

ALL THE INFORMATION YOU NEED IN ONE
ACCESSIBLE VOLUME

Oxford

CONCISE

Encyclopedia

Encyclopedia

Lively and accessible, this is the perfect encyclopedia for use at home and in the office. Over 12,000 entries cover natural history, science, technology, history, geography, politics, literature, the arts, and sport. Its compact size and clear concise entries ensure that you will find the information you need quickly and easily.

Oxford Paperback Reference

THE WORLD'S MOST TRUSTED
REFERENCE BOOKS

- 12,000 entries cover a huge range of subjects from *aardvark* to *Zoroaster*
- Fully updated for this new edition
- Includes concise biographies of famous world figures from all walks of life
- Fully illustrated with line drawings, diagrams, and maps
- Appendices include conversion tables, British prime ministers, US presidents, kings and queens of England and Scotland

Preface

This *Concise Encyclopedia* sets out to cover the whole range of human knowledge—arts, sciences, ideas, history, biography, and geography—in a single handy volume. Apart from breadth and balance of coverage, the editors have recognized three main priorities: accurate and up-to-date information; concise, accessible language; and a clear, user-friendly presentation. The result is a compact but comprehensive reference book that will meet the needs of a wide range of readers, whether at school, in the workplace, or at home. The book has been compiled with the National Curriculum in mind and should prove invaluable for coursework and other school projects.

The format of the *Concise Encyclopedia* makes it extremely easy to use; entries are arranged in strict alphabetical order and there is an extensive network of cross-references, making the text more-or-less self-indexing. Cross-references are indicated in two ways. Where a cross-reference occurs in the middle of a sentence, an asterisk is used to indicate that further information about the entry being read will be found at the article on the word or phrase so marked. In all other cases, cross-references to other articles are printed in SMALL CAPITALS.

An additional resource is provided by the quick-reference section at the end of the book, which gathers a number of useful tables together for ease of use.

Two further matters may require a word of explanation:

1. Chinese transliterations. This *Concise Encyclopedia* follows official Chinese practice in using the pinyin system of transliterating Chinese names. The Wade-Giles equivalent (formerly the system most commonly used in the English-speaking world) and, when it exists, the conventional Western name is given in brackets following the pinyin name. However, a small number of names—including Chiang Kai-shek, Mao Tse-tung, and Yangtze River—are so well known in their Wade-Giles or conventional Western forms that we have decided to retain these very familiar spellings.

2. Population figures for towns and cities. Wherever possible, these refer to the town or city proper rather than to the urban area of which it forms part.

This book is dedicated to Alan Isaacs, editor for over twenty years (1981–2002) of the *Macmillan Encyclopedia*, from the text and databases of which the current volume was compiled. Alan was working on the preparation of the *Concise Encyclopedia* at the time of his death earlier this year. We trust that we have completed the job to the standards that he would have expected.

JL, 2004

For this new edition, entries on countries, places, living people, and other contemporary subjects have been updated as necessary. In addition, a number of entirely new entries have been added to reflect the events and concerns of the last three years.

JL, 2007

Aachen (French name: Aix-la-Chapelle) 50 46N 06 06E A spa city in W Germany, in North Rhine-Westphalia near the Belgian and Dutch borders. It is an important industrial centre with iron and steel, textiles, and light engineering. *History:* it was the N capital of Charlemagne's empire and many Holy Roman Emperors were crowned in the cathedral (founded c. 796 AD). It was annexed by France in 1801 and passed to Prussia (1815). Extensively damaged during World War II, it was captured by the Allies in 1944. Population (1999 est): 243 600.

Aalborg See ÅLBORG.

Aalto, Alvar (1898–1976) Finnish architect. His reputation is based on the Paimio tuberculosis sanatorium (1933). Other buildings include a hall of residence at the Massachusetts Institute of Technology (1948) and the Helsinki Hall of Culture (1958).

aardvark (Afrikaans: earth pig) A nocturnal African mammal, *Orycteropus afer*, also called ant bear. It is about 1.5 m long, lives in grassland, and has a long snout, large ears, and a thick tail. Its strong claws are used to tear open the mounds of termites, which are picked up with its long sticky tongue. The aardvark is the only member of its order (*Tubulidentata*).

Aaron In the Old Testament, the elder brother of *Moses. Although he allowed the golden calf to be built, he and his descendants became the priests of the Jews.

Aarhus See ÅRHUS.

abacus A calculating device consisting of balls strung on wires or rods set in a frame, probably of Babylonian origin. Its use declined in Europe with the introduction of *Arabic numerals in about the 10th century AD.

Abadan 30 20N 48 15E A city in SW Iran, on an island in the Shatt (river) al-Arab. Much of

Iran's oil is brought here by pipeline for refining or exporting. Population (1996): 206 073.

abalone A marine *gastropod mollusc belonging to the widely distributed family *Haliotidae*, of rocky coasts, also called ear shell or ormer. Up to 30 cm long, their dishlike shells have a row of holes along the outer edge through which deoxygenated water and waste products are expelled from the body. The large foot is considered a delicacy and the shells are used as mother-of-pearl for ornaments.

Abbado, Claudio (1933–) Italian conductor, associated with La Scala, Milan (1968–86), the Vienna State Opera (1986–91), and the Berlin Philharmonic (1989–2001).

'Abbasids A dynasty of caliphs, which ruled the Muslim empire from 750 to 1258. Descended from Mohammed's uncle al-Abbas (566–652), they seized power from the *Umayyads in Damascus and moved their capital to Baghdad. Their rule saw a flowering of culture and scholarship.

Abbevillian A culture of the Lower *Palaeolithic in Europe, characterized by crude stone hand axes made by hammering flakes off a flint with another stone. Named after Abbeville in France, the Abbevillian also appears in Britain but in Africa similar early hand axes are designated *Acheulian.

Abbey Theatre A Dublin theatre opened in 1904. Annie Horniman (1860–1937), a friend of W.B. *Yeats, initiated the building for the Irish National Dramatic Society, a company founded by the actors Frank Fay (1870–1931) and his brother W.G. Fay (1872–1947). The Abbey Theatre gained an international reputation performing mainly plays by Irish playwrights on Irish subjects. The original playhouse burnt down in 1951 and was replaced in 1966.

abdomen In mammals (including humans), the region of the body extending from the lower surface of the diaphragm to the pelvis.

a

The abdomen contains the intestines, liver, pancreas, kidneys, gall bladder, and—in females—the ovaries and womb. In arthropods, the abdomen is the posterior section of the body, which is usually segmented.

Abdullah I (1882–1951) Emir of Transjordan (1921–46) and first King of Jordan (1946–51). He fought with T. E. *Lawrence in the Arab revolt against Turkish rule during World War I. He was assassinated.

Abdullah II (1962–) King of Jordan (1999–). The eldest son of King *Hussein by his second wife, he is married to the Palestinian-born Queen Rania (1970–).

Abel See CAIN.

Abel, Niels Henrik (1802–29) Norwegian mathematician. One of the great mathematical problems of Abel's day was to find a general solution for a class of equations called quintics. Abel proved that such a solution was impossible, but died before his achievement was recognized.

Abelard, Peter (1079–1142) French philosopher. His ill-fated marriage with Heloise, niece of a canon of Notre Dame, Paris, ended when Abelard was castrated by thugs hired by the canon (1118). He retired to a monastery and she became a nun. Despite his great fame as a teacher, Abelard was perpetually in trouble with the church authorities. His *Sic et Non* (*For and Against*), had a major influence on the development of *scholasticism by listing points on which acknowledged authorities differed.

Abercrombie, Sir (Leslie) Patrick (1879–1957) British town planner and architect, best known for his detailed schemes for London, *The County of London Plan* (1943) and *The Greater London Plan* (1944). Later plans include those for Edinburgh, Hull, and the West Midlands.

Aberdeen 1. 57 10N 2 04W A city and port in NE Scotland, in City of Aberdeen council area, on the North Sea coast between the mouths of the Rivers Don and Dee. Aberdeen is an old cathedral city with a university dating from 1494 (King's College). Fishing has always been important, as has the working of local granite; the "Granite City" provided stone for London's cobbled streets in the 18th century. Other industries include engineering, paper making, textiles, and chemicals. Aberdeen's proximity to North Sea oil has transformed it into an important service centre for the oil industry. Population (1996 est): 217 260. **2. City of Aberdeen.** A council area in NE Scotland, established in 1996.

Area: 186 sq km (72 sq mi). Population (2001): 212 125.

Aberdeen Angus A breed of polled (naturally hornless) beef cattle, originating from NE Scotland. Short, stocky, and usually black (some have red coats), they are hardy and adapt well to different climates. Angus bulls are commonly mated with dairy breeds to produce a polled beef cross.

Aberdeenshire A council area of NE Scotland, on the North Sea. In 1975 the historic county of Aberdeenshire became part of Grampian Region; it was restored as an independent unitary authority (with adjusted borders) in 1996. The City of Aberdeen forms a separate council area. Agriculture is important (especially stock raising). Industries include fish processing, tourism, whisky distilling, and those associated with North Sea oil. Area: 6318 sq km (2439 sq mi). Population (2001): 226 871. Administrative centre: Aberdeen.

aberration 1. A defect in a lens or mirror that causes blurring or distortion of the image. **Spherical aberration** is caused by rays from the outside of the lens or mirror being brought to a focus at a different point from those nearer to the centre. In **chromatic aberration**, different colours are focused at different points, since the refractive index of glass varies with the wavelength. See also ASTIGMATISM. **2.** An apparent displacement in the position of a star or other heavenly body due to the motion of the observer with the earth in its orbit round the sun.

Aberystwyth 52 25N 4 05W A town and resort in Wales, in Ceredigion on Cardigan Bay. A college of the University of Wales was established in 1872 and the National Library of Wales, in 1911. Population (1991 est): 11 154.

Abidjan 5 19N 4 00W The former capital of Côte d'Ivoire, off the Gulf of Guinea. A small village until developed by the French in the 1920s, it became the capital in 1934. It is now an important port, linked to the sea by the Vridi Canal. Population (1995): 2 797 000.

Abkhazia (or Abkhaz Republic) An administrative division of Georgia. Most of the population is Abkhazian or Georgian and lives along the narrow subtropical coastal lowland. The region is predominantly agricultural; the chief mineral is coal. *History:* invaded by the Romans, it later gained independence before coming under the Ottoman Turks in the 16th century. It became a Russian protectorate in 1810 and an autonomous republic of the Soviet Union in

1921. In 1992 it declared independence, leading to a conflict (1993–94) in which Georgian troops unsuccessfully attempted to regain control. The political situation remains unresolved. Area: 8600 sq km (3320 sq mi). Population (1993 est): 516 600. Capital: Sukhumi.

Abolition Movement The campaign to abolish slavery in the USA. Opponents of slavery formed an antislavery society in 1833. They helped runaway slaves escape to Canada via their secret Underground Railroad route; such publications as *Uncle Tom's Cabin* (1851–52) by Harriet Beecher Stowe unveiled the slavery issue, which was settled by the Civil War.

Abominable Snowman A creature, also called Yeti (Tibetan: Snowman), that is believed to live at high altitudes in the Himalayas. There have been no authenticated sightings, but footprints in the snow have been photographed (which may have other causes).

Aborigines The dark-skinned hunters and gatherers who inhabited Australia before European settlement. Material culture was rudimentary, while kinship organization and terminology were complex. Aboriginal mythology was elaborate and included accounts of creation during the primordial dawn, which they call "Dream Time." There are roughly 136 000 people of Aboriginal descent in Australia. The small proportion who maintain a nomadic way of life are threatened by encroachments upon their lands. In 1993 Aborigines were granted the right to reclaim land formerly held under native title but this was curtailed by further legislation in 1998.

abortion The expulsion or removal of a fetus from the womb before it is capable of independent survival. In the UK a fetus is not legally viable until 24 weeks old. Expulsion of a dead fetus at any later time is called a stillbirth. Abortion may be spontaneous (a miscarriage) or induced for therapeutic or social reasons. In the UK (excluding Northern Ireland) induced abortion is legal if it is carried out under the terms of the Abortion Act (1967) and the Abortion Regulations (1991): two doctors must agree that termination of the pregnancy is necessary (e.g. to prevent the birth of a severely deformed or abnormal child or to preserve the health of the mother) and the operation must be performed in approved premises. Unless there are exceptional circumstances, the abortion must be carried out in or before the 24th week. Methods used include *dilatation and curettage, suction of the womb

using an aspirator, and the administration of certain drugs (e.g. mifepristone).

Aboukir, Battle of (25 July 1799) The battle in which Napoleon defeated the Ottoman Turks during his occupation of Egypt. The 7000-strong French army defeated the unruly Turkish force of 18 000.

Abraham In the Old Testament, patriarch and founder of the Hebrew nation (Genesis 11–25). Born in Ur in about 2000 BC, he travelled to Canaan with his wife Sarah, where God established a covenant with him in which Abraham agreed to circumcise himself and to have all his male descendants circumcised. After the birth of their son, Isaac, God commanded Abraham to sacrifice him; when Abraham was about to obey, a ram was substituted and God reaffirmed his promises. Isaac's son *Jacob had 12 sons, the ancestors of the 12 tribes of Israel. Abraham is also "the father of Faith" to Christians and Muslims.

Abraham, Plains of A plateau in E Canada, on the W edge of Quebec citadel. Here Gen James *Wolfe defeated the French under Gen Montcalm (13 September 1759), leading to British control over Canada.

Abruzzi (or Abruzzo) A region in E central Italy. It consists of the Apennines in the W and a coastal region in the E. Agriculture is limited, producing mainly cereals. Manufacturing industry is primarily for local needs but there is also a large fishing fleet. Area: 10 794 sq km (4167 sq mi). Population (2000 est): 1 279 016. Capital: L'Aquila.

abscess A pus-filled cavity surrounded by inflamed tissue, usually caused by bacterial infection. Abscesses may form anywhere in the body. They usually require draining and sometimes also treatment with antibiotics.

absinthe A highly alcoholic drink made from spirits infused with herbs, including aniseed and wormwood. Absinthe has been banned in many countries because of the harmful effects of wormwood, and substitutes (e.g. anis) are drunk instead.

absolute zero The lowest temperature that can theoretically be attained. It is equal to -273.15°C or 0 K. In practice, absolute zero can never be reached, although temperatures of a few thousandths of a degree above absolute zero have been achieved. See CRYOGENICS.

absolutism A political system, characteristic of European monarchies between the 16th and 18th centuries, in which the sovereign attempted to centralize power in his own person.

a

Louis XIV of France is often regarded as the typical absolute monarch. Justified by the theory of the divine right of kings, absolutism was associated in the 18th century with enlightened despotism but was challenged by the ideals of the American and French Revolutions.

absorption See ADSORPTION.

abstract art A nonrepresentational form of art. Tendencies to abstraction can be found in almost any age or school of art, particularly oriental and decorative art. However, the widespread use of *photography in the 20th century to create a permanent visual record of people, places, events, etc., made the strictly representational function of painting much less important, enabling artists to explore various forms of abstraction. In about 1910 Wassily Kandinsky (1866–1944) produced a watercolour that is usually considered the first modern abstract. Two main tendencies of abstract art have since developed; whereas *cubism led to the geometric abstract style of such painters as Piet *Mondrian and Kasimir Malevich (1878–1935), the abstract expressionists (see ABSTRACT EXPRESSIONISM), such as Jackson *Pollock, emphasized spontaneous free expression. A characteristic of abstract sculpture is the use of new materials, such as plastic, glass, and steel. See also ACTION PAINTING; CONSTRUCTIVISM; MINIMAL ART.

abstract expressionism An art movement that developed in New York in the years after World War II, characterized by an emphasis on spontaneous subjective expression. It is associated with experimental improvisational techniques, notably the *action painting of Jackson *Pollock. Other artists associated with the movement include *de Kooning and *Rothko.

Abu Dhabi See UNITED ARAB EMIRATES.

Abuja 9 10N 7 06E The federal capital of Nigeria; the seat of government moved to this new city in December 1991. Population (1996 est): 350 100.

Abu Simbel A monumental rock-cut temple complex constructed about 1250 BC by Pharaoh Ramses II in *Nubia. Four colossal statues of Ramses, each 20 m (66 ft) high, at the entrance were raised to escape inundation by Lake Nasser (1968).

Abydos An ancient city in Upper Egypt, founded before 3000 BC and continuously occupied until Roman times. It was a principal centre of *Osiris worship. The most impressive remaining structure is Seti I's Great Temple

(c. 1300 BC), with shrines for six deities and the god pharaoh. The Table of Abydos, a king list carved on its walls, provides information about earlier pharaohs.

abyssal zone The ocean depths lying below 1000 m. It is the zone of greatest ocean depth, lying seawards of the continental slope (see CONTINENTAL SHELF). Since no light penetrates to these depths, they contain relatively little marine life and the temperature never rises above 4°C. The ocean depths below 6000 m, the deep-sea trenches, may be classified separately as the **hadal zone**.

Abyssinian cat A breed of short-haired cat, many individuals of which are descendants of one exported to the UK from Abyssinia in the 19th century. They have slender bodies and wedge-shaped heads with large ears. The reddish-brown coat has black or brown markings. The Red Abyssinian is a rich copper-red.

Acacia A genus of tropical and subtropical trees and shrubs (over 700 species), particularly abundant in Australia (see WATTLE). Acacias have clusters of yellow or white flowers, produce long flattened pods, and usually have compound leaves consisting of many small leaflets. In some species the leaflets do not develop and the leafstalks assume their function, being broad and flattened. Acacias yield a number of useful products: gums (including gum arabic), tannins, dyes, and woods suitable for furniture. Many are grown as ornamental plants. Family: *Leguminosae*.

Académie Française The French literary academy founded by Cardinal de Richelieu in 1634 (incorporated 1635) to preserve the French literary heritage. Its membership is limited at any one time to 40 "immortals," who have included Corneille, Racine, and Voltaire. It is continuously engaged in the revision of the official French dictionary.

Academy, Greek The college founded (c. 385 BC) near Athens by Plato, which continued in various guises until its dissolution by Justinian in 529 AD. It is famed mainly for contributions to philosophy and science.

Academy of Motion Picture Arts and Sciences An organization founded in Hollywood in 1927 to raise the artistic and technical standards of the film industry. It is responsible for the annual presentation of the **Academy Awards**, popularly known as Oscars, for excellence in acting, writing, directing, and other aspects of film production.

Acanthus A genus of perennial herbaceous

plants (about 50 species), mostly native to the Mediterranean region: *A. mollis* and *A. spinosus* are the species most commonly planted in temperate gardens. Growing to a height of 1–1.5 m, they have tough, often spiny, leaves and spikes of purple and white flowers. The fruit—a capsule—explodes to disperse the seeds. Family: *Acanthaceae*.

Acapulco 16 51N 99 56W A seaside resort in S Mexico, on the Pacific Ocean. Known as the Riviera of Mexico, it has fine sandy beaches and many hotels. Population (2000 est): 619 253.

acceleration The rate of change of a body's velocity. Linear acceleration is the rate of change of linear velocity. It is measured in metres per second per second. Angular acceleration is the rate of change of angular velocity and is measured in radians per second per second.

acceleration of free fall (g) Formerly called acceleration due to gravity; the acceleration of a falling body when air resistance is neglected. Caused by gravitational attraction between the body and the earth, it varies slightly at different points on the earth's surface. Its standard value is 9.806 metres per second per second.

accelerators Large machines used for accelerating beams of charged particles (electrons, protons, etc.) to very high speeds primarily for research in *particle physics. The particles are accelerated by electric fields either in a straight line, as in the *linear accelerator, or in a circle, as in the *cyclotron, *synchrotron, and *synchrocyclotron. The beam is confined to its path by magnetic fields. Particle accelerators are used by directing a beam of particles at a stationary target or, for greater energy, by colliding two beams of particles together. Accelerators are also used to create artificial isotopes and in *radiotherapy. The first accelerator was a linear accelerator, produced in 1932 by *Cockcroft and *Walton. See also CERN.

accessory In law, a person who incites another to commit a crime but is not present when the crime is committed is an accessory before the fact. (An abettor is distinguished from an accessory before the fact by being present at the commission of a crime.) A person who assists another whom he knows has committed a crime is an accessory after the fact.

accomplice In law, a person concerned with one or more other persons in committing a crime, either as its actual perpetrator or as an abettor or *accessory.

accordion A portable musical instrument invented in Berlin in 1822. A member of the reed-organ family, the accordion is a boxlike instrument in which bellows force air through reeds mounted in end panels. In the modern **piano accordion** a small piano-like keyboard supplies the melody, while buttons operated by the other hand produce chords.

Accra 5 32N 0 12W The capital of Ghana, a port on the Gulf of Guinea. It is built on the site of three 17th-century trading fortresses founded by the English, Dutch, and Danish. It became the capital of the Gold Coast in 1877. Following the opening of a railway to the agricultural hinterland (1923) it developed rapidly into the commercial centre of Ghana. The University of Ghana was founded in 1948 at Legon, just outside Accra. Population (1998 est): 1 446 000 (metropolitan area).

accumulator A cell or battery that can be recharged by passing a current through it in the direction opposite to that of the discharge current. The most common example is the lead-acid accumulator used in motor vehicles. This consists, when charged, of a positive lead dioxide electrode and a negative spongy lead electrode, both immersed in sulphuric acid with a relative density of 1.20–1.28. During discharge lead sulphate forms on the electrodes and the acid density falls.

Nickel-iron (NiFe) accumulators with an electrolyte of 20% potassium hydroxide are also used. Interest in *electric cars has stimulated accumulator development.

accumulator. A single cell of a lead (Pb) sulphuric acid (H_2SO_4) accumulator. The reactions shown are those taking place during discharge. During charging the lead sulphate (PbSO_4) is converted to lead dioxide (PbO_2) and sulphuric acid, the density of which rises.

ACE inhibitors (angiotensin-converting enzyme inhibitors) A class of drugs used in the

a

treatment of high blood pressure and heart failure, often in combination with a *diuretic. They prevent artery constriction by interfering with the enzyme that converts angiotensin into an artery constrictor. Examples include captopril and enalapril.

acetylcholine A chemical that transmits impulses between the ends of two adjacent nerves and is confined largely to the parasympathetic nervous system. Acetylcholine is released on stimulation of the nerve and diffuses across the gap of the *synapse to stimulate the adjacent nerve. It is rapidly converted to an inactive form by the enzyme cholinesterase, permitting the passage of a further impulse.

acetylene See ALKYNES.

Achebe, Chinua (1930–) Nigerian novelist of the Ibo people. His first novel, *Things Fall Apart* (1958), deals with the arrival of missionaries and colonial government in the Ibo homeland. His other works include the novels *A Man of the People* (1966) and *Anthills of the Savannah* (1987), as well as short stories, poems, and essays.

achene A small dry *fruit having a single seed that is attached to the fruit wall at one point only. The fruit does not open at maturity (i.e. the fruit is indehiscent) and the seed is thus retained until germination. Lettuce fruits are examples of achenes.

Acheron A river in N Greece, in Greek mythology the chief river of the underworld. In Dante, it is the river across which the souls of the dead are ferried to hell by *Charon.

Acheulian A culture of the Lower *Palaeolithic. It is characterized by hand axes made by hammering flakes off a flint with a hammer of wood, antler, or bone, producing a more regular and effective tool than the *Abbevillian hand axe. Named after St Acheul near Amiens (N France), the Acheulian occurs widely in Eurasia and also in Africa, where it apparently originated and survived longest (until about 58 000 years ago). Acheulian sites provide the earliest evidence of man's use of fire and are often associated with *Homo erectus* remains (see HOMO).

Achilles In Greek mythology, the greatest Greek warrior in the Trojan War. The son of Peleus, King of Thessaly, and Thetis, a sea nymph, he was dipped by his mother in the River Styx as a child, which made his whole body invulnerable except for the heel by which she had held him. After a quarrel with *Agamemnon he ceased fighting until the

death of his friend Patroclus at the hand of *Hector. Achilles then slew Hector and was himself later killed by Paris, who shot a poisoned arrow into his heel.

acid rain Rain that contains sulphuric and nitric acids as a result of the absorption of sulphur dioxide and nitrogen oxides, mostly from industrial and vehicle emissions, in the atmosphere. It is contended that the effects can include destruction of fish, crops, and trees, as well as damage to buildings. In 1985 19 countries agreed to make substantial reductions in the emission of sulphur dioxide by 1993.

acids and bases Acids are chemical compounds containing hydrogen that can be replaced by a metal atom to produce a *salt. They have a sour taste and turn litmus red. When dissolved in water they dissociate into ions. Hydrochloric acid (HCl), for instance, gives chloride ions and hydrogen ions: $\text{HCl} + \text{H}_2\text{O} \rightarrow \text{Cl}^- + \text{H}^+ + \text{H}_2\text{O}$. The hydrogen ion is associated with a water molecule, a combination referred to as a hydroxonium ion (H_3O^+).

Bases are compounds that react with acids to form salts and water. Bases that dissolve in water, known as **alkalis**, produce hydroxide ions (OH^-). Many are metal hydroxides, such as sodium hydroxide (NaOH). The neutralization of an acid by a base in solution is a reaction in which hydrogen and hydroxide ions combine to give water. The concept of an acid has been extended to include any compound that can donate a proton and a base as a proton acceptor. This (the Brønsted-Lowry theory) can be applied to reactions in nonaqueous solvents. A further extension of the terms (Lewis theory) defines an acid as an acceptor of an unshared electron pair and a base as a pair donor. See also PH.

acne A skin condition, common in adolescence, affecting the face, chest, and back. Acne is caused by overactivity and inflammation of the sebaceous glands: oily sebum accumulates in the hair follicles, producing pustules and blackheads. Severe cases can be treated with antibiotics, retinoids (e.g. isotretinoin), or other drugs.

Aconcagua, Mount (Spanish name: Cerro Aconcagua) 32 405 70 02W A mountain in W Argentina, in the Andes, regarded as being the highest point in the W hemisphere. It is of volcanic origin. Height: 6960 m (22 835 ft).

aconite A European herbaceous plant, *Aconitum napellus*, also known as monkshood. Growing to a height of 1 m, its flowers are usually purplish-blue and hood-shaped; the bulbous

roots yield poisonous alkaloids, including aconitine, which have been used in medicine as narcotics and analgesics. Winter aconite is a related plant, *Eranthis hyemalis*, with yellow flowers. Family: *Ranunculaceae* (buttercup family).

acornworm A wormlike marine invertebrate animal, 5–180 cm long, that burrows in soft sand or mud. A filter feeder, it has an acorn-shaped head with the mouth at the base. Chief genera: *Balanoglossus*, *Saccoglossus*; phylum: *Hemichordata*.

acoustics The branch of physics concerned with the production, propagation, reception, properties, and uses of sound. **Architectural acoustics** is concerned with the design of public auditoriums so that sounds can be heard in all parts of them with the maximum clarity and the minimum distortion. *Ultrasonics is the study of very high frequency sound (above about 20 000 hertz). The structure and function of sound sources, such as loudspeakers, and sound receptors, such as microphones, also form part of acoustics. Other fields include speech communication and the design of machines that can understand spoken instructions.

acquittal In law, the clearing of an accused person of the charge against him, usually by court verdict. In England there must be a verdict of "not guilty"; in Scotland the verdict may be either "not guilty" or "not proven." Acquittal prevents a person from being prosecuted for the same offence again. Anyone charged as an *accessory to a crime is automatically acquitted if the principal is acquitted.

acromegaly A rare disease in which a non-cancerous tumour of the pituitary gland secretes abnormally large amounts of growth hormone. This causes enlargement of the face, hands, feet, and heart. The tumour can be destroyed by X-rays, surgically removed, or treated with drugs (e.g. bromocriptine).

acropolis (Greek: high town) In ancient Greek towns, the isolated rocky plateau on which stood the religious and administrative nucleus of the town and which served as a citadel in time of war. The most famous is the Acropolis of Athens, which is still adorned by remains of buildings (including the Propylaea, *Parthenon, and Erechtheum) erected by *Cimon, *Themistocles, and *Pericles.

acrylics Synthetic materials produced by *polymerization of acrylonitrile (vinyl cyanide; CH_2CHCN). Acrylic resins are used in paints and plastics, the most common being *Perspex.

Acrylic fibre is widely used in textiles, mainly for knitwear, furnishing fabrics, and carpets. **Acrylic paints** are easily applied and enable artists to produce a bright smooth finish.

Actaeon A mythological Greek hunter, son of the god Aristaeus and Autonoe, daughter of Cadmus, King of Thebes. Ovid, in his *Metamorphoses*, relates how Actaeon accidentally caught sight of the goddess Artemis bathing naked and was turned by her into a stag and killed by his own hounds.

ACTH (adrenocorticotrophic hormone) A peptide hormone, secreted by the anterior lobe of the pituitary gland, that stimulates the cortex of the adrenal glands to produce three types of *corticosteroid hormones. Secretion of ACTH is stimulated by physical stress and is regulated by secretions of the *hypothalamus of the brain.

actinides A group of related chemical elements in the periodic table ranging from actinium (atomic number 89) to lawrencium (atomic number 103). They are radioactive and include a number of *transuranic elements. Chemically, they resemble the *lanthanides.

actinium (Ac) A highly radioactive metal that occurs naturally in uranium minerals. It is the first of the actinide series of elements and is chemically similar to the lanthanide elements. It was discovered in 1899 by A. L. Debierne (1874–1949). The actinium series of radioactive decay is headed by uranium-235, which undergoes a series of alpha and beta decays ending with the stable isotope lead-207. At no 89; at wt (227); mp 1051°C; bp 3200 ± 300°C; half-life of ^{227}Ac 21.6 yrs.

action painting A modern art technique, mainly associated with *abstract expressionism, in which paint is sprayed, splashed, or dribbled over a large canvas to form an unpremeditated and usually abstract design. Jackson *Pollock invented it in 1947 to give free expression to his emotions.

Actium, Battle of (31 BC) The decisive land and sea battle that ended the civil war in ancient Rome. Octavian, later *Augustus (the first Roman emperor), defeated the forces of *Mark Antony and Cleopatra.

Actors' Studio An actors' workshop founded in New York in 1947 by Elia *Kazan and others. Under its director Lee Strasberg (1901–82), who joined it in 1950, it became famous for its emphasis on "method" acting, which was developed from the theories of *Stanislavsky. Film actors influenced by it in-

a

clude Marlon *Brando, Rod Steiger (1925–2002), and James *Dean.

Acts of the Apostles The fifth book of the New Testament, written by Luke about 63 AD as a sequel to his Gospel. Starting with the ascension of Christ, it deals with the spread of the Christian Church from a single congregation in Jerusalem to Paul's first missionary journey and his eventual imprisonment in Rome.

actuary A mathematician employed by an *insurance company to calculate the premiums payable on policies. The calculations are based on statistically determined risks and eventualities (e.g. sickness, life expectancy). In the UK qualifications are awarded by the Institute of Actuaries through examination.

acupuncture A traditional Chinese system of healing in which thin metal needles are inserted into selected points in the body. The needles are stimulated either by manual rotation or electrically. Acupuncture is used in the Far East to relieve pain and in China as an anaesthetic for surgical operations. The traditional explanation of its effectiveness relates to balancing the opposing life forces *yin and yang. Recent research in the West suggests that the needles may activate deep sensory nerves, which cause the pituitary and midbrain to release endorphins (natural pain killers; see ENCEPHALINS).

Adam, Adolphe-Charles (1803–56) French composer. He composed over 60 operas but is primarily remembered for his romantic ballet *Giselle* (1841), the earliest full-length traditional ballet.

Adam and Eve In the Old Testament, the first human beings. According to Genesis (2.7–3.24), Jehovah created Adam from dust in his own image and put him in the Garden of Eden. His wife Eve was created from one of his ribs. Tempted by the serpent (the devil) to eat the forbidden fruit of the Tree of Knowledge, Eve induced Adam to eat the fruit also; as a result they were expelled from Eden. Their sons included Cain and Abel.

Adam, Robert (1728–92) British architect and interior designer. The son of the Palladian architect William Adam (1689–1748), he evolved a unique style that blended the *rococo and *neoclassicism, although he occasionally used gothic forms. After visiting Italy (1755–58), Robert, often in collaboration with his brother James Adam (1732–94), built many country houses, notably Kenwood House (1768), the in-

terior of Syon House (1769), and Osterley Park (1780). His building of town houses in London, such as Apsley House (1775), led him into severe financial difficulties. In his last years in Edinburgh he produced much of his finest work, for instance Charlotte Square (1791).

Adams, Gerry (Gerard A.; 1948–) Northern Irish politician, president of Sinn Féin (1983–). He was a leading participant in the talks that produced the Good Friday Agreement of 1998 and subsequent talks leading to the decommissioning of IRA weapons (2001–05). Since 1983 he has been several times elected to the British parliament but declines to take his seat.

Adams, John (1735–1826) US statesman; first vice president (1789–97) and second president of the USA (1797–1801). During the American Revolution he successfully mobilized European support for the North American cause. His term as president was troubled by disputes with his vice president, Thomas *Jefferson, over US policy towards Revolutionary France. Adams was defeated by Jefferson in the election of 1800. His son John Quincy Adams (1767–1848) was sixth president of the USA (1825–29). As secretary of state (1817–25) he was largely responsible for the *Monroe Doctrine (1823). His presidency was made difficult by the opposition of Andrew Jackson, who defeated Adams in the presidential election in 1828. From 1831 Adams served in the House of Representatives, where he campaigned against slavery.

adaptation In biology, a change in a physical characteristic of an animal or plant that makes it better suited to survive in a particular environment. For example, cacti have adapted to desert environments by evolving swollen water-storing stems. See also ADAPTIVE RADIATION.

adaptive radiation The process by which a uniform population of animals or plants evolves into a number of different forms. The original population increases in size and spreads to occupy different habitats. It forms several subpopulations, each adapted to the particular conditions of its habitat. In time—and if the subpopulations differ sufficiently—a number of new species will be formed from the original stock. The Australian marsupials evolved in this way into burrowers, fliers, carnivores, herbivores, and many other different forms.

adder A widely distributed European *viper, *Vipera berus*, about 80 cm long, common in

heathland areas. It is usually greyish with a broad black zigzag line along its back and black spots on its sides. Although venomous, its bite is rarely fatal. It is one of the three species of snakes found in Britain. The name adder is also given to a highly venomous Australian snake (death adder) of the cobra family and to some harmless North American snakes. See also PUFF ADDER.

Addington, Henry, 1st Viscount Sidmouth (1757–1844) British statesman; prime minister (1801–04), replacing Pitt the Younger. Addington was attacked for his management of the Napoleonic Wars and resigned. As home secretary (1812–21) he has been held responsible for the *Peterloo Massacre.

Addis Ababa 902N 38 43E The capital of Ethiopia, on a central plateau 2440 m (8000 ft) above sea level. It became the capital in 1889 and was capital of Italian East Africa (1936–41). It is the country's administrative centre and chief market place and its major industries produce cement, tobacco, textiles, and shoes. A railway line links the city with the port of Djibouti on the Gulf of Aden. It is also an important pan-African centre with the headquarters of the African Union and the UN Economic Commission for Africa. Population (2002 est): 2 646 000.

Addison, Joseph (1672–1719) British essayist and poet. He became an undersecretary in the Whig administration in 1706 and was elected to parliament in 1708. He began to contribute to Richard *Steele's journal, the *Tatler*, and in 1711 Addison and Steele founded the *Spectator*. He is also remembered for the tragedy *Cato* (1713).

Addison's disease A rare disease of the adrenal glands, first described by the British physician Thomas Addison (1793–1860), characterized by a reduced secretion of corticosteroid hormones. This leads to weakness, intestinal upsets, darkening of the skin, low blood pressure, and collapse. Formerly fatal, Addison's disease can now be readily treated with synthetic steroids.

Adelaide 34 56S 138 36E The capital of South Australia, on the Torrens River. Founded in 1837, the city was laid out in wide straight streets. Extensive parklands separate the city from its suburbs. It is an important commercial centre with a harbour at Port Adelaide. Industries include the manufacture of cars and textiles, oil refining, and electronics. Population (2001): 1 002 127.

Aden 12 50N 45 03E The main port and commercial centre of Yemen, on the Gulf of Aden, an arm of the Indian Ocean connecting with the Red Sea. Taken by the British in 1839, Aden was an important coaling station on the Suez route to India. It became part of the Federation of Saudi Arabia in 1963 and was the scene of fighting between rival nationalist groups until 1968, when it became the capital of the independent republic of South Yemen, now part of Yemen. Economic activity centres on the port and an oil refinery. Population (2001 est): 509 886.

Adenauer, Konrad (1876–1967) German statesman. He was a successful Rhineland politician until the Nazi government forced him out of public life (1934) and imprisoned him (1934, 1944). In 1946 Adenauer re-emerged as chairman of the Christian Democratic Union (CDU) and became the first chancellor (1949–63) of the Federal Republic of Germany. He presided over Germany's economic miracle and did much to restore its international prestige.

adenoids Two masses of tissue situated at the back of the nose. They consist of lymphatic tissue, which destroys disease-causing microbes in the throat. In children they are normally large, and when associated with recurrent throat infections or persistent breathing through the mouth are usually removed surgically. This operation is often combined with tonsillectomy (removal of the tonsils) as the tonsils also tend to be infected.

adiabatic process Any process in which heat neither enters nor leaves a system. Usually, such a process changes the temperature of the system. An example is the sudden compression of a gas, causing its temperature to rise. The compression is assumed to take place so quickly that the gas loses none of its acquired heat.

Adi Granth The canonical scriptures of Sikhism, compiled in 1604 by Guru Arjun Deb (1581–1606). It consists of about 6000 hymns. It is the supreme spiritual authority of the Sikhs, who hold it in great reverence.

Adirondack Mountains A mountain range in the USA, in N New York state. It consists of a glaciated plateau rising to 1629 m (5344 ft) at Mount Marcy. Its scenery and lakes make it a popular tourist area.

adjutant stork A large carrion-eating *stork, *Leptotilos dubius*, occurring in Asia and similar to the related *marabou. It has a white plumage with dark-grey back, wings, and tail, a

a

short neck, and a heavy pointed bill. Its head and neck are naked and a bald pouch hangs from the throat. Order: *Ciconiiformes*.

Adler, Alfred (1870–1937) Austrian psychiatrist who introduced the concept of the *inferiority complex. Initially an associate of Sigmund *Freud, Adler came to disagree with Freud and by 1911 he had founded his own school. Adler viewed each individual as a unique entity striving to compensate for feelings of inferiority resulting from physical or social disabilities (*The Neurotic Constitution*, 1912) and regarded sex as an opportunity to express dominance.

Admiral's Cup A biennial sailing competition held by the Royal Ocean Racing Club since 1957. Three yachts represent each nation and the competition comprises three races in the Solent and two offshore races: from Cherbourg to the Isle of Wight and from Plymouth to the Fastnet Rock off SW Ireland and back (the Fastnet Cup).

Admiralty Islands A group of about 40 islands in the SW Pacific Ocean, in Papua New Guinea in the Bismarck Archipelago. Copra and pearls are exported. The main island is Manus with the chief town, Lorengau. Area: about 2000 sq km (800 sq mi). Population (1995): 35 200.

Adonis In Greek mythology, a youth from Cyprus, loved by *Aphrodite for his great beauty. *Zeus decreed that his time should be divided between Aphrodite on earth, Persephone, queen of the underworld, and himself. He was celebrated in many festivals, his death and resurrection representing seasonal change.

adoption The process enabling a natural parent's legal rights and duties towards an unmarried minor to be transferred to another adult. The Adoption Act (1976), as amended by the Children's Act (1989), controls the work of adoption societies, the rights of the natural parents, and the adopted child's right to know his original name. Birth control, abortion, and the acceptance of one-parent families has decreased the number of children available for adoption in recent years. However, greater publicity has been given to finding adoptive homes for children with special needs, e.g. older children, children of mixed race, and the physically or mentally handicapped.

adrenal glands Two small pyramid-shaped endocrine glands in man and other mammals, one at the upper end of each of the kidneys. Each gland has an outer cortex, controlled by hormones secreted by the pituitary gland, and

an inner medulla producing *adrenaline and *noradrenaline, controlled directly by the nervous system. The cortex secretes three classes of steroid hormones that regulate the balance of salts and water, the use of carbohydrates, and the activity of the sex glands (see CORTICOSTEROIDS). See also ADDISON'S DISEASE; CUSHING'S DISEASE.

adrenaline (or **epinephrine**) A hormone secreted by the medulla of the *adrenal glands. A *catecholamine derived from the amino acid tyrosine, adrenaline increases heart rate, raises blood pressure, and increases the level of blood glucose. Its release is triggered by stress in preparation by the body for "fight or flight." Adrenaline is also secreted by nerve endings of the sympathetic nervous system. See also NORADRENALINE.

Adrian IV (Nicholas Breakspear; c. 1100–59) Pope (1154–59). The only English pope, also known as Hadrian IV, he was unanimously elected after leading the mission to the Scandinavian churches (1152). His claim that the Holy Roman Empire was held by papal grant occasioned a major quarrel with Emperor Frederick Barbarossa.

Adriatic Sea A northern arm of the Mediterranean Sea, extending between Italy and Croatia for about 750 km (466 mi). Its principal ports are Brindisi, Bari, Venice, Trieste, and Rijeka. The Italian and Croatian coasts are strikingly different: the one flat and sandy, the other rocky and irregular with many offshore islands.

adsorption The production of a layer of atoms or molecules of a substance on a solid or liquid surface. The adsorbed atoms or molecules may be strongly held by chemical bonds (**chemisorption**), in which case the adsorbed layer is usually only one molecule thick. Adsorption may also occur through weaker physical forces (**physisorption**), often giving rise to several molecular layers. In contrast, **absorption** involves material penetrating into the bulk of a solid or liquid.

adultery Voluntary sexual intercourse between a married person and a person of the opposite sex to whom he or she is not married. In many countries, including some US states, adultery is a crime; under some systems, such as Islamic law, it may carry the death penalty. More generally it is a ground for *divorce or judicial separation; in English law it has traditionally been considered proof of the "irretrievable breakdown" of a marriage.

Advent (from Latin: *adventus*, coming) The first season of the church year, leading to *Christmas. It begins on the Sunday nearest St Andrew's Day (30 Nov). From the 6th century it has been observed as a solemn preparation for celebrating Christ's birth and for his Second Coming.

adventists Several Protestant Christian denominations that stress a belief in the imminent Second Coming of Christ. In the USA adventism began in 1831 with the millenarian preaching of William Miller (1782-1849), who predicted the Second Coming for 1843-44, but postponed the date when his prediction proved false. In the UK a similar movement was founded in 1832 as the Catholic Apostolic Church. There have been many adventist movements, the Seventh-Day Adventists now being the best known.

advocate In Scotland and in some countries, such as France, having a legal system based on Roman law, a person whose profession is to plead the cases of others in a court of justice. The English equivalent is a barrister. In Scotland, the **Lord Advocate** is the chief law officer of the Crown, generally equivalent to the *attorney general in England.

Aegean civilizations The prehistoric settlements on the islands of the Aegean Sea (between mainland Greece and Asia Minor). At the beginning of the Bronze Age (c.3000 BC) an influx of immigrants to the Cyclades islands (S Aegean) brought sophistication and prosperity, which can be seen from the excavations on Thera (or Santorini). The subsequent Minoan civilization was at its greatest between the 17th and 15th centuries BC. At the end of the 15th century BC the related Mycenaean civilization asserted its supremacy.

Aegean Sea A section of the NE Mediterranean Sea, lying between Greece and Turkey and containing many islands, including the Cyclades, Dodecanese, and N Sporades.

Aeneas A legendary Trojan leader, son of Anchises and *Aphrodite, and hero of Virgil's *Aeneid*. After the Greek victory in the Trojan War, he sailed away from burning Troy with his family and other survivors and was shipwrecked near Carthage. He fell in love with *Dido but abandoned her to continue his divinely ordained voyage to Italy, where he founded what was to become Rome.

Aeolus The Greek god of the winds and ruler of Aeolia. In Homer's *Odyssey* he gave Odysseus a bag containing contrary winds; Odysseus'

companions untied it, causing his ship to be blown back to Aeolia. An **aeolian harp**, a wooden resonating box strung with gut string produces chordal sounds that vary according to the wind pressure, when hung in the open air.

aerial (or **antenna**) An electrical conductor that transmits and receives radio or other electromagnetic waves. An oscillating *electromagnetic field, caused by waves from a distant source, induces an oscillating current in the receiving aerial. A transmitting aerial works by the same process in reverse. A modern aerial for UHF (ultra-high frequency) and VHF (very high frequency) consists of a dipole formed from two metal rods, each approximately one-quarter of the operating wavelength. In the **Yagi aerial** named after H. Yagi (1886-1976), a reflector rod is set behind the dipole and several director rods are placed in front of it to provide a more directional array. It is widely used as a receiving and transmitting aerial for television.

aerodynamics The study of the behaviour and flow of air around objects. As air is a viscous fluid any object moving through it experiences a drag. Aerodynamics is important in the design of vehicles travelling at more than 50 km per hour (31 mph), buildings and bridges, engines, furnaces, as well as aircraft (see **AERONAUTICS**) and missiles.

aeronautics The science and history (see also **AIRCRAFT**) of flight. An object flying through air is subject to four basic forces: its own weight (vertically downwards as a result of gravity), lift (to counterbalance its weight and keep it in the air), thrust (to force it through the air), and drag (resulting from friction between the body and the air). Birds and insects use their wings to provide both lift and thrust; man, in his heavier-than-air fixed-wing craft, uses an **aerofoil** to provide the lift and an *internal-combustion engine (propeller or jet) to provide the thrust (see also **AIRCRAFT**; **GLIDERS**). Helicopters use rotating aerofoils to provide lift, while *rockets use no lift surfaces, the jet of expanding gas providing both lift and thrust. The use of aerofoils as lift surfaces depends on Bernoulli's theorem, according to which the total energy of a flowing fluid remains constant; thus, if the velocity of the fluid increases, its pressure decreases in proportion. An aerofoil is a wing so shaped that (at subsonic speeds) air is accelerated over its rounded leading edge and curved upper surface, causing a reduced pressure above it. A smaller reduction in air velocity on its under-

a

side causes a slightly increased pressure below it. The combination of these pressure differences provides the lift. At supersonic speeds these forces are somewhat altered (see SOUND BARRIER) and the aerofoil has to be more sweptback and more streamlined. See also AIRSHIPS; BALLOONS.

forces acting on aircraft

cross-section of aerofoil

aeronautics. The forces acting on an aircraft. The aerofoil cross-section shows how the lift, which keeps it in the air, results from the passage of the aerofoil through the air, causing a lower pressure above it and a higher pressure below it.

aerosol A colloidal suspension of particles of liquid or solid in a gaseous medium. Fog, mist, and smoke are common natural examples. By means of pressurized packages, aerosols can be produced from a huge range of substances, including insecticides, paints, hairsprays, etc. In these, the substance is mixed with an easily liquefied gas (often a chlorofluorocarbon, CFC), which acts as a propellant when the pressure is released. Because there is evidence that CFCs cause damage to the ozone layer, safer propellants are being sought.

Aeschylus (c.525–456 BC) Greek tragic dramatist, the first of the great trio of Athenian tragedians that included *Sophocles and *Euripides. He wrote over 80 plays, of which only 7 survive: *The Persians* (472), *Seven against Thebes* (467), the *Oresteia* trilogy (*Agamemnon*, *Libation Bearers*, and *Eumenides*; 458), *Suppliant Women*, and *Prometheus Bound*. His introduction of a second actor, allowing dialogue and action independent of the chorus, and his innovations in scenery, transformed drama.

Aesop The supposed author of a collection of Greek fables, said by Herodotus to be a slave from Samos who lived in the 6th century BC. Originating in folklore, the fables are anecdotal stories whose animal characters illustrate a moral point. The Roman poet Phaedrus popularized them in the 1st century AD, and the French poet La Fontaine wrote more sophisticated versions in the 17th century.

Aesthetic movement A British literary and artistic movement of the late 19th century, summarized in the slogan "art for art's sake." Reacting against the ugliness of industrialism and against contemporary utilitarian social philosophies, its followers sought to create beauty for its own sake, self-consciously divorcing art from life. They included Oscar Wilde, Aubrey Beardsley, and other contributors to the periodical *The Yellow Book* (1894–97). See also DECADENTS.

aesthetics The philosophical study of art. It includes questions concerning the nature of beauty and how we arrive at standards of judgment. Objective views hold that beauty is in the object and that aesthetic judgments are true or false. Subjective views see value as something an observer brings to the work—it may be purely a matter of personal preference or, as *Kant held, something that can be universally agreed upon.

Aetius, Flavius (d.454 AD) Roman general. He became virtual ruler of the western Empire, dominating the emperor, Valentinian III (reigned 425–55). Aetius defeated the Huns under Attila at the Catalaunian Plains (451) but was powerless to halt their invasion of Italy. He was subsequently murdered by Valentinian.

Afghan hound A breed of large dog having long legs, large drooping ears, and a very long silky coat, which may be of any colour. The Afghan probably originated in ancient Egypt and was later used in Afghanistan to hunt leopards and gazelles. Height: 68–73 cm (dogs); 61–66 cm (bitches).

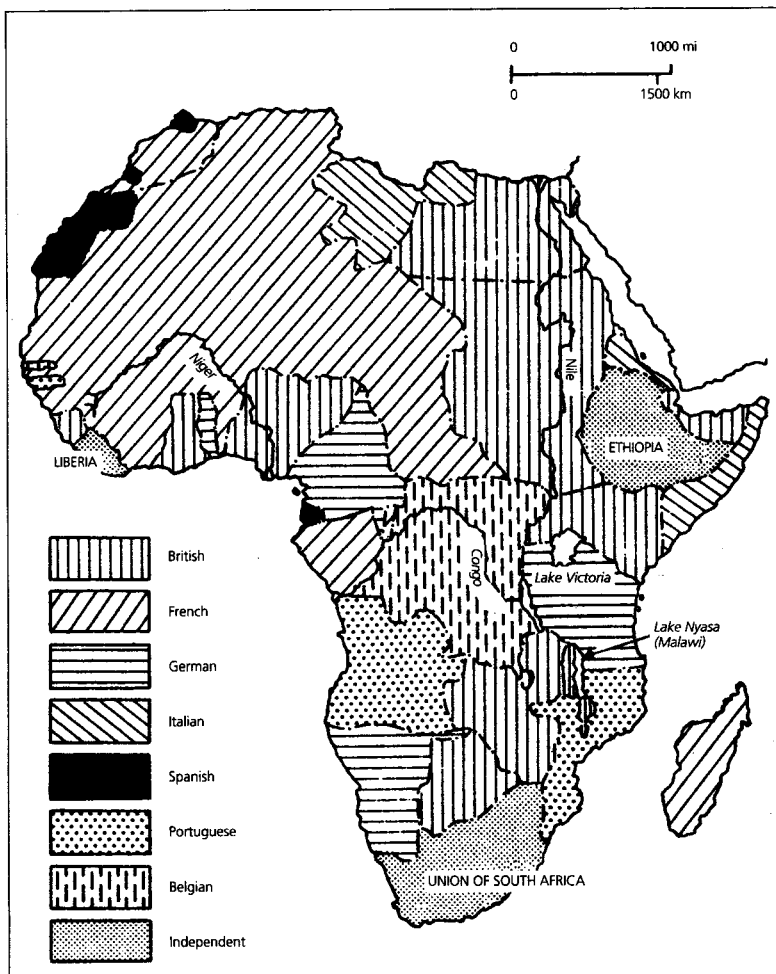

Afghanistan, Republic of A state in central Asia. The country is mountainous, the Hindu Kush range rising over 6000 m (20 000 ft). The only lower-lying areas are along the River Amu Darya (ancient name: Oxus) in the N and the delta of the River Helmand in the SW. The population consists of mixed ethnic groups, the largest being the Pathans and the Tadjiks. *Economy:* virtually all forms of economic activity have been devastated by 25 years of civil war. The cultivation of opium poppies and the production and sale of narcotics, although offi-

cially discouraged, are now the country's main source of revenue. Agriculture is now mainly at subsistence level. Attempts made during the 1970s to develop industry, exploit mineral and natural gas resources, and to improve communications have all been halted. *History:* before the opening up of international sea routes in the 15th century Afghanistan was an important centre on the overland routes across central Asia. For centuries under the rule of different powers, including the Mongol Genghis Khan in the 13th century, it became an independent kingdom in 1747. During the 19th century Afghanistan became involved in the struggle between Britain and Russia for influence in central Asia. After two wars with Britain (1839–42 and 1878–80) it became a buffer state between British India and Russia, with Britain controlling its foreign policy. Independence was achieved in 1921 under Amanollah Khan (1892–1960) after the third Afghan War. In 1926 Amanollah declared himself king. He was deposed in 1929 by a brigand chief, Habibullah, who was in turn defeated by Nader Khan. When the latter was assassinated in 1933 he was succeeded by his son, King Zahir. Since World War II there has been friction with Pakistan over the question of an independent Pathan state in Pakistan. In 1973 the monarchy was overthrown by Mohammed Daud and in 1977 a republic was set up with Daud as president. In 1978 he was killed in a military coup and a new government was set up by the Marxist People's Democratic Party. In 1979 Babrak Karmal came to power with Soviet aid; he was succeeded in 1986 by Mohammad Najibullah (1947–96). Soviet military occupation of Afghanistan provoked worldwide condemnation. After nine years of fighting against Mujahidin guerrillas, Soviet forces withdrew in 1989; Najibullah's government was finally overthrown in 1992. Fierce fighting continued between rival factions and in 1996 the Taliban militia ousted the Kabul government and imposed strict Islamic law. By late 1998 they had defeated anti-Taliban forces in the N (the Northern Alliance) to take control of virtually the whole country. In October–November 2001 Afghan cities suffered massive US airstrikes after the Taliban refused to hand over Osama *Bin Laden, whose Afghan-based *al-Qaida organization was widely held responsible for the events of *September 11 (see also WAR ON TERRORISM). As the Taliban regime collapsed, the Northern Alliance reoccupied Kabul and other major cities. An interim administration was established under Hamid Karzai, who became president in 2002. A new constitution

was promulgated in 2004 and parliamentary elections were held. Fighting between US-led forces and Taliban/al-Qaida fighters intensified again from 2005. The continuing conflict has greatly exacerbated Afghanistan's already severe refugee and food supply problems. Official languages: Pushtu and Dari Persian. Currency: afghani of 100 pulis. Area: 657 500 sq km (250 000 sq mi). Population (2007 est): 31 889 0923 Capital: Kabul.

Africa The second largest continent in the world. A notable feature of the NE is the Great Rift Valley, which contains an extensive system of freshwater lakes as well as the continent's highest point, Mount *Kilimanjaro. The principal rivers are the Nile, Niger, Congo, and Zambezi. Africa's climate and vegetation vary considerably from the arid desert of the Sahara to the tropical rainforest of the Congo basin. The inhabitants of Africa are principally of Negroid origin, although the originators of the Berber language group remain dominant in N Africa and the Sahara and there are a few Cushite-speaking peoples in the NE. *History:* Africa's long history has been substantiated by Louis Leakey's finds of hominoid man at Olduvai Gorge. The earliest African civilization was established in Egypt in about 3400 BC. From the 7th century AD Arab influence was strong and Islam spread with the trans-Saharan and East African coastal trade. Several African kingdoms and empires emerged during this period, notably the Sudanese empires of Ghana, Mali, and Songhai. From the 15th century European exploration and exploitation began, initiated by the Portuguese. Slaves, ivory, and gold were exported from Africa from the 17th to the late 19th centuries. From 1880 to 1912 most of Africa was partitioned by the European powers, which imposed political boundaries upon the continent that bore no relationship to former political and social organizations; this resulted in long-standing problems (see also SOUTH AFRICA, REPUBLIC OF). In the 1950s there was movement towards independence and Africa now consists of independent nations. Nevertheless, large areas of the continent have remained politically unstable and economically undeveloped, as well as being prey to natural disasters, such as drought. The 1990s saw a trend away from dictatorship and one-party rule towards multiparty democracy, as well as the final disappearance of White-dominated regimes. *AIDS is a major scourge in sub-Saharan Africa, causing over two million deaths a year. Area: about 30 300 000 sq km (11 700 000 sq mi). Population (1998 est): 755 919 000. See illustration on p. 14.

a

Africa. In the so-called "scramble for Africa" (1880–1912) the European powers annexed most of the continent. The map shows the position in 1914.

African languages A geographical classification of the languages spoken in the African continent. The Hamito-Semitic group extends across N Africa from Mauretania to Somalia. The Nilo-Saharan group is spoken in many dialects in central Africa, and the *Niger-Congo languages, many of them *Bantu languages, cover most of the area S of the Sahara. In S Africa the *Khoisan languages survive. There

are up to a thousand indigenous languages of the continent. Malagasy, of Austronesian origin, is spoken in Madagascar. *Swahili is a lingua franca in East Africa. Certain African languages are unique in using click sounds in their phonology; predominance of certain consonantal groups (kp, gb, mb, nd) is also common in Africa.

African National Congress (ANC) A

Black nationalist movement in S Africa. Founded in 1912, it fought apartheid from 1948, turning to guerrilla activity after being outlawed by the South African government in 1960. ANC leaders, including Nelson *Mandela, were released from prison in 1989 and 1990, when the ANC was legalized. The ANC played an active role in devising South Africa's interim constitution, signed in 1993, and won multiracial elections in 1994. In 1998 Mandela was succeeded as president of the ANC by Thabo *Mbeki. The ANC greatly increased its majority in elections held in 1999 and Mbeki became president of South Africa; it was re-elected in 2004.

African Union (AU) An organization of African States created in 2002 as the successor to the **Organization of African Unity (OAU)** (founded in 1963). It aims to extend the OAU's policy of seeking cooperative solutions to the continent's political and economic problems, with the longer-term goal of establishing an economic union and a Pan-African parliament.

African violet A flowering plant, *Saintpaulia ionantha*, native to tropical East Africa. The plants have rosettes of hairy, often deeply ridged, leaves, bear clusters of pink, blue, purple, or white flowers, and grow to a height of 10–15 cm. Many varieties and hybrids have been developed as ornamentals. Family: *Gesneriaceae*.

Afrikaner A South African of Dutch or *Huguenot descent. The Afrikaners comprise about 60% of the Republic's White population. Formerly called "Boers" (farmers), they have undergone considerable urbanization since the 1930s. In the 18th and 19th centuries they led a seminomadic life, resisting governmental control from Cape Town. Their two independent states, the South African Republic and the Orange Free State, came under British rule after the second Boer War. Their language, **Afrikaans**, derives, but is distinct, from Dutch and together with English has been an official language of South Africa since 1925. *See also* GREAT TREK.

Afro-Asiatic languages *See* HAMITO-SEMITIC LANGUAGES.

Agadir 30 30N 9 40W A port in SW Morocco, on the Atlantic coast. An earthquake in 1960 destroyed much of the town and killed about 12 000 people. Population (1994 est): 155 244.

agama A common African broad-headed lizard belonging to the family *Agamidae* (50 species). 30–45 cm long, agamas feed on insects. The common agama (*Agama agama*) is vari-

ously coloured: dominant males have a brick-red head, blue body and legs, and banded tail; other males are duller coloured, like the females.

Agamemnon King of Mycenae and commander of the Greek army in the Trojan War. His quarrel with Achilles is the main theme of Homer's *Iliad*. After his return from Troy with Cassandra, the captured daughter of King Priam, Agamemnon was murdered by his wife Clytemnestra and her lover Aegisthus.

agaric A fungus belonging to a large worldwide family (*Agaricaceae*). The group includes many edible mushrooms, such as the field mushroom (*A. campestris*), as well as the poisonous death cap. The visible part of the fungus consists of a stalk bearing a cap with gills on the undersurface. Phylum: *Basidiomycota*. *See also* FLY AGARIC; MUSHROOM.

agate A banded or concentrically patterned form of *chalcedony. The colours, ranging from white, milky blue, yellow, and brown to red, are due to traces of mineral or organic matter. Being hard, it is used for mortars for grinding, and also for ornamental purposes.

Agave A genus of plants (about 300 species) of the S USA and tropical America, many of which are grown for ornament. Agaves have a basal tuft of thick fleshy leaves and a cluster of flowers that—in some species—grows on a tall stalk (up to 12 m high). It may be 60 or more years before flowers are produced; after flowering the plant dies. Several species are commercially important as a source of fibre, especially *sisal; the fermented juice of others is used as an alcoholic drink (pulque) or distilled to produce spirits (*see* TEQUILA). Family: *Agavaceae* (or *Amaryllidaceae*).

agglomerate A rock composed of a mixture of coarse angular fragments and finer material formed by volcanic explosions; it is usually found in or near the volcanic vent.

Agincourt, Battle of (25 October 1415) The battle that took place during the *Hundred Years' War at Agincourt (now in the Pas-de-Calais), in which the French were defeated by an English army led by Henry V. The decisive English victory, which owed much to their outstanding archers, was achieved with not more than 1600 dead; the French may have lost as many as 6000 men.

Agni The Hindu god of fire, who protects humans from evil, guards the home, and, by cleansing humans from sin, bestows immortality.

a

agnosticism The philosophical view that doubts the existence of God and other spiritual phenomena, claiming that if they exist it is impossible to know anything about them. The word was coined by T. H. Huxley in 1869. Agnosticism was subsequently embraced by rationalists, who hesitated on philosophical or social grounds to adopt outright atheism.

agora A central feature of ancient Greek town planning. As with the Roman *forum, the primary function of the agora was as the town market. In addition, however, it also became the main social and political meeting place. Together with the *acropolis, it normally contained the most important buildings of the town.

agoraphobia See PHOBIA.

agouti A rabbit-sized rodent belonging to a genus (*Dasyprocta*; 13 species) of Central and South American forests. Agoutis have long legs, small ears, and a very short hairless tail. Family: *Dasyproctidae* (agoutis and pacas); suborder: *Hystricomorpha*.

Agra 27°09'N 78°00'E A city in India, in Uttar Pradesh on the River Jumna. Former capital of the Mogul Empire (1566–69 and 1601–58), it fell to the British in 1803 and from 1835 until 1862 was capital of the North-West Provinces. Notable buildings include the *Taj Mahal. Population (1991): 899 195.

Agricola, Gnaeus Julius (40–93 AD) Roman governor of Britain and father-in-law of his biographer Tacitus. Sent to govern Britain in 78, after holding previous legionary posts there, he followed a policy of romanization, exploration, and expansion before his recall in 84.

agricultural revolution The changes in agriculture in Britain that took place mainly in the 18th century. The open-field system of strip farming was replaced by larger enclosed fields, hedged and ditched, in which improved agricultural methods and new implements could be used (see TULL, JETHRO); the quality of cattle and sheep was improved by scientific stock breeding. This resulted in a greater production of food for the growing industrial population (see INDUSTRIAL REVOLUTION), although it meant hardship for those farmers who were displaced by enclosure.

agriculture The practice or study of farming. Settled farming probably dates back to the 10th millennium BC, when in many regions of the world it began to replace man's activities as a hunter and gatherer of food. The domestica-

tion of cattle, goats, sheep, and pigs together with the cropping of wheat, barley, rice, etc., enabled settled communities to evolve and primitive civilizations to flourish in such regions as the fertile river basins of the Tigris, Euphrates, and Nile.

Until the end of the 19th century farming was based entirely on energy derived from man and his draught animals. However, during the 20th century, especially in developed countries, the tractor has become the primary energy source. In this century, too, there has been great success in improving breeds of plants and animals, improving soil fertility (see FERTILIZERS), increasing mechanization, and control of plant and animal pests, measures that have enormously increased the quantity and quality of food produced. These measures are now being applied in the developing world, where they are bringing about the Green Revolution that is needed to feed the world's growing population. However, reconciling maximum food production and conservation of the environment is one of the principal tasks of the UN *Food and Agriculture Organization. See also ARABLE FARMING; LIVESTOCK FARMING.

Agrigento 37°19'N 13°35'E A seaport in Italy, in S Sicily. Founded about 580 BC, it has famous ancient temples and is the birthplace of the philosopher Empedocles. Sulphur mining is the main occupation. Population (latest est): 56 372.

Agrippa, Marcus Vipsanius (763–12 BC) Roman general and associate of the Emperor Augustus, whose daughter Julia was his third wife. After military successes in Gaul (38 BC) Agrippa became consul (37 BC). He played an important part in the defeat of Mark Antony at Actium (31 BC) and contributed to the military successes of Augustus.

Agrippina the Younger (15–59 AD), was notorious for her political intrigues. She probably murdered her uncle, the Emperor Claudius, who was also her third husband, to make way for the succession of her son, Nero. She exerted considerable influence early in Nero's reign, but after they quarrelled he had her murdered.

agronomy The management of land, especially for the production of arable crops. Agronomy involves the determination of the nature of a soil and how its fertility may be improved by such processes as drainage, irrigation, the application of natural and artificial fertilizers, and husbandry techniques (e.g. crop

rotation). Equally important is the breeding of crop plants that are suited to a particular soil.

Aguascalientes 21 51N 102 18W A city in central Mexico. A commercial centre, its industries include ceramics production, tanning, and railway engineering. There are medicinal hot springs nearby. Population (2000 est): 594 056.

Ahern, Bertie (1951–) Irish statesman. Leader of Fianna Fáil (1994–), he became prime minister in 1997 and was an architect of the 1998 Good Friday Agreement for Northern Ireland. He presided over an economic boom and his party was re-elected in 2002 and 2007.

Ahmadabad (or **Ahmedabad**) 23 03N 72 40E An industrial city in central India, in Gujarat. Founded in 1411, it is a major commercial and industrial centre known for its textiles. There are many academic and scientific institutions. Population (2001): 3 520 085.

ai See SLOTH.

Aidan, St (c.600–51 AD) Irish monk and bishop. A monk at Iona until his consecration as bishop of Northumbria in 635, he founded the monastery at Lindisfarne (see HOLY ISLAND), the centre of his extensive missionary activity in N England. His life is described by Bede in his *Ecclesiastical History*. Feast day: 31 Aug.

AIDS (acquired immune deficiency syndrome) A viral disease characterized by a decrease of certain T-lymphocytes, resulting in a breakdown of the immune system and increased susceptibility to other diseases. The causative agent, the human immunodeficiency virus (HIV), is transmitted in blood, semen, vaginal fluid, and breast milk; a high proportion of HIV-positive people (virus carriers) may develop symptoms of the disease, although this may take up to ten years after infection. In the western world AIDS is found most frequently in homosexual males and intravenous drug users, but the virus can also be transmitted by heterosexual intercourse and transfusions of infected blood (all of which is now tested). Such drugs as zidovudine (or AZT) and the protease inhibitors only slow the progress of the disease and do not yet offer a cure; clinical trials of vaccines are being planned. By the end of 2006, AIDS had resulted in over 25 million deaths worldwide (including over 14 000 in Britain), while those suffering from AIDS or HIV were estimated at about 40 million. Some 80% of deaths from AIDS (and nearly 80% of new cases

of HIV infection) now occur in central and southern Africa.

aikido A Japanese martial art, primarily for self-defence by means of dodging an attacker and leading him in the direction in which his momentum takes him before subduing him without injury.

AIM (Alternative Investment Market) See STOCK EXCHANGE.

Ainu A Mongoloid people living on certain islands of Japan and Russia (Hokkaido, Sakhalin, Kurile Islands). They were once noted for their profusion of body hair, but intermarriage has made them resemble the Japanese. Although their traditional culture has largely disappeared and they are now few in number, they speak a language not related to any other.

air See ATMOSPHERE.

aircraft Any machine capable of flying. Aircraft fall into two categories: lighter-than-air machines (see AIRSHIPS; BALLOONS) and heavier-than-air machines. The latter include *helicopters and fixed-wing aircraft, first *gliders and then powered aeroplanes. 19th-century experience of gliding, especially by Otto Lilienthal (1849–96) in Germany, provided the Wright Brothers with the information they needed to build their first powered aircraft in 1907 using the Otto-Daimler *internal-combustion engine. In 1909 the Frenchman Louis *Blériot flew across the English Channel. By the beginning of World War I, aircraft were sufficiently advanced to be used for reconnaissance and their usefulness as bombers soon became evident. Fast manoeuvrable fighters to shoot down the slower heavily laden bombers were an obvious subsequent development. By the end of the war aerial combat was established as an integral part of modern warfare. After the war air circuses and flying clubs using World War I aircraft sprang up all over the world, heralding the age of civil aviation. In 1924 Imperial Airways was formed in the UK, using Handley Page airliners, and during the 1930s a worldwide network of commercial routes developed. The Atlantic was first flown solo non-stop (from New York to Paris) in 1927 by Charles *Lindbergh and by 1939 there was a transatlantic flying-boat service, using Class C Short flying boats with in-flight refuelling.

By the outbreak of World War II aircraft of all kinds were poised for aerial combat. During the war many British bombers (including Wellingtons, Blenheims, Halifaxes, and Lancasters) were in service against the German Heinkel 111, Dornier 17, and Junkers 88. Domi-

a

Wright Brothers' Flyer The first powered flight at Kitty Hawk, North Carolina, USA, on 17 December 1903 lasted 12 seconds.

Blériot XI Louis Blériot's 30-minute flight from Calais to Dover on 25 July 1909 was the first cross-channel flight.

Handley Page 42E Hannibal In 1928 the British airline, Imperial Airways, brought eight HP42 aircraft. The 24-seater Hannibal had a top speed of 100 mph (160 km/hr).

Douglas DC3 Introduced in 1936, it was widely used in World War II as the Dakota transport. Its Pratt and Whitney 1200 hp engines gave it a maximum speed of 200 mph (320 km/hr).

Vickers Viscount Introduced into service in 1950, it was the first successful turboprop airliner. Powered by four Rolls-Royce Dart engines, it carried 60 passengers.

De Havilland Comet I The first jet airliner, it went into service in 1952. Crashes due to metal fatigue caused its withdrawal and in 1958 it was replaced by the Comet IV.

Boeing 747 Nicknamed the "jumbo jet" this wide-bodied jetliner, which can carry up to 500 passengers, has been in service with many airlines since 1970.

Concorde The first supersonic airliner, it was built by the French and British in cooperation. Powered by four Rolls-Royce Olympus engines, it came into service in 1976.

civil aircraft

Sopwith Camel A highly manoeuvrable fighter, first delivered in 1917. Its 130 hp Clerget engine gave it a top speed of 113 mph (181 km/hr).

Handley Page O/400 The largest World War I bomber. Its twin 360 hp engines enabled it to carry 2000 lbs (907 kg) of bombs.

Supermarine Spitfire British fighter. Originally powered by a Rolls-Royce Merlin engine, it later had the Griffon engine, giving it a top speed of 450 mph (724 km/hr).

Messerschmitt 109 German fighter, designed in 1935. The latest version (109G) had an 1800 hp engine enabling it to fly at 430 mph (692 km/hr).

Boeing B-29 Superfortress This enormous US bomber entered the war in 1943 and was used to drop the atom bombs on Japan.

General Dynamics F-111 US fighter and fighter-bomber, the first warplane to have swing wings (1967). It was powered by a Pratt and Whitney TF30 turbo fan.

Hawker Siddeley Harrier British VTOL aircraft developed in 1969. Two movable nozzles direct the thrust of its engine downwards for vertical take-off.

Northrop B2 stealth bomber US bomber, publicly revealed in 1989. The most expensive warplane ever developed, costing £350 million each, its revolutionary 'flying wing' design is alleged to make it invisible to enemy radar.

a

nant British fighters were the Supermarine Spitfire and the Hawker Hurricane, against the main German fighter, the Messerschmitt Me Bf109. The British jet-powered Gloster Meteor entered service in 1944, as did the German Messerschmitt Me 262 jet.

Since the end of war, the *jet engine has dominated aircraft design. However, the first postwar generation of civil aircraft used the jet engine to drive propellers (e.g. the Vickers Viscount), the first true jet to enter passenger service being the British Comet. The Boeing 707 (with its four engines in pods suspended below the wings) followed in 1954.

The first aircraft to break the *sound barrier were military and nearly all modern warplanes are supersonic and armed with missiles. Examples include the British Hawker Hunter and Avro Vulcan; the US McDonnell Douglas Phantom, Convair Hustler, and General Dynamics Swingwing F111; the French Mirage; and the Soviet MiGs. The US B2 Stealth bomber was introduced in the late 1980s. The first supersonic passenger aircraft (SST) to fly was the Soviet Tupolev Tu-144 in 1968. This was followed a year later by the Anglo-French Concorde, which remained in service until 2003. Long- and medium-range passenger services are dominated by the wide-bodied (jumbo) jets, such as the Boeing 747 and the European Airbus. See also AERONAUTICS.

aircraft carrier A naval vessel with a large flat deck for launching and landing warplanes. The first flight from the deck of a ship was made in 1910, and the first true aircraft carrier, HMS *Argus*, was completed for the Royal Navy in 1918, too late for World War I. Carriers played a dominant role in World War II, being especially effective in the war against the Japanese. After World War II carriers came to be regarded chiefly as tactical units, although they saw considerable action in the Korean and Vietnam Wars. The USS *Enterprise*, the first nuclear-powered carrier (1961), displaced 76 000 tonnes and steamed more than 432 000 km (270 000 mi) before requiring refuelling.

Airedale terrier The largest breed of *terrier, originating in Yorkshire. It has a long squarish muzzle, a short tail, and a tan-coloured wiry coat with a black saddle region. Height: 58–61 cm (dogs); 56–58 cm (bitches).

airships Dirigible *balloons that obtain their thrust from a propeller. The first airship to fly was a French steam-powered machine, designed in 1852 by H. Giffard; however, the first practical airship was the electrically powered *La France* (1884), built by Renard and Krebs. By

1900 the initiative in airships had passed to Germany, with the machines of Count Ferdinand von Zeppelin (1838–1917) leading the field. Between 1910 and 1914 Zeppelins were in extensive passenger service, carrying some 35 000 passengers, without mishap. In World War I these machines were used by the Germans to bomb England. Thereafter, a series of disasters destroyed the credibility of hydrogen-filled airships. The British *R101* caught fire at Beauvais in 1930, the US *Shenandoah* and the *Akron* were lost in 1933, and the German *Hindenberg* was destroyed in 1937.

Aix-en-Provence (Latin name: *Aquae Sextiae*) 43°31'N 5°27'E A city in S France, in the Bouches-du-Rhône department. The capital of Provence in the middle ages, it has a gothic cathedral and a university (1409). Cézanne was born here. An agricultural centre, it trades in olive oil and fruit. Population (1999): 134 222.

Aix-la-Chapelle See AACHEN.

Ajaccio 41°51'N 8°43'E The capital of Corsica, a port on the Gulf of Ajaccio. Napoleon I was born here. Tourism is important. Population (latest est): 55 279.

Ajanta 20°30'N 75°48'E A village in W India, in Maharashtra. Its Buddhist caves, dating from the 1st century BC to the 7th century AD, consist of monasteries and temples, some containing remarkable paintings illustrating the life of the times.

Ajax A legendary Greek hero, son of Telamon, King of Salamis. Described in Homer's *Iliad* as great in stature and in courage, he fought *Hector in single combat. He became insane with rage after being defeated by Odysseus in the contest for the armour of the dead *Achilles. Sophocles' play *Ajax* depicts the hero recovering his sanity, only to be driven by shame to suicide.

Akbar (I) the Great (1542–1605) The third Mogul emperor (1556–1605). Akbar embarked on a series of military campaigns and conquered all of N India. Late in his reign he conquered the Deccan to the south. He was noted for his able administration, his encouragement of trade, and his tolerance towards non-Muslims. Mogul architecture also reached a peak during his reign.

Akhenaton (or *Ikhnaton*) King of Egypt (1379–1362 BC) of the 18th dynasty, one of whose wives was Nefertiti. He replaced the traditional Amon cult with the monotheistic worship of the sun god, Aton, and built a new capital, Akhetaton, at Tell el-Amarna. Internal

disorder during his reign enabled the Hittite king, Suppiluliumas, to remove N Syria from Egyptian control.

Akhmatova, Anna (Anna Andreevna Gorenko; 1889–1966) Russian poet. Her first books, *Evening* (1912) and *Beads* (1914), were an immediate success. She was married to Nikolai Gumiliov (1886–1921), founder of acmeism, from 1910 until 1918. After the Revolution she wrote about public life as well as personal themes. Her works were banned (1922–40) but in the 1960s were restored to favour.

Akihito (1933–) Emperor of Japan (1989–). The son of *Hirohito, he was the first Crown Prince to marry a commoner, Michiko Shoda (1934–).

Akkad The capital city and dynastic name of a S Mesopotamian kingdom established about 2300 BC, N of Sumer. Akkad, the site of which is still unidentified, was founded by Sargon. The Semitic language of Akkad, Old Akkadian, spread to much of the Middle East, developing later into the languages of both Babylonia and Assyria. About 2150 BC, barbarian invasions brought about Akkad's decline and the short-lived reascendancy of Ur.

Aksum (or Axum) 14 05N 38 40E An ancient town in N Ethiopia. It was capital of the Christian Aksumite Empire (1st–6th centuries AD). According to tradition, the Ark of the Covenant was brought here from Jerusalem.

Alabama A state in the SE USA, on the Gulf of Mexico. Except for the forested uplands in the NE it consists of an undulating plain, drained by the Alabama and Tombigbee Rivers. The iron and steel industry around the state's largest city, Birmingham, is the most important. Mobile is an important seaport. Cotton production in the central Black Belt is a principal crop along with peanuts, soya beans, wheat, and maize; the raising of cattle and poultry is also important. *History*: first explored by the Spanish in the 16th century, it passed to the British (1763) following disputes with the Spanish and French. In 1783 it came under US control and with an area to the S added in the Louisiana Purchase (1803) became a state in 1819. New settlers established large cotton plantations based on slave labour and following secession from the Union (1861), the state sent most of its White male population to fight against the N. Area: 135 776 sq km (52 423 sq mi). Population (2000): 4 447 100. Capital: Montgomery.

alabaster A pure fine-grained white form of

*gypsum. Often translucent and attractively veined, it has long been worked ornamentally, for carvings, etc. The alabaster of Volterra, Tuscany, is well known.

Alain-Fournier (Henri-Alban Fournier; 1886–1914) French novelist. The son of a country schoolmaster, he became a literary journalist in Paris and was killed in World War I. His one completed novel, *Le Grand Meaulnes* (1913), is nostalgic and almost mystical; set in the French countryside of his childhood, it describes a young man's search for a girl he has glimpsed only briefly.

Alamo, the A mission in the USA, in San Antonio, Texas. During the Texas revolution it was defended from 24 Feb until 6 March 1836, by less than 200 Texan volunteers (including the legendary Davy Crockett), who were all massacred during the onslaught of 4000 Mexican troops led by Santa Anna. Six weeks later a victory at San Jacinto secured Texan independence.

Åland Islands (Finnish name: Ahvenanmaa Islands) A group of over 6000 islands and islets, under Finnish administration but semi-autonomous, at the entrance to the Gulf of Bothnia. Population (1992): 24 847. Language: Swedish. Capital: Mariehamn.

Alaska The largest state in the USA, occupying the NW corner of the North American continent. It is a mountainous volcanic area, rising over 6000 m (20 000 ft) to Mount McKinley, the highest peak in North America. The numerous rivers include the Yukon flowing W into the Bering Sea. Oil production (discovered 1950) is the major industry and there are rich supplies of natural gas. Coal, gold, and copper are mined. Fishing, especially salmon, and forestry are also major industries. Agricultural development is hindered by the short growing season and severe climate. *History*: first settled by Russians following voyages by the Dane, Vitus Bering (1728, 1741), it was under the trade control of the Russian American company until 1867 when it was purchased by the USA. A number of gold rushes in the late 19th century helped to swell the sparse population. It became the 49th state in 1959. A 2437 km (1523 mi)-road from Dawson Creek, Canada to Fairbanks, Alaska, called the **Alaska Highway** was built for defence against Japan (1942). Area: 1 700 138 sq km (656 424 sq mi). Population (2000): 626 932. Capital: Juneau.

Alba, Fernando Alvarez de Toledo, Duke of (or Alva; 1507–83) Spanish general, who commanded Habsburg forces against

a

Protestants in Germany and the French in Italy. Philip II of Spain placed him in command of the Netherlands (1567–73), where his ruthless attempts to subdue the Dutch Protestants made him very unpopular and led to his recall. He led the expedition against Portugal (1580–81). See also REVOLT OF THE NETHERLANDS.

albacore A fast-swimming *tuna fish, *Thunnus alalunga*, found in warm seas. Up to 1 m long, it has very long pectoral fins. It is the chief source of tuna for canning.

Alban, St (3rd century AD) The first English martyr. A pagan soldier, he protected a Christian priest and was converted by him. On admitting this to the Roman authorities, he was scourged and beheaded on a site subsequently dedicated to him as the Abbey of St Albans. Feast day: 22 or 17 June. Emblem: a stag.

Albania, Republic of (Albanian name: Shqipëria) A country in SE Europe, occupying part of the Balkan Peninsula on the Adriatic Sea. It consists of a mountainous interior, rising to over 2700 m (9000 ft), with extensive forests and fertile coastal lowlands. The people belong to two main groups, the Ghegs (N of the River Shkumbi) and the Tosks (S). *Economy:* mainly agricultural, although industrial development is increasing. There have been attempts to develop the rich mineral resources as well as the rich natural-gas deposits. Main exports include crude oil, bitumen, chrome ore, copper wire, tobacco, fruit, and vegetables. Under communism the economy was subject to rigid central control and Albania became one of the poorest countries in Europe. Despite subsequent liberalization the economy remains very weak, owing largely to outdated infrastructure and widespread corruption. *History:* became independent in 1912 after more than four centuries of Turkish rule. Following a civil war, in which Italy intervened, Albania became a republic in 1925 and a monarchy in 1928, when its president, Ahmed Beg Zogu (1895–1961), was proclaimed as King Zog. After occupation by Italy and Germany during World War II, another republic was set up in 1946, with a communist-controlled assembly. It aligned itself with the Soviet Union but after the death of Stalin relations between the two countries weakened and diplomatic relations were broken off from 1961 to 1990. Albania maintained close relations with China but otherwise remained isolated until the 1980s. Enver Hoxha (1908–85), as first party secretary, was executive leader from 1946 to 1985. Pressure for change led to free elections in 1991 but in 1997 the collapse of fraudulent saving schemes

led to street violence and the resignation of the government. Elections in 1997 resulted in victory for the Socialists. In 1998 violent protests in Tirana forced the government to flee the capital; a new Western-style constitution was subsequently approved in a referendum. In 1999 the crisis in neighbouring *Kosovo led to a massive influx of refugees and tensions with Serbia. The 2005 elections saw victory for the Democratic Party, whose goals include membership of NATO and the EU. Official language: Albanian. Currency: lek of 100 qindars. Area: 28 748 sq km (11 101 sq mi). Population (2007 est): 3 600 523. Capital: Tirana.

Albany 42 40N 73 49W A city in the USA, the capital of New York state on the Hudson River. Founded in 1614 by the Dutch, it is one of North America's oldest cities. Economic growth accelerated with the building of the Erie Canal (1825) and today its main manufactures are electrical goods, textiles, dental goods, chemicals, and building materials. Population (2000): 95 658.

albatross A large seabird belonging to a family (*Diomedidae*; 14 species) that occurs mainly in southern oceans. It has a hooked bill; usually a white or brown plumage often with darker markings, and very long narrow wings (the wandering albatross, *Diomedea exulans*, has the largest wingspan of any bird, reaching up to 3.5 m). Albatrosses can glide for hours over the open sea, feeding on squids and cuttlefish; they come ashore only to breed. Order: *Procellariiformes* (see PETREL).

albedo A measure of the reflecting power of a nonluminous object, such as a planet or natural satellite. It is the ratio of the amount of light reflected in all directions from the object to the amount of incident light. Clouds, snow, and ice have high albedos while volcanic rocks have very low albedos.

Albee, Edward (1928–) US dramatist. His early one-act plays, notably *Zoo Story* (1958) and *The Death of Bessie Smith* (1960), analyse contemporary social tensions using techniques of the *Theatre of the Absurd. His first three-act play, *Who's Afraid of Virginia Woolf?* (1962), which dramatizes the love-hate relationship of an academic couple, was very successful. Later plays include *A Delicate Balance* (1967, Pulitzer Prize), *Marriage Play* (1986), *Three Tall Women* (1991, Pulitzer Prize), and *Goat* (2004).

Albéniz, Isaac Manuel Francisco (1860–1909) Spanish composer and pianist. A child prodigy, he frequently ran away from home, giving recitals in North and South

America and Europe. He began serious composition after studying with d'Indy and Dukas in Paris. His works include operas, songs, and *Iberia* (1906–09), a collection of 12 piano pieces.

Albert I (1875–1934) King of the Belgians (1909–34). As commander in chief of the Belgian army, Albert led his country's heroic but unsuccessful resistance to the German invasion (1914) and contributed to the Allied victory in World War I.

Albert, Prince (1819–61) Prince Consort of the United Kingdom and younger son of Ernest I, Duke of Saxe-Coburg-Gotha. In 1840 he married his cousin Queen Victoria and became her chief adviser. Although he was initially unpopular, his devotion to duty and patronage of the arts, science, and industry won him respect. He is remembered for his organization of the *Great Exhibition (1851). He died of typhoid.

Alberta A province of W Canada, mostly on the Great Plains. It consists mainly of a plateau, rising to the foothills of the *Rocky Mountains in the SW. The undulating S prairie and parkland further N support profitable ranches and grain farms. Alberta is Canada's largest oil and gas producer, possesses vast coalfields, and includes the Athabasca tar sands, one of the world's largest oil reserves (at present untapped). *History*: first explored in the 18th century, Alberta became Canadian territory in 1869. The arrival of the railway from E Canada (1883) facilitated agricultural settlement, and Alberta became a province in 1905. Area: 644 389 sq km (248 799 sq mi). Population (2001): 3 664 249. Capital: Edmonton.

Alberti, Leon Battista (1404–72) Italian Renaissance architect, also a painter, writer, musician, and scientist. As his façade of Sta Maria Novella in Florence demonstrates, he adapted classical rules to 15th-century requirements. His most significant buildings were the churches of S Sebastiano and S Andrea in Mantua and the incomplete Tempio Malatestiano in Rimini. His treatise *De re aedificatoria* (*On Architecture*; 1452) was translated into several European languages in the 16th century.

Albigenses Followers of the Christian heresy of Catharism (see CATHARI), who flourished in southern France in the 12th and 13th centuries. Named after the town of Albi in Languedoc, they were the object of the Albigensian Crusade, launched in 1208 and led by the father of Simon de Montfort. They were finally suppressed by the Inquisition in about 1233.

albinism An inherited disorder in which tyrosinase, one of the enzymes required for the formation of the pigment *melanin, is absent. Albinos have abnormally pale skin, fair hair, and pink or light-blue irises. The condition can be eased by the use of spectacles to treat the lens abnormalities common in albinos and by protection of the skin and eyes from direct sunlight. Albinism, which can affect all human races, is also seen in animals.

Albinoni, Tomaso (1671–1750) Italian composer and court musician to the Duke of Mantua. His works, which influenced J.S. Bach, include 50 operas, a violin concerto, and two oboe concertos. The *Adagio* for organ and strings often attributed to Albinoni was in fact composed by his Italian biographer Remo Giazotto (1910–) and incorporates a fragment of a bass part by Albinoni.

Ålborg (or **Aalborg**) 57 03N 09 56E A city and seaport in Denmark, in N Jutland. Founded in 1342 AD, it has a gothic cathedral and a 16th-century castle. A university was established in 1974. Its industries include shipbuilding, cement manufacture, and textiles. Population (2000): 161 161.

albumins A class of proteins that are soluble in both water and dilute aqueous salt solutions. Serum albumins are constituents of blood; α -lactalbumin is found in milk; and ovalbumin is part of egg white. Preparations of albumins are used in therapeutic transfusions.

Albuquerque 35 05N 106 38W A city in the USA, in New Mexico on the Rio Grande. The state's largest city, it is situated in a rich agricultural area and food canning and the manufacture of livestock products are its principal industries. It is the home of the University of New Mexico (1892). Population (2000): 448 607.

Alcatraz An island in the USA, in W California in San Francisco Bay. It was the site of a notorious maximum security prison from 1934 until 1962.

alchemy A pseudoscience combining practical *chemistry with mystical views of the universe. Originating independently in China and Egypt, probably before the 3rd century BC, alchemy remained a legitimate branch of science and philosophy in Asia, Europe, and the Islamic lands for over 1500 years. It had three principal goals: the elixir of life (to ensure immortality), the panacea (or universal medicine), and the means of transmuting base metals into gold (see PHILOSOPHER'S STONE). In China, *Taoism, which highly esteemed long life, fos-

a

tered alchemical experimentation in search of the elixir. In Europe, concentration upon gold-making brought alchemy into disrepute.

Alcibiades (c. 450–404 BC) Athenian general and politician. Brought up by *Pericles, he was the pupil and lover of *Socrates. Alcibiades encouraged Athenian imperialism during the *Peloponnesian War (431–404) until, accused of desecrating monuments in Athens, he defected to Sparta (415). He regained Athenian favour (410) and was a successful commander until defeat, the fault of a subordinate, forced him into exile (406). He was murdered in Phrygia.

Alcmaeon In Greek mythology, the son of Amphiaraus, one of the Seven Against Thebes, and Eriphyle. He killed his mother to avenge the death of Amphiaraus, and was pursued by the Furies. His first wife was Arsinoë, daughter of King Pegeus of Psophis, but on his wanderings he married the daughter of the river god Achelous, and was pursued and killed by Pegeus and his sons. His own sons later avenged his death by killing Pegeus.

Alcock, Sir John (William) (1892–1919) British aviator. He served with the Royal Naval Air Service in World War I and in 1919, accompanied by (Sir) Arthur Brown (1886–1948), was the first to fly the Atlantic Ocean. They flew a Vickers-Vimy from St John's, Newfoundland, to Clifden, Co Galway, in 16 hours 27 minutes. A few months later Alcock was killed in a flying accident.

Alcoholics Anonymous A voluntary organization started in the USA in 1934 to help alcoholics. Members, who must genuinely want to stop drinking, help one another on the basis of group therapy by sharing their experiences of alcoholism. There are local autonomous groups in over 170 countries, including the UK, which has more than 1000 groups. An associated organization, ALANON, provides support for the close relatives of alcoholics.

alcoholism An illness caused by physical and psychological dependence on alcohol. Alcoholism causes mood changes, deterioration in personal standards, and periods of memory loss. Continued heavy consumption will eventually lead to cirrhosis of the liver, heart disease, and damage to the nerves. Sudden withdrawal may produce tremor, delusions, and hallucinations. Treatment, which is lengthy and difficult, includes initial alcohol withdrawal (with appropriate sedation) accompanied and followed by adequate psychological support. Drugs such as disulfiram (Antabuse), which cause vomiting after drinking alcohol,

may assist the treatment. See ALCOHOLICS ANONYMOUS.

alcohols The class of organic compounds that includes *ethanol (ethyl alcohol; C_2H_5OH) and *methanol (methyl alcohol; CH_3OH). Ethanol is the alcohol found in intoxicating drinks. Alcohols contain at least one hydroxyl group and have the general formula ROH, where R is a *hydrocarbon group. They react with acids to give *esters and water. Primary alcohols oxidize to form *aldehydes and secondary alcohols to form *ketones.

alcohol strength The measurement of the percentage volume of *ethanol (ethyl alcohol) in alcoholic drinks in order to calculate government duty on them. In the USA, 100° proof is 50% alcohol by volume. Until January 1980, the UK used a similar system for spirits, but with 57.06%, measured at 15°C, as the standard (100° proof), pure alcohol being 175° proof. France and Italy formerly used the Gay-Lussac scale, which simply states the percentage volume of alcohol, measured at 15°C. The OMIL (International Organization of Legal Metrology) system, now used throughout the EU, is based on percentage volume of alcohol at 20°C. Thus a bottle of spirits labelled in the EU "35% vol" is approximately equivalent to 61° proof in the former UK system or 70° proof in the US system.

Alcott, Louisa May (1832–88) US novelist. Her first book, *Flower Fables* (1854), was written when she was 16 to raise money for her family. *Hospital Sketches* (1863) recounted her experiences as a nurse in the Civil War. *Little Women* (1868–69), her most famous book, was largely autobiographical. Other works include *An Old-Fashioned Girl* (1870), *Little Men* (1871), and *Jo's Boys* (1886).

Aldeburgh 52.9N 1.35E A small resort in SE England in Suffolk. Once an important port, it is now famous for its annual music festival established in 1948 by Benjamin *Britten and the singer Peter Pears (1910–86), who lived here. It is the birthplace of the poet George *Crabbe, and Dr Elizabeth Garrett Anderson (1836–1917) was elected the first woman mayor in England here in 1908. Population (1991): 2654.

aldehydes A class of organic chemicals that contain the -CHO group. They are prepared by the oxidation of alcohols and are themselves oxidized to form carboxylic acids. Common aldehydes are formaldehyde and acetaldehyde.

alder A tree or shrub of the genus *Alnus*. The leaves are roundish and toothed; the flowers

grow as separate male and female catkins on the same tree. The fruit is a woody cone containing small winged nuts. The black alder (*A. glutinosa*), about 20m high, is found in wet places throughout Europe and Asia and in N Africa. Its timber is used in general turnery. Family: *Betulaceae* (birch family).

alderfly An insect, also known as a fish fly, having two pairs of delicate finely veined wings and long antennae. Up to 50 mm long (including the wings), alderflies live near fresh water, feeding on smaller insects and laying their eggs on reeds. The larvae, which are also carnivorous, live in the water and crawl out to pupate in burrows in the soil. Family: *Sialidae*; order: *Neuroptera* (lacewings, etc.).

alderman (from Anglo-Saxon *ealdorman*, a local official) In the UK, senior members of the major local authorities, normally elected by the directly elected members, until the Local Government Act (1972) abolished the office as an active rank except in the City of London. In the USA, many cities call their local-government officers aldermen but their powers vary from city to city.

Aldermaston 51 23N 109W A village in S England, in West Berkshire unitary authority, Berkshire. It is associated with protest marches (1958–63) organized by the Campaign for Nuclear Disarmament and is the site of the Atomic Weapons Research Establishment. Population (latest est): 2157.

Alderney (French name: Aurigny) 49 43N 2 12W The third largest of the Channel Islands, separated from France by the dangerous Race of Alderney channel. Its economy is based on dairy farming and tourism. Area: 8 sq km (3 sq mi). Population (2001): 2294. Chief town: St Anne.

Aldershot 51 15N 0 47W A town in S England, in Hampshire. It is the chief garrison town and army training centre in the UK. Population (1991): 51 536.

Aldrin, Jr, Edwin Eugene (1930–) US astronaut, the second man to walk on the moon. Known as "Buzz," he was an air force pilot during the Korean War before becoming an astronaut in 1963. He was lunar module pilot (under Neil *Armstrong) in Apollo 11 when it made the first moon landing in 1969.

aldosterone A steroid hormone that acts on the kidneys to regulate the levels of salts and water in the body.

aleatoric music Music that incorporates elements of chance. The term (from Latin *alea*, a

game of dice), was first used in the 1950s to describe John *Cage's experiments in determining pitch, rhythm, structure, and dynamics by the use of the I Ching, a classic Chinese work on divination. Boulez, Stockhausen, and others have experimented with this type of music. Computers have also been used to generate aleatoric music.

Aleppo (Arabic name: Halab) 36 14N 37 10E A town in NW Syria. The Crusaders tried in vain to capture it, and from 1516 to 1919 Aleppo was part of the Ottoman Empire. After World War II, it was incorporated into independent Syria. It is now an industrial centre and the terminus of a pipeline from Iraq; its university was founded in 1960. Population (1994 est): 1 591 400.

Aletsch Glacier The largest glacier in Europe, in Switzerland in the Bernese Oberland lying SE of the Aletschhorn mountain. Length: 26 km (16 mi).

Aleutian Islands A chain of volcanic Alaskan islands lying between the Bering Sea and the Pacific Ocean, divided politically between Russia and the USA. The chief settlements are on Unalaska. Russian exploitation of supplies after 1741 greatly reduced the population, but fishing and seal, otter, and fox hunting are now regulated. There are strategic US military stations on the islands and underground nuclear tests have been made here (since 1971).

Alexander I (c. 1077–1124) King of the Scots (1107–24), who ruled the highlands while his brother and successor David ruled the lowlands. He was noted for his reform of the Scottish church and his foundation of the monastery of Scone (1114). He aided Henry I of England's campaign against Wales (1114).

Alexander II (1198–1249) King of the Scots (1214–49). Hoping to regain the northern counties of England, he supported the unsuccessful Barons' War (1215–17) against King John. In 1221 he married Joan, the sister of Henry III of England, and gave up his claims to English territory in 1237, when the present border between England and Scotland was fixed.

Alexander (III) the Great (356–323 BC) King of Macedon (336–323), who between 334 and his death conquered most of the world known to antiquity. Alexander, who was a pupil of Aristotle, inherited a plan to invade Persia from his father Philip II; having secured his position in Macedon and Greece, he put this plan into action. In 333 he defeated the Persian king Darius III at Issus; in 332 he reduced Tyre

a

in his greatest victory. Alexander then proceeded to conquer Egypt and Babylon (331). Moving on to Media and then east into central Asia, he finally embarked on the Indian expedition (327–325). He crossed the River Indus and conquered the Punjab. Forced to turn back by his reluctant army, he died at Babylon shortly after the marathon return journey.

Alexander III (1241–86) King of the Scots (1249–86). He married (1251) Margaret, daughter of Henry III of England. Under his leadership, the Scots defeated the Norwegians at the battle of Largs (1263) and by the Treaty of Perth (1266) gained the Isle of Man and the Hebrides from Norway.

Alexander VI (Rodrigo Borgia; c. 1431–1503) Pope (1492–1503), notorious for his immorality, nepotism, and extravagance. Father of four illegitimate children, he used papal wealth to further the career of his son, Cesare Borgia, who pursued Alexander's territorial ambitions in Italy. He was a generous patron of the arts.

Alexander of Tunis, Harold, 1st Earl (1891–1969) British field marshal. In World War II he commanded the evacuation from Dunkirk and was the last man to leave France. He became commander in chief in the Middle East (1942) and then, as Eisenhower's deputy, directed the offensive that defeated the Germans in N Africa (1943). He ended the war as Allied supreme commander in the Mediterranean and was subsequently governor general of Canada (1946–52) and Conservative minister of defence (1952–54).

Alexandra (1844–1925) A Danish princess who married (1863) Edward VII of the United Kingdom, when he was the Prince of Wales. In 1902 she founded Queen Alexandra's Imperial (now Royal) Army Nursing Corps and in 1912 she instituted the Alexandra Rose Day in aid of hospitals.

Alexandra (1872–1918) The wife from 1894 of *Nicholas II of Russia. A German princess and granddaughter of Queen Victoria, Alexandra fell under the evil influence of *Rasputin. His disastrous domination of her government while Nicholas was supreme commander of the Russian forces in World War I precipitated the Russian Revolution and the execution of Alexandra and her family by the Bolsheviks.

Alexandria (Arabic name: al-Iskandariyah) 31°13'N 22°55'E The chief seaport and second largest city in Egypt, between Lake Mareotis and the Mediterranean Sea. It handles most of Egypt's trade and the chief export is cotton; in-

dustries include oil refining and cotton ginning. *History:* founded in 332 BC by Alexander the Great it remained the Egyptian capital for over a thousand years. It was a Greek and Jewish cultural centre with a famous library founded by Ptolemy I Soter in the 3rd century BC, which was largely destroyed by fire in 97 BC. In 30 BC Alexandria fell to the Romans, becoming their most important regional capital. It declined following the discovery of the Cape of Good Hope passage and the removal of the capital to Cairo. It was bombarded by the British in 1882, Pompey's Pillar being one of the few ancient monuments to escape destruction. Two obelisks (see CLEOPATRA'S NEEDLES), were removed and one is now in London, the other in New York. Population (1996): 3 328 196.

alexandrine A verse metre consisting of a line of 12 syllables usually with major stresses on the sixth and final syllables. The name is derived from 12th-century French poems about Alexander the Great. It was the dominant verse form in 17th-century French poetry, when it was used by *Racine and *Corneille.

alfalfa A perennial flowering plant, *Medicago sativa*, also called lucerne. Growing to a height of 1 m, it resembles clover, having clusters of small purple flowers. Native to Europe, it is widely grown as forage for cattle and because of its ability to fix nitrogen. Family: *Leguminosae*.

Alfred the Great (849–99) King of Wessex (871–99). He prevented the Danish conquest of England, defeating them at Edington (878) after a campaign of guerrilla warfare. The legend of the king, travelling incognito, being reprimanded for burning the peasant housewife's cakes, possibly refers to this unsettled period of his life. After his victory he allowed the Danes to keep their conquests in Mercia and East Anglia provided that Guthrum, their king, converted to Christianity. Alfred built a navy to defend the south coast against further Danish invasions (885–86; 892–96) and protected Wessex with a chain of fortifications. He took London (886), thus gaining control of all England save the Danish areas.

algae A vast group of simple organisms (about 25 000 species) traditionally regarded as plants but now usually placed in the kingdom *Protocista*. Algae contain the green pigment chlorophyll (and can therefore carry out photosynthesis) but have no true stems, roots, or leaves (see THALLOPHYTES). They range from single-celled organisms to the giant seaweeds. Most algae are aquatic, although some live in

damp places on land—on rocks, trees, or in soils. A few are parasitic or associate with other organisms (see LICHENS). Reproduction is extremely variable and may involve asexual means, such as cell division, fragmentation, or spore production, and/or sexual means by gamete production. The more advanced algae often alternate between sexual and asexual phases. Algae provide a valuable food source for aquatic herbivorous animals and many are used as fertilizers and in industry. They include the green, yellow-green, brown, and *red algae; blue-green algae are now classified as bacteria.

Algarve A region in S Portugal, bordering on Spain and the Atlantic Ocean, mostly corresponding to the modern administrative district of Faro. It became a Moorish kingdom in 1140 and was the last stronghold of the Moors in Portugal, being reconquered in 1249. Sparsely populated inland, its fertile coastal belt is densely populated and produces maize, figs, almonds, and olives; tourism and fishing are important.

algebra The branch of mathematics that uses symbols to represent unknown quantities. The first treatise on the subject was written by Diophantus of Alexandria in the 3rd century AD and the name derives from the Arabic *al-jabr*, a term used by the mathematician *al-Khwarizmi to denote the addition of equal quantities to both sides of an equation and later adopted as the name for the whole subject. Algebra was used in ancient Babylon, Egypt, and India and brought to Europe by the Arabs. In classical algebra symbols, such as x and y , represent ordinary numbers, the magnitude of which are determined by the solution of equations. Modern, or abstract, algebra is concerned with any system of quantities that obey a particular set of general rules and relationships.

Algeciras 36 08N 5 27W A port in S Spain, in Andalusia on the Bay of Gibraltar. Founded in 713 AD, it was destroyed by Alfonso XI of Castile (1311–50; reigned 1312–50) in 1344. The present town was rebuilt in 1760. In 1906 it was the site of the Algeciras Conference, a meeting of European powers to solve their dispute over Morocco. Its exports include oranges and cork. Population (1998 est): 101 972.

Algeria, Democratic and Popular Republic of A country in N Africa, on the Mediterranean Sea. It consists chiefly of the N Sahara Desert, with the Atlas Mountains in the N and small fertile areas near the coast. The in-

habitants, who live almost entirely in the N, are mainly Arabs and Berbers. *Economy:* mainly agricultural although industrialization has proceeded rapidly since independence, financed by the discovery of oil (the main export) in the desert areas, and natural gas, which since 1996 has been piped directly to Spain. *History:* a former province of the Roman Empire, Algeria was subjugated in the 7th century by the Arabs, who introduced Islam. Overrun by Turks in the 16th century, it became a pirate state in the 18th century under the domination of *deys*, independent rulers who preyed on Mediterranean shipping. Algeria was annexed by the French in the 19th century and in 1881 the N section became part of Metropolitan France. A war of independence, waged by the *Front de Libération nationale (FLN), lasted from 1954 to 1962 when independence was granted by de Gaulle, following referendums held in both Algeria and France. A republic was set up under Ahmed Ben Bella but was overthrown in 1965 by a Council of Revolution. Col Houari Boumédiène (1925–78) became president; following Boumédiène's death, Col Ben-jedid Chadli became the new president. A multiparty system was introduced in 1989, but when Islamic fundamentalists were poised to win a general election in 1992 the elections were cancelled and a transitional government was installed. Some 100 000 people died in the ensuing guerilla war, including the head of state, Mohammed Boudiaf, who was assassinated in 1992. In 1996 a new constitution, designed to exclude religious parties from politics, was endorsed in a referendum. Elections in 1997 resulted in victory for the government. The country's first free presidential elections, held in 1999, were marred by fraud. A peace plan unveiled by the new president, Abdelaziz Bouteflika, was backed in a referendum and by January 2000 the main insurgent group had agreed to disband. However, violence by more extreme Islamic groups has continued, as has agitation by Berber separatists. Bouteflika was re-elected by a landslide in 2004. Official languages: Arabic and Berber languages. Currency: dinar of 100 centimes. Area: 2 381 745 sq km (919 595 sq mi). Population (2007 est): 33 333 216. Capital: Algiers.

Algiers (Arabic name: al-Jaza'ir; French name: Alger) 36 45N 3 05E The capital of Algeria, a port on the Mediterranean Sea. Exports include wine, citrus fruits, and iron ore. The University of Algiers was founded in 1879 and the University of Science and Technology in 1974. *History:* founded by the Phoenicians, it was re-established by the Arabs in the 10th century.

a

Overrun by Turks in the 16th century, it became a base for Barbary pirates until taken by the French in 1830. During World War II it was the headquarters of the Allied forces in N Africa and, for a time, the seat of the French government in exile. Population (1998): 1519570.

Algonquian A group of North American Indian languages, including *Cree, *Cheyenne, Blackfoot, and others, spoken by tribes living to the S and E of Hudson Bay and in the eastern woodland zone. The Algonquian tribes lived by hunting and fishing and roamed widely in small family groups and bands.

Alhambra A castle on a hilly terrace outside *Granada (Spain), built between 1238 and 1358. It was the last stronghold of the Muslim kings of Granada. Combining citadel and palace, it is an outstanding example of Moorish architecture, with magnificent courts and gardens. The name derives from Arabic *al-hamra*, the red, an allusion to the red stucco used on the walls.

Ali (c. 600–61) A cousin of *Mohammed, who became his son-in-law by marriage to *Fatimah. Born at Mecca, he was the second, or perhaps the first, person to embrace Islam. He became the fourth caliph in 656, but faced much opposition and was murdered in 661 at Kufa, Iraq. His tomb is venerated at Najaf. According to *Shiite Muslims, Ali was the only legitimate successor of Mohammed and only his descendants can be imams.

Ali, Muhammad (Cassius Marcellus Clay; 1942–) US boxer. A gold medalist in the 1960 Olympic Games, he became professional world heavyweight champion (1964). On becoming a Black Muslim he changed his name and was soon afterwards stripped of his title for three years because of his refusal to join the US army. Defeated (1971) by Joe Frazier, he again became champion in 1974 by defeating George Foreman. In 1978 he lost the title briefly to Leon Spinks; his defeat of Spinks later that year made him the only boxer to become world champion three times. He now suffers from Parkinson's disease, possibly as a result of blows to the head.

Alicante 38 21N 0 29W A port in SE Spain, in Valencia on the Mediterranean Sea. Exports include wine, olive oil, and fruits. Industries include oil refining, textiles, chemicals, soap, tobacco, and tourism. Population (1998 est): 272 432.

Aligarh 27 42N 78 25E A city in N India, in Uttar Pradesh. An agricultural trading centre,

it is the site of the notable Aligarh Muslim University (founded as a college in 1875). Population (1991): 479 978.

alimentary canal See DIGESTION.

aliphatic compounds Organic chemical compounds that are not aromatic. They include the *alkanes, *alkenes, and *alkynes as well as some cyclic compounds (cycloalkanes).

alkali See ACIDS AND BASES.

alkali metals The elements forming group I of the *periodic table: lithium, sodium, potassium, rubidium, caesium, and francium. All are highly reactive soft, silvery-white *metals with low densities, melting points, and boiling points. In chemical reactions they tend to form positive ions and have a valence of 1. The oxides and hydroxides are alkalis.

alkaline-earth metals The elements forming group II of the *periodic table: beryllium, magnesium, calcium, strontium, barium, and radium. They are similar to the *alkali metals in appearance and chemistry, but are harder, have higher melting and boiling points, and are somewhat less reactive. They have a valence of 2. The **alkaline earths** are the oxides of these metals.

alkaloids A group of nitrogen-containing basic compounds produced by plants and having diverse effects on the body. Many alkaloids are used as medicinal drugs, including quinine, reserpine, morphine, scopolamine, and atropine. Others, such as strychnine and coniine (from hemlock) are poisons. Caffeine, nicotine, and LSD are also alkaloids.

alkanes (or **paraffins**) A series of hydrocarbons containing only single bonds between the carbon atoms. They have the general formula C_nH_{2n+2} . The first four members of the series methane (CH_4), ethane (C_2H_6), propane (C_3H_8), and butane (C_4H_{10}) are gases; higher members are liquids or waxes. They are obtained from natural gas or oil and they and their substitution products have many uses.

alkanet A herbaceous plant of the genus *Anchusa*, native to Eurasia but widely grown for ornament (*A. azurea* is a common garden plant). It may reach a height of 50–120 cm, with clusters of small blue or white flowers and narrow or oval leaves. Family: *Boraginaceae*. A similar and related plant, *Pentaglottis sempervirens*, is also called alkanet.

alkenes (or **olefins**) Hydrocarbons that contain at least one carbon-carbon double bond in their molecules. The simplest types, with one

double bond, have the general formula C_nH_{2n-2} . *ethene is the first member of this series. The alkenes are more reactive than the *alkanes, undergoing addition and polymerization reactions. They are obtained by cracking petroleum and their main use is as starting materials in industrial chemistry.

al-Khwarizmi, Muhammed ibn Musa (c.780–c.850 AD) Arabic mathematician, who introduced the Hindu decimal system and the use of zero into Arabic mathematics. He also extended the work of Diophantus on algebraic equations in a book the title of which included the word *al-jabr* ("transposition"), from which the modern word "algebra" is derived.

alkynes (or acetylenes) Hydrocarbons that contain at least one carbon–carbon triple bond in their molecules. The simplest types, with one triple bond, have the general formula C_nH_{2n-2} ; ethyne (or acetylene, C_2H_2) is the first member of this series. The alkynes, like the *alkenes, undergo addition and polymerization reactions. They are extremely reactive, tending to explode under pressure, and are difficult to use in large quantities.

Allah (Arabic, probably from *al-ilah*: the god) The Islamic name of God. Allah was worshipped in pre-Islamic Arabia as early as the 3rd century BC. In Mecca he was given special rank as "the god," but lesser tribal gods continued to be worshipped alongside him until *Mohammed proclaimed Allah as the one omnipotent and omniscient God, the same God as worshipped by Jews and Christians. He is eternal, the creator of the universe, the judge of men, merciful and compassionate. His word is embodied in the *Koran.

Allahabad 25°57'N 81°50'E A city in N India, in Uttar Pradesh at the confluence of the Rivers Ganges and Jumna. It is principally an administrative and educational centre; its university was established in 1887. There is an annual religious festival and a much larger one every 12 years. Population (1991): 806 447.

Allegheny Mountains A mountain range in the USA, extending from North Carolina to Pennsylvania. Part of the Appalachian Mountains, it consists of well-rounded uplands rising to 1480 m (4860 ft) at Spruce Knob.

allegory A verse or prose narrative in which characters and events in the plot hold a deeper, usually moral, meaning. It is similar to but usually longer than the fable and the parable. Examples of allegory include the French *Roman de la rose* (13th century), Bunyan's *The Pil-*

grim's Progress (1678), and Orwell's *Animal Farm* (1945).

Allegri, Gregorio (1582–1652) Italian composer of church music. He wrote two volumes of concertinas, two volumes of motets, and a *Miserere* for nine voices.

allele Any one of the various alternative forms of a *gene that can occur at the same site on a *chromosome. In *Drosophila* fruit flies, for example, several alternative eye colours are possible depending on which of the various alleles of the gene for eye colour is present in the individual.

Allen, Ethan (1739–89) American soldier, who pursued the independence from New York and New Hampshire of the Green Mountain region (now Vermont). Between 1770 and 1775 he commanded the Green Mountain Boys, who helped to capture Fort Ticonderoga (1775), the first American victory in the American Revolution. He was imprisoned by the British (1775–78) and died shortly before Vermont achieved statehood in 1789.

Allen, Woody (Allen Stewart Konigsberg; 1935–) US film actor and director. His films include *Play It Again, Sam* (1972), *Annie Hall* (1977), *Manhattan* (1979), *Hannah and Her Sisters* (1986), *Crimes and Misdemeanours* (1990), *Deconstructing Harry* (1997), and *Hollywood Ending* (2002).

Allenby, Edmund Henry Hynman, 1st Viscount (1861–1936) British field marshal. After experience in the Boer War, he commanded the Third Army in France in World War I. In 1917, appointed commander in chief of the Egyptian Expeditionary Force against the Turks in Palestine, he captured (9 Dec) Jerusalem and then went on to devastate the Turks at Megiddo (1918). He ended his career as high commissioner in Egypt (1919–25).

Allende (Gossens), Salvador (1908–73) Chilean statesman; president of Chile (1970–73), the first Marxist to come to power through free elections. A founder of the Chilean Socialist Party, Allende governed a coalition of left-wing parties. His nationalization policies created much opposition and he was overthrown and killed in a US-backed military coup.

allergy An abnormal reaction by the body that is provoked by certain substances, including pollen, house-dust mites, certain foods and drugs, moulds, etc. Normally all foreign substances (antigens) entering the body are destroyed by *antibodies. Allergic people,

a

however, become hypersensitive to certain antigens (called allergens), so that when they are encountered they stimulate not only the normal antibody reaction but also the specific symptoms of the allergy. Allergic conditions include *hay fever, some forms of *asthma and dermatitis, and *urticaria. Treatment includes the use of *antihistamines, corticosteroids, and desensitization.

Allied Powers The nations united in opposition to the Central Powers in World War I and to the Axis Powers in World War II. In World War I the Allies were initially the UK, France, and Russia, bound by the Treaty of London (1914), and later included Italy, Japan, and Portugal; the USA was an associated power from 1917. In World War II the chief Allies were the UK, France (1939–40, 1944–45), the Soviet Union (from June 1941), the USA (from December 1941), and China.

alligator A large broad-snouted reptile belonging to the genus *Alligator* (2 species). Each side of the jaw contains 17–22 teeth, which are all covered when the mouth is closed. The American alligator (*A. mississippiensis*) is mainly black and lives in rivers of the SE USA, reaching a length of 5–6 m; the rare Chinese alligator (*A. sinensis*) of the Yangtze River is smaller. They dig burrows in which they hibernate during cold weather. Order: *Crocodylia* (see CROCODILE).

Allium A genus of herbaceous plants (about 450 species), including the *onion, *shallot, *garlic, *leek, *chive, etc. They have bulbs, those of several species being widely used in temperate regions for food and flavouring, and in many the flowers are replaced by small bulbs (bulbils), by means of which the plants can be propagated. Family: *Liliaceae* (or *Alliaceae* according to some authorities).

Allosaurus A large bipedal dinosaur of the Jurassic and Cretaceous periods (200–65 million years ago). Up to 11 m long, it had large hind limbs, a well-developed tail, small forelegs, and thick protective knobs of bone over the eyes. Although fairly slow, it hunted prey, possibly in groups, and was equipped with sharp claws and pointed teeth. Order: *Saurischia*.

alloy A blend of a metal with other metals or nonmetals. The first alloy was probably *bronze, which was first used in Europe in about 2000 BC. *Steel and *brass are the most widely used alloys. Alloys of aluminium are also common, especially in the aircraft industry. Alloys may be intermetallic compounds, solid solutions, heterogeneous mixtures, or any

combination of these forms. In general, intermetallic compounds tend to be hard and brittle: iron carbide, which strengthens iron to form steel is an example. Solid solutions, on the other hand, are usually soft and ductile: cartridge-case brass is a typical example. Most alloys melt over a range of temperatures unlike a pure metal, which has a specific melting point. **Eutectic alloys** consist of solid solutions having the lowest melting point of all the possible mixtures of the components. They are used in fuses and other safety mechanisms.

All Saints' Day A Christian feast commemorating all saints, whether known or unknown. In the Eastern Churches it has always been observed on the first Sunday after Pentecost. In the West its date varied until fixed as 1 Nov by Gregory III. See also HALLOWE'EN.

All Souls' Day A Christian feast in the Western Church commemorating all Christians who have died (the "faithful departed"). It is observed on 2 Nov. Requiem masses, containing the *Dies Irae*, are celebrated.

allspice (or **pimento**) A widely used aromatic spice, so named because it combines the flavours of several different spices. It is derived from the powdered dried unripe berries of an evergreen tree, *Pimenta dioica*, which is native to Central America and the West Indies. Family: *Myrtaceae*.

Alma Ata 43 19N 76 55E (name until 1921: Verny) The former capital of Kazakhstan. Situated in the foothills of the Trans-Alay Alatau (mountains), it has food and tobacco processing industries and there is a thriving film industry. The capital transferred to Akmola (later renamed Astana) in 1997. Population (1995 est): 1 150 500.

almanac A calendar of the months and days of the year containing astronomical and other miscellaneous data. It usually includes information about eclipses, phases of the moon, positions of the planets, times of sunset and sunrise and of high and low tides, as well as religious and secular holidays. Modern almanacs include official government publications listing national statistics.

Alma-Tadema, Sir Lawrence (1836–1912) British painter of Dutch birth, who lived in England from 1870. Many of his paintings were inspired by Egyptian and classical antiquity.

Almodóvar, Pedro (1949–) Spanish film director, noted for his provocative black comedies, often on sexual themes. His films include *Women on the Verge of a Nervous Breakdown*

(1988), *Tie Me Up! Tie Me Down!* (1989), *The Flower of My Secret* (1995), *All About My Mother* (1999), and *Talk to Her* (2002).

almond A tree, *Prunus amygdalus*, native to SW Asia but widely grown in warm regions. The edible nuts are produced by a variety called sweet almond; the nuts of the bitter almond yield aromatic almond oil, used as a flavouring. Almond trees grow to a height of 7 m; they have pink flowers and are sometimes grown for ornament. Family: *Rosaceae*. See also PRUNUS.

Aloe A genus of succulent herbaceous plants (about 200 species), all native to Africa. A stem is usually absent, the toothed fleshy leaves forming a basal rosette, up to 40 cm in diameter. The flowers are red or yellow; the juice of some species, especially *A. vera*, is used as an emollient. Family: *Liliaceae*.

alpaca A shaggy-coated hoofed mammal, *Lama pacos*, traditionally bred in the South American Andes. Its dark fleece reaches nearly to the ground and is shorn every two years, each animal yielding about 3 kg of wool. Alpacas thrive at high altitudes, keeping to damp grassy plateaus. Family: *Camelidae* (camels).

alphabets Writing systems in which each symbol represents a speech sound (see PHONETICS). Many pictographic writing systems developed as far as ideography and even *syllabaries, but the breakthrough to true alphabetic phonetic writing took place, it seems, only on the E shores of the Mediterranean around 2000 BC. From this Semitic alphabet all the major alphabets in use today—Roman, Greek, Cyrillic, Hebrew, Arabic, and Devanagari—are ultimately derived. See also INTERNATIONAL PHONETIC ALPHABET.

alpha particle The nucleus of a helium-4 atom, consisting of two protons and two neutrons. It is extremely stable and is emitted by some radioactive nuclei in the process known as **alpha decay**, which reduces the mass number of the nucleus by four and its atomic number by two. An example is the decay of uranium-238 into thorium-234.

Alphege, St (954–1012) English martyr. He became Bishop of Winchester in 984 and was appointed Archbishop of Canterbury in 1006. He was captured by the Danes in 1011 and murdered because he refused to save himself at the expense of his tenants. Feast day: 19 April.

alphorn A musical instrument used in Switzerland for calling cattle. Made of wood, it

is commonly 2 m long or more. Being valveless, it plays only harmonics.

alphabets. The letters of the modern Roman alphabet have developed from the ancient Phoenician syllabary. This script in its Aramaic form was also the ultimate source of the Arabic alphabet and probably of the Brahmi alphabet, from which the many scripts of modern India are derived. The Cyrillic alphabet was derived directly from the Greek, whereas the Roman came through Etruscan and Latin.

Alps The highest mountain range in Europe. It extends some 800 km (497 mi) in an arc roughly E-W through France, Switzerland, Italy, and Austria, and rises to 4807 m (15 771 ft) at Mont Blanc near the W end. Several major rivers rise here, including the Rhône, Rhine, Drava, and Po. The snowline varies between

a

2400 m and 3000 m (7874 ft and 9843 ft) and many of the lower slopes are used as pasture in summer, while in winter the Alps are Europe's major skiing area. There are several road and rail routes across the chain, including a number of tunnels. See also MARITIME ALPS.

al-Qaida (Arabic: the base) The international terrorist network created by Osama *Bin Laden that carried out the attacks on America on *September 11 2001. Its seeds were sown during Bin Laden's guerrilla campaign against the Soviets in Afghanistan (1979–89), but the organization took definitive shape when he moved to Sudan (1991), where he trained terrorists for a holy war against the USA. Bomb attacks on US servicemen in Yemen (1992), Somalia (1993), and Saudi Arabia (1995) followed and in 1998 al-Qaida blew up the US embassies in Kenya and Tanzania, killing around 200. From 1996 al-Qaida had its command centre in S Afghanistan, where it forged links with the *Taliban. Following September 11, al-Qaida's headquarters and training camps became the prime targets in the US-led *war on terrorism. Nevertheless, al-Qaida cells have remained active in many countries and have been held responsible for a series of bombings, notably those in Bali (2002) and Madrid (2004), in each of which some 200 people were killed. It has also taken a leading role in the insurgency in Iraq following the *Iraq War.

Alsace (German name: Elsass) A planning region and former province in NE France, separated from Germany by the River Rhine. It is a fertile agricultural area and has important potassium deposits. *History*: it was often a scene of conflict between France and Germany. Under Roman occupation from the 1st century AD, it became a Frankish duchy in the 5th century and was part of the Holy Roman Empire from the 10th to the 17th centuries. The French gained control of Alsace in 1648, after the Thirty Years' War, but it was lost to Germany in 1871, after the Franco-Prussian War, and linked with *Lorraine to form the German imperial territory of **Alsace-Lorraine**. This existed until it reverted to France in 1919. It came under German control again in World War II and was restored to France in 1945. Area: 8310 sq km (3208 sq mi). Population (1999): 1 734 145.

Alsatian dog See GERMAN SHEPHERD DOG.

Altai Mountains A mountain system in Asia, extending from Siberia, Russia, into China and Mongolia. It rises to 4506 m (14783 ft) at Belukha in Russia.

Altamira Upper *Palaeolithic cave site in N

Spain, recognized in 1879, noted for the 150 magnificent paintings of animals on the cave's ceiling. Bison, painted in red ochre with black manganese manes, tails, and hooves, are the chief species depicted. See also MAGDALENIAN.

Altendorfer, Albrecht (c. 1480–1538) German artist. His masterpieces, few of which survive, show his love of forested mountains and include *The Battle of Issus* and *St George* (both Alte Pinakothek, Munich). He became the city architect of Regensburg.

alternating current (ac) Electrical current that periodically reverses its direction. It is the form of current produced when a coil of wire rotates in a magnetic field and, as this is the way in which current is produced in *power stations by *electric generators, it is the form of current most widely used, especially because its voltage can be easily increased or decreased by a transformer. The electromotive force (emf), E , produced by a generator is equal to $E' \sin \omega t$, where E' is the maximum emf, ω is the angular velocity of rotation, and t is the time. Thus the current has the form of a sine wave, with a frequency $\omega/2\pi$. In the UK the frequency used is 50 hertz (60 hertz in the USA). The voltage at which it is transmitted is several hundred kilovolts, which is transformed down to 240 volts for domestic use. See also ELECTRICITY SUPPLY.

alternating current. The voltage and power waveforms in a 240-volt, 50-hertz domestic mains supply. The current ($I = I_0 \sin(2\pi \times 50)t$) has a similar waveform to the voltage.

alternation of generations A phenomenon occurring in the *life cycles of many plants and some animals (particularly cnidarians) in which there is an alternation between two distinct forms (generations), which differ from each other in structure, reproduction, and also often in habit. In plants the genera-

tion reproducing sexually is the gametophyte and the asexual generation is the sporophyte. Either phase may be predominant in a particular species; for example, the gametophyte is dominant in mosses and the sporophyte in flowering plants. In cnidarians sedentary asexual polyps alternate with free-living sexual forms called medusae.

alternative energy The use of renewable energy sources from the environment. Most countries now rely heavily on *fossil fuels (oil, coal, and natural gas) and nuclear power for their energy needs. To combat the *greenhouse effect resulting from the use of fossil fuels and the environmental hazards of nuclear-waste disposal, the UK government in 2002, in accordance with the *Kyoto agreement, imposed a **renewables obligation** on all energy suppliers, who must take 3% of their energy from renewable sources. This rises to 10% in 2010. In 2005 in the UK some 4.2 million tonnes of oil equivalent was provided by renewable sources (chiefly *biomass energy and *hydroelectric power), up from 2.3 million tonnes in the late 1990s. To meet the Kyoto obligations, the largest investment is going into wind power, with the development of wind farms. Wave power, tidal power, and geothermal energy are also being developed.

alternative medicine (or **complementary medicine**) Treatment of physical and mental illness by alternative methods to those of orthodox medicine. It includes such specialties as *osteopathy, *homeopathy, *acupuncture, and *hypnosis, which are recognized and practised by some qualified doctors. Other branches include *chiropractic, *aromatherapy, naturopathy, herbalism, dietary treatments, the laying on of hands, and self-healing (e.g. by yoga, biofeedback, etc.). See also HOLISTIC MEDICINE.

Althing The parliament of Iceland, the oldest in the world, founded in about 930 AD. Since independence in 1944 it has been the country's sovereign legislature. It has 60 members in two houses of equal power.

Althorp House A country house in Northamptonshire, the childhood home and burial place of *Diana, Princess of Wales. It has been the seat of the Spencer family since 1508. A museum dedicated to the life of Diana opened in 1998.

altimeter A device for measuring altitude in one of two ways. A **pressure altimeter** consists of an aneroid *barometer calibrated in metres (or feet) above sea level. A **radio altimeter** con-

sists of a device that measures the time taken for a radio or radar signal to reach the ground and return.

altitude The angular distance of an astronomical body above or below an observer's horizon. It reaches a maximum of 90° when the body is directly overhead. It is used with the angular distance **azimuth**, measured eastwards along the horizon from the direction of N, to specify the position of an astronomical body on the *celestial sphere.

Altman, Robert (1922–2006) US film director, screenwriter, and producer. His films, mainly black comedies and satires, include *M*A*S*H* (1970), *Nashville* (1975), *Short Cuts* (1994), *Gosford Park* (2002), and *A Prairie Home Companion* (2006).

alto A high adult male singing voice produced by falsetto. Range: that of the *countertenor and *contralto.

altocumulus cloud (Ac) A medium type of *cloud appearing as globular masses in bands across the sky.

altostratus cloud (As) A medium type of *cloud appearing as a greyish sheet, sometimes thin enough for the sun to be seen through it. It usually heralds rain.

aluminium (Al) A light silvery-white metal first isolated by Friedrich Wöhler in 1827. It is the most abundant metal in the earth's crust and the main source is *bauxite, an impure hydrated oxide. The metal is extracted by electrolysis of the oxide dissolved in a flux of low melting point with the mineral cryolite. Its most important uses depend on its lightness (relative density 2.70), ductility, and good electrical conductivity. It is used in electrical power cables, kitchen utensils, and many industrial applications. Pure aluminium is soft, but its alloys with copper, magnesium, and other elements have considerable strength. This combined with their low densities makes such alloys important in aircraft construction. The hydroxide $\text{Al}(\text{OH})_3$ is used in glass manufacture and as an antacid in medicine. At no 13; at wt 26.9815; mp 660.4°C; bp 2520°C.

Alyssum A genus of low-growing herbaceous plants (about 150 species), mostly native to S Europe but widely grown in gardens. Alyssums have small flowers grouped in terminal clusters. Varieties of sweet alyssum (*A. maritimum*) have white or pink flowers and are grown as annuals. Perennial alyssums include *A. saxatile*, which has yellow flowers. Family: *Cruciferae*.

a

Alzheimer's disease A degenerative disease that affects nerve cells of the brain. It causes speech disturbances, progressive loss of memory and other mental faculties, and changes in behaviour and personality; though it may occur in middle age it is more common in elderly people. Its cause is uncertain, but some forms of Alzheimer's disease are inherited. Named after the German neurologist Alois Alzheimer (1864–1915).

amalgam An alloy of mercury with various other metals, including silver, gold, and palladium. Amalgams of mercury with silver and tin are used in dentistry to fill tooth cavities.

Amaranthus A genus of herbaceous plants (50–60 species) native to tropical and subtropical regions but now widely distributed (as pigweed). The small petalless flowers grow in long drooping spikes. Several species are grown for ornament, including *A. caudatus* (love-lies-bleeding), 60–100 cm tall with dark-red flowers, *A. tricolor* (Joseph's coat), with purple flowers and red, yellow, and green leaves. Family: *Amaranthaceae*.

amaryllis A perennial herbaceous plant, *Amaryllis belladonna*, also called belladonna lily, native to South Africa but widely cultivated for ornament. Growing from bulbs, it has strap-shaped leaves and a 45 cm long stem bearing 5–12 funnel-shaped sweet-scented flowers, usually rose-pink. Family: *Amaryllidaceae*.

Amati A family of violin makers in Cremona, Italy. **Andrea Amati** (c. 1520–c. 1578) developed the design that became the standard modern violin. His sons **Antonio Amati** (?1550–1638) and **Girolamo Amati** (1551–1635) worked as a team. Girolamo's son **Nicolò Amati** (1596–1684) was the family's greatest craftsman and taught **Andrea *Guarneri** (d. 1698) and ***Stradivari**.

Amazon, River (Portuguese name: Rio Amazonas) The largest river system and the second longest river in the world. Rising as the Rio Marañón in the Andes, in Peru, it flows generally W–E to enter the Atlantic Ocean in NE Brazil. Its drainage basin extends over much of Brazil, and parts of Venezuela, Colombia, Ecuador, Peru, and Bolivia. It is covered by a mantle of tropical rain forest (selva) and is navigable to oceangoing vessels as far as Iquitos, 3700 km (2300 mi) upstream. Destruction of the rain forest in recent years has caused concern on ecological grounds. Length: 6440 km (4000 mi). Drainage basin area: about 5 827 500 sq km (2 250 000 sq mi).

Amazons (Greek: breastless ones) A mythical

nation of female warriors who were believed by the ancient Greeks to live in Pontus, near the Black Sea. Trained for war and hunting, the Amazons got their name from their habit of removing the right breast to facilitate the drawing of bows. They intervened in the *Trojan War against the Greeks, but Achilles killed their queen, Penthesilea. They also invaded Attica but were defeated by *Theseus, who took their queen Hippolyte captive.

amber A translucent or opaque yellow fossil resin exuded by coniferous trees; insects and leaves are often preserved in the mineral, having been trapped on the sticky surface prior to hardening. It is found predominantly in Tertiary deposits around the S Baltic coast. It is used for beads, ornaments, and amber varnish.

ambergris A waxy substance found in the intestines of sperm whales. Mainly cholesterol, with fatty oils and steroids, it has a musky scent and is used in making perfumes.

Ambrose, St (c. 339–97 AD) Italian bishop of Milan and Doctor of the Church. Born at Trier, he was appointed a provincial governor in 370 with his headquarters at Milan. He was made Bishop of Milan in 374. He championed orthodoxy and the rights of the church against the civil power.

ambrosia The food of the gods in Greek mythology. Bestowing eternal life on those who ate it, ambrosia was (according to Homer and others) taken with the drink **nectar**; it was also described as a perfume.

Amenhotep III King of Egypt (c. 1417–1379 BC) of the 18th dynasty. He controlled Palestine and Syria through vassal kings and maintained good relations with Babylon. Many of the monumental buildings at Karnak and Luxor were erected by him. He was the father of Akhenaton.

American eagle See BALD EAGLE.

American football See FOOTBALL.

American Indians A diverse group of peoples of North, Central, and South America and the Caribbean Islands. In many respects they resemble the Mongoloid peoples of Asia, which has led to their classification as a subtype of the *Mongoloid race. However, their physical diversity, and the possession of certain features not common among Mongoloids, suggests other origins. Their ancestors probably migrated to the Americas from Asia via Alaska between 10 000 and 20 000 years ago. They have coarse dark straight hair, yellowish-brown skins, and sparse body hair. They speak a vari-

ety of languages and culturally range from primitive hunters and gatherers to the creators of the *Aztec, *Maya, and *Inca civilizations. See also NORTH AMERICAN INDIANS.

American Revolution (or American War of Independence; 1775–83)

The conflict in which the 13 colonies of North America gained independence from Britain. American resentment at Britain's authoritative rule focused in the mid-18th century on taxation. Protests against such legislation as the *Stamp Act (1765) and Townshend Acts (1767) culminated in the *Boston Tea Party (1773), to which Britain responded with the punitive Intolerable Acts (1774). The first Continental Congress was summoned at Philadelphia and, after attempts by both sides at negotiation had failed, the first shots of the war were fired at Lexington and Concord (April 1775). In the autumn the Americans invaded Canada, taking Montreal and besieging Quebec until forced to withdraw to Ticonderoga in Spring, 1776. On 4 July the second Continental Congress issued the *Declaration of Independence. Gen William Howe landed on Long Island in August and defeated the newly appointed American commander in chief, George *Washington, near White Plains. At the beginning of January 1777, however, Washington dealt a counterblow at Princeton before settling in winter quarters. Britain's strategy in 1777 was based on a plan for Gen John Burgoyne to march S from Canada and join Howe at the Hudson River. Burgoyne arrived at the Hudson (Aug) but Howe had left New York by sea, landed at Chesapeake Bay, and defeated Washington at the Brandywine, taking Philadelphia (Sept). Burgoyne, meanwhile, was forced to surrender his army at *Saratoga, a defeat that proved a turning point by bringing France into the war on the American side. In 1778 the British began an offensive in the S. Howe's successor, Clinton, took Charleston, South Carolina, and Cornwallis defeated Gates at Camden (1780). In early 1781 the British lost badly at Cowpens (17 Jan) but won, with heavy casualties, the battle of Guilford Court House (15 March). Cornwallis now moved into Virginia, establishing a base at Yorktown. There besieged by a Franco-American force under the Comte de Rochambeau (1725–1807) and Washington, on 19 October Cornwallis surrendered. American victory was now assured although conflict continued, chiefly at sea. The British navy had been threatened throughout by American privateers and the activities of such commanders as John Paul Jones, but the main threat at sea came from America's European allies—the French, Spanish (from 1779), and

Dutch (from 1780), who gained control of the English Channel and threatened invasion. Rodney's success (1782) in the West Indies enabled Britain to regain control of the Atlantic. In 1783 Britain acknowledged American independence in the Treaty of *Paris.

America's Cup A sailing race held periodically off Newport, Rhode Island (USA) and elsewhere, in which yachts are challenged for a cup won by the US *America* off the Isle of Wight in 1851. The USA retained the cup until 1983, when it was won by the Australian *Australia II*. The USA won again in 1987 and 1992, New Zealand in 1995 and 2000, and a Swiss challenger in 2003.

americium (Am) The fourth transuranic element, synthesized (1944) by G. T. Seaborg and others by addition of neutrons to plutonium followed by β -decay. It forms the oxide (AmO_2) and such trihalides as AmCl_3 ; it is strongly radioactive. At no 95; at wt (243); mp 1176°C.

amethyst A gemstone comprising a purple variety of *quartz. Its colour is due to impurities, particularly iron oxide. The best crystals are found in Brazil and the Urals. It is used for jewellery. Birthstone for February.

Amiens 49 54N 2 18E A city in NE France, the capital of the Somme department situated on the River Somme. Known as Samarobriwa in pre-Roman times, it was the ancient capital of Picardy. The **Peace of Amiens** (1802) marked a respite in the Revolutionary and Napoleonic Wars. Its gothic cathedral survived the damage of both World Wars. An important railway junction, Amiens' industries include textiles, tyres, and chemicals. Population (1999): 135 501.

Amin (Dada), Idi (c. 1925–2003) Ugandan politician; president (1971–79). He rose rapidly in the army, becoming commander in 1966. He overthrew Milton *Obote to become president and in 1972 ordered the expulsion of 80 000 non-Ugandan Asians. Notorious for his brutality, Amin was overthrown in a Tanzanian-backed coup after which he went into exile.

amines A class of basic organic compounds derived from ammonia (NH_3), in which one (primary amines), two (secondary amines), or three (tertiary amines) of the hydrogen atoms are replaced by organic groups. See also AMINO ACIDS.

amino acids A group of organic acids characterized by having at least one carboxyl group ($-\text{COOH}$) and at least one amino group ($-\text{NH}_2$). About 20 different amino acids comprise the basic constituents of *proteins. Certain essen-

a

tial amino acids cannot be manufactured by the body and must be supplied in the diet. In man these are: arginine, histidine, isoleucine, leucine, lysine, methionine, phenylalanine, threonine, tryptophan, and valine.

Amis, Sir Kingsley (1922–95) British novelist and poet, one of the *Angry Young Men. His first novel, *Lucky Jim* (1954), was a popular success. Later novels include *I Want It Now* (1968), *Jake's Thing* (1978), *The Old Devils* (1986), which won the Booker Prize, and *The Folks that Live on the Hill* (1990). He published several volumes of poetry and his memoirs appeared in 1991. His son **Martin Amis** (1949–), also a novelist, wrote *The Rachel Papers* (1974), *Money* (1984), *London Fields* (1989), *The Information* (1995), and *Yellow Dog* (2003). His autobiography, *Experience*, was published in 2000.

Amish A US and Canadian Protestant sect and a conservative faction of the Mennonites. Jakob Ammann, a Mennonite bishop in Switzerland, founded the sect in the 1690s, and by 1727 his followers had begun to settle in Pennsylvania. The Amish dress uniformly and depend on farming for their livelihood.

Amman 31°57'N 35°56'E The capital of Jordan. Amman was the capital of the biblical Ammonites, and there are some Greek and Roman remains. Under the British mandate in Palestine, the town grew from a small village, and in 1946 it became the capital of independent Jordan. The city has had large influxes of refugees following fighting in the Arab-Israeli Wars (1948, 1967, and 1973); in 1970 tension resulting from the refugee presence led to fighting on the streets of Amman between Jordanian forces and Palestinians. The university was founded in 1962. Amman is now an important communications centre, with some manufacturing industry. Population (1994 est): 963 490.

ammeter An instrument for measuring electric current. The two most common types are the moving-coil and the moving-iron ammeters. The moving-coil ammeter is more sensitive but will only measure direct current. The moving-iron ammeter will measure both alternating and direct current but is less sensitive and its scale is nonlinear. Some modern instruments are electronic and have a digital display.

ammonia (NH₃) A colourless toxic basic gas used for the manufacture of fertilizers, nitric acid, explosives, and synthetic fibres. It is made by the *Haber-Bosch process.

ammonite A *cephalopod mollusc belong-

ing to the subclass *Ammonoidea* (over 600 genera), abundant during the late Palaeozoic and Mesozoic eras, becoming extinct 100 million years ago. Their fossilized remains have either straight or coiled shells, some up to 200 cm in diameter, containing many chambers, which provided buoyancy for the free-swimming animal.

Ammonites An ancient Semitic tribe who were descended from Ben-ammi, the son of Lot, and lived E of Jordan. They worshipped the god Moloch and often fought the Israelites.

amnesia Loss of memory resulting from such causes as head injuries, drugs, hysteria, senility, or psychological illness. The memory loss may be for events before the injury or disease (*retrograde amnesia*) or for events after it (*anterograde amnesia*). In some cases specific areas of the brain show pathological changes. Treatment is related to the cause.

Amnesty International An organization, founded by Peter Benenson in the UK in 1961, aiming to defend freedom of speech, opinion, and religion in all parts of the world. It campaigns for the release of "prisoners of conscience," against torture, and for human rights and is concerned for the welfare of refugees. It has some 1.5 million members in over 150 countries and is funded by voluntary contributions. It won the Nobel Peace Prize in 1977.

amniocentesis A form of prenatal diagnosis in which a small quantity of the fluid (amniotic fluid) that surrounds an unborn baby in the mother's womb is removed for examination. The specimen may be taken by needle through the abdominal wall or, later in pregnancy, the opening of the womb. Tests on the amniotic fluid may reveal the presence of certain diseases or congenital disorders in the baby (e.g. Down's syndrome or spina bifida). If serious abnormality is detected, the possibility of abortion can be considered. Amniocentesis is offered to women when there is a family history of congenital disease and to pregnant women over 35 years of age.

Amoeba A genus of free-living microscopic animals (see PROTOZOA). They occur widely in soil and water and their flexible cells assume various shapes. The common amoeba (*A. proteus*) may be up to 0.5 mm long. Amoebas move by extending their cytoplasm into lobes (pseudopodia), which also engulf food particles and liquids. They reproduce by binary *fission and under adverse conditions form protective cysts. Some related forms are parasitic, includ-

ing *Entamoeba histolytica*, which causes amoebic dysentery in man. Phylum: Rhizopoda.

Amon The supreme Egyptian deity. Originally a Theban god, he acquired major status in the ascendancy of the 18th (Theban) dynasty in about 1570 BC. He became associated with the rival god Ra and as Amon-Ra became the national god. Great temples were built to him at Luxor and Karnak (c.1400 BC). Amon-Ra remained supreme god until 663 BC.

Amorites Semitic nomads of Palestine and Syria, who invaded the centres of civilization of Mesopotamia during the late 3rd millennium and 2nd millennium BC. They occupied *Babylonia, assimilated its culture and established numerous small kingdoms. Many Babylonian kings, including Hammurabi, were of Amorite stock.

Amos (early 8th century BC) An Old Testament prophet of Judah. The **Book of Amos** contains his prophecies delivered in Israel. He denounced the luxury and injustice of the privileged nation and predicted God's judgment by means of an Assyrian invasion and natural calamities.

amount of substance A quantity proportional to the number of particles, such as atoms or ions, in a sample. The constant of proportionality is the *Avogadro number. In *SI units amount of substance is measured in *moles.

ampere (A) The SI unit of electric current equal to the current that when passed through two parallel infinitely long conductors placed 1 metre apart in a vacuum produces a force between them of 2×10^{-7} newton per metre of length. This 1948 definition replaced all former definitions including that of the international ampere based on the rate of deposition of silver from a solution of silver nitrate. Named after A. M. *Ampère.

Ampère, André Marie (1775–1836) French physicist. He introduced the important distinctions between electrostatics and electric currents and between current and voltage, demonstrated that current-carrying wires exert a force on each other, and gave an explanation of magnetism in terms of electric currents. **Ampère's law** states that the strength of the magnetic field at any point produced by a current (I) flowing through a conductor of length l is proportional to Il/d^2 , where d is the distance between the point and the conductor. The unit of electric current is named after him.

amphetamine A stimulant drug that produces a feeling of alertness and wellbeing, increases muscular activity, and reduces fatigue and appetite. Because of the risk of addiction, particularly when combined with barbiturates ("purple hearts"), amphetamine is now rarely prescribed. It is occasionally used (in the form of dexamphetamine) to treat attention deficit disorder in children.

amphibian An animal belonging to the class *Amphibia*, which contains over 2500 species of frogs, toads, newts, salamanders, and caecilians. Adult amphibians breathe through lungs and have adapted to a wide range of habitats; however they require damp surroundings in order to minimize loss of body fluids through their thin, moist and usually scaleless skin. Generally amphibians lay their eggs in ponds or rivers. The eggs hatch into aquatic tadpole larvae that breathe using gills and develop into adults by a complete bodily transformation known as *metamorphosis.

amphiboles A group of rock-forming minerals, mostly complex hydrous ferromagnesian silicates. Hornblende and tremolite are examples. Amphiboles are common in igneous and metamorphic rocks and often occur in fibrous or acicular forms, including some forms of *asbestos.

amphitheatre An elliptical or circular building with tiers of seats surrounding an arena, designed by the Romans as a setting for gladiatorial and wild-beast shows, etc. The earliest stone amphitheatre is that at Pompeii (c.70 BC). The largest is the *Colosseum in Rome but there are also remains of amphitheatres in Arles, Nîmes, Capua, Verona, Sicily, and N Africa.

Amphitryon In Greek mythology, a grandson of Perseus who was betrothed to Alcmena, daughter of the King of Mycenae. While he was at war, Zeus assumed his appearance and seduced Alcmena, who conceived Heracles.

Amphitrite The Greek goddess of the sea. Poseidon chose her to be his wife when he saw her dancing with her sister Nereids. She rejected him and fled to the island of Naxos, but he sent a dolphin to reclaim her. She bore him three sons, Triton, Rhodos, and Benthesisicyma.

amphora An ancient Greek two-handled vase used as a container for liquids and fruit, and sometimes as an urn for holding ashes of the dead. The most important are the Black Figure vases (600–480 BC) of black-painted red earthenware depicting mythological scenes.

a

Other undecorated types, sometimes tapering to a pointed base, were used for transporting oil and wine.

amplifier An electronic device for intensifying an electrical signal in an alternating-current circuit, with an external steady voltage supply. Amplifiers are designed to multiply the input (current, voltage, or power) by a specific factor, known as the gain. Often an amplifier consists of several stages, the output from one stage becoming the input to the next stage. This method is used in the amplifiers in sound-reproduction systems.

Amritsar 31°35'N 74°56'E A city in NW India, in Punjab. Founded in 1577 by the fourth guru of the Sikhs, Ram Das, it has become the centre of the Sikh faith. In 1919 hundreds of Indian nationalists were killed here when fired upon by troops under British control. In 1984 about 1000 people died when the Sikh shrine, the Golden Temple, was fortified by Sikh extremists and stormed by the Indian army. The subsequent assassination of Indira *Gandhi was a reprisal for this event. A commercial, cultural, and communications centre, it manufactures textiles and silk. Population (1991): 709 456.

Amsterdam 52°21'N 4°54'E The official capital of the Netherlands, in North Holland province on the Rivers Amstel and IJ. The government seat is at The Hague. Linked to the North Sea by canal (1876), it is a major seaport. It is also an important financial and industrial centre, with a diamond cutting and polishing trade. Industries include shipbuilding, dairy produce, tobacco, and brewing. The city is mostly built on piles and linked with a radial system of canals and approximately 1000 bridges. *History:* chartered in 1300, it joined the Hanseatic League in 1369. It became the capital in 1808. Population (1999 est): 727 053.

Amu Darya, River A river in central Asia. Rising in the Pamirs, it flows mainly NW through the Hindu Kush, Turkmenistan, and Uzbekistan to join the Aral Sea through a large delta. It forms part of the N border of Afghanistan and is important for irrigation. It is navigable for over 1450 km (800 mi). Length: 2400 km (1500 mi).

Amundsen, Roald (1872–1928) Norwegian explorer, the first person to reach the South Pole. After sailing the *Northwest Passage in the *Gjøa* (1903–06) he abandoned his plan to reach the North Pole on hearing of Peary's success (1909). He himself beat *Scott to the South Pole in 1911. In 1926 he flew a dirigible over the North Pole with Umberto Nobile (1885–1928).

Amundsen died while searching for Nobile following the latter's dirigible crash in the Arctic Ocean. A small section of the S Pacific Ocean, bordering on Ellsworth Land in Antarctica, is called **Amundsen Sea** after him.

Amur, River (Chinese name: Heilong Jiang or Hei-Lung Chiang) A river in NE Asia. Rising in N Mongolia, it flows generally SE and NE through Mongolia, Russia, and China, to the Sea of Okhotsk. It forms the border between Russia and Manchuria. Length: 4350 km (2700 mi).

Anabaptists (from Greek: rebaptizers) Any of various radical religious groups originating in several continental countries during the *Reformation. They were called Anabaptists because they rejected infant baptism in favour of baptizing adults when they professed their faith. Persecuted by Roman Catholics and Protestants, they were accused of fanaticism, heresy, and immorality. They believed in pacifism, common ownership of goods, and millenarianism, and held radical political views. Their modern descendants, such as the Mennonites, number more than 500 000.

anabolic steroids See ANDROGENS.

anabolism See METABOLISM.

anaconda A nonvenomous South American *constrictor snake, *Eunectes murinus*. Up to 10 m long, it is typically dark green with oval black spots and lives in swamps and rivers, feeding on fish and small caymans and also hunting deer, peccaries, and birds along the water's edge.

Anacreon (6th century BC) Greek lyric poet. He fled from his native island of Teos before the Persian invasion, and lived at Samos and then Athens, under the patronage of Hipparchus. His work, only fragments of which survive, consisted chiefly of love lyrics and drinking songs.

anaemia A reduction in the number of red cells or the quantity of red pigment (see HAEMOGLOBIN) in the blood. It may be due to loss of blood, for example after an accident or operation or from chronic bleeding of a peptic ulcer, or lack of the iron necessary for the production of haemoglobin. **Haemolytic anaemias** are caused by increased destruction of the red blood cells, as may occur in certain blood diseases (e.g. *sickle-cell disease and thalassaemia) and malaria or because of the presence of toxic chemicals. Anaemia can also result from the defective production of red cells, as occurs in **pernicious anaemia** (when it is due to deficiency of *vitamin B₁₂).

anaesthesia A state of insensitivity to pain. Anaesthesia occurs in certain diseases of the nervous system, but is induced artificially for surgical operations. Alcohol and opium derivatives have been used as anaesthetics for centuries, but it was not until the 1840s that the first anaesthetic gases—ether, nitrous oxide, and chloroform—were used to induce **general anaesthesia** (total unconsciousness). This procedure now involves premedication (including administration of sedatives) to prepare the patient for surgery, followed by induction of anaesthesia by injecting a short-acting barbiturate (usually sodium thiopentone). Anaesthesia is maintained by inhalation of an anaesthetic gas (e.g. halothane). **Local anaesthesia** involves injection of a local anaesthetic (e.g. lignocaine) and is used for dental surgery and other minor operations. **Spinal anaesthesia** (epidural or subarachnoid) produces loss of sensation in a particular part of the body by injecting a local anaesthetic into the space round the spinal cord. It may be used, for example, during childbirth.

Anaheim 33 50N 117 56W A city in the USA, in S California near Los Angeles. It is a major tourist centre, containing the famous Disneyland opened in 1955. Population (2000): 328 014.

analgesics A class of drugs that relieve pain. **Narcotic analgesics**, such as *morphine, are powerful pain killers that act directly on the brain. Some anaesthetics also have analgesic properties. Aspirin and paracetamol are examples of **antipyretic analgesics**, which also reduce fever. These drugs are not addictive but are less potent than the narcotics.

analytic geometry The study of geometrical relations by algebraic methods. Geometrical figures are placed in a coordinate system, each point in the figure being represented by its coordinates, which satisfy an algebraic equation. It is also known as coordinate geometry or Cartesian geometry, after its inventor René *Descartes.

anaphylaxis A severe and immediate allergic response (see ALLERGY) that follows the interaction of the foreign substance (allergen) with antibody that is bound to the surface of certain cells (mast cells). This leads to the release of bradykinin, *histamine, and other chemicals, which cause the symptoms. Symptoms are either local (such as rash or swelling) or general (shock and collapse). The latter is a medical emergency; it is treated with injections of adrenaline, corticosteroids, and antihistamines.

anarchism A political theory advocating abolition of the state and all governmental authority. Most anarchists believe that voluntary cooperation between individuals and groups is not only a fairer and more moral way of organizing society but is also more effective and orderly. Anarchism aims at maximizing personal freedom and holds that societies in which freedom is limited by coercion and authority are inherently unstable. As an influential political force, anarchism was defeated in Russia by communism but persisted in Europe, especially in Spain until the end of the Civil War (1939).

Anastasia (1901–?1918) The youngest daughter of *Nicholas II of Russia. Although she was believed to have been executed after the Russian Revolution, a Mrs Anna Anderson (d. 1984) claimed from 1920 that she was Anastasia. Her claim was officially rejected in 1961 and finally proved false by DNA testing in 1993.

Anatolia See ASIA MINOR.

anatomy The study of the structure of living organisms. Early studies of human anatomy were made by the Greek physician Galen, in the 2nd century AD, but it was not until the 16th century that the prejudice against dissecting human cadavers was overcome and anatomists—notably Vesalius—made valuable contributions to the science. In the 17th century William *Harvey discovered the circulation of blood, while the development of the microscope enabled advances in the detailed structure of the body to be made by such microscopists as Malpighi, *Leeuwenhoek, and Swammerdam. In the 20th century anatomy received a valuable tool with the development of the electron microscope, which greatly extended the investigation of microscopic structure. Specialized branches of anatomy include embryology (the study of development), *histology (tissues), and *cytology (cells).

Anaxagoras (c.500–428 BC) Greek philosopher, born at Clazomenae (Asia Minor). In about 480 he moved to Athens, but because of his influence on *Pericles, he was banished (450) on a trumped-up charge of impiety. He believed that the physical universe was made up of an infinite number of substances and that matter was infinitely divisible. He was the first to explain solar eclipses.

Anaximander (c.610–c.546 BC) Greek philosopher, born in Miletus (Asia Minor). He held that the physical universe came from something unlimited, rather than one particular kind of matter, and maintained that the earth

a

lay unsupported at the centre of the universe. He was also an early evolutionist, believing that the origin of life arose in the sea, and that man evolved from some more primitive species.

ANC See AFRICAN NATIONAL CONGRESS.

ancestor worship The belief held by many members of prescientific societies that the spirits of their ancestors may be invoked to exert powers in their favour, especially in hunting, warfare, or other such enterprises. Ancestor cults can be socially important in reinforcing the powers of the community's living elders, who are believed to act as mouthpieces of the spirits. Festivals to propitiate the dead were features of both Greek and Roman religions, and ancestor cults formed part of Chinese and Japanese traditional religions.

anchor Any device for mooring a vessel to the bottom of a body of water. In ancient times a heavy stone was used, attached to the vessel by a rope. Modern anchors are designed for different kinds of bottom—sandy, rocky, muddy, etc.—and usually dig into the bottom with their bladelike flukes. They are attached to the vessel by heavy chain in large boats and ships or by rope (usually of nylon) in small boats.

anchor. Three common forms of anchor.

Anchorage 61 10N 150 00E A city and port in the USA, in S Alaska at the head of Cook Inlet. Founded in 1914 as the terminus of the Alaska Railroad, its main industries are defence projects. Population (2000): 260 283.

anchovy A small herring-like fish belonging to the tropical and warm-temperate family *En-*

graulidae (100 species). 10–25 cm long, anchovies have a large mouth extending behind the eye, a small lower jaw, and a pointed snout. They live in shoals, chiefly in coastal waters, and are fished for food, bait, and animal feeds.

Ancona 43 37N 13 31E A seaport in central Italy, the capital of Marche on the Adriatic Sea. It dates from 1500 BC, when it was founded by the Dorians. Its industries are connected with shipbuilding, engineering, and sugar refining. Population (1994 est): 100 597.

Andalusia (Spanish name: Andalucía) The southernmost region of Spain, bordering on the Atlantic Ocean and Mediterranean Sea. It chiefly occupies chiefly the river basin of the Guadalquivir and is one of Spain's most fertile regions producing citrus fruit, olives, and wine. Under Roman control after the 2nd century BC, the region was named Andalusia (after its 5th-century Vandal settlers) by the Muslims, who invaded the region in the early 8th century; much evidence of the Muslim occupation remains. In the 15th century Castile finally recovered Andalusia from the Muslims. After the Moriscos (Christians of Moorish descent) were expelled in 1609 the region's prosperity diminished. Its coastal resorts are popular with tourists, as are the Moorish buildings of Granada, Seville, and Córdoba. It became an autonomous region in 1981. Population (2001): 7 357 558.

Andaman and Nicobar Islands A Union Territory of India, comprising two island groups in the E Bay of Bengal. The Andaman forests support plywood and match industries. Coconuts, rubber, and coffee are also important. The Nicobar Islands 120 km (75 mi) S of the Andaman Islands, produce coconuts, areca nuts, and fish. Area: 8293 sq km (3215 sq mi). Population (2001): 356 265. Capital: Port Blair.

Andersen, Hans Christian (1805–75) Danish author, famous for his fairy tales. The son of a shoemaker, he attended Copenhagen University before travelling widely in Europe, writing novels, plays, and travel books. His international reputation, however, was earned by the 168 fairy tales that he wrote between 1835 and 1872. These include such classics as "The Snow Queen" and "The Ugly Duckling."

Anderson, Elizabeth Garrett (1836–1917) British physician, who pioneered the admission of women into the medical profession. Refused admission to medical schools, she studied privately and in 1865 was granted a licence to practise. She helped to establish the London hospital for women named after her.

Andes (Spanish name: Cordillera de los Andes) A mountain system in W South America. It extends N for about 7250 km (4500 mi) from Cape Horn to the Isthmus of Panama, reaching 6960 m (22 835 ft) at Mount Aconcagua and separating a narrow coastal belt from the rest of the continent. Comprising a series of parallel mountain ranges, it is chiefly of volcanic origin and contains several active volcanoes, including *Cotopaxi; earthquakes are common phenomena. It is rich in mineral wealth; the chief metals extracted include gold, silver, platinum, mercury, copper, and lead.

Andhra Pradesh A state in E central India, on the Bay of Bengal. The coastal plain rises westwards over the Eastern *Ghats into the Deccan plateau. Rice, sugar cane, cotton, tobacco, and pulses are farmed. Large forests provide teak, bamboo, and fruit trees. Manganese, iron ore, mica, and coal are mined. Industries include textiles, machinery, oil refining, and shipbuilding, which has been developed with cheap hydroelectricity. The region was struck by a severe earthquake in 1993. Area: 275 068 sq km (106 204 sq mi). Population (2001): 75 727 541. Capital: Hyderabad. Chief seaport: Vishakhapatnam.

Andorra, Principality of (Catalan name: Valls d'Andorra; French name: Les Vallées d'Andorre) A small principality in the E Pyrenees, between France and Spain. It is mountainous with peaks reaching heights of almost 3000 m (about 9500 ft). *Economy:* tourism and agriculture (wheat, potatoes, livestock raising, and tobacco) are the principal industries. Financial services are also important. *History:* in 1278 it was placed under the joint overlordship of the Bishop of Urgel in Spain and the Comte de Foix in France. The latter's rights passed in the 16th century to the French Crown and are now held by the president. Andorra pays dues in alternate years of 960 francs to France and 460 pesetas to the bishopric respectively. In 1993 a new constitution was approved, giving Andorra greater autonomy, and in 1994 Andorra's first sovereign government took office. Andorra is a tax haven and immigration has been substantial in recent years. Official language: Catalan. Currency: euro of 100 cents. Area: 465 sq km (179 sq mi). Population (2003 est): 66 900. Capital: Andorra la Vella.

Andrea del Sarto (Andrea d'Agnolo; 1486–1530) Florentine painter, whose work, through its influence on his pupils Jacopo da Pontormo (1494–1557), Giovanni Battista Rosso (1494–1540), and Giorgio Vasari (1511–74), became a starting point for Tuscan *mannerism.

Andrea spent most of his life in Florence, producing frescoes in the Scalzi and SS Annunziata. Among his most important paintings are several representing the Holy Family and the *Madonna of the Harpies* (1517; Uffizi).

Andrew, St In the New Testament, one of the 12 Apostles. Originally a fisherman with his brother Simon Peter, he was a disciple of John the Baptist before following Jesus. Apparently crucified, he is the patron saint of Scotland and Russia. Feast day: 30 Nov.

Androcles The hero of a story by Aulus Gellius (?125–?165 AD). Androcles was an escaped slave who removed a thorn from the paw of a lion. The lion later recognized the recaptured slave in the arena and spared him; both were freed. The story was satirized by G. B. Shaw in his play *Androcles and the Lion* (1913).

androgens A group of steroid hormones that influence the development and function of the male reproductive system and determine male secondary sexual characteristics, such as the growth of body hair and deepening of the voice at puberty. The major androgens are *testosterone and androsterone, produced by the testes in higher animals and man and also in small amounts by the adrenal glands and ovaries in mammals. Natural and synthetic androgens are used in medicine to treat conditions caused by androgen deficiency. Some synthetic androgens (**anabolic steroids**) promote the growth of muscle and bone and are administered to debilitated patients. Their use by athletes is banned by most athletic authorities.

Andromache In Greek mythology, the wife of Hector. She appears in Homer's *Iliad*. After the fall of Troy she became the slave of Neoptolemus, son of Achilles, and bore him three sons.

Andromeda (astronomy) A constellation in the N sky near Cassiopeia. The brightest star is the 2nd-magnitude Alpheratz. The constellation contains the spiral **Andromeda galaxy**, the largest of the nearby galaxies in the Local Group.

Andromeda (Greek mythology) The daughter of the Ethiopian king, Cepheus, and Cassiopeia. Her mother's boasts of Andromeda's beauty enraged Poseidon, who sent a sea monster to whom Andromeda was to be sacrificed. Chained to a rock to await her fate, she was rescued by *Perseus, who married her.

Aneirin (6th century AD) Welsh poet. His poem "Y Gododdin," preserved in the manuscript *Book of Aneirin* (c. 1250), celebrates the he-

a

roes of an expedition sent from Edinburgh to recapture Catterick from the Saxons. Out of 300 warriors only one survived.

anemometer An instrument for measuring the velocity of a fluid, often the wind. In one type, the fluid drives a small windmill or set of cups, the rate of rotation of which is a measure of the fluid velocity. Other types of anemometer are the *Pitot tube and the *Venturi tube.

Anemone A genus of herbaceous perennial plants (about 150 species) mostly native to N temperate regions. The leaves are segmented and the flowers lack true petals. The Eurasian wood anemone (*A. nemorosa*), 10–15 cm high, has white flowers. Many species are cultivated as ornamentals for their colourful flowers, including the poppy and Japanese anemones (*A. coronaria* and *A. japonica*). Family: *Ranunculaceae*.

aneurysm A swelling in the wall of an artery, due to a weakness in the wall. The most common cause in the western world is now *atherosclerosis. Aneurysms may rupture, causing fatal haemorrhage. Treatment consists of surgical removal of the aneurysm and its replacement with a graft.

angelfish 1. A fish of the tropical marine family *Chaetodontidae*, having a narrow oval laterally compressed body, a small mouth, and often an elongated snout. Up to 70 cm long, angelfish are solitary, living around coral reefs. They are usually patterned in a variety of brilliant colours. **2.** A South American *cichlid fish of the genus *Pterophyllum*, especially *P. scalare*, which is valued as an aquarium fish.

Angelica A genus of tall perennial herbs (about 70 species) distributed in the N hemisphere and New Zealand. They grow up to 2 m tall and have umbrella-like clusters of white or greenish flowers. The Eurasian species *A. archangelica* yields an oil used in liqueur and perfume making, and its stems are candied to make the confectionary angelica. *A. sylvestris* (wild angelica) is native to Europe and Asia and introduced in Canada. Family: *Umbelliferae*.

Angelico, Fra (Guido di Pietro; c.1400–55) Italian painter of the early Renaissance, born in Vicchio (Tuscany). In the early 1420s he became a Dominican monk in Fiesole. His order transferred in 1436 to St Mark's Convent, Florence, where he painted several frescoes, including a famous *Annunciation*. From 1445 to about 1450 he painted fresco cycles in the Vatican but only the *Scenes from the Lives of SS Stephen and*

Lawrence has survived. He was an exclusively religious painter, whose spiritual serenity is reflected in his popular name.

angels (Greek: messengers) In Christianity, Judaism, and Islam, supernatural beings created before the material universe. Their primary role was to praise and serve God. Many, however, followed Lucifer in his rebellion, becoming devils in hell. In the Bible angels appear mainly as messengers from God to man. Dionysius the Areopagite systematized angelology into nine orders. Later medieval theologians debated such questions as the nature of angels' bodies, which are often depicted as winged humans. In Christian belief **archangels** are ranked above angels in the celestial hierarchy.

angina pectoris Chest pain caused by a reduction in the supply of blood to the heart due to narrowing of the coronary blood vessels. See CORONARY HEART DISEASE.

angioplasty See CORONARY HEART DISEASE.

angiosperm Any flowering plant. Angiosperms comprise a vast group of leafy green plants (about 240 000 species) in which the seeds are formed within an ovary, which becomes the *fruit. They may have evolved from early *gymnosperms in the Jurassic period (about 180 million years ago), rapidly radiating and becoming the dominant plants in the mid-Cretaceous (about 100 million years ago). They include many trees and shrubs but most are herbaceous. The 300 families are grouped into two classes: the *monocotyledons and *dicotyledons.

Angkor A ruined city in Cambodia, founded about 880 AD as capital of the Khmer empire. It was rediscovered, covered by jungle, in 1860. Its temples, decorated with relief sculptures, were intended to emulate mountains; chief of these are the Angkor Wat (early 12th century) and Bayon (c.1200).

anglerfish A marine fish, also called goosefish, belonging to the order *Lophiiformes*. Anglerfish are generally small and have flat bodies, large heads, and wide mouths. The first ray of the spiny dorsal fin is modified to form a "fishing line" ending with a fleshy flap of skin—the "bait," which is often luminous in deep-sea species. Fish, invertebrates, and even seabirds are lured and snapped up by the huge mouth.

Angles A Germanic tribe originating from the Angeln district of Schleswig, which with the *Saxons and *Jutes invaded and conquered

most of England during the 5th century AD. England is named after them.

Anglesey (Welsh name: Ynys Môn; Latin name: Mona) A low-lying island off the NW coast of Wales, linked to the mainland by road and rail bridges over the Menai Strait. Part of Gwynedd from 1974 until 1996, it has now been reinstated as a separate county. The chief agricultural activity is sheep rearing. Area: 705 sq km (272 sq mi). Population (2001): 66 828. Administrative centre: Llangefni.

Anglican Communion The fellowship of episcopal Churches in communion with the see of Canterbury. Until 1786, when the consecration of bishops for foreign sees was legalized, it consisted of the Churches of England, Ireland, and Wales and the Episcopal Church of Scotland. In 1787 the Protestant Episcopal Church of the USA was founded and thereafter Anglican dioceses were formed in all parts of the British Empire and elsewhere. The member churches are fully autonomous, comprising about 350 dioceses; they meet for consultation at the *Lambeth Conferences. Total membership is estimated at 70 million. *See also* CHURCH OF ENGLAND.

angling Fishing with a baited hook line and usually a rod. There are four main categories. Game fishing for salmon and trout takes place in fast streams and rivers. Coarse fishing for members of the carp family, such as roach and bream is a sport in which the fish are returned to the water. Sea fishing for mackerel, flatfish, etc. is popular in shallow waters round the UK. Big-game fishing for shark, tuna, and swordfish require specially equipped motorboats. Competitions were common in Britain by the 18th century. The National Angling Championship was instituted in 1906 and in 1957 the first world championship was staged.

Anglo-Catholicism A movement within the *Anglican Communion that stresses the continuity of the Church of England with Catholic Christianity. The main impetus of modern Anglo-Catholicism was provided by the 19th-century *Oxford Movement. Anglo-Catholics emphasize the historic episcopate, the sacramental life of the Church, and traditional Catholic practices with regard to the celebration of the Eucharist, vestments, etc. Some Anglo-Catholics left the Church of England following the decision (1992) to ordain women as priests.

Anglo-Saxons The Germanic conquerors of Britain during the 5th century AD (*see* ANGLES; SAXONS; JUTES). They first established a

number of separate kingdoms, principally *Northumbria, *Mercia, and *Wessex, but eventually England was unified under an Anglo-Saxon dynasty. Kings ruled with the assistance of a *witan or council of wise men. Popular government and justice at the local level took the form of hundred courts. They were converted to Christianity as a result of the mission of St *Augustine of Canterbury. The Anglo-Saxons developed a rich art and literature. Their language is also known as Old English. *See also* ENGLISH.

Angola, Republic of A country in SW Africa, on the Atlantic Ocean. The Cabinda district lies to the N of the River Congo and is separated from the rest of the country by a section of the Democratic Republic of Congo. The country consists of a narrow coastal plain and a broad dissected plateau that reaches heights of over 2000 m (6500 ft). The inhabitants are almost all Black Africans (mainly of Bantu origin) with small numbers of mixed race. *Economy:* agriculture is run on a cooperative basis and the main crops are sugar cane and coffee. Angola is rich in mineral resources and diamonds have long been an important source of revenue. There is considerable oil production, especially offshore from Cabinda, and hydroelectricity is being harnessed. Main exports include oil, coffee, diamonds, and iron ore. The economy has been severely disrupted by 27 years of civil war and there are serious food shortages. *History:* discovered and settled by the Portuguese in the late 15th century, the area remained a Portuguese colony (apart from a brief period of Dutch occupation from 1641 to 1648) until 1951 when it became an overseas province of Portugal. During the 1950s and 1960s there was a rise in nationalism and in 1974 Portugal agreed to independence; however, lack of internal unity led to civil war. The various groups took over different parts of the country and in November 1975, Portugal granted independence to the "Angolan people" rather than to any one group. The People's Republic of Angola was declared by the MPLA (Popular Movement for the Liberation of Angola), with its capital in Luanda, supported by the Soviet Union and Cuba. The MPLA gained control of the country in 1976 but opposition from the National Front for the Liberation of Angola (FNLA) and the National Union for the Total Independence of Angola (UNITA), backed by South Africa, continued. South African and Cuban troops began to leave in 1988. A ceasefire was agreed in 1991, but broke down following the MPLA's victory in multiparty elections (1992). In 1994 the MPLA and UNITA agreed to

a

form a unity government but negotiations broke down in 1998 and UNITA launched a new offensive. In April 2002 a ceasefire ended 27 years of civil war which had claimed one million lives. Official language: Portuguese. Currency: kwanza of 100 lwei. Area: 1 246 700 sq km (481 351 sq mi). Population (2003 est): 10 776 000. Capital: Luanda.

Angora goat A breed of goat, originating in Turkey, whose long silky hair is regularly sheared and used commercially to make mohair, a wool-like fabric or yarn used in clothing etc. Mohair is now also obtained from several other goat breeds derived from the Angora.

Angora rabbit A breed of domesticated rabbit, originating in France in the 17th century, of which there are now both English and French varieties. The long wool, which is usually white but can be black or blue, is used in clothing manufacture (Angora wool).

Angry Young Men A group of British novelists and dramatists in the 1950s, mainly of working-class or lower middle-class origin, whose attitudes included dissatisfaction with postwar British society. The phrase "angry young man" was first applied to the dramatist John *Osborne. Associated with this group were the novelists Kingsley *Amis, John Wain (1925–94), and John Braine (1922–86), the dramatist Arnold *Wesker, and the critic Colin Wilson (1931–).

Ångström, Anders Jonas (1814–74) Swedish physicist and astronomer. He was a founder of spectroscopy, his work on solar spectra leading to the discovery (1862) of hydrogen in the sun. The **angstrom**, a unit of wavelength equal to 10^{-10} m (one tenth of a nanometre), is named after him.

Anguilla 18 14N 63 05W A West Indian island in the E Caribbean Sea, in the Leeward Islands. Formerly part of the UK Associated State of St Kitts-Nevis-Anguilla, it became a separate British dependency in 1980. Its economy is based on stock raising, salt production, boat-building, and fishing. Area: 90 sq km (35 sq mi). Population (1998 est): 12 394. See also ST KITTS-NEVIS, FEDERATION OF.

Angus A council area of E Scotland, on the North Sea. In 1975 the historic county of Angus was incorporated into Tayside Region. In 1996 it was restored as an independent unitary authority with adjusted borders; the city of Dundee now forms a separate authority. Agriculture is important; other sources of income include fishing, textiles, and engineering. Area:

2181 sq km (842 sq mi). Population (2001): 108 400. Administrative centre: Forfar.

aniline (or **phenylamine**; $C_6H_5NH_2$) A colourless oily liquid *amine used to make dyes, plastics, and drugs. It is made by the reduction of nitrobenzene obtained from coal tar.

animal A living organism belonging to the kingdom *Animalia*. Animals are typically mobile and feed on *plants, other animals, or their remains. Their body *cells lack the rigid cellulose wall of plant cells and they require specialized tissues, such as bone, for protection and support. Because of their activity, animals have specialized organs for sensing the nature of their environment; information from the sense organs is transmitted and coordinated by means of a nervous system. There are over one million species of animals, grouped into over 30 phyla. See also LIFE; TAXONOMY.

animal rights movement A campaign conducted by several organizations to protest against cruelty to and exploitation of animals. Targets of the movement, which developed in the 1970s, include zoos, research using experimental animals, foxhunting, and retailers of animal products. Some groups, such as the League Against Cruel Sports, favour parliamentary action, while others, such as the Animal Liberation Front, condone criminal acts, including damage to property.

animism 1. The belief that the physical world is permeated by a spirit sometimes called the **anima mundi**. Georg Ernst Stahl (1660–1734) was its chief proponent. 2. In anthropology, all forms of belief in spiritual agencies. Sir Edward Tylor (1832–1917), who coined this usage, distinguished between the souls of the dead (see ANCESTOR WORSHIP) and other personalized supernatural entities.

anise An annual Mediterranean herb, *Pimpinella anisum*, growing to a height of up to 75 cm and having umbrella-like clusters of small yellow-white flowers. It is cultivated for its liquorice-flavoured seeds (aniseed), which are used in cookery and yield an oil used to flavour drinks, etc. Family: *Umbelliferae*.

Ankara 39 55N 32 50E The capital of Turkey, in the W central region of the country. Conquered by Alexander the Great in the 4th century BC, it later came within the Roman and Byzantine Empires. It was attacked by Persians and Arabs, and in the 11th century it was defeated by the Turks. It became the capital of modern Turkey in 1923; it has three universities. Population (1997): 2 984 099.

phylum (approx. no. species)	important classes	representative members
Porifera (5000)		sponges
Cnidaria (9000)	Hydrozoa Scyphozoa Anthozoa	Hydra, Portuguese man-of-war jellyfish sea anemones, corals
Platyhelminthes (18500)	Turbellaria Trematoda Cestoda	planarians flukes tapeworms
Nematoda (12 000)		roundworms
Mollusca (50 000)	Gastropoda Bivalvia Cephalopoda	snails, slugs mussels, oysters, cockles squids, octopus
Annelida (12 000)	Oligochaeta Polychaeta Hirudinea	earthworms lugworms leeches
Arthropoda (>1 000 000)	Arachnida Crustacea Insecta Chilopoda Diplopoda	spiders, scorpions lobsters, crabs, woodlice beetles, wasps, ants, flies, bugs centipedes millipedes
Echinodermata (6500)	Asteroidea Ophiuroidea Echinoidea Holothuroidea	starfish brittle stars sea urchins sea cucumbers
Chordata (55 000)	Chondrichthyes Osteichthyes Amphibia Reptilia Aves Mammalia	sharks, rays bony fish (salmon, carp, eels, perch, etc.) frogs, toads, newts, salamanders lizards, snakes, crocodiles, turtles birds mammals, including humans

A simplified classification of the animal kingdom (major phyla only)

ankylosaur A heavily armoured dinosaur of the late Cretaceous period, which ended 65 million years ago. Ankylosaurs were low and flat and their backs were covered with hard protective bony plates. *Euoplocephalus* (or *Ankylosaurus*) reached a length of 5 m, weighed 3 tonnes, and its plated tail ended in a large bony knob. Order: *Ornithischia*.

Annaba (former name: Bône) 36 57N 7 39E A large port in E Algeria, on the Mediterranean Sea. An early centre of Christianity, it held the bishopric of St Augustine (396–430 AD). In 1832 it was captured by the French. Mineral exports are important, particularly phosphates and iron ore. Industries include flour milling and iron and steel processing. Population (1998): 348 554.

Annam A region in central Vietnam, long ruled from Hue. The Chinese, who had occupied it in 111 BC, were driven out in AD 939; it was a powerful independent state until becoming a French protectorate in 1884. In 1949 it became part of independent Vietnam.

Annan, Kofi (1938–) Ghanaian international civil servant; secretary general of the United Nations (1996–2006). He formerly worked for the UN in Geneva and New York. Annan and the UN were jointly awarded the 2001 Nobel Peace Prize.

Annapurna, Mount 28 34N 83 50E A massif in NW central Nepal, in the Himalayas. Its highest peak **Annapurna I**, at 8078 m (26 504 ft), was first climbed in 1950 by a French team.

Anne (1665–1714) Queen of England and Scotland (Great Britain from 1707) and Ireland (1702–14). Anne, the last Stuart monarch, was the daughter of the Roman Catholic James II but was herself brought up as a Protestant. Following the overthrow (1688) of James, she supported the accession of her Protestant brother-in-law, William III, whose heiress she became. She married (1683) Prince George of Denmark (1653–1708) and was pregnant 18 times by him; none of her five children born alive survived childhood. Anne therefore agreed to the Act of *Settlement (1701), which

a

provided for the Hanoverian succession after her death.

Anne (Elizabeth Alice Louise) (1950–) Princess of the United Kingdom, who became Princess Royal in 1987. The only daughter of Elizabeth II, she is eighth in line of succession to the throne. In 1973 she married Mark Phillips (1948–); following their divorce in 1992 she married Cmdr Timothy Laurence. An accomplished horsewoman, she is president of the Save the Children Fund.

annelid worm An invertebrate animal belonging to a phylum (*Annelida*) of about 12 000 species, widely distributed in salt water, fresh water, and on land. The body is characteristically a muscular cylinder divided into many fluid-filled segments. Annelids are divided into three classes: the Polychaeta, or bristleworms (see RAGWORM; LUGWORM; FANWORM); the Oligochaeta (see EARTHWORM; TUBIFEX), and the Hirudinea (see LEECH).

Anne of Bohemia (1366–94) The first wife (from 1382) of Richard II of England and daughter of Emperor Charles IV. Her household extravagance was a cause of dissension between Richard and parliament.

Anne of Cleves (1515–57) The fourth wife of Henry VIII of England. The marriage (January 1540) was arranged to effect an alliance with German Protestant rulers but Henry found Anne unattractive and quickly divorced her (July 1540).

Anne of Denmark (1574–1619) The wife (from 1589) of James I of England and VI of Scotland. She spent heavily on building and court entertainments (appearing herself in Ben Jonson's masques) and was suspected of Roman Catholic sympathies.

annihilation The conversion of a particle and its antiparticle into electromagnetic radiation (annihilation radiation) as a result of a collision. The energy of the radiation is equivalent to the combined mass of the two particles. See also ANTIMATTER.

annual rings (or **growth rings**) A pattern of rings visible in a cross section of a tree trunk, produced by different rates of wood growth: the wood appearing in spring consists of large cells corresponding to vigorous growth; autumn wood has small cells as growth slows down, and in winter growth ceases. The number of rings provides an estimate of the age of the tree. See also DENDROCHRONOLOGY.

annuals Plants that complete their life

cycle—from germination, flowering, and seed production to death—within one year. Many annuals are used as bedding plants and flower extensively in the summer months. Compare PERENNIALS.

annuity A form of pension in which an insurance company makes a series of periodic payments to a person (annuitant) or his or her dependents over a number of years (term), in return for either a lump sum or regular instalments. An immediate annuity begins at once and a deferred annuity after a fixed period. An annuity certain is for a specific number of years. A life annuity is paid from a certain age until death. A perpetuity continues indefinitely.

annulment The process establishing that a marriage is not legally valid, as opposed to divorce, which ends a valid marriage. An invalid marriage is considered void, never to have existed. A marriage is void if, for example, the husband or wife is insane, too young, or already married. When the husband or wife is unable or unwilling to consummate the marriage, it may be declared void if either partner wishes it.

Annunciation In the Bible, the announcement by the archangel Gabriel to the Virgin Mary of her conception of Christ (Luke 1.26–38). The feast, in full called the Annunciation of the Blessed Virgin Mary, or Lady Day, is celebrated on 25 March.

anode The positive electrode of an electrolytic cell, valve, etc. It is the electrode by which the electrons leave the system. Compare CATHODE.

anodizing A process in which a light metal or alloy, usually aluminium, is covered with a protective layer by oxidation in an electrolytic cell. Usually the cell contains chromic acid; the metal treated is the anode of the cell. A porous layer of oxide is formed, which can be dyed to give a coloured finish.

anointing of the sick See SACRAMENT.

Anopheles A widespread genus of mosquitoes (about 350 species), the females of which are important as vectors of the malarial parasite *Plasmodium*. The best-known malaria carrier is *A. maculipennis*. Some species transmit filariasis and encephalitis. Unlike other mosquitoes the larvae lack a siphon and lie flat on the surface of the water.

anorexia nervosa A psychological illness in which the patient, usually an adolescent girl, refuses food over a long period. It often starts with dieting to lose weight, which becomes ob-

sessional: the patient becomes emaciated and may—without treatment—starve to death. The psychological causes are complex, often involving disturbances in family relationships. Hospitalization may be required for the treatment, which involves intensive nursing, sedation, and *psychotherapy and may involve forced feeding.

Anouilh, Jean (1910–87) French dramatist, who achieved his first success in 1937 with *Traveller without Luggage*. His plays include reworkings of Greek myths (*Antigone*, 1944), social comedies (*Ring Round the Moon*, 1950), and historical dramas (*L'Alouette*, 1953; *Becket*, 1959).

Anschluss (German: union; 1938) The union of Austria with Germany. Following the forced resignation of the Austrian chancellor Kurt von Schuschnigg (1897–1977), Nazi forces entered Austria on 14 March and Schuschnigg was imprisoned. *Anschluss* was declared and ratified by a plebiscite.

Anselm of Canterbury, St (c. 1033–1109) Italian theologian and philosopher, Archbishop of Canterbury, and Doctor of the Church. Appointed to the see of Canterbury in 1093, Anselm defended church rights against William II Rufus until he went into exile to Rome in 1097. Recalled by *Henry I in 1100, he eventually reached an uneasy compromise with him. He is the leading early scholastic philosopher and is perhaps best known for his formulation of the ontological argument for the existence of God, which states that if God is “that than which nothing greater can be conceived,” then the existence of God is necessary, for it is possible to conceive of a greater entity than a nonexistent God. Feast day: 21 April.

ant An insect belonging to the family *Formicidae* (over 10 000 species). Ants occur in almost all terrestrial habitats, are 0.05–25 cm long, and show a high degree of social organization. A colony consists of wingless sterile female workers and a smaller number of fertile males and females, usually the progeny of a single queen. The young males and females fly from the nest to mate, after which the males die and the young queens found new colonies. Ant societies range from simple groups of a few individuals to large complex nests comprising millions of ants and sometimes involving a second species taken as slaves to work in the colony. Some ants have stings; others secrete burning acids (such as formic acid) as a defence. Order: *Hymenoptera*.

Antananarivo (former name: Tananarive) 18 52S 47 30E The capital of Madagascar. It was

occupied by the French in 1895. A cultural centre, it has a university (1961) and two cathedrals. Industries include tobacco and leather goods. Population (1993): 1 052 835.

Antarctica The most southerly continent, surrounding the South Pole. An almost circular ice-covered plateau, it is indented by the Weddell and Ross Seas and contains about 90% of the world's ice. The continent's climate is the severest in the world and although it lacks vegetation it has abundant wildlife including whales, seals, and penguins. Scientific stations were established during the International Geophysical Year (1957–58). Some nations (see AUSTRALIAN ANTARCTIC TERRITORY; BRITISH ANTARCTIC TERRITORY; NORWEGIAN ANTARCTIC TERRITORY) have political claims to territory in Antarctica; Argentina and Chile have also laid claims to portions of British Antarctic Territory. Under the **Antarctic Treaty** (1959; extended 1998) 43 nations have agreed to freeze all political claims, to refrain from military activities and mineral extraction, and to cooperate on scientific ventures in the continent. *History*: in his voyage of 1772–75 Capt James Cook circumnavigated the continent. Many explorations took place during the 19th century culminating in the race for the South Pole. This was reached first by Roald *Amundsen of the Norwegian Antarctic Expedition on 14 December 1911, and a month later by *Scott of the British Expedition, which perished on the return journey. Area: about 14 200 000 sq km (5 500 000 sq mi).

Antarctica. Under the Antarctic Treaty (1959) all political claims were halted and freedom of scientific research in the continent was ensured.

a

Antarctic Ocean The sections of the S Atlantic, Pacific, and Indian Oceans around Antarctica. Except in the height of summer (late Feb to early March), it is covered by drifting pack ice.

anteater A long-tailed animal belonging to a family (*Myrmecophagidae*; 3 species) occurring in tropical South America. It is toothless and has a narrow snout with a long sticky tongue used to pick up ants and termites after tearing open their nests with its powerful claws. The giant anteater (*Myrmecophaga tridactyla*) reaches 1.8 m in length and has grey and black fur and a bushy tail. The lesser anteater or tamandua (*Tamandua tetradactyla*) is a smaller arboreal animal with a prehensile tail. Order: *Edentata*. Several other unrelated animals that feed on ants or termites are called anteaters; these include the *pangolins (scaly anteaters), *echidnas (spiny anteaters), and *aardvark.

Antelami, Benedetto (active 1177–1233) Italian sculptor. He developed a style that marked the transition between the romanesque and the gothic. His best-known works are the reliefs on the doors of the baptistry at Parma, of which he was probably also the architect.

antelope A fast-running hoofed mammal belonging to the family *Bovidae* and occurring chiefly in Africa but occasionally in Asia. The shoulder height varies from 25 cm in the *royal antelope to 180 cm in the *eland. All male antelopes and some females have horns. See also GAZELLE; GNU; KUDU.

antenna 1. (zoology) The sensory feeler of insects, crustaceans, and many other arthropods, one or two pairs of which are attached to the head. They are usually jointed threadlike structures containing receptors of sound, smell, touch, and temperature. **2.** (radio) See AERIAL.

anther See STAMEN.

Anthony of Egypt, St (c. 251–356 AD) Egyptian hermit and founder of Christian monasticism. An ascetic from the age of 20, he withdrew into isolation for 34 years, when he emerged to organize a monastic community. When he was about a hundred years old, he preached against Arianism. His combat with temptation in the desert is described in Athanasius's *Life of Saint Anthony*; it became a frequent subject in Christian art.

Anthony of Padua, St (1195–1231) Portuguese friar and Doctor of the Church, known for preaching and converting heretics in N Italy and the Albigenes in S France. He became

professor of theology to the Franciscan Order in 1223. He is often invoked as a finder of lost property.

anthracene ($C_{14}H_{10}$) An aromatic compound consisting of three fused benzene rings. It is obtained from coal tar and used to make dyes.

anthracite See COAL.

anthrax A contagious disease of many animals, including farm livestock, that can be transmitted to man. Caused by the bacterium *Bacillus anthracis*, it is usually contracted by eating contaminated food. Onset is often sudden with a rise in temperature, staggering, respiratory distress, convulsions, and death. In horses and pigs a subacute form may occur, with progressive swelling of the throat and neck resulting in laboured breathing and choking. In many countries the authorities must be notified of any outbreaks. Treatment is with antibiotics and prevention is by vaccination of herds. Humans may develop localized swellings after handling infected carcasses or acquire a pneumonia from inhaling the bacterial spores (wool-sorters' disease).

Although several governments and terrorist groups are believed to have developed anthrax as a biological weapon, it has never been used in conflict.

anthropoid ape A tailless *primate belonging to the family *Pongidae*, which includes the gibbons, chimpanzees, orang-utans, and gorillas. See APE.

anthropology The scientific study of man in his physical and social aspects. It includes *archaeology, *linguistics, cultural or social anthropology, and physical anthropology. Physical anthropology is concerned with the origins and evolution of man through the examination of his fossil remains, and the study and classification of the races (see also ANTHROPOMETRY). Cultural anthropology is concerned with the evolution of human society and culture, including language, and with the systematic comparison of social, linguistic, technical, and behavioural diversity.

anthropometry The science concerned with the measurement of the human body, particularly with respect to the variation that exists between different populations and races. Anthropometry ranges from the measurement of structural characteristics, such as height and cranial capacity, to the analysis of chemical constituents of the body, such as blood groups. By comparing fossil and present-day measurements anthropometry has also

helped to reveal the sequence of events that has occurred during the evolution of man (see ANTHROPOLOGY).

anthropomorphism The human tendency to ascribe the motives, feelings, etc., of human beings to nonhuman entities. The anthropomorphism of ancient Greek religion was ridiculed by Xenophanes of Colophon (6th century BC) but God in Christianity has not escaped from an implicit anthropomorphism. Religious art can scarcely avoid being anthropomorphic.

antiballistic missiles High-speed nuclear weapons used to attack hostile *ballistic missiles. Operated by ground-based radar and computers, they rely for their final attack on their own guidance systems, destroying the target by radiation from their warheads. Short-range versions with low-yield warheads (e.g. US *Sprint*) are designed to seek and destroy targets within the earth's atmosphere; long-range missiles with high-yield warheads operate in space (e.g. US *Spartan*).

antibiotics Drugs derived from microorganisms or synthetically to treat infections caused by bacteria or fungi. Bacteriocidal antibiotics, such as *penicillin, kill bacteria, whereas bacteriostatic antibiotics, such as *tetracycline and *chloramphenicol, simply halt their growth. Examples of antifungal antibiotics are nystatin and griseofulvin. Possible adverse effects of antibiotic treatment include allergic reactions. The appearance of resistant strains of bacteria, due to the indiscriminate use of antibiotics, has resulted in the development of certain life-threatening infections that do not respond to most existing drugs.

antibody A protein produced by certain white blood cells (lymphocytes) that reacts specifically with and neutralizes a foreign protein (e.g. a bacterium), which is known as the **antigen**. Antibody production is stimulated by contact with the antigen: subsequent exposure to the antigen produces a greater antibody response, which provides the basis of *immunity. Antibodies contribute to the body's resistance to infection and are responsible for the rejection of foreign tissue or organ transplants. See also MONOCLONAL ANTIBODY.

Antichrist In the New Testament, a person or institution opposed to Christ, who will appear before Christ's second coming (John 2:18–22). Some early Christians believed Nero to be the Antichrist; many reformers, such as Luther, saw the pope in this role.

anticline An arch-shaped *fold or upfold in folded rock strata, the oldest rocks occurring at the core. In areas of complex folding an upfold may have its youngest rocks at the core, the resulting structure being termed an antiform. Compare SYNCLINE.

anticoagulants Drugs, such as heparin and warfarin, that interfere with blood clotting. They are used when there has been, or there is a risk of, clots forming in the blood vessels, as after *thrombosis of the leg veins.

anticyclone (or high) An area of atmospheric pressure higher than the surrounding air with one or more isobars of approximately circular form around its centre. Winds, generally light, circulate around the high pressure centre in a clockwise direction in the N hemisphere and anticlockwise in the S hemisphere. Calm settled weather is usually synonymous with anticyclones in temperate latitudes.

antidepressants A class of drugs used to relieve depression. The most widely used are the tricyclic antidepressants, which include amitriptyline and imipramine, and the SSRIs (selective serotonin reuptake inhibitors), such as fluoxetine (Prozac). The MAO inhibitors prevent the action of the enzyme monoamine oxidase in breaking down adrenaline and related compounds that affect mood. These antidepressants may have serious side effects and are therefore restricted to the treatment of severe psychological disorders.

Antietam, Battle of (17 September 1862) A decisive engagement in the US Civil War, which prevented the Confederate capture of Washington, DC. In the last of a series of battles, the advance of the Confederate general Robert E. *Lee, was checked at Antietam by the Federal general George B. McClellan (1826–85). The South lost about 10 000 men but McClellan allowed Lee to withdraw into Virginia.

Antigone In Greek mythology, the daughter of *Oedipus and Jocasta, whose story forms the basis of Sophocles' tragedy *Antigone*. When her father was banished from Thebes she accompanied him into exile in Colonus. Her brothers Eteocles and Polyneices had agreed to reign alternately in Thebes, but Eteocles' refusal to yield the crown led to their killing each other. Despite the Theban senate's decree prohibiting the burial of Polyneices, Antigone performed the funeral rites for her brother. She was consequently ordered to be buried alive by Creon, ruler of Thebes, and hanged herself.

Antigua and Barbuda A West Indian

a

country in the E Caribbean Sea, comprising the islands of Antigua, Barbuda, and Redonda. Tourism is the chief source of revenue; sugar and cotton production are also important and financial services are being developed. *History:* Antigua was discovered by Columbus (1493) and colonized by British settlers in 1632. It formed an associated state within the British Commonwealth from 1967 until gaining independence in 1981. It is a member of CARICOM. Elections in 2004 resulted in defeat for the ruling Labour Party, which had held power since 1976. Currency: dollar of 100 cents. Area: 440 sq km (170 sq mi). Population (2003): 76 800. Capital: St John's.

antihistamine A drug that interferes with the action of *histamine. Some antihistamines (e.g. chlorpheniramine) prevent histamine from causing allergic reactions and are used to treat hay fever and other allergies; some of these drugs are also used to prevent travel sickness and as sedatives. Other antihistamines (e.g. ranitidine) prevent histamine stimulating the secretion of gastric juice and are used to treat peptic ulcers.

Antilles The islands of the West Indies, excluding the Bahamas. The group is divided into the *Greater Antilles and the *Lesser Antilles.

antimatter Hypothetical matter in which the constituent atoms consist of **antiparticles**. For every elementary particle (see PARTICLE PHYSICS) there exists an antiparticle that is identical except for certain of its properties, such as electric charge and isospin number, which are of equal magnitude but opposite in sign. An atom of antimatter would contain a nucleus of antiprotons and antineutrons surrounded by positrons (antielectrons). See also ANNIHILATION.

antimony (Sb) A metallic element that occurs in nature as the element and more commonly in the sulphide stibnite (Sb_2S_3). The element exists in two forms: the normal metallic form, which is brittle bluish-white and flaky, and an amorphous grey form. It forms the oxide (Sb_2O_3) by burning in air and the volatile hydride, stibine (SbH_3), which like many antimony compounds is toxic. Pure antimony is used in making *semiconductors; other uses include addition to lead to increase its hardness in battery plates and as oxides or sulphides in paints, glasses, and ceramics. At no 51; at wt 121.75; mp 630.7°C; bp 1587°C.

Antioch (modern Turkish name: Antakya) 36 12N 36 10E A town in central S Turkey, near the coast and the Syrian border. Founded in 301

BC, it had a large early Christian community, and there are notable Roman mosaics in the Archaeological Museum. Population (1994 est): 137 200.

antioxidant A substance that inhibits oxidation of such products as food, paints, plastics, fuels, etc. Natural antioxidants, such as ascorbic acid (vitamin C), vitamin E, and beta-carotene, reduce damage to cells caused by free *radicals.

antipope A person raised to the papacy in opposition to a lawfully elected pope. Hippolytus, the first of some 40 antipopes, was created in the early 3rd century. During the later Roman Empire and the middle ages most antipopes represented rival factions supporting different political or doctrinal claims. In the 11th and 12th centuries some 14 antipopes were chosen by the Holy Roman Emperors, who represented the Church's growing independence from lay control. From 1378, following the *Great Schism, the popes remaining in Avignon under French control were styled antipopes. The Council of Pisa (1409) elected a new pope to end the Schism, but he too was regarded as an antipope until unity was restored at the Council of *Constance (1515). There have been no antipopes since the mid-15th century.

antipsychotics A group of drugs used to quieten disturbed patients with schizophrenia, brain damage, mania, delirium, or agitated depression. They include the phenothiazines (e.g. chlorpromazine) and the butyrophenones as well as the more recent so-called atypical antipsychotics (e.g. clozapine, risperidone), which have less severe side-effects.

Antirrhinum A genus of chiefly Mediterranean and W North American herbaceous plants (about 40 species). The most widely cultivated species is the ornamental snapdragon (*A. majus*), 30–80 cm high with brightly coloured two-lipped tubular flowers adapted to pollination by bees. Family: *Scrophulariaceae*.

antisemitism Hostility towards Jews, which has characterized their existence since the diaspora (6th century BC). Represented as God's chosen people in the Old Testament and the betrayers of Christ in the New Testament, the Jews appeared as a threateningly coherent minority in Christian Europe, especially as many served as moneylenders to Christians, who were forbidden by canon law to lend money for interest (usury). As a result of expulsion, persecution, the Inquisition (1478), and papal bull (1555) medieval Europe lost large numbers of its Jews, many of whom enriched

the Muslim countries of N Africa and Turkey. It was not until the 18th-century Enlightenment had introduced religious freedom that they returned in any numbers. However, in the 19th century the earlier church-led antisemitism was replaced by a spurious jingoism, especially in Germany. In France, it became public in the *Dreyfus affair. In Russia, government-tolerated pogroms were common in the late 19th century. Antisemitism reached its peak in Hitler's final solution (see WANNSEE CONFERENCE), which cost the Jews six million lives (see HOLOCAUST). Since the establishment of the state of Israel, antisemitism has to some extent been replaced by Arab anti-Zionism. It does, however, persist, especially in E Europe.

antiseptic A substance that kills bacteria and other dangerous microorganisms and can be applied to the skin (to cleanse wounds, before surgery, etc.) or taken internally. Antiseptics are generally distinguished from disinfectants, which are too toxic to be used on or within the body.

antitoxin An *antibody produced against a toxin. Antitoxins can be isolated from inoculated healthy animals and used to treat or prevent specific infections; for example, an antitoxin against tetanus is obtained from the plasma of animals inoculated against tetanus.

antitrust acts US legislation to control *monopolies and preserve a competitive market. The Sherman Antitrust Act (1890), the first of several measures, prohibited contracts "in restraint of trade." Interpreted narrowly at first, these laws were strengthened by successive legislation (including the Clayton Act 1914 and the Antimerger Act 1950) prohibiting or restricting interlocking directorships, price fixing, and takeovers. In the UK, the less stringent Fair Trading Act (1973) performs similar functions.

antlers The paired bony structures growing from the heads of deer, generally confined to males. In temperate regions the antlers begin to grow in early summer; they are at first covered with velvety skin, which is later shed. Used for fighting and display, the antlers are shed each year at the end of the mating season. Deer grow their first set of antlers, which are usually straight spikes, at the age of 1–2 years. The number of points is increased in successive years.

antlion An insect belonging to a family (*Myrmeleontidae*) in which the adults resemble dragonflies and live only long enough to mate and lay eggs. The predatory larva lives 1–3

years, generally at the bottom of a conical pit in loose sand; any insect that falls into the pit is snapped up with its large jaws, which protrude from the sand. Order: *Neuroptera*.

Antofagasta 21 51S 102 18W A city in NW Chile, a port on the Pacific Ocean. It is a commercial and industrial centre. The chief industries are metal refining and founding; export include nitrates and copper. The University of the North was established here in 1956. Population (1999 est): 243 048.

Antonello da Messina (c. 1430–c. 1479) Italian painter, born in Messina (Sicily). He trained in Naples, where he probably learned the Flemish technique of oil painting; this he introduced to Venice during a visit in 1475. The realism of Flemish art also deeply influenced his style, particularly in *St Jerome in His study* and *Portrait of a Man* (both National Gallery, London).

Antonescu, Ion (1882–1946) Romanian general and politician. A pro-Nazi, he became prime minister (1940), replacing Carol II's government with a totalitarian regime. In 1941 he commanded the army in Bessarabia. He was executed for war crimes.

Antonine Wall A Roman frontier defence work 58.5 km (36.5 mi) long, linking the Firths of Forth and Clyde in S Scotland and still surviving in places. It was built about 142 AD by Lollius Urbicus, governor of Britain, for the emperor *Antoninus Pius, and abandoned in 196 AD. A military road linked 29 small forts along a turf wall 3 m (10 ft) high and 4.3 m (14 ft) wide, behind a substantial ditch. See also HADRIAN'S WALL.

antlers. The number of branches increases with the age of the stag. This antler has 6 branches; a stag with a head of 12 branches is called a royal.

a

Antoninus Pius (86–161 AD) Roman emperor (138–61). Antoninus was admitted by Emperor Hadrian to his advisory council and adopted as his successor in 138. His reign was generally prosperous; minor campaigns were fought abroad and noted legal reforms were introduced; the *Antonine Wall was built during his reign. He was deified after his death.

Antonioni, Michelangelo (1912–) Italian film maker. In 1939 he moved to Rome to work for the magazine *Cinema*. His first films were *Gente del Po* (1943–47) and *Cronaca di un amore* (1950). Later films include *L'avventura* (1959), *La notte* (1961), *Blow-Up* (1966), *Zabriskie Point* (1970), *The Passenger* (1975), and *Beyond the Clouds* (1995).

Antrim 1. A historic county of NE Northern Ireland, on the Atlantic Ocean and the Irish Sea. Its administrative powers were devolved to the new district councils in 1973. On the N coast is the famous *Giant's Causeway. Outside Belfast the county is agricultural. Industry includes the manufacture of man-made fibres, which has largely replaced linen production. Area: 3100 sq km (1200 sq mi). **2.** A district in Northern Ireland, in Co Antrim. Area: 415 sq km (160 sq mi). Population (2001): 48 366.

Antwerp (Flemish name: Antwerpen; French name: Anvers) 51°13'N 4°25'E A city in Belgium, on the River Scheldt. Antwerp is one of the largest seaports in the world and has important shipbuilding and ship-repairing industries. Other industries include oil refining, diamond cutting, textiles, and electronics. It possesses many fine buildings, including the 14th-century gothic cathedral and the 16th-century Butchers' Hall. There is a large Flemish-speaking population. *History:* the leading commercial centre of western Europe in the 16th century, its decline began with religious strife and its sacking by Spaniards (1576); this was further hastened by the closure of the River Scheldt (1648). The revival of its economy began when Belgium purchased the shipping rights of the river from the Netherlands. Population (2000 est): 446 525.

Anubis Egyptian god of the dead, usually represented as a crouching jackal or a jackal-headed man. He supervised the weighing of the souls of the dead and the embalming of the body (originally devised, it is said, to preserve the body of Osiris).

Anura An order of amphibians (over 2000 species) comprising the *frogs and *toads. Anurans are specialized for jumping, having a short backbone, no tail, and large hind legs. The

eggs hatch into tadpoles, which undergo *metamorphosis. This order is also called the *Salientia*.

Anyang 36°04'N 114°20'E A city in E China, in Henan province. The last capital (1384–1111 BC) of the Shang dynasty, it has many archaeological remains. Industries include cotton and steel. Population (1999 est): 527 982.

ANZAC The Australian and New Zealand Army Corps, which served in World War I in Europe and the Middle East. On **ANZAC Day**, 25 April (the day of the ANZAC landing in Gallipoli in 1915), the dead of both World Wars are remembered.

aoudad A tawny-coloured sheep, *Ammotragus lervia*, also called Barbary sheep. The only wild sheep in Africa, aoudads live in dry rocky northern regions and obtain water mainly from vegetation and dew. They stand 102 cm at the shoulder and have outward-curving horns and long hair hanging from the neck and chest.

Apache A North American Indian people with six major divisions: the Jicarillos, Mescaleros, Chiricahuas, and Western Apache of the S Plains and SW region of the USA; and the Lipan and Kiowa-Apache living further to the east. Their language is of Athabascan type. They were feared raiders, who frequently attacked the villages of Pueblo Indians and Spanish settlements. In addition to hunting, some groups practised farming. Normally tribal unity was slight but in the late 19th century, under such chiefs as Geronimo and Victorio, they would form groups to attack the Americans. There are today about 10 000 Apaches on reservations.

apartheid (Afrikaans: apartness) The policy of separate development of the White and non-White populations in South Africa. Apartheid, which was introduced by the Afrikaner National Party in 1948, aimed to divide South Africa into separate regions for Whites and Blacks. The White minority that governed South Africa attracted worldwide hostility for this policy and in 1961 South Africa was forced to withdraw from the British Commonwealth. In 1985 non-Whites won limited constitutional rights and interracial marriage was allowed. Increased internal unrest, combined with sporting and financial pressure from outside, led *de Klerk to start dismantling apartheid. In 1992 Whites voted in a referendum to admit Blacks to the political process and in 1993 a new constitution enfranchised all South African adults; in 1994 Nelson *Mandela was elected the first Black President of South Africa.

apatite The commonest phosphorous mineral, of composition $\text{Ca}_5(\text{PO}_4)_3(\text{OH}, \text{F}, \text{Cl})$. It is found as an accessory mineral in many igneous rocks and is used in the production of fertilizers. The enamel of teeth is composed almost entirely of apatite (see also FLUORIDATION) and the chief inorganic constituent of bone is hydroxyapatite, $\text{Ca}_{10}(\text{PO}_4)_6(\text{OH})_2$.

Apatosaurus A huge herbivorous dinosaur, which has also been called *Brontosaurus*, of the late Jurassic period, which ended about 135 million years ago. Up to 21 m long and weighing up to 30 tonnes, it had massive pillar-like legs, a long neck and tail, and spent most of its time in swamps, coming ashore to lay eggs. With its nostrils placed high on its head, it was able to stand almost fully submerged. Order: *Saurischia*.

ape A highly intelligent tailless *primate belonging to the family *Pongidae* (11 species), found in central Africa and S Asia. There are two subfamilies: the arboreal *Hylobatinae* (see GIBBON; SIAMANG) and the ground-dwelling *Ponginae* (see CHIMPANZEE; ORANG-UTAN; GORILLA), also called great apes. Forest apes are often solitary but ground-dwelling apes live in complex societies and all have highly developed means of communication. Some tailless primates of other families are also called apes.

Apennines (Italian name: Appennini) A mountain range in Italy. It extends about 1050 km (652 mi) down the Italian peninsula from the Maritime Alps in the NW to the Strait of Messina in the S. The range is not generally very high, the highest peak being Monte Corno at 2914 m (9560 ft). The Apennines are volcanic in the S (see VESUVIUS).

aphelion The point in the orbit of a body around the sun at which the body is furthest from the sun. The earth is at aphelion on 3 July. Compare PERIHELION.

aphid An insect, also called a plant louse, belonging to a family (*Aphidae*) of plant pests. Small, soft, and often wingless, aphids have long thin antennae and weak legs and are usually green (greenfly), red, or brown. There are two thin tubes projecting from the abdomen from which honeydew is secreted. Aphids feed on plant sap, piercing plant tissues with sharp beaklike mouthparts, causing leaf curl, retardation of growth, and often forming galls. Order: *Hemiptera*.

Aphrodite In Greek mythology, the goddess of love, called *Venus by the Romans. According to Homer she was the daughter of Dione

and Zeus; Hesiod says that she was born from the foam after *Uranus had been castrated and his genitals thrown into the sea. She was the wife of Hephaestus but had an affair with Ares. Paris' choice of her as the most beautiful of the three goddesses at the wedding feast of Peleus and Thetis (the others were Hera and Athena) caused the *Trojan War. Revered throughout Greece as the personification of spiritual love, she also embodied sensual lust.

Apis The Egyptian bull god. Originally a minor fertility god, he became associated with Ptah and later Osiris (when he became known as Serapis). A bull sacred to him was kept until another with appropriate markings was found; it was then ritually drowned in the Nile and its body mummified in the Serapeum vault at Saqqarah.

apocalypse (Greek: revelation) In the New Testament, the Book of *Revelation. The term is also used of various noncanonical writings, such as the Book of Enoch, and of parts of the Old Testament books of Isaiah, Ezekiel, and Daniel. Full of symbolism and imagery, they describe visions of a great new era that will supersede the present age of suffering.

Apocrypha (Greek: hidden things) Twelve books taken by the early Christian Church from the Greek version of the Old Testament but not forming part of the Hebrew Bible. They originated in the Hellenistic Judaism of Alexandria but were not accepted as canonical by orthodox Jews. In the *Vulgate, most of them are printed with the Old Testament but they are omitted or printed as a separate section in Protestant versions of the Bible. They are: I Esdras, Tobit, Judith, the Rest of Esther, the Wisdom of Solomon, Ecclesiasticus, Baruch with the Epistle of Jeremy, the Song of the Three Holy Children, the History of Susanna, Bel and the Dragon, the Prayer of Manasses, and I and II Maccabees.

apogee The point in the orbit of the moon or of an artificial satellite around the earth at which the body is furthest from the earth. Compare PERIGEE.

Apollinaire, Guillaume (Wilhelm de Kostrowitzky; 1880–1918) French poet. Born in Italy, he settled in Paris in 1900. His poetry, first collected in *Alcools* (1913), blends lyricism with experiment. Having been wounded in World War I, he wrote a surrealist play, *Les Mamelles de Tirésias* (1917), and a modernist manifesto, *L'Esprit nouveau et les poètes*, during his recuperation. The poems in *Calligrammes* (1918) included typographical experiments.

a

Apollo A Greek god, symbol of light, of reason, and of male beauty. He is also associated with medicine, prophecy, music and poetry, the care of animals and crops, morality, and the maintenance of society. He and his sister *Artemis were the children of *Zeus by *Leto. He established his oracle at Delphi after killing Python, its dragon guardian.

Apollo moon programme The US programme to land men on the moon by 1970, announced by President Kennedy in 1961. The programme was directed by *NASA. A Saturn V rocket launched the Apollo spacecraft towards the moon and, once the craft was in lunar orbit, the lunar module descended to the moon's surface carrying two astronauts. The third astronaut remained in the orbiting craft. At the end of the surface mission the lunar module's descent stage was left on the moon while its ascent stage was shot into lunar orbit and docked with the orbiting craft. Following the transfer of the two astronauts, the ascent stage was jettisoned and the spacecraft returned to earth. The astronauts travelled to and from the moon in the command module, the rocket engines for in-flight manoeuvres, fuel cells, etc., being carried in the separate service module, which was jettisoned prior to re-entering the earth's atmosphere.

The first six Apollo missions were unmanned test flights, the next four being manned. Apollo 11 made the first manned lunar landing in July 1969. Of the six ensuing missions, all, except Apollo 13, were highly successful.

Apostles In the New Testament, the 12 men

chosen by Jesus as his disciples who, after his death, were to spread his teaching throughout the Roman world. Originally they were: Andrew, Bartholomew (or Nathaniel), James son of Alphaeus, James son of Zebedee, John, Jude (or Thaddeus), Judas Iscariot, Matthew (or Levi), Philip, Simon Peter, Simon the Zealot, and Thomas. After his suicide Judas Iscariot was replaced by Matthias. St Paul is also included among the Apostles because of his claim to have seen Jesus after the resurrection.

Apostles' Creed A Christian profession of faith in three sections concerning God the Father, Jesus Christ, and the Holy Spirit. Widely used in the Western Churches, it is of uncertain date but its present title first occurs in a letter of St Ambrose of about 390 AD.

apostolic succession A Christian doctrine held by the Roman Catholic and Orthodox Churches and by some Anglicans. Its upholders claim that the Apostles appointed the first bishops and that there is thus a continuous line of succession from the Apostles to the present ministries of these Churches, along which the power and authority given by Christ to the former have passed to the latter.

Appalachian Mountains A mountain range in North America. It extends NE-SW from the Gaspé Peninsula, in Canada, to Alabama and separates the Mississippi-Missouri lowlands from the Atlantic coastal plain. It consists of a series of mountain ranges and plateaus, including the Allegheny Mountains, the Catskill Mountains, and the White Mountains of New Hampshire. Its highest point is

<i>craft</i>	<i>astronauts</i>	<i>launch date</i>	<i>comments</i>
Apollo 7	W. Schirra W. Cunningham D. Eisele	11 October 1968	first manned flight of Apollo spacecraft
Apollo 8	F. Borman J. Lovell W. Anders	21 December 1968	first manned flight around moon
Apollo 9	J. McDivitt D. Scott R. Schweickart	3 March 1969	complete Apollo craft tested in earth orbit
Apollo 10	T. Stafford J. Young E. Cernan	18 May 1969	rehearsal of moon landing
Apollo 11	N. Armstrong E. Aldrin M. Collins	16 July 1969	first manned moon landing, 20 July
Apollo 12	C. Conrad A. Bean R. Gordon	14 November 1969	second moon landing
Apollo 13	J. Lovell F. Haise J. Swigert	11 April 1970	mission aborted after in-flight explosion in service module
Apollo 14	A. Shepard E. Mitchell S. Roosa	31 January 1971	third moon landing
Apollo 15	D. Scott J. Irwin A. Worden	26 July 1971	fourth moon landing
Apollo 16	J. Young C. Duke T. Mattingly	16 April 1972	fifth moon landing
Apollo 17	E. Cernan H. Schmitt R. Evans	7 December 1972	last moon landing

Apollo moon programme

Mount Mitchell, at 2038 m (6684 ft). Coalmining is important and iron ore is also extracted. It also contains the **Appalachian Trail**, the longest continuous footpath in the world.

Appaloosa An American breed of spotted riding horse. Height: 1.47–1.60 m (14½–15¼ hands).

appeal In law, the review of a court decision by a higher court, usually at the request of one of the parties to the case. The decisions of some administrative or professional bodies may also be appealed against in the courts. Appeals in *common law systems are usually based on alleged errors of law in the original trial, but may sometimes also be based on errors of fact. See also **COURTS OF LAW**.

appeasement In the 1930s, the policy of the British prime minister, Neville *Chamberlain, and his French counterpart, Édouard Daladier, of accepting the demands of Hitler and Mussolini in the hope of maintaining peace. It culminated in the Munich Agreement (1938), which was totally discredited in 1939, when Hitler seized Czechoslovakia and precipitated World War II by marching into Poland. Strongly opposed by Winston Churchill, appeasement has since been excused by some as an attempt by Britain and France to buy time to rearm.

appendix (or **vermiform appendix**) A thin blind-ended tube, 7–10 cm long, that opens from the end of the large intestine. It has no known function in man and is prone to infection, causing inflammation known as **appendicitis**. Surgical removal of an inflamed appendix is often necessary to prevent rupture and subsequent *peritonitis. In herbivorous animals (e.g. rabbits and cows) the appendix is large and functions in the digestion of vegetable matter.

Appian Way The road, built about 312 BC by the statesman Appius Claudius, between Rome and Capua. It was the first in the strategic network of Roman roads. A short stretch is still visible near Rome.

apple A deciduous tree or shrub of the genus *Malus* (about 35 species), native to N temperate regions and widely cultivated for their rounded fleshy fruits (pomes). Several species have been cultivated, especially *M. pumila* of W Asia, with the development of numerous varieties of dessert, cooking, and cider apples. Apples are also used for soft drinks and as a source of pectin. Family: *Rosaceae*. See also **CRAB APPLE**.

Appleton layer See **IONOSPHERE**.

Appomattox 37°21'N 78°51'W A town in the USA in Virginia. The US Civil War ended here when Robert E. Lee surrendered to Ulysses Grant on 9 April 1865.

apricot A tree, *Prunus armenica*, native to China and widely grown in warm temperate countries, especially Spain, for its fruits. It is 6–9 m tall and has white five-petalled flowers and toothed heart-shaped leaves. The orange-yellow fruits have sweet flesh. Family: *Rosaceae*.

apse A semicircular or polygonal eastern end of a church used in the basilica and in Romanesque and Norman architecture. The clergy were seated in the apse behind the central altar.

Apulia (or **Puglia**) A region in SE Italy, on the Adriatic Sea. It consists of lowlands in the N and S and a hilly central area. Wheat, tobacco, vegetables, olives, figs, vines, and almonds are the main products. Manufacturing is being developed, particularly at Taranto. Area: 19 347 sq km (7470 sq mi). Population (2000 est): 4 085 239. Capital: Bari.

