|| **karma** ('kɑ:mə). Also **karman**. [Skr. *karma, karman*-, action, fate.] In Buddhism, the sum of a person's actions in one of his successive states of existence, regarded as determining his fate in the next; hence, necessary fate or destiny, following as effect from cause. Also in Hinduism.

Later adopted by Western popular 'meditative' groups. 1827 H. T. COLEBROOKE in *Trans. R. Asiatic Soc.* I. 111 The next head in Canade's arrangement, after quality, is action (*carma*). 1828 B. H. SINNETT *Occult World* 132 Every thought of man upon being evolved passes into the inner world. . . It survives as an active intelligence. . . so man is continually peopling his current in space with a world of his own. . . The Buddhist calls this his 'Shandba'; the Hindu gives it the name of 'Karma'. 1882 WOOD tr. *Barth's Relig. India* 112 The individual. . . entirely perishes. The influence of its karman alone, of its acts, survives it. 1892 *Month* Jan. 10 'Karma' . . . literally signifies 'action', and in Theosophic phraseology indicates the unvarying chain of cause and effect that governs the universe. 1899 L. HEARN *In Ghostly Japan* iii. 28 The destruction of Karma by virtuous effort is likened to the burning of incense by a pure flame. 1915 A. M. STEVENSON *Heart of Jainism* viii. 175 While Hindus think of karma as formless (*amūrta*), Jaina believe karma to have shape. 1948 N. Hence 'karmic a.', pertaining to, relating to, or concerning karma.

1883 A. P. SINNETT *Esoteric Buddhism* xii. 195 Thus, on a careful examination of the matter the Karmic law. . . will be seen not only to reconcile itself to the sense of justice, but to constitute the only imaginable method of natural action that would do this. 1885 A. P. SINNETT *Karma* II. 110 To seek . . . some comprehension of the Karmic principle in operation. 1931 L. H. MYERS *Prince Jali* vi. 63 Would not a good Buddhist see in her only a link in the long karmic chain? 1949 S. BARBANELL *Silver Birch Speaks* xiii. 142 One limit imposed, and always imposed, is what I would call the karmic debt of the patient, the relationship between mind and body determined by that individual's spiritual growth and attainment. 1974 *Publishers Weekly* 29 Apr. 47/2 Brodsky begins with an introduction to current genetic theory and proceeds to relate that to Eastern karmic understanding.

later authorities give for this '*karusa* (*Tindall* 1857) or '*garosa* (*Kroenlein* 1889), while the modern *Hottentot* name for the *karroo* is said to be *toró* (*Kroenlein*). *Garo* 'desert', has also been suggested as a possible source. *Lichtenstein* and *Burchell* may have wrongly identified *toró* or *garo* with the adj. meaning 'hard'. karst, Karst (kɑ:st). 1. The name (*the Karst*, G. *der Karst* (= Serbo-Croat *Kras*)) of a high barren limestone region south of Ljubljana in N.W. Yugoslavia that has given its name to a kind of topography typified there (see 2); used *attrib.* in *Geomorphol.* (now usu. with small *k*) to designate similar regions and scenery, features, and phenomena associated with them, etc.; *karst land, karstland, karstic land*; a *karstic region*.

1894 *Geogr. Jnl.* III. 321 Under the general designation *Karst-phenomena*, physical geographers in Germany include a variety of land-surface features, all characteristic of limestone regions, which, when the features in question are present, are known as 'Karst-regions'. *Ibid.* 509 A monotonous limestone plateau almost without water and vegetation, and occasionally exhibiting the very worst Karst features. 1898 *Karst-land* [see BLIND *a.* (and *adv.*) 11 c]. 1903 *Westm. SOLLAS tr. *Suess's Face of Earth* III. vi. 231 In the Shan states of Burma, several of the coulisss which approach from the north and north-east disappear beneath a karst-like plateau of Palaeozoic limestone. 1909 CHAMBERLIN & SALISBURY *Geol.: Shorter Course* xxiii. 689 The limestone and dolomite are much more resistant than the associated shales, and as a result, erosion has developed a distinctive topography (*Karst topography*) at several points in the southern Alps. 1921 *Geogr. Rev.* XI. 594 In a region where karst topography is fully developed the water circulates almost entirely underground. *Ibid.* 631 To Penck and others we owe something for their development of the idea of the karst cycle. 1922 *Geol. Mag.* LIX. 394 Karst phenomena are not infrequent in the Alpine limestone districts. 1924 *Glasgow Herald* 25 Aug. 4 Karakul sheep were also introduced... in the Austrian 'karst land', in the mountains between Croatia and the Adriatic. 1932 W. H. EMMONS et al. *Geol.* v. 80 In the United States similar topography is developed in limestone areas in central Tennessee and Kentucky and is referred to as Karst topography. 1939 BAILEY & WEIR *Introd. Geomorphol.* xiii. 349 Whether there exists a distinct cycle of land-form evolution in limestone terrains which we may designate as a karst cycle or whether what has been so designated is better considered as the karst phase of a fluvial cycle is a disputed question. 1957 G. E. HUTCHINSON *Treat. Limnol.* I. i. 107 Along the southwestern shore of the lakes where the karst topography is best developed, there are not only many islands but also very deep holes. 1958 *Geogr. 2. (With small *k*.) A kind of topography of which the Yugoslavian Karst is typical, found in areas of readily dissolved rock (usually limestone) and predominantly underground drainage and marked by numerous abrupt ridges, fissures, sink-holes, and caverns; a region dominated by this kind of topography.

In quot. 1902 the Karst in Yugoslavia is referred to. 1902 *Geogr. Jnl.* XX. 429 The uvala is a large, broad sinking in the karst with uneven floor. 1916 H. F. CLELAND *Geol.* iii. 72 Karst is used as a descriptive term for any limestone region which has been etched and eroded by water into a rough surface. 1922 *Geol. Mag.* LIX. 394 The south of France where the karst attains its greatest development in Western Europe. 1937 WOOLDRIDGE & MORGAN *Physical Basis Geogr.* xix. 289 The surface of a well-developed karst has lost all semblance of normal water-modelled forms. HUMPHRIES tr. *Termier's Erosion & Sedimentation* vi. 148 Bauxites occur very frequently on karsts. 1966 J. C. PUGH in G. H. Dury *Ess. Geomorphol.* 135 Some workers prefer to regard cockpit country and tower karst as typical of karst in general, holding that in the past too much emphasis has been placed on solution and on associated collapse of passages, and too little on surface features of solution which are not restricted to tropical regions. 1968 R. W. FAIRBRIDGE *Encycl. Geomorphol.* 682/2 The terrace surface is a deeply etched karst ('karrenfeld'), with pinnacles 15 feet high, alternating with deep crevices, partly filled with red soil. 1972 J. karyo- ('kæriəʊ), sometimes **caryo-**, combining
form of Gr. *κάρυον* nut, kernel, employed in a
number of biological terms referring to the
nucleus of an animal or vegetable cell, esp. to
changes which take place in its structure. The
earliest of these were *karyolysis*, *karyolytic*
(introduced by Auerbach in 1874) and
karyokinesis (Schleicher). Those generally
recognized are the following:

karyogamy [-GAMY], fusion of cell nuclei;
karyokinesis (-ka'ri:nɪ:sɪs) [Gr. *κίνησις* motion],
the complicated series of changes observed in
indirect or 'mitotic' division of a cell-nucleus;
hence **karyokinetic** (-ka'ri:nɪ:k) *a.*, pertaining to
karyokinesis; **karyolymph**, the more fluid
portion of a cell-nucleus; **karyolysis** (kæri'blɪsɪs)
[Gr. *λύσις*], the dissolution of a cell-nucleus
(*Syd. Soc. Lex.* 1887); hence **karyolytic** (-'lɪtɪk)
a.; **karyomere** [Gr. *μέρος* part], a vesicular
chromosome enclosed in a nuclear membrane of
its own, such as forms at telophase in the
division of some cells; **karyomitosis** [Gr. *μίτος*
a thread], separation of the nuclear fibres in the
process of cell-division; hence **karyomitotic**,
-mitotic *adjs.*; **karyoplasm** [Gr. *πλάσμα* thing
moulded], the formed substance or protoplasm
of the nucleus; **nucleoplasm** (*Syd. Soc. Lex.*);
karyo-plas'matic, -'plasmic *adjs.*, of or
pertaining to karyoplasm; **karyorrhesis** [Gr.
ρήξις breaking], bursting of a cell-nucleus;
karyostenosis [Gr. *στένωσις* constriction],
direct or 'amitotic' division of the nucleus, by
simple elongation and constriction; hence
karyostenotic *a.*; **karyotheca** *rare*, the nuclear
membrane.

