[OE. hlǣfdige wk. fem.; *f.* hlāf bread, LOAF + root dig- to knead: see DOUGH.

Like the corresponding masc. designation hlāford, LORD, the word is not found outside Eng. (the Icel. lafi is adopted from ME.). The etym. above stated is not very plausible with regard to sense; but the attempts to explain hlǣfdige as a deriv. of hlāford are unsatisfactory: the fem. suffix in OE. is -ige, not -ige, and the umlaut in the first syllable is difficult to explain on this supposition.

The OE. æ, being regularly shortened in ME. before two consonants, yielded regularly ā and ē according to dialect. The ME. lefdi, levdi, is represented by *Sc. ledy*. The other form lafdi (= *lavedi) became lævedi (3 syllables), and by regular development lævdi; afterwards the e became silent and the v was dropped; hence the mod. Eng. form.

The genitive sing. (OE. hlǣfdigan) became by regular phonetic change in ME. coincident in form with the nom.; hence certain syntactical combs. have the appearance of proper compounds, as *lady-bird*, *Lady-day*, *Lady-chapel*.]

4. a. A woman of superior position in society, or to whom such a position is conventionally or by courtesy attributed. Originally, the word connoted a degree equal to that expressed by *lord*; but it was (like its synonyms in all European langs.) early widened in application, while the corresponding masc. term retained its restricted comprehension. In mod. use *lady* is the recognized fem. analogue of *gentleman*, and is applied to all women above a loosely-defined and variable, but usually not very elevated standard of social position. Often used (*esp.* in 'this lady') as a more courteous synonym for 'woman', without reference to the status of the person spoken of. See also FINE LADY, YOUNG LADY.

As the traditional association of *lady* with *lord* still survives, the former is a title of ostensibly higher dignity than *gentleman*. Hence, and not directly as the result of the sentiment of gallantry, the customary order of words in 'ladies and gentlemen'.

6. As an honorific title.

a. A prefix forming part of the customary designation of a woman of rank. Also in *my lady*, an appellation used (chiefly by inferiors) in speaking to or of those who are designated by this prefix.

In the 15-16th c., *The (or My) Lady* was prefixed to the Christian name of a female member of the royal family, as 'Princess' is now. With regard to the use of the prefix in the titles of the nobility of the British Isles, usage has varied greatly at different times, but the following rules are now established: (1) In speaking of a marchioness, countess, viscountess, or baroness (whether she be such in her own right, by marriage, or by courtesy), the prefix *Lady* is a less formal substitute for the specific designation of rank, which is not used in conversational address: thus 'the Marchioness (of) A.' is spoken to, and informally spoken of, as 'Lady A.' (2) The daughters of dukes, marquises, and earls have *Lady* (more formally, e.g. on a superscription, *The Lady*) prefixed to their Christian names. (3) The wife of the holder of a courtesy title in which *Lord* is prefixed to a Christian name is known as '(The) Lady John B.' (4) The wife of a baronet or other knight ('Sir John C.') is commonly spoken of as 'Lady C.', the strictly correct appellation 'Dame Mary C.' being confined to legal documents, sepulchral monuments, and the like.

lævigatē, obs. form of LEVIGATE.

lævo-, levo- ('li:vəu), used as combining form of *L. lævus*, in the sense '(turning or turned) to the left', in physical and chemical terms, chiefly having reference to the property possessed by certain substances of causing the plane of a ray of polarized light to rotate to the left (cf. *DEXTRO-*). Among these are: a. **lævo'gyrate**, **lævo'gyrous** *adjs.*, characterized by turning the plane of polarization to the left. **lævo-ro'tation**, rotation to the left. **lævo-ro'tatory a.**, = *LÆVOGYRATE*. b. **lævo-'compound**, a chemical compound which causes lævo-rotation. **lævo-'glucose** = *LÆVULOSE*. **lævo-ra'cemlc**, **lævo-tar'taric acid**, the modifications of racemic and tartaric acid which are lævo-rotatory. Hence lævo-'racemate, '-tartrate, the salts of these.

lag (læg), sb.¹ and a. [Belongs to LAG v.²; the origin and mutual relation of the words are obscure.

In some parts of England *fog*, *seg*, *lag*, or *foggie*, *seggie*, *laggie*, are used in children's games as substitutes for 'first, second, last' (see *Eng. Dial. Dict.* s.v. *Fog*). This suggests the possibility that *lag* may have originated in the language of sports as an arbitrary distortion of *last*; but even in that case the word may have coalesced with a homophone of independent origin. The current hypothesis that the adj. is a Welsh *llag* (earlier *llac*), Ir. and Gael. *lag*, slack, weak, is highly improbable. There is some affinity of sense between *lag* and LACK a. and v. (cf. *to come lag* and *to come lack*); the former might conceivably be an alteration of the latter under the influence of words like FLAG v.¹, FAG sb.² Cf. further MDa. *lakke* to go slowly (Kalkar.)

1837 *Fraser's Mog.* XVI. 114 When Spaniard meets Spaniard, then comes, not the tug, but the lag, of war.

b. in *Physics*: the retardation in a current or movement of any kind; the amount of this retardation; more widely in general use: a period of time separating any phenomenon or event from an earlier one to which it is related (causally or in some other way); = *time-lag* (TIME sb. 60). *angle of lag* (Electr.), the fraction of a complete cycle, multiplied by 360° or 2π radians, by which a sinusoidal current lags behind the associated sinusoidal voltage; *lag of the tide*: the interval by which the tide-wave falls behind the mean time in the first and third quarters of the moon. See also *jet lag* (JET sb.³ 11).

1855 OGILVIE *Suppl.* s.v., The lag of the tide... The lag of the steam-valve of a steam-engine. 1881 CHAMBERS in *Nature* XXIII. 399 The remarkable lag which takes place in the occurrence of the critical barometric epochs at the more easterly stations. 1886 S. P. THOMPSON *Dynamo-Electr. Machinery* (ed. 2) xviii. 330, φ is called the retardation or angle of lag. *Ibid.* 331 The retardation will increase with increased speed... There will be less lag therefore if the machine is so designed that it can be driven at a slow speed. 1892 *Electrical Engineer* 16 Sept. 287/1 It is obvious that at the point where B cuts the axis the induction is a maximum; hence if there were no 'magnetic lag' and no currents in the iron, this point should occur at the same time as that at which the current is a maximum. 1902 *Encycl. Brit.* XXVIII. 42/1 [His] method consisted in measuring the interval which elapses between the application of a potential difference... and the passage of the spark. This lag of the spark, as we may call it, is a very important quantity. 1909 *Jrnl. Hygiene* IX. 240 He found that there is an initial period after inoculation during which growth is almost absent: the length of time of this 'lag' varies with the age of the culture used for inoculation and with the species of the bacillus. 1923 *Glasgow Herald* 2 Nov. 12/4 The operation of the 'lag' of two months between the period of ascertainment and the months when the wages based on such ascertainment are paid. 1934 L. T. AGGER *Alternating Currents* iii. 38 The current goes through all the events in its cycle one-quarter of a period, or 90°, later than the P.D. For this reason it is said to lag behind the P.D. by 90°, or, expressed in another way, the angle of lag of the current is 90°. 1934 *Cultural lag* [see CULTURAL o. 3]. 1940 *Economist* 7 Dec. 707/1 It must not be forgotten that a very considerable lag must occur between the dates when insured losses are incurred and compensation is paid. In the case of certain shipping losses, this lag may extend for the duration of the war. 1962 J. THEWLIS et al. *Encycl. Dict. Physics* VII. 190/1 Lag in a control system may be defined briefly as delayed response of the output to changes of input. 1966 *McGraw-Hill Encycl. Sci. & Technol.* VII. 153/2 No instrument responds instantaneously to a change in the measurand; the lag is dependent on the natural frequency of the instrument system and its degree of damping.

c. *Comb.* lag fault *Geol.*, a type of overthrust formed when the uppermost of a series of rocks moves more slowly than the lower ones; lag phase *Biol.*, the period elapsing between the introduction of an inoculum of bacteria into a culture medium (or other new environment) and the commencement of its exponential growth; lag time, the period of time elapsing between one event and a later, related, event, esp. between a cause and its effect; (the extent of) a lag.