Aqaba 29°32'N 35°00'E A port in Jordan, on the Gulf of Aqaba, a narrow inlet at the NE end of the Red Sea. Aqaba was the Roman stronghold of Aelana. Being Jordan's only port, it has been considerably expanded to export phosphates. Population (1990 est): 46 090.

aquamarine A pale blue or green variety of *beryl. Many fine specimens of this gemstone come from Brazil, Madagascar, and California.

aquarium A receptacle containing fresh or salt water for maintaining fish, aquatic plants, etc. or a building in which such receptacles are displayed. A water heater (for tropical species), aerator, and filter may be necessary. The first public aquarium was opened at the London Zoo in 1853.

aquatint An etching technique that produces a result similar to a wash drawing. The method was invented in the 1760s by a Frenchman, Jean Baptiste Le Prince (1733–81). Sharply defined areas of tone are employed, usually in conjunction with etched lines. A printing plate is sprinkled with powdered asphaltum or resin, which is fixed to the plate by heating. Stopping-out varnish is used to mask different areas as the plate is immersed for varying lengths of time in an acid bath. Goya and Picasso used the technique with outstanding effect.

aquavit A spirit distilled from grains and

a flavoured with caraway seeds. Drunk predominantly in Scandinavia, it is served ice cold.

aqueduct A narrow bridge, channel, or conduit designed to enable water to flow at a steady rate over irregular natural terrain, such as a valley. Aqueducts were built by the Greeks, but the technique was developed by the Romans. Impressive Roman examples still survive at Nîmes, Segovia, and Rome.

Aquilegia A genus of perennial herbaceous plants (100 species) of temperate regions, commonly known as columbines. Their flowers have petals with long honey-secreting spurs. Many modern hybrids are derived from the European columbine (*A. vulgaris*). Family: Ranunculaceae.

Aquinas, St Thomas (c. 1225–74) Italian Dominican theologian, scholastic philosopher, and Doctor of the Church, known as *Doctor Angelicus*. The son of Count Landulf of Aquino, he was educated at Monte Cassino and at the University of Naples. Joining the Dominican Order in 1244 in spite of parental opposition, he became a pupil of Albertus Magnus in Paris (1245) and followed him to Cologne in 1248. He was a theological adviser (1259–69) to the papal Curia before teaching in Paris until 1272, when he was appointed a professor at Naples. He was canonized in 1323. His most influential works are the *Summa contra gentiles* (1259–64), written for missionaries, and the unfinished *Summa theologiae* (1266–73), the first systematic work of Latin theology. Feast day: 7 March.

Aquino, Cory (Corazón Aquino; 1933–) Philippine stateswoman; president (1986–92). She succeeded her assassinated husband **Benigno S. Aquino** (1933–83) as leader of the opposition and became head of state when the corrupt *Marcos regime came to an end.

Aquitaine (Latin name: Aquitania) A planning region in SW France, bordering on the Bay of Biscay. Formerly an administrative region in Roman Gaul, it extended from the Pyrenees N to the River Loire. It became an independent duchy under the Merovingians (7th century). The marriages of Eleanor of Aquitaine to Louis VII of France and then to Henry II of England resulted in rival French-English claims to the territory (see HUNDRED YEARS' WAR). Area: 41 408 sq km (15 984 sq mi). Population (1999): 2 908 359.

Arab horse An ancient breed of horse originally bred by the Bedouins in Arabia. It is usually grey, chestnut, or bay with a long silky mane and tail, a wedge-shaped head, and an

arched neck. The Arab is prized as a riding horse for its speed, hardiness, and docile temperament. Height: 1.42–1.52 m (14–15 hands).

Arabia A peninsula in the Middle East, forming the SW tip of Asia and bordered by the Red Sea, the Gulf of Aden, the Gulf of Oman, and the Persian Gulf. It consists of Saudi Arabia, Yemen, Oman, the United Arab Emirates, Qatar, Bahrain, and Kuwait. *History*: as remains of irrigation systems show, S Arabia was the site of technologically advanced ancient civilizations. It was conquered briefly by the Persians in 575 AD and later unified from Mecca by Islam in the 7th century, when the previously warring Arab tribes turned their attention to the conquest of N Africa, SW Asia, and S Europe. From the 16th century until World War I the Ottoman Turks held nominal control over much of the peninsula, challenged chiefly by the Wahhabiyah. From the mid-19th century until the late 1960s the UK was the chief foreign presence.

Arabian Desert 1. A desert chiefly in Saudi Arabia. Area: about 2 300 000 sq km (887 844 sq mi). 2. A desert in E Egypt between the River Nile and the Red Sea.

Arabian Sea A section of the NW Indian Ocean between Arabia and India. Connected to the Mediterranean Sea by the Red Sea and the Suez Canal, it forms a major shipping route.

Arabic A member of the Semitic group of languages. It is written from right to left. Arabic is the mother-tongue of some 110 million people inhabiting SW Asia (the Middle East) and the countries of N Africa. Arabic can be roughly classified into three parts: (a) Classical Arabic, the language of the *Koran and the great Arab writers and poets; (b) Modern Literary, or Standard, Arabic, the language of the press and broadcasting; and (c) the colloquial dialects (vernaculars), which differ in a greater or lesser degree from country to country.

Arabic numerals The number symbols 0, 1, 2, 3, 4, 5, 6, 7, 8, 9. They are believed to have originated in India and were introduced into Europe by the Arabs in about the 10th century AD. Compare ROMAN NUMERALS.

Arab League An organization formed to promote Arab unity and cooperation. Formed in Cairo in 1945, it consisted of those Arab countries that were then independent; others joined on attaining independence. Palestine, represented by the PLO, is a member. The League has had some success in the scientific and cultural field but in politics has been split

between its conservative and progressive members. In 1979, following the Egyptian-Israeli peace treaty, Egypt was expelled from the League, which was relocated in Tunis: it returned to Cairo following Egypt's readmission in 1989.

arable farming The cultivation of plants for food, fibres, vegetable oils, etc. Arable farming is often carried out in conjunction with livestock farming, enabling the farmer to grow his own animal feeds and to make use of animal manures as *fertilizers. Grass is the chief feed for *ruminant livestock and a major arable crop. Apart from grazing, grass is cut and conserved for winter food.

Cereal crops are a principal source of food and animal feedstuffs. The major cereals are wheat, barley, rice, and maize with oats, millet, sorghum, and rye cultivated to a lesser extent. Wheat may be sown either in autumn or spring, according to the variety, and is harvested in late summer when the grain is hard.

Beans are grown as a major source of vegetable protein, the most important being soyabean, produced chiefly in China and the USA. They are harvested mechanically using a specially adapted combine harvester. Harvesting root crops, such as potatoes and sugar beet, requires specialized machines that excavate the crop and remove soil. Crops grown for their oil content include sunflower, groundnut, linseed, cottonseed, and rape. Modern pesticides and fertilizers, together with innovations in mechanization, irrigation, and plant breeding have resulted in dramatic increases in crop yields, bringing about a Green Revolution, especially in developing countries.

Arabs A Semitic people originally inhabiting the Arabian peninsula. They are roughly divided into two cultural groups: the nomadic *Bedouin tribes and the settled communities of the towns and oases. Wealth from oil has recently led to industrialization and westernization in the towns, but Islam remains a strong conservative force in social customs, particularly in women's role in society. The Arabs appeared as a power in world history early in the 7th century AD, with the rise of Islam, and they carried their language (see ARABIC), religion, and culture as far as Spain in the W and Indonesia in the E.

Arachne In Greek mythology, a girl from Lydia who defeated Athena in a tapestry-weaving contest. The jealous goddess destroyed all Arachne's work; she attempted to hang herself, but Athena changed her into a spider.

arachnid An invertebrate animal belonging to a class (*Arachnida*; 65 000 species) of chiefly terrestrial *arthropods, including the *spiders, *scorpions, harvestmen, *ticks, and *mites. An arachnid's body is divided into two parts: a combined head and thorax (cephalothorax) and an abdomen. The cephalothorax bears four pairs of legs and two pairs of head appendages, one of which consists of strong pincer-like claws. Arachnids are mostly carnivorous; many secrete poison from specialized glands to kill prey or enemies. Others are parasites, some of which are carriers of disease. Arachnids usually lay eggs, which hatch into immature adults.

Arafat, Yassir (1929–2004) Palestinian leader. In the 1950s he was a founder of al-*Fatah and in 1968 he became president of the *Palestine Liberation Organization (PLO). After 1983 his leadership was rejected by some factions of the PLO. In 1993 he signed a peace agreement with Israel, which led to the award of the 1994 Nobel Peace Prize (jointly with *Rabin and *Peres). Following Israel's partial withdrawal from the *West Bank he was elected first president of the new Palestinian National Authority in 1996. He signed a further land-for-peace deal with Israel in 1998 but subsequent talks (2000) ended in impasse, leading to renewed violence. From 2001 Arafat's inability to restrain Palestinian suicide bombers and Israel's reoccupation of much of the West Bank greatly weakened his authority.

Aragon An autonomous region and medieval kingdom in NE Spain, of which Ramoír I (d. 1063) was the first king (1035–63). Union with Catalonia was secured by marriage in 1140. Later expansion gave the Aragonese Sicily (1282) and Sardinia (1320) and culminated in the conquest by Alfonso the Magnanimous (1385–1458) of the kingdom of Naples (1442). In 1469 Ferdinand and the Catholic (1452–1516), heir to the Aragonese throne, married Isabella the Catholic (1451–1504) of Castile and on his accession in 1479 the two kingdoms were united. Area: 47 609 sq km (18 382 sq mi). Population (2000 est): 1 189 909.

Aragon, Louis (1897–1982) French poet, novelist, and journalist. In 1919 he and André Breton founded the surrealist journal *Littérature*; his first books of poetry, *Feu de joie* (1920) and *Le Mouvement perpétuel* (1925), and his prose work *Le Paysan de Paris* (1926) are surrealist in style. He became a communist after a visit to the Soviet Union in 1930 and then turned to social realism, especially in the novel series *Le Monde réel* (1933–51).

a

Aral Sea A salt-water lake in W Asia in Kazakhstan and Uzbekistan, now considered one of the world's worst ecological disasters. Once the fourth largest lake in the world, overuse of its source rivers (the Amu Darya and Syr Darya) for irrigation has reduced its water volume by more than half. It is heavily polluted by agricultural chemicals. Area (including salt flats): about 66 000 sq km (25 477 sq mi).

Aramaic A western branch of the Semitic group of languages. Its 22-character alphabet is the ancestor of both Hebrew and Arabic alphabets. Originally the speech of Aram (the biblical name for Syria), Aramaic became the official language of the Persian Empire under Darius I. It replaced Hebrew as the language of the Jews from about the time of the Exile in 605 BC until after the rise of Islam and was the language spoken by Jesus and his disciples.

Ararat, Mount (Turkish name: Ağrı Dağı) 39°44'N 44°15'E A mountain in E Turkey, near the Armenian and Iranian borders. It is volcanic in origin and isolated but for a secondary peak 12 km (7 mi) away. Traditionally, Noah's ark came to rest here after the flood (Genesis 8.4). Height: 5165 m (16 946 ft).

Araucaria A genus of coniferous trees (about 15 species), native to Australasia and South America (it is named after a district of Chile). They have whorled horizontal branches covered with scale leaves, and male and female flowers usually grow on separate trees. The genus includes the ornamental *monkey puzzle and several trees yielding useful timber, including the Norfolk Island pine (*A. heterophylla*); the hoop pine (*A. cunninghamii*) and the bunya bunya (*A. bidwillii*), both from E Australia; and the parana pine (*A. angustifolia*), of Brazil. Family: *Araucariaceae*.

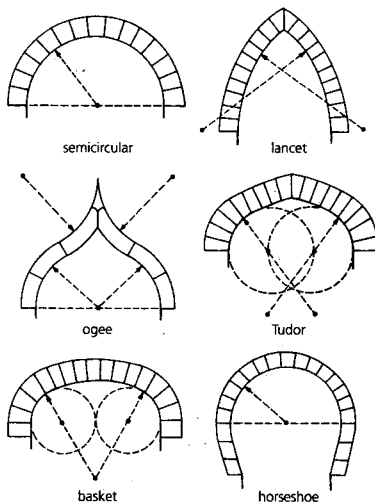

Arawak Indians of the Greater Antilles and northern and western areas of the Amazon basin. Their languages are the most widespread of the South American Indian languages and include Goajiro in Colombia, Campa and Machiguenga in Peru, and Mojo and Bauré in Bolivia. They are farmers growing manioc and maize. Prior to the Spanish conquests they were divided into numerous hereditary chiefdoms. They were never a warlike people and in the Caribbean area *Carib tribes frequently raided Arawak groups and enslaved Arawak women. The tribal gods were the spirits of chiefs represented by a hierarchy of idols called zemis, which were housed in temples.

arbor vitae A coniferous tree of the genus *Thuja* (6 species), native to North America and E

Asia. They have scalelike leaves, which densely cover the flattened stems, and small scaly cones, 1–1.8 cm long. The Chinese arbor vitae or cedar (*T. orientalis*), which grows to a height of 30 m, is a popular ornamental tree; the giant arbor vitae, or western red cedar (*T. plicata*), of W North America, grows to a height of 40 m and yields a valuable timber. Family: *Cupressaceae*.

Arbutus A genus of evergreen trees and shrubs (about 20 species) distributed in Central and North America and W Europe. The small white or pinkish flowers are borne in terminal clusters and the berries are reddish. The leaves are dark green, toothed, and shiny above. The strawberry tree (*A. unedo*) of SW Europe is widely grown as an ornamental, reaching a height of 9 m. Family: *Ericaceae*.

Arcadia A mountainous region of ancient Greece, in the central Peloponnesus, that was identified in the literature of Greece, Rome, and the Renaissance (e.g. in Sidney's *Arcadia*) as an earthly paradise. It is a modern department.

arch. The semicircular arch characterized Roman, Romanesque, and Norman architecture; the lancet, ogee, Tudor, and basket arches were gothic and later medieval developments; the horseshoe arch is typical of Islamic architecture.

Arc de Triomphe A ceremonial arch standing at the centre of the Étoile at the top of the Champs Élysées in Paris. It was commissioned to celebrate the victories of *Napoleon I and

(a) A plan of an ancient Greek burial mound showing the relative positions of the original mortuary chamber and other burials in the mound.

(b) A strategic section (through XX) of the same mound showing the comparative levels of the ground at various periods.

archaeology

built between 1806 and 1836 to the designs of Jean Chalgrin (1739–1811).

arch In architecture, a structure (invented by the Romans) for spanning a horizontal space. By using interlocking and mutually supporting pieces of stone, greater distances can be spanned than with single megaliths; also arches can be employed to provide a more even distribution of pressure throughout a building. The basic forms of arch are the pointed, or gothic, arch, and the rounded, or classical, arch.

archaeology The scientific study of the material remains of human history. Archaeology may be supplemented by written records, where they exist, but its techniques are principally concerned with nonliterary evidence for man's social and cultural development. Modern archaeology has numerous specialized branches—classical, industrial, underwater, etc. Before the 19th century, digging was carried out to plunder precious objects from ruins. Sci-

entific excavation followed the realization that often more could be learnt from the surroundings in which objects are discovered than from the objects themselves. Essential techniques include stratigraphy, based on the principle that in any sequence of deposits the uppermost is latest and the lowest earliest, and typology, the study of changes in forms (e.g. of pottery). Methods of dating include radiometric dating, *palaeomagnetism, thermoluminescence, *varve dating, and *dendrochronology.

Archaeopteryx A genus of extinct primitive birds, fossils of which date from the Jurassic period (160–120 million years ago). It had many reptilian features, such as numerous teeth, a long bony tail, and claws on the hand, but was fully feathered and is believed to be the ancestor of modern birds. *Archaeopteryx* lived in dense forests, climbing trees using its claws and gliding down in search of food.

Archangel (Russian name: Arkhangelsk) 64°32'N 40°40'E A port in NW Russia, on the River Dvina, 50 km (30 mi) from the White Sea. Founded in 1584, it was Russia's leading port until the early 18th century. The country's largest timber-exporting port, it has timber-processing and shipbuilding industries and also supports a fishing fleet. Population (1999 est): 366 200.

archery A sport in which a specified number of arrows are shot at a target over a prescribed distance. The modern bow developed from the medieval longbow, but the skill of shooting arrows from a bow dates back 30 millennia. **Target archery** consists of shooting at a target of standard size marked with five or ten circular scoring zones. Different competitions require different permutations of distances and numbers of arrows. **Field archery** consists of shooting at large animal figures with superimposed scoring rings. In **clout shooting** arrows are shot into the air to fall on a target marked on the ground, while in **flight shooting** the purpose is to achieve the maximum distance. Archery is an amateur sport, governed internationally by the Fédération internationale de Tir à l'Arc (founded 1931).

Archimedes (c. 287–c. 212 BC) Greek mathematician and inventor, regarded as the greatest scientist of classical times. Archimedes was born in Syracuse and studied in Alexandria, afterwards returning to Sicily, where he remained for the rest of his life. He is best known for his discovery of Archimedes' principle, supposedly in response to the King of Syracuse asking him to determine whether a gold crown had been adulterated with silver. Legend has it that he made his discovery while taking a bath and ran through the streets of Syracuse shouting "Eureka!" **Archimedes' principle** states that when a body is partly or wholly immersed in a fluid its apparent loss of weight is equal to the weight of the liquid displaced. He is also credited with the invention of **Archimedes' screw**, a device for raising water consisting of an inclined helical screw rotated about a central axis in a trough of water, although the device was probably already known to the Egyptians. He was killed during the Roman invasion of Syracuse.

architecture The art of designing and constructing buildings that are both functionally and aesthetically satisfying. Factors principally influencing an architect are: the use to which the building will be put; the materials obtainable; the resources available in money and labour; and contemporary artistic taste. The

earliest civilizations built on a monumental scale for their gods or the deified dead (see **PYRAMIDS**; **ZIGGURAT**). Secular architecture reflected the needs of local rulers for security, comfort, and—very important—display. The Greeks were the first to develop the concepts of proportion and harmony that still influence western architectural theory. Roman engineers greatly extended flexibility of design by their use of arches and domes. Medieval European architecture reached its zenith in the gothic cathedral but the Renaissance brought a resurgence of interest in the principles of classical architecture. This was followed by a gothic revival at the beginning of the 19th century. In the 20th century technical advances in the use of prestressed concrete opened the way to modern architecture; while the necessities of engineering increasingly determine a building's appearance, the best modern architects demonstrate that architecture can still survive as an art form.

Arcimboldo, Giuseppe (1527–93) Mannerist painter, born in Milan. He moved to Prague in 1562, becoming painter and designer of court pageants to the Habsburg emperors. His grotesque portraits include the head of a cook composed of pots and pans, fish, and meat.

Arctic Circle The area around the North Pole enclosed by the parallel of latitude 66°32'N. It includes parts of Greenland, Russia, the USA, Canada, and Scandinavia and extensive areas of ice-covered ocean, notably the Arctic Ocean. The population consists mainly of Eskimos, who live by hunting. *History:* during the 16th century exploration of the Arctic by the Dutch and English began in the search for a North-east or Northwest Passage to the Far East. In 1725–42 the Russian Imperial Navy carried out exploration. In 1879 a US expedition under G.W. De Long (1844–81) became trapped in the ice while attempting to reach the North Pole and its ship was crushed. Wreckage found off the coast of Greenland having drifted across the Arctic Ocean suggested that a sea route through the ice was possible. The Norwegian Fridtjof *Nansen in the *Fram* drifted for nearly two years (1893–95) through the ice and proved that the North Pole was within an ice-covered sea. Robert E. Peary was the first to reach the North Pole (1909). Since then extensive mapping and geological and meteorological studies have been carried out; the Soviet Union was particularly active and, like the USA, established several drifting scientific stations.

Arctic fox A small fox, *Alopex lagopus*, found throughout tundra regions. It feeds on birds and small mammals, especially lemmings and Arctic hares, and grows a dense woolly coat of fur in winter. There are two colour varieties: the white fox, which has a white winter coat and a brown summer coat; and the blue fox,

which is dark grey in summer and pale grey in winter. Arctic foxes have been farmed commercially for their fur.

Arctic Ocean The world's smallest ocean, almost completely enclosed by North America, Eurasia, and Greenland. Explored since the 17th century, it is covered by ice.

a

The orders of classical architecture

Some terms in classical architecture

Some terms in gothic architecture

a

Ardennes A chain of hills in W Europe. It extends through N Luxembourg, S Belgium, and NE France at an average height of about 500 m (1640 ft), forming the watershed between the Rivers Meuse and Moselle.

Ard A district in Northern Ireland, in Co Down. Area: 368 sq km (142 sq mi). Population (2001): 73 244.

are (a) A unit of area in the *metric system equal to 100 square metres. The *hectare (100 ares) is more frequently used.

Ares The Greek god of war, identified by the Romans with *Mars. Son of Zeus and Hera, his popularity never rivalled that of the other Olympian gods. He loved *Aphrodite, by whom he had three offspring, Deimos, Phobos, and Harmonia.

Aretino, Pietro (1492–1556) Italian satirist. Son of a shoemaker, he claimed to be the bastard son of a nobleman. In Rome (1517–27) he became famous for his satires and bawdy lyrics. He then settled in Venice, where he made a fortune by writing scurrilous satires on people or by being bribed not to do so. His letters, published in six volumes (1537–57), provide a vivid portrait of his times. He also wrote five comedies.

Argentina, Republic of The second largest country in South America. It consists chiefly of subtropical plains and forests (the Gran Chaco) in the N, the fertile temperate pampas in the centre, the Andes in the W, and the semidesert Patagonian plateau in the S. The inhabitants are almost all of European origin, mainly Italian and Spanish, with a very small and dwindling Indian population. *Economy:* chiefly agricultural with stock rearing, especially cattle. The main industries have traditionally been meat processing and packing but there has been recent growth in oil refining, plastics, textiles, and chemicals. Natural-gas deposits have been intensively developed and Argentina is practically self-sufficient in oil. *History:* colonized by the Spanish from 1515 onwards. During this period the native Indian inhabitants put up a fierce resistance but by the 19th century they had almost been wiped out. The country gained its independence in 1816, under José de San Martín, and a new constitution in 1853 marked the end of civil war and unrest. Since the late 19th century Argentina has been ruled mostly by military dictatorships. Most prominent among the rulers since World War II has been Lt Gen Juan *Perón, who came to power in 1946. Following the death (1952) of his popular wife, Eva, he was

overthrown in a military revolution (1955). In 1973 he returned to power but died the following year. He was succeeded by his second wife, Isabel, but as the economic situation deteriorated and unrest increased, allegations of corruption were made against her government. In 1976 Lt Gen Jorge Rafael Videla came to power at the head of a three-man junta and severe measures were used to suppress opposition. Gen Leopoldo Galtieri led a further coup and became president in December 1981. On 2 April 1982, Argentina launched an invasion of the Falkland Islands (which it calls the Islas Malvinas) to which it laid claim. Following armed conflict with a task force sent by the UK, Argentinian troops were forced to surrender on 14 June 1982; a defeat that forced Galtieri's resignation. Raúl Alfonsín was elected president in 1983, ending seven years of military rule. The Peronist Carlos Saúl Menem was president from 1989 until 1999, when he was succeeded by Fernando de la Rúa, whose attempts in December 2001 to arrest a financial crisis provoked riots and a general strike, leading to his resignation. The Peronist Nestor Kirchner became president in 2003. Official language: Spanish. Currency: peso of 100 centavos. Area: 2 777 815 sq km (1 072 515 sq mi). Population (2003 est): 36 846 000. Capital: Buenos Aires.

argon (Ar) A noble gas that occurs in the atmosphere (0.94%). It was first isolated in 1894 by Rayleigh and Ramsay, by the distillation of liquid air. Because it is chemically inert, it is used to fill fluorescent lamps and as an inert gas blanket for welding reactive metals. At no 18; at wt 39.948; mp –189.2°C; bp –185.7°C.

Argonauts In Greek mythology, the 50-man crew of Jason's ship *Argo*, on the quest of the *Golden Fleece. Accounts of its composition vary, but all agree that it included the shipbuilder *Argo*, the tireless helmsman *Tiphys*, the keen-sighted *Lynceus*, **Heracles* and his follower *Hylas*, and even **Orpheus* and the *Dioscuri*, **Castor* and *Pollux*. The Argonauts encountered such perils as the **Sirens*, the **Harpies*, the *Symplegades* (moving rocks that crushed ships) and the bronze giant *Talos*.

Argos 37 38N 22 43E A town in the NE Peloponnese (S Greece). Belonging in Homeric times to a follower of **Agamemnon*, Argos gave its name to the surrounding district (the Argolid). Eclipsed by nearby Sparta after the 6th century BC, Argos remained neutral or the ineffective ally of Athens during the 5th century. Considerable remains of the city survive.

Argus In Greek mythology, a giant with 100

eyes who was beheaded by Hermes. He was (at the command of Hera) the guardian of Io, who was desired by Zeus; when he was killed Hera set his eyes in the tail of the peacock.

Argyll and Bute A council area of W Scotland, on the Atlantic Ocean and the North Channel. In 1975 the historic county of Argyll and the county and island of Bute became a single district within Strathclyde Region. This district became an independent unitary authority in 1996 (with slightly adjusted borders). It includes the islands of Mull, Islay, and Jura among many others. Fishing (including salmon farming) and livestock are important, as are tourism, whisky distilling, and textiles. Area: 6930 sq km (2676 sq mi). Population (2001): 91 306. Administrative centre: Lochgilphead.

Århus (or Aarhus) 56 10N 10 13E A seaport in Denmark, in E Jutland. One of the oldest cities in Denmark, it has a gothic cathedral and a university (1928). Its industries include electronic goods, machinery, and textiles. Population (2000 est): 540 600.

aria (Italian: air) A solo song with instrumental accompaniment, usually in an opera or oratorio. The name was also used of instrumental pieces but its meaning became restricted with the development of the three part *aria da capo* by Monteverdi, Scarlatti, and Handel. Attacked by reformers, such as Gluck and Wagner, the aria form is little used in modern opera.

Ariadne In Greek legend, the daughter of *Minos, King of Crete, and Pasiphaë. She helped *Theseus to kill the Minotaur and escape from its labyrinth. He abandoned her on the island of Naxos, where she was found by *Dionysus, who married her.

Arianism A Christian heresy started by Arius, which held that the Son of God, Jesus Christ, was not truly divine. In 325 AD the Council of Nicaea banished the Arians, including several bishops, and affirmed that the Father and the Son were coequal, coeternal, and "of one substance." Although the Arians were soon restored and a version of the heresy was accepted for a time, Arianism was finally defeated at the Council of Constantinople in 381 AD.

Arias Sánchez, Oscar (1941–) Costa Rican statesman; president (1986–90). His Central American peace plan was intended to end regional conflicts by 1988 but had only limited success. He won the Nobel Peace Prize in 1987.

Ariosto, Ludovico (1474–1533) Italian poet. He spent most of his life in the service of the Este, the ducal family of Ferrara. He wrote

plays and much lyric verse but is best known for his epic poem, *Orlando furioso* (1516). It was published in its revised form in 1532. Its precursor was the *Orlando innamorato* (1483) of Boiardo.

Aristarchus of Samos (c.310–230 BC) Greek astronomer, who maintained that the earth rotates upon its axis and orbits the sun. He made the first attempts to estimate trigonometrically the size and distance from the earth of the sun and the moon.

Aristophanes (c.450–c.385 BC) Greek comic dramatist. He wrote about 40 plays, of which 11 survive: *The Acharnians* (425), *The Knights* (424), *The Clouds* (423), *The Wasps* (422), *The Peace* (421), *The Birds* (414), *Lysistrata* (411), *Thesmophoriazousae* (410), *The Frogs* (405), *Women in Parliament* (393), and *Plutus* (388). His plots were satirical fantasies on contemporary topics.

Aristotelianism Tendencies in philosophical thought that originated with Aristotle. Interpretations of his work were preserved by Arab scholars, culminating in the 12th-century commentaries of Averroes. Aquinas in the 13th century made Aristotle the metaphysical basis of Christian theology but the Latin Averroists produced their own theories, holding (for instance) that a proposition can be philosophically true although theologically false.

Aristotle (384–322 BC) Greek philosopher and scientist. His father was court physician in Macedonia. Aristotle joined Plato's Academy at Athens (367–347) but, failing to become head of the Academy at Plato's death, he accepted the protection of Hermeias, ruler of Atarneus in Asia Minor, and married his patron's niece. About 343 *Philip of Macedon appointed Aristotle tutor to his son Alexander, then aged 13. After Alexander's accession in 336, Aristotle founded the *Lyceum at Athens (a research community with library and museum). When Alexander died in 323 BC, anti-Macedonian reaction forced Aristotle to withdraw to Chalcis, where he died. Aristotle wrote over 400 books; those that survive (about one-quarter), edited by Andronicus of Rhodes about 40 BC, are apparently memoranda for his students' use, not intended for general publication.

arithmetic The branch of mathematics that deals with elementary theories of numbers, measurement, and computation. The fundamental operations of arithmetic are addition, subtraction, multiplication, and division. Addition and multiplication are assumed to obey the *associative law, the commutative law, and the distributive law. Other operations in arith-

a

metic include extracting roots, raising a number to a power, and taking *logarithms. Arithmetic is also concerned with fractions and the various number systems, such as the *decimal system and the *binary system.

arithmetic progression (or **arithmetic sequence**) A sequence of numbers in which successive terms have a constant difference, for example, 1, 4, 7, 10, 13....

Arizona A state in the SW USA. It falls into two natural regions: in the NE lies part of the Colorado Plateau, an area of dry plains and escarpments, and in the S and W is an area of desert basins and gentle valleys, drained by the Gila and Salt Rivers. The Colorado River flows through the Grand Canyon in the NW of the state. In such an arid region inadequate water supplies have long been a problem and a number of major irrigation projects have been built. Most of the population lives in urban settlements in the S and W. Manufacturing (electrical, communications, aeronautical, and aluminium products) is the major industry. The state produces over half of the USA's copper as well as gold, silver, oil, and timber. Tourism is an important source of revenue. The main crops are cotton, vegetables, and citrus fruits; livestock is also important. It has the largest Indian population in the USA; the main tribes are the Navajo, Hopi, and Apache. *History:* inhabited by Indians as early as 25 000 BC, the area was explored by the Spanish in the 16th century. Following the Mexican War, Arizona, then part of New Mexico, was ceded to the USA (1848). It was swept by Apache wars until 1877 and became a state in 1912. Area: 295 023 sq km (113 909 sq mi). Population (2000): 5 130 632. Capital: Phoenix.

Arkansas A state in the S central USA, lying W of the Mississippi River. It consists chiefly of the largely forested uplands of the N and W, descending to the Mississippi alluvial plain in the E and the West Gulf coastal plain in the S. The **Arkansas River** (2335 km; 1450 mi) bisects the state from W to E. The state is no longer primarily agricultural although the Mississippi Plain provides fertile land; soya beans and rice have replaced cotton as the major crop. There are major lumbering, petroleum, and gas developments around Smackover and El Dorado and coal deposits in the Arkansas River Valley. The state produces 90% of US bauxite. Manufactures include electronic equipment and wood products. *History:* explored by the Spanish and French in the 16th and 17th centuries, it formed part of the *Louisiana Purchase by the USA in 1803. It became a state in

1836, seceded from the Union in 1861, and was readmitted in 1868. Area: 137 539 sq km (53 104 sq mi). Population (2000): 2 673 400. Capital: Little Rock.

Ark of the Covenant In the Old Testament, the sacred chest of the Israelites that contained the tablets of the law (the Ten Commandments) and was symbolic both of God's presence and his *covenant with Israel. Made of acacia wood, and covered with gold, it was eventually placed in the Temple of Jerusalem. It probably disappeared during the Babylonian exile.

Arkwright, Sir Richard (1732–92) British inventor and industrialist, who invented a spinning frame powered by water, the so-called water frame (patented in 1769). Arkwright subsequently mechanized other spinning processes and his mills were vandalized by spinners put out of work by the incipient factory system.

Arlington National Cemetery The largest cemetery in the USA, comprising 170 hectares (420 acres) just outside Washington DC. Since 1864 it has been the burial ground of Americans killed in action and of eminent public servants.

Armada, Spanish The fleet of 130 ships sent by Philip II of Spain in 1588 to invade England. After indecisive encounters with the English fleet led by Howard of Effingham, under whom Sir John Hawkins held command, the Armada anchored off Calais only to be dispersed by English fireships during the night of 28 July. A major engagement off Gravelines followed, in which the Armada was defeated. It suffered further losses in storms as it escaped round Scotland and Ireland, arriving in Spain with 86 ships. The defeat was a major blow to Spain, which had claimed divine authority for its crusade against Protestant England. *See also* DRAKE, SIR FRANCIS.

armadillo A mammal belonging to the family *Dasypodidae* (12 species), widespread in open country in the southern USA and South America. Armadillos have a covering of jointed bands or horny plates that enables them to roll themselves into a ball for protection. They have long-clawed toes for burrowing, simple peglike teeth, and feed on insects and other invertebrates. Armadillos range in size from the giant armadillo (*Priodontes giganteus*), about 120 cm long, to the rare pink fairy armadillo (*Chlamyphorus truncatus*), 12 cm long. Order: *Edentata*.

Armageddon See MEGIDDO.

Armagh 1. A historic county in S Northern Ireland. Its administrative powers were devolved to the new district councils in 1973. Armagh is predominantly agricultural; produce includes potatoes, flax, and apples. Area: 1326 sq km (512 sq mi). **2.** A district in Northern Ireland, in Co Armagh. Area: 667 sq km (258 sq mi). Population (2001): 54 263.

Armani, Giorgio (1934–) Italian fashion designer. His fashion house, established in 1975, produces elegant ready-to-wear designs for men and women.

Armenia, Republic of A densely populated and mountainous republic in W Asia. *Economy:* industries include food processing, metallurgy, and chemicals. The rich mineral deposits include copper, lead, and zinc. The raising of livestock is the chief agricultural activity. In the 1990s the economy suffered from embargoes imposed by Turkey and Azerbaïdzhân because of the *Nagorno-Karabakh dispute and there was large-scale emigration. More recent years have seen an economic recovery. *History:* the region formed the E part of the historic area inhabited by the *Armenians. It was acquired by Russia in 1828. The Russian province declared its independence in 1918 but it subsequently formed part of the Transcaucasian Soviet Federated Republic. It became a separate Soviet republic in 1936 and an independent state in 1991. Demands for the return of the disputed Nagorno-Karabakh region from Azerbaïdzhân led to civil conflict in the late 1980s and a state of virtual war between the two countries from 1991; a ceasefire was agreed in 1994. Armenia declared independence in 1991 and a new constitution was promulgated following a referendum in 1995. Presidential elections in 1998 resulted in victory for the hardline nationalist Robert Kocharyan. In October 1999 the prime minister was shot dead in parliament by maverick extremists. Presidential elections in 2003 saw Kocharyan re-elected amidst accusations of vote-rigging. Official language: Armenian. Currency: dram of 100 luma. Area: 29 800 sq km (11 490 sq mi). Population (2003): 3 061 000. Capital: Yerevan.

Armenians A people of NE Turkey and Armenia speaking an Indo-European language. Approximately 1.5 million live in Turkey, Europe, and America and 3 million in Armenia, with smaller numbers in Georgia and Azerbaïdzhân. Their culture is ancient, with a literature written in an alphabet derived from Greek and Syriac script. Their language is the

only representative of a distinct branch of the Indo-European family. They call themselves Hay and their land Hayastan. They mainly belong to the Armenian Church, founded by St Gregory the Illuminator (c. 240–332) about 300 AD. During the 19th and 20th centuries they suffered massacres at the hands of the Ottoman Turks.

armour Defensive equipment used as a protection in warfare. Body armour (helmet, breastplate, greaves) was used in Bronze Age Greece. The Romans evolved heavier armour for both men and horses. In the early Middle Ages chainmail was widely used but after about 1300 plate armour, often sumptuously decorated and encasing the whole body, was worn by knights on horseback. Gunpowder gradually rendered most body armour obsolete. However, steel helmets were revived in World War I as a protection against shrapnel and body armour is now again in use by military personnel.

armour. The skill of the European armoured reached its height in the late 15th and early 16th centuries, when suits of plate armour were made to cover the entire body.

Armstrong, Louis (1900–71) US Black jazz trumpeter and singer, known as “Satchmo.” Born in New Orleans, he learned to play the cornet in the orphanage in which he was brought up. His career took him to Chicago, where he

a

made many recordings (some of them with Earl Hines), which earned him a worldwide reputation. He later played with several large orchestras and toured widely. His gravelly singing voice and superb trumpet playing were featured in many films.

Armstrong, Neil (Alden) (1930–) US astronaut, the first man to walk on the moon. A navy pilot during the Korean War, he worked for NASA, (1955–71) and became an astronaut in 1962. He was commander of Apollo 11 (1969). As he stepped onto the moon he said "That's one small step for a man, one giant leap for mankind."

Arnhem 52 00N 5 53E A city in the E Netherlands, the capital of Gelderland province. In World War II a large airborne landing of British troops attempted to secure a bridgehead over the River Rhine here to facilitate an Allied invasion of Germany. The attempt failed with heavy casualties in the ensuing battle (17–27 September 1944). A railway junction, its industries include engineering and pharmaceuticals. Population (1999 est): 137 222.

Arno, River A river in central Italy. Rising in the Apennines, it flows mainly W through Florence and Pisa to the Ligurian Sea. It burst its banks in 1966 causing disastrous floods in Florence. Length: 240 km (150 mi).

Arnold, Sir Malcolm (1921–) British composer, who began his musical career as an orchestral trumpet player. He has written nine symphonies and several concertos as well as much film music.

Arnold, Thomas (1795–1842) British educator. Appointed headmaster of Rugby School (1828), Arnold reformed the school and instituted the prefectorial system, which came to characterize English public schools. Arnold's piety was infectious, and Rugby became noted for "muscular Christianity." *Tom Brown's School-days* provides a record of Arnold's achievement.

His son **Matthew Arnold** (1822–88) was a poet and critic. He worked as a government inspector of schools from 1851 to 1886. His critical works include *Essays in Criticism* (1865; 1888) and *Culture and Anarchy* (1869), in which he advocated literary and cultural values as an antidote to the progressive materialism of Victorian society. His poetry included "Dover Beach" (1867) and the narrative poems "The Scholar Gypsy" (1853) and "Sohrab and Rustum" (1853).

aromatherapy A form of *alternative med-

icine using plant essential oils to enhance physiological functions. They may be inhaled or applied, with massage, to the skin. An art practised in classical Greece, it became popular in the West in the 1990s.

aromatic compound A type of cyclic organic chemical compound that includes *benzene and its derivatives. On conventional theories of valence these compounds appear to be unsaturated (i.e. contain double bonds). However, benzene and similar compounds are much less reactive than the *alkenes, tending to undergo substitution reactions rather than addition reactions. The explanation for the stability of the benzene ring lies in a model in which the carbon atoms are joined by single bonds and the extra six valence electrons are free to move around the ring in a delocalized orbital. Aromatic compounds were originally distinguished from *aliphatic compounds because of the distinctive properties of benzene compounds, many of which have a fragrant odour.

The conventional formula of benzene devised by F. A. Kekulé von Stradonitz (1829–96). With alternating double bonds it would be unsaturated and have properties similar to the alkenes.

In the benzene molecule the bonds are actually intermediate between single and double bonds. This is often represented as a resonance hybrid between the two conventional structures.

The modern explanation of the bonding involves a delocalized orbital above and below the ring. The six valence electrons (one from each carbon atom) are free to move in this orbital. This explains the properties of benzene and the fact that all C–C bonds are equal.

aromatic compound

Arp, Jean (Hans) (1887–1966) French sculptor and poet. He was one of the founders of the *dada movement (1916) and later associated with the surrealist movement in Paris. Arp experimented with collages and produced numerous painted wood reliefs. In about 1930 he began his abstract sculptures suggesting or-

ganic rather than geometric forms. His wife and occasional collaborator was the artist Sophie Tauber (1889–1943).

Arrhenius, Svante August (1859–1927) Swedish physicist and chemist, who became a professor of the University of Stockholm in 1895. He won the 1903 Nobel Prize for Chemistry for his theory of electrolytic dissociation. He later worked on the application of physical chemistry to living processes.

arrowroot A herbaceous perennial plant, *Maranta arundinacea*, native to Guyana but widely cultivated in the West Indies for the fine starch that is extracted from its underground fleshy tubers and used in cooking. The plant is about 1.5 m high and has short-stalked white flowers and broad-bladed leaves with long narrow sheaths. Family: *Marantaceae*.

Arrow War See OPIUM WARS.

ars antiqua (Latin: old art) A style of European music of the 13th century. It was particularly associated with composers of the Parisian school, such as Pérotin (c. 1155–c. 1202) and Léonin (late 12th century), and characterized by the use of complex forms of organum. It was succeeded by **ars nova*.

arsenic (As) A brittle semimetal that occurs in nature in a variety of forms: native, as the sulphides realgar (As_2S_3) and orpiment (As_2S_3), as sulpharsenides, such as arsenopyrite ($FeSAs$), and as arsenates. The element occurs in several forms and was known to the ancients. Pure arsenic has important uses as a dopant in the semiconductor industry. Arsenic and its common compounds are extremely poisonous. Compounds include the white oxide (As_2O_3), the gaseous hydride arsine (AsH_3), and arsenates, some of which are used as insecticides. At no 33; at wt 74.9216; mp 817°C (28 atm); sublimates 613°C.

ars nova (Latin: new art) A style of European music of the 14th century, which succeeded **ars antiqua*. The name was taken from the title of a treatise by Philippe de Vitry (1291–1361), which set out new principles for the composition of **motets* and for the notation of complex rhythms.

arson At common law, maliciously setting fire to something, including buildings, vehicles, etc. As a distinct offence, arson was abolished in English law by the Criminal Damage Act (1971), which is the statute covering all types of criminal damage (the destruction or damage of property belonging to another).

Criminal damage committed by fire is still, however, charged as arson.

Art Deco The style of design predominant in the decorative arts of the 1920s and 1930s. The name derives from the 1925 Exposition Internationale des Arts Décoratifs in Paris. In deliberate contrast to **Art Nouveau*, Art Deco was characterized by emphatic geometrical lines and shapes, vibrant colour schemes, and the use of man-made substances, such as plastic. Influenced by the **Bauhaus*, Art Deco included among its practitioners René Lalique (1860–1945) and Erté (Romaine de Tiroff; 1892–1990). It was debased by shoddy mass production, but interest in it rekindled in the late 20th century.

Artemis In Greek mythology, the daughter of Zeus and Leto and twin sister of Apollo. Settled in **Arcadia*, she and her band of Oceanids and nymphs spent their time hunting. Artemis demanded chastity from her followers and rigorously punished all transgressors. **Actaeon* was killed for watching her bathe and **Orion* for raping her. Despite this severity she was protectress of both animal and human young. Ephesus was the most famous centre of her worship. She was associated with the moon and identified by the Romans with **Diana*. Compare HECATE.

Artemis, Temple of One of the Seven Wonders of the World, built at **Ephesus* in 356 BC. The deity worshipped here was the many-breasted fertility goddess called Diana of the Ephesians in Acts 19.28, rather than the classical **Artemis*.

arteriosclerosis The loss of elasticity in the walls of arteries. It covers various conditions of the arteries and arterioles (small arteries) associated with the ageing process. It is also used as a synonym for **atherosclerosis*.

artery A thick-walled blood vessel that carries oxygen-rich blood away from the **heart* to supply all the tissues and organs of the body. The largest is the aorta, which leads directly from the heart and descends into the abdomen, giving rise to all the other arteries of the body. In middle age the lining of the arteries commonly becomes thickened by **atherosclerosis*, which may lead to various diseases caused by obstruction of blood flow (e.g. strokes, heart attacks). See also BLOOD PRESSURE.

artesian well A well sunk into an aquifer (a water-saturated rock stratum) that is confined between two layers of impermeable rock and through which water flows upwards under

a pressure. The aquifer reaches the surface and receives rainfall where the water table is higher than the site of the well, resulting in a head of pressure.

arthritis Inflammation of one or more joints, causing pain, swelling, and restriction of movement. Many different diseases can cause arthritis, the most important of which are *osteoarthritis, rheumatoid arthritis, and *gout. **Rheumatoid arthritis**, which is more common in women, usually affects the hands and feet and often also the hips, knees, and shoulders. The synovial membrane lining the joint becomes inflamed, resulting in damage to the cartilage over the joint with consequent pain and deformity. An autoimmune disease (see AUTOIMMUNITY), it is diagnosed by a blood test (the blood contains the rheumatoid factor) and X-rays. Treatment is usually based on analgesic and anti-inflammatory drugs; some patients benefit from gold salts and steroids, while severe cases may require surgical replacement of the affected joint(s).

arthropod An invertebrate animal belonging to the largest and most diverse phylum (*Arthropoda*) of the animal kingdom, containing about a million species (i.e. 75% of all known species). Arthropods include *arachnids, *crustaceans, *insects, *centipedes, and *millipedes. An arthropod has a segmented body with a hard outer skeleton (cuticle) made of chitin, which is shed periodically to allow the body to grow. Jointed appendages are modified for swimming, walking, feeding, respiration, reproduction, etc. Young arthropods often go through *metamorphosis to reach the adult form. Many are harmful—as pests, parasites, or vectors of disease—but others are beneficial to man, as pollinators, food sources, predators of pests, and decomposers of organic wastes.

Arthurian legend The medieval romances concerning the legendary British king Arthur and his knights. Arthur emerged as a figure of romance in the *Historia Regum Britanniae* of *Geoffrey of Monmouth. In the legend, he is the son of Uther Pendragon, was born at Tintagel in Cornwall, became king of Britain at 15, and won a number of famous victories. He married Guinevere and held court at Caerleon in Wales (or, in some versions, at Camelot, which may have been near South Cadbury, Somerset). Involved in a war at Rome, he left his kingdom in the charge of his nephew Modred, who betrayed him and abducted Guinevere. Arthur returned to Britain and defeated Modred but was himself wounded. He was

taken to the Isle of Avalon (the Celtic paradise, associated with Glastonbury) to be healed. The Anglo-Norman poet Wace (c. 1100–c. 1175) introduced the knightly fellowship of the Round Table, Layamon (early 13th century) added magical elements, and *Chrétien de Troyes focused on the quest of the *Holy Grail. Other legendary characters were the magician Merlin and the sorceress Morgan le Fay (Arthur's sister). Sir Thomas Malory's *Morte d'Arthur* (c. 1470) concluded the medieval accounts, while Tennyson's *Idylls of the King* (from 1842) and T.H. White's *The Once and Future King* (1958) gave later versions.

artichoke A perennial thistle-like herbaceous plant, *Cynara scolymus*, also known as globe artichoke, native to central and W Mediterranean regions and widely grown in warm temperate areas for its nutty-tasting immature flower heads. The hairy indented strap-like leaves, 1 m long, arise each year from the base of the short annual stems, which carry branched flower stalks bearing purplish flowers. Family: *Compositae*. See also JERUSALEM ARTICHOKE.

Articles of Confederation The first constitution of the USA (written 1776–77, adopted 1781), which was replaced by the Constitution of 1789. The leaders of the American Revolution feared the abuses of a centralized government and adopted a federal system that guaranteed each state its "sovereignty, freedom, and independence." The Continental Congress could not levy taxes but could wage war and borrow and issue money.

artificial insemination The artificial introduction of semen into the vagina of a female at or shortly after ovulation. Although practised in the 14th century by Arab horse breeders, the techniques were developed largely for livestock in the Soviet Union during the early 20th century. Semen collected from a single male can be stored at low temperatures for months before being used to fertilize many females. This has resulted in dramatic breed improvements and the control of venereal disease. Artificial insemination is also used in human medicine; for an infertile husband, semen is obtained from a donor (DI-donor insemination). Although donors are currently anonymous, children conceived after April 2005 will have the right to find out who their natural father is when they reach the age of 18. Semen may be provided by the husband in cases of impotence (artificial insemination husband—AIH). When the wife is infertile the husband's semen may be used to artificially

inseminate a surrogate mother. This woman gives birth to the child, usually for money, and must then be prepared to relinquish all claims on it to the natural father and his wife. Commercial surrogacy is growing in the USA, but in the UK the Surrogacy Arrangements Act (1985) prohibits commercial agencies from engaging women as surrogate mothers. *See also* TEST-TUBE BABY.

artificial intelligence (AI) The design of computer programs to perform tasks that involve intelligence when carried out by human beings. Tasks performed by AI include playing games, learning, understanding natural language and speech, formulating plans, proving theorems, and visual perception. Perceptual tasks involve unconscious computation in humans, which is hard to simulate. AI programs sometimes simulate human behaviour by building computer models of cognitive processes, but in most cases they adopt any technique that will do the task set or do it better than it has been done before.

artificial respiration The restoration of the flow of air into and out of the lungs when the patient's own breathing movements have ceased, for example after drowning, poisoning, etc. Mouth-to-mouth respiration—the "kiss of life"—involves a person breathing out into the patient's mouth: carbon dioxide in this exhaled air acts as a stimulus for the natural breathing reflexes. In hospitals artificial respiration by a *respirator is sometimes provided during surgery, severe pneumonias, and after head injuries.

artillery Firearms with a calibre in excess of 20 mm, used to bombard enemy positions, provide cover, etc. Early guns were classed by projectile weight, e.g. 12-pounder. Modern weapons are identified by calibre: light (below 120 mm), medium (121–160 mm), heavy (161–210 mm), and super or very heavy (above 211 mm). Gun projectiles have flat trajectories, while *mortars and *howitzers have high trajectories, with correspondingly short ranges. Artillery rockets deliver more explosive further, without needing heavy launchers. Modern electronics enable artillery fire to score a direct hit with near certainty on any visible target; as this also applies to the guns themselves artillery is now usually remote controlled.

Artiodactyla An order of hoofed mammals (150 species), distributed worldwide except for Australasia and Antarctica. Artiodactyls are terrestrial herbivores having two or four toes on each foot and often bearing horns. The

group is divided into three suborders: *Suiformes* (pigs, peccaries, and hippopotamuses); *Tylopoda* (camels and llamas); and *Ruminantia* (see RUMINANT), which comprises deer, cattle, antelopes, giraffes, pronghorns, and chevrotains. *Compare* PERISSODACTYLA.

Art Nouveau A decorative style pervading all visual art forms in Britain, France, Germany (Jugendstil), Austria (Sezessionstil), Belgium, Spain, and the USA in the 1890s and early 1900s. It is characterized by designs of naturalistic foliage and shapes linked by undulating lines. In Britain it is associated with the *Arts and Crafts movement of William *Morris, the designs of Charles Rennie Mackintosh (1868–1928), and the graphic work of Aubrey *Beardsley. On the Continent leading examples are the Parisian metro designs of Hector Guimard (1867–1942), the extravagant Barcelona flats and hotels of Antonio Gaudí (1852–1926), and the Belgian stores and houses of Victor Horta (1861–1947).

Arts and Crafts movement An English 19th-century aesthetic movement derived from William *Morris and his Pre-Raphaelite associates, whose firm was founded (1861) to produce handmade furnishings. The movement revived the principles of medieval craftsmanship and respect for materials. It culminated in the establishment of the Century Guild for Craftsmen (1882) and the Arts and Crafts Exhibition Society (1888). It helped to create the emerging *Art Nouveau style.

Arts Councils Three bodies, the Arts Councils of England, Wales, and Northern Ireland, that channel government support for the arts. Founded originally in 1946 as the Arts Council of Great Britain, the Councils have since 1995 been responsible for distributing the proceeds of the National Lottery allocated to the arts. In 2007 the former Arts Council for Scotland was replaced by a new agency, Creative Scotland.

Aruba 12 30N 70 00W A West Indian island, formerly (until 1986) part of the Netherlands Antilles, now a separate Dutch territory. Oil refining is important. Area: 193 sq km (75 sq mi). Population (2001 est): 97 200. Chief town: Oranjestad.

arum (or **arum lily**) A plant of the tropical African genus *Zantedeschia* (8 species), especially *Z. aethiopica*, widely grown as an ornamental. It has arrow-shaped leaves and a flower head of tiny yellow flowers surrounded by a white funnel-shaped bract (spathe). *Araceae*. The European genus *Arum*, of the same family, contains the *cuckoopint. The related bog

a

arum, or wild calla (*Calla palustris*), grows in swamps of N temperate and subarctic regions. It has heart-shaped leaves and small flowers enveloped in a white spathe.

Arunachal Pradesh (name until 1972: North-East Frontier Agency) A state in NE India, stretching N from the Brahmaputra Valley to the Himalayas. There it shares a disputed border with Tibet, from which Chinese troops have twice invaded since 1945. It became the 24th state of India in 1987. Mostly rainforest, it is inhabited by hill tribes. Area: 83 743 sq km (32 648 sq mi). Population (2001): 1 091 117. Capital: Itanagar.

Arundel 50 51N 0 34W A market town in SE England, in West Sussex on the River Arun. Its 11th-century castle (mainly rebuilt in the 19th century) is the seat of the Dukes of Norfolk. Other notable buildings include the 19th-century cathedral. Population (1991): 3033.

Aryans Peoples speaking Indo-European, Indo-Iranian, or Indo-Aryan languages. It has been claimed that all the Indo-European peoples originated from an Aryan people who dispersed from a common homeland into Europe and N India. Indo-Aryan-speaking peoples invaded and settled in N India in the second millennium BC. They were tribal herdsmen who became farmers. The earliest literature of India, the Vedas, written in *Sanskrit, contains details of Aryan ritual practices.

ASA rating The American Standards Association measure of the sensitivity or speed of photographic *film. A film rated at 200 is twice as fast (i.e. needs half the exposure time) as 100 ASA film. General-purpose films have speeds between 50 and 160 ASA. High-speed films for poor light are rated between 200 and 1000 ASA.

asbestos A fibrous form of certain silicate minerals, particularly the *amphiboles anthophyllite, tremolite, riebeckite, and actinolite, or a fibrous form of *serpentine, called chrysotile. Blue asbestos is crocidolite, a fibrous riebeckite. Asbestos is heat-resistant, chemically inert, and has a high electrical resistance; it is much used in industry. The fibres are spun and woven or made into blocks. The main producer is Canada. See also ASBESTOSIS.

asbestosis A lung disease caused by the inhalation of asbestos fibres. It is an occupational disease to which those exposed to large amounts of the mineral are particularly prone: tighter factory health controls have greatly reduced its incidence. It affects the air sacs of the lungs, which become thickened and scarred,

causing breathlessness: patients are liable to develop lung cancer.

Ascension 7 57S 14 22W A rocky island in the S Atlantic Ocean, a dependency of St Helena. It has little vegetation and was uninhabited until 1815. A British telecommunications centre, it is also a US air base and space research station. Area: 88 sq km (35 sq mi). Population (2001): 980. Chief settlement: Georgetown.

Ascension In the Christian calendar, the day on which it is believed Christ ascended into Heaven. Since the 4th century it has been celebrated 40 days after Easter.

asceticism Systematic spiritual self-discipline, usually involving fasting, vigils, sexual abstinence, and renunciation of worldly pleasures. *Stoicism advocated ascetic practices in order to subdue passions. Christian asceticism is based on the theory of identifying with Christ's sufferings and is viewed not as an end in itself but as a means to contemplation of and spiritual union with the divine. It became an important element in certain monastic orders and in Christian mysticism. In Islam, asceticism is particularly associated with *sufism; there is also a strong tradition of asceticism in Buddhism and Hinduism.

Asclepius (or **Aesculapius**) In Greek mythology, a son of *Apollo and the god of medicine. He was instructed by the centaur *Chiron in hunting and medicine. When he restored Hippolytus to life as a favour to Artemis, Zeus became angry and struck him dead with a thunderbolt. The sick, believing in Asclepius's power to cure them through dreams, came to sleep in his temples, the chief of which were at Epidauros and on the island of Cos.

Ascomycota A large phylum of fungi (over 30 000 species), known as sac fungi because their spores are formed in a saclike structure (called an ascus). The nonreproductive part of these fungi is often a microscopical meshwork of cells. The group includes the *truffles, *yeasts, *Penicillium*, and *Aspergillus*.

Ascot 51 25N 0 41W A village in S England, in Bracknell Forest unitary authority, Berkshire. The construction of its famous racecourse was ordered by Queen Anne in 1711. Traditionally the sovereign opens the Royal Ascot meeting in June, driving in an open carriage round the course from nearby Windsor Castle. Population (latest est): 13 500, with Sunningdale.

ASEAN See ASSOCIATION OF SOUTH-EAST ASIAN NATIONS.

Asgard In Norse mythology, the home of the gods and of heroes killed in battle, comprising over 12 kingdoms and palaces, as well as Valhalla. From earth it was reached by the bridge Bifrost (the rainbow).

ash A tree of the genus *Fraxinus* (about 50 species), native to the N hemisphere. Many species yield a pale-yellow wood of commercial importance. Reaching a height of 30 m, ashes have compound leaves made up of pairs of oval or lance-shaped leaflets, small inconspicuous flowers, and winged fruits ("ash keys"). Most species are deciduous, including the European ash (*F. excelsior*). Family: *Oleaceae* (olive family). See also MOUNTAIN ASH.

Ashanti A people of the S part of Ghana, who speak Twi. They are an agricultural people producing crops for local markets and cocoa for export. Their social organization is based upon matrilineal kin groups living in villages governed by headmen. The Ashanti established an empire in S Ghana during the 18th and 19th centuries. They worship a pantheon of gods and practise an ancestor cult.

Ashcroft, Dame Peggy (1907–91) British actress. She made her debut in 1926. Her most notable performances included Juliet in 1935, Hedda Gabler in 1954, and roles in plays by Pinter and Beckett. She won an Oscar for her performance in the film *A Passage to India* (1984).

Ashdown, Paddy, Baron (Jeremy John Durham A.; 1941–) British politician, leader of the Social and Liberal Democrats (1988–99). He entered parliament in 1983 after service in the Commandos and the Special Boat Section. He subsequently served in the position of UN high representative in Bosnia (2002–06).

Ashes A mock trophy awarded to the winning team in cricket Test matches between England and Australia. It originated with the first Australian victory (1882), when an obituary for English cricket in the *Sporting Times* ended with the words: "The body will be cremated and the ashes taken to Australia." In 1883 the victorious English captain was presented with an urn (now kept in the pavilion at *Lord's cricket ground) containing the ashes of the stumps used in the match.

Ashkenazim Jews of German or Eastern European origin, as opposed to *Sephardim. Forming some 85% of world Jewry, they have a distinct way of pronouncing Hebrew, and other customs, and until this century they mostly spoke *Yiddish. The first Ashkenazy synagogue in London was founded in 1690.

Ashkenazy, Vladimir (1937–) Russian pianist and conductor. He won the 1955 Warsaw Chopin Competition and was joint winner of the 1962 Tchaikovsky Competition. In 1973 he settled in Iceland.

Ashkhabad 37°58'N 58°24'E The capital of Turkmenistan, rebuilt after an earthquake (1948). Products include foods, carpets, glass, and machinery. Population: (1999 est): 605 000.

Ashley, Laura (born Laura Mountrey; 1925–85) British fashion designer, who married Bernard Ashley in 1949, and opened her first London boutique in 1967. This became the model for an international chain. Her husband and sons took over the business after her death.

Ashmolean Museum A museum in Oxford, housing paintings and archaeological collections. The collection was donated to Oxford University in 1675 by Elias Ashmole (1617–92) and put on public display in 1683. Now in the neoclassical building (1845) of Charles Robert Cockerell (1788–1863), it includes Italian Renaissance paintings and English 19th-century works.

Ashton, Sir Frederick (William Malandaine) (1904–88) British ballet dancer and choreographer, born in Ecuador. He joined the Sadler's Wells Ballet in 1935, became an associate director in 1952, and was director of the Royal Ballet from 1963 to 1970. His works include *Cinderella* (1948), *Onđine* (1958), *La Fille mal gardée* (1960), and many ballets choreographed for Margot Fonteyn.

Ashur The oldest Assyrian capital (modern Qalat Sharqat) on the River Tigris in Iraq. Named after its guardian sun-god, Ashur became capital of the rising Assyrian empire (14th century BC) to which it gave its name. With its later cocapitals *Nimrud and *Nineveh it was destroyed in 612 BC. First excavated in 1903, Ashur's ruins include major temples and a *ziggurat.

Ashurbanipal King of Assyria (668–762? BC), son of Esarhaddon. He suppressed two revolts during his reign and conquered the city of Tyre. He founded a remarkable library at Nineveh, some of the items in which are now in the British Museum.

Ash Wednesday In the Christian calendar, the first day of *Lent, so named from the custom, probably dating from the 8th century, of marking the foreheads of the congregation with ashes as a sign of penitence.

a

Asia The largest continent in the world, it occupies about one-third of the dry land. Extending W to the Ural Mountains, it is separated from Africa by the Red Sea and bounded on the N by the Arctic Ocean. It includes the islands of Indonesia, Japan, the Philippines, and Taiwan. It contains the world's highest point (Mount *Everest) and also its lowest (the *Dead Sea). Its central mass of mountains and plateaus has historically formed a major barrier between N and S Asia. Vast alluvial plains border the major rivers, including the Rivers Ganges, Mekong, and Ob and the Yangtze and Yellow Rivers. Containing about half of the world's total population, it is the most populous continent. There are three main population groups: Negroid (in the Philippines), Mongoloid (including the Chinese, Japanese, and Koreans), and Caucasoid (including the Arabs, Afghans, and Pakistanis). Other groups, including the Malays, are a mixture of these main races. Christianity, Judaism, Hinduism (with the largest following), Buddhism, Islam, Confucianism (in China), and Shintoism (in Japan) all originated in Asia. Agriculture employs about two-thirds of the total population. Asia has important mineral resources, notably the oil and natural-gas deposits of the Arab states. Area: 44 391 162 sq km (17 139 445 sq mi). Population (1998 est): 3 589 233 000.

Asia Minor (or Anatolia) The westernmost part of Asia between the Black Sea and the Mediterranean Sea approximating to present-day Turkey. For much of the second millennium BC, Asia Minor was the centre of the *Hittite empire. After the Hittites' collapse (12th century BC) central and W Asia Minor were dominated by *Phrygia, which reached its zenith in the 8th century, when the Assyrian Empire conquered SE Asia Minor. Phrygia fell to *Lydia in the 6th century but in 546 Cyrus the Great established Achaemenian control over Asia Minor. In 333 it was conquered by Alexander the Great and after his death, during the *Hellenistic age, the S was contested by the *Seleucids and the Macedonian rulers of Egypt. Asia Minor came under Roman control in the 2nd and 1st centuries BC, forming part of the *Roman Empire and then the Eastern Roman (subsequently Byzantine) Empire. Conquered by the Seljuq Turks in the 11th century AD and overrun by the Mongols in the 13th, Asia Minor was incorporated in the Ottoman Empire during the 14th and 15th centuries.

Asimov, Isaac (1920–92) US science fiction writer and biochemist, born in Russia. His many books include the *Foundation Trilogy*

(1951–53; sequel 1982) and collections of short stories, notably *I, Robot* (1950), *Nightfall* (1969), and *The Edge of Tomorrow* (1986). He also wrote books popularizing scientific topics.

Asmara (or Asmera) 15 20N 38 49E The capital of Eritrea, in the central highlands. The population still includes many Italians, Eritrea having been an Italian colony from 1890 until Allied occupation (1941). Industries include meat processing, distilling, and clothes manufacture. Population (1995 est): 431 000.

Asoka (died c. 232 BC) Indian king of the Maurya dynasty, who ruled over almost all of India (c. 270–c. 272 BC). A devoted Buddhist, he advocated tolerance and non-violence (*ahimsa*).

asp An aggressive European *viper, *Vipera aspis*, that lives in dry habitats. About 60 cm long, it is grey-brown to coppery brown with dark bars or zigzags, grey, yellowish, or blackish underparts, and a yellow patch under the tail tip. The snout is upturned into a small spike. The asp that killed Cleopatra was probably the Egyptian cobra (*Naja haje*).

Asparagus A genus of herbaceous plants (about 300 species), with creeping underground stems (rhizomes), found throughout the Old World. *A. officinalis* is cultivated in temperate and subtropical regions for its young edible shoots, which are considered a delicacy. Several African species are ornamental: *A. plumosus*, known as **asparagus fern**, produces attractive feathery sprays of branchlets. Family: Liliaceae.

aspen One of several *poplar trees having slender flattened leafstalks, so that the leaves tremble in the faintest breeze. The European aspen (*Populus tremula*), which grows to a height of 25 m has rounded toothed leaves. Its soft white wood is used for matches and paper pulp.

Asperger's syndrome A mild form of *autism characterized by a lack of empathy with others, stilted and pedantic speech, and an obsessive preoccupation with detail and specialized subjects. Sufferers are often highly intelligent. Named after Austrian paediatrician Hans Asperger (1906–80).

Aspergillus A genus of fungi, including many common moulds, such as *A. flavus*, which infects peanuts and produces the poison aflatoxin.

asphalt A black highly viscous or solid hydrocarbon compound, used in road construction and the manufacture of roofing materials. It is obtained from the distillation of certain

crude oils and from surface deposits (asphalt lakes), which occur naturally after the lighter fractions of a crude oil reservoir have evaporated.

asphodel A white- or yellow-flowered lily-like plant of the mostly Mediterranean genera *Asphodelus* and *Asphodeline*. In Greek mythology, the asphodel said to grow in the Elysian fields was *Asphodeline lutea*. The asphodel of the early English and French poets was probably the daffodil. The bog asphodel (*Narthecium ossifragum*), of NW Europe, grows to a height of 30 cm in swampy regions. Family: *Liliaceae*.

Aspidistra A genus of herbaceous plants (8 species) native to E Asia. *A. elatior* is commonly grown as a hardy pot plant for its long ornamental leaves. It may produce purple bell-shaped flowers. Family: *Liliaceae*.

aspirin Acetylsalicylic acid: a drug widely used to treat mild pain, such as headache and toothache. It also relieves inflammation and is therefore helpful in the treatment of rheumatoid arthritis, and it reduces fever and helps to prevent coronary thrombosis and strokes. In some people aspirin may cause bleeding from the stomach and it is no longer used for children under 12. See also ANALGESICS.

Asquith, Herbert Henry, 1st Earl of Oxford and (1852–1928) British statesman and Liberal prime minister (1908–16). Asquith's government introduced important social reforms, including noncontributory old-age pensions (1908 budget) and the National Insurance Act (1911); it ended the veto power of the House of Lords with the 1911 Parliament Act. After the outbreak of World War I Asquith headed a Liberal-Conservative coalition government (1915–16). He remained leader of the Liberal Party until 1926.

ass A small fast-running mammal belonging to the genus *Equus* (horses), native to Africa and Asia. Asses are about 200 cm long, weighing up to 250 kg, and have characteristically long ears. The Asiatic wild ass (*E. hemionus*) has a grey or tan hide and a dark stripe along the back. The African wild ass (*E. asinus*) is the ancestor of the domestic donkey. See also MULE.

Assad, Hafiz al- (1928–2000) Syrian statesman; president (1971–2000). In 1966, following the coup in Syria by the radical Ba'athists, he became minister of defence. In 1970 he led a coup by the military wing of the Ba'ath party and was elected president the following year. In foreign affairs he remained hostile to Israel and the West until the early 1990s, from which

point he began to mend relations. He was succeeded by his son, **Bashar al-Assad** (1965–).

Assam A state in NE India, mostly in the Brahmaputra Valley beyond Bangladesh. High rainfall supports tea, Assam's economic mainstay. Rice, jute, sugar cane, and cotton are also grown. Assam produces half of India's oil, as well as coal. *History:* a flourishing region by 1000 BC, Assam received later migrants from China and Burma. Burmese invasions led Britain to assume control (1826). In World War II Assam played a strategic role in the Allied advance into Burma. In recent years the region has been troubled by ethnic unrest. Area: 78 523 sq km (30 310 sq mi). Population (2001 est): 26 638 407. Capital: Dispur.

Assassins (Arabic: hashish eaters) A sect of the Ismaili. In Persia and Syria in the 12th and 13th centuries they were notorious for their practice of stabbing opponents, especially Muslims. It was commonly believed that the stabbings were carried out while they were under the influence of hashish, hence their name.

Assisi 43 04N 12 37E A town in central Italy, in Umbria. It is the birthplace of St *Francis of Assisi, who founded the Franciscan Order in 1209, and is the site of a Franciscan convent, which has two gothic churches containing frescoes by Giotto. Population (1990): 24 790.

Association football See FOOTBALL.

Association of South-East Asian Nations (ASEAN) An international organization, founded in 1967, to assist the development of its member states (now Brunei, Indonesia, Laos, Malaysia, Myanmar (Burma), the Philippines, Singapore, Thailand, and Vietnam). It aims to eliminate trade barriers, promote cultural exchanges, facilitate communications, and improve technology, commerce, and industry.

associative law The mathematical rule, obeyed by addition and multiplication in ordinary *arithmetic, that the order in which successive identical operations are performed does not affect the result: for addition $a + (b + c) = (a + b) + c$; for multiplication $a(bc) = (ab)c$.

assurance A form of insurance against an event that is certain to occur, e.g. death. The main types are **term assurance**, which only pays out if death occurs within a stipulated period, such as during a particular business trip; **whole-life assurance**, which pays out on the death of the assured, whenever it occurs; **endowment assurance**, which pays out either on the death of the assured, whenever it occurs, or

a

after a fixed period (e.g. on the assured's 65th birthday). See also ANNUITY.

Assyrian Empire An ancient kingdom on the Upper Tigris (now N Iraq), where the Assyrians (named after their god Ashur) settled in about 2500 BC, forming a dependency of Babylon. Ashur-uballit I (c. 1365–c. 1330) laid the foundations of the Empire, which was extended by Tiglath-pileser I (1120–1074), who conquered the city of Babylon. A new era of aggressive expansion was initiated by Ashurnasirpal II (883–859). The Assyrian domain was extended to Syria and Palestine under Shalmaneser III (858–824) and Assyrian ascendancy reached its zenith under Tiglath-pileser III (745–727). *Nineveh, the capital, fell to Media and Babylon in 612.

Astaire, Fred (Frederick Austerlitz; 1899–1987) US dancer and film star. He began his career as a music-hall dancer. His best-known films are the 1930s musicals in which he partnered Ginger Rogers. These include *Top Hat* (1935), *Follow the Fleet* (1936), and *Shall We Dance* (1937). His later costars included Judy Garland, Leslie Caron, and Audrey Hepburn.

Astana (name until 1961 and 1994–98: Ak-mola; name 1961–94: Tselinograd) 51°10'N 71°25'E A city in N Kazakhstan; it replaced Alma Ata as the capital of Kazakhstan in 1997. Population (1999 est): 313 000.

Astarte The Phoenician goddess of love and fertility, equivalent to the Babylonian Ishtar and sometimes regarded as the counterpart of Aphrodite. She was associated with the moon and often represented by a crescent.

astatine (At) A short-lived radioactive *halogen. Its longest-lived isotope, At-210, has a half-life of 8.1 hours. Small amounts exist in nature as a result of uranium and thorium decay. At no 85; at wt (210); mp 302°C; bp 337°C.

Aster A genus of perennial herbaceous plants (about 500 species), many of which are native to N temperate regions and are grown as the garden plants known as Michaelmas daisies. 60–100 cm tall, they have flowers with blue, red, or white rays and a central yellow disc. *A. amellus* and *A. aeris* are common ornamental species. Family: *Compositae*.

asteroid See MINOR PLANET.

asthma A disorder in which breathlessness and wheezing are aggravated by certain stimuli, which cause the bronchi to become constricted. Bronchial asthma may be an allergic reaction (see ALLERGY), it may occur secondarily to respiratory infection, or it may be

brought on by exertion, certain drugs, or strong emotion. The most common treatment is by means of bronchodilator drugs, usually in the form of aerosol inhalers; severe attacks require corticosteroid inhalers. Cardiac asthma is associated with some forms of heart disease and requires a different treatment.

astigmatism A form of *aberration that can occur in mirrors and lenses (including the eye). It results when the curvature is different in two mutually perpendicular planes; rays in one plane may then be in focus while rays in the other are out of focus. It is corrected in the eye by the use of cylindrical lenses.

astigmatism. An astigmatic lens cannot focus vertical and horizontal lines at the same time. Here the vertical focal length f_1 is shorter than the horizontal focal length f_2 . In the human eye this would be corrected by spectacles with cylindrical lenses, reducing the overall focal length in the horizontal plane only, so that both vertical and horizontal lines are in sharp focus at distance f_1 .

Astor, Nancy Witcher, Viscountess (1879–1964) US-born British politician, the first woman MP to sit in the House of Commons (1919–45). She championed the causes of women's rights and education, representing the constituency that was formerly that of her husband Waldorf, 2nd Viscount Astor (1879–1952). An MP from 1910 to 1919, Astor was proprietor (1919–45) of the *Observer* newspaper.

Astrakhan 46°22'N 48°04'E A port in SE Russia, on the River Volga. The city was an important trading centre, declining after the Revolution. Astrakhan fur, from the Karakul lamb of central Asia, was first brought to Russia by Astrakhan traders. More than half the population

is employed in fishing or allied occupations. Population (1999 est): 488 000.

astrolabe An instrument used in navigation and astronomy, invented in about 200 BC. It was replaced in the 18th century by the *sextant. It consists of a disc calibrated round its circumference in degrees. It was fitted with a sighting pointer (alidade), the angle of which, when aligned with the sun or a prominent star, enabled time and latitude and longitude to be calculated.

astrology The study of the positions of the heavenly bodies in relation to their presumed influence upon human affairs. Astrology originated in *Babylonia and then passed to Greece, India, China, and the Islamic lands. In medieval Europe astrologers had a respected role in public and personal life. Astrology is based upon an elaborate system of hypothetical relationships: each "house" (see ZODIAC), for instance, imparts a particular character to those born under its influence and the sun, moon, and principal planets in various positions predispose people to good or ill. The two branches of astrology are "natural" (concerned mainly with observations and theory) and "judicial" (foretelling events by means of a horoscope). The subject has no scientific basis. See also BIRTHSTONE.

astronomer royal An eminent British astronomer appointed by the sovereign on the advice of the prime minister. Until 1971 the astronomer royal was also head of the Royal Observatory (formerly at Greenwich, then at Herstmonceux, and at Cambridge from 1990). The first holder was John Flamsteed, appointed in 1675 when the Observatory was founded. The present holder is Sir Martin Rees.

astronomical unit (AU) A unit of length equal to the mean distance between the earth and the sun (1.495×10^{11} metres, 92.9×10^6 miles).

astronomy The study of celestial bodies. One of the most ancient of the sciences, naked-eye astronomy flourished in China, Babylonia, Egypt, and classical Greece (see ARISTARCHUS OF SAMOS; HIPPARCHUS; PTOLEMAIC SYSTEM). After the decline of ancient Greek culture, interest in astronomy was the preserve of the Arabs for many centuries. European interest in the heavens, transmitted from the Arabs through Spain, reawakened in the 16th century with the work of *Copernicus and Tycho *Brahe, who were able to separate the science of astronomy from astrological pseudoscience. But it was not until 1609 that Galileo's refracting *telescope enabled the sky to be investigated in any detail; in 1671 Newton devised the

more effective reflecting telescope. These devices provided the means for the development of astrometry and *celestial mechanics. In the 19th century, the use of spectroscopy (see SPECTRUM) provided the basis for the new sciences of *astrophysics and astrochemistry.

Until the 1930s all observations of the heavens were made by observing the light that passed through the atmosphere. Jansky's discovery (1932) that radio waves are emitted by celestial bodies marked the beginnings of *radio astronomy.

The advent of high-altitude balloons and rockets and then artificial satellites orbiting above the atmosphere has enabled the radiation from space that is absorbed by the atmosphere—gamma rays, X-rays, ultraviolet, and most wavelengths of infrared radiation—to provide information, for example, on the birth of stars and the more violent cosmic phenomena. In addition planetary probes and spacecraft have greatly increased our knowledge of many members of the solar system.

astrophysics The study of the physical and chemical processes and characteristics associated with celestial objects. It is based on theories developed in astronomy, physics, and chemistry and on observations of the radiation emitted by the objects. Originally only studies at optical and then at radio and infrared wavelengths were made, but with the recent advent of rockets and artificial satellites, sources of X-rays, gamma rays, and ultraviolet radiation can also be observed. See also COSMOLOGY.

Asunción 25 15S 57 40W The capital of Paraguay, an important port in the S on the River Paraguay. Founded in 1536, it was for a time the centre of the Spanish settlements in the area. The National University was founded in 1890 and the Catholic University in 1960. Industries include flour milling, food processing, and textiles. Population (1992): 502 426.

Aswan (or **Assuan**; Greek name: Syene) 24 05N 32 56E A city in S Egypt, on the River Nile. Some ruins of the ancient city of Syene remain. Nearby quarries supplied granite for many Egyptian monuments. The **Aswan High Dam** and earlier **Aswan Dam** are also nearby and have stimulated growth within the city. The High Dam was begun in 1960 and financed by the Soviet Union; it was completed in 1970. It is about 5 km (3 mi) long and 100 m (328 ft) high; its reservoir, **Lake Nasser**, extends for about 560 km (350 mi) behind the dam. Since its construction the famous annual Nile floods have been controlled and water is available for irrigation and for hydroelectric power. An-

a

cient Nubian monuments (notably the *Abu Simbel and Philae temples) that were threatened with permanent flooding were moved to new sites. About 7 km (4 mi) downstream is the earlier Aswan Dam (completed 1902); 2 km (1.2 mi) long and 54 m (177 ft) high, this provides irrigation water. Population (1996): 219 017.

asymptote A straight line that a two-dimensional curve approaches but never meets as the curve is extended infinitely.

Asyut (or **Assiut**; ancient name: Lycopolis) 27 14N 31 07E The largest city in Upper Egypt, on the River Nile. It is an important commercial centre and is renowned for its handicrafts and its textile industries. Below the city the Asyut barrage provides water for irrigation. It has a university (1957). Population (1996): 343 498.

Atacama Desert (Spanish name: Desierto de Atacama) A cool arid area in N central Chile, extending for about 1100 km (700 mi) S from the Peruvian border. It consists chiefly of a series of salt basins and is one of the driest areas in the world. There are valuable deposits of copper and it is a major source of nitrates. Area: about 80 290 sq km (31 000 sq mi).

Atalanta A swift-footed huntress of Greek mythology. Hippomenes (or Meilanion), on her promise to marry any man who could outrun her, raced with her. Furnished with three of the Hesperides' golden apples by *Aphrodite, which he dropped to distract her, he won the race and married her.

Atatürk, Kemal (Mustafa Kemal; 1881–1938) Turkish statesman, the founder of modern Turkey; president (1923–38). Born in Salonika, he entered the army and distinguished himself in World War I. After the war he opposed the humiliating Treaty of *Versailles and as president of the provisional government organized the defeat of the Greek invasion of Asia Minor (1920). In 1922 the Ottoman sultan was deposed and Kemal became the first president of Turkey. From then until his death he worked to make Turkey a modern secular state. He took the surname Atatürk (Father of the Turks) in 1934.

ataxia Loss of muscular coordination, often caused by disease of the part of the brain (the cerebellum) that controls movement. Ataxia may accompany severe vitamin B₁₂ and folic acid deficiencies or follow a brain haemorrhage.

Athanasian Creed A Christian profession of faith traditionally attributed to St Athana-

sius (296–373 AD) but probably dating from the 5th century. Its central statements concern the doctrines of the *Trinity and of the *Incarnation. Once popular in the Western Churches, it is now little used.

atheism The denial of the existence of God (or gods). Historically atheism has taken many different forms. In theocratic societies charges of atheism were frequently made against individuals or groups suspected of antisocial behaviour or of dissent from the prevailing orthodoxy. Philosophical materialists, such as Hobbes, were also attacked as atheists but the spread of rationalism in the 18th century created a climate sympathetic to atheism. In the 19th century, scientific advances challenged the old arguments for the existence of God, making atheism respectable. Atheists now hold either that the concept of God, being untestable, is meaningless (see LOGICAL POSITIVISM) or that all we know by scientific means about the universe suggests that God is a false notion (see HUMANISM). Compare AGNOSTICISM.

Athelstan (d. 939) King of England (925–39), succeeding his father Edward the Elder; he was crowned King of Mercia in 924. He defeated a Scottish invasion force in 937 and is also known for six extant legal codes.

Athena (or **Pallas Athena**) The virgin Greek goddess of war and of wisdom, the protectress of Athens which is named after her. Born from the head of Zeus, fully armed with a javelin, she was his favourite child. In the Trojan War she constantly aided the Greeks. She also helped Heracles in his labours and guided Perseus on his expedition against the Gorgons. She is identified with the Roman *Minerva.

Athens (Modern Greek name: Athína) 37 59N 23 42E The capital of Greece, situated on a plain in the SE of the country. It is the administrative, cultural, and economic centre of the country and adjoins its port and industrial sector, *Piraeus. Athens combines the ancient and the modern, with only one or two small Byzantine and neo-Byzantine churches surviving to testify to the period between Roman times and the early 19th century. The remains of ancient Athens found on the Acropolis include the *Parthenon, the Ionic Erechtheum, the Propylaea (a gateway), and the tiny temple of Athena Nike. To the NW, the recently restored Agora (market), contains the Theseum (5th century BC), probably the best-preserved ancient temple. To the N and E lies modern Athens. *History*: there is evidence of settle-

ments dating back to the 3rd millennium BC. Athens probably enjoyed its first rise to fame under Pisistratus and his sons in the 6th century BC. Around 506 Cleisthenes established a democracy for the free men of Athens. During the following century it became the leading Greek city state and defeated the Persians with the aid of its powerful navy (see GREEK-PERSIAN WARS). The Long Walls, connecting the city to Piraeus, and the Parthenon date from this period. Under *Pericles, it reached a peak of intellectual brilliance with the philosophy of Socrates and the drama of Aeschylus, Sophocles, and Euripides. Defeated by Sparta in the *Peloponnesian War (431-404 BC), it recovered slowly, regaining its intellectual supremacy with such figures as Plato, Aristotle, and Aristophanes. Defeated by Philip of Macedon in 338 BC, it came under the rule of Rome in the 2nd century BC. Owing to the influence of Hellenic culture on the Romans it continued to prosper and, despite being overrun by Germanic tribes in the 4th century AD, maintained its academic standing until the closure of the schools of philosophy by Justinian in 529. The city fell to the Crusaders in 1204 and was under Turkish occupation from 1456 until 1833, when it became the capital of the newly independent kingdom of Greece. Population (1991): 748 110.

atherosclerosis (or **atheroma**) Patchy thickening of the lining of arteries caused by the deposition of fatty material and fibrous tissue. This tends to obstruct the blood flow and predisposes to *thrombosis, which may lead to a heart attack or a stroke. In the Western world atherosclerosis is common in adults: its cause is believed to be associated with a diet high in animal fats (see CHOLESTEROL), cigarette smoking, and obesity. See also CORONARY HEART DISEASE.

athletics Sports that involve running, walking, throwing, and jumping competitions. They are divided into track and field events. At international level the track events include races over 100 m, 200 m, 400 m, 800 m, 1500 m, 5000 m, and 10 000 m; the 110 m and 400 m hurdles (see HURDLING); the 4 x 100 and 4 x 400 m relay races; the 3000 m steeplechase; the *marathon; and the 20 km walk (see WALKING). The standard field events are *high jump, *long jump, *triple jump, *pole vault, *shot put, *discus throw, *hammer throw, and *javelin throw. In addition there are the *decathlon (for men), the *pentathlon or *heptathlon (for women), and the modern pentathlon. The governing body is the International Amateur Athletic Federation.

Athos, Mount 1. 40 10N 24 19E A mountain in NE Greece, at the end of Akti, the easternmost promontory of Chalcidice. Height: 2033 m (6670 ft). **2.** An autonomous Greek Orthodox monastic republic occupying the mountain. Area: 80 sq km (31 sq mi). Population (1991): 1557.

Atlanta 33 45N 84 23W A city in the USA, the capital of Georgia, situated at the foot of the Appalachian Mountains. Founded in 1837 and partly destroyed by Gen Sherman in 1864, it is now the industrial, administrative, transportation, and cultural centre of the SE USA. Population (2000): 416 474.

Atlantic, Battle of the See WORLD WAR II.

Atlantic Charter (1941) A declaration made by Franklin D. Roosevelt and Winston Churchill stating common national policies. These included freedom of choice of government, improved economic and social conditions, freedom of the seas, and the total abolition of Nazism.

Atlantic Ocean The world's second largest ocean, extending between Antarctica, America, Europe, and Africa. Its major currents include the *Gulf Stream crossing it W-E. Its floor is rich in minerals, oil and gas now being exploited. The Mid-Atlantic Ridge rises above sea level as islands, such as the Azores. The youngest ocean, the Atlantic was formed when the continents now surrounding it split apart 200 million years ago.

Atlantis In Greek legend, a large island civilization in the Atlantic beyond the Pillars of Hercules (Straits of Gibraltar), which, according to Plato's dialogues the *Timaeus* and *Critias*, was destroyed by earthquake. The story, transmitted to the Greeks by the Egyptians, may refer to a cataclysmic volcanic eruption (c. 1450 BC) on the island of Thera in the Cyclades N of Crete.

Atlas In Greek mythology, the brother of Prometheus and son of the Titan Iapetus and the nymph Clymene. As a punishment for his part in the revolt of the Titans against the Olympians he was forced to hold up the pillars separating heaven from earth. From the 16th century this was depicted in the frontispieces of books of maps, which thus came to be called atlases.

Atlas Mountains A mountain system in NW Africa, extending generally NE from the Atlantic coast of Morocco to Tunisia. It consists of several mountain chains and plateaus and rises to 4165 m (13 664 ft) at Mount Toubkal in the Moroccan Great Atlas range.

a

atman (Sanskrit: breath, soul) A fundamental concept of Hinduism, signifying the individual soul or the eternal essential self. When the body dies the *atman* is continuously reincarnated until final spiritual release is achieved. In the later *Upanishads, and in the Hindu philosophical schools of Samkhya and orthodox Vedanta, the function of *atman* and its relation to *Brahman is the central issue.

atmosphere (meteorology) The gaseous envelope surrounding the earth or any other celestial body. The earth's atmosphere is composed of nitrogen (78.08%), oxygen (20.95%), argon (0.93%), and carbon dioxide (0.03%), together with small proportions of other gases and variable amounts of water vapour. In the lowest layer of the earth's atmosphere, the **troposphere**, air temperature decreases as height increases. The thickness of this layer varies from about 7 km (4.5 mi) to about 16 km (9.9 mi) at the equator. It is here that most meteorological phenomena occur. In the **stratosphere**, which goes up to about 50 km (31 mi), temperature is fairly constant because the sun's radiation counteracts the effect of decreasing density. Above this is the **ionosphere**. The outermost layer, from about 400 km (248 mi), is called the **exosphere**. From 100 km (62 mi) upwards the oxygen dissociates into atoms. There is little nitrogen above 150 km (93 mi). The atmosphere protects the earth from excessive radiation and cosmic particles and is important in maintaining the heat balance of the earth. See also OZONE.

atmosphere. The density of the atmosphere falls off sharply with height above the earth's surface. The more complicated temperature variation is shown in the graph, which also illustrates the regions of the ionosphere.

atmosphere (unit) A unit of pressure equal to 101325 pascals or 760 mm of mercury.

atmospheric pollution The release into the atmosphere of gases, droplets of liquid, or solid particles that have an undesirable effect on people, vegetation, buildings, etc. The main sources of pollution are vehicle and aircraft emissions, power stations, and other industrial plants. The gaseous pollutants include the oxides of carbon (see GREENHOUSE EFFECT), sulphur, and nitrogen (see ACID RAIN). The liquid pollutants include droplets of diesel oil and contaminated water spray, while carbon particles, soot, and coal dust are the most common solid pollutants. Natural causes of pollutions include volcanoes, forest fires, and dust storms.

atmospheric pressure The pressure exerted by the atmosphere. It decreases with altitude and, at ground level, varies around 760 millimetres of mercury, 101325 pascals, or 1013.25 millibars.

atom See ATOMIC THEORY.

atomic bomb See NUCLEAR WEAPONS.

atomic clock A highly accurate clock based on the frequency at which certain atoms or molecules vibrate between two states. For example, the nitrogen atom in the ammonia molecule vibrates through the plane of the three hydrogen atoms and back again with a frequency of 23870 hertz. In the ammonia clock, a quartz-crystal oscillator feeds energy into ammonia gas at this frequency. The ammonia only absorbs energy at this frequency, enabling a feedback circuit to control the frequency of the oscillator. The caesium clock depends on the energy difference between states of the caesium nucleus in a magnetic field.

atomic energy See NUCLEAR ENERGY.

Atomic Energy Authority A UK body established in 1954 to research into and develop nuclear energy. Its principal research establishments are situated at Harwell and Culham, both in Oxfordshire.

atomic force microscope (AFM) A high-resolution microscope useful in magnifying nonconducting samples, such as biochemical molecules. It consists of a small diamond probe attached to an arm that slowly scans the specimen. The tracking force between the diamond tip and the specimen's surface is monitored and the height of the probe is adjusted to keep the force constant. A computer-generated contour map of the surface can thus be generated,

which identifies the individual atoms of the specimen.

atomic mass unit (amu) A unit of mass equal to one-twelfth of the mass of an atom of carbon-12 (1.66033×10^{-27} kg). Relative atomic masses (atomic weights) are based on this unit. The unit is also called the dalton (after John Dalton).

atomic number (Z) The number of protons in a nucleus of an atom. It determines the position of the element in the *periodic table and, in a neutral atom, is equal to the number of electrons surrounding the nucleus. It is also known as proton number.

atomic theory The theory that an atom is the smallest particle of an element that can take part in a chemical reaction. *Democritus is credited with first conceiving the idea, which was, however, vigorously attacked by *Aristotle. The concept fell from favour until the early 19th century, when John *Dalton used it to explain how elements combine in simple proportions. The structure of the atom was first investigated by Lord *Rutherford, who discovered that it consisted of a heavy positively charged core (the *nucleus) surrounded by *electrons. Niels Bohr elaborated on this model (the Bohr atom) but the modern concept of the atom was not finally elucidated until the advent of Schrödinger's *wave mechanics.

Almost all of the atom's mass is concentrated in the nucleus, which consists of positively charged *protons and neutral *neutrons of almost equal mass (the mass of the electron is only 1/1836 that of the proton). The number of electrons in a neutral atom is equal to the number of protons in the nucleus, as the charge on the proton is equal but opposite to that of the electron. The electrons can be thought of as existing in a series of shells around the nucleus, each shell corresponding to a particular energy level. The chemical behaviour of an atom is largely determined by the number of electrons in its outermost shell, as atoms are most stable when they have no partly filled shells, a state often achieved by chemical combination. See illustration on p. 80. See also PARTICLE PHYSICS; CHEMICAL BOND.

atonality The use in music of all 12 notes of the scale in such a way as to avoid *tonality. Atonality arose from the increasing chromaticism of the music of the late 19th century. See also SERIALISM.

ATP (adenosine triphosphate) An energy-rich compound (a nucleotide) with an important

role in the metabolism of living organisms. On its formation from ADP (adenosine diphosphate) in the mitochondria of cells, ATP incorporates a large amount of energy that, on release, is used by cells to manufacture proteins, carbohydrates, etc., and to provide energy for muscle contraction and other dynamic processes.

Atreus In Greek mythology, King of Mycenae, the son of Pelops and father of Agamemnon and Menelaus. His house was cursed as a result of a feud between him and his brother Thyestes over the throne of Mycenae. After Thyestes had seduced his wife, Atreus killed Thyestes' sons and served them at a feast. Another son of Thyestes, Aegisthus, later killed Atreus.

atrium 1. Originally part of a Roman house, a central, partly covered court, frequently colonnaded, which often contained the shrine to the household god. Around it were the entrances to the main rooms. Later it became the main reception room of the house. 2. An open area or courtyard in front of early Christian churches. 3. A central hall in a large building, such as a hotel, that extends to several storeys and is often covered by a glass roof.

atropine An alkaloid, extracted from deadly nightshade, that acts on certain nerves of the autonomic nervous system. It is used during anaesthesia to decrease lung secretions, which lowers the risk of postoperative chest infections, and to treat asthma, diarrhoea, colic, peptic ulcers, and parkinsonism. It also dilates the pupil and speeds up the heart rate.

Attenborough, Richard, Baron (1923–) British film actor, director, and producer. A versatile character actor, he has appeared in such films as *Brighton Rock* (1947), *10 Rillington Place* (1971), and *Jurassic Park* (1993). As director, his films include *A Bridge Too Far* (1977), *Gandhi* (1982), *Cry Freedom* (1987), *Shadowlands* (1994), and *In Love and War* (1996). His brother Sir David Attenborough (1926–) is a naturalist and broadcaster, whose television series include *Life on Earth* (1978), *The Living Planet* (1983), *Trials of Life* (1990), *The Life of Birds* (1998), and *The Life of Mammals* (2003).

attention deficit disorder (or **hyperactivity disorder**) A psychiatric disorder of young children, associated with learning difficulties, hyperactivity, and disruptive behaviour. It occurs most frequently in epileptic, brain-damaged, or intellectually impaired children. The condition is managed by family

a

There is no simple way to illustrate an atom:

by the 19th century it was regarded as a minute solid billiard ball;

with the work of Rutherford between 1906 and 1914 and Bohr in 1913 it was depicted as a miniature solar system with a central nucleus and orbiting electron;

Sommerfeld's refinements of quantum theory in 1916 led to a model with precessing elliptical orbits and spinning electrons;

by 1926 Schrödinger's wave mechanics had been published, based on de Broglie's dual wave-particle concept of electrons. The atom is now regarded as a nucleus surrounded by a "haze" of probabilities that electrons will occur in certain positions.

The main characteristic of an atom, as the smallest particle of matter, is not what our models of it look like but the way it absorbs and emits energy.

When an atom absorbs energy (e.g. when light of the right wavelength falls on it) its electrons jump to a higher energy level.

When these electrons fall back to their original (ground) state they emit energy (as light, ultraviolet, etc.).

All matter and therefore all atoms, according to modern physics, consists of two kinds of particles: leptons and quarks. Electrons are leptons; the particles of the nucleus (protons and neutrons) are each made up of different arrangements of three quarks.

The simplest atomic nucleus is the hydrogen nucleus consisting of one proton.

An isotope of hydrogen, deuterium, has a nucleus consisting of one proton and one neutron.

All other nuclei consist of arrangements of protons and neutrons. The carbon nucleus consists of six protons and six neutrons.

atomic theory

therapy and such drugs as Dexedrine (dexamphetamine) and Ritalin (methylphenidate).

Attica A region of ancient E central Greece. According to Greek legend the 12 towns of Attica were united by Theseus into a single state, which was dominated by Athens by the 5th century BC.

Attila (c. 406–53) King of the Huns (434–53), known as the Scourge of God. After murdering

his brother and coruler, Bleda, he extended his possessions in central Europe and attacked (441–43) the eastern frontier of the Roman Empire. In 451 he invaded Gaul and suffered his only defeat, at the battle of the Catalaunian Plains. His campaigns in Italy (452) caused much destruction. The pope paid him to spare Rome and Attila died shortly afterwards.

Attlee, Clement (Richard), 1st Earl (1883–1967) British statesman; Labour prime

minister (1945–51). A barrister by profession, he was elected MP for Limehouse in 1922, was leader of the Labour Party (1935–55), and deputy prime minister of the wartime coalition government (1942–45). As the first postwar prime minister he introduced the welfare state, nationalized major industries, and gave independence to India.

attorney general The chief law officer of the Crown in England and Wales and its representative in the courts. He is legal adviser to the government and the House of Commons, of which he is always a member and to which he is answerable, and is head of the English bar. He advises on the drafting of Acts of Parliament. With his subordinate, the director of public prosecutions, he prosecutes crimes in the sovereign's name. See CROWN PROSECUTION SERVICE.

Atwood, Margaret (1939–) Canadian novelist, poet, and short-story writer. Her novels include *The Handmaid's Tale* (1986), *The Robber Bride* (1993), *The Blind Assassin* (2000), and *Oryx and Crake* (2003).

aubergine A spiny herbaceous plant, *Solanum melongena*, native to S Asia and also known as eggplant. It is commonly grown in warmer regions for its fruit, a large white, yellow, or purple berry that is eaten as a vegetable. The plant grows to a height of 60–100 cm. Family: *Solanaceae*.

Aubrey, John (1626–97) English antiquary and biographer. He is best known for his *Lives of Eminent Men* (1813) and *Brief Lives* (1898), which were first published in bowdlerized editions long after his death. He was also an active archaeologist.

Aubrieta (or **Aubrieta**) A genus of trailing herbaceous perennial flowering plants (about 15 species), native to mountainous areas of E Europe and W Asia. A *deltoidea* is commonly grown in rock gardens, bearing small purple, red, or pink flowers. Family: *Cruciferae*.

Auckland 36 55S 174 47E The largest city and port in New Zealand, on North Island. Founded in 1840, it was the capital of New Zealand until 1865. The University of Auckland was established in 1882 and there are two cathedrals (Roman Catholic and Anglican). The city is connected with the mainly residential North Shore by the Auckland Harbour Bridge (1959). Auckland is a major industrial centre with engineering, food processing, shipbuilding, and chemical industries. Population (1996 est): 353 670.

Auden, W(ystan) H(ugh) (1907–73) British poet. His early volumes, beginning with *Poems* (1930) and *Look, Stranger!* (1936), established him as a leading left-wing poet of the 1930s. He also wrote verse dramas in collaboration with Christopher Isherwood, with whom he went to the USA in 1939. He became a US citizen in 1946, returning to England while he was professor of poetry at Oxford (1956–61). He wrote several opera libretti, notably for Stravinsky's *The Rake's Progress* (1951).

audio frequency A frequency in the range 20 to 20 000 hertz, i.e. the range of frequencies to which the human ear is sensitive.

Aughrim, Battle of (12 July 1691) The final defeat of the main army of the former King James II of England by the army of William III in Ireland. It was the most disastrous battle in Irish history, with 7000 Jacobite dead. It is still celebrated, together with the battle of the Boyne, by Ulster Unionists on its anniversary (see also ORANGE ORDER).

Augsburg 48 21N 10 54E A city in S Germany, in Bavaria at the confluence of the Rivers Wertach and Lech. It is a major industrial centre; its manufactures include textiles, chemicals, cars, aircraft, and printing machinery. Many of its historic buildings, including the 10th-century cathedral, survived the bombardment of World War II. *History:* founded by the Romans in 15 BC, it became an important banking and commercial centre in the 15th and 16th centuries. An imperial free city from 1276, it was the seat of the notable diets of 1530 (see AUGSBURG CONFESSION) and 1555, which issued the religious compromise establishing the coexistence of Catholicism and Lutheranism, known as the Peace of Augsburg. Population (1999 est): 254 400.

Augsburg Confession The main and distinctive confession of faith of the Lutheran Churches. Drawn up in its original form by Melancthon and approved by Luther, it was presented to the imperial diet that Emperor Charles V had summoned at Augsburg in 1530 to judge Luther's controversial preaching.

Augustine of Canterbury, St (died c. 604) Italian churchman, the first Archbishop of Canterbury. Chosen by Pope Gregory I to evangelize England in 596, he converted Ethelbert I of Kent and successfully established Canterbury as the primatial see. Feast day: 26 or 27 May.

Augustine of Hippo, St (354–430 AD) North African theologian; Father and Doctor of

a

the Church, born at Tagaste. After studying at Carthage, he became a Manichaean, but under the influence of St Ambrose, Bishop of Milan, he converted to Christianity in 386. On his return to Africa, he lived as a monk until he was ordained at Hippo in 391. He became Bishop of Hippo in 396 and died there during a Vandal siege. His *The City of God*, a defence of Christianity in 22 books, and his spiritual autobiography, *The Confessions*, are the most important books written by an early Father of the Church. **Augustinians** are members of religious orders that follow the Rule of St Augustine, especially the orders of the Augustinian (or Austin) Canons, founded in the 11th century, and the Augustinian Hermits (or Austin Friars), founded in the 13th century. Feast day: 28 Aug.

Augustus (or **Octavian**; 63 BC–14 AD) The first Roman emperor, who restored the greatness of the Roman world following the disintegration of the Republic. Born Gaius Octavius, he was the great-nephew and adopted son of Julius Caesar. After Caesar's assassination in 44, Augustus (now Gaius Julius Caesar Octavianus; or Octavian) came to an agreement with *Mark Antony and in 43 they formed the second Triumvirate with Lepidus. Lepidus was forced to retire in 36 and Augustus' relations with Mark Antony failed to withstand Antony's abandonment of his wife Octavia (Augustus' sister) for Cleopatra. Antony's defeat at Actium in 31 allowed Augustus to establish his personal supremacy at the head of an autocratic government known as the principate. In 27 he was proclaimed Augustus (sacred). With the military assistance of Agrippa, and later of his own stepson *Tiberius, he secured and then expanded the Empire. In 4 AD he named Tiberius his heir. Augustus was deified after his death.

auk A stout-bodied seabird belonging to a family (*Alcidae*; 22 species) occurring in the N hemisphere and having a black and white plumage and short pointed wings. The family includes *puffins, *razorbills, *guillemots, and the extinct flightless great auk (*Pinguinus impennis*). Order: *Charadriiformes* (gulls, plovers, etc.).

Aung San (c.1914–47) Burmese statesman; leader of the independence movement. Committed to radical politics from his student days at Rangoon University, Aung San founded the Anti-Fascist People's Freedom League in 1944. He played a crucial role in the negotiations that led to Burmese independence from Britain but was assassinated before it was fully attained.

His daughter, **Aung San Suu Kyi** (1945–),

cofounded the National League for Democracy and led protests against martial law. Placed under house arrest in 1989, she became a symbol of opposition to military rule. Her supporters won free elections in 1990 but the military held on to power by force. She was awarded the Nobel Peace Prize in 1991. Although she was released in 1995, the government placed her under renewed house arrest in 2000–02 and again from 2003.

aurora A display of diffuse changing coloured light seen high in the earth's atmosphere, often taking the form of red or green streamers. Aurorae occur predominantly in polar regions when energetic charged particles from the sun become trapped in the earth's magnetic field. The rapidly moving particles interact with atoms and molecules in the upper atmosphere and cause them to emit light. In the N hemisphere they are called the Northern Lights.

Auschwitz See OŚWIECIM.

Austen, Jane (1775–1817) British novelist. She was the daughter of a clergyman and lived an outwardly uneventful life with her family in the south of England, settling in Chawton in Hampshire in 1809. Her six major novels are *Sense and Sensibility* (1811), *Pride and Prejudice* (1813), *Mansfield Park* (1814), *Emma* (1815–16), *Northanger Abbey* (1818), and *Persuasion* (1818).

austenite A form of *steel that exists when the metal is heated to about 1000°C, in which the carbon exists as a solid solution in the iron. Austenitic steels retain this structure at room temperature because of the presence of an alloying element, such as manganese. Austenite is nonmagnetic and has a high ductility. Named after Sir William C. Roberts-Austen (1843–1902).

Austerlitz, Battle of (2 December 1805) The battle in which Napoleon's 68 000-strong army outmanoeuvred and defeated almost 90 000 Russians and Austrians led by Mikhail Kutuzov (1745–1813). It took place near Austerlitz (now Slavkov u Brna, in the Czech Republic). Napoleon's great victory forced the Austrians to make peace with France by the Treaty of Pressburg and the Russian army to return to Russia.

Australia, Commonwealth of A country in the S Pacific, comprising the whole of the smallest continent and the island of Tasmania to the SE. External territories include *Norfolk Island, *Christmas Island, the Cocos (Keeling) Islands, and the *Australian Antarctic Terri-

tory. Much of the country has a hot dry climate and a large part of the vast central plains are desert or semidesert. The most fertile areas are in the E, along the coastal plains, and in the extreme SW. The Great Barrier Reef lies off the tropical NE coast and the highest mountains, rising over 2000 m (7000 ft), are in the Great Dividing Range, which runs parallel to the E coast. The Murray River and its tributaries in the SE form the main river system. The inhabitants are very largely of European, especially British, origin but there are about 100 000 Aborigines and people of mixed race living in the interior. Since World War II the population has increased dramatically, largely as a result of immigration. *Economy:* agriculture continues to make a substantial contribution to the economy, the main crops being cereals, sugar cane, and fruit. Livestock, particularly sheep and cattle, is also important. Since the 1960s, however, there has been marked growth in iron and steel products. Mining is now of vital importance, especially the extraction of coal, iron, bauxite, uranium, copper, lead, and zinc; about 70% of oil for home consumption is now produced in Australia. The main exports are coal and gas, iron and iron ore, nonferrous ores, and cereals. *History:* the country was inhabited by the Aborigines, immigrants from SE Asia, for approximately 20 000 years before the arrival of the Europeans, beginning with the Portuguese in the 16th century and the Dutch in the early 17th century. In 1770 Captain Cook claimed the fertile E coast for Britain, which was first used as a penal colony. After the introduction of the merino sheep, however, civilian settlements were established further to the N and W towards the interior, eventually reaching the far side of the Blue Mountains in 1813. Colonies were developed in Tasmania, Western Australia, Victoria, South Australia, and Queensland. By 1829 the whole continent was a British dependency. The discovery of gold in Victoria in 1851 attracted large numbers of immigrants and from this period the colonies struggled for greater independence. In 1901 the six colonies were federated to form the Commonwealth, becoming an independent dominion of the British Empire. In 1911 the Australian Capital Territory (the site for the federal capital) and the Northern Territory were added to the Commonwealth. Since World War II closer economic ties have been developed with Japan. In 1978 the Northern Territory achieved self-government although the federal government retained control over uranium. Australia is a member of the Commonwealth. Constitutional links with the UK

were ended in 1986. The 1980s and 1990s saw growing support for Australia becoming a republic: however, despite the fact that a people's Constitutional Convention (elected in 1997) voted to sever links with the crown, a referendum motion to replace the Queen with an appointed president was defeated in 1999. A conservative coalition led by John Howard has held power since 1996. Official language: English. Currency: dollar of 100 cents. Area: 7 686 884 sq km (2 967 283 sq mi). Population (2003 est): 19 880 000. Capital: Canberra.

Australian Alps A mountain range in SE Australia. Part of the *Great Dividing Range, it extends from E Victoria into SE New South Wales and contains the *Snowy Mountains and Mount *Kosciusko, Australia's highest mountain. It is a popular winter-sports area.

Australian Antarctic Territory The area of Antarctica claimed by Australia. It includes all the land lying S of latitude 60°S and between longitudes 45°E and 160°E, excluding Terre Adélie. Several research stations are sited here.

Australian Capital Territory An administrative division of SE Australia. It was created in 1911 from the Limestone Plains region of New South Wales as a site for *Canberra, the capital of Australia. Jervis Bay was transferred to the territory in 1915 for development as a seaport. It is the site of the Australian Academy of Science, the Royal Military College, and the Royal Australian Naval College (at Jervis Bay). Area: 2432 sq km (939 sq mi). Population (2000 est): 308 400.

Australian Rules See FOOTBALL.

Australopithecus A genus of fossil man-like higher primates of the late Pliocene and Pleistocene eras of S and E Africa. Although small in brain size, their cranial and skeletal structures were more like those of modern man than of apes. They walked erect and ate fruit, seeds, and meat. The earliest australopithecines, dated between 4 and 3 million years ago, included *A. anamensis* and *A. afarensis*. They probably evolved into various other species, some of which were the ancestors of modern man while others, such as *A. robustus*, probably coexisted with early forms of man before becoming extinct. Significant fossil finds of *Australopithecus* were made by Louis and Richard Leakey at Olduvai and Lake Turkana. See HOMO.

Austria, Republic of (German name: Österreich) A country in central Europe, on the

a

N side of the Alps. A large part of the country is mountainous but the E area consists of lower hills and plains, with the River Danube flowing through the NE. Most of the inhabitants are German but there are minorities of Croats, Slovenes, and others. *Economy:* although agriculture and forestry are important, there is considerable heavy industry, based particularly on iron and steel. Hydroelectric power is a valuable source of energy. Main exports include iron and steel, machinery, textiles, paper and paper products, and wood. *History:* Austria has a long history going back to the Celtic settlements of the early Iron Age. The area was part of the Roman Empire from 15 BC until the 5th century AD when it was overrun by Germanic tribes. In succeeding centuries it was occupied in turn by Slavs and Magyars from whom it was taken in 955 by the Holy Roman Emperor *Otto (I) the Great. He conferred it upon Leopold of Babenberg, who founded the first Austrian dynasty. In 1282 the *Habsburgs acquired Austria, which was to become the core of their vast empire. In 1526 Bohemia and Hungary were united under the Austrian Crown. The Austrian Empire continued to hold a predominant position in Europe until the middle of the 19th century when its power was lessened by successive defeats, especially in the *Austro-Prussian War. In 1867 the Habsburgs formed the Dual Monarchy of *Austria-Hungary, under the Emperor *Francis Joseph. During his reign there was considerable unrest, especially among the Slavs; the assassination of the Archduke Francis Ferdinand by Serbian nationalists in 1914 was the immediate cause of World War I. In 1918 Austria became a republic. In spite of efforts on the part of the chancellor *Schuschnigg to maintain independence, it was annexed by Nazi Germany in 1938 (see *ANSCHLUSS*). After World War II it was occupied jointly by the Allies, regaining its independence as a republic in 1955. Bruno Kreisky led a socialist government from 1970 until 1983. Austria became a member of the EU in 1995 and adopted the single European currency in 1999–2002. A series of socialist-led coalitions governed until 1999, when the left was defeated in elections. The subsequent formation (2000) of a coalition containing members of the extreme right-wing Freedom Party led EU and other countries to impose diplomatic sanctions. Elections in 2006 resulted in victory for the Social Democrats under Alfred Gusenbauer. Official language: German. Currency: euro of 100 cents. Area: 85 853 sq km (32 375 sq mi). Population (2007 est): 8 199 783. Capital: Vienna.

Austria-Hungary, Dual Monarchy of

The Habsburg monarchy from 1867 to 1918, established in response to the militant demands of Hungarian nationalism. The empire of Austria and the kingdom of Hungary each had its own laws, parliament, and ministries but were united by the monarch (Emperors *Francis Joseph and then Charles), minister for foreign affairs and minister for war, and by the biannual meetings of delegations of representatives of each parliament. The Dual Monarchy disappeared in 1918 with the proclamation of an Austrian republic.

Austrian Succession, War of the (1740–48) The war between Austria and Prussia, in which Britain supported Austria and France and Spain were allied to Prussia. It was brought about by the disputed succession of *Maria Theresa to the Austrian lands. Hostilities were begun by Frederick the Great of Prussia, who annexed the Austrian province of Silesia in 1740. The war was ended by the Treaty of Aix-la-Chapelle, at which Prussia obtained the greater share of Silesia.

Austro-Prussian War (or Seven Weeks' War; 1866) A war between German states led respectively by Austria and Prussia. The Prussian victory was an important landmark in Bismarck's strategy for uniting Germany under Prussian leadership.

Authorized Version See KING JAMES VERSION.

autism A rare and severe mental illness that starts in early childhood. Autistic children do not form normal personal relationships but they can become emotionally attached to things. They do not communicate normally, often cannot form abstract concepts, and they are very upset by tiny changes in their familiar surroundings. Most, but not all, have learning disabilities. Autism can be caused by brain damage and can also be inherited. Lengthy specialized education is usually necessary for autistic children. See also ASPERGER'S SYNDROME.

auto-da-fé (Portuguese: act of faith) The public ceremony at which persons convicted of crimes by the *Inquisition in Portugal, Spain, and their colonies were sentenced. Punishment of victims, including the burning of heretics, was the responsibility of the secular authorities. The first *auto-da-fé* was held in Seville in 1481 and the last, in Mexico in 1815.

autogiro An aircraft with large horizontal freely rotating blades to obtain lift. It differs from the *helicopter in that a propeller pro-

vides forward motion, which in turn causes the rotation of the unmotorized horizontal blades.

autoimmunity A condition in which the body produces antibodies (called autoantibodies) that damage or destroy its own tissues. This produces symptoms of various **autoimmune diseases**, the majority of which are poorly understood. Rheumatoid *arthritis is caused by the production of autoantibodies against joint tissue; the disease can be diagnosed by the detection of these antibodies in the serum. A more general production of autoantibodies causes systemic *lupus erythematosus, which can affect most tissues in the body.

autopsy (necropsy or postmortem) The dissection and examination of a dead body. An autopsy is performed when the cause of death is uncertain: it may provide further information on a poorly understood disease or evidence of criminal involvement. Except for sudden death or death due to obscure causes, permission for autopsy must be granted by the relatives.

autumn crocus A herbaceous perennial European plant, *Colchicum autumnale*, also called meadow saffron. It has narrow strap-shaped leaves, up to 30 cm long, and a single purple-blue crocus-like flower, which appears in autumn after the leaves have died. The drug colchicine, extracted from the corms, is used in the treatment of gout and in genetic research. Some plants of the genus are cultivated for ornament. Family: Liliaceae. Compare CROCUS.

Auvergne A planning region and former province in S central France. Its name derives from the Averni, who strongly resisted Roman control of the area. Crossed by the volcanic Auvergne Mountains that rise to over 1800 m (6000 ft), it has many mineral springs and some level fertile districts. It is predominantly agricultural and is noted for the growing of wheat and grapes and the rearing of cattle; cheese and wine are also produced. Area: 25 988 sq km (10 032 sq mi). Population (1999): 1 308 878.

auxin An organic substance, produced within a plant, that stimulates, inhibits, or modifies growth of the plant. Auxins are sometimes known as plant hormones. The main auxin is indoleacetic acid (IAA). Auxins are responsible for a variety of effects, for example shoot curvature, leaf fall, and fruit growth. Synthetic auxins, such as 2,4-dichlorophenoxyacetic acid (2,4-D), are used as weedkillers for broad-leaved weeds.

Avalon See ARTHURIAN LEGEND.

Avebury S1 27N 151W A village in S England, in Wiltshire, on the site of a large complex of Neolithic and early Bronze Age stone circles, banks, and ditches. The principal circle, with its ditch and outer bank, encloses over 12 hectares (30 acres); within it are two smaller ones. Nearby is *Silbury Hill.

avens A perennial herbaceous plant of the genus *Geum* (about 40 species), native to temperate and Arctic regions. Most species rarely exceed 60 cm in height. Their flowers, 2–3 cm long, are white, yellow, orange, or red, either solitary or in clusters. *G. coccineum* is a common ornamental. Family: Rosaceae.

Averroes (Ibn Rushd; 1126–98) Muslim philosopher and a judge in Córdoba and Seville. Averroes' main works were his commentaries on Aristotle, which greatly influenced the philosophy of medieval Christianity. He defended philosophy as the highest form of enquiry, holding that faith and reason are separate ways of arriving at the truth.

aversion therapy A form of *conditioning used to treat some kinds of undesirable behaviour, such as sexual deviation, alcoholism, and drug addiction. An unpleasant stimulus (e.g. an electric shock) is associated with a stimulus related to the problem behaviour (e.g. the taste of alcohol). See also BEHAVIOURISM.

Avesta The sacred scriptures of Zoroastrianism (see ZOROASTER). Written in Old Iranian, the five books of the Avesta contain prayers (probably by Zoroaster himself) hymns, ritual and liturgical instruction, and the main body of Zoroastrian law. Its surviving form dates from about the 6th century AD.

Avicenna (980–1037) Persian philosopher and physician. Avicenna received extensive education in science and philosophy and served various rulers during his life, as government official and physician. His encyclopedia of philosophy, *Ash-Shifa (The Recovery)*, encompasses logic, psychology, metaphysics, and natural sciences and parts were subsequently translated into Latin. Avicenna's *Canon of Medicine*, based on Roman and Arabic medicine and his own medical knowledge, became a popular text throughout the Middle East and Europe.

Avignon 43 56N 4 48E A town in SE France, the capital of the Vaucluse department on the River Rhône. The papacy, under French control, was removed to Avignon (1309–77; see AVIGNON PAPACY) and there were subsequently rival popes at Rome and Avignon until 1417 (see GREAT SCHISM). Famous sights include the

a

14th-century papal palace and the 12th-century bridge, of which only four arches remain. A tourist centre, Avignon trades in wine and has chemical, soap, and cement industries. Population (latest est): 89 440.

Avignon papacy (1309–77) The period during which the popes resided in Avignon (France) rather than Rome. The papal court was established in Avignon by Clement V, who, like his six successors in Avignon, was French. English and German criticism of French dominance over the papacy eventually forced its return to Rome under Gregory XI. Shortly afterwards the division in the Church known as the *Great Schism occurred, largely in response to the increased power acquired by the cardinals during the Avignon papacy (see also ANTIPOPE).

avocado A tree, *Persea americana*, up to 18 m tall, native to Mexico and Central America but now extensively cultivated in Florida, California, and South Africa for its fruit. These fruits—**avocado pears**—may reach a weight of 2 kg; they have a green to dark-purple skin, a fatty flesh rich in fat, protein, and vitamins A and B, and a single hard seed.

avocet A wading bird of the genus *Recurvirostra*, having long slender legs and a long thin upcurved bill used to skim the surface of mud or water in search of small invertebrates. The Eurasian avocet (*R. avosetta*), 50 cm long, has a black-and-white plumage and is protected in Britain. Family: *Recurvirostridae*; order: *Charadriiformes* (gulls, plovers, etc.).

Avogadro, Amedeo, Conte di Quaregna e Ceretto (1776–1856) Italian physicist, who became professor of physics at the University of Turin. He developed Gay-Lussac's hypothesis that equal volumes of gases contain equal numbers of particles, establishing the difference between atoms and molecules. Because he made this vital distinction the theory is now known as **Avogadro's hypothesis**. His name is also commemorated in the **Avogadro number** (or the Avogadro constant), the number of molecules in one mole of substance (it has the value $6.022\,52 \times 10^{23} \text{ mol}^{-1}$). Avogadro's work was not acknowledged until Cannizzaro brought it to public notice in 1854.

Avon, (Robert) Anthony Eden, 1st Earl of (1897–1977) British statesman; Conservative prime minister (1955–57). Foreign secretary from 1935 to 1938, he resigned in opposition to Neville Chamberlain's policy of *appeasement. At the beginning of World War II he was secretary for war and then (1940–45;

1951–55) foreign secretary. He succeeded Churchill as prime minister and following Nasser's nationalization (1956) of the *Suez Canal and an Israeli attack on Egypt, joined France in an offensive against Egypt. Egypt retained control of Suez and Eden was much criticized: he resigned shortly afterwards. He became Earl of Avon in 1961.

Avon, River The name of several rivers in the UK, including: 1. A river in central England, flowing SW from Northamptonshire to the River Severn at Tewkesbury. Length: 154 km (96 mi). 2. A river in SW England, flowing S and W from Gloucestershire to the Severn estuary at Avonmouth. Length: 120 km (75 mi). 3. A river in S England, flowing S from Wiltshire to the English Channel. Length: 96 km (60 mi).

AWACS (Airborne Warning and Control System) A US radar system mounted on an aircraft to give early warning of the movements of enemy aircraft and, if appropriate, to direct intervention measures against them.

Axis Powers The coalition of Germany, Italy, and Japan that opposed the Allied Powers in *World War II. It originated in agreements going back to 1936 and it culminated in the Tripartite Pact (1940).

axolotl A salamander, *Ambystoma mexicanum*, occurring in Mexican lakes. It reaches a length of 25 cm, has a long tail and weak limbs, and is typically dark brown. Axolotls retain their larval characteristics permanently, reproducing in this state, although under certain conditions they may develop into adults. Family: *Ambystomatidae*.

Ayckbourn, Sir Alan (1939–) British dramatist. After working in provincial repertory theatre, he gained his first London success with *Relatively Speaking* (1967). His comedies include *Absurd Person Singular* (1973), the trilogy *The Norman Conquests* (1974), *A Chorus of Disapproval* (1985), *Body Language* (1990), and *House and Garden* (2000), all characterized by detailed observation of middle-class life. He directs a repertory theatre in Scarborough. He was knighted in 1997.

aye-aye A rare arboreal prosimian primate, *Daubentonia madagascariensis*, occurring only in the coastal forests of N Madagascar. It is 86–104 cm long including the tail (50–60 cm) and has dark shaggy fur and large ears used to detect wood-boring insects, extracting them with its incisor teeth and narrow elongated third finger. Family: *Daubentonidae*.

Ayer, Sir Alfred (Jules) (1910–89) British

philosopher; Wykeham Professor of Logic at Oxford (1959–78). Ayer's major contribution to British philosophy was his bringing to England the teachings of the *Vienna Circle, in particular the doctrine of *logical positivism, which he expounded in *Language, Truth and Logic* (1936). His later books include *The Foundations of Empirical Knowledge* (1940), *The Problem of Knowledge* (1956), and two volumes of autobiography (1977, 1984).

Ayers Rock (Aboriginal name, Uluru) The largest monolith in the world, in Australia, in SW Northern Territory. It consists of a vast red rock, 335 m (1099 ft) high and 10 km (6.25 mi) in circumference. Its colour varies according to atmospheric changes and the position of the sun.

Aylesbury 51°50'N 0°50'W A market town in S central England, the administrative centre for Buckinghamshire. Lying in an agricultural area, it has food-processing, insurance, and various light industries. Population (1991): 58 058.

Aylward, Gladys (1903–70) British missionary. From 1930 she worked as an independent missionary in China. Her life story was the subject of a popular film, *The Inn of the Sixth Happiness* (1958), in which she was played by Ingrid Bergman.

Ayrshire A historic county of SW Scotland, bordered by the Firth of Clyde and including the island of Arran. In 1975 it became part of Strathclyde Region. Further reorganization in 1996 led to the creation of three new council areas, East Ayrshire, North Ayrshire, and South Ayrshire.

Ayrshire cattle A breed of red or brown and white cattle originating in Ayrshire, SW Scotland. A hardy breed, Ayrshires are primarily producers of good quality milk, used especially in cheese making. Many herds have been replaced by the higher yielding Friesians.

Ayub Khan, Mohammad (1907–74) Pakistani statesman; president (1958–69). After a distinguished military career he became defence minister in 1954. Following President Iskander Mirza's coup in 1958, Ayub Khan became chief martial law administrator and then ousted Mirza to become president. With Shri Lal Bahadur Shastri he negotiated (1966) the ceasefire agreement following the India-Pakistan war of 1965. He was forced to resign following civil unrest in East Pakistan.

azalea A deciduous shrub of the genus *Rhododendron*. (Most horticulturalists prefer to restrict the term *rhododendron* to the large

evergreen species.) Growing to a height of up to 2 m, azaleas are native to North America and S Asia but are widely cultivated as ornamentals. The attractive flowers are funnel-shaped (about 6 cm in diameter) and of various colours. Family: *Ericaceae*.

Azerbaijan, Republic of A republic in W Asia, on the Caspian Sea. Most of the population are Shiite Muslims. *Economy*: agricultural products include cotton, tobacco, and fruit. Oil and gas are the most important industries. *History*: the region was acquired by Russia from Persia in the early 19th century, proclaimed its independence in 1918, but subsequently formed part of the Transcaucasian Soviet Federated Socialist Republic; it became a separate Soviet republic in 1936 and an independent state in 1991. In 1988–90 riots over Armenian claims to the disputed *Nagorno-Karabakh area escalated into a state of virtual civil war. Azerbaijani troops fought Armenian forces in the region from 1991 until 1994, when a ceasefire was declared. In 1993 the former communist leader Heidar Aliyev became head of state after a military coup; he was re-elected in 1998, amidst widespread allegations of fraud, and succeeded by his son, Ilham Aliyev, in 2003. Official language: Azeri. Currency: manat of 100 gopik. Area: 86 600 sq km (33 430 sq mi). Population (2003 est): 8 235 000. Capital: Baku.

azimuth See ALTITUDE.

Azores (Portuguese name: Açores) 38°30'N 28°00'W Three groups of volcanic islands in the N Atlantic Ocean, in Portugal. The chief islands include São Miguel, Terceira, Faial, and Flores. Settled by the Portuguese in the 15th century, they were previously uninhabited. Naval fighting between the English and Spanish took place here in the 16th and 17th centuries. The site of US air bases, they produce fruit, tobacco, and wine. Area: 2300 sq km (888 sq mi). Population (2001): 242 073. Capital: Ponta Delgada, on São Miguel.

Aztecs A Nahuatl-speaking people who ruled an empire in central and S Mexico before their defeat by Hernán Cortés in the 16th century. They had an advanced, elaborate, and rich civilization centred on their capital Tenochtitlán and other cities. They constructed large palaces and temples in which they worshipped many gods, especially Huitzilopochtli to whom they sacrificed human victims, captives of warfare, by ripping out their hearts while they still lived. Authority and influence were vested in a class of chiefs and priests and in the kings, the last of whom was Montezuma.

Ba'ath Party An Arab political party committed to the creation of a united socialist Arab nation. The Ba'athists rose to power in Syria in 1963 and in Iraq (where Saddam *Hussein became their leader) in 1968. The Syrian and Iraqi wings of the party have been deeply divided since the 1970s. The Iraqi Ba'athists lost power as a result of the *Iraq War of 2003.

Babbage, Charles (1792–1871) British mathematician and inventor. In an attempt to produce more accurate mathematical tables, Babbage conceived the idea of a mechanical computer that could store information. Although he never completed the machine, it was the forerunner of the modern computer.

Babel, Isaac Emmanuilovich (1894–1941) Russian short-story writer. Of Jewish descent, he served in the imperial army, but fought for the Bolsheviks in 1917. His *Odessa Tales* were published in 1916. *Red Cavalry* (1926) was a series of sketches based on his experience in the war against Poland. He died in a Siberian prison camp, a victim of Stalin, but was posthumously rehabilitated in the 1950s.

Babel, Tower of In the old Testament (Genesis 11.1–9) a tower intended to reach to heaven. Jehovah, angered by this presumptuous behaviour, caused the builders to speak different languages so that, incomprehensible to each other, they had to abandon the work. The legend is an attempt to account for diversity of language.

Babi faith A religion founded in 1844 by Mirza 'Ali Mohammed (1819–50), who became known as the Bab (the Gate). It was the immediate precursor of the *Baha'i faith.

baboon A large *Old World monkey belonging to the genus *Papio* (5 species), of African and Asian grassland. Baboons are 95–185 cm long including the tail (45–70 cm) and have a shaggy mane and a long doglike face with large teeth. They feed on insects, small vertebrates, and vegetable matter. Baboons live in well-

organized troops containing 40–150 individuals arranged in a social hierarchy according to age and sex.

Babylon The capital of ancient Babylonia, strategically positioned on the River *Euphrates S of modern Baghdad. Its first period of prominence was about 2150 to 1740 BC, under a dynasty of which Hammurabi was the most illustrious member. Subsequently, rising Assyrian power threatened Babylonian independence, though some Babylonians, such as Nebuchadnezzar I (reigned c. 1146–1123), temporarily reversed the trend. Sacked in 689 BC by the king of Assyria, Sennacherib (d. 681 BC), Babylon was rebuilt from 625 BC onwards, especially during the reign (c. 605–562) of *Nebuchadnezzar II. It was the remains of this city that were excavated (1899–1917) by the German archaeologist Robert Koldewey (1855–1925). In 539 BC Babylon surrendered to Cyrus the Great of Persia (d. 529 BC); by 275 BC it was virtually depopulated. See also HANGING GARDENS OF BABYLON; ZIGGURAT.

Babylonia The area of *Mesopotamia on the alluvial plain on the lower reaches of the River Euphrates, which was controlled by ancient *Babylon. Before about 2000 BC approximately the same area was known as *Sumer, of which *Ur was the capital.

Bacchanalia The Roman form of the Hellenistic mystery rites in honour of Bacchus (see DIONYSUS). The cult reached Rome from S Italy in the 2nd century BC. Originally involving only women, Bacchic worship included ecstatic rituals and secret orgies. In 186 BC a decree of the Senate prohibited Bacchanalia in Rome.

Bacchus See DIONYSUS.

Bach, Johann Sebastian (1685–1750) German composer and keyboard player, the greatest member of a large musical family. He became a chorister in Lüneburg and in 1703 a violinist at the Weimar court, later becoming

organist there. In 1707 he married his cousin Maria Barbara Bach (1684–1720); after her death he married Anna Magdalena Wilcken (1701–60). He became kapellmeister at the court of Prince Leopold of Anhalt at Köthen in 1717 and finally cantor of St Thomas' Church, Leipzig, in 1723. Among his greatest works are the *St John Passion* (1723), the *St Matthew Passion* (1729), and the *Mass in B minor* (1733–38), as well as over 200 cantatas. His compositions for orchestra include violin and harpsichord concertos and the *Brandenburg Concertos* (1721). For the harpsichord and clavichord he composed a collection of 48 preludes and fugues entitled *The Well-Tempered Clavier* (Part I, 1722; Part II, 1744) and the *Goldberg Variations* (1742). Bach's music did not become widely known until Mendelssohn revived it.

Of Bach's 20 children, 3 sons became famous musicians. His eldest son **Wilhelm Friedemann Bach** (1710–84) studied in Leipzig and became church organist in Dresden (1733–46) and subsequently in Halle (1746–64). He ended his life in poverty, leaving cantatas, concertos, and symphonies.

His third son **Carl Philipp Emanuel Bach** (1714–88) became musician to Frederick the Great in Berlin and subsequently director of the principal church in Hamburg in succession to Telemann. He developed a new monophonic style of composition in his symphonies, concertos, and keyboard music that became the basis of the classical style.

J.S. Bach's 11th son **Johann Christian Bach** (1735–82), known as the English (or London) Bach, studied in Berlin and after holding posts in Italy became music master to the British royal family. He composed 13 operas, as well as concertos, church music, and piano pieces.

bacillus Any rod-shaped bacterium, specifically a bacterium of the genus *Bacillus*: spore-forming species including parasites of plants and animals. *B. anthracis* was first shown to cause anthrax in livestock by Robert Koch (1843–1910).

backgammon A board game for two players that was known in ancient Mesopotamia, Greece, and Rome and in medieval England (as "the tables"). Each player has 15 pieces, which are moved round the 24 chevrons (points) marked on the board, according to the throws of two dice. From their starting positions the players move in opposite directions. Each tries to bring all his pieces into the last quarter after which he can remove them from the board. Simultaneously he must block his opponent's moves.

background radiation Low-intensity radiation naturally present on the earth. It results either from the bombardment of the earth by *cosmic rays or from naturally occurring radioactive substances in the earth's crust.

backswimmer A *water bug, belonging to the worldwide family *Notonectidae* (nearly 200 species), that swims on its back, using a pair of oarlike legs for propulsion. Backswimmers can fly but are normally found in fresh water, preying voraciously on insects, tadpoles, and small fish. They must return to the surface periodically to replenish their air store.

Bacon, Francis (1909–92) British painter, born in Dublin of English parentage. Self-taught, he was assured a place in British art with his *Three Studies* (of figures for the base of a Crucifixion; 1945). Another of his well-known paintings is *Study after Velázquez* (1951), a version of Velázquez's portrait of pope Innocent X.

Bacon, Francis, 1st Baron Verulam, Viscount St Albans (1561–1626) English lawyer and philosopher. He was called to the Bar in 1582 and became an MP in 1584. Under James I, Bacon became attorney general (1613) and Lord Chancellor (1618). In 1621, however, he was found guilty of bribery and corruption, fined £40,000, and banished from office.

In 1597 he published his first group of *Essays*; further such discourses appeared in 1625. *The Advancement of Learning* (1605) presented a new classification of sciences and was expanded in the *De augmentis scientiarum* of 1623. In *Novum organum scientiarum* (1620) he advocated the scientific method of *induction. His other works include the *New Atlantis* (1626), which describes his ideal state.

Bacon, Roger (c. 1214–c. 1292) English monk, scholar, and scientist, called Doctor Mirabilis for his diverse skills and learning. In three books written for Pope Clement IV he attempted to systematize the current state of knowledge; other works prophesied aeroplanes, microscopes, steam engines, and telescopes; he also detected errors in the Julian *calendar and has been credited with the invention of *gunpowder and of the magnifying glass.

bacteria Microscopic single-celled organisms found wherever life is possible. Bacteria form a kingdom of organisms distinguished from all others by the structure of their cells, which lack a nucleus. They are divided into two groups, the archaeobacteria and the eubacteria. Archaeobacteria lack a rigid cell wall and are

bacteriophage (or **phage**) A *virus that infects a bacterium. 25–800 nanometres in size, phages may be spherical, filamentous, or tadpole-shaped with a head and tail. They consist of a protein coat surrounding a core of nucleic acid (either DNA or RNA) that is inserted into the bacterium. The viral genes then use the protein-synthesis apparatus of the bacterium to produce new phages, which are released from the cell, usually causing its destruction. Phages are used in genetic engineering to transfer foreign DNA into bacterial hosts.

ASSOCIATION). He achieved fame through his defence of Mafeking in the Boer War (1899–1900). Utilizing the experience of character training he had gained overseas, he founded the Boy Scouts in 1908 and, with his sister Agnes, the Girl Guides in 1910 (see GUIDES ASSOCIATION).

Bader, Sir Douglas (1910–82) British fighter pilot. After losing his legs in a flying accident (1931), Bader argued himself back into the RAF at the start of World War II. Becoming a national hero, he was finally shot down and imprisoned by the Germans, who only prevented his escape by depriving him of his artificial legs. In 1976 he was knighted for his work for the disabled.

badger A nocturnal burrowing mammal of the *weasel family (*Mustelidae*). The largest of the eight species is the gregarious Eurasian badger (*Meles meles*), about 90 cm long, with short strong legs, long coarse greyish hair on the body, and a black and white striped head. It lives in a complex of burrows (a set) and feeds on insects, rodents, worms, berries, etc.

Bad Godesberg See GODESBERG.

badminton An indoor court game for two or four players, played with rackets and a shuttlecock of nylon or cork and feathers. It originated in about 1870, probably from battledore and shuttlecock and may have first been played

in the park of Badminton House, in the village of Badminton (Avon). It is a volleying game (the shuttles do not bounce) and points are scored only by the serving side. If the serving side fails to make a good return the service changes (in doubles games both partners serve before their opponents). A game is usually played to 15 points (women's singles go to 11 points).

Baekeland, Leo Hendrik (1863–1944) US industrial chemist, born in Belgium. He invented Bakelite (see PLASTICS), the first synthetic thermosetting plastic. The discovery was made while Baekeland was searching for a synthetic substitute for *shellac.

Baffin Island The largest island of the Canadian Arctic, lying N of Hudson Strait, named after William Baffin (c. 1584–1622). It is separated from Greenland by a Strait forming **Baffin Bay** (in the N) and Davis Strait. Mountainous with many glaciers and snowfields, its sparse population is concentrated in Frobisher Bay. Since April 1999 it has formed part of the new Inuit territory of *Nunavut. Area: 476 068 sq km (183 810 sq mi).

Baghdad 33 20N 44 26E The capital of Iraq, on the River Tigris near the centre of the country. Built by the caliph Mansur in the 8th century, it was a centre of commerce, learning, and religion until sacked by the Mongols in 1258. It became the capital of independent Iraq (1927) and has three universities (1947, 1957, and 1963). It was severely damaged by US bombing in the *Iraq War (2003). Population (1997 est): 5 423 964.

bagpipes A reed-pipe instrument of ancient origin, found in many countries. Air is forced into a windbag either by the mouth (Scottish bagpipes) or by a bellows (Northumbrian pipes). By pressing the bag under his arm the player pushes air into the sounding pipes, which consist of one to three drones (each sounding a single note) and a chanter pipe. Bagpipes are regarded as the national instrument of Scotland, having been introduced to the British Isles in the 13th century.

Baha'i faith A religion founded in Persia in 1863 by Mirza Husain 'Ali (1817–92), who was known as Baha' Allah (Glory of God). He proclaimed himself to be the Promised One whose coming was foretold by the Bab (see BABI FAITH). His eldest son and then his great-grandson led the Baha'is after his death until 1957. Since 1963 the faith has been governed by the Universal House of Justice, a council at Haifa, Israel, elected by national spiritual assemblies. The basic tenet of the faith is that

God reveals himself to man through prophets who appear at various stages in history and the most recent of these is Baha' Allah.

Bahamas, Commonwealth of the A state consisting of about 700 islands and innumerable cays in the West Indies, off the SE coast of Florida. The principal islands, which are mainly low lying, include New Providence, Grand Bahama, Abaco, Eleuthera, Andros, and Watling Island (San Salvador). The majority of the population is of African descent. *Economy*: tourism accounts for over 50% of revenue and employment. It is also an offshore financial centre, 90% of companies being foreign-owned. Efforts are now being made to develop agriculture, fisheries, and industry. *History*: in 1492 Columbus made his first landing in the W hemisphere on the island of San Salvador. The first European occupation comprised an English religious settlement in the mid-17th century, and the islands became a British crown colony in 1717. In 1973 the Bahamas attained full independence within the Commonwealth. Official language: English. Currency: Bahamian dollar of 100 cents. Area: 13 864 sq km (5353 sq mi). Population (2007 est): 305 655. Capital: Nassau.

Bahrain, Kingdom of An independent sheikdom in the Arabian Gulf, occupying a low-lying archipelago between Saudi Arabia and the Qatar Peninsula. The two main islands, Bahrain and Al-Muharraq, are connected by a causeway and there are also plans for a causeway to Saudi Arabia. The inhabitants are mainly Arabs. *Economy*: almost totally dependent upon oil. A large refinery processes local oil and much larger amounts coming from Saudi Arabia by pipeline. Efforts are being made to develop other industry with some success. *History*: the islands were under Portuguese rule from 1521 until 1602, and during parts of the 17th century Iran had control, eventually being expelled by the Khalifa family, who have ruled the area for most of the time since. It was a British protected state from 1861 until 1971 when full independence was declared by the emir, Sheik Isa ibn Sulman al-Khalifa (1933–99). Bahrain became a member of OPEC in 1970. The National Assembly was dissolved in 1975 following political unrest, but growing opposition to the regime in the mid-1990s led the emir to set up an appointed council. In 2000 Emir Hamad took the title of king and a new constitution was enacted; parliamentary elections were held in 2002 and 2006 but unrest has continued. Official language: Arabic. Currency:

dinar of 1000 fils. Area: 660 sq km (255 sq mi). Population (2007 est): 708 573. Capital: Manama.

bail The release by a court of an imprisoned person, usually while awaiting trial, into the keeping of people who agree to ensure his reappearance at a particular date and time. If these people, called "sureties," then fail to produce him, they forfeit whatever sum of money the court has set for bail. The person bailed must also stand as surety for himself; if thought trustworthy, he may be bailed without other sureties, "in his own recognizance."

Bainbridge, Dame Beryl (1934–) British novelist and playwright. Born in Liverpool, she has written such novels as *The Dressmaker* (1973), *An Awfully Big Adventure* (1989), *Master Georgie* (1998), and *According to Queenie* (2001). She was appointed DBE in 2000.

Baird, John Logie (1888–1946) British electrical engineer, who invented an early television system. In 1924 he first succeeded in transmitting the outline of shapes, although his 240-line system was not adopted by the BBC. Baird also worked on radar and fibre optics.

Bakhtaran (name until 1987: Kermanshar) 34 19N 47 04E A town in W Iran, with a largely Kurdish population. Population (2004): 802 872.

Bakhtyari An Islamic tribe of W Iran of some 400 000 members speaking the Luri dialect of Persian. About one-third are still nomadic herdsman living in tents. They migrate 150 miles from their winter pastures on the plains to the summer pastures in the mountains.

baking powder A mixture, usually of sodium bicarbonate and tartaric acid or cream of tartar, used in baking. It generates carbon dioxide on heating or wetting, thus making the dough rise.

Baku 40 22N 49 53E The capital of Azerbaijan, a port on the Caspian Sea. Its ancient buildings include mosques and a 17th-century palace. It has been a centre of oil production since the 19th century. Population (2003 est): 1 828 800.

Bala, Lake (Welsh name: Llyn Tegid) The largest natural lake in Wales, in Gwynedd. The town of Bala lies at its N end. Length: 6 km (4 mi).

Balacava, Battle of (25 October 1854) An indecisive battle between Russian and British-Turkish forces in the *Crimean War. It is notorious for the heavy British casualties caused by misunderstanding between Lord

*Raglan, the British commander in chief, and Lord Lucan (1800–88), the cavalry commander. The courageous Light Brigade charged Russian artillery in a narrow valley and 113 of its 673 men were killed. The charge was made famous by Tennyson's poem "Charge of the Light Brigade".

balalaika A Russian instrument of the guitar family, having a long fretted fingerboard, a triangular body, and three wire strings that are plucked with a plectrum. Small versions are held like a guitar and the larger ones balanced on the floor like a double bass.

balance A sensitive device for comparing two masses, consisting of a beam pivoted at its centre (usually on an agate knife edge) with pans hanging from each of its ends. The material of unknown mass is placed in one pan and standard weights are placed in the other. A pointer indicates when the beam is horizontal and the whole device is enclosed in a glass case to avoid draughts and temperature changes. A standard balance will weigh to the nearest 0.0001 g, while extremely sensitive **microbalances** can be used to weigh objects with a mass of only 1 microgram.

balance of payments The difference between a country's income and its expenditure abroad. The current account records the country's balance-of-trade earnings or deficit on visible goods and invisible earnings on such items as insurance, transport, tourism, and some kinds of government spending. The capital account records all long- and short-term capital flows. If the sum of the current and capital accounts shows a deficit there will be a net loss of foreign exchange.

balance of power The principle that no nation or group of nations should be permitted to become too dominant. It was adopted in Europe in the alliance system of 15th-century Italy and by the Congress of *Vienna at the start of the 19th century. In the 20th century the concept was largely replaced by the nuclear deterrent.

balance of trade The difference in money between the value of a country's imports and its exports. Together with the invisibles account and capital transfers it makes up the *balance of payments. The balance of trade can be in deficit without necessarily meaning that the balance of payments will also be in deficit.

Balanchine, George (Georgy Melitonovich Balanchivadze; 1904–83) US ballet dancer and choreographer, born in Russia. He worked for

Diaghilev's Ballets Russes in Europe from 1924 and went to the USA in 1933, becoming artistic director of the New York City Ballet. His ballets include *Firebird* (1950) and *Don Quixote* (1965).

bald eagle A large sea *eagle, *Haliaeetus leucocephalus*, also called the American eagle; it is the national emblem of the USA and an endangered species. It is dark brown with a white head and tail and has a prominent curved beak and unfeathered legs. It feeds on carrion and fish.

Baldwin, James Arthur (1924–87) US Black novelist, essayist, and dramatist. His first novel, *Go Tell It on the Mountain* (1953), is based on his experience in Harlem, New York City, where he was born. He lived in Paris from 1948 to 1957, when he returned to the USA as an active civil-rights campaigner. His works include novels, plays, and collections of essays.

Baldwin of Bewdley, Stanley, 1st Earl (1867–1947) British statesman, who was Conservative prime minister (1923–24, 1924–29, 1935–37), when he dealt with the *General Strike (1926) and Edward VIII's abdication (1936). Baldwin was criticized for condoning Italy's conquest of Ethiopia and his reluctance to rearm in the face of Germany's military build-up.

Balearic Islands An archipelago in the W Mediterranean Sea comprising an autonomous region of Spain. It includes the chief islands of *Majorca, *Minorca, *Ibiza, and Formentera, together with several islets. The islands were conquered by Aragon from the Moors in the 14th century. Area: 5014 sq km (1936 sq mi). Population (2004 est): 955 045. Capital: Palma, on Majorca.

Balenciaga, Cristóbal (1895–1972) Spanish fashion designer, known for his simple but elegant suits and evening dresses in the 1950s.

Balfour Declaration (1917) The decision of the British Government, made known in a letter of 2 Nov from the British foreign secretary, Arthur Balfour (1848–1930), to Lionel, Baron Rothschild (1868–1937), the chairman of the British Zionist Federation, to support the establishment of a national Jewish home in Palestine. Although the Declaration was abandoned in 1939, it helped to justify the partition of Palestine and the creation of the State of Israel in 1948.

Bali An Indonesian island off E Java. Mountainous and volcanic, it has southern fertile plains that produce chiefly rice. *History:* Hindu since the 7th century AD, Bali resisted the

16th–17th century spread of Islam through Indonesia. Dutch rule began in 1908 and Bali became part of Indonesia in 1945. In the 1965–67 purge of communists 40 000 people were killed. In 2002 a bomb planted in a night club in Kuta Beach by Islamic terrorists killed over 200 people. Area: 5558 sq km (2146 sq mi). Population (2001): 3 151 162. Chief town: Denpasar.

Balkan Mountains (Bulgarian name: Stara Planina) A mountain range extending 500 km (311 mi) E–W for the entire width of central Bulgaria. It rises to 2376 m (7795 ft) at Botev Peak.

Balkans An area in SE Europe consisting of present-day Greece, Albania, Croatia, Bosnia-Herzegovina, the Former Yugoslav Republic of Macedonia, Serbia, Montenegro, Bulgaria, part of Romania, and the European part of Turkey. Part of the Roman empire from the 2nd century BC and of the Eastern Roman (Byzantine) Empire from the 5th century AD, the Balkans were ruled by the Ottoman Turks from the 15th to the early 20th century, when independence was granted (see also BALKAN WARS). All the Balkan states, except Greece, became communist after *World War II. In the 1990s the region was once again plunged into turmoil with the disintegration of Yugoslavia, the savage civil war in Bosnia-Herzegovina, and the *Kosovo war.

Balkan Wars (1912–13) In the first Balkan War (1912–13) the Balkan League (Bulgaria, Serbia, Greece, and Montenegro) defeated Turkey. In the concluding Treaty of London, Turkey lost all its European possessions except E Thrace. In the second Balkan War (1913) the victors fought over their acquisitions in Macedonia, from most of which Bulgaria was excluded by the Treaty of Bucharest; Turkey regained Thrace.

ballet A dramatic art in which dancing and mime, accompanied by music, combine to tell a story or evoke a mood. Ballet originated in the formal dances of French court entertainments, notably under Louis XIV. In the 18th century ballet established itself in the public theatre but still as an adjunct to *opera or other forms of drama. Dancing on the tips of the toes (*sur les pointes*) was introduced early in the 19th century, which saw the heyday of romantic ballet. Modern ballet arose in the early 20th century when *Fokine and *Diaghilev (see also BALLETS RUSSES) combined the polished technique of the imperial Russian dancers with the natural-

b

The five ballet positions

Labanotation

ballet. Rudolph Laban (1879–1958) published his system for recording dance movements (Labanotation) in 1928, since when it has gained widespread acceptance. In this simple example, the initial positions of the legs and arms are indicated at (1). Subsequent positions (2–5) are seen by reading upwards from the bottom. The dancer, starting with feet together and arms at her sides, takes four even steps forward, beginning with the right foot, and moves her arms upwards and outwards (the different shadings representing low, middle, and high positions).

ism advocated by the American Isadora *Duncan.

Ballets Russes A Russian ballet company (1909–29) founded in Paris by *Diaghilev. It gave the West its first opportunity to see Russian imperial dancers and greatly influenced the subsequent development of ballet. Its choreographers included *Fokine, *Massine, *Balanchine, and *Nijinsky, who was also one of its principal dancers. *Ravel and *Stravinsky composed music for several of its ballets.

ballistic missiles Rocket-powered nuclear missiles that are propelled to desired altitudes and then follow an unpowered trajectory. Intercontinental ballistic missiles (ICBMs) are capable of reaching any point on the surface of the earth. Both the USA and the former Soviet republics possess large numbers of these, some of which (MIRVs—multiple independently targeted re-entry vehicles) have up to ten separate warheads. See also ANTIBALLISTIC MISSILES.

ball lightning A luminous moving sphere, several centimetres in diameter, occurring just above the ground on rare occasions during thunderstorms. It hisses, has a distinct odour, and may be either red, orange, or yellow. It lasts for only a few seconds and then either dies away or explodes. The phenomenon is not fully understood.

balloons Lighter-than-air craft, consisting of a bag of gas that displaces a volume of air of greater mass than the total mass of the balloon and its contents. The first successful balloon flight was made in 1783 by the *Montgolfier brothers' hot-air balloon; it flew 9 km across Paris. Two years later a hydrogen balloon designed by J. A. C. Charles (1746–1823), flew across the Channel. The use of balloons in war began with Napoleon's observation balloons in 1794, after which they were little used until their extensive use in both World Wars in the form of barrage balloons. The sport of **ballooning**

enjoyed a revival in the latter half of the 20th century, using a hot-air balloon carrying its own propane air heater. The height record for a manned balloon is 30 480 m (D. Simons, US Air Force, 1957). The first crossing of the Atlantic Ocean by helium balloon was achieved in 1978. In 1999 Brian Jones of the UK and Bertrand Piccard of Switzerland made the first circumnavigation of the globe in a hot-air balloon.

Ballymena A district in central Northern Ireland, in Co Antrim. Area: 634 sq km (247 sq mi). Population (2001): 58 610.

Ballymoney A district in Northern Ireland, in Co Antrim. Area 417 sq km (161 sq mi). Population (2001): 26 894.

Balmoral Castle The principal country residence of the British monarch in Scotland, situated in SW Aberdeenshire by the River Dee. It was bought by the royal family in 1848 and rebuilt in the 1850s.

balsa An evergreen tree, *Ochroma pyramidale*, native to Central and South America, also called corkwood. About 12 m tall, it is the source of an extremely light pale-coloured wood, which is widely used for corks, canoes, floats, etc. Family: *Bombacaceae*.

balsam An aromatic resinous substance derived from the Central American leguminous tree *Myroxylon peneirae*, grown in El Salvador. It is used in medicine and perfumes.

Baltic Sea A section of the Atlantic Ocean in N Europe, bounded by Denmark, Sweden, Finland, Latvia, Lithuania, Estonia, Russia, Poland, and Germany. To the W, it leads into the Little Belt, the Great Belt, and the Sound, and to the E, the Gulfs of Bothnia, Finland, and Riga. Receiving rivers draining almost one-fifth of Europe, it has low salinity, and can freeze.

Baltic states The republics of Latvia, Lithuania, and Estonia. They were independent states between World Wars I and II and constituent republics of the Soviet Union from 1940 to 1991. They joined the EU in 2004.

Baltimore 39 25N 76 40W A city in the USA, in Maryland at the mouth of the Patapsco River. Established in 1729, it was named after the first Baron Baltimore who founded Maryland. It was the starting point of the USA's first railway (1827). Baltimore contains a number of universities, including the prestigious Johns Hopkins University (founded 1876); in the 1980s considerable rebuilding in the port area revitalized the city. Industries include steel, sugar and food processing, oil refining, and chemicals. Population (2000): 651 154.

Baluchistan A province in W Pakistan, on the Arabian Sea and the Iranian and Afghani borders. Mostly rough arid highlands, it is inhabited by pastoral Pathans, Baluchs, and other peoples. The NW deserts are practically uninhabited but the coastal plain and E lowlands support cereals and herbs. *History*: on trade routes from India to the Middle East, Baluchistan has flourished since ancient times. It usually enjoyed autonomy until Britain won control (19th century). In 1947 it became part of Pakistan. Area: 347 190 sq km (134 050 sq mi). Population (1998): 6 511 000. Capital: Quetta.

Balzac, Honoré de (1799–1850) French novelist. A lawyer's clerk, he wrote popular novels under pseudonyms. In 1828, bankruptcy forced him to turn to writing; *Les Chouans* (1829) was his first successful novel, and in the next 20 years he added over 40 novels to the cycle *La Comédie humaine*. In these novels, which included *Eugénie Grandet* (1833), *Le Père Goriot* (1834), and *La Cousine Bette* (1846), he developed new techniques of realism.

Bamako 12 40N 7 59W The capital of Mali, a port in the S on the River Niger. A centre of Muslim learning under the medieval Mali Empire, it had dwindled to a small village by the end of the 19th century. It became the capital of the French Sudan in 1905. Population (1996 est): 809 552.

bamboo A treelike plant of the tribe *Bambuseae*, native to tropical and subtropical regions, particularly in SE Asia. From an underground stem (rhizome) arise hollow woody jointed stems, which may reach a height of 40 m in some species. These are used for building, etc., while the young shoots are eaten. Family: *Gramineae* (grasses).

Banaba See OCEAN ISLAND.

banana A palmlike plant of the Old World tropical genus *Musa*, especially *M. paradisiaca sapientum*. The "trunk," up to 9 m high, is composed of the overlapping bases of the leaves, which are often 3 m or more long. The tip of the flowering stem bears male flowers; clusters of female flowers, further up the stem, develop into seedless fruits, up to 30 cm long, without being fertilized. (All cultivated bananas are sterile hybrids: the plants are propagated from suckers arising from the underground rhizome.) Varieties called plantains are cooked and eaten when still green in Africa and the Caribbean. Family: *Musaceae*.

Banbridge A district in S Northern Ireland,

in Co Down. Area: 442 sq km (170 sq mi). Population (2001): 41 392.

b

Bandaranaike, S(olomon) W(est) R(idgeway) D(ias) (1899–1959) Sri Lankan statesman; prime minister (1956–59) and founder (1951) of the Sri Lanka Freedom Party (SLFP). After his assassination his wife, **Sirimavo Bandaranaike** (1916–2000) succeeded him as head of the SLFP and became the world's first female prime minister (1960–65, 1970–77, 1994–2000). In 1980 she was expelled from parliament on the grounds of misuse of power. In 1994 their daughter **Chandrika Bandaranaike Kumaratunga** (1945–) became prime minister and after 3 months was elected president.

Bandar Seri Begawan (former name: Brunei Town) 456N 11458E The capital of Brunei, a port in the NE near the mouth of the Brunei River. Population (2001): 27 285.

bandicoot A ratlike marsupial mammal of a family (*Peramelidae*; 20 species) occurring in Australia (including Tasmania) and New Guinea. About the size of rabbits, bandicoots are mainly carnivorous, eating insects, worms, and grubs.

Bandung 6 57S 107 34E A city in Indonesia, in W Java. Its chief industries are chemicals, quinine, plastics, metal processing, and textiles. It has two universities and a nuclear research centre (1964). Population (2000): 2 136 260.

Bangalore 12 58N 77 35E A city in S India, the capital of Karnataka. Founded in the 16th century, it fell to the British in 1791. Its modern industries include information technology, machine tools, aircraft assembly, and electronics. Population (2001): 4 292 223.

Bangkok (Thai name: Krung Threp) 13 44N 100 30E The capital and main port of Thailand, in the SW near the mouth of the River Chao Phraya. It became a royal city and the capital in 1782. Distinctive features of the city are its canal system and the many Buddhist temples. It is the centre of most of the country's industry and commerce and it has eight universities. Population (2000): 6 320 174.

Bangladesh, People's Republic of A country in the Indian subcontinent in the delta of the Rivers Ganges and Brahmaputra. *Economy:* Its population, mostly Bengali, is largely occupied in agriculture, rice being by far the most important crop. Bangladesh produces 70% of the world's raw jute, its main export. Fishing, is also important. The economy has grown rapidly in the 2000s but Bangladesh remains one of the world's poorest countries. *His-*

tory: the area formed part of the kingdom of Bengal, and its conquest by the Afghans in the 12th century led to the growth of the Islamic religion. It was part of British India from 1857 until 1947 when it became a province of Pakistan (East Pakistan). Discontent led to civil war in 1971, Indian forces coming to the aid of the Bengalis. In 1972 East Pakistan achieved independence within the Commonwealth as Bangladesh, and Sheikh Mujibur Rahman (1920–75) became prime minister. In 1974 floods and famine led to political unrest and terrorism; Mujib assumed absolute power in 1975 but was assassinated soon after. Gen Ziaur Rahman assumed power in 1976, was elected president in 1978, but was assassinated in 1981. The military took power in 1982 and in 1983 Lt Gen Hussain Mohammed Ershad became president; political unrest led to his resignation in 1990. In 1991 Gen Ziaur's widow, Khaleda Zia, was elected prime minister and Abdur Rahman Biswas became president under a new constitution. In 1996 continuing political crisis led Zia to step down and she was succeeded by Mujibur's daughter, Sheikh Hasina Wajded. In 1998 and again in 2004 floods left about two-thirds of the land area under water and millions homeless. Zia's Bangladesh Nationalist Party was returned to power in 2001. In early 2007 opposition protests led to the postponement of legislative elections and the declaration of a state of emergency. Official language: Bengali. Currency: taka of 100 paise. Area: 142 797 sq km (55 126 sq mi). Population (2007 est): 150 448 339. Capital: Dhaka.

Bangui 4 23N 19 20E The capital of the Central African Republic, a port in the SW on the Ubangi River. Founded in 1889, the port handles goods for both the Central African Republic and Chad; its main exports are cotton and coffee. Population (latest est): 553 000.

banjo An originally American guitar-type instrument with 4–9 strings. It consists of a round metal hoop covered with parchment and a fretted fingerboard. It was common in jazz bands, folk music, and minstrel shows.

Banjul (name until 1973: Bathurst) 13 20N 16 38W The capital of The Gambia, a port in the W at the mouth of the River Gambia, founded by the British in 1816. Population (2003): 34 828.

Bank of England The British central bank, which was nationalized in 1946. It was originally incorporated in 1694, being set up by a group of London merchants to lend money to William III. Since the mid-19th century it has been the only bank authorized to issue bank-

notes. The Bank is responsible for financing the national debt and holding the country's gold reserves. Since 1997 it has had responsibility for setting the **bank rate**, the rate of interest at which the Bank of England lends to the discount houses.

bankruptcy The legal process by which the property of a person who cannot pay his debts is distributed among his creditors. In England bankruptcy was originally a branch of the criminal law aimed at preventing fraudulent traders evading their creditors, but since the reign of Queen Anne the law has also sought to protect the bankrupt by ending his obligation to repay most of his past debts. The Bankruptcy Act (1914) and the Insolvency Acts (1976, 1986) stipulate the circumstances in which a person may be made bankrupt, what portion of his property is to be distributed, and the creditors who are to be paid in priority to others. Liquidation is the equivalent process applicable to a company.

Bannister, Sir Roger (Gilbert) (1929–) British doctor and middle-distance runner, who on 6 May 1954, was the first man to run a mile in under 4 minutes (3 minutes 59.4 seconds).

Bannockburn 56°06'N 3°55'W A village in Scotland, near Stirling on the Bannock Burn (a tributary of the River Forth). 1.5 km (1 mi) NW is Scotland's most famous battlefield, where in 1314 Robert the Bruce, King of the Scots, routed the English under Edward II, who had come to relieve the besieged Stirling Castle. Population (1991): 2675.

Banting, Sir Frederick Grant (1891–1941) Canadian physiologist, who, with C.H. *Best, discovered a technique for the successful isolation of the hormone *insulin from pancreatic tissue in 1921, enabling *diabetes to be treated. Banting was awarded a Nobel Prize (1923).

Bantu A large subgroup of African languages of the Niger-Congo group spoken over the whole of the S half of Africa by about 60 million people. It includes Zulu, Xhosa, and Kongo; perhaps the most widely known representative is *Swahili, the language of Tanzania and lingua franca of E Africa.

Bantu Homelands (or Bantustans) The areas of South Africa designated for the Black populations from 1950 until 1994, comprising just over 13% of the land area. Acts of parliament in 1913 and 1936 controlled the extent of African lands and prohibited Blacks from holding land in White areas. Limited self-govern-

ment was granted to these areas from 1963 and some were granted full independence (not internationally recognized) from 1976. Bantustan policy was opposed by most African leaders and many of the territories resisted self-government, regarding it as a poor substitute for majority rule in South Africa. Following multiracial elections in 1994 the Homelands were reintegrated into South Africa.

banyan A tropical Asian tree, *Ficus benghalensis*, related to the fig and reaching a height of 30 m. Supporting aerial roots, which grow down to penetrate the soil, subsequently give rise to thorny branches of their own. Family: *Moraceae*.

baobab A tropical African tree, *Adansonia digitata*, with a tapering conical trunk (the base of which may exceed 10 m in diameter) reaching a height of 18 m and bearing branches at its apex. The fruits contain an edible pulp surrounded by a tough woody capsule and the bark yields a fibre of local importance. Family: *Bombacaceae*.

baptism A ceremony of initiation, occurring in many religions, involving the use of water as a symbol of purification from sin. In the Christian Church, it is a *sacrament. Both the *Baptists and the modern descendants of the *Anabaptists practise adult baptism, but most other Churches prefer infant baptism.

Baptists Protestant Christians who baptize, by immersion, only those old enough consciously to accept the Christian faith. "General Baptist" Churches, owed their origin in 1612 to John Smyth (c. 1554–1612) and Thomas Helwys (c. 1550–c. 1616), while "Particular Baptist" Churches, founded in 1633 by Calvinists, believed that salvation was only for a particular few. Both movements merged into the Baptist Union in 1891. The first Baptist Church in America was established at Providence, Rhode Island, by Roger Williams in 1639.

Baqqarah A cattle-herding Arab people of Chad and the Sudan. As a result of intermarriage with local peoples they have dark skins and speak a distinct dialect of Arabic. They migrate between northern wet-season grazing lands and southern dry-season river areas.

bar A unit of pressure equal to 10^5 pascals (0.987 atmosphere). The commonly used unit is the millibar (one-thousandth of a bar).

Barbados, State of An island state in the West Indies, E of the Windward Islands. Most of the population is of African descent. *Economy*: tourism is now the chief economic activ-

ity, although sugar cane, the main crop, remains important. The discovery of oil and natural gas has assisted the growth of small industries. *History:* a British colony from 1627 until 1966, it became independent within the Commonwealth. In 1998 a constitutional commission recommended that Barbados should become a republic but remain inside the Commonwealth. Official language: English. Currency: Barbados dollar of 100 cents. Area: 430 sq km (166 sq mi). Population (2003 est): 272 000. Capital: Bridgetown.

Barbary A region in N Africa stretching from Egypt to the Atlantic Ocean that is named after the *Berbers. Between the 16th and 18th centuries, Barbary was notorious for its pirates, who caused havoc in the Mediterranean. The **Barbary ape** is a large monkey, *Macaca sylvana*, also called magot. They are tailless and roam in bands over the forest floor, feeding on seeds, leaves, insects, etc.

barbel A long slender freshwater fish, belonging to the genus *Barbus*, that is related to *carp and occurs in clear fresh waters of Asia, Africa, and Europe. It has four fleshy thread-like appendages (barbels) near its mouth, which detect prey while exploring the river bed. *B. barbus* of Europe is usually 30–50 cm long.

Barber, Samuel (1910–81) US composer. Two of his works, the opera *Vanessa* (1958) and the piano concerto (1963), won Pulitzer Prizes. His output includes chamber music, choral works, symphonies, and concertos. His best-known work is the *Adagio for Strings*, an arrangement of the slow movement of his string quartet (1936).

barber's shop Unaccompanied close-harmony singing that originated in barbers' shops in the USA in the late 19th century. It had several revivals in the 20th century.

barbiturates A class of drugs that act by depressing the activity of the brain. The short-acting barbiturate thiopentone is used to induce *anaesthesia, while the long-acting phenobarbitone is used to control some forms of epilepsy. Barbiturates were formerly used as sleeping tablets but because they are habit-forming and have toxic side-effects, their use is now severely limited.

Barcelona 41 25N 2 10E A city in NE Spain, in Catalonia on the Mediterranean Sea. Manufactures include locomotives, textiles, and electrical equipment. The focus of Catalan art and literature, it has many educational establish-

ments including the university (1430), and a 14th-century cathedral. It is also famous for its Art Nouveau buildings designed by Antonio Gaudí. *History:* founded by the Carthaginians, it was taken by the Moors in 713 AD and by Charlemagne in 801 AD. In 1137 Catalonia and Aragón united and Barcelona became the capital. It was the seat of the Catalan autonomous government and later of the Republican government, during the Spanish Civil War (1936–39). The 1992 Olympics were held here. Population (1995 est): 1 614 571.

Bardeen, John (1908–91) US physicist, who shared the 1956 Nobel Prize for his part in the invention of the transistor (with W.B. *Shockley and W.H. *Brattain) while working at the Bell Telephone Laboratories in 1948. He also shared the 1972 Nobel Prize for his work on the theory of superconductivity (with L.N. Cooper and J.R. Schrieffer).

Bardot, Brigitte (1934–) French film actress. Her films include *And God Created Woman* (1956) and *Viva Maria* (1965). She became probably the best-known sex symbol of the 1960s but subsequently turned her back on the cinema and devoted herself to animal welfare.

Barebones Parliament The assembly, also known as the parliament of saints, called by Oliver *Cromwell in July 1653. It consisted mainly of merchants and lesser gentry, "godly men" nominated by the congregations, and was named after one of them, Praisegod Barebone (c. 1596–1679).

Barenboim, Daniel (1942–) Israeli pianist and conductor. In 1967 he married the cellist **Jacqueline du Pré** (1945–87), with whom he gave recitals. Barenboim conducted the Orchestre de Paris from 1975 to 1989, and became music director of the Chicago Symphony Orchestra in 1991. Since 1992 he has been the director of the Staatsoper in Berlin. In recent years he has organized musical projects to promote reconciliation between Arabs and Israelis.

Barents Sea A section of the Arctic Ocean between Eurasia and Svalbard. It covers part of the Eurasian continental shelf and is rich in fish. It is named after the Dutch navigator Willem Barents (1550–97).

baritone A deep adult male singing voice, lower than tenor and higher than bass. Range: G at the bottom of the bass stave to G two octaves above.

barium (Ba) A silvery reactive metal that resembles calcium in its behaviour. It was discov-

ered in 1808 by Sir Humphry Davy and occurs naturally as barytes (BaSO_4) and witherite (BaCO_3). The sulphate is used as a white pigment in paint and, because of its opacity to X-rays, is used in X-ray diagnosis. All soluble barium compounds are toxic, the carbonate being used as rat poison. At no 56; at wt 137.327; mp 729°C; bp 1805°C.

bark The dead outer layer of the stems and roots of woody plants, which protects the inner tissues. Antiseptic deposits, such as tannins, give the colour. Bark may include layers of insulating *cork, which is responsible for the characteristic ridges and patterns on some tree trunks. Bark is a source of cinnamon, quinine, and various other products.

bark beetle A hard cylindrical beetle, also called an engraver beetle, belonging to a family (Scolytidae; 7000 species) of wood borers. It is usually less than 6 mm long, coloured red-brown or black, and causes considerable damage to trees. It burrows underneath the bark to lay eggs that develop into burrowing larvae. Certain species also transmit diseases (see ELM BARK BEETLE) and can be serious economic pests.

Bar Kokhba (Simeon bar Kosiba; d. 135 AD) Jewish freedom fighter. In 132 he launched a revolt against Roman rule and attempted to set up an independent Jewish state. He was hailed as Messiah by some but was killed when his last stronghold, Betar, fell.

barley A *cereal grass of the genus *Hordeum*, especially *H. vulgare*, which produces its grain in four rows; *H. distichon* (two-rowed barley); and *H. hexadistichon* (six-rowed barley). It is used in brewing, as an animal feed, and to produce pearl barley.

Bar Mitzvah (Hebrew: son of the commandment) The ceremony marking the rite of passage of a Jewish boy into the adult community at the age of 13. It is customary for him to read a passage from the Torah in a synagogue on the first Saturday after his birthday. In some communities a similar ceremony, called a **Bat Mitzvah**, exists for girls.

Barnabas, St In the New Testament (Acts), a Christian Apostle of the 1st century. After going with St Paul to evangelize Cyprus (his birthplace), he clashed with him and they parted company. He is regarded as the founder of the Cypriot Church. Feast day: 11 June.

barnacle A marine *crustacean belonging to the class *Cirripedia* (1000 species). Some members of the group are parasites, but the typical

(nonparasitic) barnacles live attached to rocks, ships, etc., and filter food particles from the water with long feathery appendages, which protrude from the calcareous shell. Goose barnacles (e.g. *Lepas anatifera*) are attached by means of a stalk; others, including the acorn barnacle (*Balanus*), are unstalked. Barnacles are hermaphrodite; their larvae are free-swimming, but later settle and become fixed to a surface by means of a cement-like substance secreted by their antennae.

Barnard, Christiaan Neethling (1922–2001) South African surgeon, who (in 1967 at the Groote Schuur Hospital in Cape Town) performed the world's first successful heart transplant operation. After his retirement in 1983 he entered politics.

Barnardo, Thomas John (1845–1905) British doctor and philanthropist. In 1867 Barnardo founded the first of his many homes at Stepney, London, to care for destitute children.

barn owl An *owl belonging to a family (*Tytonidae*; 9 species) with a worldwide distribution. Barn owls have heart-shaped faces, long feathered legs, and usually a reddish plumage with pale underparts. The common barn owl (*Tyto alba*), 30–45 cm long, nests in old barns and hunts for small rodents.

Barnsley 1, 53°34'N 1°28'W A town in N England, in Barnsley unitary authority, South Yorkshire on the River Dearne. Formerly a coalmining centre, it now has various industries including electronics, new technology, glass manufacture, and textiles. Population (1991): 75 120. **2**, A unitary authority in N England, in South Yorkshire. Area: 329 sq km (127 sq mi). Population (2001): 218 062.

Baroda See VADODARA.

barometer An instrument for measuring atmospheric pressure. In the mercury barometer, atmospheric pressure forces mercury from a reservoir into a vertical evacuated glass tube marked with a scale. The height of the mercury column is directly proportional to the atmospheric pressure. In the smaller, but less sensitive aneroid barometer, variations in the atmospheric pressure on the lid of an evacuated metal box cause a pointer to move round a dial. See illustration on p. 100.

Barons' Wars 1, (1215–17) The civil war between King John of England and his barons. John's failure to honour the *Magna Carta led the barons to offer the English Crown to the future Louis VIII of France, who invaded Eng-

barometer. In the mercury barometer the height of the mercury column is directly proportional to the air pressure and is independent of the diameter of the tube. In the aneroid barometer movements of the lid of the evacuated metal box are transmitted to the pointer by the levers.

land. John's death and the reissue of Magna Carta (1216) removed many baronial grievances but war continued until the barons' defeat at Lincoln and Sandwich (1217). 2. (1264–67) The civil war between Henry III of England and his barons led by Simon de Montfort, following Henry's repudiation of the Provisions of Oxford. He was captured at the battle of Lewes (1264) and England was controlled by de Montfort until his death at Evesham (1265). Hostilities continued until the royalist capture of the Isle of Ely in 1267.

baroque In architecture, a style dominant in European Roman Catholic countries in the 17th and early 18th centuries. Beginning in Italy as a reaction against classicism, it was characterized by curved and broken lines, ornate decoration (which led to the rococo), and elaborate spatial effects. English architects, such as Wren and Vanbrugh, were influenced by it. In art and sculpture, the baroque was a complementary style that developed from Italian mannerism. Leading baroque painters include Caravaggio and Rubens, while Bernini is the principal exponent in sculpture. In music, the compositions of the 17th and early 18th centuries, from Monteverdi to Bach, are frequently called baroque music.

Barquisimeto 10 03N 69 18W A city in NW Venezuela. It is the commercial centre of a coffee-growing area and has a university (1963). Population (2000 est): 875 790.

barracuda A shoaling fish of the family Sphyrnidae (about 20 species), found in all

tropical seas and caught for food and sport. Its body is up to 1.8 m long and bears two dorsal fins. Barracudas feed voraciously on other fish and the larger species are considered dangerous to man. Order: Perciformes.

Barranquilla 11 00N 74 50W An important port in NW Colombia, on the Río Magdalena near its mouth on the Caribbean Sea. Its manufactures include textiles, vegetable oils, and chemicals. It has two universities (1941, 1967). Population (1999 est): 1 223 260.

Barrie, Sir James (Matthew) (1860–1937) British dramatist and novelist. The son of a Scots weaver, he came to London as a freelance writer in 1885. After two successful novels about Scottish rural life he wrote mostly for the theatre. His best-known plays are *The Admirable Crichton* (1902), *Peter Pan* (1904), which has also remained a popular children's book, and *Dear Brutus* (1917).

barrister In England and Wales or Northern Ireland, a member of the legal profession who has been "called to the Bar," i.e. awarded the title barrister-at-law by one of the Inns of Court. Barristers argue cases in courts and advise clients through their solicitors. Until 1990 they had the exclusive right to argue cases in the higher courts. Barristers are known as advocates in Scotland and elsewhere as advocates or attorneys.

barrow A prehistoric burial mound, also called a tumulus or cairn. From about 2000 BC earth barrows, concealing stone or timber passages and burial chambers, were built all over Europe for the interment of warrior chiefs. Long (i.e. rectangular or trapezoidal) barrows, such as at West Kennet (S England), were used for Neolithic multiple burials. Round barrows were more usual in Bronze Age cultures. Barrows continued in use in Iron Age Europe, and as late as the 7th century AD.

Barry, Sir Charles (1795–1860) British architect, who worked in both classical and gothic styles. In 1836 he won the competition to rebuild the Houses of Parliament (see PALACE OF WESTMINSTER), which, assisted by Augustus Pugin (1812–52), he designed in the gothic manner. He also designed the Reform Club (1837) in London.

Barrymore, Lionel (1878–1954) US actor remembered for his performances in the first series of *Dr Kildare* films. His sister **Ethel Barrymore** (1879–1959) acted with Sir Henry Irving in London, and later became a leading stage actress in the USA. Their brother **John**

Barrymore (1882–1942) was also an actor. His greatest stage success was his performance of Hamlet in 1922. As a film star during his later career he was famous for such films as *Grand Hotel* (1932) and for his tempestuous private life. His granddaughter **Drew Barrymore** (1975–) became a child star in *E.T.* (1982) and later found success in such films as *The Wedding Singer* (1998).

Barthes, Roland (1915–80) French literary critic and writer. His early works, such as *Mythologies* (1957), in which he pioneered the study of popular culture, and *On Racine* (1963), made him a leading figure in the structuralist movement (see **STRUCTURALISM**). Later works include *The Pleasure of the Text* (1975).

Bartholdi, Frédéric August (1834–1904) French sculptor, remembered chiefly for his *Statue of Liberty.

Bartók, Béla (1881–1945) Hungarian composer. Bartók studied and taught at the Budapest Academy of Music, where he and Zoltan Kodály (1882–1967) undertook research into Hungarian folksong. In 1940 he went to live in the USA, where he died in poverty. A virtuoso pianist, he composed three piano concertos, *Mikrokosmos* (1926–37), and other piano works. His stage works include the opera *Duke Bluebeard's Castle* (1911) and the ballet *The Miraculous Mandarin* (1919). In his six string quartets and *Music for Strings, Percussion, and Celesta* (1936) he explored unusual sonorities. His most popular work is the *Concerto for Orchestra* (1943).

Bartolommeo, Fra (Baccio della Porta; c.1472–1517) Florentine Renaissance painter. After training under Cosimo Rosselli (1439–1507), he became a supporter of *Savonarola, whose death moved him to join the Dominican monastery of S Marco (1500) and abandon painting until 1504. His works include *St Mark* and the *Pietà* (both Palazzo Pitti, Florence).

baryon A collective term for *nucleons and other elementary particles that have a proton or neutron in their decay products. All baryons have a *quantum number called the baryon number, which is equal to +1 and is always conserved in an interaction. See **PARTICLE PHYSICS**.

basalt A volcanic rock of basic composition, typically dark, heavy, and fine textured. Three broad groups of basalt are recognized: alkali basalt, high-alumina basalt, and tholeiite. Basalt constitutes over 90% of volcanic rocks.

baseball A nine-a-side bat-and-ball game that evolved from *rounders, played mainly in

the USA, Japan, and Latin America. The object for each team while batting is to score as many runs as possible and while fielding to prevent the other team from doing so. A team bats until three players are out; one turn at bat for both teams constitutes an inning, of which there are usually nine in a game. The pitcher, standing at the pitcher's mound, throws the ball to the batter, standing at home plate, who tries to hit it into fair territory and run. He scores a home run by making a complete circuit of the bases (first, second, third, and home). A player may be struck out (if he misses the ball or hits it into foul territory in each of three attempts), caught out, tagged out (if he or the base he is running towards is touched by a player with the ball), or put out by being hit by a batted ball while running.

Basidiomycota (or **Basidiomycetes**) A large phylum of fungi (22 000–25 000 species) that includes many *mushrooms, the bracket fungi, *puffballs, etc., as well as microscopic forms, such as the parasitic *rusts and *smuts of crops. They reproduce by basidia, which are typically club-shaped and produce spores at the tips of stalklike projections.

Basie, Count (William B.; 1904–84) US Black jazz pianist and band leader. He became famous for his distinctive "big band" style and recorded many albums, including *Atomic Mr Basie* and *Straight Ahead*.

basil An annual herbaceous plant of the Indian genus *Ocimum*, cultivated as a pot herb. Sweet basil (*O. basilicum*), up to 30 cm high, has toothed leaves and small white or bluish flowers. Family: *Labiatae*.

Basildon 51 34N 0 25E A town in SE England, in Essex. Created as a new town in 1949 from several townships, its industries include engineering, printing, and tobacco. Population (1991): 100 924.

basilica 1. A Roman public meeting hall. In imperial times, many had a layout similar to the Basilica of Maxentius in Rome: rectangular ground plan, colonnaded aisles, entrance porch (narthex), and windows in the upper storey (clerestory). 2. A Christian church based on a similar plan (e.g. S Giovanni in Laterano in Rome).

basilisk 1. An arboreal lizard belonging to the tropical American genus *Basiliscus*. Up to 60 cm long, it has a narrow body, a long whiplike tail, and a flat lobe protruding from the back of its head. It has long hind legs with lobed toes fringed with scales, enabling it to run over the

surface of water. **2.** A legendary snakelike serpent of ancient Greece and Rome whose glance was believed to be fatal to all living things except the weasel.

Basingstoke 51°16N 1°05W A town in S England, in Hampshire. Its manufactures include agricultural machinery, scientific instruments, and leather goods. It is also a warehousing and distribution centre for southern England. Population (2006 est): 157 000.

basketball A five-a-side court game invented in the USA (1891) by James Naismith (1861–1939). The object is to toss or put an inflated ball into the opponents' basket, a net mounted 3.05 m (10 ft) above the floor on a backboard. Players use only their hands, passing the ball or dribbling it by bouncing, and they may not run with it. The premier professional basketball league is the National Basketball Association in the USA (founded in 1949).

basking shark A large *shark belonging to the family *Cetorhinidae*. Up to 15 m long, they are grey-brown or blackish and inhabit cold and temperate regions of the Atlantic, Pacific, and Indian Oceans. Basking sharks usually occur in shoals near the surface and float or swim slowly, feeding on plankton.

Basle (French name: Bâle; German name: Basel) 47°33N 7°36E The second largest city in Switzerland, on the River Rhine where the French, German, and Swiss borders meet. Industries include chemicals, pharmaceuticals, and engineering. The Bank for International Settlements was established here in 1929. Population (2003 est): 165 031.

Basle, Council of A general council of the Roman Catholic Church summoned by Pope Martin V in 1431 to consider the heretical *Hussites. However, when Martin's successor, Eugenius IV, moved it to Ferrara many councillors remained at Basle, electing the antipope, Felix V, in 1439. He resigned in 1449 and the council was dissolved.

Basque A non-Indo-European language spoken by some 500 000 Basque people of the W Pyrenean areas of Spain and France. The Basques are strongly Roman Catholic and traditionally enjoyed a degree of regional autonomy, forming an independent government (1936–37) during the Spanish Civil War. The Basque Provinces became an autonomous region of Spain in 1978. Nationalism remains a significant force and the Basque Separatist movement is still active. Since 1968 guerrilla tactics have been adopted by the ETA (*Euskadi*

ta Azkatasuna) and the French-based *Enbata* groups. ETA declared a ceasefire in 1998, leading to direct contacts with the Spanish government, but returned to violence in 2000. A subsequent ceasefire was declared in 2007.

Basra 30°30N 47°50E A town in SE Iraq, on the Shatt (river) al-Arab. It is linked by rail and river steamer to Baghdad; the modern port (Al Ma'qil) was constructed by the British during World War I. It was occupied by the British once more during the *Iraq War (2003). Population (1997 est): 725 000.

bass (fish) One of several perchlike *bony fish of the order *Perciformes*. The majority belong to the family *Serranidae* (see SEA BASS), which includes the common European bass (*Dicentrarchus labrax*). This can grow up to 1 m long and has a grey or blue back with a white or yellowish belly. North American freshwater bass belong to the family *Centrarchidae*.

bass (music) **1.** The deepest adult male singing voice. Range: E below the bass stave to E two octaves above. **2.** The lowest voice or instrumental part of a piece of music.

Bassano, Jacopo (Jacopo or Giacomo da Ponte; c. 1517–92) Italian painter of the Venetian school, born in Bassano, the son of a painter. He was one of the earliest painters of rustic life, in both secular, e.g. *Pastoral* (Lugano), and religious scenes, e.g. *Adoration of the Kings* (National Gallery, Edinburgh).

basset hound A breed of dog originating in France. It has a long body with very short legs and a narrow face with drooping ears. They were formerly popular hunting dogs. Height: 33–38 cm.

bassoon A woodwind instrument. Its conically bored tube is about 2.5 m (8 ft) long and is bent back on itself. It has a metal crook into which a double reed is inserted. Its extensive compass (about three and a half octaves above B flat below the bass stave) allows it a melodic as well as a bass role.

Bass Strait A channel separating the mainland of Australia from Tasmania. It has valuable oil and natural gas deposits. Length: 290 km (180 mi). Maximum width: 240 km (150 mi).

Bastille A fortress in Paris. It was built in about 1370 to protect the wall around Paris against English attack and became a state prison under Cardinal de *Richelieu. The storming of the Bastille on 14 July 1789, is regarded as the beginning of the *French Revolution.

bat A flying mammal belonging to the order *Chiroptera* (981 species), distributed in most temperate and tropical regions. There are two suborders: the *fruit bats (*Megachiroptera*; 150 species) and the insect-eating bats (*Microchiroptera*; 831 species). The wings are extensions of skin that are supported between the forelimb, with its very long fingers, the hind limbs, and the tail. Insectivorous bats use *echolocation for navigation and catching prey whereas fruit bats have eyes adapted for night vision.

bateleur An African snake *eagle, *Terathopius ecaudatus*, having very long wings and a short tail. It flies vast distances, preying on reptiles, mammals, and carrion, which it seizes with its short rough powerful toes.

Bateson, William (1861–1926) British biologist, whose experiments on inheritance helped found the science of genetics. His results (1905–08) corroborated the findings of Gregor *Mendel published in 1865 although he refused to accept the chromosome theory proposed by T. H. Morgan.

Bath 51°23'N 2°22'W A city in SW England, in Bath and NE Somerset unitary authority, Somerset, on the River Avon. It was an early Roman centre known as Aquae Sulis because of its hot natural springs. The Roman baths have survived and are considered the best Roman remains in the UK. Bath became fashionable as a spa town in the 18th century when many of the finest buildings were built, including the Royal Crescent and the Assembly Rooms. The Bath Spa Project, which includes a new high-tech spa as well as restored 18th-century facilities, is due to open in 2004. Bath Abbey, mainly 16th-century, lies in the centre. Population (1991): 85 202.

Bath, Order of the A British order of knighthood, formed by George I in 1725 as a successor to the Knights of the Bath, traditionally founded by Henry IV in 1399. It comprises the sovereign, knights and dames grand cross (GCB), knights and dames commanders (KCB), and companions (CB). Its name is derived from the bathing ceremony that formed the principal rite of admission to the original order.

Bath and North East Somerset A unitary authority in SW England, in Somerset; it was formerly (1974–96) part of the county of Avon. Area: 351 sq km (136 sq mi). Population (2001): 169 045.

Bathsheba In the Old Testament, the wife of Uriah, the Hittite. She had an adulterous relationship with King David, who, having sent

Uriah to his death in battle, married her. After repenting, in the face of God's displeasure at his duplicity, David fathered a son, who became King Solomon.

Baton Rouge 30°30'N 91°10'W A city in the USA, the capital of Louisiana situated on the Mississippi River. It is a major deepwater port with oil and sugar refineries. Population (1996 est.): 215 882.

battered baby syndrome Injuries inflicted on babies or young children by their parents. Battering commonly takes the form of facial bruises, cigarette burns, head injuries (often with brain damage), and fractured bones. The parents are often emotionally disturbed or have themselves suffered from physical abuse in infancy. A care order is often necessary to safeguard a child from further abuse.

Battle 50°55'N 0°29'E A town in S England, in East Sussex. It was the scene of the Battle of Hastings (1066) in which Harold II was defeated by William the Conqueror, who built Battle Abbey to commemorate his victory. Population (1991): 5234.

Baudelaire, Charles (1821–67) French poet. He inherited his father's fortune in 1842 and lived extravagantly until what was left of the capital was placed in trust by his family (1844). In 1852 he discovered Edgar Allan *Poe, publishing several translations of his works (1856–65). His only volume of poetry, *Les Fleurs du mal* (1857, revised 1861), contained several erotic poems, which led to his being convicted for obscenity.

Baudouin I (1930–93) King of the Belgians (1951–93), succeeding his father Leopold III. He was interned by the Nazis in World War II. He married Fabiola de Mora y Aragón in 1960. In 1990 he abdicated for two days to avoid signing an act legalizing abortion.

Bauhaus A German school of design founded in 1919 at Weimar and closed by the Nazis in 1933. From 1925 to 1932 it was housed at Dessau in a building designed by *Gropius (its director until 1928), itself a work of great influence. The Bauhaus sought to produce a practical synthesis of all the arts and to develop a style appropriate for the industrial 20th century. See also KANDINSKY, WASSILY; KLEE, PAUL.

bauxite The chief ore of aluminium. It is a residual deposit formed by the weathering of aluminium-rich rocks (mainly syenites) under tropical conditions and consists mainly of hydrated aluminium oxide.

b

Bavaria (German name: Bayern) The largest Land of Germany, bordering on Austria and the Czech Republic. Mainly agricultural, it produces rye, wheat, and barley. *History*: a duchy and later a kingdom ruled by the Wittelsbachs from 1180 to 1918, it then became a republic. Area: 70 547 sq km (29 232 sq mi). Population (2000 est): 12 155 000. Capital: Munich.

Bax, Sir Arnold Edward Trevor (1883–1953) British composer. His tone poems, such as *Tintagel* (1917) and *The Garden of Fand* (1916), and his seven symphonies remain his most popular works. He was Master of the King's Music from 1941 until his death.

bay A Mediterranean evergreen tree, *Laurus nobilis*. It can reach a height of 20 m, has aromatic dark-green lance-shaped leaves used to season food. Family: *Lauraceae* (see LAUREL).

Bayeux 49 16N 0 42W A town in NW France, in the Calvados department on the River Aure. There is a fine 13th-century cathedral. Industries include dairy foods and plastics. The **Bayeux Tapestry** is an 11th-century embroidered linen strip, 69 m (231 ft) long, which depicts the Norman conquest of England (1066). The tapestry was reputedly commissioned for Bayeux cathedral by its bishop, Odo, the half-brother of William the Conqueror, whose wife Matilda is traditionally credited with its making. Some experts have concluded, however, that it was made in England. It is now exhibited in a former seminary close to the cathedral. Population (latest est): 14 704.

Bay of Pigs (Spanish name: Bahía de los Cochinos) A bay on the SW coast of Cuba where on 17 April 1961, about 1200 Cuban exiles attempted to invade the country. Hoping to overthrow Fidel Castro, and supported by the US *Central Intelligence Agency, the invasion was unsuccessful largely because it lacked sufficient US military backing.

Bayreuth 49 27N 11 35E A town in S Germany, in Bavaria. It was the home of Richard *Wagner, who designed its Festival Theatre (1872–76), where his operas are performed annually. Population (1991): 72 780.

bazooka Originally a 2.36 inch (60 mm) anti-tank rocket launcher fired from the shoulder and used by the US army in World War II, but later any similar weapons. The name came from a tubular wind instrument.

BBC See BRITISH BROADCASTING CORPORATION.

BCG (bacille Calmette Guérin) A vaccine con-

sisting of a weakened form of the tuberculosis bacterium, which is injected to give partial protection against tuberculosis. A successful vaccination produces a lump at the injection site.

beagle A long-established breed of dog originating in the UK. It has a deep chest, strong shoulders, and drooping ears. Beagles have long been used as hunting hounds; more recently, they have become popular household pets. Height: 33–40 cm.

bean The seed or fruit of certain herbs, shrubs, or trees of the family *Leguminosae*. See BROAD BEAN; FRENCH BEAN; LIMA BEAN; MUNG BEAN; RUNNER BEAN; SOYA BEAN.

bear A large heavy mammal belonging to a family (*Ursidae*; 8 species) found in Europe, Asia, and America. Bears have a shaggy coat and a short tail and walk flat on the soles of their broad feet. They can stand erect and most of them are vegetarian. Newborn bears are very small (about the size of rats), blind, and toothless. Order: *Carnivora*. See BLACK BEAR; BROWN BEAR; POLAR BEAR; SPECTACLED BEAR; SUN BEAR.

bearbaiting A *blood sport formerly popular in Britain and Europe. A bear, sometimes blinded, was chained to a stake in a bear pit or bear garden and dogs were let loose to attack it. **Bullbaiting** used bulls in a similar way. Both bearbaiting and bullbaiting were made illegal in the UK in 1835.

bearded vulture See LAMMERGEIER.

Beardsley, Aubrey Vincent (1872–98) British illustrator of the periodicals *The Yellow Book* and *The Savoy* and of several books, including Wilde's *Salome* and Pope's *Rape of the Lock*, he achieved notoriety with his grotesque and erotic imagery. His curved lines, characteristic of *Art Nouveau, contrast with dense areas of black ink.

Beas, River A river in NW India, flowing mainly W from the Himalayas to the River Sutlej. It forms part of the Punjab irrigation scheme. Length: 470 km (290 mi).

beating the bounds A traditional ceremony that takes place in several English towns and villages on Ascension Day. Primarily a religious event, it evolved during the reign of Elizabeth I, and is derived from the earlier ceremonies of Rogationtide. A priest leads those present round the parish boundaries offering prayers for the harvest while young boys beat the boundary stones with sticks. An

equivalent Scottish ceremony is called riding the marches.

Beatitudes In the New Testament, the eight blessings with which Jesus opened the Sermon on the Mount (Matthew 5.3–12). They describe such Christian virtues as meekness, mercy, and purity of heart (e.g. "Blessed are the meek: for they shall inherit the earth."). The word derives from the Latin of the *Vulgate, *beati sunt* (blessed are).

Beatles A British rock group, which achieved worldwide popularity during the 1960s. The Beatles appeared at the Cavern Club in Liverpool in 1962 and subsequently recorded "Love Me Do" and "She Loves You," which became a British number one in 1963. By this time the group consisted of George Harrison (1943–2001), John *Lennon, Paul *McCartney, and Ringo Starr (1940–); they toured the USA successfully, made two films, and were awarded MBEs in 1965. Their later albums include *Sergeant Pepper's Lonely Hearts Club Band* (1967). In 1970 they disbanded to pursue separate careers.

Beat movement US literary and social movement of the 1950s that sought personal liberation through art, drugs, sex, and any other "consciousness-expanding" means. The movement centred on the artistic communities of Greenwich Village in New York and of San Francisco and Los Angeles. Among its prominent writers were Allen Ginsberg (1926–97) and Jack Kerouac (1922–69).

Beaton, Sir Cecil (Walter Hardy) (1904–80) British photographer. From the 1920s onwards he became famous for his society portraits, many taken for *Vanity Fair* and *Vogue* magazines. After World War II he turned also

to scenery and costume designs, notably for *My Fair Lady*.

Beatrix (1938–) Queen of the Netherlands since the abdication (1980) of her mother Queen Juliana. Her marriage (1966) to the German Claus von Amsberg (1926–2002) caused some controversy.

beats Variations in the intensity of sound when two tones of nearly equal frequency are heard. The effect is similar to that of *interference. At certain times, the amplitudes of the waves reinforce each other and, at intermediate times, they tend to cancel each other out. The frequency of the beats is equal to the difference in the frequencies of the two notes.

Beatty, David, 1st Earl (1871–1936) British admiral. In World War I, Beatty took part in the destruction of three German cruisers in Heligoland Bight (1914) and the sinking of the *Blücher* near Dogger Bank (1915). He also fought in the Battle of Jutland (1916). As commander of the Grand Fleet, he received the German naval surrender in 1918.

Beaufort scale A scale of wind speed devised in 1805 by Admiral Sir Francis Beaufort (1774–1857).

Beaumarchais, Pierre-Augustin Caron de (1732–99) French dramatist. Son of a watchmaker, he became rich and famous with *The Barber of Seville* (1775) and *The Marriage of Figaro* (1778), which inspired operas by *Rossini and *Mozart. Constantly involved in lawsuits, he wrote *Mémoires* (1773–75) in self-defence.

Beaune 47°02N 4°50E A town in E central France, in the Côte-d'Or department. The centre for the wine trade of Burgundy, it has a wine museum. Population (latest est): 21 127.

Beaufort number	description of wind	wind speed	
		knots	metres per second
0	calm	< 1	0.0– 0.2
1	light air	1– 3	0.3– 1.5
2	light breeze	4– 6	1.6– 3.3
3	gentle breeze	7–10	3.4– 5.4
4	moderate breeze	11–16	5.5– 7.9
5	fresh breeze	17–21	8.0–10.7
6	strong breeze	22–27	10.8–13.8
7	near gale	28–33	13.9–17.1
8	gale	34–40	17.2–20.7
9	strong gale	41–47	20.8–24.4
10	storm	48–55	24.5–28.4
11	violent storm	56–63	28.5–32.6
12	hurricane	≥64	≥32.7

Beaufort scale

Beauvais 49 26N 2 05E A market town in N France, in the Oise department. Its fine cathedral (begun 1227) was damaged during World War II and the factory in which the famous Gobelin tapestries had been made since 1664 was completely destroyed and subsequently moved to Paris. Population (1999): 57 355.

Beauvoir, Simone de (1908–86) French novelist and essayist. The constant companion of Jean-Paul Sartre, whom she met at the Sorbonne in 1929, her novels include *The Blood of Others* (1948), *The Mandarins* (1956), and *All Said and Done* (1975). *The Second Sex* (1953) argued for the liberation of women from their traditional roles.

Beaux-Arts A French classical-revival architectural style that flourished at the École des Beaux Arts, Paris, in the late 19th century. The Paris Opera (1861) and Monte Carlo Casino (1878) were built by J. L. C. Garnier (1825–98) in this style.

beaver A large aquatic *rodent, *Castor fiber*, of Europe, Asia, and North America. Over 1 m long and weighing up to 40 kg, beavers have a dark sleek waterproof coat and a broad flat tail used for balance and swimming. They build a “lodge” of sticks and mud using their large incisor teeth to cut wood. During the summer they feed on vegetation. Family: *Castoridae*.

Beaverbrook, Max(well) Aitken, 1st Baron (1879–1964) British newspaper proprietor and politician, born in Canada. In 1919 he bought a majority interest in the *Daily Express*, in 1921 he founded the *Sunday Express*, and in 1929 bought the *Evening Standard* (London). He served in Lloyd George's World War I cabinet as minister of information (1918) and in Churchill's World War II cabinet as minister of aircraft production (1940–41).

Bechet, Sidney (1897–1959) US Black jazz clarinetist and soprano saxophone player. He achieved wide recognition after a tour of Europe in 1919, subsequently worked with Duke Ellington, and after World War II lived in Paris.

Becket, St Thomas (c.1118–70) English churchman. The son of a London merchant, Becket became chancellor to Henry II in 1154 and archbishop of Canterbury in 1162. After quarrelling with Henry he refused to swear allegiance to the Constitutions of Clarendon and was exiled to France (1164–70). Subsequent attempts to resolve the dispute failed and on 29 December 1170 he was murdered in Canterbury Cathedral by four courtiers who took literally

Henry's alleged remark “Will no-one rid me of this turbulent priest?” He was canonized in 1173.

Beckett, Samuel (1906–89) Irish novelist, dramatist, and poet. After studying at Trinity College, Dublin he settled in Paris in 1937. He wrote in both French and English. His plays, which include *Waiting for Godot* (1954), and his prose works, such as the trilogy *Molloy* (1951), *Malone Dies* (1951) and *The Unnamable* (1953), treat human existence with a nihilism tempered by desperate humour. His later works, such as *Breath* (1972) and *Not I* (1973), are notably brief and concentrated. He won the Nobel Prize in 1969.

Beckham, David (1975–) British Association footballer. A midfielder, he has played for England since 1996 and was captain (2000–06). He joined Real Madrid in 2003 and Los Angeles Galaxy in 2007. His wife, Victoria Beckham, is a former member of the Spice Girls pop group (“Posh Spice”).

Becquerel, (Antoine) Henri (1852–1908) French physicist, who was professor at the Conservatoire des Arts et Métiers in Paris. He discovered radioactivity (1896) by chance, on finding that invisible rays from uranium salts could affect a photographic plate even through a light-proof wrapper. For his research on these radiations, Becquerel shared the Nobel Prize (1903) with his associates Pierre and Marie Curie. The SI unit of activity (radioactivity), the becquerel (Bq), is named after him. It is equal to the number of atoms of a radioactive substance that disintegrate in one second.

bedbug A flat wingless insect, about 5 mm long, belonging to a family (*Cimicidae*; 30 species) of blood-sucking parasites. In temperate regions *Cimex lectularius* is the species that most commonly attacks man, hiding by day in bedding, furniture, etc., and becoming active at night. Order: *Hemiptera* (bugs).

Bedchamber Crisis (1839) A constitutional crisis that arose over Queen Victoria's ladies of the bedchamber. After the resignation of Lord Melbourne, a Whig, Peel attempted to form a Tory ministry and requested that Victoria dismiss her Whig ladies. She refused and Melbourne remained in office until his government fell in 1841, when Victoria consented to the dismissal of three ladies.

Bede, St (c.673–735 AD) English historian, known as the Venerable Bede. After 682 he lived at the monastery of Jarrow in Northumberland. His *Ecclesiastical History of the English People* (c.731), written in Latin and later trans-

lated into English is an important source for Anglo-Saxon history (5th–8th centuries). He was the author of many grammatical, scientific, and historical works. Feast day: 27 May.

Bedford 52 08N 0 29W A town in S England, the administrative centre of Bedfordshire on the River Ouse. John *Bunyan was born nearby and spent 12 years in Bedford gaol. Business includes manufacturing, distribution, and call centres. Population (1991): 73 917.

Bedfordshire A county in the South Midlands of England. It is chiefly low lying, rising to the Chiltern Hills in the SW, and is drained by the Great Ouse River. Agricultural products include wheat and vegetables. The chief industries are centred on Luton, Dunstable, and Bedford. Area: 1192 sq km (460 sq mi). Population (2001, excluding Luton): 381 571. Administrative centre: Bedford.

Bedlington terrier A breed of dog originating in Bedlington, N England, in the early 19th century. It has long legs and a narrow face and is a sporting dog. The thick coat may be blue or sandy. Height: about 40 cm.

Bedouin The nomadic *Arab tribes of the Syrian and Arabian deserts. Their economy is based on camels, sheep, and goats. Courageous fighters, the Bedouin played an active role in the early Arab conquests, but are under pressure to take up a settled existence.

bee A four-winged insect (10–30 mm long) belonging to the worldwide superfamily *Apoidea* (about 12 000 species). Bees feed on pollen and nectar and are important pollinators. The ovipositor is used to sting attackers and in some species is barbed, remaining in the wound. Most solitary bees nest in soil, hollow trees, or wall cavities. Some, however, tunnel into wood (the carpenter bee) or construct nests using earth (see MASON BEE) or leaves (see LEAFCUTTER BEE). The female lays one or more eggs in a nest that is then sealed. The social bees (families *Apidae* and *Halictidae*) live in communities organized into castes—workers (infertile females), drones (males, developed from unfertilized eggs), and a queen (a fertile female). Colonies are established in trees, walls, or cliffs (see also HONEYBEE). Order: Hymenoptera.

beech A tree of the genus *Fagus* (10 species), native to N temperate regions, occasionally reaching a height of 40 m. Beeches have smooth grey bark. The leaves are oval, the flowers are unisexual and inconspicuous, and the fruits are seeds enclosed in husks (beechnuts or

mast). The common beech of Europe and Asia is *Fagus sylvatica*, the timber of which is used for furniture and flooring. Family: *Fagaceae*.

Beecham, Sir Thomas (1879–1961) British conductor. He used his inherited fortune for the advancement of English music. He promoted the work of Richard Strauss, Sibelius, and—particularly—Deliuss. He founded the London Philharmonic Orchestra (1932) and the Royal Philharmonic Orchestra (1947).

bee-eater A brightly coloured bird belonging to a family (*Meropidae*; 24 species) occurring mainly in tropical Old World regions. Bee-eaters have pointed wings, long central tail feathers, a slender curved bill, and, commonly, a black eye stripe. They nest in burrows and feed in flight, chiefly on bees and wasps. Order: *Coraciiformes* (hornbills, kingfishers, etc.).

beer An alcoholic drink made from fermented malt flavoured with hops. Beer is brewed by malting barley, or other grain, by allowing it to germinate; the resulting malt is dried (kilned), ground, and heated with water (mashed). Starch in the grain is converted into soluble carbohydrates by enzymes in the malt. The resulting liquid wort is boiled with hops to concentrate the wort and utilize the bitter flavour of the hops. Yeast is added and the carbohydrates in the wort are converted into alcohol by fermentation. Beer was drunk in ancient Egypt and is now enjoyed worldwide. Ale was originally a stronger drink than beer, brewed without hops. The terms are now interchangeable, although ale is sometimes reserved for stronger brews fermented at higher temperatures. Mild beer is made with fewer hops than bitter and a darker malt is used to impart colour. Lager is traditionally a light beer matured over a long period at low temperature. Stout is made from a blend of roasted barley and malts.

Beerbohm, Sir Max (1872–1956) British caricaturist and writer. His only novel, *Zuleika Dobson* (1911), is an Oxford romance. From 1911 he lived in Rapallo, Italy, returning to England only during World War II.

Beersheba 31 15N 34 47E A town in S Israel, the largest in the Negev. In World War I it was the scene of a British victory over the Turks. Population (1999 est): 163 700.

beeswax A substance produced by bees to build honeycombs. It is collected by heating the honeycomb in water so that the floating wax can be separated. Beeswax (melting point

61–69°C) is used in high-quality polishes, candles, etc.

b

beet A herbaceous plant, *Beta vulgaris*, native to Europe and the Mediterranean region. Several varieties are cultivated in temperate areas, in particular the *sugar beet. The taproot of the red or garden beet yields beetroot, while the mangel-wurzel (*B. vulgaris vulgaris*) is an important fodder. Family: *Chenopodiaceae*.

Beethoven, Ludwig van (1770–1827) German composer, born in Bonn. His father, a court musician, attempted to exploit him as a child prodigy. He settled in Vienna in 1792 after studying there with Haydn. At the age of 30 he began to go deaf. About 600 of Beethoven's works survive, among them 9 symphonies, 5 piano concertos, 1 violin concerto, 16 string quartets, 10 violin and piano sonatas, 32 piano sonatas, 2 ballets, 2 masses, the opera *Fidelio* (1805–14), and about 200 song settings. His last works include the *Missa Solemnis* (1818–23), the ninth symphony (1817–23), and the innovative late string quartets.

beetle An insect belonging to the largest order (*Coleoptera*; about 278 000 species) of the animal kingdom. The forewings are specialized as hard structures (called elytra), which cover the functional hindwings when these are not in use. The elytra and the thick cuticle provide protection against predation and desiccation and enable aquatic species to trap a store of air. Many beetles are pests of crops, timber, etc.; others are useful by preying on insect pests. See also WEEVIL.

Beeton, Isabella Mary (1836–65) British author of one of the most famous English cookery books, *The Book of Household Management* (1861), first published in a women's magazine founded by her husband. She died of puerperal fever at the age of 29 after the birth of her third child.

Begin, Menachem (1913–92) Israeli statesman; prime minister (1977–83). Born in Russia, he commanded Jewish forces in Palestine from 1942. In 1948 he founded the Freedom (Herut) Movement and in 1973 became joint chairman of the Unity Party. In 1979 he negotiated the Camp David peace agreement with *Sadat, for which they shared the Nobel Peace Prize.

Begonia A genus of generally succulent herbaceous plants (about 1000 species) native to the tropics. They are grown as ornamental plants for their colourful flowers. Family: *Begoniaceae*.

Behan, Brendan (1923–64) Irish playwright.

His first play, *The Quare Fellow* (1954), and his autobiography, *Borstal Boy* (1958), were based on his imprisonment for IRA activities. His best-known play was *The Hostage* (1957).

behaviourism A school of psychology, founded in the USA by J. B. Watson (1878–1958) in the early 20th century, that aims to predict observable behaviour. The approach was successful in describing how animals learnt tasks in the laboratory but cannot fully account for such complex processes as emotion, language, and relationships. **Behaviour therapy** is a method of treating psychological problems by assuming that they are the result of faulty learning. It was developed mainly by Hans Eysenck (1916–97) from behaviourism. Conditioning may be used to teach new behaviour, such as better ways of relating to people, or to eliminate undesirable behaviour, such as excessive drinking (see AVERSION THERAPY). It includes treatment for *phobias, in which repeated exposure to the feared object or situation reduces the subject's fear of it.

Beiderbecke, Bix (Leon Bismarck B.; 1903–31) US jazz cornetist and pianist. He played with Louis Armstrong and in the band of Paul Whiteman (1891–1967), becoming a jazz legend because of his great originality and his early death from alcoholism.

Beijing (Peking or Pei-ching) 39 55N 116 25E The capital of the People's Republic of China, an autonomous city situated in the NE of the country in Hobei province. The city has expanded considerably since 1949 and there has been rapid development of industries. *History:* the site has a long history of human habitation. As Ta-tu, it first became the capital (of N China) under the Yuan dynasty in 1272. The capital was later moved to Nanjing, returning to Beijing (1420) under the third Ming emperor. In 1928 the Nationalist (Guomindang) government moved the capital to Nanjing. Beijing became the capital of the People's Republic of China in 1949. In 1989 thousands of students demonstrating for reform were massacred in Tiananmen Square. Population (1999 est): 6 633 929.

Beirut 33 52N 35 30E The capital of the Lebanon, on the E Mediterranean. After centuries of Turkish domination, it was held by the French from World War I until 1941, when it became the capital of the newly independent Lebanon. It was badly damaged in the civil war (1975–76) and in 1982 when Israeli forces besieged the city and forced the Palestine Liberation Organization to leave. It was then the

scene of fighting between religious factions until the private militias withdrew in 1990. Population (2003 est): 1 171 000.

Belarus (Belorussia, Byelorussia or White Russia)

A republic in E Europe. The majority of its inhabitants are Belarussians, a Slav people. *Economy:* dairy and meat farming are important. Owing to the lack of mineral resources, industry declined after the collapse of the Soviet Union; in 1994 Belarus entered an economic union with Russia to try to solve this problem. *History:* Belarus was part of Lithuania, Poland, and then Russia before becoming a constituent republic of the Soviet Union in 1919. It became an independent republic in 1991. Although a multiparty constitution was adopted, the former communists have continued to dominate politics. In the late 1990s President Aleksandr Lukashenko signed controversial treaties with Russia establishing joint economic and foreign policies and assumed near-dictatorial powers. He was re-elected in 2001 and 2006 but foreign observers condemned the elections as unfair. The regime's suppression of opposition has provoked much criticism. Official languages: Belarussian and Russian. Currency: rouble of 100 kopeks. Area: 207 600 sq km (80 134 sq mi). Population (2007 est): 9 724 723. Capital: Minsk.

Belau, Republic of (name until 1981: Palau or Pelew)

A country in the W Pacific Ocean comprising a group of islands, eight of which are inhabited. *Economy:* fishing is the main source of income; tourism is being developed. *History:* formerly part of the Spanish Empire, the islands were administered successively by Germany, Japan, and the USA before becoming a UN Trust Territory in 1947. Self-government was achieved in 1981 (with the USA retaining control of foreign and defence policy) and full independence in 1994. Official languages: Palauan and English. Currency: US dollar of 100 cents. Area: 488 sq km (188 sq mi). Population (2007 est): 20 284. Capital: Koror.

Belém 1 27S 48 29W A port in N Brazil, the capital of Pará state on the Rio do Pará. It exports products from the Amazon basin including nuts, jute, and rubber. Population (2005 est): 1 396 800.

Belfast 1. 54 40N 55 00W The capital of Northern Ireland, a seaport situated where the River Lagan enters Belfast Lough in Belfast district, Co Antrim and Co Down. The principal buildings include the City Hall (1906) and Parliament Buildings (1932) at Stormont. *History:* Belfast grew with the expansion of the linen-making

and shipbuilding industries in the 19th century; it became a city in 1888. Its recent history has been marked by conflict between Protestant and Roman Catholic communities. The British army has maintained a presence since 1969 (much reduced since the terrorist cease-fires of the mid-1990s). The Northern Ireland assembly has sat in the city since 1998. Population (2005): 268 978. 2. A district of W Northern Ireland in Co Antrim and Co Down. Area: 115 sq km (44 sq mi). Population (2004 est): 268 978.

Belgae The Germanic tribes occupying NE *Gaul in Roman times. Julius Caesar, who named them, defeated them in 57 BC but they continued their opposition to the Romans from SE Britain.

Belgium, Kingdom of (French name: Belgique; Flemish name: België)

A country in NW Europe, on the North Sea. It is low lying except for the Ardennes in the SE. The population is divided between the French and the Flemish, with other small minorities. *Economy:* highly industrialized, with engineering, food processing, brewing, textiles, and chemicals. The service sector is of growing importance. Agriculture is intensive but produces only for the home market. In 1921 a customs union was formed with Luxembourg and in 1948 both joined with the Netherlands to form the *Benelux Economic Union. Belgium is a member of the EU and almost two-thirds of its trade is with other members. *History:* the area was part of the Roman Empire until about the end of the 2nd century AD, when it was invaded by Germanic tribes. In medieval times the cities of Ghent, Bruges, and Ypres rose to virtual independence and prosperity through the wool industry. Its strategic position gave Belgium considerable importance in the balance of power in Europe and after being occupied by France during the Napoleonic Wars, it was joined to the Netherlands in 1815. Following an uprising, it became independent in 1830, and the National Congress elected Prince Leopold of Saxe-Coburg as King of the Belgians in 1831. It was attacked and occupied by Germany in both World Wars. When the Germans invaded in 1940, King *Leopold III surrendered immediately but the government struggled on in exile in London. In 1950 the king abdicated in favour of his son, *Baudouin, who was succeeded in 1993 by his brother, Albert II. Since World War II there has been tension between the French-speaking Walloons in the S and the Flemish-speaking community in the N. In 1977 Belgium was divided into the semiautonomous regions of Flanders, Wallonia, and Brussels, the regions

acquiring greater autonomy under a new federal constitution in 1993. Dr Wilfried Martens (1936–) was prime minister from 1979 to 1992. Belgium adopted the European single currency in 1999–2002. Official languages: French, Flemish, Dutch, and German. Currency: euro of 100 cents. Area: 30 513 sq km (11 781 sq mi). Population (2007 est): 10 392 226. Capital: Brussels.

Belgrade (Serbo-Croat name: Beograd) 44 50N 20 30E The capital of Serbia, situated at the confluence of the Rivers Danube and Sava. It became the Serbian capital in the early 15th century. It later suffered Turkish and Austrian occupations but again became capital of Serbia in the late 19th century and of Yugoslavia after World War I. It was occupied by the Germans in World War II and has expanded considerably since. Population (2002): 1 120 092.

Belize (name until 1973: British Honduras) A country in Central America between Mexico and Guatemala. It is generally low lying, rising to the Maya Mountains in the SW. The population is of African, Spanish-American, and Mayan Indian descent, with other small minorities. *Economy*: mainly agricultural; with sugar, citrus, cocoa, and timber exports. Agriculture was devastated by hurricanes in 1998 and 2001. Tourism grew rapidly in the early 2000s. *History*: once a Mayan settlement, Belize was discovered by Columbus in 1502 but the first European occupation was a settlement of British woodcutters, which held out against the Spanish throughout the 17th century; in 1862 it became a British colony under Jamaica, becoming an independent colony in 1884; it attained self-government in 1964. Claims, based on early Spanish treaties, were made to it by Guatemala but it was granted full independence within the Commonwealth in 1981. Elections in 1998 and 2003 were won by the People's United Democratic Party led by Said Musa. Official language: English. Currency: Belize dollar of 100 cents. Area: 22 963 sq km (8867 sq mi). Population (2007): 294 385. Capital: Belmopan.

Belize City 17 29N 88 10W The chief port of Belize, on the Caribbean coast. It was formerly capital of Belize but following a severe hurricane (1961), Belmopan, which became capital in 1970, was constructed inland. Population (2000): 49 040.

Bell, Alexander Graham (1847–1922) Scottish-born US scientist and inventor. He went to Canada in 1870 and to the USA in 1873, becoming professor of vocal physiology at Boston University. Bell's work in telegraphy and tele-

phony led to the invention of the telephone, which he patented in 1876.

belladonna See DEADLY NIGHTSHADE.

Bellerophon In Greek mythology, the grandson of Sisyphus and son of Glaucus, King of Corinth. Sent by Iobates, King of Lycia, to kill the *Chimera, he was able to carry out his task by flying above the dragon on Pegasus, a winged horse.

Bellini, Jacopo (c. 1400–c. 1470) Venetian painter, who was a pupil of *Gentile da Fabriano. Although few of his paintings survive, his two sketchbooks (British Museum and Louvre) reveal a remarkable understanding of perspective. They influenced his son-in-law Andrea *Mantegna and his two sons, who trained under him. The elder, **Gentile Bellini** (c. 1429–1507), is best known for his portraits and procession scenes. The younger, **Giovanni Bellini** (c. 1430–1516), was an important influence on Venetian art, especially through his pupils *Titian and *Giorgione. His paintings included several altarpieces.

Bellini, Vincenzo (1801–35) Italian composer. Of his 11 operas, *La sonnambula* and *Norma* (both 1831) and *I Puritani* (1835) remain popular.

Belloc, (Joseph-Pierre) Hilaire (1870–1953) British poet and essayist. Born in France, he served (1906–10) as a Liberal MP. His works include light verse, essays, biographies, and satirical novels, often illustrated by his friend G. K. *Chesterton. A Roman Catholic apologist, he opposed the socialism of G. B. *Shaw and H. G. *Wells.

Bellow, Saul (1915–2005) Canadian-born US novelist, the son of Russian Jewish immigrants. His first novel, *Dangling Man* (1944), was influenced by *existentialism. Later novels, such as *Herzog* (1964), *Humboldt's Gift* (1975), *The Dean's December* (1982), and *Ravelstein* (2000) are ironic studies of harassed Jewish intellectuals. He won the Nobel Prize in 1976.

Belmopan 17 12N 88 00W The capital of Belize, on the River Belize about 80 km (50 mi) inland from Belize City, which it succeeded as the capital in 1970 after the latter was damaged by a hurricane in 1961. Population (2004 est): 12 300.

Belo Horizonte 19 54S 43 54W A city in SE Brazil, in Minas Gerais state. Founded in 1897, it was Brazil's first planned city. Distinctive architecture includes Oscar Niemayer's Chapel of São Francisco. The chief industries include cotton textiles, meat processing, and iron and steel. Population (2001): 2 305 800.