1891 *Jrnl. R. Microsc. Soc.* 49 In *Hydatina*, as in some
Hymenoptera, there is established between arrhenotoky

*karyogamy, a relation so necessary that the second is

conjugation are only instances of plastogamy, or fusion of
the cell-body, and are not followed by union of the nuclei

SHARP *Introd. Cytol.* (ed. 3) x. 136 Of considerable interest
are those nuclei in which every chromosome of the telophase

cases the karyomeres may eventually fuse partially or
completely, but in others they remain separate although in
contact, forming what is virtually a group of small nuclei
containing one chromosome each. *Ibid.* 146 The limits of
the several chromosomes remain visible through this stage

nucleus is virtually a group of separate elementary nuclei, or
karyomeres. 1969 BROWN & BERTKE *Textbk. Cytol.* xvii.

karyosome. [f. KARYO- + Gr. *σῶμα* body; in
sense 1, ad. *G. karyosoma* (M. Ogata 1883, in
Arch. f. Anat. u. Physiol. (Physiol. Abt.) 414).]

1. *a.* A body of chromatin in a nucleus
resembling a nucleolus but distinguished from the
'true' nucleolus or plasmosome. *b.* Any
densely staining central body of a nucleus.

1889 [see *hyalosome* s.v. *HYALO-*]. 1890 WALDEYER in *Jrnl.*

WILSON *Cell* i. 24 The bodies known by this name [sc.
nucleolus] are of at least two different kinds. The first of
these, the so-called true nucleoli or plasmosomes..., are of
spherical form... Those of the other form, the 'net-knots'
(Netzknoten), or karyosomes, are either spherical or
irregular in form, stain like the chromatin, and appear to be
no more than thickened portions of the chromatic network.
1901 G. N. CALKINS *Protozoa* v. 146 In most cases they [sc.

the nuclei of Sporozoa] consist of a firm and resisting
membrane containing a single large chromatin reservoir or
karyosome. 1920 L. DONCASTER *Introd. Study Cytol.* ii. 18
The karyosome or chromatic nucleolus is a mass of
chromatin of varying size... It appears to serve as a
reservoir of chromatin from which the chromosomes... may
draw part at least of their supply when nuclear division is
approaching. 1926 G. N. CALKINS *Biol. Protozoa* ii. 60 The
centrally placed intranuclear body is generally described
under the name karyosome, a term which has been so widely
used by students of the Protozoa and for so many obviously
different structures that it is practically synonymous with
endosome or Binnenkörper. 1948 W. ANDREW tr. *E. D. P. de*
Robertis's Gen. Cytol. iii. 59 In the fixed nucleus one can
distinguish: (4) in some nuclei there are found larger and
denser flakes of chromatin situated in the chromonemata,
the chromocenters or karyosomes, also called false nucleoli
or chromatin nucleoli. 1961 MACKINNON & HAWES *Introd.*
Study Protozoa i. 12 The term karyosome (the endosome of
some authors) is here used descriptively as the name of any
conspicuous, deeply staining body lying in the nuclear sap,
without regard to its constitution. Undoubtedly some
karyosomes are really nucleoli (*Trichomonas vaginalis*) and
they disappear during mitosis; others play an important part
in that process (*Naegleria*) and some are Feulgen positive
(*Trichomonas sanguisugae*). 1969 BROWN & BERTKE *Textbk.*
Cytol. xvii. 320/1 The terms 'karyosome', 'endosome', and
'central body' are applied to nucleolus-like nuclear
organelles that are permanent structures... Karyosomes,
etc. are probably permanent nucleoli that undergo division
and are found in numerous algae, protozoa, and some fungi.

karyotin ('kæriətɪn). *Biol.* Also -ine. [a. *G.*
karyotin (H. Lundegård 1910, in *Svensk bot.*

1925 E. B. WILSON *Cell* (ed. 3) i. 90 Such considerations
led Lundegårdh ('10) to propose that the term 'chromatin'
be replaced by 'karyotin' (caryotin), the substance thus
designated appearing in either a basichromatic or an
oxyphilic phase. 1934 L. W. SHARP *Introd. Cytol.* (ed. 3) iii.

Other authors admit the existence of two distinct phases: the
karyolymph, which is considered as a colloid sufficiently
stable to be precipitated only with acids and fixatives, and
the karyotin, a more labile and complex colloid dispersed in
the karyolymph, which would precipitate with great facility.

Orig. coined by Delanay in sense 2, but according to

1. *a.* The chromosomal constitution of a cell

(mongolism) by recognizing its karyotype in foetal cells, and
aborting the fetuses concerned.

b. A systematized representation of the
chromosomes of a cell or cells, esp. a
photographic one (cf. IDIOGRAM).

1950 in WEBSTER *Add.* 1960 *Lancet* 14 May 1063/1 In
contemporary publications the terms, karyotype and
idiogram, have often been used indiscriminately. We would
recommend that the term, *karyotype*, should be applied to a
systematised array of the chromosomes of a single cell
prepared either by drawing or by photography, with the
extension in meaning that the chromosomes of a single cell
can typify the chromosomes of an individual or even a
species. 1969 *Nature* 22 Nov. 801/2 The results of a
chromosome analysis can be displayed in several ways. The
methods commonly used are the karyotype, 'a systematised

array of the chromosomes of a single cell', and the karyogram. 1970 *Sci. Jnl.* June 76/3 The best way we know of detecting abnormalities is to cut out each chromosome from a photomicrograph and pair them up like a jigsaw. This array, known as a karyotype, is constructed according to an international convention. 1970 J. D. BURKE *Cell Biol.* ix. 267 (caption) The mitotic meta-phase chromosomes of a somatic cell of a male, arranged in a karyotype. 1973 *Lancet* 24 Feb. 420/1 Strictly speaking the actual pictures are karyotypes, and an idiogram is a diagram of the chromosome state of an individual.

†2. [After the original meaning of the Russ.] A group of species having similar karyotypes (sense 1a). *Obs. rare.*

1931 *Trudy po Prikladnoi Botanike i Selektii* XXVII. 1. 221 [Referring to the work of L. N. Delaunay.] The variations from species to species within the indicated genera, or 'karyotypes' are, as it were, quantitative. In most cases it is but the length of the arms of the chromosomes... which undergoes variation. 1932 H. G. BRUNN in *Symbolae Bot. Upsalenses* I. 111 The species [of *Primula*] can be divided according to their nuclear constitution into different cytological types... called 'karyotypes'. *Ibid.* 117 Allied species as a rule also belong to the same karyotype. *Ibid.* 195 In agreement with this [statement of Delaunay's], 'Karyotypus' has been defined as a taxonomical conception, for which reason its use is made impossible in discussing the relation between taxonomy and cytology... In this work... the unconditional term 'cytological type' has had to be employed instead. But there exists an obvious need of a term to include all the species with nuclei of similar type, independent of taxonomical considerations, and in this sense I suggest that the term 'karyotype' be used... The karyotype should, therefore, be founded exclusively on chromosome-morphology.

karyotype ('kæriətaɪp), *v.* *Biol. and Med.* [f. prec. sb.] *trans.* To determine or investigate the karyotype of.

1963 *Lancet* 24 Aug. 417/1 The more cells examined (karyotyped) the greater the chance of encountering neoplastic cells. 1971 *Nature* 11 June 387/1 Ninety-seven of these modal cells were karyotyped according to the Denver-London system. 1972 *Lancet* 29 July 213/2 Newborn infants who were suspected of having an anomalous cytogenetic constitution of any kind have been photographed, X-rayed, and karyotyped.

It would show up gross chromosome abnormalities. 1971 *Nature* 2 July 25/1 In the karyotyped cells, all the normal chromosomes could be separated into pairs on the basis of their distinctive patterns of fluorescence.

1931 *Trudy po Prikladnoi Botanike i Selektii* XXVII. 1. 236 The lowest type of karyotypical variations are certainly the polyploid multiplication of sets. 1959 *Cytologia* XXIV. 390 No work has yet been carried out to find out how far karyotypic changes... have contributed to the origin of these varieties. 1963 *Canad. I would do my exercises and the hundreds of katas, stay busy with something. 1973 *Express* (Trinidad & Tobago) 27 Apr. 31/3 Over 500 karatekas will be competing for titles in... katas (imaginary combat).

kata, shortened f. KATATHERMOMETER.

katabatic (kætə'bætɪk), *a.* *Meteorol.* [f. Gr. *καταβατ-ός* descending (f. *καταβαίνω* to go down) + -IC (or ad. Gr. *καταβατικός-ός* affording a means of descent).] Of a wind: blowing down a slope, or from an elevated region to a lower one, esp. when caused by the effect of gravity on air cooled by the underlying ground. Cf. ANABATIC *a.* 2.

1918 *Meteorol. Gloss.* (Meteorol. Office) 182 A local cold wind is called Katabatic if it is caused by the gravitation of cold air off high ground. 1920 W. J. HUMPHREYS *Physics of Air* vii. 111 Where the valley is long and rather steep... the down-flowing air current may attain the velocity of a gale and become a veritable aerial torrent. This drainage flow is known... as the mountain breeze, or mountain wind; also canyon wind, katabatic wind, and gravity wind. 1936 *Geogr. Jrnl.* LXXXVII. 433 The extremely cold katabatic winds blowing off the high Greenland ice-cap... lowered the temperature. 1954 W. D. THORNBURY *Princ. Geomorphol.* xiv. 362 The radially outflowing winds which Hobbs took as evidence of the existence of a permanent anticyclone over the interior of the Greenland ice cap are really katabatic winds or cold air draining down-slope under the influence of gravity. 1967 R. W. FAIRBRIDGE *Encycl. Atmospheric Sci.* 1153/1 Foehn... This is a gusty katabatic wind which crosses the Alps... and is characterized by dryness and warmth.

