Indonesia, Republic of (name from 1798 until 1945: Dutch East Indies) A country in SE Asia, consisting of a series of islands extending E–W for some 5150 km (3200 mi) in the Pacific and Indian Oceans. The main islands are Sumatra, Java and Madura, Bali, Sulawesi, Lombok, and the Moluccas together with the W part of Timor, part of Borneo (Kalimantan), the W half of New Guinea (Irian Jaya). Most of the islands are volcanic. Its ethnically diverse population belongs mainly to the Malaysian race. The Chinese are the largest nonindigenous group. *Economy:* although rich in natural resources, it is a mainly agrarian economy of which the staple crop is rice; cash crops include rubber, palm oil, copra, sugar cane, and coffee. The main exports include crude oil, timber, sand, and rubber. *History:* in the middle ages kingdoms and empires flourished. In the 16th century it was occupied successively by the Portuguese, the British, and the Dutch, and from 1602 to 1798 it was ruled by the Dutch East India Company. It

became a colony of the Netherlands and, after Japanese occupation during World War II, declared itself a republic in 1945 under the leadership of Dr Sukarno. The country was formally granted independence in 1949–50. Under Sukarno Irian Jaya was incorporated in 1963 and there was confrontation with Malaysia (1963–66). A military coup in 1966 under the leadership of Gen Suharto established a harsh dictatorship; left-wing elements were virtually eliminated. In 1975 Indonesia occupied *East Timor, killing thousands of civilians. East Timor was formally annexed in 1976 despite UN opposition. Separatist movements in East Timor and in Irian Jaya were violently suppressed in the 1980s and 1990s. In 1998 Indonesia's economy collapsed and riots ensued. Mass protests led Suharto to resign in favour of his deputy, B. J. Habibie. Disorder continued, with prodemocracy demonstrations, conflict between Muslims and Christians, and ethnic fighting. East Timor voted for independence in 1999 and became a separate nation in 2002. Indonesia's first free elections for 45 years took place in 1999 and Abdurrahman Wahid became president. In 2001 Wahid was impeached for corruption and replaced by Megawati Sukarnoputri, Sukarno's daughter. The general election of 2004 saw a victory for supporters of Suharto; Susilo Bambang Yudhoyono was elected president. In December of that year about 160 000 were killed in the Indian Ocean *tsunami. Official language: Bahasa Indonesia. Currency: rupiah of 100 sen. Area: 1 903 650 sq km (735 000 sq mi). Population (2007 est): 234 693 997. Capital: Jakarta.

Indore 22 42N 75 54E A city in India, in Madhya Pradesh. Formerly the capital of the princely state of Indore, it is an important trading centre. Population (2001): 1 474 968.

Indra The principal Hindu deity of the Vedic period, god of war and storm, who slew the dragon Vritra, releasing the fertile water and light necessary to create the universe. He is portrayed as wielding a thunderbolt.

induction The process of making an empirical generalization by observing particular instances of its operation. The conclusion goes beyond the facts, since not all possible instances can be examined. From induction predictions can be made but they are always liable to falsification.

indulgences In the Roman Catholic Church, remissions of the temporal penalties incurred for sins already forgiven by God in the sacrament of penance. The practice of indulgences

arose in the early Church when confessors and those about to be martyred were permitted to intercede for penitents and so mitigate the discipline imposed on them. During the later middle ages, indulgences came to command a financial value, which led to widespread abuse and was one of the chief causes of *Luther's attack on the Church at the Reformation. Their sale was prohibited in 1567.

Indus, River A river in S central Asia, one of the longest in the world. Rising in SW Tibet in the Himalayas, it flows NW through Kashmir, then SSW across Pakistan to its large delta near Karachi on the Arabian Sea. Its main tributary is the Panjnad. Length: 2900 km (1800 mi).

Indus Valley civilization A literate urban civilization that flourished in the Indus plain (modern Pakistan) c. 2500–1500 BC. The cities of Harappa and Mohenjo Daro have been excavated.

industrial revolution The process of change that transformed Britain and then other countries from agricultural to industrial economies. The industrial revolution began about 1750 when the *agricultural revolution was well under way. Inventions were made in the textile industry by such men as James *Hargreaves, Richard *Arkwright, and Samuel *Crompton, which made the production of cloth much faster and the yarn produced of better quality. These new machines required factories to house them, at first near rivers for water power and then, when the steam engine was invented, near coalfields. Industrial towns with poor living and working conditions developed, but the belief in *laissez-faire meant little was done to regulate industrial growth. Advances were also made in the production of iron and in communications. The *canals were extended and from about 1830 railways were built. By the mid-19th century British industrial methods had spread to continental Europe and the USA.

inert gases See NOBLE GASES.

inertia A property of a body that causes it to resist changes in its velocity or, if stationary, to resist motion. When the body resists changes in its linear motion its mass is a measurement of its inertia (see MASS AND WEIGHT). When it resists changes in rotation about an axis its inertia is given by its *moment of inertia.

inertial guidance A means of guiding a missile or submarine without communicating with its destination or point of departure. It

consists of a set of three gyroscopes, with their axes mounted mutually perpendicular to each other, connected to a computer. The gyroscopes provide a frame of reference, which enables the computer to adjust the controls of the vehicle to steer a preset course.

infallibility A dogma of the Roman Catholic Church promulgated at the first Vatican Council (1870). It stated that the pope cannot err in defining the Church's teaching in matters of faith and morals when speaking *ex cathedra* (Latin: from the throne), i.e. when intending to make such a pronouncement.

infection Illness caused by microorganisms, including bacteria, viruses, fungi, and protozoa. Examples of bacterial infections are diphtheria, pneumonia, and whooping cough. Viruses cause influenza, measles, herpes, and AIDS (among others); malaria and sleeping sickness result from protozoan infection, and fungi cause ringworm. Infectious diseases are the commonest cause of sickness and—except in modern industrial societies—have always been the main cause of death. Methods of transmission include direct contact with an infected person, contact with a human or animal carrier or contaminated objects, and contact with infected droplets produced by coughing and sneezing. Antibiotics are active against a wide range of organisms, but as yet there are few effective drugs for viral diseases (see VACCINATION), although antiviral drugs have been developed for controlling AIDS and herpes.

inferiority complex An unconscious belief, first described by Alfred Adler, that one is severely inadequate in some particular way. This leads to defensive behaviour and often to an overcompensation, such as open aggressiveness.

infinity In mathematics, a quantity larger than any that can be specified. The symbols $+\infty$ and $-\infty$ are read as "plus infinity" and "minus infinity" respectively. They indicate infinitely large positive and negative values. $x \rightarrow +\infty$ means that the value of a variable quantity, x , continues to increase and has no maximum.

inflation A general sustained increase in prices resulting from excessive demand for goods (demand-pull inflation), increased pricing by sellers in the absence of increased demand (cost-push inflation), or an expansion of the money supply (monetary inflation). **Deflation** is the opposite process and causes a reduction in both output and employment. Deflation in the 1930s has been followed in the postwar

years by a protracted period of inflation. Remedies have varied according to the importance ascribed to each contributory factor: control of wages and prices, increased taxation, control of interest rates, reduced government spending, and a controlled money supply have been among current policies. *Compare* DEPRESSION.

inflation. UK percentages (1948–2000; annual averages).

inflorescence The arrangement of a group of flowers borne on the same main stalk, of which there are two basic types. In a racemose (or indefinite) inflorescence the tip of the main stem continues to grow and flowers arise below it. Examples are the raceme (e.g. foxglove) and the spike (e.g. wheat). A cymose (or definite) inflorescence, or cyme, is one in which a flower is produced at the tip of the main stem, which then ceases to grow. Growth is continued either by one lateral bud below the tip, to produce a monochasium (e.g. buttercup), or by a pair of buds, giving a dichasium (e.g. stitchwort).

inflorescence. All plants except those with solitary flowers show characteristic arrangements of their flowers on the main flowering stalk. All the types shown here, with the exception of the monochasium, are racemose inflorescences.

information theory The mathematical theory of communication, involving analysis of the information content of messages and the

processes used in their transmission, reception, storage, and retrieval. Statistical concepts, such as probability, are used to assess the extra information (redundancy) necessary to compensate for spurious signals (noise) occurring during communication. The *bit is the basic unit of information and the channel capacity is a measure of the ability of the transmission medium.

infrared radiation Electromagnetic radiation with wavelengths between about 750 nanometres and 1 millimetre. In the electromagnetic spectrum it lies between the red end of visible light and microwaves. It was discovered in 1800 by William Herschel (1738–1822).

infrared telescope A reflecting *telescope for detecting and studying infrared radiation from astronomical sources. Semiconductor detectors are used, and these (and in some cases the telescope optics) must be cooled to very low temperatures. Infrared telescopes are normally sited at high altitudes to reduce infrared absorption by the atmosphere or are carried on satellites.

Ingres, Jean-Auguste-Dominique (1780–1867) French painter. His three paintings of the Rivière family (Louvre) established him as a skilled portraitist. Many of his historical and mythological paintings aroused criticism but his *Vow of Louis XIII* (Cathedral, Montauban) established him as an opponent of Romanticism. He is noted for his nudes, e.g. *Valpinçon Bather* (Louvre); his draughtsmanship influenced *Degas and *Picasso.

inheritance tax A UK tax introduced in 1986 to replace capital-transfer tax. The first £300,000 (2007–08) of an inheritance is tax-free, thereafter a flat rate of 40% is applied. The tax on lifetime gifts was replaced with a tapered charge on gifts made within seven years of death.

ink A coloured fluid for writing or printing. Ordinary permanent blue-black writing ink contains ferrous sulphate, mineral organic acid, and other dyes. Coloured inks contain only synthetic dyes, while washable inks use water-soluble synthetic dyes. Marking ink is a mixture of inorganic and organic salts. Indian ink is a black waterproof ink containing carbon black and *shellac. Printing ink consists of pigments suspended in linseed oil, resins, and solvents. Ballpoint pen ink consists of synthetic dye dissolved in organic liquids with a resinous binder.

Inkerman, Battle of (5 November 1854) A

decisive battle of the Crimean War, in which the French and British defeated the Russians at Inkerman, near Sevastopol. The Russians lost about 12 000 men, the British, about 2 500, and the French, about 1 000.

Inland Sea (Japanese name: Seto Naikai) A shallow section of the NW Pacific Ocean between the Japanese islands of Honshu, Shikoku, and Kyushu.

Innsbruck 47°17'N 11°25'E A city in W Austria, the capital of the Tirol on the River Inn. It is a popular tourist and winter-sports centre. Population (2004 est): 114 561.

Inns of Court Associations with the exclusive right to confer the rank or degree of *barrister-at-law, known as "calling to the Bar." For the English bar, the Inns are the Honourable Societies of Lincoln's Inn (established 1310), Middle Temple (1340), Inner Temple (1340), and Gray's Inn (1357). Most barristers' offices (known as chambers) in London are in one of the Inns.

Inquisition (or Holy Office) An institution of the medieval and early modern Church designed to combat heresy and moral offences. Formally instituted (1231) by Pope Gregory IX (c. 1148–1241), it attempted to place all control of heresy in papal hands. The use of torture was authorized in 1252 and trials were held in secrecy; fines and various penances were imposed on those who confessed, while those who refused were imprisoned or executed by burning. Almost entirely confined to S Europe, the Inquisition was revived in Spain in 1478 against apostate Jews, Muslims, and, later, Protestants. The growth of Protestantism also led to the establishment (1542) of a Roman Inquisition by Pope Paul III. In 1965 the Holy Office was renamed the Sacred Congregation for the Doctrine of the Faith; it is now concerned with maintaining Roman Catholic discipline.

INRI Abbreviation for *Iesus Nazarenus Rex Iudeorum* (Jesus of Nazareth King of the Jews). According to St John (19.19–20) this inscription, written in Hebrew, Greek, and Latin, was placed by order of Pilate on the cross upon which Jesus was crucified.

insanity In law (although not a legal term), defect of reason caused by disease of the mind, making a person not responsible for his acts. A person is presumed sane until the contrary is proved. If a jury finds an accused person committed an act as charged but was insane, it must return a verdict of not guilty by reason of insanity. According to M'Naghten's Rules an

accused person is insane if he was unaware of the nature or quality of his act or did not know it was morally wrong. Insanity may affect a person's capacity to make binding contracts or a will or fitness to stand trial.

insect An invertebrate animal (an arthropod), 0.2–350 mm long, belonging to the largest class

in the animal kingdom (*Insecta* or *Hexapoda*; about a million known species). Insects occur throughout the world and account for 83% of all animal life. An insect's body is divided into three sections: the head, which bears a pair of antennae; the thorax, with three pairs of legs and typically two pairs of wings; and the ab-

insect. The structure of a typical insect (centre), with representatives from all the principal insect orders.

domen. With biting or sucking mouthparts they feed on almost all plant or animal materials. The majority of insects lay eggs, which go through a series of changes (metamorphosis) to reach the adult stage. Insects play an important role in nature as predators, parasites, scavengers, and as prey, but can also spread disease. Others are useful in pollinating crops or killing insect pests and some produce useful substances, such as honey, beeswax, and silk.

Insecticides Substances used to kill insects by chemical action. Previously, strong inorganic poisons, such as arsenic compounds and cyanides, were used but these were also toxic to humans and livestock. Synthetic organic substances, beginning with DDT in 1945, were then widely used. **Contact insecticides** are applied directly to the insects, while **residual insecticides** are sprayed on surfaces that the insects touch. Problems of insect immunity and environmental pollution have encouraged research into alternative methods involving *biological control.

Insectivora The order of *mammals, comprising about 375 species, that includes *shrews, *tenrecs, *hedgehogs, *moles, golden moles, and solenodons. Feeding mainly on invertebrates, insectivores are fairly primitive mammals with narrow snouts and sharp simple teeth. Frequently nocturnal, insectivores are found in nearly all regions; they are absent from the Poles and Australasia.

instinct 1. A complex pattern of behaviour, the form of which is determined by heredity and is therefore characteristic of all individuals of the same species. Although the behaviour may be released and modified by environmental stimuli, its basic pattern does not depend on the experience of the individual. Birdsong and the complex behaviour of social insects (such as bees) are striking examples. **2.** An innate drive, such as hunger or sex, that urges the individual towards a particular goal.

insulin A protein hormone secreted by the islets of Langerhans in the *pancreas. It stimulates the uptake of glucose and amino acids from the blood by the tissues and the formation of *glycogen. Insulin was first isolated in 1921 by *Banting and *Best and its amino acid composition and three-dimensional structure were revealed by Frederick Sanger (1918-) and Dorothy Hodgkin (1910-94). A deficiency of insulin causes the symptoms of *diabetes mellitus.

insurance A method of providing monetary compensation for a misfortune or loss that

may not occur. Events that must occur at some time, such as death, are provided for by assurance. In the UK and some other countries insurance against unemployment, sickness, and retirement is provided by the government (see NATIONAL INSURANCE). Other types of insurance are undertaken either by insurance companies or by *Lloyd's. The public does not deal directly with the underwriters (insurers) but arranges to cover a risk through an insurance broker, who works for a commission. The cost to the insured of covering the risk (premium) is calculated by the insurer's *actuary on the basis of the probability of the risk occurring.

integrated circuit (IC) A solid-state *semiconductor circuit contained in a single wafer of semiconductor. ICs are made by a process of etching and diffusing a pattern of impurities into the semiconductor surface, forming tiny p-n junctions, which make up individual diodes, *transistors, etc. Since the 1970s computers have been used to make ICs smaller and more complex. A silicon chip (or microchip) is covered with circuits, and computer-controlled microscopic probes search out the best points for connections for each specific device.

intelligence The ability to reason and to profit by experience. An individual's level of intelligence is determined by a complex interaction between his heredity and environment; Jean Piaget (1896-1980) greatly contributed to the understanding of intellectual development. The first **intelligence tests** were devised by Alfred Binet (1857-1911) in 1905. An individual's performance in a test is represented by his **intelligence quotient (IQ)**. Tests are constructed so that the average IQ is 100; over 95% of the population come between 70 and 130. However, it is now widely thought that true intelligence can be expressed only through speech and writing (and is therefore inaccessible to testing).

intelligence service The government department responsible for obtaining information about the military and economic capabilities and political intentions of another country (intelligence) or for thwarting the attempts of a foreign country to obtain such information for itself (counterintelligence). Intelligence services existed in antiquity and the first known treatise on the subject is Sun Tzu's *The Art of War* (c.400 BC). Elizabeth I of England had a notable intelligence service, as did Cardinal de Richelieu in 17th-century France and Frederick the Great in 18th-century Prussia. The first specifically military service was established in France during the Napoleonic

Wars, which the British countered (1808) with the Peninsular Corps of Guides in Spain. A similar corps was set up (1855) during the Crimean War. The subsequent Intelligence Department was active in the second Boer War (1899–1902). In 1909 and 1912 respectively the army general staff's Directorate of Military Operations organized MO-5 (counterintelligence) and MO-6 (intelligence), which soon became MI (Military Intelligence)-5 (the Security Service) and MI-6 (the Secret Intelligence Service). Elsewhere, the best-known intelligence services have included the *Central Intelligence Agency, the Federal Bureau of Investigation (counterintelligence), and the National Security Agency (dealing with cryptology) in the USA and the *KGB in the former Soviet Union.

interactive compact disc (CD-i) A *compact disc that stores digitized information, such as text, sound, and pictures, in a form in which the user can interact with it and control it. CD-is are used for education, games, etc. See also MULTIMEDIA SYSTEM.

interest The amount of money charged by a lender to a borrower for the use of a loan. The principal (P) is the amount on which interest is calculated; the term (t), the length of time in years for which the money is lent; and the interest rate (r), the annual rate of return per 100 units of principal. In simple interest, the principal each year is the sum originally lent. The lender is paid $Prt/100$ in interest and repaid P after t years. In compound interest, the interest each year is not paid to the lender but is added to the principal, so that the principal for the next year becomes $P + r/100$. After t years the lender is paid $P(1 + r/100)^t$.

interference A wave phenomenon in which two waves combine either to reinforce each other or to cancel each other out, depending on their relative phases. The pattern of light and dark strips so produced is called an **interference pattern** (or interference fringe). Interference was discovered in 1801 by Thomas *Young and provided strong evidence for the wave theory of light. An **interferometer** is used to produce interference patterns, mainly for the accurate measurement of wavelengths.

interferon A protein that appears in the plasma during viral infections: it is released from infected cells and inhibits the growth of the viruses. Interferon plays an important role in *immunity because it can enter uninfected cells and render them immune to all viral infections. It was discovered in 1957 by a British virologist, Alick Isaacs (1921–67). Human inter-

feron is now being used to treat certain viral infections (e.g. hepatitis B and C), cancers, and multiple sclerosis.

internal-combustion engine A *heat engine in which fuel is burnt inside the engine, rather than in a separate furnace (see STEAM ENGINE). This category includes all piston engines, *jet engines, and *rockets. The first practical internal-combustion engine was patented by N. *Otto in 1876. The modern four-stroke Otto-cycle petrol engine, used to power most road vehicles, has a compression ratio of 8 or 9 to 1, which requires special fuels (see TETRAETHYL LEAD) to avoid knocking. A simpler but less efficient variety of the petrol engine is the two-stroke, which is used where low power is required. The main alternative to the petrol engine is the oil engine, based on a cycle invented by the German engineer Rudolf Diesel (1858–1913). In this case the compression ratio has to be 15 or 16 to 1, making the engine considerably heavier and more expensive than the petrol engine. The *gas turbine uses continuous combustion and with a compression ratio of up to 30:1 can reach a working temperature of 1200°C. It is therefore more efficient and creates less pollution than piston engines. Jet engines based on the gas turbine are used in aircraft. See ELECTRIC CAR.

International An association of national socialist or labour parties formed to promote socialism or communism. The **First International** was founded in London in 1864 as the International Working Men's Association. Karl Marx soon assumed its leadership and its first congress was held in Geneva in 1866. Although the First International was successful in disseminating socialist ideas among workers, it failed to make any political changes. Its last meeting was held in 1876 in Philadelphia. The **Second International** was founded in Paris in 1889; its headquarters were in Brussels. Its leaders included Ramsay *MacDonald. At the outbreak of World War I, the organization collapsed because of division between pro- and anti-war groups. A postwar attempt to revive it failed. The **Labour and Socialist International** was founded in Vienna in 1921; its goal was to create a socialist commonwealth. It has been called the "second and a half International" because it was composed of those out of sympathy with the Second and Third Internationals. It came to an end following Hitler's invasions in W Europe in 1939. The **Third International** (or Comintern), an organization of world Communist Parties, was founded by Lenin in March 1919, to encourage worldwide proletariat revo-

ideal Otto cycle**ideal Diesel cycle**

internal-combustion engine. In the ideal Otto-cycle (four-stroke) engine, there are four piston strokes (movements up and down) for explosion. The petrol-air mixture is drawn into the cylinder by the induction stroke (1-2) and compressed by the compression stroke (2-3). A spark then ignites (3-4) the mixture causing the pressure to rise from P_3 to P_4 before the piston descends (combustion at constant volume). The piston then descends in the working stroke (4-5) and rises again in the exhaust stroke (2-1), when the burnt gases are pushed out of the cylinder through the exhaust valve. The graph illustrates the pressure and volume changes during the cycle. In the Diesel cycle, ignition is caused by the high compression achieved by the compression stroke (2-3) and the piston descends, increasing the volume of the burning gas from V_3 to V_4 , before the pressure has time to rise (combustion at constant pressure).

lution. Throughout its existence it was influenced by the power struggles within the Soviet party leadership. Stalin dissolved the International in 1943. The **Fourth International** was founded by *Trotsky in Mexico City in 1937 in opposition to Stalin and the Third International. It held its first conference in France in 1938. The **Socialist International** was founded in 1951 as an association of socialist parties that believe in parliamentary democracy and oppose communism. Its headquarters are in London.

International Bank for Reconstruction and Development (IBRD) A specialized agency of the *United Nations, known as the World Bank, with headquarters in Washington, DC. It finances development in member countries by making loans to governments or under government guarantee. It was set up by the 1944 Bretton Woods agreements.

International Brigades A volunteer army recruited during the Spanish Civil War (1936-39) by the Comintern to aid the Republic.

cans against Franco. Comprising at its largest some 20 000 volunteers, of which about 60% were communists, it was disbanded in 1938.

International Court of Justice The judicial body set up by the UN to pass judgment on disputes between states. The court, which normally sits at The Hague, comprises 15 judges, each from a different state, elected by the UN General Assembly. Judgments of the court are enforced by application to the UN Security Council.

International Date Line A line following the 180° meridian, deviating to avoid some land areas. The date immediately E of the line is one day earlier than to the W.

International Labour Organisation (ILO) A specialized agency of the *United Nations dedicated to the improvement of working conditions and living standards. It was first convened in 1919, affiliated to the *League of Nations, and its headquarters are in Geneva.

international law Rules that determine the legal relationship between independent states (public), or the method of resolving disputes between individuals to which two or more legal systems may be relevant, as when a contract made in one country is to be performed in another (private). Public international law, also called the law of nations and administered by the *International Court of Justice, is based on: (1) natural law, being laws recognized by civilized nations; (2) agreements between states, i.e. conventions; (3) customs followed in practice; and, to a lesser extent (4) the writings and opinions of respected jurists. Private international law, also called conflict of laws, determines the laws of which country should apply.

International Monetary Fund (IMF) A specialized agency of the *United Nations, with headquarters in Washington, DC, set up by the 1944 Bretton Woods agreements to stabilize exchange rates and facilitate international trade.

International Organization for Standardization (ISO) An organization, situated in Geneva, for establishing and controlling international scientific, industrial, and commercial standards of measurement and design. It was founded in 1946.

International Phonetic Alphabet (IPA) An augmented Roman alphabet, developed by the International Phonetic Association in the late 19th century. It attempts to symbolize, on phonetic principles, every sound used in human language.

international style The predominant architectural style of the 20th century. Originating in W Europe and the USA with such architects as *Gropius, *Wright, Behrens, and *Le Corbusier, the style evolved from the new tastes, materials, and technology produced by industrialization. It is characterized by the use of concrete, often roughcast, cubic forms, and a functional asymmetry.

Internet A worldwide network linking computers through modems, telephone lines, optical cables, and communications satellites. Users have access to a number of services, including electronic mail (email) and the ability to transfer files between computers and access information on remote databases. With growth in the ownership of personal computers in the 1990s, the system expanded dramatically. By the early 2000s the growth of the Internet had begun to revolutionize many established practices in the fields of entertainment, information provision, business, and shopping.

Interpol (*International Criminal Police Organization*) An association of 169 national police forces, formed in 1923 to provide a means of international cooperation in the prevention of crime. Its major concerns are the exchange of police information and the arrest of those who are the subject of an extradition order.

intestine The part of the digestive tract, in the abdomen, that extends from the stomach to the anus. The small intestine, which includes the duodenum, jejunum, and ileum, is the principal site of digestion and absorption of food. The large intestine consists of the colon, caecum, rectum, and anus. It is largely concerned with the absorption of water from digested food and the formation of faeces, which are expelled from the anus.

intrusive rock See IGNEOUS ROCK.

Inuit A Mongoloid people of the Arctic regions of Canada and Greenland. The men are traditionally hunters of seals, whales, walrus, and caribou, using harpoons and canoes. Fishing is also important. Their clothes are made of animal skins. Some construct semisubterranean sod shelters or use snow-covered skin tents, others use igloos. The term "Eskimo" is considered offensive by most Inuit. In 1999 the semiautonomous region of *Nunavut was established in NE Canada as an Inuit homeland.

Inuit-Aleut languages A language group, sometimes included in the classification of American Indian languages. It consists of three distinct languages: Inupik (Inupiaq or Inuk),

spoken in Greenland and N Canada by Inuit; Yupik, spoken in Siberia and S Alaska; and Aleut, spoken in the Aleutian Islands.

Invar An alloy of iron with 36% nickel, which expands by only 0.9 mm per km for each centigrade degree temperature rise. It was discovered in 1896 and since then has been used for accurate measuring tapes and chronometer parts.

Inverclyde A council area of W central Scotland, on the firth of Clyde. It was created from part of Strathclyde Region in 1996. The S bank of the Clyde is highly industrialized; inland it is mainly agricultural. Area: 162 sq km (63 sq mi). Population (2001): 84 203. Administrative centre: Greenock.

Inverness 57°27'N 4°15'W A city in N Scotland, the administrative centre of the Highland council area, at the head of the Moray Firth. It has a 19th-century cathedral and castle. Population (1991): 41 234.

in vitro fertilization See TEST-TUBE BABY.

Io A priestess of Hera, loved by Zeus, who transformed her into a heifer to protect her from discovery. Hera ordered Argus, a herdsman with eyes covering his entire body, to guard her, but she escaped with the help of Hermes and was finally restored to Zeus in Egypt.

iodine (I) A purple-black lustrous solid *halogen that evaporates slowly at room temperature to give a purple gas. It was discovered in 1811 by B. Courtois (1777–1838). It is insoluble in water but dissolves readily in organic solvents, such as carbon tetrachloride (CCl₄), to give pink-purple solutions. Potassium iodide (KI) is widely used in photography. The radioactive isotope ¹³¹I, with a half-life of 8.1 days, is produced in nuclear reactors. Tincture of iodine is used as an antiseptic. At no 53; at wt 126.904; mp 113.5°C; bp 184.35°C.

ion An atom or group of atoms that has lost or gained one or more electrons and consequently has an electric charge. Positively and negatively charged ions are called **cations** and **anions** respectively. The sign and magnitude of the charge is indicated by a superscript, as in the potassium ion, K⁺, or the doubly charged sulphate ion, SO₄²⁻. Many compounds (electrovalent compounds) are combinations of positive and negative ions; sodium chloride, for example is formed from sodium ions (Na⁺) and chloride ions (Cl⁻). See also CHEMICAL BOND; IONIZATION.

Iona 56°19'N 6°25'W A small sparsely populated

island in NW Scotland, in the Inner Hebrides. St Columba landed here in 563 AD, establishing a monastery that became the centre of the Celtic Church. Area: 854 ha (2112 acres).

Ionesco, Eugène (1912–94) French dramatist, born in Romania. He inaugurated the *Theatre of the Absurd with his first play, *The Bald Prima Donna* (1950). His later plays include *The Lesson* (1951), *Rhinoceros* (1960), and *Man With Bags* (1977).

Ionia In antiquity, the central W coast of Asia Minor and the adjacent islands, settled by Greeks about 1000 BC. Between the 8th and 6th centuries BC *Miletus, Samos, *Ephesus, and other Ionian cities led Greece in trade, colonization, and culture. After 550 BC Ionia passed under the domination of *Lydia and later Persia.

Ionian Islands A group of Greek islands in the Ionian Sea, including Páxos, Lévkas, Ithaca, and Cephalonia. They belonged to Britain from the Treaty of Paris (1815) until 1864, when they were ceded to Greece. Total area: 2307 sq km (891 sq mi). Population (2001): 214 274.

Ionic order See ORDERS OF ARCHITECTURE.

ionization The process of producing *ions from neutral atoms or molecules, by solvation (surrounding of an ion by polar solvent molecules), heating (thermal ionization), or bombardment with particles or radiation. The minimum energy required to ionize an atom A (i.e. A → A⁺ + e⁻) is called its **ionization potential**, which is usually measured in electron-volts.

ionizing radiation Any radiation that ionizes the atoms or molecules of the matter through which it passes. It may consist of particles (such as *electrons) or it may be electromagnetic radiation (see ULTRAVIOLET RADIATION; X-RAYS; GAMMA RADIATION). Ionizing radiation occurs naturally in *cosmic rays and is emitted by radioactive substances. It is also produced artificially in X-ray machines, particle accelerators, nuclear reactors, etc.

ionosphere A region of the upper atmosphere that reflects short radio waves, enabling transmissions to be made round the curved surface of the earth by sky waves. The gases in the ionosphere are ionized by absorption of radiation from the sun. Its existence was suggested in 1902 by A. E. Kennelly (1861–1939) and independently by O. Heaviside (1850–1925). Sir Edward Appleton (1892–1925) provided proof by bouncing radio waves off the different lay-

ers of the ionosphere, which vary in behaviour with the position of the sun and with the sunspot cycle. The ionization of the D region, at between 50 and 90 kilometres altitude, disappears during the day. The E region is 90 to 160 kilometres high and the F region (sometimes called the Appleton layer) is from 160 kilometres up to about 400 kilometres.

Iowa A state in the USA, in the Midwest. The land rises slowly from the Mississippi Valley, with higher land in the NW. Iowa is predominantly an agricultural state, famed for its livestock, particularly pigs. Major crops are corn, oats, soya beans, and other fodder crops. There is also some mining for portland cement and gypsum. *History:* explored by the Frenchmen Louis Jolliet (1645–1700) and Jacques Marquette (1637–75) in 1673, it formed part of the Louisiana Purchase (1803) by the USA. It became a territory (1838) and then a state (1846). Area: 145 790 sq km (56 290 sq mi). Population (2000): 2 926 324. Capital: Des Moines.

ipecacuanha A South American herbaceous plant, *Uragoga ipecacuanha*, cultivated in the tropics for its root, which yields medicinal alkaloids used as an expectorant and emetic. Family: *Rubiaceae*.

Iphigenia In Greek legend, the eldest daughter of *Agamemnon and *Clytemnestra. At the beginning of the *Trojan War, Agamemnon was told that Artemis demanded the sacrifice of his daughter before his fleet could sail to Troy. In some versions of the myth, Artemis took pity on Iphigenia and transported her to Tauris, where she became a priestess.

Ippoh 4 36N 101 02E A city in NW Peninsular Malaysia, the capital of Perak state. It is a tin-mining centre and has Chinese rock temples. Population (1991): 382 633.

Ipswich 52 04N 1 10E A town in SE England, the administrative centre of Suffolk at the head of the Orwell estuary. It is a port with various economic activities, including financial services and telecommunications. Cardinal Wolsey was born here. Population (1997): 112 959.

IRA See IRISH REPUBLICAN ARMY.

Iraklion (or **Herakleion**; Italian name: Candia) 35 00N 25 08E The chief port of the Greek island of Crete, on the N coast. It possesses many Venetian fortifications and is a tourist centre. Exports include raisins, grapes, and olive oil. Population (1991): 117 167.

Iran, Islamic Republic of (name until 1935: Persia) A country in the Middle East lying

between the Caspian Sea and the Persian Gulf. Its central plateau, containing deserts and marshes, is surrounded by mountains. The population is mainly Persian with groups of Turks, Kurds, Armenians, Arabs, and such tribes as the Bakhtiari. *Economy:* agriculture supports 75% of the population, although lack of rain hampers productivity. Wheat, rice, tobacco, fruit, sugar beet, and tea are grown; sheep and goats are kept. Oil is the chief source of revenue, the main oilfields being in the Zagros Mountains. Other minerals include coal, copper, iron ore, lead, natural gas, and precious stones. *History:* the Caspian coast and the plateau are among the earliest centres of civilization. Early Persian dynasties include the Achaemenians and the Sasanians (see also GREEK-PERSIAN WARS). Arab domination, which established Islam in the area, was followed by that of the Turks and Mongols before the Persian Safavid dynasty (1502–1736) came into power. Following a period of great prosperity (1587–1629) Persia again declined, encroached on by Uzbeks, Arabs, Afghans, Turks, and Russians. The next great dynasty, the Kajar dynasty (1794–1925), was marked largely by rivalry for domination between Britain and Russia. Repressive rule provoked opposition that was intensified by resentment against the concessions granted to Britain and Russia. The Shah was forced to grant a constitution and National Assembly (the Majlis; 1906); his successor disbanded this and was then deposed (1909). Further disorders brought Reza Khan to power (1921), from 1925 as Reza Shah Pahlavi. Under his virtual dictatorship order returned and the country was westernized; he was forced to abdicate in favour of his son *Mohammed Reza Pahlavi (1941). In 1945 the Soviet Union supported an Azerbaidzhani and Kurdish revolt to gain oil concessions (later withdrawn). Oil was also a major issue for the militant National Front movement, which nationalized the oil industry (1951); the British responded with a blockade. The Shah's reform programme, which included in 1963 the enfranchisement of women, the redistribution of land, and compulsory education, led to riots and harsh repression. By 1978 different opposition groups had united under the exiled Muslim leader Ayatollah Ruholla *Khomeini. The Shah fled the country in 1979, later dying in exile (1980), and Ayatollah Khomeini took over the government in the so-called Islamic Revolution, which established a strict Muslim regime. War with Iraq broke out in September 1980 (see IRAN-IRAQ WAR). Khomeini died in 1989 and Hashemi Rafsanjani became president. Iran's alleged involvement

in international terrorism led to the imposition of US trade sanctions (1995–99). In 1996 Ayatollah Mohammed Khatami was elected president and began a cautious programme of reform, while aiming to normalize Iran's international relations. However, the general election of 2004 produced a landslide for religious conservatives and the hardliner Mahmoud Ahmadinejad became president in 2005. Since 2002 Iran has come under increasing pressure from the USA over its apparent nuclear weapons programme and links with terrorist groups. Official language: Persian (Farsi). Currency: Iranian rial of 100 dinars. Area: 1 648 000 sq km (636 160 sq mi). Population (2007 est): 65 397 521. Capital: Tehran.

Iranian languages A subgroup of the Indo-Iranian language family. Iranian languages are spoken in Iran, Afghanistan, Turkey, and parts of the Caucasus and are closely related to *Sanskrit. Modern Iranian languages include Persian, Kurdish, Pashto, and Ossetic.

Iran-Iraq War (or **Gulf War**, 1980–88) An indecisive conflict in the Persian Gulf between Iran and Iraq over border territory. Iraqi forces invaded Iran and a war of attrition developed, with heavy casualties on both sides. Peace was achieved through UN mediation.

Iraq, Republic of A country in the Middle East, bordering on the Persian Gulf. The SE consists of an alluvial plain around the delta of the Rivers Tigris and Euphrates. The W is a vast desert while the N is mountainous. The population is about 90% Muslim divided evenly between Shiite and Sunni sects. The Kurds, who live in the NE, form about 15–20% of the population. *Economy*: mainly agricultural, the chief crops being wheat, barley, rice, maize, sorghum, sesame, dates, and cotton. The main industry is oil and Iraq is a member of OPEC. Before the UN's imposition of a worldwide ban on Iraqi oil exports in 1990, oil accounted for almost 100% of government revenue. This ban and the damage to industry sustained in the *Gulf War led to economic crisis, further exacerbated in the War of 2003. *History*: as *Mesopotamia, Iraq was the site of the world's first civilization. It was conquered by Arabia and became Muslim in the 7th century AD and was part of the Ottoman Empire from 1534 until World War I, when UK troops expelled the Turks. As a British mandate (1920–32), Iraq became a kingdom (1921); the monarchy was overthrown in 1958. Since the 1960s the Kurds of the NE have been in intermittent rebellion. The Ba'athist leader Saddam *Hussein assumed

absolute power in 1979; subsequently he invaded Iranian border territory, provoking the *Iran-Iraq War (1980–88), oppressed the Kurdish and Marsh Arab minorities, and invaded Kuwait (1990). In the ensuing *Gulf War his army was expelled from Kuwait by a US-led military alliance (Feb 1991). Iraq's defiance of UN ceasefire terms provoked further US air raids in 1993, 1996, and 1998. The UN agreed (1996) to a partial lifting of the oil-sales ban on the condition that the revenue was used for humanitarian purposes. In March 2003, arguing that Saddam's regime constituted a threat to international stability, the USA and UK launched the *Iraq War. The Ba'athist government was toppled and a US civil administrator appointed. Despite the collapse of Iraq's economy and infrastructure and continuing insurgency, a transitional assembly was established in January 2005 and elections to a permanent legislature were held in December. Sectarian violence between Shiites and Sunnis has risen sharply since 2004–05. Official language: Arabic. Currency: Iraqi dinar of 1000 fils. Area: 438 446 sq km (169 248 sq mi). Population (2007 est): 27 499 638. Capital: Baghdad.

Iraq War (2003) A conflict between Iraq under Saddam *Hussein on the one hand and the USA and the UK (with some military support from Australia and Poland) on the other. In 2002 President George W. *Bush accused Iraq of developing weapons of mass destruction (WMD) and threatened to remove the Ba'athist regime there as an extension of the USA's *war on terrorism. Although strongly backed by Tony Blair, the proposed action divided Western opinion and failed to get explicit authorization from the UN. On 20 March 2003 the USA launched an air attack on Baghdad; this was followed by rapid advances into Iraq by US and UK ground forces. Basra fell to the invaders on 7 April and Baghdad on 9 April. Although the main phase of the conflict was declared over on 14 April, attacks by Iraqi irregulars (including suicide bombers) continued. Conflict between Shiite and Sunni groups has subsequently escalated to the point of virtual civil war. Controversy over the justification for the war has continued, owing mainly to the continuing violence and the failure of investigators to find any evidence of WMD in Iraq.

Ireland The second largest island in the British Isles, separated from Great Britain by the North Channel, the Irish Sea, and St George's Channel. It consists of a central lowland area of fertile plains, bogs, and moorland,

rising to hills and mountains in the N and S. Since 1920 Ireland has been politically divided, the NE part forming Northern Ireland in the UK and the remainder comprising the Republic of Ireland. *History:* Ireland was invaded in the 4th century BC by the Celts. The country came to be divided into the five tribal kingdoms (the Five Fifths) of Ulster, Meath, Leinster, Munster, and Connaught. In the 5th century the country was converted to Christianity—a process in which St Patrick was the outstanding figure. The 9th and 10th centuries saw Viking invasions; in the mid-12th century Ireland was invaded by the Norman conquerors of England and Henry II gained the allegiance of the Irish kings. English law and administration were introduced in the 13th century and an Irish parliament (composed of the Anglo-Irish and subordinate to the English Crown) began to meet. However, English rule was restricted to the area around Dublin (called the Pale) until the 16th century. Revolts, inspired in part by Roman Catholic opposition to the Reformation, were suppressed and the Plantation of Ireland by English and later by Scottish settlers was begun in Ulster. Irish resistance continued, culminating in the rebellion of 1641, which was not suppressed until Oliver Cromwell's expedition in 1649–50. The subsequent redistribution of the rebels' land among English colonists established the economic and political ascendancy of the Protestant minority in Ireland. It was strengthened by the Restoration settlement, which extended Protestant landholdings, and by William of Orange's defeat (1690) of the Irish supporters of the deposed Catholic king, James II. In the 18th century Ireland's subservience to England was opposed by many Irish Protestants and in 1782, under the leadership of Henry Grattan, the Irish parliament obtained legislative independence. However, the abortive rebellion of 1798 by the Society of United Irishmen persuaded Pitt the Younger of the need for the complete union of Britain and Ireland (1800; see UNION, ACTS OF). It also convinced him of the need for *Catholic emancipation, which was not fully obtained until 1829. Attempts by the Young Ireland group to repeal the Act of Union failed, and nationalist agitation was taken up after the Irish (potato) famine, first by the *Fenians and then by the *Home Rule movement. While the Land League pursued agrarian reform with some success, Home Rule, in spite of Gladstone's support, was delayed. Following the proclamation of an Irish republic by *Sinn Féin (1919) and virtual civil war Britain proposed partition (1920), with the establishment

of separate parliaments in the predominantly Protestant NE and Catholic S and W, both of which would be self-governing provinces of the UK. This was rejected in the S, where independence was now demanded. Following negotiations between the British government and Republican leaders, the Irish Free State, with dominion status, came into being in 1922. The NE (Northern Ireland) accepted self-government within the UK.

Northern Ireland The province is divided into 26 administrative districts. There are also six nonadministrative traditional counties: Antrim, Armagh, Down, Fermanagh, Londonderry, and Tyrone. *Economy:* since the 1950s, the traditional industries of shipbuilding and linen manufacture have declined and there has been expansion of the service sector. The economy is beginning to recover from the upheavals of the last 30 years. *History:* following the Government of Ireland Act (1920) and the Anglo-Irish Treaty (1921), which provided for the division of Ireland, six of the nine counties of Ulster became an autonomous province of the UK. From 1922 until 1972 Northern Ireland was governed by a parliament, which met at Stormont Castle in Belfast and had legislative responsibility for most matters. Tension between the Protestant majority who dominated politics and the Catholic minority (most of whom favoured Northern union with the Irish Republic) led to violent conflict in 1969, when a British peacekeeping force was sent in. A terrorist campaign by the IRA led to the imposition (1972) of direct rule from Westminster. In the Downing Street Declaration (1993) the UK and Dublin governments stated their willingness to negotiate with all political parties that renounced violence. Subsequently Sinn Féin announced a complete IRA ceasefire and the Protestant paramilitaries did the same. Talks in 1997–98 led to the **Good Friday Agreement** (April 1998), which proposed the creation of three new bodies: a Northern Ireland assembly with a powersharing executive, a North-South ministerial council, and a "Council of the Isles" with members from the British and Irish governments and devolved bodies within the UK. The agreement, which required the complete decommissioning of all terrorist weapons, was backed in a referendum by 71% of the electorate and David Trimble was elected Northern Ireland's first minister. An executive including Sinn Féin members was established (December 1999) and power was devolved to the new bodies; however, slow progress on IRA decommissioning and evidence of continuing illicit activity by the organization led Britain to sus-

pend the political institutions in February–May 2000 and again in October 2002. Devolved government was restored in May 2007, following the IRA's announcement (2005) that it had decommissioned all its weapons and would abandon all paramilitary activity. Ian **Paisley* became first minister. Area: 14 121 sq km (5452 sq mi). Population (2004 est): 1 710 322. Capital: Belfast.

Republic of Ireland (Irish name: Éire) The country is administratively divided into 26 counties. *Economy:* largely agricultural, cattle rearing and dairy farming being of major importance. Arable crops include barley, wheat, oats, potatoes, and sugar beet. Tourism is another major source of revenue. Peat is extensively cut as a fuel for power stations and as a household fuel. In 1977 Europe's largest lead-zinc mines were opened at Navan. In recent decades industry and services have grown rapidly and the Republic has enjoyed one of the fastest growing economies in the developed world. *History:* Republican opposition to partition continued immediately after the establishment of the Irish Free State but was quelled by 1923. In 1932 **De Valera*, leader of Fianna Fáil, became prime minister and, in 1937, introduced a new constitution by which the Irish Free State was renamed Éire. In 1949 a coalition took the country, as the Republic of Ireland, out of the British Commonwealth. In 1973 Ireland became a member of the EC (now the EU). Since 1997 the Republic has had a Fianna Fáil government under Bertie **Aherne*. In a referendum (May 1998) the Irish electorate endorsed the Good Friday Agreement on Northern Ireland, in which the Republic agreed to abandon its constitutional claim to the province. Ireland adopted the European single currency in 1999–2002. Official languages: Irish and English. Currency: euro of 100 cents. Area: 68 893 sq km (26 599 sq mi). Population (2007 est): 4 109 086. Capital: Dublin.

Irian Jaya A province in E Indonesia, comprising W New Guinea. Formerly a Dutch colony, it was incorporated into Indonesia in 1963. Indonesia's exploitation of Irian Jaya's mineral wealth has caused environmental damage and provoked unrest among the indigenous people. Population (2000): 2 220 934.

iridium (Ir) A hard brittle metal, discovered in 1803 by C. Tennant (1768–1838), in the residue left after dissolving platinum in aqua regia. Its salts are highly coloured, whence its name (Latin *iris*, rainbow). It is used as a hardening agent for platinum and in electrical contacts. At no 77; at wt 192.22; mp 2477°C; bp 4428°C.

iris (anatomy) The muscular tissue in the eye that surrounds the pupil and is situated immediately in front of the lens: it is responsible for eye colour. Reflex contraction of the muscles in the iris cause it to become smaller in dim light (which enlarges the pupil and allows more light to enter the eye) and larger in bright light (thus decreasing the size of the pupil).

Iris (botany) A genus of perennial herbaceous plants (about 300 species), native to N temperate regions and widely planted in gardens. Irises grow from bulbs or rhizomes (underground stems) and their flowers can be three or more colours. Family: *Iridaceae*. See also FLAG.

Iris (mythology) The Greek goddess of the rainbow and messenger of the gods, especially of **Hera*. She is portrayed as carrying a herald's staff and often bearing water that could put perjurers to sleep.

Irish Republican Army (IRA) A militant organization established in 1919 to fight British rule in Ireland. Under Michael **Collins* it fought an effective war against British forces (1919–21) but the subsequent Anglo-Irish treaty was rejected by many IRA members. The antitreaty faction was defeated by Irish government forces by 1923 but continued to press for an all-Ireland republic. The movement was reactivated when the Northern Irish troubles began in 1968. In 1969 both the IRA and **Sinn Féin*, to which many IRA members belong, split into the Officials, who abandoned the policy of abstaining from constitutional Irish politics, and the Provisionals, who embarked on a terrorist campaign to expel the British from the North. Subsequent IRA outrages included the attempted assassination of the British prime minister in Brighton (1984) and a mortar attack on 10 Downing St (1991). In 1986 there was a further split into the Provisional IRA/Sinn Féin, who adopted a policy of constitutional activity backed by terrorism, and the Continuity IRA/Republican Sinn Féin, who remain outside politics and committed to violence. Following the Downing Street Declaration of 1993 (see (NORTHERN) IRELAND), the Provisional IRA announced a complete ceasefire (abandoned in 1996 but resumed in 1997). Although Sinn Féin accepted the subsequent Good Friday Agreement (1998), the IRA refused to begin decommissioning its weapons until October 2001, and continued its involvement in paramilitary activities. In July 2005 the IRA finally announced that its "war" was over and completed the process of putting its weapons "beyond use." The "Real IRA," a splinter group hostile to the Agreement, has continued terrorist activity.

most infamously the Omagh bombing (August 1998).

Irish Sea A section of the Atlantic, separating England, Scotland, and Wales from Ireland. Area: about 100 000 sq km (40 000 sq mi). Maximum width: 240 km (149 mi).

Irish wolfhound An ancient breed of large hunting dog originating in Ireland. It has a powerful body and a long narrow head with small ears. The rough wiry coat can be grey, brindle, red, black, white, or fawn. Height: 78 cm minimum (dogs); 71 cm minimum (bitches).

Irkutsk 52°18'N 104°15'E A city in S Russia. It is the industrial, cultural, and educational centre of E Siberia. Population (1999 est): 596 400.

iron (Fe) A metallic transition element that has been used since prehistoric times. It is the fourth most abundant element in the earth's crust, occurring in the ores haematite (Fe_2O_3), magnetite (Fe_3O_4), and siderite (FeCO_3). It is obtained from its ores by smelting in a *blast furnace to give pig iron, which is then converted into cast iron, wrought iron, or steel. Iron has two important valence states forming iron II (ferrous) and iron III (ferric) compounds. Common compounds include the sulphates (FeSO_4 and $\text{Fe}_2(\text{SO}_4)_3$), chlorides (FeCl_2 , FeCl_3), and oxides (FeO , Fe_3O_4 , Fe_2O_3). Iron is vital to animal life owing to its presence in *haemoglobin. At no 26; at wt 55.847; mp 1538°C; bp 2862°C. See also FERROMAGNETISM.

Iron Age The cultural phase during which iron replaced bronze metal technology (see BRONZE AGE). Despite spasmodic earlier use of meteoric iron, it was not until about 1500 BC that iron-working techniques were perfected by the *Hittites. It was used in Hallstatt Europe in the 7th century BC. The Chinese were both forging and casting iron about 500 BC, preceding Europe by about 1700 years in casting.

Iroquois North American Indian tribes of the NE region, who spoke the Iroquois language belonging to the Iroquois Caddoan family. These tribes were cultivators and hunters, organized into matrilineal clans. The *Mohawk, Oneida, Onondaga, Cayuga, and Seneca tribes formed the **Iroquois League** during the 16th century, which was allied with the British in wars against the French and, except for the Oneida and Tuscarora (members of the League from 1715), against the colonists in the American Revolution (1775–83).

Irrawaddy River The chief river in Myan-

mar (Burma), flowing SSW across the country. It enters the Andaman Sea through a swampy delta. Length: 2010 km (1250 mi).

Irving, Sir Henry (John Henry Brodribb; 1838–1905) British actor and manager. He established his reputation in London during the early 1870s and remained the leading actor for the next 30 years. From 1878 to 1902 he was manager of the Lyceum Theatre, where, with Ellen *Terry, he acted in a notable series of Shakespearean productions.

Isabella (I) the Catholic (1451–1504) Queen of Castile (1474–1504). Her marriage (1469) to Ferdinand of Aragon united the two major Spanish kingdoms. The introduction of the Inquisition (1480) and the expulsion of the Jews (1492) were largely due to Isabella's influence. See also FERDINAND (V AND II) THE CATHOLIC.

Isabella II (1830–1904) Queen of Spain (1833–68). Her succession was only secured in 1839, after the first Carlist War. Her governments became increasingly unpopular and she was deposed.

Isaiah (8th century BC) Old Testament prophet, influential at the court of Judah until the Assyrian invasion (701 BC). The **Book of Isaiah** contains his prophecies, although chapters 40–66 are now usually ascribed to a later hand. Several passages predict the coming of the Messiah, and these proved important in the development of early Christianity.

Ischia 40°44'N 13°57'E A volcanic island in Italy, in the Bay of Naples. Area: 47 sq km (18 sq mi). Population (latest est): 16 100. Chief town: Ischia.

Isfahan (or Esfahan) 32°41'N 51°41'E A town in central Iran. It has some fine examples of Persian architecture, including the 17th-century royal mosque. Population (1996 est): 1 266 765.

Isherwood, Christopher (1904–86) British novelist. His experiences while teaching in Berlin in the 1930s are described in the novel *Mr Norris Changes Trains* (1935) and in the stories *Goodbye to Berlin* (1939), adapted as the film *Cabaret* (1968). He collaborated with his friend W. H. *Auden on several plays.

Ishtar The supreme Babylonian and Assyrian goddess, the daughter of the sky god Anu or of the moon god Sin. She combined aspects of a beneficent mother goddess and fierce goddess of war and fertility. She descended to the underworld in search of her lover Tammuz.

Isis An Egyptian goddess, the sister and wife

of *Osiris, whose dismembered body she magically restored to life, and mother of *Horus. She was usually portrayed as holding the child Horus and wearing on her head the solar disc and a cow's horns, the same attributes as Hathor.

Islam (Arabic: submission to God) A major world religion, which originated in Arabia in the 7th century AD. The essential creed of Islam, whose adherents are called Muslims, is that there is one God, Allah, and that *Mohammed is his prophet. The revelations received by Mohammed are recorded in the *Koran, which is the basis of Islamic belief and practice (see also ISLAMIC LAW). Five fundamental duties are incumbent upon the individual Muslim: expression of belief in Allah and in the prophethood of Mohammed; observance at set times of five daily prayers, which are recited facing towards Mecca; fasting during the month of *Ramadan; payment of a special tax for charitable purposes; and a pilgrimage to Mecca at least once, if means permit. The main sects are the *Sunnites (or Sunni) and the *Shiites (or Shiah). There are an estimated 800 million Muslims, about one million of whom are UK citizens.

Islamabad 33 40N 73 08E The capital of Pakistan, situated in the N of the country. The site was chosen in 1959 and construction began in 1961. Population (1998): 524 500.

Islamic law The sacred law of Islam, *shari'ah*, prescribes not only religious duties (see ISLAM) but covers every aspect of the life of a Muslim. Its basic principles were elaborated in the 9th century AD. The law covers marriage, divorce, and inheritance; it forbids usury, the depiction of living beings, the drinking of alcohol, the eating of pork, etc., and prescribes penalties and punishments for crimes. In modern times most Muslim states have adopted secular legal systems at least in part and especially with regard to criminal, financial, and property law although some have reverted to strict Islamic law.

Islay An island of the Inner Hebrides in the Atlantic Ocean, off the W coast of Scotland. Area: 606 sq km (234 sq mi). Population (latest est): 3500.

Ismaili A *Shiite Muslim sect. In the 8th century AD a group of Shiites recognized Ismail the son of Jafar al-Sadiq as imam, while the rest of the Shiites supported his brother Musa. The Ismaili Fatimids ruled in Egypt and N Africa until 1171, contesting control of the Muslim world with the Abbasid dynasty of Baghdad.

Today the best-known Ismaili sect is that headed by the Aga Khan.

ISO See INTERNATIONAL ORGANIZATION FOR STANDARDIZATION.

Isocrates (436–338 BC) Athenian teacher of rhetoric and political pamphleteer. His appeals to successive military leaders to unite the feuding Greek states against Persia culminated in the *Philippus* (346 BC), addressed to *Philip of Macedon.

isomers Chemical compounds that have the same molecular formulae but different arrangements of atoms. In **structural isomerism** the molecules have different molecular structures. Thus, ethanol (C_2H_5OH) and dimethyl ether (CH_3OCH_3) both have the molecular formula C_2H_6O , although they are different compounds. Another form occurs when functional groups appear at different positions in the molecule. In **stereoisomerism** the isomers differ in their spatial arrangements. **Cis-trans isomerism** occurs as a result of the positioning of groups in a planar molecule. Since rotation cannot occur about a double bond it is possible to have two isomers in organic compounds containing double bonds: one with groups on the same side of the bond (the cis isomer) and the other with groups on opposite sides of the bond (trans isomer). Another form of stereoisomerism

structural isomers. Ethanol and dimethyl ether have the same atoms in the molecule but different functional groups.

cis-trans isomers. A form of stereoisomerism occurring as a result of a double bond.

optical isomers. Another form of stereoisomerism in which two forms of tartaric acid have different optical properties.

isomers

merism is **optical isomerism**, in which the two isomeric forms of the molecule are asymmetric and differ in that one molecule is a mirror image of the other; these are optically active, i.e. they rotate *polarized light passed through their solutions. Isomers of all types have different physical properties and, to a greater or lesser extent, different chemical properties. In some cases isomers can exist in equilibrium (**tautomerism**).

Isopoda A widely distributed order of *crustaceans (4000 species). The group includes the most successful terrestrial crustacean—the woodlouse—as well as aquatic forms. Isopods have oval flattened bodies, covered by armour-like plates, and—usually—seven pairs of walking legs. The young develop within a brood pouch on the female.

isoprene ($\text{CH}_2\text{C}(\text{CH}_3)\text{CH}=\text{CH}_2$) A colourless volatile liquid. It is made from chemicals extracted from oil, coal, or tar and is used to make synthetic rubber. Natural rubber consists mainly of a polymer of isoprene.

isotherm A line on a map joining points of equal temperature. Corrections are usually made to compensate for the effect of altitude on temperature.

isothermal process Any process that occurs without a change in the temperature of a system (compare **ADIABATIC PROCESS**).

isotopes Atoms of the same element that contain equal numbers of *protons but different numbers of *neutrons in their nuclei. They have identical chemical properties but different physical properties. An isotope is indicated by combining its nucleon number and its name or symbol in various ways, for example uranium-235, U-235, ^{235}U . All naturally occurring elements are mixtures of isotopes.

Israel, State of A country in the Middle East, bordering on the Mediterranean Sea. There are mountains in the N, a narrow coastal plain in the W, and the Negev Desert in the S. The River Jordan flowing through the Great Rift Valley forms part of the E border. The population consists largely of Jews who have immigrated since 1948. Many Palestinian Arabs left the area when Israel was created but some have since returned. The Jews form 82% of the population and the Arabs 16%; immigration is decreasing. Some 3% of the population live in *kibbutzim* (see **KIBBUTZ**) and about 5% live in *moshavim*. *Economy*: both industrial and agricultural output has increased rapidly since 1948, boosted by investments and gifts of capi-

tal from abroad. There are resources of copper ore and phosphates; potash and bromine from the Dead Sea are also exploited. Fishing and tourism are also important. 6% of the work force is employed in agriculture, which depends heavily on artificial irrigation. *History*: Israel's history prior to 1948 is that of *Palestine, in which Jewish Zionists had demanded the creation of a Jewish state since the late 19th century. According to a UN recommendation. Palestine was to be divided into a Jewish state, an Arab state, and a small internationally administered zone around Jerusalem. As soon as the state of Israel was proclaimed following British withdrawal (1948), however, Arab forces invaded; by early 1949 Israeli forces had not only repulsed them but had gained control of 75% of Palestine, while the rest had been annexed by Jordan (the *West Bank of the River Jordan) and Egypt (the *Gaza Strip). Jerusalem was divided between Jews and Arabs. In 1956, Israeli forces occupied the Gaza Strip and the *Sinai Peninsula. In the Six Day War (1967) Israel defeated Egypt, Syria, and Jordan and again occupied the Gaza Strip and the Sinai Peninsula as well as the *Golan Heights, the West Bank, and the Arab sector of Jerusalem. A peace agreement with Egypt after the Yom Kippur War (1973; in which the Israelis were taken unawares by Egyptian forces on the Day of Atonement—Yom Kippur), was achieved in 1979 at the Camp David talks, following which Israel withdrew from Sinai (1980–82). In 1982 Israel invaded Lebanon and forced the Palestine Liberation Organization (PLO) to leave West Beirut, withdrawing in 1985. Israel has been criticized for its treatment of Palestinians in the Israeli-occupied territories, which led to violent protests (the *intifada*) in 1988. Israel signed a peace agreement with the PLO in 1993, and in 1994–95 gave autonomous status to the Gaza Strip and Jericho, handing over power to a new Palestinian National Authority. In 1995 the prime minister Yitzhak Rabin was murdered by a Jewish extremist opposed to the peace process. Israel and the PLO signed a further peace agreement in October 1998. In the 1999 general election the right-wing government of Benjamin Netanyahu was heavily defeated by Labour under Ehud Barak. Hizbollah activity forced Israel to withdraw all its forces from S Lebanon in May 2000. That same year talks with the PLO collapsed over the issue of Arab E Jerusalem, leading to violent protests by Palestinians and heavy retaliation by Israel. Barak resigned as prime minister and lost the ensuing elections (2001) to Likud's Ariel *Sharon, widely seen as a hardliner. Violence then

escalated sharply. Rising casualties from Arab suicide bombings prompted Israel to reoccupy large areas of the Palestinian West Bank in 2001–02. From 2005 Sharon began to implement a new plan to disengage from the Gaza Strip but to retain parts of the West Bank. He was succeeded as prime minister by Ehud *Olmert in 2006. In July of that year Israel launched a fierce but inconclusive assault on Hizbollah fighters in Lebanon. Official languages: Hebrew and Arabic. Currency: shekel of 100 agora. Area (excluding occupied territories): 20 770 sq km (8018 sq mi). Population (2007 est): 6 426 679. Capital (de facto): Jerusalem (the UN recognizes only Tel Aviv).

Issus, Battle of (333 BC) The battle in which Alexander the Great defeated an enormous Persian army under Darius III, which was caught in a narrow pass.

Istanbul (or **Stamboul**) 4102N 2857E A city in W Turkey, on both sides of the Bosphorus. There are many ancient buildings in the city, including the mainly 6th-century Hagia Sophia the Blue Mosque, and the Topkapi Palace. It is a major port and industrial centre. *History:* ancient Byzantium was renamed Constantinople in 330, when the emperor Constantine I declared it the capital of the Eastern Roman Empire. It was the capital of the Byzantine Empire until its capture by the Ottoman Turks in 1453, although it had been held by Crusaders from 1204 to 1261. The Ottomans made it the capital of their empire in 1457; it was renamed Istanbul in 1926. Population (1997): 8 260 438.

Istria A peninsula in NW Croatia. Passing to Italy at the end of World War I, it was ceded to Yugoslavia (1947) except for the Territory of Trieste, which was divided between Italy and Yugoslavia in 1954. It became part of independent Croatia in 1991.

Italian A language of the Romance family spoken in Italy. The standard literary and official form is based upon the Tuscan dialect of Florence.

Italic languages A subgroup of the Indo-European language family spoken in central and NE Italy in the thousand years before the rise of Rome. A parent of modern *Romance languages, this group comprised four related dialects: Latin, Faliscan, Osco-Umbrian, and Venetic. At the beginning of the 1st millennium BC Osco-Umbrian was the most widely spoken, but with the growth of Roman civilization, Latin replaced it.

italic script A style of handwriting adopted

in 15th-century Italy by papal scribes and later (c. 1500) adapted for printing. Italic cursive letters eliminate unnecessary lifts of the pen, permitting rapid legible handwriting. *In print its characteristic sloped letters, such as those used in this sentence, are used mainly for display, emphasis, or to indicate that a word is in a foreign language.*

Italy, Republic of A country in S Europe, occupying a peninsula bordered by the Tyrrhenian Sea (W), the Ionian Sea (S), and the Adriatic Sea (E). The principal offshore islands are Sicily and Sardinia. Except for small coastal areas and the Po Valley in the N, the country is generally rugged and mountainous. The main rivers are the Po, Tiber, Arno, and Adige. *Economy:* agriculture is still important, the main crops being wheat, maize, grapes, and olives. Industry, however, has expanded considerably since World War II. The wine industry is important. Mineral resources are not large and Italy is heavily dependent on imported fossil fuels. Tourism is an important source of revenue. *History:* pre-Roman Italy was inhabited from the 7th century BC by the *Etruscans in the N, Italics and Latins in central Italy, and Greek colonists in the southern mainland and Sicily. By 275 BC most of the peninsula had come under the rule of Rome (see ROMAN REPUBLIC). As the western *Roman Empire declined from the 4th century AD, Italy was invaded by a succession of barbarian tribes, including the Visigoths and the Vandals. The last Roman emperor was deposed in 476 by the German king, Odoacer, who in 493 was in turn overthrown by the Ostrogoths. They were expelled in the early 6th century by the Eastern (Byzantine) Roman Empire, which was then threatened from the mid-6th century by successive invasions by the Lombards and the Franks, a period that also saw the origins of the pope's temporal power (see PAPAL STATES). The Muslims invaded the S in the 9th and 10th centuries, Magyars, the N in the 10th century, and Normans, the S in the 11th century. The claim of the German kings to rule Italy was established in 962, when Otto the Great was crowned Holy Roman Emperor in Rome. The conflict from the 11th century between successive popes and emperors over the investiture controversy embroiled the Italian city states (notably Milan, Pisa, Genoa, Venice, and Florence), which in the 12th century were further divided by the struggle between *Guelphs and Ghibellines. Many of the Italian cities came to be dominated by single families, such as the Visconti and then the Sforza in Milan and the

***Medici** in Florence, who during the Renaissance were often outstanding patrons of culture and learning. Following the French invasion of Italy in 1494 Italy became the scene of conflict between France and Spain and from the 16th to early 18th centuries was largely dominated by the latter. During the 18th century control passed to Austria until 1796, when Italy was conquered by Napoleon. After the restoration of Austrian rule the movement for independence and unification (the **Risorgimento*) developed. By 1861, under the leadership of King Victor Emmanuel II of Sardinia-Piedmont and his chief minister Cavour, aided by Garibaldi in the S, the Austrians had been expelled and the kingdom of Italy proclaimed with Victor Emmanuel as its first king. In the late 19th century Italy acquired a colonial empire, notably in East Africa. In 1915 Italy entered World War I on the side of the Allies. The postwar rise of fascism brought Mussolini to power in 1922. In 1936 he conquered Ethiopia and in 1939, Albania. In 1940, Mussolini took Italy into World War II on Germany's side. The Allied conquest of Sicily (1943) brought Mussolini's fall and in 1946 Umberto II abdicated. Since the establishment of the Republic there have been nearly 60 governments; political instability has been exacerbated by a stagnating economy, extremist groups such as the **Red Brigades* of the 1970s, and widespread corruption. In 1996 elections were won by a left-wing coalition led by Romano Prodi. The controversial tycoon Silvio **Berlusconi* led a right-wing government from 2001 until 2006, when elections resulted in the return of the left under Prodi. Italy was a founder member of the EC (now the EU) and adopted the European single currency in 1999–2002. Official language: Italian. Currency: euro of 100 cents. Area: 301 425 sq km (116 350 sq mi). Population (2007 est): 58 147 733. Capital: Rome.

itch mite A parasitic **mite*, *Sarcoptes scabiei*, that produces **scabies* in man and mange in domestic animals. The female burrows into the skin, where it lays eggs and causes irritation. Family: *Sarcoptidae*.

Ivan (III) the Great (1440–1505) Grand Prince of Muscovy (1462–1505). Ivan greatly expanded Muscovite territory and ended Russian subordination to the Tatars. In 1497 he introduced a new legal code. Ivan married (1472) Zoë Palaeologus (d. 1503), the niece of the last Byzantine emperor, and adopted the Byzantine two-headed eagle in his arms.

Ivan (IV) the Terrible (1530–84) Grand Prince of Muscovy (1533–84), who was crowned tsar in 1547. Ivan reformed the legal code and local administration (1555), conquered Kazan and Astrakhan, and established commercial relations with England. After 1560 his reign was marred by his brutality: thousands were executed and in a fit of rage Ivan murdered his son (1581). The effects of his tyranny were aggravated by the financial strains resulting from the abortive Livonian War (1558–82).

Ives, Charles (Edward) (1874–1954) US composer. Noted for his musical inventiveness, he composed more than 500 works. Two of the best known are his second piano sonata, subtitled *Concord, Mass* (1909–15), and *Central Park in the Dark* (1898–1907).

ivory The close-grained white tissue forming the tusks of elephants, walruses, and narwhals and the teeth of hippos. So-called fossil ivory is obtained from mammoths. Ivory carving is a very ancient art; objects from France date to Palaeolithic times and fine examples survive from Egyptian, Minoan, Mycenaean, Assyrian, Greek, and Roman civilizations. India, SE Asia, China, and Japan have ancient traditions of skilled ivory carving. American Eskimo carvings in walrus ivory are greatly prized by connoisseurs. In 1989 many countries banned ivory imports to conserve the African elephant from poachers. Poaching for ivory reduced the numbers of the African elephant from 1.3 million in 1979 to only 600 000 in 1989.

ivy An evergreen woody climbing plant, *Hedera helix*, that has glossy leaves, aerial roots (with which it clings to supports), greenish-yellow flowers, and small round fruits ripening from green to black. Native to Europe and W Asia, it is widely cultivated. Family: *Araliaceae*.

Ivy League A group of prestigious universities in the NE USA. They include Harvard, Yale, and Princeton and are all members of an athletic conference for intercollegiate sports known as the Ivy League (founded 1870s).

Iwo Jima 24 47N 141 19E A Japanese island in the W Pacific Ocean, the largest of the Volcano Islands. Captured by US forces in 1945, it was returned in 1968. Sulphur and sugar are produced. Area: 20 sq km (8 sq mi).

Izmir (former name: Smyrna) 38 25N 27 10E A port in W Turkey, on the Aegean Sea. Much was destroyed by fire in 1922, the rebuilt town being a modern commercial centre. Population (2000): 2 232 265.

jacana A waterbird belonging to a family (*Jacaniidae*; 7 species) occurring in tropical regions worldwide, also called lily trotter. Jacanas are characterized by long legs with elongated toes and claws, which enable them to run over floating vegetation. 25–32 cm long, they are commonly reddish to dark-brown in colour. Order: *Charadriiformes* (gulls, plovers, etc.).

Jacaranda A genus of trees and shrubs (50 species) of South and Central America and the West Indies, often grown as ornamentals. *J. mimosifolia*, up to 15 m tall, and blue or violet tubular flowers. Some species yield valuable timber. Family: *Bignoniaceae*.

jackal A carnivorous mammal of the genus *Canis*, found in Asia and Africa. Jackals are closely related to dogs and have pricked ears and bushy tails. The African black-backed jackal (*C. mesomelas*) is up to 110 cm long including the tail (25–33 cm) and often hunts in packs for carrion. The African side-striped jackal (*C. adustus*) is smaller.

jackdaw An intelligent Eurasian crow, *Corvus monedula*, about 32 cm long, having a black plumage with a grey nape, an erectile crest, and pale-blue eyes. Often found in colonies, jackdaws feed on insects, grain, and carrion.

Jack Russell terrier A breed of dog developed in England from the fox terrier by the Rev John Russell (1795–1883) for flushing foxes from earth. It has a stocky body and a strong muscular head. The short coat is white, black, and tan. Height: up to 38 cm.

Jackson 32 20N 90 11W A city in the USA, the capital of Mississippi. Founded in 1821, it was virtually destroyed by Gen Sherman in 1863. Population (2004 est): 179 298.

Jackson, Michael (1958–) US pop singer, who established himself as a solo star in the 1980s after success with his brothers as the Jackson Five. His solo albums include the

highly successful *Thriller* (1982), *Bad* (1987), *Dangerous* (1991), and *Invincible* (2001). In 2003 he was charged with several counts of child molestation but subsequently acquitted.

Jackson, Peter (1961–) New Zealand film director, screenwriter, and producer. His early work included *Bad Taste* (1987) and *Heavenly Creatures* (1994), but he is now best known for his spectacular film adaptation of Tolkien's epic trilogy *The Lord of the Rings* (2001–03).

Jackson, Stonewall (Thomas Jonathan J.; 1824–63) US Confederate general in the Civil War. In the first battle of "Bull Run, he and his brigade were described as standing "like a stone wall" in the face of the Federal advance. Jackson was a master of rapid tactical movement, shown particularly in the Shenandoah valley campaign (1862). His accidental death at Chancellorsville left a gap in the Confederate command.

Jack the Ripper An unidentified murderer who killed and mutilated at least six prostitutes in the East End of London in late 1888.

Jacob In the Old Testament, the son of Isaac and Rebekah and the ancestor of the entire Jewish nation. His story is told in Genesis 25–50. His 12 sons gave their names to the 12 tribes of Israel.

Jacobites Supporters of the exiled *Stuart king, James II (Latin name: Jacobus), and his descendants. Between 1688, when the Glorious Revolution overthrew James II, and 1745, the Jacobites (mainly Roman Catholics and/or Tories), were the rallying point for opposition to the Hanoverian monarchs. Two Jacobite rebellions, in 1715 (the "15 Rebellion" led by *James Edward Stuart, the Old Pretender) and 1745 (the "45 Rebellion" led by *Charles Edward Stuart, the Young Pretender), were suppressed and thereafter the movement disintegrated.

Jacob's ladder A perennial herb, *Polemonium caeruleum*, native of Eurasia and widely

cultivated as a garden flower. Growing to a height of 90 cm, it has bright-blue flowers. Family: *Polemoniaceae*.

jade A hard semiprecious stone, usually green, consisting of either the rare jadeite, $\text{NaAlSi}_3\text{O}_6$, or the more common nephrite, $\text{Ca}_2(\text{Mg,Fe})_2\text{Si}_2\text{O}_{11}(\text{OH,F})_2$. It has been used for carved ornaments and jewellery since prehistoric times.

Jaffa See TEL AVIV-JAFFA.

Jagannatha A Hindu deity in some contexts synonymous with Krishna. Devotees were alleged to throw themselves under the massive chariot on which his idol is annually wheeled during a festival at Puri, in Orissa, and from which the term "juggernaut" is derived.

Jagger, Sir Mick See ROLLING STONES, THE.

jaguar The largest New World *cat, *Panthera onca*, found in the southern USA and Central and South America. Up to 2.5 m long including the tail (70–90 cm), it has dark rosette-shaped spots on its yellow coat. Jaguars inhabit forest and scrub and hunt peccaries, turtles, fish, and capybaras and may attack domestic livestock.

jaguarundi A weasel-like *cat, *Felis yagouaroundi*, of Central and South America. Up to 110 cm long, it stands only 28 cm high at the shoulder. It has a red or grey coat, long tail, and small ears.

Jainism The religion of between two and three million Indians, followers of Mahavira (759–527 BC). Founded in the 6th century BC, Jainism stresses ahimsa, asceticism, and meditation. Right belief, knowledge, and conduct are the means of release from the perpetual round of rebirth caused by *karma. This release is possible only for monks; the laity aim only for a better rebirth. Jainism is atheistic, although lesser spirits and demons proliferate.

Jaipur 26°53'N 75°50'E A city in India, the capital of Rajasthan. It has many fine buildings built in pink sandstone and is famous for its enamel work and jewellery, textile printing, and stone, marble, and ivory carving. Population (2001): 2 322 575.

Jakarta (or **Djakarta**; name until 1949: Batavia) 6°09'S 106°49'E The capital of Indonesia, in NW Java. It became a commercial centre as the base of the Dutch East India Company. Population (2000): 8 347 083.

jalap A climbing plant *Ipomoea purga*, of Mexico and South America, that has crimson flowers. The dried tubers yield a resin that is

used medicinally as a laxative. Family: *Convolvulaceae*.

Jamaica An island country in the Caribbean Sea, off the S coast of Cuba. A high plateau is crossed by the Blue Mountains, which reach 2255 m (7400 ft). The population is mainly of African and mixed African and European descent. *Economy*: tourism and services now form the mainstay of the economy. Sugar, bauxite, and bananas are the most important exports. *History*: discovered by Columbus in 1494, it was occupied by the Spanish, who exterminated the original Arawak inhabitants. Captured by the British in 1655, it became a colony and a centre of the slave trade. Self-government was introduced in 1944 and in 1962 Jamaica became an independent state within the British Commonwealth. There was considerable political unrest in the 1970s: a state of emergency was imposed in 1976–77 by the socialist prime minister Michael Manley. In the 1989 election Manley became prime minister for the second time, retiring in 1992. He was replaced by Percival J. Patterson, who served until 2002. Portia Simpson-Miller became Jamaica's first woman prime minister in 2006. Jamaica is a member of the OAS and CARICOM. Official language: English. Currency: Jamaican dollar of 100 cents. Area: 10 991 sq km (4244 sq mi). Population (2007 est): 2 780 132. Capital: Kingston.

James I (1394–1437) King of the Scots (1406–37), whose actual rule began on his release (1424) from English imprisonment. He strengthened royal authority at the expense of the nobles and extended royal control over justice and commerce. He was assassinated by a group of disaffected nobles.

James I (1566–1625) The first Stuart King of England and Ireland (1603–25) and, as James VI, King of the Scots (1567–1625). He succeeded to the Scottish throne after the abdication of his mother Mary, Queen of Scots. As king he reasserted royal authority against the nobility and, less successfully, the Presbyterians. In 1589 he married *Anne of Denmark. In England, James encountered opposition from his parliaments (1604–10, 1614, 1621–22) and was also unpopular for his choice of favourites and for his attempts to obtain a Spanish marriage for his son. One of the great achievements of his reign was the publication (1611) of the *King James Version of the Bible.

James II (1430–60) King of the Scots (1437–60). He established his authority over rival factions and continued the extension of royal control and justice begun by his father James I. He was

killed while besieging the English at Roxburgh Castle.

James II (1633–1701) King of England, Scotland, and Ireland (1685–88). The second son of Charles I, James (as Duke of York) escaped to Holland (1648) after his father's defeat in the Civil War and during the 1650s fought for the French and then the Spanish. In 1659 he married the daughter of the Earl of Clarendon, Anne Hyde (1637–71), by whom he had two daughters (later Queens Mary II and Anne). In about 1669 he became a Roman Catholic; consequent attempts to exclude him from the succession failed and in 1685 he became king. The Protestant rebellion of the Duke of *Monmouth was suppressed, Roman Catholics were admitted to public office, and religious freedom for all denominations was announced (1687). In 1688 James prosecuted the Archbishop of Canterbury and six bishops who refused to proclaim religious toleration from the pulpit but lost the case. This defeat and the threat of a Roman Catholic succession with the birth of a son (see JAMES EDWARD STUART, THE OLD PRETENDER) to his second wife, Mary of Modena (1658–1718), precipitated the *Glorious Revolution. James fled; in his subsequent attempt to regain the Crown from Ireland he was defeated by William III's forces at the *Boyne (1690) and *Aughrim (1691). He died an exile in France.

James III (1452–88) King of the Scots (1460–88). Until 1469 Scotland was ruled by a regency and his personal rule was marked by baronial revolts. He was killed after defeat by rebel barons near Stirling.

James IV (1473–1513) King of the Scots (1488–1513). In 1503 he married *Margaret Tudor. He defeated the rebels who had killed his father James III, procuring internal stability. Recurrent hostility with England culminated in the invasion of Northumberland (1513) and his defeat and death at *Flodden.

James V (1512–42) King of the Scots (1513–42). During his minority (1513–28) Scotland was controlled by rival pro-French and pro-English factions. He died shortly after the failure of an invasion of England and was succeeded by his daughter Mary, Queen of Scots.

James, Henry (1843–1916) US novelist and critic. He spent much of his childhood in Europe, becoming a British citizen in 1915. His novel *Roderick Hudson* (1875) introduced the theme of Americans confronting European culture that recurred in many of his novels, such as *The Portrait of a Lady* (1881), although he

occasionally returned to American settings, as in *The Bostonians* (1886). He wrote more than a hundred shorter works of fiction, including *The Turn of the Screw* (1898). In his later novels, *The Wings of the Dove* (1902), *The Ambassadors* (1903), and *The Golden Bowl* (1904), action is subordinated to psychological analysis. His brother **William James** (1842–1910) was a psychologist and philosopher, who held that a theory was only true if it helped to solve problems. Religious and moral beliefs were treated in the same nondogmatic way, especially in his influential *Varieties of Religious Experience* (1902) and *The Meaning of Truth* (1909).

James, Jesse (Woodson) (1847–92) US outlaw. After the Civil War he formed the James gang and by 1867 was robbing banks, stagecoaches, and trains in his native Missouri and surrounding states. He was shot and killed by Robert Ford, a James gang member who claimed the \$10 000 reward.

James, P(hyllis) D(orothy), Baroness (1920–) British novelist, best known for her detective fiction. Her novels include *Death of an Expert Witness* (1977), *Devices and Desires* (1990), *A Certain Justice* (1997), and *The Murder Room* (2003). She received a life peerage in 1991.

James Edward Stuart, the Old Pretender (1688–1766) The son of James II, the deposed Roman Catholic King of England. In exile, he was urged by his supporters, known as *Jacobites, to claim the English throne. After their invasion of Scotland failed in 1715, James abandoned his claim and lived in permanent exile in Rome.

Jammu and Kashmir A state in N India, forming part of the disputed area of *Kashmir. Area: 100 569 sq km (38 820 sq mi). Population (2001): 10 069 917. Capital: Srinagar.

Jamshedpur 22 47N 86 12E A city in India, in Jharkand. Founded in 1907 by the industrialist Dorabji Jamsetji Tata, it is the site of India's principal iron and steel works. Population (1991): 461 212.

Janáček, Leoš (1854–1928) Czech composer. He was over 60 before he gained wide recognition. In his vocal works he attempted to reproduce natural speech rhythms; he was also influenced by folk music. His works include the operas *Jenufa* (1894–1903), *The Excursions of Mr Brouček* (1908–17), and *The Makropulos Case* (1923–25), two string quartets, and the *Glagolitic Mass* (1926).

Jansenism A movement in the Roman Catholic Church in the 17th and 18th centuries

based on the teaching of the Dutch theologian Cornelius Jansen (1585–1638). Jansenists emphasized the doctrine of *predestination and rejected some aspects of traditional teaching on the sacraments; this led to conflict with the Jesuits and condemnation from the Church leadership. One of the most famous Jansenists was *Pascal.

Jansky, Karl Guthe (1905–50) US radio engineer, who discovered a source of radio waves outside the solar system (1932), while investigating static interference. Jansky's discovery led to the science of *radio astronomy.

Janus The Roman god of doors, thresholds, and beginnings, after whom the month January is named. He is usually portrayed as having two heads facing forwards and backwards.

Japan (Japanese name: Nippon or Nihon) A country in E Asia, consisting of a series of islands lying between the Pacific Ocean and the Sea of Japan. The four main islands are *Honshu, *Kyushu, *Hokkaido, and *Shikoku. Much of the land is mountainous, with the highest mountain, *Fujijama, rising to 3778 m (12 399 ft). The population is of mixed Malay, Manchu, and Korean descent; the original inhabitants, the Ainu, survive in small numbers on Hokkaido. *Economy:* Japan is a highly industrialized country, manufacturing electronic goods, motor vehicles, and petrochemicals; it now produces about a third of the world's ships. Mineral resources are on the whole sparse. Agriculture is intensive and, although rice is still the main crop, there have been efforts to diversify with such crops as wheat, barley, and soya beans. There is considerable timber production. Japan is also one of the world's leading fishing nations. Japan is now one of the world's foremost financial centres, although it suffered severely in the Asian financial crisis of 1997–98. *History:* about 200 BC the country was united under the Yamato dynasty. Their religion formed the basis of *Shinto and Japanese emperors were regarded as divine descendants of the sun goddess. From 1186 AD real power was in the hands of the military *shoguns until Emperor Mutsuhito (1852–1912) regained power for the House of Yamato in 1867. 1871 saw the end of Hoken Seido (the feudal system) and from the mid-19th century the country was opened up to western communications and ideas. It expanded colonially, especially in successful wars against China and Russia, and it occupied several Asian countries. It fought against the Allies in World War II and surrendered after the dropping of atomic bombs on Hiroshima and

Nagasaki in 1945. By a new constitution of 1947 the emperor renounced his former claim to divinity and became a constitutional monarch. The Liberal Democratic Party (LDP) held power from 1955 until 1993, when a coalition government was formed. In 1997–98 Japan's financial system was severely hit by the crisis in SE Asia and the economy entered a period of recession. Junichiro Koizumi became prime minister in 2001 and led the LDP to a decisive electoral victory in 2005. The current prime minister is Shinzo Abe. Official language: Japanese. Currency: yen of 100 sen. Area: 372 480 sq km (143 777 sq mi). Population (2007 est): 127 433 494. Capital: Tokyo.

Japan, Sea of A section of the NW Pacific Ocean between Japan and the Asian mainland.

Japanese The language of Japan. Its relationship to other languages is uncertain but it is probably related to *Korean. It is polysyllabic and usually stresses all syllables equally. There are many dialects; the standard form is based on the speech of Tokyo. Japanese writing systems are complex. In about the 5th century the Japanese adopted Chinese ideographic characters (*kanji*), which have both Chinese-like (*on*) and native Japanese (*kun*) pronunciations. About 2000 *kanji* are now used. In about the 9th century the Japanese supplemented the *kanji* by deriving from them two phonetic syllabaries, of 48 symbols each, called *hiragana* and *katakana*. *Hiragana* is mainly used for suffixes and grammatical functions and for words for which there are no *kanji*. *Katakana* is mainly used for foreign names, loanwords, and scientific words.

Japanese cedar A conifer, *Cryptomeria japonica*, native to China and Japan, where it is an important timber tree reaching a height of 55 m; elsewhere it is grown for ornament and rarely exceeds 35 m. Japanese cedar has globular spiny cones, 2 cm across. Family: *Taxodiaceae*.

Japanese maple A *maple tree, *Acer palmatum*, up to 13 m tall, the 5–11 lobed leaves of which turn scarlet in autumn. Native to Japan, it is a popular ornamental in many cultivated varieties, including purple-leaved and dwarf types.

japonica A shrub or tree of the genus *Chaenomeles* (or *Cydonia*), native to Japan but widely cultivated as an ornamental. Flowering quince (*C. japonica*) and Japanese quince (*C. speciosa*) are the most popular species. These have clusters of scarlet five-petalled flowers, 5 cm

across. The apple-like fruit is used in marmalade and jelly. Family: *Rosaceae*.

Japurá, River A river in NW South America, rising in SW Colombia and flowing generally SE to join the River Amazon in Brazil. Length: 2800 km (1750 mi).

jasmine A shrub of the genus *Jasminum* (about 300 species), native to tropical and subtropical regions and widely cultivated. Many species yield an essential oil used in perfumery. Two species suitable for temperate gardens are the common jasmine (*J. officinalis*) from S Asia, up to 6 m tall with fragrant white flowers, and the Chinese winter jasmine (*J. nudiflorum*), 3–6 m tall, with yellow flowers. Family: *Oleaceae*.

Jason A legendary Greek hero, heir to the throne of Iolcos in Thessaly. Sent by his uncle, the usurper Pelias, to fetch the *Golden Fleece, he and the *Argonauts underwent many adventures before finally recovering the Fleece from Colchis with the help of *Medea. After many years of wandering he died at Corinth.

jasper An impure variety of *chalcedony, usually red or reddish brown. Slightly translucent, it is regarded as a semiprecious stone. It is an abundant mineral, occurring in veins and in cavities in volcanic rocks.

jaundice Yellowing of the skin and whites of the eyes due to the presence of *bile pigments. Jaundice may result if there is excessive breakdown of red blood cells, as in haemolytic anaemia, or in disease of the liver, such as *hepatitis, or blockage of the bile duct by gallstones.

Java An Indonesian island, the smallest of the Greater *Sunda Islands. Its chain of volcanic mountains has formed exceptionally fertile soil, and its many rivers feed its intensive wet-rice agriculture. Other food crops, sugar cane, and kapok are grown and forest products include teak. Indonesia's administrative and industrial centre, Java is heavily overpopulated. *History:* Indian colonies in the early centuries AD developed into Hindu and Buddhist kingdoms, with Hindu-Javanese culture reaching its height in the 14th century. The Dutch East India Company was centred here from 1619. Many died during anticommunist purges (1965–67). Area: 132 174 sq km (51 032 sq mi). Population (1999 est): 121 193 000, with Madura. Capital: Jakarta.

javelin throw A field event in athletics in which a spearlike javelin is thrown as far as possible. The men's javelin is 2.6–2.7 m (8.5–8.9 ft) long and weighs 800 g (1.8 lb). The women's

measures 2.2–2.3 m (7.2–7.5 ft) and weighs a minimum of 600 g (1.3 lb). It is thrown with one hand, over the shoulder, after a run-up of approximately 36 m (120 ft), and the metal head must hit the ground first. Each competitor has six tries.

jay A crow, *Garrulus glandarius*, of Eurasia and N Africa. It is about 34 cm long and brownish pink, with a black tail, white rump, black-barred blue wing patches, and a black-and-white erectile crest. Jays are found mainly in woodland, feeding on insects and larvae in summer and storing seeds for winter food.

Jefferson, Thomas (1743–1826) US statesman; the third president (1801–09) of the USA. A lawyer, Jefferson was elected a delegate to the second Continental Congress in 1775 and was the chief author of the *Declaration of Independence. Jefferson served as governor of Virginia (1779–81), minister to France (1785–89), secretary of state (1789–93), and vice president (1797–1801) under John Adams. During Jefferson's two terms as president, he approved the *Louisiana Purchase (1803) and encouraged US neutrality in the Napoleonic Wars.

Jefferson City 38 33N 92 10W A city in the USA, the capital of Missouri in the Missouri River. Population (latest est): 35 481.

Jeffreys of Wem, George, 1st Baron (c. 1645–89) English judge. A supporter of the Crown, he became a leading prosecutor of suspected traitors following the *Popish Plot and, in 1685, James II's Lord Chancellor. He is notorious for the harsh punishments and death sentences he imposed during the Bloody Assizes, after Monmouth's rebellion (1685). He was captured after the fall of James II and died in the Tower of London.

Jehovah See YAHWEH.

Jehovah's Witnesses A religious movement, first known as Bible Students, organized in the early 1870s by Charles Taze Russell (1852–1916) in Philadelphia. Jehovah's Witnesses accept the Bible as their sole authority, worshipping the Creator, Jehovah, and acknowledging Jesus Christ to be God's son and spokesman. They look for the end of the present world order in the near future. They believe that 144 000, the Christian congregation, will rule with Jesus Christ in his heavenly kingdom over the rest of obedient mankind, who will live on a paradise earth. They do not engage in politics and are conscientious objectors.

jellyfish A free-swimming aquatic inverte-

brate animal belonging to a class (*Scyphozoa*; about 200 species) of cnidarians. The translucent gelatinous body, 1.5–2000 mm in diameter, is bell- or umbrella-shaped, with a central tubular projection that hangs down and bears the mouth. Jellyfish occur in all oceans and usually propel themselves through the water by contracting muscles around the edge of the bell. Stinging tentacles are used to capture and paralyse prey. The term jellyfish is also used for the free-swimming sexual form of any other coelenterate (see *MEDUSA*).

Jena and Auerstädt, Battles of (14 October 1806) Simultaneous battles in which Napoleon defeated the Prussians. Auerstädt and Jena broke Prussia as a military power and left Russia to face Napoleon alone. Prussia remained in the orbit of the French Empire until 1813, when it rejoined the alliance against Napoleon.

Jenkins, Roy (Harris), Baron Jenkins of Hillhead (1920–2003) British politician. He became a Labour MP in 1948 and joined the cabinet in 1964. As home secretary (1965–67; 1974–76) he introduced liberal social reforms. After serving as president of the EC Commission (1977–81), he helped to found the Social Democratic Party and became its leader (1982–83). He was noted for his historical biographies.

Jenner, Edward (1749–1823) British physician, who developed the first effective vaccine—against smallpox. Jenner noticed that people who caught the mild disease cowpox never contracted smallpox. In 1796 he inoculated a small boy with cowpox and, two months later, with smallpox. The boy did not develop smallpox. Jenner published his findings in 1798 after which vaccination became a widespread protective measure.

Jerboa A small hopping *rodent belonging to the family *Dipodidae* (25 species) of Asian and N African deserts, also called desert rat. Jerboas are 4–15 cm long and have kangaroo-like hind feet, a long balancing tail, and sandy fur. They emerge at night from their burrows to feed on seeds.

Jerez de la Frontera 36 41N 6 08W A city in SW Spain, in Andalusia. It is renowned for its wine industry and gave its name to sherry. Population (1998 est): 181 602.

Jericho 31 52N 35 27E A town in the Jordan Valley, on the Israeli-occupied West Bank. The site of the old city was excavated by Kathleen Kenyon (1906–78), revealing one of the earliest known towns (before 8000 BC); of the Bronze

Age city attacked by Joshua (Joshua 6) nothing remains. The ruins of the palace, Khirbat al-Mafjar, built (739–44 AD) by the Umayyad caliph Hisham (d.743) can still be seen. By the 1993 peace agreement between Israel and the PLO, Palestinian self-rule was granted in Jericho in 1994.

Jerome, St (c.342–420 AD) Italian biblical scholar; Doctor of the Church and author of the *Vulgate Bible, the first Latin translation of the Bible from the Hebrew. After a period as a hermit, he was ordained by St Paulinus of Nola in Antioch. A secretary to Pope Damasus I, he later settled in Bethlehem, where he established a monastery. Feast day: 30 Sept.

Jersey 49 13N 2 07W The largest of the Channel Islands, in the English Channel. It was colonized from Normandy in the 11th century; French influence remains strong and French is the official language. It consists chiefly of a plateau incised by deep valleys. Agriculture, particularly dairy farming, is important and the famous Jersey cattle are bred for export. Finance and tourism are also major sources of income. Area: 116 sq km (45 sq mi). Population (2001): 89 400. Capital: St Helier.

Jerusalem (Arabic name: El Quds) 31 47N 35 13E The capital of Israel, in the Judea Heights between the Mediterranean and the Dead Sea. Jerusalem is a religious centre for Christianity, Judaism, and Islam. The modern city spreads to the W of the Old City, which is walled (1537–40) and contains the Western (Wailing) Wall (part of the retaining wall of the second Jewish Temple, consecrated 515 BC), the Dome of the Rock (691 AD; Islamic), and the Church of the Holy Sepulchre, begun 335 AD on the traditional site of Christ's crucifixion). *History:* Jerusalem was conquered by King David in 1005 BC; it became the capital of Judah in 930 BC. Nebuchadnezzar, King of Babylon, destroyed the city in 586 BC, when the Jewish inhabitants were exiled to Babylon. In 538 BC, 40 000 Jews returned to the city, whose walls were rebuilt under Nehemiah in 445 BC. It was occupied by Alexander the Great (4th century BC) and the Romans (63 BC), under whose fifth procurator, Pontius Pilate, Jesus was put to death. Occupation by the Turks was succeeded by the Kingdom of Jerusalem, a feudal state created in 1099 following conquest by the Crusaders. It was enlarged in the early 12th century by Baldwin I (c. 1058–1118) and his successors, but fell to Saladin in 1187. The Turks retook the city in 1517 and held it until 1917, when it became a British mandate, until 1948. Jerusalem was then divided between the state

of Israel, of which it became the capital (1950), and Jordan. Israel occupied the whole city in June 1967, but this annexation is not recognized by the UN. The city has since been troubled by ethnic unrest. Population (1999 est): 653 700.

Jerusalem artichoke A North American perennial herb, *Helianthus tuberosus*, that grows to a height of 2 m, and has edible tubers up to 10 cm long. They bloom only in hot summers. Family: *Compositae*.

Jesuits Members of the Society of Jesus, an order founded by St *Ignatius Loyola in 1533 to propagate the Roman Catholic faith. In addition to vows of chastity, poverty, and obedience, Jesuits were sworn to go wherever the pope might send them. They became one of the dominant forces of the *Counter-Reformation and played a prominent role in missions to the New World and the East. Their power eventually brought them into conflict with civil authorities throughout Europe, and in 1773 Pope Clement XIV suppressed the order. Reinstated in 1814, the order is now active worldwide and is noted for its schools and universities.

Jesus (c. 6 BC–c. 30 AD) The founder of *Christianity; called by his followers the Messiah or Christ (Greek *khristos*, anointed one). According to the New Testament, Jesus, the son of the Virgin *Mary, was born at Bethlehem in the last years of the reign of Herod the Great; Mary's husband, Joseph, was a carpenter of Nazareth who belonged to the tribe of Judah and the family of David. Jesus was baptized in about 27 AD by John the Baptist and began his public ministry in Galilee, preaching largely in parables. His teaching, summarized in the Sermon on the Mount (Matthew 5–7), emphasized the approaching Kingdom of God, the need for repentance, and the importance of charity, faith, and humility. Miracles were attributed to him, including healing and feeding a multitude of 5000. The beginnings of a movement are evident in Galilee when Jesus summoned his 12 disciples, instructing them to preach the imminence of the Kingdom of God. Accompanied by his disciples he travelled to Jerusalem for Passover. There, after betrayal by Judas, he was arrested and condemned to death by the Jewish tribunal, the Sanhedrin, for claiming to be the Messiah. He was crucified according to Roman law as a criminal by order of Pontius Pilate. In the New Testament his death is presented as the fulfilment of a divine purpose, made clear to the disciples at the resurrection (on the next day but one after the crucifixion) and by a number of appearances to individuals

and groups of disciples. His ascension into heaven is said to have occurred 40 days after the resurrection.

jet engine A form of *gas turbine (see also INTERNAL-COMBUSTION ENGINE) in which part of the fuel energy drives a turbine, which in turn drives a compressor to increase the pressure of the air required for combustion, and part is used as a jet to provide thrust to drive an aircraft. The jet engine was patented in 1930 by Sir Frank *Whittle, the first practical Whittle engine powering a Gloster aircraft in 1941. Thrust is equal to the mass of the gas produced multiplied by its acceleration and is due to the pressure of the expanding gas on the engine itself rather than on the air through which it is flying. It is therefore more efficient at higher altitudes, where the atmosphere is thinner. Early postwar commercial aircraft used a turboprop engine, in which a propeller is driven by the turbine. For greater speed and economy the turboprop has now been replaced by the turbojet or the turbofan. At over twice the speed of sound (Mach 2), the forward pressure of the air is sufficient for the compressor, and the turbine, to be dispensed with. The resulting engine is called a ramjet.

jet engine. (a) The principle: equal pressure from the expanding gas inside the engine meets equal resistance except rearwards. The result is a forward thrust. The lower the outside pressure, the greater the thrust. (b) The turbojet, used for subsonic and supersonic flight (especially with reheat). (c) The turbofan, used for subsonic flight: cool air, compressed by the fan, bypasses the engine and mixes with the hot jet.

The drawback of the ramjet is that it needs a rocket-assisted take-off. Turbo-shaft engines, similar to the turboprop, are used in helicopters, ships, etc. See also ROCKETS.

Jews A predominantly Semitic people, claiming descent from the ancient Israelites and practising *Judaism. They inhabited Israel until the Babylonian exile, returning in 1948. During the intervening 25 centuries they were dispersed (see DIASPORA) throughout the world and there are now communities in most countries (see ASHKENAZIM; SEPHARDIM). Under Persian, Greek, and Roman rule the Jews gradually evolved a system of communal administration that enabled them to survive as minority communities through many centuries of Christian and Muslim domination, despite frequent persecution. Since the late 18th century they have been accepted in most countries, although the German slaughter of six million Jews in Europe (see HOLOCAUST) is one of the ugliest episodes in human history. It did, however, provide the Zionist claim for a national home for the Jews with unanswerable force (see ZIONISM).

Jharkhand A state of NE India, created in 2000 from part of Bihar. It consists of the E part of the Chota Nagpur plateau, at elevations of about 700 m (2300 ft). The state has India's richest mineral resources, including coal in the Damodar valley and mica in the Hazaribagh area, and supports iron and steel engineering works. Agriculture and forestry are also important. Area: 74–677 sq km. Population (2001): 26 945 829. Capital: Ranchi.

Jhelum, River A river in India and Pakistan, the most westerly of the five rivers of the Punjab. Rising in Kashmir it flows generally SSW to join the River Chenab. Length: about 720 km (450 mi).

Jiang Zemin (1926–) Chinese Communist statesman. He became general secretary of the Communist Party in 1989 and president of China in 1993, emerging as China's supreme leader on the death (1997) of Deng Xiaoping. He was succeeded by *Hu Jintao as general secretary (2002), president (2003), and chairman of the Central Military Commission (2004).

Jiddah (or **Jedda**) 2130N 39 10E A town in Saudi Arabia, on the Red Sea coast. It is a modern industrial city and the chief port for Muslim pilgrims to Mecca. Population (1992 est): 1 500 000.

jimsonweed See THORN APPLE.

Jinan (**Chi-nan** or **Tsinan**) 36 41N 117 00E A

city in E China, the capital of Shandong province. A city since the 8th century BC, it is a cultural centre. Population (2003 est): 2 345 969.

jinja A Shinto shrine dedicated to a deity or nature spirit, situated in a place of exceptional natural beauty. It consists of three parts: the *haiden*, a hall where the laity pray and worship; the *heiden*, where religious ceremonies are performed; and the *honden*, the main inner sanctuary usually accessible only to priests. Before the jinja is a sacred gateway.

Jinnah, Mohammed Ali (1876–1948) Indian statesman, who was largely responsible for the creation of Pakistan. Born in Karachi, he studied law in England. As a member of the Muslim League and the *Indian National Congress he championed Hindu-Muslim unity until 1930, when he resigned from the Congress in opposition to Gandhi's policies. He was president of the League in 1916 and 1920 and from 1934. He advocated a separate state for Indian Muslims, which was achieved with the creation in 1947 of Pakistan, of which he was the first governor general.

Jiulong (or **Kowloon**) 22 20N 114 15E A port in SE China, on the Jiulong peninsula, opposite Hong Kong island and from 1860 to 1997 part of the British colony. Population (2001): 2 023 979.

Joan of Arc, St (French name: Jeanne d'Arc; c. 1412–31) French patriot, known as the Maid of Orléans, whose military and moral leadership led to a reversal of French fortunes in the *Hundred Years' War. Of peasant origin, she claimed to have been told by Saints Michael, Catherine, and Margaret that it was her divine mission to expel the English from France and enable Charles VII to be crowned. She persuaded Charles to allow her to lead an army to relieve the besieged city of Orléans. Her success resulted in Charles' coronation at Rheims (July 1429). Other victories followed but she failed to recapture Paris and was subsequently seized by the Burgundians, who sold her to their English allies. They tried her and burned her as a heretic. She was canonized in 1920.

Jocasta See OEDIPUS.

Jodrell Bank The site, near Macclesfield, Cheshire (UK), of the Nuffield Radio Astronomy Laboratories of Manchester University. The principal instrument is the 76.2 m (250 ft) fully steerable radio-telescope dish.

Jogjakarta (or **Yogyakarta** or **Depok**) 7 48S 110 24E A city in Indonesia, in S Java. It was the capital of the 1945–49 Indonesian Republic. A cultural centre, it is rich in Buddhist monu-

ments, notably the temple of Borobudur. Population (2000): 396 711.

Johannesburg 26 10S 28 02E The largest city in South Africa, in the Transvaal. It was founded in 1886 following the discovery of gold in the area. During the second Boer War it was taken by the British (1900). Today it is a major industrial, commercial, and banking centre containing the South African Stock Exchange (1887). Linked to the city is the complex of towns known as *Soweto, inhabited by Black Africans. Population (2005 est): 3 288 000.

John (1167–1216) King of England (1199–1216), nicknamed John Lackland; the youngest son of Henry II, he succeeded his brother Richard I. His reign saw the renewal of war with *Philip II Augustus of France, to whom he had lost several continental possessions, including Normandy, by 1205. Struggles with Pope Innocent III over John's objection to the election of Stephen Langton (c. 1150–1228) as Archbishop of Canterbury led to the imposition of an interdict over England (1208) and the king's excommunication (1212). He came into conflict with his barons and was forced to endorse the *Magna Carta. His subsequent repudiation of the Charter led to the first Barons' War (1215–17).

John (II) the Good (1319–64) King of France (1350–64), who was taken prisoner by the English at the battle of Poitiers (1356) during the *Hundred Years' War. He remained in captivity in London, where he was forced to sign the unfavourable Treaty of *Brétigny. Released in 1360, he was unable to raise the ransom demanded by the English and was forced to return to London, where he died.

John XXIII (Angelo Roncalli; 1881–1963) Pope (1958–1963). Elected at the age of 77, John was the most popular and innovative pope of modern times. In 1962 he summoned the second Vatican Council. His best-known encyclical, *Pacem in Terris* (Peace on Earth; 1963), advocated reconciliation between the western democracies and eastern communist countries.

John, Augustus (Edwin) (1878–1961) British painter, born in Wales. A flamboyant character, he travelled widely, often in Gipsy style. He is known for his strongly characterized portraits of contemporaries, such as James Joyce and T. E. Lawrence. His sister **Gwen John** (1876–1939) was also a painter, noted especially for her portraits of women.

John, Sir Elton (Reginald Kenneth Dwight; 1947–) British rock pianist and singer, who

became popular in the early 1970s with such songs as "Rocket Man" and "Daniel." In 1997 a reworking of his hit "Candle in the Wind" was released as a charity tribute to Diana, Princess of Wales, and became the world's biggest-ever selling single.

John, St In the New Testament, one of the 12 Apostles, brother of James. The Gospel according to St John is traditionally ascribed to him but is now thought to have been written in the late 1st century AD; it is markedly different in content and style from the other Gospels. The three Epistles of John and the Book of *Revelation are also ascribed to John.

John Dory (or dory) A fish of the family *Zeidae*, found worldwide in moderately deep marine waters. It has a round narrow body with deep sides, each having a black spot surrounded by a yellow ring, and spiny-rayed fins extended into filaments. *Zeus faber*, up to 90 cm long, is a food fish of the Atlantic and Mediterranean. Order: *Zeiformes*.

John of Gaunt (1340–99) The fourth son of Edward III of England; Duke of Lancaster from 1362. After a distinguished career in the *Hundred Years' War he assumed an increasingly important role in domestic government. Never popular, John, who supported *Wycliffe, was opposed by *William of Wykeham (1324–1404). From 1386 to 1389 he attempted without success to realize his claim, through his second wife, to Castile. In 1396 he married his mistress Catherine Swynford, and in 1397 their descendants were legitimized but excluded from the royal succession.

John O'Groats 58 39N 3 02W A village at the NE tip of Scotland, site of the house of John de Groot, a 16th-century Dutch immigrant. John O'Groats is 970 km (603 mi) in a straight line from Land's End, Cornwall.

John Paul II (Karol Wojtyła; 1920–2005) Pope (1978–2005). A Pole, he was the first non-Italian pope since 1522 and the longest-serving pontiff of the 20th century. In the early part of his reign he outspokenly defended the Church in communist countries, especially in Poland. His uncompromising position on contraception, abortion, homosexuality, and a celibate clergy led to considerable opposition. In 1981 he survived an assassination attempt.

Johnson, Amy (1903–41) British aviator. She established several long-distance records with her solo flights to Australia in 1930, to Tokyo in 1932, and to the Cape of Good Hope and back in 1936. In 1932 she married Jim Mollison

(1905–59), another pilot, with whom she flew the Atlantic in 1936. She was killed when her plane crashed into the sea off the Kent coast, possibly as a result of friendly fire from anti-aircraft guns.

Johnson, Lyndon Baines (1908–73) US statesman; Democratic president (1963–69). A Texan, he succeeded to the presidency after *Kennedy's assassination. His Great Society programme initiated broad social reform. He became unpopular for increasing US military involvement in the *Vietnam War.

Johnson, Samuel (1709–84) British poet, critic, and lexicographer. He left Oxford without taking a degree, married a wealthy widow in 1735, and went to London in 1737. His early publications include a long didactic poem, *The Vanity of Human Wishes* (1749). From 1750 to 1752 he produced the weekly *Rambler* almost single handed. His *Dictionary* appeared in 1755 after nine years' work and was well received, but he still relied on hackwork for money, writing *Rasselas* (1759) in a week to pay for his mother's funeral. His last major works were an edition of Shakespeare (1765) and his *Lives of the Poets* (1779–81). From the early 1760s he enjoyed the security of a pension and the friendship of Reynolds, Goldsmith, and his biographer *Boswell.

John the Baptist, St In the New Testament, the son of a priest, Zacharias, and Elizabeth, a relative of the Virgin *Mary. He began in about 27 AD preaching on the banks of the River Jordan, urging repentance and baptism because of the imminent approach of the Kingdom of God (Matthew 3.2). He baptized Christ, recognizing him as the Messiah. He was beheaded by *Herod Antipas, at the request of Salome, for denouncing his second marriage to Herodias. Feast days: 24 June (birth); 29 Aug (beheading).

Johor A swampy forested state in S Peninsular Malaysia. Chief products are rubber, copra, pineapples, palm oil, tin, and bauxite. Area: 18 958 sq km (7330 sq mi). Population (2000): 2 565 701. Capital: Johor Baharu.

Joliot-Curie, Frédéric and Irène See CURIE, MARIE.

Jolson, Al (Asa Yoelson; 1886–1950) US popular singer and songwriter, born in Russia. He became famous for his blacked-up face and the song "Mammy." In 1927 he appeared in the first full-length sound film *The Jazz Singer*.

Jones, Inigo (1573–1652) English classical architect. One of the first Englishmen to study

architecture in Italy, Jones was particularly influenced by *Palladio in his two best-known buildings, the Queen's House, Greenwich (1616–35), and the Banqueting Hall, Whitehall (1619–22). His career effectively ended with the outbreak of the Civil War in 1642, and his style only became strongly influential in England in the 18th century. With Ben Jonson, he also designed numerous court masques.

Jonquil See NARCISSUS.

Jonson, Ben (1572–1637) English dramatist and poet. In *Every Man in His Humour* (1598) he introduced the "comedy of humours," each character being driven by a particular obsession. Other major satirical plays include *Volpone* (1606), *The Alchemist* (1610), and *Bartholomew Fair* (1614). In collaboration with Inigo *Jones he produced many court masques. He also published poems and translations and influenced a number of younger poets known as "the Tribe of Ben."

Joplin, Scott (1868–1917) US Black pianist and composer of *ragtime music. Joplin is remembered for such rags as "Maple Leaf Rag" and "The Entertainer." His ragtime operas *A Guest of Honour* (1903), now lost, and *Treemonisha* (1907) were failures and Joplin died in an asylum in poverty.

Jordaens, Jakob (1593–1678) Flemish painter. Although he painted numerous religious altarpieces, influenced by *Rubens, he is best known for his allegorical scenes of merry-making peasants, such as *The King Drinks* (Brussels).

Jordan, Hashemite Kingdom of A country in the Middle East. It is mainly desert but more fertile in the W and N, where the population is concentrated. The people are Arab; most are Sunnite Muslims, with Christian and other minorities. *Economy*: major industries include the extraction and processing of phosphates, which are exported from Aqaba, oil refining, and tourism. Agriculture is concentrated in the irrigated Jordan Valley. Produce includes cereals, vegetables, wool, and such fruit as melons and olives. There are reserves of natural gas. Tourism is a growing source of revenue. *History*: the area that is now Jordan appears to have flourished in the Bronze Age and was part of the Roman Empire by 64 BC. It was controlled by Arabs from the 7th century, Crusaders in the 11th and 12th centuries, and Turks from the 16th century until 1916. In 1920 the part E of the River Jordan was named Transjordan and a League of Nations mandate for its control was given to the UK.

It became independent in 1946. In the Arab-Israeli War of 1948–49, Jordan overran the *West Bank, but it was occupied by Israel in the Six-Day War of 1967. There followed further bloodshed in the civil war of 1970–71 and the Arab-Israeli War of 1973. Jordan has since recognized the *Palestine Liberation Organization as the body entitled govern the West Bank and in 1988 recognized the West Bank as a state. In 1990–91 Jordan gave political support to Iraq in the Gulf War which caused massive disruption to the Jordanian economy. The first multi-party elections for 37 years were held in 1993. In 1994 Jordan and Israel signed a peace treaty and border agreement ending the state of war existing since 1948. King Hussein (reigned 1952–99) was succeeded by his son, Abdullah II. Official language: Arabic. Currency: dinar of 1000 fils. Area: 89 185 sq km (34 434 sq mi). Population (2003 est): 5 395 000. Capital: Amman.

Jordan, River A river in the Middle East. It rises in Syria and Lebanon and flows due S through the Sea of Galilee, finally entering the Dead Sea. It forms for some of its course part of the border between Israel and Jordan. Length: 320 km (199 mi).

Joseph, St In the New Testament, the husband of the Virgin *Mary. He was a devout Jew belonging to the line of David but worked humbly as a carpenter. He was certainly dead by the time of the crucifixion. Feast day: 19 March.

Joséphine (1763–1814) The wife (1796–1809) of Napoleon Bonaparte and Empress of the French from 1804. Her first husband was Alexandre, Vicomte de Beauharnais (1760–94), who was guillotined in the French Revolution. She presided over a brilliant court until divorced by Napoleon because of their childlessness.

Joseph of Arimathea, St In the New Testament, a man described as a councillor. He asked Pontius Pilate for the body of Christ after the crucifixion and arranged for its burial on the same day. According to medieval legend, he came to England after the crucifixion, bringing with him the *Holy Grail, and built the first English church, at Glastonbury. Feast day: 17 March.

Joshua tree A treelike plant, *Yucca brevifolia*, native to desert regions of the SW USA. Growing to a height of more than 10 m, its branching stem can assume unusual shapes. It has stiff sword-shaped leaves and bears waxy white flowers.

Josquin des Prez (c.1450–1521) Flemish composer. A pupil of Ockeghem, he served at the courts of Milan, Ferrara, and Rome. His compositions were either elaborately contrapuntal or expressively homophonic; they include masses, motets, and chansons.

joule (J) The SI unit of work or energy equal to the work done when the point of application of a force of one newton moves through a distance of one metre. Named after James *Joule.

Joule, James Prescott (1818–89) British physicist, who performed a series of experiments during the 1840s to determine the mechanical equivalent of heat. His work contributed towards Helmholtz's formulation of the law of conservation of energy. He also investigated the heating effect of an electric current, stating in **Joule's law** that the heat produced is equal to the product of the resistance, the square of the current, and the time for which it flows. With Lord Kelvin he discovered the fall in temperature that occurs when a gas expands adiabatically (the **Joule-Kelvin effect**). The unit of energy is named after him.

Joyce, James (1882–1941) Irish novelist and poet. Accompanied by Nora Barnacle (whom he did not marry until 1931), he left Ireland in 1904, living first in Trieste (until 1915) and later in Zurich during World War I and Paris (1920–40). *Dubliners* (1914), a volume of short stories, was followed by the semiautobiographical novel *Portrait of the Artist as a Young Man* (1916). In 1922 he published *Ulysses*, a stream-of-consciousness epic portraying a single day in the lives of several Dubliners. He carried linguistic experiment to further extremes in *Finnegans Wake* (1939), a dream recounted in puns and word play. Joyce died in Zurich.

Joyce, William (1906–46) Nazi broadcaster, known as Lord Haw-Haw. Born in the USA, he broadcast Nazi propaganda to Britain throughout World War II and was subsequently tried as a British subject for treason and executed.

JP See JUSTICE OF THE PEACE.

Juan Carlos (1938–) King of Spain (1975–). The grandson of Alfonso XIII, he was designated heir to the throne by Francisco *Franco and became king when he died, presiding over Spain's peaceful transition to democracy. In 1962 he married Sophia (1938–), daughter of King Paul of Greece.

Juárez, Benito (Pablo) (1806–72) Mexican statesman, who was the first Indian president of Mexico (1861–65, 1867–72). He won popular

ity by nationalizing ecclesiastical property and led the successful opposition (1864-67) to the French invasion.

Juba, River A river in East Africa. Rising in S central Ethiopia, it flows S across Somalia to the Indian Ocean. Length: 1660 km (1030 mi).

Judaea The southern division of ancient Palestine. The Old Testament kingdom of Judah survived Syrian, Assyrian, and Philistine attacks following Solomon's death but was conquered by *Nebuchadnezzar II of Babylon, when its capital, Jerusalem, was destroyed (586 BC) and the Jews were exiled. Judaea came next under Persian domination, when the Jews were allowed to return and rebuild Jerusalem, but under the Seleucids Antiochus IV Epiphanes' desecration of the temple in 167 BC instigated the Maccabees' revolt. Judaea achieved independence until the Roman conquest in 63 BC. After years of unrest the Roman province of Syria absorbed it in 135 AD.

Judaism The religion of the *Jews. Its fundamental tenet is belief in a single, eternal God, who created the world and desires its welfare. Judaism's most sacred text is the *Torah. There is no agreement as to when Judaism began. Biblical tradition attaches importance to *Abraham and *Moses, but many characteristic ideas and institutions emerged much later during the Babylonian exile and the period of the second *Temple of Jerusalem. After the destruction of the temple the *rabbis codified the traditional teachings (see MIDRASH; MISHNAH; TALMUD), and in the middle ages the *kabbalah exerted a great influence. The modern enlightenment undermined traditional values and gave rise to several conflicting movements. Orthodox Judaism asserts the supernatural authority of Torah and right behaviour (halakhah), which is challenged by *Reform Judaism. Conservative Judaism and Reconstructionism support a compromise between these extreme views.

Judas tree A shrub or small tree of the genus *Cercis* (7 species), also called redbud, native to S Europe, Asia, and North America, and cultivated for ornament. The pinkish-red clusters of flowers appear before the heart-shaped leaves have opened. The name is used particularly for *C. siliquastrum*, from which Judas Iscariot is said to have hanged himself. Family: Leguminosae.

Judge An officer who decides legal disputes and passes sentence on offenders. In England and Wales judges try cases in the House of Lords (the Lords of Appeal in Ordinary, or law

lords), the Court of Appeal (the Lords Justices), the High Court of Justice (high-court judges), the Crown Court (high-court judges and circuit judges), and County Courts (circuit judges). A judge is appointed by the Crown on the recommendation of the Lord Chancellor (see LORD CHIEF JUSTICE; MASTER OF THE ROLLS) and must be a barrister (or a *solicitor) of at least ten years' standing. (A part-time recorder, who must also be a solicitor or barrister of ten years' standing, may be appointed to serve in the Crown Court; a *justice of the peace or stipendiary magistrate serves in Magistrates' Courts.) See also COURTS OF LAW.

judo A form of wrestling developed from *jujitsu in Japan by Jigoro Kano (1860-1938). Contestants wear kimonos and coloured belts to indicate their proficiency. The five kyu (pupil) grades wear white, orange, green, blue, or brown belts in order of increasing skill, the 12 dan (master) grades all wear black belts. Contestants score points by executing prescribed throws, ground holds, and locks. See also MARTIAL ARTS.

Jujitsu (Japanese name: *yawara*) The form of unarmed self-defence used by the Japanese *samurai. The object was to disable, cripple, or kill an opponent by using his own momentum and strength against him. *Judo, *aikido, and *karate developed from it.

jujube A small thorny tree of the genus *Zizyphus* that produces sweet edible fruit. *Z. jujuba*, native to China, has been widely introduced to other hot dry regions. It grows up to a height of 9 m and has small yellow flowers. Family: Rhamnaceae. See also CROWN OF THORNS.

Jumna, River (R. Jamuna or R. Yamuna) A river in N India. Rising in Uttar Pradesh, it flows S and SE to the River Ganges near Allahabad. Length: 1385 km (860 mi).

Juneau 58 20N 134 20W A city in the USA, the capital of Alaska. A supply centre for a fur-trading and mining region, it is also an ice-free port. Population (latest est): 26 751.

Jung, Carl Gustav (1875-1961) Swiss psychiatrist and pioneer psychoanalyst. Jung collaborated with Sigmund *Freud until, in 1912, their differences became irreconcilable. Jung originated the concept of introvert and extrovert personalities and made valuable studies of mental disorders, including schizophrenia. In his major work, *Psychology of the Unconscious* (1912), Jung regarded the unconscious part of the mind as containing both the personal experiences of the individual and common inher-

ited cultural experiences (the so-called **collective unconscious**).

Jungfrau 46°33'N 7°58'E A mountain peak in S central Switzerland, in the Bernese Oberland. Height: 4158 m (13 632 ft).

jungle fowl An Asian forest bird belonging to the genus *Gallus* (4 species). The males have a large fleshy comb and wattles at the sides of the bill and, in the breeding season, fight fiercely using their sharp leg spurs. The red jungle fowl (*Gallus gallus*) is the ancestor of the domestic *fowl. Family: *Phasianidae* (fowl and pheasants).

juniper A coniferous tree or shrub of the genus *Juniperus* (60 species), widely distributed in the N hemisphere. Male and female flowers grow on separate trees. The common juniper (*J. communis*) is native to N Europe, North America, and SW Asia; it rarely exceeds 4 m in height and is often planted for ornament. The cones are used for flavouring gin and foods, as a source of oil, and as a diuretic. Family: *Cupressaceae*.

Juno A principal Roman goddess, the wife of Jupiter. She was concerned with all aspects of women's life and is usually portrayed as a matronly figure. She was identified with the Greek *Hera. The *month June is probably named after her.

Jupiter (astronomy) The largest and most massive planet, orbiting the sun every 11.86 years at a mean distance of 778.3 million km. Its rapid axial rotation (in less than 10 hours) has produced a nonspherical shape: equatorial diameter 142 800 km, polar diameter 135 500 km. Jupiter is composed mainly (99%) of hydrogen and helium (in the ratio 82:17). Ammonia, methane, and other compounds are present in the cloud layers. The planetary interior is liquid hydrogen with possibly a small rocky core. Jupiter radiates heat and is also a source of radio waves. It has a magnetic field and radiation belts of great intensity. The planet has 38 named satellites, including the four large *Galilean satellites, a further 23 minor satellites discovered since 2000, and a satellite ring of rocks.

Jupiter (mythology) The principal Roman god, identified with the Greek *Zeus. Originally a sky god, he controlled the weather and used the thunderbolt as his weapon. His temple on the Capitoline hill was the principal Roman religious structure.

Jura Mountains A mountain range in E France and NW Switzerland. It extends along

the border in a NE-SW arc, rising to 1723 m (5653 ft) at Crêt de la Neige.

Jurassic period A geological period of the Mesozoic era, between about 200 and 135 million years ago, following the Triassic and preceding the Cretaceous periods. The dinosaurs and other reptiles flourished and diversified in this period. Fossils of the earliest birds and mammals have also been found in Jurassic rocks.

Juruá, Rio A river in South America, rising in E central Peru and through NW Brazil to the River Amazon. Length: 1900 km (1200 mi).

jury A body of people, usually 12, who have taken an oath to decide questions of fact arising in a court case (now usually a criminal case but occasionally a civil case) according to the evidence before them. To qualify for jury service a person must be a registered elector between 18 and 70 years old and resident in the UK for at least 5 years since the age of 13.

Members of the judiciary and anyone involved in administering justice were formerly ineligible for jury service, but since 2003 this is no longer the case. Others (MPs, medical personnel, etc.) may be excused from jury service, but this right has now been restricted; persons who have received certain types of convictions are disqualified. By the Criminal Justice Act (1967) a majority verdict (normally ten to two) was permitted in criminal trials and the Courts Act (1971) permitted similar verdicts in civil proceedings in the High Court. In 2000 the government introduced legislation to remove a defendant's automatic right to choose jury trial for lesser offences.

justice of the peace (JP) An unpaid *magistrate appointed by the Lord Chancellor to keep the peace within a county, with statutory power to try summarily certain cases in a Magistrates' Court and to commit other more serious cases for trial by a higher court.

Justinian I (482–565 AD) Byzantine emperor (527–65) noted for his legal and administrative reforms, especially the codification of *Roman law in the so-called **Justinian Code**. He also built the great church of *St Sophia. He was greatly influenced by his wife Theodora, a former actress.

jute Either of two Indian annual plants, *Corchorus capsularis* or *C. olitorius*, cultivated in India, Pakistan, and Thailand for their fibres. Growing to a height of 3 m, they have small yellow flowers. The stems are cut, soaked in water, and beaten to remove the fibres, which

are processed into cloth, etc. There are many grades, used for ropes, sacks, carpet backings, hessian, and tarpaulin. Family: *Tiliaceae*.

Jutes A Germanic people, probably from Jutland, who invaded Britain together with the *Angles and *Saxons in the 5th century AD. The Jutes settled in what are now Kent, the Isle of Wight, and Hampshire.

Jutland (Danish name: Jylland) A peninsula in N Europe, between the North Sea, the Skager-

rak, the Kattegat, and the Little Belt. It is occupied by the continental part of Denmark and part of the German *Land* of Schleswig-Holstein. The Battle of Jutland (1916) was a major naval engagement in World War I.

Juvenal (Decimus Junius Juvenalis; c. 60–c. 130 AD) Roman satirical poet. His 16 *Satires*, probably written 98–128 AD, are savage attacks on the corruption of Roman society and human folly.

K2 (or Mt Godwin Austen) 35°53'N 76°32'E The second highest mountain in the world (after Mount Everest), in N Pakistan in the Karakoram Range. As it was the second peak to be measured in the range it was given the symbol, K2. The summit was first reached on 31 July 1954, by an Italian team. Height: 8611 m (28 250 ft).

kabbalah (Hebrew: tradition) An esoteric Jewish theosophical system. The classical kabbalistic text is the *Zohar* (*Book of Splendour*), written in Aramaic in 13th-century Spain, but the kabbalah has much older roots. It has strong connections with gnosticism and also with magical practices. An important 16th-century kabbalistic school flourished at Safed, in Galilee, around Isaac Luria (1534–72), and Christian interpretations of the kabbalah blended with *Neoplatonism in the 16th and 17th centuries.

Kabuki A form of Japanese popular theatre that developed from the aristocratic *No theatre during the 17th century. The earliest notable dramatist was Chikamatsu Monzaemon (1653–1724). The plays are performed with musical accompaniment on a wide revolving stage and emphasize visual effects and acting skills.

Kabul 34°30'N 69°10'E The capital of Afghanistan, situated in the NE of the country at an altitude of 1830 m (6000 ft). It was capital of the Mogul Empire (1504–1738), becoming capital of Afghanistan in 1773. Population (1993 est): 700 000.

Kafka, Franz (1883–1924) Czech writer. Born in Prague (then in Bohemia), the son of German Jewish parents, he wrote fantasies and parables that portray the individual isolated in an incomprehensible and uneasy environment. Most of his work was published posthumously, against his instructions, by his friend Max Brod. Among his best-known writings are the stories *Metamorphosis* (1912) and the novels *The Trial* (1925) and *The Castle* (1926).

Kafue River A river in Zambia, rising on the frontier with the Democratic Republic of Congo and flowing S and E to the Zambezi River. Length: 966 km (600 mi). The **Kafue Dam** (1972) provides about two-thirds of Zambia's hydroelectric power.

Kagoshima 31°37'N 130°32'E A port in Japan, in S Kyushu. The site of *Francis Xavier's landing in Japan (1549), it has porcelain and textile industries and a naval yard. Population (1995): 546 294.

Kaikoura Ranges Twin mountain ranges in New Zealand, comprising the Inland and the Seaward Kaikouras. They extend SW–NE in NE South Island, reaching 2885 m (9465 ft) at Tapuaenuku in the Inland Kaikouras.

Kalahari Desert A semiarid area in S Africa, chiefly in Botswana. It is sparsely inhabited by nomadic Bushmen, and although its few rivers are generally dry there is some vegetation. Area: about 250 000 sq km (96 505 sq mi).

Kali In Hindu mythology, the goddess of death. The wife of *Shiva in her destructive aspect, she is represented as a hideous four-armed black woman.

Kalimantan The Indonesian part of *Borneo, comprising the SE two-thirds of the island. It is little developed, but its dense forests provide valuable timber. Small-scale agriculture includes the growing of rice, tobacco, sugar cane, coffee, and rubber. Since Indonesian independence in 1949 the province has seen recurrent ethnic and political violence, including the mass slaughter of Muslim Madurese by indigenous Dyaks (from 1997). Area: 550 203 sq km (212 388 sq mi). Population (1999 est): 11 396 100. Chief towns: Banjarmasin and Pontianak.

Kaliningrad (name until 1946: Königsberg) A city in W Russia on the Baltic Sea. Formerly a German naval base, it was annexed by the Soviet Union in 1945. The city and its hinterland forms an exclave of Russia, surrounded by

Lithuania. Industries include shipbuilding, timber, and paper. The economy is depressed and environmental pollution is considerable. Population (1999 est): 427 200.

Kama In Hindu mythology, the god of love. He is the son of *Shiva and his popular epithet of Ananga (bodiless) derives from his having been reduced to ashes by a glance from his father's eye when Kama playfully shot his arrows at him.

Kama, River A river in central Russia, rising in the Ural Mountains and flowing mainly SW to the River Volga. Length: 2030 km (1260 mi).

Kamakura 35 19N 139 33E A city in Japan, in SE Honshu. A former Japanese capital (1192–1333), it is noted for its shrines and for its bronze Buddha, 13 m (43 ft) high. Population (1995 est): 170 319.

Kamchatka A peninsula in the extreme E of Russia. It is about 1200 km (746 mi) long and separates the Sea of Okhotsk from the Bering Sea. Area: about 270 000 sq km (104 225 sq mi).

Kamet, Mount 30 55N 79 36E A mountain in N India, in the Himalayas. It was first climbed in 1931. Height: 7756 m (25 446 ft).

Kamikaze A Japanese aircraft crashed deliberately by its pilot into its target. Such suicide missions were first flown at the battle of Leyte Gulf (1944) in World War II; at Okinawa (1945) some 3000 sorties sunk 21 US ships. Kamikaze means divine wind and refers to the typhoon that scattered Kublai Khan's invasion fleet in 1281.

Kampala 0 20N 32 30E The capital of Uganda, N of Lake Victoria. Founded by the British in the late 19th century, it became the capital in 1962. Population (1999 est): 1 154 000.

Kananga (name until 1966: Luluabourg) 5 53S 22 26E A city in the central Democratic Republic of Congo, on the River Lulua. It serves an agricultural and diamond-producing area. Population (1994 est): 393 030.

Kanazawa 36 35N 136 38E A city in Japan, in central Honshu. It is renowned for its landscape garden. Manufactures include textiles, porcelain, and lacquerware. Population (1995): 453 977.

Kandahar (or **Qandahar**) 31 36N 65 47E A city in S Afghanistan. Situated on main routes to central Asia and India, it is built on the site of several ancient cities. Population (1993 est): 237 500.

Kandinsky, Wassily (1866–1944) Russian

expressionist painter and art theorist. He painted the first purely abstract pictures in European art (c. 1911). These are characterized by freely applied paint and dazzling colours, from which he drew analogies to music in his book *Concerning the Spiritual in Art* (1911). He was a founder of the Neue Künstlervereinigung (1909) and the *Blaue Reiter (1911) and taught at the *Bauhaus school, where his style became more geometrical.

Kandy 7 17N 80 40E A city in central Sri Lanka. Capital of the kingdom of Kandy from 1480 until 1815, when it was occupied by the British, it has a Buddhist temple, Dalada Malagawa, and is the commercial centre for Sri Lanka's major tea-producing region. Population (1997 est): 150 532.

kangaroo The largest *marsupial mammal. There are two species, the red kangaroo (*Macropus rufus*) of Australia and the grey kangaroo (*M. kanguru*) of Australia and Tasmania. Red kangaroos can reach a height of 2 m and a weight of 90 kg. Kangaroos have short front legs and long hind legs and feet: they travel by a succession of leaps. Family: *Macropodidae*. See also WALLABY.

Kangchenjunga, Mount (or **Mt Kangchenjunga**) 27 44N 88 11E The third highest mountain in the world (after Mount Everest and K2), on the Sikkim (India)–Nepal border in the Himalayas. It was first climbed in 1955. Height: 8598 m (28 208 ft).

Kanpur (former name: Cawnpore) 26 27N 80 14E A city in India, in Uttar Pradesh. Ceded to the British East India Company (1801), it became an important British frontier station and during the Indian Mutiny was the scene (1857) of a massacre of British soldiers. Population (1991): 2 111 284.

Kansas A state in the centre of the USA. It consists mainly of undulating prairie. Its mineral resources include oil, natural gas, coal, sand and gravel. Kansas is the USA's main wheat-growing area; other crops include sorghum grains and hay. *History*: explored by the Spanish in the 16th century, it was claimed by the French (1682) and formed part of the Louisiana Purchase (1803). It became a state (1861) and the arrival of the railway in the late 1860s and 1870s brought many cattlemen. The Mennonites introduced wheat into the area (1874). Area: 213 063 sq km (82 264 sq mi). Population (2000): 2 688 418. Capital: Topeka.

Kansas City 39 05N 94 37W A city in the USA, in Missouri. Settled in 1821, it expanded rapidly

with the arrival of the railways in the mid-19th century. Population (2000): 441 545.

Kant, Immanuel (1724–1804) German philosopher. His early works sought to examine metaphysics in the light of the work of *Newton and *Leibniz. Acquaintance with Hume's empiricism, however, initiated his so-called "critical period" in which he evolved his doctrine of transcendental idealism. In the famous *Critique of Pure Reason* (1781) he explored the limitations of reason by which mankind interprets experience. The *Critique of Judgment* (1790) deals with aesthetic and teleological judgments. Reason makes experience possible by imposing upon the raw data supplied by the senses the forms of understanding. Kant identified 12 of these basic forms (which he called "categories"). He maintained that there was an absolute moral law and called the obligation to obey this moral law the "categorical imperative."

Kapitza, Peter Leonidovich (1894–1984) Soviet physicist, who worked with *Rutherford on high transient magnetic fields. After returning to the Soviet Union in 1934 he transferred his attention to low-temperature physics, which led him to the discovery of superfluidity in helium (1941) and also a new liquefaction technique. For this work he was awarded the 1978 Nobel Prize.

kapok The fine silky hairs covering the seeds of the silk-cotton tree (*Ceiba pentandra*), which are used for stuffing mattresses, etc. The tree is native to tropical America and widely cultivated in the tropics. Growing to 35 m, it has white or red flowers. Family: *Bombacaceae*.

Karachi 24°51'N 67°02'E The largest city and chief seaport in Pakistan, situated on the Arabian Sea just NW of the Indus delta. It became the capital of Pakistan (1947) following partition. The removal of the capital to Islamabad (1959) and the building of new satellite towns has eased overcrowding by refugees. Population (1998 est): 9 269 265.

Karaganda 49°53'N 73°07'E A city in E Kazakhstan. Founded in 1857, Karaganda grew rapidly as the Karaganda coal basin was exploited. It was one of the largest producers of bituminous coal in the former Soviet Union. Population (1999): 436 900.

Karajan, Herbert von (1908–89) Austrian conductor. Musical director of the Vienna State Opera (1957–64), he founded the Salzburg Easter Festival in 1967 and conducted the Berlin Philharmonic Orchestra (1955–89).

Karakoram Range A mountain range mainly in SW China, NE Pakistan, and NW India. It extends about 450 km (280 mi) between the Pamirs and the Himalayas and includes *K2, the second highest mountain in the world. In 1978 the **Karakoram Highway** was opened connecting China with Pakistan over the Khunjerab Pass, 4933 m (16 188 ft) high.

Kara Kum A desert in Turkmenistan, between the Caspian Sea and the River Amu Darya. Area: about 300 000 sq km (115 806 sq mi).

karate A form of unarmed combat that was systematized in Okinawa in the 17th century and spread to Japan in the 1920s, where it absorbed elements of *jūjitsu. Breath-control techniques as well as philosophical attitudes, such as the necessity of mental calm, were taken from Zen Buddhism. The aim is to focus the body's total muscular power in one instant. Hands, feet, elbows, etc., are toughened in stylized training sequences against padded or wooden blocks. In actual fights, however, blows are stopped short before impact. As in *judo, grades are distinguished by coloured belts. See also MARTIAL ARTS.

Karelian Isthmus A land bridge in NW Russia, connecting Finland with Russia. It was ceded to the Soviet Union in 1944. It is 40–113 km (25–70 mi) wide and 145 km (90 mi) long and its principal cities are St Petersburg and Vyborg.

Kariba, Lake A reservoir in Zambia and Zimbabwe. It is formed by the Zambezi River above the **Kariba Dam** (completed 1959) and generates hydroelectric power. Length: 282 km (175 mi).

Karlsruhe 49°00'N 8°24'E A city in SW Germany, in Baden-Württemberg. The capital of the former *Land* of Baden, it is the site of the federal court of justice and has a harbour on the Rhine. Population (1999 est): 276 700.

karma (Sanskrit: action) The sum of all human actions, which according to Hinduism and Jainism is passed from one individual existence to the next and determines the nature of the individual's rebirth. In *Buddhism, karma is associated with mental and physical elements passed on in the cycle of rebirth until the personal self is annihilated in attaining *nirvana.

Karnak 25°44'N 32°39'E A village near *Thebes (Upper Egypt), the site of the huge temple of Amon, built (c. 1320–1237 BC) mainly by the pharaohs Seti I (reigned 1313–1292) and Ramses II. See also LUXOR.

Karpov, Anatoly (1951–) Russian chess player, who became an International Grandmaster at 19 and subsequently world champion (1975). He successfully defended his title against Victor Korchnoi (1931–) in 1978 and 1981 but was defeated by *Kasparov (1985–87, 1990). He regained his title in 1993 (Kasparov did not take part in the championships).

karri A tree, *Eucalyptus diversicolor*, native to SW Australia and cultivated elsewhere. It grows to a height of over 35 m in moist areas and produces good timber.

karting (or **go-karting**) A form of *motor racing that originated in the USA in the 1950s. A kart usually has a tubular chassis, no body or suspension system, and a single driving seat. It has a maximum wheelbase of 50 in (1.27 m) and is usually powered by a single-cylinder two-stroke engine. Most karts are capable of about 160 km per hour (100 mph).

Kasai, River A river in central Africa. Rising in Angola, it flows N into the Democratic Republic of Congo to join the Congo River. It forms part of the Angola-Congo border. Length: 2100 km (1300 mi).

Kashmir The northernmost region of the Indian subcontinent, bordered by China to the NE and Afghanistan to the NW. The S Jammu lowlands rise into the Himalaya and Karakoram Mountains. Rice, silk, cotton, fruits, and sheep are farmed. *History:* most Kashmiris became Muslims in the 14th century but in the 19th century Hindu princes won power under British control; violence between Muslims and Hindus continues to the present day. Britain's withdrawal (1947) was followed by fighting between India and Pakistan and resulted in the partition of the region. Sporadic fighting between Indian and Pakistani forces has continued. Pakistan rules 78 932 sq km (30 468 sq mi) of the W and barren N. China occupies 42 735 sq km (16 496 sq mi) in the E. The remainder forms the Indian state of *Jammu and Kashmir. Area (all Kashmir): 222 236 sq km (85 783 sq mi).

Kasparov, Gary (Gary Weinstein; 1963–) Russian chess player of Armenian origin. He won the world championship at the age of 22, beating *Karpov in 1985–87 and 1990. In 1993 he founded the Professional Chess Association with Nigel Short (1965–) and was ejected from FIDE, the game's ruling body. Since 2006 he has emerged as a leader of the opposition to Russian president Vladimir Putin.

Kassel 51 18N 9 30E A city in central Germany,

in Hessen. Notable buildings include the Orangerie Palace (1701–11). Population (2004 est): 194 322.

Kathmandu (or **Katmandu**) 27 42N 85 19E The capital of Nepal, near the confluence of the Rivers Bagmati and Vishnumati. Founded in the 8th century AD, it has many historical buildings and hosts several religious festivals. Population (2001): 671 846.

Katmai, Mount An active volcano in the USA, in S Alaska. Following its violent eruption in 1912, the Valley of Ten Thousand Smokes was formed. Height: 2100 m (7000 ft). Depth of crater: 1130 m (3700 ft). Width of crater: about 4 km (2.5 mi).

Katowice (former name (1953–56): Stalino-grod) 50 15N 18 59E A city in S central Poland. It is an important industrial centre within the Upper Silesia coalfield. Population (2005 est): 319 904.

Kattegat A strait between Denmark and Sweden linking the Skagerrak with the Baltic Sea. Length: about 240 km (149 mi).

Katyn Massacre The execution during World War II of 4250 Polish officers in the Katyn forest, near Smolensk in Russia. The bodies of the Poles, who had been interned by the Russians following the Soviet occupation of Polish territory in 1939, were discovered by the Germans in 1943. The Russians did not admit responsibility for the massacre until 1990.

Kauffmann, Angelica (1741–1807) Swiss painter. In England (1765–81) she painted portraits influenced by *Reynolds and was employed on decorative work in country houses designed by Robert and James *Adam.

Kaunas (Russian name: Kovno) 54 52N 23 55E A port in central Lithuania, at the confluence of the Rivers Neman and Viliya. It was held successively by Lithuania, Poland, and Russia. The capital of independent Lithuania from 1918 until 1940, it was occupied by German forces during World War II. Population (2006 est): 360 637.

Kaunda, Kenneth (David) (1924–) Zambian statesman; president (1964–91). In 1958 he founded the militant Zambia African National Congress and was imprisoned for subversion. On his release in 1960 he became president of the United National Independence Party, which took Northern Rhodesia to independence as Zambia in 1964. In 1991 he was defeated in the country's first free elections since 1968. From 1995 until 2000 he was leader of Zambia's main opposition party. He was subse-

quently stripped of Zambian citizenship as his parents were born in Malawi.

kauri pine A coniferous tree, *Agathis australis*, from New Zealand. Growing to a height of 46 m, it has spherical cones, 5–8 cm in diameter. It yields a resin (kauri copal or gum) used in making varnishes. Its timber is used for building purposes. Family: *Araucariaceae*.

kava A shrub, *Piper methysticum*, of the Pacific Islands and Australia, the ground and fermented roots of which are made into a narcotic drink. The roots are also chewed, and continued use produces inflammation and ulcers of the mouth. It has been used medicinally and as a local anaesthetic. Family: *Piperaceae*.

Kawasaki 35 32N 139 41E A city in Japan, in SE Honshu. It is part of the Tokyo-Yokohama industrial complex. Population (2004 est): 1 306 021.

Kazakhstan, Republic of A republic in central Asia. The Kazakhs comprise some 30% of the population, which includes Russians (43%) and Ukrainians (7%). *Economy:* the area is rich in mineral resources, especially coal, copper, and iron ore. Oil and gas production has expanded greatly in recent years and is now of major importance. The atomic power station on the Mangyshlak peninsula has the world's first industrial fast-breeder reactor. An important agricultural area, Kazakhstan produces cereals, cotton, rice, and fruit and is noted for its sheep. *History:* conquered by Mongols in the 13th century, the region came under Russian rule in the 18th and 19th centuries. It was a constituent republic of the Soviet Union from 1936 until it gained independence in 1991. Although multiparty elections were held in 1994, a subsequent constitution (approved by referendum in 1995) gave President Nursultan Nazarbayev power to dismiss parliament and rule by decree. Subsequent presidential elections (1999, 2005) saw landslide victories for Nazarbayev, but were deemed unfair by observers. Official language: Kazakh. Currency: tenge of 100 tein. Area: 2 717 300 sq km (1 049 155 sq mi). Population (2007 est): 15 284 929. Capital: Astana.

Kazan (or Kasan) 53 45N 49 10E A city in E Russia, since 1920 the capital of the Tatar Republic. *History:* founded in the 14th century by the *Tatars, it became the capital of an independent khanate and was captured (1552) by Ivan the Terrible. Its trade and industry developed during the 19th century. Lenin and Tolstoy studied at Kazan's university (1804). Population (2002): 1 105 289.

Kazan, Elia (E. Kazanjoglous; 1909–2003) US stage and film director and novelist, born in Turkey of Greek parentage. He helped to found the *Actors' Studio in 1947. For the stage he directed *A Streetcar Named Desire* (1947), *Death of a Salesman* (1949), and other outstanding plays. His films include *On the Waterfront* (1954), *East of Eden* (1955), and *The Arrangement* (1969). In 1999 he was awarded an Oscar for his lifetime's achievement, a controversial decision as he had cooperated with the McCarthy investigations into Hollywood in the 1950s.

Kean, Edmund (c. 1787–1833) British actor. He was particularly successful as Shylock in *The Merchant of Venice*, his first London success in 1814, Richard III, Macbeth, and Iago in *Othello*, all roles suited to his passionate style of acting.

Keating, Paul (1954–) Australian statesman and Labor prime minister (1991–96). As finance minister (1983–91) he introduced sweeping economic reforms. Re-elected in 1993, he was heavily defeated in the 1996 general election.

Keaton, Buster (Joseph Francis K.; 1895–1966) US comedian of silent films. He developed his character of the unsmiling and resilient clown in a series of classic silent comedies, including *The Navigator* (1924), *The General* (1926), and *The Cameraman* (1928).

Keats, John (1795–1821) British poet. Despite the failure of his first volume, *Poems* (1817), which contained the sonnet "On First Looking into Chapman's Homer," and the savage criticism directed at his second, *Endymion* (1818), Keats persisted and between 1819 and 1820 wrote most of his best-known poems. His short life was dogged by tragedies, especially the death of his brother from tuberculosis in 1818 and his unrequited love for Fanny Brawne. Such poems as *La Belle Dame Sans Merci*, *The Eve of Saint Agnes*, and the great odes ("To a Nightingale," "On a Grecian Urn," etc.), all published in 1820, eventually established his reputation. He died in Rome in search of a cure for his tuberculosis and was buried there.

Kebnekaise A mountain range in N Sweden. It rises to 2123 m (6965 ft) at Kebnekaise Sydtopp, the highest mountain in Sweden.

Keeshond A breed of dog traditionally used by the Dutch as barge dogs. It has a compact body with a foxlike face and a long thick grey coat with black-tipped hairs. The tail is carried over the back and a dense ruff surrounds the neck. Height: 43–45 cm.

Keitel, Wilhelm (1882–1946) German field

k

marshal, who was Hitler's chief military adviser throughout World War II. In 1945 in Berlin he confirmed the German surrender. He was hanged for war crimes.

Kekulé von Stradonitz, (Friedrich) August (1829–96) German chemist, whose main interest was in valence. He was the first chemist to establish the valence of the elements and to introduce the notion of single, double, and triple bonds. He went on to deduce the structural formulae of many organic molecules, including that of benzene (**Kekulé formula**), which he claimed to have thought of in 1865 while dozing on a bus. *See also* AROMATIC COMPOUND.

Kelantan A state in central Peninsular Malaysia, bordering on Thailand. Rice is grown on the NE coastal plain, and rubber, copra, and minerals are produced. Area: 14 931 sq km (5765 sq mi). Population (2005 est): 1 505 600. Capital: Kota Bharu.

Kells (Irish name: Ceanannus Mór) 54 48N 6 14W A market town in the Republic of Ireland, in Co Meath. A monastery was founded here in the 6th century AD by St Columba in which *The Book of Kells*, an 8th-century illuminated manuscript of the Gospels, is reputed to have been written. Population (latest est): 2623.

Kelly, Grace (1929–82) US film actress. Her films include *High Noon* (1952), *The Country Girl* (1955), *To Catch a Thief* (1955), and *High Society* (1956). She retired from acting when she married Prince Rainier III of Monaco in 1956. She died following a road accident.

Kelly, Ned (1855–80) Australian outlaw. He and his brother Dan formed a gang in 1878 that became notorious for its daring robberies in Victoria and New South Wales. He was captured and hanged in 1880 after a gunfight with the police in which the other gang members were killed.

kelp A large brown *seaweed belonging to the order *Laminariales* (about 30 genera), found in cold seas, usually below the level of low tide. The giant kelp *Macrocystis*, of the E Pacific coast, reaches a length of 65 m. Its fronds are kept afloat by air bladders. The name kelp is used for the ashes of seaweed, from which potassium and sodium salts and iodine were once obtained.

kelpie A breed of short-haired dog developed in Australia from the Border Collie and used for herding sheep and cattle. Named after a champion sheepdog of the 1870s, the kelpie has a long muzzle and pricked ears. The coat may

be black or red (with or without tan), fawn, chocolate, or smoke-blue. Height: 43–50 cm.

kelvin (K) The SI unit of *thermodynamic temperature equal to $1/273.16$ of the thermodynamic temperature of the triple point of water. Named after Lord *Kelvin.

Kelvin, William Thomson, 1st Baron (1824–1907) Scottish physicist. Kelvin was the first physicist to take notice of Joule's work. The two physicists then worked together, discovering the Joule-Kelvin effect; both also made great contributions to the new science of thermodynamics. In 1848 Kelvin postulated that there is a temperature at which the motions of particles cease and their energies become zero. He called this temperature *absolute zero and suggested a scale of temperature, now known as the Kelvin scale, in which the zero point is absolute zero. In 1852 he suggested that a *heat pump was a feasible device. During the 1860s he worked on the electrical properties of cables in conjunction with the laying of the first transatlantic cable in 1866. The unit of temperature (*see* KELVIN) is named after him.

Kempis, Thomas à *See* THOMAS À KEMPIS.

Kendel 54 20N 2 45W A town in NW England, in Cumbria, called the Gateway to the Lakes. Catherine *Parr was born in the Norman castle. Population (2001): 27 521.

kendo A Japanese martial art deriving from *samurai sword fighting. Combatants using bamboo staffs or wooden swords try to deliver blows on specified target areas of each other's bodies. Two hits constitute a win.

Kendrew, Sir John Cowdery (1917–97) British biochemist, who shared the 1962 Nobel Prize for Chemistry with Max *Perutz for his discovery of the structure of the myoglobin molecule. Kendrew used the technique of X-ray diffraction, analysing his results with a computer. He was knighted in 1974.

Keneally, Thomas Michael (1935–) Australian writer. He published 16 novels before writing *Schindler's Ark* (1982), which won the 1982 *Booker Prize and was made into the film *Schindler's List* (1994). His other works include *The Chant of Jimmie Blacksmith* (1972), *The Playmaker* (1987), *The Great Shame* (1998), and *The Office of Innocence* (2002).

Kennedy, Charles (Peter) (1959–) British politician, leader of the Liberal Democrats (1999–2006). An MP from 1983, he is also well known as a journalist and broadcaster.

Kennedy, Joseph Patrick (1888–1969) US businessman and diplomat. He had five daughters and four sons, three of whom entered public life. **John Fitzgerald Kennedy** (1917–63), a Democrat, was the first Roman Catholic president of the USA (1961–63). His liberal domestic policies—the so-called New Frontier—involved tax and social reforms and an extension of racial integration. He also established the Peace Corps. Abroad, he presided over the *Bay of Pigs invasion (1961) and confronted the Soviet Union over its installation of missile bases in Cuba (1962). In 1963 he negotiated the *Nuclear Test-Ban Treaty. Kennedy's presidency also saw the beginning of US military involvement in Vietnam. He was assassinated in Dallas, apparently by Lee Harvey Oswald. In 1953 he married Jacqueline Bouvier (1929–94), who became the wife (1968–75) of Aristotle *Onassis. **Robert Francis Kennedy** (1925–68), attorney general (1961–64) and then a senator (1965–68), campaigned for the Democratic presidential nomination in 1968, during which he too was assassinated. **Edward Moore Kennedy** (1932–) is a lawyer and Democratic Senator.

Kennelly, Arthur Edwin See IONOSPHERE.

Kenneth I MacAlpine (died c. 858) King of the Scots of Dalriada (c. 844–c. 858). He formed the kingdom of Alba, the foundation of modern Scotland.

Kensington and Chelsea A royal borough of W central Greater London, created in 1965 from the metropolitan boroughs of Chelsea and Kensington. Kensington Palace was the main royal residence from 1690 to 1760; it was later the birthplace of Queen Victoria and home to Diana, Princess of Wales. The borough is a centre for museums and colleges.

Kent A county of SE England, bordering on the English Channel and Greater London. It consists predominantly of undulating lowlands, crossed by the North Downs from W to E, and rising to the the Weald in the SW. Often called the Garden of England, it is the country's leading fruit- and hop-growing area. Rochester and Gillingham became an independent unitary authority, known as Medway, in 1998. Area (excluding Medway): 3526 sq km (1361 sq mi). Population (2001, excluding Medway): 1 329 653. Administrative centre: Maidstone.

Kent, William (1685–1748) English architect, landscape gardener, and interior designer, a leading exponent of *Palladianism. His buildings include Holkham Hall, Norfolk (1734). His

development of landscape gardening was later continued by Capability *Brown.

Kentucky A state in the central USA, lying to the E of the Mississippi River. It consists of the Appalachian Mountains in the E, the Bluegrass region in the centre, an undulating plain in the W, and the basins of the Tennessee and Ohio Rivers in the SW. It is an important coalmining state and also produces petroleum and natural gas. Local timber is used in the furniture and wood industries. Agricultural products include tobacco, corn, hay, soya beans, cattle, sheep, and pigs. It is also an important region for the breeding of thoroughbred horses. *History:* Daniel Boone explored the area (1769) and after rapid settlement it became a state (1792). Area: 104 623 sq km (40 395 sq mi). Population (2000): 4 041 769. Capital: Frankfort.

Kenya, Mount 0 10S 37 30E An extinct volcano in Kenya, the second highest mountain in Africa. Height: 5200 m (17 058 ft).

Kenya, Republic of A country in East Africa, on the Indian Ocean. The land rises gradually from the coast to the highlands of the interior reaching heights of over 5000 m (17 000 ft). Most of the inhabitants are Africans, including *Kikuyu, Luo, *Masai, and Kamba. *Economy:* The chief cash crops are coffee, tea, sisal, and fruit and vegetables; livestock rearing and dairy farming are also important. Forestry is being developed and mineral resources include soda ash, gold, limestone, and salt. Wildlife reserves include the huge Tsavo National Park. Economic problems include widespread poverty and endemic official corruption. *History:* some of the earliest known fossil *hominid remains have been found in the region by the *Leakey family. The coastal area was settled by the Arabs from the 7th century AD and was controlled by the Portuguese during the 16th and 17th centuries. It became a British protectorate (East Africa Protectorate) in 1895 and a colony in 1920. In the 1950s independence movements led to the *Mau Mau revolt. Kenya gained independence in 1963 and in 1964 became a republic within the Commonwealth, with Jomo *Kenyatta as its first president. In 1992 President Daniel arap Moi (1924–) agreed to hold the first multiparty elections since the 1960s. Although he was re-elected there were allegations of fraud, causing a political crisis. Elections in 1997 produced another victory for Moi, but the opposition refused to accept the result. In an important constitutional change, parliament voted (1999) to restrict Moi's powers. Following Moi's retirement in 2002, presidential elections were won

k

by the veteran opposition leader Mwai Kibaki. The country has suffered from serious drought and food shortages since 2005. Official languages: Swahili and English. Currency: Kenya shilling of 100 cents. Area: 582 600 sq km (224 960 mi). Population (2007 est): 36 913 721. Capital: Nairobi.

Kenyatta, Jomo (c. 1891–1978) Kenyan statesman; president (1964–78). Son of a poor farmer, he became (1947) president of the Kenya African Union and in 1953 was imprisoned for seven years by the colonial government for his part in the *Mau Mau rebellion (complicity in which he always denied). While in gaol he was elected leader of the Kenya African National Union (1960), which achieved Kenya's independence in 1963. Kenyatta was prime minister before becoming president of a one-party state.

Kepler, Johannes (1571–1630) German astronomer, who was one of the first supporters of Copernicus' heliocentric theory of the solar system. Kepler used Tycho Brahe's observations to deduce the shape of planetary orbits, discovering that they were elliptical. He published this discovery, the first of **Kepler's laws**, together with his second law, stating that orbital velocity decreases with distance from the sun, in *Astronomia Nova* (1609). In 1619 he published his third law relating a planet's year to its distance from the sun. In 1610 he received a telescope built by Galileo, which he used to observe Jupiter. In 1611 he constructed an improved version, now known as a Keplerian *telescope.

Kerala A state in SW India. Tropical and beautiful, it is India's most densely populated state. Rice, tea, coffee, pepper, rubber, nuts, and fruit are farmed. Fishing is also important. *History*: Malayalam-speaking Kerala has traded with the Near and Far East since ancient times, flourishing especially in the 9th and 10th centuries. Area: 38 855 sq km (14 998 sq mi). Population (2001): 31 814 374. Capital: Thiruvananthapuram.

keratin An insoluble fibrous protein that is the major constituent of hair, nails, feathers, beaks, horns, and scales. Keratin is also found in the skin.

Kerguelen Islands 49°30'S 69°30'E An archipelago in the S Indian Ocean, in the French Southern and Antarctic Territories. Kerguelen Island, the largest, is the site of several scientific bases. Area: 7215 sq km (2786 sq mi).

kermes A scale insect of the genus *Kermes*, es-

pecially *K. ilices* of Europe and W Asia, formerly used to produce a red dye. They feed on the small evergreen kermes oak (*Quercus coccifera*), which is native to S Europe, N Africa, and W Asia.

Kern, Jerome (David) (1885–1945) US composer of musical comedies, the most famous of which was *Show Boat* (1927), written in collaboration with Oscar *Hammerstein II. Two of his best-known songs are "Smoke Gets in Your Eyes", and "Ol' Man River"; he also wrote much film music after 1939.

kerosene See PARAFFIN.

Kerouac, Jack (1922–69) US novelist. He was a leading figure of the *Beat movement, of which his novel *On the Road* (1957) was a seminal work. Other works include *Big Sur* (1962) and *Desolation Angels* (1965).

Kerr effects Two effects concerned with optical changes produced by magnetic or electric fields. In the magneto-optical effect, plane-polarized light is slightly elliptically polarized when reflected by the pole of an electromagnet. In the electro-optical effect, the plane of polarization of a beam of light is rotated when passed through certain liquids or solids across which a potential difference is applied. This effect is utilized in the **Kerr cell**, which is used as a high-speed shutter and to modulate *laser beams. Named after the discoverer John Kerr (1824–1907).

Kerry (Irish name: Chiarraige) A county in the SW Republic of Ireland, in Munster on the Atlantic Ocean. It rises in the S to Macgillycuddy's Reeks and contains the famous Lakes of Killarney. The chief occupations are fishing, farming, and tourism. Area: 4701 sq km (1815 sq mi). Population (2006): 139 616. County town: Tralee.

Kesselring, Albert (1885–1960) German general, who commanded the Luftwaffe in the invasions of Poland (1939) and France (1940) and in the battle of Britain (1940). In 1943 he became commander of land and air forces in Italy and in 1945 on the Western Front. His death sentence as a war criminal was commuted to life imprisonment and he was released in 1952.

kestrel A small *falcon characterized by a long tail and the ability to hover before diving on its prey. The common kestrel (*Falco tinnunculus*), 32 cm long, is found in Eurasia and Africa and hunts small rodents, birds, and insects. The female has a brown streaked plumage; the male is blue-grey with black-

streaked pale-brown underparts, a black-tipped tail, and a black eye stripe.

Keswick 54°37'N 3°08'W A town in NW England, in Cumbria. It is one of the main tourist centres of the Lake District. Population (1991): 4836.

ketone A class of organic chemicals having the general formula $RCOR'$, where R and R' are hydrocarbon groups. Ketones are prepared by the oxidation of secondary alcohols. Acetone (dimethyl ketone) is a common example.

Kew Gardens The Royal Gardens at Kew, near Richmond, Greater London, which occupy land once owned by the royal family. The first botanic garden was created there in 1759, by Augusta (d. 1772), Princess of Wales, and in the late 18th and early 19th centuries Kew became internationally famous. Between 1848 and 1876 William (1785–1865) and Joseph (1817–1911) Hooker founded the Museum of Economic Botany, the Library, Herbarium, and Jodrell Laboratory.

Keynes, John Maynard, 1st Baron (1883–1946) British economist. After attending the Versailles peace conference Keynes published *The Economic Consequences of the Peace* (1919), which attacked the war reparations imposed on Germany. In his greatest work, *General Theory of Employment, Interest and Money* (1936), he argued that unemployment can only be alleviated by increased public spending.

KGB (Committee of State Security) The former Soviet secret police concerned with internal security and intelligence. It was founded in 1954 to replace the more brutal MGB (Ministry of State Security; 1946–53), which itself replaced the NKVD (People's Commissariat of Internal Affairs; 1934–46). It was abolished in 1991 but formed the basis of separate units responsible for Russian intelligence, counterintelligence, and border control.

Khabarovsk 48°32'N 135°08'E A port in E Russia, on the River Amur. Situated on the Trans-Siberian Railway, it is a transport centre. Population (1999 est): 614 000.

Khachaturian, Aram Ilich (1903–78) Soviet composer. His music was deeply influenced by Caucasian folk music. His compositions include concertos for piano (1936) and violin (1940) and the famous ballets *Gayaneh* (1942) and *Spartacus* (1954).

Kharkov (or **Karkiv**) 50°00'N 36°15'E A city in E Ukraine. It was almost totally destroyed in World War II. Today, it is an important railway

junction and has major engineering industries. Population (1998 est): 1 521 400.

Khartoum (or **al-Khurtum**) 15°40'N 32°52'E The capital of the Sudan, at the confluence of the Blue and the White Nile Rivers. In 1885 *Gordon was besieged and killed here and the town destroyed by the forces of the Mahdi (see MAHDI, AL-) but was recaptured by Anglo-Egyptian forces in 1898. It has several cathedrals and two mosques. Population (1993): 924 505.

Khazars A Turkic people who inhabited the lower Volga basin from the 7th to 13th centuries. Noted for their laws, tolerance, and cosmopolitanism, the Khazars embraced Judaism in the 8th century. Slavonic and nomadic Turkic invaders brought the downfall of the Khazars in the 11th century. Itil, near modern Astrakhan, was their capital.

Khmer A people of Cambodia, Thailand, and Vietnam who speak the Khmer language, one of the Austro-Asiatic languages. They are rice cultivators and fishers, living in village communities headed by an elected chief. Their religion is Theravada Buddhism. The Khmer empire was founded in 616 AD and between the 9th and 13th centuries Khmer kings presided over the advanced civilization that was responsible for the great stone buildings of Angkor. The name Khmer was later adopted by the the communist Khmer Rouge movement (see CAMBODIA).

Khoisan The racial grouping comprising the Hottentot and Bushmen people of S Africa. The Khoisan languages are noted for their click sounds. Formerly widespread S of the Zambezi River, the Khoisan tribes have been decimated by Bantu and European encroachments since 1700. The Hottentots were nomads, herding sheep and cattle. They were divided into clans, each with its own territory and chief. The Bushmen were traditionally hunters and gatherers, but most are now farm workers. Until the early 2000s some groups in the deserts of W Botswana still roamed in bands, but all have now been forcibly resettled in villages.

Khomeini, Ayatollah Ruholla (1902–89) Iranian Shiite Muslim leader (ayatollah). Following the overthrow of the shah (1979) he returned from 16 years of exile to lead the Islamic Revolution. He imposed strict Islamic law and remained Iran's supreme religious leader until his death. His reactionary anti-Western views incurred international criticism, as in the *Rushdie affair.

Khrushchev, Nikita S(ergeevich)

(1894–1971) Soviet statesman; first secretary of the Soviet Communist Party (1953–64) and prime minister (1958–64). Khrushchev was a close associate of Stalin and emerged victorious from the power struggle that followed his death. In 1956 Khrushchev began a programme of destalinization, which gave rise to revolts in other communist countries. Owing to the failure of his economic policies and his unsuccessful foreign policy, notably his attempt to install missiles in Cuba (1962), he was ousted by *Brezhnev and *Kosygin.

Khufu (or Cheops) King of Egypt (c. 2600 BC) of the 4th dynasty; the father of Khafre (reigned c. 2550 BC). He built the Great Pyramid at *Giza, which took 20 years to construct.

Khyber Pass (Khaybar Pass or Khaibar Pass) 34 06N 71 05E A mountain pass in the Hindu Kush, connecting Afghanistan with Pakistan. Rising to 1072 m (3518 ft), it is of strategic importance.

kibbutz An Israeli collective settlement in which land and property are owned or leased by all its members and work and meals are organized collectively. About 3% of the population live in *kibbutzim*. A *moshav* is a smallholders' cooperative in which machinery alone is shared. About 5% of the Israeli population live in *moshavim*.

Kidderminster 52 23N 2 14W A market town in W central England, in Worcestershire. It is famous for carpet manufacture, begun in 1735. Population (1991): 54 644.

Kidman, Nicole (1967–) Australian film actress, born in Hawaii. She made her name in the thriller *Dead Calm* (1989) and starred with her then-husband Tom *Cruise in *Far and Away* (1992) and Kubrick's *Eyes Wide Shut* (1999). Other films include *To Die For* (1995), the musical *Moulin Rouge* (2001), and *The Hours* (2002). Her stage performances include *Hare's The Blue Room* (1998, London).

kidneys The two organs of excretion in vertebrate animals and man, which also regulate the amount of salt and water in the blood. The human kidneys are bean-shaped, each about 12 cm long and weighing about 150 g, and situated on either side of the spine below the diaphragm. They contain millions of tubules, the outer parts of which filter water and dissolved substances from blood supplied by the renal artery. Most of the water and some substances are reabsorbed back into the blood further down the tubules: the remaining fluid (see

URINE) passes on to the *bladder. If one kidney ceases to function or is removed the other will enlarge and take over its function. Removal of both kidneys requires the use of an artificial kidney machine (see DIALYSIS) unless a suitable donor kidney is available for *transplantation.

Kiel 54 20N 10 08E A city in N Germany, the capital of Schleswig-Holstein. A Baltic port, it was the chief naval port of Germany by the late 19th century. It has a 13th-century palace, restored after World War II. It is linked to the North Sea by the Kiel Canal. Population (1999 est): 235 500.

Kierkegaard, Søren (1813–55) Danish philosopher. Although critical of *Hegel, particularly in *The Concept of Irony* (1841), he remained under his influence. Much of his work is poetic and paradoxical even in its titles, for example *Either-Or* (1843) and *Concluding Unscientific Postscript* (1846). Suspicious of both science and the established Church, he saw man as existing in isolation and relating only to God. He greatly influenced 20th-century *existentialism.

Kiev 50 28N 30 29E The capital of Ukraine, on the river Dnepr. Its opera and ballet companies have a worldwide reputation. Outstanding buildings include the 11th-century St Sophia cathedral and the Golden Gate of Kiev. *History*: Kiev, "the mother of cities," was probably founded in the 6th or 7th century AD. Recurrent Tatar attacks virtually destroyed the city, which subsequently passed to Lithuania. Russian rule was established in the 17th century. After the Russian Revolution Kiev became the capital of the short-lived Ukrainian republic and in 1934, the capital of the Ukrainian SSR. In World War II the city was occupied, after a long siege, by the Germans and thousands of its inhabitants were massacred. Population (1998 est): 2 620 900.

Kikuyu A Bantu-speaking tribe of Kenya. They cultivate cereals and sweet potatoes and keep livestock, particularly cattle. Small groups of patrilineal kin occupy scattered homesteads of conical-shaped huts. Age grades are an important basis of social organization, boys being initiated by circumcision. Political authority is held by a council of members of the senior age grade. The largest tribe in Kenya, the Kikuyu were deeply involved in the *Mau Mau movement.

Kildare (Irish name: Contae Chill Dara) A county in the E Republic of Ireland, in Leinster. It consists chiefly of a low-lying plain containing part of the Bog of Allen and the Curragh, an area noted for its racehorse breeding. Cattle

rearing and arable farming are also important. Area: 1694 sq km (654 sq mi). Population (2002): 163 995. County town: Naas.

Kilimanjaro, Mount 3 02S 37 20E A volcanic mountain in Tanzania, the highest mountain in Africa. It has two peaks: Kibo at 5895 m (19 340 ft), and Mawenzi at 5273 m (17 300 ft).

Kilkenny (Irish name: Contae Chill Choinnigh) A county in the SE Republic of Ireland, in Leinster. Agriculture is the chief occupation. Area: 2062 sq km (796 sq mi). Population (2002): 80 421. County town: Kilkenny.

Killarney (Irish name: Cill Airne) 52 03N 9 30W A town in the Republic of Ireland in Co Kerry. A tourist centre, it is famous for its scenery. Population (1991): 7250.

killer whale A large toothed whale, *Orcinus orca*, common in Pacific and Antarctic waters but found in all other oceans. Up to 9 m long, killer whales are black above and pure white beneath, with an erect dorsal fin. They are notorious for their voracious appetites. Like other dolphins, they are intelligent and trainable in captivity. Family: *Delphinidae* (dolphins).

Killiecrankie, Pass of 56 43N 3 40W A pass in the Grampian Mountains, Scotland, in Perth and Kinross. It was the scene of a massacre of William III's troops by Jacobite Highlanders (1689).

killifish One of several small elongated fish, also called egg-laying top minnows, belonging to the family *Cyprinodontidae*, especially the genus *Fundulus*. Killifish occur chiefly in tropical America, Africa, and Asia and feed on plant or animal material. Up to 15 cm long, many are brightly coloured and kept as aquarium fish. Similar related fish are the live-bearing top minnows of the family *Poeciliidae*. Order: *Atheriniformes*.

Kilmarnock 55 37N 4 30W An industrial town in SW Scotland, the administrative centre of East Ayrshire. The Burns museum contains many of his manuscripts. Population (1991): 44 307.

kilogram (kg) The SI unit of mass equal to the mass of the platinum-iridium prototype kept at the International Bureau of Weights and Measures near Paris.

kiloton A measure of the explosive power of a nuclear weapon. It is equivalent to an explosion of 1000 tons of trinitrotoluene (TNT).

kilowatt-hour (kW-hr) A unit of energy used in charging for electricity. It is equal to

the work done by a power of 1000 watts in 1 hour.

Kimberley 28 45S 24 46E A city in South Africa, in N Cape Province. It was founded (1871) following the discovery of diamonds and is today the world's largest diamond centre. The Kimberley Open Mine, 1.6 km (1 mi) in circumference, was closed in 1915. Population (1996): 170 432.

Kim Dae Jung (1925–) Korean politician; president of South Korea (1997–2002). A leading human-rights campaigner, he was elected to the national assembly in 1961 but was subjected to repeated imprisonment by the authorities. As president, he negotiated (2000) an agreement with North Korea and was awarded the 2000 Nobel Peace Prize.

Kim Il Sung (Kim Song Ju; 1912–94) North Korean statesman; prime minister (1948–72) and then president (1972–94). He became leader of the Soviet-dominated N in 1945: in 1950 he ordered the invasion of South Korea in an unsuccessful attempt to reunite Korea (see KOREAN WAR). He was succeeded by his son, **Kim Jong Il** (1942–), who was effectively ruler of the country from 1994 but not declared head of state until 1998.

kimono A Japanese floor-length robe, often made of silk, with wide sleeves and a sash tied in a bow at the back. Only the patterns differentiate kimonos for men and for women.

kinetic energy Energy possessed by a body by virtue of its motion. If the body, mass m , is moving in a straight line with velocity v , its kinetic energy is $\frac{1}{2}mv^2$. If it is rotating its rotational kinetic energy is $\frac{1}{2}I\omega^2$, where I is its moment of inertia and ω its angular velocity.

kinetic theory A theory developed in the 19th century, largely by *Joule and *Maxwell, in which the behaviour of gases is explained by regarding them as consisting of tiny dimensionless particles in constant random motion. Collisions, either between the particles or between the particles and the walls of the container, are assumed to be perfectly elastic. The theory explains the pressure of a gas as being due to collisions between the particles and the walls, its temperature as a measure of the average *kinetic energy of the particles.

King, Jr, Martin Luther (1929–68) US Black civil-rights leader. An outstanding orator, he followed principles of nonviolent resistance in organizing demonstrations against racial inequality and won the Nobel Peace Prize in 1964.

He was assassinated in Memphis, Tennessee, by James Earl Ray.

King Charles spaniel A breed of *spaniel having a compact body, short legs, a short neck, and a large head with a short upturned nose. There are four colour varieties: Blenheim, ruby, tricolour, and black and tan, the last being associated with King Charles II. Weight: 3.5–6 kg; height: about 25 cm. The Cavalier King Charles spaniel is lighter bodied, with longer legs and a longer muzzle. Weight: 5–8 kg; height: about 30 cm.

king crab See HORSESHOE CRAB.

kingcup See MARSH MARIGOLD.

kingdom See TAXONOMY.

kingfisher A bird belonging to a family (*Alcedinidae*; 85 species) divided into two subfamilies: the *Alcedininae* are narrow-billed and live near water, feeding on small fish; the *Dacetoninae* are broad-billed insectivorous birds not closely associated with water. Kingfishers are 12–45 cm long, with a bright plumage and often brightly coloured bills and usually nest in burrows in banks. Order: *Coraciiformes* (hornbills, kingfishers, etc.).

King James Version The Authorized Version of the English *Bible that appeared in 1611 under the patronage of James I. It was based on the earlier Bishops' Bible (1568), but the translators also consulted and made use of the *Geneva Bible and the *Douai Bible. It was much indebted to the translations of William Tyndale (c. 1494–1536).

Kingsley, Charles (1819–79) British clergyman and writer. In many works, such as *Alton Locke* (1850), he championed various social reforms. His works include the popular children's book *The Water Babies* (1863).

King's Lynn (*Lynn* or *Lynn Regis*) 52 45N 0 24E A historic market town in E England, in Norfolk. Its importance as a port has declined since the middle ages. Population (1991): 41 281.

Kingston 17 58N 76 48W The capital and main port of Jamaica, in the SE. Founded in 1692, it became the capital in 1872. In the early 20th century it suffered from hurricanes and an earthquake. Population (2001): 96 052.

Kingston-upon-Hull 1. (or **Hull**) 53 45N 0 20W A city and port in NE England, in the East Riding of Yorkshire, on the Humber estuary. An important fishing port, Hull has vast docks and serves as a container port for much of the North and Midlands, with passenger services to the Continent. Industries include food

processing, chemicals, and engineering, as well as fish-related industries. Population (latest est): 249 000. 2. A unitary authority in NE England, in the East Riding of Yorkshire. Area: 71 sq km (27 sq mi). Population (2001): 253 400.

Kingstown 13 12N 61 14W A port in SW St Vincent, in the West Indies. Exports include bananas, copra, arrowroot, and cotton. Population (2003 est): 13 477.

kinkajou A nocturnal arboreal mammal, *Potos flavus*, of Central and South American forests. Up to 110 cm long including the tail (40–55 cm), it has a soft golden-brown coat, small ears, and a prehensile tail. An agile climber, it feeds mainly on fruit and honey. Family: *Procyonidae* (see RACCOON).

Kinnock, Baron, Neil (Gordon) (1942–) British politician. As leader of the Labour Party (1983–92) he reunited the Party but failed to win general elections (1987 and 1992). He became a European commissioner in 1995 and vice-president of the Commission in 1999. He was raised to the peerage in 2004.

Kinshasa (name until 1966: Léopoldville) 4 18S 15 18E The capital of the Democratic Republic of Congo, on the Congo River. It has a long history of human settlement and was occupied by the Humbo when *Stanley discovered it in the late 19th century. Population (latest est): 4 655 313.

Kintyre A peninsula in W Scotland, in Argyll and Bute between the Atlantic Ocean and the Firth of Clyde. The **Mull of Kintyre** headland forms its most southerly point.

Kipling, (Joseph) Rudyard (1865–1936) British writer and poet. Born in Bombay, he was educated in England, returning to India in 1882 to work as a journalist. After returning to England in 1888, he made his reputation with *Barrack Room Ballads and Other Verses* (1892). From 1892 to 1896 he lived in New England, where he wrote *The Jungle Books* (1894, 1895). *Kim* (1901) is the last novel he wrote with an Indian setting. Among his other works are *Just So Stories* (1902) and *Puck of Pook's Hill* (1906), both for children. He won the Nobel Prize in 1907.

Kirchhoff, Gustav Robert (1824–87) German physicist. Working with Robert *Bunsen, he invented the technique of spectroscopy and discovered caesium and rubidium in 1861. Kirchhoff, working alone, also discovered several elements in the sun, by investigating the solar spectrum. He is also known for **Kirchhoff's laws**, relating to electrical networks.

Kirgizstan, Republic of (or **Kyrgyzstan**

or **Kirghizia**) A republic in central Asia. The Kirgiz, a traditionally nomadic Turkic people, comprise over one-half of the population. *Economy*: there are deposits of coal, lead, mercury, and antimony, as well as oil and natural gas. Gold is mined and forms the main export. Industry, which has grown rapidly in recent years, includes the manufacture of machinery and building materials and food processing. Wheat, cotton, and tobacco are grown and livestock, especially cattle, sheep, horses, and yaks, are important. *History*: the Kirgiz came under Russian rule in the 19th century and fought the new Soviet Government after the Russian Revolution. As a result they suffered a famine in 1921–22, in which over 500 000 Kirgiz died. Kirgizstan was a constituent republic of the Soviet Union from 1936 until it became independent on the break-up of the Soviet Union in 1991. A new constitution was approved in 1994 and the country's first multiparty elections were held in 1995. Subsequent years saw rising popular unrest at the authoritarian rule of President Askar Akayev. In 2005 flawed elections sparked mass protests in which Akayev was ousted. Kurmanbek Bekiyev was subsequently elected president but popular discontent has continued. Official languages: Kirgiz and Russian. Currency: som of 100 tyin. Area: 198 500 sq km (76 642 sq mi). Population (2007 est): 5 284 149. Capital: Bishkek.

Kiribati, Republic of (name until 1979: Gilbert Islands) A country in the S Pacific Ocean comprising the Gilbert Islands, the Phoenix Islands, and some of the Line Islands together with Ocean Island. The majority of the inhabitants are Micronesians. *Economy*: although phosphate mining was discontinued in 1979, proceeds from the industry were placed in a trust fund which remains the country's main source of revenue. The main economic activities are now fishing and subsistence agriculture. Coconuts, copra, and fish are the chief exports. *History*: a centre for sperm whale hunting in the 19th century and part of the British protectorate of the Gilbert and Ellice Islands from 1892, they became a colony in 1915. Links with the Ellice Islands (see TUVALU, STATE OF) were severed in 1975 and the remaining islands became independent in 1979 as the Republic of Kiribati. Teburoro Tito has been president since 1993. Official languages: I-Kiribati and English. Currency: Australian dollar of 100 cents. Area: 861 sq km (332 sq mi). Population (2007 est): 107 817. Capital: Bairiki.

Kiritimati See CHRISTMAS ISLAND.

Kirkcaldy 56 07N 3 10W A town in E central

Scotland, in Fife. It is the birthplace of Adam Smith. Population (2001): 46 912.

Kirklees A unitary authority in N England, in West Yorkshire. Area: 410 sq km (158 sq mi). Population (2004 est): 393 200.

Kirkwall 58 59N 2 58W A town in NE Scotland, the administrative centre of the island authority of Orkney, on the island of Mainland. Population (latest est): 8500.

Kirov (name from 1780 until 1934: Vyatka) 58 38N 49 38E A port in Russia, on the River Vyatka. Founded in 1181, it was renamed after S. M. Kirov (1888–1934). Population (2002): 457 578.

Kirov Ballet A Russian ballet company based at the Kirov State Theatre of Opera and Ballet in St Petersburg. The theatre was renamed in honour of the politician S. M. Kirov (1888–1934) in 1935. Some of the Kirov's leading dancers, including Rudolf Nureyev, Natalia Makarova (1940–), and Mikhail Baryshnikov (1948–), earned international reputations.

Kirovohrad (name until 1924: Yelisavetgrad; name from 1924 until 1936: Zinoviyevs'k; name until 1992: Kirovograd) 48 31N 32 15E A city in S central Ukraine. It is a major agricultural centre. Population (2005 est): 248 367.

Kisangani (name until 1966: Stanleyville) 0 33S 25 14E A river port and agricultural centre in the NE Democratic Republic of Congo, on the Congo River. Population (2004 est): 682 599.

Kish A city of ancient *Sumer, near Babylon. Kish was the pre-eminent centre of civilization until eclipsed by *Ur (c. 2600 BC). Excavated between 1923 and 1933, its site has produced the earliest known example of writing—pictograms dating to soon after 3500 BC.

Kishinev (Romanian name: Chişinău) 47 00N 28 50E The capital of Moldova. Founded in the 15th century, it was under Romanian rule (1918–40). Population (2004 est): 644 204.

Kissinger, Henry (Alfred) (1923–) US diplomat and political scientist; secretary of state (1973–76). Appointed adviser to President Nixon (1969), Kissinger and Le Duc Tho (1911–90) were jointly awarded the Nobel Peace Prize (1973) for helping to negotiate an end to the Vietnam War. Under President Ford he became well known for his flying-shuttle style of diplomacy while negotiating a truce between Syria and Israel (1974).

Kitakyushu 33 52N 130 49E A city in Japan, on the Shimonoseki Strait. Formed in 1963 from the cities of Wakamatsu, Yawata, Tobata, Kokura, and Moji, it is one of Japan's leading

trade and deepsea fishing ports. Population (1995 est): 1 019 562.

Kitchener of Khartoum, Horatio Herbert, 1st Earl (1850–1916) British field marshal. Appointed commander in chief of the Egyptian army in 1892, by 1898, with the battle of Omdurman, he had reconquered the Sudan, becoming its governor general (1899). In the second Boer War he suppressed the guerrillas by a scorched-earth policy and the internment of civilians in concentration camps. In 1914, as war secretary, his recruitment campaign was highly successful. He was drowned on his way to Archangel.

kite A *hawk belonging to the subfamily *Milvinae*, which occurs throughout the world, most commonly in warm regions. Typically reddish brown and 52–57 cm long, kites have long narrow wings, a long often forked tail, and a narrow bill and feed on insects, small mammals, and reptiles; some are scavengers.

kithara An ancient Greek musical instrument, related to the lyre, with 7–18 strings. It is traditionally believed to have been invented by the god Apollo.

kittiwake A North Atlantic *gull, *Rissa tridactyla*, that is adapted for nesting on narrow cliff ledges. It is 40 cm long and has a white plumage with black-tipped grey wings, short black legs, dark eyes, and a yellow bill. It feeds at sea on fish and offal, going ashore only to breed.

Kitwe 12 48S 28 14E A town in N central Zambia. It is the chief commercial, industrial, and communications centre of the Copperbelt. Population (latest est): 338 207.

kiwi (bird) A secretive flightless bird belonging to a family (*Apterygidae*; 3 species) occurring in forested regions of New Zealand. 25–40 cm long, kiwis have tiny wings hidden in coarse grey-brown plumage and strong legs with large claws. Kiwis are nocturnal and have weak eyes but well-developed hearing; the long bill is used to probe the soil for worms, insect larvae, etc. Order: *Apterygiformes*.

kiwi (plant) A Chinese climbing shrub, *Actinidia chinensis*, also called Chinese gooseberry. It has white or yellow flowers and an edible rough-skinned fruit, up to 5 cm long. Family: *Actinidiaceae*.

Klagenfurt 46 38N 14 20E A city in S Austria, the capital of Carinthia. It has a cathedral (1578–91) and is a tourist centre. Population (1991 est): 89 415.

Klaipeda (German name: Memel) 55 43N 21 07E A port in Lithuania, on the Baltic Sea. It has been occupied at various times by Prussia, France, Russia, and Germany. Population (2000 est): 202 484.

Klee, Paul (1879–1940) Swiss painter and etcher. Working initially as an etcher, influenced by *Beardsley and Goya, he became associated with the *Blaue Reiter group and taught at the *Bauhaus school of design (1920–33). Inspired by a visit to Tunisia (1914), he produced small watercolours in brilliant colours; after 1919 he used oils, incorporating signs and hieroglyphs to create a fantasy world influenced by children's art.

Klein, Melanie (1882–1960) Austrian psychiatrist, who moved to England in 1926. She is noted for her psychoanalytical studies of children, which were influenced by Sigmund *Freud and his associates.

Klein bottle In *topology, a surface that has no edges and only one side. It is made by putting the small end of a tapering tube through the side of the tube, stretching it, and joining it to the large end. It was discovered by the German mathematician Christian Felix Klein (1849–1925).

Klein bottle. A solid with no edges and only one side.

Klemperer, Otto (1885–1973) German conductor. He became conductor of the German Opera in Prague on the recommendation of Mahler in 1907. Expelled by the Nazis in 1933, he was principal conductor of the Philharmonia Orchestra from 1959 until his death and is particularly remembered for performances of Beethoven.

Klondike The valley of the Klondike River in NW Canada, in the central *Yukon, where gold was discovered in 1896. The subsequent gold rush opened up the Yukon, although the population dwindled when the gold started to run out (1900).

klystron An electronic device used to generate or amplify *microwaves. It consists of a sealed evacuated tube in which a steady beam of electrons from an electron gun is alternately

accelerated and retarded by high-frequency radio waves (velocity *modulation) as it passes through a cavity. The resultant radio-frequency pulses are picked up at a second cavity, either as a voltage oscillation or, if connected to a *waveguide, as electromagnetic waves. The second cavity can be tuned to the input frequency or a harmonic of it. See also MAGNETRON.

Kneller, Sir Godfrey (1646–1723) Portrait painter of German birth. He worked successively for Charles II, William III, Queen Anne, and George I, and founded the first English academy of painting (1711). His portraits of the Whig Kit Cat Club (c. 1702–17; National Portrait Gallery), established a standard British portrait type.

Knock A village in the Republic of Ireland, in Co Mayo. Visions of the Virgin Mary were allegedly seen here, the first in 1879, and it has become a place of pilgrimage with its own airport.

Knossos The principal city of Minoan Crete, near present-day Heraklion. It was occupied between about 2500 and 1200 BC. Excavated and reconstructed (1899–1935) by Sir Arthur *Evans, the Palace of Minos was luxurious and sophisticated. About 1450 BC the palace was burnt down.

knot (bird) A short-legged bird, *Calidris canutus*, that breeds in Arctic tundra and winters on southern coasts. 25 cm long, it has a short black bill and its plumage is mottled grey in winter and reddish in summer. In winter, knots probe mud and sand for snails, worms, and crabs. Family: *Scolopacidae* (sandpipers, snipe, etc.).

knot (unit) A unit of speed, used for ships and aircraft, equal to 1 nautical mile per hour (1.15 miles per hour).

knots Fastenings formed by looping and tying pieces of rope, cord, etc. The mathematical theory of knots, a branch of *topology, was developed mainly in the 20th century, and draws on matrix theory, algebra, and geometry. A simple closed curve in space may be knotted in various ways, each with specific topological properties. See illustration on p. 494.

Knowsley A unitary authority of NW England, in Merseyside. Area: 97 sq km (38 sq mi). Population (2004 est): 149 800.

Knox, John (c. 1514–72) Scottish Protestant reformer. In 1547 he joined the Protestants who had murdered Cardinal Beaton in St An-

drew's Castle. The castle was stormed by the French, who imprisoned Knox as a galley slave. After his release (1549) he became a chaplain to Edward VI in England and contributed to the revision of the Second Book of Common Prayer. On the accession of the Catholic Mary I he escaped to the Continent, where he met *Calvin in Geneva. Returning to Scotland in 1559, he became its leading reformer. In 1560 the Scottish parliament adopted the *Confession of Faith* that Knox had compiled. His *First Book of Discipline* (1561) outlined a structure for the reformed Church of Scotland.

Knox-Johnston, Sir Robin (William Robert Patrick K.-J.; 1939–) British yachtsman; the first person to sail alone around the world nonstop (1968–69). In 2007 he completed another solo circumnavigation at the age of 68.

Knoxville 36 00N 83 57W A city in the USA, in Tennessee. It is an inland port and agricultural trading centre. Population (2004 est): 178 118.

koala An arboreal *marsupial, *Phascolarctus cinereus*, of E Australia. About 60 cm high, koalas have thick greyish fur, tufted ears, a small tail, and long claws. Each adult eats more than 1 kg of eucalyptus leaves every day. The pouch opens towards the female's tail—unusual in herbivorous marsupials. Family: *Phalangeridae*.

kob An African antelope, *Kobus kob*, also called Buffon's kob. Males are about 90 cm high at the shoulder; females are smaller. The coat ranges from orange to nearly black, with white markings on the face, legs, and belly and a black stripe down the foreleg.

Kobe 34 40N 135 12E A major port in Japan, on Osaka Bay. It forms the W end of the Osaka-Kobe industrial area. Population (2004 est): 1 519 978.

Koblenz (English name: Coblenz) 50 21N 7 36E A city in W Germany, at the confluence of the Rivers Rhine and Moselle. The seat of Frankish kings during the 6th century AD, it was annexed by France in 1798, passing to Prussia in 1815. Notable buildings include the Ehrenbreitstein fortress (c. 1000) and the birthplace of Metternich. Population (2004 est): 107 608.

Kodály, Zoltan (1882–1967) Hungarian composer. In collaboration with Béla *Bartók he collected Hungarian peasant songs, which influenced his style of composition. He achieved international recognition with his *Psalmus Hungaricus* (1923); other works include the opera *Háry János* (1926) and *Dances of Galanta* (1933).

k

overhand knot This is used either to make a knob in a rope or as the basis for another knot.

reef knot A non-slip knot for joining ropes of similar thickness.

quick release knot A tug on "a" will quickly unfasten this

surgeon's knot The extra twist in the first part of the knot prevents it from slipping loose while the second part is tied.

Hunter's bend A strong easily tied knot invented in 1978 by Dr Edward Hunter.

bowline A knot to form a non-slip loop.

running bowline A knot for making a running noose.

sheepshank A means of temporarily shortening a rope.

sheet bend A knot for securely joining two ropes of different thickness.

double sheep bend This follows the same principles as the sheet bend.

fisherman's knot Used especially for joining lengths of fishing gut.

carrick bend A knot well suited to tying heavy ropes together.

clove hitch A simple knot for attaching a rope to a ring, rail, etc.

round turn and two half hitches Used for similar purposes as the clove hitch, this knot does not easily work loose.

anchor bend A secure means of attaching a cable to an anchor.

rolling hitch A quickly made and quickly unfastened knot for attaching a rope to a rail or another, standing rope.

Kodiak bear See BROWN BEAR.

Koestler, Arthur (1905–83) British writer, born in Hungary. His novel *Darkness at Noon* (1940) called on his own experience as a prisoner in the Spanish Civil War. His nonfiction was concerned with politics (*The Yogi and the Commissar*, 1945), scientific creativity (*The Sleepwalkers*, 1959; *The Act of Creation*, 1964), and parapsychology. He and his wife committed suicide when he became terminally ill.

Koh-i-noor A famous diamond of 108 carats owned by the Mogul dynasty until the Shah of Iran looted it from Delhi (1739). It became Crown property in 1849, when Britain annexed the Punjab. It was set in the coronation crown of George VI's consort, Queen Elizabeth.

Kohl, Helmut (1930–) German statesman; chancellor of West Germany (1982–90) and of Germany (1990–98). A Christian Democrat, he led the opposition in the Bundestag (1976–82). He presided over German reunification, becoming leader of the united country in 1990. Re-elected for a fourth term in 1994, he was defeated by Gerhard Schröder in 1998. In 2000–01 he faced a criminal investigation on charges of accepting illegal party donations; this was dropped when he agreed to pay a large fine.

kohlrabi A variety of *cabbage, sometimes called turnip-rooted cabbage. The green or purple stem base, which swells like a turnip, is used as a vegetable.

Kokoschka, Oskar (1886–1980) Austrian expressionist painter and writer (see EXPRESSIONISM). After World War I he taught at the Dresden Academy, later painting landscapes and city views, particularly of London, where he lived (1938–53). From 1953 he lived and worked in Switzerland.

kola (or **cola**) Either of two trees, *Cola nitida* or *C. acuminata*, native to West Africa and widely grown in the tropics, that produce **kola nuts**. These are rich in caffeine and chewed in Africa and the West Indies for their stimulating effects. Family: Sterculiaceae.

Kola peninsula A peninsula in NW Russia, between the White Sea and the Arctic Ocean, consisting of tundra in the N and taiga in the S. The Murmansk coast has several areas that are ice-free throughout the year and has many military and naval bases. The population consists of immigrant Russians and remains of the Sami (Lapp) aboriginal people. Area: 130 000 sq km (50 182 sq mi). Chief town: Murmansk.

Kolkata See CALCUTTA.

Kolyma, River A river in the NE Russia. Rising in NE Siberia, it flows mainly NE to the East Siberian Sea. Length: 2600 km (1615 mi).

Komodo dragon A rare *monitor lizard, *Varanus komodoensis*, which, at 3 m long and weighing 135 kg, is the largest living lizard. It has a stout neck and body, a long powerful tail, and short strong legs and is powerful enough to kill a man. Komodo dragons feed mainly on carrion but also eat smaller monitors. They occur only on Komodo Island and some of the Lesser Sunda Islands of Indonesia.

Konoe Fumimaro, Prince (1891–1945) Japanese noble, who was prime minister three times. His first cabinet (1937–39) escalated the conflict with China; his second (1940–41) took Japan into alliance in World War II with Germany and Italy; and his third (1941) made the decision to attack the USA. After Japan's surrender he committed suicide.

Kon-Tiki The name given by Thor *Heyerdahl to the balsawood raft on which, between 28 April and 7 August 1947, he and five companions travelled the 5000 miles between Peru and the Tuamotu islands near Tahiti to demonstrate that ancient peoples of South America could have reached Polynesia. Kon-Tiki was an older name for the Inca creator god, Viracocha, allegedly known in Polynesia as Tiki.

Konya (ancient name: Iconium) 37°51'N 32°30'E A town in SW central Turkey. It is the centre of the Whirling Dervish sect and was the capital of the Seljuq kingdom of Rum. Population (1997): 623 333.

kookaburra A large grey-brown Australian *kingfisher, *Dacelo novaeguineae*, also called laughing jackass because of its chuckling call. 43 cm long, it is arboreal and pounces on snakes, lizards, insects, and small rodents from a perch.

Koran (or **Quran**) The sacred scripture of Islam. According to tradition, the divine revelations given to *Mohammed (d. 632 AD) were preserved by his followers and collected as the Koran under the third caliph, Uthman (d. 656). The Koran is one of the main sources of the comprehensive system of *Islamic law. Muslims believe that the revelations exist complete in a heavenly book, which contains all that has happened and will happen.

Korda, Sir Alexander (Sandor Kellner; 1893–1956) British film producer and director, born in Hungary. He boosted the British film industry during the 1930s and 1940s with a series of extravagant productions, including *The*

Private Life of Henry VIII (1932), *The Scarlet Pimpernel* (1934), and *Anna Karenina* (1948).

kore (Greek: maiden) In archaic Greek sculpture, a draped standing female figure, derived originally (c.650 BC) from Egyptian models. During the next two centuries the drapery, pose, and expression became increasingly naturalistic. Compare KOUROS.

Korea A country in NE Asia, occupying a peninsula between the Sea of Japan and the Yellow Sea, now divided (see below) into the Democratic Republic of Korea (North Korea) and the Republic of Korea (South Korea). Plains in the W rise to mountains in the N and E. Both North and South Koreans are ethnically related to the Mongoloid race. The country long had ties with China but in 1905 became a Japanese protectorate, coming formally under Japanese rule in 1910. In 1945 the Allies divided Korea at the thirty-eighth parallel. The communist Democratic People's Republic of Korea under *Kim Il Sung was established in the Soviet-occupied N and the Republic of Korea under Syngman Rhee in the US-occupied S (1948). Soviet and US troops had withdrawn by 1949 and in 1950 the *Korean War broke out, ending in 1953 with the country still divided. Tensions increased again in the late 1990s, owing to North Korean incursions into South Korean territory. In 2000 the leaders of the two Koreas met for the first time since the conflict and signed a mutual cooperation treaty with peaceful reunification as the ultimate goal.

Korea, Democratic People's Republic of (Korean name: Chosŏn) The division of Korea left the North with almost all the country's mineral wealth and a large proportion of the industries, which had been developed by the Japanese. After the Korean War reconstruction proceeded rapidly; all industry is nationalized and agricultural land was collectivized in the 1950s. In the 1990s the economy suffered from the ending of preferential trading terms with the Soviet Union and China. In 1994 Kim Il Sung handed effective control of the country to his son, Kim Jong Il. North Korea has remained one of the most secretive and authoritarian countries in the world. In 1995 floods left some 500 000 homeless, leading to famine, disorder, and economic collapse: industrial and agricultural output have fallen by two thirds, and the population has decreased by nearly 20%. North Korea's continuing nuclear weapons programme led to rising tension with the USA in the early 2000s. Official language: Korean. Currency: won of 100 jun. Area: 120 538 sq km

(46 540 sq mi). Population (2003 est): 22 466 000. Capital: P'yong Yang.

Korea, Republic of (Korean name: Han Kook) The South had been primarily agricultural but US aid led to the predominance of the industrial sector. Mineral resources are not large, although it has one of the world's largest deposits of tungsten. Exports include electrical goods, clothes, textiles, and cars. The corrupt and repressive regime of President Rhee was overthrown in 1960 and the military, headed by General Park Chung Hee, seized power the following year. The 1960s and 1970s saw growing prosperity but continued suppression of dissent. Park Chung Hee was assassinated in 1979 and General Chun Doo Hwan took over in a coup. The 1980s saw remarkable economic growth but increasing political unrest: in 1987 a more democratic constitution was adopted and in 1993 Kim Young Sam became the first civilian president for 32 years. In 1997 the currency and stock market collapsed and the country suffered financial and economic breakdown. The former dissident leader *Kim Dae Jung was elected president in 1997 and succeeded by his supporter Roh Moo Hyun in 2003. In March 2004 Roh was impeached for alleged election violations; however, elections held a month later resulted in a victory for his supporters and the impeachment was overturned. Official language: Korean. Currency: won of 100 chon. Area: 98 447 sq km (38 002 sq mi). Population (2003 est): 47 925 000. Capital: Seoul.

Korean The language of the people of Korea. It may be distantly related to *Japanese. The standard form is based on the dialect of Seoul. It is written in a phonetic script called *unmun*, devised in the mid-15th century to replace the Chinese characters in use before then.

Korean War (1950–53) An indecisive conflict between communist North Korea and noncommunist South Korea. When North Korean troops crossed the thirty-eighth parallel in 1950, 16 member nations of the UN sent troops, under the supreme command of the US general, Douglas *MacArthur, to support South Korea. The North Koreans were joined by Chinese Communist troops. An armistice was eventually signed on 27 July 1953, by which time some five million people had died.

Kosciusko, Mount 36 285 148 17E The highest mountain in Australia, in SE New South Wales in the Snowy Mountains. Height: 2230 m (7316 ft).

Kosovo An autonomous province of S Serbia. Kosovo formed the heartland of Serbia in the

middle ages but was conquered by the Turks in 1389 and subsequently settled by Muslim Albanians, who now comprise over 90% of the population. After Kosovo declared independence from Serbia (1990), the Serbian government removed its autonomous status. In 1992 unauthorized elections were won by pro-separatists. In 1998 demonstrations by ethnic Albanians led to severe repression by Serb forces and armed retaliation from the Kosovo Liberation Army (KLA). Evidence of "ethnic cleansing" by Serb forces led to NATO air strikes against targets in Yugoslavia in March 1999. The Serbs intensified their campaign against the ethnic Albanians, leading to a mass exodus of refugees to neighbouring countries. In June 1999 the Serbs effectively surrendered, agreeing to a complete withdrawal of their military forces, the presence of peacekeepers, and the return of all refugees. The region's political status remains unresolved. Population (1997 est): 2 227 742. Capital: Priština.

Kosygin, Aleksei Nikolaevich (1904–80) Soviet statesman; prime minister (1964–80). He became prime minister after Khrushchev's fall, initially sharing power with *Brezhnev, but had less influence in the late 1960s.

koto A Japanese stringed instrument of the *zither family. The narrow 2-metre sound board has 13 strings, which the player, sitting on his heels, plucks with plectra.

kouros (Greek: youth) In archaic Greek sculpture, a nude standing male figure, often more than life-size, derived (c. 650 BC) from Egyptian models. The modelling became increasingly naturalistic. Compare KORE.

Koussevitsky, Sergei (1874–1951) Russian conductor and composer. He left Russia in 1920 to work in Paris and subsequently in the USA, where he directed the Boston Symphony Orchestra from 1924 to 1949. He founded the Koussevitsky Music Foundation.

Kozhikode (former name: Calicut) 11 15N 75 45E A seaport on the W coast of India, in Kerala. Formerly famous as a cotton-manufacturing centre (Calicut gave its name to calico), it was visited by Vasco da Gama (1498) and in 1664 the British East India Company established a trading post here. Population (1991 est): 420 000.

Kra, Isthmus of The neck of the Malay Peninsula connecting it to the Asian mainland. It is occupied by Burma and Thailand and is 64 km (40 mi) across at its narrowest point.

krait A highly venomous snake belonging to the genus *Bungarus* (12 species) occurring in S

Asia. Kraits are usually patterned with blue-and-white or black-and-yellow bands; they prey chiefly on other snakes. The common blue krait (*B. caeruleus*) of India and China is 1.5 m long and its venom can be fatal to humans. Family: *Elapidae* (cobras, mambas, coral snakes).

Kraków (or **Cracow**) 50 03N 19 55E The third largest city in Poland, on the River Vistula. It was the capital of Poland from 1305 to 1609 and remains famous as a cultural centre. Notable buildings include the cathedral (14th century). Population (1999 est): 740 666.

Krasnodar (name until 1920: Ekaterinodar) 45 02N 39 00E A city in SW Russia, on the River Kuban. It is the centre of an agricultural region. Population (1999 est): 643 400.

Krasnoyarsk 56 05N 92 46E A city in E central Russia, on the River Yenisei. It developed greatly after the discovery of gold in the region in the 19th century. Population (1999 est): 877 800.

Krebs cycle (**citric acid cycle** or **tricarboxylic acid cycle**) The sequence of chemical reactions, taking place in the mitochondria of cells. Named after its principal discoverer, Sir Hans Krebs (1900–81), the cycle involves the conversion of acetyl coenzyme A, derived from the carbohydrates, proteins, and fats of food, into hydrogen atoms or electrons, from which

Krebs cycle. For every two atoms of hydrogen transferred, three ATP molecules are generated.

usable energy in the form of *ATP is produced by the cytochrome electron transport chain. Intermediate products are used for the manufacture of carbohydrates, lipids, and proteins by cells.

Krefeld 51 20N 6 32E A city in NW Germany, on the River Rhine. It was the site of a Prussian victory (1758) during the Seven Years' War. Population (1999 est): 242 800.

Kreisler, Fritz (1875–1962) Austrian violinist. A child prodigy, he frequently played his own compositions, written in the style of older composers and (until 1935) ascribed to them.

Kremenchug 49 03N 33 25E A city in E central Ukraine, on the River Dnepr. It has a large hydroelectric station. Population (1998 est): 240 700.

Kremlin The citadel of any Russian city, now referring usually to that of Moscow. Built in 1156 but continually extended, it contains the Cathedral of the Assumption (1475–79), the Cathedral of the Annunciation (1484–89), the Great Kremlin Palace (1838–49), etc. Except for the period between 1712 and 1918 it has served continually as the seat of the Russian government and is now also a museum of Russian architecture.

krill Shrimplike marine *crustaceans, 8–60 mm long, of the order *Euphausiacea* (82 species). Periodically krill swarms occur in certain regions, becoming an important source of food for fishes, birds, and especially baleen whales.

Krishna A popular Hindu deity, the eighth incarnation of *Vishnu. In the *Bhagavadgita* he is revealed as the creator, sustainer, and destroyer of the universe (see TRIMURTI). Elsewhere he is worshipped as a fertility god. He is commonly represented as a beautiful youth with bluish skin wearing a crown of peacock feathers. See also JAGANNATHA.

Krivoi Rog 47 55N 33 24E A city in SE Ukraine. Founded by the Cossacks in the 17th century, it is now an important ironmining centre. Population (1998 est): 715 400.

Kronstadt Rebellion (1921) An uprising among Soviet sailors in Kronstadt. The sailors, who had supported the Bolsheviks in the Russian Revolution, demanded economic reforms and an end to Bolshevik political domination.

Kruger, (Stephanus Johannes) Paul-(us) (1825–1904) Afrikaner statesman; president (1883–1902) of the South African Republic (Transvaal). A farmer of Dutch descent, Kruger settled with his parents in the Transvaal after

taking part in the *Great Trek. He led the struggle to regain independence for the Transvaal from the British, achieved in 1881, after the first Boer War. As president he resisted Uitlander (British immigrant) demands for political equality with the Afrikaner, a policy that led to the second Boer War (1899–1902).

Kruger National Park A game and plant reserve with an area of about 21 000 sq km (8106 sq mi) in NE South Africa. In 2002 it was combined with reserves in neighbouring Mozambique and Zimbabwe to form the **Great Limpopo Transfrontier Park**.

kruggerand A South African coin containing one troy ounce of gold, minted since 1967. It has never been a true currency coin and was minted to enable investors to escape restrictions on the private ownership of gold.

Krupp A German family of arms manufacturers. Under **Arndt Krupp** (d. 1624), the family settled in Essen, where in 1811 **Friedrich Krupp** (1787–1826) established a steel factory. His son **Alfred Krupp** (1812–87) diversified the family business into arms manufacture. Under Alfred's son-in-law **Gustav Krupp von Bohlen und Halbach** (1870–1950), the company developed Big Bertha, the World War I artillery piece named after Gustav's wife **Bertha Krupp** (1886–1957). Their son **Alfried Krupp** (1907–67) developed Gustav's ties with the Nazis, employed slave labour, and was imprisoned for war crimes.

krypton (Kr) A noble gas discovered in 1898 by Sir William Ramsay and M.W. Travers (1872–1961), in the residue left after boiling liquid air. Compounds include the fluoride KrF_2 , and some clathrates. It is used for filling some fluorescent light bulbs; the *metre was (1960–83) defined in terms of the wavelength of a transition of one of its isotopes. At no 36; at wt 83.80; mp -157.37°C ; bp -153.23°C .

Kuala Lumpur 3 10N 101 40E The financial capital of Malaysia, in central Peninsular Malaysia; the administrative capital moved to Putrajaya in 1999. It became capital of the Federated Malay States in 1895 and is a major commercial centre. Population (1991): 1 145 075.

Kuang-chou See CANTON.

Kuban, River A river in SW Russia. Rising in the Caucasus Mountains, it flows NW to the Sea of Azov. Length: 906 km (563 mi).

Kublai Khan (1215–94) Emperor of China (1279–94), who founded the Yuan dynasty. Genghis Khan's grandson, Kublai established himself (1259) as chief of the Mongols after

years of conflict with his brother Mangu (d. 1259). The acknowledged ruler of all China from 1279, he administered from Peking an empire extending from the River Danube to the East China Sea. More humane than his predecessors, he opened up communications with Europe, largely through Marco Polo. However, his preoccupation with China and attempts to conquer SE Asia weakened the rest of the empire.

Kubrick, Stanley (1928–99) US film writer, director, and producer. His films, mainly satirical and highly imaginative, include *Lolita* (1962), 2001: *A Space Odyssey* (1968), the controversial *A Clockwork Orange* (1971), *The Shining* (1980), *Full Metal Jacket* (1987), and *Eyes Wide Shut* (1999).

kudu A large antelope, *Tragelaphus strepsiceros*, of African bush regions. About 130 cm high at the shoulder, kudus are red-brown with thin white vertical stripes on the flanks. Males have long corkscrew-shaped horns. The lesser kudu (*T. imberbis*) is smaller and found only in NE Africa.

Kufah A town 145 km (90 mi) S of Baghdad, in Iraq. Founded as an Arab garrison town in 638 AD, it is now an archaeological site. Its suburb of Najaf is the burial place of *Ali and a flourishing centre of *Shiite Islam.

Ku Klux Klan (KKK) A US secret society active against the Blacks. It originated in Tennessee after the Civil War to deter newly enfranchised Blacks from voting. Klansmen in white cloaks and hoods, burning fiery crosses, killed Blacks and destroyed their property. It was revived in 1915 and again in the 1950s in the South in response to the civil-rights movement. The Un-American Activities Committee investigated its leaders in 1965, but it remains active against minority groups.

Kumamoto 32 50N 130 42E A city in Japan, on the River Shira. One of the strongest centres in feudal Japan, it has a 17th-century castle. Population (1995): 650 322.

Kumasi 6 45N 135W The second largest city in Ghana. Formerly the capital of Ashanti, it was taken by the British in 1874. Population (2002 est): 627 600.

kumquat A shrubby plant of the genus *Fortunella* (6 species), of E and SE Asia, with fruits resembling small oranges. They are mainly used for pickling and preserves. Family: Rutaceae.

Kundera, Milan (1929–) Czech novelist, living in France since 1975. His ironic sexual comedies include *Life is Elsewhere* (1973), *The Un-*

bearable Lightness of Being (1984), *Slowness* (1996), and *Ignorance* (2002).

kung fu An ancient Chinese form of combat, mainly for self-defence. Among the other *martial arts it is most closely related to *karate, which possibly developed from it. In the second half of the 20th century the *wing chun* style has become particularly well known.

Kunlun Mountains A mountain system in W China, separating Tibet from the Tarim Basin. It extends 1600 km (1000 mi) E–W, reaching 7723 m (25 378 ft) at Ulugh Muztagh.

Kunming 25 04N 102 41E A city in S China, the capital of Yunnan province. It is noted for its Ming bronze temple. Population (2003 est): 1 597 768.

Kura, River A river in W Asia. Rising in NE Turkey, it flows E through Georgia and Azerbaijan to the Caspian Sea. Length: 1515 km (941 mi).

kurchatovium (Ku) An artificial transuranic element and the first transactinide. It was first detected by Soviet scientists in 1964 and named after the Soviet physicist I.V. Kurchatov (1903–60). The claim is disputed by US scientists, who proposed the name **rutherfordium** (Rf) after Lord *Rutherford, following their independent synthesis. At no 104.

Kurdistan An area in the Middle East inhabited by *Kurds, comprising parts of SE Turkey, N Syria, N Iraq, and NW Iran, including the Iranian province of Kordestan. The Turkish part includes a plateau that supports some agriculture, the remainder being mainly mountainous. The area was split at the end of World War I. Since 1992 much of Iraqi Kurdistan has been effectively autonomous, under the control of rival Kurdish militias. Area: 192 000 sq km (74 600 sq mi).

Kurds The major population group in *Kurdistan. Their language, Kurdish, is one of the *Iranian languages and is written in either a modified Arabic or a modified Cyrillic script. The Kurds grow cereals and cotton and are now mostly detribalized but a few nomadic groups still exist. They are Muslims but do not restrict their women to the same extent as other Islamic peoples. Nationalistic rebellions in the 19th and 20th centuries have led to reprisals, especially in Turkey (1925), Iraq, and Iran. Iraq devastated Kurdish villages in 1988 and again following a Kurdish rebellion during the *Gulf War. In the *Iraq War of 2003 Kurdish forces helped to overthrow the regime of Saddam *Hussein.

Kurgan 55 30N 65 20E A city in W Russia, on the River Tobol. Population (2002): 345 515.

Kuril Islands A Russian chain of 56 islands extending 1200 km (746 mi) NE–SW between Kamchatka (Russia) and Hokkaido (Japan). Discovered by the Dutch (1634), the islands were Japanese until seized by the Soviet Union (1945); Japan still claims them. The largest are Paramushir, Urup, Iturup, and Kunashir. There are 38 active volcanoes. 200 km (124 mi) to the E is the **Kuril Trench**, maximum depth: 10 542 m (34 587 ft). Area: about 15 600 sq km (6022 sq mi).

Kurosawa Akira (1910–98) Japanese film director. His best-known films are action costume dramas, such as *Rashomon* (1950) and *Seven Samurai* (1954). Other films include the literary adaptations *Throne of Blood* (1957) and *Ran* (1985) (from Shakespeare's *Macbeth* and *King Lear*, respectively) and *Rhapsody in August* (1991).

Kursk 51 45N 36 14E A city in W Russia. Food processing and metallurgy are important. Population (2002): 412 442.

Kutch, Rann of An area of salt waste in central W India, near the border with S Pakistan. It consists of the Great Rann in the N and the Little Rann in the SE. Total area: about 23 000 sq km (8878 sq mi).

Kuwait, State of A country in the Middle East, in Arabia situated at the head of the Persian Gulf. The country is sandy and barren and has a harsh climate. The inhabitants are predominantly Arab (about half are foreigners); the Kuwaitis are mainly Sunni or Shiite Muslim. *Economy:* Kuwait is one of the largest oil producers in the world and has one of the highest per capita incomes. Kuwait is a member of OPEC. *History:* Kuwait was originally settled in the early 18th century by nomads from the Arabian interior, who established a sheikdom in 1756. In 1899, to counter German and Ottoman expansionism, Kuwait gave Britain control over its foreign affairs and on the outbreak of World War I it became a British protectorate. Oil was discovered in 1938 and transformed the Kuwaiti economy after World War II. On gaining independence in 1961, Kuwait had to request troops from Britain to avert annexation by Iraq. In August 1990 Iraq invaded, precipitating the *Gulf War of 1991; Iraq's routed army inflicted heavy damage on oil wells and infrastructure. Demands for the restoration of parliamentary democracy under the 1962 constitution, suspended since 1976, led to elections (1992). Official language: Arabic.

Currency: Kuwait dinar of 1000 fils. Area: 24 286 sq km (9375 sq mi). Population (2007 est): 2 505 559. Capital: Kuwait City.

Kuwait City 29 20N 48 00E The capital of the sheikdom of Kuwait, on the Persian Gulf. The traditional Islamic town developed into a modern metropolis with growth of the oil industry. It was badly damaged during the Gulf War (1990–91). Population (2005): 32 403.

Kwangju 35 07N 126 52E A city in SW South Korea, an ancient administrative and commercial centre. Population (2003 est): 1 401 525.

kwashiorkor Severe protein deficiency in children under five years. Kwashiorkor occurs in poor countries where the diet does not contain sufficient protein (the name derives from a Ghanaian word). The children fail to grow and succumb to the slightest infection, but recover rapidly with a good diet.

Kyoto 35 2N 135 45E A city in Japan, in S Honshu. It has been a leading cultural centre since early times, when it was the Japanese capital (794–1192 AD) and the old imperial palace and ancient Buddhist temples still remain. Population (2004 est): 1 470 541.

Kyoto agreement An international agreement to limit the emission of greenhouse gases (see GREENHOUSE EFFECT) negotiated between 1997 and July 2001. The agreement committed 38 industrialized countries to reducing their emissions of greenhouse gases by an average of 5.2% from 1990 levels by 2012. Although it was one of the original signatories, the USA opted out of the agreement.

Kyprianou, Spyros (1932–2002) Cypriot statesman; president (1977–88). When Cyprus became independent in 1960 he was appointed minister of justice and then foreign minister (1960–72).

Kyrgyzstan See KIRGIZSTAN, REPUBLIC OF.

Kyushu The southernmost of the four main islands of Japan. Mountainous and volcanic, it has hot springs and a subtropical climate and is the most densely populated of the Japanese islands. There is a large rice-growing area in the NW, while heavy industry is centred on the N coalfield. Area: 35 659 sq km (13 768 sq mi). Population (2005): 14 712 852. Chief cities: Kitakyushu, Fukuoka, and Nagasaki.

Kyzyl Kum A desert in central Asia, in Kazakhstan and Uzbekistan, lying between the Rivers Amu Darya and Syr Darya. Area: about 300 000 sq km (115 806 sq mi).

Labiatae (or Lamiaceae) A family of herbaceous plants and shrubs (about 3500 species), widely distributed but particularly abundant in the Mediterranean region. They typically have square stems, hairy simple leaves, and clusters of tubular two-lipped flowers. Many of the plants are aromatic and yield useful oils (lavender, rosemary, etc.) and many are used as culinary herbs (marjoram, mint, sage, thyme, etc.).

Labor Party The Australian democratic socialist party, formed in New South Wales in 1891. It first held federal office in the period 1904–16, and subsequently 1929–31, 1939–49, and 1972–75. The most recent Labor premiers have been Bob Hawke (1983–91) and Paul Keating (1991–96). The current leader is Kevin Rudd.

Labour Day The day on which the labour movement is celebrated. In 1889, the Second International declared an international labour holiday on May Day. In Britain, Labour Day was the first Sunday in May until 1977, when the first Monday of the month was declared a public holiday.

Labour Party The democratic socialist party in the UK. The party was formed in 1900 as the Labour Representation Committee, being renamed the Labour Party in 1906. Its origins lie in the trades-union movement of the 19th century, and the trade unions continue to provide over three-quarters of its funds. The Fabian Society was also a powerful influence on its formation and political beliefs. In 1922 the Labour Party replaced the divided Liberal Party as one of the two major UK parties (*compare* CONSERVATIVE PARTY) and in 1924 and 1929–31 Labour formed a minority government under Ramsay MacDonald. It was not until after World War II, when under Clement Attlee the party won a huge majority in the general election of 1945, that it was able to introduce radical policies. In office from 1945 to 1951, the Labour administration undertook

widespread nationalization and set up a comprehensive system of social security. The party was in office again from 1964 to 1970 and from 1974 to 1979, under Harold Wilson (1964–76) and then James Callaghan. Subsequent leaders were Michael Foot (1980–83), Neil Kinnock (1983–92), and John Smith (1992–94), who died in office. His successor, Tony Blair, modernized the party's constitution and image, leading it to victory in the general elections of 1997, 2001, and 2005. Gordon Brown became party leader and prime minister in 1997.

Labrador (or Coast of Labrador) A district of NE Canada, on the Atlantic Ocean. Although the coast has belonged to Newfoundland for several centuries, the interior was finally awarded to Newfoundland in 1927. Labrador is mostly a rolling swampy plateau within the Canadian Shield. Generally barren except for forested river valleys, it has vast reserves of high-grade iron ore, which are being mined. Its hydroelectric potential is enormous. Area: 258 185 sq km (99 685 sq mi). Population (2001): 27 864.

Labrador Current A major ocean current of the N Atlantic, flowing S from the polar seas down the W coast of Greenland and past Newfoundland, until it meets the Gulf Stream and, being cold and dense, sinks beneath it. The Labrador Current carries icebergs S and is a cause of frequent fogs in the region of Newfoundland.

Labrador retriever A breed of dog originating in Newfoundland and brought to Britain by fishermen in the early 19th century. It is solidly built, about 56 cm high, with a tapering otter-like tail and a short dense water-resistant coat, usually black or yellow-brown.

laburnum A tree of the genus *Laburnum*, especially *L. anagyroides*, which is native to mountainous regions of central Europe and widely grown for ornament. Up to 7 m high, its leaves each consist of three dark-green leaflets.

The bright-yellow flowers grow in hanging clusters and produce slender brown pods. All parts of the plant are poisonous, especially the seeds. Family: *Leguminosae*.

labyrinth fish A small elongated laterally compressed fish of the family *Anabantidae* (about 70 species), found in fresh waters of tropical Asia and Africa. They have an accessory respiratory organ (labyrinth) with which they obtain oxygen from air gulped at the surface. Some species are popular aquarium fish. Order: *Perciformes*. See also **FIGHTING FISH**; **GOURAMI**.

lace An ornamental network of threads of silk, linen, etc., used mainly for dress collars, cuffs, altar cloths, etc. Needlepoint lace, originating in Italy in the early 16th century, is made with a needle on parchment or fabric. Pillow or bobbin lace, reputedly invented by Barbara Uttmann (b. 1514) in Saxony, is formed by twisting threads around pins stuck in a pillow. The best work was done in Italy, Flanders, France, and England in the 17th and 18th centuries, famous types of lace being Brussels, Valenciennes, Mechlin, and Honiton. Lace making as an art declined in the 19th century after machine manufacture was introduced.

lacewing An insect belonging to one of several families of the suborder *Plannipennia*. Lacewings have delicate net-veined wings and are carnivorous. Green lacewings (*Chrysopidae*), also called golden-eyed lacewings, are about 10 mm long and occur worldwide. Eggs are laid individually on hairlike stalks and the larvae feed on aphids, scale insects, etc. The brown lacewings (*Hemerobiidae*) are smaller and often have spotted wings. Order: *Neuroptera*.

Lachlan River A river in SE Australia, in New South Wales. Rising in the Great Dividing Range it flows generally NW to join the Murrumbidgee River. Length: 1483 km (922 mi).

La Coruña (or Corunna) 43°22'N 8°24'W A port in NW Spain, in Galicia on the Atlantic Ocean. The Spanish Armada sailed from here on 26 July 1588, and in 1589 the city was sacked by Sir Francis Drake. It is an important fishing centre. Population (1998 est): 243 134.

lacquer tree A tree, *Rhus vernicifera*, of SE Asia, also called varnish tree. Up to 30 m tall, it has compound leaves, which turn red in autumn. Japanese lacquer is obtained from the milky resin that oozes from cuts in the bark. Family: *Anacardiaceae*.

lacrosse A 10-a-side field game (12 for women) played with a ball and a long-handled

stick (the crosse), which has a triangular head with a strung pocket for catching, throwing, and picking up the ball. Of North American Indian origin, it is played mainly in the USA, Canada, Britain, and Australia. The object is to score goals by running with the ball and passing it. Tackling and striking an opponent's stick to dislodge the ball are allowed.

The optimum dimensions of the women's ground, although the game is played with no boundaries.

The dimensions of the men's ground.

lacrosse

lactation The secretion of milk from the breasts or mammary glands. In women lactation is controlled by hormones released from the ovary, placenta, and pituitary gland (see **PROLACTIN**) and starts shortly after childbirth, in response to the sucking action of the baby at the nipple: it will continue for as long as the baby is breastfed. A protein-rich fluid called colostrum is secreted in the first few days of lactation, before the milk has been produced. It contains antibodies that give the baby temporary immunity to disease.

Ladakh Range A mountain range mainly in NW India, extending about 370 km (230 mi) between the Karakoram Range and the Himalayas and rising to over 6000 m (19 685 ft).

Ladoga, Lake A lake in NW Russia, the

largest lake in Europe. It discharges via the River Neva into the Gulf of Finland. Area: about 17 700 sq km (6836 sq mi).

ladybird beetle A small round beetle, 8–10 mm long, that belongs to the widely distributed family *Coccinellidae* (5000 species). Most species are red or yellow with black spots. Both the larvae and adults feed on a variety of plant pests, including aphids, scale insects, mealybugs, and whiteflies.

Ladysmith 28 34S 29 47E A town in South Africa, in NW Natal. Founded in 1850, it was besieged for four months (1899–1900) by the Boers during the second Boer War. Population (latest est): 56 599.

lady's slipper A terrestrial orchid, *Cypripedium calceolus*, native to N Europe and Asia. Up to 45 cm high, it has broad leaves and the flowers are grouped singly or in twos and threes. Each flower has small twisted red-brown petals and an inflated yellow slipper-like lip. The lady's slipper is nearly extinct in Britain. See also SLIPPER ORCHID.

Lafayette, Marie Joseph Gilbert Motier, Marquis de (1757–1834) French general and politician, prominent at the beginning of the French Revolution. His early career was distinguished by his military successes (1777–79, 1780–82) against the British in the *American Revolution. In France he presented the Declaration of the Rights of Man (1789) and after the storming of the Bastille became commander of the new National Guard. In 1792 the rising power of the radicals threatened his life and he gave himself up to France's enemy, Austria. Lafayette was also prominent in the July Revolution (1830), which overthrew Charles X.

Lagomorpha A world-wide order of mammals (66 species) comprising *pikas, *rabbits, and *hares. Lagomorphs have teeth similar to rodents, with four continuously growing incisors. They are vegetarians and eat their own faecal pellets, thus obtaining the maximum value from their food.

Lagos 6 27N 3 28E The former capital and main port of Nigeria, on Lagos Island on the Bight of Benin. First settled by Yoruba fishermen in the 17th century, it became the centre of the Portuguese slave trade in West Africa and was ceded to Britain in 1861. One of Africa's largest cities, it is an important commercial and industrial centre. Population (1996 est): 1 518 000.

Lahore 31 34N 74 22E The second largest city in Pakistan, near the River Ravi, founded about

the 7th century AD. Traditionally the chief city of the Punjab, Lahore is situated close to the Indian border and has been the scene of much bloodshed and violence. It is a major railway, commercial, and political centre and the headquarters of the Muslim League. The famous Shalimar gardens lie to the E of the city. Population (1998): 5 063 499.

laissez-faire The economic theory that governments should not interfere with market forces based on self-interest and the profit motive. The concept, originating in France, was advocated by Adam *Smith and widely accepted until the beginning of the 19th century. By then the growth of capitalism had exposed its principal weaknesses: the rise of monopolies, the grossly inequitable distribution of wealth, and the exploitation of labour. In the 20th century laissez-faire policies were largely abandoned for mixed economies in Western countries. Since the 1970s there has been a revival of free-market ideas.

lake A major body of water that is not a part of the sea. Most lakes are found in the N hemisphere in formerly glaciated areas, where glacial erosion has created a topography favourable to their formation. Lakes have also been formed by faulting of the bedrock, by volcanoes, etc. Most lakes contain fresh water; salt lakes are found mainly in arid areas where evaporation is great and as a rule have no outlet. Some lakes are man made, for water supply, irrigation, and hydroelectric power generation.

Lake District (or Lakeland) An area in NW England, in Cumbria, a national park since 1951. It consists of a high dome incised by a radial system of glaciated valleys, many of which contain ribbon lakes including Derwentwater, Ullswater, and Windermere. High mountains rise between the valleys, the highest being *Scafell Pike and Helvellyn. It is a major tourist area, with hill walking, rock climbing, and water sports all popular, and has many associations with the so-called Lake Poets (most notably *Wordsworth and *Coleridge). Traditional occupations include hill farming, forestry, and quarrying. Area: about 1813 sq km (700 sq mi).

Lakshmi In Hinduism, the goddess of wealth and happiness, the benign aspect of Shakti, the supreme goddess. As the wife of Vishnu she appears in various forms according to his several incarnations. Many festivals are held in her honour (see DIWALI). Lakshmi is also revered by the Jains.

Lalique, René (1860–1945) French *Art Nouveau jeweller and glassmaker. His glassware is characterized by frosted patterns in relief.

Lamarck, Jean-Baptiste de Monet, Chevalier de (1744–1829) French naturalist, noted for his speculations about the evolution of living things, particularly his theory of the inheritance of acquired characteristics (see LAMARCKISM), published in 1809. Lamarck also worked on a system of classification for invertebrate animals, published in his *Histoire naturelle des animaux sans vertèbres* (7 vols, 1815–22).

Lamarckism The first theory of *evolution as proposed by Jean-Baptiste *Lamarck in 1809, based on his concept of the inheritance of acquired characteristics. He suggested that an organism develops structural changes during its lifetime as an adaptation to its particular environment and that these features are then inherited by successive generations through sexual reproduction. A classic example of these acquired characteristics is the neck of the giraffe, which he believed became longer through its habit of browsing on tall trees. This now discredited theory has been rejected in favour of Darwin's theory of evolution.

Lamartine, Alphonse de (1790–1869) French poet, one of the major figures of the Romantic movement. He established his reputation with *Méditations poétiques* (1820). In the 1830s he became an active political champion of republican ideals and was briefly head of the provisional government after the Revolution of 1848. His other major works include the narrative poems *Jocelyn* (1836) and *La Chute d'un ange* (1836).

Lamb, Charles (1775–1834) British essayist and critic. He collaborated with his sister Mary (1764–1847) on *Tales from Shakespeare* (1807), a children's book. He is best remembered for his *Essays of Elia* (1822).

Lambaréné 0 41S 10 13E A town in W Gabon, on an island in the River Ogooué. Its hospital (1913) was founded by the missionary Albert *Schweitzer. Population (latest est): 50 800.

lambert A unit of luminance equal to the luminance of a surface that emits one lumen per square centimetre. Named after J. H. Lambert (1728–77).

Lambeth Conferences Assemblies normally convened every ten years under the chairmanship of the Archbishop of Canterbury at Lambeth Palace, London, to which all bishops of the Anglican Church are invited.

The first was held in 1867. Although their decisions have no binding power, the conferences are important indications of the Anglican episcopate's views and policies.

laminar flow Fluid flow in which the particles move in parallel layers. A fluid moving slowly along a horizontal straight pipe flows in this way. Above a certain velocity, given by the Reynolds number, the layers no longer remain parallel and the flow becomes turbulent.

lammergeier A large *vulture, *Gypaetus barbatus*, also called bearded vulture because of the long bristles on its chin. It is over 1 m long with a wingspan of 3 m and occurs in mountainous regions of S Europe, central Asia, and E Africa. It is brown with tawny underparts and a black-and-white face.

lamprey A fishlike vertebrate belonging to a family (*Petromyzonidae*; about 22 species) of *cyclostomes. Lampreys have an eel-like body with one or two dorsal fins and seven pairs of gill slits. They occur in fresh or salt water and many are parasitic on fish, attaching themselves with a circular sucking mouth and feeding on the blood and flesh.

lamp shell See BRACHIOPODA.

Lanark 55 41N 3 48W A town in S central Scotland, in South Lanarkshire. Nearby New Lanark, founded as a cotton-spinning centre in 1784 by David Dale and Richard Arkwright, is well known for Robert Owen's social experiments there. Population (1991): 8877.

Lanarkshire A historic county of S central Scotland. In 1975 it became part of Strathclyde Region. When this was abolished in 1996, administration passed to three unitary authorities: Glasgow, *North Lanarkshire, and *South Lanarkshire.

Lancashire A county of NW England, bordering on the Irish Sea. It consists of lowlands in the W rising to the high level plateaus of the Pennines in the E, with the chief river, the Ribble, flowing SW to the Irish Sea. The lowlands are important agricultural regions. Industry is based chiefly on textiles (cotton manufacturing being of major importance until recently) and engineering. Tourism is important in the coastal towns of Blackpool and Morecambe. In 1974 it lost the S (including Liverpool and Manchester) to Merseyside and Greater Manchester and the N to Cumbria. Blackburn with Darwen and Blackpool became independent unitary authorities in 1998. Area (excluding unitary authorities): 2889 sq km (1115 sq mi). Population

(2001, excluding unitary authorities): 1 134 974. Administrative centre: Preston.

Lancaster 54 03N 2 48W A town in NW England, in Lancashire on the River Lune, superseded by Preston as the administrative centre of Lancashire. The castle, partly 13th-century and enlarged by Elizabeth I, stands on the site of a Roman garrison. Population (1991): 44 497.

Lancaster A ruling dynasty of England descended from Edmund, the second son of Henry III, who was created Earl of Lancaster in 1267. In 1361 the title passed by marriage to the third son of Edward III, *John of Gaunt. His son seized the throne from Richard II and ruled (1399–1413) as Henry IV. He was succeeded by Henry V, whose son Henry VI led the Lancastrians against the Yorkists (see YORK) in the Wars of the Roses (1455–85), in which their emblem was a red rose. At Henry VI's death (1471) the royal dynasty ended.

Lancaster, Duchy of A territory with its own courts and administration created in 1267 by Henry III for his son Edmund (1245–96). After the last Duke of Lancaster became Henry IV in 1399 the Duchy was attached to the Crown, retaining its own jurisdiction. The chancellor of the Duchy of Lancaster is usually a member of the cabinet.

Lancelot In *Arthurian legend, a knight of the Round Table. While a child he was kidnapped by the Lady of the Lake, who educated him and later sent him to serve King Arthur. He was a celebrated warrior but failed in the quest of the *Holy Grail because of his adulterous love for *Guinevere.

lancers Originally foot soldiers armed with a lance, they subsequently became cavalymen belonging to one of the regiments called lancers, both on the continent and in the UK. The name is retained in some armoured regiments.

Lanchester, Frederick William (1868–1946) British engineer, who built the first British car in 1896. He formed the Lanchester Engine Company producing high-quality vehicles.

Land, Edwin Herbert (1909–91) US inventor of Polaroid, a plastic sheet impregnated with dichroic crystals that produce *polarized light, thus reducing glare. In 1937 he set up the Polaroid Corporation for its manufacture. He also invented (1947) the Polaroid Land Camera, in which pictures are printed almost instantly inside the camera.

land crab A large square-bodied *crab of the

tropical family *Gecarcinidae*, specialized for a terrestrial existence. It feeds on plant and animal materials. *Cardiosoma guanhumi*, 11 cm across the back, is found in the West Indies and S North America. Tribe: *Brachyura*.

landlord and tenant The relationship arising from a grant (lease) of exclusive possession of land by a landlord to a tenant for a fixed period and, usually, for a regular payment of rent. The relationship is defined by a *contract, which is contained in the lease or, for short terms, in a tenancy agreement.

Land Registry, HM An official registry of titles to land, established in 1862. This simplifies conveyancing when the property is sold: by searching in the Registry, outstanding leases, mortgages, etc., may be discovered. In England and Wales land registration on sale is now compulsory.

Landseer, Sir Edwin Henry (1802–73) British artist. He achieved success, particularly with Queen Victoria, with his sentimental animal and Highland subjects, notably *Dignity and Impudence*. He sculptured the four bronze lions in Trafalgar Square.

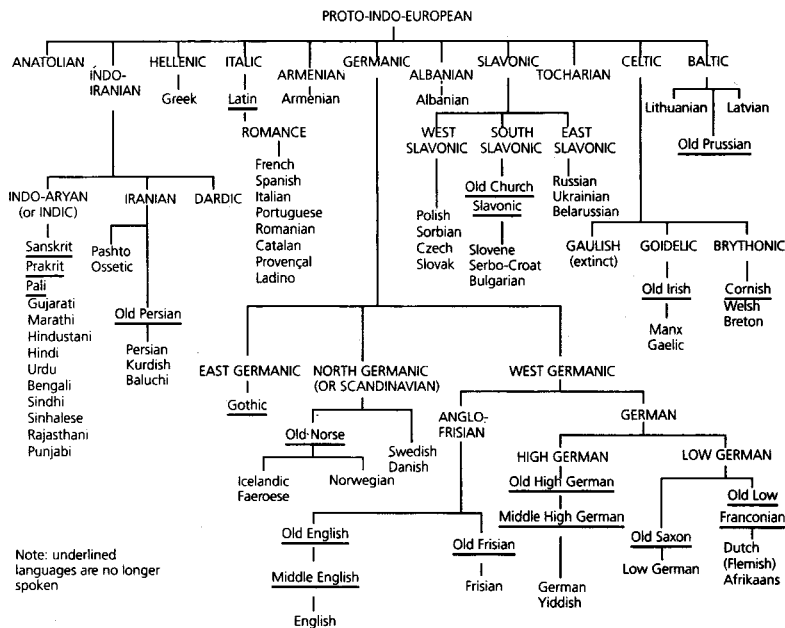

Land's End 50 03N 5 44W The extreme western point of England. A granite headland in Cornwall, it lies at a distance of 970 km (603 mi) from John o'Groats at the N tip of Scotland. The southernmost point of England is the Lizard nearby.

Lang, Fritz (1890–1976) German film director. The best known of a number of influential silent films are *Dr Mabuse the Gambler* (1922), *Metropolis* (1926), and *M* (1931). He went to Hollywood in 1933, where he made commercially successful thrillers and westerns.

Langland, William (c. 1330–c. 1400) English poet. A minor cleric, he is usually considered to be the author of the alliterative allegorical poem *The Vision of Piers Plowman*.

Langtry, Lillie (Emilie Charlotte le Breton; 1853–1929) British actress, known as the Jersey Lily. Having married a wealthy husband she proved that high social position was not incompatible with an acting career. She was noted for her beauty and was a mistress of the Prince of Wales, later Edward VII.

languages, classification of The division of languages into groups. There are three methods of classification. The first method is that of geographical or political division, in which languages are grouped together according to the continent or country in which they occur. Examples of the former include *Indian

classification of languages. A simplified family tree shows the relationships of the Indo-European languages, spoken by about half the world's population.

languages and European languages. The latter is represented by the similar but politically distinct languages *Swedish, *Danish, and *Norwegian. Such divisions do not always follow the genetic relationships that exist between languages. This relationship forms the basis for the second method of classification, which maps the historical development from one form of the language to another, as in the relation between Old English and modern *English. Further back both these and other languages can be traced to their common Indo-European ancestor. The third possible method of classification is on typological evidence, which depends on the grammatical structure of the language. The original three classes were devised by W. von Humboldt (1767–1835): analytic (or isolating), agglutinative, and inflecting languages. English is an analytic language. **Analytic languages** (e.g. English) show little variation in the forms of words but rely on strict word order to express grammatical relations. In **agglutinative languages** (e.g. Turkish) words have the capacity to be split up into individual components with separate grammatical roles.

In **inflecting languages** (e.g. Latin) words are characteristically built up of a root plus a component (morpheme) that represents several different grammatical categories.

Languedoc A former province in S France, on the Gulf of Lions. Its name derived from *langue d'oc*, the language of its inhabitants (see **PROVENÇAL**). It is now incorporated chiefly into the planning region of **Languedoc-Roussillon**. Area: 27 447 sq km (10 595 sq mi). Population (1995 est): 2 221 300.

langur A leaf-eating *Old World monkey of tropical Asia. The largest is the hanuman, or entellus langur (*Presbytis entellus*), 75 cm long with a 95-cm tail. The douc langur (*Pygathrix nemaeus*) of Vietnam is mainly grey with white forearms and is now an endangered species. Chief genera: *Presbytis* (14 species), *Rhinopithecus* (4 species).

lanolin A purified *wax extracted from wool. It is a mixture of cholesterol and other sterols, aliphatic alcohols, and esters. Because it is easily absorbed by the skin, lanolin is used as a

base for creams, soaps, and other skin preparations.

lantern fish A deepsea *bony fish belonging to the family *Myctophidae* (about 150 species). Lantern fish have large mouths and eyes and numerous light-producing organs on the head, underside, and base of the tail. Order: *Myctophiformes*.

lanthanides (or **rare-earth metals**) A group of 15 transition-metal elements, atomic numbers 57–71, which all have remarkably similar physical and chemical properties as a result of their electronic structures. They occur together in monazite and other minerals. They are used as catalysts in the petroleum industry, in iron alloys and permanent magnets, and in glass polishes. The **rare earths** are the oxides of these metals.

lanthanum (La) The first of the series of lanthanides. At no 57; at wt 138.9055; mp 918°C; bp 3464°C.

Lanzhou (Lan-chou or Lanchow) 36 01N 103 45E A city in N China, the capital of Gansu province at the confluence of the Yellow and Wei Rivers. It is an ancient trade and communications centre and is now an industrial centre. Population (1999 est): 1 429 673.

Laocoon In Greek legend, a Trojan priest of Apollo who warned against accepting the Greek gift of the *Trojan Horse. He and his two sons were killed by sea serpents sent by Apollo or, in some versions, Athena, and the Trojans then opened their gates to the wooden horse.

Laois (or **Laoighis** or **Leix**; former name: Queen's County) A county in the E central Republic of Ireland, in Leinster. Predominantly low lying with bogs and drained chiefly by the Rivers Barrow and Nore, it rises to mountains in the NW. Agriculture is the main occupation. Area: 1719 sq km (664 sq mi). Population (2002): 58 732. County town: Portlaoise.

Laos, People's Democratic Republic of A landlocked country in SE Asia, between Vietnam and Thailand. Except for the valley of the River Mekong along its western border, the country is mountainous and forested. Over half the population are Lao (descendants of the Thai) and there are minorities of Vietnamese, Chinese, and others. *Economy*: predominantly agricultural. The valuable mineral resources (tin, iron ore, gold, and copper) have yet to be fully exploited. There is little industry and Laos remains one of the world's poorest countries. *History*: the origins of the area as a nation

date from the 14th century. European contacts were initiated in the 17th century and in 1893 Laos became a French protectorate. After Japanese occupation (1941–45) the French returned and a constitutional monarchy was formed in 1947. In 1949 Laos became independent within the French Union. In 1953 civil war, which was to last for 20 years, broke out between the government (supported by the USA and by Thai mercenaries) and the communist-led Pathet Lao movement (supported by the North Vietnamese). In 1974 a provisional coalition government was formed but following the collapse of the South Vietnamese the Pathet Lao gained power (December 1975) and the People's Democratic Republic of Laos was formed. In 1991 a new constitution was published, reaffirming the Lao People's Democratic Party (the former Pathet Lao) as the sole legal party. In 1997 Laos was admitted to the Association of South-East Asian States (ASEAN). Recent years have seen border clashes with Thailand. Official language: Laotian. Currency: kip of 100 at. Area: 236 800 sq km (91 429 sq mi). Population (2003 est): 5 657 000. Capital: Vientiane.

Lao Zi (or **Lao Tzu**; ?6th century BC) The founder of *Taoism. A shadowy, possibly legendary, figure, he was eventually deified. His purpose, propounded mainly in books compiled about 300 years after his likely date of death, was to reach harmony with the *Tao* (way) by dwelling on the beauty of nature, being self-sufficient, and by desiring nothing.

La Paz 16 30S 68 00W The administrative capital of Bolivia, situated in the W of the country. At an altitude of 3577 m (11 735 ft), it is the world's highest capital. Founded by the Spanish in 1548, it became the seat of government in 1898. Population (2000 est, urban area): 1 000 899. See also SUCRE.

lapis lazuli A blue semiprecious stone composed mainly of the sulphur-rich mineral lazurite. It is formed by the metamorphism of limestone. It often contains specks or threads of yellow iron pyrites. Lapis lazuli has been mined in Afghanistan for over 6000 years. The pigment ultramarine was formerly made by grinding up lapis lazuli.

Laplace, Pierre Simon, Marquis de (1749–1827) French mathematician and astronomer. Laplace worked with J. L. Lagrange (1736–1813) on the effects, known as perturbations, of the small gravitational forces that planets exert on each other. They deduced that the perturbations have a minimal effect, thus

proving the stability of the solar system. In the published account of their results, *Mécanique céleste* (1799–1825), Laplace speculated that the solar system was formed from a condensing rotating cloud of gas.

Lapland (or **Lappland**) A vast region in N Europe, inhabited by the *Lapps and extending across northern parts of Norway, Sweden, Finland, and into the extreme NW of Russia. Lying mainly within the Arctic Circle, it consists of tundra in the N, mountains in the W, and forests in the S; there are many lakes and rivers. For many centuries the Lapps were reduced to virtual slavery by their more powerful neighbours. Subsistence farming, fishing, trapping, and hunting are the principal occupations and reindeer are a particularly important source of income. There are rich deposits of iron ore in Swedish Lapland.

Lapps (or **Sami**) A people of N Scandinavia and the Kola peninsula of Russia. They speak a Finno-Ugric language, which differs from the related Finnish and *Estonian mainly in its sound system. There are three major Lapp dialects.

lapwing A Eurasian *plover, *Vanellus vanellus*, also called peewit and green plover. It occurs commonly on farmland, where it feeds on harmful insects. 28 cm long, it has a greenish-black and white plumage and a long crest.

larch A deciduous conifer of the genus *Larix* (10 species), native to the cooler regions of the N hemisphere. Larches have needles growing in bunches on short spurs and produce small woody cones. The common European larch (*L. decidua*), from the mountains of central Europe, is widely cultivated both for timber and ornament. It reaches a height of 40 m. The Japanese larch (*L. kaempferi*) is commonly grown on plantations. Family: *Pinaceae*.

Lares and Penates Roman household gods. The Lares were originally gods of cultivated land who were worshipped at crossroads and boundaries. The Penates were gods of the store-room. Together with the Manes, they were later worshipped in private homes as guardian spirits of the family, household, and state.

lark A slender long-winged songbird belonging to a family (*Alaudidae*; 75 species) found mainly in mudflats, marshes, grasslands, and deserts of the Old World and characterized by a beautiful song. Larks commonly have a brown or buff streaked plumage that often matches the local soil colour. They have long

slender bills and feed on seeds and insects. See also SKYLARK.

Larkin, Philip (1922–85) British poet and writer. The poetry in *The Less Deceived* (1955), *The Whitsun Weddings* (1964), and *High Windows* (1974) expresses a wry acceptance of life's limitations. His *Collected Poems* were published in 1988 and his *Selected Letters* in 1992.

Larne 1. A district in Northern Ireland, in Co Antrim. Area: 337 sq km (130 sq mi). Population (2001): 30 832. 2. 54°51'N 5°49'W A port in Northern Ireland, in Co Antrim at the entrance to Lough Larne. Larne is a tourist centre and has the shortest searoute between Ireland and Britain (Stranraer). Population (1991): 17 575.

La Rochefoucauld, François, Duc de (1613–80) French moralist. He was born into an ancient aristocratic family and played an active part in intrigues against Richelieu. Thereafter he lived in retirement, writing his *Mémoires* (1664) and compiling his celebrated *Maximes* (1665), a collection of cynical epigrammatic observations on human conduct.

larva The immature form of many animals, which hatches from the egg and often differs in appearance from the adult form. Larvae usually avoid competing for food, etc., with the adults by occupying a different habitat or adopting a different lifestyle. For example, adult barnacles, which are sessile, produce motile larvae, whose role is distribution of the species. Other larvae, such as caterpillars and maggots, are responsible for gathering food reserves for the production of a fully formed adult, whose primary function is to breed. See also TADPOLE.

Larwood, Harold (1904–95) British cricketer, who played for Nottinghamshire and England. Larwood was a fast bowler who was at the centre of the bodyline controversy during the 1932–33 tour of Australia.

larynx An organ, situated at the front of the neck above the windpipe (see TRACHEA), that contains the **vocal cords**. The larynx contains several cartilages (one of which—the thyroid cartilage—forms the Adam's apple) bound together by muscles and ligaments. Within are the two vocal cords: folds of tissue separated by a narrow slit (glottis). The vocal cords modify the flow of exhaled air through the glottis to produce the sounds of speech, song, etc.

La Scala (or **Teatro alla Scala**) The principal Italian opera house, opened in Milan in 1776. It is noted for its varied repertoire and attained

its highest reputation under Arturo *Toscanini, director 1898–1907 and 1921–31.

Lascaux Upper *Palaeolithic cave site in the Dordogne (France), discovered in 1940. Lascaux contains rock paintings and engravings of horses, oxen, red deer, and other animals, dating from about 18 000 BC. Deterioration of the paintings caused the cave to be closed again (1963).

Lasdun, Sir Denys (1914–2001) British architect, whose most important works are East Anglia University (1963) and, in London, the National Theatre (1968–76) and the School of African and Oriental Studies (1970–73).

laser (light amplification by stimulated emission of radiation) A device that produces a beam of high-intensity coherent monochromatic radiation (light, infrared, or ultraviolet). Stimulated emission is the emission of a photon when an atomic electron falls from a higher energy level to a lower level as a result of being stimulated by another photon of the same frequency. In the laser large numbers of electrons are "pumped" into a higher energy level, an effect called population inversion, and then stimulated to produce a high-intensity

beam. Laser beams have been produced from solids, liquids, and gases. The simplest type is the ruby laser, consisting of a cylinder of ruby, silvered at one end and partially silvered at the other. A flash lamp is used to excite chromium ions in the ruby to a high energy level. When the ions fall back to their ground state photons are emitted. These photons collide with other excited ions producing radiation of the same wavelength (monochromatic) and the same phase (coherent), which is reflected up and down the ruby crystal and emerges as a narrow beam from the partially silvered end. Lasers are used in surgery, in *holography, and in compact disc players.

Las Palmas 28 08N 15 27W The largest city in the Canary Islands, the capital of Las Palmas province in Gran Canaria. It is a popular resort. Population (1998 est): 352 641.

La Spezia 44 07N 9 48E A port and resort in Italy, in Liguria on the Gulf of Spezia. It is a major naval base, with the largest harbour in Italy. Population (1992): 100 458.

Lassa fever A severe virus disease occurring in West Africa and first described in 1969 in Lassa, a village in Nigeria. It is a rare and often fatal disease that is transmitted to man by certain species of rat.

Las Vegas 36 10N 115 12W A city in the USA, in SE Nevada. Founded in 1855, it grew rapidly after construction of the nearby Hoover Dam. It is famous for its nightclubs and the Strip (a row of luxury hotels and gambling casinos). Population (2000): 478 434.

La Tène The second phase of the European Iron Age, succeeding Hallstatt from the 5th century BC. Named after the site at La Tène (Switzerland), this recognizably Celtic culture spread throughout Europe, coming into contact with the civilizations of Greece and Rome. Aristocratic chariot burials replaced wagon burials and the geometric patterns of Hallstatt metalwork were superseded by the intricate curvilinear designs of Celtic art. By the 1st century BC Roman expansionism effectively ended coherent La Tène culture. *See also* CELTS.

latent heat The amount of heat absorbed or released by a substance when it undergoes a change of state. For example, a liquid absorbs heat (**latent heat of vaporization**) from its surroundings on evaporation, since energy is needed to overcome the forces of attraction between the molecules as the liquid expands into a gas. Similarly a solid absorbs heat (**latent heat of fusion**) when it melts. The heat absorbed or

laser. In the solid-state ruby laser, chromium ions are excited by an intense flash of light and then stimulated by weak light of one wavelength to emit a pulse of photons. In the helium-neon gas laser, a continuous laser beam is produced from an electrical discharge through low-pressure gas.

The latitude of P is given by the angle α . In this case it would be α° N. The latitude of R is β° S.

The longitude of P is given by the angle x . In this case it would be x° W. R has a longitude y° E.

latitude and longitude

released per unit mass of substance is called the **specific latent heat**.

Lateran Councils Five ecumenical councils of the Roman Catholic Church convened in the Lateran Palace, Rome, in 1123, 1139, 1179, 1215, and 1512–17. The council of 1215, attended by most major European ecclesiastical and secular powers, proclaimed the fifth Crusade (1217–21) and was enormously influential in its formulations of doctrine and Church organization and law.

Lateran Treaty (1929) An agreement between the Italian government of Mussolini and the Vatican. The Vatican City state was created and the papacy abandoned its claims to the former *papal states.

Latin America The countries of Central and South America in which Romance languages are spoken: mostly Spanish, but also Portuguese and in some areas French and French-derived Creole languages. The populations are mostly mestizo (mixed Indian-European) with minorities of pure Indian or European descent. Brazil and the Caribbean islands have large groups of African origin.

Latin language An Italic Indo-European language, the ancestor of modern Romance languages. First spoken on the plain of Latium near Rome, Latin spread throughout the Mediterranean world as Roman power expanded. An inflected and syntactically complex language, written Latin developed contemporaneously with conversational Latin, although the latter, with its freer syntax and vocabulary, remained less static than the formal language.

Colloquial Vulgar Latin used prepositions and conjunctions freely to replace inflected forms and had a simpler word order; it became the Latin of the provinces, contributing to the early development of the Romance languages. As the western Roman Empire's official language, Latin was used in W Europe for religious, literary, and scholarly works until the middle ages.

latitude and longitude Imaginary lines on the earth's surface, enabling any point to be defined in terms of two angles. **Parallels of latitude** are circles drawn round the earth parallel to the equator; their diameters diminish as they approach the Poles. These parallels are specified by the angle subtended at the centre of the earth by the arc formed between a point on the parallel and the equator. All points on the equator therefore have a latitude of 0° , while the North Pole has a latitude of 90° N and the South Pole of 90° S. Parallels of latitude 1° apart are separated on the earth's surface by about 100 km (63 mi).

Meridians of longitude are half great circles passing through both Poles; they cross parallels of latitude at right angles. In 1884 the meridian through Greenwich, near London, was selected as the prime meridian and given the designation 0° . Other meridians are defined by the angle between the plane of the meridian and the plane of the prime meridian, specifying whether it is E or W of the prime meridian. At the equator meridians 1° apart are separated by about 112 km (70 mi).

latitudinarianism An attitude originating with certain 17th-century Anglican clergymen,

who deprecated sectarian squabbles over Church government and forms of ritual and considered such matters unimportant in comparison with personal piety and practical morality. Between the 1690s and the rise of the *Oxford Movement in the 1830s latitudinarianism was the predominant tendency in the Church of England.

Latter-Day Saints, Church of Jesus Christ of *See* MORMONS.

Latvia, Republic of A republic in NE Europe, on the Baltic Sea. It is a fertile lowland with extensive forests. Latvians, who comprise approximately 52% of the population, are mainly Lutheran Christians. *Economy:* industries include shipbuilding, engineering, chemicals, and textiles. Fishing plays an important part in the economy and tourism is being developed. *History:* the Latvians were conquered by the Livonian Knights (a German order of knighthood) in the 13th century, passing to Poland in the 16th century, to Sweden in the 17th century, and to Russia in the 18th century. Latvia gained independence in 1918, which was recognized by Soviet Russia in 1920. In 1940 it was incorporated into the Soviet Union as an SSR. It was occupied by Germany in World War II. Independence from the Soviet Union was achieved in 1991. Since independence the main issue has been the status of the large (48%) Russian minority. The draconian citizenship law of 1991, which stripped ethnic Russians of voting and other rights, was subsequently relaxed (1994 and 1998). A centre-right coalition was elected in 2002 but collapsed in 2004; the current government is a left-of-centre coalition under Aigars Kalvitis. Latvia joined the EU and NATO in 2004. Official language: Latvian. Currency: lats of 100 santimes. Area: 63 700 sq km (25 590 sq mi). Population (2007 est): 2 259 810. Capital: Riga.

Latvian A language belonging to the E division of the Baltic languages division of the Indo-European family, spoken by about two million Latvians. Most live in Latvia, where Latvian is the official language. Also known as Lettish, it is closely related to *Lithuanian. It is written in a Latin alphabet.

Laud, William (1573–1645) Anglican churchman, with the Earl of Strafford (1593–1641) the chief adviser to Charles I immediately before the *Civil War. Appointed Archbishop of Canterbury (1633–45), he supported Charles I's personal rule and his attempt to enforce liturgical uniformity. His pressure on the Scots to accept the Book of Common Prayer led to the Bishops'

Wars and paved the way for the Civil War and his own downfall. He was impeached for high treason by the Long Parliament in 1640 and executed.

Lauder, Sir Harry (Hugh MacLennan; 1870–1950) Scots singer and famous music-hall comedian. His most famous songs included 'I Love a Lassie' and 'Roamin' in the Gloamin'.

Laughton, Charles (1899–1962) British actor. His international reputation was based on his numerous films, which included *The Private Life of Henry VIII* (1933), *Mutiny on the Bounty* (1935), and *Rembrandt* (1936).

Launceston 41 25S 147 07E A city and port in Australia, in N Tasmania situated at the confluence of the North and South Esk Rivers. Population (2006 est): 103 200.

Laurasia The supercontinent of the N hemisphere that is believed to have existed prior to 200 million years ago, when the drift of the continents to their present positions began. It probably consisted of Greenland, Europe, Asia (excluding India), and North America. *See also* GONDWANALAND.

laurel One of several unrelated aromatic shrubs or small trees with attractive evergreen leaves. The so-called true laurels (genus *Laurus*) include the *bay tree. Other laurels include the ornamental *cherry laurel (*Prunus laurascerasus*), the spotted laurels (genus *Aucuba*; family Cornaceae), and the mountain laurel (*Kalmia latifolia*; family Ericaceae). The spurge laurel is a species of *Daphne*.

Laurel and Hardy US film comedians. **Stan Laurel** (Arthur Stanley Jefferson; 1890–1965), the thin member of the team and originator of the gags, was born in Britain. He joined with **Oliver Hardy** (1892–1957), who played the fat partner, in 1926. They made numerous films in the 1920s and 1930s, including *The Music Box* (1932) and *Way Out West* (1937).

Lausanne 46 32N 6 39E A city and resort in W Switzerland, on the N shore of Lake Geneva. A cultural and intellectual centre, Lausanne is the seat of the Swiss Supreme Court and the headquarters of the International Olympic Committee. Population (2007 est): 128 302.

Lausanne, Conferences of 1. (1922–23) A conference between the Allied Powers and Turkey that modified the post-World War I Treaty of Sèvres (1920): Turkey regained territory from Greece and the Allies recognized Turkey's right to control its own affairs. 2. (1932) A conference between the UK, France,

Belgium, and Italy, which ended the payment by Germany of World War I reparations.

lava Magma that has reached the earth's surface through volcanic vents and from which the volatile material has escaped, either molten or cooled and solidified. Basic lavas tend to be liquid and flow over large areas, while acid lavas are viscous.

Laval, Pierre (1883–1945) French statesman. A socialist, Laval was prime minister in 1930, 1931, 1932, 1935, and 1936. After the collapse of France (1940) in World War II, he joined Marshal Pétain's Vichy government, became increasingly powerful, and with the support of Germany gained the virtual leadership of Vichy in 1942. After the liberation of France (1944) he was tried and executed for collaboration.

lavender A small shrub of the genus *Lavandula* (about 8 species), especially *L. vera* and *L. angustifolia* (or *L. officinalis*). 30–80 cm high, it has aromatic narrow grey-green leaves and long-stemmed spikes of small mauve or violet flowers. Native to the Mediterranean area, it is widely cultivated for its flowers, which retain their fragrance when dried, and for its oil, which is used in perfumes. Family: *Labiatae*.

Lavoisier, Antoine Laurent (1743–94) French chemist. He became wealthy by investing in a private tax-collecting company. This enabled him to build a large laboratory where he discovered (1778) that air consists of a mixture of two gases, which he called oxygen and nitrogen. He then went on to study the role of oxygen in combustion, finally disposing of the *phlogiston theory. Lavoisier also discovered the law of conservation of mass and devised the modern method of naming compounds. He was arrested and guillotined during the French Revolution.

law The body of rules that govern and regulate the relationship between one state and another (see INTERNATIONAL LAW), a state and its citizens (public law), and one person and another when the state is not directly involved (see CIVIL LAW). Two great legal systems are dominant in the western world: *Roman law, as used in most countries of continental Europe and South America, and English law. The laws of England, which are enforceable by judicial process, can be divided into: (1) the *common law, based on judicial decisions, as opposed to law enacted by parliament; (2) *equity, the principles originally applied by the Court of *Chancery; and (3) statute law, embodied in specific Acts of Parliament. See also COURTS OF LAW; CRIMINAL LAW.

bodied in specific Acts of Parliament. See also COURTS OF LAW; CRIMINAL LAW.

Law, (Andrew) Bonar (1858–1923) British statesman; Conservative prime minister (1922–23). He fostered the 1916 revolt against Asquith's coalition and in the subsequent coalition led by *Lloyd George became chancellor of the exchequer. He became prime minister after Lloyd George's resignation.