1900 J. E. MARR in *Proc. Geologists' Assoc.* XVI. 461 These fissures... would have an outcrop similar to those of thrust-planes or over-faults which approached the horizontal; but they would differ from these, inasmuch as no inversion on a large scale would accompany them. We shall speak of them here as 'lag' faults. 1947 *Q. Jrnl. Geol. Soc.* CIII. 100 There are several lag-faults in the district, but... only in the case of the Tirbach lag-faults is the evidence considered to be conclusive. 1963 E. S. HILLS *Elem. Struct. Geol.* vii. 191 Lag faults.—These are low angle faults with normal fault displacement, that originate from the upward movement of the footwall block in a region of general thrusting. The hanging-wall block appears to have lagged behind in the regional movements. 1914 *Jrnl. Hygiene* XIV.

260 A seeding taken during the lag-phase grows with diminished lag. 1944 L. E. H. WHITBY *Med. Bacteriol.* (ed. 4) 1. 6 Multiplication [of bacteria] passes through four phases: (1) Lag phase—lasting from half an hour to eight hours, during which time there is no increase in numbers...; during this time the organism adjusts itself to its new environment. 1972 *Biochim. & Biophys. Acta* CCLXX. 41 When *E. coli* cells are exposed to low temperatures, they enter a prolonged lag phase. 1956 *Nature* 24 Mar. 579/1 Fragments of chorioallantoic membrane... support the growth of hæmagglutinating particles, but there is a lag-time of about ten hours. 1962 F. Lagrange (||lagrɑ̃ʒ, lə'grɒndʒ). The name of Joseph Louis *Lagrange* (1736-1813), the Italian-born mathematician who worked in Prussia and France, used *attrib.* and in the possessive to designate various concepts introduced by him or arising out of his work, as **Lagrange's** equation, each of a set of equations of motion in classical dynamics relating the total kinetic energy *T* of a system to a set of generalized co-ordinates *q*, and forces *Q*, and to the time *t*, and having the form $d(\partial T/\partial \dot{q}_i)/dt - \partial T/\partial q_i = Q_i$. (In many contexts interchangeable with *Lagrangian*.)

1858 *Rep. Brit. Assoc. Adv. Sci.* 1857 1. 12 The force function *U* is independent of the differential coefficients η_i ,... and, consequently, of the variables ω_i ,..., hence, writing $H = T - U$, the equations take the form $d\eta_i/dt = dH/d\omega_i$, $d\omega_i/dt = -dH/d\eta_i$,... which correspond to the condensed form obtained by writing $T - V = R$ in Lagrange's equations. **1902** *Encycl. Brit.* XXVII. 568/1 Hence the typical Lagrange's equation may be now written in the form $d(\partial T/\partial \dot{q}_i)/dt - \partial T/\partial q_i = -\partial V/\partial q_i$, or, again, $\dot{p}_i = -\partial(V - T)/\partial q_i$. *Ibid.*, A classical example of the application of Lagrange's equations is to the motion of a top. **1942** SYNGE & GRIFFITH *Princ. Mech.* xv. 453 Two features of Lagrange's equations should be emphasized. First, there is no unique set of generalized coordinates; however we choose them, the equations of motion always have the form (15.215). Secondly, since only working forces contribute to δW , reactions of constraint are automatically eliminated. [Note] Except where forces of friction do work. **1958** CONDON & ODISHAW *Handbk. Physics* v. ii. 18/1 If the total number of systems is *N*, $\Sigma \eta_i = N \Sigma \eta_i E_i = E$ Using the method of Lagrange multipliers, introduce multipliers β and λ and find the set of η_i 's which make $\delta[\log P - \lambda(N - \Sigma \eta_i) + \beta(E - \Sigma \eta_i E_i)] = 0$. **1962** J. RIORDAN *Stochastic Service Syst.* iv. 66, $g(y)e^{-\delta(y)} = y$. The solution of this, obtained by Lagrange expansion, is $g(y) = \sum_{n=1}^{\infty} (n^n - 'y^n)/n!$ **1967** M. G. SMITH *Introd. Theory Partial Differential Equations* i. 3

Comparing (1.2.8) and (1.2.9) we have the Lagrange equations $\dot{p}_k = \partial L/\partial q_k$ and $\dot{p}_k = \partial L/\partial \dot{q}_k$.

Lagrangian (||lagrɑ̃ʒən, lə'grɒndʒən), *a.* and *sb.* *Math.* Also *lagrangian*, *Lagrangean*. [f. *prec.* + -IAN, -AN.]

A. adj. Of or pertaining to the work of J. L. Lagrange (see *prec.*); of the kind introduced by Lagrange or associated with his work; *spec.* applied to (a) *Lagrange's* equation; (b) the difference between the kinetic energy and the potential energy of a system expressed as a function of generalized co-ordinates, their time derivatives, and time. (In many contexts interchangeable with *Lagrange's*.)

1858 A. CAYLEY in *Rep. Brit. Assoc. Adv. Sci.* 1857 1. 2 The above-mentioned form is *par excellence* the Lagrangian form of the equations of motion, and the one which has given rise to almost all the ulterior developments of the theory. *Ibid.* 15 When there is no force function... the forms corresponding to the untransformed forms in *T* and *U* are as follows, viz. the Lagrangian form is $dq/dt = q'$, $d(dT/dq')/dt - dT/dq = Q$, and the Hamiltonian form is $dq/dt = dT/dp$, $dp/dt = -dT/dq + Q$. **1870** *Rep. Brit. Assoc. Adv. Sci.* 1869 II. 10 Equations of motion in the Lagrangean form. **1882** Lagrangian method [see EULERIAN *a.*]. **1904** E. T. WHITTAKER *Treat. The function *L* is called the Kinetic Potential, or Lagrangian function; this single function completely specifies, so far as dynamical investigations are concerned, a holonomic system for which the forces are conservative. **1908** J. H. JEANS *Math. Theory Electr. & Magn.* xvi. 484 The Lagrangian equation corresponding to the coordinate *r* is found to be... $d(\partial T/\partial \dot{r})/dt - \partial(T - w)/\partial r = R$. *Ibid.* 486 Let *Q* be the charge on the positive plate at any instant, and let this be taken as a Lagrangian coordinate. **1949** *Math. The x_i are now functions of the λ_j , but these quantities, which are called the undetermined multipliers or the Lagrangian multipliers, can be eliminated by substituting for the x_i into equations (MA4.01) and solving for the λ_j . **1957** L. laik, Sc. form of LACK; variant of LAKE.

-laik, *suffix*, in the Ormulum written -le33c, in northern and north-midland texts usually -laik, -layk(e, in the Ancren Riwle (MS. Nero) and a few other 13th c. texts -leic, -lec, -leik; appended in ME. to adjs. to form sbs. of quality, none of which have survived into mod.Eng. Etymologically it represents the ON. *-leik-r* str. masc. which (with a parallel form *-leike* wk. masc.) is the ordinary suffix in ON. corresponding functionally to the Eng. *-ness*; its use in Eng. must have originated in words adopted from Scandinavian, as *godle33c* (Orm.) from ON. *góðleikr*; but already in the Ormulum (*c* 1200) it is added freely to native English adjs., as in *clænle33c* cleanness, *gredile33c* greediness. Ormin has in all 28 words of this formation; in some instances he originally wrote *-nesse*, but *-le33c* has been substituted ‘in a ruder but apparently contemporary hand’ (editorial note in *Orm.* II. 349); the reason was perh. metrical, as *-le33c* and *-nesse* were in Ormin’s prosody equivalent only before a vowel. Except in the Ormulum the suffix is somewhat rare, and no instance is known of its being appended to an adj. of Romanic origin.

The ON. *-leik-r* corresponds in form with the OE. suffix *-lác* (usually neut., rarely masc.), now -LOCK (q.v. for the etymology); but in function the two are distinct, the ON. suffix being appended only to adjs., and the OE. suffix only to sbs. or verb-stems to form sbs. expressive of action. Occasionally the suffix representing OE. *-lác* was in northern or north midland texts written *-laik*, so that it became coincident in form with the Scandinavian suffix, e.g. in *dwimerlaik* (Alex.), *wedlaik* (R. Brunne).

laika (‘laikə). Pl. laikī. [Russ. *laika*, f. *laī* bark.] A dog belonging to a group of Asiatic breeds of the spitz type, characterized by a pointed muzzle, pricked ears, a stocky body with a thick, rough, grey, fawn, white, or black coat and a tail curled over the back.