Hence *kata'batically adv.*, as a result of downward motion.

1967 R. W. FAIRBRIDGE *Encycl. Atmospheric Sci.* 1152/2 They consist of more or less cool, dry, continental air, nearly always of anticyclonic source, at times katabatically warmed.

corresponding sounds, and used chiefly in scientific and official documents and in spelling out foreign words adopted into the Japanese language. Cf. HIRAGANA.

1727 J. G. SCHEUCHZER tr. *Kämpfer's Hist. Japan* II. v. xiv. 590 The other was a map of the whole world, of their own making, in an oval form, and mark'd with the Japanese *Kattakanna* characters. 1822 F. SHOBERL tr. *Titsingh's Illustr. katamorphism (kætə'mɔ:fɪz(ə)m). *Petrol.* [f. Gr. *κατά* down + *μορφή* form: see -ISM.] Alteration of rocks (usually at or near the earth's surface) characterized by the formation of chemically simpler minerals from more complex ones. Hence **katamorphic a.**

1904 C. R. VAN HISE in *Monogr. U.S. Geol. Survey* XLVII. 43 The geological factor which in this treatise will serve as the primary basis for a classification of metamorphism is the dominant factor of depth. On this basis metamorphism will be classified into (1) alterations in the zone of katamorphism and (2) alterations in the zone of anamorphism. . . The zone of katamorphism may be defined as the zone in which the alterations of rocks result in the production of simple compounds from more complex ones. *Ibid.* 162 Katamorphic zone. 1916 F. H. LAHEE *Field Geol.* ix. 230 Any kind of alteration that any rock has undergone, whether katamorphic or anamorphic, comes under the head of metamorphism, but there are many geologists who prefer to restrict the meaning of the more general term so that it does not include weathering. 1946 *Amer. Mineralogist* XXXI. 288 It is very well known that oxidation is one of the important chemical processes of katamorphism, especially of weathering.

katana (kə'tɑ:nə). Also 7 cattan. [Jap.] A long single-edged sword of the Japanese samurai.

Japan* 57 The word 'sword' is invariably rendered by the Japanese word '*ken*', which signifies a long, straight, double-edged sword, as opposed to the '*katana*', of modern times, which has but a single edge, and is slightly curved towards the point. 1890 B. H. CHAMBERLAIN *Things Japanese* 328 The Japanese sword of ancient days (the *tsurugi*) was a straight double-edged heavy weapon some three feet long. . . That of medieval and modern times (the *katana*) is lighter, shorter, has but a single edge, and is slightly curved towards the point. 1906 *Macm. 1. A flat-bottomed vessel, esp. of the kind used on the Tyne and Wear for the loading of colliers; a lighter.

The name is or has been in local use in the east of England from the Tyne to the Norfolk Broads; it has also been used in U.S. locally both for a river and a coasting vessel. The old keel which brought coal from the upper Tyne to ships in the harbour at Tynemouth was carvel-built and had a square sail, as well as a heavy oar worked by three keel-bullies. The existing keel is clinker-built and used only for riverside traffic. See R. Oliver Heslop in *N. & Q.* 9th Ser. VII. 65-6.

'keelivine, keelie vine. *Sc. and north. dial.* Also (8 kilie vine), 9 kyle-, keela-, keely-, guilli-, cala-, -vine. [Of uncertain origin.

In South of Scotl. and Northumberland pronounced as two (or three) words *keelie vine* (or *keel i' vine*), (contracted in Scotl. *keelie*, in Northumb. *vine*), and commonly explained as from KEEL *sb.* + *vine* (referring to the pencil 'vine' or cedar), the name being only applied to a pencil enclosed in wood. But in other districts the name is pronounced as one word, and applied to the substance black-lead itself: cf. KILLow, another name of this. See other suggestions in Jamieson. If quot. 1720 belongs here, the correct etymology ought also to explain *kilie vert* there mentioned.]

A black-lead pencil, or more generally, any coloured pencil enclosed in wood (as a *red keelie-vine*); also, in some places, black-lead, plumbago.

keen (ki:n), *a. (adv.)* Forms: 1 *céne*, 2-6 *kene*, 3-4 *ken*, 4-7 *keene*, (5 *Sc. keyne*, 6 *kein(e)*), 7-*keen*. [Com. Teut.: OE. *cēne* = OS. **kōni* (MDu. *coene*, Du. *koen*), MLG. *kōne, kœne*, OHG. *chōni, chuoni* (MHG. *kiene, G. kühn*), ON. *kænn*:—OTeut. **kōnjo*-. There are no cognates outside of Teutonic.

The original meaning is somewhat obscure. The prominent sense in OE., as in Low and High German, was that of 'bold, brave,' but ON. *kænn* meant only 'expert, skilful, clever', a sense also represented in OE. (ODA. *kion, kōn*, OSw. *kōn, kyn*, 'bold', are app. from LG., the original Scand. sense being found in ODA. *lovkion* 'learned in the law') It has been suggested that the ON. sense is the original one, the connecting link with the other being the idea of 'skilled in war', 'expert in battle' (= ON. *vigkænn*), but there is no clear evidence of this. The development of the specifically English sense 'sharp' is also obscure.]

Forms: *Infinit.* 1 (2) *cépan*, 2-3 *kepan*, 2-4 -en, (4 -in, 5 -yn), 3-5 *kep*, 3-6 *kepe*, 5-7 *keepe*, (6 *keype*, *Sc.* *keip(e)*), 6- *keep*. *Pa. t.* 1 *cépte*, 3-5 *kepte*, (3-4 *kipe*), 3- *kept*; 4-5 *keped(e)*, 5 -id, -yd, 5-6 *Sc. -it*, -yt. *Pa. pple.* 4 *i-kept*, 4- *kept*; 6 *Sc. keptit*. [Late OE. *cépan*: no related words known in the cognate langs.; ulterior etymology unknown. The primary sense in OE. is also difficult to ascertain; the verb appears to have been orig. construed with a genitive.

The word prob. belonged primarily to the vulgar and non-literary stratum of the language; but it comes up suddenly into literary use c 1000, and that in many senses, indicating considerable previous development. The original sense may have been 'to lay hold' with the hands, and hence with the attention, 'to keep an eye upon, watch'. About 1000, it was taken to render *L. observare* (orig. 'to watch, keep an eye upon, take note of'), and its subsequent development seems

to have been largely influenced by the senses of this L. word, nearly all of which it has been used to render. It also renders the simple L. *servare* (orig. 'to watch, observe'), and the compounds *conservare*, *præservare*, *reservare*. In sense there is also close affinity between *keep* and *HOLD* (orig. 'to keep watch over', 'keep in charge'): in many uses they are still synonymous, and many phrases which have now the one verb formerly had the other; but in later usage, at least, *keep* implies the exercise of stronger effort to retain, so that *have*, *hold*, *keep*, form a series, the members of which pass into each other with progressive intensity of action. *Hold* has moreover often a sense of 'sustain, support, keep from falling', not belonging to *keep*.

If *cépan* was an old word, it would go back to an OTeut. **kôpjan*; but no trace of this vb. is found elsewhere. Some compare OE. *cōpiān* (found only once) = L. 'compilare', and ME. *cōpien* to watch or wait for; but uncertainty as to the length of the *o* in these words makes it doubtful whether they belong to the root *kôp-*. Kluge (Beiträge VIII. 537) has suggested radical connexion with OHG. *chuofa*, OLG. *kôpa* cask, coop (as a thing for holding or keeping). The alleged Flem. *kepen* in Kilian is an error.

Uncertainty as to the original sense makes a historical scheme of the sense-development difficult. In the following, some early (and obsolete) senses are placed first under branch I; branch II has the chief trans. senses, * = 'pay attention, observe', ** = 'guard, preserve', *** = 'hold in custody', **** = 'conduct, carry on'; III the intrans. senses derived from these; IV the combinations with adverbs. Although the four groups under II are distinct enough in the primary and literal senses, the distinction tends to melt away in the fig. uses, and esp. in the innumerable phraseological expressions into which *keep* enters; in several cases these combine the notions of two or more groups. In many phrases, also, the sense of *keep* is so indefinite and so dependent upon that of the object or complement, as to be scarcely capable of separate analysis; such phrases are treated under the sb. or adj. in question: e.g. *keep* COMPANY, *keep* WATCH, *keep* CLOSE.]

Kekulé ('kɛkjʊlɪ). *Chem.* The name of Friedrich August *Kekulé* (1829-1896), German chemist, used *attrib.* and in the possessive with reference to a system of structural formulæ devised by him, the principal features of which are the quadrivalency of the carbon atom and the linking of carbon atoms to form chains, and esp. his conception of the benzene molecule as having a closed hexagonal ring of six carbon atoms with alternate double and single bonds between them (later extended to other conjugated cyclic carbon compounds).