Belorussia See BELARUS.

beluga 1. A giant *sturgeon, *Huso huso*, up to 8.4 m long, that occurs in the Caspian and Black Seas and the River Volga of E Europe. It is a highly prolific egg producer and the source of the best caviar. 2. See WHITE WHALE.

bends See DECOMPRESSION SICKNESS.

Benedict XVI (Joseph Alois Ratzinger; 1927–) Pope (2005–). A German, he was an academic theologian before being appointed Archbishop of Munich and a cardinal (1977). As Prefect of the Congregation of the Doctrine of the Faith under his predecessor, John Paul II, he gained a reputation as a staunch conservative.

Benedictines The monks and nuns belonging to the Roman Catholic Order of St Benedict (OSB), a union of independent abbeys, which follow the Rule of St Benedict of Nursia (c. 480–c. 550). Benedict, the father of Western monasticism, drew up his Rule at Monte Cassino, Italy, in 525; it requires residence in one place, common ownership of property, and a life of work, prayer, and study. The Benedictines were largely responsible for preserving the learning of antiquity after the fall of the Roman Empire. The liqueur *Bénédictine* is made by the order at Fécamp, France.

benefit of clergy The development in England of the 12th-century canon law that criminal clerics should not be tried by both ecclesiastical and secular courts. Henry II established that all clerics had the right to be tried solely in ecclesiastical courts, which could not inflict capital punishment. This privilege was much abused in the middle ages and although limited during the Reformation was not abolished until the early 19th century.

Beneš, Edvard (1884–1948) Czechoslovak statesman. In 1918 Beneš helped Tomáš Masaryk to found Czechoslovakia and became foreign minister. He became president in 1935 but spent World War II as head of a provisional government in London, returning to Czechoslovakia in 1945. He resigned in 1948, when Czechoslovakia became a communist state.

Bengal A region of the NE Indian subcontinent on the limb of the Indian Ocean known as the **Bay of Bengal**, around the Ganges and Brahmaputra deltas; it is divided between India and Bangladesh. *History*: the centre of Buddhist (8th–12th centuries), Hindu (11th–13th centuries), and Islamic dynasties, Bengal became the base for British expansion through India. It was partitioned between India and Pakistan at independence (1947).

Bengali An Indo-Aryan language spoken by 80 million people in Bangladesh and West Bengal (India). The literary form of the language uses many *Sanskrit words. There is a distinct colloquial form.

Benghazi (or **Banghazi**; Italian name: Bengasi) 32°07'N 20°05'E The second largest city in Libya, on the Gulf of Sidra. Severely damaged during World War II, it has grown with the development of local oilfields: other industries include light engineering. Population (2003 est): 446 250.

Ben-Gurion, David (David Gruen; 1886–1973) Israeli statesman; Israel's first prime minister (1948–53, 1955–63). In 1917 he joined the British Army's Jewish Legion to free Palestine from Ottoman control (achieved in 1918) and to establish a Jewish home in Palestine, as promised in the *Balfour Declaration. In 1920 he founded the General Federation of Labour (the Histadrut) and in 1930 the Israeli Workers' Party (Mapai). He led the Zionist effort to establish a Jewish state, finally achieved in 1948. After resigning in 1963, he was leader of the opposition party, the Rafi, until 1970.

Benin, Republic of (name until 1975: Dahomey) A country in West Africa, on the Gulf of Guinea. Flat forests and swamps in the S rise to plateaus in the centre and to mountains in the N. The population is mainly Fon and Yoruba in the N and Somba and Bariba in the S. *Economy*: chiefly agricultural; cotton has been introduced in the N and coffee in the S, and these provide the main exports. Offshore oil has been found but production, which began in the 1980s, has so far proved disappointing. There is a huge external debt. *History*: the powerful Aja kingdom of Dahomey was a centre of the slave trade in the 17th century but was conquered by the French in 1893 and became part of French West Africa. Dahomey attained self-government in 1958 and became an independent republic within the French Community in 1960. A series of military coups ensued, in the last of which (1972) Brig Gen Mathieu Kérékou seized power. In 1974 he established a Marxist-Leninist state. Unrest led to the adoption of a pluralistic constitution (1990) but in 1996 Kérékou was re-elected as president. Thomas Yayi became president in 2006. Official language: French. Currency: CFA franc of 100 centimes. Area: 112 600 sq km (43 464 sq mi). Population (2007): 8 078 314. Capital: Porto Novo.

Benin City 6°19'N 5°41'E A city in Nigeria. It is an important centre for the rubber industry

and also exports palm oil. Population (1996 est): 229 400.

b

Bennett, Alan British actor and writer. He appeared in and cowrote the Cambridge Footlights revue *Beyond the Fringe* (1959). His plays include *Forty Years On* (1968), *The Madness of George III* (1991), and *The History Boys* (2004). His *Talking Heads* (1988, 1998) were monologues for TV. *Writing Home* (1994) is a collection of diaries and essays.

Bennett, (Enoch) Arnold (1837–1931) British novelist. He published his first novel, *A Man from the North*, in 1898 and lived in Paris from 1902 to 1912. His best-known novels are about life in the Potteries area of Staffordshire, where he grew up. They include *Anna of the Five Towns* (1902), *The Old Wives' Tale* (1908), and *Clayhanger* (1910).

Bennett, Richard Rodney (1936–) British composer and pianist, known primarily for his scores for such films as *Far from the Madding Crowd* (1967), *Murder on the Orient Express* (1974), and *Four Weddings and a Funeral* (1994), and for his five major operas, including *The Mines of Sulphur* (1963) and *Victory* (1969).

Ben Nevis 56 48N 5 00W The highest mountain in the British Isles, in Highland, Scotland, in the Grampians. Height: 1343 m (4406 ft).

Bentham, Jeremy (1748–1832) British philosopher, pioneer of *utilitarianism. From a wealthy middle-class background, he studied law, but preferred theory to practice and in 1776 published *A Fragment on Government*. In 1789 *Principles of Morals and Legislation* presented utilitarianism. He retired to the country in 1814 and wrote copiously on politics and ethics until his death.

Benue, River A river in West Africa. Rising in N Cameroon, it flows W across Nigeria to join the River Niger at Lokoja. Length: 1400 km (870 mi).

Benxi (or **Pen-ki**) 41 21N 123 45E A city in NE China, in Liaoning province. It is a centre of iron and steel production. Population (1999 est): 827 203.

Benz, Karl (Friedrich) (1844–1929) German engineer and car manufacturer. In 1885 he built the first car to be driven by an internal-combustion engine. The Benz Company merged with Daimler in 1926 to form Daimler-Benz, the makers of Mercedes-Benz cars.

benzene (or **benzol**; C_6H_6) A colourless highly flammable liquid. It is the simplest aromatic compound, its molecules consisting of a

ring of six carbon atoms each with a hydrogen atom attached. Benzene is obtained from *oil and from *coal tar. It is widely used in the chemical industry.

benzodiazepines A class of tranquillizing drugs that act by depressing specific areas of the brain. Benzodiazepines, such as diazepam (Valium) and chlordiazepoxide (Librium), are used as *sedatives. Nitrazepam (Mogadon) is used as a sleeping pill (a hypnotic). Both nitrazepam and diazepam are habit forming. Recent years have seen mounting concern about the effects of long-term usage and abuse of benzodiazepines, particularly of temazepam (Normison), which is now a controlled drug.

Beowulf An Anglo-Saxon epic poem preserved in a late 10th-century manuscript. Probably composed in the 8th century by a Christian poet sympathetic to pagan ideals, it alludes to historical events of early 6th-century Scandinavia. In the first part the hero, Beowulf, kills the marauding monster, Grendel; in the second part, Beowulf, now king of the Swedish tribe of Geats, slays a dragon but is mortally wounded.

Berberis A widely distributed genus of deciduous or evergreen spiny shrubs (over 400 species). The small yellow or orange flowers usually grow in clusters and the fruits are red or blue berries. Berberis is implicated in a rust disease of wheat and is therefore outlawed in some areas. Family: *Berberidaceae*.

Berbers A Muslim people occupying parts of N Africa (Morocco, Algeria, Tunisia, and adjacent regions) and speaking a non-Semitic language. Prior to the introduction of Arabic speech in the 7th century AD, Berber languages were spoken over the whole of the area and are still spoken by an estimated ten million people; Morocco is still predominantly Berber in population. The Berbers played an important role in the Islamic conquest of the Iberian peninsula in the 8th century.

Berg, Alban (1885–1935) Austrian composer. A friend and pupil of *Schoenberg, he adopted *atonality and used *serialism. His greatest works are the operas *Wozzeck* (1915–21) and *Lulu* (1928–35), the intensely personal *Lyric Suite* (for string quartet; 1925–26), and a violin concerto (1935).

bergamot A tree, *Citrus bergamia*, closely related to the orange. An essence (oil of bergamot) extracted from the rind of its fruit is used in perfumery. The name is also given to two plants of the mint family (*Labiatae*): *Men-*

tha citrata, which yields an extract similar to oil of bergamot, and *Monarda citriodora* (lemon bergamot) sometimes used in a tealike beverage.

Bergen 60 23N 5 20E The second largest city in Norway, a sea port situated in the SW. Founded about 1070 AD, it became the chief commercial city and the country's capital (12th–13th centuries). It had connections with Hanseatic merchants (14th–18th centuries). It was rebuilt after damage by fire in 1702, 1855, and 1916 and by bombing during World War II. It exports fish products and base metals. Population (1997 est): 224 130.

Bergenia A genus of herbaceous perennial plants (6 species), native to central and E Asia but often cultivated for their attractive foliage and early-blooming pink or white flowers. Family: Saxifragaceae.

Bergius, Friedrich (1884–1949) German chemist, who shared the 1931 Nobel Prize with C. Bosch for inventing a process for making motor fuels from coal or petroleum residues by treating them with hydrogen under high pressure and temperature (1913). This process was used extensively by Germany in World War II.

Bergman, Ingmar (1918–) Swedish film and stage director. His films, many of which explore tense psychological relationships and issues of religious belief, include *The Seventh Seal* (1956), *Wild Strawberries* (1957), *Persona* (1966), *Cries and Whispers* (1972), and *Fanny and Alexander* (1982).

Bergman, Ingrid (1915–82) Swedish actress. She went to Hollywood in 1939 and became an international film star, appearing in such films as *Casablanca* (1942), *Gaslight* (1944), and *Anastasia* (1956).

Bergson, Henri (1859–1941) French philosopher and psychologist. To reconcile free will and *determinism, Bergson distinguishes between consciousness, an indivisible flow of cumulative states in which (free) will operates, and the external physical world where causality reigns. His works include *Matière et mémoire* (1896) and *L'Évolution créatrice* (1907). He won the Nobel Prize for Literature in 1927.

beriberi A disease caused by deficiency of *vitamin B, (thiamine), common in areas where the staple diet is polished rice (thiamine occurs mainly in the rice husks). Dry beriberi affects the peripheral nerves, causing muscular weakness and pain. Wet beriberi is probably the result of combined protein malnutrition and

thiamine deficiency: it causes accumulation of fluid and swelling of the limbs, leading eventually to heart failure. Treatment consists of providing a diet with adequate thiamine and vitamin supplements.

Bering Sea A section of the N Pacific Ocean between Russia, Alaska, and the Aleutian Islands. Navigation is difficult, with storms and a partial ice covering in winter. The NE continental shelf contains oil and gas, as yet unexploited. The **Bering Strait** is a narrow shallow channel between Asia and North America, connecting the Bering Sea with the Arctic Ocean. During the Ice Age it bridged the continents when the sea level fell.

Berkeley, George (1685–1753) Irish bishop and idealist philosopher. In *A New Theory of Vision* (1709), *Principles of Human Knowledge* (1710), and *Three Dialogues between Hylas and Philonous* (1713), he argued that the material world exists only in being perceived by the mind.

Berkeley, Sir Lennox (1903–89) British composer. He studied under Nadia Boulanger and taught at the Royal Academy of Music from 1946 to 1968. Berkeley's compositions include the *Serenade for Strings* (1939), *Four Poems of St Teresa* for contralto and strings (1947), and the fourth symphony (1978).

berkelium (Bk) A synthetic transuranic element synthesized by Seaborg at the University of California at Berkeley in 1949. The longest-lived isotope, ²⁴⁹Bk, has a half-life of 314 days. At no 97; at wt (247).

Berkshire A historic county of S England. In 1974 it lost a substantial part of the NW to Oxfordshire, while gaining part of SW Buckinghamshire. In 1998 Berkshire county council was abolished, with administrative powers being devolved to six unitary authorities: Bracknell Forest, Reading, Slough, West Berkshire, Windsor and Maidenhead, and Wokingham. The county consists mainly of lowlands rising to the Berkshire Downs in the N. It is predominantly agricultural; industries include paints, plastics, and pharmaceutical goods at Slough and light engineering and horticulture at Reading. Area: 1256 sq km (485 sq mi).

Berlin 52 31N 13 20E The capital city and a Land of Germany, in the NE of the country on the River Spree. *History*: founded in the 13th century, it was an important member of the Hanseatic League. Its independence was reduced by the Hohenzollern Electors of Brandenburg from the 15th century, but it became their capital and grew in importance with

their increasing power, becoming the capital of Prussia in the 18th century and of the German Empire in 1871. Badly damaged in World War II, it was occupied by the four major powers after the defeat of Germany. In 1948 Berlin became two separate administrative units: Soviet-controlled East Berlin and West Berlin, formed from the US, UK, and French zones. The Soviet Union blockaded the city for almost a year in 1948–49 (see **BERLIN AIRLIFT**). From 1949–90 East Berlin was the capital of East Germany; West Berlin remained an enclave within East Germany, administratively linked with West Germany. In 1961 the Berlin wall was built by the East Germans to curb the flow of refugees from E to W. Demolition of the wall began in 1989; full reunification was achieved in 1990, when Berlin became capital of the reunited Germany. The federal government was moved here in 1999. It is a major industrial and cultural centre. Population (2002 est): 3 388 434.

Berlin, Congress of (1878) A meeting of European powers, which revised the Treaty of San Stefano that had ended the 1877–78 Russo-Turkish War. The Congress limited Russian naval expansion, permitted Austria-Hungary to occupy Bosnia-Herzegovina, and gained Turkish recognition of the independence of Serbia, Romania, and Montenegro.

Berlin, Sir Isaiah (1909–97) British philosopher and historian, who was also a diplomat in Washington and Moscow. His works, which defend liberal humanism, include *The Inevitability of History* (1954), *Two Concepts of Liberty* (1959), and *Four Essays on Liberty* (1969).

Berlin airlift (1948–49) An operation by the Allies to supply isolated West Berlin with the necessities of life after the Soviet Union cut off all rail, road, and water links with the city in an attempt to force the Allies to abandon their rights there. The airlift continued until the blockade was lifted as a result of an embargo on exports from the E European states.

Berlioz, (Louis) Hector (1803–69) French Romantic composer and conductor. His first successful work, the *Symphonie Fantastique* (1830–31), was influenced by his love for his future wife, the Irish actress, Harriet Smithson (1800–54). His dramatic symphony *Harold in Italy* (1834) and choral symphony *Romeo and Juliet* (1839) were popular successes. The oratorio *The Childhood of Christ* (1850–54) was his last major success, for his two-part opera *The Trojans* (1856–59) was not performed complete in his lifetime. He was the author of a famous

treatise on orchestration and a volume of memoirs.

Berlusconi, Silvio (1936–) Italian politician and media tycoon; prime minister (1994, 2001–06). A controversial figure, he founded the populist *Forza Italia* movement in 1993 and led a centre-right coalition to victory in the elections of 2001.

Bermejo, Río A river of S central South America. Rising in S Bolivia, it flows SE into Argentina to join the River Paraguay. Length: 1046 km (650 mi).

Bermuda A United Kingdom overseas territory comprising some 300 coral islands (of which 20 are inhabited), in the W Atlantic Ocean. The largest island is Bermuda (or Great Bermuda), while smaller ones include Somerset, Ireland, and St George. Approximately three-quarters of the population is Black. *Economy*: tourism and agriculture are the main activities. *History*: visited by the Spanish navigator Juan de Bermudez in 1515, the islands were first settled in 1609 by British colonists shipwrecked there on the way to Virginia. They became the responsibility of the British Crown in 1684 and self-governing in 1968. Demands for independence led to serious unrest in the 1970s, but in 1995 the people voted against independence in a referendum. In 2003 the Labour Party formed a government under Ewart Brown. Official language: English. Currency: Bermuda dollar of 100 cents. Area: 53 sq km (20 sq mi). Population (2007 est): 66 163. Capital: Hamilton.

Bermuda Triangle The most notorious of several geographic regions, all lying roughly between 30° and 40° of latitude, in which numerous ships and aircraft have vanished without trace. The Triangle covers about 3 900 000 sq km (1 500 000 sq mi) between Bermuda, Florida, and Puerto Rico. No generally satisfactory explanation of these disappearances has been advanced, but the powerful currents may explain the lack of wreckage.

Bern (French name: Berne) 46°57'N 9°58'W The capital of Switzerland, on the River Aare. Founded as a military post in the 12th century, it joined the Swiss Confederation in 1353 and became the capital in 1848. It has considerable industry and contains the headquarters of several international organizations. Population (2003 est): 122 707.

Bernadette of Lourdes, St See **LOURDES**.

Bernadotte, Jean Baptiste Jules (c. 1763–1844) French marshal, who was King of Sweden (1818–44) as Charles XIV John, founding

the present Swedish royal house. Rising from the ranks he became a marshal under Napoleon, with whose support he was adopted as heir by the dying Charles XIII of Sweden. Turning against Napoleon, Bernadotte contributed to his defeat at Leipzig (1813). In 1814 he forced Denmark to cede Norway to the Swedish monarchy.

Berne Convention An international *copyright agreement of 1866. Its main provision guarantees copyright in all signatory countries of any work copyrighted in any one of them. The USA is still not a signatory.

Bernhardt, Sarah (Sarah Henriette Rosine Bernard; 1844–1923) French actress. Plays in which she gave worldwide performances include *Phèdre* (1879), *La Dame aux camélias*, and *L'Aiglon* by Edmond Rostand. She was also manager of several theatres in Paris.

Bernini, Gian Lorenzo (1598–1680) Italian *baroque sculptor and architect, born in Naples, the son of a sculptor. His first major sculptures were for Cardinal Scipione Borghese and included *Apollo and Daphne* (1622–24; Borghese Gallery, Rome). Encouraged by Urban VIII, he extended his talents into architecture, major works being the baldachin over the tomb of St Peter (1624–33) and the piazza and colonnade (1656–67) of St Peter's, Rome. Later sculptures included fountains for Roman piazzas.

Bernoulli's principle The principle of conservation of energy applied to fluid flow. If the effects of friction are neglected the total energy of the flow at any point in a pipe is equal to the sum of the kinetic energy due to the flow velocity, the gravitational potential energy due to height, and the energy of pressure in the fluid itself. Bernoulli's theorem states that the sum of these three components is constant throughout a flow system. Named after the Swiss scientist Daniel Bernoulli (1700–82).

Bernstein, Leonard (1918–90) US conductor, composer, and pianist. From 1958 to 1969 he was musical director and conductor of the New York Philharmonic Orchestra. His compositions, including symphonies, choral works, and songs, often contain jazz and folk elements. His musicals, such as *On the Town* (1944) and *West Side Story* (1957), have been widely popular.

Berruguete, Pedro (c. 1450–c. 1504) Castilian Renaissance painter. In the 1470s he worked in Italy at the court of Urbino, where he painted *Federigo da Montefeltro and his Son* (Urbino). On returning to Spain (1482) he

Painted frescoes for Toledo cathedral and altarpieces for the Dominican order in Avila. His son **Alonso Berruguete** (c. 1489–1561) was a mannerist painter and sculptor, who worked in Italy (c. 1504–c. 1517) and became court painter to Emperor Charles V (1518).

berserkers (Old Norse: bear-shirts) In Scandinavian mythology, savage warriors whose frenzy in battle transformed them from men into wolves or bears gave them immunity from harm by the sword or fire—hence the phrase “to go berserk.” They were devotees of *Odin and, in early Scandinavian history, warriors called berserkers were often employed as bodyguards to nobles.

Berthelot, Marcelin (1827–1907) French chemist and politician. A pioneer of organic chemistry he demolished the theory that organic compounds contained a “vital force.” In chemical thermodynamics he distinguished between endo- and exo-thermic reactions. He became a senator in 1881 and foreign secretary in 1895.

Berthollet, Claude Louis, Comte (1748–1822) French chemist and physician. He introduced bleaching by chlorine; he also showed that ammonia consists of hydrogen and nitrogen. Berthollet, working with *Lavoisier, developed a new chemical nomenclature. He travelled to Egypt as scientific adviser to Napoleon, who made him a senator and a count.

Bertolucci, Bernardo (1940–) Italian film director. His earlier films were influenced by Marxism, notably *Before the Revolution* (1965) and the epic *1900* (1977). He achieved commercial success with the controversial *Last Tango in Paris* (1972); other films include *The Last Emperor* (1988), *Stealing Beauty* (1996), and *Besieged* (1999).

beryl A mineral consisting of beryllium aluminosilicate, found principally in granites and granite pegmatites. It occurs as crystals up to one metre in length and is white, pale blue, or green. Aquamarine and *emerald are gem varieties.

beryllium (Be) A light (relative density 1.85) alkaline-earth metal that was discovered in 1828 by F. Wöhler and A. Bussy (1794–1882) independently. It occurs in nature in such minerals as *beryl and phenacite (Be₃Si₃O₁₀). It is transparent to X-rays and is used as windows on X-ray tubes. Alloys with copper are extensively used and the oxide (BeO), having a high melting point (2530°C), is used as a ceramic. Its salts are

poisonous. At no 4; at wt 9.0122; mp 1289°C; bp 2472°C.

b

Berzelius, Jöns Jakob, Baron (1779–1848) Swedish chemist, who found the atomic compositions of many chemical compounds. He also discovered the elements selenium (1817), silicon (1824), and thorium (1828) and determined the atomic and molecular weights of more than 2000 elements and compounds. He introduced the current notation for chemical formulae and the use of oxygen as a standard for atomic weights.

Bes The Egyptian god of recreation, also associated with children and childbirth. Images of the god, represented as a grotesque dwarf with a tail, were kept in homes as protection against evil.

Bessarabia A region in E Europe, largely in Moldova and Ukraine, with a predominantly Moldovan population. The main activity is agricultural processing. *History:* the region was colonized by the Greeks and later fell successively to the Romans, Huns, Magyars, Mongols, and Turks, passing to Russia in 1812. In 1918 Bessarabia declared its independence, later voting for union with Romania, which ceded it (1940) to the Soviet Union; it remained under Soviet control until 1991. Area: about 44 300 sq km (17 100 sq mi).

Bessemer process A steelmaking process invented by the British engineer Sir Henry Bessemer (1813–98) in 1855. A long cylindrical vessel (Bessemer converter) is charged with molten pig iron; air is blown through the iron to oxidize the carbon, silicon, and manganese impurities. Phosphorus is removed by reaction with the converter's basic refractory lining. Carbon, in the form of spiegel, is added to give steel of the required carbon content. It has been largely replaced by the basic-oxygen process.

Best, Charles Herbert (1899–1978) US physiologist, who, as an undergraduate research assistant to *Banting, helped to isolate the hormone insulin.

beta blocker A drug, such as propranolol, that prevents certain nerve endings (beta receptors) of the sympathetic nervous system from being stimulated, thus reducing heart activity. Developed by Sir James *Black, they are used to treat angina, arrhythmia, and hypertension.

beta decay A radioactive process in which a neutron within a nucleus decays by the *weak interaction into a proton, an electron (beta par-

ticle), and an antineutrino; alternatively, a proton may decay into a neutron, a positron, and a neutrino. Since the nuclear charge changes by one in both cases, the nucleus is converted into the nucleus of another element.

betatron A type of particle *accelerator used for producing very high energy electrons. The electrons are accelerated round a circular path in an evacuated torus-shaped chamber, by means of a large pulsed magnetic field. Electron energies up to 300 MeV are possible.

betel A mixture of the boiled dried seeds (*betel nuts*) of the areca, or betel palm (*Areca catechu*), and the leaves of the betel pepper (*Piper betle*), which produces copious salivation when chewed with lime—common in India.

Betelgeuse An immense conspicuous red *supergiant, over 500 light years distant, the second brightest star in *Orion. It is a variable star with its magnitude ranging from 0.3 to 0.9 over a period of about 5.8 years.

Bethlehem 31 42N 35 12E A town on the *West Bank of the River Jordan, near Jerusalem. The Church of the Nativity was built in 326 over the grotto that is the presumed birthplace of Jesus Christ. Population (latest est): 91 010.

Betjeman, Sir John (1906–84) British poet. He published his first book of poetry in 1933. His verse autobiography, *Summoned by Bells* (1960), shows the nostalgia and gentle social satire characteristic of his other poems. He took a keen interest in Victorian and Edwardian architecture. He was poet laureate from 1972.

betony A widespread perennial herb, *Stachys officinalis* (or *Betonica officinalis*), up to 30 cm high. It has round-toothed leaves and a dense head of reddish-purple tubular flowers. The leaves may be used for tea and for herbal tobacco. Family: *Labiatae*.

Bevan, Aneurin (1897–1960) British Labour politician, a brilliant orator on the party's left. As minister of health (1945–51), he was the architect of the *National Health Service. He was also minister of labour in 1951. His wife *Jenny, Baroness Lee* (1904–88), a Labour MP (1929–31, 1945–70), was minister for the arts (1967–70).

Beveridge, William Henry Beveridge, 1st Baron (1879–1963) British economist, writer, and academic. Beveridge became an authority on unemployment. His best-known work was the *Report on Social Insurance and Allied Services* (1942), the so-called **Beveridge Report**, on which the welfare state was based.

Bevin, Ernest (1881–1951) British politician and trade-union leader. In 1937 Bevin became chairman of the TUC and in 1940 he was appointed minister of labour, serving in Churchill's war cabinet. He was foreign secretary (1945–51) in the postwar Labour Government, when he helped to form NATO.

bezique A card game, usually for two players, that became popular in France about 1860. Two packs of 32 cards are used (standard packs with the cards from two to six removed). Each player is dealt eight cards; the next card indicates the trump suit and the rest form the stockpile. The object is to score points by collecting melds (certain combinations of cards) and to take tricks containing brisques (aces and tens). Play continues until one player's score reaches 1000 or 1500.

Bhagavadgita (Sanskrit: Song of the Lord) Hindu poem probably composed about 300 BC, forming part of the epic *Mahabharata*. It blends a number of Hindu philosophies. Arjuna, one of the five Pandava brothers, is compelled to battle with his kinsmen, the Kauravas; he is persuaded by *Krishna, acting as his charioteer, of the virtue of selflessly performing the duties of caste.

Bhaskhara II (1114–c.1185) Indian mathematician, who was the first to use the decimal system in a written work, invented the + and – convention, and used letters to represent unknown quantities as in modern algebra.

Bhavachakra (Sanskrit: wheel of becoming) In Buddhism, an image of the cyclical nature of earthly existence, in the form of a wheel held by the demon of impermanence. At the centre, turning the wheel, are greed, hatred, and delusion, depicted as a cockerel, snake, and pig, biting each other's tails. Around the rim, the 12 stages in the cycle of life are symbolically expressed.

Bhopal 23 17N 77 28E A city in India, the capital of Madhya Pradesh. Notable buildings include the unfinished Taj-ul-Masjid, the largest mosque in India. Bhopal's varied manufactures include vehicle parts and cotton textiles. In 1984 over 2000 people died after poisonous isocyanate gas escaped from the US-owned Union Carbide factory. Population (1991): 1 063 662.

Bhutan, Kingdom of (Bhutanese name: Druk-yul) A small country in the E Himalayas, between India and Tibet. It is entirely mountainous, rising over 7300 m (21 900 ft) in the N. Over half the population are of Tibetan origin, known as Bhutias, with minorities of Nepalese

in the S and Indians in the E. *Economy*: mainly agricultural; forests cover almost 60% of the land; hydroelectricity is being developed. *History*: in 1865 part of S Bhutan was annexed by the British and a treaty was concluded in which Britain agreed to pay an annual subsidy. In 1910 Britain agreed not to interfere in Bhutan's internal affairs and Sir Ugyen Wangchuk was elected the first hereditary maharaja (now referred to as king). In 1969 the absolute monarchy was replaced by a "democratic monarchy" and power is now between the king, the Council of Ministers, and the National Assembly. A process of devolving key powers from the king to the Assembly began in 1998. The 1990s saw ethnic tensions between Bhutias and Nepalese, many of whom fled to Nepal. Official language: Dzongkha Bhutanese. Currency: ngultrum of 100 chetruns. Area: 46 600 sq km (18 000 sq mi). Population (2003 est): 685 000. Capital: Thimphu.

Bhutto, Benazir (1953–) Pakistani politician; prime minister (1988–90, 1993–96). She was the first female leader of a Muslim country. Twice dismissed from office for alleged corruption, she was convicted (in absentia) of corruption in 1999 and sentenced to five years' imprisonment; in 2001 Pakistan's Supreme Court ordered a retrial and in 2002 she was given a three-year sentence for failing to appear before the court.

Her father, **Zulfikar Ali Bhutto** (1928–79), formed the Pakistan People's Party in 1967; after the secession of East Pakistan (Bangladesh) he became president (1971–73) and prime minister (1973–77). He was ousted by a military coup, defeated in the subsequent election, and executed for conspiracy to murder an opponent.

Biafra The secessionist eastern region of Nigeria (1967–70). In an attempt to protect their interests the *Ibo people declared unilateral independence under Lieut Col Odumegwu Ojukwu (1933–). The federal government under Gen Yakuba Gowon (1934–) refused to recognize the new state and attacked it. The Ibo were decimated.

Bialystok 53 09N 23 10E A city in NE Poland. It grew mainly under the Branicki family in the 18th century. In World War II the Germans killed half the population and destroyed the industry but cloth manufacture has been revived. Population (1999 est): 283 937.

biathlon 1. An athletic event first included in the Winter Olympic Games in 1960; competitors ski 20 km (12.5 mi) with rifles and ammu-

tion and at each of four points along the course take five shots at 150 m (164 yd). **2.** An athletic event consisting of running 4000 m (2.5 mi) and swimming 300 m (328 yd), introduced in 1968 by the Modern Pentathlon Association of Great Britain.

Bible (Greek *biblia*, books) The collected books of the *Old Testament, the *New Testament, and the *Apocrypha. The canon of the Hebrew Old Testament was definitively established by the rabbinical council of Jamnia (90–100 AD), although most of the books had acquired authority much earlier. The New Testament canon was also established gradually but had essentially its present form by the 3rd century AD. To Christians it represented the complete fulfilment of the prophecies of the Old Testament. Both Jews and Christians have traditionally regarded their scriptures as divinely inspired, hence correct in every particular. Almost all Christians agreed, until relatively recently, on the literal truth of the contents, a belief slowly eroded by the development of science from the 17th century. Despite attempts to condemn scientific findings when these appeared to conflict with scripture, as in the case of Galileo, scientific method was soon applied to the study of the Bible itself. As a result, many traditional assumptions about the Bible's content and authorship are no longer tenable. Most modern biblical criticism accepts that the scriptures must be interpreted within their historical context. The oldest extant complete manuscript of the Old Testament dates from the 11th century AD, but there are much earlier versions of such parts of the text as the Pentateuch (see also DEAD SEA SCROLLS). The earliest fragments of the New Testament date from the 2nd century AD; thereafter there are an extremely large number of manuscripts of quite early date. *Translations:* the first translation of the Bible is the Latin *Vulgate of St Jerome. Major English versions are: the version prefaced by *Wycliffe (1382–88), the last manuscript Bible written before the introduction of printing; the New Testament (1525) by Tyndale; the Bible of Miles Coverdale; the Great Bible (1539), supervised by Coverdale under the patronage of Thomas Cromwell; the *Geneva Bible; the Bishops' Bible (1568); the *Douai Bible; the *King James Version; the *Revised Version* (1881–95); the *Revised Standard Version* (1946–57); and *The New English Bible* (1961–70).

Bibliothèque Nationale The national library of France in Paris, containing around seven million volumes. It is based on the royal libraries of Charles the Wise (1364–80) and his

successors. From 1537 it received a copy of every book published in France.

bicycles Light vehicles, the two wheels of which are moved by cranks attached to pedals operated by the rider. Bicycles developed in the 19th century from a two-wheeled hobby-horse or dandy-horse. Around 1840 a Scotsman, Kirkpatrick Macmillan, applied the dandy-horse principle to models with pedals. The first true bicycles, with rotary cranks on their front wheels, went into production in Paris in 1865. To increase efficiency the front wheel was gradually made larger, resulting in the 20-year vogue of the ordinary (or pennyfarthing) bicycle. This was superseded by the so-called safety bicycle (1876), which had a chain and sprocket drive to the rear wheel and was essentially the same as the modern bicycle. Pneumatic rubber tyres (1889), a freewheeling mechanism (1894), and variable gears (1899) were later refinements. The current trend is for wide-tyred machines called mountain bikes or all-terrain bikes (ATBs), with up to 24 gears. The first race was held in France in 1868.

Biddle, John (1615–62) English founder of Unitarianism (see UNITARIANS). While a schoolmaster he wrote his *Twelve Arguments* against the deity of the Holy Ghost, for which he was imprisoned in 1645. Although his adherents began to meet openly from 1652, he was arrested and banished under Cromwell and finally died in prison in London.

Biedermeier style A style of furniture and painting that flourished in Austria, Germany, and Scandinavia from about 1816 to about 1848. It was satirically named after the fictional Gottlieb Biedermeier, created by the poet Ludwig Eichrocht (1827–92) to characterize bourgeois bad taste. Biedermeier furniture utilized French *Empire style design for modern functional purposes. Biedermeier paintings aimed at extreme naturalism in outdoor scenes and intimacy in interiors and portraits.

bigamy The criminal offence of marrying a person while being married to another. Defences include an honest belief in the death of the original marriage partner, or that the first marriage was invalid. Although a person would not be guilty of bigamy in such cases, the second marriage will still be invalid.

big-bang theory A cosmological theory (see COSMOLOGY), first proposed in the 1920s, that all the matter and radiation in the universe originated in an immense explosion about 10 to 20 thousand million years ago. As the universe so created expanded, the initially high temper-

ature decreased, enabling hydrogen and helium to form. This matter eventually interacted to form galaxies. The theory also predicts that the radiation formed shortly after the explosion should by now have cooled to about three kelvin. This is indeed the temperature of the isotropic microwave background radiation, detected in 1965 and now considered strong evidence for the big-bang theory.

Big Ben The 14-ton bell in the clock tower of the *Palace of Westminster (London), named after Sir Benjamin Hall (1802–67), commissioner of works when the clock was installed (1859). Both the clock and the tower itself are also known by this name.

bighorn A mountain sheep, *Ovis canadensis*, of North America. There is considerable variation within the species, ranging from the small Nelson's bighorn to the largest Rocky Mountain bighorns, which stand 100 cm at the shoulder.

Bihar A state in N India, bordering on Nepal. The densely populated rural Ganges plain produces rice, sugar cane, pulses, and vegetables. There is little industry and Bihar remains India's poorest state. *History:* the centre of N Indian civilization from 1500 BC, it was the scene of the early development of Buddhism and Jainism. More recently Bihar has seen conflict between Maoist insurgents and right-wing militias. In 2000 a large area of S Bihar became the new state of *Jharkand. Area: 99 225 sq km (38 301 sq mi). Population (2001 est): 82 878 000. Capital: Patna.

Bikini Atoll 11 35N 165 20E An atoll in the central Pacific Ocean in the *Marshall Islands. It was the site of US atomic and hydrogen bomb tests (some underwater) from 1946 to 1958.

Biko, Steven (1946–77) Black South African medical student, who cofounded the Black Consciousness movement in 1972. His arrest and death in police custody caused international concern and made him a hero of the struggle against *apartheid.

Bilbao 43 15N 2 56W A port in N Spain, the largest city in the Basque Provinces on the River Nervión. One of Spain's chief ports, its exports include iron ore, lead, and wine. Frank Gehry's Guggenheim Art Museum was opened here in 1997. Population (1998 est): 358 467.

bilberry A deciduous shrub, *Vaccinium myrtillus*, 30–60 cm high, also known as blaeberry, huckleberry, and whortleberry. It is found on acid moors and mountains in N Europe and N Asia. The angular stems bear small pointed

leaves that turn red in autumn. The globular pink flowers develop into blue berries, which may be eaten raw or cooked or used to make preserves or wine. Family: *Ericaceae* (heath family).

bile A greenish alkaline fluid secreted by the liver and stored in the *gall bladder. Contraction of the gall bladder, which is triggered by a hormone released from the duodenum in the presence of food, causes the bile to be expelled through the common bile duct into the intestine. Bile is composed of a mixture of bile salts (which emulsifies fatty foods for digestion) and bilirubin (a breakdown product of the blood pigment haemoglobin).

bilharziasis See SCHISTOSOMIASIS.

billiards A game for two players using cues and balls on a table. In **English billiards** the table measures 12 × 6 ft (3.6 × 1.8 m) and has six pockets (holes round the edges of the table); points are scored using two white cue balls and one red ball, all 2 in (5.2 cm) in diameter. A cannon, in which the cue ball strikes both the other balls, scores two points; a winning hazard, in which the cue ball pockets another ball, scores two points (white) or three (red); a losing hazard, in which the cue ball is pocketed after striking another ball, scores two points (off white) or three (off red). A turn (or break) lasts until the player fails to score. **Carom billiards** is played on a smaller table with no pockets and scoring is by cannons (or caroms). **Bar billiards** is played on a small table with a timing device and holes in the surface, into which balls are potted off each other until the time runs out. See also SNOOKER.

Billingsgate A fish market in London, situated from the 16th century on the N bank of the River Thames by London Bridge. In 1982 it was moved to its present location on the Isle of Dogs.

Bill of Rights 1. (1689) An act of parliament incorporating the Declaration of Rights, the conditions on which the English throne was offered to William and Mary (see GLORIOUS REVOLUTION). It curtailed the royal prerogative. MPs were to be freely elected and guaranteed freedom of speech. Roman Catholics were barred from the throne. **2.** (1791) The first ten amendments to the US Constitution, described by Jefferson as "what the people are entitled to against every government on earth." They include freedom of press, speech, and religion and the right to a fair and public trial.

binary star Two stars moving around each

other under mutual gravitational attraction. Possibly 50% of stars are members of binary or other multiple systems. The components of a **visual binary** can be distinguished by telescope whereas a **spectroscopic binary** can only be detected by spectroscopic measurements, the components usually being very close. In an **eclipsing binary** the orbital plane is so orientated that one component passes alternately in front of and then behind the other, causing the combined brightness to fluctuate. In a **close binary** the two components are close enough to exchange gaseous matter and can even share gas.

binary system A number system that uses only two digits 0 and 1. Numbers are expressed in powers of 2 instead of powers of 10, as in the decimal system. In binary notation, 2 is written as 10, 3 as 11, 4 as 100, 5 as 101, and so on. Computers calculate in binary notation, the two digits corresponding to two switching positions (e.g. on or off) in the logic circuits.

binding energy The energy released when protons and neutrons bind together to form an atomic nucleus. The mass of a nucleus is always less than the sum of the masses of the constituent protons and neutrons. The missing mass is converted into the binding energy according to Einstein's law $E = mc^2$.

bindweed A widely distributed climbing plant of the temperate and subtropical genera *Convolvulus* and *Calystegia*. Bindweeds twine their stems around other plants for support and can be persistent weeds. The leaves are large and arrow-shaped and the conspicuous white, pink, or yellow flowers are funnel-shaped. Family: *Convolvulaceae*.

bingo (former names: tombola; housy-housy) A gambling game developed in the 1880s from the children's game of lotto. Each player buys a card containing lines of random numbers (from 1 to 75 in the USA and usually from 1 to 90 in the UK). As numbers are called out, the players cover corresponding squares on their cards with counters; the first person to complete a line or the card wins. It became popular in the UK following a relaxation of the gaming laws during the 1960s, many local cinemas being converted into bingo halls.

Bin Laden, Osama (1957–) Saudi-born leader of the *al-Qaida terrorist movement. The heir to a vast fortune from his father's construction business, Bin Laden dedicated himself to militant Islamic activities in the late 1970s. His role in organizing guerrilla resistance to the Soviet invaders in Afghanistan

(1979–89) made him a hero to many Muslims. However, his opposition to the stationing of US troops on Saudi soil (in 1990) then led him to organize a series of attacks on US military and diplomatic targets from Sudan (from 1992). In 1996 Bin Laden transferred these operations to Afghanistan, where he forged links with the *Taleban. In 2001 he achieved worldwide notoriety as the presumed instigator of the attacks on New York and Washington on *September 11. Although the USA's subsequent *war on terrorism destroyed al-Qaida's Afghan bases, Bin Laden survived; his whereabouts are unknown.

binoculars A portable optical instrument used for magnifying distant objects. It consists of two telescopes fixed side by side, one for each eye, inside which there are a number of lenses for magnifying and focusing the image and usually prisms for altering the direction of the light and thus increasing the effective length of the telescope.

binomial nomenclature A system devised by *Linnaeus in the 18th century for the scientific naming of plants and animals, each species being identified by two Latin names—the name of the genus (written with an initial capital letter) followed by the name of the species. The specific name may be followed by the author's name, usually abbreviated. Thus the wolf is *Canis lupus* L. (for Linnaeus).

binomial theorem The theorem, discovered by *Newton in 1676, that the quantity $(a + b)^n$, where n is an integer, can be expanded in a series: $(a + b)^n = a^n + na^{n-1}b + \{n(n-1)a^{n-2}b^2\}/2! + \{n(n-1)(n-2)a^{n-3}b^3\}/3! + \dots + b^n$ where, for example, $3!$ (called factorial three) is $3 \times 2 \times 1$.

binturong A mammal, *Arctictis binturong*, of SE Asia, closely related to the *palm civets. It has a dark-grey shaggy coat, tufted ears, short legs, and a bushy prehensile tail (60 cm long). Binturongs live in trees and feed mainly on fruit and other vegetation.

biochemistry The scientific study of the chemical composition and reactions of living organisms. Central to biochemistry is *metabolism and the determination of the complex sequence of reactions involved in the digestion of food, the utilization of energy, the manufacture of new tissues, etc. Biochemists are also concerned with the role of *genes, *hormones, and *enzymes in initiating and controlling metabolic reactions.

biodegradable substances Materials that can be broken down by such processes as

decomposition by fungi and bacteria—and can therefore be reused by living organisms. Substances that are **nonbiodegradable**, such as plastics, persist in the environment, causing pollution.

biological control The control of pests by the use of living organisms. The controlling agent is usually a predator, parasite, or disease of the pest. For example, the virus disease myxomatosis was introduced into Australia and Britain to control the rabbit population. Recent methods of controlling insect pests include the release of sterile males to mate among the population. Biological control avoids the environmental pollution of chemical pesticides.

biological warfare The use of disease-causing microorganisms as weapons. In World War I, the Germans infected Allied cavalry horses with bacteria causing *glanders. Although biological warfare is now officially banned by the major powers, research continues in developing new strains of such organisms as the plague bacterium (*Pasteurella pestis*) and the smallpox virus. The organisms are required to be highly virulent and could be delivered in the warhead of a missile. Alternatively, they could be added to water or food supplies. A more recent concern is so-called **bioterrorism**, such as the anthrax attacks on US and Pakistani targets in late 2001.

bioluminescence The production of light by living organisms, including certain bacteria, fungi, and animals (e.g. fireflies and glowworms). In some the *luminescence is due to symbiotic light-producing bacteria. The light is emitted by the compound luciferin when it is oxidized: the reaction is catalysed by an enzyme, luciferase.

biomass The total weight (mass) of all living organisms (or of all members of a particular species) found in a given area. Biomass is expressed as mass per unit area.

biomass energy Energy obtained from the methane (biogas) generated by sewage or farm, industrial, and household organic waste, from specially cultivated organisms, or from crops, such as trees and sugar cane. Known collectively as **biofuels**, these alternative energy sources already supply some 4% of US fuel requirements.

biophysics The scientific discipline concerned with the explanation of biological phenomena in terms of the laws of physics. Biophysics emerged in the 1940s with the work

of such scientists as Max *Perutz and John *Kendrew, who applied the phenomenon of X-ray diffraction to determine the structure of biological molecules. More recent topics include the nature of the nervous impulse and the operation of sense organs.

biopsy The removal of a sample of living tissue from the **body** for microscopic examination. Biopsies are used to assist in the diagnosis of diseases, including cancer, jaundice and anaemia.

biotin See VITAMIN B COMPLEX.

bipolar disorder See MANIC-DEPRESSIVE PSYCHOSIS.

birch A deciduous tree or shrub of the genus *Betula* (40 species), of the N hemisphere. Birches grow up to 25 m and have smooth grey bark, that peels off in strips. The glossy leaves are usually triangular, with toothed edges. The flowers are male and female catkins producing tiny winged nuts. Birch wood, especially that of the Eurasian silver birch (*B. pendula*), is used for turned articles. Family: *Betulaceae*.

bird A warm-blooded animal belonging to the class *Aves* (about 8600 species), adapted for flight by having fore limbs modified as wings and a body covering of feathers. Other adaptations include a light skeleton with hollow bones and a large breastbone providing attachment for the powerful flight muscles. The jaws are elongated into a horny bill (teeth are absent or reduced). Birds have good eyesight and colour vision and most are active by day. Many communicate by song (see **SONGBIRD**) and some undergo seasonal migrations.

Birds are of great economic importance to man. The eggs and flesh of many provide food (game or poultry). Wildfowl and game birds are hunted for sport, and the feathers of some birds provide ornamental plumes, etc. Other species are pests, for example by damaging crops. Modern birds include both flying and flightless species (ratites); they are grouped into 28 orders, the largest of which is the *Passeriformes* (see **PASSERINE BIRD**). See also **ORNITHOLOGY**.

bird of paradise A bird, 30–65 cm long, belonging to a family (*Paradisaeidae*; 40 species) occurring in New Guinea and neighbouring islands. The male is usually brightly coloured, with long tail feathers and ornamental plumes, and performs an acrobatic display to attract the dull-coloured female.

bird of prey A bird that hunts other animals for food, also called raptor. Birds of prey are di-

vided into the nocturnal hunters, comprising the owls (order *Strigiformes*), and those that hunt by day, comprising the eagles, falcons, hawks, secretary bird, and the vultures (order *Falconiformes*). Live prey is normally taken but the vultures specialize in feeding on carrion. Birds of prey are characterized by their strong hooked bills for tearing flesh, clawed talons, and powerful flight with a high-speed dive onto prey.

bireme See SHIPS.

Birkenhead 53 24N 3 02W A port in NW England, in Wirral unitary authority, Merseyside, linked with Liverpool by road and rail tunnels. Population (1991): 93 087.

Birkenhead, Frederick E(dwin) Smith, 1st Earl of (1872–1930) British Conservative politician. A barrister, Birkenhead entered parliament in 1906. As attorney general (1915–19) he was famous for his prosecution of Sir Roger Casement (1864–1916) and while lord chancellor (1919–22) he introduced major land-law reforms. He was secretary for India (1924–28).

Birmingham 1. 52 30N 150W A city in central England, in Birmingham unitary authority, West Midlands. Britain's second largest city, it is a centre of engineering and metal-working. A cultural centre, it possesses three universities, an art gallery (1874–81), a symphony orchestra, a ballet company, a repertory theatre, and Symphony Hall (1991). Among post-war developments are a modern shopping complex centred on the Bull Ring (rebuilt 2002–03) and the National Exhibition Centre (1976). *History:* an Anglo-Saxon settlement, its development dates largely from the industrial revolution although its metalworking tradition is much older. It was severely bombed during World War II. Population (1994 est): 965 928. 2. A unitary authority in Central England, in West Midlands. Area: 283 sq km (109 sq mi). Population (2001): 977 091. 3. 33 30N 86 55W A city in the USA, in Alabama. Settled in 1813, it is the state's largest city and the main industrial centre of the South. It has an important iron and steel industry. Population (2000): 242 820.

Biró, Laszlo (1900–85) Hungarian inventor, who in 1938 patented the ballpoint pen containing quick-drying ink. Such pens are now commonly known as *biros*.

birthstone In *astrology, a gemstone associated with a birth month. The ancient belief that certain gems had supernatural powers led to them being worn for luck. The modern list

of birthstones is usually: January—garnet; February—amethyst; March—bloodstone; April—diamond; May—emerald; June—pearl; July—ruby; August—sardonyx; September—sapphire; October—opal; November—topaz; December—turquoise.

Birtwistle, Sir Harrison (1934–) British composer. His compositions include the operas *Punch and Judy* (1966–67), *Gawain* (1991), and *The Last Supper* (2001), *Endless Parade* (for trumpet and orchestra; 1987), and the large-scale orchestral work *Exody* (1998). He was knighted in 1988 and appointed CH in 2000.

Biscay, Bay of (French name: Golfe de Gascogne; Spanish name: Golfo de Vizcaya) An inlet of the Atlantic Ocean, off the coast of W France and N Spain. It is comparatively deep and subject to rough seas. Width: about 320 km (199 mi).

Bishkek (or **Pishpek**; name 1925–91: Frunze) 42 53N 74 46E The capital of Kirgizstan, on the River Chu. Manufactures include machinery and textiles. Population (1999 est): 619 000.

Bismarck, Otto Eduard Leopold, Prince von (1815–98) Prussian statesman; first chancellor of the German Empire (1871–90). A conservative, known as the Iron Chancellor, Bismarck came to prominence after the collapse of the Revolution of 1848. After victory in the *Franco-Prussian War (1870–71) William I of Prussia accepted the imperial crown and Bismarck became chancellor of the new German Empire. He came into conflict (the Kulturkampf) with the Roman Catholic Church and, abroad, presided over the Congress of *Berlin (1878) and formed the *Triple Alliance with Austria and Italy. Losing the support of William II, Bismarck resigned in 1890 over the abolition of antisocialist laws.

Bismarck Archipelago A group of volcanic islands in the SW Pacific Ocean, in Papua New Guinea. It includes New Britain, New Ireland, and the Admiralty Islands. Area: 49 658 sq km (19 173 sq mi). Population (1995 est): 424 000.

bismuth (Bi) A dense white brittle metal, similar in properties to tin and lead. It is obtained as a by-product of lead, copper, tin, silver, and gold refining and also occurs naturally as the pure metal, the sulphide (Bi_2S_3), and the oxide (Bi_2O_3). It has unusual properties for a metal, having low thermal and electrical conductivity, and decreasing in volume on melting. With tin and cadmium it is used to make low-melting alloys in fire prevention systems.

At no 83; at wt 208.98037; mp 271.4°C; bp 1564 ± 5°C.

bison A massive hoofed mammal belonging to the genus *Bison* (2 species). The North American bison (*B. bison*) was once abundant on the plains but is now found only on reserves. Over 150 cm at the shoulder and weighing up to 1000 kg, it has a shaggy mane and low-slung head with incurved horns. The smaller European bison (*B. bonasus*), also called wisent, is now found only in zoos. Family: *Bovidae*.

Bissau 1150N 1537N The capital and chief port of Guinea-Bissau, on the Geba estuary. Founded by the Portuguese in 1687, it became capital of Portuguese Guinea in 1941. Population (1999 est): 274 000.

bit A binary digit. The basic unit of information in information theory and computer memory stores. It is the amount of information needed to specify one of two alternatives, i.e. to distinguish between 1 and 0 in the binary notation.

bittern A bird belonging to the subfamily *Botaurinae*, occurring throughout the world in swamps and reedbeds. The European bittern (*Botaurus stellaris*) is a solitary bird, 70 cm long, with a yellow-brown dark-streaked plumage that provides camouflage. The little bittern (*Ixobrychus minutus*) is 34 cm long with buffish-white wing patches. Family: *Ardeidae* (herons, etc.).

bitumen The tarry residue left after *distillation of oil, lignite, or coal, consisting almost entirely of a mixture of carbon with large *hydrocarbon molecules. Its principal uses are in roadmaking and binding cement.

bivalve A *mollusc belonging to the class *Bivalvia* (also called *Pelecypoda* or *Lamellibranchia*; about 10 000 species). Bivalves are characterized by having two hinged shell plates (valves) and include *clams, *mussels, *oysters, and *scallops. Bivalves inhabit both salt and fresh water. Most bivalves are of separate sexes but some are hermaphrodite. Some hermaphrodite bivalves, including *Ostrea* oysters, incubate the fertilized eggs.

Bizet, Georges (Alexandre César Léopold B.; 1838–75) French composer. In 1855 he produced his first major work, the symphony in C major. Among his best-known works are the music to Alphonse Daudet's play *L'Arlesienne* (1872) and the opera *Carmen* (1873–74).

Black, Sir James (Whyte) (1924–) British biochemist. His discovery of beta blockers and his work on drugs for peptic ulcers

won him a Nobel Prize (1988). He was appointed to the OM in 2000.

Black and Tans The irregular forces recruited by the British Government to fight the IRA in Ireland in 1920–21. Their name derives from their uniform, khaki with black caps and belts. They acted with great severity and were hated by the Irish.

black bear The native bear of North American forests, *Ursus* (or *Euarctos*) *americanus*. American black bears grow to a weight of 150 kg; they climb well and eat berries, pine cones, and grass as well as small animals. The Himalayan black, or moon, bear, *Selenarctos thibetanus*, inhabits forests of central and E Asia and has a white V-shaped mark on its chest.

black beetle See *COCKROACH*.

blackberry (or **bramble**) A prickly shrub, *Rubus fruticosus* (an aggregate species), occurring throughout Europe. The stems, up to 5 m long, root wherever they touch the ground. The dark-green leaves usually consist of five oval toothed leaflets and the pinkish-white flowers are borne in terminal clusters. The edible fruits consist of an aggregate of several small berries. Family: *Rosaceae*.

blackbird A songbird, *Turdus merula*, that is one of the commonest European birds, particularly in urban areas. The male, about 25 cm long, is black with a bright-yellow bill and eye ring; the larger female is dark brown with a dark bill. Blackbirds feed chiefly on worms and other invertebrates but will also eat scraps. Family: *Turdidae* (thrushes).

black body A theoretical body that absorbs all the electromagnetic radiation falling upon it. When heated it emits radiation (black-body radiation) having a continuous distribution of wavelengths with a maximum at a particular wavelength, which depends only on the temperature of the body.

Blackburn 53 45N 2 29W A town in NW England, in Blackburn with Darwen unitary authority, Lancashire, on the Leeds–Liverpool Canal. Traditionally a cotton-weaving town, it now has engineering and electronics industries. Population (1991): 105 994.

Blackburn with Darwen A unitary authority in NW England, in Lancashire. Area: 137 sq km (53 sq mi). Population (2001): 137 471.

blackcap A European *warbler, *Sylvia atricapilla*. About 14 cm long, it has an olive-brown plumage with paler underparts and a darker cap (black in the male and reddish-

b

brown in the female). Blackcaps feed chiefly on insects but—before migrating—they eat fruit to build up energy reserves.

Black Country, the An industrial area of central England. Situated NW of Birmingham, it grew up around the coalfield in what was then S Staffordshire. It gained its name from the grime produced by intense industrialization in the 19th century.

blackcurrant A shrub, *Ribes nigrum*, native to most of Europe and N Asia and widely cultivated. The stems and three-lobed leaves emit a characteristic smell. The drooping clusters of greenish bell-shaped flowers develop into edible black berries. Family: *Grossulariaceae* (gooseberry family).

Black Death The worst outbreak of *plague, principally bubonic but also pneumonic and septicaemic, of the medieval period. Originating in the Far East, it spread through Europe and England in May 1348. Estimates of mortality rates vary from 20% to more than 50%. The outbreak had a profound effect not only on demographic trends but also upon rural society and the economy as a whole. Further outbreaks followed in the 1350s and 1370s.

black earth See CHERNOZEM.

blackfly Any black *aphid, especially the bean aphid (*Aphis fabae*). Bean aphids occur in masses on beans (especially broad beans), spinach, dock, etc., in summer months. They overwinter as fertilized eggs in *Euonymus*, *Viburnum*, and *Philadelphus* trees.

black grouse A Eurasian *grouse, *Lyrurus tetrix*, of moorlands. The male (also called blackcock), 50 cm long, has a glossy black plumage and a lyre-shaped tail; the female is reddish brown. Both have conspicuous red wattles above the eyes.

black hole A celestial "object" that has undergone such total *gravitational collapse that no light can escape from it. Once a collapsing object's radius has shrunk below a critical value (the Schwarzschild radius) it becomes a black hole; for a star, this radius is about 10 km or less. The surface having this radius is called the event horizon of the black hole. The object will continue to contract until compressed to an infinite density at a single central point—a singularity. Black holes of 10^6 to 10^9 solar masses are now thought to exist at the centres of certain galaxies, possibly including our own, and to be the powerful sources of energy in *quasars.

Black Hole of Calcutta A small cell (5.5

m × 4.5 m) in which over one hundred British soldiers were allegedly confined overnight in 1756, less than 25 men surviving. The outrage was perpetrated by the Nawab of Bengal, who, objecting to the fortification of Calcutta by the East India Company, defeated the British garrison.

blackjack See PONTOON.

black mass A blasphemous parody of the Roman Catholic mass, celebrated by Satanists in honour of the devil. A naked woman is usually present at or on the altar and participants take hallucinatory drugs.

Black Mountains A mountain range in SE Wales and W central England, in Powys, Monmouthshire, and Herefordshire, mainly in the Brecon Beacons National Park. It rises to 811 m (2660 ft) at Wann Fach.

Black Muslims Members of the Nation of Islam movement founded in Detroit (USA) in 1930 by W. D. Fard, believed by Black Muslims to be the Saviour. After the disappearance of Fard in 1933, the movement was led by Elijah Muhammad (1897–1975); *Malcolm X was a leading member until 1964. It aims to establish a new Black Islamic state and follows many Muslim practices.

Blackpool 1. 53 50N 3 03W A coastal resort in NW England, in Blackpool unitary authority, Lancashire, famous for its 160 m (520 ft) high Tower (modelled on the Eiffel Tower), Pleasure Beach, and illuminations. Population (1991): 146 262. 2. A unitary authority in NW England, in Lancashire. Area: 35 sq km (13 sq mi). Population (2001): 142 284.

Black Prince, Edward the See EDWARD, THE BLACK PRINCE.

Black Rod An official of the House of Lords, first appointed in 1522, having been called usher of the Order of the *Garter since 1350. He maintains order in the House and when the monarch delivers a speech, summons members of the Commons by knocking on their door with his staff of office (black rod).

Black Sea An inland sea bounded by Bulgaria, Romania, Moldova, Ukraine, Russia, Georgia, and Turkey; it is connected to the Mediterranean Sea via the Bosphorus in the SW and to the sea of Azov in the N. Its salinity is kept low principally by the influx of fresh water from the Rivers Danube and Dnepr.

blackthorn (or *sloe*) A thorny shrub, *Prunus spinosa*, forming dense thickets, up to 4 m high, in many parts of Europe and Asia. The clusters

of white flowers usually appear before the leaves, which are oval and toothed. The bitter-tasting blue-black stone fruits are used to flavour sloe gin. Family: *Rosaceae*.

black widow A venomous *spider, also called button or redback spider, that belongs to a genus (*Latrodectus*; about 6 species) found in tropical and subtropical regions. The female of *L. mactans*, the most common North American species, has a shiny black body, 25 mm long, with red markings on the abdomen. (The male is about 6 mm long and usually killed and eaten by the female after mating.) The bite is serious but rarely fatal. Family: *Theridiidae*.

bladder In anatomy, any hollow organ containing fluid, especially the urinary bladder, into which urine drains from the *kidneys.

bladderwort A plant of the widely distributed genus *Utricularia* (about 200 species, many tropical). Most bladderworts are submerged aquatic plants with leaves bearing small bladders, which trap tiny aquatic animals by a trap-door mechanism triggered by sensitive hairs. The two-lipped tubular flowers protrude above the water. Family: *Lentibulariaceae*.

Blaenau Gwent A county borough in SE Wales, created in 1996 from part of N Gwent. Area: 109 sq km (42 sq mi). Population (2004 est): 68 800. Administrative centre: Ebbw Vale.

Blair, Tony (Anthony Charles Lynton B.; 1953–) British Labour politician: prime minister (1997–2007). He entered parliament in 1983 and was shadow home secretary (1992–94) before becoming party leader (1994). Having reformed and modernized the party, he led it to a landslide victory in the general election of 1997. His government enacted devolution in Scotland and Wales, negotiated a new settlement in Northern Ireland, and promised reform of public services; it was re-elected with a large majority in 2001. Blair committed British forces to military action in *Kosovo (1999) and Afghanistan (2001; see WAR ON TERRORISM). In 2003 he sent troops to support US forces in the *Iraq War, on the grounds that Iraq possessed weapons of mass destruction; when no such weapons were found his leadership faced severe criticism. His government was re-elected with a reduced majority in 2005.

Blake, Robert (1599–1657) English admiral. A Parliamentarian in the Civil War, Blake became one of Cromwell's most successful commanders and in 1650 destroyed Prince Rupert's Royalist fleet. In the first *Dutch War, Blake was largely responsible for the English victory and

sank 16 Spanish ships at Santa Cruz off Tenerife (1657). He died while returning to Plymouth.

Blake, William (1757–1827) British poet, painter, and engraver. His poems, the texts of which he engraved and illustrated, include *Songs of Innocence* (1789), *Songs of Experience* (1794), various "Prophetic Books," Milton (1808), and *Jerusalem* (1820). His watercolours for *The Book of Job* (1826) and Dante's *Divine Comedy* (1827) were inspired by his visions and engravings after Michelangelo. Although unrecognized by his generation, except by a few friends, he was a precursor of Romanticism.

Blantyre (or **Blantyre-Limbe**) 15 46S 35 00E The largest city in Malawi, in the Shire Highlands. In 1956 it was linked with Limbe, a major railway centre. Blantyre is Malawi's chief industrial centre and its executive and judicial capital. Population (2003 est): 646 235.

blast furnace A furnace used in the *smelting of ore. In steel making, iron ore, coke, and limestone are poured in at the top of a vertical furnace and a blast of hot air is blown in at the bottom to burn the coke. Molten iron is drawn off at the bottom. A glassy waste, called slag, is also produced.

blast furnace

Blaue Reiter, Der (German: The Blue Rider) A group of artists formed in Munich in 1911 by *Kandinsky and Franz Marc (1880–1916). Their symbolic and expressionist style (see EXPRESSIONISM) shows the influence of primitive art and children's pictures. The group, which also included Paul *Klee and August Macke (1887–1914), disbanded during World War I.

bleaching The whitening, lightening, or removing of colour by chemical treatment or ex-

posure to sunlight. Most bleaching agents are oxidizing agents, which convert a pigment into an oxidized colourless form. Examples are hydrogen peroxide, *bleaching powder, and hypochlorites. In some processes reducing agents, such as sulphur dioxide, are used.

bleaching powder (or **chloride of lime**) A whitish powder containing calcium hypochlorite ($\text{Ca}(\text{OCl})_2$), calcium chloride (CaCl_2), calcium hydroxide ($\text{Ca}(\text{OH})_2$), and water. It reacts with dilute acids to produce chlorine, which acts as a bleaching agent.

bleeding heart An ornamental plant of the genus *Dicentra*, especially *D. spectabilis* from Siberia and Japan and *D. eximia* from North America. They are perennials with arching stems, up to 90 cm long, bearing strings of large rose-red heart-shaped flowers with whitish tips. Family: *Fumariaceae*.

Blenheim, Battle of (13 August 1704) The battle won by the Duke of *Marlborough and Prince Eugène of Savoy (1663–1736) against the French in the War of the *Spanish Succession. It was fought at Blenheim (now Blindheim) on the Danube River.

Blenheim Palace The baroque palace built between 1705 and 1725 at Woodstock, Oxfordshire (England), as a gift from Queen Anne to the Duke of *Marlborough for his victories over the French, especially at the Battle of Blenheim. Designed by Vanbrugh, the gardens were laid out by Capability *Brown. It was the birthplace of Winston Churchill.

blenny A small fish belonging to a family (*Blenniidae*; about 300 species) found among rocks in shallow waters of tropical and temperate seas. Blennies have an elongated scaleless body with a blunt nose. Many have small tentacles on their heads. The name is also used for several other fish of the order *Perciformes*.

Blériot, Louis (1872–1936) French aviator. Beginning his career as a motorcar engineer he was the first to fly the English Channel (1909), from Calais to Dover, in a monoplane. He later became a manufacturer of aircraft.

Bletchley Park A house in Buckinghamshire that became the headquarters of Allied codebreakers in World War II. Here the German Enigma machine's coded messages were deciphered using one of the first electronic computers. This enabled German plans for the Battle of the Atlantic to be given to the Royal Navy in advance.

Bligh, William (1754–1817) British admiral. He accompanied *Cook on his second voyage

round the world and in 1787 sailed to Tahiti on the *Bounty*. While setting sail for home, his crew mutinied under Fletcher Christian, leaving Bligh and 18 officers aboard a small boat without maps. He eventually reached safety. In 1805 he was made governor of New South Wales.

blight A severe disease of plants caused by pests, fungi, or other agents. Symptoms commonly include spotting followed by wilting and death. The notorious potato blight that devastated Ireland in the mid-19th century was caused by the fungus *Phytophthora infestans*.

Bliss, Sir Arthur (Edward Drummond) (1891–1975) British composer. Director of music at the BBC (1942–44), Bliss was knighted in 1950 and was Master of the Queen's Music (1953–75). His works include *A Colour Symphony* (1922), music for the film *The Shape of Things to Come* (1935), a piano concerto (1938), the opera *The Olympians* (1948–49), and a cello concerto (1970).

blister beetle A brightly coloured beetle, about 10–15 mm long, belonging to a widely distributed family (*Meloidae*; about 2000 species), which also includes the *oil beetles. The larvae are parasitic upon other insects, while the adults generally feed on plants. Their secretion of cantharidin, a powerful blistering agent, has led to the medicinal use of various species, especially *Spanish fly.

Blitzkrieg (German: lightning war) A military tactic aiming to disorganize enemy forces by surprise attacks using tanks and aerial bombardment. It was extensively used by the Germans in *World War II. The *Blitz* refers to the intensive German air raids on London during the battle of Britain in *World War II.

Bloch, Ernest (1880–1959) Swiss-born composer of Jewish descent who moved to the USA in 1916. His opera *Macbeth* (1903–09), a rhapsody for cello and orchestra entitled *Schelomo* (1916), *Concerto Grosso* (1925), and *Sacred Service* (1930–33) incorporate Jewish musical elements.

Bloch, Felix (1905–83) US physicist, born in Zurich, who moved to the USA when Hitler came to power. He developed the nuclear magnetic resonance technique for which he shared the Nobel Prize (1952) with E. M. Purcell. During World War II he worked on the development of the atomic bomb. In 1954 he became the first director of CERN.

Bloemfontein 29°07'S 26°14'E The judicial capital of South Africa and the capital of Free State. Founded in 1846, it is an important agri-

cultural centre and new gold mines have been opened nearby. Population (1991): 126 867.

blood The red body fluid consisting of a watery *plasma in which are suspended various blood cells—the red cells (see ERYTHROCYTE) and several kinds of white cells (see LEUCOCYTE). The *platelets are small particles involved in blood clotting. Blood pumped round the vascular system by the heart acts as a medium for transporting oxygen, carbon dioxide, digested food, hormones, waste materials, salts, and many other substances to and from the tissues. An average adult has about 70 millilitres of blood per kilogram of body weight (i.e. about 5 litres in an average man). Blood is present in all animals with a circulatory system: its functions are similar to that of human blood although its composition varies. *See also* BLOOD CLOTTING; BLOOD GROUPS; CIRCULATION OF THE BLOOD.

blood. Blood cells and platelets, showing surface and side views of a red cell and five types of white cell (above). Human blood, magnified about 1500 times (below), containing a single white cell, a mass of red cells, and two clusters of platelets.

blood clotting The mechanism by which blood is converted from a liquid to a solid state to prevent loss of blood after injury. The process involves chemical reactions between soluble proteins (clotting factors) in the blood in the presence of *platelets, resulting in the formation of a fibrous protein (fibrin), which forms the basis of the blood clot. *See also* THROMBOSIS.

blood fluke A parasitic flatworm of the genus *Schistosoma* (3 species), which causes the disease *schistosomiasis in many parts of the world. The flukes are carried by freshwater snails and enter their human hosts to inhabit blood vessels, feeding on blood and causing severe debilitation. *See also* FLUKE.

blood groups The different types of blood, classified on the basis of the presence of certain proteins (see ANTIBODY) on the surface of the red cells, which is genetically determined. The major grouping is the ABO system, discovered in 1900 by Karl Landsteiner (1868–1943). It consists of four groups: A, B, AB, and O. Group A cells carry the A antigen and the plasma contains *antibodies against B antigen (anti-B antibodies); the converse applies to group B blood. Transfusion of blood between these groups causes destruction of the donor blood cells (see BLOOD TRANSFUSION). Group O blood contains neither antigen and can therefore be used in transfusions to people of groups A and B. Group AB blood contains neither anti-A nor anti-B antibody: people of this blood group can accept both A and B blood during transfusion. *See also* RHESUS FACTOR.

bloodhound An ancient breed of dog with a keen sense of smell, originating around the Mediterranean and used for tracking. It has a sturdy frame and a large head with long drooping ears and wrinkled skin around the eyes. Height: 63–69 cm (dogs); 58–64 cm (bitches).

blood pressure The pressure that blood exerts on the walls of the arteries, due to the pumping action of the heart. Blood pressure is at its lowest between heartbeats (i.e. at diastole) and at its highest when the ventricles of the heart are contracting (i.e. systole). It is recorded, using a *sphygmomanometer, as the height in millimetres of a column of mercury (mmHg). A healthy adult might have a systolic pressure of about 120 mmHg and a diastolic pressure of 80 mmHg, expressed as 120/80. *See also* HYPERTENSION.

bloodstone A mineral of a green colour speckled with red. It is a variety of *chalcedony. Birthstone for March.

blood transfusion Usually the transfer of blood from a **blood bank** to a person who has suffered extensive loss of blood; for example, during surgery or following an accident. Some people (e.g. Jehovah's Witnesses) object to transfusion on religious grounds. The blood is stored at 4°C and used within 3–4 weeks. The *blood group of the recipient must match that of the donor.

Bloody Assizes See JEFFREYS OF WEM, GEORGE, 1ST BARON.

Bloody Sunday 1. The massacre of unarmed protestors by Russian police in St Petersburg on 22 January 1905. 100 people were killed, precipitating the *Revolution of 1905. 2. The violent events of 21 November 1920 when the IRA assassinated 14 men believed to be British spies. British forces responded by killing 12 innocent spectators at a Dublin football match. 3. The events in Londonderry on 30 January 1972 when British paratroops fired into a crowd during a minor disturbance in a civil-rights demonstration, killing 13 innocent people.

Bloomsbury group A group of English writers and artists active in the 1910s and 1920s who met initially in private houses in Bloomsbury, London. The group included the writers Virginia *Woolf and Lytton Strachey, the art critics Clive Bell (1881–1964) and Roger *Fry, and the economist J.M. *Keynes. Their belief in the importance of personal relations and aesthetic experience was influenced by G.E. Moore's *Principia Ethica* (1903).

blowfly A large buzzing fly belonging to the family *Calliphoridae*. Some blowflies lay their eggs in human food, but more commonly the larvae develop in decaying organic material. The larvae of certain species (e.g. of the American genus *Cochliomyia*) are serious pests of sheep and cattle. Chief genera: *Calliphora* (bluebottles), *Lucilia* (greenbottles).

bluebell One of several plants having bell-shaped blue flowers. In England the bluebell is *Endymion non-scriptus*, up to 50 cm high, which overwinters as a bulb. Family: *Liliaceae*. In Scotland the name is applied to the *harebell.

bluebottle See BLOWFLY.

blue-green bacteria Bacteria belonging to the phylum *Cyanobacteria*; they were formerly classified as algae (blue-green algae; division *Cyanophyta*). They contain a blue pigment (phycocyanin), in addition to the green chlorophyll. Reproduction is asexual. They occur on moist surfaces and in the soil, where they contribute to *nitrogen fixation. Aquatic blue-green bacteria are a constituent of plankton.

blue gum See EUCALYPTUS.

Blue Mountains A mountain range in Australia, in New South Wales. Part of the *Great Dividing Range, it reaches 1180 m (3871 ft) at Bird Rock.

blues A type of US folk music that evolved

from Negro spirituals and work songs. It is characterized by mournful or bitter-sweet lyrics and the use of "blue notes" (flattened thirds and sevenths). The first published blues were "Memphis Blues" (1912) by W.C. Handy (1873–1958) and Jelly Roll Morton's "Jelly Roll Blues" (1915). The blues influenced the development of jazz and rock music and stimulated composers, such as George Gershwin, who wrote the orchestral *Rhapsody in Blue* (1924).

bluetit A European tit, *Parus caeruleus*, with a blue crown and wings, a yellow breast, and white face. Bluetits feed on insect larvae.

bluets A tufted herb of the genus *Houstonia* (about 25 species), native to North America and widely grown in rock gardens. The small funnel-shaped flowers are borne singly or in clusters. Some species provide ground cover in shade. Family: *Rubiaceae* (madder family).

blue whale The largest living *whale, *Balaenoptera musculus*, growing to over 30 m and weighing over 150 tonnes. They are nearing extinction due to overhunting and have been designated an endangered species. Family: *Balaenopteridae* (see RORQUAL).

Blunkett, David (1947–) British Labour politician; home secretary (2001–04). Blind from birth, he entered parliament in 1987 and was secretary of state for education (1997–2001). He resigned as home secretary over allegations that he had abused his powers but returned briefly as secretary of state for work and pensions in 2005.

Blunt, Anthony See MACLEAN, DONALD.

Blyton, Enid (1897–1968) British writer of children's books. She introduced her famous character Noddy in 1949 and wrote over 600 books for children.

boa A snake belonging to the subfamily *Boinae* (40–60 species) of the *constrictor family. 20–760 cm long, boas are usually green or yellowish with a camouflaging pattern. They kill their prey by biting and then constricting. The boa constrictor (*Boa constrictor*), occurring from Mexico to Argentina, is about 3.5 m long.

Boadicea (Latin name: Boudicca; d.61 AD) Queen of the *Iceni. Her husband Prasutagus ruled in what is now Norfolk (England). At his death in 61, Roman officials raped Boadicea and her daughters. She led the Iceni into rebellion, sacking Colchester, London, and St Albans. The Roman governor Suetonius Paulinus defeated the rebels at or near Fenny Stratford. Boadicea committed suicide.

boar, wild A Eurasian wild *pig, *Sus scrofa*, once common in European forests. Up to 1.5 m long and 1 m high at the shoulder, they have a rough greyish bristly coat. The ancestors of domestic pigs, males have four tusks.

Boat Race An annual rowing race on the River Thames between Oxford and Cambridge Universities, first held in 1829 at Henley. The present course of 6.8 km (4.25 mi) from Putney to Mortlake was established in 1845. By 2007 Cambridge had won 79 races and Oxford 713 with one dead heat (1877).

bobcat A short-tailed cat *Felis rufa*, resembling a lynx, found in North America. About 90 cm long, it is brown with greyish markings and has large ears.

bobsledding The sport of racing bobsleds (also called bobsleighs or bobs), which was developed by British sportsmen at St Moritz (Switzerland) in the late 19th century. A bobsled is a steel-bodied toboggan with two pairs of runners, the front pair steerable, and a rear brake, holding two or four people. The bobsleds slide down a narrow chute some 1500 m (1640 yd) long with high walls, reaching speeds of over 130 km per hour (81 mph).

Boccaccio, Giovanni (1313–75) Italian writer and poet. Son of a merchant of Florence, he wrote *Filocolo*, a prose romance, *Filostrato*, which supplied the plot of Chaucer's *Troilus and Criseyde*, and *Teseida*, the source of Chaucer's *Knight's Tale*. Between 1348 and 1353 he composed the *Decameron*, a collection of a hundred stories told by a party escaping from plague-stricken Florence in 1348.

Bodhisattva In Mahayana Buddhism, the title of a person who is to become a Buddha; also the Buddha (Gautama) before his enlightenment. The Bodhisattva ideal is that of the individual who seeks enlightenment not for himself alone but for all beings.

Bodleian Library The major library of Oxford University, first established in 1409 and restored and enlarged by Sir Thomas Bodley from 1598 to 1602. Since 1610 it has been entitled to receive a free copy of every book published in Britain; it contains well over 2.5 million volumes.

Boeotia A region of central Greece, N and W of *Attica. Its rich central plains are surrounded by hills and mountains. The dozen or so city states that shared the territory formed a federal state dominated by *Thebes in 446 BC.

Boer Wars (or **South African Wars**) The

was fought against the British by the Boers or *Afrikaners of South Africa. In the first (1880–81) the Boers of the Transvaal under *Kruger rebelled against British rule. After inflicting a massive defeat on the British garrison at Majuba Hill, the Transvaal regained its independence under the *Pretoria Convention. In the second Boer War (1899–1902) the Boer forces were initially successful, besieging Ladysmith, Mafeking, and Kimberley. They suffered reverses during 1900 but were able to hold off the British under Kitchener and F. S. Roberts (1832–1914). The British devastated the countryside, rounded up Boer women and children, of whom some 20 000 died in concentration camps, and finally defeated the Boers, who lost their independence in the Peace of Vereeniging (1902).

Boethius, Anicius Manlius Severinus (c. 480–524 AD) Roman statesman and philosopher. A patrician, he became chief minister under Theodoric but later earned the emperor's displeasure and was imprisoned, tortured, and executed. His most famous work is *The Consolation of Philosophy*, written while he was in prison.

Bogarde, Sir Dirk (Derek van den Bogaerde; 1921–99) British film actor of Dutch descent. His major films include *The Damned* (1969), *Death in Venice* (1970), and *Providence* (1978). He was also the author of several autobiographical volumes and novels.

Bogart, Humphrey (1899–1957) US film actor, usually cast in tough-guy roles. His films include *Casablanca* (1942), *To Have and Have Not* (1944), in which Lauren Bacall (1924–), whom he subsequently married, made her screen debut, *The Big Sleep* (1946), *The African Queen* (1951), and *The Caine Mutiny* (1954).

Bogotá, Santa Fé de 4 38N 74 15W The capital of Colombia, on a fertile central plateau of the E Andes at an altitude of 2640 m (8660 ft). Founded by the Spanish in the early 16th century on the site of the conquered Indian settlement of Bacatá, it became the capital of the viceroyalty of New Grenada. Population (2003 est): 6 850 205.

Bohemia (Czech name: Čechy; German name: Böhmen) An area of the W Czech Republic. It consists chiefly of a plateau enclosed by mountains. It is the most industrialized part of the Czech Republic; agriculture and mining are also important. *History:* Bohemia derives its name from the Boii (the first known inhabitants), who were displaced by the Czechs (1st–5th centuries AD). Bohemia became part of the

greater Moravian empire in the 9th century. It achieved the height of its power following the acquisitions of the Přemyslid Otakar II (1230–78; reigned 1253–78). The Přemyslid dynasty came to an end with the assassination of Wencelas III (1289–1306; reigned 1305–06) and John of Luxembourg was subsequently elected king (1310). The golden age of Bohemia was established by his son Charles I (Emperor Charles IV).

Bohr, Niels Henrik David (1885–1962) Danish physicist, who worked with J. J. Thomson at Cambridge and Rutherford at Manchester. He made an immense contribution to atomic theory by combining Rutherford's nuclear model with Planck's quantum theory. The Bohr model of the atom, in which a central nucleus is surrounded by electrons confined to circular orbits corresponding to fixed energy levels, was modified by Sommerfeld but is the basis for modern atomic theory. Bohr also invented the concept of complementarity to combine the particle and wave aspects of subatomic particles. Bohr later worked at Los Alamos on the atom bomb, after escaping from German-occupied Denmark. He shared the 1957 Nobel Prize for Physics with his son Aage Bohr (1922–).

boiling point The temperature at which the vapour pressure of a liquid is equal to the atmospheric pressure (101 325 pascals).

Boise 43 38N 116 12W A city in the USA, the capital and largest city of Idaho. The centre of a gold rush in 1862, it has timber, food-processing, and agricultural industries. Population (2000): 185 787.

Boletus A genus of mushrooms (about 50 species). The undersurface of the cap bears a series of vertical tubes (instead of gills), in which the spores are formed. Most grow near trees and they are generally edible (see CEP), except Satan's boletus (*B. satanas*), which is poisonous. It has a short stalk and a grey cap 10–20 cm in diameter. Family: *Boletaceae*; phylum: *Basidiomycota*.

Boleyn, Anne (c. 1507–36) The second wife (from 1533) of Henry VIII and the mother of Elizabeth I. When she failed to produce a male heir for Henry she was accused of committing adultery and executed.

Bolingbroke, Henry St John, 1st Viscount (1678–1751) English statesman and philosopher. A Tory MP, he became secretary of war (1704–08) and secretary of state (1710–14). As a supporter of the Jacobites, he fled to

France after the accession of George I and helped to organize the Fifteen Rebellion. He also wrote several philosophical works. Returning to England in 1725, he became a leading opponent of Robert Walpole. His political writings include *The Idea of a Patriot King* (1749).

Bolívar, Simón (1783–1830) South American soldier, known as the Liberator. The son of a wealthy Venezuelan creole family, his travels in Europe instilled a lasting admiration for the ideas of the Enlightenment. He returned to Latin America in 1807 and devoted the rest of his life to its liberation from Spain. In 1813 he seized Caracas but after defeat in 1814 went into exile until 1817. His victory at the battle of Boyacá (1819) achieved the liberation of New Granada (renamed Colombia). Bolívar became its president and, after liberating Venezuela and Quito (Ecuador) in 1821, organized a federation of the three newly independent states. Latin America was finally freed of the Spanish by campaigns in Peru, Upper Peru taking the name Bolivia in his honour.

Bolivia, Republic of An inland country in South America consisting of low plains in the N and E, crossed by extensive river systems; in the W, the Andes rise to over 6400 m (21 000 ft) and the Altiplano, a plateau averaging about 3900 m (13 000 ft), contains Lakes Titicaca and Poopó. Bolivia has some of the world's highest inhabited regions, with most of the population, of mixed Indian and Spanish descent, living at altitudes of over 3000 m (10 000 ft). *Economy:* Mineral resources include tin, silver, zinc, lead, antimony, and copper. Mining, gas, and petroleum are the main industries. The main crops are sugar cane, soya beans, potatoes, and bananas. The illegal trade in coca also thrives. *History:* ruins near Tiahuanaco indicate a pre-Inca civilization (the Aymaras) going back to the 10th century. The area later became part of the Inca Empire and was conquered by the Spanish in the 16th century, when it became known as Upper Peru. The discovery of tin and silver led to great prosperity. In 1776 it became part of the viceroyalty of Buenos Aires. After a long war it gained its independence with the help of Simón Bolívar in 1825 and became a republic with Antonio José de Sucre (1795–1830) as first president. During the remainder of the century struggles with neighbouring countries cost Bolivia much territory. Political unrest and violent changes of government continued for most of the 20th century and in 1971 a military coup brought Gen Hugo Banzer Suárez to power; he was overthrown in a coup

in 1978. By 1985 Bolivia had the highest rate of inflation in the world and massive foreign debts. The former dictator Banzer was elected president in 1997. In 2005 mass protests by indigenous Bolivians demanding the nationalization of gas reserves forced the resignation of President Carlos Mesa. He was succeeded by Evo Morales, a socialist of Indian descent. Disputes with Peru and Chile continue over access to the Pacific coast. Official languages: Spanish, Quechua, and Aymara. Currency: boliviano of 100 centavos. Area: 1 098 580 sq km (424 051 sq mi). Population (2007): 9 119 152. Capital: La Paz.

boll weevil A brownish *weevil, *Anthonomus grandis*. Originally a native of the New World tropics, it is now a major insect pest of cotton crops in the W hemisphere. The female lays a single egg within each cotton boll, which thus fails to develop.

Bologna 44°30'N 11°20'E A city in N Italy, the capital of Emilia-Romagna. The site dates from Etruscan times, but it did not become a free city until the middle ages; the Emperor Charles V was crowned here in 1530. Regarded as Italy's gastronomic centre, its industries include engineering and food processing. Population (2001 est): 371 217.

Bolsheviks One of the two factions into which the Russian Social Democratic Workers' Party split in 1903 in London (the other was the Mensheviks). The Bolsheviks, which means those in the majority, were led by *Lenin, who believed that the revolution must be guided by a single centralized party of professional revolutionaries. The Bolsheviks came to power in the *Russian Revolution (1917).

Bolshoi Ballet The principal Russian ballet company, based at the Bolshoi Theatre in Moscow. It originated from a dancing class established by the Moscow orphanage in the late 18th century and moved into its present premises in 1856 after fire had destroyed the first Bolshoi Theatre. It first appeared in the West in London in 1956. From 1964 to 1998 it was directed by Yuri Grigorovich (1927–).

Bolt, Robert Oxtan (1924–95) British dramatist. His plays include *A Man for All Seasons* (1960), a study of Sir Thomas *More. He wrote screenplays for *Lawrence of Arabia* (1962) and other films directed by David *Lean.

Bolton 1. 53°35'W 2°26'W A town in NW England, in Bolton unitary authority, Greater Manchester. Traditionally a cotton-spinning town, Bolton also manufactures machinery and chemicals. Population (2001): 139 403. 2. A uni-

tary authority in NW England, in Greater Manchester. Area: 140 sq km (54 sq mi). Population (2004 est): 264 800.

Boltzmann, Ludwig Eduard (1844–1906) Austrian physicist, who developed statistical mechanics with James Clerk *Maxwell and J. W. *Gibbs. In thermodynamics, he elucidated the relationship between entropy and molecular disorder.

Bombay (official name from 1995: Mumbai) 18°56'N 72°51'E A city in India, the capital of Maharashtra and the country's main seaport on the W coast. The city occupies a group of islands united by causeways and has an important natural harbour. The Tata hydroelectric system powers much of Bombay's industry, which includes cotton textiles, food processing, and oil refining. Bombay has India's main stock exchange and is also noted for its film industry. The population is mainly Hindu but there are large Muslim, Christian, and Jewish minorities. *History*: ceded to the Portuguese in 1534, it passed to Charles II of England in 1661 and to the British East India Company in 1668. The railways and the opening of the Suez Canal led to expansion in the 19th century. Population (2001): 11 914 398.

Bombay duck A fish, *Harpodon nehereus*, found in the estuaries of N India, where it is widely used for food. It has a grey or brown body, about 40 cm long, with small dark speckles and large fins. Order: *Myctophiformes*.

bone A rigid tissue that forms most of the skeleton of higher animals and man. Most bones have a central cavity filled with *marrow. Bone is composed of a matrix of fibres of the protein collagen, responsible for their strength, and bone salts, chiefly calcium salts (see APATITE). This tissue is formed by activity of bone cells (osteoblasts), which become enclosed in the matrix when they have ceased to function. Bone formation starts during embryonic life. Most bones develop from cartilage and the process is complete at birth. Membrane bones (e.g. the skull bones) are formed directly in connective tissue, the process being completed after birth (hence the gap (called a fontanelle) in a newborn baby's skull).

bongo An antelope, *Boocerus euryceros*, of African forests. About 120 cm high at the shoulder, bongos are red-brown with white body stripes and markings on the head. The male has spiralled horns up to 100 cm long. Bulls are solitary; cows and calves live in herds.

Bonhoeffer, Dietrich (1906–45) German

pastor and theologian. He opposed the pro-Nazi part of the Lutheran Church; during the war he became involved with anti-Hitler conspirators. He was arrested in 1943, sent to Buchenwald concentration camp, and finally hanged. His *Letters and Papers from Prison* (1953) and theological writings are still widely read.

Bonington, Sir Chris (Christian John Storey B.; 1934–) British mountaineer, author, and photographer. He made the first British ascent of the N face of the Eiger (1962) and climbed Everest in 1985.

Bonn 50°43N 7°07E A city in NW Germany, in North Rhine-Westphalia on the River Rhine. The old part of the town contains the cathedral (12th–13th centuries) and Beethoven's birthplace (now a museum). *History*: settled by the Romans, it was destroyed by the Normans (9th century), and was the seat of the Electors of Cologne (13th to 16th centuries). It passed from France to Prussia in 1815 and was the capital of West Germany from 1949 to 1990. Although Berlin became the capital of the reunited Germany, the seat of government remained in Bonn until 2000. Population (1999 est): 304 100.

Bonnard, Pierre (1867–1947) French painter. Originally a lawyer, he attracted attention with his lithographs, *Aspects of the Life of Paris* (1895), and illustrations for Verlaine's book *Parallèlement* (1900). After 1900 his paintings of interiors, landscapes, and bathing women were treated increasingly with dazzling colour and light.

Bonnie Prince Charlie See CHARLES EDWARD STUART, THE YOUNG PRETENDER.

bonsai An ordinary shrub or tree, such as a conifer or flowering cherry, that is developed as a miniature (up to about 60 cm high). The technique was first practised in China over 700 years ago. It was later perfected by the Japanese and has now spread to the W hemisphere. Both branches and roots of potted cuttings are trained and pruned. The trees may take ten years to acquire an aged appearance, and some live 300–400 years.

bony fish Any fish belonging to the class *Osteichthyes* (or *Pisces*), which includes the majority of food and game fishes (see TELEOST). They have bony skeletons and their gills are covered by a structure called an operculum. Many species use a swim bladder for buoyancy control and even for breathing air (see LUNGFISH). Subclasses: *Actinopterygii*; *Sarcopterygii*.

booby A large tropical seabird belonging to the family *Sulidae* (gannets, etc.; 9 species) char-

acterized by a large head, a long tapering bill, and a wedge-shaped tail. Boobies are 65–85 cm long and typically have a white plumage with brown markings. Boobies dive into the sea to catch fish.

boogie-woogie A popular *blues piano style in which the left hand plays a repetitive pattern with eight beats to the bar, often in ascending broken octaves, and the right hand provides a syncopated melodic line. The style was developed in the USA in the 1920s by such pianists as Pinetop Smith (1904–29).

Booker Prize An annual prize of £50,000 for a work of British, Irish, or Commonwealth fiction in the English language. It has been awarded since 1969 by the British food trading company Booker, in conjunction with the Publishers' Association. Since 2002 it has been known as the **Man Booker Prize** under a new sponsorship agreement with the Man Group.

Book of the Dead 1. A collection of ancient Egyptian texts dating from the 16th century BC. They consist of charms and spells written on papyrus and placed inside mummy cases for use by the dead in the afterlife. **2.** (Buddhist name: Bar-do Thödol) The **Tibetan Book of the Dead**, an ancient Buddhist text that purports to describe the experiences of the soul after death. It is thought to show the influence of shamanic practices on Tibetan Buddhism.

Boole, George (1815–64) British mathematician, who applied the methods of algebra to logic. By replacing logical operations by symbols, Boole showed that the operations could be manipulated to give logically consistent results. His method, known as Boolean algebra or symbolic logic, led to mathematics being given a logically consistent foundation. The subject was further developed by *Frege, Bertrand *Russell and A. N. *Whitehead.

boomerang A curved hand-thrown wooden missile used by Australian Aborigines to kill game or as a weapon of war. The angled shape and the spin given to the missile when thrown enables them to return to the thrower if they miss their target. Up to 75 cm (30 in) long, they can be effective to a distance of 45 m (50 yd).

boomslang A venomous green snake, *Dispholidus typus*, occurring in Africa and reaching 1.8 m in length. It feeds on birds and chameleons, often holding its body erect and motionless before striking. Its venom can cause fatal haemorrhaging in humans. Family: *Colubridae*.

Booth, William (1829–1912) British preacher

(Man) Booker Prize

and founder of the *Salvation Army. He became an itinerant Methodist preacher and established a mission in Whitechapel in 1865. The reluctance of established churches to accept his slum converts led to the foundation of the Salvation Army (1877).

bop (or **bebop**) A type of jazz that originated in the USA in the 1940s as a reaction against swing. Bop emphasized the art of melodic improvisation but was also characterized by harmonic and rhythmic experimentation. In New York City, Dizzy Gillespie and Charlie "Bird" Parker established small bop bands that required the audience to listen rather than dance.

borage A widely grown annual Mediterranean herb, *Borago officinalis*. Up to 60 cm high, with terminal clusters of small blue flowers with backward-pointing petals, borage is used in herbal remedies, beverages, etc. Family: Boraginaceae.

Bordeaux (Latin name: Burdigala) 44°50'N 0°34'W A city in SW France, the capital of the Gironde department on the River Garonne. It is a major seaport and wine centre. Industries include shipbuilding, engineering, and oil and sugar refining. *History*: an important centre under the Romans, it became the capital of Aquitania (see AQUITAINE). It was the seat of

the French government for a brief period in 1914 and again in 1940. Population (1999): 215 118.

b **border terrier** A breed of working dog originating in the border region of England and Scotland. It has a deep narrow body, triangular forward-falling ears, and a short strong muzzle. Weight: 6–7 kg (dogs); 5–6 kg (bitches).

bore A tidal flood wave occurring in certain estuaries and travelling upstream several kilometres at great speed. It occurs when the spring flood tide brings sea water into an estuary more quickly than it can travel up the river.

Borghese An Italian family that originated in Siena and rose to fame in Rome in 1605 after **Camillo Borghese** (1552–1621) became Pope Paul V. His adopted nephew **Scipione Caffarelli** (1576–1633), sponsored *Bernini in the building of the Villa Borghese (now an art gallery) in Rome.

Borgia, Cesare (c.1475–1507) Duke of the Romagna and captain general of the armies of the Church. The illegitimate son of Pope Alexander VI, Borgia became Archbishop of Valencia and a cardinal. He surrendered his cardinalship to marry the sister of the king of Navarre and to become captain general of the Church. He won the Romagna in three campaigns (1499–1502) but was forced to relinquish it after Alexander's death (1502). He escaped from imprisonment and died in the employ of the Navarrese king. His sister **Lucrezia Borgia** (1480–1519), unfairly notorious for her immorality, was married three times by her father Alexander VI to further his political aims. Her third husband Alfonso (1486–1534) became Duke of Este and she presided over a distinguished court at Ferrara.

Boris III (1894–1943) King of Bulgaria (1918–1943). Boris ruled as a dictator from 1938 and supported the Axis Powers in World War II. He apparently died of a heart attack but may have been assassinated.

Bormann, Martin (1900–45) German Nazi leader, who became Hitler's personal secretary in 1942. He was sentenced to death in absentia at Nuremberg. In 1973 it was established that he had committed suicide in 1945.

Born, Max (1882–1970) British physicist, born in Germany. He shared the 1954 Nobel Prize with W. Bothe for his work in statistical mechanics. With *Heisenberg he developed matrix mechanics. Born was professor of natural philosophy at Edinburgh University from 1936 to 1953.

Borneo A mountainous island SE of Peninsular Malaysia, in the Greater Sunda Islands. During the 19th century Borneo was settled and partitioned by the Dutch and British. It now consists of the Indonesian territory of *Kalimantan, the Malaysian states of *Sabah and *Sarawak, and the sultanate of *Brunei. The chief population groups are the coastal Malays and indigenous Dyaks. It possesses valuable resources of oil, coal, and gold. Area: 750 000 sq km (290 000 sq mi).

Bornholm 55 02N 15 00E A Danish island in the Baltic Sea, SE of Sweden. Dairy farming and pottery are the main activities. Area: 588 sq km (227 sq mi). Population (2001): 44 126. Chief town: Rønne.

Borobudur A huge Buddhist stupa (shrine) in central Java, built about 800 AD and abandoned, unfinished, about 1000. It has five square terraces of diminishing size, one on top of the other, on the vertical surfaces of which is carved a relief depicting the Buddha's life. On top, three circular terraces support 72 stupas. Restored (1973–83) at a cost of £20 million, it was badly damaged in a terrorist attack in 1985.

Borodin, Aleksandr Porfirevich (1833–87) Russian composer, one of the *Five, and a professor of chemistry. He produced two symphonies (1867 and 1876), the tone poem *In the Steppes of Central Asia* (1880), three string quartets, and the opera *Prince Igor* (completed by *Rimsky-Korsakov and Glazunov in 1890).

boron (B) A nonmetallic element isolated (1808) by Sir Humphry Davy. It has two forms: an impure brownish amorphous powder and pure brown crystals. The main source, kernite ($\text{Na}_2\text{B}_4\text{O}_7 \cdot 4\text{H}_2\text{O}$), is mined in California. Boron is used in semiconductors and in hardened steel. The isotope boron-10 absorbs neutrons: boron carbide (B_4C) and boron alloys are used in the control rods and shielding of nuclear reactors. The compound borax ($\text{Na}_2\text{B}_4\text{O}_7 \cdot 10\text{H}_2\text{O}$) is used in glass manufacture. At no 5; at wt 10.81; mp 2092°C; bp 4002°C.

borough In England and Wales, an urban area enjoying various privileges (often including a degree of self-government) by special charter. Boroughs originated in Anglo-Saxon England. In the UK, county boroughs were set up by the Local Government Act (1888) but were wound up by the Local Government Act (1972). Boroughs remain the units of local government in *London (outside the City). During the 1990s county boroughs were reintroduced in Wales and many of the former English county boroughs were reinstated in the form

of unitary authorities. The Scottish equivalent of the borough is the burgh.

Borstal system An English penal system established by the Prevention of Crime Act (1908) for the rehabilitation of offenders aged between 15 and 21. The name derives from the prison at Borstal near Rochester, Kent, where the system was introduced. It was abolished by the Criminal Justice Act (1982), since when offenders under 21 have been detained in a young offender institution.

borzoi A breed of large dog originating in Russia, also called Russian wolfhound, and used originally for hunting wolves. It has a long silky coat. Height: about 70 cm.

Bosch, Carl (1874–1940) German chemist, who developed the Haber process for converting atmospheric nitrogen into ammonia, so that it could be used industrially. This Haber-Bosch process has been widely used to manufacture nitrates for explosives and fertilizers.

Bosch, Hieronymus (Jerome van Aeken; c.1450–c.1516) Dutch painter. He was born in 's Hertogenbosch (hence his name), where from 1486 he belonged to the Roman Catholic Brotherhood of Our Lady. The often inexplicable symbolism of his half-animal half-human creatures and devils was inspired by contemporary proverbs. Among his major works are *The Haywain* (El Escorial) and *Garden of Earthly Delights* (Prado).

Bosnia-Herzegovina A republic in SE Europe. It is mainly agricultural but there is some heavy industry. However, Bosnia has suffered almost total economic disruption from the civil war of the early 1990s. *History:* part of ancient Illyria, the region was inhabited by Slavs from the 7th century AD onwards. Bosnia became a separate political entity in the 10th century but later came under the control of Hungary. It became an independent kingdom in the late 14th century and annexed Herzegovina but fell to the Turks in 1463. In 1908 it was annexed to Austria-Hungary; Serbian opposition to this led to the assassination of Archduke Francis Ferdinand, precipitating World War I. In 1918, Bosnia was incorporated into Yugoslavia, which became a communist state after World War II. In 1992 the Bosnian people, most of whom are Muslims and Croats, voted for independence, but this was opposed by the Bosnian Serbs, leading to civil war. Serbian forces took control of the N of the country and besieged Sarajevo. The conflict involved brutal "ethnic cleansing," mostly of Muslims by Serbs. In 1995 Croatia invaded W Bosnia, repulsing

Serb forces, and NATO bombed Serb positions. In Dec 1995 a US-brokered peace deal stated that Bosnia should remain a single state but should consist of a Muslim-Croat Federation in the W and a Bosnian Serb Republic in the N and E. Following elections (1996), the president, Alija Izetbegović, became chairman of a new joint presidency, comprising representatives from the three communities. Ultimate authority lies with the UN High Representative (since 2006, Christian Schwartz-Schilling). Official language: Serbo-Croat. Currency: marka of 100 feninga. Area: 51 129 sq km (19 737 sq mi). Population (2007 est): 4 552 198. Capital: Sarajevo.

boson A class of elementary particles with integral spin. Bosons include all the *mesons and the *photon. See PARTICLE PHYSICS.

Bosporus (Turkish name: Karadeniz Boğazi) A strait separating Europe and Asia and connecting the Black Sea with the Sea of Marmara. It is spanned by one of the world's longest suspension bridges. Length: about 30 km (19 mi). Width: about 0.6–4 km (0.4–2.5 mi).

Boston 42 20N 71 05W A city in the USA, the capital of Massachusetts. It is an important port and financial centre. Boston is a major cultural and educational centre. It is the site of Boston University (1869), Northeastern University (1898), and Boston Latin School (established in 1635 and one of the country's first free secondary schools). Harvard Medical School is also situated here. *History:* founded in 1630 by Puritan Englishmen, it became a centre of opposition to the British prior to the American Revolution (see BOSTON TEA PARTY). It was a leading force in the antislavery movement during the 1830s. Population (2003 est): 581 616.

Boston Tea Party (1773) An expression of colonial hostility towards Britain before the *American Revolution. A group of American radicals objecting to the import of cheap tea, enforced by the Tea Act to rid the East India Company of its surplus stocks, threw a cargo of tea into Boston harbour. Britain retaliated with the Intolerable Acts. See also STAMP ACT.

Boswell, James (1740–95) Scottish writer, the biographer of Samuel *Johnson. Son of an Edinburgh advocate, he first met Johnson in 1763. The biography, published in 1791, was widely acclaimed.

Bosworth Field, Battle of (22 August 1485) The battle fought near Market Bosworth, Leicestershire, in which Henry Tudor defeated Richard III, ending the Wars of the *Roses.

Richard was killed in the battle and Henry became the first *Tudor monarch, as Henry VII.

b

botany The scientific study of plants. Scientific botany dates from the 4th century BC, with the studies of the ancient Greeks—notably Theophrastus and Dioscorides. The basic principles of modern plant classification were laid down by John Ray at the end of the 17th century, and by the middle of the 18th century *Linnaeus had published his works, which established the principles of *taxonomy still in use. The invention of the microscope in the 16th century enabled detailed studies of plant structure, culminating in Schleiden's theory of the cellular nature of plants in the 1830s. The 18th century saw the discovery of *photosynthesis. During the 19th century the origin of plant species was elucidated in Charles Darwin's theory of evolution and Gregor *Mendel established the mechanisms of inheritance. Botany in the 20th century was revolutionized by advances in physiology, biochemistry, cell biology, breeding techniques, and genetic engineering.

Botany Bay An inlet of the Tasman Sea, in SE Australia. It was the site of Capt Cook's first landing in Australia (1770), is now surrounded by the suburbs of Sydney. Area: about 42 sq km (16 sq mi).

bot fly A hairy beelike fly belonging to the families *Gasterophilidae* (horse bot flies), *Calliphoridae* (e.g. the deer bot fly), or *Oestridae* (e.g. the sheep bot fly). The larvae are parasitic in mammals, often living within nasal cavities or the digestive tract to cause irritation and vertigo. When mature the larvae pass out with the faeces. *Compare* WARBLE FLY.

Botha, Pieter Willem (1916–2006) South African statesman; prime minister (1978–84) and president (1984–89). Although a vehement supporter of *apartheid, he presided over the new constitution of 1984, which allowed some non-Whites limited political power.

Botham, Sir Ian Terence (1955–) British cricketer. An all-rounder, he played for Somerset (1973–86), Worcestershire (1987–91), Durham (1991–93), and England (1977–93), captaining the side (1980–81). He held a record number of test wickets (1986–88) and scored over 3000 runs in Test matches. He was knighted in 2007.

Bothnia, Gulf of A shallow section of the Baltic Sea, between Sweden and Finland. It remains frozen for about five months of the year. Area: about 117 000 sq km (45 200 sq mi).

Bothwell, James Hepburn, 4th Earl of

(c. 1535–78) The third husband of Mary, Queen of Scots. He was almost certainly responsible for the murder of her second husband *Darnley in 1567. Following their defeat at Carberry Hill, Bothwell escaped to Denmark, where he died, insane, in captivity.

bo tree An Indian tree, *Ficus religiosa*, up to 30 m high, also called the peepul or pipal. It has heart-shaped leaves and globular purple fruits. Related to the fig, the bo tree is sacred to Buddhists, because Buddha sat beneath one when he attained enlightenment. Family: *Moraceae* (mulberry family).

Botswana, Republic of (former name until 1966: Bechuanaland) A country in the centre of S Africa, lying between the Rivers Zambezi and Molopo. It is largely an arid plateau, with the Kalahari Desert in the S and W. The River Okavango in the N is important for irrigation. The majority of the population, consisting mainly of the Bantu-speaking Tswana group, lives along the E border. The original inhabitants, the Bushmen, are now a small minority. *Economy*: chiefly agricultural. Large quantities of minerals, including coal and diamonds, were discovered in the 1960s and by the late 1990s diamonds were providing over three-quarters of export revenue. Botswana now has one of the fastest growing economies in Africa. *History*: the area became the British Protectorate of Bechuanaland in 1885 and was annexed to the Cape Colony in 1895. It later became a British High Commission Territory, gaining internal self-government in 1965 and full independence in 1966 as the Republic of Botswana within the Commonwealth. Until 1980 it was under the democratic rule of Sir Seretse Khama (1921–80). Dr Quette Masire was head of state from 1980 until 1998, when he retired in favour of Festus Mogae. Official language: English. Currency: pula of 100 thebe. Area: 575 000 sq km (222 000 sq mi). Population (2007 est): 1 815 508. Capital: Gaborone.

Botticelli, Sandro (Alessandro di Mariano Filipepi; c. 1445–1510) Florentine *Renaissance painter, called by his brother's nickname, meaning "little barrel." His chief patrons were the Medici, for whom he produced illustrations for Dante's *Divine Comedy* and allegorical paintings, such as *Primavera*, *Birth of Venus* (both Uffizi), and *Mars and Venus* (National Gallery, London). In 1481–82 he worked on frescoes for the Sistine Chapel in the Vatican.

bottlebrush An evergreen Australian shrub or tree of the genus *Callistemon* (25 species). Growing to a height of about 6 m, it has stiff

narrow leaves, 5 cm long. The flower heads consist mainly of bunches of fluffy red or yellow stamens, resembling bottle brushes. The fruits are woody. Family: *Myrtaceae*.

bottlenose A *dolphin, *Tursiops truncatus*, grey-blue and growing to 4 m. They are a shallow-water species, popular in dolphinariums and for research into the social behaviour of whales.

botulism A rare and serious form of food poisoning from foods containing the toxin produced by the bacterium *Clostridium botulinum*. The toxin can affect the cardiac and respiratory centres of the brain and may result in death. The bacterium thrives in improperly preserved foods but is invariably destroyed in cooking.

Bouaké 7 42N 5 00W A city in central Côte d'Ivoire. It is an important trade centre, linked to Abidjan. Population (1995 est): 330 000.

Boucher, François (1703–70) French *ro-coco painter. Born in Paris, the son of a lace-maker, he was influenced by *Watteau. He worked for Louis XV, and Madame de Pompadour, whom he painted (National Gallery of Scotland). He became director of the Gobelins tapestry factory (1755) and the French Academy (1765).

Boudicca See BOADICEA.

Boudin, Eugène (1824–98) French painter and forerunner of *impressionism, born in Honfleur. He painted his coastal scenes in the open air.

Bougainville A volcanic forested island in the SW Pacific Ocean, the largest in the *Solomon Islands; a province of Papua New Guinea. Copra, cocoa, timber, and tortoise shell are exported. It has one of the world's largest open-cast copper mines. Rebels declared independence in 1990 but the island was reoccupied by government troops in 1992. A peace treaty was signed in 1998; Bougainville was subsequently (2001) granted autonomy with the option of total independence by 2016. Area: about 10 360 sq km (4000 sq mi). Population (2000): 175 160. Chief town: Kieta.

Bougainvillea A genus of tropical South American shrubs (18 species) climbing by means of hooked thorns. The shrubs bear numerous showy "flowers" for most of the year. The coloured parts are actually large bracts, which surround the small inconspicuous flowers. Family: *Nyctaginaceae*.

Boulanger, Nadia (Juliette) (1887–1979)

French composer, teacher, and conductor. Lennox *Berkeley and Aaron *Copland were among her pupils. Her works include the cantata *La Sirène* (1908; awarded the Prix de Rome), and the opera *La Ville morte* (1911).

Boulez, Pierre (1925–) French composer and conductor, a pupil of Messiaen, he was influenced by Schoenberg, Webern, and Cage. He has used *serialism in such works as *Structures I and II* (for two pianos; 1951–52 and 1956–61) and has set poems by René Char and Mallarmé. His more recent works include *Dérive 2* (1993).

Boulle, André Charles (or **Buhl**; 1642–1732) French cabinetmaker in the service of Louis XIV. Boullework (or buhlwork) is a style of marquetry using brass, tortoiseshell, etc., inlaid on ebony.

Boulogne-sur-Mer 50 43N 1 37E A port and resort in N France, in the Pas-de-Calais. It was severely damaged in World War II. It is the country's main fishing port and has a ferry service to England. Population (latest est): 44 244.

Boult, Sir Adrian (Cedric) (1889–1983) British conductor of the BBC Symphony Orchestra (1930–49) and the London Philharmonic Orchestra (1949–57). He was associated particularly with the works of Elgar, Holst, and Vaughan Williams.

Bourbons A European dynasty that originated in Bourbonnais (now Allier, central France). It acquired ducal status in 1272, when Agnès Bourbon married the sixth son of Louis IX. The first Bourbon king of France was *Henry IV (reigned 1589–1610) and Bourbons continued to rule until the *French Revolution (1792). The present pretender to the French throne is Henry, Count of Clermont (1933–).

The Bourbon Louis XIV's grandson became (1700) *Philip V of Spain, where the Bourbons ruled almost continuously until the abdication of Alfonso XIII in 1931. His grandson *Juan Carlos was restored to the Spanish throne in 1975. In Naples and Sicily Bourbons ruled between 1734 and 1860.

Bourges (Latin name: Avaricum) 47 05N 2 23E A city in central France, the capital of the Cher department. An important town of Aquitaine, it became the capital of Berry in the 12th century and the centre of power following the Battle of Agincourt (1415). Population (latest est): 75 609.

Bourguiba, Habib (1903–2000) Tunisian statesman; president (1957–87). A leading figure in the struggle for Tunisian independence, he

spent ten years between 1934 and 1955 in French prisons. After independence in 1956 he became president, and in 1975 became life president; he was deposed in a bloodless coup.

Bournemouth 1. 50 43N 154W A resort in S England, in Bournemouth unitary authority, Dorset, on Poole Bay. It has a famous symphony orchestra. Population (1991 est): 155 488. 2. A unitary authority in S England, in E Dorset. Area: 46 sq km (17 sq mi). Population (2001): 163 441.

Bovidae A family of hoofed *ruminant mammals (about 128 species), comprising antelopes, cattle, sheep, and goats. Several species have been domesticated for meat, milk, hides, and wool. Order: *Artiodactyla*.

Bow, Clara (1905–65) US film actress. She personified the 1920s “flapper” in such films as *Mantrap* (1926) and *It* (1927), becoming known as the “It” girl.

bowerbird A songbird belonging to a family (*Ptilonorhynchidae*; 18 species) found in Australasian forests. 22–35 cm long, it is related to the bird of paradise. Males court females by building dome-shaped bowers with twigs, moss, etc., often decorating them with feathers and shells.

Bowie, David (David Jones; 1947–) British pop singer and songwriter, noted for his changes of style and image. His albums include *Ziggy Stardust* (1972), *Heroes* (1977), *Let's Dance* (1983), and *Heathen* (2002). He has also acted in films.

bowling (or **tenpin bowling**) A game in which players compete by attempting to knock down standing pins with rolling balls. The ten pins, 38.1 cm (15 in) high and each weighing about 1.5 kg (3.5 lb), are placed in a triangle (frame) 18.29 m (20 yd) distant at the end of a wooden lane. The balls, which have a thumb hole and two finger holes, have a maximum circumference of 68.5 cm (27 in) and a maximum weight of 7.26 kg (16 lb). Ten frames comprise a game.

bowls A game in which biased bowls (“woods”) are rolled towards a smaller one (the “jack”). **Flat green bowls** is played on a level grass surface 40–44 yd (36.6–40.2 m) square. Matches are usually played between two sides of four, each player using two bowls; a contest consists of three to six simultaneous matches. The jack is rolled onto the green by the first player and is followed by the other bowls in turn, the object being to position them as near the jack as possible. **Crown green bowls** is

played, mainly in N England, on a green 30–60 yd (27.4–54.9 m) square and sloping up to a central area raised 6–12 in (15–30 cm). Matches are usually singles lasting until one player reaches a score of 21.

box A small evergreen tree, *Buxus sempervirens*, up to 9 m high. The leaves are small and glossy and being slow growing, box is widely grown as hedges for topiary. Family: *Buxaceae*.

boxer A breed of working dog originating in Germany. It has a powerful frame with long straight legs and a broad muzzle. Height: 56–61 cm (dogs); 53–58 cm (bitches).

Boxer Rising (1900) A rebellion in China so called because the rebels belonged to a secret society named the Fists of Righteous Harmony. They opposed the Western presence in China and, wearing yellow sashes, marched on Peking, killing and pillaging as they went. The rebellion was suppressed by an international force.

boxing Fist-fighting between men wearing gloves in a roped-off ring. Organized boxing in modern times began in 18th-century England. The **Queensberry Rules**, drawn up under the patronage of the Marquess of Queensberry (1844–1900) and published in 1867, lay down the rules. In professional boxing the ring is 14 × 20 ft (4 × 6 m) square. The weight limits for professional boxers are: flyweight, 112 lb (50.8 kg); bantamweight, 118 lb (53.5 kg); featherweight, 126 lb (57.2 kg); lightweight, 135 lb (61.2 kg); light welterweight, 140 lb (63.5 kg); welterweight, 147 lb (66.7 kg); light middleweight, 154 lb (69.8 kg); middleweight, 160 lb (72.6 kg); light heavyweight, 175 lb (79.4 kg); heavyweight, unlimited. A bout consists of up to 15 3-minute rounds, separated by 1-minute intervals. A fight may be decided on points (marks awarded by the judges after each round), by disqualification, or by knockout (defined as being unable to rise within ten seconds). World titles are offered by the World Boxing Council, the World Boxing Association, the International Boxing Federation, and the World Boxing Organization. Concern has been expressed regarding the danger to health (especially brain damage) of this sport.

box turtle A terrestrial turtle belonging to the North American genus *Terrapene* (6 species). Up to 18 cm long, they have a high-domed carapace and a hinged plastron, which allows the shell to form a protective box. Family: *Emyidae*.

Boyle, Robert (1627–91) Irish scientist. His

The Skeptical Chymist (1661), distinguished between elements, compounds, and mixtures and dismissed the Aristotelian concept of the four elements. His work on gases led to **Boyle's law** (1663), stating that the pressure of unit mass of an ideal gas at constant temperature is inversely proportional to its volume. This law is only approximately true for real gases.

Boyne, Battle of the (1 July 1690) The victory of William III of England over the former King James II in Ireland. The battle was fought at the River Boyne, N of Dublin, where James hoped to halt the Williamites' advance southwards. The battles of the Boyne and of *Aughrim are still celebrated by Ulster Unionists on the latter's anniversary, 12 July.

Boyoma Falls (former name: Stanley Falls) A series of seven cataracts in NE central Democratic Republic of Congo, on a 100-km (62-mi) stretch of the River Lualaba, where it becomes the Congo River.

Boy Scouts See SCOUT ASSOCIATION.

Brachiopoda A phylum of primitive marine invertebrate animals (about 250 species) called lamp shells because of their resemblance to Roman oil lamps. The body is protected by two shell valves, usually attached to the sea bed by a fleshy stalk (peduncle). Eggs and sperm are discharged into the sea and produce free-swimming larvae.

bracken (or brake) A widely distributed *fern, *Pteridium aquilinum*. Its black underground rhizome creeps extensively, producing aerial fronds, up to 5 m high, with stalks bearing triangular blades made up of branches of paired leaflets. Spore capsules occur in brownish clusters (sori) under the leaflets. Family: *Dennstaedtiaceae*.

Bracknell 5126N 046W A town in SE England, in Bracknell Forest unitary authority, Berkshire, developed as a new town since 1949. It is a centre for high-tech electronic industries and services. The Meteorological Office is here. Population (1991 est): 60 895.

Bracknell Forest A unitary authority in SE England, in SE Berkshire. Area: 109 sq km (42 sq mi). Population (2001): 109 606.

bract A modified leaf found at the base of a flower or inflorescence (flower cluster). Occasionally bracts are large and brightly coloured, resembling petals, as in the poinsettias. Smaller bracts (bracteoles) may be found on the flower stalk.

Bradbury, Sir Malcolm Stanley (1932–

2000) British novelist and critic, who established his reputation with *The History Man* (1975). His other works include the comic novels *Eating People is Wrong* (1959), *Rates of Exchange* (1983), and *To the Hermitage* (2000). He also wrote for television. He was knighted in 2000.

Bradbury, Ray (1920–) US science-fiction writer. His novels include *The Illustrated Man* (1951), *Fahrenheit 451* (1953), *Death is a Lonely Business* (1986), and *A Graveyard for Lunatics* (1990).

Bradford 1. 53 48N 1 45W A city in N England, in Bradford unitary authority, West Yorkshire. It is the foremost wool textile town in the UK. Financial services are of growing importance, as is tourism. Population (1991): 289 376. 2. A unitary authority in N England, in West Yorkshire. Area: 370 sq km (143 sq mi). Population (2001): 467 668.

Bradman, Sir Donald George (1908–2001) Australian cricketer, who was the most successful batsman of his era (1928–48). He scored 117 centuries in 338 first-class innings and in Test matches averaged 99.94 runs. His best score was 452 not out (1929–30). As Australian captain (1936–48) he never lost a series.

Braemar 57 01N 2 34W A village in NE Scotland, in Aberdeenshire on Clunie Water (a tributary of the River Dee). It hosts the annual Highland games.

Bragança (or Braganza) The ruling dynasty of Portugal from 1640 to 1910 and of Brazil from 1822 to 1889. The family was descended from Alfonso, illegitimate son of John I (1357–1433; reigned 1385–1433) and 1st Duke of Bragança. The first Bragança king was John IV (1604–56; reigned 1640–56) and the last was Manuel II (1889–1932; reigned 1908–10), after whose deposition Portugal became a republic. When Brazil became independent (1822), it was ruled by two members of the family, Pedro I (1798–1834; reigned 1822–31) and Pedro II (1825–91; reigned 1831–89), before becoming a republic (1889).

Bragg, Sir William Henry (1862–1942) British physicist, who worked in Australia from 1886 to 1908. His early research is described in *Studies in Radioactivity* (1912). With his son Sir (William) Lawrence Bragg (1890–1971) he discovered **Bragg's law** of X-ray diffraction, stating that if two parallel X-rays of wavelength λ are reflected by adjacent planes, distance d apart, in a crystal lattice and the rays then constructively interfere, then $2d\sin\theta = n\lambda$, where n is an integer and θ the angle be-

tween the X-rays and the planes. Together they wrote *X-rays and Crystal Structure* (1915) and were jointly awarded the Nobel Prize in 1915.

Brahe, Tycho (1546–1601) Danish astronomer, who made accurate astronomical instruments enabling him to revise existing astronomical tables. As a result of observing a nova in 1572, King Frederick II had two observatories built for him, where he worked from 1580 to 1597. He believed in a compromise between Copernicus' heliocentric system and the Ptolemaic view that the earth is immobile. He thought that the sun and moon revolve round a static earth, but that all other bodies revolve round the sun. After Frederick's death, he moved to Prague, where *Kepler became his student. After Tycho's death, Kepler used his teacher's observations to test his laws of planetary motion.

Brahma The creator god of later Vedic religion. Arising from the cosmic Golden Egg, he brings into existence the cyclical process of the creation and destruction of the world. His four heads and arms represent the four *Vedas, castes, and yugas (ages of the world). Brahma represents the creative aspect of supreme deity in the trimurti triad but since the 7th century his worship has been superseded by that of Siva and *Vishnu.

Brahman In the *Upanishads, the changeless source of the phenomenal universe, seen as an all-pervading infinite Being, who is both the basis of existence and the state of one who has achieved release (see ATMAN). Brahman originally meant "the sacred Word," and was the exclusive domain of the literate priestly caste. In its extended significance it came to be the proper spiritual object of that class alone. See BRAHMANISM. See also ZEBU.

Brahmanas Commentaries on the *Vedas, written in Sanskrit between about 1000 and 600 BC. They are major sources of Indian philosophy, theology, and myth. See also UPANISHADS.

Brahmanism An early speculative rather than devotional form of *Hinduism, derived from the *Vedas and characterized by the veneration of an elite priestly caste, who, as the privileged keepers of religious knowledge embodied the sacred word. See also BRAHMAN.

Brahmaputra River A river in S Asia. Rising in SW Tibet as the Tsangpo, it flows generally E across the Himalayas before turning S into the Assam Valley of NE India as the Dihang. From here, as the Brahmaputra, it flows

WSW across NE India to join the River *Ganges N of Gaolundo Ghat. Length: 2900 km (1800 mi).

brahmin (or brahman) The first of the four major Hindu castes, that of the priests, they alone are able to perform the most important religious tasks, to study and recite the scriptures. Since in India spiritual and secular knowledge are virtually inseparable, brahmins frequently wield considerable intellectual and political power.

Brahms, Johannes (1833–97) German composer, born in Hamburg. Brahms moved to Vienna in 1863 and later became musical director of the Gesellschaft der Musikfreunde (Society of Friends of Music; 1872–75). His main orchestral works comprise four symphonies, two piano concertos, a violin concerto, and a concerto for violin and cello. His choral works include *A German Requiem* (1868) and the *Alto Rhapsody* (1869). He wrote a large quantity of chamber music and composed much piano music and many songs.

Braille, Louis (1809–52) French teacher, who, blinded by an accident at the age of three, published a system of writing that allows the blind to read by touch. Modern Braille consists of 63 characters, each of which is made up of one to six embossed dots.

Braille. The alphabet.

brain The nervous tissue that lies within the skull and is ensheathed by three membranes (meninges). It is the organ of the mind and it controls many bodily activities. The hindmost part of the brain, joining the *spinal cord, is the medulla oblongata: this ascends to the pons, which joins the midbrain. These parts, together called the brainstem, control breathing and heartbeat and regulate the level of consciousness. They also convey information to and from the cerebrum. The cerebellum, connected to

brain. The brains of these representative vertebrates (drawn to the same scale) show a progressive increase in the size and complexity of the cerebrum. In humans this development is such that the cerebrum covers or encloses all the other parts of the brain.

the brainstem, ensures the coordination of movements. The upper end of the brainstem is connected to the most highly developed part of the brain—the cerebrum. This consists of two cerebral hemispheres joined by a tract of nerve fibres. Its surface is intricately folded and is made up of an outer layer of nerve cell bodies (grey matter) and an inner mass of nerve fibres (white matter). The cerebrum is largely responsible for understanding language, thought, and the voluntary control of movements. The hemispheres differ in function: one hemisphere controls the dominant side of the body (normally the left hemisphere in right-handed people) and that hemisphere controls speech. The nondominant hemisphere specializes in analysing how things are arranged in space. Deep within the cerebrum and brainstem lie cavities (ventricles) filled with cerebrospinal fluid. The brain of vertebrate animals is similar but less highly developed than the human brain; in lower animals a collection of ganglia (nerve cell bodies) functions as the brain.

Bramante, Donato (1444–1514) Italian

painter and architect of the Renaissance. From about 1498 he lived in Rome, where he built the Tempietto di S Pietro in Montorio (1502) and the (now destroyed) Palazzo Caprini (1514). He is considered the founder of Roman High Renaissance architecture; his plans for St Peter's formed a basis for the later designs of *Michelangelo.

brambling A finch, *Fringilla montifringilla*, 14.5 cm long, that breeds in Asia and N Europe and migrates south in winter. It has a brown-speckled plumage with white wing bars and orange underparts but in winter the male has a black head and back.

Bran A legendary Celtic god-king of Britain, whose story is told in the *Mabinogion. A giant, he once waded across the Irish sea. His severed head lived on for some 80 years, giving good advice before being finally buried in London to protect Britain from invasion.

Branagh, Kenneth (1961–) British actor and director. He founded the Renaissance Theatre Company in 1986 and appeared in both Shakespearean and contemporary plays. His films include *Henry V* (1989), *Mary Shelley's*

Frankenstein (1994), and *Hamlet* (1997). He was formerly married to Emma *Thompson.

b

Branchiopoda A class of small, mostly fresh-water *crustaceans (over 800 species). They include the fairy shrimps, *tadpole shrimps, *water fleas, and clam shrimps, all bearing flat fringed appendages used for locomotion, respiration, and filter feeding. Parthenogenesis is common.

Brancusi, Constantin (1876–1957) Romanian sculptor, who moved to Paris in 1904. His stone and metal sculptures, such as the *Sleeping Muse* series beginning in 1906 and the *Birds* variations (1912–40), possess an abstract simplicity. In contrast, his wood sculptures, such as the *Prodigal Son* (1915), utilize angular forms inspired by African art.

Brandenburg 1. 52 24N 12 31E A city in E Germany, on the River Havel. It was the former capital of the province of Brandenburg and has been largely rebuilt since World War II. Population (latest est): 93 660. 2. A Land and former electorate of E Germany. The region was conquered by the Germans between the 10th and 12th centuries and in 1157 Albert (I) the Bear became margrave, and then elector, of Brandenburg. Under Frederick William, the Great Elector (1640–88), Brandenburg gained suzerainty of Prussia and became a leading German power. In 1701 the Elector of Brandenburg became Frederick I of Prussia. After World War II some Eastern parts of Brandenburg became Polish. It was reinstated as a Land in 1990. Population (2000 est): 2 601 200.

Brandenburg Gate A ceremonial gateway in Berlin, built (1789) in the neoclassical style by the architect C. G. Langhans (1732–1808). Situated at the W end of Unter den Linden, it became the symbol of the modernized city.

Brando, Marlon (1924–2004) US film actor, influenced by the "method" of the New York *Actors' Studio in the 1950s. His films include *A Streetcar Named Desire* (1951), *On the Waterfront* (1954), *The Godfather* (1972), *Apocalypse Now* (1979), and *Don Juan de Marco* (1995).

Brandt, Willy (1913–92) German statesman; chairman of the Social Democratic Party (1964–87) and chancellor of West Germany (1969–74). In Norway from 1933, he was a leader of the resistance movement against the Nazis throughout World War II. As chancellor he negotiated treaties with Russia, Poland, and East Germany and in 1971 was awarded the Nobel Peace Prize. He resigned when it was revealed that one of his aides was an East German spy.

brandy A spirit distilled from fermented grape juice (wine) or other fruit juices. The best types of wine brandy are matured in oak casks and named after the Cognac and Armagnac districts of France. Marc (French) or grappa (Italian) brandy is made from the re-fermented grape pips, skins, and stems left after pressing for wine. VSOP—very superior old pale—brandy is usually 20–25 years old.

Brandywine, Battle of the (11 September 1777) A battle during the *American Revolution. Sir William Howe (1729–1814), advancing on Philadelphia, encircled Gen George Washington's troops in an attempt to cut off the city. Howe crossed the Brandywine Creek, defeated Washington's surprised troops, and subsequently occupied Philadelphia.

Branson, Sir Richard (1950–) British entrepreneur who founded the Virgin Group, including Virgin Records (sold in 1992), Virgin Atlantic Airways, and Virgin Rail Group. He was the first to cross both the Atlantic (1987) and the Pacific (1991) in a hot-air balloon. He was knighted in 2000.

Braque, Georges (1882–1963) French painter, who with *Picasso developed *cubism. Notable among Braque's innovations were the use of lettering in compositions, e.g. *The Portuguese* (1911; Basle), mixing paint with sand to produce interesting textures, and papiers collés (paper pasted on canvases).

Brasília 16 05 48 10W The capital and a federal district of Brazil, situated on the central plateau. It was inaugurated in 1960, the chief designer being Lúcio Costa and the principal architect, Oscar *Niemeyer. Its modern buildings include the National Congress Building and the cathedral. Population (2000): 1 954 442.

brass An *alloy of copper and zinc. Brasses containing less than 36% zinc are ductile when cold, those with more are harder. It does not rust but exposure to sea water causes leaching out of the zinc. This is partially prevented by the addition of tin (1%) in Naval Brass, sometimes with about 0.05% of arsenic.

Brassica A genus of mainly annual or biennial herbs (about 40 species), with erect clusters of four-petalled yellow flowers. The genus includes many important vegetables, including broccoli, Brussels sprout, cabbage, cauliflower, kale, rape, swede, and turnip.

brass instruments Wind instruments made of brass. The *French horn, *trumpet, *trombone, and *tuba are used in orchestras; brass bands also include *bugles and *cornets.

Brass instruments have either a cup-shaped or cone-shaped mouthpiece, the shape of which influences the tone quality, as does the type of bore, which may be conical (horn) or cylindrical (trumpet). A brass instrument plays the harmonic series natural to its length; additional series are made available by the use of crooks, slides, or valves.

Bratislava (German name: Pressburg; Hungarian name: Pozsony) 48 10N 17 10E The capital of Slovakia, on the River Danube. It was the capital of Hungary (1526–1784). Notable buildings include the gothic cathedral (13th century), where many of the kings of Hungary were crowned. It is an industrial centre and river port. Population (2000 est): 448 292.

Brattain, Walter Houser (1902–87) US physicist, who shared the 1956 Nobel Prize for his part in the invention of the transistor (with W. B. Shockley and John Bardeen).

Braun, Eva (1910–45) The mistress and finally the wife of Adolf Hitler. Their relationship probably began in 1933 and they were married shortly before their suicides on 30 April 1945.

Brazil, Federative Republic of (Portuguese name: Brasil) A country comprising almost half the area of South America. The N of the country is dominated by the Amazon basin with its tropical rain forests. The land rises to the Guiana Highlands in the N and the Brazilian Highlands in the S, with large tracts of grassland in between. The population is largely of European descent, with a small and dwindling Indian minority. In recent years destruction of the Amazon rain forests has caused worldwide concern. *Economy:* agriculture remains important, the chief crops being sugar cane, manioc, maize, rice, and beans. Brazil is the world's largest producer of coffee. Cocoa, bananas, and oranges are also important. Livestock breeding has increased and Brazil is now ahead of Argentina as a cattle producer. The fishing industry is nationalized. Brazil is exceptionally rich in mineral resources; the iron-ore reserves are estimated to be the largest in the world. Large deposits of phosphates have been discovered, as well as uranium, manganese, gold, and copper. 90% of power comes from hydroelectric sources. Oil production only provides a fraction of Brazil's domestic needs although offshore fields have been found near Campos. *History:* claimed by the Portuguese in 1494, it became a Portuguese settlement. During the Napoleonic Wars the Portuguese court was transferred to Brazil and in 1815 it was made a kingdom. In 1822 independence was de-

clared by Pedro I (1798–1834), son of John VI of Portugal, with a constitution that proclaimed him emperor. In 1889 his son Pedro II (1825–91) was deposed and Brazil became a republic. From 1930 to 1945 it was ruled by the benevolent dictator Getúlio Vargas (1883–1954). Less stable governments followed. Elections were held in 1985, ending 20 years of military rule. Subsequent governments have struggled with a series of economic and financial crises. The social democrat F. H. Cardoso was president from 1995 to 2002, when he was succeeded by a socialist, Luiz Inacio Lula da Silva. Official language: Portuguese. Currency: real of 100 centavos. Area: 8 511 865 sq km (3 286 000 sq mi). Population (2003 est): 178 470 000. Capital: Brasília.

Brazil nut The seed of a tall forest tree, *Bertholletia excelsa*, up to 45 m high, native to tropical South America. The tree produces fluffy flowers that develop into woody fruits, each containing 12–24 seeds (the nuts). Family: *Lecythidaceae*.

brazilwood An evergreen tree, *Caesalpinia brasiliensis*, of tropical South America. The leaves are bipinnate and the orange flowers develop into seed pods. The tree yields a very hard wood used for cabinetwork. Family: *Leguminosae*.

Brazzaville 4 07W 15 15E The capital of Congo-Brazzaville, situated on the Congo River opposite Kinshasa (in the Democratic Republic of Congo). Founded in the 1880s, Brazzaville became capital of French Equatorial Africa in 1910. During World War II it was the centre of the Free French forces in Africa. It became capital of the newly independent Republic of Congo (now Congo-Brazzaville) in 1960. Population (1995 est): 937 579.

breadfruit The starchy fruit of a tropical tree *Artocarpus communis*. When roasted it forms a staple part of the diet in the Pacific islands. The tree grows to a height of 30 m and has shiny divided leaves. The large round fruits have a thick rind and develop from long female catkins. Family: *Moraceae*.

bream One of several *teleost fishes, especially *Abramis brama*, a food and game fish related to *carp that occurs in European lakes and slow-moving rivers. Its deep body, 30–70 cm long, is bluish grey or brown above and silvery below. See also SEA BREAM.

Bream, Julian Alexander (1933–) British guitarist and lutenist, whose repertoire includes arrangements of baroque and Renais-

sance pieces as well as works written for him by Britten and Henze.

b

breathalyzer A roadside test used by the police to estimate the amount of alcohol in the breath. In the UK a suspected driver blows through a tube into a device, which records the level of alcohol in the breath. If the level is above the legal limit (35 µg of alcohol per ml of breath or 80 mg per 100 ml of blood), the suspect is arrested and taken to a police station, where a further specimen of breath (or blood or urine) is taken for analysis. It is this specimen that provides evidence for prosecution for drunken driving offences.

Brecht, Bertolt (1898–1956) German dramatist and poet. He studied medicine and was converted to Marxism in 1928. *The Threepenny Opera* was an adaptation of John Gay's *The Beggar's Opera*, with music by Kurt Weill. In 1933 he moved to Scandinavia and the USA (1941–47). During these years he wrote *Galileo* (1938), *Mother Courage* (1939) and *The Caucasian Chalk Circle* (1949). In 1949 he returned to East Berlin and founded his Berliner Ensemble Company.

Breda 51°35N 4°46E An industrial town in the SW Netherlands, in North Brabant province. Its capture by the Spanish in 1625 is depicted in Velázquez' famous painting, *The Surrender of Breda*. Population (1999 est): 159 042.

Brehon Laws A collection of ancient Irish laws, dating back to the 8th century, which constitute one of the most important sources for the history of contemporary Irish society. The Brehon was an official who pronounced upon the law. The Laws describe conditions of tenure and transfer of land and fixes penalties and fines for criminal acts.

Bremen 1. 53°05N 8°48E The second largest port in Germany, capital of the *Land* of Bremen. Its industries include shipbuilding, oil refining, and food processing. Population (1999 est): 542 300. 2. The smallest *Land* of Germany, comprising the cities of *Bremen and *Bremerhaven enclosed by the *Land* of Lower Saxony. Area: 404 sq km (156 sq mi). Population (2000): 673 100.

Bremerhaven 53°33N 8°35E A city in NW Germany, in Bremen on the Weser estuary. It is a major fishing, freight, and passenger port, its industries include fish processing and shipbuilding. Population (1999 est): 123 800.

bremmstrahlung Electromagnetic radiation emitted by a charged particle when it is decelerated on passing close to a nucleus. The effect is most often observed with electrons

since they are light and therefore easily decelerated. Cosmic rays dissipate their energy as bremmstrahlung on entering the earth's atmosphere.

Bren gun A gas-operated light machine gun with interchangeable barrels first built at Brno, Czechoslovakia (1933), and later manufactured at Enfield, UK (1935). Widely used in World War II, it was accurate and reliable and used 0.303 calibre ammunition.

Brenner Pass 47°02N 11°32E The lowest of the chief passes in the Alps, on the Austrian-Italian border. Important since Roman times, it links Innsbruck (Austria) with Verona (Italy).

Brescia 45°33N 10°13E A city in Italy, in Lombardy. It has Roman remains, 9th-century and 17th-century cathedrals, and a 12th-century palace. Population (2000 est): 191 317.

Breslau See WROCLAW.

Bresson, Robert (1907–99) French film director and screenwriter. His films, which are mainly austere treatments of moral and spiritual dilemmas, include *Le Journal d'un curé de campagne* (1950), *Mouchette* (1967), and *L'Argent* (1983).

Brest 1. (name until 1921: Brest-Litovsk; Polish name: Brześć nad Bu-giem) 52°08N 23°40E A port in Belarus, near the Polish border. It is a major industrial centre. Population (1998 est): 297 000. 2. 48°23N 4°30W A port and naval base in NW France, in the Finistère department on the Atlantic Ocean. A German U-boat base in World War II, it was almost entirely destroyed by Allied bombing. Industries include fishing, chemicals, and clothing. Population (1999): 149 634.

Brethren Members of the Protestant Brethren Churches. The largest, called the Church of the Brethren, was founded in Germany in the early 18th century. Persecution forced its members to emigrate to America, where they became known as "Tunkers," "Dunkers," or "German Baptists." They believe in temperance and pacifism and practise adult baptism by triple immersion.

Brétigny, Treaty of (1360) The treaty that concluded the first phase of the *Hundred Years' War. Never fully effective, it promised a ransom of £500,000 for *John (II) the Good of France (1319–64; reigned 1350–64; captured at Poitiers in 1356) and granted territories, including Aquitaine, to Edward III of England. In return, Edward was to renounce his claim to the French throne.

Breton A Celtic language with four distinct

dialects spoken in Brittany by about one million people. Originally introduced by immigrants from SW England, it is related to Cornish and Welsh but has been strongly influenced by French. It has a literature that dates from the 15th century.

Bretton Woods Conference (1944) A conference held at Bretton Woods, New Hampshire (USA), at which the USA, UK, and Canada established the financial rules that led to the setting up of the *International Monetary Fund (IMF) and the *International Bank for Reconstruction and Development (World Bank). Each country agreed to maintain its currency within 1% of a value fixed for gold and to back the IMF in bridging any temporary payments imbalances. The system collapsed in 1971, following the US Government's suspension of convertibility from dollars to gold.

Brezhnev, Leonid Ilich (1906–82) Soviet statesman; secretary of the Soviet Communist Party (1964–82) and president of the Soviet Union (1977–82). Brezhnev, a metallurgist, was a political leader in the Red Army during World War II. He and *Kosygin forced Khrushchev to resign in 1964. His rule was marked by detente with the West, intervention in the affairs of other E European countries, and social and economic stagnation at home.

briar A shrubby rambling *rose with arching prickly stems, found in hedgerows and scrub in many parts of Europe. The principal species are *Rosa rubiginosa*, *R. micrantha*, *R. agrestis*, and *R. elliptica*. See also SWEET BRIAR.

Briar is also the name of a shrubby white *heath (*Erica arborea*), the roots of which are used for making briar pipes.

bribery and corruption The giving of a gift to a person in a position of trust, to induce him to act contrary to his duty. If such a gift is secretly given it is presumed to be corrupt. Bribery of public servants is illegal according to the Public Bodies Corrupt Practices Act (1889). Obtaining a title or similar honour by bribery is a crime according to the Honours (Prevention of Abuses) Act (1925). Bribery in connection with parliamentary and other elections is a corrupt practice forbidden by the Parliamentary Elections Act (1868) and the Representation of the People Act (1949).

bricks A traditional building material in the form of a rectangular block usually measuring 225 × 112 × 75 mm. They are normally made from clay and baked or fired in a kiln at about 900°C. Water is driven off, organic matter becomes oxidized, and some of the clay minerals

fuse and fill the gaps between the clay particles. Iron oxide gives the brick its reddish colour. London stock bricks are yellowish on account of the sand and alumina they contain. Bricks are laid in various patterns, known as bonds.

bridge A card game deriving from whist. **Straight bridge** was first played in Britain about 1880; having overtaken whist in popularity, about 1911 it was displaced by its descendant, **auction bridge**, in which the opposing pairs of partners competed to decide the trump suit. By 1929 **contract bridge**, which had developed in the USA, was popularized by Ely Culbertson (1891–1955). Two pairs of partners bid to name the trump suit (or to play without a trump suit) and "contract" to win a specified number of tricks above the six tricks of the "book." A game consists of 100 points, with each spade or heart trick counting 30, each diamond or club 20, and for a bid in no trumps 40 for the first trick and 30 for subsequent tricks. Only the tricks contracted for in the bidding are counted towards game; extra points are awarded separately for "honours" (ace to ten of trumps), overtricks, and for slams (when the partners have bid for and won all the tricks or all but one trick in a hand). Penalty points are awarded to the opponents for undertricks. The side winning two games consecutively or two games out of three wins the rubber, which counts as either 500 or 700 extra points.

bridges Structures that provide a means of crossing a river, valley, road, or railway. There are three basic designs. **Beam (or girder) bridges** are supported at their ends by the ground, with the weight thrusting downwards. The cantilever is a more complex form of girder. **Arch bridges** thrust outwards as well as downwards at their ends and are in compression. **Suspension bridges** use cables under tension to pull inwards against anchorages in the ground. The roadway, or a truss supporting it, hangs from the main cables by a network of vertical cables. See illustration on p. 146.

Bridge, Frank (1879–1941) British composer. His orchestral suite *The Sea* (1910–11) earned him early popularity but his later works, such as *Oration* (for cello and orchestra; 1930), are in a highly individual modern idiom. He was the teacher of Benjamin *Britten.

Bridgend A county borough of S Wales, created in 1996 from part of Mid Glamorgan. Area: 264 sq km (102 sq mi). Population: (2001): 128 650.

Bridge of Sighs (Italian name: Ponte dei Sospiri) A covered bridge in Venice (Italy) link-

bridges. The arrows show how forces are exerted onto or away from the foundations in each of the basic structural types.

ing the Doge's Palace with the prison; named from the sighs of the prisoners crossing it.

Bridget, St (St Bride or St Brigit; died c. 523 AD) Irish abbess and second patron saint of Ireland. She is believed to have founded the first Irish convent, at Kildare. Feast day: 1 Feb.

Bridgetown 14 05N 59 35W The capital of Barbados, a port in the SW on Carlisle Bay, founded in 1628. Population (latest est): 6070.

Bridgewater Canal A waterway constructed in 1759–61 by James *Brindley for the Duke of Bridgewater; it ran from Worsley to Manchester (later extended to Liverpool) and was used for transporting coal. The first British canal, it is constructed on an aqueduct across the Irwell Valley.

Brie An area in N France, between the Rivers Seine and Marne. Predominantly agricultural, it produces wheat and sugar beet and is noted for its cheese. Area: 6500 sq km (2510 sq mi).

Bright, Richard (1789–1858) British physician, who described many disorders, particularly the group of symptoms, including oedema (retention of body fluid), that he

showed to be due to kidney disease. This is sometimes called **Bright's disease** (see NEPHRITIS).

Brighton 50 50N 0 10W A resort in S England, in Brighton and Hove unitary authority, East Sussex. Originally a fishing village, its growth began with the development of sea bathing in the 1750s and the patronage of the Prince Regent (later George IV), who had the Royal Pavilion redesigned by John *Nash in oriental style. Other notable features include the Lanes (famous for their antique shops) and the boating marina (completed in 1979). Population (1991 est): 133 400.

Brighton and Hove A city and unitary authority in S England, in East Sussex. Area: 72 sq km (28 sq mi). Population (2001): 247 820.

Brigit A Celtic goddess of fire, fertility, and culture. Elements of her cult were passed into the traditions surrounding St *Bridget, notably the burning of a sacred fire by her shrine.

brill An edible *flatfish, *Scophthalmus rhombus*, related to *turbot, that occurs in European coastal waters. Its smooth body is sandy with light and dark spots above.

brimstone A lemon-yellow butterfly, *Gonopteryx rhamni*, found in Europe, N Africa, and parts of Asia. Adults hibernates, flying early in spring. The next generation emerges in June or later, the caterpillars feeding on buckthorn. Family: Pieridae.

Brindley, James (1716–72) British canal builder. He designed and built some 588 km of canals, including the *Bridgewater Canal, without ever using diagrams or calculations.

Brisbane 27 30S 153 00E The third largest city in Australia, the capital and chief port of Queensland. Exports include wool, meat, mineral sands, and wheat. Notable buildings include Parliament House (1869), the Observatory (1829) built by convicts, and the Queen Elizabeth II Stadium built for the 1982 Commonwealth Games. *History:* originally a penal colony, the settlement was opened to colonists in 1842. Population (1998 est): 848 741.

bristlecone pine A *pine tree, *Pinus aristata*, native to mountainous regions of Colorado, Arizona, and New Mexico. Up to 15 m tall. Bristlecone pines are among the longest-lived trees: some trees have reached an age of 5000 years and have been used to date archaeological sites (see DENDROCHRONOLOGY).

bristletail A slender wingless insect, 5–20 mm long, that has two or three long tail bris-

tles and belongs to the orders *Thysanura* (three-pronged bristletails) or *Diptera* (two-pronged bristletails). Most bristletails live in damp sheltered places and feed on plant detritus (see also SILVERFISH).

Bristol 1. 51°27'N 2°35'W A port and industrial city in SW England, mainly in Bristol unitary authority. A major port in the 17th and 18th centuries, trading mostly with the Americas (and prospering greatly from the slave trade), its docks at Avonmouth and Portishead (including the modern Portbury dock) are still active. Nearby is the Avon Gorge, spanned by Brunel's Clifton Suspension Bridge (1832–64). Population (1991): 407 992. 2. A unitary authority in SW England, created in 1996 from part of Avon. Area: 100 sq km (42 sq mi). Population (2001): 380 615.

Bristol Channel An inlet of the Atlantic Ocean in the UK, between South Wales and SW England. It forms an extension of the Severn Estuary and has the greatest tidal range in England. Length: about 137 km (85 mi).

Britain, Battle of See WORLD WAR II.

British Academy A learned society formed in 1901 to provide British representation of the humanities at the International Association of Academies. Incorporated in 1902, it promotes the study of languages and literatures, history, archaeology, philosophy, religion, law, economics, and the visual arts.

British Antarctic Territory A British colony established in 1962 that consists of the South Orkney and South Shetland islands and a part of the Antarctic. It is used as a base for the British Antarctic Survey stations.

British Broadcasting Corporation (BBC) A broadcasting authority in the UK. The BBC was first set up as a private company in 1922 and was incorporated as a public body under royal charter in 1927; it is responsible to parliament and is politically neutral and independent. It has national television and radio stations and a number of local radio stations. It relies on revenue from television licences as it is not permitted to carry advertising. The BBC provides external services in 43 languages.

British citizenship A form of citizenship introduced on 1 January 1983 by the British Nationality Act (1981). With British Dependent Territories citizenship and British Overseas citizenship, it replaced the composite citizenship of the UK and Colonies created by the British Nationality Act (1948). From 1983 until 2002 full British citizenship could be acquired by birth

in the UK to a parent who was either a British citizen or a settled resident there, by descent, by registration, or by naturalization. In 2002 the government restored full British citizenship to UK Overseas (formerly Dependent) Territories and Overseas citizens. British citizens have automatic citizenship of the EU.

British Columbia The westernmost province of Canada, on the Pacific Ocean. It is bounded by the *Rocky Mountains in the E and the Coast Range in the W. The main rivers (the Fraser, Kootenay, Thompson, and Columbia) and their tributaries are swift flowing and there are many lakes and waterfalls. Forests cover over 55% of the surface. There are rich mineral resources; gold, silver, lead, zinc, copper, coal, and oil are all produced. Only a small area is farmed, and half the population lives in the Lower Mainland. *History:* the area was visited by Captain Cook (1778) and a British colony established on Vancouver Island (1849) spread to the mainland when gold was discovered (1858). Entry into Canada (1871) and the transcontinental railway (1885) encouraged development. Area: 930 528 sq km (359 277 sq mi). Population (2001 est): 4 095 900. Capital: Victoria.

British Council An institution set up in 1934 and incorporated by royal charter in 1940. The Council's chief aims are to promote a knowledge of the UK abroad, to promote the teaching of English, and to foster cooperation between the developing countries and the UK.

British Council of Churches A body, set up in 1947, of representatives of the major Churches in Britain and Ireland except the Roman Catholic Church (although this sends observers to meetings). The recommendations it makes to member Churches are designed to effect unity. It founded Christian Aid and is an Associate Council of the *World Council of Churches.

British Dependent Territories See UNITED KINGDOM OVERSEAS TERRITORIES.

British Empire See EMPIRE, BRITISH.

British Indian Ocean Territory A United Kingdom Overseas Territory established in 1965 consisting of the Chagos Archipelago, the largest island of which is Diego Garcia (claimed by Mauritius). Aldabra, Farquhar, and Desroches were returned to the Seychelles in 1976. Under an agreement of 1966 the islands were made available to the US military. Construction of a major US naval and airbase on Diego Garcia was accompanied by the expulsion of all

2000 inhabitants from the islands. In 2000 the British High Court ruled that this action had been illegal and that the islanders had the right to return.

British Legion See ROYAL BRITISH LEGION.

British Library The national library, formed in 1973 from the British Museum Library, founded in 1753, and other collections; it consists of some 18 million books. The first reading room of a purpose-built library in St Pancras (London) opened in 1997.

British Museum The national museum founded in 1753 to house the private collection of the naturalist Sir Hans Sloane (1660–1753); it now occupies Sir Robert Smirke's neoclassical building (1847) in Bloomsbury, London. Its collections are unique and include Egyptian mummies, the Elgin Marbles, and the Rosetta Stone. The natural history exhibits were transferred to a building in South Kensington, known as the Natural History Museum. See also BRITISH LIBRARY.

British Standards Institution (BSI) An institution founded in 1901 (renamed in 1931) to establish minimum standards of quality for various products and to avoid duplication of design, sizes, and patterns. Products that conform to BSI standards bear the Kite mark. The BSI is a member of the *International Organization for Standardization.

British thermal unit (btu) An obsolete unit of energy equal to the amount of heat required to raise the temperature of 1 lb of water through 1°F. It is equal to 1055.06 joules (251.997 calories).

Britons The indigenous inhabitants of Britain before the Anglo-Saxon settlements. They spoke languages of the Brythonic branch of the Celtic language family. At the Roman conquest (1st century AD) Britain was divided into tribal kingdoms with a common Celtic culture (see LA TÈNE).

Brittany (Breton name: Breiz; French name: Bretagne) A planning region and former province in NW France. It consists of a peninsula between the Bay of Biscay and English Channel. It was part of ancient Armorica and in 56 BC was conquered by Julius Caesar. During the 5th–6th centuries AD Celts from Britain migrated here to escape the Anglo-Saxon invasion. Finally incorporated into France in 1532, it has retained its own distinctive culture. Area: 27 184 sq km (10 494 sq mi). Population (1999): 2 906 197.

Britten, (Edward) Benjamin, Baron

(1913–76) British composer. A pupil of Frank *Bridge, he spent the years 1939–42 in the USA and subsequently founded the English Opera Group (1947) and the Aldeburgh Festival (1948) in the Suffolk town in which he lived with his partner, the tenor Sir Peter Pears (1910–86). Among Britten's compositions are the operas *Peter Grimes* (1945), *Billy Budd* (1951), and *Death in Venice* (1973); the orchestral works *Variations on a Theme by Frank Bridge* (1937) and the *Cello Symphony* (1964); choral works, such as *A War Requiem* (1962); and many chamber works.

brittle star A marine invertebrate animal, also called sand star or serpent star, belonging to a subclass (*Ophiuroidea*) of *echinoderms. It has a small disclike body bearing five long fragile arms, used for locomotion. Class: *Stelleroidea* (starfish and brittlestars).

Brno (German name: Brünn) 49 12N 16 40E The second largest city in the Czech Republic, formerly (1918–49) the capital of the province of Moravia. A fortified town in the middle ages, it contains the Spilberk fortress, an Austrian political prison (1621–1857). The botanist Gregor Mendel devised the principles of heredity here (1865). Brno is now an important industrial centre. Population (2000 est): 383 569.

broad bean An annual plant, *Vicia faba*, 60–150 cm tall, with a ribbed stem and compound grey-green leaves. The large pod has a woolly lining surrounding large flat edible beans, for which the plant is cultivated. See also BEAN.

broadbill A brightly coloured passerine bird belonging to a family (*Eurylaimidae*; 14 species) of tropical African and Asian forests. It is about 12 cm long with a large head, partly joined toes, and a very broad short bill. Most species are insectivorous.

Broads, the A low-lying area in E England, mainly in Norfolk but extending into Suffolk. It consists of shallow lakes, believed to have originated as medieval peat diggings, linked to the Rivers Bure and Yare and their tributaries. These now provide holiday boating and fishing facilities. The Broads was given a status equivalent to a National Park in 1989.

broccoli A cultivated variety of wild *cabbage (*Brassica oleracea*) with a stout upright stem and a loose cluster of flower heads at the top. Sprouting broccoli has purple or white flowers. Calabrese or green sprouting broccoli is an Italian variety, often with fused parallel stems. Both are eaten as vegetables.

broch A circular dry-stone defensive struc-

ture built in N Scotland and adjacent islands, probably in the period 100 BC to 100 AD. The six-storey-high broch at Mousa (Shetland) is a famous example.

bromine (Br) A dense reddish-brown liquid element, discovered by A. J. Balard (1802–76) in 1826. It is extracted from sea water and other natural brines by electrolysis or by displacement with chlorine. The liquid element is volatile and its vapour has a pungent smell reminiscent of chlorine with severe irritating effects. Compounds include silver bromide (AgBr), used in photography. At no 35; at wt 79.904; mp -7.2°C ; bp 58.78°C .

bronchitis Inflammation of the bronchi (see LUNGS). Acute bronchitis is often due to a virus infection. Chronic bronchitis is common in middle-aged men in the UK, being aggravated by cigarette smoking. Irritation of the mucus-secreting glands in the bronchi results in a persistent cough, with the production of large amounts of sputum. The patient is breathless and liable to chest infections. Treatment consists of the prompt management of any chest infection.

Brontë sisters Three British novelists, daughters of the rector of Haworth, an isolated village in Yorkshire. After attending a local boarding school, **Charlotte Brontë** (1816–55) and **Emily Brontë** (1818–48) rejoined their sister **Anne Brontë** (1820–49) at home. Their early writings chronicled the imaginary kingdoms of Angria and Gondal. All the sisters worked for brief periods as governesses and teachers to help pay off the debts of their alcoholic artist brother, **Patrick Branwell Brontë** (1817–48). In 1846 the sisters published *Poems by Currer, Ellis, and Acton Bell* and in 1847, under the same pseudonyms, the novels *Jane Eyre* (by Charlotte), *Wuthering Heights* (by Emily), and *Agnes Grey* (by Anne). In 1848 Emily died of tuberculosis, as did Anne in 1849. Charlotte published *Shirley* (1849) and *Villette* (1853). She married her father's curate in 1854 and died in pregnancy a year later.

Brontosaurus See APATOSAURUS.

Brontotherium A genus of extinct North American hoofed mammals—titanotheres—that lived during the Oligocene epoch (between 38 and 26 million years ago). Standing 2.5 m at the shoulder, *Brontotherium* had a large skull with a pair of bony horns.

bronze An *alloy of copper and (4–11%) tin. Because it melts between 900°C and 1000°C , it was one of the first metals to be used for mak-

ing weapons and utensils, being known around 2000 BC in Britain. It is harder than pure copper. See also GUN METAL.

Bronze Age The cultural phase during which metallurgical technology, based first on copper (in the Chalcolithic period) and then on bronze, replaced the stone technology of the *Neolithic period. In Eurasia the development of international trade, literacy, the plough, and the wheel took place during this phase, which began at varying dates according to locality (the earliest being about 6500 BC in Anatolia); it gave way to the *Iron Age in about 1000 BC. In Africa, iron, discovered about 800 BC, replaced stone without an intervening Bronze Age. In the Americas, copper, discovered about 100 AD, was followed rapidly by iron.

Bronzino, Il (Agnolo di Cosimo; 1503–72) Florentine mannerist painter (see MANNERISM). His religious and allegorical works, such as *Venus, Cupid, and Folly* (National Gallery, London), were influenced by Michelangelo. As court painter to Cosimo I de' Medici he painted many portraits, including *Eleanor of Toledo and Her Son Giovanni* (Uffizi), a characteristic work.

Brooke, Rupert (Chawner) (1887–1915) British poet. His charm and good looks gained him many friends in literary circles. He received a naval commission in 1914 but died of blood poisoning on a hospital ship in the Aegean, without having seen action. The idealistic patriotism of *1914 and Other Poems* (1915) made him a national hero.

Brookner, Anita (1928–) British writer and art historian. Her novels include the Booker prizewinner *Hotel du Lac* (1984), *Fraud* (1992), and *The Next Big Thing* (2002).

broom A deciduous shrub, *Sarothamnus scoparius* (or *Cytisus scoparius*), 60–200 cm high, with shiny green five-angled stems and small pointed compound leaves. The bright-yellow flowers are clustered at the ends of the twigs. Broom is found in heaths and woodland glades in Europe. It is poisonous to livestock but is often grown as an ornamental. Family: Leguminosae.

Brouwer, Adriaen (c.1605–38) Flemish painter, who worked in Holland, initially as a pupil of *Hals, and later in Antwerp. He excelled in small paintings of brawling and drunken peasants.

Brown, Sir Arthur See ALCOCK, SIR JOHN (WILLIAM).

Brown, Capability (Lancelot B.; 1716–83) British landscape gardener, who carried on the

work of William *Kent. Abandoning the formal continental style, Brown's gardens sought to create a stylized imitation of nature, in the landscaped English park (as at Blenheim Palace, 1765). He was also an architect, designing houses and garden buildings. His nickname arose because he frequently told his patrons that their grounds had "capabilities" for landscaping.

Brown, Ford Madox (1821–93) British painter, born in Calais. Influenced by the Pre-Raphaelites, he painted chiefly historical themes, although his most famous paintings, *Work* (Manchester) and *The Last of England* (Birmingham), are of contemporary subjects.

Brown, (James) Gordon (1951–) British statesman; Labour prime minister (2007–). He entered parliament in 1983. As chancellor of the exchequer (1997–2007) under Tony *Blair, he presided over a long period of stability and growth.

Brown, John (1800–59) US abolitionist, who raided the Federal Arsenal at Harpers Ferry, Virginia, in an attempt to establish a slave refuge and a base for promoting slave uprisings. He was captured and executed for treason; he is the hero of the song "John Brown's Body."

Brown, Robert (1773–1858) Scottish botanist, who in 1831 first recognized the *nucleus as a fundamental constituent of cells. Four years earlier, while observing a solution of pollen grains in water under a microscope, he discovered the continuous random movement of the grains, now known as the **Brownian movement**. Although Brown was unable to explain it, it is now known to be due to collisions between the atoms and molecules of the fluid with the particles.

brown algae Algae of the phylum *Phaeophyta* (1500 species), which contain a brown pigment (fucoxanthin) in addition to and sometimes masking the green chlorophyll. Brown algae include all the larger *seaweeds, such as wracks and kelps. Many show an *alternation of generations.

brown bear A large shaggy mostly brown bear, *Ursus arctos*, of the N hemisphere. There are many local races and subspecies—the reputedly ferocious grizzly bear (*U. arctos horribilis*), of N Canada and Alaska, reaches a length of 2.5 m and a weight of 550 kg; the Alaskan Kodiak bear—a giant grizzly—is the largest living land carnivore, reaching a length of 2.8 m and a weight of 760 kg.

Browning, Robert (1812–89) British poet. The son of a bank clerk, he wrote several verse dramas and numerous dramatic monologues, including the famous "My Last Duchess" (1842). The poem cycle *The Ring and the Book* (1868–69) was his last major work. His wife **Elizabeth Barrett Browning** (1806–61) was also a poet. A spinal injury when she was 15 made her a life-long semi-invalid. In 1846 she defied her domineering father and eloped with Browning to Italy. Here she wrote her most famous work, *Sonnets from the Portuguese* (1850).

Browning Automatic Rifle (BAR) A gas-operated automatic *rifle designed in 1917 by John Moses Browning (1855–1926). The standard automatic weapon in the US army until the Korean War, it weighed over 8.6 kg (19 lbs).

Brownshirts The colloquial name for the Nazi Sturmabteilung (SA; stormtroopers). They were founded in 1921 and reorganized by Ernst Röhm (1887–1934) in 1930. Squads of thugs, who eliminated the Nazis' opponents, they numbered two million by 1933. In 1934 Hitler eliminated Röhm himself and reduced their power. *See also* SS.

Bruce, Robert *See* ROBERT (1) THE BRUCE.

brucellosis (or undulant fever) An infectious disease of farm animals caused by the bacterium *Brucella abortus*. Symptoms include fever, weakness, cough, joint pain, and sometimes swelling of the lymph nodes. Tetracycline usually cures the disease, which can be contracted by humans from contaminated milk.

Bruch, Max (1838–1920) German composer, best known for his first violin concerto (1868) and *Kol Nidrei* (1880) for cello and orchestra, based on a Jewish hymn.

Brücke, Die (German: The Bridge) A German organization founded in 1905 to promote modern art. Its members, notably Ernst Kirchner (1880–1938), were influenced, like their French contemporaries, the fauves (*see* FAUVISM), by *Van Gogh, *Gauguin, *Munch, and primitive art. Although the group broke up in 1913, their crudely painted, vibrantly coloured works had a lasting influence on the graphic arts. *See also* EXPRESSIONISM.

Bruckner, Anton (1824–96) Austrian composer. A professor at the Vienna conservatoire (1871–91), he was granted a pension and apartments in the Belvedere palace in Vienna in 1891, where he worked on his ninth (unfinished) symphony (1887–96). His 11 symphonies had a mixed reception during his lifetime and were

frequently performed in shortened versions. Bruckner also composed choral and chamber music and a *Te Deum* (1881–84).

Brueghel the Elder, Pieter (or **Bruegel**; 1525–69) Flemish painter, popularly called Peasant Brueghel, whose patrons included Cardinal de Granvelle (1517–86). Influenced by *Bosch in such works as the macabre *Triumph of Death* (Prado), in 1563 he settled in Brussels, where he executed his best-known works, e.g. *Peasant Wedding* (Kunsthistorisches Museum, Vienna), and a landscape series entitled the *Labours of the Months*. Many of his paintings were copied by his eldest son **Pieter Brueghel the Younger** (?1564–?1638). His younger son **Jan Brueghel the Elder** (1568–1625) is noted for his flower and landscape paintings.

Bruges (Flemish name: Brugge) 51°13'N 3°14'E A town in NW Belgium. It was the capital of Flanders in the 12th century and during the 13th and 14th centuries it became the centre of the Hanseatic League. It has many fine gothic buildings, including the 14th-century cathedral, the Church of Notre Dame and the Market Hall (13th–15th centuries) with its famous belfry. It is linked by canal to many European ports. Population (2000 est): 116 246.

Brummel, George Bryan (1778–1840) British dandy, known as Beau Brummel. He was a prominent member of fashionable society and a close friend of the Prince Regent, later George IV. After becoming bankrupt he fled to France and died in an asylum.

Brunei, State of A small sultanate in NW Borneo, consisting of two separate areas, bounded by the Malaysian state of Sarawak. The people are mainly Malays, while about a quarter of the population are Chinese or other minorities. *Economy*: dominated by oil since the discovery of the Seria oilfield in 1929 and the later offshore oilfields. A deepwater port and a natural-gas liquefaction plant have been built. Agriculture is being encouraged. The economy suffered from the Asian financial crisis of 1997 and the fall in oil prices. *History*: a powerful state in the 16th century controlling the whole of Borneo, it became a British protected state in 1888. In 1962 there was a revolt against the proposal to join the Federation of Malaysia, and since then the sultan has ruled by decree. In 1967 Hassanal Bolkia Mu'izzuddin Waddaulah (1946–) succeeded his father as sultan. Self-government was achieved in 1971 and full independence in 1984. Unemployment and social unrest rose during the 1990s. Official language: Malay. Currency: Brunei dollar of 100 cents.

Area: 5800 sq km (2226 sq mi). Population (2003 est): 344 000. Capital: Bandar Seri Begawan.

Brunel, Isambard Kingdom (1806–59) British engineer, whose most famous works were the Clifton suspension bridge (1864) and his ships the *Great Western* (1837), the *Great Britain* (1843), and the *Great Eastern* (1858). Much of his work was done for the Great Western Railway, for which he built over 1600 km of track. His father **Sir Marc Isambard Brunel** (1769–1849) was also an engineer. Born in France, he worked in New York after fleeing the French Revolution. He moved to England in 1799, where he became famous for his tunnelling shield, which allowed tunnels to be dug below water. His tunnel under the River Thames from Rotherhithe to Wapping took from 1825 to 1842 to complete.

Brunelleschi, Filippo (1377–1446) Italian Renaissance architect, who began his career as a goldsmith. His taste for classical architecture is demonstrated by his most famous construction, the dome of Florence cathedral (1430s). The Ospedale degli Innocenti (1419–26) is often regarded as the first architectural expression of the Renaissance.

Brunhild (or **Brynhild**) A heroine of Norse and Germanic legend. In the *Volsungasaga* she is the daughter of Odin, doomed to sleep on a fire-encircled rock until awakened by a mortal (see SIEGFRIED). In the *Nibelungenlied* she is the queen of Issland.

Brunswick (German name: Braunschweig) 52°15'N 10°30'E A city in N Germany, in Lower Saxony on the River Oker. It was the capital of the former duchy of Brunswick. Notable buildings include the castle and the romanesque cathedral (both 12th-century), the old town hall (14th–15th centuries), and the ducal palace (1768–69). Population (1999 est): 246 800.

Brussels (French name: Bruxelles) 50°51'N 4°22'E The capital of Belgium, situated on the River Senne. The headquarters of the EU and NATO, it has many fine buildings including the 15th-century gothic town hall, the 13th-century Maison du Roi, the 18th-century Palais de la Nation (parliament building), and the Royal Palace. *History*: settled by the French in the 7th century AD, it developed into a centre of the wool industry in the 13th century. It became the capital of the Spanish Netherlands in the 15th century and later of the Austrian S Netherlands. In 1830 it was chosen as capital of the new kingdom of Belgium. Population (1995 est, urban area): 1 121 000.

Brussels sprout A variety of wild cabbage, *Brassica oleracea* var. *gemmifera*, cultivated for its large edible buds. The stout shoots, up to 80 cm high, have curly leaves arranged spirally up the stem; the large buds grow in the angle between the leaf bases and the stem. See also BRASSICA.

Brutus, Marcus Junius (785–42 BC) Roman soldier, who supported Pompey against Caesar in the civil war, was pardoned by Caesar and made governor of Cisalpine Gaul (46). He subsequently joined the conspiracy to murder Caesar (44) and committed suicide after his defeat by Antony at Philippi (42).

bryony Either of two unrelated Eurasian plants. **Black bryony** (*Tamus communis*) is a herbaceous climber with heart-shaped leaves. The bell-shaped yellow flowers are borne in separate male and female spikes. The fruits are scarlet berries, and the plant overwinters as a tuber. Family: *Dioscoreaceae* (yam family). **White bryony** (*Bryonia dioica*) is a perennial climbing herb. The hairy stem arises from a large rootstock and the leaves are palmately lobed. Greenish male and female flowers occur on separate plants and produce poisonous scarlet berries. Family: *Cucurbitaceae* (gourd family).

bryophytes A group of flowerless green plants comprising the hornworts, *liverworts, and mosses. The plant body is either differentiated into stems and leaves or is a flat branching structure (thallus). Bryophytes lack true vascular (conducting) tissues and roots (the rootlike rhizoids serve mainly for anchorage). They show *alternation of generations: the plant itself is the sexual (gametophyte) phase, which bears male and female sex organs (antheridia and archegonia, respectively). Fertilization of an egg cell results in the development of a spore capsule—the asexual (sporophyte) phase—which remains attached to the gametophyte. The spores germinate to form new plants.

Bryozoa (or **Ectoprocta**) A phylum of aquatic colonial invertebrate animals (about 6000 species), called moss animals, found chiefly in seas as matlike encrustations on rocks. A colony consists of individuals, each up to 3 mm long and with a chitinous or gelatinous case and a ring of ciliated tentacles around the mouth. These waft food particles into the U-shaped digestive tract.

Brythonic languages See CELTIC LANGUAGES.

BSE (bovine spongiform encephalopathy) A fatal disease of cattle causing degeneration of brain tissue and popularly known as "mad cow disease". It is caused by an abnormal protein (prion), which accumulates in the brain and can be passed on from infected cows to their calves. It can also be transmitted to other species by ingestion of beef products from infected animals. The first cases were recorded in the UK in 1986 and concern that BSE might spread to humans led the government to ban (1989) the use of beef offal in human foods. However, it was not strictly enforced and in 1996 several people died from a new strain of *Creutzfeldt-Jakob disease, which was probably caused by eating BSE-infected beef products. The EU then imposed a worldwide ban on British beef until an agreed programme of cattle slaughter had been completed (the ban was lifted in 1999). From 1997 until 1999 the British also government banned the sale of beef on the bone. In 2000 an official enquiry into the origin and spread of BSE blamed intensive farming practices, the animal feed industry, and lack of openness by the British government.

bubonic plague See PLAGUE.

Buchan, John, 1st Baron Tweedsmuir (1875–1940) British novelist. *Prester John* (1910) was the first of a series of vigorous adventure novels that included *The Thirty-Nine Steps* (1915). Director of Information during World War I, he was made governor general of Canada in 1935.

Bucharest (Romanian name: București) 44 25N 26 07E The capital of Romania, in the SE on a tributary of the Danube. *History:* a fortress was built in the 15th century and it became capital of Wallachia in 1659. Bucharest became capital of Romania in 1862. It was badly damaged by German bombing in World War II. Population (1997 est.): 2 027 512.

Buckingham, George Villiers, 1st Duke of (1592–1628) A favourite of James I of England from 1615, he became Earl of Buckingham (1617), Lord High Admiral (1619), and Duke of Buckingham (1623). His attempt to negotiate the marriage of Prince Charles to the daughter of the Spanish king failed (1623); he was assassinated after his unsuccessful expedition to relieve the Huguenots at La Rochelle (1627). His son **George Villiers, 2nd Duke of Buckingham** (1628–87) was a member of the *Cabal group of ministers under Charles II. After his father's death he was brought up in the royal family, with whom he went into exile after the royal-

ist defeat in the Civil War (1651). He became a privy councillor at the Restoration. He wrote the satirical play *The Rehearsal* (1671).

Buckingham Palace The London residence of the British monarch. It was built about 1705 for the Duke of Buckingham, becoming a royal residence in 1761. It was completely redesigned by Nash for George IV, although its main façade was not added until 1913. It was opened to the public in 1993.

Buckinghamshire A county in the south Midlands of England. Under local government reorganization in 1974 it lost part of the S, including Slough, to Berkshire. Milton Keynes became an independent unitary authority in 1997. The land rises gently N from the River Thames to the Chiltern Hills before descending to the fertile Vale of Aylesbury. It is mainly agricultural; industry includes the manufacture of furniture at High Wycombe. Area (excluding Milton Keynes): 1568 sq km (605 sq mi). Population (2001, excluding Milton Keynes): 479 028. Administrative centre: Aylesbury.

buckminsterfullerene A form of carbon molecule that contains 60 carbon atoms arranged in a ball-like structure; resembling the geodesic dome designed by R. Buckminster Fuller, after whom it is named.

buckminsterfullerene. This allotrope of carbon has a structure consisting of 60 carbon atoms arranged at the corners of polyhedrons with faces that are hexagons or pentagons.

buckthorn A small thorny deciduous tree or shrub of the genus *Rhamnus* (about 13 species), widespread in the N hemisphere. The leaves are oval and the small green flowers produce blue-black berries. The alder buckthorn (*Frangula*

alnus) is a similar and related shrub that lacks thorns. Family: *Rhamnaceae*.

buckwheat A herbaceous plant of the genus *Fagopyrum*, especially *F. esculentum*. Up to 60 cm tall, they have arrow-shaped leaves and clusters of densely packed small pink or white flowers. Buckwheats are native to Asia but widely cultivated for their seed, used as a cereal substitute. Family: *Polygonaceae* (dock family).

Budapest 47 33N 19 03E The capital of Hungary, situated in the N of the country on the River Danube. Most of Hungary's industry, including machinery, iron, and steel, is sited here. *History:* from the 14th century the fortress of Buda, on the W bank of the Danube, was the seat of the Magyar kings. After occupation by the Turks, it came under Habsburg rule in the 17th century. In 1872 it united with Pest, on the E bank, to form the city that became the capital of Hungary in 1918. In 1956 it was the scene of a popular rising, suppressed by Soviet troops. Population (2000 est): 1 811 552.

Buddhism The nontheistic religion founded in the late 6th century BC by Gautama Siddhartha (the **Buddha**), following his attainment of enlightenment under a sacred bo tree in Buddh Gaya in Bihar, India. His followers seek to emulate his example of perfect morality, wisdom, and compassion, culminating in a transformation of consciousness known as enlightenment. The apparent substantiality of all objects, including the self, is illusion. The central beliefs of Buddhism are based on the Buddha's *Four Noble Truths, the last of which is the *Eightfold Path by which enlightenment may be attained and the individual self annihilated in *nirvana. Buddhism is not dogmatic, but has developed into many schools (see MAHAYANA; ZEN BUDDHISM). It has over 500 million followers in Sri Lanka, Nepal, Japan, and elsewhere.

Buddleia A widespread genus of trees and shrubs (about 100 species). The small four-petalled flowers are usually clustered in dense heads; the fruit is a capsule or berry. Many species are grown as ornamentals, especially *B. davidii* (butterfly bush), 4–5 m high, the long purple flower heads of which attract butterflies; and *B. globosa*, which has round orange flower heads. Family: *Buddleiaceae*.

budgerigar A small *parakeet, *Melopsittacus undulatus*, occurring in large flocks in Australia. It is 19 cm long and has a green and yellow plumage. Since its introduction to Britain in 1840 it has become a popular cagebird. Selective breeding has produced birds of many colours.

b

Buenaventura 354N 7702W A port in W Colombia, on the Pacific Ocean. Exports include coffee and sugar from the Cauca Valley and gold and platinum from the Chocó district. Population (1999 est): 224 336.

Buenos Aires 3450S 5837W The capital of Argentina situated on the Río de la Plata estuary. The financial, commercial, and industrial centre of the country, its chief exports are beef and wool. It possesses a national library and a famous opera house (the Teatro Colón). *History:* founded in 1580, after Indian attacks on earlier settlements, it became capital of the newly created viceroyalty of the Río de la Plata in 1776 and of the new Republic of Argentina in 1880. In the late 19th and early 20th centuries its population was greatly swelled by European immigrants. Population (1999 est, urban area): 2 904 192.

buffalo A large African hoofed mammal, *Syncerus caffer*, also called Cape buffalo. Weighing over 700 kg and measuring 110–150 cm at the shoulder, buffaloes have massive curved horns and a smooth black coat. They live in large herds in grassy areas where both tree cover and water are available. Family: *Bovidae*. Compare BISON; WATER BUFFALO.

Buffalo 4252N 7855W A city in the USA, in New York state on Lake Erie and the Niagara River. It is linked to New York City by the New York State Barge Canal (formerly Erie Canal). Population (2000): 292 648.

bug A common name for any insect-like animal. Specifically, the term refers to insects of the order *Hemiptera* (the true bugs), especially the *bedbug and insects of the suborder *Heteroptera* (plant bugs, water bugs, etc.).

Bug, River 1. (or **Western Bug**) A river in E central Europe, rising in SW Ukraine and flowing NW as part of the border between Ukraine and Poland to the River Vistula. Length: 724 km (450 mi). **2.** (or **Southern Bug**) A river in Ukraine, rising in the W and flowing SE to the Dnieper estuary on the Black Sea. Length: 853 km (530 mi).

Buganda A former kingdom in East Africa, now comprising an administrative region of Uganda bordering on Lake Victoria.

bugle A high-pitched brass instrument with a wide conical tube, a cup-shaped mouthpiece, and a small bell. It lacks valves and so can only play a single harmonic series (usually having the fundamental of C). Formerly much used for military signalling, it is now used on ceremonial occasions.

Bukovina (or **Bucovina**) An area in E Europe, in the NE Carpathian Mountains. As part of the principality of Moldavia, it fell to the Turks in 1512 and was ceded to Austria in 1775. Occupied by the Romanians in 1918, the N part was ceded to the Soviet Union (1940) and is now part of independent Ukraine. S Bukovina remained a Romanian province until it was abolished in 1952.

Bulawayo 2010S 2843E The second largest city in Zimbabwe. It was founded in 1894 by the British, near to Lobengula, the centre of the Ndebele tribe. The city is the country's chief industrial centre. Population (1998 est): 790 000.

bulb A modified underground stem of certain perennial herbaceous plants, for example onions and tulips, that serves as an overwintering organ. Food is stored in overlapping fleshy leaves or leaf bases, borne on a very short stem, and is used to produce one or more plants the following season.

bulb. A section through a daffodil bulb in spring (above) and summer (below) to show growth cycle.

Bulganin, Nikolai Aleksandrovich (1895–1975) Soviet statesman; prime minister (1955–58). Bulganin became (1944) a member of Stalin's war cabinet and in 1947, defence minister. As prime minister, Bulganin participated in the attempt to oust Khrushchev in 1957 and was subsequently dismissed.

Bulgaria, Republic of A country in SE Europe, in the E Balkans on the Black Sea. The low-lying Danube basin in the N rises to the Balkan Mountains in the centre; further S the Rhodope Mountains reach heights of almost 3000 m (10 000 ft). The inhabitants are mainly Bulgars,

with minorities of Macedonians, Turks, and Gypsies. *Economy:* industrialization proceeded rapidly after World War II. Coal, iron, and other minerals are mined and hydroelectricity and nuclear energy contribute to power supplies. Oil and natural gas have been found offshore in the Black Sea. Agriculture has been mechanized; the main crops include wheat, maize, and beet. In 1991 legislation permitted the return of collectivized land to individual owners and the privatization of state companies. *History:* following the invasion of the Bulgars in the 7th century AD and their gradual adoption of the culture of the conquered Slavs, Bulgaria became a significant power in SE Europe. Under Turkish rule from 1396, the Bulgars retained their national identity over the centuries until they became independent in 1908. Bulgaria aligned itself with Germany in both World Wars. In 1944 it was occupied by the Soviet Union; power was seized by the left-wing Fatherland Front, which formed a pro-Soviet government that declared war on Germany. In 1946 a People's Republic was proclaimed. Under a new constitution (1971) Todor Zhivkov became head of state. Democratic multiparty elections were held in 1990. The former Communists, now styled Socialists, returned to power in 1994 but a nonsocialist president was elected in 1996. In 1997 economic crisis led to mass protest against the government and parliamentary elections were won by a centre-right coalition. A new centrist party led by the former King Simeon II was victorious in the elections of 2001. Bulgaria joined NATO in 2004 and the EU in 2007. Official language: Bulgarian. Currency: lev; 100 stotinki. Area: 110 912 sq km (42 823 sq mi). Population (2007 est): 7 322 858. Capital: Sofia.

Bulgarian A language belonging to the South Slavonic group spoken by eight million people in Bulgaria, Greece, Romania, Moldova, and Ukraine. It differs from other Slavonic languages in lacking declensions for nouns and shares grammatical features with other non-Slavonic Balkan languages. The literature written in Bulgarian dates from the 9th century.

bulk modulus See ELASTIC MODULUS.

bull (from Latin: *bullā*, seal) Originally, the seal attached to papal edicts it later referred to the documents themselves, now only to important missives. Issued to assert doctrine, they are named by their opening phrase, for example *Pastor Aeternus* (Eternal Father; 1870).

bulldog A breed of dog originating in England, where it was used in bull- and bearbait-

ing. It has a compact rounded body with short sturdy legs and a short tail. The relatively large head has an undershot jaw and loose folds of skin. Weight: 25 kg (dogs); 23 kg (bitches).

bullfighting The national spectator sport of Spain, it is also popular in parts of France and Latin America; mounted bullfighting, in which the bulls are not killed, is practised in Portugal. At a Spanish *corrida de toros* (bullfight) three matadors kill two bulls each. Following the initial ceremonial procession the first bull enters the ring. Preliminary passes are made by the *banderilleros* (assistants) with their capes to attract the bull's attention. The matador then makes his first series of passes with his cape, controlling the bull's charge. During the next stage, the matadors make the bull charge at a mounted picador, who uses a lance to stab the bull's neck, so that it lowers its head. This procedure is repeated up to three times. During the following stage the neck muscle is further weakened by pairs of barbed sticks (*banderillas*) thrust into it by the *banderilleros*. In the final stage the matador performs a series of passes with his *muleta* (a small red cape folded over a stick) to weaken the bull until he can sever its aorta with his sword.

bullfinch A woodland *finch, *Pyrrhula pyrrhula*, of N Eurasia. It is about 14 cm long and has a grey back, a pinkish breast, and black head. Bullfinches strip trees and shrubs and are often regarded as pests.

bullfrog A large frog, *Rana catesbeiana*, of North America. Dull green with a slightly warty skin, bullfrogs grow to about 20 cm. Females are larger than males. Other large frogs—*Ptychocheilus adspersus* in Africa and *Rana tigrina* in India—are also called bullfrogs.

bull mastiff A breed of dog resulting from crosses between bulldogs and mastiffs. It is sturdily built with a short broad muzzle and folds of skin surrounding the face. The short coat is red-brown. Height: 63–68 cm (dogs); 61–66 cm (bitches).

Bull Run, Battles of (or Battles of Manassas) Two battles in the US *Civil War fought in NE Virginia. Both were Confederate victories. In the first (21 July 1861), Federal forces failed to prevent the unification of Confederate forces under Gen P.G.T. Beauregard (1818–93) and Gen Joseph E. Johnstone (1807–91) at Manassas Junction near a stream named Bull Run. The second (29–30 August 1862) followed an unsuccessful Federal attempt to capture Gordonsville, the Confederate capital. The 70 000 Federal troops, awaiting reinforcements

were attacked by Stonewall *Jackson and forced to retreat to Washington.

b

bull terrier A breed of dog originating in the UK from crosses between bulldogs and terriers. It is strongly built with a courageous temperament. Height: 48–56 cm. (Miniature bull terriers must not exceed 36 cm in height.) **Pit bull terriers** resemble Staffordshire bull terriers but are larger; since 1991 they must be registered with the police and muzzled in public.

bulrush A widely distributed perennial herbaceous plant, *Scirpus lacustris*, growing in ponds, rivers, etc. 1–3 m high, it has cylindrical leafless stems bearing branched clusters of small reddish-brown flowers. Family: Cyperaceae (sedges, etc.). The name is also applied to the *reedmace; the biblical bulrush is the *papyrus.

bumblebee A social *bee belonging to a genus (*Bombus*) found mainly in temperate regions. Bumblebees, 15–25 mm long, are usually black with yellow or orange bands. They live in colonies containing 100–400 workers in the summer. Their life cycle is like that of the *honeybee, although only young fertilized queens survive the winter. Solitary parasitic bumblebees belong to the genus *Psithyrus*. Family: Apidae.

Bunker Hill, Battle of (17 June 1775) A battle of the *American Revolution actually fought on Breed's Hill (next to Bunker Hill) in Charlestown, near Boston. The Americans defended the strategic hill from two British attacks but Sir William Howe (1729–1814) displaced them at the third attempt.

Bunsen, Robert Wilhelm (1811–99) German chemist. Working with *Kirchhoff, Bunsen developed the technique of spectroscopy, using a **Bunsen burner** to heat the substance. This gas burner, consisting of a vertical tube with a variable air inlet at its base, was not invented by Bunsen but he popularized it as a convenient laboratory tool. In 1860 Bunsen and Kirchhoff used spectroscopy to discover the elements *rubidium and *caesium.

bunting A sparrow-like bird belonging to a subfamily (*Emberizinae*) of the finches. Buntings are 12–20 cm long and usually have a brownish or greyish plumage. The subfamily includes the *yellowhammer and the *snow bunting.

Buñuel, Luis (1900–83) Spanish film director whose surrealist films, made mainly in France and Mexico, include *Un Chien andalou*

(1928), *The Discreet Charm of the Bourgeoisie* (1972), and *That Obscure Object of Desire* (1977).

Bunyan, John (1628–88) British writer. Son of a tinker, he fought in the parliamentary army during the Civil War. After being converted to religion, he became the leader of a group of Baptists in Bedford and he was imprisoned for preaching without a licence (1660). During his 12 years in prison he wrote his spiritual autobiography, *Grace Abounding* (1666), and began his imaginative allegory *The Pilgrim's Progress* (1678).

burbot A food fish, *Lota lota*, related to the ling. Up to 1.1 m long, it lives on the bottom in cold fresh waters, feeding on other fish.

Burgas 42 30N 29 29E A city in E Bulgaria, on the Black Sea. Its industries include fishing, mining, and oil refining. Population (2005 est): 189 529.

Burgenland A federal state in E Austria, bordering on Hungary. It was ceded to Austria by Hungary following World War I. It is predominantly agricultural. Area: 3965 sq km (1531 sq mi). Population (2004 est): 277 586. Capital: Eisenstadt.

Burgess, Anthony (John Anthony Burgess Wilson; 1917–93) British novelist and writer. His novels include *A Clockwork Orange* (1962), *Nothing like the Sun* (1964), *Earthly Powers* (1980), *Any Old Iron* (1989), and *A Dead Man in Deptford* (1993).

Burgess, Guy See MACLEAN, DONALD.

Burghley, William Cecil, Lord (1520–98) English statesman; close adviser to Elizabeth I. He served both Somerset and Northumberland under Edward VI and outwardly espoused Roman Catholicism under Mary I. His pragmatism is evident in Elizabeth's religious settlement (see REFORMATION). He influenced Elizabeth's pro-Protestant foreign policy and helped to prepare for the Spanish invasion (see ARMADA, SPANISH). He secured the execution of Mary, Queen of Scots. He was succeeded as royal adviser by his son **Robert Cecil, 1st Earl of Salisbury** (c. 1563–1612), who negotiated the accession of James VI of Scotland to the English throne as James I (1603). As lord treasurer (1608–12), he was James's chief adviser.

Burgos 42 21N 3 41W A city in N Spain, in Old Castile. Its cathedral (13th–16th centuries) contains the remains of the legendary hero El Cid. Population (2005 est): 172 421.

Burgundy A planning region and former province of France, E of the Rivers Rhône and

Saône. It is a major wine-producing area. A Scandinavian people occupied the region in the 4th century AD, establishing a kingdom that was conquered by the Franks in 534. The NW part of the region became a duchy in the 9th century, passing to the French Crown in the mid-14th century. Area: 31 582 sq km (12 191 sq mi). Population (2003 est): 1 612 297.

Buridan, Jean (c.1297–c.1358) French philosopher. He is associated with "Buridan's ass," an animal that has free will but starves through being unable to choose between equally attractive piles of hay.

Burke, Edmund (1729–97) British political philosopher. An MP from 1765, he attacked George III's exalted view of the monarch's political role in the pamphlet *Thoughts on the Cause of the Present Discontents* (1770) and blamed the unrest in the American colonies on British misgovernment. An opponent of democracy on the grounds that it brought demagogues to the fore, he advocated responsible aristocratic government and emphasized the dangers of large schemes of speculative reform. Both these ideas were expounded in his condemnation of the French Revolution (*Reflections on the Revolution in France*, 1790). He also wrote *A Philosophical Enquiry into the Origin of Our Ideas of the Sublime and Beautiful* (1757).

Burkina Faso (name until 1984: Upper Volta) A landlocked country in West Africa. It consists mainly of a low-lying plateau, crossed by the headwaters of the River Volta. The population is almost entirely African, the largest groups being the Mossi and Fulani. *Economy:* chiefly based on subsistence farming. Production of crops is being increased by improved water supplies. Some minerals, including manganese, have been found. Cotton is now the main export. *History:* the area was occupied by powerful Mossi states from the 14th century. It became part of the French protectorate of Soudan in 1898 and in 1919 the separate protectorate of Upper Volta was formed. In 1932 it was divided between Niger, Ivory Coast, and Soudan but was reconstituted in 1947. In 1958 Upper Volta became an autonomous republic, gaining full independence in 1960. A military coup in 1966 brought Lt Col (later Gen) Sangoulé Lamizana to power; he was overthrown in a coup in 1980. In 1983, after another coup, Capt Thomas Sankara assumed power; he died in 1987 in a coup led by Capt Blaise Compaoré, who reintroduced democracy. He was elected president in 1991 (re-elected 1998) and his party won the 1992, 1997, and 2002 elections. Official language: French. Currency: CFA franc of 100

centimes. Area: 274 002 sq km (105 764 sq mi). Population (2007 est): 14 326 203. Capital: Ouagadougou.

Burma See MYANMAR, UNION OF.

Burmese A language of the Tibeto-Burman branch of Sino-Tibetan, spoken by 20 million people in Myanmar (Burma), where it is the official language. Written in an alphabet derived from the Pali script of India, Burmese literature dates from the 11th century AD.

Burne-Jones, Sir Edward Coley (1833–98) British Pre-Raphaelite painter and designer. After meeting "Rossetti" (1856) he abandoned his studies at Oxford, for an art career. Typical of his romantic paintings is *King Cophetua and the Beggar Maid* (Tate Gallery). More influential were his designs for stained glass and tapestries, often for the firm of William *Morris.

burnet A slender perennial herb of the genera *Sanguisorba* (about 3 species) and *Poterium* (about 25 species), of N temperate regions. 500–1000 cm high, they have pinnate toothed leaves and oval heads of crimson or greenish petal-less flowers. Family: *Rosaceae*.

Burnet, Sir Frank Macfarlane (1899–1985) Australian physician, who discovered the phenomenon of acquired immunological tolerance to foreign tissue transplants, for which he shared a Nobel Prize (1960) with Sir Peter *Medawar. He received the OM in 1957.

Burns, Robert (1759–96) Scottish poet. Son of a poor farmer in Ayrshire, Burns became the Scottish national poet. *Poems, Chiefly in the Scottish Dialect* (1786) won him immediate fame. His return to farming was a failure and from 1789 he worked for the excise service. His poems range from love lyrics to broad humour, as in "Tam o'Shanter" (1788), and scathing satire, as in "The Twa Dogs" (1786). He also collected and wrote numerous songs. **Burns Night** (25th Jan) commemorates his birth and is celebrated by Scots all over the world.

Bursa 40 12N 29 04E A town in NW Turkey. It was the capital of the Ottoman Turks for most of the 14th century. Population (2000): 1 194 687.

Burton, Richard (Richard Jenkins; 1925–84) British actor, born in Wales. He first achieved success in Shakespearean roles, but from the 1950s acted mainly in films. These included *Look Back in Anger* (1959), *Becket* (1964), and *Who's Afraid of Virginia Woolf?* (1966). He was twice married to Elizabeth Taylor.

Burton-upon-Trent 52 49N 136W A town

in central England, in E Staffordshire on the River Trent. Its brewing tradition dates back to brewing by the Benedictine monks of Burton Abbey (founded 1002). Population (2001): 60 500.

Burundi, Republic of A small inland country in central Africa, bordering on Lake Tanganyika. It consists chiefly of high plateau along the Nile-Congo dividing range, descending to the Great Rift Valley in the W. Most of the population belongs to the Hutu, a Bantu tribe, but the rulers are Tutsi and there are other tribal minorities. *Economy*: mainly subsistence agriculture; coffee accounts for 80% of exports and tea and cotton are also important. Minerals have been found although industry provides only minimal revenue. The economy has been devastated by 10 years of civil war and the imposition (from 1996) of a trading blockade by many African countries. *History*: the area became part of German East Africa in 1890 and from 1919 was administered by Belgium, first under League of Nations mandate and then as a UN trust territory. It became independent in 1962. In 1966 the hereditary ruler Mwami Mwambutsa IV was deposed by his son, who was enthroned as Mwami Ntare V. In the same year, following a military coup, Capt (later Lt Gen) Michel Micombero set up a republic with himself as president, assuming absolute powers in 1972. In 1976 Jean-Baptiste Bagaza became president in a coup; he was overthrown in 1987 by Maj Pierre Buyoya. A Hutu, Melchior Ndadaye, was elected president in 1993 in Burundi's first democratic elections. He was killed after only months in office, as was his Hutu successor. Ethnic fighting intensified with wholesale massacres on both sides and some 500 000 refugees fled the country. A power-sharing government was set up but ethnic violence continued, culminating in a Tutsi-led coup (July 1996) and the reinstatement of Buyoya as president. Despite the formation of another multiethnic administration and the signing of a peace agreement in 2001 fierce fighting continued. In 2005 a new constitution was enacted and a further ceasefire was signed. Official languages: French and Kirundi. Currency: Burundi franc of 100 centimes. Area: 27 834 sq km (10 759 sq mi). Population (2007 est): 8 390 505. Capital: Bujumbura.

Bury A unitary authority in NW England, in Greater Manchester. Area: 99 sq km (38 sq mi). Population (2004 est): 182 100.

burying beetle A strong beetle, also called a sexton beetle, belonging to a genus (*Necrophorus*) occurring in N temperate regions. 15–35 mm long, many have black and orange markings.

ings. They feed and lay their eggs on the dead bodies of small animals, which they first bury. Family: *Silphidae* (carrion beetles).

Bury St Edmunds 52 15N 0 43E A market town in E England, in Suffolk. Its ruined abbey was built as a shrine to St Edmund, last King of East Anglia (martyred in 870 AD). Population (2001): 35 015.

Bush, George (Herbert Walker) (1924–) US statesman; Republican president (1989–93). Ambassador to the UN (1971–72), he was director of the CIA (1976–77) and vice president (1981–88) under Ronald Reagan. In 1991 he authorized US military action against Iraq in the *Gulf War; he was defeated in the 1992 elections.

His son **George W(alker) Bush** (1946–) also became Republican president (2001–), having previously been governor of Texas (1995–2001). Following a legal battle that ended in the Supreme Court, he emerged victorious over his Democrat opponent, Al Gore, in a disputed election (2000). Following *September 11, 2001, he launched a massive US attack on targets in Afghanistan (see WAR ON TERRORISM) and with the support of Britain, but not the UN, invaded Iraq (2003), toppling Saddam *Hussein (see IRAQ WAR). He was re-elected in 2004.

bushbaby A small nocturnal *prosimian primate of the genus *Galago* (4 species), of African forests. They are 27–80 cm long including the tail (15–40 cm). Common bushbabies (*G. senegalensis*) have soft dense greyish fur and a long bushy tail. They live in small groups. Family: *Lorisidae*.

bushel A unit of capacity (dry or liquid) equal to 8 gallons or 2219.36 cubic inches in the UK and 2150.42 cubic inches in the USA.

Bushido The code of the Japanese *samurai class. It originated in about the 13th century, although the term was not used until the 17th. Obedience to one's lord and fearlessness were its main virtues; in the 13th–14th centuries it was influenced by Zen Buddhism and in the 17th–19th centuries, by Confucianism. In the mid-19th century it became the basis of Japanese emperor worship and nationalism. See also MARTIAL ARTS.

bushmaster A pit viper, *Lachesis muta*, occurring in scrub and forests of Central and South America. The longest venomous snake (its venom can be fatal) of the New World, it reaches a length of 1.8 m and is brownish pink with dark diamond-shaped blotches.

bushrangers Australian outlaws in the late-18th and 19th centuries. They robbed farmsteads and stagecoaches, murdered, and plundered; some shared their gains with the poor. The most famous was Ned *Kelly.

bustard A large omnivorous bird of the family (*Otididae*; 22 species) occurring in grasslands of the Old World and having long legs adapted for running. Bustards have a long stout neck, broad wings, and a grey or brown mottled plumage. The great bustard (*Otis tarda*), 120 cm long and weighing 14 kg, is the largest European land bird. Order: *Gruiiformes* (cranes, rails, etc.).

butadiene ($\text{H}_2\text{C}=\text{CH}-\text{CH}=\text{CH}_2$) A colourless flammable gas made from *butanes and butenes. It is used in making synthetic rubbers.

butane (C_4H_{10}) A colourless flammable gaseous *alkane. It is used in the manufacture of synthetic rubber and, in its pressurized liquefied form, as a fuel.

Bute A Scottish island in the Firth of Clyde, in Argyll and Bute council area, separated from the mainland by the Kyles of Bute. The island serves Glasgow as a holiday resort. Area: 121 sq km (47 sq mi). Population (latest est): 8000. Chief town: Rothesay.

Butler, Samuel (1835–1902) British novelist. Son of a clergyman, he rejected his family and religion in 1859 to emigrate to New Zealand. In 1864 he returned wealthy and turned to literature. *Erewhon* (1872), which made him famous, satirizes Victorian ideals. The autobiographical *The Way of All Flesh* (1903) recounts his liberation from his family background.

buttercup An annual or perennial plant of the genus *Ranunculus*. Most species, including the common buttercup (*Ranunculus acris*), have yellow flowers. Family: *Ranunculaceae*.

butterflies and moths Insects belonging to the order *Lepidoptera* (about 100 000 species), distributed worldwide. The adults have two pairs of scale-covered wings, which are often highly coloured and patterned; the wingspan ranges from 4 mm to up to 300 mm. They all undergo a complete metamorphosis comprising a four-stage life cycle: egg, larva (see CATERPILLAR), *pupa (chrysalis), and adult (imago). The caterpillars feed mainly on plants, in some cases becoming serious crop pests; the adults feed mainly on nectar and other plant juices using a long tubular proboscis and may aid plant pollination in the process. Butterflies generally are active by day and rest with their

wings vertical; moths, which are mainly nocturnal, generally rest with their wings horizontal. Antennae, which are smooth and club-shaped in butterflies and plumed or feathery in moths.

butterwort A *carnivorous plant of the genus *Pinguicula* (about 30 species), found in the N hemisphere and South America. 12–15 cm high, they have a rosette of yellow-green leaves covered with sticky glands, on which insects are trapped, and a single funnel-shaped violet or pink flower. Family: *Lentibulariaceae*.

button quail A small ground-dwelling bird belonging to a family (*Turnicidae*; 15 species) found in warm Old World grassland regions. Button quails are 13–19 cm long with a brown streaked plumage, short wings, and a slender bill. The female courts the male, who incubates the eggs and tends the young. Order: *Gruiiformes* (cranes, rails, etc.).

Buxtehude, Dietrich (1637–1707) Danish composer. He settled in Germany in 1668 as organist at the Marienkirche, Lübeck. J.S. Bach walked 200 miles to Lübeck to hear Buxtehude's music. One of the most influential of the North German organists, he composed much sacred organ music.

Buxton 53 17N 155W A spa and resort in N central England, in the Peak District of Derbyshire on the River Wye. Its mineral waters were first used by the Romans. During the 1970s Buxton Opera House, built in 1903 and formerly used only as a theatre and cinema, was restored to its original condition. Population (1991): 19 854.

buzzard A *hawk belonging to a widespread genus (*Buteo*) characterized by broad wings, a rounded tail, and brown plumage. Buzzards hunt for small mammals, reptiles, etc., and soar gracefully. The common Eurasian buzzard (*B. buteo*), 55 cm long, occurs in a number of races; the migratory rough-legged buzzard (*B. lagopus*) is distinguished by its feathered legs.

buzz bomb See V-1.

Byatt, Dame A(ntonio) S(usan) British novelist and writer. Her novels include *The Virgin in the Garden* (1978), the Booker-prizewinning *Possession* (1990), and *A Whistling Woman* (2002). Her sister is Margaret *Drabble.

Byblos 34 08N 35 38E A Phoenician city state on the E Mediterranean coast, now Jubail (Lebanon). Egyptian records from the 14th to the 10th centuries BC attest a thriving trade with Byblos. Under Greek and Roman rule Byblos dwindled in importance but remained a

centre of orgiastic worship of Astarte (see APHRODITE). See also TYRE.

b

Byng, John (1704–57) British admiral who, in 1756, failed to relieve Minorca, then under attack by the French, and retreated to Gibraltar. He was made a scapegoat and shot for failing to do his duty—or, in Voltaire's satirical view, as a warning to his colleagues ("pour encourager les autres").

Byrd, William (?1543–1623) English composer, who, in spite of being a Roman Catholic, became organist of Lincoln Cathedral and subsequently of the Chapel Royal (1572). His compositions include Catholic masses and motets, Anglican services, anthems, and keyboard music.

Byron, George Gordon, 6th Baron

(1788–1824) British poet. Born with a clubfoot, he was lionized by London society after the publication of *Childe Harold's Pilgrimage* (1812). His many lovers included his half-sister Augusta Leigh, Lady Caroline Lamb, and Claire Clairmont (by whom he had a daughter, Allegra). His marriage (1815) to Annabella Milbanke lasted one year; their daughter, Augusta, became the Countess of Lovelace and a noted mathematician. Byron then left England to stay near Geneva with *Shelley. In Italy in 1818 he began writing the satire *Don Juan*. He died in Greece while training troops at Missolonghi for the Greek war of independence.

Byzantine Empire See EASTERN ROMAN EMPIRE.

Byzantium See ISTANBUL.

Cabal Five ministers of Charles II of England who dominated politics from 1667 to about 1674. They were Sir Thomas Clifford (1630–73), Lord Ashley (later 1st Earl of Shaftesbury), the 2nd Duke of Buckingham, the Earl of Arlington (1618–85), and the Earl of Lauderdale (1616–82).

cabbage A flowering plant, *Brassica oleracea* var. *capitata*, widely cultivated as a vegetable. The short stem bears a round heart, up to 25 cm in diameter, of tightly compressed leaves. All cabbages and many other brassicas are derived from the wild cabbage (*B. oleracea*), a perennial herb native to coastal regions of W Europe. Family: *Cruciferae*.

cabbage white butterfly A white butterfly belonging to the genus *Pieris*, whose caterpillars eat cabbages and related vegetables. The species are the large white (*P. brassicae*), the green-veined white (*P. napi*), and the small white (*P. rapae*). Family: *Pieridae*.

cabinet A committee of the executive heads of government. In the UK the cabinet originated in the 16th-century cabinet council, a committee of the *Privy Council. Cabinet power was enhanced by William III's recognition that his ministers should be selected from the political group prominent in parliament and by the emergence in the 18th century of the *prime minister. By the end of the 19th century the principle of collective cabinet responsibility to parliament had been established. Cabinets now consist of some 20 leading ministers, from either house of parliament, whom the prime minister has appointed to head executive departments.

cachalot See SPERM WHALE.

cactus A flowering plant belonging to the family *Cactaceae* (over 2000 species). These perennial herbs and shrubs grow chiefly in the drier regions of tropical America and the West Indies. Plant size and shape varies widely; the

larger species may grow to a height of 10 m or more. Cacti show pronounced modifications to prevent water loss—their leaves or shoots are reduced to spines, they have thick waxy outer layers, and many possess succulent stems that store water. The flowers, borne singly, are large and brightly coloured.

caddis fly A mothlike insect, also called sedge fly, belonging to the worldwide order *Trichoptera* (about 5000 species). Caddis flies—15–40 mm long, with long antennae—are found in cool damp places and feed on nectar. The omnivorous larvae (called caddis worms) live in flowing fresh water, often in portable cases constructed from sand, stones, pieces of leaf, etc.

Cade, Jack (d. 1450) English peasant who led a Kentish rebellion in 1450 against Henry VI. The rebels demanded an end to high taxation and court corruption and the recall of Richard Plantagenet, Duke of York, from Ireland. In spite of initial successes, the rebellion was soon put down and Cade was killed.

Cader Idris A mountain ridge in NW Wales, in Gwynedd, in Snowdonia National Park. It rises to 892 m (2927 ft) at Pen-y-Gader.

Cádiz 36 32N 6 18W A city and seaport in SW Spain, in Andalusia on the Gulf of Cádiz. It was founded by Phoenician merchants (c. 1100 BC). Following the discovery of America it prospered as a base for the Spanish treasure fleet; the harbour was burned by Sir Francis Drake in 1587. Population (1998 est): 143 121.

cadmium (Cd) A soft dense metal, discovered in 1817 by Friedrich Strohmeyer (1776–1835). Cadmium occurs naturally as the mineral greenockite (CdS) and in zinc, copper, and lead sulphide ores. It is chemically similar to lead and is a component of low-melting-point alloys. It is used in the control rods of nuclear reactors, in light meters, television-tube phosphors, batteries, solders, and in special low-

friction alloys for bearings. At no 48; at wt 112.41; mp 321.1°C; bp 767°C.

Caen 49 11N 0 22W A city and port in NW France, the capital of the Calvados department on the River Orne. Caen has iron, silk, and leather industries. The 19th-century ship canal made it an important port; it was badly damaged in World War II. Population (1999): 113 987.

Caernarfon (English name: Caernarvon) 53 08N 4 16W A town in North Wales, on the Menai Strait, the administrative centre of Gwynedd. Caernarfon is a tourist centre, market town, and small port. Its castle (built by Edward I in 1284) is the likely birthplace of Edward II, the first Prince of Wales, and was the scene of the investiture of Prince Charles as Prince of Wales in 1969. Population (1991): 9695.

Caerphilly 1. 51 35N 3 14W A market town in South Wales, in Caerphilly county borough. In a former coalmining area, it is known for Caerphilly cheese (originally made here) and its castle, the largest in Wales. Population (1991): 28 481. 2. A county borough in SE Wales, created in 1996 from parts of Mid Glamorgan and Gwent. Area: 275 sq km (106 sq mi). Population (2001): 169 521.

Caesar, (Gaius) Julius (100–44 BC) Roman general and statesman, whose career marked the end of the Roman Republic. Caesar, born of a patrician family, allied himself with the popular party by his marriage in 84 to Cinna's daughter Cornelia. After her death in 68, he married Pompeia, whom he divorced in 62, and in 59 he married Calpurnia.

During the 60s Caesar ascended the political ladder, joining *Pompey and *Crassus in the first Triumvirate (60) and becoming consul (59) and then governor of Gaul. Caesar's subjugation of Gaul (58–50), and his brief campaigns in Britain (55, 54), confirmed his military reputation and made him a popular hero. When the Triumvirate ended (50) the Senate, with Pompey's support, asked Caesar to resign his armies. He refused and, crossing the River Rubicon into Italy (49), initiated the civil war. Caesar defeated Pompey at *Pharsalus (48) and spent the following winter in Alexandria with Cleopatra, who became his lover. He later defeated the remnants of Pompey's party at Thapsus (46) and Munda (45), after which he returned to Rome as dictator. On the Ides of March (15 March 44), Caesar was assassinated in the Senate House by republicans, including *Brutus and Cassius, who feared his monarchical aspirations.

Caesar wrote outstanding accounts of his

campaigns in Gaul (*De bello gallico*) and the civil war (*De bello civili*).

Caesarean section A surgical operation in which a baby is delivered through an incision made in the abdominal wall and the womb, so called because Julius Caesar was believed to have been born in this way. Perhaps a more plausible etymology is that it derives from *caesus* (past participle of Latin *caedere*, to cut). Caesarean section is employed when a baby cannot be delivered through the vagina; for instance, because it is abnormally positioned in the womb or is too large to pass through the birth canal.

caesium (Cs) The most reactive and electropositive alkali metal. It was discovered by Bunsen and Kirchhoff in 1860 and occurs naturally in the mica lepidolite and as pollucite, (Cs,K)AlSi₃O₆·nH₂O. It is used in photoelectric cells. At no 55; at wt 132.905; mp 28.39°C; bp 671°C.

caffeine (or **theine**; C₈H₁₀O₂N₄) The substance in coffee and tea that acts as a stimulant. In its pure form it is white and crystalline.

Case, John (1912–92) Avantgarde US composer. His works include *4 minutes 33 seconds* (1954), silence in three movements for any instrument(s), *Apartment Building 1776* (1976), *Thirty Pieces for Five Orchestras* (1981), and *Europerras 3 and 4* (1990).

Cagney, James (1899–1986) US actor. He began making films in the 1930s, after working in vaudeville, and became famous for his portrayals of tough gangsters. His films include *Public Enemy* (1931) and *The Roaring Twenties* (1939).

Cain In the Old Testament, the elder son of Adam and Eve. He became jealous of his younger brother Abel, whose burnt offerings were accepted by God in preference to his own. He killed Abel and was banished, marked as the world's first murderer.

Caine, Sir Michael (Maurice Micklewhite; 1933–) British film actor. His numerous films include *The Ipcress File* (1965), *Get Carter* (1971), *Educating Rita* (1983), *Little Voice* (1999), and *The Quiet American* (2002). He was knighted in 2000.

Cainozoic era See CENOZOIC ERA.

Cairngorm Mountains A mountain range in NE Scotland, in Aberdeenshire and Highland, forming a N extension of the Grampians. Its highest peaks include Ben Macdui at 1309 m (4296 ft) and Braeriach at 1296 m (4252 ft). The area is popular for winter sports, centred

on Aviemore. It was designated a national park (the UK's largest) in 2003.

cairn terrier A breed of small dog originating in the Scottish Highlands, where it was used to flush game from cover (such as stone cairns). It has a long outer coat and a short soft undercoat; the colour varies from red, sandy, or grey to almost black. Height: about 25 cm.

Cairo (Arabic name: El Qahira) 30°01'N 31°14'E The capital of Egypt, situated in the N of the country on the E bank of the River Nile. It is the largest city in Africa. Its many mosques include the Mosque of Omar (643 AD). Cairo's earliest remaining Arabic building. Population (1996 est): 9 900 000. See also GIZA, EL.

caisson disease See DECOMPRESSION SICKNESS.

calabash A tree, *Crescentia cujete*, 7.5–15 m tall, native to tropical America (particularly Brazil). Funnel-shaped flowers are borne on the old stems and produce gourdlike fruits, up to 50 cm long. These fruits have woody outer layers and, after removal of the inner pulp, are used as pots, cooking utensils, etc. Family: Bignoniaceae.

Calabria A mountainous region occupying the southern "toe" of Italy. Crotona is the main industrial centre. Area: 15 080 sq km (5822 sq mi). Population (2000 est): 2 050 478. Capital: Catanzaro.

Calais 50°57'N 1°52'E A port in N France, in the Pas-de-Calais department. It lies on the shortest sea route to England. Calais produces lace, tulle, and other textiles. *History*: besieged and captured by the English under Edward III in 1346, Calais remained in English hands until 1558. Population (1995 est): 75 309.

calamine An ore of zinc. In English usage it refers to zinc carbonate (smithsonite) and in the USA it refers to zinc silicate (hemimorphite). A skin lotion of the same name contains zinc oxide.

Calceolaria A genus of perennial herbs and shrubs (300–400 species) native to temperate South America. The plants grow to a height of 30–70 cm and bear brightly coloured slipper-shaped flowers. Some species and hybrids are grown as ornamentals. Family: Scrophulariaceae.

calcite A common rock-forming mineral consisting of crystalline calcium carbonate. It is usually colourless or white. It occurs in igneous, metamorphic, and sedimentary rocks. See also LIMESTONE.

calcium (Ca) A reactive metal, first isolated by Sir Humphry Davy in 1808. It occurs in nature as calcite (CaCO_3), *fluorite (CaF_2), and *gypsum ($\text{CaSO}_4 \cdot 2\text{H}_2\text{O}$) and is an essential constituent of shells, bones, and teeth. The element is extracted by electrolysis of the molten chloride (CaCl_2). At no 20; at wt 40.08; mp $842 \pm 2^\circ\text{C}$; bp 1494°C .

calculus The mathematical techniques, developed by *Newton and *Leibniz, that are based on the concept of infinitely small changes in continuously varying quantities. For example, calculus is used to define the velocity of a moving body as the rate of change of its position at any instant. Velocity (v) is said to be the derivative of position (x) with respect to time (t); in calculus it is written $v = dx/dt$. In this notation dt is a vanishingly small time interval and dx is the distance the body travels in this time. If x is a known function of t , values

1. The derivative dx/dt at P gives the slope of the curve at P. When the function has a stationary (e.g. a maximum as at A or a minimum as at B) value, $dx/dt = 0$.

2. The integral $\int_{t_1}^{t_2} v \cdot dt (= x_2 - x_1)$ is the shaded area, i.e. it is the sum of all the areas $v \cdot dt$ of the infinitely thin slices. The area between A and B is subtracted since v is negative.

calculus. The two basic techniques are 1. differentiation and 2. integration.

for v at any time can be obtained by calculating the derivative of (differentiating) this function with respect to time. Similarly, the derivative of the velocity (or the second derivative of position) at any instant gives its acceleration (a), i.e. $d^2x/dt^2 = dv/dt = a$. The **differential calculus** is the technique for making such calculations. On a graph, the derivative of a function is the gradient of the curve at any point.

The **integral calculus** is concerned with the reverse process. If velocity is a continuously varying function of time, the change in position over a measurable time interval is calculated by summing the products of v and dt for each of the infinitesimally small intervals of time (dt) that make up the measurable interval. As with differential calculus, the extraction of integrals follows general rules. On a graph, the area between the curve of a function and the horizontal axis is the integral of the function over the specified interval.

Calcutta (official name from 1999: Kolkata) 22°35'N 88°21'E A city in India, the capital of West Bengal on the River Hooghly. It is a major industrial centre and the most important seaport on the E coast of India. Jute manufacturing dominates the industrial sector, while engineering, cotton, and chemicals are also important. The conurbation has a vast population, many of whom live in appalling conditions. By way of contrast, the city centre contains many imposing buildings, situated around Fort William (a British building dating from 1758). Calcutta was founded in 1692 as a trading post for the British East India Company (see also BLACK HOLE OF CALCUTTA). Population (1991 est, urban area): 10 916 272.

Calderdale A unitary authority in N England, in West Yorkshire. Area: 364 sq km (140 sq mi). Population (2001): 192 396.

Calderón (de la Barca), Pedro (1600–81) Spanish dramatist at the court of Philip IV. After the death of Lope de Vega he became the leading Spanish playwright. His plays include *Life is a Dream* (1635) and *The Mayor of Zalamea* (1640).

Caledonian Canal A system of lochs and canals in Scotland, linking the North Sea with the Irish Sea, via the Great Glen. Engineered by Thomas Telford, it was opened to navigation in 1822. It is now used mainly by small craft. Length: about 100 km (60 mi).

calendar Any of a variety of systems for the reckoning of time over an extended period. Calendars are usually based on the earth's orbital period around the sun (a year), although

in some systems the moon's orbital period around the earth (a month) is used. Since the seasons recur after each tropical *year (which contains 365.2422 days), the length of the calendar year, averaged over many years, should correspond as closely as possible to that of the tropical year. This is achieved by using leap years, which contain one more day than the usual calendar year.

In 46 BC, Julius Caesar established the so-called **Julian calendar** in which a period of three years, each of 365 days, was followed by a leap year of 366 days. The average length of the year was therefore 365.25 days. Since this was over 11 minutes longer than the tropical year, an extra day appeared about every 128 years. This discrepancy was amended by the **Gregorian calendar**, which was introduced in Roman Catholic countries in 1582 by Pope Gregory XIII, was made law in Britain and its colonies in 1752, and is now in almost worldwide use. Leap years are restricted to century years divisible by 400 (e.g. 1600 and 2000) and any other year divisible by four. This reduces the average length of the calendar year to a much more acceptable 365.2425 days.

Calgary 51°05'N 114°05'W A city in W Canada, in Alberta. It is the centre of Canada's petroleum industry and the distribution and farming centre of S Alberta. The Calgary Stampede, a famous rodeo, is celebrated annually. Population (1996): 768 082.

Cali 3°24'N 76°30'W The third largest city in Columbia. It is a commercial and industrial centre, with a university founded in 1945. Population (1999 est): 2 077 386.

calico A simple woven cotton fabric that originated as a printed fabric from Calicut, India (now named *Kozhikode). Strong and serviceable with a wide range of textures, it is used mainly for dresses and domestic purposes.