Lawrence, D(avid) H(erbert) (1885–1930) British novelist, poet, and painter. He published his first novel, *The White Peacock*, in 1911. The semiautobiographical *Sons and Lovers* (1913) established his reputation. In 1912 he eloped with Frieda Weekley. Their extensive travels provided material for the novels *Kangaroo* (1923), reflecting a stay in Australia, and *The Plumed Serpent* (1926), set in Mexico. Lawrence explored marital and sexual relations in *The Rainbow* (1915) and *Women in Love* (1921); he treated this subject in more explicit detail in *Lady Chatterley's Lover* (privately printed, Florence, 1928). The novel was not published in Britain in its unexpurgated form until 1961, after a long trial.

Lawrence, Ernest Orlando (1901–58) US physicist, who in 1930 designed and built the first *cyclotron, a type of particle *accelerator. For his invention he received the Nobel Prize in 1939.

Lawrence, T(homas) E(dward) (1888–1935) British soldier and writer, known as Lawrence of Arabia. After the outbreak of World War I he worked for army intelligence in Egypt. In 1916 he joined the Arab revolt against the Turks, leading the Arab guerrillas triumphantly into Damascus in October 1918. His exploits, which brought him almost legendary fame, were recounted in his book *The Seven Pillars of Wisdom* (subscription edition, 1926).

lawrencium (Lr) A synthetic transuranic element discovered in 1961 and named after E. O. *Lawrence. At no 103; at wt (262).

Lawson, Nigel, Baron (1932–) British Conservative politician; chancellor of the exchequer (1983–89) under Margaret *Thatcher. He became an MP in 1974 and was secretary of state for energy (1981–83). His daughter, **Nigella Lawson** (1959–), is a cookery writer and broadcaster.

laxatives (or **purgatives**) Drugs used to treat constipation. Osmotic laxatives, such as magnesium sulphate (Epsom salts), mix with the faeces and cause them to retain water,

which increases their bulk and makes them easier to pass. Stimulant laxatives, such as senna, stimulate the bowel directly. Bulk-forming laxatives, which include ispaghula husk and bran, both lubricate the faeces and increase their bulk.

lead (Pb) A dense soft bluish-grey metal, occurring in nature chiefly as the sulphide *galena (PbS). The metal is very resistant to corrosion and is used in plumbing (although it is now being replaced by plastics). It is also used to shield X-rays, as ammunition, in crystal glass (as lead oxide), and as an antiknock (as *tetraethyl lead; $C_2H_5)_4Pb$). Most lead salts are insoluble. At no 82; at wt 207.2; mp 327.502°C; bp 1750°C.

Leadbelly (Huddie Ledbetter; 1888–1949) US Black folksinger and songwriter, noted for his blues and work songs.

leaf An outgrowth from the stem of a plant in which most of the green pigment chlorophyll, used for photosynthesis, is concentrated. Foliage leaves have a large surface area for absorbing light, and they contain pores (stomata) through which exchange of gases and water occurs. They may be simple or compound (composed of a number of leaflets) and with a branching vein system (in *dicotyledons) or parallel veins (in monocotyledons). The spines

of cacti and the thorns of gorse are modified leaves.

leaf beetle A beetle belonging to a large family (*Chrysomelidae*; 26 000 species) occurring in tropical and temperate regions. Leaf beetles are generally small and brightly coloured. Both the adults and larvae feed on leaves and flowers. Leaf beetles have a wide range of habits; many are serious pests, including the *Colorado potato beetle.

leafcutter bee A solitary *bee, about 10 mm long, belonging to a genus (*Megachile*) of the family *Megachilidae*. It nests in rotten wood and soil, lining the chamber and egg cells with pieces of leaf cut with its strong jaws.

leaf insect A plant-eating insect belonging to the family *Phyllidae*. It is excellently camouflaged against foliage, having a broad leaflike body and wings and leaflike flaps on the legs.

League of Nations An international organization created (1920) after World War I with the purpose of achieving world peace. The USA's failure to ratify the Treaty of *Versailles meant its exclusion from the League. The League failed to deal effectively with the aggression during the 1930s of Japan in China, Italy in Ethiopia (in which the League's use of *sanctions was ineffectual), and Germany, which withdrew from the League in 1933. The UN superseded the League after World War II.

Leakey, Louis Seymour Bazett (1903–72) Kenyan palaeontologist. His work at *Olduvai Gorge uncovered evidence for man's early evolution, notably the *Zinjanthropus* skull dating from 1.75 million years ago. In 1974 his wife **Mary Leakey** (1913–96) unearthed hominid remains at Laetoli (N Tanzania) dating back 3.75 million years. Their son **Richard Leakey** (1944–) made fossil finds around Lake Turkana (N Kenya) and directed Kenya's Wildlife Service (1990–94). In 1995 he formed a new political party to oppose the rule of President Moi.

Lean, Sir David (1908–91) British film director. His early films in collaboration with Noel Coward included *In Which we Serve* (1942) and *Brief Encounter* (1946). Adaptations of Dickens's *Great Expectations* (1946) and *Oliver Twist* (1947) were followed by the classic *The Bridge on the River Kwai* (1957). Later films included *Lawrence of Arabia* (1962), *Dr Zhivago* (1965), and *A Passage to India* (1984).

Leander See HERO AND LEANDER.

Lear, Edward (1812–88) British artist and

leaf. The type and arrangement of the leaves are characteristic for a particular species of plant. For example, the pear has alternate ovate leaves; the horse chestnut has opposite palmate leaves.

poet, noted for his books of nonsense verse for children, beginning with *The Book of Nonsense* (1846). He also popularized the limerick.

leather Specially treated animal skin, chiefly that of cows, sheep, goats, and pigs. The skin is stripped of the fleshy inner and hairy outer layers and then tanned by steeping it in tannin, a preservative, or using chromium salts. Various finishing processes include rubbing to bring out the grain, as in Morocco leather (goatskin); dyeing; oiling; lacquering for patent leather; and sueding to raise a nap. Leather is strong, flexible, waterproof, and permeable to air. Uses range from industrial parts and saddles to clothing and bookbindings.

leatherback turtle The largest living turtle, *Dermochelys coriacea*, found worldwide. Up to 2.1 m long with a weight of 540 kg, it has no horny external shell and its bones are buried in a ridged leathery brown-black skin. It is a strong swimmer and feeds on marine invertebrates, especially large jellyfish.

Lebanon A country in the Middle East, on the E coast of the Mediterranean Sea. It contains two mountain ranges extending N-S separated by the Beqaa Valley. The population is mixed, having Arab, Phoenician, Crusader, and Greek origins. Roughly half are Christian and half Muslim; political and official posts are rigorously divided between the two religions. *Economy:* agriculture, industry, and infrastructure suffered badly during the civil war of 1975-76 and the subsequent violence (1975-92). They are now being rebuilt as part of a long-term reconstruction plan, financed largely by foreign loans. *History:* Lebanon was an early convert to Christianity but in the 7th century broke away from the rest of the Church and was invaded by Muslims. Lebanon was held by the Mamelukes during the 14th and 15th centuries and by the Ottoman Turks from the early 16th century to 1918. France, having invaded Lebanon in 1861 to stop the massacres of Christians by Druses, was given the mandate over Greater Lebanon after World War I. Lebanon became officially independent in 1941, although France retained control until 1945. Lebanon did not fight in the 1967 and 1973 Arab-Israeli Wars, but Israel made raids across the border to eliminate Palestinian guerrillas. In 1975, civil war broke out between Christians and Muslims; after 19 months this was brought to an end by a Syrian-backed Arab Deterrent Force but unrest continued, especially in the S. In 1982 Israel invaded S Lebanon, clashing with Syrian forces in the Beqaa Valley and forcing the Palestine Liberation Organization to leave.

Israel withdrew its forces from all but the S border region in 1985 leaving a United Nations force to maintain peace between the Israeli-armed Christians, the Muslims, Druses, and Palestinian guerrillas. In 1987 Syrian troops moved into Beirut but violence continued. Indecisive presidential elections in 1988 resulted in the establishment of rival Christian and Muslim governments. A new Muslim president, René Mouawad, was elected in 1989 but then assassinated. Christian opposition continued under Gen Michel Aoun until he was forced into exile in 1990. Relative peace was established in 1991, when Lebanon agreed to Syria assuming increased responsibility for its affairs. In 1996 hostile activity from Hizbollah fighters provoked an Israeli missile campaign. A concerted Hizbollah offensive forced Israel to withdraw all its forces from S Lebanon in 2000. The assassination of the former prime minister Rafik Hariri in Feb 2005 led to protests against Syrian interference in the country and the withdrawal of all Syrian troops. In July 2006 Israel launched fierce air and ground attacks on Lebanon in a failed attempt to destroy Hizbollah: over 1000 civilians were killed. Official language: Arabic. Currency: Lebanese pound of 100 piastres. Area: 10 452 sq km (4036 sq mi). Population (2007 est): 3 925 502. Capital: Beirut.

Le Carré, John (David Cornwell; 1931-) British novelist. He served in the foreign service in Germany (1961-64). His novels *The Spy Who Came in from the Cold* (1963), *Tinker, Tailor, Soldier, Spy* (1974), and *Absolute Friends* (2003) are realistic studies of the world of espionage.

Le Corbusier (Charles-Édouard Jeanneret; 1887-1965) French architect, born in Switzerland, whose buildings and writings have been extremely influential. Until World War II he pioneered a rational form of design, especially with his villas at Garches (1927) and Poissy (1929). Afterwards he became more individual, for example at his chapel at Ronchamp (1950). He was also concerned with town planning (e.g. *Chandigarh, 1950s) and large-scale housing projects (L'Unité, Marseilles, 1945).

Leda In Greek myth, the wife of Tyndareus, King of Sparta, and mother, either by her husband or by Zeus, of Clytemnestra, Helen, and Castor and Pollux. Helen was born from an egg after Zeus had visited Leda as a swan.

Lee, Robert E(dward) (1807-70) US Confederate commander in the Civil War. See CIVIL WAR, US.

leech A carnivorous aquatic *annelid worm of the class *Hirudinea* (about 300 species).

Leeches inhabit fresh and salt water throughout the world and occur in wet soil and cloud forest. They have one sucker around the mouth and a second at the rear. Leeches can move by "looping," using their suckers. Most feed on the blood of animals and humans, using piercing mouthparts.

Leeds 1. 53°50'N 1°35'W A city in N England, in Leeds unitary authority, West Yorkshire, on the River Aire. Its traditional industries are clothing, textiles, printing, engineering, chemicals, and leather goods but most employment is now in the service sector. Population (1991): 424 194. **2.** A unitary authority in N England, in West Yorkshire. Area: 562 sq km (217 sq mi). Population (2001): 715 404.

leek A hardy biennial plant, *Allium porrum*, native to SW Asia and E Mediterranean regions and widely grown in Europe as a vegetable. The bulb is hardly differentiated from the stem, which bears long broad leaves. The stems and leaves are eaten in the first year, before flowering. The leek is the emblem of Wales.

Leeuwenhoek, Antonie van (1632–1723) Dutch scientist, noted for his microscopic studies of living organisms. He was the first to describe protozoa, bacteria, and spermatozoa and he also made observations of yeasts, red blood cells, and blood capillaries. Leeuwenhoek also traced the life histories of various animals, including the flea, ant, and weevil.

Leeward Islands 1. A West Indian group of islands in the Lesser Antilles, in the Caribbean Sea extending SE from Puerto Rico to the Windward Islands. **2.** A former British colony in the West Indies (1871–1956), comprising Antigua, St Kitts-Nevis-Anguilla, Montserrat, and the British Virgin Islands. **3.** A group of islands in French Polynesia, in the Society Islands in the S Pacific Ocean.

legionnaires' disease An acute severe pneumonia, caused by the bacterium *Legionella pneumophila*, first described in 1976 after an outbreak among US legionnaires in Philadelphia. Over 30 people died in Stafford, England, as a result of an outbreak in 1985. The disease is treated with the antibiotic erythromycin. The route of transmission is often air-conditioning systems.

Legion of Honour (French name: *légion d'Honneur*) A French order of knighthood, established by Napoleon in 1802. It has five ranks, to which foreigners are admitted. Its grand master is the president of France.

Leguminosae (or Fabaceae) A worldwide

family of herbs, shrubs, and trees (about 7000 species), which includes many important crop plants, such as peas, beans, clovers, and alfalfa. They all have compound leaves and the fruit is a pod containing a single row of seeds. Both pods and seeds are rich in protein. Most species possess root nodules that contain nitrogen-fixing bacteria and leguminous crops replenish nitrogen in the soil (see NITROGEN CYCLE).

Lehár, Franz (Ferencz L.; 1870–1948) Hungarian composer, noted for the composition of operettas, of which *The Merry Widow* (1905) was his greatest success.

Le Havre 49°30'N 0°06'E A port in N France, in the Seine-Maritime department on the English Channel at the mouth of the River Seine. There is a transatlantic cargo service and a car-ferry service to England. Population (1999): 190 651.

Leibniz, Gottfried Wilhelm (1646–1716) German philosopher and mathematician. He put forward a coherent philosophy, which is summarized in his two philosophical books, *New Essays on the Human Understanding* (c.1705) and *Theodicy* (1710), and numerous essays. Leibniz' best-known doctrine is that the universe consists of an infinite set of independent substances (monads) in each of which a life force is present. In creating the world, God took account of the wishes of monads and this led to a rational harmony in the "best of all possible worlds." His claim to have invented the calculus was disputed by *Newton.

Leicester 1. (Latin name: *Ratae Coritanorum*) 52°38'N 1°05'W A city in central England, in Leicester unitary authority, the administrative centre of Leicestershire. Lying on the Fosse Way, Leicester has Roman remains and the ruins of a Norman castle. The principal industries are hosiery, knitwear, footwear, engineering, and electronics. The National Space Centre, which opened in 2001, is now Leicester's leading tourist attraction. Population (1994 est): 293 400. **2.** A unitary authority in central England, in Leicestershire. Area: 73 sq km (28 sq mi). Population (2001): 279 923.

Leicester, Robert Dudley, Earl of (c.1532–88) English courtier; the fifth son of the Duke of *Northumberland. Elizabeth I made him Master of the Horse (1558) and then a privy councillor (1559). It was rumoured that he might marry the queen after the death of his wife Amy Robsart (c.1532–60). His incompetent command (1585–87) of an English force in support of the Revolt of the Netherlands against Spain led to his recall but he retained Elizabeth's favour until his death.

Leicestershire A county in the East Midlands of England. In 1974 it absorbed the small historic county of Rutland: this became an independent unitary authority in 1997, as did Leicester city. The River Soar, flowing N, separates Charnwood Forest from the uplands of the E. Its fertile soil makes it an important agricultural county. Hosiery is the staple industry. Area (excluding unitary authorities): 2084 sq km (804 sq mi). Population (2001, excluding unitary authorities): 609 579. Administrative centre: Leicester.

Leiden (English name: Leyden) 52 10N 4 30E A city in the W Netherlands, in South Holland province. Its university was founded in 1575. During the 17th and 18th centuries it was an artistic and educational centre. Population (1999 est): 117 389.

Leif Eriksson (11th century) Icelandic explorer; the son of Eric the Red (late 10th century). He was converted to Christianity and on his way to promote the faith in Greenland, missed his course and became the first European to reach America (perhaps Newfoundland or Nova Scotia). His story is told in Icelandic sagas.

Leigh, Vivien (Vivien Hartley; 1913–67) British actress. In the theatre, she played many leading Shakespearean roles, frequently appearing with Laurence Olivier, her husband from 1937 to 1960. Her films include *Gone with the Wind* (1939) and *A Streetcar Named Desire* (1951).

Leinster A province in the SE Republic of Ireland. It consists of the counties of Carlow, Dublin, Kildare, Kilkenny, Laois, Longford, Louth, Meath, Offaly, Westmeath, Wexford, and Wicklow. It incorporates the ancient kingdoms of Meath and Leinster. Area: 19 632 sq km (7580 sq mi). Population (2002): 2 105 449.

Leipzig 51 20N 12 21E A city in E Germany, near the confluence of the Rivers Elster, Pleisse, and Parthe. Leipzig is the country's second largest city and a major industrial and commercial centre. International trade fairs are held here and it is a musical centre. The university was founded in 1409. Population (1999 est): 490 000.

Leitrim A county in the NW Republic of Ireland, in Connacht bordering on Donegal Bay. Mainly hilly, descending to lowlands in the S, it contains several lakes, notably Lough Allen. Area: 1525 sq km (589 sq mi). Population (2002): 25 815. County town: Carrick-on-Shannon.

Lely, Sir Peter (Pieter van der Faes; 1618–80)

Portrait painter, born in Germany of Dutch parents. He settled in London (1641), where he was patronized by Charles I and later Cromwell. As court painter to Charles II from 1661, he produced his best-known works, including his *Windsor Beauties* (Hampton Court).

Le Mans 48 00N 0 12E A city in NW France, the capital of the Sarthe department. Its many historical buildings include the cathedral (11th–15th centuries). The Le Mans 24 Hours, a sports-car race, is held here annually. Population (1999): 146 405.

lemming A *rodent belonging to the subfamily *Microtini*, found in northern regions of Asia, America, and Europe. They are 7.5–15 cm long and have long thick fur. When their food of grass, berries, and roots is abundant, they breed at a great rate. When food is scarce they migrate southwards, often in large swarms crossing swamps, rivers, and other obstacles; they sometimes drown through exhaustion. Chief genera: *Dicrostonyx* (collared lemmings; 4 species), *Lemmus* (true lemmings; 4 species). Family: *Cricetidae*.

lemon A small tree or shrub, *Citrus limon*, probably native to the E Mediterranean but widely cultivated in subtropical climates for its fruit. Its fragrant white flowers produce oval fruits with thick yellow skin and acid-tasting pulp rich in vitamin C. The juice is used in cookery and in drinks. Family: *Rutaceae*.

lemon sole A *flatfish, *Microstomus kitt*, found in the NE Atlantic and North Sea. Its upper side is red-brown or yellow-brown with light or dark marbling. It is an important food fish. Family: *Pleuronectidae*.

lemur A small *prosimian primate belonging to the family *Lemuridae* (16 species), found only in Madagascar and neighbouring islands. Lemurs are mostly arboreal and nocturnal and often live in groups. The ring-tailed lemur (*Lemur catta*) is 70–95 cm long including the tail (40–50 cm) and is mainly terrestrial. Dwarf lemurs (subfamily *Cheirogaleinae*) are only 25–50 cm long including the tail (12–25 cm).

Lena, River The longest river in Russia. Rising in S Siberia, W of Lake Baikal, it flows mainly NE to the Laptev Sea. Its large delta is frozen for about nine months of the year. Length: 4271 km (2653 mi).

Lenin, Vladimir Ilich (V.I. Ulyanov; 1870–1924) Russian revolutionary and first leader of communist Russia. In 1893 Lenin, a Marxist, joined a revolutionary group in St Petersburg, where he practised as a lawyer. He was impris-

oned in 1895 and exiled to Siberia in 1897. In 1902 he published *What Is to Be Done?*, in which he emphasized the role of the party in effecting revolution. This emphasis led to a split in the Russian Social Democratic Workers' Party between the *Bolsheviks under Lenin and the *Mensheviks. After the failure of the *Revolution of 1905, Lenin again went into exile, settling in Zurich in 1914, where he wrote *Imperialism, the Highest Stage of Capitalism* (1917). In April 1917, after the outbreak of the *Russian Revolution, Lenin returned to Russia. Calling for the transfer of power from the Provisional Government to the soviets (workers' councils), he was forced to flee to Finland. Lenin returned in October to lead the Bolshevik revolution, which overthrew the Provisional Government and established the ruling Soviet of People's Commissars under Lenin's chairmanship. He made peace with Germany and then led the revolutionaries to victory against the Whites in the civil war (1918–20). He founded (1919) the Third *International and initiated far-reaching social reforms. He also introduced the New Economic Policy (1921), which permitted a modicum of free enterprise. A series of strokes from 1922 led to his premature death.

The modified version of *Marxism adopted by Lenin is known as **Leninism** or **Marxist-Leninism**. According to this theory imperialism is an account of the final stage of capitalism, in which it dominates the entire world, decisive control resting with finance capital (banks) as opposed to industrial capital. Because of the worldwide nature of capitalism, socialist revolution becomes possible even in economically underdeveloped countries. In Lenin's theory the revolutionary party, the most conscious element of the proletariat, provides the leadership for the rest of the working class and the peasantry in overthrowing the capitalist class.

Leningrad See ST PETERSBURG.

Lenin Peak 39 21N 73 01E The highest mountain in Russia, in the Trans-Altaï range. Height: 7134 m (23 406 ft).

Lennon, John (1940–80) British rock musician, a member of the *Beatles. After the group disbanded, he recorded such albums as *Imagine* (1971) and *Walls and Bridges* (1974), often with his wife, the Japanese-born artist Yoko Ono (1933–). He was murdered by a deranged fan.

lens A piece of transparent material, usually glass, quartz, or plastic, used for directing and

focusing beams of light. The surfaces of a lens have a constant curvature; if both sides curve outwards at the middle the lens is called convex, if they curve inwards it is concave. The image formed by a lens may be real, in which case the rays converge to the image point (a converging lens), or virtual, in which the rays diverge from the image point (a diverging lens). The focal length of a lens is the distance from the lens at which a parallel beam of light is brought to a focus.

lens. The lines representing light rays show how a convex lens gives a real inverted image and how a concave lens gives an upright virtual image.

Lent The Christian period of fasting and penance preceding Easter. Beginning on *Ash Wednesday, the Lenten fast covers 40 days, in emulation of Christ's 40 days in the wilderness (Matthew 4.2). Since the Reformation the rules of fasting have been generally relaxed in both Roman Catholic and Protestant Churches.

lentil An annual herb, *Lens culinaris*, native to the Near East but widely cultivated. Each pod produces 1–2 flat round green or reddish seeds, which are rich in protein and can be dried and stored for use in soups, stews, etc. Family: *Leguminosae*.

Lenz's law The direction of an induced current in a conductor is such as to oppose the cause of the induction. For example, a current induced by a conductor cutting the lines of flux of a magnetic field would produce a magnetic field of its own, which would oppose the origi-

nal magnetic field. Named after Heinrich Lenz (1804–65).

Leonardo da Vinci (1452–1519) Italian artistic and scientific genius of the *Renaissance. He trained in Florence under *Verrocchio and in 1482 became painter, engineer, and designer to Duke Ludovico Sforza in Milan, where he painted the fresco of the *Last Supper* and the first version of the *Virgin of the Rocks*. His promised equestrian sculpture glorifying the Duke was never cast but the studies of horses for the project have survived. After the French invasion of Milan (1499), he returned to Florence, becoming military engineer and architect (1502) to Cesare *Borgia. Paintings in this period include *The Virgin and Child with St John the Baptist and St Anne* and the *Mona Lisa*. Some of his paintings were left unfinished and others, because of his experimental techniques, failed to survive. After working again in Milan (1506–13) and in Rome (1513–15), he was invited by Francis I to France (1516), where he died. His notebooks reveal his wide range of interests, including anatomy, botany, geology, hydraulics, and mechanics.

Leoncavallo, Ruggiero (1858–1919) Italian composer of operas. Only *I Pagliacci* (1892) has met with continuing success, although he composed over 15, including a trilogy on Italian historical subjects and, a year after Puccini, his own *La Bohème* (1897).

leopard A large spotted *cat, *Panthera pardus*, found throughout Africa and most of Asia. Leopards are slender, up to 2.1 m long including the 90-cm tail, having a yellow coat spotted with black rosettes. Colour variations, such as the *panther, sometimes occur. Leopards are solitary and nocturnal.

leopard lily A perennial herbaceous plant, *Belamcanda chinensis*, native to E Asia and widely planted as a garden ornamental. Growing over 1 m tall from an underground stem (rhizome), it has sword-shaped leaves, orange-spotted red flowers, and blackberry-like clusters of seeds. Family: *Iridaceae*.

leopard seal A solitary Antarctic *seal, *Hydrurga leptonyx*, of the pack ice. Leopard seals are fast agile hunters, feeding mainly on penguins. Grey, with dark spots and blotches, females grow to 3.7 m and males to 3.2 m. Family: *Phocidae*.

Leopold I (1790–1865) The first King of the Belgians (1831–65). He defended Belgium against William III of the Netherlands, who refused to recognize Belgian independence until

1838. A leading diplomat in Europe, at home he encouraged educational and economic reforms. He was briefly (1816–17) married to Charlotte (1796–1817), the daughter of George IV of Great Britain.

Leopold III (1901–83) King of the Belgians (1934–51). He surrendered to the Germans in *World War II, provoking opposition to his return to Belgium in 1945 and forcing his abdication in favour of his son Baudouin.

Lepanto, Battle of (7 October 1571) A naval battle off Lepanto, Greece, in which the Holy League routed the Ottoman navy, which was threatening to dominate the Mediterranean. The Christian force was commanded by John of Austria (1545–78). About 10 000 Christian galley slaves were freed.

leprosy A chronic disease, occurring almost entirely in tropical countries, caused by the bacterium *Mycobacterium leprae* (which is related to the tuberculosis bacillus). Leprosy is contracted only after close personal contact with an infected person. In the lepromatous form of the disease lumps appear on the skin, which—together with the nerves—becomes thickened and progressively destroyed, resulting in deformity. Tuberculoid leprosy usually produces only discoloured patches on the skin associated with loss of sensation in the affected areas. There are now potent antibiotics and sulphones (drugs related to the sulphonamides) available to cure the disease.

lepton A group of elementary particles, consisting of the *electron, *muon, tau particle, *neutrinos, and their antiparticles. They take part only in the weak and *electromagnetic interactions; together with quarks and photons they are thought to be the only truly elementary particles. See PARTICLE PHYSICS.

Lermontov, Mikhail (1814–41) Russian poet and novelist. His early Romantic poetry was greatly influenced by *Byron. As an army officer and an observer of high society he developed the cynical attitudes expressed in his novel *A Hero of Our Time* (1840).

Lerner, Alan Jay (1918–86) US lyricist and librettist, who collaborated with the composer Frederick *Loewe in the musicals *Brigadoon* (1947), *My Fair Lady* (1956), and *Camelot* (1960). Lerner also wrote the film scripts for *An American in Paris* (1951) and *Gigi* (1958).

lesbianism See HOMOSEXUALITY.

Lesbos (Modern Greek name: Lésvos) A Greek island in the E Aegean Sea, situated close to the mainland of Turkey. Settled about 1000 BC, it is

associated with the development of Greek lyric poetry (especially through the work of Alcaeus and Sappho). Lesbos was a member of the Delian League. Area: 1630 sq km (629 sq mi). Population (1991): 105 082.

Lesotho, Kingdom of (name until 1966: Basutoland) A small mountainous country in SE Africa, enclosed by South Africa. Most of the inhabitants are *Sotho. *Economy:* chiefly agricultural; maize, wheat, and sorghum are the main crops. Diamonds, wool, and mohair are exported. *History:* in 1868, following warfare with the Orange Free State, Basutoland came under British protection; direct British administration was imposed in 1884. In 1910 it was placed under the authority of the British High Commission in South Africa and in 1966 became an independent kingdom within the Commonwealth. After a military coup in 1986 Gen Justin Lekhanya came to power. Civilian rule was restored in 1993. Moshoeshoe II was reinstated as king in 1995 and was succeeded by Letsie III in 1996. In 1998 allegations that the general election of that year had been fraudulent led to widespread unrest and military intervention by South Africa. The electoral system was reformed for the 2002 elections, which were agreed to be fair. Official languages: Sesotho and English. Currency: loti of 100 lisente. Area: 30 340 sq km (11 716 sq mi). Population (2003): 1 802 000. Capital: Maseru.

Lesseps, Ferdinand de (1805–94) French diplomat, who supervised the construction of the Suez Canal, which was completed in 1869. A subsequent project to construct the Panama Canal ended in disaster when Lesseps was prosecuted for embezzling funds.

Lesser Antilles (former name: Caribbees) A West Indian group of islands, comprising a chain extending from Puerto Rico to the N coast of Venezuela. They include the Leeward and Windward Islands, Barbados, Trinidad and Tobago, and the Netherlands Antilles.

Lessing, Doris (1919–) British novelist. Born in Iran and brought up in Rhodesia, she came to England in 1949. Political and social themes predominate in her fiction, notably in the sequence of five novels entitled *Children of Violence* (1952–69) and *The Golden Notebook* (1962). Later works include *The Good Terrorist* (1985), *The Fifth Child* (1988), and *The Sweetest Dream* (2001), as well as two volumes of autobiography.

Leto In Greek mythology, a daughter of the *Titans loved by Zeus. She gave birth to Apollo and Artemis.

lettuce An annual herb, *Lactuca sativa*, probably from the Near East and widely cultivated as a salad plant. It has a tight rosette of juicy leaves, rich in vitamin A, and is usually eaten fresh. Cos lettuce has long crisp leaves and oval heads while cabbage lettuce has round heads and often curly leaves. Family: *Compositae*.

leucocyte (or **white blood cell**) A colourless blood cell, up to 0.02 mm in diameter, of which there are normally 4000–11 000 per cubic millimetre of blood. There are several kinds, all involved in the body's defence mechanisms. Granulocytes and monocytes ingest and feed on bacteria and other microorganisms that cause infection (see also PHAGOCYTE). The lymphocytes are involved with the production of *antibodies.

leucotomy The surgical operation of interrupting the course of white nerve fibres within the brain. It is performed to relieve uncontrollable pain or emotional tension in very severe and intractable psychiatric illnesses, such as severe depression. The original form of the operation—prefrontal leucotomy (or lobotomy)—had serious complications. Modern procedures make selective lesions and side effects are uncommon.

leukaemia A disease in which the blood contains an abnormally large number of white blood cells (see LEUCOCYTE) that do not function properly. Leukaemia is a type of cancer of the blood-forming tissues. Leukaemias may be acute or chronic, depending on the rate of progression of the disease. They are also classified according to the type of white cell affected. For example, acute lymphocytic leukaemia (affecting the lymphocytes) occurs most commonly in children and young adults; it can now often be controlled by means of radiotherapy or *cytotoxic drugs. Chronic leukaemias occur more often in old people and may not need any treatment.

level An instrument (also called a spirit level) for indicating whether or not a surface is level. It consists of one or more curved or straight glass tubes filled with liquid and containing an air bubble. The level, and therefore the surface on which it rests, is horizontal when the bubble is in the centre of the tube.

Levellers An extremist English Puritan sect, active 1647–49. Led by the pamphleteer John Lilburne (c.1614–57), they campaigned for a written constitution, radical extension of the franchise, and abolition of the monarchy and of other social distinctions (hence their name).

Leven, Loch A lake in Scotland, in SE Tayside Region. It has seven islands, on one of which Mary, Queen of Scots, was imprisoned (1567–68). Length: 6 km (3.7 mi). Width: 4 km (2.5 mi).

lever A simple machine consisting of a bar pivoted at a point on its length (the fulcrum) to move the point of application of a force and to obtain a mechanical advantage. The three orders of lever are shown in the illustration.

lever of first order

lever of second order

lever of third order

lever. In a first-order lever the fulcrum lies between the load and the effort (as in a pair of scissors). In a second-order lever the load falls between the fulcrum and the effort (as in a wheelbarrow). In a third-order lever the effort lies between the fulcrum and the load (as in a mechanical digger).

Levi, Primo (1919–87) Italian novelist and poet. A Jew, he survived confinement in Auschwitz and described his experiences in *If This Is a Man* (1947). Other works include *The Periodic Table* (1975) and *If Not Now, When?* (1982).

Lévi-Strauss, Claude (1908–) French an-

thropologist, the founder of structural anthropology (see **STRUCTURALISM**). His works include *The Elementary Structures of Kinship* (1949), *Structural Anthropology* (1958), and *Mythologies* (1964–71).

levodopa (or **L-dopa**) A drug used to treat Parkinson's disease, which is caused by a deficiency of dopamine (a chemical secreted at nerve endings when an impulse passes) in the brain. Levodopa is converted to dopamine in the body; it is given in combination with benserazide, which prevents its breakdown in the body before it reaches the brain.

Lewes 5052N 001E A market town in SE England, the administrative centre of East Sussex, on the River Ouse. At the battle of Lewes (1264) Henry III was defeated by the rebel barons under Simon de Montfort. *Glyndebourne is nearby. Population (1991): 15 376.

Lewis, C(live) S(taples) (1898–1963) British scholar and writer. He wrote science-fiction including *Out of the Silent Planet* (1938), children's books chronicling the land of Narnia, and works on religious themes, notably *The Problem of Pain* (1940), *The Screwtape Letters* (1942) and *Mere Christianity* (1952).

Lewis, (Harry) Sinclair (1885–1951) US novelist noted for his social satires, which include *Main Street* (1920), *Babbitt* (1922), *Arrowsmith* (1925), and *Elmer Gantry* (1927). He won the 1930 Nobel Prize.

Lewis, (Percy) Wyndham (1882–1957) British novelist and painter. In many polemical works and brilliant satirical novels, which include *The Apes of God* (1930) and the trilogy *The Human Age* (1928–55), he sustained a continual attack on the liberal cultural establishment. He helped found the art movement *vorticism.

Lewis and Clark expedition (1804–06) A journey of exploration across the American continent by Meriwether Lewis (1774–1809) and William Clark (1770–1838). They ascended the Missouri, crossed the Rockies, and went down the Columbia River to the Pacific, exploring the Yellowstone River on the return journey. Promoted by Thomas Jefferson, the expedition established the US claim to the Louisiana Purchase.

Lewis with Harris The largest island of the Outer Hebrides, separated from the coast of NW Scotland by the Minch. Lewis in the N is linked with Harris by a narrow isthmus. In 1998 a road bridge was opened between Harris and the small island of Scalpay. It is famous for its Harris tweed. Area: 2134 sq km (824 sq mi). Pop-

ulation (2001): 16 872. Chief town: Storno-way.

Lexicography The compilation of dictionaries. Dictionaries can be monolingual (dealing with only one language) or bi- or multi-lingual (giving equivalents of words in other languages). Monolingual dictionaries differ in the style and fullness of the definitions and in the audience for which they are intended (e.g. for native speakers or foreign learners). Some list definitions of a word in historical order while others list definitions in order of current usage. Almost all dictionaries contain information about spelling and meaning; many also offer guidance on pronunciation, usage, inflected forms of words, *etymology, etc. The most famous English dictionaries are Samuel Johnson's *Dictionary* (1755) and the *Oxford English Dictionary on Historical Principles* (1884–1928; chief editor Sir James Murray). The best-known American dictionary is Noah Webster's *American Dictionary of the English Language* (1828).

Leyden See LEIDEN.

Lhasa 29 41N 91 10E A city in W China, the capital of Tibet. As the traditional centre of *Tibetan Buddhism, it is the site of many temples, monasteries, and of the Potala, the former palace of the Dalai Lama, the priest-ruler. Since the Chinese occupation (1951) many Tibetans have fled, including the Dalai Lama following the 1959 uprising; there were riots against the Chinese in the late 1980s. Population (2003 est): 129 490.

libel See DEFAMATION.

Liberal Democrats A British political party of the centre, established (as the Social and Liberal Democrats) in 1988 when most of the Social Democratic Party merged with the Liberal Party (the current name was adopted in 1989). Paddy Ashdown was elected as their first leader; his successors have been Charles Kennedy (1999–2006) and Sir Menzies Campbell (2006–). The party advocates proportional representation and closer integration into the EU.

Liberal Party (Australia) A conservative political party, formed in 1944. A Liberal–Country Party coalition won the election of 1949 and under the leadership successively of Robert *Menzies, Harold Holt (1908–67), John Gorton (1911–2002), and William McMahon (1908–88) held office until 1972. The Liberals were again in power from 1975 to 1983 under Malcolm Fraser (1930–) and from 1996 under John *Howard.

Liberal Party (UK) A political party that grew out of the *Whig party. The heyday of the party was from the mid-19th century to World War I, under the prime ministers *Gladstone, *Campbell-Bannerman, *Asquith, and *Lloyd George. Conflict between Asquith and Lloyd George led to a split in the party after World War I, and in 1922 the Labour Party replaced the Liberals as the official opposition. The party forged a political alliance with the newly-formed Social Democratic Party in 1981 and merged with it to become the Social and Liberal Democrats in 1988.

Liberia, Republic of A country in West Africa, on the Atlantic Ocean. Coastal plains rise to higher ground inland and to mountains in the N; much of the land is covered with tropical rainforest. Most of the population belongs to indigenous tribes, including the Kpelle, Bassa, and Kru, with a minority who are descended from American slaves. *Economy*: since the outbreak of civil war in 1990 agriculture has declined to subsistence levels and industry has virtually ceased. The main food crops are rice and cassava; the main cash crop was rubber, some of it grown under concession to US companies. Exploitation of Liberia's mineral resources, especially iron ore and diamonds previously formed the basis of the country's economy. Ships are easily registered in Liberia and, with many foreign vessels, its merchant fleet is the largest in the world. *History*: it was founded in 1822 by the American Colonization Society as a settlement for freed American slaves. In 1847 it became the Free and Independent Republic of Liberia with a constitution based on that of the USA. It has had considerable US aid. Liberia also has close economic ties with Sierra Leone. In 1980 the president Dr William R. Tolbert, Jr (1913–80), was assassinated in a military coup led by Master Sergeant Samuel Doe, who was elected president in 1985. In 1990 rival rebel forces under Charles Taylor and Prince Yormie Johnson seized Monrovia, killing Doe. An interim government was set up but fighting continued. A new peace plan was agreed in 1996 and Taylor was elected president in 1997. However, his corrupt and autocratic rule provoked continuing opposition and in August 2003 rebel forces overran Monrovia and forced him into exile. A peace deal was signed and a transitional power-sharing government set up. Presidential elections in 2005 resulted in victory for Ellen Johnson-Sirleaf. Official language: English. Currency: Liberian dollar of 100 cents. Area: 111 400 sq km (43 000 sq mi). Population (2007 est): 3 195 931. Capital: Monrovia.

Library of Congress The national library of the USA founded in 1800. First housed in the Capitol, it was moved to its present site in Washington in 1897. It contains over 60 million items, and its system of classification is widely used in academic libraries.

libretto (Italian: little book) The text of an opera or operetta. Dramatists whose plays have been used as libretti include Hugo von Hofmannsthal (1874–1929), *Maeterlinck, and Oscar *Wilde. *Wagner and *Berlioz wrote their own libretti. Notable partnerships between librettists and composers include Lorenzo da Ponte (1749–1838) and Mozart, Arrigo Boito (1842–1918) and Verdi, and Gilbert and Sullivan.

Libreville 0 25N 9 25E The capital of Gabon, a port in the NW on the Gabon Estuary. It was founded by the French in the 19th century, when freed slaves were sent there. Population (2003 est): 420 000.

Librium See BENZODIAZEPINES.

Libya (official name: Great Socialist People's Libyan Arab Republic) A country in N Africa, on the Mediterranean Sea. It consists chiefly of desert, with a narrow coastal plain, rising to the Tibesti Mountains along its southern border and is divided into the three main areas (provinces until 1963) of Cyrenaica, Tripolitania, and Fezzan. The population is mainly of Berber and Arabic origin. *Economy:* between 1955 and 1970 major deposits of oil were discovered, notably at Zelten (1959). Libya is now one of the world's major oil producers and exporters. Subsistence agriculture is important, livestock farming being the main agricultural occupation, nomadic in the S. *History:* during the 16th century the area came under Turkish domination and in 1912 it was annexed by Italy. It was the scene of heavy fighting in World War II; the French occupied Fezzan and the British occupied Cyrenaica and Tripolitania. In 1951 the United Kingdom of Libya was formed from the federation of these three areas and the Emir of Cyrenaica, Mohammed Idris Al-Senussi (1889–1983), became its first king. He was deposed in a coup led by Col Moammar al-*Gaddafi in 1969 and Libya was proclaimed a republic. The Revolutionary Command Council was established to rule the country. In 1973 Gaddafi introduced a cultural revolution based on Islamic principles. Since 1969 Libya has been firmly aligned against Israel and has been accused of using terrorist methods abroad; in 1986 such accusations prompted raids on Libyan cities by US jets. In 1992 UN sanctions were imposed on Libya when Gaddafi refused

to extradite two men suspected of involvement in the Lockerbie airliner bombing (1988); they were suspended in 1999 when Gaddafi agreed to a trial in the Netherlands. Decades of isolation were finally ended in 2003–04, when Libya announced that it had abandoned its ambition to build nuclear weapons. The USA restored full diplomatic relations in 2006. Official language: Arabic; Currency: dinar of 1000 dirhams. Area: 1 759 540 sq km (679 216 sq mi). Population (2007 est): 6 036 914. Capital: Tripoli.

lichee See LITCHI.

lichens A large group of organisms (about 15 000 species) consisting of two components, an alga or a bacterium (usually a green alga or blue-green bacterium) and a fungus (usually an ascomycete), in a mutually beneficial association. Millions of algal or bacterial cells (the phycobiont) are interwoven with fungal filaments (the mycobiont) to form the lichen body (a thallus), which may be crusty, scaly, leafy, or stalked and shrublike in appearance. Lichens were formerly regarded as plants; they are now classified as fungi. They occur worldwide, mainly on tree trunks, rocks, and soil, and can survive in harsh conditions. They normally reproduce asexually by fragmentation, budding, or by producing special structures (soredia), consisting of a few algal cells enmeshed with fungal threads.

Liechtenstein, Principality of A small country in central Europe, between Switzerland and Austria. Mountains rise from the Rhine Valley to heights of over 2500 m (8000 ft). *Economy:* farming is still important but high-tech engineering is now the mainstay of the economy. Tourism and the sale of postage stamps are also important. *History:* the principality was formed from the union of the counties of Vaduz and Schellenberg in 1719 and was part of the Holy Roman Empire until 1806. It formed a customs union with Switzerland in 1923 and joined EFTA in 1991 and the European Economic Area in 1995. Official language: German. Currency: Swiss franc of 100 centimes. Area: 160 sq km (62 sq mi). Population (2007 est): 34 247. Capital: Vaduz.

lie detector An instrument designed to detect whether a person is lying by measuring such factors as blood pressure, respiration rate, skin conductivity, and pulse rate. A sudden change in these factors in a person being questioned is taken to indicate that he is under stress and may be telling a lie. Lie detectors are not usually accepted in a court of law.

Liège (Flemish name: Luik) 50 38N 5 35E An industrial city in E Belgium, on the River Meuse. It has many old churches, including St Martin's (692 AD). Population (2000 est): 185 638.

life The property that enables a living organism to assimilate nonliving materials from its environment and use them to increase its size and complexity (the process of growth), to repair its existing tissues, and to produce new independent organisms that also possess the properties of life (the process of reproduction). *See also* ANIMAL; PLANT.

Life on earth is thought to have originated between 4500 and 3000 million years ago. The atmosphere then consisted chiefly of methane, hydrogen, ammonia, and water vapour, from which simple organic molecules (such as amino acids, proteins, and fatty acids) were formed as a result of energy supplied by solar radiation, lightning, and volcanic activity. The first cells may have arisen spontaneously as simple envelopes of protein and fat molecules. However, the crucial steps towards life would probably have been the inclusion in such a cell of both the enzyme molecules necessary to perform primitive fermentations and the nucleic acid molecules, such as RNA and DNA, capable of directing the metabolic processes of the cell and of self replication, i.e. passing on this information to succeeding generations. In the course of time increasingly efficient biochemical pathways evolved, including the process of photosynthesis in the first photosynthetic organisms (e.g. blue-green bacteria). This led to the gradual build-up of oxygen in the atmosphere, which started about 2000 million years ago; by about 400 million years ago the *ozone layer in the upper atmosphere was sufficiently dense to shield the land from harmful ultraviolet radiation, enabling plants and animals to survive. With increasing oxygen levels, aerobic respiration—the most efficient method of energy utilization—was adopted by most living organisms.

lifeboat 1. In the UK, a powerful motorboat, especially designed to right itself in the event of capsizing and equipped with safety devices, used by the *Royal National Lifeboat Institution (RNLI) as an emergency vessel in the event of a disaster near the shore. **2.** A boat carried aboard a ship, used for accommodating passengers and crew if the ship has to be abandoned.

Liffey, River A river in the E Republic of Ireland, rising in the Wicklow Mountains and flowing mainly W and NE through Dublin to Dublin Bay. Length: 80 km (50 mi).

ligament A strong fibrous tissue that joins one bone to another at a joint. Ligaments are flexible but inelastic: they increase the stability of the joint and limit its movements to certain directions. Unusual stresses on a joint often damage ("pull") a ligament, as occurs in a "twisted" ankle.

light The form of *electromagnetic radiation to which the eye is sensitive. It forms the part of the electromagnetic spectrum from 740 nanometres (red light) to 400 nanometres (blue light), white light consisting of a mixture of all the colours of the visible spectrum. *Newton supported a corpuscular theory of light in which a luminous body was believed to emit particles of light. This theory adequately explained reflection and geometric optics but failed to explain *interference and *polarized light. The wave theory, supported in the 19th century by Augustin Fresnel (1788–1827) and Jean Foucault (1819–68), adequately explains these phenomena and achieved a mathematical basis when *Maxwell showed that light is a form of electromagnetic radiation. The wave theory, however, does not explain the photoelectric effect and *Einstein reverted to a form of the corpuscular theory in using the *quantum theory to postulate that in some cases light is best regarded as consisting of energy quanta called photons. The present view, expressing Bohr's concept of complementarity, is that both electromagnetic theory and quantum theory are needed to explain light.

light-emitting diode *See* SEMICONDUCTOR DIODE.

lighthouse A tall structure, built on a coastal promontory or cape or on an island at sea, equipped with a powerful beacon, visible at some distance, to mark an obstruction or other hazard. Modern lighthouses are also equipped with radio beacons. Both light and radio signals are emitted in a unique pattern to enable vessels to identify the lighthouse producing them.

lightning An electrical discharge in the atmosphere caused by the build up of electrical charges in a cloud. The potential difference causing the discharge may be as high as one thousand million volts. The electricity then discharges itself in a lightning flash, which may be between the cloud and the ground or, much more commonly, between two clouds or parts of a cloud. Thunder is the noise made by the discharge or its reverberations. *See also* BALL LIGHTNING.

lightning conductor An earthed conduct-

ing rod placed at the top of buildings, etc., to protect them from damage by lightning. It acts by providing a low-resistance path to earth for the lightning current.

light year A unit of distance, used in astronomy, equal to the distance travelled by light in one year. 1 light year = 9.46×10^{15} metres or 5.88×10^{12} miles.

lignin A complex chemical deposited in plant cell walls to add extra strength and support. It is the main constituent of *wood cells, allowing the trunk to support the heavy crown of leaves and branches.

lignum vitae Wood from trees of the genus *Guaiaecum*, especially *G. officinale*, a tropical evergreen of the New World. *Lignum vitae* is hard, dense, greenish-brown, and rich in fat (making it waterproof). It was formerly thought to have medicinal properties: its name (from the Latin) means "wood of life." Family: *Zygophyllaceae*.

Liguria A region in NW Italy. It consists of a narrow strip of land between the Apennines and Maritime Alps in the N and the Gulf of Genoa in the S. Industry (including shipbuilding and engineering) and tourism are both important, the region more or less corresponding to the Italian Riviera. Area: 5415 sq km (2091 sq mi). Population (2000 est): 1 625 870. Capital: Genoa.

Ligurian Sea A section of the NW Mediterranean Sea, between Italy (N of Elba) and Corsica.

lilac A deciduous bush or small tree of the genus *Syringa* (30 species), especially *S. vulgaris*, native to temperate Eurasia and often grown as a garden ornamental. It has dense terminal clusters of white, purple, or pink tubular fragrant flowers with four flaring lobes. Family: *Oleaceae*.

Liliaceae A family of monocotyledonous plants (about 250 species), mostly herbaceous and native to temperate and subtropical regions. They usually grow from bulbs or rhizomes to produce six-lobed flowers and three-chambered capsular fruits. The family includes many popular garden plants, including the lilies, tulip, and hyacinth. A few are economically important, for example *Asparagus*. Some authorities include related plants, such as the onion, leek, etc. (see **ALLIUM**), *Agave*, and *Yucca*.

Lille 50 39N 3 05E A city in N France, the capital of the Nord department on the River Deûle.

It is at the centre of a large industrial complex. Population (1999): 182 228.

Lilongwe 13 58S 33 49E The capital of Malawi since 1975. Population (1998 est): 435 964.

lily A perennial herbaceous plant of the genus *Lilium* (80–100 species), native to N temperate regions and widely grown for ornament. Lilies grow from bulbs to produce leafy stems with terminal clusters of showy flowers, usually with backward-curving petals. Some popular species are the tiger lily (*L. tigrinum*), from China and Japan, 60–120 cm high with purple-spotted golden flowers; the Eurasian Madonna lily (*L. candida*), 60–120 cm high with pure-white flowers; and the turk's-cap or martagon lily (*L. martagon*), also from Eurasia, 90–150 cm high, the purplish-pink flowers of which are marked with darker spots. There are numerous varieties and hybrids of these and other species. Family: *Liliaceae*.

The name is also applied to numerous other unrelated plants, such as the *arum lily and *leopard lily.

lily-of-the-valley A fragrant perennial herbaceous plant, *Convallaria majalis*, native to Eurasia and E North America and a popular garden plant. Growing from creeping underground stems (rhizomes), its stem bears a cluster of white nodding bell-shaped flowers. Family: *Liliaceae*.

Lima 12 06S 77 03W The capital of Peru, situated in the E of the country near its Pacific port of Callao. Founded by Pizarro in 1535, it became the main base of Spanish power in Peru. Notable buildings include the 16th-century cathedral and university. Lima has expanded rapidly in recent years and now has considerable industry. Population (1998): 316 322.

Lima bean A herb, *Phaseolus lunatus*, also called butter bean or Madagascar bean, native to South America but widely cultivated in the tropics and subtropics as a source of protein. It is easily stored when dry. Family: *Leguminosae*.

Limassol 34 40N 33 03E A town in Cyprus, on the S coast. It is the island's second largest town and a major port. Population (1998 est): 152 900.

Limavady A district in Northern Ireland, in Co Londonderry. Area: 558 sq km (226 sq mi). Population (2001): 32 422.

Limburg 1. A former duchy in W Europe, divided in 1839 between Belgium and the Netherlands. 2. (French name: Limbourg) A province in NE Belgium, bordering on the Netherlands. The N is an industrial region and the S is chiefly agricultural. Area: 2422 sq km (935 sq mi). Pop-

ulation (2000 est): 1 019 442. Capital: Hasselt. **3.** A province in the SE Netherlands. Coalmining has declined in recent years. Agriculture is varied. Area: 2208 sq km (852 sq mi). Population (2000 est): 1 141 200. Capital: Maastricht.

lime (botany) **1.** A large deciduous tree of the genus *Tilia* (about 30 species), also called linden. Growing to a height of 30 m, it has toothed heart-shaped leaves and fragrant pale-yellow flowers that hang in small clusters on a long winged stalk. The small round fruits remain attached to the papery wing when shed. Family: *Tiliaceae*. **2.** A tree, *Citrus aurantifolia*, growing to a height of about 4 m and cultivated in the tropics for its fruit. Lime fruits have a thick greenish-yellow skin and acid-tasting pulp; the juice is used to flavour food and drinks.

lime (chemistry) Calcium oxide (or quicklime; CaO), calcium hydroxide (or slaked lime; Ca(OH)_2), or, loosely, calcium salts in general. Ca(OH)_2 is prepared by reacting CaO with water and is used in *cement. CaO is used in making paper, as a *flux in *steel manufacture, and in softening water.

limerick A short form of comic and usually bawdy verse having five lines of three or two feet and usually rhyming aabba, as in:

There was a young lady of Lynn
Who was so uncommonly thin
That when she essayed
To drink lemonade,
She slipped through the straw and fell in.

The form, the origin of which is uncertain, was popularized by Edward *Lear in the 19th century.

Limerick **1.** 52 40N 8 38W A port in the Republic of Ireland, the county town of Co Limerick on the Shannon estuary. Population (2002): 54 058. **2.** A county in the SW Republic of Ireland, in Munster bordering on the River Shannon estuary. It consists chiefly of lowlands rising to hills in the S. Dairy farming is important. Area: 2686 sq km (1037 sq mi). Population (2002): 175 479. County town: Limerick.

limestone A common sedimentary rock consisting largely of carbonates, especially calcium carbonate (calcite) or dolomite. Most limestones were deposited in the sea in warm clear water, but some limestones were formed in fresh water. Organic limestones, including *chalk, consist of fossil skeletal material. Precipitated limestones include evaporites and *oolites (spherically grained calcite). Clastic limestones consist of fragments of pre-existing limestones. Marble is metamorphosed

limestone. Limestone is used as a building stone, in the manufacture of cement and glass, for agricultural lime, for road metal, and as a flux in smelting.

limited liability The restriction of a shareholder's obligation to meet company debts in the event of its insolvency. The Companies Act allows the formation of corporations the liability of whose shareholders is restricted either to the nominal amount of their shares ("company limited by shares") or to the amount that they have respectively undertaken to contribute if the company is wound up ("company limited by guarantee").

Limoges 45 50N 1 15E A city in W France, the capital of the Haute-Vienne department on the River Vienne. The centre of the French porcelain industry, it has Roman remains and a cathedral (13th–16th centuries). Population (1999): 133 960.

limpet A marine *gastropod mollusc with a flattened shell and powerful muscular foot for clinging to rocks and other surfaces. The true limpets (superfamily *Patellacea*; about 400 species) are oval-shaped and up to 10 cm long whereas the keyhole limpets (superfamily *Fissurellacea*; several hundred species) have an opening in the shell for expelling wastes and tend to be smaller.

Limpopo River A river in SE Africa. Rising as the Crocodile River in the Witwatersrand, South Africa, it flows generally NE through Mozambique, to the Indian Ocean, forming part of the border between the Transvaal and Botswana. Length: 1770 km (1100 mi).

Lincoln 53 14N 0 33W A city in E central England, the administrative centre of Lincolnshire on the River Witham. The British settlement became Lindum Colonia under the Romans, at the intersection of the important routeways Fosse Way and Ermine Street. The castle was begun in 1068 and the cathedral in 1075. Population (1991): 80 281.

Lincoln, Abraham (1809–65) US statesman; Republican president (1861–65). Lincoln became, in 1847, member of Congress for Illinois. Holding long-standing convictions against slavery, he opposed its extension to the new western states and in 1856 joined the newly formed antislavery Republican Party. Elected president on the slavery issue just before the outbreak of the *Civil War, in 1863 Lincoln proclaimed the freedom of slaves in the South (the Emancipation Proclamation) and gave his famous *Gettysburg Address recalling the prin-

ciples of equality established by America's founding fathers. He oversaw the 13th amendment prohibiting slavery (1865) and advocated magnanimous *Reconstruction measures but was assassinated a few days after the South surrendered.

Lincolnshire A county in E England, bordering on the North Sea. It is generally low lying, including part of the Fens, with the Lincolnshire Edge (a limestone escarpment) in the W and the Lincolnshire Wolds in the E. It is mainly agricultural producing arable crops and livestock; horticulture is also important. In 1974 it lost the N part to Humberside; when Humberside was abolished in 1996, this area was returned to Lincolnshire for ceremonial purposes but is now administered by the unitary authorities of North Lincolnshire and North East Lincolnshire. Area (excluding unitary authorities): 5880 sq km (2270 sq mi). Population (2001, excluding unitary authorities): 646 646. Administrative centre: Lincoln.

Lind, Jenny (1820–87) Swedish soprano, known as "the Swedish nightingale." She performed in opera and on the concert platform.

Lindbergh, Charles A (ugustus) (1902–74) US aviator who made the first solo non-stop flight across the Atlantic Ocean, from New York to Paris (1927), in the monoplane *Spirit of St Louis*. His two-year-old son was kidnapped and murdered in 1932.

Lindemann, Frederick Alexander, 1st Viscount Cherwell (1886–1957) German-born British physicist, who became Churchill's scientific adviser in World War II. Criticized for advocating mass bombing of civilians, Lindemann was highly praised by Churchill, who made him paymaster-general (1951–53).

Lindisfarne See HOLY ISLAND.

Linear A A syllabic script used (c. 1700–1450 BC) to write the lost language of the *Minoan civilization of Crete. It evolved from a pictographic script. Known from fewer than 400 inscriptions, it is still undeciphered, but, like its successor, *Linear B, was mainly used on clay tablets to record inventories.

linear accelerator (or **linac**) An *accelerator in which charged elementary particles are repeatedly accelerated along a long straight tube by a radio-frequency electric field. In modern linear accelerators the field is supplied by the electric component of a travelling radio wave in a waveguide. The particles are confined in the tube by a series of magnetic lenses, which focus the beam. The maximum energy

attained by a linear accelerator is about 10 GeV for electrons and 2 GeV for protons.

Linear B A syllabic script apparently adapted (c. 1450–1400 BC) from *Linear A by the invading Mycenaeans at *Knossos to write their own language. In 1952 Michael Ventris (1922–56) deciphered this language as an early form of Greek. Several thousand Linear B clay tablets, mainly inventories, survive from Knossos, Pylos, and elsewhere, dating between about 1400 and 1100 BC.

linear motor A form of electric induction motor in which the stator and the rotor are linear instead of cylindrical and parallel instead of coaxial. The development of linear motors as a method of traction for monorail intercity trains has been proposed by E.R. Laithwaite (1921–89). In this arrangement one winding would be in the train and the other on the single rail, thus obviating the need for rotating parts.

linen A fabric manufactured from *flax (*Linum usitatissimum*), probably the first textile of plant origin. Flax growing was brought to Britain by the Romans and in the 16th century a flourishing trade grew up, especially in Scotland and Northern Ireland. Greatly reduced by the 18th-century expansion of the cotton trade, and even more so by the advent of man-made fibres, these strong absorbent fibres now constitute less than 2% of world fibre production.

line of force See FIELD.

linguistics The scientific study of language. Modern linguistics has three main branches, corresponding to the three main components of language: *semantics, grammar, and *phonetics. Various specialized interests exist within the field of linguistics. **Comparative linguistics** compares languages either to establish the history of and relationships among related languages (e.g. the Indo-European family) or to test theories about linguistic universals by comparing unrelated languages (see also ETYMOLOGY). The main contribution of **structural linguistics**, which developed in the early 20th century, was to free linguistics from the historical and comparative approach, viewing language as a unique relational structure. **Sociolinguistics** deals with social aspects of language, including such matters as how language affects and reflects the role and status of individuals within the community, attitudes to dialect and "correctness," linguistic taboos and preferences, bilingualism, etc. **Psycholinguistics** is the comparatively recent branch of linguistics that deals with psychological aspects

of language, including how children acquire language, how language is stored in and generated by the brain, the relationship between meaning and memory, etc.

Linnaeus, Carolus (Carl Linné; 1707–78) Swedish botanist, who established the principles for naming and classifying plants and animals. As a result of his botanical studies, Linnaeus proposed a system for classifying plants based on their flower parts. He published *Systema naturae* in 1735 followed by *Genera plantarum* (1737) and *Species plantarum* (1753). In his system, Linnaeus defined each type of plant by two names: a generic name and a specific name (see BINOMIAL NOMENCLATURE). Furthermore he grouped related genera into classes and combined related classes into orders. Linnaeus also applied his system to the animal kingdom.

linnet A small Eurasian *finch, *Acanthis cannabina*, occurring in dry open regions, where it feeds on the seeds of common weed plants. The female has a dull brown-streaked plumage; the male has a crimson crown and breast, a greyish head, and a red-brown back with darker wings and tail. Male linnets have a beautiful flutelike voice.

linseed The flat oval seed of cultivated *flax, which is a source of linseed oil, used in paints, inks, varnishes, oilcloth, and sailcloth. The crushed seed residues form linseed meal, an important protein feed for ruminants and pigs.

Linz 48 19N 14 18E The third largest city in Austria, the capital of Upper Austria on the River Danube. Its many historical buildings include two 13th-century baroque churches. Population (2001): 186 298.

lion A large carnivorous mammal *Panthera leo*, one of the big *cats. Lions are found mainly in Africa (there are a few in India). They are heavily built with sandy-coloured coats: the shaggy-maned males grow to 2.8 m while females lack a mane and are more lightly built. Both sexes have a thin tail with a tuft at the end. Lions inhabit grasslands, living in groups (prides).

Lions, Gulf of (French name: Golfe du Lion) An inlet of the NW Mediterranean Sea, on the coast of central S France between Marseille and the Spanish border.

lipids A group of compounds, generally insoluble in water but soluble in organic solvents, that includes fats, *oils, waxes, phospholipids, sphingolipids, and *steroids. Fats and oils function as energy reserves in plants and animals

and form a major source of dietary energy in animals. Phospholipids are important structural components of cell membranes, and sphingolipids are found predominantly in nerve tissues. Steroids have many important derivatives, including cholesterol, bile salts, and certain hormones. Lipids often occur in association with proteins as lipoproteins.

Lipizzaner A breed of horse long associated with the Spanish Riding School in Vienna, where they are trained for spectacular displays. It is named after the stud founded by Archduke Charles at Lipizza, near Trieste, in 1580. The Lipizzaner has a short back, strong hindquarters, a powerful neck, and a small head. Born black, they mature to a grey colour. Height: 1.47–1.52 m.

Lippershey, Hans (died c. 1619) Dutch lens grinder, who built the first *telescope. News of it eventually reached Galileo, who built his own telescope.

Lippi, Fra Filippo (c. 1406–69) An early Renaissance Florentine painter, who was a Carmelite monk from 1421 to about 1432. He was patronized by the Medici but his greatest works are his fresco decorations for the choir of Prato Cathedral (1452–64), showing scenes from the lives of St John the Baptist and St Stephen. He is also noted for his idealized Madonnas. He abducted and later married a nun, Lucrezia Buti; their son, **Filippino Lippi** (1457–1504), was also a painter.

liquefaction of gases Gases are liquefied in several ways. If the temperature of the gas is below its critical temperature (see CRITICAL STATE), it can be liquefied simply by compressing it. If the critical temperature is too low for this, the cascade process can be used. In this a gas with a high critical temperature is first liquefied by compression and then allowed to cool by evaporation under reduced pressure. This gas cools a second gas below its critical temperature, so that it in turn can be liquefied, evaporated, and cooled still further. Thus the temperature is reduced in stages. Other methods include cooling by the Joule-Kelvin effect and cooling by adiabatic expansion in which a compressed gas is cooled by performing external work.

liquefied petroleum gas (LPG) Propane, propene, butane, butene, or a mixture of any of these. LPG is a product of *oil refining and is also produced from *natural gas. Most of the LPG produced is sold for heating or used as a raw material for chemical manufacture.

liquid crystal A substance exhibiting some liquid properties, especially fluidity, and some crystalline properties, in that large clusters of molecules are aligned in parallel formations. As liquid crystals change their reflectivity when an electric potential is applied to them, they are used in electronic digital displays.

liquids A state of matter between that of *gases and the *solid state. Liquids assume the shape of a container in the same way as gases but being incompressible do not expand to fill the container. Intermolecular forces are considerably stronger than in gases but weaker than in solids. Molecules are only maintained in an orderly arrangement by intermolecular forces over relatively small groups of molecules.

liquorice A perennial herb, *Glycyrrhiza glabra*, native to S Europe but cultivated throughout warm temperate regions. It bears clusters of blue flowers and long flat pods and its sweet roots, up to 1 m long, are a source of flavouring. Family: *Leguminosae*.

Lisbon (Portuguese name: Lisboa) 38 44N 9 08W The capital of Portugal, in the SW on the River Tagus. The country's chief seaport, it has one of the finest harbours in Europe. Lisbon is also a major industrial and commercial centre. Historic buildings include the Tower of Belém and the Jerónimos Monastery; its university was founded in 1290. *History*: a settlement from very early times, it was an organized community under the Roman Empire. It was captured by the Portuguese in the 12th century and became their capital in 1256. It flourished in the 15th and 16th centuries, the great age of Portuguese exploration and colonization, but later suffered a decline. In 1755 it was almost totally destroyed by an earthquake. It has expanded considerably in the 20th century and in 1966 one of the world's longest suspension bridges was opened across the River Tagus. Population (2001, urban area): 3 754 000.

Lisburn A district in Northern Ireland, in Co Antrim and Co Down. Area: 436 sq km (168 sq mi). Population (2001): 108 694.

Lister, Joseph, 1st Baron (1827–1912) British surgeon, who pioneered antiseptic techniques in surgery. In 1865, while surgeon at Glasgow Royal Infirmary, Lister realized the significance of Pasteur's germ theory of disease in trying to prevent the infection of wounds following surgery. Lister devised a means of eliminating contamination and introduced carbolic acid as an antiseptic to dress wounds.

His antiseptic procedures eventually became standard practice in hospitals everywhere.

Listeria A genus of rod-shaped bacteria. The single species, *L. monocytogenes*, is a parasite of warm-blooded animals. On transmission to man, especially through eating unpasteurized cheese or yogurt, it may cause *listeriosis*, with symptoms ranging from mild food poisoning to meningitis; in pregnant women it usually results in termination of the pregnancy.

Liszt, Franz (Ferencz L.; 1811–86) Hungarian pianist and composer, considered the greatest performer of his time. As a composer he invented the symphonic poem and made use of advanced harmonies and original forms. His compositions include much piano music (including a sonata in B minor and operatic paraphrases), the *Faust Symphony* (1854–57) and *Dante Symphony* (1855–56), and the symphonic poem *Les Préludes* (1854).

litchi (lychee or lichee) A Chinese tree, *Litchi chinensis*, cultivated in the tropics and subtropics for its fruits. The fruit is almost globular with a warty deep-pink rind and is borne in branched clusters. The white translucent watery flesh has a sweet acid flavour and encloses a single large brown seed. Family: *Sapindaceae*.

lithium (Li) The lightest metal (relative density 0.534), discovered by Arfvedson in 1817. It is an alkali metal. It occurs in nature in various minerals as well as in brine, from which it is extracted commercially by electrolysis of the molten chloride (LiCl). The metal has the highest specific heat capacity of any solid element. It is corrosive, combustible, and reacts with water. Because of its efficiency in reflecting neutrons, lithium has important applications as a blanketing material in both the hydrogen bomb and proposed *thermonuclear reactors. It forms salts, like the other alkali metals, and the hydride LiH. At no 3; at wt 6.941; mp 180.6°C; bp 1342°C.

lithography See PRINTING.

Lithuania, Republic of A country in NE Europe, on the Baltic Sea. Most of Lithuania comprises a fertile lowland with forests and peat reserves. Lithuanians comprise about 80% of the population. *Economy*: there are textile, petrochemical, and metalworking industries. Livestock breeding and forestry are important. Tourism is being developed. *History*: one of the largest states in medieval Europe, in the 14th century Lithuania united with Poland under the Jagiellon dynasty. After the partition of Poland in the 18th century it passed to Russia.

It became independent in 1918 but was incorporated into the Soviet Union as an SSR in 1940. It was occupied by Germany during World War II, during which the large Jewish minority was virtually exterminated. It achieved independence from the Soviet Union in 1991. The former communist leader Algirdas Brazauskas was president from 1992 to 1998 and prime minister from 2002. In April 2004 President Rolandas Paksas was impeached by parliament owing to his alleged links with organized crime in Russia. Lithuania joined the EU and NATO in 2004. Official language: Lithuanian. Currency: litas of 100 centas. Area: 65 200 sq km (25 170 sq mi). Population (2003 est): 3 454 000. Capital: Vilnius.

Lithuanian A language belonging to the E division of the Baltic languages division of the Indo-European family, spoken in Lithuania, where it is the official language. Lithuanian is closely related to *Latvian. It is written in a Latin alphabet.

litmus A soluble compound obtained from certain lichens. Litmus turns red in an acid solution and blue in an alkaline solution. It is therefore used as an *indicator, often in the form of **litmus paper**, strips of paper impregnated with litmus.

litre A unit of volume in the *metric system formerly defined as the volume of one kilogram of pure water under specified conditions. This definition still applies for purposes of the UK Weights and Measures Act (1963), but in *SI units the litre is a special name for the cubic decimetre.

Little Bighorn, Battle of the (25 June 1876) The battle fought on the S bank of the Little Bighorn River in which Gen *Custer and his men were massacred by Sioux Indians led by Crazy Horse (?1849–77) and *Sitting Bull (Custer's Last Stand). It was fought to seize the American West for White settlement.

liver A large glandular organ, weighing 1.2–1.6 kg, situated in the upper right region of the abdomen, just below the diaphragm. The liver has many important functions concerned with the utilization of absorbed foods. It converts excess glucose into glycogen, which it stores and reconverts into glucose when required; it breaks down excess amino acids into *urea; and it stores and metabolizes fats. The liver forms and secretes *bile, which contains the breakdown products of worn-out red blood cells, and synthesizes blood-clotting factors, plasma proteins, and—in the fetus—red blood

cells. It also breaks down (detoxifies) poisonous substances, including alcohol.

liver fluke A parasitic *flatworm that inhabits the bile duct of sheep, cattle, and man. The common liver fluke (*Fasciola hepatica*) passes its larval stages in a marshland snail before infecting grazing animals (or, rarely, humans). The Chinese liver fluke (*Opisthorchus sinensis*), 1–2 cm long, passes two larval stages in a freshwater snail and fish before maturing in a human host.

Liverpool 1. 53 25N 2 55W A major city in NW England, in Liverpool unitary authority, Merseyside, on the estuary of the River Mersey. It is the UK's second most important port but has recently suffered industrial decline. Notable buildings include the Royal Liver Building (1910) and the Roman Catholic cathedral (1962–67). *History*: originally trading with Ireland, Liverpool grew rapidly in the 18th and 19th centuries as a result of trade with the Americas and the industrialization of S Lancashire. Britain's first wet dock was built here in 1709. Liverpool is also a cultural centre, with the Walker Art Gallery (built 1876), and the Tate Gallery (opened 1988). Population (1994 est): 474 000. 2. A unitary authority in NW England, in Merseyside. Area: 113 sq km (44 sq mi). Population (2001): 439 476.

Liverpool, Robert Banks Jenkinson, 2nd Earl of (1770–1828) British statesman; Tory prime minister (1812–27). He was previously foreign secretary (1801–04), home secretary (1807–09), and secretary for war (1809–12). As prime minister he is mainly remembered for his repressive response to the unrest that followed the Napoleonic Wars (see PETERLOO MASSACRE).

liverwort A *bryophyte plant of the phylum *Hepatophyta* (c. 6000 species), found growing on moist soil, rocks, trees, etc. There are two groups: leafy liverworts, in which the plant body is differentiated into stems and leaves; and thallose liverworts, which have a flat lobed liverlike body (thallus). The liverwort plant is the gamete-producing phase (gametophyte) and gives rise to a capsule, the spore-producing phase (sporophyte).

livery companies Descendants of the medieval craft *guilds, so called because of the distinctive dress (livery) worn by their members on ceremonial occasions. Some occupy notable buildings in the City of London and some, such as the Mercers, Haberdashers, and Merchant Taylors, have educational interests. In 1878 the livery companies joined the Corpora-

tion of the City of London in setting up the City and Guilds of London Institute to promote technical education.

livestock farming (or **animal husbandry**) The maintenance and management of domesticated animals for the production of milk, meat, eggs, fibres, skins, etc. Modern improvements in livestock breeds and husbandry techniques have enabled dramatic increases to be made in productivity, nutrition and disease control being essential aspects of management.

Cattle produce milk and beef. Under European conditions, a cow may breed at any time of the year. The gestation period is about 9 months, followed by about 10 months of lactation and a 2-month dry period before calving again. A cow is known as a heifer until her second lactation. Heifers are reared either for beef or as dairy replacements and bull calves are generally castrated and reared for beef, being known as bullocks or steers. Age at slaughter is generally about 18 months. Calves for veal are slaughtered at about 14 weeks.

Sheep are farmed worldwide for meat and wool (and in some countries for milk), often grazing on poor mountainous or arid pastures. Under European conditions, the one or two lambs per ewe are born in early spring. Males are castrated and reared for slaughter at weights of 20–45 kg. Selected females are reared as replacement ewes. Each sheep yields 2–5 kg of wool.

Pigs in modern intensive systems are housed under controlled conditions. Young females (gilts) are first mated at 7–8 months. Following the gestation period of 115 days, an average of 7–9 piglets are born per litter. Pork pigs are slaughtered at 40–50 kg, those reared for bacon at 80–100 kg.

Poultry are now kept indoors in an artificially controlled environment. Chicks are hatched artificially, the female birds starting to lay after about 20 weeks and producing about 250 eggs per year. Laying flocks are kept in "batteries" of cages with 3–5 birds per cage, feeding, cleaning, and egg collection being automatic. Table birds are fed ad lib and reach a weight of around 2 kg in 8–12 weeks. Turkeys are also reared for meat under intensive conditions. See also FACTORY FARMING.

Livingstone, David (1813–73) Scottish missionary and explorer of Africa, qualified as a physician. He traced long stretches of the Zambezi, Shire, and Rovuma Rivers, and was the first European to see Lake Ngami (1849), the Victoria Falls (1855), and Lake Nyasa (now

Malawi). During an attempt to trace the source of the Nile (1866–73) his famous encounter with Sir Henry Morton Stanley occurred.

Livingstone, Ken (Kenneth Robert L.; 1945–) British politician; mayor of London (2000–). He became famous as the left-wing Labour leader of the Greater London Council (1981–86). In 2000 he was narrowly defeated in a ballot to decide Labour's candidate for the mayor of London but stood successfully as an independent. In 2003 he introduced a congestion charge to reduce traffic in central London. He won a second term of office in the mayoral elections of 2004, standing as the Labour candidate.

Livy (Titus Livius; 59 BC–17 AD) Roman historian, noted for his monumental history of Rome from its legendary foundation to the death of Drusus in 9 BC. Only 35 of the original 142 books survive.

lizard A reptile belonging to the suborder *Sauria* (3000 species), occurring worldwide but most abundant in tropical regions. They are mainly terrestrial with cylindrical or narrow scaly long-tailed bodies, some with limbs reduced or absent (see GLASS SNAKE; SKINK), and often with crests, spines, and frills. They range in size from the smallest geckos to the Komodo dragon. Lizards lay leathery-shelled eggs although certain species of colder regions and many skinks bear live young.

Ljubljana (German name: Laibach) 46°04'N 14°30'E The capital of Slovenia, situated in the W of the country. Under foreign rule until 1918, it is the centre of Slovene culture. It was largely destroyed by an earthquake in 1895. Population (2000 est): 270 986.

llama A hoofed mammal, *Lama glama*, of S and W South America. Up to 120 cm high at the shoulder, llamas are sure-footed, nimble, and hardy, with thick warm coats. They are now only found in the domesticated state, being used for meat, wool, and as pack animals. Family: *Camelidae* (camels, etc.).

llanos The treeless grasslands of South America that cover about 570 000 sq km (220 000 sq mi) of central Venezuela and N Colombia. Drained by the River Orinoco and its tributaries, the llanos are traditionally a cattle-rearing region but the discovery of oil in the 1930s led to considerable population growth and economic development.

Lloyd, Harold (1893–1971) US film comedian. He appeared as a dogged little man in numerous early silent comedies, most of them char-

acterized by his use of dangerous stunts. His films include *Just Nuts* (1915), *Safety Last* (1923), and *The Freshman* (1925).

Lloyd, Marie (Matilda Wood; 1870–1922) British music-hall entertainer. Her songs, characterized by cockney humour, include "Oh! Mr Porter" and "A Little of What You Fancy."

Lloyd George, David, 1st Earl (1863–1945) British statesman; Liberal prime minister (1916–22). Born in Manchester of Welsh parents, he entered parliament in 1890 and gained a reputation for radicalism as a Welsh nationalist and a supporter of the Afrikaners in the second Boer War (1899–1902). As chancellor of the exchequer (1908–15), he is best known for the so-called People's Budget (1909). This proposed higher death duties, a land value tax, and a supertax; the rejection of this budget by the House of Lords led ultimately to the 1911 Parliament Act, which removed the Lords' veto power. Lloyd George also introduced old-age pensions (1908) and national insurance (1911). In World War I he served as minister of munitions (1915–16) and secretary for war (1916) before succeeding Asquith as prime minister. After the war he continued to lead a coalition government increasingly dominated by the Conservatives. He was criticized for negotiating with Irish militants in the establishment of the Irish Free State (1921) and his government fell when Britain came close to war with the Turkish nationalists. He resigned his parliamentary seat in 1945 on being created an earl.

Lloyd's An association of *insurance underwriters named after the 17th-century London coffee house, owned by Edward Lloyd, where underwriters used to meet. Lloyd's was incorporated by Act of Parliament in 1871. The corporation itself does not underwrite insurance business, which is all undertaken by syndicates of private underwriters, who are wholly responsible for losses. From 1994 private underwriters will include limited companies. There are over 6000 underwriters, none of whom are permitted to deal with the public, all insurance policies with the public being transacted by Lloyd's insurance brokers. **Lloyd's Register of Shipping** is an organization formed by Lloyd's to inspect and list all oceangoing vessels over 100 tonnes. The Register gives annual reports on these ships as a result of checks by Lloyd's surveyors. Lloyd's also publishes *Lloyd's List and Shipping Gazette*, giving shipping news for insurance purposes.

Lloyd Webber, Andrew, Baron

(1948–) British composer. His earlier musicals, with lyrics by Sir Tim Rice (1944–), included *Joseph and the Amazing Technicolour Dreamcoat* (1968), *Jesus Christ Superstar* (1970), and *Evita* (1978); later works include *Cats* (1981), *The Phantom of the Opera* (1986), and *The Beautiful Game* (2000). He was raised to the peerage in 1997.

Llywelyn ap Gruffudd (Llywelyn II; d.1282) The only native Prince of Wales (1258–82) to be recognized as such by England. He aided the English barons against Henry III (1263–67) and refused homage to Edward I (1276), who forced Llywelyn into submission. Llywelyn was killed in another revolt.

loach A small freshwater *bony fish of the family *Cobitidae* (over 200 species), found mainly in Asia, but also in Europe and N Africa. Loaches feed at night on bottom-dwelling invertebrates detected by the three to six pairs of barbels around the mouth. Order: *Cypriniformes*.

Lobelia A genus of annual and perennial herbs (about 250 species), found in most warm and temperate regions. The flowers are tubular, with a two-lobed upper lip and a larger three-lobed lower lip. Ornamental species, called cardinal flowers, are usually blue or red. Family: *Lobeliaceae*.

lobotomy See LEUCOTOMY.

lobster A large marine *crustacean of the section *Macrura* that has a long abdomen ending in a tailfan. True lobsters (family *Homaridae*) have segmented bodies, a pair of pincers, four pairs of walking legs, and several pairs of swimming legs (swimmerets). They live on the ocean bottom, feeding on seaweed and animals. Many species are important as food, for example *Homarus vulgaris* and *H. americanus*. Order: *Decapoda*.

local government The administration of a locality. In the UK local government has developed from the Anglo-Saxon division of the country into shires, hundreds, and *boroughs but only became systematized in the 19th century. The Municipal Corporation Act (1835) established 178 municipal councils, elected by ratepayers, which in the following decades grew in number and took over a wide range of responsibilities, including the police and public health. County councils were established in 1888. In 1894 the work of local government was distributed by the creation of borough and urban district councils in urban areas and parish councils in rural areas. The Local Gov-

ernment Act (1972; effective 1974) divided England and Wales into 53 *counties. These were divided into districts, and they in turn into parishes or, in Wales, communities. District councils were responsible for a number of important services, including education, housing, and refuse collection. A similar system was established in Scotland in 1973 (effective 1975). Northern Ireland has 26 district councils. In 1996–98 unitary authorities were established to replace the two-tier system of county and district councils in many parts of the UK, including the whole of Scotland and Wales. Local-government spending is financed by the *council tax, business rates, rent, borrowing, and central-government grants.

Locarno Pact (1925) A series of treaties between Germany, France, Belgium, Poland, Czechoslovakia, the UK, and Italy, signed in the Swiss town of Locarno. The most important was an agreement between France, Germany, and Belgium, guaranteed by the UK and Italy, to maintain the borders between Germany and France and Belgium respectively and the demilitarized zone of the Rhineland (violated by Hitler in 1936).

lock A section of a ship canal or a navigable river, enclosed by gates at both ends and with means to regulate the water level. This permits vessels to transfer between sections at different levels, making transshipment unnecessary.

Locke, John (1632–1704) English philosopher. His greatest work, the *Essay concerning Human Understanding* (1690), reveals him as a pioneer of empiricism. It maintains that every one of our ideas comes from sense impressions. Locke's two works *Of Government* (1690) were enormously influential in moulding modern concepts of liberal democracy. He dismissed any divine right to kingship and advocated liberal government.

locomotive An engine that draws a train on a railway. The first locomotives, designed by Trevithick and *Stephenson, were driven by steam engines and steam dominated the railways until the end of World War II. Thousands

of steam locomotives are still in use throughout the world. However, the steam engine has a low efficiency (about 8% in a locomotive, which does not use a condenser), it takes a long time to become operational while steam is raised, it uses an awkward and dirty solid fuel (which it has to pull with it in a tender immediately behind the engine), and it creates pollution. For these reasons steam locomotives have largely been replaced in the industrial countries by electric, Diesel-electric, or Diesel trains, all of which have efficiencies of about 22%.

Where the traffic justifies the cost of installing overhead wires or a conductor rail, electric trains are usually preferred, as it is more efficient to generate electricity centrally than in the locomotive. Series-wound direct-current motors are the most widely used, with rectification in the locomotive when the supply is alternating current. When Diesel engines are used, these are either coupled hydraulically to the wheels, using a hydraulic torque converter (or fluid flywheel) and a gearbox, or to an electric generator or alternator, which produces current to power electric motors that drive the wheels. The first Diesel-electric train was used in Sweden in 1912 and the first Diesel-hydraulic in Germany a year later. Because the Diesel provides a very low torque at low speeds, it cannot be used without a hydraulic coupling, but even these units are usually restricted to small trains. See also MAGNETIC LEVITATION.

locust (botany) An evergreen Mediterranean tree, *Ceratonia siliqua*, also called carob tree. 12–15 m in height, it produces leathery pods containing a sweet edible pulp and small flat beans. The black locust (*Robinia pseudoacacia*), also called false acacia, is a North American tree widely cultivated for ornament. Up to 24 m tall, it has deeply ridged dark-brown bark, hanging clusters of white flowers, and black pods. Family: Leguminosae.

locust (zoology) A *grasshopper that, when environmental conditions are favourable, undergoes sporadic increases in population size to form huge swarms, which migrate long distances and devour all the crops and other veg-

Vessel about to enter lock.

Vessel being raised inside lock.

Vessel emerging from lock at higher level.

lock

Stephenson's "Rocket" The first locomotive to combine a multi-tubular boiler and a blast pipe, the "Rocket" was designed for the Liverpool to Manchester railway, which opened in 1830.

"General" Typical of the commonest type of US locomotive in the 19th century, the "General" was involved in a dramatic sabotage incident in 1862 during the Civil War. One of this class was the first to run at 100 mph (1893).

C.R. No. 123 Caledonian Railway's famous locomotive, designed by Dugald Drummond, ran the difficult 100.6 miles between Carlisle and Edinburgh in 102.5 minutes in August 1888.

"Mallard" This locomotive, designed by Sir Nigel Gresley, took the world steam traction speed record in July 1938, achieving 126 mph on a brake-test run.

Train à Grande Vitesse (TGV) France's high-speed electric train, which runs on special rails. It established a world record for rail travel of 236 mph in 1981.

High Speed Train (HST) British Rail's Diesel-electric HST set a world record in 1985 for Diesel-powered trains by reaching 144.8 mph. The HST continues to power long-distance services in the UK's privatized system.

locomotive

etation on which they settle. Economically important species include the migratory locust (*Locusta migratoria*), about 55 mm long, found throughout Africa and S Eurasia and eastward to Australia and New Zealand; and the desert

locust (*Schistocerca gregaria*), occurring from N Africa to the Punjab.

Lodge, David (John) (1935–) British novelist. His comic novels lampooning academic life include *Changing Places* (1975), *Small World*

(1984), and *Nice Work* (1988); later novels include *Paradise News* (1991), *Therapy* (1995), and *Thinks...* (2001).

Lódz 51 49N 19 28E The second largest city in Poland. It developed during the 19th century and is now a leading industrial centre. Population (1999 est): 806 728.

loess A deposit consisting of wind-born dust from desert or vegetation-free areas at the margins of ice sheets. In Europe loess occurs in Germany, Belgium, and NE France. Deep well-drained soils develop from loess.

Loewe, Frederick (1904–88) Austrian composer of musical comedies, resident in the USA after 1924. He is famous for such musicals as *Brigadoon* (1947), *Paint Your Wagon* (1950), *My Fair Lady* (1956), *Gigi* (1958), and *Camelot* (1960), written with Alan *Lerner.

Lofoten Islands A chain of islands reaching from the coast of N Norway into the N Atlantic, N of the Arctic Circle. The fisheries are rich, but the waters are often turbulent. The fabled Maelstrom is a current, the Moskenstraumen, between two of the outer islands.

log An instrument used to measure a ship's speed through the water. Modern logs are usually propeller or pitot (dynamic pressure-sensing) designs. A logbook, or log for short, is also a ship's diary with notes on positions, etc.

Logan, Mount 60 31N 140 22W The highest mountain in Canada, in SW Yukon in the St Elias Mountains. Height: 6050 m (19 850 ft).

loganberry A bramble-like shrub that is a cross between a raspberry and a blackberry. It bears red fleshy berries, used for preserves, puddings, and wine. It is named after James H. Logan (1841–1928), who first grew it (in California) in 1881. Family: *Rosaceae*.

logarithms A mathematical function used to facilitate multiplication and division. Based on the law that $a^x \times a^y = a^{x+y}$, two numbers p and q can be multiplied together by writing them in the form $p = a^x$ and $q = a^y$ and then adding together the values of x and y (the exponents). x is called the logarithm of p to the base a , i.e. $x = \log_a p$. Pocket calculators have obviated the need for logarithms as a method of computation but they remain useful mathematical functions.

logic In the widest sense, the science of reasoned argument. As a mental discipline, it is concerned not so much with the application of argument in specific instances as with the general rules covering the construction of valid in-

ferences. *Aristotle was the first to make a systematic study of the principles governing rational discourse (also called syllogism). His works were the sourcebooks for medieval logicians. After the Renaissance philosophers became increasingly aware of limitations in the Aristotelian approach. *Leibniz, for instance, was worried by the difference between the logical and grammatical structure of sentences; two grammatically identical sentences may be very different logically. Rules must therefore be found to formalize ordinary language in such a way as to make plain its underlying logical structure, before further rules for the construction of valid arguments can be drawn up. Since the 19th century formulation of such rules has become mainly the province of mathematicians. George *Boole and Gottlob *Frege were important pioneers in what is now called "mathematical logic" to differentiate it from the wider still current sense. *Russell, whose work had important repercussions for *set theory, called "logic...the youth of mathematics, and mathematics...the manhood of logic."

logical positivism A philosophical movement that arose from the *Vienna Circle in the 1920s. Influenced by Ernst Mach (1838–1916) and *Wittgenstein, it insisted that philosophy should be scientific, regarding it as an analytical (rather than a speculative) activity, the purpose of which was clarification of thought. Any assertion claiming to be factual has meaning only if its truth (or falsity) can be empirically tested. Metaphysical propositions and those of aesthetics and religion are consequently meaningless. A secondary goal of logical positivism was the analysis and unification of scientific terminology.

Lohengrin In *Arthurian legend, the son of Percival (Parzival). He champions a young noblewoman, Elsa of Brabant, whom he agrees to marry on condition that she does not enquire into his origins. When her curiosity overcomes her, he is taken back by his swan guide to the castle of the *Holy Grail, whence he came. The story was adapted by *Wagner in the opera *Lohengrin* (1850).

Loire, River The longest river in France. Rising in the Cévennes Mountains, it flows mainly W to the Bay of Biscay at St Nazaire, passing through Orléans, Tours, and Nantes. Its tributaries include the Allier, Vienne, and Maine. The Loire Valley is renowned for its vineyards and chateaux (Amboise, Blois, Chambord, Chaumont, Chenonceaux). It is linked by canal with the River Seine. Length: 1020 km (634 mi).

Loki In Norse mythology, a mischief-making giant with the ability to change his shape and sex, who lived among the gods until imprisoned in a cave for the murder of Balder. His offspring—Hel, the goddess of death, Jörmungandr, the evil serpent surrounding the earth, and Fenris, the wolf—are among the forces of evil, which he leads against the gods at doomsday (Ragnarök).

Lollards The followers of the English religious reformer *Wycliffe. Until his retirement from Oxford in 1378, the preaching of his doctrines was largely confined to the University. Thereafter his teachings were taken up by nonacademics, including merchants, lesser clergy, and a few members of Richard II's court. Henry IV's reign saw considerable repression of the Lollards culminating in the defeat in 1414 of the rebellion led by Sir John Oldcastle (c. 1378–1417). The movement then went underground and became increasingly proletarian. Many of its tenets were adopted by the early Protestants.

Lombardo, Pietro (c.1438–1515) Italian sculptor and architect. Lombardo worked mainly in Venice, where he was the leading sculptor of his generation. He was frequently assisted by his two sons **Antonio Lombardo** (c.1458–c.1516) and **Tullio Lombardo** (c.1460–1532).

Lombardy A region in N Italy, consisting mainly of mountains in the N and lowlands in the S. It is Italy's most industrialized region. Area: 23 834 sq km (9191 sq mi). Population (2000 est): 9 065 440. Capital: Milan.

Lomond, Loch The largest lake in Scotland, in E Strathclyde Region; it is about 38 km (24 mi) long and 8 km (5 mi) wide. In 2002 Loch Lomond and the Trossachs was designated Scotland's first national park.

London (Latin name: Londinium) 5130N 010W The capital of the UK, in SE England on the River Thames. One of the six largest cities in the world, it comprises a succession of village communities.

London's financial hub is its original nucleus, the **City of London**, roughly a square mile on the N bank of the Thames between Blackfriars Bridge and Tower Bridge. London's **East End**, centring on the borough of Tower Hamlets, has long provided a home for successive immigrant groups. The **West End** comprises the district around Oxford Street (constructed in the 19th century) and is the city's shopping and entertainment centre. London's cultural life is outstanding, with a large

number of art galleries, museums, theatres, concert halls, and educational institutions. London is administered (from 2000) by a two-tier system of local government consisting of a Greater London Assembly (with a directly elected mayor) and 32 London borough councils. The City is administered separately by the Corporation of the City of London.

Economy: the City of London is one of the world's greatest banking, commodity, shipping, and insurance centres; the *Bank of England is to be found in Threadneedle Street with the Stock Exchange nearby, while *Lloyd's is in Lime Street. London's commercial development depended to a large extent on its port. However, apart from Tilbury Docks, most of its port area has now been redeveloped for residential and commercial purposes, including Canary Wharf, the tallest building in London and one of the largest office developments in the world.

History: the Romans built London at the highest point at which the Thames could be forded and at the river's tidal limit—on what was later Cornhill and Ludgate Hill. During the reign of William the Conqueror the White Tower (see TOWER OF LONDON) was built. London prospered in the middle ages and the Church and the *guilds sponsored exceptional building programmes. Westminster Abbey dates from the 11th century, being largely rebuilt in the 13th century, when Southwark Cathedral was begun. To the 15th century belong the Guildhall and Lambeth Palace and to the 16th century, when London began to extend westwards, St James' Palace. The early Stuart period witnessed the great work of Inigo Jones, notably the Queen's House at Greenwich (1617–35) and the Banqueting Hall in Whitehall (1619–22). London's population was decimated by the Plague (1665) and much of its fabric was destroyed in the Fire of the following year. The greatest loss—Old St Paul's—was replaced by Wren, who was responsible for much of the work of reconstruction, including 49 new parish churches in the City. Many of London's finest squares were built in the late 17th and early 18th centuries; the early 19th century witnessed the work of Nash: Regent's Park and the terraces around it. The 19th century produced the *Palace of Westminster, the Law Courts, and such railway stations as St Pancras. London, especially the City and the East End, was seriously damaged by bomb attacks during World War II and subsequent rebuilding consisted largely of high-rise offices and flats, including the Barbican (1973) and the National Westminster building (1977). Recent develop-

ment has been concentrated on the old docklands area. Area: 1580 sq km (610 sq mi). Population (2001): 7 172 036.

London, Jack (1876–1916) US novelist, best known for *The Call of the Wild* (1903). His other novels include *White Fang* (1906) and *Martin Eden* (1909).

London Bridge A bridge spanning the River Thames from the City of London to the borough of Southwark. Bridges on this site date back to Roman times. The stone bridge built between 1176 and 1209 had a drawbridge and was surmounted by shops and houses. It was replaced by a new bridge in the 1820s, designed by John Rennie (1761–1821). The present bridge was completed in 1973.

Londonderry (or Derry) 1. 55 00N 7 19W A city and port in Northern Ireland, in Co Londonderry on the River Foyle. The City of London Corporation was granted Londonderry and the Irish Society established (1610) to administer it. In a famous siege (1688–89) it held out for 105 days against the forces of James II. Population (1991): 72 334. 2. A historic county of N Northern Ireland on the Atlantic Ocean. In 1972 its administrative powers were devolved to the new district council of Coleraine, Derry, Limavady, and Magherafelt. Area: 2108 sq km (814 sq mi).

Long Beach 33 47N 118 06W A city and port in the USA, in California on San Pedro Bay. It is a major tourist centre. Population (2000): 461 522.

longbow A bow of straight-grained yew used from about 1400 to about 1600. Originally Welsh, longbows were up to 1.8 m (6 ft) long and could fire a 110 cm (37 in) arrow capable of piercing chainmail and some plate armour at 183 m (200 yd) every 10 seconds.

Longfellow, Henry Wadsworth (1807–82) US poet. He achieved enormous popularity with such narrative poems as *Evangeline* (1847) and *The Song of Hiawatha* (1855).

Longford (Irish name: Longphort) A county in the N central Republic of Ireland, in Leinster, chiefly low lying with areas of bog. Area: 1043 sq km (403 sq mi). Population (2002): 31 127. County town: Longford.

Long Island An island in the USA, in New York state separated from the mainland by Long Island Sound. Chiefly residential with many resorts, it contains the New York City boroughs of Brooklyn and Queens and the international John F. Kennedy Airport. Area: 4462 sq km (1723 sq mi).

longitude See LATITUDE AND LONGITUDE.

long jump A field event in athletics. Competitors sprint up a runway and leap into a sandpit from a take-off board. The competitor who makes the longest jump in three or six tries is the winner. World records: men: 8.95 m (1991) by Michael Powell (USA); women: 7.52 m (1988) by Galina Chistyakova (Soviet Union).

Longleat An English country house near Warminster, in Wiltshire, owned by the Marquess of Bath. Dating from 1572, Longleat typifies the Elizabethan style of architecture. The house and its grounds, originally laid out by Capability *Brown and now containing a lion safari park, are open to the public.

Long Parliament (1640–60) The parliament that was summoned by Charles I of England following his defeat in the second Bishops' War. In 1640 it impeached the king's ministers, the Earl of Strafford (1593–1641) and Archbishop *Laud, in 1641 expressed its grievances against Charles in the Grand Remonstrance, and in 1642 assumed control of the militia. Charles' rejection of its demands for reform (Nineteen Propositions) precipitated the outbreak of the Civil War. Its power declined as that of the *New Model Army increased and in 1648 it was purged of its moderate members. The remaining Rump Parliament was dismissed in 1653 by Oliver Cromwell, who established the *Protectorate. The Rump was reinstated in 1659 and the full membership of the Long Parliament was restored by Gen Monck (1608–70) in 1660. Shortly afterwards it dissolved itself, being replaced by the Convention Parliament, which effected the *Restoration.

longship A large sailing vessel equipped with a bank of oars on each side. Longships were used by Scandinavian maritime peoples until the mid-18th century. They had square sails and very high prows and were steered by a long tiller attached to a large rudder.

longsightedness (or hypermetropia) Inability to see close objects clearly, because the lens of the eye focuses light to a point behind the retina (light-sensitive layer). This is less common than shortsightedness among young people, but, owing to changes in the lens with age, many people need glasses for reading by the time they are 50. This type of longsightedness is known as **presbyopia**.

loofah The fibrous skeleton of the fruit of the tropical dishcloth gourd, or vegetable sponge (genus *Luffa* (6 species), especially *L.*

cylindrica). These vines produce cucumber-like fruits, about 30 cm long. When mature, the pulp and seeds are removed leaving a dense network of fibrous conducting tissue, which is used as a bath sponge, dish washer, and industrial filter. Family: *Cucurbitaceae*.

loquat A small evergreen tree *Eriobotrya japonica*, native to China and Japan but cultivated in Mediterranean countries for its edible fruit. Family: *Rosaceae*.

Lorca, Federico García See GARCÍA LORCA, FEDERICO.

Lord Chief Justice The presiding judge of the Criminal Division of the Court of Appeal. Since the Constitutional Reform Act of 2005, which abolished the judicial functions of the Lord Chancellor, he is head of the judiciary of England and Wales. The present Lord Chief Justice (since 2005) is Lord Phillips of Worth Matravers.

Lord Lyon King of Arms The highest authority in the deciding of heraldic matters in Scotland. Originally a herald in the 14th century, the Lord Lyon now heads four heralds and two pursuivants at the Lyon Office where, since 1677, all claims to arms must be registered. Also a judge, the Lord Lyon has jurisdiction over issues of clan chieftainship and pedigrees.

Loren, Sophia (S. Scicoloni; 1934–) Italian film actress, now a French citizen. Her films include *Two Women* (1961), *The Millionairess* (1961), *Marriage Italian Style* (1964), and *Saturday, Sunday, and Monday* (1990).

Lorenz, Konrad (1903–89) Austrian zoologist, who was one of the founders of modern ethology (the study of animal behaviour). In the 1930s Lorenz identified the phenomenon of *imprinting in young chicks. He was concerned with determining the elements of behaviour, how they were stimulated, their development in an individual, and their evolutionary significance. Lorenz wrote several popular books about his work, including *King Solomon's Ring* (1949) and *Man Meets Dog* (1950). He also applied his theories to humans, with controversial implications (*On Aggression*, 1963). He was awarded a Nobel Prize (1973) with Karl von Frisch (1886–1982) and Niko Tinbergen (1907–88).

loris A nocturnal Asian *prosimian primate belonging to the subfamily *Lorisinae* (5 species). Lorises are 20–35 cm long with almost no tail and very large dark eyes. They are generally slow-moving and arboreal. Family: *Lorisidae*.

Lorraine (German name: Lothringen) A plan-

ning region and former province in NE France, bordering on Belgium, Luxembourg, and Germany. Its valuable iron-ore deposits are the largest in Europe outside Sweden and the Soviet Union. Disputed between France and the Habsburgs, it was finally incorporated into France, as a province, in 1766. Following the Franco-Prussian War (1871) part of Lorraine (now Moselle department) was lost to Germany and united with *Alsace to form the imperial territory of Alsace-Lorraine. Area: 23 540 sq km (9087 sq mi). Population (2003 est): 2 319 109.

lory A small brightly coloured *parrot belonging to the subfamily *Loriinae* (62 species), occurring in Australia, New Guinea, and Polynesia. Lories have a slender bill with a brush-tipped tongue and feed on pollen and nectar.

Los Alamos 28 54N 103 00W A town in the USA, in New Mexico. Chosen by the US government (1942) for atomic research, the first atom bombs were made here during World War II. The H-bomb was later developed here by the scientific laboratory of the University of California. Government control of Los Alamos ended in 1962. Population (2000): 11 909.

Los Angeles 34 00N 118 15W A city and seaport in the USA, in S California on the Pacific coast, founded in 1781 by Franciscan missionaries. It comprises a large industrial and urban complex, with the second largest population in the USA. It is the centre of the US film industry. Industrial pollution, augmented by the high density of cars (Los Angeles has no public transport), is a serious problem. The city was damaged by an earthquake in 1994. Population (2004 est): 3 845 541.

Los Angeles, Victoria de (1923–2005) Spanish soprano. She established herself as a popular prima donna, particularly in the title roles of Massenet's *Manon Lescaut* and Puccini's *Madame Butterfly*.

Lotto, Lorenzo (c. 1480–1556) Venetian painter. He travelled extensively but, unable to compete with Titian's success, worked chiefly in Bergamo. He is noted for his altarpieces, e.g. the *Crucifixion* (Monte San Giusto, Bergamo), and the psychological insight of such portraits as *A Young Man* (Kunsthistorisches Museum, Vienna), and *Andrea Odoni* (Hampton Court).

lotus Any of several different water plants. The sacred lotus of ancient Egypt was probably *Nymphaea lotus*, a sweet-scented white night-flowering *water lily with broad petals, or *N. caerulea*, a blue-flowered species. The sacred Indian lotus, *Nelumbo nucifera* (family *Nelum-*

baceae), has roselike pink flowers and edible seeds, called lotus nuts. The genus *Lotus* contains about 70 species of herbs, including the birdsfoot trefoils.

loudspeaker A device for converting electrical signals into sound. It usually consists of a small coil fixed to the centre of a movable diaphragm or cone. The coil lies between the poles of a strong *magnet. An audio-frequency electrical signal fed to the coil creates a varying magnetic field, which interacts with the steady field in the gap. This causes the coil, and the attached cone, to vibrate and produce sound waves of the same frequencies as the electrical signal. Generally, larger cones give a better response at low frequencies and the smaller cones are best at high frequencies; for the best results two or more different-sized cones are therefore used, either in the same or in separate cabinets.

loudspeaker. A moving-coil loudspeaker with a pot-shaped permanent magnet.

Louis (I) the Pious (778–840 AD) Emperor of the West (813–40); son of Charlemagne. He fostered Christianity but imperial unity was undermined by his rebellious sons and after his death the Empire was partitioned.

Louis (VII) le Jeune (c.1120–80) King of France (1137–80). He was engaged in a bitter struggle with Henry II of England between 1152, when Henry acquired Aquitaine through his marriage to Louis' former wife *Eleanor of Aquitaine, until 1174.

Louis VIII (1187–1226) King of France (1223–26), known as the Lionheart. He was offered the English throne by King John's baro-

nial opponents but his invasion of England was defeated in 1217.

Louis IX, St (1214–70) King of France (1226–70), regarded as the model medieval Christian king. After defeating Henry III of England (1242) he set out as leader of the seventh *Crusade (1248), during which he was captured by the Egyptians. On his return to France he introduced administrative reforms and fostered learning and the arts. He died on a Crusade in Tunisia and was canonized in 1297.

Louis XI (1423–83) King of France (1461–83), who united most of France under his rule and in 1477 finally defeated Charles the Bold of Burgundy. He extended royal authority over the church and encouraged commerce, gaining the support of the middle classes.

Louis XII (1462–1515) King of France (1498–1515). His reign was dominated by the wars that his father Charles VIII had initiated in Italy.

Louis XIII (1601–43) King of France (1610–43), whose reign was dominated by his chief minister Cardinal de *Richelieu. He was the son of the assassinated Henry IV and of Marie de' Medici (1573–1642), who was regent during his minority. In 1617 he exiled Marie from court but mother and son were later reconciled by Richelieu, her adviser, who in 1624 became Louis' chief minister. The king defeated two *Huguenot uprisings (1622, 1628).

Louis XIV (1638–1715) King of France (1643–1715), known as the Sun King because of the splendour of his reign. His minority was dominated by Cardinal Mazarin (1602–61), after whose death Louis allowed no single minister to dominate. He was a firm advocate of the *divine right of kings and is remembered for his protestation *L'état c'est moi* (I am the state). His patronage of artists, including the writers Molière and Racine, enhanced the magnificence of his court. In 1660 he married Maria Theresa (1638–83), the daughter of Philip IV of Spain. His mistresses included Mme de Montespan (1641–1707) and then Mme de Maintenon (c. 1635–1719), whom he secretly married after Maria Theresa's death. Abroad, France became the dominant power in Europe during Louis' reign, although the many wars in which he involved France left it economically weak. France was further weakened by Louis' revocation (1685) of the Edict of Nantes, ending toleration of Protestants and driving many of France's most productive citizens into exile. His reign was nevertheless one of incomparable brilliance.

The **Louis Quatorze** style of late 17th-century interior design was developed in an attempt by Louis XIV and his designers to establish a French national idiom. The formal baroque furniture was sumptuously gilded or veneered for such regal settings as *Versailles.

Louis XV (1710–74) King of France (1715–74), whose weak rule discredited the Crown and contributed to the outbreak of the French Revolution of 1789. His early reign was dominated by Cardinal Fleury (1653–1743), after whose death Louis' indecisiveness and the influence of his mistresses, especially Mme de *Pompadour and, later, Mme *Du Barry, fostered faction and intrigue. The loss of almost all France's colonies in the *Seven Years' War (1756–63) increased his unpopularity, which hasty judicial and financial reforms at the end of his reign did nothing to alleviate.

The **Louis Quinze** style of French interior decoration and furnishing lasted from about 1723 until Louis' death. A sophisticated and informal style, it was a reaction to the formal baroque pomp of Louis XIV's court. See also **ROCOCO**.

Louis XVI (1754–93) King of France (1774–93), who was guillotined during the *French Revolution. The opposition of Louis' wife *Marie Antoinette and the aristocracy thwarted the attempted reforms of his ministers Turgot (1727–81) and Necker (1732–1804). The consequent economic crisis forced the king to summon (1789) the States General, the disaffected Third Estate of which precipitated revolution. The royal family was confined to the Tuileries Palace from which they attempted to flee in 1791, reaching Varennes. Brought back to the Tuileries, Louis was deposed after it had been stormed by the Paris mob. In 1793 he and his wife were guillotined.

The **Louis Seize** style, a neoclassical French style of furnishing, came into fashion after Louis XVI's accession. It was characterized by rejection of the rococo with straight lines replacing curves and a continuing tendency towards lightness and utility. After the French Revolution (1789–99) this style remained in vogue for some time.

Louis XVII (1785–95) King of France in name (1793–95) following the execution of his father Louis XVI during the French Revolution. He died in prison.

Louis XVIII (1755–1824) King of France, in name from 1795, following the death in prison of his nephew *Louis XVII, and in fact from 1814, following the overthrow of Napoleon. He

fled Paris when Napoleon returned from Elba, being restored with diminished prestige after Waterloo (1815). His attempts to be a moderate constitutional monarch were thwarted by the ultraroyalists.

Louis, Joe (Joseph Louis Barrow; 1914–81) US boxer, called the Brown Bomber, who was world heavyweight champion from 1937 to 1948, when he retired.

Louisiana A state in the S USA, on the Gulf of Mexico. Chiefly low lying, it is crossed by the Mississippi River, the delta of which dominates the coastal lowlands in the S. The state produces chemicals and petrochemicals, paper and food products. Oil is exploited throughout the state and there are major deposits of natural gas, sulphur, and salt. New Orleans and Baton Rouge are important ports and tourism is a growing industry. Its favourable climate and fertile soils make it an important agricultural state. *History*: although discovered by the Spanish, it was claimed for France and named after Louis XIV in 1682. It was ceded to Spain (1762) but was restored to France (1800). It was acquired by the USA as part of the Louisiana Purchase (1803), becoming a state in 1812. Area: 125 675 sq km (48 523 sq mi). Population (2000): 4 468 976. Capital: Baton Rouge.

Louisiana Purchase (1803) About 2 144 250 sq km (828 000 sq mi) of land between the Mississippi River and the Rocky Mountains, purchased by the USA from France for \$27,267,622. The purchase doubled the size of the USA and established US dominance in North America.

Louis Philippe (1773–1850) King of the French (1830–48), the son of the Duke of *Orléans. He supported the *French Revolution until 1793, when he deserted to the Austrians. He joined the liberal opposition to the restored Louis XVIII and came to the throne after the July Revolution had ousted Louis' successor Charles X. Styled King of the French rather than of France and described by Thiers as the Citizen King, Louis Philippe relied on the support of the middle class. His initial moderation turned to repression in the face of the many rebellions against his rule and he abdicated in the Revolution of 1848.

Lourdes 43 06N 0 02W A town in SW France, in the Hautes-Pyrénées department situated at the foot of the Pyrenees. It has been a major pilgrimage centre for Roman Catholics since **St Bernadette of Lourdes** (1844–79) was led by a vision of the Virgin Mary to the Grotto de Massabielle in 1858. This has been the scene of

many reputed cures for a variety of diseases. Population (1995 est): 17 100.

louse A wingless insect parasitic on warm-blooded animals. The sucking lice (order *Anoplura*; 225 species) suck the blood of mammals. They have hairy flattened bodies, 0.5–6 mm long, and claws for attachment to the host. One of the most important species is the human louse (*Pediculus humanus*), of which there are two varieties—the head louse (*P. humanus capitis*) and the body louse (*P. humanus humanus*). Both are transmitted by direct contact and lay their eggs (“nits”) on hair or clothing. Body lice are carriers of typhus and related diseases. Biting lice (order *Mallophaga*; 2600 species) resemble sucking lice but have biting mouthparts for feeding on the skin, feathers, etc., of birds—their principal hosts.

Louth (Irish name: Contae Lughbhaigh) The smallest county in the Republic of Ireland, in Leinster bordering on the Irish Sea. It is chiefly low lying. Agriculture is important. Area: 821 sq km (317 sq mi). Population (2002): 101 802. County town: Dundalk.

Louvre The national museum of France containing the art collection of the French kings and housed in the former royal palace and Tuileries palace in Paris. It was opened to the public in 1793.

lovage A perennial herb, *Ligusticum scoticum*, that has large compound leaves with pairs of divided toothed leaflets and clusters of greenish-white flowers. It is native to Europe and used as a pot herb and salad plant. Family: *Umbelliferae*.

lovebird A small brightly coloured *parrot belonging to a genus (*Agapornis*; 9 species) occurring in Africa and Madagascar. Lovebirds typically have a short tail, a red bill, and a prominent eye ring. They often feed in large flocks and may damage crops. They are popular cagebirds.

Lovelace, Richard (1618–57) English Cavalier poet. One of his best-known poems is “To Althea, from Prison.” *Lucasta* (1649) contains most of his best lyrics.

love-lies-bleeding See AMARANTHUS.

Lowell, Robert (1917–77) US poet. The important collection *Life Studies* (1959) marked a change from his complex and allusive early poetry to a looser, more personal style. Later volumes include *For the Union Dead* (1964). His *Collected Poems* appeared in 2003.

Lower California (Spanish name: Baja Cali-

fornia) A peninsula in NW Mexico, between the Gulf of California and the Pacific Ocean. It is chiefly mountainous and arid, with important mineral deposits. Length: 1223 km (760 mi).

Lowry, L(awrence) S(tephen) (1887–1976) British painter, born in Manchester. His most characteristic works are bleak industrial landscapes dotted with matchstick figures.

Lozi A Bantu-speaking people of Zambia, also known as Barotse. They are cereal cultivators on the fertile flood plain of the upper Zambezi, but hunting and animal husbandry are also important. Political authority is vested in a divine king and subordinate queen who rule from separate northern and southern capitals.

LPG See LIQUEFIED PETROLEUM GAS.

LSD (lysergic acid diethylamide) A drug that—in very small doses—produces hallucinations, altered sensory perception, and a sense of happiness and relaxation or, in some people, fear and anxiety. Long-term use of LSD can cause a schizophrenia-like illness.

Lualaba, River A river in the SE Democratic Republic of Congo, the headstream of the Congo River. Rising in the Shaba region, it flows N to join the River Luvua and becomes the Congo River at the Boyoma Falls. Length: 1800 km (1100 mi).

Luanda (former name: São Paulo de Loanda) 8 58S 13 09E The capital of Angola, a port in the NW on the Atlantic Ocean. Founded by the Portuguese in 1575, it became a centre of the slave trade to Brazil. Oil was discovered nearby in 1955 and a refinery was established. Population (1999 est): 2 255 000.

Lübeck 53 52N 10 40E A city in N Germany, in Schleswig-Holstein on the Trave estuary. A leading city of the Hanseatic League, it has a cathedral (1173) and city hall (13th–15th centuries). It is a major Baltic port. Population (1999 est): 213 800.

Lubitsch, Ernst (1892–1947) US film director, born in Germany. Following the success of *Madame Dubarry* (1919), a historical romance, he went to Hollywood, where he made sophisticated comedies during the 1920s and 1930s. These include *Forbidden Paradise* (1924), *Bluebeard's Eighth Wife* (1938), and *Ninotchka* (1939).

Lubumbashi (name until 1966: Elizabethville) 11 30S 27 31E A city in the SE Democratic Republic of Congo. Founded in 1910 as a coppermining settlement, it is the industrial centre of an important mining area. Population (1994 est): 851 381.

Lucifer See DEVIL.

Lucknow 26 50N 80 54E A city in India, the capital of Uttar Pradesh. Capital of the nawabs of Oudh (1775–1856), it has many notable buildings. The British Residency was besieged in 1857 during the Indian Mutiny. Population (1991): 1 642 134.

Lucretius (Titus Lucretius Carus; c.95–c.55 BC) Roman philosopher and poet. His single work, *De rerum natura*, expounds the philosophy of Epicurus (see EPICUREANISM), including his atomic theory of phenomena and the belief that the soul was material (and mortal).

Lüda (or **Lü-ta**) 38 53N 121 37E A port complex in NE China, at the end of the Liaodong Peninsula. It comprises the two cities **Lüshun** (English name: Port Arthur) and **Dalian** (or Ta-lien; English name: Dairen). Lüshun, a major naval base from 1878, served the Russian Pacific fleet during the Russian occupation (1898–1905). The Russians began the construction of the commercial port at Dalian, completed under Japanese occupation (1905–45). Population (1991 est): 2 400 000.

Luddites A group of Nottingham frameworkers, named after their probably mythical leader, Ned Ludd, who destroyed labour-saving machinery in 1811. Luddism, which spread to other parts of industrial England, showed the hostility to the new machines that were taking the men's livelihood from them. It was severely repressed.

Luftwaffe The German air force. The Luftwaffe, which fought in World War I, was further developed by *Göring in the 1930s. In World War II it was involved in the Blitzkrieg but was defeated in the battle of Britain.

Lugansk (name from 1935 until 1991: Voroshilovgrad) 48 35N 39 20E A city in E Ukraine. It lies in the coal-producing Donets Basin and has iron, steel, and chemical industries. Population (1998 est): 475 300.

Lugus One of the principal Celtic gods. In Ireland he was called Lug and was skilled in many fields. His Welsh counterpart was Lleu Llaw Gyffes (skilful hand).

lugworm A burrowing *annelid worm, *Arenicola marina*, of Atlantic shores. Up to 40 cm long, lugworms have about 20 segments, with tufts of red gills on all but the last few. They feed on organic material in the mud, leaving casts of egested mud on the surface. Class: Polychaeta.

Luke, St New Testament evangelist, tradi-

tionally the author of the third Gospel and the Acts of the Apostles. He was apparently a Gentile doctor who accompanied Paul on several missions. The Gospel according to St Luke was written in the later 1st century AD with Gentile readers in mind.

lumbar puncture A procedure in which cerebrospinal fluid is withdrawn from the spinal cord by means of a hypodermic syringe. This is done for diagnostic purposes.

lumen (lm) The SI unit of luminous flux equal to the light emitted per second in a cone of one steradian solid angle by a point source of one candela.

luminescence The emission of light by a substance for any reason except high temperature. It occurs as a result of the emission of a *photon by an atom of the substance when it decays from an excited state to its ground state. The atom may be excited by absorbing a photon (photoluminescence), colliding with an electron (electroluminescence), etc. If the luminescence stops as soon as the exciting source is removed, it is known as fluorescence; if it persists for longer than 10⁻⁸ seconds it is called phosphorescence.

luminosity The intrinsic brightness of an object, such as a star, equal to the total energy radiated per second from the object. A star's luminosity increases both with surface temperature and with surface area: the hotter and larger a star, the greater its luminosity. Stellar luminosity is related (logarithmically) to absolute *magnitude.

luminous flux The rate of flow of light energy, taking into account the sensitivity of the observer or detector to the different wavelengths. For example, the human eye is most sensitive to the colour green. Luminous flux is measured in *lumens.

luminous intensity The amount of light emitted per second by a point source per unit solid angle in a specified direction. It is measured in *candela.

lumpsucker A slow-moving carnivorous *bony fish, also called lumpfish, belonging to the family Cyclopteridae, found in cold northern seas. They have a thickset body, sometimes studded with bony tubercles, a cleft dorsal fin, and a ventral sucking disc formed from fused pelvic fins. Cyclopterus lumpus is the largest species, reaching 60 cm long. The roe is used as a substitute for caviar. Order: Scorpaeniformes.

Lüneburg 53 15N 10 24E A spa in N Germany, in Lower Saxony. There are many fine medieval

buildings. **Lüneburg Heath** was the site of the surrender of German troops in 1945 at the end of World War II. Population (latest est): 61 000.

lungfish A freshwater *bony fish belonging to the order *Dipnoi*, now reduced to six species including *Lepidosiren paradoxa* of South America, *Protopterus annectens* of Africa, and the Australian *Neoceratodus forsteri*. Lungfish have slender bodies, narrow paired fins, and tapering tails. Their swim bladders are modified for breathing air, an adaptation for droughts, when some make burrows in the bottom mud, leaving air vents above the mouth. They re-emerge in the rainy season to feed and spawn.

lungs The respiratory organs of many air-breathing animals and man. The human lungs are situated within the rib cage on either side of the heart. Each lung is enclosed by a smooth moist membrane (the pleura), which permits it to expand without friction, and contains many tiny thin-walled air sacs (alveoli), through which exchange of oxygen and carbon dioxide takes place during breathing (see RESPIRATION). Air to the lungs passes through the *trachea (windpipe) to the two main airways (bronchi), which subdivide into progressively smaller branches that terminate (as respiratory bronchioles) in the alveoli. Diseases affecting the lungs and airways include virus infections, bronchitis, and cancer.

Lupercalia An ancient Roman festival of purification and fertility held annually on 15 Feb. After performing sacrifices, priests carrying whips of goat hide made a circuit of the Palatine. Women struck by their whips were ensured fertility. The ceremony was suppressed in 494 AD by Pope Gelasius.

lupin An annual or perennial herb of the genus *Lupinus* (about 200 species), native to the N hemisphere and widely cultivated for ornament. They have compound leaves with radiating leaflets and dense spikes of flowers. Family: Leguminosae.

lupus A skin disease of which there are two forms. Used alone, the term usually refers to **lupus vulgaris**, a tuberculous infection of the skin, which is now readily cured by drugs. **Lupus erythematosus** (LE) is a disease in which inflammation of tissues is brought about by the body's own antibodies. LE can be controlled with steroid drugs.

Lusaka 15 03S 28 30E The capital of Zambia, lying on the Tanzam Railway. It became the capital of Northern Rhodesia in 1935 and of Zambia on independence in 1964. The centre of

an important agricultural region, it has expanded rapidly. Population (latest est): 982 362.

Lüshun See LÜDA.

lute A plucked stringed instrument of Moorish origin. The European lute, popular during the 15th, 16th, and 17th centuries, had a body in the shape of a half pear, six or more courses of double strings and a fretted fingerboard. The lute was used chiefly as a solo instrument and to accompany singers; it has been revived in the last hundred years.

lungs. The air passages in the lungs terminate in millions of tiny air sacs (alveoli), into which blood from the pulmonary artery releases its carbon dioxide. Inhaled oxygen in the alveoli is absorbed by the blood, which is carried back to the heart by the pulmonary vein.

luteinizing hormone See GONADOTROPHIN.

lutetium (Lu) The heaviest *lanthanide element named by its discoverer, G. Urbain (1872–1938) after his native Paris (Latin: *Lutetia*).

It was formerly known as **cassiopeium**. At no 71; at wt 174.967; mp 1663°C; bp 3402°C.

Luther, Martin (1483–1546) German Protestant reformer. An Augustinian monk and from 1507 a priest, he became professor of theology at Wittenberg University in 1511. After experiencing a personal revelation he came to believe that salvation could be attained by faith alone. Several visits to Rome convinced him of the corruption of the papacy, and the Dominican monk Johann Tetzel (c.1465–1519), who sold *indulgences on behalf of papal funds, became a particular target for his hostility. In 1517 he nailed his 95 theses against this practice to the church door at Wittenberg. He disobeyed the papal summons to Rome (1518) and further attacked the papal system in his writings. His public burning of a papal bull condemning his theses and writings resulted in his excommunication in 1521. He appeared before Charles V's imperial diet (legislative assembly) at Worms but refused to recant and was declared an outlaw. While in hiding at Wartburg, under the protection of the Elector of Saxony, he completed a German translation of the New Testament. In 1522 he returned openly to Wittenberg, where he led the reform of its church. His original intention was reform not schism, but with the *Augsburg Confession (1530) a separate Protestant church emerged. Subsequently the leadership of the German Reformation was gradually taken over by Philip Melancthon (1497–1560).

The belief and practice of the Protestant Churches that derive from Luther's teaching is known as **Lutheranism**. There is a wide divergence in matters of belief among Lutherans. Essentially Scripture is taken to be the only rule of faith and conservative Lutherans accept Luther's basic doctrine that redemption is only through faith in Christ. Lutheranism is the national faith in all Scandinavian countries, is the principal Protestant Church in Germany, and is also strong in North America. There are 80 million Lutherans world wide.

Luton 1. 51.53N 0.25W A town in SE England, in Luton unitary authority, Bedfordshire. It has motor-vehicle, mechanical, and electronic engineering industries. Nearby is London's Luton Airport. Population (latest est): 184 000.
2. A unitary authority in SE England, in Bedfordshire. Area: 43 sq km (17 sq mi). Population (2004 est): 184 000.

Lutuli, Albert (John Mvumbi) (1898–1967) South African Black leader, whose advocacy of nonviolent opposition to racial discrimination won him the Nobel Peace Prize in 1960.

A Zulu chief, in 1952 he became president of the African National Congress.

Lutyens, Sir Edwin Landseer (1869–1944) British architect. Known as the last English designer of country houses, he also designed the central square of Hampstead Garden Suburb (1908–10) and the Cenotaph (1919–20) but his most spectacular commission was the layout and viceregal palace of New Delhi (1912–30). His daughter, **Elisabeth Lutyens** (1906–83), was a noted composer.

lux (lx) The SI unit of intensity of illumination equal to the illumination resulting from a flux of one lumen falling on an area of one square metre.

Luxembourg, Grand Duchy of A small country in central Europe, between France and Germany. The generally undulating S with its wide valleys rises to the rugged uplands of the Ardennes Plateau in the N. *Economy:* predominantly industrial; iron and steel are especially important although considerable economic diversification has taken place. Agriculture remains important. The city of Luxembourg is an important international centre with the headquarters of the European Parliament and the European Coal and Steel Community. *History:* with the Netherlands and Belgium it formed part of the so-called Low Countries. It became a grand duchy under the Dutch Crown in 1815 and joined the Belgian revolt against the Netherlands in 1830. Thereafter W Luxembourg joined independent Belgium and the E formed part of the Netherlands until the duchy obtained independence in 1867. In 1921 it formed an economic union with Belgium and in 1948 both joined with the Netherlands to form the Benelux Economic Union. Luxembourg was a founding member of the EEC (now the EU). In 2000 Grand Duke Jean abdicated in favour of his son Henri. Luxembourg adopted the single European currency in 1999–2002. Official languages: Luxembourgish, French, and German. Currency: euro of 100 cents. Area: 2586 sq km (999 sq mi). Population (2007 est): 480 222. Capital: Luxembourg.

Luxor (or **El Aksur**) 25.40N 32.38E A town in central Egypt, on the River Nile. It occupies the S part of the ancient city of *Thebes and has numerous ruins and tombs. Population (latest est): 360 503.

Luzon A volcanic island in the N Philippines, the largest and most important. Largely mountainous, its central fertile plain is a major grain growing area with rice terraces to the N. Most industry is concentrated around Manila. Area:

108 378 sq km (41 845 sq mi). Population (1995 est): 32 558 000. Chief town: Manila.

Lviv (Russian name: Lvov; German name: Lemberg) 49 50N 24 00E A city in W Ukraine. It is a major industrial and cultural centre. Under Austrian rule from 1772, it was ceded to Poland after World War I and to the Soviet Union in 1939, being occupied by the Germans in World War II; it passed to Ukraine in 1991. Population (1998 est): 793 700.

Lyceum The gardens and gymnasium in ancient Athens in which *Aristotle lectured and which gave their name to the school and research foundation that he established there in about 335 BC. The name is now applied particularly to Aristotle's philosophical doctrines.

lychee See LITCHI.

Lydia In antiquity, a region of W Asia Minor with its capital at Sardis. Its last native king, *Croesus (ruled 560–546 BC), enriched by Lydia's alluvial gold, controlled Anatolia eastwards to the River Halys, until his defeat by Cyrus the Great (d. 529 BC). The Lydians invented coined money (c. 700 BC).

lymph A clear colourless fluid, consisting of water and dissolved substances, that is contained in a network of vessels called the **lymphatic system**. It is derived from blood and bathes the cells, supplying them with nutrients and absorbing their waste products, before passing into the lymphatic vessels. Here the lymph passes through a series of small swellings called **lymph nodes**, which filter out bacteria and other foreign particles, before draining into the main lymphatic vessels in the neck. These two vessels are connected to veins in the neck and so drain the lymph back into the bloodstream. The lymph nodes, which also produce lymphocytes (a type of white blood cell), sometimes become enlarged during infections. The lymphatic system is one of the routes by which cancer is spread.

lymphocyte See LEUCOCYTE.

lymphoma Cancer of the lymph nodes. There are several different types but the most common is Hodgkin's disease, which can now often be controlled by chemotherapy.

lynx A short-tailed *cat, *Felis lynx*, that inhabits forests of Eurasia and North America.

Lynxes are about 1 m long with faintly spotted yellow-brown thick fur; their ears are tipped with black tufts. They hunt at night, usually for small mammals.

Lyon 45 46N 4 50E The third largest city in France, the capital of the Rhône department at the confluence of the Rivers Rhône and Saône. Notable buildings include the cathedral (12th–15th centuries). The focal point of road and rail routes, Lyon is an important financial centre and has been a leading textile centre since the 15th century. Population (1999): 445 257.

lyre An ancient plucked string instrument. It consists of a sound box with two symmetrical arms supporting a cross piece from which strings are stretched to a bridge on the belly.

lyrebird A primitive ground-dwelling passerine bird belonging to a family (*Menuridae*; 2 species) restricted to forests of E Australia. The male superb lyrebird (*Menura superba*) is brown with grey underparts. Its magnificent tail is spread out into a lyre shape during the courtship display. All lyrebirds sing loudly and are excellent mimics.

Lysander (d. 395 BC) Spartan general and politician. He commanded the fleets that defeated the Athenians at Notium (407) and Aegospotami (405) towards the end of the *Peloponnesian War.

Lysenko, Trofim Denisovich (1898–1976) Soviet biologist, who had a damaging influence on Soviet biology. He endorsed *Lamarck's discredited theory of evolution through inheritance of acquired characteristics. This led him to attack Mendelian genetics and the chromosome theory of inheritance, which, in the 1930s, were widely accepted elsewhere. With the backing of Stalin, Lysenko's influence grew, and by 1948, Soviet scientific opposition to his views had been stifled. Lysenko's influence was eclipsed after Stalin's death.

lysergic acid diethylamide See LSD.

lysosome A membrane-bounded structure occurring in large numbers in nearly all animal cells and containing enzymes responsible for the breakdown of materials both within and outside the cell. Functions of lysosomes include the destruction of bacteria in white blood cells.

Mabinogion, the A collection of eleven medieval Welsh folktales. Drawing on Celtic, Norman, and French legends, it was compiled in the 14th century and contains the earliest known Arthurian romance, *Culhwch and Olwen* (c. 1100).

Mabuse See GOSSAERT, JAN.

Macao (Portuguese name: Macáu; Chinese name: Aomen) 22 13N 113 36E A port and special administrative region of S China, across the Zhu estuary from Hong Kong. It was an overseas territory of Portugal until December 1999. The population is mainly Chinese. Industries now include gambling and financial services as well as the traditional textiles and fishing. Tourism is also important. *History*: it was a major trading centre until the 19th century. Immigration of refugees from Communist China was stopped after procommunist riots (1966–67). Sovereignty passed to China in 1999. Official currency: pataca of 100 avos. Area: 16 sq km (6 sq mi). Population (2006 est): 513 400.

macaque An *Old World monkey belonging to the genus *Macaca* (12 species), found mainly in the forests of S Asia. 35–78 cm long, macaques have short legs and areas of hard bare skin on the rump. They are mainly terrestrial, feeding on plant and animal matter. The Barbary ape is a macaque of N Africa. See also RHE-SUS MONKEY.

MacArthur, Douglas (1880–1964) US general. One of the outstanding strategists of World War II, he commanded the occupation of Japan (1945–51) and led the UN forces in the Korean War. His advocacy of active operations against China was contrary to US policy and President Harry S. Truman dismissed him (1951).

MacArthur, Dame Ellen (1976–) British yachtswoman. In 2005 she completed the

fastest ever solo circumnavigation of the globe and was created DBE.

Macassar See UJUNG PANDANG.

Macaulay, Thomas Babington, 1st Baron (1800–59) British essayist, historian, and poet. He was a leading contributor to the *Edinburgh Review* and had a long career in parliament. His Whig sympathies are evident in his successful *History of England* (5 vols, 1849–61).

macaw A large brightly coloured *parrot belonging to one of two genera (*Ara* and *Anodorhynchus*), ranging from Mexico to Paraguay. Up to 100 cm long, macaws have a long loose tail and a huge hooked bill.

Macbeth (d. 1057) King of Scots (1040–57), after killing Duncan I in battle at Bothnagowan. He was killed by Duncan's son Malcolm.

Maccabees The Hasmonean dynasty founded in Jerusalem by the Jewish fighter Judas Maccabee (d. 161 BC) after a revolt against Syrian (Seleucid) rule. It continued until the capture of Jerusalem by the Romans in 63 BC. The *Books of Maccabees* are four books of the *Apocrypha.

McCarthy, Joseph R(aymond) (1908–57) US Republican senator, who led Senate investigations of supposed communists during the Cold War. His claim to have the names of communist infiltrators into the State Department was not proved and in 1954 his anticommunist witchhunt—commonly known as McCarthyism—came to an end.

McCartney, Sir Paul (1942–) British rock musician and songwriter, formerly with the *Beatles. His subsequent recordings include *Band on the Run* (1973; with Wings) and *Memory Almost Full* (2007).

Macclesfield 53 16N 2 07W A town in N England, in Cheshire on the W edge of the Pennines. A former centre of the silk industry, it

now produces plastics and pharmaceuticals. Population (1998): 50 810.

McCullers, Carson (1917–67) US novelist and playwright. Her novels, which include *The Heart Is a Lonely Hunter* (1940) and *A Member of the Wedding* (1946), are set in her native South and describe a grotesque world. Other works include *The Ballad of the Sad Café* (1951) and *Clock Without Hands* (1961).

MacDiarmid, Hugh (Christopher Murray Grieve; 1892–1978) Scottish poet. Active both as a nationalist and Marxist, he virtually created the “Scottish Renaissance” in literature. His early work, notably *A Drunk Man Looks at the Thistle* (1926), was written in a Scots language drawn from regional dialects and Middle Scots writers. Most of his later poems are in English.

MacDonald, (James) Ramsay (1866–1937) British statesman; the first Labour prime minister (1924, 1929–31, 1931–35). He joined the Independent Labour Party in 1894. Elected an MP (1906) he became leader of the parliamentary *Labour Party (1911) but resigned in opposition to World War I (1914). Re-elected to parliament in 1922 he again led the Labour Party, becoming prime minister in 1924. His minority government was defeated after a vote of no confidence. His 1929–31 government was broadened into a coalition (1931–35) that was increasingly dominated by the Conservatives.

mac See NUTMEG.

Macedonia The central region of the Balkans. Inhabited from Neolithic times, Macedonia was settled by many migrating northern tribes. About 640 BC Perdiccas I became the first ruler of the kingdom of Macedon. *Philip II (359–336 BC) quelled the warlike tribes and founded Macedonia's military and economic power, which under his son Alexander the Great was extended to the East. After defeat (168 BC) in the Macedonian Wars, Macedonia became a Roman province (146). After World War I the region was divided between S Yugoslavia (see MACEDONIA, FORMER YUGOSLAV REPUBLIC OF), N Greece, and SW Bulgaria.

Macedonia, Former Yugoslav Republic of A country in SE Europe, in the Balkans. *Economy:* UN sanctions against Serbia (Macedonia's main trading partner), an economic blockade by Greece (1994–95), and a massive influx of refugees from Kosovo (1999), have had a particularly damaging effect. Mining, metalworking, chemicals, and textiles are the main industries. Agricultural products include tobacco, wheat,

and sugar beet. *History:* the country occupies the N part of the region of Macedonia, which was ceded by Turkey to Serbia in 1913. It was a constituent republic of Yugoslavia from 1944 but declared independence in 1991. Greek fears of a possible claim to the Greek region of Macedonia delayed international recognition of the country until 1993, when it agreed to adopt its current name. In 2001 the NE saw mounting violence between Albanian militants and state forces. A peace agreement involving major constitutional reforms was signed in August. Elections held in 2006 saw a victory for the centre-right led by Nikola Gruevski. Official languages: Macedonian and Albanian. Currency: denar of 100 deni. Area 25 713 sq km (9925 sq mi). Population (2007 est): 2 055 915. Capital: Skopje.

McEnroe, John (Patrick, Jr) (1959–) US tennis player. He won the US singles title in 1979, 1980, 1981, and 1984 and became Wimbledon singles champion in 1981, 1983, and 1984. He retired in 1993.

McEwan, Ian (Russell) (1948–) British novelist and writer, whose books include *First Love*, *Last Rites* (1975), *The Child in Time* (1987), *Enduring Love* (1997), *Atonement* (2001), and *On Chesil Beach* (2007).

Macgillicuddy's Reeks A mountain range in the Republic of Ireland, in Co Kerry. It extends W of the Lakes of Killarney, reaching 1041 m (3414 ft) at Carruntuohill, Ireland's highest mountain.

Machiavelli, Niccolò (1469–1527) Italian political theorist. He served the Florentine republic as statesman and diplomat from 1498 to 1512, when the restoration of the Medici family forced him into exile. In *The Prince* (1532), written in 1513, he argued that all means are permissible to obtain a stable state.

Mach number The ratio of the velocity of a body in a fluid to the velocity of sound in that fluid. The velocity is said to be supersonic if the Mach number is greater than one. If it exceeds five the velocity is said to be hypersonic. Named after the Austrian physicist Ernst Mach (1838–1916).

Machu Picchu A well-preserved 15th-century *Inca town in the Urubamba valley (Peru), discovered in 1911. Sited on a precipitous ridge, Machu Picchu is flanked by extensive agricultural terraces. It contains a central plaza, royal palace, and sun temple, all built of polygonal dressed stone blocks.

McIndoe, Sir Archibald Hector (1900–60) New Zealand surgeon, who pioneered tech-

niques in plastic surgery. He is particularly noted for his work in Britain with badly burnt RAF airmen during World War II.

Macintosh, Charles (1766–1843) Scottish chemist, who invented the waterproof garment known as the “mackintosh.” He made his discovery in 1823 by noting that rubber dissolved in naphtha could be used to stick together two pieces of cloth, producing a waterproof layer between them. He also patented a steel-making process (1825).

McKellen, Sir Ian (1939–) British actor, noted for his Shakespearean roles and for the film trilogy *The Lord of the Rings* (2001–03).

Mackenzie River The longest river in Canada, flowing from Great Slave Lake in the North West Territories W and NNW to an extensive delta on the Beaufort Sea. Navigable in summer, it carries oil and minerals from the Arctic Ocean to S Canada. Length: 1705 km (1065 mi).

mackerel An important food and game fish belonging to the genus *Scomber*, related to tuna. Mackerels live in shoals in tropical and temperate oceans, feeding on fish and invertebrates. They have a streamlined body, two dorsal fins, and a forked tail. The common Atlantic mackerel (*S. scombrus*), about 30 cm long, is marked with black and green bands above and is silvery-white below.

McKinley, Mount A mountain in the USA, in S central Alaska in the Alaska Range. The highest peak in North America, it was first successfully climbed in 1913 by a party led by the US explorer Hudson Stuck (1863–1920). Height: 6194 m (20 320 ft).

Maclean, Donald (1913–83) British Foreign Office official and Soviet secret agent. He fled to Russia in company with Guy Burgess (1911–63) in 1951; they were followed by fellow-conspirator Kim Philby (1912–88) in 1963. In 1979 it was revealed that Anthony Blunt (1907–83), a distinguished art historian, was implicated in the affair. The so-called “fifth man” involved was identified in 1991 as John Cairncross.

Macmillan, (Maurice) Harold, 1st Earl of Stockton (1894–1986) British statesman; Conservative prime minister (1957–63). The grandson of the publisher Daniel Macmillan, he first became an MP in 1924. He became minister of housing and local government in 1951 and then minister of defence (1954) and foreign secretary (1955). As chancellor of the exchequer (1955–57) he introduced Premium Bonds (1957).

Macmillan succeeded Sir Anthony Eden as prime minister. His “wind of change” speech in Africa in 1958 marked his government’s support of independence for African states; he is also remembered for his assertion during the 1959 election that “you’ve never had it so good.” His second ministry was plagued by scandal and suffered a blow when de Gaulle frustrated Britain’s attempt to join the EEC (1963). Macmillan became chancellor of Oxford University in 1960, was awarded the OM in 1976, and was granted an earldom in 1984.

MacNeice, Louis (1907–63) Irish-born British poet. He published his first volume of poetry, *Blind Fireworks*, in 1929. Among his other volumes are *Autumn Journal* (1939), *The Burning Perch* (1963), and a distinguished collection of plays for radio, *The Dark Tower* (1947).

Mâcon 46 18N 4 50E A town in E France, the capital of the Saône-et-Loire department on the River Saône. An important trading centre for Burgundy wines, its manufactures include textiles, vats, and agricultural machinery. Population (1995 est): 39 700.

McQueen, Steve (1930–80) US film actor. Following his success in *The Magnificent Seven* (1960) he usually played tough laconic heroes. His later films include *Bullitt* (1968) and *Papillon* (1973).

Madagascar, Republic of (name until 1975: Malagasy Republic) An island country in the Indian Ocean, off the SE coast of Africa. A narrow coastal plain in the E and a broader one in the W rise to central highlands. Most of the inhabitants are Merina, Betsimisaraka, and Betsileo, all speaking Austronesian dialects. *Economy*: chiefly agricultural: the main crops include rice and manioc as well as coffee, sugar, and spices, the main exports. Minerals include graphite, chrome, and ilmenite. Industry, previously based mainly on food processing and tobacco, now includes metals, plastics, paper, and oil refining. The country remains very poor, with a large external debt. *History*: settled by Indonesians from the 1st century AD and by Muslim traders from Africa from the 8th century, it remained a native kingdom until the late 19th century, when the French laid claim to Madagascar and established a protectorate (1896). It became a French overseas territory in 1946 and a republic within the French Community in 1958, gaining full independence in 1960. In 1975 Madagascar became a Marxist republic, with Admiral Didier Ratsiraka (1936–) as its first president. After social unrest, a transitional government was installed in 1991 to

oversee constitutional reform. Multiparty elections were held in 1993 and Ratsiraka was reelected in 1997. Presidential elections in 2001 gave Marc Ravalomanana a narrow victory, which Ratsiraka refused to accept. This led to virtual civil war before Ravalomanana was finally sworn in in 2002. Official languages: Malagasy and French. Currency: Malagasy franc of 100 centimes. Area: 587 041 sq km (229 233 sq mi). Population (2003 est): 16 606 000. Capital: Antananarivo.

Madeira Islands (or **Funchal Islands**) A Portuguese archipelago in the Atlantic Ocean, about 640 km (398 mi) off the coast of Morocco. It comprises the inhabited islands of Madeira and Porto Santo and two uninhabited island groups. Madeira, the largest and most important island, is densely vegetated. Its products include basketwork; fruit (such as mangoes), sugar, and the famous Madeira wine. Area: 777 sq km (300 sq mi). Population (2001): 242 603. Capital: Funchal.

Madhya Pradesh A state in central India, stretching N over highlands to the S Ganges plain; it is chiefly agricultural, with rich mineral resources and several industrial cities. The region was under Islamic (11th–18th centuries) and Maratha (18th–19th centuries) rule until Britain took control. Formerly India's largest state, it lost the SE to the new state of *Chhattisgarh in 2000. Area: 308 332 sq km (119 016 sq mi). Population (2001): 60 385 118. Capital: Bhopal.

Madonna (Madonna Louise Veronica Ciccone; 1958–) US pop singer and film actress. Her bestselling records include "Like a Virgin" (1985), "Like a Prayer" (1989), and *Music* (2000).

Madras 13°05'N 80°18'E A city and major seaport in India, the capital of Tamil Nadu on the Coromandel Coast. Founded (1639) by the British East India Company, the city developed around Fort St George, which is the site of the first English church built in India (1678–80). An important industrial centre, Madras manufactures cars, bicycles, and cement and its chief exports are leather, iron ore, and cotton textiles. Population (1991): 3 795 028.

Madrid 40°27'N 3°42'W The capital of Spain, situated on a high plateau in the centre of the country on the River Manzanares. Its industries include the manufacture of leather goods, textiles, chemicals, engineering, glassware, and porcelain and the processing of agricultural products. A cultural centre, Madrid possesses a university, notable art galleries, and the national library (founded in 1712). Fine buildings

include the former royal palace and the 17th-century cathedral. *History:* Madrid was captured from the Moors in 1083 by Alfonso VI. Philip II established it as the capital in 1561. In the Spanish Civil War Madrid was a Republican stronghold until it fell to the Nationalists in March 1939. In March 2004 nearly 200 people were killed in a bomb attack by Islamic terrorists. Population (1998 est): 2 881 506.

madrigal A secular polyphonic composition (see POLYPHONY) for voices, often a setting of a love poem. In 14th-century Florence, Landini wrote madrigals for voices and instruments. The Italian madrigal of the 16th and 17th centuries developed as an aristocratic art form in the complex compositions of Marenzio, Monteverdi, and Gesualdo. The English school (Byrd, Morley, Weelkes, etc.) wrote in a simpler style.

Maeander, River See MENDERES, RIVER.

Maes, Nicolas (or **N. Maas**; 1634–93) Dutch painter of domestic scenes and portraits. Initially influenced by his teacher Rembrandt, in such paintings as *Girl at the Window* (c.1655; Rijksmuseum, Amsterdam), he later adopted the style of Flemish portraiture.

Maeterlinck, Maurice (1862–1949) Belgian poet and dramatist. Having established his reputation as a poet he became the leading dramatist of the Symbolist movement with such plays as *Pelléas et Mélisande* (1892). He also wrote several philosophical and mystical prose works. He won the Nobel Prize in 1911.

Mafeking (or **Mafikeng**) 25°53' 25°39'E A town in South Africa, in Bophuthatswana. It was besieged for 217 days by Boers during the second Boer War (1899–1902) but was held by Col *Baden-Powell until relieved. It was the capital of the protectorate of Bechuanaland (now Botswana) until 1965. Population (latest est): 6775.

Mafia A criminal organization that originated as a secret society in 13th-century Sicily. The word (meaning "swank") was coined in the 19th century, when the Mafia was employed by the great landowners of Sicily to manage their estates. By extortion, "protection," ransom, and blackmail, the Mafia formed an organization so powerful that it virtually ruled Sicily. Italian emigrants took the Mafia to the USA in the early 20th century, where as Cosa Nostra (Our Affair), it has flourished.

Magdalenian A culture of the Upper *Palaeolithic, succeeding the Solutrean in W Europe. Named after La Madeleine cave in the Dordogne (SW France), the Magdalenian is

marked by an abundance of bone and antler tools. Dating from about 15 000 to 10 000 BC, it was the heyday of prehistoric art with magnificent cave paintings (e.g. at Altamira).

Magdeburg 52°N 11°35'E A city in E Germany, on the River Elbe. It achieved fame in the middle ages for its judicial system, the "Magdeburg Law," which was used as a model by many other European cities. It was also a leading member of the Hanseatic League. An important inland port, its industries include iron, oil and sugar refining, chemicals, and textiles. Population (1999 est): 238 000.

Magellan, Ferdinand (c.1480–1521) Portuguese explorer. He undertook many expeditions to India and Africa for Portugal between 1505 and 1516. In 1519, under Spanish patronage, he set off to seek a passage W to the Moluccas. Late in 1520 the expedition sailed through the Strait of Magellan, which separates the mainland of South America from Tierra del Fuego. In the spring of 1521 they reached the East Indies, where Magellan was killed. Only one ship returned to Spain, thus completing the first circumnavigation of the world.

Maggiore, Lake (Latin name: Lacus Verbanus) A long narrow lake in Italy and Switzerland. Sheltered from the N by the Alps, it enjoys a mild climate: the holiday resorts at its edge include Locarno, in Switzerland. Area: 212 sq km (82 sq mi).

Magherafelt A district of Northern Ireland, in Co. Londonderry. Area: 572 sq km (221 sq mi). Population (2001): 39 780.

Magi 1. In antiquity, the priests of *Zoroaster, renowned for their astronomical knowledge. 2. The sages who came from the East, following a star, to worship the infant Christ at Bethlehem (Matthew 2.1–12). Early Christian tradition gave them the title of kings and the names of Caspar, Melchior, and Baltazar. Symbolic significance was ascribed to their gifts: gold (kingship), frankincense (divinity), and myrrh (death).

magic A system of beliefs and practices by which it is believed that man may control the natural and supernatural forces that affect his life. Generally regarded as "superstition" in industrial societies, magic plays an important social role in many preindustrial societies. Its practitioners may rank highly, being credited with the ability to communicate with good and evil spirits.

Maginot line Fortifications built (1929–38) to protect the E frontier of France. They were

named after André Maginot (1877–1932), French minister of war (1929–32), who authorized its construction.

magistrate An officer who administers the law. In England magistrates are either justices of the peace or stipendiary magistrates, who are appointed to try cases in some metropolitan Magistrates' Courts, have wider powers than justices, and are salaried.

maglev See MAGNETIC LEVITATION.

magma Molten rock lying beneath the earth's surface, either in the crust or upper mantle. It may rise to the surface through volcanic fissures and be extruded as lava; if it solidifies under ground it forms intrusive *igneous rock. Magma is a hot largely silicate liquid, containing dissolved gases and sometimes suspended crystals.

Magna Carta (1215) The Great Charter that was sealed at Runnymede by King John of England in response to baronial unrest. The Charter defined the barons' feudal obligations to the monarch and confirmed the liberties of the English Church. Of the four extant originals, two are in the British Library, one is in Salisbury Cathedral, and one is in Lincoln Cathedral.

magnesium (Mg) A light silvery-white reactive metal, first isolated by Sir Humphry Davy in 1808. Magnesium is the eighth most common element in the earth's crust and is a major constituent of the earth's mantle. It is extracted by electrolysis of magnesium chloride (MgCl₂), which is obtained from sea water and is responsible for the stickiness of unrefined table salt, since magnesium chloride is deliquescent. Magnesium forms many other ionic salts, such as the sulphate (MgSO₄; Epsom salts), the carbonate (MgCO₃; magnesite), the oxide (MgO), the nitrate (Mg(NO₃)₂), and the hydroxide (Mg(OH)₂; milk of magnesia). It also plays a central role in plant life, occurring in *chlorophyll. It has important commercial uses when alloyed with aluminium. At no 12; at wt 24.3050; mp 650°C; bp 1090°C.

magnet A body that has an appreciable external *magnetic field (see also MAGNETISM). Every magnet has two distinct areas around which the field is greatest—called the north and south poles. If two magnets are brought together, the like poles repel each other and the opposite poles attract each other. Ferromagnetic materials (see FERROMAGNETISM) are attracted to magnets because the magnet induces a field in the material in line with its own field. Permanent magnets are made of fer-

m

romagnetic materials and retain their magnetism unless they are heated above a certain temperature or are demagnetized by a strong opposing field. **Electromagnets** only function when an electric current flows through their coils.

magnetic constant (μ_0) A constant frequently occurring in magnetic equations in SI units. Also known as the *permeability of free space, its value is $4\pi \times 10^{-7}$ henry per metre. It is related to the *electric constant (ϵ_0) by $\mu_0\epsilon_0 = 1/c^2$, where c is the velocity of light.

magnetic declination (or **magnetic variation**) The angle between geographical north and the horizontal component of the *geomagnetic field at the same point.

magnetic dip The angle formed between the horizon and a compass allowed to swing freely in the vertical plane. It thus indicates the direction of the vertical component of the *geomagnetic field.

magnetic domain See FERROMAGNETISM.

magnetic field The concept, devised by *Faraday, to explain the action-at-a-distance forces produced by a *magnet. The magnet is thought of as being surrounded by a field of force, within which its magnetic properties are effective. The strength and direction of the field is indicated by the lines of force that join the magnet's north and south poles. These lines of force can be seen if a card is laid over a magnet and iron filings sprinkled onto the card; when the card is tapped, the filings congregate along the lines of force. A wire carrying an electric current is also surrounded by a magnetic field, with concentric lines of force. An electromagnet usually consists of a coil of wire, in which the lines of force run through the centre of the coil and around its circumference. See also ELECTROMAGNETIC FIELD.

magnetic levitation (or **maglev**) A magnetic method of raising a vehicle above its tracks to provide almost frictionless propulsion. Starting on normal wheels, the train levitates above its elevated track as it gathers speed as a result of the interaction between superconducting magnets buried in the track and those in the base of each coach. Forward propulsion is by linear motor.

magnetic resonance imaging (MRI) A technique used in medicine for producing images, in any plane, of soft tissues, especially in the brain and spinal cord. It involves subjecting the tissues to a strong magnetic field and

enables a variety of diseases to be diagnosed without exposing the patient to X-rays.

magnetism A phenomenon in which one body can exert a force on another body with which it is not in contact (action at a distance). The space in which such a force exists is called a *magnetic field. Stationary charged particles are surrounded by an *electric field; when these charged particles move or spin, an associated effect, the magnetic field, is created. The behaviour of materials when placed in such a field depends on how the spinning electrons inside its atoms align themselves. See also FERROMAGNETISM; FERROMAGNETISM; PARAMAGNETISM.

magnetite (or **lodestone**) A black magnetic mineral, a form of iron oxide (Fe_3O_4). It often has distinct north and south magnetic poles and was known around 500 BC for its use as a compass. It is one of the ores from which iron is extracted.

magneto An alternating-current *electric generator that uses a permanent *magnet, rather than an electromagnet, to create the magnetic field. It usually consists of one or more conducting coils rotating between pairs of magnetic poles. The induced voltage has a frequency equal to the number of magnets times the speed of rotation of the coils. It is used in some small internal-combustion engines to produce the ignition spark.

magnetohydrodynamics (MHD) A method of generating electricity in which current carriers in a fluid are forced by an external magnetic field to flow between electrodes placed in the fluid. Usually the fluid is a hot ionized gas or plasma in which the current carriers are electrons. The electron concentration is increased by adding substances of low ionization potential (e.g. sodium or potassium salts) to the flame.

magnetomotive force (mmf) A measure of the magnetic effect of an electric current in a coil. It is analogous to *electromotive force and is measured in ampere-turns, being dependent on the number of turns in the coil.

magnetosphere A region surrounding a planet in which charged particles are controlled by the magnetic field of the planet rather than by the interplanetary magnetic field carried by the *solar wind. Its shape arises from the interaction between solar wind and planetary magnetic field. The earth's magnetosphere, which includes the *Van Allen radiation belts, extends 60 000 km from the

sunward side of the planet but is drawn out to a much greater extent on the opposite side.

magnetostriction The mechanical deformation of a ferromagnetic material (see FERROMAGNETISM) when it is subjected to a magnetic field.

magnetron An electronic device used to generate and amplify *microwaves. It consists of a sealed evacuated tube that contains a central cylindrical cathode (source of electrons) inside a cylindrical anode to which electrons are drawn by an electrostatic field. A steady magnetic field applied along the axis of the tube deflects the electrons from their radial path and, if strong enough, will cause them to rotate around the cathode setting up microwave-frequency oscillations. It is widely used in radar generators.

magnification In optical systems, the ratio of the width of an object to the width of its image, both being measured perpendicular to the axis of the system. For a single lens this reduces to the ratio of the distances of the image and the object from the lens when the image is in focus. For optical instruments the magnification is defined as the ratio of the size of the image on the retina produced by an object with and without the instrument.

magnitude A measure of the brightness of stars and other astronomical objects. An object's **apparent magnitude** is its brightness as observed from earth and depends primarily on its *luminosity and its distance. An object's **absolute magnitude** is its apparent magnitude if it lay at a distance of 10 parsecs (32.616 light years). Both apparent and absolute magnitude are measured at various specific wavebands in the visible, ultraviolet, and infrared regions of the electromagnetic spectrum.

Magnolia A genus of evergreen or deciduous shrubs and trees (35 species), native to North America and Asia and widely grown as ornamentals. Up to 45 m high, they have large simple leaves and showy white, yellow, greenish, or pink flowers. These produce papery conelike structures containing winged fruits. Family: *Magnoliaceae*.

magpie A noisy black-and-white crow, *Pica pica*, occurring in Eurasia, NW Africa, and W North America. 44 cm long, it has a long wedge-shaped tail. Magpies are omnivorous and notorious predators of eggs and nestlings; they are also attracted to bright objects. The name is also given to Australian songbirds of the fam-

ily *Cracticidae*, which includes the *currawongs.

Magritte, René (1898–1967) Belgian surrealist painter. Initially a wallpaper designer and commercial artist, he became associated with the Paris surrealists (see SURREALISM) in the late 1920s. In his work everyday images are made to appear menacing by unusual juxtapositions.

Magyars The largest ethnic group in Hungary. They originated from mixed Ugric and Turkic stock and migrated from Siberia during the 5th century, reaching their present location during the late 9th century. See also HUNGARIAN.

Maharashtra A state in W central India, on the Arabian Sea. Rising from its coastal plain eastwards over the Western *Ghats, it lies mostly on the Deccan plateau. Cotton, millet, wheat, and rice are farmed. The second most industrialized state, it produces textiles, machinery, and oil products. Bauxite, manganese, and iron ore are mined. Area: 307 690 sq km (118 774 sq mi). Population (2001): 96 752 247. Capital: Bombay.

Mahayana (Sanskrit: Great Vehicle) The school of Buddhism dominant in Tibet, Mongolia, China, Korea, and Japan. More evolved, adaptable, and less conservative and academic than the rival school, the Theravada, the Mahayana teaching differs from it primarily in promulgating the ideal of the Bodhisattva—the one who, having gained enlightenment, remains in the world in order to help other beings to their release.

Mahdi, al- (Arabic: the guided one) In Islamic tradition, a messianic leader who will appear shortly before the end of the world and, for a few years, restore justice and religion. According to some *Shiite Muslims, the 12th imam (9th century AD), who is now hidden, will return as the Mahdi. The best-known claimant to the title was the Sudanese leader **Muhammad Ahmad** (1844–85). After a religious experience, he proclaimed himself the Mahdi and led an uprising against the Egyptian Government. In 1885, after a ten-month siege, he captured Khartoum, which was defended by General *Gordon.

mahjong An ancient Chinese game. It is usually played by 4 people using 2 dice and 136 tiles of bone, ivory, or plastic. 108 of the tiles are arranged in 3 suits: circles, bamboos, and characters. There are also four each of red, white, and green dragons and four each of east, south,

m

west, and north winds. The tiles are built into a square of four walls, symbolizing a walled city. Players score by collecting sequences of tiles.

Mahler, Gustav (1860–1911) Austrian composer and conductor. He directed the Viennese Court Opera from 1897–1907. In 1909 he became conductor of the New York Philharmonic Society, but met resistance to his advocacy of modern music. His nine large-scale symphonies (and uncompleted tenth) were written during brief vacations. The second (*Resurrection Symphony*), third, fourth, and eighth (*Symphony of a Thousand*) employ vocal soloists. He also wrote song cycles.

mahogany An evergreen tree of the genus *Swietenia* (7 species), native to tropical America and the West Indies and widely cultivated for timber. Up to about 20 m high, it has large compound leaves, greenish-yellow flower clusters, and fruit capsules containing winged seeds. *S. macrophylla* and *S. mahagoni* are the most important species: their hard red-brown wood is highly valued for furniture. Family: *Meliaceae*.

maidenhair fern An ornamental *fern of the genus *Adiantum* (about 200 species), especially *A. capillus-veneris*, found worldwide in moist warm places. From a creeping rhizome arise delicate brown or black stalks, about 2.5–30 cm high, bearing fan-shaped green leaflets. Clusters of spore capsules (sori) are situated on the leaf margins, which are folded onto the underside. Family: *Adiantaceae*.

maidenhair tree See GINKGO.

Maidstone 51°17'N 0°32'E A town in SE England, the administrative centre of Kent on the River Medway. It is an ancient town and the centre of an important fruit- and hop-growing region. There are brewing, paper, cement, confectionery, and engineering industries. Population (1991): 90 878.

Mailer, Norman (1923–) US novelist and journalist. He established his reputation with the World War II novel *The Naked and the Dead* (1948). His concern with American society is expressed in such works as *An American Dream* (1965), *The Armies of the Night* (1968), and *The Executioner's Song* (1979). More recent works include *Ancient Evenings* (1983) and *Harlot's Ghost* (1991); *The Time of Our Time* (1998) is a collection of his journalism.

Main, River A river in central Germany, flowing generally W through Frankfurt to join the River Rhine at Mainz. It is linked by canal with the River Danube. Length: 515 km (320 mi).

Maine A coastal state in the extreme NE USA. The largest of the New England states, it consists of uplands in the W and NW and lowlands along the deeply indented coast in the E. Four-fifths of the state is forested. It is the most sparsely populated state E of the Mississippi. Manufacturing is most important and the major products are paper and pulp, leather goods, food, timber, and textiles. It is an area of considerable mineral wealth; limestone, building stone, sand, and gravel are exploited. The state's major agricultural products are potatoes, poultry, dairying, apples, and beef. *History*: although claimed by both Britain and France, it became a British possession (1763). It entered the Union as part of Massachusetts (1788) and later became a separate state (1820). Area: 86 027 sq km (33 215 sq mi). Population (2000): 1 274 923. Capital: Augusta.

Mainland 1. (or Pomona) The largest of the Orkney Islands, divided into two main parts by Kirkwall Bay and *Scapa Flow. Area: 492 sq km (190 sq mi). Population (1991): 15 128. Chief town: Kirkwall. **2.** The largest of the Shetland Islands. Area: about 583 sq km (225 sq mi). Population (1991): 17 596. Chief town: Lerwick.

main sequence See HERTZSPRUNG-RUSSELL DIAGRAM.

Mainz (French name: Mayence) 50°00'N 8°16'E A city and port in SW Germany, the capital of Rhineland-Palatinate at the confluence of the Rivers Rhine and Main. Originally a Celtic settlement, it was the first German archbishopric and in the 15th century Gutenberg set up his printing press here. It is a wine-trading centre with varied industries. Population (1999 est): 185 600.

maiolica Italian pottery originating in the 15th century. Made from calcareous clay, the soft buff body is coated with white tin glaze and brilliantly painted in lustre and rainbow colours. Items made include tableware and display ornaments. Principal centres of manufacture were Gubbio, Deruta, Caffaggiolo, and Faenza (see FAIENCE).

maize An annual *cereal grass, *Zea mays*, also called Indian corn, sweet corn, or corn, native to the New World and widely cultivated in tropical and subtropical regions. 1–4.5 m high, it bears a tassel of male flowers at the top of the stem and spikes of female flowers in the leaf axils; these develop into cobs, each comprising long parallel rows of grains. Maize is used as a vegetable, in breakfast cereals, flour, and livestock feed and for the extraction of corn oil. It is the third most important cereal

crop (after wheat and rice), the USA being the chief producing country.

Major, Sir John (1943–) British Conservative politician; prime minister (1990–97). Having entered parliament in 1979, he served as foreign secretary (1989) and chancellor of the exchequer (1989–90) before succeeding Margaret Thatcher as premier. Despite success in the 1992 general election, an economic recovery, and a new peace initiative in Northern Ireland, his party was divided over Europe and troubled by scandal. He led the party to a crushing defeat in the 1997 general election. He was knighted in 2005.

Majorca (Spanish name: Mallorca) A Spanish island in the Mediterranean Sea, the largest of the Balearic Islands. The chief occupations are agriculture and tourism; cereals, legumes, oranges, olives, and figs are produced and marble is quarried. Area: 3639 sq km (1465 sq mi). Population 2005 est: 777 821. Capital: Palma.

Makarios III (Mikhail Khristodolou Mouskos; 1913–77) Cypriot churchman and statesman; archbishop of the Orthodox Church of Cyprus (1950–77) and president of Cyprus (1960–74, 1974–77). In 1956 he was deported to the Seychelles by the British because of his support for Greek-Cypriot union.

Malabo (name until 1973: Santa Isabel) 3 45W 8 48E The capital of Equatorial Guinea, a port in the N of the island of Bioko (formerly Macías Nguema), founded by the British in 1827. Population (2003 est): 92 900.

Malacca (or Melaka) 1. 02 14N 102 14E A historic port in W Peninsular Malaysia, the capital of Malacca state. It was colonized successively by the Portuguese, Dutch, and British after 1511. Population (latest est): 295 299. 2. A state in W Peninsular Malaysia, on the Strait of Malacca. Consisting chiefly of a low-lying coastal plain, it produces rice, rubber, copra, tin, and bauxite. Area: 1650 sq km (637 sq mi). Population (2005 est): 713 000. Capital: Malacca.

malachite An ore of copper consisting of hydrated copper carbonate, $\text{Cu}_2(\text{OH})_2\text{CO}_3$. It is bright green and is found in deposits of copper minerals. It occurs in massive form, often with a smooth surface.

Málaga 36 43N 4 25W A city in S Spain, in Andalusia on the Mediterranean Sea. Founded by the Phoenicians (12th century BC), it passed successively to the Romans, the Visigoths, and the Moors, before falling to Ferdinand and Isabella in 1487. A major tourist centre and port, it ex-

ports olives, almonds, and dried fruits. Population (2005 est): 558 287.

Malamud, Bernard (1914–86) US novelist. With such witty novels as *The Assistant* (1957) and *A New Life* (1961) he built a reputation as a skilful chronicler of Jewish characters and themes. His other novels include *The Tenants* (1971) and *God's Grace* (1982).

malaria An infectious disease caused by protozoa of the genus *Plasmodium*. Malaria is transmitted by the female *Anopheles* mosquito, which lives only in the tropics. There are four species of *Plasmodium* that infect man and cause different types of malaria. Malignant tertian malaria (caused by *P. falciparum*) is the most severe; benign tertian malaria (caused by *P. vivax*) is less often fatal but there are repeated attacks. The parasites invade the red blood cells and cause them to burst. There is always fever and there may be fits, diarrhoea, shock, and jaundice. There are drugs (such as chloroquine) to treat and prevent the disease, but it remains a major cause of death and ill health in the tropics.

Malawi (name until 1963: Nyasaland) A country in SE Africa, between Tanzania, Zambia, and Mozambique. Lake Malawi lies at its E border and the land consists mainly of high plateaus reaching heights of over 3000 m (9800 ft). Most of the population is Bantu. *Economy:* chiefly agricultural. The main subsistence crop is maize, and cash crops include tobacco, sugar, and tea. Mineral resources are sparse. *History:* the area was visited by the Portuguese in the 17th century and, after Livingstone's exploration, became a British protectorate in 1891. In 1953 it was joined with Northern and Southern Rhodesia to form the Federation of Rhodesia and Nyasaland. Nyasaland became independent in 1964. In 1966 it became a republic within the British Commonwealth with Dr Hastings Banda (1905–97) as its first president (subsequently life president). Steps towards implementing multiparty democracy were taken in 1993 and in 1994 Bakili Muluzi was elected president. The early 2000s saw food shortages and the devastating spread of HIV/AIDS. In 2004 Bingu wa Mutharika, was declared victorious in presidential elections. Official languages: Chichewa and English. Currency: kwacha of 100 tambala. Area: 94 079 sq km (36 324 sq mi). Population (2007 est): 13 603 181. Capital: Lilongwe.

Malay A language of the Indonesian branch of the Austronesian family spoken in SE Asia and Indonesia. The dialect of the S Malay peninsula is the basis of standard Malay. It can be

m

written in Roman or Arabic script. The Malay people probably migrated to this area from China between 2500 and 1500 BC. Since the 15th century Islam has been the accepted religion, but vestiges of former Hinduism survive.

Malay Archipelago (former name: East Indies) An island group in SE Asia, the largest in the world. It lies between the Pacific and Indian Oceans and between the Asian and Australian continents. It comprises the Indonesian, Malaysian, and Philippine islands; New Guinea is sometimes included.

Malay peninsula The land from the *Kra Isthmus (connecting the peninsula to the mainland) to the Strait of Malacca (dividing it from Sumatra). The peninsula is tropical and partly mountainous, and is occupied by the states of Thailand (part of the Kra Isthmus), Malaysia, and Singapore.

Malaysia A country in SE Asia, consisting of the 11 states of Peninsular Malaysia (formerly the Federation of Malaya) and the states of *Sabah and *Sarawak in N Borneo. Peninsular Malaysia consists of coastal plains rising to mountains in the interior. Most of the inhabitants are Malays and Chinese. *Economy:* the country industrialized rapidly in the 1970s and 1980s, when the export of cars and electronic goods created an economic boom. In late 1997 the stock market and currency collapsed owing to the financial crisis in SE Asia but growth has since resumed. Malaysia is a major exporter of rubber, tin, and palm oil; rice is the chief food crop. Timber and fishing are also important. Minerals exploited include tin, iron ore, bauxite, ilmenite, and gold. *History:* from the 9th to the 14th centuries the Srivijaya empire dominated the area. In the 14th century it was overrun by Hindu Javanese and in about 1400 Malacca was established as an Islamic centre. In 1511 the port was taken by the Portuguese and in 1641 by the Dutch. British interest in the Malay states began in the 18th century and increased with the opening of the Suez Canal. Following occupation by the Japanese during World War II, the Federation of Malaya was established (1948). Malaya became independent in 1957 and in 1963 part of the federal state of Malaysia. There has been considerable unrest since the 1960s caused mainly by Chinese resentment of Malay dominance in the government. In 1997–98 the severe economic crisis led the government to adopt harsh measures, including the expulsion of some two million foreign workers. In 2003 Dr Mahathir bin Mohamad, prime minister since 1981, stepped down in favour of Abdullah Ahmad Badawi. Official

language: Bahasa Malaysia. Currency: ringgit of 100 sen. Area: 329 749 sq km (127 289 sq mi). Population (2007 est): 24 821 286. Capitals: Putrajaya (administrative), Kuala Lumpur (financial).

Malcolm III (c.1031–93) King of the Scots (1057–93). He became king after killing *Macbeth, the murderer of his father Duncan I (reigned 1034–40). He became a vassal of William the Conqueror (1072) and was murdered during a raid into N England.

Malcolm X (1925–65) US militant Black leader. A former member of the *Black Muslims, he founded the rival Organization of Afro-American Unity (1964), which backed violent means of achieving racial equality. He was assassinated while addressing a rally.

Maldives, Republic of (Divehi name: Divehi Raajjeyge Jumhooriyyaa; name until 1969: Maldive Islands) A small country in the Indian Ocean, to the SW of Sri Lanka. It consists of a large number of small coral islands, grouped in atolls, of which just over 200 are inhabited. Most of the population is of mixed Indian, Sinhalese, and Arabic descent. *Economy:* coconuts and fish are the main exports. Other sources of revenue are shipping, tourism, and copra production. *History:* formerly a dependency of Ceylon, the islands were officially under British protection from 1887 to 1965. They were ruled by an elected sultan until 1968, when they became a republic. The Republic of Maldives became a full member of the Commonwealth in 1985. Maumoon Abdul Gayoom has been president since 1978. As most of the islands rise less than 1.8 m (6 ft) above sea level, the future of the Maldives is threatened by the ecological changes associated with global warming. Official language: Divehi. Currency: rufiyaa of 100 laari. Area: 298 sq km (115 sq mi). Population (2007 est): 369 031. Capital: Malé.

Mali, Republic of (name until 1959: French Sudan) A large landlocked country in West Africa. It consists largely of desert, the flood plains of the River Niger providing most of the fertile land. The majority of the population are Bambara, Fulani, and Senufo. *Economy:* chiefly subsistence agriculture, especially livestock, including cattle, camels, and sheep. The main crops are rice, millet, cassava, cotton, and groundnuts. Dried and smoked fish, cattle, and groundnuts are the main exports. Industry is based mainly on the processing of food and hides and skins. Mineral reserves of bauxite, uranium, and oil are present but only salt and small quantities of gold are exploited. *History:* from the 4th century AD the area was occupied

by successive empires, including those of Ghana, Mali, and Gao. In the late 19th century it was conquered by the French and, as French Sudan, it became part of French West Africa. It achieved internal self-government as part of the French Community in 1958 and became a fully independent republic in 1960. In 1968 the government was overthrown in a military coup led by Lt Moussa Traoré, who became president in 1969. In 1991 social unrest led to his overthrow in a coup led by Amadou Toumani Touré; free elections were held in 1992 and Alpha Konaré became president. Konaré stepped down in 2002 and the former military ruler Touré was elected president. Official language: French. Currency: CFA franc of 100 centimes. Area: 1204 021 sq km (464 752 sq mi). Population (2003 est): 11 626 000. Capital: Bamako.

mallard A dabbling duck, *Anas platyrhynchos*, common on ponds and lakes in the N hemisphere. About 55 cm long, females are mottled brown and males greyish with a green head, white collar, reddish breast, black rump, a curly tail, and a broad yellow bill. Both sexes have a purple wing speculum.

Mallarmé, Stéphane (1842–98) French poet. He became a major figure of the Symbolist movement, believing that the function of poetry was to evoke the ideal essences that lay behind the world of actual appearances. His best-known works include *Hérodiade* (1864) and *L'Après-midi d'un faune* (1865).

mallow A herbaceous plant of the genus *Malva* (30 species), native to N temperate regions. Mallows, which may be creeping or erect, grow up to 90 cm tall. They have hairy lobed leaves and five-petalled flowers, which are usually purple, pink, or white. The tree mallow (*Lavatera arborea*) is a shrublike biennial, up to 3 m high, with rose-purple flowers. Family: *Malvaceae*. See also MARSH MALLOW.

Malmö 55 38N 12 57E A city and port in S Sweden, on the Sound opposite Copenhagen. It was a prominent trade and shipping centre in the middle ages. Malmö's varied industries include shipbuilding, textiles, and food processing. Population (2000 est): 257 574.

Malory, Sir Thomas (1400–1471) English writer. He was the author of *Morte d'Arthur* (c.1469), a narrative in 21 books of the legendary court of King Arthur, drawn mostly from French sources. The work was printed by Caxton in 1485. Malory was probably a Warwickshire knight who had fought in France,

became an MP in 1445, and was several times imprisoned.

Malraux, André (1901–76) French novelist and essayist. His career included active service with communist revolutionaries in China in the 1920s, with the Republican forces in the Spanish Civil War, and with the French Resistance in World War II. His novels include *Man's Estate* (1933) and *Days of Hope* (1938). He also wrote on art and produced a volume of memoirs, *Antimémoires* (1967).

Malta, Republic of A small country in the Mediterranean Sea, to the S of Sicily comprising the two main islands of Malta and Gozo and several islets. *Economy:* Malta was previously heavily dependent on British military bases. The naval dockyards have been converted to commercial use and port facilities have been developed; shipbuilding and repair are important. There is some agriculture, both crops and livestock, and fishing. Tourism is now the most important source of revenue. Exports include clothing, textiles, machinery, and food. *History:* occupied successively by the Phoenicians, Greeks, Carthaginians, and Romans, the island was conquered by the Arabs in 870 AD. In 1090 it was united with Sicily and in 1530 was granted to the Knights Hospitallers. In 1798 the island was occupied by the French and then by the British, to whom it was formally ceded in 1814. As a crown colony it became an important naval and air base, showing heroic resistance to German attack in World War II. Malta became fully independent in 1964; in 1974 under Dom Mintoff it became a republic within the British Commonwealth. Malta joined the EU in 2004. Official languages: Maltese and English. Currency: Maltese lira of 100 cents. Area: 316 sq km (122 sq mi). Population (2003 est): 399 000. Capital: Valletta.

Malthus, Thomas Robert (1766–1834) British clergyman and economist, famous for his population theories. In his *Essay on the Principle of Population* (First Essay, 1798; Second Essay, 1803) Malthus argued that most of mankind is doomed to remain at near-starvation level as growth in food production, which increases at an arithmetical rate, is negated by the geometrical increase in population.

Malvern 52 05N 2 20W A town in W central England, in Worcestershire, consisting of Great Malvern and several villages incorporating the name. Lying on the E slopes of the Malvern Hills, it is a spa town with a famous public school (Malvern College, founded 1863). Population (1991): 31 537.

Malvinas, Islas See FALKLAND ISLANDS.

mamba A large agile highly venomous snake belonging to the African genus *Dendroaspis* (4-5 species). The aggressive black mamba (*D. polylepis*) is 4.3 m long, lives in open rocky re-

gions, and preys on birds and small mammals. The smaller arboreal green mamba (*D. angusticeps*) reaches a length of 2.7 m. Mambas are egg-laying snakes. Family: *Elapidae* (cobras, mambas, coral snakes).

tundra and arctic

temperate forest

tropical grassland

tropical forest

mammal. This large and diverse group of animals has succeeded in colonizing almost every available habitat on earth, even the most inhospitable. Representative mammals are shown from eight of the world's major habitats (the animals depicted in each habitat are not necessarily from the same geographical region).

Mamet, David (Alan) (1947–) US playwright, screenwriter, and film director. His plays, which are noted for their naturalistic dialogue, include *American Buffalo* (1975), *Glen-garry Glen Ross* (1984), and *Oleanna* (1992).

mammal A warm-blooded animal belonging to the class *Mammalia* (about 4250 species). The evolution of mammals from reptiles involved the development of a temperature-regulation system with an insulating layer of fur and

temperate grassland

fresh water

desert

salt water

sweat glands in the skin for cooling. This enabled mammals to become highly active, with well-developed sense organs and brains, and to colonize cold climates. The survival of the young was improved by the evolution of *mammary glands, and in placental mammals a specialized nourishing membrane (the *placenta) in the uterus (womb).

The majority of modern mammalian species are terrestrial, ranging in size from tiny shrews to the elephant. However, bats are flying mammals and whales have adapted to a wholly marine existence.

mammary gland The gland in female mammals that secretes milk. Believed to have evolved from sweat glands, there are one or more pairs on the ventral (under) side of the body. The number of glands is related to the number of young produced at one birth. Each gland consists of branching ducts leading from milk-secreting cells and opening to the exterior through a nipple. In the most primitive mammals (*Monotremata*) there are no nipples and the milk is secreted directly onto the body surface. See also LACTATION.

mammoth An extinct elephant belonging to the genus *Mammuthus*, whose remains have been found in India, Europe, and North America. Of the four types known, the imperial mammoth (*M. imperator*) was the largest, 4.5 m at the shoulder. The woolly mammoth (*M. primigenius*) had thick body hair and tusks up to 2.5 m long.

Man, Isle of An island in the Irish Sea, between England and Ireland. It has been a British Crown possession since 1828 but is virtually self-governing with its own parliament, the Court of Tynwald. It consists of central hills rising to 620 m (2034 ft) at Snaefell, with lowlands in the N and S. Tourism is the main source of revenue, with attractions including the famous annual Tourist Trophy (TT) motorcycle races. Agriculture is varied; sheep and cattle are raised and produce includes cereals, turnips, and potatoes. *History:* the island was originally inhabited by Celts and the Manx language survived in common usage until the 19th century. The island became a dependency of Norway in the 9th century AD and was ceded to Scotland (1266), coming under English control after 1406. Area: 588 sq km (227 sq mi). Population (2001): 76 315. Capital: Douglas.

Managua 12 06N 86 18W The capital of Nicaragua, on the S shore of Lake Managua. Formerly an Indian settlement, it became capital in 1857. It suffered severe damage from

earthquakes in 1931 and 1972 and from the civil war (1979). Population (1995 est, urban area): 1 195 000.

manatee A herbivorous aquatic *mammal belonging to the genus *Trichechus* (3 species), of warm Atlantic waters and coastal rivers of Africa and America. Up to 4.5 m long, manatees have a rounded body with tail fin and flippers and a squarish snout. The American manatee (*T. manatus*) of Florida feeds mainly at night. Family: *Trichechidae*; order: *Sirenia*. See also DUGONG.

Manaus (or **Manáos**) 3 06S 60 00W A city in NW Brazil, the capital of Amazonas state on the Rio Negro. Founded in 1660, it became the centre of the rubber boom (1890–1920). It remains the chief inland port of the Amazon basin and is accessible to oceangoing steamers. Exports include rubber, brazil nuts, timber, and other forest products. Population (2000): 1 394 724.

Manawatu River A river in New Zealand, in SW North Island flowing generally W and SW to the Tasman Sea NE of Wellington. The surrounding plain is one of New Zealand's most productive farming areas. Length: 182 km (113 mi).

Man Booker Prize See BOOKER PRIZE.

Manchester 1. 53 30N 2 15W A city in NW England, in Manchester unitary authority, Greater Manchester, situated on the River Irwell and forming part of a large conurbation. Linked with the Mersey estuary by the Manchester Ship Canal (opened 1894), it is an important port as well as England's second largest commercial centre (banking, insurance). Industries include chemicals, engineering, clothing, printing, paper, rubber, food products, and electrical goods. It is also a cultural and educational centre. The 15th-century parish church became Manchester Cathedral in 1847. *History:* the Roman fort of Mancunium, Manchester developed as a regional market place for raw wool and flax and finished pieces. From the mid-18th century it became the world's main cotton-manufacturing town. Its rapid growth led to industrial discontent and political agitation (see PETERLOO MASSACRE). It also nurtured the basic principles of economic and political liberalism, embodied in the **Manchester School** (a group of political economists, the most famous being John *Bright (1811–89) and Richard Cobden (1804–65)). Population (1991): 402 889. 2. A unitary authority in NW England, in Greater Manchester. Area: 116 sq km (45 sq mi). Population (2001 est): 392 819.

Manchuria A region in NE China bordering

on Russia, roughly comprising the provinces of Heilongjiang, Jilin, and Liaoning. It is mountainous in the E and W with a large central fertile plain, which is a major industrial and agricultural area. Products include timber, minerals, such as coal and iron, and fish. *History*: the area was for centuries inhabited and fought over by the Manchu, Mongols, and Chinese. Their power struggles resulted in empires established over China by the Mongols (1279–1368; see YUAN) and Manchus (1644–1912; see QING). In the late 19th century it was dominated by Russia (1898–1904) and then by Japan (1905–45). In 1931, following the Mukden Incident (see SHENYANG), Japanese forces invaded Manchuria and established the puppet state of Manchukuo. After 1945 the area received much aid from the Soviet Union until the 1960s, when the break between China and the Soviet Union took place. Since then military forces have been massed along the border. Area: about 1 300 000 sq km (502 000 sq mi).

Mandalay 2157 96 04E A city in Myanmar (Burma), on the Irrawaddy River. The last capital of the Burmese kingdom, it fell to the British in 1885. It has numerous monasteries, temples, and pagodas and is the site of a university (1964). Mandalay is the principal commercial centre of Upper Burma. Population (2004 est): 1 176 900.

mandarin Chinese bureaucrat, whose appointment in the civil service was by examination. Mandarins occupied a privileged position in society and spoke the Mandarin dialect of *Chinese, which in its standard, Beijing, form is now spoken by 70% of the population.

Mandela, Nelson (Rolihlahla) (1918–) South African statesman; president of South Africa (1994–99). He was a lawyer, practising in Johannesburg, when he was acquitted of treason (1961) but retried (1963–64) and sentenced to life imprisonment; his release was finally achieved in 1990. He became president of the African National Congress in 1991. In 1993 he signed South Africa's new transitional multi-racial constitution, which marked the end of apartheid, and was awarded the Nobel Peace Prize with F.W. de Klerk. In the country's first multi-racial election he won an overwhelming victory for the ANC. By the late 1990s, he was an influential and much respected world statesman. His wife, **Winnie Mandela** (1934–), also became active in South African politics but in 1991 she was found guilty on a charge of kidnapping and being accessory to assault. She and her husband separated in 1992 and divorced in 1996.

Mandelson, Peter (Benjamin) (1953–) British politician. He became the Labour Party's director of communications in 1985 and an MP in 1992. He joined the cabinet in 1997 but resigned (1998) when it was revealed that he had failed to disclose a loan from a colleague. In 1999 he became secretary of state for Northern Ireland but in 2001 he was forced to resign again over his alleged intervention in a passport application. He became a European Commissioner in 2004.

mandolin A plucked musical instrument, generally having four double wire strings tuned as the violin. It is played with a plectrum, using a tremolo to sustain longer notes. It is used in informal music and more rarely as a solo or orchestral instrument.

mandrake A herb of the genus *Mandragora*, especially *M. officinarum*, native to Europe. It has large simple leaves, white flowers, and a thick forked root, which was formerly believed to have healing and aphrodisiac properties. Family: *Solanaceae*.

mandrill A large *Old World monkey, *Mandrillus sphinx*, of West African coastal forests. They are 66–84 cm long including the tail (5–7.5 cm), with red and blue muzzle and buttocks and yellow-brown hair. They live in family groups and forage for plants and insects.

Manet, Edouard (1832–83) French painter. By 1860 he was painting contemporary scenes, but throughout his career he remained indebted to the Old Masters, particularly Velázquez and Hals. He exhibited at the Paris Salon, where such paintings as *Olympia* and *Déjeuner sur l'herbe* (both Louvre) were scorned and derided. In the 1870s he adopted the technique of the impressionists. Such paintings as *The Balcony* (Louvre) and *The Luncheon* (Munich) anticipate 20th-century art by making brushwork, colour, and design more important than the subject matter.

manganese (Mn) A hard grey brittle transition element that resembles iron, first isolated in 1774 by J.G. Gahn (1745–1818). It occurs in nature in many minerals, especially pyrolusite (MnO_2) and rhodochrosite (MnCO_3), in addition to the extensive deposits of manganese nodules discovered on the deep ocean floors. It is extracted by reduction of the oxide, with magnesium or aluminium, or by electrolysis. The metal is used in many alloys, particularly in steel, in which manganese improves the strength and hardness. Manganese forms compounds in a number of different *valence states: for example MnO , Mn_2O_3 , MnO_2 . The per-

manganate ion (MnO_4^-) is a well-known oxidizing agent. At no 25; at wt 54.9380; mp $1246 \pm 3^\circ\text{C}$; bp 2062°C .

mange A contagious skin disease, caused by mites, that can affect domestic livestock, pets, and man (see SCABIES). The parasites bite or burrow into the skin causing hair loss, scaly dry skin, pimples, blisters, and intense itching. Treatment is with a suitable insecticide, such as gamma benzene hexachloride.

mango A large evergreen tropical tree, *Mangifera indica*, native to SE Asia but cultivated throughout the tropics for its fruit. Growing 15–18 m high, it has long narrow leaves and pinkish flowers. The oblong fruit, up to 2.3 kg in weight, has a green, yellow, or reddish skin and contains a stony seed, surrounded by juicy orange edible flesh that has a spicy flavour. Family: *Anacardiaceae*.

mangroves Shrubs and trees forming dense thickets and low forests on coastal mudflats, salt marshes, and estuaries throughout the tropics. Many are evergreen, with shiny leathery leaves and aerial supporting (prop) roots. The main species are the common or red mangrove (*Rhizophora mangle*), the black mangrove (*Avicennia nitida*), and *Sonneratia* species.

manic-depressive psychosis (or **bipolar disorder**) A severe mental illness causing repeated episodes of *depression, mania (excessive euphoria and overactivity), or both. Long-term treatment with lithium salts can prevent attacks or reduce their frequency and severity.

Manichaeism A religion influenced by both *Gnosticism and Christianity. It originated in Persia (c. 230 AD), spread throughout Asia and the Roman Empire, and survived in Chinese Turkistan until the 13th century. Its founder, Mani (c. 216–c. 276), was martyred by the adherents of Zoroastrianism (see ZOROASTER). Fundamental to his creed was the belief that matter is entirely evil, but within each individual is imprisoned a soul, which is a spark of the divine light.

Manila 1430N 12112E The capital and main port of the Philippines, on Manila Bay in Luzon. Founded by the Spanish in 1571, it suffered several foreign occupations over the centuries and the old town was destroyed in World War II. The official capital was transferred to Quezon City on the outskirts (1948–76). An educational centre, it has over 20 universities, including the University of Santo Tomas founded in 1611. It has one of the finest harbours in the world and is also an important in-

dustrial centre; its industries include textiles, pharmaceuticals, and food processing. Population (2000): 1 581 082.

manioc See CASSAVA.

Manitoba A province of central Canada, in the centre of North America. Although it is one of the Prairie Provinces, only the SW is true prairie. Further to the NE lies the *Red River Valley and three large lakes (Winnipeg, Winnipegosis, and Manitoba) with extensive forests in the N. Manitoba's economy is based on large mechanized farms producing grains and livestock. Forests, fisheries, and hydroelectricity are also important. Manitoba produces copper, gold, zinc, silver, nickel, and oil. Greater *Winnipeg contains over half the population. History: originally exploited for furs, Manitoba first attracted dispossessed Scots Highlanders as settlers (1812). Acquisition of the area by Canada (1869) provoked the Riel Rebellion (1869–70), an uprising of French-speaking Métis. Manitoba became a province in 1870. Area: 548 495 sq km (211 774 sq mi). Population (2001 est): 1 150 200. Capital: Winnipeg.

Mann, Thomas (1875–1955) German novelist. Art and the artist are his main themes, in the novella *Death in Venice* (1912), *The Magic Mountain* (1924), and *Doctor Faustus* (1947), a novel about a modern composer of genius. His other works include *Joseph and His Brothers* (1933–44), a series of four novels based on the biblical story of Joseph, and the picaresque *Felix Krull* (1954). Mann opposed Nazism and was forced to emigrate to the USA in the 1930s. He was awarded a Nobel Prize in 1929.

mannerism An art movement dominant in Italy from about 1520 to 1600. Mannerism developed out of the *Renaissance style, some of its characteristics being evident in the late work of *Raphael and Michelangelo. It aimed to surpass the Renaissance style in virtuosity and emotional impact. In painting this led to a distortion of scale, an elongation of form, and dissonance of colour. Leading mannerist painters were Pontormo, Parmigianino, *Vasari, and *Bronzino.

Mannheim 4930N 828E A city in SW Germany, in Baden-Württemberg at the confluence of the Rivers Rhine and Neckar. It was the seat of the Electors Palatine (1720–98) and has a notable baroque castle. It is a major port with an oil refinery and its manufactures include motor vehicles and agricultural machinery. Population (1999 est): 308 400.

manometer An instrument for measuring

pressure differences. The simplest form consists of a U-shaped tube containing mercury, one arm of which is connected to a source of pressure and the other is open. The difference in height of the liquid in the arms is a measure of the pressure difference.

manor The most common unit of agrarian organization in medieval Europe, introduced into England by the Normans. The manor was essentially the lord's landed estate, usually consisting of the lord's own farm (the *demesne*), and land let out to peasant tenants, chiefly *villeins, who worked for the *demesne* and were legally dependent upon their lord.

Mansfield, Katherine (Kathleen Mansfield Beauchamp; 1888–1923) New Zealand short-story writer. She came to Europe in 1908 and published her first collection of stories in 1911. *Bliss* (1920) and *The Garden Party* (1922) contain her best-known stories, often compared in stylistic subtlety to those of Chekhov.

manslaughter The crime of killing a person either (1) accidentally by an unlawful act or by culpable negligence or (2) in the heat of passion, after provocation. The second case is closely related to murder, and is possible only if there is no evidence of premeditation.

manta ray A *ray fish, also called devil ray or devil fish, of the family *Mobulidae*. 60–660 cm long, they swim near the surface of warm-temperate and tropical waters, feeding on plankton and small animals swept into the mouth by hornlike feeding fins projecting from the front of the head.

Mantegna, Andrea (c.1431–1506) Italian Renaissance painter and engraver, born near Vicenza. His marriage (1453) to the daughter of Jacopo *Bellini connected him with the Venetian school. As court painter to the Duke of Mantua from 1459, he painted nine panels depicting *The Triumph of Caesar* (Hampton Court, London). His fresco decorations for the bridal chamber of the ducal palace include portraits of members of the Mantuan court and an illusionistic ceiling, which anticipates the *baroque.

mantis An insect belonging to the family *Mantidae* (2000 species), found in tropical and warm temperate regions. Up to 125 mm long, mantids blend with the surrounding vegetation and are voracious carnivores, using their forelegs to capture insects and other small animals. The "praying" position held by the forelegs at rest accounts for the name praying

mantis, applied in particular to *Mantis religiosa*. Order: *Dictyoptera*.

Mantua (Italian name: Mantova) 45 10N 10 47E A city in N Italy, in Lombardy on the River Mincio. Notable buildings include a cathedral (10th–18th centuries) and a 14th-century castle. An important tourist centre, Mantua also has tanning, printing, and sugar-refining industries. Population (latest est): 54 808.

Maori A Polynesian people of New Zealand, who make up about 10% of the population. They trace their origins to migrants, probably from the Cook Islands, who came in canoes around 1350. They were an agricultural people who lived mainly in the North Island in large fortified villages of timber dwellings. The traditional arts of wood carving and dancing still survive but urbanization and Christianization have largely destroyed the Maoris' way of life.

Mao Tse-tung (or **Mao Ze Dong**; 1893–1976) Chinese communist statesman. Born into a peasant family, he was a Marxist by 1920 and helped to form the Chinese Communist Party (CCP) in 1921. In 1931 he became chairman of the Jiangxi Soviet. Forced to evacuate Jiangxi in 1934, Mao led the communist forces on the Long March. His arrival in Yan'an in 1935 marked his emergence as a leader of the CCP. Following the defeat of Japan in the Sino-Japanese War of 1937–45, civil war was resumed, ending in communist victory. In 1949 Mao, as chairman of the Communist Party, proclaimed the establishment of the People's Republic of China. Mao's political writings formed the theoretical basis of the new government and led to the founding of communes and the Great Leap Forward. He stepped down as chairman in 1958, but reappeared with greater standing during the *Cultural Revolution.

The modified form of *Marxism developed by Mao is known as **Maosism**. Mao's strategy for revolution in China gave central importance to peasant armies rather than to the action of the industrial working class in urban centres. Similarly, he believed that the socialist revolutions would develop first in the underdeveloped countries rather than in advanced capitalist countries.

maple A shrub or tree of the genus *Acer* (over 200 species), widespread in N temperate regions and often grown for timber and ornament. Growing 6–35 m high, maples usually bear lobed leaves, which turn yellow, orange, or red in autumn, and small yellow or greenish

Mercator projection

cylindrical. The globe is projected onto a cylinder, the Mercator projection being the best known.

conical. The globe is projected onto the cone as if it contained a source of light casting a shadow of its features onto the cone, resulting in a flat projection when the cone is unfurled. The cone may touch the globe along one parallel of latitude or intersect along two parallels.

Peters' projection. Designed by the German historian, Arno Peters, in 1973, this modified cylindrical equal-area projection draws attention away from Europe, focusing instead on the developing countries, which are placed prominently in the centre of the map. It aims to show countries more accurately in relation to their true size but has an odd appearance in that land surfaces close to the equator are elongated and those in high latitudes are compressed.

orthographic projection

azimuthal (or zenithal). The globe is pictured as a flattened disc. It may be projected as if it were seen from a point in the centre of the earth (gnomonic), from a point on the far side of the earth (stereographic), or from a point in space (orthographic).

Lambert's azimuthal projection

map projection

flowers, which give rise to paired winged fruits (samaras). The sugar maple (*A. saccharum*) of E North America is the source of maple sugar. Family: *Aceraceae*.

map projection The representation of the curved surface of the earth on a plane surface. The parallels of latitude and meridians of longitude (see **LATITUDE AND LONGITUDE**) are

represented as a network of intersecting lines. It is not possible to produce a projection of the earth's surface without some distortion of area, shape, or direction. In the conical projection the globe is projected onto a cone with its point above either the North or the South Pole. In the cylindrical projection the globe is projected onto a cylinder touching the equator; the *Mercator projection is of this type. Part of the globe is projected upon a plane from any point of vision in the azimuthal projection.

Maputo (name until 1975: Lourenço Marques) 25 58S 32 35E The capital and chief port of Mozambique, on Delagoa Bay. It became the capital of Portuguese East Africa in 1907. It is a major East African port, exporting minerals from South Africa, Swaziland, and Zimbabwe. Population (1997): 989 386.

marabou A large African *stork, *Leptoptilus crumeniferus*. It is 150 cm tall with a wingspan of 2.6 m and has a grey-and-white plumage, a bare black-spotted pink head and neck with a pendulous inflatable throat pouch, and a huge straight pointed bill.

Maracaibo 10 44N 71 37W The second largest city in Venezuela, a port on the NW shore of Lake Maracaibo. Its economic importance is based on oil production; industries include petrochemicals. Population (2000 est): 1 764 038.

Marajó Island (Portuguese: Ilha de Marajó) The world's largest fluvial island, in NE Brazil in the Amazon delta. Area: 38 610 sq km (15 444 sq mi).

marasmus See KWASHIORKOR.

Marat, Jean Paul (1743–93) French politician, journalist, and physician. He devoted himself to radical journalism during the French Revolution, becoming editor of *L'Ami du peuple*. Elected to the National Convention in 1792, he was murdered by Charlotte Corday (1768–93), a member of the Girondin party, whom Marat had helped to overthrow (1793).

marathon A long-distance running race over 42 195 m (26 mi 385 yd). The marathon derives its name from the story of a soldier who ran from the battlefield of Marathon to Athens with news of the Greek victory. As different courses vary, there is no official world record; the fastest time is 2 hours 8 minutes 50 seconds (1988) by Belanyeh Dinsamo (Ethiopia).

Marathon, Battle of (490 BC) The battle during the *Greek-Persian Wars in which the Athenians under *Miltiades defeated the Persians. *Pheidippides was sent to summon Spartan help but the Spartans arrived too late.

marble A rock consisting of metamorphosed limestone, although the term is used of any rock, particularly limestone, that can be cut and polished for ornamental use. Pure marble is white recrystallized calcite, but impurities, such as dolomite, silica, or clay minerals result in variations of colour. Certain quarries in Greece and Italy have been producing large quantities of marble since pre-Christian times.

Marburg disease See GREEN MONKEY DISEASE.

marcasite A pale bronze mineral form of *pyrite. It occurs as nodules in sedimentary rocks as a replacement mineral, particularly in chalk. Marcasite jewellery is sometimes pyrite but more often polished steel or white metal.

Marceau, Marcel (1923–) French mime. He began to study mime in 1946 and gradually developed the original character Bip, a white-faced clown. As well as giving solo performances, he formed his own mime company.

Marcellus, Marcus Claudius (d. 208 BC) Roman general in the second Punic War. Chosen to check Hannibal's advance through Italy, he captured Syracuse and harassed the Carthaginian armies in S Italy.

Marches The border areas of England and Wales, conquered between 1067 and 1238 by vassals of the English kings. The so-called **marcher lords** enjoyed enormous powers until the union of Wales and England in the 1530s.

Marciano, Rocky (Rocco Francis Marchegiano; 1923–69) US boxer. He took the world heavyweight championship from Joe Walcott in 1952 and retired undefeated in 1956, after 6 defences. Unbeaten in his 49 professional fights, a record among world heavyweight champions, he was killed in an aircraft crash.

Marconi, Guglielmo (1874–1937) Italian electrical engineer, who invented, independently of Aleksandr Popov (1859–1905), communication by radio. On reading about the discovery of radio waves, Marconi built a device that would convert them into electrical signals. He then experimented with transmitting and receiving radio waves over increasing distances until, in 1901, he succeeded in transmitting a signal across the Atlantic Ocean. For this work he shared the Nobel Prize for Physics in 1909.

Marcos, Ferdinand E(dralin) (1917–89) Philippine statesman; president (1965–86). In 1972 he declared martial law and assumed dictatorial powers. The murder in 1983 of opposi-

tion leader Begnino Aquino Jr, with alleged government complicity, caused unrest that culminated in a popular uprising in 1986, when Marcos was forced to go into exile. In 1988 he and his wife **Imelda Romualdez Marcos** (c. 1930–) were charged in the US courts with embezzlement and fraud. He died before he could be tried; Imelda was cleared in 1990 but found guilty of corruption in 1993.

Marcus Aurelius (121–180 AD) Roman emperor (161–180), in association with Lucius Verus (130–169) from 161 and alone from 169. Although he is known as the philosopher emperor on account of his *Meditations* (12 books of aphorisms in the Stoic tradition), his rule was active.

Marcuse, Herbert (1898–1979) German-born US thinker. His radical anti-authoritarian philosophy evolved from the Frankfurt School of social research. Marcuse attacked both Western positivism and orthodox Marxism in such books as *The Ethics of Revolution* (1966) and *Counter-Revolution and Revolt* (1973).

Marengo, Battle of (14 June 1800) A battle, fought 5 km (3 mi) SE of Alessandria, in Napoleon's Italian campaign (see REVOLUTIONARY AND NAPOLEONIC WARS). Napoleon was surprised by the Austrians with his forces divided and only the timely arrival of reinforcements made French victory possible.

Margaret of Anjou (1430–82) The wife (1445–71) of Henry VI of England; their marriage constituted an attempt to cement peace between England and France during the Wars of the *Roses, in which she was one of the most formidable Lancastrian leaders. She was captured and imprisoned after the Lancastrian defeat in the battle of Tewkesbury (1471). After her husband's death she returned to France (1476).

Margaret Tudor (1489–1541) Regent of Scotland (1513–14) for her son James V. The elder daughter of Henry VII of England and the wife of James IV of the Scots (d. 1513), she was ousted from the regency by the English but played an active role in politics until 1534.

margarine A butter substitute that does not contain dairy-product fat. A type of margarine was first produced in France in 1869 from beef tallow. However, vegetable oils were only able to be used extensively after 1910, when a hydrogenation process was developed to solidify the liquid vegetable oils by adding hydrogen to saturate some of the unsaturated fatty-acid residues in the oils. In modern margarine, pas-

teurized fat-free milk powder is emulsified with water and such refined vegetable oils as soya-bean oil, groundnut oil, and palm-kernel oil. Vitamins A and D are also added. Soft margarines contain only lightly hydrogenated oils, retaining a large part of their unsaturated nature.

Margrethe II (1940–) Queen of Denmark (1972–), who succeeded her father Frederick IX after the Danish constitution had been altered to permit the accession of a woman. In 1967 she married a French diplomat Henri de Laborde de Monpezat (Prince Henrik; 1934–).

marguerite A perennial herb, *Chrysanthemum frutescens*, also called Paris daisy, native to the Canary Isles. Each stem bears a large daisy-like flower. The name is also applied to the *oxeye daisy. See also CHRYSANTHEMUM.

Mari An ancient city on the middle Euphrates River in Syria. Commanding major trade routes, Mari thrived during the early Sumerian period (see SUMER) and under the rule of Akkad (c. 2300 BC). Its archive of 25 000 cuneiform tablets throws light on contemporary diplomacy, administration, and trade.

Mariana Islands (or Ladrone Islands) A group of mountainous islands in the W Pacific Ocean, comprising the US unincorporated territory of *Guam and the US commonwealth territory of the Northern Marianas. Strategically important, they include the islands of Tinian and Saipan. Discovered in 1521, the islands were colonized by Spanish Jesuits after 1668. Sugar cane, coffee, and coconuts are produced. Area: 958 sq km (370 sq mi). Population (2001 est): 221 400.

Marianas Trench A deep trench in the earth's crust in the W Pacific; it is the greatest known ocean depth (11 033 m). It marks the site of a plate margin (see PLATE TECTONICS),

Mount Everest 8848 m

Marianas Trench

where one plate is being submerged beneath another.

Maria Theresa (1717–80) Archduchess of Austria (1740–80). Her father Emperor Charles VI issued the Pragmatic Sanction (1713) to enable Maria Theresa, as a woman, to succeed to his Austrian territories. Her accession nevertheless precipitated the War of the *Austrian Succession (1740–48). Under the influence of Count von Kaunitz (1711–94), Maria Theresa substituted her English alliance with a French coalition but in the subsequent *Seven Years' War (1756–63) Austria suffered resounding defeat. At home she combined absolutism with a measure of reform.

Maribor (German name: Marburg) 46°35'N 15°40'E A town in N Slovenia, on the River Drava. A former Habsburg trading centre, it is now one of Slovenia's largest industrial centres. Population (1996 est): 134 289.

Marie Antoinette (1755–93) The wife of Louis XVI of France, whose uncompromising attitude to the *French Revolution contributed to the overthrow of the monarchy. The daughter of Emperor Francis I and Maria Theresa, she married the dauphin Louis in 1770. Her extravagance and alleged immorality contributed to the unpopularity of the Crown. After the overthrow of the monarchy and Louis' execution, she was guillotined.

marigold One of several annual herbaceous plants of the family *Compositae*, popular as garden ornamentals. The pot marigold (*Calendula officinalis*), native to S Europe, bears orange or yellow flowers. The African and French marigolds (genus *Tagetes*) have single or double flowers with large outer florets; there are several dwarf varieties. See also MARSH MARI-GOLD.

marihuana See CANNABIS.

Mariner probes A series of successful US planetary probes. Mariners 2 and 5 approached Venus in 1962 and 1967, while Mariner 10 flew past Venus in 1974 and then three times past Mercury in 1974–75. Mariners 4 (1965), 6 and 7 (1969), and 9 (1971–72) investigated Mars, with Mariner 9 going into Martian orbit. Mariners 11 and 12 were renamed the *Voyager probes. Mariners 1, 3, and 8 did not achieve their missions.

Maritain, Jacques (1882–1973) French Roman Catholic thinker. He applied St Thomas *Aquinas' methods to contemporary social problems. *Les Degrés du savoir* (1932) treats mys-

tical, metaphysical, and scientific knowledge as complementary.

Maritime Alps (French name: Alpes Maritimes) A range of mountains in SE France and NW Italy, running about 130 km (81 mi) along the border and constituting the southernmost arm of the Alps. It reaches 3297 m (10 817 ft) at Punta Argentera.

maritime law The branch of law relating to ships and shipping. The Romans, borrowing from the customs of Rhodes, imposed a code in the Mediterranean that was international and uniform in character. This uniformity was preserved until 17th-century nationalism gave rise to various individual codes. The English **Admiralty Court**, established in the 14th century, developed very broad powers in deciding questions of commercial law, but in the 17th century was restricted to matters "done upon the sea." Today the Admiralty Court is mainly concerned with cases involving salvage and collisions at sea. A certain international uniformity has been achieved by the Comité maritime international (CMI), in which 31 member states have agreed and ratified a number of maritime conventions.

Maritime Provinces (**Maritimes** or **Atlantic Provinces**) The easternmost provinces of Canada, on the Atlantic coast and the Gulf of St Lawrence. They consist of *New Brunswick, *Nova Scotia, *Prince Edward Island, and usually *Newfoundland and lie in the Appalachian Highlands.

marjoram One of several aromatic perennial herbs or small shrubs of the Eurasian genera *Origanum* (about 13 species) or *Majorana* (about 4 species). Wild marjoram (*O. vulgaris*), is a hairy plant, 30–80 cm tall, bearing clusters of small tubular pinkish-purple flowers. Sweet marjoram (*M. hortensis*), is widely cultivated for its aromatic leaves and flowers, which are used as culinary flavouring. Family: *Labiatae*.

Mark, St A New Testament evangelist, traditionally the author of the second Gospel. A cousin of *Barnabas, he went with him and Paul on their first mission. Subsequently he seems to have assisted Paul in Rome, where he also acted as interpreter for Peter. Feast day: 25 April. **The Gospel according to Mark** is the earliest of the Gospels, written c. 65–70 AD.

Mark Antony (Marcus Antonius; c. 83–31 BC) Roman general and statesman. Following Julius Caesar's assassination, Antony came into conflict with Octavian (see AUGUSTUS) but they were later reconciled and formed the second

Triumvirate with Lepidus (43). In 42 Antony defeated his opponents, Brutus and Cassius, at *Philippi. In 37 he abandoned his wife Octavia (Octavian's sister) to live with Cleopatra in Egypt. In 32 the Senate declared war on Egypt and Antony was defeated at *Actium. Both he and Cleopatra committed suicide.

markhor A large wild *goat, *Capra falconeri*, of the Himalayas. Over 100 cm tall at the shoulder, markhors are red-brown in summer and grey in winter and have massive corkscrew-like horns.

Markova, Dame Alicia (Lilian Alicia Marks; 1910–2004) British ballet dancer. She joined Diaghilev's Ballets Russes in 1925 and the Vic-Wells Ballet in 1931. Her dancing was noted for its lightness and delicacy, particularly evident in her performances in *Giselle*, *Swan Lake*, and *Les Sylphides*.

marl A calcareous clay that is soft and plastic when wet; consolidated marl is usually called marlstone. Marls are deposited in water, either fresh or marine. Marls and marlstones are used in the manufacture of cement.

Marlborough, John Churchill, 1st Duke of (1650–1722) British general. He suppressed Monmouth's rebellion against James II (1685) but subsequently supported the *Glorious Revolution (1688) against James. As commander in chief in the War of the *Spanish Succession, he won the great victories of *Blenheim (1704), Ramillies (1706), Oudenarde (1708), and Malplaquet (1709). A *Whig, his political importance owed much to the influence of his wife **Sarah Churchill** (born Jennings; 1660–1744), a confidante of Queen Anne. Following Sarah's fall from favour, he was charged with embezzlement and dismissed (1711). See also **BLenheim PALACE**.

marlin A large game fish, also called spearfish, belonging to the genus *Tetrapturus* (or *Makaira*). It has an elongated body, up to 2.5 m long, a cylindrical spearlike snout, and a long rigid dorsal fin. Marlins are fast swimmers, occurring in all seas. Family: *Istiophoridae*; order: *Perciformes*.

Marlowe, Christopher (1564–93) English dramatist and poet. His involvement in secret political activity while a student at Cambridge may have had some bearing on his death in a tavern fight in Deptford. His development of blank verse and dramatic characterization in his plays, which include *Tamburlaine the Great* (written about 1587) and *Faustus* (probably

1592), prepared the way for the achievements of Shakespeare.

Marmara, Sea of A sea lying between European and Asian Turkey and between the Bosphorus and the Dardanelles. In it lies the island of Marmara, where marble and granite have long been quarried. Area: 11 474 sq km (4429 sq mi).

marmoset A small South American monkey belonging to the genera *Callithrix* (9 species) and *Cebuella* (one species—the pygmy marmoset), with claws instead of fingernails. Marmosets are 20–90 cm long including the tail (10–38 cm) and have silky fur, often strikingly marked, and long balancing tails. They feed on fruit, insects, eggs, and small birds. Family: *Callicebidae*.

marmot A large ground squirrel belonging to the genus *Marmota* (8 species), also called groundhog, of Europe, Asia, and North America. Marmots are 30–60 cm long and inhabit mountainous areas. The woodchuck (*M. monax*) lives in North American woodlands.

Marne, River A river in NE France. Rising on the Plateau de Langres, it flows N and W to join the River Seine near Paris. Linked by canal to the Rivers Rhine, Rhône, and Aisne, it was the scene of two unsuccessful German offensives during *World War I (1914, 1918). Length: 525 km (326 mi).

Marquesas Islands A group of 12 volcanic islands in the S Pacific Ocean, in French Polynesia (annexed 1842). Nuku Hiva is the largest. Mountainous and fertile, the islands export copra, cotton, pearls, and vanilla. Area: 1287 sq km (497 sq mi). Population (2002): 8712. Capital: Atuona, on Hiva Oa.

Marrakech (or **Marrakesh**) 31°49N 8°00W The second largest city in Morocco. Founded in 1062, it was for a time the capital of the Moorish kingdom of Morocco. It is an important commercial centre, producing carpets and leather goods. Population (2004): 823 154.

marram grass A coarse perennial *grass of the genus *Ammophila* (2 species), also called beach grass or sand reed, which grows on sandy coasts of temperate Europe, North America, and N Africa. About 1 m high, it has tough scaly underground stems, which can spread over large areas. It is used to stabilize sand dunes.

Marranos See **CONVERSOS**.

marrow (botany) A trailing or climbing vine, *Cucurbita pepo*, probably native to the Americas and including several varieties cultivated as

vegetable crops. Marrows bear yellow or orange cup-shaped flowers and large long fleshy fruits, which have orange, green, or yellow skins. Family: *Cucurbitaceae*. See also **COURGETTE**.

marrow (zoology) The soft tissue contained in the central cavities of bones. In early life the marrow of all bones is engaged in the manufacture of blood cells: it is called red marrow. In adult life the marrow of the limb bones becomes filled with fat cells and ceases to function: this is yellow marrow.

Mars (astronomy) The fourth planet from the sun, orbiting the sun every 687 days at a mean distance of 227.9 million km. Its diameter is 6794 km and its period of axial rotation 24 hours 37 minutes 23 seconds. It has two small *satellites. The Martian atmosphere is 95% carbon dioxide and is very thin (surface pressure 7 millibars). The dry reddish dust-covered surface is heavily cratered in the S hemisphere while N regions show signs of earlier volcanic activity. In 2001 NASA launched the Mars Odyssey Probe, which subsequently orbited the planet 400 km (250 mi) above the surface, carrying out detailed chemical and geological surveys. Two NASA Mars Exploration Rovers were successfully landed on the planet in 2004.

Mars (mythology) The Roman war god, the son of Juno. He was identified with the Greek *Ares and is usually portrayed as an armed warrior. Originally a god of agriculture, he was later worshipped at Rome as a major deity and protector of the city.

Marsala (ancient name: Lilybaeum) 37°48'N 12°27'E A port in Italy, in W Sicily. Founded in 397 BC as a Carthaginian stronghold, it has ancient remains and a baroque cathedral. Marsala wine, grain, and salt are exported. Population (1998 est): 80 177.

Marseillaise, La The French national anthem, written in 1792 by Claude Rouget de l'Isle (1760–1836). Originally a patriotic song entitled "Le Chant de guerre de l'armée du Rhin," it was taken up by a group of republican soldiers from Marseille, who were prominent in the storming of the Tuileries, and became the revolutionary anthem.

Marseille (English name: Marseilles) 43°18'N 5°22'E The principal seaport in France, the capital of the Bouches-du-Rhône department. Founded about 600 BC, it was destroyed by the Arabs in the 9th century AD, redeveloped during the Crusades, and came under the French Crown in 1481. Most industry is associated with

its large world trade and includes oil refining at Fos. Population (1990): 1 231 000.

Marshall, George C(atlett) (1880–1959) US general and statesman. As army chief of staff (1939–45) he organized the build-up of US forces, contributing greatly to the Allied victory. As secretary of state (1947–49) he devised the **Marshall Plan**, or European Recovery Programme, in which the USA provided economic aid to Europe after World War II. For this he won a Nobel Peace Prize (1953).

Marshall Islands, Republic of the A country in the central Pacific Ocean. *Economy:* coconut oil and copra are the main exports; fishing is important. *History:* formerly part of the UN Trust Territory of the Pacific Islands, the country became self-governing in 1979 and its independence was recognized by the UN in 1990. The islands are threatened by global warming as a 1 m rise in sea levels would submerge 80% of the land. Official language: English. Currency: US dollar of 100 cents. Area: 181 sq km (70 sq mi). Population (2003 est): 56 400. Capital: Majuro.

marsh mallow A stout perennial herb, *Althaea officinalis*, of marshy coastal areas of Eurasia. 60–90 cm high, it has lobed leaves and flesh-coloured flowers. The fleshy roots yield a mucilage that was formerly used to make marshmallow. Family: *Malvaceae*.

marsh marigold A stout perennial herb, *Caltha palustris*, also called kingcup, growing in marshes and wet woods throughout arctic and temperate Eurasia and North America. It has erect or prostrate stems, up to 80 cm long, bearing round leaves and bright golden flowers. Family: *Ranunculaceae*.

Marston Moor, Battle of (2 July 1644) The battle in the English *Civil War in which the parliamentarians and the Scots decisively defeated the royalists at Marston Moor, W of York. The parliamentary victory destroyed the king's hold on N England.

marsupial A primitive *mammal belonging to the order *Marsupialia* (176 species). Most marsupials are found in Australia and New Guinea and include the *kangaroos, *bandicoots, and *phalangers. The only New World marsupials are the *opossums. Marsupials have small brains and lack a placenta. Young marsupials, which are born in a very immature state, complete their development in a pouch of skin on the mother's belly surrounding the teat, from which they are fed until fully formed.

m

Martello towers Fortifications containing cannons built in S Britain, Ireland, and Guernsey from 1804 to 1812. The towers were intended to check the potential invasion of Britain by Napoleon—which never materialized. They were named after the single tower mounting cannon at Mortella Point, Corsica.

marten A carnivorous mammal belonging to the genus *Martes* (8 species), of Eurasian and North American forests. Up to 90 cm long including the tail (15–30 cm), martens are arboreal agile hunters with dark lustrous fur. The two European species are the *pine marten and the smaller stone marten (*M. foina*). The fur of the American marten (*M. americana*) is called American *sable. Family: Mustelidae.

martensite The hard brittle form of *steel produced after rapid quenching in *heat treatment. When steel is heated to red heat (750°C), the carbon in it forms a solid solution in the iron. On quenching the carbon is frozen into this configuration and the crystal structure of the steel has internal strains, which cause its hardness. Named after Adolph Martens (1850–1914).

martial arts Styles of armed and unarmed combat developed in the East. The Japanese forms, such as *karate, *judo, and sumo, derive largely from the fighting skills of the *samurai. Since the late 19th century they have become forms of sport, as has the Chinese style, *kung fu. See also BUSHIDO.

martin A bird belonging to the *swallow family (*Hirundinidae*; 78 species). The brown sand martin (*Riparia riparia*) is about 12 cm long and has white underparts with a brown breast band. It nests in colonies in tunnels excavated in sand or clay banks. The black-and-white Old World house martin (*Delichon urbica*), about 13 cm long, commonly nests beneath the eaves of houses.

Martin, Pierre-Émile (1824–1915) French engineer, who invented the Siemens-Martin process of producing steel. In this process Martin employed the open-hearth furnace developed in 1856 by Sir William Siemens (1823–83) but adopted his own steel-producing process, which utilized pig iron and scrap steel.

Martin, St (c.316–97 AD) A patron saint of France; Bishop of Tours (372–97). A soldier in the imperial army, he later settled at Poitiers and nearby founded the first monastery in Gaul. His military cloak, part of which he reputedly gave to a naked beggar, has become a symbol of charity. Feast day: 11 Nov.

Martinique A French overseas region in the West Indies, in the Windward Islands of the Lesser Antilles. It consists of a mountainous island of volcanic origin. Agriculture is of importance, the chief exports being sugar, bananas, and rum. *History:* colonized by the French in 1635, it became a French overseas department in 1946. Area: 1090 sq km (420 sq mi). Population (2002 est): 386 000. Capital: Fort-de-France.

Martinů, Bohuslav (1890–1959) Czech composer. During World War II he settled in the USA. Largely self-taught, he composed many works, including symphonies, concertos, the ballet *La Revue de cuisine* (1927), and the opera *Julietta* (1936–37).

Marvell, Andrew (1621–78) English poet. He was employed as tutor by Cromwell and Fairfax and as secretary by Milton. From 1659 until his death he served as MP for Hull. He published several satires and pamphlets attacking religious intolerance and government corruption. His poems, noted for their combination of intelligent argument and lyricism, include "To his Coy Mistress" and "The Garden."

Marx, Karl (Heinrich) (1818–83) German philosopher, economist, and revolutionary. In 1842 Marx became the editor of a radical paper; after its suppression he left Germany and spent the rest of his life in exile. In Paris he met Friedrich *Engels, who later collaborated in many of Marx's writings and provided him with substantial financial support. While in Brussels, Marx's association with a group of German handicraftsmen led to *The Communist Manifesto* (1848). In 1849 Marx moved to London, where he remained for the rest of his life, publishing *A Contribution to the Critique of Political Economy* (1859) and other works. Following the establishment of the International Working Men's Association in 1864, Marx devoted many years to the affairs of the First *International. The first volume of *Das Kapital* was published in 1867. See also MARXISM.

Marx brothers A US family of comic film actors: **Chico** (Leonard M.; 1886–1961), **Harpo** (Adolph M.; 1888–1964), **Groucho** (Julius M.; 1890–1977), and, until 1933, **Zeppo** (Herbert M.; 1901–79). Their film comedies included *Horse Feathers* (1932), *Duck Soup* (1933), and *A Night at the Opera* (1935). The team disbanded in 1949.

Marxism The theory of scientific socialism introduced by Karl Marx and Friedrich Engels, which explains the origin, historical development, and demise of the capitalist economic system. It relies heavily on the philosophy of

Hegel (see DIALECTICAL MATERIALISM). Marxism developed the theory of proletarian revolution. The transition to a socialist and eventually a classless society would involve the violent overthrow of the state power of the bourgeois class. The working class would have to establish its own state power, which would be more democratic because it would be the rule of the majority of the population. As classes gradually disappeared, however, state power would also wither away. The classless society of the future would allow the fullest developments of individuals through social cooperation. Since World War I many different versions of Marxism have been expounded, notably the Marxist-Leninism of V. I. *Lenin. See also COMMUNISM.

Mary I (1516–58) Queen of England and Ireland (1553–58), succeeding her half-brother *Edward VI. The daughter of Henry VIII and Catherine of Aragon, Mary became queen after the failure of a conspiracy to place Lady Jane *Grey on the throne. Her singleminded aim was to restore Roman Catholicism in England: Edward's Protestant legislation was repealed and in 1554 the heresy laws were reintroduced, resulting in almost 300 deaths at the stake and the queen's nickname, Bloody Mary. Her marriage (1554) to Philip II of Spain led to England's entanglement in Philip's foreign policy and the loss in 1558 of its last possession on the Continent, Calais.

Mary II (1662–94) Queen of England, Scotland, and Ireland (1689–94), joint monarch with her husband William III. Daughter of James II, she was brought up as a Protestant and came to the throne after the enforced abdication of her Roman Catholic father during the *Glorious Revolution.

Mary, Queen of Scots (1542–87) The daughter of James V and Mary of Guise (1515–60), she succeeded to the throne shortly after her birth. From 1547 Mary, a Roman Catholic, lived at the French court, where in 1558 she married the dauphin (later Francis II). After Francis's death (1561) Mary returned to Scotland and in 1565 married, unpopularly, her cousin Lord *Darnley. In 1566 she gave birth to the future James VI (James I of England). In 1567 Darnley was murdered by *Bothwell, who subsequently married Mary. A rebellion of Scottish nobles defeated Mary and Bothwell at Carberry Hill (1567) and Mary was forced to abdicate in favour of her son. After fleeing to England, where her claim to the English succession had long been an embarrassment to Elizabeth I, she was held prisoner for the rest

of her life. She became the focus of a series of plots against Elizabeth and was finally tried for complicity in the conspiracy of Anthony Babington (1561–86) and executed.

Mary, the Virgin In the New Testament, the mother of *Jesus Christ. The fullest accounts of Mary are contained in the birth stories in Luke and Matthew. John (19.25) reports that she was present at the crucifixion. Luke records the Annunciation; her betrothal to *Joseph; her meeting with her cousin Elizabeth; and her song of praise (the Magnificat) when Elizabeth had greeted her as the mother of the Lord. The Gospels also state that she was a virgin. Mary's *Immaculate conception has been recognized as a dogma of the Roman Catholic Church since 1854 and the belief that she was taken into heaven (the Bodily Assumption) was defined as doctrine in 1950.

Mary Magdalene, St In the New Testament, the first person to see Jesus after the resurrection. Jesus cured her of possession by evil spirits. She aided his work in Galilee and was present at the crucifixion and burial. Medieval scholars associated her with the repentant prostitute who anointed Jesus' feet, mentioned in Luke's Gospel. Feast day: 22 July.

Maryland A state on the E seaboard of the USA. It consists of the Atlantic Coastal Plain, split by Chesapeake Bay into a low flat plain in the E and uplands in the W, and an area of higher ground, part of the Alleghenies in the N and W. Manufacturing is important, with primary metals, metal products, food processing, transportation and electrical equipment, printing and publishing, and textiles. The state's farmers produce livestock, poultry, dairy products, corn, tobacco, soya beans, and vegetables. *History:* one of the 13 original colonies, it was first settled by the English. It was named after Henrietta Maria, wife of Charles I. Area: 27 394 sq km (10 577 sq mi). Population (2000). 5 296 486. Capital: Annapolis.

Mary Rose A Tudor warship (Henry VIII's flagship), which sank in 1545 in Portsmouth Harbour while sailing into battle. The wreck was positively identified in 1971. The ship's contents, most of which were remarkably preserved, were raised during the following ten years and the hull itself was lifted in 1982 and placed in dry-dock in Portsmouth. The Mary Rose Trust, of which the Prince of Wales is president, was formed in 1979.

Masaccio (Tommaso di Giovanni di Simone Guidi; 1401–28) Florentine painter of the early Renaissance. He collaborated with Masolino

(1383–1447) on the *Madonna and Child with St Anne* (Uffizi) and other works. His independent paintings include the *Trinity* (Sta Maria Novella, Florence). Masaccio initiated the use of linear perspective and a single light source in painting.

Masada 31 19N 35 21E A precipitous rocky hilltop near the W shore of the Dead Sea, in S Israel. The site of one of Herod the Great's fortified palaces, it was later a centre of the *Essene sect and a stronghold of the Jews in their revolt against Rome (66 AD). In the last action of the war (73 AD) the defenders committed mass suicide rather than surrender. The site is an Israeli national monument.

Masai A Nilotic people of Kenya and Tanzania who speak a Sudanic language. They are nomads with little centralized political organization. Milk and blood from cattle form an important part of their diet, the blood being drawn from a vein in the animal's neck without killing it. Tall and active, the Masai highly value courage in their warriors.

Masaryk, Tomáš (Garrigue) (1850–1937) Czechoslovak statesman, who was one of the founders of Czechoslovakia. In Paris, during World War I, he and *Beneš founded the Czechoslovak National Council. When Austria-Hungary fell in November 1918, Masaryk was elected Czechoslovakia's first president; he was re-elected in 1920, 1927, and 1934.

Mascagni, Pietro (1863–1945) Italian opera composer. His fame rests chiefly on his one-act opera *Cavalleria Rusticana* (1889), written as an entry for a competition in which it won first prize.

Masefield, John (1878–1967) British poet. His first volume, *Salt-Water Ballads* (1902), reflects his experiences in the merchant navy. He also wrote narrative poems, such as *Reynard the Fox* (1919), and several children's books, including *The Midnight Folk* (1927). He became poet laureate in 1930.

maser (microwave amplification by stimulated emission of radiation) A device that works on the same principle as the *laser, the radiation produced being in the *microwave region instead of in the visible spectrum. Masers are used as oscillators (e.g. the ammonia clock; see ATOMIC CLOCK) and amplifiers.

Maseru 29 19S 27 29E The capital of Lesotho, near the South African border. It was founded in 1869. The University of Botswana, Lesotho, and Swaziland was established nearby in 1966. Population (1996 est): 160 100.

masochism Sexual pleasure obtained from the experience of pain. The condition is named after an Austrian writer, Leopold von Sacher-Masoch (1835–95), whose novels depict it. It is often associated with a strong need to be humiliated by and submissive to one's sexual partner.

mason bee A solitary *bee belonging to the genus *Osmia* and related genera, occurring in Europe, Africa, and elsewhere. It builds nests of soil cemented together with saliva in hollows in wood or stones. Family: *Megachilidae*.

Mason-Dixon line A line drawn in 1767 by two surveyors, Charles Mason and Jeremiah Dixon, to settle the conflict over borders between Pennsylvania and Maryland. Until the Civil War it also represented the division between southern proslavery and northern free states. It has remained a symbolic boundary between the North and South.

masque A form of dramatic court entertainment popular in England during the late 16th and early 17th centuries. It consisted of a combination of verse, dance, and music, usually with a slight dramatic plot based on a mythological theme. The form was perfected in the collaborations of Ben *Jonson and Inigo *Jones.

mass See MASS AND WEIGHT.

Massachusetts A state on the NE coast of the USA, in New England. The uplands in the W, which are cut N–S by the Connecticut River, are separated from the lowlands of the Atlantic Coastal Plain and Cape Cod Peninsula. A major manufacturing state, its industries produce electrical and communications equipment, instruments, chemicals, textiles, and metal and food products. Boston is an important financial and service centre. Its farmers produce dairy products, eggs, poultry, cranberries, and horticultural goods. Massachusetts is an important centre in the educational and cultural life of the USA. *History*: one of the 13 original colonies, the arrival of the Pilgrim Fathers (1620) heralded major settlement. It was a centre for opposition to British colonial policy leading to the American Revolution and became prominent following statehood (1788). Area: 21 386 sq km (8257 sq mi). Population (2000): 6 349 097. Capital: Boston.

mass action, law of The rate of a chemical reaction for a uniform system at constant temperature varies as the concentration of each reacting substance, raised to the power equal to the number of molecules of the substance appearing in the balanced equation. Thus, for the

reaction $2\text{H}_2 + \text{O}_2 = 2\text{H}_2\text{O}$ the speed of the forward reaction is proportional to the concentration of O_2 (written $[\text{O}_2]$) and to $[\text{H}_2]^2$; the reverse reaction depends on $[\text{H}_2\text{O}]^2$.

mass and weight Two physical quantities used to express the extent to which a substance is present; they are sometimes confused. The mass of a body was defined by *Newton as the ratio of a force applied to the body to the acceleration it produces. This is now called the **inertial mass**. **Gravitational mass** is defined in terms of the gravitational force between two bodies in accordance with Newton's law of gravitation. Lóránt Eotvos (1848–1919) showed experimentally that inertial mass and gravitational mass are equal.

Weight is proportional to gravitational mass, being the force by which an object is attracted to the earth. It is therefore equal to the product of the mass and the *acceleration of free fall (i.e. $W = mg$). Thus, the weight of a body may vary according to its position; the mass is a constant.

mass defect The difference between the total mass of the constituent protons and neutrons in an atomic nucleus and the mass of the nucleus. This defect is equal to the *binding energy of the nucleus.

mass-energy equation See RELATIVITY.

Massenet, Jules (1842–1912) French composer. He studied at the Paris conservatoire and won the Prix de Rome in 1863. Massenet wrote 27 operas, of which *Manon* (1884) and *Werther* (1892) are still performed today.

Massey, William Ferguson (1856–1925) New Zealand statesman; prime minister (1912–25). He entered parliament in 1894 and became (1903) leader of the Conservative opposition, which in 1909 he named the Reform Party. His administration, in coalition (1915–19) with the Liberals during World War I, supported agrarian interests.

Massif Central A plateau area in S central France. Generally considered to be that area over 300 m (984 ft) high, it rises to 1885 m (6188 ft) at Puy de Sancy. The central N area is also known as the Auvergne and the SE rim as the Cévennes. There is dairy and arable farming as well as heavy industry. Area: about 90 000 sq km (34 742 sq mi).

Massine, Léonide (Leonid Miassin; 1896–1979) Russian ballet dancer and choreographer. He choreographed for many companies, notably the Ballet Russe de Monte Carlo. Most controversial were his innovatory symphonic

ballets *Les Présages* (1933) and *Symphonie Fantastique* (1936).

mass number (or **nucleon number**) The total number of protons and neutrons in the *nucleus of an atom.

mastectomy Surgical removal of a breast, usually for the treatment of breast cancer. In a partial mastectomy (or lumpectomy) only the tumour is removed, while in a total mastectomy the entire breast is removed. A radical mastectomy involves removal of the breast together with the lymph nodes in the armpit and the chest muscles associated with it.

Master of the Queen's (or **King's**) **Music**

An English court post established in the reign of Charles I. It is now an honorary position held by a composer who may be called upon to write music for ceremonial occasions. The present holder is Sir Peter Maxwell Davies (2004–).

Master of the Rolls The presiding judge of the Civil Division of the Court of Appeal. The office originated as the guardian of all charters, patents, etc., entered upon parchment rolls. Judicial adviser to the Lord Chancellor, the Master of the Rolls became a full judge in 1729 and a member of the Court of Appeal in 1881. As his legal responsibilities increased he became less involved in record-keeping.

mastic An evergreen shrub, *Pistacia lentiscus*, up to 1.8 m high, native to the Mediterranean region. An aromatic yellowish-green resin obtained from the bark is used to make varnishes and as an adhesive. Family: *Anacardiaceae*. The name is also applied to other resin-yielding trees.

mastiff An ancient Eurasian breed of large dog long used as a guard dog and for bull- and bear-baiting. It is powerfully built with a large head and a short deep muzzle. The short smooth coat may be apricot, silver, or fawn; the muzzle, ears, and nose are black. Height: 76 cm (dogs); 69 cm (bitches). See also BULL MASTIFF.

mastodon An extinct elephant that originated in Africa 34 million years ago and spread throughout Europe, Asia, and America. Early mastodons were small and had two pairs of tusks; later forms were larger. The American mastodons survived until about 8000 years ago.

Mastroianni, Marcello (1924–96) Italian actor, who became one of the best-known international film stars of the 1960s. He appeared in Visconti's *White Nights* (1957), Fellini's *La dolce vita* (1960) and *Intervista* (1987), and *Dark Eyes* (1987).

Matabeleland An area in W Zimbabwe, between the Limpopo and Zambezi Rivers. It was named after the Ndebele tribe. Consisting chiefly of extensive plains, the area has important gold deposits. Area: 181 605 sq km (70 118 sq mi).

Mata Hari (Margaretha Geertruida Zelle; 1876–1917) Dutch courtesan and secret agent. She lived in Indonesia with her husband, a Dutch colonial officer, from 1897 to 1902. She became a professional dancer in Paris in 1905 and probably worked for both French and German intelligence services. She was executed by the French in 1917.

maté The dried leaves of a *holly shrub or tree, *Ilex paraguariensis*, native to Paraguay and Brazil. They are roasted, powdered, and infused with water to make a stimulating greenish tealike beverage.

materialism In classical metaphysics, materialism is the doctrine of *Democritus and Leucippus (5th century BC) that everything in the universe is matter or stuff. By contrast *Plato sought to establish the existence of some incorporeal objects and *Aristotle believed that the soul was immaterial. Marx's economic materialism took the form of *dialectical materialism. In all these senses materialism is a metaphysical doctrine. More popularly, the term has also been used to signify worldly outlooks and behaviour.

mathematics The logical study of numerical and spatial relationships. It is usually divided into pure and applied mathematics. In pure mathematics the general theoretical principles are studied, often in abstract. Its branches are *arithmetic, *algebra, *calculus, *geometry, and *trigonometry. The ancient Egyptians, Sumerians, and Chinese were all using a form of *abacus to carry out calculations for thousands of years before the Christian era. But it was not until the 9th century AD that *al-Khwarizmi introduced the idea of writing down calculations. The Venetian mathematicians of the 11th and 12th centuries were largely responsible for the introduction of these methods to the West. However, the application of mathematics to the physical sciences was largely a 16th-century development inspired by Galileo. It was from this development that applied mathematics grew. It is now largely concerned with *mechanics and *statistics.

Matilda (or Maud; 1102–67) The daughter of Henry I of England, who designated her his heir. On his death (1135), his nephew Stephen

seized the throne and Matilda invaded England (1139) inaugurating a period of in conclusive civil war. She captured Normandy and in 1152 the Treaty of Wallingford recognized her son Henry as Stephen's heir.

Matisse, Henri (1869–1954) French painter and sculptor. Matisse initiated *fauvism in the early 1900s with his boldly patterned and vibrantly coloured still lifes, portraits, and nudes, notably the controversial *Woman with the Hat* (1905). He was also inspired by Islamic art. A stained glass design for the Dominican chapel at Vence (S France) was among his last works.

Matsuyama 33°50'N 132°47'E A port in Japan, in NW Shikoku on the Inland Sea. It is an agricultural and industrial centre, with a university (1949). Population (1995): 460 870.

Matterhorn (French name: Mont Cervin; Italian name: Monte Cervino) 45°59'N 7°39'E A mountain in Europe, on the Swiss-Italian border in the Alps near Zermatt. First climbed in 1865 by the British mountaineer, Edward Whymper, it is conspicuous because of its striking pyramidal shape. Height: 4478 m (14 692 ft).

Matthew, St In the New Testament, one of the 12 *Apostles. He was a tax collector until he became a follower of Jesus. According to tradition, he preached in Judaea, Ethiopia, and Persia and suffered martyrdom. Feast day: 21 Sept. **The Gospel according to St Matthew** is generally believed to have been written some time after St Mark's Gospel, from which it drew material.

Maud See MATILDA.

Maugham, W(illiam) Somerset (1874–1965) British novelist and dramatist. He qualified in medicine but abandoned it after the success of his first novel, *Liza of Lambeth* (1896). His later fiction includes *Of Human Bondage* (1915), *The Moon and Sixpence* (1919), and *Cakes and Ale* (1930). He wrote popular comedies of manners, such as *The Circle* (1921), and many short stories.

Mau Mau A secret organization among the Kikuyu people of Kenya, which led a revolt (1952–57) against the British colonial government. Secret oaths were administered to participants, who committed appalling atrocities against Whites and uncooperating Blacks. Jomo *Kenyatta was thought to be a Mau Mau leader.

Maudny Thursday The Thursday before *Good Friday. Its name derives from Latin

mandatum, commandment, and its traditional foot-washing and almsgiving ceremonies originated at the Last Supper (John 13). The British sovereign's annual distribution of special Maundy money is a survival of these rites.

Maupassant, Guy de (1850–93) French short-story writer and novelist. Introduced into literary circles by Flaubert, he joined Zola's group of naturalist writers (see NATURALISM). Following the phenomenal success of "Boule de Suif" (1880), he wrote about 300 short stories and 6 novels, including *Une Vie* (1883) and *Bel-Ami* (1885). He suffered from syphilis and died in an asylum.

Mauriac, François (1885–1970) French novelist. His novels, which include *Thérèse Desqueroix* (1927) and *Le Noeud de vipères* (1933), characteristically portray the conflict between worldly passions and religion in provincial marital and family relationships. He also wrote plays and polemical criticism and journalism. He won the Nobel Prize in 1952.

Mauritania, Islamic Republic of (French name: Mauritanie; Arabic name: Muri-taniyah) A country in West Africa, with a coastline on the Atlantic Ocean. The N part is desert while the S is mainly fertile. Most of the inhabitants are Arabs and Berbers with a Negro population, mainly Fulani, in the S. *Economy*: chiefly agricultural. Livestock, especially cattle, are important and the main crops are millet, sorghum, beans, and rice. Fishing and fish processing are important. Oil was discovered in 2001 and large-scale production began in 2006. Iron ore and copper are exploited. *History*: Mauritania was dominated by Muslim Berber tribes from about 100 AD; the coast was visited by the Portuguese in the 15th century and by the Dutch, English, and French in the 17th century. The area became a French protectorate in 1903 and a colony in 1920, achieving internal self-government within the French Community in 1958. In 1976, with Morocco, it took over Western Sahara, prompting guerrilla attacks from the Polisario independence movement. In 1979 Mauritania withdrew from all but the southern tip of Western Sahara. The country was under military rule from 1978 until 1992, when Col Maaouya Ould Sidi Ahmed Taya, president since 1984, won free elections. However, these and subsequent elections were marred by accusations of fraud. Taya was deposed by the military in 2005; subsequent elections (2007) saw Sidi Mohamed Ould Cheikh Abdallahi become president. Official languages: French and Arabic. Currency: ouguiya of 5 khoums. Area: 1 030 700 sq km (397 850 sq

mi). Population (2007 est): 2 696 000. Capital: Nouakchott.

Mauritius, Republic of An island country in the Indian Ocean, about 800 km (500 mi) to the E of Madagascar. It is mainly hilly and subject to tropical cyclones. The majority of the population are of Indian descent. *Economy*: it is dependent primarily on sugar production, although manufacturing is of rising importance. Fishing is being developed, as is tourism. *History*: the island was settled by the Dutch in 1598. In 1715 it came under French rule as Île de France and in 1814 it was ceded to Britain. After riots in 1968 it became independent within the British Commonwealth. It became a republic in 1992. Sir Aneerood Jugnauth of the Mauritius Socialist Party was prime minister from 1982 to 1995. Official languages: English and French. Currency: Mauritius rupee of 100 cents. Area: 1 843 sq km (720 sq mi). Population (2007 est): 1 250 882. Capital: Port Louis.

maxwell The unit of magnetic flux in the *c.g.s. system equal to the flux through 1 cm² perpendicular to a field of one gauss. Named after James Clerk *Maxwell.

Maxwell, James Clerk (1831–79) Scottish physicist, who achieved the unification of electricity, magnetism, and light into one set of equations (known as **Maxwell's equations**). These equations, published in their final form in 1873, enabled Faraday's lines of force to be treated mathematically by introducing the concept of the electromagnetic field. Maxwell observed that the field radiated outwards from an oscillating electric charge at the speed of light, which led him to identify light as a form of electromagnetic radiation. Maxwell also made important advances in the kinetic theory of gases by introducing Maxwell-Boltzmann statistics, developed independently by Ludwig Boltzmann (1844–1906).

Maya An American Indian people of Yucatán (Mexico), Guatemala, and Belize. There are several languages in the Totonac-Mayan language family. Today the Maya live in farming villages, but between 300 and 900 AD they established an advanced civilization. They developed hieroglyphic writing and had knowledge of astronomy and mathematics. Their ritual and ceremonial life was centred on such sites as *Chichén Itzá, where large pyramid temples were constructed for the worship of the sun, moon, and rain gods.

Mayer, Louis B. (1885–1957) US film producer, born in Russia. In 1924 he founded the Metro-Goldwyn-Mayer (MGM) production com-

m

pany, whose films were largely determined by his personal taste for lavish but uncontroversial entertainment.

Mayflower The ship that carried the *Pilgrim Fathers to America. The *Mayflower* reached Plymouth (Massachusetts) in December 1620. There, the Pilgrims drew up the **Mayflower Compact**, which based their government on the will of the colonists, not the English Crown.

mayfly A slender insect of the order *Ephemeroptera* (1500 species), found near fresh water. Up to 40 mm long, mayflies are usually brown or yellow with two unequal pairs of membranous wings. The adults only live long enough to mate and lay eggs. The aquatic nymphs feed on plant debris and algae.

Mayo (Irish name: Contae Mhuigheo) A county in the W Republic of Ireland, in Connacht bordering on the Atlantic Ocean. Mountainous in the W, it contains several large lakes. Cattle, sheep, and pigs are raised and potatoes and oats are grown. Area: 5397 sq km (2084 sq mi). Population (2002): 117 428. County town: Castlebar.

mayor The chief officer of a municipal council. In the UK a mayor or mayoress is the chairman or chairwoman of a district council having *borough status. The mayor's counterpart in Scotland is called a provost. The mayor of the City of London and certain other cities is called a **Lord Mayor** (Lord Provost in Scotland). A directly elected mayor was instituted in London in 2000 and in several other UK cities in 2002.

Mazu (or **Ma-tsu**) 26 10N 119 59E A Taiwanese island in the East China Sea. It is near the Chinese mainland, from which it was bombed in 1958, causing an international incident. Area: 44 sq km (17 sq mi). Population (latest est): 8200.

Mbabane 26 30S 31 30E The capital of Swaziland, in the Mdimba Mountains. Tourism is important and nearby there is a large iron mine. Population (1998 est): 60 000.

MBE See ORDER OF THE BRITISH EMPIRE, THE MOST EXCELLENT.

Mbeki, Thabo (1942–) South African politician; president (1999–). A leading ANC activist, he took a prominent role in the negotiations that effected South Africa's transition to multi-racial democracy (1991–93). Deputy president to Nelson Mandela (1994–99), he succeeded him as president of the ANC (1997) and as national president in May 1999. He was re-elected in 2004.

Mc– Names beginning Mc are listed under Mac.

mead An alcoholic drink of fermented honey and water. The honey is dissolved in water and boiled with spices. When cool, after brewer's yeast has been added, the mead ferments in barrel. It was drunk in Anglo-Saxon England and, called hydromel, by the ancient Romans.

meadowsweet A perennial herb, *Filipendula* (or *Spiraea*) *ulmaria*, common in damp places throughout temperate Eurasia. 60–120 cm high, it has large compound leaves, and small creamy-white fragrant flowers. An oil distilled from the flower buds is used in perfumes. Family: *Rosaceae*.

mealworm See DARKLING BEETLE.

meander A curve in a river. Meandering is common in rivers flowing across plains. Because erosion is concentrated on the outside of the bends and deposition occurs on the inside, the curvature of the meander increases progressively, until the ends of the curve meet, the river takes a shorter path, and the process starts anew. The cut-off loop forms a stagnant oxbow lake.

mean life (or **lifetime**) The average time for which a radioactive isotope, elementary particle, or other unstable state exists before decaying. See RADIOACTIVITY.

measles A highly infectious viral disease, which usually affects children. After an incubation period of about two weeks the child becomes irritable and fevered and has a running nose and inflamed eyes. Two or three days later a rash appears on the head and face and spreads over the body. Usually the child recovers after a week. Compare GERMAN MEASLES.

Meath (Irish name: Contae na Midhe) A county in the E Republic of Ireland, in Leinster bordering on the Irish Sea. Consisting chiefly of fertile glacial drifts it is important for agriculture; cattle are fattened and oats and potatoes grown. Area: 2338 sq km (903 sq mi). Population (2002): 133 936. County town: Trim.

Mecca (Arabic name: Makkah) 21 26N 39 49E A city in W Saudi Arabia, in a narrow valley surrounded by barren hills. Every Muslim is expected to visit Mecca at least once in his or her lifetime unless circumstances make this impossible; nonbelievers are not allowed to enter the city. It has been a holy city since ancient times, but was also the birthplace of Mohammed (c. 570). Population (1992): 965 697.

mechanics The study of the motion of bod-

ies and systems and the forces acting on them. The subject is traditionally divided into statics, the study of bodies in equilibrium, and dynamics, the study of forces that affect the motion of bodies. Dynamics is further divided into kinetics, the effects of forces and their moments on motion, and kinematics, the study of velocity, acceleration, etc., without regard to the forces causing them. Aristotelian (see ARISTOTLE) mechanics was based on the erroneous concept that a force is required to maintain motion. Newtonian mechanics recognizes that once a body is moving a force is required to stop it but no force is needed to keep it moving. The more general relativistic mechanics is applicable to systems moving at speeds comparable to that of light (it reduces to Newtonian mechanics at velocities that are small compared to that of light). Fluid mechanics is the application of mechanical principles to fluids, both stationary (hydrostatics) and flowing (hydrodynamics).

Medawar, Sir Peter Brian (1915–87) British immunologist, noted for his investigation of the development of the immune system in embryonic and young animals, including the phenomenon of acquired immunological tolerance to foreign tissue grafts. Medawar shared the 1960 Nobel Prize with Sir Macfarlane *Burnet.

Medea In Greek legend, a sorceress, the daughter of King Aetes of Colchis and niece of *Circe. She helped *Jason steal the *Golden Fleece. When Jason deserted her for Glauce, daughter of the Corinthian King Creon, she killed Glauce, Creon, and her own two children.

Media An ancient region SW of the Caspian Sea settled by seminomadic tribes of Medes. Between the 8th and 6th centuries BC they began to unite against Assyria and in 612 destroyed Nineveh and overthrew the Assyrian empire.

median 1. The line joining the vertex of a triangle to the midpoint of the opposite side. **2.** The middle value of a set of numbers arranged in order of magnitude. For example, the median of 2, 3, 3, 4, 5 is 3.

Medici A family that dominated Florence from 1434 to 1737 (as grand dukes from 1532). The Medici, who were merchants and bankers, dominated the government of Florence in the 15th century by manipulating elections to the key magistracies. The family's power was established by **Cosimo de' Medici** (1389–1464), who also initiated the Medici tradition of artistic patronage. His son **Piero de' Medici** (1416–69) succeeded to his position, which then passed to

Lorenzo the Magnificent (1449–92). An outstanding patron of Renaissance artists (Botticelli, Ghirlandaio, Michelangelo) and scholars (Ficino, Pico della Mirandola, Politian), Lorenzo tended to neglect the family business, which declined in the late 15th century. He was succeeded by his son **Piero de' Medici** (1472–1503), who was forced to flee Florence in a revolt incited by *Savonarola. Piero's brother **Giovanni de' Medici** (1475–1521) was restored to Florence in 1512, a year before he became Pope Leo X (1513–21). **Alessandro de' Medici** (1511–37) became the first Duke of Florence; subsequent grand dukes included **Cosimo I** (1519–74), **Francesco I** (1541–87), and **Ferdinando I** (1549–1609).

Medina (Arabic name: Al Madinah) 2430N 3935E A city in W Saudi Arabia, N of Mecca. The tomb of Mohammed is in the mosque at Medina, the second most holy Muslim city after Mecca. Date-packing supplements the city's income from pilgrims, and the Islamic University was founded in 1961. Population (1992): 608 295.

Mediterranean Sea An almost landlocked sea extending between Africa and Europe to Asia. It connects with the Atlantic Ocean at Gibraltar, the Black Sea via the Sea of Marmara, and the Red Sea via the Suez Canal. Fed continuously by the Atlantic and to a lesser extent by the Black Sea, it is saltier and warmer than the oceans; pollution is a serious problem. Tidal variation is insignificant.

medlar A thorny shrub or tree, *Mespilus germanica*, native to SE Europe and central Asia and cultivated for its fruit. Growing to a height of 6 m, it bears white five-petalled flowers. The brownish fruit has an opening at the top through which the five seed chambers can be seen. Medlars are eaten when partly decayed; they can also be made into jelly. Family: Rosaceae.

medulla oblongata See BRAIN.

medusa The free-swimming sexual form that occurs during the life cycle of many animals of the phylum Cnidaria. Medusae resemble small *jellyfish and have separate sexes, releasing eggs and sperm into the water. The ciliated larvae settle and develop into the sedentary asexual forms (see POLYP). See also CNIDARIAN.

Medusa In Greek mythology, the only mortal *Gorgon. Athena, angered by her love affair with Poseidon, made her hair into serpents and her face so ugly that all who saw it were

turned to stone. She later sent *Perseus to behead her. From her blood sprang *Pegasus and Chrysaor, her children by Poseidon.

Medway A unitary authority in SE England, in Kent. Administrative centre: Gillingham. Area: 204 sq km (79 sq mi). Population (2001): 249 502.

Medway, River A river in SE England. Rising in Sussex, it flows N and E through Kent to join the River Thames by a long estuary. It passes through Tonbridge, Maidstone, Rochester, Chatham, and Gillingham. Length: 113 km (70 mi).

meerkat A small carnivorous mammal, *Suricata suricata*, also called suricate, of South African grasslands. It is about 60 cm long including the tail (17–25 cm), and lives in shallow burrows. Meerkats feed on insects, grubs, reptiles, birds, and small mammals. Family: *Viverridae*.

Meerut 29 00N 77 42E A city in India, in Uttar Pradesh. The scene of the first uprising (1857) of the Indian Mutiny. Meerut is an important army headquarters and has diverse industries. Population (1991): 753 778.

megalith (Greek: large stone) A large stone particularly favoured for building monuments in the *Neolithic and *Bronze Age. Megaliths could be placed singly, in lines, or in simple or complex circles as at *Stonehenge. Megaliths were also used for tombs and temples in Malta, Egypt, and elsewhere.

megapode A bird belonging to a family (*Megapodiidae*; 12 species) ranging from Australia to Peninsular Malaysia. 48–70 cm long, megapodes are fowl-like and ground-dwelling with brownish or black plumage and build a large nest mound in which the eggs are incubated by the heat of fermenting plant material, the sun, or volcanic heat. They include the mallee fowl and the brush turkeys (e.g. *Alectura lathami*). Order: *Galliformes* (pheasants, turkeys, etc.).

megaton A measure of the explosive power of a nuclear weapon. It is equivalent to an explosion of one million tons of trinitrotoluene (TNT).

Megiddo An ancient site in N Israel. Continuously occupied between about 3000 and 350 BC, Megiddo was strategically positioned on the route between Egypt and Syria and was the scene of many battles. Megiddo is identified with the biblical Armageddon (Revelation 16.16).

meiosis The process by which the nucleus of a germ cell divides prior to the formation of gametes (such as sperm, pollen, or eggs). Meiosis consists of two successive divisions during which one cell with the normal duplicate (diploid) set of chromosomes gives rise to four cells each with only one chromosome of each type (haploid). Meiosis differs from *mitosis in that the chromosomes of each pair become closely associated, enabling the interchange of genetic material between maternal and paternal chromosomes. There is no duplication of chromosomes between the two divisions of meiosis.

prophase I. The four chromosomes appear as thin threads (A), which form pairs (B). Each chromosome divides into two chromatids and exchange of genetic material occurs between the chromatids of each pair (C).

metaphase I. The chromosomes of each pair separate from each other and move to opposite poles of the spindle.

metaphase II. Two new spindles form and the chromatids of each group separate from each other.

telophase II. Four new nuclei form, each containing two chromosomes.

meiosis. The formation of four egg or sperm cells from one parent cell takes place in two divisions, each of which is divided into several phases. Only four phases are shown here.

Meir, Golda (1898–1978) Israeli stateswoman, born in Russia; prime minister (1969–74). A founder member of the Israeli Workers' Party (Mapai) she was its secretary general (1966–68). She was minister of labour (1949–56) and minister of foreign affairs (1956–66) before becoming prime minister. She resigned after Israel had been taken unawares in the 1973 Yom Kippur war.

Meissen porcelain The first hard-paste porcelain made in Europe following discovery

(1709) in Dresden of the technique by the alchemist J. F. Böttger (1682–1719) under the patronage of the Elector of Saxony. The manufacture moved to Meissen, a town on the River Elbe, in E Germany, in 1710. There followed extensive ranges of domestic ware, figures, chinoiserie, small boxes, seals, and painted ornaments.

Meitner, Lise (1878–1968) Austrian physicist. She worked with Otto *Hahn in Berlin (1907–38); together they discovered protactinium (1918) and caused the first fission of a uranium atom by neutron bombardment (1934). Expelled by the Nazis, she moved to Stockholm, becoming a Swedish citizen in 1949.

Mekong, River A major SE Asian river, rising in Tibet and flowing generally SE through China, Laos, Kampuchea, and Vietnam to the South China Sea. The extensive delta is one of the greatest Asian rice-growing areas. Length: about 4025 km (2500 mi).

Melanesia A division of Oceania in the SW Pacific Ocean, consisting of an arc of volcanic and coral islands NE of Australia. It includes the Bismarck Archipelago, the Solomon, Admiralty, and D'Entrecasteaux Islands, Vanuatu Republic, New Caledonia, and Fiji. *See also* MICRONESIA, FEDERATED STATES OF; POLYNESIA.

Melanesians The people of the Melanesian islands. The term also covers similar peoples of New Guinea, though these are also often known as Papuan. They are of Oceanic Negroid race and speak languages of the Austronesian family. The Melanesians cultivate yams, taro, and sweet potatoes and live in small, usually dispersed, homesteads. In coastal areas fishing is important.

melanin A pigment, varying from brown-black to yellow, that occurs in hair, skin, feathers, and scales. Derived from the amino acid tyrosine, its presence in the skin helps protect underlying tissues from damage by sunlight. Melanin is also responsible for colouring the iris of the eye.

melanoma A form of cancer, mainly affecting the skin, that arises in the cells producing the pigment *melanin. Most melanomas develop from an existing *mole, and excessive exposure to sunlight is known to be a contributory factor.

Melba, Dame Nellie (Helen Porter Armstrong; 1861–1931) Australian soprano. She made her debut in 1887 as Gilda in Verdi's opera

Rigoletto. Her worldwide career culminated in a number of farewell performances in 1926.

Melbourne 37 45S 144 58E The second largest city of Australia, the capital of Victoria on Port Phillip Bay. It is a major commercial centre. Port Melbourne is sited 4 km (2.5 mi) away, on the mouth of the Yarra River; exports include wool, scrap metal, and dairy products. The chief industries are heavy engineering, food processing, and the manufacture of textiles and clothes. A cultural centre, Melbourne possesses three universities and the new Arts Centre of Victoria. The Melbourne Cricket Ground, founded in 1853, is world famous. *History*: founded in 1835, it developed rapidly following the 1851 gold rush. It was the capital of the Commonwealth of Australia from 1901 until 1927. Population (1998 est): 2 865 329.

Melbourne, William Lamb, 2nd Viscount (1779–1848) British statesman; Whig prime minister (1834, 1835–41). He was chief secretary for Ireland (1827–28) and then home secretary (1830–34), when he dealt harshly with the *Tolpuddle Martyrs. During his second ministry his attempted resignation (1839) precipitated Victoria's *Bedchamber Crisis. In 1805 he married Lady Caroline Ponsonby (1785–1828). As *Lady Caroline Lamb*, she had a love affair with Lord Byron (1812–13); because of her increasing mental instability, she separated from Lord Melbourne in 1825.

melon An annual tropical African vine, *Cucumis melo*, widely cultivated for its fruits. Melon plants have hairy leaves, yellow or orange cup-shaped flowers, and round or oval fruits, up to 4 kg in weight, with tough skins and sweet juicy flesh surrounding a core of seeds. Varieties include the muskmelon, with a net-veined skin and pinkish flesh; the honeydew melon, with smooth skin and light-green flesh; and the canteloupe, with rough warty skin and orange flesh. Family: *Cucurbitaceae*. *See also* WATERMELON.

Melos (or **Mélos**) A Greek island in the Aegean Sea, one of the Cyclades. The famous statue, the *Venus de Milo*, was discovered here in 1820. Area: 150 sq km (58 sq mi). Population (lat-est est): 4555.

Melville, Herman (1819–91) US novelist. In 1841 he joined the crew of a whaler; his experiences in the South Seas form the raw material of his works. His masterpiece, *Moby Dick* (1851), is a narrative about whaling with an underlying philosophical theme on the nature of evil. *Billy Budd*, published in 1924 after his death,

formed the basis of a libretto for an opera by Benjamin Britten.

memory The recollection of experiences from the past. Three processes are required: registration, in which an experience is received into the mind; retention, in which a permanent memory trace, or engram, is preserved in the brain; and recall, in which a particular memory is brought back into consciousness. Short-term memories are forgotten with the passage of time unless they are registered in the long-term memory. Failure of memory (see AMNESIA) is a common consequence of diseases of the brain. An abnormally good memory (hypermnnesia) can sometimes be produced by hypnosis.

memory, computer The part of a computer that stores information. It usually refers to the computer's internal store, in which the programs and data are held; this is under the direct control of the central processing unit. In some computers, a high-speed buffer store holds information in active use by the central processing unit, while longer-term storage is provided by the slower main store. Solid-state electronic memory devices, which operate at very high speeds but lose their contents when the machine is turned off, are used for the internal memory. Slower devices, such as magnetic disks, provide permanent storage but their contents cannot be accessed directly by the central processing unit; these are sometimes called the external memory.

Memphis 35 10N 90 00W A city and port in the USA, in Tennessee situated above the Mississippi River. It is a major cotton, timber, and livestock market and its manufactures include textiles and chemicals. Memphis is associated with W. C. Handy, the composer of the blues. Population (2000): 650 100.

Memphis An ancient city of Lower Egypt, S of modern Cairo. Memphis was founded as the capital of all Egypt after its unification by Menes (c. 3100 BC), remaining the capital until supplanted by Thebes (c. 1570 BC). The necropolis of Saqqarah and the pyramids and sphinx at Giza formed part of its extensive complex of monuments.

Menai Strait A channel separating the island of Anglesey from the mainland of NW Wales. It is crossed by a notable suspension bridge designed by Thomas Telford (1819–26). The Britannia railway bridge, built by Robert Stevenson (1850) and seriously damaged by fire in 1970, has been rebuilt.

Menander (c. 341–c. 290 BC) Greek dramatist. The leading exponent of the New Comedy, he wrote sophisticated comedies on romantic and domestic themes with strongly individualized characters. His single surviving complete play is the *Dyscolus*.

Mendel, Gregor Johann (1822–84) Austrian botanist, who discovered the fundamental principles governing the inheritance of characters in living things (see GENETICS). Mendel was a monk with a scientific education. In 1856 he began to inbreed lines of pea plants to study the characters of tallness and dwarfness. Mendel concluded that such characteristics were determined by factors of inheritance (now called alleles of the gene) that were contributed equally by both parents and that sorted themselves among the offspring according to simple statistical rules. He summarized these findings in his Law of Segregation and Law of Independent Assortment (**Mendel's laws**). Mendel reported his findings in 1865 but his achievement was not appreciated until the rediscovery of his work by C. E. Correns (1864–1933), Hugo de Vries (1848–1935), and E. von Tschermak (1871–1962) in 1900.

mendelevium (Md) A synthetic element, first produced in 1955 by Ghiorso and others, by bombarding einsteinium with helium ions; it is named after the chemist Mendeleyev. At no 101; at wt (258).