1871 *Jnrl. Chem. Soc.* XXIV. 824 The author says that he acknowledges the value of Kekulé's ring formula. 1908 A. W. STEWART *Rec. Adv. Org. Chem.* i. 6 But as they actually existed in isomeric forms, the same was to be expected in benzene, if the Kekulé theory were correct. 1938 H. GILMAN *Org. Chem.* I. ii. 57 A further, rather serious objection to the Kekulé formula arose from the difficulty of understanding why, if benzene contains three ordinary double bonds, it is so inferior to the ethylenic hydrocarbons in reactivity. 1951 I. L. FINAR *Org. Chem.* I. xx. 408 The difficulty with the Kekulé formula is that it represents benzene with three double bonds, and the oscillation does not account for the difference in behaviour between these and olefinic bonds. *Ibid.* 409 The Kekulé structures contribute far more to resonance (about 80 per cent.) than do the Dewar structures (about 20 per cent.). 1961 L. F. & M. FIESER *Adv. Org. Chem.* i. 16 The Kekulé theory of structure performed valuable service for half a century before the nature of the Kekulé bond became understood. 1964 CRAM & HAMMOND *Org. [= Du. *kolzwijn*, *kolsem*, LG. *kielswin*, G. *kielschwein*, Da. *kølsvin*, Sw. *kölsvin*. The first element is app. KEEL *sb.*¹, but of the second the original form and meaning are obscure.

In all the equivalents cited, except Du. *kolsem*, the second element is identical with the word corresponding to E. *swine*, and it appears that in 18th c. LG. *swin* was used by itself in the sense of 'keelson' (see Grimm). The English forms may therefore represent a ME. **kelswin*: cf. the reduction of *boatswain* to *boteson*, *bosn*, *bo'sn*. The reason for calling the timber by this name does not appear, but this is also the case with many similar applications of the names of animals, as *cat*, *dog*, *hog*, *horse*, etc. The original may have been an unrecorded ON. **kjolsvin* or **kjalsvin*, independently adopted in Eng. and LG. The corruptions *keelstone*, *kelston*, *kelsom*, *keelsale*, originate mainly in the lack of stress on the second element. Eng. *stemson* and *sternson* are app. recent formations on the analogy of *keelson*. It has been suggested that the original form may be preserved in Norw. dial. *kjelsvill* = 'keel-sill', but this may also be an alteration, by popular etymology, of the usual *kjelsvin*.

The most usual spelling from the first has been *kelson*: recently, however, there has been a tendency to spell *keelson*, though the pron. ('kelsən) still prevails.]

Kelvin, kelvin ('kelvin). [The title of Sir William Thomson, Lord Kelvin (1824-1907), British physicist and inventor.] †1. (With lower-case initial.) A name proposed (but little used) for the kilowatt-hour, the ordinary commercial unit of electric energy. *Obs.*

1892 *Electrician* 6 May 1/1 The President of the Board of Trade having cordially approved and Lord Kelvin having acquiesced; after the word 'unit' in the Provisional Orders of this year, the words 'hereinafter called a kelvin' will be introduced. **1911** *Encycl. Brit.* XXVII. 740/1 The corresponding energy unit being the kilowatt-second, and 3600 kilowatt-seconds or 1 kilowatt-hour called a 'Board of Trade unit' or a 'kelvin'.

2. (With capital initial.) Used *attrib.* and in the possessive to designate instruments and concepts devised by Lord Kelvin, as **Kelvin balance**, an electrical measuring instrument having a set of horizontal coils arranged in the form of a balance with a sliding weight, which is used to balance the electromagnetic forces produced by a current passed through the coils and so to measure its strength; **Kelvin (double) bridge**, a modification of the Wheatstone bridge used for measuring low resistances and having two pairs of variable ratio resistors, an

adjustable standard resistor, and the unknown one; **Kelvin's law**, the law that the most economical cross-sectional area of a conductor used as a transmission line is that for which the cost of the energy dissipated in any period is equal to the charges during the same period on the capital cost of the line.

3. (With capital initial.) Used *attrib.* to designate an absolute scale of temperature (defined thermodynamically in terms of the operation of an ideal heat engine) in which the zero is identified with absolute zero and values are assigned to one or more fixed points so as to make the degrees correspond in size to those of the centigrade (Celsius) scale. So **Kelvin temperature**, a temperature expressed in terms of this scale.

As the scale was orig. defined, the temperature interval between two fixed points (the freezing point and the boiling point of water) was made to be exactly 100 degrees, so that the value of each point was a matter of experiment (which produced values of about 273° and 373° respectively); in 1954 the scale was redefined in terms of a single fixed point, the triple point of water, to which was assigned the value 273.16° exactly (giving a figure of approximately 273.15° for the ice point).

Physical Lab.) 3 The thermodynamic Kelvin scale... is recognized as the fundamental scale to which all temperature measurements should ultimately be referred.

b. **degree Kelvin** (or **Kelvin degree**): a degree of the Kelvin scale (in size equal to the degree centigrade), symbol °K (see K 4 f); now formally called a *kelvin* (symbol K) and incorporated into the International System of Units as a basic unit.

1911 *Physical Rev.* XXXIII. 220 The writer has assumed that the degree Kelvin and the degree centigrade were equal. **1930** *Engineering* 9 May 595/3 A perfect gas of one free electron per atom would necessarily contribute three calories per gram-atom per degree Kelvin to the specific heat of the metal. **1941** *Temperature* (Amer. ken (ken), *v.*¹ Forms: 1 cennan, (cænnan), 3-4 kennen, (5 -yn), (3-5 kene, 3 cene, 5 keen), 3-7 kenne, 3-ken, (3, 8 kenn, 5 kyn). *Pa. t.* 3-5 kende, 3- kenned(e, kenn'd, kende; 9 *Sc. kent*. [Com. Teut.: OE. *cennan* (*cende*, *cenned*) = Fris. *kanna*, *kenna*, OS. (*ant*)*kennian* (MDu. and Du. *kennen*), OHG. (*ir-*, *in-*, *pi-*) *chennan* (MHG. and G. *kennen*), ON. *kenna* (Sw. *känna*, Da. *kjende*, *kende*), Goth. *kannjan*, factitive of the preterite-pres. **kann-*, I know: see CAN *v.*¹

The form is properly causative 'to cause to know', 'to make known', and was restricted to this use in Goth. and OE. At an early period, however, in all the Teutonic tongues, the verb also acquired the sense 'to know'. In Eng. this may have been taken from Norse, in which both senses were in early use. In mod. Eng. *ken* is only archaic (in sense 6) and has its *pa. t.* and *pa. ppl.* *kenned* (cf. *pen*, *penned*); in *Sc.* (where it has entirely displaced *knew* 'to know') the *pa. t.* and *ppl.* are now *kent*; south *Sc.* *kend*.

kenaf (kə'næf). Also kanaff. [Persian.] = AMBARI.

1891 *Kew Bull.* 204 Recently an announcement has been made of the discovery of a new textile plant on the shores of the Caspian. The plant known as Kanaff by the natives is said to yield a soft elastic and silky fibre... It is supposed that Kanaff fibre... will successfully compete with any other textile for sacking, ropes, and packthread. 1945 *Bot. Gaz.* CVI. 349/1 The identity of the plant [introduced into Cuba]

has been established as kenaf (*Hibiscus cannabinus*, L.) which... is capable of producing more than a ton of dry fibre per acre. 1952 A. E. HAARER *Jute Substitute Fibres* i. 2 Kenaf is the name used principally in Russia, America and Cuba... and the word is derived from the local names Kanaff, Kanap or Kanaph, given to the plant where it grows on the Persian shore of the Caspian sea. *Ibid.* i. 8 No one seems to know why this fibre plant was given the name Kenaf in the Western Hemisphere. 1967 *New Scientist* 14 Dec. 660/1 The kenaf plant which is already a leading substitute for jute fibres... is now being seriously considered... as a substitute for the hardwoods used in papermaking. 1974 *Times* 12 Jan. The forms with initial *c-* predominate over the etymological forms with *k-*.

1939 L. HJELMSLEV in *Proc. Third Internat. Congr. Phonetic Sci.* 271 A language is a category of two members... One of these planes, the plerematic plane, gives form to the content...; the other, the cenematic plane, forms the expression. *Ibid.* 272 The constituents—in plerematics: the pleremes, in cenematics: the cenemes—are usually of two types: central and marginal constituents. 1950 S. POTTER *Our Lang.* vii. 86 Beginning with the phoneme, philologists pass on to speak about *morphemes*, *taxemes* or *tagmemes*, *sememes* (including *pleremes* and *kenemes*)... as if -eme were a brand-new suffix meaning 'linguistic agent'. 1958 C. F. HOCKETT *Course in Mod. The cenematic structure of language is phonology; the plerematic structure of language is grammar. 1966 M. PEI *Gloss. Ling. Terminol.* 35 *Ceneme*, 1. Linguistically, a phoneme, or anything pertaining to phonology (Hockett). 2. The smallest unit of expression without corresponding content, differing from a phoneme in that it does not necessarily consist of sound, but may include letters and other semantic indicators (Hjelmslev). 1967 [see FUNCTOR 2]. 1967 *Word* XXIII. 469 My observations apparently support the structuralist separation of *cenetics* and *plerematics*. *Ibid.* 471 In addition to their two *cenetic* and two *plerematic* systems, bilingual children naturally have to master two sets of form-to-meaning relationships. 1969 *English Studies* L. 432 The tradition from Saussure and Hjelmslev brought about a phonemic—or *cenemic*—analysis based on pure relations.