Dog of medium size, well built and cobby, covered with a thick fur. **1928** *Daily Sketch* 7 Aug. 4/3 The Elkhound is of similar type to the Russian Laika (barking) dog, so-called because, unlike others of the lupine group, its tongue is a bark and not a howl. **1948** C. L. B. HUBBARD in B. Vesey-Fitzgerald *Bk. Dog* 11. 517 The Spitz of the Asiatic sphere shew considerable variation, and are consequently divided into many well-defined breeds. These are collectively known as Laiki, and each Laika is called (in most cases) after its province or its people. **1971** F. HAMILTON *World Encycl. 4. **Physics.** **lambda point**, the temperature (approximately 2·18°K) below which liquid helium in equilibrium with its vapour exhibits superfluidity, and at which there is a sharp maximum and apparent discontinuity in its specific heat; *transf.*, any temperature at which the specific heat of a substance exhibits similar behaviour, increasing at an increasing rate as the temperature is raised to this value and then dropping abruptly; hence **lambda curve**, **line** (on a phase diagram), **transition**. Freq. written as λ *point*, etc.

1932 W. H. & A. P. KEESOM in *Proc. Sect. Sci. Kon. Akad. Wetensch. Amsterdam XXXV.* 742 The specific heat of liquid helium at about 2·19°K falls from a value of 3·0 to a value of about 1·1 certainly within 0·02 degree. . . . For convenience sake it is desirable to introduce a name for the point at which this jump occurs. According to a suggestion made by Prof. Ehrenfest we propose to call that point, considering the resemblance of the specific heat curve with the Greek letter λ, the lambda-point. 1933 W. H. KEESOM in *Ibid.* XXXVI. 149 It is in this sense that . . . we speak of the lambda-point. . . and of the lambda-curve. 1940 *Physical Rev.* LVII. 417 Measurements of the temperature variation of the adiabatic and isothermal Young's and rigidity moduli and of the coefficient of thermal expansion of pressed specimens of ammonium chloride in the neighbourhood of the λ-point transition at 242·8°K are reported. 1952 J. MENDELSSOHN *Quest for Absolute Zero* x. 234 The characteristic feature of superflow . . . was transport completely free of friction, taking place at a 'critical velocity' which only depended on temperature and vanished at the lambda-point.

5. *a. Chem.* A millionth of a litre; usu. denoted by λ.

1934 P. L. KIRK in *Mikrochemie* XIV. 13 It seems logical to use the designations mm³ = μ l = λ. Such a procedure could simplify discussion considerably if the letter lambda were used with this significance, and we shall in future adhere to this usage. *Ibid.*, Since 1 l. of normal solution contains 1 equivalent. . . 1 λ contains 1 micro-equivalent. 1939 *Mikrochemie* XXVI. 32 All the drops should have the same volume, 1 λ. 1939 E. CONWAY *Micro-diffusion Anal.* i. 4 For the actual designation of the minute quantities or volumes. . . we have the milligramme (mg.), and the gamma (γ or 0·001 mg.), also termed the microgramme (μg) and the lambda (λ or 0·001 ml.—introduced by Kirk). 1961 A. b. Nuclear Physics. Used, usu. *attrib.*, to denote a neutral hyperon (and its anti-particle) which has a mass 2183 times that of the electron, a spin of ½, and zero isospin, and on decaying usually produces a nucleon and a pion; †orig. applied to other hyperons also. Freq. written as Λ.

1954 *Physical Rev.* XCIII. 861/1 We have reported two examples of Λ⁰ particles produced in hydrogen by negative pions (π⁻) of 1·5-Bev kinetic energy. *Ibid.*, We are using here the nomenclature suggested for V events at the International Congress on Cosmic Radiation, Bagnères-de-Bigorre, France. Accordingly Λ⁰, +, - → nucleon + pion + Q_Λ. *Ibid.* XCVI. 543/1 The known hyperons, Λ⁻, Ω⁻, have masses equivalent to 1200 and 1320 Mev, respectively. 1963 *Sci. LIVINGSTON *Particle Physics* iv. 80 This evidence was the observation of V tracks consisting of two charged-particle tracks coming from a common origin, of which one was identified as a proton and the other as a negative pion. The neutral particle which decayed to give these products, now called the lambda-zero, (Λ⁰), must have had a mass greater than the sum of proton and pion masses.

Lambert ('læmbət). [The name of Johann Heinrich *Lambert* (1728-77), German mathematician.]

1. *a.* In *Cartography* used *attrib.* and in the possessive to designate certain map projections devised by Lambert, *spec.* a conical conformal projection having two standard parallels along which the scale is true. Also *ellipt.* as *Lambert*.

1879 *Encycl. Brit.* X. 207/2 A translation of this essay [of Gauss's] is to be found in the *Philosophical Magazine* for 1828... where Lambert's projection comes out as a particular solution of the general problem. **1912** A. R. HINKS *Map Projections* ii. 18 When the conical orthomorphic projection is used, it is always that with two standard parallels, which is Lambert's second, or Gauss'. **1953** A. H. ROBINSON *Elem. Cartogr.* iii. 43 The Lambert conic projection... has concentric parallels and equally spaced straight meridians that meet the parallels at right angles... It has two standard parallels, but the spacing of the other parallels on the Lambert increases away from the standard parallels. *Ibid.* iv. 74 The Lambert azimuthal equal-area projection is most useful when centered in the area of interest. **1971** I. G. GASS et al. *Understanding Earth* xv. 224 (caption) A possible geometrical fit of the southern continents at the 500-fathom... contour... Lambert equal area projection.

b. In *Physics* used in the possessive to designate two laws enunciated by Lambert:

(a) the intensity of the light emitted by an element of area of a perfectly diffusing surface is proportional to the cosine of the angle between the direction of emission and the normal to the surface; (b) (see *quots.* 1911, 1966).

1895 *Electrician* 20 Sept. 672/2 The diffused reflection practically follows Lambert's cosine law. **1911** R. W. WOOD *Physical Optics* (rev. ed.) xv. 437 Lambert's law states that each layer of equal thickness absorbs an equal fraction of the light which traverses it. **1952** R. W. DITCHBURN *Light* xv. 441 Experimental observations on the transmission in a homogeneous medium which absorbs, but does not scatter, the light are summarized in Lambert's law, which may be written $L(x) = L_0 e^{-2ax}$. The constant $2a$ is called the absorption coefficient. **1966** D. G. BRANDON *Mod. Techniques Metallogr.* ii. 65 The fraction of the incident intensity transmitted through a thin slice, of thickness t , can be calculated from Lambert's law: $I/I_0 = \exp(-\mu t)$, where μ is the absorption coefficient.

2. (Written *lambert*.) A unit of luminance equal to one lumen per square centimetre (equivalent to approximately 3180 candelas per square metre).

1915 P. G. NUTTING in *Electr. World* 6 Feb. 333/1, I prefer to speak of a brightness of so many 'lamberts'. This term is now well understood in our laboratory. Where required it is easily translated into lumens and any desired units of area. **1915** H. E. IVES in *Ibid.* 20 Feb. 460/1 Dr. Nutting... comes forward with an excellent name... the 'lambert'. But he applies it, in my opinion, to the wrong unit... Let us say that a surface has a brightness of one 'lambert' if it is as bright as a 'Lambert's law' white surface under unit illumination. **1923** L. C. MARTIN *Colour* 178 The normal radiation corresponds to $1/\pi$ candles per square centimetre when the brightness is 1 lambert. **1953** AMOS & BIRKINSHAW *Television Engin.* I. 280, 1 lambert = 1 lumen per square centimetre = 0.3183 candle per square centimetre = 2.054 candles per square inch = 929 foot-lamberts. **1962** F. I. ORDWAY et al. *Basic Astronautics* iii. 37 (table) Sun... Surface brightness, lamberts... 6.24×10^5 . **1966** D. G. BRANDON *Mod. Lambeth ('læmbəθ). [The name of a South London borough.] 1. Used allusively (chiefly *attrib.*) to refer to the Archbishop of Canterbury, whose palace is at Lambeth, or to the Church of England; esp. in Lambeth Conference, an assembly of the Anglican bishops, usu. held decennially at Lambeth Palace; Lambeth degree, a degree *honoris causa* conferred by the Archbishop of Canterbury.