Mendeleyev, Dmitrii Ivanovich (1834–1907) Russian chemist, who was professor at St Petersburg (1866–90). In 1869 he arranged the elements in order of increasing atomic weights so that those with similar properties were grouped together (see PERIODIC TABLE).

Mendelssohn, Felix (Jacob Ludwig Felix Mendelssohn-Bartholdy; 1809–47) German composer. A child prodigy, he demonstrated his precocious brilliance in his overture to *A Midsummer Night's Dream* (1826). In 1836 he became conductor of the Leipzig Gewandhaus orchestra and subsequently founded the Leipzig conservatoire. His compositions include five symphonies, overtures, the oratorios *St Paul* (1836) and *Elijah* (1846), chamber music, and piano music.

Menderes, River (ancient name: R. Maeander; Turkish name: Büyük Menderes) A winding river in W Turkey, flowing WSW into the Aegean Sea. Its ancient name gave rise to the term meander. Length: 400 km (249 mi).

Mendes, Sam (Samuel Alexander M.; 1965–) British theatre and film director. He

achieved celebrity as the young director of London's Donmar Warehouse Theatre (1992–2002) before making the films *American Beauty* (1999), which earned five Academy Awards, and *Road to Perdition* (2002).

Mendip Hills (or Mendips) A range of limestone hills in SW England, in N Somerset, extending NW–SE between Axbridge and the Frome Valley, reaching 325 m (1068 ft) at Blackdown. Its many limestone features include Cheddar Gorge and the caves of Wookey Hole.

Mendoza 32 48S 68 52W A city in W Argentina. It is the commercial centre of an irrigated area specializing in wine production. Population (1999 est): 119 681.

Menelaus A legendary Spartan king and husband of *Helen. He served under his brother Agamemnon in the *Trojan War and after the fall of Troy won Helen back.

Menelik II (1844–1913) Emperor of Ethiopia (1889–1913). He greatly expanded Ethiopia, limited the power of the nobility, and modernized the administration.

Mengele, Josef (1894–?1979) German medical scientist, notorious for atrocities committed in the Nazi concentration camp at Auschwitz. Known as “the Angel of Death,” he was camp doctor at Auschwitz from 1943 to 1945 and was subsequently held responsible for the deaths of 400 000 people, mostly Jews, many of whom died in bizarre medical experiments. In 1985 a body exhumed in Brazil was identified as his.

meningitis Inflammation of the meninges—the membranes that surround the brain. This is usually caused by bacteria or viruses and occurs most commonly in children. Symptoms include headache, vomiting, stiff neck, intolerance to light, tiredness, irritability, and fits. Treatment for bacterial meningitis is with antibiotics and the patient usually recovers rapidly, but meningococcal meningitis, a severe form caused by the meningococcus (*Neisseria meningitidis*), develops rapidly and can be fatal within a week unless diagnosed and treated promptly. The Hib vaccine protects children against bacterial meningitis caused by *Haemophilus influenzae* type B. Viral meningitis is often mild but may have serious effects.

menopause The change of life: the time in a woman's life when the menstrual periods become irregular and finally cease because egg cells are no longer produced by the ovaries. The menopause can occur at any age between the late 30s and late 50s. Some women may experi-

ence symptoms, including flushing (“hot flushes”), palpitations, and irritability, due to reduced secretion of oestrogens. These can be relieved by **hormone replacement therapy** with oestrogens (and progestogens to prevent damage to the womb lining that oestrogens alone may cause).

Menotti, Gian Carlo (1911–) Italian-born US composer. Among his compositions are the operas *The Medium* (1946) and *The Saint of Bleeker Street*, both of which won Pulitzer Prizes, and the television opera *Amahl and the Night Visitors* (1951). In 1958 he founded the Spoleto Festival.

Mensheviks One of the two factions into which the Russian Social Democratic Workers' Party split in 1903 in London. Unlike the rival *Bolsheviks, the Mensheviks (meaning those in the minority) believed in a large and loosely organized party. They supported Russia's participation in World War I and were prominent in the Russian Revolution until the Bolsheviks seized power in October 1917. They were finally suppressed in 1922.

menstruation The monthly discharge of blood and fragments of womb lining from the vagina. This is part of the **menstrual cycle**—the sequence of events, occurring in women from puberty to the menopause, by which an egg cell is released from the ovary. Menstruation is the stage at which the egg cell (with blood, etc.) is expelled from the womb if conception has not occurred. Ovulation occurs at around the middle of the cycle.

menthol (C₁₀H₂₀O) A white crystalline solid. It is a constituent of peppermint oil and is responsible for the characteristic smell of the mint plant, but can also be prepared synthetically. Menthol is used as an analgesic and in flavouring for sweets and cigarettes.

Menuhin, Yehudi, Baron (1916–99) British violinist, born in the USA of Russo-Jewish parentage. A pupil of Georges Enesco, he became famous in boyhood. From 1959 to 1968 Menuhin was director of the Bath Festival, where he also participated as a conductor. He founded the Yehudi Menuhin School for musically gifted children in 1963.

Menzies, Sir Robert Gordon (1894–1978) Australian statesman; prime minister as leader of the United Australia Party (1939–41) and then of the Liberal Party (1949–66). He was attorney general (1934–39) before becoming prime minister. He resigned in 1941 and formed the Liberal Party in 1944. As Liberal

prime minister he increased US influence in Australian affairs and was strongly anticomunist.

Mercator, Gerardus (Gerhard Kremer; 1512–94) Flemish geographer, best known for the Mercator projection. Prosecuted for heresy in 1544, he emigrated to Protestant Germany in 1552, where he was appointed cartographer to the Duke of Cleves. The **Mercator projection** first used in 1569, is a cylindrical map projection. The parallels of latitude are represented as being straight lines of equal length to the equator. The meridians are equally spaced and intersect at right angles. The correct ratio between latitude and longitude is maintained by increasing the distance between the parallels away from the equator causing increased distortion towards the Poles.

merchant banks Financial institutions that became acceptance houses as a result of their foreign trading as merchants. They are now involved in a variety of other businesses, including: the issue, placing, and underwriting of shares and debentures for firms; the issue of long-term loans for governments and institutions abroad; advising on the investment of funds and the management of portfolios; advising on and managing takeover bids; and dealings in foreign exchange.

Mercia A kingdom of Anglo-Saxon England. The Mercians were *Angles and their territory embraced most of central England between Wales and East Anglia. Mercia achieved pre-eminence under *Offa (757–96); thereafter it declined and was merged in the 9th century into a united England under Wessex.

mercury (botany) An annual or perennial herb of the genus *Mercurialis* (8 species), native to Eurasia and N Africa. The perennial dog's mercury (*M. perennis*) of woodland areas has an evil smell and is poisonous to grazing animals. Growing 15–40 cm high, it has large toothed leaves and small green flowers. The annual mercury (*M. annua*) occurs on wasteland and as a garden weed. Family: *Euphorbiaceae*.

mercury (Hg) The only common metal that is liquid at room temperature (it has a high relative density of 13.546). It occurs chiefly as the sulphide cinnabar (HgS), from which mercury is obtained simply by heating in a current of air. Mercury is used in thermometers, barometers, and batteries and as an amalgam in dentistry. Compounds include the oxide (HgO), mercurous and mercuric chlorides (Hg₂Cl₂, HgCl₂), and the explosive mercury fulminate (Hg(ONC)₂), which is widely used as a detonator.

Mercury and its compounds are highly poisonous and are only slowly excreted by the human body. At no 80; at wt 200.59; mp –38.87°C; bp 356.58°C.

Mercury (astronomy) The innermost and second smallest (4880 km diameter) planet, orbiting the sun every 88 days at a mean distance of 57.9 million km. Its long period of axial rotation, 58.6 days, is two-thirds of its orbital period. Like the moon, Mercury exhibits *phases. Its surface is heavily cratered, with intervening lava-flooded plains. It has only a very tenuous atmosphere, mainly helium and argon.

Mercury (mythology) The Roman god of merchants and commerce and of astronomy who was also the messenger of the gods. He is usually portrayed as holding a purse, and with a cap, winged sandals, and staff. He was identified with the Greek god Hermes.

Meredith, George (1828–1909) British poet and novelist. His long poem sequence *Modern Love* (1862) was partly based on his unhappy marriage. His novels include *The Egoist* (1879).

merganser A *duck belonging to a genus (*Mergus*) of the N hemisphere, also called saw-bill. 40–57 cm long, mergansers have a long serrated bill for feeding on worms, fish, and eels. Males have a dark-green double-crested head, a chestnut breast, and a grey-and-white back; females are brown with a white wing bar.

Mérida 20 59N 89 39W A city in E Mexico. It is the commercial and industrial centre for an agricultural area specializing in henequen (a fibre) production. It has a 16th-century cathedral and is the site of the University of Yucatán (refounded 1922). Population (2000): 660 848.

meristem An area of actively dividing plant cells responsible for growth in the plant. The main meristematic regions in dicotyledon plants are the shoot tip and root tip (apical meristems) and the *cambium (lateral meristem).

Merkel, Angela (Dorothea) (1954–) German stateswoman; chancellor (2005–). She grew up in East Germany and entered its parliament in 1990. Leader of the Christian Democrats from 2002, she became Germany's first woman chancellor after the close election of 2005.

merlin A small *falcon, *Falco columbarius*, occurring in moorland and heathland regions of the N hemisphere. The female is 32 cm long and is dark brown with heavily streaked underparts; the male is 26 cm long and has a grey-blue back and tail.

Merlin In *Arthurian legend, the wizard who counsels and assists Arthur and his father, Uther Pendragon. There are various accounts of Merlin's life in *Geoffrey of Monmouth and later writers. He helped Uther to win Igraine, Arthur's mother, made the Round Table, cared for Arthur as a child, and armed him with the sword Excalibur.

Meroë An ancient city, capital of a Nubian kingdom in present Sudan, founded c. 600 BC. The Iron Age culture was a mixture of local and Egyptian traditions.

Merovingians The first Frankish ruling dynasty (see FRANKS). It was founded by Merovech, King of the Salian Franks, in the mid-5th century AD. His grandson Clovis (reigned 481–511) greatly extended Merovingian possessions and the kingdom reached its zenith in the mid-6th century. The last Merovingian king, Childeric III, was deposed in 751 by the Carolingian Pepin the Short.

Mersey, River A river in NW England. Formed by the confluence of the Rivers Goyt and Tame at Stockport, it flows W to enter the Irish Sea by way of a 26 km (16 mi) long estuary, with the ocean ports of *Liverpool and Birkenhead on its banks. Length: 113 km (70 mi).

Merseyside A metropolitan county of NW England, created in 1974 from SW Lancashire and NW Cheshire. In 1986 its administrative powers were devolved to the unitary authorities of Sefton, Liverpool, St Helens, Knowsley, and Wirral. Area: 648 sq km (250 sq mi).

Merthyr Tydfil (Welsh name: Merthyr Tudful) 1. 51.46N 3.23W A town in SE Wales, in Merthyr Tydfil county borough on the River Taff. Formerly a world iron and steel centre based on the surrounding coalfields, it now has light and electrical engineering. Population (1991 est): 39 482. 2. A county borough in SE Wales, created from part of Mid Glamorgan in 1996. Area: 111 sq km (43 sq mi). Population (2001): 55 983.

mescaline A hallucinogenic drug obtained from the *peyote cactus of Mexico, where it was once widely used in religious ceremonies. Mescaline does not cause serious dependence and the hallucinations are mostly visual.

Mesmer, Franz Anton (1734–1815) German physician, who claimed to cure diseases by correcting the flow of "animal magnetism" in his patients' bodies. Investigation of "mesmerism" concluded that any cures were due to the powers of suggestion, but Mesmer's claims stimulated serious study of hypnosis.

Mesoamerican languages A geographical classification of the languages spoken by the American Indian peoples of Mexico, Guatemala, Honduras, Belize, El Salvador, and Nicaragua. It includes around 70 languages belonging to a number of families, such as the Uto-Aztecan, Otomangean, and Tarascan.

Mesolithic The middle division of the *Stone Age, especially in N Europe, where a distinct cultural stage, the Maglemosian, intervened between the last ice age and the evolution of farming communities. Generally, the Mesolithic is characterized by production of microliths (very minute stone tools), which were hafted into wooden, bone, or other handles.

mesons A group of unstable elementary particles (lifetimes between 10^{-8} and 10^{-15} second) that are classified as hadrons; each meson is believed to consist of a quark-antiquark pair (see PARTICLE PHYSICS).

Mesopotamia The region between the Rivers Tigris and Euphrates. The Sumerians settled in S Mesopotamia about 4000 BC: they established the world's first civilization and founded city states, such as *Ur, *Kish, and *Uruk. *Babylon became Mesopotamia's capital under Hammurabi (d. 1750 BC). After his death Mesopotamia was overrun successively by Kassites, Assyrians, and Persians.

Mesozoic era The geological era following the Palaeozoic and preceding the Cenozoic. It contains the Triassic, Jurassic, and Cretaceous periods, and lasted from about 240 to 65 million years ago. The reptiles were at their greatest development during this era but became extinct before the end of it.

Messerschmitt, Willy (1898–1978) German aircraft designer. He is best known for his World War II military planes, particularly the Me-109 fighter (1935) and the Me-262, the first jet fighter.

Messiaen, Olivier (1908–92) French composer, organist, and teacher. In 1931 he was appointed organist of La Trinité in Paris. His works, heavily influenced by Catholic mysticism and eastern music, include *La Nativité du Seigneur* (1935), the symphony *Turangalila* (1948), *La Transfiguration* (for chorus and orchestra; 1965–69), and the opera *St Francis d'Assise* (1986).

Messina 38 13N 15 33E A port in Italy, in NE Sicily on the Strait of Messina. Successively occupied by Greeks, Carthaginians, Mamertines, Romans, Saracens, Normans, and Spaniards, in 1860 it became the last city in Sicily to be made

m

part of a united Italy. Its manufactures include macaroni, chemicals, and soap. Population (2000 est): 259 156.

metabolism The sum of the processes and chemical reactions that occur in living organisms in order to maintain life. It can be divided into two components. **Anabolism** involves building up the tissues and organs of the body using simple substances, such as amino acids, simple sugars, etc., to construct the proteins, carbohydrates, and fats of which they are made. These processes require energy, which is provided by the oxidation of nutrients or the body's own food reserves. Oxidation and all other processes involving the chemical breakdown of substances with the production of waste products are known collectively as **catabolism**. Basal metabolism is the energy required to maintain vital functions (e.g. respiration, circulation) with the body at rest. It is measured by estimating the amount of heat produced by the body and is controlled by hormones from the thyroid gland.

metal An element that is usually a hard crystalline solid, a good conductor of heat and electricity, and forms a salt and hydrogen when reacted with an acid. Not all metals have these properties, however: mercury is a liquid at normal temperatures and sodium is soft. The most important are the heavy metals (iron, copper, lead, and zinc) used in engineering and the rarer heavy metals (nickel, chromium, tungsten, etc.) used in alloys. Other important metals are the noble metals (gold, silver, and platinum), and the light metals (aluminium and magnesium). Chemically important metals include the *alkali metals (sodium, potassium, and lithium), the *alkaline-earth metals (calcium, barium, etc.), and the rare-earth metals (see LANTHANIDES). Uranium is important in the nuclear power industry (see NUCLEAR ENERGY). Most metals occur in the earth's crust in the combined state and have to be mined before being extracted from their ores (see METALLURGY).

metallography The study of the crystalline structure of metals. It includes various techniques and is used to test the quality of steel after *heat treatment. Usually a small sample is taken from a batch and polished before being examined under a microscope for cracks, impurities, or holes. The polished surface may also be treated chemically to show up the different constituents of an alloy or to highlight cracks. The technique of X-ray diffraction developed by Max von Laue (1879–1960) is used to examine metallic crystals.

metalloids Elements displaying the physical and chemical properties both of *metals and nonmetals. Examples of metalloids are arsenic and germanium, which both have metallic and nonmetallic allotropes. They may form positive ions as well as covalently bonded compounds. The metalloid elements are often *semiconductors.

metallurgy The science and technology of producing metals. It includes the extraction of metals from their ores, alloying to form materials with specific properties, and *heat treatment to improve their properties.

metamorphic rock One of the three major rock categories (compare IGNEOUS ROCK; SEDIMENTARY ROCK) consisting of rocks produced by the alteration of existing rocks by heat, pressure, and chemically active fluids. Contact (or thermal) metamorphism occurs around igneous intrusions and results from heat alone. Regional metamorphism results from the heat and pressure created by crustal deformation. Dislocation metamorphism results from localized mechanical deformation, as along fault planes. Metamorphic rocks often form upland masses. Marble is a metamorphic rock formed from recrystallized limestone.

metamorphosis The process in animals by which a *larva changes into an adult. This radical change of internal and external body structures may be gradual or abrupt. Certain insects, such as dragonflies, undergo incomplete metamorphosis, during which successive stages (known as nymphs) become increasingly like the adult through a series of moults. In complete metamorphosis, seen in such insects as butterflies and houseflies, the larva passes into a quiescent pupal stage, during which the adult tissues are developed. Metamorphosis also occurs in amphibians (see FROG). The process in insects and amphibians is controlled by hormones.

metaphysical poets A group of 17th-century English poets whose work was characterized by intellectual wit and ingenuity, especially in their use of elaborate figures of speech. The leading poet was John *Donne, and his successors included George Herbert (1593–1633), Henry Vaughan (c. 1622–95), Andrew *Marvell, and Abraham Cowley (1618–67). They frequently employed colloquial speech rhythms in both their secular and their religious verse.

metaphysics The study of existence or being in general. The term derives from the title given to a group of Aristotle's writings.

The status of metaphysics has been much debated; *Kant thought this kind of investigation impossible because our minds can only cope with the phenomenal world or the world of appearances and *Ayer used the word as a pejorative term to indicate the meaninglessness of much traditional philosophy. However, metaphysics is still held to be one of the main divisions of philosophy.

Metazoa In traditional classification systems, a subkingdom of animals whose bodies consist of many cells differentiated and coordinated to perform specialized functions. It excludes the single-celled *protozoa and the *Parazoa* (see SPONGE). In modern classifications, the animal kingdom is divided into the subkingdoms *Parazoa* and *Eumetazoa*.

metempsychosis See REINCARNATION.

meteor A streak of light seen in the night sky when a **meteoroid**—an interplanetary rock or dust particle enters and burns up in the earth's atmosphere. A decaying *comet gradually produces a **meteor stream** of meteoroids around its orbit. When the earth passes through a meteor stream, an often spectacular **meteor shower** is observed. A **meteorite** is a large piece of interplanetary debris (mass usually over 100 kg) that falls to the earth's surface. Its composition is either principally iron or stone or an intermediate mixture.

meteorology The study of the physics, chemistry, and movements of the *atmosphere and its interactions with the ground surface. The troposphere and stratosphere, the lower layers of the atmosphere in which most weather phenomena occur, are the chief focuses of meteorology. **Weather** is the state of atmospheric conditions (including temperature, sunshine, wind, clouds, and precipitation) at a particular place and time. A **weather forecast** is a prediction of what weather conditions will be over a stated future period; it is made by studying weather maps, especially those obtained from satellites. Weather forecasts are essential to shipping and aviation and are of use to many other bodies, as well as to farmers. See illustration on p. 584.

methane (CH₄) A colourless odourless flammable gas that is the main constituent of *natural gas. It is the simplest member of the *alkane series and is used as a fuel and a source of other chemicals. Methane is produced in nature by the decay of vegetable matter under water, rising in bubbles from marshes as **marsh gas**. Coal gas also contains methane. Recently the generation of methane from sewage

has been investigated as an *alternative energy source. It burns with a clear blue flame.

methanol (**methyl alcohol** or **wood alcohol**; CH₃OH) A colourless poisonous flammable liquid. Originally produced by distillation of wood, it is now usually made from hydrogen and carbon monoxide by high-pressure *catalysis. It is used as a solvent, antifreeze, and a raw material for making other chemicals. See also METHYLATED SPIRITS.

Methodism The Christian denomination that developed out of the religious practices advocated by the *Wesley brothers. Methodism evolved its own church organization during the 1790s. The supreme decision-making body is the Conference; local societies (congregations) are highly organized and pastoral and missionary work are major concerns. Methodism in the USA accounts for 80% of all Methodists.

methylated spirits A form of *ethanol (ethyl alcohol) that has been made unsuitable for drinking by the addition of about 9.5% of methanol (methyl alcohol), about 0.5% of pyridine, and a methyl violet dye. In this form it has many household uses, especially as a fuel for spirit burners. Industrial methylated spirits (IMS) consists of ethanol with about 5% of methanol and no pyridine. It is used as a solvent for varnishes, etc.

metre (m) The unit of length in the *metric system. Originally defined in 1791 as one ten-millionth of the length of the quadrant of the earth's meridian through Paris, it was redefined in 1927 as the distance between two marks on a platinum-iridium bar. It is now defined (General Conference on Weights and Measures, 1983) as the length of the path travelled by light in a vacuum in 1/299 792 458 second, which replaces the 1960 definition based on the emission of a krypton lamp.

metre (poetry) The rhythmic pattern of a line of verse measured in terms of basic metrical units or feet. In accentual verse, as in English, a foot consists of various arrangements of stressed (') and unstressed (˘) syllables. In classical Greek and Latin verse, the quantity or length rather than the stress of syllables determines the foot. In English the most common feet are the *iamb (˘'), the trochee ('˘), the anapaest (˘˘'), the dactyl ('˘˘), and the spondee (''). Most traditional poetic forms, such as the *sonnet, are written according to strict metrical patterns.

metric system A system of measurement

weather map The numbers at the stations show temperature (0°C). Isobars show atmospheric pressure in millibars.

fronts

☐	cold front boundary between overtaking cold air mass and warm air mass.
☐	warm front boundary between overtaking warm air mass and cold air mass.
☐	stationary boundary between air masses of similar temperature.
☐	occluded line where a cold front overtakes a warm front.

meteorology. Internationally agreed symbols are used throughout the world by meteorological stations to represent current weather conditions. These are plotted on weather maps from which forecasts can be made.

based on the decimal system. First suggested in 1585, it was not given formal acceptance until 1795, when a French law provided definitions for the *metre, *are, stere, *litre, and gram. However, this form of the metric system was not widely used, even in France, until the third decade of the 19th century; during this period it was also adopted by most European countries. Although the metric system was authorized in the UK in 1864, British reluctance to abandon its own "Imperial units" did not weaken until 1963, when the Imperial yard and

pound were given legal definitions in terms of metric units. The **Metrication Board**, set up in 1969, was disbanded in April 1980. From 1 January 2000 an EU regulation was adopted into British law, making it illegal to sell goods in any measure other than grams, kilograms, millimetres, and metres (with exceptions for beer and milk).

For scientific purposes, former metric systems (such as the *c.g.s. system) have been replaced by *SI units.

metronome A small device consisting of a

pendulum with a small sliding weight on it, which can be regulated to make the pendulum beat at a desired number of beats per minute. The most common type is the clockwork metronome invented by J.N. Maelzel (1770–1838); electric metronomes also exist. Metronome markings are often given in musical scores to indicate the exact speed of the music.

Metropolitan Museum of Art The principal museum in New York City and one of the most important in the world. Founded in 1870, it opened its present premises in Central Park in 1880. Its enormous collection comprises paintings, drawings, sculptures, ceramics, etc., from many periods and countries, including China, ancient Egypt, Greece, and Rome.

Metropolitan Opera Association The principal US opera company, founded in New York in 1883. Enrico Caruso (1873–1921) sang regularly with the company from 1904 to 1921. The company occupied the Metropolitan Opera House until 1966, when it moved into the Lincoln Centre for the Performing Arts, the original building being demolished.

Metternich, Klemens Wenzel Nepomuk Lothar, Fürst von (1773–1859) Austrian statesman, the leading figure in European diplomacy from the fall of Napoleon (1815) until the Revolutions of 1848. As foreign minister (1809–48) he sought to maintain the balance of power in Europe, supporting dynastic monarchies and suppressing liberalism. His policies dominated the Congresses of *Vienna (1814–15), Aix-la-Chapelle (1818), Troppau (1820), Laibach (1821), and Verona (1822).

Meuse, River (Dutch and Flemish name: Maas) A river in W Europe. Rising in NE France and flowing mainly N past Liège in Belgium and Maastricht in the S Netherlands, it enters the North Sea at the Rhine Delta. It was the scene of heavy fighting in World War I (1914) and World War II (1940). Length: 926 km (575 mi).

Mexican War (1846–48) The war between Mexico and the USA over disputed border territory. Military operations began when Gen Zachary *Taylor invaded New Mexico and ended with the fall of Mexico City (1847). Peace was concluded with the Treaty of Guadalupe-Hidalgo.

Mexico, United States of A country in North America between the Gulf of Mexico and the Pacific Ocean. Narrow coastal plains rise to high mountain ranges in the interior. Much of the N is arid with tropical forest in

the S, especially in the Yucatán Peninsula in the SE. Most of the population is of mixed Indian and Spanish descent. *Economy:* Mexico now ranks among the world's main oil-producing countries. It also has large reserves of natural gas and there are substantial deposits of uranium. Other minerals extracted include iron ore, zinc, sulphur, silver, and copper, and Mexico is the world's largest producer of fluorite and graphite. Manufacturing is increasingly important. Agriculture remains relatively underdeveloped: maize is the main food crop; cash crops include cotton, sugar, coffee, and fruit and vegetables, as well as sisal in Yucatán. Fishing has been developed considerably and tourism is an important source of foreign currency. *History:* Mexico was the site of the Mayan civilization from the 2nd to the 13th centuries AD, and between the 8th and the 12th centuries the *Toltecs flourished. The 14th century saw the rise of the *Aztecs. The Aztecs were conquered by the Spanish under Cortés in 1521 and Mexico became part of the viceroyalty of New Spain. The struggle for independence from Spain was achieved in 1821. A turbulent period dominated by *Santa Anna was followed by the *Mexican War (1846–48), in which territory was lost to the USA. The Mexican Revolution (1910–40) produced the constitution of 1917, the democratic goals of which have been the declared aims of subsequent governments. Mexican politics is dominated by the Party of Institutionalized Revolution (PRI), which remained the governing party from 1929 until 2000, despite repeated allegations of electoral fraud. In 1994 there was an armed uprising of indigenous peoples from the poverty-stricken southern states. Mexico suffered a severe recession in the mid-1990s but has since made a strong recovery. In 2006 Felipe Calderon was declared the winner of presidential elections but the result was disputed by his left-wing opponent, leading to riots and instability. Mexico is a member of the OAS and a signatory of NAFTA. Official language: Spanish. Currency: peso of 100 centavos. Area: 1 967 183 sq km (761 530 sq mi). Population (2007 est): 108 700 891. Capital: Mexico City.

Mexico City (Spanish name: Ciudad de México) 19 25N 99 10W The capital of Mexico, in the S of the high central plateau at a height of 2380 m (7800 ft), surrounded by mountains. The 14th-century Aztec city of Tenochtitlán was destroyed by Cortés in 1521. A new Spanish city was built on the site and it rapidly became the most important in the New World. It was captured by the USA and then by France in the 19th century and in the 20th century was the

centre of several revolutions. It now has considerable industry. It is the site of the National Autonomous University of Mexico (founded in 1551), the national library, the museum, and the Palace of Fine Arts Theatre. In 1985 the city and surrounding areas were devastated by an earthquake. It suffers atmospheric pollution. Population (2000 est): 8 591 309.

Miami 25 45N 80 15W A city and port in the USA, in Florida on Biscayne Bay. A tourist resort and retirement centre, it grew during the Florida land boom of the 1920s. It produces citrus fruit and winter vegetables. Industries include aircraft repairing, sponge fisheries, clothing, and concrete. Population (2000): 362 470.

micas A group of common rock-forming silicate minerals with a layered structure and complex composition. The group includes muscovite, $K_2Al_4(Si_6Al_2)O_{20}(OH,F)_2$, a white mica and economically the most important; it occurs in granitic rocks (often pegmatites), gneisses, and schists. The other principal micas are phlogopite (amber), biotite (dark), paragonite, margarite, zinnwaldite, and lepidolite (a source of lithium). Since it is a good insulator and can withstand high temperatures, mica has many electrical uses and is used for furnace windows.

Michaelmas daisy See ASTER.

Michelangelo Buonarroti (1475–1564) Italian sculptor, painter, architect, and poet. Working in Rome from 1496 until 1501, he produced his first major sculptures, notably the *Pietà* (St Peter's, Rome). This was followed (1501–05) by his work in Florence, including *David* (Accademia, Florence) and the painting of the *Holy Family* (Uffizi). The celebrated Sistine Chapel ceiling (1508–12), in the Vatican, established his reputation as the greatest painter of his day. Returning to Florence (1516), Michelangelo became the architect and sculptor of the Medici funerary chapel (1520–34) in the church of San Lorenzo and he also designed the Laurentian Library. These architectural projects and the fresco of the *Last Judgment* (1534–41) for the Sistine Chapel were his first major works in the new mannerist style (see MANNERISM). In his last years he worked mainly as an architect, becoming in 1547 chief architect of St Peter's, Rome, in which capacity he designed its great dome.

Michelson, Albert Abraham (1852–1931) US physicist, born in Germany. He designed an accurate interferometer known as the Michelson interferometer and used it to measure pre-

cisely the speed of light. He used it in the **Michelson-Morley experiment**, with the US chemist E. W. Morley (1838–1923) in 1881; they tried to show that luminiferous ether existed by measuring the earth's velocity relative to it. The negative result led to the downfall of the ether theory and was explained by Einstein's theory of *relativity in 1905.

Michigan A state in the N central USA, bordered largely by water (Lakes Superior, Huron, Michigan, Erie, and St Clair). It is divided by the Straits of Mackinac into the Lower Peninsula in the S and the Upper Peninsula in the N. Most of Michigan's population and industry is concentrated in the Lower Peninsula. Manufacturing is important; other industries include machinery, iron and steel, and chemicals. It has large mineral reserves of gypsum, calcium, and magnesium compounds, natural gas, and oil. *History:* explored by the French in the 17th century, it remained under French control until it was acquired by the British (1763) as part of Canada. It came under American control (1783), becoming a state in 1837. Area: 150 779 sq km (58 216 sq mi). Population (2000): 9 938 444. Capital: Lansing.

Michigan, Lake The third largest of the Great Lakes in North America, wholly in the USA. It is linked with Lake Huron via the Straits of Mackinac; Chicago is on its S bank. Area: 58 000 sq km (22 400 sq mi).

microbiology The study of microorganisms, or microbes—organisms that are invisible to the naked eye, including bacteria, small fungi (e.g. yeasts and moulds), algae, protozoa, and viruses. Microorganisms bring about decomposition and the recycling of nutrients. They are vital to many industries, including brewing, dairying, and food processing, and they have revolutionized medical treatment with the discovery of antibiotics. Some microorganisms cause disease (see INFECTION).

microchip See INTEGRATED CIRCUIT.

microcomputers Small but sophisticated *computers designed for a single user and often for a specific application. The central processing unit is a *microprocessor. Laptop and handheld computers are very small and portable.

microcopy A greatly reduced photographic copy of a printed page, drawing, or other image. **Microfilm** is a strip of standard-width film containing microcopies. It was introduced in the 1920s for use in banks and is now widely used for compact storage and ready reference

to documents. Special enlarging viewers can rapidly wind the film to the correct page. **Microcliche** is a similar system on cards holding a single film negative, with even greater reduction of the pictures. The viewers often have a printer attached to reproduce paper copies.

microlight aircraft A small powered aircraft of minimal weight. These aircraft were developed in the 1980s, when such models as the British Optica were considered for traffic monitoring and other roles. Some models can be folded up for ease of transport.

micrometer An instrument for measuring small lengths with great accuracy. The object to be measured is held between the jaws of a C-shaped metal piece, one jaw of which can be adjusted by a screw. The screw is turned by rotating a drum with a vernier scale marked on it, from which the required dimension can be read.

Micronesia, Federated States of A country in the W Pacific Ocean, consisting of 600 of the Caroline Islands, including Chuuk, Yap, Pohnpei, and Kosrae. *Economy:* the main exports are copra and fish. *History:* formerly part of the UN Trust Territory of the Pacific Islands, the country became self-governing in 1986 and was recognized as independent by the UN in 1990. Official languages, English and local languages. Currency: US dollar of 100 cents. Area: 700 sq km (270 sq mi). Population (2003 est): 112 000. Capital: Palikir.

microphone A device that converts sound into electrical signals. A telephone mouthpiece usually consists of a carbon microphone in which the sound waves exert a varying pressure on carbon granules, so varying their electrical resistance. In capacitor microphones, used in music recording, a diaphragm forms one plate of a capacitor, across which the sound waves produce a fluctuating potential difference. Crystal microphones rely on the *piezoelectric effect. Ribbon microphones have a highly directional response. They consist of a thin strip of aluminium alloy in a strong magnetic field.

microprocessor The central processing unit of a *microcomputer. Its development was made possible in the 1970s by advances in solid-state electronics, in particular the design of integrated circuits of such complexity that all the main calculating functions can be carried out by a single silicon chip (see INTEGRATED CIRCUIT).

microscope An optical instrument used for

producing a magnified image of a small object. There are several distinct types, the most common being the compound microscope, which contains an objective lens system and an eyepiece system. It was invented in 1609 by a Dutch spectacle maker Zacharias Janssen (1580–c.1638) and his father, but Robert *Hooke gave the first extensive description of its use in biology in his *Micrographia* (1665). In a compound microscope the objective produces a real magnified image, which is further magnified by the eyepiece. The magnification, which may be up to a thousand, is limited by the *resolving power of the lenses; the smallest detail capable of resolution by an optical microscope is about 0.2 micrometre. This can be increased by using an oil-immersion lens (see also ULTRAMICROSCOPE). Still higher magnifications are obtained by using shorter wavelength radiations, as in the *electron microscope.

microwave background radiation See BIG-BANG THEORY.

microwaves Electromagnetic radiation with wavelengths between 1 and 300 millimetres, lying between infrared rays and radio waves in the electromagnetic spectrum. They are used in *radar and **microwave heating**. This method is used in the rapid cooking of food as the radiation penetrates to the interior of the food. The microwave photon is the same order of magnitude as the vibrational energy of atoms and molecules and therefore heats the interior directly, rather than by conduction from the surface. Microwaves are generated by such devices as *magnetrons and *klystrons.

Midas In Greek legend, a king of Phrygia whose wish that everything he touched be turned to gold was granted by Dionysus in gratitude for his hospitality to the satyr *Silenus. In another legend, Midas was asked to judge between the music of Pan and Apollo and chose the former. Apollo punished his tactlessness by changing his ears into those of an ass.

middle ages The period of European history that is generally regarded as commencing in the 5th century with the fall of the western Roman Empire and ending with the Renaissance. This period begins with the creation of the barbarian kingdoms, which developed into the nation states of W Europe. In Church history, the period covers the rise to supremacy of the Roman Catholic Church. Socially and economically the period saw the rising power of the great landed magnates and the creation of

m

a feudal society, while urban growth and the development of trade reached unprecedented heights.

Middlesbrough 1. 54°35N 114°W A town in NE England, in Middlesbrough unitary authority, North Yorkshire, on the Tees estuary. Local iron ore and local coking coal gave Middlesbrough early industrial advantages. Until the recessions of the 1980s and 1990s iron and steel, petrochemicals, and constructional engineering were major industries. The economy is now mainly based on the service sector. Population (1998 est): 145 000. 2. A unitary authority in NE England, in North Yorkshire; formerly (1974–96) part of the county of Cleveland. Area: 54 sq km (21 sq mi). Population (2001): 134 847.

midge A small fly, also called a nonbiting midge, belonging to the family *Chironomidae* (over 2000 species). It resembles a mosquito but is harmless. Midges are found near fresh water, often in large swarms. The wormlike aquatic larvae are often red.

The term is also applied loosely to similar but unrelated flies.

Midlothian A council area of SE Scotland. Under local government reorganization in 1975 the historic county of Midlothian, including the city of Edinburgh, was absorbed into Lothian Region. In 1996 a much smaller area, excluding Edinburgh, became an independent unitary authority. Midlothian is mainly hilly and the chief activity is agriculture. Area: 356 sq km (137 sq mi). Population (2001): 80 941. Administrative centre: Dalkeith.

midnight sun The sun when it remains above the horizon all night in places poleward of the Arctic and Antarctic Circles, for periods around the summer solstice (amounting to one night on the Circles and to six months at the Poles). A corresponding period of "noon darkness" occurs during the winter.

Midrash (Hebrew: enquiry, exposition) Exposition of the Bible, and more particularly a book consisting of such exposition. There are many Midrashim, mostly dating from the early middle ages, and they are a valuable source for the religious ideas of the Jews of the time. The **Talmuds* also contain a great deal of Midrash.

Midway Islands A group of atolls approximately in the middle of the Pacific Ocean. They are under US administration, the only inhabitants being US military personnel. A US–Japanese air battle near Midway in June 1942 was the first major Japanese setback in World War II.

Mies van der Rohe, Ludwig (1886–1969) German architect. A pioneering architect of the 1920s and 1930s, Mies first achieved fame with his glass skyscrapers (1919–21). However, his most influential building was the glass, steel, and marble German pavilion at the Barcelona international exhibition (1929). In 1937 he moved to the USA, where he designed such buildings as the Illinois Institute of Technology (1939) and the Seagram building, New York (1958).

migraine Recurrent headaches, usually affecting one side of the head and thought to be caused by contraction and then dilation of the arteries in the brain. The attacks are often preceded by blurring of vision and flickering lights (called an aura). During the headache itself vomiting commonly occurs.

migration, animal The periodic movement of animal populations between one region and another, usually associated with seasonal climatic changes or breeding cycles. Migration is best known among birds, but the phenomenon is seen in many other animals, including fish (notably salmon), butterflies, bats, lemmings, and whales. The mechanism of navigation and homing is not completely understood. In birds it seems to involve sighting of visible landmarks, as well as a compass sense, using the sun or the stars as bearings. Other animals are thought to use similar methods.

Mikonos (or Mykonos) A Greek island in the S Aegean Sea, one of the Cyclades. It is popular with tourists and is noted for having a large number of churches. Area: 90 sq km (35 sq mi). Population (latest est): 5503.

Milan (Italian name: Milano; Latin name: Mediolanum) 45°28N 9°12E A city in N Italy, the capital of Lombardy on the River Olona. Milan is the chief commercial and industrial centre of Italy. Its manufactures include motor vehicles, machinery, silk and other textiles, and chemicals and it is a major publishing centre. Milan has a gothic cathedral (*duomo*), the Brera Palace (containing the city's chief art collection), and the opera house of **La Scala*. *History*: founded by the Gauls about 600 BC, it was captured by the Romans in 222. After the 12th century it enjoyed considerable economic prosperity. Having fallen to Spain in 1535, it was under Austrian rule (1713–96) and in 1797 Napoleon made it capital of the Cisalpine Republic (1797) and capital of the kingdom of Italy (1805–14). Population (2000 est): 1 300 977.

mildew Any fungus that grows as dense filaments forming visible white patches. Many

fungal diseases of plants are called mildews: powdery mildews are infestations by fungi of the order *Peronosporales*, while downy mildews are due to infection by fungi of the family *Erysiphaceae*.

mile A unit of length traditionally used in the UK and USA. A statute mile is equal to 1760 yards. A nautical mile (UK) is equal to 6080 feet; a nautical mile (international) is equal to 1852 metres (6076.12 ft). The unit is based on the Roman mile of 1000 paces.

Miletus An ancient Greek city in *Ionia, founded about 1000 BC. Commercially active from Italy to Egypt, Miletus exemplified Ionian energy and enterprise. Milesians were prominent among the 6th-century Ionian thinkers, and even after destruction by Persia (494 BC) Miletus remained commercially important until its harbours silted up.

Milhaud, Darius (1892–1974) French composer, a member of Les Six. He made use of polytonality and jazz in many of his compositions. With Jean Cocteau he wrote the ballets *Le Boeuf sur le toit* (1919) and *Le Train bleu* (1924); with Paul Claudel he wrote the opera *Christophe Colomb* (1928). His other works include 12 symphonies, 15 string quartets, concertos, and Jewish liturgical music.

milk A fluid secreted by the *mammary glands of mammals to feed their young. Cows' milk consists typically of about 87% water, 3.6% fat, 3.3% protein, 4.7% lactose (milk sugar), small quantities of minerals (mainly calcium and phosphorus), and vitamins (mainly vitamins A and B). (Human milk, in contrast, contains less protein and more lactose.) Milk forms a well-balanced and highly nutritious food. In the UK most milk is sold, after *pasteurization, in bottles or cartons, with daily doorstep deliveries. Sterilized and UHT (ultraheat-treated) milk both have a longer shelf-life.

milkweed A herb of the genus *Asclepias* (120 species), native to North America and often grown in the tropics and subtropics for ornament. Up to 1.2 m high, it bears umbrella-shaped clusters of orange, purple, pink, or red flowers and yields a milky latex. Family: *Asclepiadaceae*.

Milky Way The diffuse band of light that is seen, on a clear moonless night, stretching across the sky. It is composed of innumerable stars that are too faint to be seen individually. They lie around the sun in the flattened and densely populated disc of our *Galaxy.

Mill, John Stuart (1806–73) British econo-

mist and philosopher. His *Principles of Political Economy* (1848) is little more than a restatement of the ideas of Adam Smith and Ricardo. *On Liberty* (1859) shows that he was concerned for the rights of the individual, and he believed strongly in the equality of the sexes, publishing his views in *Subjection of Women* (1869). A prolific journalist, he edited the *London Review* during the period 1835–40.

Millais, Sir John Everett (1829–96) British painter. He was one of the founders of the *Pre-Raphaelite Brotherhood, the principles of which he applied to his best paintings, notably the controversial *Christ in the House of His Parents* (1850) and *Ophelia* (1852; both Tate Gallery). After abandoning Pre-Raphaelitism in the 1860s, he painted more popular and sentimental works, such as *Bubbles* (1886), a portrait of his grandson.

Millennium Dome A large dome erected in Greenwich, Greater London, to house a multimedia exhibition celebrating the year 2000. With a circumference of over 1 km (1099 yds) and a height of 50 m (164 ft), it is the world's largest dome. Designed by the Richard Rogers Partnership, the Dome cost £750 m to build; as the exhibition failed to attract the expected interest it then required an additional £600 M of lottery money to keep open for 1 year. Subsequently it remained empty, finally (2002) being given away to a developer, who will stage entertainments and sports events. It is now officially known as the O₂ Arena.

Miller, Arthur (1915–2005) US dramatist. As a Jewish liberal intellectual he has played an active role in political life. His plays include *All My Sons* (1947), *Death of a Salesman* (1947), which won a Pulitzer Prize, *The Crucible* (1953), concerning the Salem witch trials of the 1690s, *After the Fall* (1964), which is in part a portrait of his late wife Marilyn *Monroe, *The Ride Down Mt Morgan* (1991), and *Mr Peter's Connections* (1998).

Miller, Glenn (1904–44) US jazz trombonist and band leader, known for such popular songs as "Moonlight Serenade" and "In the Mood." Miller's band, assembled in 1938, recorded many hit swing tunes and entertained the troops during World War II.

millet One of various grasses or their seeds, cultivated in Asia and Africa as a cereal crop and in parts of Europe and North America chiefly as a pasture grass and fodder crop. It grows 30–130 cm high and the flowers form spikes or branched clusters. Common or broomcorn millet (*Panicum miliaceum*) is used

m

for poultry feed or for flour milling. Pearl millet (*Pennisetum glaucum*) is grown as a food grain, Italian millet (*Setaria italica*) as a grain crop, and Japanese millet (*Echinochloa crus-galli* var. *frumentacea*) mainly for fodder. A variety of sorghum (durra) is also known as millet.

Millet, Jean François (1814–75) French painter of peasant origin. He studied in Cherbourg and in Paris, achieving acclaim in 1844. After settling in Barbizon (1849), he became associated with the Barbizon school and painted melancholy and sometimes sentimental agricultural scenes, notably *The Gleaners* (1857) and *The Angelus* (1859; both Louvre).

millipede A slow-moving *arthropod of the widely distributed class (or subclass) *Diplopoda* (about 8000 species). Its slender cylindrical body, 2–280 mm long, is covered by a calcareous cuticle and consists of 20–100 segments, most of which bear two pairs of legs (*compare* CENTIPEDE). Millipedes live in dark humid places as scavengers of dead plant and animal materials. In defence they secrete a toxic fluid containing cyanide and iodine.

Milne, A(Ian) A(lexander) (1882–1956) British novelist and dramatist. He is best known for his books for and about his son Christopher Robin. These include two collections of verse and two books about toy animals, *Winnie-the-Pooh* (1926) and *The House at Pooh Corner* (1928).

Milošević, Slobodan (1941–2006) Serbian politician; president of Serbia (1989–97) and of the Federal Republic of Yugoslavia (1997–2000). He supported Bosnian Serb aggression in Bosnia-Herzegovina (1992–95) and led repression of the ethnic Albanians in *Kosovo, provoking NATO airstrikes. He was swept from power in 2000 and handed over to the war crimes tribunal in the Hague, where he died while standing trial for genocide.

Miltiades (c.550–489 BC) Athenian general and statesman. Sent to govern the Thracian peninsula in Athenian interests, he ruled as tyrant and fought with Darius I of Persia (c.558–486 BC) in Scythia. Appointed a general in 490, he devised the strategy by which the Greeks decisively defeated the Persians at the battle of *Marathon.

Milton, John (1608–74) English poet. His early works include the poems *L'Allegro* and *Il Penseroso* (1632), the masque *Comus* (1633), and the elegy *Lycidas* (1637). During the 1640s and 1650s he actively supported the Puritan revolution and wrote many polemical pamphlets, notably

Areopagitica (1644), a defence of free speech. In 1649 he was appointed Latin Secretary to the Council of State, but his eyesight began to fail and he had become totally blind by 1652. After the Restoration he retired from public life to write his great epic poem *Paradise Lost* (1667), its sequel *Paradise Regained* (1677), and the dramatic poem *Samson Agonistes* (1671).

Milton Keynes 1. 52 02N 0 42W A city in S central England, in Milton Keynes unitary authority, Buckinghamshire. Developed since 1967 as a new town around the old village of Milton Keynes, it is the headquarters of the Open University (1969) and has varied light industries. The UK's only multid denominational cathedral opened here in 1993. Population (2001): 184 506. **2.** A unitary authority in S central England, in Buckinghamshire. Area: 310 sq km (119 sq mi). Population (2004 est): 216 700.

Milwaukee 43 03N 87 56W A city and port in the USA, in Wisconsin on Lake Michigan. The state's largest city and a major shipping centre, Milwaukee is a leading producer of heavy machinery, electrical equipment, and diesel and petrol engines. Population (2004 est): 583 624.

mime Acting without words by physical gestures alone. It was practised in ancient Greek and Roman drama and was an important constituent of the **commedia dell'arte* in the 16th century. Exponents of modern mime include Jean-Louis Barrault (1910–94) and Marcel *Marceau.

mimesis (Greek: imitation) A philosophical concept introduced by *Aristotle in the *Poetics*. He argues that imitation is the basis of all the arts but they differ as to the means they use and the objects they imitate. Imitation in the arts does not refer to a simple realistic rendering of detail but to the poet's (or artist's) ability to select and present his material so as to express essential truth.

mimicry The phenomenon of two or more organisms (commonly different species) resembling each other closely, which confers an advantage—usually protection—to one or both of them. In *Batesian mimicry*, named after H.W. Bates (1825–92), a poisonous or inedible species (the model) has a conspicuous coloration, which acts as a warning to predators. This coloration is adopted by a harmless edible species (the mimic), which derives protection against the same predators. In *Müllerian mimicry*, first described by the German naturalist Fritz Müller (1821–97), two or more species—all inedible—have the same warning coloration.

After a predator has associated this pattern with an inedible species it will learn not to select similarly coloured species.

Mimosa A genus of trees, shrubs, and herbs (450–500 species), mostly native to tropical and subtropical America. They have feathery compound leaves and fluffy round catkins of yellow flowers. The genus includes the sensitive plants, *M. pudica* and *M. sensitiva*. Florists' mimosas are species of *Acacia* (see **WATTLE**). Family: *Leguminosae*.

minaret The tower of a mosque, from which the muezzin calls the faithful to prayer. Turkish minarets are typically slender; other shapes have been used in Persia and Arabia.

Mind (National Association for Mental Health) A voluntary British organization founded in 1946 to provide for the needs of the mentally ill and distressed. It campaigns for better services for the mentally ill, runs advice centres, generally encourages an understanding of mental illness, and promotes mental health.

Mindanao An island in the S Philippines, the second largest. Hemp, maize, pineapples, timber, nickel, and gold are the chief products. Its Muslim population has resisted Spanish, US, and now Philippine rule. Area: 101 919 sq km (39 351 sq mi). Population (1995): 14 262 000. Chief towns: Davao and Zamboanga.

minerals Naturally occurring substances of definite chemical composition (although this may vary within limits). Some consist of a single element but most are compounds of at least two. Strictly defined, minerals are solid (except native mercury) and are inorganically formed, although the constituents of organic limestones, for instance, are considered minerals. The term is used loosely for any naturally occurring material that is of economic value. Almost all true minerals are crystalline; a few, such as opal, are amorphous. Minerals are identified by the following properties: crystal system (e.g. cubic) and habit or form (e.g. fibrous), hardness (see **MOHS' SCALE**), relative density, lustre (e.g. metallic), colour, streak (colour when finely divided), *cleavage, and fracture. Rocks are composed of mixtures of minerals. The study of minerals is called **mineralogy**.

Minerva A Roman goddess originally of the arts and crafts of wisdom, later identified with the Greek *Athena. As goddess of war she almost equalled Mars.

minesweeper A vessel equipped to cut the cables of floating mines. Partially submerged

cables are towed through a minefield so that the cable, passing under the mines, cuts their anchor chains, allowing the mines to float so that they can be detonated by gunfire. Mines laid on the seabed are detected by a submersible mine-finder.

Ming (1368–1644) A native Chinese dynasty, which succeeded the Mongol Yuan dynasty. It was founded by Hong-wu (1328–98), the first of 17 Ming emperors. The Ming provided an era of stable government personally controlled by the emperor. Painting and pottery, especially blue and white porcelain, flourished under the Ming.

miniature painting The art of painting on a very small scale, using watercolour on a vellum, card, or ivory base. The medieval Persian and Indian miniatures are the first great examples of the art. In Europe it flourished in the form of oval, circular, and occasionally rectangular portraits from the 16th to mid-19th centuries. There it developed from the medieval art of manuscript illumination and *Renaissance portrait medals. Nicholas *Hilliard was the first major specialist of the art in England. Other famous British miniaturists were Isaac Oliver (1556–1617), Samuel Cooper (1609–72), and Richard Cosway (1742–1821).

minicomputer A small *computer, especially one that fits into a single cabinet. Compared with a large mainframe computer it is slower, has a smaller memory, and is considerably cheaper. The term is no longer used specifically as minicomputers have been superseded by microcomputers.

minimal art An abstract style of painting and sculpture developed in New York in the 1960s. In reaction to *abstract expressionism, it aimed to eliminate self-expression by using simple geometrical shapes and unmodulated colours. Leading minimalists include the painters Kenneth Noland (1924–) and Frank Stella (1936–) and the sculptor Carl André (1935–).

minivet An Asian songbird of the genus *Pericrocotus* (10 species), occurring in forests, where it hunts for insects in small flocks. Male minivets, about 17 cm long, have a black-and-red plumage; the females are yellowish grey. Family: *Campephagidae* (cuckoo-shrikes and minivets).

mink A small carnivorous mammal belonging to the genus *Mustela* (weasels, stoats, etc.), prized for its fur. The American mink (*M. vison*) is the largest species (about 70 cm long) and has

the most valuable fur. They are nocturnal, semi-aquatic, and prey on fish, rodents, and waterfowl. Family: *Mustelidae*.

Minneapolis 45 00N 93 15W A city in the USA, in Minnesota on the Mississippi River. Adjacent to St Paul, the Twin Cities comprise the commercial, industrial, and financial centre of a large grain and cattle area; flour milling is the main industry. The University of Minnesota was established here in 1851. Population (2000): 382 618.

Minnesota A state in the USA, bordering on Canada in the N and Lake Superior in the NE. It consists of rolling prairies rising to the heavily forested Superior Highlands in the N and contains many lakes. Manufacturing industries (especially food processing) now form the most important sector of the economy, but mining is still important. Agriculture produces maize and soya beans. *History*: part of the Louisiana Purchase in 1803, it became a state in 1858. During the 1880s many Scandinavians settled in Minnesota. Area: 217 736 sq km (84 068 sq mi). Population (2000): 4 919 479. Capital: St Paul.

minnow One of several fish of the family *Cyprinidae*, especially *Phoxinus phoxinus*, found in clear fresh waters of Europe and N Asia. Its slim body is usually about 7.5 cm long, has small scales, and ranges in colour from gold to green. Order: *Cypriniformes*. The name is also applied to various other small fish.

Minoan civilization The civilization of Bronze Age Crete, named by Sir Arthur *Evans after the legendary King *Minos. The most advanced Aegean civilization, the Minoan arose after 2500 BC. It is conventionally divided into three phases: Early (2500–2000), Middle (2000–1700), and Late (1700–1400). During the Middle period palace building at *Knossos, Mallia, and Phaistos attests Crete's growing wealth. Around 1700 these structures were replaced by grander ones, the centres of power in a marine empire covering the S Aegean. A catastrophic eruption on Thera (c. 1450) may have ended Minoan prosperity, although this is controversial. Three scripts were used: hieroglyphics (c. 1900–1700), *Linear A (c. 1700–1450), and *Linear B (c. 1450–1400).

Minorca (Spanish name: Menorca) A Spanish island in the Mediterranean Sea, the second largest of the Balearic Islands. It is generally low lying and dry and agriculture is limited. Shoe manufacture is important and it has an expanding tourist industry. Area: 702 sq km (271 sq mi). Population (latest est): 55 500. Chief town: Mahón.

minor planet (or asteroid) A small nonluminous rocky body that orbits a star. Over 100 000 orbit the sun, mostly (probably 95%) in a main belt between the orbits of Mars and Jupiter, 2.17–3.3 astronomical units from the sun. The smallest minor planets are less than 1 km across with only about 200 exceeding 100 km: the largest is *Ceres (1003 km). They are probably debris from collisions of bodies that formed between Mars and Jupiter.

Minos A legendary king of Crete, son of Zeus and Europa. Although usually regarded as a good ruler, the Athenians portrayed him as a tyrant, who exacted an annual tribute of seven youths and seven maidens who were fed to the *Minotaur.

Minotaur In Greek legend, a Cretan monster with a bull's head and a man's body. It was the offspring of Pasiphae, wife of *Minos, and a bull with which Poseidon had caused her to become enamoured. *Theseus killed it with the help of Ariadne.

Minsk 53 51N 27 30E The capital of Belarus, in the centre of the country. Dating from at least the 11th century, it came under Lithuanian and then Polish rule; it was restored to Russia in 1793. It was virtually destroyed in World War II. Its varied industries include machine and vehicle manufacturing, textiles, and food processing. Population (1998 est): 1 717 000.

mint An aromatic perennial herb of the genus *Mentha* (about 25 species), native to Eurasia and Australia and widely distributed throughout temperate and subtropical regions. It has creeping roots from which arise square stems, bearing simple toothed leaves and terminal clusters of purple, pink, or white flowers. Many species are grown for their fragrance or as culinary herbs, especially *peppermint and *spearmint. Family: *Labiatae*.

Mintoff, Dom(inic) (1916–) Maltese statesman; Labour prime minister (1955–58, 1971–84). He was an active proponent of Maltese independence.

Miocene epoch See TERTIARY PERIOD.

Mir A space station launched into earth orbit by the Soviet Union in 1986. The first permanently manned space station, it was a refinement of the earlier Salyut stations. Following its collision with an unmanned ship in 1997, Mir was abandoned; its remains were brought back to earth in 2001.

Mirabeau, Honoré Gabriel Riquetti, Comte de (1749–91) French statesman. In 1789

he was elected to the States General, championing the cause of the Third Estate at the outbreak of the Revolution. However, he was out of sympathy with the growing republicanism, advocating the establishment of a constitutional monarchy on the British model, and came under increasing attack from the extremist Jacobins.

miracle plays Medieval European dramas based on religious themes. In England, they flourished particularly in the 14th and early 15th centuries. A distinction between **mystery plays** (based on episodes in the Bible) and **miracle plays** (based on the lives of saints) is often made with regard to French examples of the genre but in England the terms are used interchangeably. Originally performed in churches, they became increasingly secular in form and content and were eventually performed on mobile stages in public marketplaces.

Miró, Joan (1893–1983) Surrealist painter, born in Barcelona. He moved to Paris (1919) and began painting in a childlike style. His "savage" paintings, expressed the horrors of the Spanish Civil War; his *Constellations* were painted (during World War II) with his characteristic amoebic shapes intertwined with threadlike lines.

mirrors Devices for reflecting light, usually consisting of a sheet of glass with one surface silvered. A plane mirror, in which the sheet is flat, forms a laterally inverted virtual image. Spherical mirrors, concave or convex, magnify or reduce the image. To avoid spherical aberration, parabolic mirrors are used in reflecting *telescopes.

miscarriage See ABORTION.

Mishnah (Hebrew: instruction) An early code of Jewish law. Written in Hebrew, it is traditionally thought to have been based on earlier compilations and edited in Palestine by the ethnarch Judah I in the early 3rd century AD. It consists of halakhah on a wide range of subjects, derived partly from biblical law as interpreted by the early rabbis (called *Tannaim*) and partly from customs that had grown over a long period. See also TALMUD.

Mississippi A state in the S central USA, on the Gulf of Mexico. Mainly low lying, it consists of the cotton-producing alluvial plain of the Mississippi River in the W, extensive swamps in the SW, and low hills in the E and NE. The predominantly rural population has a large Black community. Still an important agricultural state, its main products are cotton, soya beans, poultry, eggs, and livestock. Ship con-

struction and repair, timber and paper products, textiles, chemicals, and food processing are important industries. Petroleum is the main mineral but natural gas, clay, and sand and gravel are also exploited. Mississippi remains, however, one of the country's poorest states. *History:* explored by the Spanish, it was later claimed for France and was ceded to Britain (1763). Colonization followed and the area came under US control (1783). Made a state in 1817, it became a leading cotton producer and slave state until the US Civil War. Area: 123 584 sq km (47 716 sq mi). Population (2000): 2 844 658. Capital: Jackson.

Mississippian period See CARBONIFEROUS PERIOD.

Mississippi River A river in the central USA, the second longest river in North America. Rising in N Minnesota, it flows generally S into the Gulf of Mexico, through several channels (known as the *Passes*). Famous for its steamboats, it is now one of the world's busiest commercial waterways, with major ports at St Louis and New Orleans. Length: 3780 km (2348 mi).

Missolonghi (Modern Greek name: Mesolóngion) A town in W Greece, on the Gulf of Patras. It is famous for its defence against the Turks during the War of Greek Independence (1821–29) and as the death place of Lord Byron (1824). Population (latest est): 10 164.

Missouri A state in the central USA, lying immediately W of the Mississippi River. It is divided by the Missouri River into fertile prairies and rolling hills in the N and W and the hills of the Ozark plateau in the S. Manufacturing dominates the economy, with transport and aerospace equipment, food processing, chemicals, and printing and publishing. The leading lead producer in the USA, it also exploits barytes, iron ore, and zinc deposits. Agriculture is diversified producing livestock and dairy products, soya beans, corn, wheat, cotton, and sorghum grains. *History:* explored by the French from Canada and claimed for France (1682), it was ceded to Spain (1783) before returning to France in 1800. It formed part of the Louisiana Purchase (1803) by the USA, becoming a state in 1821. Area: 180 486 sq km (69 686 sq mi). Population (2000): 5 595 211. Capital: Jefferson City.

Missouri River A river in the central USA, the longest river in North America and chief tributary of the Mississippi River. Rising in the Rocky Mountains, it flows N and E through Montana, then SE across North and South

m

Dakota before joining the Mississippi at St Louis. Length: 4367 km (2714 mi).

mistle thrush A heavily built thrush, *Turdus viscivorus*, of Eurasia and NW Africa. It is about 28 cm long and has a greyish-brown upper plumage with a thickly speckled yellowish breast and white underwings. It feeds on berries (especially mistletoe—hence its name), snails, and worms.

mistletoe A semiparasitic evergreen shrub of the temperate and tropical family *Loranthaceae* (1300 species), growing on the branches of many trees. The Eurasian mistletoe (*Viscum album*) occurs mainly on apple trees, poplars, willows, and hawthorns. It has rootlike suckers and woody branching stems, 60–90 cm long, bearing oval leathery leaves and yellow flowers. The female flowers give rise to white berries.

Mistletoe was once believed by the Druids to have magic powers and medicinal properties and is a traditional Christmas decoration.

mite A tiny *arachnid (up to 6 mm long) comprising—with the ticks—the worldwide order *Acarina* (or *Acari*; over 20 000 species). It has an unsegmented body and eight bristly legs. Mites occur in a wide range of habitats, including soil, stored foods, water, and plants; some are parasitic on animals. They may transmit diseases (including typhus). See also HARVEST MITE; ITCH MITE.

Mithraism A mystery religion that worshipped Mithra, the Persian god of the sun who represented justice and goodness. It spread through Asia Minor, finally reaching Rome in about 68 BC. Here Mithra was known as Mithras and was worshipped widely among Roman soldiers. He was regarded as the eternal enemy of evil, whose sacrifice of a bull symbolized the regeneration of life. Mithraism rivalled Christianity until its decline in the 3rd century AD.

mitochondria Granular rod-shaped structures that occur in the cytoplasm of nearly all cells. They contain various enzymes that function in cellular *respiration and the metabolism of fat, glycogen, proteins, etc., to produce energy. Therefore in very active cells (i.e. those requiring more energy), such as heart muscle, mitochondria are large and numerous.

mitosis The process by which the nucleus of a somatic cell (i.e. any cell that is not a germ cell) duplicates itself exactly, producing two daughter nuclei with chromosomes that are identical to those of the parent nucleus. This

nuclear division involves the separation of the two chromatids of each chromosome, which move apart to form two groups at opposite ends of the cell. In the final phase each group becomes enclosed in a new nuclear membrane. After this the cytoplasm usually divides to form two new cells. Mitosis occurs in most animals and plants during the normal growth and repair of tissues. Compare MEIOSIS.

prophase. The genetic material becomes visible in the form of chromosomes and the nuclear membrane disappears.

metaphase. The chromosomes become attached to the equator of a fibrous spindle.

anaphase. The two chromatids of each chromosome move to opposite poles of the spindle.

telophase. Nuclear membranes form around the two groups of chromatids, which become less distinct.

mitosis. Division of the nucleus of an animal cell takes place in four phases, which grade into each other.

Mitterrand, François (Maurice) (1916–96) French socialist politician; president (1981–95). He assumed leadership of the newly unified Socialist Party in 1971. After two unsuccessful runs for the French presidency (1965, 1974), in 1981 he became the first socialist president in 35 years. He assumed a leading role in the formation of EC policy.

Mizoram A state in NE India, in tropical hills between Bangladesh and Myanmar (Burma). Its largely Christian tribes are subsistence farmers of rice, sugar, and potatoes. Mizoram was separated from Assam in 1972 and became a state in 1986. Area: 21 230 sq km (8195 sq mi). Population (2001): 891 058. Capital: Aijal.

M'Naghten's Rules See INSANITY.

Mnemosyne In Greek mythology, a daughter of the *Titans Uranus and Gaea. She is the personification of memory. After sleeping with Zeus for nine consecutive nights she gave birth to the *Muses.

moa An extinct flightless bird belonging to an order (*Dinornithiformes*; about 25 species) that occurred in New Zealand. Moas were 60–300 cm

tall and had a small head, a long neck, and long legs. They were fast runners but were hunted by early Polynesian settlers.

Moabites A highly civilized Semitic tribe living E of the Dead Sea from the late 14th century BC. They successfully rebelled against Israelite occupation in the 9th century BC. In 582 BC, according to Josephus, they were conquered by the Babylonians.

mobile phone A small battery-operated telephone that uses the cellular network to connect to other mobiles or to the main telephone system. So-called second generation models also enable up to 160 characters of text to be sent; **texting** in this way is now widespread and has its own shorthand. Third generation models allow photographs and video images to be sent and have many computer functions.

Mobutu Sese Seko (Joseph-Désiré M.; 1930–97) Dictator (1965–97) of Zaïre (the Democratic Republic of Congo). As commander-in-chief of the Congo army he seized power in 1960 and again in 1965. In 1970 he became president and changed the country's name to Zaïre. By the 1990s his authoritarian rule faced mounting opposition and he was deposed (1997) by rebels under Laurent Kabila.

mockingbird A songbird that belongs to an American family (*Mimidae*; 30 species) and is noted for its ability to mimic sounds. Mockingbirds live on or near the ground, feeding on insects and fruit. The common mockingbird (*Mimus polyglottus*), which ranges from S Canada to S Mexico, is about 25 cm long with a grey plumage and white wing bars.

mock orange A shrub, also called syringa, belonging to the genus *Philadelphus* (75 species), native to N temperate regions and commonly cultivated for ornament. They have simple leaves and fragrant white flowers resembling orange blossom. *P. coronarius* is the only native European species. Family: *Philadelphaceae*.

Modena (ancient name: Mutina) 44°39'N 10°55'E A city in N Italy, in Emilia-Romagna. Ruled by the Este family (1288–1860), it has an 11th-century romanesque cathedral, several palaces, and an ancient university (1175). The centre of a rich agricultural area, its industries include agricultural engineering, textiles, and motor vehicles. Population (2000 est): 176 022.

modes Musical scales derived from ancient Greek music, on which European music was based up to the 16th century. Each mode consists of a different pattern of the five tones and

two semitones of the octave; the patterns can be clearly demonstrated using the white notes of the piano keyboard. Two of the most common modes were the Ionian (C-C) and the Aeolian (A-A), which became the basis of the major and minor scales.

Modigliani, Amedeo (1884–1920) Italian painter and sculptor. His mature work, executed in Paris (1906–20), was influenced by *Cézanne and *Brancusi and, in its angular and elongated character, by Negro masks. From 1909 to 1915 he worked chiefly on sculptures; from 1915 until his death he painted many nudes and portraits.

modulation A method of carrying information (the signal) on an electromagnetic wave or an oscillating electric current. In **amplitude modulation** (AM) the amplitude of a carrier wave is changed according to the magnitude of the signal. This is used in medium-wave sound broadcasting in which audio-frequencies (50–20 000 hertz) are carried on radio waves with a frequency of about one megahertz. In **frequency modulation** (FM) the frequency of the carrier wave is changed within a small bandwidth of the reference frequency. FM is used in VHF *radio (about 100 megahertz). Its main advantage over AM is its better signal-to-noise ratio. In **pulse modulation** the carrier is a series of pulses. It is used in digital equipment, such as computers, and in telegraphy and telemetry. A continuous signal alters the height in pulse-amplitude modulation, the width in pulse-duration modulation, or the time between pulses in pulse-position modulation. Pulse-code modulation uses a coded pattern of pulses to carry the signal, e.g. in *Morse code.

Mogadishu (or **Mogadiscio**) 2°01'N 45°25'E The capital and main port of Somalia, on the Indian Ocean. It was founded as an Arab settlement in the 10th century and sold to Italy in 1905 becoming the capital of Italian Somaliland. In 1991 the city was reduced to ruins during the prolonged civil war. Population (1999 est): 1 162 000.

Moguls An Indian Muslim dynasty, descended from the Mongol leader *Genghis Khan, that ruled from 1526 until 1858. Its founder was Babur (reigned 1526–30); he and the first 5 of his 18 successors are known as the Great Moguls, and by the time of Aurangzeb (1658–1707) the Empire spread from the far N to the far S of India. During the late 17th and the 18th centuries Mogul power declined; the last emperor, Bahadur Shah II (reigned

1837–58), was deposed after the *Indian Mutiny.

Mohammed (or **Muhammad**; c.570–632 AD) According to Muslims, the last of the prophets and preacher of *Islam to the Arabs. Mohammed is said to have been born in Mecca. In 610 he received revelations from God and called upon his pagan fellow townsmen to prepare for the Last Day and to repent. The Meccans rejected him and in 622 he fled to Yathrib, where he established the first Muslim community and began to spread Islam. By 629 the Muslims in Yathrib, now called Medina, were strong enough to obtain control of Mecca. By the time of Mohammed's death, Islam had begun to spread throughout Arabia. Mohammed's revelations were collected after his death to form the *Koran.

Mohammed Reza Pahlavi (1918–80) Shah of Iran (1941–79). He became shah when the Allies forced his father, Reza Shah Pahlavi, to abdicate in World War II. In 1979 civil war forced him into exile and an Islamic republic was established in Iran.

Mohawk An Iroquoian-speaking American Indian tribe of New York state. They were one of the five tribes that formed the league of the *Iroquois, said to have been founded by the Mohawk chief *Hiawatha.

Mohican An Algonkian-speaking American Indian tribe of New England. Primarily cultivators, they lived in fortified communities or in enclosed villages, but were displaced by wars with the Mohawks.

Mohorovičić discontinuity The boundary between the earth's crust and upper mantle, marked by a sudden increase in velocity in seismic waves at the denser mantle. It lies at a depth of 33–35 km (20–22 mi) beneath the continents and 5–10 km (3–6 mi) beneath the oceans. It is named after the Croatian scientist, Andrija Mohorovičić (1857–1936), who discovered it in 1909.

Mohs' scale A scale of hardness of minerals named after the mineralogist Friedrich Mohs (1773–1839). The ten standard minerals of increasing hardness, are: 1. talc, 2. gypsum, 3. calcite, 4. fluorite, 5. apatite, 6. orthoclase feldspar, 7. quartz, 8. topaz, 9. corundum, and 10. diamond. Each can be scratched by any mineral higher up the scale, and other minerals can be assigned numbers according to which materials will scratch them.

Mojave Desert (or **Mohave Desert**) A desert area in the USA, in S California. It com-

prises part of the *Great Basin. Area: 38 850 sq km (15 000 sq mi).

Moldavia A former principality in SE Europe. It was occupied by the Mongols in the 13th century, becoming independent in the 14th century. It became an Ottoman vassal state in the 16th century, losing Bessarabia to Russia in the 19th century (see MOLDOVA, REPUBLIC OF). In 1859 Moldavia and Walachia formed Romania.

Moldova, Republic of A republic in SE Europe. *Economy:* mainly agricultural, producing cereals, wine, tobacco, and fruit. Mineral resources are scarce and the country is dependent on Russia for energy. *History:* as the Moldavian Soviet Socialist Republic, it was formed in 1940, mainly from Russian *Moldavia. It became an independent republic in 1991. Separatist aspirations in the mainly Russian and Ukrainian Dnestr region led to fighting in 1992; Russian troops have remained in the region, which is effectively self-governing. In 1994 Moldova rejected union with Romania and joined the Commonwealth of Independent States. Multiparty elections were held in 1994 and free presidential elections in 1997. The Communists were voted back into power in 2001 but their attempts to limit opposition led to mass protests in 2002. Since 2005 the government has pursued an increasingly pro-Western policy. Official language: Moldovan (a form of Romanian). Currency: leu. Area: 33 670 sq km (13 000 sq mi). Population (2007 est): 4 320 490. Capital: Kishinev.

mole (medicine) An area of darkly pigmented skin, known medically as a naevus. *See also* MELANOMA.

mole (metrology; symbol mol) The SI unit of amount of substance equal to the amount of substance that contains the same number of entities as there are atoms in 0.012 kg of carbon-12. One mol of any substance contains $6.022\,52 \times 10^{23}$ entities (see AVOGADRO). The entities may be atoms, molecules, electrons, etc.

mole (zoology) A burrowing mammal of the family *Talpidae*, of Europe, Asia, and North America. The common Eurasian mole (*Talpa europaea*) is about 14 cm long including its small bristly tail. It is thickset, with black fur, and has long-clawed digging forefeet. Moles make a system of underground tunnels, feeding on earthworms. They are practically blind above ground. Order: *Insectivora*.

molecular biology The scientific discipline that deals with the molecular basis of living processes. Molecular biology involves both

*biochemistry and *biophysics: its growth since the 1930s has been made possible by the development of such techniques as chromatography, *electron microscopy, and X-ray diffraction, which have revealed the structures of biologically important molecules, such as DNA, RNA, and enzymes.

molecule The smallest portion of a compound that can exist independently and retain its properties. The atoms that make up a molecule are either bonded together covalently, e.g. CO_2 , or electrovalently, e.g. NaCl . However, in crystalline substances the bonds extend throughout the whole crystal structure and the molecule has only a notional existence. In covalent gases and liquids, however, the molecule actually exists. **Molecular weight** (or relative molecular mass) is the ratio of the average mass per molecule to one-twelfth of the mass of a carbon-12 atom.

Molière (Jean-Baptiste Poquelin; 1622–73) French dramatist, the father of modern French comedy. He toured the provinces with his theatrical company from 1645 to 1658. His plays include *Tartuffe* (1664), *Le Misanthrope* (1666), *L'Avare* (1668), and *Le Malade imaginaire* (1673). His ridicule of hypocrisy and his vigorous satire of contemporary manners and types brought him into constant conflict with the religious authorities. He frequently acted in his own productions.

mollusc An invertebrate animal belonging to the phylum *Mollusca* (about 50 000 species). Molluscs occupy marine, freshwater, and terrestrial habitats, being especially common on rocky coasts. They have a soft unsegmented body with a muscular foot, variously modified for crawling, burrowing, or swimming, and a thin dorsal mantle that secretes a shell of one, two, or eight parts. The shell is usually external, as in snails, but it may be internal, as in cuttlefish, or absent, as in slugs. Most molluscs are herbivores, with some carnivores and scavengers. See also BIVALVE; CEPHALOPOD; GASTROPOD.

moloch A grotesque desert-dwelling Australian lizard, *Moloch horridus*, also called thorny devil. Its yellow-and-brown body is covered in spines, which provide camouflage. Ants are its chief food. Family: *Agamidae*.

Moloch A Semitic god whose worship involved the sacrificial burning of children. There are several biblical references to his worship by the Israelites during the period of the Kings (c. 961–c. 562 BC).

Molotov, Vyacheslav Mikhailovich (V. M. Scriabin; 1890–1986) Soviet statesman. As prime minister (1930–41) and foreign minister (1939–49, 1953–56), Molotov signed the Soviet-German nonaggression treaty in 1939; after the German invasion in 1941, he negotiated alliances with the Allies. His subsequent attitude to the West contributed to the Cold War. The **Molotov cocktail** is a home-made incendiary hand device, consisting of a bottle full of inflammable liquid.

Moluccas (or Maluku) An Indonesian group of islands between Sulawesi and West Irian. It includes the islands of Ambon, Halmahera, and Ceram. Mountainous and volcanic, most are fertile and humid. The indigenous population fishes, hunts, and collects sago; spices, fish, and copra are exported. *History:* before the Portuguese arrival (1512), the islands were ruled by Muslims and known as the Spice Islands. Dutch control was established in the 19th century. With Indonesian independence (1949) the S Moluccas fought to secede but were subjugated by the new government (1950–56). Rioting between Muslims and Christians caused hundreds of deaths in 1999–2000. Area: about 74 504 sq km (28 766 sq mi). Population (1999 est): 2 223 000. Chief town: Ambon.

molybdenum (Mo) A very hard silvery-grey metal of high melting point, it was first prepared in 1782 by P. J. Hjelm (1746–1813). It occurs in nature as molybdenite (MoS_2) and as wulfenite (lead molybdenate; PbMoO_4). It is extracted by the reduction of molybdenum trioxide (MoO_3). Molybdenum is used in high-temperature filaments and as an alloying agent in the production of high-strength steels. At no 42; at wt 95.94; mp 2623°C; bp 4639°C.

Mombasa 4°45' 39' 40'E A port in Kenya, on an island in an inlet of the Indian Ocean. It was an important port for Arab traders and was taken in the 16th and 17th centuries by the Portuguese. The modern deepwater port at Kilindini handles most of Kenya's trade; industries include oil refining. Population (1999): 461 753.

moment The product of a force and its perpendicular distance from the axis about which it acts. A moment produces a turning effect and is sometimes called a torque. The inertia of a body to a torque is called its **moment of inertia**. This quantity is equal to mr^2 for a single mass (m) rotating about an axis at a distance r from the axis. The moment of inertia of a system of masses is equal to the sum of these products.

m

momentum The linear momentum of a body is the product of its mass and its linear velocity. The angular momentum of a body is the product of its *moment of inertia and its angular velocity. During any process the total momentum of the system always remains constant (the law of conservation of momentum).

Monaco, Principality of A small country on the Mediterranean Sea, an enclave within French territory. It consists of three principal localities: the business district around the ports, Monte Carlo, and the capital Monaco. *Economy:* the main sources of revenue are real estate, financial services, tourism, and the sale of postage stamps. *History:* ruled by the house of Grimaldi since 1297, it has been under French protection since 1641. Rainier III was succeeded by his son Albert II in 2006. Official language: French. Currency: euro of 100 cents. Area: 196 sq km (0.76 sq mi). Population (2007 est): 32 671. Capital: Monaco-Ville.

Monaghan (Irish name: Contae Mhuineachain) A county in the NE Republic of Ireland, in Ulster. It is generally low lying and undulating. Agricultural produce includes oats and potatoes; cattle rearing and dairy farming are also important. Area: 1551 sq km (499 sq mi). Population (2006): 55 816. County town: Monaghan.

mona monkey See GUENON.

monarch A widespread American butterfly, *Danaus plexippus*. Light brown with black borders and white dots, the adults migrate southwards for the winter. In spring they move north, breeding on the way. The caterpillars are green with black and yellow bands and feed on milkweed. Family: *Danaidae*.

monazite A rare-earth mineral of composition (Ce,La,Y,Th)PO₄; yellow to reddish-brown in colour, it is found as an accessory in acid igneous rocks and as placer deposits. Monazite is usually obtained as a by-product of titanium and zircon mining; it is the most common source of the rare earths.

Mönchengladbach (or **München Gladbach**) 51°12'N 6°25'E A city in W Germany, in North Rhine-Westphalia. It is the centre of the German textile industry and headquarters of the NATO forces in N central Europe. Population (2004 est): 262 391.

Mond, Ludwig (1839–1909) German industrial chemist, who lived in Britain from 1862. He discovered nickel carbonyl and its application to the extraction of platinum from its

ores, a method now known as the **Mond process**.

Mondrian, Piet (Pieter Cornelis Mondriaan; 1872–1944) Dutch painter. While in Paris (1912–14) he came under the influence of *cubism. His first abstract compositions (1917) used only horizontal and vertical lines, primary colours, and black and white. During this period he helped to launch the art movement of de Stijl. After 1919 his style, known as neoplasticism, influenced the *Bauhaus school.

Monet, Claude (1840–1926) French impressionist painter. Initially influenced by the Barbizon school, in the late 1860s he developed the impressionist technique in views of Paris and in the 1870s in boating scenes at Argenteuil. He excelled in his series of the same scenes painted at different times of day, e.g. *Gare St Lazare*, *Haystacks*, *Rouen Cathedral*, and the *Poplars*, the last of which anticipates *abstract art.

monetarism A revision of old-established economic theories that rivals Keynesianism. Monetarism's most celebrated proponent is the US economist Milton *Friedman. Monetarists regard responsible regulation of the money supply as essential to the wellbeing of the economy, advocating a gentle expansion of the money supply at roughly the rate of growth of the economy. Monetarists blame *inflation on overexpansion of the money supply.

money A medium of exchange. To be an efficient medium of exchange, money should be divisible (for small transactions), have a high value-to-weight ratio, and be not easily counterfeited. Money also functions as means of credit and a store of wealth, for which purposes its value must remain stable. Money was reputedly invented by the Lydians in the 7th century BC. It originally took the form of something intrinsically valuable (such as a precious metal) but, so long as it is generally acceptable, this is not necessary. Indeed, most money is now in the form of paper.

The total stock of money in the economy is known as the **money supply**. In the UK two definitions of the money supply are used: the narrow M1 (essentially, the total amount of cash and current accounts) and the broad M3 (essentially, the total amount of cash plus both current and deposit accounts).

money spider A tiny *spider of the family *Liniphiidae* (over 250 species). It has a reddish or black body and occurs in fields, etc. Money spiders build sheetlike webs on vegetation to

which they cling upside down, waiting to catch insects that drop onto the web.

moneywort A perennial herb, *Lysimachia nummularia*, also called creeping jenny, native to damp places in Europe. It has a creeping stem, up to 60 cm long, shiny heart-shaped leaves, and yellow flowers. Family: *Primulaceae*.

Mongolia, State of A country in NE central Asia, between Russia and China. It rises to the Altai and Khangai mountains in the W and extends into the Gobi Desert in the S. *Economy:* with its nomadic-pastoral tradition, it is still mainly dependent on livestock rearing, with recent attempts to increase crop growing. Copper mining is being introduced and other minerals include coal, oil, gold, tungsten, lead, and uranium. There is some light industry. Exports include cattle and horses, wool, and hair. In the early 1990s the end of special trading arrangements with communist East Europe led to considerable economic hardship. In 1996–2000 the government implemented IMF-backed policies of restructuring and deregulation. *History:* in the 13th century Genghis Khan ruled the Mongol empire from Karakoram in the N. As Outer Mongolia, the area was a province of China from 1691 to 1911, when it became an autonomous monarchy under Russian protection. Again under Chinese influence from 1919 to 1921, it then became independent and the Mongolian People's Republic was declared in 1924. In 1990 the Communist Party renounced its monopoly of power and a multi-party system was introduced. In 1996 the Democratic Union formed a government pledged to free-market reforms but elections in 2000 resulted in a landslide for the former Communists. A coalition government was formed after further elections in 2004. Official language: Khalkha Mongolian. Currency: tugrik of 100 möngö. Area: 1 565 000 sq km (604 095 sq mi). Population (2007 est): 2 951 786. Capital: Ulan Bator.

Mongolian languages A group of languages that, together with Turkic and Manchu-Tungus, constitute the Altaic language family. Western Mongolian languages are spoken in SE Russia, the Republic of Mongolia, and Afghanistan; Eastern Mongolian is spoken in China and the Republic of Mongolia. There are more than three million speakers of these languages, the majority of which remain unwritten.

Mongoloid The racial grouping comprising the populations of E Asia and the Arctic region of North America. They have medium skin pigmentation, the epicanthic fold of the upper

eyelid, straight coarse black hair, a rather flat face with high cheekbones, and slight facial and body hair.

Mongols An Asiatic people united in the early 13th century by *Genghis Khan, who built up an empire that encompassed much of central Asia. The Mongols ruled China as the *Yuan dynasty until 1368. They were subsequently confined to the area approximating to the present-day State of Mongolia.

mongoose A carnivorous mammal belonging to the family *Viverridae*, found in warm regions of the Mediterranean, Africa, and Asia. There are about 40 species, ranging in size from 50 to 100 cm including the long tapering furry tail (25–50 cm), with short legs, small ears, and long coarse grey-brown fur. Mongooses are renowned for catching snakes and rats and also eat eggs, small mammals, frogs, and birds. Chief genera: *Galidictis*, *Herpestes*, *Helogale*.

monitor lizard A lizard belonging to the Old World family *Varanidae* (30 species), occurring in tropical and subtropical regions. 0.2–3 m long, monitors have an elongated body and well-developed legs. They feed on mammals, snakes, lizards, eggs, and carrion. See also KOMODO DRAGON.

monkey A tree-dwelling *primate. Monkeys are 20–110 cm long and most have a long balancing tail of up to 100 cm used in climbing, although some are tailless. Agile and intelligent, they have fingernails and an opposable thumb enabling manual dexterity. Most monkeys are omnivorous but they prefer fruit, nuts, and other vegetation. See also NEW WORLD MONKEY; OLD WORLD MONKEY.

monkey puzzle A coniferous tree, *Araucaria araucana*, also called Chile pine, native to Chile and Argentina and widely grown as an ornamental. Up to 30 m high, it has whorled horizontal branches covered with leathery prickly overlapping leaves, 3–4 cm long. The globular spiny cones, 10–17 cm long, break up to release large seeds that are edible when roasted. Family: *Araucariaceae*.

monkfish A *shark belonging to the family *Squatinaidae*. It has a broad flattened head, an elongated tapering body, winglike pectoral fins, two dorsal fins, and no anal fin. Monkfish occur in tropical and temperate seas and feed on bottom-dwelling fish, molluscs, and crustaceans. A species of *anglerfish, *Lophius piscatorius*, is also called monkfish.

monkshood See ACONITE.

Monmouth, James Scott, Duke of (1649–85) The illegitimate son of Charles II of England and Lucy Walter (d. 1658), who led the Monmouth rebellion against his uncle James II. A focus of the opposition to the succession of the Roman Catholic James, he was banished (1684) after being implicated in the Rye House Plot of 1683, a failed attempt to murder Charles and James. After James's accession (1685), Monmouth landed at Lyme Regis to raise a rebellion and was defeated at *Sedgemoor, captured, and beheaded.

Monmouthshire A county of SE Wales bounded by the Bristol Channel in the S and the English border in the E. Under local government reorganization in 1974 it was mainly absorbed into Gwent. When Gwent was abolished in 1996, administration passed to a reduced Monmouthshire and four county boroughs (Blaenau Gwent, Newport, Torfaen, and Caerphilly). Monmouthshire consists of undulating country, rising to the Black Mountains in the N. It is chiefly agricultural with tourism and light industry. Area: 851 sq km (329 sq mi). Population (2001): 84 879. Administrative centre: Cwmbran.

monoclonal antibody A type of pure antibody that can be produced artificially in large quantities and used, for example, to distinguish the major blood groups and to treat certain disorders, including some types of cancer. Mouse lymphocytes producing the required antibody are fused with mouse cancer cells; the resulting hybrid cells multiply rapidly and all produce the same type of antibody as their parent lymphocytes.

monocotyledons The smaller of the two main groups of flowering plants, which includes the palms, bananas, orchids, grasses, lilies, and many garden bulbs and corms (compare DICOTYLEDONS). Monocots have a single seed leaf (cotyledon) in the embryo. Typically the flower parts are in threes (or multiples of three) and the leaves have parallel veins. See also ANGIOSPERM.

monomer A simple molecule or group of atoms forming a repeated unit in a dimer (two molecules), trimer (three molecules), or polymer (see POLYMERIZATION).

monopoly An industry in which the market is supplied by one supplier. The monopolist can obtain a high profit by restricting supply and demanding a high price. In the public sector of a mixed economy monopolies for the supply of public services are commonplace. In the private sector they are usually restricted by legis-

lation. In the UK the **Monopolies Commission**, the duties of which are set out in the Fair Trading Act (1973), conducts investigations into monopolies and mergers.

monorail A railway using a single rail, either from which to suspend a carriage or over which a carriage is straddled. The former type was first used in 1884, consisting of an electrically driven truck running on a single rail from which was suspended a load-carrying car (called a **telpher**). The latter type has been demonstrated at Birmingham's National Exhibition Centre, using magnetic levitation. Monorail systems are expensive to instal.

monosaccharide (or **simple sugar**) A *carbohydrate consisting of a single sugar unit and possessing either a keto group (C=O) or an aldehyde group (CHO). Monosaccharides are classified according to the number of carbon atoms they possess—the most common being pentoses (with five) and hexoses (with six)—and they can exist as either straight-chain or ring-shaped structures. The most widely occurring are *glucose and *fructose.

monotreme A primitive *mammal of the order *Monotremata*, found only in Australia and New Guinea. Monotremes have a single vent for passing urine, faeces, and eggs or sperm. They lay eggs, suckling their young after these hatch. The only living monotremes are the *echidnas and *duck-billed platypus.

Monroe, James (1758–1831) US statesman; president (1817–25). He was minister to France (1794–96) and Britain (1803–07) before becoming secretary of state (1811). His two peaceful terms as president saw the opening of the West and the acquisition of Spanish Florida. The **Monroe Doctrine** (1823) warned European powers not to intervene in the Americas.

Monroe, Marilyn (Norma Jean Baker or Mortenson; 1926–62) US film actress. Promoted as a sex symbol, in such films as *Niagara* (1952) and *Gentlemen Prefer Blondes* (1953), she later developed a real acting talent and ability as a comedienne. Her third husband was Arthur *Miller, and her last film appearance was in *The Misfits* (1961), which he wrote. She died from an overdose of barbiturates.

Monrovia 6 20N 10 46W The capital and main port of Liberia, on the Atlantic Ocean. Founded in 1822 as a settlement for freed slaves, it was named after President Monroe of the USA. The University of Liberia was founded in 1851. Population (1999 est): 479 000.

monsoon A seasonal large-scale reversal of

winds in the tropics, resulting chiefly from the differential heating of the land and oceans. The term is now commonly applied to the rainfall that accompanies the wind reversals, especially in S Asia (April to September).

Montaigne, Michel de (1533–92) French essayist. In 1568 he resigned his position as magistrate in Bordeaux and began composing his *Essais*. In 1580 he travelled extensively in Europe and was mayor of Bordeaux from 1581 to 1585. His *Essais*, which inaugurated a new literary genre, expressed his mature humanistic philosophy and constitute a moving self-portrait. They were published in two editions in 1580 and 1588, and a posthumous edition incorporated his final revisions.

Montana The fourth largest state in the USA, bordering on Canada. It is mountainous and forested in the W, with the rolling grasslands of the Great Plains in the E. Its economy is predominantly agricultural, cattle ranching and wheat production being of greatest importance. Other crops include barley and sugar beet. It possesses important mineral resources, notably copper (at Butte) and coal. There are several Indian reservations within the state. *History*: it formed part of the Louisiana Purchase in 1803. During the mid-19th century a gold rush caused an influx of immigrants. During the Indian wars the battle of *Little Bighorn (Custer's Last Stand) took place (1876). Area: 377 070 sq km (145 587 sq mi). Population (2005 est): 935 670. Capital: Helena.

Mont Blanc (Italian name: Monte Bianco) 45 50N 6 52E The highest mountain in the Alps, on the French–Italian border. It was first climbed in 1786. A road tunnel (1958–62) beneath it, 12 km (7.5 mi) long, connects the two countries. Height: 4807 m (15 771 ft).

montbretia A perennial herb, *Crocsmia crocosmiflora* (a hybrid between *C. pottsii* and *C. aurea*), native to South Africa but naturalized in Europe and often grown as a garden ornamental. Up to 1 m high, it has long stiff sword-shaped leaves and orange-red funnel-shaped flowers. The name is also applied to the similar and related flowering herbs of the South African genus *Montbretia* (or *Tritonia*). Family: Iridaceae.

Monte Bello Islands 20 30S 115 30E A group of uninhabited coral islands in the Indian Ocean, off the W coast of Western Australia. They were used for testing British nuclear weapons in 1952 and 1956.

Monte Carlo 43 44N 7 25E A resort in

Monaco, on the Riviera. It is famous for its casino, motor rally, and other cultural and sporting events. Population (2000): 32 020.

Montenegro (Serbo-Croat name: Crna Gora) A small country in SE Europe, on the Adriatic. It is mountainous and forested. *Economy*: agriculture and forestry are important. Industries include mining (coal and aluminium) and textiles. The economy suffered greatly during the break-up of Yugoslavia and subsequent UN sanctions. *History*: It was declared a kingdom in 1910, becoming a province of the kingdom of the Serbs, Croats, and Slovenes (later Yugoslavia) in 1918. Following the disintegration of Yugoslavia (1991–92), Montenegro and Serbia formed the Federal Republic of Yugoslavia. The later 1990s saw growing opposition to the federation with Serbia, exacerbated by the nationalistic policies of the *Milošević regime in Belgrade. Following the fall of Milošević, the federation was replaced with a looser Union of Serbia and Montenegro in 2002. Finally, Montenegrins voted to separate from Serbia in 2006 and the country became independent in June. Official language: Serbian. Currency: euro of 100 cents. Area: 13 812 sq km (5387 sq mi). Population (2007 est): 684 736. Capital: Podgorica.

Monterrey 25 40N 100 20W One of the largest cities in Mexico. Founded in 1579, it has many notable buildings. Monterrey is a major industrial centre specializing in metallurgy. Population (2000): 1 110 909.

Montessori system A system of education for young children devised by the Italian doctor Maria Montessori (1870–1952). It emphasizes development of the senses and envisages a limited role for the teacher as the child learns by itself through the use of didactic materials.

Monteverdi, Claudio (1567–1643) Italian composer. From 1613 until his death he was maestro di cappella at St Mark's Cathedral, Venice. He was the first great composer of *opera; enlarging the orchestra, he employed a new range of instrumental effects and made use of an innovative harmonic style to achieve dramatic effects. Works include the operas *Orfeo* (1607) and *The Coronation of Poppea* (1642), a set of *Vespers* (1610), and madrigals.

Montevideo 34 55S 56 10W The capital and main port of Uruguay, in the S on the Río de la Plata. Founded in 1726 by the Spanish, it became capital of Uruguay in 1828. In the 20th century it has developed rapidly, as both an industrial and a communications centre, and it is now one of South America's largest cities. Population (2004 est): 1 269 552.

Montezuma II (1466–c. 1520) The last Aztec Emperor of Mexico (1502–20). During his reign his empire was weakened by tribal warfare, which enabled the Spaniards, led by Hernán *Cortés, to establish themselves in Mexico.

Montfort, Simon de, Earl of Leicester (c. 1208–65) English statesman, born in Normandy. After serving Henry III of England in Gascony, he joined the antiroyalist faction that demanded greater control of the government, becoming the barons' leader in the subsequent Barons' War. Initially successful, he became virtual ruler of England, summoning a parliament in 1265. In the same year, however, he was defeated and killed at Evesham.

Montgolfier, Jacques-Étienne (1745–99)

French balloonist, who with his brother **Joseph-Michel Montgolfier** (1740–1810) invented the hot-air balloon, which was publicly launched in 1782. A much larger balloon, which rose 2000 m, was demonstrated in June 1783 and in October a series of passenger-carrying ascents were made. The Montgolfiers' experiments aroused enormous interest in flying.

Montgomery, Bernard Law, 1st Viscount Montgomery of Alamein

(1887–1976) British field marshal. In World War II he became commander of the Eighth Army (1942) and after the battle of Alamein drove *Rommel back to Tunis and surrender (1943). Having played a major role in the invasion of Italy (1943), he became chief of land forces in the 1944 Normandy invasion. He helped plan the Arnhem disaster (September 1944), but pushed back the subsequent German offensive, receiving Germany's surrender. After the war he was chief of the imperial general staff (1946–48) and deputy commander of NATO forces (1951–58).

month The time taken by the moon to complete one revolution around the earth. The complicated motion of the moon requires the starting and finishing points of the revolution to be specified. The length of the month depends on the choice of reference point. The **sidereal month**, of 27.32 days, is measured with reference to the background stars. The **synodic month**, of 29.53 days, is measured between two identical phases of the moon.

Montpellier 43 36N 3 53E A city in S France, the capital of the Hérault department. A Huguenot stronghold, it was besieged and captured by Louis XIII in 1622. It trades in wine and brandy and has numerous manufacturing industries. Population (1999): 225 392.

Montreal 45 30N 73 36W A city and port in E Canada, in Quebec on Montreal Island at the junction of the Ottawa and St Lawrence Rivers. Canada's second largest city, it is a major transportation, trade, and manufacturing centre. Industries include oil refining, meat packing, brewing and distilling, food processing, textiles, and aircraft. Housing four universities, Montreal is a forum for politics, broadcasting, theatre, film, and publishing. Two-thirds of the population is French-speaking. *History*: founded as Ville-Marie (1642), Montreal quickly became a commercial centre. Captured by Britain (1760), it acquired an English-speaking merchant community that has dominated Quebec's economy ever since. Population (1996): 1 016 376.

Montserrat A British overseas territory comprising one of the Leeward Islands, in the Caribbean Sea to the SE of Puerto Rico. It is largely mountainous with active volcanoes.

Economy: chiefly agricultural; the main exports are cotton, coconuts, fruit and vegetables, and cattle. Forestry is being developed. *History*: discovered by Columbus in 1493, it was colonized by the Irish in the 17th century. Formerly administratively joined to the Leeward Islands, it became a separate colony in 1960. In 1997 a huge volcanic eruption made two-thirds of the island uninhabitable (including the capital, Plymouth). Half the population have fled, with Britain offering help with voluntary resettlement. The future of the island is uncertain. Official language: English. Currency: East Caribbean dollar of 100 cents. Area: 106 sq km (40 sq mi). Population (2001 est): 4500.

Mont St Michel 48 38N 1 30W A granite islet in NW France, in the Manche department in the Bay of St Michel. The islet is connected to the mainland by a causeway. It is about 78 m (256 ft) high and is crowned by a Benedictine monastery (founded 966 AD).

moon The natural satellite of the earth. It orbits the earth every 27.32 days at a mean distance of 384 400 km, keeping more or less the same face (the nearside) towards the earth. As it revolves, different *phases can be seen from earth, together with up to two or three lunar *eclipses per year. The moon is only 81 times less massive than the earth and has a diameter of 3476 km.

The major surface features are the light-coloured highlands and the much darker lava plains—the maria. The surface is heavily cratered with roughly circular walled depressions produced by impacting bodies from space. The extremely tenuous atmosphere ex-

poses the surface to considerable temperature extremes (-180°C to $+110^{\circ}\text{C}$). The first landing on the moon was made by Neil *Armstrong and Edwin *Aldrin on 20 July 1969. See APOLLO MOON PROGRAMME.

moonfish A deep-bodied fish, also called opah, belonging to the genus *Lampris* and family *Lampridae*, widely distributed in warm seas. Up to 2 m long, its body is coloured blue above, rose-pink below, and is spotted with white; the fins are scarlet. Order: *Lampridiformes*.

Moonies See UNIFICATION CHURCH.

moonstone A semiprecious stone; a translucent form of feldspar.

Moore, G(eorge) E(dward) (1873–1958) British philosopher. Moore's work centred around language and the analysis of its meaning. His books include *Principia Ethica* (1903) and *Ethics* (1912). He was professor of mental philosophy and logic at Cambridge (1925–39) and editor of the journal *Mind* (1921–47).

Moore, Henry (1898–1986) British sculptor. His fascination with primitive African and Mexican art moulded the development of his two characteristic themes: mother and child sculptures and reclining figures. The latter, a lifelong preoccupation, reached its apogee in the sculpture for UNESCO in Paris (1956–57). After devoting himself to abstract work in the 1930s, Moore reverted to the humanist tradition in the early 1940s with his celebrated drawings of sleeping figures in air-raid shelters.

moorhen A grey-brown to black waterbird, *Gallinula chloropus*, also called common gallinule and waterhen, occurring worldwide except for Australia. It is 32 cm long and has a red bill and forehead and a white patch beneath the tail. It breeds in thick vegetation near ponds and marshes and feeds on seeds, water plants, and aquatic invertebrates. Family: *Rallidae* (rails, etc.).

Moors The conventional European name for the *Arab and *Berber inhabitants of NW Africa and, by extension, for the 8th-century Muslim conquerors of the Iberian peninsula. The Moors were the dominant power in Spain until the 11th century. A highly civilized people, they played a major role in transmitting classical science and philosophy to W Europe.

moose See ELK.

moraine Crushed rock and clay etc., ground, transported, and deposited by glaciers, ice

sheets, and glacial streams. A glacier often exhibits midline and lateral moraines on its surface, and deposits end moraines. Formerly glaciated areas usually have soils and land forms dominated by moraines (eskers, drumlins, etc.).

Moravia (Czech name: Morava; German name: Mähren) An area of the Czech Republic, formerly (1918–49) a province of Czechoslovakia. Lying chiefly in the basin of the River Morava, it rises in the N to the Sudeten Mountains and in the E to the Carpathian Mountains. It contains important mineral deposits, including coal and iron ore. *History*: settled by Slavic tribes in the late 8th century AD, it formed the centre of an important medieval kingdom (Great Moravia). It was part of the Republic of Czechoslovakia from 1918 until the end of 1992. Chief town: Brno.

Moravia, Alberto (Alberto Pincherle; 1907–90) Italian novelist. His early novels criticized fascism and the corrupt middle-class society that allowed it to flourish. His later works, which include *The Woman of Rome* (1947), *The Lie* (1966), and *Erotic Tales* (1985) concern themes of social alienation and the futility of sexual relationships.

Moray A council area of NE Scotland, on the Moray Firth and the North Sea. In 1975 the historic county of Moray was expanded to form a district of Grampian region; in 1996 this became an independent unitary authority. It consists mainly of hills and moors, rising to the Cairngorm Mountains in the S. Agriculture, fishing, forestry, and whisky distilling are important. Area: 2238 sq km (864 sq mi). Population (2001): 86 940. Administrative centre: Elgin.

moray eel A thick-bodied *eel of the family *Muraenidae* (over 80 species). Up to 1.5 m long, it is brightly coloured and lacks pectoral fins. Moray eels live in rock crevices and reefs of warm and tropical seas.

Moray Firth An inlet of the North Sea in NE Scotland, extending SW from a line between Tarbat Ness in the Highland Region and Burchhead in Grampian Region. Length: about 56 km (35 mi).

More, Sir Thomas (1477–1535) English lawyer, scholar, and saint. He joined Henry VII's Privy Council in 1518 and succeeded Wolsey as chancellor in 1529. He resigned the chancellorship in 1532 in opposition to Henry's assumption of the supreme headship of the English Church. In 1534 More was imprisoned after refusing to swear to the new Act of Suc-

m

cession. He was brought to trial for treason in 1535, convicted on false evidence, and beheaded. His best-known scholarly work is *Utopia* (1516).

morel A fungus belonging to the genus *Morchella*. Morels are typically club-shaped with the surface of the cap pitted like a honeycomb. The edible common morel (*M. esculenta*) has a yellowish-brown cap, 4–8 cm high, and a stout whitish stalk. Phylum: *Ascomycota*.

Morgan, John Pierpont (1837–1913) US financier, who founded (1895) J.P. Morgan and Co, one of the most powerful banking corporations in the USA. During the 1880s he reorganized many foundering railway companies and later financed such consolidations as the US Steel Corporation and General Electric. His son **John Pierpont Morgan, Jr** (1867–1943) succeeded him and helped to organize the credit requirements of the Allies in World War I.

Morgan le Fay In *Arthurian legend, an evil sorceress who plotted the overthrow of her brother King Arthur. According to Malory's *Morte d'Arthur* (1485) she betrayed Guinevere's adultery to Arthur. However, in the earlier *Vita Merlini* (c.1150) by *Geoffrey of Monmouth she is a benevolent figure.

Moriscos See *CONVERSOS*.

Morley, Thomas (1557–1603) English composer, music printer, organist of St Paul's Cathedral, and member of the Chapel Royal. A pupil of Byrd, he wrote madrigals, canzonets, songs, church music, and the textbook *A Plaine and easie Introduction to Practicall Musicke* (1597).

Mormons Adherents of the Christian sect that is formally called the Church of Jesus Christ of Latter-Day Saints, founded in 1830 by Joseph Smith in New York state. Smith claimed to have discovered golden tablets that contained the sacred Book of Mormon. After Smith's murder by a mob, the persecuted Mormons moved W under Brigham Young, establishing their headquarters at Salt Lake, Utah, in 1847. Mormons have no professional clergy, reject infant baptism, abstain from alcohol and other stimulants, and run educational and missionary programmes.

morning glory A trailing or twining plant of the genus *Ipomoea*, native to tropical America and Australia and cultivated for its beautiful flowers. The leaves are often heart-shaped and the trumpet-shaped flowers, up to 12 cm across, are deep blue, purple, pink, or white. Popular species are *I. purpurea* and *I. alba* (the moonflower). The seeds of certain varieties contain hallucinogens. Family: *Convolvulaceae*.

Moro, Aldo (1916–1978) Italian statesman; Christian Democratic prime minister (1963–68, 1974–76) and foreign minister (1965–66, 1969–72, 1973–74). In 1978 he was kidnapped and then murdered by the *Red Brigades.

Morocco, Kingdom of A country in NW Africa, bordering on the Atlantic Ocean and Mediterranean Sea. The Atlas Mountains crossing the centre of the country separate the Atlantic coastal area from the Sahara. The population is mainly of Berber and Arabic origin. *Economy*: the chief occupations are agriculture and mining. Wheat, barley, maize, and citrus fruits are grown; livestock is also important. Morocco is a leading exporter of phosphates; other mineral resources are iron ore, coal, lead, zinc, cobalt, and manganese. Industries include food processing, textiles, and traditional handicrafts. There is a thriving fishing industry, sardines and tuna being the chief catch. It is also a popular tourist centre. *History*: part of the Roman province of Mauretania, it fell to the Vandals in the 5th century AD. Its strategic importance was recognized by the European powers in the 19th century. French and Spanish interests conflicting with those of Germany. In the early 20th century Morocco was partitioned into French and Spanish protectorates (1912) and the international zone of Tangier (1923). In 1956 the protectorates were relinquished and Morocco became a sultanate, later a kingdom (1957) under King Mohammed V; his son, Hassan II, acceded to the throne in 1961. In 1976 *Western Sahara was partitioned between Morocco and Mauritania; when Mauritania withdrew in 1979 the area came under Moroccan occupation, with active opposition from the pro-independence Polisario Front. Following elections to a new national assembly (1998), a socialist government came to power (re-elected in 2002). Hassan II was succeeded by his son Mohammed VI in 1999. Official language: Arabic. Currency: dirham of 100 centimes. Area: 458 730 sq km (144 078 sq mi). Population (2003 est): 30 097 000. Capital: Rabat.

morphine A *narcotic analgesic drug obtained from *opium and used in medicine for the relief of severe pain. Its depressant effect on the brain accounts for the pain-killing properties; in high doses it also inhibits the breathing and cough centres. Morphine is an addictive drug and readily leads to severe physical dependence.

morphology The study of the form and structure of plants, animals, and microorganisms. Anatomy is often used synonymously with morphology but in the former the em-

phases is on the gross and microscopic structure of organs and parts.

Morris, William (1834–96) British designer, artist, and poet. Associated with the *Pre-Raphaelite Brotherhood, he later started a firm of decorators and designers (1861). He designed stained glass, carpets, and furniture, and his wallpaper designs are still used. His Kelmscott Press, founded in 1890, influenced book design and printing generally. He was also one of the founders of British socialism.

Morris dance A ritual English folk dance performed by groups of white-clad men wearing bells and often carrying sticks or handkerchiefs. A common theme is fertility through death and rebirth. Similar dances are found throughout Europe, India, and the Americas, often featuring animal characters or the black-faced Morisco (Moor), whence the name Morris is thought to derive.

Morse, Samuel Finley Breese (1791–1872) US inventor, who erected the first telegraph line, between Washington and Baltimore (1844). Messages were sent by **Morse code**, a system in which each letter of the alphabet and number has a characteristic sequence of dots and dashes (short and long pulses).

Morse code

mortar (building material) A mixture of sand, hydrated lime, and Portland cement, used to

bind together building bricks, etc. It is applied wet as a paste, which sets to a durable solid.

mortar (weapon) A short-barrelled muzzle-loading artillery piece with a low-velocity high-angled trajectory. In World War II the largest Allied mortar had a calibre of 4.2 inches (107 mm), the German version being 8.3 inches (210 mm) with six barrels. Mortars are principally used to fire high-explosive and smoke bombs.

mortgage Rights in property (usually land, buildings, etc.) given by a borrower (mortgagor) to a lender (mortgagee) as security for a loan. In the UK building societies lend money for house purchase in return for a legal charge on the property, which gives them the right to sell it to recover their debt if the borrower defaults. When all the money borrowed and the interest due under the mortgage have been repaid, it is redeemed.

Mortimer, Sir John Clifford (1923–) British barrister and playwright. He is best known for the televised tales of Horace Rumpole, a barrister. Other works include the novels *Paradise Postponed* (1985) and *The Sound of Trumpets* (1998) and the autobiographical play *A Voyage Round My Father* (1970). He was knighted in 1998.

Morton, Jelly Roll (Ferdinand Joseph La Menthe; 1885–1941) US Black jazz pianist and composer, who made recordings in the 1920s with the group Morton's Red Hot Peppers. Claiming that he "invented jazz in 1902," his reputation has been the subject of controversy.

mosaic A picture or ornamental design made from small coloured cubes of glass, stone, tile, etc. Mosaics were common in ancient Greece, where they were principally used for floors and made from coloured pebbles. During the Roman Empire mosaics of glass became popular for wall and vault decoration, a development that reached its peak in the early Christian churches in Byzantium and Italy. The 6th-century decorations in S Vitale, in Ravenna, are among the most famous mosaics of the middle ages.

Moscow (Russian name: Moskva) 55 45N 37 42E The capital of Russia and of the Moscow autonomous region (*oblast*), on the River Moskva. It is the economic and political centre of Russia and an important transportation centre. Industries include heavy engineering, cars, textiles, electronics, chemicals, publishing, and food processing. The city is based on a radial plan; the *Kremlin (citadel) and Red Square are at its heart. The Kremlin, triangular in shape,

encloses a number of notable ecclesiastical buildings. Red Square is the traditional setting for military parades and demonstrations. Moscow is a major cultural centre; its many educational institutions include the University of Moscow (1755) and the Academy of Sciences. Other famous institutions include the Bolshoi Theatre of Opera and Ballet (1780), the *Moscow Art Theatre, and the Moscow State Circus. *History*: first documented in 1147, settlement actually dates back to prehistoric times. By the beginning of the 13th century it was the centre of the Muscovy principality and became the seat of the metropolitan of the Russian Orthodox Church in 1326. The city was invaded by Napoleon (1812) and the ensuing fire destroyed much of the city. In March 1918, it became the capital of the RSFSR and following the arrival of Lenin and other communist leaders (1922) the capital of the Soviet Union. Development resumed after World War II, since when Moscow has developed an important tourist industry. Population (1999 est): 8 389 000.

Moselle, River (German name: R. Mosel) A river in W Europe, flowing N from NE France to join the River Rhine at Koblenz. It forms part of the border between Germany and Luxembourg. Its valley is one of the main wine-growing areas of Germany. Length: 547 km (340 mi).

Moses In the Old Testament, the lawgiver of Israel, who led the people from slavery in Egypt (Exodus) and brought them close to the Promised Land. As a child in Egypt (according to the Old Testament), Moses was saved from the slaughter of all Hebrew male children ordered by Pharaoh by being hidden in bulrushes on the Nile. On Mt Sinai he was given the Ten Commandments by Jehovah. He died at the age of 120.

Moses, Grandma (Anna Mary Robertson M.; 1860–1961) US primitive painter, born in Greenwich, New York (see PRIMITIVISM). Entirely self-taught, she only turned seriously to painting at the age of 67. She specialized in naive and nostalgic scenes of farm life.

Mosley, Sir Oswald Ewald (1896–1980) British fascist. He was a Conservative MP (1918–22), an Independent MP (1922–24), and then a Labour MP (1924, 1926–31), serving as chancellor of the Duchy of Lancaster (1929–30). In 1932 he established the British Union of Fascists, which incited antisemitic violence, especially in the East End of London. In World War II he was interned (1940–43) and in 1948 founded the Union Movement.

mosque A Muslim place of worship. It evolved in various styles from a simple rectangular building, such as the first mosque built by Mohammed at Medina in 622 AD. Prayers are said in a large covered area on the side facing Mecca, the direction being indicated by a niche (*mihrab*) in the wall. Mosques are often domed and have minarets (tall slender towers). The mosque has traditionally been the centre of Muslim life, intellectual and social as well as religious.

mosquito A small fly belonging to a family (*Culicidae*; about 2500 species) of almost worldwide distribution, being especially abundant in the tropics. It has long legs, elongated mouthparts, and a long slender abdomen. In most species the males feed on plant juices, while the females bite and suck the blood of mammals, often transmitting serious human and animal diseases. The three important genera are *Anopheles*, *Aedes*, and *Culex* (including the common gnat, *C. pipiens*).

moss A flowerless plant of the phylum *Bryophyta* (about 15000 species; see BRYOPHYTES), growing worldwide (except in salt water) on moist soil, trees, rocks, etc. The moss plant is differentiated into stems and leaves and produces sex cells (gametes), which give rise to a spore capsule that grows from the plant on a long stalk. *Sphagnum*, responsible for peat formation, is economically important.

The name is also applied to several unrelated plants, for example *Spanish moss.

moss animal See BRYOZOA.

Mössbauer effect The emission of a gamma ray (see GAMMA RADIATION) by an excited nucleus in a solid. Generally such an emission causes the nucleus to recoil, thus reducing the energy of the gamma ray. In the Mössbauer effect the recoil is distributed throughout the solid. The gamma ray therefore loses no energy and may then raise other nuclei into the same excited state. It was discovered by the German physicist Rudolph Mössbauer (1929–) and enables the structure of nuclei and molecules to be examined.

moss pink See PHLOX.

motet A polyphonic composition (see POLYPHONY) for voices, generally unaccompanied. In the medieval motet the fundamental tenor (holding) part was based on a slow-moving plainchant or popular song while the upper triplex (treble) and motetus (worded) parts had a different text and a quicker rhythm. The 16th-century motet with Latin

text, used during church services but not a part of the liturgy, is found in its purest form in the works of Palestrina. Since the 17th century the word has been used to describe a serious but not necessarily religious choral work.

moths See BUTTERFLIES AND MOTHS.

Motion, Andrew (1952–) British poet and writer. His publications include the poetry collections *Pleasure Steamers* (1978), and *Public Property* (2001), biographies of Larkin (1982) and Keats (1998), and the historical novel *Wainwright the Poisoner* (2000). He was appointed poet laureate in 1999.

motmot A bird of the tropical American family *Motmotidae* (8 species). 16–50 cm long, motmots have short rounded wings, short legs, and long tails with elongated central feathers. The bill is broad and serrated and the plumage is green, blue, brown, and black. Motmots live in forests and prey on insects, spiders, worms, etc. Order: *Coraciiformes* (kingfishers, etc.).

motorcycle racing Racing single-seater motorcycles or sidecar combinations, in classes according to engine capacity. In **road racing**, run usually on special circuits, the main classes are 125, 250, 350, and 500 cc. World championships are awarded according to points won in Grand Prix and other races, such as the Tourist Trophy (TT) races on the Isle of Man (first held in 1907). **Motorcycle trials** are usually events in which a cross-country course has to be completed within a certain time, with points lost for stopping, touching the ground, etc. **Moto-cross** (or scrambling) takes place on a circuit marked out across rough country. See also DRAG RACING.

motorcycles Two-wheeled engine-powered vehicles. The concept of a steam-powered bicycle was first realized by S. H. Roper in the USA in the 1860s. However, the true forerunner of the modern motorcycle was Gottlieb Daimler's 1885 bicycle powered by an *Otto four-stroke engine. The first production model was Hildebrand and Wolfmüller's 1894 *Pétrolelette*. By 1900 there were some 11 000 motorcycles in France and by the start of World War I over 100 000 were registered in the UK. During the war, motorcycles were extensively used by both sides. The interwar period—the great era of the motorcycle—saw the development of many classic designs: the Harley-Davidson in the USA; the Brough Superior, Triumph Speed Twin, and Ariel Square Four in the UK; and the German DKW two-stroke and BMW four-stroke. All these were in military use in World War II. During and after the war some innovations

were made but the basic design remained unchanged. In the 1950s and 1960s interest in motorcycles in Europe and the USA declined; the motor scooter, a low-powered Italian-originated version of the motorcycle, and the moped, an engine-assisted bicycle, acquired some popularity. In the 1970s, the Japanese, exploiting the closure of European factories, developed a whole new range of motorcycles, based on European designs.

motor racing Racing in cars, from family saloons at club level to highly specialized Grand Prix vehicles. Early races, such as the 1895 race from Paris to Bordeaux and back, were held on roads, but since 1903 they have usually been held on closed-circuit courses, the first of which in England was Brooklands (1907) in Surrey. The most prestigious form of racing is Grand Prix (Formula One) racing, for which specially built single-seater vehicles are raced by professional drivers for manufacturers or private owners. The Drivers' World Championship (instituted in 1950) is awarded according to points won in certain Formula One races. **Sports-car racing** is for production-type or modified sports cars; the most famous sports-car race is the Le Mans 24 Hours. **Indy Car** racing originated with the Indianapolis 500 in 1911. **Autocross** races are amateur races over grass, while **rallycross** is a similar but more professional form, with races held on circuits that are half grass and half tarmac. See also DRAG RACING; KARTING.

mouflon A wild sheep, *Ovis musimon*, native to Corsica and Sardinia and introduced to other parts of Europe and to North America. Mouflons are about 65 cm high at the shoulder and males have large curved horns, a rump patch, and a white saddle on the back.

mould Any fungus that forms a fine woolly mass growing on food, clothing, etc. Examples are the bread mould and species of *Aspergillus* and *Penicillium*. See also SLIME MOULDS.

mountain ash A tree, *Sorbus aucuparia*, also called rowan, native to temperate Eurasia and commonly cultivated as an ornamental. Up to 15 m high, it has long leaves with numerous paired leaflets and large clusters of small cream flowers, which give rise to bright-scarlet berries with a bitter acid taste, used to make wine and jelly. The similar and related American species is *S. americana*. Family: *Rosaceae*.

mountain lion See COUGAR.

Mountbatten, Louis, 1st Earl Mountbatten of Burma (1900–79) British admiral

and colonial administrator; son of Prince Louis of Battenberg (1854–1921) and of Princess Victoria of Hesse-Darmstadt, the granddaughter of Queen Victoria. In World War II he was supreme Allied commander in SE Asia (1943–45), retaking Burma. As viceroy of India (1947) he presided over the transfer of power to India and Pakistan and was then governor general of India (1947–48). He was subsequently commander in chief of the Mediterranean fleet (1952–54) and first sea lord (1955–59), becoming an admiral in 1956. He died in Ireland, the victim of an IRA bomb.

Mounties See ROYAL CANADIAN MOUNTED POLICE.

Mount of Olives The highest point in a small range of four summits situated just E of Jerusalem. It features in the Old and New Testaments. Its W slope was the site of the Garden of Gethsemane. According to the Acts of the Apostles (12–12), Christ ascended to heaven from the Mount of Olives.

Mount Rushmore National Memorial

The gigantic sculpture of the heads of four US presidents—Washington, Jefferson, Lincoln, and Theodore Roosevelt—carved (1927–41) to the design of the sculptor Gutzon Borglum (1871–1941) on the NE cliffs of Mount Rushmore, South Dakota. Each head is about 18 m (60 ft) high.

mouse A *rodent belonging to the suborder *Myomorpha*. The house mouse (*Mus musculus*) is common in buildings worldwide. Greyish brown, it is 14–16 cm long including its tail (7–8 cm) and feeds on a variety of foods, from sugar and grain to oil-based paints and putty. Most mice—together with the rats—are grouped into the subfamilies *Murinae* of the Old World and *Cricetinae* of the New World (which also includes hamsters). There are separate subfamilies for African tree mice (*Dendromurinae*; 7 species), jumping mice (*Zapodinae*; 3 species), dormice, and other small groups.

mouse deer See CHEVROTAIN.

Mousterian A stone-tool industry of the Middle *Palaeolithic, associated with *Neanderthal man. Named after caves at Le Moustier in the Dordogne (SW France), the Mousterian occurs, with variants, throughout Eurasia from France to China and in N Africa. Spanning roughly the period of 70 000 to 35 000 BC, it is characterized by a wide variety of hand axes, scrapers, points, and blades.

mouthbrooder A fish belonging to one of several genera of *cichlid fishes. The eggs are

carried in the mouth of the parent, usually the female, until they hatch. Chief genera: *Tilapia*; *Haplochromis*; *Pelmatochromis*. Other mouthbrooders include certain *fighting fish, *catfish, and cardinal fish.

mouth organ See HARMONICA.

Moyle A district in Northern Ireland, in Co Antrim. Area: 494 sq km (191 sq mi). Population (2004 est): 16 424.

Mozambique, Republic of (Portuguese name: Moçambique) A country in S East Africa, bordering on the Indian Ocean. Extensive coastal plains rise to plateaus inland with mountains reaching over 2000 m (6500 ft). The chief rivers, notably the Zambezi and Limpopo, flow E and provide both irrigation and hydroelectric power. Most of the population is African, mainly Bantu. *Economy*: chiefly agricultural, the staple food crops being rice and maize. The main cash crops of cashew nuts, cotton, and sugar are also the principal exports. Industry is based largely on food processing and textiles. Mineral resources, including natural gas and high-grade iron ore, are largely unexploited except for coal and bauxite. By the late 1990s government moves to deregulate the economy and attract foreign investment had resulted in a spectacular burst of growth. *History*: the N coast was settled by Arabs from the 10th century and was explored by Vasco da *Gama in 1498, becoming a Portuguese colony in the early 16th century. In 1951 it became an overseas province of Portugal. From 1963 FRELIMO (Frente de Libertação de Moçambique) waged a guerrilla campaign that achieved the establishment (1975) of an independent socialist republic under Samora Machel (1933–86). From 1977 the South African-backed Mozambique National Resistance (Renamo) applied military pressure in Mozambique; it was recognized as a legitimate political party in 1991, following the introduction of multiparty democracy (1990). A peace treaty ending the civil war was concluded in 1992. Mozambique joined the Commonwealth in 1996, the first member state to have no historic links with the UK. In 2000 and 2001 Mozambique was devastated by cyclones and flooding. In 2004 Joaquim Chissano, president since 1986, stood down; he was replaced by Armando Emilio Guebuza. Official language: Portuguese. Currency: metical of 100 centavos. Area: 784 961 sq km (303 070 sq mi). Population (2007 est): 20 905 585. Capital: Maputo.

Mozart, Wolfgang Amadeus (1756–91) Austrian composer, born in Salzburg, the son

of the violinist and composer Leopold Mozart (1719–87). Mozart exhibited extraordinary musical talent at the age of four; in 1762 his father took him on a tour of Germany and to Paris and London, where he received adulation for his abilities. After a period of unhappy service with the Archbishop of Salzburg (1779–81) he settled in Vienna as a freelance musician and teacher, composing such masterpieces as the operas *The Marriage of Figaro* (1786) and *Don Giovanni* (1787). Mozart achieved a fusion of the Germanic and Italianate styles of composition and his immense productivity enriched almost every musical genre. He composed 49 symphonies, over 40 concertos, 6 string quintets, 26 string quartets, numerous divertimenti, piano sonatas, violin sonatas, and much other music. Some of his finest works, such as the operas *Così fan tutte* (1790) and *The Magic Flute* (1791) and the *Jupiter* symphony (1788), were written in the last years of his life.

MRI See MAGNETIC RESONANCE IMAGING.

Mubarak, (Mohammed) Hosni (Said) (1928–) Egyptian statesman; president (1981–). A general, he commanded (1972–75) the Egyptian air force in the Yom Kippur War against Israel (1973). He became vice president to Anwar *Sadat in 1975 and succeeded him on his assassination. A modernizing pragmatist, he has contained inflation and improved relations with the USA and Arab countries.

mucous membrane A moist membrane that lines the digestive and respiratory tracts and the nasal sinuses. It is a type of epithelium containing cells that secrete **mucus**, a slimy substance that protects its surface and—in the digestive tract—also lubricates the passage of food and faeces. In the bronchi the mucus traps dust particles and bacteria that are inhaled with air.

Mudéjars (Arabic: vassal) The Muslims (see MOORS) of Spain who had, by the 13th century, become subject to Christian rule during the reconquest of the Iberian peninsula. Many were of mixed *Berber and Spanish descent and continued to preserve their Islamic religion and customs. They created an architectural style notable for its ornamental brickwork and use of ceramic tiling. Many examples survive in Castile and Aragon.

mudskipper A fish of the subfamily *Periophthalminae*, especially the genus *Periophthalmus*, found in swamps, estuaries, and mud flats of Africa, Polynesia, and Australia. Mudskippers have an elongated body, up to 30 cm long, a blunt head, and dorsally protruding eyes.

They are able to climb and walk over land using their limblike pectoral fins. Family: *Gobiidae* (see GOBY).

Mugabe, Robert (Gabriel) (1925–) Zimbabwean statesman; prime minister (1980–87); president (1988–). He helped found the Zimbabwe African National Union (ZANU) in 1963 and, after ten years' (1964–74) detention in Rhodesia, formed the Patriotic Front (PF) with Joshua Nkomo, leader of the Zimbabwe African People's Union (ZAPU). They waged guerrilla warfare against the governments of Ian Smith and then Bishop Muzorewa until the peace talks of 1979–80. His party's election victory (1980) brought Mugabe the leadership of Zimbabwe. Subsequently he restricted opposition, creating (1987) a one-party state. In the late 1990s his authoritarian rule and deepening recession provoked protests. His policy of condoning the illegal seizure of White-owned farms by Black militants led to international criticism in 2000; he was re-elected amid accusations of fraud in 2002.

Muhammad See MOHAMMED.

Muir, Edwin (1887–1959) Scottish poet. Born in Orkney, he moved to Glasgow in 1901 and to London in 1919. During the 1930s he and his wife Willa moved to Prague, where they translated the novels of Franz *Kafka. His reputation as a poet was established with *The Voyage* (1946) and *The Labyrinth* (1949).

mulberry A tree of the genus *Morus* (12 species), native to N temperate and subtropical regions. The black mulberry (*M. nigra*) is the species most commonly cultivated for its fruit. About 12 m high, it has toothed heart-shaped leaves and round green flower clusters (catkins). The female flowers give rise to a blackberry-like fruit, which is used in jellies, desserts, etc. The leaves of the white mulberry (*M. alba*) are the staple food of silkworms. Family: *Moraceae*.

mule The sterile offspring of a female horse and a male ass. Mules are useful pack and draught animals, being sure-footed and strong but smaller than horses.

Mull An island off the W coast of Scotland, in the Inner Hebrides. It is chiefly mountainous; some sheep and cattle are raised. Other occupations include fishing, forestry, and tourism. Area: 909 sq km (351 sq mi). Population (1991): 2708. Chief town: Tobermory.

mullein A biennial or perennial herb of the genus *Verbascum* (about 300 species), native to N temperate Eurasia. The biennial common

m

mullein (*V. thapsus*), also called Aaron's rod, occurs in dry limy regions. 0.6–2 m tall, it bears woolly leaves and yellow flowers. Some species, including the European dark mullein (*V. nigrum*), are garden plants. Family: *Scrophulariaceae*.

mullet A food fish, also called grey mullet, belonging to the genus *Mugil* (about 70 species), found in temperate and tropical coastal waters and estuaries. It has a slender silvery-green or grey large-scaled body, 30–90 cm long, with two dorsal fins. Family: *Mugilidae*; order: *Perciformes*.

multimedia system A computer system capable of producing high-quality moving pictures and sound, as well as text, usually from information stored on a compact disc.

multiple sclerosis A chronic and usually progressive disease of the nervous system in which the fatty sheaths that surround the nerves in the brain or spinal cord are destroyed. The disease is also called disseminated sclerosis, as its effects are disseminated in different parts of the body. It usually begins in young adults, and the commonest initial symptoms are sudden severe blurring of the vision or weakness in one limb. The disease usually recurs, causing permanent handicap.

Mumbai See BOMBAY.

munners' play An English folk drama based on the legend of St George and the Seven Champions of Christendom; it was a dumb show (*mummer*, from Middle English *mun*, silent), traditionally enacted on Christmas Day by masked performers.

mummy A human or animal body prepared and embalmed for burial according to ancient Egyptian religious practice. The internal organs were extracted and sealed in Canopic jars and the body was desiccated by packing in dry natron, anointed, and encased in linen bandages.

mumps An acute virus infection that usually occurs in children. After an incubation period of 12 to 20 days the child develops headache and fever; later, the parotid salivary glands (situated under the ear) become tender and swollen. The disease is usually mild and resolves rapidly. In adult male patients the infection may spread to the testicles, which may occasionally lead to sterility.

Munch, Edvard (1863–1944) Norwegian painter and printmaker, who was a major influence on 20th-century German *expressionism. His symbolic paintings of love, death, and

despair, including the famous *Cry* (1893; Nasjonalgalleriet, Oslo), reflect the pessimism caused by family tragedy.

München Gladbach See MÖNCHENGLADBACH.

Münchhausen, Karl Friedrich, Freiherr von (1720–97) German soldier and raconteur. His hyperbolic accounts of his feats passed into legend and were the subject of a series of adventure tales, *The Adventures of Baron Münchhausen* (1793), written by R.E. Raspe (1737–94).

mung bean A *bean plant, *Phaseolus aureus*, also known as green gram, native to India and cultivated in tropical and subtropical regions chiefly as a vegetable crop. The slender pods contain up to 15 small edible seeds, which can be dried and stored or germinated in the dark to produce bean sprouts. Family: *Leguminosae*.

Munich (German name: München) 48 08N 11 35E A city in S Germany, the capital of Bavaria on the River Isar. It has a 13th-century cathedral and many baroque and rococo buildings. It is also noted for its annual Oktoberfest (beer festival). A centre of commerce, industry, and tourism, its manufactures include precision instruments, electrical goods, chemicals, and beer. *History*: Munich was from 1255 the residence and from 1506 the capital of the Dukes of Bavaria (from 1806 Kings). The Nazi movement began here in the 1920s. Population (1999 est): 1 193 600.

Munich Agreement (1938) The settlement, resulting from the conference between Neville Chamberlain (UK), Daladier (France), Hitler (Germany), and Mussolini (Italy), that recognized Hitler's territorial claims to the *Sudetenland. Described by Chamberlain as achieving "peace in our time," it was followed in March 1939 by Hitler's invasion of Czechoslovakia and in Sept by World War II.

Münster 51 58N 7 37E A city and port in NW Germany, in North Rhine-Westphalia on the Dortmund-Ems Canal. It was a member of the Hanseatic League and the capital of the former province of Westphalia. It has a 13th-century cathedral and a university (1773). Service industries provide employment for most of the workforce. Population (1999 est): 264 700.

Munster A province and ancient kingdom of the SW Republic of Ireland. It consists of the counties of Clare, Cork, Kerry, Limerick, Tipperary, and Waterford. Area: 24 125 sq km (9315 sq mi). Population (2002): 1 101 266.

muntjac A small deer belonging to the sub-

family *Muntiacinae* (6 species), occurring in forests of Asia, Sumatra, Java, and Borneo. The Indian muntjac (*Muntiacus muntjak*), also called barking deer or rib-faced deer, is 55 cm high at the shoulder with short unbranched antlers and short sharp fangs. Muntjacs are mainly solitary and nocturnal.

muon A negatively charged unstable elementary particle (lifetime 2×10^{-6} second; mass 207 times that of the electron) that decays into an electron and two μ -neutrinos. It has a corresponding antiparticle. The muon was originally thought to be a meson (and was called the mu-meson) but is now classified as a lepton. See PARTICLE PHYSICS.

mural painting The decoration of walls and ceilings by such varied techniques as encaustic, tempera, and μ -fresco painting. μ -Renaissance painters often used perspective and architecture in their murals to create the illusion that the painted walls or ceilings were space extensions of the real architecture. Mural painting was revived during the 20th century, principally by the Mexican painters μ -Rivera, Orozco, and Siqueiros, who used it to reach a wider public with their social and political subject matter.

Murdoch, Dame Iris (1919–99) British novelist and philosopher. Born in Dublin, she studied and taught philosophy at Oxford; her philosophical works include *Sartre* (1953) and *Metaphysics as a Guide to Morals* (1992). Her novels, which explore moral and philosophical dilemmas, include *The Bell* (1958), *A Severed Head* (1961), *The Sea, the Sea* (1978), which won the Booker Prize, *The Good Apprentice* (1985), and *Jackson's Dilemma* (1995). Her last years were clouded by Alzheimer's disease.

Murdoch, (Keith) Rupert (1931–) US media entrepreneur, born in Australia. His News International Group owns *The Times* and *The Sun*. He is also chairman of 20th Century-Fox, HarperCollins publishers, and British Sky TV.

murex A μ -gastropod mollusc belonging to the family *Muricidae* (about 1000 species), mainly of tropical seas. Murex shells are elaborately ornamented with spines and frills; the snail feeds on other molluscs by drilling holes in their shells and extracting the flesh with its long proboscis.

Murillo, Bartolomé Esteban (1617–82) Spanish painter. He spent most of his life in Seville, working for the religious orders and helping to found the Spanish Academy (1660),

of which he became first president. After abandoning his early realism, he painted urchins and religious scenes in an idealized style influenced by Rubens and the Venetians.

Murmansk 68 59N 33 08E A port in NW Russia, on the Kola inlet of the Barents Sea (see KOLA PENINSULA). Its ice-free harbour was formerly an important fishing base but has now declined. The surrounding area is amongst the most polluted in the world, having served as a dump for nuclear waste. Population (1999 est): 382 700.

Murphy-O'Connor, Cormac, Cardinal (1932–) British Roman Catholic churchman. He succeeded Basil Hume as Archbishop of Westminster in 2000 and was created a cardinal in 2001.

Murray, Sir James (Augustus Henry) (1837–1915) British lexicographer. After joining the Philological Society and editing some early English texts, he was in 1878 appointed editor of the *New English Dictionary on Historical Principles* (later called the *Oxford English Dictionary*), to which he devoted the rest of his life.

Murray River The chief river in Australia. Rising near Mount Kosciuszko, in New South Wales, it flows generally W and S forming the boundary between Victoria and New South Wales. It enters Encounter Bay on the Indian Ocean through Lake Alexandrina. The main tributaries are the Darling and Murrumbidgee Rivers; it also receives water from the Snowy Mountains hydroelectric scheme. Length: 2590 km (1609 mi).

Murrumbidgee River A river in SE Australia, rising in the Eastern Highlands in New South Wales and flowing through the Australian Capital Territory before entering the Murray River. Length: 1690 km (1050 mi).

Muscat 23 37N 58 38E The capital of Oman, on the Gulf of Oman. Most port traffic is now handled at Matrah to the NW. There is an oil terminal to the W. Population (1993): 51 969.

muscle Tissue that is specialized to contract, producing movement or tension in the body. It contains long spindle-shaped cells (muscle fibres) that convert chemical energy (see ATP) into mechanical energy. Most of the body's musculature consists of voluntary muscle, which is consciously controlled via the central nervous system. It is also known as skeletal muscle (because it is attached to the bones) and striated (or striped) muscle (because of its banded appearance under the microscope). Individual muscles are made up of bundles of

fibres enclosed in a strong fibrous sheath and attached to bones by tendons. Involuntary muscle occurs in the walls of hollow organs, such as blood vessels, intestines, and the bladder. It is responsible for movements not under conscious control and is regulated by the autonomic nervous system. Cardiac muscle is a special type of muscle found only in the heart: its rhythmic contractions produce the heartbeat.

muscovite See MICAS.

muscular dystrophy A group of chronic and progressive disorders characterized by wasting and weakening of the muscle fibres. The disease is inherited and the commonest type, Duchenne muscular dystrophy, affects predominantly boys. There is no specific treatment but physiotherapy and orthopaedic measures can help.

Muses In Greek mythology, the nine patrons of the arts and sciences, daughters of Zeus and *Mnemosyne. Calliope was the muse of epic poetry; Clio, history; Euterpe, flute playing and music; Erato, love poetry and hymns; Terpsichore, dancing; Melpomene, tragedy; Thalia, comedy; Polyhymnia, song and mime; and Urania, astronomy.

mushroom The umbrella-shaped spore-forming body produced by many fungi. (Sometimes the word toadstool is used for those species that are inedible or poisonous, mushroom being restricted to the edible species.) It consists of an erect stem (stipe) and a cap, which may be flat, conical, spherical, or cylindrical and has numerous radiating gills on its

undersurface in which the spores are produced. The well-known edible mushrooms belong to the genus *Agaricus*; they have a smooth white or scaly brown cap with gills that become deep brown at maturity.

musical instruments Devices used to produce music. In the orchestra musical instruments are grouped into families. The *stringed instruments (*or* strings) include the violin, viola, cello, double bass, and harp (see also PIANO). The wind instruments are divided into the woodwind (flute, clarinet, oboe, and bassoon) and brass (horn, trumpet, trombone, and tuba). The percussion instruments include the triangle, cymbals, xylophone, timpani, and other instruments. Many instruments are used chiefly in jazz or pop (e.g. guitar, vibraphone, and maracas) while others, such as the Indian sitar, feature predominantly in the music of particular countries.

music hall In England, a type of popular entertainment featuring a variety of performers including singers, dancers, comedians, and conjurers. It attained its greatest popularity at the end of the 19th century and declined in the 1920s and 1930s with the rise of the cinema and the radio. Notable music-hall performers included Marie *Lloyd, Vesta Tilley, and Harry *Lauder. The US equivalent was known as vaudeville. Celebrated vaudeville performers included W. C. *Fields and Will Rodgers (1879–1935).

musk A perennial plant, *Mimulus moschatus*, native to North America and grown as an orna-

musical instruments. The range of some musical instruments shown on a piano keyboard.

mental for its musky fragrance. 20–60 cm tall, it has oval leaves and tubular yellow flowers. The name is also applied to several other plants with a musky odour including the musk mallow (*Malva moschata*) and musk rose (*Rosa moschata*).

musk deer A small solitary deer, *Moschus*

moschiferus, found in mountain forests of central Asia. Musk deer are about 60 cm high at the shoulder with long hind legs; males have no antlers but grow long fangs. The secretion of their musk gland is used in the manufacture of perfumes.

musket A smoothbore firearm fired from

the shoulder. The earliest form, known as a *harquebus* (or *arquebus*) evolved in the 15th century as the first hand-held form of the *cannon. In the second half of the 16th century a Spanish general invented a heavy shoulder weapon with a sufficiently large charge to penetrate armour. This musket still relied on the matchlock, it was not until the mid-17th century that wheellocks and flintlocks were adopted for military use. The next landmark in the development of the musket was the percussion cap at the beginning of the 19th century, which led to the breech-loading musket with cartridge and percussion-cap ammunition.

In the matchlock, a slow-burning match was forced into the powder pan by the arm when the trigger was pressed.

In the wheellock, the flint or iron pyrites was lowered onto a serrated wheel when the trigger was pressed. The sparks produced ignited the charge in the pan. The wheel, wound up by a key, also rotated when the trigger was pressed.

In the flintlock, pressing the trigger caused the flint to strike a hinged steel plate, forcing it back to expose the powder in the pan to the sparks.

The percussion cap, containing mercury fulminate, was struck by the hammer when the trigger was pressed. The flame produced passed through the hollow nipple into the vent, where it fired the main charge.

musket. The types of lock mechanism used in muzzle-loaders.

tion. Muskets were superseded by *rifles in the mid-19th century.

musk ox A large hoofed mammal, *Ovibos moschatus*, inhabiting the Arctic tundra of North America. About 150 cm high at the shoulder, musk oxen have long dark shaggy hair and prominent curved horns. Bulls have a strong musky scent in the rutting season. Family: *Bovidae*.

muskrat A large North American water *vole, *Ondatra zibethica*, also called musquash. It grows up to 35 cm long, excluding its black hairless tail, and its soft glossy coat is used in the fur trade. Muskrats inhabit marshland and feed on water plants, mussels, and crayfish. Family: *Cricetidae*.

muslin A smooth delicately woven cotton fabric. Originally made in Mosul in Mesopotamia (hence its name), it is used for dresses and curtains. In the USA coarser cotton fabrics used for shirts and sheeting are also called muslins.

musquash See MUSKRAT.

mussel A *bivalve mollusc belonging either to the family *Mytilidae* (marine mussels) or the superfamily *Unionacea* (freshwater mussels). Marine mussels have wedge-shaped shells measuring 5–15 cm. The edible mussel (*Mytilus edulis*) is an important seafood. Freshwater mussels inhabit ponds, lakes, and streams.

Musset, Alfred de (1810–57) French poet and dramatist, one of the major figures of the Romantic movement. He published his first volume of poetry, *Contes d'Espagne et d'Italie*, at the age of 20. His autobiographical *La Confession d'un enfant du siècle* (1836) includes an account of his love affair with George *Sand.

Mussolini, Benito (Amilcare Andrea) (1883–1945) Italian fascist dictator. His support of Italian participation in World War I led to his expulsion from the Socialist Party (1915). In 1919 he formed the *Fasci di combattimento* (Blackshirts) in Milan and came to power following the March on Rome (1922). He was prime minister but gradually (1924–29) established a dictatorship. As *duce* ("leader") his policies initially impressed the Italian people. However, his expansionist foreign policy, especially his alliance with Hitler, brought him increasing unpopularity. In 1939 he annexed Albania and after the outbreak of World War II he declared war on France and Britain (June 1940). The Italian war effort was disastrous; following the Allied invasion of Sicily, Mussolini was forced to resign (July 1943). Rescued by the

Germans to head a new fascist republic in N Italy, he was subsequently captured and shot by Italian partisans.

Mussorgski, Modest Petrovich (1839–81) Russian composer. An army officer and civil servant, he had little formal training. His masterpieces are the opera *Boris Godunov* (1868–72), the piano work *Pictures at an Exhibition* (1874), and the orchestral tone poem *A Night on the Bare Mountain* (1860–66).

mustang The wild horse of North America. Mustangs are descended from the domesticated European stock of Spanish settlers and have become tough and small in the harsh conditions. Many were caught and tamed by cowboys and Indians, including the Mustang tribe.

mustard Any of various annual herbs of the genus *Brassica* and closely related genera, native to Europe and W Asia and cultivated chiefly for their seeds—source of the condiment mustard. They have deeply lobed leaves and terminal clusters of yellow flowers. The leaves may be used as fodder, fertilizer, vegetables, or herbs. The main species are the white or yellow mustard, *Sinapis alba* (or *B. hirta*), black or brown mustard (*B. nigra*), and Indian mustard (*B. juncea*).

mutation A change in the hereditary material (see DNA) of an organism, which results in an altered physical characteristic. A mutation in a germ cell is inherited by subsequent generations of offspring; a change in any other cell (somatic cell) affects only those cells produced by division of the mutated cell. Gene mutations result from a change in the bases of the DNA molecule; chromosome mutations may be due to the addition or subtraction of bases and can usually be seen under a microscope. Both types of mutation affect the *genetic code and hence the corresponding function of the genes.

Very occasionally, mutations occur spontaneously and at random. They can also be induced by certain chemicals, ionizing radiation (such as X-rays), and by ultraviolet light. Most nonlethal mutations are of no benefit to the organism, but they do provide an important source of genetic variation in the population on which natural selection can act, which eventually results in the *evolution of new species.

mute swan An Old World *swan, *Cygnus olor*, found in marshy areas and estuaries and, as a semidomesticated ornamental bird, on rivers and lakes. It is 160 cm long and has a long neck, white plumage, black legs, and an orange

bill with a black base. It is less vocal than other swans.

mutualism See SYMBIOSIS.

MX missile A US nuclear strategic missile with a range of 9650 km (6000 mi). Carrying 10 warheads, the MX missile was developed in response to the vulnerability of the concrete underground silos in which other ICBMs are housed. The MX missile can be launched from ships, aircraft, submarines, mobile land launchers, or from specially reinforced silos.

Myanmar, Union of (name until 1989: Socialist Republic of the Union of Burma) A country in SE Asia, on the Bay of Bengal and the Andaman Sea. Most of the population is Burmese, with minorities including the Shan, Karen, and Chachin peoples. *Economy:* the main crop is rice. Half the land is under forest and teak is a valuable export; other exports are rice, rubber, and jute. Myanmar is thought to be the world's largest producer of opium. There is some mining, especially lead and zinc, and petroleum is produced and refined. Tourism increased tenfold during the 1990s. *History:* by the 13th century the Burmese had developed a civilization based on Hinayana Buddhism. After successive wars Burma came under British rule in 1885 as part of British India. In 1937 it attained a measure of self-government and was separated from India. In World War II it was occupied by Japanese forces. In 1948 it became a republic outside the Commonwealth. In 1962 parliamentary democracy was overthrown in a military coup led by Gen U Ne Win. The 1990 elections were won by the National League for Democracy, led by *Aung San Suu Kyi, who had been held under house arrest since 1989. However, the military refused to hand over power and suppressed opposition activity. Repeatedly released and rearrested since 1995, Suu Kyi has continued to campaign for political change. Myanmar was admitted to the Association of South-East Asian States in 1997. In 2005–06 the regime moved the country's capital from Rangoon to a new site at Naypyidaw. Official language: Burmese. Currency: kyat of 100 pyas. Area: 678 000 sq km (261 789 sq mi). Population (2007 est): 47 373 958. Capital: Naypyidaw.

Mycenae An ancient citadel in the Peloponnese (S Greece). Famed in legend as the home of *Agamemnon, Mycenae attained its zenith between 1600 and 1200 BC. Massive fortifications attest Mycenae's military readiness and exquisite bronze, gold, and silver articles from its royal graves indicate affluence.

Mycenaean civilization The civilization of Bronze Age Greece. It developed after about 1650 BC in mainland centres, such as *Mycenae and Pylos, and after 1450 BC its influence extended to Crete. The Mycenaeans were a warrior aristocracy. They spoke a form of Greek, used *Linear B script, and lived in palaces decorated with frescoes and equipped with luxury goods. About 1200 BC the palaces were destroyed, but Mycenaean culture survived until about 1100 BC.

mycology The branch of biology dealing with the study of fungi. Mycology was established as a separate discipline in the early 19th century, when the Swedish botanist Elias Fries (1794–1878) published the first scientifically based classification of the fungi (1821–32).

mycorrhiza A close association between a fungus and the roots of a higher plant that is beneficial to both participants (see SYMBIOSIS). The plant benefits by more efficient uptake of nutrients, and the fungus obtains carbohydrates and other nutrients from the plant.

mynah A songbird belonging to a genus (*Acridotheres*) native to SE Asia. Mynahs usually have a dark plumage with bright wattles on the face. They feed chiefly on the ground and eat the insects found on cattle. The common mynah (*A. tristis*) has become a pest in some regions. The popular cagebird that mimics human speech is a related species, the hill mynah (*Graculus religiosa*). Family: *Sturnidae* (starlings).

myocardial infarction Death of part of the heart muscle: the cause of what is popularly described as a heart attack. This usually results from *atherosclerosis. The patient usually experiences sudden severe central chest pain, which may spread to the neck and arms and is usually accompanied by sweating and nausea.

myopia See SHORTSIGHTEDNESS.

Myron (5th century BC) Athenian sculptor. His *Discus-Thrower* and *Marsyas*, described by ancient critics, are known through Roman copies.

myrrh An aromatic yellow to red gum resin obtained from small tropical thorny trees of the genus *Commifera*, especially *C. myrrha*, *C. molmol*, and *C. abyssinica*, native to Africa and SW Asia. It is used in incense, perfumes, cos-

metics, dentistry, and pharmaceuticals. Family: *Commiphoraceae*.

myrtle An evergreen shrub of the genus *Myrtus* (over 100 species). The common myrtle (*M. communis*), native to the Mediterranean area and W Asia, may grow to a height of 5 m. It has aromatic dark-green shiny leaves, fragrant five-petalled white flowers, and blue-black berries. Its oil is used in perfumery. Family: *Myrtaceae*. Other plants known as myrtle include the sweet gale.

Mysore 12 18N 76 37E A city in India, in Karnataka. Industries include textiles, chemicals, and food processing and it has a university (1916). Population (1991): 480 692.

mystery plays See MIRACLE PLAYS.

mysticism Belief in a type of religious experience in which the individual claims to achieve immediate knowledge of or temporary union with God. Mysticism is an element in most theistic traditions. The usual preliminary is strict asceticism. St *Francis of Assisi, St *Teresa of Avila, and Julian of Norwich (c.1342–c.1413) are among the many famous Christian mystics. Official Church attitudes have alternated between regarding mysticism as a special spiritual grace and suspecting it of verging on *Gnosticism, *pantheism, or *Neoplatonism.

mythology Imaginative poetic stories, traditions, etc., concerning religious beliefs, gods, and supernatural and heroic human beings. Mythology often involves a cosmogony—an attempted explanation of the origin of the universe, of mankind, or of a particular race or culture. The term also refers to the formal study of such stories, traditions, etc. Anthropology and psychoanalysis have thrown new light on the function of myths. Among primitive peoples they serve to provide an explanation or justification for social institutions. They also appear to embody universal values or patterns with regard to human psychology. The mythologies of particular cultures have provided the material of much of the world's great literature and art.

myxomatosis An infectious disease of rabbits and hares that is caused by a virus. Symptoms include swollen eyes, nose, and muzzle, closed eyelids, and fever. The disease, which is usually fatal, was introduced to the UK and Australia during the 1950s as a pest-control measure.

Nabis (Hebrew: prophets) A group of French artists formed in Paris in 1888. The leading members—Paul Sérusier (1863–1927), Maurice Denis (1870–1943), Pierre *Bonnard, and Édouard Vuillard (1868–1940)—were united by their admiration for *Gauguin and Japanese prints. They disbanded in 1899.

Nabokov, Vladimir (1899–1977) US novelist, born in Russia. He achieved popular success with *Lolita* (1955), whose academic antihero lusts after young girls. His other novels include *The Defence* (1930), one of several originally written in Russian, *Pale Fire* (1962), and *Ada* (1969).

Na-Dené languages An American Indian language group. It includes the Athabascan, Tlingit, Haida, and Eyak subgroups.

nadir See ZENITH.

NAFTA See NORTH AMERICAN FREE TRADE AGREEMENT.

naga In Hindu mythology, one of a race of minor serpent deities. Vishnu is often portrayed sleeping on the naga Sesha, and there is a Buddhist legend of a naga raising the Buddha on its coils above a flood sent to prevent his attaining enlightenment. Nagas are depicted as half-snake and half-human, as many-headed cobras, or in human form posed beneath a canopy of cobras.

Nagasaki 32 45N 129 52E A port in Japan, in W Kyushu. On 9 August 1945, the second atomic bomb was dropped on Nagasaki, killing or wounding about 75 000 people. Population (1995): 438 724.

Nagorno-Karabakh An administrative region in Azerbaidzhan. Formed in 1923, it is populated by Christian Armenians (76%) and Muslim Azerbaidzhanis. It has metal and mineral deposits but is chiefly agricultural. In the late 1980s the Armenians' agitation for union with Armenia led to riots and the declaration

of a state of emergency (1990). In 1991 fighting broke out between Armenian and Azerbaidzhani forces; a ceasefire was agreed in 1994 but peace talks have yet to produce any significant result. Area: 4400 sq km (1700 sq mi). Population (latest est): 193 300. Capital: Stepanakert.

Nagoya 35 8N 136 53E A port in Japan, in SE Honshu. The fourth largest city in the country, it was rebuilt after bombing in 1945. Population (1995): 2 152 258.

Nagpur 21 10N 79 12E A city in India, in Maharashtra. Founded in the early 18th century, it fell under British control in 1853. Population (1991): 1 622 225.

Nagy, Imre (1896–1958) Hungarian statesman, who led the revolutionary government of 1956. As prime minister (1953–55) Nagy promised numerous reforms. Opposed by Hungary's Stalinists, he was demoted and in 1956 expelled from the Communist Party. In the subsequent *Hungarian Revolution Nagy once more became prime minister but was deposed and executed by the Soviets.

Nahuatl The most widely used American Indian language of the Uto-Aztecan family, spoken in Mexico. It was the language of the *Aztecs and *Toltecs. The Nahua people are slash-and-burn cultivators, growing maize, beans, tomatoes, and chilis.

Naipaul, Sir V(idiadhur) S(urajprasad) (1932–) British novelist and writer, born in the West Indies. A witty ironic tone characterizes such early novels as *A House for Mr Biswas* (1961). Later novels include *A Bend in the River* (1979), *The Enigma of Arrival* (1987), and *Half a Life* (2001). Non-fiction works include *A Turn in the South* (1989) and *Beyond Belief* (1998). He was awarded the Nobel Prize for Literature in 2001.

Nairobi 1 17S 36 50E The capital of Kenya, situated just S of the equator. It is the trading

centre of a fertile agricultural region. Population (2004 est): 2 504 400.

Namib Desert A desert chiefly in W Namibia, extending some 1600 km (994 mi) along the Atlantic coast. It is almost devoid of population.

Namibia, Republic of (name until 1968: South West Africa) A country in SW Africa. The narrow coastal plains of the Namib Desert rise to the central plateau, with the Kalahari Desert to the N. Most of the population is African, the largest group being the Ovambo. *Economy:* chiefly subsistence agriculture. Fishing is important, especially for pilchards. Rich mineral resources include diamonds (the main export), uranium, copper, lead, and zinc. The economy remains highly dependent on South Africa. *History:* a German protectorate from 1884, during World War I it surrendered (1915) to South Africa, which administered South West Africa under a League of Nations mandate. In 1966 South Africa refused to acknowledge that the mandate was at an end and was condemned by both the UN and the militant South West Africa People's Organization (SWAPO). In 1985 South Africa installed an interim administration in Namibia as a first step towards granting independence (achieved in 1990); Walvis Bay was returned to Namibia in 1994. SWAPO candidates won multiparty elections held in 1989 and Sam Nujoma became president. He was succeeded by Hifikepunye Pohamba in 2005. Namibia joined the Commonwealth in 1990. Official languages: Afrikaans and English. Currency: Namibian dollar of 100 cents. Area: 824 269 sq km (318 261 sq mi). Population (2007 est): 2 055 080. Capital: Windhoek.

Nanak (1469–1539) Indian founder of *Sikhism. Born near Lahore, he settled finally in Kartarpur, where he attracted a large community of disciples. His teachings are contained in a number of hymns.

Nancy 48 42N 6 12E A town in NE France, on the River Meurthe. The former capital of the Dukes of Lorraine, it passed to France in 1766. Population (2004 est): 105 100.

Nanjing (Nan-ching or Nanking) 32 05N 118 55E A port in E China, on the Yangtze River. An ancient cultural centre, it was the centre of the Taiping Rebellion (1851–64). Population (2003 est): 2 966 047.

Nansen, Fridtjof (1861–1930) Norwegian explorer, zoologist, and statesman. In 1888 he led an expedition across the Greenland icefield and in 1893, in the *Fram*, set sail across the Arctic. In

1895, with F. J. Johansen (1867–1923), he left the ship and reached 18 14N, the nearest point to the North Pole then attained. He contributed to the League of Nations and pioneered the **Nansen passport**, an identification card for displaced persons (1922). He won the Nobel Peace Prize (1923).

Nantes 47 14N 135W A major port in W France, on the Loire estuary. It was here that the **Edict of Nantes**, guaranteeing religious toleration, was signed in 1598. Population (2004 est): 276 200.

Nantucket An island in the USA, off SE Massachusetts. A former whaling centre, it is now chiefly a resort. Length: 24 km (15 mi). Width: 5 km (3 mi). Population (latest est): 10 000.

napalm An inexpensive jelly consisting of a mixture of the aluminium salts of *napathenic acid* and *palmitic acid* used to thicken petrol so that it can be used in incendiary bombs and flame-throwers. It was used in World War II, the Korean War, and in Vietnam.

naphthalene (C₁₀H₈) A white crystalline aromatic hydrocarbon that occurs in coal tar. **Naphthol** (C₁₀H₇OH) is the hydroxy derivative. It consists of two isomers; the most important, beta-naphthol, is used in antioxidants for rubbers and dyes and in drugs.

Napier 39 29S 176 58E A port in New Zealand, in E North Island. It is the most important centre of New Zealand's wool trade. Population (2006 est): 57 000.

Napier, John (1550–1617) Scottish mathematician, who invented *logarithms. In 1614 he published a table of logarithms to the base e, now known as Napierian logarithms. Napier also produced an elementary calculating machine, known as **Napier's bones**.

Naples (Italian name: Napoli; ancient name: Neapolis) 40 50N 14 15E A city in S Italy, overlooking the Bay of Naples. It is an important port and a centre of tourism. Its many historic buildings include medieval castles, a gothic cathedral (13th–14th centuries), the 17th-century Royal Palace, and the university (1224). *History:* founded by Greek colonists about 600 BC, it fell to Rome in 326. It was under Byzantine rule (6th–8th centuries AD) and in 1139 it became part of the Norman kingdom of Sicily. Following the revolt known as the *Sicilian Vespers (1282), the Italian peninsula S of the Papal States became known as the kingdom of Naples (with Naples as its capital) until it fell to Garibaldi (1860) and was united with the rest of Italy (see also SICILY). From this time Naples

lagged economically behind the N, resulting in considerable poverty. The city was badly damaged during World War II. Population (2000 est): 1002 619.

Napoleon I (1769–1821) Emperor of the French (1804–15). Born Napoleon Bonaparte in Corsica, he became an artillery officer and rose to prominence in 1795, when he turned the guns of the Paris garrison on a mob. Shortly afterwards he married Josephine de Beauharnais and was appointed to command the French army in Italy (see REVOLUTIONARY AND NAPOLEONIC WARS). His Italian campaign (1796–97) brought the conquest of Milan and Mantua. Napoleon then obtained the Directory's support for his plan to break British imperial power by conquering Egypt and India. In Egypt his great victory of the Pyramids was undermined by Nelson's annihilation of a French fleet at the Battle of the Nile (1798) and in 1799 he returned unobtrusively to France. In the coup d'état of 18 Brumaire (9–10 November 1799) he became first consul; in 1802 he became consul for life and in 1804 had himself proclaimed emperor. His outstanding domestic achievement was the *Code Napoléon*, but Napoleon achieved immortal fame with his exploits abroad. In 1802 he negotiated the Treaty of Lunéville, which marked his defeat of the Austrians at Marengo, and the Treaty of Amiens with the British. Despite the disaster at *Trafalgar (1805), which forced him to abandon his plan for the invasion of Britain, his land victories, especially at *Austerlitz (1805), Jena (1806), and Friedland (1806), drew almost every continental power within the French orbit. However, an attempt to break the British by blockade (the Continental System) failed and the protracted *Peninsular War (1808–14) drained French resources. In 1812 Napoleon invaded Russia with half a million men, of whom nearly 400 000 died in the Russian winter. In 1813 Europe rose against Napoleon, inflicting a massive defeat at Leipzig that forced his abdication and exile to Elba. In 1815, however, he returned to France and attempted in the Hundred Days to regain his former greatness. He suffered a decisive defeat at *Waterloo and spent the rest of his life on St Helena. Napoleon's claim to the French Crown was pursued after his death by the son of his second marriage, to Marie Louise of Austria, who styled himself Napoleon II.

Napoleon III (1808–73) Emperor of the French (1852–70); nephew of Napoleon I. Napoleon used the prestige of his name to win the presidential election after the Revolution

of 1848. By a coup d'état at the end of 1851, he dissolved the legislative assembly and, a year later, declared himself emperor. His domestic policies fostered industry and transformed Paris. Abroad, his diplomacy embroiled France in the Crimean War (1854–56), in war against the Austrians in Italy (1859), and in a conflict in Mexico (1861–67). Finally, his aggressive stance towards Bismarck helped to cause the *Franco-Prussian War, in which the Second Empire was destroyed and Napoleon was driven into exile.

Neapolionic Wars See REVOLUTIONARY AND NAPOLEONIC WARS.

Narayan, R(asipuram) K(rishnaswamy) (1906–2001) Indian novelist and short-story writer. Writing in English and setting his stories in imaginary Malgudi, Narayan published such works as *Swami and Friends* (1935), *The Man-Eater of Malgudi* (1961), *Under the Banyan Tree* (1985), and *The Grandmother's Tale* (1993).

Narcissus (botany) A genus of perennial herbaceous plants (about 40 species), native to Eurasia and N Africa and widely planted in gardens and parks. Growing from bulbs, they produce erect flower stalks up to 30 cm high. The *daffodils (*N. pseudonarcissus*) have large solitary yellow flowers with trumpet-shaped crowns; the jonquils (*N. jonquilla*) have smaller pale-yellow flowers with small cuplike crowns. Family: Amaryllidaceae.

Narcissus (Greek mythology) A beautiful youth who was punished for rejecting the love of the nymph Echo by being made to fall in love with his own reflection in a pool. He died and was transformed into a flower.

narcotics Drugs that cause stupor or sleep and relieve pain by depressing activity of the brain. The term is used particularly for *opium and its derivatives (opiates), including morphine and codeine. Synthetic narcotics include heroin, methadone, and pethidine.

narwhal A gregarious Arctic toothed *whale, *Monodon monocoeros*, up to 5 m long and feeding on fish and squid. Male narwhals have a long straight spirally twisted tusk that grows to a length of 3 m; its function is unknown. Family: Monodontidae.

NASA (National Aeronautics and Space Administration) The US civilian agency, formed in 1958, that is responsible for all nonmilitary aspects of the US space programme. Its major projects have included the manned *Apollo moon programme, the manned space station

Skylab (launched 1973), reusable *space shuttles, and successful planetary probes.

Naseby, Battle of (14 June 1645) The battle in the English Civil War that decided Charles I's defeat. The *New Model Army under Fairfax and Oliver Cromwell routed Prince Rupert's royalist forces at Naseby, near Market Harborough, Leicestershire.

Nash, John (1752–1835) British architect of the Regency period. Under the patronage of the Prince of Wales (later George IV), Nash redeveloped parts of London, laying out Regent's Park as a formal park surrounded by curved terraces of houses with stucco façades. Regent's Street (1825) was designed to link the park with Westminster. In London Nash also built Carlton House Terrace (1833), laid out Trafalgar Square and St James's Park (1829), and redesigned *Buckingham Palace with the triumphal Marble Arch (1828) as its gateway. In Brighton he redesigned the Royal Pavilion as an oriental fantasy.

Nash, Paul (1889–1946) British painter. He became known for his symbolic war landscapes during World Wars I and II, the finest example being *Totes Meer* (1940–41; Tate Gallery). Nash was also a leading member of Unit One (1933), a group of artists dedicated to promoting modern art. His brother **John Nash** (1893–1977) produced fine watercolour landscapes and botanical illustrations.

Nashville 36 10N 86 50W A city in the USA, the capital of Tennessee. Founded in 1779, it is a centre of country and western music. Population (2000, with Davidson): 545 524.

Nasik 20 00N 73 52E A city in India, in Maharashtra. It is a major Hindu pilgrimage centre. Population (1991): 648 896.

Nassau 25 2N 77 25W The capital of the Bahamas, a port on New Providence Island. Built in 1729, it is an important tourist centre. Population (1999 est): 114 000.

Nasser, Gamal Abdel (1918–70) Egyptian statesman; prime minister (1954–56) and president (1956–70). An army officer, he helped to found the nationalist Free Officers group, which overthrew the monarchy in 1952. He became prime minister and then president of Egypt (United Arab Republic from 1958). His nationalization of the Suez Canal led to an unsuccessful Israeli and Anglo-French attack on Egypt (1956).

nasturtium An annual garden plant of the genus *Tropaeolum* (90 species), also called Indian cress, native to Central and South America. It

has orange, yellow, pink, or red flowers. *T. majus* is the most popular ornamental species. Family: *Tropaeolaceae*.

Natal 1. 5 46S 35 15W A port in NE Brazil, near the mouth of the Rio Potengi. It exports sugar, cotton, and carnauba wax. Population (2000, urban area): 709 422. 2. A former province in South Africa, extending from the Indian Ocean in the E to the Drakensberg Mountains in the W. Sugar cane is the major crop and timber is also important. Durban is the main industrial centre and port. Coal is the chief mineral. *History*: the Boers attempted to establish a republic in Natal (1838) but this was annexed by Britain in 1843 and with additions became a province of the Union of South Africa (1910). In 1994 it was replaced by the new region **KwaZulu/Natal**.

Natchez A Muskogean-speaking North American Indian tribe of the Lower Mississippi. They were cultivators who, like the *Creeks, built mound temples and worshipped the sun.

National Aeronautics and Space Administration See NASA.

National Curriculum The curriculum of subjects taught in state schools in England and Wales. Established by the Education Reform Act 1988, it comprises ten foundation subjects (eleven in Wales), three of which (the core subjects – English, maths, science) must be studied by all children from the age of five and taken at GCSE. Of the remaining subjects, design and technology, history or geography, and a modern language are a compulsory part of secondary education; music and art are optional. Physical education is also taught. Children are formally tested at the ages of 7, 11, 14, and 16. In addition to the National Curriculum, all schools must provide religious education and (from 2002) lessons in citizenship.

national debt The money that a government borrows; together with the revenue from taxation it makes up the government's income. In the UK, the funded debt consists of money that the government does not have to repay on a fixed date; it makes up about 10% of the national debt. The unfunded debt consists of the floating debt (e.g. treasury bills), gilt-edged securities, and such savings as Savings Bonds. Money borrowed as unfunded debt has to be repaid on a fixed date.

National Gallery An art gallery in Trafalgar Square (London), containing the largest collection of paintings in the UK. Founded for the

nation in 1824, it was housed in Pall Mall until William Wilkins (1778–1839) built the present premises (1832–38). An extension, designed by Robert Venturi, opened in 1991.

National Health Service (NHS) A comprehensive medical service in the UK, financed primarily by taxation. The National Health Service Act (1946), implemented in 1948, covered all aspects of health care except that of the school child and the worker. Complaints that the structure and policies of the NHS did not facilitate medical advance, together with rising costs, led to substantial reorganization of the Service in 1974, 1982, 1988, 1990, 1999, and 2003. In England overall responsibility lies (from 1988) with the secretary of state for health. The service is administered (since 1996) by Health Authorities, which combine the functions of the old District Health Authorities and Family Health Service Authorities. In Wales and Scotland responsibility now lies (since 1999) with the devolved bodies, while administration lies with Health Authorities (in Wales) or Health Boards (in Scotland). In 1990 legislation was passed enabling hospitals to opt to be run by self-governing NHS trusts, which are funded by selling their services to Health Authorities and fund-holding GPs. In 1999 the Labour government replaced GP fund-holding with a system of primary care groups (see HOSPITAL). Long waiting lists, a shortage of nurses, and the dilapidated state of some hospitals have led many to conclude that after 50 years the NHS is no longer working as it should. Plans to increase annual spending on the NHS by 43% within five years were announced in 2002.

National Insurance A UK insurance scheme providing funds to pay for the National Health Service and social security benefits. Contributions from employees, employers, the self-employed, and the government are paid into the National Insurance Fund, from which the benefits (including income support, maternity, and child benefits as well as retirement pensions) are paid. Under the State Earnings-Related Pension Scheme (SERPS) of 1978, contributions to retirement pensions are related to earnings, and pensions are index-linked. People who wish to opt out of SERPS may subscribe to a personal, occupational, or (from 2001) stakeholder pension scheme. From 2003 SERPS will be slowly phased out in favour of the State Second Pension, a flat-rate scheme. In 2020 the pension age for men and women will be equalized at 65.

nationalization The policy of taking into

public ownership industries that were privately owned. In the UK after World War II, Attlee's Labour government (1945–51) nationalized those industries in which competition appeared wasteful and those war-damaged enterprises needing huge injections of capital (e.g. coal, railways). Most of these industries were returned to the private sector in the 1980s and 1990s by Conservative governments.

National Portrait Gallery An art gallery in London founded in 1856 to house portraits that are authentic likenesses of famous personalities in British history. The main gallery is in St Martin's Place, adjacent to the National Gallery, and there are annexes in Carlton House Terrace and at Montacute House, Somerset. A major extension opened in 2000.

Nationals An Australian political party, founded in 1919 as the Country Party, to represent the interests of farmers. It was subsequently renamed the National Country Party and then the National Party, adopting its current name in 2003. It has held office only in coalition with the Liberal Party.

National Theatre See ROYAL NATIONAL THEATRE COMPANY.

National Trust An independent charity in the UK, founded in 1895, that acquires and preserves country houses, castles, gardens, and places of interest or natural beauty. Properties bequeathed to the Trust are exempt from inheritance tax but must be self-supporting or accompanied by an endowment.

NATO See NORTH ATLANTIC TREATY ORGANIZATION.

natterjack A short-legged European *toad, *Bufo calamita*. About 7 cm long when fully grown, the natterjack has a yellow stripe down its back. If alarmed, it raises its inflated body on its hind legs to appear larger to the enemy.

natural gas A naturally occurring mixture of gaseous hydrocarbons consisting mainly of methane with smaller amounts of heavier hydrocarbons. It is obtained from underground reservoirs, often associated with *oil deposits. Like oil it originates in the bacterial decomposition of animal matter. It also contains nonhydrocarbon impurities, the most important being helium, which is extracted commercially.

Natural History Museum See BRITISH MUSEUM.

Naturalism A literary and artistic movement of the late 19th century characterized by

the use of realistic techniques to express the philosophical belief that all phenomena can be explained by natural or material causes. It was influenced by the biological theories of *Darwin, the philosophy of *Comte, and the deterministic theories of the historian Hippolyte Taine (1828-93). Its literary manifesto was *Le Roman expérimentale* (1880) by *Zola.

natural selection See DARWINISM.

Nauru, Republic of (or **Naoero**; former name: Pleasant Island) A small country in the central Pacific Ocean, NE of Australia comprising a coral island. The small population consists mainly of Nauruans and other Pacific islanders. *Economy*: based entirely on the mining of phosphates, the only export. The phosphates are expected to run out early in the 21st century, therefore Nauru has made investments abroad and is developing as a transport centre and tax haven. *History*: discovered by the British in 1798, it was under British mandate from 1920 to 1947, when it came under the joint trusteeship of Australia, New Zealand, and the UK. In 1968 it became an independent republic and a special member of the British Commonwealth. Nauru received some £50 million compensation from Australia in 1993 for environmental damage and loss of mining profits while it was a trusteeship. Official language: English. Currency: Australian dollar of 100 cents. Area: 21 sq km (8 sq mi). Population (2003 est): 12 600. Capital: Yaren.

nautilus One of several cephalopod molluscs with external shells. The pearly nautilus (genus *Nautilus*; 3 species) live near the bottom of the Pacific and Indian Oceans. Up to 20 cm across, they have 60-90 tentacles surrounding a horny beak and live in the outermost chamber of their flat coiled shells. The others serve as buoyancy chambers. The paper nautilus (*Argonauta argo*) is found in the Atlantic and Pacific Oceans. The female, 20 cm long, secretes from one of its tentacles a papery boat-shaped shell in which the eggs develop. The male is much smaller (about 2 cm long).

Navajo A North American Indian Athabascan-speaking people of New Mexico, Arizona, and Utah. Like their relatives, the *Apache, they migrated from the far north, probably during the 17th century. They are farmers and herders and now the most numerous North American Indian tribe.

Navarino, Battle of (20 October 1827) A naval battle during the War of Greek Independence. French, Russian, and British ships destroyed an Ottoman-Egyptian fleet in the Bay

of Navarinou in the Peloponnese. This was the last fleet action fought wholly under sail.

Navarre A former kingdom in N Spain, corresponding to the present-day Spanish region of Navarra and part of the French department of Basses-Pyrénées. S Navarre was conquered by Ferdinand the Catholic of Aragon in 1512 and united with Castile in 1515. French Navarre passed to the French Crown in 1589.

Navratilova, Martina (1956-) Czech-born tennis player who defected to the USA in 1975. She was Wimbledon singles champion 1978-79, 1982-87, and 1990 and doubles champion 1976, 1979, 1981-86. She also holds a record of 74 consecutive wins. She retired in 1994.

Náxos A Greek island in the S Aegean Sea, the largest in the Cyclades. Náxos is traditionally the place where Theseus abandoned Ariadne. Area: 438 sq km (169 sq mi). Population (latest est): 14 000. Chief town: Náxos.

Nazareth 32 41N 35 16E A town in N Israel, between Haifa and the Sea of Galilee. The city's many churches commemorate its associations with the early life of Jesus Christ. Population (latest est): 51 000.

Nazi Party (Nationalsozialistische Deutsche Arbeiterpartei) The National Socialist German Workers' Party, founded in 1919 as the German Workers' Party and led from 1921 until 1945 by Adolf *Hitler. See also FASCISM.

N'djamena (name until 1973: Fort Lamy) The capital of Chad, a port in the SW. It was founded by the French in 1900. Population (1993): 530 965.

Ndola 13 00S 28 39E A city in N Zambia, near the border with the Democratic Republic of Congo. It is an important commercial centre for the Copperbelt. Population (latest est): 376 300.

Neagh, Lough A lake in Northern Ireland, divided between Co Antrim, Co Armagh, and Co Tyrone. It is the largest lake in the British Isles. Area: 388 sq km (150 sq mi).

Neanderthal man An extinct *hominid race that inhabited Europe and the adjacent areas of Africa and Asia between about 150 000 and 30 000 years ago. Characterized by heavy brow ridges, receding forehead, heavy protruding jaw, and robust bone structure, Neanderthal man had a large cranial capacity and upright posture. They were cave-dwelling hunters; and are generally regarded as a distinct species (*Homo neanderthalensis*), rather than a subspecies of *Homo sapiens*, and may

have evolved from *Homo heidelbergensis* (see HOMO).

Neath Port Talbot (Welsh name: Castell-Nedd Port Talbot) A county borough in S Wales, created from part of West Glamorgan in 1996. Area: 442 sq km (170 sq mi). Population (2001): 134 471. Administrative centre: Port Talbot.

Nebraska A state in the N central USA, lying W of the Missouri River. Part of the Central Lowlands cover the eastern third of the state, with the higher Great Plains in the W. Traditionally an agricultural state, it is still a leading producer of cattle, corn, and wheat. Most of the population is situated in the industrial E. *History*: explored by the French and Spanish, it formed part of the Louisiana Purchase (1803). It became a state in 1867. Area: 200 018 sq km (77 227 sq mi). Population (2000): 1 711 263. Capital: Lincoln.

Nebuchadnezzar II (or **Nebuchadrezzar**; c. 630–562 BC) King of *Babylon (605–562). Nebuchadnezzar extended Babylonian power in Elam, N Syria, and S Asia Minor. He captured Jerusalem in 597 and again in 586, when he destroyed the city and forced the Jews into exile.

nebula A cloud of interstellar gas and dust that becomes visible for one of three reasons. In an **emission nebula** the gas is ionized by ultraviolet radiation and light (predominantly red and green) is emitted. In a **reflection nebula** light from a nearby star is reflected in all directions by dust in the cloud, thus illuminating the cloud. The dust in a **dark nebula** reduces the amount of light passing through it (by absorption and scattering) and a dark region is seen against a brighter background.

nectar A sugary solution produced by glandular structures (nectaries) in flowers pollinated by animals. Nectar attracts insects, birds, or bats to the flower and encourages pollination as the animal collects nectar from different sources.

needlefish A carnivorous fish, also called garfish, belonging to the family *Belontiidae* (about 60 species), that occurs in tropical and warm-temperate seas. It has a slender silvery-blue or green body, up to 1.2 m long, with elongated jaws and numerous sharp teeth. Species include the European garfish (*Belone belone*). Order: *Atheriniformes*.

Nefertiti (died c.1346 BC) The cousin and chief wife of Akhenaton (1379–1362 BC) of Egypt. Her portrait bust is perhaps the best-known work of Egyptian art.

Negev A desert in S Israel. In recent decades

large areas have been irrigated by pipeline from the River Jordan. Area: about 12 000 sq km (4632 sq mi).

Negro, Río 1. (Portuguese name: Rio Negro) A river in NE South America. Rising in E Colombia as the Guainía, it joins the River Amazon about 16 km (10 mi) below Manaus. Length: about 2250 km (1400 mi). **2.** A river in S Argentina, rising in the Andes and flowing generally SE to the Atlantic Ocean. Length: 1014 km (630 mi).

Negros A volcanic island in the central Philippines. The chief industry is sugar production. Area: 12 704 sq km (4904 sq mi). Population (latest est): 3 168 000. Chief town: Bacolod.

Nehru, Jawaharlal (1889–1964) Indian statesman; the first prime minister of independent India (1947–64). He was elected president of the *Indian National Congress in 1929 in succession to his father Motilal Nehru (1861–1931). Between 1921 and 1945 he served nine prison sentences for participating in the movement of noncooperation against the British. After World War II he helped negotiate independent India. As premier, he carried through many social reforms and maintained a policy of non-alignment with foreign powers. His daughter was Indira *Gandhi.

Neisse, River 1. (or **Glatzer Neisse**; Polish name: Nysa) A river in SW Poland, flowing NE to the River Oder. Length: 244 km (159 mi). **2.** (or **Lusatian Neisse**) A river rising in the N Czech Republic and flowing mainly N to the River Oder in Poland. Length: 225 km (140 mi).

nekton An ecological division of aquatic animals that includes all those swimming actively in the open waters of a sea or lake (compare PLANKTON). The nekton includes fishes, squids, turtles, seals, and whales.

Nelson, Horatio, Viscount (1758–1805) British admiral. At the outbreak of the French Revolutionary Wars he was given a command in the Mediterranean. In 1794, at Calvi, he lost the sight in his right eye but went on to play an important part in the victory off Cape St Vincent (1797). Shortly afterwards he lost his right arm in action but in 1798 he destroyed France's naval power in the Mediterranean by his great victory in the battle of the *Nile. Nelson spent the following year in Naples, where, although married, he fell in love with Emma, Lady *Hamilton. Subsequently he was given command in the Baltic and was responsible for the victory at Copenhagen (1801). In 1803 he became commander in the Mediterranean. He block-

aded Toulon for 18 months but in 1805 the French escaped; the ensuing chase culminated in the battle of *Trafalgar (1805). Nelson directed this British triumph from aboard the *Victory* but was himself mortally wounded.

Neman, River (or **R. Nyeman**) A river in E Europe. Rising in Belarus, it flows mainly NW through Lithuania to the Baltic Sea. Length: 937 km (582 mi).

nematode A spindle-shaped colourless worm, also called roundworm, belonging to the phylum *Nematoda* (over 10 000 species). Nematodes live almost everywhere in soil, fresh water, and the sea. Some are parasites of plants or animals; others feed on dead organic matter. See also *FILARIA*; *GUINEA WORM*; *HOOKWORM*; *PINWORM*.

Nemertina See *RIBBONWORM*.

Nemesia A genus of annual herbs native to South Africa. They are up to 30 cm tall, with showy white, yellow, red, pink, or purple two-lipped flowers. Family: *Scrophulariaceae*.

Nemesis In Greek mythology, a goddess personifying the gods' anger at and punishment of human arrogance or hubris.

neoclassicism 1. In art and architecture, a style dominant in Europe from the late 18th to mid-19th centuries. Although essentially a revival of classical art and architecture, it was distinguished from similar revivals by its scientific approach to the recreation of the past. This was largely stimulated by archaeological discoveries at *Pompeii, *Herculaneum, and elsewhere. Key figures in the early development of neoclassicism were the art historian Johann Winckelmann (1717–68) and Giambattista Piranesi (1720–78). Early neoclassical painters included Jacques Louis *David and *Ingres. Other leading neoclassicists were the sculptors Antonio Canova (1757–1822) and Bertel Thorvaldsen (1768–1844) and the architects Robert *Adam and Jacques Soufflot (1713–80). See also *EMPIRE STYLE*. 2. A style of musical composition originating in the 1920s. It was characterized by the use of counterpoint and the revival of 18th-century forms. The leading practitioners were *Stravinsky and *Hindemith.

neodymium (Nd) A *lanthanide element, occurring in the mineral monazite. It is used with lanthanum in misch metal and, as the oxide (Nd₂O₃), together with praseodymium, to produce special dark glasses used in welding goggles. At no 60; at wt 144.24; mp 1021°C; bp 3074°C.

Neolithic The final division of the *Stone Age. It is characterized by the development of the earliest settled agricultural communities and increasing domestication of animals (see *JERICHO*). Although man still used only stone tools and weapons, he evolved improved techniques of grinding stone and the invention of pottery facilitated food storage and preparation.

neon (Ne) A noble gas present in very small amounts in the earth's atmosphere, discovered in 1898 by Ramsay and M. W. Travers (1872–1961) by fractional distillation of liquid air. It is commonly used in advertising signs and voltage indicator lamps. At no 10; at wt 20.179; mp –248.67°C; bp –246.08°C.

Neoplatonism The philosophy, formulated principally by *Plotinus, that emphasizes an eternal world of order, goodness, and beauty, of which material existence is a weak and unsatisfactory copy. The chief influences were Plato's *Symposium* and the *Phaedo*.

neoteny The condition in which larval characteristics persist in an animal when it reaches sexual maturity. The *axolotl is a neotenyous salamander that rarely assumes the typical adult form under natural conditions. Neotony is also known in certain primitive marine chordates.

Nepal, Kingdom of A landlocked country in the Himalayas, between China (Tibet) and India. Most of the country consists of a series of mountain ranges, with some of the world's highest peaks, including Mount Everest, along its northern border. Its predominantly Hindu population is of Mongoloid stock, the Gurkhas having been the dominant group since 1769. *Economy*: chiefly agricultural, with rice, maize, millet, and wheat as the main crops. Mineral resources are sparse. Tourism is the main source of revenue. *History*: the independent principalities that comprised the region in the middle ages were conquered by the Gurkhas in the 18th century and Nepal was subsequently ruled by the Shah family and then by the Rana, who continue to reign. An elected parliament was set up in 1959 but abolished by the king in 1962. In 1990 mass unrest led to the restoration of parliamentary democracy under a new constitution. A communist-led government held power in 1994–96. In 2001 King Birendra, his queen, and six other members of the royal family were shot dead by Crown Prince Dipendra, who then killed himself. Dipendra's brother Gyanendra then assumed the throne. A guerrilla campaign by Maoist insurgents,

which began in 1996, escalated dramatically from 2002. Gyanendra ruled without parliament from 2002 until 2006, when protests forced him to recall the legislature. The new government stripped the king of his powers and signed a peace deal with the insurgents in late 2006. Official language: Nepali. Currency: Nepalese rupee of 100 paisa. Area: 141 400 sq km (54 600 sq mi). Population (2007 est): 28 901 790. Capital: Kathmandu.

nephritis (or **Bright's disease**) Inflammation of the kidneys. It may result from infection, as in pyelitis, or from a disorder of the body's system that affects the kidneys (called glomerulonephritis), which causes protein, cells, and blood to appear in the urine and swelling of the body tissues (see OEDEMA).

Neptune (astronomy) The most distant giant planet, orbiting the sun every 165 years at a mean distance of 4497 million km. It is smaller (48 600 km in diameter) and more massive (17.2 earth masses) than *Uranus, but is thought to be almost identical to it in structure. It has 11 *satellites. Discovered in 1846 by J.G. Galle, it was circumnavigated by Voyager 2 in 1989.

Neptune (mythology) The principal Roman sea god, identified with the Greek *Poseidon. He is usually portrayed holding a trident and riding a dolphin.

neptunium (Np) The first synthetic transuranic element, produced in 1940 at Berkeley, USA, by bombarding uranium with neutrons. It is available in small quantities in nuclear reactors and forms halides (for example NpF_3 , NpCl_4) and oxides (for example NpO_2). At no 93; at wt (237); mp 639°C; bp 3902°C.

Neri, St Philip (1515–95) Italian mystic, who founded the Congregation of the Oratory. In San Girolamo he built an oratory to hold religious meetings and concerts of sacred music, from which both the name of Neri's order and the word *oratorio* derive. Feast day: 26 May.

Nero (Claudius Caesar) (37–68 AD) Roman emperor (54–68), notorious for his cruelty. His early reign was dominated by his mother Agrippina the Younger, Seneca, and Sextus Afranius Burrus but by 62 Nero had thrown off these influences: Agrippina was murdered (59), Burrus died, perhaps by poison (62), and Seneca retired (62). Also in 62, he murdered his wife Octavia in order to marry Poppaea, who herself died in 65 after being kicked by her husband. A conspiracy to assassinate him, after which Seneca was forced to kill himself, failed in 65. In 68, however, revolts in Gaul,

Spain, and Africa and the mutiny of his palace guard precipitated his suicide.

Neruda, Pablo (Ricardo Reyes; 1904–73) Chilean poet and diplomat. His volumes include *Residencia en la tierra* (1925–31) and the long poem *Canto general* (1950). He was awarded the Nobel Prize in 1971.

nerve See NEURONE.

nerve gases War gases that inhibit the transmission of impulses from nerve to nerve or muscle. Death results from paralysis of the diaphragm leading to asphyxiation. Most nerve gases are derivatives of phosphoric acid.

Nervi, Pier Luigi (1891–1979) Italian engineer and architect, famous for his use of reinforced concrete. He designed the exhibition hall in Turin (1949) and was one of the architects of the UNESCO building in Paris (1953).

nervous system The network of nervous tissue in the body. This comprises the central nervous system (CNS), i.e. the *brain and *spinal cord, and the peripheral nervous system. The latter includes the cranial and spinal nerves with their ganglia and the autonomic nervous system (ANS). The ANS controls unconscious body functions, such as digestion and heartbeat, and is coordinated by the *hypothalamus. The nervous system is chiefly responsible for communication both within the body and between the body and its surroundings. Incoming information passes along sensory *neurons to the brain, where it is analysed and compared with *memory; nerve impulses then leave the central nervous system along motor nerves.

Ness, Loch A deep lake in N Scotland, in Highland. The sight of a monster (the **Loch Ness monster**) has frequently been reported. Length: 36 km (22 mi). Depth: 229 m (754 ft).

netball A seven-a-side court game adapted from *basketball. The court is 100 × 50 ft (30.5 × 15.25 m), divided into three equal zones. The goal is a net mounted 10 ft (3.05 m) above the ground. The game is played by throwing the ball; players may not run with it.

Netherlandic A subgroup of the Western *Germanic languages. It is spoken in Holland and Belgium, where it is called Dutch and Flemish respectively. It is the parent language of Afrikaans.

Netherlands, Kingdom of the A country in NW Europe, on the North Sea. It is almost entirely flat except for some low hills in the SE, and considerable areas of land have been re-

claimed from the sea. *Economy:* banking and commerce are important sources of income. Highly developed industries include engineering, petrochemicals, plastics, electronics, and food processing. Agriculture is highly mechanized and market gardening is important. *History:* until 1581 the Netherlands formed with present-day Belgium and Luxembourg the region often referred to as the Low Countries. It was under Roman occupation from the 1st century BC to the 4th century AD. It was then overrun by German tribes. After the partition of the Frankish empire in 843 the region was called Lotharingia. The following centuries saw the rise of powerful principalities, notably the bishopric of Utrecht and the counties of Holland and Guelders, which came under the influence of Burgundy and then Spain. In 1581, during the *Revolt of the Netherlands, the seven northern provinces—Holland, Zeeland, Utrecht, Overijssel, Gröningen, Drenthe, and Friesland—proclaimed their independence as the United Provinces of the Netherlands under the leadership of William the Silent. War with Spain continued intermittently until, at the conclusion of the Thirty Years' War, Spain recognized the independence of the Dutch Republic in the Peace of Westphalia (1648). In the 17th century the Netherlands reached a peak of prosperity and international prestige, forming a considerable overseas empire. In 1795, however, it fell to Revolutionary France and in 1806 Napoleon made his brother Louis Bonaparte King of Holland. Following Napoleon's defeat the former Dutch Republic was reunited with the southern provinces to form the Kingdom of the Netherlands (1814). In 1830 the S revolted against the union, forming Belgium (1831), and in 1867 Luxembourg became an independent state. The Netherlands remained neutral in World War I but in World War II was occupied by Germany (1940–45). In 1948 the Netherlands joined with Belgium and Luxembourg to form the Benelux economic union; it is now a member of the European Union. The immediate postwar period was dominated by the Dutch colony of Indonesia's fight for independence. In 1980 Queen Juliana abdicated and was succeeded as head of state by her daughter Princess Beatrix. The Netherlands adopted the European single currency in 1999–2002. A centre-left coalition under Wim Kok (1938–) governed from 1994 until 2002, when a right-wing government was formed under Jan Peter Balkenende. Official language: Dutch. Currency: euro of 100 cents. Area: 41 160 sq km (15 892 sq mi). Population (2007 est): 16 570 613.

Capitals: Amsterdam (legal and administrative); The Hague (seat of government).

Netherlands Antilles (Dutch name: Nederlandse Antillen) Two groups of West Indian islands in the Lesser Antilles, in the Caribbean Sea some 800 km (497 mi) apart. The S group lies off N Venezuela and consists of *Curaçao and Bonaire; the N group (geographically part of the Leeward Islands) consists of St Eustatius, Saba, and the S part of *St Martin. Aruba, geographically part of the S group, became a separate Dutch territory in 1986. Under Dutch control since the 17th century, the islands became self-governing in 1954. The economy is based chiefly on oil refining and ship repairing. Currency: Netherlands Antilles guilder of 100 cents. Area: 996 sq km (390 sq mi). Population (2007 est): 223 652. Capital: Willemstad.

nettle An annual or perennial herb of the genus *Urtica* (about 30 species), found in temperate regions worldwide. Up to 1.5 m in height, it may have stinging hairs. Family: *Urticaceae*. Dead-nettles are annual or perennial herbs of the genus *Lamium* (about 40 species), occurring in Europe, temperate Asia, and N Africa. They lack stinging hairs. Family: *Labiatae*.

nettle rash See URTICARIA.

Neuchâtel (German name: Neuenburg) 47 00N 6 56E A city in W Switzerland, on Lake Neuchâtel. Industries include watchmaking and chocolate production. Population (2002 est): 31 500.

Neumann, John von (1903–57) US mathematician, born in Hungary. He invented *game theory and set quantum theory upon a rigorous mathematical basis.

neurohormone A chemical (see HORMONE) that is secreted by nerve cells and modifies the function of other organs in the body. The *hypothalamus, for example, releases several hormones that cause the *pituitary gland to secrete its own hormones, the kidney to retain water in the body, and the breast to produce milk.

neurology The study of the structure (neuroanatomy), function (neurophysiology), and diseases (neuropsychology) of the *nervous system. A neurologist specializes in the diagnosis and treatment of nervous diseases.

neurone (or nerve cell) The functioning unit of the *nervous system. A neurone consists of a cell body, containing the nucleus; small irregular branching processes called dendrites; and a single long nerve fibre, or axon,

which may be ensheathed by layers of fatty material (myelin) and either makes contact with other neurones at *synapses or ends at muscle fibres or gland cells. When a neurone is stimulated from outside or by another neurone, a nerve impulse is transmitted electrochemically down the axon. Bundles of nerve fibres are bound together to form **nerves**, which transmit impulses from sense organs to the brain or spinal cord (sensory nerves) or outwards from the central nervous system to a muscle or gland (motor nerves).

neurone. When a nerve impulse transmitted down the axon of a neurone reaches the motor terminals in muscle fibres, the muscle is stimulated to contract.

Neuroptera An order of slender carnivorous insects (4500 species) with long antennae and two similar pairs of net-veined wings. The order includes the *alderflies, snakeflies, and dobsonflies (suborder *Megaloptera*) and the *lacewings and *antlions (suborder *Plannipennia*).

neurosis (or **psychoneurosis**) A mental illness in which insight is retained but behaviour is disordered, causing suffering to the patient (compare **PSYCHOSIS**). The symptoms include a pathologically severe emotional state, as in anxiety or *depression; distressing behaviour and thoughts, as in *phobias or obsessions; and physical complaints, as in *hysteria. Neuroses are now often referred to as **anxiety disorders**. Treatment can include *tranquillizers, *psychotherapy, and behaviour therapy (see **BEHAVIOURISM**).

neutrinos A group of three elementary particles and their antiparticles. They are classified as leptons, have no charge, and are probably massless. One type of neutrino is associated with the *electron, one with the *muon, and one with the tau particle.

neutron An elementary particle that is a constituent of all atomic nuclei except hydro-

gen-1. It has no electric charge and its mass is slightly greater than that of the *proton. Inside the nucleus the neutron is stable but when free it decays, with a mean life of 12 minutes, by the *weak interaction to a proton, an electron, and an antineutrino (see **BETA DECAY**). The neutron was discovered by *Chadwick in 1932. See also **PARTICLE PHYSICS**.

neutron bomb See **NUCLEAR WEAPONS**.

neutron star A star that has undergone *gravitational collapse to the extent that most of the protons and electrons making up its constituent atoms have coalesced into neutrons. The density is extremely high (about 10^{17} kg m⁻³) and the pressure exerted by the densely packed neutrons can support the star against further contraction. Neutron stars are thought to form when the mass of the stellar core remaining after a *supernova exceeds about 1.4 times the sun's mass. See also **PULSAR**.

Nevada One of the mountain states in the W USA. Lying almost wholly within the Great Basin, most of the state consists of a vast plateau with several mountain ranges. Most of its population and manufacturing industry is located in the two main cities of Las Vegas and Reno. Tourism is by far the most important industry. *History:* ceded by Mexico to the USA in 1848, it became a state (1864) during a mining boom (1860-80). Area: 286 297 sq km (110 540 sq mi). Population (2000): 1 998 257. Capital: Carson City.

Nevis See **ST KITTS-NEVIS, FEDERATION OF**.

Newark 40 44N 74 11W A city in the USA, in New Jersey on Newark Bay. Founded in 1666, it attracted several inventors, whose developments included patent leather (1818), malleable cast iron (1826), the first photographic film (1888), and electrical measuring instruments (1888). Population (2000 est): 273 546.

New Britain A volcanic island in the SW Pacific Ocean, in Papua New Guinea, the largest of the Bismarck Archipelago. Copra and some minerals are exported. Area: 36 520 sq km (14 100 sq mi). Population (1999 est): 435 307. Chief town: Rabaul.

New Brunswick A province of E Canada, on the Gulf of St Lawrence. Heavily forested, it consists of rugged uplands with fertile river valleys. There is some mixed farming and fishing is important along the Bay of Fundy. Lead, zinc, and some copper are mined at Bathurst. *History:* settlement by French peasants ended shortly after Britain's control of the coastal areas was confirmed in 1713. Colonization from

Britain and New England followed, and New Brunswick became a separate colony (1784). It was a founding member of the Dominion of Canada (1867). Area: 72 092 sq km (27 835 sq mi). Population (2001 est): 757 100; approximately 30% are French speaking. Capital: Fredericton.

New Caledonia (French name: Nouvelle Calédonie) An island in the SW Pacific Ocean. Together with its dependencies (the Isle of Pines, the Loyalty Islands, and others) it forms a French overseas territory. The main industries are nickel mining and processing and meat preserving. Violence in the 1980s led to a referendum (1987) on the issue of independence; the people voted to remain under French sovereignty. Area: 19 103 sq km (7374 sq mi), with dependencies. Population (2002 est): 218 000. Capital: Nouméa.

Newcastle 32 55S 151 46E A city in Australia, in New South Wales. Iron and steel industries are important. In 1989 it was hit by Australia's first fatal earthquake, killing 12 people. Population (1998 est): 139 171.

Newcastle, Thomas Pelham-Holles, 1st Duke of (1693–1768) British statesman; Whig prime minister (1754–56, 1757–62). He resigned as prime minister in 1756 because of early reverses in the 'Seven Years' War but returned in 1757 with foreign affairs in the hands of Pitt the Elder. His brother **Henry Pelham** (1696–1754) was prime minister (1743–54).

Newcastle upon Tyne 1. 54 59N 135W A city in NE England, in Newcastle upon Tyne unitary authority, Tyne and Wear, on the River Tyne. It is the principal port and regional centre of NE England, with a 14th-century cathedral and two universities; cultural institutions include the Baltic Centre for Contemporary Art (2000). Industries include marine and electrical engineering. *History:* founded as a Roman settlement (Pons Aelius), Newcastle was the site of George Stephenson's iron works, established in 1823. Population (1991): 189 150. 2. A unitary authority in NE England, in Tyne and Wear. Area: 112 sq km (43 sq mi). Population (2001): 259 573.

Newcomen, Thomas (1663–1729) English blacksmith, who in 1712 constructed an early steam engine. It was based on Thomas Savery's engine and was widely used for pumping water out of mines.

New Deal (1933–41) Legislation introduced by the US president, F.D. Roosevelt, to ameliorate the effects of the Depression and to initiate social and economic reforms. Emergency

legislation enabled sound banks to reopen and regulated credit, currency, and foreign exchange; the gold standard was abandoned and the dollar devalued. Loans on crops, credit, and refinancing of debts and mortgages supported farmers, while the unemployed were helped by direct relief and civil-works programmes.

New England 1. An area in the extreme NE USA, bordering on the Atlantic Ocean. It consists of the states of Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, and Connecticut. Explored and named by Capt John Smith (1614), it was first settled by the Puritans (1620). Area: about 164 000 sq km (63 300 sq mi). 2. A district of Australia, in New South Wales. Predominantly agricultural, it occupies the N Tableland between the Moonbi Range and the Queensland border.

New Forest A woodland area in S England, in Hampshire. Originally an ancient hunting forest, it is a popular tourist area, noted for its breed of small ponies. It was designated a national park in 2001. Area: 336 sq km (130 sq mi).

Newfoundland A province of E Canada, consisting of the sparsely populated Coast of *Labrador on the Atlantic Ocean and the triangular island of Newfoundland. Pulp and paper has replaced the declining fisheries as the major industry. *History:* discovered by John Cabot (1497), Newfoundland won representative government (1832) and developed steadily until World War I, when it became a dominion. In 1927 it won possession of Labrador's interior and in 1949 became the newest Canadian province. Area: 370 485 sq km (143 044 sq mi). Population (2001 est): 533 800. Capital: St John's.

Newfoundland dog A breed of working dog originating in Newfoundland. The heavy dense black, brown, or black-and-white coat enables them to withstand icy water. Height: 71 cm (dogs); 66 cm (bitches).

New Guinea An island in the SW Pacific Ocean, separated from Australia by the Torres Strait. It consists of the Indonesian province of Irian Jaya in the W and *Papua New Guinea in the E. Mountainous and forested, it is largely undeveloped and is famed for its unique species of butterflies and birds. Its linguistically diverse tribal population consists of Melanesian, Negrito, and Papuan ethnic groups. *History:* known to Europeans from 1511, the island was colonized by the Dutch in the 18th century. The W part became part of Indonesia in 1963. The SE was colonized by Britain and the NE by Germany in the late 19th cen-

tury. Area: 775 213 sq km (299 310 sq mi). Population (2002 est): 7 646 934.

New Hampshire A state in the NE USA, in New England. It is mainly hilly, with many lakes. Manufacturing is the chief source of employment. Tourism is the other major industry. *History*: one of the 13 original colonies, it was first settled by English colonists about 1627, becoming a royal province in 1679. One of the first states to declare its independence, it became a state in 1788. Area: 24 097 sq km (9304 sq mi). Population (2005 est): 1 309 940. Capital: Concord.

New Haven 41 18N 72 55W A city and seaport in the USA, in Connecticut on Long Island Sound. It is best known as the site of Yale University (1701). Population (2004 est): 124 829.

New Jersey A state in the NE USA, on the mid-Atlantic coast. The Kittatinny Mountains extend across the NW corner of the state, SE of which lies a belt of lowland containing most of New Jersey's major cities. One of the most highly urbanized and densely populated states, it is a major industrial centre. Agriculture is also well developed. Its beaches, forests, and mountain regions form the basis of a thriving tourist industry. *History*: one of the original 13 colonies, it was first settled by the Dutch in the 1620s, coming under British control in 1664. It became a state in 1787. Area: 20 295 sq km (7836 sq mi). Population (2005 est): 8 717 925. Capital: Trenton.

Newman, John Henry, Cardinal (1801–90) British churchman, a leader of the *Oxford Movement until his conversion to Roman Catholicism (1845). He wrote many tracts, including the controversial *Tract 90*, which argued that the Thirty-Nine Articles were not incompatible with Roman Catholicism. Later works include his spiritual autobiography, *Apologia pro vita sua* (1864). He was made a cardinal in 1879. In 1991 he was awarded the title 'venerable', the first step towards canonization.

Newman, Paul (1925–) US film actor. He has frequently played the roles of cynical and witty heroes, notably in *Hud* (1963), *Butch Cassidy and the Sundance Kid* (1969), and *The Sting* (1973); among his other films are *The Verdict* (1982), *The Color of Money* (1986), and *Road to Perdition* (2002).

Newmarket 52 15N 0 25E A market town in E England, in Suffolk. It is the centre of British horse racing. Population (2001): 14 995.

New Mexico One of the mountain states in the SW USA. There are three main physical re-

gions: a flat tableland in the E, a central mountainous region cut N–S by the Valley of the Rio Grande, and a region of mountains and plains in the W. Its oil and natural-gas deposits are important. Problems of irrigation are mitigated by the Rio Grande and the Pecos rivers. Tourism is an important source of revenue. *History*: a Spanish possession from the 16th century, it was under Mexican rule when it was annexed by the USA in 1848. Following a period of Indian wars and land disputes, it became a state (1912). Area: 315 113 sq km (121 666 sq mi). Population (2005 est): 1 928 384. Capital: Santa Fe.

New Model Army The parliamentary army formed in 1645 during the English *Civil War. Organized by Sir Thomas Fairfax (1612–71), its core comprised the forces of the Eastern Association led by Oliver *Cromwell. It wielded increasing political power after its success at *Naseby (1645). In 1650 Cromwell became its commander in chief.

New Orleans 30 00N 90 03W A city and major port in the USA, in Louisiana. It is one of the leading commercial and industrial centres of the South. The Vieux Carré (French Quarter) has many historic buildings. The famous Mardi Gras festival is held here annually. *History*: founded in 1718, New Orleans became the capital of the French colonial region of Louisiana before passing to Spain in 1763. It returned briefly to France in 1803 but passed to the USA in the same year. Jazz originated among Black musicians of New Orleans during the late 19th century. In August 2005 about 80% of the city was submerged in floods caused by Hurricane Katrina. Population (2004 est): 462 269.

New Plymouth 39 03S 174 04E A port in New Zealand, in W North Island. New Zealand's chief natural gas field is nearby, at Kapuni. Population (2005 est): 49 500.

Newport 50 42N 1 18W A market town and port in S England, the administrative centre of the Isle of Wight. Nearby are Carisbrooke Castle and Parkhurst Prison. Population (2001): 23 957.

Newport (Welsh name: Casnewydd ar Wysg) 1. 51 35N 3 00W A port in SE Wales, in Newport county borough. Its parish church became the cathedral for the Monmouth diocese in 1921. Population (latest est): 140 000. 2. A county borough in SE Wales, created in 1996 from part of Gwent. Area: 190 sq km (73 sq mi). Population (2004 est): 139 500.

Newry 54 11N 6 20W A port in Northern Ireland, in County Down on Carlingford Lough. Close to the border with the Republic, it has

n

suffered from sectarian violence. It was granted city status in 2002. Population (1991): 82 943.

Newry and Mourne A district in Northern Ireland, in Co Down. Area: 886 sq km (342 sq mi). Population (2001): 87 058.

New Siberian Islands (Russian name: Novosibirskiye Ostrova) A Russian archipelago off the N coast, between the Laptev Sea and the East Siberian Sea. There is no permanent population. Total area: 35 100 sq km (13 549 sq mi), including the Lyakhov Islands.

New South Wales A state of SE Australia, bordering on the Pacific Ocean. It consists of extensive plains in the W, separated from the narrow coastal belt by the *Great Dividing Range with the *Snowy Mountains and part of the Australian Alps in the SE. Agricultural products include beef cattle, cereals, fruit and vegetables, wool, and dairy produce. Fishing and forestry are also important. Minerals extracted include coal, silver, lead, zinc, and copper. Over half the population live in Sydney, where most of the industries are located. Area: 801 428 sq km (309 433 sq mi). Population (1999 est): 6 441 680. Capital: Sydney.

newt A salamander belonging to a family (*Salamandridae*) occurring in Europe, Asia, and North America. The European smooth newt (*Triturus vulgaris*) is greenish brown with dark-brown spots and has a black-spotted orange belly. It grows to a length of 10 cm (including a 5 cm tail). Newts live mainly on land, hibernating under stones in winter and returning to water to breed in spring. The European fire salamander (*Salamandra salamandra*) bears live young and produces a poisonous skin secretion when harmed.

New Testament The 27 books that constitute the second major division of the Christian *Bible. Written in Greek, the New Testament has four divisions: the four Gospels (*Matthew, *Mark, *Luke, and *John); the Acts of the Apostles; the *Epistles, mainly written by St Paul; and the Book of *Revelation. It was written between about 50 and 100 AD.

newton (N) The SI unit of force defined as the force required to give a mass of one kilogram an acceleration of one metre per second per second. Named after Sir Isaac *Newton.

Newton, Sir Isaac (1642–1727) British physicist and mathematician. His first discovery was the law of gravitation, apocryphally inspired by the realization that an apple falling from a tree is attracted by the same force that holds

the moon in orbit. Gravitation required a precise definition of force, and this Newton also supplied in his laws of motion (see **NEWTONIAN MECHANICS**). Newton's second major work was the invention of the calculus; *Leibniz and Newton bickered for some years as to who had the idea first. His third contribution was in optics: he recognized that white light is a mixture of coloured lights, which can be separated by refraction. His incorrect belief that this effect could not be corrected, when it occurs as the chromatic aberration of a lens, inspired him to invent the reflecting telescope. Newton's principal publications were *Philosophiae naturalis principia mathematica* (1686–87) and *Optics* (1704), which held that light is a corpuscular phenomenon. He was president of the Royal Society from 1703 until his death.

Newtonian mechanics The branch of *mechanics concerned with systems in which the results of *quantum theory and the theory of *relativity can be ignored. It is based on Newton's three laws of motion. The first law states that a body remains at rest or moves with constant velocity in a straight line unless acted upon by a *force. The second law states that the *acceleration (a) of a body is proportional to the force (f) causing it. The constant of proportionality is the mass (m) of the body: $f = ma$. The third law states that the action of a force always produces a reaction in the body. The reaction is of equal magnitude but opposite in direction to the action.

Newton's rings A series of light and dark rings formed in a plano-convex lens if monochromatic light is shone onto the lens when it rests on a plane mirror. First observed by *Newton, they are caused by *interference between light reflected by the mirror and light reflected at the curved surface of the lens.

Newtownabbey A district in Northern Ireland, in Co Antrim. Area: 156 sq km (60 sq mi). Population (2001): 79 995.

New Wave (or **Nouvelle Vague**) A movement in French cinema that began in the late 1950s, characterized by a rejection of Hollywood conventions. Directors associated with the movement include *Godard, *Chabrol, and *Truffaut.

New World A name for the American continent, used especially by early emigrants from Europe and in describing the geographical distribution of plants and animals. By contrast, Europe, Africa, and Asia are sometimes referred to as the **Old World**.

New World monkey A *monkey native to the Americas. There are two families: the *Cebidae* (37 species) including uakaris, sakis, titis, howlers, capuchins, *squirrel monkeys, spider monkeys, woolly monkeys, and the douroucouli; and the *Callithricidae* (33 species) containing *marmosets and *tamarins.

New York 1. 40 45N 74 00W The largest city in the USA, situated in New York state at the mouth of the Hudson River. Divided into five boroughs—Manhattan, Brooklyn, the Bronx, Queens, and Richmond (coextensive with Staten Island), it is the nation's leading seaport. As one of the world's financial centres (see WALL STREET), it is the site of many large corporations and the New York and American Stock Exchanges. Notable features include Central Park, the fashionable shops of Fifth Avenue, the *Statue of Liberty, Times Square, Greenwich Village, the Brooklyn Bridge (1883), Rockefeller Center, St Patrick's Cathedral (1858–79), and a large number of skyscrapers, such as the Empire State Building (1931) and the United Nations Headquarters (1951). As well as the Broadway theatre district, there are numerous museums, art galleries, and libraries. *History:* on 3 September 1609, Henry Hudson sailed into New York Bay and his glowing reports attracted its founding Dutch colonists, who arrived in 1620. In 1625 New Amsterdam, situated at the S tip of Manhattan, became the capital of the newly established colony of New Netherland and the following year the whole island was bought from the Indians for the equivalent of \$24. In 1664 the city was captured by the English for the Duke of York and promptly renamed. From 1789 until 1790 it was the first capital of the USA. The opening of the Erie Canal in 1825 ensured its pre-eminence as a commercial city and seaport. Early in the 20th century the arrival of millions of European immigrants supplied New York with limitless cheap labour. During the mid-1970s New York was narrowly saved from bankruptcy by emergency loans. In the 1970s and 1980s it acquired a reputation for street violence, but this was reduced in the later 1990s. On *September 11 2001 New York saw the destruction of one of its great landmarks, the *World Trade Center, in a terrorist outrage that cost nearly 3000 lives. Population (2004 est): 8 168 338. **2.** A state in the NE USA. It is basically an upland region, dissected by the valleys of the Mohawk and Hudson Rivers. New York is the chief manufacturing state in the USA. The presence of New York City also makes it the commercial, financial, and cultural centre of the nation. The most important agricultural activity is dairy-

ing. *History:* one of the 13 original colonies, it was first settled by the Dutch in the early 17th century. It became an English colony in 1664 and later played a prominent role in the American Revolution. Area: 128 402 sq km (49 576 sq mi). Population (2005 est): 19 254 630. Capital: Albany.

New Zealand A country in the Pacific Ocean, to the SE of Australia. It consists of *North Island and *South Island, together with several smaller islands. Most of the population is of British descent with a large Maori minority. *Economy:* the main basis of the economy is livestock rearing, especially sheep farming. Mineral resources include coal, gold, limestone and silica sand. Tourism is the fastest growing economic activity. *History:* from about the 14th century the islands were inhabited by the Maoris, a Polynesian people. The first European to discover New Zealand was Tasman in 1642, who called it Staten Land, later changed to Nieuw Zealand; in 1769 the coast was explored by *Cook. During the early part of the 19th century it was used as a whaling and trading base. By the Treaty of *Waitangi in 1840 the Maori chiefs ceded sovereignty to Britain and a colony was established. After two wars with the Maoris over land rights, peace was reached in 1871. New Zealand was made a dominion in 1907 and became fully independent by the Statute of Westminster in 1931. Since World War II New Zealand has played an increasing role in international affairs, especially in the Far East. In 1985 relations with the USA were strained when the Labour government prohibited nuclear vessels from entering New Zealand waters. In 1990 the National Party was returned to office under James Bolger, who retained the premiership until 1997. The 1999, 2002, and 2005 general elections saw victory for the Labour Party, led by Helen Clark. Official languages: English and Maori. Currency: New Zealand dollar of 100 cents. Area: 268 704 sq km (103 719 sq mi). Population (2007 est): 4 115 771. Capital: Wellington.

Nguni A division of the Bantu-speaking peoples of S Africa. It includes the *Swazi, *Xhosa, and *Zulu.

Niagara Falls Two waterfalls on the US-Canadian border, on the Niagara River. The American Falls, 51 m (167 ft) high and 300 m (1000 ft) wide, are straight while the Horseshoe Falls (Canada), 49 m (162 ft) high and 790 m (2600 ft) wide, are curved.

Niamey 13 32N 2 05E The capital (since 1926)

of Niger, on the River Niger. Population (2001): 707 951.

Nicaea, Councils of Two ecumenical councils of the Christian Church held at Nicaea, now Iznik (Turkey). **1.** (325) The council summoned by the Byzantine emperor Constantine to establish Church unity and suppress Arianism. The *Nicene Creed was the major doctrinal formulation. **2.** (787) The council summoned by the Byzantine empress Irene to condemn iconoclasm.

Nicaragua, Republic of A country in Central America between the Caribbean Sea and the Pacific Ocean. Swamp and dense tropical forest on the Caribbean coast, and a broader plain with lakes to the W, rise to a central mountain range. The population is mainly of mixed Indian and Spanish descent. *Economy:* chiefly agricultural, the main crops being cotton, coffee, peanuts, sugar, rice, and maize. Minerals include gold, silver, and copper. Oil and gas deposits are being explored. Economic hardship resulting from the civil war of the 1980s has continued to the present; there is a large external debt. *History:* sighted by Columbus in 1502, it was colonized by Spain from 1522, becoming part of the captaincy general of Guatemala. It broke away from Spain in 1821 and formed part of the Central American Federation until 1838, when Nicaragua became a republic. From 1933 the government was dominated by the Somoza family, opposition to which culminated in a civil war that forced (1979) the resignation of the president, Gen Anastasio Somoza Debayle (1925–80). The victorious Sandinista National Liberation Front (FSLN) under Daniel Ortega instituted socialist policies. Accusing the Sandinistas of supplying arms to the rebels in El Salvador, the USA supported an army of 'Contras' who attacked Nicaragua from neighbouring states. In 1990 Violeta Chamorro (1929–), heading the UNO coalition party, won an election against Ortega. A ceasefire was signed with the Contras in 1994. In late 1998 the country was devastated by Hurricane Mitch. Ortega returned as president in 2006. Nicaragua is a member of the OAS and the Central American Common Market. Official language: Spanish. Currency: córdoba of 100 centavos. Area: 148 000 sq km (57 143 sq mi). Population (2007 est): 5 675 356. Capital: Managua.

Nice 43 42N 7 16E A city in SE France, the capital of the Alpes-Maritimes department. Ceded by Sardinia to France in 1860, it is one of the leading resorts of the French Riviera. Population (2004 est): 339 000.

Nicene Creed The statement of Christian belief accepted as orthodox by the first Council of *Nicaea (325). The Nicene Creed used in the *Eucharist service of Orthodox, Roman Catholic, and Protestant Churches is a version of this creed.

Nicholas I (1796–1855) Emperor of Russia (1825–55), notorious as an autocrat. Nicholas' accession was followed by the *Dekabrist revolt, which hardened his conservatism. His ambitions in the Balkans precipitated the *Crimean War.

Nicholas II (1868–1918) The last Emperor of Russia (1894–1917). Nicholas' ambition in Asia led to the unpopular *Russo-Japanese War, which in turn precipitated the *Revolution of 1905. Forced to accept the establishment of a representative assembly, Nicholas nevertheless continued attempts to rule autocratically. In 1915 he took supreme command of Russian forces in World War I, leaving Russia to the mismanagement of the Empress *Alexandra and *Rasputin. Following the Russian Revolution in 1917, Nicholas was forced to abdicate (March). He and his family were imprisoned by the Bolsheviks and executed at Ekaterinburg.

Nicholas, St (4th century AD) The patron saint of Russia, sailors, and children. He is thought to have been Bishop of Myra in Asia Minor. Legends telling of his gifts of gold to three poor girls for their dowries gave rise to the practice of exchanging gifts on his feast day, 6 Dec. This now happens on 25 Dec in most countries.

Nicholson, Ben (1894–1982) British artist. Some of his best abstract works were produced in the 1930s, while he was a member of the British art group Unit One (see NASH, PAUL). These include white-painted plaster reliefs of rectangles combined with circles.

Nicholson, Jack (1937–) US film actor. After success in *Easy Rider* (1969), he became a leading star. His films include *Chinatown* (1974), *Prizzi's Honour* (1985), *Batman* (1989), and *About Schmidt* (2002). He won Oscars for *One Flew Over the Cuckoo's Nest* (1976), *Terms of Endearment* (1983), and *As Good as It Gets* (1998).

nickel (Ni) A hard silvery metal similar to iron, discovered in 1751 by A.F. Cronstedt (1722–65). It occurs in nature chiefly as pentlandite, NiS, and pyrrhotite, (Fe,Ni)S. It is chemically similar to cobalt and copper, and forms a green oxide (NiO), the chloride (NiCl₂), the sulphate (NiSO₄), and other compounds. It is used widely in alloys, such as stainless steel, and in

coinage. At no 28; at wt 58.6934; mp 1455°C; bp 2914°C.

Nicklaus, Jack William (1940–) US golfer, who has won more major titles than any other, including six Masters championships.

Nicopolis, Battle of (25 September 1396) The battle in which a coalition of Crusaders under Emperor Sigismund were defeated by the Turks under Sultan Bayezid I (1347–1403; reigned 1389–1403).

Nicosia (Greek name: Leukosia; Turkish name: Lefkosa) The capital of Cyprus, on the River Pedieas. Originally known as Ledra, it has been successively under Byzantine, Venetian, Turkish, and British control. Its many old buildings include the Cathedral of St Sophia (completed 1325). Population (2001): 47 832.

Nicotiana A genus of poisonous herbs (over 100 species), native to Central and South America and Australia. 30–300 cm in height, they bear large funnel- or bell-shaped flowers. Many species are cultivated for ornament and certain species are grown commercially for *tobacco. Family: *Solanaceae*.

nicotine ($C_{10}H_{14}N_2$) A toxic colourless oily liquid alkaloid that rapidly turns brown on exposure to air. It is obtained from the dried leaves of the tobacco plant and is present in small quantities in cigarettes. It is also used as an insecticide.

nicotinic acid See VITAMIN B COMPLEX.

Nielsen, Carl (August) (1865–1931) Danish composer and conductor. Nielsen developed the principle of progressive tonality in his six symphonies, of which the fourth, entitled *The Inextinguishable* (1914–16), and the fifth (1922) are the best known.

Niemeyer, Oscar (1907–) Brazilian architect. A disciple of *Le Corbusier, Niemeyer made a major contribution to the development of modern architecture in Brazil. His designs for Brasília include the president's palace (1959) and the cathedral (1964) and for Rio de Janeiro the Museum of Contemporary Arts (2001).

Niemöller, Martin (1892–1984) German Lutheran pastor and Protestant leader. A U-boat commander in World War I, he became head of the Pastors' Emergency League, which became the Confessing Church, and opposed the nazification of the Church in Germany. In 1937 he was sent to a concentration camp, where he remained until the end of the war.

Nietzsche, Friedrich (1844–1900) German

philosopher. His first book, *The Birth of Tragedy* (1872), argued that Wagnerian opera was the successor to Greek drama. Nietzsche rejected Christian morality and argued that the "will to power" was the crucial human characteristic. In *Thus Spake Zarathustra* (1883–92), he eulogizes the man who is free, titanic, and powerful, an ideal adopted by the Nazis for the Aryan superman. After 1889 he was permanently insane.

Niger, Republic of A large landlocked country in West Africa, lying mainly in the Sahara. Approximately half the population are Hausa, with large proportions of Zerma, Songhai, and Fulani. *Economy*: agriculture, particularly livestock raising, is important but has suffered from repeated droughts. Mineral resources include salt, natron, tin, and uranium (the main export). The country is one of the poorest in the world. *History*: occupied by France (1883–99), it became a territory of French West Africa in 1904. It won independence in 1960 and Hamani Diori became president. The country was under military rule from 1974 until 1993, when Mohamane Ousmane was elected president in free elections. In 1996 he was overthrown in a military coup; elections later that year were won by the coup leader, Brig Gen Ibrahim Barre Mainassara. In 1999 Mainassara was assassinated, parliament was suspended, and military rule imposed. Following elections in November, Mamadou Tandja became president. Official language: French. Currency: CFA franc of 100 centimes. Area: 1 186 408 sq km (458 075 sq mi). Population (2007 est): 12 894 865. Capital: Niamey.

Niger, River The third longest river in Africa. Rising in the S highlands of Guinea, it flows NE and then SE to the Gulf of Guinea. Length: 4183 km (2600 mi).

Niger-Congo languages An African language family spoken in central and S Africa. It is subdivided into six groups: the *West Atlantic languages; the Mande languages; the Voltaic languages; the Kwa languages; the Benue-Congo group, which includes the *Bantu languages; and the Adamawa-Eastern group.

Nigeria, Federal Republic of A large country in West Africa, on the Gulf of Guinea. Mangrove swamps along the coast give way to tropical rain forest inland, rising to open savanna-covered plateaus and mountains in the E. The inhabitants are mainly Hausa and Fulani in the N, Yoruba in the W, and Ibo in the E. *Economy*: oil production accounted for about

90% of exports in the late 1970s but declined dramatically thereafter, causing serious economic problems; Nigeria is a member of OPEC and still the world's fifth largest producer. There are also important reserves of natural gas, tin, coal, iron ore, and columbite. Agriculture is important; the main cash crops are groundnuts and cotton in the N and palms, coconut, and rubber in the S. *History*: in the middle ages there were highly developed kingdoms in the area, such as those of the Hausa in the N and the Yoruba in the SW. The coast was explored in the 15th century by the Portuguese, who developed the slave trade, in which the Dutch and English also participated. In 1861 Lagos was annexed by Britain and in 1886 the Royal Niger Company was incorporated to further British interests. By 1906, the British were in control of Nigeria, which was divided into the protectorate of Northern Nigeria and the colony (of Lagos) and protectorate of Southern Nigeria. These were united in 1914. Nigeria became a federation in 1954, gained independence in 1960, and became a republic within the Commonwealth in 1963. In 1967 the eastern region withdrew to form the Republic of **Biafra*. Civil war followed, lasting until Biafra's surrender in 1970. A coup in 1985 brought Maj Gen Ibrahim Babangida to power. Democratic elections held in 1993 were annulled by Babangida, provoking a political crisis. Gen Sana Abacha subsequently seized power and abolished all democratic institutions. In 1995 Nigeria was suspended from the Commonwealth (until 1999). Following Abacha's death (1998) Gen Abdulsalam Abubakar became president, promising to restore civilian rule. Presidential elections in 1999 resulted in victory for Gen Olusegun Obasanjo amid claims of fraud; he was succeeded by Umaru Yar'Adua in 2007. Recent years have seen escalating ethnic and religious strife. Official language: English. Currency: naira of 100 kobo. Area: 923 773 sq km (356 669 sq mi). Population (2007 est): 135 031 164. Capital: Abuja.

nightingale A plump woodland bird, *Luscinia megarhynchos*, that winters in tropical Africa and breeds in S Europe and Asia Minor during the summer. It is about 16 cm long with reddish-brown plumage and pale underparts and feeds on ground insects and spiders. Nightingales are noted for their beautiful song. Family: *Turdidae* (thrushes).

Nightingale, Florence (1820–1910) British hospital reformer and founder of the nursing profession. On the outbreak of the Crimean War, in 1854, she volunteered to lead a party of

nurses to work in the military hospitals. She set about transforming the appalling conditions, earning herself the title Lady with the Lamp from her patients. In 1860, she established the Nightingale School for Nurses at St Thomas's Hospital—the first of its kind.

nightjar A nocturnal bird belonging to a subfamily (*Caprimulginae*; 60–70 species) occurring in most temperate and tropical regions, also called goatsucker. About 30 cm long, nightjars have a soft mottled grey, brown, and rufous plumage and a long tail. Its short bill has a wide gape surrounded by long sensitive bristles enabling it to catch insects in flight. Family: *Caprimulgidae*; order: *Caprimulgiformes* (frogmouths, nightjars, etc.).

nightshade One of several plants of the family *Solanaceae*. The most notorious is **deadly nightshade* (or *belladonna*). The **woody nightshade**, or *bittersweet* (*Solanum dulcamara*), is a scrambling shrubby perennial, up to 2 m tall, of Eurasia and N Africa. It has small purple-lobed flowers and its red berries are poisonous. The **black nightshade** (*S. nigrum*) is an annual, up to 50 cm high. It has poisonous black berries. The unrelated **enchanter's nightshade** (*Circaea lutetiana*), of Eurasia, is a herbaceous perennial of shady places. Up to 60 cm tall, it has a terminal spike of tiny white flowers. Family: *Onagraceae*.

nihilism A political or philosophical view that rejects all traditional values and institutions. **Turgenev* invented the label in his *Fathers and Sons* (1861).

Niigata 37 58N 139 2E A city in Japan, in NW Honshu. It is the main port for the Sea of Japan. Population (2004 est): 812 115.

Nijinsky, Vaslav (1890–1950) Russian ballet dancer. In 1909 he joined Diaghilev's company in Paris, and quickly achieved an international reputation. Michel **Fokine* created *Petrushka*, *Scheherazade*, and other ballets for him, and from 1913 he also began to choreograph himself. He retired in 1919 suffering from schizophrenia.

Nikolaev 46 57N 32 00E A port in S Ukraine, at the confluence of the Rivers Bug and Ingul. Long a naval base, it has important shipbuilding industries. Population (2005 est): 509 011.

Nile, Battle of the (1 August 1798) A naval battle in which the British, under **Nelson*, defeated the French during Napoleon's invasion of Egypt (see *REVOLUTIONARY AND NAPOLEONIC WARS*). This engagement gave Britain control of the Mediterranean.

Nile, River A river in N Africa, the longest in the world. The longest of its three main tributaries, the White Nile, rises in Burundi and flows N through Lake Victoria and Lake Mobutu. At Khartoum it is joined by the Blue Nile (which rises in the Ethiopian highlands) and later by the River Atbara before flowing through a broad delta into the Mediterranean Sea. The Nile's annual floodwaters have supported cultivation on its floodplains since ancient times. Vast dams have also been constructed, including the Aswan Dam and *Aswan High Dam. Length: 6741 km (4187 mi).

Nilo-Saharan languages A widely varied family of African languages. It includes the Nilotic languages of the Chari-Nile group, such as Dinka and Nuer.

nimbostratus A form of *cloud common in temperate latitudes. Dark grey and solid in appearance it has a low base but may show extensive vertical development. Precipitation of snow or rain is often prolonged although not usually heavy.

Nîmes 43 50N 4 21E A city in S France, the capital of the Gard department. An important Roman settlement, it was a Protestant stronghold (16th–17th centuries). Population (1999): 133 424.

Nimrod A legendary biblical figure described in Genesis as a mighty hunter. He founded a Mesopotamian kingdom that included the cities of Babel, Erech, and Akkad and is credited with building the cities of Nineveh and Kalhu (modern Nimrud).

Nimrud An Assyrian capital (ancient Kalhu) near Mosul (Iraq). Founded about 1250 BC it was destroyed by the Medes in 612 BC. Excavations (1845–51) by Sir Austen Layard (1817–94) of the 9th-century city yielded gigantic sculptures and *cuneiform tablets.

Nineveh An Assyrian capital (modern Kuyunjik) near Mosul (Iraq). Nineveh was made cocapital with Nimrud by Sennacherib (c. 700 BC). The Medes sacked it in 612 BC. Sir Austen Layard's great find here was the library of Ashurbanipal.

Ningbo (or **Ning-po**) 29 54N 121 33E A river port in E China, in Zhejiang province. Important for overseas trade (5th–9th centuries), it was also a religious centre. Population (2003 est): 1 045 048.

Niobe In Greek mythology, the daughter of Tantalus and wife of the King of Thebes. After her many children were killed by Apollo and

Artemis, she was changed by Zeus into a stone column or statue, the face of which was said continually to shed tears.

niobium (Nb) A soft ductile white metal, discovered in 1801. It was formerly known as columbium in the USA. Niobium is used in specialist alloys in spacecraft, and at low temperatures it has superconducting properties. Its compounds include the white oxide (Nb_2O_5) and the volatile fluoride and chloride (NbF_5 , NbCl_5). At no 41; at wt 92.9064; mp $2469 \pm 10^\circ\text{C}$; bp 4744°C .

nirvana The supreme goal of Buddhism, in which liberation from the limitations of existence and rebirth are attained through the extinction of desire. In Hinduism nirvana also means spiritual release in the sense of freedom from reincarnation or union with God or the Absolute.

Niš 43 20N 21 54E A city in E Serbia. For five centuries to 1877 it was a centre for Serbian resistance to Turkish control. Population (2002): 173 724.

Nishinomiya 34 44N 135 22E A city in Japan, in S Honshu. It is traditionally known for its sake (rice wine). Population (2004 est): 459 448.

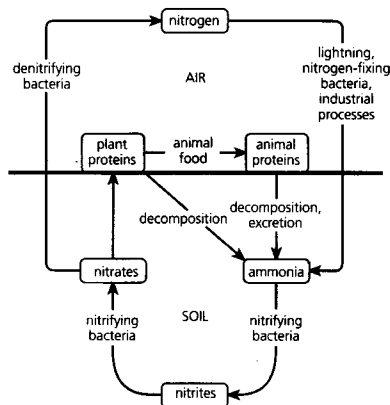

Niterói 22 54S 43 06W A city in SE Brazil, opposite the city of Rio de Janeiro. It is a popular resort. Population (2005 est): 474 000.

nitric acid (HNO_3) A fuming corrosive liquid made by the oxidation of ammonia by air in the presence of a platinum catalyst or the action of sulphuric acid on sodium or potassium nitrate. It is used in the manufacture of fertilizers and explosives.

nitrogen (N) A colourless odourless gas, discovered by D. Rutherford (1749–1819) in 1772. It makes up 78% of the earth's atmosphere by volume. The element exists as diatomic molecules (N_2) bonded very strongly together. It forms a range of chemical compounds including ammonia (NH_3), the oxides (N_2O , NO, N_2O_3 , NO_2 , N_2O_5), nitric acid (HNO_3), and many nitrates (for example NaNO_3). Liquid nitrogen has a wide range of cryogenic applications. Ammonia (NH_3) and nitrates are of great importance as fertilizers. At no 7; at wt 14.0067; mp -210.0°C ; bp -195.8°C .

nitrogen cycle The sequence of processes by which nitrogen and its compounds are utilized in nature. Nitrogen gas in the air is converted (fixed) to ammonia by certain soil bacteria and fertilizer manufacturers (see NITROGEN FIXATION). Nitrifying bacteria in the roots of leguminous plants convert ammonia

to nitrites and then to nitrates, which are used by plants to manufacture amino acids. When animals eat plants some of this nitrogenous plant material is incorporated into animal tissues. Nitrogenous excretory products and dead organic matter decompose to produce ammonia, so completing the cycle.

nitrogen cycle

nitrogen fixation The conversion of atmospheric nitrogen gas into nitrogen compounds. The process occurs naturally by the action of bacteria in the roots of leguminous plants (see NITROGEN CYCLE). Industrial methods of fixing atmospheric nitrogen are of immense importance in the manufacture of nitrogen fertilizers.

nitroglycerin ($C_3H_5(NO_3)_3$) A yellow oily highly *explosive liquid. It is used as an explosive either alone or as *dynamite or *gelignite.

Niven, David (1909–83) British film actor. His early films include *The Prisoner of Zenda* (1937) and *Wuthering Heights* (1939), and he later appeared in many stylish comedies and action films, including *Separate Tables* (1958). He published two volumes of autobiography, *The Moon's a Balloon* (1972) and *Bring on the Empty Horses* (1975).

Nixon, Richard Milhous (1913–94) US statesman; Republican president (1969–74). He contributed to *McCarthy's anticommunist investigations and was Eisenhower's vice president from 1953 until 1960, when he became the Republican presidential candidate. As president he reduced US troop commitments abroad and in 1973 ended US military involvement in Viet-

nam. In 1972 he paid a successful visit to the People's Republic of China. Participation in illegal efforts to ensure re-election in 1972 and the subsequent cover-up attempt led to the *Watergate scandal. Under threat of impeachment he became the first president to resign of office.

Nizhnii Novgorod (name from 1932 until 1991: Gorkii) 56 20N 44 00E A city in central Russia on the Rivers Oka and Volga. It is an important industrial city and was renamed in 1932 in honour of the writer Maksim Gorki. Population (1999 est): 1 364 900.

Nizhnii Tagil 58 00N 59 58E A city in Russia, on the E slopes of the Ural Mountains. Its metallurgical industries arise from the surrounding ironmining region. Population (1999 est): 395 800.

Nkrumah, Kwame (1909–72) Ghanaian statesman; prime minister (1957–60) and then president (1960–66). He formed (1949) the Convention People's Party, which with a policy of noncooperation with the British took the Gold Coast to independence as Ghana in 1957. Nkrumah was deposed by a military coup in 1966.

No A form of Japanese theatre. It is performed with a minimum of scenery and properties and is characterized by the use of dance, mime, and masks. The acting is highly stylized.

Nobel, Alfred Bernhard (1833–96) Swedish chemist and businessman. From his invention of dynamite (1866) and a smokeless gunpowder (1889) and his exploitation of the Baku oilfields he amassed a considerable fortune, leaving £1.75 million as a foundation for the Nobel Prizes. There are now six awards: for physics, chemistry, physiology or medicine, literature, peace, and economics.

nobelium (No) A synthetic transuranic element discovered in 1957 by bombarding curium with carbon ions in an accelerator. Five isotopes with short half-lives have been discovered. Named after Alfred Nobel. At no 102; at wt (259).

noble gases (or **inert gases**) The elements forming group O of the *periodic table: helium, neon, argon, krypton, xenon, and radon. All are colourless odourless tasteless gases, which are slightly soluble in water. For many years they were thought to be chemically inert. The first compound of xenon was discovered in 1962, since when fluorides and oxygen fluorides of xenon, krypton, and radon have been prepared.

noctule An insect-eating *bat, *Nyctalus noc-*

tula, of Eurasia. About 12 cm long, it has bright-chestnut fur and long narrow wings. Noctules hibernate only from Dec to Jan. Family: *Vesperilionidae*.

Nolan, Sir Sidney (1917–92) Australian painter. He is known for his paintings of Australian historical figures, such as Ned *Kelly, and landscapes of the outback.

Nonconformists In its original early-17th-century sense, the term referred to members of the Church of England who did not conform with its rituals. After the Act of Uniformity (1662), the term's scope widened to include members of dissenting Protestant sects, such as the Quakers and Methodists.

noradrenaline (or **norepinephrine**) A hormone secreted by the core (medulla) of the adrenal glands. A *catecholamine, structurally similar to *adrenaline, it produces different effects in certain target organs, especially the heart, the rate of which it decreases. Noradrenaline is stored by cells of the sympathetic nervous system and released by nerve endings to excite adjacent nerves in the transmission of impulses. In the hypothalamus it is thought to inhibit transmission of impulses.

Norfolk 1. 36°54N 76°18W A seaport in the USA, in Virginia on Hampton Roads. Founded in 1682, it suffered considerable damage in the American Revolution and the US Civil War. Population (2000): 243 403. **2.** A county of E England, in East Anglia. It is mainly low lying, with fens in the W and the Norfolk *Broads in the E. It is mainly agricultural. Tourism is important. Area: 2763 sq km (1067 sq mi). Population (2001): 796 733. Administrative centre: Norwich.

Norfolk, Thomas Howard, 3rd Duke of (1473–1554) English statesman. He became president of the privy council in 1529 and in 1536 suppressed the *Pilgrimage of Grace. He lost power after the execution of his niece Catherine Howard (1542) and was imprisoned (1546–53) for involvement in the alleged treason (1546) of his son Henry Howard, Earl of *Surrey. Surrey's son **Thomas Howard, 4th Duke of Norfolk** (1538–72) was imprisoned (1559–60) by Elizabeth I for planning to marry Mary, Queen of Scots. He subsequently plotted against Elizabeth and was executed.

Norfolk Island 29°05S 167°59E A mountainous Australian island in the SW Pacific Ocean, formerly a British penal colony. Area: 36 sq km (14 sq mi). Population (1993): 2665. Chief town: Kingston.

Norman conquest (1066–72) The conquest

of England by William, Duke of Normandy (see **WILLIAM (1) THE CONQUEROR**). After defeating Harold II at the battle of Hastings (1066), William captured London and was crowned. English risings were suppressed by 1070 and with the defeat of the Scots in 1072 the conquest was complete. The English lay and ecclesiastical aristocracy was replaced by Normans and other continentals and *feudalism was introduced. Latin became the language of government and Norman French, the literary language; Norman influence was also felt in church and architecture.

Normandy (French name: Normandie) A former province in N France, on the English Channel. *History:* during the medieval period Normandy flourished. William II, Duke of Normandy, conquered England (1066) to become William I of England. Subsequently disputed between England and France, it finally reverted to France in 1449. During World War II it suffered severe damage.

Normans Viking settlers in N France (later Normandy) whose rule, under their leader Rollo, was formally recognized (911) by Charles the Simple (879–929; reigned 898–923). By the end of the 11th century they had also conquered England (see **NORMAN CONQUEST**) and much of S Italy and Sicily and had established crusading states in the E, besides gaining a foothold in Wales and Scotland. Noted for their military inventiveness, they adopted and adapted existing administrative practices in countries they conquered with great success.

Norrköping 58°35N 16°10E A port in SE Sweden, on an inlet of the Baltic Sea. Population (2000 est): 122 212.

North, Frederick, Lord (1732–92) British statesman; prime minister (1770–82). As prime minister, he was criticized for precipitating the *American Revolution (1775–83), and eventually resigned.

North America The N part of the American double continent. For purposes of natural geography, this comprises the whole continent as far S as the Isthmus of Panama, including the Caribbean and the Canadian Arctic islands and Greenland. The W part is occupied by mountain chains (the Cascades, Rocky Mountains, Sierra Madre) surrounding arid high plateaus. The central part is the Great Plains and Mississippi basin. The Appalachian Mountains in the E are separated from the Canadian Shield by the Great Lakes. Area: over 24 000 000 sq km (9 500 000 sq mi). Population (2000 est): 440 000 000.

North American Free Trade Agreement (NAFTA)

A treaty signed in 1993 by the USA, Canada, and Mexico to establish free trade with each other. All trade tariffs will be removed, those on certain agricultural products being gradually phased out.

North American Indian languages A geographical classification of the languages of the indigenous peoples of North America. It is estimated that these languages originally numbered about 300. Edward Sapir (1884–1939) arranged them into six phyla (1929): Eskimo-Aleut; Algonkian-Wakashan; Na-Dené; Penutian; Hoka-Siouan; and Aztec-Tanoan.

North American Indians A group of peoples of North America, mistakenly believed to be inhabitants of the Indian subcontinent when first encountered by Columbus. In common with other American Indians, they are probably descended from migrants who arrived from Asia some 20 000 years ago. Their traditional cultures range from that of warlike hunters and gatherers to peaceful cultivators. Social organization is usually based on kinship.

Northampton 52 14N 0 54W A town in England. Administrative centre of Northamptonshire, it is a centre of the footwear industry. Population (2005 est): 195 000.

Northamptonshire (or Northants) A county in the East Midlands of England. A ridge of gentle hills runs NE–SW. It is predominantly agricultural. Industry includes shoe making, food processing, and engineering. Area: 2367 sq km 915 sq mi. Population (2004 est): 646 700. Administrative centre: Northampton.

North Atlantic Treaty Organization

(NATO) An alliance formed in 1949 by Belgium, Canada, Denmark, France, Iceland, Italy, Luxembourg, the Netherlands, Norway, Portugal, the UK, and the USA; Greece and Turkey joined in 1952, West Germany in 1955, Spain in 1982, and the united Germany in 1990. It was formed during the *Cold War to guard against possible Soviet aggression. All member states are bound to protect any member against attack. Its secretariat headquarters is in Brussels and its military headquarters in Norfolk, Virginia, and near Mons, Belgium. In 1991 NATO began to forge links with the former Eastern-bloc nations; in 1997 Russia was given a voice in NATO in return for accepting NATO's expansion into eastern Europe. The Czech Republic, Poland, and Hungary joined in 1999; Bulgaria, Estonia, Latvia, Lithuania, Romania, Slovakia, and Slo-

venia joined in 2004. In 1995 NATO carried out air strikes against Serb positions around Sarajevo, its first-ever aggressive action; in 1999 it undertook a major air campaign against Serbia (see KOSOVO) and in 2006 it took command of military operations in S Afghanistan.

North Ayrshire A council area of W central Scotland on the Firth of Clyde, comprising part of the historic county of Ayrshire, including the Isle of Arran. Absorbed into Strathclyde Region in 1975, it became an independent unitary authority in 1996. Tourism and fishing are important. Area: 884 sq km (341 sq mi). Population (2004 est): 136 020. Administrative centre: Irvine.

North Carolina A state in the USA, on the S Atlantic coast. The extensive coastal plain stretches westwards to the Piedmont Plateau and the Appalachian Mountains in the E. It is heavily populated and the leading industrial state in the South. *History:* one of the 13 original colonies, it shares its early history with South Carolina. It was made a separate colony in 1713 and it became a state in 1789. It was a supporter of the Confederate cause in the US Civil War. Area: 136 197 sq km (52 586 sq mi). Population (2005 est): 8 683 242. Capital: Raleigh.

North Dakota A state in the N central USA. It comprises three main physical regions: the Red River Valley along the E border, the Central Lowlands just W of this strip, and the Great Plains in the SW. Agriculture and mining are the two principal economic activities. *History:* early attempts to settle were made by Scottish and Irish families at Pembina in 1812. It formed part of the territory of Dakota from 1861 until 1889 when it was made a separate state. Area: 183 022 sq km (70 665 sq mi). Population (2005 est): 636 677. Capital: Bismarck.

North Down A district in Northern Ireland, in Co Down. Area: 82 sq km (32 sq mi). Population (2004 est): 77 624.

Northeast Caucasian languages A group of about 25 languages of the NE region of the Caucasus, also called the Nakho-Dagestanian family. Chechen, the most important, is part of the Nakh subdivision.

North East Lincolnshire A unitary authority in NE England, in Lincolnshire; formerly (1975–96) part of the county of Humberside. Area: 192 sq km (74 sq mi). Population (2004 est): 157 700.

Northeast Passage (Russian name: Severny Morskoy Put) The sea route along the N Eurasian coast, kept open in summer by Soviet icebreakers. It was first traversed by the Swe-

dish explorer, Niels Nordenskjöld (1878–79). See also **NORTHWEST PASSAGE**.

Northern Ireland See **IRELAND**.

Northern Lights See **AURORA**.

Northern Territory An administrative division of N central Australia. It consists chiefly of a plateau with Arnhem Land in the N and the Macdonnell Ranges in the S. Close to the geographical centre of the continent stands *Ayers Rock. The main agricultural activity is the rearing of beef cattle. Minerals are important, especially uranium, iron ore, manganese, copper, gold, and bauxite. In 1978 the Northern Territory became an independent state, but the federal government retained control over uranium. Area: 1 346 200 sq km (519 770 sq mi). Population (1999 est): 192 880. Capital: Darwin.

Northern War, Great (1700–21) The war fought for Baltic supremacy between Russia, Denmark, and Poland on one side, and Sweden on the other. After the death of Charles XII of Sweden (1718), the war between Denmark, Poland, and Sweden was ended by the Treaties of Stockholm (1719–20). The Treaty of Nystad (1721) between Russia and Sweden marked Russia's emergence as the major Baltic power.

North Island The most northerly of the two principal islands of New Zealand, separated from South Island by Cook Strait. Area: 114 729 sq km (44 281 sq mi). Population (2001): 2 849 724.

North Korea See **KOREA**.

North Lanarkshire A council area of central Scotland, consisting mainly of the NE part of the historic county of Lanarkshire. Absorbed into Strathclyde Region in 1975, it became an independent unitary authority in 1996. Industries include engineering, metal working, and electronics. Area: 1771 sq km (684 sq mi). Population (2001): 321 067. Administrative centre: Motherwell.

North Lincolnshire A unitary authority in NE England, in Lincolnshire; formerly (1975–96) part of the county of Humberside. Area: 1497 sq km (578 sq mi). Population (2001): 152 839.

North Sea A section of the Atlantic Ocean in NW Europe, between the British Isles and the continent N of the Strait of Dover. The entire floor is part of the continental shelf, with an average depth of about 300 m (914 ft). Recent exploitation of *North Sea oil and natural-gas finds have increased its economic importance.

North Somerset A unitary authority of SW England, in Somerset; formerly (1974–96) part

of the county of Avon. Area: 375 sq km (145 sq mi). Population (2001): 188 556.

North Star See **POLARIS**.

North Tyneside A unitary authority in NE England, in Tyne and Wear. Area: 84 sq km (32 sq mi). Population (2001): 191 663.

Northumberland The most northerly county of England. It consists of a coastal plain rising to the Cheviot Hills in the N and the Pennines in the W. The main river is the Tyne. There are outstanding Roman remains, notably Hadrian's Wall. The chief agricultural activity is sheep farming. The industrial SE became part of Tyne and Wear in 1974. Area: 5033 sq km (1944 sq mi). Population (2001): 307 186. Administrative centre: Morpeth.

Northumberland, John Dudley, Duke of (1502–53) English statesman, who was virtual ruler of England (1549–53) under Edward VI. He replaced the Duke of Somerset as head of the regency council in 1549, securing his execution in 1552. In 1553 he married his son to Lady Jane *Grey, whom he persuaded the king to name as his heir. On Edward's death Jane was proclaimed queen but lack of support forced Northumberland's surrender to Mary (I) and he was executed.

Northumbria A kingdom of Anglo-Saxon England north of the Humber. Northumbria became politically pre-eminent in England in the 7th century under *Edwin, Saint *Oswald, and Oswiu (d. 670). Northumbrian scholarship was also unrivalled, boasting such great names as *Bede. By 829, however, Northumbria had recognized the overlordship of Wessex and in the late 9th century its unity was destroyed by the Danes.

Northwest Caucasian languages A group of languages of the NW region of the Caucasus, also called the Abkhazo-Adyghian family. It includes Abkhaz, Abaza, Adyghian, Kabardian (Circassian), and Ubykh.

North-West Frontier Province A province in NW Pakistan, SE of Afghanistan. Its Pathan inhabitants mostly herd livestock or cultivate grains, fruit, sugar cane, and tobacco. Over the centuries several great powers have sought to control the province, but it has usually remained semiautonomous because of its rugged terrain and fierce inhabitants. Since the early 1980s over a million refugees have fled here from the civil wars in Afghanistan. Area: 74 522 sq km (28 773 sq mi). Population (1998): 17 555 000. Capital: Peshawar.

Northwest Passage The sea route along

n

the coast of North America, between the Atlantic and Pacific Oceans. It was first traversed by Roald Amundsen (1903–06). *See also* NORTH-EAST PASSAGE.

Northwest Territories A territory of NW Canada. It formerly occupied a vast area stretching from 60°N to the North Pole and from Baffin Island in the E to the Yukon border in the W. In 1999 a large area of the NE became the new territory of *Nunavut, a semi-autonomous homeland for the Inuit peoples. The remainder, which is the more developed part of the Canadian north, continues to be known as the Northwest Territories, although new names have been proposed. It is rich in mineral resources and mining is important. The vast oil reserves are being explored. Area: 2 082 910 sq km (804 003 sq mi). Population (2005 est): 43 000. Capital: Yellowknife.

North Yorkshire A county in N England. In 1996 the post-1974 county of Cleveland was abolished and those districts historically belonging to Yorkshire were restored to the county for ceremonial purposes: they are now administered by the unitary authorities of Langbaugh, Middlesbrough, and Stockton-on-Tees. The city of York also became a unitary authority. The Pennines rise to the W of the Vale of York, while the Cleveland Hills and North York Moors, rise to the E. It is chiefly agricultural, with some industrial activity in the larger towns. Tourism is centred on Harrogate and Scarborough. Area (excluding unitary authorities): 8037 sq km (3102 sq mi). Population (2005 est, excluding unitary authorities): 579 900. Administrative centre: Northallerton.

Norway, Kingdom of (Norwegian name: Norge) A country in N Europe occupying the W part of the Scandinavian Peninsula. It is largely mountainous, reaching heights of almost 2500 m (8000 ft), with a heavily indented coastline. Glaciers and forests cover approximately one-quarter of the country. The archipelago of Svalbard and Jan Meyen Island are also part of Norway together with the dependencies of Bouvet Island, Peter I Island, and Queen Maud Land. *Economy:* abundant hydroelectric power has enabled Norway to develop as an industrial nation. Norway is also one of the world's great fishing nations. Forestry is a major source of wealth and revenues from tourism are important. Minerals include iron ore, limestone, coal, copper, zinc, and lead. *History:* its early history was dominated by the Vikings. The many local chieftains were not subjected to a single ruler until the reign of Harold I Haarfager (died c. 930). Christianity was introduced in the 10th

century. During the reign (1204–63) of Haakon IV Haakonsson Norway acquired Iceland and Greenland and in the 14th century it was united with Sweden and Denmark. Sweden broke free in 1523 but Norway remained under Danish domination until 1814, when it was united with Sweden, while maintaining internal self-government. Only in 1907 was full independence achieved. Norway declared its neutrality in both World Wars but from 1940 to 1945 was occupied by the Germans, who established a government under Quisling. After World War II, Norway joined the UN and NATO. Norway has a highly developed social-welfare system. In a referendum (1994) Norwegians voted against joining the EU. Following elections in 2005 Jens Stoltenberg formed a "red-green" coalition. Official language: Norwegian. Currency: krone of 100 øre. Area: 323 886 sq km (125 053 sq mi). Population (2007 est): 4 627 926. Capital: Oslo.

Norwegian A North Germanic language of the West Scandinavian division, spoken in Norway. There are two distinct forms known as Dano-Norwegian (Bokmål or Riksmål) and New Norwegian (Nynorsk or Landsmål).

Norwegian Antarctic Territory The area in Antarctica claimed by Norway, consisting mainly of Queen Maud Land and adjacent islands. There have been many research stations along the mountainous coast.

Norwich 52 38N 1 18E A city in E England, the administrative centre of Norfolk. Towards the end of the 16th century many weavers from the Netherlands settled in the city and it became a major textile centre; engineering and financial services are now important. Population (2005 est): 127 600.

nose The organ of smell, which is also an entrance to the respiratory tract. It leads to the nasal cavity, which is lined by *mucous membrane, extends back to the pharynx and windpipe, and is connected to the air sinuses of the skull. Hairs in the nostrils filter particles from inhaled air, which is further cleaned, warmed, and moistened in the nasal cavity. The membrane at the top of the nasal cavity contains olfactory cells, which are sensitive to different smells and are connected to the brain via the olfactory nerve.

Nostradamus (Michel de Notredame; 1503–66) French physician and astrologer, famous for his *Centuries* (1555–58), in which he made a number of prophecies in the form of rhyming quatrains. His prophecies are obscure and open to various interpretations.

notochord A flexible skeletal rod that runs along the length of the body in the embryos of all animals of the phylum Chordata (including vertebrates). In primitive chordates, such as the lancelets and lampreys, the notochord remains the main axial support.

Notre-Dame de Paris The gothic cathedral built (1163–1345) on the Île de la Cité, Paris, to replace two earlier churches. The nave, choir, and west front were completed by 1204; the innovatory flying buttresses and the great rose windows are notable features. Damaged during the French Revolution, Notre-Dame was fully restored (1845–64) by Eugène Viollet-le-Duc (1814–79).

Nottingham 1. 52°58'N 1°10'W A city in N central England, in Nottingham unitary authority, the administrative centre of Nottinghamshire. Charles I raised his standard here in 1642 at the outbreak of the Civil War. Notable buildings include the "Trip to Jerusalem," reputed to be the oldest inn in England. It was once famous for its lace. Population (1995 est): 283 800. **2.** A unitary authority in N central England, in Nottinghamshire. Area: 78 sq km (30 sq mi). Population (2001): 266 995.

Nottinghamshire A county in the East Midlands of England. It consists mainly of lowlands, crossed by the River Trent, with Sherwood Forest (famous for the Robin Hood legend) in the SW. Agriculture is important with arable and dairy farming, orchards, and market gardening. The main town, Nottingham, became an independent unitary authority in 1998. Area (excluding Nottingham): 2086 sq km (805 sq mi). Population (2001, excluding Nottingham): 748 503. Administrative centre: Nottingham.

Nouakchott 18°09'N 15°58'W The capital of Mauritania, in the W near the Atlantic coast. A small village until the 1950s, it was developed as the capital after independence in 1960. Population (1999 est): 881 000.

Nouméa 22°16'S 166°26'E The capital of New Caledonia. A port, it exports nickel, chrome, manganese, and iron. Population (1996): 76 293.

nova A *binary star that suddenly increases in brightness by perhaps 10 000 times or more and then fades over months or years, usually to its original brightness. Nova eruptions occur in close binary systems comprising a *white dwarf with a nearby companion star that is expanding and is losing matter to the white dwarf.

Nova Scotia A province of E Canada. It con-

sists of a peninsula protruding into the Atlantic Ocean and *Cape Breton Island. Mostly rolling hills and valleys, Nova Scotia was originally covered by mixed forest but has been largely replanted with conifers. Coal output is down significantly, but Nova Scotia also mines gypsum, salt, and copper. Agriculture includes dairying, mixed farming, livestock, and fruit. *History:* from the first colonization (1605), Britain and France contested the area, Britain eventually gaining possession (confirmed by the Treaty of Paris in 1763). Since joining Canada (1867), its economy has lagged. Area: 52 841 sq km (20 402 sq mi). Population (2001): 942 700. Capital: Halifax.

Novaya Zemlya A Russian double island in the Arctic Ocean. It is mountainous with wild steep coasts. There is no permanent population, apart from weather stations. Soviet nuclear tests were formerly conducted here. Area: 83 000 sq km (32 040 sq mi).

Novello, Ivor (David Ivor Davies; 1893–1951) British composer, dramatist, and actor. He composed the World War I song "Keep the Home Fires Burning" and such romantic musicals as *Careless Rapture* (1936).

Novosibirsk 55°04'N 83°05'E A city in W central Russia, on the River Ob and the Trans-Siberian Railway. Population (1999 est): 1 402 400.

Nu, U (or **Thakin Nu**; 1907–95) Burmese statesman; prime minister (1948–56, 1957–58, 1960–62). A leading nationalist, he first became prime minister on independence.

Nubia A region of NE Africa, between Aswan (Egypt) and Khartoum (Sudan). Much of Nubia is now drowned by Lake Nasser. From about 2000 BC the Egyptians gradually occupied Nubia, which they called Cush. As Egyptian power waned, Nubian kings, based at Napata and Meroë, became influential, even dominating Egypt itself (c. 730–670). Their independent culture lasted until the 4th century AD.

Nubian Desert A desert in the NE Sudan, between the River Nile and the Red Sea. It consists of a sandstone plateau with peaks of up to 2259 m (7411 ft). Area: about 400 000 sq km (154 408 sq mi).

nuclear energy The energy evolved by nuclear fission or nuclear fusion. The energy is liberated in fission when a heavy atomic nucleus, such as uranium, splits into two or more parts, the total mass of the parts being less than the mass of the original nucleus. This difference in mass is equivalent to the *binding

energy of the nucleus and most of it is converted into the kinetic energy of the components formed in the reaction. In a fusion reaction, two light nuclei, such as hydrogen, combine to form a stable nucleus, such as he-

lium; with light nuclei the nucleus formed has a lower mass than the sum of the component nuclei, again energy is released. In the case of fission, when a nucleus of uranium-235 is struck by a neutron, a U-236 nucleus is formed,

nuclear fission

nuclear fuel cycle

Magnox reactor

advanced gas-cooled reactor (AGR)

pressurized-water reactor (PWR)

fast reactor

nuclear energy. Natural uranium metal fuel clad in Magnox (magnesium alloy) is used in Magnox thermal reactors. Enriched uranium dioxide pellets clad in steel are used in AGR and PWR fuel elements. Plutonium for fast reactors and recycled enriched uranium is obtained by reprocessing spent fuel from thermal reactors. The electricity generating plant is similar with all reactor types.

which immediately splits into two roughly equal parts. Two or three neutrons are produced at the same time. As these neutrons can cause further fissions, a chain reaction builds up and a lump of U-235 will disintegrate almost instantaneously with enormous explosive power, provided that it is in excess of the critical mass (see **NUCLEAR WEAPONS**). In nuclear power stations the fission reaction is harnessed to produce heat at a controlled rate (to raise steam to drive a turbine). They use natural uranium, which contains only 0.7% of the fissionable U-235 isotope, nearly all of the rest being the isotope U-238. The U-238 isotope absorbs the fast-moving neutrons emitted by the fission of U-235 and prevents a chain reaction from occurring in natural uranium. There are, however, two ways of producing a chain reaction. One is to use a moderator to slow down the fast neutrons so that they are not absorbed by U-238 nuclei (see **THERMAL REACTOR**). The other is to enrich the natural uranium with extra quantities of U-235 (or plutonium-239) so that there are sufficient neutrons to sustain the chain reaction in spite of absorption by U-238 (see **FAST REACTOR**). Most present commercial reactors are thermal, although fast reactors are now operating in the UK, France, and the former Soviet Union.

The fusion process is the basis of the hydrogen bomb (see **NUCLEAR WEAPONS**; **THERMONUCLEAR REACTOR**).

nuclear fission See **FAST REACTOR**; **NUCLEAR ENERGY**; **NUCLEAR POWER**; **NUCLEAR WEAPONS**; **THERMAL REACTOR**.

nuclear fusion See **NUCLEAR ENERGY**; **NUCLEAR WEAPONS**; **THERMONUCLEAR REACTOR**.

nuclear medicine The use of radioisotopes in the study of disease. It is widely used in heart disease (**nuclear cardiology**): a gamma-emitting nuclide (e.g. thallium-201) is injected into the blood, enabling a computerized gamma camera to record images of the working heart.

nuclear power The generation of electricity using nuclear energy. The nuclear power industry expanded rapidly from the 1960s: by the 1990s it provided some 22% of world electricity, 30% of Europe's electricity, and 28% of UK electricity. However, the disaster (1986) at *Chernobyl caused universal concern over nuclear safety. The Soviet design of the Chernobyl reactor, using a single shell building, is now considered unsafe, unlike the US water-cooled reactors using double-walled buildings, which

prevented disaster at Three Mile Island in 1979. In addition to safety fears, the cost of disposing of radioactive waste and high decommissioning costs have made the price of nuclear-generated electricity uncompetitive with fossil fuels. This has been especially so in the UK since privatization of the industry in 1996, when the £1 bn per year subsidy raised by the **nuclear levy** came to an end. Once regarded as the energy source of the future, nuclear power is now becoming, in the UK at least, a thing of the past. Most countries have reconsidered their plans for expansion and in the UK the 15 remaining plants will be closed during the next 20 years. This position has been reached in spite of a strong lobby that regards nuclear power as essential in view of diminishing fossil fuel reserves and the global warming they cause (see **GREENHOUSE EFFECT**). See also **FAST REACTOR**; **THERMAL REACTOR**; **THERMONUCLEAR REACTOR**.

nuclear reactor A device for producing *nuclear energy in a usable form. See **FAST REACTOR**; **NUCLEAR POWER**; **THERMAL REACTOR**; **THERMONUCLEAR REACTOR**.