California The third largest state in the USA, on the W coast. It consists of a narrow coastal plain rising to the Coast Range, with the fertile central valleys of the Sacramento and San Joaquin Rivers, deserts in the S, and the Sierra Nevada Mountains in the E. It is the most populous and prosperous state in the USA; the predominantly urban population is concentrated along the coast. Oil is exploited along with natural gas, cement, sand and gravel, and borate. Aircraft and ship construction are important industries, as well as general construction and food processing; wine production is especially important. Since the 1980s the area S of San Francisco has become known as Silicon Valley

<i>Gregorian calendar</i>	<i>Hebrew calendar</i>	<i>Islamic calendar</i>	<i>Chinese calendar</i>	
solar year of 365.2425 days	lunar year; the year 5750 started on 1 January 1990	lunar year; the year 1410 started on 18 September 1990	lunar and solar cycles; 24 fortnightly periods

Calendars still in use

owing to the concentration of high-tech industry. The state also produces grapes, tomatoes, cotton, sugar beet, strawberries, citrus fruits, hay, beef, cattle, and turkeys. *History*: first discovered by the Spanish (1542) it remained under their control until it was ceded to the USA (1848). In the same year gold was discovered, leading to a rapid increase in the number of immigrants. California became a state in 1850. Area: 411 013 sq km (158 693 sq mi). Population (2000): 33 871 648. Capital: Sacramento.

californium (Cf) A synthetic transuranic element first isolated in 1950. Californium-252 is an intense neutron emitter. It is used as a neutron source in instruments for determining moisture contents and discovering precious metals. At no 98; at wt (251).

Caligula (Gaius Caesar; 12–41 AD) Roman emperor (37–41), son of Germanicus Caesar and Agrippina the Elder. Succeeding Tiberius, he

initially enjoyed great popularity but his subsequent tyrannical and extravagant behaviour brought allegations of madness, from both contemporaries and historians, and he was assassinated.

calisaya See CINCHONA.

Callaghan, (Leonard) James, Baron (1912–2005) British statesman; Labour prime minister (1976–79). He entered parliament in 1945 and was chancellor of the exchequer (1964–67), home secretary (1967–70), and foreign secretary (1974–76). He became prime minister when Harold Wilson resigned and was defeated in the 1979 election.

Callas, Maria (Maria Kalogeropoulos; 1923–77) US-born soprano of Greek parentage. She possessed a brilliant coloratura voice and fine acting ability. From 1950 she was prima donna of La Scala, Milan.

Calliope In Greek legend, goddess of epic poetry and the chief of the nine *Muses. She was loved by Apollo; her children included Hymen, Ialemus, and *Orpheus.

calorie A former unit of heat replaced by the joule. Formerly defined as the amount of heat required to raise the temperature of 1 gram of water through 1°C, the calorie is now defined as 4.1868 joules. The kilocalorie or Calorie (1000 calories) is still used to express the energy value of foods.

Calvary A hill beyond the walls of Jerusalem on which Christ was crucified. The Hebrew name is Golgotha (a skull). Its precise location is unknown but traditionally it has been taken as the spot, now within the Church of the Holy Sepulchre, where St Helena discovered a supposed relic of the Cross in 327 AD.

Calvin, John (1509–64) French Protestant reformer. He studied law and theology and in the early 1530s openly sided with Protestantism. Settling in Basle in 1536, he published the first edition of his influential *Institutes* setting out his beliefs. During a visit to Geneva in 1536 he met the Protestant reformer, Guillaume Farel (1489–1565), who persuaded him to stay. Their efforts to organize the Reformation in the city resulted in their exile (1538). Calvin then preached in Strasbourg, but was invited back to Geneva in 1541, remaining there as its virtual dictator until his death. His theological teachings, known as **Calvinism**, form the basis of the doctrines of most of the reformed Churches that are not Lutheran, including the state Churches of the Netherlands and Scotland (see **PRESBYTERIANISM**), various Nonconformist Churches, and some Churches in North America and Germany. Calvin's systematic writings stress the transcendent power of God and man's total depravity outside God's redeeming grace. Like Luther, Calvin believed that faith must be based on Scripture alone, that justification (that is, righteousness in God's eyes) could only be achieved through faith. Unlike Luther, he believed that some people, the elect, were predestined for salvation and the rest for damnation. He also believed that the church should control the state.

Calvino, Italo (1923–85) Italian novelist and writer. His witty and erudite fantasies include the trilogy *Our Forefathers* (1952–60) and *Invisible Cities* (1972).

Calypso A Greek nymph, the daughter of *Atlas, who kept *Odysseus with her on the island of Ogygia for several years before allowing him to return home.

calypso orchid A rare and highly prized perennial orchid, *Calypso bulbosa*, also known as the fairy slipper orchid, native to cold N temperate regions. 8–10 cm high, it has a solitary pink flower with brown, purple, and yellow markings and a single crinkled dark-green leaf.

Camargue, la The Rhône delta area in S France, between the river channels of the Grand Rhône and the Petit Rhône. Once chiefly marshy, much land reclamation has occurred and cattle, especially bulls for the bullring, and horses are reared. Rice is also grown here. Area: about 560 sq km (215 sq mi).

Camberwell beauty A *nymphalid butterfly, *Nymphalis antiopa*, occurring in temperate Eurasia and in North America, where it is called mourning cloak because of its sombre coloration: purple wings with cream edges. The adults hibernate and the caterpillars feed on various trees.

cambium A layer of cells in woody plants that is responsible for producing additional *xylem and *phloem tissue, bringing about an increase in girth. The cambium also produces bark and protective callus tissue after injury. See also **MERISTEM**.

Cambodia A country in SE Asia, in the Indochina Peninsula on the Gulf of Thailand. It consists mainly of an alluvial plain drained by the River Mekong and enclosed by mountains. Most of the inhabitants are Khmers, with small minorities of Vietnamese and Chinese. *Economy*: mainly agricultural, the staple crop being rice. Production was severely reduced during the Khmer Rouge regime, but is now recovering. Industry was suspended entirely during the Khmer Rouge period but now includes garment making. Cambodia is rich in forests, and phosphates, gemstones, and gold are produced; there are also known quantities of unexploited iron ore and manganese. There is an abundance of freshwater fish. Tourism is developing. *History*: the kingdom of Funan (1st–6th centuries AD) was conquered by the Buddhist *Khmers. Following the collapse of their empire in the 15th century, Cambodia was prey to attack from the Thais and Vietnamese until 1863, when it became a French protectorate. In 1887 it became part of the Union of *Indochina. In 1949 it achieved self-government as a member of the French Union, gaining full independence in 1953. Under Prince *Sihanouk Cambodia was used as a base by North Vietnamese (communist) forces (see **VIETNAM WAR**); following the failure of his attempts to negotiate their withdrawal, he was deposed (1970) by Gen

Lon Nol (1913–85), who was supported by the USA. Shortly afterwards US and South Vietnamese troops invaded the renamed Khmer Republic to support Lon Nol against the communist Khmer Rouge guerrillas. In the ensuing civil war the Khmer Rouge was finally victorious in 1974, and in 1975 the country was renamed Kampuchea. The Khmer Rouge Government, led by Pol Pot (1925–98), attempted to reshape the country's economy on cooperative lines by forcing Cambodians out of the towns, depriving them of their property, and killing many thousands of the aged, sick, or dissenting. Altogether some two million people died as a result of these policies. The Vietnamese invaded the country in December 1978; Pol Pot was overthrown and a government set up under Heng Samrin. In 1982 the Khmer Rouge, with two other exiled factions, formed the Coalition Government of Democratic Kampuchea (CGDK), with a seat at the UN. Guerrilla attacks by CGDK forces on the forces of prime minister Hun Sen continued after the Vietnamese withdrew in 1989. In 1991 UN peace talks led to the creation of a new governing coalition. Sihanouk returned as head of state and a democratic monarchist constitution was adopted in 1993. However, the Khmer Rouge boycotted multiparty elections and continued fighting; the later 1990s saw splits in the movement, leading to its effective demise by 1999. Elections in 1998 and 2003 resulted in victory for Hun Sen's party. King Sihanouk was succeeded by his son Sihamoni in 2004. Official language: Khmer; French is widely spoken. Currency: riel of 100 sen. Area: 181 000 sq km (71 000 sq mi). Population (2007 est): 13 995 904. Capital: Phnom Penh.

Cambrian Mountains A mountain system in Wales, extending N–S from Gwynedd, through Powys to Carmarthenshire. The name is sometimes used for all the Welsh mountains and sometimes reserved for the central range, i.e. excluding Snowdonia in the NW and the Brecon Beacons and Black Mountains in the SE.

Cambrian period The earliest geological period of the *Palaeozoic era. It began about 590 million years ago and lasted at least 70 million years, lying between the Precambrian and Ordovician periods. Rocks of this period are the first to contain an abundance of fossils, including primitive representatives of most invertebrates living today. Trilobites were very abundant, as well as brachiopods and gastropods. The Cambrian period is divided into Lower, Middle, and Upper.

Cambridge 1. 52 12N 007E A city in E Eng-

land, the administrative centre of Cambridgeshire on the River Cam (or Granta), a tributary of the Great Ouse. The city is dominated by the federation of colleges that form **Cambridge University**. The oldest college, Peterhouse, dates from 1284. Kings College was founded in 1441 and its chapel (built 1446–1515 in the perpendicular gothic style) is a distinctive landmark. The largest college, Trinity, was founded by Henry VIII in 1546. The first college for women, Girton, opened in 1869. Industries in the town include electronics, high-tech research and development, biotechnology, and the manufacture of scientific instruments. It is also an important market centre for East Anglia. Population (2005 est): 124 000. 2. 42 22N 71 06W A city in the USA, in Massachusetts on the Charles River opposite Boston. It is the site of Harvard University (1636) and the Massachusetts Institute of Technology (MIT). Industries include biotechnology and printing and publishing. Population (2004 est): 100 771.

Cambridgeshire A county of E England. In 1965 it was combined with the Isle of Ely and in 1974 it absorbed Huntingdon and Peterborough as well as parts of W Suffolk. Peterborough became an independent unitary authority in 1998. It consists chiefly of low-lying fenland, crossed by the Rivers Ouse and Nene. It is predominantly agricultural, the main products being cereals, fruit, and vegetables. Area (excluding Peterborough): 3068 sq km (1184 sq mi). Population (2004 est, excluding Peterborough): 578 800. Administrative centre: Cambridge.

camel A hooved mammal belonging to the genus *Camelus* (2 species). Camels are used for riding, as pack animals, and as a source of milk, meat, wool, and hides. The one-humped Arabian camel (*C. dromedarius*) is about 2 m high at the shoulder and generally brown in colour. The dromedary is a long-legged breed of Arabian camel, developed for racing and riding. The heavier two-humped Bactrian camel (*C. bactrianus*) is native to central Asian steppes, where wild herds still exist.

Adapted to living in sandy deserts, camels can close their nostrils and have heavy protective eyelashes. Although unable to store water, camels can store fat in the hump. Family: *Camelidae*; order: *Artiodactyla*.

Camellia A genus of evergreen shrubs and trees (80–100 species) native to India, China, and Japan. Several species are widely grown as ornamentals. The best known, *C. japonica*, grows to a height of 9 m and has attractive glossy oval leaves. The genus also includes the *tea plant. Family: *Theaceae*.

Camelot The legendary capital of King Arthur's kingdom (see ARTHURIAN LEGEND). Cadbury Camp, near Yeovil, and Winchester are among the places identified with it.

Camembert 48 52N 010E A village in NW France, in the Orne department. Camembert is famous for the creamy cheese named after it.

camera, photographic A device for producing a photographic image. Basically, a camera consists of a light-tight box containing a lens and light-sensitive *film or plate. The light image coming through the lens is brought into focus on the film by adjusting the distance between the film and the lens. A picture is taken by opening the shutter over the lens for a certain period to expose the film. The exposure time is determined by the shutter speed. The diameter of the opening (aperture) in front of the lens is measured by its *f-number. Shutter speed and lens aperture determine the light available to record the image on the film.

In a **digital camera**, the light-sensitive film is replaced by a medium that records the image in digital form, so that it can be seen on a small screen forming part of the camera. The digital information can be fed into a computer, viewed on the screen as a single image, improved or manipulated in a variety of ways using computer software, and printed using a colour printer.

camera, television A camera for the instantaneous transmission of moving pictures. The scene to be televised is focused onto a screen in the electronic camera tube. This optical image is scanned in horizontal lines, fast enough to appear as a continuous moving picture to the human eye; in most cameras, the image is scanned 25 to 30 times per second. The intensity of light at each point of the image is converted to an electrical signal, which is amplified before being transmitted together with the sound and synchronization signals.

Cameron, David (William Donald) (1966–) British politician; leader of the Conservative Party (2005–). An MP since 2001, he has attempted to broaden the party's appeal since becoming leader.

Cameroon, Republic of (French name: République du Cameroun) A country in W Africa, on the Gulf of Guinea. Hot swampy coastal plains rise to forested plateaus in the centre and to the Adamwa Highlands in the N. The main river is the Sanaga. The population consists of over a hundred different ethnic groups, the most numerous being the Bamileke. *Economy*: chiefly subsistence agricul-

ture with varied crops; the main cash crops are cocoa and coffee. Aluminium smelting is the chief industry. Oil was discovered in 1973 and provides half the country's revenue. *History*: in 1884 the German protectorate of Kamerun was established and after World War I it was divided into the French and British Cameroons, which were governed from 1922 under League of Nations mandate and from 1946 as UN trust territories. The French Cameroons attained self-government in 1957 and became independent as the Federal Republic of the Cameroon in 1960. After a plebiscite in the British Cameroons in 1961, the S joined Cameroon (which became a united republic in 1972) and the N joined Nigeria. The early 1990s saw mounting opposition to one-party rule. In 1992 Paul Biya (1933–) was re-elected president amid allegations of fraud, leading to riots and a state of emergency. Legislative elections in 1992, 1997, and 2002 likewise returned the ruling party but were marred by allegations of unfairness. Cameroon joined the Commonwealth in 1995. Official languages: French and English. Currency: CFA franc of 100 centimes. Area: 475 442 sq km (183 530 sq mi). Population (2007 est): 18 060 382. Capital: Yaoundé.

Camões, Luis de (c. 1524–80) Portuguese poet and soldier. After 17 years wandering in the Portuguese colonies in the East, he returned destitute to Lisbon. In 1572 he published *The Lusiad*, an epic celebrating the 1497 voyage of da *Gama. His lyrical poetry is also much admired.

camomile (or **chamomile**) A perennial scented European herb, *Anthemis nobilis* (or *Chamaemelum nobile*). The spreading much-branched stems (10–30 cm in length) carry long-stalked daisy-like flowers.

Campaign for Nuclear Disarmament (CND) An organization formed in 1958 to campaign for Britain's nuclear disarmament. In the late 1950s and early 1960s, led by Canon John Collins (1905–82) and Bertrand *Russell, it organized large demonstrations, including the Aldermaston marches. It revived in the early 1980s amid new fears of nuclear war but membership has since declined.

Campanula A genus of annual and perennial herbaceous plants (about 300 species), often known as bellflowers, native to N temperate zones and tropical mountains. 15–120 cm high, they bear spikes of blue, pink, or white bell-shaped flowers. The fruit is a capsule. Some species (including *Canterbury bell) are grown as ornamentals. Family: *Campanulaceae*.

Campbell, Sir Malcolm (1885–1949) British

motor engineer, who broke the land-speed record nine times between 1924 and 1935 and the water-speed record three times between 1937 and 1939. He was the first man to exceed 483 km per hour (300 mph; 1935). His son **Donald Malcolm Campbell** (1921–67) also set land- and water-speed records, including 648.7 km per hour (403.1 mph) for a wheel-driven car at Lake Eyre (1964). He was killed in an attempt to break his own water-speed record on Coniston Water. The speed at which he crashed, 527.9 km per hour (328 mph), was the unofficial record for several years. His daughter **Gina Campbell** (1948–) broke the women's water-speed record in 1984.

Campbell, Sir (Walter) Menzies

(1941–) British politician; leader of the Liberal Democrats (2006–). A former Olympic sprinter, he became an MP in 1987.

Campbell-Bannerman, Sir Henry (1836–1908) British statesman; Liberal prime minister (1905–08). Campbell-Bannerman's government granted the Transvaal and Orange River Colony responsible government and passed the Trades Disputes Act (1906), which gave trades unionists greater freedom to strike.

Camus, Albert (1913–60) French novelist, an exponent of *existentialism. Born in poverty in Algiers, he won a school scholarship and studied philosophy at university. During World War II he edited *Combat*, a journal of the French Resistance. Camus published several collections of essays and plays, and three novels, notably *The Outsider* (1942), *The Plague* (1947), and *The Rebel* (1953). In 1957 he won the Nobel Prize.

Canaan An area roughly corresponding to modern Israel, W Jordan, and S Syria, known from the Bible as the land promised by God to the Israelites before the Exodus.

Canada A country occupying the entire northern half of the North American continent (except for Alaska). More than half of Canada consists of the Canadian Shield, at the centre of which lies the Hudson Bay lowlands. The Western Cordillera, which is partly made up of the Coast Mountains and the Rocky Mountains, runs parallel to the Pacific coast. Between the Rocky Mountains and the Canadian Shield lie the Interior Lowlands (consisting of prairies, plains, and the Mackenzie Lowlands). The SE region of Canada is dominated by the St Lawrence River and the *Great Lakes and is the most densely populated area in the country. The population is mainly of British and French descent but there are several substantial minorities, including Germans,

Italians, Ukrainians, and Dutch as well as the original inhabitants, the Indians and Inuit. *Economy:* both agriculture and industry are highly developed and the numerous manufacturing industries (concentrated mainly in Ontario and Quebec) include paper, iron and steel, motor vehicles, telecommunications equipment, and food processing. Canada is the world's largest producer of zinc, potash, and uranium; other mineral resources include asbestos, nickel, cadmium, sulphur, molybdenum, silver, and gold. Oil production has increased since the discovery of large oilfields in Alberta and natural gas is also produced. Agriculture is important, with cereals in the Prairie Provinces and considerable fruit growing in British Columbia and Ontario. There is a valuable fishing industry; forestry has long been important to Canada's economy and the other traditional industry, the fur trade, continues. Exports include motor vehicles and parts, wood, wood pulp, and paper, oil, gas, and petroleum products. *History:* there is evidence of Viking settlement in the NE of Canada around 1000 AD. In 1497 John Cabot reached Newfoundland and Nova Scotia, the first being claimed for England in 1583. In 1534 Jacques Cartier explored the Gulf of St Lawrence and in 1608 Champlain established the first permanent settlement at Quebec. Known as New France, this became a royal province in 1663. Later in the 17th century, when the *Iroquois defeated the *Huron Indians, the French colony was almost completely destroyed. The fur trade was of great importance to all settlers and in 1670 the English set up the Hudson's Bay Company. By 1696 the French and English were in conflict: in 1713 the Treaty of Utrecht gave Acadia (former French colony centred on present-day Nova Scotia), Newfoundland, and Hudson Bay to Britain and after the Seven Years' War, during which Gen Wolfe defeated the French under Gen Montcalm (1759), Canada was ceded to Britain by the Treaty of Paris (1763). In the late 18th century the United Empire Loyalists, fleeing from the American Revolution, settled in Canada. The ensuing racial tension led to the division of Quebec into French-speaking Lower Canada and English-speaking Upper Canada (1791), which were reunited in 1841. By the British North America Act (1867) a confederation of Lower Canada (Quebec), Upper Canada (Ontario), Nova Scotia, and New Brunswick was established. In 1869 Rupert's Land was bought from the Hudson's Bay Company; the province of Manitoba was created from it a year later. In 1871 British Columbia and in 1873 Prince Ed-

ward Island joined the confederation. Alberta and Saskatchewan were created from the NW Territories in 1905. Canada's constitutional independence was defined by the Statute of Westminster in 1931. The main political problem in recent decades has been the French-Canadian separatist agitation, led by the Quebec Liberation Front. Since 1982, when a new constitution for Canada was signed by Elizabeth II, Quebec has acted outside the constitution, despite attempts (1985) to achieve reconciliation. Proposals to give Quebec greater autonomy were rejected in a national referendum (1992), while Quebec voters narrowly rejected (1995) the proposal that the province should become a sovereign state. The Liberal Party, which had held office for most of the previous 43 years, lost power to the Progressive Conservatives in 1979 but regained it in 1993; the conservatives returned under Stephen Harper in 2006. In 1999 a vast area of the Arctic NE was designated as an autonomous Inuit territory named *Nunavut. Official languages: English and French. Currency: Canadian dollar of 100 cents. Area: 9 976 169 sq km (3 851 809 sq mi). Population (2007): 33 390 141. Capital: Ottawa.

Canada balsam A transparent resin obtained from fir trees. It is used as an adhesive in optical instruments because its refractive index is similar to that of glass.

Canada goose A large *goose, *Branta canadensis*, that breeds in Canada and Alaska, migrating in flocks to the southern USA for the winter. It is 60–100 cm long and has a black head and neck, white throat, dark-brown back, and pale underparts.

Canaletto (Antonio Canal; 1697–1768) Venetian painter, famous for his views of Venice. He trained under his father, a theatrical-scenery painter, before visiting Rome (1719–20), where he designed opera sets. His popularity with English collectors led to a stay in England (1746–55), where he painted views of London.

canals Man-made open water channels. They are divided into two categories: conveyance canals and navigation canals. The former carry water for irrigation, power, or drainage; the latter, to facilitate transportation, often connect two natural waterways. Canals have been dug from ancient times. The Grand Canal in China, started in 109 BC, was 1000 km (620 mi) long by the 8th century and carried 1.8 million tonnes of freight per annum. Some modern ship canals achieve spectacular reductions in voyage distances, especially the *Suez Canal (completed in 1869) and the *Panama Canal

(1914). Others of considerable local importance include the Corinth Canal (1893) and the St Lawrence Seaway (1959) connecting the Great Lakes.

canary A small songbird, *Serinus canarius*, native to the Canary Islands, Madeira, and the Azores. Wild canaries have an olive-green plumage with yellow to grey underparts streaked with black. Popular as cagebirds since the 15th century, they have been selectively bred both for their musical song and attractive yellow plumage. Subfamily: *Carduelinae*; family: *Fringillidae* (finches).

Canary Islands (Spanish name: Islas Canarias) A group of Spanish islands of volcanic origin in the Atlantic Ocean, close to NW Africa; an autonomous region of Spain. Since 1927 they have constituted two provinces named after their capitals of Las Palmas (including the islands of Fuerteventura, Gran Canaria, and Lanzarote) and Santa Cruz de Tenerife (including the islands of Ferro, Gomera, La Palma, and Tenerife). The islands became Spanish possessions in the 15th century. Fruit is grown for export. Tourism is also important. Total area: 7270 sq km (2807 sq mi). Population (2005 est): 1 968 280.

Canaveral, Cape (name from 1963 until 1973: Cape Kennedy) A barrier island in the USA, in E central Florida separated from the mainland by lagoons. It is the site of operations by NASA at the Kennedy Space Center.

Canberra 35 15S 149 10E The capital of Australia, in the Australian Capital Territory on the Molonglo River. Formally inaugurated in 1927, the establishment of the National University in 1946 and the growth of government departments have led to sizeable increases in population. Population (2001): 339 727.

cancer A group of diseases caused by the abnormal and uncontrolled division of cells to form tumours that invade and destroy the tissues in which they arise. Such tumours are described as malignant: their cells spread (metastasize) through the bloodstream or lymphatic system or across body cavities to set up secondary tumours at other sites in the body. The cause of cancer remains uncertain, although it is known that exposure to certain substances (see CARCINOGEN) will produce it; a genetic element, diet, and certain viruses are also implicated. Cancer can arise in almost any tissue: in the western world the breasts, colon, lungs, bronchi, prostate gland, and stomach are common sites. Carcinomas are cancers arising in epithelium; less common but more malig-

nant are sarcomas—cancers of connective tissue (bone, cartilage, muscle, etc.). Leukaemia, affecting the bone marrow and other blood-forming tissues, and lymphoma, cancer of the lymph nodes, are forms of sarcoma. Treatment of cancer includes *chemotherapy, *radiotherapy, and surgery.

Cancer (Latin: Crab) An inconspicuous constellation in the N sky, lying on the *zodiac between Leo and Gemini. It contains the star cluster Praesepe.

candela (cd) The SI unit of luminous intensity equal to the intensity of 1/600 000 square metre of the surface of a black body maintained at the freezing point of platinum.

Candia See IRÁKLION.

candidiasis An infection caused by a species of yeast (*Candida albicans*). Popularly known as thrush, it affects the mouth and vagina most frequently; it may develop after treatment with certain antibiotics and with diseases (e.g. leukaemia, AIDS) and drugs (e.g. steroids) that reduce the natural immunity of the body. The infection is cleared readily by such antifungals as nystatin.

Candlemas The Christian feast of the Purification of the Virgin Mary and the Presentation of Christ in the Temple (Luke 2.22–38), which is observed on 2 Feb. It is so called because of the distribution of candles, symbolizing Christ's appearance as the "light of the world."

cane The stem of certain large grasses and of some palms. In some species it is hollow and jointed, e.g. *reeds (*Phragmites* species), *bamboo (*Bambusa* species), and *sugar cane; in others it is solid, e.g. *rattan and Malacca (*Calamus* species) used for making furniture, walking sticks, etc.

Canea (Greek name: Khaniá) 35 31N 24 01E The capital of Crete, on the Gulf of Khaniá. The island's main port, it exports leather, olives, olive oil, and fruit. Population (1991 est): 133 060.

Canidae The dog family: a family of mammals belonging to the order *Carnivora*. It includes the dogs, wolves, jackals, coyote, and foxes.

cannabis The resin (hashish) or crushed leaves and flowers (marihuana, "grass," or "pot") obtained from certain species of *hemp. The drug is eaten or inhaled and produces euphoria, distortion of time sense, as well as sight, sound, and memory. Anxiety may also be experienced and cannabis can cause depend-

ence as well as progression to "hard" drugs. For these reasons a legal ban on its sale and use has been maintained in most countries. In the UK possession of small amounts of cannabis for one's personal use is no longer (from 2004) an arrestable offence although dealing in the substance is. See also HALLUCINOGENS.

Cannae, Battle of (216 BC) The battle, fought at the village of Cannae in Apulia (SE Italy), in which *Hannibal and the Carthaginians killed almost 50 000 Romans.

Cannes 43 33N 7 00E A resort in S France, in the Alpes-Maritimes department on the French Riviera. Its development as a fashionable resort dates from 1834, when the British statesman Lord Brougham (1778–1868) built a villa here. An annual film festival is held here. Population (latest est): 69 363.

cannibalism The practice of eating human flesh, either as food or for ritual or magical purposes. In ritual cannibalism certain parts of a defeated enemy may be eaten in order to absorb his strength and courage or to prevent his spirit taking revenge. In other cases (endocannibalism) it forms part of rituals performed at the death of a kinsman. The word is derived from the *Arawak term for the *Carib Indians among whom it was common. Ritual cannibalism was practised also by the New Zealand Maoris, the Fijian islanders, in Polynesia, in parts of Africa, in New Guinea, and among some North American Indian peoples.

Canning, George (1770–1827) British statesman; foreign secretary (1807–09, 1822–27) and Tory prime minister (1827). An MP from 1793, he held office under Pitt and contributed (1797–98) to the weekly *Anti-Jacobin*, which opposed the French Revolution. He became foreign secretary but resigned in 1809 in opposition to the management of the Napoleonic Wars by Castlereagh. He again became foreign secretary after Castlereagh's suicide before briefly becoming prime minister. His son **Charles John, Earl Canning** (1812–62) was governor general of India (1856–62).

cannon An early form of *artillery firearm used primarily until 1670 as a siege gun. A 14th-century invention (by the German monk, Berthold Schwarz), early cannons were made of wrought-iron rods welded together, covered in lead, and wrapped with iron bands. Cast guns were made in England after 1500. Modern cannons include guns, *mortars, and *howitzers.

canonization In the Christian Church, the conferring of the status of *saint on a dead

Archbishop of Canterbury	term of office
Randall Thomas Davidson (1848–1930)	1903–28
Cosmo Gordon Lang (1864–1945)	1928–42
William Temple (1881–1944)	1942–44
Geoffrey Francis Fisher (1887–1972)	1945–61
Arthur Michael Ramsey (1904–88)	1961–74
Frederick Donald Coggan (1909–2000)	1974–80
Robert Alexander Kennedy Runcie (1921–2000)	1980–91
George Leonard Carey (1935–)	1991–2002
Rowan Douglas Williams (1950–)	2002–

Archbishops of Canterbury since 1903

person. In the Roman Catholic Church this is done by a formal declaration of the pope after a long investigation. Beatification, by which the Church permits the veneration of a person, with the title "Blessed," within a particular diocese, order, or other limited area, precedes canonization and depends on evidence of the person's exceptional virtue and miracles regarded as authentic. The Church then puts the case for the canonization and appoints the *Promotor Fidei* (Latin: promoter of the faith, popularly known as the devil's advocate), to oppose it, and completes the process after satisfactory evidence of further miracles.

canon law The laws of Christian Churches, particularly the Roman Catholic, Anglican, and Orthodox Churches. They include regulations governing the clergy, the ecclesiastical courts, matters of worship and doctrine, and so on. In the 12th century Gratian (died c. 1179) produced his *Decretum*, a collection of rules that the Roman Catholic Church recognized as authoritative. The *Decretum* in turn formed part of a later collection, the *Corpus Juris Canonici*, which in 1917 was revised to form the *Codex Juris Canonici*, the present Roman Catholic code of law. The ecclesiastical law of the Church of England was mainly contained in the early-17th-century *Book of Canons*, but new laws were introduced in the 1960s.

Canova, Antonio (1757–1822) Italian neoclassical sculptor, who worked in Venice, Rome, and Paris, where he worked for Napoleon. His classical works included *Cupid and Psyche* (1792) and the *Three Graces* (1813–16).

Cantabrian Mountains (Spanish name: Cordillera Cantábrica) A mountain range in N Spain extending E–W along the Atlantic coast and rising to 2648 m (8868 ft).

Canterbury 51°17'N 1°05'E A city in SE England, in Kent on the River Stour. The cathedral

(11th–15th centuries), where Thomas *Becket was martyred in 1170, is the seat of the Archbishop and Primate of the Anglican Church. The first Archbishop of Canterbury was St *Augustine. The present Archbishop is Rowan *Williams. The University of Kent (1960) overlooks the city. Population (1991): 36 464.

Canterbury bell An annual or biennial flowering plant, *Campanula medium*, native to S Europe and frequently grown as a garden ornamental. The plant grows to a height of 75 cm and bears spikes of pink, rose, lavender, blue, or white bell-shaped flowers, each 5 cm or more long. Family: *Campanulaceae*.

Canton (Chinese names: Guangzhou or Kuang-chou) 23°08'N 113°20'E A port in S China, the capital of Guangdong province on the Zhu Jiang (Pearl River) delta. Densely populated, it is the commercial and industrial centre of S China; industries include steel, shipbuilding, paper, textiles, and the manufacture of machinery and chemicals. Population (1999 est): 3 306 277.

Cantonese See CHINESE.

Cantor, Georg (1845–1918) Russian mathematician, born in St Petersburg. Cantor's family moved in 1856 to Germany, where he spent the rest of his life. He set the concept of infinity on a rigorous mathematical foundation. His ideas created great controversy and were viciously attacked, by Leopold Kronecker (1823–91) in particular. He broke down in 1884 under the strain and died in a mental asylum.

Canute II (or **Cnut**; c. 994–1035) Danish King of England after defeating Edmund Ironside (1016). He became King of Denmark (1019) and of Norway (1028). He defended England from Viking attacks (1017, 1026, 1028) and subjected Malcolm II of Scotland (1028). According to legend, he proved to flatterers the limits of his

powers by demonstrating his inability to induce the waves to recede.

Capablanca y Graupera, José Raúl (1888–1942) Cuban chess player, who was world champion from 1921 to 1927.

capacitance The ability of an electrical component (a **capacitor** or formerly a condenser) to store charge. It is measured in *farads and defined as the ratio of the stored charge in coulombs to the voltage drop across the component. Capacitance is one of the factors that control the frequency response of circuits and components to alternating currents.

Cape Breton Island An island in SE Canada, in Nova Scotia, separated from the mainland by the Strait of Canso. It was ceded to Britain by the French (1763). Area: 10 280 sq km (3975 sq mi). Population (2001): 147 454.

Cape Cod A sandy peninsula in the USA, in Massachusetts between Cape Cod Bay and the Atlantic Ocean. A popular summer resort area, it also produces cranberries and asparagus. Length: 105 km (65 mi).

Cape Horn (Spanish name: Cabo de Hornes) The most southerly point in South America, at the S end of Horn Island, Chile. It is notorious for its stormy weather.

Cape of Good Hope A headland in South Africa, in the SW extremity of Cape Province. It was discovered (1488) by Dias, who named it the Cape of Storms.

Cape Province (official name: Cape of Good Hope Province; Afrikaans name: Kaaprovinsie) A former province in South Africa, in the extreme S. In 1994 it was replaced by the new regions **Northern Cape**, **Western Cape**, **Eastern Cape**, and part of **North West**. The area consists chiefly of plateaus separated by mountain ranges. Western Cape produces most of South Africa's fruit and vegetables for export and has many vineyards; sheep and cattle rearing is extensive and wheat and alfalfa are grown. Diamonds and copper are the chief minerals, others being asbestos, manganese, and iron ore. *History:* first settled by the Dutch (1652), it was ceded to Britain in 1814, becoming known as the Cape Colony. The discovery of diamonds in Griqualand West led to its annexation to the Cape Colony (1871). In 1910 the colony became a province in the Union of South Africa.

caper A bramble-like spiny shrub, *Capparis spinosa*, native to drier regions of S Europe. The pickled flower buds are the capers used in flavouring. The fruit is a berry. Family: *Capparidaceae*.

capercaillie The largest European *grouse, *Tetrao urogallus*, of Eurasian coniferous forests, where it feeds on pine buds and needles. The male, almost 100 cm long, is black with a blue-green gloss and red wattles above the eyes. The smaller female is brown with black and white markings.

Cape Town (Afrikaans name: Kaapstad) 33 56S 18 28E The legislative capital of South Africa on the S shore of Table Bay. Founded by Jan van Riebeeck in 1652 as a supply post for the Dutch East India Company, it is the oldest White settlement in South Africa. Cape Town is a major port and is an important commercial and industrial city besides being a popular holiday centre. Its industries include oil refining, chemicals, motor vehicles, and textiles. Population (2005 est, urban area): 3 103 000.

Cape Verde, Republic of (Portuguese name: Cabo Verde) A country occupying an archipelago in the N Atlantic Ocean, off the coast of West Africa. It consists of ten islands and five islets, most of which are mountainous. The majority of the population is of mixed African and European descent. *Economy:* mainly subsistence agriculture. Fish and fish products are the main exports. Refuelling services for ships and planes are an important source of revenue. *History:* the Cape Verde Islands were settled by the Portuguese in the mid-15th century, becoming a Portuguese colony in the 19th century and gaining full independence in 1975. Multiparty elections (1991) ended 15 years of one-party rule, when the ruling PAICV (African Party for the Independence of Cape Verde) was defeated by the opposition Movement for Democracy (MPD). The PAICV returned to power in 2001. Official language: Portuguese. Currency: escudo of 100 centavos. Area: 4033 sq km (1557 sq mi). Population (2007 est): 423 613. Capital: Praia.

capital See **ORDERS OF ARCHITECTURE**.

capital-gains tax (CGT) A UK tax, introduced in 1965, on the profit arising from the disposal of an asset by sale or gift (and until 1971 by death). It applies to stocks and shares (except some government stocks), to dwellings that are not the owner's only residence, and to all other saleable assets with some exceptions (e.g. cars). The rate of tax is the taxpayer's marginal rate of income tax on the gain; however the first £9,200 (from 2007) of a person's gains in any year are exempt and certain reductions apply to shares in a company held by employees.

capitalism An economic and political sys-

tem that developed following the *industrial revolution. Essential features of the system are uncontrolled free markets, based on the profit motive, and unrestricted ownership of the means of production (capital). If the system is allowed to develop without restriction it has certain undesirable attributes (see LAISSEZ-FAIRE). This has led Western countries to restrict capitalism by a greater or lesser degree of government regulation.

capital punishment The punishment of a convicted criminal by execution. In 18th-century Britain over 200 offences carried the death penalty, including such crimes as petty theft and forgery. In 1868 public executions were abolished and by the Homicide Act (1957) only certain kinds of murder remained punishable by death (murder committed in the course or furtherance of theft, in resisting arrest, etc.). In 1965 the death penalty was suspended for all crimes except treason, violent piracy, and (until 1971) arson in royal dockyards. In 1999 the death penalty was formally abolished for all peacetime offences. Several US states revived it in 1976.

Capodimonte porcelain A valuable soft-paste *porcelain made (1743–59) near Naples at a factory started by Charles IV of Naples. Typical pieces were peasant figures and vessels and services modelled like local sea shells and seaweeds.

Capone, Al (1899–1947) US gangster, probably born in Italy, who dominated the Chicago underworld of organized crime in the late 1920s. He was imprisoned in 1931 for income-tax evasion.

Capra, Frank (1897–1992) US film director, born in Italy. His best-known films include several popular sentimental comedies, notably *It Happened One Night* (1934), *Arsenic and Old Lace* (1942), and *It's a Wonderful Life* (1946).

Capri, Island of (Latin name: Capreae) An Italian island at the SW entrance to the Bay of Naples. Its mild climate, fine scenery, and beaches have made it a popular resort since Roman times. The Blue Grotto, a cavern accessible only by sea, is a notable feature. Area: about 13 sq km (5 sq mi). Population (latest est): 8000.

Capsicum A genus of annual and perennial flowering plants (about 50 species), native to Central and South America. The fruits (berries) of some species, particularly the various cultivated varieties of *C. annuum* and *C. frutescens*, are the chillies and peppers used in cookery. Large fruits (up to about 10 cm long) are the

sweet peppers, which have a mild taste and are used in salads, etc. They are usually green but may be red (the red varieties—paprika—can be ground to produce a spice). Smaller berries (about 2 cm long) are the hot-tasting red peppers (or chillies); when dried and ground these form cayenne pepper. Dwarf varieties are grown for ornament. Family: *Solanaceae*.

capsule In botany, a type of dry *fruit that releases its seeds at maturity through pores, teeth, or slits: an example is the poppy capsule. The term also refers to the spore-producing structures of mosses and liverworts and the slimy envelope surrounding some bacterial cells. In zoology, it is the layer of connective tissue surrounding some organs, for example the kidney.

capuchin monkey A long-tailed *monkey belonging to the genus *Cebus* (4 species), of South America. Capuchins are 70–90 cm long including the tail (40–50 cm) and live in large troops in the treetops, feeding chiefly on fruit but also eating insects, birds, and eggs. Family: *Cebidae*.

Capuchins A Roman Catholic order of friars founded in 1525. They are reformed Franciscans, named after the pointed cowl (capuche) they wear in emulation of St *Francis. Opposed by the established Franciscans, they were almost suppressed in 1542, but survived to become important during the Counter-Reformation, being recognized in 1619 as one of the three independent branches of the Franciscan order.

capybara The largest living rodent, *Hydrochoerus hydrochaeris*. Resembling giant guinea-pigs, up to 1.25 m long and 50 cm high, capybaras graze on river banks in Central and South America, living in groups of up to 20 individuals. They have short coarse yellowish-brown hair and partially webbed feet (they are expert swimmers). The capybara is the only member of its family (*Hydrochoeridae*).

car A self-propelled road vehicle. The search for a means of replacing the horse as a means of transport began seriously at the beginning of the 18th century, when *Newcomen and *Watt had shown that steam could be harnessed to produce power. Joseph Cugnot (1725–1804) in 1770 used a steam engine to drive a gun tractor and in 1808 Richard Trevithick built a working steam carriage. But these vehicles were no more than cumbersome novelties. An effective horseless carriage needed a more compact power source. This was eventually provided by two German engineers, Nikolaus

Benz 8hp 1600 of these "horseless carriages" were sold between 1898 and 1900. Described as the first reliable car offered to the public, its twin-cylinder 1570 cc engine gave it a top speed of 18 mph (29 km/hr).

Rolls-Royce Silver Ghost First built in 1907 (and continuing in production until 1927) it quickly established itself as "the best car in the world." Its 7-litre 6-cylinder engine gave it a top speed of 65 mph (105 km/hr).

Ford Model T 15 million of this first mass-produced car (nicknamed the "Tin Lizzie") were made between 1908 and 1927. Its 4-cylinder, 2898 cc engine gave it a top speed of 40 mph (64 km/hr).

Bugatti Royale Made to compete with the Rolls-Royce, this 13-litre 8-cylinder car cost over £5000 in 1927 – too much for even its intended royal customers. Six were sold. In 1987 one survivor was sold for £5.5 M.

Volkswagen Nicknamed "the Beetle," this 1937 German design by Ferdinand Porsche was still selling in the 1970s, making it the best selling car ever made. Its air-cooled slow-revving rear engine increased from 1131 to 1600 cc over the years.

MG TC This post-war British sports car (1946-55) was little changed from the TA model first built in 1937. The TC had a 1250 cc engine.

Buick This 1949 US car represented a release from wartime restrictions and set the trend for a generation of large American cars.

Mini The best selling British car ever made. Designed by Alec Issigonis, the mini was introduced in 1959. Its front-wheel drive, transverse engine, and 10-inch wheels made it an extremely roomy car for its size.

Chrysler Voyager A US people carrier with up to seven seats introduced in the 1990s. Engine options include a 3.3 litre V-6 petrol engine and a 2.5 litre 4-cylinder turbocharged diesel.

***Otto** and Gottlieb ***Daimler**, who in 1876 patented the Otto-cycle ***internal-combustion** engine. In 1885, another German, Karl ***Benz**, used a 3 hp version of this engine to power a tricycle capable of 15 mph (20 km per hour). By 1890 both Daimler and Benz were selling motorized dog carts and in France, during the closing decade of the 19th century, Panhard, Comte Albert de Dion, Georges Bouton, and Peugeot were all selling cars. In the USA, Henry Ford built his first car in 1896. In the UK, however, the development of the motor car was hampered by legislation introduced in 1865, which insisted that they must be preceded on the roads by a man carrying a red flag. This law was not repealed until 1896. Some ten years later Henry ***Royce**, dissatisfied with the quality of imported cars, decided to build his own. In partnership with C.S. Rolls, he sold his first Rolls-Royce Silver Ghost in 1907.

By the start of World War I, some 130 000 cars were registered in the UK. In the early 1920s a family Ford, Austin, Citroën, Morris, or Renault cost about £500. During the 1920s and 1930s the price of cars steadily declined until at the beginning of World War II a British-made Ford 8 or Austin 7 cost about £100. But the real mass market did not develop until after World War II, since when a model has to sell a million vehicles to be a commercial success. Cars now are more reliable and made safer by the use of seat belts and inflatable air bags. However, as a mass producer of carbon dioxide (see **GREENHOUSE EFFECT**), toxic gases, and lead (see **TETRAETHYL LEAD**), the modern car is the enemy of conservationists and town planners. See also **ELECTRIC CAR**.

Caracas 10 35N 66 56W The capital of Venezuela, situated near the N coast and linked by road to its port, La Guaira. It was founded by the Spanish as Santiago de León de Caracas in the 16th century. It is the birthplace of Simón Bolívar. Population (2000 est): 1 975 787.

carat 1. A unit of weight for precious stones, formerly defined as 4 grains (Troy), but now equal to 0.200 grams. **2.** A measure of the fineness of gold equal to the number of parts of gold by weight in 24 parts of the alloy. Thus 18-carat gold contains 18/24ths pure gold.

Caratacus (or **Caractacus**; 1st century AD) King of the Catuvellauni. The son of Cunobelinus (Cymbeline), Caratacus organized resistance to the Roman invasion of 43 AD. Defeated, he fled first to Wales then to the north British queen, Cartimandua, who betrayed him. He was pardoned by Emperor Claudius but died in exile.

Caravaggio (Michelangelo Merisi; 1573–1610) Italian ***baroque** painter, whose nickname derives from his birthplace. In Rome he painted scenes of the life of St Matthew in S Luigi dei Francesi. He also executed numerous altarpieces, some of which, e.g. *Death of the Virgin* (Louvre), were condemned for depicting sacred personages as coarse peasants. Caravaggio is noted for his dramatic contrasts of light and shade in such paintings as *Supper at Emmaus* (National Gallery, London).

caraway A perennial flowering plant, *Carum carvi*, native to N temperate regions from Europe to the Himalayas. The much-branched stem grows to a height of 25–60 cm and terminates in clusters of small white flowers. The fruit is an oblong capsule containing the familiar caraway seeds, used in cookery. Family: *Umbelliferae*.

carbohydrate One of a large group of chemical compounds containing the elements carbon, hydrogen, and oxygen and having the general formula $C_x(H_2O)_x$. Green plants manufacture carbohydrates—such as ***sugars** and starch—during ***photosynthesis** and their cell walls consist largely of carbohydrates—predominantly ***cellulose**. Hence plant carbohydrates are the primary source of food energy for animals. Glycogen is a carbohydrate energy reserve found in animals, while chitin is a structural carbohydrate occurring in arthropods (and also in fungi).

carbolic acid See **PHENOLS**.

carbon (C) A chemical element that is unique in terms of the huge number and variety of its compounds. The element occurs naturally in two main forms: ***graphite**, which is a soft greyish-black mineral, and ***diamond**, the hardest substance known. A third form, buckminsterfullerene, contains ball-shaped carbon structures. Charcoal and ***coke** are also composed of carbon. The extensive chemistry of carbon results from its ability to form single, double, and triple bonds with itself and other elements and to form chains and rings. At no 6; at wt 12.011; sublimes at 3367 ± 25°C.

carbon cycle The process by which carbon (in the form of carbon dioxide) in the atmosphere is taken up by plants during photosynthesis and transferred from one organism to the next in a ***food chain**, i.e. the plants are eaten by herbivorous animals that are themselves eaten by carnivores. At various stages carbon is returned to the environment with the release of carbon dioxide at ***respiration** and through decay.

carbon dioxide (CO₂) A colourless odourless noncombustible gas. It is present (about 0.03% by volume) in air, being produced by combustion of carbon compounds and by respiration. Industrially, CO₂ is made from chalk or limestone and is used as a coolant in nuclear reactors, as a refrigerant, in fire extinguishers, and in "fizzy" drinks.

carbon fibres Black silky threads of pure carbon made by heat treating organic textile fibres, so that all molecular side chains are removed. Eight times stronger than steel, they are used to reinforce resinous or metallic substances to make jet engine and rocket components, providing great strength at high temperatures.

Carboniferous period A geological period of the *Palaeozoic era occurring about 370–280 million years ago between the Devonian and Permian periods. During the period land plants increased prolifically and led to the formation of the world's major coal deposits. Amphibians became more common and by the end of the period some reptiles had evolved. The Carboniferous is divided into Lower and Upper (Mississippian and Pennsylvanian). Limestone deposits were widespread in the Lower Carboniferous; millstone grits and the Coal Measures (alternating beds of coal, sandstone, shale, and clay), in the Upper.

carbon monoxide (CO) A colourless odourless flammable gas. It is produced by the incomplete combustion of carbon compounds (e.g. coke or natural gas). CO is highly toxic, combining with red blood cells and preventing them from carrying oxygen. It is present in the exhaust fumes of internal-combustion engines.

carborundum A dark crystalline compound (silicon carbide) manufactured by heating silica (sand) with carbon (coke). It is used as an abrasive and as a refractory material.

carboxylic acids See FATTY ACID.

carburettor The device formerly used in a petrol engine to vaporize the fuel and mix it with air in the correct proportions. In most modern petrol engines the carburettor is replaced by a fuel-injection system.

carcinogen An agent that causes cancer. Carcinogens can be chemicals, radiation, and some viruses. Chemical carcinogens include tar (such as that produced by cigarette smoking), aniline, and azo dyes. Large doses of radiation and several viruses are also known to cause cancer.

cardamom (*cardamum* or *cardamon*) A perennial herb, *Elettaria cardamomum*, native to India. 1.5–3 m tall, it has large leaves, green and purple veined flowers, and small capsules filled with hard angular seeds. The spice cardamom consists of whole or ground dried fruit or seeds. It is cultivated in India, Sri Lanka, and Guatemala. Family: *Zingiberaceae* (ginger family).

Cardiff (Welsh name: *Caerdydd*) **1.** 51°30'N 3°13'W The capital of Wales (since 1955), a city situated in the SE of the principality at the mouth of the River Taff. Its port still handles general cargo but employment is now largely dependent on service occupations (especially banking and insurance). At the centre of the city lies the Norman castle, rebuilt in the 1870s. University College, Cardiff (founded 1883), the University of Wales Institute of Science and Technology (UWIST), the Welsh National School of Medicine, and the National Museum of Wales are all located in the city. Since May 1999 Cardiff has been home to the Welsh Assembly. In addition to Cardiff Arms Park, the traditional home of Welsh rugby, a Millennium stadium was constructed for the 1999 rugby World Cup. *History:* originally a small Roman fort, the site was reoccupied by the Normans. It received its first royal charter in 1581. Cardiff's modern prosperity was based on coal from the valleys to the N of the city; by 1913 it was the largest coal-exporting port in the world. The Cardiff Bay area, including the port and quayside, was redeveloped as a commercial, residential, and leisure area in the 1990s. Population (1992): 295 600. **2.** A county borough in SE Wales, created in 1996 from part of South Glamorgan. Area: 139 sq km (54 sq mi). Population (2001): 305 340.

Cardigan, James Thomas Brudenell, 7th Earl of (1797–1868) British cavalry officer. In 1854, during the Crimean War, he led the fatal charge of the Light Brigade at *Balaclava, made famous by Tennyson. The woollen garment known as a cardigan was named after him.

cardinals, college of (or **Sacred College**) The body of the highest dignitaries next to the pope in the *Roman Catholic Church. Originating in the advisory roles played by the parish priests and deacons of the city of Rome, the present membership of 125 cardinals was established under John XXIII and Paul VI. They assist the pope as a privy council, conducting the temporal affairs of the Church, advising on questions of doctrine, etc.; they elect the pope from among their own number.

Carey, Peter (1943–) Australian novelist and writer, who won the Booker Prize with both *Oscar and Lucinda* (1988) and *The True History of the Kelly Gang* (2001). Other novels include *Illywhacker* (1985) and *My Life as a Fake* (2003).

cargo cults Religious cults found chiefly in Melanesia since the late 19th century. Their adherents believe that a new paradise will be heralded mainly by the arrival of a supernatural cargo of goods brought by spirits, who are variously viewed as gods, ancestors, or White foreigners.

Carib An American Indian people of the Lesser Antilles and northern South America, after whom the Caribbean was named. The maritime island Caribs were warriors and cannibals, who before the advent of the Spaniards expelled the *Arawak Indians from the Lesser Antilles, enslaving the women and killing and eating the men. As a consequence, in these islands men spoke Carib and women, Arawak. The mainland Caribs were less aggressive and their culture was adapted to the tropical forest region.

Caribbean Sea A section of the Atlantic Ocean, between the West Indies, E Central America, and N South America. Area: 2 718 200 sq km (1 049 500 sq mi). Maximum depth: 7686 m (25 216 ft).

caribou See REINDEER.

caries Cavities in the teeth caused by bacterial erosion of the enamel and dentine. The bacteria feed on sugar from the diet: the sugar and bacteria become attached to the teeth to form a layer called plaque, and acid formed by bacterial breakdown of the sugar causes the damage of caries. See also FLUORIDATION.

Carlisle 54°54'N 2°55'W A city in NW England, the administrative centre of Cumbria on the River Eden. Once a Roman military centre (Luguvalium) and important fortress in the border wars with the Scots, it has a 12th-century cathedral and a castle (11th–13th centuries). Industries include metal goods, food processing, and textiles but most employment is now in the service sector. Population (1991): 72 439.

Carlow (Irish name: Ceatharlach) A county in the E Republic of Ireland, in Leinster. Chiefly low lying, it rises to mountains in the E. Agriculture is intensive producing barley, wheat, and sugar beet. Area: 896 sq km (346 sq mi). Population (2002 est): 45 845. County town: Carlow.

Carlyle, Thomas (1795–1881) Scottish historian and essayist. *Sartor Resartus*, a blend of fiction, philosophy, and autobiography, was published in 1836 and was followed by his major work, *The French Revolution*, in 1837. This and later works express his view of history as shaped by the "Hero," or inspired individual.

Carmarthenshire (Welsh name: Sir Caerfyrddin) A county in SW Wales, on Carmarthen Bay. In 1974 it became part of Dyfed but was reinstated as a county in 1996. The county is predominantly agricultural, with dairy farming the main activity. New industries have been introduced to the former coalmining and steel-working area in the SE. Area: 2 380 sq km (919 sq mi). Population (2001): 173 635. Administrative centre: Carmarthen.

Carmelites A Roman Catholic religious order founded around the mid-12th century by St Berthold (died c.1195), who established a monastery at Mount Carmel (height 546 m; 1791 ft) in what is now N Israel. With the collapse of the Crusader kingdoms, the order moved to Europe. In 1452 an order of Carmelite nuns was instituted. In the 16th century the order was reformed by St *Teresa of Ávila and emphasized the cultivation of the contemplative life.

Carmina Burana A miscellany of 13th-century Latin and German poems and six religious dramas found in a Benedictine monastery in Bavaria. It was transformed by the German composer Carl Orff (1895–1982) into an oratorio (1935–36), which has become a popular concert work.

Carnap, Rudolf (1891–1970) German-born logical positivist philosopher. A founder of the *Vienna Circle, he was professor of philosophy successively at universities in Vienna, Prague, Chicago, and Los Angeles. He worked on formal logic and its applications to science and *epistemology, believing that the analysis and clarification of knowledge should be the purpose of philosophy. By developing logical syntax and *semantics, he tried to construct a formal language for the empirical sciences to eliminate confusion, ambiguity, and similar obstacles to knowledge.

carnation A large-flowered cultivated form of the clove pink (*Dianthus caryophyllus*). These perennials grow to heights of 40–60 cm, have tufts of dense grasslike foliage, and double flowers in white, yellow, orange, pink, red, or lavender. Flowers of carnations (and pinks) are noted for their clovelike fragrance. Family: Caryophyllaceae. See also DIANTHUS.

Carnivora An order of mammals adapted for hunting and eating flesh. Carnivores have strong jaws, with sharp incisor teeth and pointed canine teeth. They are the major predators and most species are terrestrial, stalking or pouncing on their prey. The 252 species are divided into seven families: *Canidae* (dogs); *Ursidae* (see BEAR); *Procyonidae* (see RACCOON; PANDA); *Mustelidae* (weasels, skunks, etc.); *Viverridae* (genets, mongooses, etc.); and *Felidae* (cats).

carnivorous plant A plant that obtains at least some of its nutrients by the digestion of insects and other small animals. Carnivorous, or insectivorous, plants show remarkable structural adaptations for their mode of life. Butterworts and *sundews trap and digest insects by means of the sticky secretions produced by glands in the leaves. The *Venus flytrap traps its prey between bilobed hinged leaves with marginal teeth. Another common method of capture and digestion is by means of liquid-filled "pitchers" into which the insects fall (see PITCHER PLANT).

Carnot, (Nicolas Léonard) Sadi (1796–1832) French engineer and soldier, whose investigations on the efficiency of steam engines laid the basis for the science of thermodynamics. The **Carnot theorem** states that no engine can be more efficient than a reversible engine working between the same temperatures. The **Carnot cycle** is a thermodynamic cycle of the pressure and temperature changes in the gas in an ideal heat engine.

Caroline Islands An archipelago in the W Pacific Ocean, consisting of *Belau and the Federated States of *Micronesia. Spain claimed the islands in 1899 but sold them to Germany. They were controlled by Japan (1914–44) and the USA (1944–47) before becoming part of the UN Trust Territory of the Pacific Islands. Tourism is important and copra is the main export. Area: 1183 sq km (457 sq mi). Population (latest est): 115 208.

Caroline of Ansbach (1683–1737) The wife of George II of Great Britain and a strong supporter of Sir Robert *Walpole. She was appointed regent during George's absences abroad.

Caroline of Brunswick (1768–1821) The wife of George IV of the United Kingdom. After their separation (1796), he forbade her to see their child Charlotte. When George became king (1820), his attempt to divorce Caroline failed owing to popular support for her but she was excluded from the coronation (1821).

carotenoids A group of yellow, orange, or red pigments manufactured by bacteria, fungi, and plants and essential in the diet of animals. There are two groups—carotenes (including beta-carotene, a precursor of *vitamin A) and xanthophylls. Carotenoid pigments are important for display and camouflage colouring in both plants and animals and also as eye pigments.

carp An omnivorous freshwater fish, *Cyprinus carpio*, native to Asia but widely introduced elsewhere and raised for food. It has an elongated body, usually about 35 cm long, with large scales, greenish or brownish above and paler below, four barbels on the upper lip, and a long dorsal fin. Family: *Cyprinidae* (about 2000 species); order: *Cypriniformes*.

Carpaccio, Vittore (c. 1460–c. 1525) Venetian painter, noted for his paintings of his native city and his narrative cycles. His works, influenced by Gentile and Giovanni *Bellini, include a cycle of *Scenes from the Life of St Ursula* and *The Miracle of the Cross* (Accademia, Venice).

Carpathian Mountains A mountain range in Slovakia, Poland, Hungary, Ukraine, Moldova, and Romania. They form a rough semicircle about 1450 km (900 mi) long (including the Transylvanian Alps, which are also known as the **Southern Carpathians**) between Bratislava and the Iron Gate, both on the River Danube. The highest peak is Mount Gerlachovka, at 2663 m (8737 ft), in N Slovakia.

carpel The female organ of a flower, consisting of the *stigma, style, and ovary. See also PISTIL.

Carrantuohill 52 00N 9 45W The highest mountain in Ireland, in Co Kerry, in Macgillicuddy's Reeks. Height: 1041 m (3414 ft).

Carrickfergus A district in E Northern Ireland, in Co Antrim. Area: 85 sq km (33 sq mi). Population (2001): 37 659.

carriion crow An omnivorous Eurasian crow, *Corvus corone corone*, about 46 cm long with a pure-black plumage and a harsh croaking call. It is a notorious egg thief.

Carroll, Lewis (Charles Lutwidge Dodgson; 1832–98) British writer and mathematician. He lectured in mathematics at Oxford University from 1855 to 1881. The children's classic *Alice's Adventures in Wonderland* (1865) was written for the young Alice Liddell, the daughter of the head of his Oxford College. It and the sequel, *Through the Looking-Glass* (1872), combine elements of fantasy, logic, and nonsense and

have had a lasting appeal to adults as well as children. He also wrote nonsense verse, notably *The Hunting of the Snark* (1876).

carrot A biennial flowering plant, *Daucus carota*, found in grassy places in temperate regions from Europe to India. The stem grows to a height of 30–100 cm and bears a head of small white flowers. *Daucus carota sativus* is the cultivated carrot grown as an annual for its orange edible root. Family: *Umbelliferae*.

Carter, Angela (1940–92) British novelist and writer. Her novels, which blend fantasy, satire, and macabre humour, include *The Magic Toyshop* (1967), *Nights at the Circus* (1984), and *Wise Children* (1991).

Carter, Jimmy (James Earl C.; 1924–) US statesman; Democratic president (1977–81). A peanut farmer, he left business for politics becoming governor of Georgia (1970–74). He is best known for bringing about the peace treaty between Egypt and Israel (1979). Subsequently he won respect as an international peacemaker in Ethiopia, Korea, Haiti, and elsewhere. He was awarded the Nobel Peace Prize in 2002.

Cartesian coordinates See COORDINATE SYSTEMS.

Carthage (Punic name: *Kart-Hadasht*, New City) An ancient city of N Africa, near modern Tunis. Traditionally founded 814 BC by *Dido and exiles from *Tyre, Carthage rapidly became leader of the Phoenician trading cities of N Africa, waging intermittent war with the Greeks of Marseilles and Sicily. From 264 BC Carthage fought the three *Punic Wars with *Rome, her former ally, and was totally destroyed (146 BC). Refounded by Julius *Caesar (45 BC), Carthage became administrative capital of Roman Africa, the capital of the *Vandal kingdom (439–533 AD), and a Byzantine outpost, until destroyed by the Muslims in 697 AD.

Carthusians A contemplative Roman Catholic religious order founded in 1084 by St Bruno and named after the first community, La Grande Chartreuse, near Grenoble. Although originally without a written rule, the Carthusians observed a rigorous life of fasting and solitude and were vowed to silence. The French monks are noted for the liqueur Chartreuse, which they make.

Cartier-Bresson, Henri (1908–2004) French photographer and pioneer of photo-journalism. His photographs, collected in such books as *The Decisive Moment* (1952), concentrate on ordinary people in everyday settings. As a

film maker, he collaborated with Jean *Renoir in the late 1930s.

cartilage A flexible supportive tissue consisting chiefly of a polysaccharide—chondroitin sulphate—in which elastic or collagen fibres may be embedded. Cartilage lines the bone ends at joints and also provides the skeleton of the nose, external ear, and parts of the throat (larynx) and airways of the respiratory tract. A tough cartilage forms the intervertebral discs between the bones of the spine. During development a large amount of *bone is formed from pre-existing cartilage.

cartilaginous fish Any *fish belonging to the class *Chondrichthyes*, comprising the *sharks, rays, and *chimaeras. They have a cartilaginous skeleton and the males have pelvic fins modified to form copulatory organs (claspers). Fertilization occurs inside the female's body. Some species deposit their eggs on the sea bed while in others the eggs are retained and develop internally resulting in the birth of live young.

Cartwright, Edmund (1743–1823) British inventor and industrialist. In 1785 he invented a power loom and then set up a factory in Doncaster for weaving and spinning yarn. Four years later he invented a machine for combing wool. In 1793 his business failed but parliament recognized his achievements in 1809 with an award of £10,000.

Caruso, Enrico (1873–1921) Italian tenor, born in Naples. The greatest lyric tenor of his time, he was acclaimed worldwide.

caryatid A carved column in the shape of a draped female figure that first appeared in Greek architecture around 500 BC. The most notable caryatids to have survived are on the Erechtheum on the Acropolis of Athens. Caryatids were infrequent in Roman architecture but enjoyed a limited revival in 19th-century classicism.

Casablanca (Arabic name: Dar-el-Beida) 33°39'N 7°35'W The largest city and port in Morocco, on the Atlantic coast. First established by the Portuguese (1515), it was taken by the French in 1907. During World War II it was the scene of the *Casablanca Conference* (1943), a summit meeting between Franklin D. Roosevelt and Sir Winston Churchill. Major industries include textiles, electronics, chemicals, cement, and food processing. Fishing and tourism are also important. Population (1994 est): 523 279.

Casals, Pablo (Pau C.; 1876–1973) Spanish cel-

list, conductor, and composer. Casals revolutionized the style and technique of cello playing.

Casanova, Giovanni Giacomo, Chevalier de Seingalt (1725–98) Italian adventurer. He lived in many European cities, working at different times as a violinist, a spy, and a librarian. His adventures, which included a dramatic escape from prison in Venice in 1756 and many romantic liaisons, are recorded in his memoirs.

Cascade Range A volcanic mountain range in North America. It extends N–S, nearly parallel to the Pacific coast, between the Fraser River in British Columbia (Canada) and N California (USA), where it becomes continuous with the *Sierra Nevada. It reaches 4392 m (14 408 ft) at Mount Rainier.

casein The major protein present in milk. Casein is easily digested and contains a good balance of essential *amino acids, making it a high-quality dietary protein. Casein is also used industrially to make thermoplastics (e.g. knife handles).

Casement, Sir Roger (1864–1916) British consular official and Irish nationalist, executed by the British for treason. In World War I he tried unsuccessfully to obtain German help for Irish nationalists. After returning to Ireland in a German submarine he was arrested, tried, and executed. His diaries, disclosing his homosexuality, were released by the British government to quell international pressure for a reprieve. They were claimed to have been forged but are now regarded as genuine.

cashew A tree, *Anacardium occidentale*, native to tropical America and cultivated widely in the tropics. It grows to a height of about 12 m and has sweet-scented red flowers. The fruit is a kidney-shaped nut that develops at the end of a hanging pear-shaped receptacle. The edible kernel—the cashew nut—is extracted after the fruit is roasted. Family: *Anacardiaceae*.

cashmere A warm soft wool-like fabric made from the undercoat of the *Kashmir goat, produced mainly in China, Mongolia, and Iran. Originally used in shawls from Kashmir, it is expensive as each goat produces only small quantities of fine soft hair and processing is costly.

Caspian Sea The largest inland sea in the world, bounded by Iran, Russia, Azerbaïdzhân, Kazakhstan, and Turkmenistan and fed chiefly by the River Volga. Its surface is 28.5 m (93.5 ft) below sea level and is generally becoming

lower due to irrigation and increased evaporation from the Volga. The chief ports are Astrakhan in Russia and Baku in Azerbaïdzhân. Area: about 370 000 sq km (142 827 sq mi).

Cassandra A legendary Trojan prophetess, daughter of King Priam of Troy. After she had refused to submit to Apollo's advances, he condemned her prophecies to eternal disbelief. When Troy fell she was taken by Agamemnon, with whom she was later murdered.

cassava A shrubby flowering plant, *Manihot esculentus* (or *M. utilissimus*), also known as manioc, native to tropical America. Many varieties of this species—divided into two groups, sweet and bitter cassavas—are cultivated in the tropics for their edible starchy tuberous roots. These can be processed into tapioca, ground to produce manioc or cassava meal (Brazilian arrowroot), used as animal fodder, or eaten as a vegetable. Family: *Euphorbiaceae* (spurge family).

Cassia A genus of trees, shrubs, and herbs (500–600 species) of tropical and warm regions of Asia, Africa, and America. The laxative drug senna is extracted from the dried leaves and pods (fruits) of many cultivated species. The fruit of *C. fistula* (cassia pods or purging cassia) is also used as a laxative. Some species are grown as ornamentals. Family: *Leguminosae*.

cassiterite The only commercial ore of tin, consisting of stannic oxide. It is found in association with acid igneous rocks and as alluvial deposits.

Cassius Longinus, Gaius (d. 42 BC) Roman general. Cassius supported *Pompey until Pompey's defeat by Julius Caesar at *Pharsalus. He was then pardoned by Caesar but joined the conspiracy to assassinate him in 44. Outlawed, Cassius committed suicide after defeat in the battle of *Philippi.

Casson, Sir Hugh (Maxwell) (1910–99) British architect. A planning adviser to many war-damaged areas in England after World War II, he became director of architecture for the Festival of Britain in 1948.

cassowary A large flightless bird belonging to a family (*Casuaridae*; 3 species) occurring in rain forests of Australia and New Guinea. The largest cassowary (*Casuarus casuarus*) is 150 cm tall and has a black plumage, two red throat wattles, and a blue head with a protective bony helmet. Cassowaries have long powerful legs, each having a long sharp claw, and feed on seeds and berries. Order: *Casuariiformes*.

Castagno, Andrea del (Andrea di Bartolo

castle. The early medieval shell keep gave way to the massive fortifications of the 14th and 15th centuries, which were in turn superseded by the artillery fort with its low walls and sweeping lines of fire.

de Simone; c.1421–57) Italian *Renaissance painter, who was born near Castagno but settled in Florence. His major frescoes depict the *Last Supper* and the *Passion* (Sta Apollonia, Florence). Later works, showing the influence of *Donatello, include the equestrian portrait of *Niccolò da Tolentino* (Duomo, Florence).

caste A system of social stratification in which social boundaries are very definite. A pure caste system consists of a hierarchy of hereditary endogamous occupational groups, in which positions are fixed and mobility from one caste to another is prevented. The Hindu caste system provides the cardinal example. Traditionally there are four main castes: brahmins (priests), ksatriyas (warriors), vaisyas (merchants), and sundras (serfs). Outside these groups are the "outcastes" or "untouchables." Despite legislation (1947) abolishing "untouchability" and prohibiting discrimination on the basis of caste, prejudice remains.

Castile A former kingdom in central Spain. Originally a district at the foot of the Cantabrian Mountains, Castile expanded in the 9th and 10th centuries, becoming a united country. In 1035 it became a kingdom and in 1230 was united with the kingdom of León, a union dominated by Castile. In 1479 Spain was virtually united following the marriage of Isabella of Castile to Ferdinand the Catholic and Castile became the political, administrative, cultural, and linguistic centre of Spain.

cast iron A form of impure iron containing between 2.5% and 4.5% of carbon by weight. The high carbon content makes it relatively hard and brittle and it tends to crack under tension. Cast iron is made by casting *pig iron and adjusting its composition to improve the strength. It is used for casting into complicated shapes.

castle A fortified defensive building. Its

name deriving from Latin *castellum*, a small fortified place, the castle underwent many changes in its history to counteract the development of increasingly powerful weapons. In the early middle ages a castle consisted of a simple building on a mound of earth surrounded by a wooden fence (the motte and bailey castle), a design later copied in stone. Later designs became more complicated, involving extensive outworks of battlemented towers and walls.

Castlereagh A district of E Northern Ireland, in Co Down. Area: 84 sq km (32 sq mi). Population (2001): 66 488.

Castlereagh, Robert Stewart, Viscount (1769–1822) British statesman, foreign secretary (1812–22). An MP in the Irish parliament (1780), he became Viscount Castlereagh in 1796. He was appointed chief secretary for Ireland in 1798 but resigned in 1801, when George III rejected Catholic Emancipation. His policies as secretary for war (1807–09) were attacked by *Canning, with whom Castlereagh fought a duel. As foreign secretary he played an important role at the Congress of *Vienna (1814–15).

Castor and Pollux Twin heroes of classical mythology, also known as the Dioscuri. Pollux was immortal, the son of *Zeus and *Leda; Castor was mortal, the son of Tyndareus and Leda. When Castor died, Pollux asked Zeus to allow them to remain unseparated. Transformed into the Gemini constellation, they were the patrons of mariners.

castor oil A pale yellow viscous oil extracted from the seeds of the *castor-oil plant. It is used as a laxative and is also a raw material for the manufacture of resins, plastics, and lubricants.

castor-oil plant A flowering plant, *Ricinus communis*, up to 12 m high, native to tropical Africa and Asia. It is cultivated widely, in the

tropics for its seeds, from which castor oil is extracted, and in temperate regions as an ornamental shrub. Family: *Euphorbiaceae* (spurge family).

castration Removal of the testes (orchidectomy) or ovaries (oophorectomy). In medicine, castration may be performed in cases of cancer of the testes: it always produces sterility but—unless done before puberty—need not cause impotence. Castration is widely used in livestock management to increase meat production or docility. Castration was also performed before puberty on church choristers in the 17th and 18th centuries to ensure that soprano voice quality remained in adulthood. Such eunuch singers were called **castrati**. The practice was ended by Leo XIII in 1878.

Castro (Ruz), Fidel (1926–) Cuban statesman; president of Cuba (1976–). The son of a wealthy sugar planter, Castro became an opponent of the dictator Fulgencio Batista (1901–73). On 26 July 1953, he led an unsuccessful attack on the Moncada barracks and was imprisoned until 1955. In 1956 he invaded Cuba from Mexico with a small armed band and after a long guerrilla war he defeated government troops. He entered Havana on 1 January 1959. Castro established a socialist government, which the USA attempted to subvert (see BAY OF PIGS). As a result, Cuba became heavily dependent on the Soviet Union. A defiant and influential leader during the 1970s, Castro has become an increasingly isolated figure since the collapse of the Soviet Union (1991).

cat A carnivorous mammal belonging to the family *Felidae* (36 species). Most cats have sheathed claws and sharp canine teeth to kill their prey. Their acute vision (especially in poor light), sense of smell, and hearing are adaptations for hunting stealthily, often at night. With no natural enemies, the kittens (or cubs) are born blind and toothless and learn hunting techniques through play.

The wide range of different breeds of domestic cat (*Felis catus*), including Persian, Siamese, and Abyssinian, are thought to have been developed from the African wildcat, or cafer cat (*F. lybica*) and possibly the European *wildcat. Wild species range in size from the *tiger to the tiny South African black-footed cat (*F. nigripes*).

catabolism See METABOLISM.

catcombs Subterranean cemeteries, especially those containing early Christian graves. The earliest and biggest catcombs are in Rome, particularly those of St Calixtus and St

Sebastian. With the acceptance of Christianity they fell into disuse, although some remained as centres of pilgrimage.

Catalan A Romance language spoken by about five million people in Catalonia and the Balearic Islands in Spain, Andorra, and the Roussillon region of France. It is closely related to Spanish and to the Occitan language of France.

cataplexy A condition associated with certain abnormal mental states, including schizophrenia and hysteria, in which the patient, usually female, remains motionless, often with the limbs in fixed positions, for a variable length of time.

Catalonia (Spanish name: Cataluña; Catalan name: Catalunya) A mainly mountainous region of NE Spain, on the Mediterranean Sea. Agriculture is important, the main crops being cereals, olives, and grapes. It is the most highly industrialized region in Spain. *History*: united with Aragon in 1137 and Castile in 1497, Catalonia has nevertheless maintained a strong separatist tradition. In 1932 an autonomous government was established and this lasted throughout the Civil War (1936–39), in which Catalonia was on the Republican side. The Catalan government was restored in 1978 and given considerable autonomy in 2006. Area: 31 932 sq km (12 329 sq mi). Population (2005 est): 6 995 206. Capital: Barcelona.

catalysis The acceleration of a *chemical reaction by a substance (catalyst) that is not itself consumed in the reaction. The catalyst allows the reaction to proceed via a different lower-energy pathway. Since the reverse reaction is also accelerated, catalysis does not shift the chemical equilibrium, it merely speeds its attainment. Catalysis is used in industrial chemical processes. In living organisms enzymes are catalysts for biochemical reactions. The **catalytic converter** is a device, first developed in the 1950s, for removing carbon monoxide, oxides of nitrogen, and hydrocarbons from the exhaust gases of motor vehicles by passing them over catalysts in the exhaust system. In **catalytic cracking** in oil refining, the large molecules of crude oil are decomposed by heat and pressure in the presence of a catalyst.

catamaran A modern sailing vessel with two identical hulls, rigidly fastened parallel to one another, and, usually, a single mast with a triangular mainsail and jib. Because of their buoyancy, the hulls of a catamaran offer very little resistance to the water, making it extremely fast. The same principle has been

adopted for some modern high-speed car ferries. The original catamaran was a native canoe-like vessel of the SW Pacific.

cataract Opacities in the lens of the eye resulting in blurred vision and caused by the deposition of small crystals or changes in the composition of the lens substance. The former condition increases with age; such cataracts are a common cause of blindness in the elderly. Certain diseases, such as poorly controlled diabetes mellitus, can also lead to cataracts. Cataracts are usually treated by surgical replacement of the opaque lens by a plastic lens.

catecholamines Amine derivatives of catechol (pyrocatechol or 1,2 dihydroxy-benzene; $\text{C}_6\text{H}_4(\text{OH})_2$). They include *adrenaline, *noradrenaline, and dopamine, which act as neurotransmitters and/or hormones.

categorical imperative The fundamental moral law in *Kant's ethical theory: an act is moral only if the principle on which it is justified is universally applicable.

catenary The curve obtained by suspending a string between two points. If the middle of the string, the lowest point, is at height a above a reference level, then the height, y , at distance x along the string from the middle is given by: $y = \frac{1}{2}a(e^{x/a} + e^{-x/a})$.

caterpillar The larva of *butterflies and moths. Soft-bodied and wingless, all caterpillars have a head and 13 body segments with 3 pairs of true thoracic legs and 5 pairs of abdominal prolegs, which aid in locomotion. The mouthparts are adapted for chewing leaves or feeding on sap. Some species are serious crop pests. Caterpillars exhibit a wide variety of camouflaging colours and shapes. Some produce irritating or poisonous secretions.

Catesby, Robert See FAWKES, GUY.

catfish 1. A *bony fish of the order *Siluriformes* (about 2500 species), with a stout scaleless body, 4–450 cm long, a broad flat head, and long whisker-like barbels. Freshwater catfish (family *Ictaluridae*), sometimes called bullheads, occur worldwide; marine catfish (family *Arriidae*) inhabit tropical and coastal waters and are generally bottom-dwelling scavengers used as food, game, and aquarium fish. 2. A marine fish of the family *Anarhichadidae* (order *Perciformes*).

Cathari (or **Cathars**) A heretical sect that spread from Bulgaria to W Europe in the 11th century. They flourished in France (see ALBIGENSES) and in Italy until they were wiped out in the 14th century by the Inquisition. Their

doctrine taught that the material world was irredeemably evil but that man's soul was good. They were divided into two classes, the believers and the perfect; the latter lived in celibacy, sex being regarded as evil.

Catherine (II) the Great (1729–96) Empress of Russia (1762–96), who gained the throne in a coup in which her unpopular husband, Emperor Peter III (1728–62; reigned 1762), was murdered. Catherine's reign marked the expansion of Russian territory as a result of her successful wars against the Turks (1768–74, 1787–92) and the partition of Poland (1772, 1793, 1795). Influenced by the ideas of the Enlightenment, she had to abandon her scheme to emancipate the serfs in the face of opposition from their masters. Of her many lovers, only Grigori Potemkin (1739–91) exerted a durable influence on government.

Catherine de' Medici (1519–89) Regent of France (1560–63) during the minority of her second son, Charles IX, and virtual ruler until his death (1574). The daughter of Lorenzo de' Medici, Duke of Urbino, she married Henry II of France in 1533. Intent on upholding royal authority during the *Wars of Religion, she advocated tolerance for the *Huguenots but later supported the Catholics. She was largely responsible for the *St Bartholomew's Day Massacre.

Catherine of Aragon (1485–1536) The first wife (1509–33) of Henry VIII of England and the mother of Mary I. Failing to bear him a son, she was divorced by Henry, who argued that their marriage was invalid because Catherine was the widow of his brother Arthur. The pope's refusal to accept their divorce provoked the English *Reformation.

Catherine of Braganza (1638–1705) The wife (from 1662) of Charles II of England. A Portuguese princess and a devout Roman Catholic, her unpopularity was intensified by her failure to produce an heir to the throne.

cathode The negative electrode of an electrolytic cell, valve, etc. It is the electrode by which the electrons enter the system. Compare ANODE.

cathode-ray tube (CRT) A vacuum tube that converts electrical signals into visible form by projecting a beam of electrons onto a fluorescent screen. The electron beam is produced by an electron gun, and deflected horizontally and vertically by an arrangement of plates and magnets, which move it back and forth across the screen and focus it by creating

an *electromagnetic field, the strength of which varies according to input signals. In a television tube the beam intensity varies to form the light and dark regions of the picture. In the **cathode-ray oscilloscope** (CRO) it is used to show the variation of a signal strength with time or with some other electrical quantity.

Catholic emancipation A campaign in Britain and Ireland to secure full civil and political rights for Roman Catholics. In the late 18th century several relief acts were passed but parliamentary representation was still denied. The opposition of the Tory establishment and the monarchy continued until O'Connell's efforts achieved the Catholic Emancipation Act of 1829.

Cato the Elder (Marcus Porcius C.; 234–149 BC) Roman statesman, who wrote the first history of Rome. A moral and political conservative, Cato as censor (184) legislated against luxury and sponsored improvements in public works. His great-grandson, **Cato the Younger**, (Marcus Porcius C.; 95–46 BC) was an opponent of Julius Caesar. Caesar, with Pompey and Crassus, created the first Triumvirate (60) in part to neutralize Cato's opposition to their political ambitions. Forced to support Pompey in the civil war in an attempt to save the Republic, Cato escaped after Pompey's death to Utica, in Africa. There, on hearing of Caesar's victory at Thapsus, he committed suicide.

Catullus, Valerius (c. 84–c. 54 BC) Roman poet. Born in Verona, he became the leading member of a group of young innovative poets in Rome. 116 poems survive, of which the most famous are the 25 lyrics addressed to a married woman named Lesbia.

Caucasian languages See NORTHEAST CAUCASIAN LANGUAGES; NORTHWEST CAUCASIAN LANGUAGES; SOUTH CAUCASIAN LANGUAGES.

Caucasoid A race or group of races and peoples originally inhabiting Europe, North Africa, and the Near East. They are characterized by skin pigmentation ranging from very pale to dark brown, straight to curly hair, narrow high-bridged noses, plentiful body hair, and a high frequency of Rh-negative blood type.

Caucasus Mountains (Russian name: Kavkaz) Two mountain ranges in SE Europe and W Asia extending NW–SE between the Black Sea and the Caspian Sea and separated by the River Kura: the **Great Caucasus**, some 1000 km (621 mi) long, to the N and the **Little Cauca-**

sus, about half that length, along the Turkish borders of Georgia, Armenia, and Azerbaijan. Their highest point is Mount Elbrus.

cauliflower A variety of wild *cabbage, *Brassica oleracea* var. *botrytis*, cultivated as a vegetable. The short stem bears a round white heart, up to 25 cm in diameter, of tightly compressed flower buds surrounded by green leaves. See also BRASSICA.

Cavafy, Constantine (C. Kavafis; 1863–1933) Greek poet, who lived in Alexandria. His poems were often on subjects from the ancient Hellenistic world or erotic homosexual works.

Cavalier poets A group of English poets connected with the court of Charles I (1625–49), including Richard *Lovelace and Robert *Herick. Their love lyrics and poems about war and honour were characterized by a sophisticated elegance.

Cavaliers The royalist party during the English *Civil War. After the *Restoration of the monarchy (1660) the name was kept by the court party and was given to the parliament that sat from 1661 to 1679. The cavaliers were distinguished by their elaborate dress, with lace ruffles, feathers, and velvet, in contrast to the sober attire of the *Roundheads.

Cavan (Irish name: Cabhán) A county in the NE Republic of Ireland, in Ulster. It is generally hilly, drained chiefly by the River Erne, with lakes and *drumlins. Agriculture is the mainstay of the economy, producing oats, potatoes, and dairy products. Some small industries exist in the towns. Area: 1890 sq km (730 sq mi). Population (2002): 56 416. County town: Cavan.

Cavell, Edith (1865–1915) British nurse. From 1907 she worked at a training institute for nurses in Brussels. She was executed by the Germans in 1915 for helping Allied soldiers to escape from German-occupied Belgium. Before she died she is reputed to have said "I realize that patriotism is not enough. I must have no hatred or bitterness towards anyone."

Cavendish, Henry (1731–1810) British physicist; grandson of the Duke of Devonshire, from whom he inherited a fortune. He discovered hydrogen and investigated its properties. He also identified the gases in the atmosphere and showed that water is a compound. The first to measure accurately the universal gravitational constant, he used it to calculate the mass of the earth.

caves Underground hollows, usually opening directly onto the ground surface or connected

with it by a passage. In limestone regions, where most caves occur, many constitute part of a system of natural underground drainage and are connected by subterranean streams. These caves are excavated by the slow solution of limestone by slightly acidic rain water percolating through its joints. The other main type of cave is that eroded from the base of a cliff by the sea. Such caves are located at some point of weakness in an otherwise resistant rock, such as a fault plane or bed of softer material.

caviare A Russian delicacy, eaten as an hors d'oeuvre, which consists of sturgeon's roe, salted and freed from all fat. The roe of the beluga is considered the best, although caviare is also obtained from other types of sturgeon.

Cavour, Camillo Benso di, Count

(1810–61) Italian statesman; the architect of Italian unification. In 1852 he formed his first government under *Victor Emmanuel II of Sardinia-Piedmont. Cavour accepted an alliance with France and Britain during the Crimean War and negotiated a further alliance with France at Plombières in 1859 to oust Austria from Italy. He resigned when France came to terms with Austria but became prime minister again in 1860, negotiating the union of Sardinia-Piedmont with Parma, Modena, Tuscany, and the Romagna. By 1861 he had achieved the establishment of a united Italy.

cavy A small South American *rodent belonging to the genus *Cavia* (6 species); the ancestor of the domestic guinea pig. Cavies are mainly nocturnal and live in groups in scrub and grassland, digging burrows and feeding on vegetation and seeds. Family: *Caviidae*.

Caxton, William (c. 1422–91) The first English printer. A cloth merchant, Caxton lived in Bruges from 1446 until 1470, when he moved to Cologne. There he learned the technique of printing and in 1474 set up a press that produced the first printed book in English, *Recuyell of the Historyes of Troye* (1475). On returning to England (1476), he set up a press at Westminster, where he printed a long and varied list, including Chaucer's *Canterbury Tales* (1478).

Cayenne 4°55N 52°18W The capital and main Atlantic port of French Guiana, in the NW of the Île de Cayenne. Founded by the French in 1643, it served as a French penal settlement (1854–1938). Cayenne pepper derives its name from a plant grown in the area. Population (1999): 50 594.

cayman (or **caiman**) An amphibious reptile

occurring in rivers of Central and South America. 1.2–4.5 m long, it feeds on fish, birds, and insects. Genera: *Caiman* (2 species), *Melanosuchus* (1 species), *Paleosuchus* (2 species); subfamily: *Alligatorinae* (alligators and caimans); order: *Crocodylia* (see CROCODILE).

Cayman Islands A United Kingdom overseas territory in the Caribbean Sea, consisting of three low-lying coral islands (Grand Cayman, Little Cayman, and Cayman Brac) lying about 320 km (200 mi) NW of Jamaica. The population is mainly of mixed African and European descent. The Cayman Islands are a tax haven and tourist centre. The main exports are turtle shell, dried turtle meat, and tropical fish. *History*: discovered in 1503 by Columbus, who named them Las Tortugas because of the abundance of turtles. Formerly attached to Jamaica, they gained a certain measure of self-government in 1959 and became a separate British colony in 1962. Official language: English. Currency: Cayman Islands dollar of 100 cents. Area: 260 sq km (100 sq mi). Population (2000 est): 40 900. Capital: Georgetown.

cedar A conifer of the genus *Cedrus* (4 species), native to the Mediterranean region and the Himalayas and widely planted for ornament and timber. Cedars usually grow to a height of 40 m. Their stiff needle-like leaves grow in tufts of 10–40 on short spurs and their cones are erect and barrel-shaped, 5–14 cm long. The best-known species are the *deodar; the Atlas cedar (*C. atlantica*), from the Atlas mountains; and the cedar of Lebanon (*C. libani*), of the E Mediterranean. Family: *Pinaceae*.

Celebes See SULAWESI.

celeriac A variety of cultivated *celery, *Apium graveolens* var. *rapaceum*, also known as turnip-rooted or knob celery, grown for its globular edible root.

celery The cultivated form of wild celery, or smallage (*Apium graveolens*), a biennial herb native to grassy coastal areas from Europe to India and Africa. Many varieties of cultivated celery have been developed for their edible leafstalks (up to 30 cm in length), which may be pink, yellow, or green. Family: *Umbelliferae*.

celesta A small keyboard instrument the quiet bell-like tone of which is produced by hammers striking steel plates hung over wooden resonators. Invented about 1880, the celesta was used by Tchaikovsky in his ballet *Casse-Noisette*.

celestial mechanics The study of the motions of celestial bodies subject to mutual grav-

itational interaction through the application of the laws of *gravitation and of *mechanics.

celestial sphere The imaginary sphere at the centre of which lies the earth and on the inner surface of which can be projected the stars and other celestial bodies. The directions of these bodies, as seen from earth, are measured in terms of their angular distances from certain points and circles on the celestial sphere. These circles include the *ecliptic, the observer's horizon, and the **celestial equator**, where the earth's equatorial plane meets the celestial sphere. The reference points include the equinoxes, the *zenith, and the **celestial poles**, where the earth's axis meets the celestial sphere. The earth's daily rotation causes an apparent and opposite rotation of the celestial sphere.

- Y first point of Aries; vernal equinox
- △ first point of Libra; autumnal equinox
- C celestial object
- YY right ascension of C (in hours anticlockwise from Y)
- YC celestial longitude of C (in degrees anticlockwise from Y)
- YC declination of C
- XC celestial latitude of C

celestial sphere

cell The basic unit of living matter, which performs the vital processes of producing energy, synthesizing new molecules from raw materials, division, and self-replication. All plants and animals are composed of cells, the average size of which ranges from 0.01 to 0.1 mm; the simplest organisms (bacteria, protozoa, etc.) consist only of a single cell. The fundamental importance of cells was first recognized by Schleiden and Schwann in 1838-39. All cells ex-

cept those of bacteria and mammalian red blood cells possess a *nucleus, containing the genetic material, and cytoplasm, within which are structures (organelles) specialized for different metabolic functions. The cells of the body that are not involved in reproduction (somatic cells) divide by *mitosis to produce daughter cells identical to themselves. The reproductive cells divide by *meiosis to produce gametes, each containing half the number of chromosomes of the somatic cells. The difference between plant and animal cells is the presence in the former of a rigid cellulose cell wall and chlorophyll (see CHLOROPLAST).

cell. Plant and animal cells are basically similar but plant cells are supported by cellulose cell walls and contain the green pigment chlorophyll within chloroplasts. Plant cells often also have large fluid-filled vacuoles, which help to control turgidity of the cell.

Cellini, Benvenuto (1500-71) Florentine goldsmith and sculptor, famous for his autobiography (1558-62). Cellini worked chiefly as a medallist and craftsman for the papacy in Rome, the Medici in Florence, and Francis I in France. His *Perseus* (Loggia dei Lanzi, Florence) attests to his skills as a sculptor.

cello (full name: violoncello) A musical instrument of the *violin family, held between the knees and supported at its lower end by an adjustable pin. It has an extensive range above its lowest note (C two octaves below middle C). Its four strings are tuned C, G, D, A. It emerged as a solo instrument in the 18th and 19th centuries.

cellular network Any of the networks enabling mobile telephones to connect to the main telephone system. Established originally in the UK jointly by British Telecom and Securicor (as Cellnet), it consists of adjacent cells,

each about 5 km across, except in cities, where the cells are smaller and more numerous. Each cell has a transmit/receive station connected to the main telephone network. All transmitters work at the same frequency. The mobile telephone has a battery-powered radio transmitter, which sends speech signals to the receiver in its cell. As subscribers move from one cell to another (e.g. by car), a computerized control system automatically receive signals from the new area.

celluloid A highly flammable thermoplastic material made from cellulose nitrate and camphor. It became the first commercially made plastic (patented 1870).

cellulose ($C_6H_{10}O_5$)_n A carbohydrate that is an important constituent of the cell walls of plants and consists of linked glucose units. Industrially, it is made from wood pulp and is used to manufacture rayon and cellulose-acetate plastics. Cellulose is important in the human diet since it forms part of dietary fibre.

Celsius scale A temperature scale devised by Anders Celsius (1701–44), who originally designated zero as the boiling point of water and 100° as the freezing point. The scale was later reversed. Until 1948 it was known as the centigrade scale.

Celtic languages A branch of the Indo-European language family formerly widespread in W Europe. It is divided into two subgroups: Gaulish and Insular Celtic. The Gaulish languages are now extinct, being superseded in early medieval times by Romance, Germanic, and other languages. Insular Celtic can be further divided into Goidelic (including Manx and *Gaelic) and Brythonic (including *Welsh, *Cornish, and Breton).

Celtic Sea The part of the Atlantic Ocean between Ireland, Wales, SW England, and Brittany.

Celts A people who occupied a large part of Iron Age Europe. They were known to the Greeks as Keltoi and to the Romans as Gauls. There were numerous Celtic tribes and chiefdoms sharing a culture that can be traced back to the Bronze Age of central Europe (c. 1200 BC). See also DRUIDS.

cement A powdered mixture of calcium silicates and aluminates. On mixing with water it undergoes complex hydration processes and sets into a hard solid mass. **Portland cement** and similar materials are made by heating limestone with clay and grinding the product.

Portland cement was invented by a British stonemason, Joseph Aspdin (1799–1855), and named after the stone quarried at Portland, Dorset, which it resembles. It is used extensively in *mortars and in *concrete.

Cenozoic era (or Cainozoic era) The part of the *geological time scale beginning about 65 million years ago and following the *Mesozoic era. It is usually taken to include both the Tertiary and Quaternary periods. During this era the mammals flourished, after the extinction of most of the reptiles dominant in the Mesozoic; the Cenozoic is sometimes known as the age of mammals. Birds and flowering plants also flourished.

centaur In Greek legend, one of a race of wild creatures, half-human and half-horse, living in the mountains of Thessaly and descended from Ixion, King of the Lapiths. They were defeated by the Lapiths in a battle resulting from their characteristically unruly behaviour at the wedding of Ixion's son. See also CHIRON.

centipede An *arthropod belonging to the worldwide class (or subclass) *Chilopoda* (about 2800 species). It has long antennae and a slender flattened body of 15–181 segments. The first segment bears a pair of poison claws and nearly all the remaining segments bear a single pair of legs (compare MILLIPEDE). The tropical order *Scolopendrida* contain the largest species, up to 280 mm long. Centipedes are found under stones, logs, and leaf litter during the day and at night prey on earthworms, insects, etc. They lay eggs or produce live young.

Central African Republic (name from 1976 until 1979: Central African Empire) A country in central Africa, consisting mainly of a plateau lying at about 900 m (3000 ft). The dense forests in the S are drained by the River Ubangi, an important channel of communication. Most of the population belongs to the Banda and Baya tribes. *Economy:* chiefly subsistence agriculture. Diamonds are the chief export; others are cotton, coffee, and timber. There is also a state uranium mine. An IMF-backed programme of economic reforms was instituted in 1994. *History:* as Ubangi-Shari it was one of the four territories of French Equatorial Africa and from 1958 had internal self-government as a member of the French Community. It became independent in 1960 as the Central African Republic. After seizing power in a military coup (1965), Jean Bédel Bokossa had himself declared emperor (1976) but was ousted (1979) and exiled, following allegations of massacres. Free presidential elec-

tions (1993) were won by Ange Félix Patasse and a coalition government was formed that same year. A military rebellion was suppressed (1996) with the help of French troops and there was a failed coup attempt in 2001. Official language: French; Sango is the national language. Currency: CFA franc of 100 centimes. Area: 625 000 sq km (241 250 sq mi). Population (2003 est): 3 684 000. Capital: Bangui.

Central America An isthmus of S North America, extending from the Isthmus of Tehuantepec to the NW border of Colombia and comprising an area of 596 000 sq km (230 000 sq mi). It consists of Belize, Costa Rica, El Salvador, Guatemala, Honduras, Nicaragua, and Panama, together with four Mexican states.

Central Intelligence Agency (CIA) A US government department established in 1947 to coordinate US intelligence operations. It is not permitted to operate within the USA.

centre of gravity A fixed point through which the resultant gravitational force on a body always passes no matter what its orientation.

centrifugal force See CENTRIPETAL FORCE.

centripetal force A force that acts on a moving body causing it to move in a curved path. An object is constrained to move in a circle by a centripetal force directed towards the centre. It has an acceleration towards the centre of v^2/r , where v is the object's velocity and r the radius of the circle. The centripetal force is necessary to overcome the object's tendency to move in a straight line and appears to be balanced by an equal **centrifugal force** directed radially outwards.

ceorl The free peasant (as distinct from the slave) of Anglo-Saxon England. The economic pressures of the Danish invasions and the Norman conquest contributed to the ceorl's declining status and eventual absorption amongst the unfree **villeins*. Thus "churl" has come to mean an uncouth person.

cep (or **cèpe**) An edible mushroom, *Boletus edulis*. Common in temperate woodlands from August to November, it has a stout whitish or brown stalk and a hemispherical cap, brown to white in colour and 6–20 cm in diameter.

cephalopod A **mollusc* belonging to the class *Cephalopoda* (about 600 species), which includes octopuses, **squids*, and cuttlefishes. The most advanced of the molluscs, cephalopods are carnivorous and mostly free swimming,

with a ring of tentacles around the mouth, well-developed eyes, and shells that are reduced and often absent. They are found in both shallow and deepwater marine habitats. In cephalopods the sexes are usually separate and fertilization is internal, often preceded by courtship behaviour.

Cepheid variable A highly luminous supergiant star the brightness of which varies very regularly in a period (1–70 days) that depends on the **luminosity* of the star. By measuring the period and the average apparent **magnitude* of a Cepheid, its distance can be determined. See also VARIABLE STARS. Cepheids occur in ours and other galaxies and are a major means of measuring distances of galaxies up to about 20 million light years away.

Cerberus In Greek legend, the monstrous dog who guarded the entrance to the underworld, usually portrayed as having three heads and a dragon's neck and tail. The final task of **Hercules* was to overpower this monster.

cereals Cultivated grasses selected for their high yields of grain, which constitutes a major item in the diet of man and livestock. Wheat, **rice*, and **maize* are the most important cereals, but **barley*, **oats*, **rye*, and **millet* are also widely cultivated. See also ARABLE FARMING.

cerebral palsy Damage to the developing brain resulting in uncoordinated movements and muscular weakness and paralysis. The brain damage may be caused by injury during birth, insufficient oxygen before, during, or immediately after birth, or a viral infection of the brain. Posture and speech are often affected. Treatment includes physiotherapy to improve movement and speech therapy; special education may also be needed.

cerebrospinal fluid The fluid that surrounds the **brain* and **spinal cord*. It is produced by special blood vessels inside the cerebrum and is reabsorbed by special bunches of veins. It acts as a shock absorber and support for the central nervous system. A normal adult has 130 ml of clear fluid; samples of it are taken for diagnostic tests for diseases of the nervous system.

Ceredigion A county of W Wales, on Cardigan Bay. In 1974 the historical county of Cardiganshire became part of Dyfed; in 1996 it was reinstated as a unitary authority under its Welsh name, Ceredigion. It consists of a narrow coastal plain rising to rolling uplands in the E

and N. Agriculture and tourism are the chief economic activities. The county is a stronghold of the Welsh language. Area: 1793 sq km (692 sq mi). Population (2004 est): 78 100. Administrative centre: Aberaeron.

Ceres (astronomy) The largest *minor planet, 1003 km in diameter, and the first to be discovered (in 1801 by Piazzi). It orbits at between 2.55 and 2.98 astronomical units from the sun, with a period of 4.6 years.

Ceres (mythology) See DEMETER.

cerium (Ce) The most abundant lanthanide element, discovered in 1803 by Berzelius and others. It occurs naturally in several minerals including monazite, (Ce,La,Th)PO₄, and allanite, a complex aluminosilicate. It is used as a catalyst in self-cleaning ovens and as a polishing agent. At no 58; at wt 140.115; mp 798°C; bp 3443°C.

CERN (European Laboratory for Particle Physics; formerly Organisation (previously Conseil) européenne pour la Recherche nucléaire) A W European organization founded in 1954 to carry out nuclear research. Its headquarters are in Geneva. It runs a 28GeV proton synchrotron *accelerator, with an intersecting storage ring system, which is 300 m (328 yd) in diameter, and the Large Electron-Positron Collider (LEP), the world's largest accelerator. In 1994 CERN decided to build a £2 billion accelerator called the large hadron collider (LHC), which is due to open in 2006, when it will be used to attempt to detect the *Higgs boson. See also PARTICLE PHYSICS.

Cervantes, Miguel de (1547–1616) Spanish novelist. In 1569 he went to Italy and fought at the battle of Lepanto in 1571. Returning to Spain in 1575, he was captured by pirates and held for five years. After 1580 he held minor jobs in the civil service while writing a pastoral novel, *La Galatea* (1585), and several plays. *Don Quixote* (Part I, 1605; Part II, 1615), his revolutionary picaresque novel, won him fame throughout Europe.

cervical cancer Cancer of the neck (cervix) of the womb. An increased risk of the disease occurring is associated with certain strains of human papillomavirus. Regular **cervical screening** has cut the mortality of the condition. This is based on the **cervical smear test** (or Pap test, after its inventor G. N. Papanicolaou, 1883–1962) in which a few cells are scraped from the lining of the cervix for microscopic examination.

Ceylon See SRI LANKA, DEMOCRATIC SOCIALIST REPUBLIC OF.

Cézanne, Paul (1839–1906) French postimpressionist painter, born in Aix-en-Provence, the son of a banker. After studying law, he was encouraged by his childhood friend Emile *Zola to settle in Paris (1861). His crude and often erotic early paintings failed to find favour. In 1872, while working with *Pissarro in Pontoise, he turned to *impressionism but soon rejected it in favour of more stability and solidity. His approach influenced the development of *cubism. Living mainly in Provence, he painted portraits, e.g. *The Card Players* (Louvre), still lifes, landscapes, especially of Mont St Victoire and L'Éstaque, and a series of *Bathers*.

c.g.s. system A metric system of units based on the centimetre, gram, and second. It includes dynes, ergs, and both electrostatic and electromagnetic units. It has been replaced for scientific purposes by *SI units.

Chablis 47 49N 3 48E A village in central France, in the Yonne department. Chablis is famous for the white wine named after it.

Chabrol, Claude (1930–) French film director. He was a leading member of the New Wave group of French directors in the late 1950s. His films, many of which are influenced by Alfred Hitchcock and use tense murder plots to illuminate bourgeois social relationships, include *Le Beau Serge* (1958), *Le Boucher* (1969), and *Au cœur du mensonge* (1999).

Chad, Republic of (French name: Tchad) A country covering an extensive area in N central Africa, consisting mainly of poor semi-desert. The land rises from Lake Chad in the SW to the Tibesti Mountains in the N, reaching heights of about 3400 m (11 000 ft). The majority of the rather sparse population (concentrated in the S) is Sara, a Bantu people; most of the nomadic peoples of the N are Muslims. *Economy:* mainly subsistence agriculture with livestock and fishing. The main exports are cotton and meat. Chad is one of Africa's poorest countries. *History:* one of the four territories of French Equatorial Africa, it had internal self-government as a member of the French Community from 1958, gaining independence in 1960. Since 1963 there has been considerable unrest in the N. Rebel forces led by Hissene Habré seized power in 1982, leading to eight years of virtual civil war. In 1990 Habré's government was overthrown and the new president, Idriss Deby, established multiparty democracy. Deby was last re-elected in 2006. A peace agreement with northern rebels was signed in 2002 but vi-

olence has sporadically recurred. Since 2006 violent ethnic conflict has also spread into E Chad from neighbouring *Darfur. Official language: French. Currency: CFA franc of 100 centimes. Area: 1284 000 sq km (495 624 sq mi). Population (2007): 9 885 661. Capital: N'djamena.

Chadwick, Sir James (1891–1974) British physicist, who worked at Cambridge with *Rutherford and went on to discover the *neutron in 1932 by analysing the radiation emitted by beryllium when bombarded with alpha particles. He was awarded the 1935 Nobel Prize.

chafer A herbivorous beetle belonging to the family *Scarabaeidae* (see SCARAB BEETLE). Chafers cause much damage to trees and crops by eating the foliage and flowers; the larvae, which live in the soil, attack the roots. Chief genera: *Melolontha* (see COCKCHAFER), *Cetonia* (rose chafers), and *Phyllopertha* (garden chafers).

chaffinch A *finch, *Fringilla coelebs*, about 15 cm long, that is common in woods and parks in Europe, W Asia, and N Africa. The male chaffinch has a chestnut back, pinkish breast, greyish-blue crown and nape, and two conspicuous white wing bars. The female has a duller plumage with an olive-green back. Chaffinches are often migratory.

Chagall, Marc (1887–1985) Russian-born painter and printmaker of Jewish parentage. After studying in St Petersburg (1907–10), he visited Paris (1910). There he painted some of his best-known works, recalling Russian village life, such as *Me and the Village* (1911; New York). His childlike figures, distorted in scale and often upside down, influenced the surrealists. During World War II he lived in the USA, where he designed ballet sets and costumes; he later worked on mosaics and tapestries for the Israeli Knesset building (1966).

Chagos Islands See BRITISH INDIAN OCEAN TERRITORY.

chain 1. A measure of length equal to 66 feet. **2.** A measuring device used in surveying. A Gunter's chain is 66 feet long (consisting of 100 links), whereas an Engineer's chain is 100 feet long (also 100 links).

Chain, Sir Ernst Boris (1906–79) British biochemist, born in Germany. Coming to England in 1933, Chain worked first at Cambridge and then at Oxford with Lord Florey on the isolation and purification of penicillin. For their work, Chain, Florey, and Sir Alexander *Fleming (the discoverer of penicillin) were awarded a Nobel Prize (1945).

chain reaction A series of reactions in which the product of each reaction sets off further reactions. In a nuclear chain reaction each nuclear fission is induced by a neutron ejected by a previous fission. For example, the fission of a uranium-235 nucleus produces either two or three neutrons each of which can induce the fission of another uranium-235 nucleus. Chain reactions are used as a source of energy in *nuclear reactors and *nuclear weapons. See also CRITICAL MASS.

chalcidony A cryptocrystalline (submicroscopically grained) sometimes fibrous *silica mineral. The numerous varieties include carnelian (red); agate, onyx, and sardonyx (banded); jasper (red or brown); and chert and flint (opaque grey or black).

Chalcidice (Modern Greek name: Khalkidhiki) A peninsula in NE Greece. It ends in three promontories, the northernmost of which contains Mount *Athos. There are fertile low-lying areas but it is mostly wooded and mountainous. It is named after Chalcis, the capital of the Greek island of Euboea, which originally established a colony here. Area: 2945 sq km (1149 sq mi).

chalcopyrite The principal ore of copper, sometimes called copper pyrites, of composition CuFeS_2 . It is brassy yellow with a greenish black streak and occurs mainly in veins associated with the upper part of an acid igneous intrusion.

Chaldea (or Chaldaea) The region of S Babylonia in which the new Babylonian empire was established by Nabopolassar (d. 605 BC) in 625 in the last years of the Assyrian empire. At its height under *Nebuchadnezzar II (reigned 604–562), the Chaldean empire, centred on the rebuilt city of Babylon, dominated the Middle East for about 70 years until overthrown by the Achaemenians in 539.

chalk A sedimentary rock that is a pure-white fine-grained variety of *limestone (calcium carbonate). Coccoliths (the calcareous remains of extinct unicellular organisms) are the main constituents of chalk although other invertebrate remains are included. Chalk is very characteristic of the Upper Cretaceous period in W Europe and the Chalk is sometimes used synonymously with the Upper Cretaceous.

chamberlain An officer appointed by a monarch, nobleman, or corporation to perform ceremonial duties. The chamberlains of medieval England were financial officers and were figures of great political importance in

the 12th century. The chamberlain was succeeded by the Lord Chamberlain, who is responsible for the administration of the royal household. Until 1968 he also licensed plays for public performance.

C Chamberlain, Joseph (1836–1914) British politician. He was mayor of Birmingham (1873–76), and became a Liberal MP in 1876. In 1886 he split the Liberal Party with his opposition to Irish Home Rule. In 1895 he became colonial secretary in the Conservative government, but his commitment to imperial preference in tariff rates caused a rift in the Conservative ranks, which contributed to electoral defeat in 1906. His eldest son **Sir (Joseph) Austen Chamberlain** (1863–1937) became a Liberal-Unionist MP in 1892. He was chancellor of the exchequer (1919–21) and then foreign secretary (1924–29), when he negotiated the *Locarno Pact and won a Nobel Peace Prize (1925). Joseph's son by his second marriage, **(Arthur) Neville Chamberlain** (1869–1940), was a Conservative MP and prime minister of the National Government (1937–40), when he advocated a policy of *appeasement towards the fascist powers. He recognized Italy's conquest of Ethiopia and kept out of the Spanish Civil War. To avoid a European war he visited Hitler three times in 1938, coming to the *Munich Agreement and claiming to have brought "peace for our time". Hitler's invasion of Czechoslovakia, however, forced him to abandon appeasement. He declared war on Germany after Hitler's attack on Poland but his ineffective direction of the war led to his resignation in May 1940.

chamber music Music written to be played in the intimacy of a room rather than in a large hall. In the baroque period chamber sonatas were distinguished from church sonatas and in the late 18th century Haydn, Mozart, and Beethoven established the piano trio (violin, cello, and piano), the duo sonata (one instrument and piano), and the string quartet (two violins, viola, and cello) as the main chamber music forms. Chamber music has been written for other combinations of players, including the clarinet quintet (clarinet and string quartet) and the piano quintet (piano and string quartet).

chameleone An arboreal lizard belonging to the Old World family *Chamaeleontidae* (84 species) and characterized by its ability to change its skin colour by concentration or dispersion of pigment in skin cells. 17–25 cm long, chameleons have a narrow body, an extensible tongue for capturing insects, and bulging eyes that can move independently. They may be

green, yellow, cream, or dark brown, often with spots. Genera: *Brookesia*, *Chamaeleo*.

chamois An agile hoofed *mammal, *Rupicapra rupicapra*, of mountainous regions in Europe and SW Asia. Chamois grow to about 75 cm high at the shoulder and have distinctive narrow upright horns with backward-pointing hooked tips. Their tawny coat becomes darker and longer in winter. Their hide was formerly used for chamois (or shammy) leather. Family: *Bovidae*.

champagne A sparkling wine produced around Reims and Épernay, NE France. Champagne is usually made from black (*pinot noir*) and white (*pinot chardonnay*) grapes. After fermentation sugar and yeast are added to the still wine, which, when bottled, undergoes a secondary fermentation, which produces the sparkle. A dosage of sugar syrup determines whether it will be sweet (*sec*) or dry (*brut*).

Champagne A former province in NE France, now incorporated in the planning region of **Champagne-Ardenne**. Ruled by counts during the middle ages, it became important for its trade fairs and at the end of the 17th century began to produce the *champagne for which it is famous.

Chancery, Court of In English law, the court in which the system of *equity developed. It originated in the 15th century as the personal court of the king's chief law officer, the Lord Chancellor, in which he dealt with cases for which the *common law was inadequate. These included partnerships, the administration of estates, and the execution of trusts. In 1875 it was merged with the Supreme Court of Judicature; it survives as the Chancery Division of the High Court.

Chandigarh 30 43N 76 47E A Union Territory and modern (1953) city in NW India, on the Haryana–Punjab border. The joint capital of both states, it was planned by *Le Corbusier in 30 rectangular sectors for housing, government, and industry. Punjab University was established here in 1947. Area: 114 sq km (44 sq mi). Population (1991): 640 725.

Chandler, Raymond (1888–1959) US novelist. Educated at Dulwich College, England, he returned to the USA and worked in business before starting to write detective stories in the 1930s. The detective Philip Marlowe features in all his nine novels, which include *The Big Sleep* (1939), and *The Long Goodbye* (1954).

change ringing The sounding of a peal of church bells (which contains from 5 to 12 bells)

in a fixed order. Each bell is rung by a single individual. The changes are prescribed by numerical order, e.g. 12345, 21345, 23145.

Channel Islands (French name: Îles Anglo-Normandes or Îles de la Manche) A group of islands in the English Channel, off the coast of NW France. The chief islands comprise *Jersey (the largest), *Guernsey, *Alderney, and *Sark. Since the Norman conquest (1066) they have been a dependency of the British Crown. During World War II they were the only British territory to come under German occupation. Tourism is important but the islands are also noted for their early flowers, fruit, potatoes, and tomatoes. Area: 194 sq km (75 sq mi). Population (2001 est): 153 700.

Channel tunnel (or Chunnel) A tunnel linking Britain with France. First suggested to Napoleon in 1802, digging was actually started by private companies in each country in 1882. A press outcry in Britain forced the government to abandon the scheme on security grounds in 1883. In 1964 the two governments revived the project; the tunnel was agreed upon and in the early 1970s work again started, to be abandoned on economic grounds in 1974. In 1987 Britain and France began to build a high-speed rail tunnel between Folkestone and Coquelles, which was officially opened in 1994. It is 49.4 km (30.7 mi) long.

chanterelle An edible *mushroom, *Cantharellus cibarius*, occurring in temperate woodlands. It is funnel-shaped and yellow with the gills clearly visible and measures 3–10 cm across the cap. Family: *Cantharellaceae*; phylum: *Basidiomycota*.

Chaos In earliest Greek mythology, the goddess representing the primeval emptiness

from which evolved Night, Erebus (darkness), Tartarus (the underworld), and Eros (desire).

Chaplin, Charlie (Sir Charles C.; 1889–1977) British film actor. He was recruited by the Keystone Studio while touring the USA with Fred Karno's pantomime company in 1913. He gained immediate popular and financial success with his portrayals of a sensitive but pathetic tramp dressed in baggy trousers and a bowler hat. From 1918 he wrote and directed his own films. These included *The Gold Rush* (1924), *City Lights* (1931), *Modern Times* (1936), and *The Great Dictator* (1940). Accused of having communist sympathies, he left the USA in 1952 to live in Switzerland.

char (or charr) A food and game fish belonging to the genus *Salvelinus*, related to *trout, especially *S. alpinus*, found in Arctic coastal waters and fresh waters of Europe and North America. Its torpedo-shaped body, about 30 cm long, is olive-green with yellow spots above and silvery or bright red below.

Chardin, Jean-Baptiste-Siméon (1699–1779) French painter of still lifes and domestic interiors after the Dutch tradition of *Vermeer, noted for the simplicity of his paintings, e.g. *The Housewife* (Louvre) and *The Young Schoolmistress* (National Gallery, London).

Charente, River A river in W central France. Rising in the Haute-Vienne department, it flows mainly W to the Bay of Biscay. Length: 362 km (225 mi).

Chari, River (or R. Shari) A river in N central Africa. Rising in the N Central African Republic, it flows N to Lake Chad. Length: 2250 km (1400 mi).

Charing Cross A district in the Greater London borough of the city of Westminster. The

Channel tunnel. A 100-mph (160 km/hr) rail shuttle ("Le Shuttle") ferrying motor vehicles between the terminals at Folkestone, England, and Coquelles, France, began to operate in 1994. The following year Eurostar began to provide a passenger service between London and Paris or Brussels. The tunnel consists of two running tunnels linked by a service tunnel.

last of 12 crosses, marking the resting places of Queen Eleanor's coffin on its journey from Nottinghamshire, where she died, to Westminster Abbey, was erected here (1290) by Edward I.

charismatic movement A Christian movement that emphasizes the charismatic (divinely bestowed) gifts of speaking in tongues, laying on of hands, and baptism by the Holy Spirit. The practice began with the *Pentecostal Churches, but since the 1960s many charismatics have preferred to remain in their own Roman Catholic, Protestant, or Orthodox churches.

Charlemagne (c. 742–814) King of the Franks (771–814) and the first postclassical western emperor (800–14). The son of Pepin the Short, he conquered the Saxon tribes (772–81) and became King of Lombardy (773). In 778 he campaigned in NE Spain, where at Roncevalles his paladin Roland was killed. In 800, having conquered most of western Christendom, he was crowned emperor by Pope Leo III.

Charles (Philip Arthur George) (1948–) Prince of Wales and heir-apparent to the throne of the United Kingdom as the eldest son of Elizabeth II. He was married (1981–96) to *Diana, Princess of Wales, with whom he had two sons, Prince William (1982–) and Prince Harry (1984–), before their separation (1992) and divorce (1996). He married his mistress Camilla Parker Bowles in 2005. His views on modern architecture and ecological issues have aroused controversy.

Charles I (1600–49) King of England, Scotland, and Ireland (1625–49), succeeding his father James I. His first three parliaments (1625; 1626; 1628–29) were dominated by Puritan members, who attempted to make financial grants to the king dependent on his agreement to their demands. Charles resorted to levying taxes without parliamentary consent and ruled without parliament from 1629 to 1640. His attempt to impose *Laud's Anglican prayer book on Presbyterian Scotland led to the Bishops' Wars (1639–40). The financial demands of the Wars forced Charles to summon parliament again but the so-called Short Parliament (April–May 1640) proved so critical that he soon dissolved it. The *Long Parliament, summoned in November following Charles' defeat by the Scots, demanded far-reaching reforms. Charles attempted to arrest five members of the House of Commons and in April 1642 war broke out (see CIVIL WAR, ENGLISH). After his defeat at Naseby (1645), he surrendered to the Scots at Newark in 1646. Charles was tried at Westmin-

ster Hall, found guilty of treason, and beheaded.

Charles (II) the Bald (823–77) Holy Roman Emperor (875–77) and, as Charles I, King of France (843–77). After the death of his father Louis I, civil war broke out between Charles and his three older brothers. By 843 Charles had procured by the Treaty of Verdun the nucleus of what was to become France.

Charles II (1630–85) King of England, Scotland, and Ireland (1660–85). He fought with his father, Charles I, in the Civil War and, after his father's execution (1649), was crowned by the Scots. Defeated by Cromwell (1651), he was forced into exile. After the fall of the Protectorate (1659), Charles became king after promising a general pardon and liberty of conscience in the Declaration of Breda. Charles was forced to dismiss his adviser, the Earl of *Clarendon, after the failure of the *Dutch War of 1665–67 and replaced him with a group of ministers known as the *Cabal. His Roman Catholic sympathies became clear with his Declaration of Indulgence (1672), which annulled the penal laws against Dissenters and Roman Catholics. Parliament responded with the Test Act (1673) excluding Dissenters and Roman Catholics from office, which together with the unpopular Dutch War of 1672–74 served to destroy the Cabal. Fear of Catholicism came to a head with the *Popish Plot (1678), a fabricated Catholic plot to murder Charles and place his Roman Catholic brother, later James II, on the throne. Charles resisted subsequent parliamentary attempts to exclude James from the succession and ruled without parliament from 1681. On his deathbed he acknowledged his Roman Catholicism.

Charles (V) the Wise (1337–80) King of France (1364–80) during the Hundred Years' War with England. As regent (1356–60) for his father John II, Charles suppressed the peasants' revolt known as the Jacquerie (1358). From 1369 to 1375 he regained most of the territory lost to England by the Treaty of Brétigny (1360).

Charles V (1500–58) Holy Roman Emperor (1519–56). Charles inherited Burgundy and the Netherlands (1506) from his father Philip of Burgundy (1478–1506); he became King of Spain and Naples (1516) on the death of his maternal grandfather Ferdinand II of Aragon and Holy Roman Emperor on the death of his paternal grandfather Maximilian I. Charles' vast possessions provoked intermittent warfare with Francis I of France (1494–1547; reigned 1515–47); in 1525, having defeated Francis at Pavia,

Charles briefly took the French king prisoner and in 1527, in response to an alliance between France, the papacy, Venice, and Milan, Charles' troops sacked Rome. Their contest for European hegemony ended inconclusively with the Treaty of Cr  py (1544).

Charles' reign saw the emergence of the *Reformation and in 1521 he presided over the Diet of Worms, which condemned *Luther. His subsequent attempts to conciliate the Protestants failed and in 1546 Charles took up arms against the Protestant Schmalkaldic League, defeating it at M  hlberg (1547). In 1551, however, two German Protestant rulers allied with Henry II of France and Charles was forced to accept Protestant demands. Exhausted by the problems of his Empire, Charles retired to a Spanish monastery, dividing his possessions between his son, who became *Philip II of Spain, and his brother, Emperor Ferdinand I (1503–64).

Charles (VI) the Well-Beloved (1368–1422) King of France (1380–1422). Charles suffered attacks of insanity from 1392 and the ensuing conflict for the regency led to civil war between the Armagnacs and the Burgundians. In 1415 Henry V of England invaded France and defeated the French at *Agincourt. After further campaigns Henry married (1420) Charles' daughter Catherine of Valois (1401–37) and was named as regent of France and Charles' heir.

Charles VI (1685–1740) Holy Roman Emperor (1711–40). His claim (1700) to the Spanish throne gave rise to the War of the *Spanish Succession (1701–14), in which he was unsuccessful. In 1716–18 and 1736–39 he fought the Turks and in 1733–38 he fought and lost the War of the Polish Succession. In 1713 he issued the Pragmatic Sanction, settling the succession of his Austrian possessions on his daughter, *Maria Theresa; this led to the war of the *Austrian Succession on his death.

Charles VII (1403–61) King of France (1422–61). He suffered losses to the invading English and their Burgundian allies until 1429 when, with *Joan of Arc, he liberated Orleans. By 1453, he had driven the English from all of France, except Calais. *See also* HUNDRED YEARS' WAR.

Charles VII (1697–1745) Holy Roman Emperor (1742–45) during the War of the *Austrian Succession. The Elector of Bavaria (1726–45), Charles joined the alliance against Maria Theresa when she claimed the Austrian inheritance. He was elected emperor in opposition to Maria Theresa's husband Francis (subsequently Emperor Francis I).

Charles IX (1550–74) King of France (1560–74) during the *Wars of Religion. His mother *Catherine de' Medici dominated his reign and was largely responsible for the Saint Bartholomew's Day Massacre of Huguenots that Charles ordered in 1572.

Charles X (1757–1836) King of France (1824–30). Charles lived abroad after the French revolution, returning at the Bourbon restoration (1815), when he became leader of the ultra-reactionist party. His reactionary rule led to his overthrow (1830) and he fled to England.

Charles Edward Stuart, the Young Pretender (1720–88) The son of the Old Pretender, *James Edward Stuart. Romantically known as Bonnie Prince Charlie, in 1745 he landed in Scotland, rallied his *Jacobite supporters and marched S to claim the English throne. Lack of support forced his withdrawal again to Scotland. Defeated in battle at Culloden (1746), he escaped to exile in Europe.

Charles's law For a gas at constant pressure, its volume is directly proportional to its absolute temperature. The law is not strictly obeyed but is closely approximated in gases above their *critical state. An alternative statement of the law is that gases expand by 1/273 of their volume at 0  C for every 1  C rise in temperature. Named after Jacques Charles (1746–1823).

Charleston 32 48N 79 58W A city in the USA, in South Carolina near the Atlantic coast. Founded in 1670, it was here that the US Civil War started with the bombardment of Fort Sumter by Confederate troops in 1861. The ballroom dance called the **Charleston** originated here, having been a popular Black dance in the early 1900s. It became a craze in the 1920s with its syncopated rhythms and twisting toe-in steps. A major port, its manufactures include fertilizer, paper, and steel. Population (1992 est): 81 301.

Charleston, Battles of Two battles of the *American Revolution fought at Charleston, South Carolina. In the first (1776) the Americans repulsed the British, whose invasion of the South was thus delayed. In the second battle the Americans surrendered (12 May 1780) Charleston after a 45-day siege.

charm A property of matter, expressed as a *quantum number, postulated to account for the unusually long lifetime of the psi particle (discovered in 1974). According to this hypothesis a quark (*see* PARTICLE PHYSICS) exists having the property called charm. Charm is

believed to be conserved in *strong interactions and in electromagnetic interactions.

Charon In Greek legend, the ferryman who carried the souls of the dead over the Rivers Styx and Acheron to the underworld. Only the correctly buried dead were taken. A coin placed in the mouth of the corpse was his payment.

Chartism A British working-class movement for political reform, centring on the London Working Men's Association (LWMA). Founded in June 1836 by William Lovett (1800–77), the LWMA drew up a People's Charter (1838) of six points: universal male suffrage, the secret ballot, equal electoral districts, abolition of the property qualifications for MPs, payment of MPs, and annual general elections. The Chartists quickly gained support throughout the country and presented their Charter with 1.2 million signatures to parliament (1839). It was rejected, as were their two later petitions (1842, 1848). Chartism lost support in the 1840s because of lack of organization, rivalry between its leaders, and reviving trade and prosperity.

Chartres 48 27N 130E A town in N central France, the capital of Eure-et-Loire department on the River Eure. The gothic cathedral (begun c. 1194) is famous, for its 13th-century stained glass. Chartres is the principal market town of the Beauce region. Population (1999): 40 361.

Charybdis See SCYLLA AND CHARYBDIS.

chat A songbird belonging to the *thrush family. True chats include *stonechats, *whinchats, wheatears, and *redstarts although the name is also given to certain Australian wrens (family *Muscicapidae*) and to American wood warblers (family *Parulidae*).

Chatham 51 23N 032E A town in SE England, in Medway unitary authority, Kent, on the Medway estuary. Its naval base, dating from Tudor times, closed in 1984. Population (2001): 70 540.

Chaucer, Geoffrey (c. 1342–1400) English poet. Chaucer made various journeys to Europe as a soldier and diplomat and held positions in the customs service. His poems *The Book of the Duchess* and *The Parliament of Fowls* derive from the French tradition of the allegorical dream poem. Chaucer also parodied Dante's *Divine Comedy* in *The House of Fame* and used Boccaccio's poem *Il filostrato* as the basis for *Troilus and Criseyde*. His best-known work is *The Canterbury Tales*, a collection of stories told by a group of pilgrims travelling from London to Canterbury.

Chávez (Frias), Hugo (Rafael) (1954–) Venezuelan statesman; president (1998–). A former army officer, he led a failed coup at-

tempt in 1992. His left-wing policies won him a landslide victory in the 1998 presidential election; he was re-elected in 2000 and 2006. His foreign policy has caused tensions with the USA.

Chechenia (Chechenya or Chechnya) A constituent republic of Russia in the N Caucasus. Chechenia has an oilfield and deposits of natural gas. Its main industries are engineering and chemicals. *History:* the Chechens and Ingushes, neighbouring Muslim peoples, were conquered by Russia in the late 1850s. Separate autonomous regions were established in the 1920s and united as the Checheno-Ingush Autonomous Republic in 1936. After the break-up (1991) of the Soviet Union, the republic declared independence from Russia and Chechenia and Ingushetia declared independence from each other. In 1994 the Russian army suppressed the Chechen secessionists, virtually destroying Grozny. Violence continued until Russian troops withdrew (1996), leaving the rebels in control. In 1999 Russia launched a new assault, causing heavy civilian casualties. Chechen forces abandoned the city to Russian troops in 2000 and a pro-Moscow government was installed. Terrorist activities by Chechen militants have continued, notably the killing of over 330 people, including many children, at a school in Beslan, Russia, in 2004. Area: 15 700 sq km (6062 sq mi). Population (2005 est): 1 141 300. Capital: Grozny.

Cheddar 51 17N 2 46W A village in SW England, in Somerset, famous for its cheese and for the caves and rare limestone flora of the **Cheddar Gorge**, a pass through the Mendip Hills. Population (2002): 5724.

cheese A dairy product made from separated milk solids (curd). Curd is made by coagulating milk with rennet or some other enzyme and removing the liquid (whey). It is then salted, pressed into blocks, and left to mature. Cheese is a rich source of protein and calcium. It contains fat but little carbohydrate since most of it is left in the whey.

cheetah A large *cat, *Acinonyx jubatus*, of Africa and SW Asia, also called hunting leopard. It has a reddish-yellow coat with black spots and grows to about 2 m in length. Cheetahs have nonretractable claws and rough pads and they hunt by running down prey. They are the fastest mammals, sprinting at up to 110 km per hour (70 mph).

Chekhov, Anton Pavlovich (1860–1904) Russian dramatist and short-story writer. He studied medicine at Moscow University and developed as a writer after graduating. Suffering

from tuberculosis, he bought a farm at Melikhovo in 1892 and, after a haemorrhage in 1897, lived at Yalta in the Crimea. His first play, *The Seagull* (1896), failed at first but succeeded triumphantly when revived in 1898 by Stanislavsky's Moscow Art Theatre. His other major plays were *Uncle Vanya* (1897), *The Three Sisters* (1901), and *The Cherry Orchard* (1904).

Chelonia An order of reptiles (600 species) comprising the aquatic *turtles and *terrapins and the terrestrial *tortoises, widely distributed in warm and temperate regions. They have a protective shell consisting of an upper carapace and a lower plastron joined together at the sides with openings for the head, tail, and limbs. The neck is long and mobile and can be withdrawn into the shell.

Chelsea porcelain A pioneer soft-paste *porcelain made at Chelsea (London) between 1743 and 1785. From early sparsely decorated figures and small dishes the factory improved to become one of the most important in contemporary Europe. See also DERBY WARE.

Cheltenham 51°54'N 2°04'W A town in SW England, in Gloucestershire. A fashionable spa town in the 18th century, it is famous for its schools (Cheltenham College, a boys' public school, and Cheltenham Ladies' College) and racecourse. Population (1997 est): 106 500.

chemical bond The force that holds the atoms together in a molecule or the ions together in a crystalline solid. In general, atoms combine to form molecules and ions combine to form crystals in order to increase their stability by sharing or transferring outer electrons in such a way that the stable noble-gas configuration results (see ATOMIC THEORY). In **covalent bonds**, atoms are held together by sharing pairs of electrons in their outer shells. In the **electrovalent (or ionic) bond** an outer electron is transferred from one atom to another so that ions are formed. The electrostatic force between the ions holds the molecule or crystal together. **Coordinate (or dative) bonds** are covalent bonds in which both electrons are donated by the same atom.

chemical engineering The design, maintenance, and operation of equipment used in industrial chemical processes. Chemical engineers study both chemistry and engineering subjects. In the UK the profession is controlled by the Institution of Chemical Engineers.

chemical reaction A process in which one or more chemical substances change to other substances, either spontaneously or as a result

of heat, irradiation, etc. Chemical reaction involves rearrangement of electrons between reacting species to form different molecules. A chemical reaction can be expressed quantitatively in a **chemical equation**.

chemiluminescence The emission of light, without heat, in a *chemical reaction. It occurs when the molecules resulting from its reaction are produced in an excited energy state. Light is emitted as the excited molecules revert to their ground state.

chemistry The scientific study of matter, especially the changes and interactions it can undergo. Chemistry can be said to have originated with Aristotle's four-element (earth, air, fire, water) analysis of matter. This view persisted unchallenged through some 2000 years of *alchemy, until it was finally demolished by Robert *Boyle in his *Skeptical Chymist* (1661). The modern concept of an element was provided by Boyle, who also correctly distinguished between elements, compounds, and mixtures. The elucidation of the structure of compounds in terms of the elements they contain was developed by such 18th-century chemists as *Cavendish, *Priestley, and *Lavoisier. Berzelius' law of constant proportions and Dalton's atomic theory, produced at the beginning of the 19th century, established chemistry on a quantitative basis. However, it was not until the beginning of the 20th century that the work of J. J. Thomson and Rutherford (see ATOMIC THEORY) had established the structure of the atom, enabling the electronic theory of *valence to emerge. This theory made sense of the work of Newlands and *Mendeleev in ordering the elements into the structure of the *periodic table. **Inorganic chemistry** is concerned with the study of all these elements (except carbon) and their compounds and interactions. **Organic chemistry** is the study of the enormous number of compounds of carbon. **Physical chemistry** is concerned with the application of physics to a quantitative assessment of the structures and properties of compounds and the laws that control chemical reactions.

Chemnitz (name from 1953 until 1990: Karl-Marx-Stadt) 50°49'N 12°50'E A city in SE Germany, on the River Chemnitz. A textile centre since the 14th century, it became famous for machine construction in the 19th century. Population (1999 est): 266 000.

chemoreception The reception by an organism of chemical stimuli. In man and other air-breathing vertebrates, chemicals ingested

in food, etc., are sensed by taste buds on the tongue and walls of the mouth, while airborne chemicals are detected by smell (olfactory) receptors in the lining of the nasal passages (see also PHEROMONE). Both smell and taste organs are present in fish; worms and other lower animals have only a general sensitivity to chemicals over the body surface. Chemoreception is used by animals for locating and identifying other organisms and food sources.

chemotherapy The treatment of disease by means of drugs. The term was originally coined by Paul *Ehrlich (1854–1915), for the synthetic chemicals used to treat infectious diseases (e.g. salvarsan for syphilis), but it was later expanded to include antibiotics. Chemotherapy now commonly refers to the chemical treatment of cancer—by means of cytotoxic and other drugs—as distinct from treatment with X-rays (see RADIOTHERAPY).

Cheney, Richard B(ruce) (1941–) US politician, Republican vice-president under George W. Bush (2001–).

Chequers A country house in S England, in Buckinghamshire near Princes Risborough. Dating from 1565, it was given to the nation by Arthur Hamilton, 1st Viscount Lee of Fareham (1868–1947), and has been the official country residence of British prime ministers since 1921.

Cherbourg 49 38N 137W A seaport in NW France, in the Manche department on the Cotentin Peninsula. Cherbourg has civil and military docks and large shipbuilding yards. In the heyday of ocean liners Cherbourg was an important transatlantic port; the cross-channel service to Southampton remains important. Population (latest est): 30 112.

Cherenkov, Pavel Alekseevich (1904–90) Russian physicist, who discovered **Cherenkov radiation** in 1934. This radiation consists of blue-white light emitted by the atoms of a medium through which a high-energy charged particle is passing at a speed in excess of the speed of light in that medium. Three years later the effect was explained by James Franck (1882–1964) and Igor Tamm (1895–1971). The three physicists shared the 1958 Nobel Prize for their work.

Chernobyl 51 17N 30 15E A town in N Ukraine. In 1986 the nuclear reactor here exploded, causing the deaths of 31 people at the time (a further 219 died later) and the release of a radioactive cloud. Mass evacuation of people living near the reactor followed; the reactor itself was subsequently entombed in

concrete. The accident led to widespread reviews of the safety of nuclear power.

chernozem (or black earth) A type of soil that is characteristic of the grasslands of the continental interiors. There is a dark surface layer rich in alkaline humus, underlain by calcium carbonate concretions. Chernozems are agriculturally among the richest soils in the world.

Cherokee A North American Indian people of the hill country of E Tennessee and North Carolina, speaking an Iroquoian language. They lived in farming towns of 30 to 60 log cabins.

cherry A tree or shrub of the genus *Prunus*, of N temperate regions, having small rounded juicy fruits surrounding a hard stone containing a seed. Cherry trees produce clusters of white or pinkish flowers in spring, and some varieties are grown only for ornament. Cherries cultivated for their fruits are of two main types—sour and sweet. Sour cherries have been developed from *P. cerasus*. Morello—the best variety—has dark-red fruits used in jams and liqueurs. Sweet dessert cherries arose from the gean (*P. avium*), native to Eurasia and N Africa. Found in woods and hedges, it grows to 25 m. Fruits of cultivated forms vary from pale yellow to dark red.

cherubim and seraphim Supernatural beings who are the two highest orders of *angels in the celestial hierarchy. The seraphim are described by Isaiah (Isaiah 6.2–7) as six-winged attendants upon God's throne. The cherubim, who are traditionally depicted as winged heads, appear in the Bible as guardians of the divine presence (e.g. Genesis 3.24).

chervil An annual herb, *Anthriscus cerefolium*, 30–50 cm high, grown for its leaves, used for salads and seasonings. Its white flowers grow in umbrellalike clusters. A native of central, E, and S Europe, it now grows on hedgebanks and waste ground throughout Europe, the Americas, N Africa, and New Zealand. Family: *Umbelliferae*.

Cheshire A county in NW England, bordering on Wales. It consists chiefly of the low-lying Cheshire Plain rising to the Pennines in the E. It is predominantly agricultural. In 1974 the industrial part of the Wirral Peninsula became part of Merseyside and the NE passed to Greater Manchester. Warrington and Halton (Widnes and Runcorn) became independent unitary authorities in 1998. Industries include chemicals, based on the Cheshire salt fields, and textiles. Area (excluding unitary authorities):

2077 sq km (802 sq mi). Population (2001, excluding unitary authorities): 673 777. Administrative centre: Chester.

Cheshire, (Geoffrey) Leonard, Baron (1917–92) British philanthropist. In the RAF during World War II, he won the Victoria Cross. Appalled by the atomic bombing of Nagasaki, he devoted himself to the relief of suffering by founding the Cheshire Foundation Homes for the incurably sick (of which there are now 330) and launching the World War Memorial Fund for Disaster Relief (in 1989). He was made a life peer in 1991. He married (1959) **Sue, Baroness Ryder** (1923–2000), who founded the Sue Ryder Foundation for the Sick and Disabled of All Age Groups.

chess A board game for two players, each of whom controls 16 pieces. The pieces are moved according to strict rules, the object of the game being to force the opponent's king into a position from which it cannot escape. A player attempts to weaken his opponent's position by capturing his pieces (other than the king). The game is immensely complicated and there is a vast literature devoted to chess strategy. Well known to 5th-century Hindus, it seems to have reached Europe, via Persia and Arabia, in the 10th century. The rules of the game have hardly changed since the 16th century, although the identities of some of the pieces have. Since 1922 the rules have been controlled by the *Fédération internationale des Échecs* (FIDE), which also organizes world championships. In 1993 a rival organization, the Professional Chess Association, held its own world championships. See illustration on p. 200.

Chester 53 12N 2 54W A city in NW England, the administrative centre of Cheshire on the River Dee. It was a Roman fortress (Deva) and a medieval walled city and port (the walls remain intact and there are many half-timbered buildings). The Rows are two-tiered arcades of shops with covered balustrades. Its cathedral dates from the 11th century. Chester is a commercial and railway centre, with clothing and metallurgical industries. Population (1995): 120 100.

Chesterfield 53 15N 1 25W A town in N central England, in Derbyshire. Its 14th-century parish church has a famous crooked spire. Chesterfield's industries include engineering, glass, plastics, and packaging. Population (1997 est): 100 300.

Chesterton, G(ilbert) K(eith) (1874–1936) British writer. His detective stories, beginning with *The Innocence of Father Brown*

(1911), featured a Roman Catholic priest. With Hilaire Belloc, he opposed the socialism of G. B. Shaw and H. G. Wells. Chesterton converted to Roman Catholicism in 1922, and thereafter wrote mainly on religious subjects, for example *St Francis of Assisi* (1923). He published over 100 volumes, including *Dickens* (1906) as well as the novels *The Napoleon of Notting Hill* (1904), and *The Man Who Was Thursday* (1908).

chestnut A tree, *Castanea sativa*, also called sweet or Spanish chestnut, bearing large brown edible nuts inside prickly burs. Native to Europe and N Africa and widely introduced, it grows to a height of 30 m. The North American chestnut (*C. dentata*)—once one of the largest common trees of eastern areas—has been largely destroyed by the chestnut blight fungus. Family: *Fagaceae* (beech family). Compare HORSE CHESTNUT.

Chevalier, Maurice (1888–1972) French singer and actor. Starting as an entertainer in Parisian revues, he went to Hollywood in the 1930s and starred in many successful musical films. These included *Love Me Tonight* (1932), *Love in the Afternoon* (1957), and *Gigi* (1958).

Cheviot Hills A range of hills in the UK. They extend along the border between Scotland and England, mainly in Northumberland, reaching 816 m (2677 ft) at The Cheviot. The woollen fabric called **cheviot** is spun from the fleece of the sheep found in the Cheviot Hills.

chevrotain A small hoofed mammal of the family *Tragulidae*. Asiatic chevrotains (genus *Tragulus*; 3–6 species), also called mouse deer, of SE Asia, measure 20–33 cm at the shoulder and resemble small deer, but lack antlers and have a three-chambered stomach. The African water chevrotain (*Hyemoschus aquaticus*) is very similar.

Cheyenne An Algonkian-speaking North American Indian people of the Plains region. They originally lived in what is now Minnesota but intertribal wars forced the abandonment of their agriculturalist life in favour of the nomadic buffalo-hunting culture of the Plains.

Cheyenne 41 08N 104 50W A city in the USA, the capital and largest city of Wyoming. It is an agricultural trading centre. Population (latest est): 50 008.

Chhattisgarh A state of E central India, created in 2000 from the SE part of Madhya Pradesh. It consists of an undulating plain surrounded by hillier country; there are extensive forests. Rice and grain are produced in large quantities; industry includes food processing

with some mining and quarrying. *History:* the area was ruled by the Haihaya dynasty from the 8th century. Under British rule it consisted of 14 princely kingdoms under a British agent based in Raipur. Area: 135 194 sq km (52 199

sq mi). Population (2001): 20 799 956. Capital: Raipur.

Chiang Kai-shek (or **Jiang Jie Shi**; 1887–1975) Nationalist Chinese soldier and statesman. He took part in the overthrow of the *Qing dy-

The chessboard ready for play. A white square is always on the player's right. The queen always starts on a square of her own colour.

Chess notations. In the algebraic notation each square is referred to by a file letter a–h and a rank number 1–8. In the descriptive notation the files bear the names of the piece on the first rank. The ranks are counted 1–8 away from the player.

The king, weak and vulnerable, moves only one square at a time (in any direction). The name of the game is a corruption of the Persian word for king-shah.

The queen, the most powerful piece, moves any distance in any direction. Originally known as the counsellor, its present name and moves were adopted in the 15th century.

The rook or castle moves any distance vertically or horizontally. Originally represented as a chariot (Arabic: rukk), it is known in many languages as a castle or tower (French: tour).

The knight, the only piece to jump over other pieces, moves one square horizontally and two vertically or two horizontally and one vertically. Usually represented by a horse's head, it is sometimes known as the horse (as it was in the Arabic version).

The bishop moves in any direction diagonally. In the Hindu and Arabic games the piece was called an elephant. In the European games the piece has acquired a variety of identities: a bishop in English, a jester (fou) in French, a runner (Läufer) in German, but still an elephant (sion) in Russian.

The pawn moves forward one square (or two on its first move). In Arabic it was called a foot-soldier, the English word deriving from the Latin pes, pedis. In some European languages the piece is called a peasant (e.g. German: Bauer).

nasty in 1911 and in 1925 became leader of the Guomindang (Nationalist People's Party). The Nationalists began fighting their former allies, the Communists, in 1927; following Japan's defeat in World War II civil war again broke out. Chiang was forced to flee to *Taiwan in 1949, where he established the Republic of China. His son **Jiang Jing Guo** (or Chiang Ching-kuo; 1910–88) was prime minister (1971–78) and president (1978–88) of Taiwan.

chiaroscuro (Italian: light-dark) The pattern of light and shade in a picture. Controlled chiaroscuro was an important element of *Renaissance composition, while strong contrasts of light and shade were a main feature of *baroque painting. Chiaroscuro is displayed to supreme effect in etchings by Rembrandt and *Whistler.

Chicago 41 50N 87 45N A city and major port in the USA, in Illinois on Lake Michigan. The third largest city in the country, it was formerly known for its stockyards but now manufactures iron and steel, textiles, and chemicals. The first of its towering skyscrapers was built in 1887 and the Sears Tower (1974) was for many years the world's tallest office building, 443 m (1454 ft) high. *History:* founded in 1803 near the site of Fort Dearborn, it became a city in 1837 and expanded rapidly with the construction of the railways. In 1871 it was almost completely destroyed by a disastrous fire, in which several hundred people were killed. Chicago was subsequently rebuilt in stone and steel. Population (2004 est): 2 862 244.

Chichén Itzá A Maya city in N Yucatán (Mexico) that was the political and religious centre of a wide area under Toltec influence from the late 10th to the 13th centuries. Remains include El Castillo (a pyramidal temple mound), an astronomical observatory, and a cenote (natural well), from which gold, jade, and other sacrificial objects have been recovered.

Chichester 50 50N 0 48W A market town in SW England, the administrative centre of West Sussex. Chichester has Roman remains, including its street plan. Its cathedral dates from the 11th century. Other notable buildings include the Festival Theatre (1962). Population (2001): 23 731.

chickenpox A common very infectious virus disease. It is usually contracted in childhood and one attack normally gives an immunity that lasts for life. At the end of the incubation period (about a fortnight) the patient develops a fever and an irritating rash. Small raised spots appear on the chest and

spread—in the next few days—over the body, face, and limbs. The patient is infectious until the last blister has flaked off. *See also* SHINGLES.

chick pea An annual plant, *Cicer arietinum*, up to 40 cm high, with whitish flowers and edible pealike seeds. It is the chief pulse crop of India, where the cooked seeds are called dhal. Probably native to W Asia, it has long been cultivated in S Europe. Family: *Leguminosae*.

chicory A perennial herb, *Cichorium intybus*, 30–120 cm high, with bright-blue flowers. The dried ground roots yield chicory, a coffee additive, while the blanched leaves are used in salads. A native of Eurasia and N Africa, it is widely cultivated elsewhere. Family: *Compositae*. *See also* ENDIVE.

chiffchaff A woodland *warbler, *Phylloscopus collybita*, about 10 cm long, with a grey-green plumage and whitish underparts. It occurs in Europe and W Asia during the summer and winters in S Europe and Africa. It resembles the willow warbler but can usually be distinguished by its "chiff-chaff" call.

Chihuahua A breed of dog originating from an ancient Mexican breed and developed in the USA. Its coat is variable in colour and either smooth and glossy or long and soft. Height: about 13 cm.

child abuse The physical or sexual abuse of children, usually by a relative (sometimes a parent). Child protection registers kept by local authority social services departments hold the names of children considered to be at risk. Several charities have been set up to attempt to alleviate these problems. *See also* BATTERED BABY SYNDROME.

Children's Crusade (1212) A bizarre episode of the *Crusades, in which some 50 000 children set out from France and Germany to capture Jerusalem. None reached their destination, most being sold as slaves.

Child Support Agency (CSA) In the UK, a government agency established in 1993 to administer the Child Support Act (1991) by assessing and collecting child maintenance payments from absent parents. The agency has caused a good deal of controversy and plans to replace it with a new body having a similar remit were announced in 2006.

Chile, Republic of A country in South America, extending in a narrow strip along the W coast of the S half of the continent. There are many islands off the coast, some of which (including *Easter Island) are well out into the

Pacific Ocean. Chile also includes half of the island of Tierra del Fuego. The country is dominated by the Andes, which are separated from a lower coastal range by a central valley. The majority of the population is of mixed Spanish and Indian descent. *Economy:* based chiefly on the export of minerals, found principally in the N. Chile is one of the world's largest producers and exporters of copper, while the production of iron ore now exceeds that of nitrates. Coal is also mined in quantity. Oil and natural gas are produced but quantities are now declining. The main crops are wheat, sugar beet, potatoes, and maize. Fruit and forest production is growing and there is now an important wine industry. *History:* when Magellan, the first European to set eyes on Chile, sailed through (1520) the strait named after him, S Chile was occupied by Mapuche Indians. A Spanish colony was founded at Santiago in 1541 and Chile was attached to the viceroyalty of Peru. The revolt against Spain began in 1810, when a provisional republic was declared, but victory over the Spaniards was achieved only in 1817 with the military help of the Argentine liberator José de *San Martín. In 1818 the Republic of Chile was established under Bernardo *O'Higgins. The early 20th century saw economic decline and growing instability. The socialist president Salvador *Allende was overthrown by Gen *Pinochet in 1973. After a period of brutal dictatorship Pinochet stepped down in 1990 and democracy was restored. In 1998 Chile's bitter political divisions were reopened by the arrest of Pinochet for alleged human-rights violations. Presidential elections in 2006 were won by the socialist Michelle Bachelet. Chile is a member of the OAS and the LAIA. Official language: Spanish. Currency: Chilean peso of 100 centavos. Area: 741 767 sq km (286 397 sq mi). Population (2007 est): 16 284 741. Capital: Santiago.

chilli See CAPSICUM.

Chiltern Hills A chalk escarpment in S central England. It extends NE from the Goring Gap in the Thames Valley, reaching 255 m (852 ft) at Coombe Hill.

chimaera (or chimera) An organism composed of cells of two genetically different types. Plants with variegated leaves are chimaeras resulting from a mutation in a cell in the growing region (apical meristem). Plant chimaeras can also be produced by *grafting, being known as graft hybrids.

Chimborazo, Mount 129S 7852W An ex-

tinct volcano in the Andes, the highest point in Ecuador. Height: 6267 m (20 681 ft).

Chimera A legendary Greek fire-breathing monster with a lion's head, a goat's body, and a serpent's tail. After ravaging Lycia she was killed by Bellerophon.

chimpanzee An ape, *Pan troglodytes*, of West African forests. Chimpanzees are 100–170 cm tall when standing erect and live in small groups, mostly on the ground, feeding chiefly on fruit and leaves but occasionally eating meat. They communicate by facial expressions and calls and possess considerable intelligence.

China, People's Republic of A country in E Asia, covering vast areas of land ranging from the low-lying and densely populated plains of the NE to the high peaks of the Tibetan Plateau in the W. China proper falls into three natural regions, formed around the three main rivers: the Yellow River in the N, the Yangtze in the centre, and the Xi Jiang in the S. Over 90% of the inhabitants are Han Chinese. *Economy:* mainly dependent upon agriculture, which was formerly socialized through a system of communes but has now been fragmented into small private holdings. The emphasis is on foodcrops, rice in the S, wheat and millet in the N, as well as livestock, especially pigs. Cotton is grown in the N and tea in the S. Coal is extensively mined and is the major source of power. China has been self-sufficient in oil since 1973 and small amounts of natural gas are produced. Iron ore is the most important mineral deposit and China is the main world producer of tungsten ore. Other minerals include antimony, lead, bauxite, and manganese. Recent decades have seen large-scale development of modern industries, especially textiles, steel, electronics, and chemicals; state control of the economy has been loosened and there has been a huge increase in foreign trade. China now has the fourth largest economy in the world. *History:* China is one of the world's oldest civilizations, with a history of organized society going back over nearly four millennia. The first important recorded dynasty was the Shang in the valley of the Yellow River (18th–12th centuries BC). From the 12th to the 3rd centuries BC the *Zhou spread S and E. Under the *Qin, in the 3rd century BC, a unified empire came into being and the first Great Wall was built. The rule of the *Han dynasty, from the 3rd century BC to the early 3rd century AD, saw spectacular advances in technology and manufacturing but its decline was followed by centuries of struggle between different parts of the empire. With the *Tang dy-

nasty (7th–10th centuries) China was once more reunited and reached the high point of its civilization. It was followed by the Song (10th–13th centuries), the *Mongol (13th–14th centuries), the *Ming (14th–17th centuries), and the *Qing, which lasted until 1912. From the 16th century Europeans came to China and set up trading posts despite opposition from the Qing. British efforts to open up the country to free trade led to the Opium War in 1839 and to the opening of treaty ports (and also to the cession of Hong Kong). Later other trade concessions were made to several European countries; Chinese opposition to these moves included the Taiping Rebellion (1851–64) and the antiforeign Boxer Rebellion (1899–1900). In 1911 a revolution under the leadership of Sun Yat-sen ousted the Qing and a republic was set up. The 1920s saw the rise of the Guomindang (Nationalist People's Party) under Gen *Chiang Kai-shek and the foundation of the Chinese Communist Party. In 1926 relations between them broke down and a struggle began that continued until after World War II. In the 1930s threats from Japan culminated in open attack and the occupation of parts of the country, which lasted until the end of World War II. This put a temporary halt to internal struggles, but in 1949 the Guomindang was defeated by the communists and a People's Republic was set up by *Mao Tse-tung. Chiang Kai-shek retreated to Taiwan, where he set up the Republic of China. During the early years of communism relations with the Soviet Union were close but they later deteriorated. In 1966 Mao launched the Cultural Revolution, designed to eradicate "revisionism" and to prevent the rise of a ruling class. Mao died in 1976 and was succeeded by the moderate Hua Guo Feng (1920–). Attempts by a "radical" faction (known as the Gang of Four and including Mao's widow Jiang Qing) to gain power were thwarted by the arrest of its members. *Deng Xiaoping then became the dominant force in government. His rule was marked by economic liberalization but rejection of political reform. In 1984 the government authorized the massacre of thousands of protesting students in Tiananmen Square, Beijing. Following Deng's death in 1997, *Jiang Zemin emerged as the country's paramount leader. *Hu Jintao succeeded him as president in 2003. The former British crown colony of Hong Kong was returned to China in 1997, as was the Portuguese overseas territory of Macao in 1999. Since 1971 China has had a seat at the UN. Official language: Mandarin Chinese. Currency: yuan of 10 chiao or 10 fen. Area: 9 597 000 sq km (3 704 440

sq mi). Population (2007 est): 1 321 851 888. Capital: Beijing.

china clay A mineral deposit consisting mainly of kaolin, a hydrous aluminium silicate. Kaolin is produced by weathering or by hydrothermal processes acting on the feldspars in granite. It is used for making high-grade ceramic products and in many industrial processes.

chinchilla A *rodent belonging to the genus *Chinchilla* (2 species), widely bred for its valuable long soft blue-grey fur. Measuring 30–50 cm long, wild chinchillas are found high in the Andes, living among rocks and feeding at night on vegetation. South American captive chinchillas are mostly short-tailed (*C. brevicaudata*) while in North America the long-tailed species (*C. laniger*) is bred. Family: *Chinchillidae*.

Chinchilla cat A breed of long-haired cat. Chinchillas have a compact body with short legs and a broad head with a snub nose and small tufted ears. The white fur is tipped with black on the back, flanks, head, ears, and tail, giving it a silvery lustre. The eyes are emerald or blue-green.

Chindits The 77th Indian Brigade, organized by Orde *Wingate in 1943 in Burma (now Myanmar) as a "long-range penetration" infantry division. A guerrilla force, the Chindits were so called after the mythological Burmese temple guardian, the *chinthe*, and because they operated beyond the River Chindwin. Initially successful in severing Japanese lines of communication they were later in danger of being encircled and were forced to return to India in groups.

Chindwin, River A river in N Myanmar (Burma), flowing S to join the Irrawaddy River near Myingyan. Length: 1046 km (650 mi).

Chinese A language or group of languages of the Sino-Tibetan family spoken in E Asia. The many distinct forms or dialects of Chinese, which include Mandarin, Min, Kan, Hakka, Hsiang, Wu, and Cantonese (or Yüeh), are mutually unintelligible. In China there have been attempts recently to standardize the language, using Mandarin as a basis. Chinese is a tonal language, many words, otherwise identical, having quite distinct meanings according to intonation. Words are usually monosyllabic and do not change their form to indicate part of speech. The language is written in logographic characters or symbols of pictorial origin (see **IDEOGRAPHIC WRITING SYSTEMS**), which enables them to be understood by speak-

ers of any Chinese dialect. There are as many as 40 000 of these of which 10 000 are in common use. Literacy requires knowledge of about 2000 of them. For transliteration purposes, Pinyin (phonetic spelling) has replaced the older Wade-Giles system (and is generally used in this book).

Chinese lantern plant A hardy ornamental, *Physalis alkekengi*, also called bladder cherry or winter cherry. A native of S and central Europe, it grows to a height of 20–60 cm. The edible fruit is enclosed in a reddish inflated calyx resembling a lantern. Family: *Solanaceae*.

chinoiserie Decorative art and architecture that incorporated Chinese motifs into European fantasy designs and was popular in the late 17th and 18th centuries. The fashion was inspired by importation into Europe of Chinese porcelain, lacquer, etc., in the 17th century. Instances of chinoiserie in England include the *willow pattern, combining Chinese elements into a new design; the interior of the Brighton Royal Pavilion is an architectural example.

Chinook A North American Indian people of the NW Pacific coast of the USA. The Chinook language forms part of a division of the Penutian language family. The Chinook were salmon fishers and traders, their location along the lower Columbia River being ideally suited for exchanging goods with peoples to the N and S and in the interior. Chinook jargon, a combination of Chinook, Nootka, and other Indian languages mixed with English and French words, became the trading language of the entire W coast of America.

chipmunk A ground squirrel belonging to the genus *Tamias* (18 species), of North America and Asian forests. Chipmunks are 15–30 cm long and have a black and white striped back and strong feet and claws for digging. They live in burrows and, in the winter, do not hibernate but feed on a store of nuts and dried fruit carried under ground in their large cheek pouches.

Chippendale, Thomas (1718–79) British cabinetmaker, famous for his furniture designs, especially his chairs. His illustrated collection of rococo furniture designs was widely influential in England and America, although his later neoclassical styles are considered the finest. His son, also **Thomas Chippendale** (died c. 1822), continued the business.

Chirac, Jacques (1932–) French statesman; president (1995–2007), prime minister

(1974–76; 1986–88). Having reorganized the Gaullists in the late 1970s, he became (1986) prime minister under *Mitterrand. He was also mayor of Paris (1977–95). As president he implemented unpopular austerity measures to prepare France for the introduction (January 1999) of the single European currency. In 2002 he won a landslide victory in the presidential elections.

Chiron In Greek legend, a *centaur, son of Cronos and the sea nymph Philyra. Unlike his fellow centaurs, he was revered for his wisdom and knowledge of medicine. After being accidentally wounded by Heracles he bequeathed his immortality to Prometheus and was transformed into the constellation Sagittarius.

chiropractic An alternative medical specialty based on the assumption that most diseases originate from disorders of the nervous system, particularly as a result of compression of the nerve roots as they emerge from the spine. A chiropractor attempts to relieve symptoms by manipulating the spine with his hands.

Chittagong 22 20N 91 48E A city and major port in Bangladesh, on the Indian Ocean. The focal point of road, rail, and air routes, it is the second most important industrial centre in the country. Population (1991): 1 599 000.

chivalry The code of conduct of medieval European knights. The code encompassed the military virtues of bravery and loyalty as well as honour and courtesy. The latter was related to the ideal of *courtly love. The chivalric ideal enshrined a commitment to uphold Christianity and was a major factor in the *Crusades.

chive A small hardy perennial plant, *Allium schoenoprasum*, native to Europe. It has small white bulbs and produces clumps of thin tubular leaves and spherical heads of bluish flowers. The onion-flavoured leaves are used for seasoning foods. Family: *Liliaceae*.

chloramphenicol An *antibiotic usually reserved for severe bacterial infections. It is particularly useful in the treatment of typhoid fever and some forms of pneumonia and meningitis.

chlorine (Cl) A greenish poisonous *halogen gas, discovered in 1774 by C.W. Scheele. It is found in nature only in compounds, especially common salt (NaCl), sylvite (KCl), and carnallite (KMgCl₃·6H₂O). Chlorine is liberated by the electrolysis of brine. It irritates the respiratory system and was used as a poisonous gas in World War I. Chlorine gas is reactive and combines di-

rectly with most elements. Its oxidizing properties make it useful for disinfecting water. It is used in the manufacture of many compounds. At no 17; at wt 35.453; mp -100.98°C; bp -34.6°C.

chloroform (or **trichloromethane**; CHCl_3) A colourless volatile liquid made by reacting *bleaching powder with acetone, acetaldehyde, or ethanol. Its main use is now in the manufacture of *fluorocarbons but it is also used as a solvent and as an anaesthetic.

chlorophyll A green pigment present in organisms capable of *photosynthesis. Higher plants possess chlorophylls *a* and *b*, located in *chloroplasts; chlorophyll *c* is found in some primitive marine plants, and bacteriochlorophyll occurs in photosynthetic bacteria. The chlorophylls absorb red and blue light, trapping light energy for photosynthesis.

chloroplast A structure within a plant cell in which the process of *photosynthesis takes place. It is bounded by a membrane and contains the green pigment *chlorophyll. Chloroplasts vary greatly in shape and number within a cell. The greatest concentration occurs in the palisade mesophyll tissue of the leaves—the main photosynthesizing region.

chloroquine A drug used to prevent and treat malaria. It acts by preventing the digestion of haemoglobin (the red pigment of blood) by the malaria parasite. Chloroquine is also used in the treatment of rheumatoid arthritis and related diseases.

chocolate See COCOA AND CHOCOLATE.

cholera An acute infection of the intestine caused by the bacterium *Vibrio cholerae*, which is transmitted in drinking water contaminated by faeces of a patient. Epidemics of cholera occur in regions where sanitation is poor. After an incubation period of 1–5 days, cholera causes severe vomiting and diarrhoea, which—untreated—leads to dehydration that can be fatal. Treatment consists of replacement of fluid and salts by intravenous injections. Vaccinations against cholera provide only temporary immunity.

cholesterol A compound derived from steroids and found in many animal tissues. Cholesterol is manufactured mainly by the liver and is carried to other tissues in the form of low-density lipoproteins (LDLs); its derivatives form constituents of cell membranes, bile, blood, and gallstones. High levels of LDL-cholesterol in the blood have been associated with an increased risk of heart disease, as a re-

sult of fatty deposits in the walls of arteries. See also ATHEROSCLEROSIS.

Chomsky, Noam (1928–) US linguist, under whose influence the aims and methods of general linguistic theory and especially of grammar were radically revised. *Syntactic Structures* (1957) and *Aspects of the Theory of Syntax* (1965) develop the idea of transformations by which a sentence may be generated from an underlying “deep structure.” He is also an outspoken critic of US foreign policy.

Chopin, Frédéric (François) (1810–49) Polish composer and pianist of French descent. He studied in Warsaw but later settled in Paris, where he lived with the novelist George *Sand from 1838 to 1847. A fervent nationalist, he wrote mazurkas and polonaises influenced by Polish folk music. He developed a highly characteristic style of writing for the piano, for which he composed 2 concertos, 3 sonatas, 4 ballads, 4 scherzos, 24 preludes, and many waltzes, nocturnes, and studies. He also wrote a cello sonata, a piano trio, and songs.

chordate Any animal distinguished by a hollow dorsal nerve cord; a rodlike *notochord that forms the basis of the internal skeleton; and paired gill slits in the wall of the pharynx behind the head, although in higher chordates these are apparent only in early embryonic stages. Chordates comprise the tunicates, lancelets, and vertebrates. Some authorities place these three groups in a single phylum, *Chordata*, while others divide them into separate phyla: *Urochordata*, *Cephalochordata*, and *Craniata* (see VERTEBRATA), respectively.

chorea Involuntary jerky movements caused by disease of the brain. It is a feature of **Huntington's disease** (or **chorea**), a hereditary disease that is also associated with mental deterioration. **Sydenham's chorea**, formerly known as St Vitus's dance, is often associated with rheumatic fever in children. It can be treated with antibiotics.

choreography The art of composing *ballet and other theatrical dances. Choreography originally referred only to a dance notation, the lack of which has made precise reconstruction of many ballets difficult. The most comprehensive system for recording dance steps is that devised by the Hungarian dancer Rudolph Laban (1879–1958), known as Labanotation (see BALLET). The modern choreographer is usually a professional dancer, who selects, arranges into sequences, and teaches the dancers each step of the ballet.

Chou En-lai (or **Zhou En Lai**; 1898–1976) Chinese communist statesman; prime minister (1949–76) and foreign minister (1949–58). Chou studied in Japan, France, and Germany. He led workers in the 1927 general strike in Shanghai, after which he escaped *Guomindang (Nationalist) assassins and fled to Nanchang, where he helped to organize an uprising. After the establishment in 1949 of the People's Republic of China, he gained prominence as a diplomat and was largely responsible for establishing communist China's bureaucracy.

chough A large black songbird, *Pyrrhocorax pyrrhocorax*, about 37 cm long, with red legs and a long red down-curved bill. It occurs in the Alps, Spain, and a few sea cliffs around Britain. The yellow-billed Alpine chough (*P. graculus*) occurs at high altitudes in European mountains. Family: *Corvidae* (crows).

chow chow A breed of dog originating in China more than 200 years ago. The chow has a compact body and a blue-black tongue. The thick coat forms a mane around the neck and shoulders. Height: 46–51 cm.

Chrétien de Troyes (12th century AD) French poet, author of the earliest romances dealing with the *Arthurian legend. He was a native of Champagne and a member of the court of Marie, countess of Champagne, to whom his romance *Lancelot* was dedicated. His romances include *Erec*, *Cligés*, *Yvain*, and *Perceval* (or *Conte del Graal*), in which the *Holy Grail appears in a literary work for the first time.

Christchurch 43 33S 172 40E A city in New Zealand, on E South Island. Founded in 1850, it has a gothic-style cathedral (completed in 1901) and many fine parks. Industries are primarily associated with the rich agriculture of the Canterbury Plains; these include meat processing, tanning, chemicals, and flour milling. Population (2005): 367 700.

Christian Aid A British organization founded in 1949 by the *British Council of Churches to direct the use of donations made to the developing world. It supports development programmes in agriculture, health, and education and gives relief aid in emergencies.

Christian Democrats Political parties having programmes based on Christian principles and generally of a conservative nature. The German **Christlich-Demokratische Union** (Christian Democratic Union; CDU), founded in 1945, held power in alliance with the Christlich-Soziale Union (Christian Social Union; CSU), from 1948 to 1969 under Konrad *Adenauer. It

was the main party in the coalitions led by Helmut Kohl (1982–98) and Angela Merkel (2005–). In Italy the **Democrazia Cristiana** (Christian Democratic Party; DC), founded in 1943 as the successor to the Partito Popolare Italiano (Italian Popular Party), dominated government from 1945 until 1993. Other Christian Democratic parties are found in Austria, Belgium, France, Norway, and Spain.

Christianity The religious faith based on the person and teachings of *Jesus Christ, which had its origin in *Judaism. Its believers hold that Jesus is the Messiah prophesied in the Old Testament. Chiefly through the missionary activities of St Paul, Christianity spread rapidly through the Roman Empire, despite persecutions under Nero and later emperors. Christian belief was at first taught by the Apostles by word of mouth; however, the need for a written record of Jesus' life and teaching was soon fulfilled by the *Gospels. The definition of Christian belief and the authority of bishops and scriptures was well developed when Constantine became emperor (312). A series of general councils, the first held in 325 at *Nicaea, defined orthodox Christian belief. Constantine's establishment of his new capital, Constantinople, led to a growing polarization between the Eastern *Orthodox Church and the Western *Roman Catholic Church. Despite the collapse of the Western Empire, Western Christianity, under the Bishop of Rome who claimed authority as St Peter's successor, spread vigorously. The Orthodox Church, not so rigorously centralized, became increasingly isolated, and with the development of doctrinal differences the two Churches drifted apart. The date of the formal separation is generally regarded as 1054. By the end of the first millennium the Roman church was rapidly gaining power, the papacy reaching the zenith of its influence in the 13th century under Pope Innocent III. In the later middle ages the assertion of power by temporal rulers weakened the united structure of the papacy and *Holy Roman Empire.

By the 16th century the Church no longer had the power to override national interests; in this weakened state it was unable to resist the inevitable fragmentation caused by the *Reformation. Some reformers, such as the followers of Martin *Luther and the English Church, were comparatively conservative, while the Calvinists, centred in Geneva, were more radical. Coinciding with the exploration of the globe, the Reformation and the Roman Catholic response to it, the *Counter-Reformation, stimulated the spread of Christianity

throughout the world, giving rise to many different Christian denominations and communions. The total number of Christians has been estimated at over 1999 million (2000), or approximately 33% of the world population.

Christian Science A religious movement founded by Mary Baker *Eddy. Having been influenced by P.P. Quimby (d. 1866), a spiritual leader, she formulated a set of principles of faith healing based on Christ's healing powers, which she claimed to have discovered and which she expounded in *Science and Health* (1875). The First Church of Christ, Scientist, opened in Boston, Massachusetts, in 1879. The movement spread throughout the world; by 2000 there were some 350 000 adherents and 2000 churches. The movement emphasizes healing, primarily of sin and secondarily of disease.

Christie, Dame Agatha (1890-1976) British author of detective fiction and playwright. She introduced her most famous character, the Belgian detective Hercule Poirot, in *The Mysterious Affair at Styles* (1920). Later novels include *The Murder of Roger Ackroyd* (1926) and *Death on the Nile* (1937). In all, she wrote over 50 popular novels, creating other well-known fictional detectives, including Miss Jane Marple. Several stories have been filmed, and her play *The Mousetrap* has had an unparalleled long run in London since its opening in 1952.

Christmas The Feast of the Nativity of Christ. In the West it has been celebrated on 25 Dec since 336 AD, partly in order to replace the pagan sun worship on the same date. In the East, both the Nativity and Epiphany were originally celebrated on 6 Jan, but by the end of the 4th century 25 Dec was almost universally accepted, although the Armenian Church still celebrates Christmas on 6 Jan.

Christmas Island 1. An island in the Indian Ocean, SW of Java. It became a territory of the Commonwealth of Australia in 1958. The only commercial activity is phosphate mining. Area: 135 sq km (52 sq mi). Population (1994 est): 2000. **2. (or Kiribati)** A large coral atoll in the W central Pacific Ocean, in Kiribati in the Line Islands. British and US nuclear tests were held here between 1957 and 1962. It has coconut plantations. Area: 359 sq km (139 sq mi). Population (1995): 3225.

Christmas rose A perennial herbaceous plant, *Helleborus niger*, about 35 cm tall, native to central and S Europe and Asia Minor. Grown in gardens for its attractive white or pink winter-flowering blossoms, it prefers rich moist

shady sites. The poisonous rhizomes are irritant to the skin when fresh. Dried, they have been used medicinally. Family: *Ranunculaceae*.

Christopher, St (3rd century AD) Christian martyr of Syria. According to legend, he carried a child across a river where he was working as a ferryman. The child grew heavier and he learned that it was in fact Christ and he was thus carrying the weight of the world. He is the patron saint of travellers. Feast day: 25 July.

chromium (Cr) A hard grey transition metal, discovered in 1798 by Louis Nicolas Vauquelin (1763-1829). It occurs in nature principally as chromite (FeCr_2O_4). The metal is extracted by reducing the oxide (Cr_2O_3) with aluminium. The chief uses of chromium are in electroplating steel and in making alloys with iron. All chromium compounds are coloured. At no 24; at wt 51.996; mp $1863 \pm 20^\circ\text{C}$; bp 2472°C .

chromosome One of the threadlike structures that carry the genetic information (see GENE) of living organisms and are found in the nuclei of their cells. Chromosomes consist of a central axis of *DNA with associated *RNA and proteins. Before cell division, the long filamentous threads contract and thicken and each chromosome can be seen as two identical threads (**chromatids**) joined at the centromere. The chromatids later separate to become the daughter chromosomes (see MITOSIS). Chromosome number is characteristic of a species. For example, a normal human body cell has 46 chromosomes comprising 22 matched pairs (called autosomes) and two *sex chromosomes. A human sperm or egg cell has half this number of chromosomes (see MEIOSIS). Abnormal numbers or parts of chromosomes often lead to abnormalities in the individual concerned.

chromosphere The layer of a star's atmosphere that lies between the *photosphere and the *corona. It is very much less dense than the photosphere. The sun's chromosphere is a few thousand kilometres thick; the temperature increases rapidly from about 4000°C near the photosphere to about $500\,000^\circ\text{C}$ at the base of the corona. The solar chromosphere cannot be seen without special equipment, except at a total solar *eclipse.

chronic fatigue syndrome A condition that sometimes follows a serious viral disease, especially glandular fever. Extreme fatigue, which may be associated with a sore throat, muscular pain, and headache, lasts for many months. With no cause established, treatment is confined to relieving symptoms and provid-

ing psychological support. The condition has also been called **myalgic encephalopathy** (ME).

Chronicles, Books of Two Old Testament books covering the history of Judah from the Creation to the end of the Babylonian exile (538 BC). They were probably written in the 4th century BC and originally formed a continuous history with the books of Ezra and Nehemiah. After opening with genealogies from Adam, they describe the reigns of David and Solomon and the succeeding Kings of Judah. Special emphasis is given to the building of the Temple at Jerusalem.

chrysalis The *pupa of most insects of the order Lepidoptera. See also BUTTERFLIES AND MOTHS.

Chrysanthemum A genus of herbaceous plants and shrubs (about 200 species) native to Eurasia, Africa, and North America. The showy forms are widely and easily cultivated, having colourful single or double long-lasting flower heads. The different varieties may bloom at any time from early spring to autumn. Family: *Compositae*. See also PYRETHRUM.

chub One of several freshwater fish related to *carp, found in Europe and North America. The European chub (*Leuciscus cephalus*) has a plump elongated body, usually 30–40 cm long, and is dark blue or green above and silvery below. Certain unrelated freshwater fish of the genus *Leucichthys* (order: *Salmoniformes*) are also called chub.

Churchill, Lord Randolph Henry Spencer (1849–95) British Conservative politician; third son of the 7th Duke of Marlborough and the father of Sir Winston *Churchill. A 'Tory Democrat', he entered parliament in 1874, serving as secretary for India (1885–86), and chancellor of the exchequer (1886). He married (1874) Jeanette (Jennie) Jerome (1854–1921), an American.

Churchill, Sir Winston (Leonard Spencer) (1874–1965) British statesman and author. The son of Lord Randolph *Churchill, he served in the army and as a war correspondent in the second Boer War before becoming a Conservative MP in 1900. In 1904 he joined the Liberals and subsequently served as president of the Board of Trade (1908–10), home secretary (1910–11), and first lord of the admiralty (1911–15). In 1915, during World War I, he rejoined the army and served in France. In 1917 he became minister of munitions, supporting the development of the *tank. Churchill lost his parliamentary seat in 1922 but was re-

elected as a constitutionalist in 1924, becoming chancellor of the exchequer in Baldwin's government. From 1929 he was out of office until the outbreak of World War II, when he became first lord of the admiralty and then, in 1940, prime minister of a coalition government. During World War II, his remarkable oratory and outstanding qualities as a leader made him a symbol of British resistance to tyranny. He was largely responsible for Britain's victorious alliance with the Soviet Union and the USA (1941) but came to view Soviet communism as a future threat. Churchill's coalition government was defeated in 1945 but he returned as Conservative prime minister in 1951, serving until his resignation in 1955. His writings include *The Second World War* (1948–54) and *A History of the English-Speaking Peoples* (1956–58); he won the 1953 Nobel Prize for Literature.

Churchill River A river in W Canada, flowing from NW Saskatchewan E and NE through Manitoba to Hudson Bay. Length: 1610 km (1000 mi).

Church in Wales The Welsh Anglican Church, which was the Established Church of Wales from the 16th century until 1920, when it was disestablished. Since then the Church in Wales has been an autonomous province of the *Anglican Communion. One of its six diocesan bishops is elected Archbishop of Wales. The church has 1142 parishes and 700 stipendiary clergy.

Church of England The Established Church in England, which embodies Protestant elements but also claims continuity with the English Church as established by St Augustine, the first Archbishop of Canterbury. Prior to the mission of Augustine (597), the native Church was dominated by Celtic missionaries from Ireland and Scotland. Conflicts between the indigenous Celtic Church and Rome were resolved in favour of Roman usage at the Synod of *Whitby (664), and thereafter the English Church remained under papal authority until the *Reformation. Under *Henry VIII, papal supremacy was rejected and the king was acknowledged Supreme Head of the Church, but there were no doctrinal changes. The two bases of Anglican doctrine and worship were formulated in the succeeding reigns: the Book of *Common Prayer, introduced in the reign of *Edward VI, and the *Thirty-Nine Articles, published under Elizabeth I, whose excommunication (1570) by the pope completed the break with Rome. By the 19th century three parties had developed within the Church and these continue to the present: the Low

Church or Evangelical group, which emphasizes the Protestant tradition; the High Church group (see **ANGLO-CATHOLICISM**); and a Liberal group stressing adaptation to modern ideas. The two provinces of the Church are the archbishoprics of Canterbury and York, each of which is further divided into bishoprics. Ecclesiastical affairs are supervised by the General Synod (established 1970 to replace the Church Assembly), composed of bishops, clergy, and laity. In 1992 the Synod voted to admit women to the priesthood. Church property and endowments are administered by the Church Commissioners for England (established 1948). See also **ANGLICAN COMMUNION**; **CHARISMATIC MOVEMENT**; **HOLY ORDERS**; **LAMBETH CONFERENCES**; **LATITUDINARIANISM**.

Church of Scotland The Established Church in Scotland. The Scottish Church's secession from Rome was effected in 1560, largely under the influence of John *Knox. The argument over Church government between Episcopalians and Presbyterians continued until the reign of William of Orange, who established the Presbyterian Church in 1690. During the 18th century, disputes arose between traditional Evangelicals and Moderates; this, together with the question of patronage, led to secessions. During the 19th and 20th centuries many of these divisions were healed.

CIA See **CENTRAL INTELLIGENCE AGENCY**.

cicada An insect belonging to the mainly tropical family *Cicadidae* (over 2000 species). Cicadas are 20–50 mm long and have large membranous wings. Males produce loud noises by vibrating two membranes at the base of the abdomen (stridulation). Cicadas usually inhabit trees and the females lay eggs in the wood. The *nymphs drop to the ground and burrow to feed on plant juices from roots. After 1–17 years they emerge as adults. Order: *Hemiptera*.

Cicero, Marcus Tullius (106–43 BC) Roman orator and statesman. Elected consul in 63 BC, his execution of the Catiline conspirators without trial lost him support and he was exiled in 58 BC for 18 months. During the civil war he supported Pompey against Caesar. After the assassination of Caesar in 44 BC he made a series of attacks on Antony, the *Philippics*, for which he was later arrested and killed. He also wrote treatises on rhetoric and philosophical works influenced by Greek political theory.

cichlid A freshwater fish of the family *Cichlidae* (over 6000 species), found in tropical regions, especially Africa. Cichlids have a brightly coloured body, up to 30 cm long, and a single

long dorsal fin; they feed on plants or animals. Many are popular aquarium fish. Order: *Perciformes*.

cider An alcoholic drink made from fermented apple juice. In England cider is made predominantly in the West Country, from apples grown specifically for cider making. Sweet cider has a large amount of unfermented sugar, dry cider little sugar, and rough cider is dry cider with some acetic acid.

Ciliophora A phylum of microscopic single-celled organisms (see **PROTOZOA**), the ciliates, having two nuclei and tracts of hairlike cilia over the cell surface, used for feeding and swimming. Most are free-swimming (e.g. *Paramecium*) but some are attached to the substrate by a stalk (see **STENTOR**; **VORTICELLA**). Most ciliates feed on organic detritus, etc., but some are parasitic, especially on fish.

Cimon (died c. 450 BC) Athenian general and politician. He opposed Themistocles' policy of enmity towards the Spartans, believing Persia was the common Greek enemy, and in about 466 he scored a great victory against the Persians. His opponents, including *Pericles, caused him to be ostracized (461) but after his return to Athens, Cimon negotiated a truce with Sparta (c. 450) and died fighting the Persians in Cyprus.

Cinchona A genus of trees (40 species) of the South American Andes, now cultivated elsewhere in the tropics, especially India. One of the most important species is *calisaya* (*C. calisaya*). The bark yields powerful medicinal drugs, including *quinine and quinidine. Cultivation is now less important, owing to the development of synthetic drugs lacking side-effects. Family: *Rubiaceae*.

Cincinnati 39°10'N 84°30'W A city in the USA, in SW Ohio on the Ohio River. Founded in 1788, it developed as a meat-packing centre in the 19th century. Today it is an important inland port and major manufacturing centre. Population (2000): 331 285.

cinema The first motion picture exhibited to a public audience was made in 1895 by the French brothers Louis and Auguste Lumière and the first commercial success was the American film *The Great Train Robbery* (1903). Influential pioneers of the silent cinema in the USA were D.W. *Griffith, Mack Sennett, and Charlie *Chaplin. In Europe, technological developments were creatively exploited by such directors as F.W. Murnau (1889–1931) in Germany and *Eisenstein in Russia. The end of the

era of silent films was signalled by the success of Al Jolson's *The Jazz Singer* (1927), which had a synchronized musical score; colour film, introduced in the 1930s, added further popular appeal. Between 1930 and 1945 the cinema industry in the USA became essentially an entertainment factory, controlled by the giant Hollywood studios such as MGM and Paramount. The decline in cinema audiences from the early 1950s because of the rival attraction of television caused the break-up of the Hollywood system: subsequently many of the most significant developments in the cinema have been achieved by directors elsewhere. Prominent British directors included Carol Reed, David Lean, and Alfred Hitchcock; directors elsewhere included *Fellini, *Antonioni, *Bergman, *Buñuel, and Godard in Europe, Kurosawa in Japan, and Satyajit Ray in India. By the late 1970s cinema had become a truly global medium. Since the 1980s Hollywood has regained some of its dominance with big-budget action spectacles featuring the latest special effects, as in the work of *Spielberg. Recently, this trend has been boosted by the increasingly sophisticated techniques now available for the computer manipulation of images.

cineraria A herbaceous perennial pot plant developed from *Senecio cruentus* of the Canary Islands. There are numerous horticultural varieties, noted for their handsome daisy-like flowers. Family: *Compositae*.

Cinna, Lucius Cornelius (d. 84 BC) Roman politician. Expelled from Rome by his opponent Sulla (87), Cinna returned with Marius and captured Rome. He tried to restrain Marius' brutal revenge on their opponents and as consul (86–84) restored order. He was killed in a mutiny shortly before Sulla's return to Italy.

cinnabar (moth) A moth, *Callimorpha jacobaeae*, of Europe and Asia. Both the adults—scarlet and black—and the caterpillars—striped black and yellow—have warning coloration to discourage predators. Superfamily: *Caradri-noidea* (noctuids, tiger moths, etc.).

cinnabar (ore) A mineral consisting of mercury sulphide, the chief ore of mercury. It is bright red and occurs in veins and impregnations associated with volcanic rocks.

cinnamon An evergreen tree, *Cinnamomum zeylanicum*, 7–10 m high, native to Sri Lanka and cultivated widely in the tropics. It is coppiced, the bark of the twigs being peeled off and rolled up to form the spice. Family: *Lauraceae*.

Cinque Ports An association of five English ports (Sandwich, Dover, Hythe, New Romney, Hastings) in Kent and Sussex formed during the 11th century to defend the Channel coast. After the Norman conquest they were granted considerable privileges in return for providing the nucleus of the navy. Winchelsea and Rye were later added to their number. The Lord Warden of the Cinque Ports survives as an honorary office.

Circe Legendary Greek sorceress, who had the power to transform men into beasts. Odysseus, who visited her island of Aeaea on his voyage from Troy, was protected by the herb moly, and forced her to restore his men to human form.

circulation of the blood The passage of blood through the heart and the network of arteries and veins associated with it. By supplying the tissues with blood, the circulatory system effects the transport of oxygen, nutrients, etc., and the removal of waste products. Oxygen-rich blood is pumped out of the *heart into the aorta and then, via the arteries, to all the tissues of the body. Here oxygen is removed, and deoxygenated blood returns, through the veins, to the heart. This blood is then pumped to the lungs, where it is reoxygenated, and returned to the heart to repeat the circuit. The circulation of the blood was first discovered by William *Harvey in 1628.

circumcision The removal of all or part of the foreskin of the penis. In many traditional societies circumcision forms part of a rite of passage. Among some Islamic peoples it is performed just before marriage; Jewish babies are circumcised when they are eight days old. Its origin is unknown but it has hygienic advantages, especially in hot climates, and cancer of the penis very rarely occurs among circumcised men. The incidence of AIDS in African tribes that practise male circumcision is much lower than in tribes that do not. Recent research has shown that the outermost keratin layer of skin cannot be penetrated by HIV but because the inner side of the foreskin (like the mucosa lining the vagina and the anus) has no keratin layer it enables HIV to enter the body. Circumcision is also carried out if the opening of the foreskin is too narrow (phimosis). So-called **female circumcision** ranges from removal of the skin around the clitoris to infibulation, in which all the external genitalia are removed. These mutilations, illegal in the UK since 1985, are still common in Africa and the Middle East.

Cirencester 51 44N 159W A market town in SW England, in Gloucestershire. In Roman times it was the second largest town in Britain (Corinium) and it was an important wool centre in the middle ages. The Royal Agricultural College is situated in Cirencester. Population (1991): 15 221.

cirrhosis Destruction of the cells of the liver followed by their replacement with fibrous tissue, which eventually produces symptoms of liver failure (e.g. jaundice, swelling of the legs and abdomen, and vomiting of blood). Cirrhosis may be caused by *alcoholism, *hepatitis, obstruction of the bile duct, and heart failure, but often the cause is not known. Treatment is determined by the underlying condition.

cirrocumulus cloud (Cc) A high *cloud with a mottled appearance composed of ice crystals; it is sometimes known as "mackerel sky."

cirrostratus cloud (Cs) A high thin veil of *cloud composed of ice crystals, visible as a halo around the sun or moon.

cirrus cloud (Ci) A high detached *cloud occurring in the troposphere above 6000 m (20 000 ft), composed of ice crystals and appearing wispy and fibrous. It is usually associated with fair weather.

Cistercians An order of Roman Catholic monks founded by St Robert of Molesme (c. 1027–1111) as a stricter offshoot of the *Benedictine order. The mother house at Cîteaux, France, was founded in 1098. See also TRAPPISTS.

citric acid An organic compound that occurs in plant and animal tissues and is involved in the series of metabolic reactions called the *Krebs cycle. A commercial preparation of citric acid is used as a flavouring agent in foods.

citron A citrus tree, *Citrus medica*, 2–3 m high. Originally from the Far East, it was introduced into the Mediterranean region in about 300 BC; this remains the main centre of commercial cultivation. The rough yellowish sour fruits are used to make candied peel, produced by soaking in brine and preserving in sugar.

citronella A *grass, *Cymbopogon nardus*, cultivated in tropical regions of Africa and Asia and introduced into tropical America. It forms dense tufts and contains geraniol or citronella oil, used in cosmetics and insect repellents.

Citrus The largest and most important genus of tropical and subtropical fruits (10 species), originating in SE Asia. All the species are small

evergreen trees or shrubs with simple glossy leaves and five-petalled, usually white, flowers. The juicy fruits are rich in vitamin C, citric acid, and pectin (used in jam making). The most important are the *orange, *lemon, *lime, *grapefruit, *citron, bergamot, and *tangerine. Family: Rutaceae.

City Hall The headquarters of the mayor of London. An asymmetrical egg-shaped building designed by Norman *Foster, it opened in 2002 and stands opposite the Tower of London on the River Thames. It contains a circular debating chamber for the Greater London Assembly.

city states Independent municipalities, each comprising a town and its surrounding countryside, characteristic of ancient Greece. There were several hundreds of city states, of which Athens was the largest.

Ciudad Juárez 31 42N 106 29W A city in N Mexico, on the Rio Grande. Its importance is due to its location on the US border and as a marketing centre for cotton. Population (2000 est, urban area): 1 190 000.

civet A solitary nocturnal mammal belonging to the family *Viverridae*. The African civet (*Viverra civetta*) is cat-like, about 1.2 m long with coarse greyish spotted fur. Mainly carnivorous, civets also eat fruit and roots. The secretion of their anal glands is used in perfumes as a fixative, making other scents last longer. See also PALM CIVET.

civil engineering The branch of *engineering that deals with the design and construction of buildings and public structures, such as roads, railways, dams, canals, etc. The term was first used in 1750 by John Smeaton (1724–92) to distinguish his work from that of military engineers.

civil law The body of law governing the rights of private individuals and their relationships with each other rather than with the state. It is also called private law, as distinguished from public law and *criminal law. The term is also used of the European legal systems derived from *Roman law, which are different from *common law systems in important respects. For example, in civil law court decisions have no legal force in the decision of similar cases. English-speaking countries generally use common law, although the law of Scotland is more closely related to civil law.

civil list In the UK, the sum given annually from the Consolidated Fund to the monarch and her consort to meet their expenses. Until

1993 the Queen's children (except the Prince of Wales, who receives the revenues of the Duchy of Cornwall) were also on the list. The list was introduced in 1689, became law in 1697, and in 1830 all government expenses were removed from it. Originally parliament voted at the monarch's accession the sum to be paid annually but it is now, because of inflation, reviewed every ten years. **Civil list pensions**, charged to the Consolidated Fund but not forming part of the civil list, are awarded by the monarch on the advice of the prime minister to distinguished persons.

civil rights The individual's rights to liberty, equality of treatment, education, etc., under the law and safeguarded by the state. In countries with a written constitution, such as the USA, they form part of the constitution. In England there have been a number of unsuccessful attempts to codify these rights, which are still only protected by the general law. *See also* BILL OF RIGHTS.

Civil War, English (1642–51) The war between Charles I and parliament, which led to the execution of the king (1649) and the establishment of Oliver Cromwell's *Protectorate (1653). The Civil War was the outcome of a struggle for power between king and parliament, culminating in the events of the *Long Parliament. War was precipitated by Charles' rejection of parliament's Nineteen Propositions in June 1642, and on 22 Aug he raised his standard at Nottingham. The first battle, at Edgehill, ended indecisively but during 1643 the royalists (or *Cavaliers) gained ground in the N and W. The parliamentarian (see ROUND-HEADS) negotiation of the Solemn League and Covenant with the Scots led to their victory at *Marston Moor (1644); the formation of the *New Model Army brought about the decisive defeat of Charles at *Naseby (1645). In 1646 Charles surrendered to the Scots at Newark and the first Civil War was brought to an end. He was handed over to parliament in January 1647, but was seized by the army in June. He escaped to the Isle of Wight and in December reopened negotiations with the Scots. The second Civil War ensued (1648), with royalist uprisings in Wales and Kent, ending with Cromwell's defeat of the Scots at Preston in August. In the following year, Charles was tried and executed and the *Commonwealth was established by the Rump Parliament. The Civil War was concluded by Cromwell's subjection of Ireland (1649–50), his defeat of Charles' heir (later Charles II) at Dunbar (1650), and his victory against the Scots at Worcester in 1651.

Civil War, US (1861–65) The conflict between the Federal government of the USA and the 11 *Confederate States in the South, arising from the conflict of interest between the agricultural slave-owning South and the industrialized North. The election of a president, Abraham Lincoln, opposed to slavery precipitated the secession of the southern states under Jefferson Davis, and war broke out when the Confederates opened fire on Fort Sumter, South Carolina. The opening campaigns in Virginia culminated in the Confederate victory at the first battle of *Bull Run (July). Early in 1862 the Confederate Stonewall Jackson conducted a brilliant campaign in the Shenandoah Valley but on 4 May the Federal Army captured Yorktown and defeated Robert E. Lee's force in the Seven Days' battles (25 June–1 July). The Confederates won a victory at the second battle of Bull Run in August and Lee pushed N into Maryland. Defeated at *Antietam (Sept), the Confederates were then victorious at Fredericksburg (Dec). In Tennessee, meanwhile, the Confederate success at Shiloh (6–7 April) was followed by a reverse at Stones River (31 Dec–2 Jan). In 1863, following his victory at Chancellorsville, Virginia (1–5 May), Lee began his second invasion of the N, only to be defeated at *Gettysburg (July). In the W, Federal troops under Ulysses S. Grant besieged Vicksburg, Mississippi, which fell on 4 July, and, after defeat at Chickamauga (19–20 Sept), won the victory of Chattanooga (23–25 Nov). In 1864 Grant, now the Federal general in chief, advanced against Lee, whom he encountered inconclusively at *Cold Harbor (June). Sherman, who held the Federal command in the W, took Atlanta (Sept) before making his historic March to the Sea. After capturing Savannah in September, Sherman moved N through the Carolinas and on 9 April 1865, Lee surrendered at Appomattox Court House. By 2 June the Federal victory was complete.

Clackmannanshire A council area of central Scotland, lying N of the Firth of Forth. In 1975 the small county of Clackmannanshire was absorbed into Central Region; it became an independent unitary authority in 1996. It is chiefly agricultural, with distilling and some light industry. Area: 157 sq km (60 sq mi). Population (2001): 48 077. Administrative centre: Alloa.

clairvoyance *See* EXTRASENSORY PERCEPTION.

clam A *bivalve mollusc with two equal shells and a muscular burrowing foot. Burrowing clams live buried in sand and mud, mainly in

shallow coastal waters; they feed by taking in water through a tube (siphon) extended into the water. The largest burrowing clam is the geoduck (*Panopea generosa*), weighing up to 5 kg, while the giant clam (*Tridacna gigas*) can exceed 250 kg.

clan A group tracing descent from a common ancestor. Clans are frequently important divisions in traditional societies, as in the pre-18th-century Scottish Highlands. The Scottish clans, until their suppression following the *Jacobite rebellions of 1715 and 1745, controlled distinctive territories and were frequently rivals. The members of a clan wore characteristic clothing (see HIGHLAND DRESS) and often bore the name of its founder preceded by Mac (son of).

Clare (Irish name: Chláir) A county in the W Republic of Ireland, in Munster situated between Galway Bay and the Shannon estuary. It consists of a low-lying central plain rising E to mountains and W to the limestone area of the Burren. Agriculture is the chief occupation. Area: 3188 sq km (1231 sq mi). Population (2002): 94 000. County town: Ennis.

Clare, John (1793–1864) British poet, the self-educated son of a farm labourer in Northamptonshire. His first book, *Poems Descriptive of Rural Life and Scenery* (1820), brought him fame and patronage in London. Subsequent volumes, including *The Shepherd's Calendar* (1827), were less successful, and he lived in great poverty. In 1837 he became insane and in 1841 was confined to a lunatic asylum in Northampton, where he wrote some of his best poems.

Clarendon, Edward Hyde, 1st Earl of (1609–74) English statesman and historian. He served as the king's chancellor of the exchequer during the English Civil war and went into exile in 1646, settling eventually with the future Charles II in France. At the Restoration (1660) he became Lord Chancellor. His daughter Anne married the future James II. Criticized for the sale of Dunkirk to France (1662) and for his handling of the second Dutch War (1664–67), he fell from power and went again into exile, where he completed his monumental *History of the Rebellion and Civil Wars in England* (1702–04).

Clare of Assisi, St (1194–1253) Italian nun, founder of the "Poor Clares." Influenced by the teaching of St *Francis of Assisi, she gave up all her possessions and followed him. St Francis established a community of women with Clare as abbess in 1215. She was canonized in 1255. Because of an incident in which she saw mass cel-

ebrated at a distance, she was proclaimed patron saint of television in 1958. Feast day: 12 Aug.

clarinet A woodwind instrument with a single reed and a cylindrical bore. It is a transposing instrument existing in several sizes and generally has a fundamental of A or B flat; it has a range of three and a half octaves. The clarinet did not become a regular member of the orchestra until the late 18th century. The **bass clarinet** is pitched an octave lower than the B flat clarinet.

Clark, Helen (Elizabeth) (1950–) New Zealand stateswoman; prime minister (1999–). She was elected to parliament in 1981 and became leader of the Labour party in 1993. Her government was re-elected in 2002 and 2005.

Clarke, Kenneth Harry (1940–) British Conservative politician; chancellor of the exchequer (1993–97). His previous posts included home secretary (1992–93).

classicism The aesthetic qualities embodied in the visual arts and literature of ancient Greece and Rome that served as ideals for later European artistic movements. Qualities associated with the concept include harmony and balance of form, clarity of expression, and emotional restraint. The Italian Renaissance of the 15th and 16th centuries was the first attempt to revive these qualities in the arts. Its achievements in art and architecture inspired artists throughout Europe during the next two centuries. In literature, Renaissance interpretations of Aristotle's *Poetics* influenced writers all over Europe in the 17th and 18th centuries. In the later 18th century there was a reaction against neoclassicist doctrines.

Claude Lorraine (Claude Gellée; 1600–82) French landscape painter, born in Lorraine. His paintings of the Roman countryside include biblical or classical figures and his seascapes are remarkable for their sunlight.

Claudius I (10 BC–54 AD) Roman emperor (41–54), who owed his accession to the chaos that followed the murder of his nephew Emperor *Caligula. His rule was efficient: he extended the Empire, taking part in the invasion of Britain (43), but his susceptibility to the influence of his third wife Valeria Messalina alienated the Senate. Agrippina the Younger, his niece and fourth wife, was suspected of his murder. Taught by Livy, Claudius also wrote histories.

Clausewitz, Karl von (1780–1831) Prussian general and military theorist. In 1812 Clausewitz negotiated the Treaty of Tauroggen,

which set in motion the joint Prussian, Russian, and British war effort against Napoleon. Of his many military works the posthumously published *Vom Kriege* is the most famous.

Clausius, Rudolf Julius Emanuel

(1822–88) German physicist, who in 1854 formulated the concept of *entropy and used it in a statement of the second law of thermodynamics. He also contributed to the development of the *kinetic theory of gases and suggested that electrolysis involved the dissociation of molecules into charged particles.

claustrophobia See PHOBIA.

clavichord A keyboard instrument, popular from the 15th to the 18th centuries. Its delicate tone is produced by small brass plates fixed to the end of each key, which strike the strings. It is strung lengthways and has a range of about four octaves.

clavicle The collar bone. There are two clavicles, each running from the upper end of the breastbone to form a joint with the shoulder blade. They brace the shoulders and help to support the arms.

cleavage The repeated division of a fertilized egg cell (zygote) to produce a ball of cells that forms the blastula. In holoblastic cleavage, which occurs in egg cells with little yolk, the entire cell divides. Meroblastic cleavage occurs in yolky egg cells, such as those of birds, when only the yolk-free region divides.

Cleese, John (1939–) British comic actor and writer, best known for his TV series *Monty Python's Flying Circus* (1969–74) and *Fawlty Towers* (1974, 1978). Films include *A Fish Called Wanda* (1988).

clef (French: key) The symbol placed at the beginning of a musical staff to indicate the pitch of the notes. The treble clef, a decorative G, indicates that the second line up of the staff is the G above middle C; the bass clef, an archaic F, indicates that the fourth line up is the F below middle C. The C clef can be set on any of the lines of the staff to establish it as middle C; the alto clef (used for viola music) has the C on the middle line; the tenor clef (used for cello music) has the C on the fourth line up.

cleft palate An abnormality caused by failure of the left and right halves of the palate to fuse during embryonic development. It leaves the nasal and oral cavities in continuity and it may be associated with a harelip. The cleft can be repaired surgically at 16 to 18 months of age.

Clematis A genus of herbaceous or woody

plants (about 250 species), mainly climbing perennials, widely distributed in temperate regions. There are many horticultural varieties, with purple, pink, or white flowers. Family: *Ranunculaceae*.

Clemenceau, Georges (1841–1929) French statesman; prime minister (1906–09, 1917–20). A member of the chamber of deputies from 1876 to 1893, he subsequently devoted much of his energy to journalism. During the prewar years he urged military preparation against Germany and then attacked the World War I government for defeatism. As prime minister for the second time, he led France to victory.

Cleopatra VII (69–30 BC) Queen of Egypt (51–48, 47–30), the mistress of Julius Caesar and then of Mark Antony. Cleopatra was co-ruler with her brother Ptolemy XIII (61–48), who ousted her in 48. Restored by Caesar, she accompanied him to Rome and gave birth to (allegedly) his son Caesarion. After Caesar's murder, Cleopatra returned to Egypt and in 41 she met Antony. In 37 he abandoned his wife Octavia and lived with Cleopatra, who bore him three sons. Antony's brother-in-law Octavian defeated Antony and Cleopatra at *Actium in 31 and in 30 they both committed suicide.

Cleopatra's Needles A pair of ancient Egyptian obelisks carved in the reign of Thutmose III (c.1475 BC) at Heliopolis. They were moved by *Augustus Caesar to Alexandria in 12 BC. They were moved again in 1878, one being set up on the Victoria Embankment, London, the other in Central Park, New York.

Cleveland 41 30N 81 41W A city in the USA, in Ohio on Lake Erie. It is a major Great Lakes port and the largest city in Ohio. One of the country's leading iron and steel centres, its other industries include oil refining, food processing, and the manufacture of motor vehicles. Population (2000): 478 403.

Cleveland, Stephen Grover (1837–1908) US statesman; Democratic president (1885–89, 1893–97). In his first term as president he tried to stamp out graft and excessive tariff protection. His second term was troubled by a financial crisis and labour strife.

Cleveland Bay A breed of horse developed in the Cleveland region of N Yorkshire, England, and always reddish brown (bay) with black mane, tail, and legs. Formerly a pack and coach horse, Clevelands are now used mainly for crossing with Thoroughbreds to produce

showjumpers. Height: 157–168 m (15½–16½ hands).

click beetle A long narrow flat beetle, also called skipjack beetle, belonging to a large and worldwide family (*Elateridae*; 8000 species). If upturned it rights itself by springing into the air with a clicking sound. The larvae, known as wireworms, are serious pests of root crops.

Clinton, Bill (William Jefferson C.; 1946–) US statesman; Democratic president (1993–2001). His first term saw US-brokered peace deals in Bosnia-Herzegovina and the Middle East and an economic boom. He was re-elected in 1996. In 1998 he confessed to a sexual affair with a White House trainee, despite his previous denial on oath. The House of Representatives voted for his impeachment for perjury and obstruction of justice but he was found not guilty (1999) by the Senate. His wife, **Hillary Rodham Clinton** (1947–), was elected to the Senate in 2000.

clipper ship A fast sailing vessel developed in the 19th century for international commerce, so called because it clipped the time required for a given passage.

Clive, Robert, Baron Clive of Plassey (1725–74) British soldier and colonial administrator, who established British supremacy in India. He joined the East India Company in 1743 and made his name by capturing Arcot (1751). In 1757 he recaptured Calcutta from the Nawab of Bengal, whom he then defeated at Plassey. This assured the East India Company control of Bengal, of which Clive was virtual ruler until 1760, when he returned to England. He was appointed governor and commander in chief of Bengal (1764–67). He was subsequently named in an inquiry into the East India Company's affairs, was vindicated (1773), but committed suicide shortly afterwards.

cloaca The posterior chamber of the body in all vertebrate animals except the placental mammals, into which the digestive, urinary, and genital tracts open. Faeces, urine, and eggs or sperm are discharged through its vent.

clock A device for measuring the passage of time. Clockwork has two essential components: an energy store (a raised weight or a coiled spring) and an escapement that regulates the release of energy from the store. The earliest recorded escapement was in a giant Chinese astronomical clock (c. 1090 AD). Early European clocks (called turret clocks from their usual position in church towers) were crude ironwork with verge escapements, driven by falling

weights and recording time by striking on the hour. The 14th-century Italian family of Dondi introduced dials and the innovation of mainsprings about 1500 enabled portable clocks (see also WATCH) to be made. Refinements in the 17th century were the anchor escapement (1671) and the use of pendulums (see HUYGENS, CHRISTIAAN). An important advance in the 18th century was the development of an accurate marine chronometer, used by navigators to determine position. Scientific advances in the 20th century have led to the development of clocks regulated by the natural vibrations of atoms (see ATOMIC CLOCK).

clone A population of organisms produced from a single parent cell by asexual division—for example by vegetative reproduction in

clone. The stages involved in producing the first clone of a higher animal.

plants or parthenogenesis in animals. The individuals of a clone are genetically identical. The first successful **cloning** of a higher animal took place in Scotland in 1996, when the nucleus of a body cell taken from an adult sheep was fused with an egg cell that had had its own nucleus removed and was stimulated to divide by an electric shock. The resulting embryo was inserted into the womb of a surrogate sheep, leading to the birth of a lamb genetically identical to the first sheep. In the UK all experiments on human embryos are subject to strict controls by the Human Fertilization and Embryology Authority. In 1998 the Authority ruled that research into cloned human tissue for surgical transplant could proceed but that reproductive human cloning could not.

clothes moth A small *tineid moth whose larvae feed on clothes, carpets, blankets, etc. There are a number of species of widespread distribution. Adults generally have a wingspan of 12–25 mm and are pale grey-brown in colour. Pesticides, dry cleaning, and man-made fibres have reduced their damaging effects.

cloud A mass of minute water droplets or ice crystals, or a combination of both, produced by the condensation of water vapour in the atmosphere. When conditions are favourable the droplets grow and precipitation may occur. Various classifications of clouds exist but the one most extensively used by meteorologists is based on cloud appearance and height and comprises ten principal forms. The high clouds, normally above 5000 m (16 000 ft) are cirrus (Ci), cirrostratus (Cs), and cirrocumulus (Cc). The medium clouds at 2000–5000 m (6500–16 000 ft) comprise altocumulus (Ac) and altostratus (As). Below this level the low clouds are stratus (St), stratocumulus (Sc), and *nimbostratus (Ns). Some clouds grow vertically and cannot be classified solely by height; these are chiefly cumulus (Cu) and cumulonimbus.

cloud chamber A device, invented by C. T. R. *Wilson, used for studying the properties of ionizing particles. It contains a chamber containing a vapour that can be made supersaturated. When an ionizing particle passes through the chamber drops of liquid condense along its trail, thus making the trail visible.

clove An evergreen Indonesian tree, *Eugenia caryophyllata*, growing to a height of 12 m. The dried flower buds are used as spice. The whole tree is aromatic, clove oil being distilled from the buds, stalks, and leaves for use in medicine and as artificial vanilla. Family: *Myrtaceae*.

clover An annual or perennial plant of the genus *Trifolium* (about 290 species), which also includes the trefoils. Clovers, which occur mainly in N temperate regions, have leaves divided into three leaflets and dense heads of flowers. They are valuable as fodder plants and for their nitrogen-fixing ability. Family: *Leguminosae*.

clubmoss A perennial mosslike plant, also called ground pine, belonging to a genus (*Lycopodium*; about 200 species) of flowerless vascular plants, found mainly in tropical and subtropical forests and mountainous regions. It has a creeping stem with wiry branches, densely covered with green, yellowish, or greyish needle-like leaves. The spore capsules occur at the base of special leaves (sporophylls), which are often arranged in conelike clusters (strobili). Order: *Lycopodiales*; phylum: *Lycophyta*.

Cluny 46 25N 4 39E A town in E France, in the Saône-et-Loire department. Its famous Benedictine abbey (founded 910 AD) became the centre of the Cluniac order, a reformed Benedictine order that was widely influential in Europe (c. 950–c. 1130). Population (latest est): 4724.

cluster of galaxies A group of *galaxies that are physically associated by mutual gravitational effects. Most galaxies are members of a cluster: our own Galaxy belongs to the Local Group. The densest clusters contain a thousand or more galaxies. Adjacent clusters are loosely grouped into **superclusters**.

clutch A device enabling two rotating shafts to be coupled and uncoupled. Positive clutches have square or spiral jaws allowing no slipping and normally both shafts have to be at rest for engagement. Friction clutches provide for slipping while the shafts are being engaged, but do not have to be stopped for engagement. In a plate clutch flat discs attached to each shaft press against each other; in a hydraulic clutch radial vanes attached to the shafts are immersed in a fluid.

Clutha River A river in New Zealand, the longest river in South Island. It flows generally S from Lake Wanaka, in the Southern Alps, to enter the Pacific Ocean near Kaitangata. Length: 340 km (210 mi).

Clyde, River A river in W Scotland. Rising in the hills of South Lanarkshire, it flows NW through Glasgow and S of *Clydebank to enter the Atlantic Ocean at the Firth of Clyde. Length: 170 km (106 mi).

Clydebank 55 54N 4 24W A town in W central Scotland, in West Dunbartonshire Region on the River Clyde. Shipbuilding has been replaced by more varied economic activities. Population (1991): 29 171.

Clydesdale A breed of draught horse developed in the Clydesdale region of Scotland in the 18th century. It has a compact body with strong legs and feet and may be bay, brown, black, or chestnut. Height: about 1.75 m (17 hands).

Clytemnestra In Greek legend, the daughter of Tyndareus, King of Sparta, and Leda, and wife of *Agamemnon. She and her lover Aegisthus killed Agamemnon after the Trojan War and she herself was killed by her son *Orestes.

cnidarian An aquatic invertebrate animal of the phylum *Cnidaria* (about 9000 species), including *Hydra*, jellyfish, sea anemones, corals, etc. There are two different generations of the life cycle (see POLYP; MEDUSA) and either or both may occur. The body cavity has a single opening (mouth) and stinging cells (nematocysts) are used for defence or catching prey.

coal A carbonaceous mineral deposit used as a fuel and raw material for the chemical industry. Coal results from the compaction and heating of partially decomposed fossil vegetable matter. During the coalification process the plant remains are changed progressively from a peatlike material into lignite (brown coal), sub-bituminous and bituminous coal, semi-anthracite, and anthracite. During this process the percentage of carbon present increases and the moisture and volatile content decreases; anthracite is about 90% carbon. These coals are known as the humic coals. The sapropelic coals (cannel coal and boghead coal) are derived from finely divided vegetable matter (algae, spores, and fungal material). Most coal was formed in the Carboniferous period, although some of the younger coals, for example lignite, date from Mesozoic and Tertiary times.

Coal has been mined in Britain since Roman times but on a small scale until the industrial revolution. In about 1800 coal was first carbonized on a commercial scale to produce *coal gas for gas lighting and coke for smelting iron ore. By the middle of the 19th century, interest in the by-products (coal tar, ammonia, and pitch) was awakening. The chemistry of coal tar developed into the study of organic chemistry, and the aromatic compounds from coal tar led to the development of the dyestuffs and explosives industries. In the 20th century these

products also became the foundation of the plastics industry. During the 1920s and 1930s processes were also developed (mainly in Germany) for converting coal into oil. Subsequently, *natural gas has largely replaced coal gas and petrochemicals (see OIL) have to a considerable extent replaced coal tar as sources of raw materials. In 1947 the UK coal mines were nationalized under the National Coal Board but in 1994 the Coal Industry Act authorized the issuing of licences to private companies. The government decided to close many of the UK's mines in the 1990s and by 2003 there were only 9 deep mines still in operation.

coal gas A gas consisting mainly of hydrogen (50%) and methane (30%), with some carbon monoxide (8%) and other gases. It is made by destructive distillation of coal, a process that involves heating it to 1000°C. Coal gas was formerly supplied to homes for heating and cooking, but it has now been largely replaced, in the UK, by *natural gas from the North Sea.

Coal Measures See CARBONIFEROUS PERIOD.

coastguard A paraval force formed by some countries during the 19th century to hinder smuggling. In Britain it now deals principally with lifesaving and maritime safety through a network of coast-watching stations and provides a meteorological service.

Coast Mountains A mountain range of W Canada, extending from the US border 1600 km (1000 mi) N into Alaska. Very rugged, it rises steeply from the Pacific coast. It includes Canada's largest mountain mass and a long glacier belt. Mount Waddington at 3978 m (13 260 ft) is the highest point.

cobalt (Co) A transition metal similar to iron and noted for its deep-blue colour when reacted in ceramics. It was discovered by G. Brandt (1694–1768) in 1735 and occurs naturally as cobaltite (CoAsS) and in copper, nickel, iron, silver, and lead ores. It is used as an alloy in the manufacture of cutting steels and magnets. The isotope ⁶⁰Co is a strong gamma-emitter produced in nuclear reactors and used in radiotherapy (the **cobalt bomb**) and in industry. At no 27; at wt 58.9332; mp 1495°C; bp 2928°C.

Cobbett, William (1763–1835) British journalist, who championed the cause of the rural poor in his weekly *The Political Register* (from 1802). After army service in Canada he accused his officers of corruption and was forced to flee Britain (1792), returning in 1800. He was imprisoned (1810–12) for attacking the flogging of

militiamen and in 1817 was again forced to flee to the USA. Returning to Britain in 1819, he began in 1821 the country tours described in *Rural Rides* (1830).

cobra A highly venomous snake occurring in warm regions of Africa and Asia and able to expand its neck ribs to form a hood. The king cobra (*Ophiophagus hannah*) of S Asia is over 3.6 m long, making it the largest venomous snake; it preys chiefly on other snakes. The common Indian cobra (*Naja naja*), used by snake charmers, is 1.7 m long and frequently enters houses at night in search of rats. Family: *Elapidae* (cobras, mambas, coral snakes).

coca A Peruvian tree, *Erythroxylon coca*, cultivated in Java, South America, and Sri Lanka for its leaves, which—when dried—yield cocaine. Coca leaves have been chewed for centuries in South America for their effect in relieving fatigue and hunger; prolonged use can cause addiction and mental and physical damage. Family: *Erythroxylaceae*.

cocaine An alkaloid ($C_{17}H_{21}O_4N$) derived from *coca leaves and also made synthetically. The first drug to be used as a local anaesthetic, it has largely been replaced by safer drugs for this purpose (e.g. procaine) although it is still used in pain-killing mixtures for treating people with terminal illnesses (e.g. cancer). Cocaine, an addictive stimulant, is taken for the euphoria it produces. **Crack** is a highly addictive derivative of cocaine; it can induce violence in habitual users.

cochineal A natural red dye obtained from the dried bodies of certain female scale insects, especially *Dactylopius coccus* of Mexico. It has now been largely replaced by synthetic dyes, but continues to be used for colouring foodstuffs and cosmetics.

cochlea See EAR.

cockatiel A small Australian *cockatoo, *Nymphicus hollandicus*, of interior grasslands. It is 32 cm long and has a grey plumage with white wing patches, a yellow head and crest, and reddish ear patches.

cockatoo A *parrot belonging to a genus (*Cacatua*; 17 species) ranging throughout Australia, Malaysia, and the Philippines. Cockatoos are usually white, often with a pink or yellow blush, although some species are black; all have a long erectile crest and a large hooked bill used to crack nuts and extract grubs from wood.

cockchafer A European beetle, *Melolontha melolontha*, also called maybug, that is very de-

structive to plants (see CHAFER). Up to 35 mm long, it is black with reddish-brown legs and wing cases and has a loud buzzing flight. The larvae—which cause the most damage, particularly to cereals and grasses—are also called white grubs or rookworms.

Cockcroft, Sir John Douglas (1897–1967) British physicist, who shared the 1951 Nobel Prize with Ernest *Walton for their development of the first particle *accelerator in 1932, which was used for accelerating protons to split an atomic nucleus (of lithium) for the first time. In World War II he worked on the atom bomb and in 1946 became director of the Atomic Energy Research Establishment at Harwell.

Cockerell, Sir Christopher Sydney (1910–99) British engineer and inventor of the *hovercraft. After working on radar in World War II, he concentrated upon hydrodynamics. He filed his first patent for an air-cushion vehicle in 1955. The first practical hovercraft, the SR.NI, was launched in 1959.

cocker spaniel A breed of Gundog, thought to be of Spanish origin. It is compact with short legs, a short tail, and long droopy ears. The long flat silky coat is usually black, red, or cream, either plain or in mottled combinations. Height: 39–41 cm (dogs); 38 cm (bitches).

cockle A *bivalve mollusc of the family *Cardiidae* (about 250 species). The ribbed shell valves, 1–23 cm in diameter, are rounded, producing a relatively globular bivalve. Cockles burrow in sand or mud, straining food particles from water drawn in through their protruding siphons. The European cockle (*Cardium* (or *Cerastoderma*) *edule*) is edible.

cockroach A nocturnal insect belonging to the mainly tropical family *Blattidae* (3500 species). It has a black or brown flat body, 12–50 mm long, with long antennae and leathery forewings. Cockroaches seldom fly; they feed on plant and animal materials and can be household pests. A widely distributed species is the common cockroach, or black beetle (*Blatta orientalis*). Order: *Dictyoptera*.

cocoa and chocolate Foods derived from the seeds of the cacao tree (*Theobroma cacao*), native to tropical America and cultivated mainly in West Africa. The tree is pruned and woody pods, 23–30 cm long, grow directly from its trunk. The pods contain seeds (cocoa, or cacao, beans) embedded in a whitish pulp, which are scraped out, fermented, and dried before export. Manufacturing is carried out

mainly in the importing countries, where the beans are shelled, roasted, and ground. From them cocoa powder and chocolate are made. Cocoa butter, a fat retained in chocolate but removed from cocoa powder, is a rich source of food energy. Family: *Sterculiaceae*.

coconut The fruit of the coconut *palm, *Cocos nucifera*; one of the most important tropical crops. The tree has a slender trunk, up to 25 m high, which bears a crown of giant feather-like leaves. The coconuts take a year to ripen and have a thick fibrous husk surrounding a single-seeded nut. The hollow core contains coconut milk; the white kernel is eaten raw or dried to yield copra, from which coconut oil is extracted for use in soaps, synthetic rubbers, and edible oils. The residual coconut cake is used as a livestock feed and the coarse husk fibre (coir) is used for matting, etc.

Cocos Islands (or **Keeling Islands**) Two Australian coral atolls in the E Indian Ocean. They were visited by Charles Darwin (1836). First settled in 1826, they were under Australian administration from 1955 and became part of Northern Territory in 1984. Copra is produced and there is an important meteorological station. Area: 13 sq km (5 sq mi). Population (1993): 593.

Cocteau, Jean (1889–1963) Versatile French poet, artist, and filmmaker. He made his name with the novel *Les Enfants terribles* (1929) and sketches written for Diaghilev's ballet company, such as *Parade* (1917). In World War I he served as an ambulance driver and became acquainted with *Picasso, *Modigliani, and other leading painters and writers. His creative work includes poetry (*L'Ange Heurtebise*, 1925), plays (*Orphée*, 1926), films (*Le Sang d'un poète*, 1929; and *Orphée*, 1949), and graphic work.

cod A carnivorous fish, *Gadus morhua*, that lives near the bottom in temperate N Atlantic waters and is commercially fished for food and liver oil. Its elongated body, up to 1.8 m long, is generally dark grey with spots and has three dorsal fins, two anal fins, and a whisker-like barbel on its lower jaw. *G. macrocephalus* is a similar N Pacific species. Family: *Gadidae*; order: *Gadiformes*.

codeine An *analgesic drug used to relieve mild pain. It is a derivative of morphine but less toxic and less addictive. Codeine depresses the cough centre of the brain and is therefore often added to cough mixtures. It is also used in the treatment of diarrhoea.