These, generally known as the Lambeth Articles, were strongly Calvinistic in tone. **1902** *Ibid.* XXX. 120/2 The resolutions of the Lambeth Conferences have never been regarded as synodical decrees, but their weight has increased with each conference; and in particular the 'Lambeth Quadrilateral' of 1888 has already had a great effect as a plan of reunion. **1941** W. Computing Machinery* III. 272 In the development of an automatic coding system, two major problems arise. The first is to develop a coding language which permits a programmer to specify the computation he wants the machine to perform. Once this has been done, there remains the task of coding a compiler for a particular high speed calculator which will translate the language into actual machine instructions... The language described here is the one translated by the PACT I Compiling Routine into instructions for the IBM Type 701. 1959 E. M. GRABBE et al. *Handbk. Automation, Computation, & Control* II. ii. 186 The purpose of these activities has been to... set up a class of languages that will be easily translatable by machine from one to another, and also easily recognizable to the ordinary human user... Such languages form the input to a class of automatic computer programs called translators, which perform a translation... into a second or target language. The latter may be either (1) an assembly language such as SOAP, SAP, or MAGIC... or (2) a straight machine language, in pure decimal, binary (or in some cases such as the Univac I and II), alphanumeric. 1961 *LEEDS & WEINBERG Computer Programming Fund.* ii. 46 The best way of writing down operations is to write them in alphabetical format. We have now to find the quantity *V*; this we shall do by expanding it into a series, the coefficients of which have peculiar properties, depending upon a partial differential equation to which they are subject... We shall... distinguish them by that [sc. name] of their illustrious inventor, calling the differential equation and the coefficients... Laplace’s equation, and Laplace’s coefficients. 1873 J. C. MAXWELL *Treat. Electr. & Magn.* II. i. ix. 162 The theory of spherical harmonics was first given by Laplace in the third book of his *Mécanique Céleste*. The harmonics themselves are therefore often called Laplace’s Coefficients. *Ibid.* 164 It is shewn in treatises on Laplace’s Coefficients that *Q*_i is the coefficient of *hⁱ* in the expansion of (1 - 2μ*h* + *h*²)^{-1/2}. 1812 *Phil. Trans. R. Soc. CII.* 31 It is exclusively confined to that class of spheroids which, while they differ from spheres, likewise have their radii expressed by rational and integral functions of a point in the surface of a sphere: in this hypothesis Laplace’s equation has been rigorously demonstrated. 1813 *Phil. Mag.* XLI. 9 In Laplace’s equation (*d*²*V*/*dx*²) + (*d*²*V*/*dy*²) + (*d*²*V*/*dz*²) = 0, . . *V* is a function of *x*, *y*, and *z*. 1962 CORSON & LORRAIN *Introd. Electromagn. Fields* ii. 36 If we introduce into Eq. 2-23 the electrostatic potential *V*₁, . . $\nabla^2 V = -\rho/\epsilon_0$. This is Poisson’s equation. In a region of the field where the charge density ρ is zero, $\nabla^2 V = 0$, which is Laplace’s equation. *Ibid.* iv. 154 Certain cases of symmetry are best treated in spherical polar coordinates. Laplace’s equation then takes the form

$$\nabla^2 V = \frac{1}{r^2} \frac{\partial}{\partial r} \left(r^2 \frac{\partial V}{\partial r} \right) +$$

$$\frac{1}{r^2 \sin \theta} \frac{\partial}{\partial \theta} \left(\sin \theta \frac{\partial V}{\partial \theta} \right) + \frac{1}{r^2 \sin \theta} \frac{\partial^2 V}{\partial \phi^2} = 0.$$

1873 J. C. MAXWELL *Treat. Electr. & Magn.* I. 29 One of the most remarkable properties of the operator ∇ is that when repeated it becomes $\nabla^2 = - (d^2/dx^2 + d^2/dy^2 + d^2/dz^2)$, an operator occurring in all parts of Physics, which we may refer to as Laplace’s Operator. 1935, 1936 Laplace operator [see LAPLACIAN *sb.*]. 1944 T. Let us say that Laplace’s superman could do it. 1965 P. CAWS *Philos. of Sci.* xxxix. 300 This intelligence has been called ‘Laplace’s demon’, and it has become the patron saint of determinism.

1935 PAULING & WILSON *Introd. Quantum Mech.* iv. 85 This [Schrödinger] equation is often written as

$$\frac{-\hbar^2}{8\pi^2} \sum_{i=1}^N \frac{1}{m_i} \nabla_i^2 \psi + V\psi = -\frac{\hbar}{2\pi i} \frac{\partial \psi}{\partial t},$$

in which ∇^2 is the Laplace operator or Laplacian for the *i*th particle. 1936 P. M. MORSE *Vibration & Sound* vii. 232 We can write the wave equation as $\nabla^2 p = (\partial^2 p / \partial t^2) / c^2$... The operator ∇^2 is called the Laplace operator, or the Laplacian: it measures the concentration of a quantity (or, rather, the negative of the concentration). The value of $\nabla^2 p$ at a point is proportional to the difference between the average pressure near a point and the pressure right at the point. 1962 CORSON & LORRAIN *Introd. Electromagn. Fields* i. 17 The product $\nabla \cdot \nabla f$ is commonly abbreviated to $\nabla^2 f$, and the operator ∇^2 is called the Laplacian.

[ME. *lad(d)eborde*, *latheborde*, altered in the 16th c. into *ler-*, *leere-*, *larbord*, by form-association with the contemporary *ster-*, *-steere-*, *starbord*. The second component is OE. *bord*, ON. *borðe*, ship's side (BOARD *sb.* 12); the origin of the first component, which appears as *ladde-*, *lade-*, *lathe-*, *late-*, has not been determined.
Some would connect it with LADE *v.*, taking it to mean 'the side on which cargo was received', or on which deck cargo was placed.
In OE. the corresponding term was *bæcbord*; this did not survive into ME., though its etymological equivalent still remains in all the mod. continental Teut. tongues, and was adopted into Rom. (F. *bâbord*). The word seems to have meant 'the side at the back of the steersman'; the rudder or steering-paddle of early Germanic ships having been worked over the right side, whence the name *stéorbord* 'steering-side', STARBOARD.]
The side of a ship which is to the left hand of a person looking from the stern towards the bows. Opposed to *starboard*. (Freq. in phr. without the article, as †*on*, †*by*, †*a*, to *larboard*.)
The term has now been discarded in the navy and supplanted by *port*, to avoid confusion with the similar-sounding *starboard*.

8. In mod.Eng., a general designation for considerable magnitude, used instead of *great* when it is not intended to convey the emotional implication now belonging to that word. (See GREAT a. 6.) The more colloquial or less refined synonym is *big*.

a. Of material objects. Also in phrases like *large of limb* = 'having large limbs'.

Not ordinarily said of persons; the occasional use of expressions like 'a large man' is somewhat playful, the notion being 'taking up a great deal of room'. To say 'the larger' (= 'bigger') children is admissible, if perh. somewhat unusual, but the positive (and, indeed, the comparative in the singular) could not be similarly used.

In the earlier examples there may be some notion of the sense 'ample'.

i. law of large numbers [tr. F. loi des grands nombres (S. D. Poisson 1835, in *Compt. Rend.* I. 478)]: a statistical law which states that if a series of independent trials or observations is made, in each of which there is the same probability of a particular outcome, then as the number of trials is made larger the chance that the observed proportion of such outcomes differs from the probability by less than any given number, however small, approaches a certainty (or, in stronger terms, the observed proportion approaches the probability).

[1921 J. M. KEYNES *Treat. Probability* xxviii. 336 The 'Law of Great Numbers' is not at all a good name for the principle which underlies Statistical Induction. The 'Stability of Statistical Frequencies' would be a much better name for it. The former suggests, as perhaps Poisson intended... what is certainly false, that every class of event shows statistical regularity of occurrence if only one takes a sufficient number of instances of it. It... encourages the method... by which it is thought legitimate to take an observed degree of frequency or association, which is shown in a fairly numerous set of statistics, and to assume... that, because the statistics are numerous, the observed degree of frequency is therefore stable.] 1937 J. V. USPENSKY *Introd. Math. Probability* x. 182 A far reaching generalization of Bernoulli's theorem, known under the name of the 'law of large numbers'. 1949 W. KNEALE *Probability & Induction* III. 139 Many people who have heard of it under the name of the law of large numbers... suppose it to be a mysterious law of nature which guarantees that in a sufficiently large number of trials a probability will be 'realized as a frequency'. *Ibid.* 141 As an illustration of the importance of the law of large numbers in practical affairs it will be sufficient to mention the business of insurance... The greater the number of persons insuring with the company, the greater the probability that the company's finances will remain sound. 1960 S. GOLDBERG *Probability* iv. 227 The law of large numbers can be used to supply a theoretical counterpart to our intuitive feeling that if an event *A* occurs *f* times in *n* identical trials and if *n* is large, then *f/n*, the proportion of times *A* occurs, should be near the probability *P(A)* of the event *A*.