Kepler ('keplə(r)). The name of Johann *Kepler* (1571-1630), German astronomer, used, chiefly in the possessive, to designate things and concepts discovered or investigated by him, as *Kepler's equation*, the equation $\theta = \phi - e \sin \phi$ relating the mean anomaly θ of a planet to the eccentric anomaly ϕ and the eccentricity e of the orbit; *Kepler's laws* (see LAW *sb.*¹ 17c (a)); *Kepler's nova* or star, a supernova which appeared in 1604 in the constellation Ophiuchus and disappeared in 1606; *Kepler's problem*, the problem of solving Kepler's equation for the eccentric anomaly of a planet in a known orbit given the mean anomaly, which is effectively that of finding the position of the planet at any given time.

Its only subsequent rival has been Kepler's Star of 1604, which also seems to have been a supernova. 1970 G. K. WOODGATE *Elem. Atomic Struct.* II. 28 This is called an accidental degeneracy. It occurs likewise in the equivalent classical problem—the Kepler problem of planetary motion under an inverse square law of force.

Keplerian (ke'pləriən), *a.* [f. prec. + -IAN.] Of or pertaining to Kepler or his discoveries and investigations; applied *spec.* to (a) motion, orbits, and trajectories such as occur when one body moves freely in the gravitational field of another (much more massive) body, viz. an ellipse (in accordance with Kepler's laws) or some other conic section; (b) a refracting telescope that has a positive objective and a positive eyepiece and gives an inverted image.

D. UDDEN tr. *Bohr's Theory of Spectra* II. 37 The orbit of the electron deviates a little from a simple ellipse and is no longer exactly periodic. 1889 *Geol. Mag.* Feb. 71 Microscopical examination and chemical analysis show that these rocks consist, in part at least, of soda-felsites or keratophyres. The keratophyres (so named from their resemblance to hornstone) were first described by Gümbel. 1937 A. JOHANNSEN *Descr. Petrogr. Igneous Rocks* III. 49 The keratophyres are similar in appearance [to normal trachytes] but usually are much weathered and show brown or green tones. 1956 E. W. HEINRICH *Microscopic Petrogr.* iii. 51 Trachytes occur as volcanic rocks and minor hypabyssal intrusives... Albitized types (keratophyres) occur with spillites. 1972 *Gloss. Geol.* (Amer. Geol. Originally the term was restricted to lavas of pre-Tertiary age but this distinction is not recognized in current usage.

1847 J. D. HOOKER *Bot. || **Keri** (kə'ri:). *Heb. O.T.* Also *k'ri, qere, Q're, q'ri*. [Heb., imp. of *qārā* to read.] In the Hebrew text of the O.T., the word, given in the margin, to be substituted in reading for that standing in the text (KETHIB), the latter having been retained by the Masoretes as evidenced by MSS. or tradition, though considered erroneous or unintelligible.

WALTON *Consid.* 112 Certain marginal notes in the Hebrew Bibles, where the Keri is the word that must be read, placed in the margin, with a "P": the Ketib, or word written in the text, marked with a little circle or cipher. 1881 W. R. SMITH *Old Test. in Jew. Ch.* iii. 16 These notes are called Keris, the word Keri being the imperative 'read!' The expression actually written in the text, but not uttered is called Kethib (written). 1941 R. H. PREIFFER *Introd. Old Testament* i. v. 93 The *kethib* (written) is the consonantal text; the *qere* (read) is an accepted reading differing from the consonantal text. *Ibid.* 95 Long after the introduction of the *qere* 'Lord' for *YHWH*...vulgar expressions in the text...were removed by substituting a euphemism in the reading (*qere*). 1958 F. KENYON *Our Bible & Anc. MSS.* (ed. 5) iv. 78 Such variations were known by the name of *Q're* ('read') and *k'thib* ('written'), the latter being the reading of the text, and the former that of the margin, which was to be substituted for the other when the passage was read. 1968 J. BARR *Compar. Philol. & Text of Old Testament* x. 246 Here, however, there is a rather peculiar *Qere*. *Ibid.* 247 The translation at 1 Sam. 25. 14 makes it extremely probable that the LXX is a translation not of the present *Kethib* at 14. 32 but of the present *Qere*. 1969 R. K. HARRISON *Introd. Old Testament* (1970) iv. ii. 213 The preferred reading was known as *Q're*, meaning 'that which is to be read', as contrasted with the sacred consonantal text, the *K'thib* or 'written' Scripture. The *Q're* on occasions may have constituted a genuine variant reading.

Zeitschr.* XXX. 13).] A particle which acts as a condensation nucleus in a kern counter, a device in which a sample of air is supersaturated and condensation nuclei made visible and collected for counting: orig. intended to measure the concentration of condensation nuclei in the air, but now known to respond to particles too small to act as such under atmospheric conditions.

1941 *Jrnl. R. Aeronaut. Soc.* XLV. 72 The Aitken nucleus or 'kern' counter determines the number of nuclei in an air sample by subjecting it to a rapid expansion. This causes a considerable degree of supersaturation, and the drops which form around each nucleus fall on to a ruled slide where they may be counted. 1951 H. G. HOUGHTON in T. F. Malone *Compendium Meteorol.* 165/2 The sweeping action of the dust particles on the kerns. 1954 J. C. 1894 O. JESPERSEN *Progress in Language* vi. 143, I shall have to separate word and case-ending, as far as this is feasible... We want a special term for this distinction; and I propose to call the substantial part of the word, felt as such by the instinct of each generation as something apart from the ending (*eag* in the example chosen [sc. O.E. *eage*]), the *kernel* of the word, while *eagan* is the historic 'stem'. **1918** *Amer. Jrnl. c. *Math.* [tr. G. kern (D. Hilbert 1904, in *Nachrichten von d. Königl. Ges. d. Wissensch. zu Göttingen* (Math.-physik. Kl.) 49).] A function of two or more variables which, multiplied by one or more functions each of just one of the variables, constitutes the integrand of an integral with respect to these latter variables. (Orig. defined for integral equations in which the kernel is known and the other function(s) unknown, but now used in other situations also.)

1909 M. BÖCHER *Introd. Study Integral Equations* 13 Comparing Abel's equation... with Liouville's equation... we see that they come respectively under the following

types: $f(x) = \int_a^x K(x, \xi)u(\xi)d\xi$ [and] $u(x) = f(x) + \int_a^x K(x, \xi)u(\xi)d\xi$ in which $f(x)$ and $K(x, \xi)$ are to be regarded as known functions and $u(x)$ is the function to be determined... K is called the kernel of these equations. **1924** W. V. LOVITT *Linear Integral Equations* i. 6 An integral equation is also said to be singular if the kernel becomes infinite for one or more points of the interval under discussion. **1962** *Neurol. Conc. Encl. Nucl. Energy* 762/2 The function $P(r, r_0, E, E_0)$ is called the slowing-down kernel of the moderator. $F(p) = \int_a^b K(p, x)f(x)dx$ to be an integral transform of the function $f(x)$; $K(p, x)$, a prescribed function of p and x , is the kernel of the transform.

kerogen ('kerədʒən). *Petrogr.* [f. Gr. *κρό-s* wax + -GEN.] Orig., the carbonaceous material in oil shale that gives rise to crude oil on distillation; in later use extended to denote any organic material in sedimentary rock which, like the oil-yielding kind, is insoluble in the usual organic solvents.