Code Napoléon The systematic collection

of the *civil law of France. Drafted by a commission set up by *Napoleon I when he was first consul, the code—properly called the *Code Civil*—was brought into force in 1804. It and the other codes subsequently produced under Napoleon's administration remain the basis of present French law and served as a model for civil law codes elsewhere.

coelacanth A *bony fish of the suborder *Coelacanthini*. Once thought to have been extinct for 60 million years, several living representatives have been found since the discovery, in 1938, of *Latimeria chalumnae* off the coast of SE Africa. It has a heavy body, up to 1.5 m long, with a short head and limblike fins, and crawls on the bottom, feeding on other fish. Order: *Crossopterygii*.

coeliac disease A disease in which the small intestine is abnormally sensitive to gliadin (a component of the protein *gluten, found in wheat). It results in abnormalities in the cells of the intestine, which cannot digest or absorb food. The symptoms include diarrhoea, stunted growth, and general malaise, the condition is treated by a gluten-free diet.

coelom The body cavity of many animals. In mammals (including humans) the embryonic coelom is divided into three cavities, which become occupied by the lung, heart, and intestines. In the fully developed mammal the coelom is reduced to the virtually nonexistent spaces between the membranes lining the heart (the pericardium), the lungs (the pleura), and the intestines (the peritoneum).

coenzyme A nonprotein substance that forms a complex with certain enzymes and is essential for the proper functioning of these enzymes. Coenzymes include nucleotide derivatives (e.g. *ATP and NAD), coenzyme A (important in the *Krebs cycle), and *vitamins of the B complex.

Coetzee, J(ohn) M(axwell) (1940–) South African novelist and writer. *The Life and Times of Michael K* (1983) and *Disgrace* (1999) both won the Booker Prize. Other novels include *In the Heart of the Country* (1977) and *The Master of Petersburg* (1994). He received the 2003 Nobel Prize for literature.

coffee The seeds (called beans) of certain tropical evergreen trees of the genus *Coffea*, which yield a stimulating drink. *C. arabica* is the most widely grown coffee tree, producing the best quality beans. *C. canephora* is more disease resistant, longer living, and can be grown at lower altitudes. *C. liberica*, of still lower qual-

ity, is grown in Malaysia and Guyana. The coffee beans are usually fermented, then sun dried before export. Family: Rubiaceae.

Cognac 45 42N 0 19W A town in W France, in the Charente department. Under French law, the name Cognac may only be applied to brandy produced in a certain area around the town. Population (latest est): 20 995.

coke A fuel consisting mainly of carbon. It is made by heating coal in the absence of air and is produced as a by-product of *coal gas. Coke is used in *blast furnaces and other industrial processes as well as for domestic heating.

cola See KOLA.

Colchester 51 54N 0 54E A market town in SE England, in Essex on the River Colne. Founded by Cymbeline (Cunobelinus) in about 10 AD, Colchester was an important Roman town (Camulodunum); the Roman walls remain in part and there is a Norman castle. Essex University (1961) is nearby. Colchester's industries include engineering and printing. Population (1993 est): 149 100.

Cold Harbor, Battles of Two battles in the US *Civil War fought near Richmond, Virginia, the Confederate capital. In the first (27 June 1862) the Confederate general, Robert E. *Lee defeated the Federal forces under George B. McClellan (1826–85), both sides suffering heavy losses. In the second (3–12 June 1864), the Federal advance on Richmond under Ulysses S. *Grant was temporarily halted when he encountered Lee's entrenched forces.

Colditz 51 08N 12 49E A town in E Germany, on the River Mulde. Its castle, built by *Augustus II on a cliff above the town, was used as a top-security prisoner-of-war camp during World War II. Many escapes were attempted, some of which were successful.

Cold War The hostility between the USA and the Soviet Union, and their respective allies, following World War II. The term was first used in 1947 by the US politician Bernard Baruch (1870–1965). Fear of nuclear war prevented military confrontation; the Cold War was fought on economic, political, and ideological fronts. Most virulent in the 1950s, it had given way by the 1970s to the movement towards détente; despite renewed tensions in the 1980s, it was formally ended in 1990 following the collapse of communism in the East.

Coleraine A district in N Northern Ireland, in Co Londonderry. Area: 477 sq km (184 sq mi). Population (2001): 56 315.

Coleridge, Samuel Taylor (1772–1834) British poet and critic. In 1795 he met William *Wordsworth and their joint publication of *Lyrical Ballads* (first edition 1798) marked a decisive break with 18th-century poetry. His finest poems, such as *Kubla Khan* (1797) and *The Rime of the Ancient Mariner* (1797–98), were written at this time, but his personal life was troubled by his marriage, his poverty, and his increasing opium addiction. His subsequent creative energies were committed to journalism, lectures, and the writing of the critical and metaphysical *Biographia Literaria* (1817).

Coleridge-Taylor, Samuel (1875–1912) British composer, the son of a doctor from Sierra Leone and a British mother. Educated at the Royal College of Music, he is best known for the trilogy *Song of Hiawatha* (for solo voices, chorus, and orchestra; 1898–1900).

Colet, John (c. 1466–1519) English theologian and humanist. After his ordination, he lectured at Oxford, collaborating with Thomas More and Erasmus, prior to his appointment as dean of St Paul's Cathedral. He founded St Paul's School in 1509. He was a fierce opponent of Church corruption and published numerous theological works.

Coleus A genus of herbaceous or shrubby plants (150 species) originating in the Old World tropics. Many cultivated varieties of the species *C. blumei* are grown for their variegated leaves of a diversity of colours. Family: *Labiatae*.

colitis Inflammation of the large intestine (the colon), causing abdominal pain and diarrhoea (sometimes with the passage of blood). Colitis can be caused by bacterial infection (e.g. dysentery) or by *Crohn's disease. Ulcerative colitis, in which the colon becomes ulcerated, is treated with corticosteroids or sulphasalazine (a sulphonamide drug). Surgery may be required for severe cases.

collagen A structural protein that is the main component of the white fibres of connective tissue. Inelastic but with great tensile strength, it is found in tendons and ligaments and also in skin, bone, and cartilage.

College of Arms (or **Heralds' College**) An English heraldic society, comprising three kings of arms, six heralds, and four pursuivants of arms. Its origins lie in the royal officers of arms, who received a charter from Richard III in 1484. The College was reincorporated in 1555. Its functions include the settling of rights

to bear arms, which the kings may grant by letters patent.

collie A breed of dog originating in Scotland and widely used as a sheepdog. The rough-coated collie has a long dense coat and bushy tail; the smooth-coated variety has a shorter smooth coat and the bearded collie has a long coat with a shaggy beard. Collies are grey, fawn, or sandy, with or without white markings. Height: 56–61 cm (dogs); 51–56 cm (bitches).

Collins, Michael (1890–1922) Irish nationalist. A leading member of Sinn Féin, he masterminded the IRA's campaign against British forces in 1919–21. Subsequently he played a major role in the negotiations that established (1921) the Irish Free State and led the Free State army in the ensuing civil war. He was killed in an ambush.

colloid A system in which a disperse phase is present in a dispersion medium in the form of particles 10^{-9} to 10^{-6} m in length. If the disperse phase is solid and the dispersion medium is liquid the colloid is known as a **sol** (examples include milk). If both are liquid the colloid is known as an **emulsion** (e.g. mayonnaise). A colloidal suspension in which the particles of the disperse phase link together, with the dispersion medium circulating through the meshwork, is called a **gel** (e.g. a photographic emulsion). See also AEROSOL.

Cologne (German name: Köln) 50°56'N 06°57'E A city in W Germany on the River Rhine. A port and major commercial centre, it is the site of a university (1388) and the largest gothic cathedral in N Europe (founded 1248 and reconstructed after World War II). *History:* founded by the Romans, it became the capital of the northern empire in 258 AD and later the seat of Frankish kings. In 1798 it was annexed by France, passing to Prussia in 1815. Population (1999 est): 963 200.

Colombia, Republic of A country in NW South America, on the Pacific Ocean and the Caribbean Sea. The majority of the population is of mixed Spanish and Indian descent. *Economy:* the chief product is coffee, which accounts for over half the total exports. There is also widespread illegal trafficking in and processing of cocaine. The country is rich in mineral resources; gold, silver, copper, lead, and mercury are mined and Colombia is one of the world's richest sources of platinum and emeralds. There are also large reserves of oil, coal, and natural gas. *History:* inhabited by Indians before the Spanish colonization of the 16th

century. In 1819 Simón Bolívar secured the independence of Greater Colombia, which included what are now Panama, Venezuela, and Ecuador as well as Colombia. This lasted until 1830 when Venezuela and Ecuador broke away; Panama became independent in 1903. Since 1975 there has been almost continuous unrest, including strikes, kidnappings, and left-wing guerrilla activity. Despite government campaigns the drug cartels remain extremely powerful and a major source of corruption, violence, and instability. In January 1999 substantive talks began with the main left-wing guerrilla organization (FARC) but the peace process suffered frequent setbacks and collapsed in early 2002; government forces immediately moved against FARC-held territory in the S. Elections in 2002 resulted in victory for Alvaro Uribe, who announced a new clampdown on the insurgents and drug producers. Official language: Spanish. Currency: Colombian peso of 100 centavos. Area: 1 138 914 sq km (456 535 sq mi). Population (2003 est): 41 662 000. Capital: Bogotá.

Colombo 6°55'N 79°52'E The capital and main port of Sri Lanka, on the W coast at the mouth of the River Kelani. Population (1997 est): 800 982.

Colombo Plan An agreement, signed in Colombo (Ceylon) in 1951, designed to foster economic development in the countries of S and SE Asia. It now has 26 members—20 countries within the region and Australia, Canada, Japan, New Zealand, the UK, and the USA.

colon See INTESTINE.

Colorado One of the Mountain States in the W central USA. Most of the population lives and works in a transition zone, the Colorado Piedmont, between the Rocky Mountains in the W and the Great Plains of the E. Manufacturing is the most important sector of the economy, especially the production of machinery, chemicals, military equipment, and food products. Colorado also produces molybdenum, coal, and oil. Tourism, especially winter sports, is of growing importance. *History:* explored by the Spanish, part of Colorado was acquired by the USA in the Louisiana Purchase (1803) and part from Mexico in 1848. Following the discovery of gold (1859), it became a territory in 1861 and a state in 1876. Area: 269 998 sq km (104 247 sq mi). Population (2000): 4 301 261. Capital: Denver.

Colorado potato beetle A brown and yellow striped *leaf beetle, *Leptinotarsa decemlineata*, about 10 mm long. Both the adults and the

larvae eat potato leaves: the larvae also attack the tubers. The beetle is native to W North America but has spread eastwards, throughout Europe, to become a serious pest.

Colorado River A river in the W USA, rising in the Rocky Mountains and flowing SW through Colorado, Utah, and Arizona (where it passes through the *Grand Canyon) to the Gulf of California in Mexico. It is extensively used for irrigation and as a source of hydroelectric power. Length: 2320 km (1440 mi).

Colosseum An *amphitheatre in Rome. One of the most impressive of all Roman remains, the Colosseum was begun (c. 70 AD) by the emperor *Vespasian. It is an elliptical building, four storeys high, 188 m (617 ft) long, and 156 m (512 ft) wide. It could seat 47 000 people and was used mainly for gladiatorial and wild-beast fights.

Colossians, Epistle of Paul to the A New Testament book written by the Apostle Paul about 60 AD to the church in Colossae in W Asia Minor. Its theme is that the Christian faith is sufficient and that speculative philosophy diverts attention from this truth.

Colossus of Rhodes A gigantic statue of the sun god *Helios by the harbour of Rhodes. Cast in bronze by Chares of Lindos about 280 BC and standing about 31 m (100 ft) tall, it was counted among the *Seven Wonders of the World. An earthquake destroyed it 50 years after its completion.

colour The sensation produced when light of different wavelengths falls on the human eye. Although it is actually continuous, the visible spectrum is usually split into seven major colours: red, orange, yellow, green, blue, indigo, and violet, in order of decreasing wavelength (from about 6.5×10^{-7} m for red light to 4.2×10^{-7} m for violet). A mixture of all these colours in equal proportions gives white light; other colours are produced by varying the proportions or omitting components. Coloured pigments, dyes, and filters selectively absorb certain wavelengths, transmitting or reflecting the rest. Thus a red book illuminated by white light absorbs all the components of white light except red, which is reflected. This is a subtractive process, since the final colour is that remaining after absorption of the others. Combining coloured lights, on the other hand, is an additive process. A mixture of the whole spectrum gives white light, as will a mixture of lights of three *primary colours.

colour blindness The inability to distin-

guish certain colours. There are various forms, the most common of which is red-green colour blindness (the inability to distinguish red and green). Colour blindness is usually an inherited and incurable condition. Because it is a recessive trait carried on the X chromosome it is far more common in men than women (about 8% of males of Caucasian origin are colour blind). Very occasionally colour blindness may be due to disease of the retina (the light-sensitive layer of the eye).

Colt revolver A *revolver with a five-shot cylinder rotated and locked in line with the single barrel by cocking the weapon. Invented by the US engineer Samuel Colt (1814–62) in 1835, it became the standard .45 US army and navy revolver, remaining in service until 1945.

colugo An arboreal mammal belonging to the genus *Cyanocephalus* and order *Dermoptera* (2 species), also called flying lemur, found in Asia, Borneo, and the Philippines. About 60 cm long, colugos have a membrane of skin, extending from the chin via the fore and hind limbs to the tail, with which they can glide up to 70 m. Colugos feed on leaves and fruit.

Columba, St (c. 521–597 AD) Irish missionary and abbot. Ordained in 551, he founded churches and monasteries in Ireland before setting up a monastery on Iona. From here, Scotland was evangelized. Feast day: 9 June.

Columbia 34 00N 81 00W A city in the USA, the capital of South Carolina. It is an important commercial centre; its industries include textiles, plastics, and machinery. Fort Jackson (a major US Army post) is adjacent to the city. Population (2000): 116 728.

Columbia River A river in North America, flowing SW from British Columbia, through Washington State, to the Pacific Ocean at Oregon. It is an important source of hydroelectric power and forms the only deepwater harbour N of San Francisco. Length: 1930 km (1200 mi).

Columbus 39 59N 83 03W A city in the USA, the capital of Ohio on the Scioto River. It is a major industrial and commercial centre of a rich agricultural area; its manufactures include aircraft, machinery, and footwear. Population (2000): 711 470.

Columbus, Christopher (1451–1506) Italian navigator, who pioneered European contact with America. He was born in Genoa, became a pirate, and in 1476 was shipwrecked off the coast of Portugal, where he settled. He conceived the idea of reaching the East by sailing westwards but his plan was rejected by the

Portuguese king (John the Perfect); he eventually won the patronage of the Spanish monarchs Ferdinand and Isabella and on 3 August 1492, set sail in the *Santa Maria*, accompanied by the *Pinta* and the *Niña*. On 12 Oct he landed in the Bahamas and in November visited Hispaniola. On his second voyage (1493-96) he visited Guadeloupe, Puerto Rico, and Jamaica. On his third voyage (1498-1500) he reached Trinidad and the mainland of South America but the expedition ended in disaster: in 1499, following a revolt against his command, a Spanish governor was dispatched to relieve Columbus, who was sent back in chains to Spain. On his arrival, however, he was released and compensated and shortly afterwards set off on his last voyage (1502-04). From this he returned ill, dying shortly afterwards in Valladolid.

Comanche A North American Indian people of the southern Plains. They speak a language of the Uto-Aztecan group, closely related to Shoshone. They migrated to this area from Wyoming in the 18th century. Horse breeders and fierce warriors, they often attacked white settlers in Texas until they agreed to settle in Oklahoma in 1867.

combustion A chemical reaction in which a substance combines with oxygen, producing heat and light. The oxidation reactions in combustion are generally chain reactions involving free radicals, the principal overall reactions being the oxidation of carbon to carbon dioxide and the oxidation of hydrogen to water ($C + 2H_2 + 2O_2 \rightarrow CO_2 + 2H_2O$).

Comédie-Française The French national theatre, founded in 1680 and reconstituted in 1803 by Napoleon. It is organized as a cooperative society, owned by its members. Despite its strong emphasis on tradition, it has produced many of France's most original actors.

comet A small body that moves, usually in a very elongated orbit, around the sun. A typical comet consists of a small nucleus of ice and dust surrounded by an immense tenuous luminous cloud of gas and dust, the coma. Tails of gas and of dust only appear when a comet is near the sun; they point away from the sun and may be millions of kilometres long. A comet eventually decays to produce a stream of meteoroids around its orbit.

comfrey A perennial herbaceous plant, *Symphytum officinale*, also called boneset. Up to 100 cm high, it has drooping creamy or purplish flowers. Native to Europe and temperate Asia

and formerly used medicinally, it is now grown as a garden flower. Family: *Boraginaceae*.

Comintern See INTERNATIONAL.

commedia dell'arte An Italian form of popular theatre that flourished throughout Europe from the 16th to the 18th centuries. It was performed by professional actors whose comic and often vulgar improvisations were based on a set of stock situations and stereotyped characters. These included the clown *Harlequin, the cuckold Pantaloon, and the lover Inamorato.

commensalism A relationship between two individuals of different species in which one (the commensal) lives in, on, or with the other (the host), from which it derives food, shelter, support, or transport. An example is provided by certain barnacles, which live attached to whales. See also SYMBIOSIS.

commercial banks Institutions that offer a deposit, transfer, and loan service to companies and private individuals. In the UK, the commercial banks (or high-street banks) are public limited companies (joint-stock banks), which emerged from World War I as the big five: Barclays Bank, Lloyds Bank (now Lloyds TSB), Midland Bank (now HSBC), National Provincial Bank, and Westminster Bank (in 1968 the last two merged to form the National Westminster Bank, now called NatWest and owned by the Royal Bank of Scotland). Others now include the Abbey (formerly Abbey National), the Halifax, and the Woolwich, which were formerly building societies.

Common Agricultural Policy (CAP) The agricultural policy adopted by members of the EC. The aims of the policy are to ensure reasonable living standards for farmers and to secure regular supplies and reasonable prices for consumers. CAP involves the distribution of grants and a price-support system. The system's production of embarrassing surpluses (e.g. the butter "mountain" and wine "lake" of the 1970s) led to the imposition of production quotas in the 1980s.

common law The part of the law of England and of most English-speaking countries that was originally unwritten and based on the common customs of the country. Its growth was the result of judicial precedent, by which an earlier judgment or decision was binding in deciding a similar case. Such decisions can only be overruled by statute or by a higher court. It is distinguished from the statute law established by Acts of Parliament, from *equity, ad-

ministered by the Court of *Chancery, and from the *civil law of most European countries.

Common Prayer, Book of The official liturgy of the Church of England. After the Reformation, Thomas *Cranmer and others began to formulate an order of worship in English. The first Prayer Book was published under Edward VI in 1549; criticism led to a more Protestant revision in 1552. The Roman Catholic Queen Mary abolished the Prayer Book, and from the accession of Elizabeth I to the end of the Civil War, it was reinstated, further revised, and again abolished, this time by the Puritans. The version of 1662, established by the Act of Uniformity, is still in use; a revised version was authorized in 1928. The 1980 *Alternative Service Book*, in modern English, was the preferred version of the Church of England until 2000–2001, when it was superseded by *Common Worship*, a book that includes both modern-language and traditional services.

Commonwealth (1649–53) The period in English history between the execution of Charles I and the *Protectorate; the term is sometimes used synonymously with Interregnum to refer to the entire period between the execution of Charles I and the *Restoration in 1660.

Commonwealth A loose association of 54 independent nations, most of which were once subject to the imperial government of the UK (see EMPIRE, BRITISH). The British Commonwealth of Nations was established by the Statute of Westminster (1931), which was based on the autonomy, equality, and common allegiance to the Crown of member states. Its name was modified to the Commonwealth after World War II. Its member states are currently Antigua and Barbuda, Australia, the Bahamas, Bangladesh, Barbados, Belize, Botswana, Brunei, Cameroon, Canada, Cyprus, Dominica, Fiji, The Gambia, Ghana, Grenada, Guyana, India, Jamaica, Kenya, Kiribati, Lesotho, Malawi, Malaysia, Maldives, Malta, Mauritius, Mozambique, Namibia, New Zealand, Nigeria, Pakistan, Papua New Guinea, St Kitts-Nevis, St Lucia, St Vincent and the Grenadines, Samoa, Seychelles, Sierra Leone, Singapore, Solomon Islands, South Africa, Sri Lanka, Swaziland, Tanzania, Tonga, Trinidad and Tobago, Uganda, the UK, Vanuatu, Zambia, and Zimbabwe (suspended from 2002). Nauru and Tuvalu are special members and are not represented at the meetings of Commonwealth heads; there are in addition a number of associated states and

dependent territories. Commonwealth heads of government meet every two years.

Commonwealth of Independent States (CIS) A community of nations founded by Russia, Ukraine, and Belarus to maintain unity in such areas as economic policy after the collapse of the Soviet Union. Nine other former Soviet republics subsequently joined.

communications satellite An unmanned artificial satellite by which long-distance television broadcasting, telephone communications, and computer data links are achieved. High-frequency radio signals are sent from one transmitting station to the satellite, where they are amplified and retransmitted to one or more receiving stations. The first active satellite was the US Telstar 1, launched in 1962. Telstar and other early satellites were in relatively low elliptical orbits and were only visible for a short portion of their orbit. A communications satellite is now usually placed in a geostationary orbit. This is a circular orbit lying about 36 000 km above the earth's equator. The satellite completes such an orbit in the same time (24 hours) as the earth rotates on its axis and thus to a ground-based radio station appears to remain nearly stationary in the sky. Three or more satellites, suitably placed around the equatorial orbit, can provide worldwide communications links. Various organizations, serving commercial, private, or government interests, have been set up to provide worldwide communications; notably **Intelsat** (International Telecommunications Satellite Organization), founded in 1964, which now has over 100 member countries.

communism A movement based on the principle of communal ownership of all property. It is associated with *The Communist Manifesto* (1848) of Marx and Engels according to which the capitalist profit-based system of private ownership is replaced by a society in which the means of production are communally owned. This process, initiated by the overthrow of the bourgeoisie (see MARXISM), passes through a phase marked by the dictatorship of the proletariat and the preparatory stage of *socialism.

In the second half of the 19th century Marxist theories motivated several social democratic parties in Europe, although their policies later aimed at reforming capitalism (hence the epithet "reformist") rather than overthrowing it. The exception was the Russian Social Democratic Labour Party, which finally demolished the Tsar's regime in the Revolution of Novem-

ber 1917. In 1918 this party changed its name to the Communist Party of the Soviet Union, thus establishing the distinction between communism and socialism (see **LENIN**, **VLADIMIR ILICH**).

After the success of the Russian Revolution many socialist parties in other countries became communist parties, owing allegiance of varying degrees to the Soviet Communist Party (see **INTERNATIONAL**). In 1944–46 communist regimes were set up with the aid of the Soviet army in several E European countries. In 1949 the communists in China, again with Soviet support, overthrew the Nationalists and inaugurated the People's Republic of China. In the early 1970s the term **Eurocommunism** was introduced to refer to the policies of communist parties in W Europe. Communist parties have been electorally significant in France and Italy. In 1989 communist rule collapsed in Poland, Hungary, Czechoslovakia, Bulgaria, Romania, and East Germany; the Soviet Communist Party was suspended following the failed coup attempted by hardliners in 1991. However, communist governments have since been re-elected in several of these countries.

community In ecology, an interdependent group of living organisms that occupies a particular habitat. The plants and animals of a community are closely associated with each other in various ecological relationships: for example, they depend on one another for food (see **FOOD CHAIN**). The size and composition of the community depend on the habitat and climate; it may show seasonal changes. During ecological *succession, the structure of a community constantly changes until the stable climax community is established. See also **ECOLOG**.

community service A form of sentence introduced in the UK by the Criminal Justice Act (1972). It requires an offender to work for a prescribed number of hours on behalf of the community instead of being imprisoned or fined. In the UK the offender must be aged 16 or over, have given consent, and have committed no violence.

Como 45 48N 09 05E A city in N Italy, in Lombardy on Lake Como. Known as Comum in Roman times, it is the birthplace of the elder and younger Pliny. It has a 15th-century marble cathedral and a gothic town hall. Como is an important tourist centre and its industries include the famous silk factories. Population (2004): 83 016.

Como, Lake A lake in central N Italy, lying

in a narrow valley at the foot of the Alps. It is about 50 km (31 mi) long, dividing into two arms. There are many resorts on its shores. Area: 145 sq km (55 sq mi).

Comoros, Union of the A country consisting of a group of islands in the Indian Ocean, between Madagascar and the African mainland. The main islands are Grand Comoro, Anjouan, and Mohéli; another island, Mayotte, has remained French. The population is of mixed African and Arab descent. *Economy*: almost entirely agricultural. Sugar cane was formerly the main crop but others, such as vanilla and perfume plants, are now increasing in importance. *History*: became a French colony in the 19th century. At first joined to Madagascar, the Comoros became a separate French overseas territory in 1947. In a referendum in 1974 the islands (except Mayotte) voted in favour of independence, recognized by France in 1976. From 1979 to 1989 effective control lay with the mercenary leader Bob Denard; he was ousted by the French after the assassination of President Ahmed Abdallah in 1989. In 1997 Anjouan and Mohéli declared independence from Comoros, seeking a resumption of French rule. In December 2001 voters backed a new federal constitution under which each of the three main islands was given financial and legislative autonomy. Official languages: French and Arabic; Swahili is also used commercially. Currency: CFA franc of 100 centimes. Area: 1862 sq km (719 sq mi). Population (2007 est): 711 417. Capital: Moroni.

compact disc (CD) A 120 mm plastic disc used for storing digitized information, especially in the high-fidelity recording of music. They are also used as high-capacity read-only memories (**CD-ROM**) for computers. Re-recordable CDs (**CD-RW**) are increasingly popular for data storage. Digital versatile disks (**DVD**) are similar to CDs but have a higher capacity; they have largely replaced videos as a means of storing films for home entertainment. See **INTERACTIVE COMPACT DISC**.

Companions of Honour, Order of the (CH) British order of chivalry, instituted in 1917. It comprises the sovereign and not more than 65 men and women who have made conspicuous contributions to the nation.

compass A device for determining the direction of magnetic north. The magnetic compass, which has been in use as an aid to navigation probably since the 2nd century BC, consists of a magnetic needle balanced on a point, allowing it to pivot freely. The S end of the magnet

indicates magnetic N. Magnetic compasses are subject to interference from nearby ferrous metal objects and fittings, and compasses must be adjusted to compensate for distortion. Com-

pensation must also be made, in the reading of a compass, for magnetic N not being in the same direction as geographic N in most longitudes. A more sophisticated kind of compass,

magnetic north

magnetic compass

gyrocompass

compass. In the magnetic compass, the magnetized needle lines up with the earth's magnetic field. In the gyrocompass a spinning gyroscope is suspended on three mutually perpendicular frames. The axis of spin of a free gyroscope shifts round as the earth rotates: as the axis of the gyrocompass moves from the horizontal at position A to position B, a weight pulls it downwards. As a result of the gyroscopic effect, the axis shifts round at right angles to the gravitational force (precesses) and describes a circle around the N-S direction. When the precession is damped, the gyroscope axis settles down pointing N.

used on larger vessels and in aircraft, is the **gyrocompass**, which employs the effect of the earth's rotation on the orientation of a spinning object's axis of rotation.

compass plant A perennial herbaceous plant, *Silphium laciniatum*, of the North American prairie. Its oval leaves are orientated N-S to avoid the intense midday radiation. 1-2 m high, it is sometimes cultivated and is also known as turpentine plant, from the substances that ooze from the stem. Family: *Compositae*.

Compiègne 49°25'N 2°50'E A town and resort in N France, in the Oise department on the River Oise. Joan of Arc was captured here by the English in 1430. A railway coach in the forest of Compiègne was the scene of the signing of the Armistice (1918) ending World War I and of the agreement made between the Pétain government and Hitler in 1940. Population (lat-est est): 44 703.

complementary medicine See ALTERNATIVE MEDICINE.

complex numbers Quantities that consist of a real number and an imaginary number. They may be written in the form $a + ib$, where a and b are real numbers and $i = \sqrt{-1}$. Two complex numbers can be added and subtracted: for example $(a + ib) + (c + id) = (a + c) + i(b + d)$. They may also be multiplied and divided into each other. A complex number $a + ib$ may be thought of as a pair of ordered numbers (a, b) similar to a pair of Cartesian coordinates (x, y) (see COORDINATE SYSTEMS). Then (a, b) can be regarded as a point on a plane called the complex plane or Argand diagram in which the real axis is taken as horizontal and the imaginary axis as vertical.

Compositae (or **Asteraceae**) The largest family of flowering plants (about 900 genera and 14 000 species). They vary from small herbs to trees and are found worldwide. The tiny flowers are grouped into heads that resemble a single large flower. The individual florets may be similar, as in thistles, or of two types (disc and ray flowers), as in daisies. Many composites are cultivated as ornamentals (e.g. chrysanthemums and dahlias); others are agricultural weeds (daisies, dandelions, etc.) and some are edible (e.g. lettuce).

Composite order See ORDERS OF ARCHITECTURE.

comprehensive schools Secondary schools attended by children of all abilities. In the UK the widespread introduction of comprehensive schools was started in 1965 by the

Labour Government and by the late 1990s some 92% of the secondary-school population attended comprehensives. This resulted in many former grammar schools becoming comprehensives. Since 1979 Local Education Authorities (LEAs) have no longer been required to abolish selective schools; however, since 1998 they will be obliged to do so if a ballot of local parents supports such a move.

Compton, Arthur Holly (1892-1962) US physicist, who in 1923 discovered the **Compton effect** (increase in wavelength of electromagnetic radiation when scattered by free electrons). He could only explain the effect by assuming that the radiation consisted of photons, then still a novel idea. He shared the 1927 Nobel Prize with C. T. R. *Wilson.

Compton-Burnett, Dame Ivy (1892-1969) British novelist. *Pastors and Masters* (1925) was the first of a series of 17 novels set in a stylized Victorian-Edwardian upper-class world. The series includes *Manservant and Maid* (1947) and *Mother and Son* (1955).

computer A device for processing information at high speeds, by electronic methods. The principles behind the modern computer were conceived by Charles Babbage in the 19th century. The first practical machines were built in Britain and the USA during World War II. Post-war developments in information theory and the invention of the transistor made possible the computer revolution of the next 20 years. Since the 1970s, advances in integrated circuits using silicon chips have led to the successive development of minicomputers, microcomputers (or personal computers), lap top computers, and personal digital assistants.

A **digital computer** processes information in the form of groups of binary numbers (see BIT), which are represented by the on and off positions of electronic switches. The sequence of operations it performs on this information is controlled by a program, and the suite of programs that enables a computer to perform useful functions is called its software. The physical equipment, or hardware, of a computer generally has three main components: the central processing unit (CPU), main memory, and peripheral devices that enable information to be fed into the machine, display it in a readable form, or act as auxiliary memory. Input, formerly by punched tape or cards, is now by keyboard at a visual display unit (VDU) or by methods of automatic data capture, such as optical character recognition (OCR). Output is by printout on paper, VDU, or magnetic disc or tape. New developments, such as the devel-

omponent of CPUs that work much faster by using optical rather than electrical impulses, promise further increases in the power of computers. The transputer, which harnesses several microprocessors in parallel, now offers microcomputer users the computing speed of a large mainframe.

An analog computer is a device that deals with continuously varying physical quantities, such as current or voltage. They are used mainly for simulation or monitoring and controlling continuous processes in industry or scientific research.

computer virus An unauthorized computer program that exploits weaknesses in a computer's operating system to insert itself into the system; it then propagates itself to other machines via networks or disks. It interferes with the machine's operation, and in some cases destroys data held on the machine.

Comte, Auguste (1798–1857) French philosopher. Often said to be the founder of sociology, he coined the term, although work of a sociological nature had been done long before. He is best remembered for his positivism (the view that society could be studied scientifically by natural-science methods and was subject to general laws). His principal work is *Cours de philosophie positive* (6 vols, 1830–42).

Conakry (or Konakry) 9 25N 13 56W The capital of Guinea, a port in the SW on Tombo Island, which is linked to the mainland by a causeway. It was founded by the French in 1884 and became capital in 1893. Population (1999 est): 1 764 000.

concentration camp A prison camp in which large numbers of people are held without legal process, usually because of their politics or ethnicity; they may be subjected to coercion (forced labour) or even extermination. The first such camps were established by the British during the Boer War in order to isolate the Boer guerrillas from the civilian population. Some 20 000 people, mostly women and children, died. From 1933 the name was used by the German Nazis for their labour and death camps. It is estimated that 20 million people died in the camps before and during World War II, from deliberate murder, starvation, exposure, etc. (see HOLOCAUST). Forced labour camps were used in the Soviet Union (the Gulags) and other totalitarian states.

concerto A musical composition for one or more solo instruments and orchestra, usually in three movements (a *sonata form movement, a slow movement, and a rondo finale). In

the late 18th century Mozart perfected the form in his piano concertos; subsequent concertos have been written in a number of different styles.

conch A heavy-shelled marine *snail of the family *Strombidae* (about 80 species). Conch shells have a triangular outer whorl with a broad lip and can be 2–35 cm long. Indo-Pacific spider conchs (genus *Lambis*) have long horns around the aperture of their shell.

Concord 42 28N 71 17W A city in the USA, in Massachusetts on the Concord River. The first battle of the American Revolution occurred here on 19 April 1775. Population (latest est): 17 080.

Concorde An Anglo-French four-engined supersonic passenger aircraft. Test-flown in 1969, it went into regular transatlantic service in 1976. In July 2000 a Concorde crashed on take-off from Paris, killing 115 people, and all Concordes were immediately grounded for modifications. Although they returned to service in 2001 they were finally withdrawn on the grounds of high cost in 2003.

concrete A building material that was used by the Romans but in its modern form came into use after the invention of Portland *cement in 1824. Concrete consists of a mixture of a cement, usually Portland cement, and an aggregate of sand, gravel, and broken stones. Water is added to this mixture and complex hydration reactions cause the cement to harden around the aggregate. The material can be reinforced with steel bars (usually up to 50 mm in diameter) to increase its tensile strength. **Reinforced concrete** was invented in France in about 1850. In **prestressed concrete** the concrete is maintained in a state of compression by stretching the steel reinforcing wires (usually 6 mm in diameter) and keeping them in a state of tension after the concrete has set around them. Prestressed concrete is now widely used as a structural material as it has a reduced tendency to bend under load.

condensation 1. A change of physical state from a gas or vapour to a liquid. Thus as a gas is cooled below a certain temperature it may (depending on the pressure) condense to the liquid. Condensation occurs in buildings when warm moist air comes in contact with cold surfaces, such as windows and uninsulated walls. 2. A type of organic chemical reaction in which two molecules combine to form a larger molecule with elimination of a smaller molecule, such as water or methanol.

conditioned reflex A *reflex response evoked by a stimulus other than that which normally produces it. A classic example is provided by Pavlov's experiments with dogs. The normal stimulus causing salivation (i.e. food) was paired with a different stimulus (a ringing bell) so often that eventually the bell by itself caused the dogs to salivate. A conditioned reflex gradually disappears if the stimulus is presented repeatedly; this process is called extinction. See also **CONDITIONING**.

conditioning The process of modifying behaviour by changing the stimuli (and therefore responses) associated with it. Classical conditioning occurs when a response is associated with a stimulus by pairing the stimulus with an event that causes the response by reflex (see **CONDITIONED REFLEX**). Operant conditioning is brought about by either rewarding or punishing an action by the subject, which thus either encourages or discourages the behaviour (see also **AVERSION THERAPY**). Behaviourism uses both forms of conditioning to explain how people learn.

condom See **CONTRACEPTION**; **SEXUALLY TRANSMITTED DISEASE**.

condor A huge South American *vulture, *Vultur gryphus*, found high in the Andes. It is black with a white ruff, bare pink head and neck, and has a wingspan of 3 m. It feeds chiefly on carrion but also takes lambs and young deer. The very rare Californian condor (*Gymnogyps californianus*) is smaller with a bare yellow head and red neck.

conduction 1. (thermal) The transfer of heat from a region of high temperature to one of lower temperature, without the transfer of matter. It occurs as a result of the transfer of kinetic *energy by collisions between atoms and molecules in gases, liquids, and nonmetallic solids. In metals, which are the best thermal and electrical conductors, the energy is transferred by collisions between the free electrons that move through the crystal lattice and the ions of the lattice. 2. (electrical) The passage of an electric current through a substance. In metals, the best conductors, it results from the passage of free electrons moving in one direction under the influence of an electric field. In an electrolyte it is due to the passage of positive ions in one direction and negative ions in the other. In gases it is due to positive ions flowing in one direction and electrons in the other. In *semiconductors it results from the passage of electrons in one direction and positive holes in the other.

cone The structure, also called a strobilus, that bears the reproductive organs (sporophylls) in some pteridophytes (club mosses, horsetails, etc.) and the gymnosperms (conifers and related plants). In conifers both male and female cones are produced: the familiar woody cones of pines, larches, etc., are female strobili, made up of overlapping woody structures called bract scales, which bear the sporophylls in their axils.

Confederate States The 11 southern states of the USA that seceded from the Union (1860–61), precipitating the US *Civil War: South Carolina, Georgia, Texas, Virginia, Arkansas, Tennessee, North Carolina, Mississippi, Florida, Alabama, and Louisiana.

Confederation of British Industry (CBI) The employers' federation in the UK. The CBI formulates industry's views on economic matters and is consulted by the government.

confession The admission of sins by a penitent seeking forgiveness. As a religious practice it originated in Judaism and was taken over by the early Christian Church. The fourth Lateran Council (1215) made private confession to a priest empowered to grant absolution (auricular confession) incumbent on all Christians once a year. In the Roman Catholic and Orthodox Churches auricular confession is part of the *sacrament of penance. In most Protestant churches general confession by the whole congregation is practised.

confirmation A Christian rite generally held to complete the initiation of a member into the Church. In the Eastern Orthodox Church, it is administered by a priest immediately after baptism and followed by Holy Communion; in the West, it is conferred by a bishop—in the Roman Catholic Church not before the seventh birthday and in the Anglican Churches after the candidate has undergone instruction in the faith (traditionally at the age of 11 or 12 but now often as an adult).

Confucius (Kong Zi or K'ung-fu-tzu; c.551–479 BC) Chinese philosopher, the founder of **Confucianism**. As a minor official, he gathered numerous disciples, mainly young gentlemen who wished to enter government service. Promoted to ministerial rank, he became famous for his just and effective policies, but on the ruler's refusing to heed his advice, he resigned (c.496). The teaching of Confucianism is contained in five books. While retaining the concept of a divine will (*ming*), Confucianism emphasizes man's duty to his fellows. It was the official religion of China until the 1960s.

Congo, Democratic Republic of (name from 1971 until 1997: Zaïre) A large country in central equatorial Africa, with a short Atlantic coastline. It is drained by the Congo River and fringed along its E border by a chain of lakes, including Lake Tanganyika, comprising part of the Great Rift Valley. Most of the population is African, the largest groups being Luka, Mongo, and Kongo. *Economy:* agricultural production has fallen owing to drought and recurrent civil wars. The chief cash crops are palm oil, coffee, and cotton. The chief export is copper and the country is the world's chief producer of industrial diamonds and cobalt. Other minerals include manganese, zinc, gold, and uranium; offshore oil has been exploited since 1975. *History:* when the Portuguese penetrated the region in the late 15th century it was dominated by the kingdom of the Kongo. In the late 19th century it was explored by Livingstone and, under Belgian auspices, Stanley. Leopold II of the Belgians established personal rule over the Congo Free State, which was internationally recognized at the Conference of Berlin (1884–85). In 1908 it became the colony of the Belgian Congo. It became independent as the Democratic Republic of the Congo (1960). Civil war followed and in 1965 Mobutu Sese Seko seized power. The country was renamed Zaïre in 1971. In 1977–78 invasion forces twice tried to topple Mobutu. Zaïre was a one-party state from 1978 until 1991, when moves were made towards a multi-party system. However, Mobutu's attempts to block this process led to economic collapse. In 1996, civil war broke out when Tutsi rebels attacked Hutu militiamen who had taken refuge from Rwanda. By June 1997 the rebels held most of the country and Mobutu fled. The rebel leader, Laurent Kabila, became head of state and the country reverted to the name Democratic Republic of Congo. Civil war erupted again (August 1998) when many of Kabila's former supporters rebelled against him. The rebels were backed by Rwanda and Uganda, while Angolan, Zimbabwean, and Sudanese forces came to the aid of Kabila. Although the national governments signed a ceasefire agreement (1999), fighting has continued. Laurent Kabila was killed during a coup attempt in January 2001 and succeeded by his son Maj-Gen Joseph Kabila. In 2002 Rwanda withdrew its forces and Kabila agreed to establish a transitional power-sharing regime. Kabila won free elections held in 2006 but the result was contested by the opposition, leading to renewed fighting. Official language: French. Currency: Congolese franc. Area:

2 345 409 sq km (895 348 sq mi). Population (2007 est): 65 751 512. Capital: Kinshasa.

Congo-Brazzaville, Republic of (name until 1960: Middle Congo; name from 1960 to 1999: Republic of Congo) A country in W central Africa, bordering on the Congo River. The uplands give way to plains in the NE. The population is composed chiefly of Bantu tribes. *Economy:* largely agricultural, the main cash crops being sugar cane, palm oil, cocoa, and tobacco. Minerals include lead, zinc, and gold; oil was discovered in 1969 and is now an important source of revenue. *History:* in the 15th century the Portuguese established trading relations with the Congo kingdom. In the 19th century the exploration of the Frenchman Pierre de Brazza (1852–1905) led to the establishment of the colony of Middle Congo, which in 1910 became one of the four territories of French Equatorial Africa. In 1958 it attained internal self-government as a member of the French Community and in 1960 became independent. Maj Marien Ngouabi came to power in a military coup (1968) but was assassinated (1977) and the government taken over by a military committee. Plans for a multiparty system were endorsed by a referendum (1992) and elections were held in 1993. However, the result was disputed, leading to fighting between rival militias. In 1997 the former military leader Denis Sassou Nguesso was reinstated in a coup; he was elected president in 2002. Sporadic fighting has continued. Official language: French. Currency: CFA franc of 100 centimes. Area: 342 000 sq km (132 018 sq mi). Population (2007 est): 3 800 610. Capital: Brazzaville.

Congo River (name from 1971 until 1997: Zaïre River) The second longest river in Africa. Its true source is disputed, one headstream being the River Lualaba and the other the River Chambezi. Below their confluence it flows N, as the Congo River after Boyoma Falls. It flows W then SW to enter the Atlantic Ocean at Boma. The river is an important source of hydroelectric power since the construction of dams in the 1970s. Length: 4820 km (3000 mi).

Congregationalism In Christianity, a form of church government in which centralized authority is rejected and each congregation is autonomous. Congregationalist groups were active at the time of the Reformation, and in England the Independents, as they were known, were prominent during the Civil War and Commonwealth. Congregationalism spread to America, where it flourished. In England, the United Reformed Church was

founded in 1972 by the union of the Congregationalists with the Presbyterians.

Congress The legislature of the USA instituted by the constitution (1789) and comprising the Senate, the upper house, and the House of Representatives, the lower house. The Senate serves as a check on the larger House of Representatives, with which it has equal legislative responsibility as well as further powers to ratify treaties and confirm appointments. Each state in the Union is equally represented by two senators. There are 435 seats in the House of Representatives, which are allocated among the states according to population.

Congreve, William (1670–1729) British dramatist. Educated in Ireland, he returned to England in 1688 to study law but under the patronage of *Dryden entered the literary world instead. The comedies *Love for Love* (1695) and *The Way of the World* (1700) are his best-known plays.

conic sections Geometrical figures produced by the intersection of a plane and a cone. If the plane cuts the cone at right angles to its axis the figure is a circle. If the plane is tilted slightly an *ellipse is formed. If the plane is tilted further, until it lies parallel to the side of the cone, the figure is a *parabola. Tilted more, the figure becomes a *hyperbola in which the plane also intersects another cone the vertex of which touches the vertex of the first cone, so that a hyperbola has two branches.

conic section. The circle, ellipse, parabola, and hyperbola are produced by slicing through the cone as shown.

conifer A *gymnosperm tree of the widely distributed phylum *Coniferophyta* (550 species), most abundant in the colder temperate zones, especially in the north; elsewhere they are usually found at high altitudes. Nearly all conifers are evergreen (larches are exceptions), with simple needle-like or scalelike leaves. The reproductive organs are typically borne in sepa-

rate male and female *cones, usually on the same tree, and produce winged seeds that are dispersed by wind. The principal families are the *Pinaceae* (pines, cedars, spruces, firs, larches, hemlocks, etc.); *Cupressaceae* (cypresses, junipers, arbor vitae, etc.); *Taxodiaceae* (sequoias, swamp cypress, etc.); *Taxaceae* (yews); and *Araucariaceae* (monkey puzzle, etc.).

conjugation The process by which exchange of genetic material occurs in certain lower organisms by means of a connection between the cytoplasm of the two "mating" individuals. In ciliate protozoa and certain algae it is a type of sexual reproduction, the gametes (or gametic nuclei) passing through a cytoplasmic bridge (protozoa) or a conjugation tube (algae). In bacteria the connection between cells is by means of special hairs (pili) or cell-to-cell bridges.

conjunctivitis Inflammation of the conjunctiva—the membrane that covers the surface of the eye and lines the eyelids. Popularly known as pinkeye, it is marked by itching, redness, and watering of the eye. It may be caused by allergy to drugs or pollen; bacterial infection; or mechanical irritation.

Connacht (or Connaught) A province and ancient kingdom of the NW Republic of Ireland. It consists of the counties of Galway, Leitrim, Mayo, Roscommon, and Sligo. Area: 17 122 sq km (6611 sq mi). Population (2002): 464 050.

Connecticut A state in the NE USA, in New England. It is one of the most densely populated states in the USA. Manufacturing is important. Yale University is at New Haven. *History:* one of the original 13 colonies in the USA, it was first explored by the Dutch in the early 17th century. The first settlement was by English colonists from the Massachusetts Bay Colony (1633–35). Area: 12 973 sq km (5009 sq mi). Population (2000): 3 405 565. Capital: Hartford.

connective tissue The tissue that supports, binds, or separates the specialized tissues and organs of the body. Connective tissue consists of a semifluid ground substance of polysaccharide and protein in which are embedded white collagen fibres, yellow elastic fibres, and various cells (including fibroblasts, which produce the ground substance and the fibres). The amount of collagen determines the toughness of the tissue. Specialized connective tissue includes fatty tissue, blood, bone, and cartilage.

Connemara An area in the W Republic of Ireland, in Co Galway bordering on the Atlantic Ocean. It contains many lakes, peat bogs, and

the Twelve Bens, a group of quartzite mountains.

Connery, Sir Sean (Thomas C.; 1929–) Scottish film actor who became famous as James Bond, a role he first played in *Doctor No* (1962). Other films include *The Name of the Rose* (1986) and *Entrapment* (1999).

conquistador (Spanish: conqueror) One of the men who conquered the Indians of Central and South America for Spain in the first half of the 16th century. Few in number, the conquistadores were driven by a fanatical desire to find fame and gold and to serve the Roman Catholic Church. The most famous were Hernán *Cortés and Francisco *Pizarro.

Conrad, Joseph (Teodor Josef Konrad Watecz Korzeniowski; 1857–1924) Polish-born British novelist, who knew no English before he was 20. Orphaned at the age of 11, he went to Marseilles in 1874, where he became a sailor. Conrad published his first novel, *Almayer's Folly*, in 1895. His seagoing experiences influenced both the themes of his fiction and his own moral outlook. His major novels include *Lord Jim* (1900), *Nostromo* (1904), *The Secret Agent* (1907), and *Under Western Eyes* (1911).

Conservative Party A UK political party that grew out of the *Tory party in the 1830s under the leadership of Sir Robert *Peel. His repeal of the *Corn Laws (1846) caused a split in the party, with the Peelites later joining the Liberal Party. Under the leadership of *Disraeli the Conservatives acquired a distinct philosophy that combined identification with the monarchy, the British Empire, and the Church of England with social reform. Under *Salisbury and then Balfour the party was almost continuously in power from 1886 to 1905 and again, under Bonar *Law, *Baldwin, Neville *Chamberlain, and *Churchill, from 1922 to 1945, being the dominant party in the coalitions of 1931–35 and 1940–45. It was again in office from 1951 to 1964, led successively by Churchill, Eden (see AVON, (ROBERT) ANTHONY EDEN, 1ST EARL OF), *Macmillan, and Home, from 1970 to 1974 under *Heath, and from 1979 to 1997 under *Thatcher and then John *Major. The party's disunity over European integration contributed to its heavy defeat in 1997, after which William Hague became leader. The Conservatives suffered a second crushing defeat in 2001. Iain Duncan Smith took over the leadership, but was replaced by Michael *Howard in 2003. David *Cameron became leader in 2005.

Constable, John (1776–1837) British land-

scape painter. After working for his father, he trained in London at the Royal Academy schools. He painted the Suffolk countryside, Hampstead Heath, and Salisbury Cathedral with a particular concern for changing weather conditions, exemplified in *The Leaping Horse* (1825; Royal Academy) and *Dedham Vale* (1828; National Gallery, Edinburgh).

Constance, Council of (1414–18) The 16th ecumenical council of the Roman Catholic Church, held in the German town of Constance, which ended the *Great Schism by electing Pope Martin V (1417). It decreed that the authority of a general council was superior to that of the pope.

Constance, Lake (German name: Bodensee) A lake on the River Rhine in W Germany, Switzerland, and Austria. Area: 531 sq km (205 sq mi).

constantan An alloy of 55% copper and 45% nickel. It is used in electrical equipment, such as resistors and *thermocouples, because it has a high electrical resistance that does not change with temperature.

Constantine the Great (285–337 AD) Roman emperor in the West (312–24) and sole emperor (324–37). The son of Constantius (c. 250–306), Roman emperor in the West (305–06), Constantine was acclaimed as his father's successor by his troops at York but did not secure his position until he defeated his rival Maxentius (d.312). He became sole emperor after defeating the Eastern emperor Licinius (c. 270–325; reigned 311–24). Constantine was the first Roman emperor to adopt Christianity. In 313 he issued the Edict of Milan, which established toleration of Christians, and in 325 summoned the Council of *Nicaea, the first general council of the Church. He was baptized on his deathbed.

Constantinople See ISTANBUL

constellations The 88 areas into which the N and S hemispheres of the sky are now divided, using established boundaries. Each star, galaxy, or other celestial body lies within, or sometimes overlaps, the boundaries of one of the constellations and is often named in terms of this constellation. They originally had no fixed limits but were groups of stars forming a distinctive pattern outlining a mythological hero, animal, etc.

constitution The principles according to which a country is governed. The UK has an unwritten constitution comprising some statutes, much *common law, and a good deal

of custom. In many countries, the constitution is written. The US **constitution** was drawn up in 1787, ratified in 1788, and came into effect in 1789. It contains 7 articles and 27 amendments of which 10 constitute the *Bill of Rights (1791). It defines the separation of powers, designed as a system of checks and balances, between the legislature, the executive, and the judiciary. Amendments subsequent to the Bill of Rights include the abolition of slavery (13), universal suffrage (15), and prohibition of liquor (18).

constrictor A snake belonging to the family *Boidae* (70 species) occurring chiefly in tropical regions. Constrictors are nonvenomous and kill their prey by coiling their thick muscular body around it and squeezing until it suffocates. They often have claws, which are vestigial limbs. The family comprises two subfamilies, *Boinae* (see BOA) and *Pythoninae* (see PYTHON).

constructivism A movement in abstract sculpture, architecture, and design, which was launched in Russia by the *Realist Manifesto* (1920) of the brothers Naum Gabo (1890–1977) and Antoine Pevsner (1886–1962) with the aim of freeing contemporary art from political and social overtones. The chief principles of constructivism were functionalism, the articulation of space, and the use of modern materials, such as plastic and steel.

consuls The two magistrates who held supreme civil and military authority under the *Roman Republic. They were elected annually by the *Comitia Centuriata* and presided over the Senate. Under the Empire they were nominated by the emperor and held office for only two to four months, the posts becoming honorary.

contact lenses A removable form of lens worn directly against the eye to replace spectacles for long or short sight or to protect the eye in some disorders of the outer transparent layer (cornea). Modern plastic contact lenses are hard (corneal), gas-permeable (allowing oxygen to permeate the cornea), or soft (hydrophilic).

contempt of court An act or omission that tends to undermine the authority of a court or that is likely to prejudice a fair trial. Examples are insulting a presiding judge or failing to comply with a court order; magistrates are not empowered to commit for contempt. The publication of matters on which the court is to decide is also a contempt. A person found in contempt is liable to a fine or imprisonment.

continental drift The theory, first set out in 1912 by Alfred Wegener, that the continents are not fixed in position but drift slowly (see also PLATE TECTONICS). Wegener's work was based on similarities in geological structures, flora and fauna, and coastal outlines; in recent years geophysical data, particularly from geomagnetic studies, have provided firmer evidence. It is believed that about 200 million years ago a supercontinent (termed *Pangaea*) began to break up (see GONDWANALAND; LAURASIA) and the fragments drifted apart until the continents reached their present positions. It is probable that continents have been joining together and breaking up throughout the earth's history.

200 mya

135 mya

65 mya

continental drift. The position of the continents (from top to bottom) 200 million years ago, 135 million years ago, and 65 million years ago.

continental shelf The area of sea floor adjacent to the continents, dipping gently from the shoreline to a depth of about 200 m. At this depth, the shelf edge, the continental slope begins, dipping more steeply to the ocean bottom. Shelves tend to be wider off low-lying regions than mountainous regions; the average width is about 70 km.

contraception The prevention of unwanted pregnancy, also known as birth control and family planning. The rhythm method and coitus interruptus are the most simple but least reliable. In the former intercourse is avoided around the middle of the menstrual cycle, when ovulation is most likely to occur; in the latter the penis is withdrawn before ejaculation. Barrier methods include the condom (or sheath), which is worn over the penis, and the diaphragm, which is fitted over the cervix of the womb and should be used with a spermicidal jelly. Condoms also offer protection against sexually transmitted diseases, including AIDS. The female condom (e.g. Femidom) offers similar protection. More reliable is the intrauterine device (IUD)—a loop or coil, often impregnated with copper, that is inserted into the womb. Its method of action is not known. Some women are unable to use an IUD as it causes side effects (heavy menstrual bleeding or recurrent infection). Since the 1960s, the most efficient means of preventing pregnancy has been by taking hormonal pills (see ORAL CONTRACEPTIVE), but this, too, may produce side effects and is unsuitable for some women. Alternatively, hormonal contraceptives may be administered by means of skin patches. A long-term contraceptive method is the intramuscular injection, at two- or three-monthly intervals, of a synthetic hormone (progestogen). Recently developed methods for women include the hormonal "morning-after" pill, which must be taken within 72 hours of intercourse and should not be used more frequently than once per month; the administration of progestogen by means of a subcutaneous implant or a vaginal ring, which release the hormone; and hormonal IUDs (e.g. Mirena). See also STERILIZATION; STOPES, MARIE (CHARLOTTE CARMICHAEL).

contract In law, an enforceable promise or bargain, usually written but sometimes oral. A simple promise for which nothing is given in exchange is not a contract and is only enforceable at law as a *deed. Something of value, called "consideration," must be exchanged in return for the promise; the value must be real but need not be equivalent. Breach of contract,

meaning failure to fulfil its conditions, may result in the offender being sued for damages by the other party.

contralto The deepest female singing voice. Range: F below middle C to D an octave and a sixth above.

convection The transfer of heat within a fluid by means of motion of the fluid. Convection may be natural or forced. In natural convection, the fluid flows by virtue of the warmer part being less dense than the cooler part. Thus the warmer fluid rises and the colder fluid sinks under the influence of gravity. In forced convection, some external cause, such as a fan, drives colder fluid into a warmer one, or vice versa.

convergence (or convergent evolution) The development in unrelated animals of similarities resulting from adaption to the same way of life. Thus whales (mammals) and fish, both aquatic, have evolved similar features independently.

conversos (Spanish: converts) Spanish Jews who were forced to become Roman Catholics during the late 14th and 15th centuries. The Spanish *Inquisition was created largely to prevent the apostasy of conversos and **Moriscos** (Muslims forced to convert to Catholicism). Jews who adopted Spanish names and professed Christianity to avoid death at the hands of the Inquisition were called **Marranos** (Spanish: pigs).

Convocations of Canterbury and York The assemblies of the clergy of the two provinces of the Church of England. Dating from at least the 8th century, they were originally assemblies of bishops only. They later divided into two houses, an upper house composed of diocesan bishops and a lower house composed of certain lower clergy. The extent of their powers fluctuated, but they maintained the right to tax the clergy until after the Restoration. From 1717 to 1852 they were prevented by the Crown from dealing with questions of business and held only formal meetings. In 1969 many of their powers were assumed by the General Synod of the Church of England.

Convolvulus A widely distributed genus of annual or perennial twining plants (about 250 species). The flowers are funnel or bell-shaped and attractive. The Eurasian *bindweed (*C. arvensis*) is a noxious weed with deep persistent roots and rapidly growing stems. Some species, such as *C. althaeoides*, are cultivated in gardens.

Some have medicinal (purgative) properties. Family: *Convolvulaceae*.

Conwy 1. 53°18'N 3°52'W A market town and resort in North Wales, in Conwy county borough on the estuary of the River Conwy. It has a 13th-century castle. A tunnel under the estuary opened in 1991. Population (1991): 13 627. **2.** A county borough in N Wales created in 1996 from parts of Gwynedd and Clwyd. Area: 1130 sq km (436 sq mi). Population (2001): 109 597.

Cook, Captain James (1728–79) British navigator and cartographer. He joined the Royal Navy (1755) and served in the Seven Years' War (1756–63), during which he surveyed the St Lawrence River. His observations on the eclipse of the sun in 1766 were presented to the Royal Society, which gave him command of an expedition to Tahiti to observe the transit of the planet Venus across the sun and to discover Terra Australis, a presumed southern continent. The expedition set sail in the *Endeavour* in 1768 and, Venus observed, Cook went on to discover and chart New Zealand and the E coast of Australia, returning to England in 1771. His second voyage (1772–75) in the *Resolution*, accompanied by the *Adventure*, achieved the circumnavigation of the Antarctic. He charted Easter Island and discovered New Caledonia, the South Sandwich Islands, and South Georgia. On his return he received the Royal Society's Copley Medal for his dietary work (on avoiding scurvy). On his third voyage (1776–79) he was killed by Hawaiians.

Cook, Mount (Maori name: Aorangi) 43°37'S 170°08'E The highest mountain in New Zealand, in South Island in the Southern Alps. Height: 3764 m (12 349 ft).

Cook Islands A group of scattered islands in the SE Pacific Ocean, a New Zealand dependency. The chief islands are Rarotonga, Atiu, and Aitutaki. Fruit, copra, and mother-of-pearl are exported. Area: 241 sq km (93 sq mi). Population (1994): 18 500. Capital: Avarua.

Cookstown A district in central Northern Ireland in Co Tyrone. Area: 512 sq km (198 sq mi). Population (2001): 32 581.

coolabar A tree, *Eucalyptus microtheca*, growing to 25 m, common inland in W Australia. The wood is grey near the outside, deep red within. Also called jinbul, moolar, blackbox, and dwarf box, it is used for building. Family: *Myrtaceae*. See also *EUCALYPTUS*.

Coolidge, John Calvin (1872–1933) US statesman; Republican president (1923–29). His presidency followed the scandals of the ad-

ministration (1921–23) of Warren Harding (1865–1923) but Coolidge's own honesty was never questioned. He supported US business at home and abroad, but did little to curb the speculation on the stock market that ended in the 1929 financial crash.

Cooper, Gary (Frank James C.; 1901–61) US film actor. He is best known for his portrayals of tough but sensitive heroes in Hollywood westerns. These include *The Virginian* (1929), *The Westerner* (1940), and *High Noon* (1952).

cooperative societies Societies set up to manufacture, buy, or sell produce, either without profit or with profits distributed to members or shareholders as dividends. The co-operative movement was inspired by the British philanthropist Robert *Owen in the early 19th century and was seen as an alternative to the hardship that seemed to be caused by competition. Cooperative societies in agriculture, in which machinery is shared and produce is marketed jointly, are common in both the advanced and developing countries. In the UK the largest cooperative is the Cooperative Wholesale Society (CWS).

coordinate systems Geometrical systems that locate points in space by a set of numbers. In **Cartesian coordinates**, devised by René *Descartes, a point is located by its distance from intersecting axes. In a plane (two dimensions) there are two axes and in space (three dimensions) there are three. Usually the axes are at right angles to each other and are known as rectangular axes, but oblique axes can also be used. **Polar coordinates** denote position by distance and direction. A fixed point, called the origin, and a fixed line, called the polar axis, are taken as the references. For any point, the polar coordinates are the length, r , of the radius of the circle centred at the origin and passing through the point, and the angle, θ , between this radius and the polar axis. In three dimensions, **spherical polar coordinates** are used. The radius of a sphere centred at the origin and the two angles it makes with the polar axis define the point. See illustration on p. 236.

coot An aquatic *rail of the genus *Fulica* (9 species). Coots have broadly lobed toes, diving deeply to feed on invertebrates and aquatic plants. The European coot (*F. atra*) occurs throughout the Old World and is 37 cm long with black plumage and a white bill and frontal shield.

Copenhagen (Danish name: København) 55°40'N 12°35'E The capital and chief port of Denmark, on the E coast of Sjælland. Notable build-

ings include the 17th-century Charlottenborg Palace (now the Royal Academy of Arts) and Christiansborg Palace (now the parliamentary and government buildings). *History*: already a human settlement in the year 900 AD, it became capital of Denmark in 1443. It was attacked by the Hanseatic League in the middle ages and by Sweden in the 17th century. In 1801 the Danish fleet was destroyed by Nelson at the battle of Copenhagen. In 1728, and again in 1795, it was badly destroyed by fire. Occupied by the Germans in World War II, it became the centre of a strong resistance movement. Population (2000 est): 485 699.

coordinate systems. In two-dimensional Cartesian coordinates a point *P* is located by giving its *x*- and *y*-coordinates, in this case 4 and -3 (always given in this order, as shown). In three-dimensional Cartesian coordinates *P* is located in terms of three axes. In polar coordinates *P* is located by a radius *r* and an angle *θ*. In three dimensions a second angle, *φ*, is required. In the diagrams Cartesian coordinates are superimposed on the polar coordinates.

Copepoda A class of *crustaceans (7500 species), mostly 0.5–2 mm long, that have long antennae, a single median eye, and no carapace. There are 11 pairs of appendages on the head and thorax and forked tail filaments (furca). Copepods occur in abundance in fresh and salt water, forming a constituent of plankton. Most feed on microscopic plants or animals but some are parasitic on fish, other crustaceans, etc. See also CYCLOPS.

Copernicus, Nicolaus (1473–1543) Polish astronomer, formulator of the modern heliocentric theory of the solar system. After studying mathematics and music at Cracow and Bologna, Copernicus became interested in the problem of calculating planetary positions, since existing tables were out of date. He noticed that by using a system in which the earth revolved round the sun, instead of Ptolemy's geocentric system, these calculations would be much easier to make. Realizing that these ideas were at variance with the Church's view that the earth was at the centre of the universe, Copernicus only circulated them to a few friends. The full text of his book *De revolutionibus orbium coelestium* was published in 1543.

Copland, Aaron (1900–90) US composer, also active as a teacher, pianist, and champion of contemporary music. He is best known for his compositions in a popular style, such as the ballets *Billy the Kid* (1938) and *Rodeo* (1942). His other works employ a variety of styles and include a piano concerto (1927) in a jazz idiom, a *Piano Fantasy* (1950), and the tone poem *Inscape* (1967).

copper (Cu) A reddish-brown metal, known from prehistoric times and named after the island of Cyprus, which was the principal source in Roman times. It occurs naturally as the native element, the sulphide chalcopyrite (CuFeS₂), the carbonate malachite (CuCO₃·Cu(OH)₂), and other minerals. Copper is extracted by smelting and electrolysis. It is malleable, ductile, and is important because of its good electrical (second only to silver) and thermal conductivity. Copper is widely used in the electrical industry and in the form of copper pipes in plumbing. It is contained in the alloys *brass and *bronze. At no 29; at wt 63.546; mp 1084.7°C; bp 2563°C.

copra See COCONUT.

Coptic Church The largest Christian Church in Egypt. The Copts trace the history of their Church to St *Mark. As a result of its Monophysite beliefs, which were condemned at the Council of Chalcedon (451), the Coptic Church became somewhat isolated from other Christian bodies. The Muslim conquest of Egypt in 642, together with language and cultural differences, widened the division. The Church suffered some persecution under Arab dominion. In 1741 a number of Copts entered the Roman Catholic communion, becoming the Uniat Coptic Church. Alexandria held an eminent position in the early Church and remains the seat of the Coptic patriarch, who presides

over the Church with 12 diocesan bishops. The Copts are in communion with the Armenian and Syrian (Orthodox) Churches.

copyright A type of intellectual property consisting of the rights of authors, composers, artists, photographers, publishers and others who create or publish original works to reproduce their works. In the UK protection is given by the Copyright Act (1956), the Copyright, Designs, and Patents Act (1988), and the European Single Market Act (1992). The Copyright (Computer Software) Amendment Act (1985) extends copyright to computer programs. In EU countries copyright protection now lasts for 70 years after the death of the copyright holder (or the date of publication, if later). In the USA (since 1998) it lasts for 70 years after the death of the copyright holder or 95 years after publication when the holder is a corporation. In contrast to a patent, copyright cannot exist in an idea, method, or scheme, but only in its expression. Infringement of copyright is known as piracy. Under the Universal Copyright Convention (1952, revised 1971), works must be marked with the symbol ©, the name of the copyright holder, and the date of first publication.

coracle An ancient boat, usually round, made of wickerwork or laths over which a waterproofed animal skin has been stretched. Coracles were used in Ireland and in Wales and other parts of W Britain.

coral A sedentary marine animal belonging to a class (*Anthozoa*) of cnidarians. They are found in all oceans, feeding mainly on small animals. Reproduction can be asexual (by budding) or sexual, the eggs being fertilized in the water.

The stony (or true) corals (order *Madrepuraria*; about 1000 species) secrete a rigid external skeleton made of almost pure calcium carbonate. **Coral reefs** are slowly produced by succeeding generations of stony corals, occurring in dense colonies, chiefly at depths of less than 50 m and at temperatures above 20°C. Within this zone symbiotic algae (zooxanthellae) stimulate the growth of coral skeletons.

Coral Sea A section of the SW Pacific Ocean off NE Australia. It contains the *Great Barrier Reef.

coral snake A New World burrowing venomous snake that preys on other snakes. The main genus, *Micrurus* (40 species), ranges from the S USA to Argentina; most species are ringed with red, black, and yellow or white. Old World coral snakes are similar and found in SE Asia (genus *Calliophis*) and Africa (genus *Elaps*). Family: *Elapidae* (cobras, mambas, coral snakes).

The rear-fanged false coral snakes have similar patterning but belong to the family *Colubridae* (grass snakes, etc.).

cor anglais A double-reeded musical instrument, the alto member of the oboe family. It is a transposing instrument, the notes sounding a fifth lower than written. It has a range of two and a half octaves from the E below middle C.

Cordaitales An order of extinct *gymnosperm trees that—with *Calamites*—formed vast forests during the Carboniferous and Permian periods (370–240 million years ago). The trees probably grew up to 30 m high, with strap-shaped leaves, up to 1 m long.

Córdoba 37°53N 4°46W A city in S Spain, in Andalusia on the River Guadalquivir. It became the capital of Moorish Spain in 756 AD and by the 10th century was Europe's largest cultural centre. Its immense Moorish cathedral (8th–10th centuries) was originally a mosque. Population (1998 est): 309 961.

Cordon Bleu Originally, the blue ribbon of the knight's grand cross of the Order of the Holy Spirit, the first order of the Bourbon kings. The term is now used to describe food, or a chef, that achieves a very high standard.

Corelli, Arcangelo (1653–1713) Italian violinist and composer. He established the concerto grosso, in which a small group of soloists (typically two violins and cello) is contrasted with the full orchestra. His most famous work is the *Christmas Concerto* for strings and continuo.

Corfu (Latin name: *Corcyra*; Modern Greek name: *Kérkira* or *Kérkyra*) A Greek island in the NE Ionian Sea. It has belonged to many powers, including Venice (1386–1797) and Britain (1815–64). The local produce includes olives, figs, and citrus fruit, and tourism is important. Area: 641 sq km (250 sq mi). Population (1991): 107 592. Chief town: Corfu.

corgi One of two breeds of working dog originating in SW Wales. The Cardigan Welsh corgi has a long tail, rounded ears, and a shortish coat, which may be reddish brown, streaked brown, or black and tan; the Pembroke Welsh corgi has a short tail, pointed ears, and a finer coat of red, sable, fawn, or black and tan. Height: 30 cm (Cardigan); 25–30 cm (Pembroke).

coriander An annual plant, *Coriander sativum*, 20–70 cm high, with small pink or white flowers. Probably native to the Mediterranean, it is cultivated for its spicy seeds. Family: *Umbelliferae*.

Corinth (Greek name: Kórinthos) 37°56N 22°55E A port in S Greece. *History:* a settlement before 3000 BC, it became the second largest and richest of the Greek city states after Athens, rivalry between the two culminating in the *Peloponnesian War. Destroyed by the Romans in 146 BC, Corinth was later revived as a Roman colony (44 BC). Population (1995 est): 26 600.

Corinthian order See ORDERS OF ARCHITECTURE.

Corinthians, Epistles of Paul to the

Two New Testament books written by the apostle Paul to the Christian Church at Corinth in about 57 AD. In the first he answers questions on practical and doctrinal issues, for example marriage and celibacy, the resurrection of the dead, and the Eucharist. In the second he defends himself against his opponents at Corinth.

Coriolis force A force required to account for the motion of a body as seen by an observer in a rotating frame of reference. It is often referred to as a fictitious force as it disappears on changing to a nonrotating frame. For example, a shell shot from a gun at the centre of a rotating table appears to an outside observer to travel in a straight line. To an observer on the table it appears to have a curved path. The Coriolis force is required to account for this apparent tangential acceleration. The Coriolis force is responsible for the formation and direction of rotation of anticyclones and whirlpools. Named after the French physicist Gaspard de Coriolis (1792–1843).

cork Tissue that forms the outer layer of *bark in woody plants. The cork oak (*Quercus suber*) is cultivated in Portugal and SW Spain as the source of commercial cork. The cork is stripped from the tree every 8–10 years.

Cork (Irish name: Corcaigh) 1. 51°54N 8°28W The second largest city in the Republic of Ireland and county town of Co Cork. The settlement grew up around a monastery (founded in about the 6th century AD) and has many notable buildings, especially its cathedrals and St Ann's Shaldon Church. It is an industrial and trading centre with a harbour. Population (2002): 123 338. 2. The largest county in the Republic of Ireland, in Munster. Mountains in the W extend eastwards intersected by valleys, notably that of the River Blackwater. Its many coastal inlets include Bantry Bay and Cork Harbour. Agriculture and fishing are important. Its many castles include Blarney Castle, famous for the Blarney Stone. Area: 7459 sq km (2880 sq

mi). Population (2002 est): 448 181. County town: Cork.

corm A fleshy underground stem base of certain perennial herbaceous plants that acts as an overwintering structure. Growth the following season occurs by one or more buds: if two or more plants are produced the corm is acting as an organ of vegetative reproduction.

cormorant A slender long-necked waterbird belonging to a family (*Phalacrocoracidae*; 30 species) and found on most coasts and some inland waters. 50–100 cm in length, cormorants are typically glossy black and have webbed feet and a long hook-tipped bill. Order: *Pelecaniformes* (gannets, pelicans, etc.).

corncrake A migratory bird, *Crex crex*, also called landrail, that breeds in Eurasian grasslands, wintering in S Africa and Asia. It is 26 cm long with a streaked brown plumage and a rasping call. Family: *Rallidae* (rails).

cornea The transparent outer layer of the eyeball. Corneal grafts have been used successfully; since the cornea has no blood supply the graft cannot be rejected by blood-borne antibodies.

Corneille, Pierre (1606–84) French dramatist. His *Le Cid* (1636), the seminal play of French classical tragedy, excited much controversy. Here and in *Horace* (1640), *Cinna* (1641), and *Polyeucte* (1643) he pioneered a dramatic genre subsequently perfected by *Racine.

cornet A trumpet-like valved brass instrument, with cup-shaped mouthpiece and conical bore. Pitched in B flat, it has a range of two and a half octaves from the E below middle C.

cornflower An annual, sometimes overwintering, herbaceous plant, *Centaurea cyanus*, growing to about 75 cm high; a cereal crop weed. Flower heads are bright blue with a purplish centre. Family: *Compositae*.

Cornish A Celtic language of the Brythonic group, formerly spoken in Cornwall. It became extinct in about 1800 but has subsequently been revived.

Corn Laws The British laws that regulated (1360–1846) the import and export of corn to guarantee farmers' incomes. These laws were bitterly resented by the working classes, because they kept the price of bread high, and by the manufacturers, who argued that little money was left for the purchase of manufactured goods. The Anti-Corn Law League was led by Richard Cobden (1804–65) and John Bright

(1811–89). In 1846 Sir Robert Peel's government repealed them.

corn poppy An annual, or sometimes biennial, poppy, *Papaver rhoeas*, with scarlet flowers. Also called field poppy, it is widespread as a weed and grows to a height of 50 cm.

cornucopia A decorative motif from Greek antiquity denoting abundance and wealth. It consists of a goat's horn filled with fruit and flowers.

Cornwall (Celtic name: Kernow) The most southwesterly county of England, bordering on the Atlantic Ocean and the English Channel. It is mainly hilly, rising to Bodmin Moor in the E. Tourism is a chief source of income. Agriculture is important; the long-established tin mines were abandoned in the 1990s. In 1998 Cornwall was officially recognized as the poorest region in the UK owing to the crises in farming and fishing. Area: 3546 sq km (1369 sq mi). Population (2001): 499 114. Administrative centre: Truro.

Cornwall, Duchy of A private estate of some 130 000 acres, mostly in Cornwall, Devon, and Somerset, belonging to the eldest son of the sovereign, who becomes Duke of Cornwall at birth or from the moment his parent is crowned.

corona The outer layer of a star's atmosphere. The sun's corona has two main components. The **inner corona** lies above the chromosphere and consists of rapidly moving electrons. Its temperature reaches about 2 000 000°C some 75 000 km above the visible solar surface (the photosphere). The **outer corona** extends for millions of kilometres and consists of comparatively slow-moving dust particles. See also SOLAR WIND.

coronary heart disease The most common form of heart disease in the Western world. It is caused by *atherosclerosis of the coronary arteries, which reduces the blood flow to the heart. This may precipitate the formation of a blood clot in these arteries—**coronary thrombosis**. The patient experiences sudden pain in the chest (see ANGINA PECTORIS) and the result may be a heart attack, when the blood flow to the heart is suddenly stopped (see MYOCARDIAL INFARCTION). **Coronary bypass surgery** is a procedure in which a piece of vein from the leg or mammary artery is used as a graft to bypass a section of coronary artery blocked by atherosclerosis. In **coronary angioplasty** a catheter is inserted into a narrowed coronary artery and a balloon at the

tip of the catheter is inflated to dilate the blood vessel.

coroner In England and Wales, an officer of the Crown appointed for life by a county council from among suitably qualified barristers, solicitors, or qualified medical practitioners. The main duty of a coroner is to inquire into a death resulting from an act of violence or suspicious circumstances, or occurring in prison. He is often assisted by a jury of 7 to 11 people. A jury verdict of manslaughter or murder is equivalent to an indictment, and the coroner can commit the accused for trial. A coroner also inquires into cases of *treasure trove. In Scotland, the coroner's duties are carried out by the procurator fiscal.

Corot, Jean Baptiste Camille (1796–1875) French landscape painter. Although he exhibited at the Paris Salon from 1827, he did not achieve critical acclaim until the 1850s, with his poetical misty landscapes populated by nymphs. More popular today are his open-air sketches, small landscapes, and figure studies.

corporation tax A tax levied on the profits of a company on an annual basis. In the UK, the rate of tax is announced by the chancellor of the exchequer in his budget.

Corpus Christi, Feast of (Latin: body of Christ) A Christian feast honouring the institution of the Eucharist, observed in the West on the second Thursday after *Whit Sunday. The chief rite of the feast is the procession of the Blessed Sacrament. It is not generally observed by Protestant Churches.

Correggio (Antonio Allegri; c.1494–1534) Italian Renaissance painter, born at Correggio, near Modena. He worked chiefly in Parma, where he decorated the Camera di S Paolo, the domed vaulting of S Giovanni Evangelista, and the cathedral with frescoes that anticipate the *baroque.

Corsica (French name: Corse) An island in the Mediterranean Sea, a region of France. It is mountainous and largely covered with *maquis*, a dense scrub type of vegetation. Agriculture produces citrus fruits, olives, vegetables, and tobacco; sheep and goats are reared and tourism is important. *History*: under Genoese control from the 14th century, it was sold to France in 1768. During World War II it came under Italian occupation but was liberated by the French in 1943. Area: 8680 sq km (3367 sq mi). Population (1999): 260 196. Capital: Ajaccio.

Cortés, Hernán (1485–1547) Spanish conquistador. In Hispaniola and Cuba from 1504,

he led a small expedition to Mexico in 1519 and reached Tenochtitlán, the capital of the Aztec Empire. In the absence of Cortés, the Aztecs launched an attack on Tenochtitlán, forcing the Spaniards' retreat—the *noche triste* (night of sorrows). Cortés rebuilt his forces and destroyed Tenochtitlán (1521) and the Aztec Empire, founding New Spain. After further expeditions he died in poverty in Spain.

cortex The outer tissues of an animal or plant organ. In plants the cortex is situated between the *epidermis and vascular (conducting) tissues of stems and roots. Its cell walls may contain corky and woody materials or silica, providing strength, and also stored food, usually starch. In animals the outer tissue of the adrenal gland, the cerebrum, and the *kidney is called the cortex.

corticosteroids Steroid hormones secreted by the cortex of the adrenal glands (also a group of synthetic drugs with similar properties). The glucocorticoids (e.g. cortisone, prednisolone, and dexamethasone) affect carbohydrate metabolism. As anti-inflammatory drugs, they are used to treat allergic conditions, inflammatory disorders, and autoimmune diseases. The mineralocorticoids (e.g. aldosterone, fludrocortisone) control salt and water balance in the body.

corundum A mineral consisting mainly of aluminium oxide, the accessory minerals giving rise to a variety of colours. Sapphire is a blue variety containing iron and titanium; ruby contains chromium. The nongem varieties are used as abrasives (corundum is the second hardest mineral to diamond).

Cos (Modern Greek name: Kos) A Greek island in the Dodecanese. It was a member of the Delian League and the home of Hippocrates. It produces fruit, silk, and tobacco. Cos lettuce originally came from here. Area: 282 sq km (109 sq mi). Population (latest est): 21 000.

cosmic rays A continuous stream of very high-energy particles that bombard the earth from space. The primary radiation consists of *protons and light nuclei with smaller numbers of neutral particles, such as *photons and *neutrinos. These particles collide with atomic nuclei in the earth's atmosphere producing large numbers of elementary particles, known as secondary radiation. One primary particle may produce a large number of secondary particles on colliding with a nucleus. This effect is called a shower. Some cosmic rays are believed to come from the sun, others from outside the solar system.

cosmology The study of the origin, evolution, and structure of the universe. A variety of cosmological models have been suggested through the ages. Two simple but incorrect common-sense models are the flat earth draped by a canopy of stars and the earth-centred (geocentric) universe, the *Ptolemaic system. More accurate theories emerged as instruments were developed to study the heavens (see ASTRONOMY). See also BIG-BANG THEORY; STEADY-STATE THEORY.

Cossacks A people of S and SW Russia descended from independent Tatar groups and escaped serfs from Poland, Lithuania, and Muscovy. They established a number of independent self-governing communities, which were given special privileges by Russian or Polish rulers in return for military service. Known for their horsemanship, the Cossacks slowly lost their autonomy as Russia expanded in the 17th and 18th centuries. Many fled Russia after the Revolution (1918–21) and collectivization subsuming remaining Cossack communities.

Costa Rica, Republic of A country in the Central American isthmus between Nicaragua and Panama. It includes the island of Cocos, 483 km (186 mi) to the SW. The Caribbean lowlands rise to a central plateau area, with volcanic peaks reaching 3819 m (12 529 ft). The inhabitants are mainly of Spanish and mixed descent, with a dwindling Indian population. *Economy:* chiefly agricultural, the main crops being coffee, bananas, and sugar. Almost 75% of the land is forested with valuable woods, such as mahogany, rosewood, and cedar. Mineral resources include gold, haematite ore, and sulphur. Manufacturing is important and now includes computer parts, processed foods, and textiles. Tourism is now the chief source of income. The country's infrastructure and farming were devastated by Hurricane Mitch (1998). *History:* discovered by Columbus in 1502, it became a Spanish colony in the 15th century and the native Indian population was practically wiped out. It was part of the captaincy general of Guatemala until it gained independence in 1821. From 1824 until 1838 it formed part of the Central American Federation. The country has remained relatively stable since 1948, although economic difficulties in the 1990s caused some unrest. Oscar Arias Sanchez was elected president in 2006. Official language: Spanish. Currency: colon of 100 céntimos. Area: 50 900 sq km (19 653 sq mi). Population (2007 est): 4 133 884. Capital: San José.

cot death (or **sudden infant death syndrome; SIDS**) The death of a baby, usually oc-

curring overnight in its cot, from an unidentifiable cause. In 1991–93 a campaign encouraging mothers to lie babies on their backs and not to overwrap or smoke over them resulted in a 55% decrease in cot deaths in the UK.

Côte d'Ivoire, Republic of (name until 1986: Ivory Coast) A country in West Africa, on the Gulf of Guinea. Swamps and tropical forests give way to savanna to the N. The diverse African population includes Baule, Bete, Senufo, and Malinke. *Economy:* chiefly agricultural, livestock being important as well as crops, including maize, yams, and other tropical plants. The main cash crop is cocoa, of which Côte d'Ivoire is the world's leading producer. Exports of cocoa and coffee account for about 40% of GDP. Mineral resources are sparse. Industry, including tourism, is being developed. *History:* explored by the Portuguese in the late 15th century, the area was disputed by several European trading nations, becoming a French colony in 1893. It became part of French West Africa in 1904 and an overseas territory in 1946. It had internal self-government as a member of the French Community from 1958 and became fully independent in 1960. Falls in world cocoa prices led to economic crisis in the 1980s. An IMF reform programme partially stabilized the economy in the 1990s. Félix Houphouët-Boigny, president from 1960 to 1993, introduced multiparty democracy in 1990. In 1999 Gen Robert Guei seized power in a military coup. He lost power in elections in 2000 and was killed while attempting to mount a further coup in 2001. From 2002 rebels hostile to President Gbagbo took over much of the N of the country. A new peace plan was agreed in 2006. Official language: French. Currency: CFA franc of 100 centimes. Area: 322 463 sq km (124 470 sq mi). Population (2003 est): 16 631 000. Capital: Yamoussoukro.

Cotoneaster A genus of shrubs and small trees (about 50 species) of N temperate regions of the Old World. Some species are evergreen. *C. horizontalis* is a popular ground and wall cover; *C. hybrida pendula* is a weeping standard. Family: Rosaceae.

Cotonou 6 24N 2 31E The chief city in Benin, on the Gulf of Guinea. A deepwater port, it is the nation's main commercial centre. Population (1994 est): 750 000.

Cotopaxi 0 40S 78 28W The world's highest active volcano, in N central Ecuador, in the Andes. Height: 5896 m (19 457 ft).

Cotswold Hills A range of limestone hills in SW central England, mainly in Gloucestershire.

It is noted for its picturesque towns and villages.

cotton A herbaceous plant of the genus *Gossypium* (20 or 67 species, according to the classification system), native to tropical and subtropical regions. Several species are cultivated for the whitish outer fibres of their seeds. Usually 1–2 m high, cotton plants bear whitish flowers and produce seed pods (bolls), which burst when filled with the soft masses of fibres. The bolls are harvested mechanically and the fibres separated from the seeds (ginning) and cleaned and aligned (carding), ready for spinning into yarn. Cotton forms a light durable cloth used in a wide range of garments, furnishings, etc. The seeds are crushed to yield cottonseed oil, used in margarines, cooking oils, soaps, etc., and the residual meal is fed to livestock. Family: *Malvaceae*.

cotyledon The seed leaf of seed-bearing plants (gymnosperms and angiosperms): a food store within seeds providing the embryo plant with sufficient energy to germinate. Flowering plants with one cotyledon are classified as *monocotyledons; those with two as *dicotyledons. See GERMINATION.

couch grass A *grass, *Agropyron repens*, also known as quack grass or twitch, native to Europe and naturalized in other N temperate regions. 30–120 cm high, it is a serious weed of arable crops.

cougar A red-brown *cat, *Felis concolor*, of North and South America, also called puma, mountain lion, and catamount. It is 1.5–3 m long including its tail (50–80 cm), with long hind legs enabling a powerful leap. It feeds on a variety of animals.

coulomb (C) The SI unit of electric charge equal to the quantity of electricity transferred by a current of one ampere in one second. Named after Charles de Coulomb (1736–1806), French physicist.

Coulomb's law See ELECTRIC CHARGE.

Council of Europe An association of European states, founded in 1949, that is pledged to uphold parliamentary democracy and to promote the economic and social progress of its members. Its seat is in Strasbourg.

council tax In the UK, a tax to finance local government that replaced the community charge (see POLL TAX) in 1993. Adult residents of private households are liable for the tax, which is calculated by the local council according to the market value of the dwelling. There

counterpoint. An example of counterpoint from J. S. Bach's *Fantasia in C minor*.

are discounts for sole occupants and those on low incomes.

counterpoint The art of combining two or more melodic lines simultaneously in music. The word derives from the Latin *punctus contra punctum*, point against point (i.e. note against note). The use of counterpoint continued beyond the end of the polyphonic period (see **POLYPHONY**). In the 20th century contrapuntal techniques were used by Stravinsky, Hindemith, Tippett, and others.

Counter-Reformation A movement within the *Roman Catholic Church to combat the effects of the Protestant *Reformation. Extending from the middle of the 16th to the middle of the 17th century, it witnessed the emergence of the *Jesuits, the Council of *Trent, the extension of the *Inquisition, and a revival of Catholic spirituality.

countertenor A natural high male singing voice, higher than tenor, common in England in the 17th and 18th centuries. It is distinguished from the male *alto voice, which is produced by falsetto, and has the same range as contralto.

country and western A type of US popular music that evolved from the hillbilly ballads of the Appalachian Mountains and the cowboy songs of the West. The singer is accompanied by the guitar and other stringed instruments. Influenced by other styles of popular music, country and western has its own offshoots, such as bluegrass.

county A geographical subdivision of a country, often with powers of local government. In the UK counties are long established: the name was applied by the Normans to the Anglo-Saxon shire. In England and Wales the Local Government Act (1972; effective 1974) amalgamated some old counties and established new ones and placed a variety of public services in the hands of elected county councils. The Local Government (Scotland) Act (1973) created nine new regions and three island areas. Northern Ireland has six historic counties but administration is now carried out by 26 district councils. In the 1990s Local Government Acts for

Scotland and Wales (1994; effective 1996) replaced the Scottish system with 32 council areas and reorganized Wales into 10 counties and 12 county boroughs (all unitary authorities). In England several counties were abolished and their powers devolved to the district councils (now unitary authorities).

Couperin, François (1668–1733) French composer, called le Grand, the most famous member of a family that produced five generations of musicians. He was organist to Louis XIV and at St Gervais and is best known for his harpsichord music.

courgette A variety of *marrow, also called zucchini, eaten when small and immature (up to 15 cm long). Mature courgettes resemble ordinary marrows.

Courtauld Institute of Art A college and gallery for the study of art history in London. The industrialist Samuel Courtauld (1876–1947) left his house in Portman Square with his collection of impressionist paintings to London University in 1931. In 1990 the Institute moved to more spacious premises in the west wing of Somerset House in the Strand.

courtly love A literary convention describing passionate love, arising in 12th-century Provence in the poems of the *troubadours. It is not certain to what extent courtly love actually existed as a social phenomenon. In the literary convention the aristocratic lover is abjectly devoted to his chosen lady, whose virtues are idealized with quasi-religious fervour and who remains unobtainable because she is married to someone else. The lover is bound by rules of *chivalry and is ennobled by his attachment to the beloved. On the other hand, he suffers enormously from the capricious behaviour of his lady, etc. The convention spread from Provence to Italy, N France, Germany, and England, where it was treated in detail by Chaucer. It continued as an important element in the Elizabethan sonnet through the influence of *Petrarch.

court-martial A court, consisting of commissioned officers in the army, navy, or air force, convened to try a member of any of

these services for an offence against military discipline or against ordinary law. An appeal court was established in 1951 and is now governed by the Courts-Martial (Appeals) Act (1968). An offender is not immune from trial by ordinary courts, but they must take into account any punishment to which he was sentenced by the court-martial.

courts of law Assemblies in which the law is administered. In England and Wales *civil law (see also COMMON LAW; EQUITY) is administered by the County Courts and the High Court of Justice and *criminal law is administered by the Magistrates' Courts and the Crown Court. Appeals from the civil law courts lie to the civil division of the Court of Appeal and those from the criminal law courts lie from Magistrate's Courts to the Crown Court and from the Crown Court to the criminal division of the Court of Appeal. Two or more judges of the High Court, when sitting together, may constitute a Divisional Court, which hears appeals on points of law from Magistrates' Courts, Crown Courts, and certain tribunals. The Divisional Court can either (1) order the lower court to continue its hearing of the case in point while directing how the law should be applied or (2) allow or dismiss the appeal itself, if all the facts of the case have already been heard and decided by the lower court. The House of Lords is currently the Supreme Court of Appeal in both criminal and civil cases, although the Constitutional Reform Act 2005 will create a new Supreme Court. The High Court of Justice and the Court of Appeal together with the Crown Court form the Supreme Court of Judicature.

The County Courts have jurisdiction over most civil law actions. All divorce petitions start in the County Courts but are transferred to the High Court if defended. The High Court comprises the *Chancery, Queen's Bench (including the Admiralty Court (see MARITIME LAW) and the Commercial Court), and Family Divisions. The appeals system in civil cases was revised somewhat by the Civil Procedure Rules of 1998.

A criminal case comes first before a Magistrates' Court (see MAGISTRATE), which has jurisdiction in less serious cases (e.g. traffic offences) but commits more serious cases for trial at the Crown Court. The Crown Court, which was created in 1971 to replace the Courts of Assize and Courts of Quarter Session, is organized in six circuits (Midland and Oxford, North Eastern, Northern, South Eastern, Wales and Chester, and Western). A Crown Court sits in London as the Central Criminal Court (Old Bailey). See also JUDGE.

In Scotland the supreme court for civil cases is the Court of Session, established in 1532, and the supreme court for criminal cases is the High Court of Judiciary. Appeals from the former lie to the House of Lords and from the latter to a tribunal of three judges of the High Court of Judiciary.

courts of law. A slightly simplified diagram.

Cousteau, Jacques Yves (1910–97) French naval officer and underwater explorer. He shared in the invention of the aqualung (1943) and invented a way of using television under water. In 1945 he founded the Undersea Research Group of the French navy at Marseilles and in 1950 became commander of the oceanographic research vessel *Calypso*. He was famous for such films as *The Silent World* (1953) and for his environmental campaigns.

covenant 1. (law) A binding agreement between two parties whereby each promises to do something for the other (see also DEED). **2.** In the Old Testament, the agreement between God and Israel, which forms the basis of the Jewish religion. In return for obedience to the Law (the Ten Commandments) as delivered to Moses, the Israelites were privileged as God's chosen people.

Covenanters Scottish Presbyterians who in the 16th and 17th centuries covenanted to defend their church. The National Covenant of 1638 was signed by thousands of Scottish Presbyterians after Charles I's attempt to introduce the English Prayer Book, this opposition culminating in the Bishops' Wars. In the English *Civil War the Covenanters joined the parliamentarians in 1643 in return for the promise of church reform. After the Restoration (1660) they were persecuted until the re-establishment of Presbyterianism in Scotland after the Glorious Revolution (1688).

Covent Garden The principal English opera house, officially named the Royal Opera House. The first theatre on the site was opened in 1732,

and the present building dates from the 1850s; it is currently the home of both the Royal Opera and the Royal Ballet Company. It takes its name from a square (originally a convent garden) onto which it backs, which was laid out in 1631 by Inigo *Jones. For many years London's fruit and vegetable market occupied the square but in 1973 it moved to Nine Elms (Wandsworth) and the square was redeveloped as a shopping precinct.

Coventry 1. 52 25N 130W A city in central England, in Coventry unitary authority, West Midlands. Heavily bombed during World War II, the city centre was almost entirely rebuilt. The new cathedral, designed by Sir Basil Spence, was opened in 1962 and retains the ruins of the old cathedral, which was bombed in 1940. Population (1991): 299 316. **2.** A unitary authority in central England, in West Midlands. Area: 97 sq km (37 sq mi). Population (2001): 300 844.

Coward, Sir Noel (1899–1973) British dramatist, composer, and actor. He first established his reputation with *The Vortex* (1924), a domestic drama, but his best-known plays are elegant comedies of manners, such as *Hay Fever* (1925) and *Blithe Spirit* (1941). He also contributed to revues, musicals, and films, notably *In Which We Serve* (1942) and *Brief Encounter* (1946).

Cowes 50 45N 1 18W A town in S England, situated on the Isle of Wight. It is a resort and yachting centre. Population (1991): 16 335.

cowpea An annual African plant, *Vigna unguiculata*, widely grown for food in tropical areas. There are two forms: a short erect one grown in Africa and America, whose seeds are used dried, and a tall climbing one grown in SE Asia, whose long pods are eaten when young. Family: Leguminosae.

Cowper, William (1731–1800) British poet. His publications include *Olney Hymns* (1779; with John Newton), "John Gilpin's Ride" (1783), a comic ballad, and *The Task* (1785), a long poem on rural themes. He was mentally unstable throughout his life, and frequently attempted suicide.

cowpox A contagious virus disease of cattle that can be contracted by humans. Edward *Jenner used fluid from cowpox blisters to produce the first effective smallpox vaccine.

cowrie A *gastropod mollusc of the family Cypraeaidae (about 160 species), mostly found in warm seas. 1–15 cm long, cowries have glossy

shells with inrolled lips and feed at night on small animals.

cowslip A perennial spring-flowering Eurasian herb, *Primula veris*, growing to a height of 20 cm. It has bright-yellow flowers and is found from lowland meadows to alpine pastures. Family: Primulaceae (primrose family).

coyote A wild *dog, *Canis latrans*, of Central and North American grassland, also called prairie wolf. Coyotes are about 120 cm long, including the bushy tail (30 cm), and have yellowish fur. They hunt alone or in packs.

coypu A South American aquatic *rodent, *Myocaster coypus*. About 60 cm long (excluding a long hairless tail), it has thick brown fur and webbed hind feet. The underfur of the belly is known as nutria, and coypus are farmed for fur. Family: Capromyidae.

crab A *crustacean belonging to the tribes Brachyura (true crabs; about 4500 species) or Anomura (about 1300 species). True crabs have a wide flat body covered by a hard carapace. There is a large pair of pincers and four pairs of legs used for walking (typically sideways) or swimming. They are carnivores or scavengers and most species are marine. Order: Decapoda.

crab apple A tree, *Malus sylvestris*, 2–10 m high: one of the species from which cultivated *apples have been developed. A native of Europe and Asia, it is sometimes grown as an ornamental. Family: Rosaceae.

Crabbe, George (1754–1832) British poet, doctor, and cleric, born in Aldeburgh, Suffolk, scene of many of his poems. *The Village* (1783) was a brutally realistic portrayal of rural life, as were the verse tales of *The Borough* (1810) and *Tales of the Hall* (1819).

Crab nebula A turbulent expanding mass of gas, lying about 6000 light years distant in the constellation Taurus. It is the remnant of a *supernova observed in 1054. Within the nebula lies the **Crab pulsar**. This optical *pulsar rotates with a period of only 0.033 seconds.

Cracow See KRAKÓW.

Craigavon A district in central Northern Ireland, in Co Armagh. Area: 279 sq km (108 sq mi). Population (2001): 80 671.

crake A small shy bird belonging to the *rail family, commonly found in marshes and swamps. The Eurasian spotted crake (*Porzana porzana*) is 23 cm long and has a red ring at the base of the bill.

Cranach the Elder, Lucas (Lucas Müller;

1472–1553) German artist. Because of his portraits of Reformation leaders including his friend Luther, he is sometimes called the Reformation painter. He is also noted for his stylized but sensuous nudes, e.g. *Adam and Eve* (Courtauld Institute, London).

cranberry A low evergreen shrub of the genus *Vaccinium*, bearing red edible berries and growing in acidic boggy areas. *V. oxycoccus* occurs in Europe, N Asia, and North America. *V. macrocarpon* of North America has larger fruits (about 1.5 cm across). Family: *Ericaceae* (heath family).

crane A long-legged bird belonging to a family (*Gruidae*; 14 species) occurring in Old World regions and North America. Up to 140 cm tall with a wingspan of over 200 cm, cranes vary from grey to white with black wingtips; some species are crested. They feed on grain, shoots, and small animals; northern species are migratory. Order: *Gruiiformes* (rails, etc.). See also DEMOISELLE; WHOOPING CRANE.

cranefly A harmless fly, also called daddy longlegs, belonging to the family *Tipulidae*. Craneflies are 6–75 mm long with long delicate legs and wings. The larvae generally occur in water or rotting vegetation. However some—the leatherjackets—are plant pests.

cranesbill A herbaceous plant of the genus *Geranium* (about 400 species), widely distributed, and usually having pink or purple flowers. They take their name from the long slender beaklike carpels. The meadow cranesbill (*G. pratense*), a perennial up to 60 cm high, has violet-blue flowers. Family: *Geraniaceae*.

Cranmer, Thomas (1489–1556) Anglican reformer and martyr. He was consecrated Archbishop of Canterbury in 1532, following his support of *Henry VIII in the king's divorce dispute with the pope. He is especially remembered for his contributions to the Prayer Books of 1549 and 1552. Under Queen Mary he was tried as a heretic and burned at the stake.

Crassus, Marcus Licinius (c.115–53 BC) Roman politician, nicknamed *Dives* (wealthy). Crassus suppressed Spartacus' revolt (71) and joined Pompey and Caesar in the first Triumvirate (60). He was killed during an invasion of Parthia.

crayfish A freshwater *crustacean, also called crawfish and crawdad, belonging to the superfamily *Nephropidea*. It has a small lobster-like body, 25–75 mm long, and feeds on plant and animal material. Some species are edible. Order: *Decapoda*.

Crécy, Battle of (26 August 1346) The first land battle of the *Hundred Years' War, fought in N France, in which the English, led by *Edward III, defeated the French under Philip VI.

Cree An Algonkian-speaking North American Indian people. They lived by hunting and trapping in small wandering bands. One group, known as Plains Cree, moved into the Plains and adopted the buffalo-hunting culture of this region often raiding for horses.

Creek A Muskogean-speaking North American Indian people divided into the Muskogee of Georgia and the Hitchiti of Alabama. They were cultivators and hunters and tattooed their bodies heavily. A confederacy of Creek towns fought the encroaching whites in the 18th and early 19th centuries. On their defeat in the 1830s they were removed to Oklahoma.

Cremona 45°08N 10°01E A town in N Italy, in Lombardy. It has a 12th-century cathedral and a 13th-century palace. From the 16th to the 18th centuries it was famous for the manufacture of violins. Population (latest est): 75 160.

creosote A substance produced by distilling tar. The creosote used for preserving wood is obtained from *coal tar and is a brownish mixture of aromatic hydrocarbons and *phenols. Creosote made from wood tar is a mixture of phenols and is used in pharmacy.

cresol (or **methylphenol**; $\text{CH}_3\text{C}_6\text{H}_4\text{OH}$) A liquid *aromatic compound obtained from *coal tar. It has three *isomers, a mixture of which is used as a disinfectant.

cress A plant of the mustard family (*Cruciferae*) the leaves of which are used in salads, especially garden cress, or peppergrass (*Lepidium sativum*). The seedlings are eaten, often with those of white mustard (*Sinapis alba*). The European winter, or land, cress (*Barbarea verna*) grows to a height of 100 cm.

Cretaceous period A geological period of the Mesozoic era, between about 135 and 65 million years ago, divided into the Lower and Upper Cretaceous. The dinosaurs and other giant reptiles, as well as the ammonites and many other invertebrates, became extinct at the end of the Cretaceous.

Crete (Modern Greek name: Kriti) The largest of the Greek islands, in the E Mediterranean Sea. It is generally mountainous, rising over 2400 m (7874 ft). The economy is based primarily on agriculture and tourism. *History*: colonized probably in the 6th millennium BC from

Asia Minor, Crete achieved extensive maritime power during the Middle Minoan period (c. 2000–c. 1700 BC). Relics include the palace at *Knossos and clay tablets bearing two different scripts known as *Linear A and *Linear B. Politically insignificant in the history of classical Greece, it fell to Rome (67 BC), Byzantium (395 AD), and the Muslims (826). In 1204 it was sold to the Venetians, who gave both the island and Iráklion the name Candia. It fell to Turkey in 1669 and was officially incorporated into Greece in 1913. Area: 8332 sq km (3217 sq mi). Population (2001): 601 159. Capital: Khaniá.

Creutzfeldt-Jakob disease (CJD) A fatal neurological disease characterized by rapidly progressive dementia and involuntary jerking movements, first described by German psychiatrists H. G. Creutzfeldt (1885–1964) and A. M. Jakob (1884–1931). It is believed to be caused by deposits of an abnormal form of a brain protein (prion), which destroys surrounding brain cells. Sporadic and inherited forms of CJD are rare and typically affect elderly people, but the disease can be transmitted accidentally (e.g. through injections of prion-infected growth hormone), appearing many years after the initial infection. In the mid-1990s a variant form of CJD arose in the UK, which was thought to be linked to the consumption of beef products from cattle infected with *BSE.

Crewe 53 05N 2 27W A town in NW England, in Cheshire. Crewe developed as a railway junction with railway engineering and workshops; it now has varied industries, including high technology. Population (1991): 63 351.

Crick, Francis Harry Compton (1916–2004) British biophysicist, who (with James D. *Watson) proposed a model for the molecular structure of *DNA (1953). Following this breakthrough, Crick helped to determine the mechanism of protein synthesis. He shared a Nobel Prize (1962) with Watson and Maurice *Wilkins and was appointed to the OM in 1991.

cricket (sport) An 11-a-side bat-and-ball team game, in which the object is to score the most runs. It originated in England among shepherds using their crooks as bats; its rules were laid down in 1744 and the game is played almost exclusively in the UK and its former empire. It is presided over by two umpires (from 1993 a third umpire may make certain decisions in test matches with the aid of video replays). It is played on a grass pitch 22 yd (20.12 m) long having at each end a wicket of three stumps surmounted by two bails. The cork and twine ball, encased in leather, is 8.8–9 in

(22.4–22.9 cm) in circumference and weighs 5.5–5.75 oz (155.9–163 g). The members of one team take turns to bat in pairs, one defending each wicket; the batsmen's objective is to score runs by hitting the ball and exchanging ends. Each player bats until he is bowled, caught, stumped, run out, or judged lbw (leg before wicket). The members of the other team field, some taking turns to bowl the ball. International cricket is played mainly in Test matches between England, Australia, the West Indies, New Zealand, India, Pakistan, Sri Lanka, and South Africa. In England first-class cricket chiefly involves the 18 professional first-class county teams.

cricket. The pitch, showing the usual fielding positions (for a right-handed batsman).

cricket (zoology) An insect, resembling a grasshopper but with longer antennae, belonging to one of several families of the order *Orthoptera*. The males stridulate (i.e. make a chirping noise) by rubbing the front wings together. True crickets (family *Gryllidae*; 2400 species) have black or brown flattened bodies, 3–50 mm long, with long tail appendages (cerci) and short forewings (they do not fly). The females have long needle-like ovipositors for depositing eggs in soil or crevices. True crickets are omnivorous.

Crimea (Russian name: Krym) A peninsula and autonomous region (*oblast*) in the S Ukraine. It is mainly flat but rises to 1545 m

(5069 ft) in the S. Iron ore is mined here and wheat, tobacco, and wine are produced. *History:* colonized by Greeks in the 6th century BC, the Crimea was invaded by Goths, Huns, and others and in 1239 was made a khanate by Tatars. This was overthrown by Turks in 1475, and the area was annexed by Russia in 1783. Following the break-up of the Soviet Union in 1991, many Crimeans now favour union with Russia or total independence. Area: about 27 000 sq km (10 423 sq mi). Population (2005 est): 1 994 250. Capital: Simferopol. See also CRIMEAN WAR.

Crimean War (1853–56) The war between Russia, on one side, and Britain, France, the Ottoman (Turkish) Empire, and (from 1855) Sardinia-Piedmont, on the other. Caused by Russia's expansionist ambitions in the Balkans, the war culminated in the year-long siege of Sevastopol and the battles of *Balaclava and *Inkerman. The Russians eventually evacuated the port in September 1855 and peace was formally concluded at Paris (1856). Over 250 000 men were lost by each side, many from disease in the appalling hospitals of the Crimea. See also NIGHTINGALE, FLORENCE.

criminal law The body of law determining the acts and circumstances that amount to a crime (a wrong against society prohibited by law) and the punishment for crimes. Criminal law derives in England chiefly from *common law, although statute law has contributed significantly to its development. Most crimes entail both an act (*actus reus*) and a mental element (*mens rea*). However, there is a growing number of crimes in which no mental element is necessary (called crimes of strict liability), such as most motoring offences. Insanity, infancy (children under the age of ten), or duress (an act committed under threat of death or serious personal injury) may excuse a crime, but ignorance of the law does not if, in cases involving a mental element, the offender intends the result of his acts. In England all criminal cases appear first before a Magistrates' Court and may then be committed to the Crown Court (see COURTS OF LAW).

crinoid A marine invertebrate animal belonging to a class (*Crinoidea*; about 700 species) of *echinoderms. It has a small cup-shaped body covered with calcareous plates and with five radiating pairs of feathery flexible arms surrounding the mouth at the top. Sea lilies are fixed to the sea bottom, coral reefs, etc., by a stalk. Feather stars, e.g. *Antedon*, are free-swimming. Crinoids occur mainly in deep waters and feed on microscopic plankton and detritus. The larvae are sedentary.

critical mass The mass of fissile substance that is just capable of sustaining a *chain reaction within it. Below the critical mass, too many of the particles that might have induced a reaction escape.

critical state The state of a gas at its critical temperature, pressure, and volume. The critical temperature is the temperature above which a gas cannot be liquefied by increased pressure alone. The vapour pressure of the gas at this temperature is the critical pressure and its volume, the critical volume. In the critical state the density of the vapour is equal to the density of the liquid.

Croatia (Serbo-Croat name: Hrvatska) A republic in SE Europe, on the Adriatic Sea. It is chiefly mountainous, with plains in the NE. *Economy:* mainly agricultural, producing cereals, potatoes, tobacco, fruit, and livestock. Industries include food processing, metallurgy, and textiles. Tourism is reviving. *History:* settled by the Croats in the 7th century AD, the region was successively controlled by Hungary, Turkey, and Austria until the formation of the kingdom of the Serbs, Croats, and Slovenes (later Yugoslavia) in 1918. Following occupation by the Axis Powers in World War II, Croatia became an independent state (1941), rejoining Yugoslavia in 1945. In 1991 there was fighting between Croatian nationalists and the Serb-led Yugoslav army. Croatia's independence was recognized in 1992. The mainly Serb Krajina region declared itself independent from Croatia but was recaptured by government troops in 1995. Croatia was involved in the Bosnian civil war between 1991 and 1995. In the late 1990s there was growing opposition to the authoritarian rule of Franjo Tudjman and following his death (1999) his nationalists were heavily defeated in parliamentary elections (2000). The leftist Stjepan Mesić became president in 2000. Official language: Croatian. Currency: kuna. Area: 56 538 sq km (22 050 sq mi). Population (2007 est): 4 493 312. Capital: Zagreb.

Croce, Benedetto (1866–1952) Italian philosopher. His system is expounded in *Philosophy of Mind* (1900–10). The only reality is mental and this reality is divided into theoretical and practical. Theoretical reality comprises intuition (art and aesthetics) and conception (philosophy or history), while practical reality comprises individual will (political and economic activity) and universal will (morality).

crocodile A reptile belonging to either of two genera, *Crocodylus* or *Osteolaemus*, and distinguished from alligators and caymans by

having a more pointed snout and fewer teeth, the fourth tooth of the lower jaw remaining visible when the mouth is closed. Crocodiles occur chiefly in tropical fresh waters although the estuarine crocodile (*C. porosus*), which reaches a length of 6 m, occurs in coastal waters of SE Asia and Australia. Crocodiles belong to the order *Crocodylia* (about 20 species). Crocodilians are amphibious mainly nocturnal carnivores and rivers, where they prey chiefly on fish but also on water birds and land animals. They have long powerful jaws and a covering of protective bony plates; the ears and nostrils can be closed by valves when under water. The female builds a nest of mud or vegetation in which over a hundred shelled eggs may be laid.

crocodile bird An African riverbank courser, *Pluvianus aegyptius*, that feeds on parasites picked from crocodiles. It is 23 cm long and is black with white markings.

Crocus A genus of low-growing plants (75 species), native to Mediterranean regions and widely planted in gardens. Spring-flowering species include *C. vernus*, with white, blue, or purple flowers, and *C. aureus*, with deep-yellow flowers. *C. speciosus* is a purple autumn-flowering species. An Asian species (*C. sativus*) is the source of *saffron. Family: *Iridaceae*. Compare AUTUMN CROCUS.

Croesus (died c. 546 BC) The last king of *Lydia (c. 560–c. 546 BC), famous for his wealth. He conquered the Greek cities on the coast of Asia Minor but was defeated by the Persian king Cyrus (II) the Great (d. 529) in 546. According to legend, Croesus was saved by Apollo from execution by Cyrus.

Crohn's disease An inflammatory disorder of the intestinal tract named after the US physician B. B. Crohn (1884–1983). Symptoms include abdominal pain and diarrhoea. Its cause is not known. Patients are treated with drugs; some cases require surgery.

Cro-Magnon A prehistoric race of men. Skeletal remains were found (1868) at Cro-Magnon SW France and similar bones of tall broad-faced individuals have been found at other European sites. They first appeared about 35 000 years ago. The Cro-Magnon hunted reindeer, bison, and wild horse and produced the earliest known examples of cave art (see LASCAUX). See also HOMO.

Crompton, Samuel (1753–1827) British inventor of the spinning mule (1779). It was able to produce yarn of a higher quality and at a greater speed than had previously been pos-

sible. Crompton sold his idea for very little money but in 1812 he was awarded a parliamentary grant of £5,000.

Cromwell, Oliver (1599–1658) English soldier and statesman; Lord Protector of England (1653–58). Cromwell was MP for Huntingdon in the parliament of 1628–29 and a critic of Charles I in the *Long Parliament, summoned in 1640. After the outbreak of the *Civil War he raised a troop of cavalry, the nucleus of his Ironsides (formed 1643), and fought at Edgehill (1642). He held command at *Marston Moor (1644) and was instrumental in the formation of the *New Model Army under Fairfax, which with Cromwell as second in command decisively defeated Charles at *Naseby (1645). Cromwell acted as mediator between the king, parliament, and the New Model Army but his conciliatory attitude hardened after Charles' flight to the Isle of Wight; when the second Civil War ended in Charles' defeat (1648), Cromwell signed the king's death warrant. After the establishment of the Commonwealth he ruthlessly subjected Ireland (1649–50) and defeated Charles' heir at Dunbar (1650) and Worcester (1651). In 1653 he expelled the Rump of the Long Parliament and following the failure of the *Barebones Parliament (formed in 1653 and named after one of its members, Praisegod Barebones), he accepted the Instrument of Government, which established the *Protectorate. As Lord Protector, Cromwell established Puritanism but permitted religious toleration. He ended the first Dutch War, allied with France against Spain (gaining Dunkirk), and conquered Jamaica (1655). He refused parliament's offer of the crown in 1657. He was succeeded as Lord Protector by his son **Richard Cromwell** (1626–1712), who was forced to abdicate in 1659.

Cromwell, Thomas, Earl of Essex (c. 1485–1540) English statesman, who drafted the legislation that made the English Church independent of Rome (see REFORMATION). He entered *Wolsey's service in 1514, became an MP in 1529 and chancellor of the exchequer in 1533. He ended the marriage of Henry VIII to Catherine of Aragon by a series of Acts that made the king head of the English Church. Between 1536 and 1540 he organized the dissolution of the monasteries, after which his negotiation of Henry's disastrous marriage to Anne of Cleves led to his execution for treason.

Cronus A Greek deity, the youngest of the Titans. He ruled the universe after castrating his father Uranus. He swallowed all the children he fathered by his sister Rhea except Zeus, for

whom a stone was substituted. Zeus was reared secretly in Crete and eventually overthrew Cronus.

Crookes, Sir William (1832–1919) British physicist, who showed that cathode rays consisted of charged particles rather than electromagnetic radiation, since they were deflected by a magnetic field. He invented the Crookes radiometer and Crookes glass, containing cerium, to protect the eyes of the industrial workers. He also discovered the element thallium.

croquet A ball-and-mallet game that probably developed from *paille-maille*, a French game played certainly by the 13th century. It is played on a grass lawn, ideally 35 × 28 yd (32 × 25.6 m), with an arrangement of six hoops and one peg. Two to four players attempt to follow a prescribed course through the hoops, each using a distinctively coloured ball, the winner being the first to hit the peg with his ball.

Crosby, Bing (Harry Lillis C.; 1904–77) US popular singer. He achieved worldwide fame during the 1930s and 1940s with such hits as "White Christmas" (1942). He starred in many films, often with Bob Hope, and also in his own radio and television shows.

crossbill A finch of the genus *Loxia* (3 species), 14.5–17 cm long, whose unique cross-tipped bill is specialized for extracting seeds from unopened cones. The common crossbill (*L. curvirostra*) of Eurasia and North America feeds on spruce seeds. The male is red and the female grey-green. The parrot crossbill (*L. pytyopsittacus*) feeds on pine seeds.

crossbow A short bow mounted on a stock, used in Europe throughout the middle ages. Crossbows were composite, made of wood, horn, tendons, and by the early 15th century of steel (called an arbalest). They were drawn by hand, a belt hook, or a winch. The bolt or *quarrel* was short, iron-tipped, fletched with wood, leather, or brass, and capable of penetrating armour.

Crossopterygii An order of bony fish, most of which are now extinct. The suborder *Rhipidistia* were predatory freshwater fishes of the Devonian and Carboniferous periods (about 400–280 million years ago), some of which evolved into the amphibians. The suborder *Coelacanthini* contains the coelacanth, the only surviving member of the order. Subclass: *Sarcopterygii*.

Croton A genus of tropical trees and shrubs (750 species) many of which are of economic

importance. *C. tiglium* of SE Asia produces croton oil, a powerful laxative now considered unsafe. The bark of *C. cascarilla* and *C. eluteria*, trees of the Bahamas, produces cascarilla, used in tonics. *C. laccifer* from India and Sri Lanka provides a lac used in varnishes. Several Brazilian species produce dragon's-blood resin. Family: *Euphorbiaceae* (spurge family).

croup An acute infection of the respiratory tract, usually caused by viruses, resulting in inflammation and obstruction of the larynx (voice box). Croup occurs most commonly in children under five years of age; symptoms include difficulty in breathing. Treatment consists of steam inhalations and sedatives; severe cases may require surgery.

crow A large songbird of the widely distributed family *Corvidae* (102 species), 30–65 cm long, crows typically have a black or brightly coloured plumage and a stout bill. Their food includes carrion and they have a distinctive call. The typical crows are the carrion, hooded, and American crows but the family also includes the *rooks, *ravens, *coughs, jays, and *jackdaws.

crown dependencies See UNITED KINGDOM OVERSEAS TERRITORIES.

crown jewels Royal insignia and regalia and the personal jewellery inherited or acquired by a sovereign. The British Crown Jewels, kept in the Tower of London, were mainly amassed after the Restoration, the earlier set having been destroyed under Cromwell. Those used for coronations include a replica of St Edward's crown, the Sword of State, the Orb, and the Sceptre. Those used for other state occasions include the Imperial State Crown and another Sword of State.

crown of thorns 1. A Madagascan shrub, *Euphorbia splendens*, often cultivated for ornament. Up to 100 cm high, it has spiny stems and clusters of small flowers. See EUPHORBIA. **2.** A spiny vigorous shrub, *Zizyphus spina-christi*. It is widespread in the Mediterranean region and is said to be the source of Christ's crown of thorns. Family: *Rhamnaceae* (buckthorn family).

crown-of-thorns starfish A reddish starfish, *Acanthaster planci*, that has a spiny body, up to 45 cm across, with 12–19 arms. With the decimation of its chief predator—the Pacific triton (*Charonia tritonis*)—by shell collectors, it has spread throughout the South Pacific.

Crown Prosecution Service An independent prosecuting body established in England

and Wales in 1986 to decide whether a case should be pursued in the courts. It deals with cases brought by the police (excluding traffic offences) and is headed by the Director of Public Prosecutions. In 2004 the government announced plans to rename it the Public Prosecution Service.

Cruciferae (or **Brassicaceae**) A family of plants (about 1900 species), mainly annual or perennial herbs, abundant in N temperate regions. The flowers are four-petalled and cross-shaped. Many crucifers are of economic importance as food plants, cattle food, ornamentals, and weeds. Some, such as cabbage and other brassicas, have been grown since ancient times.

Cruikshank, George (1792–1872) British painter and illustrator. He illustrated such books as Dickens' *Oliver Twist* and Ainsworth's *Tower of London*. His etchings of *The Bottle* and painting of *The Worship of Bacchus* (Tate Gallery) are moralizing sermons on alcoholism.

Cruise, Tom (Thomas Cruise Mapother IV; 1962–) US film actor. His films include *The Outsiders* (1983), *Born on the Fourth of July* (1989), *Eyes Wide Shut* (1999), and *Magnolia* (2000). He was married to Nicole *Kidman.

cruiser A fast heavily armed warship, smaller than a battleship but larger than a *destroyer. Cruisers with increased firepower, nuclear power, and greater versatility have replaced most of the world's battleships.

Crusades The military expeditions organized in western Christendom primarily to recover the Holy Places of Palestine from Muslim occupation. The first Crusade (1095–99) was launched under the aegis of the papacy. Jerusalem was captured and the Crusader states of the Kingdom of Jerusalem, the County of Edessa, Antioch, and Tripoli were created. The fall (1144) of Edessa inspired the unsuccessful second Crusade (1147–48) and the capture of Jerusalem by *Saladin in 1187 led to the inconclusive third Crusade (1189–92), led by *Philip II Augustus of France, Emperor Frederick I Barbarossa, and *Richard (I) the Lionheart of England. The fourth Crusade (1202–04) was diverted from its initial objective, Egypt, and sacked Constantinople (1204). The four Crusades of the 13th century failed to recover lost ground and Acre, the last foothold of the West in Palestine, was lost in 1291. See also CHIL-DREN'S CRUSADE.

crustacean An *arthropod of the subphylum or superclass *Crustacea* (over 35 000

species), which includes the *barnacles, *woodlouse, *shrimps, *lobsters, *crabs, etc. The head bears two pairs of antennae and three pairs of jaws; the head and thorax together are usually covered by a chitinous carapace. There are numerous pairs of forked appendages, which are modified for different functions. Crustaceans are predominantly aquatic, breathing by means of gills. The larvae pass through several stages (see METAMORPHOSIS) to reach the adult form.

cryogenics The production, effects, and uses of very low temperatures, usually meaning from -150°C down to *absolute zero. The most common method of producing cryogenic temperatures is to use adiabatic processes. Cryogenic effects include changes in electrical properties, such as *superconductivity, and changes in mechanical properties, such as superfluidity (see SUPERFLUID). Cryogenics has been applied to food preservation, life-support systems in space, and liquid propellants.

Crystal Palace A building designed by Joseph *Paxton (1801–65) to house the *Great Exhibition of 1851. The Crystal Palace, which had an area of 69 892 sq m (772 289 sq ft), was built in Hyde Park, London, of prefabricated glass and iron. It was later reassembled at Sydenham in SE London but burnt down in 1936.

crystals Solids that have a regular geometrical shape because the constituent atoms, ions, or molecules are arranged in an ordered repeating pattern, known as a crystal lattice. There are seven crystal systems, into which all

system	edges	angles
cubic	$a = b = c$	$\alpha = \beta = \gamma = 90^{\circ}$
tetragonal	$a = b \neq c$	$\alpha = \beta = \gamma = 90^{\circ}$
orthorhombic	$a \neq b \neq c$	$\alpha = \beta = \gamma = 90^{\circ}$
hexagonal	$a = b \neq c$	$\alpha = \beta = 90^{\circ}; \gamma = 120^{\circ}$
trigonal	$a = b \neq c$	$\alpha = \beta = \gamma = 90^{\circ}$
monoclinic	$a \neq b \neq c$	$\alpha = \gamma \neq \beta = 90^{\circ}$
triclinic	$a \neq b \neq c$	$\alpha \neq \beta \neq \gamma$

unit cell

crystals. The classification of crystals.

crystals are classified. Crystal structures are studied by a variety of techniques, including X-ray diffraction and electron microscopy. **Crystallography** is concerned with the structure and properties of crystals. Noncrystalline solids, such as glass, are said to be amorphous.

ctenophore A marine invertebrate animal, also called comb jelly, sea gooseberry, and sea walnut, belonging to the phylum *Ctenophora* (about 80 species). Its transparent gelatinous body is usually rounded and bears eight rows of ciliated comblike plates, used for locomotion. Ctenophores often occur in swarms in coastal waters, feeding on planktonic animals.

Cuba, Republic of A country in the Caribbean Sea, off the S coast of Florida. It consists of two main islands, Cuba and the Isla de la Juventud, together with over 1500 small islands and keys. On the island of Cuba fertile plains rise to mountains in the centre and SE and hills in the NW. The population is mainly of European origin, with large African and mixed minorities. *Economy*: mainly state controlled, it is dependent upon its sugar crop. Tobacco is another important export crop and meat production is important in the domestic economy. Mineral resources include nickel. The country has lost almost all its foreign trade following the collapse of the Soviet Union. Tourism is now the main source of revenue. *History*: discovered by Columbus in 1492, it was a Spanish colony (except in 1762–63, when it was occupied by the British) until 1898, when Spain withdrew following war with the USA. After three years of US occupation Cuba became a republic (1901) but the USA continued to intervene in Cuba's affairs until 1934. In 1940 Fulgencio Batista (1901–73) took Cuba into World War II on the Allied side. His corrupt dictatorship was overthrown (1959) in a social-revolt led by Fidel *Castro, after which relations with the USA became increasingly strained and Cuba moved closer in its international relations to the Soviet Union. In 1961 an invasion of Cuban exiles with US support was defeated at the *Bay of Pigs and in 1962 the Soviet installation of missile bases in Cuba resulted in a US naval blockade. The crisis was resolved when the Soviet Union agreed to remove the bases. In the 1980s Cuban troops were involved in revolutionary conflicts in both Africa and the Caribbean. Since the collapse of the Soviet Union (1991) Cuba has suffered economic and political isolation. Official language: Spanish. Currency: Cuban peso of 100 centavos. Area 148 124 sq km (46 736 sq mi). Population (2003 est): 11 295 000. Capital: Havana.

cubism A style of painting and sculpture, originating in the works of *Picasso and *Braque in about 1907. It started as an intellectual investigation of how a solid form can be represented in two dimensions without resorting to illusionism. Volume was suggested by the fusion of multiple viewpoints of an object, which was presented as a complex of geometrical shapes. After 1911 the development of cubism led to the introduction of collage. Cubism was the principal catalytic influence on the evolution of *abstract art.

cuckoo A bird belonging to a family (*Cuculidae*; 128 species) occurring worldwide and ranging from 16–70 cm in length. The European cuckoo (*Cuculus canorus*), grey with white barring, belongs to a subfamily of parasitic cuckoos (*Cuculinae*; 47 species); these lay their eggs in the nests of other birds, which rear their young. Order: *Cuculiformes* (cuckoos and turacos).

cuckoopint A perennial herbaceous European plant, *Arum maculatum*, also called lords-and-ladies. 30–50 cm tall, it has a cylindrical cluster of tiny flowers, which protrudes from a funnel-shaped bract (spathe). The flowers give rise to poisonous red berries. Family: *Araceae*.

cucumber An annual vine, *Cucumis sativus*, widely cultivated since ancient times. The long green juicy fruits, up to 60 cm long, are eaten raw, cooked, or pickled (see GHERKIN). Family: *Cucurbitaceae* (gourd family).

cuisine minceur A style of gourmet cookery in which the traditional generous use of butter, cream, and other rich ingredients is minimized. Cuisine minceur was elaborated by the French chef Michel Guérard (1933–) in the 1970s at his restaurant at Eugénie-les-Bains in SW France.

Cullinan diamond An exceptional diamond weighing 3106 metric carats (c. 621 g) when found in the Premier Mine, South Africa, in 1905. It was cut into 9 major and 96 small stones. The two largest (Star of Africa and Cullinan II) are set in the British royal regalia.

Culloden Moor A moor in N Scotland, in the Highland Region near Inverness. In 1746 it was the scene of the last land battle to be fought in Britain, in which the Young Pretender, Charles Edward Stuart, was defeated by the Duke of Cumberland, thus ending the *Jacobite cause in Britain.

Culpeper, Nicholas (1616–54) English herbalist, physician, and astrologer. In 1649 he published an unauthorized translation of the

official London Pharmacopoeia. This was followed by his famous and equally popular *Complete Herbal* (1653).

Cultural Revolution, Great Proletarian

(1966–69) A political movement launched in China by *Mao Tse-tung with the professed aim of eliminating bureaucracy and reinvigorating revolutionary attitudes. Many leading officials were dismissed, the formal educational system was abolished, and reforms to foster correct political views were introduced. Young people, mobilized as *Red Guards, attacked Party officials and destroyed cultural objects. The result was a reign of anarchy and terror.

Cumbria A county in NW England, bordering on the Irish Sea. It was created in 1974 from Westmorland, Cumberland, and parts of NW Lancashire and NW Yorkshire. It consists of the *Lake District, enclosed by coastal lowlands and the Pennine uplands. Agricultural activity includes sheep, dairy, and arable farming. New industries, including chemicals, have largely replaced the traditional ones of coal, iron, and steel. Atomic energy establishments exist at Sellafield and Calder Hall. Area: 6809 sq km (2628 sq mi). Population (2001): 487 607. Administrative centre: Carlisle.

cumin An annual herb, *Cuminum cyminum*, up to 30 cm high with small whitish flowers and bristly fruits. Native to the Mediterranean, it has long been cultivated in Europe, India, and China for its bitter fruits, which are used in curry powders, to flavour liqueurs, etc. Family: *Umbelliferae*.

cumulus cloud (Cu) A low type of *cloud of convective origin having a heaped appearance and developing vertically from a flat base. **Cumulonimbus cloud** is heavy and dense, extending vertically to about 6000 m (20 000 ft), and is associated with thunderstorms. Its upper part often spreads out to form an anvil shape.

cuneiform The oldest writing system of which records survive, used to represent a number of ancient Near Eastern languages. The name derives from the wedge-shaped marks (Latin *cuneus*, a wedge) made by the imprint of a stylus in soft clay. Originally pictographic, by the 3rd millennium BC cuneiform pictures had become stylized in the form of groups of wedge-shaped imprints, many representing the sounds of syllables. Probably devised by the Sumerians not later than 3100 BC, cuneiform spread to other language groups in the area. By 100 BC, however, it had largely been superseded by the North Semitic script

that was used to represent the Aramaic language.

pictographs		cuneiform

				mountain
				fish
				barley grain

cuneiform. The wedge-shaped strokes of cuneiform writing developed gradually from pictographs.

Cupid The Roman god of love, identified with the Greek Eros, and lover of Psyche. He is usually portrayed as a winged boy shooting arrows of love.

cupronickel A corrosion-resistant alloy of 75% copper and 25% nickel (by weight). In the UK the Coinage Act (1946) substituted cupronickel coinage for silver alloy; the four cupronickel coins now in circulation are the 5p, 10p, 20p, and 50p pieces.

Curaçao A West Indian island, the largest in the Netherlands Antilles. Discovered in 1499, it was settled by the Spanish before being colonized by the Dutch in 1634. The refining of oil from Venezuela is of major importance; other industries include the production of Curaçao liqueur and calcium-phosphate mining. Area: 444 sq km (173 sq mi). Population (2000 est): 143 387. Chief town: Willemstad.

curare A resinous substance obtained from South American trees of the genera *Strychnos* and *Chondodendron*, used as an arrow poison by South American Indians. Curare blocks the action of *acetylcholine and causes muscular contraction; curare-like compounds (e.g. tubocurarine) are injected during general anaesthesia to relax muscles.

Curia Regis The King's Court of early medieval Europe. It fulfilled all the functions of royal government—and from its specialist departments developed the public government offices, such as, in England, the Chancery and the Exchequer, as well as the courts of law and parliament.

curie (Ci) A unit of radioactivity equal to the amount of an isotope that decays at the rate of 3.7×10^{10} disintegrations per second. Named after Pierre *Curie.

Curie, Marie (1867–1934) Polish chemist, renowned for her research into *radioactivity. Born Marya Skłodowska, she emigrated to France and married (1895) **Pierre Curie** (1859–1906), a French physicist. Marie Curie noticed in 1898 that one particular uranium ore emitted an anomalously large amount of radiation. Realizing that the radiation was caused by a new element, she and her husband spent four years isolating one gram of radium salt from eight tons of the ore. The Curies, together with Henri Becquerel, were awarded the 1903 Nobel Prize for Physics and, for her discovery of radium and polonium, she won the 1911 Nobel Prize for Chemistry. Pierre Curie discovered the *piezoelectric effect (1880) and showed that ferromagnetism reverts to paramagnetism (see **MAGNETISM**) above a certain temperature, now known as the Curie point (1895). He was killed in a road accident; she died as a result of the radiation to which she had been exposed. Their daughter **Irène Joliot-Curie** (1896–1956) married the French physicist **Frédéric Joliot** (1900–59) in 1926. They were the first to produce radioactivity artificially. For this work they were awarded the Nobel Prize for Chemistry in 1935.

curium (Cm) An artificial transuranic element discovered by Seaborg and others in 1944 and named after Marie and Pierre Curie. All 13 isotopes are radioactive and some intensely so. Curium is a silvery reactive metal. Its compounds include the oxides (CmO₂, Cm₂O₃) and halides (CmF₃, CmCl₃). At no 96; at wt (247); mp 1340 ± 40°C.

curlew A streaked brown or grey bird belonging to the genus *Numenius* (8 species). Curlews have a long neck and long curved bill. They breed in inland subarctic regions and migrate south in winter to marshes and mudflats, feeding on worms and crabs. The common Eurasian curlew (*N. arquata*) is almost 60 cm long and ranges from Britain to central Asia. Family: *Scolopacidae* (snipe, sandpipers, etc.).

curling A target game played on ice with stones fitted with handles, played since at least the early 16th century in Scotland. Two teams of four players take it in turns to slide two curling stones, each up to 36 m (39 yd), along the ice towards the "house," a series of concentric circles at the end of the rink. A team scores one point for each stone finishing nearer the centre of the house than any of its opponents'.

currant 1. One of several species of shrubs belonging to the genus *Ribes*. Some are cultivated for their fruit, for example *blackcurrant and

*redcurrant, and others, such as the *flowering currant, are grown as ornamentals. Family: *Grossulariaceae*. 2. The dried berry of a small seedless *grape, grown in the Mediterranean region and used in cooking.

currawong An Australasian songbird of the genus *Strepera* (6 species). About 50 cm long, currawongs are usually black, sometimes with white markings, and have a long hook-tipped bill. They feed on insects, small mammals, and birds and frequently destroy fruit crops. Family: *Cracticidae* (Australian magpies).

cuscus A cat-sized *marsupial mammal belonging to the genus *Phalanger*, found in forests of NE Australia, New Guinea, and nearby islands. Cuscuses have a prehensile tail and climb slowly around trees at night, eating mainly leaves and fruit but sometimes catching lizards or birds. Family: *Phalangeridae* (see **PHALANGER**).

Cushing's disease A disorder resulting from excess *corticosteroid hormones in the body, named after H.W. Cushing (1869–1939). The symptoms include obesity, loss of minerals from the bones, and reddening of the face and neck; it may be associated with the symptoms of *diabetes mellitus and high blood pressure. It may be caused by a tumour of the pituitary gland or the adrenal gland or by prolonged therapy with high doses of corticosteroids: the treatment is determined by the cause.

custard apple A small tree of the genus *Annona* so called because of the custard-like flavour of its fruits. The common custard apple (*A. reticulata*), 5–8 m high and widely grown in the West Indies, produces reddish many-seeded fruits, 8–12 cm in diameter. Family: *Annonaceae*.

Custer, George A(rmstrong) (1839–76) US cavalry general. After earning distinction in the Civil War, he commanded the Seventh Cavalry during the western campaigns against the Indians. Sent to round up Sioux and Cheyenne forces under Chief *Sitting Bull in S Dakota's Black Hills in 1876, he and his force of about 260 were massacred at the *Little Bighorn (Custer's Last Stand).

cuttlefish A *cephalopod mollusc belonging to the family *Sepiidae* (about 100 species), of temperate coastal waters. 25–90 cm long, the body is supported by an internal calcareous shell—the cuttlebone—which gives buoyancy. When alarmed, the animal emits an inky fluid.

Cuzco 13 32S 71 57W A city in S Peru, in the Andes 3416 m (11 207 ft) above sea level. It was

the capital of the Inca Empire prior to the Spanish conquest in 1533; Inca ruins include the Temple of the Sun. Population (1998 est): 278 590.

Cybele An Asiatic earth goddess identified by the Greeks with *Rhea. The centre of her worship was Phrygia, whence her cult spread to Athens and later to Rome. She represented the powers of nature and was a protectress of wild animals. Her priests were eunuchs known as Corybantes.

cybernetics The study of communication and control between men, machines, and organizations. The name was derived from the Greek word meaning "steersman" by Norbert *Wiener, who pioneered the subject. The human ability to adapt to changing circumstances and to make decisions is simulated in the design of computer-controlled systems.

cycad A *gymnosperm plant belonging to the phylum *Cycadophyta* (about 100 species), native to warm and tropical regions. They resemble small palms, having short stout stems with a crown of frondlike leaves. Reproductive organs are in the form of separate male and female cones borne on different trees. The stems of some species yield a type of *sago.

Cyclades (Modern Greek name: Kikládhes) A group of some 220 Greek islands in the S Aegean Sea, including Ándros, Delos, Íos, Mikonos, Melos, Náxos (the largest), Páros, and Syros. Total area: 2578 sq km (995 sq mi). Population (1991): 94 005. Capital: Hermopolis (on Syros).

Cyclamen A genus of perennial plants (15 species) native from the European Mediterranean to Iran and widely cultivated. The pot varieties are grown from *C. persicum*. The garden cyclamens include dwarf varieties, 5–8 cm high. All cyclamens produce corms but most can be grown from seed. They have drooping flowers with red, pink, or white reflexed petals. Family: *Primulaceae*.

cyclone An area of relatively low atmospheric pressure with a series of closed isobars around its centre. In the N hemisphere wind circulates in an anticlockwise direction around its centre, in the S hemisphere it is clockwise. Except in the tropics, cyclones are now usually referred to as *depressions or lows. Tropical cyclones include *hurricanes and *typhoons.

Cyclops A genus (44 species) of very small freshwater crustaceans of the class *Copepoda*, so named because of their single median eye. In Africa and Asia they transmit the parasitic

Guinea worm larvae to humans if accidentally swallowed.

cyclostome An eel-like jawless aquatic vertebrate of the class *Cyclostomata*, which includes the *lamprey and *hagfish. Cyclostomes have a long cylindrical body with fins arranged singly (compare FISH), a cartilaginous skeleton, and a sucking mouth with numerous horny teeth. They occur mainly in temperate fresh waters and salt waters and many are parasitic on fish. Subphylum: *Agnatha*.

cyclotron A type of particle *accelerator in which charged particles are accelerated in an outward spiral path inside two hollow D-shaped conductors (called dees) placed back to back. The maximum energy of the particles is about 25 MeV. See also SYNCHROCYCLOTRON.

cyclotron. The charged particles are accelerated in the two D-shaped conductors (*D*₁ and *D*₂), which are supported in the magnetic field *B*.

Cymbidium A genus of tropical and subtropical *orchids (40–70 species), native to Asia and Australia. Most species have pseudobulbs and sprays of 6–20 flowers on each flower stalk. Cymbidiums are among the most popular orchids in cultivation today.

Cynics The followers of the Greek moral philosopher *Diogenes of Sinope, who were active from the early 3rd century BC. They were outspoken critics of accepted social values and often lived unconventional lives. Positive freedom could be attained by self-realization, but often it was the negative side of the Cynics' beliefs that was emphasized. Their distinction between natural and artificial values strongly influenced other ancient philosophies.

cypress A conifer of the genus *Cupressus* (true cypresses; 20 species), native to S Europe, E Asia, and North America and widely planted for or-

namment and timber. Cypressess have tiny scale-like leaves and rounded cones, 1–4 cm in diameter. The Italian or funeral cypress (*C. sempervirens*), of the Mediterranean region, is 25–45 m high. Family: *Cupressaceae*.

Related trees of the genus *Chamaecyparis* (6 species), of North America and SE Asia, are known as false cypresses. An example is Lawson's cypress *C. lawsoniana*. See also SWAMP CY-
PRESS.

Cyprus, Republic of (Greek name: Kypros; Turkish name: Kıbrıs) An island state in the E Mediterranean Sea. A central plain rises to the Kyrenia Range in the N, and in the SW the Troödos Massif rises over 1800 m (6000 ft). Most of the population is Greek or Turkish, the former being in the majority. *Economy*: mainly agricultural. Mineral resources include iron pyrites, asbestos, chromite, and copper ores. Tourism is now the main source of revenue. The Turkish sector remains relatively poor, despite attempts to create a self-sufficient economy. Exports include wine, citrus fruits, potatoes, and metals. *History*: there was already a Greek colony on Cyprus almost 4000 years ago. It was conquered by Egypt in the 6th century BC and later formed part of the Persian, Macedonian, Roman, Byzantine, and Arab empires. In 1193 it became a Frankish kingdom and in 1489 a Venetian dependency. In 1571 it was conquered by the Turks and this occupation lasted until 1878 when it came under British administration. In the 1930s Greek Cypriots began advocating Enosis (Union with Greece), and in 1955 a Greek Cypriot organization (EOKA), led by Archbishop Makarios and Gen Grivas, began guerrilla warfare against the British. Cyprus became a republic in 1960 and a member of the Commonwealth in 1961. There were fierce clashes between the Greek and Turkish communities in the 1960s and in 1964 a UN peacekeeping force was sent to the island. Following a Greek-supported military coup in 1974, in which Makarios was temporarily overthrown, Turkey invaded the island leading to its virtual partition. In 1975 the Turks set up their own government in the N; this declared itself an independent state in 1983 but has not been recognized internationally. A UN plan to end the division of Cyprus (1992) failed to find acceptance and tensions between the communities have persisted. The EU's decision to admit Cyprus in May 2004 (excluding the Turkish N if there was no reunification) led to a new UN unity plan; in referendums held in April 2004 this was backed by Turkish Cypriots but rejected by Greek Cypriots. Official languages: Greek and Turkish. Currency: Cyprus pound of

1000 mls. Area: 9251 sq km (3572 sq mi). Population (2003 est): 714 000. Capital: Nicosia.

Cyrano de Bergerac, Savinien (1619–55) French writer and dramatist. He wrote a comedy, *Le Pédant joué* (1654), tragedies, and two satirical romances (published posthumously). He was noted for his comically long nose as well as his chivalrous nature and is the subject of Rostand's play *Cyrano de Bergerac*.

Cyrillic alphabet The alphabet used for Russian, Belarussian, Ukrainian, Bulgarian, Serbian, and various other languages of the former Soviet Union. It was developed from a Greek alphabet of the 9th century AD and is traditionally attributed to the Greek brothers, St Cyril (c. 827–69 AD) and St Methodius (c. 825–49 AD). It originally consisted of 43 letters, but modern versions have reduced this number to about 30.

cystic fibrosis A hereditary disease affecting the mucus-secreting and sweat glands. Symptoms, which appear in early childhood, are due to the production of thick mucus, which obstructs the pancreatic duct, intestinal glands, and bronchi. Patients suffer from malnutrition and recurrent chest infections. Current treatment, aimed at relieving symptoms, includes antibiotics, physiotherapy, a low-fat high-protein diet, and the administration of pancreatic enzymes.

cytology The study of the structure and function of cells. It began with the development of techniques for the study of materials under the light microscope, which enabled the *nucleus and other organelles to be observed. This led to the identification of chromosomes. More recent developments have included the use of phase-contrast and electron microscopy, and the use of such techniques as cell separation and analysis, autoradiography, and tissue culture. Cytological tests provide the basis for diagnosis of many diseases, including cancer.

cytoplasm See CELL.

cytotoxic drugs Drugs used to kill cancer cells. These drugs have led to improvements in the treatment of some cancers (e.g. leukaemia) but often cause severe side effects, including damage to bone marrow.

Czech A West Slavonic language spoken by over ten million people, mostly in the Czech Republic, where it is the official language. It is written in the Latin alphabet in a standardized form based on the dialect of Prague.

Czechoslovakia (Official name: Czech and Slovak Federative Republic) A former country

C in central Europe. The population was about 50% Czech, 15% Slovak, and 25% German. Czechoslovakia was created, under Tomáš *Masaryk and Edvard Beneš, in 1918 following the collapse of the Austrian Empire. The new state was unable to withstand the expansionist ambitions of Hitler's Germany, which had taken control of all Czechoslovakia by 1939. Following the war Ruthenia was ceded to the Soviet Union, and some three million Germans were expelled from Czechoslovakia. By 1948 the Communist Party was in power and Czechoslovakia was closely allied with the Soviet Union. In 1968 a liberalization programme initiated by Dubček provoked a Soviet invasion. In 1989 pressure for liberal reform led to the fall of the Communist regime; a new government was formed with Václav Havel as president. Pressure for Slovakian independence led to Slovakia and the Czech Republic becoming separate states on 1 January 1993.

Czech Republic A landlocked country in

central Europe. It is mainly wooded and mountainous. *Economy:* industry was entirely nationalized during the communist era (1948-89) and agriculture organized in collectives and state farms. A major privatization programme began in 1992. Principal crops include beet, wheat, potatoes, and barley. Industrial products include motor vehicles, glass, beer, and ceramics. Forestry is important. *History:* the Czech Republic, which comprises the historic provinces of Bohemia and Moravia, was a federal republic of Czechoslovakia until 1 January 1993. Václav *Havel, the former president of Czechoslovakia, was elected president of the new state. The Czech Republic joined NATO in 1999 and the EU in May 2004. In 2003 Havel was succeeded as president by Vaclav Kraus. A centre-right coalition under Mirek Topolánek was formed after elections in 2006. Official language: Czech. Currency: koruna of 100 hellers. Area: 78 838 sq km (30 431 sq mi). Population (2007 est): 10 228 744. Capital: Prague.

dab One of several *flatfish of the family *Pleuronectidae*, especially the genus *Limanda* found in N Atlantic and N Pacific waters. The European *L. limanda* is an important food fish.

dabchick A small *grebe, *Tachybaptus ruficollis*, common in quiet inland waters of Europe, S Asia, and Africa. It has a dark-brown back, pale underparts, and a bright chestnut breast, neck, and cheeks. It feeds on small fish and aquatic invertebrates.

dace A slender lively fish belonging to the family *Cyprinidae*, which includes chub, roach, minnow, etc. The European dace (*Leuciscus leuciscus*) is up to 30 cm long, silvery coloured, and lives in schools in fast-flowing streams and rivers, eating both plant and animal material.

Dachau 48 15N 11 26E A town in S Germany, in Bavaria. It was the site of a Nazi concentration camp (1933–45). Population (latest est): 33 200.

dachshund A breed of dog originating in Germany, where they were developed to pursue badgers to earth. There are two size varieties—standard and miniature—and three coat types—long-haired, smooth-haired, and wire-haired. They are usually brownish or black and tan.

dada A European art and literary movement, beginning in Zürich in 1916 and aimed at deflating the status of the art-object. Its ideology was transmitted in such periodicals as *L'Intransigeant* in France. Manufactured objects were favoured both in graphic art and sculpture, as in the collages of *Arp, *Ernst, and Kurt Schwitters and the ready-mades of *Duchamp, who exported dada to the USA. Although dada petered out in the early 1920s, *surrealism absorbed many of its characteristics.

Daedalus A legendary Greek craftsman and sculptor, said to have built the labyrinth for King *Minos of Crete. Minos imprisoned him

but he created wings for himself and his son **Icarus** and flew away; Icarus was killed when the sun melted his wings but Daedalus reached Sicily.

daffodil A perennial European plant, *Narcissus pseudonarcissus*, that is widely grown as a garden bulb. It has narrow leaves and yellow flowers, each with a trumpet shaped central crown surrounded by six segments. Family: *Amaryllidaceae*.

Dagestan Republic A constituent republic of Russia, on the Caspian Sea. The Caucasus Mountains lie to the S. Over 30 different nationalities, many of whom are Muslim, inhabit the republic. *Economy*: there are large engineering, oil, chemical, and food industries and power stations are under construction. Crops include wheat and fruit. *History*: conquered by Arabs, Turks, Mongols, and Persians, Dagestan was annexed by Russia in 1813. It was an autonomous Soviet Republic from 1921 until 1991. Recent years have seen growing agitation by Muslim separatists, leading to frequent bombings and attacks on Russian troops. Area: 50 278 sq km (19 416 sq mi). Population (2005 est): 2 621 800. Capital: Makhachkala.

Daguerre, Louis-Jacques-Mandé (1789–1851) French inventor of the first practicable photographic process (the daguerreotype). Working initially with Joseph Niepce (1765–1833), who had produced the first permanent photographic image (the heliograph), Daguerre succeeded during the 1830s in producing a photograph by focusing light onto a copper plate that had been coated with a silver salt. Daguerreotypes were widely made in the mid-19th century.

Dahlia A genus of herbaceous perennial tropical American plants (12 species), originally cultivated as a food crop for their tubers but now grown mainly for ornament. The brightly coloured flowers may be single or double. The varieties known as flat heads and pompoms are

derived from *D. pinnata*; cactus-type flowers with pointed petals are varieties of *D. juarezii*. Family: *Compositae*.

Dáil Éireann The representative assembly of the Republic of Ireland. It is the more important house in the National Parliament, the other house being the Seanad Éireann (the Senate). There are 166 members elected by proportional representation, at least once every 5 years. The president (the nominal head of state) summons and dissolves the Dáil on the advice of the prime minister.

Daimler, Gottlieb (Wilhelm) (1834–1900) German inventor, who contributed to the development of the internal-combustion engine. Daimler started to build his own engines in 1883, which were soon sufficiently light and efficient to power motorcycles; in 1890 he founded a company to manufacture motor cars.

daisy A herbaceous plant of the genus *Bellis* (15 species), with flower heads consisting of small central yellow disc florets surrounded by white or purple petal-like ray florets. The entire head is surrounded by bracts. Many species are garden ornamentals, some with double-flowered varieties. The common wild Eurasian daisy is *B. perennis*, a perennial up to 6 cm high, common in grasslands and lawns. Family: *Compositae*.

Dakar 14 45N 17 08W The capital and main port of Senegal, on Cape Verde peninsula, and the main industrial centre of the country. Population (1998 est): 1 999 000.

Dalai Lama The title of the spiritual and political ruler of Tibet and head of the Gelukpa Buddhist school. The title, originating in the 14th century, signifies the incarnation of the Bodhisattva of compassion. Chosen by oracles after the death of the previous incumbent, the Dalai Lama is regarded as infallible. The 14th Dalai Lama went into exile in India in 1959 after a failed uprising against the occupying Chinese. He won the Nobel Peace Prize in 1989.

Dali, Salvador (1904–89) Spanish surrealist painter. He joined the Paris surrealists (1929) and, inspired by Freudian theories of the unconscious, painted startling dream images with photographic realism during self-induced hallucinatory states. While living in New York (1940–55), he turned to religious subjects and became a Roman Catholic.

Dalian See LÜDA.

Dallas 32 47N 96 48W A city in the USA, in NE Texas on the Trinity River. The discovery of oil

in E Texas during the 1930s accelerated the city's growth, which was further enhanced by the introduction of the aircraft and electronics industries during World War II. Today Dallas is the state's second largest city and the financial and commercial centre of the SW. President John F. Kennedy was assassinated here in 1963. Population (2000): 1 188 580.

Dalmatian dog A breed named after Dalmatia, a coastal belt in Croatia on the Adriatic Sea, whence they were exported to the UK. Dalmatians are strongly built and were formerly used as carriage dogs. The short sleek coat has a pure white background with black or liver (brown) spots.

dalton See ATOMIC MASS UNIT.

Dalton, John (1766–1844) British chemist and originator of the modern atomic theory of matter. His earliest researches led to Dalton's law of partial pressures, stating that the total pressure exerted by a certain volume of a gaseous mixture is equal to the sum of the pressures exerted by each gas, if it alone occupied the same volume. He believed that gases consist of particles, extending his theory in 1803 to suggest that all matter is particulate.

dam A barrier across a river. Dams are used for diverting the flow of water; raising the water level for navigation purposes; storing water for irrigation, industrial use, or water control; and providing a high-pressure source of water for hydroelectric power. Gravity dams, usually made of concrete, have a flat vertical face upstream. They are no longer used for the largest dams. Arch dams consist of curved concrete structures presenting their convex faces upstream.

Daman and Diu A Union Territory in W India, formerly (until 1987) part of Goa. Daman, and Diu. Diu is an island off the coast of Gujarat. Area: 112 sq km (43 sq mi). Population (2001): 158 059. Chief town: Daman.

Damascus (Arabic name: Esh Sham) 33 30N 36 19E The capital of Syria, in the SE of the country close to the Lebanese border. It is thought to be the oldest continually inhabited city in the world. Under Ottoman rule from 1516 until 1918, Damascus was taken by the French (1920) and became capital of Syria in 1941. Population (1994): 1 394 322.

Damocles Legendary courtier of Dionysius I of Syracuse in the 9th century BC. Dionysius seated him at a banquet beneath a sword suspended by a single hair, thus illustrating the

insecurity of human life, irrespective of wealth or power.

damson The edible plumlike stone fruit of *Prunus damascena*, a slender twisted tree found across the N hemisphere. It has small white flowers that develop into purple fruits. Family: Rosaceae. See also PLUM.

Danae In Greek legend, the daughter of Acrisius, King of Argos. He imprisoned her because an oracle said he would be killed by her child; Zeus visited her, however, and she gave birth to *Perseus. Acrisius cast mother and son out to sea but Polydectes, King of Seriphos, rescued them.

Da Nang (former name: Tourane) 16°04'N 108°14'E A port in S central Vietnam, on the South China Sea. It was the site of a major US airbase during the Vietnam War. Population (1992 est): 382 674.

dandelion A weedy perennial herbaceous plant of the worldwide genus *Taraxacum*, with a basal rosette of jagged toothed leaves and a solitary flower head of bright-yellow florets. The seeds have parachutes of fine white hairs and are dispersed by wind. The common dandelion (*T. officinale*) is found throughout the N hemisphere. Family: Compositae.

Danelaw The area of Anglo-Saxon England E of Watling Street from the River Tees to the River Thames within which Danish laws and customs prevailed from the late 9th to the late 11th centuries.

Daniel (6th century BC) An Old Testament prophet and Jewish exile in Babylon. The Book of Daniel is usually credited to him, the first six chapters telling of various mainly supernatural episodes involving Daniel and his companions under Kings Nebuchadnezzar and Belshazzar.

Daniell cell An electric cell whose positive pole consists of copper immersed in a solution of copper sulphate and whose negative pole consists of zinc in a solution of sulphuric acid or zinc sulphate. It has an almost constant emf of 1.08 volts. Named after J.F. Daniell (1790–1845), British chemist.

Danish The official language of Denmark, spoken by about five million people. It belongs to the East Scandinavian branch of the North Germanic languages. Closely related to other Scandinavian languages, it is the most altered form of the common ancestral tongue.

Dante Alighieri (1265–1321) Italian poet. Born into a noble Guelf family of Florence (see

GUELFS AND Ghibellines), he became involved in the political struggle between the Black Guelfs and the White Guelfs, leading to his exile (c. 1301) from Florence. Dante's major works include the autobiographical love poem *La vita nuova* (c. 1292), the epic poem *The Divine Comedy* (c. 1307), and two influential treatises on the value of vernacular Italian as a literary language.

Danube, River The second longest river in Europe after the River Volga. Rising in the Black Forest in Germany, it flows mainly ESE across central and SE Europe to enter the Black Sea in Romania. Immensely important commercially, it is linked by the River Altmühl with canals to the Rivers Main and Rhine. Major cities along its course include Vienna, Budapest, and Belgrade. Length: 2850 km (1770 mi).

Daphne (botany) A genus of evergreen and deciduous shrubs (70 species) of the Old World, including many important ornamentals. The leaves are arranged spirally up the stem. The small bell-shaped flowers occur in clusters. The genus includes the deciduous mezereum (*D. mezereum*), with reddish-purple flowers and red berries, and the evergreen spurge laurel (*D. laureola*), with greenish flowers and black berries. Family: Thymeleaceae.

Daphne (Greek mythology) A mountain nymph who rejected Apollo and, to escape him, was transformed by Gaia into a laurel tree. Apollo made the laurel a symbol of honour and victory.

Daphnia See WATER FLEA.

Daphnis In Greek legend, a Sicilian shepherd who was punished with blindness for infidelity in love. He consoled himself with songs and was thus revered as the inventor of pastoral poetry and song.

Da Ponte, Lorenzo (1749–1838) Italian author, originally a priest. Banished from Italy in 1779, he settled in Vienna and there wrote the libretti for Mozart's operas *The Marriage of Figaro* (1786), *Don Giovanni* (1787), and *Così fan tutte* (1790). In 1805 he went to the USA.

Dardanelles (Ancient name: Hellespont) A strait separating European and Asian Turkey and connecting the Sea of Marmara with the Aegean Sea. It was the scene of an unsuccessful campaign in *World War I. Length: 60 km (37 mi); width: 15–6.5 km (1–4 mi).

Dar es Salaam 6°48'S 39°12'E The capital and main port of Tanzania, on the Indian Ocean. Founded in 1862, it was capital of German East

Africa (1891–1916) and of Tanganyika (1916–64). It is an important commercial and industrial centre. Population (latest est): 1 360 850.

Darfur A region of W Sudan; it is mainly an arid plain and comprises about 20% of the country. Since 2003 it has seen brutal ethnic cleansing of Black Africans by the Janjaweed, or Arab militia, with the tacit support of the Sudanese government. Some 200 000 have been killed and around 2.5 million have fled into neighbouring Chad.

darkling beetle A black or dark brown flightless beetle belonging to a widely distributed family (*Tenebrionidae*; 15 000 species), particularly common in warm regions. Nearly all are scavengers, feeding on decaying vegetation, dung, fungi, or stored grains and cereals. Mealworms (larvae of *Tenebrio molitor*) are common pests of flour mills, etc., and are also reared commercially as food for birds and fish.

Darling, Alistair (Maclean) (1953–) British Labour politician; chancellor of the exchequer (2007–). He entered parliament in 1987 and was secretary of state for transport (2002–06) and trade and industry (2006–07).

Darling, Grace (1815–42) British heroine, the daughter of a lighthouse keeper on the Northumberland coast. In 1838 she helped her father rescue five people from a ship (*Forfarshire*) that had struck the rocks during a storm.

Darling River A river in E Australia, rising in the Great Dividing Range and flowing generally SW across New South Wales before joining the Murray River at Wentworth. Length: 2740 km (1702 mi).

Darlington 1. 54°31'N 1°34'W A town in NE England, in Darlington unitary authority, Co Durham. The Stockton–Darlington railway (1825) was the world's first passenger railway. Darlington has engineering, construction, and communications industries. Population (latest est): 86 767. **2.** A unitary authority in NE England, in Durham. Area: 198 sq km (77 sq mi). Population (2004 est): 98 600.

Darmstadt 49°52'N 08°39'E A city in central Germany, in Hesse. It has a 16th-century palace. Manufactures include machinery and chemicals. Population (2004 est): 139 698.

Darnley, Henry Stuart, Lord (1545–67) The second husband of Mary, Queen of Scots, and father of James I of England. He married Mary, his cousin, in 1565. He was involved in the murder of her secretary David Riccio (1566) and was himself murdered, probably by *Bothwell.

Dartford 51°27'N 0°14'E A town in SE England, in Kent linked with Thurrock (Essex) by the Dartford Tunnel (opened in 1963) under the River Thames. A bridge was opened in 1991. Population (2001): 85 911.

Dartmoor A moorland area of England, in SW Devon. A national park since 1951, it consists of a granite upland rising to tors, the highest being High Willhays at 621 m (2039 ft). Historic remains include stone circles and Bronze Age and Iron Age settlements. A major tourist attraction, it is also used extensively as a military training area. Dartmoor prison was opened in 1806. Area: 945 sq km (365 sq mi).

Darwin 12°23'S 130°44'E A city in Australia, the capital and chief port of the Northern Territory. It had to be largely rebuilt after a cyclone in 1974. Population (2005 est): 111 300.

Darwin, Charles Robert (1809–1882) British naturalist, who originated the concept that living things evolve by means of natural selection. Following attempts to study medicine and theology, Darwin's interest in natural history led him to sail with HMS *Beagle* on an expedition to South America and the Pacific (1831–36). As ship's naturalist, Darwin made exhaustive observations of the geology and natural history of the region.

Following the voyage, Darwin analysed his observations and formed them into a coherent view of nature. In 1859 he published his findings in *Origin of Species by Means of Natural Selection* (see DARWINISM). His views aroused controversy because they conflicted with the account of the Creation in the Bible. This culminated in the debate at Oxford in 1860 between Darwin's supporters, led by T.H. *Huxley, and Bishop Samuel Wilberforce. Huxley's arguments won the day. In *The Descent of Man* (1871), Darwin applied his theories to humans; they are now accepted as a fundamental principle of biology. His grandfather **Erasmus Darwin** (1731–1802) was a successful physician noted for his radical views, especially on biology. Among his ideas were speculations about the nature of evolution that anticipated later theories, particularly those of *Lamarck.

Darwinism The theory of *evolution based on the work of Charles *Darwin. Darwin drew his conclusions from the following observations: (1) in any population the organisms show individual variations; (2) the size of the population remains constant although more offspring are produced than are necessary to maintain it. He concluded that the forces acting on the population—competition, disease,

climate, etc.—resulted in the survival of those best fitted to the environment, a process he called **natural selection**. The survivors would breed, thus passing on their inheritable advantageous variations to their offspring. In a gradually changing environment this process would result in a change in the whole population and ultimately the evolution of new *species.

Darwin's theory has been modified by subsequent discoveries in genetics, which have revealed the source of the variation on which it is based (mostly genetic mutations). The modern version of his theory is known as **neo-Darwinism**.

dasyure A small carnivorous *marsupial mammal belonging to a family (*Dasyuridae*; 45 species) occurring in Australia and New Guinea. Dasyures are nocturnal and good climbers. See also **TASMANIAN DEVIL**.

data processing The organization, transmission, and storage of information by computers. In batch processing, data is grouped and coded before processing. In on-line processing each user feeds data into the system continuously. Many systems incorporate both of these forms of processing for different types of work. The Data Protection Act (1998; in force from 2000), which supplements and strengthens earlier legislation (1984), provides protection for individuals by controlling the processing of information about them stored on computers.

date A *palm tree, *Phoenix dactylifera*, native to N Africa and SW Asia and cultivated from Morocco to India for its sugar-rich fruits. Male and female flowers grow on separate trees, the female flowers developing into large clusters of single-seeded berries.

dating techniques See **DENDROCHRONOLOGY**; **HELIUM DATING**; **POTASSIUM-ARGON DATING**; **RADIOCARBON DATING**; **RUBIDIUM-STRONTIUM DATING**; **URANIUM-LEAD DATING**.

dauphin From 1350 until 1830 the title of the heirs to the French Crown. It was the personal name, and later became the title, of the rulers of a former province of SE France, the Dauphiné, which was purchased by the future Charles V in 1350. After becoming king (1364), he granted the Dauphiné and its accompanying title to his son, thus establishing a precedent.

David (d.962 BC) King of Israel (c.1000–962). David was anointed by Samuel as the successor of Saul, the first King of Israel. He became a

close friend of Saul's son, Jonathan, but his successes against the Philistines, in cluding the slaying of Goliath, aroused Saul's jealousy and he became an outlaw. After the death of Saul and Jonathan, David was proclaimed King of Hebron and then of all Israel. He conquered Jerusalem, making it the nation's political and religious centre, finally defeated the Philistines, and united the tribes of Israel. His reign was troubled by the revolt of his son Absalom. David was succeeded by Solomon, his son by Bathsheba. According to the Jewish prophets, the Messiah must be a descendant of David.

David I (1084–1153) King of the Scots (1124–53). He recognized Matilda as successor to Henry I of England, and invaded N England (1138) after Stephen had seized the throne. Stephen defeated him in the battle of the Standard (1138), near Northallerton. David founded or re-founded over a dozen monasteries.

David, Jacques Louis (1748–1825) French neoclassical painter. His mature works depicted heroic scenes from Republican Rome and ancient Greece, e.g. *Oath of the Horatii* (Louvre). During the Revolution he painted some of its martyrs, e.g. *Death of Marat*, and as court painter to Napoleon I (from 1804) his paintings illustrate imperial successes, e.g. *Napoleon Crowning Josephine* (Louvre).

David, St (or St Dewi) (c.520–600 AD) The patron saint of Wales and first abbot of Menevia (now St David's). He was also a missionary and the founder of many churches in Wales. Feast day: 1 March.

David ap Gruffudd (d.1283) The brother of *Llywelyn ap Gruffudd, after whose death (1282) David claimed the title Prince of Wales. He was executed by Edward I for leading the Welsh in rebellion against him.

Davies, Sir Peter Maxwell (1934–) British composer and conductor. He was director (1970–87) of the chamber ensemble The Fires of London. Some of his works blend medieval musical techniques with modern compositional devices. His output includes film music, operas, seven symphonies, and the ten Strathclyde Concertos. He was appointed Master of the Queen's Music in 2004.

Davis, Bette (Ruth Elizabeth D.; 1908–89) US film actress. From the 1930s to the 1950s she gave intense performances in such films as *Jezebel* (1938), *Dark Victory* (1939), and *All About Eve* (1950). In later years she played elderly eccentric or neurotic women.

Davis, Sir Colin (1927–) British conductor. He has conducted the BBC Scottish Symphony Orchestra, the English Chamber Orchestra, and the orchestras of the Metropolitan Opera, New York, and the Royal Opera, Covent Garden, becoming conductor of the London Symphony Orchestra in 1995. He was appointed CH in 2001.

Davis, John (or **J. Davys**; c. 1550–1605) English navigator. He went on three voyages in search of the *Northwest Passage (1585, 1586, 1587), passing through the strait named after him to Baffin Bay. In 1592, seeking the Magellan Strait, he discovered the Falkland Islands.

Davis, Miles (1926–91) US jazz trumpeter and composer, one of the originators of cool jazz. His albums include *Birth of the Cool* (1948), the innovatory *Kind of Blue* (1960), and *Bitches Brew* (1969), in which he pioneered the fusion of jazz with rock.

Davis, Steve (1957–) British snooker player. He won the world professional championship in 1981, 1983, 1984, and 1987–89.

Davis Cup An international tennis trophy for competing teams of men, donated in 1900 by Dwight Filley Davis (1879–1945). Recent winners have been USA (1990, 1992, 1995), France (1991, 1996, 2001), Germany (1993), Sweden (1994, 1997, 1998), Australia (1999, 2003), Spain (2000), and Russia (2002).

Davy, Sir Humphry (1778–1829) British chemist and inventor of the miner's safety lamp (1815), known as the Davy lamp. For discovering the value of nitrous oxide as an anaesthetic Davy was invited to join the Royal Institution in London; here his most important work was the discovery of many new metallic elements—potassium in 1807 and sodium, calcium, barium, magnesium and strontium in 1808. He employed the young Michael *Faraday as his assistant at the Royal Institution.

DBE See ORDER OF THE BRITISH EMPIRE, THE MOST EXCELLENT.

DDT (dichlorophenyltrichloroethane) An organochlorine compound that was formerly widely used as a contact *insecticide. It is active against many insects, including mosquitoes, flies, fleas, and bedbugs. However, many have become resistant to DDT, which is a very stable compound and accumulates not only in their tissues but also in the tissues of the animals that prey on them, causing toxic effects. Its use is banned in the UK.

deadly nightshade (or **belladonna**) A branching perennial herb, *Atropa belladonna*,

native to Eurasia. It has solitary purple or greenish bell-shaped flowers. The shiny black berries taste sweet but contain a deadly poison. The plant is a source of a variety of alkaloids, especially hyoscyamine and atropine. Family: *Solanaceae*. See also NIGHTSHADE.

Dead Sea A lake in E Israel and W Jordan. It is fed by the River Jordan and, having no outlet, is highly saline and supports no life. Area: 1050 sq km (401 sq mi).

Dead Sea Scrolls A group of Hebrew and Aramaic manuscript scrolls found in caves in the area of Khirbat Qumran, NW of the Dead Sea. The first were discovered in 1947. The 500 different documents, dating from 250 BC to 70 AD, seem to have formed the library of a Jewish, perhaps *Essene, community that existed from about 125 BC to 66–70 AD. They include texts of many Old Testament books, commentaries, prayers, psalms, and material peculiar to the community. They are particularly valuable as evidence of the accuracy of previously known Old Testament texts.

Dean, James (James Byron; 1931–55) US film actor who trained at the *Actors' Studio, and became a cult hero for his generation. His films were *East of Eden* (1954), *Rebel without a Cause* (1955), and *Giant* (1955), released following his death in a car crash.

death The permanent cessation of all bodily functions in an organism. A person is medically pronounced dead when his heartbeat and breathing movements have ceased permanently, but since the advent of mechanical ventilators the heartbeat may be maintained long after "natural" breathing has stopped as a result of irreversible brain damage. Brain death is defined on the basis of brain function: when the parts of the brain that control respiration and other vital reflexes have ceased to function the patient is said to be brain dead, i.e. truly dead, although his heart may continue to beat for some time with the aid of mechanical life-support systems.

death cap A highly poisonous mushroom, *Amanita phalloides*, fairly common in and near deciduous woodlands. Its cap is usually pale greenish yellow. The stalk is white or greenish white, with a baglike sheath (volva) at its base.

death's-head moth A *hawk moth, *Acherontia atropos*, with a wingspan of 125 mm, found in Europe, Africa, and Asia. Its thoracic markings resemble a skull and crossbones.

deathwatch beetle A widely distributed wood-boring beetle, *Xestobium rufovillosum*,

about 7 mm long, that can cause immense damage to old buildings and furniture. It lays its eggs in small crevices in the wood and the larvae tunnel in, eventually reducing it to powder. The pupae often make knocking sounds by repeatedly striking their heads against the walls of their burrows. Family: *Anobiidae*.

debenture stock A document setting out the terms of a fixed-interest loan to a company. A **secured debenture** is secured against a specified asset belonging to the company (fixed charge) or against all the company's assets (floating charge). An **unsecured debenture** has no such security, but if it cannot be paid back on the repayment date, debenture holders can force the company into liquidation and they then take priority over other shareholders in having their capital repaid. An **irredeemable debenture** is never repaid, being bought only for the interest it earns.

de Broglie, Louis Victor, 7th Duc (1892–1987) French physicist, who won the 1929 Nobel Prize for his theory that elementary particles have associated waves, known as **de Broglie waves**. The theory was confirmed by the subsequent observation of *electron diffraction and forms the basis of the branch of quantum mechanics known as *wave mechanics.

Debussy, Claude (Achille) (1862–1918) French composer. He spent most of his life in Paris and is regarded as the originator of musical impressionism. His most famous works include *Prélude à l'après-midi d'un faune* (for orchestra; 1892–94), the opera *Pelléas et Mélisande* (1892–1902), *La Mer* (three symphonic sketches; 1903–05), a string quartet, and a sonata for flute, viola, and harp.

Decadents A group of late-19th-century French symbolist poets and their contemporaries in England. They aimed to create a literature liberated from all moral and social responsibilities. Poets linked with the movement included *Rimbaud, *Verlaine, and *Mallarmé in France, and Arthur Symonds and Oscar Wilde in England. See also AESTHETIC MOVEMENT.

Decapoda A worldwide order of *crustaceans (over 8500 species), with five pairs of thoracic appendages—anterior pincers and four pairs of walking legs. They include the *shrimps and *prawns (suborder: *Natantia*, "swimming forms") and *lobsters, *crayfish, and *crabs (suborder: *Reptantia*, "walking forms").

decathlon An athletic competition for men, consisting of ten events over two days. On the first are 100 m sprint, long jump, shot put, high jump, and 400 m sprint; on the second are 110 m hurdles, discus throw, pole vault, javelin throw, and 1500 m run.

decibel (dB) A unit used to compare two power levels on a logarithmic scale. Two power levels P and P_0 differ by n decibels when $n = 10 \log_{10} P/P_0$. The unit is often used to express a sound intensity in which case P_0 is usually taken as the intensity of the lowest audible note of the same frequency as P .

decimal system The number system in common use, having a base 10 and thus using ten separate numerals. It also involves the use of a decimal point to express numbers less than one, as in 0.25. The decimal system was invented by the Hindus and adopted by the Arabs in the 9th century (see also MATHEMATICS). The use of decimal fractions originated in Italy in the 12th century but use of the decimal point did not occur until the early 18th century. Decimalization of currency systems was introduced by France after the Revolution and followed by most other European and American countries, except for Britain, which did not decimalize until 1971. See also METRIC SYSTEM.

Declaration of Independence (4 July 1776) The declaration, adopted by the 13 colonies of North America, that announced their independence from Great Britain. Written by Thomas *Jefferson between 11 June and 2 July and revised before adoption, the Declaration is both specific (in its enumeration of grievances) and general (in its statement of principles of governance) and is one of the most influential proclamations in the Western political tradition.

declination See MAGNETIC DECLINATION; RIGHT ASCENSION.

decompression sickness (or caisson disease) An occupational hazard of pilots and underwater divers caused by too rapid a return to normal atmospheric pressure. At high pressures large amounts of gas can be carried in the blood. A rapid return to normal pressure causes nitrogen (the main component of inhaled air) to form bubbles in the blood; this interrupts the blood supply to the tissues, producing joint pain (the bends), general discomfort, and respiratory problems (the chokes). Decompression sickness is prevented by a slow return to atmospheric pressure; it is treated by placing the patient in a hyperbaric chamber.

Decorated The style of gothic architecture predominant in England between 1300 and 1370. In contrast to the geometric restraint of its predecessor, *Early English, Decorated is characterized by complex flowing patterns, especially in window tracery. Roof vaults were intricately ribbed and the ogee or double curved arch with elaborate ornamentation became common.

Dee, River The name of three rivers in the UK. 1. A river in NE Scotland, flowing E to the North Sea at Aberdeen. Length: 140 km (87 mi). 2. A river in North Wales and NW England, rising in Gwynedd and flowing E and N through Chester to the Irish Sea. Length: 112 km (70 mi). 3. A river in S Scotland, flowing S to the Solway Firth. Length: 80 km (50 mi).

deed In law, a document in writing, signed, sealed, and delivered, transferring a right over property (title-deed) or creating an obligation on its maker. To be binding it need not fulfil conditions applicable to a *contract. A deed may be between two parties, to establish mutual obligations, or it may involve one party only (deed poll).

deer A *ruminant mammal of the family *Cervidae* (41 species), occurring mainly in the N hemisphere, although a few are found in South America and N Africa and they have been introduced to SE Asia and Australasia. Nearly all deer have bony antlers that are shed and replaced every year. Deer range in size from the *elk to the small South American pudu.

defamation In law, a false and derogatory statement about another person that tends to lower him in the estimation of members of the community generally. It is libel if made in a permanent form (e.g. in newspapers, broadcasts) and slander if made in a transient form, by spoken words or gestures. The remedy for both types of defamation is by civil proceedings, although libel may also be a crime if its publication is calculated to provoke a breach of the peace. Not only the originator of a libel but everyone who has subsequently repeated or published it may be sued by the person libelled. Action for libel cannot be brought against "privileged" proceedings or statements such as judicial and parliamentary proceedings. A statement judged to be a fair comment on a matter of public interest is also not actionable as defamation.

deficit financing The fiscal policy of stimulating the economy by government spending in excess of revenue by borrowing to finance the resultant deficit. Deficit financing was ad-

vocated by the British economist J.M. *Keynes and became normal practice from 1945 until the 1980s, when monetarist ideas became influential (see NATIONAL DEBT).

deflation A government action to slow down the economy, with the aim of easing *inflation or cutting down on imports and thus helping the *balance of payments. Both monetary policy (credit "squeeze") and fiscal policy (increasing taxes, cutting government spending) can be used to deflate the economy.

Defoe, Daniel (1660–1731) British novelist, economist, and journalist. His early career as a merchant ended in bankruptcy in 1692. He worked as a journalist and informer for both Whigs and Tories and suffered imprisonment (1702) for one of his pamphlets. From 1704 to 1713 he wrote most of the thrice-weekly *Review* himself. His famous novels were written late in his career, *Robinson Crusoe* in 1719 and *Moll Flanders* and *Colonel Jack* in 1722.

defoliant A chemical applied to foliage in order to cause premature shedding of leaves. Defoliants are used to aid mechanical harvesting of cotton and for other peaceful uses. They are also employed in chemical warfare.

Degas, (Hilaire Germain) Edgar (1834–1917) French painter and sculptor. His early works were portraits and history paintings. From the mid-1860s he turned to painting contemporary scenes, particularly of ballet and racecourses, characterized by informal poses and unusual angles. His pastels of women at their toilet shocked his contemporaries but are among his finest works. He exhibited frequently with the impressionists but was little influenced by their style.

de Gaulle, Charles André Joseph Marie (1890–1970) French general and statesman who was an outstanding international figure in the mid-20th century; president (1958–69). An advocate of mechanized warfare during the 1930s, he was promoted early in World War II to general (1940). He opposed the Franco-German armistice, becoming leader of the Free French in London and a symbol of French patriotism. De Gaulle resented his dependence on Britain and the USA and the antagonism between them was to continue after the war. In 1958 he was summoned from retirement to deal with the crisis in *Algeria. He became president of the new Fifth Republic in 1959 and moved towards the achievement of Algerian independence (1962). He subsequently pursued his vision of a Europe of nationally self-conscious states, free of US influence. He

thus opposed the postwar multinational organizations, refusing to sign the "Nuclear Test-Ban Treaty (1963) and withdrawing France from the military structure of NATO (1966). He was also passionately opposed to UK membership of the EEC. At home his position was greatly weakened by the student and industrial unrest of May 1968, and in 1969 he resigned. His policies, however, have endured in the right-wing Gaullist movement in French politics.

De Havilland, Sir Geoffrey (1882–1965) British aircraft designer and manufacturer, who produced some of the first jet-propelled aircraft. During both World Wars he designed several military aircraft, including the Mosquito of World War II.

dehydration A potentially serious condition resulting from excessive loss of water from the body. The water that is continuously lost from the body in urine, sweat, expired air, and faeces must be replaced by drinking. Dehydration may result from insufficient intake of water or from excessive loss in fever, vomiting, diarrhoea, or from the skin in hot climates. It may lead, if not treated, to shock and death.

deism A system of belief in God that, in contrast to *theism, discounts revealed religion and takes God as the philosophical first cause. More specifically, deism was a rationalistic anti-Christian movement in England in the late 17th and early 18th centuries with its roots in John *Locke's empiricism; its adherents regarded dogmatic religions as corruptions of man's natural relation with God.

Decabrists (or **Decembrists**) Members of an unsuccessful anti-Tsarist revolt in December 1825, following the death of Alexander I. They were members of various clandestine organizations formed after the Napoleonic Wars by discontented former military officers.

de Klerk, F(rederik) W(illem) (1937–) South African statesman; president (1989–94). He dismantled apartheid and in 1993 signed South Africa's new multiracial (transitional) constitution. After the ANC won multiracial elections (1994), de Klerk became second deputy president. In 1996 he withdrew his party from the ruling coalition and resigned (1997) as party leader. He was awarded the 1993 Nobel Peace Prize jointly with Nelson Mandela.

de Kooning, Willem (1904–97) US painter of Dutch birth. He painted both figurative and abstract compositions but by the late 1940s was regarded as a leader of *abstract expression-

ism. In his later years he produced many paintings while suffering from Alzheimer's disease.

Delacroix, Eugène (1798–1863) French Romantic painter, influenced by Théodore Géricault (1791–1824), *Rubens, and *Constable. His richly coloured paintings were often inspired by incidents in Dante, Shakespeare, and Byron, and by contemporary events, e.g. *Massacre at Chios* (1824), based on a Turkish atrocity in Greece.

de la Mare, Walter (1873–1956) British poet, novelist, and anthologist, whose work is imbued with an atmosphere of mystery and magic. His works include the poem "The Listeners" (1912), the novel *Memoirs of a Midget* (1921), and the anthology *Love* (1943).

Delaunay, Robert (1885–1941) The earliest French painter of completely abstract compositions. In his series of *Discs* (1912–13) he pioneered orphism (which he called *simultanisme*), a style in which colour alone was the subject matter.

Delaware The second smallest state in the USA. It occupies part of the low-lying Atlantic coastal plain with higher ground in the NW, where most of the state's population and industry is concentrated. It is one of the most industrialized states; Wilmington contains the administrative centres of several large chemical companies. Motor vehicles, synthetic rubber, textiles, and food products are also produced. *History:* the Dutch established a settlement (1631) but it was the Swedes who founded the first permanent settlement Fort Christiana (now Wilmington) in 1638. Delaware was subsequently captured by the Dutch (1655) and the English (1664). It became part of Pennsylvania in 1682 and shared a governor with that colony until 1776. It was the first of the original 13 states of the USA. Area: 5328 sq km (2057 sq mi). Population (2000): 783 600. Capital: Dover.

Delft 52 01N 4 21E A town in the W Netherlands, in South Holland province. Since the late 16th century it has been famous for its pottery and porcelain known as delftware. Population (1991 est): 89 000.

Delhi 28 40N 77 14E The capital of India, situated midway between the Ganges and Indus Valleys on the W bank of the River Jumna. It consists of the old city (Old Delhi), which was built in 1639 on the site of former cities of Delhi that date from the 15th century BC, and New Delhi, which replaced Calcutta as the capital of British India in 1912. Both the old and

new cities together with the surrounding area comprise the Union Territory of Delhi, an administrative unit of some 1418 sq km (553 sq mi). The massive Red Fort of Old Delhi contains the Imperial Palace (1638–48) of Shah Jahan, and the Jami Masjid (Principal Mosque). New Delhi, with its spacious tree-lined streets and imposing government buildings, was designed chiefly by Sir Edwin Lutyens. Population (1991): 7 206 704.

Delian League A confederacy of Greek city states formed in 478 BC during the *Greek-Persian Wars under the leadership of Athens. Members met on the sacred island of Delos. After the peace between Greece and Persia (c. 450) Athens regarded its allies as subjects. The League was disbanded after Athens' defeat (404) in the Peloponnesian War but was revived in defence against Sparta in 378, lasting until the defeat (338) of Athens and Thebes at Chaeronea.

Delibes, Leo (1836–91) French composer. He wrote operas and operettas but his best-known works are the ballets *Coppélia* (1870) and *Sylvia* (1876).

deliquescence The process in which some crystalline substances, such as calcium chloride (CaCl₂), absorb water from the atmosphere to such an extent that they dissolve; this is extreme hygroscopic (water-attracting) behaviour. Deliquescent substances are used in several industries to provide dry atmospheres.

Delius, Frederick (1862–1934) British composer of German descent. Largely self-taught, he was influenced by Debussy and Grieg. His works include *Paris, the Song of a Great City* (1899), *On Hearing the First Cuckoo in Spring* (1912), and *North Country Sketches* (1913–14). Delius became blind in 1925 but continued to compose with the help of his amanuensis, Eric Fenby (1906–97).

Della Robbia, Luca (1400–82) Florentine Renaissance sculptor. Working first in marble, Luca produced the relief *Cantoria* (1431–38) for the Duomo, Florence. Later he specialized in enamelled terracotta sculptures.

Delos (Modern Greek name: *Dhílos*) 37°23'N 25°15'E A Greek island in the S Aegean Sea, one of the Cyclades. It was of great importance in antiquity (see **DELIAN LEAGUE**), and many ancient temples and other buildings have been excavated. Area: 3 sq km (1 sq mi).

Delphi A village in central Greece. In antiquity, it was the principal sanctuary and oracle of *Apollo. The oracle's advice, interpreted

from the trance utterances of a priestess, was widely sought by individuals and the Greek states. As traditional beliefs declined after the 4th century BC the oracle lost influence. It was closed by the Christian emperor, Theodosius (390 AD).

Delphinium A genus of annual or perennial herbs (250 species), also called larkspur, with tall spikes of deep-blue flowers. Delphiniums, native to the N hemisphere, are popular garden plants. Cultivated varieties have single or double flowers in shades of blue, pink, purple, or white. Family: *Ranunculaceae*.

delta A large fan-shaped accumulation of sediment deposited at the mouth of a river, where it discharges into a sea or lake. It forms when the river's flow is slowed down on meeting the comparatively static sea or lake, resulting in a reduction of the river's load-bearing capacity. Clay particles also coagulate on meeting salt water and are deposited. The river is increasingly divided by the deposition into channels. Being fertile, deltas (such as the Nile Delta) are often extensively cultivated but are also prone to flooding.

Demeter A Greek corn goddess and mother goddess, sister of *Zeus. She was worshipped at Eleusis, whose people helped her in her search for her daughter *Persephone, abducted to the underworld. In gratitude she instructed them in agriculture and religion. She was identified with the Roman goddess Ceres.

democracy A form of government in which people either rule themselves, as in ancient Athens, or elect representatives to rule in their interests, as in most modern democracies. Elections, to be democratic, must be held regularly, be secret, and provide a choice of candidates; the elected assembly must also be free to legislate and to criticize government policy. Modern democratic ideas stem from 18th-century *utilitarianism.

Democratic Party One of the two major political parties in the USA (compare **REPUBLICAN PARTY**). Originating in Jefferson's Republican Democrats in 1792, it became the Democratic Party during the presidency (1829–37) of Andrew Jackson. In 1860, just before the Civil War, the Democrats split over the issue of *slavery into northern and southern factions and the party, dominated by southern Democrats, was eclipsed until regaining northern support in the 1880s. With F.D. Roosevelt's *New Deal programme in the 1930s, the Democrats again became identified as a progressive party. Democratic presidents include

Woodrow Wilson, F.D. Roosevelt, J.F. Kennedy, and Bill Clinton.

Democritus (c. 460–370 BC), Greek philosopher and scientist. His atomism, developed from Leucippus, considered that all matter consists of minute particles—atoms—the multifarious arrangement of which accounts for different properties of matter apparent to our senses. Democritus wrote also on cosmology, biology, perception, music, and ethics.

demography A branch of the social sciences concerned with the statistical study of the sizes, distribution, and composition of human populations. It includes analysis of birth, death, and marriage rates for whole populations or groups within them.

demoiselle A *crane, *Anthropoides virgo*, of dry grassy regions of central Europe and Asia. It is grey with a black head and neck, long black breast feathers, and long white plumes behind each eye.

Demosthenes (384–322 BC) Athenian orator and statesman. He attacked Philip of Macedon's imperial ambitions in Greece in a series of orations called the *Philippics* (351, 344, 341) and promoted an Athenian alliance with Thebes against Philip. This was defeated by Philip at Chaeronea (338), whereby Macedonian supremacy in Greece was assured. After the death of Philip's son, Alexander the Great (323), Demosthenes again encouraged a Greek revolt. Condemned to death by Alexander's successors, Demosthenes fled Athens and committed suicide.

demotic script A form of Egyptian hieroglyphic writing. Pictorial hieroglyphics became less realistic and increasingly cursive from about 2500 BC until in the 7th century BC they developed into the cursive script called demotic. This continued in common use until the 5th century AD. See also ROSETTA STONE.

Denbighshire A county in North Wales on the Irish Sea. In 1974 it was absorbed into Clwyd and Gwynedd but reinstated (with different boundaries) in 1996. It is mainly hilly. Agriculture is the chief economic activity and tourism is important. Area: 844 sq km (327 sq mi). Population (2001): 93 092. Administrative centre: Ruthin.

Dench, Dame Judi (Olivia) (1934–) British actress, noted for her Shakespearean roles. Film roles include Queen Victoria in *Mrs Brown* (1997), Elizabeth I in *Shakespeare in Love* (1999), and Iris Murdoch in *Iris* (2001).

dendrochronology (or **tree-ring dating**)

An archaeological dating technique based on the *annual rings of trees. Variations in ring widths have been shown to correspond to rainfall and temperature variations and thus very old tree trunks can give a record of past climates. Any construction incorporating timber can be dated by comparing the timber-ring patterns with a specimen of known age.

Deng Xiao Ping (1904–07) Chinese statesman. He was dismissed during the Cultural Revolution but subsequently became vice premier (1973–76; 1977–80). Subsequently he held various posts and titles but was effectively China's supreme leader until his death. His rule saw liberalization of the economy but continuing political repression.

denim A coarse twill-woven cloth, named after the French fabric *serge de Nîmes*. It is made of cotton, often with an admixture of nylon, and usually dyed blue. Originally popular for work garments, denim became fashionable for jeans and other casual clothes in the 1970s.

De Niro, Robert (1943–) US film actor of the Method school; he won Oscars for *The Godfather Part II* (1974) and *Raging Bull* (1979). Other films include *Taxi Driver* (1976), *Goodfellas* (1990), and *Analyze This* (1999).

Denis, St (3rd century) The patron saint of France. Of Italian birth, he was sent to Gaul as a missionary and there became the first Bishop of Paris. He was martyred under the Emperor Valerian. His shrine is in the Benedictine abbey at St Denis near Paris. Feast Day: 9 Oct.

Denmark, Kingdom of (Danish name: Danmark) A country in N Europe, between the Baltic and the North Seas. It consists of the N section of the Jutland peninsula and about a hundred inhabited islands. *Greenland and the *Faeroe Islands are also part of the Danish kingdom. The country is almost entirely flat. *Economy*: agriculture is important. Since World War II, however, industry has predominated, with manufacturing, engineering, chemicals, brewing, and food processing. Financial and service industries are major employers. Exports include meat and meat products, dairy produce, cereals, fish, porcelain, glassware, and metal goods. *History*: Viking kingdoms occupied the area from the 8th to the 10th century, when Denmark became a united Christian monarchy under Harald Bluetooth. His grandson, Canute, ruled over Denmark, Norway, and England, forming the Danish Empire, which was dissolved soon after his death. In 1363 Norway again came under the Danish Crown by

royal marriage. In 1397 Denmark and Norway joined with Sweden to form the Kalmar Union, which lasted until 1523. The Peace of Copenhagen (1660) concluded a long period of conflict between Denmark and Sweden. It then became an absolute monarchy until 1849, when a more liberal government was formed. Having supported Napoleon in the Napoleonic Wars, Denmark was compelled to cede Norway to Sweden by the Treaty of Kiel (1814). During World War II Denmark was occupied by Germany but a resistance movement aided the Allied victory. Iceland, which had previously been united with Denmark, became independent in 1944. A new constitution was enacted in 1953, with a single-chamber parliament. In 1973 Denmark joined the EC (now the EU). The Maastricht Treaty (See EUROPEAN COMMUNITY) was rejected in two referendums (1992, 1993) but later accepted. Membership of the single European currency was rejected in a referendum (2000). Denmark's first right-wing government in more than 75 years was elected in 2001, when Anders Fogh Rasmussen became prime minister. A bridge and causeway linking Denmark and Sweden was completed in 2000. Official language: Danish. Currency: krone of 100 øre. Area: 43 074 sq km (16 631 sq mi). Population (2003 est): 5 387 000. Capital: Copenhagen.

density The mass of unit volume of a substance. In *SI units it is measured in kilograms per cubic metre; water has a density of 1000 kg m⁻³ at 4°C. **Relative density** (formerly called "specific gravity") is the density of a substance divided by the density of water at 4°C. The density of a gas (vapour density) is often expressed as the mass of unit volume of the gas divided by the mass of the same volume of hydrogen at standard temperature and pressure.

dentistry The branch of medical science concerned with the care of the teeth, gums, and mouth. Restorative dentistry is concerned with the repair of teeth damaged by *caries and the replacement of teeth lost through injury or extraction. Orthodontics deals with the correction of badly positioned teeth, usually by means of braces or other appliances but sometimes by surgery on the jaw. Periodontics includes the care of the gums and other structures supporting the teeth and the treatment of periodontal disease.

Denver 39 45N 105 00W A city in the USA, the capital of Colorado on the South Platte River. Founded in 1858 during the Colorado gold rush, Denver is the financial, administrative, and industrial centre for a large agricultural area. Population (2000): 554 636.

deodar A tall *cedar, *Cedrus deodara*, native to the Himalayas, where it forms vast forests, and widely planted for ornament in temperate regions and for timber in S Europe. It has young branches that droop down and large barrel-shaped cones.

depression (economics) A period during the *trade cycle in which demand is low compared to industry's capacity to satisfy it. Profits, and therefore confidence and investment, are also correspondingly low. A depression is also characterized by high unemployment, as occurred in the 1930s (see DEPRESSION). Governments after World War II adopted *deficit financing policies to counter depressions, but the combination of depression and *inflation in the 1970s led to widespread adoption of *monetarism. A depression is also called a slump.

depression (psychiatry) Severe and persistent misery. It can be a normal reaction to distressing events (reactive depression). Sometimes, however, it is out of all proportion to the situation or may have no apparent external cause (endogenous depression); it can then be a sign of mental illness. In *manic-depressive psychosis the depression is severe and leads the sufferer to despairing and guilty beliefs; sleep, appetite, and concentration can all be disturbed. In depressive neurosis the symptoms are less extreme but may still lead to suicide. Treatment with *antidepressant drugs is often effective and psychotherapy is helpful. Severe cases may need *electroconvulsive therapy.

Depression The period, also called the Slump, during the early 1930s, when worldwide economic collapse precipitated commercial failure and mass unemployment. Starting in the USA in 1929, when share prices fell so disastrously that thousands were made bankrupt, the Depression caused international repercussions. Overseas trade almost ceased, industrial production dropped, millions in industrialized countries were unemployed, and agricultural countries were impoverished. Roosevelt's *New Deal (1934) brought Americans hope of recovery, but Britain, despite abandoning free trade to protect its industries, never regained its commercial pre-eminence. In Germany the Depression contributed to the rise of Hitler's Nazi movement.

Derain, André (1880–1954) French postimpressionist painter. In his bold designs and vibrant colours, he was initially a leading exponent of *fauvism, but after 1907 he came under the influence of *Cézanne and painted in a cubist manner. He later reverted to a more

traditional style. He produced some notable scenery and costume designs for Diaghilev's *Ballets Russes.

Derby A flat race for three-year-old horses, run over 2.4 km (1.5 mi) at Epsom in early June. The most prestigious of the English Classics, it was instituted (1780) by the 12th Earl of Derby.

Derby 1. 52 55N 130W A city in central England, in Derby unitary authority, Derbyshire, on the River Derwent. Its growth as a manufacturing centre began in the late 17th century (see **DERBY WARE**). Today Derby is an important engineering centre (with Rolls-Royce aero engines) and has large railway workshops. Population (1991): 222 500. **2.** A unitary authority in central England, in Derbyshire. Area: 78 sq km (30 sq mi). Population (1996 est): 233 700.

Derbyshire A county in N central England. In 1974 it lost part of the NE to South Yorkshire, while gaining part of NE Cheshire; Derby city became an independent unitary authority in 1997. It consists of lowlands in the SE rising to the uplands of the *Peak District in the NW. The main rivers are the Derwent, Trent, Dove, and Rother. Sheep and dairy farming are important. Heavy industry and mining are in decline and service industries are increasingly important. Area (excluding Derby city): 2551 sq km (985 sq mi). Population (2001, excluding Derby city): 734 581. Administrative centre: Matlock.

Derby ware Porcelain first produced by William Duesbury (1725–86) at Derby in the 1750s. Early manufactures resemble *Chelsea porcelain and Duesbury later bought the Chelsea works (1770). Utility products were decorated in bold blue, red, and gilt "Japan" patterns, but important portrait and fictional figures were also made in quantity. Products of the factory between 1786 and 1811 are called Crown Derby.

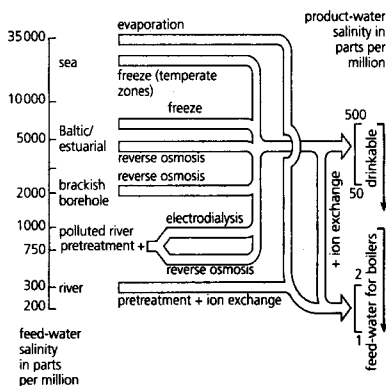

dermatology See SKIN.

Derry 1. A district in NE Northern Ireland, in Co Londonderry. Area: 373 sq km (144 sq mi). Population (2001): 106 066. **2.** See LONDON-DERRY.

Derwent, River Any of several rivers in England, including: **1.** A river in N central England, flowing SE from N Derbyshire to the River Trent. Length: 96 km (60 mi). **2.** A river in N England, flowing S from the North York Moors to join the River Ouse between Selby and Goole. Length: 92 km (57 mi). **3.** A river in NW England, flowing N and W from the Bor-

rowdale Fells, Cumbria, to the Irish Sea. Length: 54 km (34 mi).

desalination The removal of salt from brine to produce fresh water. Desalination is used to irrigate arid regions in which sea water is available, especially if solar power can be used as an energy source. Methods commonly employed are evaporation of the sea water, the condensed vapour forming relatively pure water, and freezing of the sea water, which produces pure ice. Freezing requires less energy than evaporation but the process is slower and technically more difficult.

desalination. The initial and final salinities for various desalination techniques and feed-water sources.

Descartes, René (1596–1650) French philosopher and mathematician. After a Jesuit education he spent nine years in travel and military service before turning to study, primarily in Holland. Descartes' *Discourse on Method* (1637) introduced his technique of methodical doubt, which he developed in his greatest work the *Meditations* (1641). Asking "How and what do I know?" he arrived by a process of reduction at his famous statement "Cogito ergo sum" ("I think, therefore I am"). From this he proved to his own satisfaction God's existence (he was a sincere and lifelong Roman Catholic) and hence the existence of everything else. The importance of this approach lies in making *epistemology the gateway to knowledge. Equally influential was his dualism: he considered that the world was composed of mind, the essence of human beings, and matter—but never satisfactorily answered the problem of how mind and matter can interact. Descartes also con-

tributed to the foundations of geometry (see COORDINATE SYSTEMS) and optics.

desert A virtually barren area of land where precipitation is minimal and sporadic, limiting vegetation growth. The mean annual rainfall is usually taken as being below 250 mm (10 in) for desert conditions. Deserts may occur in areas of high atmospheric pressure, such as the *Sahara, or near the W coast of continents cooled by cold ocean currents (e.g. the Atacama and *Kalahari Deserts). They are also found in continental interiors where mountain barriers restrict precipitation, such as the *Gobi Desert. Many deserts are characterized by stony scrublands with occasional resistant rock uplands and some areas of shifting sand dunes. The wind is an important agent of erosion and the rain, falling as violent downpours, is capable of moving large amounts of debris.

desertification The process by which arid or semiarid areas become deserts through human action or climatic change. Removal of the topsoil, by artificial means or erosion by wind, water, or desiccation, results in a reduction in the ground's water-storage capacity, which can cause crops to fail and famine. Over-intensive farming and the cutting of trees for firewood helped to create the *Dust Bowl in the USA and have caused deserts in Africa and SW Asia to advance by several kilometres each year. Solutions are now based on effective management of surface cover and climate.

desert rat See JERBOA.

De Sica, Vittorio (1901–74) Italian film director. His postwar films, in which he treated contemporary social themes with compassion and political awareness, included *Shoeshine* (1946), *Bicycle Thieves* (1948), and *Umberto D* (1952).

Des Moines 41 35N 93 35W A city in the USA, the capital of Iowa. Founded in 1843, it is an important industrial and commercial centre. Population (2000): 198 682.

destroyer A fast heavily armed naval vessel that is smaller than a *cruiser, has a displacement of about 3000 tonnes, and is 110–150 m (330–450 ft) long. Destroyers are not armoured. Because of their speed, armament, and versatility, they are employed in antisubmarine warfare, in convoy work, and in attack groups consisting of one carrier and five or six destroyers.

detached retina A condition in which the retina—a layer of specialized light-sensitive cells at the back of the eye—becomes separated from the layer beneath it. It happens slowly

and painlessly and the patient loses part of his vision. It is caused by injury to the eye or inflammation in the eye and is most common in very short-sighted people. Detached retina is treated surgically using a laser beam to weld the retina in place.

detergents Chemicals used for cleansing. Although the term includes *soaps it is usually applied to synthetic *surfactants. Such detergents have large molecules, typically composed of a hydrocarbon oil-soluble part and a water-soluble part. These compounds are thus able to promote the solution of oil, grease, etc., in water. Household detergents may also contain water softeners, bleaches, and fabric brighteners.

determinism The philosophical theory that every event has a cause and that all events are determined by causal physical laws. Applied to human actions, determinism appears to conflict with the concept of *free will. If even desires, intentions, and motives are determined and if actions are, in principle, predictable, this contradicts the idea that actions are freely chosen, and hence the concept of moral responsibility. However, some philosophers believe that determinism and free will are compatible and that a person acts freely if his desires are the cause of his actions. See also PREDESTINATION.

Detroit 42 23N 83 05W A city and port in the USA, in Michigan on the Detroit River. Founded in 1701, it is the fifth largest city in the USA. It is dominated by the motor-vehicle industry. Population (2000): 951 270.

deuterium (or **heavy hydrogen**; D or ²H) An *isotope of *hydrogen having a nucleus consisting of one proton and one neutron. It occurs naturally in hydrogen (0.0156%) and is used as a radioactive tracer. Heavy water (deuterium oxide; D₂O) is used in *nuclear reactors as a moderator (see also THERMONUCLEAR REACTOR). At no 1; at wt 2.014.

De Valera, Eamon (1882–1975) Irish statesman; prime minister (1932–48, 1951–54, 1957–59) and president (1959–73). A commandant in the 1916 *Easter Rising, he nevertheless escaped execution and in 1917 was elected to the British parliament and became the president of *Sinn Féin. From 1919 he was president of the self-declared Irish Republic but rejected the terms of the Anglo-Irish treaty of 1921 (see HOME RULE) and backed the republicans in the ensuing civil war. In 1926 he founded *Fianna Fáil.

de Valois, Dame Ninette (Edris Stannus;

1898–2001) British ballet dancer and choreographer, born in Ireland. During the 1920s she worked with Diaghilev's Ballets Russes. In 1931 she founded the Sadler's Wells Ballet, which became the *Royal Ballet in 1956; she directed it until 1963. She was appointed to the OM in 1992.

devaluation A downward change in the value of one country's currency in terms of other currencies. A country that devalues makes its exports cheaper and its imports more expensive; thus devaluation should help correct a balance-of-payments deficit by increasing the volume of exports and decreasing the volume of imports. Under the Bretton Woods fixed-rate system (see BRETTON WOODS CONFERENCE) devaluations only occurred occasionally but were large and destabilizing. In the floating-rate system that replaced it, the value of a currency was determined by supply and demand with a minimum of government interference, so producing gradual devaluations. The *European Monetary System was intended to stabilize EC currencies, making devaluation unnecessary, but had clearly failed in this aim by September 1992, when market pressures forced the UK to leave the system. In 1999–2002 12 EU states adopted the single European currency.

developing countries Countries that do not have sophisticated industries and consequently have a low per capita income. They include almost all the countries in Africa, Asia, and South America. Their economies are characterized by abundant cheap unskilled labour and a scarcity of capital for investment. Nearly 80% of the world's population lives in developing countries in largely agricultural economies from which poverty, hunger, disease, and illiteracy have not been eliminated. Many of these economies rely shakily on one main crop, which in years of crop failure, poor world demand, or low market prices can cause severe hardship.

Devil In Christian tradition, the personification of evil, who seeks to tempt mankind away from the path of salvation and rules in *hell. Judaeo-Christian doctrine holds that God created the Devil good and he became evil of his own free will by committing sin (commonly thought to have been the sin of pride). The Devil is identified with such Old Testament figures as the archangel Lucifer (who sought to make himself God's equal and was expelled from heaven), the serpent that tempted Eve (Genesis 3:1–6), and Satan the tormentor of Job. Similar figures exist in Islam and Zoroastrianism.

devolution The delegation of political powers from a central government to regional governments. In the UK the establishment of the *Stormont parliament in Northern Ireland was the first important act of devolution. Growing nationalist sentiment in Scotland and Wales led to the introduction of two devolution bills in 1976 and the holding of referendums in March 1979. In Wales there was a majority against the devolution plans; in Scotland an insufficiently large majority favoured them. In 1997 new plans to establish a Welsh assembly and a Scottish parliament were endorsed in referendums and the first elections to these bodies took place in May 1999. Following the Good Friday Agreement (1998), an assembly with a power-sharing executive was established in Northern Ireland and power was devolved in late 1999; however, failure to achieve progress on the decommissioning of terrorist weapons led the British government to suspend the new institutions from February to May 2000 and again from October 2002. They were re-established in 2007.

Devon A county of SW England, bordering the Atlantic Ocean in the N and the English Channel in the S. It consists mainly of the mid-Devon plain, rising to *Dartmoor in the S and *Exmoor in the NE. The chief rivers are the Dart, Exe, and Tamar. Tourism and agriculture are important while industry is concentrated around Exeter and Plymouth, a major naval base. Plymouth and Torbay became unitary authorities in 1998. Area (excluding unitary authorities): 6569 sq km (2536 sq mi). Population (2001, excluding unitary authorities): 704 499. Administrative centre: Exeter.

Devonian period A geological period of the Upper Palaeozoic era between the Silurian and Carboniferous periods, about 415 to 370 million years ago. It is divided into seven stages, based on invertebrate fossil remains, such as corals, brachiopods, ammonoids, and crinoids. The rocks containing these fossils were marine deposits but the Devonian period also shows extensive continental deposits (Old Red Sandstone). Fossils from these rocks include fish, land plants, and freshwater molluscs.

dew The condensation of moisture, which forms on the ground or on objects near the ground, especially at night. It occurs when the air near the ground cools to the dew point, at which it becomes saturated and the water vapour present condenses into water droplets.

Dewar flask (Thermos flask or vacuum

d

flask) A flask, used to store a substance at constant temperature. It has double glass walls, the space between the walls being evacuated to prevent heat loss by conduction. The inside wall is silvered to prevent heat loss by radiation and the flask is tightly stoppered to prevent heat loss by convection or evaporation. It was invented by the Scottish scientist Sir James Dewar (1842–1923).

Dewey Decimal Classification An international system for classifying the books in a library, originated in 1873 by the US librarian Melvil Dewey (1851–1931). Books are divided according to subject matter into ten groups, each group having a hundred numbers; principle subdivisions within each group are divided by ten, and with the use of decimal numbers further subdivisions can be generated without limit.

Dhaka (name until 1984: Dacca) 23 42N 90 22E The capital of Bangladesh, situated in the SE of the country, on the Burhi Ganga River. It is a riverport and commercial and industrial centre. The capital of the Bengal province of the Mogul Empire in the 17th century, it came under British rule in the 18th century and upon independence in 1947 was made capital of East Pakistan. Population (1991): 3 839 000.

diabetes One of several diseases with a common symptom—the production of large quantities of urine. The term usually refers to **diabetes mellitus** (or sugar diabetes), in which the body is unable to utilize sugars to produce energy due to a deficiency of the pancreatic hormone *insulin. Symptoms include thirst, weight loss, and a high level of glucose in the urine and in the blood (hyperglycaemia). Treatment involves a controlled diet, often with insulin injections or pills to reduce the amount of sugar in the blood. **Diabetes insipidus** is a rare disease due to a deficiency of the pituitary hormone vasopressin, which regulates water balance in the body. The patient produces large quantities of watery urine and is always thirsty. It is treated with doses of the hormone.

Diaghilev, Sergei (Pavlovich) (1872–1929) Russian ballet impresario. The outstanding success of his season of Russian ballet (1909) resulted in the organization of a permanent company (1911), known as the *Ballets Russes, which Diaghilev directed until his death.

dialect A variant of a language spoken in a particular district or by a particular group of people. The distinction between language and dialect is not clear cut. As a general rule any two dialects of a language may be expected to

be mutually comprehensible. Dialects develop as a result of geographical separation, usually within a generation or so of the time of separation.

dialectical materialism The official philosophy of *Marxism, derived by Marx and Engels from a combination of contemporary (1850) science and *Hegel's idealism. **Historical materialism**, expounded in the *Communist Manifesto*, is a coherent account of history on an economic basis: for every system of production there is an appropriate organization of class and property. While economic forces continually develop production systems, the class and property structure remains unchanged, causing tension between economic forces and social relations, which continues until the ultimate rational socialist society evolves.

dialysis A process, discovered by Thomas Graham (1804–69), for separating mixtures of fluids by diffusion through a semipermeable membrane. Different substances in a solution diffuse at different rates. The passage of large particles is almost completely blocked by a semipermeable membrane, whereas salt solutions pass through easily. The technique of dialysis is used in artificial kidney machines, or dialysers, which take over the function of diseased kidneys by filtering waste material from the blood but leaving behind proteins, blood cells, and other large particles.

diamond The hardest known mineral, comprising a cubic variety of crystalline *carbon, formed under intense heat and pressure. Diamonds are used industrially, mainly for cutting and grinding tools, the others being used as gems. The largest diamond yet discovered is the *Cullinan diamond. Many industrial diamonds are produced synthetically from graphite subjected to very high temperatures and pressures.

Diana The Roman goddess identified with the Greek Artemis, associated with women and childbirth and with the moon. She is usually represented as a virgin huntress armed with bow and arrows.

Diana, Princess of Wales (1961–97) Former wife of Prince Charles and mother of Prince William (1982–) and Prince Harry (1984–), famous as a fashion icon as well as for her committed work with many charities. She was killed in a car crash in Paris with her companion Dodi Fayed; her premature death caused an unprecedented display of public grief.

Dianthus A genus of annual and perennial herbs (300 species), mainly from Europe and Asia, having flower stems (often branched) with swollen joints and showy white, pink, or red flowers. Common species include *D. barbatus* (see SWEET WILLIAM), *D. caryophyllus* (see CARNATION), and *D. plumarius* (see PINK). Family: Caryophyllaceae.

diaspora (Greek: dispersion) The collective term for Jewish communities outside the land of Israel. Beginning with the Babylonian exile (6th century BC), Jews spread to most parts of the world, while continuing to regard Israel as their homeland. In the late 19th century there was a massive exodus of Jews from Russia and Poland, and the Nazi *holocaust destroyed many old European communities. The main centre is now the USA, with some six million Jews.

diatoms Microscopic *algae belonging to a phylum (*Diatoms* or *Bacillariophyta*; about 16 000 species) occurring abundantly as single cells or colonies in fresh water and oceans (forming an important constituent of *plankton) and also in soil. They have silicon-rich cell walls, often beautifully sculptured, forming a shell (called a test) composed of two halves that fit together. Fossilized tests form a porous rock called diatomaceous earth (or kieselguhr), used in filters, insulators, abrasives, etc.

Dicentra A genus of annual and perennial herbaceous plants (about 300 species) from North America and E Asia. They have divided compound leaves and sprays of hanging flowers that are flattened sideways. Many species are ornamentals (see BLEEDING HEART). Family: *Fumariaceae*.

Dickens, Charles (1812–70) British novelist. He began his career by contributing to popular magazines, achieving sudden fame with *The Pickwick Papers* (1837), which he followed with *Oliver Twist* (1838), *Nicholas Nickleby* (1839), and the very successful *Old Curiosity Shop* (1840–41); like all his novels, these first appeared in monthly instalments. *David Copperfield* (1849–50) was a strongly autobiographical work. His later novels, from *Bleak House* (1853) to the incomplete *Edwin Drood* (1870), were increasingly pessimistic in tone; *Great Expectations* (1860–61) and *Our Mutual Friend* (1864–65) depict the destructive powers of money and ambition.

Dickinson, Emily (1830–86) US poet. From the age of 30 she lived a largely secluded life in Amherst, Massachusetts. Of her 1700 poems, which are mainly brief intense lyrics on

themes of love and death, only seven appeared in her lifetime.

dicotyledons The larger of the two main groups of flowering plants, which includes hardwood trees, shrubs, and many herbaceous plants (compare MONOCOTYLEDONS). Dicots are characterized by having two seed leaves (cotyledons) in the embryo. Typically the flower parts are arranged in fours or fives (or multiples of these) and the leaves have a net-like pattern of veins. See also ANGIOSPERM.

Diderot, Denis (1713–84) French philosopher and writer. With *Voltaire, Diderot helped create the *Enlightenment, mainly through the *Encyclopédie*, which he edited after 1750 (see ENCYCLOPEDISTS).

Dido In Greek legend, the daughter of a king of Tyre, who fled to Africa when her husband was murdered; there she founded *Carthage. According to legend she burnt herself to death on a funeral pyre to avoid marriage to larvae of Numidia; in Virgil's *Aeneid* she killed herself after being abandoned by her lover *Aeneas.

dielectric A substance that acts as an electric insulator and can sustain an electric field. When a voltage is applied across a perfect dielectric there is no energy loss and the electric field strength changes simultaneously with voltage. In real dielectrics, such as air or wax, there is always a small energy loss.

Dien Bien Phu, Battle of (March–May 1954) The decisive battle of the Indochina war, in NE Vietnam, in which Vietnamese forces defeated the French. It coincided with the Geneva Conference, which ended French control of Indochina.

Dieppe 49 55N 105E A port and resort in N France, in the Seine-Maritime department on the English Channel. Population (1990): 36 600.

Diesel engine See INTERNAL-COMBUSTION ENGINE.

dietetics The study of the principles of nutrition and their application to the selection of appropriate diets both to maintain health and as part of the treatment of certain diseases. A balanced diet should contain foods with adequate amounts of all the nutrients—carbohydrates, fats, proteins, minerals, and vitamins—as well as foods with a high content of dietary *fibre.

Dietrich, Marlene (Maria Magdalene von Losch; 1904–92) German film actress and singer. Her image of sultry beauty was developed by the Austrian-born director Josef von Sternberg

(1894–1969) in such films as *The Blue Angel* (1930), *Blonde Venus* (1932), and *Shanghai Express* (1932).

diffraction The spreading or bending of light waves as they pass the edge of an object or pass through an aperture. The diffracted waves subsequently interfere with each other producing regions of alternately high and low intensity. This phenomenon can be observed in the irregular boundary of a shadow of an object cast on a screen by a small light source. A similar effect occurs with sound waves. See also INTERFERENCE.

diffusion 1. The mixing of different fluids, or the distribution of a substance from a region of high concentration to one of lower concentration, by means of the random thermal motion of its constituents. The rates at which gases diffuse are inversely proportional to their densities (Graham's law). 2. The scattering of a beam of radiation on reflection from a rough surface or on transmission through certain media. When diffusion occurs the laws of reflection and refraction are not obeyed.

digestion The process by which food is converted into substances that can be absorbed by the *intestine. The process begins in the mouth, where the food is chewed and mixed with saliva, and continues with the action of digestive enzymes secreted by the *stomach, duodenum, and *pancreas. Rhythmic contractions of the muscular layer of the intestinal wall (called peristalsis) ensures a constant mixing of enzymes and food and the propulsion of food along the intestine. The products of digestion include amino acids, various sugars (such as lactose, maltose, and glucose), and fat molecules; these are absorbed by the intestine and conveyed to the bloodstream.

digitalis A drug prepared from the dried leaves of foxglove plants. Digitalis is purified to digoxin, digitoxin, and lanatoside C. These drugs are used to improve the action of a failing or inefficient heart and to reduce a dangerously fast heart rate.

digital mapping The production of a map using a system in which the points and lines that make it up are converted, or digitized, into computer data. Subsequent reproduction may be of the whole map or of a selected part; it may be at a different scale and/or on a transformed projection. A print of the map can be produced or it may be displayed on a visual display unit. Changes can be made without the whole map having to be redrawn. In the UK the *Ordnance Survey began to digitize its data in 1973 and completed this programme in 1995.

digital photography See CAMERA, PHOTOGRAPHIC.

Dijon 47 20N 5 02E A city in France, the capital of the Côte-d'Or department on the Burgundy Canal. The former capital of Burgundy, it is the site of the palace of the Dukes of Burgundy and has a cathedral (13th–14th centuries). It is famous for its mustard. Population (1999): 149 867.

dilatation and curettage (D and C) An operation in which the neck (cervix) of the womb is dilated (widened) and the lining of the womb is scraped out. D and C may be performed for the removal of any residual membranes after a miscarriage or abortion, removal of cysts or tumours, and removal of a specimen of tissue in the diagnosis of gynaecological disorders.

dill A widely cultivated annual or biennial European herb, *Anethum graveolens*, 60 cm high. The smooth stem bears feathery leaves and umbrella-like clusters of small yellow flowers, which produce small hard flat fruits. The young leaves and fruits are used to flavour soups, cakes, salads, fish, and pickled cucumbers. Family: *Umbelliferae*.

D'Indy, Vincent (1851–1931) French composer. The pupil and biographer of Franck, he was greatly influenced by Wagner and wrote a number of large-scale orchestral compositions, as well as operas and chamber music. His most famous work is the *Symphony on a French Mountaineer's Song* (for piano and orchestra; 1886).

dingo An Australian wild *dog, *Canis familiaris* (formerly *C. dingo*), introduced from Asia. It has a tan-coloured coat. It is nocturnal and generally solitary.

Dinka A Nilotic people of the Nile basin region of the Sudan. Warlike and independent, the Dinka move with their cattle from dry-season pastures by the rivers to wet-season settlements, where they grow millet. There are many independent tribes.

dinosaur An extinct reptile that was the dominant terrestrial animal during the Jurassic and Cretaceous periods (200–65 million years ago). Dinosaurs first appeared about 225 million years ago, ranging in size from about 60 cm to such mighty creatures as *Diplodocus*, which reached 27 m in length. There were two orders: the *Saurischia*, which were mostly carnivores and included the bipedal *Allosaurus* and *Tyrannosaurus*; and the *Ornithischia*, which were all herbivores and included the bipedal *Iguanodon*, the horned *Triceratops*, and *Stegosaurus*.