Nuclear Test-Ban Treaty (1963) A treaty banning nuclear testing by its signatories on the ground, in the atmosphere, in space, and under water. The signatories were the Soviet Union, the UK, and the USA; many other countries agreed to adhere to the treaty. Subsequent disarmament talks led to a comprehensive test-ban treaty (1996) but this will only come into force when signed and ratified by all 44 countries deemed to have nuclear potential. So far it has been signed by all but India, Pakistan, and North Korea but ratified only by France and the UK.

nuclear waste See **RADIOACTIVE WASTE**.

nuclear weapons Missiles, bombs, or mines that use nuclear fission or fusion (see **NUCLEAR ENERGY**) yielding enormous quantities of heat, light, blast, and radiation. The first **atomic bomb** (or fission bomb), manufactured by the USA in World War II, was dropped on Hiroshima in 1945. It consisted of two small masses of uranium-235 forced together by a chemical explosion to form a supercritical mass, in which an uncontrolled chain reaction occurred. The bomb had an explosive power equivalent to 20 000 tons of TNT. Later models used plutonium-239 to even greater effect.

The **hydrogen bomb** (fusion bomb or thermonuclear bomb) consists of an atom bomb surrounded by a layer of hydrogenous material, such as lithium deuteride. The atom

bomb creates the necessary temperature (about 100 000 000°C) needed to ignite the fusion reaction (see THERMONUCLEAR REACTOR). Hydrogen bombs have an explosive power measured in tens of megatons (millions of tons) of TNT. The first hydrogen bomb was exploded by US scientists on Eniwetok Atoll in 1952.

The **neutron bomb** (or enhanced radiation bomb) is a nuclear weapon designed to maximize neutron radiation. It is lethal to all forms of life but, having reduced blast, leaves buildings, etc., relatively undamaged.

nucleic acids Organic compounds, found in the cells of all living organisms, that consist of a mixture of nitrogenous bases (purines and pyrimidines), phosphoric acid, and a pentose sugar. The sugar is ribose in the ribonucleic acids (see RNA) and deoxyribose in the deoxyribonucleic acids (see DNA). Nucleic acids store genetic information in living organisms and interpret that information in protein synthesis. See also NUCLEOPROTEIN.

nucleolus A small dense body, one or more of which can be seen within the *nucleus of a nondividing cell. It contains RNA and protein and is involved in the synthesis of *ribosomes.

nucleon A collective name for a proton or neutron. See also MASS NUMBER.

nucleoprotein A compound consisting of a nucleic acid associated with one or more proteins. The nucleoprotein of cell nuclei—the chromosomes—consists of DNA and proteins, mainly histones; cytoplasmic nucleoproteins—the ribosomes—are ribonucleoproteins comprising some 60% protein and 40% RNA. Viruses also consist of nucleoprotein.

nucleus (biology) A large granular component of nearly all cells. It is usually spherical or ovoid in shape and is surrounded by a nuclear membrane, which is perforated with pores to allow exchange of materials between the nucleus and cytoplasm. The nucleus contains the *chromosomes, made up of the hereditary material (DNA), and is therefore essential for the control and regulation of cellular activities, such as growth and metabolism. During cell division the chromosomes are involved in the transfer of hereditary information (see MEIOSIS; MITOSIS).

nucleus (physics) The central core of the atom (see ATOMIC THEORY) discovered by Lord Rutherford in 1911. All nuclei consist of protons and neutrons (jointly called nucleons), except for hydrogen, which consists of a single

proton. The constituent nucleons are held together by the *strong interaction. The number of protons in the nucleus determines its charge and atomic number; the number of neutrons (in addition to the number of protons) determines the mass number and the isotope. **Nuclear physics** is the study of the structure and reactions of the nucleus. See also PARTICLE PHYSICS.

Nuffield, William Richard Morris, 1st Viscount (1877–1963) British car manufacturer and philanthropist. He established a car factory in Cowley, near Oxford, which in 1913 produced the first Morris Oxford, soon followed by the Morris Cowley. He founded Nuffield College, Oxford, the Nuffield Trust, and the Nuffield Foundation.

Nuku'alofa 21 09S 175 14W The capital of Tonga in the S Pacific, in N Tongatabu. It is the site of the Royal Palace (1865–67) and Royal Tombs. Population (1999 est): 37 000.

Nullarbor Plain A plain of SW South Australia and SE Western Australia, bordering on the Great Australian Bight. It consists of a treeless arid plateau. Area: 260 000 sq km (100 000 sq mi).

numbat A rat-sized *marsupial, *Myrmecobius fasciatus*, of SW Australia, also called marsupial (or banded) anteater. It is slender and rust-coloured, with white stripes across the back and a long tail, and it feeds on ants and termites with its long sticky tongue. Numbats have no pouch. Family: *Dasyuridae*.

number theory The study of the properties of numbers. It includes various theorems about *prime numbers, many of which are unproved but apparently true, and the study of Diophantine equations (named after the 3rd-century Greek mathematician Diophantus of Alexandria), i.e. equations that have only integer solutions. Fermat's last theorem deals with the solution of one of these equations and is a famous unproved theorem. It now includes analytic number theory, originated by Leonhard Euler (1707–83) in 1742; geometric number theory, which uses such geometrical methods of analysis as Cartesian coordinates (see COORDINATE SYSTEMS), *vectors, and matrices; and probabilistic number theory, based on *probability theory.

Numidia An ancient kingdom of N Africa, W of *Carthage. Its *Berber population was nomadic until Masinissa (c. 240–149 BC) promoted agriculture and urbanization. After supporting Pompey against Julius Caesar (46 BC), Nu-

media lost its monarchy and became part of the Roman province of Africa.

Nunavut (Inupik: Our Land) A territory of NE Canada, created in 1999 from part of the Northwest Territories as a semiautonomous homeland for the Inuit peoples. It extends from 60° N to the North Pole and incorporates most of Canada's Arctic islands. Although the territory is rich in mineral resources (including copper, silver, zinc, and iron), these remain largely unexploited owing to the severe climate and lack of infrastructure. Elections to the new territorial assembly took place in 1999 and Paul Okalik became premier. The territory has severe economic and social problems. Area: 2 093 190 sq km (808 185 sq mi). Population (2001): 26 745. Capital: Iqaluit.

Nuneaton 52 32N 128W A town in central England, in Warwickshire. It has textile and light-engineering industries. Population (1991): 66 715.

Nuremberg (German name: Nürnberg) 49 27N 11 05E A city in S Germany, in Bavaria, with metal-working and electrical industries. It was severely bombed during World War II. History: it was the centre of the German Renaissance, when the mastersingers' contests were held here. It was the site of the Nazi Party congresses (1933–38) and the war-crime trials after World War II. Population (1998 est): 489 758.

Nureyev, Rudolf (1938–93) Russian ballet dancer. He danced with the Leningrad Kirov Ballet from 1958 until 1961, when he defected from Russia. In 1962 he joined the Royal Ballet, where he partnered Margot Fonteyn in such ballets as *Giselle* and *Swan Lake*. He was artistic director of the Paris Opéra Ballet from 1983 until 1989.

nurse shark A *shark, *Ginglymostoma cirratum*, that occurs in warm shallow waters of the Atlantic Ocean. Yellow-brown or grey-brown and up to 4.2 m long, it is considered dangerous to man only when provoked. Family: *Orectolobidae*.

Nusa Tenggara (former name: Lesser Sunda Islands) A volcanic island group E of Java, mostly in Indonesia; the chief islands are Bali, Lombok, Sumbawa, Sumba, Flores, and Timor. Area: 73 144 sq km (28 241 sq mi). Population (1995 est): 7 237 600.

nut Loosely, any edible nonsucculent fruit, including the peanut and brazil nut. Botanically, a nut is a large dry fruit containing a single seed that is not released from the fruit at maturity. An example is the chestnut.

nutcracker A songbird of the genus *Nucifraga* found in coniferous forests of E Europe and Asia. The common nutcracker (*N. caryocatactes*) is dark brown speckled with white, about 32 cm long, and cracks open pine cones with its sharp bill to extract the seeds. Family: *Corvidae* (crows, jays, magpies).

nuthatch A small stocky bird belonging to a family (*Sittidae*: 30 species) occurring everywhere except South America and New Zealand. Nuthatches have long straight bills, for hammering open nuts, and long-clawed toes, for running up and down tree trunks in search of insects. The European nuthatch (*Sitta europaea*), about 14 cm long, has a blue-grey upper plumage with paler underparts and a black eye-stripe.

nutmeg A fragrant tropical evergreen tree, *Myristica fragrans*, native to Indonesia but widely cultivated in SE Asia and the West Indies. Growing to 20 m high, it has tiny male and female flowers borne on separate trees. The yellow fleshy fruit, about 3 cm across, splits when ripe to expose the seed, which has a red fleshy covering (aril). The dried aril (mace) and whole or ground seeds (nutmeg) are used as spices. Family: *Myristicaceae*.

nutria See COYPU.

Nuuk (name until 1979: Godthåb) 64 10N 51 40W The capital of Greenland, a port at the mouth of Godthåb Fjord. Population (2000 est): 13 838.

nyala An antelope, *Tragelaphus angasi*, of SW Africa. About 100 cm high at the shoulder, nyalas are shy and nocturnal and have spiral-shaped horns and a greyish-brown coat with vertical white stripes on the flanks. The mountain nyala (*T. buxtoni*) lives in mountainous regions of S Ethiopia.

Nyeman, River See NEMAN, RIVER.

Nyerere, Julius (Kambarage) (1922–99) Tanzanian statesman; president (1962–85). In 1954 Nyerere formed the Tanganyika African National Union, which led the fight for independence (achieved in 1960). He became chief minister (1960), prime minister (1961), and then president of Tanganyika, which was renamed Tanzania in 1964 after union with Zanzibar. He was instrumental in the overthrow of Amin in Uganda in 1979.

nylon A synthetic material with a translucent creamy white appearance, widely used both in fibre form and in solid blocks because of its lightness, toughness, and elasticity. It is made

by *polymerization of diamine with *fatty acid or by polymerizing a single monomer, in both cases to form a polyamide. Nylon is used to make small engineering components and is also spun and woven into fabrics for clothing, etc., and can be coloured with pigments. Introduced commercially in 1938, nylon was the first truly synthetic fibre.

nymph A stage in the life cycle of insects that show incomplete *metamorphosis, including dragonflies, grasshoppers, and bugs. The egg hatches into a nymph, which undergoes a series of moults to form a line of nymphs that show increasing similarity to the adult.

nymphalid butterfly A butterfly belonging to the widely distributed family *Nymphalidae*, also called brush-footed butterfly. Nymphalids are characterized by small hairy

forelegs, useless for walking. Many, including the migratory *red admiral and *painted lady, are strong fast fliers.

nymphs In Greek mythology, female spirits of nature, often portrayed as youthful and amorous dancers or musicians. The several classes of nymphs associated with particular natural phenomena include the dryads, the naiads, and the nereids.

Nyoro A Bantu-speaking people of the western lakes region of Uganda. They were traditionally divided into the Bito clan from whom the hereditary paramount chief (Mukama) always came, the aristocratic Huma pastoralists, and the subordinate Iru cultivators. They are a patrilineal people who live in small scattered settlements.

Oahu A US island in Hawaii, the most populous and the administrative centre. The Japanese attack on *Pearl Harbor (1941) was decisive in bringing the USA into World War II. Area: 1584 sq km (608 sq mi). Population (latest est): 836 231. Chief town: Honolulu.

oak A deciduous or evergreen tree or shrub of the genus *Quercus* (over 800 species), found in N temperate and subtropical regions. The simple leaves usually have lobed or toothed margins. The fruit—an acorn—is a hard oval nut partly enclosed by a round cup. Often 30–40 m high, many species are important timber trees, especially the common or pedunculate oak (*Q. robur*) and the durmast oak (both Eurasian). Several are planted for ornament, including the Mediterranean holm oak. Family: *Fagaceae*.

oarfish A fish of the genus *Regalecus*, especially *R. glesne*, found in all seas. It has a long silvery ribbon-like body, up to 9 m long, a long red dorsal fin, long red oarlike pelvic fins situated near the pectoral fins, and no anal or tail fins.

OAS See ORGANISATION DE L'ARMÉE SECRÈTE; ORGANIZATION OF AMERICAN STATES.

oasis An area within a desert where water is available for vegetation and human use. It may consist of a single small spring around which palms grow or be an extensive area where the water table is at or near the ground surface.

Oates, Lawrence Edward Grace (1880–1912) British explorer and a member of R.F. *Scott's expedition to the Antarctic (1910–12). After reaching the Pole Oates, fearing that his lameness (resulting from frostbite) might hinder the already struggling expedition on the return journey, walked out into the blizzard to die. His gallant act, related in Scott's diaries, failed to save his companions.

Oates, Titus See POPISH PLOT.

oats Annual grasses belonging to the genus *Avena* (10 species), native to temperate regions. The common oat (*A. sativa*) was first cultivated in Europe and is grown widely in cool temperate regions. The grain is used as a livestock feed, especially for horses, and for oatmeal, breakfast cereals, etc. The straw is used for livestock fodder and bedding. Wild oats, especially *A. fatua*, can be a serious weed in cereal crops.

Ob, River A river in N central Russia, flowing N from the Altai Mountains to the **Gulf of Ob** on the Kara Sea. One of the world's largest rivers, its drainage basin covers an area of about 2 930 000 sq km (1 131 000 sq mi). Length: 3682 km (2287 mi).

OBE See ORDER OF THE BRITISH EMPIRE, THE MOST EXCELLENT.

obelisk A stone monument consisting of a tapering pillar with a pyramid-shaped top. Erected by the ancient Egyptians as cult objects, they were covered by hieroglyphs and dedicated to the sun god. Some later obelisks were erected as memorials to rulers. Many obelisks were carried away by conquerors; two famous specimens in Rome were taken there in antiquity and there are now 14 in the city. Their transport and erection were considerable engineering feats. Obelisks misnamed "Cleopatras needles" are found in both London and New York.

Oberammergau 47°35'N 11°07'E A town in S Germany, in the Bavarian Alps. It is noted for its passion play, performed every ten years following a vow made by the villagers (1633) when they were saved from the plague. Population (latest est): 4740.

obesity The condition of being seriously overweight, usually defined as having a body mass index (BMI) of 30 or more (BMI = weight (in kilograms) divided by height (in metres) squared). It is caused by the consumption of

more food than is required to supply a person's energy needs. Obesity, the most common nutritional disorder in the developed world, increases the body's susceptibility to disease and reduces life expectancy.

oboe A woodwind instrument with a double reed, made in three jointed sections and having a conical bore and small belled end. It derives from the ancient shawm. It has a range of about three octaves above the B flat below middle C and because of its constant pitch usually gives the A to which other orchestral instruments tune.

Obote, (Apollo) Milton (1925–2005) Ugandan statesman; prime minister (1962–66) and president (1966–71, 1980–85). On independence he became prime minister and in 1966 deposed Mutesa II of Buganda (1924–69). Overthrown by *Amin in 1971, he was re-elected in 1980 but deposed in a military coup in 1985.

obsidian A black glassy volcanic rock with a conchoidal fracture. It is formed by the rapid cooling of acid lava.

obstetrics See GYNAECOLOGY.

O'Casey, Sean (1880–1964) Irish dramatist. His early realistic tragicomedies include *The Shadow of a Gunman* (1923) and *Juno and the Paycock* (1924). His later work, which includes *The Silver Tassie* (1929) and *Red Roses for Me* (1943), is usually considered inferior.

Occitan See PROVENÇAL.

occultation The temporary disappearance of one astronomical body behind another, as when the moon passes in front of and obscures a star. See also ECLIPSE.

occupational therapy The ancillary medical specialty concerned with restoring the physical and mental health of the sick and disabled. The occupational therapist plays an important role in keeping long-stay hospital patients interested and usefully occupied, helps them gain confidence to return to work, and trains disabled persons for new employment. See also GERIATRICS.

Oceania The islands of the Pacific Ocean, usually taken to exclude Japan, Indonesia, Taiwan, the Philippines, and the Aleutian Islands, but often including Australasia.

Ocean Island (or Banaba) 00 52S 169 35E An island in the SW Pacific Ocean, in Kiribati. Rich deposits of phosphate were mined to exhaustion by the UK (1900–79). During the Japanese occupation (1942–45) Banabans were deported to Fiji; the remainder were massacred in 1945.

In 1965 surviving Banabans were paid compensation for overmining and in 1979 they were given dual Kiribati and Fijian nationality. Area: about 5 sq km (2 sq mi). Population (2005): 301.

oceanography The study of the oceans, particularly their origin, structure, and form, the relief and sediments of the sea floor, the flora and fauna they contain, and the properties of sea water, waves, currents, and tides.

oceans The large areas of water (excluding lakes and seas) covering about 70% of the earth's surface. The oceans are the Pacific (covering about one-third of the world), Atlantic, Indian, and Arctic; the Southern Ocean (waters south of 40°S) is sometimes distinguished. Major structural features are the continental margins (continental shelf and slope), mid-ocean ridges, ocean basins, and trenches.

ocelot A *cat, *Felis (Panthera) pardalis*, of Central and South American forests. 100–150 cm long including the tail (30–50 cm), it has a black-spotted buff coat with stripes on the legs. It frequently hunts by night.

Ockham's Razor The metaphysical principle, associated with the English medieval philosopher William of Ockham (c. 1285–1349), that "Entities should not be multiplied unnecessarily." In analysing a problem one should always choose the hypothesis that makes the least number of assumptions; only indispensable concepts are real.

O'Connell, Daniel (1775–1847) Irish politician. As a Catholic, his election as an MP in 1828 forced the government to concede Catholic Emancipation. A popular speaker known as the Liberator, he subsequently campaigned for the repeal of the union with Britain.

octane number A measure of the extent to which a fuel causes knocking in a petrol engine. It is the percentage by volume of *iso*-octane (C₈H₁₈) in a mixture of *iso*-octane and *n*-heptane (C₇H₁₆), which has the same knocking characteristics as the fuel under specified conditions.

Octavian See AUGUSTUS.

octopus An eight-armed *cephalopod mollusc belonging to the genus *Octopus*, found in most oceans. The common octopus (*O. vulgaris*) has a pair of well-developed eyes, a ring of tentacles around its horny beak, and a saki-like body. Octopuses feed mainly on crabs and lobsters and may eject a cloud of ink when alarmed. Family: *Octopodidae*; order: *Octopoda*.

Oder, River A river in E Europe. Rising in the

Oder Mountains of the Czech Republic, it flows N and W through Poland and enters the Baltic Sea at Szczecin. Linked by canals to both E and W Europe, it is of great commercial importance. Length: 886 km (551 mi).

Oder-Neisse Line The boundary between Germany and Poland, following the Rivers Oder and Neisse. Confirmed by the Allies at the

*Potsdam Conference (1945) at the end of World War II, it was recognized by East Germany and Poland in 1950 but not by West Germany until 1970.

Odessa 46 30N 30 46E A port in S Ukraine, on the Black Sea. Founded in the 14th century as a Tatar fortress, it passed to Russia in 1791 and became a naval base. It was the scene (1905) of

oceans. A selection of animals and plants found at different depths of the ocean.

the mutiny on the *Potemkin*. Population (1998 est): 1027 400.

Odin The principal god of the Teutonic peoples, the husband of *Frigga and, according to some legends, the father of *Thor. Also known as Woden and Wotan, he was the god of war, learning, and poetry and possessed great magical powers. He was the protector of slain heroes, who were brought to *Valhalla by his servants the *Valkyries.

Odysseus (or Ulysses) A legendary Greek king of Ithaca and hero of Homer's *Odyssey*, notable for his cunning. His many adventures during his voyage home from the *Trojan War included encounters with the Cyclops Polyphemus, the enchantress *Circe, and the goddess Calypso, with whom he lived for eight years. Having reached Ithaca, he was reunited with his faithful wife *Penelope after killing her suitors with the help of his son Telemachus.

Oë, Kenzaburo (1935–) Japanese novelist and writer. In such novels as *Our Age* (1959) and *The Silent Cry* (1967) he explored the spiritual confusion of postwar Japan. He was awarded the Nobel Prize in 1994.

OECD See ORGANIZATION FOR ECONOMIC COOPERATION AND DEVELOPMENT.

oedema The accumulation of fluid in body tissues, leading to swelling, popularly known as dropsy. There are many causes of oedema, including heart failure, kidney failure, liver failure, and malnutrition. Diuretic drugs can usually resolve oedema by causing the patient to pass more urine.

Oedipus In Greek legend, a king of Thebes who unwittingly fulfilled the prophecy of the oracle at Delphi that he would kill his father and marry his mother. He was brought up by Polybus, King of Corinth. He killed his true father, Laius, in a roadside quarrel, and after winning the throne of Thebes by solving the riddle of the *sphinx he married his mother, the widowed Jocasta. When they discovered the truth, Jocasta committed suicide and Oedipus blinded himself and went into exile.

Oedipus complex The unconscious sexual feelings of a boy for his mother, which are accompanied by aggressive feelings for his father. According to psychoanalysis this is a normal desire, made unconscious by *repression. The female equivalent (in which a girl desires her father) is called the **Electra complex**.

Oersted, Hans Christian (1777–1851) Danish physicist. He discovered the magnetic effect of an electric current and thus established

the relationship between electricity and magnetism.

oesophagus The gullet: a muscular tube, about 25 cm long, running from the pharynx at the back of the mouth to the stomach. Contractions of the oesophagus propel swallowed food towards the stomach: the food is lubricated with mucus secreted by the walls of the oesophagus.

oestrogens A group of steroid hormones that function principally as female sex hormones. The most important oestrogens in mammals are oestradiol and oestrone. Produced by the ovaries, they promote the development of the reproductive organs and secondary sexual characteristics (such as enlargement of breasts) at puberty and regulate the changes of the menstrual cycle. Oestrogens are also produced by the placenta, adrenal glands, and testes. Synthetic oestrogens are used to treat menstrual and menopausal disorders; they are also constituents of *oral contraceptives.

oestrus The period of "heat" in the sexual cycle of female mammals, when the female will attract males and permit copulation. It corresponds to the time of ovulation, so that mating is most likely to result in pregnancy.

Offa (d. 796) King of Mercia (757–96) and overlord of all England S of the Humber. He accepted greater papal control of the Church, introduced a new currency, and devised a code of laws. **Offa's Dyke**, an earthwork dividing England from Wales, built c. 784–c. 796, marks the frontier established by his wars with the Welsh.

Offaly (Irish name: Uabh Fáilghe) A county in the central Republic of Ireland, in Leinster, bordered in the W by the River Shannon. Area: 2000 sq km (770 sq mi). Population (2002): 63 702. County town: Tullamore.

Offenbach, Jacques (J. Eberst; 1819–80) German composer of French adoption. He wrote a series of popular operettas, including *Orpheus in the Underworld* (1858), and *La Vie Parisienne* (1866), and one grand opera, *The Tales of Hoffman* (produced posthumously; 1881).

Ogaden, the A semidesert area in E Ethiopia, enclosed by Somalia except to the W. The nomadic inhabitants are chiefly Muslim Somalis and in the 1960s a claim to the area by Somalia provoked border clashes. Somalia invaded the Ogaden in 1977 but withdrew in 1978. Guerrilla fighting has continued.

O'Higgins, Bernardo (1778–1842) Chilean

national hero of Irish descent, who fought with José de *San Martín against Spain and liberated Chile. He was made dictator of the country in 1817 but his wide-ranging reforms created much resentment and he was deposed.

Ohio A state in the USA, in the Midwest situated to the S of Lake Erie. The flat or rolling land of W Ohio gives way in the E to the hill and valley region of the Appalachian Plateau. A major industrial state, it lies at the centre of the most industrialized area of the USA and is strategically located near many rich markets. Agriculture is important, especially livestock. Ceded to Britain in 1763 and to the USA in 1783, it became a state in 1802. Area: 106 764 sq km (41 222 sq mi). Population (2000): 11 353 140. Capital: Columbus.

Ohio River A river in the USA flowing mainly SW from Pittsburgh in W Pennsylvania to join the Mississippi (in Illinois) as its main E tributary. Length: 1577 km (980 mi).

ohm (Ω) The SI unit of electrical resistance equal to the resistance between two points on a conductor when a potential difference of one volt between the points produces a current of one ampere. Named after Georg *Ohm.

Ohm, Georg Simon (1787–1854) German physicist, who discovered in 1827 that the current flowing through a wire (or circuit element) is directly proportional to the potential difference between its ends (**Ohm's law**). The constant of proportionality is the resistance of the wire or element. The unit of resistance is named after him.

oil There are three types of oil: lipids (see **FATS AND OILS**), *essential oils, and mineral oil. Petroleum (or rock oil) is the thick greenish mineral oil that occurs in permeable underground rock. It consists mainly of *hydrocarbons derived from the remains of living organisms deposited many millions of years ago with rock-forming sediments. Under the effects of heat and pressure this organic material passed through a number of chemical and physical changes ending up as droplets of petroleum, which migrated through porous rocks and fissures to become trapped in large underground reservoirs, often floating on a layer of water and held under pressure beneath a layer of natural gas (mostly methane). The modern oil industry began when oil was discovered in Pennsylvania in 1859 and has grown with the development of the internal-combustion engine, which is entirely dependent on it as a fuel. Once the presence of oil has been detected and its extent determined, the oil well is made

by drilling through the rock; a specially prepared mud is pumped through the hollow bit to collect the debris, which is forced back up the shaft around the drilling bit. Drilling for oil below the sea is achieved in a similar manner, except that the drilling rig has to be supported on a base, which has legs sunk into the sea bed.

Petroleum has no uses in its crude form and has to be refined by fractional distillation (i.e. separating the components according to their boiling points) before it is of commercial value. Natural gas is widely used as a substitute for coal gas. Products made by blending the distillation fractions include aviation spirit, petrol, kerosene, Diesel oil, lubricating oil, paraffin wax, and petroleum jelly. Catalytic reforming is used to make a number of valuable chemicals (petrochemicals), which are required to manufacture detergents, plastics, fibres, fertilizers, drugs, etc.

The price, conservation, and political significance of oil are extremely controversial issues. In 1961 the *Organization of Petroleum Exporting Countries (OPEC) was set up to protect producing countries from exploitation. Its advent ended the era of cheap energy and prices for petroleum products rose sharply during the ensuing decade. In 1974 the International Energy Agency (IEA) was established to protect consumers.

oil palm A *palm tree, *Elaeis guineensis*, native to tropical West Africa and cultivated in Africa, Indonesia, Malaysia, and tropical America as the source of palm oil. The small fleshy fruits contain a white kernel within a hard black shell. Palm oil is extracted from the pulp and kernel and used in making soaps, margarine, lubricants, etc. The residual meal from the kernels is a valuable livestock feed.

oilseeds Oil-bearing seeds of plants from which the edible oil is extracted for making margarine, soaps, etc. Examples include rapeseed, cottonseed, groundnuts, and soya beans. The oil is obtained from the seeds by expelling it under pressure or by extracting it using a solvent; the **oilcake** remaining after most of the oil has been removed is widely used as animal feed.

Ojibwa A North American Indian people of the Great Lakes region, who speak a language of the Algonkian family. They are also known as Chippewa.

okapi A hoofed mammal, *Okapia johnstoni*, of central African rain forests. Okapis have a dark-brown coat with horizontal black and

white stripes on the legs and rump. The smaller male has short bony backward-pointing horns. Family: *Giraffidae* (giraffes).

Okeechobee, Lake A large freshwater lake in the USA, in S Florida. It drains into the Atlantic Ocean through the Everglades. Area: 1813 sq km (700 sq mi).

Okinawa A mountainous Japanese island, the main one of the Ryukyu group. Captured by the USA in World War II, it was returned to Japan in 1972, the USA retaining military bases there. Area: 1176 sq km (454 sq mi). Population (1995): 1 273 508. Capital: Naha.

Oklahoma A state in the S central USA with a diverse landscape of hills and plains. An oil-rich state, agriculture (especially cattle) remains a major source of revenue. Most industry is located around Oklahoma City and Tulsa (one of the world's leading oil centres). Oklahoma formed part of the Louisiana Purchase in 1803. It was reserved as Indian territory (1828) but after the US Civil War White settlement began and it became a state in 1907. Area: 181 089 sq km (69 919 sq mi). Population (2000): 3 450 654. Capital: Oklahoma City.

Oklahoma City 35°28'N 97°33'W A city in the USA, the capital of Oklahoma on the North Canadian River. Founded in 1889, it expanded rapidly following the discovery of oil (1920s). Today it is a commercial, industrial, and distribution centre for an oil-producing and agricultural area. In 1995 a right-wing extremist bombed a government office building, killing 168 people. Population (2000): 506 132.

okra An annual African herb, *Hibiscus esculentus*, also called lady's fingers or gumbo, widely cultivated in the tropics and subtropics. It has five-petalled yellow flowers with a crimson centre and edible pods. The seeds are a coffee substitute. Family: *Malvaceae*.

Old Catholics Christian Churches from several European countries that separated from the Roman Catholic Church at various times and in 1932 entered into communion with the Church of England. They comprise the Church of Utrecht (1724), the Old Catholic Churches of Germany, Switzerland, and Austria (1870), the National Polish Church (established 1897), and the Yugoslav Old Catholic Church (1924).

Old English sheepdog A breed of working dog originating in England. It has a compact body and a long dense shaggy coat that may be grey or blue-grey with white markings. Their tails are docked at birth. Height: 55–66 cm.

Oldham 1. 53°33'N 2°07'W A town in N England, in Oldham unitary authority, Greater Manchester. Formerly a cotton-spinning town, Oldham now has electronics, plastics, and clothing industries. Population (1991): 103–991. 2. a unitary authority in N England, in Greater Manchester. Area: 141 sq km (54 sq mi). Population (2001): 217 393.

Old Norse A North Germanic language formerly spoken in Iceland and Norway (c. 1150–c. 1350). It was closely related to the contemporary speech of Denmark and Sweden. From this group the modern Scandinavian languages are derived.

Old Testament The collection of 39 books that forms the first of the two major divisions of the Christian *Bible (the second being the *New Testament). The same writings (traditionally divided into 24 books) form the whole of the Hebrew Bible, the sacred scriptures of Judaism. The Christian title derives from the Latin word for *covenant and refers to the pact between God and Israel. The books claim to cover the period from the creation of the universe and man (Adam) to about 400 B.C. They are traditionally divided into three parts: the Law or *Torah, the first five books, traditionally ascribed to Moses and often called the Pentateuch; the Prophets, bearing the names of individual prophets and containing much historical information; and the Writings or Hagiographa, the latest books admitted to the Hebrew Old Testament (c. 100 AD).

Olduvai Gorge A site in N Tanzania yielding an important sequence of Lower *Palaeolithic fossils and tools, many found by the *Leakey family.

Old Vic A London theatre built in 1818 and named the Royal Victoria in 1833. It became famous for music hall and, after Lilian Baylis (1874–1937) became manager in 1912, for productions of Shakespeare. It was the temporary home of the National Theatre Company (1963–76; see ROYAL NATIONAL THEATRE COMPANY). It was saved from closure in 1998–2000 and the US film star Kevin Spacey was appointed artistic director in 2002.

Old World See NEW WORLD.

Old World monkey A *monkey belonging to the family *Cercopithecidae* (58 species), native to Africa or Asia. There are both terrestrial and arboreal species, active mainly by day and either omnivorous or vegetarian. They inhabit forest, savannah, swamps, and rocks. See also BABOON; GUENON; LANGUR; MACAQUE.

1896	Athens	1964	Tokyo
1900	Paris	1968	Mexico City

Venues of Olympic Games since 1896

oleander A poisonous evergreen shrub, *Nerium oleander*, also called rosebay, native to the Mediterranean region and widely cultivated for its attractive flowers. Up to 7 m high, it has long narrow leaves, clusters of white, pink, or purplish five-petalled flowers (up to 7.5 cm across), and dangling pods. Family: *Apocynaceae*.

oleaster A shrub or tree, *Elaeagnus angustifolia*, found throughout S Europe. It has ornamental silvery foliage and small fragrant yellowish flowers. The edible yellowish fruits have a silvery coat. Family: *Elaeagnaceae*.

olefines See ALKENES.

Oligocene epoch See TERTIARY PERIOD.

olive An evergreen tree, *Olea europaea*, native to W Asia but cultivated throughout Mediterranean and subtropical regions for its fruits. It has a gnarled grey trunk, grey-green leaves, and fleshy oval berries. Unripe green olives and ripe black olives are pickled for culinary uses. **Olive oil**, pressed from the fruit, is one of the finest edible oils. It is also used in soaps and cosmetics. Family: *Oleaceae*.

Olives, Mount of (or Olivet) 31 47N 35 15E A hill to the E of the old city of Jerusalem. Near its foot is the Garden of Gethsemane, the scene of the betrayal of Christ (Mark 14.26–50) and it

is the traditional site of Christ's Ascension (Acts 1.2–12).

Olivier, Laurence (Kerr), Baron (1907–89) British actor. He played many Shakespearean roles while with the Old Vic Theatre Company, 1937–1949; outstanding modern roles included Archie Rice in *The Entertainer* (1957). His films include the Shakespeare adaptations *Henry V* (1944) and *Richard III* (1956). He was director of the National Theatre Company (1961–73). His second marriage to Vivien *Leigh ended in divorce; in 1961 he married Joan Plowright (1929–).

olivine A group of greenish rock-forming silicate minerals, with a conchoidal fracture, that occur in igneous rocks. Peridot is a pale green gem variety. Olivine may be a major constituent of the earth's upper mantle.

Olmert, Ehud (1945–) Israeli statesman; prime minister (2006–). He became acting premier on Ariel *Sharon's incapacitation by a stroke (2006) and led the new Kadima party to victory in the subsequent election.

Olympia A sanctuary of *Zeus, established about 1000 BC in the NW *Peloponnese, in W Greece. From 776 BC until at least 261 AD it was the venue of the *Olympic Games. The temple of Zeus in the Altis (sacred grove), which later

held Phidias' famous statue, was completed in 457 BC. The sanctuary was closed by the Christian Emperor Theodosius (390 AD).

Olympic Games A quadrennial international amateur sports contest. The modern games derive from the ancient Greek athletic festival held at *Olympia. They were revived at Athens in 1896. The Winter Olympics were first held in 1924. The Games are governed by the International Olympic Committee (IOC). Although officially a contest between individuals, hosted by a particular city, the Games are often seen as a competition between countries; they have sometimes been disrupted by international political tensions. See table on p. 653.

Olympus, Mount 40°05N 22°21E A group of mountains in NE central Greece, held in ancient times to be the home of the gods. Highest point: 2917 m (9570 ft).

Om In Indian religions, the greatest of the mantras or mystical sounds embodying spiritual power. In Sanskrit *Om* comprises three sounds A, U, M (the vowels being equivalent to O), which represent the three Vedic scriptures, the three worlds (earth, atmosphere, heaven), the *Trimurti or some other triple, and ultimately the essence of the universe.

Omagh A district in Northern Ireland, in Co Tyrone. Area: 1123 sq km (434 sq mi). Population (2001): 47 952.

Oman, Sultanate of (name until 1970: Muscat and Oman) A country in the Middle East, in E *Arabia on the Gulf of Oman. It is mainly flat with coastal mountains in the N. The majority of the population is nomadic Arab and Ibadhi Muslim by religion. *Economy:* oil, which has been extracted since 1967, accounts for about 90% of the country's revenue. *History:* Oman was settled by the Portuguese, Dutch, and English in the 16th century. Since the 19th century Britain has been influential; it supported the present sultan's overthrow of his father in 1970 and helped to defeat a Marxist insurgency in 1975. Although a State Advisory Council and a Council of State were established in the 1990s, Oman remains an absolute monarchy. Official language: Arabic. Currency: rial Omani of 1000 baiza. Area: 300 000 sq km (120 000 sq mi). Population (2003 est): 2 621 000. Capital: Muscat.

Omar (or Umar) (d. 644 AD) The second caliph (634–44), regarded by Islam as the founder of the Muslim state. Omar continued the Muslim conquests and in 638 visited Jerusalem after its capture. He was murdered.

'Omar Khayyam (?1048–?1122) Persian poet, mathematician, and astronomer. His poems, characterized by an agnostic and hedonistic philosophy, were written in the form of *rubā'is* (quatrains). The free translation of 75 of them by Edward *Fitzgerald in 1859 became popular; more recent translations have also been made.

Omayyads See UMAYYADS.

ombudsman A person appointed to investigate grievances against maladministration. The post originated in Sweden in 1809. In the UK an ombudsman (the parliamentary commissioner for administration) was first appointed in 1967 to investigate complaints against central government departments; complaints against health authorities are investigated by Health Service Commissioners, appointed since 1973; there have been ombudsmen for local government since 1974. In the 1980s and 1990s various financial ombudsmen were set up to investigate complaints against banks, insurance companies, pension managers, etc.

Omdurman 15°37N 32°29E A city in the Sudan, on the River Nile. The Mahdi made it his capital in 1885 but his successor, the Khalifa, was defeated by Anglo-Egyptian forces under Lord Kitchener in the battle of Omdurman (1898). Population (1993): 1 267 077 (urban area).

Omsk 55°00N 73°22E A port in W central Russia, at the confluence of the Rivers Irtysh and Om. Also on the Trans-Siberian Railway, it has important engineering industries and oil refineries. Population (1999 est): 1 157 600.

Onassis, Aristotle Socrates (1906–75) Greek businessman, who owned one of the largest independent shipping lines in the world and during the 1950s became one of the first to construct supertankers. In 1968 he married Jacqueline Kennedy, his second wife, after a long relationship with Maria *Callas.

oncogene A gene responsible for turning a normal cell into a cancerous cell. Several viruses (called oncogenic viruses) are known to carry oncogenes; when such a virus infects a host cell the oncogene directly transforms it into a cancer cell without altering the host cell's genes.

Onega, Lake A lake in NW Russia, the second largest in Europe. It forms part of the water route from the Gulf of Finland to the White Sea. Area: 9887 sq km (3817 sq mi).

O'Neill, Eugene (1888–1953) US dramatist. His plays include *Beyond the Horizon* (1920), *Anna Christie* (1921), the trilogy *Mourning Be-*

comes *Electra* (1931), *The Iceman Cometh* (1946), and the autobiographical *Long Day's Journey into Night* (1956). He won the Nobel Prize in 1936.

onion A hardy herbaceous perennial plant, *Allium cepa*, probably native to central or W Asia but now cultivated worldwide, mainly in temperate regions, for its edible bulb. The mature plant has a long leafless stalk, which bears a round head of small white flowers, and six long slender leaves growing directly from the bulb. Immature bulbs, together with their leaves, are eaten raw in salads, etc.: these are spring onions. Family: Liliaceae.

Ontario A province of Canada, the most populous and wealthy, stretching from the Great Lakes N to Hudson Bay. It lies mainly on the mineral-rich Canadian Shield, a rocky forested plateau with many lakes and rivers. Most of the population live in the fertile lowlands near the S Great Lakes, dominated by the highly industrialized belt stretching from Toronto to Windsor. Manufacturing and mining are both important. Penetrated by French explorers and fur traders in the 17th century, Ontario became British (1763) and was settled by expatriate Americans loyal to Britain after the American Revolution. Area: 891 194 sq km (344 090 sq mi). Population (2001 est): 11 874 400. Capital: Toronto.

Ontario, Lake A lake in E North America, the smallest and easternmost of the Great Lakes. It is fed by the Niagara River and empties into the St Lawrence River. Area: 18 941 sq km (7313 sq mi).

ontogeny See PHYLOGENY.

ontology The branch of philosophy that deals with the theory of being. Ontological theories may assert that only minds exist (extreme idealism), or that only physical objects do (see MATERIALISM).

onyx A semiprecious stone consisting of a variety of *chalcedony characterized by straight parallel bands, often distinctly coloured. Onyx occurs in the lower part of steam cavities in igneous rocks.

oolite A variety of *limestone consisting mainly of beds of ooliths, spherical concretions of calcite accumulated in concentric layers around a nucleus (for example a grain of sand or fragment of a shell). Although most oolites are calcareous, oolitic ironstones also occur.

opal A semiprecious stone consisting of a hydrous amorphous variety of silica. The precious variety, used as a gem, shows a characteristic internal play of colours (opalescence) resulting

from internal reflection and refraction of light. It occurs in cavities in many rocks, deposited by percolating silica-bearing water.

OPEC See ORGANIZATION OF PETROLEUM EXPORTING COUNTRIES.

open-hearth process A technique for making *steel from *pig iron, scrap steel, and iron ore, developed in the 1850s. The process uses gaseous fuel, which is preheated by the exhaust gases from the furnace. The molten metal lies in a pool at the bottom or hearth of the furnace.

Open University (OU) A nonresidential university in the UK, established in 1969 to provide further education on a part-time basis for adults by means of correspondence courses and radio and television programmes, supported by a tutor-counselling service at regional centres throughout the country. It is open to anyone regardless of previous qualifications, age, or school attended. The first courses started in 1971. More recently the OU has moved into non-degree forms of continuing education.

opera A staged dramatic work in which all or most of the text is set to music. Opera originated in Florence in the early 17th century as the result of attempts to revive Greek tragedy and to reproduce its musical elements. These became the aria, recitative, and chorus of operatic convention. The earliest opera still in the modern repertory is Monteverdi's *Orfeo* (1607). Opera seria is the Italian style of opera developed by such composers as Scarlatti and Handel and characterized by a heroic or mythological plot. Opera buffa is a form of comic opera containing some spoken dialogue. It developed in the early 18th century and was originally performed between the acts of opera seria. At the end of the 18th century Mozart perfected opera buffa. In the early 19th century the influence of Romanticism gave rise to the works of Weber and Meyerbeer, while the Italian bel canto ("beautiful singing") tradition was maintained by Bellini, Rossini, and Donizetti. In the mid-19th century the musical and dramatic elements of opera were integrated by Wagner in his opera cycle *Der Ring des Nibelungen* (1869–76) and his subsequent operas. Verdi extended the emotional and dramatic range of Italian opera. The realism of Bizet's *Carmen* (1875) influenced Leoncavallo, Mascagni, and Puccini. In the 20th century a wide variety of operatic styles flourished, including the dramatic realism of Janáček and the neoclassicism of Stravinsky. Richard Strauss's operas were greatly influenced by

Wagner. Other important operatic composers of the past hundred years include Prokofiev, Britten, Henze, and Tippett.

ophthalmology The medical specialty concerned with the study, diagnosis, and treatment of diseases of the eye. Ophthalmologists are doctors specializing in this. **Optometry** is the assessment and correction of visual defects, and opticians are not doctors: ophthalmic opticians (or optometrists) both test eyesight and prescribe suitable lenses; dispensing opticians make and fit glasses.

opium The dried juice obtained from the seed capsule of the *opium poppy, *Papaver somniferum*, an annual cultivated in N temperate and subtropical regions. Opium is extracted from the latex of the plant, which exudes from notches made in the half-ripened capsule. A narcotic drug, opium has been used for centuries in medicine for the relief of pain. Although still sometimes given in the form of laudanum (tincture of opium), its main legitimate uses today include the extraction of its active ingredients—*morphine (first isolated in 1803), codeine, papaverine, etc.—and preparation of their derivatives (e.g. heroin). Because opium causes *drug dependence and overdosage can be fatal, its preparation and use are strictly controlled. (Illegal trading continues however.) India, Turkey, and Afghanistan are the main opium-producing countries.

Opium Wars 1. (1839–42) The war between Britain and China precipitated by the confiscation by the Chinese Government of British opium stores in Canton and the murder of a Chinese by British sailors. The British victory led to five treaty ports being opened to British trade and residence. **2.** (1856–60) The war between Britain and France, on one side, and China. Its immediate cause was the boarding of the British *Arrow* by Chinese officials. The allied victory opened further ports to western trade and led to the legalization of opium.

Oporto 41°09'N 8°37'W The second largest city in Portugal, on the River Douro near the Atlantic coast. Built on terraces, it has many tall granite houses and a modernized 13th-century cathedral. It is famous for the export (chiefly to Britain) of its port wine. Population (2000): 262 928.

opossum A New World *marsupial belonging to the family *Didelphidae* (65 species). Opossums are the only marsupials outside Australasia. The common, or Virginian, opossum (*Didelphys marsupialis*) is cat-sized, with a large pouch containing up to 16 teats.

Oppenheimer, J. Robert (1904–67) US physicist, who contributed to quantum mechanics and particle physics. In 1943 he was put in charge of the development of the atom bomb at Los Alamos, New Mexico. After the war he opposed the development of the hydrogen bomb and was labelled a security risk by Senator Joseph McCarthy's committee.

opposition An alignment of two celestial bodies in the solar system, usually the sun and a planet, that occurs when they lie directly opposite each other in the sky. The angle planet-earth-sun is then 180°.

optical activity The rotation of the plane of polarization of plane *polarized light as it passes through certain solutions and crystals. The angle through which the plane is rotated is directly proportional to the path length of the light in the substance and, in the case of a solution, to its concentration. If the plane is rotated clockwise (looking at the oncoming light) the substance is said to be dextrorotatory. Laevorotatory substances rotate the plane anticlockwise.

optics The branch of physics concerned with *light and vision. Optics is divided into two major branches: geometrical optics studies the geometry of light rays as they pass through an optical system; physical optics concerns light's properties (e.g. *diffraction, *interference, and polarization) and its interaction with matter (e.g. in *refraction, scattering, and absorption).

oracle A response given by a deity, usually through the medium of a priest or priestess, to an individual's inquiry; also, the sacred place at which such responses were sought. Although occurring in Egyptian and other ancient civilizations, the best-known oracles were those of classical Greece, especially the oracle of Apollo at Delphi.

oral contraceptive A hormonal drug—usually a mixture of an *oestrogen and a synthetic progesterone—taken in the form of tablets ("the Pill") by women to prevent conception. Oral contraceptives act by preventing the monthly release of an egg cell from the ovary. They may cause depression, high blood pressure, weight gain, and in rare cases thrombosis.

Oran 35°45'N 0°38'W A port in Algeria, on the Mediterranean Sea. Under intermittent Spanish occupation from the 16th to the 18th centuries, it was occupied by France from 1831 until Algerian independence (1962). Population (1998): 692 516.

orange One of several small evergreen trees or shrubs of the genus *Citrus*, native to SE Asia but cultivated throughout the tropics and subtropics. They have thick shiny leaves and clusters of fragrant white flowers. The globular fruit has a dimpled orange or yellow rind and a juicy pulp. Fruit of the sweet orange (*C. sinensis*) is eaten fresh while that of the Seville orange (*C. aurantium*) is used to make marmalade. Oranges are also used in soft drinks and confectionery. Family: Rutaceae. See also TANGERINE.

Orange The ruling dynasty of the Netherlands since 1815. In the 16th century the Princes of Orange, in S France, married into the House of *Nassau. William the Silent (1533–84), Prince of Orange-Nassau, led the Revolt of the Netherlands against Spain. He and his descendants (one of whom became William III of England) were stadholders (chief magistrates) of the United Provinces of the Netherlands until its collapse in 1795. In 1815 the family were restored as monarchs of the newly established kingdom of the Netherlands.

Orange Free State (Afrikaans name: Oranje Vrystaat) A former province in South Africa, consisting mainly of the undulating plain of the Highveld. Agriculture is the leading economic activity. Mining has developed recently; diamonds, gold, uranium, and coal are produced. The province has a strong Afrikaner culture. First settled by Voortrekkers in the early 19th century, the area was under British rule from 1848 until an independent Orange Free State was recognized in 1854. It joined the Union of South Africa in 1910. In 1994 it became the Free State region as part of administrative reorganization. Area: 129 152 sq km (49 886 sq mi). Population (2002 est): 2 859 081. Capital: Bloemfontein.

Orange Order An Irish sectarian society, named after William III of England (previously William of Orange), pledged to maintain the Protestant succession. Formed in 1795, following William's defeat of the Roman Catholic former king James II, it provided the backbone of Ulster resistance to the *Home Rule movement and remains the embodiment of Protestant Unionism.

Orange River A river in SW Africa. Rising in NE Lesotho, it flows mainly W across the South African plateau to the Atlantic Ocean. The largest river in South Africa, it forms part of the border between South Africa and Namibia. In 1963 the **Orange River Project** was begun to provide, through a series of dams, irrigation

and hydroelectric power. Length: 2093 km (1300 mi).

orang-utan A long-armed great *ape, *Pongo pygmaeus*, of Borneo and Sumatra. Orang-utans grow up to 120 cm tall, have long coarse reddish-brown hair, and are mainly vegetarian. They are the only great apes outside Africa.

oratorio A musical composition, usually on a religious subject, for soloists, chorus, and orchestra. The name derives from the Oratory of St Philip Neri in 16th-century Rome where semidramatized versions of biblical stories were performed with musical accompaniment. Among notable oratorios are the *St Matthew* and *St John Passions* of J.S. Bach, Handel's *Messiah*, Haydn's *The Creation*, Mendelssohn's *Elijah*, Elgar's *Dream of Gerontius*, and Tippett's *A Child of Our Time*.

orbital An atomic orbital is the region around the nucleus in which there is an appreciable probability that an electron will be found. Each orbital has a fixed energy and a shape determined by three *quantum numbers, one (n) indicating the most probable distance of the electron from the nucleus, one (l) giving its angular momentum, and one (m) giving the orientation of the orbital if it is not spherical. In the formation of a covalent bond between two atoms, a molecular orbital containing two electrons is formed. See also WAVE MECHANICS.

orchestra A large instrumental ensemble. The modern symphony orchestra, which evolved during the 18th and 19th centuries, has string, wind (brass and woodwind), and percussion sections. The Greek word *orquestra* originally referred to the round space between the stage and the auditorium in ancient Greek theatres, which was occupied by the chorus, musicians, and dancers.

orchid A herbaceous perennial plant of the family *Orchidaceae* (about 20 000 species), found worldwide, especially in damp tropical regions. Most temperate orchids grow normally in the soil; while tropical orchids tend to grow non-parasitically on trees (i.e. as epiphytes) and form pseudobulbs (storage organs) at the base of the stem. Each flower consists of three petal-like sepals and three petals—the lowest (labellum) being very distinctive. The one or two stamens and stigma are fused to form a central column that bears pollen grains grouped into masses (pollinia), which are transferred to other flowers by insects. The flowers of many species are adapted to receive only a particular species of insect; examples are the bee, fly, and

spider orchids (genus *Ophrys*). Many orchids are cultivated for ornament (see CYMBIDIUM; SLIPPER ORCHID); one genus—*Vanilla*—is of commercial importance as the source of vanilla flavouring.

Order of Merit (OM) A British order of chivalry, instituted in 1902. It comprises the sovereign and not more than 24 men and women of great eminence.

Order of the British Empire, The Most Excellent A British order of knighthood, instituted in 1917 and having five classes: Knights or Dames Grand Cross (GBE); Knights or Dames Commanders (KBE or DBE); Commanders (CBE); Officers (OBE); and Members (MBE).

orders of architecture The fundamental elements of classical *architecture, comprising five main types of supportive column—Doric, Tuscan, Ionic, Corinthian, and Composite. The column was developed by the Greeks and Romans to such an extent that the proportions between its constituent parts determined the proportions of the entire building. Each order usually consists of four main parts, the base, shaft, capital, and entablature, these having individual shapes and types of decoration.

Ordnance Survey The official map-making body of the UK. Established in 1791, following the mapping of Scotland (1726–90), it published its first map in 1801. Maps ranging from the large-scale 1:1250 (for major areas) to the small-scale 1:1 000 000 have since been produced. The original scale to be used, the 1:63 360 (1 in:1 mi) was converted to the metric scale of 1:50 000 in the 1970s. The First Series of the 1:50 000 was completed in 1976; this has now been replaced by a Second Series with redrawn maps (the "Landranger" series), completed in 1988. Some 80% of the Survey's income now comes from the supply of mapping information in digital form. See also DIGITAL MAPPING.

Ordovician period A geological period of the Lower Palaeozoic era, between the Cambrian and Silurian periods. It lasted from about 515 to 445 million years ago. It is divided into the Upper and Lower Ordovician.

ore A rock body or mineral deposit from which one or more useful materials, usually metals, can be economically extracted. The gangue is the waste material left when the desired mineral has been extracted.

oregano An aromatic perennial herb, *Origanum vulgare*, native to the Mediterranean and W Asia. The dried leaves and flowers are used as

a culinary flavouring and the plant is a source of essential oils. Family: *Labiatae*.

Oregon A state in the USA, on the NW Pacific coast. The Cascade Range extends N–S dividing the state between the valleys of the W and the dry plateau areas of the E. The economy is based predominantly on agriculture and forestry. Oregon is the nation's leading timber state and approximately half its area is forested; the Douglas fir is especially important. Oregon became a state in 1859, following considerable migration of White settlers from the Midwest during the 19th century. Area: 251 180 sq km (96 981 sq mi). Population (2000): 3 421 399. Capital: Salem.

Orestes In Greek legend, the son of *Agamemnon, King of Mycenae, and *Clytemnestra. Encouraged by his sister *Electra, he avenged his father's murder by killing his mother and her lover Aegisthus.

Orff, Carl (1895–1982) German composer, teacher, conductor, and editor. He developed a monodic style of composition characterized by lively rhythms; his best-known work is the oratorio *Carmina Burana* (1935–36).

organ A musical wind instrument of early origin. The modern organ consists of a large number of graduated pipes, some of which contain reeds, fitted over a wind chest and blown by manual or electric bellows. The pipes are made to sound by depressing keys or pedals. Each pipe sounds one note, but groups of duplicate pipes, called stops, can be made to sound together or successively. Different stops have different tone colours, many of which resemble orchestral instruments. An organ console may have as many as five keyboards, as well as pedals. Each keyboard has a separate range of stops and different characteristics. The action linking keys and pipes consists of a series of rods called a tracker action or wires conveying electrical impulses. The modern electronic organ consists of a series of electronic oscillators to produce notes, which are then amplified.

organic farming See FERTILIZERS.

Organisation de l'Armée secrète (OAS) An organization of French settlers in Algeria opposed to Algerian independence from France. The OAS was established in 1961 and led by General Raoul Salan (1899–1984). Its campaign of terrorism in Algeria and France included the attempted assassination in September 1961, of the French president, de Gaulle, who by March 1962 had reached agreement

with the Algerian nationalists (see **FRONT DE LIBÉRATION NATIONALE**). Salan was captured (imprisoned 1962–68) and the OAS collapsed.

Organization for Economic Cooperation and Development (OECD) An international organization founded in 1961 to further world trade and coordinate aid to developing countries. It succeeded the organization set up in 1948 to coordinate the *Marshall Plan for European economic recovery after World War II. The headquarters are in Paris.

Organization of African Unity (OAU)
See **AFRICAN UNION**.

Organization of American States (OAS) A body founded in 1948 to foster mutual understanding and cooperation between American republics and collective security. It is based on the *Monroe Doctrine, which discouraged European intervention in the Americas. Cuba was expelled in 1962.

Organization of Central American States (OCAS) An international organization founded in 1951. Its members include Costa Rica, El Salvador, Guatemala, Honduras, and Nicaragua, and its headquarters are in Guatemala City. Its aim is to promote social, cultural, and economic development through joint action.

Organization of Petroleum Exporting Countries (OPEC) An organization founded in 1960 to represent the interests of the chief oil-exporting nations (Algeria, Indonesia, Iran, Iraq, Kuwait, Libya, Nigeria, Qatar, Saudi Arabia, United Arab Emirates, and Venezuela) in dealings with the major oil companies. Since the mid-1970s OPEC has been less effective in controlling the price of oil due to internal dissension and increased supplies from non-OPEC sources. Ecuador left in 1992 and Gabon in 1995.

orienteering A navigational sport, held over rugged country, that originated in Sweden in 1918 and is designed to test both intellectual and athletic ability. Using a map and compass, competitors run round a series of control points in a prescribed sequence.

Orinoco, River The third largest river system in South America. Rising in S Venezuela, it flows in an arc forming part of the Venezuela-Colombia border before entering the Atlantic Ocean via an extensive delta region. Drainage basin area: 940 000 sq km (365 000 sq mi). Length: about 2575 km (1600 mi).

oriole A songbird belonging to an Old World family (*Oriolidae*; 28 species) occurring mainly

in tropical forests. Orioles generally have a black-and-yellow plumage, measure 18–30 cm, and feed on fruit and insects. The golden oriole (*Oriolus oriolus*) is the only species reaching Europe. American orioles belong to the family *Icteridae* (87 species). They usually have a black plumage with red, yellow, or brown markings.

Orion A very conspicuous constellation that can be seen from most parts of the world. The brightest stars, Rigel and *Betelgeuse, lie at opposite corners of a quadrilateral of stars with Bellatrix and Saiph at the other corners. Inside the quadrilateral three 2nd-magnitude stars form **Orion's Belt**, S of which lies the **Orion nebula**.

Orkney Islands (or Orkneys) A group of about 70 islands off the N coast of Scotland, separated from the mainland by the Pentland Firth. The chief ones are Mainland (Pomona), South Ronaldsay, Westray, Sanday, and Hoy. The population is of Scandinavian descent, reflecting the Islands' long connections with Norway and Denmark. The group became an island authority in 1975. Agriculture is of major importance; the Islands also serve as a base for the exploitation of North Sea oil with a pipeline from the Piper field. Area: 974 sq km (376 sq mi). Population (2001): 19 245. Administrative centre: Kirkwall.

Orléans 47°54'N 154°E A city in N France, the capital of the Loiret department on the River Loire. In 1429, during the Hundred Years' War, the strategically important city was delivered from the English by Joan of Arc. Its cathedral, which was destroyed by the Huguenots in 1568, was rebuilt in the 17th century. The focal point of road and rail routes, Orléans has an extensive trade in wine, brandy, and agricultural produce. Population (1999): 112 833.

Orléans, Louis Philippe Joseph, Duc d' (1747–93) French revolutionary. A cousin of Louis XVI of France, he nevertheless supported the dissident Third Estate at the beginning of the *French Revolution, joining the radical Jacobins in 1791. He was executed after his son (later King Louis Philippe) had joined the Austrian coalition against France.

ormolu (French: *d'or moulu*, powdered gold) Ornamental gilded bronze used as embellishment on furniture, especially French 18th- and 19th-century furniture.

Ornithischia An order of herbivorous *dinosaurs that lived in the Jurassic and Cretaceous periods (200–65 million years ago). They had hip bones arranged like those of birds (the

name means "bird hips") and a horny beak at the front of the jaw (teeth were present only at the rear). Some were bipedal while others evolved to become quadrupedal and heavily armoured. There were both amphibious and terrestrial forms. See IGUANODON; STEGOSAURUS; TRICERATOPS.

ornithology The study of *birds. Ornithology is a popular pastime as well as a branch of zoology; the records of bird sightings made by amateur ornithologists can be valuable in helping to determine the ecology and behaviour of bird populations. Recovery of rings used in bird-ringing experiments provides information regarding the dispersion and migration of birds. Many species are protected by legislation, and bird sanctuaries have been established.

orogeny A period of mountain building. Several major orogenies have occurred in the earth's geological history, major ones since the Precambrian including the Caledonian (in the Lower Palaeozoic) and the Alpine (in the Tertiary). **Orogenesis** is the process of mountain building, including folding, faulting, and thrusting, resulting from the collision of two continents, which compresses the sediment between them into mountain chains (see PLATE TECTONICS).

Orpheus A legendary Greek poet and musician, the son of the muse Calliope by either Apollo or Oeagrus, King of Thrace. After sailing with the *Argonauts he married *Eurydice. After her death, he descended to Hades to recover her. *Persephone, charmed by his playing on the lyre, released Eurydice but Orpheus lost her when he disobeyed the gods' command not to look back at her. He was murdered by the Maenads, followers of *Dionysus.

orrisroot The fragrant rhizome (underground stem) of several European plants of the genus *Iris*. It is dried and ground for use in perfumes and medicines.

orthoclase An alkali potassium *feldspar, $KAlSi_3O_8$, found in acid igneous rocks and in many metamorphic rocks. It is white, pink, or greenish grey, and is softer than quartz. Commercially, orthoclase is frequently obtained from pegmatites; it is used in the manufacture of glass, ceramic glazes, and enamels.

Orthodox Church The federation of self-governing Churches historically associated with the eastern part of the Roman Empire and separated from the Latin Church since 1054; also called the Eastern Orthodox Church.

The four ancient patriarchs of Orthodoxy are of Constantinople (which has primacy of honour), Alexandria, Antioch, and Jerusalem; in addition there are patriarchs of Moscow, Georgia, Serbia, Bulgaria, and Romania. Independent Orthodox Churches exist in Greece, Cyprus, Albania, the Czech Republic, and Poland. There are also congregations in other countries, many established by Russian immigrants after the Revolution. Government is by bishops, who must be unmarried, priests, and deacons, who play an important liturgical role. The Orthodox Church claims the authority of *apostolic succession and regards itself as the one true Church, accepting as doctrine only the *Nicene Creed. Its worship is sacramental and centred on the Eucharist and the ancient liturgies of St John Chrysostom and St Basil, which are always solemnly celebrated and sung without accompaniment. The veneration of *icons is a distinctive feature of Orthodox worship; statues and other three-dimensional images are forbidden. Easter is the main feast of the Church year. See also GREEK ORTHODOX CHURCH; RUSSIAN ORTHODOX CHURCH.

orthopaedics The medical specialty concerned with treating deformities caused by disease of and injury to the bones and joints. This includes the use of surgery (especially for artificial hip joints), manipulation, traction, etc., in correcting deformities and fractures, together with rehabilitation of patients.

Orthoptera A mainly tropical order of generally large stout-bodied insects (15 000 species), including the *grasshoppers and *crickets. The hind legs are enlarged and specialized for jumping and the large blunt head has biting jaws for feeding on vegetation. Few species are good fliers. Many species produce sounds by rubbing one part of the body against another (stridulation).

ortolan A Eurasian *bunting, *Emberiza hortulana*, about 16 cm long, having a brown-streaked plumage with a yellow throat and pinkish belly. Large numbers are trapped as table delicacies on their autumn migration to N Africa and the Middle East.

Orton, Joe (Kingsley) (1933–67) British dramatist, whose black comedies on themes of sexual perversion and corruption included *Loot* (1966) and *What the Butler Saw* (1969). A homosexual, he was murdered by his lover.

Orwell, George (Eric Blair; 1903–50) British novelist and writer, born in India. His nonfiction includes *Down and Out in Paris and London* (1933), *The Road to Wigan Pier* (1937), and *Homage*

to Catalonia (1936). *Animal Farm* (1945) is an anti-Stalinist allegory and *Nineteen Eighty Four* (1949) a pessimistic view of a totalitarian future.

oryx A desert antelope, *Oryx gazella*, which comprises two races, beisa and gemsbok, of S and E Africa. Oryxes have long slender straight horns and are greyish brown with black markings on the face and legs. The Arabian oryx (*O. leucoryx*) and the N African scimitar-horned oryx (*O. tao*) are both endangered species.

Osaka 34 40N 135 30E A port in Japan, in SW Honshu on the Yodo delta. The third largest city in Japan, it was a leading commercial centre by the 17th century. It is also a cultural centre. Together with Kobe, Kyoto, and several small cities it forms the important **Osaka-Kobe** industrial area. Population (1995): 2 602 352.

Osborne, John (1929–94) British dramatist, one of the original Angry Young Men, best known for his play *Look Back in Anger* (1956). His criticism of contemporary Britain continued in such plays as *The Entertainer* (1957), *A Patriot for Me* (1965), and *West of Suez* (1971). Other plays include *Luther* (1960), *Inadmissible Evidence* (1964), and *Déjà Vu* (1992).

Oscar See ACADEMY OF MOTION PICTURE ARTS AND SCIENCES.

Osiris The Egyptian god of the dead, the brother and husband of *Isis; as the father of *Horus (the sun), he was also the god of renewal and rebirth. He was killed by his evil brother *Set. After Isis had magically reconstructed his body, he became ruler of the underworld. Dead pharaohs became identified with Osiris.

Oslo (former name (1877–1925): Kristiania) 59 56N 10 54E The capital and main port of Norway, situated in the SE at the head of Oslo Fjord. It is the financial and industrial centre of Norway and is also a cultural centre. Founded in the 11th century, Oslo became capital in 1299 and developed into an important trading post under the influence of the Hanseatic League. Population (2000 est): 507 467.

osmiridium A naturally occurring alloy consisting mainly of osmium and iridium. It is hard and resistant to wear.

osmium (Os) An extremely hard bluish-silver metal of the platinum group. It is one of the densest elements known (relative density 22.6). Its major use is in the production of hard alloys with other noble metals, for pen nibs and electrical contacts. At no 76; at wt 190.2; mp 3033 ± 20°C; bp 5012 ± 100°C.

osmosis The passage of a solvent from a less concentrated into a more concentrated solution through a semipermeable membrane (one allowing the passage of solvent, but not solute, molecules). Osmosis stops if the pressure of the more concentrated solution exceeds that of the less concentrated solution by an amount known as the **osmotic pressure** between them. In living organisms the solvent is water and osmosis plays an important role in effecting the distribution of water in plants and animals, causing water to pass into and out of cells.

osprey A large *hawk, *Pandion haliaetus*, also called fish hawk, occurring worldwide (except in South America) around coasts and inland waters. It is 65 cm long and its plumage is brown above and white below. It feeds mostly on pike and trout, caught in its talons, which are covered in rough spikes to help grasp prey.

Ostend 1 13N 2 55E A seaport and coast in NW Belgium, on the North Sea. Ostend is the headquarters of the country's fishing fleet and maintains a cross-Channel ferry service to Dover, England. Population (1995 est): 68 858.

osteoarthritis A disease of the joints, mainly back, hips, and knees, in which their internal surfaces are rubbed away and they become swollen and painful. This becomes increasingly common as people age. Drugs can reduce the pain as can surgically installed artificial hips and knees. See also ARTHRITIS.

osteopathy A system of healing by manipulation and massage, based on the theory that nearly all diseases are due to the displacement of bones, especially the bones of the spine. Osteopathy is of use in relieving disorders of the joints, bones, and muscles, especially those causing back pain.

Ostia A town of ancient Rome, at the mouth of the River Tiber. A major naval base under the Republic, its prosperity was greatest in the 2nd century AD, when it was an important commercial centre.

ostrich A fast-running flightless African bird, *Struthio camelus*, occurring in open grassland and semidesert regions. It is the largest living bird. Males may reach 2.5 m tall and are black with white wing and tail plumes; females are smaller and mainly brown. Ostriches have a long almost naked neck, a small head, and a ducklike bill used to feed on plant material. Order: *Struthioniformes*.

Ostrogoths A branch of the *Goths, forced W of the River Dniester by the *Huns (375 AD). In the 6th century they frequently invaded N

Italy and captured much of the Balkans. Between 493 and 526 Theodoric (c. 445–526), their leader, ruled Italy. The Roman Empire, subsequently destroyed the Ostrogoths (562).

Oswald, Saint (c. 605–41) King of Northumbria (634–41) after defeating and killing the Welsh king, Cadwallader. He restored Christianity in Northumbria with the help of St *Aidan. Oswald was killed in battle by Penda. Feast day: 5 Aug.

Oświęcim (German name: Auschwitz) 50 02N 19 11E A town in S Poland, site of a notorious Nazi extermination camp during World War II. Between two and four million people (mostly Jews) were systematically murdered here. Parts of the site are preserved as a monument. Population (latest est): 45 200.

Ottawa 45 25N 75 43W The capital of Canada, in SE Ontario on the Ottawa River. It is two-thirds English speaking and one-third French speaking. Founded in the early 19th century as a lumbering centre, it became national capital in 1867. Population (1996): 323 340.

Ottawa River A river in central Canada, rising in W Quebec and flowing W, then SE down the Ontario-Quebec border to join the St Lawrence River, as its chief tributary, at Montreal. It is linked with Lake Ontario by the Rideau Canal. Length: 1120 km (696 mi).

Otter A semi-aquatic carnivorous mammal belonging to the subfamily *Lutrinae* (18 species), distributed worldwide except in Polar regions, Australasia, and Madagascar. Otters have a cylindrical body, waterproof fur, short legs, partially webbed feet, and a thick tapering tail. The Eurasian otter (*Lutra lutra*) is about 1.2 m long. Chief genera: *Lutra*, *Paraonyx*; family: *Mustelidae*. See also SEA OTTER.

Otto (I) the Great (912–73 AD) Holy Roman Emperor (936–73; crowned 962). He subdued his rebellious vassals, defeated a Hungarian invasion at the great victory of Lechfeld (955), and extended his influence into Italy.

Otto, Nikolaus August (1832–91) German engineer, who in 1876 devised the four-stroke cycle, known as the Otto cycle, for the *internal-combustion engine. His engine made the development of the motor car possible.

Ottoman Empire A Turkish Muslim empire ruling large parts of the Middle East as well as territories in Europe from the 14th to the 20th centuries. Its capital was *Istanbul (formerly Constantinople) and its rulers descendants of its founder Osman I (c. 1258–c. 1326). Originating around 1300 as a small Turk-

ish state in Asia Minor, in 1453 the Ottomans captured Constantinople and destroyed the Eastern Roman (Byzantine) Empire. Ottoman power culminated in the 16th century with the conquest of Egypt and Syria (1517) and, under Suleiman the Magnificent, Hungary (1529) and territories in the Middle East and N Africa. From the 17th century the Empire declined. In World War I the Ottomans supported Germany and defeat brought the loss of territories outside Asia Minor. The subsequent nationalist revolution of Kemal *Atatürk replaced the Ottoman Empire with the state of Turkey (1922).

Ouagadougou 12 25N 130W The capital of Burkina Faso, founded in the 11th century as the centre of a Mossi empire. Population (1993 est): 690 000.

Oudry, Jean-Baptiste (1686–1755) French *rococo painter and tapestry designer, head of the *Beauvais (1734) and Gobelins (1736) tapestry works. His illustrations to La Fontaine's *Fables* are particularly well known.

Ouse, River The name of several rivers in England, including: 1. A river in NE England, flowing mainly NE through Yorkshire to join the River Trent, forming the Humber estuary. Length: 92 km (57 mi). 2. A river in S England, flowing E and S across the South Downs to the English Channel at Newhaven. Length: 48 km (30 mi). See also GREAT OUSE RIVER.

ovary 1. The organ of female animals in which the *egg cells (ova) are produced. In mammals (including women) there are two ovaries close to the openings of the Fallopian tubes, which lead to the uterus (womb). They produce both eggs and steroid hormones (see OESTROGENS; PROGESTERONE) in a regular cycle (see MENSTRUATION). 2. The part of a flower that contains the *ovules. It is situated at the base of the carpel(s) and becomes the fruit wall after fertilization.

Ovid (Publius Ovidius Naso; 43 BC–17 AD) Roman poet. His poems include the *Amores* and the *Ars amatoria*, on his characteristic theme of love. His greatest work, the *Metamorphoses*, is a poem in 15 books including mythological and historical tales. In 8 AD he was exiled by the emperor Augustus to the Black Sea.

ovule The structure within the ovary of a *flower that contains an egg cell and nutritive tissue. After fertilization it develops into the *seed containing the embryo.

ovum See EGG.

Owen, David (Anthony Llewellyn), Baron (1938–) British politician. As a Labour

MP (1966–81), he was foreign secretary (1977–79). A cofounder of the Social Democratic Party (SDP), he became leader in 1983 but resigned in 1987 when the party merged with the Liberals.

Owen, Robert (1771–1858) British philanthropist and manufacturer. In 1800 he became manager of the mills at New Lanark, Scotland, where he established a model community with improved housing and working conditions. He later established cooperative societies for the unemployed and cofounded the Grand National Consolidated Trades Union in 1834.

Owen, Wilfred (1893–1918) British poet. His poetry written during World War I includes "Strange Meeting" and "Anthem for Doomed Youth." He was killed in action. His friend Siegfried *Sassoon edited his *Poems* (1920).

Owens, Jesse (John Cleveland O.; 1913–80) US Black athlete. In 1935 he set six world records in 45 minutes (in the long jump, 100 yards, 220 yards, 220 metres, 220 yards hurdles, and 220 metres hurdles). At the Berlin Olympics (1936) he won four gold medals.

owl A nocturnal bird of prey belonging to an order (*Strigiformes*) of worldwide distribution. There are two families: *Strigidae* (typical owls) and *Tytonidae* (barn and bay owls). Owls have a large head with large forward facing eyes surrounded by a facial disc of radiating feathers, soft plumage, usually brown and patterned, and a short sharp hooked bill. Owls hunt mammals, birds, and insects. They range in size from 16 cm (pygmy owls; genus *Glaucidium*) to 70 cm (eagle owls; genus *Bubo*). See BARN OWL; TAWNY OWL.

oxalic acid (or **ethanedioic acid**; $(\text{COOH})_2$) A colourless poisonous soluble crystalline solid. Potassium and sodium salts are found in plants. Oxalic acid is used as a metal cleaner and for bleaching textiles and leather.

oxeye daisy A perennial herb, *Chrysanthemum leucanthemum*, also called moon daisy or marguerite, found in grassland and wasteland throughout Europe. It has large solitary flower heads with long white rays surrounding a yellow central disc. Family: *Compositae*.

OXFAM A British charity founded in 1942, and registered in 1948 as the Oxford Committee for Famine Relief. Its purpose is to relieve suffering throughout the world. Its long-term projects include medical, social, and economic research and training schemes.

Oxford 51 46N 1 15W A city in S central England, the administrative centre of Oxfordshire on the Rivers Thames and Cherwell. It is the

site of the **University of Oxford**, one of the oldest universities in Europe, dating from the 12th century. The University is organized as a federation of colleges, which are governed by their own teaching staff ("fellows"). The first college, University College, was founded in 1249. Other notable colleges include All Souls (1438), Christ Church (1546), and Lady Margaret Hall (1878), which was the first women's college. In the Civil War Oxford was the royalist headquarters. College buildings dominate the city centre, with business parks on the outskirts. The motor-car works at Cowley now employs only a fraction of its former workforce. Oxford has one of the world's great libraries (the Bodleian Library, 1602). Population (1991): 127 600.

Oxford, Provisions of (1258) The scheme of constitutional reform imposed upon Henry III by his barons at Oxford following their opposition to excessive taxation. His repudiation of the Provisions (1261) led to the Barons' War.

Oxford Movement A movement within the Church of England emphasizing the Catholic principles on which it rested. Led by *Newman, John Keble (1792–1866), Edward Pusey (1800–82), and James Froude (1818–94) of Oxford University, it was initiated in 1833 and greatly invigorated Anglicanism. See also ANGLICO-CATHOLICISM.

Oxfordshire A county in the S Midlands of England. In 1974 it gained a large part of NW Berkshire. It consists mainly of a broad vale, crossed by the River Thames, with the *Chiltern Hills in the SE and the *Cotswold Hills in the NW. It is chiefly agricultural; industries include light manufacturing, electronics, and tourism (centred on Oxford). Area: 2611 sq km (1008 sq mi). Population (2001): 605 492. Administrative centre: Oxford.

oxidation and reduction Oxidation is the chemical combination of a substance with oxygen. An example is the combustion of carbon to carbon dioxide: $\text{C} + \text{O}_2 \rightarrow \text{CO}_2$. The converse process, removal of oxygen, is known as reduction; e.g. the reduction of iron oxide to iron: $\text{Fe}_2\text{O}_3 + 3\text{C} \rightarrow 2\text{Fe} + 3\text{CO}$. Reduction also refers to reaction with hydrogen and oxidation to removal of hydrogen. More generally, an oxidation reaction is one involving loss of electrons and reduction a gain of electrons. Usually oxidation and reduction reactions occur together. Thus, in the reaction of ferric ions (Fe^{3+}) with stannous ions (Sn^{2+}), the ferric ions are reduced to ferrous ions (Fe^{2+}) and the stannous ions oxi-

dized to stannic ions (Sn^{4+}). Reactions of this type are called **redox reactions**.

oxidation number (or oxidation state)

The number of electrons that would have to be added to an atom to neutralize it. Thus Na^+ , Cl^- , and He have oxidation numbers of 1, -1, and 0, respectively. Rules have been developed for assigning oxidation numbers to covalently bound atoms depending on the electric charge that the atom would have if the molecule ionized.

oxpecker An African songbird, genus *Buphagus*, that feeds on ticks and maggots pecked from the hides of cattle and game animals. Family: *Sturnidae* (starlings).

oxygen (O) A colourless odourless gas discovered by J. *Priestley. The element exists in two forms—the diatomic molecule (O_2), which constitutes 21% of the earth's atmosphere, and trace amounts of the highly reactive triatomic allotrope, ozone. Oxygen is very reactive and forms oxides with most elements. In addition to its vital importance for plants and animals, its major use is in the production of steel in blast furnaces. It is obtained by the distillation of liquid air. At no 8; at wt 15.9994; mp -218.79°C ; bp -182.97°C .

oxygen cycle The process by which oxygen—present in the atmosphere or dissolved in water—is taken in by plants and animals for use in *respiration (intercellular combustion of food materials to provide energy) and released into the environment as a waste product, mostly in the form of free oxygen (by plants in photosynthesis). Oxygen is often combined in organic and inorganic compounds, which may also be considered as part of the cycle. See also CARBON CYCLE; NITROGEN CYCLE.

oyster A sedentary *bivalve mollusc belonging to the family *Ostreidae* (true oysters), of temperate and warm seas. The lower plate (valve) of the shell is larger and flatter than the upper valve; they are held together by an elastic ligament and powerful muscles. Edible oysters are cultivated for their white flesh; pearl oysters (family *Aviculidae*) are cultivated for their pearls, which they make by coating a grain of sand lodged inside their shell with calcareous material.

oystercatcher A black or black-and-white wading bird of a family (*Haematopodidae*; 4 species) occurring in temperate and tropical coastal regions. 40–50 cm long, oystercatchers have a flattened orange-red bill specialized for opening bivalve molluscs and probing in mud. Order: *Charadriiformes*.

ozone (O_3) A pale blue gaseous form of *oxygen, formed by passing an electrical discharge through oxygen (O_2). Ozone is a poisonous unstable gas. It is used as an oxidizing agent, for example in water purification. It is present in small amounts in the atmosphere, mostly in the **ozone layer**, which forms 11–26 km (7–16 mi) above the earth's surface as a result of dissociation by solar ultraviolet radiation of molecular oxygen into single atoms, some of which then combine with undissociated oxygen molecules. The ozone layer absorbs in the 230–320 nm waveband, protecting the earth from dangerous excessive ultraviolet radiation. In the 1980s holes in the ozone layer were detected over both poles, prompting the EU to phase out the use of harmful CFCs (see FLUOROCARBONS) by 1997, while other countries agreed to limit such emissions in the Montreal Pact (1990). See also GREENHOUSE EFFECT.

ozone layer. Solar ultraviolet radiation breaks up oxygen molecules (O_2) into atoms, some of which recombine with oxygen molecules to form ozone (O_3). Chlorine atoms from stable CFCs combine with O_3 to form chlorine monoxide (ClO), which reacts with atomic oxygen to form O_2 and chlorine atoms again. These Cl atoms react again with O_3 . Each chlorine atom can react 20 000 times with ozone causing a severe drop in the concentration of ozone in the ozone layer.

pacemaker A small section of specialized heart muscle that initiates heartbeat. It is situated in the right atrium and contracts spontaneously: the impulse to contract is transmitted from the pacemaker to both atria and then to the ventricles. If the pacemaker ceases to function (heart block) it may be replaced by a battery-operated device that stimulates the heart to contract.

Pacific Ocean The world's largest and deepest ocean, covering a third of its surface. It extends between Asia, Australia, Antarctica, and America. It reaches its maximum depth in the *Marianas Trench. The S and E have a uniform climate with steady winds, but the W is known for its typhoons, which cause coastal flooding. The Pacific has some diurnal and mixed tides, while Tahitian tides follow the sun and not the moon.

Pacino, Al (1940–) US actor, best known for his film roles, often as violent but brooding antiheroes. His films include *The Godfather* (1972) and its sequels, *Scent of a Woman* (1992), which earned him an Oscar, and *Insomnia* (2002).

Padang 100S 100 21E A port in Indonesia, in W Sumatra. An early Dutch settlement, it flourished when railways were built in the 19th century. It exports coal, cement, coffee, copra, and rubber. Population (1995 est): 721 500.

Paderewski, Ignacy (Jan) (1860–1941) Polish pianist, composer, and statesman. He achieved an international reputation as a performer and composed a piano concerto and many solo pieces. He was the first prime minister (1919) of newly independent Poland but resigned after ten months to return to his musical career.

Padua (Italian name: Padova) 45 24N 11 53E A city in NE Italy, near Venice. An important city in Roman and Renaissance times, it has several notable buildings; in front of the Basilica of St Anthony stands Donatello's equestrian statue

of Gattamelata. Machinery and textiles are produced. Population (2000 est): 211 391.

paediatrics The medical specialty concerned with the problems and illnesses of infants and children from birth to adolescence. Paediatricians must have a detailed knowledge of obstetrics, genetics, and psychology. Their work includes the management of handicaps as well as the treatment and prevention of childhood diseases.

Paestum The Roman name for Posidonia, a Greek colony founded about 600 BC on the SW coast of Italy. The remains of three great Doric temples still stand there. Named after the Greek sea god *Poseidon, it was conquered by Rome in 273 BC.

Paganini, Niccolò (1782–1840) Italian virtuoso violinist. After an adventurous youth he toured Europe, astonishing audiences with his techniques. He composed six violin concertos, showpieces for violin, including a set of variations on the G string, and 24 caprices.

pagoda A Buddhist shrine in the form of a tower for housing relics of the Buddha. Pagodas originated in India, where their standardized form of a basic unit repeated vertically in diminishing sizes was evolved. The pagoda spread to Sri Lanka, SE Asia, China, and Japan. See illustration on p. 666.

Paine, Thomas (1737–1809) British political writer. In 1774 he went to America, where his *Common Sense* (1776) initiated the movement towards independence. Back in England, he published *The Rights of Man* (1791–92) in defence of the French Revolution. Indicted for treason, he fled to France, where he wrote *The Age of Reason* (1796), a deist manifesto. He died in poverty in America.

paint A finely powdered insoluble pigment suspended in a binding medium; on application to a surface the volatile components of the binding medium evaporate, the drying oils

Chinese

Japanese

pagoda. The exuberantly curving roofs of the typical multistoreyed Chinese pagoda contrast with the more restrained Japanese form.

oxidize, and the resins polymerize, leaving a decorative or protective skin. The binding medium consists of a drying oil (e.g. linseed oil or tung oil), a resin (rosin or a synthetic alkyd), a thinner (turpentine, benzene, etc.), and a drier (e.g. lead linoleate) to accelerate film formation. Water-based emulsion paints consist of emulsions of a synthetic resin in water.

painted lady An orange, black, and white butterfly, *Vanessa cardui*, of worldwide distribution. It cannot survive cold winters but migrates from warmer regions each year. The caterpillars feed mainly on thistles and nettles.

Paisley 55°50'N 4°26'W A town in W central Scotland, in Strathclyde Region near Glasgow. Famous for shawls in the 19th century, Paisley's textile industry is still important. The abstract design used for the shawls is still known as **paisley pattern**. Dyeing, bleaching, engineering, and starch and cornflour manufacturing are also important. Population (2001): 74 170.

Paisley, Ian (1926–) Northern Irish politician; first minister of Northern Ireland (2007). A minister of the Free Presbyterian Church of Ulster, he was a member of the Northern Irish parliament (1970–72) before becoming a Democratic Unionist MP in the House of Commons (1974–85; 1986–), an MEP (1979–2004), and a member of the Northern Ireland assembly (1998–). He was a leading opponent of the Good Friday Agreement (1998) but in 2007 agreed to take his party into government with Sinn Féin.

Pakistan, Islamic Republic of A country in S Asia, bordering on Iran, Afghanistan,

China, and India. The W is mountainous and the E has areas of desert, while the River Indus rises in the Himalayas in the N and flows S to the Arabian Sea. The population is a mixture of many Asian and Middle Eastern racial groups. 97% of the population is Muslim. *Economy:* mainly agricultural, producing cotton, rice, wheat, and sugar cane. Pakistan has become a major exporter of cotton and cotton yarn and cloth. Chemical fertilizers, cement, sugar, and handicrafts are also produced, and a steel industry is being developed. Fishing is increasingly important. Resources include coal, iron ore, copper, limestone, oil, and large quantities of natural gas. *History:* the history of Pakistan is that of *India until 1947, when it was created to satisfy the Muslim League's demand for a separate state for the Muslim minority. It consisted of two separate areas; West Pakistan comprised Baluchistan, the Northwest Frontier, West Punjab, and Sind, while East Pakistan was formed from East Bengal. The most serious problem has been conflict between Pakistan's diverse ethnic groups. As a result, each of Pakistan's three constitutions (1956, 1962, 1973) has been replaced or suspended. The electoral victory in East Pakistan of the Awami League (1970), which demanded regional autonomy, led to its secession as *Bangladesh (1971). From 1972 to 1989 Pakistan withdrew from the Commonwealth. Unrest followed the disputed 1977 elections, leading to a military coup by Gen Zia ul-Haq. The former prime minister, Zulfikar Ali Bhutto, was executed (1979). Zia became president in 1978; after he was assassinated in 1988 Bhutto's daughter Benazir Bhutto became prime minister. In 1990, in the wake of ethnic violence, Bhutto was dismissed. Her successor, Nawaz Sharif, was dismissed in 1993 following accusations of corruption; Bhutto was re-elected but in 1996 was again dismissed on grounds of corruption. Sharif was re-elected in 1997 but faced constitutional disputes, ethnic violence, and deepening economic crisis. In 1999 Sharif was deposed in a coup led by Gen Pervez Musharraf, who subsequently became president. Musharraf's supporters won elections in 2002, but these were widely seen as flawed. The country was suspended from the Commonwealth from 1999 to 2004. The long-running border dispute with India over Kashmir escalated sharply in 2002 but there have since been peace talks. Official language: Urdu. Currency: Pakistan rupee of 100 paise. Area (excluding Jammu and Kashmir): 803 943 sq km (310 322 sq mi). Population (2007 est): 164 741 924. Capital: Islamabad.

Palace of Westminster The British parlia-

mentary buildings in Westminster, London, containing the House of Commons and the House of Lords (see **PARLIAMENT**). It is also known as the Houses of Parliament. A royal palace of medieval construction until the 16th century, when it assumed its present function, it was largely burnt down in 1834, only the Great Hall surviving. It was rebuilt in the gothic revival style by *Barry and *Pugin. See also **BIG BEN**.

Palaeocene epoch See **TERTIARY PERIOD**.

Palaeolithic The earliest division of the *Stone Age. It extends roughly from the emergence of man to the end of the last ice age. The Palaeolithic has three phases: Lower, beginning as much as 3 500 000 years ago and characterized by pebble-tool manufacture; Middle, beginning about 70 000 years ago and associated with *Neanderthal man; and Upper, beginning about 40 000 years ago and associated with *Cro-Magnon man.

palaeomagnetism The history of the earth's magnetic field (see **GEOMAGNETIC FIELD**) as determined from the remanent magnetism of rocks. The study assumes that the principal component of igneous and sedimentary rocks' magnetism was determined at or near to the time at which the rocks were formed. Palaeomagnetism provides evidence for continental drift (see **PLATE TECTONICS**) and the movement of the magnetic poles.

palaeontology The study of ancient organisms from their *fossil remains in the rocks. Fossils are used to correlate bodies of rock and establish their stratigraphic relationships with each other; this field is called **biostratigraphy**. The study of ancient microscopic organisms (microfossils) is called **micropalaeontology**.

Palaeozoic era The era of geological time between the Precambrian and the Mesozoic, lasting from about 590 to 240 million years ago. It is divided into the Lower Palaeozoic, which contains the Cambrian, Ordovician, and Silurian periods, and the Upper Palaeozoic, containing the Devonian, Carboniferous, and Permian. It is the first era of Phanerozoic time.

palate The roof of the mouth, which is divided into two parts. The soft palate at the back of the mouth is composed of mucous membrane and prevents food passing into the nose during swallowing. The hard palate, further forward, is composed of two fused halves made up of the palatine bone and part of the maxillary (upper jaw) bones.

Palatinate Two regions of W Germany: the

Lower (or Rhenish) Palatinate is now in Rheinland-Pfalz, Baden-Württemberg, and Hessen and the Upper Palatinate is now in Bavaria. In 1156 the title of count palatine was bestowed by Emperor Frederick I on his half-brother Conrad, whose territories included what later became the Rhenish Palatinate. When, in 1214, it passed to the Wittelsbach family, their lands in Bavaria became the Upper Palatinate. From 1356 the counts palatine were electors of Holy Roman Emperors. The two Palatinates were separated from 1648 until 1777. In the early 19th century the Lower Palatinate was divided between France and various German states and the Upper Palatinate passed to Bavaria.

Palau See **BELAU, REPUBLIC OF**.

Palermo 38°08'N 13°23'E A port in Italy, the capital of Sicily. Founded by the Phoenicians in the 8th century BC, it became the chief town of the island under the Arabs (9th–11th centuries). Buildings include the gothic cathedral and the Norman palace. It has shipbuilding and textile industries. Population (2004 est): 679 730.

Palestine (or Holy Land) A historic area in the Middle East, consisting of the area between the Mediterranean Sea and the River Jordan. It now comprises *Israel and the Israeli-occupied territories. Sacred to Jews, Christians, and Muslims alike, the area has been much fought over. Towards the end of the 2nd millennium BC it was settled by the Hebrew people, and in about 1000 BC a Hebrew kingdom was founded by Saul. Following the reign of Solomon it was split into Israel, later conquered by the Assyrians, and Judah (see **JUDAEA**), later conquered by the Babylonians. From the late 4th century AD many Jews left Palestine, which became a centre first for Christian and later for Muslim pilgrimage (following Arab conquest in 636 AD). Christianity was reinstated in the area by the conquest of the Crusaders (1099 until the 13th century). After a period of Egyptian rule it fell to the Ottoman Turks (1516), who ruled it until World War I. From the mid-19th century Jews returned from the Diaspora to settle in Palestine. The late 19th century saw the beginning of *Zionism and in 1909 Tel Aviv, the first new Jewish city, was founded. In 1918 Palestine was captured by the British, who supported the Jewish demand for a Jewish nation in Palestine. This provoked unrest and terrorism among the Arab population, who felt increasingly threatened by Jewish immigration. In 1947 the problem was referred to the UN, which decided to divide Palestine into two separate states, Jewish and Arab. As this was accepted by the Jews but not the Arabs, Britain renounced its

mandate in 1948. The state of Israel was then proclaimed and immediately attacked by the surrounding Arab countries. They were repulsed and Israel greatly expanded its territory; the rest of Palestine was divided between Jordan (the West Bank) and Egypt (the Gaza strip). In 1995, following a peace agreement with the *Palestine Liberation Organization, Israel handed over the administration of the Gaza Strip and parts of the West Bank to a new Palestinian National Authority. Yassir *Arafat was elected (1996) first president of the Authority. Further progress was hampered by continuing Arab violence and delays in Israeli troop withdrawals. In 2001–02 rising casualties from Arab suicide bombings led the Israeli military to occupy large areas of Palestinian territory. Following Arafat's death, Mahmoud Abbas (1935–) became president of the Palestinian Authority. In 2006 legislative elections led to victory for the militants of * Hamas and in 2007 the organization seized control of the Gaza strip.

Palestine Liberation Organization

(PLO) An organization of various Palestinian groups opposed to Israel, led by al-*Fatah. It was founded in 1964; Yassir *Arafat became its chairman in 1969. Terrorist actions carried out by the PLO include the murder of 11 Israeli athletes at the Munich Olympics (1972). In 1982 PLO forces were expelled from Lebanon when Israel invaded. In 1988 the PLO set up a parliament in exile (in Tunis) for the newly declared state of Palestine. In the same year Arafat adopted a more peaceful policy. A peace agreement was signed in 1993 by Arafat and Yitzhak Rabin. The PLO renounced terrorism and recognized Israel's right to exist; Israel offered to withdraw its troops from the Gaza Strip and the West Bank. The Palestinians, under PLO leadership, gained effective autonomy in these areas in 1995. However, the peace process then stalled, owing to violence from extreme Arab factions and Israeli reluctance to withdraw troops. A further land-for-security deal was signed by Israel and the PLO in 1998 but US-brokered talks in 2000 ended in bitter failure. Claims that the PLO was colluding in Arab suicide bombings were used to justify Israel's re-occupation of Palestinian cities in 2002. Mahmoud Abbas (1935–) became chairman of the PLO on Arafat's death in 2004.

Palestrina, Giovanni Pierluigi da

(1525–94) Italian composer. He spent most of his life in Rome, as chorister, choirmaster, or maestro at churches including St Peter's. One of the greatest masters of *polyphony, he composed 93 masses, 179 motets, and other pieces.

Palladio, Andrea (1508–80) Italian architect, born in Padua. Palladio is famous for developing the architectural style now known as **Palladianism**; based on classical Roman public architecture, it was introduced into England in the early 17th century by Inigo Jones. Palladio's first job was the remodelling of the basilica in Vicenza (begun 1549) and from that emerged a hugely successful career. He produced villas, palaces, and churches, the most famous being S Giorgio Maggiore in Venice (begun 1566).

palladium (Pd) A silvery-white noble metal of the platinum group, discovered by W. H. Wollaston (1766–1828) in 1803, and named after the asteroid Pallas. It readily absorbs hydrogen and is used as a catalyst for hydrogenation reactions; it is alloyed with gold to form white gold. At no 46; at wt 106.4; mp 1555°C; bp 2964°C.

palm A monocotyledonous plant of the family *Palmae* (or *Arecaceae*; about 2500 species), occurring in tropical and subtropical regions. 1 to 60 m in height, palms have an unbranched trunk crowned with a cluster of large leaves, which are fan-shaped or feather-like. The flowers give rise to berries or drupes (stone fruits). Palms are important as a source of food (see COCONUT; DATE; SAGO), oil (see OIL PALM), wax, fibres, and building materials.

Palma (or Palma de Mallorca) 39 35N 2 39E

The capital of the Spanish Balearic Islands, in Majorca. Buildings include the gothic cathedral (1230–1601) and the 14th-century Bellver Castle. It is a port, tourist resort, and commercial centre; industries include textiles and footwear. Population (2005 est): 375 773.

palm civet A mammal of the family *Viverridae*, smaller than true civets and more omnivorous than *genets. Most palm civets are Asian (the two-spotted palm civet (*Nandinia binotata*) is the only African species). The masked palm civet (*Puguma larvata*) is up to 140 cm long including the tail (50–65 cm) and is mainly arboreal, feeding on fruit, insects, and vertebrates.

Palmer, Samuel (1805–81) British landscape painter and etcher. His best landscapes, which were either in sepia or watercolour, were painted during his association (1826–35) with a group of painters in Shoreham, who shared Palmer's admiration for William *Blake.

Palmerston, Henry John Temple, 3rd Viscount

(1784–1865) British statesman; foreign secretary (1830–34, 1835–41, 1846–51) and Liberal prime minister (1855–58, 1859–65). He entered parliament in 1807 as a Tory, serving as

secretary for war from 1809 to 1828, but by 1830 he had joined the Whigs. His markedly nationalistic foreign policy sought to defend constitutional states and prevent a Franco-Russian combination. As prime minister Palmerston supported the Confederacy in the US Civil War but was dissuaded from actively involving Britain.

palmyra A *palm tree, *Borassus flabellier*, cultivated in India and Sri Lanka. The timber is used for construction and the leaves are used for thatch and made into a type of paper. The sugary sap from the flower heads is fermented to give palm wine and the kernels of the fruits are eaten.

Palmyra (or Tadmor) 34°36'N 38°15'E An ancient Syrian desert city on the route of the E-W caravan trade in the 2nd and 3rd centuries AD. The ruins of the ancient city include the remains of the Temple of Bel (Palmyra's chief deity). Inscriptions in the Palmyric alphabet provide important information on Palmyra's trade.

Palomar, Mount A mountain in the USA, in California. It is the site of the Mount Palomar Observatory. Its 508 cm (200 in) reflecting telescope is among the largest in the world. Height: 1870 m (6140 ft).

Paltrow, Gwyneth (Kate) (1973–) US film actress. Her films include *Emma* (1996), *Shakespeare in Love* (1998), which earned her an Oscar, and *Sylvia* (2003), in which she played Sylvia Plath.

Pamirs (or Pamir) A mountainous area of central Asia, situated mainly in Tadzhikistan. It consists of a complex of high ranges, with the Tian Shan in the N, the Kunlun and Karakoram in the E, and the Hindu Kush in the W. Its highest point in Tadzhikistan is Communism Peak, at 7495 m (24 590 ft). In China it reaches 7719 m (25 326 ft) at Kungur.

Pampas The flat treeless plains of Argentina. They are of major agricultural importance in the E, producing wheat, corn, and beef in particular.

pampas grass A perennial *grass of the genus *Cortaderia*, native to South America and widely cultivated as an ornamental. *C. argentea* grows in dense clumps, with leaves up to 2 m long and flowering stems exceeding 3 m in length. The flowers form silvery-white plumes.

Pamplona 42°49'N 1°39'W A city in NE Spain, in the Basque Provinces. It has a cathedral and holds a renowned fiesta (during which bulls are driven through the streets to the bullring). It is

an agricultural centre and its industries include traditional crafts and chemicals. Population (1998 est): 171 150.

Pan The Greek god of shepherds and their flocks, the son of Hermes. He is usually portrayed with the legs, ears, and horns of a goat. He lived in the mountains and was associated especially with Arcadia, where he played his pipes (see PANPIPES).

Panama, Republic of A country in Central America, occupying the Isthmus of Panama. Narrow coastal plains rise to volcanic mountains. The population is largely of mixed Indian, European, and African descent. *Economy*: considerable revenue comes from receipts from the Panama Canal and from international capital. The main agricultural products are bananas, rice, sugar, and maize; fishing (especially for shrimps) is growing in importance. Industries include cement production and paper and food processing; oil refining has declined. Tourism is now the main source of foreign revenue. *History*: the original inhabitants were destroyed following Panama's discovery by Columbus in 1502 and Spanish colonization. Panama later became part of the viceroyalty of Peru and then of New Granada. In 1821 it became part of newly independent Colombia, from which it broke free in 1903 after a revolution supported by the USA. A military coup in 1968 brought Gen Omar Torrijos (1929–81) to power; in 1978 he retired as head of state. In 1981 Gen Manuel Noriega (1938–) took effective control. His alleged involvement in drug-dealing and refusal to relinquish power prompted the USA to send a military task force (1989); he was deposed and taken to the USA, where he was convicted on drug charges (1992). In 1991 a new constitution abolished the armed forces. In 1999 Mireya Moscoso became Panama's first woman head of state; Martin Torrijos, son of the former dictator Omar Torrijos, was elected president in 2004. Official language: Spanish. Currency: balboa of 100 centésimos. Area: 78 046 sq km (30 134 sq mi). Population (2003 est): 3 116 000. Capital: Panama City.

Panama Canal A canal across the Isthmus of Panama connecting the Atlantic and Pacific Oceans. Some 82 km (51 mi) long, it was begun in 1880 by the French Panama Canal Company under Ferdinand de Lesseps. In 1903 the USA acquired the construction rights from Panama and the canal was opened to commercial traffic in 1914. The USA also acquired sovereignty in perpetuity over the **Panama Canal Zone**, a region extending 8 km (5 mi) on either side of the

canal. In 1977–78 two treaties restored Panamanian sovereignty over the canal and the Zone (from 1979), while also ensuring their neutrality and the USA's continued use of its bases. Full control of the canal reverted to Panama on 31 December 1999. Area: 1676 sq km (647 sq mi).

Panama City 558N 7931W The capital of Panama. Founded by the Spanish in 1519 on the site of an Indian fishing village, it was destroyed in 1671 and rebuilt two years later 8 km (5 mi) to the SW. It became capital of the newly independent Panama in 1904. The University of Panama was founded in 1935 and that of Santa Maria de la Antigua in 1965. Population (2000): 415 964.

pancreas A gland, about 15 cm long, situated in the abdomen behind the stomach. When food passes into the intestine the pancreas secretes several digestive enzymes that drain into the intestine through the pancreatic duct. In addition, small clusters of cells (called islets of Langerhans) scattered throughout the pancreas secrete the hormones *insulin and glucagon.

panda A bearlike mammal of the family *Procyonidae*. The giant panda (*Ailuropoda melanoleuca*) is rare; it lives in the cold bamboo forests of central China, feeding on young bamboo shoots. Giant pandas are up to 1.6 m long and have bold black and white markings. The red panda (*Ailurus fulgens*), also called the lesser panda, lives in the forests of the Himalayas and W China. 80–110 cm long including the bushy tail (30–50 cm), it is red-brown with black markings on its white face. It feeds on roots, nuts, lichens, and bamboo shoots.

Pandora In Greek mythology, the first woman, fashioned by Hephaestus and invented by Zeus. She married Epimetheus, brother of Prometheus. Her dowry was a box, which, when opened, released all the varieties of evil and retained only hope.

pangolin An armoured mammal belonging to the genus *Manis* and order *Pholidota* (7 species), of Africa and S Asia, also called scaly anteater. 30–80 cm long with long prehensile tails, pangolins are covered on their backs with overlapping horny scales. Toothless, with a long sticky tongue, they feed at night on ants and termites.

Pankhurst, Emmeline (1858–1928) British suffragette, who founded, in Manchester, the Women's Social and Political Union (1903). Imprisoned several times, she underwent hunger strikes and forcible feeding. During World

War I, she encouraged the industrial recruitment of women. Her daughters **Dame Christabel Pankhurst** (1880–1958) and **Sylvia Pankhurst** (1882–1960) were also suffragettes.

panpipes (or **syrinx**) An ancient musical instrument consisting of a row of small graduated pipes bound together. According to Greek legend it was invented by *Pan, who pursued the nymph Syrinx. When she was changed into a reed by Apollo, Pan made the instrument from the reed stem.

pansy A popular garden plant that is a hybrid of the wild pansy (*Viola tricolor*), developed in the early 19th century. There are now many varieties, up to 20 cm high, with (usually) yellow, orange, purple, brown, or white flowers. The wild pansy, or heartsease, found throughout Eurasia, has small flowers coloured purple, yellow, and white. Family: *Violaceae*. See also **VIOLET**.

pantheism Any belief or doctrine presenting the natural world, including man, as part of the divine. Pantheism is a predominant tendency in Hinduism but is frowned on by orthodox Christianity.

Pantheon 1. A temple dedicated to the worship of many gods. The most famous is that in Rome begun in 27 BC but rebuilt about 118 AD. A circular design topped by a huge concrete dome, in 609 AD it became the Church of Sta Maria Rotonda. **2.** A building honouring the famous. The best known is that in Paris designed by Jacques Soufflot (1713–80) in 1759.

panther A colour variety of leopard that has a great deal of black pigmentation. Panthers can occur among a litter of normally spotted leopards.

pantomime A British form of dramatic entertainment for children, traditionally performed at Christmas. Although the word also refers to several other dramatic forms, such as mime plays and dumbshows, children's pantomime developed during the 19th century from the harlequinade (see **HARLEQUIN**). Based on fairy tales, pantomimes include popular songs and slapstick comedy. The principal boy is traditionally played by a girl, and the dame, a comic old woman, by a man.

papal states The central Italian states under papal sovereignty between 756 and 1870. They included parts of Emilia-Romagna, Marche, Umbria, and Lazio. A major obstacle to the 19th-century movement for Italian unification (see **RISORGIMENTO**), they were finally annexed in 1870. The popes refused to recognize

their loss of temporal power until the *Lateran Treaty (1929) established the Vatican City as an independent papal state.

papaw (or **papaya**) A small tropical American tree, *Carica papaya*, cultivated throughout the tropics. About 7.5 m tall, it has lobed toothed leaves and fragrant creamy-white flowers. The yellowish fruit resembles an elongated melon: its succulent pinkish or orange flesh encloses a mass of seeds. The fruits are eaten fresh, boiled, and in preserves or pickles and are a commercial source of the enzyme papain, used as a meat tenderizer. Family: *Caricaceae*.

Papeete 17 32S 149 34W The capital of French Polynesia, in NW Tahiti. A tourist centre, it is a stop on many Pacific routes. Population (1996, urban area): 121 000.

paper A substance in sheet form made from the pulped cellulose fibres of wood, grass, cotton, etc., and used for writing and printing on, wrapping, cleaning, etc. The Chinese invented paper (c. 2nd century BC). Foreign competition meant a slow start to British paper making, the first successful mill being set up about 1589. All early paper was handmade; a machine for making paper in a continuous roll was not invented until 1798, in France. Brought to England in 1803 by Henry Fourdrinier (1766–1854), this machine picked up the pulp on a travelling wire mesh and shook it until the fibres were interlaced and the water drained off, before passing it through pressing and drying rollers. The pulp for papermaking is obtained chiefly from wood, but also from esparto grass and rags (for strong durable high-quality paper), and increasingly from recycled wastepaper.

papilloma A harmless tumour that grows from the surface of the skin or from the lining of a hollow organ, for example the bladder, womb, or lungs. Warts and *polyps are types of papilloma.

paprika See CAPSICUM.

Papua New Guinea, State of A country in the Pacific Ocean, E of Indonesia. It consists

of the E part of *New Guinea and several islands, including the Bismarck Archipelago, the N part of the Solomon Islands, and the Admiralty Islands. Most of the population are Melanesians. *Economy:* subsistence agriculture and the growing of cash crops, such as coconuts, cocoa, coffee, and rubber, are the chief occupations. The chief mineral resource and export is copper; mining on *Bougainville was halted by secessionist violence in 1989. Other exports include gold, coffee, cocoa, timber, and copra. *History:* the SE part of the island of New Guinea was annexed by Queensland in 1883, becoming a British colony in 1888, known as the Territory of Papua. The NE part came under Australian rule in 1914 as the Trust Territory of New Guinea. In 1921 the two territories including their islands were merged, later becoming a UN Trusteeship under Australia. It was renamed Papua New Guinea in 1971, achieved self-government in 1973, and became fully independent in 1975. In 1990 rebels on Bougainville declared independence and fighting broke out; a permanent ceasefire was signed in 1998 and a political settlement agreed in 2001. Official languages: English, pidgin, and Motu. Currency: kina of 100 toea. Area: 462 840 sq km (178 656 sq mi). Population (2003 est): 5 583 000. Capital: Port Moresby.

papyrus An aquatic reedlike plant, *Cyperus papyrus*, up to 3 m tall, originally cultivated in the Nile delta of Egypt and now growing wild in parts of Africa and in Syria. It was used by the ancient Egyptians to make paper, and also for rope, mats, sails, and shoes. The pith was a common food. Family: *Cyperaceae*.

parabola The curve, formed by a conic section, in which the distance from a fixed point (focus) and a fixed line (directrix) are equal. In Cartesian coordinates (see COORDINATE SYSTEMS) a standard form of its equation is $y^2 = 4ax$, for a parabola that is symmetrical about the x-axis and cuts it at the origin (vertex).

Paracelsus (Theophrastus Bombastus von Hohenheim; 1493–1541) Swiss physician, whose radical ideas influenced the development of

paper. The Fourdrinier paper-making machine is one of the longest machines in use.

medicine during the Renaissance. He stressed the importance of chemical compounds in treating disease, refuted the notion that mental illness was caused by demons, and linked goitre with minerals in drinking water.

paraffin 1. (or **kerosene**) A mixture of hydrocarbons that boil in the range 150–300°C and have a relative density of 0.78–0.83. It is obtained from crude *oil by distillation and is used as a fuel for domestic heating and for aircraft. **2.** See **ALKANES**.

paraffin wax A wax obtained during the refining of crude *oil. Fully refined, it is a white tasteless solid (mp 50–60°C) consisting of higher *alkanes; it is used in the manufacture of waxed papers, candles, and polishes.

Paraguay, Republic of A landlocked country in the centre of South America. It is divided by the River Paraguay into two zones: an area of fertile plains and hills to the E and the semidesert of the Gran Chaco to the W. The great majority of the population is of mixed Spanish and Guaraní Indian descent. *Economy:* chiefly agricultural; livestock rearing is of particular importance. Meat packing is one of the main industries. Exports include meat, cotton, oilseed, and timber. The main crops are cotton, soya beans, cassava, and sugar cane. Hydroelectricity is a major source of power. *History:* explored and colonized by the Spanish in the 16th century, it became independent of Spain in 1811. In 1814 José Gaspar Rodríguez de Francia (1766–1840) was elected dictator. The population suffered great losses in the War of the *Triple Alliance (1865–70) against Brazil, Argentina, and Uruguay and again in the Chaco War (1932–35) with Bolivia. In 1954 Gen Alfredo Stroessner (1912–) seized power and became president; he was overthrown in a coup in 1989. In 1993 Paraguay's first democratic elections were held and a civilian, Juan Carlos Wasmosy, was elected president. In 1998 presidential and legislative elections resulted in victory for Raúl Cubas Gran and his Colorado Party. However, in 1999 he resigned and fled abroad after his supporters murdered a political rival. Nicanor Duarte Frutos was elected president in 2003. Paraguay is a member of the OAS and LAIA. Official languages: Spanish and Guaraní. Currency: guaraní of 100 céntimos. Area: 406 752 sq km (157 042 sq mi). Population (2003 est): 5 642 000. Capital: Asunción.

Paraguayan War See **TRIPLE ALLIANCE, WAR OF THE**.

parakeet A small seed-eating *parrot characterized by a long tapering tail and a predom-

inantly green plumage and found especially in SE Asia and Australia. Brightly coloured species are popular as cagebirds. See also **BUDGERIGAR**; **ROSELLA**.

paralysis Failure of a muscle or a group of muscles to work. This is commonly caused by damage to the nerve (and its connections) supplying the muscle, as resulting from injury or infection (see **POLIOMYELITIS**), but may also be due to failure of the nerve impulse to be transmitted to the muscle (as in **myasthenia gravis**) or by wasting of the muscle (as in *muscular dystrophy). A *stroke causes damage to the part of the brain that controls movement and may result in **hemiplegia**, i.e. half of the body and face becomes paralysed. **Paraplegia** (paralysed legs) results from injury to the spinal cord. **Quadriplegia** (paralysed legs and arms) results when the spinal cord is damaged close to the brain.

paramagnetism A form of *magnetism caused by the presence in atoms or molecules of electrons with unpaired spins. The atom or molecule therefore acts like a tiny magnet (see **FERROMAGNETISM**). In the presence of an external magnetic field these microscopic magnets tend to align with the field, reinforcing it. The effect is destroyed by random thermal motion and, except at low temperatures and high field strengths, the *permeability (a measure of the extent of alignment) is inversely proportional to the temperature.

Paramaribo 552N 5514W The capital and main port of Suriname, in the N on the River Suriname. Founded by the French (1540), it was later under English and then Dutch rule. The University of Suriname was founded in 1968. Population (1999 est): 233 000.

Paraná, Río (Spanish name: Río Paraná) A river in South America. Formed by the confluence of the Río Grande and Río Paranaíba in SE central Brazil, it flows generally S for 2900 km (1800 mi) to join the River Uruguay and form the Río de la Plata. The Itaipu Dam, which is sited at Foz do Iguaçu near the Paraguayan border, was opened in 1982.

paranoia A mental disorder in which the patient is governed by a rigid system of irrational beliefs (delusions). The sufferer may believe that he is being persecuted by others, or that he is overwhelmingly important. The condition can result from *schizophrenia, *alcoholism, or manic-depressive psychosis.

paraplegia See **PARALYSIS**.

parasite An organism living in or on another

organism of a different species (called the host), from which it obtains food and protection: the relationship may or may not be harmful to the host. Many parasites have complex life cycles, with one or more intermediate hosts (of different species) supporting the parasite in the immature stages of its development. The study of parasites—**parasitology**—is of great importance in medicine since many parasites, such as bacteria, ticks, and fleas, either cause or transmit disease. Many plants are either partly or completely parasitic: mistletoe is a partial parasite.

parathyroid glands Two pairs of small endocrine glands lying immediately behind the thyroid gland. These glands secrete **parathyroid hormone** in response to a reduction in the level of calcium in the blood. This hormone causes the release of calcium from the bones and its transfer to the blood. Deficiency of parathyroid hormone results in muscle spasms and cramps (tetany).

parchment Animal skin, usually of the goat, sheep, or calf, treated for writing on. It derives its name from Pergamum, where in the 2nd century BC improved methods of treating skins were developed. It was used for manuscripts and early bound books. More delicate skin from young animals is called vellum. See also LEATHER.

Paris 48 52N 2 18E The capital of France and a department of the Paris Region, situated in the N of the country on the River Seine. The administrative, commercial, and cultural centre of France, Paris is also an important industrial base, and many international organizations, including UNESCO, have their headquarters here. At the heart of the city, the Île de la Cité contains the cathedral of Notre-Dame. On the Left Bank lie Montparnasse and the Latin Quarter, which is known for its associations with writers and artists. On the Right Bank stands the Palais du Louvre, one of the world's most important museums. Further W is a series of radiating boulevards meeting at the Place Charles de Gaulle. The Champs Élysées runs from the *Arc de Triomphe at the centre of the Place Charles de Gaulle to the Place de la Concorde. Further N lies Montmartre, dominated by the Basilica of the Sacré Coeur (1919). To the S of the Seine stands the *Eiffel Tower. *History:* the earliest known settlement was on the Île de la Cité in Roman times. In the 6th century Clovis made it the capital of his Frankish kingdom but it later suffered attacks from Vikings. It regained importance as the capital under the Capetians. Since the storming of the

Bastille (1789), heralding the beginning of the French Revolution, it has been the scene of many revolts, such as the July Revolution (1830) and the Revolution of 1848. Population (1999): 2 123 261.

Paris In Greek legend, a son of *Priam and Hecuba. His abduction of *Helen with the help of Aphrodite caused the *Trojan War, during which he killed Achilles and was himself killed by Philoctetes. See also ERIS.

parity In physics, the concept of left- and right-handedness. According to the law of conservation of parity, no fundamental distinction exists between left and right. In 1957 this principle was shown to be violated in *weak interactions. For example, when a neutron decays the electron produced is always left-polarized (i.e. spins in a direction opposite to that of its motion), whereas if parity was conserved there would be equal numbers of left- and right-polarized electrons. This lack of parity provides a fundamental distinction between left and right. The parity of elementary particles is expressed as a *quantum number.

Park, Mungo (1771–c. 1806) Scottish explorer. In 1795–96 he ascended the Niger from the mouth of the River Gambia, crossed the Senegal Basin, and was imprisoned by Arabs. His *Travels in the Interior Districts of Africa* (1797) related his adventures. In 1805, under government patronage, he resumed his exploration. The expedition was attacked by Africans and Park died.

Parker, Charlie (Christopher) (1920–55) US Black jazz saxophonist and composer, known as "Bird" or "Yardbird." With Dizzy *Gillespie he originated the *bop style of jazz in New York in the 1940s. His early death was hastened by heroin addiction and alcoholism.

Parkinson's disease A chronic disease affecting the part of the brain controlling voluntary movement, first described in 1817 by a British physician, James Parkinson (1755–1824). The symptoms are tremor of the hands and mouth, stiffness, and difficulty in initiating movements. Sometimes this group of symptoms, known as **parkinsonism**, may result from infection, side effects of drugs, or injury. It is treated with drugs, including levodopa.

parliament The legislative assembly of a country. In the UK parliament is the supreme legislature; it consists of the sovereign, the House of Lords, and the House of Commons; its seat is the *Palace of Westminster. Parliament developed in the 13th century from the *Curia

Regis (King's Court), in which the monarch consulted with his barons. In 1213, 1254, and 1258 representatives of the shires were also summoned to attend parliament and in 1265 the parliament summoned by Simon de *Montfort included borough representatives—the origins of the House of Commons. By the reign of Edward III (1327–77) Lords and Commons, meeting separately, were recognized constituents of government. Parliament's conflict with James I and Charles I led to the Civil War (1642–51) and the establishment of republican government under Cromwell. Following the Restoration in 1660, the attempts of James II to rule arbitrarily led to the Glorious Revolution (1688), which achieved the beginning of parliamentary ascendancy over the Crown. The 18th century saw the emergence of party politics and of a *prime minister and the development of *cabinet government.

Until the present government began its reform of the House of Lords it had some 1300 members, including over 750 hereditary peers (see *PEERAGE*). In 1999 the hereditary peers were removed except for a rump of 92, who will remain until further reform has been completed. Although it is envisaged that the reformed second chamber should have about 600 members, there is no agreement as to whether these should be wholly appointed, wholly elected, or some combination of the two. In 2003 MPs voted to reject all of a series of options submitted to them, leaving the reform process in disarray. The House of Commons has (1999) 659 members of parliament (MPs), each representing a geographical constituency, and is regulated by the *Speaker of the House of Commons. Parliamentary legislation is introduced in the form of private or public bills. After a first reading a bill will be printed and then debated in a second reading. It is then referred to a committee by which it may be amended. Its amendments are considered by the whole house and it then receives a third reading after which it is sent to the other house, where it goes through a similar procedure. After passing both houses the bill receives the royal assent and becomes an Act of Parliament.

Parma 44 48N 10 19E A city in N Italy, in Emilia-Romagna. Dating from Roman times, it became an important cultural centre in the middle ages. Its university was established in 1222 and it has a romanesque cathedral and a 16th-century palace. Industries include the manufacture of Parmesan cheese, perfume, fertilizers, and glass. Population (2000 est): 168 717.

Parnassus, Mount (Modern Greek name: Parnassós) 38 32N 22 41E A mountain in S central Greece, held in ancient times as sacred to the god Apollo and the Muses. Height: 2457 m (8061 ft).

Parnell, Charles Stewart (1846–91) Irish politician, who in 1880 became the leader of the *Home Rule party in the British House of Commons. Parnell, an MP from 1875, reconciled constitutional and radical forces and enjoyed widespread popular support in Ireland. He allied his party with the Liberals in 1886, when Gladstone introduced the Home Rule bill. Parnell remained a dominant political figure until 1890, when he fell from grace after being cited in a divorce case.

Parr, Catherine (1512–48) The sixth wife (1543–47) of Henry VIII of England. After Henry's death, she married (1547) Thomas, Baron Seymour of Sudeley (d. 1549).

parrot A bird belonging to the family (*Psittacidae*; 300 species) occurring worldwide in warm regions. 10–100 cm long, parrots have a compact body, a short neck, and strong rounded wings. The plumage is typically brightly coloured and the short stout hooked bill is used to open nuts and to feed on fruits and seeds. Most are arboreal and excellent climbers, having clawed feet with rough scaly toes. They have a harsh screaming voice. Order: *Psittaciformes*. See also COCKATOO; LORY; LOVEBIRD; MACAW; PARAKEET.

parrot fish A fish, also called parrot wrasse, belonging to the family *Scaridae* found among tropical reefs. The teeth are fused to form a hard beak, which is used to feed on coral, molluscs, and seaweed. Order: *Perciformes*.

Parry, Sir (Charles) Hubert (Hastings) (1848–1918) British composer of operatic, orchestral, choral, chamber, and solo works, the best known of which is the song *Jerusalem* (1916). He was the director of the Royal College of Music (1894–1918) and professor of music at Oxford University (1900–08).

parsec A unit of distance, used in astronomy, corresponding to a parallax of one second of arc. 1 parsec = 3.26 light-years or 3.084×10^{16} metres.

Parseeism The religion of the descendants of Persians who fled their country in the 8th century AD to avoid persecution following the Arab conquest. Mostly located in Bombay, Madras, Calcutta, and Karachi, they continue to practise Zoroastrianism (see ZOROASTER) in two sectarian forms.

parsley A fragrant biennial herb, *Petroselinum crispum*, native to the Mediterranean region but widely cultivated. The compound leaves have an aromatic flavour. They are used fresh or dried in fish and meat dishes, soups, garnishes, and bouquets garnis. The flowering stems, up to 1 m high, bear yellowish flowers. Family: *Umbelliferae*.

parsnip A hairy strong-smelling biennial plant, *Pastinaca sativa*, native to Eurasia and widely cultivated for its large starchy white taproot, which is eaten as a vegetable or used as cattle feed. The leaves consist of paired lobed toothed leaflets on a long furrowed stalk and the clusters of tiny yellow flowers are borne on stems up to 150 cm high. Family: *Umbelliferae*.

parthenogenesis A method of reproduction in which the egg develops without *fertilization to produce an individual usually identical to the parent. It occurs commonly among lower plants and animals, particularly aphids, ants, bees, and wasps.

Parthenon A temple on the hill of the Acropolis in Athens dedicated to the goddess Athena. Built between 447 and 432 BC, it represents the summit of classical Greek architecture. Its rectangular colonnaded exterior of Doric columns originally contained a walled chamber with Phidias' gold and ivory statue of Athena. In the 5th century AD it became a Christian church and in the 15th century a mosque. Later used as a magazine by the Turks, it blew up during a bombardment by the Venetians in 1687. See also *ELGIN MARBLES*.

Parthia The region S of the Caspian Sea approximating to present-day Khorasan (NE Iran). Inhabited by seminomadic tribes, Parthia controlled a great empire from about 250 BC to 224 AD with its capital at Ctesiphon. Parthia's famous cavalry and mounted archers overwhelmed Crassus' army in a humiliating defeat at Carrhae in 53 BC. In 224 AD the Parthian empire was conquered by the Sasanians of Persia.

particle physics The study of elementary particles and their interactions. The existence of the electron (J. J. Thomson; 1897) and the discovery of the *proton (Rutherford; 1911) made it clear that the atom had an internal structure. When the *neutron was discovered (Chadwick; 1932), it appeared that the whole universe was constructed of just these three particles. The outstanding problem was the nature of the force that held neutrons and protons together in the atomic nucleus. The only two fundamental forces known at that time were the gravitational force and the electromag-

netic (em) force: the gravitational force was too weak to account for the great stability of the nucleus and the em force had no effect on the electrically uncharged neutron.

In 1935 *Yukawa suggested that there might be in nature a short-lived particle (later called the meson) that jumped between protons and neutrons and held them together. This concept of exchange forces and the subsequent discovery of short-lived particles led to intensive research into particle physics throughout the world (see *ACCELERATORS*). By the 1960s some 200 "elementary" particles had been identified and it became clear that there were four basic types of force; in addition to gravitational and em forces there were *strong interactions (100 times more powerful than em forces) and *weak interactions (10¹⁶ weaker than em forces). There are now believed to be two classes of particles: leptons (the electron, muon, tau particle, and neutrinos), which interact by the em or the weak forces and have no apparent internal structure; and hadrons (including the proton, neutron, pion, etc.), which interact by the strong interaction and do appear to have an internal structure.

The current model of the hadron is based on Murray Gell-Mann's concept of the quark, introduced in 1963. In this model, hadrons themselves are divided into two classes: baryons, which decay into protons; and mesons, which decay into leptons and *photons or into proton pairs. Baryons consist of three quarks and mesons consist of a quark-antiquark pair. Thus all the matter in the universe is now seen as being made of leptons and quarks. Quark theory is fairly elaborate; quarks have fractional electronic charges (+2/3 or -1/3 of the electronic charge) and come in six "flavours" called up (u; +2/3), down (d; -1/3), charmed (c; +2/3), strange (s; -1/3), top (t; +2/3), and bottom (b; -1/3). For each flavour there is an equivalent antiquark (\bar{u} , \bar{d} , etc.). The proton consists of uud ($2/3 + 2/3 - 1/3 = 1$) and the neutron consists of udd ($2/3 - 1/3 - 1/3 = 0$).

In this limited form quark theory conflicted with the *Pauli exclusion principle and it therefore became necessary to introduce the concept of "colour." Thus each flavour of quark can have one of the three colours red, yellow, or blue, with antiquarks having the corresponding anticolours. "Colour" in this sense has no connection with visual colour but the analogy is useful. All hadrons are regarded as white and baryons must consist of a red, a blue, and a yellow (since these visual colours produce white); mesons consist of a quark of any colour and its corresponding anticolour. This inter-

pretation of the nature of matter is known as the **standard model**; the one missing particle required to complete the integration of the weak interaction into this model is the *Higgs boson (see CERN). See also **ANTIMATTER**; **CHARM**; **STRANGENESS**.

partridge A small gamebird native to the Old World but widely introduced elsewhere. Partridges are 25–40 cm long and have rounded bodies with short rounded wings. The European partridge (*Perdix perdix*) is a common farmland bird and has a greyish plumage with a red face and tail. Family: *Phasianidae* (pheasants, quail, partridges).

pascal (Pa) The SI unit of pressure equal to one newton per square metre. Named after Blaise *Pascal.

Pascal, Blaise (1623–62) French mathematician, physicist, and theologian. He invented Pascal's triangle for calculating the coefficients of a binomial expansion. He also made discoveries in *fluid mechanics, notably that the pressure in a fluid is everywhere equal (**Pascal's principle**). In 1641 he invented the first calculating machine. At the age of 31 he had a mystical experience; he became a Jansenist and his *Lettres provinciales* (1656–57) defended *Jansenism against the Jesuits. His greatest work was *Pensées sur la religion* (1669), a metaphysical treatise on human nature.

Passchendaele See **WORLD WAR I**.

passerine bird A bird belonging to the order *Passeriformes*, which includes over half (about 5100) of all bird species. Passerines—the perching birds—are characterized by their feet, which are specialized for gripping branches, and stems. They are the most highly evolved birds and occur in almost every habitat, although few live or feed in water. There are both migratory and sedentary species. The order is divided into four major groups (suborders): *Eurylaimi* (broadbills); *Tyranni* (includes manakins, ovenbirds, pittas, and tyrant flycatchers); *Menurae* (lyrebirds and scrubbirds); and—the largest and most advanced group—*Oscines* (see **SONGBIRD**).

passionflower A climbing plant of the genus *Passiflora* (500 species), native chiefly to tropical and subtropical America and cultivated for ornament. The leaves may be simple or deeply lobed. The distinctive flowers each consist of a cup-shaped base with five coloured sepals and petals at its upper edge surmounted by a coloured fringe. The fruit is a berry or capsule, which in some species (e.g. *P. quadrangu-*

laris) is edible (passionfruits or granadillas). Family: *Passifloraceae*.

Passion plays Religious dramas concerning the crucifixion and resurrection of Christ. They were performed on Good Friday throughout medieval Europe. The Passion play at *Oberammergau in W Germany has been performed every ten years since 1634.

Passover (Hebrew word: *Pesah*) One of the three biblical pilgrimage festivals (the others are Weeks and Tabernacles). It commemorates the Exodus from Egypt and also incorporates a spring harvest festival. In Judaism, it is celebrated for seven or eight days, beginning on the eve of the first day with a formal meal. In Christianity it has been replaced by *Easter.

Pasternak, Boris (1890–1960) Russian poet and novelist. He published several volumes of Symbolist poetry between 1917 and 1923. His epic novel *Dr Zhivago* was banned in Russia but became internationally successful after its publication in Italy in 1957. Under severe political pressure, he declined the Nobel Prize in 1958.

Pasteur, Louis (1822–95) French chemist and microbiologist, who made great advances in the prevention and treatment of diseases caused by microorganisms. In 1854 Pasteur was appointed dean of sciences at Lille University. He found that fermentation was caused by microorganisms and that by excluding these, souring or decay could be prevented (see **PASTEURIZATION**). By 1881 he had devised a means of safely inducing immunity to anthrax by injecting a vaccine of heat-treated (attenuated) live anthrax bacilli. Pasteur also produced a vaccine for chicken cholera and an effective rabies vaccine. The Pasteur Institute was founded in 1888 to treat rabies and has since developed into a world centre for biological research.

pasteurization Heat treatment used to destroy the microorganisms in milk. The method involves heating milk for 30 minutes at 60°C, which kills the tuberculosis bacteria without damaging the milk protein. Named after Louis *Pasteur.

Patagonia A geographic area of S South America in Argentina and Chile, extending S of the River Colorado to the Strait of Magellan. It consists chiefly of an arid plateau rising to the Andes. Sheep raising is the principal economic activity. It contains the major oilfield of Comodoro Rivadavia and the Río Turbio coalfield. Area: about 777 000 sq km (300 000 sq mi).

pathology The branch of medicine concerned with the study of disease and disease processes in order to understand their causes and nature. The specialty originated in the mid-19th century, with the work of Virchow, Pasteur, and Koch on the bacterial cause of disease, but it was not until the beginning of the 20th century that the knowledge gained in the laboratory was applied to the treatment and prevention of disease in patients. Examples of early work in the science of clinical pathology include Schick's test for diphtheria and Wasserman's test for syphilis. Chemical pathology developed notably with the work of Banting and Best on the importance of insulin in diabetes and contributions from such haematologists as Landsteiner in the discovery of the blood groups. Today pathology includes studies of the chemistry of blood, urine, faeces, and diseased tissue, together with the use of X-rays and many other investigative techniques.

Patna 25 37N 85 12E A city in India, the capital of Bihar on the River Ganges. It was founded in 1541 on the former site of Pataliputra, ancient capital of the Maurya and Gupta empires. Population (1991): 916 980.

Patras (or **Pátrai**) 38 14N 21 44E A port in W Greece, in the N Peloponnese on the Gulf of Patras. The War of Greek Independence began here in 1821. Exports include currants, sultanas, tobacco, and olive oil. Population (1991): 172 763.

patricians The hereditary aristocracy of ancient Rome. Originally the sole holders of political and religious offices, the patricians were gradually forced during Republican times to admit *plebeians to political offices and their privileged position was eroded.

Patrick, St (c. 390–c. 460 AD) The patron saint of Ireland. A local chief's slave in Antrim, he later escaped to Gaul, finally returning to Ireland as a missionary. He established an archiepiscopal see at Armagh and by the time of his death had firmly established Christianity in Ireland. His only certain works are a spiritual autobiography, the *Confession*, and the *Epistle to Coroticus*. Feast day: 17 March.

Paul VI (Giovanni Battista Montini; 1897–1978) Pope (1963–78). Succeeding *John XXIII, Paul continued his predecessor's policies of reform, reconvening the second Vatican Council after his election. His encyclical *Humanae Vitae* (1968) affirmed the Church's opposition to birth control.

Paul, St (c. 3–c. 64 AD) Christian Apostle, born

Saul of Tarsus, who spread Christianity among the Gentiles; the 13 Epistles attributed to him form a major part of the New Testament. The son of a Pharisee, he was initially anti-Christian, having participated in the martyrdom of St *Stephen. While travelling to Damascus, he had a vision that led to his conversion to Christianity. He began his activity as an Apostle in Damascus, later joining the other Apostles in Jerusalem. His missionary work consisted of three journeys in which he travelled to Cyprus, Asia Minor, Macedonia, Greece, Ephesus, and elsewhere. Arrested by Roman soldiers on his return to Jerusalem, he eventually appealed to Caesar and, as a Roman citizen, was taken to Rome for trial. He was imprisoned for two years; here the New Testament account ends. Feast day: 29 June.

Pauli, Wolfgang (1900–58) US physicist, born in Austria, who in 1925 formulated the Pauli exclusion principle, that no two fermions may exist in the same state, for which he received the 1945 Nobel Prize. In 1931 he postulated that some of the energy of a *beta decay was carried away by massless particles, which *Fermi named neutrinos.

Pauling, Linus Carl (1901–94) US chemist, who originated and developed important concepts concerning the structure of molecules. Using new analytical techniques, Pauling elucidated the nature of chemical bonding in both simple and complex molecules, publishing *The Nature of the Chemical Bond* in 1939. He received the Nobel Prize for Chemistry (1954) and the Nobel Peace Prize (1962) for his stance against the use of nuclear weapons.

Pavarotti, Luciano (1935–) Italian operatic tenor. He made his debut at La Scala, Milan, in 1966. He specializes in the works of Bellini, Verdi, and Puccini. His rendering of "Nessun Dorma" became a bestseller in 1990 and he is now known worldwide as one of the "Three Tenors," the others being Plácido Domingo and José Carreras.

Pavlov, Ivan Petrovich (1849–1936) Russian physiologist, best known for his studies of digestion and his demonstration of the *conditioned reflex. Pavlov showed how heartbeat is regulated by the vagus nerve and how eating stimulates secretion of digestive juices by the stomach. He extended his theories of reflex behaviour to cover aspects of human behaviour, such as learning. He was awarded the 1907 Nobel Prize.

Pavlova, Anna (1885–1931) Russian ballet dancer. She joined Diaghilev's company in Paris

in 1909, and from 1914 she devoted her career to international tours with her own company. She created the chief role in *Les Sylphides* and was especially associated with *Le Cygne*, choreographed for her by *Fokine in 1907.

Paxton, Sir Joseph (1801–65) British architect. Initially a gardener, Paxton experimented with new techniques of construction in building greenhouses at Chatsworth. This experience culminated in the design of the revolutionary *Crystal Palace for the Great Exhibition of 1851.

pea An annual herb of the genus *Pisum* (about 6 species), native to the Mediterranean area and W Asia, especially the widely cultivated *P. sativum*. The leaves consist of paired oval leaflets and have curling tendrils used for climbing. The edible round seeds are contained in an elongated pod and are an important source of protein for man and livestock. Family: *Leguminosae*.

Peace River A river in W Canada, whose headstreams (Finlay and Parsnip Rivers) rise in the British Columbia Rockies. Flowing generally NE across the N Alberta plains, it empties into the Slave River. It is mostly navigable and is also tapped for hydroelectricity. Its valley is fertile farmland, with important oil and timber reserves. Length: 1923 km (1195 mi), including Finlay River.

peach A small tree, *Prunus persica*, probably native to China but widely cultivated in Mediterranean and warm temperate regions. Up to 6 m high, it has glossy green leaves and pink flowers. The round fleshy fruit (a *drupe) has thin velvety skin, yellowish with a crimson tinge. The sweet white or yellow flesh encloses a wrinkled stone. Peaches are eaten fresh, canned, or in preserves. Nectarines (*P. persica* var. *nectarina*) are varieties with smooth-skinned fruits. Family: *Rosaceae*.

Peacock, Thomas Love (1785–1866) British satirical novelist. He worked for the East India Company from 1819 to 1856 and was a close friend of Shelley. His seven novels, which include *Nightmare Abbey* (1818) and *Gryll Grange* (1860), satirize contemporary fashions and ideas.

peacock butterfly A common Eurasian *nymphalid butterfly, *Inachis io*. The adults are brownish purple with a bright eyespot on each wing. They fly from early spring well into summer. The black spiny caterpillars feed on stinging nettles.

peafowl An Old World gamebird belonging

to a genus (*Pavo*; 2 species) native to lowland forests of India and SE Asia. Peafowl are 75 cm long and the female (peahen) has a green-brown plumage; males (peacocks) have elaborate lacy tails, 150 cm long, the feathers of which are tipped by blue-and-bronze markings and raised over the body during display. Family: *Phasianidae* (pheasants, partridges, etc.); order: *Galliformes* (pheasants, turkeys, etc.).

Peak District A hilly area and national park in N central England, mainly in Derbyshire, at the S end of the Pennines. It reaches 727 m (2385 ft) at Kinder Scout and contains many limestone caves.

peanut See *GROUNDNUT*.

pear A tree of the genus *Pyrus* (about 20 species), native to temperate Eurasia. The numerous cultivated varieties are derived from *P. communis*. Up to 13 m high, it has oval leaves and white flowers. The fruit, which narrows towards the stalk, has sweet gritty flesh; it is eaten fresh or canned. The wood is used for furniture making. Family: *Rosaceae*.

pearl A natural calcareous concretion formed around a foreign body in certain bivalve molluscs popularly known as pearl oysters or pearl mussels. Used for jewellery since earliest times, pearls are usually white or bluish grey and of globular, oval, pear-shaped, or irregular form. It consists of concentric films of nacre, consisting of aragonite, which also forms the smooth lustrous lining (mother-of-pearl) in the shells of pearl-bearing molluscs. Cultured pearls are beads of mother-of-pearl artificially inserted into the mollusc, where they are left for three to five years. Birthstone for June.

Pearl Harbor An inlet of the Pacific Ocean in the USA, in Hawaii on Oahu Island. On 7 December 1941, the Japanese launched an air attack on US military installations in Hawaii. This action precipitated US involvement in World War II. It is now a naval shipyard, supply centre, and submarine base.

Pearson, Lester B(owles) (1897–1972) Canadian statesman and diplomat; Liberal prime minister (1963–68). Ambassador to the USA (1945–46), chairman of NATO (1951), and delegate to the UN, Pearson played a key role in settling the Suez crisis (1956), which earned him the Nobel Peace Prize in 1957.

Peary Land An area in N Greenland, between Victoria Fjord and the Greenland Sea. It is the most northerly land area in the world and was named after the Arctic explorer, Robert

E. Peary (1856–1920), who first explored it in 1892.

Peasants' Revolt (1381) The only major popular revolt in England during the middle ages. It was occasioned by heavy poll taxes and reflected a general discontent with government policies. The peasants, led by Wat *Tyler and John Ball (d. 1381), marched on London. They achieved initial success, but the revolt soon collapsed and its supporters were ruthlessly suppressed.

peat Partially decomposed dark-brown or black plant debris laid down in waterlogged conditions in temperate or cold climates. The remains of *Sphagnum* (peat or bog moss) are important constituents. Peat is the starting point for coal formation and is itself used as a fuel.

peccary A small gregarious hoofed mammal belonging to the genus *Tayassu* (2 species) of South and Central American forests. Resembling a pig, the collared peccary (*T. tajacu*) is dark grey with a light stripe from chest to shoulder and grows to a length of 90 cm. It has two pairs of short tusks. The white-lipped peccary (*T. albirostris*) is darker and larger and has a white patch on the snout. Both are omnivorous. Family: *Tayassuidae*.

pectin A carbohydrate found combined with cellulose in the cell walls of plants. Ripening fruits change any other pectic compounds present into jelly-like pectin—an essential ingredient for the gelling of jam.

Peel, Sir Robert (1788–1850) British statesman; Conservative prime minister (1834–35, 1841–46). Elected to parliament in 1809, he was twice home secretary (1822–27, 1828–30), introducing prison and criminal-law reforms and founding the Metropolitan Police (1829). In the Tamworth manifesto (1834), he stated a programme of reform that clearly identified the *Conservative Party. He is best remembered for the repeal of the *Corn Laws (1846).

peerage In the UK and Ireland, the temporal hereditary nobility and the life peers, comprising (since 1876) the Lords of Appeal in Ordinary (law lords) and (since 1958) those created in recognition of public service. The five ranks of the hereditary peerage are, in descending order, duke, marquess, earl, viscount, and baron. A life peer has the rank of baron. Until recently all peers were permitted to sit in the House of Lords but were not allowed to be MPs (although from 1963 peers were able to disclaim their titles for life to enable them to sit

in the Commons). In 1999 the hereditary peers (except a transitional rump of 92) were deprived of the right to sit in the Lords. Under a White Paper (2001), newly created life peers would no longer have a seat in the Lords and the existing life peers would gradually be replaced with new appointees (who would have no title). Plans to abolish the law lords were announced in 2003.

peewit See LAPWING.

Pegasus (astronomy) A large constellation in the N sky that contains the **Square of Pegasus**, formed from three 2nd- and 3rd-magnitude stars in the constellation together with the 2nd-magnitude star Alpheratz in Andromeda.

Pegasus (Greek mythology) A winged horse that sprang from the blood of *Medusa. It carried the legendary hero Bellerophon in his battles. It became a constellation and the bearer of thunderbolts for Zeus.

Pei, leoh Ming (1917–) US architect, born in China. He moved to the USA in 1935 and became a US citizen in 1954. His buildings include the John Hancock Tower (1973) in Boston, a glass and steel pyramid at the Louvre, Paris (1989), and the Rock and Roll Hall of Fame in Cleveland (1995).

Peking See BEIJING.

Pekingese An ancient breed of toy dog originating in China and brought to the West by British forces who sacked the Imperial Palace, Peking (Beijing), in 1860. It has a long straight coat forming a luxuriant mane on the shoulders and a black short-muzzled face. Height: 15–23 cm.

Peking man A type of fossil *hominid belonging to the species *Homo erectus* (see HOMO); it is represented by skeletal remains found at Chou-K'ou-Tien (Zhou kou tian) cave near Peking (Beijing). Formerly known as *Pithecanthropus*, Peking man lived during the middle Pleistocene period (c. 500 000 years ago).

Pelagius (c. 360–c. 420 AD) The originator of the heretical Christian doctrine known as Pelagianism. He rejected original sin and predestination, believing in man's free will and inherent capacity for good.

Pelargonium See GERANIUM.

Pelé (Edson Arantes do Nascimento; 1940–) Brazilian Association footballer. The greatest inside forward of his time, he became a world star at 17 when Brazil first won the World Cup (1958). He scored over 1300 goals. In 1994 he was appointed special minister for sports and in

1997 he was awarded an honorary British knighthood.

Pelham, Henry See NEWCASTLE, THOMAS PELHAM-HOLLES, 1ST DUKE OF.

pelican A large waterbird belonging to a family (*Pelecanidae*; 7 species) occurring on lakes, rivers, and coasts of temperate and tropical regions. 125–180 cm long, pelicans have short legs, a short tail, and very large wings. Their long straight pointed bills have a distensible pouch underneath, in which fish are held before being swallowed. Order: *Pelecaniformes* (gannets, pelicans, etc.).

pellagra A disease caused by deficiency of nicotinic acid (see VITAMIN B COMPLEX). It occurs mainly in poor countries in people whose diet consists predominantly of maize. The disease causes dermatitis, diarrhoea, and delirium or depression.

Peloponnese (Modern Greek name: Pelopónnesos) The S peninsula of Greece, joined to central Greece by the Isthmus of Corinth. It includes the towns of Corinth, Patras (the chief port), and *Sparta. It was linked to W Greece by bridge in 2004. Area: 21637 sq km (8354 sq mi). Population (2001): 1 632 955.

Peloponnesian War (431–404 BC) The conflict between Athens and Sparta and their allies, in which Sparta was finally victorious. Sparta's superior infantry invaded Athens in 431 while Athens, under Pericles, attacked at sea. In 415 Athens led by *Alcibiades set out to conquer Sicily, which retaliated with Spartan help and destroyed the Athenian fleet (413). The war continued until Sparta under *Lysander besieged Athens, which then surrendered (404).

Pelops The legendary Greek founder of the Pelopid dynasty of Mycenae, a son of Tantalus. He won his bride Hippodamia by winning a chariot race with the help of his driver Myrtilus. When Myrtilus demanded his reward, Pelops refused and drowned him. The curse pronounced by the dying Myrtilus was passed on to all his descendants until it was exorcised by the purification of Orestes.

Peltier effect See THERMOELECTRIC EFFECTS.

pelvis A basin-like structure composed of the hip bones and lower part of the spine. It protects the soft organs of the lower abdomen and provides attachment for the bones and muscles of the legs.

Pembrokeshire A county in SW Wales, on the Irish Sea and the Bristol Channel. In 1974 it

became part of Dyfed but it was reinstated in 1996. It consists of a peninsula with a spectacular indented coast, rising to the Prescilly Hills in the N. Agriculture, fishing, and tourism are important; oil-refining has developed around Milford Haven. Area: 1593 sq km (615 sq mi). Population (2001): 112 901. Administrative centre: Haverfordwest.

Penal Laws (1571, 1581, 1593) A series of Acts passed during the reign of Elizabeth I to punish those (recusants), especially Roman Catholics, who refused to attend Church of England services. Recusants were fined, imprisoned, banished, or executed and suffered civil disabilities, such as loss of property. The Laws were repealed in 1829 (see CATHOLIC EMANCIPATION). See also TEST ACTS.

Penang A state in NW Peninsular Malaysia, on the Strait of Malacca, consisting of Penang island and Province Wellesley on the mainland. The island was the first British settlement in Malaya. The main products are rice, rubber, and tin. Area: 1031 sq km (398 sq mi). Population (2000): 1 225 501. Capital: Georgetown.

Penates See LARES AND PENATES.

Penderecki, Krzysztof (1933–) Polish composer. His music, for which he has devised a special system of notation, is characterized by unusual sound effects. His works include *Threnody for the Victims of Hiroshima* (for strings; 1960), five symphonies, four operas, and the *Polish Requiem* (1983–84).

pendulum A device in which a mass (the bob) swings freely about a fixed point with a constant period. In the ideal simple pendulum the bob is connected to the fixed point by a length (*l*) of weightless string, wire, etc. Its period is $2\pi(l/g)^{1/2}$, where *g* is the *acceleration of free fall, and is independent of the mass of the bob. Pendulums are used to regulate a clock mechanism and in instruments that determine the value of *g*.

Penelope In Homer's *Odyssey*, the wife of *Odysseus. During her husband's absence she put off her many suitors by saying that she must first make a shroud for her father-in-law Laertes. Each night she unravelled what she had woven by day.

penguin A flightless black-and-white seabird belonging to a family (*Spheniscidae*; 14–18 species) occurring on cold coasts of the S hemisphere. Penguins are adapted for aquatic life, having wings reduced to narrow flippers giving fast propulsion. 40–120 cm long, they have dense plumage enabling them to tolerate ex-

treme cold. Order: *Sphenisciformes*. See also EMPEROR PENGUIN.

penicillins A group of *antibiotics. The first penicillin was discovered in the mould *Penicillium notatum*, in 1929, by Sir Alexander *Fleming but was not used to treat infections in humans until 1941. Natural penicillins include benzylpenicillin (or penicillin G), which is usually administered by injection, and phenoxymethylpenicillin (or penicillin V), which is administered orally. Semisynthetic penicillins (e.g. flucloxacillin, methicillin) are effective against infections resistant to naturally occurring penicillins. Penicillins can cause severe allergic reactions in susceptible patients.

Peninsular War (1808–14) That part of the Napoleonic Wars fought in Spain and Portugal. The French took Portugal in 1807 and in 1808 Napoleon's brother, Joseph Bonaparte (1768–1844), replaced Ferdinand VII as King of Spain. Popular revolts broke out and turned into a vicious guerrilla war. British troops under the command of the Duke of *Wellington eventually liberated the Peninsula.

penis The male copulatory organ of mammals, some reptiles, and a few birds. In humans (and other mammals) it contains a tube (urethra) through which both semen and urine can be discharged. Erectile tissue making up the bulk of the penis becomes engorged with blood during sexual excitement. The corresponding part in women is the clitoris, a small erectile mass of tissue situated in front of the urinary opening.

Penn, William (1644–1718) English Quaker and founder of Pennsylvania, son of Admiral Sir William Penn (1621–70). In 1668 he was imprisoned in the Tower, where he wrote *No Cross, No Crown* (1669), a classic of Quaker practice. From 1682 he was involved in the establishment of Quaker settlements in America, including Pennsylvania.

Pennines (or **Pennine Chain**) An upland range in N England. It extends from the Cheviot Hills in the N to the valley of the River Trent in the S. Sometimes known as the "backbone of England," it is the watershed of the chief rivers in N England. It rises to 893 m (2930 ft) at Cross Fell.

Pennsylvania A state in the E USA, dominated by the uplands of the Appalachian Plateau. It is a leading iron and steel producer and provides nearly all the country's hard coal. Oil is important and the world's first oil well was drilled near Titusville in 1859. Dairy farm-

ing predominates in the NE, while the fertile lands of the SE yield cereals, fruit, and vegetables. *History*: one of the 13 original colonies, it was first settled by Swedes, who were soon dispossessed by the Dutch (1655). In 1681 the area was given to William Penn by Charles II of England as a haven for Quakers. It became a state in 1787. Area: 117 412 sq km (45 333 sq mi). Population (2000): 12 281 054. Capital: Harrisburg.

Pennsylvanian period See CARBONIFEROUS PERIOD.

Pentagon The headquarters of the US Defense Department, a massive five-sided building in Virginia built (1941–43) during World War II. It houses all three services and is the largest office building in the world, extending over 14 hectares (34 acres). The terrorist attack on *September 11, 2001 left some 180 workers dead and seriously damaged the building.

pentathlon An athletic competition comprising five events, the winner being the competitor with the highest total. It originated in an Olympic contest instituted in 708 BC. The current women's version, an Olympic event since 1964, consists of the 100 m hurdles, shot put, high jump, long jump, and 800 m run. The men's pentathlon has been replaced in major competitions by the *decathlon. The **modern pentathlon** is a sporting competition comprising five events: a 5000 m cross-country ride (on horseback), fencing, pistol shooting, a 300 m swim, and a 4000 m cross-country run. It was first included in the Olympic Games in 1912.

Pentecost See WHIT SUNDAY.

Pentecostal Churches A Christian movement originating in revivalist meetings in the USA in 1906. In Pentecostal assemblies people seek spiritual renewal through baptism by the Holy Spirit, as took place on the first Pentecost (Acts 2.1–4).

pentlandite The principal ore mineral of nickel, (Ni,Fe)S, found in association with pyrrhotite and chalcopyrite in basic and ultrabasic igneous rocks. It is mined in Canada, Australia, and the republics of the former Soviet Union.

peony A large perennial herb or shrub of the genus *Paeonia* (33 species) of N temperate regions, often cultivated for its showy flowers. It has large glossy leaves and solitary white, pink, crimson, or yellow flowers, about 10 cm across, with incurving petals and a fleshy central disc. The fruit is a large leathery pod containing black seeds. Family: *Paeoniaceae*.

Pepin the Short (d.768 AD) King of the

Franks (751–68) after overthrowing the *Merovingians. Founder of the Carolingian dynasty, Pepin checked Lombard expansion and in 756 presented Pope Stephen II with the nucleus of the *papal states.

pepper A condiment derived from a perennial climbing vine, *Piper nigrum*, native to India. Up to 10 m high, it bears chains of up to 50 inconspicuous flowers that form berry-like fruits (or peppercorns), about 5 mm in diameter. Family: *Piperaceae*. The fleshy red and green peppers are the fruits of *Capsicum* species (see *CAPSICUM*).

peppered moth A European *geometrid moth, *Biston betularia*, the typical form of which has a similar coloration to the lichen-encrusted tree bark on which it rests. During the past century a dark form, var. *carbonaria*, has become common in sooty industrial areas.

peppermint A perennial herb, *Mentha × piperata*: a hybrid between water mint (*M. aquatica*) and *spearmint. It has dark-green leaves and reddish-lilac flowers and is the source of oil of peppermint, used as a flavouring.

pepsin A protein-digesting enzyme found in gastric juice. The inactive form, pepsinogen, is secreted by glands in the stomach wall and converted to pepsin by the hydrochloric acid in the stomach. Pepsin is a powerful coagulant of milk.

peptic ulcer An inflamed eroded area in the wall of the stomach (**gastric ulcer**) or, more commonly, the duodenum (**duodenal ulcer**). Ulcers are more common in people who secrete excessive amounts of stomach acid. They may cause abdominal pain, nausea, and vomiting. Serious complications occur when the ulcer bleeds or perforates (bursts). Evidence suggests that infection with *Helicobacter pylori* must be controlled by antibiotics to avoid recurrence of ulcers.

peptide A chemical compound comprising a chain of two or more *amino acids linked by peptide bonds (–NH–CO–) formed between the carboxyl and amino groups of adjacent amino acids. Polypeptides, containing between three and several hundred amino acids, are the constituents of *proteins. Some peptides are important as hormones and as antibiotics.

Pepys, Samuel (1633–1703) English diarist. He was secretary to the Admiralty (1669–88), an MP, and president of the Royal Society. His *Diary*, which extends from 1660 to 1669 and includes descriptions of the Restoration, the

Plague, and the Fire of London, was written in code.

perch One of two species of freshwater food and game fish belonging to the genus *Perca*. The common perch (*P. fluviatilis*) of Eurasia has a deep elongated body, usually about 25 cm long, and is greenish in colour, with dark vertical bars on its sides and a spiny first dorsal fin. Perch usually live in shoals, feeding on fish and invertebrates. Family: *Percidae*; order: *Perciformes*. See also *SEA BASS*.

percussion instruments Musical instruments struck directly with the hand or with a hand-held implement. The main categories are idiophones, in which the entire instrument body vibrates (gong, xylophone, cymbals, rattles) and membranophones, in which the sound is emitted by a tensioned membrane (most drums, kettledrums, tambourines). Another distinction is between instruments with a defined pitch (kettledrums, bells, xylophone) and those without a defined pitch (bass and marching drums, triangles).

Percy, Sir Henry (1364–1403) English rebel, called Hotspur. Together with his father, Henry, 1st Earl of Northumberland (1342–1408), he led the most serious revolt against Henry IV, whom they had helped to the throne in 1399. He appears in Shakespeare's *Henry IV, Part I*.

peregrine falcon A large powerful *falcon, *Falco peregrinus*, occurring in rocky coastal regions worldwide. It is 33–48 cm long and has long pointed wings and a long tail. The male is blue-grey with black-barred white underparts; females are browner. It feeds mainly on ducks, shorebirds, and mammals.

Pereira 4 47N 75 46W A city in W Colombia. An agricultural trading centre, it has coffee-processing, brewing, and clothing industries. Population (2003 est): 420 415.

perennials Plants that can live for many years. In herbaceous perennials aerial parts die down each winter and the plants survive in the form of underground organs (rhizomes, bulbs, corms, etc.). Woody perennials have woody stems, which overwinter above ground.

Peres, Shimon (1923–) Israeli statesman, prime minister (1984–86; 1995–96); foreign minister (1986–88; 1992–95; 2001–02); president (2007–). Born in Poland, Peres emigrated to Palestine in 1934. He became head of the navy in 1948 and was defence minister from 1974 to 1977. In 1994 he was awarded the Nobel Peace Prize with Yassir Arafat and Yitzhak

Rabin for his part in securing the Israeli-PLO peace agreement.

perestroika See GLASNOST.

Pergamum An ancient city of W Asia Minor. After about 230 BC it became capital of a powerful Hellenistic kingdom. Pergamum became rich largely from *parchment and luxury textiles mass-produced by slave labour. The last king bequeathed his realm to Rome (133 BC).

Pericles (c. 495–429 BC) Athenian statesman, who presided over Athens' golden age. Pericles became leader of the democratic party in 461 and secured power shortly afterwards. He dominated Athens until 430 by virtue of his outstanding oratory and leadership and his reputation for honesty. Under Pericles, Athens asserted its leadership of the *Delian League and revolts among its members were suppressed. By 431, rivalry between Athens and Sparta had led to the outbreak of the *Peloponnesian War. Pericles' strategy was undermined by the plague of 430 and he briefly lost office. He died shortly after his reinstatement.

peridotite An ultrabasic coarse-grained igneous rock consisting mainly of olivine. The earth's mantle is sometimes called the peridotite shell. Peridotites occur beneath many mountains and islands.

perigee The point in the orbit of the moon or of an artificial satellite around the earth at which the body is nearest the earth. Compare APOGEE.

Perigordian A culture of the Upper *Palaeolithic. Perigordian is the preferred French designation for the pre-Solutrean industries in W Europe, excluding the typologically different Aurignacian. Upper Perigordian is approximately equatable with *Gravettian.

Périgueux 4512N 044E A town in SW France, the capital of the Dordogne department. It is renowned for its *pâté de foie gras*, truffles, and wine. Manufactures include hardware and chemicals. Population (latest est): 32 850.

perihelion The point in the orbit of a body around the sun at which the body is nearest the sun. The earth is at perihelion on 3 Jan. Compare APHELION.

periodic table A tabular arrangement of the chemical *elements in order of increasing atomic number, such that physical and chemical similarities are displayed. The earliest version was devised in 1869 by D. *Mendeleyev, who predicted the existence of several el-

ements from gaps in the table. The rows across the table are known as periods and the columns as groups. The elements in a group all have a similar configuration of outer electrons and therefore show similar chemical behaviour. Across each period, atoms are electropositive (form positive ions) to the left and electronegative to the right. Atomic theory explains this behaviour using the concept of electron shells, corresponding to different energy levels of the atomic electrons. Atoms combine in order to form complete outer shells. The shells are built up by filling the lower energy states (inner shells) first. The first shell takes two electrons, and the second, eight. In larger atoms, the inner electrons screen the outer electrons from the nucleus, resulting in a more complex shell-filling sequence. The short periods are from lithium (Li) to neon (Ne) and from sodium (Na) to argon (Ar). The *noble gases in column 0 have complete outer shells and are generally chemically inactive. See table on p. 684.

periodontal disease Disease of the gums and other structures surrounding the teeth, formerly known as pyorrhoea. Caused by the action of bacteria on food debris that forms a hard deposit (calculus) in the spaces between the gums and teeth, it results in swelling and bleeding of the gums: eventually—if untreated—the teeth become loose and fall out. Periodontal disease is the major cause of tooth loss in adults: it may be prevented (and the early stages treated) by regular brushing, scaling, and polishing, to remove the calculus. Advanced cases require surgery.

periscope An optical device consisting, typically, of a tube in which mirrors or prisms are arranged so that light passing through an aperture at right angles to the tube is reflected through the length of the tube to emerge at an aperture at the other end also at right angles to the tube. Extendible periscopes are used by submerged submarines to see above the surface of the water.

Perissodactyla An order of hoofed mammals (16 species) that includes *horses, *tapirs, and rhinoceroses. The name—meaning odd-toed—reflects the fact that the weight of the body is carried mainly by the central (third) digit of the foot. They are herbivorous, but have only a single stomach, which is less efficient than the digestive system of *ruminants. Compare ARTIODACTYLA.

peritonitis Inflammation of the peritoneum—the membrane that lines the abdom-

Period

periodic table

inal cavity. This results from the bursting of an abdominal organ (such as the appendix) or of a peptic ulcer. Alternatively it may result from bacterial infection. An immediate operation is essential to repair the perforated organ and to cleanse the inside of the abdomen; antibiotics are also given.

periwinkle (botany) An evergreen creeping shrub or perennial herb of the genus *Vinca* (5 species), native to Europe and W Asia. The attractive solitary flowers are blue or white and the fruit is usually a long capsule. They are cultivated as ornamentals: *V. major* is an important species. Family: *Apocynaceae*.

periwinkle (zoology) A *gastropod mollusc belonging to the family *Littorinidae*, also called winkle. The common edible winkle (*Littorina littorea*) of European seashores is about 2 cm high and has a dark-green rounded shell with a pointed spire and grazes on algae.

Perkin, Sir William Henry (1838–1907) British chemist, who in 1856 synthesized the first artificial dye, aniline purple. The following year he built a factory to manufacture the dye but he later returned to chemical research and the synthesis of many compounds.

Perm (name from 1940 until 1957: Molotov) 58 01N 56 10E A port in W Russia, on the River Kama. Its varied industries include engineering, chemical manufacturing, and oil refining. The *Permian period was first identified here. Population (1999 est): 1 017 100.

permafrost The permanent freezing of the ground, sometimes to great depths, in areas bordering on ice sheets. During the summer season the top layer of soil may thaw and become marshy, while the frozen ground below remains an impermeable barrier.

permeability, magnetic (μ) A measure of the response of a material to a *magnetic field equal to the ratio of the magnetic *flux induced in the material to the applied magnetic field strength. The relative permeability, μ_r , is the ratio of μ in the medium to that in a vacuum, μ_0 (see MAGNETIC CONSTANT). Paramagnetic materials have a μ_r greater than unity because they reinforce the magnetic field. Ferromagnetic materials can have a μ_r as high as 100 000. Diamagnetic materials have a μ_r of less than one.

Permian period The last geological period of the Palaeozoic era, between the Carboniferous and Triassic periods, lasting from about 280 to 240 million years ago. The period was marked by an increasingly dry climate that

continued into the Triassic, and the two periods are often linked together as the Permian-Triassic.

permittivity (ϵ) The absolute permittivity of a medium is the ratio of the electric displacement to the electric field at the same point. The absolute permittivity of free space is called the *electric constant. The relative permittivity (or dielectric constant) ϵ_r of a capacitor is the ratio of its capacitance with a specified dielectric between the plates to its capacitance with free space between the plates.

Perón, Juan (Domingo) (1895–1974) Argentine statesman; president (1946–55, 1973–74). Elected in 1946 after winning popular support as head of the labour secretariat, his position was strengthened by the popularity of his second wife, *Evita Perón* (María Eva Duarte de P.; 1919–52), who was idolized by the poor for her charitable work. After her death, support for Perón waned and he was deposed. He was re-elected president in 1973.

Perpendicular The style of gothic architecture predominant in England between about 1370 and the mid-16th century. The name derives from the panel-like effect of the window design, with its pronounced vertical mullions broken regularly by horizontal divisions. King's College chapel, Cambridge (1446–1515) and St George's chapel, Windsor (begun 1481) are masterpieces of the Perpendicular style.

Perpignan 42 42N 2 54E A city in S France, the capital of the Pyrénées-Orientales department situated near the Spanish border. The capital of the former province of Roussillon in the 17th century, it has a gothic cathedral and a 13th-century castle. Perpignan is a tourist and commercial centre, trading in wine, fruit, and vegetables. Population (1999): 105 115.

Persephone (Roman name: Proserpine) Greek goddess of the underworld, daughter of Zeus and *Demeter. She was abducted by *Hades, who made her queen of the underworld. Zeus allowed her to spend part of each year on earth, symbolizing the regeneration of natural life in the spring.

Persepolis An ancient Persian city in Fars province, Iran. Darius I (reigned 522–486 BC) planned Persepolis as the ceremonial capital of his empire and its wealth and splendour were legendary. Alexander the Great destroyed Persepolis in 330 BC.

Perseus In Greek mythology, the son of Zeus and Danae. One of the greatest Greek heroes, he beheaded the *Medusa with the help of

Athena, who gave him a mirror to avoid looking at the Gorgon and being turned to stone. He married Andromeda, daughter of the Ethiopian king.

Pershing missile A US army two-stage solid-fuelled nuclear surface-to-surface missile launched from mobile launcher vehicles and having a range of 740 km (460 mi). Several improved versions of the missile have been produced. It is named after Gen J.J. Pershing (1860–1948).

Persian cat A domesticated cat, also called a Longhair, having a long flowing coat with a ruff or frill around the neck. The coat may be of any colour, although the Blue Persian is most popular.

Persian Gulf An arm of the Arabian Sea, extending some 950 km (590 mi) NW beyond the Gulf of Oman. The large offshore oil deposits are exploited by the surrounding *Gulf States. Area: 233 000 sq km (89 942 sq mi).

persimmon A tree of the genus *Diospyros* that produces edible fruits. These are the Japanese persimmon (*D. kaki*), the American persimmon (*D. virginiana*), and the Asian date plum (*D. lotus*). They have dark-green oval leaves and produce round orange, yellow, or red fruits, 5–8 cm across. Persimmons are eaten fresh, cooked, or candied. Family: *Ebenaceae*.

Perspex (polymethyl methacrylate) A colourless transparent thermoplastic material made by *polymerization of methyl methacrylate. It can be extruded and moulded and coloured, for use in light fittings, aircraft parts, and car parts. It is widely used as an unbreakable substitute for glass.

Perth 1. 56 24N 3 28W A city in E Scotland, the administrative centre of Perth and Kinross on the River Tay. It was an early capital of Scotland. There are dyeing, textiles, whisky distilling, and carpet industries and it is a popular tourist centre. Population (2001): 43 450. 2. 31 58S 115 49E The capital of Western Australia, on the Swan River. Founded in 1829, it expanded following the discovery (1893) of gold. Its port, Fremantle, is a growing industrial centre. Population (2001): 1 176 542.

Perth and Kinross A council area of central Scotland. In 1975 the historic county of Perthshire was abolished; the greater part combined with the county of Kinross to form Perth and Kinross district in Tayside Region. In 1996 this became an independent unitary authority. It is chiefly mountainous. Agriculture is concentrated in the SE lowlands. Tourism and

forestry are important. Area: 5231 sq km (2019 sq mi). Population (2004 est): 137 520. Administrative centre: Perth.

Peru, Republic of A country in the NW of South America, on the Pacific Ocean. Narrow coastal plains rise to the Andes, reaching heights of over 6500 m (21 000 ft). The land descends again to the tropical forests of the Amazon basin. Most of the population is of Indian or mixed Indian and European descent. *Economy:* Peru is one of the world's leading fishing countries, the main product being fishmeal. Agriculture is important, and the main crops include maize, rice, sugar cane, cotton, and coffee. Livestock is particularly important, especially the production of wool. Rich mineral resources include copper, silver, lead, zinc, and iron; oil was discovered in the 1970s but production has since declined. With its rain forests and relics of ancient civilizations, Peru has a valuable tourist trade. The main exports include minerals and metals and fishmeal. *History:* Peru's precolonial history encompasses the civilization of the Chimú and that of the *Incas, who were conquered by the Spanish under Pizarro in 1533. Peru was the last of Spain's American colonies to declare its independence (1821) and the Spanish were finally defeated in 1824. Political stability was achieved by Gen Ramón Castilla (1797–1867), who developed Peru's economy. However, the country's prosperity was undermined by the War of the Pacific (1879–83). In the 1960s and 1970s there was a series of coups. In 1980, in Peru's first elections to be held in 17 years, the former civilian president Fernando Belaúnde Terry was re-elected. The 1980s and 1990s saw terrorist outrages by left-wing insurgents and human-rights abuses by the military. Alberto Fujimori was elected president in 1990 and enhanced his powers in a new constitution (1993). Peru's long-standing border dispute with Ecuador (which had led to war in 1941, 1981, and 1995) was finally settled in 1998. In 2000 Fujimori was elected to a third term amid accusations of fraud; protests and scandal led him to stand down and go into exile. He has since been charged with murder and kidnapping. In 2001 Alejandro Toledo became the first Indian president; the current incumbent (since 2006) is Alan García Pérez. Peru is a member of the OAS and LAIA. Official languages: Spanish, Quechua, and Aymará. Currency: nuevo sol of 100 céntimos. Area: 1 285 215 sq km (496 093 sq mi). Population (2007 est): 28 674 757. Capital: Lima.

Perugia 43 07N 12 23E A city in Italy, the capital of Umbria. Originally an Etruscan city, it

has 13th-century city walls, a 14th-century cathedral, and a university (1200). Perugia is an agricultural trading centre and its manufactures include furniture and textiles. Population (2000 est): 156 673.

Perutz, Max Ferdinand (1914–2002) British chemist, born in Austria, who developed X-ray diffraction to determine the molecular structure of haemoglobin. He shared a Nobel Prize (1962) with J. C. *Kendrew.

Peshawar 34°01N 71°40E A city in N Pakistan, situated at the E end of the Khyber Pass. It is one of the oldest cities in Pakistan. Industries include textiles, shoes, and pottery. Population (1998): 988 055.

Pestalozzi, Johann Heinrich (1746–1827) Swiss educationalist, pioneer of mass education. His book *Wie Gertrud ihre Kinder lehrt* (1801) reflected his ideas on the intuitive method of education. Pestalozzi's work is commemorated in the **Pestalozzi International Children's Villages**, the first of which was established in 1946 for war orphans at Trogen (Switzerland).

Pétain, (Henri) Philippe (1856–1951) French general and statesman. In World War I he distinguished himself at the defence of Verdun (1916), becoming marshal of France (1918). In World War II, when France was on the verge of defeat (1940), Pétain became prime minister. In June 1940, he signed an armistice with Hitler that allowed for a third of France to remain unoccupied by Germany. Pétain was sentenced to death in 1945 for collaboration but reprieved.

Peter (I) the Great (1672–1725) Tsar (1682–1721) and then Emperor (1721–25) of Russia, who established Russia as a major European power. Peter travelled in W Europe in the late 1690s, acquiring knowledge of western technology. He instituted many reforms in government and administration, trade and industry, and in the army. In the Great Northern War (1700–21), he acquired Livonia, Estonia, and also Ingria, where in 1703 he founded St Petersburg. He campaigned less successfully against the Turks (1710–13) but gained territory in the Caspian region from war with Persia (1722–23).

Peter, St In the New Testament, one of the 12 Apostles. He was a fisherman until called by Jesus. Although his faith often wavered, notably at the crucifixion, when he denied Christ three times, Peter was named as the rock upon which the Church was to be built. After Christ's death, he dominated the Christian community for 15 years, undertaking mission-

ary work despite imprisonment. Feast day: 29 June.

Peterborough 1, 52°35N 0°15W A city in E central England, in Peterborough unitary authority, Cambridgeshire, on the River Nene. The cathedral was begun in the 12th century. Designated a new town in 1967, it is an important marketing centre for the surrounding agricultural area. Population (1991): 134 788. **2**. A unitary authority in E central England, in Cambridgeshire. Area: 402 sq km (155 sq mi). Population (2001): 156 060.

Peterloo Massacre (1819) The name given, by analogy with the battle of Waterloo, to the violent dispersal of a political meeting held in St Peter's Fields, Manchester. A peaceful crowd had gathered to hear Henry Hunt (1773–1835) speak on parliamentary reform. The magistrates called in local troops, the cavalry were ordered to charge, and 11 people were killed.

Petition of Right (1628) A parliamentary declaration accepted by Charles I. It made illegal imprisonment without trial, taxation without parliamentary approval, and the billeting of soldiers on private individuals.

Petra An ancient town in S Jordan. It was the capital of the Nabataeans, nomadic Arabs who settled along the caravan routes from Arabia to the Mediterranean. Petra was a great trading centre from the 3rd century BC. It was incorporated in the Roman Empire in 106 AD and was superseded by *Palmyra in the 2nd century. Accessible only through a narrow gorge, Petra is renowned for its rock-cut temples and dwellings.

Petrarch (Francesco Petrarca; 1304–74) Italian poet. He travelled widely in Europe and in 1341 was crowned as poet laureate in Rome. His works of scholarship anticipated the Renaissance in their combination of classical learning and Christian faith. He is remembered chiefly for the *Canzoniere*, a series of love poems addressed to Laura.

petrel A marine bird belonging to a widely distributed family (*Procellariidae*; 55 species) characterized by thick plumage, webbed feet, and a hooked bill. 27–90 cm long, petrels feed on fish and molluscs. Diving petrels belong to a family (*Pelecanoididae*; 5 species) occurring in the S hemisphere; they are 16–25 cm long and feed mostly on crustaceans. Order: *Procellariiformes*. See also FULMAR; PRION; SHEARWATER; STORM PETREL.

petroleum See OIL.

petrology The study of rocks, including

their formation, structure, texture, and mineral and chemical composition. **Petrogenesis** is the origin or mode of formation of rocks; **petrography** is the description and classification of rocks from hand specimens or thin sections.

Petunia A genus of tropical American herbs (about 40 species), cultivated for their showy funnel-shaped flowers. Ornamental species include *P. integrifolia*, with pink, blue, or purple flowers, the white-flowered *P. axillaris*, and hybrids between them. Family: *Solanaceae*.

pewter An *alloy of tin (80–90%) and lead (20–10%) with small amounts of antimony to harden it or copper to soften it. It was formerly used for plates, spoons, and other utensils but now only beer mugs are made from it.

peyote A blue-green *cactus, *Lophophora williamsii*, also called mescal, native to Mexico and the SW USA. It bears white to pink flowering heads, which, when dried, are known as "mescal buttons." They contain the alkaloid *mescaline, which produces hallucinations when chewed.

pH A measure of the acidity or alkalinity of a solution, equal to the logarithm to the base 10 of the reciprocal of the number of moles per litre of hydrogen ions it contains. In neutral solutions, therefore, the hydrogen ion concentration is 10^{-7} and the pH is consequently 7. In acid solutions the pH is less than 7; alkaline solutions have pH values greater than 7. The pH scale is logarithmic; for example, a solution with a pH of 2 is ten times more acidic than one with a pH of 1. See also ACIDS AND BASES.

Phaedra In Greek mythology, the daughter of *Minos and Pasiphaë and the wife of Theseus. She fell in love with her stepson Hippolytus. When he rejected her, she hanged herself, after writing a letter to Theseus accusing Hippolytus of having seduced her.

phagocyte A cell that engulfs and then digests particles from its surroundings; this process is called phagocytosis. Many protozoans are phagocytic, but the word specifically refers to certain white blood cells that protect the body by engulfing bacteria and other foreign particles.

phalanger A small herbivorous *marsupial of the family *Phalangeridae* (48 species), occurring in woodlands of Australia and New Guinea. They are adapted for climbing trees, having strong claws and prehensile tails. The family includes the cuscuses, flying phalangers, *honey mouse, *koalas, and *possums.

phalarope A lightly built migratory shore-

bird belonging to a family (*Phalaropodidae*; 3 species) in which the female courts the male, which rears the young. 20–25 cm long, phalaropes have a slim neck, lobed toes, and a grey and red-brown plumage. Two species breed in the Arctic and one inland in North America.

pharaoh The title of ancient Egyptian rulers. The word derives via Hebrew from the Egyptian for great house. The royal cobra, the sun god Ra's symbol, signified divinity; pharaoh represented Ra reigning on earth. The first dynasty, or line of pharaohs, was founded about 3200 BC.

pharaoh. The pharaoh's double crown, combining the red crown of Lower Egypt with the white crown of Upper Egypt, symbolized the unification of the two lands (c. 3100 ac).

Pharisees An ancient Jewish religious and political party. The party originated in the 2nd century BC and vied for political influence with the *Sadducees. In the *Gospels they are frequently criticized by Jesus, although his own teachings are very close to theirs.

pharmacology The study of the action of drugs on living organisms. Pharmacologists examine the uptake of drugs after administration, their subsequent effects, their unwanted side effects, the interaction between different drugs, etc. **Pharmacy** is the science concerned with the preparation, manufacture, packaging, quality, and supply of medicinal drugs. The practice of pharmacy should conform to the standards laid down in the official **pharmacopoeia**, a government-approved list giving details of the manufacture, dosage, uses, and characteristics of drugs.

Pharos of Alexandria An ancient lighthouse, one of the *Seven Wonders of the World. Built in about 280 BC by Sostratus of Cnidos for Ptolemy II of Egypt, it was over 135 m (440 ft) high. It was demolished in the 13th century AD.

Pharsalus, Battle of (48 BC) The decisive encounter near present-day Farsala (Greece) in the Roman civil war, in which Julius Caesar defeated Pompey. Pompey's defeat opened the way to Caesar's dictatorship.

pharynx The muscular tract, lined with mucous membrane, between the back of the mouth and oesophagus (gullet) and larynx. It acts as a passageway for food and it also conducts air from the nasal cavity to the larynx and windpipe. Inflammation of the pharynx (pharyngitis) is a common cause of a sore throat.

phase (astronomy) The fraction of the face of the moon or a planet that is illuminated at a particular time in its orbit. Lunar phases vary from new moon (unilluminated) through a waxing crescent, first quarter, a waxing gibbous moon, to full moon, followed by a waning gibbous moon, last quarter, a waning crescent, and the next new moon.

phase (physics) **1.** The fraction of its whole cycle that a periodically varying system has completed. For example, two alternating currents of the same frequency are **in phase** if they reach their maximum values at the same instant. In an electricity-supply system there are usually three phases. **2.** Any portion of a system that is physically distinct, is homogeneous throughout, and can be mechanically separated from other phases. For example, a salt solution is a one-phase system, whereas a mixture of ice and water is a two-phase system.

pheasant A long-tailed gamebird belonging to an Old World subfamily (*Phasianinae*; 50 species) occurring in open or woodland regions. Pheasants have short wings, a short bill, and strong claws for scratching up grain, roots, and grubs. Males are brightly coloured, with bright fleshy wattles and long tail feathers. Family: *Phasianidae* (pheasants, quail, partridges); order: *Galliformes* (pheasants, turkeys, etc.).

phenols A class of organic compounds with the general formula ROH, in which the -OH group is linked directly to a carbon atom in an aromatic ring. The simplest example, phenol itself (or **carbolic acid**), C_6H_5OH , is a white deliquescent solid used as a disinfectant and in the production of drugs, weedkillers, and synthetic resins.

phenylketonuria A genetic disease that leads to mental deficiency if untreated. Patients are unable to metabolize the amino acid phenylalanine, which is a normal constituent of diet; the amino acid and its derivatives accumulate in the body and prevent proper mental development. Phenylketonuria can now be easily detected at birth by a routine test. Babies with the disease need a special diet that contains little phenylalanine, which should be maintained until adolescence.

pheromone A chemical substance produced by animals to communicate with others of the same species. The best-known pheromones are the sex attractants secreted by moths to attract mates. Pheromones are also used by ants to lay trails and by mammals to mark out territories.

Phidias (c. 490–c. 417 BC) Athenian sculptor, one of the most influential artists of his time. Phidias designed and supervised the sculptures of the *Parthenon (see **ELGIN MARBLES**). His works included two famous chryselephantine statues: Athena in the Parthenon and *Zeus at Olympia.

Phidippides (5th century BC) Greek runner who ran 241 km (150 mi) from Athens to Sparta in two days to ask for help against the Persians before the battle of Marathon in 490 BC. The modern *marathon race derives from this feat.

Philadelphia 40°00N 75°10W A city in the USA, situated on the Delaware River in Pennsylvania at the junction of the Schuylkill River. Founded in 1681 by the Quaker, William Penn, it has many historic buildings, including Independence Hall (1732–59), where the Declaration of Independence was adopted. It is the USA's fourth largest city and has the world's largest freshwater port. Industries include oil refining, textiles, and shipbuilding. Population (2000): 1 517 550.

Philip (II) of Macedon (382–336 BC) King of Macedon (359–336), who founded the Macedonian empire. Philip unified Macedonia, expanded the economy, and trained a professional army. Despite the resolute opposition of *Demosthenes at Athens, the Greeks were defeated at the battle of Chaeronea (338). Philip planned to lead a combined force against Persia but he was assassinated.

Philip II Augustus (1165–1223) King of France (1179–1223), who destroyed the Angevin empire of the English kings. He waged war with Henry II (1187–89), Richard Lionheart (1194–99), and John; he took Normandy in 1204, followed by Maine, Touraine, and Anjou (1204–05), and in 1214 defeated an English-imperial alliance at Bouvines.

Philip II (1527–98) King of Spain (1556–98). He married Mary I of England in 1554. Philip faced the *Revolt of the Netherlands and the Turkish threat in the Mediterranean, suppressed the Moriscos (see **CONVERSOS**), launched the *Spanish Armada against Protestant England (1588), and intervened in the French *Wars of Religion against the Huguenots.

Philip V (1683–1746) The first Bourbon King of Spain (1700–24, 1724–46). The grandson of Louis XIV of France, his accession instigated the War of the *Spanish Succession. He abdicated in 1724 in favour of his son Luis (1707–24) but returned to the throne when Luis died.

Philip, Prince, Duke of Edinburgh (1921–) The husband (from 1947) of Elizabeth II of the United Kingdom. The son of Prince Andrew of Greece, he assumed the name Mountbatten in 1947, when he took British citizenship. In 1956 he introduced the **Duke of Edinburgh's Award Scheme** to encourage the leisure activities of young people between the ages of 14 and 25.

Philippi, Battle of (42 BC) The battle in which Mark Antony and Octavian (later Emperor *Augustus) defeated *Brutus and *Cassius Longinus in the Roman civil war.

Philippines, Republic of the A country in SE Asia, consisting of an archipelago of over 7000 islands between the Pacific Ocean and the South China Sea. There are few extensive lowlands, most of the larger islands, being mountainous and volcanic. Most of the inhabitants are Filipinos. *Economy:* based principally on agriculture, forestry, and fishing. The production of the staple crops of rice and maize and the main cash crops (sugar, coconuts, bananas, and pineapples) is concentrated around the central plain of Luzon. The country has a wide range of metallic minerals, including copper, gold, iron ore, manganese, molybdenum, zinc, lead, and silver. Forests cover over half the land, providing gums and resins, bamboo, and dyes in addition to good-quality hardwoods. The main industries are electronics, food processing, textiles, and wood processing. *History:* colonized by Spain in 1565, the islands were ceded to the USA in 1898 following the Spanish-American War. They became independent in 1946. Following the election of President *Marcos in 1965 rapid economic development and a greatly improved infrastructure brought increased prosperity to the Philippines. During the early 1970s growing communist guerrilla activity in the N and a Muslim separatist movement in the S led to the declaration of martial law (1972). This was lifted in 1981 but unrest increased when the exiled opposition leader Benigno S. Aquino was assassinated in 1983. After elections in 1986, Marcos went into exile and Corazon Aquino, widow of Benigno, became president. She was succeeded by Fidel Ramos in 1992. In 1996 he signed a peace agreement with Muslim rebels, which created an autonomous Muslim region in the S. The left-

wing populist Joseph Estrada was elected president in 1998 but forced to resign in 2001 after allegations of financial misconduct. The vice-president Gloria Macapagal-Arroyo succeeded him as president and was re-elected in 2004. Official languages: Filipino (a new language based on Tagalog) and English. Currency: Philippine peso of 100 centavos. Area: 300 000 sq km (115 830 sq mi). Population (2003 est): 81 161 000. Capital: Manila.

Philistines A non-Semitic people, who were driven from Egypt about 1200 BC and settled in Canaan; the region took the name Palestine from its new settlers. A warlike seafaring people, without cultural pretensions (hence the derogatory word philistine), they were largely absorbed into the kingdom of Israel under King David about 1000 BC.

Philodendron A genus of woody, usually climbing, plants (275 species), native to tropical America. They cling to trees or other supports by means of aerial roots growing from their stems. Cultivated as ornamental house plants for their foliage, *P. andreaeanum* and *P. erubescens* are among the most popular species. Family: Araceae.

philosopher's stone A hypothetical substance sought by alchemists for its ability to turn less valuable minerals into gold. In alchemical literature it is also called the elixir, the tincture, and of other names. It was sometimes credited with the power of curing all diseases and of making its possessors immortal. See ALCHEMY.

phloem Plant tissue specialized to transport synthesized foods, mainly sugars, around the plant. It consists principally of tubelike cells that lack nuclei, the end of one cell being linked to the next by means of a porous wall (sieve plate). The cells are controlled by small neighbouring cells, known as companion cells.

phlogiston theory An 18th-century theory of combustion based on the belief that all combustible substances contain phlogiston, which is liberated when the substance is heated, leaving calx or ash. The more combustible the substance, the more phlogiston it contains. The theory was finally overthrown in the late 18th century by A. *Lavoisier, who correctly explained combustion in terms of oxidation.

Phlox A genus of ornamental herbs (about 65 species), mostly native to North America. The flowers have five white, pink, red, or purple spreading petals. The creeping phlox, or moss pink (*P. subulata*), forms carpets of flowers in

rock gardens. *P. drummondii* is the source of most garden varieties. Family: *Polemoniaceae*.

Phnom Penh (or **Pnom Penh**; Cambodian name: Phnum Pénh) 11 35N 104 55E The capital of Cambodia, a port at the head of the Mekong delta. The capital since about 1432, it is now the site of the royal palace, many museums and pagodas, and several universities. The country's commercial centre, its industries include textiles and food processing. Population (1999 est): 938 000.

phobia A pathologically strong fear of a particular situation or thing. The main kinds are agoraphobia (fear of public places and open spaces); claustrophobia (fear of enclosed places); specific phobias of individual things, such as sharp knives; social phobias of encountering people; and animal phobias, as of spiders, rats, or snakes. Phobias are sometimes learned after a frightening incident, sometimes acquired in childhood from other people, and sometimes result from *depression.

Phoenicia A group of city states on the coastal plain of Syria N of ancient *Canaan. Semitic peoples settled here sometime before 1800 BC and after about 1000 BC they became outstanding navigators and merchants, establishing trading posts all over the E Mediterranean and beyond. Their major cities were *Tyre, Sidon, and *Byblos. The Phoenician alphabet was the ancestor of all western alphabets. Phoenicia was attacked by Alexander the Great (332 BC), becoming part of the Hellenistic and later the Roman Empires.

phoenix A fabulous bird associated with sun worship, especially in Egypt, and representing resurrection and immortality. It was like an eagle in size and shape, had red and golden plumage, and lived for 500 years. The dying phoenix was consumed by fire in a nest of aromatic materials and from its ashes a new bird arose.

Phoenix 33 30N 112 03W A city in the USA, the capital of Arizona on the Salt River. The state's largest city, the commercial centre for a cotton and farming region, its industries include the manufacture of aircraft and textiles. Population (2000): 1 321 045.

phonetics The study of the production and perception of sounds in languages. Sounds are classified in terms of the way in which they are produced by the speech organs. The study of the system of sounds within any given language is called **phonology** and the individual

sounds are called phonemes. Phonetics also includes the study of stress and intonation.

phosphorescence See LUMINESCENCE.

phosphorus (P) A nonmetallic solid element discovered by H. Brand (died c. 1692) in 1669. It exists in at least four forms: white (α and β), red, and black. White phosphorus is a waxy solid, which ignites spontaneously in air to form the pentoxide (P_2O_5). Red phosphorus, a more stable allotrope, is formed when white phosphorus is heated to 400°C; it is used in matches. Black phosphorus is also stable and forms when white phosphorus is heated to 200–300°C. Phosphorus exists in nature chiefly as the mineral *apatite ($Ca_5(PO_4)_3$), from which the element is obtained, either by reduction with carbon or reaction with silica at high temperatures. Phosphates are used extensively as fertilizers (mainly as "superphosphate"—calcium hydrogen phosphate) but find other uses in detergents, water softeners, and specialist glasses. Some organo-phosphorus compounds are extremely toxic and are used as nerve gases. At no 15; at wt 30.9738; mp (white) 44.1°C; bp (white) 280°C.

photocell (or **photoelectric cell**) A device that makes use of a photoelectric effect to measure or detect light or other electromagnetic radiation. In the photoemissive cell, a photosensitive cathode emits electrons when it is illuminated; these photoelectrons constitute a current when they flow to the positive anode of the cell. In solid-state devices the light changes the behaviour of a p-n junction (as in the photodiode), creating a potential difference by the photovoltaic effect. In the conductivity cell, the resistance of a substance, such as selenium, changes when light falls on it as a result of photoconductivity. Photocells are widely used in light-operated controls, such as fire alarms; they are also used in solar cells (see SOLAR POWER) and photographic light meters. See illustration on p. 692.

photocopying machine A device that prints copies of documents, drawings, etc., from an optical image. The most common technique is a dry electrostatic process known as xerography. A pattern of electric charge is induced by light falling on a layer of *semiconductor material on a conducting surface. Toner powder is sprayed or rolled onto this material, so that it sticks to the highly charged areas. The image so formed is printed onto charged paper, where it is fixed by heating to produce the final copy.

photoelectric effects A number of

effects in which electromagnetic radiation interacts with matter, frequently with the emission of electrons. These effects include photoconductivity, the photovoltaic effect, and the *Compton effect and the Auger effect. The frequency of the radiation (f) has to be such that the energy of the photon (hf , where h is Planck's constant) is sufficient to liberate the electron. For solids, the minimum energy required is called the work function; for free atoms or molecules it is equal to the first *ionization potential, the effect then being known as photoionization. For most substances, an ultraviolet frequency is needed to eject an electron, but for some metals, such as caesium, visible light is sufficient. See PHOTOCCELL.

photoemissive cell. Illumination releases electrons from the cathode.

photovoltaic cell. Illumination creates a potential difference at a p-n semiconductor junction.

photoconductivity cell. Illumination increases the conductivity of a semiconductor, such as selenium.

photocell

photography The recording of images on sensitized material, by means of visible light, X-rays, or other radiation, and the subsequent chemical processing. The first photograph was taken in 1826 by Joseph Nicéphore Niépce (d. 1833). In 1839 *Daguerre introduced the daguerrotype, a positive image of milky white on a silver background, produced directly from silver iodide emulsion on plates exposed inside a simple *camera. Modern photography involves a negative made by the development of *film coated with silver salts. The positive picture is obtained by shining light through the negative

onto light-sensitive paper with a coating similar to that on the original film. Lenses can be used to enlarge or reduce the size of the final image on the print. Transparencies, for use with a slide projector, may also be made. Film is usually developed and printed in a darkroom by dipping it in baths of chemicals. Polaroid photography, however, produces positive pictures directly from the camera in one stage. This system was invented by Edwin *Land in 1947 and is used for instant pictures for security passes, laboratory records, etc.

photolysis The breaking of a chemical bond by absorbed electromagnetic radiation. The photon energy of the radiation must exceed the bond energy, and photolytic reactions can be produced by light, ultraviolet radiation, and X-rays. Examples occur in *photosynthesis, suntan, and photography. **Flash photolysis** is a technique for identifying and studying unstable reaction intermediates. The intermediates are produced in a gas by an intense brief flash of light, and their reactions are followed by spectroscopy.

photometry The branch of physics concerned with measuring quantities related to the intensity of light. If the intensity is measured in terms of the energy of the light, they are known as radiant quantities. They may also be measured in terms of their visual effect; they are then known as luminous quantities.

photon The quantum of *electromagnetic radiation, having an energy hf , where h is the *Planck constant and f is the frequency of the radiation. It may also be regarded as an elementary particle with *spin 1 and zero mass that travels at the speed of *light.

photosphere The boundary between the atmosphere of a star and its much denser interior. The sun's photosphere is several hundred kilometres thick. Almost all the energy emitted by the sun is radiated from the photosphere. Its temperature falls from about 6000°C at the convective zone to about 4000°C where the photosphere merges with the *chromosphere. See also SUNSPOTS.

photosynthesis The means by which plants and certain bacteria produce carbohydrates from carbon dioxide and a hydrogen source. The energy for the process is provided by light absorbed by the green pigment chlorophyll, which is contained in the *chloroplasts. Plants use water (H_2O) as the hydrogen source and release its oxygen as a by-product. Photosynthesis comprises two sets of reactions. One set, which requires light, produces energy-storing and re-

ducing compounds; the other reactions use these compounds to add hydrogen atoms to carbon dioxide and make carbohydrates. The overall reactions can be summarized by the equation $6\text{CO}_2 + 6\text{H}_2\text{O} \rightarrow \text{C}_6\text{H}_{12}\text{O}_6 + 6\text{O}_2$.

Phrygia The central and W areas of Asia Minor inhabited after the Hittite empire collapsed (12th century BC) by Thracian migrants. The shortlived Phrygian kingdom, centred on its capital Gordium, reached its peak in the late 8th century. The legendary *Midas was King of Phrygia. The Phrygians are reputed to have invented embroidery.

phylloxera A plant-eating insect belonging to the family *Phylloxeridae*, closely related to the *aphids. The grape, or vine, phylloxera (*Phylloxera vitifoliae* or *Viteus vitifolii*) is a notorious pest of grapevines. The insect forms galls on the leaves and roots, which damage the

plant. The grape phylloxera almost destroyed the wine industry in France in the 19th century.

phylogeny The history of the *evolution of a species or other group of organisms. By studying the fossil record, comparative anatomy, embryology, biochemistry, and geographical distribution of the groups involved, one can establish the probable lines of descent and degrees of relationship between broad groups of plants or animals to produce a phylogenetic tree. Phylogeny forms the basis for the classification of organisms (see **TAXONOMY**). It should be distinguished from **ontogeny**, the succession of developmental stages through which an individual organism passes during its lifetime.

phylum A major unit of classification for living organisms (see **TAXONOMY**). Organisms belonging to the same phylum share basic features but are divided into classes, orders,

black and white photography. The stages in making a photographic print.

colour photography. In colour reproduction with subtractive reversal film, light from the different coloured areas of the scene forms negatives for each primary colour. These are dyed to form filters that subtract colours from white light to reconstruct the original picture.

photography

genera, and species according to their supposed degrees of relationship. In traditional plant-classification systems the equivalent term is division.

physics The study of the interrelationship between matter and energy, without reference to chemical change. Traditionally the subject was divided into the study of mechanics, electricity and magnetism, heat and thermodynamics, optics, and acoustics. More modern aspects of the subject include quantum mechanics, relativity, nuclear physics, particle physics, solid-state physics, and astrophysics.

physiology The study of the functioning of living organisms and their constituent parts. Physiology is closely linked with both *anatomy (the study of structure) and *biochemistry (the chemical reactions that play a vital role in many physiological processes).

pi In mathematics, the ratio of the circumference of a circle to its diameter, denoted by the Greek letter π . It was proved to be an irrational number by J.H. Lambert (1728–77) and transcendental by F. Lindemann (1852–1939). Its value is 3.14159....

Piaf, Edith (Edith Giovanna Gassion; 1915–63) French cabaret and music-hall singer. Originally a street singer, her small size earned her the nickname "piaf" (French slang: sparrow). Her songs include "Je ne regrette rien" and "La Vie en rose."

Piaget, Jean (1896–1980) Swiss psychologist, noted for his studies of thought processes in children. His books, which include *The Origins of Intelligence in Children* (1954), have had a major influence on educational practice.

piano A musical instrument consisting of a number of wire strings stretched over a metal frame, which are hit by felt-covered wooden hammers operated by a keyboard. The piano was invented by Bartolommeo Cristofori (1655–1731) in the early 18th century; the name derives from the Italian *pianoforte*, soft-loud, referring to the variation in volume obtainable on the piano in contrast to the earlier *clavichord and *harpsichord. In the modern instrument the frame is either horizontal, as in the **grand piano**, or vertical, as in the **upright piano**. The piano has a compass of seven and a quarter octaves and the largest repertory of any instrument.

Picardy (French name: Picardie) A planning region and former province in N France. It was incorporated into France in 1477 by Louis XI of France. During World War I it was the scene of

heavy fighting. Area: 19 411 sq km (7493 sq mi). Population (1999): 1 857 834.

Picasso, Pablo (1881–1973) Spanish artist, born in Malaga. Picasso trained in Barcelona but worked chiefly in Paris after 1900. Although his most popular paintings are those of his blue (1901–04) and rose (1905–08) periods, his most original work began with *Les Femmes d'Alger* (1907), influenced by Cézanne and African sculpture, and resulted in his development of *cubism with *Braque. One of his major works, *Guernica* (1937), is a horrific depiction of the destruction of the Basque capital during the Spanish Civil War.

Piccard A family of Swiss scientists and explorers. **Auguste Piccard** (1884–1962) and his twin **Jean-Félix Piccard** (1884–1963) pioneered the scientific study of the stratosphere in balloons, reaching a height of 16 940 metres in 1932. In 1948 Auguste designed a bathyscaphe, using it to explore the sea depths. His son **Jacques Piccard** (1927–) collaborated with his father in designing bathyscaphes and reached a depth of 10 917 metres in 1960.

piccolo A woodwind instrument, the smallest and shrillest member of the *flute family. It is pitched an octave higher than the flute and its music is written an octave lower than it sounds. It is used in the orchestra and in the military band.

Picts (painted people) The Roman name (referring to their tattoos) for all Scottish tribes living N of the *Antonine Wall. Perpetually hostile to the Romans, the Picts had forced them to withdraw behind *Hadrian's Wall by 200 AD, and remained independent until Kenneth I MacAlpine unified S Scotland in the 9th century.

Piedmont (Italian name: Piemonte) A region in NW Italy. Associated with the House of Savoy since the early 11th century, it became the nucleus of Italian unification in the mid-19th century. It consists of the upper Po Valley, bordered by the Alps in the N and W and the Apennines in the S. Manufacturing is important, with engineering and steel centred on Turin; other industries include textiles, chemicals, rubber, and food products. Agriculture is also important, producing rice, cereals, wine, and dairy products. Area: 25 400 sq km (9807 sq mi). Population (2000 est): 4 287 465. Capital: Turin.

Piero della Francesca (c. 1420–92) Italian Renaissance painter. *The Baptism of Christ* (National Gallery, London) shows his monumental

figure style. He frequently worked at the court of Urbino, where he painted the double portrait of the duke and his wife in profile (Uffizi). His interest in perspective is reflected in his fresco cycle *The Legend of the True Cross*, painted for the church of S Francesco, Arezzo, and in his treatise *On Perspective in Painting*.

Pietermaritzburg 29 36S 30 24E A city in South Africa, the capital of KwaZulu/Natal. It was founded by Boers (1838) and named after their leaders, Piet Retief and Gert Maritz, massacred by the Zulus. It is the centre of a rich farming area. Population (1996): 378 126.

piezoelectric effect The production of electric charges on the opposite faces of certain asymmetric crystals when they are compressed or expanded. The charges are of equal magnitude but opposite in sign on the two faces, the sign on each face depending on whether the crystal is expanded or compressed. Such piezoelectric crystals include quartz and Rochelle salt. In the converse effect a voltage applied across a piezoelectric crystal causes it to expand or contract. The effect is used in the piezoelectric oscillator, the crystal microphone, and the piezoelectric loudspeaker.

pig A hoofed mammal belonging to the Old World family *Suidae* (8 species). Also called hogs or swine, pigs have a stocky body with short legs, a short neck, and a large head with a long cylindrical snout used for digging up roots, seeds, small animals, etc., from soil. Modern breeds are reared for pork and bacon (see **LIVESTOCK FARMING**). Other members of the pig family include the babirusa and *warthog. See also **PECCARY**; **WARTHOG**.

pigeon A bird belonging to a family (*Columbidae*; 300 species) occurring worldwide except in the coldest regions; the smaller long-tailed forms are called doves. 17–75 cm long, pigeons have soft plumage, a plump body, a small head, short bill and legs, and a characteristic cooing call. Pigeons feed mainly on seeds and other plant material. They are often fast fliers and some are highly migratory, domesticated breeds being used as messengers and for racing. Order: *Columbiformes* (pigeons and sandgrouse). See also **WOOD PIGEON**.

Piggott, Lester Keith (1935–) British jockey, who rode his first winner at the age of 12 (1948). Champion jockey eleven times and Derby winner a record nine times, he became a trainer in 1985. He was gaoled (1987–88) for tax evasion but returned to win his 30th classic race in 1992.

pig iron The type of iron produced by *blast furnaces, and used as the first stage in *steel making. It has a high carbon content (about 4% by weight) and contains impurities, including some slag, which make it brittle. See also **CAST IRON**.

pigmies See **PYGMIES**.

pika A small mammal belonging to the genus *Ochotona* (14 species), of Asia and North America, also called mouse hare, cony, and rock rabbit. 12.5–30 cm long and resembling large short-tailed mice, pikas live in cold rocky areas above the tree line. Family: *Ochotonidae*; order: *Lagomorpha*.

pike A freshwater fish of the genus *Esox* found in temperate regions of Eurasia and America. It has a broad flat snout, and a large mouth with strong teeth. It feeds voraciously on fish and other animals. The common pike (*E. lucius*) is olive-grey above with silvery underparts and pale spots. Family: *Esocidae*; order: *Salmoniformes*.

Pilate, Pontius (1st century AD) Roman governor. As procurator of Judaea and Samaria (26–36) he condemned Christ to death but, according to the New Testament Gospels, did so reluctantly, fearing the outcome of any other course. He came into frequent conflict with the Jews and was finally dismissed for his cruel suppression of a Samaritan rebellion.

pilchard An important food fish, *Sardinia pilchardus*, related to the herring and sprat, that occurs in abundance in the Mediterranean, E Atlantic, and English Channel. Its slender body, 25–35 cm long, is bluish green above and whitish below and it swims in large shoals feeding on crustaceans and fish eggs. Pilchards up to one year old are called *sardines. Pilchards are eaten fresh and tinned.

piles See **HAEMORRHOIDS**.

Pilgrimage of Grace (1536) A revolt in N England against the government of Henry VIII. The rebels were united by their opposition to the recent *Reformation legislation and the dissolution of the monasteries as well as by economic grievances. Under Robert Aske (c. 1500–37) they seized York but were persuaded to surrender. However, some 230 men, including Aske, were executed.

Pilgrim Fathers The 102 English colonists who established the first settlement in New England in 1620. They included 35 Puritans, escaping persecution in England, and sailed in

the *Mayflower* to New Plymouth, Massachusetts.

Pill, the See ORAL CONTRACEPTIVE.

Pillars of Hercules Two promontories at the entrance to the Mediterranean Sea, known in ancient times as Calpe (modern Gibraltar) and Abyla (modern Jebel Musa, at Ceuta, Morocco). According to one legend, the promontories were joined until Heracles tore them apart.

pilot fish A fish, *Naucratus ductor*, that has a pale-blue elongated body marked with dark vertical bands. It is found in warm and tropical seas, accompanying ships and large fish, especially sharks, to feed on parasites and scraps of food. Family: *Carangidae*; order: *Perciformes*.

Piltown man Skeletal remains once thought to be those of a fossil *hominid, found on Piltown Common, near Lewes (England), in 1912. In 1953–54 the "find" was shown to be a hoax or fraud.

pimpernel A slender herb of the genus *Anagallis* (about 20 species), found in Eurasia, Africa, and America, especially the annual scarlet pimpernel (*A. arvensis*). Growing 5–30 cm tall, pimpernels have simple leaves and small red, pink, blue, or white bell-shaped flowers. The fruit is a capsule, which opens by a round lid. The yellow pimpernel (*Lysimachia nemorum*) belongs to a closely related genus. Family: *Primulaceae*.

Pindar (518–438 BC) Greek poet. Of his 17 books of choral lyrics only 4 survive. These contain Epincian Odes written in honour of victors of athletic games and noted for their exalted style and religious feeling.

pine A coniferous tree of the genus *Pinus* (about 80 species), widely distributed in the N hemisphere. Pines have long slender needles and hanging cones made up of overlapping woody scales. Pines are important softwoods: the timber is easily worked and yields turpentine, tar, pitch, and other resinous products. Commercially important and widely planted species include the Scots pine (*P. sylvestris*), of N and W Europe and Asia, up to 40 m high and the maritime pine (*P. pinaster*), of W Mediterranean regions and N Africa, up to 35 m high. These and other species are also planted for shelter and ornament and some species have edible seeds (see STONE PINE). Family: *Pinaceae*. See also BRISTLEcone PINE.

A number of other unrelated conifers are called pines, including species of *Araucaria*, the *cypress pine, and the *kauri pine.

pineal gland A small gland within the brain. In some lower animals, for example certain lizards, it is receptive to light and is visible externally as a third eye (pineal eye); in man its function is unknown, although it may help to regulate the onset of puberty.

pineapple A perennial herbaceous plant, *Ananas comosus*, native to tropical and subtropical America and cultivated in many warm and tropical regions for its fruit. It reaches a height of 1 m. Purplish flowers occur at the centre of a rosette of leaves and—with their bracts—fuse to form the composite fruit, which ripens 5–6 months after flowering begins and can weigh up to 10 kg. The major producing countries are the Hawaiian Islands, Brazil, Mexico, Cuba, and the Philippines. Family: *Bromeliaceae*.

pine marten A European carnivorous mammal, *Martes martes*. About 70 cm long, it inhabits dense evergreen forests, preying on squirrels, birds, insects, and eggs. As with other *martens, the female has a litter (2–5 cubs) only every second year.

pink One of several usually perennial herbaceous plants derived from *Dianthus plumarius* and often grown as fragrant garden ornamentals. They have long slender leaves and showy white, pink, or red flowers, often with fringed petals. Family: *Caryophyllaceae*.

Pinochet, Augusto (1915–2006) Chilean general and head of state (1973–90). He led the military coup that overthrew Salvador *Allende and became the head of a repressive military junta. He relinquished office in 1990 but remained head of the army until 1998, when he was made a senator for life. That year he was arrested while visiting London, pending extradition to Spain to answer charges of murder and torture of Spanish nationals during his presidency. After a lengthy legal battle the home secretary authorized Pinochet's release (2000) on medical grounds. After his return to Chile he was charged with murder and kidnapping but was eventually (2001) found mentally unfit to stand trial.

pintail A *duck, *Anas acuta*, occurring in the N hemisphere, that breeds on inland waters and winters in coastal areas. The male has a dark-brown head and neck with a white band down the neck, grey flanks, and long black central tail feathers. Females have mottled brown plumage and both sexes have a blue-grey bill.

Pinter, Harold (1930–) British dramatist. In his plays, which include *The Birthday Party* (1958), *The Caretaker* (1960), *The Homecoming*

(1965), *Betrayal* (1978), *Mountain Language* (1988), *Ashes to Ashes* (1996), and *Celebration* (2000), he uses elliptical dialogue to evoke an atmosphere of tension and ambiguity. He has also written film scripts and directed plays. Pinter was awarded the Nobel Prize in 2005.

pinto A horse whose coat consists of sharply defined patches of white and a darker colour—either black (piebald pattern) or brown, bay, dun, or roan (skewbald pattern). Pintos were commonly used by American Indians. Height: 1.42 m minimum (14 hands).

pinworm A slender parasitic *nematode worm, *Enterobius vermicularius*, also called seat-worm or threadworm. Up to 1 cm long, pinworms are white and inhabit the human intestine; they are common in Europe and America. Female worms migrate to the anus to lay thousands of eggs, causing itching, especially at night.

Pinyin See CHINESE.

pion A group of three elementary particles (see PARTICLE PHYSICS) classified as *mesons (symbol: π). The charged pions (π^+ and π^-) have a mass of 139.6 MeV, the neutral pion (π^0) a mass of 136 MeV. The *strong interaction can be represented by the exchange of virtual pions between particles (see VIRTUAL PARTICLE).

Piper, John (1903–92) British painter and writer. He painted abstract works in the 1930s and was an official war artist in World War II. Best known for his watercolours and aquatints of architecture, he also designed stained glass, notably for Coventry Cathedral, and stage sets.

pipistrelle A small insect-eating *bat belonging to the genus *Pipistrellus* (50 species) with a worldwide distribution. The Eurasian pipistrelle (*P. pipistrellus*) is about 3.5 cm long with a 20-cm wingspan. Pipistrelles have a prehensile tail, used when crawling into crevices to roost. Family: *Vespertilionidae*.

pipit A small insectivorous songbird of the genus *Anthus* (30 species), 14–16 cm long with a brown-streaked plumage and paler speckled underparts. The meadow pipit (*A. pratensis*) occurs on moors and downs in Britain. The water pipit (*A. spinoletta*) inhabits the high mountains of Eurasia and North America; it is also found in coastal regions, when it is known as the rock pipit. Family: *Motacillidae* (wagtails and pipits).

Piraeus (Modern Greek name: Piráeūs) 37°57'N 23°42'E The chief port of Greece, SW of Athens on the Saronic Gulf. It was founded during the 5th century BC as the port of Athens. Industries include shipbuilding, oil refining, and

chemicals. Its exports include wine and olive oil. Population (2001): 175 697.

Pirandello, Luigi (1867–1936) Italian dramatist and novelist. Born in Sicily, he studied philology in Germany. His writing was greatly influenced by life with his insane wife. He gained international success with his plays exploring the nature of reality and illusion, notably *Six Characters in Search of an Author* (1921) and *Henry IV* (1922). He won the Nobel Prize in 1934.

piranha A freshwater fish, also called caribe and piraya, belonging to a genus (*Serrasalmus*) found in South America. It has a deep body, ranging from silver to black in colour, strong jaws, and razor-sharp teeth. Piranhas swim in groups and feed on other fish; they also attack larger animals, including man. Family: *Characidae*.

Pisa 43°43'N 10°24'E A city in Italy, in Tuscany on the River Arno. Dating from Etruscan times, it developed into a thriving maritime republic (11th–12th centuries) but declined after it fell to the Florentines in 1509. Its most famous building is the Leaning Tower, which is 59 m (194 ft) high and about 5 m (17 ft) out of perpendicular. Machinery, textiles, bicycles, and glass are manufactured. Population (2005): 90 482.

Pisano, Nicola (c. 1220–c. 1278) Italian sculptor. He initiated the revival of antique Roman forms that led eventually to Renaissance sculpture, beginning with his pulpit in the Baptistery, Pisa. Later works reveal the cooperation of his son Giovanni Pisano (c. 1250–1314). Giovanni introduced French gothic elements into his sculptures for the façade of Siena Cathedral.

Pissarro, Camille (1830–1903) French impressionist painter, born in the West Indies. Chiefly influenced by *Corot, he was more interested in landscape structure than the other impressionists. He is noted for his encouragement of younger painters, especially *Cézanne and *Gauguin. In the 1880s he experimented with *pointillism.

pistachio A small aromatic tree, *Pistacia vera*, native to central Eurasia and cultivated in Mediterranean regions for its edible green kernels ("nuts"). Growing 7–10 m high, it has compound leaves and drooping spikes of small male and female flowers. The oval white fruits, 1.5–2 cm long, often split to expose the kernels, which are used as dessert nuts and for flavour-

ing confectionery, cakes, etc. Family: *Anacardiaceae*.

pistil The part of a flower consisting of the female reproductive organs. It consists of one or more *carpels, which may be united into a single structure. Some plants, such as the cucumber, have separate male and female flowers: the latter are described as pistillate.

pistol A short-range small arm that can be used with one hand. Pistols fall into two classes: the *revolver and the automatic. The first successful revolver was the Colt of 1835, in which a magazine chamber revolves behind a single barrel. The first automatics (1893) combined a box magazine in the butt with a recoil loading action. The Luger 9 mm automatic went into service with the German navy in 1904. Both revolvers and automatics are still in military and police use throughout the world.

17th-century English wheellock pistol

18th-century Scottish flintlock with ram's-horn butt

Colt 45 revolver first produced in 1873 and still in use

Colt 45 automatic

pistol

pit bull terrier See BULL TERRIER.

Pitcairn Islands A small island group in the central S Pacific Ocean, a United Kingdom overseas territory, consisting of Pitcairn Island and three uninhabited islands. Subsistence agriculture is the chief occupation. Pitcairn Island was occupied in 1790 by mutineers from the *Bounty* and women from Tahiti. By 1856 the island was overpopulated and the inhabitants were moved to Norfolk Island; some later returned. Area: 4.6 sq km (1.75 sq mi). Population (1999 est): 54. Sole town: Adamstown.

pitch A black or dark-brown residue resulting from the partial evaporation or fractional distillation of coal tars or tar products. The term is sometimes used for the residue obtained from petroleum distillation (bitumen) or for the naturally occurring petroleum residue (asphalt). Bitumen is a mixture of heavy hydrocarbons with a high proportion of free carbon. It is used as a binding agent (it is the main constituent of road tars), as a protective coating in bituminous paints, in roofing felts, and as a fuel.

pitchblende The chief ore of uranium, a massive form of uraninite, UO_2 , a black radioactive mineral found in hydrothermal veins and as an accessory mineral in acid igneous rocks.

pitcher plant Any *carnivorous plant with pitcher-shaped leaves, belonging mainly to the families *Nepenthaceae* and *Sarraceniacae*. The pitcher is often brightly coloured and secretes nectar to attract insects, which often fall inside and drown in the digestive juices at the bottom of the pitcher.

Pitman, Sir Isaac See SHORTHAND.

pitot tube A type of anemometer for measuring the velocity of a fluid, invented by Henri Pitot (1695–1771). It consists of an L-shaped tube placed in the moving fluid; the vertical limb of the tube has an opening facing into the flow. The difference in pressure between the interior of the tube and the surroundings enables the velocity of the fluid to be calculated. The device is used to measure the velocity of liquids, aircraft airspeeds, etc.

Pittsburgh 40 26N 80 00W A city in the USA, in Pennsylvania at the confluence of the Allegheny and Monongahela Rivers, which here form the Ohio River. It is the site of several colleges and universities, including the University of Pittsburgh (1787) and the famous Carnegie Institute. Pittsburgh has grown as a major centre of the steel industry and is the country's largest inland port. Other manufactures include machinery, petroleum, coal, glass, and chemicals. Population (2000): 334 563.

Pitt the Elder, William, 1st Earl of Chatham (1708–78) British statesman, known as the Great Commoner. Having entered parliament in 1735, he established a reputation as an outstanding orator. He became secretary of state and leader of the House of Commons in 1756, was dismissed in 1757, and then recalled to form a ministry with *Newcastle. In charge of foreign affairs, he was largely responsible for British victory in the *Seven Years' War, reor-

ganizing the militia and navy and rallying public opinion.

His second son **William Pitt the Younger** (1759–1806) was twice prime minister (1783–1801, 1804–06), the youngest in British history. As prime minister he inherited an enormous public debt, which he reduced by a fiscal policy influenced by Adam *Smith. He also reformed the Indian administration. Pitt negotiated the first (1793) and second (1798) coalitions against France (see REVOLUTIONARY AND NAPOLEONIC WARS) and resolved the crisis caused by the Irish rebellion in 1798 by union of Britain and Ireland in 1800. His second ministry was marked by an alliance with Russia, Sweden, and Austria against Napoleon, which collapsed shortly before his death in office.

pituitary gland A small endocrine gland, about 12 mm by 8 mm, lying within the skull close to the centre of the head. The anterior (front) lobe produces *growth hormone, *prolactin, and hormones that regulate the function of other glands. The posterior (back) lobe is a downgrowth from the *hypothalamus and stores various neurohormones that are synthesized in this part of the brain. Neural control of the entire endocrine system is effected from the pituitary gland.

Pius V, St (Michele Ghislieri; 1504–72) Pope (1566–72). A Dominican friar, he enforced the decrees of the Council of *Trent and expanded the activities of the *Inquisition. He excommunicated the Protestant Elizabeth I of England in 1570. He was canonized in 1712. Feast day: 30 April.

Pius IX (Giovanni Maria Mastai-Ferretti; 1792–1878) Pope (1846–78). At first sympathetic to liberal and nationalist movements, he abandoned radicalism for reaction after the Revolution of 1848, in which he fled Rome. He refused to acknowledge the newly established kingdom of Italy, into which Rome was incorporated in 1870. He defined the dogmas of the Immaculate Conception (1854) and papal infallibility (1869–70).

Pizarro, Francisco (c.1475–1541) Spanish conquistador. In the 1520s he explored the NW coast of South America. In 1531 he crossed the Andes to Cajamarca, where he treacherously murdered the Inca king, Atahualpa. He then consolidated the Spanish conquest of the Inca empire, founding Lima in 1535.

placenta 1. An organ formed within the womb of mammals and other viviparous animals during pregnancy, composed of fetal and maternal tissues. Via the placenta the fetus re-

ceives nutrients, oxygen, and antibodies from the mother's blood and its waste products are absorbed into the mother's circulation. The fetus is attached to the placenta by the umbilical cord. 2. A tissue in plants that connects the ovules (later the seeds) to the ovary (later the fruit wall).

plague An infectious disease caused by the bacterium *Yersinia pestis*, which is transmitted to man by rat fleas. There are three forms of the disease, the most common of which is bubonic plague, in which fever, vomiting, and headache are accompanied by swollen inflamed lymph nodes (buboes). Epidemics of plague afflicted Europe throughout the middle ages, the *Black Death of 1348 being the most devastating. The **Great Plague of London** (1665–66) claimed an estimated 70 000 lives. Today plague is usually restricted to areas of poor sanitation in tropical countries.

plaice A commercially important *flatfish, *Pleuronectes platessa*, that occurs in the N North Atlantic and British coastal waters. It is usually 25–40 cm long and is coloured brown with bright-red or orange spots above and white beneath.

Plaid Cymru A political party, founded in 1925, dedicated to the achievement of Welsh independence. The party won its first parliamentary seat in 1966 (in 2005 it won three seats). Plaid Cymru currently holds 15 of the 60 seats in the Welsh assembly, making it the main opposition. The current leader is Ieuan Wyn Jones.

Planck, Max Karl Ernst Ludwig (1858–1947) German physicist; the originator of *quantum theory. In 1900 Planck solved the problem of black-body radiation by assuming that the radiation was emitted in discrete amounts (quanta) known as *photons. The energy (E) of a photon is related to the frequency (f) of the radiation by the equation $E = hf$, where h is known as **Planck's constant** (which has the value $6.626\,196 \times 10^{-34}$ J s). For this work he received the Nobel Prize in 1918.

planet A celestial body that moves around a star and shines by light reflected from its surface. The only known planets are those orbiting the sun (solar system). Traditionally, there are nine major planets: in order from the sun these are *Mercury, *Venus, *earth, and *Mars (the **terrestrial planets**), *Jupiter, *Saturn, *Uranus, and *Neptune (the **giant planets**), and *Pluto. In 2006 Pluto was redefined by the International Astronomical Union as a "dwarf planet." There are also numerous *minor planets.

p

plane tree A large tree of the genus *Platanus* (10 species), native to the N hemisphere and often grown for shade and ornament. Up to 50 m tall, the trees have patchy peeling bark, large lobed leaves, and separate round clusters (catkins) of male and female flowers: the female flowers give rise to bristly round fruits. The London plane (*P. × acerifolia*) is a hybrid between the Oriental plane (*P. orientalis*) and North American buttonwood (*P. occidentalis*). The timber is a valuable hardwood used in carpentry. Family: *Platanaceae*.

plankton Minute or microscopic animals (zooplankton) and plants (phytoplankton) that float and drift in the open waters of a sea or lake. The phytoplankton carry out *photosynthesis in the surface waters. The zooplankton include protozoa, small crustaceans, and larvae. Plankton are of great ecological and economic importance as a food source for fish and whales.

plant A living organism belonging to the kingdom *Plantae*, of which there are some 280 000 or so species. Plants are typically immobile and most manufacture their own food from simple inorganic nutrients by *photosynthesis, trapping the energy required for the process in the green pigment chlorophyll. Plant cells have rigid cell walls, providing support, and growth occurs from specialized zones of tissue (see **MERISTEM**), continuously or periodically throughout life. Plants lack specialized sense organs and a nervous system; response to external stimuli is usually slow and often permanent. Green plants are the primary source of food and oxygen for all animals.

Plantagenet The surname of the Angevin, Lancastrian, and Yorkist Kings of England

(1154–1485). They were descended from Queen Matilda and Geoffrey Martel, Count of Anjou (d. 1151), who was nicknamed Plantagenet because he wore a sprig of broom (*plante genêt*) in his cap. The name was not formally adopted until the 15th century.

plantain 1. An annual or perennial herb of the genus *Plantago* (about 50 species), occurring in temperate regions and on mountains in the tropics, often as a troublesome weed. Plantains have a basal rosette of simple leaves from which arises a stalk bearing a dense terminal head of inconspicuous green, white, yellow, or brown flowers with protruding stamens. Family: *Plantaginaceae*. **2.** See **BANANA**.

plasma (anatomy) The fluid constituent of *blood, in which the blood cells are suspended. Plasma consists of a solution of various salts, sugars, etc., and contains numerous proteins, including those involved in *blood clotting and the immunological response to infection (i.e. antibodies). It is obtained by centrifuging unclotted blood. Compare **SERUM**.

plasma (physics) A gas the atoms of which have been completely ionized. Sometimes called the fourth state of matter, plasmas occur at enormously high temperatures and are also created in *thermonuclear reactors.

Plasmodium A genus of parasitic single-celled animals (see **PROTOZOA**) that cause *malaria in humans. *Plasmodium* undergoes the sexual phase of its development in blood-sucking mosquitoes of the genus *Anopheles*, through which it is transmitted to man. Four species cause different forms of malaria: *P. falciparum*, *P. vivax*, *P. malariae*, and *P. ovale*. Class: *Apicomplexa* (see **SPOROZOAN**).

broad category	major groups (phyla)	important classes	representative members
nonvascular plants (bryophytes)	Hepatophyta Bryophyta Anthoceroophyta		liverworts (e.g. <i>Pellia</i>) mosses (e.g. <i>Sphagnum</i>) hornworts (e.g. <i>Anthoceros</i>)
vascular plants (tracheophytes)	Lycophyta Sphenophyta Filicinophyta Coniferophyta (conifers) Anthophyta (flowering plants)	Monocotyledoneae (monocotyledons) Dicotyledoneae (dicotyledons)	clubmosses (e.g. <i>Lycopodium</i>) horsetails (<i>Equisetum</i>) ferns (e.g. <i>Pteridium</i>) pines, larches, spruces, firs, yews grasses, palms, orchids, lilies daisies, roses, buttercups, hardwood trees (oak, beech, etc.)

plant. A simplified classification of the plant kingdom.

plaster of Paris A hydrated form of calcium sulphate ($\text{CaSO}_4 \cdot \frac{1}{2}\text{H}_2\text{O}$) made by partial dehydration of *gypsum by heating. When mixed with water it sets into a hard mass by formation of the dihydrate ($\text{CaSO}_4 \cdot 2\text{H}_2\text{O}$). It is used for casts for broken limbs and for modelling.

plastics Synthetic materials that consist of

polymers, which are moulded during manufacture. Plastics are made from synthetic *resins. **Thermosetting plastics** harden on heating to give a rigid product that cannot then be softened. Polyurethanes, *polyesters, and *epoxy resins all form thermosetting plastics. **Thermoplastic materials** soften when heated and harden again when cooled. These include der-

structure of an anther

structure of a carpel

FLOWERS

transverse section of a dicotyledon stem

section of a woody stem showing four seasons' growth

ROOTS

section of the tip of a root

transverse section of a leaf

detail of stomata

p

plant. Structure of a flowering plant.

ivatives of *cellulose and *polythene, and other polymers, which contain a reactive double bond.

The first synthetic material was Celluloid, made in 1870 from cotton and camphor. This highly inflammable substance was replaced during World War I by cellulose acetate and casein products. These materials were all based on naturally occurring large molecules. The first polymers to be made by joining together smaller molecules were the phenol-formaldehyde resins (trade name Bakelite) invented in 1908 by Leo Baekeland (1863–1944). Since then a vast number of different resins have been synthesized.

Plata, Río de la (English name: River Plate) The estuary of the Río Paraná and the River Uruguay, on the Atlantic coast of SE South America between Uruguay and Argentina. Montevideo, the capital of Uruguay, lies on the N shore and Buenos Aires, the capital of Argentina, is situated on the S shore. A naval battle was fought off its mouth in 1939 (see WORLD WAR II). Length: 275 km (171 mi). Width (at mouth): 225 km (140 mi).

platelet A small particle, 0.001–0.002 mm in diameter, produced by the bone marrow and found in the blood. Platelets are essential for *blood clotting, accumulating in large numbers at the site of an injured blood vessel. There are normally 150 000 to 400 000 platelets per cubic millimetre of blood.

plate tectonics The theory, developed mainly in the 1960s, that the earth's crust is divided into rigid plates (oceanic, continental, or a combination of both), which move about the earth's surface at rates of 1–9 cm per annum. At constructive plate margins new oceanic crust is created where two plates are moving apart and magma rises to fill the gap; this occurs at midocean ridges. At destructive plate margins two plates collide and one dips beneath the other, producing deep-sea trenches. Where two continental plates collide, mountain chains are formed.

Plath, Sylvia (1932–63) US poet and writer. In 1956 she married the British poet Ted Hughes, whom she had met at Cambridge University. The disciplined poems of her first volume, *The Colossus* (1960), contrast with the anguished poems of *Ariel* (1965), published two years after her suicide. She also wrote a novel, *The Bell Jar* (1966). Her journals and her *Collected Poems* (1981) were published posthumously.

platinum (Pt) A precious silver-white noble metal. It is malleable, ductile, and has a high

melting point. Platinum is found in nature in nickel ore. It can absorb large quantities of hydrogen and is used as a catalyst, particularly in contact process for making sulphuric acid. It is also used in thermocouple wires and in jewellery. Although unreactive, platinum also forms other compounds, including the hexafluoride (PtF₆), one of the most powerful oxidizing agents known. At no 78; at wt 195.08; mp 1769°C; bp 3827 ± 100°C.

Plato (429–347 BC) Greek philosopher. An Athenian nobleman, he became a devoted follower of *Socrates, after whose death he travelled widely. In 387 he returned to Athens and founded his *Academy, to which he devoted the rest of his life. Some of Plato's poetry and all his prose works survive. Apart from 13 possibly spurious letters and the *Apology*, which purports to be Socrates' defence of himself before his judges, they are dramatic dialogues of outstanding literary merit. The early ones illustrate Socrates' character and philosophical methods. The *Phaedo*, *Symposium*, and *Republic* of Plato's middle period develop his mature views on such topics as metaphysics, love, and government, notably his theory of ideas (Forms), the perfect spiritual entities or prototypes of which the physical world is a feeble and imperfect copy.

platypus See DUCK-BILLED PLATYPUS.

plebeians Romans other than the privileged *patricians. At first without civil rights, in 493–92 the plebeians forced the Senate to appoint their own tribunes and an assembly. During the subsequent two centuries of conflict, the plebeians gradually gained admission to all Roman offices.

Pléiade, La A group of seven French writers in the 16th century who sought to liberate French poetry from medieval tradition. Their principles, deriving from the study of Greek, Latin, and Italian literature, were expounded in *Défense et illustration de la langue française* (1549) by Joachim du Bellay (1522–60), and their innovations included the introduction of the sonnet, the ode, and the alexandrine. Led by Pierre de Ronsard (1524–85), the group included du Bellay, J.-A. de Baif (1532–89), Étienne Jodelle (c. 1532–73), Rémy Belleau (c. 1528–77), Pontus de Tyard (c. 1522–1605), and Jacques Peletier (1517–82) or Jean Dorat (1508–88).

Pleiades (or Seven Sisters) A young open *star cluster in the constellation Taurus that contains several hundred stars, of which six are clearly visible to the naked eye. They were named after the seven daughters of *Atlas,

who were changed by the gods into stars while being pursued by Orion.

Pleistocene epoch The epoch of geological time between the Pliocene and the Holocene, at the beginning of the Quaternary period. It lasted from about 1.8 million to 10,000 years ago. It is often called the "Ice Age" because during this time the earth experienced great fluctuations in temperature. Fossils from the Pleistocene include horses, pigs, and elephants.

plesiosaur A widely distributed marine reptile of the Jurassic and Cretaceous periods (200–65 million years ago). Up to about 12 m long, plesiosaurs had broad turtle-like bodies with paddle-like limbs, a long flexible neck, and jaws armed with sharp teeth used to catch fish.

pleurisy Inflammation of the pleura—the membrane that covers the lungs and lines the chest cavity. The commonest cause of pleurisy is bacterial or viral infection. The patient will often have a fever, a pain in the chest that is worse on coughing or taking a deep breath, and a cough.

Plimsoll line A series of lines painted on the outside of a cargo ship's hull showing the various safe levels to which the ship can be loaded. The measure was introduced in the UK as a result of the Merchant Shipping Act (1876) at the instigation of the MP Samuel Plimsoll (1824–98).

Plimsoll line. The lines and letters mark the waterline under various conditions. TF = fresh water in the tropics; F = fresh water; T = salt water in the tropics; S = salt water in the summer; W = salt water in the winter; WNA = winter in the N Atlantic. LR represents Lloyd's Register.

Pliny the Elder (Gaius Plinius Secundus; 23–79 AD) Roman scholar, whose universal encyclopedia, *Natural History*, was a major source of scientific knowledge until the 17th century. During his military career, Pliny assembled material from numerous sources on a wide range of disciplines, including astrology, geography, agriculture, medicine, zoology, and botany. He finally completed this work of 37 volumes in 77

AD. His nephew and adopted son **Pliny the Younger** (Gaius Plinius Caecilius Secundus; c.61–c.113 AD) held various administrative posts and was a prominent legal orator. His ten volumes of private letters constitute an intimate unofficial history of his time.

Pliocene epoch See TERTIARY PERIOD.

PLO See PALESTINE LIBERATION ORGANIZATION.

Plotinus (205–70 AD) Greek philosopher and founder of "Neoplatonism. Born in Egypt, he studied at Alexandria, and finally settled in Rome. Developing Plato's mysticism, he taught that the immaterial impersonal indescribable "One" is the ground of all existence and value. From it emanate successively mind, soul, and nature. By rejecting material nature and cultivating the intellect man may briefly become mystically united with the One.

Plovdiv (former name: Philippopoli) 42.08N 24.45E A city in S central Bulgaria, on the River Maritsa. Bulgaria's second largest city, its industries include food processing and carpet manufacture. Population (1999 est): 342,584.

plover A bird belonging to a widely distributed family (*Charadriidae*; 56 species) occurring in open regions and along shores. Plovers have brown or grey plumage, often mottled, with white underparts. They feed on insects and other small invertebrates and nest on the ground. Order: *Charadriiformes* (gulls, plovers, etc.). See also LAPWING.

plum A small tree, *Prunus domestica*—a natural hybrid between the "blackthorn" and the cherry plum (*P. cerasifera*), native to SW Asia and cultivated in most Mediterranean and N temperate regions for its fruit. It has oval toothed leaves and white flowers. The fruit is round or oval and has a dark-red to blue-black skin (when ripe), enclosing a sweet greenish-yellow pulp and a central oval stony seed. Plums are eaten fresh, cooked in desserts, canned, or dried as prunes. Family: *Rosaceae*. See also DAMSON.

Plumbago A genus of herbaceous plants, shrubs, and climbers (12 species), native to warm regions and including a number of ornamentals. They have simple leaves and terminal clusters of white, blue, violet, pink, or red flowers. *P. auriculata*, with pale-blue flowers, and *P. rosea*, with red flowers, are popular greenhouse plants. Some species are used for medicinal purposes. Family: *Plumbaginaceae*.

Plutarch (c.46–c.120 AD) Greek biographer and essayist. He was a citizen of both Athens

and Rome and a priest of Delphi. His *Parallel Lives* consists of biographies of 23 pairs of Greek and Roman statesmen and soldiers. The *Moralia* contain 83 essays on ethical, scientific, and literary topics.

Pluto (astronomy) Traditionally, the smallest and outermost planet, orbiting the sun every 248 years at a mean distance of 5900 million km. Pluto was discovered in 1930 but little was known about it until its satellite was discovered in 1978. It is a very cold low-density body about 3000 km in diameter. In 2006 the International Astronomical Union redefined Pluto as a "dwarf planet."

Pluto (mythology) See HADES.

plutonic rock See IGNEOUS ROCK.

plutonium (Pu) An important synthetic transuranic element discovered in 1940. Trace quantities exist in natural uranium ores. It is produced in large quantities in nuclear reactors by beta-decay from uranium-239. Plutonium is fissile and was used in the atomic bomb dropped on Nagasaki in 1945 (see NUCLEAR WEAPONS). It forms oxides (PuO, PuO₂), halides (for example PuF₃), and other compounds. It is used in *fast reactors and small power units for spacecraft. At no 94; at wt (244); mp 640°C; bp 3230°C.

Plymouth 1. 50 23N 4 10W A port in SW England, in Plymouth unitary authority, Devon, on Plymouth Sound between the Tamar and Plym estuaries. On Plymouth Hoe Drake is reputed to have finished his game of bowls while the Spanish Armada approached; the *Mayflower* embarked from here for America in 1620. Plymouth is the UK's largest naval base and has associated marine industries. Population (latest est): 245 991. **2.** A unitary authority in SW England, in Devon. Area: 76 km (30 sq mi). Population (2004 est): 244 400.

Plymouth Brethren An austere Protestant sect founded at Plymouth in 1830 by a former Anglican priest, J.N. Darby (1800–82). The Brethren have strict standards of behaviour and shun many secular trades and professions. Small groups exist throughout the world, often as active missionaries.

pneumoconiosis Chronic lung disease caused by inhaling dust, most commonly coal dust (causing coalworkers' pneumoconiosis) and silica (causing silicosis). Considerable coal dust may be taken into the lungs without causing much damage, but later progressive massive fibrosis may develop. See also ASBESTOSIS.

pneumonia Inflammation of the lungs,

mostly caused by infection. Pneumonia may arise in only one lobe of the lung (lobar pneumonia) or in patches in both lungs (bronchopneumonia). The infective organisms may be streptococci, viruses, tubercle bacilli, or other organisms, such as mycoplasmas. The patient has a fever, cough, and pain in the chest and may be breathless.

Po, River (Latin name: Padus) The longest river in Italy rising in the Cottian Alps and flowing mainly ENE through Turin to enter the Adriatic Sea by way of a large delta in the E. The Po Valley is the most fertile and economically important region in Italy. Length: 652 km (405 mi).

poachard A large-headed *duck, *Aythya ferina*, occurring in temperate inland waters of Eurasia. It has grey legs and a grey-blue bill; males have a reddish head, black breast, and grey body; females are brown. It feeds on water plants and small aquatic invertebrates.

podzol A type of *soil typical of many cool temperate humid zones especially with coniferous vegetation, as in the taiga of Russia and North America. It is characterized by an ashen-coloured upper layer (A horizon) and an underlying layer (B horizon) of redeposition humus and iron, which may develop into an impermeable pan.

Poe, Edgar Allan (1809–49) US poet, short-story writer, and critic. After publishing two volumes of poetry (1827, 1829), he worked for literary magazines. Among his prose tales and horror stories are "The Fall of the House of Usher" (1839), "The Black Cat" (1843), and the first ever detective story, "The Murders in the Rue Morgue" (1841). His best-known poems are "The Raven" (1845) and *The Bells* (1849).

poet laureate A title bestowed by the British monarch on a contemporary poet, whose traditional duties include the writing of commemorative odes on important public occasions. The first official poet laureate was John Dryden, who served from 1668 to 1688, and his most recent successors include John Betjeman (1972–84), Ted Hughes (1984–98), and Andrew Motion (1999–). Until 1999 the title was bestowed for life and the holder received an annual present of wine; it is now a salaried post with a fixed tenure of 10 years.

Poincaré, Raymond (1860–1934) French statesman; president (1913–20) and prime minister (1912–13, 1922–24, 1926–29). His foreign policy aimed to prevent French isolation in the face of possible German aggression. His post-

war economic policy brought a period of stability to France. His cousin **Jules Henri Poincaré** (1854–1912) was a mathematician, regarded by some as the last universal mathematician. Poincaré wrote important treatises on the nature of mathematical creativity, emphasizing its intuitional aspects.

poinsettia An ornamental shrub, *Euphorbia pulcherrima*, native to Mexico and tropical America and a popular pot plant at Christmas in Europe and North America. It has simple dark-green leaves and clusters of tiny greenish-yellow flowers surrounded by large scarlet bracts, up to 14 cm long, which resemble petals. Family: *Euphorbiaceae*.

pointer A breed of sporting dog originating in England and named after its habit of pointing its nose towards game. It is lithely built with a long tapering tail, a long muzzle, and drooping ears. The short smooth coat is white combined with yellow, orange, liver, or black. Height: 63–68 cm (dogs); 61–66 cm (bitches).

pointillism A style of painting using dots of pure colour. The pointillists applied primary colours to the canvas in dots and allowed the colours to be mixed by the eye. It was developed by *Seurat in France in the 1880s.

Poisson, Siméon Denis (1781–1840) French mathematician, who contributed to the mathematical theory of electricity, magnetism, and mechanics. His work on electricity led him in 1837 to discover Poisson's equation, which describes the electric field created by an arbitrary charge density. Poisson's distribution is widely used in probability calculations and **Poisson's ratio** (the ratio of the lateral strain to the longitudinal strain in a stretched wire) is used by engineers in studying the elongation of structural members.

poker A card game, usually for five to seven players. In the standard version each player receives five cards, with the option of discarding and replacing up to five of them. Each player makes bets on his or her hand before and after discarding until a limit is reached or no one wishes to bet further. The object is to make the best hand (i.e. the one containing the highest-ranking combination of cards) or to bluff one's opponents that one has the best hand.

Poland, Republic of A country in N Europe, on the Baltic Sea. Wide plains in the N rise to the Carpathian Mountains in the S, which reach heights of over 2500 m (8000 ft). About 90% of the inhabitants are Roman Catholic. *Economy:* Poland is one of the world's leading

agricultural nations. The chief crops are rye, wheat, oats, sugar beet, and potatoes. Its mineral wealth includes deposits of coal, copper, and sulphur; natural gas has been found as well as some oil. Poland's industries include shipbuilding, textiles, engineering, steel, cement, chemicals, and food products. *History:* Poland first became a separate state in the 10th century, which also saw the introduction of Christianity. From the 14th to 16th centuries its power was extended under the Jagiellon dynasty. Foreign intervention in the 18th century culminated in partition by Russia, Austria, and Prussia (in 1772, 1793, and 1795). At the Congress of Vienna in 1815 the *Congress Kingdom of Poland was created under the Russian Crown. After World War I independence was declared under Józef Piłsudski (1867–1935), who ruled as a dictator from 1927. In 1939 Poland was invaded by Germany; some six million Poles, including three million Jews, died during the occupation. Polish resistance contributed to the Allied victory, and in 1945 Poland was occupied by the Russians. The first postwar elections, in 1948, brought a communist-controlled government to power under Władysław Gomułka (1905–82). Unrest in 1970 led to his enforced resignation and he was succeeded by Edward Gierek (1913–2001). In December 1981, the independent trade union *Solidarity, led by Lech *Wałęsa, was outlawed and martial law was declared by Gen Wojciech Jaruzelski. Following mass demonstrations, Solidarity was relegalized in 1989 and allowed to contest a general election; it won all but two of the seats contested and led the new government with Wałęsa as president from 1990. The 1990s saw continuing economic crisis and a series of shortlived governments. In 1995 Aleksander Kwasniewski, a former communist, defeated Wałęsa in presidential elections. In 1997 Poland adopted a new constitution that removed the last traces of communism. The conservative Lech Kaczyński became president in 2005; his twin brother Jarosław Kaczyński became prime minister in 2006. Poland joined NATO in 1999 and the EU in 2004. Official language: Polish. Currency: złoty of 100 groszy. Area: 312 677 sq km (120 624 sq mi). Population (2007 est): 38 518 214. Capital: Warsaw.

Polanski, Roman (1933–) Polish film director, born in Paris. His films include *Repulsion* (1965), *Rosemary's Baby* (1968), *Tess* (1979), *Frantic* (1988), and *The Pianist* (2002).

polar bear A white bear, *Thalarctos maritimus*, living on the shores of the Arctic Ocean. Up to 2.5 m long and weighing 500–700 kg (de-

pending on the season), polar bears prey on seals, fish, and birds.

Polaris (or **North Star**) A remote cream *supergiant, apparent magnitude 2.0 and about 650 light years distant, that is the brightest star in the constellation Ursa Minor. It is the present *pole star, lying about 1° from the N celestial pole. It is a *Cepheid variable and is the primary component of a multiple star.

Polaris missile A US navy two-stage solid-fuelled nuclear strategic missile launched from a submarine and having a range of 4500 km (2800 m). Travelling at speeds of over mach 10, some versions (Poseidon) are capable of delivering 10 separately guided 15-*kiloton warheads. When fired from below the surface, the missile is ejected from the vessel by compressed gas, its rocket firing at the surface. Firing is by two-key control, linked directly to Washington. In the UK Polaris was replaced by the Trident missile in the 1990s.

polarized light Light in which the direction of vibration is restricted. In ordinary light (and other types of *electromagnetic radiation) the transverse vibrations of the electric and magnetic fields are at right angles to each other in all possible planes. In **plane-polarized light** the vibrations of the electric field are confined to one plane and the magnetic field to one at right angles to it. Plane-polarized light can be produced by reflection at a certain angle or by passing light through such doubly refracting substances as Polaroid (a plastic sheet impregnated with tiny crystals of a dichroic substance orientated parallel to each other). **Circularly and elliptically polarized light** occur when the electric vector describes a circle or an ellipse round the direction of the light beam.

polder An area of low-lying land reclaimed from the sea or other water, often for agricultural purposes. Polders are usually formed by constructing dykes around the area, which is then drained. The most notable polders are those of Holland, next to the IJsselmeer.

polecat A carnivorous mammal, *Mustela putorius*, found in woods and grassland throughout Europe, Asia, and N Africa. About 50 cm long, it has a dark-brown coat with yellowish patches on the face and ears. Polecats are nocturnal, foraging for rodents and insects. They eject a pungent fluid when alarmed. Family: *Mustelidae* (weasels, etc.). See also FERRET.

Poles, North and South The most northerly and southerly points of the earth's surface and the ends of the earth's axis, about

which it rotates. The magnetic north and south poles are the points to which a magnetic compass needle points and where the lines of force of the earth's magnetic field are vertical. They do not coincide with the geographical poles and their positions slowly change. See also ARCTIC CIRCLE; ANTARCTICA.

pole star Either of two stars that are nearest the N or S celestial pole. The poles are not fixed in position but, owing to precession of the earth's axis, trace out two circles in the sky over a period of 25 800 years. There is thus a sequence of stars that slowly, in turn, become the N or S pole star. See also POLARIS.

pole vault An event in athletics, in which competitors use a fibreglass pole to vault a horizontal bar. A competitor is allowed three tries at each height. The height is increased until only one competitor is left. The event was opened to women in 1995 (2000 in the Olympics). World record: 6.14 m (1994) by Sergei Bubka (Ukraine).

poliomyelitis A viral infection of the central nervous system that may result in muscle paralysis. It was formerly known as infantile paralysis, because children were most commonly affected. In most cases the infection is mild, but sometimes a more severe illness develops, which may lead to severe pain in the limbs followed by permanent paralysis. A vaccine is available that gives complete protection (see SABIN VACCINE; SALK VACCINE).

Polish (or **Lekhitic**) A West Slavonic language spoken in Poland and closely related to *Czech, *Slovak, and Sorbian. It is written in a Latin alphabet and the standard form is based on the dialect of Poznań.

polka A Bohemian folk dance in 2/4 time, which became a ballroom dance in 19th-century Europe and rivalled the waltz in popularity. It is characterized by three steps and a hop.

pollen The male gametes of seed plants, which are produced in the *stamens of flowering plants and in the male *cones of conifers and other gymnosperms. To ensure fertilization, the pollen must be transferred to the stigma (in flowering plants) or the female cone (in conifers)—the process of **pollination**. Many flowers are cross-pollinated, i.e. the pollen from one plant is deposited on the stigma of another of the same species by means of insect carriers, wind, or water. Some flowers are self-pollinated, the pollen being transferred from the anthers to the stigma of the same plant: the stamens are usually bent over the stigma

to assist the process. After pollination, a pollen tube grows down from the pollen grain into the pistil of the pollinated flower until it reaches the ovule. Two pollen nuclei travel down this tube: one fertilizes the egg cell, which develops into the embryo plant in the seed; the other fuses with a nucleus in the ovule to become food for the seed.

Pollock, Jackson (1912–56) US painter. By 1947 he had developed a style of *abstract expressionism to express feelings and unconscious thoughts through the act of painting itself (see ACTION PAINTING). He dripped paints onto very large canvases to form patterns of interweaving lines.

poll tax A levy on individuals (poll, head), regardless of means. First levied regularly in England in 1377, it was a direct cause of the Peasants' Revolt in 1381 and was abolished in 1698. A poll tax (the **community charge**) replaced domestic rates in 1989–90; following public opposition, it was replaced by *council tax in 1993.

pollution The addition to the environment of substances that cannot be rendered harmless by normal biological processes. Modern industrial and agricultural activities have led to pollution by either man-made toxic substances (such as pesticides and fertilizers) or by the overproduction of naturally occurring substances (such as carbon dioxide gas). Current problems include the disposal of radioactive wastes; increasing amounts of heavy metals (such as lead), carbon dioxide, carbon monoxide, etc., in the atmosphere; the disposal of human refuse and sewage; and unacceptable noise levels. See also ACID RAIN; GREENHOUSE EFFECT; OZONE.

polo A four-a-side stick-and-ball game, in which the players are mounted on specially bred ponies. It was played in Persia by 600 BC and was rediscovered by British officers in India in the 19th century. The riders use long sticks with mallet heads to hit a solid wooden ball, with the object of scoring goals. A game consists of up to eight seven-minute periods, or "chukkas," after each of which mounts are changed.

Polo, Marco (c. 1254–1324) Venetian traveller. His father and uncle travelled to Beijing in 1271 at the request of the Mongol emperor, Kublai Khan, taking Marco with them. Having learned Mongolian, he entered Kublai's service, conducting missions as far as S India, until leaving China in 1292. He subsequently fought for the Venetians against the Genoese and was

captured. In prison (1296–98) he dictated an account of his travels.

polonium (Po) A highly radioactive element discovered in 1898 by Marie Curie in minute amounts in pitchblende. It is 5000 times as radioactive as *radium and liberates considerable amounts of heat. Polonium has 27 isotopes, more than any other element. It is used in compact radiation and thermoelectric power sources. At no 84; at wt (209); mp 254°C; bp 962°C.

Pol Pot (1925–98) Cambodian politician; head of state of Democratic Kampuchea (1975–79). He launched an armed revolution in 1968 and commanded the victorious Khmer Rouge movement in the ensuing civil war (1970–75). He then began a radical restructuring of Cambodian society, having hundreds of thousands killed in labour camps. In 1979 his regime fell but he maintained influence over Khmer Rouge guerrillas in Cambodia from his exile in Thailand. In 1997 he was captured and sentenced to life imprisonment by former Khmer Rouge colleagues.

polyanthus A hardy perennial, *Primula* × *polyanthus*, derived from a cross between the common primrose and the cowslip. There are many varieties, with yellow, brown, blue, or red flowers. See also PRIMULA.

polo. The dimensions of the ground. If the side lines are boarded, the width is 160 yd (146.4 m) and there is a safety area extending 10 yd (9 m) beyond each side line and 30 yd (27 m) beyond each goal line.

polyesters Synthetic resins or *plastics that are polymers of *esters. Saturated polyesters

(i.e. those with no double bonds), made by a condensation reaction, are widely used in such synthetic fibres as Dacron and Terylene. Unsaturated polyesters are used as resins to make thermosetting plastics.

Polygonum A genus of annual or perennial herbs (about 75 species), found worldwide. 10 to 200 cm in height, they bear simple leaves and small white or pink flowers. Family: *Polygonaceae*.

polyhedron A solid body bounded by plane polygons constituting its faces. Three or more edges meet at a vertex. The five regular polyhedrons (known as Platonic solids) have equal faces that are regular polygons. They are the regular tetrahedron, hexahedron, octahedron, dodecahedron, and icosahedron with 4, 6, 8, 12 and 20 faces respectively.

polymerization The chemical combination of simpler molecules (monomers) to form long chain molecules (**polymers**) of repeating units. In **addition polymerization**, the monomers simply add together and no other compound is formed. Polythene is made from ethylene in this way. In **condensation polymerization**, water, alcohol, or some other small molecule is formed in the reaction, as in the production of *nylon.

polymethyl methacrylate See PERSPEX.

polymorphism In biology, the functional or structural variation between two or more members of a species, determined by differences in either genetic constitution, environmental conditions, or both. It is a widespread phenomenon in animals and plants. In **transient polymorphism** two different forms exist together temporarily, while one form is replacing the other; in **balanced polymorphism** the different forms continue to coexist.

Polynesia A division of Oceania in the S and central Pacific Ocean. The volcanic and coral islands include those of French Polynesia, Hawaii, Samoa, Tonga, Tuvalu, Kiribati, and the Line and Cook Islands. See also MELANESIA; MICRONESIA, FEDERATED STATES OF.

Polynesian The people of the Pacific islands contained within the roughly triangular area between and including Hawaii, New Zealand, and Easter Island. They are seafarers, with considerable skill in navigation. Fishing and cultivating are also important. The Polynesian languages belong to the Oceanic branch of the Austronesian family and include Samoan, *Maori, Tongan, Tahitian, and Hawaiian.

polyp (biology) A sedentary form that occurs

during the life cycle of many animals of the phylum *Cnidaria*. It has a cylindrical stalklike body attached at the base, with the mouth at the free end surrounded by tentacles bearing stinging cells (nematocysts). Polyps occur singly or in colonies; colonial polyps are modified for different functions, such as feeding, reproduction, and protection. See CNIDARIAN.

polyp (or **polypus**) (medicine) A growth that has a narrow base or stalk. Polyps may occur in the bowel, the nose, the womb, the larynx, and other sites. They often cause obstruction or infection and some forms may become cancerous.

polyphony (Greek: many voices) Music that consists of a horizontal combination of melodic strands rather than a series of vertical chords. The high point of the polyphonic style was reached in the 16th century with Palestrina's church music, the Italian *madrigal, the English madrigal, and the church music of Tallis and Byrd. See COUNTERPOINT; HARMONY; MODES.

polypropylene A thermoplastic material made by *polymerization of propylene (CH_2CHCH_3). It is similar to high-density *polythene but stronger, lighter, and more rigid. Polypropylene products, such as beer crates, luggage, and hinges, are injection moulded. Fibres, which are used to make sacks and carpet backings, are made by extrusion.

polysaccharide A complex carbohydrate comprising chains of between three and several thousand linked *monosaccharide units. Polysaccharides, such as *starch, *glycogen, and *cellulose, are important as energy reserves and structural components of plants and animals.

polytetrafluoroethene (PTFE) A synthetic material produced by the *polymerization of tetrafluoroethene ($\text{F}_2\text{C}_2\text{F}_4$). It can withstand temperatures of up to 400°C and has a very slippery surface. PTFE is used to coat nonstick cooking utensils and in gaskets, bearings, and electrical insulation. It is sold under the tradenames Teflon and Fluon.

polythene (**polyethylene** or **polyethene**) A white translucent thermoplastic material made by *polymerization of *ethene. **Low-density polythene** is made at high pressure and is a soft material used for flexible pipes, sheets, and bags. **High-density polythene** is made at lower pressures, is more rigid, and softens at a higher temperature. It is used for moulded articles.

polyurethane A synthetic polymer the molecules of which contain the -NH.CO.O- group. Some polyurethanes form thermosetting resins and others, thermoplastic resins. They have a wide range of properties and are used in paints, adhesives, moulded articles, rubbers, lacquers, and foams.

polyvinyl chloride (PVC) A vinyl *resin or plastic produced by *polymerization of vinyl chloride (chloroethene; $\text{CH}_2\text{:CHCl}$), a toxic gas. Rigid PVC products are made by moulding. The addition of a plasticizer produces flexible PVC. PVC is tough, nonflammable, and a good electrical insulator.

pomegranate A shrub or small tree, *Punica granatum*, native to W Asia and widely cultivated in the tropics and subtropics for its fruit. 5–7 m tall, it has narrow pointed leaves and orange-red flowers. The large round fruit has a thick yellowish-reddish skin and contains several chambers, each containing many seeds coated with a pinkish juicy pulp. Pomegranates are eaten fresh or used in beverages or wines. The seeds are used in preserves and syrups. Family: *Punicaceae*.

Pomeranian A breed of toy dog, developed in Pomerania, a region of NE Europe now divided between Poland and E Germany. Its ancestors are thought to have been Scandinavian sledge dogs. The Pomeranian has a compact body and foxlike head with small erect ears. The short undercoat is covered by a long straight outercoat and the fluffy tail is held over the back. The coat may be any recognized colour, including white, black, brown, or reddish. Height: 14–18 cm.

Pompadour, Mme de (Jeanne Antoinette Poisson, Marquise de P.; 1721–64) The mistress of Louis XV, who exerted considerable political influence from 1745 until her death. She influenced the negotiation of an Austrian alliance against Prussia and was blamed for French defeats in the subsequent 'Seven Years' War. She was a notable patron of artists and scholars.

Pompeii An ancient city near Naples, in Italy. It was buried four to six metres deep under volcanic ash by the eruption of Mount *Vesuvius (79 AD) and rediscovered in 1748. Pompeii provides unparalleled evidence for daily life in Roman times: buildings, with extensive wall paintings and graffiti; food and wooden furniture, preserved by the ash; and personal possessions abandoned by the fleeing inhabitants.

Pompey (Gnaeus Pompeius; 106–48 BC)

Roman general and statesman, called Pompeius Magnus (Pompey the Great). In 60 he joined Julius Caesar and Crassus in the first Triumvirate, marrying Caesar's daughter Julia (d. 54) in 59, but in 50 he supported the Senate's demand for Caesar to resign his armies. In the civil war that followed Pompey was defeated by Caesar at Pharsalus (48) and fled to Egypt, where he was murdered.

Pompidou, Georges (Jean Raymond) (1911–74) French statesman; prime minister (1962–68) and president (1969–74). He served under de Gaulle during World War II and was his personal assistant in 1958–59, when he helped draft the constitution of the Fifth Republic. He negotiated a settlement with the Algerians (1961) and with the students in the revolt of May 1968.

Pondicherry A Union Territory in SE India, on the Coromandel Coast. Founded by the French in 1674, it was their chief settlement in India until transferred to Indian administration in 1954. Rice and millet are the chief products. Area: 479 sq km (185 sq mi). Population (2001 est): 973 829. Capital: Pondicherry.

pond skater (or water strider) A water bug belonging to the family *Gerridae* with over 300 species. They have a slender body and long legs, feed on small insects, and walk on the surface of stagnant water, supported by surface tension.

pondweed A usually perennial aquatic herb of the genus *Potamogeton* (100 species), found worldwide in fresh water. It has submerged or floating oblong or pointed leaves and tiny greenish flowers. Family: *Potamogetonaceae*.

The Canadian pondweed (*Elodea canadensis*) has submerged stems, up to 3 m long, with whorls of narrow backward-curving dark-green leaves. Native to North America, it is naturalized in Europe and used in aquariums. Family: *Hydrocharitaceae*.

Ponte Vecchio A bridge over the River Arno in Florence. Topped by buildings, it was designed by Taddeo *Gaddi and finished in 1345. It was a highly advanced structure for its period.

Pontianak 005S 109 16E A port in Indonesia, in W Kalimantan on the Kapuas delta. Formerly Borneo's main gold town, its chief industries are shipbuilding and rubber, palm oil, sugar, and timber processing. Population (1995 est): 449 100.

pontoon (or vingt-et-un) A card game in which the objective is to score 21, counting court cards as 10 and the ace as 1 or 11. One card

is dealt to each player, who puts up a stake accordingly; a second card is then dealt. Players then have the option of "sticking" (keeping the cards they have), buying another card face down, or "twisting" (accepting another card face up at no cost). Hands scoring more than 21 lose their stakes (go "bust"). The winner is the player with the score nearest to 21. Players scoring exactly 21 win double their stakes.

Blackjack is a variant on pontoon played by a croupier and six punters in a casino, using four standard packs.

pony A *horse that does not exceed 1.47 m (14½ hands) in height at maturity, measured from the top of the shoulders (withers). The many modern breeds of pony are thought to have developed from one or two original types. Ponies have traditionally been used by man as pack animals and for riding. Today, they are especially popular as children's mounts and for pony trekking.

poodle A breed of dog of uncertain origins but long associated with France and Germany. The poodle is an active intelligent dog with a long straight muzzle, drooping ears, and a docked tail. The dense coat was originally clipped to enable them to swim and retrieve in water. The miniature poodle and toy poodle are derivative breeds of the standard poodle. Height: 38 cm minimum (standard); 28–38 cm (miniature); under 28 cm (toy).

Poole 1. 50 43N 159W A resort and port in S England, in Poole unitary authority, Dorset; it stands on **Poole Harbour**, one of the world's largest natural harbours, and has boatbuilding, engineering and pottery industries. Population (1991): 138 479. 2. A unitary authority in S England, in Dorset. Area: 37 sq km (14 sq mi). Population (2001): 138 299.

Poona (or Pune) 18 34N 73 58E A city in India, in Maharashtra. Capital of the Marathas in the late 18th century, it was taken by the British in 1817. A commercial, manufacturing, and military centre, it has cotton textiles, rubber, paper, and munitions industries. Population (1991): 1 559 558.

Poor Laws The laws that governed assistance to the poor in Britain. From the 16th century parishes were responsible for providing for their poor and from 1572 levied a rate for poor relief. The Poor Law Amendment Act of 1834 abolished such outdoor relief and those seeking assistance had to enter a *workhouse. The Poor Law system was not abolished until 1947.

pop art A US and British art movement of the 1950s and 1960s characterized by the use of techniques and subject matter from popular mass culture (television, comics, advertising, etc.). Leading pop artists included Andy *Warhol, Roy Lichtenstein (1923–97), Richard Hamilton (1922–), and Peter Blake (1932–).

Pope, Alexander (1688–1744) British poet. He established his reputation as a poet of biting wit and skill, especially in his masterly use of the heroic couplet, with *An Essay on Criticism* (1711) and the mock epic *The Rape of the Lock* (1712–14). His other works include translations of Homer's *Iliad* (1715–20) and *Odyssey* (1725–26), the mock epic *The Dunciad* (1728; revised 1742–43), the philosophical poem *An Essay on Man* (1733–34), and poems modelled on the satires of Horace.

Popish Plot (1678) A supposed conspiracy invented by Titus Oates (1649–1705) and Israel Tonge. They alleged the existence of a plot to assassinate Charles II and place his Roman Catholic brother, James, on the throne. The anti-Catholic passions Oates and Tonge thus aroused led to the execution of 35 suspects and the exclusion of Catholics from parliament (see TEST ACTS).

poplar A shrub or tree of the genus *Populus* (about 30 species), native to N temperate regions and grown for wood pulp, shade, and ornament. Up to 40 m tall, the trees may have a broad spreading crown, as in the European black poplar (*P. nigra*), or a tall slender one, as in the Lombardy poplar (*P. nigra* var. *italica*). The poplar has oval, triangular, or heart-shaped leaves and drooping catkins. The seeds have tufts of silky white hairs. Family: *Salicaceae*. See also ASPEN.