The term 'large-scale integration' is close to being the most descriptive, although at times the syntax is awkward. A somewhat more precise term is 'large-scale integrated electronics'. We will use LSI to abbreviate both 'large-scale integrated electronics' and 'large-scale integration'. 1967 *Proc. lark (lɑ:k), *v.*² *colloq.* (orig. *slang*). [Belongs to LARK *sb.*²; the *sb.* and *vb.* appear first in 1811-3. The origin is somewhat uncertain.

Possibly it may represent the northern LAKE *v.*, as heard by sporting men from Yorkshire jockeys or grooms; the sound (læk, læk), which is written *lairk* in Robinson's *Whitby Glossary* and in dialect books, would to a southern hearer more naturally suggest 'lark' than 'lake' as its equivalent in educated pronunciation. On the other hand, it is quite as likely that the word may have originated in some allusion to LARK *sb.*¹; cf. the similar use of *skylark* *vb.*, which is found a few years earlier (1809).]

in which the particle is rotating to rotate in turn about the direction of the magnetic flux with a frequency $\gamma B/2\pi$ (where γ is the magneto-mechanical ratio and B the magnetic induction), which for an orbital electron in a monatomic molecule represents a precessional frequency of $eB/4\pi m$ (e and m being the charge and mass of the electron); so *Larmor frequency*, *precession*; *Larmor's theorem*; also *Larmor radius*, the radius of the helical path of a free charged particle spiralling about magnetic field lines.

1929 C. E. TILLEY in *Mineral. Mag.* XXII. 79 Next in importance to spurrite comes a mineral consisting of calcium orthosilicate. As this is the first recorded natural occurrence of this compound it is proposed to designate it as larnite, from *Larne*, in the vicinity of which these contact minerals occur. 1950 *Ibid.* XXIX. 182 Both the nagelschmidite and larnite phases have been seen in slags. 1957 *Amer. larrikin ('lærɪkɪn). Chiefly *Austral.* Also *larikin*. [Of uncertain origin; possibly f. *Larry* (a nickname for Lawrence, common in Ireland) + -KIN.]

The word seems to have originated in Melbourne not long before 1870; but the story that it was evolved by a reporter from an Irish policeman's pronunciation of *larking*, heard in a Melbourne police-court in 1869, appears to be a figment, no trace of the incident being found in the local papers of the time. (See Morris, *Austral Eng.*, s.v.) A guess that has been proposed is that it is short for *larri* 'a mischievous or frolicsome youth' from informants in Warwickshire and Worcestershire; see also quot. 1882. Cf. *E.D.D.*, *Larack* (*larack* about, to 'lark' about), cited from C. C. Robinson's *Dial. of Leeds* (1861).]

lase (leɪz), *v.* [Back-formation from LASER², the ending -er being treated as the ending -ER¹ of agent nouns.] *intr.* Of a substance, or an atom or molecule: to undergo the physical processes (of excitation and stimulated emission) employed in the laser; to function as the working substance of a laser. Of a device: to operate as a laser.

1962 *New Scientist* 1 Feb. 270/3 This is well illustrated by the uses now being made of the entirely novel verb 'to lase'. ... It is common currency among those... whose lives are given to the search for materials that will emit light in coherent and narrow-pencilled beams. 1963 *Ibid.* 10 Jan. 65/3 Hitherto, only certain ionic crystals (notably ruby), some gas mixtures and... one or two liquids, had been persuaded to 'lase'; that is, to emit coherent infrared or visible light of a single wavelength. 1963 *Ibid.* 7 Feb. 293/2 Scientists at Standard Telecommunications Laboratories... last week persuaded their version of the gallium arsenide laser to 'lase'. 1963 *Monsanto Mag.* Mar. 10/2 Calculations... indicated that gallium arsenide would 'lase', or amplify light, if suitably stimulated. 1967 *Guardian* 11 Feb. 1/1 Can X-ray lasers be made? laser² ('leɪzə(r)). [f. the initial letters of 'light amplification by the stimulated emission of radiation', after the earlier MASER.] 1. Any device that is capable of emitting a very intense, narrow, parallel beam of highly monochromatic and coherent light (or other electromagnetic radiation), either continuously or in pulses, and operates by using light to stimulate the emission of more light of the same wavelength and phase by atoms or molecules that have been excited by some means.

Orig. treated as the name of a particular kind of maser (optical maser) emitting visible light, *laser* is now the general term for all devices of this kind, whatever the wavelength of the emitted radiation.

1960 *N.Y. Times* 8 July 7/6 The Hughes device is an optical maser, or 'laser', (the 'l' standing for 'light'). 1960 *Aviation Week* 18 July 97/2 The optical Maser is also referred to by the term Laser. 1960 *Daily Tel.* 29 Dec. 9/4 The laser, a device for amplifying light which could conceivably be developed to produce a searchlight beam that would reach the moon, is still a paper project as far as British scientists are concerned. 1961 *Jrnl. Appl. Physics* XXXII. 178 [*Paper received 13 June 1960.*] The Fabry-Perot interferometer has been suggested for use as a high-mode LASER (light amplification by stimulated emission of radiation) resonator. 1961 *Observer* 19 Feb. 5/2 The new 'laser', as it is called, uses a mixture of helium and neon gas to produce a continuous beam of infra-red radiation... Previous devices have produced only brief pulses of light. 1962 *Science Survey* III. 27 The principle of the maser has been extended also to solid materials and, in addition, it has been found possible to make a light maser (or 'laser') that produces, not microwaves, but visible light. 1963 *Electronics Weekly* 2 Jan. 1/4 The new high-power laser uses a six-inch by half-inch ruby. 1963 *Monsanto Mag.* Mar. 9/2 Early lasers absorbed energy from a strong burst of ordinary white light, organized it, then expelled a powerful beam of a different kind of light. 1963 *Daily Tel.* 24 Oct. 19/4 Already in metal working the term 'Gillette power' is used as a measure of the laser's metal-vaporising capabilities. It represents the number of stacked razor blades through which a beam can bore its way. 1964, 1966 [see HOLOGRAM]. 1969 *Sci. Jnl.* Apr. 53/1 Lasers have been operated which produce visible radiation, ultraviolet, infrared and even submillimetre radiation. 1970 [see HOLOGRAM v.]. 1971 *Sci. Amer.* June 21/3 A laser is a device for generating or amplifying a beam of light whose waves are both monochromatic (all the same wavelength) and coherent (all in step). The light beam emitted by a laser can be made almost perfectly parallel, its divergence angle being theoretically limited only by diffraction effects. 1972 *McGraw-Hill Yearbk. Sci. & Technol.* 266/2 The first purely chemical lasers requiring no external source of energy to initiate or sustain laser excitation have been operated successfully.

lass (læs). Forms: 4 las, lasce, 4-7 lasse, 6 *Sc. lase*, 6- lass. [ME. *lasce*, *las(se)*; perh. a. prehistoric ON. **lasqa*, wk. fern. of **lasqar* unmarried: cf. MSw. *lōsk kona* unmarried woman.]

The adj. means primarily 'free from ties'; hence the above sense and those of 'unoccupied', 'having no fixed abode', which are also recorded in MSw. The lcel. *lpsk-r* occurs only in the sense 'idle, weak'.

The phonology of the Eng. word, according to the above conjecture, is somewhat difficult; but the same sound-change occurs in other northern forms, as *ass* for **ask* (ashes), *asse* for *ask v.*, *buss* for *busk*.]

1. a. A girl.

In northern and north midland dialects the ordinary word; in the southern counties it has little or no popular currency.

2. A commercial denomination of weight, capacity, or quantity, varying for different kinds of goods and in different localities. Cf. G. *last*.

Originally the 'last' must have been the quantity carried at one time by the vehicle (boat, wagon, etc.) ordinarily used for the particular kind of merchandise. As a weight, it is often stated to be (like the Ger. weight of the same name) nominally equivalent either to 2 tons or to 4,000 lbs. In wool weight it is 4368 lbs. (= 12 sacks). A last of gunpowder is said to be 2,400 lbs. (= 24 barrels), and of feathers or flax 1,700 lbs.