Why both orders died out at the end of the Cretaceous period along with other reptiles, such as *ichthyosaurs, *pterosaurs, and *plesiosaurs, is still not certain. Dinosaurs had large bodies with heavy bones and protective armour and were probably unable to adapt to climatic changes and the effects of a rise in the sea level, which flooded their coastal habitats.

Diocletian(us), Gaius Aurelius Valerius (245–313 AD) Roman emperor (284–305). He rose to prominence in the army, to which he owed his accession. In 293 he established the tetrarchy to govern the Empire more effectively in a time of civil strife: the Empire was divided into East and West, with each ruled by an emperor and his associate. Diocletian ruled in the East with Galerius, abdicating in 305.

diode See SEMICONDUCTOR DIODE; THERMIONIC VALVE.

Diogenes of Sinope (412–322 BC) The founder of the philosophical sect of the *Cynics. Diogenes claimed, in contrast to almost all Greek thinkers, total freedom and self-sufficiency for the individual. Unlike modern anarchists, he saw no need for violent rebellion to assert his independence, which he thought he already had. His disregard for social conventions made him the subject of many stories.

Dionysus (or Bacchus) The Greek god of wine, originally a vegetation god. He was the son of Semele (daughter of Cadmus) by Zeus. A common theme of many Dionysian legends is a people's refusal to accept his divinity and his subsequent retribution.

dioptré A unit used to measure the power of a lens equal to the reciprocal of its focal length in metres. The power of a converging lens is taken to be positive and that of a diverging lens as negative.

Dioscuri See CASTOR AND POLLUX.

diphtheria An acute bacterial infection primarily affecting the nose, throat, or larynx. Virtually eliminated from most Western nations by extensive immunization, it formerly caused the death of many children. It is still found in Africa and India. Diphtheria produces a membrane across the throat that chokes the child. The disease can be cured using penicillin and antitoxin.

Diplodocus An amphibious dinosaur of the Jurassic period (200–136 million years ago) and the largest terrestrial vertebrate ever to exist, reaching a length of 27 m. It had a narrow body with massive legs, a long neck with a tiny head,

and a long tail. It fed on vegetation in swamps and shallow lakes. Order: *Saurischia*.

dipper An aquatic songbird of the family *Cinclididae* (4 species) of Eurasia and America. Dippers are found near fast-flowing mountain streams, diving into the water to search for insects and small fish. The Eurasian white-breasted dipper (*Cinclus cinclus*) is about 17 cm long and has a dense dark-brown plumage with a white breast.

Diptera An order of insects comprising the two-winged, or true, flies. See FLY.

Dirac, Paul Adrien Maurice (1902–84) British physicist. In 1928 he introduced a general formulation of quantum theory. Two years later he incorporated *relativity into quantum theory and produced an equation that predicted the existence of antiparticles. He shared the 1933 Nobel Prize with Erwin *Schrödinger.

direction finder Equipment for locating the source of a radio signal, such as a ship at sea. It consists of one or more directive *aerials (usually in the form of a loop), designed to detect signals from a specific direction, and a receiver. Frequencies normally used are between 0.1 and 2 megahertz. Radar is a form of direction finding based on picking up reflections of a transmitted signal.

discus throw A field event in athletics. The circular discus is made of wood and metal, the men's weighing 2 kg (4.4 lb) and the women's 1 kg (2.2 lb). It is thrown as far as possible with one hand from within a circle 2.5 m (8.2 ft) in diameter.

disinfectant A substance or process that kills germs or prevents them multiplying. Carbolic acid (phenol) was introduced for this purpose in medicine in the 1870s by Joseph *Lister. It is still used in cleaning materials and, in weaker solutions, in skin disinfectants. Chlorine and such compounds as sodium hypochlorite kill bacteria and also some viruses. Other chemical disinfectants include chlorinated phenols, hydrogen peroxide (H₂O₂), iodine (I₂), and formaldehyde (HCHO). Dry heating to 140°C for about 3 hours will kill all disease-causing germs. Boiling water and ultraviolet light are also effective disinfectants.

Disney, Walt (1901–66) US film producer and animator. His most famous cartoon character, Mickey Mouse, was designed in 1928. His films include full-length cartoon features, such as *Snow White and the Seven Dwarfs* (1938), *Pinocchio* (1939), and *Bambi* (1943), nature documentaries,

and live-action films, such as *Mary Poppins* (1964). His *Fantasia* (1940) used cartoons to accompany several pieces of classical music. He opened Disneyland, an amusement park, in California in 1955 and Walt Disney World in Florida was opened in 1971. Similar parks were opened in Tokyo (1983) and near Paris (1992).

d **Disraeli, Benjamin, 1st Earl of Beaconsfield** (1804–81) British statesman; Conservative prime minister (1868, 1874–80). Becoming an MP in 1837, Disraeli was critical of Peel's Conservative Government (1841–46) and opposed the repeal of the *Corn Laws. Three times chancellor of the exchequer in Derby's governments (1852, 1858–59, 1866–68), he was largely responsible for the 1867 Reform Act. He succeeded Derby in 1868, but soon lost office to the Liberals under Gladstone. During Disraeli's second premiership the Conservative Party came to be clearly identified with policies that upheld the monarchy, Empire, and Church of England, while sponsoring social reform. In 1875 he bought Britain a major stake in the Suez Canal and in 1876 secured passage of a bill that conferred the title Empress of India on Queen Victoria. A flamboyant and witty parliamentarian, Disraeli was also a writer, whose novels include *Coningsby*, or *the New Generation* (1844) and *Sybil*, or *the Two Nations* (1845).

distillation A method of purifying or separating the components of a liquid by boiling or evaporating the liquid and condensing the vapour. It is used for separating either liquids from solids or a mixture of liquids whose components have different boiling points (known as fractional distillation). Distillation is employed in petroleum refineries to separate the various *hydrocarbons, in the production of alcoholic spirits, and in extracting pure water from sea water.

District of Columbia A federal district of the E USA, coextensive with the federal capital, *Washington. Area: 178 sq km (69 sq mi).

dittany A perennial European herbaceous plant, *Dictamnus albus*, also known as the gas plant. A strong-scented gland-covered plant, it gives off an aromatic oil. Dittany produces a drooping spike of white or pink flowers. Family: Rutaceae.

Diu See DAMAN AND DIU.

diuretics A large class of drugs that increase the excretion of urine by the kidneys. Diuretics are used in the treatment of diseases in which fluid accumulates in the tissues, such as heart

failure, kidney failure, and some liver diseases (such as cirrhosis).

diver A large aquatic bird belonging to a family (*Gaviidae*; 3 species) occurring in the N hemisphere, also called loon. Divers breed on lakes and ponds and spend the winter in temperate coastal waters. They have small pointed wings and black and white plumage and they dive deeply, feeding on fish, frogs, and aquatic insects. Order: *Gaviiformes*.

dividend A share in the profits of a company paid to shareholders. The rate of dividend is declared at the company's annual general meeting to reflect the preceding year's profit. It is usually expressed as a percentage of the par value of the share (e.g. a 5% dividend on a 20p share would pay 1p per share). The dividend **yield** of the share is the income it produces expressed as a percentage of its current value (e.g. a 5% dividend on a 20p share that has a current value of 35p is $20/35 \times 5 = 2.86\%$). Dividends are usually paid twice yearly, an interim dividend and a final dividend.

divine right of kings A political doctrine claiming that monarchs are responsible only to God and that their subjects owe them unquestioning obedience. The theory originated in the middle ages and was most fully developed in the 16th and 17th centuries, especially in England under the Stuart kings and in France under Louis XIV.

diving beetle An aquatic beetle of the family *Dytiscidae*, with a flattened body and oar-like hind legs. They are efficient predators, and breathe by raising the end of the abdomen above the water to fill a cavity under their wings with air.

divorce The legal process by which a marriage is ended. Until the Matrimonial Causes Act (1857), which established a Divorce Court, divorce in England was possible only by special Act of Parliament. Jurisdiction is now vested in the High Court and county courts (see COURTS OF LAW). Since 1971, the only ground for divorce has been that the marriage has irretrievably broken down; the current law is contained in the Matrimonial Causes Act (1973). The party who is applying for the divorce (the petitioner) must substantiate such breakdown by presenting evidence of adultery, desertion, or unreasonable behaviour by the other party (the respondent) or that the parties have lived apart for at least two years (if the respondent agrees to the divorce) or at least five years (if he or she does not). If the respondent contests these allegations, the suit must be heard in open court;

if not, an immediate decree nisi can be granted, followed six weeks later by the decree absolute, leaving the parties free to remarry. During the proceedings the parties must have reached agreements about money and the care of any children. The Family Law Act, passed in 1996, contained provisions that aimed to reform divorce proceedings by replacing the emphasis on apportioning blame with a more consensual approach. However, pilot schemes for the new measures in 1997–99 were considered unsuccessful and those sections of the Act dealing with divorce were never implemented.

Diwali (Festival of Light, from Sanskrit *dīpawālī*, row of lights) An important Hindu religious festival held during October or November. It honours *Lakshmi, the goddess of wealth (or in Bengal, Kali). There is feasting, gambling, and lighting of lamps in honour of *Rama. Jains commemorate at this time the death of their saint Mahavira.

Dixieland A type of jazz played by White musicians in imitation of the traditional *New Orleans style. It emerged in the early 20th century but declined during the swing and bebop eras.

Djibouti, Republic of (name until 1977: the French Territory of the Afars and the Issas) A small country in NE Africa, on the Gulf of Aden at its entrance to the Red Sea. It consists chiefly of an arid rocky coastal plain rising to a plateau inland. The main population groups are Somalis (chiefly Issas) and Afars, with Arabic and European minorities. *Economy:* the port of Djibouti (a free port since 1949) is the country's economic focus handling an important transshipment trade. The port is linked by rail to Ethiopia and handles about half of that country's trade. *History:* French involvement, centred on the port, began in the mid-19th century. It was made a French colony known as French Somaliland in 1896 and proclaimed an overseas territory in 1967. It became independent in 1977 as Djibouti with Hassan Gouled Aptidon as its first president. The country suffered from the disruption of trade caused by civil wars and famine in Ethiopia and Somalia and the arrival from those countries of large numbers of refugees. Following a guerrilla war (1991) against Gouled's one-party rule, multiparty democracy was established (1992) and peace agreements were signed (1993 and 2000) with the rebels. Gouled was succeeded by his ally Ismael Omar Guelleh in 1999. Official languages: Hamitic languages of Somali. Currency: Djibouti franc of 100 centimes. Area:

21 783 sq km (8409 sq mi). Population (2007 est): 496 374. Capital: Djibouti.

DNA (deoxyribonucleic acid) A nucleic acid that is the chief constituent of the *chromosomes, carrying genetic information, in the form of *genes, necessary for the organization and functioning of living cells.

The molecular structure of DNA, proposed by J.D. *Watson and F.H. *Crick in 1953, consists of a double helix of two strands coiled around each other. Each strand is made up of alternating pentose sugar (deoxyribose) and phosphate groups, with an organic base attached to each pentose group. There are four possible bases: adenine (A), guanine (G), cytosine (C), and thymine (T). The bases on each strand are joined by hydrogen bonds and are always paired in the same way: A always binds with T and G with C. During replication, the strands of the helix separate and each provides a template for the synthesis of a new complementary strand, thus producing two identical copies of the original helix. This special property for accurate self-replication enables DNA to duplicate the genes of an organism during the cell divisions of growth (see MITOSIS) and the production of germ cells for the next generation (see MEIOSIS).

DNA. The structure of a DNA molecule takes the form of a double helix. The sequence of base pairs constitutes the genetic code, which controls the inheritance of characteristics.

Dnepr, River (or **R. Dnieper**) A river in NE Europe. Rising in the Valdai Hills, NE of Smolensk, it flows mainly SE through Russia, Belarus, and E Ukraine to enter the Black Sea. Length: 2286 km (1420 mi).

Dnepropetrovsk (name from 1787 until 1796 and from 1802 until 1826: Ekaterinoslav) 48°29'N 35°00'E A city in E Ukraine on the River Dnepr. It is one of the country's largest indus-

trial cities, producing especially iron and steel. Population (1998 est): 275 000.

Dnestr, River (or **R. Dniester**) A river in NE Europe. It flows mainly SE from the Carpathian Mountains, through Ukraine and Moldova to the Black Sea near Odessa. Length: 1411 km (877 mi).

Dobermann pinscher A breed of dog developed by Louis Dobermann in Germany in the late 19th century. It has a powerful streamlined body and a long muzzle. The short smooth coat is black, brown, or blue-grey with tan markings. Dobermanns are widely used as police, guard, and guide dogs.

dock A plant (usually perennial) of the genus *Rumex*, of temperate regions. It has a deep stout root and large lance-shaped leaves. The small greenish flowers borne in small clusters produce small nutlets, often surrounded by the reddish papery remains of the petals. Dock leaves are the traditional antidote to nettle stings. Family: *Polygonaceae*. See also **SORREL**.

Dodecanese A group of some 20 Greek islands and islets in the SE Aegean Sea, including Cos, *Rhodes (the largest), and Pátmos. They were taken from Turkey by Italy in 1912 and passed to Greece in 1947. Total area: 2719 sq km (1050 sq mi). Population (1991): 162 439. Capital: Rhodes.

dodo A large clumsy flightless bird, *Raphus cucullatus*, that lived on Mauritius but was extinct by 1681. It had a grey-blue plumage, tiny wings, a tuft of curly white tail feathers, and a large head with a massive hooked bill. Family: *Raphidae*; order: *Columbiformes* (pigeons, etc).

Dodoma 6 10S 35 40E A town in E central Tanzania. It replaced Dar es Salaam as the capital in 1983. Population (latest est): 203 833.

dog A carnivorous mammal belonging to the family *Canidae*. Ancestors of the modern domestic dog (*Canis familiaris*), probably derived from wolves or jackals, were first domesticated over 10 000 years ago. Wild dogs generally live and hunt in packs, relying on speed and cooperation to secure their prey. They are specialized hunters with long legs, sharp teeth, strong jaws, and acute hearing and smell.

The intelligence and social nature of dogs have led to their selective breeding by man for a variety of purposes, principally as sporting dogs, working dogs, and household pets. There are up to 400 modern breeds.

doge The title of the chief magistrate of Venice from about 697 AD to the fall of the Venetian Empire in 1797. The doge was elected

for life and wielded considerable power until 1172 when his authority was restricted by the creation of a supreme Great Council of 480 members. Further constitutional checks made the doge little more than a figurehead. The present richly decorated **Doge's Palace** originated in the early 14th century.

dogfish A small *shark belonging to one of a number of families. *Scyliorhinus stellaris* and *S. canicula* are brown-spotted dogfish commonly found in Mediterranean and British coastal waters. They are edible and purchased as "rock salmon."

Dogger Bank A vast sandbank in the central North Sea, 17–36 m (55–120 ft) below water. It is a major fishing ground.

dog rose A shrubby *rose, *Rosa canina*, with arching stems that grows in woods, hedges, and roadsides of Europe, North Africa, and SW Asia.

dogwood A shrub or small tree of the genus *Cornus* (about 45 species), mostly of the N hemisphere. It has oval pointed leaves with prominent curved veins and dense clusters of four-petaled flowers. The fruit is a berry. The common European dogwood (*C. sanguinea*) has white flowers, blood-red shoots and autumn leaves, and black berries. Family: *Cornaceae*.

Doha 25 15N 51 36E The capital of Qatar, on the E coast. Population (1997): 264 009.

Dohnányi, Ernő (Ernst von D.; 1877–1960) Hungarian composer and pianist, who spent his last years in the USA. Unlike his contemporaries, Bartók and Kodály, Dohnányi remained uninfluenced by Hungarian folksong. His best-known composition is the *Variations on a Nursery Theme* (for piano and orchestra; 1913).

Dolby system Tradename of an electronic device for reducing the hiss in sound reproduction, particularly in *tape recorders. It was invented by Ray Dolby (1933–). The system selectively boosts the higher frequencies in the sound signal before recording it, to drown out the constant hiss produced by the tape, and attenuates them when playing back. It operates only when the music is quiet enough for the hiss to be heard.

doldrums The equatorial belt within which the trade-wind zones converge. Winds are light and variable but the strong upward movement of air caused by the convergence produces frequent thunderstorms, heavy rains, and squalls.

Dollfuss, Engelbert (1892–1934) Austrian statesman; chancellor (1932–34). His chancellorship was increasingly strained by his inability

to control the Austrian Nazis or to cooperate with the Social Democrats. He was assassinated in July during an abortive attempt by the Nazis to seize power.

dolmen (Breton: table stone) A prehistoric tomb made of huge stone slabs set upright and

supporting a stone roof. Widely distributed in *Neolithic Europe, dolmens were often covered by a *barrow.

Dolmetsch, Arnold (1858–1940) British musician and instrument maker. He pioneered the rediscovery of early music and its performance

on contemporary instruments in its original style.

dolomite A mineral consisting of calcium magnesium carbonate, $\text{CaMg}(\text{CO}_3)_2$, colourless or white or grey in colour. Rocks containing over 15% magnesium carbonate are called dolomites, those containing less are magnesium limestones, and those containing both dolomite and calcite are dolomitic limestones. Dolomite occurs as a primary sediment, in metalliferous veins and in limestones altered by the process of dolomitization, by which the calcium carbonate is wholly or partly converted to dolomite by magnesium-rich sea water, or by magnesium-rich solutions permeating joints in the rock.

Dolomites (Italian name: Alpi Dolomitiche) A section of the Alps in NE Italy. Composed of dolomitic limestone, they are characterized by their steep-sided rocky peaks.

dolphin 1. A toothed *whale of the family *Delphinidae* (about 50 species). Agile and streamlined and up to 4.5 m long, dolphins live in large groups and feed mainly on fish. They are intelligent creatures with well-developed abilities for social communication and *echolocation. The common dolphin (*Delphinus delphus*), which grows to 2.1 m, is blue-black with a white belly and striped body. See also BOTTLENOSE; PORPOISE. **2.** A large fast-moving marine fish of the family *Coryphaenidae* (2 species) that resembles the cetaceous dolphin. Order: *Perciformes*.

Dome of the Rock The great mosque in Jerusalem, built in 691 AD by the *Umayyad caliph, 'Abd al-Malik, to commemorate the Muslim tradition that Mohammed ascended to Paradise from the Temple Mount (see TEMPLE OF JERUSALEM) on which it stands. It is the third most holy place of Islam, after *Mecca and *Medina.

Domesday Book (1086) The survey of England ordered by William I to assess the extent of his own possessions and the value for taxation purposes of the estates of his tenants in chief. Parts of N and NW England and some towns, including London and Winchester, were omitted. Royal commissioners collected, shire by shire, details about each *manor, naming its present owner and its owner under Edward the Confessor, changes in its size since Edward's reign, the numbers of its inhabitants and the services or rents they owed, and the numbers of its ploughteams, mills, and fisheries. The survey, in two volumes, is now in the Public Record Office.

Domingo, Plácido (1941–) Spanish tenor. He sings a wide range of roles but specializes in Puccini and Verdi, starring in film versions of *La Traviata* (1983) and *Otello* (1986). In the 1990s he reached a huge international audience performing with Luciano Pavarotti (1935–) and José Carreras (1946–) as the Three Tenors.

Dominica, Commonwealth of An island country in the West Indies, the largest of the Windward Islands. It is of volcanic origin and very mountainous. The population is mainly of African descent. *Economy:* chiefly agricultural. *History:* discovered by Columbus in 1493, it was alternately French then British during the 18th century before finally becoming British in 1783. It became internally self-governing in 1967 and an independent republic within the British Commonwealth in 1978. Dame Eugenia Charles was prime minister from 1980 until 1995. Official language: English. Currency: East Caribbean dollar of 100 cents. Area: 728 sq km (289 sq mi). Population (2007 est): 72 386. Capital: Roseau.

Dominican Republic A largely mountainous country in the Caribbean Sea, occupying the E two-thirds of the island of Hispaniola (Haiti occupies the W third). The population is mainly of mixed African and European descent. *Economy:* chiefly agricultural. The principal mineral export is ferro-nickel. Manufacturing and tourism are increasingly important. *History:* becoming a Spanish colony following the island's discovery in 1492 by Columbus, the E was ceded, 1795–1809, to the French, who had colonized the W. The E gained independence from Spain in 1821. It was held by Haiti from 1822 until 1844, when the Dominican Republic was founded. Political and economic instability led to US occupation (1916–22) and the establishment (1930) of Trujillo's 30-year dictatorship. Following Trujillo's assassination in 1962 the elected president, Juan Bosch, was deposed (1963) in a military coup. After a period of civil war, a new democratic constitution was introduced (1966). Joaquín Balaguer was president from 1966 to 1978 and from 1986 to 1996. The current president (since 2004) is Leonel Fernández. Official language: Spanish. Currency: Dominican Republic peso of 100 centavos. Area: 48 442 sq km (18 700 sq mi). Population (2007 est): 9 365 818. Capital: Santo Domingo.

Dominicans (Latin *Ordo Praedicatorum*: Order of Preachers) A Roman Catholic order of friars, also known as Black Friars, Friar Preachers, or (in France) Jacobins, founded by St Dominic (c. 1170–1221) and formally organized at Bologna in 1220–21. As preachers and teachers

the friars lived mendicant lives. Among their scholars was St Thomas *Aquinas. They were prominent defenders of orthodoxy in the *Inquisition. There are also two orders of Dominican nuns.

Don, River A river in SW Russia, flowing mainly S to the Sea of Azov. A canal links it to the River Volga. Length: 1981 km (1224 mi).

Donatello (Donato de Nicolo di Betti Bardi; c. 1386–1466) Florentine sculptor. A pioneer of the Renaissance style, Donatello's marble sculptures are lifelike rather than idealized figures. Simultaneously he developed a new form of relief sculpture in which he created perspective. Working also in bronze from the early 1420s, he produced *David* (c. 1430–35; Florence), the influential equestrian monument in Padua known as the *Gattamelata* (1447–53), and the high altar for S Antonio, Padua (1446–50).

Doncaster 1. 53°32'N 107°W An industrial town in N England, in Doncaster unitary authority, South Yorkshire, with railway workshops; coalmining is in decline. Population (1991): 71 595. 2. A unitary authority in N England, in South Yorkshire. Area: 582 sq km (225 sq mi). Population (2001): 286 865.

Donegal (Irish name: Dún Na Ngall) A county in the N Republic of Ireland, in Ulster bordering on the Atlantic Ocean. Chiefly mountainous, it has a rugged indented coastline. Area: 4830 sq km (1865 sq mi). Population (2002): 137 383. County town: Lifford.

Dönitz, Karl (1891–1980) German admiral. A U-boat commander in World War I, in World War II he developed the "pack" system of submarine attack. In 1943 he became grand admiral and then commander in chief of the German navy. He was appointed chancellor after Hitler's death and was imprisoned (1946–56) for war crimes.

Donizetti, Gaetano (1797–1848) Italian composer of operas. His 75 stage works rely on coloratura display, the popular characteristic of his age. They include *Lucia di Lammermoor* (1835) and *Daughter of the Regiment* (1840).

Don Juan The great aristocratic libertine of European literature. In Tirso de Molina's play *El burlador de Sevilla* (1630) he kills the father of his latest victim; he mockingly invites the old man's statue to dinner, and it drags him off to hell. This plot is retained in subsequent versions, most notably Molière's *Don Juan* (1665) and Mozart's *Don Giovanni* (1787). In satirical treatments by *Byron (*Don Juan*, 1819–24) and

G. B. *Shaw (*Man and Superman*, 1903) Juan is more hunted than hunter.

donkey A domesticated *ass more commonly used for pack and draught work than for riding. See also MULE.

Donne, John (1572–1631) English metaphysical poet. Failing to gain secular advancement, despite having several influential patrons, he became an Anglican priest in 1615 and was appointed Dean of St Paul's in 1621. His poetry combines passionate feeling for God, woman, and humanity with brilliant intellectual wit. Almost all of it, even religious works, such as *La Corona* (1607), was written before 1615.

Doppler effect The apparent change in the frequency of a wave caused by relative motion between the source and the observer. When the source and the observer are approaching each other, the apparent frequency of the wave increases; when one is travelling away from the other, the apparent frequency decreases. An example is the change in pitch of a train whistle as the train passes through a station. The effect can also be observed as a shifting of the wavelength of light from a receding star towards the red end of the spectrum; this is known as the *redshift. Named after Christian Doppler (1803–53), Austrian physicist.

Dorchester 50°43'N 2°26'W A market town in S England, the administrative centre for Dorset on the River Frome. Population (1991): 15 037.

Dordogne, River A river in SW France. Rising in the Auvergne Mountains, it flows SW and W to enter the Gironde estuary NNE of Bordeaux. It is important for hydroelectric power and has famous vineyards along its lower course. Length: 472 km (293 mi).

Doré, (Paul) Gustave (Louis Christophe) (1832–83) French illustrator, painter, and sculptor, born in Strasbourg. He established his popularity in the 1850s with his illustrations of works by Rabelais and Balzac. These were followed by illustrations to Dante, Cervantes, Tennyson, etc., showing his taste for the grotesque and dramatic. His realistic scenes of poverty in *London* influenced Van Gogh.

Dorians Iron Age Greek conquerors of the S Aegean region (c. 1100–1000 BC). Moving southward from Epirus and SW Macedonia, they displaced the Achaeans and brought about the final collapse of the Bronze Age *Mycenaean civilization. They settled chiefly in the Peloponnese.

Doric order See ORDERS OF ARCHITECTURE.

dormancy A period of reduced metabolic activity during which a plant or animal or a reproductive body (e.g. seeds or spores) can survive unfavourable environmental conditions. The onset may be triggered by, for example, changes in temperature, daylength (photoperiodism), and availability of water, oxygen, and carbon dioxide. The dormant phase of a life cycle is represented as spores in bacteria and fungi, cysts in protozoans and some invertebrates, and seeds, buds, and bulbs or similar organs in plants. See also HIBERNATION.

dormouse A climbing *rodent belonging to the family *Gliridae* (about 10 species) of Eurasia and Africa. The common dormouse (*Muscardinus avellanarius*) is reddish, about 6 cm long with a 5-cm bushy tail. It feeds at night on nuts, berries, and seeds, hibernating during winter.

Dorset A county of SW England, bordering on the English Channel. In 1974 it gained part of SW Hampshire. Bournemouth and Poole became independent unitary authorities in 1997. It consists of lowlands in the SE with several ranges of hills. The chief rivers are the Frome and the Stour. Agriculture is predominant, especially livestock farming. Tourism is important, notably in Bournemouth and Weymouth. Many towns are associated with the writings of Thomas *Hardy. Area (excluding unitary authorities): 2544 sq km (982 sq mi). Population (2001, excluding unitary authorities): 390 986. Administrative centre: Dorchester.

Dortmund 51 32N 07 27E A city in NW Germany, in North Rhine-Westphalia in the *Ruhr. A port on the Dortmund-Ems Canal and a major industrial and brewing centre. Population (1999 est): 590 300.

Dortmund-Ems Canal A major canal in Germany. Opened in 1899, it links the Ruhr industrial area with the North Sea near Emden. Length: about 270 km (168 mi).

Dostoevski, Fedor Mikhailovich (1821–81) Russian novelist. He lived in W Europe from 1867 to 1871, plagued by his epilepsy and compulsive gambling. He returned to Russia in 1871 and became relatively prosperous, stable, and conservative. His major novels, in which he explored moral and political themes with psychological realism, are *Crime and Punishment* (1866), *The Idiot* (1868–69), *The Possessed* (1869–72), and *The Brothers Karamazov* (1879–80).

dotterel A small Eurasian *plover, *Eudromias morinellus*, that nests in tundra regions and mi-

grates to the Mediterranean and SW Asia for the winter. It has a broad white eye stripe and a grey breast separated by a narrow white band from its russet belly.

Douai Bible The Roman Catholic version of the Bible in English, translated from the *Vulgate by Roman Catholic scholars from Oxford, who had fled to Europe during the reign of Elizabeth I and who were members of the English College at Douai. The New Testament was published at Reims in 1582 and the Old Testament at Douai in 1609–10. Its language influenced the translators of the *King James Version.

Douala 404N 943E The largest city in Cameroon, on the River Wouri estuary. A deep-water port and the chief export point of the country, it is also a major West African industrial centre. Population (1992 est): 1 200 000.

double bass The lowest-pitched musical instrument of the violin family. Its four strings are tuned in fourths (E, A, D, G), giving it a range of over three octaves, from the E an octave below the bass staff. The double bass is a member of the symphony orchestra; it is also played in jazz and dance bands, usually by plucking the strings.

Douglas 54 09N 4 29W The capital of the Isle of Man, on the E coast. It is a port and resort, its buildings including the House of Keys (parliament house) and the Manx Museum. Population (1998): 23 487.

Douglas fir A conifer, *Pseudotsuga taxifolia*, native to W North America and cultivated widely both for ornament and for its timber. 60–90 m high, it has flexible blunt needles and cylindrical cones. Family: *Pinaceae*.

Douglas-Home, Sir Alec See HOME OF THE HIRSEL, ALEC DOUGLAS-HOME, BARON.

Doulton English pottery works, established at Lambeth (London) in 1815, specializing in salt-glazed stoneware. Brown stoneware vessels with relief moulded portrait and landscape ornament were typical of the period to 1850. From 1856 unique studio pottery in coloured glazes was produced, using wood-fired kilns.

Douro, River (Spanish name: Duero) A river in SW Europe. Flowing W from N central Spain, it forms part of the border between Spain and Portugal before entering the Atlantic Ocean at Oporto. Length: 895 km (556 mi).

dove See PIGEON.

Dover 51 08N 1 19E A port in SE England, in Kent on the Strait of Dover. A Cinque Port, it is

the UK's chief ferry and Hovercraft port for the Continent. Population (1993 est): 106 100.

Dowding, Hugh Caswall Tremeneere, 1st Baron (1882–1970) British air chief marshal, who was head of the RAF Fighter Command in 1940. His strategic and tactical genius in coordinating early warning radar, pilots, and equipment played a major role in winning the Battle of Britain.

Dow Jones index A weighted average of the prices on the New York Stock Exchange of 30 industrial shares, computed each working day by Dow Jones and Co. First devised in 1897 using only 11 shares, it is the principal indicator of movements in share prices in the USA.

Down 1. A historic county in SE Northern Ireland, bordering on the Irish Sea. Its administrative powers were devolved to the new district councils in 1973. It consists of lowlands in E rising to the Mourne Mountains in the SW. Agriculture is the chief occupation. Area: 2466 sq km (952 sq mi). **2.** A district in SE Northern Ireland, in Co Down. Area: 638 sq km (246 sq mi). Population (2001): 63 828.

Downing Street A London street adjoining Whitehall. No 10 is the official residence of the prime minister; the chancellor of the exchequer resides at No 11. It was named after the English statesman Sir George Downing (1623–84).

Downs, North and South Two roughly parallel ranges of chalk hills in SE England, separated by the Weald. The **North Downs** extend W–E between Guildford, in Surrey, and Dover, in Kent. The **South Downs** extend generally SE from Winchester, in Hampshire, to Beachy Head. In 1999 plans were announced to designate the South Downs as a national park. The Downs have traditionally been sheep-farming areas.

Down's syndrome A condition that results from the presence of one extra copy of chromosome 21 and is present at birth; it is named after J. L. H. Down (1828–96), English physician. Affected children often have learning difficulties and their faces resemble those of people from the Far East; heart defects may be present. They are usually cheerful and with special education can live relatively normal lives. Down's syndrome is more common in babies of mothers over 40; it can be detected during pregnancy (see AMNIOCENTESIS).

Doyle, Sir Arthur Conan (1859–1930) Scottish author, creator of the detective Sherlock Holmes. Conan Doyle graduated in medicine

but soon turned to writing. Holmes first appeared in the novel *A Study in Scarlet* (1887), narrated, as are nearly all the short stories and novels about him, by Dr John H. Watson. Conan Doyle also created the brilliant Professor Challenger in *The Lost World* (1912) but he valued most highly his historical novels, such as *The White Company* (1890).

Doyle, Roddy (1958–) Irish novelist and playwright. His works include *The Commitments* (1988), *Paddy Clarke Ha Ha Ha* (1993), which won the 1993 Booker Prize, and *A Star Called Henry* (1999).

D'Oyly Carte, Richard (1844–1901) British theatre impresario and manager. He produced most of the comic operas of Gilbert and Sullivan at the Savoy Theatre, London, which he opened in 1881.

Drabble, Margaret (1939–) British novelist. Most of her novels concern the moral and emotional problems of women in contemporary society. They include *The Millstone* (1965), *The Needle's Eye* (1972), *The Radiant Way* (1987), and *The Seven Sisters* (2002). She also edited the 1985 *Oxford Companion to English Literature*. Her sister is A. S. *Byatt.

Draco (7th century BC) Athenian lawgiver. His legal system was so harsh that "draconian" has since been used to describe any rigorous or cruel law. Draco's code prescribed the death penalty for most offences, taking retribution out of the hands of private citizens.

dragonfly A strong agile brightly coloured insect belonging to the widely distributed sub-order *Anisoptera* (about 4500 species). It has a long body, large eyes, and transparent veined wings (spanning up to 180 mm). Both the adults and freshwater nymphs (naiads) are active carnivores and control many insect pests, such as mosquitoes, flies, and gnats. Order: *Odonata*.

drag racing 1. A form of *motor racing that originated in the USA. It is held in heats of two cars on a straight strip a quarter of a mile (402 m) long. Using a standing start, races depend heavily on acceleration. Speeds have exceeded 400 km per hour (250 mph) in specially constructed light powerful vehicles. **2.** A form of motorcycle racing organized in the same way.

Drake, Sir Francis (1540–96) English navigator and admiral. Drake's first important voyages were trading expeditions to Guinea and the West Indies and in 1567 he accompanied Sir John *Hawkins to the Gulf of Mexico. In 1572 he embarked on a plundering expedition, de-

destroying towns on the Isthmus of Panama and capturing much booty. In 1578 he became the first Englishman to navigate the Straits of Magellan, intending to raid the Pacific coast. Alone out of five ships, his *Golden Hind* sailed N but unable to find a way back to the Atlantic Ocean crossed the Pacific Ocean, returning home in 1580 via the Cape of Good Hope. Drake crowned his career by helping to defeat the Spanish *Armada at Gravelines (1588).

Drakensberg Mountains (or **Quathlamba**) The chief mountain range in S Africa, extending from SE South Africa along the E border of Lesotho to Swaziland, reaching 3482 m (11 425 ft) at Thaba Ntlenyana.

draughts (US name: checkers) A board game for two players, developed in 12th-century Europe from an ancient Egyptian game. Each player has 12 disc-shaped pieces which are placed at the opposite ends of a chessboard. The pieces move only on the black squares and black always starts. One piece per turn is moved diagonally forwards onto an adjacent square. If the next square is occupied by one of the opponent's pieces but the square beyond that is vacant, the playing piece must jump onto the vacant square, removing the opponent's piece from the board. If a piece reaches the opposing back line it becomes a "king" and it may then move forwards or backwards. The winner is the player who takes or immobilizes all his opponent's pieces.

Dravidian languages A large language family of up to 20 languages spoken mainly in S India. The major languages of the family are *Tamil, Kanarese (or Kannada), Telugu, Malayalam, and Tulu. These are all spoken in a continuous area in India, and Tamil is also spoken in Sri Lanka.

Dresden 515N 13 41E A city in SE Germany, on the River *Elbe, the capital of Saxony. One of the world's most beautiful cities prior to its devastation by bombs in 1945, it has since been rebuilt. Dresden is a centre of culture, light industry, and market gardening. Population (1999 est): 477 700.

Dresden porcelain See MEISSEN PORCELAIN.

dressage The training of a riding (or carriage) horse to make it calm, supple, and responsive to its rider (or driver). Originally a training for military charges, the present, more humane, methods developed in the 18th century. The most advanced stage is *haute école* equitation in which a horse is taught to per-

form intricate leaps and movements. Dressage competitions consist of a sequence of complex prescribed movements.

Dreyfus, Alfred (1859–1935) French Jewish army officer. Unjustly accused of revealing state secrets to the German military attaché in Paris, in 1894 Dreyfus, the victim of anti-semitism, was deported for life to the penal colony on Devil's Island (off the coast of French Guiana). His case was reopened in 1898, becoming the focus of conflict between royalist, nationalist, and militarist elements on the one hand and socialist, republican, and anticlerical factions on the other. Following a retrial in 1899, Dreyfus was pardoned but not completely cleared until 1906.

dromedary See CAMEL.

Drosophila A genus of small *fruit flies (about 1000 species). Most species feed on fermenting materials, such as rotting or damaged fruit. Some species, especially *D. melanogaster*, have been used extensively in laboratory studies of heredity and evolution because of the large chromosomes in their salivary glands and their short life cycle. Family: *Drosophilidae*.

drugs Compounds that alter the physiological state of living organisms (including humans). **Medicinal drugs** are widely used for the treatment, prevention, and diagnosis of disease. The wide range of drugs available for this purpose includes the anaesthetics (see ANAESTHESIA), *analgesics, *antibiotics, *cytotoxic drugs, *diuretics, hormonal drugs, and *tranquillizers.

Some drugs are taken solely for their pleasurable effects. Many such drugs are addictive. In the UK these dangerous drugs are known as **controlled drugs**. They are classified as: Class A (heroin, cocaine, ecstasy, etc.) attracting the severest penalties; Class B (amphetamines, barbiturates, etc.) less severe penalties; Class C (including steroids and from 2004 cannabis) still illegal but treated more leniently.

Druids Ancient Celtic priests who were also revered as teachers and judges. They worshipped nature gods, believed in the immortality of the soul and *reincarnation, and also taught astronomy. Their central religious rite involved the sacred oak tree. They sacrificed humans, usually criminals, on behalf of those near to death. In Gaul and Britain they were wiped out by the Romans, their last stand being in Anglesey (61 AD), but in Ireland they survived until the arrival of Christian missionaries.

drumlin A small streamlined hill, formed through glaciation and composed of glacial till or drift, sometimes with a rock core. Drumlins usually occur in groups or swarms (sometimes called basket-of-eggs topography), their long axes parallel to the direction of ice flow.

drupe A stone fruit, such as a cherry, plum, or peach. The fruit wall (pericarp) develops into three layers: an outer skin (epicarp), succulent flesh (mesocarp), and a stone (endocarp) containing the seed.

Drury Lane Theatre The oldest theatre in London, first opened in 1663. The present building dates from 1813. It has housed every form of dramatic production. Its early managers included David *Garrick and R. B. *Sheridan, and it has strong associations with the actors Edmund *Kean and Sir Henry *Irving.

Druses (or Druzes) Adherents of a religious sect living mainly in Syria, the Lebanon, and Israel. Druses are not generally accepted as Muslims. Their scriptures are based on the Bible, the Koran, and on Sufi writings.

Dryden, John (1631–1700) British poet and critic. He welcomed the Restoration of the monarchy and wrote several successful plays for the recently reopened theatres, such as *All for Love* (1677). He also wrote brilliant verse satires, notably *Absalom and Achitophel* (1681) and *MacFlecknoe* (1682), and many translations.

dry rot The decay of timber caused by cellulose-digesting fungi, especially *Serpula lacrymans*. Spores are liable to germinate in timber having a moisture content of over 20% and the fungus appears as a whitish mass on the surface. The timber becomes cracked and crumbly and the infection may spread to adjoining dry timbers. Treatment is by removal of infected timbers and application of fungicide to the remaining parts. Compare WET ROT.

Dubai See UNITED ARAB EMIRATES.

Du Barry, Marie Jeanne Bécu, Comtesse (?1743–93) The last mistress of *Louis XV of France from 1768 until his death (1774), when she was banished from court. She was guillotined during the French Revolution.

Dublin (Irish name: Baile Átha Cliath) 1. 53 20N 6 15W The capital of the Republic of Ireland, on Dublin Bay. An important commercial and cultural centre, it is also the largest manufacturing centre and the largest port in the Republic. Its industries include whiskey distilling, brewing, clothing, glass, and food processing. It is noted for its wide streets and

18th-century Georgian squares. The Easter Rising of 1916 took place here. Population (2002): 495 101. 2. A county in the E Republic of Ireland, in Leinster bordering on the Irish Sea. Chiefly low lying, it rises in the S to the Wicklow Mountains and is drained by the River Liffey. Area: 922 sq km (356 sq mi). Population (2002): 1 122 600. County town: Dublin.

Dubrovnik (Italian name: Ragusa) 42 40N 18 07E A port and tourist resort in W Croatia on the Adriatic coast. In 1991 it was damaged during the civil war that followed Croatia's secession from Yugoslavia. Population (1991): 49 730.

Duchamp, Marcel (1887–1968) French artist. His first success was *Nude Descending a Staircase* (1912; Philadelphia), influenced by *cubism and futurism. This was followed by his controversial ready-made objects, for example a urinal, first exhibited in New York. He lived in New York after 1915 and became leader of its *dada art movement. His best-known work is the glass and wire picture of *The Bride Stripped Bare by Her Bachelors, Even* (1915–23; Philadelphia).

duck A small short-necked waterbird belonging to the family *Anatidae* (ducks, geese, and swans), occurring in salt and fresh waters throughout the world except Antarctica. Ducks are adapted for swimming and diving, having a dense waterproofed outer plumage with a thick underlayer of down. The blunt spatulate bill is covered with a sensitive membrane and has internal horny plates for sifting food from water. The 200 species of duck are mostly gregarious; many are migratory. Dabbling ducks feed at the surface of the water, while diving ducks dive to forage in deeper water. Order: *Anseriformes* (ducks and geese).

duck-billed platypus An aquatic *monotreme mammal, *Ornithorhynchus anatinus*, of Australia and Tasmania. Platypuses have webbed feet and a broad flat toothless beak for sieving invertebrates from stream bottoms. The female lays two eggs and after incubation suckles the tiny young. Family: *Ornithorhynchidae*.

Dudley A unitary authority in W central England, in West Midlands. Area: 98 sq km (38 sq mi). Population (2001): 305 164.

Dufay, Guillaume (c. 1400–74) Burgundian composer and priest. One of the outstanding composers of the middle ages, he wrote masses, motets, magnificats, and French and Italian chansons.

Dufy, Raoul (1877–1953) French painter. His

d

early influences were *impressionism and then *fauvism. He later developed an individual style in lively racecourse and regatta scenes.

dugong A marine herbivorous mammal, *Dugong dugon*, of the Indo-Pacific region. Dugongs, also known as sea cows, have blue-grey rough skin and a bristly snout; the males have short tusks. Their forelimbs are flippers and they lack hind limbs, having a flukelike tail for swimming. Family: *Dugongidae*; order: *Sirenia*.

dulcimer A musical instrument consisting of a shallow resonating box with strings stretched over two moveable bridges. It is played with two small hammers and is much used in European and Asian folk music.

Dumas, Alexandre (1802–70) French novelist and dramatist, often called Dumas père. He is noted for his historical romances, including *The Count of Monte Cristo* (1844–45), *The Three Musketeers* (1844), and *The Black Tulip* (1850). His son **Alexandre Dumas** (1824–95), a dramatist, was often called Dumas fils. His best-known work is the novel *La Dame aux camélias* (1848), the basis of a play and Verdi's opera *La Traviata*.

Du Maurier, George (Louis Palmella Bussan) (1834–96) British caricaturist and novelist, born in Paris, who contributed caricatures to *Punch* and other magazines. His novel *Trilby* (1894), remembered for its sinister hypnotist Svengali, is based on his life as an art student in Paris. The best-known works of his granddaughter **Dame Daphne Du Maurier** (1907–89) are romances, usually set in Cornwall. They include *Rebecca* (1938) and *My Cousin Rachel* (1951).

Dumfries and Galloway A council area in SW Scotland, bordering on the Solway Firth. Formed in 1975 from the counties of Dumfries, Kirkcubright, and Wigtown, it became a unitary authority in 1996. It consists of uplands in the N descending to coastal lowlands in the S and has an indented coastline. The region is predominantly agricultural. Area: 6369 sq km (2460 sq mi). Population (2001): 147 765. Administrative centre: Dumfries.

Dunbarton (or Dunbartonshire) A historic county of W Scotland. In 1975 its boundaries were adjusted to form Dunbarton District, in Strathclyde Region. Further reorganization in 1996 involved the creation of two council areas, *East Dunbartonshire and *West Dunbartonshire.

Duncan I (d. 1040) King of the Scots (1034–40).

His claim to the throne was challenged by Macbeth, by whom he was murdered.

Duncan, Isadora (1878–1927) US dancer. She lived mostly in Europe, where she gained a reputation for both her innovative modern interpretive dancing and her flamboyant lifestyle.

Dundee 1. 56 28N 3 00W A city and port in E Scotland, in Dundee City council area, on the Firth of Tay. It provides supplies and services for the North Sea oil industry and is also a fast-growing centre for biotechnology and genetic research. Population (1993 est): 153 710. **2. Dundee City.** A council area in E Scotland. Area: 65 sq km (25 sq mi). Population (2001): 145 663.

Dunedin 45 52S 170 30E A port in New Zealand, in SE South Island at the head of Otago Harbour. Founded by Scottish Presbyterians in 1848, it has two cathedrals (Anglican and Roman Catholic) and the University of Otago (the oldest in the country, founded in 1869). Population (1999 est): 119 600.

Dunfermline 56 04N 3 29W A town in E Scotland, in Fife Region on the Firth of Forth. Several Scottish kings, including Robert the Bruce, are buried in the 11th-century abbey. Population (1991): 55 083.

Dungannon A district in S Northern Ireland, in Co Tyrone. Area: 763 sq km (294 sq mi). Population (2001): 47 735.

dung beetle A *scarab beetle, usually small and dark, that has the habit of rolling dung into balls, which serve as a food source for both the adults and larvae.

Dungeness 50 55N 0 58E A shingle headland in SE England, in Kent extending into the English Channel. Two nuclear power stations and an automatic lighthouse are located here.

Dunkirk (French name: Dunkerque) 51 02N 2 23E A port in N France, in the Nord department on the Strait of Dover. During *World War II some 338 200 Allied troops were successfully evacuated from its beaches (1940) following the fall of France. Dunkirk is a rapidly growing industrial centre and has an oil refinery and naval shipbuilding yards. Population (1990): 71 071.

Dun Laoghaire 53 17N 6 08W A port in the E Republic of Ireland, in Co Dublin. It is the terminus of a ferry service from Holyhead, Wales. Population (2002): 191 389.

dunlin A common *sandpiper, *Calidris alpina*, that breeds in far northern regions, ranging south to N Britain. It has a bill with a curved tip

and a black and russet plumage that changes to grey in winter.

Dunlop, John Boyd (1840–1921) Scottish inventor, who is credited with inventing the pneumatic tyre (1887). Dunlop began to produce his tyres commercially in 1890, contributing to the development of motor cars.

dunnoek A shy songbird, *Prunella modularis*, also called hedge sparrow. About 14 cm long, the dunnoek has a brown plumage with a greyish throat and breast. It has a sharp bill and feeds on insects. Family: *Prunellidae* (accentors).

Duns Scotus, John (c. 1260–1308) Scottish-born Franciscan philosopher, who, with Roger *Bacon and William of Ockham, carried on controversy against *Aquinas. Duns Scotus held that what makes one thing distinct from another is its form or essence—that is, its essential properties rather than its accidental properties, as the latter may be removed or changed without altering its identity. Although nicknamed the Subtle Doctor by contemporaries, Duns Scotus suffered Renaissance ridicule, his name giving rise to the derisive label “dunce.”

Dunstan, St (924–88 AD) English churchman and monastic reformer. Appointed Abbot of Glastonbury in 943, he rebuilt its monastery and revived English monasticism. The chief minister under Kings Eadred and Edgar, he became Bishop of Worcester (957), Bishop of London (959), and Archbishop of Canterbury (960). Feast day: 19 May.

duodenum See INTESTINE.

Durban 29°53S 31°00E The main seaport in South Africa, on the Indian Ocean. Population (1996, urban area): 2 117 650.

Dürer, Albrecht (1471–1528) German *Renaissance painter, engraver, draughtsman, and woodcut designer. He was influenced by Italian artists but his woodcuts of the *Apocalypse* (1498) are still gothic in style. In about 1500, he became preoccupied with the study of human proportions. Paintings of this period include the *Self-Portrait as Christ* (1500) and *Adoration of the Magi* (1504). He executed his most famous engravings, including *Knight, Death, and the Devil*, in the period 1512–19.

Durham 1. 54°47N 1°34W A city in NE England, the administrative centre of Co Durham on the River Wear. It has a Norman cathedral and an 11th-century castle. Population (1991): 36 937. 2. A county in NE England, on the North Sea. It consists of lowlands, rising W to the uplands of the Pennines and is drained by the

Rivers Wear and Tees. Agriculture includes sheep and dairy farming. Coalmining was formerly important, but the last deep pits closed in the 1990s. Light engineering, services, and clothing manufacture are now the chief industries. In 1974 it lost the NE and SE to Tyne and Wear and Cleveland respectively. In 1996 Cleveland was abolished and the former SE boundary restored for ceremonial purposes: these areas are now administered by the unitary authorities of Hartlepool and Stockton-on-Tees. Darlington became an independent unitary authority in 1997. Area (excluding unitary authorities): 2434 sq km (960 sq mi). Population (2001, excluding unitary authorities): 493 470. Administrative centre: Durham.

durra A variety of *sorghum, *S. vulgare*, also called millet. It is cultivated in arid lands in S Europe, Asia, and Africa and is used as a cereal, as animal feed, and for the manufacture of sugar and syrup.

Durrell, Lawrence George (1912–90) British novelist and poet. His best-known work is *The Alexandria Quartet*, comprising *Justine* (1957), *Balthazar* (1958), *Mountolive* (1958), and *Clea* (1960). His later work includes *The Avignon Quintet* (1974–85). His brother **Gerald Durrell** (1925–95) was a naturalist and popular writer, known for such books as *My Family and Other Animals* (1956).

durum See WHEAT.

Dushanbe (name until 1929: Dyushambe; name 1929–61: Stalinabad) 38°38N 68°51E The capital of Tadjikistan, on the River Dushanbinka. It has food and textile industries. Since 1992 it has been the scene of fighting between rival political factions. Population (1998 est): 513 000.

Düsseldorf 51°13N 6°47E A city in NW Germany, capital of North Rhine-Westphalia on the River Rhine. A port and major commercial and industrial centre of the *Ruhr, its main industry is iron and steel. Population (1999 est): 568 500.

Dust Bowl, the An area in the USA, extending across W Kansas, Oklahoma, and Texas, and into Colorado and New Mexico. During the 1930s droughts and overfarming caused topsoil erosion.

Dutch The national language of the Netherlands, belonging to the West Germanic language group. In Belgium it is one of the two official languages and is known as Flemish (or Vlaams). It is derived from Low Franconian, the

speech of the Salic Franks, who settled in this area, and has numerous local variants.

Dutch elm disease A serious disease, first described in the Netherlands in 1919, that reached epidemic proportions in Britain in the 1970s, killing millions of elm trees. The fungus responsible, *Ceratocystus ulmi*, blocks the vessels that carry water to the leaves, which wilt and eventually die. The disease is carried by the elm bark beetle. Protective measures can be taken but are too expensive for widespread use.

Duvalier, François (1907–71) Haitian politician, known as Papa Doc; president (1957–71). He used his secret police, the Tonton Macoutes, to suppress opposition and exploited Black nationalism and voodoo rites to maintain popular support. In 1964 he became president for life, a post in which his son **Jean-Claude Duvalier** (1951–), known as Baby Doc, succeeded him, but had to flee to France after an uprising in 1986.

DVD See COMPACT DISC.

Dvořák, Antonín (1841–1904) Czech composer. He wrote his famous ninth symphony, entitled "From the New World," while director of the National Conservatory in New York, 1892–95. Besides the symphonies he wrote concertos for piano, violin, and cello, orchestral tone poems, chamber music, piano music, and songs. His Czech nationalism is particularly evident in his famous *Slavonic Dances* for piano duet (1878–86).

Dylan, Bob (Robert Allen Zimmerman; 1941–) US singer and songwriter. An outstanding lyricist, he spoke for the protest movement of the 1960s with such folk albums as *The Times They Are a-Changin'* (1964); later albums include *Blonde on Blonde* (1966), *Blood on*

the Tracks (1975) and, following his conversion to Christianity, *Slow Train Coming* (1979). More recent records include *Time Out of Mind* (1997) and *Love & Theft* (2001).

dynamite An explosive plastic solid consisting of 75% nitroglycerine and 25% kieselguhr, a porous form of silicon dioxide (SiO₂). It was invented in 1866 by *Nobel. Nitroglycerine alone is very sensitive to shock. The kieselguhr makes it safe to handle. Dynamite is used for blasting, particularly under water.

dynamo See ELECTRIC GENERATOR.

dyne The unit of force in the *c.g.s. system equal to the force that will impart to a mass of one gram an acceleration of one centimetre per second per second.

dysentery An infection of the large bowel causing painful diarrhoea that often contains blood and mucus. It may be caused either by bacteria of the genus *Shigella* or by amoebae. It can occur wherever there is poor sanitation, but amoebic dysentery is much more common in tropical countries. Treatment for bacillary dysentery is usually by administration of fluids to prevent dehydration, but for amoebic dysentery drugs to kill the amoebae are also given.

dyslexia Difficulty in learning to write, spell, and read. It is commonly discovered at school. Dyslexic children are usually of normal intelligence and with special teaching can improve greatly. In some cases the cause is genetic.

dysprosium (Dy) A lanthanide element discovered in 1886. It forms the oxide (Dy₂O₃) and halides (for example DyF₃) and can be separated from the other lanthanides by ion-exchange techniques. At no 66; at wt 162.50; mp 1412°C; bp 2567°C.

Eadred (d. 955) King of England (946–55), who reconquered Northumbria by expelling Eric Bloodaxe (954), its Norwegian king.

Eadwig (or **Edwy**; d. 959) King of England from 955 to 957, when he lost Mercia and Northumbria, and thereafter of Kent and Wessex.

eagle A large broad-winged bird of prey occurring throughout the world, mostly in remote mountainous regions. Eagles have a large hooked bill and strong feet with large curved talons and are typically dull brown. With a wingspan of 1.3–2.4 m, they can soar for long periods searching for food. Family: *Accipitridae* (hawks and eagles). See also **BALD EAGLE**; **GOLDEN EAGLE**.

Eagle owl Europe's largest owl, *Bubo bubo*; it has a body length of 65–70 cm, and is yellowish brown with darker stripes and ear tufts. The eagle owl is endangered, and active measures have been taken to breed it.

ealdorman The chief royal official of the Anglo-Saxon shire. Almost always of noble rank, he presided over the shire court, executed royal orders, and raised the shire military levy. Ealdormen later became the hereditary earls, and the sheriffs succeeded to their duties.

ear The organ of hearing and balance in vertebrates (including man). The human ear is divided into external, middle, and inner parts. Sound waves are transmitted through the auditory meatus and cause the eardrum (tympanic membrane) to vibrate. These vibrations are transmitted through the three small bones (ossicles) of the middle ear to the fenestra ovalis, which leads to the inner ear. A duct (the Eustachian tube) connects the middle ear to the back of the throat (pharynx), enabling the release of pressure that builds up in the middle ear. The cochlea—a spiral organ of the inner ear—contains special cells that convert the sound vibrations into nerve impulses, which

are transmitted to the hearing centres of the brain via the cochlear nerve. The inner ear also contains the organs of balance: three semicircular canals, each of which registers movement in a different plane.

ear. A vertical section through the human ear shows its internal structure; the middle and inner ears are embedded in the bone of the skull. The arrow indicates the direction of sound waves entering the ear.

Earhart, Amelia (1898–1937) US aviator, who was the first woman to fly solo across the Atlantic (1932) and Pacific (1935) Oceans. She died on an attempted flight around the world.

Earl Marshal A hereditary post held by the Duke of Norfolk since 1672. As the senior member of the College of Arms, the Earl Marshal oversees state ceremonies, his staff of office being a golden rod with a black ring at each end.

Early English The style of gothic architecture predominant in England in the 13th century. It is characterized by narrow pointed windows and arches, in contrast to the rounded features of the preceding period.

earth The third planet from the sun, at an average distance of 149.6 million km (93 million mi) from it. Its diameter at the equator is 12 756

km (7926 mi), slightly less at the Poles; its shape is therefore a flattened sphere. It completes an orbit of the sun in 365.26 days, and makes one rotation on its axis every 23.93 hours. The earth is believed to be about 4600 million years old. Geologists divide this time into eras, periods, and epochs (see GEOLOGICAL TIME SCALE). The earth consists of an inner core of solid iron, surrounded by an outer core of molten iron. Surrounding this is the solid mantle, inner and outer, which is separated from the crust by the Mohorovičić Discontinuity. The crust consists of basaltic oceanic crust surmounted by less dense granitic continental crust, which forms the continents. The crust varies in thickness from 5 km under the oceans to 60 km under mountain ranges. The composition of the crust is approximately 47% oxygen, 28% silicon, 8% aluminium, 4.5% iron, 3.5% calcium, 2.5% each sodium and potassium, and 2.2% magnesium. All other elements present occur to an extent of less than 1% each. 70.8% of the earth's surface is ocean.

earthquake A series of shocks felt at the earth's surface, ranging from mild tremblings to violent oscillations, resulting from the fracturing of brittle rocks within the earth's crust and upper mantle. The magnitude of an earthquake depends on the amount of energy liberated in the seismic waves at the focus, where the overstrained rocks fracture. The *Richter scale is used for comparing earthquake magnitudes. The majority of earthquakes occur in certain well-defined seismic zones, corresponding with the junction of lithospheric plates (see PLATE TECTONICS).

earthworm A terrestrial *annelid worm belonging to a class (*Oligochaeta*) found all over the world. Earthworms feed on rotting vegetation, pulling the dead leaves down into their burrows and improving the fertility of the soil. The body consists of about 100 segments.

earwig A nocturnal usually herbivorous insect belonging to an order (*Dermaptera*; about 1100 species) found in Europe and warm regions. It has a dark slender body, a pair of pincers (cerci) at the end of the abdomen, and two pairs of wings.

East Ayrshire A council area of SE Scotland, consisting of the E part of the historic county of Ayrshire. Absorbed into Strathclyde Region in 1975, it became an independent unitary authority in 1996. It consists mainly of a rich agricultural plain. Dairying and cattle breeding are the main agricultural activities. Area: 1252 sq

km (483 sq mi). Population (2001): 120 235. Administrative centre: Kilmarnock.

Eastbourne 51 00N 0 44W A resort in S England, on the East Sussex coast near Beachy Head, where the South Downs reach the sea. Population (1991): 94 793.

East Dunbartonshire A council area of central Scotland, comprising part of the historic county of Dunbarton. Absorbed into Strathclyde Region in 1975, it became an independent unitary authority in 1996. It is mainly low-lying and agricultural. Area: 172 sq km (66 sq mi). Population (2001): 108 243. Administrative centre: Kirkintilloch.

Easter The feast of the resurrection of Christ. Associated by the early Church with the Jewish Passover, the date of celebrating Easter was a matter of controversy. At the Council of Nicaea in 325 AD, it was agreed that it would be linked to the full moon on or following the vernal equinox and might thus fall on any Sunday between 22 March and 25 April. See also GOOD FRIDAY; LENT.

Easter Island (or Rapanui) 27 05S 109 20W A Chilean island of volcanic origin in the S Pacific Ocean. It is famed for its tall stone sculptures. The population is of Polynesian stock. Area: 166 sq km (64 sq mi). Population (latest est): 2000. Chief settlement: Hanga-Roa.

Eastern Roman Empire (or Byzantine Empire) The Roman territories E of the Balkans separated from the western Roman Empire by Diocletian in 293 AD. An eastern emperor and magistrates coexisted with their western counterparts at Rome. Under Constantine the Great the Empire became Christian. Constantinople (previously Byzantium; now Istanbul) was inaugurated as the "New Rome" in 330 AD. The Eastern Empire survived until the fall of Constantinople to the Ottoman Turks in 1453.

Easter Rising (1916) An armed insurrection mainly in Dublin against the British Government. Patrick Pearse, a leader of the Irish Republican Brotherhood, and James Connolly with his Citizen Army, a total of 2000 men, occupied strategic positions in the city and proclaimed the establishment of the Irish Republic. Serious fighting ensued with the government employing artillery. The insurgents surrendered unconditionally and 15 of the leaders were executed.

East India Company 1. (British) A commercial company that was incorporated in 1600 to trade in East Indian spices and came to

wield considerable political power in British India. Its dominance was established at the expense of the French East India Company (founded 1664) by Robert Clive's victories in the Seven Years' War (1756–63). For the next decade the Company controlled government, its powers then being restricted by a series of Government of India Acts. The Company ceased to exist in 1873. 2. (Dutch) A commercial company founded in 1602 to foster Dutch trade in the East Indies. By the late 17th century, it concentrated almost exclusively on the administration of Java.

East Lothian A council area of SE Scotland, on the Firth of Forth and the North Sea. In 1975 the boundaries of the historic county of East Lothian were adjusted to form a district of the same name, in Lothian Region. In 1996 this became an independent unitary authority. Coastal plains in the N rise to hills in the SW. Agriculture, fishing, and tourism are the main economic activities. Area: 678 sq km (262 sq mi). Population (2004 est): 91 580. Administrative centre: Haddington.

Eastman, George (1854–1932) US inventor of the Kodak camera (1888) and founder of the Eastman Kodak Company (1892). In 1884 he patented a photographic film consisting of a paper base on which the necessary chemicals were fixed rather than being applied to photographic plates when required; the paper base was replaced by celluloid in 1889. In 1928 he developed a process for colour photography.

East Renfrewshire A council area of W central Scotland, consisting of part of the historic county of Renfrewshire. Absorbed into Strathclyde Region in 1975, it became a unitary authority in 1996. It is mainly an upland farming area apart from the N, which is a residential area for Glasgow. Area: 173 sq km (67 sq mi). Population (2004 est): 89 610. Administrative centre: Giffnock.

East Riding A county in NE England, a historical division of Yorkshire, on the North Sea and Humber estuary. In 1974 it was incorporated into the new county of Humberside. In 1996 Humberside was abolished and separate unitary authorities were created for the East Riding and Kingston upon Hull: the latter is considered part of the East Riding for ceremonial purposes. The area is mainly flat rising to the Yorkshire Wolds in the N. The main economic activities are farming, fishing, and tourism. Area (excluding Kingston upon Hull): 1748 sq km (675 sq mi). Population (2004 est, ex-

cluding Kingston upon Hull): 324 800. Administrative centre: Beverley.

East River A river in the E USA, a tidal strait and navigable waterway flowing through New York City and connecting New York Harbour with Long Island Sound. Length: 26 km (16 mi).

East Sussex A county of SE England, formerly part of Sussex, on the English Channel. Brighton and Hove became an independent unitary authority in 1997. It consists mainly of undulating land with the South Downs in the S. It is predominantly agricultural. Coastal resorts include Brighton and Eastbourne. Area (excluding Brighton and Hove): 1795 sq km (693 sq mi). Population (2004 est, excluding Brighton and Hove): 496 700. Administrative centre: Lewes.

East Timor (Portuguese name: Timor-Leste) A country in SE Asia, occupying the E part of the island of Timor with a small enclave in W Timor (Indonesia). It is mountainous, with a monsoon climate. The great majority of the population are Roman Catholics. *Economy:* lack of natural resources, underdevelopment, and 25 years of repression and conflict have left East Timor the poorest nation in Asia. 90% of the population live off the land; the main crops are coffee (the chief export), coconuts, and sandalwood. Offshore oil and gas began to be exploited in 2004. *History:* in 1859 Timor was divided between Holland, which took the W part, and Portugal, which took the E. In 1975 East Timor declared its independence but this provoked a military invasion by Indonesia (which had incorporated W Timor in 1949). Wholesale massacres of the Timorese population followed. Formal annexation by Indonesia in 1976 was not recognized by the UN. In a referendum in 1999, 78.5% of the population voted for independence. There followed a campaign of terror by anti-independence militias. In October 1999 Indonesian troops were withdrawn, leaving a UN administration to oversee the transition to independence, finally achieved in May 2002, with the former guerrilla leader, Xanana Gusmão, having been elected president. Jose Ramos Horta became president in 2007. Official languages: Portuguese and Tetum (a *lingua franca*). Currency: US dollar of 100 cents. Area: 14 874 sq km (5743 sq mi). Population (2007 est): 1 084 971. Capital: Dili.

Eastwood, Clint (1930–) US film actor and director. He became popular playing taciturn tough guys in such films as *A Fistful of Dollars* (1964) and *Dirty Harry* (1971); his films as

a director include *Unforgiven* (1992) and *Mystic River* (2003).

ebony The valuable heartwood of several tropical evergreen trees of the genus *Diospyros*. Ebony is very hard, dark, and heavy. It is used for cabinetwork, inlaying, etc. The most important species of trees are *D. ebenum* from India and Sri Lanka and *D. reticulata* from Mauritius. Family: *Ebenaceae*.

Eccles, Sir John Carew (1903–97) Australian physiologist who showed how the different nerve endings could either allow the transmission of nervous impulses to other nerves (excitatory) or prevent their passage (inhibitory). He was awarded the 1963 Nobel Prize with A. F. *Huxley and A. L. Hodgkin.

Ecclesiastes (Greek: the preacher) An Old Testament book consisting of a series of largely pessimistic reflections on human life. Although traditionally ascribed to *Solomon, it is in fact one of the later books to be accepted as part of the Hebrew Bible.

echidna A monotreme mammal belonging to the family *Tachyglossidae* (2 species), of Australia and New Guinea. The Australian echidna (*Tachyglossus aculeatus*), or spiny anteater, is about 45 cm long, with very long spines among its fur, and digs for ants, picking them up with its long sticky tongue. The single egg is incubated in a pouch on the female's belly. The young echidna is suckled at a teat in the pouch.

Echidna In Greek legend, a monster, half woman and half serpent. By the monster Typhon she gave birth to many other legendary monsters, including Chimera, Cerberus, Orthus, Scylla, the Sphinx, and the dragons of the Hesperides and of Colchis.

echinoderm A marine invertebrate animal of the phylum *Echinodermata* (over 6500 species), including *starfish, *sea urchins, *crinoids, *sea cucumbers, etc. Echinoderms usually have a skin-covered skeleton of calcareous plates, often bearing spines. They use hydrostatic pressure to extend numerous small saclike organs (tube feet) used in locomotion, respiration, feeding, etc. Echinoderms generally occur on the sea floor.

Echo In Greek legend, a nymph deprived of speech by Hera and able to repeat only the final words of others. Her hopeless love for *Narcissus caused her to fade away until only her voice remained.

echolocation A method by which certain animals can sense and locate surrounding objects by emitting sounds and detecting the

echo. Insectivorous bats detect the echo by means of large ears or folds of the nostril, and are able to locate their prey when hunting on the wing. Toothed whales and porpoises emit brief intense clicks, enabling them to discriminate very small objects.

echo sounding The use of sound waves to measure the depth of the sea below a vessel or to detect other vessels or obstacles. The device used consists of a source of ultrasonic pulses and an electronic circuit to measure the time taken for the pulse to reach the target and its echo to return to the transducer. The device was developed originally by the Allied Submarine Detection Investigation Committee (ASDIC) in 1920 and was formerly known by this acronym. The name was changed to sonar (sound navigation and ranging) in 1963.

eclipse The passage of all or part of an astronomical body into the shadow of another. A **lunar eclipse** occurs when the moon can enter the earth's shadow at full moon. The gradual obscuration of the moon's surface is seen wherever the moon is above the horizon. A **solar eclipse**, which is strictly an *occultation, occurs at new moon, but only when the moon passes directly in front of the sun. The moon's shadow falls on and moves rapidly across the earth. Observers in the outer shadow region (the penumbra) will see a **partial eclipse**, with only part of the sun hidden. Observers in the dark inner (umbral) region of the shadow will see a **total eclipse**, in which the sun's disc is completely but briefly obscured; the *corona can, however, be seen. If the moon is too far away totally to cover the sun, an **annular eclipse** is observed, in which a rim of light is visible around the eclipsed sun.

eclipse

ecliptic The great circle in which the plane of the earth's orbit around the sun meets the *celestial sphere. It marks the apparent path of the sun across the celestial sphere, relative to the background stars, over the course of a year.

ecology The scientific study of organisms in their natural environment. Modern ecology is concerned with the relationships of different

species with each other and with the environment (habitat). A *community of organisms and their habitat is called an **ecosystem**. Ecologists can calculate the productivity of various ecosystems in terms of energy, with important applications in agriculture. In addition, the effects of man's intervention on natural ecosystems can be predicted, enabling the effective conservation of wildlife and management of game and fish.

e-commerce The use of the *Internet to buy and sell goods and services. Payment is usually by credit card, but other methods, such as digitized e-cash, are available.

economics A social science concerned with the production of goods and services, their distribution, exchange, and consumption. **Microeconomics** is concerned with the problems facing individuals and firms, while **macroeconomics** is concerned with the economy of a country and regulation of the economy by governments. See also **MONETARISM**.

ecstasy A street name for the illegal hallucinogen 3,4-methylene dioxymethamphetamine (MDMA), which first became a popular recreational drug in the 1980s. Side-effects include overheating and dehydration, which may cause users to drink dangerous amounts of water. Persistent use may also cause memory loss.

ectopic pregnancy Pregnancy occurring elsewhere than in the womb, most commonly in a Fallopian tube. It may lead to abortion or, more seriously, to rupture of the tube, with pain, bleeding, and shock. The usual treatment is surgical removal of the fetus and tube.

Ecuador, Republic of A country in NW South America, lying on the Equator, from which it takes its name. It includes the *Galápagos Islands. It consists chiefly of a coastal plain in the W, separated from the tropical jungles and rivers of the Amazon basin by the Andes (containing several active volcanoes). There are frequent earthquakes. The population is largely of Indian and mixed race, with minorities of European and African descent. *Economy:* mainly agricultural, with cash crops (bananas, coffee, and cocoa) grown in the lower coastal areas. Much of the country is forested and valuable hardwoods are produced. Fishing and the oil industry are important. *History:* the Andean kingdom of Quito had already been conquered by the Incas when the Spanish established a colony in 1532. It gained independence in 1821 and in 1822 joined Gran Colombia under *Bolívar. In 1830 it became the indepen-

dent republic of Ecuador. Between 1934 and 1972 the would-be dictator Velasco Ibarra (1893–1979) was five times elected president but each time deposed by the military. A new democratic constitution was introduced in 1979 and free elections were held: since then governments have faced problems of economic crisis, unrest, and threatened military intervention. Financial and economic crisis in 2000 led to the resignation of the cabinet, the adoption of the US dollar, rising disorder, and a coup led by the military. In 2007 the left-winger Rafael Correa was elected president. Official language: Spanish. Currency: US dollar of 100 cents. Area: 270 670 sq km (104 505 sq mi). Population (2007 est): 13 755 680. Capital: Quito.

eczema Inflammation of the skin, often without obvious cause. Eczema resulting from contact with irritant or allergy-provoking substances, infections, drugs, or radiation is usually called dermatitis.

Eddy, Mary Baker (1821–1910) US religious leader, founder of *Christian Science. Often ill as a young woman, Mrs Eddy was influenced by the spiritual leader Phineas Parkhurst Quimby (1802–66). She published her beliefs in *Science and Health* (1875) and in 1879 founded the Church of Christ, Scientist, in Boston.

edelweiss A common perennial alpine plant, *Leontopodium alpinum*, from Europe and South America, often grown in rock gardens. About 15 cm high, it has woolly leaves and tiny yellow flowers surrounded by whitish felted bracts. Family: *Compositae* (daisy family).

Eden, Anthony See **AVON**, (ROBERT) ANTHONY EDEN, 1ST EARL OF.

Edgar (c.943–75) The first king of a united England (959–75). He allowed his Danish subjects to retain Danish laws. Edgar promoted a monastic revival, encouraged trade by reforming the currency, and improved naval defence.

Edgar the Aetheling (c.1050–c.1130) The grandson of Edmund II Ironside; his title Aetheling means royal prince. His claim to the English throne was rejected in 1066 owing to his minority and ill health. In 1068 and 1069 he led revolts against William I but came to terms with him in 1074.

Edinburgh 1. 55°57N 3°13W The capital of Scotland, a city in the E centre of the country, in City of Edinburgh council area, on the Firth of Forth. In the old town, atop steep basalt cliffs that rise above the city, stands the castle. The Royal Mile extends E from the castle rock to the Palace of Holyrood House (begun c.1500).

The other famous thoroughfare is Princes Street. The new town contains fine Georgian architecture situated around a network of broad streets, squares, and circuses. *History*: strategically important in medieval times in the wars between England and Scotland, Edinburgh emerged as the national capital in the 15th century. After James VI of Scotland (James I of England) moved his court to London in 1605 Edinburgh suffered a decline, but by the mid-18th century it was a centre of learning. The annual Edinburgh International Festival was founded in 1947. The city has been the seat of the Scottish Parliament since 1999. Population (1991): 401 910. **2. City of Edinburgh**. A council area in E central Scotland, created from part of Lothian Region in 1996. Area: 262 sq km (101 sq mi). Population (2001): 448 624.

Edison, Thomas Alva (1847–1931) US inventor, owning a large research laboratory in Menlo Park, New Jersey. His most famous invention, the electric light bulb, was constructed in 1879. By 1881 Edison had built a generating station and was supplying electricity to over 80 customers. Among his other 1300 inventions were the gramophone and improvements to Bell's telephone. He also discovered thermionic emission, enabling J.A. *Fleming to produce the first thermionic valve.

Edmonton 53 34N 113 25W A city in W Canada, the capital of Alberta on the North Saskatchewan River. Population (1996): 616 306.

Edmund I (921–46) King of England (939–46), who expelled the Norse king Olaf from Northumbria (944).

Edmund II Ironside (c. 981–1016) The son of Ethelred II of England. His struggle with Canute for the vacant throne ended in Edmund's defeat at Ashington (1016). Canute agreed on the partition of England with Edmund, but after Edmund's sudden death Canute acquired the whole kingdom.

Edward I (1239–1307) King of England (1272–1307), succeeding his father Henry III. He married (1254) *Eleanor of Castile. He encouraged parliamentary institutions at the expense of feudalism and subdued Wales, on which he imposed the English system of administration. He later tried to assert his authority over Scotland and died while on his way to fight Robert Bruce (see ROBERT (1) THE BRUCE).

Edward II (1284–1327) King of England (1307–27), succeeding his father Edward I. He became the first English Prince of Wales (1301). He married (1308) Isabella of France (1292–1358).

His reign was troubled by his extravagance, his military disasters in Scotland, notably at Bannockburn (1314), and the unpopularity of his favourites, Piers Gaveston (d. 1312) and Hugh le Despenser (1262–1326), which led to his murder.

Edward III (1312–77) King of England (1327–77), succeeding his father Edward II. He assumed effective power in 1330 after imprisoning his mother Isabella of France (1292–1358) and executing her lover Roger de Mortimer. Thereafter his reign was dominated by military adventures, his victories in Scotland encouraging him to plan (1363) the union of England and Scotland. Through his mother he claimed the French throne, thus starting (1337) the *Hundred Years' War. His son *John of Gaunt dominated the government during his last years.

Edward IV (1442–83) King of England (1461–70, 1471–83) during the Wars of the *Roses. The Yorkist leader, he was crowned after defeating the Lancastrians at Mortimer's Cross and Towton (1461). He was forced from the throne (1470) by the Earl of *Warwick but regained it after defeating the Lancastrians at Tewkesbury (1471).

Edward V (1470–?1483) King of England (1483), succeeding his father Edward IV. His uncle, the Duke of Gloucester, imprisoned Edward and his brother Richard in the Tower of London, deposed Edward after a reign of only three months, and had himself crowned as Richard III. The two boys, known as the Princes in the Tower, were probably murdered in 1483.

Edward VI (1537–53) King of England (1547–53) and the son of Henry VIII, whom he succeeded, and Jane *Seymour. Effective power was held by the protector, the Duke of *Somerset, until 1550, when the Duke of *Northumberland seized power. Edward became a fervent Protestant and during his reign the *Reformation in England made substantial progress.

Edward VII (1841–1910) King of the United Kingdom (1901–10), succeeding his mother Queen Victoria. He married (1863) *Alexandra of Denmark. As Prince of Wales his indiscretions caused Victoria to exclude him from all affairs of state, but he became a popular king.

Edward VIII (1894–1972) King of the United Kingdom (1936), succeeding his father George V. He abdicated on 11 December 1936, because of constitutional objections to his liaison with the twice-divorced Mrs Wallis Simpson (1896–1986), whom he married in France in 1937.

He became Duke of Windsor and was governor of the Bahamas during World War II. He subsequently lived in France until his death.

Edward, the Black Prince (1330–76) Prince of Wales and the eldest son of Edward III. His nickname may refer to the black armour he was said to have worn at Crécy (1346). He won victories against France in the *Hundred Years' War and ruled Aquitaine from 1360 until ousted (1371).

Edward the Confessor (c.1003–66) King of England (1042–66), nicknamed for his piety and his foundation of a new Westminster Abbey (consecrated 1065). His early reign was dominated by rivalry between his Norman favourites and his father-in-law Earl Godwin (d. 1053). After 1053 the Godwins were in the ascendant. Edward's childlessness resulted in rival claims to the throne by two named heirs (see HAROLD II; WILLIAM I) THE CONQUEROR) and led ultimately to the Norman conquest. He was canonized in 1161.

Edward the Elder (d.924) King of England (899–924), succeeding his father Alfred the Great. He defeated the Danes (918), taking East Anglia, and also conquered Mercia (918) and Northumbria (920).

Edward the Martyr (c.963–78) King of England (975–78), succeeding his father Edgar. He was murdered at Corfe Castle in Dorset and canonized in 1001. Feast day: 18 March.

Edwin (c.585–633) King of Northumbria (616–33), who became overlord of all English kingdoms S of the Humber, except for Kent. His marriage to Ethelburh, a Christian, led to his conversion and that of his people to Christianity (627). He was killed in battle against Penda of Mercia.

eel A snakelike *bony fish of the worldwide order *Anguilliformes* (or *Apodes*; over 500 species) having, usually, a scaleless body, no pelvic fins, and long dorsal and anal fins. Most species are marine, occurring mainly in shallow waters and feeding on other fish. The freshwater eels (family *Anguillidae*) migrate to the sea to breed—the *Sargasso Sea in the case of European and American species—and the young eels (elvers) return to rivers and streams. See also ELECTRIC EEL.

eelgrass A perennial herbaceous marine plant of the genus *Zostera*, especially *Z. marina*, which grows in muddy intertidal flats and estuaries on the coasts of Europe and North America. It has creeping underground stems (rhizomes), which help to stabilize mudbanks,

and broad dark-green grasslike leaves. Family: *Zosteraceae*.

EFTA See EUROPEAN FREE TRADE ASSOCIATION.

egg (or **ovum**) The female reproductive cell (see GAMETE), which—when fertilized by a male gamete (sperm)—develops into a new individual. Animal eggs are surrounded by nutritive material (yolk) and—usually—one or more protective membranes, for example a jelly coat in amphibian eggs, the shell and other layers in birds' eggs. In mammals the egg is nourished from the maternal circulation and thus has less yolk than the eggs of other egg-laying animals in which the embryo is nourished by the yolk. See also OVARY.

eglantine See SWEET BRIAR.

ego In *psychoanalysis, the part of the mind that is closely in touch with the demands of external reality and operates rationally. It includes some motives (such as hunger and ambition), the individual's learned responses, and his (or her) conscious thought. It has to reconcile the conflicting demands of the *id, the *superego, and the outside world.

egret A white bird belonging to the *heron subfamily. The great white egret (*Egretta alba*) has long silky ornamental plumes in the breeding season. The smaller cattle egret (*Aroleola ibis*) is 50 cm long and follows large grazing animals.

Egypt, Arab Republic of A country in NE Africa, extending into SW Asia. It consists mostly of desert—the *Sinai Peninsula, the Eastern Desert (a vast upland area), and the Western Desert (an extensive low plateau); most of the population is concentrated along the fertile Nile Valley. *Economy*: the introduction of modern irrigation schemes, such as the *Aswan High Dam, has led to an increase in the quantity and diversity of agricultural products, especially cotton. There has been considerable expansion of the industrial sector since the 1950s. Oil was discovered in 1909 and production has greatly increased; petroleum refining is an important industry. Natural gas is also being exploited. Egypt's many historical and archaeological remains make tourism important, although this is threatened by Islamic terrorism. *History*: ancient Egyptian history is traditionally divided into 30 dynasties, beginning in about 3100 BC with the union of Upper and Lower Egypt by Menes and ending in 343 BC with the death of the last Egyptian *pharaoh, Nectanebo II. The dynasties are

grouped into the Old Kingdom (3rd–6th dynasties; c. 2686–c. 2160), the First Intermediate Period (7th–11th dynasties; c. 2160–c. 2040), the Middle Kingdom (12th dynasty; c. 2040–c. 1786), the Second Intermediate Period (13th–17th dynasties; c. 1786–c. 1567), and the New Kingdom (18th–20th dynasties; c. 1570–1085). During the New Kingdom there was territorial expansion and, later, trouble with the Sea Peoples; the 20th dynasty also saw the priests' power rise at the kings' expense. The outcome of Egypt's decline under the 21st–25th dynasties (1085–664) was the Assyrian invasion under Esarhaddon (671) and the 26th dynasty (664–525) was brought to an end by the Persian Achaemenians. Achaemenian rule was interrupted by the native 28th, 29th, and 30th dynasties (404–343) and was finally ended by Alexander the Great of Macedon, who obtained Egypt in 332.

On Alexander's death Egypt was acquired by the Macedonian Ptolemy I Soter. The Ptolemies ruled until the suicide of *Cleopatra VII in 30 BC, when Egypt passed under Roman rule. In 395 AD, Egypt became part of the Byzantine (Eastern Roman) Empire. The Arabs conquered Egypt in 642 and it was then governed by representatives of the caliphate of Baghdad, under whom Islam was introduced. After 868 it gained virtual autonomy under a series of ruling dynasties. The last of these, the Fatimids, were overthrown by *Saladin, who restored Egypt to the caliphate in 1171. It was ruled by the Mamelukes from 1250 until 1517, when it was conquered by the Ottoman Turks. By the early 18th century power was largely in the hands of the Mameluke elite.

In 1798 Napoleon established a French protectorate over Egypt, which in 1801 was overthrown by the British and Ottomans. Mehemet 'Ali was brought to power as viceroy in 1805, and in 1840 he was recognized by the Ottomans as hereditary ruler. In 1869 the opening of the Suez Canal enhanced Egypt's international significance and from 1882 the British dominated Egyptian government in spite of nominal Ottoman suzerainty. Egypt was a British protectorate from 1914 until independence under King Fu'ad I was granted in 1922. In 1936 his son Farouk signed a treaty of alliance with Britain, which retained rights in the Suez Canal zone, and in World War II Egypt joined the Allies. The immediate postwar period saw the first Arab-Israeli War (1948–49) and a military coup (1952) that overthrew the monarchy and brought *Nasser to power (1954). Nasser's nationalization of the Suez Canal in 1956 precipitated an invasion by Israeli and Anglo-French forces, which were compelled by the UN to

withdraw. In 1958 Egypt, Syria, and subsequently North Yemen formed the United Arab Republic. Conflict with Israel erupted again in 1967, when in the Six Day War Egypt lost the Sinai peninsula, which was partly regained in the fourth war (1973). In 1970 Nasser was succeeded by Sadat, who in 1972 brought Egypt's close relationship with the Soviet Union to an end. In 1979, under US influence, Egypt and Israel signed a peace treaty and Egypt was expelled from the Arab League. Opposition to Sadat's policies culminated in his assassination by Islamic extremists in 1981. He was succeeded by Hosni Mubarak (1929–). Egypt was readmitted to the Arab League in 1989 but has suffered continuing terrorist attacks by Islamic extremists. In 2005 Mubarak was victorious in Egypt's first multi-candidate elections. Official language: Arabic. Currency: Egyptian pound of 100 piastres. Area: 1 000 000 sq km (386 198 sq mi). Population (2007 est): 80 335 036. Capital: Cairo.

Ehrlich, Paul (1854–1915) German bacteriologist, who studied acquired immunity to disease and, with Emil Behring (1854–1917), prepared a serum against diphtheria. In 1910 he produced an arsenical compound (Salvarsan) for treating syphilis. Ehrlich shared a Nobel Prize (1908) with I. I. Metchnikov (1845–1916).

Eichmann, Adolf (1906–62) German Nazi, appointed at the *Wannsee Conference to implement the planned extermination of European Jews. After World War II he went into hiding in Argentina; captured by the Israelis in 1960, he was tried and hanged for war crimes.

eider A large sea *duck, *Somateria mollissima*, of far northern sea coasts. About 55 cm long, males are mostly white with a black crown, belly, and tail; females are mottled dark brown. The soft breast feathers of the female are the source of eiderdown.

Eiffel Tower A metal tower in Paris, 300 m (984 ft) high, built for the 1889 Centennial Exposition by the French engineer Alexandre-Gustave Eiffel (1832–1923).

Eiger 46 34N 8 01E A mountain in central S Switzerland, in the Bernese Oberland. Its difficult N face was first climbed successfully in 1938. Height: 3970 m (13 025 ft).

Eightfold Path (or **The Noble Eightfold Path**) In Buddhism the fourth of the *Four Noble Truths, which summarizes the eight ways that lead the Buddhist to enlightenment. They are: right understanding, right resolve, right speech, right action, right livelihood,

right effort, right mindfulness, and right meditation.

Eilat (Elat or Elath) 29 33N 34 57E A resort and port in extreme S Israel, on the Gulf of Aqaba. The modern city was founded in 1949. Population (latest est): 26 000.

Einstein, Albert (1879–1955) German physicist. While working at the Patent Office in Berne, Switzerland, he continued his researches into theoretical physics and in 1905 published four highly original papers. One gave a mathematical explanation of the Brownian movement (see BROWN, ROBERT), the second explained the photoelectric effect in terms of *photons, the third announced his special theory of *relativity, and the fourth related mass to energy. In 1916 he extended the theory of relativity to the general case. He received the 1921 Nobel Prize for Physics. Einstein was lecturing in California when Hitler came to power in 1933. Being Jewish, he remained in the USA, spending the rest of his life at the Institute for Advanced Study in Princeton, unsuccessfully seeking a *unified field theory. He became a US citizen in 1940. Einstein was persuaded in 1939 to write to President Roosevelt warning him that an atom bomb could now be made and that Germany might make one. He took no part in its manufacture and became a postwar advocate of nuclear disarmament.

einsteinium (Es) An artificial transuranic element discovered by Ghiorso and others in 1952 and named after Albert Einstein. It behaves chemically as a trivalent actinide. Its 11 isotopes are all radioactive; the longest-lived has a half-life of 275 days. At no 99; at wt (252).

Eisenhower, Dwight D(avid) (1890–1969) US general and statesman; Republican president (1953–61). In World War II he was commander of US troops in Europe (1942), of Allied forces in N Africa and Italy (1942–43), and then supreme commander of Allied forces in Europe (1943). He commanded the forces in the D-Day invasion of Normandy. In 1951 he became supreme commander of NATO. A popular president, "Ike" initiated social welfare programmes. His administration spanned the Cold War years and was marred by the anti-communist agitation of Joseph *McCarthy. The **Eisenhower Doctrine** (1957) offered economic and military help to Middle Eastern nations to impede communist advances.

Eisenstein, Sergei (1898–1948) Russian film director. His films, which include *Battleship Potemkin* (1925), *Alexander Nevsky* (1938), and *Ivan*

the Terrible (1942–46), used advanced editing and montage techniques.

eisteddfod A Welsh festival of literature, music, and drama. A medieval tradition, it later declined but was revived as the chief national cultural event during the 19th century.

Ekaterinburg (name from 1924 until 1991: Sverdlovsk) 56 52N 60 35E A city in NW Russia. Nicholas II and his family were all executed here in 1918. Population: (1999 est): 1 272 900.

eland A large horned antelope belonging to the genus *Taurotragus* (2 species), of African plains. The common eland (*T. oryx*) is light brown with thin vertical white stripes towards the shoulders. The Derby eland (*T. derbianus*) has a black neck with a white band at the base. Both species have a black-tufted tail and dewlap.

elastic modulus The ratio of the stress on a body obeying Hooke's law to the strain produced. The strain may be a change in length (Young's Modulus) or a change in volume (bulk modulus).

Elba An Italian island in the Tyrrhenian Sea. Napoleon I was exiled here (1814–15) following his abdication. Area: 223 sq km (86 sq mi). Population (1991 est): 27 722.

Elbe, River (Czech name: Labe) A river in central Europe, flowing mainly NW from the N Czech Republic, through Germany to the North Sea at Hamburg. It is connected by various canal systems to the Rivers Weser and Rhine as well as to the River Oder. Length: 1165 km (724 mi).

El Cid (Rodrigo Díaz de Vivar; c. 1040–99) Spanish warrior, immortalized in the epic poem *Cantar del mio Cid*. A vassal of Alfonso VI of Castile, he was exiled by the king in 1079 and became a soldier of fortune, fighting for both Spaniard and Moor. Always loyal to his king, he was returned to favour and became protector and then ruler of Valencia.

elder A shrub or tree of the genus *Sambucus* (40 species), found in temperate and subtropical areas. The cream-coloured flowers, grouped into flat-topped clusters, can be used in tea or wine. The red or black berries are used in wine, jams, and jellies. The common European elder is *S. nigra*. Family: *Caprifoliaceae*.

Eldorado (Spanish: the golden one) An Indian ruler in Colombia who, according to legend, ritually coated himself in gold dust before bathing in a lake. The name was later applied to a region of fabulous wealth suggested by

this legend. The conquest of South America in the 16th century was hastened by expeditions seeking Eldorado, notably those of Francisco *Pizarro (1539) and Jiménez de Quesada (1569–72).

Eleanor of Aquitaine (c. 1122–1204) The wife (1137–52) of Louis VII of France and, after the annulment of their marriage, the wife (1154–89) of Henry II of England. Henry imprisoned her (1174–89) for complicity in their sons' rebellion against him. After Henry's death she helped to secure their peaceful accession as Richard I (1189) and John (1199).

Eleanor of Castile (1246–90) The wife (from 1254) of Edward I of England. Edward erected the **Eleanor Crosses** (e.g. Charing Cross) wherever her body rested on its way from Nottinghamshire, where she died, to her funeral in London.

electoral college An indirect electoral system used in the US for electing the president and vice president. Each state chooses by popular vote a number of electors to send to an electoral college. This number is equal to its number of representatives in the House of Representatives plus its two senators. All the electors chosen by a state pledge themselves to vote for the presidential candidate with the highest popular vote in the state. Thus the majority of the elected president is enhanced in the college, giving an increased influence to the more populous states.

Electra In Greek legend, the daughter of Agamemnon and Clytemnestra. She helped her brother Orestes escape after the murder of Agamemnon and later helped him to kill Clytemnestra and her lover Aegisthus.

electric car A car driven by one or more electric motors, which are powered by batteries. Diminishing oil reserves and the pollution problems associated with the *internal-combustion engine have intensified the search for an effective electric car (see GREENHOUSE EFFECT). Although milk floats have been in use since the 1930s, no electric car can yet compete with a petrol-driven car, as even a light car using 280 kg of expensive nickel-cadmium batteries with regenerative braking only has a 50–60 mile range. Two lines of research are therefore being pursued: improving accumulators and making workable *fuel cells. The hybrid electric car carries its own petrol-engine-driven generator for use outside towns.

electric charge A property of certain elementary particles (see PARTICLE PHYSICS) that

causes them to undergo *electromagnetic interactions. The magnitude of the charge is always the same and is equal to 1.6021×10^{-19} coulomb (although quarks have a fractional charge). Charge is of two kinds, arbitrarily called positive and negative. Like charges repel each other and unlike charges attract each other. The force (F) between charges q_1 and q_2 is given by Coulomb's law, $F = q_1 q_2 / 4\pi\epsilon_0 d^2$, where ϵ_0 is the electric constant and d is the distance between charges.

electric constant (ϵ_0) A constant that appears in Coulomb's law (see ELECTRIC CHARGE). Its value is 8.854×10^{-12} farad per metre. It is also known as the absolute *permittivity of free space. Compare MAGNETIC CONSTANT.

electric eel An eel-like freshwater fish, *Electrophorus electricus*, that occurs in NE South America. Up to 3 m long, it has electric organs—modified muscle tissue—in the tail, which produce shocks capable of killing prey and of stunning a human being. Family: *Electrophoridae*; order: *Gymnotiformes*.

electric field The pattern of the lines of force that surround an electric charge. The field strength at any point is inversely proportional to the square of the distance of that point from the charge (Coulomb's law). Any other charge placed in this field experiences a force proportional to the field strength and to the magnitude of the introduced charge. The force is attractive if the charges are opposite and repulsive if they are alike.

electric generator A device for converting mechanical energy into electricity, usually by *electromagnetic induction. A simple electromagnetic generator, or dynamo, consists of a conducting coil rotated in a magnetic field. Current induced in this coil is fed to an external circuit by slip rings in an alternating-current generator (called an alternator) or by a commutator, which rectifies the current, in a direct-current generator.

Most of the electricity from *power stations is produced by alternators as three-phase alternating current, i.e. there are three windings on each generator, producing three separate output voltages. For transmission there are three conductor wires with a common neutral wire. Generally, all three phases are supplied to large factories but the supply is split to single phase for homes, shops, and offices.

electricity The phenomena that arise as a result of *electric charge. Electricity has two forms: *static electricity, which depends on

Modern life depends on electricity in so many ways, yet it is not known exactly what it is.

Atoms consist of electrons, protons, and neutrons. The electrons cluster round the central nucleus of protons and neutrons.

Electrons have a negative electric charge — protons are positively charged. The charges are equal but opposite.

Similar charges repel each other, opposite charges attract each other. These are the forces harnessed to make electricity.

An electrical current consists of a flow of electrons in one direction. But in many atoms, such as helium, they are tightly bound to the nucleus. To flow as a current electrons have to be free.

In a metal wire some of the electrons are free to move about between the metal ions (atoms that have lost an electron). Normally they move about at random and no current flows.

When the majority of electrons flow in one direction this is an electric current. 1 ampere is equivalent to a flow of 6×10^{18} electrons per second.

There are two main methods of making electrons flow to generate a current.

One method is to subject them to a changing magnetic field — this is the principle of the dynamo. If a coil of wire is rotated between the poles of a magnet, the electrons are forced round the coil. This is the power-station method; coal or oil is burned to raise steam to drive a turbine, which rotates the coils.

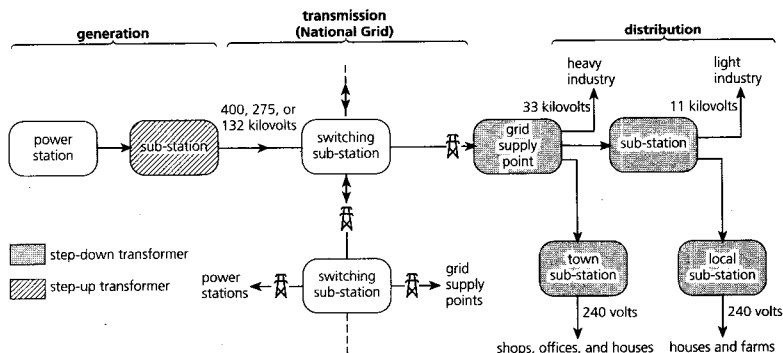

The other way is to make use of a chemical reaction in an electric cell to dissociate the electrons from their atoms and molecules. The separated charges then flow in opposite directions as a result of the forces between them. This is how a battery works. The sulphuric acid dissolves the zinc electrode producing 2 electrons, a sulphate ion (SO_4^{2-}), 2 zinc ions (Zn^{2+}), and 2 hydrogen ions (H^+).

electricity

stationary charges, and current electricity, which consists of a flow of charges, specifically *electrons. Current electricity was first demonstrated by Volta in 1800 and investigated by *Ampère during the next 25 years. Oersted's discovery (1820) that a magnetic needle was deflected by an electric current inspired *Faraday to a deep investigation of the relationship between electricity and magnetism, which led him to the discovery of *electromagnetic induction, the *electric generator, and the *elec-

tric motor. The theory of electromagnetism was elucidated by Clerk *Maxwell in the mid-1850s.

electricity supply The system that generates (see POWER STATION), transmits, and distributes the electric power in an industrialized society. Power stations are interconnected by transmission lines to form a grid. Grid-control centres continuously monitor the load from factories, offices, homes, etc., and match it with the best combination of available generating

electricity supply. A schematic diagram of the UK system.

capacity, maintaining the supply at a constant voltage and frequency. Base-load stations run continuously. These are usually the larger or cheaper-to-run nuclear and gas- or coal-fired stations. Less economic or smaller stations that are easier to start up and shut down are brought in to supply the peak demand. The grid voltage is reduced at substations for area distribution and further reduced at local substations to the UK domestic supply voltage of 240 volts.

electric motor A device that converts electrical energy into mechanical energy, usually for driving machinery. They depend on the principle that a current-carrying conductor in a magnetic field experiences a force and that when two electromagnets are placed close together the two magnetic fields force them apart. The simplest type of motor uses this principle to turn a single coil of wire (the armature or rotor) between the poles of a permanent magnet. Practical motors use a stationary winding (stator) in place of a permanent magnet. Most motors work on an alternating-current (ac) supply. In the induction motor, current is fed to the stator, which induces a current in the rotor; interaction between the magnetic field of the stator and the induced rotor current causes the rotor to rotate. In the synchronous ac motor, current is also fed to the rotor (through slip rings) and the rate of rotation is proportional to the supply frequency. In a dc motor current is fed to the rotor through a commutator. See also LINEAR MOTOR.

electric ray A fish, also called torpedo ray, belonging to a family (*Torpedinidae*) found mainly in shallow waters of warm and temper-

ate regions. Electric organs—modified muscle tissue—on each side of the disclike head produce electric shocks used in defence and food capture. Order: *Batoidea* (see RAY).

electrocardiography Examination of the electrical activity of the heart. Impulses generated by the contraction of the heart muscle are transmitted through electrodes attached to the skin to a recording apparatus (electrocardiograph). The recording itself, an electrocardiogram (ECG), indicates the rhythm of the heart and aids in the diagnosis of heart disease.

electroconvulsive therapy (ECT) A treatment for mental disorders, such as endogenous depression, in which an electric current is passed through the brain in order to cause a convulsion. The convulsion is greatly reduced by giving an anaesthetic and drugs to relax the muscles.

electroencephalography The measurement of the electrical activity of the brain and the recording of the brain waves in the form of a tracing—an electroencephalogram (EEG). Brain waves were first recorded from electrodes on the scalp in 1926. Electroencephalography is now used widely to diagnose diseases of the brain and to study brain function. See also MAGNETIC RESONANCE IMAGING.

electrolysis The chemical decomposition of a substance by passing an electric current through it. If a voltage is applied across two electrodes placed in a liquid (electrolyte) containing ions, the positive ions will drift towards the negative electrode (cathode) and the negative ions towards the positive electrode (anode). At the electrodes, the ions may give up their charge and form molecules. Alterna-

tively, the atoms of the electrode may ionize and pass into solution. Electrolysis is used to electroplate metals and in the manufacture of a number of chemicals, such as sodium and chlorine.

electromagnet See MAGNET.

electromagnetic field A concept describing electric and magnetic forces that, like gravitational forces, act without physical contact (action at a distance). The interaction of electricity and magnetism was first investigated in the 19th century. Faraday explained the electromagnetic interaction in terms of magnetic lines of force, forming a field of force, which is distorted by the presence of a current-carrying conductor or by another magnet. James Clerk *Maxwell developed the theory that electricity and magnetism are different manifestations of the same phenomenon (the electromagnetic field), magnetism being the result of relative motion of *electric fields.

electromagnetic induction The production of voltage in an electrical conductor when it is in a changing magnetic field or if it moves in relation to a steady magnetic field. The direction of the induced *electromotive force opposes the change or motion causing it. Since a current-carrying conductor itself induces a magnetic field, if the current changes, **self-inductance** occurs, opposing the current change. **Mutual inductance** occurs between two adjacent conductors that carry changing currents.

electromagnetic interaction An interaction that occurs between elementary particles that possess an electric charge. The interaction can be visualized as the exchange of virtual photons (see VIRTUAL PARTICLE) between the interacting particles. The electromagnetic interaction is 200 times weaker than the *strong interaction but 10^{10} times stronger than the *weak interaction. See also PARTICLE PHYSICS.

electromagnetic radiation Transverse waves consisting of electric and magnetic fields vibrating perpendicularly to each other and to the direction of propagation. In free space the waves are propagated at a velocity of 2.9979×10^8 metres per second, known as the velocity of light (symbol: c). Their *wavelength, λ , and *frequency, f , are related by the equation $\lambda f = c$. Those with the highest frequencies are known as *gamma radiation; then in descending order of frequency the **electromagnetic spectrum** includes X-rays, *ultraviolet radiation, visible *light, *infrared radiation, *mi-

crowaves, and *radio waves. Electromagnetic radiation exhibits typical wave properties, such as *refraction, *diffraction, *interference, and polarization. However, it has a dual nature in that it can also be regarded as a stream of massless elementary particles called *photons.

electromagnetic radiation

electromotive force (emf) The electrical potential difference or voltage between two points in an electric circuit. It causes the movement of charge that constitutes an electric current.

electron A stable negatively charged elementary particle with mass 9.10956×10^{-31} kilogram and spin $\frac{1}{2}$. Electrons are responsible for almost all commonly observed electrical and magnetic effects and, since they orbit the nucleus in atoms, are also responsible for most chemical processes. A **free electron** is one that has become detached from an atom. An electric current passing through a metal or low-pressure gas consists of a flow of free electrons; a current of 1 ampere is equivalent to a flow of 6×10^{18} electrons per second.

electronic fund transfer (EFT) A means of charging a sale to a customer's bank account or credit card by a computer at the retail outlet connected to the telephone network. For example, supermarket sales can be paid for by using a debit card, which instantly debits the customer's bank or building society account.

electronic mail (or e-mail) A means of transmitting and receiving text using a system of computers connected to the telephone network. Subscribers send messages by keyboarding them into a microprocessor and transmitting them by telephone line to a central computer. To receive a communication, a subscriber calls up the central computer and receives any communications addressed to it on its microprocessor and printer.

electronics The study of devices that control

and utilize the movement of *electrons and other charged particles. Originating with the invention of thermionic valves, it expanded rapidly during World War II to include radar, missile guidance systems, and *computers. The replacement of bulky *thermionic valves by *semiconductor components, such as *transistors, and later by *integrated circuits has resulted in much more compact and reliable equipment. The social impact of electronics has been immense, leading for example to the development of television, communications satellites, and the computerization of office and factory systems.

electronic tagging A method of monitoring the movements of persons convicted of certain offences as an alternative to prison. The offender wears a microchip device emitting a signal to a transmitter attached to a telephone. If the offender moves out of a 75-metre (250-ft) range, the telephone sends a message to a controlling computer.

electron microscope A type of microscope in which a beam of electrons is focused by means of magnetic and electrostatic lenses onto a specimen and scattered by it to produce an image. Typically an electron microscope can

electron microscope. The beam of electrons in the transmission electron microscope is focused in a similar way to light in an ordinary microscope.

resolve two points 10^{-9} metre apart and produce magnifications of up to a million.

electronvolt (eV) A unit of energy equal to the increase in the energy of an electron when it passes through a rise in potential of one volt. $1 \text{ eV} = 1.6 \times 10^{-19}$ joule.

electroplating The process of depositing a layer of one metal on another by making the object to be plated the cathode in an electrolytic bath (see ELECTROLYSIS). Metals used for electroplating include silver (see SILVER-PLATE), gold, chromium, cadmium, copper, zinc, and nickel; they usually form the anode in the bath.

elements Substances that cannot be broken down into simpler fragments by chemical means. A sample of an element contains atoms that are chemically identical, since they have the same *atomic number and thus the same number of electrons around the nucleus. Samples of a given element may consist of a mixture of *isotopes. Over 100 elements are known, of which about 90 occur naturally, the rest having been synthesized in nuclear reactions. See also PERIODIC TABLE.

elephant A mammal of the order *Proboscidea*: the African elephant (*Loxodonta africana*) or the Indian elephant (*Elephas maximus*). (The extinct *mammoth also belonged to this order.) Elephants have a tough brownish-grey skin and a prehensile trunk—an extension of the nose and upper lip used to convey food (vegetation) and water to the mouth. The upper incisor teeth are continually growing ivory tusks. Elephants live in herds. The African elephant is the largest land mammal, standing 3–4 m high at the shoulder. The smaller Indian elephant—intelligent and readily trained—is used for transport and heavy work.

elephantiasis A chronic infection caused by nematode worms, called filariae. The worms block the lymphatic channels causing swelling of the legs and scrotum (or vulva). Elephantiasis occurs only in the tropics.

elephant seal A large seal belonging to the genus *Mirounga* (2 species). The male Antarctic elephant seal (*M. leonina*) grows to over 6 m; females are about half that size. The slightly smaller northern elephant seal (*M. angustirostris*) lives off the W coast of North America.

Elgar, Sir Edward (1857–1934) British composer. A professional violinist, Elgar wrote choral works, two symphonies, concertos for

violini and cello, and chamber music. His most famous works are the *Dream of Gerontius* (1900), the *Enigma Variations* (1899), and the *Pomp and Circumstance* marches (1901–30).

Elgin Marbles Ancient Greek marble sculptures, mostly a frieze from the *Parthenon, sold to the British Museum in 1816 by Lord Elgin for £35,000. He acquired them from the Turks occupying Athens, who were using the Parthenon for target practice. The British government has not yielded to Greek agitation for their return.

El Greco (Domenikos Theotokopoulos; 1541–1614) Painter of Greek parentage, born in Crete, who worked mainly in Spain. He trained in Venice under Titian in the 1560s and in 1577 moved to Spain, settling in Toledo. His early Spanish works were Venetian in inspiration, but his later paintings of saints and his masterpiece, *The Burial of Count Orgaz* (1586–88), are characterized by strident colours and dramatically elongated figures.

Eliot, George (Mary Ann Evans; 1819–80) British novelist, noted for her depiction of provincial English society. She wrote the novels *Adam Bede* (1859), *The Mill on the Floss* (1860), *Silas Marner* (1861), the pioneering and influential *Middlemarch* (1871–72), and *Daniel Deronda* (1876).

Eliot, T(homas) S(tearns) (1888–1965) Anglo-American poet, critic, and dramatist, born in Missouri. His first volume of poetry was the innovatory *Prufock and Other Observations* (1917). *The Waste Land* (1922) and *Four Quartets* (1935–41) are other major poetic achievements. In 1927 he became an Anglo-Catholic and a British subject. From 1922 to 1939 he edited *The Criterion*, a critical review.

His verse dramas include *Murder in the Cathedral* (1935) and *The Cocktail Party* (1949). He was awarded the Nobel Prize in 1948.

Elizabeth I (1533–1603) Queen of England and Ireland (1558–1603), daughter of Henry VIII and Anne *Boleyn. Her mother's execution and Elizabeth's imprisonment by Mary I made her cautious and suspicious but her devotion to England made her one of its greatest monarchs. Her religious compromise (1559–63) established moderate Protestantism in England (see REFORMATION). England won a great naval victory in 1588 by destroying the Spanish *Armada. Elizabeth never married and was called the Virgin Queen.

Elizabeth II (1926–) Queen of the United Kingdom (1952–), noted for her scrupulous fulfilment of the roles of constitutional monarch and head of the Commonwealth. She married Prince *Philip in 1947; their four children are Prince *Charles, Princess *Anne, Prince Andrew, Duke of York (1960–), and Prince Edward, Earl of Wessex (1964–).

Elizabeth the Queen Mother (1900–2002) The consort of *George VI and mother of *Elizabeth II and Princess Margaret. Formerly Lady Elizabeth Bowes-Lyon, she married in 1923 and was widowed in 1952.

elk The largest deer, *Alces alces*, found in forests of N Eurasia and also in N North America, where it is called a moose. Up to 2 m high at the shoulder, elks have a broad curved muzzle and a short neck with a heavy dewlap. The coat is grey-brown and males grow large palmate antlers. They feed on leaves and water plants and form herds in winter.

Ellesmere Island The most northerly of the Canadian Arctic islands, in Baffin Bay W of

African elephant

Indian elephant

elephant. The African elephant can be distinguished from the smaller Indian species by its larger ears, flatter forehead, smooth skin, and concave back.

Greenland. It is mountainous with deep fjords, and is covered by glaciers. It has few permanent inhabitants. Area: 212 688 sq km (82 119 sq mi).

Ellice Islands See TUVALU, STATE OF.

Ellington, Duke (Edward Kennedy E.; 1899–1974) US Black jazz composer, band leader, and pianist. In New York he established a group of musicians that remained the core of his band for 30 years. In later years Ellington concentrated on large-scale works for jazz orchestra.

ellipse A closed curve having the shape of an elongated circle. The sum of the distances from any point on the circumference to each of two fixed points, known as the foci, is a constant. The ellipse is one of a family of curves known as *conic sections.

elm A tree of the genus *Ulmus* (about 30 species), of N temperate regions. Up to 40 m high, elms have toothed leaves, clusters of small reddish flowers, and winged nuts. Elms are widely planted for shade and ornament and for their durable timber, but the number in Europe and North America has been greatly reduced by *Dutch elm disease. Species include the English elm (*U. procera*), the Eurasian wych elm (*U. glabra*), and the American elm (*U. americana*). Family: *Ulmaceae*.

elm bark beetle A wood-boring beetle that tunnels under the bark of elm trees and carries the fungus *Ceratostomella ulmi*, which causes *Dutch elm disease. Family: *Scolytidae* (see BARK BEETLE).

El Niño (Spanish: the Christ child) Widespread weather disruption resulting from reversal of the trade winds and sea currents in the equatorial Pacific region, so called as it tends to begin at around Christmas. Normally, trade winds blow from east to west, pushing warm water westwards and bringing heavy rainfall to Indonesia and cool waters with dry weather to Peru. As a result of El Niño a huge mass of warm water moves eastward, causing torrential rain and floods in Peru and the southern USA, while drought and forest fires occur in Indonesia and Australia. El Niño events can extend as far west as Africa, resulting in storms and flooding in the E and drought in the S. El Niño usually lasts about 18 months. Since the late 1970s it has recurred on average every 4 years.

El Salvador, Republic of A country in Central America, on the Pacific Ocean. Narrow coastal lowlands rise to a fertile plateau, which

is enclosed by volcanic mountains. Most of the population is of mixed European and Indian descent. *Economy:* mainly agricultural, dominated by coffee since the late 19th century. Most of the cultivated land is controlled by a few families. *History:* the Aztec population was conquered by the Spaniards in 1526 and after the overthrow of Spanish rule the region formed part of the Central American Federation (1823–38). In 1841 it became an independent republic. Tensions arising from the emigration of Salvadoreans to Honduras culminated in war in 1965 and again in 1969. In 1978–79 the repressive regime of Gen Carlos Humberto Romero provoked rising unrest. Romero was deposed in 1979 and a junta took control but violence continued. Civilian rule returned in 1982. After 12 years of virtual civil war with the Farabundo Martí National Liberation Front (FMLN), a peace agreement was reached in 1992. Elections were held in 1994 in which the FMLN took part. The country has since been governed by a right-wing coalition led by the ARENA party, with Francisco Flores as president since 1999. El Salvador is a member of the OAS. Official language: Spanish. Currency: US dollar of 100 cents. Area 21 393 sq km (8236 sq mi). Population (2003 est): 6 515 000. Capital: San Salvador.

Elsinore See HELSINGØR.

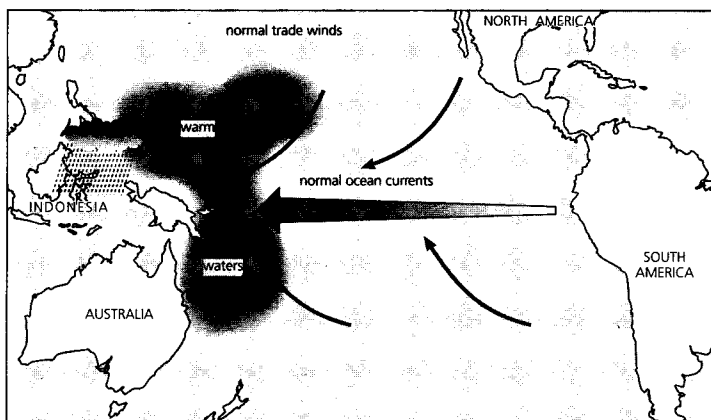

Ely 52 24N 016E A city in E England, in Cambridgeshire on the River Ouse. The Isle of Ely is an area of higher ground surrounded by fenland. Ely's 12th-century cathedral dominates the fen landscape. Population (1991): 10 329.

Elysium (or Elysian Fields) In Greek mythology, the fields on the banks of the River Oceanus where those favoured by the gods live in eternal happiness. In Roman mythology Elysium is part of the underworld.

e-mail See ELECTRONIC MAIL.

Emancipation Proclamation (1863) The edict issued by President Abraham *Lincoln that freed slaves in the rebellious southern states of the USA. Its provisions were extended and confirmed by the 13th Amendment, which abolished *slavery throughout the nation (1865).

embolism The sudden blocking of an artery by a clot or other material that has come from another part of the body via the bloodstream. A clot most commonly forms in the leg and pieces break away and lodge in the arteries of the lung—a **pulmonary embolism**. A clot may sometimes come from the heart and lodge in

El Niño. Showing the ocean currents that bring flooding to parts of South America, leaving Indonesia and parts of Australia in drought.

the brain, causing a *stroke. See also THROMBOSIS.

embryo An animal or plant in the earliest stages of its development. In vertebrate animals the embryonic stage lasts from the first division of the fertilized egg until the young animal either hatches from the egg or is expelled from the womb at birth. A human embryo is called a *fetus from the eighth week of pregnancy. In invertebrate animals the embryo is generally called a *larva. In plants, the embryo lies within the *seed. **Embryology** is the study of the development of embryos. See illustration on p. 306.

emerald A green variety of *beryl, highly valued as a gemstone. It occurs mainly in metamorphic rocks, the finest specimens coming from Muzo, Colombia.

Emerson, Ralph Waldo (1803–82) US essayist and poet, a leading transcendentalist. He published *Nature*, his transcendentalist creed, in 1836 and expressed his optimistic humanism in *Representative Men* (1850) and *The Conduct of Life* (1860).

emery A granular greyish-black rock consisting of *corundum with magnetite, hematite, or spinel. It occurs mainly in metamorphic rocks or sediments and is used as an abrasive.

The different species are hard to distinguish in the early stages of development; later they develop individual characteristics.

embryo. Various vertebrate embryos (above); a human embryo (below).

Empedocles (c. 490–430 BC) Sicilian Greek philosopher. He founded the doctrine that earth, air, fire, and water make up the world, and that love and strife (attraction and antipathy) govern their distribution.

emperor penguin A large *penguin, *Aptenodytes forsteri*. 1.2 m tall, it is the largest seabird and has a blue-grey plumage with a black head and throat, a white belly, and orange patches on the neck.

emphysema A progressive disease of the lungs characterized by destruction of lung tissue and distension of the air spaces. It is most commonly caused by smoking and is often accompanied by chronic *bronchitis. Patients become very breathless on exertion.

Empire, British Britain's overseas possessions from the 16th to mid 20th centuries. Although the empire originated in the discovery of Cape Breton Island (1497), permanent settlements in North America were not established until the early 17th century, when colonists, some escaping religious persecution, were granted charters by the Crown to settle Virginia, Maryland, and New England. The American colonies were lost in 1783 (see AMERICAN REVOLUTION). In Canada the English came into

conflict with the French and only established control in the *Seven Years' War (1756–63), from which they also emerged victorious in India. Robert Clive's victory at Plassey (1757) assured British, rather than French, dominance in India and the East India Company continued to govern until 1857, when its authority was replaced by the Crown's.

The Napoleonic Wars in the early 19th century brought possessions in the West Indies (Trinidad, Tobago, St Lucia) as well as Mauritius, Ceylon, and, in Africa, the Cape. Substantial possessions in Africa were not obtained until the late 18th century with the acquisition of what are now Sierra Leone, Ghana, and Nigeria. The 19th-century colonial expansion in Africa was fired by missionary zeal, which motivated such explorers as *Livingstone, as well as commercial activities. The late 19th century saw the establishment of British dominance in Egypt and the Sudan but in South Africa it was undermined by *Afrikaner hostility.

Colonies in Australia were initially penal settlements: New South Wales was settled in 1778, Tasmania in 1803, and Queensland in 1824. New Zealand was controlled by the British from 1840 and the 19th century also achieved the acquisition of Hong Kong (1841) and Burma (1886).

The colonies were supervised from 1801 by the Colonial Office, and were generally self-governing. In the mid-19th century, the self-governing colonies in Canada, Australia, New Zealand, and South Africa received responsible government, whereby governors were advised by local ministers. In 1907 Canada, Australia, and New Zealand (and in 1910 South Africa), by now federated, were termed dominions. In 1931 the *Commonwealth of Nations was established, giving the dominions autonomy, and in the following decades Britain's other colonies gradually achieved full independence.

Empire style The neoclassical style in the decorative arts that developed during the Napoleonic empire (1804–14). It was inspired by classical Greek, Roman, and Egyptian models and reflected contemporary interest in archaeology (e.g. Pompeii). Dark woods, such as rosewood, were favoured, sparsely ornamented with *ormolu. Shapes tended to be plain but caryatids were used as supports. The grandiose **Second Empire style** was the official architectural style of the French Government under Emperor Napoleon III (1852–70).

emu A large flightless long-legged Australian bird, *Dromaius novaehollandiae*, found in open plains and forests. It has a dark-brown hairlike

plumage with a naked blue spot on each side of the neck, and can run at high speeds.

emulsion See COLLOID.

encephalins (or **enkephalins**) Short peptide molecules, found in parts of the brain and spinal cord, that are thought to relieve pain. These and similar compounds are called **endorphins**. In the spinal cord encephalins are believed to inhibit painful sensations by reacting with specific receptor sites on the sensory nerve endings. In the brain their function is less certain but may be associated with mood. The pain-relieving effects of acupuncture may be due to the release of the body's encephalins.

encephalitis Inflammation of the brain. It usually occurs as a result of a virus infection, but can be caused by malaria, fungi, or parasites (rarely by bacteria). The patient is often drowsy and fevered and has a bad headache. There is no specific treatment for viral encephalitis but the patient usually recovers.

Encke's comet A comet that has a period of only 3.3 years (decreasing by 2.5 hours/revolution) and has been very closely studied during its numerous apparitions. Its period was first established by the German astronomer J.F. Encke (1791-1865).

Encyclopedists (French name: Encyclopédistes) The French intellectuals who contributed to *Diderot's monumental *Encyclopédie*, published in 28 volumes between 1751 and 1772. Five more volumes were published in 1776-77. Over 200 experts, including such leading figures of the *Enlightenment as Voltaire and Rousseau, contributed articles. By their appeal to reason rather than faith the Encyclopedists threatened the authority of Church and state.

endangered species A plant or animal species that is in danger of extinction. Some 34 000 vascular-plant species and 5000 animal species are currently endangered, mostly through destruction of natural habitats, pollution, and hunting and trapping. During the 20th century the number of endangered species grew dramatically, and in 1948 the International Union for the Conservation of Nature and Natural Resources (IUCN) was founded to devise measures to protect them. The IUCN publishes the Red Data Book, which lists all known endangered species. Trade in endangered species is regulated by CITES—the Convention on International Trade in Endangered Species. This has been signed by 96 coun-

tries, including the UK. See also WORLD WIDE FUND FOR NATURE.

endive An annual or biennial plant, *Cichorium endivia*, probably native to S Asia and N China and cultivated widely. It has a rosette of shiny leaves, either curled and narrow (var. *crispa*), used for salads, or broad (*latifolia*), used for cooking. Family: *Compositae*. See also CHICORY.

endocrine glands Ductless glands that secrete *hormones into the bloodstream. Most are regulated by hormones from the *pituitary gland, which is itself controlled by neuro-hormones secreted by the *hypothalamus. Other endocrine glands include the thyroid, adrenal, and *parathyroid glands, parts of the *pancreas (the islets of Langerhans), and the ovaries and testes. The study of the endocrine glands is called **endocrinology**.

endorphins See ENKEPHALINS.

Endymion In Greek legend, a beautiful youth who was put into an everlasting sleep by Selene, goddess of the moon, so that she could enjoy his beauty forever.

energy A property of a system that enables it to do work, i.e. to move the point of application of a force. The several forms of energy can be converted into each other under appropriate conditions. Kinetic energy is energy of motion, whereas *potential energy is stored energy, for example the energy stored in a body by virtue of its position in a gravitational or electric field. Other forms of energy include heat (the kinetic energy of the atoms and molecules in a body), chemical energy (the potential energy stored in the chemical bonds between atoms), nuclear energy (the potential energy stored in the atomic nucleus), and radiant energy (the energy associated with electromagnetic waves). As a consequence of the special theory of relativity, mass has also to be regarded as a form of energy. Energy is measured in joules (SI units), calories or ergs (c.g.s. units), kilowatt-hours or British thermal units (Imperial units).

Energy sources: the combustion of wood and fossil fuels (asphalt, coal, oil, natural gas) is a process, long known to man, in which chemical energy is converted into heat energy. The *industrial revolution and the later advent of motorized transport brought explosive increases in the demand for energy and consequently for fossil fuels. The total world energy consumption is of the order of 4×10^{20} joules per year, nearly 88% of which is provided by fossil fuels. Concern both about fossil fuel reserves and the 2.5×10^{10} tonnes of CO₂ they produce each year (see GREENHOUSE EFFECT) is directing atten-

tion to *alternative energy sources as well as nuclear energy.

energy band A concept used to explain the electrical properties of solids, particularly *semiconductors. It is a band of allowed energies for electrons in a solid. The distribution of the bands in a solid determines the conducting properties of the solid.

Engels, Friedrich (1820–95) German socialist and chief collaborator of Karl *Marx. He was able to introduce Marx to English economic conditions and the British working-class movement. Among other works he wrote the *Condition of the Working Class in England in 1844* (1845). After Marx's death, he edited the last volume of *Das Kapital* (1885).

engineering The systematic application of scientific knowledge to the design, creation, and use of structures and machines. Civil engineering arose from the study and design of such static structures as bridges, dams, buildings, etc., whereas mechanical engineering is concerned with dynamical systems, such as machinery and engines. Other important branches of engineering are electrical engineering, aeronautical engineering, and *chemical engineering.

England The largest political division in the *United Kingdom. With Wales to the W and Scotland to the N, it is separated from the mainland of Europe by the North Sea and the English Channel and from Ireland by the Irish Sea. It consists of two main zones: the lowlands, which extend across the Midlands, the SE, East Anglia, and the Fens, and the highlands of the Pennines and the Lake District in the N and the uplands of Dartmoor and Exmoor in the SW. The chief rivers are the Thames and the Severn. The centre of government and administration of the UK, England is also the wealthiest and most populous of the UK countries. *Economy:* the development of industry has been a major contributor to England's wealth. The exploitation of North Sea oil and gas continues to make an important contribution to the economy. Coalmining was formerly of major importance but there are now only 8 deep mines in operation (compared to some 800 in the 1950s). Despite the expansion of industries based on advanced technology, the decline of heavy industry (including shipbuilding), has led to high unemployment in the North and on Merseyside. Agriculture has increased in productivity but employs a declining number of people. Dairy farming is dominant in the W, while livestock rearing (especially sheep and cattle) is im-

portant in the hilly areas of the N and SW. The major crops, mainly from the E and SE, are cereals, potatoes, and sugar beet. Over 75% of the workforce are now employed in service industries. Tourism is an important source of revenue. *History:* there is much archaeological evidence of prehistoric settlement in England but historical records begin with the Roman occupation, from 43 AD until the early 5th century. Christianity was introduced in the 4th century, and conquests between the 3rd and 7th centuries by *Angles, *Saxons, and *Jutes led to the establishment of independent kingdoms (see *MERCIA; NORTHUMBRIA; WESSEX*), which were united in the 9th century under the leadership of Wessex. By the late 800s the Danes had established themselves in the area that came to be known as the *Danelaw and from 1016 to 1042 the English were ruled successively by the Danish kings Canute and *Hardecanute. The *Norman conquest (1066) ended the *Anglo-Saxon period and established a new dynasty of Norman kings. In 1455 the rival claims of the Houses of *Lancaster and *York precipitated the Wars of the *Roses, which lasted until Richard III's defeat at Bosworth (1485) by Henry *Tudor. The 16th century saw the establishment of Protestantism in England (see *REFORMATION*), the formal union of England and Wales (see *UNION, ACTS OF*), and, under Elizabeth I, a significant development in overseas exploration and trade. The Tudors were succeeded by the *Stuarts in 1603, when James VI of Scotland ascended the English throne as *James I. The unpopularity of James and his son Charles I, especially with parliament, brought about the *Civil War, which ended with Charles' execution (1649) and the establishment of republican government. The Stuart *Restoration (1660) followed the fall of Oliver Cromwell's *Protectorate but the authoritarian and pro-Catholic policies of James II brought about his deposition in 1688 and the succession of William of Orange and his Stuart wife Mary. The crisis of the Glorious Revolution saw the emergence of the rival political groups known as *Whigs (later Liberals) and *Tories (later Conservatives). The Tories' association with the *Jacobites, who in 1714 threatened the Hanoverian succession (see *SETTLEMENT, ACT OF*), led to their political isolation. The 18th century saw union with Scotland (1707) and the loss of the American colonies (1783; see *AMERICAN REVOLUTION*). Following union with Ireland in 1801, England, Wales, Scotland, and Ireland became the United Kingdom of Great Britain and Ireland. Area: 130 360 sq km (50 332 sq mi). Popula-

tion (2001): 49138831. Capital: London. *See also* UNITED KINGDOM.

English A West Germanic language spoken originally in Britain but now also in the USA, Canada, New Zealand, Australia, and many other parts of the world. It is the world's most widely known and used language, with a unique role as the international language of science, commerce, computing and the Internet, and mass entertainment. Its history may be divided into three periods. In the Old English period (c. 407–1100 AD), four dialects were spoken: Northumbrian, Mercian, Kentish, and West Saxon. The last became the standard form. Middle English refers to the period from 1100 to 1500, when five dialects were spoken: Northern (developed from Northumbrian), West and East Midlands (diverging from Mercian), South Western (from West Saxon) and South Eastern (from Kentish). Each developed in characteristic ways but in general the influence of French after the Norman conquest brought new vocabulary and sound patterns. Modern English covers the period from 1500 and was much influenced by the speech of London. Its vocabulary is about half Germanic and half Romance with many other borrowings.

English Channel (French name: La Manche) An arm of the Atlantic Ocean in NW Europe, between England and France. It is one of the busiest shipping lanes in the world. *See also* CHANNEL TUNNEL.

engraving A method of producing a reproductive plate by chiselling, carving, or biting the design onto a metal or wood plate. Intaglio engraving denotes such methods as *etching, mezzotint, and soft- or hard-ground engraving, in which the printed impression pulls ink from inside the carved grooves. By contrast, relief engraving denotes methods, such as *woodcut, in which the carved-away areas are not inked. Intaglio engraving allows for delicacy and detail; relief engraving is often exploited when force and clarity are needed.

Enlightenment (or **Age of Reason**) An 18th-century philosophical movement that sought to replace authoritarian beliefs with rational scientific inquiry. During the 17th century, as scientific knowledge increased, such scholars as Newton, Pascal, and Descartes questioned many accepted beliefs. In France the Philosophes (e.g. Voltaire) attacked religion; the Enlightenment beliefs in individual liberty and equality were embodied in the work of Voltaire, Rousseau, and other *Encyclopedists. The movement helped to inspire the French

Revolution but came to an end in the era of war and political reaction that followed.

entomology The study of insects. Modern entomology dates from the 17th century, when the introduction of microscopy enabled fine details of insect anatomy to be described. Attention is now focused on insect pests, since knowledge of them is important in their control.

entropy A measure of the disorder of a system, used in *thermodynamics. Thus a solid has less entropy than a liquid since the constituent particles in a solid are in a more ordered state. The change in entropy of a reversible system is equal to the energy absorbed by the system divided by the thermodynamic temperature at which the change takes place. The entropy of a closed system never decreases during a thermodynamic process.

E number *See* FOOD ADDITIVES.

environment The surroundings in which an organism lives, which are affected by physical and chemical factors as well as by other organisms. The damage to the earth caused by human activities has been a major concern during the last 50 years. In the UK, the Department for Environment, Food, and Rural Affairs is responsible for a wide range of activities, including conservation areas, land use, and energy resources. *See* ACID RAIN; ENDANGERED SPECIES; GREENHOUSE EFFECT; OZONE; POLLUTION.

enzymes A group of proteins that act as biological catalysts, i.e. they speed up (or slow down) the rate of chemical reactions in living organisms. Enzymes are manufactured by cells according to the *genetic code carried by the chromosomes; because each enzyme catalyses a specific reaction, it is the enzymes that determine the function of the cell. Control of *metabolism is largely by regulation of enzyme production and activity.

Eocene epoch *See* TERTIARY PERIOD.

eohippus An extinct (Eocene) ancestor of the *horse. About 28 cm tall, it was a browsing forest dweller and had four toes on the forefoot and three on the hindfoot.

Ephesians, Epistle of Paul to the A New Testament book written as a circular letter from the Apostle Paul to churches in Asia Minor in about 60 AD; it stresses the equality of Jewish and Gentile Christians.

Ephesus An ancient Greek city and trading centre on the Ionian coast of *Asia Minor. It

maintained its prosperity under the Persians and Alexander the Great and in Roman times was rivalled only by *Alexandria as a commercial centre. It was sacked by the *Goths in 262 AD. See also ARTEMIS, TEMPLE OF.

Epicureanism A school of thought founded by the Greek philosopher **Epicurus** (341–270 BC) around 300 BC in Athens. He taught that the highest good was pleasure and the avoidance of pain, based on tranquillity of mind and conscience.

Epidaurus A city state of ancient Greece, situated across the Saronic Gulf from *Athens. Its sanctuary of *Asclepius was famous in antiquity for its medical cures. The 4th-century BC theatre (part of the temple complex) is sufficiently preserved to be still used for plays.

epidemiology The science that investigates the incidence and causative factors of diseases that are associated with a particular environment or way of life. Epidemiologists have enlarged their studies from the classical epidemics of communicable diseases, such as typhus and cholera, to include noncommunicable diseases, such as cancer.

epidermis The outermost layer of cells in animals and plants. In higher animals (including mammals) it forms the outer layer of the skin.

epididymis See TESTIS.

epidural See ANAESTHESIA.

epiglottis A leaf-shaped flap of cartilage at the root of the tongue that prevents food and fluid from entering the windpipe during swallowing.

epilepsy A disease characterized by seizures (periods of sudden loss of consciousness); sufferers included Dostoevski, Van Gogh, and Julius Caesar. In tonic-clonic seizures (formerly called grand mal epilepsy) the patient suddenly becomes stiff, loses consciousness, and has convulsions for a few minutes. Absence seizures (formerly called petit mal) most commonly affect children, who suddenly lose consciousness for a few seconds but usually do not fall down. These and other forms of epilepsy are treated with anticonvulsant (antiepileptic) drugs.

epinephrine See ADRENALINE.

Epiphany (or Twelfth Day) A Christian feast celebrated on 6 Jan. In Eastern Orthodox Churches it commemorates the baptism of Jesus. Introduced to the West in the 4th century, it developed as a celebration of the coming of the *Magi to Bethlehem, representing

the manifestation (Greek: *epiphaneia*) of Christ to the Gentiles. **Twelfth Night** is the night preceding Epiphany and traditionally devoted to festivities.

epiphyte A plant that grows on another plant for support. Epiphytes are not parasites: some obtain nourishment from decaying plant remains and many solve the problem of obtaining water by developing such structures as aerial roots.

epistemology The philosophical discipline that considers the nature, basis, and limits of knowledge. It is one of the three main branches of modern philosophy and is considered fundamental to all philosophical and scientific enquiry.

Epistles The 21 books of the *New Testament that were written as letters, mostly by Paul (13). The remainder are attributed to James, Peter (2), John (3), Jude, and an unknown author. In the liturgy of many Christian Churches, the Epistle is the name of the first of two passages of Scripture (usually taken from the New Testament Epistles) recited at the celebration of the Eucharist, the second being the Gospel.

epoxy resin A type of synthetic *resin containing the -O- atom (epoxy group). They are viscous liquids but set to hard clear solids on the addition of curing agents. They are extensively used as adhesives, the resin and the curing agent being mixed immediately before use.

Epstein, Sir Jacob (1880–1959) British sculptor of US birth, working in London after 1905. From 1912 he experimented with avantgarde sculpture, provoking criticism with such works as *Genesis* (1931). His bronze portrait busts of Einstein (1933), T. S. Eliot, and Vaughan Williams (1950) were more favourably received. His last works included *St Michael and the Devil* (1958) for Coventry Cathedral.

equator The great circle around the earth at latitude 0°, lying midway between the poles in a plane at right angles to the earth's axis. It is 40 076 km (24 902 mi) long and divides the N from the S hemisphere.

Equatorial Guinea, Republic of A small country in W central Africa, on the Gulf of Guinea. It consists of two main parts: mainland Río Muni and the island of Bioko (formerly Macías Nguema), as well as the island of Palagalu (formerly Annobón) and several smaller islands. The inhabitants are mainly *Fang, Fernandinos, and the indigenous Bubi (descendants of slaves from West Africa), who inhabit Bioko. *Economy:* chiefly agricultural. Although

the discovery of offshore oil made Equatorial Guinea the world's fastest growing economy in the early 2000s, it remains one of the world's poorest countries. *History:* formerly a Spanish colony, the area became two Spanish provinces in 1959 and gained independence in 1968. In 1979 the life president Francisco Macías Nguema (1924–79) was overthrown and executed in a coup led by Lt Col Teodoro Obiang Nguema Mbasogo, who became president. Multiparty elections held in 1993 resulted in victory for the ruling party but were condemned as unfair by international observers. Opposition parties were declared illegal in 1997–98 and human rights violations continue to concern the UN. Official languages: Spanish and French. Currency: CFA franc of 100 centimes. Area: 28 051 sq km (10 831 sq mi). Population (2003 est): 494 000. Capital: Malabo.

equinox Either of the two points at which the *ecliptic intersects the celestial equator (see CELESTIAL SPHERE). The ecliptic represents the apparent annual path of the sun around the celestial sphere. The sun crosses the celestial equator from S to N at the **vernal (or spring) equinox**, usually on 21 March. It crosses from N to S at the **autumnal equinox**, usually on 23 Sept. At the equinoxes night and day are of almost equal duration.

equity (law) The body of rules developed by the Court of *Chancery to achieve a fair result in cases in which the application of *common law would fail to do so. The rules of equity developed separately from but by the same method (judicial precedent) as the common law. The two systems were amalgamated in 1875 with the establishment of the High Court of Justice. Now all courts administer both law and equity, the rules of equity prevailing if in conflict with the common law. See also COURTS OF LAW.

Erasmus, Desiderius (1466–1536) Christian humanist and writer, born at Rotterdam. A highly influential Renaissance thinker, he studied and taught all over Europe. He produced many original works and compilations, including *Encomium Moriae* (*Praise of Folly*; 1509), written for Thomas *More. He also produced the first translation of the Greek New Testament.

erbium (Er) A lanthanide element that forms an oxide (Eb₂O₃) and halides (e.g. EbCl₃). It is added to phosphors, glasses, and alloys. At no 68; at wt 167.26; mp 1529°C; bp 2868°C.

Erfurt 50 59N 11 00E A city in S Germany, on the River Gera. One of the oldest German cities, it became a member of the Hanseatic League in

the 15th century and was of great commercial importance in the 16th century. Population (1999 est): 202 102.

erg The unit of energy in the *c.g.s. system equal to the work done when a force of one dyne acts through a distance of one centimetre. 1 erg = 10⁻⁷ joule.

ergonomics The study of the psychological and physical factors that can be used to improve the design of both machines and systems for human use.

ergot A disease caused by the fungus *Claviceps purpurea*, which affects cereals and grasses, especially rye. In affected plants a hard black fungal body develops in place of the grain. Consumption of bread made with diseased grain produces the symptoms of **ergotism**: gangrene of the fingers and toes or convulsions.

Erie, Lake The fourth largest of the Great Lakes in North America, between Canada and the USA. Linked with Lake Ontario via the Welland Ship Canal, it forms part of the St Lawrence Seaway system. It is closed to navigation during winter due to freezing. Area: 25 718 sq km (9930 sq mi).

Erinyes (or furies) In Greek legend, spirits of vengeance who lived in the underworld and ruthlessly pursued all evildoers. They were three in number and were named (in later writers) Allecto, Tisiphone, and Megaera. After *Orestes was acquitted of his mother's murder, the pursuing Erinyes became known as the **Eumenides** or 'kindly ones'. In Roman legend they were known as the Furies (Latin *Furiae* or *Dirae*).

Eris A Greek goddess personifying strife. She threw a golden apple inscribed "To the Fairest" among the gods. Aphrodite, Hera, and Athena each claimed the apple. *Paris, who had to decide, chose Aphrodite because she offered him in return the most beautiful woman as his wife. This myth, the Judgment of Paris, explains the origin of the *Trojan War.

Eritrea A country in NE Africa, bordering on the Red Sea. It consists of a narrow coastal plain rising inland to the Ethiopian plateau. *Economy:* agriculture and industry, producing sorghum, livestock, hides, and textiles, were devastated in the war of independence but are now being restored. *History:* a former Italian colony, it came under British administration in 1941. Its integration with Ethiopia in 1962 gave rise to political discontent, which developed during the 1970s and 1980s into civil war be-

tween separatists and Ethiopian government forces. The war ended in 1991, when Eritrea achieved *de facto* independence; full independence was internationally recognized in 1993. In 1998–99 and 2000 there were fierce border skirmishes between Eritrea and Ethiopia. Official languages: English and Arabic. Currency: nakfa. Area: 93 679 sq km (36 170 sq mi). Population (2003 est): 4 141 000. Capital: Asmara.

Ernst, Max (1891–1976) German artist. He was a founder in 1919 of the Cologne *dada movement. He excelled in collage, particularly of cut-out illustrations, and became a leading practitioner of *surrealism in Paris. In 1941 he moved to the USA.

Eros The Greek god of love, the son of Aphrodite by Zeus, Hermes, or Ares. He was usually portrayed as a winged youth armed with bow and arrows. He was identified with the Roman Cupid.

erythrocyte (or **red blood cell**) A disc-shaped blood cell, about 0.007 mm in diameter, that lacks a nucleus and contains *haemoglobin, which combines reversibly with oxygen and is the means by which blood transports oxygen from the lungs to the tissues. A deficiency of red blood cells (below about 4.5 million per mm³ of blood) or haemoglobin is called *anaemia.

escape velocity The initial velocity required by a projectile to enable it, without any further source of power, to escape from the gravitational field of a celestial body. It depends on the mass and diameter of the celestial body. For the earth the escape velocity is 11 200 metres per second.

Escoffier, Auguste (1846–1935) French chef. He gained an international reputation while supervising the kitchens at the Savoy and the Carlton hotels in London.

Eskimo See INUIT.

Eskimo-Aleut languages See INUIT-ALEUT LANGUAGES.

ESP See EXTRASENSORY PERCEPTION.

Esperanto An artificial language invented by a Polish philologist, L. L. Zamenhof (1859–1917), in 1887. Intended as a universal medium of communication, it is spoken by over 100 000 people. Grammatically it is entirely regular, its pronunciation is consistent with its spelling, and as well as grammatical rules it has the potential for the formation of new words.

Essen 51°27'N 6°57'E A city in W Germany, in North Rhine-Westphalia near the River Ruhr. It

has a 9th-century cathedral. It is the administrative centre of the *Ruhr. Population (1999 est): 600 700.

Essenes An ancient Jewish sect active between the 2nd century BC and the 2nd century AD in Palestine. The *Dead Sea Scrolls may be relics of an Essene community.

essential oils Substances with a characteristic scent produced by the glands of aromatic plants. They are used in perfumes, food flavourings, and medicines. Examples include lavender oil and clove oil.

Essex A county of E England, bordering on the North Sea and Greater London, which incorporated the SW of the county in 1965. Southend-on-Sea and Thurrock became independent unitary authorities in 1998. It is mainly low lying, rising gently towards the chalk uplands of the NW. Agriculture is important. Industry is located mainly in the SW. Harwich is a major ferry port. Area (excluding unitary authorities): 3446 sq km (1330 sq mi). Population (2001, excluding unitary authorities): 1 310 922. Administrative centre: Chelmsford.

Essex, Robert Devereux, 2nd Earl of (1566–1601) English soldier and courtier to Elizabeth I. He was appointed Master of the Horse (1587) after distinguishing himself against Spain. He commanded an expedition (1591–92) sent to aid Henry IV of France and in 1596 he took part in the sack of Cádiz. He was dismissed (1600) after failing to suppress an Irish rebellion and in 1601 raised a riot in London, for which he was executed.

esters Organic compounds produced by the reaction of an alcohol with an acid, with the elimination of water. Common organic esters are formed from carboxylic acids and have the general formula RCOOR'. The lighter ones often have a pleasant smell and taste and are widely used in perfumes and flavourings.

Esther In the Old Testament, the queen of the Persian King Ahasuerus. The **Book of Esther** tells how she used her influence to prevent a massacre of Persian Jews, commemorated in the Jewish feast of *Purim.

Estonia, Republic of A republic in NE Europe. It has many lakes and includes numerous islands in the Baltic Sea. Some 30% of the population are Russians. *Economy:* fishing is important. Industries include machine building, textiles, and food processing. *History:* Estonia was ceded to Russia in 1721. Rebellions in the 19th century culminated in a declaration of in-

dependence (1918), which was recognized by Soviet Russia in 1920. Estonia was assigned to the Soviet Union by the Nazi-Soviet Pact (1939), becoming a Soviet republic in 1940. It was occupied by Germany in World War II. Separatist feeling grew in the 1980s, culminating in independence in 1991. In 1993 a new law denying citizenship to non-Estonian-speaking residents increased tension between Estonians and Russians. Since 2005 the country has been governed by a centre-right coalition under Andrus Ansip. Estonia joined both the EU and NATO in 2004. Official language: Estonian. Currency: kroon of 100 sents. Area: 45 100 sq km (17 410 sq mi). Population (2007 est): 1 315 912. Capital: Tallinn.

Estonian A language of the Baltic-Finnic branch of the Finno-Ugric division of the Uralic language family. The official language of Estonia, it is related to Finnish.

etching A method of making prints from a metal plate covered with an acid-resistant ground, on which a design is drawn with a needle. The plate is then placed in acid, the exposed lines being eaten away. These recessed lines retain ink and the design is transferred to paper.

ethane (C_2H_6) A colourless gas, the second member of the *alkane series. It occurs in *natural gas.

ethanol (or **ethyl alcohol**; C_2H_5OH) A colourless flammable liquid that is the active constituent of alcoholic drinks. It is prepared by fermentation or by the catalytic hydration of *ethylene. It is used as a solvent, a raw material for producing other chemicals, and a fuel.

Ethelbert (c.552–616 AD) King of Kent, who became overlord of all England south of the Humber. Encouraging the conversion of his people to Christianity, he received Augustine's mission from Rome. He wrote the first extant English code of laws.

Ethelred I (d.871 AD) King of England (866–71), in whose reign the Vikings launched a full-scale invasion of England. Ethelred died after his victory at Ashdown, leaving his brother *Alfred the Great to fight on.

Ethelred the Unready (968–1016) King of England (978–1016). In the face of Danish raids, he was forced to pay huge tributes (Danegeld) to the enemy. He was driven into exile by King Sweyn of Denmark in 1013 but returned after Sweyn's death (1014).

ethene (or **ethylene**; C_2H_4) A colourless flammable gaseous *alkene. It is made by cracking

petroleum and is used to make *polythene (polyethylene).

ether Any member of the group of organic compounds with the general formula $R-O-R'$, which are formed by the condensation of two alcohols. Diethyl ether, $C_2H_5OC_2H_5$, often known simply as ether, is a volatile liquid and is used as an anaesthetic and solvent.

ethics The science of morality, also called moral philosophy. It is one of the three main branches of modern philosophy and seeks to discover a consistent principle by which human actions can be judged. Until about a century ago, ethics aimed to be a guide to human conduct. Now it is more descriptive, attempting to discover how moral decisions are actually made. In utilitarianism the good of society is the criterion and this is now the basis of commercial, legal, and social ethics; however, conscience remains the guide of most individuals. See also HEDONISM; RATIONALISM.

Ethiopia, Federal Democratic Republic of (former name: Abyssinia) A country in NE Africa, on the Red Sea. It consists of deserts in the SE and NE and a central plateau, crossed by river valleys (including that of the Blue Nile) and by mountain ranges. The population consists of many ethnic groups, including the Galla and Amhara. *Economy:* Ethiopia remains one of the poorest countries in the world and agriculture is chiefly at subsistence level. The situation has been worsened in recent years by serious crop failures, causing famines. All land was nationalized in 1975 and farmed cooperatively until 1992, when private ownership was reintroduced. *History:* Ethiopia has a long history, legend claiming the descent of its rulers from Solomon and the Queen of Sheba. From the 2nd to the 9th century AD there was considerable prosperity and expansion; in the 4th century Ethiopia became the first Christian country in Africa. This period was followed by centuries of struggles (especially with the Muslims) and of internal divisions. Only in the 19th century was the country reunited. In 1896 Italian attempts to conquer Ethiopia were defeated but in 1935 Italy (under Mussolini) invaded. In 1936 Addis Ababa fell and the emperor, Haile Selassie, fled to England. Ethiopia then formed part of Italian East Africa (with Eritrea and Italian Somaliland). In 1941 the Allies liberated Ethiopia and Haile Selassie returned to the throne. Eritrea was fully integrated into Ethiopia in 1962; it became independent in 1993. Haile Selassie was deposed in 1974 and a provisional military government came to power. After the execution of mem-

bers of the ruling military council in 1977, the government became known as the Derg (Provisional Military Administrative Council) with Mengistu Haile Mariam (1937–) as president. During this unsettled period liberation movements in Eritrea and the Somali-speaking Ogaden area increased their armed struggle; in 1977 Ethiopian troops beat off a Somali invasion of the Ogaden. Successive droughts (1982, 1984, 1987, 1989, 1999–2000, 2002) led to famine and resettlement from the N to the fertile west; one million people died in the famine of 1984. Massive foreign aid was hampered by internal strife and disorganization. Armed rebellion in the province of Tigré led to civil war and the fall of Mengistu in 1991; a new constitution was ratified in 1994 and Meles Zenawi became prime minister in 1995. In 1998–99 and 2000 there was fierce border fighting with Eritrea. Official language: Amharic. Currency: birr of 100 cents. Area: 1 128 221 sq km (435 608 sq mi). Population (2007 est): 76 511 887. Capital: Addis Ababa.

ethology The study of animal behaviour, founded in Europe in the 1930s by the work of Konrad *Lorenz and Niko Tinbergen (1907–88), who studied animals in their natural states. Ethologists are concerned with how animals respond to signals or stimuli, how they sense these signals, and what their response means to other animals and to themselves. They demonstrate the interactions between the inherited (instinctive) aspects of behaviour and those determined by experience (learning).

Etna, Mount 37 45N 15 00E A volcano in E Sicily. The first recorded eruption was in 476 BC and in the last hundred years significant eruptions have occurred in 1928, 1949, 1971, 1991, 2000, and 2002. Height: 3263 m (10 705 ft).

Eton 51 31N 0 37 W A town in SE England, in Maidenhead and Windsor unitary authority, Berkshire, opposite Windsor on the River Thames. Eton College, the famous public school, was founded by Henry VI in 1440. Population (latest est, excluding Eton College): 1974.

Etruscans The ancient inhabitants of Etruria (now Tuscany) in central Italy N of Rome. From the 8th to the 5th centuries BC their cities, forming a loose political confederacy, dominated their neighbours but after 396 they were rapidly absorbed by the Romans. The Etruscans had extensive trading links. Their origins are mysterious. Their language was non-Indo-European but is still untranslated.

etymology The study of the history of words, in which words are traced back to their

earliest recorded forms, or even beyond these to hypothetical reconstructed forms. Most English words are derived either from Proto-Germanic (see GERMANIC LANGUAGES) or from Latin and French. Many learned English words were taken from Greek or made up from Greek elements, while in the past 200 years English has borrowed words from languages in every part of the world.

EU See EUROPEAN UNION.

Eucalyptus A genus of tropical and subtropical evergreen trees (about 600 species) native to Australia but cultivated elsewhere. Eucalypts—also known as gum trees—are among the tallest trees in the world, 90–100 m high. The blue-grey bark is smooth and often peeling and the mature leaves are long and narrow. Fast-growing and drought-resistant, eucalypts are important sources of timber. The best known species are the blue gum and the red gum. All parts of the trees contain essential oils. Family: *Myrtaceae* (myrtle family).

Eucharist (Greek *eucharistia*: thanksgiving) The chief *sacrament and central act of worship of the Christian Churches. Also known as Holy Communion, the Lord's Supper, and the Mass, its institution is described in the three Synoptic Gospels. At the last meal of Christ and the apostles, bread and wine were blessed by Christ and shared, representing his death on the cross and the subsequent redemption of mankind.

Euclid (c.300 BC) Greek mathematician, famous for his book entitled *Elements* in which he derived all that was known of geometry from a few simple axioms. The geometry that obeys Euclid's axioms is known as Euclidean geometry, all other kinds being called non-Euclidean.

Euglena A genus of single-celled microorganisms found chiefly in fresh water. They are spindle-shaped, with a flexible cell wall and a gullet from which protrudes a long whiplike flagellum, used for locomotion. They are regarded by some authorities as algae and by others as protozoans.

Eulenspiegel, Till A German peasant folk hero, a crafty and often savage joker whose exploits inspired numerous folktales and many literary and musical works, notably the epic poem (1928) by Gerhart Hauptmann (1862–1946) and the tone poem by Richard *Strauss.

Eumenides See ERINYES.

euphonium Brass instrument with a wide conical bore, a cup-shaped mouthpiece, four

valves, and a range of just over three octaves rising from the third B flat below middle C.

Euphorbia A worldwide genus of herbs and small trees (1600 species), having clusters of small flowers each surrounded by conspicuous petal-like bracts. The genus includes some ornamental shrubs such as poinsettia. The herbaceous euphorbias are known as *spurge. Family: *Euphorbiaceae*.

Euphrates, River A river in SW Asia, rising in E Turkey and flowing SE through Syria into Iraq. 190 km (118 mi) from the Persian Gulf, it joins the River Tigris to form the Shatt al-Arab. It flows past the historic sites of Babylon, Ur, Nippur, and Sippara. Length: 2700 km (1678 mi).

EURATOM See EUROPEAN ATOMIC ENERGY COMMUNITY.

eurhythmic A system of teaching music by developing the student's physical response to rhythm. Devised by Émile Jaques-Dalcroze (1865–1950) in about 1905, it has been used in physical education and *ballet and modern dance training.

Euripides (c.480–406 BC) Greek dramatist, the third (after *Aeschylus and *Sophocles) of the three major writers of Attic tragedy. Of approximately 90 plays, 19 survive, including the tragedies *Medea* (431), *Hippolytus* (428), *Electra* (415), *The Trojan Women* (415), *The Bacchae* (405), and *Iphigenia at Aulis* (405). His technical innovations included naturalistic dialogue and a diminution of the role of the chorus. He also explored feminine psychology.

euro The currency unit of certain member states of the European Union that was launched in January 1999 and replaced the national currencies for all forms of monetary transaction in January–March 2002. It is subdivided into 100 cents. See EUROPEAN MONETARY SYSTEM.

Europa In Greek mythology, the daughter of King Agenor of Tyre. Carried to Crete by Zeus in the form of a bull, she bore him three sons: Minos, Rhadamanthus, and Sarpedon.

Europe A continent bordering on the Arctic Ocean (N), the Atlantic Ocean (W), and the Mediterranean Sea (S); the Ural Mountains, the River Ural, and the Caspian Sea form its E boundary. Europe is the second smallest continent but has exerted a disproportionate influence on the rest of the world. A central plain, extending from the Ural Mountains to the Atlantic Ocean and divided by uplands and the English Channel, comprises two-thirds of the continent. It rises in the S to a series of

mountain systems (e.g. the Pyrenees, Alps, Apennines, Carpathian Mountains), and in the N to the mountainous region of Scandinavia and Scotland. The chief rivers flow from the Valdai Hills (e.g. Volga, Don, Dnieper) or the Alps (e.g. Danube, Rhine, Rhône, Po). Its four **climatic zones** are characterized by mild winters, cool summers, and rain all the year round (NW); mild winters, hot summers, and chiefly spring and autumn rain (Mediterranean); cold winters, warm summers, and chiefly summer rain (Central Europe); and very cold winters (E Europe). **Vegetation zones** comprise, from N to S: tundra; a coniferous forest belt; a deciduous forest belt; and the mainly evergreen and scrub vegetation of the Mediterranean. Steppe and semidesert characterize the SE. Forest once covered some 80% of Europe but intense agriculture since the middle ages and industrialization since the 19th century have reduced it to 30% of the land mass. Europe possesses important mineral resources. Coalfields, especially in Germany, Poland, Russia, and Ukraine, continue to be an important source of power, and oil and natural-gas reserves are found in Russia, Romania, Albania, and beneath the North Sea. Iron-ore deposits are found on a large scale only in countries of the former Soviet Union, which also have reserves of nickel, tin, and manganese, but nonmetallic minerals occur widely. Europe's high-density population is concentrated in industrial regions. Most of the large number of national groups in Europe speak an Indo-European language. Europeans may be subdivided into racial types (e.g. Nordic, Germanic, Alpine, and Mediterranean) but extensive intermixing has occurred. Christianity, in various forms, is the dominant religion. Europe's medieval and modern history is that of its diverse nations, conflicts between which culminated in the 20th century in the two World Wars. The postwar period saw a split between the communist countries of E Europe, dominated by the Soviet Union until its collapse, and the countries of W Europe, which have sought to resolve their rivalries in the EUROPEAN UNION. Area: about 10 400 000 sq km (4 000 000 sq mi). Population (1996 est): 729 370 000.

European Atomic Energy Community (EURATOM) An international organization founded in 1958 to promote peaceful uses of atomic energy in Europe. In 1967 the executive and legislative bodies of EURATOM and the European Coal and Steel Community merged with those of the European Economic Community.

European Community (EC or European Communities) An economic and political organization of W European states created in 1967 when the executive and legislative bodies of the European Economic Community merged with those of the European Coal and Steel Community and the European Atomic Energy Community. The original members, Belgium, France, Italy, Luxembourg, the Netherlands, and West Germany, were joined by Denmark, Ireland, and the UK in 1973; Greece joined in 1981, and Spain and Portugal joined in 1986. In 1985 Greenland left the EC, having attained home rule.

Agreements were reached on the removal of customs tariffs between members, the setting of a Common External Tariff for imports from nonmember states, and the abolition of barriers to free movement of labour, services, and capital between members. The EC controlled the Common Agricultural Policy (CAP) and initiated a Common Fisheries Policy (1983). British passports in a common European format were introduced in the UK in 1988. Under the terms of the **Maastricht Treaty** (signed Feb 1992) members agreed to closer political, economic, and monetary union (see **EUROPEAN MONETARY SYSTEM**), which led to the establishment of the *European Union in 1993.

European Economic Community (EEC or Common Market) An organization of W European states created by the Treaty of Rome (1957) to foster economic cooperation, with the eventual aim of economic, and some political, unity. The EEC implemented a Common Agricultural Policy (CAP) in 1962 (modified 1968) and promoted the removal of customs tariffs. In 1967 its legislative and executive bodies merged with those of EURATOM and the European Coal and Steel Community to form the *European Community.

European Free Trade Association (EFTA) An association, now consisting of four states (Iceland, Norway, Switzerland, and Liechtenstein), founded in 1960 to foster free trade between members. In 1984 free trade was established between the EC and EFTA. In 1994 the EU and EFTA (excluding Switzerland) formed the **European Economic Area (EEA)**, the world's richest open market.

European Monetary System (EMS) A system created by the European Community (now the EU) in 1979 to stabilize exchange rates between members and as a possible step towards European Monetary Union (EMU). Participating states limited fluctuations in their exchange rates through the **Exchange Rate**

Mechanism (ERM) and linked their currencies to the European Currency Unit (ECU), the value of which was based on a basket of currencies. In 1992 the ERM failed when market pressures forced the British and Italian governments to withdraw. Despite this failure, plans to introduce a single European currency (the euro) and a **European Central Bank (ECB)** advanced rapidly in the late 1990s. By 2001 12 EU countries (excluding Denmark, Sweden, and the UK) had committed themselves to EMU. Their currencies were locked together and the euro was launched for all noncash transactions in January 1999; the first notes and coins were issued in January 2002 and the national currencies were withdrawn. Of the 12 states that have joined the EU since 2004, only Slovenia has so far adopted the euro (in 2007). EU countries outside EMU are able to join ERM II, based on the euro and supervised by the ECB.

European Space Agency (ESA) An organization responsible for Europe's space programme, formed in 1975 from the merger of the European Space Research Organization (founded 1962) and the European Launcher Development Organization. There are at present 15 full-member nations, including the UK. Since 1979 all ESA *satellites have been launched by the ESA launcher *Ariane*. In 1996 the launcher *Ariane-5* was destroyed on its maiden flight.

European Union (EU) An organization established in 1993 by the terms of the **Maastricht Treaty** (see **EUROPEAN COMMUNITY**). It comprises the EC, with the addition of a common foreign and security policy and cooperation between members in justice and policing. In 1995 Austria, Sweden, and Finland joined. (Greek) Cyprus, the Czech Republic, Estonia, Hungary, Latvia, Lithuania, Malta, Poland, Slovenia, and Slovakia all joined in 2004, and Bulgaria and Romania in 2007.

The **European Commission** (until 1993 the Commission of the European Communities) is in Brussels and consists of one member or two appointed by each member country; its president is elected for a four-year term. The Commission acts as an advisory body to, and is responsible for implementing policy decided upon by, the Council of Ministers of the European Union. The current Commission is headed by José Manuel Durão Barroso. Also in Brussels, the Council comprises ministers from the governments of the member countries. The heads of government meet triannually as the **European Council**. The **European Parliament** at Strasbourg or Luxembourg comments on the

Commission's legislative proposals; it must be consulted on the annual budgets and may dismiss the Commission. Members are (since 1979) elected by direct vote in the member countries and sit as political groups in the Parliament. The long-planned single European currency (see EUROPEAN MONETARY SYSTEM) was introduced in 1999–2002. Controversial proposals for an EU constitution, which would create an EU president and foreign minister and further limit the right of national veto, were agreed in 2004 but suspended after their rejection by the electorates of France and the Netherlands (2005).

europium (Eu) A *lanthanide element, used in television-tube phosphors. At no 63; at wt 151.96; mp 822°C; bp 1527°C.

Eurydice In Greek legend, a dryad, the wife of *Orpheus. She died of a snake bite. Orpheus descended to the underworld to recover her but lost her forever when he violated the condition of her release and turned to look at her before emerging.

euthanasia (Greek: easy death) The taking of life to relieve suffering from painful and incurable diseases. Voluntary euthanasia includes both active steps for taking life (e.g. administration of drugs) and the withholding of life-supporting treatment (passive euthanasia). With compulsory euthanasia the patient—for example, a severely deformed baby—is unable to express his own wishes and the responsibility for deciding to terminate life rests on society or a person acting on authority. Many societies (e.g. The Voluntary Euthanasia Society, or Exit) promote voluntary euthanasia. Voluntary euthanasia was effectively decriminalized in the Netherlands in 1993 and made fully legal under certain conditions in 2001. Euthanasia has been legalized in strictly defined circumstances in Oregon, USA (1998) and Belgium (2002).

Evans, Sir Arthur John (1851–1941) British archaeologist. His life's work was the excavation in Crete of *Knossos (1899–1935). In *The Palace of Minos* (1921–36) he firmly established the main features of *Minoan civilization.

Evelyn, John (1620–1706) English author, best known for his *Diary*, a detailed personal record of the years 1641–1706.

evening primrose A herbaceous plant of the genus *Oenothera* (100 species), 90–100 cm tall, native to the Americas but widespread in Europe. The fragrant yellow flowers open in the evening.

Everest, Mount 27 59N 86 56E The highest mountain in the world, on the Nepal–Tibet border in the Himalayas. Climbing attempts started in 1920 and the 12th expedition, led by Col John Hunt (later Baron Hunt; 1910–98), was the first to succeed: (Sir) Edmund *Hillary (1919–) and Sherpa *Tenzing Norgay (c. 1914–86) reached the summit on 29 May 1953. Height: 8846 m (29 023 ft).

evergreen plants Plants the foliage of which is retained throughout the year. The leaves, which are tough and waxy, are produced and shed at different times all the year round, individual leaves often remaining on the tree for several years. Most conifers and many tropical broad-leaved trees are evergreen. **Deciduous plants** produce softer leaves, which are all shed before winter, leaving only the woody parts and protected buds exposed.

evolution In biology, the gradual and continuous process by which the first and most primitive of living organisms have developed into the diversity of plant and animal life known today. Until the 18th century it was generally believed that each group of organisms was separately and divinely created. Work by Linnaeus and Buffon indicated that this was incorrect.

The first theory of evolution was published by Lamarck, in 1809 (see LAMARCKISM). His idea of the inheritance of acquired characteristics lacked definite proof, although it has had its supporters. A more satisfactory theory was put forward by Charles *Darwin and A.R. *Wallace in 1858: they proposed that new species arose by a process of natural selection acting on individual inheritable variations in a population (see DARWINISM). Later work has proved that these heritable changes result from spontaneous genetic mutations, and Darwin's theory—with some modifications—is now generally accepted.

Excalibur King Arthur's magic sword. In one legend Arthur succeeds in drawing it from a stone, thereby proving his claim to the English throne. In another he receives it from the Lady of the Lake, to whom it is thrown back at his death. See also ARTHURIAN LEGEND.

excitation In physics, the raising of a system from its lowest energy level (the ground state) to a higher energy level (the excited state). It is most frequently caused by the absorption of a *photon by an atom or ion.

excommunication The exclusion of a Christian from the community of the Church for misconduct. In the early Church, exclusion

from the sacraments was frequently used as a means of censure, and in the middle ages the papacy used it to apply political pressure against sovereigns. It is still used by the Roman Catholic Church.

Exeter 50 43N 3 31W A city in SW England, the administrative centre of Devon on the River Exe. It has a 13th-century cathedral and an ancient Guildhall. Population (1993 est): 105 100.

existentialism A philosophical movement that rejects metaphysics and concentrates on the individual's existence in the world. The forerunner of existentialism was *Kierkegaard, whose pragmatic philosophy of existence was adapted by French intellectuals, especially *Sartre, after World War II. Sartre's existentialism allows individuals freedom in a nihilistic universe. A man is responsible for his effect on others, but only *his* existence is real to him and he is ultimately his own judge.

Exmoor A high moorland and national park of SW England, extending from NE Devon into W Somerset, reaching 520 m (1707 ft) at Dunkery Beacon. It supports heather, bracken, and grass and is grazed by the small hardy Exmoor ponies, wild red deer, and sheep. Parts are now being ploughed. Area: 686 sq km (265 sq mi).

Exodus (Greek: going out) The second book of the Bible, traditionally ascribed to Moses, and probably compiled between the 9th and 4th centuries BC, relating events that may have occurred in the 15th century BC. It recounts the events culminating in the departure of the Israelites from Egypt, where they had lived as slaves since the time of Joseph, and their arrival at Mount Sinai, where the Ten Commandments are given to Moses.

expanding universe The theory that the universe is expanding was first confirmed by Edwin Hubble (1889–1953) in 1929 following observations that the light from distant galaxies is subject to a *redshift, which arises from the recession of the galaxies from us (and from each other). The expansion can be explained by the *big-bang theory. See also HUBBLE CONSTANT.

explosives Substances that can be made to produce a large volume of gas very suddenly. The energy of the expanding gases may be used for a number of industrial or military purposes. Most explosives used are **chemical explosives**. These include *TNT, *nitroglycerin, *dynamite, and *gelignite. Modern high explosives are often in the form of water gels, which

are plastic, water resistant, and easy to handle safely. In **nuclear explosives**, there is an almost instantaneous release of nuclear energy, which is used for bombs and occasionally for mining.

exposure meter A device for measuring the intensity of light falling on a photographic *camera, used to determine the film exposure time and lens *f-number needed to suit the lighting conditions. The aperture and shutter speed can then be set manually or sometimes automatically.

expressionism A movement in the arts of the early 20th century in which the force of human emotion was allowed to distort the presentation of the external world. In the visual arts the chief exponents were Die *Brücke and Der *Blaue Reiter groups in Germany. Expressionism was also significant in the cinema and the theatre.

extrasensory perception (ESP) Acquisition of information not accessible through normal perceptual processes. Three phenomena are usually classified under this heading: clairvoyance (knowledge of distant events and concealed objects), telepathy (thought transference between people), and precognition (knowledge of future events). Evidence for all three tends to be anecdotal.

eye The organ of sight. The human eyes lie within two bony sockets in the skull and are attached by six muscles, which produce eye movements. At the front of the eye the white fibrous outer layer (sclera) is replaced by the transparent cornea. A delicate membrane (the conjunctiva) covers the white of the eye and lines the eyelids. Light entering the eye is refracted by the cornea and passes through the

eye. The structure of the human eye is revealed in this section. The blind spot, where the optic nerve leaves the eye, contains no visual cells and is therefore insensitive to light. The fovea is the area of acutest vision.

watery aqueous humour and pupil to the lens. The pigmented *iris controls the amount of light entering the eye. The shape of the lens can be adjusted by means of the ciliary muscles so that an image is focused through the jelly-like vitreous humour onto the *retina. Contraction of the ciliary muscles causes the lens to become flattened for focusing distant objects; relaxation of the muscles increases the

curvature of the lens for focusing near objects. Light-sensitive cells in the retina send impulses to the brain via the optic nerve. *See also* LONGSIGHTEDNESS; OPHTHALMOLOGY; SHORT-SIGHTEDNESS.

Eyre, Lake A shallow salt lake of NE South Australia. It is normally dry except during the rainy season when heavy rains are fed into the lake. Area: about 9100 sq km (3500 sq mi).

Fabergé, Peter Carl (1846–1920) Russian goldsmith and jeweller. He designed elegant *objets d'art* and was patronized by European royalty. He was especially famous for jewelled Easter eggs containing gifts.

Fabian Society A society, named after *Fabius Maximus, formed in London in 1884 for the purpose of peacefully promoting socialist ideas and establishing a socialist state in Britain. Members included George Bernard *Shaw and Sidney and Beatrice *Webb. The Fabians were active in the establishment of the Labour Party.

Fabius Maximus, Quintus (d. 203 BC) Roman general of the second Punic War. Appointed dictator after Hannibal's defeat of the Romans at Trasimene in 217, Fabius adopted a policy of attrition, harassing Hannibal but avoiding pitched battles. Hannibal's victory at *Cannae in 216 proved the wisdom of Fabius' tactics.

Factory Acts A series of UK parliamentary Acts that regulate conditions of work in factories. A response to the appalling conditions resulting from the *industrial revolution, the early Factory Acts (1802, 1819, 1833) were primarily concerned with the employment of children. Anthony Ashley Cooper (later Lord Shaftesbury), leader of the ten-hour movement, was largely responsible for the Acts of 1844 and 1847, the achievements of which were consolidated in subsequent 19th-century legislation. The safety, health, and welfare of factory workers is now regulated by the Factories Act (1961), which is increasingly being replaced by the Health and Safety at Work Act (1974).

factory farming The intensive farming of livestock in which animals are kept in confined artificial environments, with controlled lighting, heating, etc., to maximize production. Battery cages for laying hens, crates for veal calves, factory systems for bacon pigs and beef cattle are examples. Critics argue that animals

suffer distress and that the edible products contain high levels of hormones and antibiotics. In 1999 EU countries agreed to end battery-egg production by 2013.

Faeroe Islands (or Faroe Islands) A Danish group of 22 self-governing islands in the N Atlantic Ocean, between the Shetland Islands and Iceland, the chief ones being Strømø, Østerø, and Vaagø. Fishing and fish processing is important. Official currency: krone of 100 øre. Area: 1400 sq km (540 sq mi). Population (2006): 48 100. Capital: Thorshavn, on Strømø.

Fahd bin Abdul Aziz (1922–2005) King of Saudi Arabia (1982–2005). He was succeeded by his half-brother Abdullah.

Fahrenheit scale A temperature scale in which the temperature of melting ice is taken as 32 degrees and the temperature of boiling water, as 212 degrees. Named after the German physicist Gabriel Daniel Fahrenheit (1686–1736).

faience Several kinds of tin-glazed earthenware made in France. The name derives from *porcellana di Faenza*, a species of *maiolica made in Faenza, Italy. The technique of coating fragile porous earthenware with impervious hard white opaque tin glaze was brought to France by Italian potters in the 16th century. Centres of production during the 17th and 18th centuries were Lyons, Marseilles, Moustiers, Nevers, and Rouen.

Fairbanks, Douglas (Julius Ullman; 1883–1939) US film actor. With D.W. Griffith, Charlie Chaplin, and his wife Mary Pickford he founded United Artists in 1919. His films, in which he played handsome athletic heroes, include *The Mark of Zorro* (1920) and *The Black Pirate* (1926). His son **Douglas Fairbanks Jr** (1909–2000) was also a film actor, playing similar roles, as in *The Prisoner of Zenda* (1937).

Fair Isle 59 32N 138W A sparsely inhabited island in the North Sea, off the N coast of Scotland between the Orkney and Shetland Islands.

It is famous for its knitted goods with intricate patterns. Area: 16.5 sq km (6 sq mi).

Faisal I (1885–1933) King of Iraq (1921–33). He played an important part in the Arab revolt during World War I. After the war he was briefly King of Syria before the French occupation (1920). In 1921 the British installed him as king in mandatory Iraq.

Faisal Ibn Abdul Aziz (1905–75) King of Saudi Arabia (1964–75). He became the real ruler of Saudi Arabia in 1958, although his brother Saud was still nominally king until his abdication in 1964. His reign saw the increased international importance of Saudi Arabia as an oil-producing country. He was assassinated by his nephew.

Falange Española The Spanish Fascist party, created in 1933 by José Antonio Primo de Rivera (1870–1936). The Falange wanted to regenerate Spain by means of revolution but rejected socialism. In 1937 Franco merged the Falange with the various Nationalist parties to create the National Movement, which became Spain's only legal party after the Civil War.

Falashas An Ethiopian tribe, who practise an early form of Judaism. In early 1985 the Israelis organized a secret airlift of over 7000 Falashas to Israel from famine-stricken Ethiopia.

falcon A ground-nesting bird of prey belonging to a widely distributed family (*Falconidae*; 58 species). Falcons are characterized by long pointed wings and a notched hooked bill. True falcons belong to the genus *Falco*; they kill small birds in flight with their claws or seize small mammals from the ground. Order: *Falconiformes* (falcons, hawks, etc.). See also GYRFALCON; KESTREL; MERLIN; PEREGRINE FALCON. The sport of hunting small animals or birds with falcons, other hawks, or sometimes eagles is known as **falconry**. It was practised in Asia from the 8th century BC and in Europe from late medieval times to the 17th century. The birds are taken as fledglings (eyasses) or caught as one-year-old birds (passagers) or fully mature birds (haggards), but because many hunting birds are now protected species, they are often bred in captivity. They are trained to sit hooded on the gloved fist and, by the use of a lure (an imitation bird with meat attached), to hunt and kill (but not retrieve).

Falkirk A council area in central Scotland, on the Firth of Forth. Formerly part of Stirling, it was absorbed into Central Region in 1974 and became a unitary authority in 1996. It is mainly agricultural, with petrochemicals in Grange-

mouth. Area: 299 sq km (4700 sq mi). Population (2001): 145 191. Administrative centre: Falkirk.

Falkland Islands (Argentine name: *Islas Malvinas*) An island group and United Kingdom overseas territory in the S Atlantic Ocean. The main islands are East and West Falkland; *South Georgia and the South Sandwich group to the SE now form a separate overseas territory. The population is almost entirely of British origin. Fishing is a major source of revenue and sheep farming produces wool for export. *History*: the first landing was by Capt John Strong in 1690. In the early 19th century the islands became a British colony. Argentina has long made claims to the group and on 2 April 1982, invaded the islands, triggering the **Falklands War**. Attempts at a diplomatic settlement failed and a task force sent by the UK recaptured first South Georgia and then the Falkland Islands on 14 June, after considerable loss of life on both sides. Argentina refused to declare a cessation of hostilities until 1989. The declaration of a fishing zone (1987) led to tripling of the islands' income. The economy has benefited from a new trade in squid, and is expected to be revolutionized by the exploitation of newly discovered oil resources. Currency: Falkland pound of 100 pence. Area: 12 173 sq km (4700 sq mi). Population (2001): 2564. Capital: Stanley.

Falla, Manuel de (1876–1946) Spanish nationalist composer. His music was heavily influenced by Spanish folksong and he is best known for his ballet scores *Love the Magician* (1915) and *The Three-Cornered Hat* (1919), *Nights in the Gardens of Spain* (for piano and orchestra; 1909–15), and a concerto for harpsichord and chamber ensemble.

Falloppian tubes See OVARY.

fallout Radioactive particles deposited from the atmosphere after a nuclear explosion. Local fallout consists of large particles deposited within a radius of a few hundred kilometres during the first few hours after the explosion. Tropospheric fallout may occur anywhere along the same line of latitude as the explosion during the first week after the explosion. Particles drawn high into the atmosphere can cause stratospheric fallout for several years.

fallow deer A *deer, *Dama dama*, native to Mediterranean forests but widely kept in parks and woodlands. About 90 cm high at the shoulder, fallow deer are fawn with white spots in summer, becoming greyish in winter.

Famagusta 35 07N 33 57E A port in Cyprus,

on the E coast. Founded in the 3rd century BC, it did not develop until the 13th century AD, when Christians fled here from Palestine. Many residents left in 1974 on the Turkish invasion of N Cyprus. Population (1994): 67 167.

Fang A Bantu people of West Africa comprising tribes in N Gabon, Equatorial Guinea, and S Cameroon.

fanworm A marine annelid worm belonging to the family *Sabellidae*, also called peacock or feather-duster worm. Fanworms build a parchment-like tube, up to 45 cm long, from which protrudes a feathery crown of tentacles that trap food particles and absorb oxygen. Class: *Polychaeta*.

FAO See FOOD AND AGRICULTURE ORGANIZATION.

farad (F) The SI unit of electrical capacitance equal to the capacitance of a parallel-plate capacitor with a potential difference of one volt across its plates when the capacitor is charged with one coulomb, i.e. $1\text{ F} = 1\text{ CV}^{-1}$. Named after Michael *Faraday.

Faraday, Michael (1791–1867) British chemist and physicist. In 1813 he became assistant to Sir Humphry *Davy at the Royal Institution, eventually succeeding Davy there as professor of chemistry (1833). His major work was on electricity and electrochemistry. Continuing Davy's work on electrolysis (1832) he went on to quantify the process in **Faraday's laws of electrolysis** (1833). These are: (1) the mass of a substance produced by an electrolytic reaction varies directly with the amount of electricity passed through the cell; (2) the masses of substances produced by a given amount of electricity are proportional to the equivalent masses of the substances. The **Faraday constant** is the quantity of electricity equivalent to 1 mole of electrons, i.e. the product of Avogadro's number and the electronic charge. It has the value 96 487 coulombs per mole. In electricity, he discovered the connection between electricity and magnetism and, independently of Joseph Henry (1797–1878), first showed that electromagnetic induction was possible. He used induction to produce the first electrical generator (1831) and also the first transformer.

Fargo, William See WELLS, HENRY.

Farnborough 51 17N 0 46W A town in S England, in Hampshire. The Royal Aircraft Establishment, the UK's chief aeronautical research centre, was situated here until 1991; there are

plans to develop the site as a heritage centre. Population (1991): 52 535.

Farne Islands (or The Staples) 55 38N 136W A group of about 30 islets and rocks in NE England, off the Northumberland coast. St Cuthbert lived on Inner Farne. In 1838 a heroic rescue by Grace *Darling took place from Longstone Island lighthouse.

Farouk I (1920–65) The last king of Egypt (1936–52). His inability to prevent British intervention in Egyptian affairs, and defeat in the first Arab-Israeli War (1948–49), led to his overthrow.

Fasciola See LIVER FLUKE.

fascism A political movement that first became organized in Italy in 1919 under *Mussolini. Economic backwardness, fear of communist revolution, and frustrated national ambitions enabled Mussolini's Blackshirts to come to power in 1922. Fascism emphasized an imagined national or racial superiority, and concentrated authority on a dictatorial cult figure. In Germany Hitler added antisemitism to fascist militarism, secret police, and anticommunism. World War II destroyed Mussolini's and Hitler's dictatorships and fascism won little support in other countries, except in Spain, where Franco's regime survived almost 40 years.

fast reactor A nuclear reactor (see NUCLEAR ENERGY) in which natural uranium enriched with uranium-235 or plutonium-239 is used without a moderator, the chain reaction being sustained by fast neutrons. In these reactors the core is surrounded by a blanket of natural uranium into which neutrons escape. These neutrons collide with U-238 nuclei to form U-239 nuclei, which decay to the fissionable isotope Pu-239. By suitable design, more Pu-239 can be produced in the blanket than is required to enrich the fuel in the core. These reactors are therefore called **breeder reactors**. They are 50 times more economical in uranium usage than *thermal reactors. The temperature is so high that a liquid metal (usually sodium) has to be used as coolant and safety considerations have precluded their use.

Fatah, al- (Arabic: the victory) A Palestinian organization, also known as the Palestine National Liberation Movement, established in the late 1950s. Led by Yassir *Arafat, al-Fatah began guerrilla warfare against Israel in the mid-1960s. The organization subsequently split into factions pro and anti Arafat and his role in the Arab-Israeli peace process of the 1990s.

Fates In Greek mythology, three goddesses who determine human destinies. The daughters of Zeus and Themis, they are: Lachesis, who assigns a person's position at birth; Clotho, who spins out the thread of his existence; and Atropos, who cuts the thread at death.

fathom A unit used to express depths of water, equal to six feet.

Fatimah (d.632) The daughter of *Mohammed. She married *Ali and was the mother of his sons, Hasan and Husayn, from whom most of the Shiite imams were descended. The Fatimid caliphs claimed descent from her.

fats and oils Lipid substances formed by the combination of glycerol with *fatty acids. Fats occur widely in animals and plants as an energy store and as insulating material. Vegetable fats and oils are used in making soaps, margarines, cooking oils, paints, and lubricants. Animal fats are used in foods, soaps, and candles. Oils are distinguished from fats by being liquid at 20°C, whereas fats are solid. Mineral oils are hydrocarbons rather than lipids (see OIL).

fatty acid (or **carboxylic acid**) An organic acid that comprises one or more carboxyl groups (-COOH) attached to an alkyl group. Fatty acids combine with glycerol to form glycerides, the main constituents of *fats and oils. Animal fats tend to be hard because they contain a high proportion of saturated fatty acids; soft fats, such as vegetable and fish oils, contain greater proportions of unsaturated and polyunsaturated fatty acids (containing one or more double bonds). The risk of heart disease associated with dietary fat is thought to be reduced if the fat consumed is rich in polyunsaturated fatty acids.

fatwa An edict issued by a Muslim religious leader. The most notorious such edict was the fatwa issued by Ayatollah *Khomeini in 1989, which demanded the assassination of Salman *Rushdie.

Faulkner, William (1897-1962) US novelist. *Sartoris* (1929) was the first of his stories set in the fictitious Yoknapatawpha County, based on his native northern Mississippi. His major novels include *The Sound and the Fury* (1929) and *Abraham, Absalom!* (1936). He was awarded the Nobel Prize in 1949.

fault A fracture plane in the rocks of the earth's crust, the rocks on each side being displaced relative to one another, either vertically, horizontally, or obliquely. Faulting occurs as a result of accumulated strain in the

rocks, usually at plate margins (see PLATE TECTONICS). A rift valley is a downward vertical displacement between parallel faults.

Fauré, Gabriel (Urbain) (1845-1924) French composer and organist. His works include the well-known *Requiem* (1886-87), incidental music for Maeterlinck's play *Pelléas and Mélisande* (1898), the opera *Pénélope* (1913), the orchestral *Pavane* (1887), songs, such as those in the cycle *La Bonne Chanson* (1891-92), and much piano music and chamber music.

Faust A legendary medieval German scholar and magician who sold his soul to the Devil in exchange for knowledge and power. He has has inspired numerous literary works, notably by *Marlowe (1592), *Goethe (1808, 1832), and Thomas *Mann (1947), as well as musical works, including operas by *Gounod.

fauvism A movement in French painting at the turn of the 19th century, characterized by the aggressive use of strong colours. Under the leadership of *Matisse, the fauves included *Dufy, *Braque, *Rouault, and Vlaminck.

Fawkes, Guy (1570-1606) English convert to Roman Catholicism, who became involved in the Gunpowder Plot, led by Robert Catesby (1573-1605), to blow up James I and parliament. The conspirators were informed upon and Fawkes was discovered (5 November 1605) with the gunpowder in a cellar of the Palace of Westminster. Catesby was killed resisting arrest and Fawkes was executed. Nov 5 continues to be celebrated with fireworks and the burning on a bonfire of effigies of Fawkes (so-called "guys").

fax (or **facsimile transmission**) A method of sending images (text or pictures) through the normal telephone network. The document is scanned optically to break it into a pattern of dots, which are transmitted as electrical pulses. The receiving device reconstructs the image from this information and prints it out.

FBI See FEDERAL BUREAU OF INVESTIGATION.

Federal Bureau of Investigation (FBI)

The organization within the US Department of Justice that carries out investigations into possible breaches of federal law, especially those related to security. Founded as the Bureau of Investigation in 1908, it became the FBI in 1935; under J. Edgar *Hoover (director 1924-72) it developed considerable autonomy. It campaigned against organized crime in the 1930s and participated in the anticommunist activities of Joseph *McCarthy in the 1950s.

Fédération internationale de Foot-

ball association (FIFA) The world governing body of association football, formed in Paris in 1904. Based in Zürich, it has over 140 members. It runs the World Cup competition.

Federer, Roger (1981–) Swiss tennis player. His numerous titles include the US Open (2004, 2005, 2006) and Wimbledon (2004, 2005, 2006).

feedback In electronics and communications theory, the process of returning to the input of a device a fraction of the output signal. **Negative feedback**, in which the feedback opposes and therefore reduces the input, is often used in *amplifier circuits. It compensates for noise and distortion in the output signal, although it also reduces the overall amplification. **Positive feedback** reinforces the input signal. If it becomes too high, the circuit oscillates and the output becomes independent of the input.

The principle of negative feedback also operates in biological systems, especially in controlling some biochemical reactions: the product of the reaction inhibits further activity of the enzyme catalysing it.

feldspars The most important group of rock-forming minerals and the major constituents of igneous rocks. There are four components of feldspars: anorthite (calcium plagioclase, $\text{CaAl}_2\text{Si}_2\text{O}_8$); albite (sodium plagioclase, $\text{NaAlSi}_3\text{O}_8$); orthoclase (potassium feldspar, KAlSi_3O_8); and celsian (barium feldspar, $\text{BaAl}_2\text{Si}_2\text{O}_8$).

Fellini, Federico (1920–93) Italian film director. His films, many of which are characterized by autobiographical elements, include *La strada* (1954), *La Dolce Vita* (1960), *8½* (1963), *Amarcord* (1974), and *Intervista* (1987).

fencing The art of combat with a sword, of which there are three main forms in sport: foil, épée, and sabre. Bouts are fought on a *piste*, or marked-out area. The winner is the first to score five hits (for men) or four (for women) in a time limit of six minutes (for men) or five (for women), the form of the hit varying between the three weapons.

feng shui An ancient Chinese art that claims to determine the best location for buildings and their furnishings. Adherence to its principles is claimed to enhance the flow of *ch'i* (positive energy) in an environment.

Fenians Members of a secret Irish-American revolutionary society, the Irish Republican Brotherhood (IRB), formed in 1858 by James Stephens (1825–1901). The IRB's influence con-

tinued into the 20th century, when it was superseded by the IRA.

fennel A strong-smelling perennial herb, *Foeniculum vulgare*, native to S Europe and widely cultivated. The feathery dark-green leaves and the greenish seeds (which taste of aniseed) are used to flavour food. Florence, or sweet, fennel (*F. dulce*) is cultivated for its bulb-like leafstalks, which may be eaten cooked or raw. Family: *Umbelliferae*.

Fens, the A low-lying highly fertile area in E England, extending across parts of Cambridgeshire, Lincolnshire, Norfolk, and Suffolk. Once waterlogged, the first drainage attempt was made by the Romans. This was resumed during the 17th century by the Duke of Bedford. The Fens are now virtually all drained.

fenugreek An annual herb, *Trigonella foenum-graecum*, native to the Mediterranean but widely cultivated. The brownish seeds are used to flavour curry and chutney. Family: *Leguminosae*.

Ferdinand (V and II) the Catholic (1452–1516) King of Castile as Ferdinand V (1474–1504) and of Aragon as Ferdinand II (1479–1516). He ruled Castile jointly with his wife *Isabella (I) the Catholic of Castile and after her death was regent for their daughter, Joanna the Mad. Ferdinand's accession to the

foil. The foil weighs a maximum of 500 g. Its blade is quadrangular and very flexible.

épée. The épée weighs a maximum of 770 g. Its blade is triangular and stiffer than that of the foil.

sabre. The sabre weighs a maximum of 500 g. Its blade is a flattened V-shape.

fencing

Aragonese throne effected the union of Castile and Aragon, to which Granada, taken from the Moors in 1492, was added. The introduction of the Inquisition (1480) and the expulsion of the Jews (1492) aimed to strengthen both church and monarchy.

Fermanagh A county and district of SW Northern Ireland (the new administrative district created in 1973 has the same boundaries as the historic county). It contains Upper and Lower Lough Erne. Fermanagh is mainly agricultural; traditional manufactures include cotton and tweeds. Area (including loughs): 1851 sq km (715 sq mi). Population (2001): 57 527.

Fermat, Pierre de (1601–65) French mathematician who founded *number theory and, with Blaise *Pascal, *probability theory.

fermentation The process by which microorganisms and tissues respire in the absence of oxygen (i.e. anaerobically). It can cause the decomposition of organic materials. The fermentation of carbohydrates by yeasts to form alcohol is the basis of making wines and beers and the production of industrial alcohol. Other types of fermentation produce lactic acid, as in the souring of milk by bacteria.

Fermi, Enrico (1901–54) US physicist, born in Italy. His early work in Italy was concerned with the mathematical statistics of nuclear particles. For his work on the bombardment of uranium by thermal neutrons he was awarded the 1938 Nobel Prize. He moved in 1938 to the USA. He achieved the first controlled nuclear chain reaction and later played a central role in the development of the atom bomb at Los Alamos. He bitterly opposed *Teller in the development of the hydrogen bomb.

fermium (Fm) An artificial transuranic element, named after Fermi and found in debris from the 1952 hydrogen-bomb explosion. The most stable isotope, ²⁵⁷Fm, the most stable isotope, has a half-life of 100.5 days. At no 100; at wt (257).

fern A perennial spore-producing vascular plant of the phylum *Filicinophyta* (or *Pterophyta* according to some classification schemes; about 9000–15 000 species), most abundant in tropical regions but widely distributed elsewhere. The life cycle shows *alternation of generations. The fern plant itself is the asexual (sporophyte) generation, which has a creeping underground stem (rhizome) bearing roots and aerial fronds, which reach a height of 25 m in the *tree ferns. The fronds are feather-like and usually divided into leaflets. Asexual spores are

produced in capsules, which usually occur in clusters on the underside of the leaflets. The spores develop into the inconspicuous sexual (gametophyte) generation—a tiny heart-shaped plant (called a prothallus) producing egg and sperm cells. The fertilized egg cell develops into a new sporophyte plant, which grows up from the prothallus.

ferret A domesticated form of *polecat, *Mustela putorius*, that is slightly smaller than the European polecat and lighter in colour (sometimes albino). They are used to drive rats and rabbits from their burrows.

ferrimagnetism A form of magnetism occurring in certain antiferromagnetic materials. The behaviour is weakly ferromagnetic below the Néel temperature and paramagnetic above it.

ferrite 1. A compound of iron with the general chemical formula MFe_2O_4 , where M is a metal. Most ferrites are ferromagnetic or ferrimagnetic ceramic materials and they are used in transformers and computer memories. **2.** Iron in its body-centred cubic crystal structure, either pure or as a constituent of *steel.

ferromagnetism The property of a material that enables it to become a permanent magnet, i.e. ferromagnetic materials when placed in a *magnetic field develop a very strong internal field and retain some of it when the external field is removed. The most common ferromagnetic substances are iron, cobalt, nickel, and alloys of these metals. Ferromagnetism, like *paramagnetism, is caused by the unbalanced spin of atomic electrons, which produces the effect of a tiny magnet. In ferromagnetic substances, the application of an external field causes groups of these tiny magnets, called domains, to become aligned. Above a certain temperature, the Curie point, thermal agitation destroys the domain structure and the substance becomes paramagnetic.

Fertile Crescent A strip of land in the Middle East roughly comprising the lower Nile Valley, the E Mediterranean coast, Syria, and *Mesopotamia. Formerly enjoying a wetter climate, it was the cradle of civilization, with sites showing evidence of settled communities from at least 9000 BC.

fertility drugs Drugs given to infertile women to stimulate the release of an egg cell from the ovary. The best known are the gonadotrophins—hormones normally released by the pituitary gland to control activity of the ovary.

fertilization The union of a male and a female *gamete, involving the fusion of hereditary material. The resulting cell, which is called a zygote, undergoes division (see CLEAVAGE), growth, and development to form a new individual, in which half the chromosomes are of paternal origin and half of maternal origin. In **self-fertilization** both gametes are produced by the same individual; in **cross-fertilization** they derive from different individuals. In most aquatic animals the gametes are expelled into the water and fertilization is external; in most terrestrial animals the sperms are introduced into the body of the female, where fertilization takes place.

fertilizers Substances added to soils to maintain or improve soil fertility. Natural farmyard manures have long been used as a source of plant nutrients and humus, which maintains the physical structure of the soil. Other traditional fertilizers have included bone meal, dried blood, and other animal products. Modern artificial fertilizers have provided the means for dramatic increases in crop yields. The major plant nutrients required are nitrogen (chiefly provided as ammonium nitrate derived from fixation of atmospheric nitrogen), phosphate (derived from naturally occurring rock phosphate), and potassium (from mined potash deposits). Artificial fertilizers have been of immense benefit in helping to feed a rapidly expanding human population, although excessive application can lead to pollution of rivers.

Fès (or **Fez**; Arabic name: Fas) 34°05N 5°00W A city in N Morocco. In the 14th century the Islamic city reached its peak as a major centre for commerce and learning. It has two mosques; the Qarawiyn Mosque is the oldest in Africa and contains a university (859 AD). Population (1994 est): 263 828.

fescue A *grass of the genus *Festuca* (about 100 species), native to temperate and cold regions of the N hemisphere. It grows in tufts. Meadow fescue (*F. pratensis*) is sown as a pasture grass and used for livestock fodder; sheep's fescue (*F. ovina*) grows on mountains and in dry and exposed soil. Red or creeping fescue (*F. rubra*) is common in grass mixtures for lawns.

fetishism 1. In anthropology, the practice of using charms magically, found among W African tribes and, hence, in the West Indies. Sir Edward Tylor (1832–1917) reserved the term for the idea of spirits embodied in or associated with material objects. 2. In psychiatry, the abnormal condition in which sexual satisfaction

is obtained by handling or otherwise using nongenital objects (fetishes). The fetish may be an article of clothing, rubber objects, leather, etc.

fetus (or **foetus**) The developing baby in the womb from the beginning of the ninth week of pregnancy until birth. The fetus is protected by a series of membranes enclosing a fluid (amniotic fluid), which can be extracted and used for diagnostic purposes. The fetus is connected through the *umbilical cord and *placenta to the mother's bloodstream.

feudalism The type of land tenure, characteristic of medieval Europe, in which property was held by a vassal of a lord in return for military service and a pledge of homage. Feudalism originated in the 8th and 9th centuries. It led to a fragmentation of authority, which was reflected in the rapid growth of feudal armies, the development of the castle as an administrative and military centre, and the growth of justice administered by local lords rather than by a central authority. From the 12th century these implications of feudal tenure were challenged by the growing power of Western rulers, especially in England, where it was abolished in 1661. Their governments increasingly depended on a royal bureaucracy and an army of mercenaries rather than the feudal bands. The growth of towns, outside the feudal framework, also contributed to the decline of feudalism.

Feynman, Richard Phillips (1918–88) US physicist, who shared the 1965 Nobel Prize with Julian Schwinger (1918–94) and Shinjiro Tomonaga (1906–79) for their development of quantum electrodynamics.

Fianna Fáil (Irish: Soldiers of Destiny) Irish political party, founded in 1926 by Eamon *De Valera from moderate *Sinn Féin members. The ruling party in the years 1932–48, 1951–54, 1957–73, 1977–81, 1982, 1987–94, and from 1997, its leaders have been De Valera (until 1959), Sean Lemass (until 1966), Jack Lynch (until 1979), Charles *Haughey (until 1992), Albert Reynolds (until 1994), and Bertie Ahern.

fibre (or **dietary fibre**) The constituent of the human diet that is not digested. It consists of the cell walls of plants, i.e. cellulose, lignin, hemicellulose, and pectic substances. Significant amounts are present in wholewheat cereals and flour, root vegetables, nuts, and fruit; refined foods, such as sugar, have a low fibre content. Dietary fibre is considered helpful in preventing constipation, diverticular disease, obesity, diabetes mellitus, and colonic cancer.

fibreglass (glass fibre or spun glass) Material made from glass drawn into fine threads. Glass fibre has excellent heat- and fire-resistant properties and is a good electrical insulator. It is spun and woven into curtain material; made into glass wool for heat, electrical, and sound-insulation; woven into coarse mats for filters; and used in reinforcing moulded plastics for boats, car bodies, etc.

fibre optics The use of thin flexible glass fibres for transmitting light. Each fibre, which may be used singly or in bunches, has a high refractive index. The light inside the fibre is totally internally reflected and travels through the fibre with little loss of intensity. The fibres are highly polished and coated with a substance of lower refractive index to reduce dispersion further. Glass fibres are used in communications and for examining otherwise inaccessible places, for example in medical diagnosis and in specialized industrial processes.

fiddler crab A small burrowing *crab, 25–30 mm long, belonging to the genus *Uca* (about 65 species). The brightly coloured male has an enlarged claw. Fiddler crabs are found on salt marshes and sandy beaches of tropical and temperate regions.

field In physics, a region of space in which a body possessing certain properties can exert a force on similar bodies, when they are not in contact. For example, a body having mass exerts an attractive force on all other massive bodies as a result of its gravitational field. Similarly, an electrically charged body exerts a force (attractive or repulsive, depending on polarity) on other charged bodies and a magnetized body will have a magnetic field around it. A field is often represented by lines of force to indicate the direction in which the force acts at that point.

Fielding, Henry (1707–54) British novelist and dramatist. He wrote about 25 plays, mostly satirical and topical comedies, between 1728 and 1737. His major novels include *Joseph Andrews* (1742), the ironical *Jonathan Wild* (1743), and *Tom Jones* (1749).

fieldmouse A small nocturnal long-tailed *mouse, *Apodemus sylvaticus*, of Europe, Asia, and N Africa. About 9 cm long, with an 8-cm tail, it has a rich brown coat with white underparts. Fieldmice feed on seeds and grain and can become a pest.

Field of the Cloth of Gold (1520) The meeting near Calais of Henry VIII of England and Francis I of France. Francis hoped for Eng-

lish support against Emperor Charles V, with whom, however, Henry subsequently formed an alliance.

Fields, Gracie (Dame Grace Stansfield; 1898–1979) British popular entertainer. She began her career as a music-hall singer and comedian and made several films during the 1930s. During World War II she gave many concerts for the troops; she later lived in Capri.

FIFA See FÉDÉRATION INTERNATIONALE DE FOOTBALL ASSOCIATION.

fife A small transverse *flute, pitched in B flat and used in military fife-and-drum bands.

Fife A council area in E Scotland, bordering on the North Sea, coextensive with the historic county of Fife. It consists of a lowland peninsula located between the Firths of Forth and Tay. Agriculture is most important in the N with industry concentrated in the S. Area: 1323 sq km (511 sq mi). Population (2001): 349 429. Administrative centre: Glenrothes.

fig A spreading tree or shrub, *Ficus carica*, probably native to W Asia but widely cultivated in warm temperate and subtropical regions. The large dark-green leaves are usually deeply lobed. The tiny flowers are borne inside a fleshy pear-shaped structure, which develops into the edible fig after fertilization. Figs are eaten fresh, dried, or preserved. Family: *Moraceae* (mulberry family).

fighting fish One of several labyrinth fishes, especially of the genus *Betta*, found in SE Asia and the Malay Archipelago and named for the aggression shown by the males towards each other and to immature females. The Siamese fighting fish (*B. splendens*) is about 6.5 cm long and greenish or brown in colour.

Fiji, Republic of A country in the S Pacific Ocean. It consists of over 800 islands, only 106 of which are inhabited; the largest are Viti Levu and Vanua Levu. Most of the population are Indians and Fijians with some Europeans, Chinese, and other Pacific islanders. *Economy*: chiefly agricultural, sugar cane being the main cash crop. *History*: discovered by Abel Tasman in 1643, the islands were visited by Capt Cook in 1774 and ceded to Britain in 1874. Fiji became independent within the British Commonwealth in 1970. It left the Commonwealth in 1987, when it declared itself a republic after two military coups led by Maj Gen Sitiveni Rabuka; a new constitution was passed guaranteeing native Fijians political dominance over ethnic Indians. Fiji was readmitted to the Commonwealth in 1997, the racial elements in the

constitution were revoked, and in 1999 Fiji elected its first ethnic Indian prime minister, Mahendra Chaudry. However, in May 2000 he and his cabinet were taken hostage by native Fijians opposed to multiracial government. The military took control, suspended the 1997 constitution, and installed a new government. This was returned to power in elections but overthrown in a subsequent military coup in 2006. Official language: English. Currency: Fiji dollar of 100 cents. Area: 18 272 sq km (7055 sq mi). Population (2007 est): 918 675. Capital: Suva.

filaria A parasitic *nematode worm, mainly of central Africa, Asia, and the SW Pacific. The species *Wuchereria bancrofti* and *Brugia malayi* cause the disease **filariasis**. The tiny larval worm enters the body in the saliva of a biting mosquito or mite. It then grows up to 8 cm long in lymph and blood vessels, causing swelling and pain (see **ELEPHANTIASIS**).

film A thin flexible strip of cellulose acetate, or similar transparent plastic, coated with a light-sensitive emulsion. A black-and-white photographic emulsion usually consists of gelatin containing tiny suspended crystals of silver halide. After exposure to light in a *camera, these crystals are reduced to metallic silver when treated with the chemicals in the developer, to produce a reversed (or negative) image. In colour photography, the film has three layers of light-sensitive emulsion, one for each of the primary colours. The final image is generally produced using a process of subtractive colour reversal. The sensitivity (speed) of film is quoted as an *ASA rating. See also **PHOTOGRAPHY**.

filter A device that allows one substance to pass through it but not others. For example, a filter is used to remove solid particles from a liquid or gas by passing the mixture through a porous substance, such as paper or *fibreglass, the holes in which are fine enough to prevent the passage of the particles. Such filters are used in some air-conditioning units, for water purification, etc. In optics, coloured glass filters

are used to select light with a certain range of wavelengths. In electronics, filters are circuits used to allow alternating currents of a certain frequency range to pass, while currents with frequencies outside the range are stopped.

finch A songbird belonging to a family (*Fringillidae*; 176 species) occurring in most regions of the world except Australia. Finches have hard conical bills used to crack open seeds, although they also feed on buds and fruit. There are two subfamilies: the *Fringillinae*, including the finer-billed *chaffinch and *brambling of the Old World, and the *Carduelinae*, comprising the heavier-billed species found in both the Old World and North America. Compare **WEAVERFINCH**.

Fine Gael (Irish: Tribe of Gaels) Irish political party, formed in 1933. It was the senior member of ruling coalitions in Ireland (1948–51, 1954–57, 1973–77, 1981–Jan 1982, Dec 1982–87, and 1994–97), led successively by John Costello, Liam Cosgrave, Dr Garret *Fitzgerald, and John Bruton. The current leader (from 2002) is Enda Kenny.

fingerprint The impression made by the pattern of ridges on the palmar side of the end joint of the fingers and thumbs. The taking of a person's fingerprints, which are virtually unique, for the purpose of identifying habitual criminals was introduced into the UK in 1901, largely as a result of the work of Sir William Herschel (1833–1917) and Sir Edward Henry (1859–1931). Fingerprints left at the scene of a crime may be taken by photography. Classification relies on a numerical value given to a print, which identifies the finger and the pattern of ridges. See also **GENETIC FINGERPRINTING**.

Finisterre, Cape 42°52N 9°16W The most westerly point in Spain, on the Atlantic coast.

Finland, Republic of (Finnish name: Suomi) A country in N Europe, with S and W coastlines on the Baltic Sea. It includes the Åland Islands, situated at the mouth of the Gulf of Bothnia. The land is generally low lying.

arch

whorl

loop

fingerprint. Loops are the commonest form of pattern (c. 65%), followed by whorls (c. 30%), and then arches (c. 5%).

Over 10% of the area consists of lakes, which, together with rivers and canals, provide an extensive network of inland waterways. The majority of the population are Finns, with minorities of Swedes, Lapps, and Russians. *Economy*: agriculture is highly mechanized and, together with cereals, dairy produce is of particular importance. Over 70% of the land is under forest, providing ample resources for the timber and pulp and paper industries. Hydroelectricity provides the main source of power. *History*: prehistorically the Finnic peoples migrated into Finland, gradually driving the Lapps northwards. Conquered by Sweden in the 12th century AD, Finland had a considerable degree of independence, becoming a grand duchy in the 16th century. In the 18th century the SE was occupied by Russia and in 1809 the rest of the country was ceded to Russia, becoming an autonomous grand duchy. It became independent in 1917, following the Russian Revolution, and a republic two years later. In 1939 it was invaded by Soviet forces and in 1940, and again in 1944, was forced to cede certain territories to the Soviet Union. A treaty of friendship between the two countries, first signed in 1948, continued in force until 1991. It was replaced in 1992 by a similar treaty with Russia. Finland became a member of the EU in 1995 and adopted the European single currency in 1999–2002. Matti Vanhanen has led a centrist government since 2003. Official languages: Finnish and Swedish. Currency: euro of 100 cents. Area: 305 745 sq km (117 913 sq mi). Population (2007 est): 5 238 460. Capital: Helsinki.

Finney, Albert (1936–) British actor. Following his early successful performances in plays by modern dramatists he made various films, notably *Saturday Night and Sunday Morning* (1960), *The Dresser* (1983), *Erin Brockovich* (2000), and *Amazing Grace* (2006).

Finno-Ugric languages A large group of languages of the Uralic family, spoken by more than 20 million people in dispersed communities in Scandinavia, E Europe, and W Asia. Thought to have diverged about five millennia ago, the Finnic and Ugric languages can be further divided into Ugric (*Hungarian and Ob-Ugric) and Finnic (Finnish, Estonian, Lapp, Mari, Permian, and a number of other languages).

fins Organs of locomotion and balance in fish and some other aquatic animals. The fins of fish are supported by bony or cartilaginous fin rays and are either median or paired. The median fins include the tail (or caudal) fin, typi-

cally used for propulsion (in conjunction with the muscular body) and the dorsal and anal fins, used for balancing. The paired pectoral fins, just behind the gills, and pelvic fins, further back, are used for steering (although in rays the large pectorals provide motive force).

fir A coniferous tree of the genus *Abies* (about 50 species). Mostly native to N temperate regions, these trees are also called silver firs, as many species have leaves with a silvery undersurface. Firs have blunt-tipped needles and erect stout woody cones; they are important softwood trees. The European silver fir (*A. alba*), which forms pure forests in the mountains of central Europe, is widely grown for its timber: it reaches a height of 50 m. Another widely planted timber tree is the grand, or giant, fir (*A. grandis*), which grows up to 90 m in its native W North America. Family: Pinaceae.

firefly A nocturnal beetle belonging to a family (*Lampyridae*; 2000 species) common in tropical and temperate regions. Fireflies emit a greenish light—often as short rhythmic flashes—from organs on the abdomen (see BIO-LUMINESCENCE). Many have conspicuous orange or yellow markings. The wingless females and larvae are called glowworms.

Fire of London (2–5 September 1666) The fire that started in a baker's shop in Pudding Lane and destroyed four-fifths of the City. More than 13 000 buildings, including the medieval St Paul's Cathedral, were razed to the ground. Sir Christopher Wren played a major part in the subsequent rebuilding. The **Monument**, which he designed in 1671, stands close to Pudding Lane to commemorate the Fire.

fireworks Combustible devices, used for signals, flares, and displays. Gunpowder rockets and fire crackers were first used in ancient China for military purposes and celebrations and in Europe from the middle ages. The basic explosive, usually gunpowder, is coloured by the addition of metallic salts: sodium salts for yellow, barium for green, strontium for red, and copper for blue. Metal filings are added for sparks and aniline dyes provide coloured smokes.

firn (or **névé**) A stage in the transformation of fresh snow to glacier ice. Compaction and recrystallization of the snow increases its density and it becomes firn at a relative density of 0.5. Under further compaction firn may be transformed to glacier ice, this occurring at a relative density of 0.89–0.90.

Fischer-Tropsch reaction The formation

of light liquid *hydrocarbons by passing a mixture of hydrogen and carbon monoxide over catalysts at around 200°C. The reaction enables synthetic liquid fuels to be produced from coal. It was invented by F. Fischer (1852–1932)

and H. Tropsch (1839–1935) in 1925 and was extensively used in Germany during World War II.

fish A cold-blooded aquatic vertebrate belonging to either of the two classes *Chondrichthyes*

fish. There are numerous variations on the structure of a typical bony fish (mackerel: centre). In the flying fish, for instance, the pectoral fins are enlarged as wings; in the lungfish they are fleshy, for moving on land; and in the mangrove ray they are flattened, for swimming. The dorsal and anal fins of the scorpion fish are armed with poisonous spines and the tail of the sea horse is prehensile.

(see CARTILAGINOUS FISH) or *Osteichthyes* (see BONY FISH; FLATFISH), which together comprise over 30,000 species occurring worldwide in seas and fresh waters. They have streamlined bodies with a covering of bony scales, a fin-bearing tail, an anal fin, one or more dorsal fins, and paired lateral, pectoral (anterior), and pelvic (ventral) fins, which are used in swimming. Oxygen is obtained from water by means of *gills situated in the wall of the mouth cavity, although a few species can also breathe air (see LUNGFISH). The majority of fish are carnivorous, feeding mainly on other fish and invertebrates, although some eat plants. Large numbers of small eggs are laid and are usually fertilized externally.

fish hawk See OSPREY.

fission (biology) A form of asexual reproduction in which an individual splits into two (binary fission) or more (multiple fission) equal parts, each part becoming a new individual. It occurs in a variety of plants, bacteria, protozoa, and some multicellular animals (e.g. corals).

fission (physics) See NUCLEAR ENERGY.

fission-track dating A method of dating based on the spontaneous nuclear fission of uranium-238 in the sample. The fissions are recorded as tracks, which are then compared to the tracks formed by inducing fission in the uranium-235 present. A comparison of the numbers of tracks is used as a measure of the age of the sample.

Fitzgerald, Edward (1809–83) British poet. His famous *Rubaiyat of Omar Khayyam* (1859) was a free adaptation of the 12th-century Persian original.

Fitzgerald, Ella (1918–96) US Black jazz singer. She performed with such musicians as Duke Ellington and Oscar Peterson, and made many albums, including *Hello Love*, *Duke Ellington's Song Book*, and the *Gershwin Song Books*.

Fitzgerald, F(rancis) Scott (Key) (1896–1940) US novelist. His autobiographical first novel, *This Side of Paradise* (1920), was highly successful. After 1924 Fitzgerald lived chiefly on the French Riviera, where he wrote his masterpiece *The Great Gatsby* (1925). His wife Zelda suffered increasingly from schizophrenia and after 1930 was confined to an asylum. Fitzgerald, plagued by guilt, declined into alcoholism. His other works include *The Beautiful and the Damned* (1922) and *Tender is the Night* (1934).

Fitzgerald, Garret (1926–) Irish statesman; prime minister of Ireland (1981–82;

1982–87). He was leader of the Fine Gael party 1977–87 and negotiated the Anglo-Irish Agreement of 1985.

Fiume See RIJEKA.

Five, the A group of 19th-century Russian composers dedicated to the formation of a nationalist musical tradition based on folk music. Led by Mili Balakirev, the other members were *Borodin, César Cui, *Mussorgski, and *Rimsky-Korsakov.

fives A British court game that originated in handball and developed in different forms at three public schools, Eton, Rugby, and Winchester. It is played with gloved hands by two or four players on a three- or four-walled court, each side returning the ball in turn to certain areas of wall.

fjord (or fiord) A long narrow sea inlet lying between steep mountain slopes, especially in Norway. Usually U-shaped, fjords are glaciated valleys that have been flooded by the sea. Many are extremely deep, but near their mouths they usually have a considerably shallower bar or threshold.

flag A Eurasian iris, *Iris pseudacorus* (yellow flag), growing in marshes and ditches. Up to 1.2 m high, it has yellow flowers and long blade-like leaves. The sweet flag (*Acorus calamus*) is a perennial herbaceous plant native to Asia and North America and naturalized in Britain, growing at the margins of ponds, rivers, etc. About 1 m high, it has wavy-edged leaves, which smell of tangerines when crushed, and the small yellow flowers are tightly packed on a tapering spikelike spadix. Family: *Araceae*.

flagella Long threadlike structures that project from the surface of a cell and produce lashing or undulating movements, used for locomotion or the production of water currents. Flagella occur in certain protozoa, motile gametes (usually sperms), lower plants, and sponges, in which they have a complex internal structure. Bacteria have flagella of a simpler structure. Because of this difference, many biologists prefer the term "undulipodia" for non-bacterial flagella.

flageolet A musical instrument similar to the *recorder but with two thumb holes on the underside and a more complex head fitted with a slender ivory mouthpiece containing a sponge to absorb condensation.

Flamboyant In French gothic architecture, the predominant style during the 15th century. Similar to the earlier English Decorated style, Flamboyant takes its name from its character-

istic slender and elaborate curves that wind into flamelike patterns, especially in window tracery. St Maclou, Rouen (begun 1432), is a fine Flamboyant church.

flamboyant tree A tree, *Delonix regia*, also called royal poinciana, flame tree, and peacock flower. It has showy flame-coloured flowers with long protruding stamens. Native to Madagascar, it is widely planted in the tropics for shade and ornament. Family: *Leguminosae*.

flamenco A type of Spanish music originating in Andalusia, typically consisting of a song accompanied by dancing, in which the men perform intricate toe and heel tapping steps (*zapateados*) and the women rely on graceful hand and body movements. It was developed by gypsies and shows signs of Moorish influence. Flamenco guitar playing employs a different technique from that of the "classical" guitar, including a percussive effect obtained by tapping the body of the guitar with the fingers.

flame tree One of several unrelated trees with flame-coloured showy flowers. The name is most commonly applied to *Brachychiton acerifolium* (or *Sterculia acerifolia*), a deciduous Australian tree that bears masses of small scarlet bell-like flowers on leafless branches. It may also refer to the *flamboyant tree.

flamingo A wading bird belonging to a family (*Phoenicopteridae*; 4 species) occurring in large flocks on saltwater lakes in warm regions of the world. Flamingos have a long neck, a broad wingspan, and white plumage, tinged with pink. They separate algae, diatoms, small molluscs, etc., from mud using their bills, which are lined with sieve-like filters. Order: *Ciconiiformes* (herons, storks, etc.).

Flaminius, Gaius (d. 217 BC) Roman popular leader. An advocate of the plebeians' rights, he often challenged or disregarded senatorial authority. In 220, as consul, he built the Flaminian Way, Rome's road to N Italy. Elected in 217 as leader against *Hannibal, he was defeated and killed at Trasimene.

Flamsteed, John (1646–1719) English astronomer, who established, with the permission of Charles II, a national observatory at Greenwich and was appointed the first astronomer royal in 1675. His star catalogue gave the positions of more than 3000 stars.

Flanders A historic region in Europe, in the SW of the Low Countries. It now comprises the provinces of East Flanders and West Flanders in Belgium and parts of N France and the

Netherlands. In the middle ages Flanders formed an autonomous region ruled by the Counts of Flanders and after the 12th century it became a major industrial and commercial centre, its cloth being especially important. The scene of many battles during its history, it saw heavy fighting in both World Wars. See also FLEMINGS.

flatfish Any carnivorous *bony fish of the order *Pleuronectiformes* (about 600 species), including many important food fishes, such as *halibut, *plaice, *sole, and *turbot. They have a laterally flattened body fringed with dorsal and anal fins. Both eyes occur on the same side of the head and they lie on their "blind" side, usually on sandy or muddy bottoms of coastal waters; the upper surface is coloured to blend with their surroundings. In the larval stage one eye migrates over the head to lie near the other.

flat racing A form of horse racing in which the horses are not required to jump obstacles. Flat races are usually run over distances between 0.8 km (0.5 mi) and 2.4 km (1.5 mi). Thoroughbred horses are used, mainly as two- and three-year-olds. Weight handicaps are allotted in most races. The most prestigious races are the English Classics, the US Triple Crown, and the French Prix de l'Arc de Triomphe.

flatworm A flat-bodied wormlike animal of the invertebrate phylum *Platyhelminthes* (9000 species). Some flatworms are free-living (planarians) but the majority are parasitic (see FLUKE; TAPEWORM). They range in size from 1 mm to 15 m. Many are hermaphrodite.

Flaubert, Gustave (1821–80) French novelist. His first novel, *Madame Bovary* (1856), was controversially explicit. Other major works include *Salammbô* (1862), *L'Éducation sentimentale* (1870), *La Tentation de Saint Antoine* (1874), and the brilliant short stories in *Trois contes* (1877).

flax A herbaceous plant of the genus *Linum* (230 species), mostly of the N hemisphere. Cultivated flax (*L. usitatissimum*) is an annual with narrow leaves and blue flowers. Its stem fibres are used to make linen, fine writing paper, and cigarette paper. The seeds contain *linseed oil. Flax is cultivated throughout Europe. Family: *Linaceae*.

flea A small wingless insect belonging to the widely distributed order *Siphonaptera* (about 1600 species). Fleas are bloodsucking parasites of birds and mammals. Their legs are modified for jumping. Fleas have irritating bites and act as carriers of some serious diseases. Two im-

portant and widely distributed species are the human flea (*Pulex irritans*) and the oriental rat flea (*Xenopsylla cheopis*), which transmits bubonic plague and typhus to man.