Popper, Sir Karl (Raimund) (1902–94) British philosopher, born in Austria. In *The Logic of Scientific Discovery* (1935) he argued that the basic procedure of science was the falsification, rather than the verification, of hypotheses by observation. In *The Open Society and Its Enemies* (1942) and *The Poverty of Historicism* (1957) he defended liberal individualism against Marxism.

poppy An annual, biennial, or perennial plant of the genus *Papaver* (about 120 species), native mainly to the N hemisphere and often grown for ornament. It yields a milky sap (latex) and bears large lobed or divided leaves and showy white, pink, or red flowers with 4–6 petals surrounding a dense whorl of stamens. The fruit is a capsule with pores through which the seeds are dispersed. Species include

the *corn poppy and *opium poppy. Family: *Papaveraceae*. See also WELSH POPPY.

porcelain White vitrified ceramic evolved by Chinese potters about 900 AD. It was not invented but developed out of stoneware pottery. There are three kinds of porcelain: hard-paste or true porcelain, soft-paste or artificial, and English bone china. Hard-paste porcelain consists of china clay (kaolin) and fusible feldspathic rock (petuntse) finely mixed and fired to about 1400°C. This forms a translucent white resonant vitreous body, which is usually glazed with pure petuntse during the firing. Soft-paste porcelain differs from hard-paste in that the clay or kaolin is mixed with an artificial flux, such as sand with lime, flint, soda, etc. The mixture is fired at about 1100°C and the glaze, usually of glass, is applied in a second firing at about 1000°C. Bone porcelain is an 18th-century English invention using bone ash as a flux.

porcupine A large herbivorous spiny *rodent belonging to either of the families *Erethizontidae* (New World porcupines; 11 species) or *Hystriidae* (Old World porcupines; 15 species). American porcupines tend to be arboreal and have prehensile tails. The North American porcupine (*Erethizon dorsatum*) is about 75 cm long and grows a soft winter coat that almost conceals its covering of quills. Old World porcupines are mainly ground-dwelling. The Indian crested porcupine (*Hystrix indica*) grows to 1 m in length and may have spines 35 cm long. Porcupines respond to a threat by turning their backs and raising their spines.

porphyria A group of genetic disorders in which there is an accumulation in the body of one or more porphyrins—precursors of the red blood pigment—due to an enzyme defect. The disease affects the digestive tract, causing abdominal pain, vomiting, and diarrhoea; the nervous system, causing psychotic disorder, epilepsy, and weakness; the circulatory system, causing high blood pressure; and the skin, causing photosensitivity.

porphyry An igneous rock, usually hypabyssal, containing numerous large crystals called phenocrysts set in a finer-grained, or sometimes glassy, groundmass. The term porphyry is often given with the name of the propyritic mineral, for example quartz porphyry.

porpoise A small toothed *whale belonging to the family *Phocoenidae* (7 species), of coastal waters. The common, or harbour, porpoise (*Phocoena phocoena*) of the N Atlantic and

Pacific, has a rounded body, tapering towards the tail, blue-grey above and pale grey beneath. It feeds on fish, squid, and crustaceans.

port A fortified usually dessert *wine from Oporto (N Portugal). The grapes grown on the Douro hillsides are trodden in stone presses. Fermentation is halted by adding brandy. Subsequently the wine is taken to the lodges near Oporto, where it matures in wood.

Port-au-Prince 18 40N 72 20W The capital of Haiti, a port in the SW on the Gulf of Gonaïves. Its main exports are coffee and sugar. The University of Haiti was founded here in 1944. Population (1997 est): 917 112.

Porter, Cole (Albert) (1893–1964) US composer of musical comedies and popular songs. He wrote a series of musicals, including *The Gay Divorcee* (1932), *Anything Goes* (1934), *Kiss Me Kate* (1948), and *Can Can* (1953). His songs included "Night and Day" and "Begin the Beguine."

Portland, Isle of A peninsula in S England, in Dorset, connected to the mainland by Chesil Bank. It contains Portland Castle, built by Henry VIII (1520). The Portland stone quarried here has been used in many London buildings, notably St Paul's Cathedral.

Port Louis 20 10S 57 30E The capital of Mauritius, in the NW of the island. Founded in about 1736, it is the site of two cathedrals. Sugar is exported. Population (1999 est): 147 648.

Port Moresby 9 30S 147 07E The capital and main port of Papua New Guinea, on the Gulf of Papua. It was an important Allied base in World War II. Population (1999 est, urban area): 298 145.

Pôrto Alegre 30 03S 51 10W A city in S Brazil, the capital of Rio Grande do Sul state on the Lagoa (Lagoon) dos Patos. It is a major commercial and industrial centre; industries are chiefly related to agriculture and include meat processing, tanning, and the manufacture of textiles. Population (2000): 1 320 000.

Port-of-Spain 10 38N 61 31W The capital and main port of Trinidad and Tobago since 1783, on the W coast of Trinidad. Notable buildings include the Anglican and Roman Catholic cathedrals. Petroleum products, sugar, and rum are among the main exports. Population (1996 est): 43 396.

Porto Novo 6 30N 2 47E The capital of Benin, on the Gulf of Guinea. A former centre of the slave trade with the Portuguese, it came under French rule in the late 19th century. Trade in-

cludes palm oil and cotton. Population (2004 est): 234 300.

Port Said (or **Bur Said**) 31°17'N 32°18'E A major port in Egypt, situated at the Mediterranean entrance to the Suez Canal. Founded in 1859, it became an important fuelling point but suffered from the closure of the Suez Canal (1967–75) and Israeli occupation of the E bank. Population (latest est): 469 533.

Portsmouth 1. 50°48'N 1°05'W A port in S England, in Portsmouth unitary authority, Hampshire, at the entrance to Portsmouth Harbour. Landmarks include Nelson's flagship *HMS Victory* and the Spinnaker Tower (2005). One of the chief naval bases in the UK, Portsmouth is also a commercial port. Population (latest est): 174 690. 2. A unitary authority in S England, in Hampshire. Area: 37 sq km (14 sq mi). Population (2004): 188 500.

Port Sudan 19°38'N 37°07'E A port in the Sudan, on the Red Sea. It handles much of the country's trade; exports include cotton, gum arabic, and sesame seeds. It also has an important salt-panning industry. Population (2000 est): 410 000.

Portugal, Republic of A country in SW Europe, occupying the W section of the Iberian Peninsula and bordering on the Atlantic Ocean. The *Madeira Islands are an integral part of Portugal. Coastal plains rise to mountains, reaching 1935 m (6352 ft) in the N. *Economy*: traditionally agricultural but now moderately industrialized. Portugal's principal exports include motor vehicles and components, textiles, clothing, cork, wood products, sardines, and fortified wines. Rich mineral resources include coal, copper pyrites, kaolin, haematite and hydroelectricity is a valuable source of power. Tourism is important. *History*: the early history of the region is that of the rest of the Iberian Peninsula (see SPAIN, KINGDOM OF). Portugal as a distinct Christian territory dates from 868. It became a kingdom in 1139 under Alfonso I (1112–85) and its long alliance with England began in the 14th century. From the 15th century Portuguese explorers opened up new trade routes, allowing for the establishment of an extensive overseas empire. The country was under Spanish domination from 1580 to 1640, when the Braganzas came to power. In 1807 Portugal was invaded by the French, who were defeated in the subsequent *Peninsular War. A revolution in 1910 overthrew the monarchy and established a republic. A period of political instability culminated in a military coup in 1926. A prominent role in the new government was played by António *Salazar, who became

prime minister in 1932. His long dictatorship saw colonial wars in Africa and economic decline. In 1974 Salazar's successor, Marcello Caetano (1906–80), was overthrown in a military coup. Constitutional government was restored in 1976. In 1986 Portugal joined the EC. Following elections in 2005 a left-wing government was formed under Jose Socrates. The current president, Anibal Cavaco Silva, was elected in 2006. Portugal adopted the single European currency in 1999–2002. Official language: Portuguese. Currency: euro of 100 cents. Area: 91 631 sq km (34 861 sq mi). Population (2007 est): 10 642 836. Capital: Lisbon.

Portuguese A Romance language spoken in Portugal, Galicia (Spain), Brazil, Madeira, and the Azores. Brazilian Portuguese differs slightly in grammar and sound system. A notable characteristic of Portuguese is the use of nasal vowel sounds.

Portuguese man-of-war A colonial marine invertebrate animal belonging to a genus (*Physalia*) of cnidarians found mainly in warm seas. It has a translucent bladder-like float (pneumatophore), pink, blue, or violet in colour. Attached underneath are *polyps bearing stinging tentacles, up to 50 m long, which paralyse fish and other prey. Order: *Siphonophora*; class: *Hydrozoa*.

Poseidon The Greek god of the sea and earthquakes, brother of Zeus and Hades. His many offspring included Theseus, Polyphemus, and the winged horse Pegasus. He was usually portrayed with a trident and dolphin. He was identified with the Roman *Neptune.

positron The antiparticle of the *electron, having the same mass and *spin as the electron but opposite electric charge. A positron and an electron annihilate each other on collision, producing two gamma-ray photons.

possum The most common Australian *marsupial, *Trichosurus vulpecula*, also called brush-tailed phalanger. Nocturnal and arboreal, it is cat-sized and has a soft greyish coat and bushy tail. It feeds mainly on buds, leaves, and fruit, and occasionally fledgling birds. The name possum is often used for other members of the family *Phalangeridae*.

postimpressionism The art of the late 19th-century French painters *Cézanne, *Seurat, *Van Gogh, *Gauguin, *Toulouse-Lautrec, and their followers whose work developed out of and, to some extent, in reaction to *impressionism. The term was coined by the British art critic, Roger *Fry.

postmortem See AUTOPSY.

potassium (K) A reactive alkali metal discovered by Sir Humphry Davy in 1807. It is a common constituent of the earth's crust; forming *feldspars (KAlSi_3O_8), clays, and evaporite minerals. The metal is prepared by electrolysis of the molten hydroxide. It is soft, easily cut with a knife, and reacts readily with water, catching fire and liberating hydrogen. It oxidizes rapidly in air and must therefore be stored under oil. The element is highly electropositive and its chemistry is dominated by its ability to form ionic salts (e.g. KCl). Its largest use is in fertilizers, potassium being essential for plant growth. Alloys of potassium and sodium have been proposed as heat transfer media in nuclear reactors, since the lowest melting alloy melts at -12.3°C . One of the three isotopes (^{40}K) is radioactive with a half-life of 1.3×10^9 years and is used in *potassium-argon dating. The metal and its salts impart a lilac colour to flames. At no 19; at wt 39.0938; mp 63.71°C ; bp 759°C .

potassium-argon dating A method of radiometric dating of geological specimens based on the decay of the radioactive isotope potassium-40, which is present to a small extent in all naturally occurring potassium. Its half-life is 1.3×10^9 years and it decays to argon-40; thus an estimate of the ratio of the two isotopes in a specimen of rock gives an indication of its age.

potato A perennial herbaceous plant, *Solanum tuberosum*, native to the Andes but cultivated throughout the world, especially in temperate regions, as an important vegetable crop. Potatoes were first introduced to England in the late 16th century by Sir Walter Raleigh. The plants grow to a height of 50–100 cm, with compound leaves and clusters of white and purple flowers. The tubers have a thin brownish-white, white, yellow, or pinkish skin and are rich in starch; there are several varieties, up to 15 kg in weight, and they are eaten cooked or ground into flour. Family: *Solanaceae*. See also SWEET POTATO.

potential, electric A measure of electrical work. The potential at a point in an *electric field is one volt when one joule of energy is needed to bring a positive charge of one coulomb to that point from infinity. Usually the potential difference between two points, rather than the absolute potential, is used. See also ELECTROMOTIVE FORCE.

potential energy Energy stored in a body by virtue of its position or configuration. Thus

a body, mass m , at a height h above the ground has a potential energy equal to mgh , where g is the *acceleration of free fall, relative to the ground. A compressed spring and an electrically charged body also store potential energy.

Potentilla A genus of mostly perennial herbs (500 species), found mainly in N temperate and arctic regions. It includes several species and hybrids grown as ornamentals. They have erect or creeping stems, 5–70 cm long, bearing compound leaves and yellow, white, or red flowers. The fruit is a group of seedlike achenes. Family: *Rosaceae*.

potholing See SPELEOLOGY.

pot marigold A herb, *Calendula officinalis*, native to S Europe and cultivated in temperate regions as an ornamental. About 30–35 cm tall, it bears simple oblong leaves and yellow or orange daisy-like flowers, often double in cultivated varieties. The fresh petals may be eaten in salads or puddings or are dried and used in medicines. Family: *Compositae*.

Potomac River A river in the E central USA, rising in the Appalachian Mountains of W Virginia and flowing generally NE through Washington, DC, to Chesapeake Bay. Length: 462 km (287 mi).

Potsdam 52 19N 13 15E A city in E Germany, on the River Havel adjoining Berlin. It was the residence of Prussian kings and German emperors. Notable buildings include the Brandenburg Gate (1770) and the Sanssouci Palace (1745–47). An industrial city, Potsdam has many scientific institutes. After the end of World War II in Europe, Truman, Stalin, and Churchill (and then Attlee) met here at the **Potsdam Conference**. Population (1999 est): 129 500.

Potter, Beatrix (1866–1943) British children's writer and illustrator. *The Tale of Peter Rabbit* (1900) was the first of a series of famous children's books concerning such animals as Jemima Puddle-Duck and Mrs Tittlemouse.

potter wasp A solitary *wasp belonging to the genus *Eumerus*, common in North America and Europe. It constructs juglike nests of mud or clay, cemented by saliva and attached to plant stems. A single egg is laid in each nest.

Poulenc, Francis (1899–1963) French composer, a member of Les Six. He produced a wide variety of compositions, including the song cycle *Le Bestiaire* (1919), the operas *Les Mamelles de Tirésias* (1944) and *Les Dialogues des Carmélites* (1953–56), and the ballet *Les Biches* (1923).

Pound, Ezra (1885–1972) US poet and critic. He went to Europe in 1908 and became a dynamic propagandist for modernist literary and artistic movements in London (see **IMAGISM**; **VORTICISM**). His early poetry included *A Lume Spento* (1908), his first volume, and the long poems *Homage to Sextus Propertius* (1917) and *Hugh Selwyn Mauberly* (1920). He moved to Paris and, in 1924, to Italy, where he worked on the *Cantos* (1925–69). His pro-fascist broadcasts during World War II led to his confinement in a mental hospital in the USA (1946–58), after which he returned to Italy.

Poussin, Nicolas (1594–1665) French painter, regarded as one of the greatest exponents of *classicism. Poussin lived in Rome from 1624 until his death, apart from two years in France. His representation of religious themes, such as *The Martyrdom of St Erasmus* (1628; Vatican), gave way to an interest in mythology and the Old Testament, for example *The Worship of the Golden Calf* (c. 1635; National Gallery, London). The classicism of his second Roman period is exemplified in *Landscapes with Diogenes* (1648; Louvre).

powder metallurgy The shaping of metals by pressing powdered metal into blocks, heating, and stamping. The method is used for working metals, such as platinum and tungsten, that are difficult to shape by other means. It leaves no scrap and is suitable for intricate shapes. Nonmetal additives can be easily included, such as the graphite lubricant in self-lubricating bearings.

Powell, Anthony (1905–2000) British novelist. His novel sequence *A Dance to the Music of Time* comprises 12 social comedies beginning with *A Question of Upbringing* (1951) and ending with *Hearing Secret Harmonies* (1975). He also wrote memoirs and diaries.

Powell, Colin (Luther) (1937–) US Republican politician and soldier. A general, he was appointed chairman of the Joint Chiefs of Staff in 1989, the first Black American to hold the post. He subsequently became US secretary of state under George W. Bush (2001–05).

Powell, (John) Enoch (1912–98) British politician. He became a Conservative MP in 1950. From 1960 to 1963 he was minister of health, his only cabinet post, and in 1968 he was dismissed from Edward Heath's shadow cabinet following a controversial speech against immigration. From 1974 to 1987 he was the Ulster Unionist MP for South Down.

power The rate at which a body or system

does work. It is measured in watts or horsepower.

power station An electricity generating plant that forms part of the *electricity supply system. In **thermal power stations**, heat from the burning of fossil fuels (oil, coal, and gas) or from thermal nuclear reactors is used to generate steam. The steam drives *turbines connected to alternating-current generators (turbo-alternators), thus converting heat into electricity. Gas turbines are also used, missing out the steam-generation stage. They are easy to build and flexible to run, but have an efficiency of only about 25%. Sometimes the exhaust gas is used to help generate steam for a steam turbine, in order to increase the station's overall efficiency. Usually in a steam-turbine thermal station about 30 to 40% of the heat is converted to electricity, most of the rest being lost when steam is condensed to water before it is returned to the boilers. Hydroelectric power stations are more efficient (up to 90%) and provide about 0.2% of UK electricity supplies. See also **ENERGY**.

Powys A county of E Central Wales, bordering on England. It was formed in 1974 from Montgomeryshire, Radnorshire, and most of Breconshire. It is generally mountainous, rising to 886 m (2907 ft) in the Brecon Beacons. Agricultural activities include sheep, cattle, dairy, and arable farming. Tourism is important. Area: 5077 sq km (1960 sq mi). Population (2004 est): 130 700. Administrative centre: Llan-drindod Wells.

Prado An art gallery in Madrid. Designed originally as a natural-history museum by Juan de Villanueva (1739–1811), the art gallery was founded in 1818 by Ferdinand VII. Most of its collection consists of paintings collected by the Spanish monarchs from the 16th century onwards. It includes works by Velázquez, Goya, *El Greco, *Titian, and *Bosch.

Praetorian Guard The official bodyguard of the Roman emperors created by Augustus in 27 BC. Composed of up to 16 long-serving infantry divisions each of 500–1000 men, and stationed as a single unit in Rome, the Guard and its commanders developed great political influence; as senatorial power diminished emperors came to rely upon Praetorian support and in later imperial times the emperor's position and even his life depended on the Guard's favour.

Prague (Czech name: Praha) 50°N 14°25'E The capital of the Czech Republic, in the centre of the country on the River Vltava. The industrial

and commercial centre of the country, it manufactures machinery, cars, aircraft, food products, clothing, and chemicals. Notable buildings include Hradčany Castle and the mainly gothic Cathedral of St Vitus. *History:* in the middle ages it was the seat of the Přemyslid kings of Bohemia. Under Habsburg rule from the 16th century, it was made the capital of newly independent Czechoslovakia in 1918. In 1968 the city was occupied by Soviet troops; in 1989 it witnessed mass demonstrations leading to the fall of the Communists. Population (2000 est): 1 186 855.

prairie dog A large ground squirrel, *Cynomys ludovicianus*, of North America, also called black-tailed prairie marmot. Heavily built animals, about 30 cm long, prairie dogs feed on grass and have been treated as pests by cattle ranchers.

prairies The extensive grasslands of the interior of North America. They occupy a broad N-S belt extending from Alberta and Saskatchewan through the Midwest into Texas, reaching as far W as the Rocky Mountains. Little of the original true prairie now remains, having been extensively ploughed for wheat production. *See also* STEPPES.

praseodymium (Pr) A *lanthanide element, which was separated from its mixture with neodymium by von Welsbach in 1885. It forms trihalides (for example PrCl_3) and an oxide (Pr_2O_3), which is used to give a strong yellow colour to glass. At no 59; at wt 140.9077; mp 931°C; bp 3520°C.

prawn A large shrimplike *crustacean (up to 20 cm long), belonging to the suborder *Natantia*. The antennae are longer than the body and a forward projection of the carapace forms a spike (rostrum) between the eyes, bearing six or more teeth. The second pair of appendages are enlarged to form pincers (*compare* SHRIMP). The common edible prawn (*Leander serratus*) occurs in temperate coastal waters and is 5–8 cm long.

Praxiteles (mid-4th century BC) Athenian sculptor, renowned for his handling of marble. His statue of Hermes, discovered at *Olympia in 1877, exemplifies the sensuous grace and repose of his work.

Precambrian Geological time from the formation of the earth's crust, about 4500 million years ago, to about 590 million years ago when the Palaeozoic era began. Precambrian rocks lie below the Cambrian system. Most are metamorphosed and have undergone one or more

Precambrian mountain-building periods as well as later ones. The largest areas of exposed Precambrian rocks are the *shield areas.

precession A circular motion described by the axis of a rotating object, such as a spinning top. The earth's axis exhibits a slow precession around the pole of the ecliptic, of about 50 seconds of angle a year.

precession of the equinoxes The gradual westward motion of the equinoxes around the *ecliptic in a period of about 25 800 years. It is caused by the precession of the earth's axis of rotation, which results mainly from the gravitational pull of the sun and moon on the equatorial bulge of the nonspherical earth. As the axis precesses, slowly tracing out a cone in the sky, the celestial equator moves relative to the ecliptic. The points of intersection, i.e. the equinoxes, thus continuously change.

predestination In Christian doctrine, God's foreordaining of salvation for certain people. The idea is propagated by St *Paul in the Epistles and was later developed systematically by St Augustine and *Calvin. It raises enormous problems about the nature of divine justice and the role of the human will and endeavours, problems that Christian philosophers have never satisfactorily solved.

pregnancy The period in humans during which a fetus develops in the womb, usually lasting for about 266 days from conception to delivery of the baby. A pregnancy can be confirmed after the first missed period with the aid of a pregnancy test, usually based on the presence of the hormone human chorionic *gonadotrophin in the urine.

premium bond A UK government security, held in numbered units of one pound, the interest on which is put into a fund and allocated to bond holders by a monthly lottery, as tax-free prizes. The numbers of winning bonds are selected by Electronic Random Number Indicator Equipment (ERNIE). Premium bonds were introduced in 1956.

Pre-Raphaelite Brotherhood A group including the British painters Dante Gabriel *Rossetti, John Everett *Millais, and William Holman *Hunt, who joined together in 1848 in reaction to the banality of contemporary British painting and its enthusiasm for *Raphael. Signing all their works PRB, they sought to emulate Italian painters earlier than Raphael and to paint subjects of a moral or religious character. The PRB had a strong in-

fluence on such artists as William *Morris and Edward *Burne-Jones.

presbyopia See LONGSIGHTEDNESS.

Presbyterianism A Protestant church organization based on government by elders. These elders determine Church policy through a hierarchical system of presbyteries, synods, and general assemblies. Presbyterianism originated with the 16th-century followers of *Calvin. In Scotland the tenets of Presbyterianism were formulated (1560) by *Knox and it became the established church in 1696.

Prescott, John (Leslie) (1938–) British Labour politician; deputy prime minister (1997–2007). His cabinet posts include secretary of state for local government and the regions (2002–06).

Presley, Elvis (Aaron) (1935–77) US popular singer, whose fusion of Black and White styles effectively created modern pop music. His first big hit, "Heartbreak Hotel" (1956), was followed by "Hound Dog," "Suspicious Minds," and numerous others, making him the best-selling recording artist in history. His early death was accelerated by drug dependence.

Press Complaints Commission An organization founded in 1991 to deal with complaints of invasion of privacy and unfair treatment by the press and to ensure that the press maintains high professional standards. It replaced the **Press Council**, founded in 1953 to defend press freedom.

press gang A band of men employed to force paupers, vagabonds, or criminals into the army or navy. This system of impressment, common throughout the world in the 18th century, ceased when improved pay and conditions in the army and navy increased voluntary recruitment.

pressure Force per unit area. For a liquid, density d , the pressure at a depth h is $h\delta g$, where g is the *acceleration of free fall. Pressure is usually measured in pascals, millimetres of mercury, or millibars.

pressure gauge An instrument for measuring the pressure of a fluid. Atmospheric pressure is measured with a mercury *barometer or an aneroid barometer. Pressures above atmospheric pressure are usually measured with a Bourdon gauge, which consists of a flattened curved tube that tends to straighten under pressure. Low pressures are measured with such vacuum gauges as the McLeod gauge or Pirani gauge.

Preston 53 46N 2 42W A city in NW England, the administrative centre of Lancashire on the River Ribble. It has plastics, chemical, motor-vehicle and aircraft construction, and electronics industries as well as the traditional cotton and engineering works. It was granted city status in 2002. Population (2004 est): 131 000.

Pretender, Old See JAMES EDWARD STUART, THE OLD PRETENDER.

Pretender, Young See CHARLES EDWARD STUART, THE YOUNG PRETENDER.

Pretoria (or **Tshwane**) 25 36S 28 12E The administrative capital of South Africa. Founded in 1855, it became the capital of the Union of South Africa in 1910. The University of South Africa was founded here in 1873. Industries include iron and steel processing, engineering, and food processing. Population (2005 est): 1 282 000.

Priam In Greek legend, the last king of Troy, husband of Hecuba. As an old man he witnessed the deaths of many of his 50 sons in the *Trojan War.

Priapus A Greek fertility god associated with gardens, son of Dionysus and Aphrodite. He was usually portrayed as a comic ugly figure with an enormous phallus. The donkey, symbol of lust, was sacrificed to him.

price index A single figure used to measure the average percentage change in the price of a set of goods over a period of time, taking a base figure of 100 for a specified year. The best-known indexes are the Producer Price Index, the Retail Price Index, and the EU's Consumer Price Index. Some wages, salaries, and costs are **index-linked** (i.e. increase in proportion to a specified price index) to cover the devaluation of money as a result of *inflation. **Indexation** is commonly used in agreements that extend over a long period during which inflation is expected to be a significant factor.

prickly pear A cactus of the genus *Opuntia*, native to North and South America and introduced to Australia and South Africa. It has flat jointed spiny stems bearing large orange or yellow flowers, which give rise to edible pear-shaped fruits. The seeds are used to produce an oil and the shoots are eaten as vegetables or used as animal feed.

Priestley, J(ohn) B(oynton) (1894–1984) British novelist and dramatist. He first won popular success with his picaresque novel *The Good Companions* (1929). His plays include *An Inspector Calls* (1946) and several mildly experi-

mental dramas exploring the nature of time, including *Time and the Conways* (1937).

Priestley, Joseph (1733–1804) British chemist and one of the discoverers of oxygen, together with Carl Scheele (1742–86). Priestley, being a firm believer in the *phlogiston theory, named his gas dephlogisticated air and first prepared it in 1774 by heating mercuric oxide. In 1778–79 *Lavoisier demolished the phlogiston theory and named the gas oxygen. Priestley also produced and studied several other gases, including ammonia, sulphur dioxide, and hydrogen chloride. He invented the method of collecting them over mercury, since some of these gases dissolved in water.

primary colours The minimum number of *colours that, when mixed in the correct proportions, are capable of giving all the other colours in the visible spectrum. When light of three **primary additive colours** (usually red, green, and blue) is mixed in equal intensities, white light results. This principle is used in colour television and colour *photography. Any particular colour can also be obtained by subtracting from white light a mixture of three **primary subtractive colours**, usually cyan (blue-green), magenta (purplish red), and yellow, which are complementary to red, green, and blue. Adding pigments of these in equal proportions gives black pigment.

primate A mammal belonging to the order *Primates* (about 195 species), which includes the *prosimians, monkeys, *apes, and humans. Primates probably evolved from insectivorous climbing creatures like *tree shrews and have many adaptations for climbing, including five fingers and five toes with opposable first digits (except in the hind feet of man). They have well-developed sight and hearing and enlarged cerebral hemispheres of the brain.

prime minister A head of government. In the UK the post developed in the 18th century. Sir Robert *Walpole is generally regarded as the first prime minister (1721–42) but the post was not formally recognized until 1905. The prime minister is customarily a member of the House of Commons and is head of government by virtue of being the leader of the dominant political party in the Commons.

prime number An integer greater than one that has no integral factors except itself and one; for example 2, 3, 5, 7, 11, 13, 17. Every natural number can be expressed uniquely as a product of prime numbers; for example $1260 = 2^2 \times 3^2 \times 5 \times 7$.

primitivism In art, the style of untrained artists who ignore or are ignorant of both traditional aesthetic standards and avantgarde trends. Its chief characteristics are meticulous detail, brilliant colours, childlike representation, and faulty perspective. The best known primitive is the French painter Henri *Rousseau; others include the American Grandma *Moses. The term is also sometimes applied to African and Polynesian indigenous art.

primrose A perennial herbaceous plant, *Primula vulgaris*, growing in woodlands and hedge banks in Europe and N Africa. It has a basal rosette of puckered spoon-shaped leaves, with solitary pale-yellow flowers. Family: *Primulaceae*. See also EVENING PRIMROSE.

Primula A genus of perennial plants (about 500 species), native mainly to N temperate regions and often grown as ornamentals. They have a basal rosette of leaves and five-petalled flowers, red, pink, purple, blue, white, or yellow in colour and usually with a different coloured centre. The fruit is a capsule. The genus also includes the *cowslip and *primrose. Family: *Primulaceae*.

Prince Edward Island An island province of E Canada, in the S Gulf of St Lawrence. Its small farms produce potatoes, grains, dairy cattle, and other livestock. Tourism and fishing are also important. *History*: discovered (1534) and colonized (1720) by France, the island was captured (1758) and resettled by Britain. In 1873 it joined Canada. Area: 5657 sq km (2184 sq mi). Population (2001 est): 138 500. Capital: Charlottetown.

Prince of Wales A title customarily conferred on the eldest son of the British sovereign. It was a native Welsh title until 1301, when Edward I, following his annexation of Wales, bestowed it on his son, the future Edward II. The present holder of the title is Prince Charles.

Príncipe Island See SÃO TOMÉ AND PRÍNCIPE.

printed circuit An electronic circuit in which the connections between components are formed by a pattern of conducting film on a board, instead of by wires. The method greatly facilitates mass-production. An insulating board is coated with a conducting material, such as copper, and a protective pattern is deposited on it using photographic techniques. The unprotected metal is then etched away and components are soldered in place.

printing The production of multiple copies of text or pictures, usually on paper. The oldest method, in use in China and Japan before 800 AD, is **letterpress**, in which the raised surfaces of etched, engraved, or cast material are inked and pressed onto the paper. This method was revolutionized by the invention of movable type in the 15th century. Early printing presses were of the hand-operated platen variety in which the type stands on a horizontal surface and the paper is pressed onto it from above. Faster production became possible on the power-driven presses of the 19th century: first the cylinder press, and later the rotary press.

In **lithography**, a method invented by Alois Senefelder (1771–1834) in 1798, the printing surface is smooth, the printing and nonprinting areas being made greasereceptive and grease-repellent respectively. Greasy ink rolled over the entire area is taken up only by the grease-receptive areas; the ink is then transferred by rolling onto the paper. **Offset printing**, involves an intermediate rubber-covered cylinder that transfers the ink from plate to paper. In **gravure printing**, the small square etched holes (cells) in the copper printing plate are filled with a free-flowing ink, the rest of the plate is wiped clean, and the plate is rolled against the paper, which absorbs the ink out of the cells.

Letterpress and offset lithography are used for almost all types of printing job; gravure is limited to long runs, such as cheap illustrated

magazines, postage stamps, and packaging. Direct lithography has been used almost exclusively by artists. In **silk-screen printing** (screen-process printing or serigraphy), a piece of taut open-weave silk, metal, or synthetic fabric carries the negative of the desired image in an impervious substance, such as glue; ink is forced through the clear (printing) areas by a squeegee onto the paper, glass, fabric, or other material, behind. It is used for printing posters, electronic circuit boards, labelling on bottles, etc.

Full-colour reproduction is achieved by **colour-process printing**, in which all colours can be produced from combinations of three primary colours—yellow, cyan (blue), and magenta.

prion A *petrel belonging to a genus (*Pachyptila*; 4 species) found in Antarctica and nearby islands. Prions have a blue-grey plumage with white underparts. The flattened bill has a fringe of strainers with the floor of the mouth forming a small pouch; it feeds by skimming over the sea and straining out small invertebrates.

prism A piece of glass or other transparent material having parallel polygonal ends, with a number of rectangular surfaces meeting them at right angles. They are used in optical instruments, such as cameras and binoculars, for changing the direction of light, either by refraction or by reflection from their walls. They

printing. Principles of three major printing processes and the three major designs of printing press.

are also used for splitting light into its component colours as a result of double refraction.

prisons Institutions for confining convicted criminals (see CRIMINAL LAW). In primitive societies, and throughout much of history, prisons were primarily places in which people were held until other punishments could be carried out. It was not until the 18th century that the main purpose of prisons became custodial. The appalling prison conditions at this time led to the reform movements of John *Howard and Elizabeth *Fry. During the 19th century a massive prison-building programme was carried out in the UK, modelled on Pentonville (1842), the structure of which was based on the principle of solitary confinement. Reforms since have changed the emphasis in penal institutions from retribution to correction and rehabilitation. The first "open prison," in which prisoners are permitted some personal freedom, was opened in 1936. See also COMMUNITY SERVICE; ELECTRONIC TAGGING.

Pristina 42 39N 21 10E A city in S Serbia, the capital of *Kosovo. It was the capital of medieval Serbia, until captured by the Turks in a decisive battle (1389). In 1999 it was severely damaged by Serb forces engaged in "ethnic cleansing" of Muslim Albanians, who make up the majority of the population. Population (2002): 165 844.

Pritchett, Sir V(ictor) S(awden) (1900–97) British short-story writer and critic. He travelled widely in Europe during the 1920s and wrote frequently about Spain. He published critical works, volumes of stories including his *Complete Short Stories* (1990), and two much acclaimed autobiographical books, *A Cab at the Door* (1968) and *Midnight Oil* (1971).

privatization The sale of a public corporation to the private sector. Conservative governments of the 1980s and 1990s sold interests in British Telecom, British Gas, and British Rail, etc., to private investors to increase the efficiency of these organizations and the number of shareholders in the community. Similar policies have been implemented by the formerly communist countries of E Europe and by developing countries in Africa and Asia. See NATIONALIZATION.

privet An evergreen or deciduous shrub or small tree of the genus *Ligustrum* (40–50 species), native to Eurasia and Australia and widely used for ornamental hedges, especially the European common privet (*L. vulgare*). Growing up to about 5 m high, it has simple

oval leaves and small creamy flowers, which give rise to black berries. Family: *Oleaceae*.

Privy Council A body advising the British monarch, now having chiefly formal functions. It consists of all cabinet ministers, the Archbishops of Canterbury and York, the speaker of the House of Commons, and senior British and Commonwealth statesmen, who are all addressed as the Right Honourable.

probability The mathematical concept concerned with the effects of chance on an event, experiment, or observation. It originated in 1654, when the mathematicians *Pascal and *Fermat worked on problems sent to them by a gambler. If an event can occur in n ways and r is the number of ways it can occur in a specified way, then the **mathematical probability** of it occurring in the specified way is r/n . For example, the probability of the number 5 coming up on a six-faced dice in one throw is $1/6$. The probability of a 5 coming up x times in x throws is obtained by multiplication, i.e. it is $(1/6)^x$. Probabilities are expressed as numbers between 1 (a certainty) and 0 (an impossibility). If an event has occurred n times and failed m times, the **empirical probability** of success in the next trial is $n/(n+m)$. Actuarial tables of life expectancy are based on empirical probabilities.

probation In English law, a court order, given instead of a sentence, requiring an offender of or over 17 years of age to be under the supervision of a probation officer for between 6 months and 3 years. Failure to comply with the order makes the offender liable to be sentenced for the original offence.

proboscis monkey A large leaf-eating *Old World monkey, *Nasalis larvatus*, of Borneo. Up to 1.5 m tall, proboscis monkeys have a protruding nose and live in groups in forests, feeding on young palm leaves.

progesterone A steroid hormone secreted mainly by the corpus luteum of the mammalian ovary following ovulation. It prepares the womb for implantation of the embryo and maintains this state during pregnancy. Progestogens—synthetic steroids with progesterone-like actions—are constituents of *oral contraceptives.

program, computer A series of instructions that directs a computer to perform a particular operation. The programs executed by the computer are in a machine code, which has the form of a series of numbers that the device interprets as either instructions or data. Pro-

gramming languages simplify the programmer's task. Low-level languages are those that resemble closely the logic of the machine; high-level languages, such as Basic, Fortran, Cobol, Algol, and Pascal, use abstract constructs more suited to human thought and are independent of any particular machine. *See also* SOFTWARE.

Prohibition (1919–33) A period during which the manufacture, sale, and transportation of alcoholic drinks were prohibited in the USA by the 18th Amendment to the constitution. The temperance movement, combined with the wartime need to divert grain from distilleries to food manufacture, led to national prohibition. It was repealed by the 21st Amendment.

Prokofiev, Sergei (1891–1953) Soviet composer and pianist. He lived abroad from 1918 to 1933 and in 1948 was officially condemned for “undemocratic tendencies” in his music. His work includes seven symphonies, five piano concertos, two violin concertos, the opera *The Love of Three Oranges* (1919), the ballet *Romeo and Juliet* (1935–36), and *Peter and the Wolf* (1936) for speaker and orchestra.

prolactin A protein hormone, produced by the pituitary gland, that initiates and maintains lactation in mammals. In other animals, it has a variety of functions, being involved in growth and the balance of water and salts, as well as reproduction. *See also* GONADOTROPIN.

proletariat Originally, the lower class of Rome and other ancient states, the term was later used to refer to the lower class of any community. *Marx defined the proletariat as the wage labourers of capitalist economies. *See* MARXISM.

promenade concerts Originally, concerts in which the audience was free to walk about, now a series of concerts organized by the BBC, which were started by Henry *Wood in 1895. The BBC Promenade Concerts (the Proms) have been held in the Royal Albert Hall since the original venue, the Queens Hall, was destroyed by bombs in World War II.

Prometheus (Greek: forethought) In Greek mythology, the son of a Titan and Themis who created man and endowed him with reason. He also stole fire from heaven to give to man. Zeus chained him to a rock in the Caucasus and sent an eagle each day to devour his liver, which grew again by night.

promethium (Pm) A radioactive element, not known on earth but identified by its spec-

trum in the light from stars, in which it is continuously being formed by nuclear reactions. The most stable isotope has a half-life of 17.7 years. Promethium salts exhibit bluish-green *luminescence and can be used in photoelectric cells. It is obtained from nuclear reactors. At no 61; at wt (145); mp about 1042°C.

propellant 1. A solid or liquid substance used to provide thrust in a rocket engine or gun. Propellants utilize very fast exothermic chemical reactions to produce large quantities of expanding gas quickly. Generally, they are explosive substances or mixtures. 2. The pressurized inert liquids used to drive an *aerosol from its container.

propeller A device for converting the rotation of a shaft into thrust in the direction of its axis. A **marine propeller** has between two and six blades, shaped as part of a helical surface. It acts as a screw, accelerating a column of water rearwards. An **air propeller** (or airscrew) has longer thinner blades (usually two or four) and a higher rotational speed. It, too, accelerates a mass of air rearwards thrusting the aircraft forwards.

proportional representation (PR) A voting system that aims to reflect accurately the wishes of the electorate and to ensure that votes for unsuccessful candidates are not wasted. In the system of PR known as the **single transferable vote** electors indicate their preferences among the candidates by numbering them on their ballot paper. Those candidates who obtain a required quota of first-choice votes are elected to represent the constituency. First-choice votes in excess of the quota are then redistributed to the voter's second-choice, as are those for the least successful candidate. The **alternative vote** system is similar but takes place in single-member constituencies. Under the **additional member** system people vote separately for a candidate and a party. Parties are awarded additional MPs if the number of constituencies they win does not reflect their share of the overall vote. In the **party-list system** (introduced for the UK's elections to the European Parliament in 1999) electors vote for a party, which is then allocated seats in proportion to its total vote. Elections to the devolved bodies in Scotland and Wales use a combination of the traditional “first-past-the-post” and the additional member system; those to the Northern Ireland assembly use the single transferable vote.

Proserpine *See* PERSEPHONE.

prosimian A *primate of the suborder

Prosimii (53 species), including the *lemurs, indris, sifakas, lorises, *bushbabies, *tarsiers, *tree shrews, and the aye-aye. Prosimians are mainly arboreal.

Prost, Alain (1955–) French motor racing driver. He is the most successful Formula One driver ever, having won 51 Grand Prix races. He won the World Championship in 1985, 1986, 1989, and 1993, the year he retired.

prostaglandins Compounds derived from long-chain (essential) fatty acids and found in mammalian body tissues. Their effects include stimulation of contraction in the womb, dilation of blood vessels, and modification of hormonal activity. They are released at sites of inflammation following tissue damage and the pain-relieving properties of such drugs as aspirin are due to their inhibition of prostaglandin synthesis.

prostate gland A gland in men, situated just beneath the bladder. It secretes an alkaline fluid during ejaculation that forms part of the semen. Enlargement of the prostate commonly occurs in elderly men, obstructing the bladder and preventing urination. It is usually treated by drugs, a surgical transurethral resection of the prostate (TURPS), or in extreme cases by removal of the gland (prostatectomy).

protactinium (Pa) A radioactive *actinide element, first identified in 1913. It is present in pitchblende as a member of the uranium decay series. The oxide (Pa_2O_5) and iodide (PaI_3) have been produced. The latter decomposes on heating to give the metal. At no 91; at wt (231); mp 1572°C .

Protea A genus of evergreen shrubs and trees (over 100 species), native to S and central Africa. They have small white, pink, yellow, or orange flowers that are grouped in clusters. The flowers are a national emblem of South Africa. Family: *Proteaceae*.

Protectorate (1653–59) The period during which England was governed by Oliver *Cromwell. The Instrument of Government (1653) vested executive authority in the Lord Protector (Cromwell) and a state council and legislative authority in the Protector and a triennial parliament. The Instrument was modified by the Humble Petition and Advice (1657), which gave more power to parliament. Cromwell's relations with parliament subsequently deteriorated and he dismissed it in 1658.

protein A complex organic compound that consists of one or more chains of *amino acids

linked by *peptide bonds ($-\text{NH}-\text{CO}-$). These chains are variously coiled, wound, and cross-linked to form a three-dimensional molecular structure that determines the biological properties of the protein. Proteins are manufactured by cells according to the genetic information carried in the chromosomes and the specific function of the cell (see DNA; RNA). Proteins fulfil many important biological roles: some, including *collagen and *keratin, are important structural materials of body tissues, while the proteins of muscle—actin and myosin—are responsible for its contractile properties. Proteins vital to the functioning of the body include enzymes, *antibodies, and many *hormones.

Protestantism The movement for Church reform that arose in the Western Church in the 16th century and led to the establishment of the Reformed Churches. The word derives from the *protestatio* of the dissident reforming minority at the Diet of Speyer (1529). The early leaders of the Reformation—*Luther, *Calvin, and Ulrich Zwingli (1484–1531)—each promoted his own brand of Protestantism. Under Elizabeth I Protestantism finally became the established religion in England.

There are many doctrinal divisions among Protestants, but all reject a varying number of tenets and practices retained in Catholicism. In general Protestants rely less upon ecclesiastical tradition, believing the Bible to be the sole source of truth. They deny papal authority and admit a variety of forms of Church government. Transubstantiation, *purgatory, special veneration of the Virgin Mary, and invocation of saints are all repudiated. The importance of the sacraments is minimized, with only baptism and the *Eucharist being accorded widespread acceptance. The preaching and studying of God's word in the Bible is conversely important.

Proteus A Greek sea god who served Poseidon as a shepherd of seals. He had prophetic powers but used his ability to change his form to avoid communicating his knowledge.

proton A positively charged elementary particle classified as a baryon (see PARTICLE PHYSICS). It forms part of all atomic nuclei, a single proton being the nucleus of the hydrogen atom. It is a stable particle, 1836 times heavier than the electron.

protostar An embryonic star that has formed out of a contracting cloud of interstellar gas and dust. It continues to contract, the density and temperature at its centre rising

until they are sufficiently high to cause energy-releasing thermonuclear reactions to begin in the central core. The collapse is then halted, and the object becomes a luminous star.

protozoa A large and diverse group of typically microscopic single-celled organisms, traditionally classified as simple animals but now assigned to a variety of phyla that are usually placed in the kingdom *Protoctista*. Widely distributed in moist and watery places, including mud, soil, fresh waters, and oceans, protozoans range in size from 0.1 mm to several centimetres. They may have one or several nuclei and a variety of specialized structures, including a contractile vacuole for regulating the water content and cilia or flagella for movement and feeding. The cell may be fairly rigid, with a stiff cell wall (pellicle) or skeletal elements, or flexible and variable. Some protozoans contain pigment and obtain food by photosynthesis in the same way as plants. However, most forms take in dissolved nutrients or solid food particles (detritus, bacteria, etc.). Asexual reproduction is by means of simple division of the parent cell (binary fission) or by budding to form new cells; various forms of sexual reproduction occur, including *conjugation. Proto-

zoans can survive dry or adverse conditions by forming resistant cysts or spores. Some are important parasites of humans and animals, including species of *Plasmodium*, which cause malaria, and trypanosomes, which cause sleeping sickness.

Proust, Joseph-Louis (1754–1826) French chemist, who demonstrated by accurate analysis that compounds always contain fixed proportions of elements. This is now known as the law of definite proportion or sometimes as Proust's law. This work contributed to Dalton's atomic theory.

Proust, Marcel (1871–1922) French novelist. In the 1890s he became a socialite in the most fashionable aristocratic circles in Paris but from 1905 he dedicated his life to writing. In 1912 he published the first volume (*Swann's Way*) of what was to become his masterpiece, *In Search of Lost Time*. The second volume, *Within a Budding Grove* (1919), won the Prix Goncourt; it was followed by *The Guermites Way* (1920–21) and *Cities of the Plain* (1921–22). Proust managed to complete but not revise the final three volumes before his death. *In Search of Lost Time* is a detailed portrait of the society that Proust had abandoned, recreated through

Amoeba

Paramecium
(Ciliophora)

Vorticella

Noctiluca

Elphidium
(Foraminifera)

Hexactinium
(radiolarian)

protozoa. Although consisting only of single cells, these organisms show a surprising complexity of structure. Many have organs of locomotion (pseudopodia, flagella, or cilia) and some have gullets, through which food is channelled.

the involuntary workings of memory. There is a strong autobiographical element.

Provençal A Romance language, strictly the dialect of *Provence, but also used to refer to the dialects of various regions of S France and in this broad sense often called Occitan. These dialects are also collectively described as the *langue d'oc*, in contrast to the *langue d'oïl* spoken in northern and central areas of France (oc and oïl being the medieval forms for yes in these two dialect areas). About nine million people still speak it.

Provence A former province in SE France, bordering on Italy and the Mediterranean Sea. A kingdom during the 9th century AD, it became part of France in 1481 and now forms the modern planning region of **Provence-Côte-d'Azur**. Chiefly mountainous, its fertile river valleys produce grapes, olives, and mulberries. It contains the French *Riviera along the S coast. Area: 31 435 sq km (12 134 sq mi). Population (1995 est): 4 428 000.

Prunus A genus of deciduous or evergreen shrubs and trees (over 200 species), mostly native to N temperate regions. It includes the *plums, *almonds, *apricots, peaches, and *cherries as well as many ornamental species. They have oval toothed leaves, and white or pink flowers. They produce stone fruits (see **DRUPE**), often with edible flesh or kernels. Family: *Rosaceae*.

Prussia A former state in N Germany on the NE Baltic coast. Established in the 13th century by the Teutonic Knights, Prussia became a duchy in 1525 under Hohenzollern rule. United with Brandenburg in 1618, it became the most powerful N German state. In the 18th century, under Frederick the Great, Prussia annexed Silesia and parts of Poland and became a major European power. Under *Bismarck's leadership, Prussia defeated Austria and Austria's German allies (1866), acquiring *Schleswig-Holstein and forming the North German Confederation. Following Prussia's victory in the *Franco-Prussian War (1870-71) the German Empire was proclaimed under Prussian leadership. Prussia was abolished by the Allies after World War II.

Przewalski's horse The single surviving species of wild horse, *Equus przewalskii*, discovered in Mongolia in about 1880 by the Russian explorer Nicolai Mikhailovich Przewalski (1839-88). It is sturdily built with a short erect dark-brown mane and a dark dorsal stripe. The coat is reddish brown. Height: 1.22-1.42 m (12-14 hands).

pseudopodium A temporary extension of the cytoplasm found in some protozoa and used for locomotion and for engulfing food particles. In *Amoeba*, the pseudopodia are blunt lobular processes but in other protozoa they may be slender, filamentous, or branching.

Psilocybe A genus of mushrooms growing in soil and dung. The Mexican species *P. mexicana* contains the hallucinogenic compounds psilocin and psilocybin. It was regarded as a sacred mushroom in Mexico and eaten during religious ceremonies. Mushrooms of the liberty cap fungus (*P. semilanceolata*) are common in pastures and lawns, having greyish-brown or olive-green conical caps.

psittacosis (or **parrot disease**) An infectious illness caused by a microorganism of the *Chlamydia* group, which is caught from birds, particularly parrots. The severity of the disease varies, but usually it causes pneumonia.

psoriasis A chronic recurring skin disease marked by excessive scaling of the skin. It begins with small red patches covered in scales and may spread extensively. The knees, elbows, lower back, scalp, and nails are most commonly affected.

psychedelic drugs See **HALLUCINOGENS**.

psychiatry The study and treatment of mental disorders. A psychiatrist is a medically qualified physician specializing in mental illness. The range of mental disorders includes *psychosis, *neurosis, psychosomatic disorders, *drug dependence, and mental retardation. Within psychiatry there are several specialities, notably child psychiatry, *psychotherapy, and geriatric psychiatry (psychogeriatrics).

psychoanalysis A school of *psychology and a method of treating mental disorders based upon the teachings of Sigmund *Freud (see also **ADLER**, **ALFRED**; **JUNG**, **CARL GUSTAV**). Psychoanalysis stresses the dynamic interplay of unconscious mental forces and the way in which the adult personality is determined by the course of sexual development in childhood. The chief techniques of psychoanalysis are free association and the recall of dreams in the course of intensive psychotherapy, the object being to bring repressed conflicts into consciousness so that they can be resolved. See also **EGO**; **ID**; **OEDIPUS COMPLEX**; **REPRESSION**; **SUPEREGO**.

psychology The scientific study of the behaviour of man and animals. Different schools of psychology use differing methods and have different theories. These include *behav-

iourism; experimental psychology; *Gestalt psychology; associationist psychology; and *psychoanalysis. Clinical psychology applies these approaches to the understanding and treatment of mental illness (see also PSYCHIATRY). Educational psychology studies the ways in which children learn, in order to intervene as problems arise. Occupational psychology studies people in their working environment. See also ETHOLOGY.

psychosis A severe mental illness in which the sufferer loses contact with reality. Organic psychoses are caused by diseases affecting the brain, such as epilepsy, alcoholism, and dementia; functional psychoses have no known physical cause. The major functional psychoses are *schizophrenia and manic-depressive psychosis. All psychoses can cause hallucinations, delusions, and altered thought processes.

psychotherapy Psychological methods of treatment for mental disorders. There are many different approaches to psychotherapy, including *psychoanalysis and *group therapy. In client-centred therapy the therapist refrains from giving any direct advice. Family therapy involves several members of a family meeting together with a therapist to improve their relationships. All these approaches share the goal of helping self-understanding and personal development through the relationship between the client and the therapist.

ptarmigan A grouse, *Lagopus lagopus*, found in Arctic tundra and mountain regions. 35 cm long, it has white wings and a mottled blackish-brown body that changes to white in winter. Its feet are covered with feathers and it feeds on shoots and fruits in summer and on lichens and leaves dug from the snow in winter.

pteridophyte A flowerless perennial vascular plant that shows a distinct *alternation of generations with the asexual spore-bearing (sporophyte) generation predominating. The sporophyte plant consists typically of leaves, stems, and roots and bears spores in special capsules (sporangia), which are often arranged in clusters (sori) on the leaves. Pteridophytes were formerly classified together in the division *Pteridophyta*, but in most modern classification systems they are assigned to separate divisions (or phyla). They include the clubmosses (*Lycophyta*), horsetails (*Sphenophyta*), whisk ferns (*Psilophyta*; mostly extinct), and ferns (*Filicinae*).

pterosaur (or **pterodactyl**) An extinct flying reptile that lived during the Jurassic and

Cretaceous periods (200–65 million years ago). A thin wing membrane stretched from the elongated fourth finger of the fore limb along the body to the knee; a second membrane stretched to the neck. It had long slender hind limbs, probably used to cling, batlike, to rocks and trees. Its light bones and toothless beaked jaw resembled those of modern birds.

Ptolemaic system A theory concerning the motions of the sun, moon, and planets that was originally advanced in Greece in the 3rd century BC and was completed by *Ptolemy in the 2nd century AD. It was a geocentric system in which the moon, Mercury, Venus, Sun, Mars, Jupiter, and Saturn moved around the earth. Ptolemy proposed that each orbiting body moved in a small circle (an epicycle) the centre of which moved in a larger circle (a deferent) around the earth. The Ptolemaic system was finally abandoned when the heliocentric system of *Copernicus was accepted.

Ptolemy (or **Claudius Ptolemaeus**; 2nd century AD) Egyptian mathematician, astronomer, and geographer. The foremost of his works outlines the *Ptolemaic system of astronomy and was known to Arab astronomers by the Greek superlative *Megiste*, which took the Arab form *Almagest*, the name by which it is still known. His other works include *Analemma* and *Planisphaerium* on geometry and *Geographike hyphegesis*.

Ptolemy I Soter (736?–728 BC) The first Macedonian King of Egypt and founder of the Ptolemaic dynasty. He was a general of Alexander the Great, after whose death he became governor of Egypt. He conquered Palestine, Cyprus, and much of Asia Minor, taking the title of king in 304. He made *Alexandria his capital, and wrote a history of Alexander's campaigns.

ptomaines Compounds formed during the bacterial decomposition of proteins in animal and plant tissues. Most are amines, such as diethylamine, putrescine, and cadaverine, and they may be poisonous, although the symptoms ascribed to "ptomaine poisoning" are usually due to bacterial toxins in contaminated food.

public school In the UK a fee-paying independent school, usually a boarding school with an established reputation. Although traditionally male preserves, most public schools now admit girls, especially at sixth-form level, and a number of well-known independent girls' schools were established in the 19th century; entrance is usually at 13. Any school the head-

teacher of which is a member of the Headmasters' and Headmistresses' Conference, the Governing Bodies Association, or the Governing Bodies of Girls' Schools Association is now usually regarded as a public school, making the total number about 200, although this includes many of the former direct-grant schools (state-assisted schools that have either been incorporated into the state system or become totally independent).

public sector Those parts of the economy that are financed out of taxation, are under state control, or both. It usually embraces central and local government, education, health and social services, and any nationalized industries. In the UK and many other countries certain businesses essential to the life of the community, such as the public utilities, were formerly nationalized but are now privately owned (see PRIVATIZATION). The amount by which the receipts of the public sector, including taxation, fall short of public expenditure constitutes the Public Sector Borrowing Requirement.

Puccini, Giacomo (1858–1924) Italian opera composer. His first major success was *Manon Lescaut* (1893). The operas that followed established Puccini as the master of the *verismo* (Italian: realism) style: *La Bohème* (1896), *Tosca* (1900), and *Madame Butterfly* (1904). *La fanciulla del West* (1910) and the three one-act operas of *Il Trittico* (1918) were less successful; his final masterpiece, *Turandot*, was produced posthumously in 1926.

Pueblo Indians North American Indian tribes of the SW region including the Tewa, Keres, Hopi, and Zuni. Their collective name derives from the Spanish term for their villages—*pueblos*. They began to abandon their hunting existence and adopt their present farming economy about 1600 years ago. They were always extremely peaceful peoples, much given to ritual and ceremonial pursuits. Communities were traditionally governed by a council of the heads of the various secret religious societies. The diversity of Pueblo languages indicates different origins.

Puerto Rico, Commonwealth of (name from 1898 until 1932: Porto Rico) An island and self-governing commonwealth in association with the USA. It is in the West Indies, the smallest and most easterly island in the Greater Antilles. It is largely mountainous, rising to over 1200 m (3937 ft), and supports one of the densest populations in the world. *Economy*: industrialization has transformed the economy

since World War II. Manufacture (chemicals, textiles, plastics, food processing) is the main source of income, while in the agricultural sector income from dairy and livestock farming has overtaken that of sugar, the principal crop. *History*: discovered by Columbus in 1508, it was under Spanish rule for nearly 400 years until ceded to the USA in 1898. Full US citizenship was granted in 1917 and it attained its present status in 1952. Since the mid 1970s there has been militant pressure for the independence of Puerto Rico but also a strong lobby arguing for its incorporation as a state of the USA. In 1993 and 1998 Puerto Ricans voted against both these options, choosing to maintain their present status. Official languages: Spanish and English. Currency: US dollar of 100 cents. Area: 8674 sq km (3349 sq mi). Population (2002 est): 3 856 000. Capital: San Juan.

puff adder A large stout-bodied highly venomous *adder belonging to the genus *Bitis* (8 species), occurring in semiarid areas of Africa and characterized by its habit of hissing loudly and inflating its body in a threatening posture. Puff adders are brown or grey with yellow chevron patterning.

puffball The globular or pear-shaped fruiting body of certain fungi. As it matures, the outer layer cracks and sloughs off; the spongy interior produces powdery spores. The greyish-white giant puffball (*C. giganteum*) occurs in pastures, woodlands, and road verges and may reach over 1 m across. Phylum: Basidiomycota.

puffer A fish, also called globefish, belonging to the family *Tetraodontidae*, that inflates its body with air or water when disturbed. The tough spiny skin contains a highly toxic chemical (tetraodontotoxin), which can be fatal. Puffers live mainly in tropical and subtropical seas, feeding on corals, molluscs, and crustaceans. Order: *Tetraodontiformes*.

puffin A N Atlantic seabird, *Fratercula arctica*. 29 cm long, it is black with a white face and underparts, red legs, and a blue ring around the eye. Its large triangular bill is striped red, yellow, and blue in the breeding season. It feeds at sea on fish and molluscs and breeds in disused rabbit burrows. Family: *Alcidae* (auks).

pug A breed of toy dog originating in China and introduced to Britain from Holland in the 17th century. It is stockily built, and has a wrinkled skin and a large head with a short square muzzle. The short smooth coat can be silver, black, or apricot-fawn with a black mask on the face. Height: 25–28 cm.

p

Pugin, Augustus Welby Northmore (1812–52) British architect and theorist. Pugin was the most vocal exponent of the English gothic revival. His most influential book, *Contrasts* (1836), exalted the English *Decorated style (late 13th to early 14th centuries) above all others. He was most accomplished at designing churches, such as Nottingham Cathedral (1842), but is best known for his collaboration with *Barry on the *Palace of Westminster, being responsible for the interior design.

Pulitzer Prizes Annual awards endowed by the US publisher Joseph Pulitzer (1847–1911) for achievements in journalism and literature. The prizes for journalism and for literature were first awarded in 1917. Since 1943 a prize for musical composition has also been awarded.

Pullman, Philip (1946–) British author. He writes primarily for older children, but has attracted readers of all ages. He is best known for *His Dark Materials*, a trilogy of fantasy novels comprising *Northern Lights* (1997), *The Subtle Knife* (1999), and *The Amber Spyglass* (2000).

pulsar A celestial object that emits extremely regular pulses of radiation and is almost certainly a rotating *neutron star. Pulsars were originally discovered, in 1967, at radio wavelengths. The Crab and Vela pulsars also emit pulses at optical and gamma-ray wavelengths. The pulses arise when a beam of radio waves emitted by the rotating star sweeps ast the earth. The radiation (synchrotron radiation) is generated by electrons moving in the star's strong magnetic field; the emission site is still uncertain. Pulsars are thought to originate in supernovae.

pulsating stars See VARIABLE STARS.

puma See COUGAR.

pumice A volcanic rock derived from acidic lava. It resembles sponge in having many cavities produced by bubbles of gas trapped on rapid solidification. Pumice is light in colour and weight and often floats on water.

pumpkin The fruit of certain varieties of *Cucurbita pepo* and *C. maxima*, small bushes or trailing vines cultivated in North America and Europe. The fruit is large and round, up to 30 kg in weight with a lightly furrowed yellow rind surrounding an edible fleshy pulp and numerous seeds. It is cooked and eaten as a vegetable, in pies, puddings, and soups or used as animal feed. Family: *Cucurbitaceae*.

Punic Wars Three wars between Rome and Carthage, which gave Rome control of the

Mediterranean. The first Punic (from the Latin *Punicus*, Carthaginian) War (264–241 BC) was provoked by Roman intervention in Sicily and was marked by the emergence of Roman naval power: its newly built fleet was victorious off the Aegates Insulae (241), which brought the war to an end. The second Punic War (218–201) was instigated by Hannibal's capture (219) of Saguntum, a Roman ally in Spain. His advance into Italy was eventually checked by *Fabius Maximus and Scipio Africanus, who defeated Hannibal at Zama (202). Roman fears of a resurgence of Carthaginian power caused the third Punic War (149–146), in which Carthage was destroyed and its territory became the Roman province of Africa.

Punjab A region of the NW Indian subcontinent, in India and Pakistan below the Himalayan foothills on the flat alluvial plain of five Indus tributaries. Hot and dry, it produces grain surpluses with irrigation. Pulses, cotton, sugar cane, oilseeds, fruit, and vegetables are also grown. Industries include textiles, bicycles, electrical and metal goods, machinery, and food products. Its population is 60% Sikh in India's Punjab state, and almost entirely Muslim in Pakistan's Punjab province. *History:* the Punjab was conquered by Muslims (11th century) but eventually became a Sikh stronghold until Britain established control (19th century). On the partition of India and Pakistan (1947), the Punjab was divided on a religious basis. The W section became the Pakistan province of West Punjab (renamed Punjab in 1949), with an area of 205 346 sq km (79 284 sq mi) and its capital at Lahore; its population in 1998 was 72 585 000. The Indian section was reorganized in 1966 on a linguistic basis when the Punjabi-speaking state of Punjab was created, 50 376 sq km (19 445 sq mi), with its capital at Chandigarh; its population in 2001 was 24 289 296.

pupa A stage in the life cycle of certain insects, including flies, butterflies, ants, bees, and beetles, during which complete *metamorphosis from larva to adult takes place. The adult emerges by cutting or digesting the pupal case after a period of a few days to several months.

pupil See EYE; IRIS.

Purcell, Henry (1659–95) English composer and organist. In 1677 he was appointed composer to the orchestra of the Chapel Royal and, in 1682, organist there. He wrote keyboard pieces, sonatas, anthems, songs, cantatas, and much music for the stage, including incidental music for *King Arthur* (1691) and *The Fairy Queen* (1692) and one opera, *Dido and Aeneas* (1689).

purgatory In Roman Catholic doctrine, the state in which souls are purified after death to make them fit for heaven. Masses or prayers for the dead are believed to shorten a soul's purgatorial sufferings. The doctrine of purgatory was officially adopted by the Church in the late 6th century, but at the Reformation the Protestants rejected the concept.

Purim A Jewish festival, commemorating the frustration of an attempt to exterminate the Jews of the Persian Empire (473 BC), as narrated in the book of Esther. It is celebrated on the 14th Adar (Feb–March), with lighthearted festivities and charitable gifts.

purine An organic nitrogenous base ($C_5H_4N_4$) consisting of a two-ringed molecule of carbon and nitrogen atoms. The derivatives adenine and guanine are constituents of the nucleic acids *DNA and *RNA. Uric acid and *caffeine are also purines.

Puritanism A movement among Protestants in 16th- and 17th-century England. The term originally denoted members of the Church of England in Elizabeth I's reign who wished to eliminate elements in the Church's liturgy and hierarchy that were reminiscent of Roman Catholicism. In the 17th century the Puritans, many of them now forming extremist sects (see LEVELLERS), became associated with the parliamentary side in the Civil War. After the Act of Uniformity (1662) the term *Non-conformists became generally applied to the sects of Puritan origin that survived.

Pusan 35 05N 129 02E A port in SE South Korea, on the Korea Strait, capital of South Kyongsang province and South Korea's second largest city. Its industries include shipbuilding. Population (2003 est): 3 747 369.

Pushkin, Aleksandr (1799–1837) Russian poet, novelist, and dramatist. In 1820 he was exiled to the southern provinces for his political verse. In exile he began the epic verse novel *Eugene Onegin* (1833), on which Tchaikovsky based his opera (1877–78). In 1824 he was transferred to NW Russia, where he wrote the historical drama *Boris Godunov* (1831). He returned to Moscow in 1826. During his last years he wrote the epic poem *The Bronze Horseman* (1837) as well as lyrical poetry and several prose works. He died of injuries sustained in a duel.

puss moth A moth, *Cerura vinula*, of Europe, Asia, and N Africa. The adult has a fat white hairy body with black spots. The caterpillar is green with black markings and when alarmed it presents a grotesque appearance with the

head and tail appendages raised up. It feeds on sawallow, willow, and poplar.

Putin, Vladimir (Vladimirovich) (1952–) Russian statesman; president of the Russian Federation (2000–). A former KGB colonel, he became head of Russia's security services in 1998 and prime minister in 1999. He became acting president on Yeltsin's resignation (31 December 1999), and full president following elections in March 2000. His crushing of the revolt in *Chechnia (1999–2000) and his curtailment of media freedoms have been criticized in the West but he remains highly popular in Russia. He was re-elected in 2004.

Putrajaya 2 80N 101 40E The capital of Malaysia since 1999, in the SW Malay Peninsula. Construction of this high-tech garden city is expected to be complete in 2010, when it will house over 300 000 people.

Puttnam, David (Terence), Baron (1941–) British film producer, who was chairman (1986–87) of Columbia Pictures. His films include *Midnight Express* (1978), *Chariots of Fire* (1981), *The Killing Fields* (1984), *The Mission* (1986), and *My Life So Far* (1999). He was made a life peer in 1997.

PVC See POLYVINYL CHLORIDE.

Pygmalion In Greek mythology, a legendary king of Cyprus who made an ivory statue and fell in love with it. When he prayed for a wife who would be as beautiful as the statue, Aphrodite gave the statue life.

Pygmies Peoples of the tropical forest region of Africa, who are much smaller in stature than their Bantu neighbours. The males are less than 150 cm (4 ft 11 in) in height. They are nomadic hunters and gatherers, wandering in small and basically patrilineal exogamous bands of around 30 members. They speak various Bantu languages.

pygmy hippopotamus A small *hippopotamus, *Choeropsis liberiensis*, of West African forests. Up to 100 cm high at the shoulder and weighing about 200 kg, pygmy hippos frequent river banks, sleeping during the day and feeding in the forest at night.

P'yŏngyang 39 00N 125 47E The capital of the Democratic People's Republic of (North) Korea, in the NW on the River Taedong. Reputedly the oldest city in Korea, it is a major industrial as well as administrative centre. Population (2003 est): 2 767 900.

Pyracantha A genus of thorny evergreen shrubs (about 10 species), known as firethorns,

p

native to SE Eurasia and widely cultivated as garden shrubs. A commonly grown species is *P. coccinea*. It has finely toothed leaves and white or pinkish-yellow flowers. The round scarlet berries may last all winter. Family: *Rosaceae*.

pyramids Royal funerary monuments in ancient Egypt. The greatest are the pyramids of *Khufu, Khafre, and Menkaura (Greek name: Mycerinus) at Giza (built c. 2600–2500 BC), the only survivors of the *Seven Wonders of the World. Pyramids were also built in ancient Mexico.

Pyramus and Thisbe Legendary lovers in a Babylonian story retold by *Ovid. The couple were forbidden to marry by their parents but exchanged vows through a chink in the wall between their houses. They arranged a secret meeting. Thisbe arrived first at the meeting place, which was near a mulberry tree; but she was frightened by a lion and fled, dropping her veil. Pyramus, finding her veil and thinking her dead, stabbed himself, and when Thisbe returned she killed herself also. The mulberry tree has borne blood-red fruit ever since. The rustics' farce in Shakespeare's *A Midsummer Night's Dream* is based on this story.

Pyrenean mountain dog (or **Great Pyrenees**) A breed of large dog, possibly of Asian origin, used in Europe for over 3000 years to guard shepherds and their flocks. They are massively built with drooping ears. The long thick slightly wavy coat is white, with or without grey or brown patches. Height: 71 cm (dogs); 66 cm (bitches).

Pyrenees (French name: Pyrénées; Spanish name: Pirineos) A mountain range in SW Europe. It extends between the Bay of Biscay in the W and the Mediterranean Sea in the E, forming a barrier between France and Spain. The entire republic of Andorra lies within the range, which rises to 3404 m (11168 ft) at Pico de Aneto.

pyrethrum A perennial plant, *Chrysanthemum coccineum* (or *Pyrethrum roseum*), with finely divided leaves and showy red, pink, lilac, or white flowers. It is native to Persia and the Caucasus and widely cultivated for ornament in temperate regions. An insecticide is prepared from its dried flower heads. Family: *Compositae*.

Pyrex The trade name for a heat-resistant glass containing borosilicate. It is also resistant to many chemicals and is an electrical insulator. Pyrex is used in laboratory glassware, ovenware, and large telescopes.

pyridine (C_5H_5N) A hygroscopic colourless liquid, with a strong odour, which boils at 115°C. It is a basic aromatic compound with a six-membered heterocyclic molecule, made by passing tetrahydrofurfuryl alcohol and ammonia over a catalyst at 500°C. It is used as an industrial solvent and in the manufacture of various drugs and pesticides.

pyridoxine See VITAMIN B COMPLEX.

pyrimidine An organic base ($C_4H_4N_2$) consisting of a six-membered ring of carbon and nitrogen atoms. Its derivatives cytosine, thymine, and uracil are constituents of the nucleic acids *RNA and *DNA.

pyrite (or **iron pyrites**) A pale brassy yellow mineral, FeS_2 , the most common sulphide mineral. It occurs as an accessory mineral in igneous rocks, in hydrothermal veins, in contact metamorphic rocks, and in sediments laid down in anaerobic conditions. It is usually mined for its sulphur, used for the manufacture of sulphuric acid, or for the gold and copper found in association with it. Because of its colour it has been called fool's gold.

pyroelectricity The development of opposite electric charges on opposite faces of asymmetric crystals when they are heated. The charges occur on those faces that are responsible for the crystal's asymmetry. Quartz and tourmaline have pyroelectric properties. See also PIEZOELECTRIC EFFECT.

pyrometer An instrument used for measuring high temperatures. The two most important types are the optical pyrometer and the radiation pyrometer. In the optical pyrometer a filament, heated to a known temperature, is viewed with the hot body in the background. The temperature of the filament is adjusted until it appears to vanish; at which point its temperature is the same as the temperature to be measured. In the radiation pyrometer, radiant heat from the hot body is focused into a *thermocouple, which develops a potential difference proportional to the temperature.

pyroxenes A group of ferromagnesian rock-forming silicate minerals. They usually occur in basic and ultrabasic igneous rocks but also in some metamorphosed rocks. Those of orthorhombic crystal structure are orthopyroxenes and those of monoclinic structure are clinopyroxenes. Orthopyroxenes vary in composition between the end-members enstatite ($MgSiO_3$) and orthoferrosilite ($FeSiO_3$). Clinopyroxenes, the larger group, include diopside,

hedenbergite, augite, pigeonite, aegirine, jadeite, and spodumene (a source of lithium).

Pyrrhus (319–272 BC) King of Epirus (307–303, 297–272). Having secured his throne (297), Pyrrhus pursued an adventurous policy of expansion but his empire was short-lived: in support of Tarentum against Rome he won victories that cost much in loss of life ("Pyrrhic" victories), and he was forced to withdraw.

pyruvic acid An organic acid (CH_3COCOOH). Its anion, pyruvate ($\text{CH}_3\text{-CO-COO}^-$), is an important intermediate compound in the carbohydrate metabolism of living organisms.

Pythagoras (6th century BC) Greek philosopher and religious leader. Born at Samos, he migrated in about 530 BC to Croton (S Italy), where he founded a religious society that governed Croton for many years until its sup-

pression (460–440 BC). Its members followed an ascetic regime aimed at purifying the soul and releasing it from "entombment" in successive bodies. Pythagoras probably discovered the geometrical theorem named after him and certainly discovered the arithmetical ratios governing musical intervals, which led him to interpret the universe in terms of mathematics alone. Pythagoreans were pioneers in several branches of science. *See also* ALCMAEON.

python A large *constrictor snake belonging to the Old World subfamily *Pythoninae* (20–25 species), occurring in tropical and temperate regions. Pythons usually live near water and tend to be sluggish, catching prey—which may include goats, pigs, and deer—by ambush. The reticulated python (*Python reticulatus*) is the largest of all constrictors, reaching 10 m in length. Family: *Boidae*.

Qatar, State of A country in the Middle East, in Arabia. The native population is mainly Arab and Wahhabi Sunni Muslim, but over 80% of workers are immigrants from other countries. *Economy:* oil extraction accounts for some 90% of the national income and Qatar is a member of OPEC. The export of natural gas is of growing importance. *History:* Qatar relied on Britain for most of the 19th and 20th centuries, becoming a protectorate in 1916; it became independent in 1971. In 1995 Sheikh Hamad bin Khalifa al-Thani became emir after ousting his father. Qatar was an absolute monarchy until 2003, when an elected national body was created. That same year a new constitution gave women the right to vote and hold office. Official language: Arabic. Currency: Qatar riyal of 100 dirhams. Area: 11 000 sq km (4246 sq mi). Population (2003 est): 626 000. Capital: Doha.

Qin (or Ch'in; 221–206 BC) The dynasty under which China became a unified empire. The first Qin emperor, Shi Huangdi (or Shih Huang Ti; c. 259–210 BC), consolidated his vast conquest by unifying weights, measures, and coinage and by creating one system of writing for the whole empire. It was during the Qin reign that much of the *Great Wall of China was built.

Qing (or Ch'ing; 1644–1911) A Manchu dynasty, founded by Nurhachi (1559–1626), that ruled China from the fall of the Ming dynasty until 1911. At its height in the 18th century under Qian Long (1711–99), the dynasty ruled a vast empire that included Outer Mongolia, Tibet, and Turkistan. Trade and commerce flourished, as did cultural life and learning. Bureaucratic conservatism, however, resisted modernization, corruption became rife, and China suffered a series of defeats by foreign powers (e.g. the *Opium Wars) as well as internal rebellions (e.g. the *Taiping Rebellion) that culminated in the overthrow of the Qing in 1911.

Qingdao (Ch'ing-tao or Tsingtao) 36 04N 120 22E A port in E China, in Shandong province on the Yellow Sea. From 1898 to 1922 it was under German and then Japanese control. Population (1999 est): 1 702 108.

Qom (or Qum) 34 39N 50 57E A city in central Iran, S of Tehran. It is the burial place of many Islamic saints. Population (1996): 777 677.

quadratic equation An algebraic equation in which the greatest power of the variable is two. It is usually written in the form $ax^2 + bx + c = 0$, in which the two *roots are given by $x = [-b \pm \sqrt{(b^2 - 4ac)}] / 2a$. Both of these roots are real numbers when the quantity under the square-root sign is greater than or equal to zero. They are equal when that quantity is zero. If it is less than zero the roots are complex numbers.

quadriplegia See PARALYSIS.

Quadruple Alliances 1. (1718) The alliance formed by Britain, France, the Holy Roman Emperor, and the Netherlands to maintain the Treaties of *Utrecht (1713–14), which had been repudiated by Spain. **2.** (1814) The alliance formed by Britain, Austria, Prussia, and Russia against Napoleon. **3.** (1834) The alliance between Britain, France, Spain, and Portugal that sought to maintain constitutional monarchy in Spain and Portugal.

quail A round-bodied short-tailed gamebird of open grassland and farmland. Old World quail (subfamily *Perdicinae*; 95 species) are 13–20 cm long, have a smooth-edged bill and leg spurs, and are usually sandy in colour. New World quail (subfamily *Odontophorinae*; 36 species) are up to 30 cm long and have a strong serrated bill, no leg spurs, and are brightly coloured and patterned. Family: *Phasianidae* (pheasants, partridges, and quail).

Quakers The Christian sect, formally known as the Religious Society of Friends, founded in England by George *Fox in the late 1640s. They suffered violent persecution for many years

and in 1682 William *Penn led a colony of Friends to *Pennsylvania. In the USA they were leaders in the fight against *slavery. The early Quakers adopted an unostentatious dress and way of life. They were (and remain) pacifists, refused to take oaths, and rejected the use of titles.

quaking grass An annual or perennial *grass of the genus *Briza* (about 20 species), mostly native to South America. Their long slender flower stalks bear spikelets of open flower clusters, which quiver in the wind. *B. media* is native to temperate Eurasia and grows 20–50 cm high.

quantity theory of money A theory that seeks to explain how the money supply (see MONEY) affects the economy. Originally put forward in the 17th century, it has been restated in its modern form by the US economist Milton *Friedman. It states that if there is a change in the money supply, either the price level will change or the supply of goods in the economy will alter.

quantum number An integral or half-integral number (0, $\frac{1}{2}$, 1, $1\frac{1}{2}$, 2, ...) that gives the possible values of a property of a system according to the *quantum theory. For example, in Bohr's atomic theory the angular momentum of an electron moving in orbit round an atomic nucleus can only have the values $nh/2\pi$, where n is a quantum number specifying these values and h is Planck's constant. Bohr's theory has now been replaced by the more versatile *wave mechanics, but the concept of quantum numbers is useful in some contexts. It is also used to quantify the properties of elementary particles (see PARTICLE PHYSICS).

quantum theory The theory first developed by Max *Planck in 1900 to explain the distribution of wavelengths of electromagnetic radiation emitted by a *black body. The experimental observations could only be explained when Planck assumed that the radiation was emitted and absorbed in discrete amounts, which he called quanta. The energy of each quantum has the value hf , where h is a universal constant (now known as the Planck constant) and f is the frequency of the radiation. Planck's theory was used by *Einstein to explain the photoelectric effect and in 1913 by Niels *Bohr to explain the spectrum of hydrogen. **Quantum mechanics** is the application of quantum theory to the mechanics of atomic systems; **quantum electrodynamics** is the theory of *electromagnetic interactions between elementary particles.

quarantine The period during which a person or animal suspected of carrying an infectious disease is kept in isolation. The term was originally applied to the 40-day period (French: *quarantaine*) during which ships suspected of carrying infected people were prevented from communicating with the shore. The quarantine period is now slightly longer than the incubation period of the disease. Until 2000 all domestic animals entering the UK had to undergo a six-month quarantine to prevent the importation of rabies. Under the new "passport for pets" scheme, this quarantine requirement has been lifted for animals from rabies-free countries with proof of vaccination and a fixed microchip to identify them.

quarter days In law, days in each quarter of the year on which rent and other dues on land were traditionally paid. In England they are 25 March (Lady Day), 24 June (Midsummer Day), 29 Sept (Michaelmas Day), and 25 Dec (Christmas Day).

quartz The commonest of all minerals, consisting of crystalline *silica. It occurs in many rocks, particularly acid igneous rocks (such as granite), many metamorphic rocks (such as gneisses), and in sands and gravels, which form sandstones on consolidation. Pure quartz is colourless and is known as rock crystal; it is used in glassmaking, in jewellery, and (because of its piezoelectric properties) in making electrical oscillators. Some coloured varieties, such as amethyst (violet), rose quartz (pink), and citrine (yellow), are used as gemstones.

quartzite A resistant pale-coloured rock consisting almost wholly of quartz. It is formed by the metamorphism of a pure sandstone, the original quartz grains being recrystallized and interlocking.

quasar (*quasi-stellar object*; **QSO**) A class of celestial objects discovered in 1964–65. They appear as starlike points of light but are each emitting more energy than several hundred giant galaxies. Quasar *redshifts are extremely large and indicate that quasars are the most distant and hence the youngest extragalactic objects known. The prodigious energy could result from matter spiralling into a supermassive *black hole (maybe 10^9 solar masses) lying at the centre of a galaxy.

Quasimodo, Salvatore (1901–68) Italian poet. His early work, such as *And Suddenly It's Night* (1942), was evocative and private, but after World War II his poetry, as in *Il falso e vero verde* (1956), expressed his active concern for social issues. He won the Nobel Prize in 1959.

Quassia A genus of tropical Asian trees and shrubs (40 species). Bitterwood (*Q. amara*) is an attractive shrub with red flowers. The heartwood is a source of quassin, used in medicine. Family: Simaroubaceae.

Quaternary period The most recent period of geological time, from the end of the Tertiary (about 1.8 million years ago) to the present day. It includes the Pleistocene (Ice Age) and *Holocene epochs.

Quebec 1. 46°50'N 71°15'W A city and port in E Canada, the capital of Quebec. First settled in 1608, it is strategically located above a sudden narrowing of the St Lawrence River. Quebec was the key to New France until captured by Britain (1759). Most of the workforce is employed by government and service industries. The Plains of *Abraham lie to the SW of the city. Population (1996): 167 264. **2.** The largest province of Canada, stretching from the *St Lawrence River N to Hudson Bay and Strait. Most of the population lives in the St Lawrence valley. The SE strip of Quebec enters the fertile Appalachian Highlands. The province's highly industrialized economy is based on its abundant natural resources. Asbestos, iron-ore, copper, zinc, gold, and other minerals are mined. Fishing, farming, and tourism are also important. *History:* claimed by France (1534), Quebec or New France was a French colony (1608–1763) until ceded to Britain. French-Canadian culture was preserved after the formation of Canada (1867). In 1995 a proposal that Quebec should become a sovereign state was very narrowly rejected in a referendum within the province. Area: 1 356 791 sq km (523 858 sq mi). Population (2001 est): 7 410 500; over 80% are French speaking. Capital: Quebec. *See also* MONTREAL.

Quechua The language of the *Incas and of the present-day American Indian peoples of the central Andean highlands. The people are nominally Roman Catholic but many pagan beliefs and rituals survive.

Queen Anne style An English architectural and decorative style with some baroque elements, dating from about 1700 to 1715. Beautiful walnut veneered furniture was made, enhanced by the restrained use of herringbone inlays. Chairs became lighter, more comfortable, and invariably had cabriole legs. Plateglass wall mirrors in gilt frames decorated panelled rooms.

Queen Charlotte Islands An archipelago of W Canada, in British Columbia 160 km (100 mi) off the Pacific coast. Mountainous with lush vegetation, the islands are mostly inhab-

ited by Haida Indians engaged in fishing and forestry. Area: 9596 sq km (3705 sq mi). Population (1991): 5316.

Queen's Award An award to industry in the UK, instituted in 1965 and made on the birthday (21 April) of Queen Elizabeth II. Awarded to firms, rather than individuals, it entitles holders to make use of a special emblem for five years.

Queen's Counsel (QC) A barrister appointed to senior rank as counsel to the English queen on the recommendation of the Lord Chancellor. Such a barrister is a **King's Counsel** during the reign of a king. QCs have no special duties to the Crown; they wear a silk gown, sit within the Bar of the court, and take precedence over the "utter barristers" (i.e. the outer barristers, who sit outside the Bar).

Queensland The second largest state of Australia, situated in the NE. The *Great Dividing Range separates the hilly coastlands from the vast inland plain and the *Great Barrier Reef runs parallel to the Pacific coast. The area is rich in natural resources, which form the basis of Queensland's rapid economic progress. Coal is the most important mineral. Other minerals include copper, bauxite, lead, silver, and zinc; oil production began in 1964; natural gas is piped to Brisbane. Beef, sugar, and wool are major industries. Another growing industry is tourism. Area: 1 728 000 sq km (667 000 sq mi). Population (1999 est): 3 512 360. Capital: Brisbane.

quelea A small brown African weaverbird. *Quelea quelea*, about 13 cm long, also called the red-billed dioch. Queleas live in vast colonies; they destroy grain crops, frequently causing famine, and also damage the trees in which they roost.

Quemoy (Chinese name: Jinmen) A Chinese island near the coast of the mainland, held by Taiwan but contested by the People's Republic who bombed it in 1958. Area: 130 sq km (50 sq mi). Population (1996 est): 53 237.

Quetta 30°15'N 67°00'E A city in W central Pakistan, at an altitude of 1650 m (5500 ft). The chief town of Baluchistan, it was badly damaged by an earthquake in 1935. Population (1998): 560 387.

quetzal A Central American bird, *Pharomachus mocinno*, that lives in cloud forests and feeds on fruit, insects, tree frogs, and lizards. The male reaches 1.3 m in length, including its curved ornamental tail feathers; its plumage is

iridescent green, red, and white. Family: *Trogonidae* (trogons).

Quetzalcoatl A Mexican wind and fertility god, usually portrayed as a feathered snake. During the Aztec period (14th–16th centuries) he was identified with the planet Venus, symbol of death and resurrection.

Quezon City 14 39N 121 01E A city in the N Philippines, in S Luzon near to Manila. It was the nation's former capital (1948–76). Population (2000): 2 173 831.

quillwort A small perennial nonvascular flowerless plant of the genus *Isoetes* (about 60 species), which grows mainly in swampy cooler regions of N North America and Eurasia. Tufts of stiff spiky quill-like leaves, about 5–18 cm long, grow from a short stout rhizome that bears numerous roots. The common Eurasian quillwort (*I. lacustris*) is aquatic. Order: *Isoetales*; phylum: *Lycophyta* (clubmosses, etc.).

quince A small tree or shrub, *Cydonia vulgaris*, probably native to W Asia but cultivated in temperate regions for its fruit. 4.5–6 m high, it has white or pink flowers, 5 cm across. The pear-shaped fruit is 7.5–10 cm long with a golden-yellow skin and many pips. Family: *Rosaceae*.

quinine The first drug used to treat malaria. Quinine, which is obtained from the bark of *Cinchona* trees, has now been largely replaced by other drugs (e.g. chloroquine), which have fewer side effects and are less toxic. Quinine-like compounds (e.g. quinidine) are used to treat abnormal heart rhythms.

quinone ($O=C_6H_4=O$) An *aromatic compound with two hydrogen atoms in the benzene ring replaced by two oxygen atoms. Quinones are used in photography and dye manufacture. They are also found in plants.

quinsy An abscess in the tissue surrounding a tonsil. This arises from infection of the tonsils and may be a complication of tonsillitis. The patient has a sore throat and difficulty in swallowing. Quinsy is sometimes treated by surgical draining of the abscess.

Quisling, Vidkun (Abraham Lauritz Jonsson) (1887–1945) Norwegian army officer and Nazi collaborator, whose name is a synonym for "traitor." After serving as a diplomat, Quisling formed (1933) the fascist National Union Party in Norway. He encouraged the Nazi occupation of Norway (1940), and as "minister president" in the occupation government, sent a thousand Jews to concentration camps. Arrested in 1945, he was found guilty of war crimes and executed.

Quito 0 20S 78 45W The capital of Ecuador, on the slopes of the volcano Pichincha at an altitude of 2850 m (9350 ft). It was the capital of the Inca kingdom of Quito until 1534, when it was captured by the Spanish. It contains many Spanish-colonial churches. Population (1997 est): 1 487 513.

Qumeran, Khirbat The site on the NW shore of the Dead Sea in Israel, where a Jewish sect called the *Essenes lived from about 125 BC to 68 AD. The community produced the *Dead Sea Scrolls, found by Bedouin shepherds in 1947 in nearby caves.

Ra (or Re) The Egyptian sun god and lord of creation, portrayed with a falcon's head bearing a solar disc. During the 18th dynasty (1567–1320 BC) he became identified with the Theban god Amon as Amon-Ra.

Rabat (Arabic name: Ribat) 34.00N 6.42W The capital of Morocco, near the Atlantic coast. Founded in the 12th century, it became the capital under the French protectorate in the early 20th century. Population (1994 est): 623 457.

rabbi A Jewish scholar and religious authority. For a long time the rabbinate was not a salaried office; the title indicated scholarly achievement and legal competence. In modern Jewish communities rabbis are community leaders, preachers, and pastoral workers.

rabbit A burrowing *mammal belonging to the family *Leporidae* (which also includes the hares). The European rabbit (*Oryctolagus cuniculus*) grows to about 45 cm; it has long ears, a short tail, and soft grey-brown fur. Rabbits are gregarious, living in large warrens and feeding on grasses and vegetation. Order: *Lagomorpha*.

Rabelais, François (1483–1553) French satirist. He became a Franciscan and then a Benedictine monk, left the monastery to practise medicine, and visited Italy. His humanism is expressed in his works of inventive and often coarse comic satire, *Pantagruel* (1532), *Gargantua* (1534), *Tiers Livre* (1546), and *Quart Livre* (1552). The classic English translation of his works is by Sir Thomas Urquhart (1653).

rabies An acute viral infection of the brain that can affect all warm-blooded animals and may be transmitted to man through the bite of an infected animal (usually a dog). Symptoms, which appear after an incubation period of from ten days to two years, include painful spasms of the throat on swallowing. Later, the very sight of water induces convulsions and paralysis (hence the alternative name of the

disease—hydrophobia, literally “fear of water”) and the patient eventually dies in a coma. Antirabies vaccine and rabies antiserum given to patients immediately after they have been bitten may prevent the infection from developing. In the UK there are strict quarantine regulations for imported domestic animals to prevent the disease from reaching Britain.

Rabin, Yitzhak (1922–95) Israeli politician; Labour prime minister (1974–77, 1992–95). He was a chief of staff of the Israeli army (1964–68) and minister of defence (1984–90). In 1993 he signed a peace agreement with Yassir *Arafat of the PLO; he shared the Nobel Peace Prize in 1994 with Arafat and Shimon Peres. He was assassinated by a right-wing Jewish extremist.

raccoon An omnivorous mammal belonging to the genus *Procyon* (7 species), of the Americas. About 1 m long, raccoons are stockily built, with long hind legs and short forelegs. A black patch across the eyes and a striped tail contrast with the grey coat. Family: *Procyonidae*; order: *Carnivora*.

Rachmaninov, Sergei (1873–1943) Russian composer, pianist, and conductor. He spent most of the rest of his life (from 1917) in the USA. His works include four operas, three symphonies, four piano concertos (which he also recorded), the *Rhapsody on a Theme of Paganini* (1934), and *The Bells* (1910).

Racine, Jean (1639–99) French dramatist. His major classical verse tragedies, which were influenced initially by those of Pierre *Corneille, include *Andromaque* (1667), *Britannicus* (1669), *Bérénice* (1670), and *Phèdre* (1677). In 1677 he retired, married, and accepted a post at the court of Louis XIV. His final works were two religious dramas, *Esther* (1689) and *Athalie* (1691).

rad The unit of absorbed dose of ionizing radiation in the *c.g.s. system equal to an energy

radar. The high-frequency pulses sent out by the transmitting aerial are reflected back by the target and displayed on a screen. The typical air-traffic control picture seen here shows East Anglia (only a few of the targets are labelled, for clarity).

absorption of 100 ergs per gram of irradiated material.

radar (radio detection and ranging) A method of locating distant objects used in military surveillance, air traffic control, and navigation; it was developed before World War II by a British team led by Sir Robert *Watson-Watt. High-frequency (300 to 30 000 megahertz) radio waves are sent out in pulses from a powerful rotating transmitter and are reflected back by any object they encounter. The reflected signal is picked up by a receiver antenna and is used to deflect the electron beam in a *cathode-ray tube. The beam scans the screen of the tube by rotating at the same speed as the antenna, so that its angular position indicates the direction of the located object. The distance from the centre of the screen shows the distance away of the object.

radian (rad) The SI unit of plane angle equal to the angle subtended at the centre of a circle by an arc equal in length to the radius of the circle.

radiation The propagation of energy by means of beams of particles or waves. It includes all electromagnetic waves, beams of elementary particles, ions, etc., and sound waves.

radiation sickness Illness caused by exposure to *ionizing radiation. Short-term effects include nausea and diarrhoea, while long-term

effects include sterility and cancer (especially leukaemia).

radical A group of atoms in a chemical compound that behaves as a unit in chemical reactions. For example, the methanol molecule (CH_3OH) can be considered as a methyl radical ($\text{CH}_3\cdot$) and a hydroxyl radical ($\text{OH}\cdot$) which is the functional group of alcohols. **Free radicals** are groups existing independently. Because they have unpaired electrons they are usually extremely reactive transient species.

radio The transmission of sound or other information by radio-frequency (3 kilohertz to 300 gigahertz) electromagnetic waves. The use of radio waves for communication was pioneered by *Marconi in 1895, although their existence had been postulated by *Maxwell in 1873 and demonstrated by *Hertz in 1888.

A **radio transmitter** generates a radio-frequency electrical signal (carrier wave) in an oscillator and superimposes the sound signal on it by a *modulation process. The composite signal is then fed to an aerial, which transmits electromagnetic waves. Transmission beyond the horizon is made possible by the ionosphere, a layer of the upper atmosphere that reflects radio waves in the long and medium wavebands. Long-wave (30 to 300 kilohertz) and medium-wave (300 to 3000 kilohertz) radio is used for direct (ground-wave) transmission in amplitude-modulated (AM) sound broadcast-

radio. The transmission and reception of radio broadcasts.

ing. Short-wave radio is used for AM sound broadcasting over longer distances using the ionosphere (sky waves) and for communication to ships and aircraft. VHF (very high frequency; 30 to 300 megahertz) is used for *stereophonic sound broadcasting in frequency modulated (FM) transmissions. Television uses mostly UHF (ultrahigh frequency). Neither VHF nor UHF are reflected by the ionosphere, but can be relayed by *communications satellites. All **radio receivers** consist of an *aerial, a resonant circuit, a demodulator, an amplification system, and one or more *loudspeakers.

radioactive tracer A radioactive *isotope used for following the course of a substance during a physical, biological, or chemical process. A nonradioactive isotope in the substance is replaced by a radioactive isotope of the same element, which can then be detected by observing its radiation with a *Geiger counter.

radioactive waste Waste products from nuclear reactors, uranium processing plants, etc., that are radioactive. Because the radioactivity of some materials persists for many years, their disposal is controlled. High-level waste (spent nuclear fuel, etc.) needs artificial cooling and is stored by its producers for decades before disposal. Intermediate-level waste (reactor components, etc.) is mixed with concrete and stored in steel drums prior to burial in deep mines or beneath the seabed in concrete chambers. Low-level waste in the UK is disposed of by Nirex Ltd in steel drums in concrete trenches at Driggs, Cumbria. Disposal of wastes in the Atlantic was banned in 1983. Some low-level gaseous and liquid wastes are discharged into the air.

radioactivity The spontaneous emission of a particle by an atomic nucleus. The emitted

particle may be an alpha particle (a helium nucleus consisting of two protons and two neutrons), in which case the process is known as alpha decay; or it may be a beta particle (an electron), when the process is known as *beta decay. Highly energetic X-rays (see GAMMA RADIATION) may also be emitted simultaneously. In both alpha and beta decay the nucleus changes into that of another element. Radioactive decay is a random process and its occurrence for a single nucleus can be neither predicted nor controlled. However, for a large number of nuclei the time taken for a certain fraction of nuclei to decay can be accurately predicted as either its *mean life or *half-life. These quantities vary from about 10^{-8} second to 10^{10} years depending on the isotope. The phenomenon was first discovered in 1898 by *Becquerel in uranium.

radio astronomy The study of celestial objects by means of the radio waves they emit. This radio emission was first noticed by K.G. *Jansky in 1932 and now forms an important branch of *astronomy. It has enabled the evolution of the universe to be studied from its creation (see BIG-BANG THEORY).

radiocarbon dating A method of estimating the age of a material, such as wood, that was once living. All living things absorb a small proportion of carbon-14 from atmospheric carbon dioxide, however, once dead, the level of carbon-14 falls as a result of *beta decay. By measuring the radioactivity of a material, the concentration of carbon-14 and hence its age can be estimated.

radio galaxy A *radio source that lies beyond our Galaxy, is identified with an optical *galaxy, and the radio-power output of which greatly exceeds that of a normal galaxy. A massive *black hole at the galaxy centre has been postulated as a possible energy source.

radiography The technique of examining the internal structure of a solid body by passing *X-rays or *gamma radiation through it to produce an image on a photographic film or fluorescent screen. It is used in medicine (see RADIOLOGY) and in industry to find structural defects.

radio interferometer See RADIO TELESCOPE.

radioisotope (or radioactive isotope) An *isotope that is radioactive. Radioisotopes are used in the production of *nuclear energy, in *radiotherapy, as *radioactive tracers, and in dating techniques. Some are naturally occurring (those with mass numbers in excess of 208) while others can be made radioactive by neutron bombardment.

radiolarian Any one of a group of single-celled marine organisms (see PROTOZOA), traditionally regarded as a class or order, *Radiolaria*, but now usually classified in several different classes, occurring chiefly as a component of plankton. Radiolarians are spherical, 0.1 mm to several millimetres in diameter, with a siliceous skeleton of radiating spines from which long thin pseudopodia extend to capture food particles. The skeletal remains of radiolarians form radiolarian ooze. Phylum: *Actinopoda*.

radiology The branch of medicine concerned with the use of radiation in the diagnosis and treatment of disease. A radiologist is a doctor specialized in the interpretation of X-ray photographs and films. See also RADIO-THERAPY; TOMOGRAPHY.

radio source A celestial object that emits radio waves. The sun and Jupiter are solar-system sources. Other radio sources within our Galaxy are pulsars, supernova remnants, interstellar hydrogen clouds, and the galactic centre. Extragalactic sources include spiral galaxies, radio galaxies, and some quasars.

radio telescope An instrument for detecting and measuring the radio emissions from celestial *radio sources. It consists of an antenna, or system of antennas, the radio-frequency signals of which are carried by wires or waveguides to one or more receivers. The antenna may be a large metal parabolic or spherical dish, usually steerable, that brings radio waves from a radio source to a focus on a secondary antenna. Alternatively simple dipole antennas may be used. The **radio interferometer**, in two separate units, has a very much greater resolving power than a single antenna. The largest single radio telescope dish in the

world is that at Arecibo, Puerto Rico; it measures 305 m (1000 ft) across. The best-known radio telescope in the UK is that at Jodrell Bank.

radiotherapy The use of X-rays and other forms of radiation for treating disease. The radiation may be directed at the target organ from a distance or radioactive needles, wires, pellets, etc., may be implanted in the body. Radiation is used in treating various forms of *cancer and overactivity of the thyroid gland.

radish An annual or biennial herb, *Raphanus sativus*, widely grown for its edible root, which may be red, white, or purple. The plant bears white flowers. Family: *Cruciferae*.

radium (Ra) A metallic element, discovered in pitchblende in 1898 by Pierre and Marie Curie. It is a divalent alkaline-earth element, forming a number of simple salts, such as the chloride (RaCl₂). It decays to form the noble gas radon and is used in radiotherapy. At no 88; at wt (226); mp 700°C; bp 1140°C.

radon (Rn) The heaviest noble gas, produced by the decay of radium, thorium, and actinium. It is radioactive, the longest-lived isotope (²²²Rn) having a half-life of 3.825 days. Like the other noble gases, Rn forms clathrates and fluorides. At no 86; at wt (222); mp -71°C; bp -61.8°C.

raffia (or raphia) A *palm tree of the genus *Raphia*, especially *R. pedunculata* (or *R. ruffia*), native to Madagascar. Its leaves, up to 20 m long, are composed of 80-100 leaflets from which the fibre is torn in thin strips and dried in the sun. Raffia is woven into mats and baskets and used in horticulture, etc.

Rafflesia A genus of Malaysian parasitic herbs (12 species). The monster plant (*R. arnoldii*) has the world's largest flower—up to 45 cm across and weighing up to 10 kg. It smells of rotten meat and attracts carrion flies, which act as pollinators. The genus was named after Sir Stamford Raffles (1781-1826). Family: *Rafflesiaceae*.

Raglan, FitzRoy James Henry Somerset, 1st Baron (1788-1855) British field marshal. In 1854 he became commander in the *Crimean War and, in spite of success at *Inkerman, his strategy was much criticized (see also BALACLAVA, BATTLE OF). The Raglan sleeve is named after him.

Ragnarök In Norse mythology, doomsday, when a catastrophic battle between the gods and the forces of evil will occur. After the defeat of the gods everyone will be destroyed ex-

cept for Lif and Lifthrasir, a man and woman who will subsequently found a new race.

ragtime A precursor of New Orleans style jazz. Ragtime was characterized by syncopation in the melody against a marchlike accompaniment and was popular from the 1890s. Scott *Joplin was the first ragtime composer to write down his music.

ragworm A marine *annelid worm, *Nereis cultrifera*, also called chainworm, of European coastal waters. 5–10 cm long, ragworms swim by means of paddle-like structures occurring in pairs on each body segment. Most live in burrows in sand or mud or among stones, feeding on dead organisms and detritus. Class: *Polychaeta*.

rail A slender secretive ground-dwelling bird belonging to a widely distributed family (*Rallidae*; about 300 species), occurring mostly in swamps, marshes, and fresh waters. 11–45 cm long, rails have short rounded wings, a short tail, and typically a dull grey or brown plumage, often barred for camouflage. Order: *Gruiformes* (cranes, rails, etc.). See also COOT; CORNCRAKE; GALLINULE.

railway A permanent track, consisting of parallel steel rails laid on sleepers of wood or concrete, on which *locomotive-drawn or self-propelled trains for freight or passengers travel. The normal gauge of the track is 1435 mm, in Russia and Finland 1676 mm, in Ireland 1600 mm, and in Spain and Portugal 1524 mm. Narrow gauge railways of 600–1200 mm gauge are common in Japan, parts of South America, and Africa. Trains were originally powered by steam, but are now nearly exclusively drawn by diesel or electric locomotives. The first passenger service was opened in 1825 between Stockton and Darlington in England. Railway building on the European continent and in Scandinavia started in the mid-1850s. The first Pacific railway in the USA was finished in 1869, the Trans-Siberian in Russia in 1905. From the 1950s, railways met increased competition from road and air travel, many railways being abandoned, or services curtailed. More recently increasing congestion on the roads has led to new opportunities for the railways. In the UK special passenger trains attain speeds of over 200 km per hr (125 mph), while in Japan and France speeds reach over 300 km per hr (186 mph). The USA has 338 000 km (209 000 mi) of railway, India 60 200 km (37 400 mi), and Australia 41 500 km (25 800 mi).

rain A form of precipitation composed of liquid water drops ranging in size from about 0.5

to 5 mm diameter. Minute droplets of water in clouds may coalesce to form larger drops; if these are sufficiently heavy they will fall as rain. The amount of rain, together with other forms of precipitation, that falls in a specific time is usually measured with a **rain gauge**. This is a cylindrical container with a funnel of standard diameter into which the rain falls. The water collected is periodically measured and recorded.

rainbow An optical phenomenon consisting of an arc of light across the sky composed of the colours of the spectrum. It is caused by the refraction of sunlight through falling water drops; the larger the drops the stronger the colours.

rainbow. The refraction of light by a raindrop.

rain forest See FOREST.

Rainier III (1923–2005) Prince of Monaco (1949–2005). He repudiated the principle of the *divine right of kings in a new constitution (1962). In 1956 he married Grace *Kelly. Their three children are Prince Albert (1958–), who succeeded him, Princess Caroline (1957–), and Princess Stephanie (1965–).

Rajkot 22 18N 70 53E A city in India, in Gujarat. It is a commercial and industrial centre. Population (2001): 967 476.

Rajput A group of clans in N and central India, now numbering about 11 million people. Descended from invading tribes from Central Asia, they were once included within the Ksatriya (warrior) caste of Hindu society. The Rajput states resisted the Muslim invaders, maintaining their independence in Rajasthan. They acknowledged the overlordship of the Moguls in the 16th century, the Marathas in the 18th century, and the British in 1808.

Raleigh, Sir Walter (1554–1618) British explorer and writer; a favourite of Elizabeth I. Unsuccessful in founding (1584–89) a colony in Virginia, he brought back the potato and tobacco plant from America. In 1595–96 he led an expedition to South America, which he de-

scribed in *The Discoverie of Guiana* (1596), and in 1596 took part in the sack of Cádiz. At James I's accession (1603) he stood trial for treason, but the death sentence was commuted to imprisonment; while in the Tower of London he wrote *The History of the World* (1614). He was released in 1616 to search for gold along the Orinoco but his mission was a failure and after his return he was executed.

Rama The seventh incarnation of *Vishnu, appearing as a hero in the epics the *Ramayana* and *Mahabharata*. In the *Upanishads* and elsewhere he appears as a god. He is usually represented holding a bow and arrow and attended by his wife.

Ramadan The ninth month of the Muslim year. It is a time of atonement, and every Muslim is required to observe a strict fast daily from dawn to dusk until the new moon of the next month is visible.

Ramapithecus A genus of fossil *hominids that lived during the late Miocene and early Pliocene. They were about the size of a gibbon, possibly walked erect, and may represent the early ancestors of modern man.

Ramayana (Sanskrit: romance of Rama) Hindu epic poem in seven books. It tells the story of *Rama and his devoted wife Sita, her abduction by the demon king Ravana, and Rama's struggle to recover her with the aid of *Hanuman.

Rambert, Dame Marie (Cyvia Rabbam, later Miriam Rambach; 1888–1982) British ballet dancer and choreographer, born in Poland. As director of the Carmargo Society, which in 1935 became the Ballet Rambert, she trained and encouraged many young British dancers and choreographers.

Rameau, Jean Philippe (1683–1764) French composer. He wrote a *Traité de l'harmonie* (1722), before beginning to compose. His works include chamber, keyboard, and vocal music, as well as 24 operas and opera-ballets, including *Les Indes galantes* (1735) and *Castor et Pollux* (1737).

Ramillies, Battle of (23 May 1706) The battle in the War of the *Spanish Succession in which Marlborough defeated the French 21 km (13 mi) N of Namur. The victory gave much of the Spanish Netherlands to the allies.

Ramsay, Sir William (1852–1916) Scottish chemist, whose work on the *noble gases earned him the 1904 Nobel Prize for Chemistry. In 1894, Ramsay, working with Rayleigh, discovered argon. By fractionally distilling argon,

Ramsay isolated neon, xenon, and krypton in 1898. In 1895 he had discovered the inert gas, helium, being given off by the mineral cleveite.

Ramses (II) the Great King of Egypt (1304–1237 BC) of the 19th dynasty. His warfare against the Hittites ended in lasting peace around 1284. Ramses also built the temple complex of *Abu Simbel. He is probably the pharaoh who oppressed the Israelites.

Rangoon (name from 1989: Yangon) 16 47N 96 10E The capital of Myanmar (Burma), a port in the S on the River Rangoon. Industry has increased greatly since independence in 1948. History: a settlement grew up in very early times around the Shwe Dagon Pagoda, which is the focal point of Burmese religious life. Twice captured by the British in the 19th century, it became the capital of all Burma in 1886. It was badly damaged in World War II. Population (1995): 3 851 000.

Ranunculaceae A family of herbaceous and woody plants (about 1300 species), found all over the world but most abundant in N temperate and Arctic regions. The family includes many garden flowers, such as *Anemone*, *Aquilegia*, *Clematis*, and *Delphinium*, as well as common weeds, e.g. buttercup (genus *Ranunculus*).

rape An annual or biennial herb, *Brassica napus* var. *arvensis*, also called oilseed rape or coleseed, that grows to a height of 1 m and has yellow flowers. It is widely cultivated for its seeds, which yield an edible oil. Family: *Cruciferae*.

Raphael (Raffaello Sanzio; 1483–1520) Italian Renaissance painter and architect. He trained in Perugia before moving to Florence in 1504. There, influenced by Leonardo and Michelangelo, he painted numerous Madonnas and also the portraits of Angelo and Maddalena Doni (Palazzo Pitti, Florence). Settling in Rome in 1508, he decorated the papal apartments in the Vatican with frescoes. He painted his patron Pope Julius II (Palazzo Pitti) and the *Sistine Madonna* (Dresden). In 1514 he succeeded Bramante as architect of St Peter's. In 1515 he designed tapestries for the Sistine Chapel. His last work, the *Transfiguration* (Vatican Museum), anticipates *mannerism.

Rarotonga 21 15S 159 45W A mountainous island in the SW Pacific Ocean, the administrative centre of the *Cook Islands. Copra and citrus fruit are exported. Area: 67 sq km (26 sq mi). Population (latest est): 9281. Chief town: Avarua.

raspberry A prickly woody perennial plant,

Rubus idaeus, native to Eurasia and North America. Up to 1.5 m high, it produces red sweet fruits. Upright canes grow from basal buds and bear fruit in their first autumn or second summer. Family: *Rosaceae*.

Rasputin, Grigori Yefimovich (c. 1872–1916) Russian mystic, who was a favourite of Emperor *Nicholas II and *Alexandra. A Siberian peasant, Rasputin's apparent ability to ease the bleeding of the haemophilic crown prince brought him considerable influence over the royal family. His unpopularity, aggravated by his debauchery, led to his murder by a group of nobles: when poison inexplicably failed he was shot and thrown into the River Neva.

Rastafarians Members of a West Indian religious and political sect, who believe that Ras Tafari Makonnen (*Haile Selassie) will arrange for the deliverance of the black races by procuring for them a homeland in Ethiopia. Rastafarian men wear their hair in long matted curls (dreadlocks).

rat A *rodent belonging to the suborder *Myomorpha*, distributed worldwide. Typical rats belong to the Old World genus *Rattus* (137 species). The black rat (*R. rattus*), originally Asian, has spread to most regions of the world, living in human habitations and sewers. The brown rat (*R. norvegicus*) is larger, measuring 30–45 cm including its tail (15–20 cm), and tends to live outdoors in burrows. Both species eat a wide variety of plant and animal materials, often causing serious damage and transmitting disease. See also MOUSE.

ratel An omnivorous mammal, *Mellivora capensis*, also called honey badger, of Africa and S Asia. About 70 cm long, grey above and black underneath, it lives in thick woods. Family: *Mustelidae*.

rationalism A philosophical movement stemming from 17th-century attempts to study the universe using reason rather than sense-experience. *Descartes, for example, tried to deduce what God's world is like from the axioms of divine existence and goodness. Conflict between the new sciences and religion is reflected in the work of *Spinoza, Antoine Arnauld (1612–94), and *Leibniz.

rat kangaroo A *marsupial belonging to the subfamily *Potoroinae* (9 species), of Australia (including Tasmania). Two species are commonly known as boodies and two others as potoroos. Measuring 23–44 cm excluding the tail (15–38 cm), rat kangaroos are related to

kangaroos and have a narrow ratlike face. They forage at night for grubs and tubers. Family: *Macropodidae*.

rattan The stems of climbing *palms of the genus *Calamus* (375 species), native to Old World tropical regions. Up to 130 m long, the stems are used in furniture, matting, etc.

Rattigan, Sir Terence (1911–77) British dramatist. His highly successful plays include upper-class comedies (*French without Tears*, 1936), more ambitious studies of human relationships (*The Deep Blue Sea*, 1952), and studies of historical characters (Ross, 1960).

Rattle, Sir Simon (1955–) British conductor. He was principal conductor (1980–91) and musical director (1991–98) of the City of Birmingham Symphony Orchestra. In 2002 he became chief conductor of the Berlin Philharmonic.

rattlesnake A pit viper belonging to either of two genera, *Sistrurus* (2 species) or *Crotalus* (28 species), and characterized by having a rattle composed of loosely connected horny tail segments. Rattlesnakes occur in both North and South America and are 0.3–2.5 m long with dark diamond, hexagonal, or spotted markings on a pale background. See also SIDEWINDER.

Ravel, Maurice (1875–1937) French composer of the impressionist school. His works include, for piano, *Pavane pour une infante défunte* (1899), *Valses nobles et sentimentales* (1911), and *Le Tombeau de Couperin* (1914–17), the suite *Gaspard de la nuit* (1908), and two piano concertos; for orchestra, *La Valse* (1920), *Boléro* (1927), and the ballet *Daphnis and Chloé* (1909–12); the opera *L'Enfant et les sortilèges* (1920–25); and many songs.

raven A large glossy black crow, *Corvus corax*, about 63 cm long with a massive bill and a wedge-shaped tail. It feeds on carrion, small animals, seeds, and fruits and often roosts in large colonies. Ravens occur in mountain and moorland regions of the N hemisphere.

Ravenna 44°25'N 12°12'E A city and port in N Italy, connected to the Adriatic Sea by canal. Ravenna was the capital of the western Roman Empire (402–76 AD), of the Ostrogothic kings (476–526), and of the Byzantine exarchate (military governorship) from 584 to 751. It is noted for its mosaics. Population (2000 est): 138 418.

Ravi, River A river in NW India and Pakistan. Rising in the Himalayas, it flows W and SW to the River Chenab. Length: 724 km (450 mi).

Rawalpindi 33°40'N 73°08'E A city in N Pak-

istan. From 1959 until 1969 it served as the interim capital while the new capital at Islamabad was being built. Population (1998): 1 406 214.

ray A predominantly marine *cartilaginous fish of the worldwide order *Batoidea* (or *Rajiformes*; about 350 species). Rays have a flattened head and body with greatly enlarged winglike pectoral fins; the tapering tail often bears sharp poison spines. Rays are generally bottom-dwelling and feed mainly on fish and invertebrates. Subclass: *Elasmobranchii*.

Ray, Satyajit (1921–92) Indian film director. He achieved an international reputation with *Pather Panchali* (1955), *The Unvanquished* (1956), and *The World of Apu* (1959), a trilogy of films about social change in India; his other films include *Charulata* (1964) and *The Stranger* (1992).

Rayleigh, John William Strutt, 3rd Baron (1842–1919) British physicist. His work on black-body radiation was upset by Planck's discovery of the quantum theory but he did much valuable work in optics, hydrodynamics, and the theory of electrical units. He was awarded the 1904 Nobel Prize for his discovery of argon, in conjunction with Sir William *Ramsay.

rayon A textile fibre or fabric made from *cellulose. **Viscose rayon** is made by dissolving wood pulp in a mixture of sodium hydroxide and carbon disulphide. The fibres are reconstituted in an acid bath. **Acetate rayon** is made by mixing wood pulp with acetic anhydride, acetic acid, and sulphuric acid to form cellulose acetate, which is then dissolved in a solvent and forced through fine holes to form fibres as the solvent evaporates.

razorbill A black-and-white *auk, *Alca torda*, that breeds around N Atlantic coasts and winters in the Mediterranean. 40 cm long, it has a laterally compressed bill. It dives to catch fish, shellfish, and worms.

razor shell A burrowing *bivalve mollusc of the family *Solenidae* (about 40 species), also called a jack-knife clam, of Atlantic and Pacific coasts. The common razor (*Ensis siliqua*), about 15 cm long, has a narrow shell with squared ends; its curved foot burrows into sand.

reactance See IMPEDANCE.

Reading 1 51 28N 0 59W A town in S England, in Reading unitary authority, Berkshire. It is the headquarters of several international industries. Population (1991): 134 600. **2** A unitary authority in S England, in Berkshire. Area: 37 sq km (14 sq mi). Population (2001): 143 124.

Reagan, Ronald (1911–2004) US statesman; Republican president (1981–89). He was a film actor before entering politics. In 1981 he survived an assassination attempt. As president he cut taxes, increased defence spending, and approved the US invasion of Grenada (1983) and CIA operations in Nicaragua, despite Congress opposition. He agreed the Intermediate Nuclear Forces (INF) Treaty with the Soviet Union in 1987 and improved US–Soviet relations after *Gorbachov came to power.

realism 1. The medieval philosophical theory that general terms (called universals) have a real existence, that is that there is some abstract entity that corresponds with the term. *Plato and *Aristotle were realists in believing that the universe contained universals in addition to particulars. *Aquinas and *Duns Scotus were leading realists. **2.** In modern philosophy, a stance opposed to *idealism. Realists, such as G. E. *Moore, assert that objects exist independently of being perceived.

real tennis A racket-and-ball indoor court game, which originated in France in the 12th–13th centuries; it was originally played with the bare hand. Many other handball and racket-and-ball court games developed from it. Its world championships date back to about 1750, although it is now very much a minority sport. The stone or concrete floor area is approximately 29 × 10 m (96 × 32 ft). The cloth ball is hit over a central net, as in *tennis, but it also bounces off the side walls, as in *squash rackets.

Réaumur, René-Antoine Ferchault de (1683–1757) French physicist, whose work on thermometers led him to devise the temperature scale that bears his name. On this scale water freezes at 0° and boils at 80°.

received pronunciation (RP) The pronunciation of English most generally accepted as standard or correct. The term was coined in 1926 by Daniel Jones (1881–1967) to describe the characteristic accent of the public schools and universities. Historically, it is derived from Middle English spoken in the London area.

recessive gene The *allele of a gene the function of which is hidden when the organism concerned is crossed with one carrying a different allele (called the dominant allele) for the same gene.

Recife (or Pernambuco) 8 06S 34 53W A port in NE Brazil, on the Atlantic Ocean. It is a major port. Population (1995): 3 168 000.

recombinant DNA technology See GENETIC ENGINEERING.

Reconstruction (1865–77) The period after the US *Civil War in which the defeated Confederate states were brought back into the Union. The new state governments were dominated by Whites prepared to compromise, newly enfranchised Blacks, and northern carpetbaggers, but after the withdrawal of Federal troops in 1877 White supremacists were restored to power.

recorder A woodwind instrument of medieval origin. The recorder is end-blown, through a whistle mouthpiece mounted in a block (or fipple). The holes are covered with the fingers; the tone is quieter than that of the flute.

rectifier A device that allows electric current to flow in one direction only; it is generally used to convert alternating current to direct current. Semiconductor diodes have now replaced thermionic valves (diodes) for lower voltage applications. For power supplies of several megawatts, mercury-arc rectifiers are used.

rectum See INTESTINE.

red admiral A butterfly, *Vanessa atalanta*, found throughout Europe, Asia, and North America. The wings are black with red and white markings. Red admirals migrate to northern regions for the summer. The caterpillars feed mainly on stinging nettles. Family: *Nymphalidae*.

red algae Algae of the phylum *Rhodophyta* (about 3000 species), which are usually red or blue in colour due to the presence of the pigments phycoerythrin (red) or phycocyanin (blue), which mask the green chlorophyll. They range from small unicellular or filamentous forms to branching or sheetlike *seaweeds. Reproduction is asexual or sexual.

Red Brigades (Italian name: *Brigate Rosse*) A group of Italian terrorists formed in 1969 and dedicated to the violent overthrow of capitalist society. They were responsible for the murder of Aldo *Moro in 1978.

Redcar and Cleveland A unitary authority in NE England, in North Yorkshire; part of Cleveland county from 1974 to 1996. Area: 240 sq km (93 sq mi). Population (2001): 139 141.

Red Cross, International An organization founded by the Geneva Convention of 1864 to provide care for the casualties of war. Inspired by Henri Dunant (1828–1910), its headquarters are in Geneva and its emblem, the red

cross, represents the Swiss flag with its colours reversed. Muslim countries have generally adopted the crescent as their emblem. The International Red Cross has twice won the Nobel Peace Prize, in 1917 and 1944.

redcurrant A shrub of the genus *Ribes* (see CURRANT), cultivated for its red fruits, which may be made into jellies, jams, etc. Cultivated redcurrants have been derived from *R. rubrum* of Eurasia, *R. sativum* of W Europe, and *R. petraeum* of central and S Europe.

red deer A large reddish-brown deer, *Cervus elaphus*, of European and Asian woodlands. Over 120 cm high at the shoulder, males have spreading branched antlers up to 125 cm long; females are more lightly built. Stags and hinds come together in the autumn for the rut, when mature males compete to gather hinds.

Redford, Robert (1936–) US film actor and director. He costarred with Paul *Newman in *Butch Cassidy and the Sundance Kid* (1969) and *The Sting* (1973). His other films include *All the President's Men* (1976), *Out of Africa* (1986), *Indecent Proposal* (1993), and *Spy Game* (2001). Films that he has directed include *Ordinary People* (1980) and *The Horse Whisperer* (1998), in which he also starred.

red giant A greatly distended cool but very luminous *giant star. It is one of the final evolutionary stages of a normal *star, attained when its central hydrogen has been converted to helium. As it evolves it may change to a hotter more compact type of giant and then swell back to a red giant.

Redgrave, Sir Michael (1908–85) British Shakespearean actor, who also performed in and directed modern plays. His films included *The Browning Version* (1951) and *The Go-Between* (1971). His daughter **Vanessa Redgrave** (1937–) has acted on stage and in films, including *Blow-Up* (1966), *Julia* (1977), *Comrades* (1987), and *Mrs Dalloway* (1998). She is well known for her left-wing political activities, as is her brother **Corin Redgrave** (1939–), who is also an actor. His daughter **Lynn Redgrave** (1943–) is also an actress. Vanessa Redgrave's daughters **Natasha Richardson** (1963–) and **Joely Richardson** (1965–) have also appeared on stage and in films.

red grouse A *grouse, *Lagopus lagopus scoticus*, found on moorlands of Great Britain and Ireland, where it is managed as a gamebird. 34–37 cm long, it feeds on ling heather. The male is red-brown with red wattles above the eyes and the female is browner and barred.

Red Guards High-school and university students organized by Mao Tse-tung during the *Cultural Revolution. The Red Guards destroyed property, humiliated foreign diplomats, and attacked those officials who opposed Mao's policies.

red-hot poker A plant of the African genus *Kniphofia*, cultivated as garden plants. 45–120 cm tall, they have tubular flowers, usually scarlet and/or yellow. Family: *Liliaceae*.

redox reactions See OXIDATION AND REDUCTION.

Red River (Vietnamese name: Song Hong) The chief river of N Vietnam, rising in S China and flowing SE to the Gulf of Tonkin. Length: 500 km (310 mi).

Red River of the North (or Red River) A river in central North America, rising in W Minnesota and flowing N into Canada. Length: 1000 km (621 mi).

Red Sea A long narrow arm of the Indian Ocean between Africa and Asia, extending some 2400 km (1491 mi) NNW beyond the Gulf of Aden and the Bab el-Mandeb. In the N, it is connected to the Mediterranean Sea by the Suez Canal. Area: 438 000 sq km (169 076 sq mi).

redshank An Old World *sandpiper, *Tringa totanus*, that breeds in cool marshy regions of Eurasia. 30 cm long, it has long reddish legs, a black-tipped red bill, and a brown-grey plumage with a white rump. It winters on mudflats of Africa and Asia, feeding on crustaceans, molluscs, and ragworms.

redshift An overall displacement towards larger wavelengths of the spectral lines of a celestial object. Its astronomical significance was suggested by Edwin Hubble (1889–1953) in 1929, when it was used as the basis of the theory that the universe is expanding (see EXPANDING UNIVERSE). A redshift usually arises from the *Doppler effect, that is from recession of a celestial object. It increases as the object's radial velocity increases and for an extragalactic body can be used as a measure of distance. A **gravitational redshift** occurs whenever radiation is emitted by a body.

red squirrel A tree *squirrel, *Sciurus vulgaris*, of Eurasia. About 20 cm long with a 20-cm tail, red squirrels have dark glossy red fur and tufted ears. They feed mainly on seeds and nuts.

redstart A small Eurasian thrush of the genus *Phoenicurus*, about 14 cm long with a sharp bill. The male European redstart (*P.*

phoenicurus) is grey with a russet breast and a red tail, which it fans out in its courtship display to the yellow and brown female. It is found in woodland and heathland.

reduction See OXIDATION AND REDUCTION.

redwood A coniferous tree, *Sequoia sempervirens*, thought to be the tallest tree in the world and one of the longest lived: a specimen in California is over 111 m tall and some Californian trees are over 2000 years old. Also called coast redwood, it is native to the Pacific coast between Oregon and California and is an important timber tree. It has brown-red fibrous bark and red-brown globular cones, about 2 cm long. Family: *Taxodiaceae*. See also SEQUOIA.

reed Any of several species of tall aquatic grasses, especially those of the genus *Phragmites* (2–3 species). The common reed (*P. communis*) has a creeping underground stem (rhizome) and grows worldwide along the margins of marshes, lakes, streams, and fens.

Reed, Sir Carol (1906–76) British film director. His best-known films include *The Fallen Idol* (1948) and *The Third Man* (1949) both with screenplays by Graham *Greene. His later films include *The Agony and the Ecstasy* (1965) and *Oliver!* (1968).

reedbuck An African antelope belonging to the genus *Redunca* (3 species). The common reedbuck (*R. arundinum*) grows to 90 cm high at the shoulder and has a stiff grey coat and slender ridged horns and inhabits lush grassland. The bohor reedbuck (*R. redunca*) is smaller and lives in swampy regions, while the gregarious mountain reedbuck (*R. fulvorumfula*) lives in hilly areas.

reedling A Eurasian bird, *Panurus biarmicus*, about 16 cm long, also called bearded tit. It lives in reedbeds, feeding on insects and seeds. The plumage is brown with pale underparts: the male has a grey head with a black moustache of feathers. Reedlings belong to the babbler family.

reedmace A widely distributed perennial herbaceous plant, *Typha latifolia*, also called bulrush or cat's-tail, growing in reed swamps. It has an erect stem, 1.5–2.5 m high, bearing cylindrical fruit. There are several other reed-maces of the genus *Typha*. Family: *Typhaceae*.

reed warbler An acrobatic *warbler, *Acrocephalus scirpaceus*, about 12 cm long with a reddish-brown plumage, pale underparts, and a pale eyestripe. It winters in SE Africa and breeds in European reed swamps.

referendum and initiative Votes on specific legislation by the whole electorate. In the UK referendums have been held concerning membership of the EC (1975) and *devolution for Scotland and Wales (1979 and 1997). Initiatives are proposals, drafted by a citizen or group of citizens, that by virtue of attaining a requisite number of signatures on a petition are put to the electorate for acceptance or rejection.

reflection The rebounding of a wave of light or other radiation when it strikes a surface. Reflected light obeys two laws: first, the normal (an imaginary line vertical to the surface at the point of impact), the incident ray, and the reflected rays all lie in the same plane; second, the angle between the incident ray and the normal is equal to the angle of reflection. See also MIRRORS.

reflex An automatic and involuntary response by an organism to a change in the environment, which occurs before the brain has had time to convey the necessary information to the muscles involved. See also CONDITIONED REFLEX.

Reform Acts The legislation that reformed the British parliamentary system. The Reform Act of 1832 gave many more people the right to vote, disenfranchised some rotten and pocket boroughs, and gave parliamentary representation to new industrial towns. The 1867 Reform Act gave the vote to many working-class householders for the first time. The 1884 Reform Act made the county franchise the same as that in the towns, thus increasing the electorate to about five million.

Reformation A religious movement in 16th-century Europe that began as an attempt to reform the *Roman Catholic Church and ended with the establishment of independent Protestant Churches (see PROTESTANTISM).

The Reformation began on 31 October 1517, when Martin *Luther nailed his 95 theses on the door of the castle church at Wittenburg. Luther's attack on the sale of *indulgences and, subsequently, on papal authority and the *sacraments (save baptism and the Eucharist) was condemned by the pope and the Holy Roman Emperor but gained the support of several German princes. The consequent conflict (see CHARLES V) was not resolved until 1555 (see AUGSBURG, Peace of).

In Switzerland, the Reformation was initiated by Ulrich Zwingli (1484–1531) in Zurich in 1520, spreading to Basle, Berne, and also to Geneva, where it was led by John *Calvin.

In France, where Protestants were called Huguenots, the Reformation became involved in a political struggle for control of the Crown, giving rise to the *Wars of Religion, and in the Low Countries it fired the *Revolt of the Netherlands against Spanish rule.

In England, the Reformation had three stages. Under Henry VIII papal authority in England was destroyed. Thomas Cromwell's legislation (1529–36) culminated in Henry's divorce from Catherine of Aragon and the Act of Supremacy (1534), which proclaimed the king supreme head of the English Church; in 1536 the dissolution of the monasteries was authorized. Under Edward VI Protestantism was established by the 1552 Book of *Common Prayer, the accompanying Acts of *Uniformity, and the 42 Articles (1553). Protestantism finally became the established *Church of England under Elizabeth I and a new Act of Supremacy was passed (1559). In Scotland, the Reformation was influenced by John *Knox and *Presbyterianism was established in 1592. See also COUNTER-REFORMATION.

Reform Judaism A religious movement attempting to adapt traditional Judaism to modern circumstances. It began in Germany in the early 19th century. The first Reform synagogue in England was established in 1840; the Liberal movement (founded 1903) instituted more radical reforms typical of US Reform Judaism. The World Union for Progressive Judaism was founded in London in 1926 (it is now based in Jerusalem). The reforms include abolition of many of the ritual laws, acceptance of modern biblical criticism, vernacular services, and full equality for women.

refraction The bending of a beam of radiation as it passes from one medium onto another. For a light ray the amount by which it is bent depends on the angle of the incident ray and on the refractive indices of the two media, the exact dependence being given by *Snell's law. Refraction is caused by the difference in the velocity of the radiation in the two media. The ratio of the velocity of light in the two media is known as the **refractive index**.

refrigeration The process of lowering the temperature inside a closed insulated container. In the domestic refrigerator the method most commonly used is the vapour-compression cycle in which a liquid refrigerant, such as Freon (a compound of chlorine, fluorine, and carbon), is pumped through cooling coils formed into the ice-making compartment. In these coils the refrigerant evaporates, taking the latent heat required to make it into

a gas from the surroundings. It is then passed to an electrically driven compressor; after compression it condenses back to liquid, when the absorbed heat is given out (usually at the back of the refrigerator). This cycle is repeated over and over again until the required temperature (about $1-2^{\circ}\text{C}$ in the food chamber and -15°C in the deep-freeze compartment) is achieved. See also **FREEZING**.

refrigeration. The vapour-compression cycle commonly used in domestic refrigerators. The energy for the cycle is supplied by the mains electricity.

Regency style An English decorative style fashionable from about 1800 to 1830 and influenced by the French *Empire style. Dark woods and veneers were popular and were set off by ormolu mounts. Concurrently there was a vogue for oriental motifs (see **CHINOISERIE**) and some magnificent lacquer was produced, for example for the Prince Regent's Pavilion at Brighton.

regeneration In biology, the regrowth and development of tissues or organs lost through injury, as a normal process (e.g. during moulting), or by any other means. It is particularly well developed in plants and simple animals. Thus, whole plants can regenerate from stem and leaf cuttings and simple animals, such as sponges and planarians, can develop from minute fragments. More complex animals, such as crustaceans, replace lost appendages, while lizards can grow new tails. In mammals

regeneration is limited to wound healing and regrowth of peripheral nerve fibres.

Regina 5030N 10438W A city in W Canada, the capital of Saskatchewan. Founded in 1882, it has expanded rapidly since 1945. Population (1996): 180 400.

Reichstag (Imperial Diet) The legislative assembly of the German Empire (1871-1918) and the Weimar Republic (1919-33). Its origins lay in the diet of the Holy Roman Empire. It was divided into an electoral college, a college of princes, and a college of cities. It was revived by Bismarck in 1867 as the representative assembly of the North German Confederation. In 1933 the Reichstag building was burnt out; Nazi allegations of communist responsibility provided an excuse to ban opposition parties. In the late 1990s the Reichstag building was radically restored to provide a new seat for the German government (from 1999).

Reign of Terror (1793-94) The most violent period of the French Revolution. Dominated by *Robespierre, the governing Committee of Public Safety took severe measures against the Revolution's opponents. About 1400 were summarily guillotined. Public reaction contributed to Robespierre's downfall and execution in July 1794.

Reims (or **Rheims**) 4915N 402E A city in NE France, in the Marne department. An important Roman town, it was the scene of the coronations of most of the French kings. The magnificent gothic cathedral was badly damaged in World War I. Population (1999): 187 206.

reincarnation (or **metempsychosis**) The migration of the soul from one body at death and its re-entry into another (human or animal) body. The cycle of reincarnation (*samsara*) is fundamental to Hindu, Buddhist, and Jain conceptions of the world, all spiritual effort being directed towards release (*moksha*) from the cycle. Orthodox Christianity rejected it as contrary to belief in the resurrection of the body.

reindeer A large deer, *Rangifer tarandus*, of European and North American tundra (in America it is called a caribou). About 125 cm high at the shoulder, reindeer have a grey-brown coat and spreading branched antlers (the antlers of males are larger). Reindeer feed mainly on lichens (*reindeer moss) but also eat dwarf willow and other shrubs.

reindeer moss A grey tufted *lichen, *Cladonia rangiferina*, that is very abundant in Arctic regions. Up to 8 cm high, it serves as the major

food source for reindeer, moose, musk oxen, etc.

Reinhardt, Django (Jean Baptiste R.; 1910–53) Belgian jazz guitarist of gipsy origin. He injured his hand in a fire at the age of 18 but developed an original guitar technique. From 1934 to 1939 he led the quintet of the Hot Club de France with Stephane *Grappelli.

Reith, John Charles Walsham, 1st Baron (1889–1971) British administrator. His severe moral principles greatly influenced the early development of the BBC, of which he was director general from 1927 to 1938. The Reith lectures, broadcast annually, were named in his honour.

relativistic mass The mass of a body that is moving at a velocity comparable to the *velocity of light. According to the theory of *relativity, if the velocity of the body is v then its mass is $m_0(1 - v^2/c^2)^{-1/2}$, where c is the velocity of light and m_0 the rest mass (the mass when stationary).

relativity The first part of the theory, published by Albert Einstein in 1905 and known as the special theory, applies only to motion in which there is no acceleration. Up to this time it was thought that light travelled through a stationary medium, called the ether, at a constant speed and that its speed relative to an observer could be calculated in the same way as the relative speed of any two moving objects. For example, if one car (A) travelling at 90 mph on a motorway overtakes another (B) travelling at 70 mph, the speed of the two cars relative to each other is 20 mph. In talking about relative speeds it is necessary to be precise about what a particular speed is relative to. Car A's speed relative to car B is 20 mph, but relative to the earth it is 90 mph. Relative to the sun it is about 24 million mph. Because two American scientists, Michelson and Morley, had shown that light travelled at the same speed whether measured in the direction of the earth's rotation or at right angles to this direction, Einstein suggested that the restriction about relative motion does not apply to light. It always has the same speed of 2.998×10^8 metres per second (186 000 miles per second), irrespective of the motion of the observer.

In his special theory Einstein suggested that as bodies increase in speed they become shorter and heavier. This effect is only noticeable as the speed of light is approached. An electron travelling at 99% of the speed of light becomes seven times heavier than its mass at rest. Einstein also showed that no body could actually

travel at the speed of light itself. If it did it would be infinitely heavy and have zero length.

The increase in mass and decrease in length that a body undergoes when moving at high speeds led Einstein to the conclusion that an energy (E) has a mass (m); they are related by the simple equation $E = mc^2$, where c is the velocity of light. The atom bomb and *nuclear energy both depend on this equation.

In the general theory of 1916, Einstein considered accelerated relative motion, especially as it is concerned with gravitation. The gravitational force experienced by a body is treated as a property of space and time, which Einstein suggested was "curved" by the presence of the mass. The observed bending of light rays as they pass close to the sun and the shift of certain lines in the solar *spectrum have provided experimental verification of the theory.

relativity. 1. Two cars, A and B, travelling along a motorway. The speed of car A relative to the earth is 90 mph. The speed of car B relative to the earth is 70 mph. The speed of car A relative to car B is $90 - 70 = 20$ mph. 2. Car B is now stationary; its headlight beams are turned on as supercar A passes, travelling at 5000 miles per second. The speed of car B's headlight beam relative to car A is 186 000 miles per second (not $186\,000 - 5000$ miles per second). The speed of light is absolute.

relay, electric An electrical switching device in which one circuit is controlled by a separate circuit, often to avoid the danger of direct contact with high-voltage supplies or to reduce the length of high-current cable needed. Relays may involve mechanical movement and an electromagnetic connection between the two circuits or be controlled entirely by solid-state electronic components.

reluctance (or **magnetic resistance**) The ratio of the *magnetomotive force in a material to the total magnetic flux induced by it. It is analogous to electrical *resistance.

Rembrandt (Harmenszoon) van Rijn (1606–69) Dutch painter and etcher. Settling permanently in Amsterdam (1631), he made his name as a portrait painter with *The Anatomy Lesson of Dr Tulp* (1632; The Hague). It was followed by many other portraits, including those of his wife Saskia and culminating in the famous group portrait, *The Nightwatch* (1642; Rijksmuseum, Amsterdam). He also treated dramatic mythological and biblical subjects and excelled as a landscapist. His etchings are among the finest ever produced. He eventually had financial difficulties and became bankrupt.

Remembrance Sunday The day on which the British remember the dead of both World Wars. Since 1956 it has been observed on the second Sunday of November. A two-minute silence marks the time, 11 am, of the signing of the Armistice on 11 November 1918 and wreaths of Flanders poppies are laid at the Cenotaph in Whitehall, London, and at other war memorials.

remora A dark slender elongated fish, 30–90 cm long, belonging to a family (*Echeneidae*; 8–10 species) found in warm marine waters. The dorsal fin is modified to form a flat oval sucking disc on its head by which it attaches itself to various marine animals or ships to feed on scraps of food or the hosts' parasites. Order: *Perciformes*.

Renaissance (French: rebirth) An intellectual and cultural movement that began in Italy in the 14th century, spread to N Europe, and flourished until the late 16th century. Fundamental to the Renaissance were the revival of classical learning, art, and architecture and the concept of the dignity of man, which characterized *humanism. Great writers of the Italian Renaissance included *Petrarch, *Dante, *Boccaccio, *Machiavelli, and *Ariosto.

The first painter to mirror these new ideals was *Giotto. He was followed in the 15th century by *Masaccio, *Uccello, *Piero della Francesca, *Mantegna, and others, who introduced the use of linear perspective. The High Renaissance denotes the period between about 1500 and about 1520, when the artists *Leonardo da Vinci, *Raphael, and *Michelangelo perfected the harmony and balance associated with classical art.

In sculpture the major figures were Nicola *Pisano, *Donatello, *Ghiberti, *Verrocchio, and Michelangelo. In building Brunelleschi was

the first to revive the classical use of the *orders of architecture. Later architects, such as *Alberti, Donato Bramante (1444–1514), and *Palladio, also revived ancient temples and domed structures.

In the 16th century the Renaissance spread to N Europe, where it manifested itself in the art of *Dürer, the scholarship of *Erasmus, the plays of *Shakespeare, and particularly in the courts of such rulers as Elizabeth I of England.

Renfrewshire A council area of W Scotland, on the Clyde Estuary W of Glasgow. In 1975 the historic county of Renfrewshire was absorbed into Strathclyde Region. In 1996 Strathclyde was abolished and the unitary authorities of Inverclyde, Renfrewshire, and East Renfrewshire were established. The main economic activities are engineering, textiles, and agriculture. Area: 216 sq km (101 sq mi). Population (2001): 172 867. Administrative centre: Paisley.

Reni, Guido (1575–1642) Italian painter. In Rome (c. 1600–14) he established a studio and painted his masterpiece, the ceiling fresco of *Aurora* (Palazzo Rospigliosi). Later, in Bologna, his highly idealized style became somewhat sentimental.

renin An enzyme, secreted by the kidneys, that breaks down a liver protein to form the peptide angiotensin I. This is converted to angiotensin II, which constricts blood vessels—causing a rise in blood pressure—and increases the secretion of aldosterone from the adrenal glands.

Rennes 48 06N 1 40W A city in NW France, in the Ille-et-Vilaine department. The capital of Brittany, it was badly damaged by fire in 1720. It is now the main commercial centre of W France. Population (1999): 206 229.

rennet An extract, prepared from cows' stomachs, that contains the milk-coagulating enzyme rennin. It is used in the manufacture of cheese and junket.

Renoir, Pierre Auguste (1841–1919) French impressionist painter, born in Limoges. He exhibited at the first three impressionist exhibitions but later abandoned impressionism. Increasingly crippled by arthritis, he spent his last years in the south of France, painting many sensuous nudes. His best-known works include *Les Parapluies* (National Gallery, London) and *Le Moulin de la Galette* (Louvre). His son **Jean Renoir** (1894–1979) was a film director whose best-known films are the social satires *La Grande Illusion* (1937) and *La Règle du jeu* (1939). During World War II he went to Holly-

wood but he returned to Europe to make *French Can-can* (1955) and other films.

Representatives, House of See CONGRESS.

repression In *psychoanalysis, the process of excluding unacceptable ideas from consciousness. Repressed wishes and thoughts continue to exist in the unconscious mind and may give rise to symptoms. One of the goals of psychoanalytic treatment is to bring repressed material back into conscious awareness so that it can be coped with rationally.

reproduction The generation of new individuals of the same species. In **asexual reproduction** individuals are derived from one parent; the simplest form is *fission, occurring mostly in unicellular organisms. Simple multicellular organisms, such as sponges and cnidarians, reproduce by budding; a new individual arises as an outgrowth (bud) from the parent. In plants a common form of asexual reproduction is **vegetative reproduction** (or vegetative propagation), in which new individuals develop from such structures as bulbs, corms, rhizomes, and tubers, which become detached from the parent plant. Most animals and plants, however, reproduce by **sexual reproduction**, which involves specialized reproductive cells (see GAMETE)—typically male and female—that fuse to produce a new individual with a different genetic makeup. This process occurs in its simplest form in *conjugation. In more complex organisms the gametes are produced in special organs, e.g. the carpel and stamen in flowering plants and the ovary and testis in animals. The importance of sexual reproduction is that it allows genetic variation in a population, enabling it to adapt to the changing environment.

reptile A vertebrate animal belonging to the class *Reptilia* (about 6000 species), which includes *crocodiles, *turtles, *lizards, *snakes, and the *tuatara. Reptiles, which evolved from amphibians, occur in terrestrial, freshwater, and marine habitats, chiefly in tropical regions. They have a covering of horny scales and are cold-blooded. Fertilization of the egg takes place within the female, unlike fish and most amphibians. The large egg has a leathery shell, enabling it to be laid on land. In some lizards and snakes the eggs are retained inside the female and live young are born. Young reptiles resemble their parents and—unlike amphibians—do not undergo metamorphosis.

Republican Party One of the two major political parties of the USA (compare DEMOCRA-

TIC PARTY). The name was used by Jefferson's Republican Democrats (formed in 1792), but the modern Republican Party originated in 1854 as an alliance of those opposed to the extension of slavery in the new territories in the W USA. After the election of the first Republican president, Lincoln, in 1860, the Republicans were usually the ascendant party until the 1930s. Recent Republican presidents include *Nixon, *Reagan, and *Bush (father and son).

requiem shark A *shark of the family *Carcharhinidae* (over 60 species), found worldwide mainly in warm oceans. 1.5–5.5 m long, they have two dorsal fins and are carnivorous, feeding on fish and invertebrates. Some species, such as the *tiger shark, are dangerous to humans.

resins Adhesive nonflammable organic polymers, usually insoluble in water but soluble in organic solvents. **Natural resins**, such as *rosin and *shellac, are exuded by plants and insects. **Synthetic resins** are made by modifying natural polymers or by polymerization of petrochemicals. Thermosetting resins, those that harden on heating, include epoxy and some *polyurethane resins. Thermoplastic resins, those that soften on heating, include *polythene, *polyvinyl chloride, and *polypropylene.

resistance The property of all materials, except superconductors (see SUPERCONDUCTIVITY), that reduces the flow of electricity through them. It is defined by Ohm's law as the ratio of the potential difference between the ends of a conductor to the current flowing through it (see also IMPEDANCE).

resolving power 1. The ability of a *microscope to produce separate images of two neighbouring points; the closer the points, the greater the resolving power of the microscope. The resolving power may be increased by using shorter wavelength radiation (e.g. ultraviolet radiation) or by using very short wavelength electrons (as in the *electron microscope). Alternatively the refractive index of the medium between the specimen and the objective lens may be increased, as in the oil-immersion lens. 2. A measure of the ability of a *telescope to distinguish detail, usually the smallest angle between two point objects that produces distinct images.

resonance (chemistry) The existence of a compound with a molecular structure intermediate between two or more conventional structures. For example, the polar molecule HCl can be regarded as a **resonance hybrid** between two structures. One is the covalent mol-

ecule H-Cl and the other the ionic compound H^+Cl^- .

resonance (physics) The sympathetic oscillation of a system in response to an external excitation. A wire under tension, for example, will not respond to an external vibration unless the vibration is at the natural frequency of oscillation of the wire. A **resonant circuit** con-

sists of a capacitance in parallel with an inductance. When the capacitor discharges through the inductor an induced emf is produced, which again charges the capacitor (in the opposite sense). The circuit will then continue to oscillate, provided that energy is supplied from an outside source. Such circuits, feeding an aerial, are used in *radio transmitters to generate

reptile. Some representative reptiles.

radio-frequency oscillations and in receivers to detect incoming signals.

Respighi, Ottorino (1879–1936) Italian composer. He wrote several operas, the symphonic poems *The Fountains of Rome* (1917) and *The Pines of Rome* (1924), the orchestral suite *The Birds* (1927), and ballets, including *La Boutique fantasque* (1919).

respiration The process by which an organism takes up oxygen from its environment and discharges carbon dioxide into it. In man and most air-breathing animals the organs through which this takes place are the *lungs (aquatic animals use *gills; insects use tracheae). Oxygen-depleted blood is pumped from the *heart to the air sacs (alveoli) of the lungs, where it receives oxygen (from inhaled air) and releases carbon dioxide (which is exhaled). Oxygen in the blood is carried to the tissues and cells, where it oxidizes foodstuffs to produce energy.

respirator A machine used to maintain breathing in patients whose respiratory muscles are paralysed. The cabinet respirator (iron lung) encloses the patient in a sealed container from the neck down; by lowering the pressure in the cabinet the chest expands and draws air into the lungs. A positive-pressure respirator pumps air at regular intervals into the lungs through a tube placed in the windpipe.

Restoration (1660) The re-establishment of the monarchy in England following the fall of the *Protectorate. The Restoration of Charles II, whose father Charles I had been executed (1649) during the Civil War, was engineered by General Monck (1608–70). In April 1660, the Convention Parliament accepted Charles' Declaration of Breda, in which he promised religious toleration and an amnesty to all but 57 of those who had fought the Crown.

retina The light-sensitive layer that forms the inner surface of the eye. Light is focused by the lens onto the retina, which contains numerous interconnecting light-sensitive cells (rods and cones) that send signals to the visual centre of the brain via the optic nerve. The rods are responsible for vision in dim light and the cones are sensitive to colour and visual detail. *See also* DETACHED RETINA.

retriever A large strongly built sporting dog descended from the Labrador and characterized by a "soft" mouth and good swimming ability. The flat-coated retriever has a dense coat while the curly-coated retriever has a coat of small tight curls, indicating possible poodle

ancestry. Height: 56–68 cm. *See also* GOLDEN RETRIEVER.

Réunion A volcanic island and French overseas department in the W Indian Ocean, in the Mascarene Islands. It was settled in about 1642 by the French with their African and Indian slaves. Sugar, rum, and molasses are exported. Area: 2512 sq km (970 sq mi). Population (2002 est): 743 000. Capital: Saint-Denis.

Revelation, Book of A prophetic book, the last in the New Testament, written perhaps about 90–95 AD by "John the Divine," who is often identified with the apostle John. It consists of seven highly symbolic visions that trace the fortunes of the Christian Church from its inception to the end of the world.

Revere, Paul (1735–1818) American silversmith and revolutionary. On 18 April 1775, he rode out to warn the people of Massachusetts that the British troops were on the march. The next morning the American Revolution began with shots at the British at Lexington. Revere's ride is celebrated in a poem by Longfellow.

Revolt of the Netherlands The rebellion against Spanish rule in the Netherlands, inspired by political and economic grievances and resentment at the suppression of Protestantism. The revolt broke out in 1568 but the independence of the United Provinces of the Netherlands was not acknowledged until 1648, when the Peace of Westphalia was signed.

Revolutionary and Napoleonic Wars (1792–1815) A series of European wars precipitated by the *French Revolution and *Napoleon I's ambitions for the conquest of Europe. War broke out as a result of the hostile reaction of Austria and Prussia to the arrest of Louis XVI. Initial French success prompted Britain, the Netherlands, and Spain to close ranks with Austria and Prussia in the first coalition (1793). Hard pressed, France created a citizen army and achieved a series of victories. In 1795 Prussia, the Netherlands, and Spain sued for peace and, following Napoleon's first Italian campaign (1796–97), Austria followed suit. French supremacy was thwarted only by British naval strength and Nelson's great victory of the *Nile (1798). In 1798–99 the second coalition of Britain, the Ottoman Empire, Naples, Portugal, and Austria was formed but collapsed (1801) in the face of Napoleon's victories, especially at Hohenlinden (1800), and the Revolutionary Wars ended with the uneasy Treaty of Amiens (1802) between Britain and France.

Napoleon's aggression, including his imposi-

tion of the Continental System of trade blockades against Britain, led to the resumption of naval war between Britain and France. In 1805 Pitt the Younger negotiated a third coalition against Napoleon, who was defeated by Nelson at *Trafalgar. Napoleon now defeated Austria and Russia at Ulm and *Austerlitz (1805), Prussia at *Jena and Auerstadt (1806), and Russia again at Friedland (1807). With the failure of the Continental System and Wellington's victories in the *Peninsular War, Napoleon's dominance diminished. Following his disastrous Russian campaign (1812) the allies were able to defeat him at *Leipzig (1813) and later, after his return from exile, at *Waterloo (1815). The post-Napoleonic settlement of Europe was decided at the Congress of *Vienna.

Revolution of 1905 An insurrection in Russia, an expression of the widespread discontent that culminated in the *Russian Revolution of 1917. It began on 22 January 1905 (*Bloody Sunday), when a group of workers marched peacefully on the Winter Palace in St Petersburg and were fired on by troops. The massacre precipitated nationwide strikes, uprisings, and mutinies (including the mutiny on the battleship *Potemkin*). The Revolution was crushed by the end of December.

Revolutions of 1848 A series of revolutions in continental Europe caused by economic distress and liberal agitation. The first revolution broke out in France, where the insurgents overthrew the July Monarchy of Louis Philippe, but a split in their ranks led to the suppression of the Left and the election of Louis Napoleon (later *Napoleon III) as president. In the Italian states the revolution formed part of the movement against the Austrian presence in Italy (see *RISORGIMENTO*). In the Austrian Empire revolts in Vienna secured the resignation of Metternich and the summoning of a constituent assembly. In Prussia, Frederick William IV was forced to convene a constituent assembly. By December, however, the revolutions there and in other German states had been suppressed. The revolutions were all quelled but not without some concessions to liberal and nationalist movements.

revolver A short-range small arm having a revolving cylinder containing the rounds behind the barrel. Calibres range from .21 inches to .455 inches. The first successful revolver was the Colt. See also *PISTOL*.

Reykjavík 64°10'N 21°53'W The capital of Iceland, an important fishing port, on Faxa Fjord in the SW. Founded by the Vikings in 874 AD, it

became the seat of parliament (the Althing) in 1843 and capital of Iceland in 1918. Population (2006 est): 114 074.

Reynolds, Sir Joshua (1723–92) British portrait painter. Using the techniques of the Old Masters in such paintings as *Sarah Siddons as the Tragic Muse* (San Marino, California), Reynolds aimed to give portraits the prestige of history paintings. In 1768 he became the first president of the *Royal Academy, where he delivered the *Discourses* containing his artistic theories.

rhea A large flightless bird of a family (*Rheidae*; 3 species) occurring in South America. 120 cm tall, rheas have a brownish plumage and long legs with three toes. They live in flocks, feeding on leaves, roots, seeds, insects, and small vertebrates. Order: *Rheiformes*.

Rhea In Greek religion, a Titan, daughter of Uranus and Gaea. Her consort *Cronus swallowed her children, fearing that they would overthrow him. Rhea substituted a stone for one child, *Zeus, who eventually overthrew Cronus and forced him to disgorge the other children.

Rhee, Syngman (1875–1965) Korean statesman; president of South Korea (1948–60). He became leader of South Korea in 1945 during the US occupation and as its first president claimed his government's right to rule over all Korea. Popular unrest unseated him in 1960.

rhenium (Re) A dense (relative density 21.02) silvery-white transition metal with a very high melting point. The metal is very ductile and is used to alloy with tungsten. Alloys with molybdenum are superconducting. The metal is obtained as a by-product of molybdenum refining. At no 75; at wt 186.2; mp 3186°C; bp 5596°C.

rhesus factor (Rh factor) A blood protein present on the red cells in 83% of the population: the presence or absence of the Rh factor is the basis of the Rh *blood group system, people with the factor being described as Rh positive and those without as Rh negative. If a Rh-negative woman has a Rh-positive baby she may produce anti-Rh antibodies that will react against subsequent Rh-positive pregnancies. The affected baby's blood cells may be destroyed by these antibodies, leading to the severe anaemia of haemolytic disease of the newborn. The incidence of this disease has been reduced by taking steps to prevent the formation of maternal anti-Rh antibodies soon after delivery of the first baby.

rhesus monkey A *macaque monkey, *Macaca mulatta*, of S Asia, widely used in medical research. In the wild, rhesus monkeys live in large colonies in forests or on hillsides.

rheumatic fever A disease of children that occurs (rarely) after infection with a streptococcus bacterium. The symptoms develop 10–14 days after the original infection (which is usually of the throat) and include fever, aching joints, chorea (involuntary movements), and inflammation of the heart, which—in a few cases—may lead to chronic heart disease. Treatment is with bed rest, penicillin, aspirin, and sometimes steroids.

rheumatism Any condition involving pain in the joints. This may be caused by a simple strain or by rheumatoid *arthritis, *osteoarthritis, *gout, or *rheumatic fever.

Rhine, River (German name: Rhein; Dutch name: Rijn) A river in central and W Europe. Rising in SE Switzerland, it flows N along the Swiss-German border, the Franco-German border and into Germany and the Netherlands before entering the North Sea. The main tributaries are the Rivers Ruhr, Main, Moselle, and Neckar. It is W Europe's main navigable waterway. Length: 1320 km (820 mi).

rhinoceros A large hoofed mammal belonging to the family *Rhinocerotidae* (5 species), of Asia and Africa. Rhinos have a massive virtually naked dark-skinned body with short thick legs, a short neck, and a large head. The Indian rhinoceros (*Rhinoceros unicornis*) has a single horn; all other rhinos have two horns. Rhinos range in size from the large rare African white rhinoceros (*Diceros simus*), up to 2 m high and weighing 3.5 tonnes, to the Sumatran rhinoceros (*Didermoceros sumatrensis*), which is up to 150 cm high and weighs 500–1000 kg. Rhinos are generally solitary grazers. All are now endangered species.

rhizome An underground plant stem producing aerial leaves and shoots. It may extend some distance below ground and can be fleshy (as in the iris) or wiry (as in couch grass). Rhizomes can function both as organs of vegetative reproduction and as overwintering structures.

Rhode Island The smallest state in the USA, indented by Narragansett Bay. One of the New England states, it is the second most densely populated US state. It is highly industrialized and has important naval installations. It is famous for its poultry. *History*: settled in 1636, it was the first colony to declare its independence

from Britain. Area: 3144 sq km (1214 sq mi). Population (2000): 1 048 319. Capital: Providence.

Rhode Island Red A breed of domestic fowl developed on Rhode Island farms in the 19th century. It has a deep broad long body with a nearly horizontal back and a slightly curved beak. The plumage is red. Weight: 3.8 kg (cocks); 3.0 kg (hens).

Rhodes (Modern Greek name: Ródhos) A Greek island in the SE Aegean Sea, the largest of the Dodecanese group. It has a mountainous interior with fertile coastal strips, producing cereals, fruit, and wine. Tourism is important. *History*: colonized by Dorians before 1000 BC, Rhodes entered its period of greatest prosperity in the 3rd century BC. It suffered several earthquakes, one of which destroyed the *Colossus of Rhodes in 244 BC. It was occupied by the Knights *Hospitallers from 1282 until 1528, when it became part of the Ottoman Empire. Conquered by Italy in 1912, it was ceded to Greece in 1947. Area: 1400 sq km (540 sq mi). Population (latest est): 40 392. Capital: Rhodes.

Rhodes, Cecil (John) (1853–1902) South African financier and statesman. Born in Britain, he went to South Africa in 1870. In 1888 his company bought up the Kimberley mines and in 1889 he gained a charter to develop the territory that in 1895 was named Rhodesia in his honour. He became prime minister of Cape Colony in 1890 but was forced to resign in 1896 over the abortive Jameson raid into the Transvaal. Rhodes endowed 170 Rhodes scholarships at Oxford University for students from the British Empire, the USA, and Germany.

rhodium (Rh) A metal of the platinum group, discovered in 1803 by W.H. Wollaston (1766–1828). It is a very hard highly reflective metal and is used to plate jewellery and optical instruments. At no 45; at wt 102.905; mp 1963 ± 3°C; bp 3697 ± 100°C.

Rhododendron A genus of small trees and shrubs (about 250 species), mainly of N temperate regions. They have leathery often evergreen leaves, large scaly winter buds, and colourful fragrant bell- or funnel-shaped flowers. Many, including *azaleas, are cultivated as ornamentals. Family: *Ericaceae*.

Rhondda, Cynon, Taff A county borough in S Wales, created in 1996 from part of Mid Glamorgan. Area: 558 sq km (215 sq mi). Population (2001): 231 952. Administrative centre: Rhondda.

Rhône, River A major river in W Europe. Rising in the Rhône Glacier in Switzerland, it

flows through Lake Geneva to enter France, flowing generally SW. Since 1976 the River Rhône has been canalized from Lyon to the Mediterranean Sea. Length 812 km (505 mi).

rhubarb A perennial plant, *Rheum raphaniticum*, possibly of Asian origin, widely cultivated for its juicy red or green leafstalks, up to 1 m high, which are cooked in sugar. The leaves are poisonous. Family: *Polygonaceae*.

rib A curved bone, 12 pairs of which make up the rib cage, enclosing and protecting the heart and lungs. Each rib articulates with the *spine, permitting movement of the rib cage during breathing. The other ends of the upper seven ribs (the so-called true ribs) are fixed directly to the breastbone by means of a cartilage. Each of the next three pairs (the "false" ribs) is connected by the cartilage to the rib above it, and the two lowest ribs (the floating ribs) end in the muscles of the body wall.

Ribbentrop, Joachim von (1893–1946) German Nazi politician and diplomat. From 1936 to 1938 he was ambassador to the UK and then became Hitler's foreign minister. He was arrested in 1945 and hanged for war crimes.

ribbonworm A long flat wormlike animal, also called proboscis worm, belonging to the invertebrate phylum *Nemertina* (about 600 species). Ranging in length from 1 mm to 30 m, ribbonworms live in shallow seas, feeding on annelid worms, molluscs, and crustaceans.

Ribeirão Preto 2109S 4748W A city in S Brazil, in São Paulo state. It is the centre of a coffee- and sugar-growing area. Population (2000): 502 333.

Ribera, José de (or **Jusepe R.**; 1591–1652) Spanish-born painter and etcher. He settled in Naples (1616), where he was known as Lo Spagnoletto (Little Spaniard). He painted chiefly religious subjects and some everyday life scenes and portraits, the best examples of which are *The Martyrdom of St Bartholomew* (Prado) and *Clubfooted Boy* (Louvre).

riboflavin See VITAMIN B COMPLEX.

ribonucleic acid See RNA.

ribose A simple sugar ($C_5H_{10}O_5$). Ribose and its derivative deoxyribose are important constituents of *RNA and *DNA respectively.

ribosome A granular particle present in enormous numbers in the cytoplasm of nearly all *cells. Ribosomes are composed of *RNA and protein and are the site of protein synthesis.

rice An annual cereal *grass, *Oryza sativa*, or its edible grain, probably native to India but widely cultivated throughout tropical, subtropical, and warm temperate regions. Seedlings are generally transplanted to flooded paddy fields, although varieties of upland rice do not require flooding. The field is drained to enable mechanical harvesting. Milling the grain removes either the outer husk alone, resulting in brown rice, or both the husk and the bran layer, resulting in vitamin-B-deficient white rice.

Richard (I) the Lionheart (1157–99) King of England (1189–99); a hero of medieval legend, he spent all but six months of his reign abroad. The third son of Henry II and *Eleanor of Aquitaine, he joined the third Crusade in 1189 and conquered Messina and Cyprus before arriving in the Holy Land. His victory at Arsuf gained Joppa (1191). On his way home he was captured in Austria and was only released after payment of an enormous ransom (1194). He died campaigning in France.

Richard II (1367–1400) King of England (1377–99). Succeeding his grandfather Edward III, as a minor, government was largely in the hands of his uncle *John of Gaunt. Factional struggles culminated in the banishment in 1398 of Gaunt's son Henry Bolingbroke. He returned in 1399, while Richard was in Ireland, and seized the throne as Henry IV. Richard died shortly afterwards at Pontefract Castle in mysterious circumstances.

Richard III (1452–85) King of England (1483–85). He was the youngest brother of Edward IV, on whose death in 1483 he became protector for Edward V, a minor. After destroying the power of the Woodville faction, Richard imprisoned Edward and his brother and seized the throne. It is alleged that Richard murdered the boys, who disappeared in August 1483. As king, he made important administrative and financial reforms but faced opposition, first from Henry Stafford, 2nd Duke of Buckingham (executed in October 1483), and then from Henry Tudor (subsequently *Henry VII), by whom Richard was defeated and killed at Bosworth.

Richardson, Sir Ralph (1902–83) British actor. He established his reputation as an actor of Shakespearean roles while working with the Old Vic Company during the 1930s and 1940s. He also acted in modern plays, such as *David Storey's Home* (1970) and *Harold Pinter's No Man's Land* (1976) and made many films.

Richardson, Samuel (1689–1761) British

novelist. His pioneering novel *Pamela* (1740) evolved from a publisher's commission for a book of model letters for inexperienced writers. His acute psychological characterization was further developed in *Clarissa* (1748).

Richelieu, Armand Jean du Plessis, Cardinal de (1585–1642) French statesman, who greatly increased the absolute authority of the Crown and France's power in Europe. He rose to prominence as adviser to Louis XIII's mother Marie de' Medici (1573–1642), becoming Louis' chief minister in 1629. He ruthlessly suppressed the *Huguenots and by means of an extensive secret service thwarted a series of aristocratic conspiracies against himself. He directed France with brilliance in the Thirty Years' War and founded the French Academy.

Richmond 37°34'N 77°27'W A city and port in the USA, the capital of Virginia. Richmond was the capital of the Confederate states during the US Civil War. Population (2000): 197 790.

Richmond-upon-Thames A mainly residential borough of SW Greater London. It contains Richmond Park, Hampton Court Palace, and Kew Gardens.

Richter scale A scale of earthquake magnitude devised in 1935 by C. F. Richter (1900–85). It is a logarithmic scale from 0–9, the largest earthquakes having the highest numbers. The strongest earthquake so far recorded had a Richter scale value of 8.6.

Richthofen, Manfred, Freiherr von (1892–1918) German air ace of World War I, who shot down 80 Allied aircraft before being killed himself in action. His nickname, the Red Baron, referred to the colour of his plane.

rickets A disease of children affecting the bones and caused by *vitamin D deficiency. With a poor diet and/or inadequate sunshine the bones become soft and do not grow properly.

rickettsia A minute organism belonging to a phylum of bacteria that cannot reproduce outside the bodies of their hosts. They infect arthropods (especially ticks and mites) and can be transmitted to humans, in whom they cause such diseases as *typhus. All species live within living cells; they were formerly regarded as intermediate between bacteria and viruses. The name derives from the principal genus (*Rickettsia*), which was named after the US pathologist H. T. Ricketts (1871–1910).

Ridgeway A prehistoric trackway in S England. It runs along the scarp of the Berkshire

Downs, linking the *Avebury region with the Thames.

Rif A *Berber people of N Morocco. Most of the 19 tribes speak the Rif dialect of the Berber language but a few speak Arabic. Many are light skinned and have blue or grey eyes. The Rif are Muslims and are renowned for their warrior tradition.

rifle A shoulder small arm with a spiral groove inside its long barrel to make the projectile spin during its trajectory. Invented in the 15th century, the rifle superseded the *musket during the 18th and 19th centuries. During the 1880s breech-loading rifles became capable of firing more than one cartridge without reloading. These were the immediate predecessors of the modern repeating rifle. See also BROWNING AUTOMATIC RIFLE.

riflebird A large *bird of paradise having a black plumage with iridescent throat patches and small ornamental plumes. The magnificent riflebird (*Craspedophora magnifica*) is about 30 cm long with a slender curved bill, a glossy green crown, and a purplish throat. The male performs its courtship display on fiercely defended perches.

rift valley A steep-sided valley with a flat floor formed as a result of the valley floor subsiding between two roughly parallel faults. The most notable example is the vast Great Rift Valley in Africa.

Riga 56°53'N 24°08'E The capital of Latvia, a port on the Baltic Sea. It is an industrial and cultural centre. *History:* the order of Livonian Knights was founded here in 1201, and in 1282 Riga became a member of the Hanseatic League. It then passed to Poland (1581), to Sweden (1621), and to Russia (1710). The capital of independent Latvia (1918–40 and from 1991) and of the Latvian SSR (1940–91), it was occupied by the Germans (1941–44) in World War II. Population (2000 est): 788 283.

right ascension An angular distance, analogous to terrestrial longitude, that is used with **declination** to specify the position of an astronomical body on the *celestial sphere. It is measured eastwards along the celestial equator from the vernal *equinox. Declination is the angular distance of the body N or S of the celestial equator.

Rights of Man and of the Citizen, Declaration of the (1789) The formal expression of the ideals of the *French Revolution. Comprising 17 articles, it was drafted by the National Assembly to preface the constitution

of 1791. Incorporating *Enlightenment theories and both English and American precedents (see **BILL OF RIGHTS**), the Declaration asserted that "all men are born free and equal in rights."

right whale A *whale of the family *Balaenidae* (5 species), so called because they were the right whales to catch (by whalers). Up to 18 m long and weighing over 20 tonnes, they are large-headed slow-moving plankton feeders.

Rijeka (Italian name: Fiume) 45 20N 14 27E The chief seaport in Croatia on the Adriatic Sea. Made a free port in 1723, it was annexed by Hungary in 1779. In 1919, Gabriele D'Annunzio (1863–1938) led a force to capture it for Italy. It again became a free port in 1920, reverted to Italy in 1924, came to Yugoslavia in 1947, and finally became part of independent Croatia in 1991. Population (2001): 147 709.

Rijksmuseum A museum and art gallery in Amsterdam, housing the national collection of the Netherlands. It originated in 1808 as the Royal Museum and became the Rijksmuseum in 1817. Its paintings of the Dutch school include the celebrated *Night Watch* by Rembrandt.

Rijswijk, Treaty of (1697) The treaty that ended the War of the Grand Alliance between France and England, Spain, Austria, and the Netherlands. Louis XIV of France surrendered most of the territories he had conquered, recognized William III as King of England, and granted trading concessions to the Dutch.

Rilke, Rainer Maria (1875–1926) Austrian poet, born in Prague. Paris is the setting for the meditative prose of *Die Aufzeichnungen des Malte Laurids Brigge* (1910). In his poetry, the mysticism of *Das Stunden-Buch* (1905) develops into a pantheistic celebration of life in the *Duino Elegies* (1923) and the *Sonnets to Orpheus* (1923).

Rimbaud, Arthur (1854–91) French poet. He was welcomed to Paris in 1871 by *Verlaine, with whom he formed a tempestuous relationship that eventually ended in a violent quarrel. His visionary theories about poetry were expressed in *Une Saison en enfer* (1873) and *Les Illuminations* (1886). At the age of 20 he renounced poetry and wandered in Europe and the Near East, eventually becoming a gun-runner in Ethiopia.

Rimini (Latin name: Ariminum) 44 03N 12 24E A town and resort in Italy, on the N Adriatic coast. It has various Roman and medieval remains. Population (2000 est): 131 062.

Rimsky-Korsakov, Nikolai (1844–1908)

Russian composer. He was a member of the group of nationalist composers known as the Mighty Five. He wrote 15 operas, including *The Snow Maiden* (1880–81) and *The Golden Cockerel* (1906–07), such orchestral works as *Scheherazade* (1888), chamber music, and songs.

ringlet A *satyrid butterfly characterized by brownish wings marked with small white rings. The larval food plants are mainly grasses. Chief genera: *Aphantopus*, *Cacnonymphe*, *Erebia*.

ring ouzel A shy songbird, *Turdus torquatus*, of mountainous regions. The male is black with a broad white crescent around the throat; the female is dark brown with less distinct markings. Family: *Turdidae* (thrushes).

ringworm A highly infectious disease of the skin, hair, and nails that is caused by various fungi: it is known medically as *tinea*. Ringworm is usually transmitted by direct contact. The affected area is typically ring-shaped (especially on the scalp). Infections are treated with a variety of antifungal drugs, applied locally or taken by mouth.

Rio de Janeiro 22 53S 43 17W The chief port in Brazil, the capital of Rio de Janeiro state. Discovered by the Portuguese in 1502, it was the capital of Brazil from 1763 until 1960. It is renowned for its spectacular setting backed by mountains, the most famous of which is the conical Sugar Loaf Mountain. Another famous landmark is the giant figure of Christ standing on the highest peak. It is an important port and trading centre. Population (2000): 5 850 544.

Rio Grande (Spanish names: Rio Bravo; Rio Bravo del Norte) The fifth longest river of North America. Rising in the Rocky Mountains, it forms the entire border between Texas (USA) and Mexico. Length: 2040 km (1267 mi).

Risorgimento (Italian: resurgence) The nationalist movement in 19th-century Italy that achieved the country's independence and unification. Secret societies, such as the Carbonari and Young Italy, encouraged Italian patriotism after 1815. In 1859, the Piedmontese prime minister *Cavour freed Lombardy and in 1860 Garibaldi surrendered to Piedmont the conquests made in the S by his Expedition of the Thousand. Tuscany, Modena, Parma, Bologna, and Romagna then accepted entry into the kingdom of Italy under the House of Piedmont, proclaimed in 1861. Unification was completed by Italy's annexation of Venetia in 1866 and of the papal states in 1870.

Rivera, Diego (1886–1957) Mexican mural painter. In Mexico in the 1920s, he revived the

old techniques of *fresco and encaustic painting. His communist-inspired subject matter made him notorious in the USA. His wife **Frida Kahlo** (1907–54) was also a noted painter.

Riverina A district of Australia, in S New South Wales. It consists chiefly of flat alluvial plains. Area: 68 658 sq km (26 509 sq mi).

Riviera (French name: *Rivière*) The narrow Mediterranean coastal belt of France and Italy, extending roughly between Toulon and La Spezia. Its climate, scenery, and beaches have made it a long-standing cosmopolitan resort.

Riyadh 24 39N 46 46E A city in Saudi Arabia, in the centre of the Arabian Peninsula. Riyadh and Mecca are joint capitals of the kingdom. Population (1996 est): 2 800 000.

RNA (or ribonucleic acid) A nucleic acid that is important in the synthesis of proteins by living organisms. In some viruses RNA is the genetic material. Structurally, it is similar to *DNA but usually occurs as a single-stranded molecule with the sugar ribose and the base uracil replacing the deoxyribose and thymine of DNA. There are three main types of RNA: ribosomal (r) RNA, messenger (m) RNA, and transfer (t) RNA. mRNA contains the genetic code necessary for protein synthesis. It is transcribed from DNA in the nucleus and then moves to the ribosomes, where the genetic information encoded within it is translated into a particular polypeptide chain. The amino acids making up the protein are brought to their correct positions in the chain by tRNA.

roach One of several freshwater fish related to carp, especially *Rutilus rutilus*, a game fish found in N Europe. It has an elongated body, 13–45 cm long, olive-green to grey-green above and silvery white below with reddish fins and red eyes. It lives in shoals, feeding on small animals and plants.

Robert (I) the Bruce (1274–1329) King of the Scots (1306–29). After a long career of rebellion against the English Crown Robert seized the Scottish throne in 1306. Although immediately forced into exile by Edward I of England, on the accession of Edward II he slowly recovered the kingdom, decisively defeating the English forces at Bannockburn (1314).

Robert II (1316–90) The first *Stuart King of the Scots (1371–90). He was three times regent of Scotland (jointly 1334–35; alone 1338–41 and 1346–57) while his uncle David II (1324–71) was imprisoned or in exile. His own rule, as an old man, was of little consequence.

Roberts, Julia (1967–) US film actress, who rose to stardom in *Pretty Woman* (1990). Later films include *Notting Hill* (1999), *Erin Brockovich* (2000), which earned her an Oscar, and *Mona Lisa Smile* (2003).

Robeson, Paul (1898–1976) US Black actor and singer of Negro spirituals. His stage performances include the title role of Othello, and he actively campaigned for Black civil rights.

Robespierre, Maximilien François Marie Isidore de (1758–94) French revolutionary. A lawyer, Robespierre was elected to the States General in 1789 and became one of the leaders of the radical Jacobins. After the execution of Louis XVI he was instrumental in the overthrow of the Girondins (1793). He subsequently wielded supreme power on the Committee of Public Safety, instituting the *Reign of Terror. In 1794 his cult of the Supreme Being became unpopular: he was denounced in the Legislative Assembly and guillotined.

robin A small Eurasian songbird, *Erithacus rubecula*. About 13 cm long, it has an olive-brown plumage with an orange-red breast, throat, and forehead and feeds on insects, earthworms, fruit, and seeds. A robin defends its territory fiercely, using its song to warn off intruders. Family: *Turdidae* (thrushes).

Robin Hood An English outlaw, probably legendary, who figures in a series of medieval ballads. According to the *Lytell Geste of Robyn Hode* (c. 1495) he killed the evil sheriff of Nottingham, was visited in his forest home by the king, and was then employed in the royal household.

Robinson, Sugar Ray (Walker Smith; 1921–89) US boxer, world welterweight champion (1946–51) and five times middleweight champion (twice in 1951, 1955, 1957, 1958–60). He fought 202 professional bouts, of which he lost only 19.

robotics The study of automatic machines that are capable of simulating and replacing human activities. Some robotic machines have sensory devices and can make decisions based on a sensory input and a self-programming facility. However, most robots in current industrial use carry out a fixed sequence of computer-controlled operations.

Rob Roy (Robert Macgregor; 1671–1734) Scottish outlaw, whose violent life was romanticized in Sir Walter Scott's novel *Rob Roy* (1818). He became a bandit after losing his family fortunes in 1712.

Robson, Dame Flora (1902–84) British actress. She was successful in both comedy, as in *Captain Brassbound's Conversion* (1948), and in serious drama, such as Ibsen's *Ghosts* (1958) and *John Gabriel Borkman* (1963). In her many films she usually played character parts.

Rochdale A unitary authority in N England, in Greater Manchester. Area: 159 sq km (61 sq mi). Population (2001): 205 233.

Rochester 1. 43 12N 77 37W A city in the USA, in New York state on Lake Ontario. Founded in 1789, its industries include the manufacture of photographic equipment. Population (2000): 219 773. 2. 51 24N 0 30E A city and port in SE England, in Medway unitary authority, Kent on the Medway estuary. It was a Roman stronghold. Population (1994 est): 146 200.

rock A solid mixture of *minerals forming part of the earth's crust. Rocks are classified according to their formation (see IGNEOUS ROCK; METAMORPHIC ROCK; SEDIMENTARY ROCK), their age (see STRATIGRAPHY), and their composition. The principal minerals in rocks are the silicates (including silica), carbonates, and oxides. The essential minerals in a rock are those that determine its classification; accessory minerals are those that do not affect its classification. Petrology is the study of rocks.

rock crystal See QUARTZ.

Rockefeller, John D(avison) (1839–1937) US industrialist, who founded the monopolistic oil-refining company, Standard Oil (1870). A philanthropist, he founded the University of Chicago in 1891 and, with his son **John Davison Rockefeller, Jr** (1874–1960), established the Rockefeller Institute for Medical Research (now Rockefeller University) in 1901. The latter's nephew, **Nelson A(ldrich) Rockefeller** (1908–79), was Gerald Ford's vice-president (1974–77).

rockets Vehicles or missiles powered by jet propulsion that carry their own fuel and oxidizer and can therefore travel both in space and in the atmosphere. Rockets have no lift surfaces (see AERONAUTICS), obtaining both lift and thrust from their propulsive jets. Solid-fuel firework rockets were known to the Chinese in the 13th century; the first liquid-fuelled rocket to fly was designed by the American R.H. Goddard (1882–1945) in 1926. This achievement attracted little interest, except in Germany, where the Peenemünde rocket research station was set up. It was here that Werner *von Braun produced the *V-2 rocket in World War II. Intercontinental *ballistic

missiles (with nuclear warheads) developed from this model. These rockets, in turn, led to the space rockets that carried man to the moon.

Space rockets are built in stages, a high-thrust vehicle providing lift-off and acceleration into the thinner atmosphere, where this first stage is jettisoned and the second stage takes over. The world's biggest rocket, the US Saturn V, is a three-stage rocket weighing 3000 tonnes fully laden. The first stage burns kerosene and the second and third stages burn liquid hydrogen. Liquid oxygen (lox) is the oxidizer for all stages.

rockrose A small spreading shrub, *Helianthemum chamaecistus*, up to 30 cm high with bright-yellow flowers; it is found in grassland and scrub of Europe and W Asia. Family: Cistaceae.

Rocky Mountains (or Rockies) The chief mountain system in North America. It extends roughly N–S for about 4800 km (3000 mi) between New Mexico (USA) and the Yukon (Canada), forming the Continental Divide. It rises to 4399 m (14 431 ft) at Mount Elbert.

rococo A style dominant in the fine and decorative arts of France between about 1700 and 1750. Developing in reaction to the *baroque pomp of the Louis XIV period, it was characterized by curved forms, slender proportions, asymmetry, pastel colours, and a general effect of gaiety and delicacy. Rococo artists include the painters *Fragonard, *Boucher, and *Watteau and the sculptor Clodion (1738–1814). The style spread to Austria and Germany, where the leading exponent was the architect Baltazar Neumann (1687–1753).

rodent A mammal belonging to the order *Rodentia* (over 1700 species). Rodents are distributed worldwide and occupy a wide range of habitats. They range in size from about 7.5 cm (the smallest mice) to 130 cm (the capybara). Rodents have distinctive teeth. The single pairs of chisel-like incisors in each jaw continue to grow throughout life, as they are worn away by gnawing. There are no second incisor or canine teeth, leaving a gap between the front teeth and cheek teeth. Rodents are divided into three suborders: *Hystricomorpha* (porcupines, cavies, chinchillas, etc.; 180 species); *Sciuromorpha* (squirrels, beavers, marmots, chipmunks, etc.; 366 species); and *Myomorpha* (rats, mice, lemmings, voles, etc.; 1183 species).

Rodgers, Richard Charles (1902–79) US composer of musical comedies. With the lyricist Lorenz Hart (1895–1943) he wrote such

works as *The Girl Friend* (1926) and *Pal Joey* (1940). After Hart's death he collaborated with Oscar *Hammerstein II on *Oklahoma* (1943), *The King and I* (1951), *The Sound of Music* (1959), and other musicals.

Rodin, Auguste (1840–1917) French sculptor. He produced his first major work, *The Age of Bronze* (1877), after visiting Italy (1875), where he was influenced by the work of Michelangelo and Donatello. *The Burghers of Calais* (1884–86), his nude monument of Victor Hugo, and his dressing-gowned Balzac were all initially rejected. Nevertheless, by 1900 Rodin had established an international reputation, his bronze portrait busts and his marble *The Kiss* (1886; Tate Gallery), being particularly admired. His most personal work, *The Gates of Hell*, was left unfinished at his death.

Rodney, George Brydges, 1st Baron (1719–92) British admiral. He wrecked (1759–60) a French invasion fleet during the Seven Years' War and won victories (1780–82) against the powers that supported the American Revolution. His victory over the French off Dominica (1782) helped Britain to gain favourable terms in the concluding Peace of Versailles (1783).

Rodrigo, Joaquín (1902–99) Spanish composer, blind since the age of three. His works include the *Concierto de Aranjuez* (for guitar and orchestra; 1940) and *Concierto Pastorale* (for flute and orchestra; 1978).

roe deer A small deer, *Capreolus capreolus*, of temperate Eurasian forests. About 70 cm high, roe deer have a dark-brown winter coat, a red-brown summer coat, and a large white rump patch; males have small antlers. They feed at night on leaves, shoots, and berries.

roentgen A unit of dose of ionizing radiation equal to the dose that produces ions of one sign carrying a charge of 2.58×10^{-4} coulomb in air.

Roentgen, Wilhelm Konrad (1845–1923) German physicist. In 1895 Roentgen was investigating the *luminescence that cathode rays produce in certain substances and discovered that the luminescence persisted when the cathode rays themselves were blocked by cardboard. He correctly concluded that some other type of radiation was coming from the cathode-ray tube. He named the radiation X-rays.

Rogers, Ginger (Virginia McMath; 1911–95) US actress and singer. During the 1930s she partnered Fred *Astaire in film musicals, including *Top Hat* (1935), *Swing Time* (1936), and *Follow the Fleet* (1936).

Rogers, Richard, Baron (1933–) British architect, born in Italy. With his first wife Su he formed Team 4 with Norman and Wendy *Foster (1963–67). His buildings include the Pompidou Centre in Paris (1971–77; with Renzo Piano), Lloyd's in London (1986), the European Court of Human Rights, Strasbourg (1989–95), and the *Millennium Dome, Greenwich.

Rolland, Romain (1866–1944) French novelist, dramatist, and essayist. His best-known novel, *Jean Christophe* (1904–12), concerns a German composer. He won the Nobel Prize in 1915.

Rolling Stones, the A British rock group, formed in 1962. Their early hits included "The Last Time" and "Satisfaction". Later albums include *Beggar's Banquet* (1968), *Exile on Main Street* (1972), and *Some Girls* (1978). The original members were Mick *Jagger (1944–), Keith Richard (1943–), Bill Wyman (1936–), Charlie Watts (1941–), and Brian Jones (1942–69).

Roman Catholic Church The Christian Church of which the pope is the temporal leader. After the split with the Eastern Orthodox Churches (1054), Roman Catholicism was the unchallenged spiritual authority in W Europe. In the early 16th century the rising tide of *Protestantism demonstrated the need for urgent reforms within the Church. The Council of Trent (1545–63) has largely determined the present dogmatic, disciplinary, and liturgical character of Roman Catholicism (see also COUNTER-REFORMATION), although important reforms were initiated by the second Vatican Council. The Church organization is centralized and hierarchical and the pope's decisions are reinforced by the doctrine of *infallibility. Other accepted doctrines include *transubstantiation and *purgatory. The number of the *sacraments has been fixed at seven since the 12th century. The cult of the Virgin Mary, which flourished in the middle ages, underwent a major revival in the 19th century. Until the mid-20th century Latin was the sole language of the Mass. Roman Catholicism has spread worldwide due to strenuous missionary efforts since the 16th century (see JESUITS) and is the largest Christian denomination. Some modernization of the Church has taken place (the use of the vernacular in the Mass, etc.), although traditional teachings on such issues as abortion, contraception, divorce, and female and married priests have been maintained.

Romance languages Descendants of the Italic language group, in particular of the spoken form of Latin, called Vulgar Latin. The group consists of modern *French, *Italian,

*Spanish, *Portuguese, *Romanian, *Catalan, the Rhaetian (see ROMANSCH) group of dialects, Sardinian, and the now extinct Dalmatian. They are classified as a group on the basis of a shared section of basic vocabulary, which originated in the influence of the language of the Roman conquerors of the Mediterranean.

Roman Curia (Latin: *Curia Romana*) The papal court, comprising the chief judicial and administrative bodies of the *Roman Catholic Church. Extensively reformed in 1967 by Pope Paul VI, it consists of three tribunals, which are mainly concerned with judicial matters; five offices, including the Chancery, which issues papal bulls, and the offices of the Palatine Secretaries; and nine Roman Congregations, which are permanent commissions of cardinals having specific tasks.

Roman Empire The imperial period of ancient Roman history from 27 BC, when Octavian became emperor as *Augustus, until 476 AD. Under imperial government many of the political institutions of the *Roman Republic, notably the Senate, continued to function, although Augustus and his successors enjoyed supreme power as *princeps* (chief citizen). Augustus fostered peace and prosperity, which continued, despite outbreaks of rebellion, under the paternalistic rule of the Flavian (69–96 AD: Vespasian, Titus, and Domitian) and Antonine (96–180: Nerva, Trajan, Hadrian, Antoninus Pius, Marcus Aurelius) emperors. Civil war, however, followed the death of Commodus (193). Order was briefly restored by Lucius Septimius Severus (reigned 193–211), who openly acknowledged his dependence on military might. The 3rd century saw a rapid succession of army-nominated emperors, while Rome's frontiers were threatened by the Sasanians and the Goths. Diocletian (reigned 284–305) countered these attacks with the reorganization of the Empire between East (see EASTERN ROMAN EMPIRE) and West (293). It was reunited (324) under *Constantine the Great, who founded a new imperial capital at Constantinople (see ISTANBUL). Civil war and economic decline followed his death and the western Empire fell prey to barbarian invasions. In 476 the last Roman emperor of the West, Romulus Augustulus (b. ?461), was deposed by the German king Odoacer. The Eastern Roman, or Byzantine, Empire survived until 1453. See p. 618.

Romanesque art The dominant style of building, art, and furniture from the end of the 10th century until the emergence of the Gothic style around 1200. The buildings are

characterized by the round arch, inherited from the Romans, which is used for doorways, windows, and friezes; vaulting, when used, is often barrel vaulting. The pictorial art is often severe and stylized, while furniture is more robust than elegant.

Romania, Republic of A country in SE Europe, on the Black Sea. The Carpathian Mountains and the Transylvanian Alps separate the plains in the E and S from the Transylvanian plateau in the NW. *Economy:* the main crops are maize, wheat, potatoes, sugar beet, and fruit. Livestock is also important. Minerals include oil and gas, salt, lignite, iron, and copper. The industrial sector is based on heavy industries and stands in need of modernization. There is a considerable timber industry and wine-making is of growing importance. Soaring inflation in the mid-1990s obliged the government to introduce free-market reforms. Recent years have seen solid economic growth. *History:* formed in 1861 from the principalities of *Moldavia and *Wallachia, Romania gained independence from the Ottoman Empire in 1878 and in 1881 became a kingdom under Carol I. Romania joined (1916) the Allies in World War I and was occupied by the Germans. In 1918 it obtained Bessarabia, Bukovina, and Transylvania, which it was forced to relinquish to the Axis Powers in 1940. Shortly afterwards Carol II abdicated in favour of his son Michael and the fascist Ion *Antonescu came to power. He gave military support to Germany until Soviet forces entered the country and his government was overthrown (1944). After World War II a communist-dominated coalition was established (1945) and in 1947 Michael abdicated. Elections in 1948 resulted in a clear communist victory. Under the totalitarian regime of President Nicolae Ceaușescu (from 1967) all dissent was suppressed and living standards plummeted. In 1989 mass demonstrations in Bucharest, Timișoara, and elsewhere culminated in a full-scale revolution. Ceaușescu was executed and a new administration installed. A new constitution enshrining a multiparty system and free-market reforms was approved in a national referendum (1991) but the government continued to be dominated by the ex-communists and President Ion Iliescu was accused of blocking reform. Demonstrations against the government were repressed. In 1996 non-communists were victorious in presidential and parliamentary elections but elections in 2000 saw the return of Iliescu and the ex-communists. Since 2004 the country has been governed by a centre-right coalition. Romania joined NATO in 2004 and the EU in 2007. Official language:

Romanian. Currency: leu of 100 bani. Area: 237 500 sq km (91 699 sq mi). Population (2003 est): 21 616 000. Capital: Bucharest.

Romanian A Romance language, the main form of which (Daco-Romanian) is spoken in Romania and Moldova. Other forms are Aromanian or Macedo-Romanian (Greece, Macedonia, Serbia, Albania, and Bulgaria); Megleno-Romanian (N Greece); and Istro-Romanian (Istrian peninsula).

Roman law The body of laws compiled by the Romans, which forms the basis of the *civil law of many modern countries. Before about 150 BC the laws of the Twelve Tables (450 BC) were elaborated as the *jus civile* (civil law), i.e. the law applicable exclusively to Roman citizens. With increasing interests abroad, another system, the *jus gentium* (law of nations), was also applied by Roman courts. This system of international law derived from the philosophical concept of natural law (i.e. a law common to all men and to nature) and was used in cases involving provincial Roman subjects of different states and in suits between a foreigner or provincial and a Roman citizen. As Roman law developed there arose a number of anomalies, until the Byzantine emperor *Justinian I sponsored the *Corpus Juris Civilis* (Body of Civil Law) or Justinian Code, published between 529 and 565 AD. This consisted of four parts: (1) the *Codex Constitutionum*, a chronological collection of the ordinances (*constitutiones*) of the emperors, with all anomalies eliminated; (2) the *Digest*, a collection of statements by jurists on points of law; (3) the *Institutes*, a textbook explaining legal institutions; and (4) the *Novellae* or *Novels*, the new ordinances issued by Justinian after the publication of the *Codex*. The most influential modern codification based on it was the *Code Napoléon*.

Roman numerals The system of numbers used by the Romans, based on letters of the alphabet: I = 1, V = 5, X = 10, L = 50, C = 100, D = 500, and M = 1000. Intermediate numbers are given by the sum of a larger number and the smaller number that follows it (e.g. VI = 6) or the difference between a larger number and the smaller number that precedes it (IV = 4, IX = 9).

Roman Republic (510–27 BC) The period of ancient Roman history between the expulsion of *Tarquin the Proud and the proclamation of *Augustus as the first Roman emperor. Republican government comprised two chief magistrates (later *consuls) elected annually, an increasing number of subordinate magistrates, the *Senate, and popular assemblies. Power lay

in the hands of the *patricians until the *plebeians, after two centuries of struggle, achieved access to all state offices.

Roman dominance over the rest of Italy was achieved by the early 3rd century. By the mid-2nd century Cisalpine *Gaul had been subdued and the *Punic Wars with Carthage brought control of the Mediterranean (146) and Rome's first overseas provinces. Concomitantly, dominance over Greece was achieved and control of much of Asia Minor. In the mid-1st century *Caesar completed the conquest of Transalpine Gaul. The Republic was gradually undermined, however, by provincial unrest, which, together with the military ineptness of the Senate in the late 2nd century, brought a series of ambitious army commanders to the fore.

The first of these, Marius (c. 157–86 BC), lost a bloody power struggle to the aristocrat, *Sulla, whose dictatorship (83–79) was marked by legislation to strengthen the Senate. This was revoked in 70 by *Pompey and *Crassus, who ten years later formed the so-called first Triumvirate with Caesar. The death of Crassus (53) and Pompey's intrigues with Caesar's senatorial enemies brought civil war. Caesar's victory and subsequent short-lived dictatorship rang the knell of the Roman Republic, which was finally destroyed by Octavian's defeat of *Mark Antony and his assumption of absolute power as Augustus. See also ROMAN EMPIRE.

Romansch A Romance language belonging to the Rhaetian group, spoken in N Italy and in the Rhine Valley in Switzerland.

Romanticism A fundamental development in western art, literature, music, and their related fields of theory in the late 18th and early 19th centuries. Romanticism constituted a reaction against the unquestioned authority of reason and tradition (see CLASSICISM) and an affirmation of faith in man's innate powers of creativity. Its various manifestations included a passionate concern with the relationship between man and his natural environment and a new interest in the primitive and the irrational. In literature, English Romanticism is usually dated from the publication of *Lyrical Ballads* by Wordsworth and Coleridge in 1798 and is associated with the poetry of Byron, Shelley, and Keats.

Romany The language spoken by Gipsies. It is related to *Sanskrit and the Indo-Aryan languages of N India but diverged from these about 1000 AD, when the Gipsies began their nomadic way of life. Romany has been greatly influenced in vocabulary by the languages spo-

ken in regions the Gipsies have passed through, resulting in many different dialects.

Rome (Italian name: Roma) 41°53N 12°33E The capital of Italy, on the River Tiber. It is an administrative and cultural centre and, with the *Vatican City within its boundaries, the focal point of the Roman Catholic Church. Relics of classical times include the Forum, the *Pantheon, and the *Colosseum. There are many ancient churches the origins of which go back to the early Christian era. The Renaissance produced not only many outstanding buildings, such as St Peter's Basilica, but also the paintings and sculpture of such artists as Michelangelo and Raphael. *History:* according to legend Rome was founded on the Palatine Hill in 753 BC by Romulus, its first king. Seven kings were followed by the *Roman Republic, and the *Roman Empire was founded in the 1st century BC. As the Empire declined in the 5th century AD Rome was sacked by Germanic tribes. From the 6th century it regained importance, this time as an ecclesiastical power. In 800 Charlemagne was crowned emperor here. It remained under papal control until 1871, when it became capital of the newly unified Italy. The popes however refused formally to relinquish their temporal power until the Lateran Treaty of 1929, when their jurisdiction was confined to the Vatican City. Mussolini's March on Rome in 1922 marked the beginning of his fascist rule; the city was occupied by the Allies in World War II. Population (1996): 2 654 187.

Rome, Treaties of (1957) Two treaties signed in Rome, which led to the establishment of the *European Economic Community and the *European Atomic Energy Community.

Rommel, Erwin (1891–1944) German general, known as the Desert Fox. In 1940 he became commander of the Seventh Panzer Division and, in 1941, of the Afrika Corps. In N Africa he was hailed as a liberator by the Arabs and gained the respect of the enemy but in 1943, after his defeat at Alamein (1942), he was recalled and became commander of the Channel defence. His involvement in the attempt to assassinate Hitler in 1944 (see STAUFFENBERG, CLAUDIUS, GRAF VON) led to his suicide, under pressure from Hitler.

Romney, George (1734–1802) British portrait painter. He attracted a fashionable clientele and rivalled Reynolds when he moved to London in 1762. He is best known for his numerous portraits of Emma, Lady *Hamilton.

Romulus and Remus The legendary founders of Rome, the sons of Mars and Rhea

Silvia, daughter of Numitor, King of Alba Longa. Amulius, who had deposed Numitor, threw the twin babies into the Tiber. They were washed ashore and suckled by a she-wolf. They eventually founded Rome at the place where they had been rescued.

rondo A musical form in which a recurring theme alternates with contrasting episodes. In its simplest form it consists of the pattern ABACADA, A being the rondo theme and B, C, and D the episodes.

Ronsard, Pierre de See PLÉIADE, LA.

rook A large blue-black Eurasian crow, *Corvus frugilegus*, about 45 cm long and having a narrow grey bill with pale patches of bare skin at its base. Rooks are highly gregarious and feed on earthworms, larvae, carrion, and grain.

Roosevelt, Franklin D(elan) (1882–1945) US statesman; Democratic president (1933–45). He was paralysed from the waist down by poliomyelitis in 1921 but despite this disability became the only US president to be elected four times. He helped US recovery from the Depression with the *New Deal relief programmes. In World War II he introduced lend-lease aid to the Allies and, after the Japanese bombing of Pearl Harbor (1941), took the USA into the war. He attended the *Tehran and *Yalta Conferences but died in office before the conclusion of the war.

Roosevelt, Theodore (1858–1919) US statesman; Republican president (1901–09). A rancher and big-game hunter, he led the Rough Riders (1st Volunteer Cavalry) in the 1898 war with Cuba. As president he introduced his *Square Deal programme for social reform. Roosevelt's foreign policy was to "speak softly and carry a big stick." He established US control over the building of the Panama Canal and made the USA a policing power in the Americas.

root (algebra) **1.** One of the equal factors of a number. The square root is one of two equal factors; for example $\sqrt{9} = \pm 3$; the r th root of a number n is the number that when raised to the r th power gives n . **2.** The solution of an equation, i.e. the values of the variable that will satisfy the equation. See QUADRATIC EQUATION.

root (botany) The part of a plant that provides anchorage and enables the uptake of water and nutrients from the soil. Some plants, such as the dandelion, have one main root with smaller branches—a tap root system; others, such as grasses, have a mass of similar-sized roots—a

fibrous root system. Roots can act as food-storage organs, as in the carrot and turnip (tap roots); fibrous roots that become swollen with food are called tuberous roots. Some roots act as supports.

root-mean-square value (rms value)

The square root of the arithmetic average of the squares of a set of numbers; for example the rms of 2, 4, 5, 6 is $[(2^2 + 4^2 + 5^2 + 6^2)/4]^{1/2} = 4.5$. The rms value is useful in continuous quantities, such as alternating electric current, in which the heating effect is proportional to the current squared.

Roque de los Muchachos Observatory

An international observatory on the island of La Palma in the Canaries at an altitude of 2400 m, set up in the 1980s by Britain, Denmark, Spain (who owns the site), and Sweden.

rorqual A small-headed fast-moving whale-bone *whale of the family *Balaenopteridae* (6 species). The common rorqual (*Balaenoptera physalus*), also called fin whale or razorback, grows up to 25 m long; it has a dark back, shading to white underneath, and a small dorsal fin. See also BLUE WHALE.

Rorschach test A psychological test intended to measure aspects of personality. Devised by the Swiss psychiatrist Hermann Rorschach (1884–1922), it consists of ten inkblots in complex shapes. The way in which the subject describes these pictures suggests his or her character.

Rosaceae A cosmopolitan family of trees, shrubs, and herbs (about 2000 species). They include important fruit trees (cherries, apricots, apples, plums, etc.) and ornamentals (notably roses).

Rosario 33 00S 60 40W The second largest city in Argentina, on the Río Paraná. It is an industrial and commercial centre and the terminus of the pampas railways. Population (1999 est): 1 000 000.

Roscommon (Irish name: Ros Comáin) A county in the N Republic of Ireland, in Connacht. It has many lakes and extensive bogs. Agriculture is the chief occupation. Area: 2463 sq km (951 sq mi). Population (2002): 58 803. County town: Roscommon.

rose A prickly shrub or climber of the genus *Rosa* (200–250 species), native to N temperate regions but widely cultivated. The flowers are usually white, yellow, pink, or red and the fruits are red, yellow, or black hips containing many seeds. Modern hybrid roses—usually with double flowers—include the hybrid teas,

derived from the tea rose (*R. odorata*), and the floribundas. Wild species include *dog rose and *sweet briar. Family: *Rosaceae*.

rosella A brightly coloured *parakeet belonging to a genus (*Platycercus*; 7 species) occurring in Australia and New Zealand. 18 cm long, rosellas have a long broad tail, which is usually blue or green edged with white, black shoulders, and distinctive face and throat markings. They are largely ground-dwelling.

rosemary An evergreen shrub, *Rosmarinus officinalis*, native to the Mediterranean region and W Asia. Up to 2 m high, it has bluish flowers. It is widely cultivated for its oil and for its leaves, which are used as a culinary herb. Family: *Labiatae*.

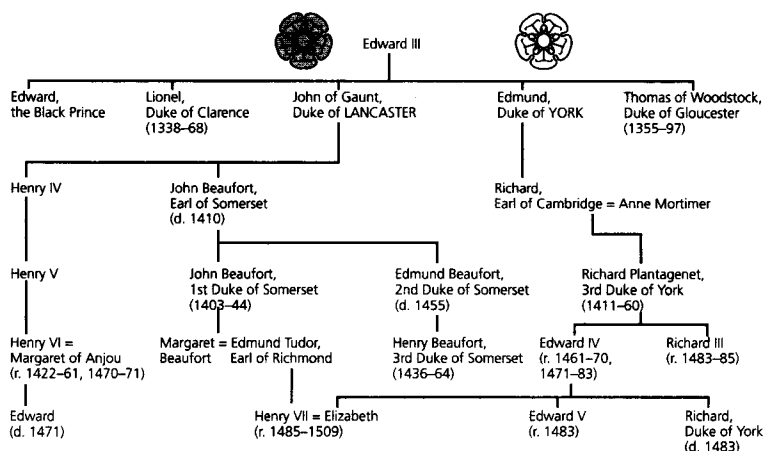

rose of Jericho A perennial herb, *Anastatica hierochuntica*, also called resurrection plant, native to W Asia. During the dry season the leaves are shed and the whole plant forms a wickerwork-like ball that is blown by the wind. When moistened, the plant regains its shape and produces tiny white flowers. Family: *Cruciferae*.

rose of Sharon See HIBISCUS; ST JOHN'S WORT.

Roses, Wars of the (1455–85) The civil wars between the Houses of *Lancaster (the red rose) and *York (the white rose) for possession of the English Crown. The Lancastrian Henry VI's incompetent rule resulted in factional struggles led by the Lancastrian Beauforts and Richard Plantagenet, Duke of *York, and the Earl of *Warwick (the Kingmaker). Open warfare broke out in 1455. York was killed in 1460 and his son seized the Crown in 1461, becoming Edward IV, and crushed the Lancastrians. In 1470–71 Henry VI was briefly restored by disaffected Yorkists but Edward returned after his victory at Tewkesbury and ruled until 1483. He was succeeded by his brother Richard III, whose reign ended with his defeat by Henry (VII) at Bosworth (1485). The remaining Yorkists were finally overcome at Stoke in 1487.

Rosetta Stone An inscribed stone slab discovered (1799) at Rosetta (Arabic name: Rashid), near Alexandria (Egypt). It carries a decree (196 BC) of Ptolemy V Epiphanes (reigned 205–180) in Egyptian *hieroglyphic and demotic, and Greek. The repetition of Ptolemy's name in the different scripts gave Thomas *Young the clue to deciphering hieroglyphs.

rosewood An attractive hardwood, usually dark reddish and often rose-scented, derived from several tropical evergreen trees of the genus *Dalbergia* (family *Leguminosae*). These in-

Wars of the Roses. The rival Houses of Lancaster and York.

clude Brazilian rosewood, or blackwood (*D. nigra*), used for veneers and cabinetwork; Honduras rosewood (*D. stevensoni*), used for musical instruments; and East Indian rosewood (*D. latifolia*).

Rosh Hashana (Hebrew: beginning of the year) The Jewish New Year festival, celebrated in Sept or Oct. It is regarded as a time of penitence and preparation for *Yom Kippur. A ram's horn (*shofar*) is blown in the synagogue.

Rosicrucianism An esoteric movement for spiritual renewal that originated in Protestant Germany in the early 17th century. Its manifesto traces its source to a fictitious brotherhood that was founded by a certain Christian Rosenkreuz in 1484. See also FREEMASONRY.

rosin (or **colophony**) A yellowish *resin obtained as a residue from the distillation of *turpentine. It is used in varnishes, soaps, soldering *flux, and to rub on violin bows.

Rossetti, Dante Gabriel (Gabriel Charles Dante R.; 1828-82) British painter and poet. In 1848 Rossetti joined with *Millais, *Hunt, and others to found the *Pre-Raphaelite Brotherhood. He founded the shortlived Pre-Raphaelite journal *The Germ* (1850-51) and later published several volumes of poetry and translations, including *Poems* (1870) and *Ballads and Sonnets* (1881). His sister **Christina Georgina Rossetti** (1830-74), a poet, was influenced by the *Oxford Movement. *Goblin Market and Other Poems* (1862), her first published volume, gave literary expression to Pre-Raphaelite ideals.

Rossini, Gioacchino Antonio (1792-1868) Italian composer. He wrote 36 highly successful operas, including *Tancredi* (1813), *The Italian Girl in Algiers* (1813), *The Barber of Seville* (1816), *The Thieving Magpie* (1817), and *William Tell* (1829). He also invented a number of recipes, including Tournedos Rossini.

Ross Island 77 40S 168 00E A volcanic island in the W Ross Sea, at the edge of the **Ross Ice Shelf**, a vast mass of permanent ice.

Ross Sea A large inlet of the S Pacific Ocean, in the Antarctic continent between Victoria Land and Byrd Land.

Rostock 54 03N 12 07E A city and Baltic port in NE Germany. Its fine medieval buildings have been restored following damage during World War II. Population (1999 est): 205 900.

Rostov-na-Donu 47 15N 39 45E A port in S Russia, on the River Don. Its importance owes much to its position on the route from the W to the Caucasus. Population (1999 est): 1 017 300.

Rostropovich, Mstislav (1927-) Soviet-born cellist. He left the Soviet Union in 1975 and now lives in London. Prokofiev, Britten, and Shostakovich all wrote cello works for him.

Roth, Philip (1933-) US novelist. Middle-class Jewish themes predominated in his early works including *Portnoy's Complaint* (1969). In subsequent novels, such as *The Anatomy Lesson* (1983) and *Operation Shylock* (1993), the targets of his satire are more various. His latest novels,

which include *American Pastoral* (1997) and *The Human Stain* (2000), show a further broadening of his range.

Rotherham A unitary authority in N England, in South Yorkshire. Area: 283 sq km (109 sq mi). Population (2001): 248 176.

Rothko, Mark (Marcus Rothkovitch; 1903–70) Russian-born painter, who emigrated to the USA in 1913. In the late 1940s he pioneered colour-field painting, an abstract style using large expanses of colour, often in horizontal bands.

Rothschild, Mayer Amschel (1744–1812) German merchant and banker, whose business in Frankfurt prospered during the Napoleonic Wars, making loans to the various combatants and trading in high-demand goods such as arms, wheat, and cotton. His sons later established branches of the firm in Vienna, London, Naples, and Paris.

rotifer A tiny invertebrate animal belonging to the phylum *Rotifera* (about 2000 species), also called wheel animalcule, found mainly in fresh water. Rotifers vary in shape and range between 0.1 and 0.5 mm in length. Each has a ring of cilia (corona) for wafting food particles into the mouth and providing a means of locomotion in active species.

Rotorua 38°07'S 176°17'E A spa city in New Zealand, in N North Island. A Maori centre, situated within a volcanic area with hot springs, it has been developed as a health resort. Population (1994): 54 700.

Rotterdam 51°55'N 4°29'E The chief port and second largest city in the Netherlands, on the New Meuse River. It became important during the 19th century, mainly with the opening of the 35 km (12 mi) long Nieuwe Waterweg (New Waterway) in 1872 linking it to the North Sea. During World War II the city centre was destroyed; it has since been rebuilt. Buildings include the restored Groote Kerk (Great Church). Population (1999 est): 592 665.

Rottweiler A breed of working dog developed originally in Rottweil, Germany, with a reputation for aggression. It has a broad round body, a strong neck, and a large head with a deep muzzle. The coarse short coat is black with tan markings. Height: 63–68 cm (dogs); 58–63 cm (bitches).

Rouault, Georges (Henri) (1871–1958) French artist. A major 20th-century religious artist, he executed many paintings of clowns and prostitutes, which expressed his sympathy with social outcasts. As a graphic artist his

main achievement was his series of etchings (1916–27), entitled *Miserere* and *Guerre*.

Rouen (Latin name: Rotomagus) 49°26'N 1°05'E A city and port in NW France, on the River Seine. The ancient capital of Normandy, it was here that Joan of Arc was tried and burned in 1431. Many of its notable buildings, including the cathedral (13th–16th centuries), survived the damage of World War II. Population (1999): 106 035.

rounders A nine-a-side bat-and-ball field game, which is probably the prototype of *baseball. The two teams take turns at batting and fielding and a match consists of two innings per team. The hard ball is delivered underarm to each batsman in turn until all are out. The batsmen try to score rounders by hitting it and running round the four bases without being caught or run out.

Roundheads The parliamentary party during the English *Civil War. The name referred originally to the short haircuts of the apprentices who demonstrated against the king at Westminster in 1640.

roundworm See NEMATODE.

Rousseau, Henri (1844–1910) French painter. From 1886 he exhibited at the Salon des Indépendants but his work, resembling folk art in technique (see PRIMITIVISM), was ridiculed. After 1894, when he exhibited *War* (Louvre), followed by the *Sleeping Gypsy* (1897; New York), he received more serious attention. The childlike quality of his jungle landscapes influenced many 20th-century painters.

Rousseau, Jean Jacques (1712–78) French philosopher and writer. Through his acquaintance with *Diderot, Rousseau joined the *Encyclopedists. In the *Discourse on the Origin and Foundations of Inequality amongst Men* (1754) he argued that man's perfect nature is spoiled by corrupt society. *Émile* (1762), a novel on education, expanded his views on ideal unfallen human nature. Such political works as *Du contrat social* (1762) found favour with the French revolutionaries. His romantic outlook inspired Shelley, Byron, and Wordsworth.

rowan See MOUNTAIN ASH.

rowing A sport using narrow light boats propelled by oars and often steered by a coxswain. It arose in its modern form in England during the 18th century; Olympic rowing events began in 1900. Each rower sits on a mobile slide, enabling leg, back, and arm muscles to be used. In sculling boats (single, double, four) each rower has two oars. **Sculling** is a form of row-

ing for one, two, or four people per boat, each person controlling two oars.

Rowlandson, Thomas (1756–1827) British caricaturist. Using a reed pen and delicate washes of colour, he produced the satirical *Dr Syntax* series (1812–21) and the *English Dance of Death* (1815–16). He also illustrated books by Smollett, Goldsmith, and Sterne.

Rowling, J(anne) K. (1965–) British children's writer, whose seven books about the boy wizard Harry Potter—beginning with *Harry Potter and The Philosopher's Stone* (1997) and ending with *Harry Potter and The Deathly Hallows* (2007)—have broken sales records worldwide.

Royal Academy An art society in Burlington House, London, that holds annual summer exhibitions of contemporary British art, as well as loan exhibitions of modern artists and the old masters. Founded in 1768, it moved to its present premises in 1867.

Royal Academy of Dramatic Art (RADA) The leading British school of acting, founded in London in 1904 by Sir Herbert Beerbohm Tree. It has received a government subsidy since 1924.

Royal Air Force (RAF) A British armed service formed in 1918 by the amalgamation of the Royal Flying Corps (1912) with the Royal Naval Air Service (1914). It contributed to the final operations on the western front in World War I and played a decisive role in World War II. It is now divided into Strike Command (the operational command), Maintenance Command, and Training Command and is administered by the Air Force Department of the Ministry of Defence. The **Women's Royal Air Force** was formed in 1949 in succession to the Women's Auxiliary Air Force (WAAF) of World War II and the short-lived Women's Royal Air Force (1918–20). See also AIRCRAFT.

royal antelope The world's smallest antelope, *Neotragus pygmaeus*, of West African forests. 25–30 cm high, it is red-brown with white underparts; males have short spiky horns. They are nocturnal.

Royal Ballet The leading British ballet company and school, founded by Dame Ninette de Valois in 1931. Based at the Royal Opera House, Covent Garden, since 1946, it was known as the Sadler's Wells Ballet until 1956. Anthony Dowell was its director from 1986 until 2001; the current director is Monica Mason.

Royal British Legion An organization for ex-servicemen and women, founded in 1921 largely through the efforts of Douglas Haig.

It provides assistance with housing or employment problems and runs homes for the sick and aged. It also manufactures the Flanders poppies sold before Remembrance Sunday.

Royal Canadian Mounted Police (or Mounties) Canadian police force. Founded in 1873 as the North West Mounted Police, it has become famous for the efficiency of its members, dressed in their distinctive scarlet tunics, blue breeches, and wide-brimmed hats.

Royal Geographical Society A British learned society, established in 1830 and incorporated in 1859, for the advancement of geographical knowledge. Among other functions it provides grants to finance expeditions. Two Royal Medals are awarded annually by the Queen to geographers recommended by the Society.

Royal Greenwich Observatory An observatory founded in 1675 by Charles II at Greenwich, London, in a building designed by Sir Christopher Wren. The meridian through Greenwich (0°) was internationally adopted as the prime meridian in 1884. The observatory was based at Herstmonceux, Sussex (1948–86), before its main telescope was moved to the new Roque de los Muchachos Observatory in the Canary Islands; the observatory moved to Cambridge in 1990.

Royal Horticultural Society A society in the UK that exists to further interest in vegetables and ornamental plants. Founded in 1804, it now has its headquarters in Vincent Square, London. The society promotes new varieties and rare plants at various shows, the most famous being the annual Chelsea Flower Show.

Royal Institution One of the first scientific research centres, founded by Benjamin Thompson, Count Rumford, in 1799. Several famous scientists have worked at its premises in Albermarle Street, London, including Davy, Faraday, and Bragg.

Royal Marines A corps of troops, founded in England in 1664, which serves on land, at sea, or in the air. Their ranks correspond to those of the army but they are administered by the Navy Board. They served in both World Wars, in the Korean War and in Northern Ireland.

Royal Mint The factory in which the UK's coins are made. It was formerly in the Tower of London, moving to Tower Hill in 1811 and to Llantrisant, South Wales, in 1968. In 1999 the

government announced that it would be semi-privatized.

Royal National Lifeboat Institution (RNLI) A voluntary organization, founded in 1824, that operates a 24-hour *lifeboat service around British coasts. Each lifeboat has a full-time mechanic but the other crew members are volunteers.

Royal National Theatre Company A British government-subsidized theatre company established as the National Theatre Company in 1963. Laurence Olivier, its first director, was succeeded by Peter Hall in 1973, Richard Eyre in 1988, Trevor Nunn in 1996, and Nicholas Hytner in 2003. The company's building, designed by Sir Denys Lasdun and opened in 1976, comprises an open-stage theatre called the Olivier, a proscenium-stage theatre called the Lyttleton, and a studio theatre for experimental plays called the Cottesloe. The prefix Royal was added in 1988.

Royal Navy (RN) The senior of Britain's three armed services. Founded in the 9th century by Alfred the Great, the RN emerged as "the wooden walls of England" in the 16th century with such victories as that over the Spanish *Armada (1588). The 17th century saw further victories against the Dutch, but little improvement in the lot of the sailors ("Jack Tars"). Mutiny finally broke out at the Nore and Spithead (1797) even as the RN entered its greatest era with a series of victories under *Nelson against Napoleonic France. The supreme sea power during the 19th century, the RN fought its last set-piece battle at Jutland (1916) during World War I. The modern RN is probably the most efficient navy in the world and undertakes fishery protection, mine sweeping, and NATO roles.

Royal Opera The leading British opera company, based at the Royal Opera House in Covent Garden. The company acquired its present name in 1969. Conductors with the Royal Opera have included Sir Thomas Beecham, Karl Rankl, and Sir Georg Solti. The Royal Opera House also houses the Royal Ballet. Chairman: Dame Judith Mayhew.

Royal Shakespeare Company (RSC) A British theatre company, founded in 1960 from the company at the Shakespeare Memorial Theatre in Stratford-upon-Avon. Peter Hall, its first director, was succeeded in 1968 by Trevor Nunn, who was joined by Terry Hands in 1978. Adrian Noble became director in 1991 but his plans to restructure the company and rebuild the main Stratford theatre caused opposition;

he was replaced by Michael Boyd in 2002. The company performs Shakespeare and modern plays at Stratford and in London and tours frequently.

Royal Society The oldest and most important scientific society in the UK. It originated in 1645 and was incorporated by royal charter in 1662, early members including Sir Christopher *Wren and Samuel *Pepys. With the presidency from 1703–27 of Isaac *Newton, the Royal Society achieved great standing and financial security. The Society publishes scientific papers in the *Proceedings* and the *Philosophical Transactions*, maintains a large library, disburses grants, and awards medals for scientific achievement.

Royal Society for the Prevention of Cruelty to Animals (RSPCA) A British charity founded in 1824 to investigate reports of cruelty to animals. Funded by voluntary contributions, it has branches in the Commonwealth.

Royal Society for the Protection of Birds (RSPB) A British charity founded in 1889 to protest against the wholesale killing of birds for their plumage. Since then it has promoted the conservation of wild birds throughout Britain.

Royce, Sir (Frederick) Henry (1863–1933) British car manufacturer, who founded, with Charles Rolls (1877–1910), Rolls-Royce Ltd (1906). In 1884 Royce opened an engineering business in Manchester and in 1904 began to build cars, which much impressed Rolls and led to the merger of their businesses. Royce and his team designed many famous cars and the aeroengine that became the Merlin (used in Spitfires and Hurricanes in World War II).

Ruapehu, Mount 39 18S 175 36E An active volcano in New Zealand, the highest peak in North Island. Height: 2797 m (9175 ft).

Rub' al-Khali The S part of the Arabian Desert, mainly in Saudi Arabia. It constitutes the largest continuous area of sand in the world. Area: about 800 000 sq km (308 815 sq mi).

rubber A synthetic or natural organic polymer that is elastic and tough. The name comes from its ability to erase pencil marks. **Natural rubber**, which consists mainly of polyisoprene—(CH₂CHC(CH₃)CH₂)_n—is made from the latex of the *rubber tree (*Hevea brasiliensis*) grown in SE Asia. The rubber is coagulated from latex (using acids) and pressed into sheets. Vulcanization increases its durability. **Synthetic rubbers** are made from petrochemicals

(see OIL). Styrene-butadiene rubber (SBR), now the commonest synthetic rubber, was introduced during World War II.

rubber plant A tree, *Ficus elastica*, native to India and Malaysia, where it grows to a height of 35 m in forests. Its latex is the source of Assam or India rubber. Family: *Moraceae*.

rubella See GERMAN MEASLES.

Rubens, Peter Paul (1577–1640) Flemish painter, who lived chiefly in Antwerp. The greatest of the *baroque artists, Rubens first worked for the Mantuan court in Italy (1600–08). Returning to Antwerp, he painted his first major works, *The Raising of the Cross* and *Descent from the Cross* (both Antwerp Cathedral). Many commissions followed, including a cycle for Marie de' Medici (Louvre) and the ceiling of the Banqueting House, Whitehall, for Charles I. His most personal works are his portraits of his family, notably *Helena Fourment with a Fur Cloak* (Kunsthistorisches Museum, Vienna), and such landscapes as *The Château de Steen* (National Gallery, London).

Rubicon A stream in N central Italy, which formed the boundary between Italy and Cisalpine Gaul in the time of the Roman Republic. In 49 BC Julius Caesar precipitated civil war by leading his army across the Rubicon into Italy, an illegal act. Hence "crossing the Rubicon" has come to mean taking an irrevocable step.

rubidium (Rb) A highly electropositive alkali metal, discovered spectroscopically by R.W. Bunsen and G.R. Kirchhoff in 1861. The element is soft and silvery-white. It ignites spontaneously in air and reacts violently with water. The isotope ^{87}Rb is radioactive with a half-life of 5×10^{11} years and is used in *rubidium-strontium dating. Rubidium forms ionic salts and four oxides (Rb_2O , Rb_2O_2 , Rb_2O_3 , RbO_2). At no 37; at wt 85.47; mp 39.48°C; bp 688°C.

rubidium-strontium dating A method of radiometric dating, used mainly for rocks, fossils, etc. It utilizes the fact that naturally occurring rubidium contains about 28% of the radioactive isotope rubidium-87, which undergoes *beta decay to strontium-87. Thus by measuring the ratio of rubidium-87 to strontium-87 in the sample, its age may be estimated.

Rubinstein, Artur (1888–1982) Polish-born US pianist. He acquired a worldwide reputation, particularly as a performer of Chopin.

ruby A red transparent variety of *corundum, the colour being due to traces of

chromium. It is used as a gemstone and in lasers, watches, and other precision instruments. Prior to the 14th century rubies were called carbuncles.

rudd A game fish, *Scardinius erythrophthalmus*, found in fresh waters of Europe and W Asia. It has a stout body, 35–40 cm long, golden- or olive-brown above and silvery white below, deep-red fins, and golden eyes.

rue An evergreen shrub, *Ruta graveolens*, also known as herb of grace, native to S Europe. 90 cm high, it has yellow flowers. The leaves yield a bitter oil, once used as a spice and in medicines. Family: *Rutaceae*.

ruff An Old World *sandpiper, *Philomachus pugnax*, that breeds in coastal wetlands of N Eurasia and winters on mudflats of South Africa and S Asia. The female (called a reeve) is 25 cm long and has a grey-brown plumage; the larger male has a double crest and a multi-coloured collar in the breeding season.

Rugby 52 23N 115W A town in the English Midlands, in Warwickshire. According to tradition the game of rugby football originated here in 1823 at the famous public school (1567), which was described in *Tom Brown's Schooldays*. Rugby's industries include engineering and cement. Population (1997 est): 87 500.

Rügen A German island in the Baltic Sea, 2.5 km (1.5 mi) off Stralsund, to which it is connected by a road and rail causeway. Area: 926 sq km (358 sq mi). Population (latest est): 84 500.

Ruhr, River A river in W Germany, rising in the Sauerland and flowing NW and W to the River Rhine. The Ruhr Valley (German name: Ruhrgebiet) is the centre of the German iron and steel industry. Length: 235 km (146 mi).

Ruisdael, Jacob van (?1628–82) The greatest of Dutch landscape painters. His baroque compositions are noted for their dramatic contrasts of light and shade. *The Jewish Cemetery* (c. 1660) is a striking evocation of human mortality.

rum A colourless spirit distilled from molasses derived from sugar cane. Better-quality rums are aged in oak casks for several years.

Rumford, Benjamin Thompson, Count (1753–1814) American-born scientist, who spied for the British in the American Revolution. In England he carried out scientific research in ballistics and the theory of heat. Suspected of spying for the French, he left England in 1785 for Paris and then Bavaria, where he became a count of the Holy Roman

Empire. In 1795 he returned to England, where he helped to found the *Royal Institution (1799).

ruminant A hoofed mammal belonging to the suborder *Ruminantia* (about 175 species), which includes deer, cattle, antelopes, sheep, and goats. Ruminants are characterized by possession of a four-chambered stomach. Ruminants regurgitate their food periodically to "chew the cud," which helps to break up the plant cell walls.

Rump Parliament See LONG PARLIAMENT.

Rum Rebellion (1808) A rebellion in Australia in which William *Bligh, governor of New South Wales, was imprisoned by officers of the New South Wales Corps. It was incited by Bligh's suppression of the rum traffic.

Rundstedt, (Karl Rudolf) Gerd von (1875–1953) German field marshal, who was recalled from retirement at the outbreak of World War II, becoming (1942) commander in chief in France. He was captured in 1945 but his ill health secured his release.

runic alphabet An alphabetical writing system used for Norse and certain other Germanic languages. It originated, probably as a modified version of the Etruscan or the Roman alphabet, in the 2nd or 3rd century AD, and went out of use gradually after the 14th century. The runes were always associated with magical powers.

runner bean A climbing plant, *Phaseolus coccineus*, also known as scarlet runner, native to South America and widely cultivated as an annual vegetable crop. Growing up to 3 m high, it bears usually red flowers, which give rise to bean pods, 20–60 cm long, that are eaten cooked. Family: *Leguminosae*. See also BEAN.

Runnymede (or **Runnimeade**) 51 26N 0 33W A meadow in SE England, on the S bank of the River Thames near Windsor. The Magna Carta was granted here by King John (1215).

Runyon, Damon (1884–1946) US humorous writer. His stories about New York characters were first collected in *Guys and Dolls* (1932).

Rupert, Prince (1619–82) Cavalry officer, who fought for the Royalists in the Civil War; he was the son of Frederick the Winter King of the Palatinate and Elizabeth, daughter of James I of England. A charismatic leader, he lacked the ability to maintain control when battle commenced. He was defeated at *Marston Moor (1644) and *Naseby (1645) and after Charles' surrender was banished from

England. He returned at the Restoration (1660) and served as an admiral in the *Dutch Wars.

rupture See HERNIA.

rush A grasslike plant of the genus *Juncus* (over 300 species), found worldwide in damp temperate and cold regions. Rushes have tufts of slender rigid stalks, up to about 1 m high, bearing long flat leaves and produce many-seeded capsules. Family: *Juncaceae*. The name is also applied to similar plants, including the *bulrush, *flowering rush, and woodrush.

Rushdie, Sir Salman (1947–) British novelist, born in India. His first novel, *Grimus* (1975), was followed by the Booker prizewinner *Midnight's Children* (1981), *Shame* (1983), and *The Satanic Verses* (1988), which many Muslims interpreted as blasphemous. After Ayatollah *Khomeini's fatwa demanding the death of the author, he went into hiding. In 1998 the Iranian government dissociated itself from the fatwa, effectively ending his ordeal. His most recent novels are *Fury* (2001) and *Shalimar the Clown* (2005). He was knighted in 2007.

Ruskin, John (1819–1900) British art and social critic. He wrote *Modern Painters* (1843–60) to defend the paintings of J. M. W. Turner. In *The Stones of Venice* (1851–53) he promoted the gothic style in architecture. In *Unto This Last* (1862) and other volumes of social criticism he denounced materialism and laissez-faire economics. During his last years he became insane.

Russell, Bertrand Arthur William, 3rd Earl (1872–1970) British philosopher. His first major philosophical work, *Principia Mathematica* (1910–13), written with A. N. *Whitehead, presented pure mathematics as a development of *logic. *Our Knowledge of the External World* (1914) attempted a new approach to epistemology. From his pupil *Wittgenstein, he also acquired a lasting interest in language. He was imprisoned (1918) for his outspoken pacifism and again in 1961 for civil disobedience during the Campaign for Nuclear Disarmament. He was awarded the Nobel Prize for Literature in 1950.

Russell, Ken (1927–) British film director. His films include *Women in Love* (1969) and controversial biographical films, such as *The Music Lovers* (1970), about Tchaikovsky, *Mahler* (1974), and *Valentino* (1977).

Russian The main language of Russia, belonging to the East Slavic family. It is a highly inflected language and is written in the *Cyrillic alphabet. The standard form is based on the dialect of Moscow.

Russian Federation (or **Russia**) The world's largest country, covering N Eurasia. It consists of 21 constituent republics, 11 national-territorial formations, 6 territorial formations, 49 regions, and 2 federal cities (Moscow and St Petersburg). The area W of the River Yenisei consists of vast plains and depressions, dissected by the Ural Mountains, while the E consists mainly of mountains and plateaus. *Economy:* Russia's mineral resources include iron ore, coal, oil, gold, platinum and copper. Industrial products include heavy machinery, electronic equipment, textiles, and chemicals. The main agricultural products are wheat, cotton, fruit and vegetables, tobacco, and sugar beet. In 1991 the new Russian state inherited economic troubles created over many years under the Soviet Union. Mass privatization began in 1992, as did reorganization of agriculture. Initially there was instability but owing to high world oil prices and rising consumer demand the economy has grown steadily since the financial crisis of 1998–99. *History:* little is known of the region's history until the 8th century AD, when European and Middle Eastern traders began its exploration. Control of the area between the Baltic and Black Seas was established by Scandinavian adventurers by 1000. Dominated by Kiev from the mid-10th to mid-11th centuries, these Varangian principalities submitted (after 1223) to the overrule of the Mongol Golden Horde. By the time of the Horde's collapse in the 14th century, Moscow, ruled by Rurik princes, had emerged as a powerful principality, becoming the capital of a united Russia under Ivan the Great in the 15th century. Contact with W Europe was established in the late 17th century by Peter the Great, who also established the Russian bureaucracy and educational system and built a new capital, St Petersburg. By the 19th century Russia had been greatly extended but its bureaucracy had grown unwieldy and oppressive, and its Romanov emperors (tsars) were opposed to any political change. Revolutionary activity began with the Dekabrist' conspiracy, uncovered in 1825; although serfdom was abolished in 1861, its abolition was achieved on terms unfavourable to the peasants and served to encourage revolutionaries, a group of whom assassinated Alexander II in 1881. Following the *Revolution of 1905, a parliament, the Duma, was established in 1906, but political unrest continued and was aggravated during World War I by military defeat and food shortages. The February and October Revolutions (see RUSSIAN REVOLUTION) were followed by civil war (1918–22), after which

communist control was complete. Russia itself became the Russian Soviet Federal Socialist Republic (RSFSR), forming the major part of the Soviet Union. The independent Russian Federation was created in 1991 with Boris *Yeltsin as its first president. In 1993 Yeltsin began radical economic reforms and forced their implementation by ordering the military to act against a defiant parliament. A new constitution was endorsed by referendum that year. In 1995 the Communists became the largest party in the Russian parliament. The republic of *Chechnia achieved *de facto* independence following a fierce struggle between separatists and Russian troops (1994–96), but was reoccupied by Russian forces (1999–2000). Vladimir *Putin succeeded Yeltsin as president in 2000 and was re-elected in 2004. His rule has seen economic progress but has raised concerns about human rights and media freedoms. Official language: Russian. Currency: rouble of 100 kopeks. Area: 17 074 984 sq km (6 592 658 sq mi). Population (2007 est): 141 377 752. Capital: Moscow.

Russian Orthodox Church An offshoot of the Greek Orthodox Church, dating from the baptism of the emperor Vladimir (later St Vladimir) in 988. Since 1328 the metropolitan see has been at Moscow.

Russian Revolution (1917) The revolution between March and November (Old Style February and October) 1917, that established the world's first communist state. It began with the February Revolution, when riots in Petrograd led to the establishment of a provisional government of Duma deputies, which forced *Nicholas II to abdicate. The failure of Prince Lvov and then Aleksandr Kerenski (1881–1970) to end Russia's participation in World War I and to deal with food shortages led to the October (or Bolshevik) Revolution, in which *Lenin seized power and established the Soviet of People's Commissars. In the subsequent civil war (1918–21) the Red Army was ultimately victorious against the anticommunist White Russians but with the loss of some 100 000 lives.

Russo-Japanese War (1904–05) A confrontation arising from conflicting Japanese and Russian interests in Manchuria. In 1904 Japan attacked Port Arthur (now Lüda), which fell in January 1905. In May a Japanese fleet destroyed Russia's Baltic Fleet in the Tsushima Straits, forcing Russia's surrender.

rust A reddish-brown solid consisting of hydrated iron oxide. Rusting is a special case of corrosion; the mechanism involves the setting up of a cell in which iron is the anode and a

metal impurity the cathode. Both water and oxygen must be present for rust to form although the most serious damage, pitting, is always found in an oxygen-free portion of metal.

rust fungi Fungi, belonging to the order *Uredinales*, that are parasites of plants, forming spots, blotches, and pustules on the stems and foliage of their hosts. Several are important pests of cereal crops, including black rust (*Puccinia graminis*) of wheat. Other important wheat rusts include yellow rust (*P. striiformis*) and brown rust (*P. recondita*). Phylum: *Basidiomycota*.

Ruth, Babe (George Herman R.; 1895–1948) US baseball player. Known as the "Sultan of Swat," he became the top player of the 1920s.

ruthenium (Ru) A hard metal of the platinum group, first separated in 1844 by K. K. Klaus (1796–1864). It is used to harden platinum and palladium in electrical contacts and as a catalyst. The tetroxide (RuO_4) is toxic. The element shows a wide range of valence states. At no 44; at wt 101.07; mp 2334°C; bp 4150°C.

Rutherford, Ernest, 1st Baron (1871–1937) English physicist, born in New Zealand. He made fundamental discoveries concerning the nature of radioactivity, distinguishing between the three types of radiation, which he named alpha, beta, and gamma rays. Working with Hans Geiger (1882–1945) he discovered that alpha radiation consisted of positively charged helium atoms. In 1906, he deduced the existence of a heavy positively charged core in the atom, which he called the "nucleus. In 1908, Rutherford received the Nobel Prize for Chemistry.

rutherfordium See KURCHATOVIIUM.

rutile A brown to black form of natural titanium dioxide, TiO_2 . It is found in igneous and metamorphic rocks, in veins, and as fibres in quartz, known as Venus' hair.

Rutland A historic county in the East Midlands of England. The smallest county in England, it became part of Leicestershire in 1974 but was reinstated as an independent unitary authority in 1997. Rutland Water is one of the largest artificial reservoirs in the UK. Area: 394 sq km (152 sq mi). Population (2004 est): 36 500. Administrative centre: Oakham.

Rwanda, Republic of A small landlocked country in E central Africa. Lake Kivu forms most of its W boundary and the land is chiefly mountainous. Most inhabitants are Bantu-speaking Hutu, with a Tutsi minority. Economy: chiefly subsistence agriculture. The principal

cash crop is coffee. Methane gas has been found under Lake Kivu. *History:* a Tutsi kingdom from the 16th century, the area came under German East Africa in 1890. From 1919, it was administered by Belgium as N Ruanda-Urundi. In 1959 the Tutsi kingdom was overthrown by the Hutu, who declared Rwanda a republic (1961); independence was recognized by Belgium (1962). In 1973 the Hutu Maj Gen Juvenal Habyarimana (1937–94) came to power in a coup. Uganda-based Tutsi rebels, the Rwandan Patriotic Front (RPF), invaded in 1990 but were contained by troops from France, Belgium, and Zaïre (now Democratic Republic of Congo). A transitional multiparty government was formed in 1992 but in 1994 Habyarimana was assassinated and some half a million Tutsi were massacred. In the ensuing civil war the RPF gained control and about two million Hutus fled into exile; a new government was established dominated by Paul Kagame (president since 2000). The late 1990s saw the repatriation of refugees and the establishment of a UN International Criminal Tribunal to prosecute those responsible for genocide. From 1998 Rwandan troops were involved in the civil war in the Democratic Republic of Congo. Official languages: Kinyarwanda and French. Currency: Rwanda franc of 100 centimes. Area: 26 330 sq km (10 166 sq mi). Population (2007 est): 9 907 509. Capital: Kigali.

Ryazan 54 37N 39 43E A city in W central Russia. Founded in 1095, it was the capital of a principality until annexed by Russia in 1521. Population (2002): 521 560.

Rybinsk (name from 1946 until 1958: Shcherbakov; name from 1984 until 1991: Andropov) 58 01N 38 52E A port in W central Russia, on the River Volga. It is situated below the **Rybinsk Reservoir**, an artificial lake of 5200 sq km (2000 sq mi) created in 1941. Population (2002): 222 653.

Ryder, Sue See CHESHIRE, (GEOFFREY) LEONARD, BARON.

Ryder Cup A biennial golf tournament between teams from Europe and the USA. It was first played between members of the British and US Professional Golfers' Associations, in 1927. In 1979 the British team was opened to continental golfers. The cup was won by Europe in 1995 and 1997, by the USA in 1999, and by Europe in 2002.

rye A cereal *grass, *Secale cereale*, native to W Asia but widely cultivated in cool temperate and upland regions. 1–2 m high, it bears a terminal spike, 10–15 cm long. The grain is milled

to produce a dark-coloured flour, used in making black bread or for livestock feed.

Ryle, Gilbert (1900–76) British philosopher. His philosophy centred on detailed analysis of mental concepts. *The Concept of Mind* (1949) argued against Descartes' idea of the human being consisting of mind and body ("the ghost in the machine").

Ryle, Sir Martin (1918–84) British astronomer; astronomer royal (1972–84). A pioneer of radio telescope, his most important

work was the development of a technique for studying distant radio sources. In 1974 he shared the Nobel Prize for Physics.

Ryukyu Islands A group of volcanic and coral islands in the W Pacific Ocean, extending almost 650 km (400 mi) from Kyushu to N Taiwan. A kingdom until the 14th century, the islands were dominated by the Chinese before becoming a part of Japan (1879). They were under US control (1945–72). Area: 2196 sq km (849 sq mi). Population (2000 est): 1 318 000. Chief city: Naha (on Okinawa).

Saarbrücken 49 15N 6 58E An industrial city in SW Germany, the capital of Saarland on the River Saar near the French border. A centre of the iron and steel industry, it was under French administration in 1801–15, 1919–35, and 1945–57. Population (2004 est): 181 860.

Saarinen, Eero (1910–61) US architect, born in Finland. His most famous building is the Trans World Airlines terminal at Kennedy Airport, New York (1956–62), which has reinforced concrete vaults spreading outwards to suggest flight.

Saarland A state (*Land*) in W Germany, around the River Saar, a tributary of the Moselle. The area has often passed between France and Germany but plebiscites (1935 and 1955) led to union with Germany. Rich in coal, it has a large steel industry. Area 2569 sq km (992 sq mi). Population (2004 est): 1 061 376. Capital: Saarbrücken.

Sabah (former name: North Borneo) A state in Malaysia, in NE *Borneo. Forested and mountainous, it is largely undeveloped, but on the western coastal plain rice and rubber are grown. Copper and oil resources are being exploited; timber, rubber, and copra are exported. *History:* North Borneo was first colonized by the British in 1877, becoming a protectorate in 1882. In 1963 it joined Malaysia under its present name. Tension between Muslims and the government led to violence in the 1980s. Area: 76 115 sq km (29 388 sq mi). Population (2005 est): 2 931 700. Capital: Kota Kinabalu.

Sabines The peoples of the scattered hilltop communities NE of ancient Rome. The legendary abduction of the Sabine women by Roman settlers indicates the early interbreeding of Sabines with Romans. Sabine influence on Roman religion was especially strong. They became Roman citizens in 268 BC.

Sabin vaccine A vaccine that prevents poliomyelitis, developed by a US virologist,

A. B. Sabin (1906–93). It contains a weakened polio virus that stimulates the body's defence against polio without causing the disease. Sabin vaccine is given by mouth (often on a sugar lump) in three consecutive doses. *See also* SALK VACCINE.

sable A carnivorous mammal, *Martes zibellina*, native to N Eurasia. It is less than 50 cm long and has thicker legs and longer ears than other *martens. Its coat is thick, soft, and glossy and is valued as fur (Siberian sable).

sabre-toothed tiger An extinct *cat that lived 30 million years ago and became extinct in the Pleistocene epoch (1 million years ago). *Smilodon*, a Pleistocene form, was about the size of a tiger, with very long upper canine teeth used to pierce the thick hide of its prey.

saccharin An organic compound (C₇H₅NO₂S) used as a sweetening agent in the food industry and as a sugar substitute. It has about five hundred times the sweetening power of table sugar.

Sacks, Sir Jonathan (Henry) (1948–) British rabbi. A philosopher by training, he became a rabbi in 1978 and Commonwealth chief rabbi in 1991. His books include *The Persistence of Faith* (1991). He was knighted in 2005.

sacrament In Christian theology, a ritual having a special significance as a visible sign of an inner grace in its participants. The *Roman Catholic Church and Orthodox Churches accept seven sacraments: baptism, confirmation, penance, the *Eucharist, marriage, holy orders, and anointing of the sick (formerly extreme unction). Baptism and the Eucharist are the only commonly accepted sacraments among the Protestant Churches.

Sacramento 38 32N 121 30W A city in the USA, the capital of California on the Sacramento River. Founded in 1839, it grew after the discovery of gold nearby in 1848. Linked by canal (1963) to San Francisco Bay, it is a deep-

water port and serves an extensive agricultural area. Population (2000): 407 018.

sacred ibis An African ibis, *Threskiornis aethiopia*, that was revered in ancient Egypt. 75 cm long, it is pure white except for dark ornamental plumes on its back, dark wing tips, and a black head, neck, and bill. It feeds in flocks along rivers.

Sadat, Anwar (1918–81) Egyptian statesman; president (1970–81). Sadat was twice vice president (1964–66, 1969–70) before becoming president on *Nasser's death. He moved Egypt away from the Soviet Union and towards the USA, under the influence of which he negotiated a peace agreement with Israel in 1979. He shared the 1978 Nobel Peace Prize with Israel's President Begin. He was assassinated (1981) by Islamic extremists.

Sadducees An ancient Jewish religious and political party. They formed a conservative and aristocratic group centring on the priesthood in Jerusalem. With the destruction of the temple the party ceased to exist. *See also* PHARISEES.

Sade, Donatien Alphonse François, Marquis de (1740–1814) French novelist. Most of his works of sexual fantasy and perversion, which include *Justine* and *Les 120 Journées de Sodome*, were written in the 1780s and 1790s, during his many years of imprisonment for sexual offences. The sexual perversion "sadism," in which sexual pleasure is derived from causing or observing pain, is named after him.

Sadler's Wells Theatre A theatre in London where Lilian Baylis (1874–1937) established an opera and ballet company in 1931. From the 1680s the medicinal wells on the site were exploited and its owner, Mr Sadler, later erected a music hall. In 1753 this became a theatre, which closed (1878) but was restored by Baylis. Its ballet and opera companies later transferred to the West End, becoming the *Royal Ballet and English National Opera respectively. In 1998 Sadler's Wells reopened as a high-tech "dance theatre for the millennium" after a multimillion-pound redevelopment.

saffron The dried orange-yellow stigmas of the saffron crocus (*C. sativa*), used for flavouring and colouring foods and liqueurs and formerly as a fabric dye. The crocus, which has purple flowers, is cultivated mainly in France, Spain, and Italy. About 100 000 flowers are needed to produce 1 kg of saffron.

sagas Heroic prose narratives in Old Norse,

the best of which were written down in Iceland in the 12th and 13th centuries. Characteristic subject matter was drawn from ancient Scandinavian oral traditions and included fictionalized accounts of the deeds of Norwegian kings, for example *Heimskringla* by Snorri Sturluson (1178–1241), and heroic legends of the pagan past.

sage A perennial herb or shrub, *Salvia officinalis*, native to the Mediterranean region and widely cultivated for its leaves, which are used for flavouring foods. It has blue, pink, or white flowers. *See also* SALVIA.

sage grouse A large grouse, *Centrocercus urophasianus*, occurring in sagebrush deserts of western USA. It is 75 cm long and the male has ornamental wattles and a long slender tail, which is fanned out during its courtship display.

sago A starchy food obtained mainly from the Indonesian sago *palms (*Metoxylon sago* and *M. rumphii*), cultivated in Malaysia. It is extracted from the pithy stems.

Sahara The largest desert in the world, covering most of N Africa. The terrain consists chiefly of a plateau with central mountains rising to 3415 m (11 204 ft) and some areas of sand dunes, such as the Libyan Desert in the NE. The vegetation is sparse. Geological evidence shows that the Sahara was once well vegetated and that parts were formerly under the sea. There are large deposits of oil and gas in Algeria and Libya and phosphates in Morocco and Western Sahara. Rainfall is minimal and irregular, but there are numerous scattered oases. Area: about 9 000 000 sq km (3 474 171 sq mi).

saiga A small antelope, *Saiga tatarica*, of Asian deserts and steppes. Saigas are slightly built with a pale woolly coat and a remarkable swollen snout with convoluted nasal tracts, thought to be an adaptation for warming inhaled air or to be related to their keen sense of smell. Males have straight ridged horns. Saigas form large herds to migrate southwards in winter.

Saigon *See* HO CHI MINH CITY.

Saimaa, Lake A lake in SE Finland. It is the primary lake in a system spread over most of S Finland. Area: about 1760 sq km (680 sq mi).

saint In Christian belief, a person characterized by special holiness. In the *Roman Catholic Church saints formally admitted to the calendar of saints by *canonization can be invoked as intercessors. *Protestantism rejects the invocation of saints, although the *Church of

England's calendar recognizes a number of saints' days.

St Albans 51 46N 0 21W A city in SE England, in Hertfordshire. Here stood the important Romano-British town of Verulamium, site of the martyrdom of St Alban; Roman remains include a theatre and mosaic pavement. The abbey, founded in honour of the saint in 793 AD, was made a cathedral in 1877. Population (1991): 80 376.

St Andrews 56 20N 2 48W A resort in E Scotland, in Fife Region on St Andrews Bay. An ancient ecclesiastical centre, its university (1412) is the oldest in Scotland. The famous Royal and Ancient Golf Club was founded here in 1754. Population (1991): 11 136.

St Bartholomew's Day Massacre The slaughter of *Huguenots that began on 24 August 1572, in Paris. The massacre was ordered by Charles IX of France under the influence of his mother, Catherine de' Medici. Some 3000 Huguenots died in Paris and many more were murdered in the provinces.

St Basil's Cathedral The cathedral of the Russian Orthodox Church in Moscow built between 1554 and 1560 for Ivan the Terrible. It is named after the Russian saint, who was buried there at the end of the 16th century.

St Bernard A breed of large working dog developed in Europe from Asian ancestors and employed as a rescue dog by the hospice of St Bernard in the Swiss Alps since the 17th century. It is massively built, having a large head with drooping ears. The coat is white marked with red-brown or brindle. Height: 65 cm minimum.

St Catherines 43 10N 79 15W A city and port in E Canada, in S Ontario at the entrance to the Welland Ship Canal linking Lakes Erie and Ontario. Founded in 1790, it is a fruit-farming and industrial centre and houses Brock University (1962). Population (1996): 130 926.

St Croix (or Santa Cruz) A West Indian island, the largest of the US Virgin Islands. The economy is based on tourism and agriculture. Area: 207 sq km (80 sq mi). Population (2000): 53 234. Chief town: Christiansted.

St David's (Welsh name: Tyddewi) 51 54N 5 16W A village in SW Wales in Pembrokeshire, the smallest cathedral city in Britain. The 12th-century cathedral, the largest in Wales, was an important medieval pilgrimage centre for the shrine of St David. Population (1991): 1627.

St Dunstan's (full name: St Dunstan's for

Men and Women Blinded on War Service) A British organization for the training, settlement, and lifelong care of those blinded in war. It was founded in 1915 by a blind newspaper proprietor, Sir Arthur Pearson (1866–1921).

St Elmo's fire A small electrical discharge, with a luminous appearance, that is associated with stormy weather and seen around the extremities of tall objects, such as the tops of trees and masts.

Saint-Exupéry, Antoine de (1900–44) French novelist and aviator. His novels include *Night Flight* (1931) and *Wind, Sand and Stars* (1939). He also wrote a fable for children, *The Little Prince* (1943).

St George's 12 04N 61 44W The capital of Grenada, on the SW coast, both a port and tourist resort. Founded by the French in the 17th century, it was capital of the British Windward Islands from 1885 to 1958. Population (1991): 4439.

St George's Channel A channel between SE Ireland and Wales, linking the Irish Sea with the Atlantic Ocean. Length: about 160 km (100 mi). Maximum width: 145 km (90 mi).

St Helena 15 58S 5 43W A mountainous island in the S Atlantic Ocean, a British dependent territory. Napoleon I was exiled here (1815–21). Area: 122 sq km (47 sq mi). Population (1994 est): 5157. Capital: Jamestown.

St Helens 1. 53 28N 2 44W A town in NW England, in St Helens unitary authority, Merseyside. It has an important glass industry, besides brick and tile manufacturing, engineering, and brewing. Population (1991): 106 293. 2. A unitary authority in NW England, in Merseyside. Area: 130 sq km (50 sq mi). Population (2001): 176 845.

St Helens, Mount 46 12N 122 11W A volcano in the USA, in SW Washington state in the S Cascade Range. Dormant since 1857, the mountain erupted in May 1980, causing widespread destruction in which more than 50 people died. Height: 2950 m (9677 ft).

St Helier 49 12N 2 07W A market town and resort in the Channel Islands, on the S coast of Jersey. There is a substantial trade in early vegetables and Jersey cattle. Population (1996): 27 523.

St James's Palace A royal palace in Pall Mall, in London, built for Henry VIII on the site of an 11th-century hospital. It was the principal London residence of the monarch from 1697, when Whitehall was burnt down, until superseded by Buckingham Palace in 1837. Much of

the original building was destroyed by fire in 1807.

St John River A river in E North America. Rising in Maine, USA, it flows NE to New Brunswick, Canada, and then SE to the Bay of Fundy, where high tides cause the river to reverse its course at the famous Reversing Falls. Length: 673 km (418 mi).

St John's 47°34'N 52°41'W A city in E Canada, the capital and commercial centre of Newfoundland. Settled in the 16th century, it is located beside a huge protected harbour. Population (1996): 101 936.

St John's wort A perennial herb or shrub, genus *Hypericum* (400 species), found in temperate regions. They have yellow five-petalled flowers with many stamens and many species are cultivated for ornament, including *H. calycinum* (also known as rose of Sharon). Family: *Guttiferae*.

St Kilda 57°49'N 8°34'W A group of three small mountainous islands off the Scottish mainland, the most westerly of the Outer Hebrides. Evacuated in 1930, they are now a nature reserve. Area: about 16 sq km (6 sq mi).

St Kitts-Nevis, Federation of (or St Christopher-Nevis) A country in the West Indies, in the Leeward Islands in the E Caribbean Sea. *Economy*: primarily agricultural; sugar, molasses, cotton, and coconuts are the main products. Tourism is important. *History*: from 1967 it was a UK associated state consisting of three islands: St Kitts, Nevis, and Anguilla. Anguilla became a separate British dependency in 1980. St Kitts-Nevis became fully independent within the British Commonwealth in 1983. Although the Nevis parliament announced (1997) plans to secede from the Federation, a referendum in 1998 failed to secure the two-thirds majority required for independence. Area: 262 sq km (101 sq mi). Population (2003 est): 46 400. Capital: Basseterre, on St Kitts.

Saint-Laurent, Yves (1936–) French fashion designer, who trained with Christian Dior and took over his fashion house (1957), opening his own in 1962. He established his reputation as the first designer to produce ready-to-wear clothes for the mass market; he has also produced clothes for men and a range of perfumes.

St Lawrence River A river in North America that belongs to one of the world's greatest water systems, draining the *Great Lakes into the Atlantic Ocean. From Lake Ontario it flows NE along the Canadian-US border through the

Thousand Islands, a major tourist district. Above Montreal it enters Canada and passes through rapids where hydroelectricity is produced. At Quebec it broadens into a long estuary that merges with the Gulf of St Lawrence, an arm of the Atlantic Ocean and a major fishing ground. The St Lawrence valley is an important agricultural and industrial belt as well as a rail, water, and road corridor. The **St Lawrence Seaway** is a navigable waterway through the St Lawrence River and the Great Lakes, completed in 1959. With a season of over eight months, it admits ships of up to 9000 tons. Length: Lake Ontario to Quebec 480 km (298 mi); St Louis River headwaters to Anticosti Island 3395 km (2110 mi).

St Louis 38°40'N 90°15'W A city and port in the USA, in Missouri on the Mississippi River. A major centre in the colonization of the West, it is now a large industrial and university city and an important agricultural market. Population (2000): 348 189.

St Lucia An island country in the West Indies, in the Windward Islands in the E Caribbean Sea. It is a mountainous island of volcanic origin. The population is mainly of African descent. *Economy*: mainly agricultural, the main crops being bananas and coconuts; there is a growing tourist industry. *History*: St Lucia was colonized by the French in the 17th century and ceded to Britain in 1814. It became internally self-governing in 1967 and fully independent within the British Commonwealth in 1979. Official language: English. Currency: East Caribbean dollar of 100 cents. Area: 616 sq km (238 sq mi). Population (2003 est): 162 000. Capital: Castries.

St Mark's Cathedral The cathedral church of Venice since 1807. It was built in the 9th century to house the relics of St Mark but rebuilt in the 11th century after a fire. Designed as a Greek cross surmounted by five domes, it is strongly influenced by Byzantine art and is famous for its opulent mosaic and sculptural decoration.

St Moritz 46°30'N 9°51'E A resort in SE Switzerland, on St Moritz Lake. A renowned winter-sports centre, its Cresta Run (for bobsleds) dates from 1885. Population (latest est): 5335. Altitude: 1822 m (5978 ft).

St Paul 45°00'N 93°10'W A city in the USA, the capital of Minnesota on the Mississippi River adjacent to Minneapolis; the Twin Cities comprise the commercial and industrial centre of an extensive grain and cattle area. Population (2000): 259 606.

St Paul's Cathedral The cathedral of the diocese of London; there have been five cathedrals on this site, the first three of which were Saxon. The present building was designed by Sir Christopher *Wren and replaced the Norman structure burnt down in the Great Fire. It features a traditional cruciform plan, a classical two-tiered portico, a great dome, and flanking towers.

St Peter's Basilica The basilica in the Vatican City, Rome. It dates from the 16th century and replaced the original gothic building. It is the largest church in the world. Its general shape was determined by Donato Bramante (1444–1514), although it was designed together with its enormous dome by *Michelangelo. Giacomo da Vignola (1507–73) continued the work and the nave and façade were added by Carlo Maderna (1556–1629). *Bernini completed the building in the 17th century.

St Petersburg (name from 1914 until 1924: Petrograd; name from 1924 until 1991: Leningrad) 59°55N 30°25E The second largest city in Russia and the capital of an autonomous region (*oblast*), at the head of the Gulf of Finland on the River Neva. It is a major industrial and commercial centre and its port, although frozen between January and April, is one of the largest in the world. Buildings include the Peter-Paul Fortress, the Winter Palace, and the Gostiny Dvor. *History:* the city was founded (1703) by Peter the Great and was the capital of Russia from 1712 until 1918, replacing Archangel as Russia's main seaport. In the late 19th century it developed as an important industrial centre. St Petersburg was prominent in both the *Revolution of 1905 and the 1917 revolution (see RUSSIAN REVOLUTION). During World War II the city withstood a siege by the Germans (8 September 1941–27 January 1944), in which nearly a million people perished. Population (1999 est): 4 169 400.

Saint-Saëns, Camille (1835–1921) French composer, conductor, pianist, and organist. His compositions include 12 operas, five symphonies, *The Carnival of the Animals* (published posthumously; 1922) for two pianos and orchestra, and five piano concertos.

St Sophia (or *Hagíá Sophia*) A building in Istanbul. In 537 *Justinian I erected a Byzantine church of great size and beauty to replace an earlier church (326) founded by Constantine I. In 1453, after the Turkish conquest, this became a mosque with added minarets. It was converted into a museum in 1935.

St Thomas 18°22N 64°57W A West Indian is-

land in the US Virgin Islands, in the Lesser Antilles, once a major sugar producer and slave-trading centre. Tourism is of major importance. Area: 83 sq km (28 sq mi). Population (2000): 51 181. Capital: Charlotte Amalie.

St Vincent, Cape 37°01N 85°59W A promontory in the extreme SW of Portugal, in the Algarve on the Atlantic Ocean. Several naval battles have been fought off the cape, including the British defeat (1797) of the Spanish fleet during the Napoleonic Wars.

St Vincent and the Grenadines A country in the E Caribbean Sea, in the Windward Islands of the Lesser Antilles. It consists of the principal island of St Vincent and its dependencies of the Grenadine islets. *Economy:* based on agriculture; bananas, taro, and sweet potatoes are the main products. *History:* a British possession since 1763, it became fully independent within the Commonwealth in 1979. Area: 390 sq km (150 sq mi). Population (2003 est): 113 000. Capital: Kingstown.

saké (or *rice wine*) An alcoholic drink made in Japan from steamed rice, to which a special yeast is added, and slowly fermented. It resembles a light sherry in taste and is served warm.

Sakhalin A Russian island, mountainous and forested, between the Sea of Okhotsk and the Sea of Japan, divided from the mainland by the Tatar Strait. The island has coal, iron, and fisheries; major off-shore reserves of gas and oil were discovered in the 2000s. It has also been used as a place of exile. At times it belonged to Japan but was re-annexed by the Soviet Union in 1945. Area: 76 000 sq km (29 300 sq mi). Population (2000 est): 598 000. Main town: Yushno Sakhalinsk.

Sakharov, Andrei Dmitrievich (1921–89) Soviet physicist. After helping to develop the Soviet hydrogen bomb during the 1940s and 1950s he spoke out against nuclear weapons in the 1960s and argued for freedom of speech in the Soviet Union. He was awarded the Nobel Peace Prize in 1975. His exile to Gorkii (Nizhniy Novgorod) in 1980 aroused international protest and ended in 1986. In 1989 he was elected to the new Soviet People's Congress of Deputies.

Saki (H(ector) H(ugh) Munro; 1870–1916) British writer. Born in Burma, he settled in London in 1908. He published several volumes of humorous short stories, many of which featured his fastidious and snobbish heroes Clovis and Reginald. He was killed in action in World War I.

Saladin (1137–93) The leader of the Muslims against the Crusaders in Syria. He obtained control over the Muslim lands in Egypt, of which he became sultan in 1175, and Syria. He then captured the Kingdom of Jerusalem following his great victory over the Crusaders at the battle of Hattin (1187). During the third *Crusade he won his legendary reputation as a chivalrous warrior.

Salam, Abdus (1926–96) Pakistani physicist, who became professor of physics at Imperial College, London, in 1957. He was also director of the International Centre for Theoretical Physics in Trieste. In 1979 he shared the Nobel Prize with the US physicists Sheldon Glashow (1932–) and Steven Weinberg (1933–) for their work on *weak interactions.

Salamanca 40°58'N 5°40'W A city in central Spain, in Salamanca. During the Peninsular War the battle of Salamanca was fought here on 22 July 1812, in which Wellington secured a decisive victory over the French. An intellectual centre of Renaissance Europe, Salamanca remains an important cultural centre with a university (founded 1218). Its many notable old buildings include two cathedrals and it has a fine Roman bridge. Population (1998 est): 158 457.

salamander A tailed *amphibian belonging to a widely distributed order (*Urodela* or *Caudata*; about 225 species). Salamanders have short legs and long bodies and move by bending the body from side to side to give as wide a movement as possible for their feet. They usually hide in damp places when not hunting small worms and insects. Their habits range from wholly aquatic to wholly terrestrial. See also NEWT.

Salazar, António de Oliveira (1889–1970) Portuguese dictator, prime minister from 1932 to 1968. His New State repressed opposition and fought long colonial wars in Africa, which gravely impeded the country's economic development.

Salerno 40°40'N 14°46'E A port in Italy, in Campania on the Gulf of Salerno. Founded by the Romans in 197 BC, its medical school flourished in the middle ages. It was the scene of heavy fighting during World War II (1943). Population (2000 est): 142 055.

Salford 1. 53°30'N 2°16'W A city in NW England, in Salford unitary authority, Greater Manchester, on the River Irwell and the Manchester Ship Canal. The docks have been redeveloped for business and leisure. The Lowry, a

major art gallery and cultural centre named in honour of L. S. *Lowry, opened in 2000. Population (1991): 227 400. 2. A unitary authority in NW England, in Greater Manchester. Area: 97 sq km (37 sq mi). Population (2001): 216 119.

Salic Law The law of the Salian *Franks issued under Clovis in the early 6th century. Owing little to other contemporary law codes or to Roman law, it is concerned with both criminal and civil law. Its importance for later periods lies in its prohibition against women inheriting land. This canon was invoked in France in 1316 and 1321 to prevent a woman from succeeding to the throne and, in 1328, Edward III's claim to the French Crown was rejected on the grounds that his claim was by female descent.