The equivalence of the last of wool with 12 sacks seems to have led to an association of the word with the number twelve. Thus a last of hides was formerly 12 dozen (also 20 dickers of 10 hides each); of beer 12 barrels; of pitch 12 (sometimes 14) barrels; of cod and herrings 12 barrels (but of red herrings and pilchards 10,000 to 13,200 fish).

As a measure for grain and malt, the last was in the 16th c. 12 quarters, but is now 10 quarters = 80 bushels.

1959 E. M. GRABBE et al. *Handbk. Automation, Computation, & Control* II. xvii. 6 A delay element is provided with external gating which enables it to hold information provided on the 'set' input until a 'reset' input of 1 occurs. This configuration . . . is sometimes referred to as a latch. 1962 SIMPSON & RICHARDS *Physical Princ. Junction Transistors* xvi. 403 A variant of it [sc. the 'flip-flop'], known as the latch, is an asymmetric bistable multivibrator. 1971 J. H. SMITH *Digital Logic* iv. 54 A push button might be pressed and at a certain time in a machine sequence the fact that the button was pressed may be needed to change the sequence. The latch circuit is therefore used to 'remember' that a push button has been pressed. *Ibid.*, A *r* signal applied momentarily to the set input of NOR 1 will make *O/P*₁ a 0 signal. . . To reset the latch a *r* signal is fed to the reset input which makes *O/P*₂ fall to 0. As NOR 1 no longer has a *r* input, *O/P*₁ changes to 1, thereby holding *O/P*₂ at the 0 level.

JONES *Papers on Psycho-Anal.* ii. 26 A period of latency follows, usually from the fifth to the tenth years, when the process of sublimation is at its highest activity. 1934 H. C. WARREN *Dict. 2. *a.* *Delay between a stimulus and a response, esp. in muscle; a latent period.*

1882 *Proc. R. Soc. XXXIII.* 463 If, after a muscle has been powerfully extended, and while it is returning, by reason of its elasticity, towards its normal condition, a stimulation be applied, the latency may become as short as the 1/200-1/400 second. 1932 *Jrnl. Physiol.* LXXIV. 17 The general interest in the problem of latency increased when it was found, that while recording the action current of the muscle the latent period was absent, or seemed to be absent. 1951 H. DAVSON *Textbk. Gen. Physiol.* xvii. 483 The latency, as ordinarily recorded, is thus of the order of 3.5 msec. at 23°C; if, however, we take as a measure of the mechanical latent period the time between the stimulus and the moment when the tension [in the muscle] begins to rise from its minimum value, the period is 3.0 msec. 1963 *Jrnl. Pediatrics* LXII. 724 Cry latency is defined as the time which elapses between the moment of painful stimulation and the onset of crying. 1973 *Jrnl. b. *Computers.* More fully *latency time*. The delay before a transfer of data begins following an instruction for its transfer, esp. to or from a rotating storage device.

The latency represents the amount of time it takes to find the chosen address. 1970 O. La Tène (la'ten). The name of a district at the east end of Lake Neuchâtel, Switzerland, where archaeological finds were made, used esp. *attrib.* to denote a culture (fl. c3rd century B.C.) of the second Iron Age of central and west Europe, and objects found there.

h. *Biol. latent period*: a period between a stimulus and a response, esp. in a muscle or an irradiated individual. (See also sense d and LATENCY 2 a.)

1877 M. FOSTER *Text Bk. Physiol.* 1. ii. 37 A phase antecedent to any visible alteration in the muscle... during which invisible preparatory changes are taking place in the nerve and muscle, is often called the 'latent period'. 1926 L. i. *Math. latent root*: a scalar quantity λ which, when subtracted from each of the elements in the principal diagonal of a square matrix A , makes the determinant of the resulting matrix equal to zero (and so is a solution of the equation $Ax = \lambda x$, where x is a column vector).

1883 J. J. SYLVESTER in *Phil. Mag.* XVI. 267 It will be convenient to introduce here a notion (which plays a conspicuous part in my new theory of multiple algebra), viz. that of the latent roots of a matrix—latent in a somewhat similar sense as vapour may be said to be latent in water or smoke in a tobacco-leaf. If from each term in the diagonal of a given matrix, λ be subtracted, the determinant to the matrix so modified will be a rational integer function of λ ; the roots of that function are the latent roots of the matrix; and there results the important theorem that the latent roots of any function of a matrix are respectively the same functions of the latent roots of the matrix itself: ex. gr. the latent roots of the square of a matrix are the squares of its latent roots. 1958 R. V. ANDREE *Sel. Mod. Abstract Algebra* ix. 195 In quantum mechanics and elsewhere, the terms latent roots, proper value, eigenvalue, and eigenwerte are often used in place of characteristic root. 1968 E. T. COPSON *Metric Spaces* viii. 117 The condition... is known to imply that all the latent roots of A lie in $|z| < 1$. Hence the latent roots of $I - A$ lie in $|z - 1| < 1$. Thus $z = 0$ is not a latent root of $I - A$, so that $I - A$ is non-singular.

k. *Psychol. latent learning*, learning that has taken place without conscious purpose and that is not manifested until there is a goal to be achieved.

1929 H. C. BLODGETT in *Univ. Calif. Publ. Psychol.* IV. 122 Do these drops in errors which come after the introduction of reward indicate that something to be called a latent learning developed during the non-reward period—a latent learning which made itself manifest after the reward had been presented? *Ibid.* 133 During the non-reward period, the rats were developing a latent learning of the maze which they were able to utilize as soon as reward was introduced. 1938 R. S. WOODWORTH *Exper. Psychol.* vi. 137 'Latent learning', i.e., learning that is not revealed by the animal's path through the maze, until food has been found in the food box. 1956 E. R. HILGARD *Theories of Learning* (ed. 2) vi. 214 This second phase demonstrates genuine latent learning of the true path. 1957 *New Biol.* XXIV. 123 If rats, not deprived of any primary bodily needs, are put in a maze, they explore it... If such rats are later trained to run from one part of the maze to another to get food, they learn this task more quickly than similar rats which have not previously experienced the maze. This consequence of exploration is called latent learning. 1968 CHAPLIN & KRAWIEC *Syst. & Theories Psychol.* (ed. 2) vii. 277 Latent learning is hidden learning which goes on unobserved but which, under certain conditions, can be revealed in performance.

laterite ('lætərait). *Min.* [f. L. *later* brick + -ITE¹.] *a.* A red, porous, ferruginous clayey substance, forming the surface covering in some parts of India, south-western Asia, and other tropical and sub-tropical regions, which is soft when first dug but hardens irreversibly to the consistency of rock when exposed to the air. *b.* Applied loosely to various reddish or iron-rich surface materials in the tropics and sub-tropics. *c.* *Soil Science.* Any soil or soil horizon characterized by a high proportion of sesquioxides, esp. of aluminium and iron, and an unusually low proportion of alkali metals, alkaline earths, and combined silica, such as occurs as a product of chemical weathering in hot climates with periods of abundant rain; *esp.* one which hardens on exposure to air or is derived from one already exposed.

The use and proper application of the word have been the subject of much debate.

1807 F. BUCHANAN *Journey from Madras* II. xii. 441 What I have called indurated clay is not the mineral so called by Mr. Kirwan. It... is one of the most valuable materials for building. It is diffused in immense masses, without any appearance of stratification, and is placed over the granite that forms the basis of Malaya... As it is usually cut into the form of bricks... in several of the native dialects, it is called the brick-stone (*Itica cullu*). Where, however, by the washing away of the soil, part of it has been exposed to the air, and has hardened into a rock, its colour becomes black, and its pores and inequalities give it a kind of resemblance to the skin of a person affected with cutaneous disorders; hence in the Tamul language it is called *Shuri cull*, or itch-stone. The most proper English name would be *Laterite*. *Ibid.*, 460 In general, the Laterite, or brick-stone, comes very near the surface. 1871 TYLOR *Prim. Cult.* I. 53 In the gravel-beds of Europe, the laterite of India, and other more superficial localities. 1893 R. D. OLDHAM *Man. Geol. India* (ed. 2) xv. 385 The origin of laterite is still wrapt in obscurity. *Ibid.*, According to some geologists this laterite [of Buchanan] is in reality a soil and formed by the direct decomposition *in situ* of the underlying rock. 1898 *Agric. Ledger* (Calcutta) V. 11. 34 If... it is difficult for the Geologist to decide what is 'laterite', it becomes practically impossible