Flémalle, Master of (c. 1378–1444) One of the founders (with the *van Eyck brothers) of the Flemish school of painting. He is usually identified as Robert Campin. His works display the careful realistic rendering of details from everyday life that characterizes the Flemish school as a whole.

Fleming, Sir Alexander (1881–1955) British microbiologist, who discovered the antibiotic *penicillin. In 1928 Fleming noticed that a mould contaminating a bacterial culture had destroyed the bacteria in its vicinity. He identified the mould but could not isolate or identify the antibiotic. This was later achieved by Lord *Florey and Sir Ernst *Chain, with whom Fleming shared the 1945 Nobel Prize.

Fleming, Ian (Lancaster) (1908–64) British author and journalist, famous for his creation of the archetypal secret agent, James Bond, in 12 novels and 7 short stories, most of them filmed.

Fleming, Sir John Ambrose (1849–1945) British electrical engineer, who constructed the first rectifying diode (see THERMIONIC VALVE) in 1904. His invention greatly stimulated the development of radio and led to the invention of the triode two years later by Lee De Forest (1873–1961).

Flemings Inhabitants of N and W Belgium (*Flanders) who speak Flemish, a dialect of *Dutch known by them as Vlaams. They number approximately 5 500 000. Like the Dutch they are descended from the Salic Franks, a Germanic people, who settled the area during the 3rd and 4th centuries AD. They retain a cultural identity distinct from that of French-speaking Belgians (see WALLOONS).

flight recorder A strong box containing a multitrack tape record of an aircraft's flight parameters (instrument readings, position of control surfaces, etc.) and the voices of the pilot and crew. Recordings are made every second. If found after a crash it can provide information as to its cause.

flint A variety of *chalcedony. It is grey to black, is dense and tough, and breaks with a conchoidal (curved) fracture, leaving sharp edges (hence its use by Stone Age man for tools and weapons). It occurs in nodules in chalk along the bedding planes and as pebbles in river gravels and beach material.

flint glass A durable, brilliant, and highly refractive glass. Also known as lead glass and crystal glass, it is used in high-quality glassware and also in lenses and prisms since it absorbs very little light.

Flintshire A county in NE Wales, on the Dee estuary and the Irish Sea. In 1974 it became part of Clwyd; it was reinstated as a county (with different borders) in 1996. The Deeside region is heavily industrialized, while the S and W are agricultural. Area: 437 sq km (169 sq mi). Population (2001): 148 565. Administrative centre: Mold.

Flodden, Battle of (9 September 1513) The battle in which the English under Thomas Howard, Earl of Surrey (1443–1524), defeated the Scots under *James IV at Flodden Edge, Northumberland. The Scots had invaded England after allying with France against Henry VIII.

Florence (Italian name: Firenze) 43° 47' N 11° 15' E A city in Italy, the capital of Tuscany on the River Arno. The principal industry is tourism. Its many famous buildings include the 13th-century cathedral of Sta Maria del Fiore, the campanile of Giotto, the baptistery, and many churches (including Sta Maria Novella and Sta Croce). The Ponte Vecchio (1345) across the River Arno connects the *Uffizi gallery to the Palazzo Pitti (now an art gallery). Art treasures in Florence include works by Michelangelo, Donatello, Masaccio, Giotto, Fra Angelico, Botticelli, Raphael, Titian, and Rubens. *History:* an early Roman colony, it had developed into an important centre of trade and industry by the 12th century. It was torn by the struggles between the *Guelfs and Ghibellines (13th and 14th centuries) but flourished financially and culturally (14th–16th centuries). The rule of the *Medici family began in 1434 and continued almost uninterrupted for three centuries. Following a period of Austrian rule, Florence became part of the new kingdom of Italy in 1861 and was the provisional capital (1865–71). Population (2000 est): 376 682.

Florey, Howard Walter, Baron (1898–1968) Australian pathologist, who, working with Sir Ernst *Chain, isolated and purified the antibiotic *penicillin, first discovered by Sir Alexander *Fleming in 1928. Florey and Chain developed techniques for producing the pure drug in large quantities. In 1941 they conducted the first clinical trials, in which penicillin proved very effective in combating bacterial infections. Florey shared the 1945 Nobel Prize with Chain and Fleming.

Florida A state in the far SE of the USA, between the Atlantic Ocean and the Gulf of Mexico. It is a low-lying peninsula with many lakes and rivers. Tourism, based on its subtropical climate, is the most important industry, with many popular resorts, such as Miami Beach and Palm Beach. The John F. Kennedy Space Center is at Cape Canaveral. Florida produces some 75% of the USA's citrus fruits, as well as large quantities of vegetables. *History:* following its exploration by the Spanish, it was ceded to the British in 1763 but returned to Spain after the American Revolution. It passed to the USA in 1819, becoming a state in 1845. It was a supporter of the Confederate cause during the US Civil War. The **Florida Keys** are a chain of small islands, separated from the S coast of Florida by Florida Bay. They include the islands of Key West and Key Largo and extend for over 160 km (100 mi). The islands are linked by the Overseas Highway, a complex of roads and 42 bridges. Mainland area: 151 670 sq km (58 560 sq mi). Population (2000): 15 982 378. Capital: Tallahassee.

flotsam, jetsam, and lagan Goods cast into the sea that respectively remain afloat, sink, or would sink but have attached to them a buoy, which keeps them afloat. Unless claimed by the owner, they belong to the Crown.

flounder A common name for any *flatfish or for certain species. An example is *Platichthys flesus*, which lives in European coastal and fresh waters. It has a greenish or brownish mottled upper surface and is an important food and game fish.

flour The powdered grain of wheat or other cereals, used in baking, chiefly bread. When the two proteins in wheat, glutenin and gliadin, are mixed with water they form gluten, which permits the dough to expand and retain the carbon dioxide resulting from fermentation of the yeast in bread dough. The principal commercial flours are whole wheat (100%), wholemeal and stoneground (92%), wheatmeal (80–90%), and white flours (70–72%). Whole wheat and wholemeal flour retain more of the bran (the outer skin of the wheat grain) and have more iron and calcium than white flour, and so are favoured by nutritionists. They are also a good source of dietary *fibre. Flour with a high gluten content (strong flour) is best when yeast is called for, as in dough for bread. A softer flour with a lower gluten content (fine flour) is used for cakes, shortbread, etc. Plain flour is an all-purpose flour, with a moderate

gluten content. Self-raising flour is plain flour with the addition of raising agents.

flower The reproductive organ of flowering plants (angiosperms), which is essential for the production of seeds and fruits. It is made up of the perianth (petals and sepals) and the sexual organs—the *stamens producing pollen (male gametes) and the *carpels containing the female gametes. The petals and sepals serve to protect the sexual organs and—in flowers pollinated by animals—are brightly coloured, scented, and secrete *nectar to attract insects and birds. Wind-pollinated flowers are typically small and inconspicuous and may lack a perianth.

flowering currant An ornamental garden shrub, *Ribes sanguineum*, native to North America. Its drooping spikes of pink tubular flowers appear before the maple-shaped leaves. The fruit is a blue-black berry. The shrub has an odour of blackcurrants. Family: *Grossulariaceae* (see CURRANT).

flowering rush A perennial freshwater plant, *Butomus umbellatus*, native to Eurasia but common throughout N temperate regions: it is a popular garden plant. It has long tapering leaves and an umbrella-shaped cluster of pinkish flowers at the tip of a long stalk. Family: *Butomaceae*.

fluidics The use of jets of fluid in a circuit to carry out electronic functions. Fluidic circuits can resist much higher temperatures than electronic circuits and are also unaffected by ionizing radiation and magnetic fields. They therefore have uses in nuclear reactors and spacecraft. They are also used as delay lines since they respond much more slowly than electronic circuits.

fluidization The process of supporting very fine solid particles in a stream of gas so that the combination of solid and fluid behaves like a liquid. The process is used, for example, in transporting coal dust.

fluid mechanics The study of the mechanical properties of fluids. Hydrostatics is concerned with the study of fluids at rest and hydrodynamics (or fluid dynamics) with fluids that are flowing. Hydraulics deals with the practical applications of these sciences. Two important aspects of hydrodynamics are the conservation of energy in fluid flow and the distinction between streamline and turbulent flow. See also AERODYNAMICS.

flake A parasitic *flatworm of the class *Trematoda* (over 6000 species). Typically leaf-

shaped, some are elongated to fit the body cavities they inhabit. Monogenetic flukes have a single host and are generally external parasites of fishes; the digenetic flukes have life cycles involving up to four different hosts and are mainly internal parasites of vertebrates, passing early larval stages in various invertebrates.

fluorescence See LUMINESCENCE.

fluorescent lamp A lamp that uses fluorescence (see LUMINESCENCE) as its source of light. It consists of a glass tube containing a low pressure gas, such as mercury vapour. As a current passes through the gas, collisions between the electrons and atoms of the gas excite the atoms, which emit *ultraviolet radiation when they return to the ground state. The radiation strikes a phosphor coating on the inner surface of the tube, causing the phosphor to fluoresce emitting visible light.

fluorescent lamp. Electrons from the filament collide with atoms of mercury vapour in the tube producing ultraviolet radiation. This is converted to visible light by the fluorescent coating on the tube.

fluoridation The addition of fluoride (usually sodium fluoride) to drinking water to reduce dental *caries (tooth decay), especially in children. The fluoride combines with apatite—the chief constituent of tooth enamel—to form fluoroapatite, which has a greater resistance to bacterial decay. The recommended level is one part of fluoride per million. In the UK the decision to implement this recommendation rests with local authorities.

fluorine (F) A highly reactive pale-yellow halogen gas, the most electronegative element known. It was first isolated by H. Moissan in 1886 and occurs naturally in volcanic gases and as *fluorite (CaF_2) and cryolite (Na_3AlF_6). It is

prepared by electrolysis of potassium hydrogen fluoride (KHF_2) solution in dry hydrofluoric acid (HF). The gas uranium hexafluoride (UF_6) allows separation of the fissile ^{235}U isotope from ^{238}U by gaseous diffusion. Hydrofluoric acid is used to etch glass. Fluorocarbons are chemically unreactive and have many important uses. See also FLUORIDATION. At no 9; at wt 18.9984; mp -219.62°C ; bp -188.14°C .

fluorite (or **fluorspar**) A mineral consisting of calcium fluoride. It occurs in hydrothermal veins, often in ore deposits, and in some igneous rocks. Most fluorite is used as a flux in iron and steel making; it is also used as a source of fluorine. Blue John is a deep blue or purple variety used for ornamental purposes.

fluorocarbons Synthetic compounds of carbon and fluorine (sometimes also containing atoms of other halogens). They are extremely resistant to chemical attack, even at very high temperatures, and are nontoxic and nonflammable. They are used as refrigerants, anaesthetics, heat-transfer agents, and high-temperature lubricants. The fluoroanalogue of polythene, polytetrafluoroethylene (Teflon), is a useful plastic in corrosive environments and has a very low coefficient of friction. Its stability at high temperatures enables it to be used for nonstick coatings in cooking utensils. **Chlorofluorocarbons** (CFCs), containing both fluorine and chlorine, were formerly much used as propellants for aerosols, although their use is now limited on environmental grounds as photochemical reactions in the upper atmosphere may lead to depletion of the *ozone layer.

flute A woodwind instrument of ancient origin, existing in many different cultures. The modern side-blown flute (in which a column of air is made to vibrate by blowing across an elliptical mouth hole) and the *recorder are members of the same family. Originally made of wood, most flutes are now metal. The modern orchestral flute is about 0.6 m (2 ft) long and has a range of three octaves above middle C.

flux 1. The net amount of a directional quantity passing through a surface area at right angles to the surface. The concept of flux is used to describe phenomena that involve forces or the flow of energy, such as electric flux, magnetic flux, and luminous flux. **2.** A substance used in brazing and soldering to aid the formation of the joint. It lowers the melting point of the solder and also removes oxides from the metal surfaces allowing the solder to unite with a clean metal surface.

fly An insect belonging to the order *Diptera*

(over 85 000 species)—the so-called true, or two-winged, flies—of great economic importance in transmitting disease. The adults have only two wings (the front pair), the hind pair being reduced to balancing organs. The mouthparts are adapted for piercing or sucking, and most species feed on plant juices or suck the blood of mammals. The larvae—often called maggots—are typically scavengers on plant and animal refuse. Bloodsucking species, such as mosquitoes and tsetse flies, may transmit such diseases as malaria, sleeping sickness, and yellow fever. The order also includes the *houseflies, *blowflies, *craneflies, and *horse flies.

Various flying insects of other orders are also called flies, e.g. the alderfly, firefly, and mayfly.

fly agaric A poisonous mushroom, *Amanita muscaria*, found in woodlands, especially of birch and conifers. Its cap is scarlet or orange-red with white scales and the white stalk has a membranous collar beneath the cap. Fly agaric is seldom fatal.

flycatcher A small active songbird belonging to an Old World family (*Muscicapidae*; 378 species) and feeding on insects, typically caught in flight. They have delicate legs used only for perching. The typical flycatchers are dull coloured and include the grey-and-brown European spotted flycatcher (*Muscicapa striata*) and the black-and-white pied flycatcher (*Ficedula hypoleuca*). The tropical blue flycatchers and paradise flycatchers are beautifully coloured and ornamented. Compare TYRANT FLYCATCHER.

flying fish A fish of the family *Exocoetidae* (about 40 species). Flying fish swim just below the surface in warm oceanic waters. If disturbed they launch themselves from the water by rapidly beating the tail and glide through the air using large winglike pectoral fins.

flying fox A fruit *bat belonging to the genus *Pteropus* (51 species), ranging from Africa to Australia. Flying foxes have foxlike heads and a wingspan of up to 1.5 m.

flying lemur See COLUGO.

flying lizard A lizard belonging to the genus *Draco* (15 species) of SE Asia, having large folds of skin between the legs supported by ribs that are spread out when the lizard jumps from a tree. They have greenish bodies and brightly coloured "wings." Family: *Agamidae* (agamids).

flying snake A slender diurnal arboreal snake belonging to the genus *Chrysopelea* (3 species), occurring in S Asia and the East Indies.

They can glide short distances by launching themselves in the air and flattening their belly scales. Family: *Colubridae*.

flying squirrel A nocturnal *squirrel of the subfamily *Petauristinae* (37 species), occurring in SE Asia, North America, and Eurasia. Flying squirrels have a flap of loose skin from elbow to knee that is stretched tight by extending the legs, enabling them to glide from branch to branch.

Flynn, Errol (1909–59) Australian actor. He played the handsome adventurous hero in such Hollywood films as *Captain Blood* (1935), *Gentleman Jim* (1942), and (as John Barrymore) *Too Much Too Soon* (1958). His private life was candidly recounted in two autobiographies.

f-number The ratio of the focal length of a camera lens to the diameter of the shutter opening (aperture). For example, f-8 means that the focal length is eight times the aperture. The smaller the f-number, the greater the illumination of the film.

Foch, Ferdinand (1851–1929) French marshal. At the outbreak of World War I he commanded the Ninth Army and was largely responsible for halting the German advance at the Marne and for the Allied victory at Ypres (1915). After the Somme offensive (1916), he became chief of the general staff (1917). He returned to action in 1918 and as Allied commander in chief forced the Germans back to the Rhine, effecting their defeat.

foetus See FETUS.

fog A cloud near the ground surface, within which visibility is reduced to less than 1 km (0.6 mi). Fog is the result of the condensation of water vapour on tiny particles in the lower layers of air, usually through the cooling of air to below its *dew point; it is most likely to occur with light wind conditions and a clear sky at night. There is a greater incidence in industrial areas.

föhn A warm dry wind that descends down the leeward side of mountains. It is a frequent occurrence in the Alps (where the name originated), the Rocky Mountains (where it is known as the *chinook*), and the Andes. In winter it can cause extremely rapid thaws of lying snow, resulting in avalanches.

Fokine, Michel (Mikhail F.; 1880–1942) Russian ballet dancer and choreographer. From 1909 he worked with Diaghilev's Ballets Russes in Paris, for which he choreographed such revolutionary ballets as *The Firebird* (1910) and

Petrushka (1911). He became a naturalized US citizen in 1932.

fold A buckling of sedimentary rock strata produced by compressional forces acting on it. Large-scale folding produces mountain ranges; this occurs where two continental plates collide (see **PLATE TECTONICS**) and the sediment along their margins is compressed and folded. A simple upfold is called an *anticline and a downfold, a *syncline; however, most folds are much more complex.

folic acid See **VITAMIN B COMPLEX**.

Folies-Bergère A Parisian variety theatre opened in 1869 and celebrated chiefly for its elaborate revues featuring dancing girls and striptease acts.

folk dance A form of dance developed by country people, usually for their own amusement. Folk dances derive from ancient ritual dances used in religious worship and to invoke the fertility of the land (the original purpose of the maypole dance). They have greatly influenced other forms of dances, notably court dancing, 18th- and 19th-century ballroom dances (such as the waltz and polka), and *ballet. In England the most popular types are country dancing and the Morris dance.

Folkestone 515N 111E A resort and port in SE England, in Kent. The English terminal of the *Channel tunnel is here. Population (1991): 45 587.

folk music Song or dance music developed from a communal aural tradition, e.g. Irish ballads and cowboy songs. The melody and words of folksongs are often changed by a succession of performances. Folk music is characterized by modal melody and simple forms, such as dances, lullabies, work songs, and love ballads.

Fonda, Henry (1905–82) US film actor and director, associated particularly with the portrayal of men of solid integrity, notably in *The Grapes of Wrath* (1940). Other films include *War and Peace* (1956), *Twelve Angry Men* (1957), which he directed, and *On Golden Pond* (1981), which earned him his first Oscar and also starred his daughter **Jane Fonda** (1937–). Her other films include *Kluge* (1971), *Julia* (1977), and *Old Gringo* (1989). His son **Peter Fonda** (1939–) and granddaughter **Bridget Fonda** (1964–) are also film actors.

Fontainebleau 48 24N 2 42E A town in N central France, in the Seine-et-Marne department. The surrounding forest inspired the Barbizon school of painters. The 16th century Royal Palace was largely built by Francis I.

Fontainebleau was the headquarters of NATO from 1954 to 1966. Population (latest est): 18 753.

Fonteyn, Dame Margot (Margaret Hookham; 1919–91) British ballet dancer. She was a member of the Sadler's Wells company and the Royal Ballet from 1934 to 1959 and often performed in partnership with Rudolf *Nureyev.

food additives Substances added to food to alter its taste, texture, appearance, keeping qualities, or other properties. Although additives play a vital role in food preservation, consumer resistance to them has grown following recent reports of their toxic, carcinogenic, or allergic effects. In the UK prepacked and processed foods must list their ingredients, including any additives. About 280 of these currently have an **E number**, meaning that they have been approved for use in the EU. Additives without an E number must be listed by name.

Food and Agriculture Organization (FAO) A specialized agency of the *United Nations constituted in 1945 to coordinate international efforts to raise levels of nutrition and food production and to improve the management of forests. The headquarters are in Rome.

food chain A series of living organisms associated in a feeding relationship: each animal feeds on the one below it in the series. Most commonly, green plants are at the base of a food chain. They are eaten by herbivores, which in turn may be consumed by carnivores. Parasites are also part of the chain, and different food chains are often interconnected to form a **food web**. Other food chains are based on decomposers—organisms that feed on dead organic remains. See illustration on p. 338.

fool's gold See **PYRITE**.

foot-and-mouth disease An infectious virus disease affecting cattle, sheep, goats, pigs, and many wild animals. Typically it causes fever and blisters in the mouth and feet, with consequent reluctance to feed, listlessness, and lameness. The virus can be transmitted to other animals by direct contact or indirectly by infected dung, etc.; it can also be carried by contaminated vehicles, people, and wild animals. The disease is currently endemic in N South America, central Africa, the Middle East, and S Asia. It also occurs sporadically in China and NW Africa. In Europe it was eradicated by a programme of compulsory mass vaccination of cattle during the 1950s and 1960s, combined with 'stamping out' of any subsequent disease

by slaughter of infected animals. However, the UK suffered a major outbreak in 2001, when over 5.6 million animals were destroyed.

football A field game played throughout the world, the object of which is to score goals with an inflated ball. The modern games evolved during the 19th century.

American football is played with an oval ball on a field marked out as a gridiron. There are 22 players on the field at any one time, but groups of differently specialized players are used in different phases of the game. After kick off, the game progresses in downs, or periods when the offensive team is advancing the ball towards the goal by passing or running with it. The team has four downs in which to advance the ball 10 yd (9 m). If it fails, the other team is given possession, having the chance to substitute offensive for defensive players. If the 10 yd is covered, the team maintains possession of the ball. A touchdown, in which the ball is taken across the opponents' goal line, scores six points; a conversion after a touchdown, in which the ball is taken over the goal line again from scrimmage or is kicked between the goalposts scores respectively two points or one point; a field goal (kicked from anywhere on the field) scores three points. Players must wear protective clothing.

Association football (or soccer) dates back to the founding in England of the Football Association (1863). It is an 11-a-side game played with a spherical ball weighing 14–16 oz (396–453 g) and having a circumference of 27–28 in (69–71

cm). The traditional positions of the players are: goalkeeper; right and left back; right, centre, and left half-back; outside right, inside right, centre forward, inside left, and outside left. These positions have now become very flexible. The teams toss for the first kick (the kick-off), following which the teams try to kick or head the ball into the opponents' goal. Only the goalkeeper may use his hands, and then only in his penalty area. Played all over the world, the game is governed internationally by the *Fédération internationale de Football association.

Australian Rules is a fast 18-a-side game played with an oval ball measuring 22.75 by 29.5 in (57.2 by 73.6 cm), with which players may run as long as they bounce it every 9 m (10 yd). The ball must be punched instead of thrown. There are four goalposts without crossbars at each end. A goal, kicked between the two inner posts, scores six points; a behind, kicked between an inner and an outer post, scores one point.

Canadian football is similar to American football but is played with 12-a-side teams on a larger field and has slightly different scoring and rules.

Rugby football uses an oval ball that is kicked or passed by hand. The game was first played at Rugby School, England, according to tradition in 1823. In 1871 the Rugby Football Union was formed, but its ban on professionalism led in 1893 to the secession of the Rugby League (then called the Northern Union); there are therefore two types of rugby. Rugby Union

food chain. The feeding relationships between some plants and animals of a meadow habitat are simplified in this food web; in practice many more links and various other organisms are involved.

American football

Association football

Australian Rules

Rugby Union football

football. Dimensions of pitches.

football (or rugger) is a 15-a-side game played throughout the world. The ball is 11–11.25 in (27.9–28.6 cm) long. A try, in which the ball is touched down behind the opponents' goal line, is worth five points; a goal (a try "converted" by

kicking the ball over the crossbar of the goal-posts), seven points total; a penalty goal, resulting from a kick awarded as a penalty, or a drop goal, from the field, score three points. A scrum, in which the forwards of both teams

battle for the ball in a tight mass, is used to restart the game after minor infringements. The ban on professionalism was abandoned in 1995. Rugby League football is a 13-a-side game with slightly different rules and scoring in which professionalism has always been allowed; it is played mainly in N England.

Football League An English association football competition for professional teams. It was created in the N in 1888 to help finance professional clubs by providing a systematic series of matches. The Second Division was added in 1892 with a system of promotion and relegation between the divisions soon after; the Third Division was added in 1920 and the Fourth in 1958.

football pools A system of gambling involving postal betting on the results of football matches. First appearing in the UK in 1923, they are now controlled by a few companies registered under the Betting, Gaming and Lotteries Act (1963). The stake money is pooled, some 30% of which is available as prize money (30% goes in running costs and 40% in government duty).

Foraminifera An order of small single-celled organisms (protozoa) found on the sea bed or as part of the *plankton. They form tiny calcareous often multichambered shells from which they extend fine branching pseudopodia to trap small protozoans and algae. Phylum: *Granuloreticulosa*; kingdom: *Protoctista*. See also GLOBIGERINA.

force The agency that changes either the speed or the direction of motion of a body (symbol: *F*). It is a *vector quantity defined as the product of the mass of the body and the acceleration produced on it. Force is measured in newtons. See also CENTRIPETAL FORCE; CORIOLIS FORCE.

Ford, Ford Madox (Ford Hermann Hueffer; 1873–1939) British novelist, the grandson of the Pre-Raphaelite artist Ford Madox Brown. Among his many novels and books of criticism and memoirs are the novels *The Good Soldier* (1915) and *Parade's End* (1924–28), a tetralogy. He founded and edited the *English Review* (1908).

Ford, Gerald R(udolph) (1913–2006) US statesman; Republican president (1974–77) following Nixon's resignation.

Ford, Harrison (1942–) US film actor. His films, mostly adventure fantasies, include *Star Wars* (1977) and its sequels, *Raiders of the Lost Ark* (1981), and *What Lies Beneath* (2000).

Ford, Henry (1863–1947) US car manufac-

turer. The Ford Motor Company was founded in 1903 and in 1912 Ford introduced the assembly line to manufacture the famous Model T, 15 million of which had been mass-produced by 1928.

Foreign Legion A French military force formed in 1831 to serve in France's African colonies. Its recruits are international but its officers are usually French. The headquarters are at Aubagne, near Marseille, with units in Corsica and Djibouti.

forest An area of land covered largely with trees and undergrowth. Over 20% of world land area is forest, both natural and artificially planted, making forests a vital part of the global ecosystem as major suppliers of oxygen as well as timber. They also provide habitats for wildlife.

The species of trees growing depends mainly on climate. Northern coniferous forests consist largely of pine, spruce, and fir and provide softwood for paper pulp, furniture, construction, etc. In more temperate regions forests consist primarily of mixed deciduous trees, especially oak, ash, elm, beech, sycamore, and other hardwoods, used mainly in furniture. In Mediterranean climates, the trees are adapted to hot dry summers and include the evergreen oaks. Broad-leaved evergreen trees are also found in New Zealand and South America, together with southern conifers. Tropical forests are characterized by a great diversity of species, usually of tall evergreen trees, with many climbing vines and epiphytes. The major tropical rain forests are in the Amazon and Orinoco river basins, with others in Africa and SE Asia. In neighbouring regions of lower and more seasonal rainfall, an open savanna forest predominates, consisting of scattered deciduous trees.

Forestry, the cultivation and management of forests, is of major economic importance. In the UK, forestry is controlled by the Forestry Commission (established in 1919), which is now responsible for the production of most home-grown softwoods.

forget-me-not An annual or perennial herb of the genus *Myosotis* (50 species), of temperate regions. It has long spikes of small flowers, usually blue with white centres. Several species are grown as garden flowers. Family: *Boraginaceae*.

Forman, Miloš (1932–) Czech film director. His earlier films, such as *The Fireman's Ball* (1967), blend humour and social criticism. In 1968 he went to the USA, where he made *One Flew over the Cuckoo's Nest* (1975). More recent

films include *Amadeus* (1983), and *The People vs Larry Flint* (1996).

formic acid (or **methanoic acid**; HCOOH) A colourless corrosive liquid *fatty acid with a pungent smell. It is used in textile finishing and chemical manufacture. Formic acid occurs naturally in nettles and insects. Its name comes from the Latin *formica*, ant, whose sting is due to the secretion of formic acid.

Forster, E(dward) M(organi) (1879–1970) British novelist. His fiction and social criticism stress the importance of human affection and the need to cultivate both the intellect and the imagination. His novels include *Where Angels Fear to Tread* (1905), *A Room with a View* (1908), *Howards End* (1910), and *A Passage to India* (1924).

Forsythia A genus of shrubs (about 7 species), native to E Europe and Asia and widely grown as garden ornamentals. The masses of four-petalled yellow flowers appear before the leaves. The slender stems make the plants suitable for wall shrubs and hedges. The most common garden forsythia is the hybrid *F. × intermedia*. Family: *Oleaceae* (olive family).

Forth, River A river in SE Scotland, rising on the NE slopes of Ben Lomond and flowing 104 km (65 mi) E through Stirling to Alloa. The river then expands into the **Firth of Forth** (an inlet of the North Sea) extending 82 km (51 mi) in length and 31 km (19 mi) wide at its mouth. It is spanned by the cantilever iron Forth Rail Bridge (designed in the 1880s by Benjamin Baker) and a road bridge (1964).

Fort Knox 37°54'N 85°59'W A military base in the USA, in N Kentucky. Established in 1917, it is the site of the US Depository, which contains US gold reserves. Population (latest est): 38 277.

Fortuna The Roman goddess of fortune and good luck. She was usually portrayed standing on a ball or wheel, indicating her mutability, and holding a cornucopia from which she distributes her favours. She is identical with Tyche.

Fort Worth 32°45'N 97°20'W A city in the USA, in NE Texas near Dallas, centre of the N Texas industrial area. Population (2000): 534 694.

forum A Roman marketplace; the forum was the town's civic centre, containing all the main temples and public buildings. See also AGORA.

Fosse Way A Roman road from Exeter through Cirencester to Lincoln. It marked the frontier in the first phase of the Roman conquest of Britain (c. 47 AD). Its characteristically

straight course is now followed partly by the modern A429.

fossil The remains or traces of a plant or animal that lived in the past, usually preserved in sedimentary rock. It may be the whole or part of the organism itself that is preserved, usually chemically altered; alternatively it may have dissolved away leaving an impression (mould), which preserves its exact shape, or a cast, when it has been replaced exactly by mineral matter. Examples of fossils are whole mammoths preserved in ice, insects preserved in amber, and coal (the carbonized remains of extinct swamp plants). Trace fossils include excrement, burrows, or fossil tracks. The study of fossils is called *palaeontology. See table on p. 342.

fossil fuels The mineral fuels *coal, *oil, and *natural gas that occur in rock formations. They were formed by the deposition millions of years ago of the remains of vegetation (coal) and living organisms (oil and gas), which were buried under subsequent deposition and later subjected to heat and pressure. Fossil fuels supply a large proportion of our current *energy needs, but the reserves are finite (see also GREENHOUSE EFFECT).

Foster, Norman, Baron (1935–) British architect. His high-tech designs include Standed Airport (1991), the Berlin Reichstag (1999), and *City Hall, London (2002).

Fourier, Jean Baptiste Joseph, Baron (1768–1830) French mathematician and physicist, noted for his method of expanding a periodic function in terms of sine and cosine waves, now known as **Fourier analysis**.

Four Noble Truths The fundamental doctrine of Buddhism, set forth by Gautama in the first discourse at Benares. The Truths are: existence is characterized by suffering; the cause of suffering is craving; to end craving is to end suffering; the way to achieve this is the *Eight-fold Path.

four o'clock plant A bushy perennial herb, *Mirabilis jalapa*, native to tropical America but widely grown as an ornamental. It bears clusters of red, pink, white, yellow, or streaked flowers, which are tubular with a wide flared mouth and open in the late afternoon. Family: *Nyctaginaceae*.

fowl, domestic A domesticated form of the red *jungle fowl, *Gallus gallus*, native to Asian forests. It was first domesticated about 4000 years ago as a religious and sacrificial animal and was used by the Romans for food. Since the 19th century, a large number of breeds and va-

fossil. Some extinct animals and plants from past geological ages.

rieties have been selected for size, resistance to disease, egg production, shell colour, fertility, and food conversion efficiency. See also **LIVE-STOCK FARMING**.

Fowles, John (1926–) British novelist, whose works treat philosophical, psychological, and social themes in a rich and often fantastic manner. His novels include *The Collector* (1963), *The Magus* (1966), *The French Lieutenant's*

Woman (1969), and *The Maggot* (1985); he has also written the short stories *The Ebony Tower* (1974).

fox A carnivorous mammal belonging to the *dog family (*Canidae*). Foxes have pointed ears, short legs, and large bushy tails. Generally nocturnal, they are solitary stealthy hunters. The most familiar is the red fox (*Vulpes vulpes*), found in forest and woodland and now venturing into suburban gardens (see **FOXHUNTING**).

Some species are specialized for life in difficult habitats, such as the *Arctic fox and the fennec (desert fox). Chief genera: *Vulpes* (9 species), *Dusicyon* (South American foxes; 8 species).

Fox, Charles James (1749–1806) British Whig politician; the first British foreign secretary (1782). He entered parliament (1768) as a supporter of Lord *North but opposed North's American policy. Fox resigned over George III's appointment of the Earl of Shelburne (1737–1805) as prime minister in 1782 and joined North in a coalition that briefly took office under the Duke of Portland (1738–1809) in 1783. He supported the French Revolution, over which many Whigs joined the Tories, and in 1798 he was dismissed from the privy council for opposing war with Revolutionary France.

Fox, George (1624–91) English religious leader, founder of the *Quakers. A Puritan by upbringing, Fox became dissatisfied with established Christianity and the state's control of the church. In 1646 he had a personal revelation and thereafter preached a gospel of love, stressing the immediate guidance of the Holy Spirit. He was frequently imprisoned.

foxglove A herbaceous plant of the genus *Digitalis*, especially *D. purpurea*, a biennial herb native to W Europe but naturalized elsewhere. Foxgloves have large grey-green leaves and tall spikes of drooping bell-shaped flowers, purple, yellow, or white in colour. The dried leaves contain *digitalis. Family: *Scrophulariaceae*.

foxhunting A sport in which huntsmen on horseback pursue a fox with a pack of 20 to 30 specially bred dogs, called **foxhounds**, which hunt by scent. It has been organized in the UK since the 18th century. The hunt officials, who traditionally dress in scarlet coats, are the master of foxhounds, who directs the hounds, and one or more whippers-in, who help to control them. Mounted followers (the field) accompany the hunt. Although supported by many country people hunting is opposed by many others, notably the League against Cruel Sports. Following a long parliamentary battle, hunting with dogs was made illegal in England and Wales in 2004 (effective 2005); the sport had previously been banned by the Scottish Parliament (2002). Many hunts have found ways to continue their traditions while staying on the right side of the law.

fox terrier A breed of dog, either smooth-haired or wire-haired, developed in England for hunting foxes and badgers. It is sturdy with a broad tapering muzzle and small droop-

ing ears. The coat is mainly white with black and tan markings. Height: 37–39 cm.

fracture The breaking of a bone. This usually occurs as a result of injury but it may happen very easily in bones diseased with cancer or osteoporosis (pathological fracture). In a simple fracture the ends of the broken bone are not displaced; in a compound fracture the broken bone pierces the skin. Fractures are treated by aligning the ends of the broken bone and immobilizing them. Sometimes, it is necessary to pin fractures surgically.

Fragonard, Jean Honoré (1732–1806) French *rococo painter whose light-hearted and delicately erotic subjects include *The Swing* and *The Progress of Love*. Dutch influence can be seen in a number of his landscapes and portraits.

France, Anatole (Jacques Anatole François Thibault; 1844–1924) French novelist. His intervention in the *Dreyfus case (1897) marked the beginning of his commitment to socialism and, during his final years, communism. In such novels as *L'Île des pingouins* (1909) and *Les Dieux ont soif* (1913) his view of mankind is deeply pessimistic. He was awarded the Nobel Prize in 1921.

France, Republic of A country in W Europe, bordering on the English Channel in the N, the Atlantic Ocean in the W, and the Mediterranean Sea in the S. It includes the island of Corsica and several overseas regions (Martinique, Guadeloupe, and French Guiana). Overseas territories include French Polynesia and New Caledonia. Fertile lowlands cover most of the N and W of France, rising to the Pyrenees in the S, the Massif Central in the SE, and the Vosges, Jura, and Alps in the E. The principal rivers are the Seine, the Loire, and the Rhône. *Economy:* agriculture is important, especially animal products; the wine industry is a major source of revenue. There were large-scale developments in the industrial sector after World War II but economic growth has slowed down in recent decades. *History:* France today approximates to the ancient region of *Gaul, which was conquered by Julius Caesar in the 1st century BC. It became part of the Roman Empire and in the 1st century AD Christianity was introduced to the provinces into which Gaul was divided. From the 3rd to the 5th centuries, it was overrun by German tribes, including the Goths, Vandals, and *Franks (from whom the name France is derived). The Frankish kingdom reached its peak under Charlemagne (reigned 768–814) and his Carolin-

gian dynasty continued to rule in France until 987, when Hugh Capet became the first Capetian king. During the 10th century Norsemen (Vikings) established themselves in what became Normandy and in 1066 invaded England. The claims of English kings to French territory were realized on a large scale by the Angevins and consequent conflict between France and England culminated in the 'Hundred Years' War (1337–1453), as a result of which the English were expelled from all of France, except Calais. The Capetians were succeeded by the

*Valois dynasty (1328–1589), a period that saw the beginning of France's long rivalry with Spain for hegemony in Europe. During the *Wars of Religion the first *Bourbon, Henry IV, came to the throne (1589). The first half of the 17th century was dominated by Cardinal de *Richelieu and his protégé and successor as chief minister, Cardinal Mazarin (1602–61). They were responsible for France replacing Spain, after the Thirty Years' War, as the supreme European power (1659). During the reign (1643–1715) of *Louis XIV France reached

the zenith of its power and brilliance. Decline, however, began before his death and gathered speed in the following decades. The disastrous *Seven Years' War forced France to recognize British supremacy in North America and India and the political reaction and economic incompetence of the later Bourbon kings precipitated the *French Revolution in 1789. The First Republic was proclaimed (1792) and Louis XVI was guillotined (1793) in spite of the military opposition of the major European powers (see REVOLUTIONARY AND NAPOLEONIC WARS). In 1799 Napoleon Bonaparte overthrew the Directory, becoming first consul and, in 1804, emperor. By 1808 he had brought most of continental Europe under his sway but in 1815 he was finally defeated at Waterloo and exiled. The Bourbons were restored until 1830, when the July Revolution raised Louis Philippe to the throne. Overthrown in the Revolution of 1848, the monarchy was replaced by the Second Republic of which Louis Napoleon became president; in 1852 he proclaimed himself emperor as *Napoleon III. During the Second Empire France underwent the beginnings of industrialization but its prosperity was not sufficient to achieve victory in the *Franco-Prussian War, in which Napoleon's ignominious leadership led to his overthrow (1870). The subsequent Third Republic lasted until 1940, in spite of *World War I and political dissension. After the outbreak of World War II France fell to Germany and a pro-German government was established at Vichy, while *de Gaulle led the Free French resistance in London. In 1944 France was liberated by the Allies and de Gaulle established a provisional government that gave way (1946) to the Fourth Republic. The immediate postwar period was overshadowed by war in Indochina and by the crisis in Algeria that precipitated the fall of the Fourth Republic (1958). De Gaulle was recalled from retirement and, as president of the Fifth Republic, instituted firm government. In May 1968, however, the Republic was shaken by serious revolts among students and a wave of strikes and in 1969 he resigned. Gaullist principles nevertheless continued to influence government under his successors Pompidou and Giscard d'Estaing. Mitterrand's election (1981) made him the first socialist to hold the office of president in 35 years. The 1995 presidential elections showed a swing to the right, with the election of Jacques Chirac. He was re-elected in 2002 and succeeded by the right-winger Nicolas Sarkozy in 2007. France adopted the single European currency in 1999–2002. Official language: French. Currency: euro of 100 cents.

Area: 543 814 sq km (209 912 sq mi). Population (2007 est): 63 713 926. Capital: Paris.

Francis Ferdinand (1863–1914) Archduke of Austria and heir apparent to his uncle, Emperor *Francis Joseph. His assassination (28 June 1914) by a Serbian nationalist at Sarajevo precipitated *World War I.

Francis Joseph (1830–1916) Emperor of Austria (1848–1916) and King of Hungary (1867–1916). His long reign saw the rise of national tensions in the Empire, which led to the establishment of the Dual Monarchy of *Austria-Hungary, under which Austria and Hungary coexisted as equal partners under the Austrian Crown. He was defeated in the Austro-Prussian War of 1866 but in 1879 he allied with the recently formed German Empire and in 1882 with Italy, forming the *Triple Alliance. His ultimatum to Serbia, following the assassination by a Serbian nationalist of his nephew, Archduke *Francis Ferdinand (1914), led to *World War I.

Francis of Assisi, St (Giovanni di Bernardone; c.1182–1226) Italian friar, born in Assisi. He renounced his worldly life in 1205 to live in poverty and devote himself to charitable works. Gaining followers, he founded his order, the **Franciscans**, in 1209. He travelled throughout Spain, the Holy Land, and Egypt. He received the stigmata in 1224 and was canonized in 1228. Feast day: 4 Oct. The Franciscan order has remained an important missionary and charitable branch of the Roman Catholic Church.

Francis Xavier, St (1506–52) Spanish *Jesuit missionary. While studying in Paris (1523–34) he met St Ignatius of Loyola and helped him found the Jesuit order. From 1541 he established missions in the Indies, India, and Japan. Feast day: 3 Dec.

francium (Fr) The heaviest alkali metal, a very unstable radioactive element discovered in 1939 by Perey. The longest-lived isotope ²²³Fr has a half-life of 22 minutes; traces of the element exist in nature. At no 87; at wt (223); mp 27°C; bp 677°C.

Franck, César Auguste (1822–90) Belgian composer, organist, and teacher, who settled in Paris in 1834. Franck was influenced by Bach and evolved a highly chromatic form of harmony. He also developed "cyclic form," the use of the same theme in more than one movement of a work. His compositions include *Symphonic Variations* (for piano and orchestra; 1885),

a symphony (1886–88), and a string quartet (1889).

Franco, Francisco (1892–1975) Spanish general and statesman; dictator from 1939 until his death. He became chief of the General Staff in 1935 and on 18 July 1936, staged a military uprising against the Republican Government of Manuel Azaña (1880–1940) that precipitated the *Spanish Civil War. In October 1936, he became head of state in the Nationalist Zone and commander in chief of the rebel forces. By 1939, with help from Hitler and Mussolini, he had defeated the Republican forces and become the absolute leader of Spain. Franco's government, in which the National Movement (see *FALANGE ESPAÑOLA*) was the only political party, remained sympathetic to Hitler but stayed neutral throughout World War II. Spain was excluded from the newly formed UN in 1945 but was admitted during the Cold War, when Franco's anticommunism made him a more attractive ally. Although his government achieved considerable economic advance for Spain, he operated a dictatorship that tolerated no opposition.

Franco-Prussian War (1870–71) A war between France and Prussia. Fearing Bismarck's proposals to make a relative of William I of Prussia the king of Spain, France declared war. Napoleon III and his army were soon defeated at the battle of *Sedan but French resistance continued. Napoleon was deposed and the Third Republic was established. The Treaty of Frankfurt imposed a huge indemnity on France, which ceded Alsace and Lorraine to the newly established German Empire; France was left economically weakened and politically divided.

frangipani A tropical American tree, *Plumeria rubra*, cultivated throughout the tropics. It has tapering long-stalked leaves and round clusters of fragrant pink, reddish-purple, white, or yellow flowers, used to make perfume. Family: *Apocynaceae*.

Frank, Anne (1929–45) German Jewish girl, who died in a German concentration camp. Her diary became a symbol of Jewish resistance and courage following its publication in 1947. She wrote it while hiding from the Nazis in Amsterdam in 1942–43. After being betrayed she was sent to Belsen, where she died.

Frankfurt am Main 50°06N 8°41E A city in W Germany, in Hessen on the River Main. A major banking and commercial centre, it is famed for its trade fairs, especially the annual book fair. It was the seat of the imperial elec-

tions (9th to 18th centuries) and coronations (1562–1792) of the Holy Roman emperors and the original home of the Rothschilds. Population (1999 est): 644 700.

frankincense (or **olibanum**) An aromatic gum resin obtained chiefly from trees of the genus *Boswellia*, especially *B. carteri*, which grows in the Middle East. It smells of balsam when heated, and burns brightly giving off a fragrant odour. Frankincense has been known since ancient Egyptian times and is still used as an *incense, in fumigants, and in perfumes.

Franklin, Benjamin (1706–90) US diplomat, scientist, and author. His experiments with static electricity established the electrical nature of thunderstorms and led him to invent the lightning conductor. In the disputes that led to the American Revolution he represented Pennsylvania's case to Britain (1757–62, 1766–75) and as a member of the Continental Congress helped frame the Declaration of Independence (1775). As a diplomat in Paris (1776–85), he enlisted French help for the colonies and later negotiated peace with Britain (1783).

Franks A Germanic people, who invaded Roman *Gaul from the Rhineland between the 3rd and 5th centuries AD. One of the Frankish tribes, the Salian Franks, gained control of most of Gaul under their ruler Clovis (d.511) and were converted to Christianity. The Frankish state was ruled by the *Merovingian dynasty (named after Clovis' grandfather, Merovech) until its replacement by the Carolingians (named after *Charlemagne) in 751. The Carolingian empire lasted until its division in 843. The western Frankish kingdom was the nucleus of France.

Franz Josef Land (Russian name: Zemlya Frantsa Iosifa) A Russian archipelago of about 85 icebound islands in the N Barents Sea. They were discovered in 1873 by Austrians and annexed by the Soviet Union in 1926. Total area: about 20 700 sq km (79 905 sq mi).

Fraser River A river in W Canada, the chief river of British Columbia. Rising near Mount Robson, it flows rapidly through mountain gorges and eventually empties into the Strait of Georgia near Vancouver. Length: 1370 km (850 mi).

fraud In law, making a false representation, by words or conduct or by withholding facts where there is a duty to disclose them, in order to obtain a material advantage. To prove fraud it is necessary to show that a false representation was made (1) knowingly, (2) without belief

in its truth, or (3) recklessly, without concern whether it was true or not.

Frazer, Sir James George (1854–1941) British anthropologist and writer. Frazer's major work was *The Golden Bough* (first edition 1890). The results of his work were far-reaching, influencing people outside the anthropological field.

Frederick (I) Barbarossa (c. 1123–90) Holy Roman Emperor (1152–90; crowned 1155). He was engaged in a long struggle with the papacy and was excommunicated in 1160. His warring against the Lombard cities was ultimately unsuccessful; they regained their independence in 1183. He failed to subdue his powerful cousin, Henry the Lion (?1129–95), but established his authority in Poland, Hungary, Bohemia, and Burgundy.

Frederick II (1194–1250) Holy Roman Emperor (1220–50) and, as Frederick I, King of Sicily (1198–1250). As leader of the sixth Crusade (1228–29) he captured Jerusalem but remained an opponent of papal policy and was excommunicated three times (1227, 1239, 1245). He was a man of wide learning but neglected the government of his possessions.

Frederick (II) the Great (1712–86) King of Prussia (1740–86), who made Prussia a major European power. He liberalized the Prussian legal code and introduced economic and social reforms that reinvigorated Prussian society and institutions. His conquest of Silesia (1740) gave rise to the War of the *Austrian Succession (1740–48), after which his possession of the region was confirmed. His victory in the *Seven Years' War (1756–63) established the military supremacy of Prussia.

freemasonry A secret society for men, which declares itself to be based on brotherly love, faith, and charity. It probably developed from the medieval stonemasons' guilds. In its modern form freemasonry dates from the establishment (1717) in England of the Grand Lodge, to which some 9250 private lodges are now affiliated. During the 18th century masonry spread to America and the colonies as well as to continental Europe. Its ceremonies, which are allegorical and illustrated by symbols, demand a vow of secrecy as well as a belief in God and are based on Old Testament anecdotes and moralities.

Opposition to masonry originated with a papal bull (1738) excommunicating masons, since when Roman Catholics have never accepted its principles or its secrecy.

Freesia A genus of ornamental South African plants (20 species), cultivated commercially, especially as a source of cut flowers. Growing from corms, they have sword-shaped leaves and clusters of funnel-shaped lemon-scented flowers of various colours. Most cultivated varieties are hybrids derived from *F. refracta* (with yellowish flowers) and *F. armstrongii* (rose-purple flowers). Family: Iridaceae.

Freetown 8 20N 13 05W The capital and main port of Sierra Leone, on the Atlantic coast. It was founded in the late 18th century as a refuge for freed slaves and was capital of British West Africa (1808–74), becoming the capital of Sierra Leone in 1961. Population (1999 est): 822 000.

free will In philosophy and theology, the ability of man to choose his own destiny, as opposed to the idea that everything that happens to him is inevitable. Philosophers are concerned to discover what the presuppositions and implications of free will are, compared to those of *determinism. They are also concerned to discover to what extent free will and determinism can be compatible. In a theistic context, determinism is replaced by *predestination, the view that all events, including human choice, are fixed by the will of God.

freezing The preservation of food by keeping it frozen, thereby arresting the development of the microorganisms responsible for the decay of the food. Home freezers keep food at a temperature of about -18°C (-0.4°F). Most foods are well preserved by freezing, with little loss in nutritional value but some with a high water content within the cells of the food, such as strawberries and cucumbers, become soggy after freezing as a result of damage to the cell structure by ice formation. Most vegetables are blanched (boiled for 2–4 minutes) before freezing to arrest the action of enzymes. It is the residual enzymic action that determines the recommended storage time. In **freeze drying** food is rapidly frozen under very low pressure. Any water present freezes and then sublimates under the low pressure.

Frege, Gottlob (1848–1925) German mathematician and logician, who extended *Boole's work on symbolic logic by using logical symbols not already used in mathematics (symbols for *or*, *if-then*, etc.). This is now standard practice in logic.

Fremantle 32 07S 115 44E A major seaport in Western Australia, SW of Perth at the mouth of the Swan River. Kwinana, an important industrial complex with oil and nickel refineries

and bulk-grain facilities, is nearby. Population (latest est): 23 981.

French A Romance language spoken by 45 million people in France, and extensively in Canada, Belgium, Switzerland, and elsewhere. It is the official language of 21 countries. Standard French, based upon the Parisian dialect known as Francien, has been France's official administrative language since 1539. It has replaced most northern dialects, known collectively as *langue d'oïl*, and has superseded the Occitan dialects of S France, known as *langue d'oc* (see *PROVENÇAL*). During the 17th century the *Académie Française and the publication of a standard dictionary (1680) quickly stabilized the language.

French bean An annual herb, *Phaseolus vulgaris*, also called kidney bean, probably native to South America but widely cultivated. It has large heart-shaped leaves and white pealike flowers. Both dwarf and twining varieties are grown for their *beans, usually eaten in the pod. The *haricot bean* is a variety of French bean grown in warm climates; the seeds are used for making baked beans.

French Community An association of states, comprising France and its former colonies, established by the new Fifth Republic after a constitutional referendum (1958). In addition to France it includes Guadeloupe, French Guiana, Martinique, Mayotte, La Réunion, St Pierre and Miquelon, Southern and Antarctic Territories, French Polynesia, New Caledonia, and Wallis and Futuna.

French Guiana A French overseas region on the NE coast of South America. A narrow fertile coastal belt rises to a mountainous interior, which is covered in dense forest rich in valuable timber. *History:* Europeans in search of *Eldorado explored the region from the early 16th century, but it was not settled until the 17th century, when the French, Dutch, Portuguese, and English competed for possession. In 1817 it was finally obtained by the French, who established penal colonies, including the notorious one on Devil's Island, in the territory. The French Guianese have had full French citizenship since 1848. Area: about 91 000 sq km (34 740 sq mi). Population (2001 est): 168 000. Capital: Cayenne.

French horn An orchestral brass instrument, which evolved from the hunting horn. It consists of a long narrow coiled tube with a wide bell and a cup-shaped mouthpiece. In the 18th century crooks of tubing of different lengths were inserted to enable it to play in var-

ious keys. In the 19th century valves were fitted giving the horn in F a complete range of about three octaves. It is a transposing instrument: its music is written a fifth higher than it sounds.

French Polynesia (former name: French Settlements in Oceania) A French overseas territory in the S Pacific Ocean consisting of several island groups. The most important of these are the Gambier Islands, the Society Archipelago, the Tuamotu Archipelago, the Tubuai Islands, and the Marquesas Islands. Area: about 4000 sq km (1500 sq mi). Population (2001 est): 238 000. Capital: Papeete.

French Republican calendar The calendar adopted (1793) in France during the French Revolution and retained until 1806, when the Gregorian *calendar was reintroduced. The year began on 22 Sept (the date in 1792 when the Republic came into being) and had 365 days divided into 12 months of 30 days each.

French Revolution The overthrow of the French monarchy as a reaction to the corrupt, feudal, and incompetent government of the Bourbon kings. In 1789 Louis XVI was forced to summon the *States General but its Third Estate, opposing aristocratic attempts to dominate proceedings, formed its own National Assembly. Riots followed, the Bastille was stormed, the king was mobbed at Versailles, and the Assembly (from July the Constituent Assembly) promulgated the Declaration of the Rights of Man. Feudalism was abolished and in September 1791, a new constitution was accepted by the king following his thwarted attempt to flee France (the flight to Varennes). However, his uncooperativeness fostered the growing republicanism of what became the Legislative Assembly (October 1791) and then the National Convention (September 1792). The Convention proclaimed a republic and in January 1793, Louis was executed. The moderate Girondins, discredited by France's war reverses (see *REVOLUTIONARY AND NAPOLEONIC WARS*), were now ousted by the Jacobins and power passed to the Committee of Public Safety. Under *Robespierre the Committee conducted a *Reign of Terror in which thousands of suspected antirevolutionaries were executed. His extremism, however, brought his downfall (1794) and led to the establishment of the Directory (1795), which struggled with economic crises until Napoleon's coup d'état (1799) brought the Revolution to an end.

French Southern and Antarctic Territories A French overseas territory (since 1955)

comprising Terre Adélie in Antarctica with the islands of Amsterdam and St Paul and the Kerguelen and Crozet archipelagos in the Indian Ocean.

frequency The number of cycles completed by a vibrating system in unit time, usually one second (symbol: ν or f). The unit of frequency is the hertz (see HERTZ, HEINRICH RUDOLF). The angular frequency, ω , is related to the frequency by the equation $\omega = 2\pi f$ and is measured in radians per second.

frequency modulation See MODULATION.

fresco A classical and Renaissance method of wall decoration in which pure pigments dissolved in water were applied to the wet lime-plastered surface of a wall, producing a chemical reaction that made the colours a permanent part of the wall. Up to about 1500 the design was sketched freehand onto the rough plaster surface. Separate areas of the sketch were then filled in with fine smooth plaster and detailed colour was applied in layers of different pigments. Subsequently the cartoon, as used by Michelangelo, Raphael, Holbein, and others, allowed for more complicated premeditated design. The composition was drawn on sheets of paper, later applied to the wall, and the design pricked through with a stylus or with charcoal dust forced through the stylus piercings. Fresco painting was revived in the 20th century by the Mexican muralists Orozco and *Rivera.

Freud, Sigmund (1856–1939) Austrian pioneer of psychoanalysis. Freud studied medicine and, in 1882, joined the staff of a psychiatric clinic in Vienna. An interest in hypnosis developed through his collaboration with Josef Breuer (1842–1925) and Jean-Martin Charcot (1825–93). Following the publication with Breuer of *Studies in Hysteria* (1895), Freud evolved his theory that neuroses were rooted in suppressed sexual desires and sexual experiences of childhood. In *The Interpretation of Dreams* (1899), he analysed the content of dreams in terms of unconscious desires. His emphasis on the sexual origin of mental disorders aroused great controversy. In 1902 Freud established a circle in Vienna, which later (1910) became the International Psycho-Analytical Society. However, many of its members, including Carl *Jung and Alfred *Adler, resigned over disagreements. Freud left Vienna in 1938, following the Nazi invasion, joining his son in London. His other books include *The Psychopathology of Everyday Life* (1904), *Totem and*

Taboo (1913), and *Beyond the Pleasure Principle* (1920). His grandson **Lucian Freud** (1922–) is a painter, who became a British citizen in 1939. His bleakly realistic portraits and nudes are extremely highly regarded and command enormous prices.

Freyja (or **Freyja**) The Norse goddess of love and fertility, the sister of Frey, the god of sunshine, rain, and fertility. She is the Norse counterpart of Venus and is the leader of the *Valkyries. In some sources she is identified with *Frigga.

friction A force exerted at the boundary between two solids or fluids that retards motion between them. In solid friction a distinction is drawn between sliding friction and rolling friction. Sliding friction is further divided into dynamic friction, defined as the minimum force needed to keep a body sliding, and static friction, defined as the minimum force needed to move a stationary body. The latter is slightly greater than the former. In rolling friction the force of resistance is less than in sliding friction as the rolling body moves up the side of a depression made in the stationary body. The coefficient of friction is defined as the ratio of the frictional force to the perpendicular reaction between the surfaces. Friction is caused primarily by the two surfaces interlocking at the microscopic level. It is reduced by the use of lubricants, such as grease or graphite.

Friedman, Milton (1912–2006) US economist, known for his theories on monetary supply, which contradict those of *Keynes. His published work, which argues for the free market economy, includes *A Theory of the Consumption Function* (1957), *Capitalism and Freedom* (1962), and *Money Mischief* (1992). He won the 1976 Nobel Prize.

Friends of the Earth A British environmental pressure group. Established in 1971, it campaigns on environmental issues through demonstrations, public meetings, and parliamentary legislation. Targets have included motorway projects, commercial whaling, and industrial pollution (including nuclear power plants). The organization also has branches in 70 countries, directed from the Netherlands.

Friesian cattle A breed of black-and-white cattle originating from the province of Friesland in the Netherlands. They were exported to North America by early settlers and there developed as Holstein-Friesians. They are high-yielding milk producers and crosses, especially with a Charolais or Hereford bull, give good beef.

frigate bird A seabird belonging to the genus *Fregata* and family *Fregatidae* (5 species), occurring in tropical and subtropical oceanic regions, also called man-of-war bird because it often steals food from other birds in midair. 80–115 cm long, frigate birds have narrow wings spanning up to 2.3 m, a long hooked bill, and a forked tail. Males are glossy black and develop an inflatable red throat sac in the breeding season; females are brownish black with white underparts. Order: *Pelecaniformes* (gannets, pelicans, etc.).

Frigga (or Frigg) The Norse goddess of married love and the hearth, the wife of *Odin. In some legends she is identified with *Freyja; her name is preserved in *Friday*.

Frisian Islands A chain of islands in the North Sea extending along the coast of, and politically divided between, the Netherlands, Germany, and SW Denmark. The chain comprises three main groups: the West, North, and East Frisian Islands. The **Frisian language** was formerly spoken along the North Sea coastal region of Holland as far as Schleswig in Germany. It is now principally confined to Friesland province in Holland and certain offshore islands including Helgoland in the North Frisian islands.

fritillary (botany) A bulbous perennial plant of the genus *Fritillaria* (80 species), mostly native to N temperate regions. The leaves are narrow and the bell-shaped flowers droop from slender stalks. The European snake's head (*F. meleagris*) has reddish-purple chequered flowers. The crown imperial (*F. imperialis*), native to N India, has a cluster of pendant red flowers at the top of a tall (120 cm) stem, topped by a tuft of leaves. Both species are popular garden plants. Family: *Liliaceae*.

fritillary (zoology) A *nymphalid butterfly, usually brown or orange marked with black. Chief genera: *Boloria*, *Melitaea*.

Friuli-Venezia Giulia A semiautonomous region in the extreme NE of Italy. It was formed in 1947 and incorporated Trieste in 1954. It consists of mountains along the N border with Austria and a coastal plain in the S. There is arable or livestock farming throughout the region. Area: 7850 sq km (3031 sq mi). Population (2000 est): 1 185 172. Capital: Trieste.

Froebel, Friedrich Wilhelm August (1782–1852) German pioneer of nursery education. He applied the concept of harmonious growth to the development of children in *The Education of Man* (1826). His view that children

should spend time together in creative play led him to found the first kindergarten (1837) at Blankenburg.

frog A tail-less amphibian of the family *Ranidae*, which includes bullfrogs, hairy frogs, and leopard frogs. Many other so-called frogs, such as *tree frogs, are actually toads. The European frog (*Rana temporaria*) grows to 10 cm. Greenish-brown with black markings, it spends most of its life on land, feeding on insects, and only returns to water to breed. Order: *Anura*.

froghopper A small jumping insect belonging to the family *Cercopidae* (about 2000 species). Froghoppers feed on plant juices, sometimes becoming pests. Eggs are laid on stems or roots and the *nymphs remain stationary until adult. They often protect themselves against predators and desiccation with a cover of white froth ("cuckoo spit"), produced by blowing air mixed with fluid from the anus through a valve in the abdomen. For this reason they are often known as cuckoo-spit insects and spittlebugs. Order: *Hemiptera*.

front In meteorology, the interface between two air masses of different thermal characteristics and origins. Where the air masses converge the warm air, being lighter, rises and slopes over the cold air. Distinctive weather phenomena are associated with fronts, particularly the development of depressions, and they are important in weather forecasting.

Front de Libération nationale (FLN) An Algerian nationalist group that organized the war of independence against France (1954–62). Formed in 1954, the FLN began a campaign of terrorism and sabotage. In 1956 it organized itself like a government, sending diplomatic missions abroad, and in 1958 set up a provisional government in Tunis. In 1962 the French agreed to Algerian independence and when Ahmed Ben Bella (1916–) became president in 1963 the FLN became Algeria's sole political party.

frost A weather condition that occurs when the temperature falls below 0°C (32°F). It is recognized by the icy deposit that forms but if the air is very dry this will not occur. In weather forecasting grades of severity of frost are distinguished as slight (–0.1 to –3.5°C), moderate (–3.6 to –6.4°C), severe (–6.5 to –11.5°C), and very severe (below –11.5°C). A distinction is made between ground frost, measured at grass level, and air frost, measured at a height of 1.4 m (4 ft).

Frost, Robert (Lee) (1874–1963) US poet. He became famous with the publication of *A Boy's Will* (1913) and *North of Boston* (1914). His work, which is often pastoral, has a dark undercurrent of anxiety and suffering.

frostbite Damage to part of the body, usually a hand or foot, resulting from exposure to extreme cold. The blood vessels to the affected limb constrict so that little blood (and therefore essential oxygen) reaches the skin, nerves, and muscles. This may lead to loss of sensation, ulcers, and eventually gangrene, necessitating amputation. Initial treatment is gently to warm the affected part.

fructose A simple sugar $C_6H_{12}O_6$ that is sweeter than sucrose and present in green leaves, fruits, and honey.

fruit The fertilized ovary of a flower, which contains the seed (or seeds) and may incorporate other parts of the flower (e.g. the receptacle in strawberries, the bracts in pineapples). The variation in the structure of fruits reflects the different means they have evolved to ensure dispersal of the seeds, which is essential to prevent overcrowding and enable the plant to spread and colonize new habitats. Fleshy fruits, for example, are usually eaten by animals, the seeds passing out with their faeces. Animals can also carry hooked or sticky fruits on their bodies. Seeds dispersed by wind are usually very light: they are either forcibly ejected from their fruits, for example from the *capsule of poppy and the pods of leguminous plants, or they remain attached to the fruit, which can itself remain airborne for considerable distances. Some fruits are distributed by

strawberry The true fruits, which are formed from the ovary and contain the seeds, are the achenes on the surface of the fleshy receptacle.

poppy The seeds within the capsule are shaken out through the pores.

apple The flesh of the apple is the receptacle; the core develops from the ovary and contains the seeds (pips).

plum This fruit, like all drupes (stone fruits), is made up of three layers.

dandelion The pappus acts as a parachute.

tomato The flesh of the tomato (a berry) is formed from the ovary.

herb bennet The hooks cling to the fur of animals, which thus disperse the seeds.

sycamore The two winged fruits separate and are carried away by the wind.

lupin When ripe, the pod splits open and curls back, ejecting the seeds.

water: coconut fruits can be transported several hundred miles by sea. The word fruit is popularly restricted to the fleshy edible fruits.

fruit bat A vegetarian *bat belonging to the family *Pteropidae* and suborder *Megachiroptera* (150 species). Fruit bats occur in tropical and subtropical regions of the Old World. They are typically larger than insect-eating bats and have better vision; only one genus (*Rousettus*, 13 species) uses *echolocation. Most eat fruit although some feed on flowers or nectar. See also **FLYING FOX**.

fruit fly A fly belonging to the family *Trypetidae* (1200 species)—the true fruit flies. (Insects of the family *Drosophilidae* are known as small fruit flies: see **DROSOPHILA**.) True fruit flies have spotted or banded wings and the larvae of many species feed on fruit, often causing serious damage. For example, the Mediterranean fruit fly (*Ceratitis capitata*) is a pest of almost all succulent fruits.

Fry, Elizabeth (1780–1845) British prison reformer. From 1813 she strove to improve the lot of women prisoners in Newgate Prison, London. Later, she visited prisons throughout Europe, urging reform.

Fry, Roger (Eliot) (1866–1934) British painter and art critic. He is best known for his influential writings on art, e.g. *Vision and Design* (1920), and artists, e.g. *Bellini* (1899) and *Cézanne* (1927).

Fuchs, Klaus Emil Julian (1911–88) British physicist and spy, born in Germany. During World War II he worked on atomic bomb research in Britain and in 1950 was tried and found guilty of having passed secret information to the Soviet Union since 1943. He was released from prison in 1959 and emigrated to East Germany.

Fuchsia A genus of shrubs and herbs (100 species) mostly native to tropical America and widely cultivated as ornamentals. The plants range from creeping forms, bushes, and small trees to epiphytes. They have deep-pink, red, or purple drooping flowers all along the branches; each flower has four long flaring coloured sepals surrounding the shorter petals, below which the stamens and stigma protrude. Most cultivated forms are varieties of *F. magellanica*, *F. coccinea*, and *F. arborescens* or hybrids between them. Family: *Onagraceae* (willowherb family).

fuel cell A device that converts the energy of a chemical reaction directly into an electric current. In the simplest type oxygen and hy-

drogen are fed through two separate porous nickel plates into an electrolytic solution. The gases combine to form water and thus set up a potential difference between the two plates. Fuel cells are distinguished from *accumulators in that the latter need to be recharged and do not consume their chemicals (which in fuel cells need to be replenished). Fuel cells provide a clean source of power.

fuel injection The pumping of fuel in the form of a spray directly into the cylinders of an *internal-combustion engine. In petrol engines it is increasingly used to replace the carburettor as it gives a more even fuel distribution in the combustion chamber. Fuel injection is also used in Diesel engines and continuous-combustion engines.

fugue A piece of polyphonic music, generally having three or four parts (or voices), in which each part enters in turn with a statement of the main theme (or subject). After stating the subject each voice continues with the secondary theme (or counter-subject). Fugues are not composed to strict patterns; episodes in different tonalities are often interspersed with subsequent groups of entries of the voices. At the climax the voices are overlapped in close succession (*stretto*).

Fujiyama (English name: Mount Fuji) 35 23N 138 42E The highest mountain in Japan, it is a dormant volcano in S central Honshu. Long regarded as a symbol of Japan, it has a symmetrical snow-capped (Oct–May) cone and a Shinto shrine. Height: 3776 m (12 388 ft).

Fukuoka 33 39N 130 21E A port in Japan in N Kyushu on Hakata Bay. An ancient commercial centre, *Kublai Khan was twice defeated here (1274, 1281). Kyushu University was established in 1910. Industries include textiles and shipbuilding. Population (latest est): 1 284 741.

Fulani A Muslim people scattered over a large area of W Africa from Lake Chad to the Atlantic coast. They are a mixed Negroid and, probably, Berber racial type. Their language, known as Fulfulde (or Fula), belongs to the Atlantic division of the Niger-Congo family. Their social and cultural patterns are varied. In N Nigeria many adopted the *Hausa language and culture and, as a result of religious wars (1804–10), established a Muslim empire in which they were the ruling elite.

fullerene See **CARBON**.

fulmar A maritime North Atlantic bird, *Fulmarus glacialis*. It is about 46 cm long and dark

grey above with white underparts. Family: *Procellariidae* (petrels).

Funchal 32 40N 15 55W The capital of the Madeira Islands, on the S coast of Madeira, and a popular tourist resort. Population (latest est): 44 111.

functionalism A doctrine principally associated with the *international style. Its main tenet is that the more fitted to its purpose a building is, the more beautiful it will be. Developed under Louis Sullivan in the 1890s, the doctrine's most vocal advocate was *Le Corbusier. Functionalism led to a very severe style, lacking in all ornamentation and idiosyncrasy. Its dominance faded after 1930.

fundamental interactions The basic forces that occur in nature. See ELECTROMAGNETIC INTERACTION; GRAVITATIONAL INTERACTION; STRONG INTERACTION; WEAK INTERACTION.

fundamentalism A form of religion in which traditional beliefs are held uncompromisingly. Jewish and Christian fundamentalists reject any scientific theories, such as those of cosmology and evolution, that conflict with a literal interpretation of the Bible. Christian fundamentalism has strong support among Protestants in parts of the USA. Islamic fundamentalists adhere strictly to the teachings of the Koran and expect the state to adopt Islamic law. A strong upsurge of Islamic fundamentalism began in the late 1970s when Ayatollah Khomeini became leader of Iran. Islamic fundamentalism has also inspired terrorist groups in the Middle East and the international *al-Qaida network.

fungi Unicellular or multicellular organisms belonging to the kingdom *Fungi* (about 50 000 known species) and including mushrooms, mildews, moulds, yeasts, etc. Fungi were formally classified as plants; however all fungi lack chlorophyll and therefore (unlike plants) cannot manufacture their own food by photosynthesis. Some are saprophytes, feeding on dead organic matter by means of digestive enzymes; others are parasites of plants or animals. The body of most fungi consists of a network of branching threadlike structures

(hyphae), forming a mycelium. Sexual reproduction results in the formation of spores, which may be produced in a specialized structure called a fruiting body: this is the visible part of mushrooms, puffballs, etc. Other fungi consist of single cells, which can reproduce asexually by simple division into two daughter cells. Fungi are distributed worldwide in terrestrial, freshwater, and marine habitats. Some live in the soil and play a vital role in bringing about decomposition of dead organic matter. Other fungi (e.g. *Penicillium* and *Streptomyces*) are of great importance as a source of *antibiotics. Many parasitic fungi cause disease in animals and humans (see INFECTION) or in plants (e.g. the smuts and rusts), while some saprotrophs are destructive to timber (see DRY ROT). Some fungi form associations with other organisms, most notably with algae to form *lichens. See also ASCOMYCOTA; BASIDIOMYCOTA.

furlong A unit of length equal to 220 yards ($\frac{1}{4}$ mile), used in horseracing.

Furness A peninsula in NW England, in Cumbria between the Irish Sea and Morecambe Bay. Chief town: Barrow-in-Furness.

Fushun 41 51N 123 53E A city in NE China, in Liaoning province. Its oil, steel, and chemical industries are based on its oil-shale and vast coal deposits. Aluminium production is also important. Population (1999 est): 1 271 113.

fusion See NUCLEAR ENERGY.

Futuna Islands See WALLIS AND FUTUNA.

Fuzhou (Fu-chou or Foochow) 26 10N 119 20E A port in SE China, the capital of Fujian province on the Min delta. An ancient capital, it was the centre of foreign trade from the 10th to the 19th centuries. Population (1999 est): 1 057 372.

Fyn (German name: Fünen) The second largest Danish island, situated between the Little Belt and the Great Belt. Fishing is important and its fertile soil supports cereal growing, dairy farming, and cattle rearing. It was joined to Sjaelland by a suspension bridge in 1998. Area: 3481 sq km (1344 sq mi). Population (2001): 472 064.

Gable, Clark (1901–60) US film actor. He established his popularity during the 1930s, when he played many tough masculine roles. His films include *It Happened One Night* (1934), *Gone with the Wind* (1939), and *The Misfits* (1961).

Gabon (official name: Gabonese Republic) An equatorial country in West Africa. The population is mainly Fang. *Economy*: almost three-quarters of the land is forested and timber was formerly the most important resource. Now, however, its vast mineral wealth forms the basis of the economy. Agriculture consists chiefly of subsistence farming. *History*: trading posts were set up by the Portuguese in the late 15th century and the area later became a centre of the slave trade. Settled by the French in the mid-19th century, it became part of French Equatorial Africa in 1910. It gained internal self-government in 1958 and became independent in 1960. A one-party political system was instituted under Omar Bongo in 1967; in the 1980s the opposition was led by an underground group known as the *morena*. Continuing unrest led to multiparty legislative elections being held in 1990; Bongo was victorious in subsequent multiparty presidential elections, amidst widespread accusations of fraud. Official language: French. Currency: CFA franc of 100 centimes. Area: 267 000 sq km (103 089 sq mi). Population (2007 est): 1 454 867. Capital: Libreville.

gaboon viper A highly venomous *puff adder, *Bitis gabonica*, occurring in African rain forests. Up to 2 m long, it has hornlike projections on its snout and is patterned with buff, brown, and purple rectangles and triangles. It feeds on small vertebrates.

Gaborone (former name: Gaborones) 24 45S 25 55E The capital of Botswana. The seat of government was transferred here from Mafeking in 1965. Population (2004 est): 199 600.

Gaddafi, Moammar al- (or **Qaddafi**; 1942–) Libyan colonel and statesman. In 1969

he led a revolt that overthrew the Libyan monarchy and in 1970 became chairman of the Revolutionary Command Council. His Arab nationalist and Islamic socialist policies led to a reorganization of Libyan society and brought him into conflict with the West, which accused him of backing international terrorism. A new era of cooperation with the West began in 2004, when Gaddafi announced that he had abandoned plans to build nuclear weapons.

Gaddi, Taddeo (c.1300–?1366) Florentine painter, who was the pupil and assistant of *Giotto. His works include the *Life of the Virgin* (Baroncelli Chapel, Sta Croce, Florence). His son **Agnolo Gaddi** (c.1350–96), painted the *Story of the True Cross* in Sta Croce and the *Life of the Virgin* (Duomo, Prato).

gadolinium (Gd) A *lanthanide element named after the Finnish chemist J. Gadolin (1760–1852). It is used in television-tube phosphors. At no 64; at wt 157.25; mp 1313°C; bp 3273°C.

Gadsden Purchase (1853) About 77 700 sq km (30 000 sq mi) of land in what are now New Mexico and Arizona, bought by the USA from Mexico for \$10 million. The purchase was named after its negotiator, James Gadsden (1788–1858).

Gaelic A language of the Goidelic group of *Celtic languages. Irish Gaelic is spoken in Ireland as a first language by around 100 000 people and as a second language by around 700 000. Scottish Gaelic (or Erse), which is spoken in NW Scotland, is an offshoot of Irish Gaelic.

Gagarin, Yuri Alekseevich (1934–68) Soviet cosmonaut, who on 12 April 1961, became the first person to orbit the earth reaching a height of about 301 km (187 mi). He died when a plane he was testing crashed.

Gaia (or **Gaea**) A Greek goddess personifying the earth. The wife and mother of Uranus (Heaven), by whom she bore the *Titans, the

*Cyclops, and the *Gigantes, she incited the revolt of the Titans against him.

Gainsborough, Thomas (1727–88) British portrait and landscape painter. The elegant style of Van Dyck is reflected in Gainsborough's *Countess Howe* (Kenwood House, London) and the *Blue Boy* (San Marino, California) while his landscapes were influenced by *Ruisdael, Meindert Hobbema (1638–1709), and later by *Rubens, particularly the *Harvest Wagon* (Barber Institute, Birmingham). After 1774 he successfully rivalled *Reynolds; in his later years he painted idyllic rustic scenes, the so-called "fancy" pictures.

galago See BUSHBABY.

Galahad In *Arthurian legend, the son of *Lancelot and Elaine. As the most perfect exemplar of knighthood, he was (in many romances) the only knight to succeed in the quest of the *Holy Grail.

Galápagos Islands (Spanish name: Archipiélago de Colón) An archipelago in the Pacific Ocean, W of Ecuador. It consists of 12 main islands and several smaller ones, all of volcanic origin. Visited by Charles *Darwin in 1835, the islands contain many endemic species, including the Galápagos giant tortoise (*Testudo elephantopus*), up to 15 m long and weighing up to 150 kg. Many islands now form nature reserves. Area: 7428 sq km (2868 sq mi). Population (2001): 18 640.

Galatea 1. In Greek legend, a nymph who loved the shepherd Acis and was loved by Polyphemus. When Acis was killed by his rival she turned him into a river. 2. The name of a statue that came to life in answer to the prayers of *Pygmalion.

galaxies Huge assemblies of stars, gas, and dust, bound together by gravitational interactions. **Spiral galaxies** are large flattened systems with spiral arms containing much interstellar gas and dust from which stars can form. Spirals have a mass of 10^{10} to 10^{11} solar masses. **Elliptical galaxies** are actually spheroidal with no clear internal structure. They vary in size and mass, the largest giant ellipticals exceeding 10^{12} solar masses. **Irregular galaxies** have no definite shape and are relatively small, with a high content of interstellar matter.

Galaxy (or **Milky Way system**) The spiral *galaxy to which the sun belongs. It contains about a hundred thousand million (10^{11}) stars. Most lie in its two spiral arms, the sun lying about 33 000 light years from the centre. Light

cannot penetrate the dust in the innermost regions of the Galaxy but radio, infrared, and X-ray observations have shown complex phenomena to be occurring, possibly arising from the presence of a *black hole at the galactic centre.

Galbraith, John Kenneth (1908–2006) US economist and diplomat. His works in the Keynesian tradition include *The Affluent Society* (1958), *Economics and the Public Purpose* (1973), and *The Culture of Contentment* (1992).

Galen (129–c.199 AD) Greek physician and scholar, whose ideas dominated medicine until the Renaissance. Galen showed the importance of the spinal cord in muscle activity, the role of the ureter in kidney and bladder function, and that arteries carry blood rather than air despite holding mistaken views on blood circulation. Galen also wrote on philosophy, law, and mathematics.

galena The principal ore of lead. It is a grey soft metallic mineral, found as cubic crystals of lead sulphide in hydrothermal veins and as replacement deposits in limestones. Galena ore bodies usually contain silver.

Galicia 1. A medieval kingdom in NW Spain, now an autonomous region. Colonized by the *Visigoths, it became a subkingdom of Castile in the late 11th century. 2. A historical region of E Europe, now in Poland and Ukraine.

Galilean satellites The four largest *satellites of Jupiter—Io, Europa, Ganymede, and Callisto—discovered by Galileo (1610) and studied in detail by the US *Voyager probes (1979). Io is the most active volcanic body known in the solar system.

Galilee A district of N Israel, bordering the River Jordan, associated with the early ministry of Jesus Christ, Crusader battles, and Jewish settlement after the fall of Jerusalem (70 AD). Zionist settlements, begun in 1892, became part of Israel in 1949. **The Sea of Galilee** (Sea of Tiberias; Lake of Gennesaret; Lake Kinneret) is a lake in NE Israel. It is fed mainly by and drained by the River Jordan; its surface is 209 m (686 ft) below sea level. It was the scene of many episodes in the life of Christ. Area: 166 sq km (64 sq mi).

Galileo Galilei (1564–1642) Italian mathematician, physicist, and astronomer. Born in Pisa, legend has it that he demonstrated that the rate of fall of a body is independent of its mass by dropping weights from the Leaning Tower of Pisa. He is also reputed to have worked out that the period of a pendulum is

independent of its amplitude by watching a swinging chandelier in Pisa Cathedral. In 1609 Galileo designed a telescope and used it to discover sunspots and Jupiter's satellites. His book *Dialogue on Two World Systems* (1632) denounced the Ptolemaic system of astronomy in favour of Copernicus' system. As the Roman Catholic Church had condemned Copernicus' work in 1616, Galileo was forced by the Inquisition to recant his views and placed under house arrest for the rest of his life. He was cleared of heresy by a Vatican commission in 1992.

g

Galla A people of Ethiopia numbering about 10 million and making up about 40% of the Ethiopian population. They were originally nomads who spread from the SE region during the 16th century. Their language belongs to the Hamito-Semitic family.

gall bladder A saclike organ (7–10 cm long) that receives and stores *bile (formerly called gall) formed by the liver. The gall bladder is connected to the liver by the hepatic ducts and to the intestine by the common bile duct. Crystallization of bile components forms **gallstones**, which may block the bile duct or cause gall bladder infections (cholecystitis) and may necessitate surgical removal of the gall bladder (cholecystectomy).

Gallic Wars (58–51 BC) The campaigns in which Julius Caesar annexed Transalpine *Gaul (France). Caesar's intervention in Gallic intertribal warfare was prompted by concern for Italian security. NE Gaul was pacified by 57 BC and the tribes along the Atlantic coast by 56 BC. In 52 Caesar defeated the tribes of central Gaul, led by Vercingetorix. Caesar's own account of the Gallic Wars has survived.

gallinule A bird belonging to the family *Rallidae* (rails). Gallinules are widely distributed, occurring on semistagnant water edged by dense vegetation, and commonly have blue, green, or purple plumage for camouflage. They are 30–45 cm long and have long slender toes enabling them to run over floating vegetation. See also MOORHEN.

Gallipoli (Turkish name: Gelibolu) 40 25N 26 41E A seaport in Turkey, on the NE coast of the Dardanelles. Strategically important for the defence of Istanbul, the town had to be rebuilt after the Gallipoli campaign (see WORLD WAR I). Population (latest est): 14 721.

gallium (Ga) A metallic element with a low melting point and high boiling point, discovered in 1875 by Lecoq de Boisbaudran. **Gallium arsenide** (GaAs) is a *semiconductor that

is widely used in electronic devices, particularly the field-effect *transistor and the Gunn diode. At no 31; at wt 69.72; mp 29.77°C; bp 2205°C.

gallon An Imperial unit of volume equal to the volume occupied by ten pounds of distilled water under precisely defined conditions. The US gallon is equal to 0.832 68 British gallons.

Galsworthy, John (1867–1933) British novelist and dramatist. *The Man of Property* (1906) began the famous novel series *The Forsyte Saga*, chronicling the decline of a rich English family. His plays include *Strife* (1909).

Galvani, Luigi (1737–85) Italian physician, who pioneered research into the electrical properties of living things. Observing the twitching of frog muscles when touched with metal, he wrongly attributed the phenomenon to an innate animal electricity. This inspired Alessandro Volta (1745–1827) to discover the electric cell. The *galvanometer is named after Galvani.

galvanized steel Steel coated with zinc to prevent corrosion. The zinc may be deposited by electroplating the steel in molten zinc, spraying with molten zinc, or by coating it with zinc powder and heating it.

galvanometer An instrument for measuring small electric currents, named after Luigi *Galvani. The moving-coil galvanometer consists of a coil of wire suspended in a magnetic field. A current passing through the coil causes it to rotate until balanced by the opposing torsion in the suspending thread. The angle of rotation is used to measure the current. In the moving-magnet instrument the magnet is suspended in the earth's magnetic field and deflection is caused by a current passing through the surrounding coil.

Galway (Irish name: Contae Na Gaillimhe) A county in the W Republic of Ireland, in Connacht. Low lying E of Lough Carrib, it rises to Connemara (an area of moors and bogs) in the W. Offshore islands include the Aran Islands. Cattle and sheep rearing are important. Area: 5939 sq km (2293 sq mi). Population (2002): 208 826. County town: Galway.

Gama, Vasco da (c. 1469–1524) Portuguese navigator. In 1497, he departed with three ships to continue the search by Bartolomeu Dias (c. 1450–c. 1500) for the route to India. He rounded the Cape of Good Hope and crossed to Calicut (1498). Received with hostility by the Indians, he withdrew. In 1502 da Gama was sent out on a punitive expedition to establish Portugal's

influence in the Indian Ocean, returning to Portugal with much booty. Some 20 years later he went back to India as Portuguese viceroy.

Gambia, Republic of The A country in West Africa, surrounded by Senegalese territory. Swamps along the River Gambia give way to savanna. The majority of the inhabitants are Mandingo. *Economy:* overwhelmingly agricultural, producing groundnuts and rice. In 1988 it agreed a free-trade zone with Senegal. Tourism is being encouraged. *History:* in the 15th century the mouth of the River Gambia was explored by the Portuguese, and in 1661 the English established a trading settlement on James Island. The area was administered by the British from 1807 until it achieved independence in 1965, with Sir Dawda Jawara as first president; it became a republic within the British Commonwealth in 1970. Close ties with Senegal were reinforced with the formation of the Senegambia Confederation (1982–89). In 1994 Lt Yayah Jammeh replaced Jawara as president in a military coup; a civilian constitution was adopted in 1996. Jammeh was re-elected in 2001 and 2006. Official language: English. Currency: dalasi of 100 butut. Area: 10 689 sq km (4125 sq mi). Population (2007 est): 1 688 359. Capital: Banjul.

Gambia, River A river in West Africa. Rising in Guinea, it flows NW through Senegal and The Gambia to the Atlantic Ocean. Length: 1126 km (700 mi).

Gambier Islands 23 10S 135 00W A group of coral islands in the S Pacific Ocean, in French Polynesia. They have been used for French nuclear tests. Area: 30 sq km (11 sq mi). Population (latest est): 582. Chief settlement: Rikitea.

gamboge (or **cambooge**) A hard brittle gum resin obtained from various SE Asian trees of the genus *Garcinia*. It is orange to brown in colour and turns bright yellow when powdered. Artists use gamboge as a pigment and to colour varnishes. In medicine it is used as a strong purgative.

gamete A reproductive cell—either male or female—produced in the sex organs of plants or animals and containing half the number of *chromosomes present in a body (somatic) cell. On *fertilization the new individual therefore has a complete set of chromosomes, half from each parent. The female gamete (see EGG) is large and immotile and contains abundant cytoplasm, while the male gamete (see SPERM) is motile, with little cytoplasm.

game theory The branch of mathematics

that seeks to analyse and solve problems arising in economic, business, or military situations on the assumption that each participant adopts strategies that will maximize gain (pay-off) and minimize loss, as in playing a game. Worked out originally by John von *Neumann and Oskar Morganstern (1907–77), it was successfully used in World War II in an analysis of submarine warfare.

gametophyte See ALTERNATION OF GENERATIONS.

gamma globulin See GLOBULIN.

gamma radiation Highly energetic electromagnetic radiation emitted by certain radioactive substances as a result of transitions of nucleons from a higher to a lower energy level and when an elementary particle and its antiparticle annihilate each other. The wavelength of gamma radiation is between 10^{-10} and 10^{-14} metre.

Ganda A Bantu people of the region W and N of Lake Victoria. They are agriculturalists, whose staple crop is bananas. The largest tribe in Uganda, they were formerly ruled by a king (Kabaka) in their own kingdom of *Buganda.

Gandhi, Indira (1917–84) Indian stateswoman; prime minister (1966–77; 1980–84). Daughter of Jawaharlal *Nehru, she succeeded Lal Bahadur Shastri as prime minister and leader of the *Indian National Congress. In 1975 she was accused of electoral malpractices and threatened with the loss of her seat. She was defeated in the elections of 1977 but returned to power in 1980. In the wake of sectarian violence, she was assassinated in 1984 by Sikh members of her bodyguard. Her elder son **Rajiv Gandhi** (1942–91) succeeded her as prime minister (1984–89); he was also assassinated. Rajiv's widow, the Italian-born **Sonia Gandhi** (1946–), became leader of the Congress Party in 1998; although she led the party to victory in the election of 2004 she declined the post of prime minister.

Gandhi, Mohandas Karamchand (1869–1948) Indian nationalist leader. Mahatma ("Great Soul") Gandhi was born in W India and went to England in 1888 to study law. In 1893 he moved to South Africa to practise law and became a champion of the rights of the Indian community, introducing a policy of noncooperation (satyagraha) with the civil authorities. After returning to India, he became leader of the *Indian National Congress. Following imprisonment (1922–24) for civil disobedience, Gandhi campaigned against the degradation of

untouchables. In 1930 he walked from Ahmedabad to the sea, where he distilled salt from sea water in protest against the government's salt monopoly, and was again imprisoned. In 1932 he undertook his first "fast unto death," against the government's attitude to untouchables. During World War II Gandhi had to reconcile Indian support for Britain with his beliefs in nonviolence and an independent India. His demand that the British should withdraw immediately from India led the British to gaol Gandhi and other Congress leaders until 1944.

Subsequently, Gandhi played a crucial part in independence talks and finally accepted the establishment of Pakistan. When violence broke out in Bengal, Gandhi undertook a fast in an attempt to halt the conflict. His advocacy of friendship between Hindus and Muslims caused resentment among Hindu fanatics, one of whom (Nathuram Godse) assassinated him. Gandhi was for many years regarded as both a saint and the supreme Indian leader.

Gandzha (name from 1813 until 1920: Yelisevetspol; name from 1935 until 1990: Kirovabad) 40 39N 46 20E A city in NW Azerbaidzhan. A medieval commercial centre, it is now important for industry. Population (1997 est): 291 900.

Ganesha (or **Ganesa**) One of the principal Hindu deities, who is portrayed as having an elephant's head on a human body. His father *Shiva beheaded him, but then replaced his human head with that of the first creature he found. He is the patron of prosperity and learning.

Ganges, River (or **Ganga**) The great river of N India. Formed by headstreams in the Himalayas, it flows E across the Ganges plain to the Brahmaputra River, thereafter continuing as the River Padma, which empties into the Bay of Bengal by way of the largest delta in the world. It is the Hindus' most sacred river. Length: 2507 km (1557 mi).

gangrene Death of tissues, most commonly those of a limb. This usually results from narrowing of the blood vessels of the legs by *atherosclerosis or because of diabetes. If the tissues become infected the condition is called wet gangrene. Treatment is aimed at improving the blood flow to the limbs by surgery or by rest; in advanced cases amputation may be necessary.

gannet A seabird of the family *Sulidae*, distributed worldwide. (Tropical members are called boobies.) The North Atlantic gannet (*Sula*

bassana), also called solan goose, 90 cm long, is white with black wingtips. Gannets feed on fish and nest in colonies on rocky islands and cliffs. Order: *Pelecaniformes* (cormorants, pelicans, etc.).

Ganymede (Greek mythology) A Trojan prince of great beauty carried off by Zeus to be his cupbearer in exchange for some immortal horses or a golden vine.

Gaoxiong (or **Kao-hsiung**; Japanese name: Takao) 22 36N 120 17E A city in SW Taiwan, the second largest on the island and its leading port. Under Japanese occupation (1895–1945) it became an important naval base. Population (2000 est): 1 475 505.

Garbo, Greta (Greta Gustafson; 1905–90) Swedish actress. Her aloof beauty contributed much to her portrayal of tragic heroines in such films as *Grand Hotel* (1932), *Anna Karenina* (1935), and *Camille* (1936). As a comedienne she excelled in *Ninotchka* (1939).

García Lorca, Federico (1898–1936) Spanish poet and dramatist. He won international fame with *Gipsy Ballads* (1928). His masterpiece is the trilogy of folk tragedies *Blood Wedding* (1933), *Yerma* (1934), and *The House of Bernarda Alba* (1936). He was shot by Nationalist partisans in the Spanish Civil War.

García Márquez, Gabriel (1928–) Colombian novelist; his novels include *One Hundred Years of Solitude* (1967) and *Chronicle of a Death Foretold* (1981). He won a Nobel Prize in 1982.

Garda, Lake (Latin name: *Lacus Benacus*) A lake in central N Italy. Sheltered on the N by the Alps, it has a temperate climate that attracts holidaymakers. Area: 370 sq km (143 sq mi).

Gardenia A genus of ornamental shrubs and trees (60–100 species) native to tropical and subtropical Africa and Asia. Many are richly scented and used in perfumes and tea. *G. jasminoides* is a popular pot plant. Family: *Rubiaceae* (madder family).

garfish See **NEEDLEFISH**.

Garibaldi, Giuseppe (1807–82) Italian soldier, a hero of the movement for Italian unification (see *RISORGIMENTO*). Influenced by Mazzini, he joined an attempted republican revolution in Sardinia-Piedmont (1834) and was forced to flee to South America. He returned to Italy to join the Revolution of 1848, fighting the Austrians and play a leading part in the unsuccessful defence of Rome against the French.

Following another period of exile, he joined the unification movement led by *Cavour and Victor Emmanuel II. In 1860 he set out from Genoa on the Expedition of a Thousand, achieving the conquest of Sicily and Naples and their incorporation in the new kingdom of Italy. He also fought for the French in the Franco-Prussian War (1870–71).

Garland, Judy (Frances Gumm; 1922–69) US singer and film actress. She began her career at the age of five in vaudeville. Her films included *The Wizard of Oz* (1939), *Meet Me in St Louis* (1944), and *A Star is Born* (1954). Although an unhappy private life interfered with her career, she maintained her reputation as a superstar. Her daughter **Liza Minnelli** (1946–) is also a singer and actress, best known for her starring role in *Cabaret* (1972); other films include *Arthur* (1981) and *Stepping Out* (1991).

garlic A widely cultivated perennial herb, *Allium sativum*, native to Asia and naturalized in S Europe and North America. Its leafless flower stem grows to a height of 60 cm. The bulb, with its pungent taste, is used in cooking.

garnet A group of minerals, with varying compositions, that occur chiefly in metamorphic rocks. They are used as abrasives and semi-precious stones. Birthstone for January.

Garonne, River A river in SW France. Rising in the central Pyrenees, it enters the Atlantic Ocean by the Gironde estuary. Length: 580 km (360 mi).

Garrick, David (1717–79) English actor. He went to London with Samuel *Johnson in 1737 and began his long theatrical career with a highly acclaimed performance as Richard III in 1741. As manager of the Drury Lane Theatre from 1747 to 1776, he introduced innovations in production, lighting, and scenery.

Garter, Order of the A British order of knighthood, traditionally founded by Edward III in 1348 and comprising chiefly the sovereign and 25 knights companions. Its motto, *Honi soit qui mal y pense* (The shame be his who thinks badly of it), supposedly the words of Edward III on tying to his leg a garter dropped by a lady, is inscribed on a blue garter worn below the left knee. The order's chapel is St George's Chapel, Windsor.

Gascony A former duchy of SW France. After Roman rule Gascony was conquered by the Visigoths and then by the Franks. It fell to Aquitaine in 1052 and came under English control in the 12th century. It was regained by the

French at the end of the Hundred Years' War (1453).

gases Substances that distribute themselves evenly throughout a closed container. The behaviour of a gas under variations of temperature, pressure, and volume is fairly accurately described by the *gas laws and the *kinetic theory of gases.

Gaskell, Elizabeth Cleghorn (1810–65) British novelist. In 1832 she married a Unitarian minister and settled in Manchester, the industrial setting of her first novel, *Mary Barton* (1848). Her other novels include *Cranford* (1853) and *North and South* (1855). She also wrote the first biography of her friend Charlotte Brontë (1857).

gas laws Relationships between the thermodynamic temperature (T), pressure (p), and volume (V) of a gas. Boyle's law (see BOYLE, ROBERT) ($p \propto 1/V$) and *Charles's law ($V \propto T$) are combined in the ideal gas equation: $pV = nRT$, where R is the gas constant, which has the value $8.314 \text{ J K}^{-1} \text{ mol}^{-1}$, and n is the number of moles present. Only ideal gases obey these laws exactly. Later modifications of these equations attempt to cover real gases.

gastropod A single-shelled *mollusc belonging to the class *Gastropoda* (about 40 000 species), including *snails and *slugs, *limpets, and sea hares. 0.1–20 cm long, gastropods occupy terrestrial, freshwater, and marine habitats. They move by undulating the muscular foot and have two pairs of retractable sensory head tentacles, one pair bearing simple eyes. They feed by scraping plant or animal matter with a rasping tongue (radula). Most gastropods have internal fertilization: the mating individuals may be of separate sexes or hermaphrodite.

gas turbine A form of *internal-combustion engine consisting of a *turbine in which the power to drive the blades is provided by hot gas. It consists of a compressor, a combustion chamber, and the turbine. Atmospheric air is fed under pressure from the compressor to the combustion chambers, where a fuel, such as natural gas, paraffin, or oil is burnt; the hot gases then drive the turbine, which in turn drives the compressor. Power is supplied either in the form of thrust from a jet or rotation of the turbine shaft.

Gates, Bill (William Henry G; 1955–) US business man, whose Microsoft company (founded 1975) has dominated the computer software industry worldwide since the early

1980s. The company's success was consolidated by its Windows system, introduced in 1985. One of the world's richest men, Gates is known for his philanthropy; he was awarded an honorary knighthood in 2004.

Gateshead 1. 5458N 135W A town in NE England, in Gateshead unitary authority, Tyne and Wear, on the River Tyne. Industries include engineering and clothing. Landmarks include the new Baltic art gallery and Millennium Bridge and the Angel of the North, the UK's largest outdoor sculpture. Population (latest est): 83 159. 2. A unitary authority in NE England, in Tyne and Wear. Area: 142 sq km (55 sq mi). Population (2004 est): 191 300.

Gatwick 5108N 011W A village in SE England, 43 km (27 mi) S of London, in W Sussex. It is the site of one of London's two subsidiary airports (see also STANSTED).

Gauguin, Paul (1848–1903) French postimpressionist painter. After five years at sea he became a stockbroker (1871), painting as a hobby. He became a full-time painter in 1883 and developed a style called synthetism in such paintings as *Vision after the Sermon* (National Gallery, Edinburgh). He visited Martinique in 1887 and stayed with Van Gogh in Arles in 1888. Seeking the inspiration of a primitive civilization, he moved to Tahiti (1891), where the symbolism in such paintings as *Nevermore* (Courtauld Institute, London) was influenced by native superstitions.

Gaul An ancient region of Europe. It was divided by the Romans into Transalpine Gaul (the area bound by the Rhine, Alps, and Pyrenees) and Cisalpine Gaul (N Italy). Transalpine Gaul was settled from about 1500 BC by Celtic tribes, who inhabited Cisalpine Gaul after around 500 BC. Subsequent Gallic expansion southwards brought conflict with Rome, which the Gauls sacked in 390. In 121 the Romans annexed S Transalpine Gaul, which they called Gallia Narbonensis, and between 58 and 50 Caesar subdued the rest of Gaul, finally crushing the Gallic tribal leader Vercingetorix at Alesia. Gaul was extensively romanized and prospered until the barbarian invasions in the 5th century.

Gauss, Karl Friedrich (1777–1855) German mathematician, regarded as one of the greatest mathematicians of all time. He influenced all aspects of mathematics and much of physics. His greatest contributions were in the fields of probability theory, number theory, complex numbers, algebra, and electricity and magnetism.

gavial (or **gharial**) A long-snouted reptile, *Gavialis gangeticus*, occurring in N Indian rivers and sacred to Hindus. 4–5 m long, it has long slender sharp-toothed jaws, which it uses to catch fish. It is the only member of its family (Gavialidae). Order: Crocodilia (see CROCODILE).

Gawain In Arthurian legend, a knight of the Round Table, the nephew of King Arthur and the son of King Lot of Norway and the Orkneys. He was known for his purity and courage.

Gaya 24 48N 85 00E A city in NE India, in Bihar. A centre of Hindu pilgrimage, it is situated 10 km (6 mi) S of Buddh Gaya, which is sacred to Buddhists. Population (2001): 385 432.

Gay-Lussac, Joseph Louis (1778–1850) French chemist and physicist. He discovered boron (1808) and the law that gases combine in a simple ratio by volume (Gay-Lussac's law). He also discovered *Charles's law independently of Charles and published his results first.

Gaza Strip A strip of coastal territory, 50 km (30 mi) long, on the SE corner of the Mediterranean Sea. Agriculture is the chief pursuit, especially the growing of citrus fruit. Following the Arab-Israeli War of 1948–49, it was the only part of Palestine held by Egypt. Held by the Israelis for a short time in 1956–57, it was taken by them again in 1967. Under the Camp David agreement (1979), eventual self-government for the area was planned. The Gaza Strip suffers from extreme overpopulation, with many Palestinian refugees being housed in squalid camps. In 1994 Palestinian self-government commenced. Violent protests intensified in 2001–2002, provoking Israeli air attacks and military incursions. In 2005 Israel implemented a plan to withdraw from Gaza unilaterally but to hold on to settlements in the *West Bank. In 2007 * Hamas fighters seized control of Gaza in defiance of the Palestinian Authority. Population (2007 est): 1 482 405.

gazelle A slender antelope of the genus *Gazella* (about 12 species), of Africa and Asia. 50–90 cm high at the shoulder, gazelles are distinguished from other antelopes by horizontal stripes on the face. In most species both sexes have lyre-shaped horns.

Gdańsk (German name: Danzig) 54 22N 18 41E A port in N Poland. It is an industrial centre with metallurgy, chemicals, and food processing. The city's famous shipyards closed in 1997. History: it was under Prussian control (1793–1807 and 1814–1919), becoming a free city under the League of Nations in 1919. In 1939 it was annexed by Germany; the city was re-

turned to Poland in 1945. Population (1999 est): 458 988.

Gdynia 54°31'N 18°30'E A port in N Poland. Originally a fishing village, it has become Poland's main shipbuilding centre and naval base. Population (1999 est): 253 521.

gecko A slender long-tailed nocturnal lizard belonging to the widely distributed family *Gekkonidae* (650 species), found in a wide range of habitats. 3–35 cm long, many geckos have fleshy toe pads covered with microscopic hooks enabling them to cling to smooth surfaces. They feed on insects and have well-developed vocal cords. The **tokay** (*Gekko gecko*) of E Asia is a large arboreal gecko.

Geelong 38°10'S 144°26'E A city and major port in Australia, in S Victoria. Wool, wheat, and oil are the principal exports. Population (1998 est): 186 307.

Geiger counter A device that detects and quantifies ionizing radiation and particles. Essentially it consists of a metal cylinder containing low-pressure gas and a wire anode. Ionizing particles passing into the tube through a window at one end induce discharges, which can be counted by a suitable circuit. Named after the German physicist Hans Geiger (1882–1945).

Geiger counter. The radiation entering the tube causes an electrical discharge through the gas between the anode and cathode, sending an electrical pulse to the counter.

geisha A Japanese woman whose profession is to entertain men in a restaurant. Geishas, who are not prostitutes, sing and dance or engage their clients in conversation.

gel See COLLOID.

gelada A large *Old World monkey, *Theropithecus gelada*, of Ethiopian mountains. 120–150 cm long including the tufted tail (70–80 cm), it has a cape of dark-brown hair with two bare

patches on the chest and lives in large groups, feeding on roots, leaves, and fruit.

gelatin A protein derived from bones and skins. In solution it forms a reversible gel that becomes fluid as the temperature rises and solidifies on cooling. It is widely used in the food industry, in drug preparations, and in photographic emulsions.

Geldof, Bob (1952–) Irish rock musician. Born in Dublin, Geldof made successful recordings with the Boomtown Rats before becoming involved in fund raising for the starving in Africa in 1984. His efforts, culminating in a massive concert held simultaneously in the UK and the USA in 1985, generated widespread support and unprecedented donations to charity. He received an honorary knighthood in 1986.

gelignite A high explosive consisting of nitroglycerin, cellulose nitrate, potassium nitrate, and woodpulp.

Gell-Mann, Murray (1929–) US physicist, who won the 1959 Nobel Prize for his work on elementary particles. In 1953 he introduced the concept of *strangeness to account for the absence of certain expected interactions. He also formulated the theory of unitary symmetry and the concept of quarks (see also PARTICLE PHYSICS).

Gemini (Latin: Twins) A conspicuous constellation in the N sky near Orion, on the *zodiac between Cancer and Taurus. The brightest stars are Pollux and Castor.

gene A unit of the hereditary material of an organism that provides the genetic information necessary to fulfil a single function. The term was first coined by W.L. Johannsen (1857–1927) in 1909. Genes were initially conceived as a string of beads comprising the *chromosome. However, with the discovery of the structure of *DNA and the molecular basis of heredity, a gene is now regarded as being a functional unit (cistron) corresponding to a specific sequence of the *genetic code. See also GENE THERAPY; GENOME.

General Agreement on Tariffs and Trade (GATT) An organization set up in 1948 by a UN initiative to regulate and reduce barriers to world trade. GATT was succeeded by the *World Trade Organization in 1996.

General Strike (1926) A national stoppage of work by members of Britain's major industries, lasting from 3 to 12 May. It began when the Trades Union Council (TUC) called out its members in support of the miners, who had refused to accept a reduction in wages. The govern-

ment under Stanley *Baldwin kept essential services going and nine days later the TUC called off the Strike.

Genesis The first book of the Bible, traditionally ascribed to Moses. It recounts the creation of the universe and of man, the fall of Adam, the Flood, and the scattering of the nations at Babel. The remainder of the book focuses on the lives of *Abraham, Isaac, Jacob, and Joseph, introducing the covenant between God and the Israelites.

genet A carnivorous mammal of the genus *Genetta* (9 species) of Africa and Europe. Genets range from the 50-cm Abyssinian genet (*G. abyssinica*) to the 100-cm African giant genet (*G. victoriae*). They have retractile claws, long tails (up to 50 cm), foxlike heads, and pale fur with dark spots or stripes. Genets are nocturnal, preying on birds and small mammals. Family: Viverridae.

gene therapy The treatment of diseases using genetic engineering. It is targeted at somatic (rather than germ) cells and aims to treat both genetic diseases and some cancers. Genetic diseases, such as haemophilia, muscular dystrophy, and cystic fibrosis, are caused by a faulty gene failing to produce a vital protein; the treatment is designed to introduce into the patient's body the correct version of the gene, which can restore the missing protein. In treating cancers, gene transfer can enable genes acting specifically against tumour cells to be inserted into these cells.

genetic code The way in which information encoded in DNA and RNA molecules is used for the organization and function of living cells. The nature of the code was elucidated in the 1960s by the work of *Crick, M.W. Nirenberg (1927–), Har Gobind Khorana (1922–), and others. The basic symbol of the code is a sequence of three consecutive bases of messenger RNA (which is transcribed from DNA).

genetic counselling Advice given to those with a family history of inherited diseases, such as cystic fibrosis and muscular dystrophy. Parents are told of the likelihood of their children being affected, and the means of prevention and treatment available.

genetic engineering (genetic modification or recombinant DNA technology) Alteration of the genetic constitution of organisms, usually bacteria, in order to obtain gene products beneficial to man. Typically, a sequence of desirable genes is inserted into the DNA of a host bacterium. This altered DNA (or

recombinant DNA) then directs the bacterial cell to synthesize the desired gene product (for example, insulin). Genetic engineering has been used to improve crop plants, for example by conferring resistance to pests or herbicides or prolonging storage time. The resultant **genetically modified organisms** (GMOs) include tomatoes, maize, and soya. Because the long-term effects of GM crops are not known, in the UK their commercial exploitation is controversial. In 2004 the government permitted GM maize to be grown for animal consumption.

genetic fingerprinting (or DNA fingerprinting) An identification technique based on DNA examination. DNA is extracted from sample cells (e.g. from blood or semen) and broken into fragments using enzymes. These fragments, containing the genetic code unique to each individual, are compared with fragments obtained from a blood sample of the test subject. In 1987 the technique was first used in the UK as forensic evidence, since when its use has become widespread.

genetics The study of heredity and variation in living organisms. The science of genetics is founded on the work of Gregor *Mendel. In the early 20th century *chromosomes and their *genes were established as the carriers of information determining inheritable characteristics, and with the discovery of the structure of *DNA in 1953, the molecular basis of genetics was revealed. Genetics is important in plant and animal breeding and in understanding inherited diseases. See also GENETIC ENGINEERING.

Geneva (French name: Genève; German name: Genf) 46 13N 6 09E A city in SW Switzerland, on Lake Geneva. It is a cultural and commercial centre, banking and international finance being particularly important. It is the base of many international organizations including the International Red Cross and the World Health Organization. History: originally a prehistoric lake dwelling, it was later a Roman city. It became the centre of the Calvinist Reformation and a refuge for persecuted Protestants. Population (1999 est): 172 809.

Geneva Bible An English translation of the Bible published in 1560 by Puritan exiles in Geneva. It is also called the Breeches Bible because of the use of the word in the translation of Genesis 3.7.

Geneva Conventions International agreements covering the care and protection of non-combatants and wounded troops in wartime. Inspired by the establishment of the Interna-

genetics. When a purebred (homozygous) black guinea pig (BB) mates with a purebred white one (bb) all the offspring (F₁ generation) will be black (Bb), since the gene for black is dominant. Mating of this heterozygous F₁ generation will produce both black and white guinea pigs (F₂ generation) in the ratio 3:1, since each of the parents carries a white recessive gene. The same principle applies to the inheritance of two factors — seed colour and texture — in pea plants. When a plant with round yellow seeds (RRYY — dominant) is crossed with one producing wrinkled green seeds (rryy — recessive) the offspring will all have round yellow seeds (RrYy — heterozygous). Crossing of this generation results in the segregation and reassortment of the genes so that their offspring will show all four possibilities of seed colour and texture in the proportions 9:3:3:1. These examples of single- and two-factor inheritance obey Mendel's laws.

tional *Red Cross, a code of practice for the treatment of wounded soldiers was agreed in 1864. Subsequent agreements (1906, 1929, 1949) cover assistance for forces at sea, the treatment of prisoners of war, and the protection of civilians.

Geneva, Lake (French name: Lac Léman) A lake on the River Rhône between Switzerland

and France. The city of Geneva and the towns of Montreux, Lausanne, and Evian stand on its shores. It is dominated by the Alps to the N. Area: 577 sq km (223 sq mi).

Genghis Khan (c. 1162–1227) The founder of the Mongol empire. Originally called Tamujin, he adopted the title Genghis Khan (Emperor of All) in 1206 after uniting the nomadic Mongol

tribes of the Siberian steppes and destroying Tatar power. Organizing his horsemen into highly mobile squadrons called *ordus* (hence "hordes"), he breached the Great Wall and captured Peking but failed to conquer China completely. Advancing westwards, Genghis crushed resistance in Afghanistan, Persia, and S Russia.

Genoa (Italian name: Genova) 44 24N 08 56E A port in NW Italy. A major maritime city during the middle ages, Genoa is Italy's chief port and a major industrial centre. Population (2000 est): 636 104.

genome The full complement of genes (i.e. DNA sequences) within a single set of chromosomes, comprising the genetic constitution of a species. The **Human Genome Project**, begun in 1988 and completed in 2003, succeeded in sequencing the bases of human DNA, comprising an estimated 30 000–35 000 genes. This will facilitate the identification of genes responsible for many diseases, enabling accurate genetic testing and possibly the development of gene-based treatments for these disorders.

gentian A herbaceous plant of the widely distributed genus *Gentiana* (about 400 species), which includes many alpine perennials. The blue flowers usually form a bell or funnel with spreading lobes. The fruit of most species is a capsule. Family: *Gentianaceae*.

Gentile da Fabriano (Niccolo di Giovanni di Massio; c.1370–1427) Florentine painter of the international gothic style. His fresco cycles for the Doge's Palace, Venice, and the Lateran Basilica, Rome, have perished. The *Adoration of the Magi* (Uffizi) shows his rich style.

geochronology The study of dating geological events, rocks, sediments, and organic remains. Absolute dating involves radioactive dating techniques giving an actual date BP (before present). Relative dating establishes the order of geological events in relation to each other, using fossil correlation, pollen analysis, etc.

Geoffrey of Monmouth (c.1100–54) English chronicler. His major work, the fanciful *Historia Regum Britanniae*, was the main source for the whole body of medieval European literature concerned with the Arthurian legend.

geography The study of the features of the earth's surface, especially in terms of the human environment. Modern geography was founded in the early 19th century by the German scholars Alexander von Humboldt and Carl Ritter and is now divided between the

physical and social sciences. Physical geography includes geomorphology (the study of land-forms), biogeography (the study of soils and the distribution of animals and plants), and climatology (the study of climate). The main branches of human geography are historical geography, economic geography, urban geography, and political geography.

geological time scale A time scale covering the earth's history. The largest divisions are eras (Palaeozoic, Mesozoic, and Cenozoic); these are subdivided into periods and the Tertiary and Quaternary periods are further subdivided into epochs; epochs consist of several ages, and ages can be divided into chrons. The stratomeric standard scale refers to the rocks formed in these intervals; the corresponding terms are group (era), system (period), series (epoch), stage (age), and chronozone (chron).

geology The study of the earth: its origin, history, structure, composition, and the natural processes acting on it. The branches of geology are historical (including geochronology, stratigraphy, and palaeontology); physical (including geomorphology, geophysics, petrology, mineralogy, crystallography, and geochemistry); and economic, involving the distribution and occurrence of the economically important rocks and minerals.

geomagnetic field The earth's magnetic field, causing a compass needle to align north–south. It is believed to be caused by the liquid-iron core acting as a dynamo resulting from the convection currents in it. The magnetic poles do not coincide with the geographic poles, and their positions vary with time. Reversals of the earth's magnetic field have occurred in the past. The **magnetic elements** of the earth's field are the *magnetic dip, the *magnetic declination, and the horizontal field strength.

geometrid moth A moth of the family *Geometridae*, occurring in Europe, Asia, and North America. The name is derived from the looping method of locomotion of the caterpillars, which are known as inch worms, loopers, or measuring worms. The adults, known as pugs, umbers, carpet moths, etc., have slender bodies, a weak flight, and camouflaging coloration.

geometry A branch of mathematics concerned with the properties of space and shapes. In Euclidean geometry the space corresponds to common ideas of physical space and the shapes are idealizations of the common shapes that occur in real life. Other branches of geom-

etry include non-Euclidean geometry, Riemannian geometry, and *analytic geometry. *See also* TOPOLOGY.

era	period	epoch	millions of years ago
Cenozoic	Quaternary	Holocene	1.8
		Pleistocene	
	Tertiary	Pliocene	65
		Miocene	
		Oligocene	
		Eocene	
		Palaeocene	
Mesozoic	Cretaceous		135
	Jurassic		200
Palaeozoic	Triassic		240
	Permian		280
	Carboniferous		370
	Devonian		415
	Silurian		445
	Ordovician		515
Precambrian	Cambrian		590
	Precambrian		4500

geological time scale

geophysics The study of the physical forces acting on and within the earth. Important branches of geophysics are seismology, geomagnetism, vulcanology, natural radioactivity, and the gravitational field.

George I (1660–1727) The first Hanoverian King of Great Britain and Ireland (1714–27) and Elector of Hanover (1698–1727). He divorced his wife for infidelity (1694) and imprisoned her for 32 years. A successful soldier and a shrewd diplomat, he was unpopular in Britain because he seemed to subordinate British to Hanoverian interests. He never learnt English and left government to his Whig ministers.

George II (1683–1760) King of Great Britain and Ireland and Elector of Hanover (1727–69). His reliance on such ministers as Sir Robert *Walpole influenced the development of constitutional monarchy. In the War of Austrian Succession he fought at Dettingen (1743), the last British king to appear in battle. He was a patron of musicians, notably Handel.

George III (1738–1820) King of Great Britain and Ireland (1760–1820) and Elector (1760–1815) and King (1815–20) of Hanover. He shared with Lord *North the blame for the loss of the American colonies but was more astute in backing William Pitt the Younger as prime minister (1783–1801). He suffered periods of insanity from the 1780s (attributed to *porphyria) and was permanently insane by 1811, after which the Prince of Wales (later George IV) acted as regent (*see also* REGENCY STYLE).

George IV (1762–1830) King of the United Kingdom and of Hanover (1820–30). He secretly married a Roman Catholic, Maria Fitzherbert, in 1785 but the marriage was invalid and in 1795 he married *Caroline of Brunswick. George's dissipation and his treatment of his wife undermined the prestige of the monarchy.

George V (1865–1936) King of the United Kingdom (1910–36), second son of Edward VII, whose heir he became on the death (1892) of his elder brother Albert Victor. In 1893 George married Mary of Teck.

George VI (1895–1952) King of the United Kingdom (1936–52). Second son of George V, he succeeded to the throne when Edward VIII abdicated. He married Lady Elizabeth Bowes-Lyon (*see* ELIZABETH THE QUEEN MOTHER) in 1923.

George, St The patron saint of England and of soldiers. His cult was brought to England by Crusaders returning from Palestine, where he was believed to have been martyred during Emperor Diocletian's rule. In art he is usually portrayed slaying a dragon, a legend that probably derives from the *Pegasus myth. Feast day: 23 April.

George Cross The highest British decora-

tion for civilian bravery, awarded since 1940. A silver cross superscribed *For Gallantry*, it has twice been awarded collectively: to the island of Malta (1942) and the Royal Ulster Constabulary (1999). The **George Medal**, the second highest decoration for civilian bravery, was also instituted in 1940.

Georgetown (or **Penang**) 5 26N 100 16E A city in NW Peninsular Malaysia, the capital of Penang state. It is now Malaysia's chief port. Population (1991): 219 376.

Georgetown 6 46N 58 10W The capital and main port of Guyana. Founded by the British in 1781, it was later occupied by the French and the Dutch. Population (1999 est): 275 000.

Georgia (USA) A state on the SE coast of the USA. It can be divided into two physical regions: the Appalachian Mountains in the N and a coastal plain with forests and swamps in the S. Agriculture is important; poultry has replaced cotton as the major item and Georgia is a leading producer of peanuts. *History*: named after George II, it was founded in 1732. Settlement of the state expanded after the American Revolution; a supporter of the Confederate cause in the US Civil War, it suffered considerable damage during Gen Sherman's March to the Sea (1864). During the last hundred years it has suffered from a decline in the cotton industry and troubled race relations. Area: 152 488 sq km (58 876 sq mi). Population (2000): 8 186 453. Capital: Atlanta.

Georgia (Asia) A republic in W Asia. It is a mountainous region with many holiday resorts on the Black Sea coast. The population is mostly Georgian. *Economy*: Georgia is rich in minerals, especially manganese and coal. It also has hydroelectric resources. The main crop is tea; citrus fruits, grapes, and tobacco are also important. *History*: Christianity was introduced in the 4th century AD. An independent kingdom for most of the middle ages, Georgia was divided between Persia and Turkey in 1555, passing to Russia in the 19th century. It became independent in 1918 but subsequently formed part of the Transcaucasian Soviet Federated Republic. It became a separate republic in the USSR in 1936. Independence was declared in 1990; in 1992 the dictatorial president Zviad Gamsakhurdia was overthrown, government passed to a state council under Eduard Shevardnadze, Georgia's independence was recognized, and free elections were held. The early 1990s saw fighting between state troops and separatists in Abkhazia and South Ossetia (supported by Russia). Greater stability was

achieved after Georgia and Russia signed an economic cooperation agreement (1994). A new constitution (1995) granted considerable autonomy to Abkhazia and South Ossetia (renamed Tskhinvali) but pressure for complete independence has continued. In 2003 disputed election results provoked massive demonstrations and Shevardnadze was forced to resign; he was succeeded by the opposition leader Mikhail Saakashvili. Official language: Georgian. Currency: lari of 100 tetri. Area: 69 493 sq km (26 831 sq mi). Population (2003 est): 4 934 000. Capital: Tbilisi.

Georgian The language spoken by the Georgian peoples of Georgia, Azerbaidzhan, Turkey, and Iran. It belongs to the Kartvelian or South Caucasian group and is written in a script derived from Aramaic with Greek influences and has a literature dating from the 5th century AD. It is the official language of Georgia.

Georgian style A style of British architecture prevalent during the reigns of George I to George IV (1714–1830). The period was subject to several different influences but was dominated by Palladianism and *neoclassicism. Georgian architecture was characterized by the symmetrical use of twelve-paned sash windows and the restrained use of classical features.

geostationary orbit See COMMUNICATIONS SATELLITE.

geothermal power. In the UK the absence of volcanoes and geysers means that hot-dry-rock (HDR) technology has to be used. In this, cold water is pumped some 6 km down in the earth's crust, where it percolates through fissures in the hot dry rocks; the resulting superheated steam is brought to the surface, where it drives a turbogenerator. HDR technology is still experimental.

geothermal power Heat produced in the earth's interior. Volcanoes, geysers, and hot springs are all sources of geothermal power, although only the latter two provide convenient

energy sources. It supplies about 0.1% of the world's energy requirements.

geranium A herbaceous plant of the genus *Pelargonium* (250 species), most species of which are native to South Africa. They have showy flowers, usually red or pink. Most horticultural geraniums are hybrids. Family: *Geraniaceae*. Horticultural geraniums should be distinguished from related plants of the genus *Geranium* (see CRANESBILL).

gerbil A small *rodent belonging to the subfamily *Gerbillinae* (over 100 species) of Africa and Asia, also called jird and sand rat. Ranging in size from 5–20 cm, gerbils have long hind legs. They spend the day in underground burrows, feeding at night on seeds and roots. Chief genera: *Gerbillus*, *Tatera*; family: *Cricetidae*.

Géricault, (Jean Louis André) Théodore (1791–1824) French painter. His famous *Raft of the Medusa* (1819) was based on a contemporary shipwreck. He is also noted for his paintings of horses and a late series of portraits of insane people. He died in a riding accident.

German A language of the West Germanic language group. It is the official language of Germany and Austria and one of the four official languages of Switzerland. High German, the official and written form, developed from dialects of the highland areas of Germany and Austria. Old High German was spoken before 1100 AD when Middle High German, based on Upper German dialects, became the standard form. Modern High German developed from the 16th-century dialect of Luther. Low German exists only in a spoken form in N Germany and is derived from Old Saxon and Middle Low German speech.

Germanic languages A subgroup of the Indo-European language group. There are three recognized subgroups: East Germanic, North Germanic, and West Germanic. The first of these is now extinct. North Germanic covers the *Scandinavian languages, West Germanic includes modern English and German among its descendants as well as *Dutch (Netherlandic) and Frisian. All three branches can be traced back to an unrecorded Proto-Germanic language, which has been reconstructed by philologists by comparing and tracing back similar modern languages.

germanium (Ge) A brittle grey-white metalloid, discovered by C. A. Winkler (1838–1904) in 1886. Like *gallium it is present in coal and is concentrated in chimney soot as well as in the

flue dusts of zinc smelters, from which it is obtained commercially. The element is a *semiconductor and is used in the electronics industry. At no 32; at wt 72.61; mp 938.35°C; bp 2834°C.

German measles A common contagious disease of children and young adults caused by a virus. Known medically as rubella, it is a mild infection producing a pink rash and a sore throat. If a woman is infected in pregnancy she may give birth to a malformed child.

German shepherd dog (or **Alsatian**) A breed of large dog originating in Germany. It has a coarse coat that can range in colour from white to black but is often black and tan. German shepherds are used as working dogs, as guard dogs, and as guide dogs for the blind. Height: 61–66 cm (dogs); 56–61 cm (bitches).

Germany, Federal Republic of A country in central Europe; since 1990 it has comprised the former East Germany (the German Democratic Republic) and the former West Germany (the Federal Republic of Germany). For administrative purposes, Germany is divided into 16 *Länder* (German, states). Extensive plains in the N, which border on the North Sea, the Baltic Sea, and Denmark, rise to a central hilly area, including the Harz Mountains and Thuringian Forest, with the Erzgebirge in the SE and the peaks of the Alps in the extreme S. The chief rivers are the Rhine, Danube, Oder, Ems, Weser, and Elbe. *Economy*: in what was then West Germany, rapid reconstruction of the industrial sector followed World War II. East Germany's centrally controlled economy was also highly industrialized, but remained undynamic by Western standards. The cost of restructuring it has proved far higher than anticipated, and as a result Germany spent most of the 1990s in recession. Considerable mineral resources include coal, lignite, iron ore, lead and zinc, and potash. The agricultural sector has declined in importance, but there is a considerable amount of forestry and an important wine industry. Manufacturing industry remains the mainstay of the economy. Tourism is an important source of revenue. *History*: The region was occupied by German tribes from about 500 BC and came repeatedly into conflict with the Romans from the 2nd century BC. Overrun by the Huns in the 4th and 5th centuries, the area was dominated by the *Franks from the 6th century and was Christianized in the late-7th to 8th centuries. After the failure of the Frankish dynasty the German kings became nominally elective but medieval Germany was in practice ruled by a series of

hereditary dynasties claiming the title of Holy Roman Emperor. In the 13th century the first *Habsburg emperor was elected and from the 15th century the imperial title remained almost continuously in the family. In the later middle ages the power of the princes was challenged by the *Hanseatic League. The 16th and 17th centuries were dominated by religious strife, following Luther's inception of the *Reformation at Wittenberg in 1520. The religious conflict was not resolved until the conclusion (1648) of the *Thirty Years' War. In the 17th century the Hohenzollern Electors of Brandenburg acquired Prussia, which became the dominant German state and, under *Frederick (II) the Great, a major European power. In 1806 the Holy Roman Empire was brought to an end by Napoleon, who formed the Confederation of the Rhine in its place. The post-Napoleonic German confederation was dominated by Austria and Prussia and in 1834 the latter was the moving influence behind the formation of the *Zollverein (customs union). Prussian power increased further with victory in the *Austro-Prussian War (1866), and in the *Franco-Prussian War (1870–71). In 1871 Bismarck achieved his cherished ambition of creating a German Empire. The late 19th and early 20th centuries saw rapid industrialization, an aggressive armaments programme, and the rise of Germany as a colonial power, especially in Africa; its international aspirations were a major cause of *World War I. Defeated in 1918, the Empire came to an end (1919) and was replaced by the *Weimar Republic, which was plagued by the economic difficulties that facilitated Hitler's rise to power in the early 1930s. His aggressive foreign policy and absurd racial theories led to attempts to establish a new German empire by an unprecedented ruthlessness which precipitated World War II. Following Germany's defeat the country was divided into British, French, Soviet, and US zones before the subsequent formation of two separate states, the German Democratic Republic and the Federal Republic of Germany.

East Germany or the **German Democratic Republic** (GDR; German name: Deutsche Demokratische Republik) was formed from the Soviet-occupied zone of Germany following World War II. It was given a provisional constitution in 1949, becoming independent in 1954, with membership of COMECON and the Warsaw Pact and (from 1973) a seat in the UN. The capital was East Berlin. The early years of economic austerity and curbs on civil liberties led to much discontent; the flow of refugees to West Germany continued until 1961, when the

*Berlin Wall was erected. Low living standards and the government's refusal to consider liberal reform led to mass protests in 1989 and the departure of thousands of refugees to the West. President Erich Honecker resigned and a multiparty democracy was instituted. A conservative alliance won free elections in March 1990 and union with West Germany was achieved in Oct 1990.

West Germany or the **Federal Republic of Germany** (FRG; German name: Bundesrepublik Deutschland) was formed from the British-, French-, and US-occupied zones following World War II, and became fully independent in 1955. The capital was transferred to Bonn although West Berlin remained a part of the Federal Republic. In the postwar years it enjoyed a spectacular economic recovery making it the most prosperous country in W Europe.

Elections for the reunited Germany were held in Dec 1990, with victory for Helmut Kohl and the Christian Democrats. Kohl was replaced as chancellor by Gerhard Schröder in 1999, when the Social Democrats were victorious in elections. Following elections in 2005, a coalition was formed under the Christian Democrat Angela *Merkel. Germany is a member of NATO. German forces saw military action for the first time since 1945 in the NATO air war against Yugoslavia (1999). Germany adopted the single European currency in 1999–2002. Official language: German. Currency: euro of 100 cents. Area: 356 798 sq km (137 746 sq mi). Population (2007 est): 82 400 996. Capital: Berlin.

germination The process by which an embryo plant within a seed is transformed into a recognizable plant with roots, stem, and leaves. Water, warmth, and oxygen stimulate germination, which begins with the emergence of the root (radicle) and is followed by the shoot (plumule). Energy for the process is provided by the *cotyledons (seed leaves), which either remain below ground (hypogeal germination, as in the broad bean) or form the first leaves of the seedling (epigeal germination, as in the marrow).

Gershwin, George (Jacob Gershwint; 1898–1937) US composer and songwriter. He wrote many songs for musicals and films; jazz-inspired orchestral works include *Rhapsody in Blue* (1924) and *An American in Paris* (1928). The opera *Porgy and Bess* (1935) is still widely performed. His brother **Ira Gershwin** (1896–1983) wrote the lyrics to many of his songs.

Gestalt psychology A school of *psychology that originated in Germany in the early 20th century; Wolfgang Köhler (1887–1967) and

Kurt Koffka (1886–1941) were its founders. It regards mental processes as wholes (gestalts) that cannot be analysed into smaller components.

Gestapo (German: *Geheime Staatspolizei*, secret state police) The Nazi secret police, formed in 1933 under Göring and administered from 1936 by the *SS. The two organizations were responsible for carrying out the atrocities perpetrated by the Germans in Europe.

Getty, J(ean) Paul (1892–1976) US businessman, who lived in the UK. He made his fortune in oil, becoming a millionaire at the age of 22. He founded the J. Paul Getty Museum at Malibu, California. His son, **Paul Getty Jr.** (1932–2003), was a noted philanthropist.

Gettysburg, Battle of (1–3 July 1863) The most significant battle of the US *Civil War, fought in S central Pennsylvania as part of the Confederacy's second invasion of the North. After three days of fighting the Confederates withdrew; the North lost 23 000 men and the South 25 000. The **Gettysburg Address**, one of the shortest and most famous of modern speeches, was delivered (19 November 1863) by President Abraham Lincoln at Gettysburg battlefield.

geysers Jets of hot water and steam issuing intermittently from holes in the earth's crust, some reaching heights of up to 70 m. Geysers are found in volcanically active or recently active regions. They occur when water from deep within the crust becomes superheated and suddenly boils.

Ghana, Republic of A country in West Africa, on the Gulf of Guinea. Coastal plains rise to undulating country around Accra, and, in the centre, the basin of the River Volta rises to plateaus, especially in the N and W. *Economy*: chiefly agricultural. The main cash crop is cocoa, of which Ghana is among the world's chief producers. Gold and diamonds are mined, as well as manganese, bauxite, and limestone. Hydroelectricity is an important source of power and oil was found offshore in 1978. The 1990s saw steady economic improvement. *History*: from the middle ages several small kingdoms flourished in what is now Ghana. In 1472 the Portuguese and subsequently other Europeans set up trading posts in the region, which they called the Gold Coast. The area became the British colony of the Gold Coast in 1874. In 1957, together with the British part of Togo, it became independent, its new name, Ghana, being that of a medieval N African empire. In 1960 it became a republic within the British Common-

wealth under Kwame Nkrumah, who was deposed in 1969. There followed a series of military coups, in the last of which (1981) Fl Lt Jerry Rawlings came to power. Multiparty elections in 1992 led to victory for Rawlings, although the result was contested by opposition parties. Rawlings was re-elected in 1996 but defeated by the opposition leader John Kufuor in 2000. Official language: English. Currency: cedi of 100 pesewas. Area: 238 305 sq km (92 010 sq mi). Population (2003 est): 20 468 000. Capital: Accra.

gharial See GAVIAL.

Ghats Two mountain ranges lying along the W and E coasts of India. The **Western Ghats**, which extend about 1500 km (932 mi) from N of Bombay to Cape Comorin, rise to 2693 m (8840 ft). They have dense natural vegetation and are used for tea planting. The **Eastern Ghats** extend about 1400 km (880 mi) from near Cuttack to the Nilgiri Hills.

Ghent (Flemish name: Gent; French name: Gand) 5102N 342E A city in Belgium, at the confluence of the canalized Rivers Scheldt and Lys. One of Belgium's oldest cities, it is a major port and the country's textile centre. Population (2000 est): 224 180.

gherkin A trailing West Indian vine, *Cucumis anguria*. It is cultivated for its prickly edible fruit, 2.5–7.5 cm long, used when immature for pickling. Family: *Cucurbitaceae* (gourd family).

Ghibellines See GUELFs AND Ghibellines.

Ghiberti, Lorenzo (c. 1378–1455) Florentine Renaissance sculptor, who made his name in 1402, by winning the competition for the bronze relief sculptures for the north doors of the Baptistry of the Florentine Duomo. Finished in 1424, these New Testament scenes, mainly in the international gothic style, were followed by Old Testament scenes (1425–52). Simultaneously he wrote *I commentarii*, which included histories of ancient and early Renaissance art and an autobiography.

Ghirlandaio, Domenico (Domenico di Tommaso Bigordi; 1449–94) Florentine painter of the early *Renaissance. From 1481 to 1482 he worked on a fresco in the Sistine Chapel but his major undertaking was the fresco cycle (1486–90) in Sta Maria Novella, Florence. The tenderly painted *Old Man and Boy* (Louvre) is a fine example of his portraiture.

Giacometti, Alberto (1901–66) Swiss sculptor and painter. He was influenced initially by *cubism and primitive art and later by *surrealism, particularly in his abstract construction

of sticks, glass, wire, etc., entitled *The Palace at 4 am* (New York). After breaking with surrealism in 1935, he developed a unique figure style.

Giambologna (Giovanni da Bologna or Jean de Boulogne; 1529–1608) Italian mannerist sculptor of Flemish birth. Working from 1557 in Florence, where he was patronized by the Medici, he produced fountains, religious sculptures, and small bronze statues.

Giant's Causeway 55 14N 6 32W A promontory in N Northern Ireland, in Antrim. It consists of several thousand closely packed basaltic columns, mainly hexagonal in shape, formed by an outpouring of lava into the sea. According to legend it was built as a bridge to enable the giants to cross from Ireland to Scotland.

giant star A large very luminous star that has a very tenuous atmosphere but a dense core. It is in a late stage of evolution, having exhausted the normal source of energy in its core (hydrogen), and must obtain energy from other nuclear fusion reactions. See also RED GIANT.

gibberellins A group of organic compounds that stimulate plant growth. First isolated from the fungus *Gibberella fujikuroi*, over 30 gibberellins are now known. They stimulate the growth of leaves, stems, flowers, and fruit and break the dormancy of seeds and tubers.

gibbon A small *ape belonging to the genus *Hylobates* (7 species), of S Asia. 45–65 cm long, they have long arms and hooked fingers used to swing through trees. They live in family groups, feeding chiefly on fruit and leaves, and have a whooping call. Family: *Hylobatidae*. See also SIAMANG.

Gibbon, Edward (1737–94) British historian. His ironic treatment of Christianity in his monumental *The History of the Decline and Fall of the Roman Empire* (1776–88) aroused controversy, but its scope and style ensured its survival.

Gibbons, Grinling (1648–1721) English wood carver and sculptor, born in Rotterdam. Patronized by Charles II and subsequent British monarchs, he produced decorative carvings of flowers, fruit, etc. His best-known works are the choir stalls and organ screen in St Paul's Cathedral.

Gibbons, Orlando (1583–1625) English composer, organist, and virginalist. He wrote madrigals, church music, and string fantasias and contributed pieces to *Parthenia* (1611),

the first anthology of keyboard music to be printed in England.

Gibbs, Josiah Willard (1839–1903) US physicist. Gibbs founded chemical thermodynamics, which is largely based on the function known as the Gibbs free energy. He is also known for his phase rule, relating the number of parameters that can be varied in a system of more than one phase.

Gibraltar A UK overseas territory occupying a peninsula at the southern tip of Spain. The isthmus that links it to the Spanish mainland rises sharply to the 427 m (1400 ft) limestone Rock of Gibraltar. The population is mainly of Spanish, Genoese, and Portuguese descent. *Economy*: Britain's defence presence on Gibraltar was the mainstay of the economy until the mid-1980s, when the naval dockyards closed. Offshore financial services and tourism are now the main economic activities. Fees for services to shipping are also an important source of revenue. *History*: settled by the Moors in 711 AD, the Rock of Gibraltar was taken by Castile in 1462, becoming part of united Spain. It was captured in 1704 by the British to whom it was formally ceded by the Treaty of Utrecht (1713). The colony became an important British naval base. Claims to Gibraltar have long been made by Spain but a UN proposal to end British occupation was defeated in a referendum in 1967. In 1969 Spain closed its frontier with Gibraltar leading to the subsequent import of Moroccan labour. The border was reopened in 1985. In 1998–99 a new dispute led to Spain imposing a semi-blockade. Anglo-Spanish talks aimed at agreeing a new international status for Gibraltar began in 2001. However, Gibraltarians voting in a 2002 referendum rejected any form of shared sovereignty by almost 99%. Official languages: English and Spanish. Currency: Gibraltar pound of 100 pence. Area: 6.5 sq km (2.5 sq mi). Population (2000 est): 27 033.

Gibraltar, Strait of A strait between Gibraltar and Africa, joining the Atlantic Ocean and the Mediterranean Sea. It narrows to 13 km (8 mi) and is of great strategic importance.

Gibson Desert A desert in central Western Australia. It consists of a vast arid area of active sand dunes and desert grass. Area: 220 000 sq km (85 000 sq mi).

Gide, André (1869–1951) French novelist and critic. Much of his work reflects his homosexuality and consequent conflict with conventional morality. In 1895 he married his cousin Madeleine Rondeaux, the inspiration of two

short works, *The Immoralist* (1902) and *Strait Is the Gate* (1909). His longer novels are *The Vatican Cellars* (1914) and *The Counterfeiters* (1926). His *Journal*, which he kept from 1885 until his death, is a major work of literary autobiography. He won the Nobel Prize in 1947.

Gielgud, Sir (Arthur) John (1904–2000) British actor. He was noted for his distinguished voice and his many fine performances in Shakespearean productions. He was appointed to the OM in 1997.

Gigantes In Greek mythology, the giant sons of *Uranus (Heaven) and *Gaia (Earth), whose rebellion against the Olympian gods was defeated with the help of Heracles. They were subsequently associated with earthquakes and volcanoes.

Gijón 43°32'N 5°40'W A port in NW Spain, on the Bay of Biscay. Its many ancient buildings include Roman baths and medieval palaces. Population (1998 est): 265 491.

Gilbert, William (1544–1603) English physician and physician to Elizabeth I. His *De magnete* (1600) listed many experimental observations concerning magnets, including the discovery of magnetic dip. He was the first English scientist to accept the ideas of *Copernicus and coined such terms as *electricity* and *magnetic pole*.

Gilbert, Sir W(illiam) S(chwenk) (1836–1911) British comic dramatist. He wrote comic verses, published as *Bab Ballads* (1869), while studying law. In 1870 he met Arthur *Sullivan, the composer for whom he wrote the libretti for 14 popular operas.

Gilbert Islands See KIRIBATI, REPUBLIC OF.

Gillespie, Dizzy (John Birks G.; 1917–93) US Black jazz trumpeter, band leader, and composer, who was one of the originators of *bop.

gills The respiratory organs of aquatic animals: specialized thin-walled regions of the body surface through which dissolved oxygen is taken into the blood and carbon dioxide released into the water. The gills of fish lie in gill slits on each side of the gullet. The gills of molluscs and fanworms are ciliated and trap food particles in the respiratory currents. The external gills of amphibian larvae (tadpoles) are feathery structures projecting from the body wall.

gilt-edged security A UK government fixed-interest stock. Most are redeemable at par on a specified date. Short-term gilts ("shorts") are redeemable within 5 years, "medi-

ums" in 5–15 years, and "longs" in over 15 years. The price of gilts depends upon prevailing interest rates. Most gilts are issued in units of £100 (the par value). Consols are irredeemable.

gin A spirit distilled usually from grain flavoured with juniper berries (the name is derived from the Dutch *jenever*, juniper). Gin is almost pure alcohol, with little flavour. It is generally drunk with tonic water, vermouth, fruit juice, etc.

ginger A perennial herbaceous plant, *Zingiber officinale*, native to SE Asia and widely grown in the tropics for its pungent underground stems (rhizomes), used as a spice, food, and flavouring and in medicine. The plants are sterile, and propagation is by cuttings from the rootstocks. Family: *Zingiberaceae*.

ginkgo A deciduous *gymnosperm tree, *Ginkgo biloba*, also called maidenhair tree, that is the sole living representative of a group of trees that flourished in the Carboniferous period (370–280 million years ago). Growing to a height of 30 m, it has fleshy yellow fruits containing edible kernels. The ginkgo is native to China and widely planted for ornament. Family: *Ginkgoaceae*; phylum: *Ginkgophyta*.

ginseng An extract of the forked roots of either of two herbs, *Panax quinquefolium* or *P. schinseng*, used as a stimulant drug in the Far East and to make aromatic bitters. Family: *Araliaceae* (ivy family).

Giorgione (c.1477–1510) Italian painter of the Venetian school. He trained under Giovanni *Bellini and worked with *Titian. Most of his paintings are small secular pictures, including the *Tempest* (Accademia, Venice), notable for their dreamlike mood. His portraits, e.g. *Laura* (Vienna), influenced many Venetian painters.

Giotto (Giotto di Bondone; c.1266–1337) Italian painter and architect, who laid the foundation for *Renaissance painting. He painted the innovative frescoes of scenes from the lives of Joachim and Anne and the Virgin and Christ in the Arena Chapel, Padua, and frescoes in Sta Croce, Florence. In 1334 he became architect of the city and surveyor of Florence Cathedral, for which he designed the campanile.

Gipsies A wandering people found on most continents. The name "Gipsy" is derived from "Egyptian," but they probably originated in India. One group is thought to have migrated through Egypt and North Africa and another through Europe reaching NW Europe during the 15th and 16th centuries. They live largely

by seasonal work, itinerant trade, and fortune telling. They have been persecuted frequently, half a million being killed by the Nazis during World War II. Their native language is *Romanian.

giraffe A hoofed *mammal, *Giraffa camelopardalis*, of tropical African grasslands. Measuring 3 m at the shoulder, with a neck 2.5 m long, giraffes are marked with reddish-brown blotches on a buff-coloured background. They feed on leaves; both sexes have permanent skin-covered horns. Family: *Giraffidae*.

9

giro A low-cost system for transferring money. It originated in Austria in 1883 and the British National Giro was set up by the Post Office in 1968, becoming independent in 1988 as Girobank PLC. All accounts are held at the Giro Centre (in Bootle, Merseyside), which transfers money from one account to another on receipt of a completed form. Bank giro operates similarly, but accounts are held at bank branches.

Gironde, River An estuary in SW France, on the Bay of Biscay. Formed by the confluence of the Rivers Garonne and Dordogne near Bordeaux, it is used by oceangoing vessels. Length: 72 km (45 mi).

Giscard d'Estaing, Valéry (1926–) French statesman; president (1974–81). A successful minister of finance, he succeeded Pompidou as president but was subsequently defeated by Mitterand.

Gish, Lillian (1893–1993) US actress, who began her career as a child actress on stage with her sister **Dorothy Gish** (1898–1968). Both acted for D.W. *Griffith in early silent films, including *The Birth of a Nation* (1916). Lillian's later films include *Duel in the Sun* (1946) and *The Night of the Hunter* (1955).

Giulio Romano (Giulio Pippi; c.1499–1546) Italian mannerist painter and architect (see **MANNERISM**). He was the pupil of *Raphael, whom he assisted in the decoration of the Vatican apartments and the Villa Farnesina. In 1524 he settled in Mantua, where he designed and decorated the Palazzo del Tè.

Giza, El (or **al-Jizah**) 30°01'N 31°12'E A city in N Egypt, forming a suburb of Cairo. Nearby are the great pyramids of Khafre, *Khufu, and Menkaure and the Sphinx. Population (1990 est): 2 516 000.

glacier A mass of ice and *firn of limited width lying chiefly, or completely, on land and moving downslope from its source. **Cirque glaciers** are contained in depressions on moun-

tain slopes or valley heads. **Valley glaciers** are contained within pre-existing valleys, originating either from cirque glaciers or from an icesheet. The longest of these is the Lambert Glacier, 400 km (250 mi) long. Where a glacier emerges from a valley onto a lowland area, a lobe-shaped **piedmont glacier** results; an example is the Malaspina Glacier in Alaska. **Glaciation** is the action of glacier ice on the land surface. The main landforms resulting from glaciation are either erosional or depositional. Erosional features include U-shaped valleys and rounded rock basins known as cirques. Those of depositional origin include glacial drift and till.

gladiators The slaves, prisoners of war, condemned criminals, or volunteers who fought to the death in amphitheatres for the entertainment of the ancient Roman people. Gladiatorial combats began as a feature of funeral games but their popularity was soon so great that statesmen sponsored shows to enhance their political prestige.

Gladiolus A genus of ornamental perennial herbaceous plants (300 species), native to Europe, Africa, and the Mediterranean regions and widely cultivated. Growing from a corm, the flowering stem reaches a height of 1.2 m, with funnel-shaped flowers. Principal garden forms are *G. cardinalis*, *G. primulinus*, *G. psittacinus*, *G. purpurea-auratus*, and *G. saundersii*. Family: *Iridaceae*.

Gladstone, W(illiam) E(wart) (1809–98) British statesman; Liberal prime minister (1868–74, 1880–85, 1886, 1892–94). Elected to parliament in 1832, he was initially a Tory but supported Peel in the repeal of the *Corn Laws, after which the Peelites joined the Whigs (shortly to be termed Liberals). As chancellor of the exchequer (1852–55, 1859–66) Gladstone reduced tariffs and expenditure. His first ministry disestablished the Irish Church (1869) and introduced the Education Act (1870), the first Irish Land Act (1870), and the Ballot Act (introducing secret ballots). Defeated in the 1874 election, he resigned the Liberal leadership but reemerged as a critic of British policy towards the Balkans. His second ministry achieved further parliamentary reform (1884) but its failure to save *Gordon from Khartoum led to Gladstone's resignation. His last ministries followed his conversion to Irish *Home Rule but both his Home Rule bills were rejected (1886, 1893). An impressive speaker, Gladstone with his Conservative opponent Disraeli dominated British politics in the late 19th century.

Glamorgan A historic county of South Wales. In 1974 it was divided to form the counties of Mid Glamorgan, South Glamorgan, and West Glamorgan. In 1996 administrative powers passed to the new county of Swansea and the county boroughs of Bridgend, Caerphilly, Cardiff, Merthyr Tydfil, Neath and Port Talbot, Rhondda Cynon Taff, and Vale of Glamorgan.

gland An organ specialized for synthesizing a specific chemical substance (secretion) from constituents of the blood and releasing its secretion for use by the body. Man and higher animals have two kinds of glands. The *endocrine glands lack ducts and release their secretions (hormones) directly into the bloodstream. The exocrine glands have ducts through which their products are secreted. Exocrine glands include the salivary glands, the sweat and sebaceous glands in the skin, and the pancreatic cells that secrete digestive enzymes. Plants also have glands, which secrete latex, resin, nectar, tannin, etc.

glanders A highly contagious disease of horses, donkeys, and related animals caused by the bacterium *Pfeifferella mallei*, which can also infect other animals and man. Slaughter of infected animals is compulsory in most countries.

glandular fever (or infectious mononucleosis) An infection characterized by fatigue, sore throat, headache, muscular pain, and enlarged lymph nodes. Most common in children and young adults, it is caused by the Epstein-Barr virus, which can be transmitted in saliva (for example during kissing). Treatment is with bed rest and painkillers.

Glasgow 1. 55°53N 4°15W A city in central Scotland, mainly in Glasgow City council area, on the River Clyde. Formerly an important port. Glasgow has engineering, textile, chemical, brewing, and whisky-blending industries. *History:* after the union with England (1707), Glasgow's wealth grew rapidly through trade, especially in tobacco and sugar from the New World, and through industry in the industrial revolution. Population (1991): 662 954. 2. **Glasgow City.** A council area in W central Scotland. Area: 175 sq km (68 sq mi). Population (2001): 577 869.

glasnost A policy of increased freedom in social and cultural matters introduced in the Soviet Union by Mikhail Gorbachov in 1986. A Russian word meaning openness, *glasnost* was adopted in conjunction with *perestroika* (meaning progress), which heralded a new flexibility

in the economy of the USSR, and an improvement of relations with the West.

glass A translucent and usually transparent noncrystalline substance that behaves as a solid although it has many of the properties of a liquid. Glass itself was known in the 3rd millennium BC but glassblowing was not invented until about 100 BC (in Syria) and windows were not in use until about 100 AD. Ordinary soda glass, used for windows, etc., consists of silica (sand), sodium carbonate, and calcium carbonate (limestone). Flint glass, used for crystal glassware, contains silica, potassium carbonate, potassium nitrate, and lead oxide. Heat-resistant glass also contains borates and alumina; optical glass contains additional elements to control the refractive index and other optical properties. Blown glass is melted and blown inside a mould until it fills the mould. Flint glass is usually blown by hand. Pressed glass is made by pressing the molten glass into a mould. Plate glass, for windows, etc., is now made by floating a rolled sheet of glass on molten tin. See also FIBREGLASS.

glass snake A legless lizard belonging to the genus *Ophisaurus*, occurring in Europe, S and E Asia, N Africa, and North America. Glass snakes feed on insects, lizards, mice, and birds' eggs. Unlike true snakes, they have ears, eyelids, and rigid jaws. When attacked, they shed their tail. Family: *Anguidae*.

Glastonbury 51°09N 2°43W A market town in SW England, in Somerset. Here by tradition Joseph of Arimathea founded England's first church and King Arthur is said to be buried. The Glastonbury Festival, the world's largest open-air music event, is held nearby. Population (1991): 7747.

glaucoma An eye disease caused by raised pressure inside the eye. Acute glaucoma is often caused by a sudden block to the drainage of the watery fluid (aqueous humour) inside the eye. It leads to pain and disturbed vision, which will result in blindness without urgent treatment. Chronic glaucoma—one of the commonest causes of blindness—comes on slowly and painlessly.

Glazunov, Aleksandr Konstantinovich (1865–1936) Russian composer and a pupil of Rimsky-Korsakov. Glazunov's works, which were influenced by Wagner and Liszt rather than by Russian musical nationalism, included eight symphonies, concertos, ballets, and string quartets.

Glencoe A glen in W Scotland, in the High-

land Region. It was the scene of the massacre of the Macdonalds by the Campbells and English (1692).

Glendower, Owen (Welsh name: Owain Glyndwr; c. 1359–c. 1416) Welsh rebel. Allying with Henry IV's opponents, Glendower controlled most of Wales by 1404 but was subsequently defeated and turned to guerrilla warfare. He disappeared in 1416.

Glenn, John (1921–) US astronaut and politician, who on 20 February 1962, became the first American to orbit the earth. He became a US senator in 1975. In 1998 he returned to space as part of the research into the effects of space travel on the ageing human body.

gliders Light fixed-wing engineless aircraft, sometimes called sailplanes. They are launched into the air by a winch or catapult or by being towed by a car or powered aircraft. Once airborne a glider is lifted by warm air currents. The height record is 14.1 km (P. F. Bickle; 1961) and the distance record 1460.8 km (H. W. Grosse; 1972). Pioneered by Otto Lilienthal (1848–96), gliders were used by the *Wright brothers in designing their powered aircraft. Since the 1920s gliding has been a popular sport, controlled in the UK by the British Gliding Association (1924). See also HANG-GLIDING.

Glinka, Mikhail Ivanovich (1804–57) Russian composer. He composed the first truly Russian opera *Ivan Susanin* (*A Life for the Tsar*; 1836), piano music, songs, and a second opera *Russian and Ludmilla* (1842).

Global Positioning System (GPS) A US satellite-based system enabling people, ships, aircraft, etc. equipped with a GPS receiver to determine their position on the earth to within 100 metres. It was developed for the US Department of Defense but now has a range of civilian uses, including the rescue and emergency services.

global warming See GREENHOUSE EFFECT.

globefish See PUFFER.

Globe Theatre An Elizabethan theatre, in Southwark, in which most of Shakespeare's plays were first produced. A cylindrical wooden building open to the sky, it was built in 1599, burnt down in 1613, rebuilt in 1614, and finally demolished in 1644. Its remains were rediscovered in 1989. A replica of the Globe was erected near the original site and opened for performances in 1996.

Globigerina A genus of protozoan animals that are common components of marine

plankton. Ranging in size from 0.3 to 2 mm, their chalky skeletons are a major constituent of the grey mud on some sea beds, forming globigerina ooze. Order: *Foraminifera*.

globulin A type of protein that is generally insoluble in water. Gamma globulins, one of a class of globulins occurring in the blood (serum globulins), include the immunoglobulins (antibodies), which are manufactured by animals and humans to combat infections (see IMMUNITY). Injections of gamma globulin are used for immunization against hepatitis A. Other globulins occur in eggs, nuts, and seeds.

glockenspiel (German: bell play) A tuned percussion instrument having a keyboard-like arrangement of steel bars played with two small hammers. The notes of its two-and-a-half-octave compass above bottom G of the bass stave sound two octaves higher.

Glomma, River (Norwegian name: Glåma) A river in SE Norway and the longest river in Scandinavia. Length: 588 km (365 mi).

Glorious Revolution (1688) The overthrow of James II of England and the establishment of his daughter Mary and her husband William of Orange on the throne. The opposition to James' pro-Catholic and absolutist policies requested William's armed intervention; James fled to France. As William III and Mary II, the joint monarchs accepted the *Bill of Rights.

Gloucester 51°53N 2°14W A market town in W England, the administrative centre of Gloucestershire on the River Severn. First developed under the Romans (Glevum) it is noted for its cathedral. Population (1997 est): 107 400.

Gloucestershire A county of W England, bordering Wales. In 1996 the SW part of the historic county (part of Avon since 1974) became a unitary authority called South Gloucestershire; it is administered separately but is part of Gloucestershire for ceremonial purposes. Gloucestershire consists of three regions: the Cotswold Hills, the Severn Valley, and the Forest of Dean. It is predominantly agricultural. Area (excluding South Gloucestershire): 2638 sq km (1019 sq mi). Population (2001, excluding South Gloucestershire): 564 559. Administrative centre: Gloucester.

glowworm See FIREFLY.

gloxinia An ornamental herb, *Sinningia speciosa*, native to Brazil. Gloxinias have large bell-shaped velvety flowers, usually violet, purple, or pink. New plants can regenerate from the base of the leafstalks. Family: *Gesneriaceae*.

Gluck, Christoph Willibald (1714–87) German composer. He reformed *opera seria and composed the operas *Orfeo ed Euridice* (1762) and *Alceste* (1767). He also composed over 40 dramatic works.

glucose (or **dextrose**) A simple sugar ($C_6H_{12}O_6$) and an essential substance in the carbohydrate metabolism of living organisms. Carbohydrates (such as starch and glycogen) in food or tissue reserves are broken down to glucose, which is easily transported to cells where it undergoes *glycolysis. Organisms can also manufacture glucose from fats and proteins. Glucose levels in blood are regulated by the hormones *insulin and glucagon.

gluten A protein mixture derived from wheat. In bread making, dough rises because the gluten in wheat flour expands, trapping the carbon dioxide bubbles in an elastic network. See also COELIAC DISEASE.

glycerol (or **glycerine**; $CH_2OHCHOHCH_2OH$) A colourless syrupy liquid with a sweet taste. It is made from fats and oils or by fermentation and is used in explosives, cosmetics, and antifreeze solutions.

glycogen A starchlike carbohydrate found in animal tissues as a reserve energy source. It consists of branched chains of *glucose molecules: when required to provide energy, glycogen is broken down to glucose under the influence of hormones.

glycolysis The sequence of chemical reactions occurring in most living cells by which glucose is partially broken down to provide usable energy in the form of *ATP. Glycolysis can take place in the presence or absence of oxygen but only a small amount of the available energy is released, most being released via the *Krebs cycle.

Glyndebourne An estate near Lewes, in East Sussex, home of an annual international festival of opera. The opera house was built by John Christie (1882–1962), who founded the Glyndebourne Festival in 1934 for his wife, the opera singer Audrey Mildmay (1900–53). The opera house was completely rebuilt (1992–94).

GM crops See GENETIC ENGINEERING.

gnat Any of the smaller delicate species of two-winged flies (*Diptera*). They include the less virulent mosquitoes and phantom gnats (family *Culicidae*), winter gnats (family *Trichoceridae*), fungus gnats (family *Mycetophilidae*), craneflies (family *Tipulidae*), and several others.

gneiss A coarse-grained metamorphic rock

consisting predominantly of bands of quartz and feldspar alternating with bands of micas and amphiboles. Gneisses are formed during regional metamorphism; those derived from igneous rocks are termed **orthogneiss**, those from sedimentary rocks **paragneiss**.

Gnosticism A religious movement that flourished in the early Christian era. It contained elements of pagan thought but is most fully recorded as a group of heretical Christian sects. The Gnostics' defining characteristic was their belief in *gnosis* (Greek: knowledge)—a special revelation from God to initiates, which would ensure their salvation. They interpreted Christ (whose humanity they denied) as being sent to rescue particles of spirit (souls) entrapped in matter.

GNP See GROSS NATIONAL PRODUCT.

gnu A large ungainly antelope belonging to the genus *Connochaetes* (2 species), also called wildebeest, of African plains. The brindled gnu (*C. taurinus*) grows to 140 cm high at the shoulder and is blue-grey with a long black mane, black facial tufts, and a black-tufted tail. The smaller white-tailed gnu (*C. gnou*) has a long white tail and is very rare.

Goa The 25th state of India, formerly part of Goa, Daman, and Diu Union Territory. A Portuguese overseas territory from 1510 until annexed by India in 1961, it has many fine examples of Portuguese colonial architecture, including the church in which the remains of St Francis Xavier are preserved. Area: 3702 sq km (1429 sq mi). Population (2001): 1 343 498.

goat A hoofed *ruminant mammal belonging to the genus *Capra* (5 species). Related to sheep, goats are 60–85 cm tall at the shoulder and have hollow horns; males have a scent gland beneath the tail and a beard. Wild goats, found in mountainous regions of Eurasia, live in herds. Goats were first domesticated over 10 000 years ago and are still used to provide milk, meat, and hides in many semiarid regions. Family: *Bovidae*. See also IBEX; MARKHOR.

goat moth A large moth, *Cossus cossus*, of Europe, Asia, and N Africa. Mottled grey and brown, it has a wingspan of 70 mm. The reddish caterpillar bores under the bark of trees and emits a characteristic strong odour.

Gobelins, Manufacture nationale des A French state-controlled tapestry factory, founded in Paris as a dyeworks in the 15th century by Jean and Philibert Gobelin. Manufacturing tapestries from 1529, it was incorpo-

rated by Henry IV in 1607. Since 1826 carpets have also been made here.

Gobi Desert A vast desert of SE Mongolia and N China. On a plateau 900–1500 m (2950–4920 ft) high, it is rocky with salt marshes and streams that disappear into the sand. It is rich in prehistoric remains. Area: about 1 295 000 sq km (500 000 sq mi).

goby A fish of the suborder *Gobioidei* (over 800 species), especially the family *Gobiidae* (true gobies). True gobies have smooth elongated bodies, two dorsal fins, and a suction disc formed from fused pelvic fins. Most are 5–10 cm long, although *Pandaka pygmaea* of the Philippines is the smallest known vertebrate at under 13 mm long. They are found chiefly in tropical coastal regions. Order: *Perciformes*.

Godard, Jean-Luc (1930–) French film director, a member of the New Wave. His films, characterized by experimental narrative and editing techniques, include *A Bout de souffle* (*Breathless*; 1959), *Week-End* (1967), *Tout va bien* (1972), *Je Vous salue, Marie* (1985), and *Eloge de l'amour* (2001).

Godavari, River A river in central India. Rising in the Western Ghats, it flows ESE to the Bay of Bengal. It is sacred to the Hindus. Length: 1500 km (900 mi).

Godesberg (or Bad Godesberg) 50 41N 7 10E A spa in W West Germany, in North Rhine-Westphalia on the River Rhine; since 1968 a district of Bonn.

Godiva, Lady (d. ?1080) The English woman who, according to the chronicler Roger of Wendover (d. 1236), rode naked through the market place of Coventry in order to persuade her husband Leofric, Earl of Mercia, to reduce his taxes on the town. The story was later embellished with a Peeping Tom who, ignoring Godiva's request that the townspeople remain indoors, was struck blind.

Godunov, Boris (Fedorovich) (c. 1551–1605) Russian statesman and tsar (1598–1605). Godunov rose to power under Ivan the Terrible and became regent for Fyodor I, whose younger brother and heir, Dimitrii, Godunov may have murdered in 1591. After Fyodor's death (1598), Godunov was elected tsar. His authority was challenged by the first False Dimitrii, a pretender who succeeded Godunov.

Godwin Austen, Mount See K2.

godwit A long-legged long-billed migratory bird belonging to a genus (*Limosa*; 4 species) that breeds in N Eurasia and North America.

The black-tailed godwit (*L. limosa*) is 40 cm long and has a distinctive black-banded white tail. Family: *Scolopacidae* (plovers, sandpipers, etc.).

Goebbels, (Paul) Joseph (1897–1945) German Nazi politician. Appointed minister of propaganda by Hitler in 1933, he established a vast machine for the control of public information, the arts, cinema, and theatre, all of which he manipulated with a cynical disregard for truth. He committed suicide with his wife after taking the lives of his six children during the collapse of the Third Reich.

Goethe, Johann Wolfgang von (1749–1832) German poet and statesman. His discovery of Shakespeare inspired him to write an epic drama, *Götz von Berlichingen* (1773) while the autobiographical novel *The Sorrows of Young Werther* (1774) won him international fame. In 1775 he settled at the court of the Duke of Saxe-Weimar, whom he served as prime minister until 1785. At Weimar he fell in love with Charlotte von Stein, who inspired some of his greatest lyric poetry. A visit to Italy (1786–88) made him an advocate of classicism, influencing such plays as *Iphigenia on Tauris* (1787) and *Torquato Tasso* (1790). After the novel *Wilhelm Meister's Apprentice Years* (1795–96) he published the first part of his greatest work *Faust* (1808), a poetic drama of the aspirations of man. He published *Wilhelm Meister's Journeyman Years* in 1829 and completed the second part of *Faust* shortly before his death.

Gog and Magog In Revelation and other books of the Bible, attendant powers of Satan. In British folklore they appear as the survivors of a race of giants destroyed by Brutus, the legendary founder of Britain.

Gogol, Nikolai Vasilievich (1809–52) Russian novelist and dramatist. Early ambitions to become a poet and an actor and to emigrate all failed, but two volumes of stories based on his Ukrainian childhood won him acclaim from *Pushkin and other writers. To escape the controversy aroused by his satirical play *The Government Inspector* (1836) he went to Rome, where he wrote his best-known work, *Dead Souls* (1842), a grotesque lampoon of Russian feudalism. In his last years he became a depressive and a religious maniac.

Goiânia 16 43S 49 18W A city in central Brazil, the capital of Goiás state. Founded in 1933 to replace the old capital, it serves a cattle-raising and coffee-growing area. Population (2000): 1 083 396.

Goidelic languages See CELTIC LANGUAGES.

goitre Swelling in the neck caused by enlargement of the thyroid gland. A goitre is called simple if the thyroid is functioning normally; this occurs in areas where iodine is deficient in the water supply and it may occur sporadically in adolescent girls. A goitre may also be seen when the thyroid is overactive or underactive.

Golan Heights A range of hills in SW Syria, under Israeli administration. They are of great strategic importance; Israeli forces stormed the heights in June 1967, when most of the local populace fled. Jewish settlements have since been established.

gold (Au) A soft dense yellow metal valued since ancient times. It occurs in nature as the element and in compounds with tellurium, in rock veins and alluvial deposits. The metal is the most malleable and ductile known. It alloys with other metals, is a good conductor of heat and electricity, and is chemically unreactive. The major uses for the element are for jewellery, electrical contacts, and as a currency standard (see GOLD STANDARD). Purity is measured in *carats. At no 79; at wt 196.967; mp 1064.43°C; bp 2857°C.

goldcrest A tiny agile songbird, *Regulus regulus*, occurring chiefly in coniferous woodland of N Europe and Asia and feeding on insects and spiders. It is about 9 cm long and has a yellow-green plumage and an orange crest. Family: *Muscicapidae* (Old World flycatchers).

golden eagle A large dark-brown *eagle, *Aquila chrysaetos*, occurring in mountainous regions of North America and Eurasia. It is 70–85 cm long and has a wingspan of up to 230 cm; they catch small mammals and gamebirds.

goldeneye A diving duck, *Bucephala clangula*, that breeds in N Eurasia and winters in more southerly regions. It is 41–45 cm long and males are black and white with a greenish head and a circular white patch on the cheek; females are grey with white markings and a brown head.

Golden Fleece The fleece of a sacred winged ram, the recovery of which was the goal of *Jason and the *Argonauts. Athamas, King of Thebes, had two children, Phrixus and Helle, by his first wife Nephele. His second wife, Ino, hated her stepchildren and plotted their death. They fled across the sea on the golden ram but Helle fell in and drowned. Phrixus reached Colchis, sacrificed the ram to

Zeus and hung the fleece in a grove sacred to Ares, where it was guarded by a dragon. The **Order of the Golden Fleece** was founded in 1430 by Philip the Good, taking as its badge Jason's fleece. After Burgundy was united with the Habsburg empire (1477), the order became confined to Austria and Spain.

golden retriever A large strongly built breed of dog whose ancestors possibly included labradors, setters, and spaniels. The dense water-resistant wavy coat is gold or cream; they are used as gun dogs, guide dogs, etc. Height: 56–61 cm (dogs); 51–56 cm (bitches).

goldenrod A perennial herb of the genus *Solidago* (about 120 species), up to 2.5 m tall and mostly native to North America. The stem bears small yellow flowers. Canadian goldenrod (*S. canadensis*) is often grown as a garden ornamental. Family: *Compositae*.

goldfinch A Eurasian *finch, *Carduelis carduelis*. About 12 cm long, it has a brown back, black wings with a broad yellow stripe, black-and-white tail and head, and a red face. It uses its pointed bill to extract seeds from thistles and dandelions and flocks of goldfinches (called charms) are commonly seen on farmland.

goldfish A freshwater fish, *Carassius auratus*, also called golden carp, of E Asian origin but introduced elsewhere as an ornamental fish. In its natural state it is greenish brown or grey and up to 30 cm long. However, the breeding of abnormal specimens has produced over 125 varieties often with a red-gold coloration. It requires cold well-oxygenated water and is omnivorous.

Golding, Sir William (1911–93) British novelist. His best-known novel, *Lord of the Flies* (1954), concerns the savagery of a group of schoolboys isolated on a desert island. His other novels include *Pincher Martin* (1956), *The Spire* (1964), *Rites of Passage* (1980), which won the Booker prize, and *Fire Down Below* (1989). He was awarded the Nobel Prize in 1983.

Goldsmith, Oliver (1730–74) Anglo-Irish writer. He arrived penniless in London in 1756 and became a friend of Johnson and Boswell. His best-known works are the poem *The Deserted Village* (1770), the novel *The Vicar of Wakefield* (1776), and the play *She Stoops to Conquer* (1773).

gold standard A monetary system in which paper money was convertible on demand into gold. Rates of exchange between currencies were fixed by their values in gold. In classical economics imbalances in international trade

were rectified automatically by the gold standard. A country in deficit would have depleted gold reserves and would therefore reduce its money supply. The resulting fall in demand would reduce imports and the lowering of prices would boost exports, thus rectifying the deficit. It was finally abandoned in 1931. *See also* INTERNATIONAL MONETARY FUND.

Goldwyn, Samuel (S. Goldfish; 1882–1974) US film producer, born in Poland. In 1916 he cofounded Goldwyn Pictures, a production company that was absorbed into Metro-Goldwyn-Mayer (MGM) in 1924. His many successful films as an independent producer include *Wuthering Heights* (1939) and *Guys and Dolls* (1955).

golem In medieval Jewish folklore, an automaton or artificial human being that can be brought to life by a charm. The best-known legend is that of a golem created by a rabbi of Prague, which he used as a servant. The word originally referred to anything incomplete or embryonic.

golf A game for two or four players played on a golf course. It almost certainly originated in Scotland. A standard course is usually between 4572 m (5000 yd) and 6400 m (7000 yd) and is divided into 18 holes (9 on a small course), each of which is between 90 m (100 yd) and 540 m (600 yd) long. A "hole" comprises the flat starting point, called the "tee," a strip of mown grass about 27–90 m (30–100 yd) wide, called the "fairway," and a smooth putting green. On the green is the actual hole, which has a diameter of 10.8 cm (4.25 in). There are also obstacles

around the course, such as trees, ditches, and sand bunkers. The object of the game is to hit a rubber-cored ball from each tee into each hole with as few strokes as possible ("par" for a hole is the standard number of strokes needed by a first-class player; one stroke less than par is called a "birdie," and an "eagle" is two strokes less). To achieve this a player has a set of clubs of which there are three basic types: woods, irons, and putters.

Golgi apparatus (or **Golgi complex**) A structure present in the cytoplasm of nearly all cells, composed of stacks of flattened sacs bounded by membranes and associated with vesicles. Discovered by Camillo Golgi (1843–1926), it is thought to function in the synthesis and concentration of certain materials, especially secretory products, which are then packaged into the vesicles and transported within the cell.

Golgotha *See* CALVARY.

goliath beetle A large beetle belonging to the group of flower *chafer. The African goliath beetle (*Goliathus giganteus*) has the largest body of all the insects, about 96 mm in length. It is white with black stripes and brown wing cases. The larvae are found in rotten logs.

gomuti A *palm tree, *Arenga pinnata* (or *A. saccharifera*), also called sugar palm, occurring in SE Asia. The sap yields palm sugar and the fermented juice (palm wine) is distilled to produce arrack. A form of sago is obtained from the pith and the leaf fibres are used to make cord, ropes, etc.

golf. Irons are numbered according to the angle of the face; the greater the angle of inclination, the higher the ball is hit into the air. Thus a good player, under normal conditions, knows the range of each iron. The Number One wood (driver) is used from the tee for the maximum distance and the putter is used on the green.

gonadotrophin One of several hormones that control the activity of the testes and ovaries (the gonads) in mammals. The pituitary gland produces three gonadotrophins: luteinizing hormone (LH), which stimulates ovulation and *oestrogen production by the ovaries and the production of *androgens by the testes; follicle-stimulating hormone (FSH), which promotes ovulation and sperm production; and *prolactin, which triggers lactation. LH and FSH are glycoproteins and are usually released together. Human chorionic gonadotrophin (HCG) is produced by the placenta, reaching a peak level in the urine in early pregnancy. Gonadotrophins are also used in *fertility drugs.

Goncourt, Edmond de (1822–96) French writer, who with his brother **Jules de Goncourt** (1830–70) wrote art criticism, social histories, and novels, notably *Germinie Lacerteux* (1864) and *Madame Gervaisais* (1869). They are best known for their *Journal*, a record of French literary life, and for Edmond's legacy, the Académie Goncourt, which awards France's prestigious annual literary prize, the **Prix Goncourt**.

Gondwanaland The supercontinent in the S hemisphere believed to have existed prior to 200 million years ago, when the drift of the continents to their present positions began. It probably consisted of South America, Africa, Australia, Antarctica, Arabia, and India. See also LAURASIA.

gonorrhoea A sexually transmitted disease caused by a bacterium (the gonococcus). Symptoms in men are discharge from the penis and a burning pain on passing urine. Women may have vaginal discharge and pain on urinating. Gonorrhoea can be treated with penicillin.

Good Friday The Friday before *Easter, when Christ's crucifixion is commemorated. It is a fast day, and in the Roman Catholic Church the Mass is not celebrated. In the Anglican Church Holy Communion is rarely held, although provided for in the Book of *Common Prayer.

Good Friday Agreement See (NORTH-ERN) IRELAND.

Goodwin Sands A range of dangerous sandbanks off the SE coast of England, in the Strait of Dover. At low tide large areas of sand are exposed.

goose A large long-necked waterbird belonging to the family *Anatidae* (ducks, geese, and swans), occurring in the N hemisphere. Geese have short bills and webbed feet. They chiefly

feed on grass, grain, etc., and are migratory, flying in V-formations and honking in flight. Genera: *Anser* (grey geese), *Branta* (black geese); order: *Anseriformes*. See also CANADA GOOSE; GREYLAG GOOSE.

gooseberry A fruit bush of the genus *Ribes*, especially *R. uva-crispa* (or *R. grossularia*), which is widely cultivated in the Old World for its hairy edible berries. Family: *Grossulariaceae*.

gopher See SOUSLIK.

Gorbachov, Mikhail Sergeevich (1931–) Soviet statesman; general secretary of the Soviet Communist Party (1985–91) and president (1988–91). As general secretary he began a radical programme of political and economic reform (see GLASNOST). He signed major arms limitation treaties with the USA (1987) and NATO (1990) and in 1990 under his leadership the Communist Party voted to give up its monopoly of power. In August 1991 he survived a coup attempted by Communist hardliners. He resigned following his failure to prevent the break-up of the Soviet Union. He was awarded the Nobel Peace Prize in 1990.

Gordian knot A knot binding the yoke and beam of the chariot of Gordius, a legendary king of Phrygia. According to legend, whoever could unloose the knot would become the ruler of Asia. In 333 BC Alexander the Great is said to have cut the knot with his sword.

Gordimer, Nadine (1923–) South African novelist. Her earlier novels, which include *The Lying Days* (1953), *The Conservationist* (1974), and *My Son's Story* (1990), condemn *apartheid; later works, such as *The House Gun* (1997), explore the subsequent changes in South Africa. She was awarded the Nobel Prize in 1991.

Gordon, Charles George (1833–85) British general. Gordon served in the Crimean War and then in China and Egypt. From 1877 to 1880 he was British governor of the Sudan; in 1884 he returned to the Sudan to evacuate Europeans and Egyptians, following al *Mahdi's revolt. Gordon was besieged for ten months in Khartoum, which fell two days before a relief force arrived. Gordon was murdered.

Gordon Riots (1780) Anti-Roman Catholic riots in London fomented by Lord George Gordon (1751–93), who opposed the Roman Catholic Relief Act (1778). The riots were crushed; Gordon was arrested but acquitted of treason.

Gorgon In Greek legend, an underworld monster. Hesiod refers to three Gorgons, the sisters Stheno, Euryale, and *Medusa. They

were usually portrayed as winged females with snakes for hair and boars' tusks for teeth.

gorilla The largest living *ape, *Gorilla gorilla*, of tropical African forests. Male gorillas can grow to 1.8 m with a weight of 300 kg. They walk on their feet and knuckles, feeding on plant stems and fruit. Troops are led by a dominant adult male and are generally not aggressive.

Göring, Hermann Wilhelm (1893–1946) German Nazi politician. He served in the air force in World War I and became a Nazi in 1922, taking command of Hitler's Brownshirts. When Hitler came to power in 1933, Göring was appointed air minister of Germany and prime minister of Prussia. He established the *Gestapo and probably engineered the Reichstag fire (1933). He directed the development of the Luftwaffe. Hitler declared him his successor in 1939 but expelled him from the party shortly before the Nazi collapse. Condemned to hang at Nuremberg, he committed suicide.

Gorki, Maksim (Aleksii Maksimovich Peshkov; 1868–1936) Russian novelist. His early life is recounted in his trilogy *Childhood* (1913–14), *In the World* (1915–16), and *My Universities* (1923). He established his literary reputation with romantic short stories and followed these with several novels and plays, including *Mother* (1906) and *The Lower Depths* (1906). He lived in exile from 1906 to 1913 and again from 1921 to 1928. He then returned to Russia, becoming an exponent of Stalinism.

Gorlovka (or Horlivka) 48 17N 38 05E A city in SE Ukraine, in the Donets Basin. It is one of the largest coalmining and industrial centres of the area. Population (1998 est): 309 300.

gorse (or furze) A spiny shrub, *Ulex europaeus*, up to 4 m high, with bright-yellow sweet-scented flowers. The fruit is a black hairy pod that splits open explosively to release the seeds. Gorse is native to grassy areas and heaths throughout Europe and has been introduced elsewhere. Family: Leguminosae.

goshawk A large powerful *hawk, *Accipiter gentilis*, ranging throughout forests of the N hemisphere and formerly used in falconry. It is 60 cm long with a wingspan of 130 cm and grey plumage.

Gospels (Old English: good news) The four New Testament accounts of Christ's life, ascribed to *Matthew, *Mark, Luke, and *John. The first three are known as the Synoptic Gospels, since they report approximately the same synopsis of the events. Material that is

not found in Mark but is common to Matthew and Luke is believed to derive from a single lost source, known as Q. The fourth Gospel, John, may presuppose a knowledge of the Synoptic Gospels.

Gossaert, Jan (c.1478–c.1532) Flemish painter, whose popular surname, Mabuse, derives from his birthplace Maubeuge. One of the first Flemish artists to work in the Italian Renaissance style, he painted sculptural nudes against Italian architectural backgrounds, e.g. *Neptune and Amphitrite* (Berlin).

Göteborg (English name: Gothenburg) 57 45N 12 00E An important ice-free port in SW Sweden, at the mouth of the River Göta. Sweden's second largest city, it expanded with the opening of the Göta Canal (1832). Population (2000 est): 462 470.

gothic art and architecture The styles flourishing in Europe from the mid-12th to the end of the 15th centuries. "Gothic" originated as a derisory term used by Renaissance artists, who blamed the destruction of classical art on the Goths who invaded the Roman Empire. The

Early English

Decorated

Perpendicular

gothic art and architecture. In England the three phases of gothic architecture are characterized by distinctive window designs.

hallmarks of gothic design in church architecture are the rib and shaft ceiling, the pointed arch, and the flying buttress. It was initiated in France in such edifices as the cathedrals of Notre-Dame (begun 1163) and Chartres (begun c. 1194). In England it has been subdivided into three phases: *Early English (c. 1200–c. 1300; e.g. Lincoln Cathedral), *Decorated (c. 1300–70; e.g. Exeter Cathedral), and *Perpendicular (c. 1370–1540; e.g. Winchester Cathedral). Stained glass was developed in the period, while gothic sculpture sought a stylized elegance. Early gothic painting was restricted to manuscript illumination. Its full flowering in panel and manuscript painting came with the international gothic style of the early 15th century. The **gothic revival** of the 19th century is seen in such buildings as the Houses of Parliament and the Law Courts in London.

gothic novel An English genre, popular in the late 18th and early 19th centuries, characterized by a prevailing atmosphere of mystery and terror and pseudomedieval settings. Examples include Horace Walpole's *Castle of Otranto* (1765) and Ann Radcliffe's *The Mysteries of Udolpho* (1794).

Goths Germanic peoples who originated in Scandinavia (Gotland) and had moved into the Ukraine by the end of the 2nd century AD. Shortly afterwards they invaded the Roman Empire N of the Danube and expanded into the Balkans. Converted to Arian Christianity in the mid-4th century, their empire was soon destroyed by the *Huns and their two groups, the *Ostrogoths and *Visigoths, separated.

Gotland (Gothland or Gottland) The largest of the Swedish islands, in the Baltic Sea. Long disputed between Denmark and Sweden, it was finally ceded to Sweden in 1645. Area: 3140 sq km (1225 sq mi). Population (2001 est): 57 313, including associated islands. Capital: Visby.

Göttingen 51 32N 9 57E A city in E West Germany. With its famous university and the Max Planck Association for the furtherance of science, it is a noted educational centre. Population (1999 est): 127 366.

Gounod, Charles François (1818–93) French composer. His most successful works were the operas *Faust* (1852–59) and *Romeo and Juliet* (1864). Towards the end of his life he composed only sacred music.

gourami One of several freshwater tropical labyrinth fishes, especially *Osphronemus goramy*. It has a brown or grey oval body, up to 60

cm long, and a filamentous ray extending from each pelvic fin.

gourd The fruit of certain plants of the family *Cucurbitaceae*, especially the white-flowered bottle gourd (*Lagenaria siceraria*). Other gourds are grown as ornamentals. The dishcloth gourd is used as a bath sponge and the *snake gourd is grown for food.

gout Sudden attacks of arthritis caused by the presence of uric acid crystals in the joints. The big toe is most commonly affected, becoming hot, red, and very painful.

Gower Peninsula A peninsula in South Wales, in the county of Swansea, noted for its coastal scenery.

Goya (y Lucientes), Francesco (Jose) de (1746–1828) Spanish painter. After studying in Italy, he settled in Madrid (1775), where he painted scenes of Spanish life for the royal tapestry factory. As court painter from 1789 he produced realistic portraits of the royal family. He became deaf in 1792, and his works grew pessimistic, as in his etchings *Los Caprichos* and *The Disasters of War*. His best-known paintings are *Maja Clothed*, *The Shootings of 3 May 1808*, and the so-called black paintings, such as *Satan Devouring His Children* (all Prado).

Gozzoli, Benozzo (Benozzo di Lese; 1420–97) Florentine painter. His major works are the frescoes of the *Journey of the Magi* (Palazzo Medici-Riccardi, Florence), which are noted for their detailed landscapes, and portraits of his contemporaries.

Grace, W(illiam) G(ilbert) (1848–1915) British cricketer, who captained England in 13 Test matches. In his long career (1865–1908) he scored 54896 runs, including 126 centuries, took 2876 wickets, and held 877 catches.

Graces In Greek mythology, the three daughters of Zeus and Hera, representing beauty, grace, and charm. They were named Aglaia, Euphrosyne, and Thalia.

Graf, Steffi (1969–) German tennis player. Her victories include the Wimbledon singles championship in 1988, 1989, 1991, 1992, 1993, 1995, and 1996; in 1988 she won a grand slam of the four major singles championships. She married the tennis player André Agassi in 2001.

grafting 1. (horticulture) The transfer of part of one plant, usually a shoot or a bud, onto another plant. It is used as a means of vegetative propagation, particularly for fruit trees and roses. The *cambium (a region of actively dividing cells) of the transplanted piece (the

scion) is aligned with that of the recipient plant (the stock); the wound tissue thus formed binds the graft together. 2. (surgery) See TRANSPLANTATION.

grafting. Two commonly used grafting methods. After stock and scion are fitted together they are held securely by tape, string, etc., and protected from desiccation by covering the point of union with wax or moist material.

Graham, Billy (1918–) US evangelist. His carefully staged meetings, in which the audience are invited to “take a decision for Christ,” have attracted very large crowds throughout the world.

Graham, Martha (1893–1991) US ballet dancer and choreographer. Her ballets include *Primitive Mysteries* (1931), *Circe* (1963), and *Acts of Light* (1981).

Grahame, Kenneth (1859–1932) British writer. His best-known book is the children's classic, *The Wind in the Willows* (1908), adapted as a play, *Toad of Toad Hall* (1929), by A. A. *Milne.

Grahamstown (Afrikaans name: Grahamstad) 33 19S 26 32E A town in South Africa, in SE Cape Province. It was the focus of British settlement in 1820. Population (latest est): 75 000.

Graiae In Greek legend, three goddesses personifying old age, the sisters and protectors of the *Gorgons. They shared one eye and one tooth. *Perseus stole the eye in order to take the Gorgons by surprise.

Grainger, Percy (Aldridge) (1882–1961) Australian-born composer and pianist. He was

a friend of Grieg and Delius and studied and recorded English folksong. His compositions include *Shepherds' Hey* (1913), and *Harvest Hymn* (1933), as well as the “clog dance” *Handel in the Strand* (1913).

gram (g) A unit of mass equal to 1/1000 of a *kilogram.

grammar schools Secondary schools in the UK providing a largely academic education for children aged 12 to 18. The original grammar schools, established in the middle ages, were preparatory institutions for university or for jobs in which a knowledge of Latin was essential. After World War II, with the growing demand for academic excellence, grammar schools were compelled to restrict entry to those passing the eleven-plus examination. Most grammar schools were replaced in the 1970s by *comprehensive schools.

Grampians 1. A range of mountains in central Scotland, mainly in Perth and Kinross and Aberdeenshire. Its chief summits include Ben Nevis at 1343 m (4406 ft) and Ben Macdhui at 1309 m (4296 ft). 2. A mountain range in Australia. It extends SW from Victoria, reaching 1166 m (3827 ft) at Mount William.

grampus A small toothed *whale, *Grampus griseus*, of warm and temperate waters, also called Risso's dolphin. About 3.7 m long, dark-grey with a pale belly, grampuses migrate towards the Poles in summer and the equator in winter.

Granada 37 10N 3 35W A city in S Spain, in Andalusia. Formerly the capital of the kingdom of Granada, it includes many Moorish buildings (notably the Alhambra). Population (1998 est): 241 471.

Granados, Enrique (1867–1916) Spanish composer and pianist. He and his wife were drowned during World War I when HMS *Sussex* was torpedoed. Granados is best remembered for the piano pieces entitled *Goyescas* (1911), inspired by Goya.

Gran Chaco A vast plain in South America. A long-standing dispute over the territory led to the Chaco War between Paraguay and Bolivia (1932–35), following which most of the area was incorporated into Paraguay. Area: 780 000 sq km (300 000 sq mi).

Grand Canal (Chinese name: Da Yunhe) A canal in E China, the longest in the world, extending about 1600 km (1000 mi) N–S from Beijing to *Wuhan.

Grand Canyon A vast gorge in the USA, in

Arizona on the Colorado River. It became the **Grand Canyon National Park** in 1919. Length: 451 km (280 mi). Width: 6–29 km (4–18 mi). Greatest depth: 1.5 km (1 mi).

Grand Coulee Dam A large gravity *dam on the Columbia River in Washington (USA). It is 1272 m long at its crest, 108 m high, and has a reservoir capacity of 11 600 million cubic metres.

Grande Dixence Dam A gravity *dam on the River Dixence (Switzerland). Until 1970 it was the tallest dam in the world (284 m high).

Grand Guignol A type of sensational drama that flourished in Paris in the late 19th century. The term derives from the name of a theatre at which these plays were performed, and from Guignol, a stock character in French puppet shows.

grand mal See EPILEPSY.

Grand National Steeplechase The world's most famous *steeplechase, run in March at Aintree near Liverpool (England) over 30 assorted obstacles. It was first run in 1839.

granite A coarse-grained plutonic rock of acid composition resulting from the high silica content. Granites contain quartz, feldspar (usually alkali), and mafic (dark-coloured) minerals, usually muscovite and biotite (micas). Most granites crystallize from magma in igneous intrusions known as batholiths, but some are produced by the action of granitic fluids rising from great depths.

Gran Paradiso 45°33'N 7°17'E The highest mountain in Italy, in the Alps. Height: 4061 m (13 323 ft).

Grant, Cary (Archibald Leach; 1904–86) US film actor, born in England. He established his reputation in such films as *Bringing Up Baby* (1938) and *The Philadelphia Story* (1940). His films for Alfred Hitchcock include *To Catch a Thief* (1955) and *North By Northwest* (1959).

Grant, Ulysses S (Impson) (1822–85) US general and statesman; Republican president (1869–77). As supreme commander of the Federal armies (1864–65) he defeated the Confederates by battering them into submission. The great losses to his own side earned him the nickname Grant the Butcher. As president, he acquiesced in Reconstruction attempts to enfranchise Blacks, fought inflation, and unsuccessfully planned to annex the Dominican Republic.

grape The fruit of vines of the genus *Vitis* (about 60 species), especially *V. vinifera*, native

to N Asia but cultivated throughout Mediterranean regions. The fruit is green, red, or blue-black and used to make *wine, brandy, and liqueurs or eaten fresh or dried (as raisins, sultanas, and currants).

grapefruit A tree, *Citrus paradisi*, 6–12 m high, cultivated in the tropics and subtropics. Its fleshy yellow-skinned fruits, 10–15 cm in diameter, are eaten fresh, tinned, or crushed to make beverages. See CITRUS.

grape hyacinth A perennial herbaceous plant of the genus *Muscari* (50 species), mostly native to the Mediterranean region and widely grown as spring-blooming garden bulbs. The blue, pink, or white flowers are borne at the tip of a stalk, up to 15 cm high. Family: Liliaceae.

graphite An iron-grey to black form of pure carbon, found in many metamorphic rocks. It occurs in a laminar or massive form. It is soft, flaky, and greasy to the touch. Graphite is used for making metallurgical crucibles, as a lubricant, in paint, rubber, and pencil leads, in batteries and for other electrical purposes, and as a moderator in nuclear reactors. It has often been called plumbago or black lead, since it was formerly mistaken for lead.

Grappelli, Stephane (1908–97) French jazz violinist. A member of the Hot Club de France (1934–39), he made recordings with Earl Hines and Yehudi *Menuhin among others.

graptolite A small colonial marine animal belonging to the extinct class *Graptolithina*. Their fossils occur in rocks of the Upper Cambrian to Carboniferous periods, about 420–250 million years ago.

grass A monocotyledonous annual or perennial herbaceous plant belonging to the family *Poaceae* (or *Gramineae*; 6000–10 000 species), distributed worldwide. The leaves consist of a basal sheath and a long narrow blade. The flowering stems (culms) bear inconspicuous flowers. The single-seeded fruit (the grain) is known as a caryopsis, with the ovary wall (pericarp) and seed coat fused. Many species are important in agriculture (see CEREALS; SUGAR CANE). See illustration on p. 384.

Grass, Günter (1927–) German novelist. His first novel, *The Tin Drum* (1959) established him as a moral spokesman for his generation. His other novels include *The Flounder* (1977), *The Rat* (1986), *Toad Croaks* (1992), and *Crabwalk* (2002). He received the Nobel Prize for Literature in 1999.

grassfinch A songbird belonging to a subfamily of weaverfinches, occurring chiefly in

Australasia. About 10 cm long, grassfinches have long tails and stout bills.

grass. The typical structure of a grass is seen in the meadow fescue (*Festuca pratensis*). The flowers are grouped into spikelets and each consists only of male and female parts surrounded by bracts; petals and sepals are absent.

grasshopper A jumping insect belonging to the family *Acrididae* (about 5000 species). 24–110 mm long, both sexes produce sound by rubbing the hind legs against the front wings. Some species can fly, (see LOCUST). Grasshoppers feed on low vegetation and the females lay eggs in the soil. Order: *Orthoptera*.

grass monkey A small African *guenon monkey, *Cercopithecus aethiops*, inhabiting wooded regions. The West African green monkey, the East African grivet monkey, and the South African vervet or blue monkey are all local races of grass monkey.

grass snake A nonvenomous snake, *Natrix natrix*, also called water snake, occurring throughout Europe. 75–95 cm long, it has a green back with two rows of black spots, vertical black bars along its sides, and a yellow neck patch. Its prey includes fish and small mammals. Family: *Colubridae*.

grass tree A woody plant of the genus *Xanthorrhoea* (about 5 species), native to E Australia. They often have palmlike stems, 5 m tall, that end in a tuft of rigid grasslike leaves, from which extend flower spikes. A red or yellow resin, used for varnishes, exudes from the bases of old leaves. Family: *Xanthorrhoeaceae*.

Gravenhage, 's See HAGUE, THE.

Graves, Robert (Ranke) (1895–1985)

British poet, critic, and novelist. *Goodbye to All That* (1929) recounts his experiences in World War I. His other writings include poems, *I Claudius* (1934), and *The White Goddess* (1948).

Gravettian A culture of the Upper *Palaeolithic, succeeding the Aurignacian in W Europe. Named after the cave at La Gravette in the Dordogne (SW France), the Gravettian is characterized by small pointed stone blades (Gravette points) and dates from between 26 000 and 20 000 BC. The well-known small female figurines called Venuses are of Gravettian origin. The term Eastern Gravettian is applied to similar material from sites in Russia and E Europe. Compare PERIGORDIAN.

gravitation An attractive force that occurs between all bodies that possess mass. It was first described by Sir Isaac *Newton in a law stating that the force between two bodies is directly proportional to the product of their masses and inversely proportional to the square of the distance between them. The constant of proportionality, the universal **gravitational constant**, *G*, has the value 6.673×10^{-11} newton metre squared per kilogram squared. Gravitation is more accurately described by the general theory of *relativity.

gravitational collapse The sudden collapse of the core of a *star when thermonuclear fusion ceases. The star's internal gas pressure can no longer support the star's weight and the initial result may be a *supernova explosion. The gravitational pull of the remains of the star causes it to contract, producing a *white dwarf, *neutron star, or *black hole.

gravitational interaction One of the four kinds of interaction that occur between elementary particles (see PARTICLE PHYSICS) and by far the weakest (about 10^{46} times weaker than the *electromagnetic interaction). The interaction occurs between all particles with mass and can be explained as the exchange of *virtual particles called gravitons.

gray (Gy) The SI unit of absorbed dose of ionizing radiation equal to the energy in joules absorbed by one kilogram of irradiated material.

Gray, Thomas (1716–71) British poet. His most famous poem is *Elegy Written in a Country Churchyard* (1751), a classical meditation on the graves of the villagers of Stoke Poges, Buckinghamshire.

grayling A troutlike fish of the genus *Thymallus*, sometimes placed in a distinct family (*Thymallidae*). Graylings have a silvery-purple

body, up to 50 cm long, with a sail-like dorsal fin, and live in fresh waters of Eurasia and N North America, feeding on aquatic insects. They are important food and game fish. Family: *Salmonidae*.

Graz 47°05N 15°22E The second largest city in Austria, the capital of Styria. Its historical buildings include a cathedral (1438–62) and a clock tower (1561). Population (2001): 226 424.

Great Artesian Basin An artesian basin of E Australia. The largest area of artesian water in the world, it extends S from Queensland into South Australia and New South Wales. Area: 1 750 000 sq km (676 250 sq mi).

Great Barrier Reef The largest coral reef in the world, off NE Australia. 2012 km (1250 mi) long, its exotic plant and animal life makes it popular with tourists.

Great Basin A large semiarid area in the USA. It extends over most of Nevada, Utah, and parts of California and Oregon.

Great Bear See *URSA MAJOR*.

Great Bear Lake A lake in N Canada, on the Arctic Circle. Frozen eight months of the year, it is the fourth largest lake in North America. Area: 31 792 sq km (12 275 sq mi).

Great Britain *England, *Scotland, and *Wales, including those adjacent islands governed from the mainland (i.e. excluding the Isle of Man and the Channel Islands). The name was introduced as early as 1603. Area: 229 523 sq km (88 619 sq mi). Population (2001): 57 103 927.

great circle A circle that is the intersection on the surface of a sphere of a plane passing through the centre of that sphere. On the earth, each meridian of longitude is half of a great circle; the equator is the only parallel of latitude that is a great circle.

Great Dane A breed of large dog originating in Germany, where they were developed for hunting boar. The short sleek coat can be golden, black, streaked brown, blue-grey, or white. Height: 76 cm minimum (dogs); 71 cm minimum (bitches).

Great Dividing Range (Great Divide or Eastern Highlands) The E highlands of Australia. It extends for about 3700 km (2300 mi) from Cape York Peninsula to the Grampians of Victoria, reaching 2230 m (7316 ft) at Mount *Kosciusko.

Greater Antilles The four largest West Indian islands, in the N Caribbean Sea, comprising Cuba, Hispaniola, Jamaica, and Puerto Rico.

Greater Manchester A metropolitan county of NW England, created in 1974 from SE Lancashire and parts of NE Cheshire and SW Yorkshire. In 1986 administrative powers were devolved to the unitary authorities of Wigan, Bolton, Bury, Rochdale, Salford, Oldham, Manchester, Trafford, Stockport, and Tameside. Area: 1285 sq km (496 sq mi).

Great Exhibition (1851) A display of the products of industrial Britain and Europe, planned by Prince Albert and held in the *Crystal Palace in Hyde Park, London. It contained about 13 000 exhibits.

Great Glen (or **Glen More**) A rift valley extending across N Scotland from Fort William to Inverness. The *Caledonian Canal was constructed along its length.

Great Lakes Five large lakes along the US-Canadian border: Lakes *Superior, *Michigan, *Huron, *Erie, and *Ontario. They comprise the world's largest freshwater surface and together with the *St Lawrence River form the St Lawrence Seaway.

Great Ouse River (or **R. Ouse**) A river in E England, rising in Northamptonshire and flowing NE to the Wash. Length: 257 km (160 mi).

Great Plains An extensive area in North America. It consists of plains extending from the Mackenzie River Delta in Canada to the Rio Grande in the S. Length: about 4828 km (3000 mi). Average width: about 644 km (400 mi).

Great Rift Valley (or **East African Rift System**) An extensive rift valley in the Middle East and East Africa. It extends from the Jordan Valley in Syria along the Red Sea into Ethiopia and through Kenya, Tanzania, and Malawi into Mozambique. Length: about 6400 km (4000 mi).

Great Salt Lake A salt lake in the USA, in NW Utah in the Great Basin. Its area has fluctuated from less than 2500 sq km (1000 sq mi) to over 5000 sq km (2000 sq mi).

Great Sandy Desert A desert of N Western Australia. It stretches SE from the Indian Ocean to the Gibson Desert. Area: 415 000 sq km (160 000 sq mi).

Great Schism (1378–1417) The split in the Roman Catholic Church following the election of two rival popes to succeed Gregory XI. When Urban VI determined to reform the College of Cardinals, they responded by electing an *antipope at Avignon. Clement VII. The Schism was ended by the Council of *Constance (1414–18) and the election of Martin V in 1417.

Great Trek The movement from the mid-1830s to mid-1840s of Dutch settlers (Afrikaners) in South Africa northwards from the Cape. The so-called Voortrekkers, under such leaders as Andries Pretorius (1799–1853), moved away from British rule at the Cape in search of more farmland that they could administer themselves. They established the republics of the Transvaal and the Orange Free State.

Great Victoria Desert A desert of Western and South Australia. It consists of a vast region of sand hills and salt marshes. Area: 323 750 sq km (125 000 sq mi).

g

Great Wall of China A medieval defensive fortification in N China. Stretching from the Yellow Sea N of Beijing nearly 2400 km (1500 mi) inland, it is the world's largest building achievement. Originally begun in 214 BC as a defence against nomads, it was rebuilt of stone in the 15th and 16th centuries. It is about 9 m (30 ft) high, with numerous watch towers along its length.

Great Zimbabwe The largest of the ruined Bantu royal centres in Zimbabwe. The word *zimbabwe* is derived from the Bantu for "revered houses." Great Zimbabwe reached its zenith in the late 14th century and traces of widespread trade, based on local gold, have been discovered, including Chinese pottery. Parts of the so-called Elliptical Building (a compound enclosing now vanished huts) stand 10.5 m (35 ft) high.

grebe A bird belonging to a primitive family (*Podicipitidae*; 21 species) occurring in rivers and lakes worldwide. Grebes have short wings, a very small tail, and partially webbed feet. They feed chiefly on fish and aquatic invertebrates. Grebes are grey, black, or brown, usually with white underparts, and in the breeding season many have brightly coloured erectile crests and ear tufts. Order: *Podicipediformes*. See also DABCHICK.

Greece, Republic of (official name: Hellenic Republic; Greek name: Ellás) A country in SE Europe, occupying the S section of the Balkan Peninsula. Numerous islands, lie to the S, E, and W; the largest is *Crete. *Economy*: industry has now replaced agriculture as the mainstay of the economy. Mineral resources, including lignite, bauxite, and iron ore, have been intensively exploited. The principal crops include wheat, barley, maize, tobacco, sugar beet, tomatoes, and dried and fresh fruits. Tourism is also important. In the 1990s austerity measures were imposed as a prelude to joining the single European currency. *History*: the

centuries following the collapse of the *Mycenaean civilization (c. 1200 BC) saw the rise of the Greek city states and establishment of Greek colonies overseas. The 5th century was dominated by the abortive attempt of the Persians to annex Greece and the Peloponnesian War between rival Athens and Sparta. Sparta's subsequent supremacy in Greece lasted until its defeat by Thebes in 371. Greece fell to Philip of Macedon in 338 and was incorporated in the empire of his son Alexander the Great. Following Alexander's death (323), the Greek city states repeatedly attempted to assert their independence until the last Macedonian War (171–168) allowed Rome to dominate Greece. Roman rule lasted until 395 AD, when Greece became part of the Byzantine (Eastern Roman) Empire, centred on Constantinople. In the middle ages Greece was subject to invasions by the Franks, Normans, and the Latin Crusaders. In the early 14th century Byzantium reasserted its control over the area but by 1460 control had passed to the Ottoman Turks. Apart from a Venetian occupation (1686–1715), Greece remained under Ottoman rule until it achieved independence in 1829. In 1832 the Greek Crown was offered to a Bavarian prince, who became Otto I; after his deposition in 1862 a Danish prince became king as George I. Greek demands for Crete led to a disastrous war with Turkey in 1897, but in the Balkan Wars (1912–13) Greece gained the island together with territory in Thrace and Macedonia. In 1917 Greece entered World War I on the Allied side and the immediate postwar period saw renewed conflict with Turkey, in which Greece lost Smyrna. In 1924 Greece became a republic, which lasted until George II was restored in 1935. In World War II an unsuccessful Italian invasion (1940) was followed by the German occupation (1941–44), after which civil war lasted until 1949. The 1950s were dominated by the question of union with Cyprus. A military coup (1967) deposed Constantine II and led to a succession of military governments. A new constitution (1975) saw the reintroduction of democratic government. Greece became a member of the EC (now the EU) in 1981. Andreas Papandreu (1919–96) led Socialist governments from 1981 to 1989 and 1993 to 1996; he was succeeded by Costas Simitis. Greece adopted the single European currency in 2001–02. Following elections in 2004 a centre-right government took office under Costas Karamanlis. Official language: Greek. Currency: euro of 100 cents. Area: 131 986 sq km (50 960 sq mi). Population (2003 est): 11 001 000. Capital: Athens.

Greek language An Indo-European language spoken chiefly in Greece and the E Mediterranean islands. Well documented since the 14th century BC (see LINEAR B), ancient Greek was a highly complex inflected language. It had many dialect forms, the main groupings being Ionic (E Greece and Asia Minor), Aeolic (Boeotia and Thessaly), and Doric (the Peloponnese). From Ionic developed the Attic dialect, centred on Athens, which became the chief literary language of classical Greece. When the Greek city states lost their independence (4th century BC), their dialects gave way to a new common dialect (*koine*), which became the language of Hellenistic Greece and the New Testament. Modern Greek has two widely differing forms: the classically based Katharevusa (purified tongue) used in official publications, and Demotic, the living language of speech, poetry, and fiction.

Greek Orthodox Church Strictly, the Orthodox Church in Greece, although the term is often applied to the Orthodox Churches as a whole, to distinguish them from the Latin Church of the West. The Church in Greece dates from the 1st century and St Paul's activities, especially at Corinth. Under the patriarchate of Constantinople Greece was, from the acceptance of Christianity by Constantine, one of the main Christian centres. It is now a self-governing Church, the see of Athens holding a primacy of honour after the separation from the patriarchate of Constantinople in 1833.

Greek-Persian Wars An intermittent conflict between the Greeks and Persians. Persian encroachment on Greek territory began in 499 BC, when the Greek cities of Ionia revolted against their Persian overlords and were crushed by Darius I. In 490 the Persians were defeated by a small force of Athenians at Marathon. Darius died in 486 and in 480 Xerxes I crossed the Hellespont with a large force. The Greeks and Persians fought at Thermopylae, where the Spartans (under Leonidas I) heroically held the pass. Xerxes now attacked Attica and Athens was evacuated. At the battle of Salamis the Persians were defeated by the Greek fleet commanded by Themistocles and were again defeated at Plataea (479). Intermittent warfare continued until 449, when the Persians abandoned hope of annexing Greece.

green algae Algae of the phylum *Chlorophyta* (about 6000 species), which are bright green, owing to the predominance of the green pigment chlorophyll. Green algae range from simple unicellular plants, for example *Chlamydomonas*, to complex seaweeds. They are

aquatic (mainly freshwater) or terrestrial in moist areas. Reproduction can be sexual or asexual.

green belt A zone of open, mostly agricultural, land surrounding a town to prevent it from spreading. Sir Ebenezer Howard's garden cities of the early 1900s provided the first practical examples; in 1935 the London County Council initiated the steps towards a London green belt that were realized in the Green Belt Act (1938) and the Town and Country Planning Act (1947). Since the 1950s restrictions against building in green belts have been relaxed and there is now growing pressure for major residential developments in the countryside.

Greene, (Henry) Graham (1904–91) British novelist. He converted to Roman Catholicism in 1927, and an intense concern with questions of morality is central to many of his novels, including *Brighton Rock* (1938), *The Power and the Glory* (1940), *The Human Factor* (1978), and *The Captain and the Enemy* (1988). He also wrote literary thrillers, including *The Ministry of Fear* (1943), *The Third Man* (1950), and *Our Man in Havana* (1958).

greenfinch A Eurasian *finch, *Carduelis chloris*, about 14 cm long with an olive-green body and a pale bill. The male has a bright yellow-green breast and both sexes show bright-yellow wing flashes in flight.

greenfly See APHID.

greengage A bush or small tree, *Prunus italica*, related to the *plum, probably native to Asia Minor and widely cultivated. It bears round green fruits, which are used in preserves and for canning.

greenhouse effect An atmospheric effect in which some of the energy of ultraviolet radiation and visible light from the sun is retained by the earth as heat. The radiation is transmitted through the atmosphere to the earth's surface, where it is reradiated as longer wavelength infrared radiation. As the atmosphere only partially transmits the infrared back into space, some of it is absorbed by atmospheric gases, especially carbon dioxide, causing a rise in temperature. The phenomenon takes its name from a greenhouse, in which a similar effect occurs. In recent years CO₂ in the atmosphere has increased as a result of the burning of forests and increased use of fossil fuels, causing global warming. In the past century the world's average temperature has risen by over 0.6%, and the 10 warmest years since records began in 1860 have all oc-

greenhouse effect. The sun's ultraviolet light is reradiated as infrared radiation, some of which is absorbed by the greenhouse gases (CO₂, CH₄, etc.).

curred in the last 12 years. See KYOTO AGREEMENT.

Greenland (Danish name: Grønland; Greenlandic name: Kalaallit Nunaat) A large island off NE North America. Lying chiefly within the Arctic Circle, it is largely covered by a vast ice cap. Many glaciers emerge from this, including the Humboldt Glacier, breaking off to form icebergs along the coast. About 80% of the population are Inuit, the remainder being chiefly Danish. *Economy:* fishing is the chief occupation. Whaling and seal hunting have declined. Sheep are reared in the SW. Lead and zinc have been exploited since the early 1970s; uranium is also present. *History:* in about 986 AD the Norwegian Eric the Red discovered the island, which he named Greenland to attract settlers. Norse colonies on the island disappeared during the 15th century. A Danish colony from 1721, Greenland became an integral part of Denmark in 1953. In 1979 it gained self-government under Danish sovereignty. In 1985 Greenland left the EC. Official language: Inupik (Greenland Inuit). Currency: Danish krone of 100 øre. Area: 2 175 600 sq km (840 000 sq mi). Population (2007 est): 56 344. Capital: Nuuk.

Greenland Sea An extension of the Arctic Ocean, between Greenland, Svalbard, and Iceland. Covered by drifting ice, it links with the Atlantic Ocean.

green monkey disease An acute, often fatal, viral infection first described in Marburg, Germany, and therefore sometimes called Marburg disease. It occurs in vervet monkeys and may be transmitted to humans.

Green Party A British political party,

founded in 1973 as the Ecology Party. Dedicated to protecting the environment, the party attracted growing support in the 1980s before being eclipsed by the increasingly "green" attitudes of the major political parties. Similar parties have achieved greater power elsewhere in Europe, notably in Germany.

Greenpeace An international environmental pressure group founded in 1971. It campaigns primarily against nuclear power, dumping nuclear waste, and commercial whaling. Its use of direct action has sometimes led to confrontation.

green turtle A large brown-green marine turtle, *Chelonia mydas*, formerly used to make turtle soup. Up to 1 m long and weighing up to 140 kg, they occur in warm Atlantic coastal waters feeding on marine algae and migrate to lay their eggs on Central American beaches. It is now an endangered species.

Greenwich A borough of E Greater London, on the S bank of the River Thames. The first Renaissance building in England, the Queen's House designed by Inigo *Jones (1616), was completed in 1637. The Greenwich Royal Hospital, designed by *Wren, became the Royal Naval College in 1873. Wren also designed the original *Royal Greenwich Observatory. The tea clipper *Cutty Sark* and Sir Francis Chichester's *Gipsy Moth IV* are at Greenwich Pier. See also MILLENIUM DOME.

Greenwich Mean Time (GMT) The local time at Greenwich, London, located on the 0° meridian (see LATITUDE AND LONGITUDE), from which the standard times of different areas of the globe are calculated, 15° longitude

representing one hour in time. In 1986 it was succeeded by Coordinated Universal Time.

Gregorian calendar See CALENDAR.

Gregorian chant The official liturgical plainchant of the Roman Catholic Church as codified during the papacy of *Gregory I. It consists of single unaccompanied melodic lines sung to flexible rhythms.

Gregory I, St (c. 540–604 AD) Pope (590–604), known as Gregory the Great. As pope he made peace with the Lombards and limited imperial authority over the Church. He reformed the papal states and sponsored Augustine (of Canterbury) in his mission to convert England. He also introduced the use of *Gregorian chant into the liturgy. Feast day: 3 September.

Gregory VII, St (Hildebrand; c. 1021–85) Pope (1073–85). He asserted the independence of the Church from lay control but created considerable opposition, especially in France and Germany, where Emperor *Henry IV declared his deposition (1076). He in turn excommunicated Henry and released his subjects from allegiance. Henry submitted to Gregory at Canossa (1077) but then appointed Wibert, Archbishop of Ravenna, antipope (1080), invaded Italy, and captured Rome (1084). Gregory was rescued by Norman troops but was nevertheless forced to flee. Feast day: 25 May.

Grenada An island country in the West Indies, in the Windward Islands. It also includes some of the Grenadine Islands. The majority of the population is of mixed European and Indian descent. *Economy*: largely agricultural, the chief products are cocoa, bananas, citrus fruits, sugar, and nutmeg (the main export). *History*: discovered by Columbus in 1493, it was colonized by the French and ceded to the British in 1763. In 1974 it became an independent state within the British Commonwealth. In March 1979, the government of Sir Eric Gairy was overthrown in a nearly bloodless coup led by Maurice Bishop. Following an uprising in 1983, during which Bishop was killed, the USA invaded the country and democratic government was restored. The current prime minister, Dr Keith Mitchell, took office following elections in 1995. Official language: English. Currency: East Caribbean dollar of 100 cents. Area: 344 sq km (133 sq mi). Population (2003 est): 102 000. Capital: St George's.

Grenadine Islands A chain of West Indian islets, extending for about 100 km (60 mi) between St Vincent and Grenada and administratively divided between the two.

Grenoble 45°11N 5°43E A city in SE France. The capital of the Dauphiné until 1341, it is the principal tourist centre of the French Alps. Population (1999): 153 317.

Grey, Lady Jane (1537–54) Queen of England for nine days (1553). The Protestant great-granddaughter of *Henry VII, Lady Jane was proclaimed queen by the Duke of *Northumberland when Edward VI died. However, Mary, the rightful heiress, had popular support and Jane abdicated. She was executed for treason with her husband Lord Guildford Dudley, Northumberland's son.

greyhound An ancient breed of dog used for hare coursing and racing. It has a slender deep-chested streamlined body with long legs and a long muscular neck. The short smooth coat can be of various colours. Greyhounds can reach speeds of up to 70 km per hour. Height: 71–76 cm (dogs); 68–71 cm (bitches).

greylag goose A grazing *goose, *Anser anser*, occurring in N and E Europe and central Asia. 75–87 cm long, it has a heavy orange bill and is dark grey above with pale wings, a finely barred neck, and pink legs.

Grieg, Edvard Hagerup (1843–1907) Norwegian composer. The influence of Norwegian folk music is apparent in many of his works, which include the *Lyric Pieces* (1867–1901), a very popular piano concerto (1868), incidental music to Ibsen's play *Peer Gynt* (1876), chamber music, and many songs.

griffin A mythological creature with the head and wings of an eagle, the body of a lion, and often a serpent's tail. It is common in many ancient eastern mythologies.

Griffith, Arthur (1872–1922) Irish journalist and politician, who founded *Sinn Féin in 1905. In 1919–20 he was acting head of the self-declared republican government in Ireland and in 1921 he helped to negotiate the treaty establishing the Irish Free State. He became head of the provisional government but died soon afterward.

Griffith, D(avid) W(ark) (1875–1948) US film director: the most influential pioneer of the cinema in the USA. His major films are *The Birth of a Nation* (1915), *Intolerance* (1916), and *Broken Blossoms* (1919).

griffon A breed of toy dog originating in Belgium and of terrier ancestry. It has a square compact body, a docked tail, and a large head covered with long coarse hair. The coat may be red, black, or black and tan. Weight: 2–5 kg.

griffon vulture One of the largest Old World *vultures, *Gyps fulvus*. It is 100 cm long and occurs in mountainous regions of S Europe, South Africa, and Asia. It is grey-brown with darker wingtips and a white head and ruff.

Grimm Two brothers, German philologists and folklorists. After early work on medieval German texts, **Jakob Grimm** (1785–1863) and **Wilhelm Grimm** (1786–1859) set about collecting German folktales, published in 1812–14 as *Kinder- und Hausmärchen*. The *Deutsche Grammatik* (1819, 1822) contains observations on the regularity of sound changes in Indo-European languages, known as **Grimm's law**. Their *Deutsches Wörterbuch* is a historical and descriptive German dictionary.

Grimby 53 35N 0 05W A seaport in NE England, in North East Lincolnshire unitary authority, Lincolnshire, near the mouth of the Humber estuary. It is the largest fishing port in England, but the size of the fleet has been much reduced due to overfishing. Population (1991): 90 703.

grizzly bear See BROWN BEAR.

Grodno 53 40N 23 50E A port in W central Belarus. Possessed by Lithuania and then by Poland, it includes a medieval castle and a 16th-century palace. Population (1996 est): 301 000.

Gromyko, Andrei (1909–89) Soviet diplomat; foreign minister (1957–85) and president of the Soviet Union (1985–88). He was a major influence on Soviet foreign policy for over forty years.

Groningen A province in the Netherlands, bordering on the North Sea. Low lying and fertile, it is intensively cultivated. Area: 2350 sq km (900 sq mi). Population (2000): 562 600. Capital: Groningen.

Gropius, Walter (1883–1969) German architect, one of the pioneers of the international modern style of architecture. His first major building, a factory at Alfeld (1911) is a very early example of the new style. As director of the *Bauhaus (1919–28) he was able to influence all aspects of contemporary design. The rise of Nazi power forced him to move to America where he continued to design buildings.

Grossglockner 47 05N 12 44E The highest mountain in Austria, in the Alps. The Grossglockner Road (built 1930–35) crosses it, rising to 2576 m (7852 ft). Height: 3797 m (12 457 ft).

gross national product (GNP) A measure of the total annual output of a country, in-

cluding net income from abroad. GNP can be calculated in three ways: based on income, output, or expenditure. All incomes accruing to residents of the country as a result of economic activity (excluding, for instance, pensions) can be summed. On the basis of output, the value added to a product at each stage of production can be summed. Alternatively the expenditure on consumption products can be calculated. **Gross domestic product (GDP)** is GNP excluding net income from abroad and gives some indication of the strength of domestic industry. **Net national product** makes a provision for depreciation, i.e. the using up of the country's capital stock.

ground beetle A heavily armoured long-legged beetle belonging to a family (*Carabidae*; 25 000 species) that is particularly common in temperate regions. Ground beetles are dark in colour or have a metallic sheen and are from 2 to 85 mm long. Most are nocturnal; the adults and most larvae are active carnivores, preying on insects, slugs, and snails.

groundhog See MARMOT.

groundnut The fruit of *Arachis hypogaea*, also called peanut or earthnut, native to tropical South America but widely cultivated in the tropics. The plant is an annual, 30–45 cm high, with yellow flowers. After fertilization the pod ripens underground. The pod contains one to three seeds (the nuts), which are highly nutritious. Family: *Leguminosae*.

grouper One of several food and game fish of the family *Serranidae* (see SEA BASS), especially the genera *Epinephelus* and *Mycteroperca*, widely distributed in warm seas. Groupers have a dull-green or brown heavy body, up to or exceeding 2 m long, and a large mouth. Some are poisonous.

group therapy A form of *psychotherapy in which several patients meet to understand their problems, usually with the help of a therapist. Sometimes the aim is to increase patients' insight, sometimes to act out distressing events, and sometimes to provide support in overcoming a common problem (such as alcoholism).

grouse A game bird, 30–88 cm long, belonging to a family (*Tetraonidae*; about 18 species) of the N hemisphere. Grouse are mostly ground-living, with short round wings, a short strong bill, and feathered legs. They are noted for their spectacular courtship displays (called *leks*). The family includes the *black grouse, *red grouse, and *capercaillie of N Europe; the

*ptarmigans; and the North American ruffed grouse (*Bonasa umbellus*) and *sage grouse. In Britain the grouse-shooting season is from 12 Aug to 10 Dec. Order: *Galliformes*.

growth hormone (or somatotrophin) A protein hormone that promotes the metabolic processes involved in growth of bone and muscle. It is secreted by the pituitary gland and stimulates protein synthesis, mobilizes fat reserves, increases glucose levels in the blood, and affects mineral metabolism. Lack of growth hormone in children causes dwarfism.