Salieri, Antonio (1750–1825) Italian composer and conductor in Vienna from 1766. His pupils included Beethoven, Schubert, and Liszt. Because of his rivalry with Mozart, he was fancifully credited with having poisoned him.

Salinger, J(erome) D(avid) (1919–) US novelist, who achieved success with his novel of adolescent alienation *The Catcher in the Rye* (1951). Later works include *Franny* and *Zooey* (1961), and *Seymour, An Introduction* (1963), but he subsequently became a recluse and published very little.

Salisbury 51°05'N 1°48'W A city in S England, in Wiltshire at the confluence of the Rivers Avon and Wylye. Its 13th-century cathedral has the highest spire in the country, 123 m (403 ft). Industries include light engineering and tourism. Nearby is Old Sarum, the site of an Iron Age hill fort with extensive earthworks; settlement here continued until the 13th century. Population (1996): 39 431.

Salisbury, Robert Cecil, 1st Earl of See BURGHLEY, WILLIAM CECIL, LORD.

Salisbury, Robert Arthur Talbot Gascoyne-Cecil, 3rd Marquess of (1830–1903) British statesman; Conservative prime minister (1885–86, 1886–92, 1895–1902). Elected an MP in 1853, he became Disraeli's foreign secretary in 1878. As prime minister he served as his own foreign secretary (except in 1886 and 1900–02) and his policy has been characterized as one of "splendid isolation."

saliva The fluid secreted by three pairs of **salivary glands** around the mouth in response to the sight, smell, taste, or thought of food. Its major role is to bind the food particles and to lubricate the mouth and gullet.

Salk vaccine The first successful antipolio

vaccine. Given by injection, it was developed by the US virologist J. E. Salk (1914–95) and first used in 1954. It has been replaced by the Sabin vaccine in many countries.

Sallust (Gaius Sallustius Crispus; c.86–c.34 BC) Roman politician and historian. Expelled from the Senate for alleged immorality, he supported Julius Caesar in the war against Pompey and became governor of Numidia. He was accused of corruption and extortion and retired from politics in about 44 BC. His best-known works are the monographs *Bellum Catilinae* and *Bellum Jugurthinum*.

salmon One of several fish of the genera *Oncorhynchus* or *Salmo*, especially the Atlantic salmon (*S. salar*)—a valuable food and game fish. It has an elongated body, up to 150 cm long, and two dorsal fins. Salmon live mainly in the sea, feeding on other fish, but migrate into fresh water to spawn. The spawned fish (kelts) either die or return to the sea and spawn in successive years. On hatching the young fish are known as parr once they start feeding. At about two years the coat becomes silver and the fish (smolt) migrate to the sea to reach maturity. After about two to three years they return to their native spawning waters as grilse, guided upstream by their sense of smell. Family: *Salmonidae*; order: *Salmoniformes*.

Salmond, Alex (1954–) Scottish politician; leader of the Scottish National Party (1990–2000; 2004–). Following elections in 2007 he became first minister of Scotland at the head of a minority administration.

Salmonella A genus of rod-shaped bacteria that are parasites of animals and man and cause several diseases: *S. typhi* and *S. paratyphi* cause typhoid fever in humans while *S. typhimurium* is a common cause of food poisoning.

salsify A biennial herb, *Tragopogon porrifolius*, native to the Mediterranean region. It is cultivated in temperate regions for its fleshy white root, supposed to taste like oysters when cooked. The plant has long narrow leaves, used in salads, a head of purple flowers surrounded by stiff pointed green sepals. Family: *Compositae*.

salt 1. (sodium chloride; NaCl) The crystalline solid that is used for seasoning and preserving food and is present in sea water and halite, which are its chief sources. It has an important function in the human body and is used in the manufacture of many chemicals, such as soap, fertilizer, and ceramics. **2.** Any similar com-

pound formed, together with water, when an acid reacts with a base.

Salt Lake City 40°45'N 111°55'W A city in the USA, the capital of Utah near Great Salt Lake. Founded in 1847 by the Mormons under the leadership of Brigham Young, it is the world headquarters of the Mormon Church. Population (2004 est): 178 605.

saltpetre (**potassium nitrate** or **nitre**; KNO₃) A white crystalline solid used as a fertilizer, a food preservative, and in gunpowder and fireworks.

saltwort An annual or perennial herb belonging to the widely distributed genus *Salsola* (50 species), found on seashores and salt marshes. They have fleshy spiked leaves. Family: *Chenopodiaceae*.

Salvador (or **Bahia**) 12°58'S 38°29'W A port in NE Brazil, the capital of Bahia state on the Atlantic Ocean. It has a fine natural harbour. Population (2005 est): 2 672 500.

Salvation Army The international Christian organization founded in 1865 in London by William Booth. Its members wear a characteristic uniform on public occasions. It is famous for its social and evangelistic work.

Salvia A genus of perennial herbs and shrubs (about 700 species), widely distributed in temperate and tropical regions. Many are cultivated for ornament, including the Brazilian scarlet sage (*S. splendens*) and the blue-flowered *S. patens*. Common *sage is the culinary herb. Family: *Labiatae*.

Salyut A series of manned Soviet space stations first launched into earth orbit in 1971. Crews were conveyed to and from the orbiting laboratory by Soyuz spacecraft. They lived in weightless conditions, sometimes for very long periods, conducting a variety of experiments and observations. The series was superseded by the *Mir space stations.

Salzburg 47°54'N 13°03'E A city in central Austria, the capital of Salzburg. It has many fine buildings. Mozart was born here and a famous musical event, the Salzburg Festival, is held annually. Population (2004 est): 145 680.

Samar The third largest island in the Philippines, in the Visayan Islands linked by bridge to Leyte. Its frequent typhoons restrict agriculture; the chief products are rice, coconuts, and hemp. Copper and iron ore are mined. Area: 13 415 sq km (5181 sq mi). Population (2000): 1 517 585. Chief town: Catbalogan.

Samara (name from 1935 until 1991: Kuibys-

shev) 53 10N 50 10E A port in SW central Russia, on the River Volga. Population (1999 est): 1168 000.

Samaritans 1. A people of ancient Samaria (now in N Israel), with a religion closely akin to Judaism but much disliked by the Jews. They declined under Muslim rule. 2. A British telephone and e-mail service for the suicidal and despairing, started in 1953 by the Rev Chad Varah (1911–) in a London church (St Stephen Walbrook). A nonreligious charity, it offers a nonprofessional, confidential, and anonymous service to anyone in distress through over 200 UK branches. Many overseas branches belong to the associated Befrienders International.

samarium (Sm) A *lanthanide element, discovered 1879, that occurs naturally, with other lanthanides, in monazite (CePO₄). At no 62; at wt 150; mp 1074°C; bp 1794°C.

Samarkand 39 40N 66 57E A city in E Uzbekistan. It was the chief junction of the ancient *Silk Road between China and the Mediterranean and, conquered by the Arabs in the 8th century, became the Abbasids' capital (9th–10th centuries) and a great Islamic centre. In the 14th century it became the capital of Timur's mighty empire, coming later under the rule of the Uzbek people (16th–19th centuries). The city's remarkable historic buildings include Timur's mausoleum. Population (1998 est): 388 000.

Samoa, American An incorporated US territory in the S central Pacific, consisting of Tutuila and several smaller islands in the E Samoan archipelago. Agriculture is the main occupation; canned tuna is an important export. An elected legislature with limited law-making powers was established under the constitutions of 1960 and 1967. Area: 197 sq km (76 sq mi). Population (2001): 58 000. Capital: Pago Pago.

Samoa, Independent State of (name until 1997; Western Samoa) A country in the S central Pacific; the main islands are Savai'i and Upolu. *Economy:* subsistence agriculture is the main occupation; exports include copra, bananas, and cocoa. Food processing, fishing, and tourism are also important. *History:* a German protectorate until World War I, Western Samoa was subsequent under New Zealand control until it became independent in 1962. The following year Susuga Malietoa Tanumafili II (1913–) became head of state for life. Universal adult suffrage was introduced in 1990. The Human Rights Protection Party under Tofilau Eti Alesana has played the lead-

ing role in government since 1996. Official languages: Samoan and English. Currency: tala (Samoa dollar) of 100 sene. Area: 2842 sq km (1097 sq mi). Population (2003 est): 179 000. Capital: Apia.

Samoyed (dog) A breed of dog developed in Siberia and used by the Samoyed tribesmen as a sledge dog. It is robustly built with husky-like features; the white or cream coat consists of a short soft undercoat and a long coarse outer coat. Height: 51–56 cm (dogs); 46–51 cm (bitches).

Samoyed (people) A group of Siberian peoples of the tundra and N forest region of central Russia. They were traditionally nomadic reindeer hunters and fishers, but are now mainly settled as reindeer breeders. Shamanism dominates their religious life. The five Samoyed languages belong to the Uralic family, only Nenets (or Yurak) having a considerable number of speakers.

Sampras, Pete (1971–) US tennis player who was Wimbledon singles champion in 1993–95 and 1997–2000. He won the US Open in 1990, 1993, 1995, and 1996.

samurai The provincial warriors who rose to power in Japan in the 11th century. Most became the vassals of *daimyo* (feudal lords). The samurai class was sharply divided from other classes by its superior status and marked distinctions also existed within its own ranks. After the Meiji restoration (1868) the samurai lost their special position but ex-samurai became leaders in various areas of modern Japanese life.

Sana'a 15 23N 44 14E The capital of Yemen, in the west of the country. Notable buildings include the Great Mosque, where there is a sacred Muslim shrine. Population (1995): 972 000.

San Andreas Fault A fault in the earth's crust, 1200 km (750 mi) in length, running along the margin between the Pacific tectonic plate (see PLATE TECTONICS) and the North American plate in NW California. In 1906 a horizontal displacement between the plates of about 6 metres and a lateral displacement of 1 metre caused an earthquake that devastated San Francisco; in 1989 and 1994 earthquakes caused further damage to the city. It is named after San Andreas Lake, through which it passes.

San Antonio 29 25N 98 30W A city in the USA, in Texas. Founded in 1718, it was the scene of the Mexican attack on the *Alamo (1836) during the Texan revolution. San Antonio has several military bases and is a commercial and

industrial centre for a large agricultural region. Population (2000): 1 144 646.

sanctions Penalties imposed for breaking a law, especially international law. They were first imposed by the *League of Nations on Italy following its invasion of Ethiopia. More recent examples of economic sanctions were those imposed by the UN against South Africa (1985–94); Iraq (1990–2003); and Serbia (1992–2000).

sand Unconsolidated grains of rock, varying in size from 0.06 to 2.00 mm in diameter. Consolidated sands form *sandstones; grits are coarse sandstones with angular grains. Most sands consist mainly of quartz, derived from the weathering of quartz-bearing rocks. Sand is used in glass and cement production, and as an abrasive.

Sand, George (Aurore Dupin, Baronne Dudevant; 1804–76) French novelist. Her first book, *Indiana* (1832), the first of an enormous number of successful novels. Among her many lovers were Alfred de Musset and Frédéric Chopin.

sandalwood An evergreen tree belonging to the genus *Santalum* (about 25 species), native to SE Asia and the Pacific Islands. The true sandalwood (*S. album*) is partially parasitic on the roots of other trees. Its white wood is used to make boxes and furniture and, when distilled, yields sweet-scented sandalwood oil. Family: *Santalaceae*.

sand dollar A marine invertebrate animal belonging to an order (*Clypeastroida*) of *echinoderms. Its round flat rigid body is covered with small spines and saclike organs (tube feet). Sand dollars live on the sea bed and sift minute food particles from the sand in which they burrow. Class: *Echinoidea*.

sanderling A bird, *Calidris alba*, that nests on Arctic coasts and winters on shores worldwide. 20 cm long, it has a rust-coloured upper plumage, changing to pale-brown in winter, and a long white wing stripe. It feeds on shrimps, sandhoppers, and molluscs with its straight slender bill. Family: *Scopacidae* (sandpipers).

sandfly A small fly belonging to the widely distributed genus *Phlebotomus*. Sandflies are among the worst pests of the tropics: the bloodsucking females can give a painful bite and several species are carriers of serious human diseases. The name has also been used for many bloodsucking *gnats and *midges of sandy places.

sand hopper A small terrestrial jumping *crustacean, also called beach hopper and sand or beach flea, belonging to the family *Talitridae*. Its body is laterally flattened and lacks a carapace. During the day it is buried in sand but at night it emerges to feed on organic debris under stones, etc. Order: *Amphipoda*.

Sandhurst 51 02N 0 34E A village in SE England, in Bracknell Forest unitary authority, Berkshire. The Royal Military Academy (1799) for training officers moved to nearby Camberley, Surrey, in 1946 but is still known as Sandhurst. Population (1991): 19 153.

San Diego 32 45N 117 10W A city in the USA, in California on San Diego Bay. It has a US naval base and naval air service facilities and is the site of a scientific research centre. Population (2000): 1 223 400.

sand lizard A slender long-tailed European lizard, *Lacerta agilis*, occurring in sandy regions. It has white-centred dark spots along its pale-brown or grey back. Family: *Lacertidae*.

sandpiper A wading bird belonging to a family (*Scopacidae*; 82 species) occurring chiefly in the N hemisphere, breeding in northerly latitudes and migrating south to winter. Sandpipers typically have long legs, long wings, a mottled brown or grey plumage, which commonly changes colour seasonally, and a long slender bill. They nest in marshy regions or on mud flats. Order: *Charadriiformes* (gulls, plovers, etc.).

Sandringham 52 49N 0 30E A village in E England, in Norfolk. The Sandringham estate was bought by Queen Victoria for the Prince of Wales (later Edward VII) in 1861. Sandringham House remains a royal residence. Population (latest est): 440.

sandstone A sedimentary rock consisting of consolidated *sand, cemented mainly by calcareous, siliceous, or ferruginous minerals. They may be deposited by wind action in deserts or in shallow seas, estuaries and deltas, and along low-lying coasts by water. Sandstones vary in colour from red to yellow to white according to the presence of other minerals in addition to the quartz.

Sandwell A unitary authority in W central England, in West Midlands. Area: 86 sq km (33 sq mi). Population (2001): 282 901.

San Francisco 37 40N 122 25W A city in the USA, in California situated on a peninsula between San Francisco Bay and the Pacific Ocean. It is a major seaport, a financial and insurance

centre, and a major cultural centre. Landmarks include the San Francisco–Oakland Bay Bridge (1936), the Golden Gate Bridge (1937), Chinatown, and the city's cable cars. Founded by the Spanish in 1776, it was captured by the USA (1846) during the Mexican War. It expanded rapidly following the discovery of gold in California (1848) and it was during this period that the first Chinese settled in the city. In 1906 movement in the San Andreas Fault led to devastation of the city by an earthquake and three-day fire. In 1989 another earthquake caused about 70 deaths. Population (2000): 776 733.

Sanhedrin The highest court of the Jews, which met in Jerusalem. Its composition and its jurisdiction varied with its history. In New Testament times, the high priest was president and its functions were administrative, judicial, and religious.

San José 37 20N 121 55W A city in the USA, in California on the S arm of San Francisco Bay. Founded in 1777, it was the first city in California and state capital (1849–51). Situated in the fertile Santa Clara Valley, it has many food-processing plants and wineries as well as aerospace and electronics industries. Population (2000): 894 943.

San José 950N 84 02W The capital of Costa Rica, situated in the centre of the country in a high fertile valley. It was founded in 1736; a university was established in 1843. Population (2000 est): 344 349.

San Juan 18 29N 66 08W The capital and main port of Puerto Rico, in the N. Founded by the Spanish in 1508, it was captured by the US navy in 1898. It expanded considerably in the 20th century and is now also an industrial and tourist centre. Population (2000): 421 958.

San Marino, Republic of A small independent republic, an enclave in Italian territory, situated on the slopes of the Apennines mountain range, SW of Rimini. *Economy:* farming, winemaking, tourism, and the sale of postage stamps are the main sources of income. *History:* dating from the 4th century AD, it was an independent commune by the 12th century. In 1862, the newly established kingdom of Italy guaranteed San Marino's independence and a customs union. Executive power lies in the Congress of State and two regents elected by the Great and General Council. Official language: Italian. Currency: euro of 100 cents. Area: 61 sq km (24 sq mi). Population (2003 est): 29 200. Capital: San Marino.

San Martín, José de (1778–1850) South American soldier and statesman; the national hero of Argentina. After participating in the struggle of Buenos Aires against the Spanish, he raised an army in Argentina (1814–16), which he led across the Andes; with Bernardo O'Higgins he defeated the Spanish at Chacabuco (1817) and Maipo (1818), achieving the liberation of Chile. In 1821 he entered Lima, proclaimed the independence of Peru, and became its "protector." He resigned in 1822, after differences with Bolívar.

San Salvador 13 59N 89 18W The capital of El Salvador, situated in the centre of the country. Founded by the Spanish in 1525, it became capital in 1839. It has suffered severe earthquakes, most recently in 1986, and in 1989 witnessed conflict between rebel and government forces. Population (1992): 422 570.

San Sebastián 43 19N 1 59W A seaside resort in N Spain, in the Basque Provinces on the Bay of Biscay. It possesses a cathedral and palace. Population (1991): 169 933.

Sansevieria A genus of herbaceous perennial plants (60 species) native to tropical and S Africa and S Asia. They have a basal rosette of stiff swordlike leaves arising from thick creeping underground stems (rhizomes). *S. trifasciata* var. *laurentii* (mother-in-law's tongue) is a popular house plant with long leaves, striped green and yellow. The leaves of several species yield a fibre used for ropes, mats, etc. Family: Liliaceae.

Sanskrit The classical literary language of the Hindu scriptures, belonging to the Indo-Aryan family. From it the Prakrits and modern N Indian languages developed. It was spoken in NW India from 1500 BC, becoming a scholarly language in the 5th century BC, and is still used as a sacred language. It is highly complex and is written in the Devanagari script.

Sansovino, Jacopo (Jacopo Tatti; 1486–1570) Florentine sculptor and architect. From 1527 he introduced the High Renaissance style to Venice, serving as the city's chief architect until his death. His works include the library of St Mark's Cathedral (from 1537) and the gigantic statues of *Neptune* and *Mars* in the Doge's Palace (from 1554).

Santa Anna, Antonio López de (1794–1876) Mexican soldier and statesman; president (1833–36) and dictator (1839, 1841–45). He dominated Mexican politics from 1823 until driven into exile in 1845. He is best known for his defeat of Texan forces at the *Alamo (1836).

Santa Cruz 17 45S 63 14W A city in SE Bolivia. It is the commercial centre for an area producing chiefly sugar cane, rice, and coffee. Major industries include the manufacture of cigarettes and sugar refining. Population (2000 est): 1016 137.

Santayana, George (1863–1952) Spanish-born US philosopher and poet. His philosophy was set out in *Realms of Being* (1927–40). His witty and urbane works include *The Life of Reason* (1905–06), *Scepticism and Animal Faith* (1923), and *The Last Puritan* (1935).

Santiago (or Santiago de Chile) 33 35S 70 40W The capital of Chile, situated in the centre of the country at the foot of the Andes. It was founded by the Spanish in 1541 and is now a major industrial centre. Population (1999 est): 4 640 635.

Santo Domingo 18 32N 69 50W The capital of the Dominican Republic, a port on the S coast. Founded by Columbus in 1496, it became the capital of the first Spanish colony in the Americas and is the site of the first cathedral (1521) and the first university (1538) in the New World. It became capital of the new Dominican Republic in 1844. Population (1993): 1 555 656.

Santos 23 56S 46 22W A city in SE Brazil, in São Paulo state on the Atlantic Ocean. It is the leading coffee port of the world. Population (2000): 415 553.

São Luís 2 34S 44 16W A port in N Brazil, the capital of Maranhão state. The chief exports are babaçu palm products, cotton, sugar, and balsam. It is the site of the University of Maranhão (1966). Population (2000, urban area): 834 968.

Saône, River A river in E France, rising in Lorraine and flowing mainly S to join the River Rhône at Lyons. It is linked by canal to the Rivers Moselle, Rhine, Loire, Seine, and Meuse. Length: 480 km (298 mi).

São Paulo 23 33S 46 39W The largest city in Brazil, the capital of São Paulo state. Founded in 1554, it grew rapidly after 1880 with the development of coffee plantations. Coffee remains important but its industries have diversified and it is now the fastest-growing city in Brazil. Population (2000): 9 785 640.

São Tomé and Príncipe, Democratic Republic of A small island country off the coast of West Africa, in the Gulf of Guinea. It comprises the two main islands, which have coastal plains rising to volcanic mountains in their interiors, together with two islets. Most

of the population is descended from African slaves and southern Europeans. *Economy:* chiefly agricultural; the main crops are cocoa, copra, palm oil and kernels, and coffee. *History:* discovered by the Portuguese in 1471, the islands came under Portuguese rule in 1522. They became an overseas province in 1951 and gained independence in 1975. The 1990s saw an ongoing power struggle between parliament and the president. Fradique de Menezes was elected president in 2001. Official language: Portuguese. Currency: dobra of 100 centavos. Area: 964 sq km (372 sq mi). Population (2003 est): 142 000. Capital: São Tomé.

sap The fluid found in the vascular (conducting) system of plants. It consists of water and minerals, absorbed from the soil and transported through the plant in the *xylem, and sugars, made in the leaves and distributed in solution in the *phloem.

sapodilla An evergreen tree, *Achras sapota*, native to Central America but cultivated elsewhere in the tropics. It produces large edible brown rounded fruits, with a juicy pulp surrounding black seeds. Milky latex from the bark is a source of chicle gum, used in chewing gum. Family: *Sapotaceae*.

sapphire A transparent variety of *corundum that may be any colour except red (see RUBY) due to traces of iron and titanium. It is used as a gemstone and in record-player styluses. Sapphires occur in igneous and metamorphic rocks but most are obtained from detrital gravels.

Sappho (c. 612–c. 580 BC) Greek lyric poet, contemporary with Alcaeus. Her passionate poetry, which has survived in fragments, was written for her group of female admirers on the island of Lesbos (from which the term "lesbianism" is derived).

Sapporo 43 5N 141 21E A city in Japan, in SW Hokkaido. It is the island's main administrative and educational centre. It is also a ski resort, site of the 1972 winter Olympics. Population (1995): 1 756 968.

saprotroph (or saprophyte) An organism that obtains its energy by feeding on dead or decaying tissue. Bacteria and fungi are important saprotrophs, using enzymes to break down organic material and release nutrients into the soil, which can be used by plants.

Sarajevo 43 52N 18 26E The capital of Bosnia-Herzegovina, an industrial and cultural centre. It was here that the heir apparent of Austria-Hungary, *Francis Ferdinand, was assassinated

(28 June 1914), precipitating World War I. In 1992 fierce fighting broke out between Bosnian Serbs and Muslims following Bosnia-Herzegovina's declaration of independence from Yugoslavia. From April 1992 it was besieged and bombed by Bosnian Serb forces; NATO airstrikes on their positions finally ended their grip on the city in 1995. Following the signing of the Bosnian peace accord (Dec 1995), Sarajevo was reunited under Bosnian government control. Population (2004 est): 428 600.

Saratoga, Battles of (19 September and 7 October 1777) Two battles fought near Saratoga, New York, which formed the turning point of the *American Revolution. The second ended with the surrender of Gen Burgoyne to the Americans. The outcome of the battles helped persuade the French to recognize and support the USA.

Sarawak A state in Malaysia, in NW *Borneo on the South China Sea. It has a mountainous forested interior with a swampy coastal plain, where rubber, pepper, sago, and rice are grown. Oil production is of prime importance. It was given in 1841 by the sultan of Brunei to the British explorer James Brooke, the "white rajah." Made a British protectorate in 1888, it was ruled by the Brooke family until World War II, when it was occupied by the Japanese. Ceded to Britain in 1946, it joined Malaysia in 1963. Area: 124 970 sq km (48 250 sq mi). Population (2005 est): 2 312 600. Capital: Kuching.

sardine A young *pilchard or any of several species of food fish of the family *Clupeidae*, especially members of the genera *Sardina*, *Sardinops*, and *Sardinella*.

Sardinia The second largest island in the Mediterranean Sea, comprising an autonomous region of Italy. It is largely mountainous. Agriculture is important, especially on the fertile alluvial plain in the SW. Its major industry is mineral production, especially lead, zinc, coal, fluorspar, and sea salt. First settled by the Phoenicians, it was ceded to Savoy by Austria (1720) in exchange for Sicily and formed the kingdom of Sardinia with Piedmont, which formed the basis of a unified Italy. Area: 23 813 sq km (9194 sq mi). Population (2005 est): 1 650 052. Capital: Cagliari.

Sargasso Sea An elliptical section of the N Atlantic Ocean between latitudes 20°N and 35°N and longitudes 30°W and 70°W. Contained within a current system, it is still and warm. It takes its name from the floating brown seaweed of the genus *Sargassum* (see GULFWEEB), found in it.

Sark 49 26N 2 22W The smallest of the four main Channel Islands. It consists of Great Sark and Little Sark, connected by a narrow isthmus. It is governed by a hereditary seigneur or dame in a semifeudal system. Cars are prohibited here. Area: 5 sq km (2 sq mi). Population (2002): 610.

Sarkozy, Nicolas (1955–) French statesman; president (2007–). He became president of the right-wing UMP in 2004 and won the presidential election of 2007 on a platform of liberalizing the French economy.

sarsaparilla An extract of the roots of several perennial climbing or trailing vines of the genus *Smilax*, especially *S. aristolochiae* folia, cultivated in Central and South America. The dried roots are used as a tonic and as flavouring for medicines and beverages. Family: *Smilacaceae*.

Sartre, Jean-Paul (1905–80) French philosopher, novelist, dramatist, and critic. A leading existentialist, his major works of philosophy include *Being and Nothingness* (1943). His novels include *Nausea* (1938) and the trilogy *The Roads to Freedom* (1945–49). Among his plays are *In Camera* (1944) and *Altona* (1959). He had a close association with Simone de *Beauvoir.

SAS See SPECIAL AIR SERVICE.

Saskatchewan A province of W Canada, on the Great Plains. The N is covered by forest with lakes and swamps. The S is open prairie and is one of the world's most important wheatlands. The province is rich in minerals, including uranium, oil, natural gas, potash, zinc, and copper; associated industries are important. Explored in the 17th and 18th centuries, Saskatchewan was first exploited for furs. Agricultural settlement began slowly (1870s) but sped up in the decade before 1914. Area: 570 269 sq km (220 181 sq mi). Population (2005 est): 994 100. Capital: Regina.

Saskatchewan River A river in W Canada, rising in two separate branches in the Rocky Mountains and flowing generally E through prairie grainlands to unite in central Saskatchewan. The river then continues to Lake Winnipeg. Length: 1940 km (1205 mi).

sassafras A tree, *Sassafras albidum*, native to North America. It bears clusters of yellow flowers and dark-blue berries. The aromatic roots are dried for use in medicines and also yield oil of sassafras, which is used in perfumes and as flavouring for beverages. Family: *Lauraceae*.

Sassoon, Siegfried (1886–1967) British

poet and writer. In 1917 his disgust with the progress of World War I led him to make a public refusal to serve, for which he was sent to a military hospital where he met Wilfred *Owen. His antiwar poetry appeared in *The Old Huntsman* (1917) and *Counterattack* (1918) and he wrote several volumes of memoirs.

Satan See DEVIL.

satellite 1. A celestial body orbiting a *planet. The planets of the solar system have at least 50 known satellites, ranging greatly in size. The small bodies comprising the rings of Saturn, Uranus, and Jupiter may also be regarded as satellites. Mercury and Venus have no satellites. Spacecraft have sent back information on various satellites, including the earth's moon, the four large Galilean satellites of Jupiter, Saturn's rings and its largest satellite Titan, and the satellites of Uranus and Neptune. In recent years many small satellites

have been discovered by these spacecraft, notably a further six moons of Uranus, a further 12 moons of Saturn, and a further 45 moons of Jupiter, most of which remain unnamed. **2.** A spacecraft that is launched into orbit around the earth or enters an orbit around some other solar-system body. It may be a *communications satellite, retransmitting radio signals from one location on earth to another. Alternatively, its instruments may gather information from earth or from other celestial objects and transmit it, by radio signals, to ground-based receiving stations. This information is used, for example, in weather forecasting, navigation, scientific and astronomical research, and for military purposes.

Satie, Erik (1866–1925) French composer. He turned away from impressionism towards a clear-textured style that admitted humour. His works include the ballet *Parade* (1916),

The principal planetary satellites

piano pieces, including *Trois Gymnopédies* (1888), and many songs.

satinwood A tree, *Chloroxylon swietenia*, native to S India and Sri Lanka. Its wood is valued in cabinetmaking for its fine golden-yellow finish. The wood of certain West Indian species is also known as satinwood. Family: *Meliaceae*.

satsuma See TANGERINE.

Saturn (astronomy) The second largest planet, orbiting the sun every 29.5 years at a mean distance of 1427 million km. The most oblate planet, its equatorial diameter is 120 000 km. The dominant feature is **Saturn's rings**, lying in the equatorial plane and tilted at 27° to the orbital plane. There are six rings, differing considerably in brightness and width but are all composed of small icy chunks. The overall diameter is almost 600 000 km but the thickness is only a few hundred metres. The main rings, C, B, and A, were discovered in the 17th century. The outermost, A, is separated from the brightest ring, B. Saturn also has at least 30 *satellites. Saturn is made up primarily of hydrogen and helium.

Saturn (mythology) The Roman god of agriculture and father of the gods, identified with the Greek *Cronus. Various aspects of the **Saturnalia**, his annual festival held in December, at which presents were exchanged and normal social rules relaxed, were taken over by the Christian festival of Christmas.

saturniid moth A moth belonging to the mainly tropical family *Saturniidae* (about 800 species). They are usually large with a transparent eyespot on each wing. Their cocoons can be a source of silk.

satyrid butterfly A butterfly of the worldwide family *Satyridae*. The wings are mainly brownish with a few or numerous eyespots. The forelegs are rudimentary and the flight weak and fluttering. Satyrids hide when alarmed, folding the forewings inside the camouflaged hindwings.

Satyr and Sileni In Greek mythology, male fertility spirits of the woods and fields, usually portrayed with goats' legs and pointed ears or horns. Associated with *Dionysus, they were typically drunk and lustful. See also SILENUS.

Saudi Arabia, Kingdom of A country in the Middle East comprising most of Arabia, bordering on the Red Sea and the Persian Gulf. In the W a line of mountains runs close to the Red Sea, while the Najd, the central plateau, slopes downwards W-E. In the N and SE are

large areas of desert. The population, densest in the SW, is mainly Sunni Muslim. About 27% are nomads. *Economy:* based on oil in the Persian Gulf, exploited since 1938. The country, a member of OPEC, is the world's greatest exporter of oil. Income is also derived from pilgrims visiting Mecca, Medina, and Jiddah. *History:* the establishment of Saudi Arabia (1932) under *Ibn Saud followed the 19th-century struggle by the Saud family to dominate the warring tribes of the peninsula and take overall control from Turkey. Asir was incorporated in 1934. Saudi Arabia became a founding member of the Arab League (1945). Under Ibn Saud's son, *Faisal Ibn Abdul Aziz, there was economic development, Faisal using the oil crisis of the early 1970s to increase Saudi holdings in oil operations. The present king, since 2005, is Abdullah Ibn Abdul Aziz, a half-brother of Faisal. Saudi Arabia is an absolute monarchy with a constitution and legal system based on the Koran and Islamic law. An appointed council was established in 1993 and local elections were held for the first time in 2003. Official language: Arabic. Currency: riyal of 100 halalah. Area: 2 400 000 sq km (927 000 sq mi). Population (2007 est): 27 601 038. Capital: Riyadh.

Saul In the Old Testament, the first King of Israel, who reigned in the 11th century BC. He was anointed king by the prophet Samuel and began his reign with a great victory over the Ammonites, followed by many battles against the Philistines. His last years were marked by a growing enmity with *David.

Sault Ste Marie 46°32N 84°20W A city in E Canada, in NW Ontario on the St Mary's River opposite Sault Ste Marie, USA. Its canal allows ships to bypass local rapids. Population (1996): 88 054.

Saunders, Dame Cicely Mary Strobe (1918–2005) British philanthropist. In 1967 she founded St Christopher's Hospice in London for the care of the terminally ill, which specializes in the relief of pain and support for the families. Her books include *Living with Dying* (1983).

Saurischia An order of *dinosaurs dominant in the Jurassic period (about 195–130 million years ago). They had hip bones like those of modern lizards (the name means "lizard hips") and were mostly bipedal carnivores, although some were quadrupedal herbivores. See also ALLOSAURUS; APATOSAURUS; TYRANNOSAURUS.

saury A marine fish, also called skipper, belonging to the family *Scomberesocidae* (about 4

species). It has a long slim body, blue or olive above and golden or silvery below, with beaklike jaws. Sauries occur in large shoals in tropical and temperate surface waters, and are often seen leaping or skipping over the surface to escape predators. Order: *Atheriniformes*.

Saussure, Ferdinand de (1857–1913) Swiss linguist, whose posthumously published *Course in General Linguistics* (1916) is usually regarded as the foundation of modern linguistics. His conception of languages as self-contained systems of arbitrary signs formed the basis of *structuralism.

savanna (or savannah) The extensive tropical grasslands, bordering on the equatorial rain forests in both the N and S hemispheres. They cover extensive areas in N Australia, Africa, and South America (where they are known as the *llanos in Venezuela and Colombia and the campos in Brazil). The vegetation of savannas is dominated by tall grasses, such as elephant grass, interspersed with low often flat-topped trees and bushes. Grazed by herds of hooved animals, savannas are ideal cattle-rearing areas.

Savonarola, Girolamo (1452–98) Italian religious reformer. A Dominican prior in Florence from 1491, he began a crusade against religious and political corruption, centring his attacks on the papacy and the *Medici. He became the virtual ruler of Florence when the Medici were expelled by the populace in 1494. Excommunicated in 1497, he was hanged and burned for heresy.

savory A herb belonging to the genus *Satureja*, of warm and temperate regions. Summer savory (*S. hortensis*) is an annual, native to central Europe and Asia. Both the dried leaves and the oil extract are used for flavouring foods. The perennial winter savory (*S. montana*) is also a culinary herb. Family: *Labiatae*.

Savoy An Alpine frontier region of SE France corresponding to the present-day departments of Savoie and Haute-Savoie. Strategically important for its mountain passes, the county of Savoy was founded in 1034. Piedmont was acquired in the 14th century and Sardinia in 1720; Savoyard dukes then took the title King of Sardinia, which in 1748 became the kingdom of Piedmont-Sardinia. Savoy (but not Sardinia) was annexed by France during the Revolutionary Wars but restored in 1815 and Piedmont-Sardinia became the leading spirit in the movement for Italian unification (see *RISORGIMENTO*). Savoy became part of France in 1860, but the House of Savoy ruled the newly formed kingdom of Italy (1861–1946).

sawfly An insect belonging to the widely distributed suborder *Symphyla*. The female possesses a needle-like tubular ovipositor, used to insert eggs into foliage and timber. The larvae, resembling caterpillars, damage trees. Chief families: *Argidae*, *Siricidae*, *Cimbicidae*, *Diprionidae*, *Tenthredinidae*; order: *Hymenoptera*.

saxifrage A perennial herb belonging to certain genera of the family *Saxifragaceae*, found in cold and temperate regions. The leaves may either form a basal rosette or occur in pairs along the stem and the flowers are white, yellow, purple, or red.

Saxons A Germanic people who, during the 5th century AD, expanded from their Baltic coastal homelands to other areas of N Germany, the coast of Gaul (France), and (with the *Angles and *Jutes) to Britain. Charlemagne eventually defeated the continental Saxons in the 8th century and converted them to Christianity. See also *ANGLO-SAXONS*.

Saxony (German name: *Sachsen*) 1. An ancient NW German duchy. Named after its original inhabitants, the *Saxons, it was incorporated into Charlemagne's empire and subsequently became a duchy. In the 13th century Saxony became an electorate and in the 16th and 17th centuries a leading German Protestant state. In 1697 Elector Frederick Augustus I (1670–1733) became King of Poland and Saxony's subsequent involvement in Polish affairs kept it apart from German power struggles until the 19th century. Conquered by Napoleon in 1806, N Saxony was annexed by Prussia in 1815 and in 1866 joined the Prussian-dominated North German Confederation. The remainder of Saxony joined the German Empire in 1871. 2. A Land in E Germany, formerly part of East Germany. Area: 18 413 sq km (7109 sq mi). Population (2000 est): 4 459 700. Capital: Dresden.

saxophone A woodwind instrument with a brass body, keys, and a single reed mouthpiece similar to that of a *clarinet. It was invented by the Belgian Adolphe Sax (1814–94) and patented in France in the 1840s. The most common sizes of saxophone are the soprano, alto, tenor, and baritone. They are most commonly used as solo instruments in jazz.

Sayers, Dorothy L(eigh) (1893–1957) British writer, best known for her series of detective novels, beginning with *Whose Body?* (1923), featuring the erudite detective Lord Peter Wimsey.

scabies A contagious skin infection caused by the *itch mite, which tunnels and breeds in

the skin, causing intense itching. Treatment is by application of benzylbenzoate cream.

scabious An annual or perennial herb belonging to the genus *Scabiosa* (80–100 species), native to the Mediterranean region and temperate parts of Eurasia and Africa. The small scabious (*S. columbaria*) is widely distributed on chalky soils. It has small bluish-lilac flowers on a long stalk. The field scabious, *S.* (or *Knautia*) *arvensis*, is similar. Family: *Dipsacaceae*.

Scafell Pike 54 28N 3 12W The highest peak in England, in Cumbria, in the Lake District. Height: 978 m (3210 ft).

scalar quantity A quantity that is represented by magnitude only. Unlike a *vector quantity, a scalar quantity has no direction. Examples include mass, time, and speed.

scale An ascending or descending succession of notes, characterized by a fixed succession of intervals between the notes that constitute it. Many thousands of different scales exist; all the major musical traditions are based upon them. In Western music there are three **diatonic scales**: the major scale, the harmonic minor scale, and the melodic minor scale. The octave is divided into 12 notes and any of these scales may be constructed on these notes. The version of the scale produced is associated with a particular *tonality. The **chromatic scale** includes all 12 semitones of the octave.

scale insect An insect belonging to the superfamily *Coccoidea* (about 4000 species), abundant in warm and tropical regions. Scale insects are usually small and the females are often legless, wingless, and eyeless and covered by a waxy scale or mass of threads. They become encrusted on plants and suck the juices, often becoming serious pests. Other species are of value by producing *shellac, *cochineal, and various waxes. Suborder: *Homoptera*; order: *Hemiptera*.

scallop An edible *bivalve mollusc belonging to the family *Pectinidae* (about 400 species), of warm and temperate seas. The valves of the shell are broad, flattened, and deeply fluted, and the animal swims by flapping them with a single powerful muscle.

Scandinavia Geographically, a peninsula in NW Europe, comprising Sweden and Norway. Culturally and historically, it also includes Denmark, Iceland, the Faeroes, and Finland.

Scandinavian languages A subgroup of the Germanic group of languages consisting of *Swedish, *Norwegian, *Danish, *Icelandic, and Faeroese. The first three are similar

enough to be mutually intelligible, their separateness being imposed by their history and political boundaries. They all developed from a common Scandinavian ancestor, which originally used the *runic alphabet (see also OLD NORSE). This language spread with the Vikings to Iceland, the Faeroes, and elsewhere.

scandium (Sc) The first transition metal, predicted by Mendeleyev and discovered in 1879. It is trivalent, light (relative density 2.989), and has a high melting point. At no 21; at wt 44.956; mp 1541°C; bp 2836°C.

Scapa Flow A section of the Atlantic Ocean off the N coast of Scotland, in the Orkney Islands. It was the main base of the British Grand Fleet in World War I. Following its surrender, the German fleet scuttled itself here (1919). Length: 24 km (15 mi). Width: 13 km (8 mi).

scarab beetle A beetle belonging to the worldwide family *Scarabaeidae* (over 19000 species). Scarabs show a great variety in size and form: the largest beetles—the goliath and *hercules beetles—are scarabs, while other species have developed extraordinary horns. The family has two main groups—the *dung beetles and *chafers. Certain dung-rolling beetles, especially *Scarabaeus sacer*, were the sacred scarabs of the ancient Egyptians.

Scarborough 54 17N 0 24W A resort in NE England, on the North Yorkshire coast. The promontory is the site of a prehistoric settlement, a Roman signal station, and a 12th-century castle. There is fishing, tourism, and manufacturing. Population (1995): 44 930.

Scarlatti, Domenico (1685–1757) Italian composer and noted harpsichordist and organist, working in Lisbon from 1720 and in Madrid from 1729. Besides some operas and church music, he wrote over 600 harpsichord sonatas, many of which were highly innovative. His father **Alessandro Scarlatti** (1660–1725) was also a composer, working chiefly in Rome and Naples. His works include over a hundred operas, 600 chamber cantatas, 200 masses, 12 chamber symphonies, and 14 oratorios.

scarlet fever A highly infectious disease of children caused by streptococcus bacteria. The child develops a sore throat, fever, and headache, and 24–48 hours later a red rash spreads from the chest over the whole body. Before antibiotics scarlet fever killed many children or left them disabled with *rheumatic fever, kidney disease, or ear infections; it can now be rapidly cured with penicillin.

Schama, Simon (Michael) (1945–)

British historian and art writer, based in the USA. His books include *The Embarrassment of Riches* (1987), *Citizens* (1989), and *Landscape and Memory* (1995). He is also well known for presenting the television series *A History of Britain* (2000–02).

Scheldt, River A river in W Europe. Rising in NE France, it flows generally NNE through W Belgium to Antwerp, then NW to the North Sea in the SW Netherlands. Canals connect it to the Rivers Somme, Seine, Sambre, Meuse, and Rhine. Length: 435 km (270 mi).

Schiller, (Johann Christoph) Friedrich (von) (1759–1805) German dramatist, poet, and writer. His first play, *Die Räuber* (1781), typifies the **Sturm und Drang* call for political freedom. With Goethe's encouragement, Schiller turned from historical and academic studies to produce brilliant dramas: the trilogy *Wallenstein* (1798–99), *Maria Stuart* (1800), *Die Jungfrau von Orleans* (1801), and *Wilhelm Tell* (1804). His nondramatic works include poems and an important essay on aesthetics.

schistosomiasis (or bilharziasis) A widespread disease of the tropics caused by blood flukes of the genus *Schistosoma* (or *Bilharzia*). It is contracted by bathing in water contaminated by snails, which harbour the larvae of the parasite. The larvae penetrate the skin and—when mature—settle in the blood vessels of the intestine or bladder. Symptoms, caused by the release of eggs by adult flukes, include anaemia, inflammation, and diarrhoea and dysentery, or cystitis and blood in the urine. The disease is treated by drugs that destroy the parasite.

schizophrenia A severe mental disorder characterized by disintegration of the processes of thinking, contact with reality, and emotional responsiveness. Delusions and hallucinations are common, especially those that produce the feeling of a loss of personal identity. Treatment consists of administration of drugs (see ANTIPSYCHOTICS) and vigorous psychological and social rehabilitation. See also PARANOIA; PSYCHOSIS.

Schleswig-Holstein A low-lying *Land* in N Germany bordering on the North Sea, the Baltic Sea, and Denmark. During the 19th century Denmark and the Austrian-led German confederacy both laid claim to the two duchies of Schleswig and Holstein. The duchies were eventually annexed to Prussia in 1866, the *Land* being formed in 1949. Area: 15 696 sq km (6059 sq mi). Population (2000 est): 2 777 300. Capital: Kiel.

Schliemann, Heinrich (1822–90) German archaeologist. After a successful business career, Schliemann retired (1863) to search for Homeric **Troy*. He excavated Hissarlik on the Asia Minor coast of Turkey, finding ruins of nine consecutive cities. His spectacular finds at **Mycenae* (1874–76), Orchomenos in Boeotia (1880), and Tiryns (1884–85) established him as the discoverer of **Mycenaean civilization*.

Schmidt, Helmut (1918–) German statesman; Social Democratic chancellor of West Germany (1974–82). Entering Federal politics in 1953, he was minister of defence (1969–72) and for finance (1972–74) before becoming chancellor.

Schmidt telescope A **telescope* that uses a thin "correcting" lens in front of the spherical primary mirror. It was developed by the Estonian instrument maker Bernard Voldemar Schmidt (1879–1935). It produces very sharp photographic images of celestial objects over a very wide angle of sky.

schnauzer A breed of dog originating in Germany and used as a guard dog. Strongly built with a docked tail, it has a square muzzle with long sidewhiskers. The coat is black or light grey and brown. Two varieties are the giant schnauzer bred for farm and police work and the miniature schnauzer. Height: 33–35 cm (miniature); 45–48 cm (standard); 54–65 cm (giant).

Schoenberg, Arnold (1874–1951) Austrian-born composer. Forced as a Jew to leave Berlin (1933), he became a US citizen in 1941. His early compositions, in a late Romantic style, include two string quartets and the symphonic poem *Pelleas und Melisande* (1902–03). Later works were characterized by **atonality*. In 1924 Schoenberg developed the theory and technique of **serialism*, which he employed in most of his subsequent works, including a violin concerto (1936), a piano concerto (1942), and the unfinished opera *Moses und Aaron* (begun 1932).

scholasticism The intellectual discipline comprising all the philosophical and theological activities pursued in the medieval universities (schools). As the international philosophy of Christendom it respected orthodoxy and was concerned with the philosophies of **Plato* and **Aristotle*. For scholastics, such as **Abelard* and **Aquinas*, religion was predominant and it was by theology that the selection of problems for study and the scope of scientific enquiry were to be decided. After Aquinas,

scholasticism became virtually synonymous with *Aristotelianism.

Schopenhauer, Arthur (1788–1860) German philosopher. He placed emphasis upon the human will as a means to understanding. *The World as Will and Idea* (1818) sets out his principal ideas and pessimistic conclusions. He was distrustful of rationalism and the scientific method, believing that contemplative freedom could be achieved through art.

Schröder, Gerhard (1944–) German politician; chancellor (1998–2005). A Social Democrat, he defeated Helmut *Kohl and the CDU in the elections of 1998. He was re-elected in 2002.

Schrödinger, Erwin (1887–1961) Austrian physicist, who worked in Dublin, 1940–56. He shared the 1933 Nobel Prize with *Dirac for his development of the form of the *quantum theory known as *wave mechanics.

Schubert, Franz (Peter) (1797–1828) Austrian composer, who achieved little recognition before his premature death. Schubert's melodic genius is evident in his 600 *Lieder*, which include "Death and the Maiden" and "The Trout." Some of his greatest songs are to be found in the song-cycles *Die Schöne Müllerin* (1823) and *Die Winterreise* (1827). His other compositions include nine symphonies (of which one is lost and the eighth is unfinished), string quartets, piano trios, an octet, two quintets, piano sonatas, and choral music.

Schumacher, Michael (1969–) German motor-racing driver. He was Formula One world champion in 1994, 1995, 2000, 2001, 2002, 2003, and 2004. He won more Grand Prix races and more world championships than any other driver. He retired in 2006.

Schumann, Robert (Alexander) (1810–56) German composer. Almost all his musical compositions up to 1840 were for the piano, including *Kreisleriana* (1838). His works also include four symphonies and many songs. He wrote much as a critic, founding and editing (1835–44) a musical journal. Insanity developed in later life and he died in an asylum. His wife **Clara Schumann** (1819–96) was a famous pianist, teacher, and composer, and became a great interpreter and editor of her husband's works.

Schuschnigg, Kurt von (1897–1977) Austrian statesman; chancellor (1934–38). He tried in vain to prevent the Nazi *Anschluss* and was forced to resign, being imprisoned by Hitler throughout World War II. On his release he

taught in the USA until 1967, when he returned to Austria.

Schwarzenegger, Arnold (1947–) US film actor and politician, born in Austria. A former bodybuilder, he later starred in hugely successful action films such as *Terminator* (1984) and *Total Recall* (1990). In 2003 he was elected Republican governor of California.

Schwarzkopf, Dame Elisabeth (1915–2006) German soprano, especially noted for her interpretation of Mozart and Richard Strauss.

Schweitzer, Albert (1875–1965) Alsatian-born theologian, medical missionary, and organist. From 1913 until his death, Schweitzer practised as a doctor in the hospital he founded in Gabon at the jungle village of Lambaréné. In 1952 he received the Nobel Peace Prize.

Science Museum A museum in South Kensington, London, devoted to the history and development of science, engineering, and industry. Its full name is the British National Museum of Science and Industry. It was separated from the Victoria and Albert Museum in 1909. The National Railway Museum, York, (opened 1975) is an outstation.

Scilly, Isles of (or Scillies) A group of about 140 islands and islets in the Atlantic Ocean, off the extreme SW coast of England. Only five are inhabited, namely St Mary's (the largest), Treco, St Martin's, St Agnes, and Bryher. Their mild climate has been exploited to produce early spring flowers for the UK market. Agriculture is intensive. Area: 16 sq km (6 sq mi). Population (2005 est): 2100. Chief town: Hugh Town.

sclerosis Stiffening and hardening of the tissues. This is a feature of many diseases. See MULTIPLE SCLEROSIS; ARTERIOSCLEROSIS; ATHEROSCLEROSIS.

Scofield, (David) Paul (1922–) British actor. His major theatrical roles include Hamlet (1948, 1955), Lear (1962), Prospero (1976), and Othello (1980). His best-known film performance was as Sir Thomas More in *A Man for All Seasons* (1966).

Scone 56 25N 3 24W A parish in E central Scotland, in Perth and Kinross. It consists of the villages of New Scone and Old Scone, the Pictish and later Scottish capital where most Scottish kings were crowned. The coronation stone was taken from here by Edward I in 1296 and placed in Westminster Abbey. It was removed by Scottish nationalists in 1950 but later recovered. In 1996 it was moved to Edinburgh castle.

scops owl A small *owl of the mainly tropical genus *Otus*, also called screech owl because of its call. Scops owls are mostly arboreal, with camouflaging plumage resembling bark.

scorpion An *arachnid of the order *Scorpionida* (about 800 species), found in warm dry regions. The second pair of appendages form large pincers and the elongated abdomen curls upwards and bears a poisonous sting, which can be fatal to man. They prey at night, mainly on insects and spiders.

scorpion fish A carnivorous fish, often called rockfish or zebra fish, belonging to the family *Scorpaenidae*, found mainly on rocky beds of tropical and temperate coastal waters. It has a stout body, up to 1 m long, a large spiny head, and strong fin spines, which can inflict painful wounds and may be venomous. Order: *Scorpaeniformes*.

scorpion fly An insect of the order *Mecoptera* (400 species), so called because the males of many species curl the abdomen over the body, like a scorpion. Scorpion flies have long legs and antennae and, typically, two similar pairs of net-veined wings. Larvae and adults feed on dead animals and plants.

Scorsese, Martin (1942–) US film director, noted for tough urban dramas such as *Mean Streets* (1973), *Taxi Driver* (1976), *Raging Bull* (1980), *Goodfellas* (1990), *Gangs of New York* (2002), and *The Departed* (2006).

Scotland A country occupying the N part of Great Britain and comprising a political division of the *United Kingdom. Most of the population lives in a narrow lowland belt, which runs E-W across the country and separates the lower hills of the S from the higher mountains of the N (including the Grampian and Cairngorm Mountains). There are many islands off the N and W coasts, including the Hebrides to the W and the Orkneys and Shetlands to the N. The principal rivers are the Clyde, Forth, Tay, and Spey. There are many lochs in the northern mountains. Administratively, Scotland is divided into 32 council areas. *Economy*: the central belt of the country is highly industrialized. However the traditional industries of coalmining and shipbuilding are now almost extinct. Whisky, for which Scotland is internationally famous, is produced in Highland, Moray, and Aberdeenshire. The discovery of oil in the North Sea has led to a boom on the E coast. Agriculture remains important and includes sheep farming in the upland areas, dairying in the SW, beef production in the E and NE lowlands, and market gardening. Forestry has

grown in importance. Fishing is a major source of revenue and salmon farming is a growing industry. *History*: Scotland was never completely subdued by the Romans, but the barbaric northern tribes were kept N of *Hadrian's Wall and, for some 40 years, the more northerly Antonine Wall. The diverse peoples (Picts, Scots, Britons, and Angles) of Scotland gradually united, helped by the spread of Christianity, and Kenneth I MacAlpine (died c.858) is regarded as their first king. During the middle ages there was recurrent war between England and Scotland. In 1296 Edward I of England declared himself King of Scotland but after his death Robert the Bruce reasserted Scottish independence, which was recognized by England in 1328. The 14th century saw the establishment of a long-standing alliance between France and Scotland and the succession of the *Stuart dynasty. Under the influence of John *Knox the Scottish Church became Presbyterian (see CHURCH OF SCOTLAND) during the reign of Mary, Queen of Scots. In 1603 her son James VI succeeded as James I to the throne of England but political union was not established until 1707 (see UNION, ACTS OF). After the Hanoverian succession the Stuart cause was kept alive by the *Jacobites, who staged two unsuccessful rebellions (1715, 1745). Scotland experienced rapid industrialization in the 19th century. Following the parliamentary Reform Act (1832) a tradition for Liberalism was established but Labour gained dominance in the 20th century. Nationalism became a growing force in the 1970s but devolution plans failed to attract sufficient support in a referendum in 1979. In 1997, however, 74.3% of voters backed proposals to establish a Scottish parliament. Elections for the parliament took place in 1999. The current first minister is the Scottish National Party's Alex *Salmond. Area: 78 769 sq km (30 405 sq mi). Population (2004 est): 5 078 400. Capital: Edinburgh.

Scots law Originally Scots law differed little from English law, but from the beginning of the 16th century there was a tendency to introduce elements of *Roman law, especially as embodied in the *civil law of France and the Netherlands. This resulted in marked differences from English law, the preservation of which was guaranteed by the Treaty of Union with England in 1707. An example is the Scots law of *contract, in which the principle of "consideration" does not have the importance it has in English law. Modern statutes have, however, introduced many new laws that are the same for both countries.

Scott, Sir George Gilbert (1811–78) British architect. An advocate of the gothic revival style, Scott was a noted designer, restorer of medieval buildings, and author. He renovated many churches and cathedrals, including Westminster Abbey. His original buildings include the Albert Memorial (1864) and St Pancras station (1865). His grandson **Sir Giles Gilbert Scott** (1880–1960) was also an architect. He designed the Anglican Cathedral in Liverpool (begun 1904), the new Bodleian Library, Oxford (1936–46), and the new Waterloo Bridge (1939–45).

Scott, Sir Ridley (1937–) British film director, who established himself in the cinema with the science-fiction films *Alien* (1979) and *Blade Runner* (1982). Later films include the feminist road movie *Thelma and Louise* (1991), the epic *Gladiator* (2000), which won five Academy Awards, and *Hannibal* (2001).

Scott, Robert Falcon (1868–1912) British explorer and naval officer. He led two expeditions to the Antarctic, 1900–04 and 1910–12. With a party of four he reached the South Pole on 17 January 1912, only to find that *Amundsen had preceded them. Delayed by illness and blizzards they perished only a few miles from safety. His son **Sir Peter Markham Scott** (1909–89) was a noted ornithologist and wildlife painter. In 1946 he founded the Wildfowl Trust (renamed the Wildfowl and Wetlands Trust in 1989) based at Slimbridge, Gloucestershire, for the study and conservation of birds.

Scott, Sir Walter (1771–1832) Scottish novelist and poet. His early works included a collection of border ballads (1802–03) and the popular narrative poem *The Lay of the Last Minstrel* (1805). *Waverley* (1814) was the first of a series of successful historical novels that included *Old Mortality* (1816) and *The Heart of Midlothian* (1818).

Scottish Borders A council area in SE Scotland, bordering on England. Created in 1996, it has the same boundaries as the former Borders Region. It is mainly hilly, with sheep farming and forestry; tweed and knitwear are manufactured. Area: 4734 sq km (1827 sq mi). Population (2004 est): 109 270. Administrative centre: Newtown St Boswells.

Scottish National Party (SNP) A political party, founded in 1928, dedicated to achieving Scottish independence from the UK. The party secured 11 seats and 30.4% of the Scottish vote in the 1974 parliamentary election, but in 1979 held only two seats. After the 2005 election it held six seats. Since 2007 the SNP has been the largest party in the Scottish parliament, hold-

ing 47 of the 129 seats. The party formed a minority administration with Alex *Salmond as first minister.

Scottish terrier A breed of dog, originally called Aberdeen terrier, used to chase foxes from earth. It is thickset with short legs, a short erect tail, and pricked ears. The long muzzle has characteristically long whiskers and the wiry coat is usually black. Height: 25–28 cm.

Scout Association An association founded by Robert Baden Powell in 1908 to encourage boys to become enterprising members of society. It includes Cub Scouts (for boy aged 8 to 11), Scouts (11–16), and Venture Scouts (16–29). Girl Scouts were first admitted in the UK in 1990. See also GUIDES ASSOCIATION.

screech owl See SCOPS OWL.

screw pine A treelike plant of the genus *Pandanus* (about 150 species), native to the Old World tropics. The name derives from the spiral arrangement of the leaves. Stout aerial prop roots grow down from the stem into the ground: the part of the stem below these roots decays, so that the plant is supported entirely by the prop roots. The leaves are used for matting and weaving. The flowers grow in large heads enclosed in leafy structures (spathes) and the fruits of some species are edible. Family: *Pandanaceae*.

Scriabin, Alexander (1872–1915) Russian composer and pianist. His mature compositions were characterized by chords built on the interval of the fourth. His works include three symphonies, a piano concerto (1894), ten piano sonatas, and *Prometheus or The Poem of Fire* (1909–10).

scrofula Ulceration of a lymph node infected with *tuberculosis, seen most commonly in the neck. This form of tuberculosis is now uncommon in developed countries. Treatment is with antibiotic drugs and surgery.

Scunthorpe 53°36'N 0°38'W A town in NE England, in North Lincolnshire unitary authority, Lincolnshire. The service sector has risen in importance as iron and steel have declined. Population (2001): 72 660.

scurvy A disease caused by deficiency of *vitamin C (which is present in most fresh fruits and vegetables). In the past scurvy was common among sailors on long voyages, but it is now rarely seen.

Scylla and Charybdis In Greek mythology, two sea monsters on opposite sides of the

Strait of Messina who menaced *Odysseus, the *Argonauts, and other legendary heroes. Scylla was a monster with six heads and a pack of baying hounds, while Charybdis was a raging whirlpool.

Scythians An Indo-European people who temporarily settled in Asia Minor before settling in what is now S Russia in the 6th century BC. The true Scythians, called Royal Scyths, established a kingdom N of the Black Sea. Their skill as horsemen and archers halted Persian and Macedonian invasions but they disappeared from history during the Gothic onslaughts of the 3rd century AD.

sea anemone A sedentary marine invertebrate animal of a worldwide order (*Actiniaria*; over 1000 species) of *cnidarians. It has a soft columnar body (see **POLYP**) with a mouth at the top surrounded by rings of tentacles, which—when expanded—give the animal a flower-like appearance. Sea anemones are often found attached to rocks and weeds. They feed mainly on fish and other animals. Class: *Anthozoa*.

sea bass A carnivorous fish, also called sea perch, of the family *Serranidae* (about 400 species), found mainly in coastal waters of tropical and temperate seas. Its elongated body ranges up to 3.75 m long and varies in colour with the species. They may be active or sedentary and certain species are *hermaphrodite while others, such as *groupers, are able to change sex. Many are valued food and game fish. Order: *Perciformes*. See also **BASS**.

sea bream A fish, also called porgy, belonging to a family (*Sparidae*; about 400 species) found mainly in shallow waters of tropical and subtropical seas. It has a deep laterally flattened body covered with large scales, a single long dorsal fin, and well-developed teeth. It lives in shoals and feeds by scraping algae and small animals off rocks.

sea cow See **DUGONG**.

sea cucumber A marine invertebrate animal belonging to a worldwide class (*Holothuroidea*; 1100 species) of *echinoderms. At one end of its leathery cucumber-shaped body there is a mouth surrounded by a ring of tentacles. It crawls sluggishly on the sea bottom or burrows in sand or mud.

sea-floor spreading A concept developed in the 1960s that provides a mechanism for *continental drift. Magma rises from the earth's mantle to the surface along midocean ridges (constructive plate margins; see **PLATE TECTONICS**), cools to form new oceanic crust,

and displaces the older material sideways at an average rate of 4 cm per year. Magnetic reversals recorded in the rocks in approximately symmetrical strips at each side of the midocean ridges provide strong evidence.

sea eagle An eagle of the widely distributed genus *Haliaeetus*. The European sea eagle, *H. albicilla* may have a wingspan up to 2.4 m. They have a wedge-shaped tail and feed mainly on fish.

seagull See **GULL**.

sea horse One of several small bony-plated marine fish of the family *Syngnathidae*, especially the genus *Hippocampus*, that lives in shallow warm waters. The horselike head with its long tubular snout is set at an angle to the body. They use the prehensile tail to cling to seaweed and swim in a vertical position by undulating the dorsal fin. Order: *Gasterosteiformes*.

seal A carnivorous marine mammal belonging to the order *Pinnipedia* (32 species). Seals have a streamlined body with a smooth rounded head and an insulating layer of blubber under the sleek-coated skin. Both pairs of limbs flatten into flippers. They feed mainly on fish and breed on land or ice.

There are two main families: the *Otariidae* (eared seals; 13 species) including fur seals and *sealions, which have external ears and can turn their hind flippers forward for walking on land; and the *Phocidae* (true seals; 18 species), which lack external ears and have trailing hind flippers. See also *walrus.

sealion A large *seal belonging to the family *Otariidae*. Californian sealions (*Zalophus californianus*) of the Californian coast grow to 2 m and live in groups with a definite social hierarchy. Steller's sealion (*Eumetopias jubatus*) is the largest species, growing to over 3 m.

Sealyham terrier A breed of dog developed (1850–91) on the Sealyham estate, Haverfordwest, Wales, for hunting foxes and badgers. It is sturdily built with short legs, drooping ears, and a short thin tail. White with darker markings, Sealyhams have a soft under coat and a wiry outer coat. Height: 27–30 cm.

sea otter A marine *otter, *Enhydra lutris*, of the N Pacific, living in colonies of up to 90 individuals. Sea otters feed on molluscs, crustaceans, and fish and can crack open shells using a pebble. Once hunted for their valuable fur, they are now a protected species.

Sea Peoples The seafaring tribes, uncertainly identified, who colonized Asia Minor, the

Aegean, and N Africa in the 13th and 12th centuries BC, destroying the *Hittite empire. About 1170 they were almost annihilated by Rameses III of Egypt and those that survived scattered.

sea slug A marine *gastropod mollusc of the order *Nudibranchia*. Sea slugs have exposed feathery gills, two pairs of tentacles, and no shell. They browse on sponges, sea anemones, and corals and are often brightly coloured.

sea snake A venomous fish-eating snake belonging to the family *Hydrophiidae* (50 species) occurring mainly in coastal waters of Australasia and SE Asia. Sea snakes are adapted to an underwater life by having a flattened body with an oarlike tail and valvelike closures in the nostrils. Most produce live young (rather than eggs).

Seattle 47°35N 122°20W A city and port in the USA, in Washington state between the Puget Sound and Lake Washington. A port of entry to the Klondike, it became a boom town with the 1897 Alaska Gold Rush. There are large timber mills and various forest-based industries. Population (2000): 563 374.

sea urchin A marine invertebrate animal, belonging to the class *Echinoidea*, with a typically spherical rigid body covered by long movable spines. Sea urchins live on shores and ocean floors and use a complex feeding apparatus to masticate algae and other organic material scraped off rocks. Phylum: *Echinodermata* (see ECHINODERM).

sea water The water constituting the world's oceans and seas. It is usually saline, average salinity being about 35 g per kg of sea water. The principal dissolved salts are sodium chloride (2.8%), magnesium chloride (0.4%), and magnesium sulphate (0.2%). Where evaporation is high, salinity is increased, as in the Red Sea. See also DESALINATION).

seaweed Large multicellular red, brown, or green marine *algae that are generally found attached to the sea bed, rocks, or other solid structures by rootlike structures called holdfasts. The plants have stemlike stalks and fronds, which may be flat and undivided, threadlike, or branched, sometimes with small air bladders for buoyancy. Seaweeds often occur in dense aggregations along shores. Many are of commercial importance as food (e.g. carrageen, laver, and sea lettuce), as fertilizers, in chemical and pharmaceutical products, etc. See also KELP; WRACK.

Sebastian, St (3rd century AD) Roman mar-

tyr, killed by archers. According to tradition, he was an officer of the Praetorian Guards until his Christianity was discovered by Diocletian. Feast day: 20 Jan.

Sebastiano del Piombo (S. Luciano; c.1485–1547) Venetian painter. Although he was a pupil of Giovanni Bellini, his early works, notably *St John Chrysostom* (c.1509; S Giovanni Crisostomo, Venice), were influenced by Giorgione. Moving to Rome in 1511, he painted decorations in the Farnesina with *Raphael, whose *Transfiguration* he directly challenged with his *Raising of Lazarus* (1517–19; National Gallery, London). He was also known as a portraitist; his sitters included Christopher Columbus and Pope Clement VII, who appointed him keeper of the papal seals (*piombi*) in 1531—hence his nickname.

second 1. (s) The SI unit of time equal to the duration of 9 192 631 770 periods of the radiation corresponding to a specified transition of the caesium-133 atom. 2. A unit of angle equal to one-sixtieth of a minute.

secondary education Education for adolescent children, aged approximately from 11 to 18. In the UK the Education Act (1944) introduced universal secondary education (compulsory to the age of 15, extended to 16 in 1972). Initially a tripartite system (comprising *grammar schools for more academic pupils, secondary modern schools, and technical schools) was implemented in England and Wales, selection being based upon the eleven-plus examination. This exam has since been largely phased out and a widespread system of *comprehensive schools introduced.

secondary emission The ejection of electrons from the surface of a metal when it is bombarded with charged particles of sufficient energy. When the bombarding particles are themselves electrons, these are known as primary electrons and the ejected electrons are called secondary electrons. The effect is used in such devices as the electron multiplier.

secretary bird A large long-legged terrestrial bird of prey, *Sagittarius serpentarius*, that lives in dry uplands of Africa. It has a hawklike face and a grey plumage with a long pair of central tail feathers and a black crest of quills behind its head—hence its name. Order: *Falconiformes* (falcons, hawks, etc.).

Sedan, Battle of (1 September 1870) The battle in the *Franco-Prussian War in which German forces, invading NE France, defeated the army of Napoleon III. This precipitated rev-

olution in Paris and marked the end of the Second Empire.

sedatives Drugs that relieve restlessness, anxiety, and tension. Most drugs that depress the activity of the nervous system have this effect (including barbiturates and narcotics), but the most widely used sedatives are the *benzodiazepines.

sedge A perennial herbaceous grasslike plant of the genus *Carex* (about 2000 species), growing throughout the world, mainly in swampy places. Sedges have solid triangular stems, with long narrow leaves and small male and female flowers usually grouped into separate clusters (spikes). Family: *Cyperaceae*.

Sedgemoor, Battle of (6 July 1685) The battle, E of Bridgwater, Somerset, in which the forces of James II of England defeated the rebellion of his nephew, the Duke of *Monmouth.

sedimentary rock One of the three major categories into which rocks are divided (compare IGNEOUS ROCK; METAMORPHIC ROCK). Sedimentary rocks are deposited mainly under water, usually in approximately horizontal layers (beds). **Clastic sedimentary rocks** are formed from the erosion and deposition of pre-existing rocks and are classified according to the size of the particles: those with sand-grade particles include the sandstones; those with silt- or clay-grade particles include siltstones and mudstones; those with gravel-grade and larger fragments include the breccias, conglomerates, etc. Organically formed sedimentary rocks are derived from the remains of plants and animals, for example limestone and coal. Chemically formed sedimentary rocks result from natural chemical processes and include sedimentary iron ores. Many sedimentary rocks show complex internal structures, formed during or after deposition.

Seebeck effect See THERMOELECTRIC EFFECTS.

seed The reproductive structure formed after pollination and fertilization in higher plants. In flowering plants (angiosperms) the seed begins to develop after the *pollen nucleus has fused with the egg. In gymnosperms (conifers and related plants) the ovule begins dividing before pollination. All seeds contain an embryo and usually a food store, which is mobilized on germination. Angiosperm seeds are surrounded by a seed coat and contained within a *fruit; gymnosperm seeds are naked (see CONE). The development of the "seed habit"

has given the higher plants a marked advantage over the ferns, mosses, algae, and fungi. Water is not needed for fertilization, and therefore the plants can colonize arid habitats. In addition, seeds—unlike the spores of lower plants—can survive adverse conditions.

seed fern A fernlike *gymnosperm plant belonging to the extinct order *Cycadafitales* (or *Pteridospermales*), abundant during the Carboniferous and Permian periods (370–240 million years ago). Seed ferns—unlike ferns—produced seeds, in cuplike structures.

Sefton A unitary authority in NW England, in Merseyside. Area: 150 sq km (58 sq mi). Population (2001): 282 956.

Segovia, Andrés (1893–1987) Spanish guitarist, who revived the popularity of the guitar as a concert instrument.

Seine, River A river in N France. Rising on the Plateau de Langres, it flows mainly NW through Paris to the English Channel, S of Le Havre. It is the second longest river in France, linked by canal with the Rivers Somme, Scheldt, Meuse, Rhine, Saône, and Loire. Length: 776 km (482 mi).

seismic belts (or **seismic zones**) The narrow distinct belts on the earth's surface that are subject to frequent earthquakes. They usually follow the line of plate boundaries (see PLATE TECTONICS), especially along midocean ridges, island arc systems, and major *faults.

seismic wave An elastic shock wave emanating from the focus of an *earthquake or explosion. When seismic activity is recorded, several types of wave can be identified: longitudinal P (*primae*) waves and transverse S (*secundae*) waves are small rapid vibrations that come directly through the earth's interior in the preliminary tremor of an earthquake. The main earthquake consists of large slow L (*longae*) waves travelling along the surface. The study of seismic waves has provided much of our knowledge of the earth's interior.

seismology The branch of geophysics concerned with the study of *earthquakes: their origin, the waves they produce (see SEISMIC WAVE), their effects, their distribution, and their prediction and modification. The instruments used are the **seismograph**, which records the magnitude of the oscillations during an earthquake, and the **seismometer**, which detects and records the motions of the earth in a particular direction (usually used in sets of three).

Selene The Greek moon-goddess, daughter of

the Titan Hyperion and sister of Helios (the sun) and Eos (dawn). She became identified with the later Greek goddess *Artemis and with the Roman *Diana.

selenium (Se) A chemical element that is a member of the sulphur family and exists in several forms, including deep-red crystals, but the commonest allotrope is grey. The element has photovoltaic properties and is used in photocells, light meters, and in photocopying machines. It is a semiconductor and is widely used in rectifiers. At no 34; at wt 78.96; mp 221°C; bp 685°C.

Seleucids A Middle Eastern dynasty of the Hellenistic age (323–27 BC) founded by Seleucus I Nicator (c. 356–280 BC), the Macedonian general who, after Alexander the Great's death, became governor and then ruler (312) of Babylonia. He extended his kingdom to the frontiers of India in the east and then into Syria in the west but his successors failed to maintain his conquests. Antiochus the Great (reigned 223–187) briefly restored Seleucid power in the east but could not prevent Rome's Mediterranean expansion. The empire was further weakened by the revolt of the *Maccabees,

who were repressed, and the failure to push back the Parthians precipitated its final disintegration. In 64 BC Pompey annexed what was left of it to form the Roman province of Syria.

Sellers, Peter (1925–80) British comic actor. He made his name in the 1950s with the BBC radio comedy series *The Goon Show*. His films include *I'm All Right, Jack* (1959), *Dr Strangelove* (1963), *What's New, Pussycat?* (1965), *The Pink Panther* series (1963–77), and *Being There* (1980).

Selznick, David O(liver) (1902–65) US film producer. In 1936 he formed his own production company and produced *A Star Is Born* (1937) and *Gone with the Wind* (1939) among other films. His later films included *Duel in the Sun* (1946) and *A Farewell to Arms* (1957).

semantics The branch of *linguistics concerned with the meaning of individual words; also, in logic and philosophy, the study of the relationship between words and the objects or concepts they refer to. There can be problems in explaining such a relationship when a word has no concrete referent (e.g. "honesty").

semaphore 1. A visual method of communication between ships at sea, used mainly by

warships wishing to maintain radio silence, and consisting of a pattern of signalling by the use of two flags, held by a signalman, their relative positions symbolizing an alphabetical or numerical character. **2.** A mechanical railway signalling device, consisting of a movable steel arm.

Semarang 6°58'S 110°29'E A port in Indonesia, in central Java on the Java Sea. A commercial centre with textile and shipbuilding industries, it exports sugar, rubber, coffee, kapok, and copra. The port is sometimes disrupted by the monsoon. Its university was established in 1960. Population (1995 est): 1 366 500.

semiconductor A crystalline material in which the electrical conductivity increases with temperature and is between that of a conductor and an insulator. The conductivity is also sensitive to minute quantities of impurities in the crystal lattice. Some (donor) impurities increase the number of negative charge carriers (electrons), creating what is known as an n-type semiconductor. Other (acceptor) impurities increase the number of positive charge carriers (holes), creating a p-type semiconductor. The introduction of these impurities is called doping. Solid-state electronic components, such as diodes, *transistors, and *integrated circuits depend on the properties of junctions between p-type and n-type regions in the same piece of semiconductor crystal (p-n junctions). Metal oxide semiconductor (MOS) devices also use the properties of a thin layer of insulating oxide on the semiconductor surface. The element silicon is now the most widely used semiconducting material.

semiconductor diode A solid-state electronic device with two electrodes. It consists of a single p-n junction (see SEMICONDUCTOR). When the p-region is at a more positive voltage than the n-region (forward bias), the current flow increases exponentially as the voltage rises. In reverse bias, very little current flows until a sufficiently high reverse voltage has built up to cause breakdown; the current then increases sharply. The diode is, therefore, commonly used as a rectifier. Semiconductor diodes are also used to generate microwaves by the Gunn effect, to detect light in *photocells, and to emit light in low-voltage displays (**light-emitting diodes**; LEDs).

Semites A group of peoples, including the *Jews and *Arabs, said in the Bible to be descended from Shem, Noah's eldest son. The Babylonians, Assyrians, Canaanites, and Phoenicians were ancient Semitic peoples.

Semitic alphabets The earliest known truly alphabetic writing systems, developed among the Semitic peoples of the E Mediterranean around 2000 BC. From them all the major alphabets of today are derived: the south Semitic version gave rise to the modern Amharic script of Ethiopia; from North Semitic were derived Greek (and from Greek came the Roman, Cyrillic, runic, and other alphabets), Phoenician, and Aramaic (from which came the scripts of Hebrew, Arabic, and Devanagari in India).

Semitic languages A subgroup of the Hamito-Semitic language family spoken in a large area of N Africa, extending through Palestine to the SW corner of Asia. The Semitic languages originated in Mesopotamia in the 3rd millennium BC and are recorded in Sumerian *cuneiform inscriptions. Although many, including Aramaic, Assyrian, and Babylonian are now extinct, examples of living Semitic languages are *Hebrew, modern *Arabic, and Maltese.

Senate In ancient Rome, the state council. During Republican times it was largely composed of ex-magistrates and, although its role was primarily to advise the magistrates, it carried much weight, especially in foreign policy, finance, and religion. Under the Empire membership of the Senate became largely hereditary and its chief function was to ratify imperial decisions.

Senate, US See CONGRESS.

Sendai 38°16'N 140°52'E A city in Japan, in NE Honshu. It is the largest city of N Japan and an important commercial centre. Population (1995 est): 971 297.

Seneca the Elder (Marcus Annaeus Seneca; c.55 BC–c.41 AD) Roman rhetorician, born at Córdoba (Spain). Parts of his work on oratory, addressed to his sons, have survived. One of his sons, **Seneca the Younger** (Lucius Annaeus Seneca; c.4 BC–65 AD), was an author and politician. He was tutor and later chief minister to Nero. Retiring in 64 AD, he was accused of treason and forced to commit suicide. His philosophical writings advocate *Stoicism. His nine tragedies, which influenced the Elizabethan dramatists, also survive.

Senegal, Republic of A country in West Africa, on the Atlantic Ocean. The River Senegal forms its N boundary and the River Gambia flows E–W through the country to the border of The Gambia, which forms an enclave within Senegalese territory. Senegal consists chiefly of

level plains rising to a dissected plateau in the SE. Most of the population are Wolof, Serer, and Tukolor. *Economy:* chiefly agricultural, the production of groundnuts being dominant. Phosphates, iron ore, and offshore oil and natural gas have been found in significant quantities. There is a large foreign debt. The country has seen steady economic growth since the mid-1990s, when a programme of economic reform was instituted. *History:* the French extended their control in the mid-19th century over most of the region. The country achieved self-government in 1958 as a member of the French Community and in 1959–60 briefly formed the Federation of Mali with Sudan. Senegal became a separate independent republic in 1960, with Leopold Senghor (1906–2002) as president. From 1982 until 1989 it formed the Senegambia Confederation with The Gambia, with each country retaining its independence but having joint defence, foreign, and monetary policies. Abdou Diouf (1935–) succeeded Senghor as president in 1981. The 1990s saw rising ethnic tensions, including a virtual frontier war with Mauritania (1989–92). In 2000 40 years of socialist rule came to an end when President Diouf was defeated by Abdoulaye Wade. Official language: French. Currency: CFA franc of 100 centimes. Area: 197 722 sq km (76 320 sq mi). Population (2007 est): 12 521 851. Capital: Dakar.

senna See CASSIA.

sensitive plants See MIMOSA.

Seoul 37 30N 127 00E The capital of the Republic of (South) Korea, in the NW on the River Han near the coast. It was the capital of Korea from 1394. Population (2003 est): 10 280 523.

Sephardim (Hebrew *Sepharad*: Spain) Jews who went to Spain and Portugal in the *diaspora. When the Jews were expelled from Spain in 1492 they spread to many parts of the world, preserving their customs and their language, Ladino. The first Jewish settlers in England were Marranos from Spain. In the 17th century the Sephardim came from Holland; they opened their first synagogue in 1657, which was replaced in 1701 by a synagogue in Bevis Marks in the City of London, which is still in use. The term is now sometimes applied, especially in Israel, to all non-*Ashkenazim.

September 11 The day in 2001 that saw the worst terrorist atrocity in history, directed at targets in New York and Washington. Four passenger airliners were hijacked by Islamic terrorists: two were flown into the twin towers of the *World Trade Center in New York,

causing their collapse, a third was crashed into the *Pentagon, while the fourth hit the ground near Pittsburgh, apparently as a result of a fight-back by passengers. A total of 265 people (including 19 terrorists) died in the hijacked aeroplanes, over 2600 died in the collapse of the World Trade Center, and a further 180 were killed in the Pentagon, bringing the total death toll to about 3195. Evidence was soon found to confirm suspicions that the *al-Qaida terrorist network led by Osama *Bin Laden was responsible. In October, the USA launched its so-called *war on terrorism with air strikes against al-Qaida and *Taleban targets in Afghanistan.

sequoia Either of two Californian coniferous trees, the *redwood (*Sequoia sempervirens*), the world's tallest tree; or the giant sequoia, *Sequoiadendron giganteum* (formerly *Sequoia gigantea*), also called wellingtonia. The latter forms natural forests in California's Sierra Nevada, where some trees are over 3000 years old, with a height of over 80 m and a girth of over 24 m. The red-brown bark is soft and fibrous and the shoots are covered with pointed scalelike leaves. Family: Taxodiaceae.

seraphim See CHERUBIM AND SERAPHIM.

Serbia (Serbo-Croat name: Srbija) A country of SE Europe, in the Balkans, incorporating the autonomous regions of *Vojvodina and *Kosovo. It is chiefly mountainous in the S, descending in the N to the fertile Danube basin. *Economy:* the country is self-sufficient in food production and livestock-raising. Forestry and wine-making are important. The economy is slowly beginning to recover from Serbia's international isolation (1990s) and NATO bombing (1999). *History:* first settled by the Serbs in the 7th century AD, it later came under Turkish control (1389–1804), finally regaining its independence in 1878. It played a major role in events leading up to World War I, Austria accusing Serbia of direct involvement in the assassination of Archduke Francis Ferdinand. In 1918 Serbia became the leading partner in the kingdom of Serbs, Croats, and Slovenes, later renamed *Yugoslavia. In 1991 Serbia under Slobodan *Milošević attempted unsuccessfully to prevent the break-up of Yugoslavia by military action against Slovenia and Croatia. Serbia was also condemned for its involvement in the civil war in Bosnia-Herzegovina (1992–95). In 1992 Serbia and Montenegro formed a new Federal Republic of Yugoslavia. Serbia's attempt to suppress ethnic Albanian separatists in Kosovo through a campaign of "ethnic cleansing" led to NATO

airstrikes in 1999 and a complete military withdrawal from the region. The final status of Kosovo is unresolved: it remains nominally part of Serbia but is administered separately by the UN. Popular discontent with the authoritarian rule of Milošević culminated (October 2000) in a bloodless revolution in which he was replaced by the opposition leader, Vojislav Kostunica. A new agreement with Montenegro, establishing the Union of Serbia and Montenegro, was signed in 2002 and ratified in 2003. Although this gave the two states virtual autonomy in domestic and economic matters, Montenegrins voted for complete independence in 2006 and the union was dissolved. Official language: Serbo-Croat. Currency: new dinar of 100 paras (euro of 100 cents in Kosovo). Area: 88 361 sq km (34 107 sq mi). Population (2007 est): 9 993 000. Capital: Belgrade.

Serbo-Croat The language of the Serbs and Croats of the former Yugoslavia. Serbian and Croatian differ little in terms of vocabulary and not at all in grammar but Serbian is written in Cyrillic and Croatian in Latin script.

serf An unfree peasant of the middle ages. Serfdom was characteristic of the manorial economic system (see **MANOR**). A serf was bound to the soil he tilled, paying his lord a fee and providing service in return for the use of his land. Serfs had their own homes, plots, and livestock and enjoyed customary rights. While serfdom declined in W Europe in the late middle ages, it continued in E Europe until the 19th century.

serialism (or **twelve-tone music**) A method of composing music using all 12 notes of the chromatic scale equally, invented by Arnold *Schoenberg in the 1920s. Schoenberg sought an alternative to chromaticism and *atonality by using a fixed sequence of 12 notes (called a **series** or **tone row**) as a source of melody and harmony. The series could be transposed so as to begin on any degree of the scale and could also be inverted and used in a retrograde form. In strict serialism no single note of the row could be repeated until the other 11 had occurred in melody or harmony.

series The sum of the terms in a sequence, written as $a_1 + a_2 + a_3 + \dots + a_n + \dots$. The partial sum to the n th term is denoted by S_n . A series is convergent if S_n approaches a particular value as n increases and divergent if it increases without limit. A geometric series has the general form $a + an + an^2 + \dots$, where a and n are constant. A power series has the general form $a_0 + a_1x + a_2x^2 + a_3x^3 + \dots$, where x is a variable.

serpentine A group of minerals consisting mainly of hydrous magnesium silicates, with a layered structure. They are usually green or white, and often streaked or mottled like a snake's skin. They occur in igneous rocks. Rock consisting mainly of serpentine is sometimes quarried for ornamental stone.

serum The fluid that remains after blood has been allowed to clot. It can be obtained by centrifuging clotted blood and is similar in composition to plasma, except that it lacks the factors, such as fibrinogen, that are involved in blood clotting.

serval A slender long-legged *cat, *Felis serval*, of the African bush. It is about 1.25 m long including the tail and has large ears and a spotted coat. Servals hunt birds and small mammals, mainly at night.

service tree A tree, *Sorbus domestica*, about 15 m high, native to S Europe, W Asia, and N Africa and commonly grown for ornament. Related to the *mountain ash, it has compound leaves and its small green fruits are used for making wine. Family: *Rosaceae*.

sesame An annual herb, *Sesamum indicum*, cultivated in Central and South America, the Middle East, and SE Asia for its seeds, which are used in confectionery and as food flavouring. An edible oil is extracted from the seeds; the residue is used as cattle feed. Family: *Pedaliaceae*.

Set An Egyptian deity. Originally a sun and sky god, he murdered his brother *Osiris and so came to represent all evil. He was killed by *Horus, son of Osiris.

setter One of three breeds of sporting dog with a lean deep-chested body and drooping ears. Setters are named after their habit of squatting flat ("setting") after finding game. The English setter has a long white silky coat flecked with darker markings. The heavier Gordon setter is black with chestnut markings, while the Irish, or red, setter has a flat silky chestnut coat. Height: 61–69 cm.

set theory The study, founded by Georg *Cantor, of the logical and mathematical laws of sets. A set is a defined collection of objects or elements; for example the set of odd integers between 0 and 10 is 1, 3, 5, 7, 9. The empty or null set has no elements. All sets are contained in the universal set E . The relationships between sets can be illustrated in a Venn diagram, named after the British logician John Venn (1834–1923), or shown by symbols. $a \in A$ means the element a is a member of the set A .

set theory. Venn diagrams.

$A \subset B$ means set A is contained in set B . $A \cup B$ means the union of A and B . $A \cap B$ means the intersection of A and B , i.e. those elements in both. A^c or A' is the complement of A , all elements in E but not in A .

Settlement, Act of (1701) The Act that established the Hanoverian succession to the English throne. In the absence of heirs to William III or Anne, the Crown was to pass to James I's granddaughter Sophia (1657–1714), Electress of Hanover, or to her Protestant descendants. The Act stipulated that the monarch must be a Protestant and that foreigners must not hold public office or enter parliament. Anne was succeeded by the first Hanoverian king, George I, in 1714.

Seurat, Georges (1859–91) French painter who developed neoimpressionism, popularly called 'pointillism'. Although he finished only seven paintings in this style, for example *Sunday Afternoon on the Island of the Grande Jatte* (1884–86), his work was very influential.

Sevastopol (English name: Sebastopol) 44°36'N 33°31'E A port in S Ukraine, in the Crimean *oblast* (region) on the Black Sea. It is a popular seaside resort. Founded in 1783, after Russia's annexation of the Crimea it became an important naval base and, later, a commercial port. It was besieged by the British and French during the Crimean War, falling after 11 months. Population (2005 est): 340 353.

Seven Deadly Sins Pride, covetousness, lust, envy, gluttony, anger, and sloth. The traditional Christian list was already established by the 6th century.

Seven Wonders of the World The supreme man-made structures of the ancient world. They were the Pyramids of Egypt, the *Colossus of Rhodes, the *Hanging Gardens of Babylon, the Mausoleum of Halicarnassus, the statue of *Zeus at Olympia, the temple

of *Artemis at Ephesus, and the *Pharos of Alexandria. Only the Pyramids have survived.

Seven Years' War (1756–63) The war between Prussia, Britain, and Hanover on one side and France, Austria, Russia, and Spain on the other. The war had two main aspects: the rivalry between Austria and Prussia for domination of Germany and the struggle between France and Britain for overseas supremacy. The war was precipitated by Austria's desire to regain Silesia, lost to Frederick the Great of Prussia in the War of the *Austrian Succession, and began with Frederick's invasion of Saxony. Russia's defection (1762) to Prussia enabled Frederick ultimately to emerge victorious and Prussian ascendancy was confirmed by the Peace of Hubertusberg. Overseas, the British despite initial reverses won a series of spectacular victories in India (by *Clive) and Canada (by Wolfe). By the Treaty of *Paris (1763) Britain was confirmed as the supreme world power.

Severn, River (Welsh name: Hafren) The longest river in the UK, rising in central Wales and flowing NE and E into England, then S to the Bristol Channel. It passes through Shrewsbury, Worcester, and Gloucester. It is spanned near its estuary by the **Severn Bridges**. The first of these, a suspension bridge 988 m (3240 ft) long, was built in the 1960s. However, its vulnerability to high winds led to frequent closure and a second bridge, mainly cantilevered and with a much greater wind resistance, was opened in 1996; this now takes the majority of the traffic. Length: 365 km (227 mi).

Seville (Spanish name: Sevilla) 37°24'N 5°59'W A city and port in SW Spain, in Andalusia on the River Guadalquivir. Now a major industrial centre, it was important during Roman times, thrived under the Moors (711–1248) as a cultural centre, and became a major port in the 16th century. There is a university (founded

1502) and a cathedral (1401–1591). Population (2007 est): 704 154.

Sèvres porcelain The finest French porcelain, first produced in Vincennes in 1738 and still made. The factory moved to Sèvres near *Versailles in 1756. It always enjoyed royal patronage. Early output was soft-paste porcelain but from 1768 hard-paste was made. Products were figures, vases, ornaments, and table services with blue, rose Pompadour, yellow, or green grounds richly gilded for royal taste.

sex chromosome A *chromosome that carries the genes for determining the sex of an individual. In humans there are two types of sex chromosomes, called X and Y. The body cells of normal males possess one X and one Y chromosome while those of normal females have two X chromosomes. Human sperm is therefore either "male" or "female" depending on whether it carries an X or a Y chromosome. The sex of the embryo is determined by which type of sperm fertilizes the female egg (which always carries an X chromosome). Abnormal numbers of sex chromosomes cause a range of disabilities, including physical abnormalities, mental retardation, and sterility.

sex hormones Hormones that regulate the growth, development, and functioning of the reproductive organs and determine external sexual characteristics. The major female sex hormones are the *oestrogens, *progesterone, and *prolactin while the *androgens are the principal male ones. Their production is regulated by *gonadotrophins from the pituitary gland.

sextant An instrument used primarily in navigation for determining latitudes by measuring the angle subtended by some celestial body to the horizon. Thomas Godfrey of Philadelphia and John Hadley of London, working independently, discovered the sextant's principle in 1730. The graduated metal strip, shaped in an arc of the sixth part of a circle, gave the instrument its name. In use the movable index arm is slid along the scale until the image of the reference star as viewed in the half-silvered index mirror is aligned with the horizon. The reading on the scale then indicates the angle subtended.

sexton beetle See BURYING BEETLE.

sexually transmitted disease (STD) Any disease transmitted by sexual intercourse, also known as venereal disease (VD). Among the most prevalent STDs today are genital herpes, nonspecific urethritis (NSU; caused by *Chlamy-*

dia), and AIDS; syphilis and gonorrhoea—the former scourges—are now treatable with antibiotics.

Seychelles, Republic of A country consisting of 87 widely scattered islands in the W Indian Ocean, NE of Madagascar. The main island is Mahé. Most of the population is of mixed African and European descent. *Economy:* the chief products and exports are fish, copra, and cinnamon bark. Tourism is important, as is offshore banking and finance. *History:* the uninhabited islands became a French colony in the mid-18th century as a spice plantation. Captured by the British in 1794, they were a dependency of Mauritius from 1814 until 1903, when they became a British crown colony. In 1976 the country became an independent republic within the Commonwealth. Multiparty elections held in 1993 resulted in victory for Albert René and his ruling party. The current president is James Michel. Official languages: English and French; the majority speak Creole. Currency: Seychelles rupee of 100 cents. Area: 444 sq km (171 sq mi). Population (2007 est): 81 895. Capital: Victoria.

Seymour, Jane (c.1509–37) The third wife (1536–37) of Henry VIII of England. A lady in waiting to Anne Boleyn, she married Henry 11 days after Anne's execution. Jane died shortly after the birth of a son, Edward VI.

's Gravenhage See HAGUE, THE.

sextant. Angle α measures the angle between horizon and reference arm; β is the angle between index mirror and horizon glass, marked by the angular movement of the index arm along the limb. $\alpha = 2\beta$, therefore the graduations marked on the scale are twice the actual angular movement.

Shackleton, Sir Ernest Henry (1874–1922) British explorer. He accompanied Scott's

expedition of 1901–04 and on his own expedition in 1908–09 nearly reached the South Pole. In an expedition of 1914–16 his ship, the *Endurance*, was marooned but he and his men reached Elephant Island by sledge and boats. With five others he then journeyed 1300 km (800 mi) to find relief. He died on his fourth expedition.

shad A food fish, belonging to a genus (*Alosa*) related to herrings, that occurs in the N Atlantic, Mediterranean, and North Sea. It has one or a succession of black spots along each side and a notch in the upper jaw. They migrate in large shoals to spawn in fresh waters.

Shaffer, Peter (1926–) British dramatist. His plays include *Five-Finger Exercise* (1958), *The Royal Hunt of the Sun* (1964), *Equus* (1973; filmed 1977), *Amadeus* (1979; filmed 1984), *Yonadab* (1985), *Lettice and Lovage* (1987), and *The Gift of the Gorgon* (1992).

Shaftesbury, Anthony Ashley Cooper, 7th Earl of (1801–85) British reformer. He became an MP in 1826 and campaigned successfully for reform of the lunacy laws (1845), a ten-hour day for factory workers (1847), and an end to the employment of children in coal mines (1842) and as chimney sweeps (1840).

Shah Jahan (1592–1666) Emperor of India (1628–58) of the Mogul dynasty; the son of Jahangir (1569–1627). His reign was as ruthless as his means of attaining it; he put his nearest relatives to death in 1628. His passion for fine architecture produced such monuments as the *Taj Mahal and the Delhi Red Fort. He was deposed by his son Aurangzeb (1618–1707).

Shakespeare, William (1564–1616) English dramatist, universally recognized as the greatest English writer. Born in Stratford-upon-Avon, he married in 1582 a local girl, Anne Hathaway, by whom he had three children. Soon afterwards he went to London, where he became an actor in the leading theatrical company, the Lord Chamberlain's Men (called the King's Men after 1603). The three parts of *Henry VI* and *Richard III* were his first plays (1589–92). His poems *Venus and Adonis* (1593) and *The Rape of Lucrece* (1594) were dedicated to his patron Henry Wriothesley, 3rd Earl of *Southampton. His *Sonnets* (1609) were probably written at this time. His early comedies (1593–95) were *Love's Labour's Lost*, *The Two Gentlemen of Verona*, and *The Taming of the Shrew*. These were followed (1595–1600) by *A Midsummer Night's Dream*, *The Merchant of Venice*, *Much*

Ado About Nothing, *Twelfth Night*, and *As You Like It*. During this period he also wrote his first significant tragedy, *Romeo and Juliet*, as well as *Richard II* and *Julius Caesar*. In 1597 he bought New Place, a large house in Stratford, and later became a shareholder in the Globe Theatre in London. The two parts of *Henry IV* were completed before *Hamlet*, *Othello*, *King Lear*, and *Macbeth*, his major tragedies (1600–06). His final experimental plays included *The Winter's Tale* (c. 1610) and *The Tempest* (c. 1611). In about 1611 he retired to Stratford, where he died. The first collected edition of his works, known as the First Folio and containing 36 plays, was published in 1623. His other plays were: *The Comedy of Errors*, *Titus Andronicus*, *King John*, *Henry V*, *The Merry Wives of Windsor*, *Antony and Cleopatra*, *Coriolanus*, *Troilus and Cressida*, *Measure for Measure*, *All's Well That Ends Well*, *Timon of Athens*, *Pericles*, *Cymbeline*, and, with John Fletcher (1579–1625), *Henry VIII* and *The Two Noble Kinsmen*.

shale A fine-grained *sedimentary rock that splits easily along the closely spaced bedding planes as a result of the alignment of the clay mineral particles parallel to the bedding planes. Shales may disintegrate in water. They are softer and lighter than slate, which is a fine-grained *metamorphic rock.

shallot A hardy perennial herbaceous plant, *Allium ascalonium*, probably of Asiatic origin. Its small hollow cylindrical leaves are often used for dressing food and in salads. Its small angular bulbs occur in garlic-like clusters and are used for flavouring and pickling. Family: *Liliaceae*.

shamanism The religious beliefs and practices common in certain tribal societies of Asia, such as the *Samoyed. The term is also applied to North American Indian practices. The shaman is a tribal priest generally felt to be possessed by a spirit or deity and hence to have supernatural powers. He may also act as the tribal ruler and judge.

Shamir, Yitzhak (1915–) Israeli statesman, born in Poland; prime minister (1983–84, 1986–92). He led the Israeli Freedom Fighters (1940–41), served in Israel's secret service (1955–65), and was foreign minister (1980–83, 1984–86). In 1984–88 he had a special power-sharing agreement with Shimon *Peres. His government collapsed in 1992 over peace talks with Palestinian leaders.

shamrock Any of several plants bearing leaves with three leaflets, especially various *clovers, black medick (*Medicago lupulina*), and

*wood sorrel (*Oxalis acetosella*). The shamrock is worn on St Patrick's Day.

Shanghai 31 13N 121 25E An administratively autonomous port in E China, on the Yangtze estuary. The largest city in China, it is its chief port and industrial city. It grew rapidly after it was opened to foreign trade in 1842, coming under British, US, and French rule until World War II. Population (2003 est): 10 030 788.

Shankar, Ravi (1920–) Indian *sitar player who popularized Indian music in the West.

Shannon, River The longest river in the Republic of Ireland. Rising in NW Co Cavan, it flows S to Limerick and then W to the Atlantic. Length: 386 km (240 mi).

shari'ah See ISLAMIC LAW.

Sharjah See UNITED ARAB EMIRATES.

shark A *cartilaginous fish belonging to the worldwide order *Selachii* (about 250 species). Ranging in size from the smallest *dogfish to the enormous *whale shark, they have a torpedo-shaped body with a muscular tail used in swimming, five to seven pairs of gill slits on the sides of the head, and numerous sharp teeth. They are chiefly marine and carnivorous. Subclass: *Elasmobranchii*.

Sharon, Ariel (1928–) Israeli soldier and politician; prime minister (2001–06). An Israeli army officer, he became a national hero in the Yom Kippur War (1973). As defence minister he organized Israel's invasion of Lebanon (1982) but was sacked (1983) when it was found that he had connived in the massacre of Palestinian refugees by right-wing Lebanese forces. He later emerged as a leading critic of the Palestinian peace process and served as foreign minister (1998–99). He became leader of Likud (2000), taking the party to victory in the 2001 elections. In 2001–02 he responded to Arab suicide bombings by ordering the reoccupation of much of the West Bank. He formed a new political party, Kadima, in late 2005 but has lain in a coma since suffering a stroke in Jan 2006.

Sharpeville A Black African town in South Africa, in the S Transvaal near Vereeniging. It was the scene of a riot on 21 March 1960, in which African demonstrators were fired on by the police. Over 60 of the demonstrators were killed and many others wounded. There were riots on the anniversary in 1984 and 1985, when 19 died.

Shaw, George Bernard (1856–1950) Irish dramatist, critic, and writer, born in Dublin. He

went to London in 1876, becoming a music and drama critic, an active socialist, and a founder of the Fabian Society. He wrote more than 40 plays, the Prefaces indicating at length the social and moral issues involved. *Plays Pleasant and Unpleasant* (1898) included *Mrs Warren's Profession* (on prostitution), and the comedies *Arms and the Man* and *Candida*. His *Three Plays for Puritans* (1901) included *Caesar and Cleopatra* and *Captain Brassbound's Conversion*. The epic comedy of ideas, *Man and Superman* (1903), was followed by *John Bull's Other Island* (1904), *The Doctor's Dilemma* (1906), *Misalliance* (1910), and *Pygmalion* (1913), an outstanding commercial success. Later works include *Heartbreak House* (1917), the series of plays entitled *Back to Methuselah* (1921), and the historical drama *St Joan* (1924). In 1925 he was awarded the Nobel Prize.

shear stress See STRESS.

shearwater One of a group of birds (about 15 species) of the oceanic family *Procellariidae*. Shearwaters have a dark plumage (some species have white underparts), long narrow wings, and slender bills; they feed on fish from the sea surface. The great shearwater (*Puffinus gravis*) breeds in the South Atlantic, migrating to spend summer and autumn in the North Atlantic. The Manx shearwater (*P. puffinus*) breeds off British and Mediterranean coasts and winters in E South America and Australia. Order: *Procellariiformes*. See also PETREL.

sheep A hoofed *ruminant mammal belonging to the genus *Ovis* (7 species), native to mountainous regions of Eurasia and North America. Related to goats, sheep are generally 75–100 cm tall at the shoulder. They have a compact body with slender legs and a short tail and the coat ranges from white to brown in colour. Males (rams) have large spiralled horns; females (ewes) have smaller less curved horns. There are over 200 breeds of domestic sheep (*O. aries*), which are reared worldwide for meat, wool, and milk (see LIVESTOCK FARMING). Family: *Bovidae*. See also AODAD; BIGHORN; MOUFLOON.

sheepdog A dog used for handling sheep, such as the *collie, *German shepherd dog, *Old English sheepdog, and *Shetland sheepdog, as well as crossbred derivatives.

Sheffield 1. 52 23N 130W A city in N England, in Sheffield unitary authority, South Yorkshire on the River Don. It is world famous for steel, produced here since the mid-18th century. Population (latest est): 450 000. 2. A

unitary authority in N England, in South Yorkshire. Area: 368 sq km (142 sq mi). Population (2004 est): 516 100.

shelduck A large *duck, *Tadorna tadorna*, found around coasts of W and central Eurasia. It is 65 cm long and has black-and-white plumage with a green head, chestnut shoulders, and a red bill.

shellac A natural thermoplastic *resin made from the secretions of the lac insect, *Laccifer lacca*, which is parasitic on certain trees in India and Thailand. Its solution in alcohol is used as a varnish and in lacquers.

Shelley, Percy Bysshe (1792–1822) British poet. He wrote the revolutionary poem *Queen Mab* in 1813 and in 1816 he met and befriended Byron in Switzerland. From 1818 until his death he lived in Italy, where he wrote the verse drama *Prometheus Unbound* (1818–19), the elegy *Adonais* (1821) prompted by the death of Keats, and much lyrical poetry. He was drowned in a sailing accident off the Italian coast. His second wife **Mary Wollstonecraft Shelley** (1797–1851) is best known for her novel *Frankenstein: the Modern Prometheus* (1818).

shells The hard casings secreted by some animals to protect themselves or their eggs.

The term usually refers to the shells of molluscs, which consist largely of calcium carbonate and come in a wide variety of shapes and sizes. They may be spiralled or flat, with one valve (in gastropods, such as snails) or two (in bivalves, such as mussels). The pearly nautilus has a many chambered shell, which provides buoyancy.

Shelter (National Campaign for the Homeless) A British organization, founded in 1966, to raise funds for housing projects and housing aid centres for the homeless and to campaign for more and better housing.

Shenyang (former name: Mukden) 41 50N 123 26E A city in NE China, on the River Hun, the capital of Liaoning province. China's fourth largest city, it is a major industrial centre. Population (2003 est): 3 995 531.

Sheraton, Thomas (1751–1806) British furniture designer, who made his name with the designs in his *Cabinet-Maker and Upholsterer's Drawing Book* (1791–94). Influenced by *Adam and contemporary French styles, these designs were characterized by elegance, delicacy, straight lines, and inlaid decoration.

Sheridan, Richard Brinsley (1751–1816) Anglo-Irish dramatist, who lived in England

shells. A selection of mollusc shells, drawn to scale (the largest, the helmet shell, is 35 cm long). All these species are marine and several, including the glory of the sea, are collectors' items.

from childhood. He wrote witty comedies of manners, of which the best known are *The Rivals* (1775) and *School for Scandal* (1777). A Whig MP from 1780 to 1812, he was recognized as being one of the great parliamentary orators.

sheriff An official with administrative and judicial responsibilities in England, Scotland, and the USA. Originating in the 10th century as the king's representative in the shire and at the shire court, the sheriff continued in this role under the Normans, who expanded his judicial competence. The sheriffs' powers were reduced by Henry II and succeeding kings and became little more than ceremonial in the 16th century. Sheriffs in England and Scotland are normally appointed by the Crown to each county. In Scotland sheriffs are also the chief county judges. In the USA they are elected and are the principal law enforcement officers in a county.

Sherpa A people of Nepal who speak a dialect of Tibetan. They often act as porters for Himalayan expeditions. With Edmund Hillary, the Sherpa *Tenzing Norgay reached the summit of Everest in 1953.

sherry A fortified *wine, originally made around Jerez de la Frontera (whence its name) in S Spain. There are two basic types of sherry: fino is a pale dry wine on which the *flor* (flower or yeast) has developed fully; oloroso is a rich full-bodied wine on which the *flor* is little developed. Amontillado is a strong dark derivative of a fino and cream sherry is a heavily sweetened oloroso.

Sherwood Forest An ancient forest in the Midlands of England, in Nottinghamshire. Once an extensive royal hunting ground, it is now much reduced; it is famous for its associations with Robin Hood.

Shetland Islands (or **Shetland**) official name until 1974: Zetland. A group of about 100 islands in the North Sea, off the N coast of Scotland. The largest islands include Mainland, Yell, and Unst. Shetland is best known for its ponies and knitted goods (especially in the Shetland and Fair Isle patterns). The islands are a base for North Sea oil exploitation with a pipeline from the Brent field. Area: 1427 sq km (551 sq mi). Population (2001): 21 988. Administrative centre: Lerwick.

Shetland pony The smallest British pony breed, native to the Shetland Islands. It has a sturdy compact body with short legs and a relatively large head. The mane and tail are pro-

fuse and the coat becomes thick in winter. Height: up to 1.05 m (10½ hands).

Shetland sheepdog (or **Sheltie**) A breed of dog developed in the Shetland Islands for working sheep. Related to and resembling the *collie, it has a soft undercoat and a long outer coat and may be black, brown, or blue-grey, with white and tan markings. Height: about 35 cm.

Shevardnadze, Eduard (1928–) Georgian statesman; president (1992–2003). As Soviet minister for foreign affairs (1985–90, 1991) he played a key role in arms negotiations with the USA. He was re-elected in 1995 and 2000 but resigned in Nov 2003, following mass protests accusing him of rigging parliamentary elections.

shield An extensive rigid block of Precambrian rocks. Shields are the oldest continental regions, frequently of igneous granite or metamorphic gneiss. The shields were once the site of Precambrian mountain belts, although the mountains have been completely eroded. The **Canadian** (or **Laurentian**) **Shield** is the largest, covering several million square kilometres of NE North America.

Shih tzu A breed of small dog originating in Tibet and introduced to the UK in the 1930s. It has a long body with short legs, a short muzzle, and drooping ears. The long straight coat can be of various colours and the plumed tail is held over the back. Height: about 26 cm.

Shiites (or **Shiah**) The general term applied to a number of different Muslim sects, the main body of which is dominant in Iran. The distinctive belief of the Shiites, which differentiates them from the other major Muslim group, the *Sunnites, is that *Ali, the fourth caliph, is the only legitimate successor of Mohammed. The leader of Islam, the imam, must be a descendant of Ali and has authority in secular and religious matters.

Shikoku The smallest of the four main islands of Japan, separated from Honshu and Kyushu by the Inland Sea. Its population is concentrated on the coastal plains, with industry mainly in the N. Area: 17 759 sq km (6857 sq mi). Population (2000 est): 4 154 000. Chief cities: Matsuyama and Takamatsu.

shingles An infection caused by the *herpes zoster virus, which lodges in nerve cells in the spinal cord. Shingles affects adults who have had chickenpox as children. It usually starts with pain along the course of a sensory nerve, followed by a band of blisters round half of the

body or face. The rash usually eventually disappears but the patient may be left with severe neuralgia.

Shinto The native religion of Japan. Shinto is primarily an attitude of nationalistic and aesthetic reverence towards familiar places and traditions, rather than a set of religious beliefs. However, the central themes are the belief in numerous usually amoral *kamis* or nature spirits, together with ancestor worship and an ideal of military chivalry. The two principal *kamis* are the sun-goddess (reputedly mother of the emperor) and her brother the storm-god. The conflict between them expresses the creative and destructive forces of nature. After World War II, Shinto was disestablished as the state religion.

ships Early mariners included the Egyptians, Chinese and Phoenicians. The short broad Phoenician merchant ships of the 13th century BC were propelled by oars and a single square sail to catch the prevailing wind.

The Greeks developed biremes (with two banks of oars) and triremes (with three banks) as warships, especially strengthened for ramming enemy vessels. The Romans also relied on oars, but their larger grain ships had a number of square sails. In the N the double-ended longships of the Vikings were designed to cope with the rough and windy North Sea. Developed in the 8th century AD and propelled by sail and oars, ships of this kind brought William the Conqueror to England. It was not until the 12th century and the stimulus of the Crusades that the art of using sails was sufficiently developed for oars to be dispensed with. Sailing into the wind was originally pioneered by the Chinese in their junks, but it was the Arabs who perfected the lateen sail, which made it a reliable means of propulsion for large ships. By the 14th century sailing ships were commonplace. The warships of the period had "castles" built at each end to house fighting men, and guns were usually carried on the forecastle. By the end of the 15th century the heavy muzzle-loading cannons were carried in gun ports low in the hull. During this period, too, the single-master with one large heavy sail gave way to the three-master with more manageable small sails and full rigging. During the next 300 years sailing ships developed in many ways, usually with the merchantmen following the innovations in hull design and rigging made by the designers of warships. Sailing ships reached their zenith in the 19th-century clippers, which remained supreme until the *steam engine revolutionized seafaring. The

first steamer to cross the Atlantic (in April 1827) was the Dutch *Curaçao* (built 1826), the first British ship to do so (in April 1838) being Brunel's *Great Western*, a wooden paddle steamer. In the next century the propeller completely replaced the paddle and Parson's steam *turbine largely replaced the reciprocating engine. Passenger travel across the Atlantic has now been captured by the airlines; shipbuilding concentrates on cargo vessels, especially oil *tankers.

Warships in the age of steam were largely modelled on the turbine-driven battleship *Dreadnought* (1906), which together with the *cruiser, *destroyer, frigate, and *submarine dominated naval warfare in World War I. By World War II the *aircraft carrier had evolved and with its long-range striking power became the supreme weapon of the war at sea. However, the strength of navies is now judged by their missile- and aircraft-carrying capabilities, as well as by numbers of nuclear-powered submarines. See illustrations on pp. 806-07.

Shire horse A breed of draught horse descended from the English warhorse and one of the world's largest horses. It is massively built with characteristic long white hair (called feathering) covering the lower parts of the legs. The coat is grey, bay, or black. Height: about 1.73 m (17 hands).

Shiva (or Siva) The third member of the Hindu trinity, the *Trimurti. He is known as the Destroyer, but represents the principle of generation symbolized by the lingam or phallus. His female counterpart is Parvati, also known in her more ominous aspects as Kali and Durga. He is often portrayed in human form with four arms, a third eye in the centre of the forehead, and sometimes wearing a necklace of skulls. His most famous depiction is as *Nataraja* (king of dancing), his dance symbolizing the cosmic rhythm of creation and destruction. The worship of Shiva is characterized by an asceticism that contrasts with the gentler worship of *Vishnu.

shock 1. A severe condition resulting from failure of the circulatory system, when the blood supply to the tissues is inadequate. The shock may be caused by failure of the heart to pump sufficiently strongly, for example after a heart attack; by loss of blood fluid, for example through haemorrhage or burns; or by widening of the blood vessels so that there is not enough blood to fill them, for example after injury or during a very severe infection. **2.** Injury resulting from electrocution. The extent of the injury depends on the current pass-

Roman merchantman (c. 100 AD) The Romans' need to transport grain from N Africa to Europe encouraged the building of imposing ships up to 55 m (180 ft) long.

Portuguese caravel (c. 1450) Although it was only a little longer than a large rowing boat, the caravel took part in most of the 15th-century voyages of discovery. The lateen sail, derived from Arab examples, enabled it to sail against the prevailing winds.

Cutty Sark (1869) The 19th-century clippers were renowned for their speed and grace. The *Cutty Sark*, built to bring tea from China, was one of the fastest and most consistent sailing ships of its time. It is now permanently moored at Greenwich.

Great Britain (1843) The second steam ship designed by I. K. Brunel, the *Great Britain* was the first all-iron propeller-driven ship to cross the Atlantic, taking 15 days between Liverpool and New York. Wrecked off the Falkland Islands in 1937, it was restored in the 1970s in Bristol, where it is kept in dry dock.

Queen Mary (1934) In 1938 this British passenger liner captured the Blue Riband for the fastest Atlantic crossing with a time of 3 days 20 hours 42 minutes. In 1967 it was anchored off Long Beach, California, as a tourist centre.

oil tanker (1968) The largest vessels afloat today, some of these giant ships have a deadweight capacity of over 300 000 tonnes.

ships

ing through the body, which is related to the voltage and the skin resistance. As skin resistance is greatly reduced when it is wet, mains voltage (240 V) can cause a lethal current (about 15 milliamperes) to flow through the body if live terminals are touched with wet hands.

Shockley, William Bradfield (1910–89)

British-born US physicist, who shared the 1956 Nobel Prize with John *Bardeen and Walter *Brattain for their discovery of the *transistor at the Bell Telephone laboratories (1948).

shock wave A narrow region of a high pressure in a fluid, created when a fast-moving body passes through the fluid. The waves are

Greek bireme (c. 500 BC) Propelled during an attack by its two ranks of oars, the bireme was strongly built round a keel to support the strain of the ram attached to its bows.

Viking longship (c. 1000 AD) The clinker-built, double-ended longship, propelled by oars and sail, was used mainly to transport fighting men.

medieval nef (c. 1400) This single-masted vessel had platforms (castles) for fighting men at either end and one on the mast (topcastle) from which missiles could be hurled.

Victory (1759–65) Nelson's flagship at the battle of Trafalgar (1805), the Victory carried 100 guns and a crew of 850. It is now preserved at Portsmouth.

Dreadnought (1906) The design of the British *Dreadnought* became the model for battleships in a period in which a country's naval strength was reckoned in terms of how many battleships it possessed. The *Dreadnought* carried ten 12-inch guns, 27 smaller guns, and five underwater torpedo tubes.

Nautilus (1954) The first nuclear-powered warship, the US *Nautilus* heralded an era in which naval strength is reckoned in terms of nuclear submarines. They are armed with torpedoes and long- and short-range missiles carrying nuclear warheads, all of which can be fired while the vessel is submerged.

warships

propagated outwards from the body and occur, for example, when an aircraft passes through the *sound barrier.

shogun A hereditary military title held by the heads of three families; they were the rulers of Japan, although the emperors retained formal sovereignty. The shogunate was

secured for the Minamoto from the emperor in 1192 after Minamoto Yoritomo's victory over the Taira league. From 1338 to 1573 the Ashikaga family held the title and in 1603 Tokugawa Ieyasu (1542–1616), who claimed Minamoto ancestry, revived it. The last shogun was Tokugawa Keiki (1827–1913; ruled 1867–68).

Sholokhov, Mikhail (1905–84) Soviet novelist. His first major novel (1928–40) was translated in two parts as *And Quiet Flows the Don* and *The Don Flows Home to the Sea*. He won the Nobel Prize in 1965.

shooting Discharging a weapon at a target or at game. The two main categories of **target shooting** for rifles are small bore (.22 calibre) at ranges of 25–200 m (27–219 yd), and full bore (7.62 calibre) at ranges of 200–1200 yd (183–1097 m); full-bore courses are fired from standing, sitting, kneeling, and prone positions. Weapons for pistol shooting range from the .177 air pistol to the .45 pistol, with ranges between 10 and 50 yd (9–45 m). In **clay-pigeon shooting** (or trapshooting) clay discs are mechanically flung into the air and fired at with shotguns. In **grouse shooting** (in the UK permitted only from 12 Aug to 10 Dec), **pheasant shooting** (1 Oct to 1 Feb), and **partridge shooting** (1 Sept to 1 Feb) the birds are either driven by a semicircle of beaters towards the shooters in butts or are flushed out by hunting dogs and beaters for a moving party of shooters.

shorthand A form of writing designed to record spoken language quickly. Most forms use only as many sounds as are necessary for accurate reading. In the Pitman System (devised by Sir Isaac Pitman; 1813–97) characters are based on segments of a circle or straight lines; vowels are indicated by dots; voicing of consonants by thickening of strokes. The US system was invented by John Robert Gregg (1867–1948). Shorthand speeds of up to 300 words per minute can be achieved.

Shorthorn A breed of cattle originating in NE England and formerly popular for both beef and dairy purposes. Stocky, with short legs, Shorthorns range from red to white with various mottled mixtures. They have been replaced by specialist beef and dairy breeds.

shortsightedness (or myopia) Inability to focus on distant objects. This is the commonest kind of visual defect and commonly runs in families: it is due to a slightly misshapen eyeball, in which the light rays are focused in front of the retina (light-sensitive layer). It is corrected by wearing glasses with concave lenses or contact lenses.

Shoshoni A group of North American Indian tribes of the Great Basin region who spoke a language of the Uto-Aztecan family. Some acquired horses and moved onto the Plains, including the *Comanche.

Shostakovich, Dmitri (1906–75) Russian

composer. His 15 symphonies include the wartime seventh symphony (*The Leningrad*; 1941). He also composed two concertos each for piano, violin, and cello, 15 string quartets, and the operas *The Nose* (1927–28) and *Lady Macbeth of Mtsensk* (1930–32).

shot put (or putting the shot) A field event in athletics, in which an iron or brass sphere is thrown as far as possible. It weighs 7.26 kg (16 lb) for men and 4 kg (8.8 lb) for women. It is thrown, or put, one-handed from in front of the shoulder and the putter must stay within a circle 2.1 m (7 ft) in diameter. World records: men: 23.12 m (1990) by Eric Randolph Barnes (USA); women: 22.63 m (1987) by Natalya Lisovskaya (USSR).

shoveler duck A *duck, *Spatula clypeata*, found in the N hemisphere, having a large bill for feeding on water plants and invertebrates. 50 cm long, it has a blue wing flash; the male has a green head, white breast, and chestnut underparts and the female is brown.

showjumping Competitive jumping by horse and rider across a course of artificial obstacles, either against the clock (with penalties for faults) or as *puissance* contests, in which the horse's ability to jump over a number of high objects is tested.

shrew A small insectivorous mammal of the family *Soricidae* (265 species), found worldwide except in Australasia and the Polar regions. The dwarf shrew (*Suncus etruscus*) is the smallest mammal in the world, weighing 2 g and measuring 7–8 cm. The common shrew (*Sorex araneus*) eats its own weight in food every 24 hours. Order: *Insectivora*.

Shrewsbury 52 43N 2 45W A market town in W central England, the administrative centre of Shropshire on the River Severn. It achieved importance as a gateway to Wales, and a castle was built in 1070. The famous boys' public school was founded here in 1552. Population (1996 est): 97 371.

shrike A predatory songbird of a family (*Laniidae*; 74 species) occurring in Eurasia, Africa, and North America and also called butcherbird. Shrikes dive on insects and vertebrates from the air, killing them with their hooked bills.

shrimp A *crustacean, usually 4–8 cm long, belonging to a worldwide suborder (*Natantia*; about 2000 species) that occurs in fresh and salt water. Shrimps have a semitransparent body with long slender legs (the first pair pincer-like), a fanlike tail, and long whiplike antennae. They feed on small animals or plants. Many

species, including the European *Crangon vulgaris*, are commercially important as food. Order: *Decapoda*.

Shropshire (name 1974–80: Salop) A county in the W Midlands of England, bordering on Wales. The River Severn separates the lowlands in the N and E from the uplands in the S and W. During the 18th century it became the main iron-producing county in England; the world's first cast-iron bridge was built at Ironbridge in 1779. It is now chiefly agricultural. The rapidly developing area around Telford new town became an independent unitary authority (as Telford and Wrekin) in 1998. Area (excluding Telford and Wrekin): 3201 sq km (1236 sq mi). Population (2001, excluding Telford and Wrekin): 283 240. Administrative centre: Shrewsbury.

Shroud of Turin A relic believed by some to be the linen cloth used to wrap Christ's body for burial. It bears impressions of a human body marked with wounds consonant with Christ's at the crucifixion. It has been kept in Turin since 1578, but there are gaps in its history prior to the 14th century. Carbon dating in 1988 indicated that it had been woven from flax gathered between 1260 and 1390 but this finding has been called into question by later tests.

Shrove Tuesday The day before the beginning of Lent (see *ASH WEDNESDAY*), so called from the "shriving" (i.e. confession and absolution) of the faithful that was customary before the Lenten season. In many countries carnivals are held and in England pancakes are traditionally eaten—hence the popular name Pancake Day.

sial The earth's continental crust, which is composed of granitic rocks rich in silicon (Si) and aluminium (Al). It is less dense than the underlying layer of *sima and much thicker.

siamang The largest of the *gibbons, *Hylobates syndactylus*, found in Malaya and Sumatra. Up to 90 cm tall, with arms spanning 150 cm, siamangs have a large naked vocal sac on the throat, which expands to give volume to their cries.

Siamese cat A breed of short-haired cat, originating from SE Asia. The Siamese has a slender body, slanted blue eyes, large pointed ears, and a long slim tapering tail. The fur on the body is cream-coloured or off-white, shading into one of several colours (most popularly seal-brown or blue-grey) on the ears, mask, paws, and tail (the "points").

Siamese twins Identical twins who are fused together, usually at the head or along the trunk. They can sometimes be surgically separated, providing that vital organs are not involved in the point of union. The original Siamese twins, Chang and Eng (1811–74), were born in Siam; they were joined at the hip and remained fused.

Sibelius, Jean (Johan Julius Christian S.; 1865–1957) Finnish composer. Many of his works have Finnish associations and many were inspired by the epic poem, the *Kalevala*. They include seven symphonies, symphonic poems such as *The Swan of Tuonela* (1893) and *Finlandia* (1899–1900), a violin concerto, and many songs.

Siberia A region chiefly in Russia, extending into N Kazakhstan. Corresponding to N Asia, it is bordered on the W by the Ural Mountains, on the N by the Arctic Ocean, on the E by the Pacific Ocean, and on the S by Mongolia and China. Siberia comprises three geographical areas—the West Siberian Plain, the Central Siberian Plateau, and the Far East. It is notorious for its long harsh winters. Its outstandingly rich mineral resources include coal and petroleum. Forestry is also important and Siberia's many rivers (notably the Ob, Yenisei, and Lena) are harnessed for hydroelectric power. Russian settlement was intermittent until the building (1891–1905) of the Trans-Siberian Railway. Siberia has long been a place of exile for Russian criminals and political prisoners. Area: about 13 807 037 sq km (5 330 896 sq mi).

Sibyl In Greek and Roman mythology, any of various divinely inspired prophetesses, the most famous of which was the Sibyl of Cumae, near Naples. Three books of these Sibylline prophecies were preserved in the Temple of Jupiter on the Capitoline hill at Rome and were consulted in national emergencies.

Sicilian Vespers (1282) The massacre of 2000 French residents of Palermo that began the Sicilian revolt, backed by Pedro III of Aragon (1236–85; reigned 1276–85), against the oppressive regime of the Angevin Charles I. Aragonese control was finally established in 1302 under Pedro's son Frederick II (1272–1337).

Sicily The largest island in the Mediterranean Sea, which together with adjacent islands comprises an autonomous region of Italy. It is separated from the mainland by the Strait of Messina. Sicily is largely mountainous (highest point Mount Etna) and underdeveloped. The mining industry is important, especially oil.

History: occupied by the Greeks, Carthaginians, Romans, and later the Arabs, in 1060 the Norman conquest of Sicily began. In 1266 Charles I became the first Angevin King of Sicily. The island was conquered by Aragon in 1284 following the revolt (called the *Sicilian Vespers) in 1282 against Charles' oppressive regime. In 1734 Don Carlos of Bourbon (later Charles III of Spain) became Charles IV of Naples and Sicily, which formally became the Kingdom of the Two Sicilies in 1815 under Ferdinand I. After conquest by Garibaldi (1860), Sicily was united with the rest of Italy. Since then Sicily's history has been one of trouble and discontent as a result of an ailing economy, widespread poverty, and the influence of the *Mafia. Area: 25 710 sq km (9927 sq mi), with adjacent islands. Population (2000 est): 5 087 794. Capital: Palermo.

Sickert, Walter (Richard) (1860–1942) British impressionist painter and etcher, born in Munich of Danish and Irish parentage. His paintings of Venice and Dieppe (1895–1905) and scenes from the music hall and domestic life are distinguishable from French *impressionism chiefly by their sombre colours.

sickle-cell disease A condition resulting from the production of an abnormal form of haemoglobin (the pigment of red blood cells). The disease is hereditary and affects only Blacks. When the blood is deprived of oxygen the abnormal haemoglobin crystallizes and distorts the red cells into a sickle shape: these sickle cells are removed from the blood by the spleen, which leads to *anaemia. Those less severely affected survive and even tend to have some built-in resistance to malaria.

Siddons, Sarah (born Kemble; 1755–1831) English actress, acclaimed at her London debut in 1782 as the leading tragic actress of her time.

sidereal period The time taken by a planet or satellite to return to the same point in its orbit, i.e. to complete one revolution, with reference to the background stars.

sidewinder A small nocturnal *rattlesnake, *Crotalus cerastes*, occurring in deserts of the S USA and Mexico, that has a sideways looping method of locomotion enabling it to move quickly over loose sand.

Sidney, Sir Philip (1554–86) English poet and courtier. His works include the prose romance *Arcadia* (1580), the sequence of Petrarchan sonnets, *Astrophel and Stella* (1591), and an important work of critical theory, *The Defence of Poesy* (1595). He served as a diplomat in Eu-

rope and was killed while fighting the Spanish in the Netherlands.

Siegfried A hero of Germanic legend, who also appears in early Scandinavian legend as Sigurd. In the Germanic *Nibelungenlied*, Siegfried wins *Brunhild for his brother-in-law Gunther, but a quarrel between Brunhild and Siegfried's wife Kriemhild leads to Siegfried's death by treachery. In the Old Norse *Volsungasaga*, Sigurd is betrothed to Brynhild but is tricked (by a magic potion) into forgetting her and marries Gudrun. He then wins Brynhild for his brother-in-law Gunnar; later Brynhild incites Gunnar to kill him. Siegfried is the hero of the last two operas of Wagner's *The Ring of the Nibelung*.

siemens (S) The SI unit of conductance between two points on a conductor when a potential difference of one volt between the points causes a current of one ampere to flow. Named after the German electrical engineer Ernst Werner von Siemens (1816–92).

Siena 43 19N 11 19E A city in central Italy, in Tuscany. Founded by the Etruscans, it was a commercial and artistic centre in the middle ages. Its fine buildings include a 13th-century cathedral, a university (1240), and several palaces. Population (latest est): 58 728.

Sierra Leone, Republic of A country in West Africa, on the Gulf of Guinea. Coastal plains, fringed by mangrove swamps, rise to higher land in the interior. The main ethnic groups are Mende and Temne. *Economy:* chiefly agricultural, with fishing, forestry, and mining industries. Minerals, including diamonds, are the main exports. The economy has been severely disrupted by the recent political instability. *History:* in 1787 local chiefs ceded to Britain a piece of land along the coast for the settlement of slaves freed in the colonies. In 1896 the region became a British protectorate, gaining independence within the Commonwealth in 1961. In 1971 Sierra Leone became a republic and in 1978 one-party government was introduced. Plans for a multiparty system were approved in 1991 but suspended when Capt Valentine E. M. Strasser staged a coup in 1992. In 1996 free presidential elections resulted in a victory for Ahmad Tejan Kabbah, but he was overthrown in a further coup the following year. President Kabbah was restored in 1998 but savage fighting broke out again when members of the deposed junta joined with left-wing rebels to attack Freetown. Following talks, a power-sharing government was established (late 1999) and a UN peace-keeping force de-

ployed. When rebel violence erupted once more in 2000, British troops were sent in to support UN forces. In 2002 Kabbah won a landslide victory in elections called to draw a line under 10 years of civil war. Official language: English; Krio is widely spoken. Currency: leone of 100 cents. Area: 73 326 sq km (27 925 sq mi). Population (2007 est): 6 144 562. Capital: Freetown.

Sierra Madre The chief mountain system of Mexico. It extends for about 2500 km (1500 mi) SE from the US border, reaching 5699 m (18 697 ft) at Citlaltépetl.

Sierra Nevada 1. A mountain range in the USA. It extends generally NW–SE through California, reaching 4418 m (14 495 ft) at Mount Whitney. It contains the famous Yosemite National Park. 2. A mountain range in S Spain. It rises to 3481 m (11 421 ft) at Mulhacén, the highest point in Spain.

Sihanouk, Norodom (1923–) King (1941–55, 1993–2004) of Cambodia; head of state (1975–76, 1991–93). Following World War II, Sihanouk achieved Cambodia's independence from France (1953). Abdicating in 1955, he dominated Cambodian politics as prime minister until 1970, when he was overthrown in a coup. He returned briefly (1975–76) as head of state but was again deposed. From 1982 he led Cambodia's government in exile, returning as head of state in 1991. In 1993 a new constitution made him king again.

sika A deer, *Cervus nippon*, also called Japanese deer, native to S Asia, Japan, and Taiwan and introduced to New Zealand and Europe. Grey-brown in winter and chestnut with white spots in summer, its shoulder height is 70–100 cm. Stags have slender eight-pointed antlers about 80 cm long.

Sikhism The religion of some nine million Indians, most of whom live in the Punjab. Founded in the 15th century by the Guru *Nanak, Sikhism combines Hindu and Islamic ideas. The Hindu concepts of *karma and rebirth are accepted, but the caste system is rejected. Sikhs believe that god is the only reality and that spiritual release can be obtained by taming the ego. The guidance of the guru, or spiritual teacher, is essential. The concept of Khalsa, a chosen race of warrior-saints, is central, as are the so-called five Ks: *kangha* (comb); *kacch* (shorts); *kirpan* (sword); *kara* (steel bracelet); and *kes* (uncut hair and beard). The occupation of the Sikh Golden Temple at Amritsar by Indian troops in 1984 led to the assassination a few months later of the Indian

prime minister Indira *Gandhi by Sikh members of her bodyguard. Violent reprisals against Sikhs followed throughout India.

Sikorski, Władysław (1881–1943) Polish general and statesman; prime minister (1922–23) and then minister of military affairs (1924–25). After Poland's collapse in 1939, he became prime minister of the Polish government-in-exile in London. He was killed in a plane crash near Gibraltar.

Sikorsky, Igor Ivan (1889–1972) US aeronautical engineer, born in Russia, who invented the helicopter. He produced the S-1 biplane in 1910. After moving to the USA (1919) he completed the first successful helicopter, the VS-300, in 1939.

Silbury Hill A prehistoric mound in S England, near *Avebury, Wiltshire. Begun about 2150 BC, it is the largest man-made hill in Europe, standing 40 m (130 ft) high.

Silenus In Greek mythology, an elderly *Satyr, companion of the god *Dionysus. He was famed for his wisdom and prophetic powers as well as his drunkenness. The Sileni were his fellow nature spirits.

Silesia A region of E central Europe now in the Czech Republic and Poland. Because of its geographical position, mineral wealth, and industrial potential, Silesia has been disputed territory since the 17th century, when it was claimed by both Austria and Prussia. The seizure of most of it by Prussia was finally recognized by Austria in 1763, after the *Seven Years' War. After World War I it was divided between Czechoslovakia, Germany, and Poland and after World War II, between Czechoslovakia and Poland.

silica The mineral silicon dioxide, SiO₂, the most abundant of all minerals. There are three main forms of silica: *quartz, tridymite, and cristobalite, the last two occurring in acidic volcanic rocks. Silica content is used to classify igneous rocks. In one scheme the rocks are divided into acidic (over 65% silica), intermediate (52–66% silica), basic (45–52% silica), and ultrabasic (under 45% silica) varieties; these terms do not reflect pH value.

silicon (Si) The second most abundant element in the earth's crust, after oxygen. It is a major constituent of almost all rock-forming minerals. Pure silicon is of great importance in the electronics industry as a semiconductor. Silicates have been important for centuries as the main constituents of pottery, glasses, and many building materials. Silicon carbide (see

CARBORUNDUM) is a widely used abrasive, refractory, and semiconductor. Organic silicon compounds are known as *silicones. At no 14; at wt 28.086; mp 1414°C; bp 3267°C.

silicon chip See INTEGRATED CIRCUIT.

silicones Synthetic polymers consisting of chains of alternating silicon and oxygen atoms, with organic groups attached to the former. Silicones include fluids, greases, rubbers, and resins. All have similar chemical properties: stability to heat, oxidation, many chemicals, and oils. The main applications are in adhesives, paints, elastomers, and waterproofing agents.

silicosis A lung disease caused by prolonged inhalation of silica dust: an occupational disease of stone cutters, quarry workers, etc. The air sacs of the lungs become thickened and scarred, causing breathlessness and coughing. There is no specific treatment so prevention is essential. See also PNEUMOCONIOSIS.

silk The thread produced by the caterpillar of the *silkworm moth and the luxury fabric woven from it. The cocoons are unravelled and the filaments from several twisted together; processing this raw silk includes combining these strands and washing away the sticky secretion. China, where silk production was first practised, and Japan are the leading producers of pure silk; wild silk, produced by silkworms that feed on leaves other than mulberry or by uncultivated silkworms, includes a coarser brown Indian silk. Silk is lustrous, elastic, absorbent, and very strong.

Silk Road A trade route, 6400 km (4000 mi) long, that connected China with the Mediterranean. It was most used in antiquity, when silk was taken westwards and wool and precious metals eastwards, but was again travelled in the later middle ages, notably by Marco Polo.

silkworm A caterpillar that spins a silken cocoon, especially one that is suitable for commercial silk production. The commonest is the Chinese silkworm (*Bombyx mori*), which feeds on mulberry leaves. The pupae are killed by heat and the silken thread, up to 900 m long, is then unwound. The Japanese oak silkmoth (*Antheraea yamanai*) and the Chinese species *A. pernyi* are also used.

silky oak One of two species of Australian trees. *Grevillea robusta*, of E Australia, has fern-like leaves. It is widely cultivated in the tropics as an ornamental or shade tree. The northern silky oak (*Cardwellia sublimis*) has pinkish soft wood and is an important timber tree.

sill A horizontal or near-horizontal sheetlike

mass of intrusive igneous rock. Most sills consist of medium-grained hypabyssal rock, the commonest being dolerite.

silt A fine-grained sedimentary deposit, the rock particles of which range from 0.002 to 0.06 mm in diameter. Silts consist mainly of clay minerals, with iron oxides and hydroxides and silica. They collect in sheltered marine environments, such as estuaries, which makes dredging necessary. Consolidated silts form siltstones.

Silurian period A geological period of the Lower Palaeozoic era between the Ordovician and Devonian periods, lasting from about 445 to 415 million years ago. Conditions were mainly marine and the first true fish appeared. The first evidence of land plants also comes from Silurian rocks. The Caledonian period of mountain building reached its peak.

silver (Ag) A metallic element that occurs in nature as the metal, as argentite (Ag₂S), and in lead, zinc, and copper ores. Pure silver has the highest electrical and thermal conductivity known. In air, silver tarnishes forming a coating of the black sulphide (Ag₂S). Sterling silver (92.5% pure) is used for jewellery. Although not a reactive metal, silver forms many compounds including the oxide (Ag₂O), the nitrate (AgNO₃), and halides (for example AgCl, AgBr). Silver salts are of great importance in photography since they are light sensitive. At no 47; at wt 107.868; mp 961.93; bp 2163°C.

silverfish A widely distributed primitive wingless insect, *Lepisma saccharina*. One of the three-pronged *bristletails, it is covered with silvery scales and is common in buildings, feeding on starchy materials, including books and fabrics. Family: *Lepismatidae*.

silverplate Any object that is plated with silver rather than being solid silver. So-called Sheffield plate, in which silver is fused onto copper, was first produced in 1742. In 1840 the advent of *electroplating brought silverplated domestic articles to a much wider public. Many silverplated articles are marked EPNS (electroplated nickel silver)—nickel silver itself is an alloy of copper, nickel, and zinc and contains no silver; in this process a layer of silver is electroplated onto the nickel-silver base.

sima The earth's oceanic crust, which is composed of basaltic rocks rich in silica (Si) and magnesium (Mg). It is denser than the *sial of the continental crust and is believed to continue beneath it.

Simbirsk (former name: Ulyanovsk) 54 19N

48 22E A port in W central Russia, on the River Volga. In 1924 it was renamed in honour of Lenin (originally V.I. Ul'yanov), who was born here. Population (1999 est): 671 700.

Simenon, Georges (1903–89) Belgian novelist. The best known of his several hundred novels feature the Parisian *commissaire de police*, Maigret.

simple harmonic motion Any oscillation performed by a body about some reference point so that the restraining force is directly proportional to its displacement from that point. Examples include a *pendulum swinging through a small angle and a vibrating string. The displacement, x , at a time t is represented by the equation $x = A \sin \omega t$, where A is the amplitude (maximum displacement) and ω the angular frequency, which is related to the period of oscillation T by $\omega = 2\pi/T$.

Simplon Pass An alpine pass linking Brig in Switzerland with Iselle in Italy. Built 1800–07 it reaches 2009 m (6590 ft). The **Simplon Tunnel** was, at 20 km (12 mi), the longest rail tunnel in the world until 1979.

Simpson Desert (or **Arunta Desert**) A desert of central Australia, mainly in Northern Territory. Area: about 77 000 sq km (29 723 sq mi).

Sinai A desert peninsula in Egypt, bounded by Israel and the Gulf of Aqaba to the E and the Gulf of Suez and mainland Egypt to the W. Mount Sinai, 2285 m (7497 ft) high, is in the mountain range in the S. The N half of the desert is plateau. The chief resources of the region are manganese and the oil deposits in the W, based on Sudr. Sinai was occupied by Israel in the 1956 and 1967 Arab-Israeli Wars and following the 1973 war Egyptian and Israeli lines were established on either side of a UN buffer zone. Under the 1979 Egyptian-Israeli agreement a large proportion of the area was returned to Egypt.

Sinatra, Frank (Francis Albert S.; 1915–98) US singer and film actor, who recorded his first hit, "All or Nothing at All," in 1943. His role in the film *From Here to Eternity* (1953), earned him an Oscar; he subsequently appeared in such films as *Guys and Dolls* (1955) and *The Manchurian Candidate* (1962). Later recorded hits include "Strangers in the Night" (1966) and "My Way" (1969).

Singapore, Republic of A republic in SE Asia, off the S tip of the Malay Peninsula, consisting of the island of Singapore and over 58 islets. The city of Singapore, located in the S, oc-

cupies a substantial part of the island's area. The majority of the diverse population is Chinese with minorities of Malays, Indians, and others. *Economy:* Singapore is one of the world's busiest ports and lies on a major sea route. It is a major commercial and financial centre and in recent decades industry has been expanded and diversified, electronics, telecommunications, shipbuilding, and oil refining being important. *History:* although a prosperous trading centre in the middle ages, the island was largely uninhabited in 1819 when Sir Stamford Raffles established a station of the British East India Company here. In 1824 it was ceded to Britain. During World War II it was occupied by the Japanese (from 1942). It became a British crown colony in 1946 and gained its independence in 1959. It joined the Federation of Malaysia on its formation (1963) but broke away in 1965 and formed an independent republic. The People's Action Party has governed continuously since 1965; Lee Kuan Yew was prime minister until 1990, when he was succeeded by Goh Chok Tong. The current prime minister (since 2004) is Lee Hsien Luong. Official languages: Chinese, English, Malay, and Tamil. Currency: Singapore dollar of 100 cents. Area: 639 sq km (247 sq mi). Population (2007 est): 4 553 009.

Singer, Isaac Bashevis (1904–91) Polish-born US writer. His novels and stories, written in Yiddish and frequently dramatizing Jewish life in Poland, include *Gimpel the Fool* (1957), *The Slave* (1960), *Shosha* (1978), and *The King of the Fields* (1989). He won the Nobel Prize in 1978.

Sinhalese The major ethnic group in Sri Lanka. They speak an Indo-Aryan language that has been much influenced by Pali and the Dravidian languages, particularly *Tamil. They are descended from migrants from Bengal who colonized Sri Lanka during the 5th century BC. An agricultural people, they base their social organization on caste and practise Theravada Buddhism.

Sinn Féin (Irish: We Ourselves) An Irish political party committed to the establishment of an Irish republic to include Northern Ireland. It was founded by Arthur *Griffith in 1905. In 1918, under Eamon *De Valera, it won a majority of the Irish seats in the British parliament, declared independence, and began a campaign of guerrilla warfare through its military wing, the *Irish Republican Army. However, the creation of the Irish Free State in 1922 split the party and it dwindled into an insignificant rump. It became prominent again as the political wing of the Republican movement after the outbreak of the Northern Irish "Troubles"

in 1968. IRA ceasefires were announced by Sinn Féin president Gerry *Adams in 1994 and 1997. Subsequently Sinn Féin voted to back the Good Friday Agreement (1998) and its representatives were included in the assembly and executive established. After a period of suspension, the executive was re-established in 2007, when Sinn Féin agreed to share power with Ian *Paisley's DUP.

Sino-Japanese Wars 1. (1894–95) The war between China and Japan resulting from rivalry in Korea. China, heavily defeated, was forced to pay a large indemnity and cede Taiwan, the Pescadores, and the Liaodong peninsula. **2.** (1937–45) The war between China and Japan brought about by Japanese expansion into China in the 1930s. The Japanese had established a puppet state in Manchuria in 1932 but only after internal nationalist-communist co-operation against Japan did full war break out. The Japanese took Shanghai and Nanchang in 1937 and Wuhan and Canton in 1938. Their position remained strong until the USA entered World War II (1941) and gave China assistance. After Japan's surrender (1945) China regained Manchuria, Taiwan, and the Pescadores.

Sino-Tibetan languages A group of languages spoken in E Asia. It includes all the *Chinese dialects (which use the same alphabet but differ substantially in sound), the Tibeto-Burman languages (Tibetan, Burmese, and many related languages of the Himalayas), and probably the Tai languages, such as Siamese, Laotian, and Shan. The main characteristic is the monosyllabic nature of the vocabulary of these languages and their use of tonality to differentiate otherwise similar words. They all use word order, not inflection, to determine grammatical relations.

Sintra (former name: Cintra) 38 48N 9 22W A town in central Portugal. The many notable buildings include the royal palace (14th–15th centuries) in Moorish and gothic styles. It is a tourist and agricultural centre. Population (latest est): 20 574.

sinus A hollow cavity, especially one in a bone. The term usually refers to the air sinuses of the head, which are cavities in the facial bones; all have connections to the nasal cavity and they are susceptible to infection and inflammation (*sinusitis*).

Siouan languages A family of North American Indian languages including Dakota *Sioux, Crow, and several others. Most are spoken by Plains tribes.

Sioux A confederation of North American Plains Indian tribes, also known as the Dakota. They fought fiercely against White encroachments and defeated Gen Custer at the battle of the *Little Bighorn (1876) under their leaders Sitting Bull and Crazy Horse. They were ultimately subdued, one group making a last stand at *Wounded Knee (1890).

Sirens In Greek mythology, female creatures, sometimes portrayed with birdlike features, who lured sailors to their island by their singing and then destroyed them. *Odysseus saved himself by tying himself to the mast of his ship and filling the ears of his crew with wax. The *Argonauts were protected by the superior singing of *Orpheus.

sirocco (or scirocco) A southerly wind occurring in N Africa, Sicily, and S Italy. Hot and dry on the N African coast, it picks up moisture as it crosses the Mediterranean Sea bringing extensive cloud to S Italy.

sisal A perennial plant, *Agave sisalana*, native to central America and cultivated throughout the tropics for its fibre, which is extracted from the leaves. It is used in shipping, general industry, and agriculture.

Sisley, Alfred (1839–99) Impressionist painter, born in Paris of British parents. In 1862 he met *Monet and *Renoir and later exhibited with them. In the 1870s he produced some of his best landscapes, for example the three pictures of the *Floods at Port-Marly*.

Sistine Chapel The principal chapel of the Vatican, built for Pope Sixtus V (1473) by Giovanni dei Dolci. It is famous for its Renaissance interior decoration, with murals by Perugino (c. 1450–1523), *Botticelli, and *Ghirlandaio and the roof and ceiling by *Michelangelo.

Sisyphus A legendary Greek king of Corinth. For various offences he was condemned in the underworld eternally to roll a boulder to the top of a hill, from whence it always rolled down again.

sitar An Indian long-necked *lute with a resonating body made from a large gourd, seven metal strings stopped against movable arched frets, and a series of sympathetic strings.

Sitting Bull (c. 1834–93) American Sioux Indian chief. Resisting US expansion into the Plains, Sitting Bull led the massacre of Gen Custer and his men at the *Little Bighorn (1876). After an amnesty he settled on a Dakota reservation but was killed during further hostilities.

SI units (Système International d'Unités) An international system of units, used for all scientific purposes. It has seven base units (metre, kilogram, second, ampere, kelvin, candela, and mole) and two supplementary (or dimensionless) units (radian and steradian). All physical quantities are expressed in these units or in derived units consisting of combinations of these units, 18 of which have special names and agreed symbols. Decimal multiples of all units are expressed by a set of prefixes, such as kilo-, milli-, and mega-. See Appendices (Units of Measurement).

Six Day War See ISRAEL, STATE OF.

Sjaelland (Danish name: Sjælland) The most westerly and the largest of the major Danish islands, between Great Belt (Store Bælt) in the west and the Sound (Øresund), and Sweden in the east. Area: 7016 sq km (2709 sq mi). Population (latest est): 1,987,549. Chief town: Copenhagen.

Skagerrak A channel in N Europe, lying between Denmark and Norway and connecting the Kattegat to the North Sea.

skate A large *ray fish belonging to the family *Rajidae* (over 100 species), especially the genus *Raja*. 50–200 cm long, skates have a diamond-shaped flattened body with spiny or thorny structures on the upper surface and often an extremely long snout.

skeleton The rigid supporting framework of an animal's body. In such animals as *arthropods it lies outside the body (exoskeleton) and must be shed periodically during growth. Vertebrates, including humans, have a skeleton (endoskeleton) of *bones and cartilage that is entirely within the body and grows with age. The human skeleton is made up of over 200 bones, which are connected to each other at joints and held together by ligaments. The skeleton protects and supports the soft tissues of the body and provides a firm surface for the attachment of muscles and a system of levers that are essential for movement.

skiing A means of locomotion over snow. Although skis have been used in Scandinavia since the Stone Age, skiing as a sport did not develop until the 19th century. It is divided into Alpine or downhill skiing ('straight' downhill, giant and special slalom, and the combined Super G), and Nordic skiing (cross-country races over various distances and ski jumping). To these has been added freestyle skiing (ski acrobatics). Recreational skiing has become a vast holiday industry.

skimmer A black-and-white bird belonging to a family (*Rhynchopidae*; 3 species) occurring chiefly around western Atlantic coasts and African and Asian rivers. The skimmer fishes by flying close to the water, shearing the surface with the lower mandible and snapping the bill shut as soon as a fish is caught.

skin The tissue that covers the body. The outer layer (epidermis) consists of several layers of cells: the outermost layer contains dead cells made of keratin, which are constantly sloughed off and replaced by the deeper layers of continuously dividing cells. The inner layer of skin (dermis) contains *connective tissue with blood vessels, sensory nerve endings, *sweat glands, sebaceous glands (which secrete an oily substance, sebum, that protects the skin surface), and hair follicles. The skin protects the body from external injury and desiccation, assists in regulating body temperature (e.g. by sweating), and is sensitive to touch, temperature, and pain. The branch of medicine concerned with the diagnosis and treatment of skin disorders is called **dermatology**. Skin grafting is one of the most important and successful *transplantation operations.

skin. A vertical section through the human skin shows its microscopical structure. The subcutaneous layer of fat cells provides insulation.

skink A lizard belonging to the family *Scincidae* (600 species), occurring throughout the tropics and in temperate North America. Skinks are well adapted for burrowing: they have cylindrical streamlined bodies with smooth scales, internal eardrums, a transparent covering over the eye, and often reduced limbs. Many have an elongated tail and move with sideways undulations of the body.

Skinner, Burrhus Frederic (1904–90) US

psychologist and advocate of *behaviourism. Many of Skinner's experiments involved teaching simple actions to animals by reinforcing the desired action with rewards of food. He developed equipment, including the Skinner box, in order to standardize the teaching of animals and applied his principles to human educational aids. His books include *The Behaviour of Organisms* (1938), *Science and Human Behaviour* (1953), and *Beyond Freedom and Dignity* (1971).

Skopje (Turkish name: Usküb) 42 00N 21 28E The capital of the Former Yugoslav Republic of Macedonia, on the River Vardar. It was burned down in 1689 to stop a cholera epidemic and almost completely destroyed by an earthquake in 1963. Population (1994): 541 280.

skua A large hook-billed seabird belonging to a family (*Stercorariidae*; 4 species), breeding in Arctic and Antarctic regions and wintering in warmer latitudes. Skuas are strong fliers and have a dark plumage with two long central tail feathers. They scavenge around seabird colonies, feeding on eggs, chicks, and food scraps. Order: *Charadriiformes* (gulls, plovers, etc.).

skull The skeleton of the head, made up of 22 bones of varying shapes and sizes. The cranium consists of eight flat platelike bones that surround and protect the brain. The remaining 14 bones, including the mandible, form the face: the mandible is the only movable bone in the skull; the rest are connected by immovable joints called sutures. Numerous holes puncture the skull to allow blood vessels and nerves to pass to and from the brain.

skunk A black and white carnivorous mammal of the family *Mustelidae* that is known for its defensive habit of ejecting a foul-smelling fluid. The nine species are found in North, South, and Central America. The nocturnal North American striped skunk (*Mephitis mephitis*) inhabits woodland.

Skye The largest and most northerly island of the Inner Hebrides group, off the W coast of Scotland. It is mountainous, with an economy based on crofting and tourism. A toll bridge linking Skye with the mainland was opened in 1996. Area: 1735 sq km (670 sq mi). Population (1994 est): 8139. Chief town: Portree.

Skye terrier A small (height: 25 cm) terrier originating on the island of Skye in the Hebrides. It has a long protective outer coat. The colour may be grey, fawn, cream, or black.

skylark A *lark, *Alauda arvensis*, occurring in Eurasia and N Africa and noted for its sustained warbling flight song. It is about 17 cm

long, with brown plumage, a small crest and a white stripe above the eye.

slander See DEFAMATION.

slate A fine-grained rock produced by the low-grade metamorphism of mudstone, siltstone, or other argillaceous sediments. Its perfect cleavage is due to the parallel alignment of crystals of mica and chlorite. Slate is used as a constructional material.

slavery The condition in which human beings are owned by others as chattels. In ancient Greece and early Rome captives from conquered lands were the chief source of slaves, who often had special skills, were well treated, and might be freed (manumission). The condition of slaves in later Roman times greatly worsened. Slaving became a lucrative business in the 16th century, when European traders began to transport thousands of Africans to the Americas. By the early 19th century humanitarians, such as William *Wilberforce, had begun to attack slavery on moral grounds and it was abolished in all British territories by 1834. In the USA, slavery in the South became one of the causes of the Civil War. In 1863 Abraham *Lincoln liberated all slaves in the southern states (see EMANCIPATION PROCLAMATION); in 1865 the Constitution was amended to abolish slavery. The UN estimates that there are still some 200 million slaves (including bonded labourers) in the developing world.

Slavonic languages A subgroup of the Indo-European language family. Native to E Europe and NW Asia, they are often classified into three groups: South Slavonic (including *Serbo-Croat, Slovene, *Bulgarian, and Macedonian); West Slavonic (including Czech, *Slovak, Sorbian, and Polish); and East Slavonic (Russian, Belarusian, and Ukrainian). All the dialects are linked historically and all developed from a common ancestor, Proto-Slavonic. The peoples who originally settled in these regions migrated from Asia during the second or third millennium BC. The present Slav nations began to emerge around the 5th and 6th centuries AD, when there was further westward movement. Most Slavs speak Russian, many learning it as a second language.

sleep A naturally occurring state of unconsciousness. Orthodox sleep occurs in four stages, which vary in depth. The electrical activity of the brain continues but is more rhythmic than when awake and reacts less to outside stimuli. It is periodically interrupted by paradoxical sleep, in which the eyes move

rapidly and the brain is more active, but the muscles are especially relaxed. Paradoxical sleep is particularly associated with dreams. Sleep is biologically necessary and probably helps to control physical growth; individuals' needs vary between three and ten hours a night. Insomnia can be caused by changes of routine, anxiety, *depression, and by many drugs.

sleeping sickness A disease caused by infection with a protozoan of the genus *Trypanosoma*, which is transmitted by the tsetse fly and occurs only in East, central, and West Africa: it is the African form of trypanosomiasis. Initial symptoms are swelling of the lymph nodes and fever, which persists for several months. The brain is then infected, causing lethargy, weakness, and depression: without treatment the patient dies.

sleepy sickness A highly infectious viral disease of the brain. Known medically as encephalitis lethargica, it is marked by drowsiness leading eventually to coma.

Sligo (Irish name: Contae Shligigh) A county in the NW Republic of Ireland, in Connacht bordering on the Atlantic Ocean. Chiefly hilly, much of the land is devoted to pasture; cattle rearing and dairy farming are important. Area: 1795 sq km (693 sq mi). Population (2006): 60 863. County town: Sligo.

Slim, William Joseph, 1st Viscount (1891–1970) British field marshal. In World War II he commanded the 14th Army (the "forgotten army") in Burma (1943). After successful operations against the Japanese he became commander in chief of Allied land forces in SE Asia. In 1948 he became chief of the imperial general staff and was then governor general of Australia (1953–60).

slime moulds Organisms traditionally regarded as fungi (since they produce fruiting bodies) but having affinities with the protozoa; they are now usually classified in the kingdom *Protocista*. The so-called true slime moulds (*Myxomycota*) are found beneath logs and in other damp places. They consist of slimy sheets of protoplasm that engulf bacteria, wood particles, etc. The cellular slime moulds (*Acetabularia*) are single-celled amoeba-like organisms found in soil. The parasitic slime moulds (*Plasmodiophora*) live in the tissues of plants.

slipper orchid A terrestrial *orchid of the tropical Asian genus *Paphiopedilum* (about 50 species) and the related genera *Cypripedium* and *Phragmipedium*. Popular ornamentals, they are characterized by their flowers, which have

a pouched slipper-shaped lip and are usually borne singly or in clusters of two or three.

sloe See BLACKTHORN.

sloth A primitive arboreal *mammal belonging to the family *Bradypodidae* (7 species) of Central and South America, also called ai or unau. 50–65 cm long, sloths are slow-moving and hang upside down from branches, feeding on leaves and fruit. Their greyish-brown fur lies so that rain runs off easily and is often greenish from algae. Order: *Edentata*.

Slough 1. 51 31N 0 36W A town in SE England, in Slough unitary authority, Berkshire. It grew rapidly after a large trading estate was built here in the 1920s and now has a great variety of light industries. Population (latest est): 108 000. **2.** A unitary authority in SE England, in Berkshire. Area: 28 sq km (11 sq mi). Population (2004): 117 600.

Slovak A Western Slavonic language, closely related to *Czech. It is spoken mainly in Slovakia, where it is the official language, and written in the Latin alphabet.

Slovakia, Republic of A country in central Europe. Lying mainly within the Carpathian Mountains, it descends SW to the Danube plains. *Economy:* mainly agricultural; products include cereals, wines, and tobacco. There is heavy industry in most of the larger towns. *History:* conquered by the Magyars in the 10th century, it was part of Hungary until 1918 when it became a province of Czechoslovakia. As such it was under communist control from 1948 to 1990. Slovakia became an independent republic on the dissolution of Czechoslovakia (1 Jan 1993). In 1997 Slovakia was refused EU membership owing to concerns about human-rights abuses under the government of Vladimir Meciar. In 1998 a new coalition was formed under Mikulas Dzurinda, who introduced economic and social reforms. Slovakia joined both the EU and NATO in 2004. Elections in 2006 produced a centre-left government under Robert Fico. Official language: Slovak. Currency: koruna of 100 hellers. Area: 49 039 sq km (18 934 sq mi). Population (2007 est): 5 447 502. Capital: Bratislava.

Slovenia, Republic of (Serbo-Croat name: Slovenija) A republic in S central Europe. It is mountainous. *Economy:* mainly agricultural, but manufacturing has expanded and diversified. Slovenia has important deposits of coal, mercury, and zinc. *History:* chiefly under Habsburg rule from the 14th century, it was incorporated (1918) into the kingdom of Serbs,

Croats, and Slovenes, later renamed *Yugoslavia. It declared independence in 1991, leading to a brief war with the Serb-led Yugoslav army, and achieved international recognition in 1992. The 2004 elections were won by the Slovenian Democratic Party of Janez Jansa. Janez Drnovšek was elected president in 2002. Slovenia joined the EU and NATO in 2004. It adopted the euro in 2007. Official language: Slovenian. Currency: euro of 100 cents. Area: 20 251 sq km (7819 sq mi). Population (2007 est): 2 009 245. Capital: Ljubljana.

slowworm A legless lizard, *Anguis fragilis*, also called blindworm, occurring in heaths and open woodlands of Europe. It is about 30 cm long, usually brown, grey, or reddish, and feeds on snails, slugs, and other soft-bodied invertebrates. Family: *Anguidae*.

slug A *gastropod mollusc of the order *Stylommatophora*, widely distributed in moist terrestrial habitats. Slugs have slimy soft bodies with the shell vestigial or absent. They range in colour from yellow through red-brown to black. Some are carnivorous or scavenging while others feed on soft plant tissues. Subclass: *Pulmonata*. Compare SEA SLUG.

smallpox A highly infectious virus disease marked by a skin rash that leaves permanent pitted scars. Smallpox is transmitted by direct contact; the initial symptoms of fever, prostration, severe headache, and backache are followed by the rash on the face and limbs. Secondary infection with staphylococci is often fatal. After a worldwide vaccination programme sponsored by the World Health Organization smallpox was officially declared to have been eradicated in 1979.

smelt A slender food fish of the genus *Osmerus* and family *Osmeridae*, occurring in coastal and estuarine waters of Europe and North America. It migrates to fresh water to spawn. The European smelt (*O. eperlanus*), up to about 30 cm long, is greenish grey above and silvery below. Order: *Salmoniformes*.

smelting The extraction of a metal from its ore by heating. The method used depends on the metal, the type of ore, and the melting points of both. The smelting takes place either in a *blast furnace (e.g. to extract iron) or a reverberatory furnace (e.g. to extract copper).

Smetana, Bedřich (1824–84) Bohemian composer. In 1859 he joined a group of composers in Prague who were establishing a national opera. *The Brandenburgers in Bohemia* (1862–63) and *The Bartered Bride* (1863–66) were

composed for it. Despite becoming totally deaf in 1874 he wrote the four symphonic poems *Má Vlast* (1874–79) and a string quartet (1876).

Smith, Adam (1723–90) Scottish moral philosopher and political economist. In 1776, he published *An Enquiry into the Nature and Causes of the Wealth of Nations*, an attack on mercantilism that was to become the bible of the free-trade movement. He held that employment, trade, production, and distribution are as much a part of a nation's wealth as its money. An individual allowed to promote his own interests freely within the law often promotes the interests of society as a whole.

Smith, Ian (Douglas) (1919–) Prime minister (1964–79) of Rhodesia (now Zimbabwe). An advocate of White supremacy, he demanded full independence for Southern Rhodesia in 1964 but opposed Britain's stipulation that Black majority rule be prepared for. In 1965 he made a unilateral declaration of independence (UDI), maintained until 1976 when he agreed to the principle of Black majority rule.

Smith, John (1938–94) British politician; leader of the Labour Party (1992–94). He entered parliament in 1970, becoming shadow chancellor (1987–92).

Smith, Joseph (1805–44) US founder of the *Mormons. Smith announced in 1827 his discovery of the sacred *Book of Mormon*, which he claimed to have translated from two gold tablets. His new church, founded in Fayette, New York (1830), grew rapidly but attracted opposition. While in jail on charges of conspiracy, Smith was killed by an angry mob. The Mormons migrated westward to Utah under Brigham *Young.

Smith, Dame Maggie (1934–) British stage and screen actress. Her films include *The Prime of Miss Jean Brodie* (1969), which earned her an Oscar, *A Room with a View* (1986), and the *Harry Potter* series of films (from 2001).

Smith, Stevie (Florence Margaret S.; 1902–71) British poet, whose deceptively simple poetry blends tenderness, toughness, and humour. The best known of her novels is *Novel on Yellow Paper* (1936). Her *Collected Poems* (1975) were published posthumously.

Smithsonian Institution A research institution in Washington, DC, founded in 1846 with a bequest from the Englishman James Smithson (1765–1829). It has carried out important scientific work and explorations throughout the world, and administers a number of important museums, including the National

Air and Space Museum and the National Collection of Fine Arts.

smoke tree (or smoke bush) One of several species of trees and shrubs having a whitish cloudy appearance at some stage of the season. The American smoke tree (*Cotinus obovatus*) grows to a height of 9 m and has a smokelike mass of whitish flower heads, as does the Australian smoke bush (*Conospermum stoechadis*). *Rhus cotinus* is the common smoke bush native to the Mediterranean area and parts of Asia.

Smolensk 54 49N 32 04E An industrial city in W Russia, on the River Dnepr. Dating back to at least the 9th century, it was long disputed between Lithuania and Russia, falling to the latter in 1654. It saw fierce fighting in World War II. Population (1999 est): 355 700.

Smollett, Tobias (George) (1721–71) Scottish writer. His lively picaresque novels include *Roderick Random* (1748), *Peregrine Pickle* (1751), and *Humphry Clinker* (1771).

smooth snake A widespread Eurasian snake, *Coronella austriaca*, that has smooth glossy scales and is brown or reddish with a pale belly and dark spots along its back and tail. Up to 65 cm long, it favours sandy heathlands. Family: Colubridae.

smut A disease affecting flowering plants, particularly the cereals and grasses, caused by various basidiomycete fungi of the genus *Ustilago*. Infection is not usually apparent until spore formation, when dark powdery masses of spores are released over the flower head. Stinking smuts are caused by fungi belonging to the related genus *Tilletia*. Both are controlled by spraying crops with fungicide and treating seed before sowing.

Smuts, Jan (Christiaan) (1870–1950) South African statesman and general; prime minister (1919–24, 1939–48). He led commandos in the second Boer War (1899–1902), but thereafter worked for reconciliation with Britain. He played an important part in achieving responsible government for the Transvaal (1906) and the Union of South Africa (1910), becoming a minister in Louis Botha's government (1910–19) and succeeding him as prime minister. During his second premiership he led South Africa into World War II and strove to maintain links with the British Commonwealth.

snail A *gastropod mollusc with a spirally coiled shell, including terrestrial, freshwater, and marine forms. The common garden snail (*Helix pomatia*) is active at night, feeding on vegetation and sheltering by day in crevices.

snake A legless *reptile belonging to the sub-order *Serpentes* (about 3000 species), occurring worldwide but especially common in the tropics. Snakes range from 0.12–10 m in length and grow throughout their lives, periodically shedding the skin in one piece. They feed chiefly on other vertebrates, which they swallow whole. Prey may be killed by constriction, by engulfing it alive, or by the injection of venom by means of hollow or grooved fangs. The major families are the *Boidae* (pythons, boas, etc.), the *Colubridae* (typical snakes, e.g. the grass snake), the *Elapidae* (cobras, coral snakes, etc.), and the *Viperidae* (vipers, etc.). Order: *Squamata* (lizards and snakes).

Snake River A river in the NW USA. Rising in the Yellowstone National Park in Wyoming, it flows W through Idaho to join the Columbia River in Washington State. Length: 1670 km (1038 mi).

snapdragon See ANTIRRHINUM.

snapper A carnivorous shoaling fish of the family *Lutjanidae* (about 250 species), found in tropical seas. It has an elongated body, a large mouth, and sharp teeth. Some are valuable food fish, especially the red snapper (*Lutjanus blackfordi*); others are poisonous.

Snell's law When a ray of light passes from one medium to another the angle (r) between the refracted ray and a line normal to the interface between the media is related to the angle (i) of the incident ray, also taken to the normal, by the equation $\sin i / \sin r = n$, where n is the relative refractive index of the media (see REFRACTION). It is named after the Dutch astronomer Willebrord Snell (1591–1626).

snipe A *sandpiper belonging to a subfamily (*Scolopacinae*; 10 species) occurring in wet areas of warm and temperate regions. Snipe have a long flexible bill used to probe for worms, and a barred and striped brown, black, and white plumage. The common snipe (*Gallinago gallinago*) is popular gamebird.

snooker A game, deriving from *billiards, that arose among British officers in India (1875). It is played by two players or pairs of players on a billiards table. There are 22 balls: 1 white cue ball, 15 red balls (value 1 point each), and 6 coloured balls—yellow (2 points), green (3), brown (4), blue (5), pink (6), black (7). The object is to pocket a red ball and a coloured ball alternately, each time returning the coloured ball to its prescribed spot on the table. The red balls are not replaced. When all the red balls have been potted the colours are potted.

snow A solid form of precipitation composed of ice crystals or snowflakes. Ice crystals occur when temperatures are well below freezing point; with temperatures nearer to 0°C (32°F) snowflakes develop through the clustering together of crystals.

snowball tree See GUELDER ROSE.

Snowdon (Welsh name: Yr Wyddfa) 53 04N 405W The highest mountain in Wales, in Gwynedd. The surrounding area, **Snowdonia**, was designated a national park in 1951. Height: 1085 m (3560 ft).

snowdrop A small early spring-blooming herbaceous plant of the genus *Galanthus* (about 10 species) native to Europe and W Asia. They grow from bulbs to produce grasslike leaves and slender stems bearing solitary nodding white flowers, tipped with green or yellow. There are over 50 cultivated varieties. *G. nivalis* is the common European snowdrop. Family: *Amaryllidaceae*.

snow goose An Arctic *goose, *Anser caerulescens*. It is either pure white with black wingtips, pink legs, and a red bill or blue-grey with a white head. Snow geese winter in the southern USA, Japan, and China.

snow leopard A big *cat, *Panthera* (or *Uncia*) *uncia*, also called ounce, found in the mountains of central Asia. It is 1.9 m long, with a thick ash-grey coat marked with dark rosettes.

Snowy Mountains A mountain range in Australia. It lies in New South Wales, and contains Australia's highest mountain, Mount *Kosciusko.

soaps Salts of *fatty acids. Household soap (**hard soap**) is a mixture of sodium stearate, oleate, and palmitate. It is made by the hydrolysis of fats with caustic soda (sodium hydroxide), thus converting the glycerides of stearic, oleic, and palmitic acids into sodium salts and glycerol. **Soft soap** is made with potassium hydroxide instead of sodium hydroxide. Soaps have a cleansing action because they contain negative ions composed of a long hydrocarbon chain (which has an affinity for grease and oil) attached to a carboxyl group (which has an affinity for water). Particles of grease or oil are therefore emulsified in soapy water. See also DETERGENTS.

soapstone See TALC.

Soares, Mario (1924–) Portuguese statesman; prime minister (1976–79; 1983–85); president (1986–96). He was a critic of *Salazar and lived in exile from 1970 to 1974, when he be-

came foreign minister in the new military government. He became prime minister as leader of the Portuguese Socialist Party.

Sobers, Gary (Sir Garfield Saint Auburn S.; 1936–) West Indian cricketer, who captained the West Indies and Nottinghamshire. One of the greatest all-rounders, he played in 93 Test matches, scoring 8032 runs, including 26 centuries, and taking 235 wickets and 110 catches.

Social Democratic and Labour Party (SDLP) A British political party, active in Northern Ireland. Founded by John *Hume and others in 1970, it supports peaceful union with Ireland. Its leader in the Northern Ireland assembly is Mark Durkan (1960–).

Social Democratic Party (SDP) A British political party of the centre, formed in 1981 by the "gang of four" labour dissidents: Roy Jenkins, Shirley Williams, David Owen (leader 1983–87), and William Rodgers. The SDP formed a political alliance with the Liberal Party in 1981; in 1988 the party merged with the Liberals, forming the Social and Liberal Democrats (subsequently renamed the *Liberal Democrats).

soaps. The action of soap in emulsifying grease. The nonpolar hydrocarbon end of the soap molecule attaches itself to the grease. The attraction of the polar end to water breaks up the grease and distributes it throughout the solution.

socialism A concept, resulting in diverse political movements, that emphasizes cooperation rather than competition as the basis of society. In the 19th century one sense of the word implied reform of the social system to develop liberal values and end class privileges. Socialism in a second sense was explicitly contrasted with competitive individualism; practical cooperation could not be achieved until a society based on private property was replaced by one based on social ownership and control. In 1848 Marx and Engels laid down the principles of scientific socialism in *The Communist Manifesto* and *Marxism became the theoretical basis for most socialist thought. The British

***Fabian Society** (founded 1884) revived a variant of the first sense of the term, which later found political expression in the *Labour Party. It was the split in Russia, however, between the revolutionary *Bolsheviks and the reformist *Mensheviks that led to the decisive distinction between the terms *communism and socialism as they are now generally understood, socialists being those who seek change by peaceful reform and communists being those dedicated to change by revolution. In the late 20th century many socialist parties abandoned or revised traditional socialist ideas in response to the collapse of Marxist systems and the apparent triumph of global capitalism.

Society Islands An archipelago in French Polynesia, discovered in 1767. It consists of two mountainous island groups, the **Windward Islands** (including Tahiti and Moorea) and the **Leeward Islands** (including Raiatea and Huahine). The capital of French Polynesia, Papeete, is on Tahiti. Area: 1595 sq km (616 sq mi). Population (1996): 189 524.

Society of Friends See QUAKERS.

Society of Jesus See JESUITS.

sociology The systematic study of the development, organization, functioning, and classification of human societies. Its growth was stimulated by the rapid industrial and social change in Europe in the early 19th century. It has employed techniques of participant observation, the systematic comparison of different societies, and surveys of social conditions, attitudes, and behaviour. Contemporary sociology is divided into several specialized subdisciplines including demography, political, educational, and urban sociology as well as sociological studies of deviance, religion, and culture.

sockeye salmon A *salmon, *Oncorhynchus nerka*, also called red salmon or blueback, that lives in the N Pacific and spawns in Canadian fresh waters.

Socrates (c. 469–399 BC) Athenian philosopher, whose ideas, integrity, and courage are known through his disciples *Plato and *Xenophon. Socrates diverted philosophy from physical speculations about the universe towards *ethics. His insistence upon thorough critical analysis of ethical concepts also marked the beginning of *logic. The "Socratic method" of teaching was by eliciting answers from interlocutors to reveal inconsistencies in accepted opinions. He was tried on charges of

atheism and "corrupting the youth" and condemned to die by drinking hemlock.

Soddy, Frederick (1877–1956) British chemist, who worked under *Rutherford and *Ramsay and went on to win the 1921 Nobel Prize for his discovery of *isotopes.

sodium (Na) A highly reactive alkali metal, long-recognized in compounds but first isolated as the element by Sir Humphry Davy in 1807. It is obtained commercially by electrolysis of common salt (NaCl). It occurs naturally in some silicate minerals (for example *feldspars; $\text{NaAlSi}_3\text{O}_8$), as well as in salt deposits and in the oceans. The metal is soft, bright, and less dense (relative density 0.97) than water, with which it reacts violently, liberating hydrogen. It is a highly electropositive element, forming many ionic salts of great importance, such as the chloride (common salt; NaCl), the carbonate (soda ash; Na_2CO_3), the bicarbonate (baking-soda; NaHCO_3), various phosphates, and the nitrate (NaNO_3). At no 11; at wt 22.9898; mp 97.8°C; bp 882.9°C.

sodium bicarbonate (**sodium hydrogen carbonate** or **bicarbonate of soda**; NaHCO_3) The white soluble powder that is a constituent of *baking powder and is used to make fizzy drinks and as an antacid in medicine.

sodium carbonate (Na_2CO_3) A white soluble salt. The commercial form (**soda ash**) is a white anhydrous powder and is used in making glass, soap, paper, as well as other chemicals. **Washing soda**, its hydrated form, is a white crystalline solid used as a domestic cleanser and water softener.

sodium hydroxide (or **caustic soda**; NaOH) A white solid that is strongly alkaline in aqueous solution and is very corrosive to organic tissue. It is used in making rayon, paper, detergents, and other chemicals.

Sodom and Gomorrah In the Old Testament, two cities of Palestine, known as the "cities of the plain," sited S of the Dead Sea. According to Genesis (18, 19), they were destroyed by fire and brimstone from heaven because of the utter depravity of their inhabitants.

Sofia 42 40N 23 18E The capital of Bulgaria, situated on a plateau in the W of the country. Sofia came under the Byzantine Empire in the 6th century and was taken over by the Bulgars in the 9th century. Under Turkish rule from 1382, the city was liberated by the Russians in 1878 and became the national capital (1879). Population (1999 est): 1 122 302.

software The suite of programs that sets up

a computer system for operation, as distinct from the physical equipment (hardware). Software supplied by the computer manufacturer controls various parts of the system and provides facilities for further programming. Additional programs are purchased separately or written by the user. See also PROGRAM, COMPUTER.

Sogne Fjord The longest and deepest fjord in Norway, extending 204 km (127 mi) inland N of Bergen. It is flanked by spectacular mountain scenery.

soil The mixture of unconsolidated mineral particles, derived from weathered rock, and organic matter (humus), derived from the breakdown of plant tissue by living organisms, that covers much of the earth's land surface and provides a medium for plant growth. Soils are characterized by their texture, which depends on particle sizes (see SAND; SILT; CLAY), and their structure, which depends on the way the particles are bound into aggregates (e.g. crumbs, granules, flakes, etc.). These are important factors in determining the fertility of the soil, particularly its moisture and air content, susceptibility to leaching (the removal of nutrients to deeper levels by percolating water), and ease of cultivation. Soils are also classified according to their profiles—the arrangement of the layers (horizons) between the ground surface and the bedrock. See also CHERNOZEM; PODZOL.

sol See COLLOID.

Solanaceae A family of herbaceous plants and shrubs (about 2000 species), widely distributed but chiefly tropical. Their flowers have five fused sepals and petals. The family includes several commercially important species (e.g. the potato, tomato, pepper, and tobacco) and some ornamentals (e.g. *Petunia*); various other members are poisonous (e.g. the nightshades).

solar constant The total amount of solar energy passing perpendicularly through unit area per unit time at a particular distance from the sun. It is about 1.36 kW m⁻² at the earth's mean orbital distance.

solar flare A sudden brightening, within minutes, of areas in the sun's atmosphere, resulting from an explosive release of energetic particles and radiation. Flares often occur above *sunspot groups. Large flares affect radio transmission on earth and produce *auroras.

solar power The use of the sun's energy to

provide heating or to generate electricity. Solar energy is most commonly converted into heat by direct heating of water flowing through special panels on the roof of a building. The temperature rise produced is fairly small but it reduces the energy required from other sources for hot water and space heating. Higher temperatures, sufficient to form steam for electricity generation, are possible using large mirrors to collect and focus the sun's rays. Direct conversion of solar radiation into electrical energy is possible with **solar cells**. These are semiconductor devices sensitive to the photovoltaic effect. The method is used mainly in small-scale specialized applications, for example powering remote monitoring equipment, spacecraft, marine beacons, etc.

solar system A system comprising the *sun and the astronomical bodies gravitationally bound to the sun, that is the nine major *planets, their *satellites, and the immense numbers of *minor planets, *comets, and meteoroids. Almost all the mass of the solar system (99.86%) resides in the sun. The planets orbit the sun in the same direction and, with the exception of Pluto, move in paths close to the earth's orbital plane. The solar system formed some 4600 million years ago, following the contraction and subsequent flattening of a rotating cloud of interstellar gas and dust.

solar wind An almost radial outflow of charged particles discharged from the sun's corona into interplanetary space. The particles, mainly protons and electrons, are moving at speeds between 200 and 900 km per second in the vicinity of the earth's orbit. They interact with the earth's *magnetosphere.

solder An *alloy that is melted to form a joint between other metals or, occasionally, nonmetals. The surfaces to be joined are heated by a soldering iron or by a flame, but are not melted. **Soft solder** is usually made of lead and tin and melts in the range 200–250°C. It cannot be used for joints that have to stand up to stress or heat, but is used for making secure electrical connections. **Brazing**, also called **hard soldering**, uses a harder alloy with a higher melting temperature (850–900°C), usually a *brass with 60% zinc and 40% copper. **Silver solder** has a slightly lower melting point (630–830°C) than brass, and often contains antimony or other metals but no longer contains silver. Like brazing, its strength makes it useful in engineering applications. A flux of zinc chloride or a resin is applied to the hot surfaces

solar system. The planets with their equatorial diameters in kilometres (in brackets after the planet's name) and their distance from the sun in millions of kilometres (not to scale).

before soldering to clean them and to enable the solder to flow.

sole An elongated *flatfish of the family *Soleidae* (over 100 species), found in temperate and tropical seas. The common European sole (*Solea solea*), also called Dover sole, is a valuable food fish and has a blotchy brown body with a black spot on each pectoral fin. See also LEMON SOLE.

solenoid A coil of wire usually forming a long cylinder. When electric current flows through it a *magnetic field is created. This field can be used to move an iron rod placed on its axis. Solenoids are often used to operate mechanical valves attached to the iron rod by switching on or off the current.

Solent, the A channel between the coast of Hampshire in S England and the Isle of Wight. It is an important shipping route between Southampton and the English Channel.

solicitor In the UK, a member of the legal profession qualified to give legal advice to clients, to present clients' cases in Magistrates' Courts, County Courts, and (since 1971) higher courts (provided that they have obtained the necessary advocacy qualification), and to undertake other legal work, such as the transfer of property (conveyancing). They are eligible for appointment as circuit judges and recorders, but are not eligible for the higher judiciary. A barrister must always be instructed through a solicitor.

Solidarity (Polish name: Solidarność) A Polish

trade union. Formed in Gdansk (1980) and led by Lech *Wałęsa, it became a focus of resistance to General Jaruzelski's Soviet-dominated government and was outlawed from 1982 until 1989. In June 1989 the movement triumphed in elections, forming the first noncommunist government in the communist world. By 1993, the movement had split into several political groupings, only one of which retained the name Solidarity.

solid state One of the four states of matter and that to which all substances, except helium, revert at sufficiently low temperatures. It is distinguished from the other states by being the only one in which matter retains its shape, as a result of the stronger intermolecular forces.

solid-state devices Electronic devices made with solid *semiconductor components. They have no moving parts and depend for their operation on the movement of charges within a crystalline solid. Solid-state devices are compact, robust, and easily mass-produced. See also SEMICONDUCTOR DIODE; TRANSISTOR.

Solihull A unitary authority in central England, in West Midlands. Area: 180 sq km (70 sq mi). Population (2001): 199 521.

solmization A method of teaching sight-singing that eliminates learning to read music notation from the stave. In the tonic sol-fa system the notes of the rising major scale are represented by the syllables doh, ray, me, fah, soh,

lah, ti, and doh. The system can be applied in any key, and modulation to a different key simply involves shifting doh to another pitch.

Solomon In the Old Testament, the third King of Israel, son of *David and Bathsheba, who reigned in the 10th century BC. During his peaceful reign foreign alliances were formed (notably with Phoenicia and Egypt), trade and commerce were expanded, and the *Temple of Jerusalem and many palaces were built. To realize his schemes he imposed heavy taxation and used compulsory labour, which resulted in the revolt of N Israel. He is traditionally famous for his wisdom.

Solomon Islands A country in the Pacific Ocean, E of New Guinea. It consists of over 900 small islands, the largest of which are *Guadalcanal, Malaita, San Cristobal, New Georgia, Santa Isabel and Choiseul. The larger islands are mainly forested and mountainous, with some active volcanoes. Most of the population are Melanesian, with Polynesian and Micronesian minorities. *Economy:* the main industries are fishing, mining, forestry and tourism. The economy has been severely affected by recent political disorders. *History:* inhabited from about 2000 BC, the islands were visited by the Spanish in 1568. The four main islands became a British protectorate in 1893 and others were added in 1898–99. They achieved self-government in 1976 and became independent within the Commonwealth in 1978. Ethnic fighting erupted on Guadalcanal in 1998 and culminated in a coup (2000) deposing prime minister Bartholomew Ulufa'ulu. Although a peace deal was signed (Oct 2000), violence and disorder continued, leading to the despatch of Australian peacekeepers in 2003. Official language: English. Currency: Solomon Islands dollar of 100 cents. Area: 29 785 sq km (11 500 sq mi). Population (2003 est): 450 000. Capital: Honiara.

Solon (6th century BC) Athenian statesman, who laid the foundations of Athenian democracy. As archon (c.594–593), Solon cancelled debts for which land or liberty was the security and introduced a new coinage and weights and measures. He also instituted a new constitution and a more lenient legal code.

solstice Either of two points on the *ecliptic, midway between the equinoxes, at which the sun reaches its greatest angular distance above or below the celestial equator (see CELESTIAL SPHERE). In the N hemisphere the sun's northernmost position occurs at the **summer solstice**, usually on 21 June, when daylight hours are at a maximum. Its southernmost position

occurs at the **winter solstice**, usually on 22 December, when daylight hours are minimal.

Solti, Sir Georg (1912–97) Hungarian-born British conductor. He was conductor of the Royal Opera, Covent Garden (1961–71), the Orchestre de Paris (1972–75), the London Philharmonic Orchestra (1979–83), and the Chicago Symphony Orchestra (1969–91).

solution A homogenous liquid mixture of two or more substances. Solutions, unlike *colloids, contain no identifiable particles of different substances. When a solid or gas is dissolved in a liquid, the liquid is known as the solvent and the dissolved material the solute. If the components are all liquid, the one in excess is the solvent.

Solvay process An industrial process for the production of sodium carbonate. Limestone is first heated strongly to produce calcium oxide and carbon dioxide, which is then passed through brine saturated with ammonia, precipitating sodium hydrogencarbonate (NaHCO₃). This, on mild heating, yields sodium carbonate and some carbon dioxide, which is recycled. The ammonia is also recovered. Named after E. Solvay (1833–1922).

solvent abuse The sniffing of organic solvents in glue, cleaning fluids, aerosols, etc., especially by adolescents. The practice has grown up as an offshoot of the drug culture and is highly dangerous. In the UK there are now restrictions on the sale of materials containing solvents to children.

Solzhenitsyn, Aleksandr (1918–) Russian novelist. After World War II he was held in prison camps until 1956. In 1974 he left the Soviet Union and moved to the USA. His major works include *Cancer Ward* (1968), *The First Circle* (1968), and *The Gulag Archipelago* (1974–78). He won the Nobel Prize in 1970. He returned to Russia in 1994.

Somali An E African people occupying Somalia, Djibouti (where they are called Issas), Ethiopia, and NW Kenya. There are many tribes. Some Somalis are nomadic herdsman while others dwell in towns and along the coast as traders and farmers. Their language belongs to the Cushitic branch of the Hamito-Semitic family.

Somalia (official name: Somali Democratic Republic) A country in East Africa, occupying most of the Horn of Africa between the Gulf of Aden and the Indian Ocean. Coastal plains rise in the N to a high plateau. Most of the inhabitants are nomadic *Somalis with minorities of

Sab, Bantu, and others. **Economy:** chiefly agricultural, livestock raising being especially important. **History:** British and Italian *Somaliland gained independence as Somalia in 1960. In 1969, after a military coup, a Supreme Revolutionary Council was established under Gen Mohammed Siad Barré. The country has had serious territorial disputes with Ethiopia (see OGADEN, THE), which has a large Somali population. Barré was replaced as president in a 1991 coup by Ali Mahdi Mohammed. His rule was rejected by several factions, and in 1991 the N declared itself independent as the Somaliland Republic. Civil war broke out in the S, exacerbating famine conditions; UN troops intervened in 1992 but failed to maintain a ceasefire and withdrew in 1995. Confused factional fighting continued until Dec 1997, when the warring militias agreed to establish a transitional government. This was inaugurated in 2000 but failed to take effective control. In 2004 a further peace deal was signed; Abdullahi Yusuf was elected president and a new government was established but remained weak. From mid-2006 Islamist militias took control in Mogadishu and much of the S. They were subsequently routed by Ethiopian and Sudanese government forces but instability has continued. Official language: Somali; Arabic, Italian, and English are used extensively. Currency: Somali shilling of 100 centesemi. Area: 700 000 sq km (270 000 sq mi). Population (2007 est): 9 118 773. Capital: Mogadishu.

Somaliland A region corresponding to present-day Somalia and Djibouti. Between the 7th and 12th centuries AD the coast was occupied by Muslim traders while the N was settled from the 10th century by nomadic Somalis. During the 19th century the region was divided between France, Britain, and Italy. Italian Somaliland was united with Ethiopia by Mussolini (1935) and became an Italian trust territory after World War II. British and Italian Somaliland united to become Somalia in 1960 and the French territory, Afars and Issas, became Djibouti in 1977.

somatotrophin See GROWTH HORMONE.

Somerset A county of SW England, bordering on the Bristol Channel. In 1974 it lost the NE part to Avon; in 1996 the administration of this area passed to two unitary authorities, Bath and North East Somerset and North Somerset, which are considered part of Somerset for ceremonial purposes. It consists mainly of a flat plain enclosed by the Quantock Hills and Exmoor in the W, the Blackdown Hills in the S, and the Mendip Hills in the N. It is predomi-

nantly agricultural, with dairy farming and the traditional cider making. Tourism is also important. Area (excluding unitary authorities): 3452 sq km (1332 sq mi). Population (2004 est, excluding unitary authorities): 512 500. Administrative centre: Taunton.

Somme, River A river in N France, rising in the Aisne department and flowing mainly W through Amiens and Abbeville to the English Channel. It was the scene of extensive fighting in *World War I (1916). Length: 245 km (152 mi).

sonar See ECHO SOUNDING.

sonata (Italian: sounded, as opposed to *cantata*, sung) A piece of music for one or more instruments. The name has been used of a variety of musical forms. **Sonata form**, the normal structure of the first movement of the classical sonata, involved the exposition, development, and recapitulation of two contrasting themes. It was applied to the first movement of the *symphony and of *chamber music compositions as well as the sonata proper. Beethoven and his successors enlarged the formal boundaries of the sonata; Liszt evolved a single-movement form out of the three or four movements of the classical sonata.

Sondheim, Stephen (Joshua) (1930–) US composer, who studied with Oscar Hammerstein. He wrote the lyrics for *West Side Story* (1957) and both words and music for *Sweeney Todd* (1979), *Sunday In the Park with George* (1989), and *Assassins* (1992).

songbird A *passerine bird belonging to the suborder *Oscines* (about 4000 species), in which the vocal organ (syrinx), at the junction of the trachea (windpipe) and bronchi, is highly developed. The flow of air vibrates the vocal membranes; muscles alter their tension and so produce the different notes. Bird song communicates the identity and whereabouts of an individual to other birds and also signals alarm and sexual intentions.

sonnet A poem of 14 lines originating in Italy in the 13th century and introduced into England in the 16th century by *Wyatt. Its two principal variations are the Petrarchan sonnet, usually divided into an octet rhyming *abbaabba* and a sestet rhyming *cdecde*, and the Shakespearean sonnet, usually rhyming *abab cdcd efef gg*.

Sophists The Greek sages of the 5th and early 4th centuries BC who were itinerant experts on various subjects including public speaking, grammar, ethics, literature, mathematics, and elementary physics. In philosophy they tried to explain the phenomenal world.

Their educational programme centred on the belief that virtue can be taught. From their opponent *Plato, they acquired a bad name as philosophical tricksters.

Sophocles (c. 496–406 BC) Greek dramatist; with Aeschylus and Euripides, one of the three great Athenian tragic dramatists. He developed the more static drama of Aeschylus by introducing a third actor and by reducing the role of the chorus. Of his 123 plays, 7 survive, including *Electra*, *Oedipus Rex*, and *Antigone*. He led an active public life, holding several important civil and military administrative posts.

soprano (Italian: upper) The highest female singing voice. Range: middle C to the C above the treble stave. The **mezzo-soprano** voice lies between the soprano and the contralto. Range: A below middle C to F an octave and a sixth above.

Sorghum A genus of annual or perennial grasses (about 30 species), native to Africa, especially *S. vulgare*, of which there are several varieties, such as sweet sorghum and durra, widely cultivated as cereal crops. They have rigid stalks, long flat leaves, and terminal flower clusters bearing 800–3000 starch-rich seeds. The seeds are used as grain for making bread, etc., and as a source of edible oil, starch, and sugar. The stalks are used as fodder or sometimes for syrup manufacture.

sorrel A tall perennial herb, *Rumex acetosa*, common throughout temperate Eurasia and North America. It bears numerous small red flowers. The tangy-tasting leaves are used as a culinary flavouring and in salads. Family: Polygonaceae. See also WOOD SORREL.

Sotho A large group of Bantu-speaking peoples of S Africa. The term applies in a general sense to the peoples of Botswana, Lesotho, and the Transvaal (South Africa), but, more specifically, to one of the four main divisions of these peoples, the Sotho of Lesotho. The other branches are the Tswana, Pedi, and Venda, each with many tribes.

sound A disturbance propagated through a medium by longitudinal waves. Strictly the term applies only to those waves that are audible to the human ear, i.e. with frequencies between about 20 and 20 000 hertz, those with higher frequencies being called ultrasound. Sound is propagated by vibrations of molecules in the medium, producing fronts of compression and rarefaction. Sound waves are longitudinal as the molecules vibrate in the direction of propagation; the speed of sound in air at 0°C

is about 332 metres per second (760 mph). The three principal characteristics of a sound are its pitch (the frequency of the wave), loudness (the amplitude of the wave), and *timbre (the extent to which it contains harmonics of the fundamental frequency). See also ACOUSTICS; SOUND INTENSITY.

sound barrier An obstacle experienced by subsonic *aircraft attempting to fly at or above the speed of sound. Drag increases sharply, lift falls off, and the aircraft becomes difficult to control (see AERONAUTICS). At subsonic speeds the pressure waves created by the aircraft as it flies through the air are able to move ahead of the aircraft; at supersonic speeds they cannot escape in a forward direction as the source is moving faster than the pressure waves themselves. Thus shock waves build up on the aircraft's wings and fuselage, creating an apparent barrier to supersonic flight. Many aircraft are now capable of supersonic flight (including Concorde) by greater streamlining, sweptback wings, and more powerful engines. As these aircraft cross the sound barrier a **sonic boom** is heard. This is created by a shock-wave cone with the nose of the aircraft at its vertex. In level flight the intersection of this cone with the ground produces a hyperbola at all points along which the boom is heard.

sound barrier. As an aircraft passes through the sound barrier the sonic boom is heard along a hyperbolic area on the ground.

sound intensity The rate at which sound energy is propagated through a unit area perpendicular to the direction of propagation. It is measured in watts per square metre. The intensities of two sound levels are compared by a unit called the *decibel. The intensity of sound is not the same as its loudness, the latter being the magnitude of the sensation produced by the human ear, which is dependent on the frequency of the sound.

Sousa, John Philip (1854–1933) US composer and bandmaster. He wrote military marches including "The Stars and Stripes Forever," "The Washington Post," and "Liberty Bell" and invented the *sousaphone*, a tuba-like band instrument with a forward-facing bell.

souslik (or suslik) A nocturnal ground squirrel belonging to the genus *Citellus* (34 species), of E Europe, Asia, and North America (where it is sometimes called a gopher). The European souslik (*C. citellus*) is yellowish brown with large eyes and small ears. *See also* CHIPMUNK.

South Africa, Republic of (Afrikaans name: Suid-Afrika) A country occupying the S tip of Africa. Narrow coastal plains rise to plateaus in the interior, with the Drakensberg mountains in the E. The N is mainly desert. The Limpopo, Molopo, and Orange Rivers mark the N boundary. The Vaal, a tributary of the Orange, is another important river. The majority of the inhabitants are Africans (71%) with White, Coloured, and Asian (mostly Indian) minorities. *Economy:* although South Africa is highly industrialized, agriculture (including citrus fruits) is still important. South Africa is the world's biggest producer of gold, diamonds, platinum, and chrome; uranium, coal, manganese, phosphates, and iron are also mined. Industries include metals, machinery, chemicals, food processing, and textiles. Wine making is of growing importance, as is tourism. *History:* Bantu-speaking tribes arrived from the north between 1000 and 1500. The Portuguese under Bartolomeu Dias (c. 1450–c. 1500) first sighted the Cape of Good Hope in 1488 but made no permanent settlement. The Dutch East India Company settlement (1652) at Table Bay (Cape Town) expanded into the interior. During the Napoleonic Wars Britain acquired the Cape Colony for strategic reasons, a possession confirmed in 1814. In the 1830s increasing numbers of Dutch farmers (or Boers, forebears of the modern Afrikaners) moved E and N to escape British rule, clashing with the *Bantu peoples who were then migrating southwards (*see* GREAT TREK). The Boers founded two independent republics, the Orange Free State and the Transvaal, but their republic in Natal was soon annexed by the British (1843), who were also expanding the Cape Colony. *Kruger's assertion of Boer independence led to war with the British (1880–81, 1899–1902) (*see* BOER WARS). The need for cooperation led the two former Boer republics and the two British colonies to combine in the Union of South Africa (1910). In both World Wars South Africa, under J. C. *Smuts, enthusi-

astically supported Britain, but in 1948 Smuts was ousted by the anti-British Afrikaner National Party and in 1961 South Africa became a republic outside the Commonwealth. From 1910 until 1994 the treatment of the non-White majority was the crucial political issue (*see* APARTHEID). In 1976 the *Transkei became the first independent Bantu Homeland (Bantustan); these areas were abolished in 1994. South Africa intervened in Angola (1976) and Namibia, and supported the White minorities in Zimbabwe and Mozambique. Some non-Whites received limited parliamentary power under a new tricameral constitution (1984). In the face of rising unrest a state of emergency was declared in 1985, leading the USA and EC to impose economic sanctions. In 1989 P. W. Botha was replaced as president by F. W. de Klerk, who legalized the banned African National Congress, released Nelson *Mandela from prison, and began to dismantle apartheid. Classification by race was ended in 1991. In 1993 the government was replaced by a multiracial multiparty Transitional Executive Council (TEC), which devised an interim constitution. In 1994 the ANC won multiracial elections and Mandela became president. South Africa then rejoined the Commonwealth. A permanent constitution was adopted in 1996. Mandela retired in 1999 and, following elections, Thabo *Mbeki became president. Official languages: Afrikaans, English, and African languages. Currency: rand of 100 cents. Area: 1 221 042 sq km (472 359 sq mi). Population (2003 est): 45 349 000. Capitals: Pretoria (administrative), Bloemfontein (judicial), Cape Town (legislative).

South America The fourth largest continent, lying chiefly in the S of the W hemisphere between the Pacific and Atlantic Oceans. It is linked to the continent of North America by the Isthmus of Panama. An ancient shield occupies much of the NE part of the continent and forms the Brazilian and Guiana Highlands. These are separated by the vast basins of the Orinoco, Amazon, and Paraná–Paraguay river systems. In the extreme W, beyond a series of plains, rise the mountains and high plateaus of the *Andes. South America's climate varies considerably, largely because of its length, but much is tropical with vast areas of tropical rainforest (*selva*). The population consists chiefly of the indigenous Indians, Europeans (especially Spanish and Portuguese), and mestizos together with large numbers of Negroids. *History:* the flourishing kingdoms of South America (such as those of the *Incas and Chibchas), were vanquished by the Spanish conquistadors. The entire continent was divided—

Portugal taking the NE portion (now Brazil) and Spain the remainder—during the 16th century. With the collapse of the Spanish Empire during the early 19th century, there followed struggles for independence under national leaders, who included *Bolívar and *San Martín. Large-scale European immigration occurred in the 19th century. During the 20th century the constituent nations became increasingly industrialized and saw rapid rises in their populations. Although political and economic instability was endemic for most of the century, democratic government is now in place in every country and several (notably Chile and Brazil) have achieved prosperity. Area: 17 767 331 sq km (6 858 527 sq mi). Population (1996 est): 317 846 000.

Southampton 1. 50°55'N 1°25'W A city in S England, in Southampton unitary authority, Hampshire on Southampton Water (an inlet of the English Channel). It is the UK's principal passenger port, used by the largest transatlantic liners, and has four tides daily. It is also an industrial centre with a large oil refinery at Fawley. Population (1991): 210 138. **2.** A unitary authority in S England, in Hampshire. Area: 49 sq km (19 sq mi). Population (2001): 217 478.

Southampton, Henry Wriothesley, 3rd Earl of (1573–1624) English courtier, famous as the patron of Shakespeare. He was involved in the Earl of Essex's conspiracy against Elizabeth I (1600), sentenced to death, but pardoned by James I (1603).

South Australia A state of S central Australia, on the Indian Ocean and Great Australian Bight. It consists chiefly of low-lying plains with the *Great Victoria Desert in the W, rising in the NW to the Musgrave Ranges and in the SE to the Flinders Range. The only major river is the Murray. Intensive agriculture is restricted to the S. The vineyards of the fertile Barossa Valley are important, producing almost half of Australia's wine. Mineral resources include iron ore, coal, large natural gas fields in the N, and opals. Industry is concentrated in Adelaide. Area: 984 377 sq km (380 070 sq mi). Population (1999 est): 1 493 070. Capital: Adelaide.

South Ayrshire A council area in SW Scotland on the Firth of Clyde, comprising part of the historic county of Ayrshire. Absorbed into Strathclyde Region in 1975, it became an independent unitary authority in 1996. South Ayrshire is mainly agricultural, but fishing and tourism are also important. Area: 1202 sq km

(464 sq mi). Population (2001): 112 097. Administrative centre: Ayr.

South Carolina A state in the SE USA, on the Atlantic coast. Lowlands make up two-thirds of the state rising to uplands in the NW. The large areas of woodland supply the furniture industries and the large textile and clothing industries are based on the region's cotton crop. One of the 13 original colonies, it became separate from North Carolina in 1713 and was the first state to secede from the Union (1860). Area: 80 432 sq km (31 055 sq mi). Population (2000): 4 012 012. Capital: Columbia.

South Caucasian languages A group of languages, also known as the Kartvelian languages, spoken by the people of W Transcaucasia and adjacent regions. It includes *Georgian, Svan, Mingrelian, and Laz. Only Georgian possesses a literary tradition.

South China Sea A section of the W Pacific Ocean, between SE Asia, Borneo, the Philippines, and Taiwan. A monsoon area, it is heavily fished.

South Dakota One of the Plains states in N central USA. The Missouri River separates the arid Badlands, the Black Hills, and the Great Plains in the W from the flat fertile prairie in the E, which forms the basis of South Dakota's predominantly agrarian economy. Livestock and livestock products are the chief source of revenue. Part of the Louisiana Purchase (1803), the gold rush and land boom of the 1880s brought many settlers and South Dakota became a state in 1889. Area: 199 551 sq km (77 047 sq mi). Population (2000): 754 844. Capital: Pierre.

Southend-on-Sea 1. 51°33'N 0°43'E A resort in SE England, in Southend-on-Sea unitary authority, Essex, on the lower Thames estuary. It is the nearest seaside resort to London and has the world's longest pleasure pier. Population (1991 est): 158 517. **2.** A unitary authority in SE England, in Essex. Area: 42 sq km (16 sq mi). Population (2001): 160 256.

Southern Alps The highest range of mountains in New Zealand. It extends SW–NE through South Island and contains many peaks over 3000 m (10 000 ft), including Mount *Cook. Glaciers, fed by the central snowfields, flank the mountains. It is an important winter-sports area.

South Georgia An island in the S Atlantic Ocean, a UK overseas territory. It has no permanent population but there is a British Antarctic Survey base. With the Falkland Is-

lands, it was invaded by Argentina (1982) but was soon recaptured. Area: 3755 sq km (1450 sq mi).

South Gloucestershire A unitary authority of SW England, in Gloucestershire; it was part of Avon county from 1974 to 1996. Area: 510 sq km (197 sq mi). Population (2001): 245 644.

South Island The larger of the two principal islands of New Zealand, separated from North Island by Cook Strait. It is generally mountainous, including the *Southern Alps in the W, with coastal plains.

South Lanarkshire A council area of S Scotland, consisting of the S part of the historic county of Lanarkshire. Absorbed into Strathclyde Region in 1975, it became an independent unitary authority in 1996. It consists of the valley of the River Clyde and is mainly agricultural. Forestry and market gardening are also important. Area: 1771 sq km (684 sq mi). Population (2001): 302 216. Administrative centre: Hamilton.

South Pole See ANTARCTICA.

Southport 53 39N 3 01W A town and resort in NW England, in Sefton unitary authority, Merseyside, on the Irish Sea. Its annual flower show is famous. Population (1991): 90 959.

South Sea Bubble (1720) The collapse of the British market in South Sea stocks that had far-reaching political repercussions. The South Sea Company was founded in 1711 to trade with Spanish America and in 1718 George I became its governor. A boom in South Sea stock was followed by collapse and the subsequent inquiry revealed corruption among ministers and even touched the king. The day was saved by Sir Robert *Walpole, who transferred the South Sea stocks to the Bank of England and the East India Company.

South Shields 55 00N 1 25W A port in NE England, in South Tyneside unitary authority, Tyne and Wear, on the Tyne estuary opposite North Shields. Industries include petrochemicals and paint manufacture; shipbuilding has declined. The first lifeboat was built here (1790). Population (1991): 83 704.

South Tyneside A unitary authority in NE England, in Tyne and Wear. Area 64 sq km (25 sq mi). Population (2001): 152 785.

South Yorkshire A metropolitan county of N England, created in 1974 from the S part of the West Riding of Yorkshire and a small part of NE Derbyshire. In 1986 the county council was abolished and administrative powers were

devolved to the districts of Sheffield, Rotherham, Doncaster, and Barnsley. Agriculture is important on the Pennines in the W and on the lowlands in the E. The main industrial activities include iron and steel and engineering. Area: 1562 sq km (603 sq mi).

Soutine, Chaim (1893–1943) Lithuanian-born painter, who emigrated to Paris in 1913. Using thickly applied paint, intense colour, and distorted and writhing forms, he was, together with *Chagall, the leading representative of French expressionism.

soviet A government council in the Soviet Union. Soviets originated as committees of workers' deputies in the *Revolution of 1905 and were again established in the *Russian Revolution of 1917. The Supreme Soviet was in theory the supreme organ of government in the Soviet Union; soviets were also elected at the local, provincial, and republican levels. Candidates, one for each deputy, were selected by the Communist Party.

Soviet Union (official name: Union of Soviet Socialist Republics) A former country in E Europe and N Asia. It was a federal state comprising 15 constituent republics: the Armenian, Azerbaidzhan, Belarussian, Estonian, Georgian, Kazakh, Kirgiz, Latvian, Lithuanian, Moldavian, Russian Soviet Federal, Tadzhik, Turkmen, Ukrainian, and Uzbek Soviet Socialist Republics. Administrative subdivisions included 20 Autonomous Soviet Socialist Republics and, within some of these, 8 autonomous regions (Russian *oblast*, region). The population included over a hundred national groups. The most numerous were the Russians, Ukrainians, Uzbeks, Belarussians, Tatars, and Kazakhs. *Economy*: formerly based on state ownership and controlled through Gosplan (the State Planning Commission) and Gosbank (the State Bank), it began a programme of liberalization in the late 1980s, with privatization of state monopolies and new pricing policies. Such a system was designed to replace the five-year plans, under which the economy had been directed since 1928. The country possessed vast natural resources. The Soviet Union was the world's leading producer of oil, coal, iron ore, cement, and steel; manganese, gold, and natural gas were also of major importance. Industry was concentrated on the production of capital goods. Agriculture, which was organized in a system of state and collective farms, was highly mechanized but not very productive. Fishing, forestry, and dependent industries were also important. *History*: the February and October Revolutions in Russia (see RUSSIAN REVOLU-

TION) were followed by civil war (1918–22), after which communist control was complete. The Soviet Union was created in 1922 from the union of Russia, Ukraine, Belarussia, and Transcaucasia. After *Lenin's death (1924) *Stalin had emerged as leader by 1928, having ousted Trotsky. Under Stalin the Soviet Union became a major industrial power but a totalitarian state, with effective political opposition eliminated during the 1930s by purges. World War II established the Soviet Union as one of the two major superpowers with effective control over much of E Europe (see WARSAW PACT). Relations with the other superpower, the USA, became tense during the *Cold War and again following the Soviet invasion of Afghanistan (1979). The Soviet Government used military force to crush the Hungarian Revolution (1956) and the Czechoslovakian liberalization programme (1968). In 1982 the Soviet leadership directed the suppression of the Solidarity trade union in Poland. Internal dissent was suppressed until the mid-1980s, when more liberal policies were adopted under *Gorbachov (see GLASNOST). A parliament of approved elected representatives called the Congress of People's Deputies was established in 1989 and in 1990 the Communists voted to give up their guaranteed right to rule, to create a strong new executive presidency, and to allow private property ownership. Relations with the West improved greatly with important agreements on disarmament. In 1989 the Soviet Union did not intervene when Communist regimes throughout E Europe were replaced by multiparty systems. The 1980s also saw growing separatist movements in many of the Soviet Union's constituent republics. In 1991 Communist Party rule in the Soviet Union collapsed following the failure of an anti-Gorbachov coup by Communist hardliners. The constituent republics asserted their independence and the Soviet Union ceased to exist in December 1991. In the same month the *Commonwealth of Independent States, a looser organization with responsibility for economic and military cooperation, was formed.

Soweto 26 10S 28 02E A large urban area in South Africa, in the Transvaal forming a suburb of Johannesburg. It is inhabited by Black Africans and comprises 36 townships, divided into tribal areas. In June 1976, it was the scene of serious rioting by African students during which over a hundred people died; there were further riots in 1985. Population (1996): 1 098 094.

soya bean (or **soybean**) An annual plant,

Glycine max, widely cultivated for its seeds. The many commercial varieties produce clusters of pods, each containing two or three seeds. The ripe seeds contain 35% protein. Soya-bean oil is extracted for use in making margarines, cooking oils, resins, and paints and for many other foods, chemicals, and textiles. The meal residue is an important protein food for livestock and a meat substitute for man. The beans are also eaten whole, ground into flour, and as soy sauce. Family: *Leguminosae*.

Soyinka, Wole (1934–) Nigerian dramatist and writer. His works include the plays *The Lion and the Jewel* (1963) and *A Scourge of Hyacinths* (1992), the novel *The Interpreters* (1965), and essays in *The Burden of Memory, the Muse of Forgiveness* (1998). He was imprisoned during the Nigerian civil war (1967–69) and later exiled (1993–98). He won the 1986 Nobel Prize.

Soyuz See SALYUT.

spacecraft A vehicle designed to be launched into space and to function effectively for a considerable period in space. Unmanned craft include several thousand *satellites of diverse functions and planetary probes. Space stations and *space shuttles carry crews.

space shuttle One of a series of manned reusable US space transportation systems developed by *NASA. First launched in April 1981 it was operational by 1982. It consists of a delta-wing Orbiter that has three powerful rocket engines, a large cargo bay, and living space. Satellites and other craft can be launched from the cargo bay. Having completed its mission (7–30 days), the shuttle enters the earth's atmosphere in a shallow dive and makes an unpowered landing. Flights were suspended following the explosion of the shuttle *Challenger* (1986) but resumed in 1988. A further disaster occurred in 2003, when the shuttle *Columbia* disintegrated as it re-entered the earth's atmosphere, killing all seven astronauts. The first reusable Soviet shuttle, *Buran*, was launched in 1988.

space station A large orbiting spacecraft on which people can live and work in weightless conditions. The first space station was the Soviet Salyut-1, launched in 1971; America's Skylab was orbited in 1973. The USA, in cooperation with 14 other nations, plans to launch an international space station in the early 21st century. See also MIR.

space-time continuum A coordinate system that has four dimensions, three represent-

ing physical space and the fourth time. It is used in *relativity.

Spain, Kingdom of A country in SW Europe, occupying over four-fifths of the Iberian Peninsula. The Balearic and Canary Islands are also part of Spain. It consists mainly of a high plateau, rising over 3000 m (10 000 ft) in the Pyrenees in the NE. *Economy:* although traditionally agricultural, the industrial sector had begun to predominate by the early 1970s. Tourism is a major source of foreign currency. Forestry, fishing, and wine are important and there are rich mineral resources. *History:* early inhabitants included Iberians, Celts, Phoenicians, and Greeks; the Carthaginians conquered most of the Iberian peninsula in the 3rd century BC but were expelled by the Romans in the second Punic War (218–201 BC). Christianity was introduced in the 1st century AD and by the 5th century the Romans had given way to German tribes, including the Vandals and then the Visigoths. The Visigothic kingdom collapsed (711) in the face of Muslim invaders, who dominated most of the centre and S under a series of powerful dynasties. The reconquest of Muslim Spain was pursued throughout the middle ages by the Christian kingdoms in the N and was completed in 1492 with the conquest of Granada by Ferdinand of Aragon and Isabella of Castile. The union of Spain, begun by the union of Aragon and Castile, was now complete. The year 1492 also saw the expulsion from Spain of the Jews, who were followed after much persecution (1609) by the Muslims; the influence of both peoples on Spanish culture was enormous. The 16th century was Spain's golden age. Overseas exploration led to the formation of an empire in the New World, which brought great wealth to Spain. The country's prestige and power, as well as its possessions, in Europe were furthered by the Habsburg kings Charles I (who as *Charles V was also Holy Roman Emperor) and his son Philip II but the latter's reign witnessed the beginnings of decline. The *Revolt of the Netherlands against Spanish rule led to the secession (1581) of the northern Dutch provinces and in 1588 Spain suffered the humiliating defeat of the Armada by the English. Following the Thirty Years' War Spain lost to France its position as the leading European power (1659). The death in 1700 of the last Habsburg king (Charles II), without an heir, led to the War of the *Spanish Succession (1701–14). This confirmed the Bourbon succession and also deprived Spain of the Spanish Netherlands, Milan, Naples, Sardinia, and Sicily. In the second half of the 18th century Spain's decline was arrested by re-

form, especially under Charles III, but in 1808 Napoleon established his brother Joseph Bonaparte on the Spanish throne. The Spanish resistance to their French conquerors contributed to the defeat of Napoleon (see **PENINSULAR WAR**) and in 1814 the Bourbon Ferdinand III (1716–88) was restored. Conflict between supporters and opponents of the pretender Don Carlos (1788–1855) and subsequently between monarchists and republicans dominated the 19th century, during which Spain lost its last American possessions. It was neutral in World War I, following which Miguel Primo de Rivera (1870–1930) established a military dictatorship that undermined the position of the monarchy. In 1931 Alfonso XIII abdicated and the Second Republic was established. The electoral victory of the Popular Front in 1936 precipitated a military revolt led by Gen *Franco that became the *Spanish Civil War (1936–39). Franco's victory initiated over three decades of Nationalist dictatorship. Following Franco's death in 1975, the monarchy was restored and Juan Carlos de Borbón became king. The return to democracy proceeded rapidly. In 1978 provisional regional self-government was granted to Catalonia, Valencia, the Canary Islands, Aragon, Galicia, and the Basque provinces, although terrorist activities by Basque separatists have continued. Spain's first Socialist government in nearly 50 years was elected in 1982 under Felipe González. In the 1996 elections José María Aznar led the right-wing Popular Party to victory. In March 2004 nearly 200 people were killed in a bomb attack on Madrid, presumed to be the work of *al-Qaida. The bombing, and the government's response to it, produced a surprise victory for the Socialists under José Luis Rodríguez Zapatero in that month's general election. Spain joined NATO in 1982 and the EC (now the EU) in 1986. It adopted the European single currency in 1999–2002. Official language: Spanish. Currency: euro of 100 cents. Area: 504 879 sq km (194 883 sq mi). Population (2003 est): 42 600 000. Capital: Madrid.

spaniel One of several breeds of sporting dogs developed in Britain and thought to have originated in Spain. The English springer spaniel is typical, having a lean compact body, long muzzle, and drooping ears. It is longer in the leg than the similar *cocker spaniel but has the same flat wavy weather-resistant coat. It is generally black and white or liver and white, while the smaller Welsh springer spaniel is always red and white. Height: 51 cm (English springer). See also **KING CHARLES SPANIEL**.

Spanish A Romance language spoken in

Spain, Latin America, the Philippines, and elsewhere by about 308 million people. The standard form is based on the Castilian dialect.

Spanish Civil War (1936–39) The civil war in Spain precipitated by a military revolt on 18 July 1936, led by the Nationalist Gen *Franco, against the Republican Government of Manuel Azaña (1880–1940). By the end of 1936 the Nationalists had gained control of most of W and S Spain, while the Republicans held the urban areas of the E and N, including Madrid, Valencia, Barcelona, and Bilbao. During 1937 the Nationalists, with Italian and German help, failed in their attempt to take Madrid but captured Bilbao. In 1938, in spite of the assistance of the *International Brigade and the Soviet Union, the Republican front was broken and early in 1939 Barcelona, Valencia, and then Madrid fell. The Republican cause rallied liberals throughout Europe against fascism.

Spanish moss 1. An epiphytic plant, *Tillandsia usneoides* (or *Dendropogon usneoides*), found in warm regions of America. Its seeds are wind-blown to trees, where they germinate and grow downwards in large silvery-grey beard-like masses, 6–7.5 m long. It is covered in hair-like scales, which absorb water from the air. Family: *Bromeliaceae*. 2. A tropical lichen, *Usnea longissima*, which resembles *T. usneoides*.

Spanish Riding School A centre for classical horsemanship in Vienna, originally sited in the Habsburg imperial palace and probably founded in the late 16th century. The purest *haute école* *dressage of the 16th and 17th centuries is practised. The white *Lipizzaner stallions used here have been bred from horses imported from Spain in the 16th century—hence the title “Spanish.”

Spanish Succession, War of the (1701–14) The third of the European wars caused by Louis XIV's attempts to increase French power. The immediate cause of conflict was the succession to the Spanish throne. Following the death of the childless Charles II, Louis proclaimed the succession of his grandson as Philip V. England felt menaced, and with the Dutch Republic and the Holy Roman Emperor formed an alliance against France in 1701; they were joined by most German states upon the outbreak of general hostilities (1702). Spain, Bavaria, Portugal, and Savoy supported France. The English won a series of brilliant victories under the Duke of *Marlborough but pressed for peace in 1712, when a Spanish-Austrian union threatened. The Treaties of *Utrecht (1713–14) concluded the war.

Spark, Dame Muriel (1918–2006) British novelist, who achieved success with a series of witty satirical novels including *Memento Mori* (1959) and *The Prime of Miss Jean Brodie* (1961). Her later novels include *The Abbess of Crewe* (1974), *A Far Cry from Kensington* (1988), *Reality and Dreams* (1996), and *The Finishing School* (2004).

sparrow A small thick-billed member of the *weaverbird family. Sparrows are generally brown and grey in colour, often with black or bright yellow patches. They are mostly tropical Old World species but also occur in Eurasia; the Eurasian house sparrow (*Passer domesticus*) has been introduced to North America, where it is now a pest. Sparrows eat seeds, etc., feeding on the ground. Subfamily: *Passerinae*.

sparrowhawk A small woodland *hawk, *Accipiter nisus*, occurring in Eurasia and NW Africa. It has a long tail and short rounded wings and the male (27 cm long) is grey with brown-barred white underparts; females (38 cm long) are brown above. It hunts small birds.

Sparta 37°05N 22°25E In ancient Greece, the capital of Laconia on the River Eurotas in the S Peloponnese. Having developed during the 10th century BC, Sparta controlled much of Laconia and Messenia by 700 BC. It became an austere militaristic state, where weaker boys were abandoned at birth and those that survived were subjected to a rigid military training. Its military strength brought conflict in the 5th century with Athens, and ultimate victory (404) in the consequent *Peloponnesian War: defeat by the Thebans at Leuctra (371) marked the beginning of Spartan decline. The ancient city was destroyed by the Visigoths in 396 AD.

Spartacus Thracian gladiator, who led a slave revolt against Rome in 73 BC. After defeating the Romans in five separate engagements in Italy, he moved N to Cisalpine *Gaul. When his followers refused to disperse, Spartacus marched S again and was defeated by Marcus Licinius *Crassus (71). He and his followers were crucified.

Spartina A genus of grasses (16 species), known as cordgrass, found on salt marshes and tidal flats of North America, Europe, and Africa. They have stiff erect stems and yellowish flower spikes. Townsend's cord grass (*S. townsendii*) has been used extensively to help reclaim coastal land.

Speaker of the House of Commons The presiding officer of the lower chamber of the British parliament. Elected by each new parliament, a Speaker or his deputy regulate

with impartiality all the debates and proceedings of the House, except for proceedings in committee. The current Speaker (since 2000) is Michael Martin.

spearmint An aromatic perennial herb, *Mentha spicata*, native to central and S Europe and widely cultivated as a culinary herb. The oil extract from the leaves is used to flavour sweets, etc. Family: *Labiatae*.

Special Air Service (SAS) A specialist division of the British army, formed in 1942. The unit is highly trained in operations behind enemy lines and is the most secretive of the British forces. Its motto is "Who dares wins."

species A unit of classification of living organisms. Individuals of the same species usually resemble one another closely and can breed among themselves to produce fertile offspring that resemble the parents. Some species are subdivided into subspecies and varieties. Breeds of domestic animals and cultivated varieties of plants have been specially developed by man for economic or other purposes and are all derived from a few wild species. Those originating from the same species can interbreed, despite obvious differences in character. All breeds of domestic dog, for instance, belong to the same species—*Canis familiaris*—and can breed together.

specific gravity See DENSITY.

specific heat capacity (c) The quantity of heat needed to raise a unit mass of substance by 1 K. It is measured in joules per kelvin per kilogram. For gases, the specific heat capacity at constant pressure (c_p) exceeds that at constant volume (c_v) as heat is required to do work against the surroundings during the expansion.

spectacles Lenses worn in frames in front of the eyes to correct defective vision. Convex lenses bend parallel light rays inward; they are used by those unable to focus on close objects (see LONGSIGHTEDNESS). Concave lenses have the opposite effect and are used by those unable to focus on distant objects (see SHORTSIGHTEDNESS). Astigmatism is treated by wearing lenses that produce a compensating distortion of the light rays. Bifocal spectacles have convex lenses consisting of upper and lower parts of different curvatures, for focusing on distant and near objects, respectively; they are worn for presbyopia. See also CONTACT LENSES.

spectral type See HARVARD CLASSIFICATION SYSTEM.

spectrum In general, the way in which a particular property of a system is distributed over its components. The visible spectrum, for example, is observed in a *rainbow, which shows the distribution of frequencies when sunlight is split up into its components by raindrops. The visible spectrum, however, is only a small part of the electromagnetic spectrum, which ranges from gamma rays to radio waves. **Spectroscopy** is concerned with analysing the emission and absorption of electromagnetic energy by atoms and molecules. Atoms emit and absorb radiation at characteristic frequencies, which show up as lines in their spectrum and can be used to identify particular elements.

speedwell An annual or perennial herbaceous plant of the genus *Veronica* (about 200 species), occurring throughout temperate regions. The flowers are usually blue. The fruit is a flattened heart-shaped capsule. Family: *Scrophulariaceae*.

Speke, John Hanning (1827–64) British explorer. He accompanied Richard Burton (1821–90) on the expeditions (1855, 1857–58) to discover the source of the Nile. They discovered Lake Tanganyika and then Speke went on alone to discover Lake Victoria, which on a second visit in 1860 he established to be the source of the Nile. Burton disputed Speke's claim.

speleology (or spelaeology) The study and exploration of *caves and underground water courses. This includes the survey of caves and the study of their formation, plant and animal life (past and present), and geology. Potholing—or descending through potholes into underground drainage passages in order to follow the course of underground streams—is a popular activity.

Spence, Sir Basil (1907–76) British architect, who became internationally known with his design for rebuilding Coventry Cathedral (consecrated 1962). Later buildings included Sussex University and the British Embassy in Rome (completed 1971).

Spencer, Herbert (1820–1903) British philosopher, an influential exponent of *laissez-faire. He believed that state intervention limited progress and he developed this idea fully in his popular *The Man versus the State* (1884). Spencer's other writings include works on psychology, ethics, and sociology. He supported Darwin's theory of evolution and applied evolutionary ideas to social development.

Spencer, Sir Stanley (1891–1959) British painter. He is known for his religious subjects,

often depicted in the everyday setting of his native village of Cookham, Berkshire.

Spenser, Edmund (c. 1552–99) English poet. His major work, *The Faerie Queene*, a long moral allegory in nine-line "Spenserian" stanzas, was dedicated to Elizabeth I and published in six books in 1590 and 1596. His other works include *The Shepheardests Calendar* (1579) and the *Epithalamion* (1595), celebrating his second marriage.

sperm (or **spermatozoon**) The reproductive cell of male animals, which is formed in the *testis and fertilizes an egg cell during sexual reproduction. A sperm usually has a head region, containing the genetic material, and a tail, by means of which it swims to the egg. In men, sperms develop and mature in the testes. At ejaculation they are mixed with secretions from various glands (including the *prostate gland) to form semen.

sperm whale A large toothed *whale, *Physeter cathodon*, also called cachalot. It is 18 m long, grey-blue above and pale beneath, with tiny flippers and large tail flukes. Family: *Physeteridae*.

Spey, River A fast-flowing river in NE Scotland, flowing mainly NE through the Grampian Mountains to Spey Bay. It is known for its salmon fishing. Length: 172 km (107 mi).

Sphagnum A widely distributed genus of mosses (over 300 species), called bog or peat moss, forming dense raised clumps in bogs and other waterlogged places. Green to dark red in colour, the fine stems bear clusters of thread-like branches, densely clothed with tiny leaves, and globular spore capsules. The ability of the stems and leaves to retain water means that these mosses can drain very wet ground and form bogs. The dead remains form peat. Family: *Sphagnaceae*.

sphinx A mythological creature with a lion's body and a human head, occurring in the art and legends of most ancient Near and Middle Eastern civilizations. The most famous representation is the Great Sphinx at Giza, Egypt, dating from the 3rd millennium BC. In Greek legend, the Sphinx was a female monster that preyed on travellers going to Thebes. She killed those who could not answer her riddle, which was finally solved by *Oedipus.

sphygmomanometer A device for measuring arterial *blood pressure. It consists of an inflatable arm cuff connected via a rubber tube to a column of mercury with a graduated scale or an aneroid device. The cuff is inflated until the pulse cannot be detected (using a

stethoscope) and then slowly deflated until the systolic and then the diastolic pressure can be recorded as the pulse returns.

spices See HERBS AND SPICES.

spider An *arachnid belonging to the worldwide order *Araneae* (or *Araneida*; over 30 000 species). The body of a spider consists of a cephalothorax and an abdomen separated by a narrow "waist." There are eight walking legs, up to eight eyes, and several pairs of spinnerets, which produce silk used for making webs, egg cocoons, etc. Spiders are predominantly terrestrial and prey mainly on insects, hunting them or trapping them in their webs. The victims are killed with poison-bearing fangs; in a few species the poison is harmful to man. The female is generally larger than the male, which she sometimes kills and eats after mating. See also BLACK WIDOW; TARANTULA; WATER SPIDER; WOLF SPIDER.

spider crab A marine *crab belonging to the widely distributed family *Maiidae*, especially one of the genus *Libinia*. It has a thick rounded body with long spindly legs and generally moves slowly. Most spider crabs are scavengers, especially of dead animals.

spider monkey A monkey belonging to the genus *Ateles* (4 species), of Central and South American forests. Spider monkeys have very long legs and a long prehensile tail, which is capable of supporting their weight. They live in family groups in thick forest, feeding on seeds and leaves. Family: *Cebidae*.

spider plant A plant of the genus *Chlorophytum*, especially *C. elatum*, native to South Africa and widely grown as a house plant. It has long green and white leaves and periodically produces a stem bearing small white flowers or young plantlets. Family: *Liliaceae*.

spiderwort See *TRADERSCANTIA*.

Spielberg, Steven (1946–) US film director, whose hugely successful adventure and fantasy films include *Jaws* (1975), *ET* (1982), and *Jurassic Park* (1993). *The Color Purple* (1986), *Schindler's List* (1994), and *Saving Private Ryan* (1998) have more serious themes. In 1996 he set up Dream Works, his own Hollywood studio.

spin A property possessed by elementary particles as a result of which they possess a constant angular momentum that is independent of their motion. The spin is quantized and labelled by a spin *quantum number (symbol: *s*), which may be integral or half-integral.

spina bifida A defect, present at birth, in

which the backbone fails to fuse properly, leaving the spinal cord and its coverings exposed. Commonly the child has paralysed legs and disordered bladder and bowel function. Intelligence is often normal. The condition can be diagnosed during pregnancy (see AMNIOCENTESIS), and is less likely to occur if pregnant women take extra folic acid.

spinach An annual herbaceous plant, *Spinacia oleracea*, native to Asia and widely cultivated as a vegetable. Its edible leaves are rich in iron and vitamins A and C. Family: *Chenopodiaceae*.

spinal cord An elongated part of the central nervous system, running downwards from the base of the brain and consisting of a core of grey matter (nerve cell bodies) surrounded by white matter (nerve fibres). It is surrounded and protected by the spine and is enclosed in membranes (meninges). It gives off spinal nerves, usually in pairs, and ends in a bundle of nerves supplying the legs and lower part of the body. Through it run the nerve fibres between the brain and the body; injury can therefore cause paralysis and loss of sensation.

spine In anatomy, the backbone, or vertebral column: a series of small bones (vertebrae) that runs up the centre of the back. The spine encloses and protects the spinal cord, articulates with the skull, ribs, and pelvis, and provides attachment for muscles of the back. There are 26 vertebrae in the adult spine. The vertebrae are connected by tough discs of cartilage (intervertebral discs), which absorb the shock produced by running and other movements.

spinnet A plucked keyboard instrument of the harpsichord family that superseded the virginals in the 17th century. It is wing shaped, the strings (one to each note) being at an angle of 45° to the keyboard.

spinning The process of converting cleaned and straightened fibres into yarn by twisting overlapping fibres together. Yarn was made originally by drawing out a length of fibre from the mass and attaching it to a vertically hanging stick (spindle) that was weighted to help it spin round. This process was mechanized first by the spinning wheel (in Europe not until the 14th century). The inventions of Hargreaves, Arkwright, and Crompton in the late 18th century industrialized the process. Modern spinning machines produce thousands of metres of yarn every hour. As applied to synthetic fibres, spinning is the extrusion of viscous solutions to form continuous filaments.

Spinoza, Benedict (or **Baruch de S.**; 1632–77) Dutch philosopher and theologian of Jewish parentage. Influenced by the writings of Descartes, Hobbes, and Giordano Bruno (1548–1600), Spinoza rejected the concepts of the personal nature of God and the immortality of the soul. The Jewish community of his native Amsterdam expelled him in 1656 on account of his unorthodoxy and his *Tractatus Theologico-Politicus* (1670) was furiously attacked by Christian scholars. The idea of God as the basis of all things was, however, central to his philosophy. His major work, generally known as the *Ethics*, could only be published posthumously in 1677.

Spiraea A genus of shrubs (about 100 species), widely distributed in N temperate regions. Many are cultivated as ornamentals, including the willow spiraea (*S. salicifolia*), which bears dense clusters of small pink flowers. Family: *Rosaceae*.

spirochaete A bacterium belonging to the order *Spirochaetales*. Spirochaetes are corkscrew-shaped and flexible: they swim by means of bending and looping motions, achieved by contraction of a bundle of fibrils within the cell. Some spirochaetes cause diseases, including syphilis and yaws in humans.

Spirogyra A genus of green algae, also called mermaid's tresses or pond scum, in the form of threadlike strands of connected cells up to about 30 cm long. Large masses may be found floating near the surface of quiet fresh waters. Reproduction is asexual (by fragmentation) or sexual (see CONJUGATION).

Spitsbergen See SVALBARD.

spitz One of a group of dog breeds originating in N Eurasia and having a thick coat, small pricked ears, and a brushlike tail carried over the back. The Finnish spitz, bred in Finland as a hunting and guard dog, has a reddish-brown or yellowish-red coat.

spleen A rubbery dark-red organ, about 14 cm long, situated in the abdomen just beneath the lower border of the left side of the rib cage. The spleen assists in the body's defence mechanisms by producing antibodies in newborn babies and by absorbing and digesting bacteria in the bloodstream. It also removes worn-out and abnormal red blood cells and other particles from the circulation. The spleen becomes enlarged in some diseases, including liver disease and severe infections.

Split (Italian name: Spalato) 43°31'N 16°28'E A port in SE Croatia, on the Adriatic Sea. The vast

3rd-century AD Palace of Diocletian contains the present-day city centre, including the cathedral, which was Diocletian's mausoleum. It has a university (1974) and diverse industries. Population (2001): 173 692.

sponge An aquatic invertebrate animal belonging to the phylum *Porifera* (about 5000 species). Most sponges are marine, found attached to rocks or the sea bed, and measure up to several metres across: they may be treelike, cylindrical, or flat irregular masses. Sponges have an internal skeleton of lime, silica, or a fibrous protein (spongin). Bath sponges are spongin skeletons without the living animals. The simplest type of sponge has a vase-shaped body with a pore at the top and smaller pores in the sides. The inside is lined with special cells, which maintain a flow of water in through the side pores and out at the top. Food particles in the water are extracted by these cells; other cells in the body wall digest food, secrete the skeleton, and produce eggs and sperm. Fertilized eggs are dispersed in the water current and the free-swimming larvae eventually settle and become new sponges. The animals can also reproduce asexually, by budding or fragmentation.

spoonbill A long-legged wading bird belonging to a subfamily (*Plataleinae*; 6 species) occurring around estuaries and lakes in tropical and subtropical regions worldwide. 60–80 cm long, spoonbills are usually entirely white, often with a naked head. They feed on fish and crustaceans picked up by sweeping the large spatulate bill from side to side in mud or shallow water. Family: *Threskiornithidae* (ibises and spoonbills); order: *Ciconiiformes* (herons, storks, etc.).

spore The small, often single-celled, reproductive unit of plants, algae, fungi, protozoa, and bacteria, which may serve either as a rapid means of propagation or as a dormant stage in the life cycle. Spores may be produced sexually or asexually, i.e. fusion of sex cells (gametes) may or may not occur before their formation. In plants exhibiting an *alternation of generations spores are formed by the sporophyte following meiosis and give rise to the gametophyte, which produces the sex cells.

sporophyte See ALTERNATION OF GENERATIONS.

sporozoan A microscopic single-celled organism of the phylum *Apicomplexa* (formerly *Sporozoa*; see PROTOZOA), all of which are parasites with complex life cycles involving asexual and sexual forms of reproduction. They are

often found in the intestinal tracts or blood of animals and form resistant spores or cysts, which can remain dormant until entering a suitable host.

sprat A small food fish, *Clupea* (*Sprattus*) *sprat*, that is similar and related to the herring. It lives in shoals in the E Atlantic, N Mediterranean, and British coastal waters. The young are known as whitebait.

springbok A rare antelope, *Antidorcas marsupialis*, inhabiting arid regions of S Africa. It has a white face with a black line along each side of the muzzle and a patch of white hairs on the rump, which can be flashed as an alarm signal.

Springsteen, Bruce (1949–) US rock singer and guitarist. Born in New Jersey, he built up a huge following with songs describing working-class US life and with his energetic live performances; his albums include *Born to Run* (1975), *Born in the USA* (1984), *The Ghost of Tom Joad* (1995), and *The Rising* (2002).

spruce A coniferous tree of the genus *Picea* (about 50 species), widely distributed in the N hemisphere. Its needles grow in spirals and leave peglike projections on the shoots when they fall. The woody cones hang down from the branches. An important and widely grown timber tree is the Norway spruce (*Picea abies*), from N and central Europe; the timber is known as white wood or deal. Young specimens are used as Christmas trees in Britain. Family: *Pinaceae*.

spurge See EUPHORBIA.

Sputnik A series of Soviet unmanned satellites, the first of which was the first spacecraft to be launched (4 October 1957).

Square Deal A programme of economic and social reform intended by Theodore *Roosevelt (president 1901–09) to benefit the "plain man" in the USA. It sponsored improved labour conditions, regulations regarding food, and anti-monopoly legislation.

squash The fruit of certain plants belonging to the genus *Cucurbita* (15 species), especially *C. maxima*. Native to the New World, squash plants are widely cultivated, producing fleshy edible fruits. They are usually served as a cooked vegetable. Family: *Cucurbitaceae*. Compare GOURD; PUMPKIN.

squash rackets A racket-and-ball game played in a four-walled court. Players hit the ball with the object of making a shot that the opponent cannot return. (When the ball is played it must hit the front wall of the court

(25 332 sq mi). Population (2003 est): 19 665 000. Capital: Colombo.

SS (German: Schutzstaffel, Defence Squad) The Nazi military corps created in 1925 as Hitler's bodyguard and commanded by Heinrich Himmler from 1929. The SS, or Blackshirts, by the mid-1930s controlled the Nazis' security system, including the *Gestapo, concentration camp guards, and the Waffen SS, an elite corps of combat troops in World War II. The activities of the SS were condemned at the Nuremberg trials (1946).

St Names beginning St are listed under Saint.

Staffordshire A county in the Midlands of England. It consists mainly of undulating lowlands rising to moorlands in the N, with the River Trent flowing SE. Agriculture is important, especially dairy farming. Industries include the manufacture of pottery, which became famous during the 18th century, especially through the work of Josiah *Wedgwood. Coalmining was formerly important. In 1974 the industrial area in the S passed to the new metropolitan county of the West Midlands. Stoke-on-Trent became an independent unitary authority in 1997. Area (excluding Stoke-on-Trent): 2624 sq km (1013 sq mi). Population (2001, excluding Stoke-on-Trent): 806 737. Administrative centre: Stafford.

Staffordshire bull terrier A breed of dog developed from a bulldog-terrier cross as a pit dog. It is stockily built with a broad deep head and a short smooth coat that may be of various colours. Height: 35–40 cm (English).

stag beetle A beetle belonging to a family (*Lucanidae*; about 900 species) occurring mostly in the tropical regions. The males have well-developed mandibles that in many species resemble antlers. They are used during combat with other males. Most stag beetles are black or brown, although tropical species are often more colourful.

stagecoach A large horse-drawn coach for four or six horses (mules in some countries) used for scheduled transport of passengers and mail in W Europe and in America from the second half of the 18th century. Stagecoaches disappeared with the advent of rail travel.

staghorn fern A *fern of the genus *Platycerium*, which grows upon other plants but is not a parasite. The fronds fork repeatedly into long pointed leaflets, resembling antlers, and the spore capsules are borne on their undersides. The fern, which is native to most warm

regions, is cultivated as a pot plant. Family: *Polypodiaceae*.

stainless steel An alloy *steel containing up to 20% chromium and 10% nickel. It is corrosion resistant because the oxide that forms on the surface remains intact and protects the metal, unlike other steels in which it flakes off. Stainless steel is used in a wide variety of engineering applications where this property is important, as well as in kitchen utensils.

stalactites and stalagmites Deposits of calcium carbonate in limestone caves; stalactites are conical or cylindrical projections from the cave roof, while stalagmites grow upwards from the floor and are generally more stumpy. They sometimes meet to form a continuous column. They are gradually formed from water containing calcium bicarbonate dripping from the roof. When the water evaporates a solid residue of calcium carbonate is left.

Stalin, Joseph (J. Dzhuqashvili; 1879–1953) Soviet statesman. Born in Georgia, Stalin (whose adopted name means “man of steel”) became a Marxist in the 1890s. In 1903 he joined the *Bolsheviks under *Lenin and in the years preceding the Russian Revolution (1917) was repeatedly imprisoned and exiled. In 1922 he became general secretary of the Communist Party. After Lenin's death in 1924 Stalin struggled to eliminate his rivals, above all *Trotsky, and emerged as supreme dictator in 1929. He abandoned Lenin's New Economic Policy, initiating a series of five-year plans to enforce, with great brutality, the collectivization of industry and agriculture. The 1930s saw a reign of terror, culminating in the great purge, in which Stalin sought to remove his real, or imagined, rivals. In World War II, Stalin became chairman of the Council of People's Commissars and, following Hitler's invasion of the Soviet Union (1941), reversed the German alliance of 1939. He attended Allied conferences at Tehran (1943) and at Yalta and Potsdam (1945). In the postwar years, when Stalin's autocracy intensified, he pursued a foreign policy of imperialism towards the communist countries of E Europe and unremitting hostility towards the noncommunist world. After his death many of Stalin's policies were denounced by the Soviet regime.

Stalingrad, Battle of (1942–43) A battle in World War II, in which the German 6th Army under Friedrich Paulus (1890–1957), having entered Stalingrad (now Volgograd), surrendered

to the Russians under *Zhukov. The Germans lost 200 000 men.

stamen The part of a flower that produces the *pollen (male gametes). It comprises an anther, a lobed structure consisting of four pollen sacs, borne on a stalk (filament). The pollen develops within the sacs, which split open to release it. In self-pollinated flowers, the stamens open inwards, towards the pistil, but in cross-pollinated flowers they open outwards. See also FLOWER.

Stamford Bridge 53 59N 0 55W A village in N England, in the East Riding of Yorkshire on the River Derwent. Here King Harold defeated his brother Tostig and King Harald of Norway in 1066, three weeks before his own defeat at Hastings by William the Conqueror. Population (1991): 3099.

Stamp Act (1765) The first British Act that imposed direct taxes on documents, newspapers, and dice in the American colonies. Parliament was forced by colonial hostility to repeal the Act but asserted its right to impose laws on the colonies (Declaratory Act, 1766), thus aggravating the opposition that led to the *American Revolution.

standard deviation See VARIANCE.

Stanislavsky, Konstantin (K. Alekseyev; 1863–1938) Russian actor and theatre director. As director of the Moscow Art Theatre, which he cofounded in 1898, he developed an innovative style of naturalistic production. His theories about acting, later developed in the USA as “method” acting at the *Actors’ Studio, emphasized the actor’s complete identification with his or her character.

Stanley 51 45S 57 56W The capital of the Falkland Islands, in NE East Falkland Island on the Atlantic Ocean. It was the focal point of the Falklands War of 1982. Population (1991): 1643.

Stanley, Sir Henry Morton (1841–1904) British explorer and journalist. He went to the USA in 1859, joined the *New York Herald*, and in 1871 was sent to search for David *Livingstone in Africa. Having found him at Ujiji, the two men explored Lake Tanganyika together. On a second expedition (1874–77) Stanley followed the Congo River to its mouth. By obtaining Belgian sponsorship for exploration in the Congo he was instrumental in securing Belgian sovereignty over the Congo Free State.

Stansted 51 54N 0 12E A village in SE England, E of London in Essex. It is the site of London’s third airport. Population (1991): 4943.

Staphylococcus A genus of spherical bacteria. *S. aureus* is responsible for boils and mastitis, *S. pyogenes* infects wounds, and certain strains cause acute food poisoning.

star A luminous celestial body that is composed of gas and that derives its energy from thermonuclear reactions in its hot dense core. The sun is a typical star: stellar mass usually ranges from about 0.05 to 60 times the sun’s mass. The higher the mass, the brighter, hotter, and larger the star and the shorter its life. Young stars evolve from the *protostar stage when they begin to generate energy by the thermonuclear fusion of hydrogen to form helium. This continues for some 10^6 years for stars of solar mass but for only a few million years for the most massive stars. When the hydrogen is exhausted, stars evolve into *giant stars, those of near solar mass becoming *red giants, and further thermonuclear reactions occur. A low-mass star finally evolves to a *white dwarf. More massive stars explode as supernovae. Stars are not distributed uniformly throughout the universe, but are grouped into enormous assemblies, called *galaxies, as a result of gravitational forces. The nearest star to the sun is 4.3 light years away.

starch A carbohydrate that is an important storage product of many plants. Chemically it consists of linked glucose units. Starch occurs naturally as white powdery granules that are insoluble in cold water but form a gelatinous solution in hot water. Plants manufacture starch by photosynthesis and it is a major constituent of seeds, fruits, roots, and tubers and a major source of dietary energy for animals and man.

Star Chamber, Court of A court, originating in the king’s council of medieval England, that met in the Star Chamber at Westminster Palace. It was concerned chiefly with breaches of the peace. Its misuse by Charles I to enforce his unpopular policies led to its abolition (1641) by the *Long Parliament on the eve of the Civil War.

starfish A marine invertebrate animal belonging to a worldwide class (*Asteroidae*; 1800 species) of *echinoderms. Its fleshy star-shaped body is covered with a spiny skin and has five or more radiating arms. Starfish occur on shores and ocean floors and move slowly, using sucklike tube feet on the underside of the arms. They feed mainly on molluscs and other invertebrates.

starling A noisy sharp-winged songbird, *Stur-*

nus vulgaris, having a black plumage speckled with iridescent purple, green, and white. It is a versatile bird, common on farmland, where it probes the soil for insects, and also in cities, where it is a scavenger. It is gregarious and commonly nests in flocks. Family: *Sturnidae*.

star-of-Bethlehem A spring-blooming perennial plant, *Ornithogalum umbellatum*, native to the Mediterranean and grown in gardens. Growing from a bulb, it has clusters of star-shaped white flowers striped with green. Family: *Liliaceae*.

star of David (Hebrew *magen David*; shield of David) A six-pointed star or hexagram, composed of two equilateral triangles. Widely used from antiquity as an ornament or magical sign, it has been regarded since the 17th century as a Jewish symbol, and was imposed on the Jews as a "badge of shame" by the Nazis. In 1897 it was officially adopted as an emblem of Zionism and it now appears on the flag of Israel.

States General In France, the assembly of representatives of the three estates—clergy, nobility, and the Third Estate or commons. It did not meet after 1614 until summoned by Louis XVI in 1789 on the eve of the *French Revolution. The Third Estate declared itself a National Assembly, which replaced the States General.

states of matter Matter has traditionally been seen as occurring in three states or phases, depending on temperature: in the *solid state mutual forces hold individual atoms firmly in place; in *liquids thermal movement partially overcomes these binding forces, so that the substance has no intrinsic shape; and in *gases molecules and individual atoms fly apart; the gas fills all the available volume. A fourth state is *plasma, in which even atoms are dissociated into electrons and nuclei. In the universe as a whole, plasma is by far the most common state, as it occurs in stars and in galactic space. Transitions between phases may occur at distinct temperatures, melting/freezing points and evaporation/condensation points.

static electricity The effects created by electrical charges at rest. Current electricity is an effect resulting from a flow of electrons; in static electricity electrons from one object are pulled onto another object, usually by rubbing them together, but they do not flow. The effect can be observed with many nonconducting materials, for example a comb passing through dry hair. A force exists between two charged bodies (see **ELECTRIC FIELD**), attractive if they

have opposite charges, repulsive if the charges are similar; the magnitude of the force is given by Coulomb's law (see **ELECTRIC CHARGE**).

statics See **MECHANICS**.

Stationery Office, The (TSO) The UK company that publishes and sells government publications. It was privatized from **Her Majesty's Stationery Office (HMSO)** in 1996. HMSO remains responsible for printing Acts of Parliament and administering Crown copyright. Since 2005 it has been part of the Office of Public Sector Information (OPSI).

Stations of the Cross A series of 14 pictures or images depicting the final events in the life of Christ, beginning at Pontius Pilate's house, where he was condemned to death, and concluding at the sepulchre. They are usually arranged on the walls of a church and form the basis of a devotion in which prayers are recited as each station is visited in turn. The devotion was popularized in the middle ages by the Franciscans but derived from the early custom of pilgrims who followed the Way of the Cross (Via Dolorosa) in Jerusalem.

statistics The study of methods for collecting and analysing quantitative data. The data measure certain characteristics of a group of people or objects, called the population; usually the whole population cannot be observed, often because it is too large, so data are collected from a representative sample of the population. The sample is analysed and conclusions are inferred about the whole population, using *probability theory because the inferences cannot be certain.

Statue of Liberty A statue of a woman 46 m (152 ft) high holding a torch in her raised right hand, on Liberty Island in New York harbour. Designed by Frédéric *Bartholdi, it was given to the Americans by the French in 1884 to commemorate the French and American Revolutions. Unveiled and dedicated in 1886, it has been a US national monument since 1924.

Stauffenberg, Claus, Graf von (1907–44) German army officer, who attempted to assassinate Hitler in 1944. Stauffenberg served in N Africa, where he was badly wounded. He tried to eliminate Hitler by bombing his headquarters at Rastenburg. He and his fellow conspirators were executed.

steady-state theory A cosmological theory proposed in 1948 by Hermann Bondi (1919–2005), Fred *Hoyle and Thomas Gold (1920–2004) in which the universe is regarded as

having always existed in a steady state. The expansion of the universe is compensated by the continuous creation of new matter. On the present evidence this theory has been discredited in favour of the *big-bang theory.

steam engine A heat engine in which heat from a furnace is used to raise steam, the expansion of which forces a piston to move up and down in a cylinder to provide mechanical energy. A primitive steam engine was invented in 1698 by a Capt Savery to pump water from mines. In 1711 *Newcomen improved on this design but still relied on cooling the cylinder with a jet of water after each stroke. Watt's single-acting steam engine, patented in 1769, was the first to use a separate condenser. Watt went on to invent the double-acting engine, the crank and crosshead mechanism, and the governor. It was largely this engine that created the *industrial revolution. The steam engine was the supreme prime mover of railways throughout the world from 1829 (when *Stephenson built his first *locomotive) until after World War II, when steam was largely replaced by electric and Diesel-electric trains. From the beginning of the 19th century steam engines were also widely used in place of sails in *ships. Moreover, it was the steam engine that drove the first electricity generators for public supply. However, the more compact and efficient steam *turbine has now replaced the steam engine for this purpose.

steam engine. The principle of a double-action beam engine of the kind patented by James Watt. During the first half of the cycle, valve A opens, and steam flows in and pushes the cylinder down, and steam flows out to the condenser through valve C. During the second half of the cycle, B opens and the steam pushes the piston the other way.

steel An *alloy of iron containing a small carefully controlled proportion of carbon, usually less than 1%. Carbon steels contain principally iron and carbon. Alloy steels have other metals added. Steel products form the basis of modern technology and steel production is therefore a key factor in the world economy. For many engineering products the starting material is **mild steel**, a carbon steel with between 0.2% and 0.8% carbon and sometimes a little manganese or silicon. It can be further improved by *heat treatment. Alloy steels, such as *stainless steel, are usually more expensive to produce. They are used where special hardness, strength, or corrosion resistance are needed.

Steel is made by *smelting iron ore in a blast furnace to produce pig iron, which is added to melted down scrap iron before being converted by the basic-oxygen process, or formerly by the *Bessemer process, the open-hearth furnace, or the electric-arc furnace.

Steel, David (Martin Scott), Baron (1938–) British politician; leader of the Liberal Party (1976–88). He entered parliament in 1964 and succeeded Jeremy Thorpe as Liberal leader. In the 1980s he headed the SDP-Liberal Alliance alongside the SDP leader, David Owen. He was raised to the peerage in 1997 and elected presiding officer of the new Scottish parliament (1999–2003).

Steele, Sir Richard (1672–1729) British essayist and dramatist. He is best remembered for his essays in *The Tatler* (1709–11) and *The Spectator* (1711–12), periodicals that he founded and on which he collaborated with Joseph *Addison.

steeplechase 1. A form of horse race that grew out of *foxhunting, in which horses jump artificial hedges and ditches. Hurdling is a less taxing version over lower lighter fences and shorter distances. Point-to-points are steeplechases for amateur riders. **2.** A track event for men in athletics over a 3000 m course that includes 28 hurdles 91 cm (3 ft) high and seven water jumps 3.66 m (12 ft) across per lap. World record: 8 minutes 2.08 seconds (1992) by Moses Kiptanui (Kenya).

Stegosaurus A dinosaur of the late Jurassic period (about 150–135 million years ago). 7 m long and weighing 1.75 tonnes, it had a double row of large triangular plates arranged in pairs along its back. It fed on soft plants. Order: *Ornithischia*.

Steinbeck, John (1902–68) US novelist. The

majority of his novels, notably *Of Mice and Men* (1937) and *The Grapes of Wrath* (1939), deal with the social and economic conditions of his native California. *East of Eden* (1952) is the most ambitious of his later novels. He won the Nobel Prize in 1962.

stem cells Simple cells in the body that give rise to specialized cells when stimulated by growth factors and other chemical signals produced by the body. Stem cells occur in the embryo, where they continually divide to produce all the many different tissues required by the developing embryo. They are also found at various sites in the adult body (including skin, bone, muscle, and intestine) to provide replacement cells for the repair of tissues at those sites. For example, stem cells in the bone marrow are active throughout life, providing a continual supply of new blood cells as the old ones wear out. Much interest now focuses on the potential of stem cells to treat disease or repair injured tissue. Adult stem cells, such as bone marrow cells, are already used in treating leukaemia and other diseases of blood cells, by forming new healthy cells to replace the defective ones, as are tissue-matched cord-blood stem cells, taken from the umbilical cord of a new-born baby. Other disorders that might benefit from stem-cell therapy include diabetes, Parkinson's disease, and spinal injury. Embryonic stem cells are particularly attractive since they can produce many different types of cells and — triggered by the appropriate chemical signals — begin producing the required tissue cells wherever they are inserted. Human embryos cloned from a person's cells could, in theory, provide genetically identical therapeutic stem cells that would not be rejected by that person's immune system. But technical hurdles and ethical objections lie in the way of attaining this goal. In 2002 the UK became one of the first countries to license stem-cell research, subject to strict guidelines. This would include the use of spare embryos generated by IVF techniques as well as—if there is an exceptional need—embryos produced by therapeutic cloning.

Stendhal (Henri Beyle; 1783–1842) French novelist and critic. His two major novels, *Le Rouge et le noir* (1830) and *La Chartreuse de Parme* (1839), blend romantic vigour with dispassionate and often ironical psychological analysis.

Stentor A genus of tiny single-celled organisms (see PROTOZOA) occurring in fresh water. They are trumpet-shaped, with tracts of hair-like cilia over the body surface, and are often

attached by a stalk to the substrate. Phylum: Ciliophora.

Stephanotis A genus of evergreen climbing shrubs (5 species), native to Madagascar, and including some ornamental species. *S. floribunda* is a popular greenhouse plant with small fragrant white waxy flowers. Family: Asclepiadaceae.

Stephen (c.1097–1154) King of England (1135–54); grandson of William the Conqueror. Stephen seized the throne from Henry I's daughter Matilda, who invaded England in 1139. Civil war followed. In 1152, after much of the country had been ravaged in factional fighting and the royal administration had broken down, Stephen recognized Matilda's son Henry (later Henry II) as heir to the throne.

Stephenson, George (1781–1848) British engineer, who developed a greatly improved steam locomotive. Stephenson became interested in locomotives in 1813 and two years later built the *Blucher*, which could draw 30 tons of coal at 4 mph. He assisted his son **Robert Stephenson** (1803–59) on his famous locomotive the *Rocket*, built in 1829. It carried passengers at a speed of 36 mph on the new Liverpool–Manchester line and stimulated railway development throughout Europe and in North America.

steppes The midlatitude grasslands of Eurasia extending in a broad belt from Ukraine to SW Siberia. They consist chiefly of level, virtually treeless, plains.

steradian (sr) The SI unit of solid angle equal to a solid angle that encloses a surface on a sphere equal to the square of its radius.

stereophonic sound Sound reproduction in which two signals are used to give a directional quality. It results in more realistic reproduction than a single signal system (monophonic sound) because the brain distinguishes the direction by assessing the difference between the sound in each ear. For recording, either two directional *microphones at right angles in one place or two separated microphones are needed. Playing back requires at least two *loudspeakers, one for each signal.

sterility Inability to produce offspring by sexual reproduction. Sterility (or infertility) in men may be caused by various conditions in which the sperms are deficient in numbers or defective in quality. It may also result from psychological problems causing impotence. In women sterility may be due to disease of the

womb, blockage of the Fallopian tubes leading from the ovaries to the womb, or failure of the ovaries to produce egg cells. *See also* STERILIZATION.

sterilization The surgical technique or any other means used to induce *sterility. Surgical sterilization may be performed for contraceptive purposes or when pregnancy would damage the health of the woman. For men, the operation—vasectomy—involves cutting and tying the duct (vas deferens) that conveys sperm from the testicle. In women the Fallopian tubes are clipped or tied (tubal ligation), which prevents the passage of the egg cells to the womb. Neither operation affects sexual desire or the ability to satisfy it. Sterilization should be considered as irreversible. *See also* CASTRATION.

Stern, Isaac (1920–2001) Russian-born US violinist, who became a world-famous soloist and toured extensively.

Sterne, Laurence (1713–68) Irish-born British novelist and clergyman, best known for his eccentric comic novel *Tristram Shandy* (1759–67). *A Sentimental Journey* (1768) was based on his travels on the Continent.

steroids A class of organic chemical compounds with a basic structure of three six-membered carbon rings joined to a five-membered ring. Steroids and their hydroxy derivatives (**sterols**) fulfil many biological roles in plants and animals and include the *sex hormones, *corticosteroids, *bile acids, and *vitamin D. Cholesterol is an important precursor in the synthesis of many steroids.

stethoscope An instrument widely used by doctors to listen to sounds within the body. Modern instruments consist of two earpieces joined by two tubes to a head, which is placed on the body. The head usually has a diaphragm (for high-pitched sounds) and a bell (for low-pitched sounds). More sophisticated stethoscopes are fitted with electronic amplification devices.

Stevenage S155N 014W A town in SE England, in Hertfordshire. The first of the new towns (1946) to be developed after World War II, it is now a centre for electrical and aerospace industries. Population (1997 est): 78 114.

Stevens, Wallace (1879–1955) US poet. In such poems as “The Man with the Blue Guitar” (1937) he explores the relationship between reality and imagination. His poems were collected in *Collected Poems* (1954) and *Opus Posthumus* (1957).

Stevenson, Adlai E(wing) (1900–65) US Democratic politician, governor of Illinois (1949–53). He twice ran for the presidency (1952, 1956) but was defeated on both occasions by Eisenhower. He helped to found the UN, to which he was later US delegate (1961–65).

Stevenson, Robert Louis (1850–94) Scottish novelist. After travels in Europe and the USA, he published several novels that remain among the best-known in the language: *Treasure Island* (1883), *Kidnapped* (1886), and *The Strange Case of Dr Jekyll and Mr Hyde* (1886). Constantly troubled by respiratory disease, he travelled to the South Seas in 1888. His other works include the unfinished masterpiece *Weir of Hermiston* (1896).

Stewart, James (Maitland) (1908–97) US film actor. He established himself as an incorruptible hero with a distinctive drawl in such films as *Mr Smith Goes to Washington* (1939), *The Philadelphia Story* (1940), and *It's a Wonderful Life* (1946); later films include Hitchcock's *Vertigo* (1958).

stick insect An insect belonging to the family *Phasmidae*. It has a twiglike body and long spindly legs and the wings are reduced or absent. Males are rare; the females live in trees or shrubs, producing eggs that drop to the ground and develop without fertilization (*see* PARTHENOGENESIS). Order: *Phasmida* (stick and leaf insects).

stickleback A fish of the family *Gasterosteidae* (about 12 species), found in both fresh and salt water in temperate regions of the N hemisphere. Sticklebacks have a row of spines along the back. The male builds a nest for the eggs and guards the young. Order: *Gasterosteiformes*.

stigma The part of the pistil of a flower that is specialized to receive *pollen. In flowers pollinated by insects the stigma is sticky, whereas wind-pollinated flowers have large feathery stigmas.

stimulants A large group of drugs that stimulate activity of the nervous system. Caffeine (in tea and coffee) and nicotine (in cigarettes) are stimulants used widely to reduce feelings of tiredness and to improve concentration. Hallucinogens, *amphetamine, and *cocaine are also stimulants. Stimulants may affect other parts of the body, particularly the heart.

stingray A round or diamond-shaped *ray fish belonging to a family (*Dasyatidae*; 89 species) found mainly in warm shallow ocean waters. Most species have a whiplike tail armed

with one or more saw-edged venomous spines, which can inflict an intensely painful wound causing paralysis and occasionally death.

stinkhorn A fungus of the order *Phallales*, producing a phallus-shaped fruiting body. This consists of a stout whitish stalk arising from a basal egg-shaped structure and bearing a thimble-shaped cap containing spores. When the spores are ripe the cap produces a strong-smelling secretion that attracts flies, which disperse the spores. Phylum: *Basidiomycota*.

Stirling 1. 56°07N 35°7W A city in Scotland, the administrative centre of Stirling council area on the River Forth. It was once a residence of the Scottish kings and the first Scottish parliament was held here in 1326. The castle occupies a prominent position. Stirling is a market town with financial and other services. It was granted city status in 2002. Population (1997 est): 30 791. 2. A council area of central Scotland. In 1975 the historic county of Stirling was abolished; most of it was incorporated into a new Stirling district in Central Region. In 1996 this district became an independent unitary authority. Agriculture has declined but is still important; coal is no longer mined. The main economic activities are now administration, finance, and tourism. Area: 2173 sq km (839 sq mi). Population (2001): 86 212. Administrative centre: Stirling.