for the agriculturist to say what is a 'laterite soil'. Those 'laterite soils', that is, soils lying on or adjacent to what had every appearance of being laterite rock, which I have seen, had all a bright red appearance when dry; but as will be seen when discussing the analyses of the samples... some at least of these are probably not true laterite. 1909 *Geol. Mag.* Decade V. VI. 431 The term 'laterite' has been used, in the Malay Peninsula at least, for many years by a large body of engineers for what are essentially masses of iron oxide replacing portions of weathered rock and filling fissures in such rocks near the surface. This (Malayan) laterite... is largely used for public works. 1910 *Ibid.* VII. 444 The foregoing representatives of the class of more or less ferruginous and aluminous deposits which in the Guianas... have been termed 'laterite' do not possess, except in the case of the concretionary ironstones, the property... of 'setting' or hardening on exposure to the atmosphere. Parts of them agree to some extent with what has been laid down as the modern scientific qualification for a rock to be termed 'laterite'—the fact that they are 'essentially characterized by the presence of free hydrate of alumina'. 1911 *Ibid.* VIII. 565 Laterite (or rather some varieties of it) is formed by a process... by which certain rocks undergo superficial decomposition, with the removal in solution of combined silica, lime, magnesia, soda, and potash, and with the residual accumulation... of a hydrated mixture of oxides of iron, aluminium, and titanium, with, more rarely, manganese. *Ibid.*, The property of hardening on exposure to the air is characteristic of many varieties of laterite, but it is not essential property. 1927 *Jrnl. Agric. Sci.* XVII. 546 It is... suggested that where the silica/alumina ratio in the clay fraction [of a soil] falls below 2:0 the soil should be described as 'lateritic', and where this ratio falls below 1:33 the soil should be described as laterite. 1932 G. W. ROBINSON *Soils* xiii. 279 Many of the descriptions of the supposed laterites merely relate to red soils... It is now generally agreed that the terms laterite and lateritic should be restricted to materials characterised by excess of sesquioxides. 1949 *Publ. Inst. Nat. pour l'Étude Agron. du Congo Belge Sér. Sci.* No. 46. 7 The word 'laterite' is used by us for the sesquioxide-rich, highly weathered clayey materials that change irreversibly to concretions, hardpans, or crusts, when dehydrated, and for the hardened relicts of such materials, more or less mixed with entrapped quartz and other materials. 1966 D. FORBES *Heart of Malaya* iii. 35 It [sc. a bungalow] was set on a hillside... at the end of a three-mile estate road of red laterite. 1967 *Not. Geographic* July 110/2 [Thailand.] A foreman said this was laterite, a low-grade iron ore, good for making roads and filling land. 1970 E. M. BRIDGES *World Soils* ix. 72/1 Laterite... is formed by an accumulation in the soil of sesquioxides material.

BURTON *Goa* 176 A pile of laterite rock rising abruptly from a level expanse of sand. 1886 GUILLEMAUD *Cruise Marchesa* II. 327 The red laterite roads. 1898 [see above]. 1906 *Daily Chron.* 24 Aug. 6/5 The soil and the climate of Seychelles are evidently favourable to the growth of Para rubber, which thrives even in laterite soils where no other plants are at present growing.

lateritic ('lætə'ritik), *a.* [f. prec. + -IC.] Resembling or of the nature of laterite; in *Soil Science*, applied to a soil that is not regarded as laterite but approaches it in composition.

1847 CAPT. NEWBOLD in *Jrnl. Asiatic Soc. Bengal* XIV. 305 Lateritic sandstone. 1880 V. BALL *Jungle Life* Ind. i. 4 A very notable change... from a swampy alluvium into a lateritic gravel. 1927, 1932 [see LATERITE]. 1938 *U.S. Dept. Agric. Yearbk.* 974 Soils in which the lateritization process has become markedly evident but has not reached completion are known as lateritic soils... They are very important in the West Indies... These soils are characterized by a colloidal fraction whose molecular ratio of silica to alumina is approximately 2. 1946 LUTZ & CHANDLER *Forest Soils* xi. 403 The lateritization process, in conjunction with podzolization, has resulted in the development of six zonal soils in the forested warm-temperature and tropical regions: (1) laterites, (2) reddish-brown lateritic soils, (3) yellowish-brown lateritic soils, (4) red podzolic soils, (5) yellow podzolic soils, and (6) terra rossa. 1952 L. M. THOMPSON *Soils & Soil Fertility* xvii. 285 The clay soils which he studied... were lateritic in nature (high percentage of kaolinite or high in hydrated oxides of iron and aluminum), and it is now recognized that lateritic or kaolinitic materials are resistant to erosion. 1970 *Toronto Daily Star* 24 Sept. 14/7 He pointed to the lateritic, or oxide, ores of the tropics and subtropics as an area where future major expansion in the industry will occur.

lateritious ('lætə'riʃ(i)əs), *a.* Also latericeous (in mod. American Dicts.). [f. L. *lateritius*, -icius, f. *later* brick: see -ITIOUS¹.] Pertaining to or resembling brick; of the colour of brick, brick-red: said chiefly of urinary deposits.

lateritization ('lætə'ritai'zeɪʃən). [f. LATERIT(E) + -IZATION, rendering G. *lateritisierung* (now -ierung) (M. Bauer 1898, in *Neues Jahrb. f. Min., Geol. u. Paläont.* II. 203).] = LATERIZATION.

1903 *Geol. Mag.* Decade IV. X. 62 That the formation of laterite is a mere question of average temperature seems unlikely, for lateritization is very prominent at elevations of 6,000-7,000 feet... in South India, where the temperature varies very little above or below 60° F. 1920 *Geol. Mag.* LVII. 212 The depth of lateritization was so great on the right bank of the Congo at a height of about 500 O.D. that [etc.]. 1934 *Discovery* July 202/1 Lateritization (silica leaching) may be considered as the reverse of podsolization (iron and aluminium leaching). 1966 *McGraw-Hill Encycl. Sci. & Technol.* VII. 406/2 The resulting concentrations of iron and aluminum oxides sharply differentiate lateritization from temperate-climate weathering in which the end product is largely clay minerals (hydrous aluminum silicates).

Hence (as a back-formation, or after G. *lateritisi(e)ren*) *'lateritize v. trans.*, to convert into laterite; *'lateritized ppl. a.*, -itizing *vbl. sb.*

1911 *Geol. Mag.* Decade V. VIII. 509 These five rocks... were probably formed *in situ* under conditions in which the lateritizing processes were not pushed to a finish. 1920 *Geol. Mag.* LVII. 214 Certain inclined bands in the norite have been thoroughly lateritized for many yards along their outcrop, and seams of magnetite in them... run practically unaltered from norite into laterite. *Ibid.* 212 The lateritized portion was more readily removed by erosive agencies, and the masses of unaltered rock were left standing in relief. 1970 *Nature* 23 May 693/2 The southern half of Western Australia is an old, slightly dissected, lateritized land surface dating from the middle or late Tertiary. *Ibid.*, The Giles Complex of mafic and ultramafic igneous rocks... has been lateritized.

laterization ('lætəraɪ'zeɪʃən). [f. LATER(ITE) + -IZATION, rendering G. *lateritisierung* (see prec.).] The alteration of rock to laterite; the kind of weathering or soil-forming process that results in laterite and lateritic soils.

1903 A. GEIKIE *Text-bk. Geol.* (ed. 4) I. 169 Laterite... The peculiar kind of alteration exemplified by this rock and by Bauxite has been termed 'Laterisation' [by Bauer]. 1917 *Mining Mag.* XVII. 74/2 A very definite line must be drawn... between live laterite or that in process of formation, and dead laterite or that in which laterization is no longer actively operative. 1936 *U.S. Dept. Agric. Misc. Publ.* No. 229.22 The laterization process is, perhaps, more strictly a geological process than one of soil building. 1938 *U.S. Dept. Agric. Yearbk.* 973 The soil-forming process called laterization is essentially the progressive hydrolysis of rock minerals, and its full development results in their conversion to silicic acid, aluminum hydroxide, and iron hydroxide or their more or less complete dehydration products—the Laterites. 1952 P. W. RICHARDS *Trop. Rain Forest* ix. 209 This preferential leaching of silica from a soil is called laterization. 1967 M. J. COE *Ecol. Alpine Zone Mt. 1662 J. CHANDLER *Van Helmont's Oriat.* 115 Religion is amazed. . . at the finding of a latex or liquor, which being reduced to the least Atomes possible to nature, as loving a single life, would despise the Wedlocks of every ferment. *Ibid.* 194 Separation of the Liquor Latex, Urine, and Sweat doth employ the Liver. 1669 W. Trans.* LVII. 91 Her blood appeared of a good texture, otherwise than giving off a little more than its due proportion of latex.