Grozny 43°21'N 45°42'E A city in S Russia, the capital of Chechnya, in one of the country's richest oil-producing areas. The city was devastated by Russian bombs during the Russian-Chechen conflict (1994–95) and again in 1999–2000, when Russian troops reoccupied the city. Population (2002): 210 720.

Grünwald, Matthias (Mathis Gothardt; d. 1528) German painter. His favourite subject was the crucifixion, as in the *Isenheim Altarpiece* (Colmar, France), noted for its dazzling colour. His style influenced 20th-century German expressionists (see **EXPRESSIONISM**).

grunt A small food fish, belonging to the family *Pomadasyidae* (about 75 species), that can produce piglike grunts. It has a colourful elongated body and occurs in warm and tropical coastal waters. Order: *Perciformes*.

Guadalajara 1. 20°30'N 103°20'W The second largest city in Mexico, at an altitude of 1650 m (5413 ft). Founded by the Spanish (1530), it is a communications centre across the Sierra Madre Occidental. Population (2000 est): 1 647 000. 2. 40°37'N 3°10'W A town in NE Spain. Its palace was virtually destroyed during the Spanish Civil War but has since been restored. Population (2006): 75 493.

Guadalcanal 9°30'S 160°00'E The largest of the Solomon Islands, in the S Pacific Ocean. During World War II the first major US offensive against the Japanese took place here (1942–43). Area: 6475 sq km (2500 sq mi). Population (1999): 60 273. Chief settlement: Honiara.

Guadalquivir, River The main river of S Spain. It flows WSW to the Gulf of Cádiz and is navigable to Seville by oceangoing vessels. Length: 560 km (348 mi).

Guadeloupe A French overseas region in the E Caribbean Sea. It comprises two main islands, Grande Terre and Basse Terre, together with the island dependencies of Marie Galante, La Désirade, Îles des Saintes, St Barthélemy, and the N part of *St Martin. The economy is based

on agriculture; sugar cane is the chief crop. Area: 1702 sq km (657 sq mi). Population (2006): 458 000. Capital: Basse-Terre.

gualiacum A small evergreen tree of the genus *Guaiaacum*, especially *G. officinale* of tropical America, also called *lignum vitae*. It has blue flowers, yellow fruits, and hard wood, used to make bowling balls. The resin is distilled for medicinal use. Family: *Zygophyllaceae*.

Guam 13°30'N 144°40'E An island and US unincorporated territory in the West Pacific Ocean, the largest of the Mariana Islands. Spanish from 1565 to 1898, it was occupied by the Japanese (1941–44). It is a major naval and air base, especially important during the Vietnam War. Area: 450 sq km (210 sq mi). Population (2007 est): 173 456. Capital: Agaña.

Guangzhou See **CANTON**.

guano The accumulated excrement of certain animals, especially seabirds, seals, and bats. It contains 10–18% nitrogen, 8–12% phosphoric acid, and 2–3% potash, according to the age and origin of the deposit. It has been widely used as a fertilizer.

Guantánamo 20°09'N 75°14'W A city in SE Cuba, N of Guantánamo Bay. It is the centre of an agricultural area producing sugar cane and coffee. Population (2002): 208 145.

Guantánamo Bay A natural harbour in SE Cuba, site of a US naval base since 1898. The USA acquired a perpetual lease in 1903 but this is not recognized by the Cuban government. It is now chiefly known for the detention centre established in 2002, where some 750 alleged *al-Qaida and *Taleban fighters captured during the *war on terrorism have been held without judicial process (over 300 have now been repatriated). The centre has aroused fierce international criticism and there have been allegations of torture and abuse.

Guarani A group of South American Indian peoples of Paraguay and neighbouring areas of Brazil and Argentina who speak languages of the Tupian group. Few now retain their original culture, based on hunting and maize cultivation, warfare, and cannibalism.

Guardi, Francesco (1712–93) Venetian painter, who sometimes collaborated with his elder brother, **Giovanni Antonio Guardi** (1699–1760). His views of Venice were sometimes copied from *Canaletto but they are distinguished by their romantic style.

Guarini, Guarino (1624–83) Italian baroque architect, philosopher, and mathematician. Al-

though influenced by Francesco Borromini (1599–1667), his work shows great originality and technical skill. Probably his most successful building is the church of S Lorenzo, Turin (1668–87).

Guarneri An Italian family of violin makers, famous in the 17th and 18th centuries. **Andrea Guarneri** (d. 1698) was a pupil (with Stradivari) of Amati in Cremona. Andrea's grandson **Giuseppe Guarneri** (1698–1744), known as "del Gesù," was the most famous member of the family; influenced by the makers of the Brescian school, he signed his violins "Guarnerius."

g

Guatemala, Republic of A country in Central America, on the Pacific Ocean, with a small outlet on the Caribbean Sea. Tropical forests rise to a central mountainous region, containing a fertile plateau. About half the population are *Maya Quiché Indians and most of the rest are of mixed Spanish and Indian descent. *Economy:* mainly agricultural. The main crops are coffee, sugar, bananas, and cotton, which are the principal exports. Minerals include zinc and lead concentrates. Oil was discovered in 1974. *History:* there is extensive archaeological evidence of pre-Spanish civilizations, especially that of the Maya, and, from the 12th century, the Aztecs. From 1524 to 1821 the area was part of the Spanish captaincy general of Guatemala, which included most of Central America. It formed the nucleus of the Central American Federation until 1839, when it became independent. During the next 150 years periods of democratic government alternated with military dictatorships and there was almost continuous political unrest; Guatemala has often been criticized for its human rights record. In 1996 Alvaro Arzú became president and signed a peace agreement with the URNG (left-wing, mostly Maya Quiché Indian, guerrillas) guaranteeing the rights of indigenous peoples. The presidency of Alfonso Portillo (1999–2003) was marked by corruption scandals and rising social unrest; he was succeeded by Oscar Berger in 2004. Official language: Spanish. Currencies: quetzal of 100 centavos and US dollar. Area: 108 889 sq km (42 042 sq mi). Population (2003 est): 12 347 000. Capital: Guatemala City.

Guatemala City 14 38N 90 22W The capital of Guatemala. Founded in 1776, it was the capital of the captaincy general of Guatemala and later of the Central American Federation. Population (2000 est, urban area): 2 578 526.

guava A tropical American tree, *Psidium guajava*, about 10 m tall. Its white flowers develop into yellow pear-shaped fruits containing

many small seeds. Guava fruits are used to make jam and jelly, stewed for desserts, or canned. Family: *Myrtaceae* (myrtle family).

Guayaquil (or **Santiago de Guayaquil**) 2 13S 79 54W The largest city and chief port of Ecuador, on the River Guayas. Population (1997 est): 1 973 880.

gudgeon A freshwater shoaling fish, *Gobio gobio*, related to *carp, found in Europe and N Asia. Used as bait, it has a slender greyish body, up to 20 cm long, with a row of blackish spots along each side and a pair of barbels at the corners of the mouth.

guelder rose A small tree or shrub, *Viburnum opulus*, 4–5 m high, found throughout Eurasia. It has clusters of flowers, 5–10 cm across, in which the outer flowers are large and sterile and the inner ones are small and fertile. The fruits are red translucent berries. Family: *Caprifoliaceae* (honeysuckle family).

Guelfs and Ghibellines The propal and proimperial factions respectively in medieval Germany and Italy. Arising from a German struggle between rival claimants to the Holy Roman Empire, the Guelfs (named after Welf, the family name) and Ghibellines (named after Waiblingen, a Hohenstaufen castle), their conflict acquired an Italian context because of papal opposition to the Hohenstaufen. The Italian city states were led by Florence (Guelf) and Pisa (Ghibelline).

guenon An *Old World monkey belonging to the genus *Cercopithecus* (10 species), of African forests. They are 83–160 cm long including the tail (50–88 cm) and move in troops, feeding on leaves, fruits, and insects. The mona monkey (*C. mona*) is a strikingly marked guenon. See also GRASS MONKEY.

Guercino (Giovanni Francesco Barbieri; 1591–1666) Italian painter. His masterpiece, the ceiling frescos in the Casino Ludovisi, Rome, commissioned by Pope Gregory XV in 1621, were influenced by the Carracci. While in Rome (1621–23) he also painted the *Burial of St Petronilla* (Capitoline Museum, Rome).

Guericke, Otto von (1602–86) German physicist, renowned for his investigation of vacuums. In 1650 he invented the air pump, which he used to perform a series of experiments culminating in a demonstration in which two teams of horses failed to separate a pair of large hemispheres (called the Magdeburg hemispheres after his home town) placed together and evacuated. When air was admitted to the hemispheres they fell apart.

Guernica 43 19N 2 40W A historic Basque town in N Spain, on the Bay of Biscay. During the Spanish Civil War it was virtually destroyed by German planes supporting the Nationalists on 27 April 1937. This is depicted in a painting by Picasso. Population (2004): 15 571.

Guernsey 49 27N 2 35W The second largest of the Channel Islands, in the English Channel. It is low lying in the N and hilly in the S with rugged coastal cliffs. The finance industry is important, together with horticulture and dairy farming (the Guernsey breed of cattle originated here). Guernsey is a popular tourist resort. Area: 63 sq km (24.5 sq mi). Population (2005 est): 65 228. Capital: St Peter Port.

Guevara, Che (Ernesto G.; 1928–67) Argentine revolutionary, who became the hero of left-wing youth in the 1960s. A doctor, he joined Castro's invasion of Cuba (1956). After Castro's victory, Guevara influenced Cuba's foreign relations and directed its land-reform policies. In 1967 he was killed while attempting to instigate a revolt in Bolivia.

guide dogs Dogs specially trained to guide the blind. The first training schools were established in Germany (1911–18) and the British Guide Dog Association was founded in 1931. The most suitable breeds for the four-month training course are German Shepherd dogs (Alsations), Labradors, and golden retrievers.

Guides Association An association founded (as the Girl Guides Association) by Robert and (his sister) Agnes Baden Powell in 1910 to encourage the physical, mental, and spiritual development of girls. The three classes of members are Brownie Guides (aged 7–10), Guides (10–15), and Ranger Guides (14–20). Its counterpart for boys is the Scout Association. The Association dropped the word "Girl" from its title in 1992.

Guildford 51 14N 0 35W A city in SE England, in Surrey on the River Wey. It is a market and residential town; its buildings include Guildford Cathedral (1936). Population (2001): 66 273.

guilds (or gilds) Associations formed in medieval Europe to further their members' common purposes. Originally religious or social, the first guilds are recorded in the 9th century. Merchant guilds were created in many towns in the 11th century to organize trade and became a powerful force in local government. Craft guilds, restricted to specific crafts or trades, were formed from the 12th century. The *livery companies of London are descended from the craft guilds.

guillemot A bird, *Uria aalge*, occurring in coastal regions of the N hemisphere. It is 40 cm long and has a dark-brown plumage with a white belly and wing stripe a slender bill, feeding on fish, shellfish, and worms. The eggs are shaped so that they do not roll off the cliff ledges where they are laid. Family *Alcidae* (auks).

guillotine A device for beheading people. It consists of two vertical posts and a horizontal knife that is dropped onto the victim's neck. Invented by Joseph Ignace Guillotin (1738–1814), it was introduced in France in 1792, during the French Revolution.

Guinea, Gulf of A large inlet of the E Atlantic Ocean, bordering on the Guinea Coast of West Africa.

Guinea, Republic of A country on the coast of West Africa. A coastal plain, partly swamp, rises steeply to plateaus and mountains. The population is mainly Fulani and Mandingo. *Economy*: chiefly agricultural. The chief crops are rice and palm oil and nuts, as well as coffee, peanuts, and fruits. Livestock is also important. Mining accounts for the majority of exports, the principal mineral resources being diamonds, iron ore, and bauxite, of which Guinea is the world's second-largest producer. *History*: the N formed part of Ghana from the 5th to the 8th centuries AD and of the Mali empire in the 16th century. In 1849 the French established a protectorate over part of Guinea, which became part of French West Africa in 1895. In 1958 French Guinea became an independent republic under President Ahmed Sekou Touré. The army took over following Touré's death in 1984 but a multiparty system was introduced in 1991. Gen Lansana Conté, president since 1984, was elected in 1993. In 1996 Sidia Touré became the country's first prime minister; Lansana Kouyate has held the post since 2007. Official languages: French and eight local languages. Currency: Guinea franc of 100 centimes. Area: 245 857 sq km (95 000 sq mi). Population (2007 est): 9 947 814. Capital: Conakry.

Guinea-Bissau, Republic of (name until 1974: Portuguese Guinea) A small country on the coast of West Africa. It consists chiefly of a coastal plain rising to savanna-covered plateau inland. Most of the population are Fulani, Mandiako, and Mandingo. *Economy*: chiefly agricultural, the principal crops being cashew nuts (the main export) and rice. Mineral resources are largely unexploited and the country remains one of the poorest in the world. *History*: explored by the Portuguese in the mid-

15th century, the area became a centre of the slave trade. It became a Portuguese colony in 1879 and an overseas province of Portugal in 1951. In 1974 it became an independent republic. After a coup in 1980, constitutional rule returned in 1984, with Maj João Bernardo Vieira as elected head of state. The first multiparty elections (1994) were won by the ruling party but Vieira was overthrown in a coup in 1999. Following elections in 2000 Kumba Ialá became president but he too was deposed by the military in 2003. Vieira was re-elected in 2005. Official language: Portuguese. Currency: CFA franc of 100 centimes. Area: 36 125 sq km (13 948 sq mi). Population (2007 est): 1 472 780. Capital: Bissau.

guinea fowl A bird belonging to an African family (*Numididae*; 7–10 species). About 50 cm long, domesticated guinea fowl are descended from the helmet guinea fowl (*Numida meleagris*), which has a large bony crest, a bare face with red and blue wattles, and a grey white-spotted plumage. Guinea fowl scratch for seeds and insects, especially termites. Order: *Galliformes* (pheasants, turkeys, etc.).

guinea pig A domesticated rodent, *Cavia porcellus*, descended from the *cavy. Guinea pigs were originally bred for food but are now popular as pets.

guinea worm A *nematode worm, *Dracunculus medinensis*, that is a serious parasite of humans in Africa, India, and the Middle East. The larvae are carried by water fleas (genus *Cyclops*) often present in drinking water. When swallowed by humans, they burrow into the tissues and grow to maturity: the females reach a length of up to 120 cm, causing ulcers on the feet and legs.

Guinevere In *Arthurian legend, the wife of King Arthur and lover of *Lancelot. Malory's *Morte d'Arthur* (1485) describes her adulterous love for Lancelot.

Guinness, Sir Alec (1914–2000) British actor. He established his reputation as a stage actor in the 1930s. His films included *Kind Hearts and Coronets* (1949), *The Bridge on the River Kwai* (1957), and *A Passage to India* (1984).

guitar A plucked stringed instrument of Moorish origin, which came to Europe via Spain. The modern Spanish guitar has a flat back, a round sound hole, a fretted fingerboard, and six strings tuned chiefly in fourths. It has a range of over three octaves from the E below the bass staff. Music for it is written an octave higher than it sounds. The electric gui-

tar, which has an electronic pick-up linked to an amplifier rather than a soundbox, was developed in the 1950s.

guitar fish A ray fish, of the family *Rhinobatidae*, that has a flat pointed head with fused pectoral fins and a long muscular sharklike tail. Guitar fish live in shallow waters of tropical and temperate seas and feed on bottom-dwelling animals, especially crustaceans.

Guiyang (or **Kuei-yang**) 26 35N 106 40E A city in S China, the capital of Guizhou province. Population (2003 est): 1 372 600.

Gujarat A state in W India, on the Arabian Sea SE of Pakistan. Lowlands merge into hills in the S and E and into marshes in the NW. Industries include textiles and chemicals. Cotton, tobacco, peanuts, and other crops are raised. *History:* a flourishing area under Muslim princes (13th–17th centuries), Gujarat was conquered by the Maratha in the 18th century before passing to Britain. In January 2001 a severe earthquake left at least 30 000 dead and 600 000 homeless. Area: 116 024 sq km (44 788 sq mi). Population (2001): 50 671 017. Capital: Gandhinagar.

Gujarati An Indo-Aryan language spoken by 20 million people in Gujarat and Maharashtra in India. It is related to Rajasthani, uses a modified Devanagari script, and has a long literary tradition.

Gulf States The nations situated on the Persian Gulf. They are Oman, United Arab Emirates, Qatar, Bahrain, Saudi Arabia, Kuwait, Iraq, and Iran. They comprise the world's major oil-producing area.

Gulf Stream One of the major ocean currents of the world, flowing from the Florida Strait parallel to the North American coast as far as the Newfoundland banks. It bears NE across the Atlantic as the North Atlantic Drift, branching into two main directions, one flowing N towards Spitsbergen and the other flowing S to form the Canary Current. The warm water benefits the climate of NW Europe.

Gulf War 1. (1991) A conflict between Iraq under Saddam *Hussein and a US-led multinational force including troops from the UK, France, Saudi Arabia, Egypt, Syria, Kuwait, and other Arab states. It was precipitated by Iraq's invasion of Kuwait (2 Aug 1990) and refusal to comply with UN resolutions demanding its withdrawal. The coalition nations built up a military force in Saudi Arabia and, when Iraq continued to be defiant, launched air attacks on Baghdad and other targets on 17 Jan 1991.

Iraq responded to the bombing campaign with missile attacks on Israel and Saudi Arabia. On 24 Feb 1991 the coalition forces began a ground attack, overwhelming the Iraqi troops in Kuwait and advancing into southern Iraq. The coalition attack ceased on 28 Feb when Iraq agreed to comply with UN resolutions. However, tensions between Iraq and the West continued, with US bombing raids on Iraqi bases in 1993, 1996, and 1998, and led eventually to the *Iraq War of 2003 (sometimes called the "second Gulf War"). 2. See IRAN-IRAQ WAR.

gulfweed Tropical *brown algae, also called rockweed or sea holly, of the genus *Sargassum*, especially *S. natans*, which forms huge free-floating masses of seaweed in the Sargasso Sea.

gull A seabird belonging to the subfamily *Larinae* (about 40 species), seen mostly in coastal regions. Up to 75 cm long, gulls have long pointed wings and a strong slightly hooked bill. Gulls are typically grey and white. Some gulls feed on fish but most are scavengers. Family: *Laridae* (gulls and terns); order: *Charadriiformes* (gulls, plovers, etc.).

gullet See OESOPHAGUS.

gums Adhesive substances exuded by plants. They are odourless tasteless amorphous *carbohydrates that form either clear liquid solu-

tions or gelatinous mixtures with water. **Gum arabic** (or gum acacia) is obtained from trees of the genus *Acacia*. **Gum tragacanth** is extracted from shrubs of the genus *Astragalus*.

gum tree A tree of the genus *Eucalyptus* (about 600 species), so called because the whole tree is rich in resin and aromatic oils.

gun metal A type of *bronze containing about 90% copper and sometimes a little zinc, originally used for making cannons. Admiralty gun metal (88% copper, 10% tin, 2% zinc) is used in shipbuilding.

gunnel An eel-like fish of the family *Pholididae* (about 8 species), found in N Atlantic and N Pacific coastal waters, feeding on invertebrates. The rock gunnel (*Pholis gunnellus*), also called butterfish, is 30 cm long and brownish with 9–13 black spots along the dorsal fin. Order: *Perciformes*.

gunpowder An explosive mixture of potassium nitrate, sulphur, and powdered charcoal. Invented by the Chinese many centuries before its description by Roger *Bacon in the 13th century, it has had a profound effect on human conflict.

Gunpowder Plot See FAWKES, GUY.

Guomindang (or **Kuomintang**) The Na-

Gulf Stream

tional People's Party of *Taiwan (Republic of China). Organized in 1912 from Sun Yat-sen's Alliance Society, it formed an alliance with the new Chinese Communist Party (CCP) in 1924. Following Sun's death (1925), the Guomindang was led by *Chiang Kai-shek and with the CCP had gained control of most of China by 1926. A break between the two parties (1927) led to civil war until Japanese conquests in China (see SINO-JAPANESE WARS) necessitated renewed cooperation in 1937. After Japan's defeat (1945), civil war resumed until a communist victory (1949) drove the Guomindang into exile in Taiwan.

guppy A freshwater fish, *Lebistes reticulatus*, native to N South America and the West Indies. Male guppies are up to 4 cm long and brightly coloured. Females produce live young at monthly intervals. Guppies are popular aquarium fish. Family: *Cyprinodontidae*.

Gurkhas Soldiers of Nepalese origin who have served in the British Army since 1815. The name derives from the ruling dynasty of Nepal.

gurnard A carnivorous bottom-dwelling fish, also called sea robin, belonging to a family (*Triglidae*; about 40 species) found in temperate and tropical seas. It has a tapering body, up to 70 cm long, a large armoured head, and produces sound by vibrating its swim bladder. The flying gurnards belong to the family *Dactylopteridae*. Order: *Scorpaeniformes*.

Gutenberg, Johann (c. 1400–c. 1468) German printer, who invented printing with movable metal type. In 1448 he received the financial backing of Johann Fust (1400–66) and by 1455 had produced his great 42-line Bible (the Gutenberg Bible). Fust successfully sued Gutenberg in 1455 for the repayment of his loan and the impoverished Gutenberg was forced to relinquish his machinery.

gutta percha A brownish leathery material obtained from the latex of various trees of the family *Sapotaceae*, especially those of the SE Asian genus *Palaquium*. Once extensively used, for example as an electrical insulator, it has now largely been replaced by synthetics.

Guyana, Cooperative Republic of (name until 1966: British Guiana) A country in the NE of South America, on the Atlantic Ocean. Narrow fertile coastal plains give way to higher undulating areas. Most of the population is of African and East Indian descent. *Economy*: agriculture is important, the main crops being rice and sugar. The most important min-

erals were formerly gold and diamonds, but these have now been overtaken by bauxite. *History*: the coast was first explored by the Spanish in 1499 and settlements were founded by the Dutch in the 17th century. The area became a British colony, as British Guiana, in 1831. In 1961 it gained internal self-government under Cheddi Jagan. In 1966, as Guyana, it became independent within the British Commonwealth. It is also a member of CARICOM. The Marxist Cooperative Republic of Guyana was formed in 1970. The 1980s saw deepening economic crisis and social unrest; free elections were held in 1992 (the first for 28 years). In 1999 Bharrat Jagdeo became president. Official language: English. Currency: Guyana dollar of 100 cents. Area: 210 000 sq km (83 000 sq mi). Population (2003 est): 778 000. Capital: Georgetown.

Gwalior 26 12N 78 09E A city in India, in Madhya Pradesh. It developed around its impressive fortress, which is believed to date from the 6th century AD. Population (1991): 692 982.

Gwyn, Nell (1650–87) English actress. Originally an orange seller in Drury Lane, she achieved fame as an actress and became Charles II's mistress, bearing him two sons. "Let not poor Nellie starve," are said to have been his last words.

Gwynedd A county of NW Wales, bordering on the Irish Sea. It was created in 1974 from the counties of Anglesey, Caernarfonshire, Merionethshire, and part of W Denbighshire. In 1996 it became a unitary authority; Anglesey was restored as an independent county and the NE became part of the new county borough of Conwy. It is predominantly mountainous, rising to 1086 m (3563 ft) in Snowdon. Area: 1027 sq km (397 sq mi). Population (2001): 116 838. Administrative centre: Caernarfon.

gymnosperms A group of plants, most of which are trees, whose sole consistent characteristic is that their seeds are borne naked, often on *cone scales. They were formerly classified as a class, *Gymnospermae*, but are now generally split into separate phyla: *Coniferophyta* (see CONIFER); *Ginkgophyta* (see GINKGO); *Cycadophyta* (see CYCAD); and *Gnetophyta* (e.g. *welwitschia*). There are several extinct orders, including the *Cycadofilicales* (see SEED FERN) and the *Cordaitales*.

gymnure An insectivorous mammal belonging to the family *Erimacidae* of SE Asia, also called hairy hedgehog. There are four species, including the *moon rat. Short-legged and flat-footed, 15–60 cm long, they live in thick undergrowth and hunt mainly at night.

gynaecology The branch of medicine and surgery concerned with diseases of women, particularly those affecting the reproductive system. **Obstetrics** deals with the care of women during pregnancy, childbirth, and the period immediately after delivery.

Gypsophila A genus of slender annual or perennial herbs (about 120 species), native to the Mediterranean area. Up to 1.5 m high, they have white or pink flowers. Family: *Caryophyllaceae* (pink family).

gypsum A colourless or white mineral consisting of hydrated calcium sulphate found in clays, shales, and limestones. Rock gypsum is often red-stained, granular, and found in layers. Gypsite is impure and earthy, occurring as surface deposits. Alabaster is a pure compact fine-grained translucent form. Satin-spar is fibrous and silky. Selenite occurs as transparent crystals in clays and mudstones. Gypsum is used in the manufacture of cement, rubber, paper, plaster of Paris, and blackboard chalk.

gypsy moth A moth, *Lymantria dispar*, distributed throughout the N hemisphere. Males are brownish grey and females white. The larvae, which feed on a variety of trees, are a serious pest. See also TUSsock Moth.

gyrfalcon The largest *falcon, *Falco rusticolus*, which breeds in N Eurasia, North America, and mountainous regions of Asia. It is 60 cm long and its plumage varies from pure white speckled with black to dark grey with dense black barring. It hunts for hares, rodents, and ground-dwelling birds.

gyrocompass See COMPASS.

gyroscope A device consisting of a heavy wheel mounted in a double gimbal so that it is free to rotate about three mutually perpendicular axes. Once spinning, the wheel maintains the same orientation in space, even when the gimbals are turned. It is used as a directional sensor in many instruments (gyrocompass, gyro horizon, automatic pilot).

Haakon VII (1872–1957) The first King of Norway (1905–57) following the restoration of Norwegian independence. In 1896 he married Maud (d. 1938), the daughter of Edward VII of the UK. His refusal to abdicate during the German occupation (1940–45) encouraged Norwegian resistance.

Haarlem 52 23N 4 38E A city in the W Netherlands, the capital of North Holland province. It is a major trade centre for bulbs and is noted for its Frans Hals museum and its fine cathedral. Population (1999 est): 148 262.

habeas corpus (Latin: have the body) A remedy against unlawful confinement, consisting of a writ ordering the person alleged to have unlawful custody of a prisoner to produce him or her before the court and to comply with any court orders. The writ may be used to test the legality of imprisonment but not to appeal against a lawful conviction.

Haber-Bosch process A method for the bulk production of ammonia from hydrogen and atmospheric nitrogen. The pure gases are passed over an iron catalyst at about 500°C and a pressure of 500 atmospheres. The process was devised by Fritz Haber (1868–1934) and adapted by Carl Bosch (1874–1940).

Habsburgs (or **Hapsburgs**) The most prominent European royal dynasty from the 15th to 20th centuries. The family originated in Switzerland in the 10th century. In 1273 Rudolph I (1218–91) was elected Holy Roman Emperor and consolidated his family's possession of Austria, Carniola, and Styria. The Habsburgs held the imperial title again from 1438 to 1740 and from 1745 to 1806. In 1516 *Charles V inherited the Spanish Crown, adding Spain with its European and American possessions to the Habsburg domains. He left the Spanish Crown to his son, *Philip II, and his Austrian possessions to his brother, Ferdinand I (1503–64). The Spanish branch ruled until 1700; the Austrian Habsburgs became emperors of Aus-

tria in 1804 and of *Austria-Hungary in 1867, which they ruled until the end of World War I.

hadal zone See ABYSSAL ZONE.

haddock A carnivorous food fish, *Melanogrammus aeglefinus*, related to *cod, that usually occurs in shoals near the bottom of N Atlantic coastal waters. It is up to 1 m long, grey or brown above and silvery below, with two anal and three dorsal fins. It is eaten both fresh and smoked.

Hades (or **Pluto**) The Greek god of the dead; also the name of the underworld he ruled. He was the brother of Zeus and Poseidon and husband of *Persephone, whom he abducted. The souls of the dead were ferried to Hades across the River Styx by *Charon.

Hadrian (76–138 AD) Roman emperor (117–38). He was admitted to the imperial household as Trajan's ward in 85 and had a successful military career. On Trajan's death he became emperor and from 120 to 131 toured the provinces. His foreign policy was generally defensive (see HADRIAN'S WALL).

Hadrian IV See ADRIAN IV.

Hadrian's Wall A Roman frontier defence work. Begun in 122 AD, it was the N frontier of Roman Britain for 250 years. Designed to contain the Scottish tribes, it stretched 120 km (85 mi) from Tyne to Solway. It eventually comprised ditch, stone and turf wall (incorporating forts and signalling turrets), road system, and "vallum" (earthworks delimiting the military area). Substantial portions still stand.

hadron Any elementary particle that takes part in *strong interactions. The group thus includes all baryons and mesons but not leptons or the photon. See PARTICLE PHYSICS.

haematite (or **hematite**) The principal ore of iron, ferric oxide, varying in colour from red to grey to black. It contains over 70% iron.

It occurs either in crystalline form (specular iron ore) or in massive form.

haematology The study of blood and its diseases. Haematology is concerned particularly with treating *leukaemias, *haemophilia, and rare kinds of anaemia.

haemoglobin The substance, contained within the red blood cells (see ERYTHROCYTE), that is responsible for the colour of blood. In humans haemoglobin consists of a protein (globin) combined with an iron-containing pigment (haem). Haem combines with oxygen to form oxyhaemoglobin, which gives arterial blood its bright-red colour and is the means by which oxygen is transported around the body. Oxygen is released at the tissues and the pigment acquires a bluish tinge, responsible for the bluish-red colour of venous blood.

haemophilia A hereditary disease in which the blood does not clot properly due to absence of one of the clotting factors. The disease is almost entirely restricted to boys but is transmitted through the mother. If an affected person (a haemophiliac) cuts himself seriously he needs immediate treatment. The disease can be controlled by administration of Factor VIII, obtained from human blood.

haemorrhoids (or **piles**) Swollen (varicose) veins in the anal canal, which may enlarge sufficiently to hang down outside the anus. Piles may cause bleeding from the anus and itchiness; in severe cases they may need to be surgically removed or injected with a sclerosing agent, which makes them shrivel up.

Ha-er-bin (English name: Harbin) 45 45N 126 41E A port in NE China, the capital of Heilongjiang province on the Songhua River. A trading and industrial centre, it was a haven for refugees from the Russian Revolution (1917). Population (1999 est): 2 586 978.

hafnium (Hf) A dense ductile metal, first detected in zircon ($ZrSiO_4$) in 1923 and named after the Latin (Hafnia) for Copenhagen, where it was discovered. It is chemically similar to zirconium. The capacity of hafnium to absorb neutrons is used to control nuclear reactors, especially in submarines. Its compounds include the chloride ($HfCl_4$) and other halides, the oxide (HfO_2), the carbide (HfC), and the nitride (Hf_3N_4). At no 72; at wt 178.49; mp $2331 \pm 20^\circ C$; bp $4603^\circ C$.

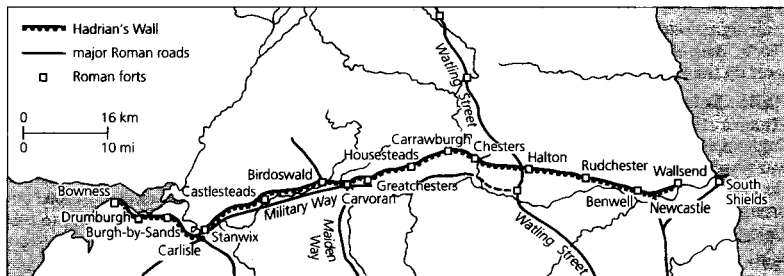

Haganah (Hebrew: defence) The irregular organization of the early Jewish settlers in Palestine established in 1920 to counteract the attacks of the Palestinian Arabs. After the partition of Palestine in 1947, the Haganah became the defence force of the Jewish state, and in 1948 the national army of the state of Israel.

hagfish A fishlike vertebrate, 40–80 cm long, sometimes called slime eel, belonging to a family (*Myxiniidae*; about 20 species) of *cyclostomes. They occur on or near the sea bottom in cold regions and feed on dead or dying fish. Hagfishes are initially hermaphrodites but develop either male or female sex organs.

Haggard, Sir H(enry) Rider (1856–1925) British novelist. His five years in government service in South Africa provided the background of his first novel, *King Solomon's Mines* (1885), reflecting his own liberal views. Of his many later romances, *She* (1887) is the best known.

haggis A traditional Scottish dish, eaten especially on Burns' Night (25 Jan). Haggis is made from minced sheep's heart, liver, and lungs with onion, oatmeal, suet, and seasonings, all stuffed into a bag made from the sheep's stomach.

Hague, The (Dutch name: 's Gravenhage or Den Haag) 52 05N 4 16E The seat of government

Hadrian's Wall. The most extensive of the Roman remains in the UK.

of the Netherlands and capital of South Holland province. It became the seat of the States General of the seven United Provinces of the Netherlands in the 16th century. It is the residence of the court and the International Court of Justice is located here. Notable buildings include the 13th-century Binnenhof, in which the government is housed. It is a commercial and residential centre with some light industry. Population (1999 est): 440 743.

Hahn, Otto (1879–1968) German chemist and physicist. With Lise *Meitner he discovered protactinium in 1918. He continued to work with Meitner until she was forced to leave Germany in 1938. Together they discovered the process of nuclear fission. In 1944 he was awarded the Nobel Prize for Chemistry.

Hahnemann, Samuel Christian Friedrich (1755–1843) German physician and founder of *homeopathy. Hahnemann's methods aroused controversy among his contemporaries and he was forced to leave his practice in Leipzig, eventually settling in Paris.

hahnium (Ha; element 105) An artificial transuranic element, synthesized in the USA in 1970 by bombarding californium-249 with nitrogen-15 in a particle accelerator and possibly also in the Soviet Union in 1967 by a different method. Named after Otto Hahn. At no 105; at wt (260).

Haifa 32 49N 34 59E A town in NW Israel, on the Mediterranean coast by Mount Carmel. It was the scene of fighting in the 1948–49 Arab-Israeli conflict and has since developed into a manufacturing town. Population (2005 est): 268 500.

Haig, Douglas, 1st Earl (1861–1928) British field marshal. Commander of the first army corps in France and later commander in chief of the British Expeditionary Force during World War I, he was criticized for the appalling losses of the Somme and Passchendaele campaigns. Under the supreme command of *Foch, Haig directed the final victorious assault on the Hindenburg line.

Haile Selassie I (1892–1975) Emperor of Ethiopia (1930–36, 1941–74). In 1936 he fled to England after the invasion by the Italians, but was restored to the throne by the Allies in 1941. He did much to modernize Ethiopia and was prominent in international affairs before his deposition by a military coup.

Hainan Island A Chinese island, the largest in the South China Sea, apart from Taiwan, and separated from the mainland by **Hainan Strait**.

Sparsely populated, it is one of China's least developed regions. Rubber and timber are produced and iron ore and other minerals are mined. Area: 33 991 sq km (13 124 sq mi). Population (2000 est): 7 870 000. Capital: Haikou.

Hainaut (Flemish name: Henegouwen; French name: Hainault) A province in SW Belgium, bordering on France. It contains important coalfields and industries include iron and steel processing. Area: 3997 sq km (1466 sq mi). Population (2005 est): 1 287 172. Capital: Mons.

hair Threadlike structures forming the body covering of mammals (see SKIN). Each hair grows from the base of a hair follicle embedded in the lower layer (dermis) of the skin and consists of dead cells made largely of the protein *keratin. In most mammals hair forms an insulating and protective coat, which reduces heat loss from the body.

Haiti, Republic of A country in the Caribbean Sea, occupying the W third of the island of Hispaniola. Much of the country is mountainous and forested, with fertile plains lying between the three main mountain ranges. Most of the population is of African descent. *Economy*: mainly agricultural, mostly organized in small farms. The main crops are coffee (the principal export), sugar, rice, bananas, and sisal. Haiti joined the Caribbean Community in 1997. Since the mid-1990s political instability has led to a deepening economic crisis. *History*: the island was discovered by Columbus in 1492 and became a Spanish colony. The E part was ceded to France in 1697, becoming the most prosperous of the French colonies, and the remainder was temporarily ceded between 1795 and 1809. In 1804, under Gen Jean Jacques Dessalines (c. 1758–1806), Haiti gained its independence; a period of unrest was followed by union with the rest of the island (1822–44). For most of the time since it has been a republic; after a series of coups Dr François *Duvalier came to power in 1957 and was succeeded in 1971 by his son, Jean-Claude Duvalier. In 1986 Duvalier's brutal regime fell in a military coup. After elections in 1991 Jean-Bertrand Aristide became president but was deposed by the military. In 1994, aided by US troops, Aristide assumed the presidency. He was succeeded (1996) by his associate René Préval, whose disputes with parliament (1999) led to a constitutional crisis. Aristide was re-elected in 2000 but the result was widely disputed, leading to further unrest. In 2004 rebels advanced on the capital and Aristide went into exile. Préval was re-elected in 2006. Official languages: French and Haitian creole. Currency: gourde of 100

centimes. Area: 27 750 sq km (10 700 sq mi). Population (2003 est): 7 528 000. Capital: Port-au-Prince.

hajj The pilgrimage to Mecca that, circumstances permitting, every able-bodied Muslim with adequate means is expected to make at least once in his or her lifetime.

hake A food fish, of the genus *Merluccius*, that is related to *cod and occurs off European, African, and American coasts. Its elongated body, up to about 1 m long, is dark grey above and lighter below, with two dorsal fins.

Haldane, Richard Burdon, 1st Viscount (1856–1928) British army reformer. A Liberal MP (1885–1911), he was secretary for war from 1905 to 1912. He formed the Territorial Force (see TERRITORIAL ARMY) and facilitated the mobilization of the British Expeditionary Force at the outbreak of World War I. He became Lord Chancellor in 1912 but was dismissed in 1915 because of accusations that he was pro-German. He also helped to found the London School of Economics (1895). His brother **John Scott Haldane** (1860–1936) was a physiologist, noted for his investigations of human respiration. Haldane established that the rate of breathing was regulated according to the concentration of carbon dioxide in the blood. He also improved mine safety by demonstrating the toxic effects of carbon monoxide. J. S. Haldane's son **John Burdon Sanderson Haldane** (1892–1964) was a geneticist and Marxist philosopher, who contributed to many aspects of biology, including evolution and population genetics.

half-life The time taken for half the atoms in a sample of a radioactive isotope to decay. It is therefore a measure of the activity of an isotope. A very active isotope may have a half-life of only a millionth of a second, whereas some have half-lives of millions of years.

halibut A *flatfish of the genus *Hippoglossus*, especially *H. hippoglossus*—a large food fish, up to about 2 m long, found in N Atlantic coastal waters. The eyed (right) side is brown or dark green with mottling. Family: *Pleuronectidae*.

Halifax 1. 53 44N 152W A town in N England, in Calderdale unitary authority, West Yorkshire on the River Calder. Halifax has a strong wool textile tradition going back to the 13th century. Carpets, woollens, and worsteds are manufactured as well as machinery. Population (1991): 91 069. 2. 44 38N 63 35W A city and major port in E Canada, the capital of Nova Scotia on the Atlantic Ocean. Founded as a British

naval base (1749), it dominates the cultural life, commerce, and industry of the *Maritime Provinces. Its industries include shipbuilding, oil refining, steel, and food processing. Population (1996): 113 910.

Hall, Sir Peter (1930–) British theatre director. He was director of the Royal Shakespeare Company from 1960 to 1968 and director of the National Theatre Company from 1973 to 1988. He led his own company from 1988 to 1998 and is now based in the USA.

Halle 51 30N 11 59E A city in central Germany, on the River Saale. The birthplace of Handel, Halle has many fine old buildings. Its industries include sugar refining and coalmining. Population (1999 est): 258 500.

Hallé, Sir Charles (Karl Hallé; 1819–1895) German conductor and pianist. Hallé settled in Britain in 1848 and in 1857 established a series of concerts in Manchester, for which he founded and conducted the **Hallé Orchestra**.

Hall effect If a conductor carrying an electric current is placed in a transverse magnetic field, an electric field appears across the material, perpendicular to both the current and the magnetic field. The charges flowing in the material are displaced to one side thus creating a potential difference. Named after Edwin H. Hall (1855–1938).

Halley, Edmund (1656–1742) British astronomer, who was appointed professor of geometry at Oxford University in 1703. He was the first to realize that *comets have periodic orbits. In 1705 he identified a particular comet, now known as **Halley's comet**, as having a period of 76 years (appearing 1866, 2062, etc.). He also discovered that stars have a proper motion of their own (1718) and was appointed astronomer royal to succeed *Flamsteed (1720).

hallmarks A set of marks stamped onto gold, silver, or (since 1975) platinum objects manufactured in the UK, as a guarantee of purity. Each article has up to five marks: the mark of the assay office (or hall), a standard mark to indicate quality, a date mark, a duty mark (1784–1890) consisting of the sovereign's head showing that the excise duty had been paid, and the maker's mark. Gold articles also have a mark to indicate their purity—in *carats (prior to 1975) and as the number of parts per 1000 thereafter. Since 1999 all articles made of a precious metal in the EU must carry an indication of purity in this numerical form. See illustration on p. 402.

Hallowe'en 31 Oct, the eve of All Saints' Day.

The name is a contraction of All Hallows (hallowed or holy) Eve. In pre-Christian Britain, 31 Oct was the eve of New Year, when the souls of the dead were thought to revisit their homes. Customs include the shaping of a demon's face from a hollow turnip or pumpkin, in which a candle is then placed.

hallucinogens Drugs that produce hallucinations due to their stimulant action on the brain. Such drugs are also described as psychedelic. Hallucinogens, which include *cannabis, *ecstasy, and *LSD, tend to lead to *drug dependence.

halogens The elements forming group VII of the *periodic table: fluorine, chlorine, bromine, iodine, and astatine. In chemical reactions they tend to form negative ions or covalent bonds and they have a valence of 1. All are reactive, particularly fluorine and chlorine. They produce salts on contact with metals ("halogen" means salt-yielding) and react with other nonmetals.

A typical hallmark, from a sterling silver article assayed in London in 1796.

marks of present assay offices

London

A leopard's head introduced in 1300 (crowned between 1478 and 1821).

Birmingham

An anchor introduced in 1773.

Sheffield

The crown, introduced in 1773, was replaced by the rose in 1975.

Edinburgh

The castle introduced in the mid-16th century. The thistle was introduced in 1759. The castle is now used.

marks of some former assay offices

Chester

Newcastle-on-Tyne

York

Norwich

Exeter

Glasgow

standard marks

Sterling silver

Britannia silver

9 carat gold

Platinum

All assay offices employ the same marks for both Britannia silver (95.84% pure) and Sterling silver (92.5%), except London, which, before 1975, used a separate Britannia mark.

hallmarks

Hals, Frans (c.1581–1666) Dutch painter of portraits and scenes of everyday life. He was born in Antwerp but worked mainly in Haarlem. Apart from his *Laughing Cavalier* (1624; Wallace Collection, London), he is best known for his group portraits. Later works include *Lady-Governors of the Almshouse at Haarlem* (1664; Frans Hals Museum, Haarlem), influenced by Rembrandt.

Halton A unitary authority in NW England, in Cheshire, consisting of the towns of Widnes and Runcorn. Area: 75 sq km (29 sq mi). Population (2004 est): 118 900.

hamadryas A small *baboon, *Papio hamadryas*, of NE Africa and Saudi Arabia. 100–140 cm long including the tail (40–60 cm), hamadryas baboons have a long silvery-brown mane, pinkish face, and red buttocks. They were sacred animals to the ancient Egyptians.

Hamas An organization formed in 1987 with the aim of creating an Islamic Palestinian state. Since 1996 it has carried out a series of suicide bombings in Israeli cities. Following elections in 2006, Hamas gained control of the Palestinian Authority. In 2007 Hamas unilaterally seized control in the Gaza Strip.

Hamburg 53 33N 10 00E A city in N Germany, on the Rivers Elbe and Alster. A major port and leading commercial centre, it is also important for its cultural activity, with a university (1919), art gallery, and opera house (1678). Its many industries include shipbuilding, engineering, and food processing. *History:* its alliance with Lübeck (1241) became the basis of the Hanseatic League. It was a trading centre from the middle ages and the first German stock exchange was established here (1558). It was severely bombed during World War II. Population (2004 est): 1 734 083.

Hamilcar Barca (died c.229 BC) Carthaginian general and Hannibal's father. Commander in Sicily during the first Punic War, he negotiated peace in 241. After suppressing rebellious mercenaries in Carthage, he invaded Spain. He was drowned after the siege of Helice.

Hamilton 1. 43 15N 79 50W A city and port in central Canada, in S Ontario on Lake Ontario. Canada's main centre of heavy industry, it is particularly important for iron and steel, motor vehicles, machinery, chemicals, and electrical goods. Population (2001): 490 268. **2.** 37 46S 175 18E A city in New Zealand, in N North Island on the Waikato River. It is the most important inland centre and serves a pastoral and lumbering region. The University of Waikato was

established in 1964. Population (1999 est): 117 100.

Hamilton, Emma (c.1761–1815) The mistress of Horatio *Nelson. She was previously the mistress of his uncle Sir William Hamilton (1730–1803), whom she married in 1791. She met Nelson in 1793; they became lovers and in 1801 their daughter Horatia (d.1881) was born. After Nelson's death (1805), Lady Hamilton squandered her inheritance and fled to Calais (1814), where she died.

Hamito-Semitic languages A language family spoken in N Africa and S Asia. More appropriately known as Afro-Asiatic, it has five branches that descend from an ancestor language, Proto-Hamito-Semitic, which was spoken between the 6th and 8th millenniums BC. The five branches are Egyptian, Berber, Cushitic, Semitic, and Chadic.

Hammarskjöld, Dag (Hjalmar Agne Carl) (1905–61) Swedish international civil servant. The son of Hjalmar Hammarskjöld (1862–1953), who was a prime minister of Sweden (1914–17), he headed the Swedish delegation to the UN and in 1953 became its secretary general. He dealt with the Suez crisis (1956) and the civil war in the Congo (1960). He was killed in a plane crash and awarded the Nobel Peace Prize posthumously in 1961.

hammerhead shark A *shark of the family *Sphyrnidae*, found in warm and temperate salt waters. Up to 4.5 m long, the head is flattened and extended laterally into two hammer- or spade-shaped lobes, which bear the eyes and nostrils. They feed primarily on fish but may attack other animals, including man.

Hammerstein II, Oscar (1895–1960) US lyricist and librettist. With Richard Rodgers he wrote *Oklahoma!* (1943), *Carousel* (1945), *South Pacific* (1949), *The King and I* (1951), and *The Sound of Music* (1959).

hammer throw A field event for men in athletics. The hammer is an iron or brass sphere weighing 16 lb (7.26 kg) attached to a wire handle and grip. It is thrown with both hands within a circle 7 ft (2.13 m) in diameter. The event has been open to women since 1995 (since 2000 in the Olympics). World record: 86.74 m (1986) by Yuri Sedykh (Soviet Union).

Hammett, Dashiell (1894–1961) US novelist. He worked as a private detective for eight years before writing his first detective stories. His novels, the realistic and economical style of which influenced Raymond *Chandler, include *The Maltese Falcon* (1930) and *The Thin Man* (1932).

Hampshire A county of S central England, on the English Channel. Portsmouth and Southampton became independent unitary authorities in 1997. It consists mainly of undulating lowlands, rising to chalk downlands in the N and E. The chief rivers, the Test and Itchen, drain into the Solent, which separates the Isle of *Wight from the mainland. It is predominantly agricultural with dairy and arable farming. Industries, centred on Southampton, include shipbuilding and oil refining and there are important naval bases at Portsmouth and Gosport. Tourism is important in the *New Forest. Area (excluding unitary authorities): 3679 sq km (1420 sq mi). Population (2001, excluding unitary authorities): 1 240 032. Administrative centre: Winchester.

Hampton, Lionel (1913–2002) US Black jazz band leader and vibraphone player, who played with Benny Goodman before forming his own orchestra in 1940. Hampton was the first jazz musician to popularize the vibraphone.

Hampton Court A Tudor and Stuart palace on the River Thames near London. Built by Cardinal Wolsey, it was given in the 1520s to Henry VIII, who made substantial alterations; in the 1690s *Wren began a further rebuilding project for William III. The palace, now open to the public, has an important collection of paintings. In 1986 it was damaged by fire.

hamster A small *rodent of the family *Cricetidae*. The common hamster (*Cricetus cricetus*), native to Europe and W Asia, has a red-brown coat with white patches on the flanks, neck, and cheek. It feeds on seeds and grains. The golden hamster (*Mesocricetus auratus*) is a domestic pet.

Han (206 BC–220 AD) A Chinese dynasty founded by the general Liu Bang (or Liu Pang; 256–195 BC), who overthrew the preceding Qin dynasty. The power of the Han was consolidated by the emperor, Wu Di (or Wu Ti; 157–87 BC; reigned 140–87), who completed the conquest of a vast empire. Chinese export of silk increased, and a vast canal-building programme was started. Paper was invented by the Han Chinese, who also produced early forms of porcelain. The programme of expansion led to financial difficulties that enabled Wang Mang to usurp the throne in 8 AD. The Han dynasty was subsequently restored for a second period, known as the Later Han (23–220 AD).

handball An indoor game played by two teams of seven, with rules similar to those of Association football. Playing time is 2 x 30 min-

utes. The game originated in Scandinavia and was further developed in Germany. It has been an Olympic event since 1972 (for women since 1976).

Handel, George Frederick (1685–1759) German composer. He studied in Halle and travelled to Italy, where he became famous as a harpsichordist and as a master of the Italianate style of composition. Handel first visited England in 1712 and became musical director to James Brydges, first duke of Chandos (1673–1744), in 1718. He subsequently became music master to the family of the Prince of Wales and director of the Royal Academy of Music on its foundation in 1720. His Italian operas were successfully produced in London; from 1739 he turned to writing such oratorios as *Saul* (1739), and *Messiah* (1742). In 1751 he began to lose his sight although he continued to compose. His mastery of composition is reflected in the range of his works, which include the *Water Music* (1717), *Music for the Royal Fireworks* (1749), concerti grossi, sonatas, organ concertos, harpsichord suites, and anthems.

hang-gliding Unpowered flight in a hang-glider, consisting of a large bat-shaped cloth wing on a light metal framework from which the pilot hangs in a harness, holding a horizontal control bar. In flight, the wing fills to form an aerofoil (see AERONAUTICS). The first hang-glider was built by Otto Lilienthal (1848–96), but the prototype for modern design was the sail-wing invented by Frances Rogallo (1912–). Hang-gliding became popular in the late 1960s. In **paragliding** a mattress-like canopy allows greater manoeuvrability.

Hanging Gardens of Babylon Ancient gardens in the palace of Nebuchadnezzar II (604–562 BC) on the E side of Babylon. One of the Seven Wonders of the World, they were built on top of stone arches and watered from the Euphrates by a complicated mechanical system.

Hangzhou (Hang-chou or Hangchow) 30 18N 120 07E A city in E China, the capital of Zhejiang province on Hangzhou Bay, an inlet of the East China Sea. It was the capital (1132–1276) of the Southern Song dynasty. A picturesque tourist centre, its varied industries include silk production. Population (1999 est): 1 346 148.

Hanks, Tom (1956–) US film actor, who made his name in such comedies as *Splash* (1984). Later films include *Philadelphia* (1993) and *Forrest Gump* (1994), both of which earned him

Oscars, *Saving Private Ryan* (1998), and *Castaway* (2000).

Hannibal (247–c. 183 BC) Carthaginian general. Appointed commander in Spain in 221, he deliberately provoked the second Punic War with Rome. In 218 he crossed the Alps in winter, losing about 10 000 of his 35 000 men. For two years he devastated Italy, but lost ground in the face of Fabius' guerrilla tactics. Recalled to defend Carthage after Scipio Africanus' invasion of Africa, Hannibal was defeated at Zama (202). Suspected of rebellion, he was forced to flee Roman retribution. He committed suicide to avoid capture.

Hanoi 20 57N 105 55E The capital of Vietnam, in the NE of the country on the Red River. The capital of the Vietnamese empire from the 11th until the 17th centuries, it was occupied by the French in 1873 and became the capital of French Indochina. Following the Japanese occupation in World War II, it became the capital of the Democratic Republic of Vietnam. Many ancient buildings in the Vietnamese quarter remain, together with several imposing buildings in the European quarter built by the French. Population (1993 est, urban area): 2 154 900.

Hanover (German name: Hannover) 52 23N 9 44E A city in N Germany, the capital of Lower Saxony on the River Leine. It is a transshipment port and a commercial and industrial centre. After the destruction of World War II it was largely rebuilt; the Leine Palace (founded 1636) is now the *Land* parliament building. Hanover's manufactures include machinery, rubber, textiles, and motor vehicles. *History:* in 1638 Hanover became the capital of the future electorate and kingdom of Hanover. In 1714 Elector George Louis became George I of Great Britain (see SETTLEMENT, ACT OF). He is buried in Hanover. British monarchs were Electors (later Kings) of Hanover until 1837 when Victoria, as a woman, was debarred from succeeding to the Hanoverian throne. Population (1999 est): 515 200.

Hansard The official reports of debates in the UK *parliament. The name, which was officially adopted in 1943, is that of the family that first printed the reports: **Luke Hansard** (1752–1828) and his son **Thomas Curson Hansard** (1776–1833). The Stationery Office published Hansard from 1890.

Hanseatic League An association of N German trading towns (the Hanse) formed in the 13th century to protect their economic interests overseas. By the mid-14th century, the

League, comprising some hundred towns, had become a powerful corporate body and conducted a number of trade wars with Denmark and England. The rise of the non-German Baltic states and changing trade routes contributed to the League's declining influence. It was finally dissolved in 1669.

Hanukka A Jewish festival, commemorating the revolt of the *Maccabees. It falls in mid-winter and is celebrated by lighting a lamp each day, traditionally in an eight-branched candelabrum called a *menorah*.

Hanuman In Hindu mythology, a monkey god and one of the principal characters in the *Ramayana*. There are numerous temples dedicated to him in both India and Japan.

hara-kiri The honourable way of death for Japanese *samurai. In its strict form it involved ceremoniously cutting one's stomach open with a dagger before decapitation by the single blow of another samurai's sword. It is still sometimes practised by Japanese suicides, although it is now illegal.

Harald V (1937–) King of Norway (1991–), succeeding his father, Olaf V. Educated at Oxford, he subsequently served in the Norwegian forces.

Harare (name until 1982: Salisbury) 1750 S 3102 E The capital of Zimbabwe, on a plateau in the NE. Founded in 1890, it was the capital of the Federation of Rhodesia and Nyasaland (1935–63). It has two cathedrals and is the centre of a tobacco-growing area. Population (1998 est): 1 686 169.

harbour seal The common *seal, *Phoca vitulina*, of coastal Pacific and Atlantic waters. Up to 1.8 m long, with a blotchy grey coat, it inhabits sandbanks and river estuaries, feeding on fish. Family: *Phocidae*.

Hardanger Fjord A fjord in SW Norway, S of Bergen, penetrating inland from the North Sea for 110 km (68 mi).

Hardecanute (or **Harthacanute**; c. 1019–42) The last Danish King of England (1040–42), succeeding his illegitimate half-brother Harold I Harefoot, and King of Denmark (1035–42). He razed Worcester after a riot against his tax collectors.

Hardie, J(ames) Keir (1856–1915) British Labour politician. Born in Scotland, he became a coalminer at the age of ten. He founded the Scottish Parliamentary Labour Party in 1888 and, as an Independent Socialist MP (1892–95), he helped to found (1893) the Independent

Labour Party. Again an MP (1900–15), he became chairman (1906), of the future *Labour Party.

Hardy, Thomas (1840–1928) British novelist and poet. His major novels, which include *The Return of the Native* (1878), *The Mayor of Casterbridge* (1886), and *Tess of the D'Urbervilles* (1891), are tragic tales set in his native Dorset ("Wessex" in the novels). After public outrage at the alleged immorality of *Jude the Obscure* (1895) he published only verse, beginning with *Wessex Poems* (1898), and an epic drama, *The Dynasts* (1903–08). He was awarded the OM in 1910.

hare A mammal belonging to the widely distributed family *Leporidae* (which also includes the rabbits). Hares are typically larger than rabbits and have long black-tipped ears. They live and breed in the open and are mainly nocturnal, feeding on grass and bark. Chief genus: *Lepus* (about 26 species); order: *Lagomorpha*.

Hare, Sir David (1947–) British playwright. His plays include *Plenty* (1978), *Pravda* (1985), *Racing Demon* (1990), *The Blue Room* (1998), and *The Permanent Way* (2003).

harebell A herbaceous perennial plant, *Campanula rotundifolia*, of N temperate regions, growing to a height of 60 cm. It has rounded leaves and blue bell-shaped flowers. Family: *Campanulaceae*.

Hare Krishna movement (Sanskrit: hail Krishna) A quasi-religious cult, the International Society for Krishna Consciousness (ISKCON), founded in New York in 1966 on Hindu principles by an Indian, Swami Prabhupada (1895–1977). Members are vegetarians; gambling, extramarital sex, and the use of drugs are prohibited. They dress in saffron linen robes and the men have shaved heads. Detractors claim that the sect exploits vulnerable young people.

Hargreaves, James (d. 1778) English inventor, who around 1764 invented the spinning jenny, a machine with which several threads could be spun simultaneously. After local spinners, believing that their jobs were threatened, broke up his machines, Hargreaves set up (1768) a small mill in Nottingham.

Harlech 52 52N 4 07W A historic town in NW Wales, in Gwynedd on Cardigan Bay. It is a resort with a famous ruined castle. Population (1991): 1233.

Harlequin A stock character of the commedia dell'arte. Harlequin began as a comic and covetous servant but developed into the lover of Columbine and the central comic figure of the harlequinade, dressed in a bright diamond-

h

patterned costume, masked, and carrying a wooden club.

harmonica The mouth organ: the smallest member of the reed-organ family; its invention is attributed to Sir Charles Wheatstone (1802–75) in 1829. Notes and chords are obtained by blowing or sucking rows of parallel reeds. The instrument's main exponent was Larry Adler (1914–2001).

harmonium A keyboard instrument of the reed organ family, patented in 1848 by Alexandre Debain (1809–77) in Paris. It is a free *reed instrument, the air being blown by a bellows activated by foot pedals. It may have several stops (see ORGAN).

h **harmony** In music, the combining of notes into chords, so that they are heard simultaneously. Before about 1650 composers made use of *polyphony; between about 1650 and about 1900 (the **harmonic period**) a system of harmony evolved based on diatonic chords (see SCALE). Such chords consist of three notes sounded simultaneously; a note of the scale of the *tonality of the composition and the notes a third and a fifth above it. The constituent notes of any chord can be rearranged to provide variety. A **harmonic progression** consists of a particular sequence of chords, especially one leading (or modulating) into another tonality. In the later 19th century harmony became more complex, and tonality ambiguous, in the works of Wagner, Debussy, and others. In the early years of the 20th century Schoenberg first adopted *atonality and subsequently invented *serialism as a substitute for traditional harmony. Other composers of the past hundred years have made use of a wide range of harmonic styles.

Harold I Harefoot (d.1040) Danish King of England (1037–40). The illegitimate son of Canute, he became king while Hardecanute, Canute's legitimate son, was preoccupied in Denmark. Before Hardecanute could oust him, Harold died.

Harold II (c.1022–66) The last Anglo-Saxon King of England (1066), reputedly designated heir by the dying Edward the Confessor. After becoming king, he crushed the forces of his brother Tostig (d. 1066) and Harold III Hardraade of Norway (1015–66) at Stamford Bridge (1066). Harold was killed in the battle of *Hastings by the army of William the Conqueror.

harp A plucked stringed instrument of ancient origin, consisting of an open frame with strings of varying length and tension. The

modern orchestral harp is triangular in shape with about 45 strings stretched between the soundbox and the neck. The pillar contains a mechanism that enables the player to raise each string by one or two semitones by means of pedals at the base. It gives the harp a full chromatic range of six and a half octaves from the B below the bass stave.

Harper, Stephen (Joseph) (1959–) Canadian statesman; prime minister (2006–). He first became an MP in 1993 and was elected leader of the newly formed Conservative Party in 2004.

Harpies In Greek mythology, malicious spirits who carried off their victims to their deaths. They were later portrayed as rapacious birds with ugly women's faces.

harpichord A keyboard instrument with strings plucked by quills, rather than hit by hammers (see SPINET; VIRGINALS; compare CLAVICHORD; PIANO). In the 16th, 17th, and 18th centuries it was an instrument of great importance. The tone can be changed by the addition of stops, which sound strings an octave below or above the note depressed.

harrier A slender long-legged *hawk belonging to a widely distributed genus (*Circus*). Harriers are about 50 cm long and are usually brown with a small bill and a long tail. They fly low over fields and marshes, searching for frogs, mice, snakes, and insects.

Harris See LEWIS WITH HARRIS.

Harrogate 54 00N 133W A residential town and former spa in N England, in North Yorkshire. It is an important centre for conferences and trade fairs. Population (2001): 65 128.

Harrow A residential borough of NW Greater London. Harrow School, founded by John Lyon in 1571, dominates Harrow-on-the-Hill.

hartebeest A long-faced antelope, *Alcephalus busephalus*, of African plains. About 120 cm high at the shoulder, hartebeests are slender fast-running animals, ranging in colour from dark chestnut to fawn; their horns are generally lyre-shaped.

Hartford 41 45N 72 42W A city in the USA, the capital of Connecticut. Trinity College (1823) and the law and insurance schools of the University of Connecticut are situated here. A commercial, industrial, and financial centre, Hartford is one of the leading insurance centres in the world. Population (2004): 124 848.

Hartlepool 1.54 41N 1 13W A port in NE England, in Hartlepool unitary authority, Durham.

It was originally an old fishing port and medieval walled town. Hartlepool's main industries are engineering, clothing manufacture, and services for North Sea oilfields. Population (1991): 87 310. **2.** A unitary authority in NE England, in Durham. Area: 93 sq km (36 sq mi). Population (2004 est): 90 100.

Harvard classification system A system, introduced in the 1890s by astronomers at the Harvard College Observatory (USA), by which stars are classified according to features in their spectra. The stars are grouped into seven major spectral types: O, B, A, F, G, K, and M, in order of decreasing temperature. There are 10 subdivisions for each spectral type, indicated by a digit (0–9) placed after the letter. Stars of one spectral type can be further classified into supergiants, giants, etc., according to their *luminosity. See also HERTZSPRUNG-RUSSELL DIAGRAM.

Harvard University The oldest university in the USA (founded 1636), located at Cambridge, Massachusetts. It is named after the clergyman John Harvard (1607–38). The associated women's college, Radcliffe College, dates from 1879.

harvest mite A *mite, also called chigger and scrub mite, belonging to the genus *Trombicula*. Its larvae are parasitic on vertebrates, including man, feeding on skin and causing inflammation.

Harvey, William (1578–1657) English physician and anatomist, who discovered the circulation of the blood. Harvey studied under the great anatomist Fabricius ab Aquapendente (1537–1619) and later became physician to James I and Charles I. His findings were published in *On the Motion of the Heart and Blood in Animals* (1628).

Haryana A state in N India, mostly in the fertile Upper Ganges plain. Predominantly rural, it produces wheat, other grains, cotton, sugar cane, and oilseeds. There is some light industry, including textiles, agricultural implements, and sugar refining. Area: 44 222 sq km (17 070 sq mi). Population (2001): 21 144 564. Capital: Chandigarh.

Harz Mountains A mountain range extending about 90 km (56 mi) across Germany W of Halle. They are the northernmost range of the European mountain system. The highest peak is the Brocken.

Hashemites The Arab descendants of the prophet Mohammed, including the fourth caliph *Ali (c. 600–67) and the line of hereditary

emirs of Mecca. King Abdullah of Jordan is a modern representative of the line.

Hasidism A Jewish religious movement, founded by the Ba'al Shem Tov (c. 1700–60). Essentially a blend of *kabbalah and popular pietism, Hasidism spread, against strong opposition, throughout the Jewish communities of E Europe in the 18th and 19th centuries. Led by charismatic teachers (*zaddikim*), it stressed simple piety and ecstatic prayer. Most of the Hasidic communities in Europe were wiped out during the *holocaust, but Hasidism still thrives in North America and Israel. Hasidic men are bearded and wear black suits with broad-brimmed hats.

Hastings 50 51N 0 36E A resort town on the S coast of England, in East Sussex. Formerly the chief of the Cinque Ports, it has a ruined castle built by William the Conqueror. Population (2005 est): 84 600. The **Battle of Hastings** between the Normans and the English at Senlac Hill (see **BATTLE**), was fought here on 14 October 1066. William, Duke of Normandy, claiming the English throne, defeated Harold II of England. Both sides suffered heavy losses but the death of Harold allowed William to conquer England (see **NORMAN CONQUEST**) and become its king.

hatchetfish A carnivorous hatchet-shaped fish, up to 10 cm long, belonging to one of two unrelated groups. Deepsea hatchetfish (family *Sternoptychidae*; 15 species) are related to *salmon and occur in warm and temperate waters. The freshwater or flying hatchetfish (family *Gasteropelecidae*; about 9 species) of South America are related to *carp.

Haughey, Charles (1925–2006) Irish statesman; prime minister of Ireland (1979–81, 1982, and 1987–92). The president of Fianna Fáil (1979–92), he resigned after a series of scandals.

Hauraki Gulf A large inlet of the South Pacific Ocean, in New Zealand on the E coast of North Island. Waitemata Harbour, on which stands Auckland, is situated in the SW. Area: about 2290 sq km (884 sq mi).

Hausa A people of NW Nigeria and S Niger, numbering about nine million. Their language belongs to the Chadic subgroup of the Hamito-Semitic family, but has absorbed many Arabic words and influences. It is an official language of Nigeria and a second language in much of West Africa. The Hausa are mainly Muslim. The economy is based on the cultivation of maize, millet, sorghum, and other crops. Cities,

h

such as *Kano, date from precolonial times but most Hausa live in small rural settlements.

Havana (Spanish name: La Habana) 23 00N 82 30W The capital of Cuba, a port in the NW. It exports sugar, cotton, and tobacco. The university was founded in 1728. *History:* the original settlement was on the S coast, but the inhabitants moved to the city's present site in 1519. It became the capital of Cuba in the late 16th century. Population (1995 est): 2 241 000.

Havel, Václav (1936–) Czech writer; president of Czechoslovakia (1989–92) and of the Czech Republic (1993–2003). The author of such plays as *Largo Desolato* (1984), he was imprisoned (1979–83) for involvement in the dissident Charter 77 movement. In 1989 he took a leading role in the Civil Forum reform movement, and was elected president following the resignation of the Communist government. He resigned as president of Czechoslovakia after failing to prevent its break-up, subsequently becoming president of the Czech Republic.

Hawaii (former name: Sandwich Islands) A state in the USA, occupying a chain of over 20 volcanic islands in the central Pacific Ocean. These include the islands of Hawaii (the largest), Maui, Oahu, Kauai, and Molokai. Its population is ethnically diverse. Manufactures include oil and chemical products, steel, textiles, and food. Agriculture is important, the main crops being sugar and pineapples. The principal industry, however, is tourism. There are many US military bases. *History:* first discovered by Capt Cook in 1778, Hawaii remained a kingdom until becoming a republic in 1893. It was annexed by the USA in 1894 and became a territory in 1900. The Japanese attack on Pearl Harbor in 1941 precipitated the entry of the USA into World War II. Hawaii became a state in 1959. Area: 16 641 sq km (6425 sq mi). Population (2000): 1 211 537. Capital: Honolulu.

hawfinch A large *finch, *Coccothraustes coccothraustes*, of Eurasia and N Africa. 18 cm long, it has a reddish-brown plumage with paler underparts, black-and-white wings, and a massive bill.

Haw-Haw, Lord See JOYCE, WILLIAM.

hawk A bird of prey belonging to a widely distributed family (*Accipitridae*; 205 species) that includes buzzards, eagles, harriers, kites, and vultures. Hawks have down-curved pointed bills, powerful gripping feet, and good eyesight. They usually nest in trees or crags. Order: *Falconiformes*. Compare FALCON.

Hawkesbury River A river in SE Australia,

rising in the Great Dividing Range in New South Wales and flowing NE to the Tasman Sea. Length: 472 km (293 mi).

Hawking, Stephen (William) (1942–) British physicist. Although severely handicapped by a progressive nervous disease, he has described the particle emission of black holes (1974) and shown that general relativity supports the big-bang theory. His publications include the best-selling *A Brief History of Time* (1987) and *The Universe in a Nutshell* (2001).

Hawkins, Sir John (1532–95) English navigator. In 1562 he became the first English slave trader, transporting slaves from West Africa to the Spanish West Indies. In 1577 he became treasurer of the navy; he died at Puerto Rico on an expedition with Drake. His son **Sir Richard Hawkins** (c.1562–1622) served against the Armada and in a subsequent expedition was seized by the Spanish and imprisoned (1594–1602).

hawk moth A moth belonging to the widespread family *Sphingidae* (about 1000 species), also called sphinx moth or hummingbird moth. They have large bodies with relatively small wings (spanning 5–20 cm), which they beat rapidly, hovering over flowers and sipping nectar through their long proboscis.

hawksbill turtle A small sea turtle, *Eretmochelys imbricata*, found in warm waters worldwide. It has hooked jaws, feeds on algae, fish, and invertebrates, and is usually 40–55 cm long. Its shell is used as tortoiseshell.

Hawksmoor, Nicholas (1661–1736) English baroque architect. Hawksmoor was trained by *Wren and collaborated with *Vanbrugh at *Blenheim Palace and Castle Howard. His finest individual work was at Easton Neston (1702), All Souls', Oxford (1729), and St Anne's, Limehouse (1714).

hawthorn A thorny shrub or tree of the N temperate genus *Crataegus* (about 200 species). Hawthorns have lobed leaves, white flowers, and yellow, black, or red fruits. The common hawthorn, or may (*C. monogyna*), is found in hedgerows and thickets in Europe and the Mediterranean. Up to 10 m high, it has red fruits (haws).

Haydn, Franz Joseph (1732–1809) Austrian composer. He became a cathedral chorister in Vienna at the age of eight and subsequently worked as a freelance musician and music teacher. In 1761 he became kapellmeister to the Esterházy family, a post he held for the rest of his life. In 1791 and 1794 he visited London and

wrote his last 12 symphonies, which include the *Oxford* and *London* symphonies. Haydn's compositions include piano sonatas, piano trios, string quartets, masses, concertos, 104 symphonies, operas, and the oratorios *The Creation* (1798) and *The Seasons* (1801).

hay fever An allergy to pollen, which leads to sneezing, a streaming nose, and inflamed eyes. Treatment is by desensitization, with antihistamines or, in severe cases, with steroids.

hazel A hardy shrub or tree of the N temperate genus *Corylus* (15 species), cultivated since ancient times for its edible nuts, also called cob nuts. The leaves are rounded and toothed. The male flowers are attractive yellow catkins; each female flower develops into a nut. The best-known species is the European hazel (*C. avellana*), up to 12 m high. Family: *Betulaceae* (birch family) or *Corylaceae*.

Hazlitt, William (1778–1830) British critic and essayist. The son of a Unitarian minister, he studied art and philosophy before becoming a journalist. His opinions in politics and literary matters were expressed in brilliant invective. His best-known collections of essays and lectures are *Lectures on the English Poets* (1818) and *The Spirit of the Age* (1825).

Healey, Denis (Winston), Baron (1917–) British Labour politician; chancellor of the exchequer (1974–79). He entered parliament in 1952 and from 1964 to 1970 was defence minister. He was deputy leader of the Labour Party (1981–83).

Heaney, Seamus (Justin) (1939–) Irish poet. His early work reflects his upbringing in rural Northern Ireland. Later volumes include *North* (1975), *Seeing Things* (1991), and *Electric Light* (2001). He was Professor of Poetry at Oxford University (1989–94) and published an acclaimed translation of the Old English *Beowulf* in 1999. He was awarded the Nobel Prize in 1995.

hearing aid A device used by the partially deaf to increase the loudness of sounds. Modern hearing aids are tiny electronic devices, consisting of a microphone, an amplifier, and an earphone. The profoundly deaf may now benefit from electrodes implanted in the inner ear that convey signals from an external microphone directly to the auditory nerve.

heart A four-chambered muscular organ that pumps blood around the body. Two chambers—the left and right atria—dilate to receive oxygen-rich blood from the lungs and oxygen-depleted blood from the rest of the body, re-

spectively (this is called diastole). Contraction of the heart (called systole) starts in the atria, forcing blood into the two ventricles. The left ventricle then contracts to force blood into a large artery—the aorta, which leads from the heart and feeds all the other arteries. The right ventricle pumps blood into the pulmonary artery and to the lungs, where it receives oxygen. Valves between the atria and ventricles and at the arterial exits of the heart prevent the backflow of blood. The rhythm of the heartbeat is maintained by the electrical activity of a group of specialized cells within the heart (see **PACEMAKER**). The muscle of the heart is supplied with blood by the coronary arteries. Atherosclerosis of these arteries may lead to a heart attack (see **CORONARY HEART DISEASE**; **MYOCARDIAL INFARCTION**). See also **CIRCULATION OF THE BLOOD**.

heart. In humans and other mammals the right and left chambers of the heart are completely separate from each other. This ensures that oxygenated and deoxygenated blood do not mix and enables oxygen-depleted blood to receive a fresh supply of oxygen from the lungs before circulating to the rest of the body.

heartsease See **PANSY**.

heat The form of energy that is transferred from one body or region to another at a lower

temperature. The amount of heat gained or lost by a body is equal to the product of its *heat capacity and the temperature through which it rises or falls. Heat is measured in joules, but older units, such as calories and British thermal units, are still sometimes used. *See also* HEAT TRANSFER.

heat capacity The amount of heat in joules needed to raise the temperature of a body through one kelvin. For a gas, the heat capacity may be measured under conditions of either constant pressure or constant volume. *See also* SPECIFIC HEAT CAPACITY.

heat death of the universe A hypothetical final state of the universe in which its *entropy is at a maximum and no heat is available to do work. In any closed system the total entropy can never decrease during any process. Thus the entropy of the universe will eventually reach a maximum value and when that happens all matter will be totally disordered and at a uniform temperature. This assumes that the universe is a closed system.

heath An evergreen shrub or tree of the genus *Erica* (about 500 species) of Europe and Africa (about 470 species are native to South Africa). Heaths have spikes of bell-shaped or tubular flowers, white, pink, purple, or yellow in colour. Dwarf heaths are abundant on acid peaty soils, such as moorlands. There are many cultivated varieties, popular in rock gardens. Some tree heaths grow to a height of 6 m. Family: *Ericaceae*.

Heath, Sir Edward (Richard George) (1916–2005) British statesman; Conservative prime minister (1970–74), who took the UK into the EC (1973). He entered parliament in 1950 and assumed cabinet office as minister of labour in 1959. In 1965 he succeeded Douglas-Home as leader of the Conservative Party. His Industrial Relations Act (1971) was badly received by the trade unions and his government was twice challenged by miners' strikes. Defeated in both the elections of 1974 (February, October), he relinquished the party leadership to Margaret Thatcher in 1975.

heather (or ling) An evergreen shrub, *Calluna vulgaris*, up to 60 cm high, with scaly leaves and clusters of pale-purple bell-shaped flowers. It grows—often with heath—on acid soils of heaths, moors, and bogs throughout Europe and in parts of N Africa and North America. Family: *Ericaceae*.

Heathrow (or London Airport) 51 28N 0 27W The chief air terminal for the UK, in the

Greater London borough of Hounslow. Opened to passengers in 1946, it has an underground railway connection from central London (since 1977).

heat pump A device that extracts heat from one substance at a low temperature and supplies it to another substance at a higher temperature, consuming energy in the process. Heat pumps are used to extract the low temperature heat from rivers, etc., for space- and water-heating units. *See also* REFRIGERATION.

heatstroke A rise in body temperature associated with *dehydration and exhaustion, caused by overexposure to high temperatures. The emergency treatment is to cool the patient down with water or fans.

heat transfer The transference of energy between two bodies or regions by virtue of the difference in temperatures between them. The three methods of transference are: *convection, *conduction, and *radiation. In convection the heat is transferred by a hotter region flowing into a colder region. In conduction, on the other hand, the heat is transferred by direct contact without any apparent relative motion. In radiation the heat is transferred by means of either *infrared radiation or *microwave radiation. Radiation is the only method of transferring heat through a vacuum.

heat treatment The process of heating a metal to a temperature below its melting point and then cooling it in order to change its physical properties. Metals are made up of tiny crystals (grains). Their hardness, strength, and ductility is determined by the concentration and distribution of irregularities (dislocations) in the crystal lattice. Heating creates and redistributes dislocations, relieving any internal stresses that have built up. This makes the metal softer and more ductile; a process known as annealing. Dislocation movement is restricted by the boundaries between grains and by the presence of impurities, which make the metal harder and less ductile. Because both the impurity distribution and the grain structure are affected by heating and the rate of cooling, so also is the metal's strength. In steel manufacture, rapid cooling (quenching) by immersion in water or oil hardens the steel, leaving it brittle. Slow cooling makes it soft and ductile.

heaven In Christian belief, the abode of God in which the souls of the virtuous will be rewarded with everlasting life. The iconography of heaven is based upon the Book of Revelation

(compare HELL). Analogous concepts exist in other major religions.

heavy water Deuterium oxide (D_2O), the form of water containing the isotope of hydrogen with mass number 2. It is chemically less reactive than normal water and has a relative density of 1.1; its boiling point is $101.42^\circ C$. It is present to an extent of 1 part in 5000 in natural water and it is used as a moderator and coolant in some nuclear reactors.

Hebrew A Semitic language. It is written from right to left in an alphabet of 22 letters, all consonants, with vowels indicated by subscript and superscript diacritical marks. The oldest and best-known works of Hebrew literature are those preserved in the *Bible (Old Testament). Hebrew continued to be a literary language throughout the middle ages. In the late 19th century Hebrew was revived as a spoken language, particularly in Russia and Palestine. In 1948 it became an official language of Israel.

Hebrides, the A group of about 500 islands off the W coast of Scotland. The islands are subdivided into the Inner and Outer Hebrides, separated by the Minch. The chief islands of the Outer Hebrides include Lewis with Harris and the Uists; those of the Inner Hebrides include Skye, Mull, Islay, and Jura. The main occupations are stock rearing, fishing, and crofting. Harris tweed is produced, especially in the Uists.

Hebron (Arabic name: Al Khalil) 31 32N 35 06E A town in the S of the *West Bank of the River Jordan. It is one of the oldest continuously inhabited cities in the world and is revered by both Jews and Muslims as the burial place of Abraham. Since 1997 most of the town has been controlled by the Palestinian National Authority. Population (1997): 119 401.

Hecate A primitive Greek fertility goddess and a ruler of the underworld. She was associated with witchcraft and magic and was worshipped at crossroads. She accompanied *Demeter in her search for Persephone.

hectare (ha) A unit of area in the *metric system equal to 100 ares or 10 000 square metres. 1 ha = 2.471 acres.

Hector In Greek legend, the eldest son of Priam, King of Troy, and the chief Trojan warrior. He was the husband of Andromache. He fought Ajax in single combat, killed Patroclus, and was killed in revenge by *Achilles.

Hecuba In Greek legend, the wife of Priam,

King of Troy, and mother of *Hector. She was captured by the Greeks after the fall of Troy.

hedgehog A nocturnal prickly-coated insectivorous mammal belonging to the subfamily *Erinaceinae* (15 species). The European hedgehog (*Erinaceus europaeus*) grows up to 30 cm long and has brown and cream spines and soft grey-brown underfur. It feeds on worms, beetles, slugs, and snails. Family: *Erinaceidae*.

hedge sparrow See DUNNOCK.

hedonism The ethical theory holding that pleasure is the greatest good. Varying definitions of pleasure distinguished the classical hedonistic schools. Utilitarianism is the most important modern form of hedonism. Compare EPICUREANISM.

Hegel, Georg Wilhelm Friedrich (1770–1831) German philosopher, one of the most influential thinkers of the 19th century. His first major work, *The Phenomenology of Mind*, was published in 1807, the *Encyclopedia of the Philosophical Sciences* in 1817, and *The Philosophy of Right* in 1821. Besides these major works, he left voluminous lecture notes on history, religion, and aesthetics. **Hegelianism** is the idealist school of thought based on his philosophy.

Heidegger, Martin (1889–1976) German philosopher. His main philosophical work was *Sein und Zeit* (*Being and Time*; 1927). As rector of Freiburg University (1933–34) he supported Hitler and this association, together with logical flaws in his work, has damaged his reputation.

Heidelberg 49 25N 08 42E A city in SW Germany, in Baden-Württemberg on the River Neckar. A tourist centre, it has a ruined castle (mainly 16th–17th centuries) and the oldest university in Germany (1386). Its varied manufactures include printing presses, cigars, and electrical appliances. *History*: the capital of the Palatinate until 1685, it was devastated during the Thirty Years' War and later by the French. During the 19th century it was the student centre of Germany. In 1952 it became the European headquarters of the US army. Population (1999 est): 139 400.

Heifetz, Jascha (1901–87) Russian-born US violinist. A child prodigy, he entered the St Petersburg conservatoire in 1910, and at the age of 12 began a worldwide career. He commissioned Walton's violin concerto.

Heine, Heinrich (1797–1856) German Jewish poet and writer. His early works include the poetry collection *Buch der Lieder* (1827) and the prose *Reisebilder* (1826–31). From 1831 he lived in

Paris, where he wrote essays on French and German culture and some satirical poetry.

Heisenberg, Werner Karl (1901–76) German physicist, who, with *Schrödinger, was the main architect of quantum mechanics. In 1927 Heisenberg created a mathematical system, known as matrix mechanics, to explain the structure of the hydrogen atom. In the same year he put forward the theory known as the *Heisenberg uncertainty principle, for which he was awarded the Nobel Prize in 1932. During World War II Heisenberg was in charge of Germany's unsuccessful attempts to make an atom bomb at the Max Planck Institute in Berlin. After the war he became director of the Max Planck Institute for Physics in Göttingen.

Heisenberg uncertainty principle If a simultaneous measurement is made of the position and momentum of a particle, there is always an uncertainty in the values obtained. The product of the uncertainties is of the same order as Planck's constant. A similar uncertainty exists with the simultaneous measurement of energy and time. The uncertainty, which is only important at subatomic levels, arises because the act of observing the system interferes with it in an unpredictable way. Named after Werner *Heisenberg.

Hejaz (or **Western Province**) A province in Saudi Arabia, bordering on the Red Sea. Its coastal plain supports some agriculture; income is also derived from pilgrims to Mecca and Medina. The largest town is Jidda. Hejaz, formerly independent, joined Najd in a dual kingdom in 1926, and both became part of Saudi Arabia in 1932. Area: about 350 000 sq km (135 107 sq mi). Population (2000 est): 7 304 025.

Helen In Greek legend, the daughter of Zeus and *Leda, famed for her supreme beauty. She married Menelaus, King of Sparta, but later fled to Troy with *Paris, thus precipitating the *Trojan War. After the fall of Troy she was reunited with Menelaus.

Helena, St (c. 248–c. 328 AD) Roman empress, mother of Constantine the Great. A Christian from 313, she made a pilgrimage to the Holy Land (c. 326), where she founded several churches and, according to tradition, rediscovered the cross used at the crucifixion. Feast day: 18 Aug. Emblem: the cross.

Helgoland (or **Heligoland**) 54 09N 7 52E A German island in the North Sea, in the North Frisian group. Ceded to Britain in 1814, it was transferred to Germany in exchange for Zanzibar in 1890 and was a major German naval base

during both World Wars. Area: about 150 ha (380 acres).

helicopter An aircraft that obtains both its lift and its thrust from aerofoils (rotors) rotating about a vertical axis (*compare* AUTOGIRO). The first successful helicopter was made in 1939 by Igor *Sikorsky in the USA. A helicopter using a single rotor requires an anti-torque tail propeller and some models also use a vertical propeller for forward thrust. Helicopters can rise and drop vertically, hover, and move backwards, forwards, and sideways by control of the pitch of the rotors. First used in World War II, helicopters have since been developed for rescue services, police observation, and urban passenger services.

Helios The Greek sun god, usually represented as a charioteer driving the sun across the sky each day. In later legends he was identified with Hyperion or Apollo.

heliotrope A herb or shrub of the genus *Heliotropium* (220 species), found in tropical and temperate regions and having heads of blue or white flowers. Many horticultural varieties of the cherry-pie plant (*H. peruvianum*) and *H. corymbosa* are used as bedding plants in cooler climates. Family: *Boraginaceae*.

helium (He) The lightest noble gas, first detected in 1868 by Janssen (1838–1904) as an unexpected line in the spectrum of the sun, and named from Greek *helios*, sun. Helium was discovered on earth in 1895 in the uranium mineral, cleveite, as a radioactive decay product (*see* RADIOACTIVITY). It is used for filling balloons, as a gas shield in arc welding, and to replace nitrogen in the breathing mixture used by divers. Helium has the lowest melting point of any element. At no 2; at wt 4.0026; mp -272.2°C ; bp -268.9°C .

helium dating A method of dating rocks, minerals, and fossils that utilizes the production of helium in the form of *alpha particles during the radioactive decay of uranium-235, uranium-238, or thorium-232. The amount of helium trapped in the sample is a measure of its age.

hell In Christian belief, the place in which the souls of the wicked are imprisoned in everlasting torment. The concept of hell as a dark and fiery pit derives from the Book of Revelation. Some Christians insist upon the physical reality of hellfire but most consider it a metaphor for the misery of being deprived forever of the vision of God. *Compare* PURGATORY.

hellebore A poisonous perennial herb of the

genus *Helleborus* (20 species), of Europe and W Asia. The stinking hellebore (*H. foetidus*) grows to a height of 30–50 cm and bears clusters of cup-shaped purple-edged green flowers. Family: *Ranunculaceae*. See also CHRISTMAS ROSE.

Hellen In Greek mythology, the grandson of Prometheus and eponymous ancestor of the Greeks, who called themselves the Hellenes and their country Hellas. The four subgroups of the Hellenes, the Aeolians, Dorians, Ionians, and Achaeans, were named after his sons and grandsons.

Hellenistic age The period, between the death of Alexander the Great of Macedon (323 BC) and the accession of the Roman emperor Augustus (27 BC), when Greek culture spread throughout the Mediterranean. In the Hellenistic period Alexandria in Egypt was the major commercial city and centre of intellectual life, including scholarly literature and grandiose art, *Epicureanism, *Neoplatonism, Stoic philosophy, *Gnosticism, and Christianity. The Koine, common Greek, was the universal language.

Hellespont See DARDANELLES.

Helmand, River (**R. Helmund** or **R. Hilmand**) The longest river in Afghanistan. Rising in the E of the country, it flows generally SW then N to enter the marshy lake of Halmun Helmand on the Afghan-Iranian border. Length: 1400 km (870 mi).

Helmholtz, Hermann Ludwig Ferdinand von (1821–94) German physicist and physiologist, who made contributions to many fields of science. In physiology his main interest was the sense organs, developing *Young's theory of colour vision (now known as the Young-Helmholtz theory). This work was published in his *Physiological Optics* (1856). He played a considerable part in the development of thermodynamics, especially in formulating the concept of free energy.

Helpmann, Sir Robert (1909–86) Australian ballet dancer, choreographer, and actor. He went to England in 1933 and worked mainly with Sadler's Wells Ballet until 1950. He became artistic director of the Australian Ballet in 1955. His ballets include *Comus* (1942) and *Hamlet* (1942).

Helsingør (or **Elsinore**) 56 03N 12 38E A seaport in Denmark, in NE Sjælland situated on the Sound opposite Hålsingborg in Sweden. It contains the fortress of Kronborg (1580), famous as the scene of Shakespeare's play *Hamlet*. Population (2000 est): 116 870.

Helsinki (Swedish name: Helsingfors) 60 13N 24 55E The capital of Finland, a port in the S on the Gulf of Finland. It is the country's commercial and administrative centre; industries include metals, textiles, food processing, and paper. Its famous buildings include the 18th-century cathedral; the city is also renowned for its 20th-century architecture. *History:* founded by Gustavus I Vasa of Sweden in 1550, it replaced Turku as capital of Finland (then under Russian rule) in 1812. Population (2000 est): 551 123.

Hemel Hempstead 51 46N 0 28W A market town in SE England, in Hertfordshire. Designated a new town in 1946, the principal industries include light engineering. Population (1991): 79 235.

Hemichordata A phylum of marine invertebrate animals (about 100 species), found in coastal sand or mud and on the sea bed. The gill slits and nervous system show similarities with those of chordates—hence their name. The group comprises the *acornworms and the pterobranchs (class *Pterobranchia*).

Hemingway, Ernest (1899–1961) US novelist. After World War I he joined the American expatriate community in Paris. In his short stories and novels, which include *The Sun Also Rises* (1926), *To Have and Have Not* (1937), *For Whom the Bell Tolls* (1940), about the Spanish Civil War, and *The Old Man and the Sea* (1952), he celebrated the virtues of courage and stoicism in a forceful economical style. He won the Nobel Prize in 1954. Subject to severe depressions, he committed suicide.

hemiplegia See PARALYSIS.

Hemiptera An order of insects (about 50 000 species)—the true bugs—having piercing mouthparts for sucking the juices from plants or animals. The suborder *Heteroptera* includes the plant bugs and the water bugs. The forewings of these insects have both a leathery and a membranous region. The suborder *Homoptera*, including the *froghoppers, *aphids, *cicadas, and *scale insects, are all plant feeders and have uniform front wings.

hemlock 1. A poisonous biennial plant, *Conium maculatum*, native to Europe, W Asia, and N Africa. It grows in damp places to a height of 2 m and has branching purple-spotted stems that bear much divided leaves and clusters of tiny white flowers. Family: *Umbelliferae*. 2. A coniferous tree of the genus *Tsuga* (15 species), native to S and E Asia and North America. The narrow bladelike leaves are grouped in two

rows along the stems and the cones are brown and egg-shaped. Family: *Pinaceae*.

hemp An annual herb, *Cannabis sativa*, native to central Asia. It grows to a height of 5 m and bears small yellow flowers. Hemp is cultivated in many temperate regions for its fibre. The flowers, bark, twigs, and leaves contain a narcotic resin (see CANNABIS). Family: *Moraceae*.

Hengist and Horsa Legendary leaders of the first Anglo-Saxon settlers in Britain. According to the Anglo-Saxon Chronicle (late 9th century AD) Horsa was killed in 455 AD and his brother Hengist ruled over Kent from 455 to 488.

Henley-on-Thames 51.32N 0.56W A town in S central England, in Oxfordshire on the River Thames. It is chiefly a residential and recreational town with an annual Royal Regatta (first held in 1839). Population (1991): 10 558.

henna A shrub, *Lawsonia inermis*, occurring in Egypt, India, and the Middle East. Up to 2 m high, it has fragrant white-and-yellow flowers. The leaves are powdered and used for tinting the hair a reddish colour. Family: *Lythraceae*.

henry (H) The SI unit of inductance equal to the inductance of a closed circuit such that a rate of change of current of one ampere per second produces an induced e.m.f. of one volt. Named after the US physicist Joseph Henry (1797–1878).

Henry I (1069–1135) King of England (1100–35); the youngest son of *William (I) the Conqueror. Henry became king on the death of his brother William Rufus, successfully defending his throne against the claims of his eldest brother Robert II Curthose, Duke of Normandy. In England his reign is notable for important legal and administrative reforms, especially in the Exchequer. Abroad Henry waged several campaigns against Louis VI of France (1081–1137; reigned 1108–37), Fulk V, Count of Anjou (1092–1143), and Norman rebels.

Henry II (1133–89) King of England (1154–89); the son of Matilda and Geoffrey of Anjou and the grandson of Henry I. Henry succeeded Stephen. He married *Eleanor of Aquitaine in 1152 and ruled an empire that stretched from the River Tweed to the Pyrenees. In spite of frequent hostilities and his quarrel with Thomas *Becket, Henry maintained control over his possessions until shortly before his death.

Henry II (1519–59) King of France (1547–59); the husband from 1533 of *Catherine de' Medici. He concluded war against the Emperor

*Charles V at Cateau-Cambrésis (1559). An ardent Roman Catholic, he began the systematic persecution of Huguenots, which ultimately led to the *Wars of Religion.

Henry III (1207–72) King of England (1216–72), succeeding his father John. Hubert de Burgh (d. 1243) controlled the government from 1119 to 1232 and Henry's personal government began in 1234. Baronial discontent simmered, boiling over in 1258; reforms—the Provisions of Oxford—were agreed upon but then renounced by Henry. Simon de *Montfort led a rebellion against the king (see BARONS' WARS), which was defeated after initial success.

Henry III (1551–89) King of France (1574–89) during the *Wars of Religion. Elected King of Poland in 1573, he abandoned that country on succeeding to the French throne. In France he allied with the Huguenot Henry of Navarre (the future *Henry IV). He was assassinated while besieging Paris.

Henry IV (1366–1413) King of England (1399–1413); the eldest son of *John of Gaunt. As Henry Bolingbroke, he seized the throne from Richard II. In the early years of his reign Henry faced considerable opposition from Richard's supporters and from the Welsh. Successful in defeating his enemies, the costs of these wars and resultant taxation led to protracted struggles between king and parliament for control of royal expenditure.

Henry IV (1553–1610) The first Bourbon King of France (1589–1610), who restored peace and prosperity following the *Wars of Religion. A Protestant, he succeeded his mother to the throne of Navarre in 1572. Shortly afterwards he married Charles IX's sister Margaret of Valois (1553–1615). In 1576 he became a *Huguenot (Protestant) leader in the Wars of Religion. His succession to the throne was secured in 1594, when he became a Roman Catholic; in 1598 he granted the Huguenots freedom of worship by the Edict of *Nantes.

Henry V (1387–1422) King of England (1413–22); the eldest son of Henry IV. He vigorously resumed the *Hundred Years' War, his first campaign culminating in the battle of *Agincourt (1415); by 1420, in alliance with Burgundy, he controlled much of N France. He married Catherine of Valois and gained recognition (1420) as the heir of her father *Charles VI.

Henry VI (1421–71) King of England (1422–61, 1470–71), succeeding his father Henry V. He married *Margaret of Anjou in 1445. His in-

ability to govern led to bitter struggles that culminated in the Wars of the *Roses. Deposed and imprisoned by the Yorkists (1461), he was briefly restored to power (1470–71). A notable patron of learning, he founded Eton College (1440) and King's College, Cambridge (1447).

Henry VII (1457–1509) King of England (1485–1509). As Henry Tudor, Earl of Richmond, he defeated Richard III at Bosworth (1485) and his marriage (1486) to Richard's niece Elizabeth of York (1465–1503) united the Houses of *Lancaster and *York, ending the Wars of the *Roses. His domestic rule was noted for its harsh financial exactions, efficient administration, and growing prosperity. His foreign policy temporarily put an end to war with France.

Henry VIII (1491–1547) King of England (1509–47), who initiated the English *Reformation. In 1512 he joined a European alliance against France and in the same year his army thwarted a Scottish invasion at *Flodden. His desire to make England a notable European power was pursued from 1515 by his Lord Chancellor, Cardinal *Wolsey. From 1527 Henry was preoccupied by his wish to divorce *Catherine of Aragon and marry Anne Boleyn. He blamed Catherine's failure to produce a son on the canonical prohibition against marrying one's brother's widow and sought a papal annulment. Only in 1533, after Thomas *Cromwell had initiated the legislation that made the English Church, under Henry's supreme headship, independent of Rome, could the king marry Anne. In 1536 Anne was executed for adultery; Henry then married Jane *Seymour, who died shortly after giving birth to the future Edward VI (1537). His marriage to *Anne of Cleves was short lived, ending in divorce; shortly afterwards Henry married Catherine *Howard, who was executed in 1542, and finally, in 1543, Catherine *Parr, who outlived him. Henry's last years were dominated by war with France and Scotland.

Henry, O. (William Sidney Porter; 1862–1910) US short-story writer. He adopted his pseudonym while serving a prison sentence for embezzlement. He subsequently worked in New York, where he published *Cabbages and Kings* (1904), the first of many volumes of short stories.

hepatitis Inflammation of the liver, most commonly caused by viruses. The main types of infectious hepatitis are hepatitis A, usually contracted by ingesting the virus from food or drink, and hepatitis B and C, contracted from contaminated hypodermic needles or blood

products or sexually transmitted. The patient usually has a fever, loses his appetite, and later becomes jaundiced. Unless chronic disease develops, hepatitis often resolves without specific treatment.

Hepburn, Katharine (1909–2003) US actress. She made several films with Spencer *Tracy, and her other films include *The Philadelphia Story* (1940), *The African Queen* (1952), *The Lion in Winter* (1968), and *On Golden Pond* (1981).

Hepplewhite, George (1727–86) British furniture designer and cabinetmaker, who established a business in London. His neoclassical furniture is a simplified and more functional version of the designs of Robert *Adam, with whom he sometimes collaborated. Usually in inlaid mahogany or satinwood, it is characterized by straight tapering legs and heart- or oval-shaped chairbacks filled with openwork designs.

heptathlon An athletic competition for women, consisting of seven events over two days. They are the 100 m hurdle, high jump, shot put, 200 m sprint, long jump, javelin throw, and 800 m sprint.

Hepworth, Dame Barbara (1903–75) British sculptor. She studied in Leeds and at the Royal College of Art. A friend of Henry *Moore, she was also influenced by *Brancusi and *Arp. Her abstract carving in wood and stone developed after *Pierced Form* (1931), creating massive shapes broken by holes with wires stretched across their openings. She received the DBE in 1965.

Hera In Greek mythology, the daughter of Cronus and Rhea and the sister and wife of Zeus. She was jealous of Zeus' mistresses but gave support to *Jason and *Achilles. She was worshipped as a goddess of women and marriage. She is identified with the Roman *Juno.

Heracles (or **Hercules**) A Greek legendary hero, famed for his strength and courage. He was the son of Zeus and Alcmene. After killing his wife and children in a fit of madness, he performed the Twelve Labours in expiation: he killed the Nemean lion and the *Hydra of Lerna, captured the Hind of Ceryneia and the Boar of Erymanthus, cleaned the Augean stables, chased away the Stymphalian birds, captured the Cretan bull and the horses of Diomedes, stole the girdle of Hippolyte, captured the oxen of Geryon, stole the apples of the *Hesperides, and finally captured and bound *Cerberus in Hades.

heraldry. The terminology of heraldry, of which a few terms are illustrated, reveals the science's French origins.

heraldry A system of pictorial devices on shields originally used to identify individuals when wearing armour. Personal devices on shields are of great antiquity but in the early 12th century armorial devices became hereditary in Europe. They were also used as *seals. Coats of arms are also granted to institutions. In England heraldry is controlled by the *College of Arms. The Court of the Lord Lyon has a similar function in Scotland. Coats of arms comprise the shield, a helmet surmounted by a crest, a mantling (stylized drapery behind the shield), a wreath, and a motto. The shield bears the heraldic signs (charges), which have ancient fixed meanings. From these heralds can determine genealogy and status.

Herbert, George (1593–1633) English poet. A member of a distinguished family, he was an MP before becoming rector of Bemerton, Wiltshire, in 1630. His religious lyrics, collected in *The Temple* (1633), are among the finest in the language.

herbs and spices The fresh or dried parts of aromatic or pungent plants used in food, drink, medicine, and perfumery. Herbs are generally the leaves of plants growing in temperate zones. Common culinary herbs are *basil, *bay leaves, *marjoram, *mint, *parsley, and *thyme. Spices generally grow in hot countries; they were formerly a valuable trade commodity. Spices are usually dried and may be obtained from the root (e.g. *ginger), bark (e.g. *cinnamon), flower (e.g. *clove), seed pod (e.g. *chilli), or, most commonly, from the seed itself (e.g. *coriander, *cumin, *pepper).

Herculaneum An ancient Italian city near *Naples in Italy. It was destroyed by the same eruption as *Pompeii (79 AD). Entombment beneath solidified volcanic mud makes excavation there very difficult.

Hercules See HERACLES.

hercules beetle A giant green and black beetle, *Dynastes herculeus*, occurring in Central and South America. The male may reach a length of 15 cm, nearly two-thirds of which is taken up by an enormous pair of horns, extending from the thorax and head. Family: Scarabaeidae (see SCARAB BEETLE).

Hereford 52 04N 2 43W A city in W England, the administrative centre of Herefordshire on the River Wye. Situated in an important agricultural area, Hereford deals mainly in agricultural produce, manufacturing cider, beer, leather goods, and chemicals. It has given its name to a famous breed of beef cattle. The cathedral, begun in 1079, contains one of the oldest maps (*Mappa Mundi*) in the world (about 1314). Population (1991): 54 326.

Herefordshire A county of W England, on the Welsh border. In 1974 it became part of Hereford and Worcester but in 1998 it was reinstated as an independent unitary authority. Herefordshire consists of a rolling plain separating the Malvern Hills in the E from the Black Mountains in the W. The chief river is the Wye. It is predominantly agricultural, with hops and apples and pears grown. The Hereford breed of cattle is renowned worldwide. Industry is concentrated in Hereford. Area: 2180 sq km (842 sq mi). Population (2001): 174 844. Administrative centre: Hereford.

Herero A group of Bantu-speaking peoples of SW Africa, Botswana, and Angola. They are traditionally cattle, sheep, and goat herders but some adopted agriculture after European contact. Their social organization is based on the common principle of counting descent in the male line for some purposes and in the female line for others.

Hereward the Wake (11th century) Anglo-Saxon thegn, who led a raid on Peterborough Abbey (1070) as a protest against William I's ap-

pointment of a Norman abbot. He and other disaffected Anglo-Saxon nobles took refuge on the Isle of Ely until its capture by William (1071).

hermaphrodite (or **bisexual**) A plant or animal possessing both male and female reproductive organs. Such organisms may show cross- or self-*fertilization: the latter method is particularly common when the opportunity of finding a mate is remote. True hermaphroditism rarely occurs in humans. More common is **pseudohermaphroditism**, in which an individual develops secondary characteristics appropriate to the opposite sex (e.g. breasts in a man), due to hormone imbalance.

Hermes In Greek mythology, the messenger and herald of the gods and the guide of travellers. He was regarded as the god of riches and good luck, the protector of merchants and thieves, and the god of dreams. He was usually portrayed as an athletic youth wearing a cap and winged sandals and carrying a golden staff. He was the son of Zeus and Maia. He is identified with the Roman *Mercury.

hermit crab A *crab with a soft unprotected abdomen, belonging to the worldwide families *Paguridae* and *Coenobitidae*. It lives in portable hollow objects, such as snail shells, for protection. Hermit crabs are found in sandy or muddy-bottomed waters and occasionally on land and in trees. Tribe: *Anomura*.

hernia The protrusion of an organ or tissue through a weak spot in the wall that normally contains it. The most common types are the inguinal hernia (popularly called a rupture), which is a swelling in the groin caused by the protrusion of the abdominal contents, and the hiatus hernia, in which part of the stomach protrudes into the chest cavity. Hernias should usually be surgically repaired or they may become painful and cut off from their blood supply (strangulated).

Hero and Leander Legendary lovers whose story was recounted by the Greek poet Musaeus (4th or 5th century AD). Hero was a priestess of Aphrodite at Sestos and Leander swam to her each night across the Hellespont from Abydos. After a stormy night Hero found her lover's drowned body and in despair drowned herself.

Herod (I) the Great (c. 73–4 BC) King of Judaea (37–4); the son of Antipater the Idumaeon (d. 43 BC). Supported by Mark Antony, he became the Romans' king in Judaea. A Jew of Arab origins, he retained power by control of

the religious establishment and rigorous suppression of opposition. Shortly before his death he ordered the massacre of the infants of Bethlehem.

Herod Agrippa I (c. 10 BC–44 AD) King of Judaea (41–44); the grandson of Herod the Great. He was educated at the Roman imperial court after the execution of his father by Herod the Great. He intrigued in imperial family politics and helped Emperor Claudius to power, for which he was made King of Judaea. He was a popular ruler but persecuted Christians.

Herod Agrippa II (died c. 100 AD) King of Chalcis (50–c. 100) in S Lebanon; the son of *Herod Agrippa I. He attempted to prevent the Jewish rebellion of 66, during which his troops fought on the Roman side, and helped to take Jerusalem in 70.

Herod Antipas (21 BC–39 AD) Tetrarch (governor) of Galilee (4–39 AD) after the partition of the realm of his father Herod the Great. He divorced his wife to marry his niece Herodias, for which he was censured by John the Baptist. Herodias persuaded her daughter Salome to ask for John's head in return for dancing at Antipas' birthday celebration and John was executed. Jesus Christ was brought before Antipas after his arrest, but Antipas returned him to Pontius Pilate of Judaea without passing judgment.

Herodotus (c. 484–c. 425 BC) Greek historian. Born at Halicarnassus, he was exiled for political reasons and moved first to Samos, then to Athens, and lastly to the Athenian colony of Thurii in S Italy. He was the first historian to subject his material to critical evaluation and research. His narrative account of the wars between Greece and Persia in nine books contains much incidental information gathered on his travels.

heroin (or **diamorphine**) A pain-killing drug with a stronger action and fewer side effects than *morphine, from which it is made. Heroin is used to alleviate the suffering of terminal illness. Because the use of heroin can lead to physical dependence its use in medicine is strictly controlled. It is widely abused.

heron A wading bird belonging to a subfamily (*Ardeinae*; 60 species) occurring on lakes and rivers worldwide, especially in the tropics. 75–150 cm long, herons have a slim body, longish legs, broad wings, and a grey, blue, greenish, white, purple, or reddish plumage. Herons hunt by seizing fish and insects with

the long pointed bill. Family: *Ardeidae* (herons and bitterns). See also EGRET.

herpes A virus of which there are several forms. *Herpes zoster virus* (or *varicellazoster*) causes chickenpox and shingles. *Herpes simplex virus I* causes cold sores. *Herpes simplex virus II* causes the sexually transmitted genital herpes.

Herrick, Robert (1591–1674) English poet. He served as rector of Dean Prior, Devonshire, from 1630 to 1646 and again after the Restoration. The majority of his secular and religious poems, collected in *Hesperides* (1648), are short lyrics influenced by classical models.

herring A food fish, *Clupea harengus*, found mainly in the N Atlantic and the North Sea. It has a slender silvery body, up to about 40 cm long, with a single dorsal fin and feeds on plankton. A related species (*C. pallasii*) occurs in the N Pacific. Herrings are eaten fresh, pickled, and smoked. Smoked herrings, mainly produced in Scotland, are known as kippers. Order: *Clupeiformes*.

herring gull A large grey and white *gull, *Larus argentatus*, occurring around coasts in the N hemisphere. It is omnivorous and is commonly seen scavenging at refuse tips. Adults are 57 cm long and have pink legs and a yellow bill with a red spot on the lower mandible.

Hertford 51 48N 0 05W A market town in SE England, the administrative centre of Hertfordshire on the River Lea. Industries include printing, flour milling, brewing, and brush manufacturing. Population (1991): 21 665.

Hertfordshire A county of S England, bordering on Greater London. It lies mainly in the Lower Thames Basin rising to the Chiltern Hills in the NW and is drained by the Rivers Lea, Stort, and Colne. The chief agricultural activity is arable farming, producing barley for the brewing industry. Dairy farming, market gardening, and horticulture are also important. There is a mixture of modern and traditional industries. Area: 1634 sq km (632 sq mi). Population (2001): 1 033 977. Administrative centre: Hertford.

Hertz, Heinrich Rudolf (1857–94) German physicist, who first produced and detected *radio waves (1888). The SI unit of frequency the **hertz** (Hz), equal to one cycle per second, is named after him.

Hertzog, James Barry Munnik (1866–1942) South African statesman; prime minister of the Union of South Africa (1924–39). In the second Boer War he led the Orange Free State

forces. He formed the Afrikaner Nationalist Party in 1914 in opposition to Botha, becoming prime minister in 1924. In 1933 he formed a coalition government with *Smuts, resigning in 1939.

Hertzsprung-Russell diagram A graphic representation of the classification of stars according to spectral type (see HARVARD CLASSIFICATION SYSTEM) and brightness—usually absolute *magnitude. The stars are not uniformly distributed. Most lie on a diagonal band, the main sequence, the brightest stars of which are spectral types O and B and the faintest are M stars. The somewhat brighter *giant stars, the even brighter *supergiants, and the faint *white dwarfs fall into their own distinct groupings and are at later stages of evolution. The diagram was originally produced, independently, in 1911 by E. Hertzsprung (1873–1967) and in 1913 by H. N. Russell (1877–1957).

Hertzsprung-Russell diagram. This graph for bright stars is important in studies of stellar evolution and in determining distance.

Herzl, Theodor (1860–1904) Hungarian-born journalist and playwright, who founded the movement to establish a Jewish nation (see ZIONISM). A world congress of Zionists in Basle (1897), at which the World Zionist Organization was established, elected Herzl as the first president.

Heseltine, Michael (Ray Dibdin), Baron (1933–) British Conservative politician; deputy prime minister (1995–97); secretary of state for the environment (1979–83; 1990–92), for defence (1983–86), and for trade and industry and president of the board of trade (1992–95). He ran unsuccessfully for the leadership of the Conservative Party in 1990, precipitating the fall of Margaret Thatcher.

Hesperides (Greek: daughters of evening) In Greek mythology, three nymphs who guarded

the sacred golden apples of Hera in a garden in the far west. The apples were stolen by *Hercles as one of his Twelve Labours.

Hess, Rudolf (1894–1987) German politician. Hess joined the Nazi Party in 1920, becoming deputy party leader (1933). After his unsuccessful secret mission to Scotland to negotiate a separate peace with Britain (1941) he was imprisoned until 1946, when he was convicted at the Nuremberg war trials and sent to Spandau prison, where he committed suicide.

Hesse (German name: Hessen) *A Land* in central Germany. Formed in 1945, it consists of the former duchies of Hesse-Darmstadt and Nassau. Hilly and forested, it is chiefly agricultural, producing potatoes, sugar beet, and wheat. Industry includes publishing and the manufacture of machinery and chemicals. Iron ore, salt, and coal are mined. Area: 21 112 sq km (8150 sq mi). Population (2000 est): 6 052 000. Capital: Wiesbaden.

Hesse, Hermann (1877–1962) German novelist and poet. He worked as a bookseller until publication of his first novel, *Peter Camenzind* (1904). His early themes of art and self-knowledge were later extended by his interest in Indian mysticism and Jungian psychology, as reflected in *Siddharta* (1922), *Steppenwolf* (1927), and *The Glass Bead Game* (1943). From 1911 until his death he lived in Switzerland. He was awarded a Nobel Prize (1946).

Heyerdahl, Thor (1914–2002) Norwegian ethnologist. He built and sailed the balsa wood raft *Kon-Tiki* from the Pacific coast of South America to Polynesia to show that the pre-Incan inhabitants of Peru might thus have migrated to Polynesia. In 1969–70 he crossed the Atlantic Ocean from Morocco to South America in a papyrus boat—the *Ra*—showing the possibility of Egyptian influence on Pre-Columbian civilization. Later he led a series of archaeological expeditions to Easter Island (1986–88).

Hiawatha The legendary chief of the Onondaga tribe of American Indians, who was said to have formed the *Iroquois League. His story is the subject of Longfellow's *Song of Hiawatha* (1855).

hibernation A state of *dormancy in winter experienced by many fish, amphibians, reptiles, and mammals of temperate and Arctic regions: it is an adaptation to avoid death by heat loss, freezing, or food scarcity. Hibernation involves a period of sleep during which the body temperature drops almost to that of the surround-

ings, the body processes are slowed, and the hibernator lives on body fat until it awakens in the spring.

Hibiscus A genus of tropical and subtropical herbs, shrubs, and trees (about 150 species). Two popular cultivated shrubs, up to 3 m high, are the Chinese *H. rosa-sinensis* (rose of China), which has red, pink, or yellow flowers, and the Syrian *H. syriacus* (rose of Sharon), which has pink, blue, or white flowers. The genus also includes plants cultivated for their food value (see OKRA) and for their fibre. Family: Malvaceae.

hickory A tree of the genus *Carya* (20 species), native to E North America and Asia and cultivated for timber, nuts, and ornament. They grow to 30 m and have compound leaves consisting of paired leaflets. Commercially important species are the shagbark (*C. ovata*) and the pecan (*C. illinoensis*). Family: Juglandaceae.

hieroglyphics Originally, an Egyptian picture writing in use from about 3000 BC to 300 AD; it now denotes any pictographic or ideographic writing system. The Egyptians used hieroglyphics largely for monumental inscriptions. The characters are reproductions of people, animals, and objects and represent either the objects they portray or the sounds that are featured in the pronunciation of the referent.

hieroglyphics. A picture was used to represent objects, related ideas, and sounds.

Higgs boson A massive *boson the existence of which was proposed by the Scottish physicist Peter Higgs (1929–) to explain the weak interaction (see PARTICLE PHYSICS). In his theory Higgs suggested that the nonzero masses of the intermediate vector bosons (the W and Z bosons) are acquired by the particles in interacting with an all-pervading field, known as the **Higgs field**. CERN's large hadron collider (LHC), which is due to be completed in 2006, is being constructed to test this theory.

high jump A field event in athletics in which jumpers compete to clear a horizontal bar. A competitor is allowed three attempts at a height and is eliminated if he fails to clear it.

World records: men: 2.45 m (1993) by Javier Sotomayor (Cuba); women 2.09 m (1987) by Stefka Kostadinova (Bulgaria).

Highland A council area in N Scotland, created in 1975 (as Highland Region) under local government reorganization from the N part of Argyll, Caithness, Inverness, Nairn, Ross and Cromarty, and Sutherland. It became a unitary authority in 1996. The region consists chiefly of glaciated highlands divided from NE to SW by the fault valley, Great Glen, and includes part of the Inner Hebrides. Sheep farming is the main agricultural activity. Industries associated with North Sea oil have developed and aluminium smelting, pulp and paper production, and distilling are all important. Tourism is a major source of revenue. Salmon farming is a growing industry. Area: 25 425 sq km (9814 sq mi). Population (2001): 208 914. Administrative centre: Inverness.

Highland dress The traditional male costume (since the 17th century) of the Scottish Highlands. It consists of the kilt and the plaid (a cloak worn over one shoulder). Accessories include the sporran (a goatskin pouch), cap, kilt pin, and dagger (worn in the right sock). Highland dress was banned for civilian wear (1746–82) following the Jacobite rebellions. **Tartan**, the material used for the kilt and plaid, is a woollen cloth woven into a design of large-meshed cross stripes. The tradition of each clan having its own tartan probably dates from the 17th century.

Highland Games Scottish athletics meetings, usually professional, held in the Highlands. Events include standard track and field events as well as such Scottish sports as caber tossing, and there are also competitions in highland dancing and playing the bagpipes. The Braemar Games can be traced back to the 8th century AD.

High Wycombe 51°38'N 0°46'W. A town in SE England, in Buckinghamshire. It has a long tradition of furniture making and also produces paper, precision instruments, and clothing. Hughenden Manor was the home of Disraeli. Population (1991): 71 718.

Hildegard of Bingen, St (1098–1179) German writer, composer, and mystic. She lived in a convent from the age of eight, becoming a prioress in 1136 and an abbess in 1147. Her writings include works on medicine and science as well as mystical poems, many of which she set to music.

Hillary, Sir Edmund (Percival) (1919–)

New Zealand mountaineer and explorer. In 1953 he and *Tenzing Norgay were the first to reach the summit of Mount Everest, for which achievement he was knighted. He was New Zealand High Commissioner in Delhi (1984–89).

Hilliard, Nicholas (1547–1619) English portrait miniaturist, born in Exeter. Like his father, he trained as a jeweller, later becoming court painter to Elizabeth I and James I. Many of his portraits are in the royal collection at Windsor Castle. In his *Treatise on the Art of Limning* (c. 1600), he describes his style and technique of painting miniatures.

Himachal Pradesh A state in NW India, in the W Himalayas beside Tibet's border. Long part of the *Punjab, it was formed by the combination of various hill states (1948). Most of the inhabitants are Pahari-speaking Hindus who farm grains, potatoes, maize, and livestock. The forests yield timber and bamboo, and enormous hydroelectric potential is being exploited. Area: 55 673 sq km (21 490 sq mi). Population (2001): 6 077 248. Capital: Simla.

Himalayas A vast mountain system, the highest in the world, structurally the southern edge of the great plateau of central Asia. They extend about 2400 km (1550 mi) along the N Indian border, reaching 8848 m (29 028 ft) at Mount *Everest. The region is disputed by China, India, and Pakistan.

Himmler, Heinrich (1900–45) German politician. He joined the Nazi Party in 1925 and became head of the SS in 1929. From 1936 he also directed the Gestapo and supervised the extermination of Jews in E Europe. After the Nazi collapse he was captured and committed suicide.

Hindemith, Paul (1895–1963) German composer. He studied in Frankfurt am Main, where he led the opera orchestra (1915–23). His music was banned by the Nazis in 1933; he moved to Turkey and in 1939 went to the USA. His early works were highly dissonant; he later evolved his own system of tonal harmony. Many of his compositions are neoclassical in character; they include the opera *Cardillac* (1926), the ballet *Nobilissima Visione* (1938), concertos, sonatas, and much *Gebrauchsmusik* (German: utility music).

Hindenburg, Paul von Beneckendorff und von (1847–1934) German general, who was recalled from retirement at the outbreak of World War I and with Erich Ludendorff (1865–1937) won a great victory at Tannenberg (1914). In 1916 Hindenburg became commander

in chief and directed the German retreat to the **Hindenburg line** (fortified defence on the Western Front). He became president of Germany in 1925 and was re-elected in 1932.

Hindi The national language of India and the most widely spoken, having approximately 134 million speakers. It is an Indo-Aryan language, showing strong *Sanskrit influence in its written form but with a much simpler grammar. The standard form, written in Devanagari script, is based on the Khari Boli dialect of Delhi.

Hinduism The religious beliefs of about 400 million inhabitants of India and parts of neighbouring countries. The complex result of about 5000 years of cultural development, it includes many diverse traditional beliefs and practices. One of its central concepts is that one's actions in life lead to *reincarnation at a higher or lower level of life (see KARMA). The goal of the religion is to find a release from the cycle of rebirth and to return to the ultimate unchanging reality, *Brahman. Release may be sought through good works, devotion to a particular god, or through various types of meditation and asceticism (e.g. samadhi, YOGA). The principle gods are Brahma, Vishnu, and Shiva, together known as the *Trimurti. Popular devotion consists mainly of temple worship and the celebration of numerous festivals. The great Hindu texts, the *Mahabharata* and the *Ramayana*, were composed in the 4th century BC. See also VEDANTA.

Hindustani An Indo-Aryan language that originated in the dialect of the Delhi district. The Moguls and the British promoted its use as a lingua franca throughout India. *Urdu and *Hindi are the literary forms developed from it.

hip The part of the body at which the legs are joined to the trunk. The skeleton of the hip consists of the *pelvis and the part of the spine (the sacrum) to which it is attached. The hip joint—the articulation between the pelvis and femur (thigh bone)—is a common site for arthritis; in severe cases the whole joint may be replaced by an artificial one or pins or other devices may be inserted into the damaged parts.

Hipparchus (c. 190–c. 120 BC) Greek astronomer, born in Nicaea. He produced the first accurate map of over 1000 stars, indicating their positions by means of latitude and longitude. He also discovered the precession of the equinoxes and accurately measured the distance to the moon by parallax. In mathematics he invented trigonometry by constructing a

table of the ratios of the sides of right-angle triangles.

Hippocrates (c. 460–c. 377 BC) Greek physician and founder of the Hippocratic school of medicine, which greatly influenced medical science until the 18th century. Hippocrates was a prominent physician, who travelled widely in Greece and Asia Minor. His followers believed that health was governed by the balance of four body fluids, or humours: phlegm, blood, black bile, and yellow bile. The Hippocratic Oath, taken by medical students in some countries, was probably not written by Hippocrates.

hippopotamus A large hoofed mammal, *Hippopotamus amphibius*, of tropical Africa. About 150 cm high at the shoulder and weighing around 3.5 tonnes, hippos have dark-brown skin and continuously growing tusks up to 60 cm long. They spend the day in rivers or waterholes, emerging at night to graze on surrounding pasture. Herds usually number 10–15 individuals. Family: Hippopotamidae. See also PYGMY HIPPOPOTAMUS.

Hirohito (1901–89) Emperor of Japan (1926–89), having been regent for five years after his father Yoshihito (1879–1926) had been declared insane. He married (1924) Princess Nagako Kuai. Ruling as divine emperor until Japan's defeat in World War II, he became no more than a constitutional monarch under the 1946 constitution. He also wrote several books on marine biology.

Hiroshima 34°23'N 132°27'E A city in Japan, in SW Honshu on the delta of the River Ota. A former military base and important seaport, it was largely destroyed (6 August 1945) by the first atomic bomb to be used in warfare; over 130 000 people were killed or injured. The city was rapidly rebuilt and is now a major industrial centre. An international conference is held here annually to oppose nuclear weapons. Population (1995): 1 108 868.

Hispaniola The second largest West Indian island, in the Greater Antilles. It is politically divided between the *Dominican Republic and *Haiti. Area: 18 703 sq km (29 418 sq mi).

histamine An amine, derived from the amino acid histidine, that is released from body tissues after injury or in an allergic reaction, such as asthma or hay fever. It dilates blood vessels, producing inflammation; contracts smooth muscle, which in the lungs leads to breathing difficulties; and stimulates the secretion of gastric juice. Its effects can be counteracted with *antihistamine drugs.

histology The study of tissues. Originally histology was limited to the study of tissues by light microscopy, but the development of such techniques as electron microscopy, immunofluorescence, and autoradiography has enabled the details of subcellular structure to be revealed. See also CYTOLOGY.

history The study that discovers, examines, and interprets the records of past human societies, events, and personalities. It is generally regarded as beginning with the ancient Greeks, among whom *Herodotus, *Thucydides, and *Xenophon were outstanding. Notable Roman historians include *Sallust, *Cicero, *Livy, and *Tacitus. Early Christian history writing (historiography) was influenced by Jewish historians, such as Josephus (c. 38–c. 100). Medieval historiography consisted largely of chronicles, such as those of *Bede and Matthew *Paris; the later middle ages were influenced by Byzantine historians, including Anna Comnena (1083–?1148). The classical interests of early Renaissance scholars (see HUMANISM) led to a new concern for textual criticism, which led to the work of *Machiavelli and Francesco Guicciardini (1483–1540) in the early 16th century. Their critical approach to sources was continued by 17th-century historians but the 18th-century Enlightenment enlarged the interests of historians to include a more fundamental study of the pattern of change in human societies. This concern is reflected in the work of the 18th-century British historian Edward Gibbon. In the 19th century, under the influence of such German historians as Leopold von Ranke (1795–1886), history was established as a discipline in the universities. Outstanding British historians of the 19th century included William Stubbs, *Macaulay, and *Carlyle. The scope of historiography widened greatly in the 20th century under the influence of sociology, anthropology, and new techniques, such as the use of computers to analyse statistics.

Hitchcock, Sir Alfred (1899–1980) British film director. He worked almost exclusively in Hollywood from 1940. He specialized in sophisticated thrillers, using calculated effects to create tension and suspense. His films include *The Thirty-Nine Steps* (1935), *Strangers on a Train* (1951), *Psycho* (1960), and *The Birds* (1963).

Hitler, Adolf (1889–1945) German dictator. Born in Austria, he won the Iron Cross in World War I. In 1919 he joined the German Workers' Party, which was renamed the National Socialist (abbreviated to Nazi) Party in 1920. He became its president in 1921 and two years later staged an abortive coup—the Mu-

nich Putsch—against the Bavarian Government. During a brief imprisonment he wrote most of *Mein Kampf* (*My Struggle*), based on spurious notions of the superiority of the Aryan race and the culpability of the Jews for Germany's defeat in World War I. In the economic crisis of the late 1920s and early 1930s Hitler's oratory and his anticommunism brought the Nazis increasing support. In 1933 he was offered the chancellorship by *Hindenburg, the German president. He gained a majority in the subsequent elections (in coalition with the Nationalists); and in 1934 assumed the title of Führer (leader). He proceeded to crush his opponents, institute his fanatical persecution of the Jews by the establishment of concentration camps, and launch a massive rearmament programme. He lent support to Mussolini in Italy and Franco in Spain, precipitating *World War II by invading Austria (1938) and Czechoslovakia and Poland (1939). As his dreams of world domination collapsed with Germany's defeat, he committed suicide with Eva *Braun (whom he had married shortly before) in the bunker of the chancellery in Berlin.

Hittites An Indo-European people who appeared in Anatolia around the beginning of the second millennium BC. By 1340 BC they had emerged as a major power, conquering much of Anatolia and also Syria. In their polytheistic religion, their king was believed to be the representative of god on earth and became a god himself on death. The society was feudal in organization and also upheld the institution of slavery. Their language is extinct, but is known from cuneiform tablets and inscriptions.

hives See URTICARIA.

Hizbollah (Arabic: Party of God) A Shiite Muslim organization, based in Lebanon, that became notorious for hijackings, hostage taking, and other terrorist activities in the late 1980s. Hizbollah attacks have provoked Israel to launch several offensives against S Lebanon since 1996.

HMSO See STATIONERY OFFICE, THE.

hoatzin A primitive bird, *Opisthocomus hoatzin*, that occurs in tropical South American swamps. It is 65 cm long and has a small head with a wispy crest and a long tail. Its plumage is streaked brown with yellowish underparts and it feeds chiefly on flowers and fruit. It is the only member of its family (*Opisthocomidae*). Order: *Galliformes* (pheasants, turkeys, etc.).

Hobart 42°54'S 147°18'E A city in Australia, the capital and chief port of Tasmania on the Der-

went River estuary. Industries include zinc refining and food processing; the chief exports are apples, wool, timber, and dairy produce. The University of Tasmania was established here in 1890. Population (1995 est): 194 700.

Hobbes, Thomas (1588–1679) English political philosopher. Hobbes was a proponent of scientific *materialism, particularly with regard to human nature. His interests lay in mathematics, geography, and the classics until the breakdown of English political and social order in the 1640s inspired him to devise his own political theory. *Leviathan* (1651) argues that because people are inherently selfish they need to be ruled by an absolute sovereign, whose function is to enforce public order.

Hobbs, Jack (Sir John Berry H.; 1882–1963) British cricketer. The world's greatest batsman between *Grace and *Bradman, he played for Surrey and for England in 61 Test matches. During his career (1905–34) he scored 61 237 runs and 197 centuries (98 made after the age of 40). He was the first cricketer to be knighted (1953).

Ho Chi Minh (Nguyen That Thanh; 1890–1969) Vietnamese statesman, who led Vietnam in its struggle for independence from the French. As a young man he lived in France. In 1924 he went to communist-controlled Canton, where he formed the Association of Young Vietnamese Revolutionaries (Thanh Nien), the forerunner of the Indochinese Communist Party (1930). Returning to Vietnam in 1941, he formed the *Viet Minh, which waged the long and ultimately victorious colonial war against the French (1945–54; see INDOCHINA). According to the Geneva Accords, which Ho Chi Minh attended, Vietnam was divided on either side of the 17th parallel into North Vietnam, of which Ho became president, and South Vietnam. In 1959 he extended support to the *Viet Cong guerrilla movement in the South (see also VIETNAM WAR) with the aim of Vietnamese unification, which was achieved after his death.

Ho Chi Minh City (name until 1976: Saigon) 10 46N 106 43E A city in S Vietnam, on the River Saigon. It is the major commercial and industrial centre of the S, with shipbuilding, metalworking, textile, and chemical industries. *History:* an ancient Khmer town, it was the capital of Cochinchina and then of French Indochina (1887–1902). During the *Vietnam War it was the capital of South Vietnam. Population (1993 est): 4 322 300.

hockey An 11-a-side field game, the object of which is to score goals. It has been played in

various forms for at least 4000 years. A team comprises a goalkeeper, two full-backs, three half-backs, and five forwards, each of whom carries a curved stick for hitting the ball. Players dribble the ball with the stick and hit it along the ground or through the air. See also ICE HOCKEY.

hockey. The dimensions of the pitch.

Hockney, David (1937–) British painter, printmaker, draughtsman, and photographer, born in Bradford. After studying at the Royal College of Art (1959–62), he travelled in the USA, where he developed his witty style, his favourite subjects being figure studies and aquatic themes. Later work includes landscapes. He has also designed stage sets and illustrated books.

Hoffman, Dustin (1937–) US film actor. He made his reputation in the films *The Graduate* (1967) and *Midnight Cowboy* (1969) and won Oscars for *Kramer vs Kramer* (1980) and *Rain Man* (1989). His other films include *Lenny* (1974), *Tootsie* (1982), *Hero* (1992), *Wag the Dog* (1998), and *Goodbye Hello* (2002).

Hogarth, William (1697–1764) British painter and engraver. He established his reputation with the sequence *A Harlot's Progress* (1731–32). He excelled in moralizing social satires in such narrative series as *A Rake's Progress*, *Industry and Idleness*, and the paintings

of *Marriage à la Mode* (Tate Gallery), works that led him to campaign for an Engraving Copyright Act (the so-called Hogarth's Act, 1734). The naturalism and vivacity of *Captain Coram* (Foundling Hospital, London) and *Hogarth's Servants* (National Gallery, London) were influential. His artistic theories are expressed in his treatise *The Analysis of Beauty* (1753).

hogweed A biennial herb, *Heracleum sphondylium*, also called cow parsnip, native to Eurasia and N Africa and introduced to North America. Up to 2 m high, it has hollow ridged stems, divided leaves, and umbrella-like clusters of white or pinkish flowers. The giant hogweed (*H. mantegazzianum*) may reach a height of 3.5 m and is grown as an ornamental. Family: Umbelliferae.

Hokkaido (former name: Yezo) The second largest and northernmost of the four main islands of Japan, separated from Honshu by the Tsugaru Strait and from the Russian island of Sakhalin by La Perouse Strait. Mountainous, volcanic, and forested, with a relatively cool climate, it is popular for winter sports. It has a sizable aboriginal population and the N is largely uninhabited. Main industries are coalmining, agriculture, and fishing. *History:* the Japanese began to settle on the island in the 16th century but did not develop it seriously until after 1868. It became administratively autonomous in 1885. Area: 78 508 sq km (30 312 sq mi). Population (2000 est): 5 683 000. Capital: Sapporo.

Holbein the Younger, Hans (c. 1497–1543) German painter, born in Augsburg. In 1515 he settled in Basle, where he designed woodcuts. Settling in England in 1532, he painted portraits of merchants before becoming court painter and designer to Henry VIII (1536). His portrait of Henry VIII in a wall painting (destroyed) for Whitehall Palace became the prototype for other paintings of the king. He was also commissioned to paint Henry's prospective wives, including *Anne of Cleves* (Louvre), and established a thriving portrait-painting business, e.g. *The Ambassadors* (National Gallery, London). His father **Hans Holbein the Elder** (c. 1465–1524) was also a painter; he painted the *S Sebastian Altar* (Alte Pinakothek, Munich).

Holiday, Billie (Eleanor Gough McKay; 1915–59) US Black jazz singer, known as "Lady Day." She was discovered in Harlem by Benny Goodman and made her first recording in 1933. She subsequently sang with the bands of Count Basie and Artie Shaw. Addiction to heroin caused her death.

holistic medicine An approach to therapy in which all the physical, mental, and social aspects of the patient's life are taken into account in understanding and curing his or her disease, as opposed to merely treating symptoms. The holistic approach is a basic tenet of *alternative medicine.

Holland The low-lying NW region of the Netherlands, now comprising the provinces of North Holland and South Holland. A county of the Holy Roman Empire from the 12th century, Holland came under Burgundy in the 15th century and then (1500) under the Habsburgs. Prominent in the 16th-century *Revolt of the Netherlands against Spanish Habsburg rule, Holland became the chief province of the independent United Provinces of the Netherlands. When the kingdom of the *Netherlands was established in 1814, its importance diminished. Nevertheless the whole country is still commonly called Holland.

holly A tree or shrub of the widely distributed genus *Ilex* (300 species). The evergreen English holly (*I. aquifolium*) grows to a height of 15 m and has spiny lustrous dark-green leaves and small white flowers; the female flowers develop into red berries. It is widely cultivated for hedging and used for Christmas decorations. Family: Aquifoliaceae. See also MATÉ.

hollyhock A perennial herb, *Althaea rosea*, native to China but widely cultivated. Up to 3 m high, it bears large white, yellow, or red flowers. Family: Malvaceae.

Hollywood 34 00N 118 15W A NW suburb of Los Angeles, in California in the USA. Founded in the 1880s, it is the centre of the US film industry. Population (1996 est): 127 894.

holmium (Ho) A metallic lanthanide element, discovered in 1879 by P.T. Cleve (1840–1905) and named after his native city, Stockholm. Holmium occurs in rare-earth minerals, such as monazite (CePO₄). It forms an oxide (Ho₂O₃) and halides (HoX₃), but has few uses. At no 67; at wt 164.93032; mp 1474°C; bp 2700°C.

holocaust The extermination of European *Jews by the Germans (1939–45). Some six million Jews from many countries, two-thirds of European Jewry, were killed in Auschwitz and other *concentration camps.

Holocene epoch The present, or Recent, epoch in geological time, including the last 10 000 years from the end of the Pleistocene. Some authorities consider it to be an inter-

glacial phase of the Pleistocene. At the beginning of the Holocene the rise in sea level resulting from melting ice isolated Britain from the rest of Europe.

holography A method of producing a stereoscopic image without using a camera. A beam of monochromatic coherent radiation from a *laser is split into two using a semi-transparent mirror; one beam falls directly onto a photographic film or plate and the other is reflected by the subject onto the film. The two beams form *interference patterns on the film, which is called a hologram. To reconstruct the image, light of the same wavelength from a laser is shone onto the hologram. The interference pattern on the hologram diffracts the beam and splits it into two parts. One part gives a real two-dimensional image and the other gives a virtual three-dimensional image.

holography. A three-dimensional image formed by two beams of light is recorded as an interference pattern on a single plate. The two images, giving a 3-D effect, are reconstructed by shining a similar beam through the hologram.

Holst, Gustav (Theodore) (1874–1934) British composer. Having studied composition at the Royal College of Music, he taught at the Royal College, Morley College, and St Paul's Girls' School. His interest in oriental philosophy inspired the chamber opera *Savitri* (1908) and other works. Among his most famous compositions are the choral work *The Hymn of Jesus* (1917), the tone poem *Egdon Heath* (1927), and the orchestral suite *The Planets* (1914–16).

Holy Grail In medieval legend, a vessel or dish having supernatural power. Originally the

grail may have had some significance in pre-Christian Celtic mythology; but by the 12th century it was associated with the chalice used by Christ at the Last Supper and later given to *Joseph of Arimathea, who received the blood of Christ in it at the crucifixion. Chrétien de Troyes combined the grail legend with the *Arthurian legend, and the knightly quest for the Holy Grail is a dominant theme in many Arthurian romances. According to a passage in William of Malmesbury (c. 1090–c. 1143), Joseph brought the Holy Grail to Glastonbury.

Holy Island 1. (or Lindisfarne) 55 41N 1 48W An island, in NE England off the NE coast of Northumberland. Its monastery was founded by St Aidan (635 AD); St Cuthbert was a bishop here (685–87). **2.** An island off the NW coast of Anglesey.

holy orders In Christian Churches, specifically those accepting episcopacy, the ranks of bishop, priest, etc., conferred by a bishop. They are traditionally divided into major and minor orders, the former being the ranks of bishop, priest, deacon, and (in the Roman Church) subdeacon. Holy orders are considered a *sacrament by the Orthodox and Roman Catholic Churches. Women priests were first ordained in the Church of England in 1994.

Holy Roman Empire The successor to the western *Roman Empire of antiquity. The institution dates from 800, when *Charlemagne was crowned emperor of the West by Pope Leo III. Its territory came to comprise much of W and central Europe, being centred on Germany and Austria and including areas of E France and N Italy. After the failure of Charlemagne's Carolingian dynasty the imperial title passed (962) to the German kings, who retained it until the Empire's abolition in 1806. Between the 11th and 13th centuries the emperors vied with the popes for dominance in Europe (see GUELFs AND Ghibellines), a conflict from which the Empire emerged much weakened. It was further undermined by the *Reformation in the 16th century, the *Thirty Years' War in the 17th century, and the rise of Prussia and was finally broken by Napoleon's conquest of imperial territories in the early 19th century.

Holyrood House A palace in Edinburgh, which is the Scottish residence of the British monarch. A medieval building, it was substantially modified in the classical style from 1671 onwards by Sir William Bruce (d. 1710).

Holy Spirit (or Holy Ghost) In Christian theology, the third person of the Trinity, coequal and of one substance with the Father and the

Son. Old Testament references to the spirit of God are given a more specific application in the New Testament Gospels: in St John's Gospel the Holy Spirit is seen as the "Paraclete" or Comforter; in Acts, the descent of the Holy Spirit upon the Apostles is described. In art, the Holy Spirit is usually symbolized by a dove.

Home of the Hirsels, Alec Douglas-Home, Baron (Alexander Frederick D.H.; 1903–95) British statesman; Conservative prime minister (1963–64). He was an MP (1931–45, 1950–51) before he became the 14th Earl of Home. After serving as foreign secretary (1960–63), he renounced his peerages to become prime minister. Following the Conservative electoral defeat (1964) he resigned the party leadership (1965). He received a life peerage in 1974.

homeopathy The system of treating illness developed by Samuel *Hahnemann at the end of the 18th century and based on the principle of "like cures like." To treat a disease homeopaths prescribe tiny doses of a drug that in larger quantities would cause the symptoms of the disease.

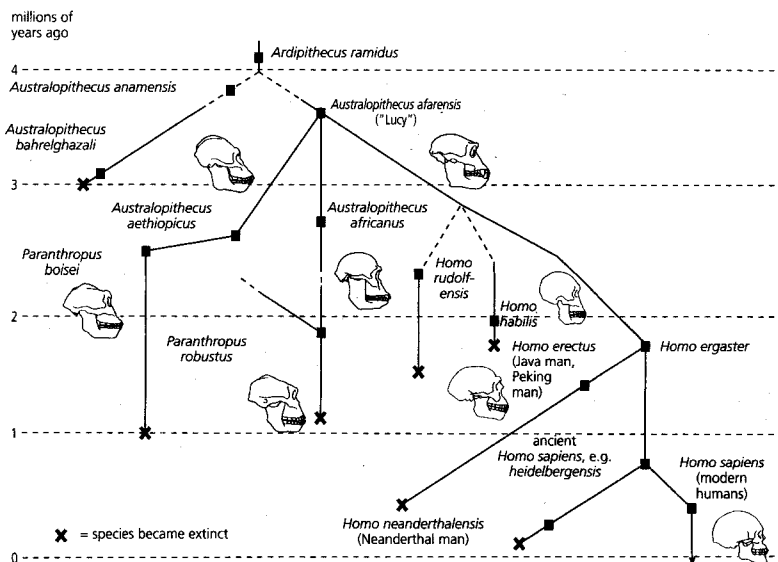

Homer (8th century BC) Greek epic poet, pre-

sumed author of the *Iliad* and *Odyssey*. He is believed to have lived in Ionia in Asia Minor and according to legend was blind. The *Iliad* concerns the Trojan War, and its basic tragic theme is enlivened by the human sympathy of its individual episodes. The *Odyssey* relates the various adventures of *Odysseus during his voyage home from the Trojan War to his kingdom of Ithaca. Both poems have a profound influence on western culture.

Home Rule An Irish political movement to repeal the Act of *Union with Britain and give Ireland a legislature responsible for domestic affairs. Founded in 1870, the Home Rule movement achieved parliamentary prominence under the leadership of *Parnell from 1880. The Home Rule bills of 1886 and 1893 were defeated; in 1914 the third Home Rule bill was passed but suspended for the duration of the war. A modified act was passed in 1920 providing separate parliaments for northern and southern Ireland. This was accepted by the north but rejected by the south, which in 1922 gained dominion status as the Irish Free State.

homing instinct See MIGRATION, ANIMAL.

hominid A member of the *Hominidae* family

Homo. The human evolutionary tree is still far from complete: the picture is constantly changing as new fossil evidence comes to light. Palaeoanthropologists are still debating many of the relationships shown on this chart (indicated by the broken lines).

of primates, to which humans (*Homo sapiens*) belong. Besides *H. sapiens*, there are no surviving hominids: the others are known only from fossil remains. The *Hominidae* include the genera *Australopithecus*, and *Homo*.

Homo A genus of *hominids characterized by a large cranial capacity, erect posture, bipedal gait, a thumb capable of a precision grip, and the ability to make and use tools. *Homo erectus* (formerly called *Pithecanthropus*) first appeared 1.8 million years ago and made hand axes. A contemporaneous species was *H. ergaster*, which is thought by many authorities to be the earliest direct ancestor of modern humans. *Neanderthal man also belongs to the genus *Homo*, as does *Cro-Magnon man, who was probably an early form of the species *Homo sapiens*. See also AUSTRALOPITHECUS.

homosexuality Sexual attraction or relations between persons of the same sex. It is known as lesbianism when the persons are females. Homosexual acts between consenting adults in private are now legal in all EU countries. In 1994 the age of consent for homosexual men in the UK was lowered from 21 to 18, and in 2000 the age of consent for both homosexuals and heterosexuals was equalized at 16. Since 2004 homosexual couples in the UK have had the legal right to register their partnerships.

Honduras, Republic of A country in Central America, with a N coastline on the Caribbean Sea and a short S one on the Pacific Ocean. Narrow coastal plains rise to mountainous country, dissected by river valleys. The majority of the population is of mixed Indian and Spanish descent. *Economy*: mainly agricultural, the chief crops are bananas and coffee (the principal exports). Almost half the land is forested, with valuable hardwoods and pine. Fishing is important, especially shrimps for export. The considerable mineral resources include gold, silver, lead, tin and zinc, and mercury. *History*: the area was a centre of Mayan culture from the 4th to the 9th centuries AD and was later occupied by the Lenca Indians. Discovered by Columbus in 1502, it became part of the Spanish captaincy general of Guatemala. It gained independence from Spain in 1821 and then formed part of the Central American Federation (1823–38). For the next 145 years Honduras was ruled by a series of military dictators with only brief periods of civilian rule. Military rule ended in 1982, when Roberto Suazo Córdova became president; the current president is Manuel Zelaya. Honduras suffered its worst natural disaster of modern

times in Nov 1998, when torrential rains in the wake of Hurricane Mitch devastated the capital leaving 8000 dead and 250 000 homeless. Honduras is a member of the OAS and the Organization of Central American States. Official language: Spanish. Currency: lempira of 100 centavos. Area: 112 088 sq km (43 227 sq mi). Population (2007 est): 7 483 763. Capital: Tegucigalpa.

Honegger, Arthur (1892–1955) French composer, born in Switzerland. He was a son of Les Six and developed his own polyphonic and dissonant style. His compositions include five symphonies, the stage works *King David* (1921) and *Joan of Arc at the Stake* (1934–35), chamber music, and piano music.

honesty A herbaceous plant of the European genus *Lunaria* (3 species). Up to 1 m high, it is often grown in gardens for its papery seed heads. *L. annua* has white to purple flowers while *L. variegata* has crimson flowers and variegated foliage. Family: *Cruciferae*.

honey A sweet thick yellow syrup collected from the honeycomb of bee hives. Bees suck nectar from flowers and empty it into the cells of their hives, where they convert the sugar it contains from sucrose into dextrose and laevulose. Honey consists of about 70% sugars, 18% water, and small amounts of minerals, pollen, and wax.

honey badger See RATEL.

honeybee A social *bee, *Apis mellifera*, also called hive bee. Native to Europe, it is reared worldwide for its *honey and *beeswax. Honeybees have large colonies with 50 000–80 000 workers during the summer and a well-defined caste system. Workers attend to nest building, food gathering, and brood care; they use dances to communicate the location of food sources to other colony members. The queen lays her eggs in wax chambers (cells). Larvae hatching from fertilized eggs and fed on protein-rich “royal jelly” throughout their development become queens. New colonies are formed by a swarm of workers led by the old queen (compare BUMBLEBEE); a young queen continues the established colony. Family: *Apidae*.

honeyeater An arboreal songbird belonging to a family (*Meliphagidae*; 160 species) occurring chiefly in SE Asia and Australasia. They are 10 to 35 cm long and have a drab plumage. The slender bill is down-curved and the long extensible tongue has a central trough, through which nectar is drunk, and a brush-like tip for collecting pollen and small insects.

honeysuckle A shrub or twining plant of

the genus *Lonicera* (100 species). The common European honeysuckle (*L. periclymenum*), also called woodbine, is a trailing shrub with clusters of tubular yellowish flowers. Some species are cultivated as ornamentals, including the fragrant climbing honeysuckle (*L. japonica*). Family: *Caprifoliaceae*.

Hong Kong A special administrative region of S China, which until 1 July 1997 was a British crown colony. It consists of the island of Hong Kong, the mainland peninsula of Jiulong, the New Territories, and Stonecutters Island. Much of the land is steep and barren. The majority of the population is Chinese. *Economy*: owing to its strategic position and fine natural harbour, it is an important entrepôt and banking centre. Much of China's foreign trade passes through Hong Kong. The export of manufactured goods has become increasingly important since World War II and the textile and clothing industry accounts for over half the total domestic exports. Electronics and plastics are also important and there is some heavy industry. Tourism is a major source of revenue. A new airport (the world's largest) opened in 1998. *History*: the island was ceded to Britain by China at the end of the first Opium War (1842) and Kowloon (Jiulong) was added in 1860. In 1898 the New Territories were granted on a 99-year lease. Hong Kong was occupied by the Japanese during World War II. The 1980s saw a big influx of refugees from Vietnam (boat people) and the first forced repatriations. The return of the colony to Chinese control in 1997 was agreed between Britain and China in 1984. In 1992 Chris Patten was appointed governor to oversee the transition to Chinese rule. Hong Kong is now governed by an executive council, headed by the chief executive, and an elected legislative council. Official languages: Chinese and English. Currency: Hong Kong dollar of 100 cents. Area: 1031 sq km (398 sq mi). Population (2002 est): 6 785 000. Administrative centre: Victoria.

Honolulu 21 19N 157 50W A city in the USA, the capital of Hawaii on SE Oahu in the central Pacific Ocean. It is the site of three universities and of Iolani Palace, the former royal residence. *Pearl Harbor is still an important naval base. Population (2000): 371 657.

Honshu The largest of the four main islands of Japan, situated between the Pacific Ocean and the Sea of Japan. It is mountainous, volcanic, and prone to earthquakes. The historic centre of Japan, it has been the site of its capital since earliest times. Most of Japan's major ports and cities are here. Rice, fruit, cotton, and

tea are grown; mineral wealth includes oil, zinc, and copper. The traditional industry is silk but the many modern industries include shipbuilding, iron and steel, chemicals, and textiles. Area: 230 448 sq km (88 976 sq mi). Population (1995): 100 995 000. Chief town: Tokyo.

Hooch, Pieter de (1629–c.1684) Dutch painter, born in Rotterdam. Working in Delft, Leiden, and Amsterdam, he excelled in small paintings, such as *The Pantry* (Rijksmuseum, Amsterdam), depicting household tasks in courtyards or dark interiors.

Hood, Samuel, 1st Viscount (1724–1816) British admiral, who achieved eminence in the American Revolution, when he defeated the French off Dominica (1782). In the French Revolutionary Wars he captured Toulon (1793) and destroyed the defences of Corsica (1794).

Hooke, Robert (1635–1703) British physicist and instrument maker. In 1660 he discovered **Hooke's law**, which states that for an elastic body, the stress is directly proportioned to the strain. Many of his microscope studies were published in *Micrographia* (1665). Appointed a city surveyor after the Fire of London, he designed several buildings, including the College of Physicians.

Hook of Holland (Dutch name: Hoek van Holland) 51 59N 4 07E A port in the SW Netherlands, in South Holland province at the North Sea end of the Nieuwe Waterweg (New Waterway). A ferry service operates from here to Harwich, England.

hookworm A parasitic *nematode worm inhabiting the intestine of animals and man. About 1 cm long, hookworms attach themselves to the gut lining and feed by sucking blood and body fluids. The two main species infecting man are *Necator americanus*, of the southern USA and Africa, and the Eurasian *Ancylostoma duodenale*.

Hoover, Herbert (Clark) (1874–1964) US statesman; Republican president (1929–33). As secretary of commerce (1921–29) he was chairman of commissions that initiated construction of the Hoover Dam (named after him) and the St Lawrence Seaway.

hop A perennial climbing herb, *Humulus lupulus*. Native to Eurasia, where it grows to a length of 3–6 m in hedges and thickets, it is widely cultivated for its pale yellow-green female flowers ("cones"), which are used in brewing to flavour beer. Family: *Cannabiaceae*.

Hope, Bob (Leslie Townes Hope; 1903–2003) US comedian, born in Britain. He starred in a

number of popular films during the 1940s, including *Road to Zanzibar* (1941) and other "Road" films in which he partnered Bing *Crosby. He gave many performances for US troops. He was awarded an honorary British knighthood in 1998.

Hopkins, Gerard Manley (1844–89) British poet. He converted to Roman Catholicism in 1866 and was ordained as a Jesuit priest in 1877. In verse of daring originality he rejected conventional metres in favour of a flexible "sprung rhythm." "The Wreck of the Deutschland" and "The Windhover" are among his best-known poems, which were published posthumously in 1918.

Horace (Quintus Horatius Flaccus; 65–8 BC) Roman poet. Reduced to poverty after fighting for Brutus in the Civil War, he became a leading poet under the emperor Augustus and acquired a farm near Rome, celebrated in his poetry. His *Odes* and his *Satires* and verse *Epistles* vividly portray contemporary Roman society.

hormone A substance that is secreted into the blood in small quantities to cause a response in a specific target organ or tissue of the body. Hormones are produced and secreted by *endocrine glands and by specialized nerve cells (see **NEUROHORMONE**) under the control of the nervous system or in response to changes in the chemical composition of the blood. Hormones regulate short-term physiological processes, such as digestion, and long-term changes, such as those associated with growth and reproduction; they also help to maintain a constant internal environment in the body. The following are some of the more important hormones known in humans: *ACTH, *gonadotrophin, *growth hormone, and *prolactin (secreted by the pituitary); *corticosteroids, e.g. cortisone, and *adrenaline (from the adrenal glands); *androgens and *oestrogens (from the sex glands); thyroid hormone (from the *thyroid gland); *insulin and glucagon (from the pancreas). Chemically, most hormones are proteins or steroids. The study of hormones is called endocrinology.

hornbeam A tree of the genus *Carpinus* (26 species), of N temperate regions. The common Eurasian hornbeam (*C. betulus*) has smooth grey bark, oval pointed leaves with prominent veins, and small nuts with conspicuous winged bracts. It is planted for ornament and for its hard fine-grained timber. Family: *Corylaceae*.

hornbill A bird belonging to a family (*Bucerotidae*; 45 species) occurring in Old World

tropical regions. 38–150 cm long, hornbills are characterized by a huge bill, often bearing a large bony "helmet," and feed on fruit and berries. Order: *Coraciiformes* (kingfishers, etc.).

hornblende A mineral of the *amphibole group, which occurs widely in igneous and metamorphic rocks. It consists mainly of silicates of sodium, calcium, magnesium, and iron. It is black or greenish black and occurs in crystalline or massive form.

hornet A social *wasp, *Vespa crabro*, that is common throughout Europe and has spread to North America and elsewhere. 35 mm long, it is tawny-yellow with brown markings and nests in hollow trees. It feeds chiefly on insects, nectar, and fruit juices and its painful sting can be dangerous to humans. Members of the genera *Dolichorespula*, *Paravespula*, and *Vespula* may also be known as hornets.

Horowitz, Vladimir (1904–89) Russian pianist, who settled in the USA in 1940. Horowitz excelled in Russian music and in his own transcriptions.

horse A hoofed mammal, *Equus caballus*, domesticated for pack and draught work, riding, and sport. The earliest horse is believed to have been *eohippus, which is thought to have originated in North America and spread to Asia. Successive larger forms evolved, in which the central toe became enlarged as the hoof; these horses developed from forest browsers to become grazing animals of the plains.

The many breeds of modern horse are grouped into ponies, light horses, and draught horses. They range in size from the tiny Fala-bella (developed in Argentina from Shetland pony stock) to the massive *Shire horse and are measured in hands (1 hand = 4 in = 10.16 cm) to the top of the shoulders (withers). According to breed, horses mature at 3½–5 years of age and the lifespan is usually 20–35 years. Mares have a gestation period of 11 months, producing usually a single foal. Horses belong to the family *Equidae*, which also includes asses and *zebras. See illustration on p. 430.

horse chestnut A broad spreading tree, *Aesculus hippocastanum*, native to SE Europe and widely planted as an ornamental. It grows to a height of 25 m, producing large compound leaves and white flowers; the green spiny fruits ripen to release large brown shiny seeds (conkers). Family: *Hippocastanaceae*.

horse fly A stout-bodied fly of the genus *Tabanus* (the term is also used loosely for the other genera—*Chrysops* (deerflies) and *Haema-*

horse. The points of a horse.

topota (cleg flies)—of the family *Tabanidae*; 2500 species). Male horse flies feed on nectar but the females are bloodsuckers and inflict painful bites on man, horses, cattle, etc. A few species transmit diseases, such as tularemia and anthrax.

horsepower (hp) A unit of power equal to 550 foot-pounds per second. It was devised by James *Watt, who found that a strong horse could raise a weight of 150 pounds 4 feet in 1 second. *See also* WATT.

horseradish A perennial herb, *Armoracia rusticana*, probably native to SE Europe and W Asia and widely cultivated. Growing to a height of 125 cm, it has fleshy pungent roots from which horseradish sauce is made and it bears small white flowers. Family: *Cruciferae*.

horseshoe crab A large nocturnal marine *arthropod (up to 50 cm long), also called king crab, belonging to the subclass *Xiphosura*. The two living genera, *Limulus* and *Tachyplesus*, are found in shallow waters on the E coasts of North America and Asia respectively. They have a hinged body covered by a brown horseshoe-shaped carapace and a long tail spine. They can swim but usually burrow in sand, feeding on worms and thin-shelled molluscs. Class: *Meristomata*.

horticulture The cultivation of vegetables (also known as market gardening) and fruit for food and of trees, shrubs, and other plants for ornament. Horticulture is both a popular domestic pastime and an important commercial activity. Higher-yielding and more disease-resistant plant varieties, increased mechanization, the use of new cultivation techniques, and the application of fertilizers and pesticides have all contributed to improved productivity and quality.

Horus The Egyptian sun-god, usually portrayed as a falcon or with a falcon's head. He was the son of *Osiris and *Isis. The pharaohs were conceived as the incarnations of Horus as earthly ruler and added the god's name to their titles.

hospice An establishment that provides care for the terminally ill. Hospices specialize in easing the physical and mental distress of the patients and providing support for their families. Most modern hospices are modelled on St Christopher's hospice, founded in London in 1967 by Dame Cicely *Saunders.

hospital An institution providing diagnostic and therapeutic services for the sick on a residential (in-patient) or nonresidential (out-patient) basis. In the ancient world such medical services as existed were provided by religious

organizations. In Europe in the middle ages many institutions for the care of the sick were founded by monastic orders and later, during the Crusades, by orders of knighthood. St Bartholomew's (1123) and St Thomas's (1207) in London date back to this period. In the UK, during the 18th and 19th centuries, many new voluntary hospitals were founded by philanthropists and staffed by doctors who gave their services free. Municipal hospitals with paid medical staff arose alongside the voluntary hospitals; both systems were nationalized by the National Health Service Act (1946). Since then all NHS hospitals have provided free services, although some have a small number of paybeds. In the 1990s many hospitals opted to be run by self-governing NHS trusts, obtaining income by providing services to health authorities and fund-holding GPs. In 1999 the Labour government replaced this "internal market" in NHS services with a system under which the trusts contract long-term service agreements with teams of doctors and nurses (primary care groups). Under the Private Finance Initiative (1992), hospitals can now be built, financed, and operated by private interests who lease them to the NHS. From 2004 the best-performing hospitals can apply to become so-called "foundation hospitals," which will enjoy greater administrative autonomy. See also NATIONAL HEALTH SERVICE.

Hospitallers (Order of the Hospital of St John of Jerusalem) A religious order of knighthood that began as a hospital for pilgrims to Jerusalem (c.1070) and during the *Crusades took on a military function. The Hospitallers were the great rivals of the *Templars and immensely wealthy. After the fall of Acre (1291) they established themselves in Cyprus, Rhodes, and finally Malta.

Hosta A genus of perennial herbaceous plants (10 species), native to China and Japan and widely planted in gardens. They are grown chiefly for their often variegated foliage—but they also produce attractive spikes of purplish or white funnel-shaped flowers. Family: *Liliaceae*.

Houdini, Harry (Erich Weiss; 1874–1926) US magician. His ability to escape from handcuffs, straitjackets, and locked containers, even when under water, gained him an international reputation.

housefly A dull-grey fly, *Musca domestica*, that is a worldwide household pest. The adult is 5–7 mm long, with mouthparts used for sucking up organic liquids of all kinds. Through the

contamination of food it spreads many serious diseases, such as typhoid, tuberculosis, and dysentery. Family: *Muscidae*.

Houston 29 45N 95 25W A city in the USA, the main port in Texas. Founded in 1836, it is named after the Texan leader Sam(uel) Houston (1793–1863). It expanded rapidly following the building of a canal (1912–14), linking it to the Gulf of Mexico, and the development of coastal oilfields. One of the world's major oil and petrochemical centres, Houston also has shipbuilding and steel manufacture. The Lyndon B. Johnson Space Center is nearby. Population (2000): 1953 631.

hovercraft (or air-cushion vehicle) A ship-like vehicle equipped with powerful blowers capable of lifting it off a surface so that it rides on a cushion of air, which is contained within a rubber skirt. It can navigate on almost any kind of surface and is moved forward by propellers. The first hovercraft was built by Christopher *Cockerell in 1959. Hovercraft were used as ferries between England and France but have been superseded by high-speed *hydrofoils, which use less fuel.

hovercraft. In the plenum chamber the air cushion is produced by a horizontal fan; the cushion in the centre is almost at rest and is surrounded by a fast-moving ring of turbulent air. In the annular chamber the cushion is formed within an annular ring of jets, the nozzles of which are sloped inwards. The lower figure shows the forces acting on a hovercraft.

hoverfly A fly, also called a flowerfly or syrphid fly, belonging to the family *Syrphidae* (about 4000 species). Many species are black and yellow, resembling bees and wasps, but they do not sting. The larvae of many hoverflies are scavengers in decaying organic matter or the nests of ants, termites, or bees.

Howard, Catherine (c.1520–42) The fifth wife (1540–42) of Henry VIII of England. She

was beheaded for treason when Henry learnt of her premarital love affairs.

Howard, Sir Ebenezer (1850–1928) British theorist of town planning. His book *Garden Cities of Tomorrow*, first published under this title in 1902, propounds his concept of ideal spacious suburbs. This was first realized in the planning of Letchworth (1903), Lutyens' design for Hampstead (1908), and Welwyn Garden City (1920).

Howard, John (c. 1726–90) English prison reformer. Horrified by conditions in Bedford gaol, which he inspected while high sheriff of Bedfordshire, Howard campaigned for sanitary improvements and wages for gaolers. An act of 1774 achieved his aims. The **Howard League for Penal Reform**, founded in 1866 as the Howard Association, was named after him.

Howard, John (Winston) (1939–) Australian politician; prime minister (1996–). The leader of the Liberal Party from 1985 to 1989 and again from 1995, he led his party to victory in elections in 1996, 1998, 2001, and 2004.

Howard, Leslie (Leslie Howard Stainer; 1890–1943) British actor of Hungarian descent. He became famous as the romantic leading man in both British and US films, including *The Scarlet Pimpernel* (1935), *Pygmalion* (1938), and *Gone with the Wind* (1939). He was killed when his aeroplane was shot down by German aircraft.

Howard, Michael (1941–) British politician; leader of the Conservative Party (2003–05). He entered parliament in 1983 and held several ministerial posts, including home secretary (1993–97).

Howard, Trevor (1916–88) British actor. After working in the theatre in the 1930s he concentrated on films, including *Brief Encounter* (1946), *The Third Man* (1949), *Mutiny on the Bounty* (1962), *Ryan's Daughter* (1970), and *White Mischief* (1987).

Howe, (Richard Edward) Geoffrey, Baron (1926–) British Conservative politician; chancellor of the exchequer (1979–83); foreign secretary (1983–89). He became deputy prime minister in 1989 but unexpectedly resigned in 1990, contributing to the fall of Margaret Thatcher as prime minister.

howitzer A low-velocity *artillery firearm with a shorter barrel and a larger bore than a gun but a smaller bore and longer barrel than a *mortar. They are often mounted on carriages that enable them to fire either flat gun-type trajectories or arched mortar-type

trajectories. They were widely used in World War I. The word comes from the Dutch *houwtzer*, catapult.

howler monkey A large monkey belonging to the genus *Alouatta* (6 species), of Central and South American forests. Howlers are 115–180 cm long including the tail (58–91 cm) and are named after their loud voices. They have beards over their enlarged throats, prehensile tails, and live in groups of up to 40 individuals. Family: *Cebidae*.

Hoya See WAXPLANT.

Hoyle, Sir Fred (1915–2001) British astronomer, who with Hermann Bondi (1919–2005) and Thomas Gold (1920–2004) proposed the *steady-state theory of the universe. His other theoretical studies were mainly concerned with stellar evolution. He was also a leading science writer and a notable science-fiction writer.

Huancayo 12 05S 75 12W A city in W Peru, the chief commercial centre of the central Andes. It has a cathedral and a university (1962). Population (1998 est): 305 039.

Huang Hai See YELLOW SEA.

Huang Ho See YELLOW RIVER.

Hubble constant (H_0) The rate at which the velocity of expansion of the universe changes with distance. It relates the recession velocity, V , of a distant galaxy to its distance, D . **Hubble's law**, proposed in 1929 by the US astronomer Edwin Hubble (1889–1953), states that recession velocity and distance are directly proportional: $V = H_0 D$.

Hubli 15 20N 75 14E A city in India, in Karnataka. Together with Dharwar, it forms one of the state's most populous areas. Industries include cotton and newspapers. Population (1991): 647 640.

Huddersfield 53 39N 147W A town in N England, in Kirklees unitary authority, West Yorkshire, at the confluence of the Rivers Colne and Holme. Formerly a major wool textile town, Huddersfield now has important manufacturing and chemical industries; it is also a centre for culture and sport. Population (2001): 146 234.

Hudson, Henry (d. 1611) English navigator. In 1607 he sailed in search of the *Northeast Passage to China, reaching Spitzbergen. He tried again, unsuccessfully, in 1608. On a third voyage, under the auspices of the Dutch East India Company, he sailed some 240 km (150 mi) down what came to be called the Hudson River.

His fourth voyage (1610–11) took him to what is now Hudson Bay, where his men mutinied and cast him adrift.

Hudson Bay A huge shallow oceanic bay in N central Canada, linked to the Atlantic Ocean by Hudson Strait and to the Arctic Ocean by Foxe Channel. Frozen during winter, in summer it carries grain ships from W Canada to Europe.

Hudson River A river in the NE USA, flowing from the Adirondack Mountains to New York Bay, where it forms part of New York Harbor. An important commercial waterway, it is linked by canals with the *Great Lakes and the *St Lawrence River. Length: 492 km (306 mi).

Hudson's Bay Company A fur-trading company, formed in 1670, that was given settlement and trading rights in Canada. It engaged in rivalry with the Northwest Company from the 1780s until 1821, when they were united under the name of the Hudson's Bay Company. In 1870 it sold its territories to Canada but remained a major fur-trading agency with headquarters in London.

Hue 16 28N 107 35E An ancient city in central Vietnam, on the Huong estuary. A commercial centre, Hue has textile, timber, and cement industries. *History:* a Chinese military stronghold from about 200 BC, Hue later fell to Champa and after 1635 was the capital of Annam and after 1802 of the short-lived Vietnamese empire. It suffered heavily during the Vietnam War. Population (1992 est): 219 149.

Hughes, Howard (Robard) (1905–76) US aviator, film producer, and multi-millionaire. After founding the Hughes Aircraft Company he broke the landplane speed record in 1935, reaching a speed of 352 mph. His films include *Hell's Angels* (1930), *Scarface* (1932), and *The Outlaw* (1944). From 1950 until his death he lived in seclusion.

Hughes, Ted (1930–98) British poet. His first volume, *The Hawk in the Rain* (1957), contained many poems concerned with the natural world written in a forceful energetic style. The poems in *Crow* (1970) are characterized by increased violence of language and subject matter. He became poet laureate in 1984. Later works include the adaptation *Tales from Ovid* (1997) and *Birthday Letters* (1998), a sequence of poems about his doomed marriage to Sylvia *Plath. He was appointed to the OM in 1998.

Hugo, Victor (Marie) (1802–85) French poet, dramatist, and novelist. After several early novels and volumes of poetry, his leader-

ship of the Romantic movement was confirmed by the success of his drama *Hernani* (1831). During the 1840s he became involved in republican politics and, after the coup d'état by the future Napoleon III in 1851, he went into exile in the Channel Islands until 1870. His later major works included *Les Contemplations* (1856), a volume of poems, and the novel *Les Misérables* (1862).

Huguenots French Protestants. Their name is derived from the Swiss-German *Eidgenoss*, confederate. The Huguenots, chiefly followers of John Calvin, were soon an influential national minority. The rivalry of their leaders with the prominent Roman Catholic Guise family caused the *Wars of Religion (1562–94). The Edict of Nantes (1598) guaranteed the Huguenots freedom of worship but after the revocation of the Edict (1685) over 250 000 Huguenots emigrated.

Hu Jintao (1942–) Chinese politician, who succeeded *Jiang Zemin as general secretary of the Communist Party in 2002 and as president of China in 2003. He was previously vice president (1998–2003).

Hull See KINGSTON-UPON-HULL.

humanism 1. The intellectual movement that formed the basis of Renaissance culture. Humanist scholars were inspired by the rediscovery and study of classical Greek and Roman authors, which had been initiated in Italy by such men as *Petrarch and *Boccaccio. Turning away from the theological bias of their predecessors, they concentrated on human achievements. *Erasmus was the greatest N European humanist. 2. A 20th-century philosophical viewpoint based on atheism, holding religion to be an outmoded superstition.

human rights Privileges claimed or enjoyed by a human being simply by virtue of being human. The concept developed from Roman ideas of "natural law" entailing "natural rights" to 20th-century liberal acceptance of the idea that human beings should have certain equal civil, political, and economic rights. The UN Universal Declaration of Human Rights (1948), itself not a legally binding code, has spawned various subsequent agreements, such as the Covenants on Civil and Political Rights and on Economic, Social, and Cultural Rights (1966), accepted as binding by 35 states. A UN High Commissioner for Human Rights was appointed in 1994. The European Convention on Human Rights was promulgated in 1950 and the European Court of Human Rights established in 1959. In 1998 the UK parliament passed

the Human Rights Act, under which the European convention on Human Rights was incorporated into English law.

Humber An estuary in N England, flowing from the confluence of the Rivers Ouse and Trent to the North Sea past the ports of Kingston-upon-Hull, Immingham, and Grimsby. The **Humber Bridge** (opened 1981) was formerly the world's longest single-span suspension bridge, with a main span of 1410 m (4626 ft). Length: 64 km (40 mi).

Humboldt Current (or Peru Current) An ocean current constituting part of the South Pacific oceanic circulation system. It flows N off the Peruvian coast of South America. It is a cold current rich in plankton and the fish that feed on them, giving rise to Peru's prosperous fishing industry.

Humboldt Glacier The largest known glacier in the N hemisphere, in NW Greenland. At its end in Kane Basin it is 100 km (60 mi) wide and 91 m (300 ft) high.

Hume, David (1711–76) Scottish philosopher and historian. In *A Treatise of Human Nature* (1739–40) he developed his influential distinction between impressions and ideas. For Hume almost nothing about existence was demonstrable; regarding the existence of God, he maintained an incisive agnosticism. Although an empiricist like *Locke and *Berkeley, Hume modified problematic aspects of their philosophies in favour of psychological explanations. Hume's *History of England* (1754–62) was a best-seller for many years.

Hume, John (1937–) Northern Irish politician; leader of the *Social Democratic and Labour Party (1979–2001). In 1998 he was awarded the Nobel Peace Prize (jointly with David *Trimble) for his role in the peace process that led to the Good Friday Agreement of that year.

humidity A measure of the amount of water vapour in the atmosphere. Absolute humidity is the mass of water vapour in unit volume of air, measured in kilograms per cubic metre. Relative humidity is the ratio of the absolute humidity at a given temperature to the maximum humidity without precipitation at the same temperature, usually expressed as a percentage.

hummingbird A brightly coloured bird belonging to a New World family (*Trochilidae*; 320 species). Hummingbirds are 5.5–20 cm long and have a slender often downcurved bill and a brush-tipped tongue for feeding on nectar and

small insects. Hummingbirds can hover, fly backwards, and produce a humming noise by the rapid vibration of their wings during flight. Order: *Apodiformes* (swifts, etc.).

Humperdinck, Engelbert (1854–1921) German composer. He assisted Wagner with the score of *Parsifal* in 1880–81. Of his many operas only *Hänsel and Gretel* (1893) is still popular: it blends German folklore with Wagnerian operatic techniques.

humus The black organic matter in soil resulting from the decomposition of dead plants and animals (humification). It is rich in such elements as carbon, nitrogen, phosphorus, and sulphur, which maintain soil fertility and promote plant growth. Humus also improves water absorption and workability of the soil.

Hundred Years' War (1337–1453) A war between England and France. It was precipitated by Edward III's claim to the French throne. The Treaty of *Brétigny (1360) recognized initial English successes at Sluys (1340), *Crécy (1346), and Poitiers (1356) but thereafter the war was waged intermittently with frequent truces. Henry V of England achieved recognition as heir to the French throne after his victory at *Agincourt (1415), but the more vigorous French prosecution of the war (inspired by *Joan of Arc) reversed his triumph and by 1453 England had been expelled from all French territory except Calais.

Hungarian A language of the Finno-Ugric branch of the Uralic family. It is spoken by 14 million people mainly in Hungary, where it is the official language, and in Slovakia, Romania, and Yugoslavia. It uses a modified Latin alphabet and has borrowed many words from surrounding languages. See also **MAGYARS**.

Hungary, Republic of (Hungarian name: Magyar Köztársaság) A country in central Europe. It lies mainly in the basin of the middle Danube, which forms the NW boundary with Slovakia before running N–S across the centre of the country. To the E of the Danube lies the Great Hungarian Plain; to the W an undulating plain rises to some low hills in the SW and in the NW to the hilly Bakony Forest. The people are mainly Magyars, with minorities of Germans, Slovaks, and others. *Economy*: under communism agriculture was organized collectively and most farms are still cooperatives; the main crops are wheat and maize as well as fruit and vegetables. Mineral resources include bauxite, oil, coal, and natural gas but most fuel supplies come from Russia. After 1949 all industry was nationalized and there was considerable expan-

sion. From 1968 there was a certain amount of decentralization, although overall state control was maintained. In 1992 it was decided that some 75% of industry should be privatized. Exports include transport equipment, computer software, and fruit and vegetables. *History:* the Magyars reached the Danube area in the 9th century AD and settled there. In the 11th century St *Stephen I converted the country to Christianity and became the first Hungarian king. After a long period of dynastic struggles and threats from foreign powers, Hungary was conquered by the Turks in 1526 and in the 17th century it became part of the Habsburg Empire. In 1867 Hungary gained internal self-government as part of the Dual Monarchy of *Austria-Hungary. In 1918 Hungary became a republic but, after a short period of communist rule, a constitutional monarchy was formed. After World War II it became a republic again and in 1949 the communists gained control. In 1956 an anti-Stalinist uprising was crushed by Soviet forces. Pressure for liberal reform led to the introduction of pluralist democracy in 1989; the Communist Party was reformed as the Hungarian Socialist Party, which formed governments in 1994–98 and from 2002. Hungary joined NATO in 1999 and the EU in 2004. Official language: Hungarian (Magyar). Currency: forint of 100 fillér. Area: 93 035 sq km (35 911 sq mi). Population (2007 est): 9 956 103. Capital: Budapest.

Huns Nomadic peoples, originating in Mongolia, who overran much of SE Europe in the late 4th and 5th centuries, overthrowing the *Ostrogoths and then invading the Roman Empire. United under *Attila, the Huns invaded Greece, Gaul, and finally Italy (452). The death of Attila (453) fragmented their empire and they were defeated by a coalition of tribes at Nedao (455).

Hunt, William Holman (1827–1910) British painter. He helped found the *Pre-Raphaelite Brotherhood. His symbolic paintings include *The Light of the World* (Keble College, Oxford) and *The Scapegoat* (Port Sunlight), inspired by a visit to Syria and Palestine (1854).

Huntingdon 52 20N 0 12W A town in E England, in Cambridgeshire on the Great Ouse River. A market town with printing, brewing, and knitwear industries, Huntingdon is the birthplace of Oliver Cromwell. Population (2001): 19 830, with Godmanchester.

hurdling A track event in athletics in which sprinters jump ten hurdles in the course of a race. Distances are 110 m and 400 m for men and 100 m for women. For the 110 m the height

of the hurdles is 106.7 cm (3.5 ft), for the 400 m it is 91.4 cm (3 ft), and for the 100 m 84 cm (2.75 ft). Racers are not normally disqualified for knocking hurdles over.

hurling (or **hurley**) An Irish 15-a-side stick-and-ball field game similar to *hockey, over 3000 years old. The ball is hit or carried through the air with a broad-bladed curved stick, the hurley (Gaelic word: *camán*), and may be caught in the hand. A goal, hit under the crossbar, scores three points; a hit between the posts but above the bar scores one.

Huron, Lake The second largest of the Great Lakes in North America, situated between the USA and Canada. It is an important shipping route carrying iron ore, coal, grain, and oil. Area: 59 570 sq km (23 000 sq mi).

hurricane 1. A tropical *cyclone with surface-wind speeds in excess of 64 knots (32.7 m per second) that occurs around the Caribbean Sea and Gulf of Mexico. The centre (eye) of a hurricane is an area of light winds around which strong winds, cloud, and rain bands spiral. **2.** Any wind reaching force 12 on the *Beaufort scale (in excess of 64 knots or 32.7 metres per second).

husky One of several breeds of compact sturdy deep-chested dogs used for pulling sledges in Arctic regions. The Siberian husky has small erect ears, a long muzzle, and a brushlike tail. The dense double-layered coat provides insulation against the severe climate. Height: 51–63 cm. See also SAMOYED.

Hussein (ibn Talal) (1935–99) King of Jordan (1952–99). He became king following the deposition because of mental illness of his father Talal. Hussein led Jordan into the 1967 Arab-Israeli War, in which it lost the *West Bank of the River Jordan to Israel. In 1970 he ruthlessly crushed Palestinian guerrillas but in 1974, under pressure from other Arab countries, he accepted the claims of the Palestine Liberation Organization to the West Bank. In the 1990s he took a role in the Arab-Israeli peace process. He was succeeded by his son, Abdullah II.

Hussein, Saddam (1937–2006) Iraqi statesman; Ba'athist president of Iraq (1979–2003). He repressed such minority groups as the Kurds, established his own personality cult, and led Iraq into the *Iran-Iraq War. His annexation of Kuwait (1990) led to the *Gulf War, in which his forces were routed by a US-led coalition. In the 1990s his defiance of UN ceasefire terms led to further US air raids. Defeat in the 2003 *Iraq

War led to the collapse of his regime; he was subsequently captured, tried, and executed.

Hussites The followers of the Bohemian heretic **Jan Hus** (1372–1415). They demanded a reformed national Church with a vernacular liturgy. In spite of crusades led by the Holy Roman Emperor Sigismund, the Hussites remained undefeated until a compromise was reached at the Council of *Basle in 1433. The moderate Utraquists gained many of their demands and survived until the 17th century.

Huston, John (1906–87) US film director and scriptwriter. His first film as director was *The Maltese Falcon* (1941), and subsequent films included *The Treasure of the Sierra Madre* (1948), for which he wrote the script and in which he also acted, *The African Queen* (1951), *The Misfits* (1960), and *The Dead* (1987). His daughter **Angelica Huston** (1952–) has starred in such films as *The Grifters* (1990), *The Crossing Guard* (1995), and *Blood Work* (2002).

Hutu A Bantu-speaking people, some 9–10 million of whom inhabit Burundi and Rwanda. Although the Hutu form the majority in both countries, they have traditionally been dominated by the **Tutsi** minority. In the 1990s escalating ethnic violence culminated in the slaughter of over half a million Rwandan Tutsis by Hutu militiamen. In the ensuing civil war a flood of Hutu refugees fled to neighbouring countries; this has caused further instability, especially in the Democratic Republic of Congo.

Huxley, Thomas Henry (1825–95) British biologist, whose impact spanned both biology and philosophy. He developed his interest in natural history while serving as a ship's surgeon in the Far East. After valuable work in palaeontology Huxley held numerous public posts and played an important role in educational reform. From 1880 onwards he challenged orthodox theology and coined the term "agnosticism" to describe his own position. Three of his grandsons achieved fame. **Sir Julian Huxley** (1887–1975) was a zoologist and scientific administrator, who also made valuable contributions to the philosophy of science. He was involved in the improvement of the London Zoo at Regent's Park and was appointed first director general of UNESCO (1946–48). His brother **Aldous Huxley** (1894–1964) was a novelist and writer. His witty satirical novels *Antic Hay* (1923) and *Point Counter Point* (1928) were followed by *Brave New World* (1932) and *Eyeless in Gaza* (1936). **Sir Andrew Fielding Huxley** (1917–), half-brother to Sir Julian and Aldous,

is a biologist noted for his researches into the mechanisms of nerve-impulse conduction and muscle contraction. Huxley and his collaborator A.L. Hodgkin shared a Nobel Prize (1963) with Sir John *Eccles.

Huygens, Christiaan (1629–95) Dutch astronomer and physicist, who discovered Saturn's rings in 1656. He also built the first pendulum clock and designed an arrangement of lenses called a Huygens eyepiece. He devised a wave theory of light to explain double refraction.

hyacinth A perennial herbaceous plant of the genus *Hyacinthus* (about 30 species), native to the Mediterranean region and tropical Africa. Growing from bulbs, the plants have a dense head of bell-shaped flowers, varying from white to deep purple, and slender leaves. The common garden hyacinths are derived from *H. orientalis*. Family: Liliaceae.

hybrid The offspring resulting from the mating of two unrelated individuals. The hybrid offspring often shows greater general fitness than either of the two parents, a phenomenon called hybrid vigour (or heterosis). This is commonly used by plant breeders to produce a generation of crop plants giving higher yields and showing improved resistance to disease.

Hyderabad 17 22N 78 26E One of the largest cities in India, the capital of Andhra Pradesh situated on the River Musi. Formerly the capital of the princely state of Hyderabad, it was founded in 1590 by the Muslim Qutb Shahi sultans. An educational centre, Hyderabad is the site of Osmania University (1918), an agricultural university, and several research institutes. The chief manufactures include bus and railway equipment, textiles, and pharmaceutical goods. Population (2001): 3 637 483.

Hydra (mythology) In Greek legend, a monster with many heads who grew two more whenever one was cut off. It was killed by *Heracles.

Hydra (zoology) A widely distributed genus of solitary freshwater invertebrate animals belonging to an order (*Hydroida*) of *cnidarians. They are flexible *polyps, 10–30 mm long, with the mouth at the top surrounded by 6–10 tentacles. Hydras attach to stones, sticks, or aquatic vegetation and feed on small animals. Class: Hydrozoa.

Hydrangea A genus of shrubs (about 80 species) native to Asia and North and South America, including several popular ornamen-

tals. The showy heads of white, pink, or blue flowers may be sterile and sometimes change colour according to the acidity or alkalinity of the soil. Family: *Hydrangeaceae*.

hydraulics The application of hydrostatics (the study of fluids at rest) and hydrodynamics (the study of fluids in motion) to design problems. In civil engineering it is used to study the flow of water in pipes, rivers, canals, etc., especially with reference to the construction of dams, reservoirs, and hydroelectric power stations. In mechanical engineering, applications include the design of machinery involving fluids, such as hydraulic presses, *turbines, propellers, etc.

hydrocarbons Compounds containing carbon and hydrogen. The saturated hydrocarbons are classified as *alkanes. Unsaturated hydrocarbons include the *alkenes and *alkynes. *Aromatic compounds include *benzene and its many derivatives.

hydrochloric acid A solution in water of the colourless pungent gas hydrogen chloride (HCl). It is made by the action of sulphuric acid on salt or by the direct recombination of hydrogen and chlorine from the electrolysis of sea water. It is very soluble in water and forms a strong acid. Concentrated hydrochloric acid contains about 40% HCl by weight and is a clear fuming corrosive liquid. The acid in the human stomach is dilute hydrochloric acid (0.4%).

hydroelectric power Electricity generation using the energy of falling water. The water turns a *turbine connected to an alternator, generating electricity with an efficiency of over 90% at full load. Water is led through pipes from high-level natural or artificial reservoirs to the power station. Hydroelectric power is, therefore, a cheap power source in mountainous areas with high rainfall. In pumped storage stations, electricity is stored by using it to drive pumps that raise the water to a high-level reservoir. In times of high demand this water is run back through the turbines. Hydroelectricity is a renewable energy source causing no pollution; it currently provides 2.4% of world energy needs.

hydrofoil A ship the hull of which is raised out of the water by foils as its speed increases. The foils provide lift in much the same way as an aerofoil; once the hull is clear of the water the drag is greatly reduced and the speed can be increased far above that of a normal ship of the same size and weight. The first hydrofoil was built in 1906 by Enrico Forlanini (1848–1930). Modern craft use a large V-shaped

foil, to provide stability in turns or in rough seas, or small totally submerged foils, which support the hull on streamlined struts. Propulsion is by propeller or by pumped-water jet. Hydrofoils of 150 tonnes are in use in many parts of the world, including a cross-Channel service.

ladder foils

V-shaped foils

short submerged foils

hydrofoil

hydrogen (H) The lightest of all gases, recognized as an element by *Cavendish in 1766 and named by *Lavoisier after water (Greek *hudro*, water). Hydrogen makes up about three-quarters of the mass of the universe. It is the simplest element, its nuclei consisting of one proton. Heavier elements are formed by nuclear fusion (see nuclear energy) from hydrogen in stars. The heavier isotope of hydrogen, *deuterium (D or ^2H), occurs as about one part in 6000 of ordinary hydrogen. *Tritium (^3H) also occurs but is unstable. As well as the gaseous element (H_2) and water (H_2O), hydrogen occurs in organic compounds and in all inorganic *acids and alkalis. The gas itself is used as a fuel for rockets, in welding, and in chemical manufacture. It combines (explosively if in the right proportions) with oxygen to form water and can be obtained from water by electrolysis. At no 1; at wt 1.00794; mp -259.34°C ; bp -252.87°C .

hydrogen bomb See NUCLEAR WEAPONS.

hydrology The study of the occurrence and movement of water on the surface of the earth. The **hydrological cycle** is the movement of water from the sea to the atmosphere and back, via precipitation, streams, and rivers. The main

hydrology. The hydrological cycle.

processes with which hydrology is concerned are precipitation, evaporation and transpiration, stream flow, and groundwater flow. It has many important applications, such as flood control and the supply of water for domestic and industrial purposes, irrigation, and hydroelectric power.

hydrophobia See RABIES.

hydroponics The cultivation of plants in a liquid nutrient solution instead of soil. An aqueous solution of the nutrients required for healthy growth is used, usually in conjunction with an inert medium, such as sand or gravel, which provides support for the plant-root system. On a small scale, the solution is simply poured over the substrate and the excess allowed to drain into containers for re-use. On a commercial scale, this is achieved by an automatic pumping system in which the solution is monitored to maintain nutrient levels and acidity.

hyena (or **hyaena**) A carnivorous mammal of the family *Hyaenidae*. There are three species: the African spotted hyena (*Crocuta crocuta*); the Asian striped hyena (*Hyaena hyaena*); and the brown hyena (*H. brunnea*) of South Africa, also called strandwolf. Hyenas are doglike in ap-

pearance, up to 1.5 m long including the tail, and stand about 90 cm high at the shoulder. They hunt in packs, feeding on carrion and killing young or sick animals.

hygrometer An instrument that measures the relative humidity of the atmosphere. In mechanical hygrometers, a material (usually human hair) is used, the length of which varies with the humidity; the variations being transformed into the movement of a pointer along a scale. In the wet-and-dry bulb hygrometer, two thermometers are placed side by side, one having its bulb covered by a moist cloth. The cooling caused by the evaporation from this wet bulb depends on the atmospheric moisture and thus the difference between the two thermometer readings can be related by standard tables to the relative humidity.

Hymenoptera A large worldwide order of insects (over 100 000 species) including the ants, sawflies, ichneumons, wasps, and bees. Many species show a high degree of social organization. Typically they have two pairs of membranous wings and the first segment of the abdomen is constricted to form a "waist." A tubular egg-laying structure (ovipositor) is generally present and in higher groups is modified for sawing, piercing, or stinging. The lar-

vae (except the sawflies) are legless and have well-developed heads. The males develop from unfertilized eggs. Many species are of benefit to man because they pollinate flowering plants and prey on insect pests.

hyperbola The curve, or pair of curves, formed by a *conic section and defined in Cartesian coordinates (see COORDINATE SYSTEMS) by the equation $x^2/a^2 - y^2/b^2 = 1$, where a and b are constants. Its two parts have a common axis and are separated by a minimum distance $2a$ along this axis. As it goes out to *infinity, the curve becomes increasingly close to two straight lines (*asymptotes).

hyperbolic functions A set of mathematical functions written $\sinh x$, $\cosh x$, $\tanh x$, and their inverses $\operatorname{csch} x$, $\operatorname{sech} x$, and $\operatorname{coth} x$ respectively. $\sinh x$ is defined as $\frac{1}{2}(e^x - e^{-x})$, where e is the base of natural logarithms; $\cosh x$ is $\frac{1}{2}(e^x + e^{-x})$, and $\tanh x$ is $\sinh x / \cosh x$. Hyperbolic functions are defined by analogy with the trigonometric functions $\sin x$, etc., and are so named because they are related to the *hyperbola in much the same way as the trigonometric functions are related to the circle.

hypermetropia See LONGSIGHTEDNESS.

hypertension High *blood pressure. This is a common condition, which can be caused by kidney disease, hormonal disorders, and some congenital diseases; for most cases, however, no cause can be found. Usually there are no symptoms, with the consequent danger that untreated hypertension may lead to heart failure, kidney failure, cerebral haemorrhage, and blindness. It is treated by drugs.

hypnosis The production of a trance state by means of firm suggestion, with the cooperation of the subject. People who have been deeply hypnotized can carry out instructions that would not be possible in a normal waking state. First used for therapeutic purposes by *Mesmer in the 18th century, it was developed (and given the name hypnosis) by James Braid (1795–1860) in the 19th century. By the turn of the century it was established as a means of treating certain psychiatric disorders (especially those of psychosomatic origin).

hypothalamus A part of the *brain, surrounding the lower part of the third ventricle, that is an important coordinating centre for the functions of the autonomic *nervous system. It is particularly involved with the control of body temperature, with regulating how

much is eaten and drunk, and with the emotions. It also releases *neurohormones affecting other organs, especially the *pituitary gland.

hypothermia Lowering of the body temperature. This is most commonly seen in old people and young babies—whose body temperature is less well controlled—if they are living in poorly heated rooms. If the body temperature falls very low severe internal changes may occur, but otherwise gentle warming will help the patient to recover.

hyrax An African *mammal belonging to the order Hyracoidea (6 species), also called cony. 30–60 cm long, hyraxes are related to ungulates (hooved mammals), having hooflike toes and a two-chambered stomach for digesting their vegetable diet. They are nimble and live in small colonies in trees or among rocks, being most active at twilight.

hyssop A perennial herbaceous plant, *Hyssopus officinalis*, native to S Europe, Asia, and Morocco. It is grown elsewhere as a garden ornamental and was formerly cultivated as a medicinal herb. Growing to a height of 60 cm, it has whorls of violet-blue flowers along the stem. Family: *Labiatae.

hysterectomy The surgical removal of the womb. A subtotal hysterectomy involves removing the body of the womb but leaving the neck (cervix); in total hysterectomy (or panhysterectomy) the entire womb is removed. It is most commonly performed when the womb contains large fibroids—benign tumours that cause heavy menstrual periods. Other conditions that may require hysterectomy include cancer of the womb or the presence of precancerous cells in the cervix. The operation is usually performed through an incision made in the abdominal wall: it invariably precludes subsequent pregnancy but does not affect sexual activity.

hysteria A neurotic condition of emotional instability and immaturity in which patients are vulnerable to suggestion and develop physical symptoms. Hysterical symptoms are unconsciously adopted by the individual because they bring some gain. The symptoms may be of "conversion hysteria," characterized by physical symptoms, such as paralysis; or of "dissociative hysteria," with changes in thinking, such as multiple personality. Treatment is usually by *psychotherapy.

h

iamb A metrical foot consisting of an unstressed syllable (or in verse based on quantity, a short syllable) followed by a stressed (or long) syllable. Developed by the ancient Greeks, it is the commonest type in English poetry.

Ibadan 7°23'N 3°56'E The second largest city in Nigeria. It is an important industrial and administrative centre. Population (1996 est): 1,142,000.

Iberian Peninsula A peninsula in SW Europe, occupied by Portugal and Spain. It is separated from the rest of Europe by the Pyrenees and its flora and fauna are similar to those of N Africa. Area: 593,250 sq km (229,054 sq mi).

Iberians A Bronze Age people of S and E Spain in the 1st millennium BC. Their non-Indo-European language, which was displaced by Latin, is known from a variety of inscriptions on stone and other materials. The economic basis was agriculture, mining, and metalworking. The Iberians lost their identity by cultural assimilation to the *Celts in Roman times.

ibex A rare wild *goat, *Capra ibex*, of Eurasian and N African mountains. About 85 cm high at the shoulder, ibexes have backward-curving horns up to 65 cm long and their coat is brownish-grey with variable markings.

ibis A long-necked wading bird belonging to the subfamily *Threskiornithinae* (20 species), distributed worldwide in warm regions. 55–75 cm long, ibises have a slender downcurved bill and unfeathered face or head and neck. Family: *Threskiornithidae* (ibises and spoonbills); order: *Ciconiiformes* (herons, storks, etc.).

Ibiza (Iviza or Ivica) One of the Balearic islands. It is a popular tourist centre, noted for its many nightclubs etc.; exports include almonds, dried figs, apricots, and salt. Area: 541 sq km (209 sq mi). Population (latest est): 45,000. Chief town: Ibiza.

Ibn Saud (c.1880–1953) The first King of Saudi Arabia (1932–53). With the military help of al-Ikhwan, a tribal militia, he extended his territory from the Sultanate of Najd, which he reconquered in 1902, to encompass much of Arabia by 1924, when he took Hejaz. The name Saudi Arabia was adopted in 1932.

Ibo (or Igbo) A people of SE Nigeria who speak Igbo, a language of the Kwa subgroup of the Niger-Congo family. Subsistence cultivators of yams, cassava, and taro, they traditionally lived in scattered small holdings or village clusters of patrilineal kin headed by the eldest male descendant of the founder. See also BIAFRA.

Ibsen, Henrik (1828–1906) Norwegian playwright and poet, the founder of modern prose drama. From 1864 to 1891 he lived in Italy and Germany. His fame as a dramatist grew with *Brand* (1865) and *Peer Gynt* (1867). Later plays explored social issues: women's emancipation in *A Doll's House* (1879), inherited disease and guilt in *Ghosts* (1881), and public corruption in *An Enemy of the People* (1882). In his last plays, *The Master Builder* (1892), *John Gabriel Borkman* (1896), and *When We Dead Awaken* (1899), he turned to the symbolic treatment of autobiographical themes.

Icarus See DAEDALUS.

ice Water in its solid (frozen) phase. Pure water at a pressure of 101.3 kilopascal (= 1 atmosphere) freezes at 0° C. Its density at this temperature is 0.92, so that about 8% of a floating piece of ice is above water.

Ice Age A period in the earth's history when ice spread towards the equator with a general lowering of temperatures. The most recent of these was the *Pleistocene epoch ending about 10,000 years ago, during which four major ice advances occurred. Other ice ages occurred in Permo-Carboniferous times about 250 million years ago and in Pre-Cambrian times about 500 million years ago. Between 1550 and 1850 the

Little Ice Age occurred, with a significant lowering of temperatures in the N hemisphere.

iceberg A large mass of ice in the sea that has originated on land. Many result from the breaking off of ice from glaciers. In the N hemisphere icebergs originate chiefly from Greenland, in the S hemisphere most break off from the Antarctic ice.

ice hockey A six-a-side team game played with stick and puck on a rink. It derives from field hockey and was first played by Englishmen on the frozen Kingston Harbour, Ontario (c. 1860). Canada is the true home of the game, but it is widely played in the USA, Russia, and Scandinavia.

ice hockey. The dimensions of the rink.

Iceland, Republic of (Icelandic name: Ís-

land) An island country in the N Atlantic, just S of the Arctic Circle, off the SE coast of Greenland. It consists mainly of an uninhabited plateau of volcanoes, lava fields, and glaciers; most of the population live around the deeply indented coast. *Economy:* the main exports are fish, fish products, ferrosilicon, and aluminium. Tourism is of growing importance. Hydroelectricity and geothermal power (from geysers and thermal springs) are important sources of energy. Iceland is a member of the European Free Trade Association. *History:* the Vikings reached Iceland about 874 AD and by the 10th century it had become an independent state with its own parliament, the Althing, considered to be the oldest in the world. In 1264 it came under Norwegian rule and, with Norway, passed to the Danish Crown in 1381. In 1918 it became an independent state under the Danish Crown, attaining full independence as a republic in 1944. Iceland was involved in several Cod Wars with the UK during the 1960s and 1970s; falling fish prices have since created economic strain. In 2007 parliamentary elections were won by the Independence Party. Official language: Icelandic. Currency: króna of 100 aurar. Area: 103 000 sq km (39 758 sq mi). Population (2007 est): 301 431. Capital: Reykjavik.

Icelandic A North Germanic language of the Western Scandinavian subgroup, developed from Old Norse. It is the official language of Iceland.

Iceni A British tribe that inhabited the area that is now Norfolk and Suffolk. Under *Boadicea (60 AD) their revolt against Roman rule was brutally suppressed.

ice plant A succulent annual or biennial plant, *Cryophytum crystallinum*, that is covered in glistening papillae and has long prostrate stems reaching 75 cm. Native to South Africa, it is widely grown as a garden or pot plant. Family: Aizoaceae.

ice skating The recreation and sport of sliding over ice on steel-bladed skates. The main forms of the sport are speed skating (racing), figure skating (set exercises followed by a freestyle performance to music, either singly or in pairs), and ice dancing (a combination of dancing and pairs figure skating).

ichneumon An insect, also called ichneumon fly and ichneumon wasp, belonging to a family (*Ichneumonidae*; about 40 000 species) occurring in Europe, North America, and elsewhere. About 12 mm long, ichneumons resemble wasps but have longer antennae. They are para-

sitic upon other insects thereby controlling many insect pests. Order: *Hymenoptera*.

ichthyosaur An extinct dolphin-like marine reptile that lived through much of the Mesozoic era but was most abundant in the Jurassic period (200–135 million years ago). 1–12 m long, it had broad flexible paddles, a large tail fin, and a triangular dorsal fin.

icon A painted or mosaic image of Christ or a saint, peculiar to the Byzantine and Orthodox churches. Unlike other paintings, icons have undergone little stylistic development and are characterized by a symbolic rather than realistic approach to colour, perspective, etc.

id In *psychoanalysis, the part of the unconscious mind that is governed by irrational instinctive forces, such as libido and aggression. These forces seek immediate (actual or symbolic) relief and the id is therefore said to be ruled by the pleasure principle and not by reality or logic. See also EGO; SUPEREGO.

Id (or **Eid**; Arabic: festival) Either of two annual Muslim festivals, **Id-ul-Adha** (Festival of Sacrifice) held in late February or early March to mark the end of the pilgrimage to Mecca (see HAJJ), or **Id-ul-Fitr** (Festival of Fast Breaking) held in early December to mark the end of *Ramadan.

Idaho A state in the NW USA, dominated by the N Rocky Mountains. It is primarily agricultural producing potatoes, wheat, and sugar beet along with beef cattle and sheep. Rich in minerals, Idaho is a leading US producer of silver and antimony. *History*: first settled in the early 19th century, it became a state in 1890. Area: 216 412 sq km (83 557 sq mi). Population (2000 est): 1 293 953. Capital: Boise.

idealism Any philosophical doctrine that equates reality with mind, spirit, person, soul, thought, or, as in *Plato, archetypal ideas. Philosophers who have held various idealist views include Berkeley, Kant, and Hegel.

ideographic writing systems (or **ideography**) Writing systems in which each concept is represented by a symbol. All ideographic systems were probably derived from pictographic writing systems, stylized representations of abstract concepts being added to the list of symbols. Languages such as Chinese still use ideographic writing systems.

igloo A temporary dome-shaped dwelling made from blocks of snow by Inuits of the region between the Mackenzie River delta and Labrador in N Canada. The blocks are cut with a long knife and the joints filled with snow.

The igloo is entered by a low and narrow semi-cylindrical passageway.

Ignatius Loyola, St (1491–1556) Spanish founder of the *Jesuits. His interest in religion dated from 1521, when he read the life of Christ while convalescing from a war wound. After visiting the Holy Land (1523), he studied in Spain and in Paris. There, in 1534 he made vows of poverty, chastity, and obedience, with St *Francis Xavier and other followers. He was ordained in 1537 and founded the Society of Jesus with the approval of Pope Paul III in 1540. His *Spiritual Exercises* (1548) has had lasting influence on the Roman Catholic Church. Feast day: 31 July.

igneous rock One of the three major categories of rock (compare METAMORPHIC ROCK; SEDIMENTARY ROCK) consisting mostly of crystalline rocks cooled directly from magma. That cooled at the surface forms extrusive rocks—volcanic lavas with small crystals because they have cooled rapidly. Some extrusive rocks, such as obsidian, are like glass. Igneous rocks cooled at depth are called intrusive or plutonic. They have larger crystals, granite being a common example. A third category contains the hypabyssal rocks, cooled in dykes or sills at intermediate depth and usually having intermediate crystal sizes, for example dolerite. Silica is the dominant chemical constituent of igneous rocks.

iguana A lizard belonging to the predominantly New World family *Iguanidae* (700 species), comprising desert-dwelling, arboreal, and amphibious species. The green common iguana (*Iguana iguana*) reaches a length of 1.8 m including the long tail (about 1.3 m) and has a short spiny crest along the back; males have a dewlap beneath the throat. They feed on vegetation and are excellent swimmers. The marine iguana (*Amblyrhynchus cristatus*) of the Galápagos is the only lizard that feeds in the sea. See also BASILISK.

Iguanodon A large dinosaur that lived in the Jurassic and Cretaceous periods (200–65 million years ago). It stood on powerful hind legs about 5 m tall and measured 11 m from its head to the tip of its heavy balancing tail. Iguanodons were herbivorous, tearing off leaves with their tongues and cutting them with bladelike teeth. Order: *Ornithischia*.

Illinois A group of Algonquian-speaking North American Indian tribes of Wisconsin, Illinois, Missouri, and Iowa. Their villages were of rush-mat-covered dwellings, each housing several families. Men hunted forest game and

prairie bison; women cultivated maize and corn. The Illinois were much reduced in population through wars with other tribes and eventually dispersed from their territory.

Illinois A state in the USA, in the Midwest. It consists largely of flat prairies crossed by the Illinois and Kaskaskia Rivers. Approximately half its population is concentrated in the Chicago metropolitan area, the area to the S being predominantly rural. Illinois is a major producer of soya beans, maize, corn, pork, beef, and dairy products. Manufacturing and coalmining are also important. *History:* the first Europeans to visit Illinois were the French in the 17th century. It formed part of the French province of Louisiana but was ceded to Britain (1763). It came under US control (1783), becoming a territory in 1809 and a state in 1818. Area: 146 075 sq km (56 400 sq mi). Population (2000): 12 419 293. Capital: Springfield.

illuminated manuscripts Manuscripts of gospels, books of hours, prayers, etc., decorated with designs in watercolour and frequently gold leaf. The art was first practised by monastic scribes in the early middle ages, as in the 8th-century Book of Kells. The Duke of Berry's book of hours by the de *Limburg brothers (active c. 1400–c. 1416) is an outstanding example of late medieval illumination.

Illyria The Adriatic coastal region W of the Balkans. Inhabited from the 10th century BC by warlike tribes, Illyria constantly harassed Macedonia and Epirus. Piratical raids in the Adriatic provoked Roman intervention from 228 BC; Illyria became the Roman province of *Illyricum* in 167 BC.

Iloilo 10 41N 122 33E A port in the central Philippines, in SE Panay. The island's commercial centre, it exports sugar and rice. Population (2000): 365 820.

Ilyushin, Sergei Vladimirovich (1894–1977) Soviet aircraft designer. He first became known for the Il-2 Stormovik dive bomber; he later worked on commercial aircraft, designing the jet airliner Il-62.

imaginary number See COMPLEX NUMBERS.

Imagism A literary movement begun in Britain in 1912, dedicated to the concise expression of pure visual images in poetry. Its emphasis on clarity and hardness derived largely from the criticism of T. E. Hulme (1883–1917). *Des Imagistes* (1914), an anthology edited by Ezra *Pound, included poems by Richard Aldington, Hilda Doolittle (H.D.), and Amy Lowell. The

movement was shortlived but profoundly influenced British and US poetry.

Immaculate Conception A dogma of the Roman Catholic Church stating that the Virgin Mary was conceived free from original sin. It was opposed by prominent theologians, such as St Bonaventure and St Thomas Aquinas, but was promulgated as dogma in 1854 by Pope Pius IX.

immunity In medicine, resistance to infection, usually that specifically acquired due to the presence of *antibodies. Newborn babies have a temporary passive immunity from antibodies transferred from the mother's blood through the placenta. Active immunity is produced when an individual forms his (or her) own antibodies after exposure to an antigen, such as occurs following an infection. There are two different kinds of immune response produced by antibodies. Cell-mediated immunity is due to activity of the T-lymphocytes (produced by or dependent on the thymus), which produce cells with antibody bound to their surface. They are responsible for such reactions as graft rejection. Humoral immunity is produced by the B-lymphocytes (probably formed by lymphatic tissue in the gut), which produce cells that release free antibody into the blood. Patients whose immune systems have failed to develop completely are said to be **immunodeficient**; those whose immune systems have become deficient, as through AIDS, are **immunocompromised**.

Immunization is the production of immunity by artificial means. This may be achieved by injecting antibodies against specific diseases (e.g. tetanus and diphtheria), providing temporary passive immunity, or by *vaccination to produce active immunity.

immunology The study of the biological processes by which the body reacts to foreign substances. Immunologists are also concerned with disorders of the immune system, including *allergy and *autoimmunity.

immunosuppression The condition in which the *immunity of the body is reduced. This can occur in various diseases (e.g. leukaemia and severe infections) or it may be deliberately induced by certain drugs (e.g. azathioprine and cyclophosphamide). Immunosuppressive drugs are administered after transplant surgery and are also used to treat rheumatoid arthritis and other conditions associated with *autoimmunity.

impala A common antelope, *Aepyceros melampus*, of central and S African savanna. About

100 cm high at the shoulder, impalas have a red-brown coat and white underparts; males have lyre-shaped ridged horns. Impalas are known for their agile springing leaps.

Impatiens A genus of annual and perennial herbaceous plants (about 700 species), widely distributed in temperate and tropical regions. The genus includes touch-me-not (*I. noli-tangere*) and various cultivated species, such as the red-flowered garden *balsam (*I. balsamina*) and busy Lizzies. Family: *Balsaminaceae*.

impeachment In the UK, a prosecution brought by the House of Commons as prosecutor and tried by the House of Lords as judge, especially against a minister of the Crown for a serious public offence. In the USA impeachments are brought by the House of Representatives and tried by the Senate.

impedance A measure of the ability of a circuit to resist the flow of an alternating current. It is given by $Z = R + iX$, where Z is the impedance, R is the *resistance, and X is the reactance. Impedance and reactance are measured in *ohms.

impressionism A French art movement that flourished from the late 1860s to the late 1880s. Its name was derived from Monet's painting *Impression: Sunrise* (1872; Musée Marmottan, Paris), shown at the first of the eight impressionist exhibitions (1874, 1876, 1877, 1879, 1880, 1881, 1882, 1886). The leading impressionists were *Monet, *Pissarro, *Sisley, and *Renoir. They aimed to capture fleeting effects of light and weather with dabs of bright colour and a minimum of drawing.

imprinting In *ethology, a rapid and irreversible form of learning that takes place in some animals in the first hours of life. Animals attach themselves to whatever creatures they are exposed to at that time – usually, but not necessarily, their mothers. This behaviour was first described by Konrad *Lorenz.

Incarnation The central tenet of Christian belief, that the second person of the Trinity took human form and became man. Although in other religions gods temporarily appear in human form (i.e. a theophany), in Christianity the union of the divine and human in Christ is permanent and the integrity of both the divine and human natures is maintained. The doctrine is stated in the opening of the Gospel of St John and in St Paul's Epistle to the Colossians.

Incas A Quechua-speaking South American Indian people of the Peruvian Andes. From

their capital of *Cuzco, they established, during the 15th century, an empire extending from Ecuador to central Chile. It was destroyed in the 16th century by the Spaniards. See also MACHU PICCHU.

incense A mixture of gums and spices (especially gum benzoin) burnt for its aroma (see also FRANKINCENSE). It was employed in pagan rituals in ancient Egypt, Greece, and Rome as well as in Judaic ritual and was a valued trade commodity. In the Book of Revelation it is a symbol of the prayers of saints and has been used in Christian worship since the 6th century AD.

incest Proscribed sexual relations between close kin. The most common and universal prohibitions apply to members of the same nuclear family, such as relations between parents and children and between brothers and sisters. These taboos, founded in folklore, have a sound basis in genetics (unfavourable recessive genes can become dominant when consanguineous relatives breed).

Inchön 37 30N 126 38E A city in NW South Korea, Seoul's main seaport on the Yellow Sea. A UN attack here (1950) during the Korean War halted the North Korean invasion. Population (1995): 2 307 618.

income tax A direct tax on income and a major source of government revenue in many countries. In most countries, including the UK, it is a progressive tax (the rate charged increasing with the taxable income) in which a certain amount can be earned without attracting tax.

incunabula Books printed during the infancy of modern printing (before 1500). N European incunabula have a heavy type design known as black letter; Italian books have a more elegant roman typeface.

Independence Day The national holiday in the USA that marks the adoption of the *Declaration of Independence by the Continental Congress on 4 July 1776.

independent school A UK school that is not funded by central government or a local authority. The main groups are the public schools (for 13–17 year olds), the preparatory schools ("prep" schools; 8–13 year olds), and the independent primary schools ("pre-prep" schools; 5–7).

India, Republic of (Hindi name: Bharat) A country in S Asia, the seventh largest in the world and the second most populous. Bordering on Pakistan, China, Nepal, Bhutan, and Myanmar (Burma), it comprises 28 states and 7 Union Territories. The Himalayas, in which the

River Ganges rises, form a natural barrier to the N. Central India consists of a plateau (the Deccan), flanked by the mountains of the Western and Eastern Ghats. N of this lies the Indo-Gangetic plain, with the Thar Desert in the W. The population comprises many ethnic and cultural groups and about 1600 languages and dialects are spoken. The chief religions are Hinduism (83% of the population) and Islam (11%). The *caste system still survives, although untouchability has been officially abolished. *Economy:* 60% of the workforce is engaged in agriculture, with rice, pulses, and cereals as the main food crops; sugar cane, tea, jute, cotton, and tobacco are also important. Mineral resources include iron ore, manganese, bauxite, mica, and ilmenite. Coal is mined, oil is produced from the Arabian Sea, and India also has nuclear power. Chief exports are cotton goods, tea, leather, iron ore, and jute. The economy has grown rapidly since the early 1990s and India is now the world's eighth greatest economic power. *History:* the *Indus Valley was the site of a civilization for a millennium before the invading Aryans established theirs (c. 1500 BC) between the Indus and the Ganges. From this civilization Hinduism emerged as India's dominant religion. The Mauryan Empire followed (c. 320 BC–c. 185 BC), which unified most of India. The 4th–6th centuries AD saw a flowering of Hindu culture in the N under the Gupta dynasty. Muslim raids on the N culminated in the establishment of a Muslim sultanate based on Delhi (1129), under which much of India was again unified. A later Muslim invasion resulted in the magnificent *Mogul Empire (established 1526). At this time Europeans were also arriving. The British *East India Company fought with French traders in the 18th century for a monopoly as the Mogul Empire declined. With Robert Clive's victory at Plassey (1757), the British established their supremacy and power shifted from the East India Company to the British Government. The Indian economy suffered under British trading arrangements, provoking social and political unrest. After the *Indian Mutiny (1857–59) reforms were introduced, including the transfer of the East India Company's administrative powers to the India Office, represented by a viceroy and provincial governors. Subsequent reforms allowed Indians greater involvement in government, and in 1919 a parliament was created. However, the nationalist movement (see INDIAN NATIONAL CONGRESS) became increasingly forceful in its demand for home rule and, under Mahatma *Gandhi and Jawaharlal *Nehru, pursued a policy of civil disobedience.

Independence was finally achieved in 1947, with Nehru as prime minister, on condition that a separate Muslim state should be established. The creation of *Pakistan (1947) was followed by violence and war between the two countries over Kashmir. Trouble between India and Pakistan erupted again in 1965 and 1971 (see also BANGLADESH). Hostility between Hindus and Muslims has been a continuing problem, leading to serious violence in the 1990s. The Kashmir border dispute continues, having led India and Pakistan to the brink of war in 1990, 1999, and 2001–02. India, which became a sovereign state in 1950, has been consolidated by the incorporation of former French and Portuguese territories (1956 and 1961) and Sikkim (1975). Indira *Gandhi (prime minister 1966–77, 1980–84) suppressed a militant Sikh movement, advocating autonomy for the Punjab, in 1984. Later that year she was assassinated; she was succeeded by her son, Rajiv Gandhi (killed by a terrorist bomb in 1991). The late 1990s saw a series of short-lived coalitions until the general election of 1999, which resulted in a clear victory for the militant Hindu BJP under A. B. *Vajpayee. The Congress Party returned to power in 2004, with Dr Manmohan Singh as the country's first Sikh prime minister. Official languages: Hindi and English. Currency: Indian rupee of 100 paise. Area: 3 287 590 sq km (1 269 072 sq mi), including Jammu and Kashmir. Population (2007 est): 1 129 866 154. Capital: New Delhi.

Indiana A state in the USA, forming part of the Mississippi Basin. It is largely undulating prairie with glacial lakes in the N. Agriculture is important in the central plain, the major crops being soya beans, maize, wheat, and vegetables; pigs are the primary livestock. Coal and building stone are also exploited. It is a transport centre with the Ohio River linking Indiana with the Mississippi River. *History:* explored by the French in the 17th century, the area was ceded to Britain in 1763, passing to the USA in 1783. Increased settlement followed the defeat of the Indians (1794) and Indiana became a state in 1816. Area: 93 993 sq km (36 291 sq mi). Population (2005 est): 6 271 973. Capital: Indianapolis.

Indianapolis 39 45N 86 10W A city in the USA, the capital of Indiana. It is the scene of annual speedway races, including the **Indianapolis 500**, first held in 1911. Population (2004 est): 784 242.

Indian languages Languages of widely differing origins spoken in the Indian subcontinent. The two major language families are the Indo-European and the Dravidian. On the NW

borders of India, Baluchi and Pashto, members of the Iranian subgroup of the Indo-European family, are spoken. Most of the other Indo-European languages of India are of the Indo-Aryan subgroup. This includes the lingua franca Hindustani; *Hindi, the official national language; Rajasthani, Punjabi, *Gujarati, and Sindhi in the west; *Bengali and Bihari in the east; and Kashmiri. Most of S India is covered by the Dravidian language family. In addition to these two large families, there are scattered languages of the Munda group in the NE, and languages of Sino-Tibetan origins are spoken in the Himalayas.

Indian Mutiny (1857–59) A revolt of about 35 000 sepoys (Indian soldiers in the service of the British East India Company), which developed into a bloody Anglo-Indian War. It began with a massacre of Europeans at Meerut in May 1857, following which the mutineers captured Delhi. The sepoys then rose in many other N Indian towns and were joined by local princes. Extensive British reinforcements were able under Colin Campbell (1792–1863) to regain Delhi in Sept and relieve besieged Lucknow in Nov; by July 1858, the revolt had largely been contained.

Indian National Congress The political party, founded in 1885, that governed India after the declaration of independence in 1947. After 1917, under the guidance of Mahatma *Gandhi, it advocated noncooperation with the British and in World War II it refused to support Britain without being promised Indian independence. The party was led by Jawarhalal *Nehru from 1951 to 1964, by Lal Bahadur Shastri (1904–66) until 1966, and then by Indira *Gandhi, under whom it split into two factions. Her son Rajiv Gandhi took over the leadership of the main faction, Congress (I), in 1984 and was succeeded by Narasimha Rao in 1991. The party suffered a heavy electoral defeat in 1996; Sitaram Kesri took over as leader but was succeeded by Sonia Gandhi (Rajiv's widow) in 1998. She led the party to victory in the general election of 2004 but declined the post of prime minister, which was assumed by Dr Manmohan Singh.

Indian Ocean The world's third largest ocean, extending between Asia, Africa, Australia, and Antarctica. Lying mainly in the S hemisphere, most is within the tropical and temperate zones. The ocean floor is extremely rich in minerals.

indicator A substance used to indicate through changes in colour, fluorescence, etc.,

the presence of another substance or the completion of a chemical reaction. Indicators are usually weak organic acids or bases that yield ions of a different colour to the unionized molecule. For example, litmus is red in the presence of acids but blue in the presence of alkalis.

indium (In) A soft silvery metal, named after the bright indigo line in its spectrum. It is used in making transistors, rectifiers, thermistors, and alloys of low melting point. At no 49; at wt 114.82; mp 156.63°C; bp 2073°C.

Indochina The area of SE Asia comprising Vietnam, Cambodia, Myanmar (Burma), Thailand, Malaysia, and *Laos. During the 19th century the French established control over the region, forming (1887) the Union of Indochina. Its capital was Saigon (now Ho Chi Minh City). During World War II the Japanese occupied all Indochina (1941). Following Japan's defeat, fighting broke out between nationalists (see VIET MINH) and the French, bitter conflict continuing until 1954, when the *Geneva Conference ended French control of Indochina (see also DIEN BIEN PHU, BATTLE OF).

Indo-European languages The largest language family of the world, sometimes also called Indo-Germanic. Indo-European languages are spoken throughout Europe as well as in India, Iran, and in parts of NW Asia, and the family is generally thought to include the following subgroups: Germanic; Italic; Indo-Iranian; Celtic; Baltic; Slavic (see SLAVONIC LANGUAGES); Albanian; Greek; *Armenian; Tocharian; and Anatolian.