1906 D. R. STEUART in H. M. Cadell et al. *Oil-Shales of Lothians* III. 142 We are indebted to Professor Crum Brown, F.R.S., for suggesting the term *Kerogen* to express the carbonaceous matter in shale that gives rise to crude oil in distillation. 1923 P. E. SPIELMANN *Genesis of Petroleum* ii. 17 In some cases it may have been that kerogen consisting of unicellular algae and of spores like those of the lycopods, had actually been distilled. 1941 *Jrnl. Inst. Petroleum* XXVII. 426 The term 'kerogen'... is merely a convenient name for the organic matter from which oil is obtained when rocks containing it are heated; hence the kerogens of different deposits may be chemically different. *Ibid.* 427 The

insolubility of kerogen in organic solvents is a characteristic property which serves to distinguish true kerogen rocks from such materials as oil- or tar-sands, bituminous limestones, etc. 1958 *Habitat of Oil* (Amer. Assoc. Petroleum Geol.) 758 Kerogens isolated from the marine rocks were obtained as very fine, amorphous, soft powders that varied from dark brown to jet black... When the samples were heated in an open test tube only small amounts of an oily distillate were formed. 1961 *Fuel* XL. 387 Colorado oil-shale kerogen is predominantly a cyclic material, highly saturated with hydrogen, and contains oxygen, nitrogen and sulphur atoms associated with ring structures. 1963 J. P. FORSMAN in I. A. Breger *Org. Geochem.* v. 148 The term 'kerogen'... may be defined as the insoluble organic matter occurring in sedimentary rocks. *Ibid.*, Since the dividing line between oil shales and other rocks is rather arbitrary, there appears to be no logical reason for restricting the name 'kerogen' to a certain rock type. 1968 *Times* 16 Nov. 9/6 The most ancient kerogen yet known comes from the Fig Tree System of rocks in Swaziland, thought to be 3,100 million years old.

kerosene ('kerəsɪn), *sb.* Also kerosine (see note below). [irreg. f. Gr. *κρός* wax + -ENE.]

a. A mixture of liquid hydrocarbons, a commercial product of the distillation of petroleum; obtained also from coal and bituminous shale, and extensively used as a lamp-oil. Now important as a fuel for some kinds of internal-combustion engines, esp. jet engines.

First manufactured by Abraham Gesner, shortly after 1846 (1865 Gesner *Cool. Petrol.* etc. 9), and frequently called *kerosene oil*. Also commonly known as *petroleum*, which properly denotes the crude mineral oil from which kerosene is obtained. *Kerosene*, *-ine* is now the usual name for paraffin in much of the U.S. (see quot. 1961) and in Australia and New Zealand; in Britain its currency is largely restricted to technical contexts. The spelling *kerosine* was adopted in 1925 by the Amer. Soc. for Testing Materials and (in Britain) by the Institute of Petroleum; the *-ene* form remains the usual one in general usage and still occurs in technical contexts.

This matter was brought to our attention by the Executive Committee of the Standardization Committee of the Institution of Petroleum Technologists, it being pointed out that the ending 'ene' is very generally applied to pure hydrocarbons. The suffix 'ine' already applied to gasoline is therefore also applied to kerosine. 1933 *Industr. News* 5 Apr. 1386/3 'Kerosene' is commoner than 'kerosine'. The ASTM [sc. American Society for Testing Materials] and ASA [sc. American Standards Association] have preferred 'kerosine', probably in order to make it consistent with 'gasoline', and CA [sc. Chemical Abstracts] has adopted 'kerosine' as the choice of an authoritative group in the petroleum field. 1957 FRAZER & ESHELMAN *Tractors & Crawler* i. 14 Kerosene and distillate... will burn satisfactorily in engines which are designed for low-grade fuels. 1960 *B.S.I. Kerr (kɜː(r), kəː(r), kɜː(r)). The name of John Kerr (1824-1907), Scottish physicist, used *attrib.* to designate certain devices, phenomena, and concepts discovered by him or arising out of his work, as *Kerr cell*, a transparent cell containing two plate electrodes in a substance exhibiting a strong Kerr (electro-optical) effect, by means of which an applied voltage may be made to vary the plane of polarization of plane-polarized light and hence (when the cell is placed between crossed nicols) the intensity of a beam; *Kerr constant*, a number expressing the degree to which a substance exhibits the electro-optical Kerr effect, equal to the difference between the extraordinary and ordinary indices of refraction of the substance divided by the wavelength of the monochromatic light used and by the square of the electric field strength; **Kerr effect**, (a) the rotation of the plane of polarization of light when it is reflected from a magnetized surface; (b) the production of birefringence in a substance by the application of an electric field.

[1893 J. J. THOMSON *Notes Res. Electr. & Magn.* v. 501 There is... no reason to expect that the order of the metals with respect to Kerr's effect should be the same as that with respect to Hall's.] 1909 *Chem. The reflected light is elliptically polarized with the major axis of the ellipse rotated with respect to the original axis of the light. 1972 J. R. MEYER-ARENDT *Introd. Classical*

In the 16-17th c. *kerseys* are commonly contrasted with *cloths* or *broad-cloth*; the size of the latter was fixed by the statute of 1465 as 24 yds. long by 2 wide, while a kersey was only 18 yds. long and a yard and a nail in width. The act of 1552 enumerates various kinds of kerseys, as ordinary, sorting, Devonshire (called dozens), and check kerseys, and fixes their length as between 17 and 18 yards; in 1557 this was reduced to between 16 and 17. About 1618 we find three kerseys reckoned as equal to one cloth (see CLOTH 8).

Quantum Mech.* (ed. 3) i. 16 It is desirable to have a special name for describing the vectors which are connected with the states of a system in quantum mechanics, whether they are in a space of a finite or an infinite number of dimensions. We shall call them ket vectors, or simply kets, and denote a general one of them by a special symbol |> . 1957 F. MANDL *Quantum Mech.* (ed. 2) v. 102 Labels, in particular eigenvalues, distinguishing different ket vectors are written as arguments of the ket vectors. For example, we might write a set of vectors as |1>, |2>, . . . |n>, or the wave function (14.4) as |l, m> . 1972 J. M. JAUCH in Salam & Wigner *Aspects Quantum Theory* ix. 142 Dirac never defines what a ket vector is mathematically, he describes its physical interpretation as 'vectors which are connected with the states of a system in quantum mechanics'. ketone ('ki:təʊn). *Chem.* [*a.* Ger. *keton* (pl. *ketone*), a modification of ACETONE, introduced by Gmelin, *Handbuch d. Chem.* (ed. 4, 1848) IV. 40, 187.] 1. The name of a class of chemical compounds formed by oxidation of the secondary alcohols or carbinols, to which they stand in some respects in the relation of aldehydes. The lowest of the series, *dimethyl ketone*, is common ACETONE.

The ketones, in their simplest form, contain a carbonyl group CO attached to two monad hydrocarbon radicles. If the two radicles are identical as in acetone, the compound is a *simple ketone*; if different, as in methyl-ethyl-ketone CH₃·CO·CH₂·CH₃, it is a *mixed ketone*. Compounds containing two carbonyl groups are termed *diketones*; those containing three *triketones*' (Morley & Muir *Watts' Dict. Chem.* III. 102/2).

2. Special combs.: **ketone body**, any of the three related compounds acetone, acetoacetic acid, and β-hydroxybutyric acid, which are produced in the body in fatty- and amino-acid metabolism; an 'acetone body'.

1915 *Arch. Internal Med.* XV. 40 There are in the literature only casual references to the influence of organotherapy on the formation and excretion of ketone bodies. **1936** *J. Biol. Nutrition* XII. 647 The term 'rate of ketogenesis' . . takes into account both the ketonemia, or level of ketone bodies in the blood, and the ketonuria, or the rate of ketone body excretion in the urine. **1959** A. WHITE et al. *Princ. Biochem.* (ed. 2) xix. 479 The total ketone body concentration in blood, expressed as β-hydroxybutyrate, is normally below 1 mg. per 100 ml., and the average total daily excretion in the urine is approximately 20 mg. **1974** *Nature* 18 Jan. 161/2 Urine samples were tested for 'ketone bodies' with a commercial preparation that contains sodium nitroprusside.

Hence *ketonic a.*, of or pertaining to ketones, as in *ketonic acid*, a compound containing the radical carbonyl, CO, and having the characteristic properties of both a ketone and an acid. So 'ketol, a ketonic alcohol; 'ketose, a sugar which is a ketonic alcohol, e.g. lævulose, or fruit sugar.

ketonize ('ki:tənaɪz), *v.* *Chem.* [*f.* KETON(E) + -IZE.] *intr.* Of a compound which undergoes ketoketo-enol tautomerism: to change into the ketoketo-form.

ketosis (ki'təʊsɪs). *Med.* [*f.* KET(O-) + -OSIS.] A condition characterized by an increased production of ketone bodies, which is associated with a predominance of fat metabolism and with diabetes.

1917 F. M. ALLEN in *Amer. J. Med. Sci.* CLIII. 335 No other name but acidosis exists for the metabolic process which it denotes. Ketonuria and ketonemia have their accurate place but do not cover the ground. Possibly the word ketosis might be suggested and used for special purposes, but the change of established usage would be difficult and seems unnecessary. **1925** *Biochem. J.* XIX. 948 In man after a relatively short period of starvation . . a considerable ketosis appears. **1951** A. key (ki:), *sb.*¹ Forms: 1 cæȝ, cæȝe, (kæȝe, kaiȝe), 2 kæie, 3 keiȝe, pl. keyȝen, keien, 4 keyȝe; 3-4 kai, 3-8 kay, 4 cay, kaiē, pl. caiss, 4-6 kaye, (5-6 pl. kaies); 3-6 keye, (pl. keis), 3-7 keie, 5-7 kee, 7 kie; 4- key, (pl. 4-6 -es, 4- -s). [OE. *cæȝ* str. f. (pl. *cæȝa*) and *cæȝe* wk. f. (pl. *cæȝan*) = OFris. *kei*, *kay*; not found in the other Teut. languages; ulterior etym. unknown.