Stirling engine An external combustion piston engine using heated air as the working fluid. Heat is transferred to the cylinders by heat exchangers. The engine is silent and vibration-free, uses many types of fuel economically, and can produce clean exhaust gases. It was invented in 1816 by the clergyman Robert Stirling (1790–1878), but was not put to practical use until the 1960s, when it was used as an auxiliary engine in submarines.

stoat A small carnivorous mammal, *Mustela erminea*, of Europe, Asia, and North America. About 35 cm long, with a long sinuous body, flattish head, and short legs, it can be distinguished from a *weasel by its black-tipped tail. Stoats prey mainly on rabbits.

stock One of several herbaceous plants of the genus *Matthiola* that are cultivated as ornamentals. Many garden varieties, including ten-week stocks and Brompton stocks, are derived from the European biennial *M. incana*, which has clusters of purple flowers. The night-scented stock (*M. bicornis*) has small lilac flowers that emit their fragrance at night. Family: *Cruciferae*.

stock exchange A market in which securities are bought and sold. The three largest stock exchanges are in London, New York, and Tokyo. A stock exchange is an essential part of the capital market, providing capital for industry and a form of investment for savers. Members of the London Stock Exchange, founded in 1773, were formerly either stockbrokers or stockjobbers, but this distinction ceased to exist with the change in City practices known as the "Big Bang" (October 1986). Thereafter the market became a highly computerized free-for-all, in which commissions were negotiable. The **Alternative Investment Market** (AIM), established in 1995, deals with smaller and newer company shares.

Stockhausen, Karlheinz (1928–) German composer. He rejected traditional forms and techniques, developing a concept of music as a sequence of sound "events" in such works as *Gruppen* (for three orchestras; 1955–57) and *Kontra-Punkte* (for ten instruments; 1962). Such works as *Mantra* (for two pianos and percussion; 1970) were influenced by Indian mysticism. Later works include the operas *Donnerstag* (1978–80), *Montag* (1988), *Dienstag* (1991), and *Freitag* (1996).

Stockholm 59°20N 18°55E The capital of Sweden, built on several islands between Lake Mälaren and the Baltic Sea. It is the country's second largest port. The old town contains many buildings erected in the middle ages and in the 16th and 17th centuries. A settlement from very early times, Stockholm became the capital in 1436. Population (2000 est): 743 703.

Stockport 1. 53°25N 2°10W A town in N England, in Stockport unitary authority, Greater Manchester, on the River Mersey. Traditionally a textile town (particularly for cotton), Stockport now has engineering, electronics, and high-tech industries. Population (1991): 132 813. 2. A unitary authority in N England, in Greater Manchester. Area: 126 sq km (49 sq mi). Population (2001): 284 544.

stocks and shares Documents representing money invested in industrial and commercial corporations or loaned to a government. In the UK stocks represent fixed-interest loans made to the government (see GILT-EDGED SECURITY), foreign governments, local authorities, or companies (see DEBENTURE STOCK). Shares represent equal amounts of capital subscribed to a company in return for membership rights. Ordinary shareholders are the last to receive their *dividends, which fluctuate according to the level of profits. They usually

have voting rights in the company. Shares in public companies can be bought and sold on a *stock exchange. In the USA ordinary shares are called common stock.

Stockton-on-Tees 1. 53 34N 1 19W A town in NE England, in Stockton-on-Tees unitary authority, Co Durham, on the River Tees. The first passenger railway was built from here to Darlington in 1825, and it was once an important port. Now retail and services are the chief employers. Population (1996 est): 82 800. 2. A unitary authority in NE England, in Co Durham and North Yorkshire; from 1974 to 1996 it was part of the county of Cleveland. Area: 195 sq km (75 sq mi). Population (2001): 178 405.

Stoicism The philosophical school founded about 300 BC in Athens by *Zeno of Citium. Stoics believed that God (identified with reason) was the basis of the universe, that human souls were sparks of the divine fire, and that the wise man lived "in harmony with nature." Knowledge of virtue was all-important. Stoicism was subsequently modified to stress the primacy of active virtue and duty. Its doctrines influenced many later thinkers.

Stoke-on-Trent 1. 53 00N 2 10W A city in N central England, in Stoke-on-Trent unitary authority, Staffordshire, on the River Trent. Formed in 1910 by the amalgamation of five towns, the area is known as the Potteries and is the centre of the British ceramic industry. Population (1991): 266 543. 2. A unitary authority in N central England, in Staffordshire. Area: 93 sq km (36 sq mi). Population (2001): 240 643.

stomach A muscular sac, just beneath the diaphragm, that opens from the oesophagus (gullet) and leads to the duodenum (part of the small intestine). The stomach secretes gastric juice, containing hydrochloric acid and the enzyme *pepsin, which continue the digestion of food that started in the mouth. Release of acid is triggered in response to the presence of food. The churning action of the stomach ensures constant mixing of the food and its secretions.

Stone Age The cultural phase during which man relied on stone, supplemented by wood, bone, or antler, as material for weapons and tools. It is the earliest phase in a system devised (1816) for classifying human technological progress (compare BRONZE AGE; IRON AGE). The Stone Age is subdivided into Old (see PALAEOLOGIC), Middle (see MESOLITHIC), and New (see NEOLITHIC).

stonechat A small *chat, *Saxicola torquata*, occurring in Eurasia and N Africa and feeding

chiefly on insects and their larvae. The male has a dark-brown head and back, chestnut underparts, and white rump; the female is a drabber brown. Stonechats favour dry heathland regions.

stonecrop An annual or perennial herb belonging to the genus *Sedum* (600 species), found in N temperate regions and also in Central and South America. They have white, pink, or yellow flowers. Some are popular ornamentals. Family: *Crassulaceae*.

stone curlew A ground-nesting bird belonging to a widely distributed family (*Burhinidae*; 9 species) characterized by thickened tarsal joints, also called thickknee. Stone curlews are typically nocturnal, feeding on beetles, worms, etc. Order: *Charadriiformes* (gulls, plovers, etc.).

stonefly An insect of the order *Plecoptera* (3000 species), 6–60 mm long with long antennae and two pairs of membranous wings. The short-lived adults rarely feed and are found near fresh water. The aquatic *nymphs feed on plants, decaying organic material, or other insects.

Stonehenge A famous megalithic structure on Salisbury Plain in Wiltshire (England). Sarsens and bluestones, the latter probably brought from S Wales, are set upright in concentric circles and horseshoes the orientation of which suggests one purpose as being sun and moon observation. It was erected in three main phases between c. 3000 and c. 1600 BC. The alleged "Druid" connection dates only from the 18th century AD. See illustration on p. 846. See also MEGALITH.

stone pine A *pine tree, *Pinus pinea*, native to SW Europe and Asia but planted throughout Mediterranean regions since Roman times for its edible seeds. Up to 30 m high, it has cones about 12.5 cm long.

Stopes, Marie (Charlotte Carmichael) (1880–1958) British birth-control campaigner. She worked as a botanist until the failure of her first marriage turned her attention to sexual problems. In 1921 she opened the first birth-control clinic in Britain. Her books include *Married Love* (1918) and *Contraception: Its Theory, History, and Practice* (1923).

Stoppard, Sir Tom (Thomas Straussler; 1937–) British dramatist, born in Czechoslovakia. He achieved international success with *Rosencrantz and Guildenstern Are Dead* (1967). In *Jumpers* (1972), *Travesties* (1975), *The Real Thing* (1982), *Arcadia* (1993), and *The Invention of Love*

Stonehenge. The plan reveals features of consecutive building phases that may no longer be visible to the visitor to the site.

(1997) he explored philosophical ideas with wit and great verbal facility. His most recent work is the trilogy *The Coast of Utopia* (2002). He has also written television, radio, and film scripts, including *Shakespeare in Love* (1999; with Marc Norman). Stoppard was appointed to the OM in 2000.

storax A tree or shrub belonging to the genus *Styrax* (130 species), occurring in warm and tropical regions. They have small white flowers and several species are cultivated as ornamentals. The resin storax, used in cough mixtures, pastilles, etc., is extracted from trees of the genus *Liquidambar* (sweet gums). Family: *Styracaceae*.

stork A large bird belonging to a widely distributed family (*Ciconiidae*; 17 species) occurring in warm and temperate regions. 60–150 cm tall, storks have long necks, legs, and bill and are white with black markings. They feed chiefly on fish, frogs, molluscs, and insects and build a large nest platform of twigs in a tree or on a rooftop. Order: *Ciconiiformes* (herons, storks, flamingos). See also ADJUTANT STORK; MARABOU.

storksbill A herb of the genus *Erodium*

(about 90 species) occurring in Eurasia, Australia, and South America. The common storksbill (*E. cicutarium*) grows to a height of 60 cm and has purplish-pink flowers. Family: *Geraniaceae*.

Stormont The seat of the government of Northern Ireland, in Belfast; the site includes Stormont Castle, Parliament House (1932), and Dundonald House (1963). From 1921 until 1972 it housed the parliament of Northern Ireland and the residence of its prime minister and was a symbol of Protestant domination. Since 1998 Parliament House has been the seat of the Northern Ireland Assembly, set up under the Good Friday Agreement of that year.

storm petrel A small seabird belonging to a family (*Hydrobatidae*; 20 species) occurring in all oceans. 13–25 cm long, storm petrels have dark-grey or brown plumage, often with paler underparts. Species of southern oceans feed by “walking” on the water with wings outstretched, picking up plankton. Northern species feed by swooping on fish. Order: *Procellariiformes* (petrels).

Stornoway 58 12N 6 23W A port in NW Scotland, in the Outer Hebrides, on the Isle of

Lewis. It is the administrative centre of the Western Isles Islands Area. Population (2001): 5602.

Stowe, Harriet Beecher (1811–96) US novelist. She was the daughter of Lyman Beecher (1775–1863), a famous preacher. Her *Uncle Tom's Cabin* (1852) greatly stimulated antislavery feeling.

Strabane A district in Northern Ireland, in Co Tyrone. Area: 861 sq km (332 sq mi). Population (2004 est): 38 665

strabismus See SQUINT.

Stradivari, Antonio (1644–1737) Italian violin maker. He was a pupil of Niccolò *Amati. From 1666 he and two of his sons made outstanding violins, violas, and cellos at their workshop in Cremona.

strain In physics, the deformation of a body when it is subjected to a *stress. **Longitudinal strain** is the extension per unit length when a body is stretched; **bulk strain** is the volume change per unit volume when a body is compressed; and **shear strain** is an angular measure of deformation.

strangeness A property of matter, expressed as a *quantum number (s), postulated to account for the unusually long lifetime of some *hadrons. In the quark model (see PARTICLE PHYSICS) strange hadrons contain the strange quark or its antiquark.

Strasbourg (German name: Strassburg) 48°35N 7°45E A city in NE France, on the River Ill. An important inland port, it is famous for its *pâté de foie gras*. *History:* made a free imperial city in the 13th century, it was ceded to France in 1697. Captured by the Germans (1871), it was returned to France after World War I. Population (2004 est): 273 100.

Stratford-on-Avon 52°12N 1°41W A town in central England, in Warwickshire on the River Avon. It is the birthplace of William Shakespeare. The Royal Shakespeare Theatre (opened in 1932) stages mainly Shakespeare's plays. Population (2001): 23 676.

stratigraphy The branch of geology concerned with the formation, composition, sequence in time, and spatial correlation of stratified rocks. **Lithostratigraphy** involves the lithological and spatial relations of rock units. **Biostratigraphy** utilizes fossils in calibrating rock successions. **Chronostratigraphy** studies rock bodies according to the time of their formation (see GEOLOGICAL TIME SCALE).

stratocumulus cloud (Sc) A low type of

*cloud composed of dark grey globular masses, often forming extensive sheets.

stratosphere See ATMOSPHERE.

stratus cloud A low type of *cloud forming below 2400 m (7874 ft), having a grey uniform appearance; it may actually occur at ground level as hill fog.

Strauss, Richard (1864–1949) German composer and conductor. Strauss was much influenced by *Wagner, whose use of leitmotifs he adopted. From 1887 to 1899 Strauss wrote a series of symphonic poems, including *Death and Transfiguration* (1889), *Also sprach Zarathustra* (1895–96), and *Ein Heldenleben* (1898). He then turned to opera, writing 15 works, including *Salome* (1905), *Elektra* (1906–08), *Der Rosenkavalier* (1909–10), and *Ariadne auf Naxos* (1912).

Strauss the Younger, Johann (1825–99) Austrian violinist, conductor, and composer. He wrote a great many waltzes, such as "The Blue Danube" and "Tales from the Vienna Woods," as well as polkas and marches. He also wrote 16 operettas, including *Die Fledermaus* (1874) and *The Gipsy Baron* (1885). His father **Johann Strauss the Elder** (1804–49) composed 152 waltzes as well as quadrilles, marches (including the "Radetzky March"), galops, etc.

Stravinsky, Igor (1882–1971) Russian-born US composer. He became famous with a series of ballet scores commissioned by *Diaghilev, including *The Firebird* (1910), *Petrushka* (1911), and *The Rite of Spring* (1913), which provoked demonstrations at its premiere and had a strong influence on 20th-century music. Stravinsky subsequently developed a neoclassical style (see NEOCLASSICISM) in such works as the oratorio *Oedipus Rex* (1927). Towards the end of his life Stravinsky adopted *serialism in such works as *Canticum Sacrum* (1955).

Straw, Jack (John Whitaker S.; 1946–) British Labour politician; home secretary (1997–2001), foreign secretary (2001–2006), and secretary of state for justice (2007–). He entered parliament in 1979.

strawberry A perennial herb belonging to the genus *Fragaria* (15 species), native to N temperate regions and widely cultivated for its edible fruit. Most of the commercial varieties are hybrids derived from the European *hautbois* strawberry (*F. moschata*), the Chilean strawberry (*F. chiloensis*), and the North American scarlet strawberry (*F. virginiana*). The plants are low growing, with white flowers. Family: Rosaceae.

strawberry tree See ARBUTUS.

Streep, Meryl (Mary Louise S.; 1949–) US actress. After appearing in *The Deerhunter* (1978) she became the leading US film actress of the 1980s in such films as *Kramer vs. Kramer* (1980), *The French Lieutenant's Woman* (1981), *Sophie's Choice* (1982), and *Out of Africa* (1986). Later films include *The River Wild* (1994), *The Hours* (2002), and *The Devil Wears Prada* (2006).

Streptococcus A genus of spherical anaerobic bacteria many of which live as parasites in the respiratory and digestive systems of animals and humans. *S. pyogenes* causes scarlet fever in humans.

streptomycin An *antibiotic, obtained from the bacterium *Streptomyces griseus*, that revolutionized the treatment of tuberculosis. It is usually administered (by injection) in combination with other antibiotics.

stress The force per unit area that causes a deformation (or *strain) in a body. **Tensile stress** tends to stretch a body; **bulk stress** tends to compress it; and **shear stress** tends to twist it.

strike A form of industrial action in which a group of employees, usually organized in a trade union (or unions), withdraws its labour in order to achieve its demands. A strike is the last resort in the process of collective bargaining: it may prompt a settlement either because it proves that neither side is bluffing or because the costs involved (in terms of lost pay and profits) force a compromise. As future orders and job security may be jeopardized by a strike, responsible unions only resort to the measure in extreme cases. An official strike is one that is recognized by a trade union, whereas an unofficial (or wildcat) strike is a walkout organized by shopfloor workers without union backing. The Trade Union Act (1984) provides for compulsory ballots in connection with strikes and other industrial actions.

Strindberg, August (1849–1912) Swedish dramatist and writer. His unhappy childhood and three unsuccessful marriages gave rise to mental instability and a violent hatred of women. This is reflected in the plays *The Father* (1887) and *Miss Julie* (1888), and the autobiographical prose works *Confessions of a Fool* (1912) and *Inferno* (1897). Other works include *The Dance of Death* (1900), the symbolic *Easter* (1901), and *A Dream Play* (1901). His late chamber plays, such as *The Ghost Sonata* (1907), combine irrational elements with realistic settings.

stringed instruments Musical instruments in which notes are produced by the vi-

bration of stretched strings. The strings may be plucked, bowed, plucked mechanically, struck mechanically, or plucked with hammers.

stroke (or apoplexy) Sudden loss of consciousness with weakness or paralysis of one side of the body, caused by interruption of the blood supply to the brain. This may be due to a blood clot in one of the arteries of the brain (see EMBOLISM; THROMBOSIS) or to the rupture of a blood vessel in the brain (cerebral haemorrhage). With careful nursing and physiotherapy many patients recover completely.

Stromboli An Italian island in the Tyrrhenian Sea, in the Lipari Islands. Its active volcano produces a stream of lava.

strong interaction One of the four basic forces in the universe; it occurs between the class of elementary particles called hadrons. It is the strongest of the four (100 times stronger than the electromotive interaction) but effective only over about 10^{-15} metre. It is the force that holds the protons and neutrons together in the nucleus and is thought to occur as the result of the exchange of gluons between quarks. See PARTICLE PHYSICS.

strontium (Sr) A reactive alkaline-earth metal, discovered by Sir Humphry Davy in 1808 and named after Strontian, a town in Scotland where the carbonate (SrCO_3) is found. It also occurs as the sulphate, celestine (SrSO_4). It is a highly reactive metal, being more electropositive than calcium and reacting vigorously with water to liberate hydrogen. The isotope ^{90}Sr is produced in nuclear fallout. At no 38; at wt 87.62; mp 769°C ; bp 1384°C .

structuralism An approach to the study of culture that seeks to uncover underlying patterns and structures and the basic elements from which these are constructed. The leading figure of this school was the anthropologist Claude *Lévi-Strauss, whose work on kinship, ritual, and religion sought to elucidate universal laws of human thought. This approach was stimulated by the structural school in *linguistics, as originated by *Saussure, which maintains that linguistic signs achieve meaning only through their structural relationships with other signs in the same system. In the 1960s a structuralist approach to literary criticism and popular culture was pioneered by French critics, such as Roland *Barthes, and became influential in the humanities. During the 1970s structuralism evolved into so-called **post-structuralism** in the work of Jacques Derrida (1930–2004) and others.

strychnine An alkaloid poison derived from plants of the genus *Strychnos*. It acts on the central nervous system, causing convulsions and ultimately death.

Stuarts (or Stewarts) The ruling dynasty of Scotland from 1371 to 1714 and of England from 1603 to 1714. The first Stuart king was Robert II (crowned 1371) of Scotland. The direct male line ended with the death of James V in 1542, when the throne passed to his daughter Mary, Queen of Scots, and following her abdication (1567) to her son James VI, who inherited the English Crown (1603) as James I. He was succeeded by Charles I, Charles II, James II, Mary II (and her husband William III), and Anne (d. 1714). The Crown then passed to the Hanoverians (see SETTLEMENT, ACT OF) but the Stuart claim was kept alive by *James Edward Stuart, the Old Pretender, and his son, *Charles Edward Stuart, the Young Pretender. The last royal Stuart was Henry Stuart, Cardinal York (d. 1807).

Stubbs, George (1724–1806) British animal painter. He is best known for his horse paintings, such as *Mares and Foals in a Landscape* (Tate Gallery), but he also painted portraits and farming scenes.

stupa A Buddhist shrine, originally a reliquary mound. It is usually surrounded by a processional path and a wall, and is often crowned with sculpted parasols representing the heavens. The stupa is the origin of the *pagoda.

sturgeon A *bony fish belonging to a family (*Acipenseridae*; about 24 species) found in N temperate waters. Sturgeons have a large sharklike body, up to 8.4 m long, with five longitudinal rows of sharp bony plates, a small ventral mouth, and four sensory barbels. Eggs are laid in fresh water and are commercially important as caviar. See also BELUGA.

Sturm und Drang (German: Storm and Stress) A German literary movement of the late 18th century that anticipated many aspects of Romanticism. Its influence is most notable in the drama, where it led to a rejection of neoclassical conventions.

Stuttgart 48°47'N 9°12'E A city in SW Germany, on the River Neckar. It became the capital of Württemberg in 1482. It was largely destroyed in World War II. Population (2000): 581,200.

stylops A minute insect of the order Strepsiptera (about 400 species), which is parasitic on bees and other insects. The grublike female lives permanently inside the host's body; the

winged male, often less than 4 mm long, leaves its host to find and fertilize a female.

Styx In Greek mythology, the main river of Hades across which the souls of the dead were ferried by *Charon. It was sometimes personified as the daughter of Oceanus.

sublimation In chemistry, the evaporation of a solid without melting. For any substance the liquid phase only occurs within certain limits of temperature and pressure—if the pressure is low enough, heating a solid will result in sublimation. Substances that sublime at atmospheric pressure include carbon dioxide (dry ice) and iodine.

submarine A warship designed for sustained operation under water. The earliest record of a submarine craft is that developed by Cornelis Drebbel (1572–1634) of Holland in 1620. A more practical model, the "Turtle," was invented by David Bushnell (1742–1824) of Connecticut in 1776, and saw limited use in the American Revolution. Submarines, called U-boats (German name: *Unterseeboot*, undersea boat), were first used extensively by the German navy in World War I. They became an important armament in World War II. Modern submarines may be powered by nuclear reactors and can remain submerged for months at a time. These vessels also carry one or more guns mounted on deck, torpedoes for firing under water, and missiles that can be launched when the submarine is submerged.

substitution reaction A type of chemical reaction in which one atom or group of atoms is displaced by another. An example is the reaction of methyl chloride (CH_3Cl) with hydroxide ions (OH^-) to give methanol (CH_3OH) and chloride ions (Cl^-). The hydroxide ion, in this case, is referred to as the substituent.

succession In ecology, the process of continual change that takes place in the composition of a *community of organisms occupying a particular habitat from the time of its initial colonization to the establishment of a stable climax community.

Sucre 19°00'S 65°15'W The capital of Bolivia, in the S at an altitude of 2790 m (9153 ft). It was founded by the Spanish in 1538. The seat of government was moved to La Paz in 1898. Population (2000 est): 192,238.

sucrose (cane sugar or beet sugar or saccharose) A carbohydrate consisting chemically of one molecule each of *glucose and *fructose linked together. It is commercially the most important of the *sugars.

Sudan, Democratic Republic of the

A large country in NE Africa, bordering on the Red Sea. It consists chiefly of a vast plateau rising to mountains in the S and W. The main rivers are the Blue Nile and White Nile. About half the population are Arabs, and there are minorities of *Dinka, Nubians, and others. *Economy:* chiefly agricultural, the main cash crop and export being cotton. Livestock rearing is also important. Forest products include gum arabic. Since the mid-1980s the economy has been devastated by drought, famine, US sanctions (1996–99), and continuous civil war. *History:* the NE was part of ancient *Nubia. The region was Christianized in the 6th century and invaded from the N in the 13th century, after which it was converted to Islam. In 1821 it was conquered by the Egyptians, against whom a revolt under the Mahdi took place in 1881. In 1898 an Anglo-Egyptian force under Kitchener subdued his followers and in 1899 an Anglo-Egyptian condominium was established. In 1956 the Sudan became an independent republic. A coup in 1969 brought Col Jaafar al Nemeiry to power. In 1972 he negotiated an end to the fighting between the mainly Muslim N and the mainly animist and Christian S that had raged since independence. However, new violence in the S erupted in 1983, with the Sudanese People's Liberation Army taking over large areas. During widespread famine in 1985, Nimeiry was overthrown and civilian rule re-established. A further military coup was led by Lt Gen Omar Hassan Ahmad al-Bashir, who established an Islamic state. The new government's abuse of human rights and alleged support for Islamic terrorism led to its international isolation in the 1990s. In 1996 al-Bashir and his supporters were victorious in parliamentary and presidential elections. Peace talks in 2002–04 produced an agreement under which the S will enjoy near autonomy, with the option of formal secession after six years. War and war-related food shortages are thought to have claimed over 2 million lives since 1983. A further conflict erupted in the western *Darfur region in 2003, where government-backed Arab militias have carried out brutal ethnic cleansing of Black Africans. Official language: Arabic; English is widely spoken. Currency: Sudanese dinar of 10 pounds. Area: 2,500,000 sq km (967,500 sq mi). Population (2007 est): 39,379,358. Capital: Khartoum.

Sudbury 46°30'N 81°01'W A city in E Canada, in Ontario. Established in 1883, it is one of the world's greatest mining cities. Population (2006): 157,857.

sudden infant death syndrome (SIDS)

See COT DEATH.

Sudetenland A mountainous region in the W Czech Republic. Incorporated in Czechoslovakia in 1919, it was reoccupied by Germany in 1938. After World War II Czechoslovakia regained the Sudetenland and expelled the Sudeten Germans.

Suez (Arabic name: As-Suways) 29°59'N 32°33'E A port in Egypt, near the mouth of the Suez Canal. An important refuelling station, it was rebuilt after the Arab-Israeli War of 1967. Population (latest est): 417,610.

Suez Canal A canal in Egypt connecting the Mediterranean Sea and the Red Sea. Running between Port Said in the N and Suez in the S, it is 165 km (103 mi) long. It was designed by the French engineer Ferdinand de Lesseps and was opened in 1869. In 1888 it became a neutral zone, with Britain the guarantor of its status. In 1956 President Nasser nationalized the canal, provoking an Anglo-French attack on Egypt. However, Britain and France withdrew within a few days in the face of international censure. The canal was closed from 1967 to 1975 because of Arab-Israeli hostilities.

Suffolk A county in E England, on the North Sea. It consists of undulating lowlands. It is mainly agricultural, producing cereals and sugar beet, and is noted for its horse breeding (Suffolk Punches). Area: 3800 sq km (1467 sq mi). Population (2004 est): 683,700. Administrative centre: Ipswich.

Sufism (Arabic *sufi* wearer of a woollen cloak, mystic) A mystical movement arising within Islam in the 8th and 9th centuries AD. The goal of the Sufis was mystical union with God achieved by fervent worship. Later Sufism shows the influence of Neoplatonism and Hindu asceticism.

sugar beet A biennial herb derived from the European sea *beet (*Beta vulgaris*). Sugar beet is widely cultivated for the sucrose content of its large roots. Family: *Chenopodiaceae*.

sugar cane A perennial grass of the tropical genus *Saccharum* (5 species), especially *S. officinarum*, which is cultivated for its sugar content. The clumps of stalks (canes), 3–8 m high, may bear dense woolly clusters of female flowers. Usually, the canes are crushed to extract the sugary liquid. This is concentrated and refined to produce table sugar, etc. The remaining liquor (molasses) is used for animal feedstuffs, industrial alcohol, etc. The fibrous residue (bagasse) is used as fuel, cattle feed, etc.

sugars A class of sweet-tasting *carbohydrates, classified chemically as *monosaccharides or disaccharides. The sugar widely used to sweeten food, drinks, and confectionery is the disaccharide *sucrose, derived from sugar cane (11–15% sucrose) and from sugar beet (17% sucrose). Sugar manufacture is believed to have originated in India (Sanskrit *sārkara*, sand) around 3000 BC; it was taken to the New World by Christopher Columbus in 1493. Sucrose is extracted from raw sugar cane by pressure, the extract being crystallized by evaporation. It is extracted from beet by hot water. Raw cane sugar and beet sugar are further refined to produce granulated, caster, icing, and cube sugars. By-products include molasses and sugar-beet pulp, both of which are used in animal feedstuffs.

Suharto (1921–) Indonesian statesman and general; president (1967–98). He gained prominence in the struggle for Indonesian independence and came to power in the gradual overthrow (1965–68) of *Sukarno. Following the collapse of Indonesia's economy (1997), there were mass protests leading to his resignation (1998). He was charged with corruption (2000) but escaped trial owing to ill health.

Sukarno (1901–70) Indonesian statesman; president (1945–67). He helped to found the Indonesian Nationalist Party in 1927 and was Indonesia's main resistance leader during the Japanese occupation (1942–45). When Indonesia was declared independent he became president. From 1965 he effectively lost power to the army under *Suharto. His daughter, **Megawati Sukarnoputri** (1947–), became president of Indonesia in 2001.

Sulawesi (former name: Celebes) An island in Indonesia, off E Borneo. It is mountainous and forested. Area, including adjacent islands: 189 033 sq km (72 986 sq mi). Population (1999 est): 14 768 400. Chief towns: Ujung Pandang and Menado.

Suleiman (I) the Magnificent (?1494–1566) Ottoman sultan (1520–66), under whom the Ottoman Empire reached its peak. Suleiman captured Belgrade in 1521 and Rhodes in 1522. In 1526 he defeated the Hungarians at Mohács and annexed large parts of Hungary. In 1529 he besieged Vienna. In campaigns against Persia he made many conquests and the Ottoman navy, under Barbarossa (d. 1546) and others, controlled the E Mediterranean.

Sulla, Lucius Cornelius (c. 138–78 BC) Roman dictator; an opponent of Gaius Marius (c. 157–86 BC) and *Cinna. Enraged because his

command against Mithridates, King of Pontus, was transferred to Marius, he stormed Rome (87), forcing Marius and Cinna to flee. Although outlawed when his rivals returned, he successfully concluded the campaign against Mithridates and in 83 invaded Italy. Elected dictator, Sulla butchered his opponents. After restoring the Senate's constitutional powers, he retired (79).

Sullivan, Sir Arthur (1842–1900) British composer. He is best known for his collaboration with the librettist W.S. *Gilbert in such comic operas as *The Pirates of Penzance* (1879), *The Mikado* (1885), and *The Yeomen of the Guard* (1888).

sulphonamides (or **sulpha drugs**) A group of drugs, derived from sulphanilamide, that prevent the growth of bacteria. Sulphonamides are used to treat a wide variety of infections, particularly those of the urinary tract and the eye. Sulphonamides are also combined with the antibiotic trimethoprim, which improves their effectiveness. In some patients sulphonamides may cause severe allergic disorders.

sulphur (S) A yellow nonmetallic solid element, occurring in various crystalline and amorphous forms. Sulphur was known in ancient times as brimstone. It is found near volcanoes and in large deposits associated with oil trapped against salt domes. Extraction is by the Frasch process, in which the sulphur is melted and pumped to the surface. Sulphur reacts readily with many elements to form sulphides, sulphates, and oxides. The oxides SO₂ and SO₃ are acidic gases that dissolve in water to form sulphurous acid (H₂SO₃) and sulphuric acid (H₂SO₄). At no 16; at wt 32.066; mp 115.22°C; bp 444.674°C.

sulphuric acid (H₂SO₄) A colourless oily liquid that has a great affinity for water and is used as a drying agent. H₂SO₄ is made by the contact process, in which sulphur dioxide is heated and passed through columns of platinized asbestos catalyst to produce sulphur trioxide (SO₃). The SO₃ is then dissolved in water to form H₂SO₄. Adding further SO₃ to H₂SO₄ produces fuming sulphuric acid (oleum; H₂S₂O₇), a fuming liquid that forms a crystalline solid on cooling. Sulphuric acid is one of the most important industrial chemicals.

Sulu Archipelago An island group in the SW Philippines. The most important of its 400 islands are Basilan and Jolo. Area: 2815 sq km (1087 sq mi). Population (latest est): 555 239. Chief town: Jolo.

sumach (or **sumac**) A tree or shrub of the genus *Rhus* (250 species), native to warm temperate and subtropical regions. The leaves of the Sicilian sumach (*R. coraria*) yield a substance used in tanning and dyeing. Several species are cultivated as garden ornamentals. Some species are poisonous and irritate the skin on contact, particularly the American poison ivy and poison sumach (*R. vernix*). Family: *Anacardiaceae*. See also LACQUER TREE.

Sumatra (or **Sumatera**) The second largest Indonesian island, separated from Peninsular Malaysia by the Strait of Malacca. The mountainous volcanic spine descends in the NE to swamps. It is Indonesia's chief rubber and oil producer. Crops include coffee, tea, and pepper. *History:* the Buddhist kingdom of Sri Vijaya (7th–13th centuries) was based in Palembang. During the 15th century the Islamic influence became dominant, resisting Dutch domination in the N until 1908. Since 1949 there has been considerable separatist activity. Area: 524 097 sq km (202 311 sq mi). Population (1999 est): 24 284 400. Chief towns: Palembang and Medan.

Sumer The area in S Mesopotamia in which the earliest civilization evolved during the 4th millennium BC. The fertile natural environment encouraged settlements that grew into such politically independent cities as *Ur. After 2000 BC Sumer was absorbed into *Babylonia.

sumo See WRESTLING.

sun The nearest star, lying at an average distance of 149.6 million km from earth at the centre of the *solar system. It has a diameter of 1 392 000 km, a mass of 1.99×10^{30} kg, and rotates on its axis in a mean period of 25.38 days. A typical yellow (G2) main-sequence star, it is composed primarily (99%) of hydrogen and helium in the approximate ratio 3:1 by mass. In its hot central core, about 400 000 km in diameter, energy is generated by nuclear fusion reactions. The surface, called the *photosphere, is the boundary between the opaque outer (convective) zone of the sun's interior and its transparent atmosphere. The atmosphere comprises the *chromosphere and the inner and outer *corona. There are regions of intense localized magnetic fields on the sun, where *sunspots, solar prominences, and *solar flares occur. See also SOLAR WIND.

sun bear A *bear, *Helarctos malayanus*, of tropical forests of Asia, Sumatra, and Borneo. It is the smallest bear, (110–140 cm long) and climbs well, hunting for small vertebrates, fruit, and honey.

sunbird An arboreal bird belonging to a tropical family (*Nectariniidae*; 104 species) ranging from Africa to Australasia. Sunbirds are 9–15 cm long and have a brilliant metallic plumage, slender down-curved bills, and long extensible tongues for feeding on nectar.

Sunda Islands An Indonesian group of islands, between the Indian Ocean and South China Sea. It consists of the **Greater Sunda Islands** (including Sumatra, Java, Borneo, and Sulawesi) and *Nusa Tenggara.

Sunderland 1. 54°55N 1°23W A port in NE England, in Sunderland unitary authority, Tyne and Wear, at the mouth of the River Wear. Sunderland exported coal from the Durham coalfield from the 14th century until the late 20th century, when the last deep pit closed. The main industries are now car manufacture (Nissan), engineering, and chemicals. Sunderland was given city status in 1992. Population (1991): 183 310. 2. A unitary authority in NE England, in Tyne and Wear. Area: 138 sq km (53 sq mi). Population (2001): 280 807.

sundew A perennial or annual *carnivorous plant of the genus *Drosera* (about 100 species), of temperate and tropical regions. Sundews have a basal rosette of leaves covered in sticky reddish gland-tipped hairs, used to trap insects. Family: *Droseraceae*.

sunfish An omnivorous fish of the family *Molidae*, especially *Mola mola*, found in all tropical and temperate seas. It has a disc-shaped laterally flattened body, up to 3 m long, with the tail fin reduced to a wavy frill attached to the triangular dorsal and anal fins. Order: *Tetraodontiformes*.

The name is also applied to several carnivorous freshwater food and game fish of the North American family *Centrarchidae*. They have deep laterally flattened bodies, 2.5–80 cm long, and a single long dorsal fin. Order: *Perciformes*.

sunflower A herbaceous plant of the genus *Helianthus*, native to North and South America. *H. annuus* is about 3 m high with yellow flower heads, up to 35 cm in diameter. It is cultivated both for ornament and for its seeds, from which oil is obtained. Perennial sunflowers include *H. salicifolius* and *H. decapetalus*. Family: *Compositae*.

sunn An annual herb, *Crotalaria juncea*, cultivated in India for its stem fibres. It grows to a height of 2–3 m and produces small yellow flowers. The fibres are used for netting, canvas,

yarns, and in certain paper products. Family: *Leguminosae*.

Sunnites (or **Sunni**; Arabic *sunna*: custom) The larger of the two main Muslim Sects. In contrast to the *Shiite Muslims, the Sunnites accept the first three caliphs as Mohammed's legitimate successors. They are strictly orthodox in their obedience to the Koran. They form the majority party in most Islamic countries except Iran.

sunspots Comparatively dark markings on the sun's *photosphere, typically a few thousand kilometres across with the central region being darkest and coolest. They can influence the climate on earth. They are centres of intense localized magnetic fields. The number of sunspots seen in a year, and their mean solar latitude, varies in a cycle of about 11 years, known as the **sunspot cycle**.

sunstroke A form of *heatstroke caused by overexposure to the sun. **Sunburn** is damage to the skin resulting from overexposure to the sun's rays. This may vary from slight reddening to large painful blisters.

superconductivity A phenomenon in which the electrical resistance of certain metals vanishes when they are cooled to very low temperatures. The temperature below which superconductivity occurs is called the transition temperature and varies for different substances. If a loop of a superconducting substance is cooled to below its transition temperature, a current will flow through the loop indefinitely. Ceramic conductors have now been found that operate at higher temperatures than the metal conductors first used.

supercooling The reduction in the temperature of a liquid below its freezing point without its solidification. This can only be achieved by slow and continuous cooling with pure liquids. A supercooled liquid is in a metastable state and any disturbance will cause solidification.

superego In *psychoanalysis, the part of the mind that acts as a moral conscience. It was believed by *Freud to result from the incorporation of the parent's instructions into a child's mind. See also EGO; ID.

superfluid A fluid that exhibits a very high thermal conductivity and virtually no friction at temperatures close to absolute zero. Such a fluid will flow up the sides and out of an open container.

supergiant The largest and most luminous type of star. They evolve from very massive

but more compact stars. Rigel, *Betelgeuse, and Antares are examples. See also GIANT STAR.

superheterodyne A system widely used in radio receivers; the incoming radio-frequency signal is combined with a locally generated carrier wave to give an intermediate frequency between radio- and audio-frequency (see MODULATION). The intermediate frequency is easier to amplify than radio-frequency.

Superior, Lake The largest of the Great Lakes in North America, situated between the USA and Canada. The lake is important for shipping. Area: 82 362 sq km (31 800 sq mi).

supernova A cataclysmic stellar explosion, seen as a sudden increase in a star's brightness. Most or all of the star's substance is blown off at high velocity, forming an expanding gas shell—the **supernova remnant**. If the star's core survives, it will most probably end up as a *neutron star or *black hole. See also CRAB NEBULA.

superphosphates Phosphorus-containing fertilizers that are highly active. Single superphosphate is made by reacting sulphuric acid with insoluble calcium phosphate rock to form calcium sulphate and soluble calcium hydrogen phosphate $\text{Ca}(\text{H}_2\text{PO}_4)_2$. Often the process is carried out under pressure. Triple superphosphate is more concentrated.

Supreme Court of the United States The highest law court in the USA, comprising the chief justice and eight associate justices appointed for life by the president. Its main functions include interpreting and safeguarding the constitution. It also decides disputes between states and between one state and the citizens of another and hears appeals from state and federal courts.

Surabaya 7 14S 112 45E A port in Indonesia, in E Java. It is Indonesia's second largest city and chief naval base. Population (1995 est): 2 701 300.

Surakarta (or **Solo**) 7 32S 110 50E A city in Indonesia, in central Java. A cultural centre noted for its shadow plays, it is the site of a sultan's palace (1745). Population (1995 est): 516 500.

Surat 21 10N 72 54E A city in India, in Gujarat on the River Tapti. It was the Mogul Empire's chief port (16th–17th centuries). It was the headquarters of the East India Company until 1687. Population (1991): 1 496 943.

surface tension A force occurring on the surface of a liquid that makes it behave as if the surface has an elastic skin. It is caused by forces between the molecules of the liquid:

only those at the surface experience forces from below, whereas those in the interior are acted on by intermolecular forces from all sides. Surface tension causes a meniscus to form, liquids to rise up capillary tubes, paper to absorb water, and droplets and bubbles to form. It is defined as the force acting tangentially to the surface on one side of a line of unit length (newtons per metre) or as the work required to produce unit increase in surface area (joules per square metre).

surfactant A substance that lowers the surface tension of a liquid, thus allowing easier penetration and spreading. For this reason they are often known as **wetting agents**. Surfactants are widely used in *detergents, emulsifiers, paints, adhesives, inks, etc.

surgeonfish A tropical marine fish, also called tang, belonging to the family *Acanthuridae* (about 100 species). Its deep laterally flattened body, up to about 50 cm long, is often brightly coloured, with a single long dorsal fin, and a sharp bladefike spine on each side of the tail. They feed mainly on algae. Order: *Perciformes*.

Suriname, Republic of (name until 1948: Dutch Guiana) A country on the N coast of South America, largely covered by tropical forest. The population is ethnically very diverse. *Economy*: based on bauxite, the chief industry being aluminium processing. Fishing is important, as is production of rice. *History*: it was sighted by Columbus in 1498 and the first permanent settlement was established by the English in 1650. It was ceded to the Netherlands in 1667. During the Revolutionary and Napoleonic Wars it was again (1799–1802, 1804–16) under British rule. In 1949 it gained a measure of self-government, subsequently becoming an autonomous part of the Netherlands (1954) and an independent republic (1975). The military took over in 1980; although democracy was ostensibly restored in 1988, Lt Col Désiré Bouterse remained the real leader until the free elections of 1991, which resulted in the opposition leader Runaldo Venetiaan becoming president. Venetiaan was again president from 2000. Crime, corruption, and the drug trade are endemic problems. Suriname is a member of the OAS and the Caribbean Community. Official language: Dutch; English, Hindustani, and Javanese are widely spoken; Surinamese (Sranang Tongo) is used as a lingua franca. Currency: Suriname guilder of 100 cents. Area: 163 265 sq km (63 020 sq mi). Population (2003 est): 435 000. Capital: Paramaribo.

surrealism A European movement in art and literature of the 1920s and 1930s. Surrealism began as a literary movement, when its leader, the poet André *Breton, published the surrealist manifesto in Paris (1924). It aimed, under the influence of *Freud, to embody in art and poetry the irrational forces of dreams and the subconscious mind. Other leading surrealists were the poets Louis *Aragon and Paul Eluard (1895–1952) and the painters *Ernst, *Miró, *Dali, *Magritte, Paul Delvaux (1897–1994), and Yves Tanguy (1900–55).

Surrey A county in SE England, bordering on Greater London. The North Downs run E–W across the middle of the county. Although it has developed primarily as a residential area, agriculture is important in the S. Area: 1679 sq km (648 sq mi). Population (2001): 1 059 015. Administrative centre: Kingston-upon-Thames.

Surrey, Henry Howard, Earl of (1517–47) English poet. The son of the Duke of Norfolk, he led a precarious life in the service of Henry VIII, and was finally executed on a charge of treason. He pioneered the use of blank verse in his translation of Virgil's *Aeneid* (1557), and, with Sir Thomas *Wyatt, was responsible for introducing Italian forms into English poetry.

Surya In Hindu mythology, the sun-god. He appears as a major deity in the *Vedas* and remained prominent as patron of numerous Hindu royal dynasties.

Susa (or Shushan) An ancient city in SW Iran. Occupied since the 4th millennium BC, it was a capital of Elam. Susa's heyday was as administrative capital of the Achaemenian kings of Persia (521–331).

Susquehanna River A river in the E USA. It rises in New York State and flows mainly S to Chesapeake Bay. Length: 715 km (444 mi).

Sussex See WEST SUSSEX; EAST SUSSEX.

Sutherland, Graham (Vivian) (1903–80) British artist. He turned to painting in 1935, specializing in disturbing landscapes and scenes of war desolation. Also well known are his *Crucifixion* (1946; St Matthew's, Northampton), his tapestry for Coventry Cathedral, and his portraits, e.g. of Somerset Maugham (Tate Gallery).

Sutherland, Dame Joan (1926–) Australian operatic soprano. She established her reputation at Covent Garden in 1959 in the title role of Donizetti's *Lucia di Lammermoor* and retired in 1990.

Sutlej, River A river in India and Pakistan.

Rising in SW Tibet, it flows mainly SW across the Punjab plain into Pakistan, where it joins the River Chenab. Length: 1368 km (850 mi).

suttee An ancient Hindu custom of self-immolation of widows on their husbands' funeral pyres. It was officially abolished in India by the British in 1829.

Sutton Coldfield 52°34'N 1°48'W A town in England, in Birmingham unitary authority, West Midlands, a mainly residential suburb of Birmingham. Population (1992 est): 103 097.

Sutton Hoo The site of a Saxon ship burial near Woodbridge, in Suffolk (E England). Excavations in 1939 revealed the remnants of a 38-oar boat containing a magnificent treasure hoard. The mound is thought to be a cenotaph to King Raedwald (died c. 625 AD).

Suu Kyi, Aung San See AUNG SAN.

Suva 18°08'S 178°25'E The capital of Fiji, on the coast of Viti Levu. Its industries include tourism and the production of coconut oil and soap. Population (1996 est): 167 421.

Suwannee River (or **Swanee R.**) A river in the SE USA, flowing from the Okefenokee Swamp in SE Georgia across Florida to the Gulf of Mexico. Length: 400 km (200 mi).

Suzhou (**Su-chou** or **Soochow**) 31°21'N 120°40'E A city in E China, on the Yangtze delta. Famed for its beautiful canals and gardens, it is a centre of culture and the silk industry. Population (1999 est): 845 687.

Svalbard (or **Spitsbergen**) A Norwegian archipelago in the Arctic Ocean. Following disputes over their sovereignty, they were granted to Norway in 1920. Covered largely by icefields and glaciers their major importance is as a source of coal. Area: 62 050 sq km (23 958 sq mi). Population (latest est): 3544. Chief town: Longyearbyen.

Swabia (German name: Schwaben) A former region in SW Germany now divided between Germany, Switzerland, and France. Swabia was one of the leading German duchies in the middle ages. Napoleon finally partitioned Swabia among neighbouring states in 1807.

Swahili (or **Kiswahili**) A Bantu language of East Africa and the lingua franca of Tanzania, Kenya, the Democratic Republic of Congo, and Uganda. There are three main dialects.

swallow A songbird belonging to a cosmopolitan family (*Hirundinidae*; 78 species) of acrobatic fliers that catch insects on the wing. Swallows are 10–22 cm long, with short necks,

long pointed wings, short legs, and often forked tails. All temperate swallows migrate to hot climates for the winter. See also MARTIN.

swallowtail butterfly A papilionid butterfly having long swallow-like tails on the hindwings. Many species are tropical and brightly coloured, with the sexes often of different colours. The caterpillars give off a strong odour if they are disturbed. Family: *Papilionidae*.

swamp cypress A deciduous conifer, *Taxodium distichum*, also called bald cypress, native to swampy regions of the SE USA and grown for its timber and as an ornamental. In waterlogged soils its roots protrude above the water. Up to 45 m high, it has globular cones, 2.5 cm across. Family: *Taxodiaceae*.

swan A large waterbird belonging to a genus (*Cygnus*; 7–8 species) occurring worldwide on fresh waters or sheltered coasts and estuaries. 100–160 cm long, swans are usually white with black legs and have large feet, a long neck, and a powerful spatulate bill, which they use to feed on underwater plants. Immature swans have a mottled brown plumage. See also MUTE SWAN. Family: *Anatidae* (ducks, geese, swans).

Swansea (Welsh name: Abertawe) 1. 51°38'N 3°57'W A city and port in Swansea county, South Wales. It is the second-largest city in Wales and a major industrial centre, with metals, chemicals, and oil refining. Population (1991): 181 906. 2. A county in S Wales on the Bristol Channel, created in 1996 from part of West Glamorgan. It includes the Swansea conurbation, the Gower Peninsula, and some hillier country in the N. The economy is based on heavy industry and port facilities in Swansea and tourism in the Gower. Area: 378 sq km (146 sq mi). Population (2001): 223 293. Administrative centre: Swansea.

swastika An ancient symbol of uncertain origin, generally held to signify prosperity and creativity. It is a cross, the four arms of which are deflected at right angles either clockwise or anticlockwise. It has been revered by Buddhists, Hindus, Celts, and North American Indians. The Nazis adopted the symbol, mistakenly believing it to be of pure Aryan origins.

Swazi A Bantu-speaking people who occupy Swaziland and adjacent areas of South Africa. They are an agricultural and pastoral people. Polygyny is practised by senior men. Traditionally ancestor worship, witchcraft, and magic were prominent in religious life.

Swaziland, Kingdom of A small country

in SE Africa between South Africa and Mozambique. It consists of *veld. *Economy:* chiefly agricultural, the main food crop being maize. The chief cash crop is sugar. Rich mineral resources include iron ore, asbestos, and coal. Manufacturing has developed rapidly since the late 1980s. *History:* the *Swazi occupied the area in the late 18th century. It became a South African protectorate in 1894 and, in 1902, after the Boer War it came under British rule. It became an independent kingdom within the Commonwealth in 1968. Under a new constitution (1978) political parties were banned; there is a partly elected House of Assembly but the country is effectively an absolute monarchy under King Mswati III. Economic crisis led to a growth in pro-democracy activism in the 2000s. Official languages: Siswati and English. Currency: lilangeni of 100 cents; South African currency is also legal tender. Area: 17 400 sq km (6705 sq mi). Population (2007 est): 1 133 066. Capital: Mbabane.

sweat (or perspiration) A watery fluid, consisting mainly of sodium chloride and urea in solution, that is secreted by the sweat glands in the skin. Sweating is a means of excreting nitrogenous waste products, but is more importantly a means of temperature regulation.

swede An annual or biennial herbaceous plant, *Brassica napus napobrassica*, growing to a height of 1 m, with yellow flowers. It is cultivated for its fleshy edible taproot; this is eaten as a vegetable and also fed to livestock. Family: *Cruciferae*.

Sweden, Kingdom of (Swedish name: Sverige) A country in N Europe occupying the E part of the Scandinavian peninsula. Undulating land in the S rises to mountains in the N. There are numerous lakes and forests. *Economy:* Sweden is rich in mineral resources, notably iron ore, which forms the basis of the country's heavy industry and is a major export. The large forests support important pulp and paper industries. There is a thriving fishing industry. Agricultural activities are concentrated in the S. *History:* the area was inhabited from early times by German tribes, the Swedes in the N and the Goths in the S, and its people participated in the exploits of the Vikings. Christianity was introduced in the 9th century. Finland was acquired in the 13th century and the 14th century saw the Kalmar Union of Sweden with Denmark and Norway. Independence was achieved in 1523 under Gustavus I Vasa, during whose reign Lutheranism was introduced. In the 17th century, under Gustavus Adolphus, Sweden emerged from the *Thirty Years' War

as a major European power, a position undermined by the Great *Northern War (1700–21). In 1809, during the Napoleonic Wars, Finland was surrendered to Russia. In 1814 Norway was ceded to Sweden, the two countries remaining united until 1905. Sweden remained neutral in both World Wars. From 1932 to 1976 politics was dominated by the Social Democrats, who created a highly developed welfare state (this has been cut back since the 1990s). On the accession of Carl XVI Gustaf in 1975 a new constitution reduced the power of the monarchy. The Social Democrat prime minister Olof Palme was assassinated in 1986. There was a centre-right government from 1991 to 1996, when the Social Democrats returned under Göran Persson. The current prime minister (from 2006) is Fredrik Reinfeldt, a conservative. Sweden joined the EU in 1995. In 2003 Sweden rejected the euro in a referendum marked by the assassination of the pro-euro foreign minister Anna Lindh. Official language: Swedish. Currency: krona of 100 øre. Area: 449 964 sq km (173 732 sq mi). Population (2007 est): 9 031 088. Capital: Stockholm.

Swedish A language belonging to the Scandinavian branch of the North Germanic group. It is the official language of Sweden and is spoken by a minority in Finland. The standard literary form is based mainly on the dialect of Stockholm.

sweet briar A branched prickly fragrant *rose, *Rosa rubiginosa* (or *R. eglanteria*), also called eglantine. Found in scrub and chalk grassland across the N hemisphere, it grows to a height of 2 m and has pink flowers.

sweet corn See MAIZE.

sweet pea An annual climbing herb, *Lathyrus odoratus*, native to Sicily and widely cultivated as a garden ornamental. Flower colours include shades of red, purple, blue, white, and yellow. Family: *Leguminosae*.

sweet potato An annual herb, *Ipomoea batatas*, native to tropical America and widely cultivated for its starchy edible tubers, which are reddish-brown with white or orange flesh. Family: *Convolvulaceae*.

sweet william A usually biennial herb, *Di-anthus barbatus*, native to S Europe and widely cultivated as a garden ornamental. Growing to a height of 30–70 cm, sweet williams produce flowers of red or pink in the wild but of various shades and patterns in cultivated varieties. Family: *Caryophyllaceae*.

swift A bird belonging to a widely distributed family (*Apodidae*; 75 species). 9–23 cm long,

swifts have grey or brown plumage with white markings; a wide slightly curved bill, and forked tail. With scimitar-shaped wings and a high-speed flight they capture insects and even mate and sleep on the wing. Order: *Apodiformes* (swifts, hummingbirds, etc.).

Swift, Jonathan (1667–1745) Anglo-Irish clergyman, poet, and satirist. Born in Dublin, he lived as a young man in England, where he wrote the satire *A Tale of a Tub* (1704). In 1714 he returned to Dublin, where he became dean of St Patrick's Cathedral, attacked English misrule in a series of pamphlets, and wrote his satirical masterpiece, *Gulliver's Travels* (1726).

swiftlet A small *swift belonging to a genus (*Collocalia*; 15–20 species) occurring in SE Asia and Australia. 9–15 cm long, swiftlets use echolocation to navigate in the caves where they nest.

Swinburne, Algernon Charles (1837–1909) British poet. His poetry, especially in the first volume of *Poems and Ballads* (1866), is characterized by sensuous flowing rhythms. He supported republican movements in Europe and rebelled against conventional British morality.

Swindon 1. 5134N 147W A town in S England, in Swindon unitary authority, Wiltshire. It developed around the workshops of the former Great Western Railway. Railway engineering is still a major employer but there are now diverse industries as well as financial and other services. Population (1991 est): 145 236. 2. A unitary authority in S England, in Wiltshire. Area: 230 sq km (89 sq mi). Population (2001): 180 061.

swine fever An infectious virus disease of pigs. In young pigs the disease is usually acute, resulting in death. Animals are treated with antiserum and antibiotics to combat secondary infection. In the UK infected animals are slaughtered.

Swithin, St (d. 862) English churchman. He was appointed Bishop of Winchester in 852. His tomb in Winchester Cathedral has become a famous shrine and according to legend the weather conditions on his feast day, 15 July, continue for 40 days.

Switzerland, Confederation of (French name: Suisse; German name: Schweiz; Italian name: Svizzera) A small landlocked country in central Europe. Undulating land in the N rises to the Jura Mountains in the W and the Alps in the S. The majority of the population is German, with large French and Italian minorities. Economy: although lacking in mineral wealth,

Switzerland owes much of its prosperity to its terrain and central European position. The latter has led to its development as a centre for trade, banking, and insurance, while the magnificent scenery has long been a major tourist attraction. The principal exports are machinery, watches, chemicals, and textiles. History: its Celtic inhabitants (the Helvetii) were conquered by the Romans in the 1st century BC and the region was overrun by German tribes in the 5th century AD, becoming part of the Holy Roman Empire in the 10th century. In 1291 Uri, Schwyz, and Nidwalden formed the Everlasting League, which is traditionally regarded as the origin of the Swiss Federation. By 1499 the Federation had achieved virtual independence and in the 16th century it became an important centre of the Reformation. In 1648 its independence was formally recognized by the European powers. The French conquered Switzerland in 1798, but after Napoleon's fall (1815) the Congress of Vienna guaranteed Swiss neutrality. Religious conflict led to a modified constitution (1848) by which Switzerland became a unified federal state. It maintained its neutrality through both World Wars and has become the headquarters of many international organizations. Switzerland is a member of the European Free Trade Association but the electorate rejected membership of the European Economic Area in 1992 and voted against joining the EU in 2001. In 2002 Switzerland ended its long tradition of isolationism by joining the UN. Official languages: French, German, Italian, and Romansch. Currency: Swiss franc of 100 centimes. Area: 41 288 sq km (15 941 sq mi). Population (2003 est): 7 336 000. Capital: Bern.

swordfish A food and game fish, *Xiphias gladius*, related to tuna and found in all tropical and temperate seas. It has an elongated body, up to 4.6 m long, a triangular front dorsal fin, no pelvic fins, and an elongated swordlike snout used to slash at shoaling fish on which it feeds. It is the only member of its family (*Xiphiidae*).

swordtail A tropical freshwater fish of the genus *Xiphophorus*, especially *X. helleri*. It has an elongated body, up to 13 cm long, and males have a long swordlike extension of the lower lobe of the tail fin. Swordtails are naturally green with a red strip on each side, but have been bred in many colours for aquaria. Family: *Poeciliidae*; order: *Atheriniformes*.

sycamore A large *maple tree, *Acer pseudoplatanus*, native to central and S Europe and widely grown elsewhere. Up to 30 m tall, it pro-

duces winged fruits. The wood is used for violin cases, carvings, and furniture.

Sydney 33 55S 151 10E The oldest and largest city in Australia, the capital of New South Wales, situated on Port Jackson inlet. It is a commercial, cultural, and financial centre. The N side of Port Jackson is predominantly residential, industry being located to the S. The two shores are connected by Sydney Harbour Bridge (1932), the second largest single span bridge in the world. Cultural centres include the Sydney Opera House (opened 1973). *History:* a penal settlement was established at Port Jackson in 1788. Under the governorship of Lachlan Macquarie (1810–21), it developed into a thriving town. Area: 1735 sq km (670 sq mi). Population (1998 est): 3 276 207.

syenite A range of coarse-grained intrusive rocks (see IGNEOUS ROCK) consisting mainly of alkali feldspar or feldspathoids, together with hornblende and biotite.

syllabaries Writing systems in which each symbol represents a syllable in the language rather than a concept (compare IDEOGRAPHIC WRITING SYSTEMS). The only major language using a syllabary today is Japanese.

symbiosis Any close relationship between individuals of two different species of organisms. The term can therefore include parasitism (see PARASITE), *commensalism, and inquilinism (in which one organism shares the nest of the other), but is often restricted to—and used synonymously with—*mutualism, in which both partners (symbionts) benefit from the association. An example of such a symbiotic relationship is provided by a sea anemone (*Adamsia palliata*), which lives attached to the snail shell inhabited by the hermit crab (*Eupagurus prideauxii*). The anemone protects the crab, from which it receives food and transport.

symphonic poem (or tone poem) A one-movement orchestral composition based on a literary, dramatic, or pictorial theme. The symphonic poem was invented by *Liszt, who composed a series of such works.

symphony An orchestral composition, usually in four movements. The classical symphony evolved in the mid-18th century and was perfected by Haydn and Mozart: the fast first movement was generally in *sonata form, the second was slow and expressive, the third a minuet and trio, and the fourth fast. Beethoven extended the formal and emotional range of the symphony, introducing a chorus

and soloists in the last movement of his ninth symphony. In the hands of such composers as Bruckner and Mahler the symphony underwent further enlargement: Mahler's eighth symphony (1907) requires a thousand performers. Sibelius developed a concentrated approach to symphonic writing: his seventh symphony (1924) is in one movement. In the 20th century Nielsen, Shostakovich, Vaughan Williams, and others all developed the symphony in differing ways.

synagogue A Jewish place of worship. The synagogue probably originated during the Babylonian exile as a substitute for the Temple at Jerusalem. In antiquity it was a public meeting place, devoted mainly to the reading and exposition of the *Torah. It is now primarily a house of prayer. The principal piece of furniture is the cupboard (Ark) containing the Torah scrolls.

synapse The meeting point between one nerve cell and another (see NEURONE). The nerve impulse, as it arrives at the end of one nerve process, causes a chemical neurotransmitter (e.g. *acetylcholine or noradrenaline) to be released. This reaches receptors on the opposite neurone and produces a new nerve impulse.

synchrocyclotron A type of *cyclotron in which the frequency of the accelerating electric field can be varied to compensate for the relativistic increase in the mass of the accelerated particles. This enables energies of up to 500 MeV to be obtained.

synchrotron A particle *accelerator, similar to the *cyclotron, in which protons or electrons are accelerated in a circular path by an alternating electric field. The frequency of the field is synchronized with the energy of the particles to counteract their relativistic increase in the mass. Proton energies of several hundred GeV have been attained in these devices.

synchrotron radiation Electromagnetic radiation emitted in certain directions by a charged particle when the presence of a magnetic field confines its motion to a circle. The particle has to be moving at speeds comparable to that of light for a noticeable amount of radiation to be emitted. Therefore a high magnetic field is needed. Such fields are used in *synchrotrons.

syncline A trough-shaped fold or downfold in folded rock strata, the strata dipping towards a central axis (compare ANTICLINE). The

youngest rocks occur in the core unless very complex deformation has occurred. Where the strata dip inwards from all directions the resulting feature is called a structural basin.

syndicalism A type of *socialism, advocated by Georges Sorel (1847–1922), under which the workers, not the state, would take over the productive resources of industry. Syndicalists were widely influential in Europe from the late 19th century until World War I.

Synge, John Millington (1871–1909) Irish dramatist. Most of his plays, which contributed greatly to the Irish Literary Renaissance, were inspired by his experience of life in an isolated Irish community, recorded in *The Aran Islands* (1907). His best-known play, *The Playboy of the Western World* (1907), caused riots at its first performance.

synodic period The average time taken by a planet or satellite to return to the same point in its orbit, relative to the sun, as seen from earth or from the satellite's primary (i.e. the body it orbits). It is therefore the interval between *oppositions or between identical *phases.

synthesizer A device that can reproduce the sounds of conventional instruments electronically or produce a variety of artificial tones. Electronic oscillators produce a range of signals, which after amplification and appropriate filtering are converted to sound waves. Individual circuits can be plugged in and out by the player, enabling a wide range of sounds to be produced.

syphilis A sexually transmitted disease caused by the *spirochaete bacterium *Treponema pallidum*. In primary syphilis chancres (hard ulcers) appear after about 25 days at the site of infection (usually the genitals). Weeks or months later the rash of secondary syphilis occurs. Arthritis, meningitis, and hepatitis may also occur at this stage. Without treatment the tertiary stage of syphilis may appear up to 30 years later and give rise to a variety of symptoms, including large tumour-like masses (gummas) in many organs, heart disease, blindness, and madness and paralysis. Syphilis can be treated with antibiotics. Several blood tests are available for diagnosing the disease.

Syracuse (Italian name: Siracusa) 37°04'N 15°18'E A seaport in Italy, in SE Sicily. Founded by Greeks in 734 BC, it became an important cultural centre in the 5th century. In 212 BC Syracuse fell to the Romans after a three-year siege. Ancient remains include a Greek temple,

a Roman amphitheatre, and a fortress. Population (2004 est): 123 022.

Syr Darya, River (ancient name: Jaxartes) A river in central Asia, rising in the Tian Shan and flowing mainly W to the Aral Sea. Length: 2900 km (1800 mi).

Syria (official name: Syrian Arab Republic) A country in the Middle East, on the Mediterranean. In the W the Ghab depression runs N–S. To the E of this is steppe and desert with some mountains. The main fertile areas are the coastal strip and the basin of the River Euphrates (see FERTILE CRESCENT). The population is predominantly Muslim (mainly Sunnites). *Economy*: largely agricultural. Natural resources include oil, natural gas, phosphates, and salt. Syria has a planned socialist economy; much of its industry is nationalized, and land has been redistributed in favour of the peasants. *History*: before the 20th century Syria extended over much of the Middle East, including Palestine and Lebanon. In ancient times the *Amorites settled here and later *Phoenicia flourished. Islam was introduced by conquering Arabs (c. 640 AD) and the caliphate established at Damascus. From the 11th century, it was the site of battles with the Crusaders. From 1517 until World War I it was part of the Ottoman Empire. In 1920 it became part of a French mandate. Demands for Syrian independence were finally satisfied in 1946. It united briefly with Egypt in the United Arab Republic (1958–61). In 1971 Syria, Libya, and Egypt united loosely in the Federation of Arab Republics. From 1976 Syria intervened in Lebanon, at first as a mediator but later as an active supporter of certain Muslim factions. Syria's military presence in Lebanon was formalized by treaty in 1991. Although formerly friendly with the Soviet Union and implacably hostile towards Israel, Syria improved relations with the West in the 1990s. Syria was ruled by President Hafiz al-Assad from 1971 until his death in 2000, when he was succeeded by his son, Bashar al-Assad. Relations with the USA deteriorated again in the 2000s, when Syria was accused of sponsoring international terrorism. International pressure led Syria to withdraw from Lebanon in 2005. Syria is a member of the Arab League. Official language: Arabic. Currency: Syrian pound of 100 piastres. Area: 185 680 sq km (71 772 sq mi). Population (2007 est): 19 314 747. Capital: Damascus.

Syriac A Semitic language based on the dialect of *Aramaic spoken in Edessa (now Urfa, SE Turkey). It became an important literary

and liturgical language during the 3rd to the 7th centuries AD.

syringa See LILAC; MOCK ORANGE.

syrinx The vocal organ of birds, located at the base of the windpipe. Air from the lungs vibrates membranes within a resonating chamber. Muscular tension alters pitch, and the two halves of the syrinx can produce different notes simultaneously.

Syros (Modern Greek name: Síros) A Greek island in the S Aegean Sea. The chief town, Hermopolis, is the capital of the Cyclades. Area: 85 sq km (33 sq mi). Population (latest est): 16 000.

systole See BLOOD PRESSURE; HEART.

Szczecin (German name: Stettin) 53 25N 14 32E A city in NW Poland, on the River Oder.

It is a major port, the chief export being coal. *History:* it became a member of the Hanseatic League in 1360. Seized by the Swedes (1648) it passed to Prussia in 1720, remaining under German control until it was ceded to Poland in 1945. It suffered severe damage during World War II. Population (2005 est): 411 900.

Szilard, Leo (1898–1964) US physicist, born in Hungary, who in 1934, while working in England, conceived the idea of a self-sustaining nuclear chain reaction. He joined *Teller in persuading Einstein to write to Roosevelt to warn him of the possibility that Germany might make an atom bomb first. During World War II he actually worked on the atom bomb, but later pressed for the abolition of all nuclear weapons.

tabasco A hot red pepper or sauce made from the entire fruits of a variety of the South American plant *Capsicum frutescens* and used to flavour soups, stews, curries, etc. Family: *Solanaceae*.

table tennis (or **Ping-Pong**) An indoor game for two or four players that originated in England in the late 19th century from *real tennis. It is played on a table 2.74 m (9 ft) long and 1.52 m (5 ft) wide, divided across its width by a net 15.25 cm (6 in) high. The players hit a small hollow plastic ball with a rubber-faced wooden bat. A point is scored when the opponent fails to return the ball after it has bounced once. The winner of a game is the first to reach 21 points with at least a two-point lead.

Tabriz 38 05N 46 18E A city in NW Iran. The most notable buildings are the Blue Mosque (15th century) and the citadel; it is famous for its carpets and has an airport and important rail connections. Population (1996): 1 191 043.

Tacitus, Cornelius (c. 55–c. 120 AD) Roman historian. He established his reputation as a public orator in Rome and became consul in 97 AD; in 112–13 he was governor of Asia. In 98 he wrote two historical monographs, *Germania* and *Agricola*, the latter an account of his father-in-law's career. His major works, the *Histories* and the *Annals*, survey Roman history during the periods 69–96 AD and 14–68 AD.

tadpole The aquatic larva of frogs and toads. The newly hatched tadpole feeds on vegetation but later becomes carnivorous. The external gills of the young tadpole are gradually replaced by internal gills, and after about ten weeks the limbs start to appear, the tail degenerates, the lungs develop, and the circulatory system changes to enable the adult to lead a terrestrial life.

Tadzhikistan, Republic of (or **Tajikistan**) A republic in central Asia. Largely

mountainous, it contains the Pamir and Altai ranges. Some 53% of the population are *Tadzhiks, with Uzbek and Russian minorities. *Economy*: primarily agricultural, although there are mining, engineering, and textile industries. Health resorts have grown up around its mineral springs. The economy suffered badly from the civil war of the 1990s. *History*: the region converted to Islam in the 7th century. Ruled by the Uzbeks from the 15th century, Tadzhikistan was taken by Russia in the 1860s. It was a constituent republic of the Soviet Union from 1924 until it gained independence in 1991. A violent struggle between the ex-communist government and Muslim rebels broke out in 1992; a ceasefire was signed in 1994 but subsequent elections were boycotted by the opposition and fighting recurred. Peace was secured by a further agreement (1997), which involved a degree of power sharing. Tadzhikistan's cooperation with the USA in its *war on terrorism (2001) in neighbouring Afghanistan has led to closer relations with the West. Official language: Tadzhik. Currency: somoni of 100 dinars. Area: 143 100 sq km (55 240 sq mi). Population (2003 est): 6 535 000. Capital: Dushanbe.

Tadzhiks An Iranian Muslim people of Afghanistan and parts of Turkistan. They practise agriculture, growing cereal and fruit trees, and are traditionally traders, because of their position on the caravan routes between China, India, and Persia. They speak Tadzhik, a form of Persian.

Taegu 35 52N 128 36E A city in SE South Korea, the capital of North Kyongsang province. An old cultural centre, it has an important textile industry. Population (1995): 2 249 139.

Taft, William Howard (1857–1930) US statesman; Republican president (1909–13). Taft's conservative presidency was characterized by antitrust legislation and high protec-

tive tariffs, which split the Republican vote and lost the 1912 election to the Democrats.

Tagore, Rabindranath (1861–1941) Indian poet, philosopher, and teacher. He resigned his knighthood in 1919 as a protest against the *Amritsar massacre. He advocated cultural links between the East and the West and won the Nobel Prize for Literature in 1913 after the publication in English of *Gitanjali* (1912), a volume of spiritual poetry.

Tagus, River (Portuguese name: Tejo; Spanish name: Tago) A river in SW Europe. Rising in E central Spain, it flows NW and then SW to the Atlantic Ocean at Lisbon. Length: 1007 km (626 mi).

Tahiti The largest of the Society Islands in the S central Pacific Ocean, in French Polynesia. Mountainous and famous for its beauty, it was *Gauguin's home for two years (1891–93). Settled by Polynesians in the 14th century, it was first visited by Europeans in 1767. It became French in 1842. Tourism is important, and copra, sugar cane, vanilla, and coffee are exported. Area: 1005 sq km (388 sq mi). Population (latest est): 116 000. Chief town: Papeete.

Tai Peoples of SE Asia and China who speak a group of related languages probably belonging to the Sino-Tibetan family. They are traditionally rice cultivators and Theravada Buddhists. Major groupings are the Thai or Siamese, the Lao, Shan, and Lu.

taiga The coniferous forests, composed chiefly of spruces, pines, and firs, in the N hemisphere in subpolar latitudes. It extends from Norway across Sweden, Finland, and Russia (including Siberia). The coniferous forests of North America are also known as taiga.

tailorbird A S Asian *warbler belonging to the genus *Orthotomus* (9 species), named after its habit of sewing the edges of a large leaf together to form a bag in which the nest is built.

Tainan 23°01'N 120°14'E A city in SW Taiwan. It is the island's former capital (1683–1891). Population (2000 est): 728 060.

taipan A small-headed *cobra, *Oxyuranus scutellatus*, that occurs in NE Australia and New Guinea. Up to 3.3 m long, it has a ridged brown back and a yellow belly. Its venom contains a blood-clotting agent that is fatal within a few minutes.

Taipei (or **Taipei**) 25°00'N 121°32'E The capital of Taiwan, in the N of the island. Founded in the 18th century, it was under Japanese occupation (1895–1945) and became the seat of the

Nationalist Government (see GUOMINDANG) in 1949. Population (2000 est): 2 641 312.

Taiiping Rebellion (1851–64) A peasant rebellion in China that seriously undermined the Qing dynasty. In 1851 a Hakka peasant, Hong Xiu Quan, raised an army of rebels and marched N, capturing Nanjing in 1853. They then marched on Beijing but imperial forces, and cold weather, drove them back. When Nanjing fell, Hong and his followers committed mass suicide.

Taiwan (official name: Republic of China) An island off the SE coast of mainland China. Together with several nearby islands, including the Penghu Islands and the islands of Jinmen and *Mazu, it comprises the so-called Republic of China. Taiwan Island is largely mountainous, and two-thirds of the land is under forest. The people are predominantly Chinese. *Economy:* the balance of the economy has shifted from agriculture to industry and services. Iron and steel are important and the large volume of exports also includes television and radio sets, mass-produced plastic goods, chemicals, and textiles. As well as coal, gold, and other minerals, oil, and natural gas have been found, although timber remains the main natural resource. The chief crops are sugar cane, rice, and sweet potatoes. *History:* the island, named Formosa ("beautiful") by the Portuguese, who discovered it in 1590, was ceded by China to Japan in 1897. It surrendered to Gen *Chiang Kai-shek in 1945 and after the defeat of his Nationalist (*Guomindang) government by the Chinese Communists he fled here in 1949. Following threats by the People's Republic of China, the USA undertook in 1955 to protect Taiwan from attack. However, Taiwan's importance in international affairs diminished, and in 1979 the USA established diplomatic relations with mainland China and severed those with Taiwan. Taiwan is now recognized by less than 40 countries. Relations with China improved in the early 1990s but declined in 1995–96, when Taiwan embarked on democratic elections and China carried out military exercises in the Taiwan Strait. The Guomindang's 50-year domination of Taiwanese politics ended in 2000, when Chen Shui-bian of the Democratic Progressive Party was elected president; he was narrowly re-elected in 2004. Official language: Mandarin Chinese. Currency: new Taiwan dollar of 100 cents. Area: 35 981 sq km (13 892 sq mi). Population (2003): 22 569 000. Capital: Taipei.

Taiyuan 37°50'N 112°30'E A city in NE China, the capital of Shanxi province. An ancient fortified city, it is a centre of technology, coalmin-

ing, and heavy industry. Population (2003 est): 1 970 304.

Tajikistan See TADZHIKISTAN, REPUBLIC OF.

Taj Mahal The mausoleum in Agra (N India) built (1631–53) for Mumtaz-i-Mahal, wife of the Mogul emperor, *Shah Jahan, who is also buried here. Set in formal gardens, the Taj Mahal is built mainly of white marble, delicately carved and inlaid with precious stones.

talapoin The smallest *guenon monkey, *Ceropithecus talapoin*, of central West Africa, also called pygmy guenon. Only 30 cm long, it inhabits swampy forests. It has olive-green fur and conspicuously swollen genitals.

talaq An Islamic extra-judicial law of divorce enabling a husband to unilaterally divorce his wife by repudiating her three times. The marriage is then dissolved, unless the husband revokes the pronouncement during the next three months or, if the wife is pregnant, before the child is born.

talc A white or green mineral of hydrated magnesium silicate, $Mg_3(Si_4O_{10})(OH)_2$, with a layered structure. It is soft (hardness 1 on *Mohs' scale) and greasy. Soapstone (steatite) is a rock consisting almost wholly of talc. Besides its use as talcum powder, it is used as a filler, lubricant, and soft abrasive.

Taleban (Pashto: seeker) A militant Sunni Muslim organization that controlled most of Afghanistan from 1996 until late 2001. It imposed strict Islamic law, proscribing nearly all Western influences and denying women access to education and paid work. In Oct 2001 the Taleban's links with *al-Qaida prompted massive US air strikes (see WAR ON TERRORISM) and the regime collapsed within weeks. Taleban fighters have since maintained a fierce guerrilla campaign against the Afghan government and NATO forces.

talipot palm A *palm tree, *Corypha umbraculifera*, cultivated in India and Burma. Its trunk bears fan-shaped leaves up to 5 m in diameter. The pyramid-shaped flower cluster, more than 7 m tall, is the largest in the plant kingdom. The seeds are used for buttons and the leaves for matting, fans, and thatching.

Talleyrand (Charles Maurice de Talleyrand-Périgord; 1754–1838) French politician and diplomat. He was foreign minister from 1797 until 1807, and again under the restored Louis XVIII. He represented France at the *Congress of Vienna and was ambassador to Great Britain (1830–34).

Tallinn (German name: Reval) 59 22N 24 48E The capital of Estonia, a port on Tallinn Bay in the Gulf of Finland. Its varied industries include shipbuilding. A member of the Hanseatic League, it was a prominent trading centre in the middle ages. Population (2004 est): 396 375.

Tallis, Thomas (c.1505–85) English composer. He was joint organist of the Chapel Royal with his pupil Byrd. In 1575 he and Byrd produced *Cantiones Sacrae*, a collection of their motets. Tallis' most famous works are *The Lamentations of Jeremiah* and *Spem in Alium*.

Talmud Two of the most important works of Jewish religious literature: the Babylonian and the Palestinian (or Jerusalem) Talmud. Both Talmuds have the same form: they are written in a mixture of Hebrew and Aramaic and are presented as a commentary (*gemara*) on the *Mishnah. They contain records of rabbinic discussions, concentrating especially on halakhah. The rabbis mentioned in the Talmuds are called *Amoraim*; the Palestinian *Amoraim* flourished in the 3rd and 4th centuries AD; the Babylonian *Amoraim* continued to about 500.

tamarin A South American monkey found in open woodland and forests, closely related to *marmosets. Tamarins have tusklike lower canine teeth and feed on fruit, insects, eggs, etc. Chief genera: *Leontocebus* (21 species), *Leontideus* (3 species); family: *Callithricidae*.

tamarind An evergreen tree, *Tamarindus indica*, cultivated in tropical regions for its fruit. It bears clusters of yellow flowers. The fruit is a plump pod containing seeds and a bitter-sweet pulp, which is used in chutneys, curries, and medicines. Family: *Leguminosae*.

tamarisk A tree or shrub belonging to the genus *Tamarix* (90 species), native to W and S Europe, central Asia, and India. Tamarisks have small scalelike leaves, feathery clusters of small pink flowers, and deep roots. They have been widely planted to stabilize sand dunes. *T. mannifera* of the Middle East and central Asia exudes a sweet white edible substance (manna) from the stems. The false tamarisks (genus *Myricaria*; 10 species) are native to temperate Eurasia. Family: *Tamaricaceae*.

Tambo, Oliver (1917–93) South African politician; president of the African National Congress (1977–91). A lawyer, he was arrested with Nelson *Mandela in 1956, but released a year later. From 1960 to 1990 he directed ANC activities from outside South Africa.

Tamerlane See TIMUR.

t

Tameside A unitary authority in NW England, in Greater Manchester. Area: 103 sq km (40 sq mi). Population (2001): 213 045.

Tamil A Dravidian language of S India and Sri Lanka. It is the official language of the state of Tamil Nadu. There are several regional dialects. It is written in a script known as Vatteluttu and there are marked differences between the written and spoken forms. Tamil society, mainly Hindu, is stratified into caste groups.

Tampere (Swedish name: Tammerfors) 61°32'N 23°45'E The second largest city in Finland. It has a 20th-century cathedral and a university (1925). Its manufactures include railway rolling stock, textiles, wood pulp, paper, and footwear. Population (2000 est): 193 174.

Tampico 22°18'N 97°52'W A port and winter resort in SE Mexico, on the Río Panuco. Oil refining is the chief industry. Population (2000 est): 294 789.

tanager A brightly coloured songbird belonging to a family (*Thraupidae*; 222 species) occurring in tropical and subtropical America. Tanagers are 10–20 cm long, plumpish, with a short neck and a conical bill. They live mainly in forests and feed on fruit, nectar, and insects.

Tang (or **T'ang**; 618–906 AD) A Chinese dynasty that established an empire extending over much of central Asia and Korea. In Tang times foreign trade was encouraged and many Chinese scientific inventions, such as gunpowder, spread to the West. Arts, especially poetry, flourished, printing was invented, and paper money was used for the first time. In 751 Arab forces recaptured Turkestan and the Tang empire began to disintegrate. Two rebellions finally led to the collapse of the dynasty.

Tanganyika, Lake A lake in E central Africa, in Democratic Republic of Congo, Burundi, Tanzania, and Zambia. It is drained intermittently to the W by the River Lukuga. Area: about 33 000 sq km (12 738 sq mi).

tangent A straight line touching a curve at one point only or a plane touching a curved surface at one point only.

tangerine The fruit of a tree, *Citrus reticulata*, also called mandarin, native to SE Asia and cultivated in the S USA and the Mediterranean region. The orange fruit, which peels easily and readily splits into segments, is usually eaten fresh. Many varieties have been developed, including the satsuma and clementine.

Tangier (or **Tangiers**) 35°48'N 5°45'W A port in N Morocco, on a bay on the Strait of Gibraltar.

An important Roman town, it was established as an international zone in 1923. Its international status was abolished on Moroccan independence (1956). Its industries include cigarette and textile manufacture, fishing, and market gardening, and it is also a tourist centre. Population (1994 est): 521 735.

tank An armour-plated military vehicle that is self-propelled on caterpillar tracks and typically armed with a gun (usually turret-mounted) and machine guns. Tanks are classified as main battle tanks (MBTs), for independent operation, and light tanks, for reconnaissance and other specialized uses. Based on a design of Sir Ernest Swinton (1868–1951), they were first used during the Somme offensive in September 1916. In World War II tank battles across Europe and N Africa replaced the static trench warfare of World War I. Modern tank development has concentrated on improving weapons, armour, and computer-aided navigation and fire control.

tanker A seagoing vessel equipped with a large cargo tank for transporting liquids, especially oil. The forerunner of the modern tanker was built in 1885; modern **supertankers** with a carrying capacity of 75 000 tonnes were developed after World War II. Ultra-Large Crude Carriers (ULCCs) have deadweights of up to nearly half a million tonnes.

Tannhäuser (c. 1200–c. 1270) German poet, a Minnesinger several of whose lyrics survive. Wagner's opera is based on the legend of his seduction by Venus, his life of sensuality at her court, and his pilgrimage to seek papal forgiveness.

tannin (or **tannic acid**) One of a group of phenol derivatives present in the bark, leaves, fruits, and galls of many plants. Tannins are used as mordants for many dyes, in tanning leather, and in making ink.

tansy A perennial herb, *Tanacetum* (or *Chrysanthemum*) *vulgare*, native to temperate Eurasia. It has flat-topped clusters of yellow flowers and was formerly cultivated for its aromatic leaves, used for cooking and medicinal purposes. Family: *Compositae*.

tantalum (Ta) A very hard grey dense metallic element, discovered in 1802 by A. K. Ekeberg (1767–1813). It is similar to niobium (Nb) and is difficult to separate from it. Tantalum occurs naturally in the ore columbite ($(\text{FeNb,Ta})_2\text{O}_6$). It is resistant to chemical attack and is used in alloys, for example in surgical materials for implantation in the body and in incandescent

filaments. The oxide (Ta_2O_5) is used in special glass, with high refractive index, for camera lenses. At no 73; at wt 180.948; mp 3020°C; bp 5458 ± 100°C.

Tantalus A legendary Greek king of Lydia, son of Zeus and Pluto and father of *Niobe and *Pelops. In Hades he was punished for certain offences against the gods by being made to stand within reach of water and fruits that moved away whenever he tried to drink or eat.

Tantras A group of Sanskrit religious texts written in India in the 5th century AD. They form the basis of esoteric systems of meditation in both Hinduism and Buddhism. In the **Tantric yoga** of Hinduism, two principles are postulated: Shiva and Shakti, male and female, mind and creative energy. The object of tantric practices is to arouse the female element and ultimately to unite it with the male principle. **Tantric Buddhism** involves an elaborate system of meditation by means of mudras (gestures), mantras (symbolic sounds), and mandalas (diagrams). The imagery of sexual union is the distinctive feature of both systems.

Tanzania, United Republic of A country in East Africa, on the Indian Ocean. It consists of a mainland area (formerly the republic of Tanganyika) and the islands of *Zanzibar and Pemba, as well as some smaller islands. The land rises from the coast through plateaus to mountains, especially in the N, with Mount Kilimanjaro at 5950 m (19520 ft). The majority of the population is African, mainly of Bantu origin. **Economy:** chiefly agricultural, with much subsistence farming. In mainland Tanzania the chief crops are cotton, maize, and cassava. Zanzibar (with Pemba) is the world's largest producer of cloves, with coconuts as the second cash crop. Food crops include rice, bananas, and cassava. Minerals include diamonds, gold, tin, and salt; coal and iron have been found, as has offshore gas. There is little industry and Tanzania remains one of the world's poorest countries. **History:** important prehistoric remains have been found by the *Leakey family. Tanganyika was occupied by the Germans in the 1880s, becoming a German protectorate in 1891. After World War I it was under British rule. It gained independence in 1961 and in 1962 became a republic within the Commonwealth with Julius Nyerere as its first president. In 1964 Tanganyika and Zanzibar joined to form the United Republic of Tanganyika and Zanzibar, now known as Tanzania. In 1977 it became a one-party state. Plans to create a multiparty system were endorsed in 1992. In 1995 elections resulted in victory for the ruling Party of

the Revolution. The current president (since 2005) is Jakaya Kikwete. Recent years have seen a growing separatist movement in Zanzibar. Official languages: Swahili and English. Currency: Tanzanian shilling of 100 cents. Area: 945 087 sq km (364 900 sq mi). Population (2007 est): 39 384 223. Capital: Dodoma.

Taoism Emerging in the 6th century BC, Taoism is one of the two great native Chinese religio-philosophical systems (the other is Confucianism) and a major influence in the development of Chinese culture. The goal of Taoism as a philosophy is joyful, mystical, and practical harmony with the universe. Yin (the feminine) balances yang (the masculine). *Te* (virtue) and *ch'i* (energy) represent the power of effortless action accessible to the Taoist. Taoism emphasizes breath control, diet, exercises, sexual continence, and chemical elixirs as a means of achieving immortality. Since the Cultural Revolution (1966–68) religious Taoism survives mainly in Taiwan. Western interest has been aroused by philosophical Taoism, especially by the *I Ching*, an oracular work that claims to demonstrate purpose in chance events.

tape recorder A device for recording and playing back sound stored on magnetic tape, which is usually wound into cassettes or cartridges. In recording, the sound is converted to an electrical signal by a *microphone, amplified, then fed to an electromagnet in the recording head. The varying field of the magnet leaves a pattern of magnetization in the iron (or sometimes chromium) oxide coating of the tape. To play back, the magnetized tape induces a current in a coil as it passes the reproducing head. The coil current is then amplified and fed to loudspeakers.

tapeworm A parasitic hermaphrodite *flatworm of the class *Cestoda* (about 3000 species). Tapeworms range from 20 mm to 15 m in length and anchor themselves inside the intestine of their host by means of hooks and suckers on the head. The body consists of a chain of progressively large segments through which food is absorbed. The terminal segments—full of eggs—are regularly shed, passing out of the host's body to infect a secondary host, where larvae invade muscle tissue. Species infecting man include the beef tapeworm (*Taenia saginata*) and the pork tapeworm (*T. solium*).

tapir A shy nocturnal hoofed mammal belonging to the genus *Tapirus* (4 species). The largest species is the black and white Malayan tapir (*T. indicus*), reaching about 1 m at the shoulder and weighing up to 350 kg. Other

species are brown. All have a large head with a short fleshy snout. Young tapirs are marked with white spots and stripes. Tapirs inhabit forests near water, feeding on leaves and shoots. Family: *Tapiridae*; order: *Perissodactyla*.

tar A thick black semisolid substance of organic origin, especially coal tar obtained when coal is heated to over 1000°C in the absence of air (1 kg of coal yielding about 50 g of tar). Tar can be used as it is, or can be distilled to produce a wide range of organic chemicals including benzene, naphthalene, and anthracene and their derivatives. The substance remaining is called pitch.

Tara 53 34N 635W A village in the Republic of Ireland, in Co Meath. The Hill of Tara was the ancient religious and political centre of Ireland and here the early Irish Kings lived and were crowned.

Tarantino, Quentin (1963–) US film director and screenwriter, noted for his violent stylish crime dramas, which include *Reservoir Dogs* (1993), *Pulp Fiction* (1994), and the two parts of *Kill Bill* (2003, 04).

tarantula A large dark hairy spider (up to 75 mm long) of the family *Theraphosidae*, found in tropical America. Many tarantulas live on trees or in burrows in the soil, feeding mainly at night on insects and occasionally frogs, toads, mice, and small birds. Their poisonous bite is painful but not fatal to man. The name was originally given to a *wolf spider (*Lycosa tarentula*) of Taranto (Italy).

taro A perennial herbaceous plant, *Colocasia esculenta*, also known as eddo, dasheen, and elephant's ear, native to tropical Asia and widely cultivated in tropical and subtropical areas for its edible tubers. The tubers, which are large, starchy, and spherical, contain more protein than potatoes and are eaten cooked as vegetables or made into puddings or bread. Family: *Araceae*.

tarot A pack of 78 cards used primarily in fortune telling, although they are also the fore-runners of modern playing cards. They originated in 14th-century Italy. The original pack is now known as the Greater Arcana; this consists of 22 cards (believed to correspond to the letters of the Hebrew alphabet)—21 numbered cards representing natural elements, vices, and virtues and a "Fool" (the original joker). During the 14th century these were combined with 56 cards, now known as the Lesser Arcana, in 4 suits: cups, swords, coins, and rods, representing clergy, nobility, mer-

chants, and peasants. Each suit consists of number cards from one to ten and four court cards: king, queen, knave, and knight.

Tarquinius Superbus (Tarquinius Superbus) The last King of Rome, who ruled, according to Roman tradition, from 534 to 510 BC. Tarquinius is probably a historical figure but many myths evolved to account for the nickname Superbus.

tarragon A perennial herb, *Artemisia dracunculoides*, native to central Asia and widely cultivated. It has slender leaves and flowers, which are often dried and used in salads, sauces, pickles, etc. It also yields an essential oil used in cooking and perfumery. Family: *Compositae*.

tarsier A small nocturnal *prosimian primate belonging to the genus *Tarsius* (3 species), of Sumatra, Borneo, Celebes, and the Philippines. 22–43 cm long including the naked tail (13–27 cm), tarsiers have enormous eyes, large hairless ears, and gripping pads at the end of their digits. They are mainly arboreal. Family: *Tarsiidae*.

Tarsus 36 52N 34 52E A town in central S Turkey, near Adana. The first known settlement here was Neolithic; it was Assyrian for many centuries and an important town in the Roman and Byzantine Empires. St Paul was born here. Population (1997): 190 184.

Tashkent 41 16N 69 13E The capital of Uzbekistan. It is the oldest and largest city of central Asia, being a major communications, industrial, and cultural centre. Textiles, food- and tobacco-processing, and chemical industries are important. History: dating from at least the 1st century BC, it fell successively to the Arabs (7th century) and the Turks (12th century). It was captured by Russia in 1865. Population (1998 est): 2 124 000.

Tasmania An island state of Australia, separated from the SE corner of the mainland by Bass Strait. Discovered by the Dutch navigator Abel Tasman (c. 1603–c. 1659) in 1642, it was called Van Diemen's Land, after Tasman's patron, until 1856. Agriculture is important with dairy farming, sheep rearing, and apples and hops. More than 40% of the island is covered by forest and the export of wood chips to Japan is a significant industry. Large mineral deposits include tin, iron ore, zinc, lead, and copper. Area: 68 332 sq km (26 383 sq mi). Population (1999 est): 470 260. Capital: Hobart.

Tasmanian devil A carnivorous marsupial, *Sarcophilus harrisi*, now restricted to Tasmania. About 1 m long, it is black with a large head and wide jaws containing doglike teeth. Strong

and heavily built, it feeds on wallabies, birds, and lizards and fights ferociously when cornered. Family: *Dasyuridae* (dasyures).

Tasman Sea A section of the SW Pacific Ocean, lying between SE Australia and Tasmania on the W and New Zealand on the E. Area: about 2 300 000 sq km (900 000 sq mi).

Tasso, Torquato (1544–95) Italian poet. He joined the court of the Este family at Ferrara where he wrote *Aminta* (1573) and his major work, the epic *Gerusalemme Liberata* (1575; published 1581). He later suffered from mental instability.

Tatars A mainly Muslim people, living mainly in the Tatar Republic of Russia, who belong to the NW division of the Turkic-speaking peoples. They traditionally lived by farming and herding. The Tatars are descended from peoples associated with the Mongol empire and the name was often used to refer to all the nomadic Turkic and Mongol peoples of the steppes.

Tate Galleries Two art galleries in London. The original Tate Gallery was built on Millbank in 1897 with the financial support of the sugar merchant and philanthropist Sir Henry Tate (1819–99). Highlights are its Pre-Raphaelite works and paintings by Turner, housed in the Clore Gallery since 1987. New branches were opened in Liverpool (1988) and in St Ives, Cornwall (1993). In 1999–2000 the former Bankside power station, on the S bank of the Thames, was converted into **Tate Modern**; this now holds the collection of international modern art, leaving the Millbank gallery (Tate Britain) for British works.

Tatra Mountains Two mountain ranges in central E Europe: the **High Tatras**, which extend 90 km (56 mi) E–W along the Polish-Slovakian border and constitute the highest area of the *Carpathian Mountains, and, to the S, the **Low Tatras**, which run parallel for some 150 km (93 mi) and rise to 2043 m (6703 ft).

Taunton 51°10'N 3°06'W A market town in SW England, the administrative centre of Somerset. The Great Hall in the 12th-century castle was the scene of Judge Jeffreys' Bloody Assizes (1685). Service industries now predominate; there is also precision engineering and the traditional cider making. Population (1996): 60 300.

Taupo, Lake (or **Taupomoana**) The largest lake in New Zealand. It lies on the volcanic plateau of central North Island and is drained by the Waikato River. Area: 616 sq km (238 sq mi).

tautomerism See ISOMERS.

Tavener, Sir John (1944–) British composer. His earlier compositions include the cantata *The Whale* (1966) and the opera *Thérèse* (1979). Later works, such as *The Protecting Veil* (1989) and *Mary of Egypt* (1992), are influenced by the liturgy of the Russian Orthodox Church.

Taverner, John (c. 1495–1545) English composer. He became choirmaster at Cardinal College (later renamed Christ Church) Oxford, in 1526. In 1528 he was imprisoned for heresy and left Oxford in 1530. He became a paid agent of Thomas Cromwell and gave up music. He left 28 motets, a *Te Deum*, 8 masses, and some instrumental music.

tawny owl A common *owl, *Strix aluco*, occurring in Europe and SE Asia. It has short rounded wings, dark-brown eyes, a mottled brown plumage, and lacks ear tufts.

taxidermy The art of making lifelike zoological models of creatures by preserving their skins and mounting them on suitable dummies. Taxidermy dates from the 17th century; improved technology and the use of plastic body forms have resulted in greater degrees of realism.

taxis The movement of a living organism or cell in response to an external stimulus: the movement is either towards or away from the stimulus, i.e. a positive or negative taxis. **Chemotaxis** is the response to a change in the concentration of a chemical. Many insects, for example, respond chemotactically to the scents emitted by the opposite sex. **Phototaxis** is the response to light: cockroaches are negatively phototactic. Compare TROPISM.

taxonomy The study of the classification and nomenclature of organisms. The principles of taxonomy were established in the 18th century by the work of *Linnaeus (see also BINOMIAL NOMENCLATURE). As far as possible, organisms are arranged into a hierarchy of groups (called taxa) based on degrees of relationship (see PHYLOGENY). When knowledge of the evolution of a group is lacking, taxonomy is based on structural and other similarities. The basic unit of classification is the *species. Related species are grouped into genera, which are arranged into orders and then classes, phyla, and finally kingdoms. In most modern classifications five kingdoms are recognized: *Animalia* (animals), *Plantae* (plants), *Fungi*, *Bacteria* (or *Prokaryotae*), and *Protoctista* (which includes algae, protozoa, and slime moulds).

Tay, River The longest river in Scotland, ris-

ing in the Grampian Mountains and flowing through Loch Tay. It enters the North Sea through the Firth of Tay. Length: 193 km (120 mi).

Taylor, Dame Elizabeth (1932–) US film actress, born in England. She began her career as a child star, notably in *National Velvet* (1944). Her other films include *Cleopatra* (1962) and *Who's Afraid of Virginia Woolf?* (1966), in both of which she costarred with Richard *Burton, to whom she was twice married; she has had six other husbands. She was created a DBE in 2000.

Taylor, Zachary (1784–1850) US statesman and general; president (1849–50). In the *Mexican War (1846–48) he won the victory of Buena Vista although his forces were outnumbered by four to one.

Tbilisi (former name: Tiflis) 41°43'N 44°48'E The capital of Georgia (Asia), on the River Kura. Engineering and the manufacture of textiles, wine, and food are the principal economic activities. History: founded in the mid-5th century, it fell successively to the Persians, Byzantines, Arabs, Mongols, Turks, and (in 1801) to the Russians. Population (1997 est): 1 398 968.

Tchaikovsky, Peter Ilich (1840–93) Russian composer. He became professor at the Moscow conservatoire in 1866. After the success of his first piano concerto, Tchaikovsky was offered financial support from Nadezhda von Meck (1831–94), a wealthy widow, whom he never met. Among his compositions are six symphonies, including the *Pathétique* (1893), three piano concertos (one unfinished), a violin concerto, string quartets, the opera *Eugene Onegin* (1877–78), and the ballets *Swan Lake* (1876–77) and the *Nutcracker* (1891–92).

tea The dried leaves and shoots of the evergreen shrub or tree, *Camellia sinensis*, which yield a beverage when infused with water. Native to parts of India and China, the tea plant has three major varieties—China, Assam, and Cambodia—and numerous hybrids. The shoots and young leaves are picked by hand and left to wilt before being lightly rolled and dried. The major tea exporters are India and Sri Lanka; most of China's production goes for home consumption. Tea is usually sold in the form of chopped leaves—loose or contained in small porous paper bags (tea bags). Its stimulating effect is due to the caffeine content (about 3.5%); flavour depends on the presence of volatile oils, and tannins are responsible for its colour. Family: *Theaceae*.

teak A tropical tree, *Tectonia grandis*, native

to SE Asia and cultivated for its timber. It has small white flowers and fleshy fruits. The aromatic golden-yellow heartwood becomes brown when seasoned and is very hard and durable, being used for furniture, door and window frames, etc. Burma is the major teak exporter. Family: *Verbenaceae*.

teal A small dabbling duck, *Anas crecca*, of the N hemisphere, nesting on marshes and wintering on mudflats and estuaries. It feeds on water plants and aquatic invertebrates. Drakes are grey and have a chestnut head and a white wing stripe; females are mottled brown and both sexes have a green-and-black wing patch.

tear gas (or *lachrymator*) A substance, generally an atomized liquid rather than a gas, that is used to control crowds by causing acute eye irritation with temporary blindness and copious flow of tears. Chloroacetophenone (Mace) is the best-known example.

teasel A biennial herb, *Dipsacus fullonum*, native to Europe, W Asia, and N Africa. The prickly stems grow to a height of 2 m and bear conical heads of blue, purple, or white flowers with stiff hooked bracts. The flower heads of fuller's teasel (*D. fullonum sativus*) were formerly used to tease fabrics. Family: *Dipsacaceae*.

technetium (Tc) A silvery-grey radioactive element that was the first to be produced artificially. It does not occur naturally on earth but has been observed spectroscopically in a number of stars. It is chemically similar to rhodium and the compound KTcO_4 is a remarkable corrosion inhibitor in steels. At no 43; at wt (98); mp 2204°C; bp 4265°C.

tectonics The study of the major structural features of the earth's crust and the processes by which they are constructed. See also PLATE TECTONICS.

Tedder, Arthur William, 1st Baron (1890–1967) British air marshal. He joined the Royal Flying Corps in 1916. In World War II he was appointed (1940) to command the RAF in the Middle East and then (1943) in the Mediterranean. He became Eisenhower's deputy in 1944 and contributed to the success of the Normandy landings.

Tees, River A river in N England. Rising in the Pennines in Cumbria, it flows E through Co Durham to join the North Sea in the Teesmouth estuary. **Teesside** is the industrial district on the estuary, consisting of Stockton-on-Tees and Middlesbrough. Length: 113 km (70 mi).

teeth Hard structures in the mouth, embed-

ded in the jaws, used for biting and chewing food. The human adult (permanent) dentition consists of 32 teeth, including incisors (8), canines (4), premolars (8), and molars (12), which replaces the milk (deciduous) dentition of young children. The third molars (wisdom teeth) do not normally appear until the age of about 20. The crown of a tooth consists of very dense hard enamel (largely *apatite) overlying the yellow bonelike dentine, which is slightly spongy and very sensitive to touch, temperature, and pain. The pulp at the centre contains blood vessels and nerve fibres. See also DENTISTRY.

molar tooth The root of the tooth is anchored into the socket by a bonelike substance, cement.

teeth in the adult upper jaw The incisors and canines are used principally for biting; the premolars and molars are used for grinding and chewing. The lower jaw contains the same number and type of teeth.

teeth

Tegucigalpa 14 20N 87 12W The capital of Honduras, situated in the centre of the country in a high valley. Founded in 1579, it was an important centre of gold and silver mining. It became the capital in 1824. Population (1999 est): 988 400.

Tehran (or Teheran) 35 40N 51 26E The capital of Iran, in the N centre of the country at the foot of the Elburz Mountains. Tehran is the commercial, industrial, administrative, and cultural centre of the country, with six universities (oldest 1934). It became the capital in 1788

and was greatly enlarged during the 20th century. Population (1996): 6 758 845.

Tehran Conference (1943) The conference in World War II attended by F.D. Roosevelt (USA), Stalin (Soviet Union), and Churchill (UK). Its chief purpose was to coordinate Allied strategy in W and E Europe.

Te Kanawa, Dame Kiri (1944–) New Zealand soprano. She made her major debut in the *Marriage of Figaro* at Covent Garden in 1971. She was made a DBE in 1982.

tektites Small glassy objects, which have been found in certain parts of the earth, often strewn over immense areas. They are apparently composed of rapidly cooled molten material, probably terrestrial in origin and formed during the impact of giant meteorites.

Tel Aviv-Jaffa 32 05N 34 46E A city in central Israel, on the Mediterranean coast. It is the largest city in Israel, and the country's commercial, industrial, and cultural centre. The city's port is at Ashdod, to the S. *History:* Tel Aviv was originally a suburb to the N of Jaffa, founded in 1909 to relieve the overpopulation of the Jewish quarter. Following tension between Arabs and Jews, the two towns were separated in 1921. Almost the entire Arab population fled Jaffa on its capture by Jewish forces in 1948, and the two cities were reunited in 1950. Population (1999 est): 348 100.

Telemann, Georg Philipp (1681–1767) German composer. Whilst studying law at Leipzig University he taught himself to play various instruments and to compose. He held musical posts in various cities, including Frankfurt and Hamburg (1721). His output was very large and included operas, oratorios, church music, and much chamber music.

teleost Any *bony fish belonging to the infraclass *Teleostei* (over 20 000 species), which includes nearly all the important food and game fish and many aquarium fish. Teleosts have a symmetrically divided (homocercal) tail fin and an air-filled swim bladder. Most lay eggs on rocks or plants, or freely in the water, although some bear live young. Chief orders: *Clupeiformes* (see HERRING; ANCHOVY), *Salmoniformes* (see SALMON; TROUT; PIKE), *Cypriniformes* (see CARP), *Gadiformes* (see COD; HAKE), *Perciformes* (see PERCH; MACKEREL), *Pleuronectiformes* (see FLATFISH); subclass: *Actinopterygii*.

telepathy See EXTRASENSORY PERCEPTION.

telescope An optical instrument that produces a magnified image of distant objects. The

refracting telescope was invented in 1608 by *Lippershey in Holland and developed by Galileo as an astronomical instrument a year later. The light in the refracting telescope falls on a converging long-focus objective lens. The resulting image is then magnified by the short-focus eyepiece to produce the final image. An example is the **Keplerian telescope**. Reflectors are also used as terrestrial telescopes, usually containing an additional lens or a prism to cause the inverted image to be seen erect. The first **reflecting telescope** was produced by *Newton in 1668. In the reflecting telescope the light from an object is collected by a concave, usually paraboloid, mirror of long focal length. This primary mirror reflects the lights into a secondary optical system, which in turn reflects it into a short-focus eyepiece. The eyepiece lenses produce a magnified image that can be viewed or photographed. Depending on the secondary optics, reflectors are called **Gregorian**, **Newtonian**, **Cassegrain**, or **coudé telescopes**. See also SCHMIDT TELESCOPE; RADIO TELESCOPE.

teletext An information service in which pages of text are transmitted for display on a domestic television set. The system utilizes two of the unused lines between picture frames. All the stored information, which may be weather reports, news flashes, sports results, etc., is sent out continuously in a cycle. The required pages are selected for display by keypad. The two systems originally developed in the UK were Ceefax, run by the BBC, and Oracle, run by the Independent Broadcasting Authority; Oracle was replaced by a new system provided by Teletext Ltd in 1992 and Ceefax was gradually phased out in favour of a digital text service from 2001. See also VIEWDATA.

television (TV) The broadcasting of pictures and sound by *radio waves or electric cable. Television was invented by John Logie *Baird in 1926. A television *camera converts the picture into an electrical signal. In most of Europe the picture consists of 625 lines made by an electron beam scanning the screen of a *cathode-ray tube, 25 such pictures being formed every second. In the USA and Japan, 525 lines and 30 frames per second are used. High-definition television (HDTV) employs pictures with up to 1125 lines in a wide-screen format. A brightness signal and a synchronization signal (to form the lines and frames of the picture) make up the picture signal, which is used to modulate (see MODULATION) a VHF or UHF carrier wave and is broadcast with the modu-

Galilean. The simplest practical form of refracting telescope was developed by Galileo in about 1609 from Lippershey's invention.

Keplerian. Kepler's arrangement produces an inverted image but was much used for astronomical observations in which the inversion did not matter.

Gregorian. James Gregory proposed this design in 1663 but it has had little general application.

Newtonian. In Newton's 1671 design the secondary mirror is placed at an angle of 45° to the axis of the beam.

Cassegrain. Widely used, this form was invented by the obscure French astronomer N. Cassegrain in 1672.

Condé (French: angled). This arrangement is valuable in larger telescopes as it increases their focal length.

L = light rays P = primary mirror
E = eyepiece S = secondary mirror

telescope

television

lated sound carrier wave (which has a slightly different frequency).

The aerial or dish (for satellite broadcasts) of the TV receiver detects the broadcast radio waves and the picture and sound signals are separated within the receiver. The picture signal is demodulated, and the resulting current is used to control the electron beam in a cathode-ray tube so that the picture is reconstructed.

In a colour television camera light from the scene to be televised is filtered into three primary colour components: red, green, and blue. Light of each colour goes to a separate image tube. There are three systems in use for encoding colour picture information for transmission, all of which combine colour and intensity information with sound and synchronization in a similar way to black-and-white television. The colour television receiver splits the signal into red, green, and blue components and applies these to three separate electron guns. The beam from each gun activates a set of phos-

phor dots of that colour on the screen, thus reconstructing the red, green, and blue components of the picture.

Since the late 1990s there has been a growing use of digital systems in which the signal is sampled up to 30 000 times per second and the characteristics of the sampled signal are represented by digits, which are then transmitted and reconstituted in the receiver. The digital process ensures that no distortion or interference occurs. In the UK there are plans to complete the switch to digital by 2010, when all viewers will require a set-top decoder or an integrated digital TV.

Telford, Thomas (1757–1834) British civil engineer. His suspension bridge over the Menai Strait, completed in 1825, is 177 metres long. Telford also designed some 1500 kilometres of roads, many bridges and aqueducts, canals, and St Katherine's Dock in London.

Telford and Wrekin A unitary authority in

W central England, in Shropshire. Area: 289 sq km (112 sq mi). Population (2001): 158 285.

Tell, William A Swiss national hero who is first mentioned in a 15th-century chronicle and who, in Schiller's play *Wilhelm Tell* (1804), embodies the Swiss struggle for independence from the Austrian Habsburgs. After refusing to do homage as required by Gessler, the Austrian governor, Tell was ordered to shoot an apple from his son's head with a crossbow at 80 paces. He passed this test and later killed Gessler.

Teller, Edward (1908–2003) US physicist, born in Hungary. He worked on the fission bomb during World War II and subsequently on the fusion bomb, making a significant contribution to its development. Teller's unfavourable evidence in J.R. *Oppenheimer's security-clearance hearing lost him some respect among scientists.

tellurium (Te) A silvery-white semiconductor of the sulphur group, discovered by Müller von Reichenstein in 1782. The hydride (H_2Te) is volatile and toxic, with a powerful smell of bad eggs. Bismuth telluride ($BiTe$) is used as an effective thermoelectric cooler. The metal is used in some special alloys and in some semiconducting devices. At no 52; at wt 127.60; mp $449.5 \pm 0.3^\circ C$; bp $988^\circ C$.

temperature A physical quantity that is a measure of the average *kinetic energy of the constituent particles of a body. It determines the direction in which *heat flows when two bodies are in contact, the body with the higher temperature losing heat to that with the lower. The temperature of a body is measured in kelvins, degrees Celsius, or degrees Fahrenheit.

Templars (Poor Knights of Christ and of the Temple of Solomon) A religious order of knighthood founded (c. 1120) in Jerusalem by a group of French knights. The Templars were, with the *Hospitalers, the most important military order of the *Crusades. Accused of heresy and immorality by Philip IV of France, the Templars were suppressed by the papacy in 1312.

Temple, Shirley (1928–) US film actress, who featured as a child star in such films as *Little Miss Marker* (1934) and *Heidi* (1937). She won a special Academy Award in 1934. She was subsequently appointed US ambassador to Ghana (1974–76) and to Czechoslovakia (1989–92).

Temple of Jerusalem The ancient centre of Jewish religious life. The first Temple was

built by King Solomon (c. 950 BC) and destroyed by Nebuchadnezzar in 586 BC. The second Temple was built later in the 6th century BC, restored by the *Maccabees and later by Herod the Great, and destroyed by the Romans in 70 AD. An attempt was made to rebuild the Temple under the Roman emperor Julian (362 AD) but it was abandoned. Both temples were built on the same walled platform, known as the Temple Mount; part of the western retaining wall of this structure is the **Western (Wailing) Wall**, still a holy site for Jews. Since 691 AD the Muslim Dome of the Rock has stood on the Temple Mount.

tench An elongated fish, *Tinca tinca*, that is related to *carp and occurs in European fresh waters. Its slimy body is greenish or blackish above with lighter undersides. It lives in quiet waters, feeding on small animals and plants.

tendon A strong fibrous cord that joins a muscle to a bone. The tendon fibres merge with the muscle fibres and extend to the fibrous tissue lining the bone, serving to concentrate the pull of the muscle on a small part of the bone.

Tenerife 28 15N 16 35W A Spanish island in the Atlantic Ocean, the largest of the Canary Islands. Its Pico de Teide mountain is, at 3710 m (12 172 ft), the highest in Spain. Early fruit and vegetables are produced and the island is popular for holidays. Area: 2020 sq km (780 sq mi). Population (latest est): 771 000. Chief town: Santa Cruz de Tenerife.

Tennessee A state in the S central USA. In the E there is a region of thickly wooded mountains, while further W an area of upland plateau and rolling hills gives way to lowland plains and swamps situated between the Tennessee and Mississippi Rivers. An agriculturally poor state, its major crops are tobacco, soya beans, and cotton. Beef and dairy products are also important. The leading industries produce chemicals, food products, machinery, and textiles. The state is an important hardwood producer. It is the USA's largest producer of zinc and the extraction of stone is a major source of revenue. *History:* disputed by the English and French in the 17th century, it was under British rule during the American Revolution. The area became a territory in 1790 and a state in 1796. Area: 109 411 sq km (42 244 sq mi). Population (2000): 5 689 283. Capital: Nashville.

Tennessee River A river in SE USA. It follows a U-shaped course from E Tennessee, flowing through NE Alabama before returning across Tennessee to join the Ohio River at Pad-

ucah, Kentucky. The **Tennessee Valley Authority**, created in 1933, built dams along the river to control floods, arrest soil erosion, and generate electricity. Length: 1049 km (652 mi).

Tenniel, Sir John (1820–1914) British cartoonist and book illustrator. He worked for *Punch* from 1851 to 1901 but is best known for his illustrations for *Alice in Wonderland*.

tennis (or lawn tennis) A game for two or four players using rackets to hit a cloth-covered rubber ball on a grass or hard court. It originated in England in the mid-19th century. A match lasts a maximum of five sets for men and three for women and the minimum number of games per set is six. A lead of two games is usually needed to win a set. The scoring system derives from *real tennis and a minimum of four points is needed for a game: 15, 30, 40, and game; a lead of two points is also needed to win a game. To win points players must return the ball over the net either before it bounces (volley) or after the first bounce, positioning it so that their opponents cannot return it. The game is popular at all levels, from the local club to the All England Champion-

ships at Wimbledon. Other highly prized trophies are the *Davis Cup and the Wightman cup.

Tennyson, Alfred, Lord (1809–92) British poet. He published volumes in 1830 and 1832 but gained general acclaim only with his 1842 volume, which included "Morte d'Arthur." In 1850 he married, became poet laureate, and published *In Memoriam*, a sequence of elegaic lyrics mourning the death of his close friend Arthur Hallam (1811–33). He reinforced his popularity with *Idylls of the King* (1859) and other poems. He accepted a peerage in 1884.

tenor A high adult male singing voice. The word comes from the Latin *tenere*, to hold; in Renaissance polyphonic music the tenor part held the melody on which the music was based. Range: C on the bass stave to C two octaves above.

tenrec An insect-eating mammal belonging to the family *Tenrecidae* (30 species), found only in Madagascar and the Comoro Islands. Tenrecs measure 5–40 cm, some with long tails and some tailless, and generally have a brownish coat of bristly hairs or spines. Most tenrecs live in burrows and are nocturnal, feeding mainly on small invertebrates with some plant material. Order: *Insectivora*.

Tenzing Norgay (c. 1914–86) Sherpa mountaineer, who, with Sir Edmund *Hillary, was the first man to reach the summit of Mount Everest (1953). He later became a director at the Himalayan Mountaineering Institute, Darjeeling.

tequila A Mexican spirit made of the fermented juice of an agave plant (see AGAVE), water, and, sometimes, sulphuric acid and yeast. The spirit is distilled twice in potstills then may be aged in casks. It is produced near the town of Tequila.

terbium (Tb) A *lanthanide element, discovered in 1843 by C.G. Mosander (1797–1858) and named after the village Ytterby in Sweden. It is obtained from monazite (CePO_4), and the brown oxide (Tb_2O_3) is used as a phosphor in colour-television tubes. The metal is silvery-grey and can be cut with a knife. At no 65; at wt 158.92; mp 1356°C; bp 3230°C.

terebinth A small tree, *Pistacia terebinthus*, native to the Mediterranean region. It has small flowers producing purple fruit and was formerly an important source of turpentine. Family: *Pistaciaceae*.

Teresa, Mother (Agnes Gonxha Bejxhui; 1910–97) Indian nun born in Yugoslavia of Al-

tennis. The dimensions of the court. For singles games the posts holding the net are moved to inside the doubles sidelines. The net is 3 ft (91.4 cm) high at the centre.

banian parents, who founded the Order of the Missionaries of Charity (Calcutta; 1948) to help lepers, the poor, and the aged and dying throughout the world. She received the 1979 Nobel Peace Prize, became an honorary OM (1983), and was beatified (2003) only six years after her death.

Teresa of Ávila, St (1515–82) Spanish nun and mystic, who reformed the Carmelite order. She joined the Carmelites at Ávila in 1533 and in 1555 experienced a spiritual awakening followed by several visions. She founded the Convent of St Joseph in Ávila in 1562 and later other religious houses with the help of St John of the Cross (1542–91). Her books, which include her *Life* (1562–65) and *The Way of Perfection* (after 1565), are regarded as classics of mysticism.

Teresina 5 09S 42 46W A city in NE Brazil, the capital of Piauí state on the Rio Parnaíba. It is a commercial centre; exports include cattle, hides, cotton, rice, and manioc. Population (2000): 676 596.

termite A social insect, also called white ant (although unrelated to the ants), belonging to the mainly tropical order *Isoptera* (2000 species). Termite colonies nest in tunnels and galleries in wood, soil, or earth mounds (termitaria). There are three major castes: winged reproductives, workers, and soldiers. The reproductives found new colonies; the workers construct galleries, feed the colony, and care for the young; while the soldiers are concerned with defence. Termites eat cellulose and are very destructive when they invade houses and attack wood products.

tern A seabird belonging to a subfamily (*Sterninae*; 35–40 species) occurring around coasts and inland waters worldwide. Terns have long wings, short legs, usually a forked tail, and their plumage is white, black-and-white, or almost totally black. They feed on fish and crustaceans and often migrate long distances. Family: *Laridae* (gulls and terns).

terracotta (Italian: baked earth) A fired clay, usually reddish in colour, used to make sculpture, tiles, bricks, containers, etc. Terracotta figurines, often painted, were very common in ancient Greece and Rome. The art was revived during the Renaissance.

terrapin A small edible turtle belonging to the family *Emydidae*, occurring chiefly in the New World. The diamondback terrapin (*Malaclemys terrapin*), which occurs in coastal waters and salt marshes of North America, has dia-

mond-shaped patterns on its dark carapace and is yellow with black speckles underneath. It is regarded as a table delicacy.

terrier One of about 20 breeds of dog characterized by their small compact sturdy build and traditionally used for hunting vermin and rousing foxes and badgers from cover. The Scottish breeds, such as the *cairn terrier, *Scottish terrier, *Skye terrier, and West Highland white terrier, tend to be smaller and longer haired than other terriers.

Territorial Army A British force of volunteers, created as the Territorial Force in 1907 and renamed in 1922. Between 1967 and 1979 it was known as the Territorial Army Volunteer Reserve. Its 84 000 men constitute a pool of trained and equipped reinforcements for the regular army.

terrorism The use of violence and intimidation to achieve an objective that is usually, but not always, political. The targets may be members of a government or organization who are known to be antagonistic to the terrorists' cause or ordinary members of the public. In the latter case the motive is usually an attempt to generate publicity through outrage, or to put pressure on governments by arousing public alarm and concern. Indiscriminate shooting, bombing, hostage-taking, kidnapping, and hijacking of aircraft are all part of the terrorists' armoury. The psychology of terrorists clearly varies widely; while in some cases their behaviour defies rational understanding, other groups can be seen to have made a calculating use of terrorist methods as part of a political strategy and have disbanded when these objectives were achieved. Terrorist groups whose motivation is not strictly or wholly political include those motivated by racism (e.g. Nazi *Brownshirts, the US *Ku Klux Klan), a religious belief (e.g. *Hamas, *al-Qaida), or an extreme minority cause (e.g. militant animal rights movements).

The containment of terrorism is usually extremely difficult, not least because many of the organizations involved are financed, abetted, and protected by sympathetic governments. International collaboration against terrorism has rarely proved effective, owing to the different interests of the governments and police authorities involved. Following the terrorist attacks on the USA on *September 11, 2001 (the most murderous and spectacular in history), President George W. Bush announced a concerted *war on terrorism in which US military force would be used against international terrorist networks and those regimes

found to be harbouring them. Major terrorist incidents of recent years have included bombings in Bali (2002), Madrid (2004), and London (2005).

Terry, Dame Ellen (Alice) (1847–1928) British actress. A member of a talented family of actors, from 1878 to 1898 she acted with Sir Henry *Irving at the Lyceum Theatre, achieving success in Shakespearean roles.

Tertiary period The first geological period of the Cenozoic era, following the Cretaceous period and preceding the Quaternary. It lasted from about 65 to 1.8 million years ago and contains the Palaeocene, Eocene, Oligocene, Miocene, and Pliocene epochs, in ascending order. Modern invertebrates and mammals evolved and became increasingly abundant; the modern angiosperms became the dominant plants. The Alpine period of mountain formation reached its peak in the Miocene. The climate began to deteriorate in the Oligocene, finally leading to the Ice Age of the Pleistocene.

tesla (T) The SI unit of magnetic flux density equal to one weber per square metre. Named after Nikola Tesla (1856–1943), US engineer.

Test Acts 1. In England, the Acts stipulating that public office holders must take Holy Communion in the Church of England (1673) and excluding all Roman Catholics except the Duke of York (later James II) from parliament (1678). They were not repealed until the mid-19th century. **2.** In Scotland, the Act (1681) that forced all public office holders to declare their belief in Protestantism; it was repealed in 1889.

testis The organ of male animals in which *sperm is produced. In men there is a pair of testes, or testicles, which produce both sperm and sex hormones (see ANDROGENS). Before birth the testicles descend into the scrotum—a sac of skin outside the abdominal cavity—since sperms require a temperature lower than that of the body to mature. The sperms complete their development in a convoluted tube (epididymis) outside the testis.

testosterone A steroid hormone—the most important of the *androgens—first isolated from bull testes in 1935. Synthetic testosterone has various medical uses, including treatment of certain forms of sterility in men.

test-tube baby A baby produced by fertilizing the mother's egg cell with sperm from the father in a test tube (*in vitro* fertilization): the fertilized egg is then implanted surgically into the mother's womb. It is a means of overcoming sterility in a woman due to blocked

Fallopian tubes or any similar defect. The first test-tube baby was born in July 1978, and the first from a frozen embryo in 1988. See also ARTIFICIAL INSEMINATION.

tetanus A serious disease caused by the bacterium *Clostridium tetani* entering wounds and producing a powerful toxin (poison) that irritates the nerves supplying muscles. After an incubation period of seven–ten days, stiffness, spasm, and rigidity of the muscles affects the jaw (hence the popular name—lockjaw) and spreads to other muscles. The disease can be prevented by completing a full course of antitetanus immunization.

tetracyclines A group of *antibiotics derived from *Streptomyces* bacteria. Tetracyclines are active against a large number of different bacteria. Taken by mouth, they may cause the side effects of diarrhoea, nausea, and discoloration of growing teeth and bones.

tetraethyl lead (Pb(C₂H₅)₄) A colourless poisonous oily liquid. It is made by treating lead-sodium alloys with chloroethane and is added to petrol to prevent knocking in internal-combustion engines. However, lead-free petrol is now being widely promoted to reduce lead pollution of the atmosphere.

Teutonic Knights A religious knightly order founded in the Holy Land in 1191 which subsequently (from 1211) moved its activities to the Baltic area. The Order ruled the coastal lands S and SE of the Baltic in the 13th and 14th centuries, presiding over an intense German colonization, in which the indigenous peoples were reduced to serfdom. A defeat by the Poles and Lithuanians at Tannenberg in 1410 halted its expansion. After the Reformation the order was dissolved and in 1525 the last Grand Master became the secular ruler of Prussia and the founder of the dynasty of Hohenzollern. One branch of the order survived in Germany until it was dissolved in 1809 by Napoleon.

Texas The second largest and the third most populous state in the USA, in the SW of the country. It consists of four main physical regions: the West Gulf Coastal Plain in the SE; the Central Lowland; the Great Plains; and the Trans-Pecos or mountainous area in the W. It leads the nation in the production of oil and natural gas and is also a major producer of sulphur. Oil-related industries dominate the manufacturing sector, the most important being the chemical industry. There is an important space centre at Houston and Dallas is a major commercial and industrial centre. Texas also produces a variety of crops, especially cotton,

sorghum grains, rice, and peanuts, and is a leading livestock producer. *History:* it was colonized by the Spanish in 1682, the first permanent Anglo-American settlement being established in 1821. In 1836 the Texans set up a provisional government in opposition to the Mexican dictatorship of Antonio López de Santa Anna; following the heroic defence of the *Alamo, the revolutionary army finally defeated Mexican forces. A republic was established and Texas remained independent for almost a decade until annexation by the USA was agreed upon and Texas became a state. Area: 692 402 sq km (267 338 sq mi). Population (2005 est): 22 859 968. Capital: Austin.

Thackeray, William Makepeace (1811–63) British novelist and journalist. After publishing several novels under pseudonyms, he won fame and financial success with *Vanity Fair* (1847–48), which he followed with the semiautobiographical *The History of Pendennis* (1848–50) and the historical *Henry Esmond* (1852).

Thailand, Kingdom of (name until 1939: Siam) A country in SE Asia, on the Gulf of Thailand. Fertile plains and hills in the S rise to mountains in the N. Most of the population is Thai. *Economy:* the chief food crop and main export is rice. Forests cover 60% of the land but export of hardwoods has been banned. Mineral resources include tin, manganese, antimony, and zinc. The cement, textiles, and motor vehicle industries are important; other manufactures include electronic equipment and computers. Tourism is now the main source of foreign revenue. Recent decades have seen rapid economic growth, despite a financial crisis in 1997. *History:* by the 6th century AD the Thais had reached the area from the N. They conquered the Mons to the S and in succeeding centuries were involved in struggles with the Burmese and Khmers. In the 19th century they lost territory to the French and the British but remained independent. In 1932 the absolute monarchy was replaced by a constitutional monarchy, since when civil and military governments have alternated, often through violent upheavals. In 1992 mass protests led to the removal of the unelected prime minister Gen Suchinda Kraprayoon and, following free elections, the creation of a reformist coalition under Chuan Leekpai. The financial crisis of 1997 led to the virtual collapse of the economy and the fall of the government. The telecommunications tycoon Thaksin Shinawatra became prime minister in 2001 but was deposed by the military on grounds of corruption in 2006. Recent years

have seen separatist violence in the mainly Muslim S. Official language: Thai. Currency: baht of 100 satang. Area: 514 000 sq km (198 250 sq mi). Population (2007 est): 65 068 149. Capital: Bangkok.

Thales (c. 624–547 BC) The first of the Greek speculative scientists. Born at Miletus, he used the data from Babylonian astronomers to predict the solar eclipse of 28 May, 585 BC, advised on stellar navigation, and introduced Egyptian methods of land measurement. He held that all things derive from water and set the Presocratics on their quest for the basic substance of the universe.

thalidomide A sedative drug that was found to cause severe developmental defects in the fetus when taken during pregnancy. The most common abnormality induced by thalidomide is phocomelia, in which feet and hands develop normally without corresponding growth of the bones of the arms and legs. Between 1959 and 1962 some 500 deformed babies were born in the UK and over 2000 in West Germany.

thallium (Tl) A metallic element, discovered spectroscopically by Sir William Crookes in 1861 and named after the Greek *thallos*, a green shoot, because of its bright-green spectral line. The metal is soft and malleable and reacts easily to form numerous salts. It occurs in sulphide ores of lead and zinc and in iron pyrites (FeS₂). At no 81; at wt 204.38; mp 304°C; bp 1473 ± 10°C.

Thallophyta In traditional plant classification systems, a subkingdom containing all those plants that lack true stems, leaves, and roots, i.e. the algae, fungi, and lichens. The plant body is a thallus, conducting tissue. Although this subkingdom is no longer used in modern classifications, the term "thallus" is still used for the body of algae and some lower plants.

Thames, River The longest river in England. Rising in the Cotswold Hills near Cirencester, it flows mainly ESE through Oxford, Reading, and London to enter the North Sea at the Nore. A tidal barrier was constructed below London to reduce the danger of flooding. Length: 346 km (215 mi).

Thanet, Isle of 51°22'N 1°15'E An island in SE England, separated from the Kent mainland by two channels of the River Stour. It contains the resorts of Ramsgate and Margate. Area: 109 sq km (42 sq mi).

Thanksgiving Day A national holiday in

the USA, celebrated on the fourth Thursday in November. Thanksgiving Day was originally observed by the Pilgrim Fathers, who in 1621 celebrated their first harvest in North America. It became a national holiday in 1863. It is also celebrated in Canada, on the second Monday in October.

Thatcher, Margaret (Hilda), Baroness (1925–) British stateswoman; Conservative prime minister (1979–90). She entered parliament in 1959 and became secretary of state for education and science (1970–74). She succeeded Edward Heath as Conservative leader in 1975 and in 1979 became the first woman prime minister of the UK. In office she introduced monetarist economic policies, cut government spending, and used military force to retain control of the Falkland Islands (1982). Following a landslide victory in 1983, she pursued policies of *privatization and curbing union powers. A further victory in 1987 led to her becoming the longest serving UK prime minister of the century. However, discontent with her style of leadership and her attitude to the EC led to the resignations of her chancellor, Nigel Lawson (1989), and her deputy prime minister, Sir Geoffrey Howe (1990). Implementation of the *poll tax also lost her popularity. Failure to win outright victory in a leadership ballot in 1990 precipitated her resignation. She left the House of Commons and was made a life peer in 1992.

Theatre of the Absurd A theatrical genre popularized in the 1950s and 1960s in which the human condition is presented as absurd. It includes the plays of Eugene *Ionesco, Samuel *Beckett, Arthur Adamov (1908–70), and others, which rejected established theatrical conventions and used comic effects in developing pessimistic philosophical themes.

Thebes 1. An ancient city in Upper Egypt and capital of all Egypt (c. 1570–c. 1085 BC). Thebes' power was linked with the supremacy of its god Amon in the Egyptian pantheon. 2. 88 19N 23 19E A town in Boeotia, in central Greece. It was founded in Mycenaean times and its legendary history was a favourite theme in Greek drama. Thebes briefly became the leading Greek state after defeating the Spartans at Leuctra (371). Population (latest est): 18 712.

theft The offence of dishonestly appropriating property belonging to another with the intention of permanently depriving the other person of it. The earlier offence of larceny was until 1827 divided into Grand Larceny and Petty Larceny. It was replaced by theft as defined by

the Theft Act (1968), as were embezzlement, fraudulent conversion, and related offences.

thegn A person in Anglo-Saxon England who held land from his lord in return for service. The status of thegn (meaning one who serves) was hereditary. The king's thegns, who were the most important, had military and administrative duties and attended the *witan (king's council). Their importance declined in the early 11th century, when the Danish kings introduced their housecarls, and the thegns died out as a clan after the Norman conquest.

theism The belief in a personal God as creator and preserver of the universe, who reveals himself by supernatural means to his creatures. Apparently coined (1678) by Ralph Cudworth (1617–88) as an opposite to *atheism, the word has been refined in meaning to exclude both *pantheism and *deism.

Themistocles (c. 528–462 BC) Athenian statesman. Themistocles persuaded Athens to expand its navy (483) and to transfer its port from Phaleron to the more defensible Piraeus. These policies, and his leadership at the battle of Salamis, saved Greece from Persia (480) (see GREEK-PERSIAN WARS). Themistocles also argued successfully for the fortification of Athens.

theodolite An instrument used in surveying to measure horizontal and vertical angles. It consists of a telescope, with crosshairs in the eyepiece for focusing on the target, that can swivel on horizontal and vertical axes, which pass through two circular scales. It has a spirit level to indicate when the instrument is horizontal.

Theodosius (I) the Great (347–95 AD) Roman emperor in the East (379–94) and sole emperor (394–95). Theodosius allowed the Visigoths independence on Roman territory by a treaty in 382. A devout and orthodox Christian, he imposed Christianity on the Empire in 391, closing pagan temples and forbidding sacrifices.

theology Literally, the study of God. Christian theology includes within its scope the nature of God, His relationship with the universe, His providence regarding man, and the teachings of the Church. Different traditions exist within the Roman Catholic, Orthodox, and Protestant communions, but typical subdivisions of theology are dogmatic, historical, and pastoral theology.

Thera (or **Santorini**; modern Greek name: Thira) A volcanic island, the most southerly of

the Greek Cyclades. A Minoan city existed here but was destroyed in a volcanic explosion in the 15th century BC, in which much of the island sank into the sea. The cataclysm is thought to have been a severe blow to the Minoan civilization in Crete, and some scholars believe it to be the foundation of the legend of Atlantis. Rich archaeological finds have been made here.

Thérèse, St (Marie Françoise Thérèse Martin; 1873–97) French nun, known as the Little Flower of Jesus. She entered the Carmelite convent at Lisieux when only 15 and died there 9 years later of tuberculosis. Her fame rests on her spiritual autobiography, *Histoire d'une âme* (1898). She was canonized in 1925. Feast day: 3 Oct.

thermae Roman baths. The Roman citizen spent much of his or her afternoon in the *thermae*, moving between its three main rooms—the *frigidarium* (cold), the *tepidarium* (tepid), and the *calidarium* (hot); this could be supplemented by a dip in the indoor pool, exercises in the gym, or a stroll in the gardens. The *thermae* were also cultural institutions, with libraries, concerts, and lecture halls. Established by the munificence of the rulers, they were free to Roman citizens. Impressive ruins remain, especially in Rome (the Baths of Caracalla).

thermal reactor A nuclear reactor (see NUCLEAR ENERGY) in which natural or enriched uranium is used with a moderator so that the velocities of the emitted neutrons are comparable to the velocities of gas molecules ("thermal" velocities). The reactor core consists of fuel rods made of uranium metal or oxide surrounded by a moderator, the heat of the reaction being removed by a coolant. After leaving the core, the coolant passes to a heat exchanger in which steam is raised. The rate of reaction is controlled by a series of control rods, which can move in and out of the core: the rods contain a neutron-absorbing element, such as boron. Early British reactors (Mgnox) used natural uranium; the next generation (advanced gas-cooled reactor; AGR) used enriched uranium dioxide and CO₂ as a coolant. The US-designed pressurized-water reactors (PWR), using ordinary water as both moderator and coolant are now widely used. Compare FAST REACTOR.

thermionic valve A device consisting of an evacuated glass or metal tube, into which two or more electrodes are inserted. One heated electrode, the cathode, emits electrons, which

are attracted to the positively charged anode, forming an electric current. This current flows in one direction only and can be controlled by the voltage applied at one or more other electrodes (called grids). The **diode valve** was invented in 1904 by Sir John Ambrose Fleming. The **triode valve** with one grid was invented in 1910 by Lee De Forest; it was the first to function as an amplifier. The weak signal fed to the grid produces a stronger signal in the anode circuit. Diode and triode valves made possible the development of radio transmitters and receivers, although now *semiconductor diodes and *transistors have replaced them.

thermistor A *semiconductor device with an electrical resistance that decreases sharply as temperature increases. It is used in temperature-control circuits and can be calibrated for use as a thermometer.

thermocouple A type of thermometer consisting of an electric circuit formed by two dissimilar metals joined at each end. One junction is exposed to the temperature to be measured, a voltage being generated between it and the other (reference) junction as a result of the temperature difference between them (see THERMOELECTRIC EFFECTS). The output is usually displayed on a *galvanometer. Copper-constantan junctions are used up to 500°C and platinum-rhodium alloy up to 1500°C. A **thermopile** consists of several thermocouples connected in series.

thermodynamics The study of *heat and its relationship with other forms of energy. Thermodynamics is primarily a statistical subject, thermodynamic quantities, such as *temperature and *entropy, being dependent on the statistical behaviour of the particles that comprise a system. There are three fundamental laws of thermodynamics. The first law states that the energy of a closed system remains constant during any process. The second law states that heat cannot flow from a cold body to a hot body without the expenditure of external work; or, that the entropy of a closed system can never decrease. The third law states that as the thermodynamic temperature of a system approaches *absolute zero, its entropy approaches zero. See HEAT DEATH OF UNIVERSE.

thermoelectric effects The effects of changes of temperature on electric circuits or devices. The **Seebeck effect**, named after Johann Seebeck (1770–1831), provides the basis for the *thermocouple; it occurs when a circuit has two junctions between dissimilar metals. If

the junctions are maintained at different temperatures, a voltage is generated between them. The **Peltier effect**, named after Jean Peltier (1785–1845), is the converse of this. One junction heats up and the other cools down when a steady current flows through such a circuit. In the **Thomson (or Kelvin) effect**, named after Lord *Kelvin, a temperature gradient along a single metal conductor causes a current to flow through it.

thermometer An instrument used for measuring temperature. Thermometers make use of some property of a substance that varies uniformly with temperature, most commonly the expansion of a liquid, such as mercury. A clinical thermometer is a typical mercury-in-glass thermometer; more accurate thermometers use the expansion of a gas, which is much greater than that of a liquid. Other thermometers include the resistance thermometer, which depends on the variation in the resistance of a wire (usually platinum); the bimetallic strip, which makes use of the unequal expansion of two metals welded together; and the thermistor, in which the change in conductivity of a semiconductor is used as a measure of temperature. High temperatures are measured by a *pyrometer.

thermonuclear reactor A reactor in which a fusion reaction (see NUCLEAR ENERGY) takes place with the controlled release of energy. The most readily achieved fusion reaction is the combination of deuterium and tritium to form helium (${}^2\text{H} + {}^3\text{H} = {}^4\text{He} + \text{n} + 17.6 \text{ MeV}$). To overcome the electrostatic repulsion between nuclei a temperature of about 40 million °C is needed. Containing the *plasma (as the high-temperature ionized gas is called) is the central problem. In magnetic containment a high current passed through the plasma creates a magnetic bottle that keeps the plasma away from the containing walls. To produce useful power gain at this temperature, the product of the plasma density and the containment time must exceed 10^{14} particle seconds per cm^3 . In magnetic containment the plasma is kept away from the containing walls by magnetic fields generated by electric currents flowing through external coils as well as the plasma itself. Toroidal tokamak devices, which originated in the Soviet Union, have approached this figure but problems of magnetic instabilities and impurity control have not yet been solved. Other possible techniques include inertial confinement, in which a pellet of fuel is exposed to *laser or particle beams to produce adiabatic compression (to 100 times solid

density), which causes ignition. The outstanding problems relate to the efficient generation of high-power beams (ultraviolet, X-ray, or proton) and to maintaining symmetry during compression.

thermonuclear reactor. The combination of deuterium (${}^2\text{H}$) and tritium (${}^3\text{H}$) in a fusion reaction that forms helium. This is being attempted using a toroidal electromagnet to contain plasma consisting of deuterium and tritium nuclei.

Thermopylae, Battle of (480 BC) The battle in which the Greeks under the Spartan king, Leonidas (reigned ?490–480), attempted to hold the pass of Thermopylae in E central Greece against the Persians. After the main Greek force had retreated the Spartans and Thespians, surrounded and outnumbered, fought to the death.

Thermos flask See DEWAR FLASK.

Theseus A legendary Greek hero. He freed the Athenians from their annual tribute to *Minos by killing the *Minotaur. He extended the rule of Athens to various communities and was the subject of many legends.

Thessaloniki (English name: Salonika) 40 38N 22 58E The second largest port in Greece, in Macedonia on the Gulf of Salonika. Founded

in 315 BC, it became the capital of Macedonia. It was captured by the Turks (1430) and remained in the Ottoman Empire until ceded to Greece (1913). The port handles about one-third of Greek exports. Industries include the manufacture of textiles and food processing. Population (1991): 377 951.

Thessaly (Modern Greek name: Thessalia) A region of E central Greece, bordering on the Aegean Sea. In the 4th century BC it fell to Philip of Macedon. Freed from Macedonian rule by Rome in 196 BC, it was incorporated in the Roman province of Macedonia in 148 BC. It subsequently formed part of the Byzantine Empire, falling to Turkey in the late 14th century AD. It was annexed by Greece in 1881. Population (2001): 754 893.

thiamine See VITAMIN B COMPLEX.

thiazine An organic compound that has a molecular structure containing a ring of four carbon atoms and two sulphur atoms. Thiazine derivatives are used in such drugs as tranquilizers, antihistamines, and antibiotics, as well as in various dyes.

thiazole (C_2H_3NS) An organic compound that has a molecular structure containing a ring of three carbon atoms, one sulphur atom, and one nitrogen atom. Thiazole derivatives occur in thiamine (vitamin B_1), penicillin, and in synthetic drugs, dyes, and chemicals.

Third Reich (1933–45) The Nazi regime in Germany. The name refers to the Nazi ambition to revive the medieval Holy Roman Empire (the first Reich) and the German Empire (the second Reich; 1871–1918). The Third Reich ended with Germany's defeat in World War II.

Thirty-Nine Articles (1563) A set of formulations defining the historic doctrine of the *Church of England. They were derived from Thomas Cranmer's 42 Articles (1553), which had been revoked by Mary I in re-establishing Roman Catholicism in England. The Articles do not represent a creed; rather they deal with specific points that were matters of controversy and give in broad terms the Anglican position. The clergy of the Church of England are no longer required to subscribe formally to the Articles but only to promise not to contradict them.

Thirty Years' War (1618–48) The conflict between rival dynastic and religious interests in the Holy Roman Empire that escalated into a major European war. It was caused by the revolt of Protestants in Bohemia against the Counter-Reformation policies of the imperial

government at Prague. Although imperial forces defeated the Bohemians in 1620, the revolt spread. With the Edict of Restitution (1629) Emperor Ferdinand II dispossessed many German Protestants. In 1635 France, hoping to contain the power of Spain and the Empire, entered the conflict. The war ended with the Peace of Westphalia (1648), although the Franco-Spanish conflict continued until 1659. The war caused serious economic and demographic reverses in Germany.

Thisbe See PYRAMUS AND THISBE.

thistle A prickly-leaved herb belonging to one of several genera of the family *Compositae*, especially *Carduus* (120 species), *Cirsium* (120 species), *Carlina* (20 species), and *Onopordum* (20 species), distributed throughout the N hemisphere. Thistles characteristically have heads of small purple flowers and spiny stems. The perennial creeping thistle (*Cirsium arvense*) grows to a height of 1 m and is a persistent weed.

thixotropy A property possessed by certain gels as a result of which they become liquid when stirred and return to a gel-like state when left to stand. Thixotropic gels are used in nondrip paints. Certain types of quicksand are naturally thixotropic.

Thomas, Dylan (1914–53) Welsh poet. Born in Swansea, he moved to London after the publication of 18 *Poems* in 1934 and worked for the BBC. *Deaths and Entrances* (1946) contains many of his best-known poems. In 1949 he returned to Wales, where he wrote his popular radio play *Under Milk Wood* (1954). Alcoholism precipitated his death.

Thomas, Edward (1878–1917) British poet and writer, whose work reflects his love of the English countryside. He was killed in action in World War I.

Thomas, R(onald) S(tuart) (1913–2000) Welsh poet. Earlier volumes, such as *Song at the Year's Turning* (1955), draw on his work as a clergyman in rural Wales. His *Collected Poems* appeared in 1993.

Thomas, St In the New Testament, one of the 12 Apostles. He is known as "Doubting Thomas" because he refused to believe in the resurrection until he had seen and touched Christ. Feast day: 21 Dec.

Thomas à Kempis (Thomas Hemmerken; c.1380–1471) German spiritual writer and monk. He spent most of his life writing and teaching at the Augustinian convent of Agnietenberg near Zwolle (Netherlands). His fame

rests on his devotional treatise, *The Imitation of Christ*.

Thompson, Emma (1859–) British actress. Her films include *Howards End* (1992), which earned her an Oscar, *Sense and Sensibility* (1995), for which she also wrote the Oscar-winning screenplay, *Primary Colors* (1998), and *Love Actually* (2003). She was married to Kenneth *Branagh.

Thomson, Sir Joseph John (1856–1940) British physicist, who discovered the *electron. In 1897 he succeeded in deflecting cathode rays by an electric field, thus showing that they consisted of negatively charged particles. He also measured the ratio of their charge to mass and deduced that electrons were about 2000 times lighter than the hydrogen atom. Thomson thought that atoms consist of electrons embedded in a positively charged sphere, a concept that was superseded by Rutherford's model. He was awarded the Nobel Prize in 1906.

Thomson, William See KELVIN, WILLIAM THOMSON, 1ST BARON.

Thomson effect (or **Kelvin effect**) See THERMOELECTRIC EFFECTS.

Thor The Teutonic god of thunder, in some legends the son of *Odin. He presided over the home and controlled the weather and crops; he was also worshipped as a god of war. His name survives in *Thursday*.

thorax In mammals (including humans), the region of the body between the diaphragm and the neck, which contains the lungs and heart and their associated vessels. The skeleton of the thorax is formed by the breastbone at the front, the spine at the back, and the ribs at the sides. In arthropods the thorax is between the head and abdomen.

thorium (Th) A naturally occurring radioactive metal. It is possible that thorium-fuelled nuclear reactors may be developed in the future, since it is more abundant than uranium and does not produce plutonium-239 in appreciable quantities (see URANIUM). Thorium oxide (ThO₂) has one of the highest known melting points (3300°C), which led to its use in gas mantles, as it glows white when heated. At no 90; at wt 232.038; mp 1755°C; bp 4788°C.

thorium series One of three naturally occurring series of radioactive decays. The thorium series is headed by thorium-232, which undergoes a series of decays ending with the stable isotope lead-208. See also ACTINIUM; URANIUM SERIES.

thorn apple An annual herb, *Datura stramonium*, also called jimsonweed, occurring in N temperate and subtropical regions. It has white trumpet-shaped flowers producing a fruit with a spiny capsule that splits to release the black seeds. All parts of the plant are very poisonous, containing the alkaloids hyoscyamine, hyoscine, and scopolamine. Family: Solanaceae.

thornbill A drab-coloured Australian bird belonging to one of three genera, especially *Acanthiza*. The yellow-tailed thornbill (*A. chrysorrhoa*) builds a very long oval nest with several nest chambers. Family: Muscicapidae (see FLYCATCHER).

Thrace The Balkan region bordered by the Black Sea, the Aegean, Macedonia, and the River Danube. From the 8th century BC Greek cities colonized the coasts, while the inland tribes were an easy target for invaders—the Persians in about 516 BC and then Philip II of Macedonia in the mid-4th century. Having come under the influence of Rome in 168 BC, it became a Roman province in 46 AD. Famous for its horses and horsemen, and for ecstatic religious rituals, Thrace was traditionally the birthplace of the mysteries associated with the worship of Dionysus. It is now divided between Turkey, Greece, and Bulgaria.

threadworm See PINWORM.

thrift A perennial herb, *Armeria maritima*, also called sea pink, native to mountains, salt marshes, and sandy coastal regions of N Europe. The flower stem rises from a basal tuft of long narrow grasslike leaves and bears a cluster of rose-pink or white flowers. Family: Plumbaginaceae.

thrips A minute insect, also called thunder fly, belonging to the order *Thysanoptera* (about 3000 species). Thrips have dark slender bodies, 0.5–5 mm long, and usually two pairs of narrow fringed wings. Many species suck the juices of flowering plants, often causing serious damage and spreading plant diseases.

thrombosis The formation of a blood clot inside a blood vessel, which often obstructs the flow of blood. Thrombosis is more likely to occur if the blood vessel is damaged or if the blood flow is very slow. The commonest site of thrombosis is in the veins of the legs. This is particularly likely to occur if a person is bedridden for a long time. The clot may become detached and carried to the lungs, causing pulmonary *embolism.

Thrombosis can also occur in the arteries

supplying the heart (coronary thrombosis), causing a heart attack (see MYOCARDIAL INFARCTION), or the brain, causing *stroke.

thrush (bird) A songbird belonging to a family (*Turdidae*; 300 species) found throughout the world but predominantly in Old World regions. Thrushes are slender billed and usually brown—often with speckling or patches of red, yellow, or blue. They feed chiefly on insects and fruit and often have melodious songs, as in the song thrush (*Turdus philomelos*). Northern species are migratory. See also BLACKBIRD; MISTLE THRUSH; RING OUZEL.

thrush (disease) See CANDIDIASIS.

Thucydides (c. 460–c. 400 BC) Greek historian. He served as an Athenian general in the Peloponnesian War but was banished in 424 BC for allowing the Spartan general Brasidas to capture the colony of Amphipolis. His eight-volume *History of the Peloponnesian War* is notable for its political, moral, and psychological analysis.

thulium (Tm) The least abundant of the *lanthanide elements, discovered in 1879 by P. T. Cleve (1840–1905). Radioactive ¹⁶⁹Tm is used in portable X-ray generators. At no 69; at wt 168.934; mp 1545°C; bp 1950°C.

Thurber, James (1894–1961) US humorous writer and cartoonist. An early and continuing contributor to the *New Yorker*, he satirized intellectual fashions and domestic habits with irony and sophistication. His essays and stories are collected in *The Thurber Carnival* (1945) and other volumes.

Thurrock A unitary authority in SE England, in Essex. Area: 163 sq km (63 sq mi). Population (2001): 143–042.

Thutmose III (d. 1450 BC) King of Egypt (c. 1504–1450) of the 18th dynasty, who ruled Egypt at its most powerful and prosperous. In 1468 he defeated Syrian rebels at Megiddo and in later campaigns advanced beyond the River Euphrates. He organized the country's complicated administration and was an outstanding athlete and big-game hunter and a patron of art and architecture.

thylacine The largest carnivorous *marsupial, *Thylacinus cynocephalus*, also called Tasmanian wolf or tiger and now probably extinct. About 1.5 m long, it resembles a dog with dark stripes across its grey-brown back. Family: *Dasyuridae*.

thyme A small shrub belonging to the genus *Thymus* (about 50 species), native to temperate

Eurasia. Garden thyme (*T. vulgaris*) is cultivated for its fragrant leaves, which are dried and used as a herb. An oil extract is used in perfumes and medicines. The common wild thyme (*T. drucei*) has a creeping stem and clusters of rose-purple flowers. Family: *Labiatae*.

thymus An organ situated at the base of the neck, above the heart. The thymus grows until puberty, after which it shrinks and ceases to function. During infancy the thymus produces lymphocytes that form the *antibodies associated with allergic responses and the rejection of transplanted tissues and organs. See also IMMUNITY.

thyristor A solid-state electronic device, also called a semiconductor or silicon-controlled rectifier; it consists of four layers of *semiconductor forming three p-n junctions. It acts as a switch, blocking the current through two terminals until it has been turned on by a pulse applied to the third terminal. This pulse can be initiated by light or a temperature change. Thyristors can pass currents ranging from milliamperes to several hundred amperes, often replacing gas-filled valve relays.

thyroid gland An endocrine gland situated at the base of the neck, in front and on either side of the windpipe. It secretes the hormone thyroxine, which controls the basal metabolism of the body; thyroxine secretion is regulated by thyroid-stimulating hormone, which is released from the *pituitary gland. Because thyroxine production requires iodine, deficiency of iodine causes the thyroid to enlarge in an attempt to produce adequate amounts of the hormone (see GOITRE).

Tiber, River (Italian name: Tevere; Latin name: Tiberis) A river in central Italy, rising in the Apennines of Tuscany and flowing mainly S through Rome to the Tyrrhenian Sea near Ostia. Length: 405 km (252 mi).

Tiberius (42 BC–37 AD) Roman emperor (14–37 AD). Tiberius was recognized by his stepfather, Emperor Augustus, as his successor in 4 AD. As emperor his policies were unambitious though sound but he faced the Senate's hostility, family intrigue, and military rebellion. He retired to Capri in 26 AD, where he gained a reputation for depravity.

Tibet (Chinese name: Xizang Autonomous Region) An administrative region in W China, bordering on India, Nepal, Bhutan, and Burma. It consists of a high plateau and is surrounded by mountains, including the Himalayas and the Kunlun Mountains. Most agriculture and

the country's cities are in the river valleys. The area is rich in minerals. *History:* Buddhism, introduced in the 7th century AD, has exerted a profound influence on Tibetan history. The lamas (priests) of *Tibetan Buddhism attained political power in the 13th century. In 1642, the fifth *Dalai Lama became ruler of all Tibet. In 1720 the Chinese Qing dynasty established a control over Tibet that lasted until 1911. Independence was declared, but in 1950 Tibet again fell to the Chinese. An uprising in 1959 was brutally suppressed. There were further riots in the 1980s, leading to the imposition of martial law (1989–90). China has been widely accused of violating Tibetans' human and religious rights. In 1997 an International Commission of Jurists denounced Chinese rule and called for a UN-monitored referendum to decide Tibet's future. Area: 1221601 sq km (471660 sq mi). Population (2000 est): 2 620 000. Capital: Lhasa.

Tibetan Buddhism (or **lamaism**) A form of Mahayana Buddhism practised in Tibet and Mongolia. Introduced into Tibet in the 7th century AD, it has a complex symbolic literature and monastic discipline. The guru, or venerated spiritual teacher, is of prime importance; some are held to be reincarnations of previous lamas. Until 1959, the *Dalai Lama was temporal and spiritual head of the state.

tick A parasitic *arachnid of the worldwide suborder *Metastigmata* (850 species), which sucks the blood of birds and mammals and may transmit such diseases as *typhus and relapsing fever. Its round unsegmented body, up to 30 mm long, bears eight bristly legs. After feeding, the adults drop off the host and lay eggs on the ground. The larvae attach themselves to a suitable victim, feed, then drop off and moult into nymphs, which repeat the procedure. Order: *Acarina* (or *Acari*). Compare *MITE*.

tides The regular rising and falling of seawater resulting from the gravitational attraction between the earth, sun, and moon. Most parts of the world experience semidiurnal tides (occurring twice per tidal day—24 hours 5 minutes). Tidal currents are periodic horizontal flows of water resulting from the rise and fall of the tide. Near the coast they are usually perpendicular to it and reversing, but in the ocean they flow in a rotary manner around a series of nodal points.

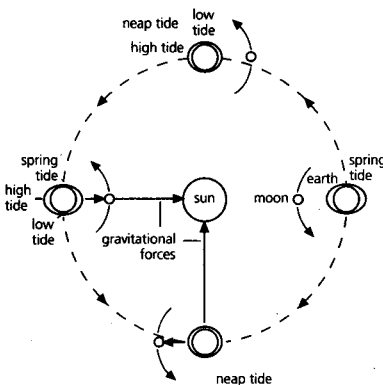

Tiepolo, Giovanni Battista (1696–1770) Venetian *rococo painter. His early sombre style evolved into the exuberance of his first major frescoes, for the Archbishop's Palace at Udine (1725–29). These were followed by deco-

rations for many N Italian palaces and churches. Abroad he decorated the Residenz Palace, Würzburg (1750–53) and the Royal Palace in Madrid (1762–66).

Tierra del Fuego An archipelago separated from the mainland of S South America by the Strait of Magellan. The W and S belong to Chile, the E to Argentina. Sheep farming and oil production are the principal economic activities. Chief towns: Punta Arenas (Chile); Ushuaia (Argentina).

tiger A large *cat, *Panthera tigris*. Tigers are usually about 3 m long, but the race of Siberian tigers can reach 4 m. Tigers evolved in Siberia and have spread south to most of Asia; they shed their coat seasonally and shelter from hot sun during the day. They hunt (mainly antelope) at night.

tiger moth A moth belonging to the family *Arctiidae*, occurring in Eurasia, N Africa, and North America. The adults have a stout body and are brightly coloured, often orange and black. The hairy larvae, commonly called woolly bears, are seldom destructive.

tides. The force of gravity between the earth and the moon pulls the waters of the seas towards the moon, creating high tides once a day. The second daily high tide occurs because the moon pulls the earth itself away from the water on the far side of the moon. Exceptionally high spring tides occur twice monthly when the gravitational force of the moon is in line with that of the sun. The lower neap tides occur when these two forces are at right angles.

tiger shark A large *requiem shark, *Galeocerdo cuvieri*, that lives mainly in tropical seas. It has a greyish-brown body, up to about 5.5 m long, patterned with vertical bars and a lighter

underside. It eats virtually anything, including mammals, birds, fish, invertebrates, refuse, and man.

Tigris, River A river in SW Asia, rising in SE Turkey and flowing SE through Diyarbakir, along the Turkish-Syrian border, and into Iraq. It joins the River Euphrates to form the Shatt al-Arab. Length: 1850 km (1150 mi).

Tijuana 39 29N 117 10W A city in NW Mexico, on the US border. Tijuana is the main entry point to Mexico from California and is a popular tourist resort. Population (2000 est): 1 150 000.

timbre A quality in the sound of a musical instrument, voice, etc., that distinguishes it from others. Thus a violin and a clarinet sound different even when they are playing the same note. The difference arises because each type of instrument produces different overtones in different strengths when a note is played. The production of overtones is controlled by the way the note is produced (plucking, blowing, etc.) and by the characteristics of the individual instrument.

Timbuktu (French name: Tombouctou) 16 49N 2 59W A town in E central Mali, on the River Niger. It was an important centre on the trans-Saharan caravan route and an Islamic cultural centre (1400–1600). Population (latest est): 31 925.

time One of the four dimensions of the space-time continuum of the Einsteinian universe (the others being the three spatial dimensions of *Newton's world). Unlike the spatial dimensions, time is directional and passively carries the universe along with it in one direction only. To Newton, time was absolute and independent of the spatial dimensions, which are also absolute. In relativity, all dimensions are interdependent.

time dilation An effect predicted by Einstein's special theory of *relativity. If two observers, A and B, are moving at a velocity v relative to each other, it will appear to A that B's clock will show that time is running more slowly; thus a time t measured on A's clock will be $t(1-v^2/c^2)^{1/2}$ on B's clock, where c is the velocity of light.

time zones North-south zones of standardized time. Astronomical noon travels continuously around the globe, but for convenience, equalized times are applied in the 24 zones, starting at the International Date Line (180° W and E). Each is normally 15° = 1 hour wide.

Timor The largest island of the *Nusa Teng-

gara group. Mountainous and dry, it is largely undeveloped. Crops include coffee, coconut, and sandalwood. *History:* in 1859 it was divided between Portugal and Holland. West (Dutch) Timor was included in independent Indonesia (1949). Although *East Timor was subsequently (1975–76) annexed by Indonesia, this was not accepted by the UN. Demonstrations against Indonesian rule in 1991 were severely repressed. Indonesia finally withdrew its troops in 1999, leaving a UN administration to oversee the transition to full nationhood in May 2002. Area: 39 775 sq km (11 883 sq mi). Chief towns: Kupang and Dili.

Timor-Leste See EAST TIMOR.

Timothy, St In the New Testament, a disciple of *Paul, whom he accompanied on many missions. According to tradition he was martyred in Ephesus. Feast day: 6 Feb.

timpani (or **kettledrums**) Drums with a large bowl-shaped body and a single head. They have a musical pitch, which can be altered by keys round the circumference or a pedal. The military kettledrums used in mounted bands are attached to a horse in pairs, tuned to two fixed tones.

Timur (or **Tamerlane**; c. 1336–1405) Mongol conqueror, a descendant of Genghis Khan. After winning control of Turkestan in central Asia, Timur swept ruthlessly through Mongolia, Persia, Turkey, Russia, and India, leaving death and destruction behind him. Paradoxically, he spared and encouraged all kinds of artists.

tin (Sn) A silvery-white metal known to the ancients. Its principal ore is the oxide cassiterite (SnO₂), often found in alluvial concentrations. The element exists as at least two allotropes—the grey alpha-tin, and beta-tin, which is the common form above 13.2°C. At low temperature beta-tin slowly changes into alpha-tin causing **tin plague**. It is obtained by reduction with coal in a reverberatory furnace. The major use of tin is in tinplate. It alloys with copper to form *bronzes and with niobium to give a superconducting composition, which is used in electromagnets. At no 50; at wt 118.710; mp 231.9°C; bp 2603°C.

tinamou A solitary ground-dwelling bird belonging to a family (*Tinamidae*; 50 species) occurring in Central and South America. Well camouflaged with a mottled grey or brown plumage, tinamous have small wings and a very short tail and are poor fliers. They feed on seeds, fruit, and insects.

tineid moth A moth of the widespread family *Tineidae*. The adults are usually small with a golden or silvery sheen and frequently do not feed. The caterpillars feed on a variety of plant and animal matter. *See clothes moth*.

Tintagel 50 40N 4 45W A village and resort in SW England, on the N coast of Cornwall. On the rugged promontory of Tintagel Head are the ruins of Tintagel Castle, reputedly the birthplace of King Arthur.

Tintoretto (Jacopo Comin; 1518–94) Venetian painter, whose nickname, meaning "little dyer," derived from his father's profession of silk dyeing. His three paintings of the *Miracles of St Mark* (1562–66) for the Confraternity of S Marco were followed by his series of the life of Christ (1564–87; Scuola di S Rocco) and his paintings for the Doge's Palace, including the enormous *Paradise*. As a portraitist, he was particularly adept at painting old men, for example *Bearded Man with Fur* (Kunsthistorisches Museum, Vienna).

Tipperary (Irish name: Contae Tiobraid Árann) A county in the S Republic of Ireland, in Munster. It contains part of the Golden Vale (one of the most fertile areas in Ireland) in the SW. Predominantly agricultural, dairy farming is especially important. Area: 4255 sq km (1643 sq mi). Population (2006 est): 149 040. County town: Clonmel.

Tippett, Sir Michael (1905–98) British composer. He wrote five operas, including *The Midsummer Marriage* (1947–52), *The Knot Garden* (1966–70), and *New Year* (1989). His other works include four symphonies, five string quartets, four piano sonatas, and the oratorio *A Child of Our Time* (1940). In 1983 he was appointed a member of the OM.

Tirana (Albanian name: Tiranë) 41 20N 19 49E The capital of Albania, situated on a fertile plain in the centre of the country. Founded in the 17th century, it became the capital in 1920. There has been considerable industrial expansion since World War II. Population (2001): 343 078.

Tiresias In Greek legend, a blind Theban seer who lived for seven generations. *Oedipus learned from him of his own patricide and incest and *Odysseus consulted him in the underworld, where he retained his prophetic powers.

Tirich Mir, Mount 36 18N 71 55E A mountain in NW Pakistan, the highest in the Hindu Kush. Height: 7692 m (25 236 ft).

Tirol (or Tyrol) A mountainous federal state in W Austria, bordering on Germany and Italy. It has an international reputation for winter sports, especially at Kitzbühel, and tourism is important throughout the year. The chief occupations are agriculture and forestry, with some mining and manufacturing industries. Area: 12 648 sq km (4883 sq mi). Population (2004 est): 688 340. Capital: Innsbruck.

Tisza, River (Slavonic and Romanian name: Tisa) A river in S central Europe. Rising in the W Ukraine, it flows across the Hungarian Plain to join the River Danube below Novi Sad in Serbia. It is a source of irrigation and power, especially in NE Hungary. Length: 980 km (610 mi).

tit A small acrobatic songbird (also called titmouse) belonging to a family (*Paridae*; 65 species) occurring in Eurasia, North America, and Africa. Tits frequent woodlands and gardens, feeding chiefly on insects. Their soft plumage is usually grey or black, often with blue and yellow markings. *See also* BLUETIT.

Titanic A luxury passenger ship that on 14–15 April 1912, struck an iceberg near Newfoundland on its maiden voyage and sank with the loss of 1513 lives. Because of its special design it was thought to be unsinkable. As a result of the disaster safety rules for ships at sea were drawn up. The wreck of the Titanic was located (1985) and subsequently salvaged.

titanium (Ti) A relatively light strong transition metal discovered in 1791 by W. Gregor (1761–1817). It occurs in nature in the minerals rutile (TiO₂), ilmenite (FeTiO₃), sphene (CaTiO₃), and in some iron ores. The dioxide (TiO₂) is used in white paint as it has excellent opacity. The metal is as strong as steel but 45% lighter (relative density 4.54) and 60% heavier than aluminium but twice as strong. It is used in alloys for missiles and aircraft. At no 22; at wt 47.88; mp 1670°C; bp 3289°C.

Titans In Greek mythology, 12 primeval gods and goddesses, the children of *Uranus and *Gaia. They were Oceanus, Coeus, Crius, Hyperion, Iapetus, Cronus, Thea, Rhea, Themis, Mnemosyne, Phoebe, and Tethys. They were overthrown by Zeus and the Olympian gods.

tithes The tenth part of an income allotted to religious purposes. Originating in the offering of the "first fruits" as a divine sacrifice, tithes were decreed by Mosaic law, which demanded payment in kind from all agricultural produce. Christian ecclesiastical law also enjoined tithes to maintain churches and clergy. Tithes were abolished in Britain in 1936.

Titian (Tiziano Vecellio; c. 1488–1576) Venetian painter of the High Renaissance. He collaborated with Giorgione on frescoes for the façade of the German Exchange (1508). In his *Assumption of the Virgin* (Sta Maria dei Frari) his monumental style links him with such Florentine painters as Raphael. His greatest works for the Habsburgs, who patronized him from 1530 onwards, were the equestrian portrait of Emperor Charles V at Mühlberg (1548; Prado) and *Philip II* (1550–51; Prado). His mythological works include *Bacchus and Ariadne* (National Gallery, London).

Titicaca, Lake A lake in South America, between Peru and Bolivia, in the Andes. At an altitude of 3809 m (12 497 ft) it is the world's highest lake navigable to large vessels. Area: 8135 sq km (3141 sq mi). Depth: 370 m (1214 ft).

Tito (Josip Broz; 1892–1980) Yugoslav statesman; president (1953–80). Tito was captured by the Russians in World War I and subsequently fought with the Red Army in the Russian civil war. He returned to Yugoslavia in 1920 and joined the Communist Party. In World War II he led the resistance to the German occupation, becoming a marshal in 1943. He became Yugoslavia's postwar leader and introduced the policy of decentralization to workers' councils. Following Yugoslavia's expulsion (1948) from the Cominform, Tito successfully maintained his country's independence from Soviet interference, pursuing a foreign policy of nonalignment.

Titus (Flavius Vespasianus) (39–81 AD) Roman emperor (79–81). He fought with his father Vespasian in Judaea and ended the Jewish revolt (70) by capturing Jerusalem. Titus was a popular emperor; when Vesuvius erupted (79), he aided the victims generously. At his death he was deified.

Tivoli 41 58N 12 48E A town in central Italy, in Lazio. A summer resort in Roman times, it possesses the remains of Hadrian's villa and the Renaissance Villa d'Este, with its terraced water gardens. Population (latest est): 55 030.

Tlingit A North American Indian people of the NW Pacific coast in SE Alaska. There were 14 tribes divided into independent matrilineal clans, each headed by a chief. They lived by salmon fishing and hunting. Their language belongs to the Na-Dené group.

TNT (trinitrotoluene; $C_6H_5(NO_2)_3$) A highly explosive yellow crystalline solid prepared from toluene treated with concentrated sul-

phuric and nitric acids. It is used in shells, bombs, and blasting explosives.

toad A tail-less amphibian belonging to a widely distributed order (*Anura*; about 2600 species). Toads have long hind legs and short forelegs; they swim by means of partially webbed feet. They have a long sticky tongue that can extend very rapidly to capture flying insects. See also NATTERJACK; TREE FROG.

toadfish A bottom-dwelling carnivorous *bony fish of the order *Batachoiiformes* (about 45 species), found mainly in tropical and subtropical seas. It has a heavy brownish body and makes grunting or croaking sounds resembling a toad.

toadstool See MUSHROOM.

tobacco A plant belonging to the genus *Nicotiana*, especially *N. tabacum* and *N. rustica*, which are cultivated for their leaves, used to make cigarettes, cigars, snuff, etc. Commercial tobacco plants grow to a height of 1–3 m and bear pink, white, or greenish flowers. After harvesting, their large sticky leaves are slowly dried and then fermented. The main growing regions are the USA, China, India, Russia, and Georgia. Tobacco contains about 2–4% nicotine, which produces its stimulant and addictive properties. Family: *Solanaceae*.

Tobata See KITAKYUSHU.

Toc H An interdenominational Christian fellowship devoted to social service. It was founded in 1915 in Belgium by the Rev P.B. Clayton (1885–1972), a Church of England chaplain, as a military chapel and club; it was named Talbot House in memory of Gilbert Talbot (1891–1915), a British lieutenant, killed in action. Its name derives from army signallers' designations of the initials *T H*.

toga The formal outer garment of the Roman citizen, worn over a tunic. It was originally worn by both sexes but later only by patrician males. The toga was an oval sheet of linen, draped across the left shoulder, and forced the wearer to comport himself in a dignified manner. Senators, high officials, and emperors wore togas edged with purple, while candidates for office wore their togas in the Forum whitened with chalk (the *toga candida*).

Togo, Republic of (French name: République Togolaise) A small narrow country in West Africa, on the Gulf of Guinea between Ghana and Benin. The majority of the population is African. *Economy*: chiefly agricultural; food crops consist mainly of cassava, maize, and rice and cash crops include cocoa, coffee,

and cotton. Forests produce not only timber but oil palms and dyewoods. There are rich deposits of phosphates, which are the main export. Bauxite was found in the 1950s. Industry includes food processing, a large cement plant, and an oil refinery. *History:* settled by the Ewe in the 12th and 13th centuries; the area was raided for slaves from the 17th to 19th centuries. From 1884 to 1914 Togoland was a German protectorate and after World War I it was divided between France and the UK. The French territory gained full independence in 1960. (The British part joined Ghana in 1957.) A coup in 1967 brought Lt Col (later Gen) Etienne Gnassingbé Eyadéma to power. Following pro-democracy riots, a multiparty constitution was approved in 1992. Eyadéma was re-elected several times but these polls were widely condemned as fraudulent. Legislative elections in 1999 and 2002 were boycotted by the opposition. In 2005 Eyadéma died after 38 years in power and was succeeded by his son, Faure Gnassingbe. Official language: French. Currency: CFA franc of 100 centimes. Area: 56 000 sq km (21 616 sq mi). Population (2007 est): 5 701 579. Capital: Lomé.

Tokyo 35 40N 139 45E The capital of Japan, in E central *Honshu on Tokyo Bay (an inlet of the Pacific). Administratively joined to its port Yokohama and to the industrial centre of Kawasaki. Greater Tokyo is the world's largest city. It has over 100 universities. *History:* the village of Edo was founded in the 12th century. As Tokyo, it replaced Kyoto as imperial capital in 1868. It was badly damaged by an earthquake in 1923 and by bombing during World War II, since when its industrial growth has been dramatic. Population (2004 est): 8 390 967.

Toledo 1. 41 40N 83 35W A city in the USA, in Ohio on Lake Erie at the mouth of the River Maumee. It is a major Great Lakes port, shipping oil, coal, and farm products. Industrial activities include shipbuilding and oil refining. Population (2004 est): 304 973. 2. 39 52N 4 02W A city in central Spain, in New Castile on the River Tagus. It was formerly the capital of Spain. Famous for its swords and knives, it produces metalwork engraved in the Moorish tradition. Population (2005): 75 578.

Tolkien, J(ohn) R(onald) R(euel) (1892–1973) British scholar and writer. His trilogy *The Lord of the Rings* (1954–59; filmed 2001–03), in which he created a richly detailed fantasy world, became a bestseller. Related works include *The Hobbit* (1937) and *The Silmarilion* (1977).

Tolpuddle Martyrs Six members of the Friendly Society of Agricultural Labourers of Tolpuddle, Dorset, founded in 1833. The six were unfairly charged with administering unlawful oaths and transported to Australia. They were pardoned in 1836.

Tolstoy, Leo (Nikolaevich), Count (1828–1910) Russian writer and moralist. Following his marriage in 1862 he wrote two novels, *War and Peace* (1865–69), concerning the Napoleonic War, and *Anna Karenina* (1875–77), both acknowledged masterpieces of Russian literature. Around 1879 he underwent a spiritual crisis from which he emerged with a faith in an extreme form of Christian anarchism. He worked and dressed as a peasant, became a vegetarian and pacifist, repudiated his literary works, and gave his property to his family.

Toltecs An Indian people who dominated central Mexico between the 10th and 12th centuries AD. Their language, *Nahuatl, was also spoken by the Aztecs. A militaristic people, they created an empire and introduced the cult of *Quetzalcoatl. The *Aztecs destroyed their capital of Tula in the mid-12th century.

tomato An annual plant, *Lycopersicon esculentum*, native to South America and widely cultivated for its fleshy red fruit. In warm temperate regions, tomatoes are grown in fields and are low branching plants; the hot-house tomatoes of cooler regions often grow a single erect fruiting stem. The yellow flowers produce rounded or pear-shaped fruits which are eaten fresh or canned and made into purée, pickles, etc. Family: Solanaceae.

tomography The technique, used in medicine for diagnosis, of producing an image of a selected plane of the body using X-rays or other radiation. In **computerized tomography** (CT), a ring-shaped X-ray machine (CT scanner) is rotated around the patient and records different planes of the body. The information obtained is assembled by the scanner's computer into a three-dimensional representation of the body.

Toms 56 30N 85 05E A port in central Russia, on the River Tom. Industries include engineering and it has a university (1888). In 1993 an explosion at a nuclear reprocessing plant resulted in radioactive contamination of the surrounding region. Population (2002): 487 838.

ton An Imperial unit of weight equal to 2240 lb (long ton) or 1016 kilograms. In the USA a unit equal to 2000 lb (short ton) is also used.

The metric ton (or **tonne**) is equal to 1000 kilograms.

tonality The presence of a tonal centre or key in a musical composition. Musical compositions from at least the early 17th century to about 1900 are in distinct keys. These are based on individual scales, in which certain notes (the tonic and dominant degrees) form tonal centres to which the music periodically returns. Music in which tonal centres are deliberately avoided exhibits *atonality. See also SERIALISM.

Tonga, Kingdom of (or Friendly Islands)

A country in the SW Pacific Ocean, E of Fiji. It consists of 169 small islands. *Economy:* agricultural, the main products being copra, vanilla beans, and fruit. Fishing and tourism are important. *History:* the islands were visited by Captain Cook in 1773. Under King Taufa'ahau Tupou (George I; 1797–1893) Tonga became a united kingdom and converted to Christianity. The country became a British protectorate in 1900, and an independent state within the Commonwealth in 1970. There is a partly elected assembly but considerable power remains with the king (since 2006 Tupou V). Official languages: Tongan and English. Currency: pa'anga of 100 seniti. Area: 700 sq km (270 sq mi). Population (2007 est): 116 921. Capital: Nuku'alofa.

tongue A muscular organ situated in the floor of the mouth. The root of the tongue is attached by muscles to the U-shaped hyoid bone in the neck. The tongue is the main organ of taste: its surface is covered by taste buds, which detect sweet, sour, salt, and bitter tastes. It also manipulates food during chewing and swallowing and plays an important role in the articulation of speech.

tonsils Patches of tissue situated on each side at the back of the mouth. They produce lymphocytes, which protect the body against infection. Inflammation of the tonsils (tonsillitis) may be caused by a variety of infections.

topaz A mineral consisting of a hydrous fluosilicate of aluminium, $\text{Al}_2\text{SiO}_4(\text{OH},\text{F})_2$. It occurs in acidic igneous rocks, in pegmatites and veins. It is usually colourless or yellow, and when cut and polished it is used as a gemstone. The finest specimens come mainly from the Urals, Brazil, and Ceylon. Birthstone for November.

topology The branch of *geometry concerned with the properties of an object that do not change under homeomorphisms, i.e. when the object is bent, stretched, or shrunk but not

torn or deformed so that several points on it are fused. Topology is often called rubber-sheet geometry; it was formerly called *analysis situs*. One application is in networks in which the topological properties depend on the so-called Euler characteristic, named after Leonhard Euler (1707–83), $V - E + F$, where V is the number of vertices in the network, E the number of edges, and F the number of areas enclosed by the edges.

Torah (Hebrew: instruction) The five books of Moses (Genesis, Exodus, Leviticus, Numbers, and Deuteronomy), which constitute the first of the three divisions of the Hebrew *Bible. In Judaism, the term is also applied more widely to the whole body of religious teachings, viewed as the revealed word of God and including both the written and the oral Torah.

Torbay A unitary authority in SW England, in S Devon, consisting of **Torquay** with two neighbouring seaside resorts. Area: 63 sq km (24 sq mi). Population (2004 est): 132 500.

Torfaen A county borough of SE Wales, created in 1996 from part of Gwent. Area: 290 sq km (112 sq mi). Population (2004 est): 90 400.

Tories A British political group that became the *Conservative Party under Robert *Peel in the 1830s; Tory is still used synonymously with Conservative. Originally an Irish name for a Roman Catholic outlaw, it was applied in 1679 to a supporter (in opposition to the *Whigs) of the succession to the throne of the Roman Catholic Duke of York (later James II). The Tories were later associated with the rebellious Jacobites and were excluded from politics until the 1780s, when they re-emerged. They represented the interests of the country gentry, merchants, and Anglicans.

tornado A violently rotating column of air, small in diameter, characterized by a funnel-shaped cloud, which may reach ground surface. Wind speeds of up to 200 knots (100 m per second) have been experienced. Occurring over land, tornadoes cause large-scale destruction and are a considerable problem in the central USA and Australia.

Toronto 43 42N 79 25W A city and port in E Canada, the capital of Ontario on Lake Ontario. It is Canada's largest city, housing a stock exchange and many business headquarters. Its diversified industries include heavy engineering, electrical, chemical, and wood products, foods, clothing, sporting goods, publishing, and films. *History:* established as Upper Canada's capital and military centre (1793), Toronto was scene of

the Mackenzie Rebellion (1837) against oligarchic government. It became an industrial and commercial centre with the development of railways (1850s). Population (1996): 4 338 400 (metropolitan area).

torpedo (armament) A self-propelled guided underwater missile carrying a high-explosive warhead. They can be launched by ships or aircraft but have been used most successfully by submarines. Designed in 1866 by a British engineer, Robert Whitehead (1823–1905), they were used to sink 25 million tons of Allied shipping in World Wars I and II. Modern torpedoes are driven by steam turbines or by battery-powered electric motors and have sophisticated active or passive acoustic homing systems.

torpedo (fish) See ELECTRIC RAY.

Torquemada, Tomás de (1420–98) Spanish Dominican friar and Grand Inquisitor. Confessor to Ferdinand and Isabella, he was appointed head of the Spanish *Inquisition in 1483. His sentences were extremely harsh and he was responsible for the expulsion of the Jews from Spain in 1492.

Torres Strait A channel between New Guinea and Cape York Peninsula, N Australia, linking the Arafura Sea and Coral Sea. It was discovered (1606) by the Spaniard Luis Vaez de Torres. Width: 145 km (90 mi).

Torricelli, Evangelista (1608–47) Italian physicist. He discovered that the atmosphere exerts a pressure and demonstrated it by showing that it could support a column of mercury in a tube, thus inventing the mercury barometer (1643). He also created the first man-made vacuum in his simple barometer, the space above the mercury still being called a Torricellian vacuum.

tort In law, a civil wrong that constitutes a breach of a duty established by law rather than by *contract. It is distinguished from a crime in that it affects the interests of the injured person rather than of the state.

Tortelier, Paul (1914–90) French cellist. He won first prize at the Paris conservatoire at the age of 16. After playing in orchestras in the USA he began a career as a soloist, composer, and teacher.

tortoise A slow-moving herbivorous reptile belonging to the family *Testudinidae* (40 species). Tortoises have a protective high-domed shell, tough scaly legs, and range in size from about 10 cm to 1.5 m (see GALÁPAGOS ISLANDS). Tortoises lay eggs and have long life-

spans, reputedly up to 150 years. Compare TURTLE; TERRAPIN.

tortoiseshell butterfly A *nymphalid butterfly whose wings are mainly orange with black markings. Tortoiseshells are found in Europe, Asia, and North America. The caterpillars feed mainly on nettles and willows. Chief genera: *Aglais*, *Nymphalis*.

Toscanini, Arturo (1867–1957) Italian conductor. He made his debut in 1886 and subsequently conducted at La Scala, Milan, and at the Metropolitan Opera in New York. From 1937 until his death he conducted the NBC (National Broadcasting Company) Symphony Orchestra.

toucan A noisy forest-dwelling bird belonging to a family (*Ramphastidae*; 37 species) occurring in tropical America. Toucans have huge brightly coloured bills and typically black plumage with a brightly coloured breast. They feed on fruit. Order: *Piciformes* (woodpeckers, etc.).

touchstone A black or grey flintlike stone, formerly used for testing the purity of gold and silver. The metal to be tested and one of known purity are both rubbed with the touchstone and compared. The colour of the marks left indicates the impurities present.

Toulon 43 07N 555E A port in SE France, in the Var department on the Mediterranean Sea. Toulon is one of France's principal naval bases and has marine engineering, chemical, oil, and textile industries. Population (1999): 159 389.

Toulouse 43 33N 124E A city in S France, the capital of the Haute-Garonne department on the River Garonne. A major commercial and industrial centre, it has aircraft, armaments, chemical, and textile industries. It is also an important agricultural trading centre. Notable buildings include the basilica (11th–13th centuries), the gothic cathedral, and the university (1230). Population (1999): 390 413.

Toulouse-Lautrec, Henri (Marie Raymond) de (1864–1901) French artist. Stunted by a childhood accident, he settled in Paris, where he led an unconventional life among the music halls and cafés of Montmartre. His sympathetic studies of entertainers, circus life, and prostitutes in posters, lithographs, and paintings were influenced by *Degas and Japanese prints. Characteristic paintings are *At the Moulin Rouge* (Art Institute of Chicago) and *La Toilette* (Louvre).

Tour de France The main Continental professional cycling race. Founded in 1903, the road race lasts three weeks or more and has a

maximum length of approximately 4000 km (2480 mi). The race starts in a different town each year but always ends in Paris.

tourmaline A group of minerals composed of complex cyclosilicates containing boron. There are numerous varieties, some being used as gemstones and some for their piezoelectric and polarizing properties. Tourmalines are found in veins and pegmatites, in granite rocks.

Tours 47°23'N 0°42'E A city in central France, the capital of the Indre-et-Loire department situated between the Rivers Loire and Cher. Notable buildings include the gothic cathedral, the archiepiscopal palace (17th–18th centuries), and the university (1970). Tours is a tourist centre for the Loire Valley and has varied manufacturing industries. Population (1999): 132 820.

Tower Bridge A bridge over the River Thames, next to the *Tower of London. Built in 1894 in the gothic style, it has a central portion that lifts to allow large ships to pass through it into the Pool of London.

Tower of London A royal fortress on the N bank of the River Thames, to the E of the City of London. It was begun in the 11th century and added to in subsequent centuries. It was a royal palace until the 17th century and a state prison. It is now a barracks, armoury, and museum, containing the British crown jewels.

toxaemia The presence of bacterial toxins in the blood. Formerly, the term was used to describe a condition affecting pregnant women thought to be due to toxins but now known to be caused by *hypertension (raised blood pressure).

toxin A poison produced by a living organism. Many microorganisms, including bacteria and fungi, produce toxins. In diphtheria and tetanus the toxin is produced by the bacteria within the infected person; in botulism the toxin is produced in contaminated food. Some toxins are useful: penicillin is a toxin that kills bacteria.

Trabzon (former name: Trebizond) 41°00'N 39°43'E A port in NE Turkey, on the Black Sea. It was the capital of the Comnenian empire (1204–1461) and has a university (1963). Population (1997): 182 552.

tracery Decorative stonework supporting the segments of leaded stained glass in the windows of Gothic and Gothic-revival buildings. It was often very elaborate, especially in the late Gothic *Flamboyant (Continental) and *Per-

pendicular (English) styles. See GOTHIC ART AND ARCHITECTURE.

trachea 1. The windpipe: a tube that conducts air from the larynx to the left and right bronchi, which continue to the *lungs. The trachea is lined by *mucous membrane and supported by hoops of cartilage in its wall. 2. One of the air passages in insects, which lead directly to the tissues. Each trachea has an external opening (spiracle) that can be opened and closed.

trachoma An eye disease that occurs in dry poor parts of the world and is caused by a virus-like bacterium of the genus *Chlamydia*. It is a severe form of *conjunctivitis in which the membrane lining the eyelids becomes scarred and shrunken. Trachoma is the world's most common cause of blindness.

Tracy, Spencer (1900–67) US film actor. He began his film career in the 1930s by playing gangsters, but later costarred with Katherine *Hepburn in nine films, including *Adam's Rib* (1949) and *Guess Who's Coming to Dinner* (1967). Other notable films include *The Old Man and the Sea* (1958) and *Judgement at Nuremberg* (1961).

trade cycle The repeated cycle of boom, recession, *depression, recovery, and boom in an economy. In the UK in the 19th century, the trade cycle displayed remarkable regularity and stability; in the last hundred years it has fluctuated more. The *Depression of the 1930s was a severe and protracted world slump followed, after World War II, by a period of boom, interrupted by only minor recessions, which persisted until another depression was entered in the 1970s and another in the early 1990s. The causes of the cycle are uncertain, but it may result from the regular cycle of electoral politics or from erratic shocks to the economy, such as wars or rises in the prices of essential commodities (such as oil).

trademarks Distinctive emblems owned by a manufacturer or trader and applied to his goods to identify them as produced or sold by him. The owner of a trademark has the right to its exclusive use in connection with the goods associated with it. Any trademark can be protected against infringement by legal action and registered trademarks enjoy additional statutory protection.

Tradescantia A genus of flowering plants (about 60 species), native to North and Central America and popular as ornamentals. Varieties of the wandering jew (*T. fluminensis*) are popular house plants, having oval green leaves,

tinged with pink or with silver stripes. Spiderworts, derived from *T. virginiana*, have three-petalled blue, red, or white; flowers and grasslike leaves; they are attractive border plants. Family: *Commelinaceae*.

trade union An organization of employees joined together to present a collective front in negotiations with an employer and to provide a measure of security for its members. The origins of trade unions lie in the local clubs of skilled craftsmen in 18th-century Britain. Robert *Owen's Grand National Consolidated Trades Union (1834), the first attempt to unite skilled and unskilled workers, collapsed following the transportation of the *Tolpuddle Martyrs. In 1851 the first successful national trade union, the Amalgamated Society of Engineers, was formed and in 1868 the Trades Union Congress (TUC) met for the first time. Granted legal status in 1871, trade unions began to be formed by unskilled workers. Unions in the UK finally became secure with the passing of the Trade Disputes Act (1906), which prevented employers from suing unions for damages after a *strike. The failure of the *General Strike (1926) was a blow to the trades union movement in Britain and the consequent Trade Disputes Act (1927) made general strikes illegal. This was repealed by the postwar Labour Government. In the 1960s and 1970s trade unions became an important political force, but their power was subsequently curbed by the Employment Acts (1980, 1982, 1988) and the Trade Union Act (1984) passed by the Thatcher Government. The Labour Party has loosened its traditional links with the trade unions since the mid-1990s.

The first international trade union was the first *International (1864); the international trades union movement is now represented by the World Federation of Trade Unions and the *International Confederation of Free Trade Unions.

trade winds (or **tropical easterlies**) The predominantly easterly winds that blow in the tropics. They blow from the NE in the N hemisphere and from the SE in the S hemisphere, converging towards the equator.

Trafalgar, Battle of (21 October 1805) The naval battle in the Napoleonic Wars in which the British under Nelson (in the *Victory*) defeated the French W of Cape Trafalgar, between Cádiz and Gibraltar (SW Spain). The British success, which was tragically marred by Nelson's death in the hour of victory, ended the threat of a French invasion of Britain.

Trafford A unitary authority in NW England, in Greater Manchester. Area: 106 sq km (41 sq mi). Population (2001): 210 135.

tragedy A form of drama recounting the fall (usually, the death) of a noble protagonist. The form evolved in ancient Greece and was fully developed in the plays of Aeschylus, Sophocles, and Euripides. Little tragic drama of worth was then written until the tragedies of Shakespeare and his contemporaries. In 17th-century France the neoclassical tragedies of Racine and Corneille were carefully based on principles derived from Aristotle's *Poetics*. Ibsen and Strindberg in Europe and Eugene O'Neill in the USA contributed to the development of tragic drama in the 19th and 20th centuries.

tranquillizers Drugs used to relieve anxiety and tension. They include the *benzodiazepines. The powerful drugs used in the treatment of schizophrenia and other mental disorders were formerly known as major tranquillizers but are now known as antipsychotic drugs (see ANTIPSYCHOTICS).

transformer A device for converting alternating current from one voltage to another. The input is fed to a primary winding, a coil of wire round a soft iron core, creating an oscillating magnetic field in the core. This field induces a secondary current of the same frequency in the secondary winding wound on the same core. The ratio of primary to secondary voltage is equal to the ratio of the number of turns in the secondary coil to that in the primary. The device is widely used both in electronic circuits and in the transmission and distribution of electric power (see ELECTRICITY SUPPLY).

transistor A *semiconductor device with three or more electrodes. Transistors form the basic elements of electronic *amplifiers and logic circuits, often combined with other components in *integrated circuits. They were first developed in 1948 by William *Shockley and his coworkers at the Bell Telephone Co and now replace *thermionic valves in most applications. A **bipolar junction transistor** consists of two junctions between p-type and n-type semiconductors forming either a p-n-p or n-p-n structure. Current is carried across these junctions by both negative and positive charge carriers (electrons and holes). Depending on how it is connected into a circuit, the junction transistor can act as a voltage or current amplifier in much the same way as a triode valve.

Originally, junction transistors were made by alloying the impurity metal onto the semi-

conductor crystal or by adding impurities as the crystal was being grown. Now the doping is diffused in as a gas, introduced by ion implantation, or, more commonly, achieved by a combined process of etching and diffusion, known as the planar process.

The **field effect transistor (FET)** is a unipolar device, in which current is carried by only one type of charge. There are two types: the junction FET (JFET) has a region of semiconductor of one doping type flanked by two highly doped layers of the opposite type. Current flows parallel to the junctions, between the so-called source and drain electrodes, through a narrow channel between the highly doped regions (the gate); it is controlled by the electric field arising from the gate input voltage, which alters the width of the conducting channel. The JFET is used as a separate component in amplifiers and switches. In the insulated-gate FET (IGFET) the source and drain electrodes are highly doped regions in a substrate of the opposite type. The gate electrode is a conductor separated from the substrate by a thin insulating layer across the surface. The electric field caused by the gate voltage controls the source-drain current on the other side of the insulator. The IGFET is used mainly in metal-oxide semiconductor (MOS) integrated circuits. It is smaller than the equivalent bipolar junction transistor and uses less power. The first plastic transistor was built in 1988.

transition elements A large group of metallic elements, including most of the commonly used metals, the inner electron shells of which are incomplete. The *lanthanides and the *actinides are sometimes included in this definition. The elements show considerable similarities to their horizontal neighbours in the *periodic table. In general, they are hard, brittle, high-melting, and excellent conductors of heat and electricity. They have multiple valencies and form coloured compounds.

Transkei, Republic of A former Bantu homeland in South Africa, consisting of three separate areas. Most of the population was *Xhosa. Created in 1963, as the first of the Bantu Homelands, it became nominally independent in 1976. All Black Africans of Transkeian origin became its citizens, simultaneously losing their South African citizenship. Its independence was only recognized by South Africa. In 1994, following the adoption of a multiracial constitution, the Bantu Homelands were reintegrated into South Africa and South African citizenship granted to their inhabitants.

transmutation The conversion of one element into another. An early (unfulfilled) aim of alchemy was the transmutation of base metals into gold. Transmutations were achieved in the 20th century by bombarding elements with *alpha particles or *neutrons.

transpiration The loss of water vapour from the surface of a plant, which occurs primarily through small pores (stomata) in the leaves but also (slowly) through the cuticle of the *epidermis. The rate of water loss is controlled by the opening and closing of the stomata, greater loss occurring during the day than at night.

transplantation The surgical implantation of a tissue or organ derived either from another part of the patient's body or from another individual (the donor). Skin grafting is an example of the former: it is used particularly to repair damage and disfigurement caused by burns and other injuries. Transplantation of donor organs requires careful matching of the donor's and recipient's tissues together with the use of drugs that suppress the recipient's immune responses (see IMMUNOSUPPRESSION). The first successful heart transplant operation was performed by Christiaan *Barnard in 1967; other organs that have been transplanted include the kidneys, lungs, liver, and pancreas. The first implantation of an artificial heart, made of titanium, took place in 1988.

transportation In law, the practice of sending a convicted criminal to some place outside Britain, usually to one of the colonies, to be kept in hard labour. Transportation dates back to the reign of Elizabeth I; it ceased in the 19th century.

Trans-Siberian Railway The world's longest railway, running 9335 km (5800 mi) from Moscow to Vladivostok. Double track, largely electrified, has replaced the original single track line built between 1891 and 1905. The complete journey with nearly a hundred stops takes nine days.

transubstantiation In Roman Catholic theology, the doctrine that the substance of the elements of bread and wine in the *Eucharist is changed at consecration into the substance of the body and blood of Christ. Only the accidents (i.e. the qualities apparent to the senses) of the bread and wine remain.

transuranic elements Elements with higher atomic number than uranium. Apart from traces of neptunium and plutonium, none of them has ever been detected in nature,

Germanium is a typical semiconductor. The four outer electrons in each of its atoms form covalent bonds with adjacent atoms. In the pure state it acts as an insulator as no electrons are available to carry current.

Arsenic atoms have five outer electrons. Germanium containing arsenic atoms as an impurity can carry current because the fifth electron is available as a carrier. This is an n-type semiconductor because current is carried by negative electrons.

Indium atoms have three outer electrons. Germanium doped with indium therefore has holes in its electronic structure. These can be filled by electrons from neighbouring atoms, creating new holes; this has the effect of positive charge moving through the crystal in the opposite direction to electrons. This is p-type germanium.

In the bipolar junction transistor a piece of p-type material is sandwiched between two n-type pieces, making an n-p-n structure (p-n-p transistors are also used).

In an n-p-n transistor, a negative voltage is applied to one end (the emitter) and a positive to the other (the collector). No current flows, however, because a potential barrier forms at the junction between the emitter and the central region (the base).

If the base region is positively biased, the free electrons in the emitter are attracted to the p-type base and current flows through the thin base to the collector. As the collector current depends on the amount of bias to the base, the device can be used as an amplifier.

In the symbolic representation of a transistor, the direction of the arrow on the emitter indicates the direction of the current and the type of transistor (n-p-n or p-n-p).

transistor. The operation of the bipolar junction transistor.

since no isotopes of sufficient half-life exist; they have been created since 1940 in nuclear reactions. See also ACTINIDES.

Transvaal A former province in South Africa. Heavily populated in the S, it contains the country's main industrial area, centred on

the Witwatersrand; iron, steel, and chemicals are produced. Mineral deposits include gold, diamonds, uranium, coal, chromite, tin, and platinum. It has a well-developed agriculture producing maize, wheat, peanuts, citrus fruit, cotton, and tobacco; sheep and cattle are raised.

Forestry is also important. *History:* originally an Afrikaner republic, it fought in the *Boer Wars against Britain (1880–81, 1899–1902). It joined the Union of South Africa in 1910. In 1994 the province was replaced by the new regions of **Gauteng**, **Mpumalanga**, **Northern**, and parts of **Northwest**.

Transylvania A region of SE Europe, bounded by the Carpathian Mountains and the Transylvanian Alps. Transylvania retained its distinctive character under successive Roman, Magyar, and Hungarian rulers; during the 16th and 17th centuries, it was a self-governing principedom within the Ottoman Empire. Restored to Hungary in 1687, Transylvania became part of Romania after World War I. In a 1996 treaty Hungary renounced any claim to Transylvania, while Romania guaranteed the rights of ethnic Hungarians.

trap-door spider A *spider, especially one of the family *Ctenizidae*, that constructs a silk-lined burrow in the ground covered by a tight-fitting silk-hinged door. Ctenizids are dull brown, with short stout legs. They occur in tropical and subtropical regions.

Trappists A Roman Catholic monastic order, officially known as the *Cistercians of the Strict Observance. It was founded in 1664 at the abbey of La Trappe in Normandy; there are now monasteries in Britain, Ireland, North America, and elsewhere. The order is notable for its austerity, which includes the observance of strict silence.

treason The violation by a citizen of his allegiance to the sovereign or the state. In England, the Statute of Treasons (1352) defined two kinds of treason: high treason was (1) to plot to kill or maim the sovereign; (2) to wage war against him or to join his enemies; (3) to kill his eldest son or heir; (4) to violate his wife, eldest daughter (if unmarried), or heir's wife; (5) to kill the chancellor, or any judge while he or she is performing his or her office; petty treason, abolished in 1828, was the violation of private allegiance. Until 1999 all forms of high treason carried the death penalty; this is now restricted to treason in time of war or imminent war.

treasure trove Formerly, gold or silver items of unknown ownership found hidden in a concealed place. In England it belonged to the Crown provided it had been deliberately concealed rather than abandoned or lost. The finder of treasure trove was rewarded the value of the property found, unless he concealed it, in which case he was liable to impris-

onment. The Treasure Act (1996) redefined treasure as any item (excluding single coins) at least 300 years old and containing more than 5% precious metal. It belongs to the Crown, which will pay a reward to the finder.

Treasury The UK government department, established in 1653, that is responsible, with the *Bank of England, for the management of the economy and the allocation of the available government money between the spending departments. The prime minister is the first lord of the treasury, but it is run by the chancellor of the exchequer, assisted by the chief secretary to the Treasury and the financial secretary.

tree A tall perennial woody plant, usually with a single main stem (the trunk) and secondary stems (the branches) arising some distance above ground level. Most tree species are either *dicotyledons (angiosperms)—the broad-leaved trees—or *conifers (gymnosperms). These are of economic importance as producers of hardwoods and softwoods, respectively. Other groups containing trees are the cycads (gymnosperms), monocotyledons (notably the palms), and the ferns. The conifers and tropical trees are mostly *evergreen plants, while broad-leaved trees growing in regions with marked seasonal changes in climate are typically deciduous. The study of the ecology and classification of trees is called **dendrology**. See also **FOREST**.

Tree, Sir Herbert (Draper) Beerbohm (1853–1917) British actor and theatre manager, halfbrother of the writer Max Beerbohm (1872–1956). He was manager of the Haymarket Theatre from 1887 to 1899 and then of Her Majesty's Theatre, where he staged many lavish Shakespearean productions. In 1904 he founded the *Royal Academy of Dramatic Art.

treecreeper A small songbird belonging to a family (*Certhiidae*; 5 species) occurring in Europe, Asia, and North America. It has a brownish streaked plumage with pale silvery underparts, long claws, and a slender down-curved bill. The European treecreeper (*Certhia familiaris*) occurs mainly in coniferous woods, where it creeps up tree trunks to probe for small beetles, spiders, woodlice, etc.

tree frog A small toad belonging to a widely distributed family (*Hylidae*; about 500 species). They have adapted to living in trees and have adhesive pads on their toes that enable them to cling to leaves and branches, leaping acrobatically to capture insects.

tree

tree of heaven A tree, *Ailanthus altissima*, native to central Asia and planted elsewhere as an ornamental. Growing to a height of 30 m, it has compound leaves, up to 1 m, composed of paired leaflets. Its flowers form greenish-white clusters; the female flowers produce winged fruits. Family: *Simaroubaceae*.

tree-ring dating See DENDROCHRONOLOGY.

tree shrew A mammal belonging to the order Scandentia (19 species), found in Java, Borneo, Sumatra, the Philippines, and S Asia. The common tree shrew (*Tupaia glis*) is 30–45 cm

long including the tail (15–23 cm) and has a slender pointed face. It darts among the branches, feeding on insects, fruit, and seeds.

Trenchard, Hugh Montagne, 1st Viscount (1873–1956) The first British air marshal. As commander of the Royal Flying Corps during World War I, he was chiefly responsible for the establishment of the RAF (1918).

Trent, Council of (1545–63) The 19th general council of the Roman Catholic Church, an expression of the *Counter-Reformation, which was summoned by Pope Paul III to strengthen the Church in its confrontation with Protestantism. It was held in Trento (N Italy). There were three sessions (1545–47, 1551–52, 1562–63), which clarified doctrine and instituted reforms; the Council condemned Luther's doctrine of justification by faith alone and defined *transubstantiation. It effectively determined the structures, teachings, and liturgy of the Church until the Second *Vatican Council 400 years later.

Trent, River A river in central England. Flowing mainly NE from Staffordshire through Nottingham, it joins the River Ouse to form the Humber estuary. The Midlands' main river, it is linked to the Mersey by the Trent, Mersey, and Grand Union Canals. Length: 270 km (170 mi).

Trento (German name: Trent) 46°04'N 11°08'E A city in N Italy, the capital of Trentino-Alto Adige on the River Adige. Dating from pre-Roman times, it has a romanesque cathedral (12th century) and the 16th-century Church of Sta Maria Maggiore, where the Council of *Trent met. Population (2000 est): 104 906.

triangle A geometric figure bounded by three straight sides meeting in three corners called the vertices (singular: vertex). In a plane triangle, the sum of the internal angles is always 180°; in non-Euclidian geometries the sum may be more (spherical triangles) or less.

Triassic period (or Trias) A period of geological time at the beginning of the Mesozoic era, lasting from about 240 to 200 million years ago. The rocks of the period were laid down mainly under continental conditions. The dinosaurs, ichthyosaurs, and plesiosaurs appeared in the Triassic.

tribes of Israel In the Bible, the Hebrew people. The 12 tribes, descended from the sons of Jacob, were Reuben, Simeon, Judah, Issachar, Zebulun, Benjamin, Dan, Naphtali, Gad, Asher, Levi, and Ephraim and Manasseh. These last two were usually counted as one. After the

death of Solomon, ten of the tribes broke away from Benjamin and Judah to form the northern kingdom of Israel; they are known as the Ten Lost Tribes of Israel.

tribune In ancient Rome, a plebeian magistrate appointed to protect plebeians' rights. Instituted during the 5th-century political struggles between *patricians and plebeians, the tribunes could veto legislative proposals of the Senate or popular assemblies and could propose legislation without senatorial approval.

Triceratops A three-horned dinosaur of the late Cretaceous period (about 100–65 million years ago). 8 m long and weighing 8.5 tonnes, it had an enormous head with one horn on the snout and one over each eye. It also had a large bony neck frill and browsed on tough plants. Order: *Ornithischia*.

Trident missile A US navy three-stage solid-fuelled nuclear strategic missile launched from a submarine and having a range of 7800 km (4800 mi). Designed as a replacement for the Poseidon missile, Trident missiles, first deployed in the early 1980s, are capable of great accuracy at increased distances and carry a new stellar-inertial guidance system. They replaced the UK's Polaris systems in 1994–96. The UK launched its fourth and last Trident submarine in 1998.

Trier (French name: Trèves) 49°45'N 6°39'E A city in SW Germany, in Rhineland-Palatinate on the River Moselle. Founded by the Emperor Augustus, it has important Roman remains. It is a wine-trading and industrial centre. Population (1991): 98 750.

Trieste (Serbo-Croat name: Trst) 45°39'N 13°47'E A seaport in Italy, the capital of Friuli-Venezia Giulia, situated on the Gulf of Trieste at the head of the Adriatic Sea. An important transit port for central Europe, it has shipyards, oil refineries, and a steel industry. *History:* an important Roman port in the 1st century AD, it passed to Austria in 1382. It expanded rapidly in the 19th century and in 1920 was ceded to Italy. Following World War II it became the capital of the Free Territory of Trieste. In 1954 most of the N of the Territory (including Trieste) passed to Italy and the remainder to Yugoslavia. Population (2000 est): 216 459.

triggerfish A shallow-water fish, of a family (*Balistidae*) related to *puffers, that occurs in tropical seas. Its deep laterally flattened body is covered with large scales. The strong spine of the first dorsal fin is erected and locked into

position by the second dorsal fin, forming a "trigger" that wedges the fish into crevices.

trigonometry A branch of mathematics founded by Hipparchus in the mid-2nd century BC, concerned originally with the measurement of triangles. The ratios of the lengths of the sides of a right-angled triangle are used to define the sine, cosine, and tangent of one of its angles. Trigonometry deals with the properties of these and related functions.

trilobite An extinct marine *arthropod belonging to a subphylum (*Trilobita*; over 4000 species) that flourished 500–200 million years ago. Trilobite fossils are abundant in rocks of this period. Its flattened oval body, 10–675 mm long, was divided by two longitudinal furrows into three lobes. The head bore a pair of antennae and two eyes and each segment of the thorax and tail region carried a pair of forked appendages.

Trimble, (William) David, Baron (1944–) Northern Irish politician, leader of the Ulster Unionist Party (1995–2005). An MP from 1990, he participated in the talks that led to the Good Friday Agreement of 1998 and became Northern Ireland's first minister later that year. In 1998 he was awarded the Nobel Peace Prize jointly with John *Hume. He was raised to the House of Lords in 2006.

Trimurti The Hindu triad of gods, *Brahma, *Vishnu, and *Shiva, representing the creative, sustaining, and destructive aspects of reality respectively, sometimes portrayed as one body with three heads.

Trinidad and Tobago, Republic of A country off the N coast of South America, consisting of the islands of Trinidad and Tobago. Both are hilly and wooded. Most of the population is of African and East Indian descent. *Economy*: oil has replaced cocoa and sugar as the main source of wealth and reserves of offshore gas have also been discovered. Other industrial developments include aluminium smelting, plastics, electronics, iron and steel, and chemicals. Tourism is growing. The republic is a member of CARICOM. *History*: Trinidad was inhabited by Arawak and Carib Indians when it was discovered by Columbus in 1498. It was a Spanish colony from the 16th century until 1802, when it was ceded to Britain; it joined with Tobago in 1809. The country became an independent state within the Commonwealth in 1962 and a republic in 1976. Legislative elections in 2001 produced a straight tie between the main parties, causing a constitutional crisis that was not resolved until the following year.

Official language: English. Currency: Trinidad and Tobago dollar of 100 cents. Area: 5128 sq km (1980 sq mi). Population (2007 est): 1 056 608. Capital: Port-of-Spain.

Trinity, the A central doctrine of Christian theology, stating that God is one substance but with three distinct, coequal, and coeternal "persons," the Father, the Son, and the *Holy Spirit. It was given a first formal definition by the Council of *Nicaea (325).

triode See THERMIONIC VALVE.

Triple Alliance (1882) An alliance between Germany, Austria-Hungary, and Italy, which with the opposing *Triple Entente shaped European diplomacy before World War I. At the outbreak of war (1914) Italy declared its neutrality, thus breaking the alliance.

Triple Alliance, War of the (or Paraguayan War, 1865–70) The war between Paraguay and a coalition of Argentina, Brazil, and Uruguay. Conflict was precipitated by the belligerent diplomacy of Paraguay's dictator, F. S. López (1826–70), towards Argentina, which with Brazil and Uruguay invaded Paraguay. López waged a guerrilla war until captured (1870).

Triple Entente An informal combination of France, Russia, and Britain resulting from the Franco-Russian alliance (1893), the Franco-British Entente Cordiale (1904), and the Anglo-Russian agreement (1907). It was formed in opposition to the *Triple Alliance.

triple jump (former name: hop, step, and jump) A field event in athletics, similar to the long jump but executed as a continuous series of three jumps. The jumper lands first on the takeoff foot and then on the other, which becomes the takeoff foot for the final jump. The event was opened to women in 1990 (1996 for the Olympics). World record: 17.97 m (1985) Willie Banks (USA).

Tripoli 1. (Arabic name: Tarabulus al-Gharb) 32 58N 13 12E The capital and main port of Libya, on the Mediterranean Sea. Originally founded as Oea by the Phoenicians, it became the capital of Libya on independence in 1951. Exports include fruit and olive oil and it is a transshipment centre. Population (2003 est): 591 060. **2.** (Arabic name: Tarabalus ash-sham) 34 27N 35 50E A port in NW Lebanon, on the Mediterranean Sea. It was the capital of a Phoenician federation of three other cities. Iraqi oil is brought by pipeline to the refinery here. Population (2003 est): 212 900.

trireme See SHIPS.

Tristan The tragic hero of several medieval romances. After accidentally drinking a magic love potion, he becomes the lover of Iseult (Isolde), who is betrothed to his uncle, King Mark of Cornwall. He later renounces Iseult and goes to Brittany, where he marries. Dying from a wound, he sends for Iseult; she arrives too late and dies of grief at his side. Of Celtic origin, the legend appeared in a French poem, written in about 1150. Other versions include Gottfried von Strassburg's *Tristan und Isolde*, the source of Wagner's opera. In the 13th century the story was incorporated into the *Arthurian legend.

Tristan da Cunha 37 15S 12 30W A group of four small islands in the S Atlantic Ocean, a dependency of St Helena. The only settlement, Edinburgh, is on Tristan (the largest island). In 1961 the inhabitants were evacuated to the UK to escape a volcanic eruption but most chose to return in 1963. The economy is based on crawfish canning and postage stamps. Area: about 100 sq km (40 sq mi). Population (latest est): 313.

tritium (T or ³H) A radioactive isotope of hydrogen, the nucleus of which contains one *proton and two *neutrons. It does not occur naturally but is produced in nuclear reactors and is used as a radioactive tracer and in nuclear weapons. Tritium decays with a half-life of 12.3 years, emitting beta-rays.

triton shell A *gastropod mollusc of the family *Cymatiidae* (about 100 species), occurring mainly in tropical seas. Triton trumpets (genus *Charonia*) grow to 40 cm and have ribbed shells, often with prominent knobs. They feed on molluscs and echinoderms.

triumvirate In Roman affairs, a board of three men officially appointed for special administrative duties. The so-called first Triumvirate (60 BC) of Caesar, Pompey, and Crassus was merely a private arrangement. The triumvirate, or triple dictatorship, of Mark Antony, Lepidus, and Octavian was unique; appointed in 43 BC to maintain public order in Rome, they held office with absolute powers until Lepidus was ousted in 36.

Troilus In Greek mythology, a son of King Priam of Troy who was killed by Achilles. The story of his love for Cressida, who deserted him for the Greek Diomedes, first appeared in the *Roman de Troie* by the 12th-century French poet Benoît de Sainte-Maure. Later versions include those by Chaucer and Shakespeare.

Trojan Horse In Greek legend, a gigantic

hollow wooden horse used in the *Trojan War. The Trojans hauled it inside their city, believing it to be a gift to Athena, and Greek warriors then emerged from it to open the gates to their army.

Trojan War In Greek legend, a ten years' war waged by the Greeks against *Troy after the abduction of *Helen by Paris. Its history, probably based on an actual war fought in the 12th century BC, is related in Homer's *Iliad*. The Greeks were led by *Agamemnon and their champions included *Achilles, Diomedes, and *Odysseus. The chief Trojan warriors were *Hector and *Paris, sons of King Priam. The war culminated in the capture of Troy by the stratagem of the *Trojan Horse.

troll In Scandinavian folklore, originally a gigantic ogre-like creature imagined as guarding treasure, inhabiting a castle, and stalking through the forest at night. In later folklore, trolls were conceived as dwarflike cave- and mountain-dwellers who were skilled craftsmen.

Trollope, Anthony (1815–82) British novelist. He worked for the General Post Office from 1834 until he retired in 1867. He established his reputation with a series of novels, including *The Warden* (1855) and *Barchester Towers* (1857), set in the imaginary county of Barsetshire with a cast of predominantly clerical characters. A second series of novels, set against a political background, includes *Phineas Finn* (1869) and *The Eustace Diamonds* (1873).

trombone A brass musical instrument, consisting of a cylindrical tube, about 3 m (9 ft) long, turned back upon itself, a cup-shaped mouthpiece, and a flaring bell. By means of a slide and by varying lip pressure, a chromatic range of almost three octaves can be produced. The trombone has been part of the symphony orchestra since the late 18th century and is frequently used in jazz. The old English name for the trombone was the **sackbut**.

Trondheim 63 36N 10 23E A city and seaport in W Norway on Trondheim Fjord. It has a famous cathedral (12th–14th centuries) where Norwegian sovereigns have been crowned since early times and two universities. Industries include shipbuilding and fishing. Population (2000 est): 148 859.

trooping the Colour Traditionally, the parade of the British sovereign's flag, or Colour, displayed so that foreign mercenaries would recognize it in battle. It is now a military parade held on the Horse Guards parade ground

in Whitehall, London, on the sovereign's official birthday.

tropic bird A white seabird belonging to a family (*Phaethontidae*; 3 species) occurring in tropical and subtropical waters. Tropic birds have black eye and wing markings and are up to 50 cm long excluding the long streamer-like tail feathers. Order: *Pelecaniformes* (cormorants, pelicans, etc.).

tropics The area of the earth's surface lying roughly between the Tropic of Cancer on the 23°30'N parallel of latitude and the Tropic of Capricorn on the 23°30'S parallel.

tropism The growth of a plant or sedentary animal in response to a directional external stimulus: a growth movement towards the stimulus is a positive tropism; the opposite response is a negative tropism. For example, positive **hydrotropism** is growth towards water; negative **geotropism** is growth away from the pull of gravity.

troposphere See ATMOSPHERE.

Trotsky, Leon (Lev Bronstein; 1879–1940) Russian revolutionary and Marxist theorist. Trotsky became a Marxist in the 1890s and was imprisoned and exiled for revolutionary activities. He lived in W Europe until the Revolution of 1905, when he was again imprisoned and exiled. On the outbreak of the Russian Revolution, he returned to Russia and abandoned his *Menshevik loyalties to become a *Bolshevik. He played a major role in the October Revolution and during the civil war (1918–20) directed the Red Army to victory. Under Lenin, Trotsky was Russia's second most powerful man but he lost to Stalin the power struggle that followed Lenin's death and was banished. He was murdered, probably by a Soviet agent. The form of Marxism developed by Trotsky, who advocated world revolution in opposition to the view that socialism could be achieved in one country, is known as **Trotskyism**.

troubadours Provençal poets of the 12th to 14th centuries whose lyric poetry had a profound influence on both the subject matter and form of subsequent European verse. Both poets and composers, the troubadours wrote songs introducing a new concept of love, later labelled courtly love. The earliest troubadour was Guillaume, 9th Duc d'Aquitaine (1071–1127). Other famous troubadours included Vicome de Hautefort (c.1140–c.1207); Arnaut Daniel (c.1180), who was credited with inventing the *sestina*; and Bernard de Ventadour (late 12th

century), in whose lyrics the conventions of courtly love were most clearly developed.

trout One of several predatory fish belonging to the family *Salmonidae*, especially the genus *Salmo*, that are native to the N hemisphere but introduced elsewhere as food and game fish. It has a stout body with a blunt head and varies in colour from blackish to light olive with characteristic black or red spots or X-shaped markings. Trout occur mainly in fresh water. The common European brown trout (*S. trutta*) has a migratory variety called the sea trout. The North American rainbow trout (*S. gairdneri*) is distinguished by a broad purple band along its sides. Order: *Salmoniformes*.

Troy An ancient city in Asia Minor, near the Dardanelles. According to legend, when the Trojan prince *Paris abducted *Helen, *Agamemnon led a Greek force to recover her and captured Troy (see TROJAN WAR). Schliemann's excavations (1870) identified Troy at Hissarlik. Excavations have revealed nine superimposed cities, the seventh of which was contemporary with the legendary siege. See also HOMER.

Trudeau, Pierre Elliott (1919–2000) Canadian statesman; Liberal prime minister (1968–79, 1980–84). A French Canadian, he nevertheless opposed French separatism and in 1970 briefly introduced martial law to deal with separatist agitation in Quebec. He retired from office in 1984 and his Liberal party lost the subsequent general election.

Truffaut, François (1932–84) French film director and critic, an influential member of the *New Wave. His films, noted for their visual charm and elegance, include *Le Quatre Cent Coups* (1959), *Jules et Jim* (1961), *L'Enfant sauvage* (1970), *Day for Night* (1973), and *Le Dernier Métro* (1980).

truffle A fungus belonging to the order *Tuberales*. Up to 10 cm across, truffles are rounded and occur in chalky soils, usually in association with tree roots. Several species are regarded as delicacies, including the black Périgord truffle (*Tuber melanosporum*) and the white Piedmont truffle (*T. magnatum*), both of France. They are collected in oak woods using trained pigs or dogs. The bluish-black English truffle (*T. aestivum*) is found mainly in beech woods. Phylum: *Ascomycota*.

Trujillo 8 06S 79 00W A city in Peru, situated 13 km (8 mi) from its port, Salaverry, on the Pacific coast. Founded in 1535, Trujillo is the commercial centre for an area producing

sugar cane and rice. Population (2005 est): 634 044.

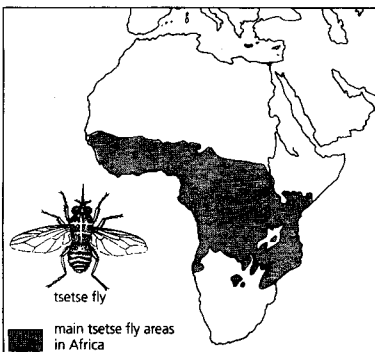

Truman, Harry S. (1884–1972) US statesman; Democratic president (1945–53). One of his first acts as president was to order the atomic bombing of Hiroshima and Nagasaki to end the war with Japan. In the **Truman Doctrine** he announced economic and military aid to countries thought to be vulnerable to communist takeover. His administration saw the establishment of the *North Atlantic Treaty Organization (1949). In domestic politics his Fair Deal programme promised social reform.

trumpet A brass musical instrument. The modern trumpet consists of a cylindrical tube, 1.5 m (5 ft) long, turned back on itself, a cup-shaped mouthpiece, and a flaring bell. Three valves alter the effective length of the tube; with varying lip pressure the B flat trumpet has a chromatic range of two and a half octaves.

Truro 50 16N 5 03W A cathedral city in SW England, the administrative centre of Cornwall. It is a small port and market town, with pottery and biscuit manufacturing. Population (2001): 20 920.

trypsin A digestive enzyme, secreted by the pancreas, that breaks down dietary proteins in the small intestine. It is secreted in an inactive form, which is converted to trypsin by the enzyme enterokinase in the intestine.

tsetse fly A fly, 6–16 mm long, belonging to a genus (*Glossina*; 22 species) restricted to tropical Africa. Both sexes bite and suck the blood of mammals; *G. palpalis* transmits sleeping sickness to man and *G. morsitans* transmits nagana to cattle. Family: *Muscidae*.

tsetse fly. The tsetse areas in Africa correspond to the areas where sleeping sickness is endemic.

tsunami A long sea wave generated by the sudden displacement of a large volume of water, usually as a result of submarine earthquakes, volcanic eruptions, etc. Tsunamis, which are sometimes incorrectly referred to as "tidal waves", can cause massive destruction when they reach land. The most devastating tsunami on record is the Indian Ocean tsunami of Dec 2004, which killed some 230 000 people, mainly in Indonesia and Sri Lanka, as well as causing massive economic damage.

Tuamotu Archipelago A chain of about 80 coral atolls in the S Pacific Ocean, in French Polynesia. Rangiroa is the largest island and Fakarua, the most important economically. French nuclear tests were held here during the 1960s. Mother-of-pearl, phosphate, and copra are produced. Area: 860 sq km (332 sq mi). Population (1996): 15 370. Administrative centre: Apataki atoll.

tuatara A lizard-like reptile, *Sphenodon punctatus*, that is the only living representative of the primitive order *Rhynchocephalia*, which lived 200 million years ago. It is found only on islands off the North Island of New Zealand and has a brown-black to greenish body with a crest of spines running from head to tail; up to 70 cm long, it may live 100 years. Tuataras live in burrows during the day and emerge at night to feed on spiders, insects, and birds' eggs.

tuba A valved brass instrument with a conical bore and low pitch, derived originally from the saxhorn. Various types of tuba exist under a variety of names; the instrument is used in the symphony orchestra as well as in the military band.

tuber A swollen underground plant stem in which carbohydrates (often in the form of starch) are stored. Some tubers, for example potatoes and yams, are important human foods. Tuber-bearing plants may reproduce vegetatively from buds on the tuber, and tuber crops are usually grown from tubers rather than seed.

tuberculin A protein derived from tuberculosis bacilli that have been killed. In the Mantoux test tuberculin is injected into the skin to test whether a person has been in contact with tuberculosis. The appearance of an inflamed patch (a positive reaction) indicates previous exposure to the bacilli.

tuberculosis An infectious disease caused by the bacillus *Mycobacterium tuberculosis* (which was first recognized by the bacteriologist Robert Koch (1843–1910) in 1882). In pulmonary tuberculosis the bacillus is inhaled into the

lungs, where it forms a primary tubercle that usually heals without trouble. Alternatively the disease may smoulder for months without showing any symptoms. Reactivation of the primary disease, or reinfection, may lead to active tuberculosis ("consumption"), characterized by a cough, fever, lassitude, weight loss, and breathlessness. The TB bacillus can also enter the body through drinking infected cows' milk. Improved environmental conditions, pasteurization of milk, X-ray screening, and *BCG vaccinations have all reduced the incidence of TB in developed countries.

tubifex A freshwater *annelid worm, also called bloodworm, belonging to the widely distributed family *Tubificidae*. Found along muddy rivers and estuaries, the most common species is the bright-red extremely active *Tubifex tubifex*, up to 85 mm long. Class: *Oligochaeta*.

Tucson 32 15N 110 57W A city and health resort in the USA, in Arizona. Its growth came with the arrival of the Southern Pacific Railroad (1880) and the discovery of silver at nearby Tombstone. Tucson is an industrial centre for the surrounding agricultural and mining district. Population (2000): 486 699.

Tudjman, Franjo (1922–99) Croatian soldier and politician, president of Croatia (as a federal republic of Yugoslavia 1990–92, as an independent state 1992–99). In 1991–92 he led the Croatian struggle against the Serb-led Yugoslav army and in 1992–95 he involved his country's forces in the civil war in Bosnia-Herzegovina. His regime was nationalistic and authoritarian.

Tudors The ruling dynasty of England from 1485 to 1603. Owen Tudor (c. 1400–61), a Welshman, entered the service of Henry V and married (1422) his widow Catherine of Valois (1401–37). Their eldest son Edmund, Earl of Richmond (c. 1430–56), married Margaret Beaufort (1443–1509), the great-great-granddaughter of Edward III, and their son became the first Tudor monarch, Henry VII. Subsequent Tudor monarchs were Henry VIII, Edward VI, Mary I, and Elizabeth I.

tulip A perennial herbaceous plant of the genus *Tulipa* (about 100 species), native to the Old World but widely cultivated for ornament. Growing from bulbs, most tulips have a solitary bell-shaped flower, with bluish-green leaves clustered at the base of the plant. There are nearly 4000 varieties of garden tulips: the older varieties are descended from *T. gesneriana* and *T. suaveolens*; the newer ones often have *T. kaufmanniana*, *T. greigi*, or *T. fosteriana* as one of the parent species. Family: *Liliaceae*.

tulip tree A tree, *Liriodendron tulipifera*, native to E North America and widely planted for ornament. Reaching a height of 58 m in the wild, it has three-lobed leaves and large tulip-like flowers, greenish white or yellow, produce papery cones containing winged fruits. The wood, known as white wood, is used for furniture, plywood, paper, and boxes. The Chinese tulip tree (*L. chinense*) is similar but smaller. Family: *Magnoliaceae*.

Tull, Jethro (1674–1741) English agriculturist, best known for his invention in 1701 of the seed drill. He made many other innovations in agricultural methods.

Tulsa 36 07N 95 58W A city in the USA, in Oklahoma on the Arkansas River. Oil was discovered in 1901 and today over 800 oil companies have established plants here. Population (2000): 393 049.

tumour Any swelling in the body caused by the abnormal proliferation of cells. Tumours that do not spread to other parts of the body (i.e. are noncancerous) are described as benign. They are usually harmless. Tumours that destroy the tissue in which they arise and spread to other parts of the body are described as malignant (see CANCER).

tuna A carnivorous food and game fish, sometimes called tunny, belonging to a family (*Scombridae*) found in warm seas. Its elongated robust body is generally dark above and silvery below. The large bluefin tuna (*Thunnus thynnus*) reaches 4.3 m in length. Large quantities of tinned tuna are consumed throughout the world. Order: *Perciformes*. See also ALBACORE.

Tunbridge Wells (or **Royal Tunbridge Wells**) 51 08N 0 16E A town in SE England, in Kent. Visited for its medicinal waters since the 17th century, it became a fashionable health resort. Population (1991): 45 155.

tundra The level, virtually treeless, areas in the N hemisphere (in Eurasia and North America) lying between the most northerly region in which trees grow and the polar regions of perpetual snow and ice. Winters are long and severe with brief summers in which temperatures remain below 10°C (50°F); *permafrost is a feature. Vegetation includes mosses, lichens, dwarf shrubs, herbaceous perennials, and a few stunted trees.

tungsten (or **wolfram**; W) A grey brittle metal with the highest melting point of any element. It was discovered in 1779 and is obtained from the ores wolframite (FeWO₄) and scheelite (CaWO₄) by reduction with hydrogen or carbon.

It oxidizes readily when heated, forming the oxide WO_3 . The metal is used as filaments in electric light bulbs, in television tubes, contact breakers, and X-ray tubes, and in many hard alloys for high-speed cutting tools. Tungsten carbide (WC) is very hard and is used for tipping drill bits. At no 74; at wt 183.85; mp $3422 \pm 20^\circ\text{C}$; bp 5555°C .

tunicate A small marine animal belonging to the phylum (or subphylum) *Urochordata* (or *Tunicata*; about 2000 species). Tunicates range from several millimetres to over 30 cm in size. They have a saclike cellulose tunic covering the body; food particles are filtered from water drawn in through a siphon at the top and expelled through a second siphon. The free-swimming tadpole-like larvae show the major characteristics of all chordates; they subsequently metamorphose to the adult form and lose their chordate features. Sea squirts (class *Ascidacea*) live attached to rocks, etc., singly or in colonies, while the salps (class *Thaliacea*) float in the sea, sometimes as chains of several hundred individuals.

Tunis (Arabic name: Tunus) 36 48N 10 13E The capital of Tunisia, on the Gulf of Tunis. It was developed by the Arabs in the 7th century AD. It came under French rule in the late 19th century, and became the capital on independence in 1956. Industries include chemicals, lead smelting, and textiles. Population (2004): 728 453.

Tunisia, Republic of (Arabic name: al-Jumhuriyah at-Tunisiyah) A small country in N Africa, bordering on the Mediterranean Sea. Its narrow coastal zone extends into desert in the S and rises to uplands in the N. The population is largely Arabic. *Economy*: predominantly agricultural, with wheat, olive oil, citrus fruits, dates, and wine among the chief products; livestock is also important. Tunisia is one of the world's largest producers of phosphates. Oil reserves were discovered in 1964 and exploitation began in 1972; iron ore and lead are also mined. Manufacturing industry includes oil refining, cement, and steel processing. Fine beaches and notable architecture contribute to Tunisia's popularity with tourists. *History*: first settled by the Phoenicians, it developed into the empire of Carthage and was later absorbed into the Roman Empire. Under the dynasty of the Berber Hafsids (1207–1574) it became powerful. It became a French protectorate in 1883, gaining its independence in 1956. Habib Bourguiba was elected president in 1957; he was replaced in a bloodless coup by Zine al-Abidine Ben Ali in 1987. Although elections have been held, the

country remains effectively a one-party state. Recent years have seen concerns about Tunisia's human-rights record. Official language: Arabic. Currency: Tunisian dinar of 1000 millimes. Area: 164 150 sq km (63 362 sq mi). Population (2007 est): 10 276 158. Capital: Tunis.

tunnel effect The passage of an electron or other particle through a potential barrier when, according to classical mechanics, it has insufficient energy to do so. It is explained by *wave mechanics on the basis that the electron is not completely localized in space, part of the energy of the associated wave being able to tunnel through the barrier. The effect has a negligible probability in large-scale systems, but a finite probability in microscopic systems. It is made use of in the **tunnel diode**, a semiconductor device that has a negative resistance over part of its operating range.

Tupi A group of South American Indian peoples and languages including the *Guarani. They are mainly a tropical rainforest people; they also fish in the rivers and off the coast where their villages are located. Cannibalism was common. Culture varied considerably from one region to another. Religion emphasized nature spirits.

Tupolev, Andrei Nikolaievich (1888–1972) Soviet designer of the first supersonic passenger aircraft, the TU-144, tested in 1969. He also designed supersonic bombers, such as the TU-22, and swing-wing bombers. His TU-104, first produced in 1955, was one of the first passenger jet aircraft.

turaco (or **touraco**) A brightly coloured arboreal bird belonging to a family (*Musophagidae*; 18 species) occurring in Africa. Turacos have short rounded wings, a short down-curved bill, and are often crested. Most species have a greenish plumage. Order: *Cuculiformes* (cuckoos and turacos).

turbine A device in which a moving fluid drives a wheel or motor, converting the kinetic energy of the fluid into mechanical energy. In its simplest form it is known as a **water wheel**, which has been in use since ancient times to drive mills, pumps, etc. The principle of the water wheel forms the basis of the hydraulic turbine, used in the generation of hydroelectricity. The Pelton wheel (patented in 1889 by L.A. Pelton) consisting of a ring of buckets or bucket-shaped vanes arranged around the periphery of a wheel, is known as an impulse turbine as it is only the impulse of the water that makes the wheel turn. The Francis turbine (designed in 1849 by J.B. Francis), with its outer

ring of stationary guide vanes and inner ring of curved vanes on the surface of one side of the wheel, is a reaction turbine; part of the energy is derived from the impulse of the water and part from the reaction between the water and the blades.

The steam-driven turbine was invented in the 1st century AD by the Greek engineer and mathematician Hero of Alexandria. However, the first practical turbine to be driven by steam was a reaction device with several rows of turbine wheels (enabling the energy of the expanding steam to be utilized in stages) invented in 1884 by the British engineer, Sir Charles Parsons (1854–1931). An impulse turbine using several steam nozzles was invented by Carl de Laval (1845–1913) in the 1890s. Since the beginning of the 20th century steam turbines based on these designs have replaced the *steam engine as the prime mover in *power stations. See illustration on p. 904. See also GAS TURBINE.

turbot A *flatfish, *Scophthalmus maximus*, that occurs off European shores. It has a broad circular body, up to 1 m long, which is usually light- or grey-brown on the upper (left) side and whitish underneath. It is a valuable food fish. Family: *Bothidae*.

Turgenev, Ivan (1818–83) Russian novelist. His *Sportsman's Sketches* (1852) was followed by such works as the novel *Fathers and Sons* (1862) and the long story *The Torrents of Spring* (1872). He also wrote poetry and plays, notably *A Month in the Country* (published 1870). A lifelong admirer of Western society, he went into self-imposed exile in Baden Baden (1862–70) and Paris (1871–83).

Turin (Italian name: Torino) 45°04'N 7°40'E A city in NW Italy, the capital of Piedmont on the River Po. Dating from Roman times, it was the first capital (1861–65) of united Italy. Notable buildings include a 15th-century cathedral and a 17th-century palace. Turin's industries include engineering, publishing, and the manufacture of motor vehicles, textiles, paper, chocolate, wine, and leather goods. Population (2004 est): 867 857.

Turkana, Lake (name until 1979: Lake Rudolph) A lake in Kenya and Ethiopia. Since it has no outlet, it has become increasingly saline through evaporation. Significant fossil finds have been made here by Richard Leakey. Area: about 6405 sq km (2473 sq mi).

turkey A large terrestrial bird belonging to a family (*Meleagrididae*; 2 species) native to North and Central American woodlands. Wild tur-

keys have green-bronze plumage, a warty red neck, and a long fleshy bill ornament and throat wattle. The common turkey (*Meleagris gallopavo*) was brought to Europe in the 16th century and is now farmed for its flesh. Order: *Galliformes* (pheasants, turkeys, etc.).

Turkey, Republic of A country in the Middle East. The large Asian area, Anatolia, lies between the Mediterranean Sea and the Black Sea. The small European area, Thrace, is bordered by Greece and Bulgaria. Anatolia consists of a semiarid plateau surrounded by mountains. The coastal areas are the most populous. 98% of the population is Muslim. *Economy*: mainly agricultural. Wheat, barley, sugar beet, potatoes, and rice are grown in the interior, and cotton, tobacco, and citrus fruit are grown for export around the coast. Cattle, sheep, and goats are kept. Copper, chromium, borax, coal, bauxite, and oil are produced. The main industries are steel, cement, textiles, and fertilizers. Turkey is an associate member of the EU. *History*: Anatolia, formerly known as *Asia Minor, was dominated by the Seljuqs (1055–1243) and later became the core of the *Ottoman Empire (c. 1300–1922). Under Kemal *Atatürk, who ruled as a virtual dictator, the new Republic of Turkey (declared 1923) was rapidly westernized. After the death of Kemal (1938) and World War II, Turkey became less stable politically. The Democratic Party came to power in 1950 but grew increasingly reactionary; unrest increased until a military coup took place in 1960. The army again intervened in 1971, when martial law was imposed (until 1973). Rivalry with Greece over Cyprus almost resulted in war in 1974, when the island was invaded by Turkish troops. In 1980 a military coup overthrew the government of Suleiman Demirel (1924–). A state of emergency was imposed until 1991, when Demirel returned as prime minister, subsequently becoming president (1993–2000). Recent years have seen a growing challenge to Turkey's secular constitution from Muslim fundamentalists. In 1987 Turkey applied to join the EC (now the EU), but this application has made slow progress owing mainly to Turkey's human-rights record. There has been fighting between Kurdish separatist guerrillas and government troops since 1984. In August 1999 the NW was hit by Turkey's worst post-war earthquake, in which over 17 000 died. Official language: Turkish. Currency: Turkish lira of 100 kurus. Area: 779 452 sq km (330 883 sq mi). Population (2007 est): 71 158 647. Capital: Ankara.

Turkic languages A group of languages of the Altaic language family, related to Mongo-

t

overshot water wheel

undershot water wheel

Pelton wheel

Francis turbine

Kaplan turbine

de Laval's impulse steam turbine

turbine

lian and Manchu-Tungus. Spoken by more than 66 million people, the languages are spread over a geographical area extending from Turkey to Siberia. Originally written in the Arabic script in the 9th century, the languages are now written in the *Cyrillic alphabet in the republics of the former Soviet Union and in Latin script in Turkey.

Turkish A Turkic language, spoken mainly in Turkey. Since 1929 it has been written in a modified Latin alphabet, replacing Arabic script. Its grammatical system is based on the use of suffixes.

Turkistan (or Turkestan) A region of central Asia, now comprising the Xinjiang Uygur AR of the People's Republic of China and Kazakhstan, Turkmenistan, Tadzhikistan, Kirgizstan, and Uzbekistan. W Turkistan was ruled by the Persians from the 6th century BC, Islam from the 7th century AD, and the Russians

from the 18th century. The E was long disputed between Chinese dynasties and nomadic tribes.

Turkmen (or Turkoman) A people of SW Asia speaking a language that is part of the Turkic language group (it is the official language of Turkmenistan). Most are settled farmers in Turkmenistan, but groups in Iran, Afghanistan, E Turkey, N Syria, and N Iraq retain their traditional nomadic life. They are Sunni Muslims.

Turkmenistan, Republic of A republic in central Asia. Some 90% comprises desert, including the Kara Kum or semidesert; 66% of the population are Turkmen. *Economy:* the country is only economically viable owing to its large deposits of oil and natural gas. The principal occupation is agriculture (cotton, wool, and karakul pelts). There is some heavy industry. *History:* Turkmenistan was gradually

taken over by Russia during the 19th century. The Turkmen SSR was established in 1924 and became independent as Turkmenistan in 1991. Power remained in the hands of the former Communist Party and President Sapamurad Niyazov, whose executive powers were extended to the point of virtual dictatorship by the new constitution of 1992. Following Niyazov's death in late 2006 Gurbanguly Berdimukhamedov became president. Official language: Turkmen. Currency: manat of 100 tenesi. Area: 488 100 sq km (186 400 sq mi). Population (2007 est): 5 097 028. Capital: Ashkhabad.

Turks and Caicos Islands A UK overseas territory consisting of a series of over 30 islands in the Atlantic Ocean, to the SE of the Bahamas. The most important are Grand Turk, Grand Caicos, and Salt Cay. Most of the inhabitants are of African descent. *Economy*: mainly based on fishing and offshore finance; exports include conchs, conch shells, crawfish, salt, and fishmeal. Tourism is an important source of revenue. *History*: the islands were discovered by the Spanish in 1512 but remained uninhabited until 1678. A dependency of Jamaica (1874–1959), they became a British crown colony in 1962 and gained internal self-government in 1976. Official language: English. Currency: US dollar of 100 cents. Area: 430 sq km (192 sq mi). Population (2007 est): 21 746. Capital: Grand Turk.

turmeric A perennial herbaceous plant, *Curcuma longa*, native to S India and Indonesia and cultivated for its underground rhizomes. It has narrow leaves and yellow flowers. The rhizomes are boiled and dried in the sun for 5–7 days, then polished and usually sold in ground form. Turmeric is used as a spice in curries, etc., and as a yellow dye. Family: Zingiberaceae.

Turner, Joseph Mallord William (1775–1851) British landscape and marine painter. After painting many watercolours, he achieved success in the late 1790s with his landscapes in oil. In 1802 he made the first of several continental tours, which provided him with such scenic subjects as the Alps, Venice, and Rome. In the 1810s his style evolved into a romantic vision of colour, light, and weather; such late paintings as *Rain, Steam, and Speed* (National Gallery, London) and *Interior at Petworth* (Tate Gallery) anticipate French *impressionism.

turnip A biennial plant, *Brassica rapa*, probably native to Asia and widely cultivated for its thick fleshy root, which is used as a vegetable. An erect branching stem grows out of the

basal leaf rosette and produces bright-yellow flowers. Family: Cruciferae.

turnstone A small *plover, *Arenaria interpres*, that breeds around Arctic coasts and migrates to the S hemisphere to winter. It has a black-and-brown upper plumage, becoming tortoiseshell in summer, and white underparts. Turnstones have short black bills used to turn over pebbles and shells in search of molluscs, small fish, and sandhoppers.

turpentine An oily liquid extracted from pine resin. Its main constituent is pinene (C₁₀H₁₆); it is used as a solvent for paints.

Turpin, Dick (1706–39) British highwayman. He was hanged at York for murder and horse stealing. The story of his ride from London to York on his horse Black Bess, popularized in Harrison Ainsworth's novel *Rookwood* (1834), is probably based on a much older legend.

turquoise An opaque greenish-blue mineral used as a gem. It consists of a basic aluminium phosphate, traces of copper providing the colour. Birthstone for December.

turtle An aquatic reptile belonging to the order Chelonia, which includes *tortoises and *terrapins. 10–200 cm long, turtles have broad paddle-like flippers and a streamlined shell and occur in most seas. Their diet consists of worms, snails, crustaceans, and fish. Some turtles live in fresh water. See also GREEN TURTLE; LEATHERBACK TURTLE.

turtle dove A small dove, *Streptopelia turtur*, occurring in S Europe and N Africa, visiting N Europe in the summer. It has a chequered red-brown back, grey wings, a pink breast, a black-and-white striped neck patch, and a long white-tipped tail. Family: Columbidae (pigeons).

Tuscany (Italian name: Toscana) A region in N central Italy, consisting mainly of hills and mountains with coastal lowlands in the W. It is predominantly agricultural, producing cereals, wines (Chianti), olives, and fruit. Tourists are attracted by the scenery and the cultural centres of Florence, Siena, and Pisa. The major industries are iron and steel and mining and quarrying. Area: 22 989 sq km (8876 sq mi). Population (2005 est): 3 598 269. Capital: Florence.

Tussaud, Marie (Marie Grosholtz; 1761–1850) French wax modeller, who went to London in 1802, where she founded (1835) the wax-works museum known as Madame Tussaud's.

tussock moth A moth of the family Lymantriidae, occurring in both the Old and New Worlds and including the vapourers, tussocks,

and *gypsy moths. The caterpillars, cocoons, and adults are typically hairy, frequently causing skin irritation and swelling if handled.

Tutankhamen King of Egypt (c. 1361–1352 BC) of the 18th dynasty. Tutankhamen became king at the age of 11. He abandoned Akhenaton's worship of the sun-god Aton, reinstating that of Amon and transferring the capital once more to Thebes. His splendid tomb was discovered by Howard Carter (1874–1939) in 1922.

Tutu, Desmond (1931–) South African clergyman, noted for his opposition to *apartheid. Ordained in 1960, he became the first Black general secretary of the South African Council of Churches (1979), Anglican Bishop of Johannesburg (1984), and Archbishop of Cape Town (1986). In 1996 he retired and was appointed head of the Truth and Reconciliation Commission set up to investigate crimes of apartheid, which presented its report in 1998. He won the Nobel Peace Prize in 1984.

Tuvalu, State of (name until 1976: Ellice Islands) A small country in the SW Pacific Ocean. It consists of a group of nine islands, the main one being Funafuti. Most of the population is Polynesian. *Economy*: coconut growing and fishing are the chief occupations. The only export is copra. Since 1993 the main source of revenue has been a deal whereby Tuvalu allows its national Internet suffix (.tv) to be used by a US television company. *History*: formerly part of the Gilbert and Ellice Islands colony, it became a separate colony in 1974, gaining independence in 1978. It is a member of the Commonwealth. As most of the islands rise less than 3m (11.5 ft) above sea level, their future is threatened by rising sea levels. Official language: Tuvalu. Currency: Australian dollar of 100 cents. Area: 24 sq km (9.5 sq mi). Population (2003 est): 10 200. Capital: Fongafale.

Twain, Mark (Samuel Langhorne Clemens; 1835–1910) US novelist. He worked as a steamboat pilot on the Mississippi before gaining a national reputation for humorous journalism. He wrote several works based on his early life, notably *Life on the Mississippi* (1883) and his masterpiece *The Adventures of Huckleberry Finn* (1884).

Tweed, River A river in SE Scotland and NE England. Flowing E from the Tweedsmuir Hills to the North Sea at Berwick, it forms part of the border between England and Scotland. Length: 156 km (97 mi).

twelve-tone music See SERIALISM.

twins Two individuals born from the same

pregnancy. Identical twins are produced when a fertilized egg splits in two and develops as two fetuses of the same sex. More commonly, nonidentical (or fraternal) twins are produced when two eggs are fertilized at the same time; they may be of different sexes. See also SIAMESE TWINS.

Tyburn A stream in SE England, in London. It now flows underground from Hampstead to the River Thames. The London gallows, known as the Tyburn Tree (1571–1759), stood at the W end of Oxford Street.

Tyler, Wat (d. 1381) English rebel, who led the *Peasants' Revolt (1381). He was murdered during negotiations with Richard II at Smithfield.

Tyne, River A river in N England. Flowing E from the SW Cheviot Hills to the North Sea at Tynemouth, it passes through Newcastle, Gateshead, and Jarrow. Length: 48 km (30 mi).

Tyne and Wear A metropolitan county of NE England, created in 1974 from SE Northumberland and NE Durham. In 1986 the county council was abolished and administrative powers passed to the unitary authorities of Newcastle upon Tyne, North Tyneside, Gateshead, South Tyneside, and Sunderland. Industries grew up along the River Tyne owing to the large coalfields; in the 19th century the development of the shipyards was especially important. During the Depression of the 1930s and the recessions of the 1980s and early 1990s it suffered severely owing to its dependence on heavy industry. The last 15 years has seen considerable diversification of industry. Area: 540 sq km (208 sq mi).

typewriter A hand-operated machine for producing printed symbols. The first machine was invented in the USA in 1867 but the commercial success of the typewriter began in 1874 with the machines produced by Remington and Sons. This design, with the paper held in a moving platen, remained the basis of the typewriter until the advent of electric golf-ball machines, with a stationary platen, in the early 1960s. Typewriters have now been superseded by computer-controlled *word processors.

typhoid fever An infectious disease of the digestive tract caused by the bacterium *Salmonella typhi*. This disease (and paratyphoid fever) are usually contracted by drinking infected water. The symptoms include fever, headache, cough, loss of appetite, and constipation; a characteristic red rash may appear. If untreated, the patient may develop bowel haemorrhage or perforations.

typhoon A tropical cyclone or *hurricane with winds above force 12 on the *Beaufort scale occurring in the China Sea and the W Pacific Ocean. The name is derived from a Chinese word meaning great wind.

typhus An infection caused by certain parasitic bacteria (see RICKETTSIA), which are transmitted to humans by lice, fleas, mites, or ticks. The many different forms of typhus share the symptoms of fever, headache, pains in muscles and joints, delirium, and a rash. Treatment is with tetracycline antibiotics or chloramphenicol.

Tyr (Old English name: Tiw) In Teutonic mythology, the god of war; with *Odin and *Thor, he is one of the three main Germanic gods. His name is linguistically related to Zeus and survives in Tuesday.

Tyrannosaurus A huge bipedal dinosaur that lived in North America during the late Cretaceous period (about 100–65 million years ago). This animal was 15 m long, stood 6.5 m tall, and weighed up to 10 tonnes. It had a massive body with a short thick neck supporting a large head, large muscular hind limbs with clawed feet, and tiny fore legs. It was a carnivore with long dagger-like teeth. Order: Saurischia.

tyrant flycatcher A passerine bird belonging to the New World family Tyrannidae (365 species), ranging from 9–27 cm in length and generally grey, brown, or olive-coloured with paler underparts. They are typically arboreal and dart out from a perch to seize flying insects. Tyrant flycatchers will attack large birds that enter their breeding territories. Compare FLYCATCHER.

Tyre (modern name: Sur) 33 12N 35 11E A port in SW Lebanon, on the Mediterranean Sea. It was important to the Phoenicians for several centuries and was taken by Alexander the Great in 322 BC and by the Romans in 68 BC. The city was long held by the Crusaders but fell to Muslim forces in 1291. Population (1991 est): 70 000.

Tyrol See TIROL.

Tyson, Mike (1966–) US boxer. He won the World Boxing Championship title and the World Boxing Association's title in 1986, subsequently adding the International Boxing Federation title (1988). In 1992 he was gaoled for rape. After his release (1995) he regained both the WBC and WBA titles. In a fight with Evander Holyfield (1997) he was banned from the ring (until 1998) for biting off part of his opponent's ear.

Uccello, Paolo (P. di Dono; 1397–1475) Florentine painter. His frescoes for Sta Maria Novella, Florence, include the famous *Flood*, which shows his preoccupation with perspective. In the three paintings of the Battle of San Romano, he combines a geometric structure with aspects of the international gothic style.

Ufa 54 45N 55 58E A city in W central Russia. Situated in the Ural Mountains, it has oil refineries. Population (2002): 1 042 437.

Uffizi An art gallery in Florence, containing the art treasures of the Medici. Built by *Vasari, the Uffizi was opened as a museum in 1765. The major part of its collection comprises Italian Renaissance paintings.

Uganda, Republic of A landlocked country in East Africa. It consists of a high plateau rising to mountains; a large area is occupied by lakes, notably Lake Victoria. Most of the population is African, especially *Ganda. *Economy:* chiefly agricultural. Food crops include plantains and maize; cash crops include coffee, tea, and tobacco. Livestock is important, as is freshwater fishing. The chief mineral resource is copper. *History:* the area was dominated by the kingdom of *Buganda before it became a British protectorate in 1894. It became an independent state within the Commonwealth in 1962; the following year a republic was established with *Obote as prime minister. In 1971 a military coup brought Gen Idi *Amin to power. His repressive regime was overthrown in 1979, with the help of Tanzanian troops. In 1986, after a further series of coups, Yoweri Museveni came to power. Ugandan troops were involved in the conflict in the Democratic Republic of Congo in 1998–2002. Multiparty politics were reintroduced in 2005 and Museveni was re-elected the following year. In 2006 peace talks began with the Lord's Resistance Army, who had carried on a brutal insurgency in the N since 1987. Official language: English. Currency: Ugandan shilling of 100 cents. Area:

236 860 sq km (91 343 sq mi). Population (2007 est): 30 262 610. Capital: Kampala.

ugli A hybrid cross between a *grapefruit and a *tangerine. The fruit has brownish-yellow warty skin and orange flesh. It is grown in the West Indies.

Uist Two islands in NW Scotland, in the Outer Hebrides. North Uist is separated from South Uist by the island of Benbecula.

Ujjain 23 11N 75 50E A city in India, in Madhya Pradesh. One of the seven sacred Hindu cities, it hosts the Kumbh Mela bathing festival every 12 years. Population (2001): 430 427.

Ujung Pandang (Makassar or Macassar) 5 09S 119 08E A port in central Indonesia, in SW Sulawesi. Its exports include coffee, copra, and vegetable oils. Population (2000): 1 100 019.

UKAEA See ATOMIC ENERGY AUTHORITY.

Ukraine A republic in SE Europe. Very fertile and wooded, it was the economically most important Soviet republic after Russia. Some 96% of the population are Slavs, mostly Ukrainians. *Economy:* Major coalfields and iron-ore mines support a large ferrous metallurgical industry. The machine-building, chemical, consumer-goods, and food industries are also important. Crops include wheat, sugar beet, cotton, and tobacco. The economy came close to collapse in the years after independence but has since improved, owing partly to a treaty of economic cooperation with Russia (1998). *History:* it was dominated by the Khazars from the 7th to the 9th centuries and then by the Rurik princes of Kiev. In the 13th century the Golden Horde overran the region, which subsequently came under the rule of Lithuania and, in the 16th century, Poland. Polish domination was followed by Russian rule. After a national and cultural revival in the late 19th century the Ukraine declared independence in 1918 but became a constituent republic of the Soviet Union in 1922. It achieved independence on the

break-up of the Soviet Union in 1991. The largely Russian region of Crimea declared itself independent in 1992. Until 1994, governments were dominated by the authoritarian president, Leonid Kravchuk; he was succeeded by Leonid Kuchma. A new constitution was adopted in 1996 but the legislature remained dominated by communists. In 2004 the pro-Russian prime minister Viktor Yanukovych was declared the victor in presidential elections; however, accusations of vote-rigging led to mass protests and the result was overturned (the so-called "Orange Revolution"). A rerun election produced a clear victory for the pro-Western candidate Viktor Yushchenko, who became president in 2005. The country has continued to suffer from conflicts between president and parliament and tensions with Russia. Official languages: Ukrainian and Russian. Currency: hryvna of 100 kopykas. Area: 603 700 sq km (231 990 sq mi). Population (2007 est): 46 299 862. Capital: Kiev.

Ulan Bator (or **Ulaanbaatar**; former name: Urga) 47°54'N 106°52'E The capital of the Republic of Mongolia, situated on a plateau in the N of the country. Built around a monastery, in the 17th century it developed as a centre of trade between China and Japan. It became the capital when Outer Mongolia declared its independence in 1911. Population (2000): 760 077.

Ulbricht, Walter (1893–1973) East German statesman. Ulbricht was the leading architect of the German Democratic Republic after World War II. He was general secretary of the Socialist Unity Party from 1950 and in 1960 became chairman of the newly established council of state. In 1961 he erected the Berlin Wall.

ulcer An inflamed eroded area of skin or mucous membrane. There are many forms of ulcer, one of the most prevalent being *peptic ulcers, which affect the stomach and duodenum. Ulcers may also occur in the colon (see COLITIS). Varicose ulcers may develop in the skin of patients with chronic *varicose veins.

Ulster A province and former kingdom of N Ireland. The land passed to the English Crown in 1461. It was partitioned in 1921, six counties forming Northern Ireland and the counties of Cavan, Donegal, and Monaghan forming the province of Ulster, part of the Republic of Ireland. Area (province in Irish Republic): 8013 sq km (3094 sq mi). Population (province in Irish Republic; 2002): 246 571.

Ulster Democratic Unionist Party (DUP) A British political party, active in Northern Ireland. Founded in 1969, it opposes any

weakening of the province's links with the UK. It became the largest unionist party following the 2003 elections to the Northern Ireland Assembly. Although previously hostile to the Good Friday Agreement of 1998, its leader, Ian *Paisley, agreed to a power-sharing deal with Sinn Féin in 2007.

Ulster Unionist Party (UUP) A British political party, active in Northern Ireland. Its former leader, David *Trimble, was an architect of the Good Friday Agreement of 1998. Although formerly the largest unionist party, it has been overtaken by the Ulster Democratic Unionist Party and was nearly wiped out in the general election of 2005. The current leader is Sir Reg Empey.

ultramicroscope A type of microscope, invented by Richard Zsigmondy (1865–1929) in 1902, used to study colloidal particles in a liquid medium. A beam of light illuminates the particles from the side, the scattered light enabling the movements of the particles to be observed as flashes against a dark background (dark-field illumination).

ultrasonics The study of *sound waves the frequencies of which are too high to be audible to the normal human ear, i.e. above about 20 000 hertz. Ultrasound waves may be produced by *magnetostriction or by applying a rapidly alternating voltage across a piezoelectric crystal. Ultrasound is used in medical diagnosis in place of X-rays.

ultraviolet radiation Electromagnetic radiation with frequencies between the violet end of the visible spectrum and *X-rays, i.e. between about 380 and 5 nanometres. Ultraviolet radiation is produced during arc discharges and by gas-discharge tubes. It is also produced in large quantities by the sun, although the radiation below 200 nm is absorbed by the *ozone layer of the atmosphere.

Ulysses See ODYSSEUS.

Umayyads (or **Omeyyads**) The first dynasty of caliphs, which ruled Islam from 661 to 750 AD. The dynasty reached its peak with 'Abd al-Malik (reigned 685–705). They were overthrown by a rebellion of discontented Arabs and pious Muslims. In Muslim Spain, an Umayyad, 'Abd ar-Rahman, seized power in 756 and established a dynasty that ruled until 1030.

Umbelliferae (or **Apiaceae**) A widely distributed family of plants (2850 species), most abundant in N temperate regions. Most species are herbaceous, with much divided leaves and umbrella-shaped heads of tiny flowers. The

family includes vegetables, such as the carrot, celery, and parsnip, and many culinary herbs and spices.

Umberto I (1844–1900) King of Italy (1878–1900). He commanded with distinction in the war against the Austrians (1866). As king he led Italy into the *Triple Alliance (1882) and encouraged Italian colonialism in Africa. Two unsuccessful attempts on Umberto's life were followed by his assassination at Monza.

Umberto II (1904–83) The last King of Italy (1946), following the abdication of his father Victor Emmanuel III. He too was forced to abdicate after a referendum approved the establishment of republican government.

umbilical cord The structure, about 50 cm long, that connects a fetus to the *placenta in the womb. It contains three blood vessels (two arteries and one vein) that convey blood to and from the placenta. At birth the umbilical cord is tied off and cut.

Un-American Activities Committee US House of Representatives committee established in 1935 to investigate subversive organizations in the USA. Spurred on by Senator *McCarthy, it blacklisted several Hollywood writers and directors and investigated government officials. Its influence declined after 1954 and it was abolished in 1975.

UNESCO See UNITED NATIONS EDUCATIONAL, SCIENTIFIC AND CULTURAL ORGANIZATION.

uniat churches Various churches of Eastern Orthodox Christianity that are in full communion with the Roman Catholic Church. They retain their own traditional liturgies and canon law.

UNICEF See UNITED NATIONS INTERNATIONAL CHILDREN'S EMERGENCY FUND.

Unification Church A religious sect founded in South Korea in 1954 by a millionaire Korean businessman, Sun Myung Moon (1920–). Absolute obedience is demanded of members ('Moonies'), who spend most of their waking hours earning money for the organization. Moon was imprisoned for tax evasion in 1984–85.

unified field theory A theory that encompasses the four fundamental interactions—strong, weak, electromagnetic, and gravitational—in terms of a single field, analogous to the electromagnetic or gravitational fields. Einstein failed to unify gravitation and electromagnetism, although a measure of unifica-

tion has been achieved between the weak and electromagnetic fields.

Uniformity, Acts of A series of Acts (1549, 1552, 1559, 1562) that enforced the use of the Book of *Common Prayer in England during the *Reformation.

Union, Acts of 1. The Acts (1536–43) uniting England and Wales. They imposed English law and administration on Wales, made English the language of officialdom, and provided for Welsh representation in parliament. **2.** The Act (1707) uniting England and Scotland to form Great Britain. Scotland retained its legal system and Presbyterian Church and was to be represented in parliament by 16 peers and 45 MPs. **3.** The Act (1800) that united Great Britain and Ireland to form (1801) the United Kingdom. It provided for Irish representation in parliament (4 spiritual peers, 28 life peers, 100 MPs).

Union of Soviet Socialist Republics See SOVIET UNION.

Unitarians A group of Christians who reject the doctrine of the Trinity and the divinity of Christ, believing instead in the single personality of God. Modern Unitarian thought dates from the Reformation, but congregations were first formed in Britain and the USA in the 18th century.

United Arab Emirates (UAE; former name: Trucial States) A federation of seven sheikdoms in the Middle East, in *Arabia, comprising Abu Dhabi, Ajman, Dubai, Fujairah, Ras al-Khaimah, Sharjah, and Umm al-Qaiwain. The population is mainly Arab and Sunnite Muslim. The terrain is flat sandy desert. *Economy:* the oil of Abu Dhabi and Dubai is the chief product and export. Fishing and pearls are still important, as are financial services. Tourism is expanding. *History:* the sheikdoms signed several common treaties with Britain from 1820; that of 1892 made them protectorates—the Trucial States. The federation was formed in 1971 (Ras al-Khaimah joined in 1972) and is a member of OPEC. The UAE is governed by a supreme council consisting of the seven ruling sheikhs; there is also a partly elected federal council. Official language: Arabic. Currency: dirham of 100 fils. Area: 83 650 sq km (32 290 sq mi). Population (2007 est): 4 444 011. Capital: Abu Dhabi.

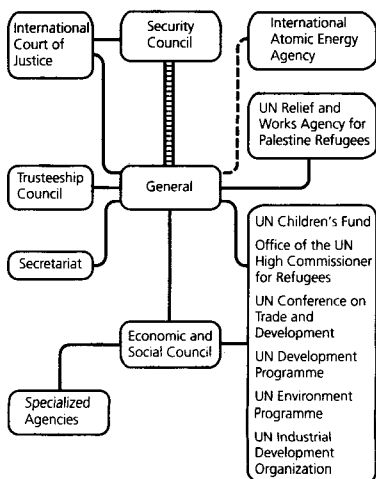

United Kingdom (UK) A country in N Europe, consisting of *England, *Scotland, *Wales, and Northern Ireland (see IRELAND). The UK does not include the Channel Isles and the Isle of Man, which are direct dependencies

of the Crown. **History:** The United Kingdom of Great Britain and Ireland was formed in 1801 (see **UNION, ACTS OF**), since when the histories of the member countries have been inextricably linked (for history prior to 1801, see **ENGLAND; SCOTLAND; WALES**). With the Industrial Revolution the UK evolved from an agricultural to an industrial economy; during the long reign of Victoria there was agitation for an extension of the franchise (see **REFORM ACTS**) and a shift in political influence from the landowners to the urban middle class. The growing power of the Trade Unions led to the formation in 1900 of the *Labour Party. The 19th century also saw the heyday of the British *Empire and the beginning of colonial rivalry with Germany, which was a significant factor in the outbreak of *World War I. In 1922, following the creation of the Irish Free State, the UK was retitled the United Kingdom of Great Britain and Northern Ireland. The interwar years were dominated by the Depression and the growing threat of fascism, which culminated in *World War II. 1945 saw the return of a Labour government, which established a Welfare State and began a programme of nationalization. The Conservatives returned to power (1951–64) before the return of Labour (1964–70; 1974–79). From 1979 to 1997 the Conservatives presided over extensive privatization and a recession followed by economic recovery. Labour returned with a landslide victory (1997) and Tony Blair became prime minister. Devolution for Scotland and Wales was put into effect in 1999. Hopes for a solution to the long-running problem of Northern Ireland were raised by the Good Friday Agreement (1998). The general elections of 2001 and 2005 were won by Labour. Official languages: English, Welsh, and Gaelic languages. Currency: pound sterling of 100 pence. Area: 244 014 sq km (94 214 sq mi). Population (2007 est): 60 776 238. Capital: London.