2. *Bot.* A milky liquid found in many plants (in special vessels called *laticiferous*), which exudes when the plant is wounded, and coagulates on exposure to the air; *spec.* that of *Hevea brasiliensis* or other plants used to produce rubber. Also *attrib.*

1835 LINDLEY *Introd. Bot.* (1848) II. 338 Many plants. . . when old, have a milky latex. 1858 CARPENTER *Veg. 3. Any dispersion in water of particles of a polymer (originally synthetic rubber) that is formed in a polymerization process, such as is used as a binder in paints or for coating paper and leather.

1937 W. J. S. NAUNTON *Synthetic Rubber* viii. 140 'Rubber dispersions' should be divided into two groups: (1) Latices produced *in situ* by emulsion polymerisation. . . (2) Dispersed rubbers produced by the dispersion of pre-formed solid rubbers. *Ibid.* 150 This synthetic latex forms a

good cement for assembling the numerous pieces of natural and artificial leather which constitute the modern mass-produced shoe. 1952 J. P. CASEY *Pulp & Paper* II. xxi. 1247 Pulp treated with small amounts of elastomer latices has improved strength properties and increased wet strength. 1954 H. F. PAYNE *Organic Coating Technol.* I. ix. 372 During the past few years stabilized latexes of a variety of polymeric film-formers have been made available to the paint industry. 1969 T. C. THORSTENSEN *Pract. Leather Technol.* xiv. 226 In a latex system the binder is emulsified in water. When the latex is applied the water evaporates, or sinks into the leather, and eventually a phase inversion takes place.

4. Special Comb. **latex paint**, a paint having a latex as its binding medium.

1954 H. F. PAYNE *Organic Coating Technol.* I. ix. 372 Another advantage of latex paints is their very fast drying property. 1965 D. H. PARKER *Princ. Surface Coating Technol.* xlv. 724 Exterior latex paints should not be applied directly to unpainted wood, for poor adhesion may result.

The ME. *læppe*, from which the modern standard Eng. form descends, prob. represents an OE. **læpp-*, as this would correspond to the synonymous OHG. *lat(t)a*, *ladda* (MHG., mod.G. *latte*); but the mutual relation of the two types is obscure, and the occurrence of a geminated *p* in OTeut. has no known parallel or explanation. Some scholars think that the substitution of *p* for *t* was due to the influence of the synonymous (and perh. cognate) Welsh *llath* = Irish *slat*:—OCeltic **slattā*. The Teut. word has passed into the Rom. langs. (cf. It. *latta*, Sp. *lata*, F. *latte*); it is usu. regarded as cogn. w. MHG. *lade* plank (mod.G. *laden* counter, shop).]

lathe (leɪð), *sb.*¹ [Late OE. *læð* str. neut., corresponding to ON. *lǫð* (poet.) landed possession, land:—O'Leut. **læþom*; according to some scholars cogn. w. *-læð-* in Goth. *un-lēds* poor (? lit. without landed possessions), OE. *un-læd(e)* wretched.

The form *lathe* (recorded from 14th c.) would, if it represented a pronunciation handed down by oral tradition, imply that the OE. word had a short vowel, and connexion with *lathan*, to summon, would then be possible. Probably, however, the word had little oral currency, so that its form may have been influenced by the spelling of early documents. The identity of the word with ON. *lǫð* (which involves the conclusion that the OE. form was *læð*) is rendered almost certain by the following facts. (1) The OE. word is in one instance recorded in the sense of the ON. word, viz., in the legal formula 'ne gyrne ic pines ne lǫðes ne landes ne sace ne sócne' (Schmid, *Gesetze der Angelsachsen*, app. xi), where it has the same alliterative association as in the frequent ON. phrase 'land ok lǫð'. (2) This alliterative association recurs in our first quotation, where the word has its specific Kentish application. (3) Our second quotation implies that 'the lathe of Aylesford' was the territory that was under a jurisdiction attached to the *manor* of Aylesford, so that the development of the special Kentish use from the general sense of 'landed possession' presents no difficulty.

The possibility is not excluded that the Kentish term may represent a coalescence of the original OE. *læð*, territory, with other words of similar form: cf. ON. *leif* fem. a court or judicial assembly, and OE. *-læð* or *-læðe* in *mōtlæðu* pl., attendances at a 'moot' or assembly (? related to ON. *liða*, OE. *liðan*, to go); also mod.Da. *lægð* 'division of a parish for military purposes' (f. root of LIE, LAY *vb.*).

The latinized *leidegrevei* (see b) may, as is commonly assumed, represent an OE. **læðgerēfan* 'lathe-reeves'; but the text is of little authority.]

[Of obscure history; prob. cognate with Da. *lad*, in *drejelad* turning-lathe, also in other compounds in which it has the general sense of 'stand, supporting framework', e.g. *savelad* saw-bench, *sengelad* bedstead, *tøndelad* gantry, *væverlad* loom. The Da. word is prob. a special use of *lad* pile, heap regularly built up:—ON. *hlað*, related to *hlaða* to LADE.

If the coincidence in form and meaning with Da. *lad* be not purely accidental, the Eng. word must, not withstanding its late occurrence, have come down from the time of the Danish settlements in England. (A native OE. cognate is out of the question, as it would have had *d*, not *ð*.) The Da. word, in compounds, is cited by Kalkar from the 15-16th c.

As the older form of turning-lathe, used as late as the 19th century, was worked by means of a spring-lath overhead (see drawing in *Encycl. Brit.* ed. 9, XIV. 323), it is not wholly impossible that the word may be a modification of LATH *sb.*; but against this is the occurrence of the word in the wider Danish sense (see sense 1).

The ON. *lauð* (in Dicts. miswritten *lōð*, and explained 'smith's lathe') is commonly given as the etymon, but erroneously. All that is known of the word is that it was used in composition to form poetic synonyms for gold.]

In addition, however, a block constraint based upon day of injection, so that on each day every dose is tested, is a useful precaution against the possibility that laboratory conditions on a particular day may tend to affect all animals in the same direction. A 4×4 Latin square with columns corresponding to different rabbits and rows corresponding to different days, enables both constraints to be incorporated. **1971** *Nature* 13 Aug. 499/1 On drug weeks each of six rats received one of six doses, each in a different order (latin-square design). *Ibid.*, An additional 6.0 mg/kg dose was administered to all subjects during the week after the completion of the latin-square.

[In their original geographical use *latitude* (*L. latitudo*, Gr. *πλάτος*) and *longitude* (*L. longitudo*, Gr. *μήκος*) meant quite literally the 'breadth' and 'length' of the oblong map of the known world; this literal sense remained even in the expression 'degrees of latitude and longitude' (*μοίραι πλάτους και μήκους*). By a natural development the terms afterwards came (in late Latin, app. not yet in Greek) to denote the distance of any place, in the breadthwise and lengthwise direction respectively, from the circle assumed as the origin of measurement.]

5. *Astron.* The angular distance of a heavenly body from the ecliptic: called *spec. celestial latitude*. (See also ASCENDING *vbl. sb.*, GEOCENTRIC *a.* 1, HELIOCENTRIC *a.* 1, and HELIOGRAPHIC *a.* 1.)

The history of this sense appears to be as follows. Orig. the word was applied, on the analogy of the geographical use (see 4) to denote the angular distance of a point in the celestial sphere from the equator, measured along a secondary to the latter. This, however, was not accurately distinguished by name from the distance of a point from the *ecliptic*, the terms 'latitude' and 'declination' being employed indiscriminately with reference to both these ways of indicating position. (Cf. quot. 1391.) In mod. use, the terms have been differentiated, *declination* being appropriated to what was originally and with historical propriety called 'latitude', while *latitude* became the name for distance from the ecliptic.

c1391 CHAUCER *Astrol.* II. §17 Fro the Equinoxial may the declination or the latitude of any body celestial be rikned, after the site north or south, . . . & riht so may the latitude or the declination of any body celestial, saue only of the sonne . . . be rekned from the Ecliptic lyne. 1551 RECORDE *Cast. Rom. **latta* lath, tin-plate (It. *latta*, Sp., Pg. *lata*, F. *latte*; of Teut. origin: see LATH). From Fr. the word was adopted into the Teut. and Slav. langs.: cf.