The mod. pronunciation (ki:) is abnormal. The other OE. words ending in -æȝ have uniformly mod. (ei), as *clæȝ* clay, *græȝ* grey, gray, *hwæȝ* whey; and that *key* had the same vowel as these in ME. is proved not only by the frequent spelling *kay*, but by its constantly riming with *day*, *way*, *say*, *play*, etc. This was evidently the standard pron. down to the close of the 17th c.; Dryden has the rime with *way* more than once in one of his latest works (1700). On the other hand, we find even in 15th c. a (northern) spelling *kee*; and in Scottish MSS. of the same cent. the form *key* (pl. *keis*) shows that the vowel in that dialect was not the same as in *day* or *clay*; in somewhat later Scottish (16th-17th c.) the identity of the vowel with that which gives mod. (i:) is established by rimes. In mod. Southern Sc. also, *key* has the same diphthong (kei) as *be*, *me*, *we*, *de*, *see*, *tree*, etc., proving that it must from an early period have had the same sound as *ē*, *ee* had at the time. The vb. *weigh* has the same history in Sc. (wi:), but in Eng. remains (wei). The mod. pronunciation (ki:) thus appears to be of northern origin, and it is difficult to know how it came into general Eng. use. Cf. the surname *Kaye* or *Key* (*Caius*) in *Caius* (i.e. *Key*'s) College, Cambridge.]

Keys (ki:z). [Pl. of KEY *sb.*¹ in specialized use.] A body of twenty-four members which forms the elective branch of the Legislature of the Isle of Man. More fully *House of Keys*. (The reason

of the title is not quite clear. It appears in Latin form *claves* in 1418, and in Eng. form in 1422. But it is not the recognized name in the Manx Statutes till 1585; from that date to 1734 the title is 'The Twenty-four Keys'; after this simply 'The Keys'. The Manx popular name is *Yn Kiare as Feed*, 'The Four-and-twenty.' The suggestion that *Keys* was some kind of corruption of *Kiare* as 'Four-and' has no historical basis.)

[1417-18 in Gill *Statutes I. of Man* (1883) I. 2 Hæc Indentura facta inter Thurstanum de Tyldesley [etc.] ex unâ parte, et . . . xxiii Claves Mann. ex altera, Testatur qd. predicti xxiii Claves legis cum iudice Mann. dicunt, etc.] 1422 *Ibid.* I. 11 Alsoe we give for Law, that there was never xxiii Keys in Certainty, since they were first that were called Taxiaxi, those were xxiii free Houlders. keysender ('ki:səndə(r)). *Teleph.* [f. KEY sb.¹ + SENDER.] A device for applying electric impulses representing a telephone number to a circuit by means of a set of keys (numbered 0 to 9), in place of a dial.

1929 *Telegraph & Telephone Jnl.* XVI. 34/1 The light, airy switchroom, the tap-tap of the keysenders and the humming of the dials, this is my introduction into the subscriber's Paradise—an Automatic Exchange. 1934 *Post Office Electr. Engineers' Jnl.* XXVII. 32/1 It has recently been decided . . . to provide mechanical keysenders both for P.B.X. operators and, if desired, for individual telephones. 1948 J. ATKINSON *Herbert & Procter's Telephony* (new ed.) I. xi. 216/2 The keysender . . . is a device introduced as an alternative to the dial on large type private branch exchange switchboards to reduce the time expended by a P.B.X. operator when dialling numbers from the switchboard. By its use, the P.B.X. operator is free to attend to other calls whilst the keysender is still transmitting the digits which have been keyed up. 1970 *New Scientist* 5 Nov. 275/1 Tests at the St Albans exchange showed that the keysender was markedly quieter than the rotary dial and saved an average of 2-3 seconds on each call.

So **key-sending**, the use or operation of a keysender.

1928 C. W. BROWN *Automatic Telephony Simplified* viii. 143 Key sending, and not dial sending, would, of course, be provided at manual exchanges when necessary. 1930 *Gloss. 1891 A. CUNNINGHAM *Coins Anc. India* 36 A script named *Khorosti*, which was read from right to left, is said to have been one of the forms taught to the youthful Buddha. *Ibid.* 37 As the name was derived from the inventor of the writing, I think it probable that the name of Zoroaster, or *Zordusht* himself, may have been preserved in the term *Khorosti*, as the inventor or introducer of that particular form of writing. The *Khorosti* alphabet, under this view of its origin, would naturally have penetrated into every country under Akhæmenian rule. 1902 [see **BRABMI**]. 1934 A. [Of obscure formation.

On the supposition that the sing. was *kid(e)nere*, this has been inferred to be a compound, having as its second element ME. *nere* kidney; and it has been conjectured that *kid(e)nere* might represent OE. *cwið*, *cwiða*, or ON. *kvið* belly, womb. But this is on many grounds improbable; above all, because the ordinary sing. in ME. was in -ei, -ey, the solitary instance of *kydnere*, c 1420 (1 b below), being probably a pl. for *kydnere*. It is thus possible that *kidenei*, pl. *kidneiren*, had as its second element ey, pl. *eyren*, *eiren*, *eyre*, *eyer*, EGG. (Cf. Ger. *eier* testicles.) The pl. *kid(e)neris* might possibly owe its form to association with *neres*, *neeres*, pl. of *nere*; the later *kidneies*, -neis, was a new pl. from the unanalysed singular. But the first element remains uncertain.]

kilogram, -gramme ('kɪləgræm). Also 9 chilogramme. [a. F. *kilogramme* (1795): see KILO- and GRAM², GRAMME.] 1. a. A unit of mass (formerly also taken as a unit of weight) that was introduced as a fundamental unit of the metric system and is now one of the base units of the International System of Units, being equivalent to approximately 2.205 lb.; it was intended to be the mass (or weight) of a cubic decimetre of distilled water, but in practice has been defined almost from its inception as the mass of a unique physical standard (orig. the 'Kilogramme des Archives', and since 1889 the International Prototype of the Kilogramme).

1797 *Jrnl. Nat. Philos.* I. 197 The kilogramme [is] equal to 2 pounds 5 gros 49 grains. 1810 *Naval Chron.* XXIV. 299 The French weight called Kilogramme. *Ibid.* 301 Kilogram (weight of cubic decimeter of water). 1825 J. ARNOLD-FORSTER (*title*) The Coming of the Kilogram, or the Battle of the Standards. 1946 *Proc. R. Soc. A.* CLXXXVI. 171 The kilogram was originally defined by reference to a 'natural' standard, i.e. the mass of the cubic decimetre of water. The material representation of this standard was the Kilogramme des Archives, a simple cylindrical piece of platinum which was constructed in the latter part of the eighteenth century. 1964 H. S. HVIISTEN *Engin. Units* iii. 20 Study of the archives of the BIPM [sc. the Bureau International des Poids et Mesures] has shown that whilst due to the lack of precision in scientific terminology at that time, the word 'poids' (weight) was improperly used as a synonym of 'mass', the kilogramme étalon was definitely intended to represent the unit of what we now always call mass, and not the force by which that mass unit was attracted to the earth. 1969 *Changing to Metric Syst.* (Nat. Physical Lab.) (ed. 3) 5 The spellings of the units of length (metre) and mass (kilogramme) given above are those used by the General Conference of Weights and Measures. b. An object having a mass of one kilogram and made as a standard of mass or weight.

A proposal to construct a new standard kilogramme brought the whole subject under review in 1872, and the Commission Internationale du Mètre... decided that the international kilogramme should be a copy of the 'Kilogramme des Archives'. 1936 *Rep. Kilroy ('kilrɔɪ). The name of a mythical person, popularized by American servicemen in the war of 1939–45, who left such inscriptions as 'Kilroy was here' on walls, etc., all over the world.

The explanation in quot. 1946 is one of numerous unverifiable accounts of the origin of the name.

1945 *Sat. Even. Post* 20 Oct. 6/2 On the crib hung a hand-lettered sign which asserted: 'Kilroy slept Here'... Wherever he was, Kilroy had been there and left his mark behind: 'Kilroy Was Here', or 'Kilroy Passed Through' or 'You're in the Footsteps of Kilroy'. **1946** *N. Y. Times* 24 Dec. 18/4 As far as the American Transit Association is concerned, the identity of the elusive Kilroy of 'Kilroy Was Here' fame has been established, and in token of this recognition a street car was shipped today to James J. Kilroy of Halifax, Mass. *Ibid.* 18/5 In brief, Mr. Kilroy's claim is based on the following: During the war he was employed at the Bethlehem Steel Company's Quincy shipyard, inspecting tanks, double bottoms and other parts of warships under construction. To satisfy superiors that he was performing his duties, Mr. Kilroy scribbled in yellow crayon 'Kilroy was here' on inspected work. Soon the phrase began to appear in various unrelated places, and Mr. Kilroy believes the 14,000 shipyard workers who entered the armed services were responsible for its subsequent world-wide use. **1951** *Here & Now* (N.Z.) Kimmeridge ('kɪmərɪdʒ). Also *Kimeridge*. A village on the Dorsetshire coast, where extensive beds of the Upper Oolite formation are developed. Hence, *Kimmeridge clay*, a bed of clay in the Upper Oolite containing bituminous shales. *Kimmeridge coal*, shale of the Kimmeridge clay containing so much bitumen that it may be burnt as coal; *Kimmeridge coal money*, disks of shale found near Kimmeridge, popularly supposed to have been used as coins by the ancient inhabitants.