United Kingdom Overseas Territories

(former names: British Dependent Territories or Crown dependencies) Overseas territories for which constitutional responsibility rests with the UK Foreign and Commonwealth Office. There are currently 13 such territories: Anguilla, Bermuda, British Antarctic Territory, British Indian Ocean Territory, British Virgin Islands, Cayman Islands, Falkland Islands, Gibraltar, Montserrat, Pitcairn Islands, St Helena and Dependencies, South Georgia and South Sandwich Islands, and Turks and Caicos Islands. Full British citizenship (revoked in most cases during the 1980s) was restored to their inhabitants in 2002.

United Nations (UN) An organization established to maintain international peace and to foster international cooperation in the resolution of economic, social, cultural, and humanitarian problems. The UN was founded on 24 October 1945 (United Nations Day). There were 51 founder members; most countries are now members of the UN, the chief exception being *Taiwan, which lost its seat to China in 1971. Monaco joined in 1993 and Switzerland in 2002. The headquarters of the UN are in New York. The organization's main deliberative organ is the **General Assembly**. Each member state has one equal vote in the Assembly, which cannot impose its will upon members. The **Security Council** bears the chief responsibility for maintaining international peace. Its permanent members are China, France, Russia (until 1991 the Soviet Union), the UK, and the USA; a further ten members are elected by the General Assembly for two-year terms. Decisions, except on procedure, must be agreed by nine members, including all the permanent members (the so-called veto privilege). In the event of a breach of international peace the Council may commit military forces to re-establish peace. The **Economic and Social Council (ECOSOC)** coordinates the economic and social work of the UN. The principal judicial organ of the UN is the *International Court of Justice. The **Secretariat**, headed by the secretary general (currently Ban Ki-moon), is responsible for administration.

United Nations. The structure of the organization.

Other UN bodies are the **United Nations Development Programme (UNDP)**, which fosters the economic growth of the *developing countries; the **United Nations Conference on Trade and Development (UNCTAD)**, which encourages international trade; the **United Nations Industrial Development Organization (UNIDO)**, which promotes industrial development; and the **United Nations Environment Programme (UNEP)**, which is concerned with the protection of the environment. Other specialized agencies include the *Food and Agriculture Organization, *International Labour Organisation, *International Monetary Fund, *United Nations Educational, Scientific and Cultural Organization, *International Bank for Reconstruction and Development, and the *World Health Organization.

United Nations Educational, Scientific and Cultural Organization (UNESCO) A specialized agency of the *United Nations established in 1945 to promote international cooperation in education, science, and culture. Its headquarters are in Paris. Objecting to inefficiency and political bias, the USA withdrew in 1984 and the UK in 1985–97.

United Nations High Commissioner for Refugees, Office of the (UNHCR) A *United Nations body established in 1950 to provide international protection for refugees. Its headquarters are in Geneva. It won the Nobel Peace Prize in 1981.

United Nations International Children's Emergency Fund (UNICEF) A *United Nations body established in 1946. It is chiefly concerned with providing health care, education, and improved nutrition to *developing countries. Its headquarters are in Geneva. It won the Nobel Peace Prize in 1965.

United States of America (USA) A country in North America, the fourth largest in the world. It is a federal republic comprising 50 states, including Alaska, in the extreme NW of the continent, and Hawaii, in the central Pacific Ocean. The Pacific mountain system and the Rocky Mountains extend N–S in the W with an arid area between, while the Appalachian Mountains extend N–S in the E. In the centre lie vast plains. The population is of mixed ethnic stock, the majority being of European descent. *Economy:* the USA is the world's greatest industrial producer, with a highly diversified economy. It is the leading producer of natural gas, lead, copper, aluminium, and sulphur and of electrical and nuclear energy. Farming is highly mechanized and 15% of exports are agri-

cultural products. Cereals, soya beans, cotton, and tobacco are the main crops. Other exports include motor vehicles, aircraft, machinery, computers, electrical components, and chemicals. *History:* the first inhabitants probably came from Asia about 30 000 years ago. Following the voyage of Columbus in 1492, America was settled by Europeans, with the British colonies in the E becoming the most successful. During the 18th century conflict developed between local colonial assemblies and their British governors, particularly over taxation. The colonists' confidence was strengthened by their success in the *French and Indian Wars (1754–63) and the 13 colonies finally won independence in the *American Revolution (1775–83). The USA was rapidly expanding W at this time and through the *Mexican War (1846–48) acquired California; the discovery of gold there (1848) further encouraged settlement in the W. By 1820 conflict was developing between the cotton-growing states of the South (where African slaves had worked since the late 17th century) and the commercial North (where slavery was opposed). This led to the *Civil War (1861–65), which ended in victory for the North and the abolition of slavery. It was followed by a period of rapid industrial and economic expansion, while territorial expansion continued with the purchase of Alaska (1867), the annexation of Hawaii (1898), and the Spanish-American War (1898), in which the USA acquired the Philippines, Puerto Rico, Guam, and a measure of control over Cuba.

Intervention in Colombia led to the construction of the Panama Canal (opened 1914). The status of the USA as a world power was confirmed by its role in World War I, which it entered reluctantly in 1917. The 1920s saw another economic boom, which ended in the *Depression that followed the Crash of 1929. The USA was again reluctant to enter World War II but was forced to do so by the Japanese bombing of Pearl Harbor in Hawaii (December 1941). Postwar fear of Soviet expansion resulted in the Marshall Plan (1947), designed to render Europe less susceptible to communism, in the *Cold War, and in the harassment of supposed communists at home (see also MCCARTHY, JOSEPH R(AYMOND); UN-AMERICAN ACTIVITIES COMMITTEE). Fear of the spread of communism led also to intervention in Korea (1950–53), Cuba (1961–62), and Vietnam (1961–75). After 1963 relations with the Soviet Union improved and diplomatic relations were established with China in 1979. Domestic problems of the 1960s and 1970s included difficulties in effecting racial integration and opposition to

the *Vietnam War. The *Watergate affair (1972–74) undermined confidence in US institutions and the postwar economic boom was followed by decline in the 1970s. There was considerable tension in US relations with Iran and Libya during the 1980s. Relations with the USSR deteriorated once more after the Soviet invasion of Afghanistan (1979) but subsequently improved with the arrival of the reformist Soviet leader Gorbachov. The collapse of the Soviet Union in 1991 left the USA as the world's only superpower. In 1991 US forces led a military alliance against Iraq in the *Gulf War. The 1990s saw US airstrikes against targets in Iraq (1996, 1998) and Yugoslavia (1999) during the presidency of Bill Clinton; there was also a prolonged economic boom. In 2001 George W. Bush became president following a disputed election that was only resolved by a Supreme Court ruling. Following the terrorist attack of *September 11 Bush declared a *war on terrorism and sent US forces into action in Afghanistan. In 2003 the USA invaded and occupied Iraq, deposing the regime of Saddam Hussein (see IRAQ WAR). Official language: English. Currency: US dollar of 100 cents. Area: 9 363 123 sq km (3 614 343 sq mi). Population (2003 est): 291 587 000. Capital: Washington, DC.

unit trust An organization that uses funds raised by selling "units" to the public to buy and sell securities in order to make profits for distribution to unit holders. Securities are held in the names of trustees, usually banks. The small investor has the advantages of a professionally managed widespread portfolio.

Universal Decimal Classification (or Brussels Classification) A system of library classification developed in 1895 in Brussels. It extends the division of the *Dewey Decimal Classification, on which it is based.

Upanishads About 200 prose and verse metaphysical commentaries on the *Vedas*, dating from around 400 BC. They deal with the nature of *Brahman and the soul and are reputedly divinely inspired.

Updike, John (Hoyer) (1932–) US novelist and short-story writer. In such novels as *Rabbit, Run* (1960) and *Couples* (1968) he explored the moral confusions of contemporary US society. *Rabbit is Rich* (1981) and *Rabbit at Rest* (1990) won Pulitzer Prizes. Later novels include *Bech at Bay* (1998) and *Seek My Face* (2003).

Uppsala 59°55'N 17°38'E A city in E central Sweden. It has Sweden's oldest university (1477), where *Linnaeus taught. Population (2000 est): 188 478.

Ur An ancient city of *Sumer (S Iraq). Sir Leonard *Woolley's excavations (1922–34) made famous the rich royal burials of about 2500 BC and seemed to provide historical evidence for Noah's flood. The leading city in Sumer when it was sacked by barbarians about 2000 BC, Ur was superseded by *Babylon.

uraemia The accumulation of *urea in the blood due to kidney failure. Kidney failure can occur suddenly due to shock, obstruction of both ureters, injury, or acute kidney disease or it may arise slowly due to *nephritis or other diseases. The kidneys will often recover after *dialysis. In chronic conditions a kidney transplant is preferred.

Ural, River A river in central Russia and W Kazakhstan, rising in the S Ural Mountains, and flowing S to the Caspian Sea. Length: 2534 km (1575 mi).

Uralic languages A major language family comprising two related groups of languages, the Finno-Ugric and the Samoyedic (see SAMOYED). The two branches of the Uralic language family have developed into multiple forms covering an extensive area.

Ural Mountains A mountain range in W central Russia. It extends 2000 km (1243 mi) N–S from the Kara Sea to the steppes NE of the Caspian Sea. The highest point is Mount Narodnaya, in the N, at 1894 m (6214 ft).

uranium (U) A radioactive metallic element (see NUCLEAR ENERGY). It is a silvery-white metal, almost as hard as steel and very dense (relative density 18.95), and has the highest atomic number of the naturally occurring elements. It was first isolated in 1841 by E. Péligot (1811–90), although it had been identified before this in pitchblende. Natural uranium contains three isotopes: ^{238}U (99.283%), ^{235}U (0.711%), and ^{234}U (0.006%). ^{238}U has a half-life of 4.51×10^9 years and is useful in dating rocks, as well as in fuel for fast reactors. ^{235}U is used in *thermal reactors. Some reactors use uranium dioxide (UO_2). Other oxides include U_3O_8 and UO_3 . At no 92; at wt 238.0289; mp 1135°C; bp 4134°C.

uranium-lead dating A group of methods of radiometric dating certain rocks, depending on the decay of the radioactive isotope uranium-238 to lead-206 or of uranium-235 to lead-207.

uranium series One of three naturally occurring series of radioactive decays. The uranium series is headed by uranium-238, which undergoes a series of alpha and beta decays

ending with the stable isotope lead-206. See also ACTINIUM; THORIUM SERIES.

Uranus (astronomy) A giant planet, orbiting the sun every 84 years (between Saturn and Neptune) at a mean distance of 2870 million km. It is somewhat larger (50 800 km in diameter) than Neptune and exhibits a similar greenish featureless disc in a telescope. In its equatorial plane lie at least 21 moons and about 20 rings. Its atmospheric and interior structure are thought to be almost identical to those of Neptune. Uranus was discovered telescopically in 1781 by Sir William Herschel.

Uranus (Greek mythology) The personification of Heaven. He was the son of Gaia (Earth), and his children by her included the *Titans and the *Cyclops. He was castrated by his son Cronus and his genitals were thrown into the sea, which gave birth to *Aphrodite.

Urdu An Indo-Aryan language of N India and Pakistan. Like *Hindi it arose from *Hindustani. It is written in a modified Arabic script.

urea (or **carbamide**) A white crystalline compound ($\text{CO}(\text{NH}_2)_2$) derived from ammonia and carbon dioxide. It is used as a nitrogen fertilizer, a feed supplement for ruminant animals, and in industry. Urea is present in *urine.

urea-formaldehyde resins Synthetic thermosetting resins that are made by the condensation in aqueous solution of urea and formaldehyde with an ammonia catalyst. Cellulose filler is added to produce a moulding powder. This powder is used to make cups, bathroom fittings, etc.

urethane A white crystalline solid, $\text{CO}(\text{NH}_2)_2 \cdot (\text{OC}_2\text{H}_5)_2$, made by heating ethanol with urea nitrate. It is used to make *polyurethane foam.

uric acid A compound ($\text{C}_5\text{H}_4\text{N}_4\text{O}_3$) formed during the nitrogen metabolism of animals. In man, raised levels of uric acid in the blood are associated with gout.

urine The fluid that is formed by the kidneys and contains the waste products of metabolism and surplus water and salts. In man the kidneys produce 0.9–1.5 l of urine per day.

Urmia, Lake A shallow lake in NW Iran, the largest in the country, lying 1300 m (4265 ft) above sea level. It has no outlet and varies in size. Average area: 5000 sq km (1930 sq mi).

Ursa Major (Latin: Great Bear) A large conspicuous constellation in the N sky. The seven brightest stars form the Plough.

Ursa Minor (Latin: Little Bear) A constella-

tion in the N sky that contains the N celestial pole. The brightest star is *Polaris.

urticaria (or **hives**) An acute or chronic allergic disorder in which itching white raised patches surrounded by red areas appear on the skin: they resemble nettle stings (hence the alternative name—nettle rash). Acute urticaria usually arises from allergy to food or drugs and usually disappears quickly if the cause is removed. Chronic urticaria occurs in young people and its cause is not certain.

Uruguay, Oriental Republic of A country in SE South America. Coastal plains rise to higher ground, especially in the N. Most of the population is of Spanish and Italian descent. *Economy:* the traditional livestock industry was badly affected by the 1974 EC ban on meat imports, although new markets have since been found. The cultivation of wheat, barley, and rice has been intensified and the fishing industry has been expanded. The principal industries include food processing, machinery, textiles, and chemicals. Winemaking is of growing importance. *History:* Charrúa and Chaná Indians inhabited Uruguay before its exploration by the Spanish in the 16th century. Its subsequent history was one of rivalry between Spanish and Portuguese settlements. In 1776 it became part of the Spanish viceroyalty of the Río de la Plata. Under the leadership of José Gervasio Artigas (1764–1850), Uruguay joined Argentina in the struggle for independence from Spain but was subsequently fought over by Argentina and Brazil. In 1828, with British help, Uruguay achieved independence. The late 19th century saw considerable immigration from Europe. In 1973 the army took over, imposing repressive measures that led to international protests. Military rule officially ended in early 1985, when Julio Sanguinetti became president; he lost power in 1989 but was re-elected in 1995. The country suffered a severe economic and financial crisis in 2002, leading to a general strike and social unrest. In 2004 the leftist Tabaré Vázquez was elected president and a left-wing alliance was victorious in legislative elections. Uruguay is a member of the OAS and LAIA. Official language: Spanish. Currency: Uruguayan peso of 100 centésimos. Area: 186 926 sq km (72 172 sq mi). Population (2007 est): 3 460 607. Capital: Montevideo.

Uruguay, River (Portuguese name: Rio Uruguai; Spanish name: Río Uruguay) A river in South America. Rising in S Brazil, it flows SW forming the Argentina–Brazil and Ar-

gentina-Uruguay borders before joining the Rio Paraná. Length: about 1600 km (1000 mi).

Uruk (biblical name: Erech; modern name: Warka) An ancient city in S Mesopotamia. The site testifies to the beginnings of Sumerian civilization in the 4th millennium BC. Supplanted by *Ur (c. 2100), Uruk nevertheless remained inhabited until the early Christian era.

USSR See SOVIET UNION.

Ussuri River A river in E Asia, rising in the extreme E of Russia and forming part of the border with China as it flows N to the River Amur. Length: about 800 km (500 mi).

Utah One of the mountain states in the SW USA. The Wasatch Range of the Rocky Mountains divides the state into two arid regions: the Great Basin and the Great Salt Lake Desert in the W and the Colorado Plateau in the E. Livestock raising is the principal agricultural activity. There are significant deposits of copper, oil, natural gas, and uranium. Scenic attractions make it a popular tourist area. *History:* the Mormons began major settlements here in 1847 and continue to dominate the life of the state. Ceded to the USA by Mexico in 1848, Utah was finally admitted to the Union in 1896. Area: 219 931 sq km (84 916 sq mi). Population (2002 est): 2 233 169. Capital: Salt Lake City.

uterus See WOMB.

utilitarianism An ethical doctrine holding that the best action is the one that will result in the greatest happiness and least pain for the greatest number of people. Utilitarianism flourished in Britain from the mid-18th century to the mid-19th century. *Hume, *Bentham, and James *Mill (1773-1836) propounded it and John Stuart Mill defended it.

utopianism A programme of total social and political reform with the object of establishing a perfect society. The term derives from the imaginary state depicted in Thomas More's *Utopia* (1516). Utopian experiments have included the New Lanark community established by Robert *Owen. Utopianism advocates a communistic organization of society, but the concomitant authoritarianism reveals that no way has been found of reconciling individual freedom and happiness with social justice.

Utrecht 52 06N 5 07E A city in the central Netherlands. The Union of Utrecht (1579) united the northern provinces of the Netherlands against Spain. The *Treaties of Utrecht* (1713-14), ending the War of the Spanish Succession, were concluded here. Its notable

buildings include the gothic cathedral (14th century). Population (1999 est): 232 718.

Utrillo, Maurice (1883-1955) French painter. For almost his entire life, he suffered from alcoholism and drug addiction. He specialized in painting street scenes, notably of Montmartre, which are distinguished by their near-monochrome colours and precise drawing.

Uttar Pradesh A state in N India, consisting mainly of the Upper Ganges plain. India's most populous state, it produces grains, pulses, tea, and timber; there is little industry. Uttar Pradesh was the core of the Mogul Empire and the centre of the Indian Mutiny (1857-59) and the 20th-century independence movement. The NW Himalayan region became the new state of *Uttaranchal* in 2000. Area: 243 350 sq km (93 933 sq mi). Population (2001): 166 052 859. Capital: Lucknow.

Uzbekistan A republic in central Asia, formerly a constituent republic of the Soviet Union. The NW is desert but fertile land is found in the SE. The Uzbeks, Turkic-speaking Sunnite Muslims, make up two-thirds of the population. *Economy:* based on intensive agriculture. Cotton is the chief crop; rice and fruit are also grown. However, the extensive use of chemical pesticides and industrial pollution have caused serious environmental problems, which have affected agricultural production in recent decades. Uzbekistan is rich in oil, coal, and copper, and has more than 20 hydroelectric plants and 3 natural gas pipelines in operation. Industries include mining, chemicals, and metals. *History:* the region was invaded by the Persians under Darius I, the Macedonians under Alexander the Great, and then by the Arabs (8th century AD) and the Mongols (13th century). In the 16th century the Uzbeks dominated the region, which was annexed by Russia in the 19th century. The Uzbek SSR was formed in 1924. Uzbekistan achieved independence on the break-up of the Soviet Union in 1991. The Communist Party has remained in power under the maverick President Islam Karimov. Despite the introduction of a multiparty constitution (1992), political opposition is effectively banned and the country's human-rights record has been severely criticized. There have also been ethnic clashes between Uzbeks and Tadzhiks. In 2001 Uzbekistan provided operational support for the USA's military action in Afghanistan (see WAR ON TERRORISM), leading to closer relations with the West. Official language: Uzbek. Currency: som. Area: 449 600 sq km (173 546 sq mi). Population (2003 est): 25 640 000. Capital: Tashkent.

V-1 A German World War II unguided missile, also called a flying bomb. Powered by an air-breathing type of ramjet, it carried about 2000 pounds (900 kg) of high explosive. Some 8000 were launched against London between June 1944 and March 1945, killing 5500 civilians.

V-2 A German World War II ballistic missile powered by a rocket engine using alcohol and liquid oxygen as fuel. It carried about 2000 pounds (900 kg) of high explosive and had a preset guidance system. Some 4000 were used against Britain and the Low Countries in 1944 and 1945. It became the basis for both US and Soviet postwar rocket design.

Vaal River A river in South Africa, rising in the SE Transvaal. It flows generally W and SW, to join the Orange River and forms part of the Orange Free State-Transvaal border. Length: 1210 km (750 mi).

vaccination (or inoculation) The introduction of inactivated or dead disease-causing microorganisms (vaccine) into the body to stimulate the formation of *antibodies to these agents (see also IMMUNITY). The first vaccination (against smallpox) was performed by Edward *Jenner in 1798. Vaccines are usually given by injection but some can be administered through skin scratches and some are taken by mouth.

vacuum A region of space that contains no matter. In practice, a perfect vacuum is impossible to obtain. In technical work a soft (or low) vacuum goes down to a pressure of 10^{-2} pascal, a hard (or high) vacuum is between 10^{-2} and 10^{-7} pascal, and an ultrahigh vacuum is below 10^{-7} pascal. Vacuum technology is used in making cathode-ray tubes, light bulbs, etc., and is used in food preservation.

vacuum flask See DEWAR FLASK.

Vadodara (former name: Baroda) 22 19N 73 14E. A city in India, in Gujarat. The siting of an oil refinery at nearby Kouali has helped to

promote Vadodara's industrial growth and its chief products include petrochemicals, cotton textiles, wood, and tobacco. Population (1991): 1 021 084.

Vaduz 47 08N 9 32E The capital of Liechtenstein. Its castle (restored 1905-16) is the residence of the ruling prince. Population (2000 est): 5043.

vagina The part of the reproductive tract of women and other female mammals into which the *penis is inserted during sexual intercourse. It connects the womb to the exterior and is readily distensible to allow for childbirth.

vagus nerve An important nerve that connects the brain with the throat, larynx, heart, lungs, stomach, and gut. Surgical cutting of a branch of the vagus nerve (**vagotomy**) may be done to treat a peptic ulcer.

Vajpayee, A(tal) B(ihari) (1926-) Indian politician; prime minister (1996, 1998-2004). He became leader of the Hindu nationalist Bharatiya Janata Party (BJP) in 1980. His premiership saw a rise in tensions with Pakistan but subsequent peace talks (2004).

valence (or valency) The combining power of an atom, ion, or radical. It is equal to the number of hydrogen atoms that the atom, ion, or radical can combine with or replace in forming compounds. Many elements have more than one valence. A **valence electron** is an electron in the outer shell of an atom that participates in forming chemical (valence) bonds. See also ENERGY BAND.

Valencia 1. 39 29N 0 24W The third largest city in Spain, on the Guadalquivir estuary. In 1021 it became the capital of the Moorish kingdom of Valencia. El Cid took the city from the Moors in 1094. Its many notable buildings include the cathedral (1262-1482) and a scientific and cultural complex by Santiago Calatrava (1998-2002). Population (1998 est): 739 412. 2.

1014N 6759W The third largest city in Venezuela. It is the focus of the country's chief agricultural area and an industrial centre. Population (2001): 1 196 000.

Valentine, St (died c. 269) Roman priest and martyr, known as the patron of lovers. The customs practised on his feast day (14 Feb) have no connection with his life.

Valentinian I (d.375 AD) Western Roman emperor (364–75). He fought campaigns in the north of the Empire, restoring the Rhine frontier and Hadrian's Wall.

Valentino, Rudolf (Rodolpho Gugliemi di Valentina d'Antonguolla; 1895–1926) US film actor, born in Italy. His performances in *The Sheik* (1921), *Blood and Sand* (1922), *Son of the Sheik* (1926), and other silent romantic dramas established him as a leading cinema idol of the 1920s.

Vale of Glamorgan A county borough of S Wales, created in 1996 from parts of Mid Glamorgan and South Glamorgan. Area: 295 sq km (114 sq mi). Population (2004 est): 122 300. Administrative centre: Barry.

Valéry, Paul (1871–1945) French poet, essayist, and critic. *Cahiers* (29 vols, 1957–60) is a record of his metaphysical speculations from 1894 until his death. His later poetry in *La Jeune Parque* (1917) and *Charmes* (1922) combines sensuous lyricism with intellectual force.

Valhalla In Teutonic mythology, one of the three homes of *Odin. Half of the warriors who die in battle are brought by the *Valkyries to Valhalla, where they spend their days in battle and their nights in feasting and listening to songs of their heroic exploits.

Valkyries In Teutonic mythology, beautiful maidens, who are the personal attendants of *Odin. They wear armour and, led by *Freyja, ride on horseback over battlefields in order to carry away the slain warriors whom Odin has chosen to live with him in *Valhalla.

Valladolid 4139N 445W A city in central Spain, in Old Castile. It was formerly the capital of Castile and León (14th–15th centuries). It has a 16th-century cathedral and contains Cervantes' house; Christopher Columbus died here (1506). Population (2005 est): 321 001.

Valletta 3554N 1432E The capital of Malta. Founded (1566) by the Knights of St John, it was formerly an important British naval base. Population (2005 est): 6315, with a conurbation of 83 000.

valley An elongated depression in the earth's surface. Valleys have various origins but the

common **V-shaped valley** is formed as the result of erosion by a river. Those that originated through glacial erosion are **U-shaped valleys**, with steep sides and broad floors, often occupied by deep lakes (see **FJORD**). See also **RIFT VALLEY**.

Valley of the Kings The cemetery of the Egyptian pharaohs from about 1580 to about 1085 BC, near *Thebes. All the tombs were robbed, except that of *Tutankhamen.

Valois The royal dynasty of France from 1328 to 1589. The *Hundred Years' War (1337–1453) nearly destroyed Valois power, which was saved by *Charles VII (reigned 1422–61). Charles VIII (reigned 1483–98) and *Louis XII waged disastrous wars in Italy, where they opposed the *Habsburgs. The last Valois were victims of rival religious factions (see **WARS OF RELIGION**).

Valparaíso 33 05S 71 40W The second largest city in Chile, on the Pacific Ocean. Founded by the Spanish (1536), Valparaíso is a major port. Population (2002): 275 141.

value-added tax (VAT) An indirect tax on goods calculated by adding a percentage to the value of a product as it increases at each stage of production; the whole cost is eventually passed on to the consumer. The tax was introduced in the UK in 1973. It is charged at a rate of 17.5% on all goods and services except those that are zero-rated, exempt, or taxed at a special rate.

vampire bat A bat of the family *Desmodontidae* (3 species), of Central and South America. The most common species is *Desmodus rotundus*, 7.5–9 cm long. Vampire bats feed on the blood of mammals or birds. Although too small to cause serious blood loss to their host, they can transmit dangerous diseases.

vanadium (V) A transition metal, named after the Norse goddess Vanadis. The metal is isolated by reduction of the trichloride (VCl₃) with magnesium or of the pentoxide (V₂O₅) with calcium. At no 23; at wt 50.9415; mp 1910 ± 10°C; bp 3409°C.

Van Allen radiation belts Two regions of charged particles in the earth's *magnetosphere. The toroidal inner belt lies 1000–5000 km above the equator; the outer belt lies 15 000–25 000 km above the equator, curving down towards the earth's magnetic poles. The belts were discovered in 1958 by the US physicist James Van Allen (1914–2006).

Vanbrugh, Sir John (1664–1726) English architect, soldier, and playwright. His plays in-

cluded *The Relapse* (1697) and *The Provok'd Wife* (1697). He was England's most successful *baroque architect, his buildings including Castle Howard (1699–1726) and *Blenheim Palace (begun 1705), on which he collaborated with *Hawksmoor.

Van Buren, Martin (1762–1862) US statesman; Democratic president (1837–41) and a founder of the Democratic Party. He came to power during the economic crisis of 1837 but his adherence to laissez-faire principles led to his defeat in 1840.

Vancouver 49 13N 123 06W A city and port in W Canada, in British Columbia. Established in 1862 at the S end of the Coast Mountains, Vancouver is the commercial and industrial centre of British Columbia. Population (1996): 514 008.

Vancouver Island A Canadian island off the Pacific coast of British Columbia. Its E coastal plain rises to glaciers and forested mountains. The economy depends on timber, mining, fishing, and tourism. Area: 32 137 sq km (12 408 sq mi). Population (latest est): 461 573. Chief town: Victoria.

Vandals A Germanic tribe that during the first four centuries AD migrated southwards from Scandinavia and the S Baltic coast. In 455 they sacked Rome. The devastation they caused gave rise to the term vandalism.

Van de Graaff generator A type of electrostatic generator, invented by the US physicist Robert Jemison Van de Graaff (1901–67), that produces static potentials of millions of volts. Charge from an external source is fed onto a continuously moving belt, which transfers it to the inside of a large hollow conducting sphere. The charge moves to the outer surface of the sphere, leaving the inside neutral and able to collect more charge.

Van der Waals' equation A modification of the ideal gas equation, $pV = RT$, where p is the pressure exerted by a gas with volume V and thermodynamic temperature T . R is the gas constant. Van der Waals adjusted V to $(V - b)$ to take account of the volume occupied by the molecules. He also assumed that forces (Van der Waals' forces) exist between the molecules and therefore adjusted the pressure term to $(p - a/V^2)$. Both a and b are constant for a particular gas.

van de Velde A family of 17th-century Dutch painters. **Willem van de Velde the Elder** (1611–93) and his eldest son **Willem van de Velde the Younger** (1633–1707) were both marine artists, living in England after 1672. His

younger son **Adriaen van de Velde** (1636–72) was a landscape painter. **Esaias van de Velde** (c. 1591–1630), the landscape painter, was probably the brother of Willem van de Velde the Elder.

Van Dyck, Sir Anthony (or **Vandyke**; 1599–1641) Flemish *baroque painter. Working chiefly in England, he painted many religious and mythological subjects, although his reputation rests largely on his portraits of the English court. *Charles I on Horseback* (National Gallery, London) demonstrates the elegance and grandeur of his style.

Vänern, Lake The largest lake in Sweden. It drains into the Kattegat via the River Göta. Area: 5546 sq km (2141 sq mi).

van Eyck, Jan (c. 1390–1441) Flemish painter. He is noted for his realistic portraits, particularly *The Arnolfini Marriage* and *Man in a Red Turban* (both National Gallery, London). He certainly perfected and possibly invented the Flemish technique of oil painting, in which the pigment is mixed with oil and turpentine and applied in thin glazes. The famous *Adoration of the Lamb* altarpiece in Ghent was probably begun by his elder brother **Hubert van Eyck** (d. 1426) and completed by Jan.

Van Gogh, Vincent (1853–90) Dutch postimpressionist painter. His early works were chiefly drawings of peasants. On moving to Paris (1886) he briefly adopted the style of *impressionism. In Arles in 1888 he painted his best-known works—orchards, sunflowers, and the local postman—but only one painting was sold during his lifetime. The visit of *Gauguin ended in a quarrel during which Van Gogh cut off part of his own left ear. In 1889 he entered a mental asylum at Saint-Rémy. *Wheatfield with Crows* (Stedelijk Museum, Amsterdam) was painted shortly before his suicide.

Vanilla A genus of climbing *orchids (about 90 species), native to tropical Asia and America. They have long fleshy stems attached to trees by aerial roots and produce large white and yellow flowers. Several species are cultivated commercially for the flavouring agent vanilla.

Van't Hoff, Jacobus Henricus (1852–1911) Dutch chemist, who pioneered the field of stereoisomerism, showing that the bonds of a carbon atom are arranged in a tetrahedron. This enabled him to explain *optical activity in terms of molecular structure. He also contributed to chemical thermodynamics and to the theory of solutions, for which he won the 1901 Nobel Prize.

Vanua Levu A volcanic island in the S Pacific Ocean, the second largest in Fiji. Sugar, copra, and gold are exported. Area: 5535 sq km (2137 sq mi). Population (latest est): 909. Chief town: Lambasa.

Vanuatu, Republic of (name until 1980: New Hebrides) A country in the SW Pacific Ocean comprising a chain of about 80 forested volcanic islands, the largest of which is Espiritu Santo. *Economy:* copra, cocoa, coffee, and beef are exported. Tourism and financial services have also developed. *History:* sighted by the Portuguese (1606), the islands were later charted (1774) by James Cook. In the 19th century thousands of the indigenous inhabitants were forcibly removed to sugar plantations in Australia. From 1906 the islands were jointly administered by France and the UK. In 1980 they became independent. Official languages: French, English, and Bislama. Currency: vatu of 100 centimes. Area: about 14 760 sq km (5700 sq mi). Population (2003 est): 204 000. Capital: Vila.

Varanasi (or **Benares**) 25 20N 82 00E A city in India, on the River Ganges. A major place of pilgrimage for Hindus, Jains, Sikhs, and Buddhists, it has 5 km (3 mi) of ghats (steps), from which thousands of Hindus bathe in the sacred river. Population (1991): 925 962.

Vargas Llosa, Mario (1936–) Peruvian novelist and politician. His novels include *The City and the Dogs* (1963), *The War of the End of the World* (1981), and *The Notebooks of Don Rigoberto* (1998).

variable stars Stars the brightness of which varies with time. In regular variables the brightness completes a cycle of changes in a period ranging from minutes to years. The brightness variation can be up to several *magnitudes. The three major groups are: eclipsing *binary stars, cataclysmic variables, and pulsating stars.

variance In a set of numbers, usually measurements, the quantity obtained by summing the squares of the differences between each number and the average value of the set and then dividing by the number of members of the set. Variance and, more often, its square root, called the **standard deviation**, are used to estimate scatter or random error in experimental results.

varicose veins Swollen tortuous veins in the legs caused by malfunctioning of the valves in the veins, which obstructs blood flow. Varicose veins tend to run in families and are

commoner in older and fat people, women, and those who are constantly standing.

Varna 43 12N 27 57E A city and port in E Bulgaria, on the Black Sea. Founded in the 6th century BC, it finally passed to Bulgaria in 1878. In the **Battle of Varna** (10 November 1444) a Hungarian force was decisively defeated by the Turks, who were thus enabled to expand further into the Balkans. Population (1999 est): 299 801.

varnish A resinous solution in oil or alcohol that dries to a hard transparent coating on wood, metal, etc. Natural resins include *shellac, copal, dammar, and congo. Polyurethane is a durable and chemical-resistant synthetic resin. Polyesters and alkyds are also used.

varve dating A technique used in geology and archaeology to give the age of a sediment and to provide information about the climate during which it was formed. Varves are layers of claylike sediment deposited from a melting glacier into a lake. Each varve represents a single year's deposition.

Vasa The ruling dynasty of Sweden (1523–1818) and of Poland (1587–1668) founded by Gustavus I Vasa (1496–1560). The best-known Vasa monarchs in Sweden were Gustavus II Adolphus (1594–1632) and Christina (1626–89).

Vasari, Giorgio (1511–74) Italian painter, architect, and writer. In Florence he painted fresco cycles and built the *Uffizi, both works showing his respect for *mannerism. However he is best known for his *Lives of the Most Eminent Italian Architects, Painters, and Sculptors*, tracing the history of Renaissance art.

Västerås 59 36N 16 32E A city in central Sweden, on Lake Mälär. An important city in medieval times, it has a 12th-century castle. Population (1997 est): 124 084.

VAT See VALUE-ADDED TAX.

Vatican City, State of the A small independent state within the city of Rome, the seat of government of the Roman Catholic Church. It came into being in 1929, when Pius XI signed the *Lateran Treaty with Mussolini. The state is governed by a commission appointed by the pope. Official language: Italian. Currency: euro of 100 cents. Area: 44 hectares (109 acres). Population (2003 est): 900.

Vatican Councils Two ecumenical councils of the Roman Catholic Church, held in Rome. 1. (1869–70) The council that was convoked by *Pius IX, resulting in the promulgation of the doctrine of papal *infallibility. 2. (1962–65) The

council that was convoked by *John XXIII and continued by *Paul VI. It reformed the liturgy and established an atmosphere in which progressive critics could freely express their views.

Vaughan Williams, Ralph (1872–1958) British composer. Influenced by English folk-song and Tudor music, he developed a modal style that found its first full expression in *Fantasy on a Theme by Tallis* (for string orchestra; 1910). His works include nine symphonies, the ballet *Job* (1931) and the opera *The Pilgrim's Progress* (1951).

vector (mathematics) A quantity that has both magnitude and direction. Examples of vectors include velocity, force, magnetic flux density, etc. A vector needs three numbers (called components) to be defined, each number representing its magnitude in one of three mutually perpendicular directions.

vectors. The two vectors OP (p) and OQ (q) add to give the resultant vector OQ ($p + q$). $OR = PQ = q$, $OP = RQ = p$. OQP is a vector triangle and $ORQP$ is a parallelogram of vectors.

vector (medicine) An organism that is capable of transmitting a disease-causing organism (pathogen) from one organism to another. Transmission may be accidental or the vector may play a significant role in the life cycle of the pathogen, for example the malarial parasite spends part of its life cycle in the mosquito, which transmits it to man.

Vedanta The various philosophical schools of Hinduism, which derive from the commentaries on the Vedas, especially the **Upanishads*, the *Brahmasutras*, and the **Bhagavadgita*. The schools have in common the belief in reincarnation, the truth of the Vedas, the law of **karma*, and the need for spiritual release. Believing Brahman to be the cause of the world, they condemn Buddhism and Jainism.

Vedas (Sanskrit: divine knowledge) The basic Hindu scriptures, written in archaic Sanskrit (Vedic) around 1500 BC. They comprise hymns,

invocations, mantras, spells, and rituals, mostly concerning the sacrificial worship of gods representing various natural forces.

Vega A conspicuous white star, apparent magnitude 0.03 and 26.5 light years distant, that is the brightest star in the constellation Lyra.

Vega (Carpio), Lopé Felix de (1562–1635) Spanish dramatist and writer. After serving with the Spanish Armada he settled in Madrid and was ordained (1614). His numerous plays include *Fuenteovejuna* (1612–14) and *El caballero de Olmedo* (1615–26).

vegetarianism The practice of abstaining from eating animal flesh for ethical, religious, or nutritional reasons. Some vegetarians will not eat any animal products, including milk, cheese, eggs, etc., and are called **vegans**. Vegetarianism occurs in many religious traditions, including Buddhism, Jainism, and Hinduism, and it was advocated by Pythagoras, Plato, and many other thinkers. Vegetarians, especially vegans, can suffer from anaemia unless their diet includes sufficient vitamin B₁₂.

vein A thin-walled blood vessel that carries oxygen-depleted blood from the tissues to the *heart. The veins opening directly into the heart are the superior and inferior vena cavae and the pulmonary veins from the lungs, which are unique in carrying oxygenated blood.

Velázquez, Diego Rodriguez de Silva (1599–1660) Spanish painter. Influenced by Titian, he specialized initially in religious subjects and still-lives. Later (1623) he became court painter to Philip IV and painted many portraits of the royal family and courtiers. Other works include *Pope Innocent X* (Rome), the *Rokeby Venus* (National Gallery, London), and the group portrait *Las Meninas* (Milan).

veld (or **veldt**) A tract of open grassland on the plateau of S Africa. It includes the Highveld (over 1500 m), Middleveld (1500–900 m), and Lowveld (below 900 m).

velocity The rate of change of a body's position in a given direction. The speed of a body is not in a specified direction. Velocity is thus a *vector quantity and speed is a scalar quantity. **Angular velocity** is the rate of change of a body's motion about an axis. It is measured in radians per second.

venereal disease See SEXUALLY TRANSMITTED DISEASE.

Venezuela, Bolivarian Republic of A country on the N coast of South America. The plains of the Orinoco basin in the N rise to the

Guiana Highlands in the SE, and in the NW the N end of the Andean chain reaches heights of over 5000 m (16 000 ft). Most of the population is of mixed European and Indian descent. *Economy*: based chiefly on oil, although production has declined since the 1970s. Efforts are being made to diversify the economy. Venezuela's rich mineral deposits include iron ore, bauxite, diamonds, gold, zinc, copper, and lead. Agriculture remains underdeveloped. Prolonged recessions in the 1980s and early 1990s led to the introduction of radical free-market reforms. *History*: sighted by Columbus in 1498, it was visited in 1499 by Vespucci, who named it Venezuela ("Little Venice") on seeing Indian villages built on stilts over Lake Maracaibo. Spanish settlement began in 1520 and Venezuela remained under Spanish rule until liberated by Bolívar in 1821. It then formed part of Colombia until 1830. Independent Venezuela was ruled by a succession of dictators until the post-World War II period, which has seen more democratic governments. Economic crisis in the late 1980s and early 1990s led to rising unrest. The 1998 presidential elections saw victory for the radical populist Lt Col Hugo *Chávez Frías. A new constitution was introduced in 1999. That same year Venezuela suffered its worst natural disaster of the century, when at least 30 000 died in flooding and mud slides. The 2000s have seen economic growth, an abortive military coup (April 2002), and deteriorating relations with the USA. Chávez was re-elected by a landslide in 2006. Venezuela is a member of the OAS, LAIA, and OPEC. Official languages: Spanish and indigenous languages. Currency: bolívar of 100 céntimos. Area: 912 050 sq km (352 143 sq mi). Population (2007 est): 26 023 528. Capital: Caracas.

Venice (Italian name: Venezia) 45°26'N 12°20'E A city in NE Italy. It is a seaport built on over 100 islands in the Lagoon of Venice. Venice is a centre of commerce and tourism and its manufactures include glassware, textiles, and lace. The Grand Canal and about 170 smaller canals provide waterways for water buses (*vaporetti*) and gondolas. Famous bridges include the Rialto Bridge and the *Bridge of Sighs. At the centre of Venice is St Mark's Square (Piazza San Marco) overlooked by *St Mark's Cathedral, the Campanile, and the Doge's Palace. The Accademia houses a unique collection of Venetian paintings; the Lido, a seaside resort, is 3 km (2 mi) to the SE. *History*: originally settled by refugees fleeing barbarian invasions (5th century AD onwards), Venice was united under the first *doge in 697. It became an independent republic and a great maritime power from the

14th century. It came under Austrian control in 1797 and became part of Italy in 1866. Venice is now threatened by subsidence and there are plans to build a flood barrier in the lagoon by 2010. Population (2004 est): 271 663.

Venn diagram See SET THEORY.

Venturi tube A device consisting of an open-ended tube with a central constriction, used to measure the rate of flow of a fluid, which can be calculated from the pressure difference between the centre and the ends. It is used to measure the airspeed of aircraft. Invented by G. B. Venturi (1746–1822).

Venus (goddess) A Roman goddess originally of gardens and fertility who became identified with the Greek *Aphrodite as goddess of love.

Venus (planet) The second planet in order from the sun, orbiting the sun every 225 days at an average distance of 108 million km. It is 12 102 km in diameter and has an extremely long period of axial rotation (243 days). It can be one of the most brilliant objects in the sky, reaching a *magnitude of -4.4, and like the moon exhibits *phases. Its surface is totally obscured by dense clouds of sulphuric acid droplets and sulphur particles. The atmosphere is primarily (98%) carbon dioxide. Planetary probes have shown that the surface temperature is a hostile 470°C.

Venus flytrap A *carnivorous plant, *Dionaea muscipula*, native to the eastern USA. The upper part of each leaf is hinged at the midrib and an alighting insect triggers the leaf to snap shut, thus trapping the prey. Family: *Droseraceae*.

Venus's girdle A marine invertebrate animal, *Cestum veneris*, belonging to an order (*Cestida*) of *ctenophores. Its transparent ribbon-like body is about 5 cm wide and 1 m or more long. It occurs in the Mediterranean Sea and Atlantic Ocean.

Veracruz (or **Veracruz Llave**) 19°11'N 96°10'W A major port in E Mexico, on the Gulf of Mexico. Population (2000): 411 582.

Verbena A genus of herbaceous plants or dwarf shrubs (about 250 species), chiefly native to North and South America. Lemon verbena (*Lippia citriodora*) is a related shrub from tropical America, the leaves of which yield an oil used in perfumery. Family: *Verbenaceae*.

Verde, Cape See CAPE VERDE, REPUBLIC OF.

Verdi, Giuseppe (1813–1901) Italian composer of operas. His first mature work was *Rigoletto* (1851); this was quickly followed in

1853 with *La Traviata* and *Il Trovatore*. In 1869 he wrote *Aida* (1871). His last works were the *Requiem* (1874) and the operas *Otello* (1887) and *Falstaff* (1893).

verdigris A green copper acetate used as a paint pigment. The term is also applied to the green coating, consisting of copper sulphate or carbonate, that forms on copper roofs, etc.

Verdun 49°10'N 5°24'E A fortified town in NE France, on the River Meuse. It was the scene (1916) of the longest battle of *World War I. Population (latest est): 23 430.

Verlaine, Paul (1844–96) French poet. His tempestuous relationship with *Rimbaud, who influenced his experimental *Romances sans paroles* (1874), resulted in the break-up of his marriage, and in 1873 he was imprisoned for shooting and wounding Rimbaud. After the publication of *Les Poètes maudits* (1884) Verlaine was the acknowledged leader of the Symbolist poets.

Vermeer, Jan (1632–75) Dutch painter, who spent his entire life in Delft. His paintings of everyday scenes, which are remarkable for their motionless figures and use of light, include *The Milkmaid* (Rijksmuseum, Amsterdam), *The Lacemaker* (Louvre), and *Allegory of Painting* (Kunsthistorisches Museum, Vienna), showing himself at work.

vermiculite A clay mineral with the property of expanding up to 22 times its original thickness on heating. Vermiculite results from the hydrothermal alteration of biotite and the intrusion of acid magma into basic rock.

vermilion Red mercuric sulphide (HgS). It sublimes readily on heating and occurs naturally as the mineral cinnabar. It is used as a pigment.

Vermont A state in the NE USA, in New England. The extensively forested Green Mountains run N–S through the centre of the state. Small manufacturing industries, mining, and tourism are important. The state's farmers produce dairy products, hay, potatoes, corn, and maple syrup. *History:* settled by the British in 1724, it declared its independence in 1777 and joined the Union in 1791. Area: 24 887 sq km (9609 sq mi). Population (2002 est): 608 827. Capital: Montpelier.

Verne, Jules (1828–1905) French writer. Verne's *Voyages extraordinaires* introduced such technological marvels as the submarine, space travel, and television. They included *Journey to the Centre of the Earth* (1864) and *Twenty Thousand Leagues Under the Sea* (1873). Other sto-

ries included *Around the World in Eighty Days* (1873).

Vernier scale A device for measuring subdivisions of a scale, such as those on a pair of calipers. The auxiliary Vernier scale is divided so that ten of its subdivisions correspond to nine of those on the main scale. Named after Pierre Vernier (1580–1637).

Vernier scale. An auxiliary scale used to measure accurately to two places of decimals.

Verona 45°26'N 11°00'E A city in N Italy, on the River Adige. A tourist centre, it possesses a Roman amphitheatre, a 12th-century cathedral, and the medieval Castelvécchio. Population (2000 est): 255 268.

Veronese, Paolo (P. Caliari; 1528–88) Italian painter of the Venetian school. In the Villa Barbaro at Maser, designed by *Palladio, he painted illusionistic landscapes, mythological scenes, and portraits. His religious works, for example *Marriage at Cana* (Louvre), were often pretexts for depicting contemporary banquets in impressive architectural settings.

Verrocchio, Andrea del (Andrea del Cione; c.1435–88) Florentine Renaissance sculptor, painter, and goldsmith. Verrocchio's best-known sculptures are the *David* in Florence and the equestrian monument of Bartolommeo Colleoni in the Campo SS Giovanni e Paolo, Venice.

Versailles 48°48'N 2°08'E A town in N central France, famous for its baroque palace, the residence of the French kings from 1678 to 1769. Historic events enacted at the palace include Britain's recognition of American independence (1783), the crowning (1871) of William I as German emperor, and the signing of the *Treaty of Versailles* (1919), which imposed reparations on Germany after World War I and established the League of Nations. Population (latest est): 91 029.

vertebra See SPINE.

Vertebrata (or **Craniata**) A subphylum (or phylum) of animals that includes the fish, amphibians, reptiles, birds, and mammals. They

are characterized by a backbone consisting of interlocking vertebrae, which forms the main support for the body and protects the nerve cord (spinal cord). See also CHORDATE.

Verwoerd, Hendrik Frensch (1901–66) South African statesman; prime minister (1958–66). The chief architect of the *apartheid system, he took South Africa out of the Commonwealth in 1960. He was assassinated in parliament.

Vesalius, Andreas (1514–64) Flemish anatomist, whose major work, *The Seven Books on the Structure of the Human Body* (1543), contained some of the first accurate descriptions of human anatomy.

Vespasian (9–79 AD) Roman emperor (69–79). Vespasian's decisive policies brought an end to civil war and he increased taxes and reformed the army. He was deified after his death.

Vespucci, Amerigo (1454–1512) Italian navigator, after whom America is named. In 1499 and 1501 he explored the E coast of South America.

Vesta The Roman goddess of the hearth, identified with the Greek Hestia. She was worshipped in private households, and her annual festival, the Vestalia, was held in June. The Vestal Virgins, her priestesses, tended the eternal fire at her shrine in Rome.

Vesuvius 40 49N 14 26E A volcano in S central Italy, near Naples. In 79 AD it engulfed *Herculaneum and *Pompeii; the last eruption was in 1944. Average height: 1220 m (4003 ft).

vetch A climbing or trailing annual or perennial herb of the genus *Vicia* (about 150 species), native to N temperate regions and South America. Some species are grown as fodder crops. Family: Leguminosae.

Vibrio A genus of freshwater and marine bacteria. They are rod-shaped, either straight or curved, and swim by means of whiplike flagella. *V. cholerae* causes *cholera in humans.

Viburnum A genus of shrubs and small trees (about 200 species), mostly native to N temperate regions. They have white or pink flowers. Many are grown as ornamentals, including the snowball tree (see GUELDER ROSE) and laurustinus. Family: Caprifoliaceae.

Vicenza 45 33N 11 33E A city in NE Italy. It was the home of the 16th-century architect Andrea Palladio. Population (1996 est): 107 786.

Vichy 46 07N 3 25E A spa in central France, on the River Allier. From 1940 until 1944, it was

the seat of the pro-German puppet government of Marshal *Pétain. Its waters, which were known to the Romans, are bottled and exported worldwide. Population (latest est): 30 554.

Victor Emmanuel II (1820–78) King of Italy (1861–78). As king of Sardinia-Piedmont (from 1849) he fought the Austrians, supported the nationalist goals of *Cavour, and coordinated with *Garibaldi in the campaign that freed S Italy. As King of Italy he acquired Venetia (1866) and Rome (1870), which he made the Italian capital.

Victor Emmanuel III (1869–1947) King of Italy (1900–46) following the assassination of his father Umberto I. He acquiesced in Mussolini's seizure of power (1922) and after Mussolini's fall (1943) relinquished his powers to his son Umberto II.

Victoria 1. A state of SE Australia. It consists of central uplands, descending to plains in the N and S. Gippsland is a noted dairying area. Cattle production is now concentrated in S Victoria. Brown coal is mined in Central Gippsland and gas and oil are piped from the Bass Strait. Industry is concentrated on Melbourne. Area: 227 600 sq km (87 884 sq mi). Population (1999 est): 4 712 170. Capital: Melbourne. **2.** 22 16N 114 13E An urban district in S China, the administrative centre of Hong Kong, situated on the N of the island. Population (latest est): 590 771.

Victoria (1819–1901) Queen of the United Kingdom (1837–1901). The daughter of George III's fourth son Edward, Duke of Kent (1767–1820), Victoria succeeded her uncle William IV. In 1840 she married her cousin Prince *Albert of Saxe-Coburg-Gotha; they had nine children. Albert's death in 1861 was a severe blow to Victoria and she resolved thereafter to act exactly as he would have wished. She had an exalted view of the monarch's role in government, failing to appreciate the limitations of constitutional monarchy. Her refusal to dismiss her Whig ladies of the bedchamber when the Tory, Robert Peel, was attempting to form a ministry caused the *Bedchamber Crisis (1839). Her close friendship with *Disraeli, who made her Empress of India (1876), contrasted with her strained relations with his rival *Gladstone. In the last years of her reign, especially after her Golden Jubilee (1887), she enjoyed enormous popularity.

Victoria, Lake (or **Victoria Nyanza**) The largest lake in Africa, in Uganda, Tanzania, and

Kenya. It was discovered for Europeans in 1858 by Speke. Area: 69 485 sq km (26 826 sq mi).

Victoria and Albert Museum A London museum founded in 1853 to house examples of applied arts of all periods and cultures. Originally at Marlborough House, it moved to South Kensington in 1857.

Victoria Cross (VC) The highest British decoration for "bravery...in the presence of the enemy." Instituted by Queen Victoria in 1856, VCs were formerly cast from the metal of Russian guns taken during the Crimean War (1854-56).

Victoria Falls 17 55S 25 52E A waterfall in the Zambezi River on the border of Zimbabwe and Zambia. The river drops as much as 128 m (420 ft), and then flows through a narrow gorge known as the **Boiling Pot**.

vicuna A hoofed mammal, *Vicugna vicugna*, of high Andean plateaus. Resembling a small camel, the vicuna is 75 cm high and has a tawny-brown coat with a white bib and underparts. Aggressively territorial, they are valued for their wool. Family: *Camelidae* (camels, etc.).

video recording The storage of a *television programme or prerecorded film on magnetic tape. Because the demodulated video (vision) signal can have frequencies in the megahertz range, the signal is recorded diagonally on the tape (each diagonal line representing one line of the picture) and the tape is run slowly over a drum on which the recording and reading heads rotate at high speeds. Since the late 1990s DVDs (see COMPACT DISC) have increasingly replaced video tape as a means of storing prerecorded films.

Vienna (German name: Wien) 48 12N 16 20E The capital of Austria, on the River Danube. With its musical and theatrical life, its museums, and parks, it is a popular tourist attraction. Trade and industry, however, form the basis of the economy. Most of the chief buildings lie on or within the Ringstrasse, the boulevard built in 1857 to replace the old city ramparts. *History:* seat of the Habsburgs (1278-1918) and residence of the Holy Roman Emperor (1558-1806), Vienna became an important cultural centre in the 18th and 19th centuries, having associations with Haydn, Mozart, Beethoven, Schubert, and the Strauss family. It suffered damage during World War II and was jointly occupied by the Allied Powers (1945-55). Population (2001): 1 562 676.

Vienna, Congress of (1814-15) A conference of European powers that met following

the fall of Napoleon. Its Final Act created a kingdom of the Netherlands, a German confederation of 39 states, Lombardy-Venetia subject to Austria, and the Congress Kingdom of Poland. Legitimate monarchs were restored in Spain, Naples, Piedmont, Tuscany, and Modena, and Louis XVIII was confirmed as King of France.

Vienna Circle The group of scientific philosophers who developed the doctrine of *logical positivism. Founded by Moritz Schlick (1882-1936) in 1924, the Vienna Circle flourished until 1939. Members included *Carnap, Kurt Gödel (1906-78), and Otto Neurath (1882-1945). See also AYER, SIR ALFRED (JULES).

Vienne, River A river in W central France, flowing mainly NNW to the River Loire. Length: 354 km (220 mi).

Vientiane 18 06N 102 30E The capital of Laos, a port on the River Mekong. Founded in the 13th century, it came under Siamese control in the 18th century and was destroyed (1828) following a revolt against Siamese rule. It became capital of the French protectorate of Laos in the late 19th century. Population (1999 est): 540 000.

Viet Cong Communist guerrillas who fought in the *Vietnam War (1954-75). In 1960 they established the National Liberation Front, which amalgamated the various groups opposed to the South Vietnamese government.

Viet Minh The Vietnam League for Independence, formed in 1941 by *Ho Chi Minh to create an independent Vietnamese republic. After World War II, in which it resisted the Japanese occupation, the Viet Minh played a prominent role in the *Indochina war against France (1946-54).

Vietnam, Socialist Republic of A country in SE Asia, occupying the E part of the Indochina peninsula. Fertile coastal lowlands rise to forested plateaus and mountains, the most populated areas being around the Mekong delta in the S and the Red River delta in the N. The inhabitants are mainly Vietnamese, with minorities of Chinese and others. *Economy:* agriculture remains the most important sector. Rice is grown extensively and is now a major export. Teak and bamboo are the chief forest products and fishing is also important. Industrial developments have been concentrated mainly in the N. Offshore oil production is increasing and crude petroleum is exported. Other exports include garments, footwear, and coffee. *History:* the northern kingdom of Nam

Viet was conquered in 111 BC by the Chinese. In 939 AD it broke free and resisted further Chinese invasions until the 15th century, when it was again briefly occupied. Its southward expansion culminated in the establishment (1802) of a united Vietnamese empire, which lasted until the establishment of the Union of *Indochina by the French (1887). Vietnam was occupied by the Japanese in World War II. France's refusal in 1945 to recognize Ho Chi Minh's government led to war (1946–54) after which, following defeat at Dien Bien Phu, the French withdrew. The Geneva Conference (1954) divided Vietnam along the 17th parallel into communist North Vietnam and noncommunist South Vietnam, between which civil war ensued. In 1961 the USA extended assistance to the South and remained involved in the conflict until 1973 (see VIETNAM WAR). In 1976 the victorious North proclaimed the reunited Socialist Republic of Vietnam. Vietnamese troops invaded Cambodia in December 1978 and did not withdraw until 1989. The 1980s saw a massive increase in the number of refugees, known as the Boat People, attempting to leave Vietnam by small craft across the South China Sea. A new constitution was adopted in 1992, endorsing the free-market reforms of the previous decade. Official language: Vietnamese. Currency: dong of 100 xu. Area: 329 466 sq km (127 180 sq mi). Population (2003 est): 81 377 000. Capital: Hanoi.

Vietnam War (1954–75) The war between communist North Vietnam, aided by *Viet Cong guerrillas, and South Vietnam, aided from 1961 by the USA. It resulted in communist victory and the union (1976) of North and South Vietnam. Some 900 000 Viet Cong and North Vietnamese, 50 000 Americans, and some 400 000 South Vietnamese died in the war. See also INDOCHINA.

viewdata An information storage and retrieval system in which pages of text are transmitted as coded signals along telephone wires and displayed on a domestic television receiver. The user has direct access to a central computer store via a keypad. See also TELETEXT.

Vigny, Alfred de (1797–1863) French poet, novelist and dramatist. He associated with many Romantic writers while serving (1814–27) as an army officer. His works include the historical novel *Cinq-Mars* (1826) and the play *Chatterton* (1835).

Vigo 42 15N 8 44W A port and naval base in NW Spain, on the Atlantic coast. In 1702 an Eng-

lish-Dutch fleet sank a Spanish treasure fleet here. Population (1998 est): 283 110.

Vijayawada (former name: Bezvada) 16 34N 80 40E A city in India, on the River Krishna. Industries include engineering and rice milling. Population (1994 est): 288 573.

Viking probes Two identical US spacecraft that went into orbit around Mars in 1976. The Lander sections landed on the surface in July and September and performed various experiments. The Orbiter sections took extensive measurements and photographs of Mars' surface and two satellites.

Vikings Scandinavian sea warriors active from the late 8th to the mid-11th centuries. They established settlements in the British Isles (especially at York and Dublin), where an Anglo-Danish dynasty was founded (1016) by Canute, and in Normandy. They also settled in the E Baltic, *Vinland, and Greenland. Viking literature (the sagas) and art are noted for their vitality.

Villa, Pancho (Francesco V.; 1878–1923) Mexican revolutionary. Villa supported successive revolts against Mexican governments and came to dominate the north with an irregular army. In 1916 he raided Texas and New Mexico. After an agreement with the Mexican Government in 1920, he disbanded his army. He was later assassinated.

Villa-Lobos, Heitor (1887–1959) Brazilian composer. He toured Brazil collecting folk-songs and in 1945 founded the Brazilian Academy of Music. His vast output includes 12 symphonies, *Bachianas Brasileiras* (1930–45), *Rudepoema* (1921–26) for piano, and the ballet *Uirapurú* (1917).

Villanovan The earliest Iron Age culture of N Italy, named after the site of Villanova near Bologna. Emerging in the 9th century BC Villanovan culture is characterized by sophisticated metalworking.

villein The unfree peasant of medieval Europe, holding land from the lord of the *manor in return for labour. Many villeins acquired written titles to their holdings following the *Peasants' Revolt.

Villeneuve, Pierre (1763–1806) French admiral during the Napoleonic Wars. He was defeated by Nelson at Trafalgar (1805) and taken prisoner. After his release he committed suicide.

Villon, François (1431–?1463) French poet. He led a life of vagrancy and crime and was

condemned to be hanged in 1463 but was banished instead. The ballades and other poems in his *Lais* and *Grand Testament* are characterized by compassion, irony, and a fascination with death and decay.

Vilnius (Polish name: Wilno) 54 40N 25 19E. The capital of Lithuania, on the River Neris. *History:* the capital of Gediminas, who founded Lithuania in the 14th century, it was ceded to Russia in 1795. After World War I it was given to newly independent Lithuania but was seized by Poland in 1922. It then became part of the Soviet Union (1940–91). The Germans occupied Vilnius in World War II, when its large Jewish population was virtually exterminated. Population (2000 est): 577 969.

Vimy See WORLD WAR I.

vinegar A dilute solution of acetic acid, produced from soured wine, beer (malt vinegar), or other dilute alcoholic liquids. It is used in salad dressings, preserving, etc.

Vinland The Viking name for the area of NE America, probably Newfoundland, discovered, explored, and briefly settled by *Leif Eriksson (c. 1000). The area was possibly visited a decade earlier by Bjarni Herjólfsson.

viol A bowed stringed instrument, common from the 15th until the early 18th centuries, when it was eclipsed by the *violin. Viols have six strings, tuned mainly in fourths, and are held between the knees when played. The bass viol acquired the name **viola da gamba** from the Italian *gamba*, leg.

viola A musical instrument of the *violin family. It is similar to the violin, although larger in size, having thicker strings and a heavier bow. It has a range of over four octaves from the C below middle C; its strings are tuned C, G, D, A.

violet A perennial herb of the genus *Viola*, up to 40 cm tall, whose solitary flowers are usually blue, purple, or white. The sweet-scented garden violets are derived from the Eurasian sweet violet (*V. odorata*). The dog violet (*V. canina*) is another common species, and the genus also includes the *pansies. Family: *Violaceae*.

violin A bowed string instrument, the soprano member of the family that includes the viola, cello, and double bass. It has four strings tuned in fifths (G, D, A, E), an arched bridge, and a smooth fingerboard. It has a range of over four octaves from the G below middle C. It is played with a bow strung with horsehair; the strings can also be plucked. The design of the violin was perfected by the Amati, Guarneri,

and Stradivari families in Italy between the mid-16th and early 18th centuries.

viper A venomous snake, belonging to the family *Viperidae* (150 species), that has long erectile fangs. 0.3–3 m long, vipers feed on small animals. Most give birth to live young. Old World vipers (subfamily *Viperinae*) are stout-bodied and broad-headed and mostly ground-dwelling. New World vipers (subfamily *Crotalinae*) are known as pit vipers.

Virgil (Publius Vergilius Maro; 70–19 BC) Roman poet. Reacting against a troubled political background, he described in his *Eclogues* (42–37 BC) an idealized pastoral landscape. His more practical vision of Italy in the *Georgics* (36–29 BC) is informed by his interest in agriculture. During his final years he worked on the *Aeneid*, a national epic describing the wanderings of Aeneas, and the founding of Rome and extolling Augustus. The supreme poet of imperial Rome, Virgil became the object of superstitious reverence to later generations.

virginals A keyboard instrument of the 16th and 17th centuries, the earliest and simplest form of the *harpsichord. It was often made in the form of a box, which could be set on the table; the strings ran parallel to the keyboard.

virginals

Virginia A state on the mid-Atlantic coast of the USA. The low-lying coastal plain rises to the forested Appalachian Mountains in the W. The principal industries are chemicals and tobacco processing. Fishing, tourism, and mining are also significant. The state produces tobacco, hay, corn, apples, and peaches. *History:* one of the 13 original colonies, it was named after Elizabeth I of England, the Virgin Queen. It became a state in 1788. Area: 105 716 sq km (40 817 sq mi).

Population (2000 est): 7 078 515. Capital: Richmond.

Virginia creeper A climbing shrub, also called woodbine, of the genus *Parthenocissus*, especially *P. tricuspidata* of SE Asia and *P. quinquefolia* of North America. It clings by means of branched tendrils. Family: Vitaceae.

Virgin Islands A group of approximately 100 small islands in the Caribbean, in the Lesser Antilles. The **British Virgin Islands** consist of about 40 islands, the largest being Tortola. They became a British crown colony (now a United Kingdom overseas territory) in 1956. Area: 153 sq km (59 sq mi). Population (2001 est): 20 000. Capital: Road Town. The **Virgin Islands of the United States** consist of three main islands, the largest being *St Croix, and about 50 smaller ones. They were purchased from Denmark in 1917. Area: 344 sq km (133 sq mi). Population (2002 est): 110 000. Capital: Charlotte Amalie.

Virgo (Latin: Virgin) A large equatorial constellation on the *zodiac between Libra and Leo. The brightest star is Spica. The constellation contains the **Virgo cluster** of galaxies, which contains over 2500 members.

virtual particle A short-lived particle that is used in quantum mechanics to represent the interaction between stable particles. In quantum mechanics the electromagnetic interaction would be represented by the exchange of virtual photons between them. The *strong interaction is represented by the exchange of virtual pions, the *weak interaction by the exchange of intermediate vector bosons, and the *gravitational interaction by the exchange of virtual gravitons.

virtual reality A computer-generated environment that simulates the real world or creates realistic fantasy worlds. Virtual reality machines provide sounds and images of the artificial environment through eyescreens and headphones. The computer is linked to movement sensors and other, often manual, controls: the images change in response to the movements of the user. Virtual reality technology has been developed for such uses as flight simulation but can also be used for games.

virus A minute noncellular particle that can reproduce only in living cells. Viruses consist of a core of nucleic acid (either *DNA or *RNA), surrounded by a protein coat (capsule) and, in some types, a lipid-containing envelope. Viruses alternate between an inert virion stage

and an infective stage, in which the capsule binds to the host cell and the viral nucleic acid (containing its genes) enters the cell and directs the components of the host cell to assemble replica viruses. These are finally liberated, often with damage to or death of the host cell. Viruses are responsible for a wide range of diseases in plants and animals.

viscacha A gregarious South American *rodent, *Lagostomus maximus*, related to *chinchillas. Over 50 cm in length, viscachas live in warrens of 12–15 burrows. They are nocturnal and feed on grasses, roots, and seeds. Family: Chinchillidae.

Visconti, Luchino (1906–76) Italian film director. Born into a noble family, he became a committed Marxist. Early films, such as *Ossessione* (1942), are neorealist in style but later films are characterized by elaborate visual composition. They include *The Leopard* (1963), *The Damned* (1970), and *Death in Venice* (1971).

viscosity A measure of the degree to which a fluid resists a deforming force. It is defined by Newton's law of viscosity: if two layers of a fluid, area *A* and distance *x* apart, flow with a relative velocity *v*, there is a force between them equal to $\eta Av/x$. η is the coefficient of viscosity. Viscosity is measured in newton seconds per square metre. The **kinematic viscosity** is the coefficient of viscosity divided by the density of the fluid.

Vishakhapatnam 17 42N 83 24E A city in India, on the Bay of Bengal. It is an important port; India's first steamer was launched here in 1948. Population (1991): 750 024.

Vishnu The second member of the Hindu trinity, the *Trimurti. He is known as the Preserver and is married to *Lakshmi. He has ten avatars or manifestations, the most famous of which are *Rama and *Krishna. He is often portrayed as lying asleep on a seven-headed snake.

Visigoths A branch of the *Goths. Forced by the *Huns across the Danube (376 AD), they destroyed a Roman army at Adrianople (378) and, under Alaric I (c. 370–410 AD), sacked Rome in 410.

Vistula, River (Polish name: Wisła) The longest river of Poland, rising in the Carpathian Mountains and flowing N and NW to enter the Baltic Sea near Gdańsk. Length: 1090 km (677 mi).

vitamin An organic compound, other than a protein, fat or carbohydrate, that is required in small amounts by living organisms for normal

growth and maintenance of life. Vitamins function as *coenzymes in many metabolic reactions.

vitamin A (or retinol) A fat-soluble vitamin and an essential constituent of the visual pigments of the eyes. It also functions in the maintenance of healthy mucous membranes. Sources include liver, fish-liver oils, and egg yolk.

vitamin B complex A group of water-soluble vitamins that are all constituents of *coenzymes involved in metabolic reactions. Thiamine (B_1) occurs in cereal grains, beans, peas, and pork. Deficiency leads to *beriberi. Riboflavin (B_2) is found in yeast, liver, milk, and green leafy plants. Nicotinamide (nicotinic acid or niacin) can be synthesized from the amino acid tryptophan; liver is a rich source of the vitamin and milk and eggs of tryptophan. Vitamin B_6 (pyridoxine) is widely distributed in yeast, liver, milk, beans, and cereal grains. Also common in many foods are pantothenic acid, a constituent of coenzyme A; biotin, which is synthesized by intestinal bacteria; and choline, a precursor of *acetylcholine (which transmits nervous impulses). Folic acid and vitamin B_{12} (cyanocobalamin) can be synthesized by intestinal bacteria. Liver is a good source of vitamin B_{12} .

vitamin C (or ascorbic acid) A water-soluble compound that is required especially for the maintenance of healthy connective tissue. It cannot be synthesized by man and certain animals. Fruit and vegetables, especially citrus fruits, are good sources. Deficiency of vitamin C leads to *scurvy.

vitamin D A fat-soluble vitamin consisting of several related compounds (sterols), chiefly cholecalciferol (D_3) and ergocalciferol (D_2). Vitamin D is important in calcium and phosphorus metabolism. Vitamin D_3 is produced by the action of sunlight on skin. Fish and fish-liver oils are the main natural sources, while vitamin D_2 is added to margarine. Deficiency in infants causes *rickets.

vitamin E A vitamin consisting of a group of related compounds that function as biological antioxidants. The most potent form of vitamin E is alpha-tocopherol, found in green leafy plants, cereal grains, and eggs.

vitamin K A vitamin consisting of a group of quinone-based compounds that are necessary for the formation of prothrombin, important in blood clotting. Vitamin K occurs in vegeta-

bles, cereals, and egg yolk and can be synthesized by intestinal bacteria.

Viti Levu The largest Fijian island, in the S Pacific Ocean. Mount Victoria rises to 1302 m (4341 ft). Sugar, pineapples, cotton, and rice are produced. Area: 10 386 sq km (4010 sq mi). Population (latest est): 340 561. Chief settlement: Suva.

Vitoria 42°51'N 2°40'W A city in N Spain. Wellington defeated the French here (1813). Population (1998 est): 216 527.

Vitruvius (Marcus Vitruvius Pollio; 1st century BC) Roman architect and military engineer. His *De architectura* describes all aspects of Roman architecture. It strongly influenced architects in Renaissance Italy.

Vivaldi, Antonio (1678–1741) Italian composer and violinist, based mainly in Venice. Besides operas and sacred music, Vivaldi wrote over 450 concertos for various instruments, including a set of four violin concertos entitled *The Four Seasons*.

Viverridae A family of mammals of the order Carnivora. The 82 species include the genets, civets, linsangs, and mongooses. Viverrids typically have a long body and tail and short legs.

viviparity A reproductive process in animals in which the embryo develops within the maternal body. Viviparity occurs in most mammals—the embryos being nourished through the placenta—and in some snakes, lizards, and sharks.

vivisection The use of live animals for experiments, either to determine the effects of drugs, cosmetics, food additives, and other chemicals on living organisms, or in medical and biological research. In the UK experimenters are licensed by the Home Office. Alternatives to live animals include the use of test-tube (*in vitro*) techniques, tissue cultures, and computer-based mathematical models.

Vladikavkas (name from 1944 until 1954: Dzauzhikau; name from 1954 until 1991: Ordzhonikidze) 43°02'N 44°43'E A city in S Russia, the capital of the North Ossetian Republic. An important road and rail junction, it has metallurgy and food processing industries. Population (1999 est): 310 600.

Vladivostok 43°09'N 131°53'E A port in SE Russia, on the Sea of Japan. It is the terminus of the Trans-Siberian Railway and a major Russian naval base. Population (1999 est): 613 100.

Vltava, River A river in the Czech Republic,

rising in the Forest of Bohemia and flowing mainly SE then N to join the River Elbe. Length: 434 km (270 mi).

vodka A spirit distilled from potatoes, rye, barley, or malt, usually in E Europe. Being colourless and without a distinctive flavour, vodka is used in many mixed drinks.

Vojvodina An autonomous province of N Serbia. Low lying and fertile, it produces cereals, fruit, and vegetables. With a large Hungarian minority, it became a focus of ethnic unrest in the late 1980s; in 1990 it was stripped of its autonomous status but this was restored in 2002. Area: 22 489 sq km (8683 sq mi). Population (2002): 2 031 992. Capital: Novi Sad.

volcanoes Vents or fissures in the earth's surface through which magma rises from the earth's interior and erupts lava, gases, and pyroclastic material. Basaltic lava tends to produce gently sloping cones, the lava flowing over a wide area, whereas the more viscous acid lava produces a steeper-sided cone. Volcanic cones are often topped by craters, created by volcanic explosions. The world's highest volcano (extinct) is Aconcagua (6959 m) in the Andes.

vole A small short-tailed *rodent belonging to the subfamily *Microtinae*. Voles are found in Europe, Asia, and North America and range in size from 7 to 35 cm. They have blunt noses and their cheek teeth grow continuously. The common field voles (genus *Microtus*; 42 species) eat nearly their own weight in seeds, roots, and leaves every 24 hours. Family: *Cricetidae*.

Volga, River A river in W Russia, the longest river in Europe. Rising in the Valdai Range, it flows mainly E and S to the Caspian Sea. Length: 3690 km (2293 mi).

Volgograd (name until 1925: Tsaritsyn; name from 1925 until 1961: Stalingrad) 48°45'N 44°30'E A city in SW Russia, on the River Volga. It has been rapidly redeveloped since World War II (see STALINGRAD, BATTLE OF). Population (2002): 1 011 417.

volleyball A six-a-side court game invented in the USA in 1895, in which an inflated ball is hit with the hands or arms. After the service each team is allowed to hit the ball three times before it crosses the net. A rally ends when the ball touches the ground or is not returned correctly. A game goes to 15 points and a 2-point lead is required to win.

volt (V) The SI unit of potential, potential difference, or electromotive force equal to the po-

tential difference between two points on a conductor carrying a steady current of one ampere when the power dissipated is one watt. Named after the Italian physicist Alessandro Volta (1745–1827).

Volta, River A river in West Africa. Its headstreams, the Black Volta and White Volta Rivers, join in N central Ghana to form the River Volta, which then flows S to enter the Bight of Benin. Length: 480 km (300 mi).

Voltaire (François-Marie Arouet; 1694–1778) French writer, philosopher, and moralist, whose versatile work epitomizes the age of Enlightenment. An outspoken opponent of political and religious tyranny, he was obliged to spend most of his later life in exile. His voluminous writings include the satirical fable *Candide* (1759), *Traité de la tolérance* (1763), the *Dictionnaire philosophique* (1764), and histories of Peter the Great and Louis XV.

voltmeter A device for measuring voltage. In the direct-current moving-coil voltmeter the magnetic force on a coil in a magnetic field is used to deflect a needle, the high impedance needed being provided by a high resistance in series with the coil. Cathode-ray oscilloscopes and digital voltmeters are used for both direct and alternating current.

volleyball. The dimensions of the court. The height of the ceiling is a minimum of 7 m (23 ft). The top of the centre of the net is 2.43 m (8 ft) above the floor for men or 2.24 m (7 ft 4 in) for women.

Volturno, River A river in S central Italy, flowing SE and SW to the Tyrrhenian Sea. In 1860 it was the scene of a battle in which Garibaldi defeated the Neapolitans (see **RISORGIMENTO**). Length: 175 km (109 mi).

Voluntary Service Overseas (VSO) A British organization founded in 1958 by Alexander Dickson (1914–94) to send skilled volunteers at the request of overseas governments to work as teachers and doctors or on agricultural, industrial, or business schemes.

von Braun, Wernher (1912–77) US rocket engineer, born in Germany. He was director of the German Rocket Test Centre at Peenemünde during World War II, when the *V-2 rocket was built. After the war von Braun worked on US space rockets (see **ROCKETS**).

voodoo Magical and animistic cults of West African origin, practised in the Caribbean and in parts of South America. Trances induced by spirit possession are central to voodoo ritual. Other elements in the nocturnal rites are animal sacrifice, drum beating, dancing, and de-based elements of Roman Catholic liturgy.

Voronezh 51 40N 39 13E A city in W Russia. It is at the centre of an agricultural region. Population (1999 est): 908 000.

Vorster, Balthazar Johannes (1915–83) South African statesman; prime minister (1966–78) and briefly president (1978). Vorster was known for his strict enforcement of racial policies. He retired during investigations of financial irregularities.

Vorticella A genus of microscopic aquatic single-celled organisms (see **PROTOZOA**). 0.05–0.15 mm long, they are bell-shaped and attached to the substrate by a long coiled contractile stalk. Phylum: *Ciliophora*.

Vorticism A British art movement inaugurated in 1913 by Wyndham *Lewis. It called for an art expressing the advanced technology and pace of modern life. Its journal, *Blast*, in-

cluded contributions from Ezra *Pound and T. S. *Eliot. The sculptors Jacob *Epstein and Henri Gaudier-Brzeska (1891–1915) were also associated with the movement.

Vosges A range of mountains in NE France. It extends roughly N–S to the W of the River Rhine, rising to 1423 m (4672 ft).

Voyager probes Two US planetary probes launched in 1977. Voyager 1 approached Jupiter in 1979 then flew towards Saturn, which it reached in 1980. Voyager 2 flew past Jupiter in 1979, Saturn in 1981, Uranus in 1986, and reached Neptune in August, 1989.

VSO See **VOLUNTARY SERVICE OVERSEAS**.

Vulcan The Roman god of fire. He became patron of smiths and metalworkers after his identification with the Greek Hephaestus, whose myths he assumed.

vulcanization A process in which sticky natural rubber is made into a harder useful material by heating it with sulphur. Vulcanization involves the formation of sulphur bridges (–S–S–) between the polymer chains. An inert filler is incorporated at the same time.

Vulgate The Latin translation of the Bible made by St Jerome in the 4th century AD. The oldest surviving translation of the whole Bible, it was adopted by the Council of Trent (1546) as the official version of the Roman Catholic Church.

vulture A large carrion-eating bird belonging to the order *Falconiformes*. 60–100 cm long with a wingspan of up to 270 cm, vultures have a fleshy naked head. New World vultures (family *Cathartidae*; 6 species) have a slender hooked bill, large feet, and are voiceless. See also **CONDOR**. Old World vultures (subfamily *Aegyptiinae*; 20 species) are widely distributed in open temperate and tropical regions and have a feathered ruff at the base of the neck. Family: *Accipitridae* (hawks and eagles). See also **GRIFON VULTURE**; **LAMMERGEIER**.

Wabash River A river of the E central USA, flowing from W Ohio to the Ohio River. Length: 765 km (474 mi).

wadi A normally dry valley in a desert area. It will occasionally contain water following the infrequent violent downpours of rain that occur in these areas.

Wagner, (Wilhelm) Richard (1813–83) German composer. His early operas *Rienzi* (1842) and *The Flying Dutchman* (1843) led to his appointment as conductor at the Dresden opera house. In 1845 his opera *Tannhäuser* was successfully performed there but in 1848, after the failure of the May uprising, Wagner fled to Zürich, where he began the opera cycle *Der Ring des Nibelungen*, an epic treatment of German mythology. In this work and in *Tristan und Isolde* (1865) Wagner developed the use of leitmotifs to integrate music and drama in opera. In 1868 he produced his comic opera *Die Meistersinger von Nürnberg*; he also raised money to build a theatre in Bayreuth for the first performance of the *Ring cycle* (1876). His last opera, *Parsifal*, was produced in Bayreuth in 1882.

Wagram, Battle of (5–6 July 1809) The battle in which Napoleon finally defeated the Austrians. Fought NE of Vienna, Wagram witnessed the largest recorded concentration of field artillery.

wagtail A songbird noted for its constantly bobbing tail. The pied wagtail (*Motacilla alba*) is black, grey, and white, and about 18 cm long. The larger grey wagtail (*M. cinerea*) lives near streams, catching flying insects. The yellow wagtail (*M. flava*) visits Britain in the summer. Family: *Motacillidae* (wagtails and pipits).

Waikato River The longest river in New Zealand, in North Island. Rising in Mount Ruapehu, it flows NW to the Tasman Sea. Length: 350 km (220 mi).

Waitangi, Treaty of (1840) A treaty be-

tween the British Government and 46 Maori chiefs in New Zealand, which gave the Maori full rights and confirmed their possession of their lands. Its infringement by settlers led to the *Maori Wars. The signing of the treaty on 6 Feb is a national holiday in New Zealand (**Waitangi Day**).

Wakashan languages A group of *North American Indian languages of the NW Pacific coast, including Nootka and Kwakiutl.

Wakefield 1, 53 42N 129W A city in N England, in Wakefield unitary authority, West Yorkshire on the River Calder. A battle was fought here in 1460 during the Wars of the Roses. Population (2001): 76 886. **2**, a unitary authority in N England, in West Yorkshire. Area: 333 sq km (129 sq mi). Population (2004 est): 319 800.

Walachia (or **Wallachia**) A principality in SE Europe. Founded in 1290, it was a Hungarian fief until 1330. In the late 14th century it came under Turkish domination. In 1859 Walachia united with *Moldavia to form Romania, independent from 1878.

Walcheren An island in the SW Netherlands, in the Scheldt estuary. Protected from the sea by dykes, it produces sugar beet and vegetables. Area: 212 sq km (82 sq mi). Chief towns: Flushing and Middelburg.

Walcott, Derek (1930–) St Lucian poet and playwright. His volumes include *Collected Poems* (1986), the epic *Omeros* (1991), and *The Bounty* (1997). He received the Nobel Prize in 1992.

Waldheim, Kurt (1918–2007) Austrian diplomat and statesman; secretary general of the UN (1972–81), president of Austria (1986–92). He became president despite controversy over his war record as a Nazi army officer.

Wales (Welsh name: Cymru) A principality in the W of Great Britain, comprising a political division of the *United Kingdom. It is bordered

by England to the E, the Irish Sea to the N, St George's Channel to the W, and the Bristol Channel to the S. Much of the country is covered by hills and mountains. Most of the population lives in the S and along the coastal strip in the N. Wales is administered by 22 unitary authorities (10 counties and 12 boroughs). *Economy*: the valleys and coastal plain in the S became highly industrialized in the 19th century, owing to the coal found there; however, there is now only one working pit. Wales still accounts for about half the UK's production of steel sheet and almost all its production of tinplate. Since the decline of traditional industries in the 1980s, South Wales has become one of Europe's chief centres for the manufacture of electrical goods and components (mostly Japanese and Korean-owned companies). Milford Haven, in the far SW, is used for the importing of oil, which has given rise to oil refining and associated petrochemical industries. Tourism, forestry, and sheep rearing are also important. *History*: the Celts living in Wales were little affected by the Roman occupation and were christianized in the 3rd century AD. King *Offa of Mercia built a great dyke (8th century) stretching from sea to sea, behind which the Welsh kingdoms were contained. Temporary unity was achieved by Hywel the Good (d.950) but subsequent disunity enabled Edward I of England to defeat Llywelyn ap Gruffud (d.1282) and establish English supremacy. Owen Glendower's revolt in the early 14th century was also crushed and English rule was formalized with the Acts of *Union (1536-43). Wales adopted Protestantism in the 16th century and has been a centre of Nonconformity since the 18th century. The early 19th century was characterized by rural overpopulation and near famine; Wales also suffered during the Depression of the 1930s. Welsh nationalism (see **FLAID CYMRU**) became a growing force in the 1960s and the 1970s, although *devolution plans were rejected in a referendum in 1979. A further referendum (1997) resulted in a small majority in favour of a Welsh assembly. This was established in May 1999. Area: 20 767 sq km (8016 sq mi). Population (2001): 2 903 085. Capital: Cardiff.

W

Wałęsa, Lech (1943-) Polish statesman and trade unionist; president of Poland (1990-95). An electrician at the Gdansk shipyard, he became leader of the independent trade union *Solidarity from its establishment (1980). He was awarded the 1983 Nobel Peace Prize for his efforts to ensure workers' rights. As president he faced economic crisis and political instability.

walking (or **race walking**) In athletics, a form of racing in which a particular gait is used; the advancing foot must touch the ground before the other leaves it.

wallaby A herbivorous marsupial belonging to the *kangaroo family (*Macropodidae*). Hare wallabies (genus *Lagorchestes*; 3 species) are the smallest, measuring up to 90 cm in length. Rock wallabies (genus *Petrogale*; 6 species) have rough-soled feet for negotiating rocky ground. Scrub wallabies (genus *Protemnodon*; about 11 species) inhabit brush or open forest.

Wallace, Alfred Russel (1823-1913) British naturalist, who formulated a theory of evolution by natural selection independently of Charles *Darwin. Wallace spent eight years (1854-62) assembling evidence in the Malay Archipelago, sending his conclusions to Darwin in England. He also proposed an imaginary line (**Wallace's line**) dividing the fauna of Asia and Australia.

Wallace, Sir William (c. 1270-1305) Scottish hero who resisted English rule in the 1290s. In 1297 he captured Stirling Castle and was proclaimed warden of Scotland. However, in 1298 he was defeated by Edward I at Falkirk and he was later captured and hanged.

Wallace Collection An art museum in Manchester Square, London. The collection, which was given to the nation in 1897, was formed by the 4th Marquess of Hertford and his half-brother Sir Richard Wallace (1818-90). It includes 18th-century French paintings and furniture, armour, and *The Laughing Cavalier* by *Hals. A large extension opened in 2000.

wallcreeper A Eurasian songbird, *Tichodroma muraria*, about 17 cm long and having a grey plumage with broad black wings patched with red. It climbs rock faces clinging with its sharp claws and probing crevices for insects. Family: *Sittidae* (nuthatches).

Wallenberg, Raoul (1912-71947) Swedish diplomat. Sent to Hungary in 1944 as a special envoy, he helped thousands of Jews to escape the Nazis, issuing them with Swedish passports. In 1945 he was arrested by the Soviet authorities and disappeared. Although the Russian government has stated that he died in 1947 in prison, there is considerable uncertainty as to his fate.

Waller, Fats (Thomas W.; 1904-1943) US Black jazz musician and songwriter. An exceptional pianist, he recorded many of his own compositions, including "Honeysuckle Rose" and "Ain't Misbehavin'."

wallflower An annual or perennial herb of the genera *Cheiranthus* (about 10 species), native to Eurasia and North America, or *Erysimum* (about 80 species), native to Eurasia. Wallflowers have orange, yellow, red, or brown flowers. Many varieties of *C. cheiri* are cultivated as garden ornamentals. The Siberian wallflower (*E. × marshallii*) has brilliant orange or yellow flowers. Family: *Cruciferae*.

Wallis, Sir Barnes (Neville) (1887–1979) British aeronautical engineer. He designed the airship R100 and geodetic constructions, which he used in his Wellington bomber. He also invented the swing-wing aircraft but is best known for his invention in 1943 of the bouncing bomb, used to destroy the Ruhr dams in Germany.

Wallis and Futuna A French overseas territory in the SW Pacific Ocean comprising two small groups of islands. The chief of the **Wallis Islands** is Uvéa, while the **Futuna Islands** (or Îles de Horne) consist of Futuna and Alofi. Copra and timber are produced. Area: 275 sq km (106 sq mi). Population (1993 est): 14 400. Capital: Matautu, on Uvéa.

Walloons The French-speaking inhabitants of Belgium, living mainly in the S and E of the country. They are descended from the northernmost group of *Franks who adopted the Romance speech. Compare FLEMINGS.

Wall Street The centre of the financial district in New York City, in which the New York Stock Exchange is situated. Wall Street, often known as the Street, is synonymous with the stock exchange.

walnut A tree of the genus *Juglans* (about 17 species), especially the Eurasian species *J. regia*, which produces the best quality nuts. Up to 30 m tall, it has grey furrowed bark. The plum-sized green fruits each contain an edible kernel enclosed in a wrinkled pale-brown shell. The whole fruits may be eaten pickled. The timber of this species and of the American black walnut (*J. nigra*) is valued for furniture. Family: *Juglandaceae*.

Walpole, Sir Robert, 1st Earl of Orford (1676–1745) British statesman, regarded as the first prime minister (1721–42). He became a Whig MP in 1700 and was secretary for war (1708–10) and treasurer of the navy (1710–11). In 1712 he was impeached for corruption but came back into the government (1715–17) as first lord of the treasury and chancellor of the exchequer. He became paymaster general in 1720, and returned to the treasury

after his effective handling of the *South Sea Bubble crisis (1721). His power was subsequently maintained by the adroit use of patronage. However, conflict with Spain led to the War of Jenkins' Ear and Walpole was forced to resign. His fourth son, **Horace Walpole, 4th Earl of Orford** (1717–97), was a writer. Strawberry Hill, his villa at Twickenham, became a showpiece of the gothic architectural revival. He wrote the popular gothic novel, *The Castle of Otranto* (1765) and numerous letters.

walrus A large *seal, *Odobenus rosmarus*, of coastal Arctic waters. Males are up to 3.7 m long and weigh about 1400 kg. Walruses have tusks—elongated upper canine teeth up to 1 m long—used in digging for molluscs on the sea bed and for fighting and display. Family: *Odobenidae*.

Walsall 1. 52 35N 158W An industrial town in central England, in Walsall unitary authority, West Midlands. Population (1991): 174 739. 2. A unitary authority in W central England, in West Midlands. Area: 106 sq km (41 sq mi). Population (2001): 253 502.

Walton, Ernest Thomas Sinton (1903–95) Irish physicist, who shared the 1951 Nobel Prize with Sir John *Cockcroft for their invention in 1929 of the first particle accelerator.

Walton, Izaak (1593–1683) English writer best-known for *The Compleat Angler* (1653), an entertaining treatise on fishing. He also wrote biographies of John Donne (1640), George Herbert (1670), and other churchmen.

Walton, Sir William (Turner) (1902–83) British composer. He first became well known through *Façade* (1922), a setting of poems by Edith Sitwell. Later works include two symphonies (1932–35, 1960), the opera *Troilus and Cressida* (1954), concertos for viola (1929), violin (1939), and cello (1957), the oratorio *Belshazzar's Feast* (1931), and music for Laurence Olivier's films of *Hamlet*, *Henry V*, and *Richard III*.

Wankel engine A four-stroke rotary *internal-combustion engine. It consists of a triangular-shaped rotating piston, with outward curved sides and rounded corners. This rotates in an oval-shaped chamber, which has inlet and exhaust ports and a sparking plug. The small number of moving parts and the lack of vibration are the chief advantages of this engine, but gas leakage has been the principal problem. It was invented by the German engineer Felix Wankel (1902–88). See illustration on p. 934.

Wannsee Conference (early 1942) The

conference held at Wannsee, near Berlin, at which the Germans formulated their plan to exterminate all European Jews. Chaired by Reinhard Heydrich, the conference appointed Adolf *Eichmann to organize the logistics of the "final solution." See also HOLOCAUST.

WAP (wireless application protocol) A standard protocol for data transmission used in connecting mobile telephones to the Internet. WAP phones are capable of sending and receiving e-mails and accessing a limited range of Internet services.

wapentake Any of the medieval administrative subdivisions into which the parts of England settled by the Danes (see DANELAW) were divided. They corresponded to the hundreds found in the rest of England.

Warbeck, Perkin (c. 1474–99) Flemish-born impostor, the focus of a Yorkist plot against Henry VII of England. Pretending to be the Duke of York (presumed murdered in 1483) he landed in Cornwall in 1497 but he and his 6000 followers fled in the face of Henry's troops. Captured at Beaulieu, he was hanged.

warble fly A parasitic fly belonging to the family *Oestridae*, widespread in Europe and North America. *Hypoderma boris* and *H. lineatum* attack cattle: eggs are laid on the legs and the larvae burrow into the tissue. When mature the larvae leave the host and pupate in the ground.

Wankel engine. The rotary piston draws the fuel mixture through the inlet port into chamber A. At the same time the gas drawn into chamber B in the previous third of a cycle is compressed and ignited to drive the piston round. Meanwhile, the gas in chamber C is discharged through the outlet port.

warbler A small songbird belonging to a fam-

ily (*Sylviidae*; 400 species) widely distributed in Old World regions. 9–25 cm in length, warblers have slender bills, soft thick plumage, and feed on insects and berries. They are usually drab brown or olive in colour. See BLACKCAP; CHIFF-CHAFF; REED WARBLER; WHITETHROAT.

Ward, Sir Joseph George (1856–1930) New Zealand statesman; Liberal (1906–12) and United Party (1928–30) prime minister. He advocated unity within the British Empire in foreign affairs and led the Liberals in the coalition government (1915–19) under W.F. Massey, before becoming leader of the United Party.

Wardrobe A royal administrative department in medieval England. Originally the room in which the king kept his clothes and jewels, it became a government department in the late 12th century. Controlled by the king, it was used by Henry III to counterbalance the Exchequer. It declined in importance during the 14th century.

Warhol, Andy (Andrew Warhola; 1926–87) US *pop artist and film producer. He achieved notoriety in the early 1960s with paintings of soup cans and portraits of film stars made with the silk-screen printing technique. His films include *The Chelsea Girls* (1966).

War of 1812 (1812–14) The war declared on Britain by the USA in response to Britain's impressment of sailors from US ships and its blockade on US shipping during the Napoleonic Wars. The USA was also incensed by British assistance to Indians harassing NW settlements. The war was inconclusive but helped forge US unity.

war on terrorism The "war" against international terrorism announced by President George W. *Bush in the wake of *September 11, 2001. Bush declared that the USA would use military force to destroy international terrorist networks and any regimes found to be harbouring them. Several countries, including the UK, offered military assistance while others pledged operational support. Blame for the September 11 attacks was quickly pinned on the *al-Qaida network controlled by Osama *Bin Laden, which was based in Afghanistan and known to have links with the *Taleban regime. Accordingly, the USA began air strikes on Afghan targets in early October 2001, leading to the total collapse of Taleban power by mid-November. US forces then concentrated on the Tora Bora, a cave complex in the S Afghan mountains believed to be the stronghold of Bin Laden. This resulted in the death or capture of many al-Qaida fighters but Bin Laden is known

to have survived. Although al-Qaida's Afghan operation had been destroyed by the end of 2001, Taliban fighters have continued to engage Western forces. US attention then focused on the aim of destroying the regime of Saddam *Hussein in Iraq (see IRAQ WAR).

Warrington 1. 53 24N 2 37W An industrial town in NW England, in Warrington unitary authority, Cheshire. It was designated a new town in 1968. Population (2001): 158 195. 2. A unitary authority in NW England, in N Cheshire. Area: 176 sq km (68 sq mi). Population (2004 est): 193 700.

Warrumbungle Range A mountain range of Australia. It lies in N New South Wales and contains the Breadknife, a rock 90 m (300 ft) high but only 1.5 m (5 ft) wide.

Warsaw (Polish name: Warszawa) 52 15N 21 00W The capital of Poland, on the River Vistula. It became the capital in 1611. It was occupied by Russia in 1794 and later by France and Prussia. After German occupation in World War I, it became the capital once more when independence was achieved (1918). During the German occupation in World War II, a ghetto was established (1940) for 400 000 Jews and in February 1943, the survivors (about 100 000) staged an uprising, after which they were put to death. After the war much of the old town was faithfully reconstructed. It is now an important industrial and communications centre. Population (2005 est): 1 694 854.

Warsaw Pact (or **Warsaw Treaty Organization**) A military treaty signed in 1955 by the Soviet Union, Albania (until 1968), Bulgaria, Czechoslovakia, East Germany, Hungary, Poland, and Romania. Formed as a communist counterpart to NATO, it was dissolved in 1991.

Wars of Religion (1562–98) French civil wars arising out of the struggle of the *Huguenots (French Protestants) for religious liberty and the rivalry between Protestants and Roman Catholic nobles. The wars ended in the victory of the Huguenot leader Henry of Navarre (subsequently Henry IV), who in 1598 issued the Edict of *Nantes, giving the Huguenots religious freedom.

wart A small leathery growth on the skin, caused by human papillomaviruses. Warts are common in children and usually appear on the hands and on the soles of the feet (plantar warts or verrucae). Genital warts are often associated with other infections of the genital area. Warts appear suddenly and may disappear without treatment. Persistent warts can

be treated by cauterization, freezing, or with drugs.

warthog A wild pig, *Phocochoerus aethiopicus*, of tropical African woodland. Short-legged, with a large head, bulging eyes, and long curved tusks, warthogs grow to about 75 cm high. They are grey-brown with sparse body hair and feed during the day on roots, grass, etc.

Warwick 52 17N 1 34W A town in central England, the administrative centre of Warwickshire on the River Avon. It is a historic town with a 14th-century castle. Population (2001): 25 434.

Warwick, Richard Neville, Earl of (1428–71) English statesman, known as the Kingmaker. A supporter of the Yorkists in the Wars of the Roses, he was responsible for the seizure of the Crown in 1461 by Edward, Duke of York (Edward IV). In 1470, he changed sides and briefly restored Henry VI to the throne. After the Lancastrians were routed (1471), he was killed, at Barnet.

Warwickshire A county in the Midlands of England. It consists mainly of undulating countryside, drained to the SW by the River Avon. It is predominantly agricultural, having lost the industrial NW (including Birmingham and Coventry) to West Midlands in 1974. Area: 1981 sq km (765 sq mi). Population (2004 est): 525 500. Administrative centre: Warwick.

Wash, the A shallow inlet of the North Sea, in E England between Lincolnshire and Norfolk. Length: about 30 km (19 mi). Width: 24 km (15 mi).

Washington One of the Pacific states in NW USA. Mountains ring the state, including Mount *St Helens, and the Columbia Basin covers much of the central area. The state's major manufacturing industry is the construction of aircraft. Attempts to diversify the economy have led to a growing tourist industry and significant mineral extraction, especially of gold, silver, and uranium. *History:* the British Hudson Bay Company dominated the area until the 1840s. In 1846 the boundary between Washington and Canada was agreed and the state (1889) was named after George Washington. Area: 176 616 sq km (68 192 sq mi). Population (2005 est): 6 287 759. Capital: Olympia.

Washington, DC 38 55N 77 00W The capital of the USA, in the E on the Potomac River. Co-extensive with the District of Columbia, it is the centre of the government of the USA. Its many notable landmarks include the Washing-

ton Monument, the Lincoln Memorial, the Capitol, the White House, the *Pentagon, the Library of Congress, the Smithsonian Institution, and the Vietnam Veterans Memorial. *History*: its location was chosen by George Washington and approved by Congress in 1790. Planned by the French engineer, Pierre L'Enfant (1754–1825), its first constructions date from 1793. Population (2000): 572 059.

Washington, George (1732–99) US statesman and general; the first president of the USA (1789–97). Washington gained a high reputation in the *French and Indian War before becoming a leading opponent of British rule. On the outbreak of the *American Revolution (1775–83) he was appointed commander in chief of the American forces. After winning the final victory at Yorktown (1781), Washington presided over the Constitutional Convention (1787) and was unanimously elected president.

wasp A stinging insect, 6–40 mm long, belonging to the order *Hymenoptera*. The common European wasps (genus *Vespula*) are typical social wasps, forming colonies that consist of a queen, males, and workers. The adults feed on nectar, ripe fruit, insects, etc. New colonies are established by young fertilized

queens—the only individuals to survive the winter. Certain parasitic wasps lay their eggs in the nests of other wasps. Solitary wasps (family *Sphecidae*) lay their eggs in individual nests. *See also* GALL WASP; HORNET; POTTER WASP.

Wassermann, August von (1866–1925) German bacteriologist, who invented the Wassermann test for detecting *syphilis. Wassermann also developed a test for tuberculosis and an antitoxin against diphtheria.

watch A timepiece small enough to be worn by a person. Watches first came into use in the 16th century with the invention by Peter Henlein (1480–1542) of the mainspring. Based on a verge escapement, watches were then bulky devices worn on the girdle. The invention of the balance spring (claimed by both *Hooke and *Huygens) in 1675 converted the watch into an article that could be concealed in the pocket. By the 18th century pocket watches had attained a high degree of accuracy. At the beginning of the 20th century wrist watches were introduced. Between the wars these became smaller and cheaper and incorporated such features as rust and shock resistance, luminous dials, or self-winding mechanisms. In

quartz-crystal watch A crystal of quartz (Q) uses the piezoelectric effect accurately to control the frequency of an oscillating electronic circuit consisting of a capacitor (C) and inductance (L).

digital watch

watch. Early watches used the verge escapement of clocks. The balance wheel and lever escapement dominated watch design until the quartz crystal and digital watch emerged in the 20th century.

the early 1950s electromagnetic watches were developed, but it was not until the late 1960s that the first electronic watch appeared. In the 1970s quartz watches were developed without moving parts, the dial and hands being replaced by a digital display. Digital wrist watches now often incorporate additional functions, such as a tiny calculator.

water (H_2O) A colourless odourless tasteless liquid consisting of eight parts of oxygen to two parts of hydrogen by weight. Water covers 72% of the earth's surface and is found in all living matter, in minerals, and as a small but important constituent of the atmosphere. The solid form of water (ice) is less dense (916.8 kg/m^3) than the liquid at 0°C (999.84 kg/m^3), which is why ice floats and frozen water pipes burst. The maximum density (999.97 kg/m^3) occurs at 3.98°C , unlike most liquids in which the maximum density occurs at the melting point. The molecules of water are polar, i.e. they have a positive electric charge at one end and a negative at the other. This makes it an excellent solvent.

water beetle A beetle of the family *Dytiscidae*—the so-called true water beetles. The name is also used loosely for any aquatic beetle, including the *whirligig beetles (family *Cyprinidae*); the water scavenging beetles (family *Hydrophilidae*); and the crawling water beetles (family *Haliplidae*).

water boatman A *water bug belonging to the cosmopolitan family *Corixidae* (over 300 species). It has a flattened boat-shaped body with fringed oarlike hind legs and feeds on plant debris and algae, scooped up by the spoon-shaped front legs.

water buffalo A large buffalo, *Bubalus bubalis*, also called Asiatic buffalo or carabao, found wild in swampy land of SE Asia and widely domesticated throughout Asia. Up to 180 cm at the shoulder and heavily built, water buffaloes are grey-black with long backward-curving horns. Domestic breeds are used for milk and as draught animals.

water bug An insect of the suborder *Heteroptera* (see *HEMIPTERA*) that lives in or on fresh or brackish water. True water bugs include the *backswimmer and *water boatman. The surface water bugs include the pond skater (*Gerridae*), water cricket (*Veliidae*), and water measurer (*Hydrometridae*).

water chestnut An annual aquatic plant of the genus *Trapa*, especially the Eurasian species *T. natans*, which has floating leaves, feathery

submerged leaves, and small white flowers. The hard spiny dark-grey fruit, up to 5 cm across, contains edible seeds. Family: *Trapaceae*. The Chinese water chestnut is the edible tuber of an E Asian sedge, *Eleocharis tuberosa*. Family: *Cyperaceae*.

watercress Either of two perennial herbs, *Nasturtium officinale* or *N. microphyllum* \times *officinale*, native to Eurasia and widely cultivated for the peppery young shoots, which are used in salads. Watercress grows submerged or floating in streams or on mud. Family: *Cruciferae*.

water flea A small freshwater *crustacean of the suborder *Cladocera* (about 430 species). Its compact body, usually 1–3 mm long, is covered, behind the head, by a laterally flattened transparent carapace, which encloses 4–6 pairs of appendages. Common genera: *Daphnia*, *Leptodora*; subclass: *Branchiopoda*.

Waterford (Irish name: Port Lairge) 1. 52 15N 7 06W A city and port in the SE Republic of Ireland, the county town of Co Waterford. It has Protestant and Roman Catholic cathedrals and is famous for its glass making. Population (2002): 44 564. 2. A county in the S Republic of Ireland, in Munster. Chiefly hilly, it is drained by the Rivers Blackwater and Suir. The traditional glass-making industry is of note. Area: 1838 sq km (710 sq mi). Population (2002): 101 518. County town: Waterford.

water gas A mixture of equal amounts of hydrogen and carbon monoxide made by passing steam over red hot coke: $H_2O + C \rightarrow H_2 + CO$. The mixture is a useful fuel gas. Water gas can be made in conjunction with an exothermic reaction—that between air and carbon: $O_2 + 4N_2 + 2C \rightarrow 2CO + 4N_2$. The mixture of carbon monoxide and nitrogen is called **producer gas**. It has a lower calorific value than water gas. The heating value of water gas can be improved by passing it through petroleum while hot (carburetting).

Watergate A building complex in Washington, DC, that gave its name to a political scandal culminating in the resignation of President Richard *Nixon. The *Washington Post* exposed the involvement of presidential officials in a burglary of Democratic Party headquarters at the Watergate during the 1972 presidential election, and in subsequent attempts to cover the matter up. Following the prosecution of top White House staff, Nixon resigned under the threat of impeachment (1974).

water glass (or **sodium silicate**) A mixture of silicates with the general chemical formula

$x\text{Na}_2\text{O}\cdot y\text{SiO}_2$, forming a clear viscous solution in water. It is made by fusing *sodium carbonate and sand (*silica) in an electric furnace and is used in making silica gel, detergents, and textiles.

Waterhouse, Alfred (1830–1905) British architect of the gothic revival. His early work was done in Manchester and included the Asize Court (1859; demolished 1959) and the Town Hall (1868). In London he built the Natural History Museum (1881) and the now demolished gothic redbrick St Paul's School (1885) and City and Guilds College (1879).

water lily An annual or perennial freshwater plant of the family *Nymphaeaceae* (75 species), native to temperate and tropical regions. Water lilies have round wax-coated leaves floating on the water surface and borne on long stalks arising from creeping stems buried in the mud below. The large flowers are cup-shaped, usually white, yellow, pink, red, blue, or purple in colour. See also LOTUS.

Waterloo, Battle of (18 June 1815) The battle in which Napoleon was finally defeated by British, Dutch, Belgian, and German forces commanded by Wellington and the Prussians under von Blücher. Napoleon caught Wellington 5 km (3 mi) S of the village of Waterloo (Belgium) in isolation from the Prussians and attempted to smash his army by a direct offensive. However, British lines held until the Prussians arrived, when a concerted charge brought victory.

watermark A distinctive mark produced in *paper during manufacture by making it slightly thinner in some places than in others. In handmade paper, the watermark is formed by the wires in the bottom of the mould. In machine-made paper the mark is put in by a roller.

watermelon The fruit of an annual climbing plant, *Citrullus vulgaris*, native to Africa but widely cultivated. The plant produces large oval fruits, up to 25 cm across, with a shiny dark-green rind and red, yellow, or white flesh, which is juicy and sweet-flavoured. Family: *Cucurbitaceae*. See also MELON.

water polo A ball game played seven-a-side (with four substitutes), usually in a swimming pool. It originated in England in the 1870s, with players riding floating barrels to resemble horses and hitting the ball with paddles; in the modern game players swim.

water rat A large aquatic *rodent belonging to the subfamily *Hydromyinae* (13 species)

found in Australia, New Guinea, and the Philippines. The Australian water rat (*Hydromys chrysogaster*) is about 35 cm long and has otter-like fur and a white-tipped tail. Family: *Muridae*. Water voles and *muskrats are also known as water rats.

water skiing Planing on water on wooden skis while being towed by a motorboat. Speeds of at least 25 km per hour (15 mph) are required. Competitive water skiing includes jumping, slalom, and trick riding.

water spider A European freshwater *spider, *Argyroneta aquatica*, that lives under water in a bell-shaped structure constructed from silk and plant material and filled with bubbles of air. It feeds inside on small animals. The male (15 mm long) is—usually—larger than the female (10 mm long).

waterspout A funnel-shaped cloud extending from the base of a cumulonimbus cloud to the surface of the sea. It is a small-scale intense low-pressure system, characterized by intense rotating winds.

water polo. The dimensions of the field of play. The water must be at least 1 m deep.

water table The upper level of the water that has percolated into the ground and become trapped in permeable rocks. The level varies with topography and rainfall. See also ARTESIAN WELL.

water table

water vole A large *vole, *Arvicola terrestris*, of Europe and Asia. 15–20 cm long, they are heavily built with light-brown to black fur. Water voles burrow into river banks and feed on aquatic vegetation.

water wheel See **TURBINE**.

Watford 51 40N 0 25W A town in SE England, in Hertfordshire. Industries include light engineering, computer software, and financial services. It is also a dormitory town for London. Population (1998 est): 80 000.

Watling Street The Roman road that traversed Britain from London to Wroxeter, with a branch to the legionary fortress at Chester.

Watson, James Dewey (1928–) US geneticist, who (with Francis *Crick) proposed a model for the molecular structure of *DNA (1953). Watson later investigated aspects of the *genetic code. He received a Nobel Prize (1962) with Crick and Maurice *Wilkins.

Watson, John Broadus (1878–1958) US psychologist and founder of the US school of *behaviourism. Watson declared that speculations about animal behaviour should be based entirely on observations made under laboratory conditions. In *Psychology from the Standpoint of the Behaviourist* (1919), Watson applied his principles to human behaviour.

Watson-Watt, Sir Robert Alexander (1892–1973) Scottish physicist, who pioneered the development of *radar. In 1935 the British Government put him in charge of a research team, which enabled radar to be used by the Allies in World War II ahead of the Axis powers.

watt (W) The SI unit of power equal to one joule per second. In electrical terms it is the energy per second expended by a current of one ampere flowing between points on a conductor between which there is a potential difference of one volt. Named after James *Watt.

Watt, James (1736–1819) British engineer, whose development of the steam engine contributed to the *industrial revolution. He realized that the Newcomen engine could be made more efficient if the steam was condensed in a

separate chamber. Watt's steam engine, completed in 1769, soon replaced the Newcomen engine. By 1800 some 500 stationary Watt engines were in use. He later invented the centrifugal governor and devised the unit "horsepower."

Watteau, (Jean) Antoine (1684–1721) French rococo painter. Despite his early death from tuberculosis, he achieved fame with his charming *fêtes galantes* (scenes of gallantry) and paintings of comedians, notably *L'Embarquement pour l'île de Cythère* and the portrait of the clown Gilles (both Louvre).

wattle Any of various Australian trees and shrubs, especially those of the genus *Acacia*, used for fencing, turnery, etc. The commonest are the black wattle (*A. binervata*), the golden or green wattle (*A. pycnantha*), and the silver wattle (*A. dealbata*), which has globular yellow flower heads and is used by florists under the name of mimosa.

wattmeter An instrument for measuring electrical power. The most common type has two conducting coils connected in series, one fixed and one movable. The magnetic forces between them produce a deflection of the movable coil proportional to the square of the current, which is in turn proportional to the power.

Waugh, Evelyn (Arthur St John) (1903–66) British novelist. With *Decline and Fall* (1928), *Vile Bodies* (1930), *A Handful of Dust* (1934), and other novels, he established his reputation as a brilliant social satirist. After his conversion to Roman Catholicism in 1930, religious themes played an increasing part in his novels, especially in *Brideshead Revisited* (1945). Later novels include his *Sword of Honour* trilogy about World War II (1952–61).

wave Any periodic change in a property of a system that is propagated through a medium (or through space). Waves are classified according to the curve produced when their magnitude is plotted against time on a graph. If the wave is shaped like a sine curve, it is known as a sine (or sinusoidal) wave. Examples include electromagnetic waves and sound waves. A wave is characterized by amplitude, the maximum displacement of the wave; *wavelength; and *frequency. The wave may propagate energy, in which case it is known as a travelling wave, or it may not, when it is known as a standing or stationary wave. **Wavelength** is the distance between successive peaks (or troughs) of a wave. It is equal to the velocity of the wave divided by its frequency.

Wavell, Archibald Percival, 1st Earl

(1883–1950) British field marshal. In World War II, as commander in chief in the Middle East, he defeated the Italians in N and East Africa. After the failure of his offensive against *Rommel in June 1941, he was transferred to SE Asia, where he was again replaced after failing to halt the Japanese advance. He was viceroy of India from 1943 to 1947.

wave mechanics A branch of *quantum theory in which elementary particles are treated as *de Broglie waves. Systems of particles are described by a wave equation, known as the *Schrödinger equation. The solutions of this equation give the allowed values of the energy of each particle (eigenvalues) and the associated wave functions (eigenfunctions); the wave functions provide a measure of the probability that each particle will appear at different points in space. The theory, first proposed by de Broglie, was developed by Erwin Schrödinger.

wave power The use of the energy of wave motion in the sea to generate electricity. Generators of various types have been developed, the best known being the "nodding-duck" type, a string of floats that bob up and down in the waves, thus turning a generator. It is estimated that there are between 50 and 100 kilowatts of power per metre in the waves off the coast of Britain, a total of 120 gigawatts over all the suitable sites. The main disadvantages of wave power are that it is variable and unpredictable; that, since it is sited off the coast, it may be obstructive to shipping; and that the design and construction of generators to work at sea present a formidable engineering problem. Nevertheless, research into wave power has been intensified in the UK as a result of the renewables obligation (see ALTERNATIVE ENERGY).

wax A smooth substance of low melting point (40–80°C) obtained from plants (e.g. carnauba wax) or animals (e.g. *beeswax, *lanolin) or made synthetically. They consist of esters of higher fatty acids than are found in fats, usually with monohydric alcohols. Mineral waxes include paraffin wax, which is obtained from the distillation of petroleum. Waxes are used in making polishes, candles, mouldings, etc., and in modelling.

waxbill A bird of the *weaverfinch family having a stout waxy-red conical bill. Most waxbills inhabit open grassy regions of Africa. They are 7.5 to 15 cm long and typically grey or brown with red, yellow, or brown markings and fine barring on the wings.

waxplant An evergreen climbing plant, *Hoya carnosa*, native to China and Australia. It produces clusters of large fragrant waxy white flowers with pink centres and is cultivated as an ornamental. Family: *Asclepiadaceae*.

waxwing A broad-billed fruit-eating songbird, *Bombycilla garrulus*, occurring in N coniferous forests and birch woods. It has a soft plumage, liver-coloured above with a reddish crest, a yellow-banded tail, and a black throat and eyestripe. The red tips of the flight feathers resemble sealing wax. Family: *Bombycillidae* (9 species).

Wayland (or Weland) In Teutonic mythology, a skilled smith with supernatural powers. He was captured and lamed by King Nidudr who kept him on an island, where he was forced to practise his metalworking. Wayland murdered the king's sons and made ornaments of their skulls before escaping by magic. In England an ancient site near White Horse Hill on the Berkshire Downs is known as Wayland's Smithy.

Wayne, John (Marion Michael Morrison; 1907–79) US film actor. Following his success in *Stagecoach* (1939) he played the tough hero of numerous classic westerns including *Red River* (1948), *The Searchers* (1956), *True Grit* (1969), and *The Shootist* (1976).

weak interaction One of the four fundamental interactions between elementary particles (see PARTICLE PHYSICS). The weak interaction is about 10^{10} times weaker than the electromagnetic interaction. It is believed to be generated by the exchange of *virtual particles known as intermediate vector bosons.

weasel A small carnivorous mammal, *Mustela nivalis*, of Europe, Asia, N Africa, and New Zealand. Growing to about 25 cm long, it is long-bodied and short-legged, bright red-brown above with white underparts. Weasels feed on rats, mice, and voles. They swim well but do not climb. Family: *Mustelidae*.

weaverbird A small songbird belonging to a mainly tropical Old World family (*Ploceidae*; 132 species). Most species build elaborate domed nests. The communal nest of the sociable weaver (*Philetairus socius*) houses 20–30 pairs of birds. Weavers are seed eaters with stout conical bills and variously coloured plumage. See also SPARROW; QUELEA.

weaverfinch A small finchlike seed-eating songbird belonging to a family (*Estrildidae*; 108 species) occurring in tropical regions of Africa, SE Asia, and Australasia. Weaverfinches have

large conical bills and are usually brightly coloured. See **GRASSFINCH**; **WAXBILL**; **ZEBRA FINCH**.

weaving The process of interlacing two or more yarns at right angles to produce a fabric. The equipment used is called a loom, which is first set up with a series of longitudinal threads (warp). In plain weave, alternate warp threads are raised and lowered by means of wires or cords (heddles) to allow the crosswise threads (weft), wound onto a bobbin (shuttle), to pass between them. Different kinds of weave, such as twill and herringbone, are made by altering the pattern of interlacing. Power looms were invented by Edmund *Cartwright in 1786.

Webb, Sidney (James), Baron Passfield (1859–1947) British economist and socialist. He helped to organize the *Fabian Society in 1884 and was one of the founders of the London School of Economics (1895). He initiated educational reforms as a member of the London County Council (1892–1910) and later held various government posts. His wife **Beatrice (Potter) Webb** (1858–1943), collaborated with him on a number of books, including *The History of Trade Unionism* (1894) and *Industrial Democracy* (1897).

weber (Wb) The SI unit of magnetic flux equal to the flux linking a circuit of one turn that produces an electromotive force of one volt when reduced uniformly to zero in one second. Named after Wilhelm Weber (1804–91).

Weber, Carl Maria von (1786–1826) German composer. His most successful opera, *Der Freischütz* (1821), based on a German fairy story, was the first opera in the German Romantic tradition.

Weber, Max (1864–1920) German sociologist, one of the founders of modern sociology. His major works include *The Protestant Ethic and the Spirit of Capitalism* (1904–05) and *Economy and Society* (1922).

Webern, Anton von (1883–1945) Austrian composer, a pupil of *Schoenberg. His compositions, which employ the technique of *serialism, include a concerto for nine instruments (1934) and a string quartet (1938). He was killed by a US soldier during the occupation of Vienna.

Webster, John (c.1580–c.1625) English dramatist, whose major plays are *The White Devil* (1612) and *The Duchess of Malfi* (c.1613). Despite their violence and morbidity, the plays

are distinguished by their poetic intensity and psychological insight.

Weddell Sea A large inlet of the S Atlantic Ocean in Antarctica, between the Antarctic Peninsula and Coats Land. It is named after the British explorer James Weddell (1787–1834).

Wedgwood, Josiah (1730–95) British potter, industrialist, and writer. Trained under his brother Thomas, he opened his own factory at Burslem, Staffordshire. In 1769 he opened a new factory (Etruria), where he also built a village for his workmen, displaying his interest in social welfare. Employing such leading artists as John Flaxman (1755–1826), Wedgwood popularized the neoclassical taste in pottery. His high-quality ceramics perfected creamware and developed basalt and jasperware; they also brought transfer printing to Staffordshire.

weevil A beetle, also called a snout beetle, belonging to the largest family (*Curculionidae*; about 60 000 species) in the animal kingdom. Most weevils are small (less than 6 mm) and their mouthparts are at the tip of a beaklike rostrum, which can sometimes exceed the body length. Many species are serious pests.

weight See **MASS AND WEIGHT**.

weight lifting A sport in which men and women compete to lift weighted barbells. In the most common form of competition contestants make three attempts in each of two styles, the snatch and the clean and jerk.

Weil, Simone (1909–43) French philosopher. An active socialist in the 1930s, she served in a nonmilitary capacity in the Spanish Civil War. After a mystical experience she became a convinced Roman Catholic, although she refused baptism. During World War II she worked for the Free French Resistance in London. Her writings on spiritual and social themes include *Waiting for God* (1951) and *The Need for Roots* (1952).

Weill, Kurt (1900–50) German composer. His collaboration with Bertolt *Brecht began with the opera *The Rise and Fall of the City of Mahagonny* (1927), a satirical portrayal of American life. Their most famous work was *The Threepenny Opera* (1928), a modern version of John Gay's *The Beggar's Opera*.

Weimar 50 59N 11 15E A city in central Germany, on the River Ilm. It was the capital of the grand duchy of Saxe-Weimar-Eisenach (1815–1918). In 1919 the German National Assembly met in the city and drew up the constitution of the new *Weimar Republic. Population (1991): 59 100.

Weimaraner (or **Weimeraner**) A breed of dog developed in Weimar, Germany, for hunting and retrieving game. It has drooping ears and a short slender tail; the short sleek coat is silver-grey or mouse-grey. Height: 61–69 cm (dogs); 56–64 cm (bitches).

Weimar Republic The government of Germany from 1919 to 1933. Named after the town in which the new German constitution was formulated, the Republic faced political and economic crises and was finally overthrown by Hitler.

Weismann, August Friedrich Leopold (1834–1914) German biologist, who (in 1883) proposed that heredity was based upon the transfer, from generation to generation, of a substance—germ plasm—with a definite molecular constitution. Weismann is regarded as one of the founders of modern genetics.

Weizmann, Chaim (Azriel) (1874–1952) Israeli statesman; the first president of Israel (1949–52). A leader of the British Zionist movement, his discovery (1916) of a process for the production of acetone, which contributed to the British war effort, facilitated the negotiations that led to the *Balfour Declaration (1917). As president (1920–31, 1935–46) of the World Zionist Movement he played an important part in the establishment of Israel in 1948.

Weldon, Fay (Franklin Birkinshaw; 1931–) British writer. Her novels include *The Fat Woman's Joke* (1967), *Praxis* (1978), *The Life and Loves of a She-Devil* (1983), and *Big Women* (1998). She has also written plays, including many for radio and television.

Welles, (George) Orson (1915–85) US film actor and director. After establishing his reputation in the theatre and on radio he went to Hollywood in 1940. His first film, *Citizen Kane* (1941), became one of the most famous of all time. His other films include *The Magnificent Ambersons* (1942), *A Touch of Evil* (1958), and *Chimes at Midnight* (1966). As a film actor he is best remembered for *The Third Man* (1949).

Wellington 41 17S 174 47E The capital of New Zealand, a port in S North Island. It became the seat of central government in 1865 and is now the commercial and communications centre of New Zealand. Population (1999 est): 166 700.

Wellington, Arthur Wellesley, 1st Duke of (1769–1852) British general and statesman, known as the Iron Duke; prime minister (1828–30). Born in Dublin, he went to India in 1799, where he held command against Tipu Sahib (1749–99) and became governor of

Mysore. In the Napoleonic Wars he was responsible for victory (1814) in the *Peninsular War and commanded at Waterloo (1815), where he and Marshal Blücher (1742–1819) finally defeated Napoleon. He served in Lord Liverpool's Tory government and represented Britain at the Congresses of Aix-la-Chapelle (1818) and Verona (1822). As prime minister he introduced *Catholic emancipation but opposed parliamentary reform, leading to his resignation. He subsequently served as foreign secretary (1834–35) and was commander in chief of the British army (1827–28, 1842–52).

Wellingtonia See SEQUOIA.

Wells, Henry (1805–78) US businessman, who with William Fargo (1818–81) and others founded Wells, Fargo and Company (1852). An express business, it carried mail to and from the newly developed West. It also controlled banks and later ran a stagecoach service.

Wells, H(erbert) G(eorge) (1866–1946) British novelist. He found success with *The Time Machine* (1895) and other science-fiction novels and with a series of comic social novels, including *Kipps* (1905) and *The History of Mr Polly* (1910). A member of the Fabian Society, he engaged in frequent controversy with G. B. Shaw. His nonfiction works include *The Outline of History* (1920) and *The Shape of Things to Come* (1933).

wels A large nocturnal predatory *catfish, *Silurus glanis*, also called waller, found in fresh waters of Europe and W Asia. Up to 4.5 m long, it has three pairs of barbels, a long anal fin, and is usually mottled olive-green to blue-black with a paler belly.

Welsh A Celtic language of the Brythonic group. Some 19% of the Welsh population (about 600 000 people) speak Welsh as their first or favoured language; it is taught as a compulsory part of the National Curriculum in Welsh schools and is the general teaching language in some schools. For convenience Welsh speakers usually use English words and phrases for modern concepts. Road signs and other public notices throughout Wales are provided in both English and Welsh.

Welsh pony One of two breeds of pony originating in Wales. The Welsh Mountain pony, used for riding and draught work, has a compact muscular body with short strong legs and a profuse mane and tail. The larger Welsh riding pony is a popular children's mount. Both may be any solid colour. Height: Mountain

pony: up to 1.22 m (12 hands); riding pony: up to 1.37 m (13½ hands).

Welsh poppy A perennial herbaceous plant, *Mecanopsis cambrica*, up to 38 cm tall and found in damp regions of W Europe. It bears solitary yellow flowers, up to 7.5 cm across.

welwitschia An unusual *gymnosperm plant, *Welwitschia mirabilis*, confined to the deserts of SW Africa. The very short stem bears two strap-shaped waxy leaves, up to 1 m long. The small conelike flowers produce winged seeds. Individual plants may live for more than a hundred years. Phylum: *Gnetophyta*.

Welwyn Garden City 51 48N 0 13W A town in SE England, in Hertfordshire. Founded in 1919 by Sir Ebenezer *Howard, it became a new town in 1948. Population (1991): 41 710.

Wenceslas, St (d. 929 AD) Duke of Bohemia (7924–29), famous for his piety. Wenceslas' unpopular submission to the German king Henry the Fowler gave rise to a conspiracy of nobles, who incited Wenceslas' brother to assassinate him. He became Bohemia's patron saint.

wentletrap A *gastropod mollusc of the worldwide family *Epitonidae* (about 200 species). 2–10 cm long, wentletraps have shells with long spires; that of the precious wentletrap (*Epitonium scalare*) is prized by collectors. They can produce a purple substance used as a dye.

wergild The sum payable as compensation in Anglo-Saxon England to the family of a slain man by his assassin or the latter's kin. The amount was regulated according to the status and nationality of the victim.

Weser, River A river in NW Germany. It flows NW from Münden, through Bremen, to the North Sea. Length: 477 km (296 mi).

Wesker, Arnold (1932–) British dramatist best known for the trilogy of plays *Chicken Soup with Barley* (1958), *Roots* (1959), and *I'm Talking about Jerusalem* (1960). Later plays include *Chips with Everything* (1962), *The Merchant* (1976), and *Break My Heart* (1997).

Wesley, John (1703–91) British religious leader, founder of *Methodism. As a student, Wesley was one of a group nicknamed "Methodists," who sought to live disciplined religious lives. His brother **Charles Wesley** (1707–88) was also a member. The brothers, both ordained, sailed to Georgia as missionaries in 1735, but returned disillusioned in 1738. In the same year both experienced a spiritual awakening while attending meetings of the

Moravians, as a result of which they toured the country preaching a message of repentance, faith, and love. They did not intend to form a new denomination, the Wesleyan Methodist Church being organized only after their death. John travelled the country on horseback preaching thousands of sermons. Charles was the author of many well-known hymns.

Wessex The kingdom of the West *Saxons, under which Anglo-Saxon England was united in the 9th century. Egbert, King of Wessex (802–39), destroyed Mercian ascendancy in 825 and made possible the subsequent union of England under Alfred the Great.

West, Mae (1892–1980) US actress. She became an international sex symbol during the 1930s. Her films, many of which she wrote, include *She Done Him Wrong* (1933) and *My Little Chickadee* (1939).

West Atlantic languages A subgroup of the Niger-Congo family, spoken in Guinea and Senegal. It includes the languages Wolof and *Fulani.

West Bank A territory in the Middle East, on the W bank of the River Jordan. It comprises the hills of Judaea and Samaria. Formerly part of *Palestine, it was left in Arab hands after partition (1948), became part of Jordan following the ceasefire of 1949, and was occupied by Israeli forces in 1967. Israel has since been under pressure to withdraw and allow an autonomous Palestinian state to be set up, especially following the Camp David agreement (1978). In 1988 Jordan relinquished claims to the area and the PLO declared a Palestinian state, unrecognized by Israel. In 1993 Israel agreed to withdraw its troops from certain areas as part of a peace settlement with the PLO. The Palestinian National Authority assumed control of the Jericho area in 1994–95 but Israel postponed further withdrawals on security grounds. Mounting frustration on the West Bank erupted into open violence in 2000; this escalated sharply during 2001–02, provoking Israel to reoccupy large parts of the territory. Area: about 6000 sq km (2320 sq mi). Population (2000 est): 1 949 000.

West Berkshire A unitary authority of S England, in Berkshire. Area: 705 sq km (272 sq mi). Population (2001): 144 445.

West Bromwich 52 31N 1 59W An industrial town in central England, in Sandwell unitary authority, West Midlands. Population (1992 est): 154 531.

West Dunbartonshire A council area of W

central Scotland on the Clyde estuary, part of the historic county of Dunbarton. Absorbed into Strathclyde Region in 1975, it became a unitary authority in 1996. The main economic activities are engineering, whisky distilling, and agriculture; there is marine engineering in Clydebank. Area: 162 sq km (63 sq mi). Population (2001): 93 378.

Western Australia The largest state of Australia, bordering on the Indian Ocean, Timor Sea, and Great Australian Bight. It is mainly an arid undulating plateau with the Great Sandy Desert, the Gibson Desert, and the Great Victoria Desert in the interior. In the SW is the Darling Range; the Kimberleys are in the N. Agricultural activities include dairy farming, lumbering, and the cultivation of citrus fruits, wheat, and vines in the extreme SW. Mineral resources include bauxite, nickel, oil, gold, and huge deposits of ferrous minerals. Industry is located chiefly around Perth. Area: 2 527 621 sq km (975 920 sq mi). Population (1999 est): 1 755 000. Capital: Perth.

Western European Union An organization formed in 1955 by the UK, Belgium, France, Italy, Luxembourg, the Netherlands, and West Germany to coordinate defence policy and to cooperate in political and other spheres. Portugal and Spain joined in 1988 and Greece joined in 1995. In 1991 the WEU was designated as the future defence component of the European Union. All the other EU states now have some form of associate membership, as do Bulgaria, Iceland, Norway, Romania, and Turkey.

Western Isles Islands Area (official Gaelic name: Eilean Siar) An administrative area of NW Scotland consisting of the Outer Hebrides (see **HEBRIDES**, **THE**). Area: 2901 sq km (1120 sq mi). Population (2001): 26 502. Administrative centre: Stornoway.

Western Sahara (name until 1975: Spanish Sahara) A territory in NW Africa, bordering on the Atlantic Ocean, Mauritania, and Morocco. It consists chiefly of desert. *History:* in 1884 Spain claimed a protectorate over the area and in 1958 it became a province of Spain as Spanish Sahara. In 1976 this was partitioned between Mauritania and Morocco; Morocco occupied the whole area when Mauritania withdrew in 1979. The Polisario Front, a guerrilla organization seeking to establish an independent Saharan Arab Democratic Republic, violently opposes the Moroccan occupation, with backing from Algeria. A UN peacekeeping force has been in occupation since 1991 but attempts to settle the status of the region have not suc-

ceeded. Area: 266 000 sq km (102 680 sq mi). Population (1993 est): 214 000.

Western Wall (or Wailing Wall) See **TEMPLE OF JERUSALEM**.

West Indies An archipelago extending for over 2400 km (1500 mi) from Florida to Venezuela enclosing the Caribbean Sea. It is subdivided into the *Greater Antilles, the *Lesser Antilles, and the *Bahamas. The islands are chiefly volcanic but some are composed of coral. Hurricanes occur frequently. The people are of mixed origin but the descendants of African slaves form the largest group. The original Arawak and Carib Indians have virtually disappeared. *Economy:* sugar-cane cultivation has been important since the beginning of colonization. Many islands also grow tobacco, bananas, spices, or coffee. Mineral deposits are scarce. *History:* Columbus discovered the archipelago in 1492 and named it in the belief that he had found the west route to India. The Spanish (the first Europeans to settle) introduced sugar cultivation and imported African slaves to work the plantations. The slave trade was maintained until the 19th century. Britain created the Federation of the West Indies in 1958 but this collapsed in 1962. Jamaica and Trinidad and Tobago then became independent nations within the Commonwealth, as did Barbados in 1966. The status of British associated state was adopted by Antigua, Dominica, Grenada, St Kitts-Nevis-Anguilla, and St Lucia in 1967 and St Vincent in 1969. Grenada became independent in 1974, Dominica in 1978, St Lucia and St Vincent in 1979, Antigua (and Barbuda) in 1981, and St Kitts-Nevis in 1983. Area: over 235 000 sq km (91 000 sq mi).

West Lothian A council area of SE Scotland, on the Firth of Forth. In 1975 the historic county of West Lothian was abolished; its boundaries were adjusted to form a district of the same name, in Lothian Region. In 1996 this district became an independent unitary authority. Oil refining is an important industry. Area: 425 sq km (164 sq mi). Population (2001): 158 714. Administrative centre: Livingston.

Westmeath (Irish name: Contae Na Hiarmhíde) A county in the central Republic of Ireland, in Leinster. It is predominantly low lying with areas of bog; much of the land is under pasture. Area: 1764 sq km (681 sq mi). Population (2002): 63 000. County town: Mullingar.

West Midlands A metropolitan county in the West Midlands of England, created in 1974 from parts of Staffordshire, Warwickshire,

and Worcestershire. In 1986 the county council was abolished and administrative power devolved to the districts of Wolverhampton, Walsall, Dudley, Sandwell, Birmingham, Solihull, and Coventry. Area: 899 sq km (347 sq mi).

Westminster, City of A borough of central Greater London, on the N bank of the River Thames. The heart of London's West End, it contains many famous theatres, restaurants, and shops. Historic buildings include *Buckingham Palace, the Palace of Westminster, and *Westminster Abbey. It also contains St James's Park, Green Park, Hyde Park, and Regent's Park.

Westminster, Statutes of 1. (1275, 1285, 1290) Legislation initiated by Edward I of England. The first Statute dealt principally with criminal law and procedures for the improvement of royal justice while the second dealt with rights of inheritance. The Statute of 1290 prohibited subinfeudation of land (i.e. the granting of portions of a knight's estate), which had occasioned considerable loss of feudal dues. **2.** (1931) The Statute that established the *Commonwealth of Nations.

Westminster Abbey A historic abbey church at Westminster, London. The present building, begun (1245) by Henry III, replaces one dedicated (1065) by Edward the Confessor, whose shrine the abbey still houses. Since William I, every English monarch (except Edward V and Edward VIII) has been crowned in Westminster Abbey and many are buried there in magnificent tombs. The Coronation Chair was first used in 1307. Other features include Poets' Corner, where Chaucer, Spenser, Dryden, Tennyson, Dickens, and many others are buried or have memorials.

Westphalia A region of NW Germany, approximating to present-day Nordrhein-Westfalen. By the 12th century Westphalia comprised many small principalities and in the 18th century it came largely under Prussian control. In 1807–13 Prussian Westphalian territories became the kingdom of Westphalia. The Congress of Vienna (1815) restored most of Westphalia to Prussia.

Westphalia, Peace of (1648) The agreements, negotiated in Osnabrück and Münster (Westphalia), that ended the *Thirty Years' War. The peace marked the end of the supremacy in Europe of the Holy Roman Empire. It recognized the sovereignty of the German states, the Swiss Confederation, and the Netherlands, and granted W Pomerania to

Sweden. Lutherans, Calvinists, and Roman Catholics were given equal rights.

West Point 41°23N 73°58W A military reservation in the USA, in New York state. It is the site of the United States Military Academy (1802).

West Sussex A county of S England, formerly part of Sussex, bordering on the English Channel. It is mainly low lying, rising in the S to the South Downs. It is predominantly agricultural. Tourism is important in the coastal resorts. Area: 1989 sq km (768 sq mi). Population (2001): 753 612. Administrative centre: Chichester.

West Virginia A state in the E central USA. It consists of a ridge and valley region (the Great Appalachian Valley) in the E and the Appalachian Plateau. Although predominantly a rural state, manufacturing and mining (especially of coal) are important. *History:* originally part of Virginia, it joined the Union as a separate State in 1863. Area: 62 628 sq km (24 181 sq mi). Population (2000 est): 1 808 344. Capital: Charleston.

Westwood, Vivienne (1941–) British fashion designer. With Malcolm McLaren (1941–) she pioneered the punk look of the late 1970s. Her highly original designs won her the Designer of the Year award in both 1990 and 1991.

West Yorkshire A metropolitan county of NE England, created in 1974 from the W part of the West Riding of Yorkshire. In 1986 the county council was abolished and administrative power devolved to the districts of Bradford, Leeds, Calderdale, Kirklees, and Wakefield. West Yorkshire remains the centre of the English wool textile industry. Area: 2039 sq km (787 sq mi).

wet rot The decay that affects timber with a relatively high moisture content, caused by the cellar fungus (*Coniophora cerebella*) and characterized by the formation of a dark surface mass. Treatment is by drying affected timbers. *Compare* DRY ROT.

Wexford (Irish name: Contae Loch Garman) A county in the SE Republic of Ireland, in Leinster. It was the first Irish county to be colonized from England (1169). Lowlands rise to mountains in the W. Area: 2352 sq km (908 sq mi). Population (2002): 116 543. County town: Wexford.

Weyden, Rogier van der (c. 1400–64) Flemish painter of portraits and religious altarpieces. The influence of the Master of *Flé-

malle is evident in *The Deposition* (Prado). In 1450 he visited Italy and paintings from this period, for example the *Entombment* (Uffizi), show Italian influences.

Weymouth 5036N 228W A town in S England, on the coast of Dorset. It is a resort and port. Population (1991): 46 065.

whale A large marine mammal belonging to the order *Cetacea*. Whales have no hind limbs; their forelimbs are flippers and their tails are horizontally flattened to form a pair of flukes. They breathe through a blowhole on top of the head. Whales are insulated by a thick layer of blubber under the skin. The whalebone whales (*Mysticetae*; 12 species)—including the *rorquals, *blue whale, and *right whales—are large and slow-moving and feed on krill. Toothed whales (*Odontocetae*; 80 species)—including the *dolphins, *narwhal, and *sperm whale—are smaller and more agile. They feed on fish and squid and are often gregarious. See also WHALING.

whaling The hunting of whales for their carcasses. Modern whaling fleets comprise a mother factory ship and a fleet of small hunter vessels equipped with harpoon guns and winches. The carcasses are a source of meat, fats, oils, and other chemicals. Whaling has depleted whale populations to the point that some species are in danger of extinction. The International Whaling Commission has called for a complete ban on commercial whaling.

Whangarei 35 43S 174 20E A city in New Zealand, in North Island. It is the site of New Zealand's only oil refinery (1964). Population (1994): 44 800.

Wharton, Edith (Newbold) (1862–1937) US novelist, who lived in Paris from 1907. Her novels, which are mainly about New York society, include *The House of Mirth* (1905), *Ethan Frome* (1911), and *The Age of Innocence* (1920).

wheat A cereal *grass belonging to the genus *Triticum*, native to W Asia but widely cultivated. With the exception of einkorn (*T. monococcum*), most commercial wheats are hybrids with the genus *Aegilops*. The stems, up to 1 m high, each bear a cylindrical head of up to a hundred flower clusters. The grain of bread wheat (*T. aestivum*) is milled to produce flour. Hard or durum wheat (*T. durum*) is used to make pasta and semolina. Surplus grain, bran, etc., is fed to livestock. Wheat is also a commercial source of alcohol, dextrose, gluten, malt, and starch.

Wheeler, Sir (Robert Eric) Mortimer

(1890–1976) British archaeologist. Wheeler's skill in interpreting archaeological strata was renowned. He excavated Romano-British sites, including Maiden Castle.

whelk A *gastropod mollusc of the family *Buccinidae* (over 400 species), of warm and cold seas. 4–12 cm long, whelks feed on molluscs and worms. The common northern whelk (*Buccinum undatum*), 5 cm long, has a drab yellow-brown shell and edible flesh. Tropical species are more colourful.

Whigs Members of a British political group that became the *Liberal Party after about 1868. Originally an abusive Scottish name for a horsethief, it was later applied to one who wished to exclude the Roman Catholic Duke of York (later James II) from the succession. The Whigs dominated politics in the first half of the 18th century. Identifying with industrialist, Nonconformist, and reforming interests, they became the Liberal Party under *Gladstone.

whimbrel A *curlew, *Numenius phaeopus*, that breeds on Arctic tundra and winters in Africa, South America, and S Asia. 40 cm long, it has a streaked brown plumage and a dark crown with a pale central stripe. It feeds on insects, spiders, worms, and snails.

whinchat A migratory *chat, *Saxicola rubetra*, common on open farmland. It winters in Africa and breeds in Eurasia, feeding on flies and moths. The male has a streaked brown plumage, pale chestnut breast, white wingbars, and a white eyestripe; the female is duller.

whip In the UK, an official of a political party responsible for ensuring that the party's MPs vote according to its leadership's policies. The term also refers to the summons to vote sent by whips to MPs, a crucial summons being underlined three times (three-line whip).

whippet A breed of dog developed in England during the 19th century from terrier and greyhound stock and used for coursing and racing. It has a slender streamlined build. The fine short coat can be any mixture of colours. Height: 46 cm (dogs); 43 cm (bitches).

whip snake A slender arboreal snake belonging to the genus *Zamenis* (5 species). The common European speckled grey whip snake (*Z. gemonensis*) feeds on other snakes and lizards. The green whip snakes (genus *Dryophis*; 8 species) occur in tropical Asia and Australasia. Family: *Colubridae*.

whirligig A dark shiny *water beetle belonging to the widely distributed family

Gyrinidae (about 700 species). It spins around on the surface of still or slow-moving fresh water, feeding on insects or other small animals. If disturbed, whirligig beetles exude a foul-smelling milky liquid.

whirlwind A small revolving column of air, which whirls around a low-pressure centre produced by local heating and convective up-rising. It may pick up small pieces of debris and dust and in desert areas may cause sandstorms.

whisky A spirit distilled from malted barley or other grain. The word comes from the Gaelic *uisgebeatha*, water of life. The milled grain is mixed with water to form a mash, which must be converted to sugar before fermentation; the resulting alcoholic liquid is distilled and then aged in the cask for at least three years.

Whistler, James (Abbott) McNeill (1834–1903) US painter. He specialized in portraits and landscapes dominated by one or two colours, the best known being *The Artist's Mother* (Louvre) and *Nocturne in Blue and Gold* (Tate Gallery). In 1877 *Ruskin described one of Whistler's works as "flinging a pot of paint in the public's face" and was sued for libel (1878). Whistler was also famous as a wit.

Whitbread Book of the Year Award An annual literary award of £23,000. Announced in 1985, it is open to both fiction and non-fiction, but the author must live in the UK or Ireland. The prize is administered by the Booksellers Association of Great Britain. Winners include Seamus Heaney for *The Spirit Level* in 1996 and *Beowulf* in 1999, Ted Hughes for *Tales from Ovid* in 1997 and *Birthday Letters* in 1998 and Philip Pullman for *The Amber Spyglass* in 2001. The award was renamed the **Costa Book of the Year Award** in 2006.

Whitby, Synod of (663 AD) A council convened at Whitby, Yorkshire, by King Oswy of Northumbria to decide whether to adopt Roman or Celtic Church usages in Britain. The Roman view triumphed and the English Church was brought into line with the Continent.

White, Patrick (1912–90) Australian novelist. He explored the national consciousness in his epic novels *The Tree of Man* (1955) and *Voss* (1957). His other works include *A Fringe of Leaves* (1976) and *Netherwood* (1983). He won the Nobel Prize in 1973.

whitebeam A tree, *Sorbus aria*, up to 15 m tall and found mainly in S and central Europe. Swedish whitebeam (*S. × intermedia*), a hybrid

between whitebeam and *mountain ash, is often planted in parks. Family: *Rosaceae*.

white dwarf A very small faint low-mass star (less than 1.44 solar masses) that has undergone *gravitational collapse following exhaustion of its nuclear fuel. Electrons are stripped from the constituent atoms, and it is the pressure exerted by these densely packed electrons that eventually halts the star's contraction. The density is then 10^7 – 10^{11} kg m⁻³.

whitefish A slender fish, belonging to a genus (*Coregonus*) related to trout, that occurs mainly in deep northern lakes and rivers of Europe, Asia, and North America. It has a small mouth, minute teeth, and a covering of large silvery scales. Whitefish feed on insects and other small animals.

white fly A small winged insect of the mainly tropical family *Aleyrodidae*. 2–3 mm long, it is covered with a mealy white powder and resembles a minute moth. White flies suck plant juices and exude honeydew on which a black mould grows, often damaging crops. Suborder: *Homoptera*; order: *Hemiptera*.

Whitehall A street in Westminster, London, where many government offices are located; the name is often applied to the civil service. The Cenotaph is also in Whitehall.

Whitehead, A(lfred) N(orth) (1861–1947) British philosopher and mathematician. Whitehead's first major work, the *Principia Mathematica* (1910–13), was written with Bertrand *Russell. In *Principles of Natural Knowledge* (1919) and *The Concept of Nature* (1920), he explored the relationships between concepts and sense perception.

White Horse, Vale of the A valley in S England, in Oxfordshire. Its name derives from the Uffington White Horse, the figure of a horse 110 m (361 ft) long cut in the chalk of the Berkshire Downs.

White House The official residence of the president of the USA. In Washington, DC, the building was burnt (1814) by the British during the *War of 1812 but was subsequently restored, being painted white to hide the smoke stains.

Whitelaw, William (Stephen Ian), 1st Viscount (1918–99) British Conservative politician. He was deputy leader of the Conservative Party (1975–88), home secretary (1979–83), and leader of the House of Lords (1983–88) under Margaret Thatcher.

White Russians The Russians who fought

against the Soviet Red Army in the civil war (1917–21) that followed the *Russian Revolution. The name derives from that of the royalist opponents to the French Revolution, called Whites because they adopted the white flag of the French Bourbon dynasty.

White Sea (Russian name: Beloye More) A gulf of the Arctic Ocean in NW Russia. It gives access to Archangel and Kandalaksha.

white shark A dangerous man-eating *mackerel shark, *Carcharodon carcharias*, that occurs in tropical and temperate seas. Its heavy body, up to 11 m long, is grey-brown to slate-blue with light-grey undersides.

whitethroat An Old World *warbler, *Sylvia communis*, that breeds in N Eurasia and winters in central Africa. It is about 14 cm long. The male is russet brown with a greyish head and white throat and performs a tumbling courtship display in flight. The female is a duller brown.

white whale A small Arctic toothed *whale, *Delphinapterus leucas*, also called beluga. Young white whales are blue-grey, but change to white as they mature. About 4.5 m long with a rounded head, they feed mainly on fish. Family: *Monodontidae*.

whiting A marine food and game fish belonging to the genus *Gadus* (or *Merlangius*), especially *M. merlangus* found in shallow European waters. It has a slender body, up to 70 cm long, which is olive, sandy, or bluish above and silvery white below, and three dorsal and two anal fins.

Whitlam, (Edward) Gough (1916–) Australian statesman; Labor prime minister (1972–75). He ended conscription, relaxed rules on immigration, and tried to lessen US influence. In 1975 he was dismissed by the governor, Sir John Kerr (1914–91).

Whitman, Walt (1819–92) US poet. He expressed his democratic idealism in the revolutionary free-verse poems of *Leaves of Grass* (1855), revised and enlarged in nine editions during his lifetime. During the Civil War he nursed wounded soldiers. His later works include the prose *Democratic Vistas* (1871).

Whit Sunday (or **Pentecost**) The seventh Sunday after Easter, a Christian festival commemorating the descent of the Holy Spirit on the Apostles on the 50th day after Easter (Acts 2.1). Whit Sunday became a time for baptisms, hence its name ("White" Sunday), referring to the white baptismal robes.

Whittington, Dick (Richard W.; d.1423) English merchant, who was three times Lord Mayor of London (1397–98, 1406–07, 1419–20). The legend of Whittington and his cat dates from the early 17th century.

Whittle, Sir Frank (1907–96) British aeronautical engineer who designed and flew the first British jet aircraft. The engine was fitted into a specially constructed Gloster E28/39; its maiden flight took place on 15 May 1941.

WHO See WORLD HEALTH ORGANIZATION.

whooping cough A respiratory infection of children caused by the bacterium *Bordetella pertussis*. After an incubation period of 7–14 days, the child develops a cough, a nasal discharge, and low fever, followed by paroxysms of coughing accompanied by a characteristic whooping sound. A vaccine is available but its use is controversial, since rare cases of brain damage in immunized children have been attributed to it.

whooping crane A rare bird, *Grus americana*, that breeds in NW Canada and winters in SE Texas: 150 cm tall with a wingspan of 210 cm, it has a white plumage with black-tipped wings, black legs, and a bare red face and has a loud whooping call. Family: *Gruidae* (cranes).

whydah (or **whidah**) A small *weaverbird belonging to the genus *Vidua* (11 species), also called widowbird and occurring in open grassy regions of Africa. The males have long tail feathers used in the courtship display and the females lay their eggs in the nests of *waxbills, which rear their young.

Wichita 37°43N 97°20W A city in the USA, in Kansas. Founded in 1864, it is the state's largest city. Population (2000): 344 284.

Wicklow (Irish name: Contae Chill Mhantáin) A county in the E Republic of Ireland, in Leinster. Fertile lowlands rise to the central Wicklow Mountains. Agriculture is the chief occupation. Area: 2025 sq km (782 sq mi). Population (2002): 114 719. County town: Wicklow.

Wiener, Norbert (1894–1964) US mathematician, who pioneered the mathematics of information and communication, which he called *cybernetics. After World War II, during which he worked on anti-aircraft guns, Wiener spent the rest of his life writing about the social problems resulting from automation.

Wiesbaden 50°05N 8°15E A spa city in SW Germany, on the River Rhine. Its hot saline springs have made it a popular resort since Roman times. Population (1999 est): 268 200.

Wiesenthal, Simon (1908–2005) Austrian investigator of Nazi crimes against the Jews. After World War II, during which he was held in concentration camps, he tracked down over 1000 war criminals, including *Eichmann. He was founder (1961) and head of the Jewish Documentation Centre in Vienna.

Wigan 1. 53 33N 2 38W A town in NW England, in Wigan unitary authority, Greater Manchester. It is an industrial and market town. Population (2001): 81 203. 2. A unitary authority in NW England, in Greater Manchester. Area: 199 sq km (77 sq mi). Population (2004 est): 305 400.

wigeon A fast-flying *duck, *Anas penelope*, that breeds in N Eurasia and winters as far south as Africa and S Asia. 45 cm long, males have a chestnut head with a yellowish crown and grey back, while females are brown with a white belly and white shoulders.

Wight, Isle of (Latin name: Vectis) 50 40N 1 15W An island and county in S England, separated from the mainland by the Solent. It consists chiefly of chalk downs; the Needles, a group of chalk rocks, stand off the W coast. Tourism is important. The annual Cowes Regatta Week is famous. Area: 380 sq km (147 sq mi). Population (2004 est): 138 400. Administrative centre: Newport.

Wigner, Eugene Paul (1902–95) US physicist, born in Hungary, who worked out the theory of neutron absorption by nuclei and discovered that solids change their size under radiation (Wigner effect). He won a share of the 1963 Nobel Prize for his work on nuclear physics.

wigwam The dome- or tunnel-shaped hut of the North American Woods Indians, covered with bark on a light wooden frame. The conical tent of the Plains Indians, the *teepee*, has often been incorrectly called a wigwam.

Wilberforce, William (1759–1833) British philanthropist. As an MP (1780–1825) he led the parliamentary campaign to abolish the slave trade (achieved in 1807) and then to emancipate existing slaves (achieved a month after his death).

wildcat A *cat, *Felis sylvestris*, of Europe and W Asia. About 75 cm long, it has a bushy rounded tail and thick striped coat. Wildcats inhabit dense woodland and breed once a year. They may interbreed with domestic cats.

Wilde, Oscar (Fingal O'Flahertie Wills) (1854–1900) Anglo-Irish dramatist and

writer. He dazzled London society with his wit and became a leading figure of the *Aesthetic movement. His works include a novel, *The Picture of Dorian Gray* (1891), and a series of brilliant social comedies: *Lady Windermere's Fan* (1892), *A Woman of No Importance* (1893), *An Ideal Husband* (1895), and *The Importance of Being Earnest* (1895). Socially and financially ruined by a trial in 1895 arising from his homosexual relationship with Lord Alfred Douglas (1870–1945), he was imprisoned for two years. In exile in France he produced his best-known poem, *The Ballad of Reading Gaol* (1898).

wildebeest See GNU.

Wilder, Billy (Samuel W.; 1906–2002) US film director and screenwriter, born in Austria. His films include *Double Indemnity* (1944), *Sunset Boulevard* (1950), *Some Like It Hot* (1959), *The Apartment* (1960), and *The Front Page* (1974).

Wilder, Thornton (1897–1975) US novelist and dramatist. His best-known plays are *Our Town* (1938) and *The Skin of Our Teeth* (1942); novels include *The Bridge of San Luis Rey* (1927).

Wilhelmina (1880–1962) Queen of the Netherlands (1890–1948), who encouraged Dutch resistance in World War II. She abdicated in favour of her daughter Juliana.

Wilhelmshaven 53 32N 8 07E A seaport in NW Germany, on the North Sea. It was founded in 1869 as the main Prussian (later German) naval base. Population (2006): 83 238.

Wilkes, John (1725–97) British journalist and politician. He was a member of the Hellfire Club of debauchees and founded the weekly *North Briton*, in which he attacked George III's ministers. Issue No 45 (1763) accused the government of lying in the king's speech and Wilkes was arrested for libel. Outlawed in 1764 and three times expelled from the House of Commons, he was at last permitted to take his seat in 1774.

Wilkins, Maurice Hugh Frederick (1916–2004) New Zealand physicist, who worked on the atom bomb during World War II. After the war, he assisted James *Watson and Francis *Crick in determining the structure of DNA. These three scientists shared the 1962 Nobel Prize.

Willemstad 12 12N 68 56W The capital and main port of the *Netherlands Antilles, on the SE coast of Curaçao. Population (2001 est): 93 599.

William (I) the Conqueror (c. 1028–1087) Duke of Normandy (1035–87) and the first Norman King of England (1066–87). He claimed to

have been named by Edward the Confessor as heir to the English throne. When Harold II succeeded Edward, William invaded England, defeated and killed his rival at the battle of Hastings, and became king. His administration relied upon Norman and other foreign personnel, especially his Archbishop of Canterbury, Lanfranc (c. 1010–89). In 1085 William commissioned the *Domesday Book.

William (I) the Lion (1143–1214) King of the Scots (1165–1214). After his capture in a revolt against *Henry II of England in 1174, he became a vassal of the English throne. On Henry's death in 1189 he regained independence for his kingdom in return for a payment to Richard I.

William (I) the Silent (1533–84) The leader of the *Revolt of the Netherlands against Spanish rule. When open revolt broke out in 1568, William soon emerged as its leader and in 1576 succeeded in uniting the Roman Catholic south with the Protestant north. This union was short lived, however, and in 1579 the northern provinces declared independence with William as their first stadholder (chief magistrate). He was assassinated by a Spanish agent.

William II Rufus (c. 1056–1100) King of England (1087–1100), succeeding his father William the Conqueror. His harsh rule aroused baronial and ecclesiastical opposition, notably from Anselm. He made several attempts to recover Normandy from his elder brother Robert (d. 1134) and was killed by an arrow while hunting in the New Forest.

William III (1650–1702) King of England (1689–1702) and Stadholder (chief magistrate) of the United Provinces (1672–1702), known as William of Orange. Grandson of Charles I of England and son of William II, Prince of Orange (1626–50), he married James II of England's daughter Mary in 1677. In 1688 he was invited to invade England by James's opponents and in 1689 he was proclaimed joint sovereign with his wife, Mary II (see GLORIOUS REVOLUTION). William defeated the former king at the *Boyne in 1690. On the Continent he was successful in the War of the Grand Alliance (1689–97) against France.

William IV (1765–1837) King of England and Hanover (1830–37), known as the Sailor King. He served in the Royal Navy from 1778 to 1790. He had ten illegitimate children by the Irish actress Dorothea Jordan before marrying (1818) Adelaide of Saxe-Meiningen (1792–1849). William was succeeded in England by his niece Victoria.

William and Mary style An English derivative (1689–1702) of the *Louis XIV style of furniture. The cabriole leg was a typical innovation replacing the preceding twist turned legs. Rich gilding was common and some important furniture was made of cast silver. Cabinet furniture was finely veneered with marquetry or lacquered and gilded.

William of Ockham See OCKHAM'S RAZOR.

William of Wykeham (1324–1404) English churchman and statesman. Bishop of Winchester from 1366 and Lord Chancellor (1367–71, 1389–91), he founded New College, Oxford (1379), and Winchester College (1382).

Williams, Rowan (Douglas) (1950–) British churchman; Archbishop of Canterbury from 2002. He was previously Archbishop of Wales (2000–02).

Williams, Tennessee (1911–83) US dramatist. *The Glass Menagerie* (1945), his first major success, introduced his recurrent themes of family tensions and sexual frustration, which were treated with increasing violence in *A Streetcar Named Desire* (1947) and *Cat on a Hot Tin Roof* (1955).

Williams, Venus (1980–) US tennis player, whose titles include the US Open (2000, 2001), and Wimbledon (2000, 2001, 2005). Her sister *Serena Williams* (1981–), also a tennis player, won the US Open in 1999 and 2002 and Wimbledon in 2002 and 2003.

Williams, William Carlos (1883–1963) US poet. His free-verse poems are noted for their directness and use of natural speech rhythms. His volumes include *Collected Poems* (1934), *Pictures from Brueghel* (1963), and the epic *Paterson* (1946–58).

Williamson, Malcolm (1931–2003) Australian composer, living in the UK from 1953. His works include an organ concerto (1961), the operas *Our Man in Havana* (1963) and *The Violins of St Jacques* (1966), and eight symphonies. He was Master of the Queen's Music from 1975.

willow A tree or shrub of the genus *Salix* (about 300 species), native to temperate and arctic regions. Male and female catkins are borne on separate trees and open before the leaves. Willows are common in wet places and some are grown as ornamentals, especially the weeping willow (*S. babylonica*), with its slender drooping branches, and the bay willow (*S. pentandra*). Family: Salicaceae.

willowherb A tall perennial herb of subarctic and temperate regions, growing profusely

in forest glades and in meadows, especially on ground recently cleared (and sometimes therefore called *freherb*). The flowers, often light purple, are grouped in high spikes. The approximately 170 species belong to two genera, *Epilobium* and *Chamaenerion*.

willow pattern A *chinoiserie pattern attributed to Thomas Minton and introduced about 1780. The elements are a willow tree, pagoda, figures on a river bridge, and two flying birds in an elaborate border.

willow warbler A small inconspicuous warbler, *Phylloscopus trochilus*, which is probably the most common of all birds in Eurasian deciduous forests.

Wilson, Charles Thomson Rees (1869–1959) British physicist, who won the 1927 Nobel Prize for his invention of the Wilson *cloud chamber. He discovered that moisture condensed in the presence of ions and, when X-rays and radioactivity were discovered, applied his discoveries to invent the cloud chamber.

Wilson, (James) Harold, Baron (1916–95) British statesman; Labour prime minister (1964–70, 1974–76). He was a government economist during World War II, after which he became an MP (1945) and president of the Board of Trade (1947). He succeeded Gaitskill as Labour leader in 1963 and achieved electoral victory in 1964. His statutory incomes policy and plans for industrial-relations reform were unpopular and he lost the 1970 election. His second ministry saw the renegotiation of the UK's terms of membership to the EC, which was confirmed by a referendum in 1975. In 1976 Wilson unexpectedly resigned. He was made a life peer in 1983.

Wilson, (Thomas) Woodrow (1856–1924) US statesman; Democratic president (1913–21). In his first term as president he introduced progressive reforms. In World War I, Wilson declared war on Germany (1917) in response to its unrestricted submarine campaign. Wilson's Fourteen Points (1918) proposed a basis on which peace might be settled and contained a plan for a League of Nations that was incorporated into the Treaty of Versailles.

Wiltshire A county of S England. It consists of a rolling chalk plateau, bordered by lowlands in the NW and SE. It is predominantly agricultural. Prehistoric sites include *Stonehenge and *Avebury. Swindon became a unitary authority in 1997. Area (excluding Swindon): 3481 sq km (1344 sq mi). Population

(2001, excluding Swindon): 432 973. Administrative centre: Trowbridge.

Winchester 51 04N 1 19W A city in S England, the administrative centre of Hampshire. As capital of Saxon Wessex, it rivalled London. The cathedral, built in the 11th century on earlier Saxon foundations, contains many royal tombs. Winchester College (1382), founded by *William of Wykeham, is England's oldest public school. Population (1991): 36 121.

wind A general horizontal movement of the atmosphere, as distinct from strictly local turbulence. In principle, winds blow from high to low pressure areas, but the direction is usually changed due to the earth's rotation. In the N hemisphere winds are forced to deviate to the right, in the S to the left. Wind speeds are measured in metres per second or may be classified by the *Beaufort scale.

Windermere The largest lake in England, in Cumbria in the Lake District. The lake is extensively used for watersports. Length: 17 km (10.5 mi).

Windhoek 22 34S 17 06E The capital of Namibia. It is the centre of the world's karakul (Persian lamb) skin industry. Population (1997 est): 169 000.

wind instruments Musical instruments in which the sound is produced by a vibrating column of air. *Brass instruments are activated by lip pressure; **reed instruments**, such as the clarinet, oboe, and bassoon, employ double or single reed mouthpieces; the *flute is side blown; the *recorder has a mouthpiece; *organ pipes have air blown into them by mechanically activated bellows. *Compare* **PERCUSSION INSTRUMENTS**; **STRINGED INSTRUMENTS**.

windmills Machines in which the wind turns a set of vanes or sails mounted on a horizontal shaft, the rotation of which is transmitted by gearing to working machinery. Windmills had appeared by 1150 in NE Europe and were used for grinding corn, pumping water, and powering light industry. Two common designs were the Dutch mill, in which only the sails and the conical roof moved to catch the wind, and the German post mill, in which the whole millhouse rotated around a central supporting pole. The modern metal windmill with multiple-bladed sails is found world wide in rural areas.

wind power The use of wind energy to generate electricity. Because of the world shortage of conventional energy resources, wind turbines (aerogenerators) have now become more

wind power. A typical aerogenerator with a horizontal axis. The blades, rotated by the wind, drive the gearbox, which increases the number of revolutions to an efficient rate for the production of electricity by the generator. The yaw system turns the top of the structure to obtain the maximum amount of energy from the wind.

attractive economically. Advantages of wind power are that it is free from pollution and uses no fuel. There are several different designs of aerogenerator: some with a horizontal axis and blades like the familiar *windmill; some with specially shaped aerofoil blades rotating on a vertical axis. A considerable number of large wind turbines and wind farms (groups of up to a few hundred machines) now supply the grid in the UK, USA, and elsewhere. In the UK the renewables obligation (see **ALTERNATIVE ENERGY**) will require a major increase in the number of wind farms.

Windsor 51 29N 0 38W A town in SE England, in Windsor and Maidenhead unitary authority, Berkshire on the River Thames. **Windsor Castle**, a royal residence, dominates the town. It was begun by William the Conqueror as a stockaded earthwork. Many additions were made by subsequent monarchs, notably the keep by Henry III, St George's Chapel, an example of the *Perpendicular style, by Edward IV, and the Albert Memorial Chapel (so called by Queen Victoria) by Henry VII. Population (1991): 31 225.

Windsor, House of The name of Britain's royal family from 1917, when it replaced that

of House of Saxe-Coburg-Gotha, of which Prince *Albert had been a member. In 1960 Elizabeth II declared that those of her descendants in the male line who were not princes or princesses would take the surname Mountbatten-Windsor.

Windsor and Maidenhead A unitary authority in SE England, in Berkshire. Area: 197 sq km (76 sq mi). Population (2001): 133 606.

Windward Islands (Spanish name: Islas de Barlovento) A West Indian group of islands forming part of the S Lesser Antilles. They comprise the islands of Martinique, St Lucia, St Vincent, the N Grenadines, and Grenada.

wine An alcoholic drink made from fermented grape juice. The grapes are first crushed, traditionally by treading, now generally by machine. This process brings the yeast on the grapeskins, visible as the "bloom," into contact with the sugar in the juice, which it then converts into ethanol (ethyl alcohol). Depending upon when the fermentation is stopped, the resulting wine is dry, medium, or sweet. Table wines contain about 9–13% alcohol. Fortified wines (e.g. *port, *sherry) contain about 16–23% alcohol. The bubbles in sparkling wines are caused by a secondary fermentation in the bottle (see also **CHAMPAGNE**). Red wines are made from whole grapes; for white wines the grapeskins are removed at an early stage in production. True rosé wines are made from the grenache grape, from which the skins are removed before the juice is deeply stained by them. The variety of grape, the soil of the vineyard, and the local climate govern a wine's quality. The appellation "vintage" is now used to designate a wine of outstanding quality.

Wingate, Orde Charles (1903–44) British soldier, who led the *Chindits. A Zionist, he organized Jewish guerrillas in Palestine (1936–39). In World War II, after taking Addis Ababa from the Italians (1941), he formed the Chindits to disrupt communications behind the Japanese lines in Burma. He was killed in an aircraft.

Winnipeg 49 53N 97 10W A city in S Canada, capital of Manitoba. Established as a fur-trading post (1806), it expanded with the growth of farming and the arrival of the railway (1881) from E Canada. Population (1996): 618 477 (metropolitan area).

Winnipeg, Lake A lake in S Canada, in S Manitoba. Emptying into Hudson Bay, it drains much of the Canadian prairies. Area: 24 514 sq km (9465 sq mi).

wintergreen An evergreen creeping peren-

nial herb or small shrub of the family *Pyrolaceae* (about 35 species), found in N temperate and arctic regions. The flowers are white or pale-pink and the fruit is a capsule. Oil of wintergreen is extracted from the leaves of the winterberry (*Gaultheria procumbens*), a North American shrub; the common wintergreen (*Pyrola minor*) is a herb of Eurasia and North America.

Winter War See RUSSO-FINNISH WAR.

Wirral A unitary authority in NW England, in Merseyside. Area: 158 sq km (61 sq mi). Population (2001): 312 289.

Wirral Peninsula A peninsula in NW England, in Merseyside and Cheshire. Chiefly low-lying, it serves mainly as a residential area for Liverpool.

Wisconsin A state in the N central USA. The Central Lowlands give way in the N to the Superior Upland, which contains many forests and lakes. Manufacturing is the state's major economic activity. *History:* ceded to the USA by the British in 1783, large-scale immigration in the 1820s led to its organization as a territory (1836) and it became a state in 1848. Area: 145 438 sq km (56 154 sq mi). Population (2000): 5 363 675. Capital: Madison.

Wisteria A genus of twining usually woody vines (10 species), native to E Asia and North America and grown as ornamentals, especially *W. floribunda* from Japan, which may reach a height of 30 m. Family: *Leguminosae*.

witan A body of 30 to 40 high-ranking laymen and ecclesiastics, which advised Anglo-Saxon kings on such major policy matters as foreign policy and taxation. It met only at the king's will and had no fixed procedure.

witchcraft The supposed manipulation of natural events by persons using supernatural means. In Europe the biblical injunction "Thou shalt not suffer a witch to live" (Exodus 22.18) sanctioned widespread persecution. Social and religious upheavals in the 16th and 17th centuries brought an upsurge in witch hunts; the famous outbreak at Salem, Massachusetts (1692), is a paradigm case of witch hysteria. Witches were accused of worshipping the devil at nocturnal orgies (sabbaths), of keeping evil spirits (familiars), and of killing livestock, wrecking crops, and causing barrenness, impotence, and fits. Many traditional African communities hold witchcraft accountable for similarly inexplicable misfortunes.

witch hazel A shrub or small tree of the genus *Hamamelis* (6 species), native to E Asia

and North America, especially the American *H. virginiana*, which is the source of witch-hazel lotion used in pharmacy. This and several other species are often grown as ornamentals. Family: *Hamamelidaceae*.

Wittenberg 53 00N 11 41E A town in E Germany, on the River *Elbe. The Reformation began here on 31 October 1517, when Martin Luther nailed his 95 theses to the door of All Saints Church. Population (1991): 87 000.

Wittgenstein, Ludwig (1889–1951) Austrian philosopher. His two major works are the *Tractatus Logico-philosophicus* (1921) and the posthumously published *Philosophical Investigations* (1953). In his earlier work he developed the "picture theory" of language—words represent things by established conventions—but later he considered actual usage to be more important than set convention.

Witwatersrand (or the Rand) A ridge of hills in NE South Africa. It extends about 160 km (99 mi) chiefly W of Johannesburg. It has been worked for gold since the 1880s.

woad A branching perennial or biennial herb, *Isatis tinctoria*, native to central and S Europe. Formerly cultivated for the blue dye extracted from its crushed leaves, it is now rare. Up to 120 cm tall, it has tiny yellow flowers. Family: *Cruciferae*.

Wodehouse, Sir P(elham) G(renville) (1881–1975) British-born writer, who became a US citizen in 1955. In his many comic novels featuring Bertie Wooster and his manservant Jeeves, including *The Inimitable Jeeves* (1923) and *The Code of the Woosters* (1938), he portrayed an English upper-class society fixed forever in the 1920s.

Woden See ODIN.

Wokingham A unitary authority in SE England, in Berkshire. Area: 179 sq km (69 sq mi). Population (2001): 150 257.

wolf A wild *dog, *Canis lupus*, of Eurasia and North America. Wolves are 140–190 cm long including the tail (30–55 cm). They live in packs of 5–30 and feed mainly on mice, fish, and caribou but also attack deer. Mating is often for life. Wolves in colder climates are generally larger and shaggier. There is an almost white N Siberian race, while the Indian pale-footed wolf is small and grey. See also TIMBER WOLF.

Wolf, Hugo (1860–1903) Austrian composer. He wrote 300 *Lieder*, the opera *Der Corregidor* (1895), and an Italian *Serenade* for string quartet. He died insane.

Wolfe, James (1727–59) British soldier. After the outbreak of the Seven Years' War he was sent to Canada, where he excelled in the capture of Louisbourg (1758). The following year he besieged the Marquis de Montcalm (1712–59) in Quebec. His forces scaled the undefended Heights of Abraham and a pitched battle ensued in which both commanders were killed. Wolfe's victory established Britain's supremacy in Canada.

wolfhound See BORZOI; IRISH WOLF-HOUND.

Wolfit, Sir Donald (1902–68) British actor and manager. He acted all the major Shakespearean roles, receiving especial acclaim for his Lear, first performed in 1943.

wolframite The principal ore of tungsten, consisting of ferrous tungstate, $(\text{Fe,Mn})\text{WO}_4$. It is brown, black, grey, or reddish in colour and is found particularly in quartz veins associated with granitic rocks.

Wolfram von Eschenbach (c. 1170–c. 1220) German poet. His great romance, *Parzival* (c. 1212), is the first German work to use the story of the Holy Grail and is the basis of Wagner's opera.

wolf spider A *spider, also called hunting spider, belonging to a widespread family (*Lycosidae*; over 175 species). Wolf spiders, up to 25 mm long, are dark brown with long stout legs and are usually active at night, hunting prey rather than trapping it in webs. The female carries the eggs and young.

Wollongong, Greater 34 25S 150 52E A city in Australia, in New South Wales. It includes the towns of Wollongong, Bulli, and Port Kembla. Population (1991): 236 010.

Wollstonecraft, Mary (1759–97) British writer. In 1797 she married the social philosopher William Godwin (1756–1836). Her best-known work is *A Vindication of the Rights of Women* (1792), which argued for equal opportunities for all in education. She died after giving birth to her daughter Mary, who married *Shelley.

Wolsey, Thomas, Cardinal (c. 1475–1530) English churchman and statesman; Lord Chancellor (1515–29) under Henry VIII. As chancellor he interfered unsuccessfully in the conflict between Francis I of France and Emperor *Charles V. Wolsey's attempts to raise taxes to pay for his foreign policy encountered violent opposition. He fell from power after failing to persuade the pope to annul Henry's marriage

to Catherine of Aragon and died on his way to face trial in London.

Wolverhampton 1. 52 36N 2 08W A town in central England, in Wolverhampton unitary authority, West Midlands. Metalworking and engineering are the principal industries. Population (1996 est): 244 500. 2. A unitary authority in W central England, in West Midlands. Area: 69 sq km (27 sq mi). Population (2001): 236 573.

wolverine A carnivorous mammal, *Gulo gulo*, also called glutton, inhabiting northern evergreen forests of Europe, Asia, and America. It is heavily built, about 1 m long and weighing about 25 kg, and hunts lemmings and hares. Family: *Mustelidae*.

womb (or **uterus**) The part of a woman's reproductive tract in which the fetus develops. The womb is a hollow muscular organ, connected by the vagina to the outside and to the ovaries by the Fallopian tubes. In a nonpregnant woman the lining of the womb is shed at monthly intervals (see MENSTRUATION). During childbirth the womb, which is greatly enlarged (about 30 cm long), undergoes strong contractions to expel the baby.

wombat A bearlike *marsupial belonging to the family *Phascolomidae* (2–3 species), of Australia (including Tasmania). The coarse-haired wombat (*Phascolomis ursinus*) is about 1 m long and has strong claws, which it uses for tunnelling. It feeds on grass, roots, and tree bark.

Women's Institutes, National Federation of A British organization founded in 1915 to develop the quality, chiefly through further education, of rural life for women. Local institutes meet monthly to hear talks on a wide range of subjects.

Women's Royal Voluntary Service A British organization founded in 1938 as the Women's Voluntary Service (WVS). Its members perform many voluntary welfare services, including Meals on Wheels.

wood The hard tissue of the stems and branches of trees and shrubs, beneath the bark, consisting of *xylem cells strengthened with deposits of lignin. The central part of the trunk—heartwood—consists of dead xylem. Conifers are referred to as softwoods because the xylem is porous; broad-leaved (angiosperm) trees, which are called hardwoods, contain more fibres and are therefore stronger.

Wood A family of English architects, known for their contribution to town planning and urban architecture. They mainly worked in Bath, which John Wood the Elder (1704–54)

began to develop in the late 1720s. His work was continued by his son **John Wood the Younger** (1728–81), who designed the famous Royal Crescent (1767–75) and the Assembly Rooms (1769–71).

Wood, Sir Henry (Joseph) (1869–1944) British conductor. He is remembered for the London Promenade concerts, which he established at the Queen's Hall, London, and which continued at the Albert Hall after the Queen's Hall was bombed in World War II.

woodbine See HONEYSUCKLE; VIRGINIA CREEPER.

woodcock A Eurasian gamebird, *Scolopax rusticola*, occurring in woodland and generally active at night. It has a stocky body, 34 cm long, and a russet plumage with a dark-barred head and a white-tipped tail. Woodcocks have long bills and feed on worms and insect larvae. Family: *Scolopacidae* (sandpipers, snipe).

woodcut A relief *printing technique. The design is drawn on the surface of a block of medium soft wood, sawn along the grain, and all the undrawn parts are cut away. The design is then transferred to paper by pressing the inked block onto the paper. The woodcut was used in China (c. 5th century AD) for textile design but its history in Europe dates from the 14th century. Leading 16th-century German artists, such as *Dürer and *Holbein the Younger, used the medium to supreme effect.

wood engraving A technique of printing images, refined in the 18th century by Thomas Bewick (1753–1828). The surface of a hardwood block, sawn against the grain, is cut away with engraving tools to leave raised areas which, when treated with ink, will appear dark when printed, in contrast to the white line of the incised areas.

woodlouse A terrestrial crustacean of the suborder *Oniscoidea*, found in damp shady places under stones, logs, etc. Woodlice have a body covering of armour-like plates. A common species is the pill bug or woodlouse (*Armadillidium vulgare*), about 17 mm long, which rolls into a ball when disturbed. Common genera: *Oniscus*, *Porcellio*; order: *Isopoda*.

woodpecker A bird belonging to a family (*Picidae*; about 220 species) occurring worldwide except Madagascar, Australia, and New Zealand. 9–57 cm long, woodpeckers have multicoloured plumage, often barred or spotted. Most are exclusively arboreal, chiselling through bark with their long straight bills in search of insects.

wood pigeon A large Eurasian *pigeon, *Columba palumbus*, which is a serious pest on farmland. 40 cm long, it has a predominantly grey plumage with a black-tipped tail, brownish back and wings, white wing patches, and a green, purple, and white neck patch.

Woods, Tiger (Eldrick W.; 1975–) US golfer. In 1997 he became (at 21) the youngest Masters champion and the first Black golfer to win a major championship. In 2000 he became the youngest player to win all four major competitions and in 2001 the only player to hold all four titles at once.

wood sorrel A herbaceous plant of the genus *Oxalis* (about 800 species), of temperate and tropical regions, especially *O. acetosella*, of Europe. This species has solitary white flowers. Some species, including the vegetable oca (*O. tuberosa*), have edible tubers. Family: *Oxalidaceae*.

woodwasp A sawfly belonging to the families *Xiphydriidae* (Europe and North America), *Sytexidae* (North America), or *Orussidae* (worldwide). *Xiphydriidae* larvae bore into deciduous trees. *Sytexidae* are restricted to the incense cedar tree. *Orussidae* larvae are external parasites on wood-dwelling beetle larvae.

woodwind instruments Blown musical instruments in which a column of air is made to vibrate either by blowing across a mouth hole, as in the flute, or by making a single or a double reed vibrate, as in the oboe, bassoon, clarinet, and saxophone.

woodworm A wood-boring beetle of the genus *Anobium*, especially the furniture beetle (*A. punctatum*), 5 mm long, which damages furniture and old buildings. The larvae bore into wood and emerge when adult. Family: *Anobiidae*.

wool Fibres obtained from the fleeces of domestic sheep. Elastic, resilient, and absorbent, it is also an excellent insulator. Merino wool is the best in quality. Wools from the 26 British breeds vary widely, while New Zealand sheep are crossbreeds of merino and British. The wool of Asian sheep and mountain breeds is used chiefly for carpets. Since World War II synthetic fibres have been mixed with wool.

Woolf, (Adeline) Virginia (born Stephen; 1882–1941) British novelist, a central figure of the *Bloomsbury group. Her novels in which she used an impressionistic style to capture the fluidity of existence, include *Mrs Dalloway* (1925), *To the Lighthouse* (1927), and *The Waves* (1931). She also wrote biographies and criticism,

including the essays in *The Common Reader* (1925–32), and voluminous diaries. She committed suicide by drowning. Her husband **Leonard (Sidney) Woolf** (1880–1969), with whom she founded the Hogarth Press in 1917, was literary editor of the *Nation* (1923–30) and wrote five volumes of autobiography (1960–69).

Woolley, Sir Leonard (1880–1960) British archaeologist. He worked at Carchemish and Tell el-Amarna but is famous chiefly for his excavations at *Ur (1922–34).

woolly rhinoceros A rhinoceros belonging to the extinct genus *Coelodonta*, which inhabited Eurasia and North Africa during the Pleistocene epoch (2.5 million to 10 000 years ago). Well-preserved specimens show that it was a large shaggy-coated animal with two horns.

Woomera 31 11S 136 54E A town in central South Australia. The Anglo-Australian Long Range Weapons Establishment was founded here in 1947 and the site has subsequently been used as a test range for missiles and other weapons and a launching base for space satellites. Population (latest est): 300.

Worcester 52 11N 2 13W A city in W central England, the administrative centre of Hereford and Worcester on the River Severn. The cathedral, begun in 1084, dates mainly from the 14th century. At the battle of Worcester (1651) Charles II was defeated by Cromwell. It is traditionally associated with porcelain and gloves but now has a diverse service-based economy. Population (2005 est): 94 300.

Worcestershire A county in W central England. In 1974 it was absorbed into the new county of Hereford and Worcester and lost part of the N to the West Midlands: it was reinstated as a county in 1998. It is mainly agricultural, with cattle breeding and fruit growing. Industries include engineering and chemicals. Area: 1742 sq km (674 sq mi). Population (2004 est): 552 000. Administrative centre: Worcester.

word processor A software package for a computer enabling documents, letters, etc., to be created, edited, printed, and stored. Modern word processors enable text to be justified and correctly hyphenated, a variety of fonts and weights of typefaces to be used, tables and footnotes to be automatically generated, and graphics to be incorporated. Most word processors are now capable of producing print-quality documents.

Wordsworth, William (1770–1850) British poet. Born in Cumberland, he became an enthusiastic republican during a visit to Revolu-

tionary France (1791–92). In 1795 he met S.T. *Coleridge, with whom he collaborated on *Lyrical Ballads* (1798), a seminal work of the Romantic movement. In 1799 he settled in the Lake District, where, cared for by his wife Mary and his sister Dorothy, he completed his masterpiece, a verse autobiography entitled *The Prelude* (completed 1805; published 1850). In this and other poems he described his feelings of union with nature. Dorothy's journals provide details of their life in the Lake District.

work The product of a force and the distance through which it causes a body to move in the direction of the force. Work, like energy, is measured in *joules.

workhouses Institutions set up in the 17th century in Britain and elsewhere to provide employment and shelter for paupers. The 1834 Poor Law Amendment Act made it necessary for anyone seeking assistance to enter a workhouse, which because of their inhuman rules soon became dreaded places.

World Bank See INTERNATIONAL BANK FOR RECONSTRUCTION AND DEVELOPMENT.

World Council of Churches An organization of more than 200 Protestant and Orthodox churches. A product of the ecumenical movement, it was founded at Amsterdam in 1948, with headquarters at Geneva.

World Cup An international association football competition held first in 1930 and thereafter every four years (except during World War II). It is organized by the Fédération Internationale de Football association (FIFA). The winners have been Uruguay (1930, 1950), Italy (1934, 1938, 1982, 2006), West Germany (1954, 1974, 1990), Brazil (1958, 1962, 1970, 1994, 2002), England (1966), Argentina (1978, 1986), and France (1998).

World Health Organization (WHO) A specialized agency of the *United Nations established in 1948. WHO supports programmes to eradicate diseases, carries out and finances epidemiological research, trains health workers, strengthens national health services, and has established international health regulations; it also provides aid in emergencies. Its headquarters are in Geneva.

World Meteorological Organization (WMO) A specialized agency of the *United Nations established in 1951 with the aim of standardizing international meteorological observations and improving the exchange of weather information. Its headquarters are in Geneva.

World Trade Center (WTC) A building complex, designed by Minoru Yamasaki, that formerly stood in New York's Manhattan district. When the building opened (1974), its 417 m (1368 ft) and 415 m (1362 ft) towers were the tallest in the world. In the infamous terrorist attack of *September 11, 2001, each of the towers was struck by a hijacked airliner, caught fire, and collapsed from the top downwards. Around 2800 people were killed, including several hundred emergency workers and all 156 passengers and crew on the aircraft.

World Trade Organization (WTO) An organization set up to succeed the General Agreement on Tariffs and Trade (GATT) from 1 Jan. 1996. Its aim is to raise standards of living worldwide by liberalizing international trade. There are currently 150 member states. The secretariat is based in Geneva.

World War I (1914–18) The Great War between the Allied Powers including countries of the British Empire, France, Russia, Belgium, Japan, Serbia, Italy (from May 1915), Portugal (from March 1916), Romania (from August 1916), the USA (from April 1917), and Greece (from July 1917) on one side, and the Central Powers, including Germany, Austria-Hungary, Turkey (from November 1914), and Bulgaria (from October 1915) on the other. Its causes included fear of the German Empire's European and colonial ambitions. Tensions among European powers were expressed by the formation of the *Triple Alliance and of the *Triple Entente. The immediate cause of the war lay in the conflict of interests between Russia and Austria-Hungary in the Balkans. On 28 June 1914, the heir to the Austro-Hungarian throne, Archduke Francis Ferdinand, was assassinated at Sarajevo by a Serbian nationalist and on 28 July Austria-Hungary, with German support, declared war on Serbia. On 29 July Russia mobilized its forces in support of Serbia; on 1 August Germany declared war on Russia and on 3 August, upon France. Germany's invasion of Belgium brought the UK into the war at midnight on 4 August.

Western Front: German strategy at the start of the war was based on the Schlieffen plan, which envisaged a rapid flanking movement through the Low Countries. The German forces under von Moltke advanced rapidly through Belgium until they were forced by the British Expeditionary Force (BEF) and the French under Joffre, at the first battle of the Marne (5–9 Sept), to retreat across the River Aisne. Germany's effort to reach the Channel was thwarted at the first battle of Ypres (12 Oct–11

Nov) and the combatants settled to futile trench warfare. 1915 saw inconclusive battles at Neuve-Chapelle (March), again at Ypres (April–May), where the Germans used poison gas for the first time, and at Loos (Sept). On 21 February 1916, the Germans launched a crippling attack on the French at Verdun but on 1 July Haig, who had succeeded Sir John French as commander of the BEF, opened the battle of the Somme, during which *tanks were used (by the British) for the first time; the Allies lost some 600 000 men and the Germans about 650 000. In early 1917 the Germans under Ludendorff withdrew behind the *Hindenburg line; in April Haig took Vimy Ridge (with the loss of 132 000 men); but the French campaign in Champagne was disastrous and command passed to Pétain. With the USA (incensed by German *submarine warfare) now participating, on 31 July Britain launched the third battle of Ypres and by 6 November had taken Passchendaele (with 245 000 British losses). In spring 1918 Germany thrust a bulge in the Allied line, which the Allied commander in chief, Foch, wiped out at the second battle of the Marne. In September the Hindenburg line was broken by Haig between Saint Quentin and Cambrai. By October Germany was suing for peace.

Eastern Front and Balkans: in August 1914 the Russians advanced into E Prussia but were defeated at Tannenberg. When late in 1914 Turkey attacked Russia in the Caucasus, the Allies launched the **Gallipoli campaign**, in which Australian and New Zealand forces played a major part (see ANZAC). It failed to break through the Dardanelles and by January 1916, the Allies had withdrawn. Germany's offensive in the summer of 1915 secured Poland, most of Lithuania, and Serbia. Meanwhile, the Allies landed at Salonika, the ensuing **Macedonian campaign** continuing until Bulgaria capitulated in September 1918. Russia collapsed following the Russian Revolution (March 1917) and signed the Treaties of Brest-Litovsk.

Middle East: the **Mesopotamian campaign**, intended to protect oil installations, was launched on 6 November 1914. However, the Allies failed to take Baghdad (November 1915) and in April 1916 they lost Kut al-Amara to the Turks. In February 1917 it was retaken and in March Baghdad fell. Meanwhile the Allies had invaded Palestine and, aided by the Arab revolt, Allenby took Jerusalem in December 1917; his victory at Megiddo (September 1918) and capture of Damascus and Aleppo finally crushed the Turks.

Italy: the Italian front was maintained along

the River Isonzo through 11 battles until 1917, when the Italians were defeated by Austria-Hungary at Caporetto (Oct–Nov). In October 1918 Austria-Hungary was defeated at Vittorio Veneto and in November capitulated.

War at sea and in the air: at sea the larger British navy was dominant in the North Sea. German raids on the English coast were repudiated by Beatty's victory at Dogger Bank in January 1915. The indecisive battle of Jutland (31 May 1916) was the only engagement between the main fleets. The real threat to the Allies at sea came from the German U-boats, which sunk some 6000 ships, including the *Lusitania*. World War I was the first war in which aircraft were used: in 1915 German Zeppelins began to attack British cities and in 1917 aircraft were also thus employed. Some air combat took place on the Western and Eastern Fronts and towards the end of the war the newly established Royal Air Force was bombing German cities.

Conclusion: with the defeat of the Turks and Bulgarians in September 1918 and of Germany on the Western Front and Austria-Hungary in Italy in October, revolt broke out in Germany. On 9 November the German emperor, William II, fled and on 11 November Germany signed the armistice. On 18 January 1919 the Allies met at the *Paris Peace Conference to determine the peace settlement, which was signed by Germany (the Treaty of Versailles) on 28 June. The Allies lost some 5 million lives (of which 3 million were French and Russian) in the war; the Central Powers lost some 3.5 million (of which 3 million were German and Austro-Hungarian). 21 million combatants were wounded.

World War II (1939–45) The war between the Allied Powers, including countries of the Commonwealth, France, the Soviet Union (from June 1941), the USA (from December 1941), and China (from December 1941) on one side, and the *Axis Powers, including Germany, Italy (from June 1940), and Japan (from December 1941) on the other. The war was caused by the failure of the Paris Peace Conference to provide for international security and by the territorial ambitions of Nazi Germany under Adolf Hitler. In March 1938 Germany annexed Austria (see *ANSCHLUSS*) and in September, following the *Munich Agreement, the *Sudetenland. In March 1939 Hitler occupied the rest of Czechoslovakia. On 23 May Hitler came to an agreement with Mussolini's Italy, which in April had conquered Albania. Hitler's and Stalin's nonaggression pact followed on 23 August and Britain, France, and Poland made an agreement of mutual assistance on 25 Aug. On 1 Sep-

tember Germany invaded Poland and two days later Britain and France declared war on Germany.

Western Europe (1939–41): by 27 September Poland had succumbed to the German Blitzkrieg. The Soviet invasion of Finland (see *RUSO-FINNISH WAR*) brought Finnish capitulation by March 1940 and in April Germany invaded Denmark and Norway. The Allied failure in Scandinavia led to Neville Chamberlain's resignation and on 10 May, the day that Germany invaded Belgium and the Netherlands, Churchill became Britain's prime minister. The German advance outflanked the *Maginot line and split the Allied forces; on 26 May an Allied evacuation from the Continent was ordered. Between 29 May and 4 June some 338 226 Allied troops were rescued from Dunkirk. On 22 June Pétain signed the French armistice with Germany, following which French resistance to the Axis Powers was directed by de Gaulle from London, where he organized the Free French.

Britain now faced an imminent German invasion. In August and September 1940, the *Luftwaffe attacked SE England and then London in a series of daytime raids. In October German bombing was carried out at night and extended to other British cities. The Luftwaffe failed to cripple the RAF and by the end of October the battle of Britain had been won by the RAF under Dowding. The RAF lost 915 aircraft in the conflict and the Luftwaffe some 1733.

Africa and the Middle East (1940–43): In September 1940 Italy advanced from Libya into Egypt but was forced to retreat by Wavell's troops. By 6 February 1941 the Allies had captured 113 000 Italian soldiers but their success was undermined by the arrival in N Africa of Rommel and the German Afrika Corps. In March Wavell's force was weakened by the dispatch of troops to aid Greece (Yugoslavia and Greece fell in April, and Crete in May) and retreated to the Egyptian border.

In November Auchinleck (who had replaced Wavell in July) launched an offensive against Rommel but by January 1942 had been forced to take up a defensive position at El-Alamein, inside the Egyptian frontier. In August Auchinleck was replaced by Alexander and Montgomery became commander of the Eighth Army. In the decisive battle of Alamein (23 Oct–4 Nov) Montgomery defeated Rommel, forcing his retreat along the N African coast. On 8 November an Anglo-US force under Eisenhower landed on the coast of French N Africa. The French under Darlan surrendered and the Allies advanced through Tunisia to meet (7 April 1943) with Montgomery's Eighth Army.

On 7 May the Allies took Bizerta and Tunis and on 13 May the Axis forces surrendered (some 248 000 troops were captured).

In East Africa, Wavell had taken Addis Ababa from the Italians in April 1941 and had secured Ethiopia and British Somaliland (captured by Italy in August 1940) by May. In the Middle East, in April Britain occupied Iraq, by June Lebanon and Syria were in Allied hands, and in August the Allies gained control of Iran.

Italy (1943–45): on 10 July 1943 Alexander's army group (the Eighth under Montgomery and the US Fifth Army), under the supreme command of Eisenhower, landed in Sicily. On 25 July Mussolini fell and on 3 Sept the Italian armistice was signed and the Allies landed on the Italian mainland. The Germans held back the Allies at the Ortona-Gargliano line until an Allied offensive, launched on 12 May 1944 succeeded in breaking through to Rome (4 June). Bologna and then Milan were taken in April 1945 and on 2 May Trieste fell.

Eastern Front (1941–45): Germany, with Finland, Hungary, and Romania, invaded the Soviet Union on 22 June 1941. The Axis forces took the Crimea and the Ukraine in the S, besieged Leningrad (St Petersburg) in the N, and by November were in sight of Moscow. The Soviets staged an effective counterattack in the winter of 1941–42 but Germany retaliated in June and by August the battle of *Stalingrad had begun. Following this heroic Soviet victory, the Germans launched a new offensive in July but were gradually forced back until expelled from Soviet soil in August 1944. On 23 August the Soviet Union secured a Romanian armistice and on 19 Sept, a Finnish armistice. Also in September Bulgaria declared war on Germany and the Germans evacuated Greece. On 5 October Belgrade fell following collaboration between the Red Army and Tito's Partisans. In October Soviet troops invaded Germany and in January 1945 launched a final offensive, taking Poland, Austria, and Hungary and entering Czechoslovakia. Berlin fell on 2 May, shortly after Hitler's suicide.

Western Front (1944–45): on 6 June 1944, D-Day, the Allied invasion of Normandy began under Eisenhower. The RAF Bomber Command had prepared the way with heavy strategic bombing, including the bombing of German cities. By 2 July one million US and British troops had landed. The British under Montgomery took Caen and US troops, after capturing St Lô (July), invaded Brittany. The Canadians took Falaise on 17 August, shortly after US and French troops had landed in the South of France from the Mediterranean. On

25 August Paris fell to the Allies, who now advanced into the Ruhr.

At the battle of Arnhem in September airborne troops were withdrawn after sustaining heavy losses. That December the Germans launched a counteroffensive (the battle of the Bulge) in the Ardennes region of S Belgium. US troops forced the Germans to retreat in January 1945 and the final Allied offensive was launched. The Rhine was crossed in March and by 1 April the Ruhr was encircled. On 4 May Montgomery accepted the surrender of German forces in NW Germany, Holland, and Denmark at Lüneburg Heath. On 7 May the Germans signed a general surrender at Reims, which was ratified two days later in Berlin.

War at sea: The battle for control of the sea routes, known as the **battle of the Atlantic**, was fought from December 1939, when the German *Graf Spee* inflicted considerable damage on HMS *Exeter* in the battle of the River Plate in the S Atlantic. In November 1940 a successful naval air attack was launched on Taranto and in March 1941 at Cape Matapan the British Mediterranean fleet thwarted an Italian attempt to prevent the transfer of British troops from Egypt to Greece. In May the *Hood* was sunk by the *Bismarck* and, three days later, the *Dorsetshire* sunk the *Bismarck*. However, as in World War I, the major threat was posed by the German U-boats. These were most effective early in 1943 but by the summer, partly owing to the introduction of Allied escort carriers, 37 U-boats had been sunk and the battle of the Atlantic was over.

Asia (1941–45): the Japanese attack on Pearl Harbor on 7 December 1941 initiated a truly "world" war. On 10 December Germany and Italy declared war on the USA and the second Sino-Japanese War became part of the wider conflict.

Japan invaded Malaya on 8 December and captured Hong Kong (25 Dec), Manila (3 January 1942), and Singapore (15 Feb). The Dutch East Indies fell on 10 March and the Philippines and Burma in May. However, the US naval and air victories of the *Coral Sea (4–8 May), Midway Island (4–6 June), and *Guadalcanal (Aug) then halted Japan's eastward expansion. In October 1944 the Japanese fleet was decisively defeated at Leyte Gulf and the Allied conquest of Manila (February 1945), the Philippines (June), and Borneo (May–June) followed. Burma was reconquered by the 14th ("forgotten") Army under Slim (January–May 1945). Japanese resistance was finally ended by the atomic bombing on 6 and 9 August respectively of Hiroshima and

Nagasaki, and Japan formally surrendered on 14 August.

Conclusion: in May 1945, with the fall of Berlin, the war in Europe was over. The post-war settlement was decided at the *Potsdam Conference in July and August (see also TEHRAN CONFERENCE; YALTA CONFERENCE).

In the course of the war Germany lost some 3.5 million combatants and 780 000 civilians. In contrast the UK lost some 264 443 combatants and 92 673 civilians. The Soviet Union lost 11 million combatants and 7 million civilians; the Japanese 1.3 million and 672 000 respectively; and the USA, 292 131 and 6000. In addition some 5.7 million Jews died in Nazi concentration camps.

World Wide Fund for Nature (WWF) An international organization dedicated to the conservation of endangered species and their natural habitats. Founded in 1961 as the World Wildlife Fund, it has financed projects both in Britain and abroad. The international president is HRH the Duke of Edinburgh.

worm A soft-bodied elongated invertebrate. The term is applied to members of several different groups, especially *earthworms and various parasitic species, and sometimes the larvae of insects. See also ANNELID WORM; FLATWORM; NEMATODE; RIBBONWORM.

Worms 49 38N 8 23E A town in SW Germany, on the River Rhine. Heavily bombed during World War II, it has an 11th-century cathedral and synagogue (1034). **History:** in the 5th century AD it was the capital of Burgundy. Among the imperial diets (assemblies) held here was that of 1521 at which Luther refused to recant. It was annexed by France in 1797 and passed to Hesse-Darmstadt in 1815. Population (1991): 77 430.

wormwood An aromatic herb or shrub of the worldwide genus *Artemisia* (about 200 species), especially *A. absinthium*, which is found in grasslands of the N hemisphere and is the source of absinthe. Up to 80 cm high, it has small yellow flowers. Family: *Compositae*.

Worthing 50 48N 0 23W A resort in S England, on the West Sussex coast. Nearby on the South Downs is the neolithic Cissbury Ring. Population (1991): 95 732.

Wotan See ODIN.

Wounded Knee The site in SW South Dakota (USA) of the last confrontation (29 December 1890) between the Indians and US troops. Fearing an uprising among the discontented Sioux, troops killed over 200 men,

women, and children at Wounded Knee creek. In 1973 two Indians were killed when the American Indian Movement occupied the village of Wounded Knee in protest against government Indian policies.

wrack A large brown *seaweed of the order *Fucales*, found almost worldwide on rocky shores. Leathery branching fronds arise from a circular rootlike anchor (holdfast), often bearing air bladders to aid flotation. Examples are bladderwrack (*Fucus vesiculosus*) and serrated wrack (*F. serratus*).

wrasse A fish of the family *Labridae* (300 species) found near rocks or coral reefs in shallow tropical and temperate seas. It has a slender often brilliantly coloured body, 5–200 cm long, long dorsal and anal fins, and thick lips. Order: *Perciformes*.

wreckfish A carnivorous fish, *Polyprion americanus*, also called stone bass, found in Mediterranean and Atlantic offshore waters. It has a deep heavy body, up to 2 m long, dark brown above and yellowish below, a large head, and a jutting lower jaw. Family: *Serranidae*; order: *Perciformes*.

wren A small brown bird belonging to a family (*Troglodytidae*; 63 species) found chiefly in South America. Wrens are 9–22 cm long with sharp slender bills and short cocked tails. The only Eurasian species, *Troglodytes troglodytes*, is about 10 cm long and has a reddish-brown plumage with barring on the wings and tail. The name is also given to the families *Maluridae* (Australian wrens) and *Xenicidae* (New Zealand wrens).

Wren, Sir Christopher (1632–1723) English architect. He was a founder member of the Royal Society and later its president (1680–82). His first designs were for Pembroke College chapel, Cambridge (1663) and the Sheldonian Theatre, Oxford (1664). Within days of the *Fire of London Wren produced a new plan for the whole City; although this was rejected he was commissioned to rebuild 51 City churches and some 36 company halls. Basing many of his designs for the churches on Vitruvius' Roman basilica, Wren showed enormous ingenuity in fitting his buildings into the old sites. His design for St Paul's Cathedral was accepted, after many modifications, in 1675. His later buildings include the Greenwich Hospital (begun in 1694).

wrestling A form of unarmed combat, in which two people attempt to throw and hold each other down. It first became an Olympic

sport in 704 BC. In **Graeco-Roman wrestling** holds on the body below the waist and the use of legs to hold or trip are not allowed. They are, however, allowed in **freestyle wrestling**. In both styles a wrestler wins a match by securing a fall (throwing his opponent onto his back and pinning both shoulders to the mat for one second) or by accumulating the most points according to a complex scoring system. **Sumo** is the highly popular Japanese style in which the wrestlers, usually weighing around 130 kg (20 stone), attempt to force each other out of the ring. See also **JUDO**.

Wrexham 1. 53 03N 3 00W A town in North Wales, in Wrexham county borough. It is a market town, manufacturing chemicals and metal goods. Population (1991): 40 614. 2. A county borough in N Wales, created in 1996 from part of Clwyd. Area: 500 sq km (93 sq mi). Population (2001): 128 477.

Wright, Frank Lloyd (1869–1959) US architect. He first demonstrated his originality in a series of Chicago houses between 1900 and 1909, the most famous being the Robie house (1909). Later buildings include the Johnson Wax factory at Racine, Wisconsin (1936–39), Taliesin West (1938), his winter home in the Arizona desert, and the Guggenheim Museum (1959).

Wright, Orville (1871–1948) US aviator, who with his brother **Wilbur Wright** (1867–1912) is usually considered to have made the first powered and controlled flights (17 December 1903). They took place near Kitty Hawk, North Carolina, and in the second, lasting about a minute, the aircraft flew 250 metres.

Wrocław (German name: Breslau) 51 05N 17 00E A city in SW Poland, on the River Oder. Founded during the 10th century, it suffered severe damage in World War II under siege from the Soviet armies (1945). Population (1999 est): 637 877.

wrought iron An almost pure form of iron, often with less than 0.1% carbon. It was originally produced by repeatedly hammering and folding hot *pig iron to squeeze out the impurities. The puddling process has now superseded hand working.

Wuhan 30 35N 114 19E A port in E central China, at the confluence of the Yangtze and Han Rivers. Formed by the amalgamation (1950) of the ancient cities of Hankou (or Hankow), Hanyang, and Wuchang, it is the commercial and industrial centre of central China. Population (2000): 3 911 824.

Wuppertal 51 05N 7 10E A city in NW Germany, in the *Ruhr. It was formed in 1929 from six towns, including Elberfeld, and was heavily bombed in World War II. Population (1999 est): 370 700.

Würzburg 49 48N 9 57E A city in SW Germany, on the River Main. The former episcopal residence (1720–44), containing frescoes by Tiepolo, was damaged in World War II but later restored. Population (1999 est): 126 000.

Wuxi (or Wu-hsi) 31 35N 120 19E A city in E China, on the *Grand Canal. A major grain market since the 7th century AD, it is also an industrial centre. Population (1999 est): 940 858.

Wyatt, Sir Thomas (1503–42) English poet. With Henry Howard, Earl of *Surrey, he introduced Italian verse forms and metres, notably the Petrarchan sonnet, into English poetry. 96 of his poems, together with 40 by Surrey, were included in *Tottel's Miscellany* (1557).

Wycherley, William (1640–1716) English dramatist. He wrote four comedies, notably *The Country Wife* (1675) and *The Plain Dealer* (1676), adapted from Molière's *Le Misanthrope*. His plays are more fiercely satirical than those of his fellow Restoration dramatists.

Wycliffe, John (c. 1329–84) English religious reformer. An Oxford philosopher, he made increasingly radical criticisms of the Church, resulting in his condemnation as a heretic. He attacked the doctrine of transubstantiation and emphasized the importance of the Bible, of which he supervised the first English translation from the Latin. Wycliffe's adherents, the *Lollards, were forerunners of English Protestantism.

Wye, River A river in E Wales and W England. Flowing mainly SE from Plynlimmon it joins the River Severn near Chepstow. Length: 210 km (130 mi).

Wyoming One of the mountain states in the NW USA. Its natural resources include oil, natural gas, uranium, coal, trona, bentonite clay, and iron ore. Livestock production dominates farming. Tourism is significant with such attractions as the Yellowstone National Park. History: part of the territory acquired from France by the Louisiana Purchase (1803), the arrival of the Union Pacific Railway (1867–69) brought settlement in the S and the area became a state in 1890. Area: 253 596 sq km (97 914 sq mi). Population (2000): 493 782. Capital: Cheyenne.

xenon (Xe) A noble gas, present in the atmosphere and discovered in 1898 by Sir William Ramsay and M.W. Travers (1872–1961), in the residue of distilled liquid air. The first noble gas compounds were discovered by Neil Bartlett (1932–), by reacting xenon with dioxygenyl platinum hexafluoride (O_2PtF_6) to form $Xe^+PtF_6^-$. Xenon is used in special lamps and the radio-active isotope ^{135}Xe is produced in nuclear reactors. It is a "poison," i.e. a neutron absorber, and is a crucial factor in the control of the chain reaction (see NUCLEAR ENERGY). At no 54; at wt 131.3; mp $-111.76^\circ C$; bp $-108^\circ C$.

Xenophon (c. 430–c. 354 BC) Greek historian and soldier. He was born in Athens and became a disciple of Socrates. In 410 he led a group of 10 000 Greek mercenaries in a heroic retreat through the hostile Persian Empire to the Black Sea, after their commander, Cyrus, was killed in battle. This feat formed the subject of his best-known work, the *Anabasis*. His other works include *Memorabilia*, *Apology*, and *Symposium*, which deal with Socrates.

xerophyte A plant that lives in a hot dry climate and is adapted for conserving water. Cacti, for example, often have spiny leaves (to prevent water loss) and green succulent stems (in which water is stored). A **xeromorph** is a plant that shows some of the features of xerophytes but may not live in desert areas.

Xerxes I (d. 465 BC) King of Persia (486–465). Having brutally repressed revolts in Egypt, he invaded Greece (see GREEK-PERSIAN WARS) in 480. However, defeat at Salamis (480), Plataea and Mycale (479), and the consequent revolt of the Asiatic Greeks forced him to withdraw. This tyrannous ruler and compulsive builder was assassinated in a court intrigue.

Xhosa A Bantu people of the *Transkei region of South Africa. Many Xhosa are migrant labourers in other areas of South Africa. Their language employs click sounds borrowed from the *Khoisan languages.

Xi An (Hsi-an or Sian) 34 16N 108 54E A city in central China, on the Wei Ho (River). It contains many Tang pagodas and a noted museum. History: as a Tang capital (618–906 AD) it attracted many Buddhist, Muslim, and Christian missionaries. After 1935 it was a Guomindang (Nationalist) base. It is now an industrial centre. Population (1999 est): 2 294 790.

Xi Jiang (or Hsi Chiang) The most important river in S China, rising in Yunnan province and flowing E to form the densely populated Canton delta and the Zhu Jiang. Length: about 1900 km (1200 mi).

Xingu, River (Portuguese name: Rio Xingu) A river in central Brazil, rising on the Mato Grosso plateau and flowing generally N to enter the Amazon delta. Length: 1932 km (1200 mi).

Xiong Nu (or Hsiung-nu) Turkish and Mongol tribes on the N and NW borders of China, which threatened Chinese security from about 500 BC. The Chinese attempted to control the Xiong Nu by building the Great Wall of China, marrying their daughters to Xiong Nu leaders, and trading with them.

Xochimilco 19 08N 99 09W A town in central Mexico, on Lake Xochimilco. It is famous for its floating gardens, which originated as soil-covered rafts and have since become islands. Population (latest est): 271 000.

X-ray diffraction The *diffraction of *X-rays when they strike a crystal. The angle through which the X-rays are diffracted depends on the spacing between the different planes in the crystal in a manner given by *Bragg's law. The technique is used in studying crystal structure.

X-rays Electromagnetic radiation lying between ultraviolet radiation and gamma rays in the electromagnetic spectrum. X-rays may have wavelengths between 10^{-9} metre and 10^{-11} metre. Discovered by Wilhelm *Roentgen in

1895, they are produced when heavy metal atoms are struck by sufficiently energetic electrons, as in an **X-ray tube**. The electrons in an X-ray tube are produced by a heated cathode in an evacuated tube and accelerated to the heavy-metal anode by an electric field. The collisions knock inner electrons from the atoms, X-rays being emitted when the vacancy is filled by outer electrons. X-rays cause ionization in gases and penetrate matter. X-rays have many uses in medical diagnosis, *radiotherapy, structural analysis, and the study of crystals (X-ray diffraction).

xylem A plant tissue specialized for the transport of water and salts. The main cells are tubelike, with their walls strengthened by de-

posits of *lignin. In trees and shrubs the lignin deposits eventually block the tubes completely; this tissue forms *wood, and new secondary xylem is produced.

xylene (or **dimethyl benzene**; $C_6H_4(CH_3)_2$) A colourless toxic flammable liquid consisting of a mixture of three isomers. It is obtained by fractional distillation of petroleum and is used as an aviation fuel and as a solvent.

xylophone A pitched percussion instrument, consisting of a frame on which wooden bars in the pattern of a keyboard are fixed, each with a tubular metal resonator beneath it. It is played with two sticks. Orchestral xylophones usually have a compass of three octaves.

Yahweh The conjectural pronunciation of one of the Hebrew names of God. The name YHWH (the Tetragrammaton or "four-letter" name) occurs often in the Bible; out of reverence it was traditionally not pronounced except by the high priest when he entered the Holy of Holies. "Jehovah" represents another attempt to pronounce this name.

yak A shaggy-coated wild ox, *Bos grunniens*, inhabiting mountain pastures of central Asia. Yaks have long been domesticated for draught purposes and milk; their dung is used as fuel. Wild yaks, up to 2 m high with long upward-curving horns, are larger than domestic yaks and are always black.

Yale University One of the oldest universities in the USA (founded 1701), situated at New Haven, Connecticut. It is named after Elihu Yale (1648–1721), who donated his books to the college.

Yalta Conference (1945) The conference, held at the Black Sea port of Yalta, towards the end of World War II attended by F. D. Roosevelt (USA), Stalin (Soviet Union), and Churchill (UK). They agreed upon the postwar occupation of Germany and decided that German surrender must be unconditional. Stalin also gave assurances (subsequently broken) that free elections would be held in Poland and other countries of E Europe occupied by the Red Army.

yam A twining herbaceous plant of the genus *Dioscorea*, cultivated in wet tropical regions for its edible tubers. Tubers can reach a length of 2.6 m and a weight of 45 kg; species commonly cultivated are *D. alata* (white yam), *D. rotundata* (white guinea yam), *D. batatas* (Chinese yam), and *D. cayenensis* (yellow yam). Family: *Dioscoreaceae*.

Yamasaki, Minoru (1912–86) US architect. His earliest buildings, such as Missouri's St Louis airport (1953–55), were remarkable for their simple but dramatic elegance. However, later works, such as the *World Trade Center

in New York (1970–77), employed controversial pseudo-Gothic elements.

Yamoussoukro 6°49N 5°17W The capital of Côte d'Ivoire. Yamoussoukro was chosen as an inland replacement for the old capital of Abidjan in 1983. It includes the largest basilica in the world, completed in 1989. Population (1995 est): 110 000.

Yang, Chen Ning (1922–) US physicist, born in China, who shared the 1957 Nobel Prize with his countryman Tsung-Dao Lee (1926–) for their theoretical work suggesting that parity would not be conserved in the *weak interaction. This was quickly confirmed by observations of beta decay.

Yangtze River (Chinese name: Chang Jiang or Ch'ang Chiang) The longest river in China and the third longest in the world. Rising in mountains on the Tibetan borders, it flows E to the East China Sea via an extensive delta. The Yangtze is one of China's main transport routes. Work on the **Yangtze dam**, the world's biggest hydroelectric and flood-control project near Yichang, began in 1994 and is due to be completed in 2010. There are also plans to divert some 10% of the Yangtze's waters to desert areas thousands of miles to the N. Length: 6380 km (3964 mi).

Yaoundé (or Yaunde) 3°51N 11°31E The capital of Cameroon. Founded in 1888, it has been capital of Cameroon since 1922 (except during World War II). Population (1992 est): 800 000.

yarow (or milfoil) A medium-sized perennial herb, *Achillea millefolium*, with small white flowers, common in pastures in temperate Eurasia. Family: *Compositae*.

yaws A chronic tropical disease caused by a *spirochaete bacterium, *Treponema pertenue*. It occurs mostly among poor children and is spread by skin contact. After an incubation period of three to four weeks a growth appears on the thighs or buttocks; later, multiple

growths appear all over the skin. If not treated the disease can be very disfiguring. Treatment with penicillin is highly effective.

year The time taken by the earth to complete one revolution around the sun. This is equal to the period of the sun's apparent motion around the *ecliptic. The **tropical year**, of 365.2422 days, is the interval between two successive passages of the sun through the vernal *equinox. The **sidereal year**, of 365.2564 days, refers to successive passages of the sun through a point relative to the background stars. These periods differ because of the *precession of the equinoxes. See also CALENDAR.

yeast A single-celled fungus that is capable of fermenting carbohydrates and that reproduces asexually by budding new cells from its surface. Strains of *Saccharomyces cerevisiae* are widely used to cause *fermentation in baking, brewing, etc. Yeast extracts are used as a food for their high vitamin B content. Phylum: *Ascomycota*.

Yeats, William Butler (1865–1939) Irish poet and dramatist. His best-known poems, many of which appeared in *The Tower* (1928) and *The Winding Stair* (1929), are mainly tragic meditations on personal and political themes. Among them are "Easter, 1916," "The Second Coming," and "Sailing to Byzantium." He was an admirer of the Irish nationalist Maud Gonne (1866–1953), who inspired many of his love poems, and with Lady Gregory (1852–1932) he founded (1904) the Abbey Theatre, Dublin. He was a senator of the Irish Free State (1922–28) and won the Nobel Prize in 1923. His brother **Jack Butler Yeats** (1871–1957) was a noted painter.

yellow fever An acute viral infection transmitted by female mosquitoes of the genus *Aedes*, which occur in tropical rain forests. After an incubation period of 3–14 days the patient develops a fever with aching muscles. In severe cases the virus affects the liver causing jaundice (hence the name), the kidneys, and the heart; death may result from liver or heart failure. There is no specific treatment but two kinds of vaccine can prevent it.

yellow-green algae Algae of the phylum *Chrysophyta* (about 6000 species), which are yellow-green to brown in colour. Most are unicellular or colonial and they form a major constituent of plankton (see also DIATOMS). Most reproduce asexually by spores.

yellowhammer A Eurasian *bunting, *Emberiza citrinella*, that occurs on farmland and

roadsides, where it feeds on grain and seeds. About 16 cm long, the male has a bright-yellow head and underparts, chestnut rump, and a brown-streaked back; females are less colourful.

Yellow River (Chinese name: Huang He or Huang Ho) A river in China, rising in the W and flowing E to the Gulf of Chihli via a fertile delta. Its diversion during the Japanese invasion (1938) caused the death of 900 000 people. Length: about 4350 km (2700 mi).

Yellow Sea (Chinese name: Huang Hai) A large shallow inlet of the W Pacific Ocean, bordered by China and Korea. It is so called because of the yellowish silt deposited by the Chinese rivers.

Yellowstone National Park The largest national park in the USA, chiefly in NW Wyoming but extending into S Montana and E Idaho. Its active geysers include Old Faithful. Area: 8956 sq km (3458 sq mi).

Yellowstone River A river in the W USA, rising in NW Wyoming and flowing N through the *Yellowstone National Park then E to join the Missouri River. Length: 1080 km (671 mi).

Yeltsin, Boris (1931–2007) Russian politician; president of the Russian Federation (1991–2000). A former first secretary of the Moscow Communist Party (1985–87), he was elected president of the Russian SFSR in 1990, becoming the chief political rival to Gorbachov. In 1991 he led resistance to the failed coup by Communist hardliners and became president of Russia on the break-up of the Soviet Union. His economic reforms met with opposition from parliament, leading to a brief military confrontation in 1993. His handling of the crisis in Chechnya (1994–96) led to international criticism. Although he was re-elected in 1996, his authority was already in decline owing to ill health.

Yemen Republic A country in the Middle East, in S *Arabia bordering on the Red Sea, the Gulf of Aden, and the Arabian Sea. It includes several islands, including Kamaran and Perim Island. It consists of narrow dry coastal plains rising to upland valleys and mountains in the W (the wettest and most fertile in Arabia) and desert in the N and E. The population is chiefly Arab and Sunnite Muslim. *Economy*: agriculture was the basis of the economy until oil production began in 1986. Subsistence farming remains the chief occupation. Cotton is the main crop; others include cereals, coffee, fruit and vegetables, tobacco, and the narcotic qat.

Livestock are kept and sardine fishing is important. The S and E have almost no industry outside Aden. The economy relies on foreign aid and money received from Yemenis who work abroad. *History:* ruled by Muslim imams (priest-kings) from the 9th century, Yemen (excluding Aden) was nominally part of the Ottoman Empire from the 16th century to 1918. Aden was captured from the Turks in 1839 and occupied by the British East India Company. The British made protectorate treaties with other local rulers (1886–1914), finally uniting them under the Aden Protectorate (1937). The state of North Yemen, in the NW of present-day Yemen and with its capital at Sana'a, was established in 1934. It joined the Arab League (1945) and the UN (1947) and was loosely allied with Egypt and Syria (1958–61) in the United Arab Republic. In 1963 the Aden Protectorate and adjoining sheikdoms formed the Federation of South Arabia. This collapsed in 1967 and South Yemen became an independent socialist republic, with its capital at Aden. In North Yemen, civil war (1962–70) ended with the recognition of a republican regime. Successive heads of state were assassinated in 1977 and 1978. The history of South Yemen was dominated by border disputes with North Yemen and with Oman (until 1976). In 1986 foreign nationals were evacuated during a violent military coup. Plans for union between the two Yemens were implemented in 1990, but a civil war broke out (1994) in which the northern forces defeated the southern secessionists. Multiparty elections were held in 1997; Yemen's first direct presidential elections, held in 1999, were won by the incumbent, President Ali Abdullah Saleh. Official language: Arabic. Currency: rial of 100 fils. Area: 531,870 sq km (205,311 sq mi). Population (2003 est): 12,010,000. Capital: Sana'a (administrative) and Aden (commercial).

Yenisei, River A river in central Russia, rising in the Sayan Mountains and flowing N to **Yenisei Bay** on the Kara Sea. Length: about 4000 km (2485 mi).

Yeomen of the Guard The bodyguard of the British sovereign established by Henry VII in 1485. Their last appearance in battle was at Dettingen in 1743. They are often confused with the Yeoman Warders of the Tower of London who wear a similar red and gold uniform. The nickname **Beefeaters** (of disputed origin) is popularly applied to both units but disliked by the Yeomen of the Guard.

Yerevan (Russian name: Erevan) 40°10'N 44°31'E The capital of Armenia. The city dates from at

least the 7th century AD. A commercial centre, it has chemical, textile, and food-processing industries. Population (1995 est): 1,248,700.

Yeti See ABOMINABLE SNOWMAN.

Yevtushenko, Yevgenii (1933–) Russian poet. His implicit criticism of the Soviet authorities in such poems as *Babi Yar* (1961) gained him wide popularity among both Soviet and Western readers. His more recent works include *Farewell to Red Banner* (1992).

yew A coniferous tree or shrub of the genus *Taxus* (10 species), native to the N hemisphere. Male and female flowers, which produce bright-red berries, grow on separate trees. The berries are attractive to birds but the seeds and leaves are poisonous. The most widespread species is the common yew (*T. baccata*), of Europe, SW Asia, and N Africa. Family: *Taxaceae*.

Yggdrasil In Norse mythology, an evergreen ash tree embracing the whole universe. Its three roots join the underworld, the land of giants, and the home of the gods (Asgard). The maypole and the Christmas tree are possibly symbolic derivatives of Yggdrasil.

Yiddish A language used by *Ashkenazim (East European) Jews and based on a dialect of High German. It emerged during the 9th century and has absorbed many Slavonic and other influences. It is written in the *Hebrew alphabet. After the holocaust it yielded its place as the principal literary language of the Jews to Hebrew. Over the last hundred years many Yiddish words have entered American English.

yield point The point at which a body becomes permanently deformed when subjected to a sufficiently large stress. Below the yield point the body is elastic, above the yield point it becomes plastic.

yin and yang Contrasting but complementary principles at the root of traditional Chinese cosmology. Yin is the negative feminine mode, associated with the earth, darkness, and passivity. Yang is the positive dynamic principle of masculine energy associated with heaven and light.

yin and yang. The symbols are interlocked and each contains a tiny portion of the other.

YMCA See YOUNG MEN'S CHRISTIAN ASSOCIATION.

yoga The principles and practice of self-training that permeate all Indian philosophical traditions. The methods used include physical control and meditative techniques. Physical control is stressed in Hindu yoga; in the Buddhist practice contemplative methods predominate; in Jainism asceticism is emphasized. Usually the aim is a state of release and liberation from the material world. The yoga fashionable in the West is often hatha-yoga, which involves physical exercises to bring peace and insight.

Yokohama 35 28N 139 28E The second largest city of Japan, a port in SE Honshu. Together with Tokyo it forms Japan's greatest urban area. *History:* it grew rapidly after 1859, but was almost destroyed by the 1923 earthquake and bombed during World War II. Population (1995): 3 307 408.

Yokosuka 35 18N 139 39E A port in Japan, in SE Honshu on Tokyo Bay. William Adams (d. 1620), the first Englishman to visit Japan (1600), is buried here. It has a major naval base and its chief industry is shipbuilding. Population (1995): 432 202.

Yom Kippur (Hebrew: Day of Atonement) A Jewish holy day, falling nine days after Rosh Hashanah. It is a day of penitence and cleansing from sin and is marked by 24 hours' total fast.

Yom Kippur War See ISRAEL, STATE OF.

Yonkers 40 56N 73 54W A city in the USA, in New York state on the Hudson River. Manufactures include elevators, carpets, and chemicals. Population (2000): 196 086.

York 1. (Latin name: Eboracum) 53 58N 105W A city in N England, in York unitary authority, North Yorkshire on the River Ouse. It was the principal Roman garrison in Britain and was for long regarded as the northern capital. The cathedral (Minster), seat of the Archbishop of York, the second of the two archbishops of England, was begun in 1154. The medieval walls and four city gateways remain. It is an educational and tourist centre with various light industries. Population (1994 est): 104 100. **2.** A unitary authority in N England. Area: 272 sq km (105 sq mi). Population (2001): 181 131.

York A ruling dynasty of England descended from Edmund, Duke of York (1342–1402), the fourth son of Edward III. Richard Plantagenet, Duke of *York, led the opposition to Henry VI in the Wars of the Roses (1455–85), in which the

Yorkist emblem was the white rose. His son Edward IV established the royal dynasty. After the brief rule of his son Edward V and the overthrow of Richard III (1485) the Crown passed to Henry VII, the first *Tudor monarch, who married Edward IV's daughter Elizabeth.

York, Richard Plantagenet, 3rd Duke of (1411–60) English magnate. His claim to the throne against Henry VI resulted in the outbreak of the Wars of the Roses in 1455. He was killed in a skirmish at Wakefield. His sons became Edward IV and Richard III.

Yorkshire A historic county in NE England. It was traditionally divided into North, West, and East Ridings (thirds). It was reorganized in 1974 to form the counties of *North Yorkshire, *West Yorkshire, and *South Yorkshire, and parts of Humberside and Cleveland. When Humberside and Cleveland were abolished (1996), the *East Riding was reinstated as a unitary authority and parts of the NE were returned to North Yorkshire for ceremonial purposes.

Yorkshire terrier A breed of toy dog developed in N England during the 19th century. It is small and compact with a very long straight coat that trails on the ground. This is black at birth but matures to steel-blue with tan on the head and chest. Height: 20–23 cm.

Yosemite National Park A national park in the USA, in central California. The scenic Yosemite Valley contains the world's three largest monoliths of exposed granite. Its many lakes, rivers, and waterfalls include the Yosemite Falls. Area: 3061 sq km (1182 sq mi).

Young, Brigham (1801–1877) US Mormon leader, who succeeded Joseph *Smith. A former Methodist, Young joined the new church in 1832. After Smith's death he led the major migration to Salt Lake City, Utah (1846–47).

Young, Thomas (1773–1829) British physician and physicist. He identified astigmatism and described the ciliary muscles of the eye. He demonstrated the interference of light and suggested a wave theory of light in opposition to Newton's corpuscular theory. As a result of his work on the elasticity of materials, the ratio of stress to strain is known as Young's modulus (see ELASTIC MODULUS). Also an Egyptologist, he helped decipher the Rosetta Stone.

Young Men's Christian Association (YMCA) A Christian organization for young men and, since 1971, young women, founded in 1844 by George Williams (1821–1905). Its aim is

to encourage Christian morality and qualities of leadership.

Young Women's Christian Association (YWCA) A Christian organization for women (to which men may now also belong). It was founded in 1855 by Emma Robarts and Mary Jane Kinnaird to promote unity among Christians and understanding between different faiths.

Youth Hostels Association (YHA) A British organization, founded in 1930, to promote a greater understanding of the countryside, especially by providing hostels where young people of limited means may stay. There are over 250 hostels in England and Wales.

Ypres (Flemish name: Ieper) 50°51'N 2°53'E A town in W Belgium, on the River Yperlee. Its many medieval buildings were almost completely destroyed during the three battles of Ypres in World War I. Population (1991 est): 21 400.

ytterbium (Yb) A lanthanide element, named after Ytterby in Sweden. It forms trivalent compounds, including the oxide (Yb₂O₃) and trihalides (for example YbCl₃). At no 70; at wt 173.04; mp 819°C; bp 1196°C.

yttrium (Y) A lanthanide element, discovered in 1794 by J. Gadolin (1760–1852). It is widely used as the oxide (Y₂O₃) to make red television-tube phosphors. At no 39; at wt 88.906; mp 1522°C; bp 3338°C.

Yuan (1279–1368) A Mongol dynasty that ruled China after overthrowing the Song dynasty. The first and strongest Mongol ruler was Kublai Khan, who held the empire together by military force.

Yucatán A peninsula of Central America, chiefly in SE Mexico but extending into Belize and Guatemala, separating the Gulf of Mexico from the Caribbean Sea. It was a centre of Maya civilization. Area: about 181 300 sq km (70 000 sq mi).

Yucca A genus of succulent plants (about 40 species), native to S North America and varying in height from small shrubs to 15-m-high trees. Most are stemless and have a rosette of stiff sword-shaped leaves crowded on a stout trunk. The waxy white bell-shaped flowers are pollinated by female yucca moths (genus *Pronuba*). Family: *Agavaceae*. See also JOSHUA TREE.

Yugoslavia, Federal Republic of A former country in SE Europe, on the Adriatic Sea. Yugoslavia was originally created in 1918 as a homeland mainly for South (Jugo) Slavic peo-

ples (Serbs, Croats, Slovenes, and Macedonians). Until its violent break-up in 1991–92, it comprised the area now occupied by the nations of Croatia, Slovenia, Bosnia-Herzegovina, the former Yugoslav Republic of Macedonia, and the Union of *Serbia and Montenegro. *Economy:* agriculture was important. Forestry and wine-making were major sources of revenue and there were also rich mineral resources. Industry developed rapidly in the decades after World War II but in the 1990s the economy was devastated by civil war, UN sanctions on Serbia, and NATO bombing in the *Kosovo war (1999). *History:* Yugoslavia was so named in 1927, having been formed in 1918 as the Kingdom of Serbs, Croats, and Slovenes. The Serbian king, Alexander I (1888–1934), assumed absolute power in 1929 but was assassinated by extreme nationalist Croats (Ustashi) in 1934. In 1941 Yugoslavia was attacked and occupied by the Germans and Italians. Croatia was put under the rule of the Ustashi, who committed atrocities against Serbs, Jews, and others. Internal resistance was divided between the Chetniks and the communist Partisans under *Tito. After the war Tito established a communist dictatorship. In 1948 Tito broke with Stalin and Yugoslavia became a leader of the nonaligned countries in foreign affairs. After Tito's death, the country struggled with economic and political crises. Croatia and Slovenia declared independence in 1991; military action by the Serb-led Yugoslav Army failed to subdue them. The independence of Slovenia and Croatia was recognized by EC and other states in January 1992 and that of Bosnia-Herzegovina in March. The latter descended into savage civil war (1992–95) between Bosnian Serbs, Muslims, and Croats. In April 1992 Macedonia declared independence but this was not recognized until 1993. That same month the Belgrade government announced the formation of a new Federal Republic of Yugoslavia comprising Serbia and Montenegro; this was not generally recognized until 2000. The Serbian leader Slobodan *Milošević became president of this rump Yugoslavia in 1997. From 1998 Serbian forces attempted to crush separatism in Kosovo by large-scale "ethnic cleansing." In response NATO bombed military and economic targets throughout Serbia until it withdrew its forces in June 1999. Following elections in 2000, Milošević refused to accept his defeat by the opposition candidate Vojislav Kostunica. He was subsequently deposed by a mass uprising and Kostunica became president. The name Yugoslavia was finally consigned to history in February 2002, when the Federal Republic of

Yugoslavia was replaced by a new Union of Serbia and Montenegro. The Union was dissolved in 2006, when the constituent states became fully independent.

Yukawa, Hideki (1907–81) Japanese physicist, who postulated (1935) that the *strong interaction could be accounted for by the exchange of *virtual particles. He calculated the mass of the particle involved. Confirmation came in 1947, when Cecil Powell (1903–69) discovered the pion. Yukawa won a Nobel Prize in 1949.

Yukon A territory of NW Canada, on the Beaufort Sea. It is covered by tundra in the N. Poor soils and low precipitation produce only

sparse vegetation, except in S valleys. The population is concentrated on the central plateau, where silver, lead, zinc, copper, and asbestos are mined. There is some lumbering and tourism. The Yukon was first opened up by the *Klondike gold rush (1897–99). Area: 482 443 sq km (186 272 sq mi). Population (2005 est): 31 000. Capital: Whitehorse.

Yukon River A river in NW North America. Rising in NW Canada, it flows N through Alaska, USA, then SW into the Bering Sea. Length: 3185 km (1979 mi).

YWCA See YOUNG WOMEN'S CHRISTIAN ASSOCIATION.

Zagreb 45 48N 15 58E The capital of Croatia, on the River Sava. A cultural centre of the Croats since the 16th century, it possesses a gothic cathedral. Population (2001): 682 598.

Zagros Mountains A mountain system in W Iran, extending 1600 km (994 mi) NW-SE between the Turkish border and the Strait of Hormuz. It rises to 4811 m (15 784 ft) at Sabalan.

Zaire, Republic of See CONGO, DEMOCRATIC REPUBLIC OF.

Zambezi River A river in S Africa. Rising in NW Zambia, it flows generally S through E Angola before re-entering Zambia and curving E along the frontier of Namibia. It then forms the Zambia-Zimbabwe border, the *Victoria Falls and Kariba Dam being located along this course, before flowing SE to enter the Indian Ocean. It has a drainage area of about 1 347 000 sq km (520 000 sq mi). Length: 2740 km (1700 mi).

Zambia, Republic of (name until 1964: Northern Rhodesia) A landlocked country in S central Africa. It consists chiefly of low undulating plateaus and is drained along its southern border by the Zambezi River; other main rivers are the Kafue and Luangwa. The population is largely Bantu, with European, Asian, and Chinese minorities. *Economy:* copper accounts for about 96% of the total mineral production and comes mainly from the Copperbelt. Lead and zinc are also important, some coal is mined, and there are extensive iron-ore deposits, as yet unexploited. Agriculture is a major occupation; the chief subsistence crop is maize. Cash crops include cotton and tobacco but commercial agriculture has declined since the 1970s. Livestock and forestry are also important. There is a large foreign debt. *History:* the area had already been occupied by Bantu peoples when it was raided by Arab slave traders in the 18th century. In the 19th century British missionaries, notably David *Livingstone, paved the way for Cecil *Rhodes, who in-

corporated the region into a territory named Rhodesia and administered by the British South Africa Company. Constituted as Northern Rhodesia in 1911, it became a British protectorate in 1924. It formed part of the Federation of Rhodesia and Nyasaland (1953-63), obtaining internal self-government and then full independence within the Commonwealth as the Republic of Zambia (1964). *Kaunda became president on independence. In 1972 a new constitution led to one-party rule. After the legalization of opposition parties, Kaunda was defeated in free elections in 1991 and Frederick Chiluba became president. He was re-elected in 1996 amid accusations of fraud. An attempted coup led the government to impose a state of emergency in 1997-98. In January 2002 Levy Mwanawasa became president following elections; Chiluba and several of his ministers were subsequently charged with corruption. Official language: English. Currency: kwacha of 100 ngwee. Area: 752 262 sq km (290 586 sq mi). Population (2003 est): 10 812 000. Capital: Lusaka.

Zanzibar An island in Tanzania, off the NE coast of the mainland. It came under Arab influence early in its history and was, together with Pemba, a sultanate from 1856 to 1964. It was under British rule from 1890 until it became independent within the Commonwealth in 1963. In 1964 the Sultan was exiled and Zanzibar united with Tanganyika to form Tanzania. It exports mainly cloves and copra. Recent years have seen a growing movement for independence. Area: 1658 sq km (640 sq mi). Population (2002 est): 604 910. Chief town: Zanzibar.

Zapata, Emiliano (1877-1919) Mexican revolutionary, who championed the cause of agrarian reform. By late 1911 he controlled the state of Morelos, where he carried out land reforms, chasing out the estate owners and dividing their land amongst the peasants. In 1919 he was tricked into an ambush and assassinated.

Zaporozhye (name until 1921: Aleksan-

drovsk) 47 50N 35 10E A city in E Ukraine, on the River Dnepr. A large hydroelectric station, built here in the years 1927–32, was destroyed in World War II but subsequently rebuilt. Population (1998 est): 863 100.

Zapotecs An American Indian people of the Oaxaca valleys (S Mexico). Their traditional culture, emerging about 300 AD, developed into one of the classic Mesoamerican Indian civilizations. Monte Alban, their chief city, declined under pressure from the Mixtecs (c. 900–50).

Zaragoza (English name: Saragossa) 41 39N 05 40W A city in NE Spain, in Aragon on the River Ebro. During the Peninsular War it heroically resisted a French siege until about 50 000 of its defenders had died (1808–09). It has two cathedrals and a university (founded 1533). An industrial centre, Zaragoza produces paper and wine. Population (1998 est): 603 367.

Zealots A Jewish political party of the 1st century AD. They were bitterly opposed to Roman rule in Judaea, and played a leading part in the revolt of 66 AD. Their last stronghold, *Masada, fell in 73. After the war their influence in Judaea was minimal but they may have been responsible for the further revolts in Egypt, Libya, and Cyprus in 115 AD.

zebra An African wild horse having characteristic black and white stripes covering part or all of the body. There are three races of the plains zebra (*Equus burchelli*), distinguished by the extent and nature of their stripes. The mountain zebra (*E. zebra*) has very bold stripes and a dewlap on the throat, while Grévy's zebra (*E. grevyi*) is the largest species, standing over 1.5 m at the shoulder with narrow stripes.

zebra finch An Australian *grassfinch, *Taeniopyga castanotis*, occurring in large flocks in the interior grasslands. The males are grey above with white underparts, reddish flanks, and black-and-white barred throat, breast, and tail. Zebra finches are popular cagebirds and have been bred to produce a white form with the black-and-white barring.

zebra fish A tropical freshwater fish, *Brachydanio rerio*, also called zebra danio, found in E India and popular in aquaria. It has a shiny blue body, up to 4.5 cm long, with four longitudinal yellowish gold stripes along its sides. See also SCORPION FISH.

zebu The domestic cattle of Asia and Africa, *Bos indicus*, also called Brahmin (or Brahman). Larger and leaner than western cattle, zebus have a distinctive hump over the shoulders, a large dewlap under the throat, and long horns.

Zebus are no longer found in the wild and have been exported to hot countries for their heat tolerance and insect resistance in crosses with beef breeds.

Zeebrugge 51 20N 3 13E A small port in NW Belgium, on the North Sea, connected by ship canal (1907) to Bruges. A German submarine base in World War I, the canal was blocked by British naval forces in 1918. In 1987 the British ferry *Herald of Free Enterprise* capsized here, with the loss of 193 lives.

Zeeman, Pieter (1865–1943) Dutch physicist, who discovered (1886) the splitting of the spectral lines of a substance when placed in a magnetic field (**Zeeman effect**). It is caused by changes in the energy levels of the electrons of the emitting atoms as a result of interaction between the magnetic moment of the orbit and the external field. For this discovery he shared the 1902 Nobel Prize with Hendrik Lorentz (1853–1928).

Zeffirelli, Franco (1923–) Italian film and theatre director and stage designer. Having started in the theatre, he went on to direct films, including *The Taming of the Shrew* (1966), *Romeo and Juliet* (1968), *La Traviata* (1983), *Hamlet* (1990), and *Tea with Mussolini* (1999). He has also directed operas, plays, and the television series *Jesus of Nazareth* (1975).

Zen Buddhism (Japanese *Zen*, meditation) In China and Japan, a Buddhist school emphasizing the transmission of enlightenment from master to disciple without reliance on the scriptures. It derives from the teaching of Bodhidharma, who came to China in 520 AD. The two major sects, Soto and Rinzai, stress meditation and the use of logical paradoxes (*koans*) respectively, in order to confound the rational mind. Many aspects of Japanese and Chinese art, music, and literature, as well as calligraphy, the tea ceremony, the martial arts, etc., express the spontaneous Zen attitude to life. More recently Zen has gained followers in the West, where its opposition to rationalism has popular appeal.

zenith The point in the sky lying directly above an observer and 90° from all points on his horizon. The (unobservable) point diametrically opposite the zenith is the **nadir**.

Zenobia (3rd century AD) The wife of Odaenathus of Palmyra, whom she may have murdered (267) and whom she succeeded as regent for their son. Zenobia occupied Syria, Egypt, and much of Asia Minor before the Roman emperor Aurelian (c. 215–275 AD) defeated and

captured her in 272. She enjoyed a reputation for beauty and intelligence.

Zeno of Citium (c.335–262 BC) Greek philosopher, who was born in Cyprus of Phoenician stock, came to Athens in 313 BC, and attended lectures at Plato's Academy. He was influenced by various philosophical schools, including the *Cynics, before evolving his own doctrine of *Stoicism.

Zeno of Elea (born c. 490 BC) Greek philosopher. Zeno's paradoxes are the first dialectic arguments, eliciting contradictory conclusions from an opponent's hypotheses. These paradoxes include: Achilles and the tortoise—if space is infinitely divisible, once Achilles has given the tortoise a start he cannot overtake it, for whenever he arrives where the tortoise was it has already moved on; the flying arrow—if space is divisible into finite parts, a moving arrow at each moment of its flight is opposite a particular piece of ground and therefore stationary.

zeolites A group of complex silicate minerals containing loosely held water. They are divided into three groups: fibrous (natrolite, mesolite, scolecite), platy (heulandite, stilbite), and equant (harmatome, chabazite). Most occur in cavities in basic volcanic rocks. They are usually colourless or white and are relatively soft. Because of their property of base exchange they were used as water softeners before the introduction of artificial substitutes. They are also used as molecular sieves in the petroleum industry and as drying agents.

Zeppelins See AIRSHIPS.

Zeus The Greek sky and weather god, the supreme deity, identified with the Roman *Jupiter. He was the son of Cronus and Rhea, and brother of Poseidon and Hades. His defeat of Cronus and the *Titans represents the triumph of the Olympian deities over their predecessors. His offspring included *Athena, *Apollo, and *Dionysus and from his many love affairs, which excited the jealousy of his wife, *Hera, were produced numerous other divine and semidivine children. He was usually portrayed as a bearded man, with thunderbolts and the eagle as his attributes.

Zeus, statue of The chryselephantine statue designed by the Greek sculptor *Phidias in about 430 BC for the temple of Zeus at Olympia. One of the *Seven Wonders of the World, it was 12 m (40 ft) high and covered with jewels and gold. It was destroyed in the 5th century AD.

Zhangjiakou (or **Chang-chia-k'ou**; Mongolian name: Kalgan) 40°51'N 114°59'E A city in NE China, in Hebei province near the Great Wall. It was historically important for defence against and trade with the Mongols and is the site of two forts (1429, 1613). Population (1990): 529 136.

Zhengzhou (or **Cheng-chou**) 34°35'N 113°38'E A city in E China, the capital of Henan province. An old administrative centre, it has many industries developed since 1949. Population (1990): 1 159 679.

Zhou (?1027–221 BC) The earliest Chinese dynasty of which there is accurate knowledge. The dynasty was founded in the area now called Shenxi after the Zhou ruler, Wu Wang, had annihilated the armies of the preceding Shang dynasty and set up a system of government under feudal rulers. These undermined Zhou authority in the so-called Warring States period (481–221), after which the *Qin emerged to unite China. Under the Zhou human sacrifice was abolished and the Chinese idea of ancestor worship came into being. The late Zhou was also the great period of Chinese philosophy, when Taoist and Confucian thought first emerged.

Zhukov, Georgi Konstantinovich (1896–1974) Soviet marshal. An expert on armoured warfare, he became chief of the army general staff (1941). He planned or commanded almost every major Soviet military operation in World War II. Under Khrushchev he became defence minister and a member of the presidium of the Communist Party.

Ziegfeld, Florenz (1867–1932) US theatrical producer. The *Ziegfeld Follies*, lavish revues modelled on the *Folies-Bergère, appeared annually from 1907 until his death. He also created such hits as *Show Boat* (1927) and *Bitter Sweet* (1929) and launched Will Rogers, W.C. Fields, and others on their careers.

Ziegler, Karl (1898–1973) German chemist, who shared the 1963 Nobel Prize with Giulio Natta (1903–79) for their work on plastics and polymers. Ziegler showed that certain organometallic compounds (**Ziegler catalysts**) would catalyze the *polymerization of ethylene giving unbranched polymers that were tougher and had a higher melting point than those previously obtainable.

ziggurat A type of ancient Mesopotamian brick-built temple tower. Ziggurats were constructed of rectangular terraces of diminishing size, generally with a shrine for the god on top. They existed in every major Sumerian,

Babylonian, and Assyrian centre, the one at Babylon being the probable original of the Tower of Babel.

Zimbabwe, State of (name until 1979: Rhodesia) A landlocked country in SE Africa. It is bounded in the N by the Zambezi River and in the S by the Limpopo River. Much of the land consists of plateau, generally over 1000 m (3300 ft), with extensive areas of savanna. Most of the population is Bantu with small minorities of Europeans, Asians, and others. *Economy:* agriculture is the major source of employment. Tobacco production has fallen since the colonial period and a diversification to cotton and cattle has taken place; other cash crops include sugar and citrus fruit. The chief subsistence crops are maize, millet, and groundnuts. Forestry and fishing are important. Zimbabwe has gold, copper, asbestos, chrome, and nickel resources, but no oil reserves. Industry is mainly limited to the processing of food and minerals. An economic growth crisis in the late 1980s and 1990s, exacerbated by a financial crisis in 1998–99 and the government policy of seizing White-owned farms, has led to the virtual collapse of the economy in the early 2000s. Commercial food production has dropped sharply, leaving some 70% of the population below the breadline. *History:* ruins at *Great Zimbabwe attest the existence of a medieval Bantu civilization in the region. In 1837 its Mashona inhabitants were conquered by the Matabele and later in the 19th century it was explored by European missionaries, notably *Livingstone. In 1889 Cecil *Rhodes obtained a charter for the British South Africa Company, which conquered the Matabele and their territory, named Rhodesia (1895) in Rhodes' honour. In 1911 it was divided into Northern Rhodesia (now *Zambia) and Southern Rhodesia, the latter becoming a self-governing British colony in 1922. In 1953 the two parts of Rhodesia were reunited in the Federation of Rhodesia and Nyasaland, and after its dissolution in 1963 the Whites demanded independence for Southern Rhodesia (Rhodesia from 1964). The UK's refusal to permit independence without a guarantee of majority rule led the prime minister Ian *Smith to issue a unilateral declaration of independence (UDI) in 1965. Both the UK and the UN imposed economic sanctions but these proved fruitless. In 1970 Rhodesia declared itself a republic. In 1974 the Rhodesian government opened negotiations with the Zimbabwe African People's Union (ZAPU) and the Zimbabwe African National Union (ZANU), which had pursued guerrilla activities since the 1960s. Smith failed to negotiate an agreement with

the Black nationalists, who remained divided under the umbrella of the Patriotic Front. In 1978, following the intervention of the UK (1977), agreement was reached on a transitional government leading to Black majority rule. However, when this government under Bishop Muzorewa failed to obtain the support of the Patriotic Front, an all-party conference was called in London (1979–80). Here Lord Soames (1920–87) was appointed governor to oversee the holding of elections (which brought Robert *Mugabe, leader of ZANU (PF), to power) and the granting of independence to Zimbabwe as a member of the Commonwealth (1980). In 1987 ZAPU and ZANU were unified under Mugabe, effectively creating a one-party state. Since 1997 Mugabe has faced protests over food prices, corruption, and the lack of political reform. The government has responded with authoritarian measures. With Mugabe's collusion, a campaign of violent seizure of White farms by squatters began in 2000. Despite widespread intimidation, elections in June 2000 resulted in massive gains for the opposition. Although Mugabe won presidential elections in 2002, the result was condemned as a fraud by foreign observers. State violence and repression led to Zimbabwe's suspension from the Commonwealth in 2002. Official language: English. Currency: Zimbabwe dollar of 100 cents. Area: 390 622 sq km (150 820 sq mi). Population (2003 est): 11 719 000. Capital: Harare.

zinc (Zn) A bluish-white metal known in antiquity in India and the Middle East. It occurs in nature principally in the ores calamine (ZnCO₃), zincite (ZnO), and zinc blende (ZnS). Zinc is widely used to make *galvanized steel and forms a number of useful low-melting alloys, including *brass. The sulphide (ZnS) is a phosphor and is used in making television screens and fluorescent tubes. Zinc oxide (ZnO) is widely used as a pigment and in medicines, batteries, cosmetics, plastics, and other products. Trace amounts of zinc are also important for growth in animals, including human beings. At no 30; at wt 65.37; mp 419.58°C; bp 907°C.

Zinnia A genus of herbs and shrubs (about 15 species), mostly native to North America. They have stiff stems, oval to heart-shaped leaves, and daisy-like flower heads with variously coloured ray florets. Cultivated zinnias are hybrids derived from the Mexican species *Z. elegans*. Family: *Compositae*.

Zinoviev, Grigori Yevseevich (1883–1936) Soviet politician. Zinoviev became a member of the politburo (1918) and chairman of the

Comintern (1919) but was expelled from the Communist Party in 1927. In 1935 he was accused of complicity in the murder of Sergei *Kirov (1888–1934) and was executed. A letter allegedly written by Zinoviev, in which the British Communist Party was urged to revolt, contributed to the defeat of the Labour Government in 1924. This was subsequently (1966) exposed as a forgery.

Zion (or **Sion**) A stronghold (II Samuel 5:6–7) on the SE hill of Jerusalem, captured by David, who made it the centre of his capital (Jerusalem). In the Old Testament it is another name for Jerusalem, or the place in which God dwells and reigns. In the New Testament and in later Christian writings, it symbolizes heaven.

Zionism A Jewish nationalist movement. It emerged during the 19th century on a tide of European antisemitism and was formally established at the First Zionist Congress (Basle, 1897). The Congress defined its political aim as the establishment of a Jewish national home in Palestine; the World Zionist Organization was set up, with Theodor *Herzl as its first president. Jewish immigration into Palestine (*aliyah*) was encouraged, especially through the Jewish National Fund (founded 1901) and the Jewish Agency for Palestine (1929). It was also supported by the Balfour Declaration, facilitated by Chaim *Weizmann's relationship with the British government. After World War II, the holocaust provided Zionism with an unanswerable case. Since the establishment of *Israel in 1948 the Zionist movement has continued to foster *aliyah*; the conflict between this principle and the rights of Palestinians has not, however, been resolved.

zircon A mineral consisting of zirconium silicate, found as an accessory mineral in intermediate and acid igneous rocks. It is usually colourless or yellowish. Gem varieties include hyacinth (red) and jargoon (colourless or smoky grey). It is the chief ore of zirconium and is used as a refractory material.

zirconium (Zr) A grey high-melting-point transition metal, isolated by J.J. Berzelius in 1824. It occurs in nature as zircon (zirconium silicate; $ZrSiO_4$), which is used as a gemstone. The dioxide (zirconia; ZrO_2) has a high melting point (2715°C) and is used as a refractory and crucible material. The metal is used in cladding fuel elements in nuclear reactors. At no 40; at wt 91.22; mp 1855 ± 2°C; bp 4409°C.

zither A plucked stringed instrument of ancient origin, consisting of a flat resonating box fitted with 30 to 40 strings, approximately 5 of

which lie across a fretted fingerboard for playing the melody. The rest are used for playing accompanying chords.

zodiac A zone of the heavens extending about 8° on either side of the *ecliptic. Within it lies the apparent annual path of the sun, as seen from the earth, and the orbits of the moon, and major planets, apart from Pluto. The 12 constellations in the zodiac are known as "signs" or "houses" to astrologers, who believe them capable of stamping their individual dispositions upon those born under their influence (see **ASTROLOGY**). The 12 signs and their astrologically effective dates (different from their astronomical periods on account of precession) are: Aries, the Ram 21 Mar–19 Apr; Taurus, the Bull 20 Apr–20 May; Gemini, the Twins 21 May–21 June; Cancer, the Crab 22 June–22 July; Leo, the Lion 23 July–22 Aug; Virgo, the Virgin 23 Aug–22 Sept; Libra, the Scales 23 Sept–23 Oct; Scorpio, the Scorpion 24 Oct–21 Nov; Sagittarius, the Archer 22 Nov–21 Dec; Capricornus, the Goat 22 Dec–19 Jan; Aquarius, the Water-carrier 20 Jan–18 Feb; and Pisces, the Fish 19 Feb–20 Mar.

Zog I (1895–1961) King of Albania (1928–39). Zog was proclaimed king after serving as prime minister (1922–24) and president (1925–28). He let Albania fall under Italian economic domination and when Mussolini invaded Albania (1939) he fled into exile.

Zohar (Hebrew: splendour) The classical text of the *kabbalah. Written in Aramaic, it purports to be a mystical commentary on the *Torah and a collection of theosophical discussions dating from the time of the *Mishnah. It was actually written about 1280 by the Spanish kabbalist Moses de Leon, although it contains some later additions.

Zola, Émile (1840–1902) French novelist, the leading exponent of literary *naturalism. Following the success of his first major novel, *Thérèse Raquin* (1867), he conceived the plan for the series of 20 novels entitled *Les Rougon-Macquart* (1871–93). *L'Assommoir* (1877), describing the disintegration of a working-class family, *Nana* (1880), concerning a girl from the slums, *Germinal* (1885), about a mining community, and *La Terre* (1887), about the life of peasants, are among his powerful exposés of social problems. He fled to England after defending *Dreyfus in an open letter, *J'accuse* (1898), but was welcomed back as a hero after Dreyfus had been cleared.

Zollverein A customs union of 18 German states formed under Prussian dominance in

1834. By 1867 all German states except Hamburg and Bremen had joined. This commercial union helped pave the way for German unification under Prussian leadership (1871).

zoogeography The study of the geographical distribution of animals. It is based mainly on the work of A.R. *Wallace, who divided the world into a number of zoogeographical regions, each with a distinctive fauna. The present-day distribution of animals reflects both their evolutionary history and the movements of the land masses in past geological ages (see CONTINENTAL DRIFT). Thus the concentration of marsupials in the Australasian region is explained by the fact that the separation of Australia from the Asian mainland coincided with the evolutionary radiation of this group. The Australian marsupials therefore avoided competing with the more efficient placental mammals, which subsequently evolved on the mainland.

zoogeography. The world can be divided into six regions according to the distribution of its animals. Since some animals are less fixed in their habitats than others and may be found in more than one region, the divisions between the regions are somewhat arbitrary. For example, Wallace's line, separating the Oriental and Australasian regions, has been modified since Wallace proposed it.

zoology The branch of biological sciences specializing in the scientific study of animals. This includes their classification, anatomy, physiology, ecology, behaviour, evolution, etc. The importance of animals as food producers, pests, etc., in relation to man makes many aspects of zoology economically significant. See also ENTOMOLOGY; ORNITHOLOGY.

Zoroaster (or **Zarathustra**; c.628–c.551 BC) Iranian prophet, founder of **Zoroastrianism**, a dualistic religion that recognizes two principles, good and evil, as personified by Ahura Mazda and Ahriman. Probably born near Tehran, he is believed to have been a priest in the ancient polytheistic religion when he received a vision of Ahura Mazda, who exhorted

him to preach a new faith based on his worship. Zoroaster abolished orgiastic rituals, although animal sacrifice and the ancient fire cult continued to be practised. The teachings attributed to him are preserved in the Gathas (hymns) in the *Avesta. Zoroastrianism survives in some parts of Iran and in India among the Parsees (see PARSEISM).

Zuccarelli, Francesco (1702–88) Italian painter. He worked chiefly in Venice (after 1732) and in England (1752–62, 1765–71). A founding member of the Royal Academy and a favourite painter of George III, he specialized in picturesque landscapes.

Zuider Zee A former inlet of the SE North Sea, within the Netherlands. The N part, the Waddenzee, is separated from the S part (now the IJsselmeer) by a huge dam (completed 1932).

Zululand An area of SE South Africa. The home of the *Zulu people, it became a powerful state during the 1820s under their king Shaka (c.1787–1828). Following conflict with the Boers the Zulus, under Cetshwayo (c.1826–84), were defeated by the British (1879) and Zululand was incorporated into the former province of Natal in 1897. It comprised part of the *Bantu Homeland of KwaZulu and is now part of the KwaZulu/Natal region, which was created in 1994.

Zulus A Bantu people of SE South Africa. They are traditionally cattle herders and cattle are still a prestige possession. Polygyny is practised by important men. In the 19th century, under Shaka (c.1787–1828), the Zulus conquered an extensive empire until eventually defeated in wars with the Europeans. Their highly efficient military organization was based on the age-set system; warriors could not marry until they attained a certain grade. Ancestor worship and witchcraft were prominent in their religious beliefs and the king had important ritual functions. Today, many Zulus are migrant labourers. In 1994 the status of the Zulu king was enshrined in South Africa's constitution.

Zurbarán, Francisco de (1598–1664) Spanish painter. In his earlier career, when he was based in Seville, he specialized in scenes from the lives of the saints, portraits, and still-lives. The paintings of his later years, when he lived in Madrid, are characterized by a sentimental piety and are now considered inferior.

Zürich 47°23'N 8°33'E The largest city in Switzerland, on Lake Zürich. It is the commercial and industrial centre of Switzerland. Zürich's Alpine setting has contributed to the

rise of its tourist industry. The Romans occupied the site in the 1st century BC. During the middle ages it became the most important Swiss town and joined the Swiss confederation in 1351. A leading centre of the Reformation, Zürich became a refuge for those persecuted in the Counter-Reformation. Population (1999 est): 336 821.

Zwingli, Ulrich (1484–1531) Swiss Protestant reformer. A priest in the minster at Zürich, he welcomed *Luther's writings and had established a reformed church by 1525. He separated from Luther over the latter's Eucharistic doctrine, which he saw as a persistence of Roman doctrine.

zygote See FERTILIZATION.

Appendices

Units of Measurement

SI units (Système International d'Unités) are now widely used throughout the world, especially for scientific purposes. SI units are metric units, based on the metre, kilogram, and second.

The base units are:

PHYSICAL QUANTITY	SI UNIT	SYMBOL
length	metre	m
mass	kilogram	kg
time	second	s
electric current	ampere	A
thermodynamic temperature	kelvin	K
luminous intensity	candela	cd
amount of substance	mole	mol
plane angle	radian	rad
(supplementary unit)		
solid angle	steradian	sr
(supplementary unit)		

The derived units with special names are:

PHYSICAL QUANTITY	SI UNIT	SYMBOL
frequency	hertz	Hz
energy	joule	J
force	newton	N
power	watt	W
pressure	pascal	Pa
electric charge	coulomb	C
electric potential difference	volt	V
electric resistance	ohm	W
electric conductance	siemens	S
electric capacitance	farad	F
magnetic flux	weber	Wb
inductance	henry	H
magnetic flux density (magnetic induction)	tesla	T
luminous flux	lumen	lm
illuminance	lux	lx
absorbed dose	gray	Gy
activity	becquerel	Bq
dose equivalent	sievert	Sv

SI units are used in decimal multiples, e.g. 1 km = 1000 metres, often written 10^3 m ($1 \times 10^3 = 10 \times 10 \times 10 = 1000$); 1 cm = 1/100 of a metre, often written 10^{-2} m ($1 \times 10^{-2} = 1 + (10 \times 10) = 1/100$).

The following prefixes are used:

SUBMULTIPLE	PREFIX	SYMBOL	MULTIPLE	PREFIX	SYMBOL
10^{-1}	deci-	d	10	deca-	da
10^{-2}	centi-	c	10^2	hecto-	h
10^{-3}	milli-	m	10^3	kilo-	k
10^{-6}	micro-	μ	10^6	mega-	M
10^{-9}	nano-	n	10^9	giga-	G
10^{-12}	pico-	p	10^{12}	tera-	T
10^{-15}	femto-	f	10^{15}	peta-	P
10^{-18}	atto-	a	10^{18}	exa-	E
10^{-21}	zepto-	z	10^{21}	zetta-	Z
10^{-24}	yocto-	y	10^{24}	yotta-	Y

These prefixes are used with all SI units.

Unit Conversion Tables

LENGTH