Although the village name is now spelt *Kimmeridge*, the form *Kimeridge* is current in geological usage, reflecting the former spelling of the name; cf.:—**1933** W. J. ARKELL *Jurassic Syst. Gt. Brit.* xiv. 441 The spelling *Kimeridge* was used by H. B. Woodward..., by Damon..., and by most earlier authorities. The new form *Kimmeridge* was not heard of before Webster and Buckland introduced it in the [early] nineteenth century and seems to have no justification. **1947** — *Geol. Country around Weymouth* (Mem. Geol. Survey Gt. Brit.) v. 68 Inland towards Kimmeridge village. [Note] The name of this village was Cameric in Domesday Book and Kymerich by 1293; by the time of Hutchins' great work on Dorset it had become Kimeridge... The Ordnance map of 1811 (Sheet 16, Old Series) retained one 'm', and so did Damon in his *Geology of Weymouth* (1860 and 1884–8) and H. B. Woodward in 'The Jurassic Rocks of Britain' (vol. v, 1895), *Mem. Geol. Survey*. In the resurvey of 1892 (Sheet 342, New Series), two 'm's' were adopted and the Geological Survey followed suit in 1898.

KEN v.²

In the Teutonic word, as in Latin *genus* and Greek *γένος*, three main senses appear, (1) race or stock, (2) class or kind, (3) gender or sex; the last, found in OE. and early ME., but not later, is the only sense in mod.Du., Da., and Sw.]

†b. In this sense, chiefly in a genitive phrase, dependent upon following sb. Cf. KIND sb. 14.

In OE. the genitive might be either sing. or pl., according to sense; e.g. *ælces* or *gehtwyles cynnes* *déor*, animals of each or every kind, *monigra cynna scipu*, ships of many kinds, *þreora cynna treowu*, trees of three kinds. In ME., *cynnes* became *kunnes*, *kynnes*, *kyns*, *kins*; *cynna* became *kunne*, *kynne*, *kyn*, *kin*. For the latter the genitive sing. was often substituted; and conversely, *kynne*, *kin*, appeared in the sing., esp. in the north, where it was prob. viewed as an uninflected genitive, as in *man son*, *fader broder*, etc. The preceding adjectival word agreeing with *kynnes*, *kins*, dropped its genitive *s* somewhat early; sometimes it was transferred to *kinnes*, thus *alle skynnes* (= *alles kynnes*, *alle kynnes*), *no skynnes*, etc. Usually however the two words were at length combined, as in the later forms *alkin(s)*, *anykin(s)*, *fele-kin(s)*, *manykin(s)*, *nokin(s)* or *nakin(s)*, *otherkin(s)*, *sere-kin(s)*, *swilkin(s)*, *same-kin(s)*, *thiskin(s)*, *whilk-kin* (*hwil-kin*), *whatkin(s)*. Few of these came down to 1500, though in the north *whatkin* is found in the 16th c., and survives in Sc. and north Eng. as *what'n*, beside *siccan* from *swilk kin*.

The reduction of *kin* to its simple uninflected form may have been assisted by the equivalent use of *manere* (MANNER) from OFr., which is thus found, as *three maner men* = men of three kinds or sorts. In this, at an early period, we find of inserted: *an manere of fisce*, *al maner o suet spices*, the syntactical relation between the words being thus reversed, and although this appears to have rarely extended to *kin* itself, it affected its later representative *kind*, also *sort*, *species*, etc., so that we now say 'all kinds of things' = things of all kinds. This may have been facilitated by the fact that in the order of the words (as distinct from their syntactical relation) 'al kins things' is more closely represented by 'all kinds of things' than by 'things of all kind'. See KIND, MANNER, SORT, etc., and, for the special combinations of *kin* with preceding adj., ALKIN, ANY-KYN, etc.

kin var. KEN sb.³

-*kin* (kin), suffix, forming diminutives, corresp. to MDu. *-kijn*, *-ken*, MLG. *-kîn* = OHG. *-chîn*, MHG. *-chîn*, *-chein*, *-chin*, *-chen* (G. *-chen*), as in MDu. *kindekijn*, *-ken*, MLG. *kindekîn*, MHG. *kindichîn*, G. *kindchen* little child; MDu. *husekijn*, *huusken*, MHG. *häusichin*, G. *häuschen* a little house. No trace of the suffix is found in OE.

The suffix has only a limited use in English. It appears to occur first in some familiar forms of personal (chiefly male) names, which were either adoptions or imitations of diminutive forms current in Flanders and Holland, where such forms appear already in the 10th c. The earliest ME. examples noted are *Janekin*, *Malekin*, *Watekin*, and *Wilekin*,

found as early as 1250 (*O.E. Misc.* 188-191), and evidently then in familiar use. These and others of the kind were no doubt common in 13-14th c. (for *Jankin* and its variants see Nicholson *Pedigree of 'Jack'*), but are not prominent in literature till the second half of the 14th. The A-text of 'Piers Plowman' has *Malkin* and *Perkin*, the B-text adds *Haukyn*, and the C-text *Watkin*; Chaucer uses *Jankin*, *Malkin*, *Perkin*, *Simkin*, and *Wilkin*; and in the 'Tournament of Tottenham' there occur *Daukyn*, *Haukyn*, *Jeynkyn*, *Perkyn*, and *Tymkyn*. The 'Earliest English Wills' have *Idkyne* (1397), *Jankyn* (1417-22) and *Watkin* (1433). As Christian names these seem to have mostly gone out of fashion shortly after 1400, though instances occur later (e.g. *Wilkin* in Lyndesay's 'Satyre', 2180); most of them have, however, survived as surnames, usually with the addition of -s or -son, as *Jenkins*, *Watkins*, *Wilkinson*, *Dickens*, *Dickinson*, etc.

Instances of the suffix being added to common nouns in the 14th c. are rare; but Langland has *baudekin*, *fauntekin*, and *feudekin*, perhaps on the analogy of the personal names. Other words in -kin from the same or immediately succeeding period are either adopted from Du. or are of obscure origin; and it is doubtful whether the ending was in every case felt as a diminutive; such are *barmkin*, *bodkin*, *dodkin*, *firkin*, *kilderkin*, *napkin*. Considerable obscurity attaches to many later words (16-17th c.) of the same type, as *jerkin*, *bumpkin*, *pipkin*, *gaskin*, *griskin*, *bumkin*, *gherkin*, *ciderkin*, etc.: in some of these the ending may be of different origin, or due to assimilation, as in *pumpkin*, *tamkin* for earlier *pumpion*, *tampion*. Apparently from Du. are the 16-17th c. words *minikin*, *cannikin*, *catkin*, and *mannikin*. Outside of these, and some forms used in oaths, as *lakin* (? for *ladykin*), *bodykin*, *pittikin*, the suffix is comparatively rare; the only example which has obtained real currency is *lambkin* (1579), though a few others are occasionally employed, as *boykin* (1547), *devilkin*, *godkin*, *ladykin*, and nonce-words such as *glenikin*, *headikin*, *handikin* (after *mannikin*). *Bootikin* (18th c.) is not clearly a diminutive in origin, and in Sc. *cutikin*, *thumbikin* (cf. also *greenkin*) the force of the suffix is different.

kinæsthesis (kainis'thē:sis). Also *kinæsthesia*, *kinesthesis*. [f. Gr. *κιν-εῖν* to move + *αἰσθησις* sensation *ÆSTHESIS*.] The sense of muscular effort that accompanies a voluntary motion of the body. Also, the sense or faculty by which such sensations are perceived. So *kinæsthetic* (-'θetik) *a.*, belonging to *kinæsthesia*; also, involving or utilizing *kinæsthesia*; *kinæsthetically adv.*

1880 *BASTIAN Brain as an Organ of Mind* xxv. 543 We may . . speak of a Sense of Movement, as a separate endowment. [Note] Or in one word, *Kinæsthesia*. . . To speak of a 'Kinæsthetic Centre' will certainly be found more convenient than to speak of a 'Sense of Movement Centre'. 1891 V. HORSLEY in *10th Cent.* June 859 Bastian coined the term 'kinæsthesia'. . . further, he . . postulated the view that such kinæsthesia, or sense of movement, strain, effort, &c., must naturally find its seat or localisation in the so-called motor or Rolandic region of the brain. *Ibid.* 868 Given that the cortex of the Rolandic region is kinæsthetic, from which element of it does the efferent impulse start? 1939 [see HAPTIC *a.* (and *sb.*)]. 1942 E. G. BORING *Sensation & Perception* xiv. 532 The fact that such small angular displacements can be sensed at such relatively slow speeds did much to direct attention upon the importance of kinesthesis. 1952 *Dance Observer* Jan. 9 A happy gang of young people being kinesthetically hypnotized by a clarinetist. 1953 H. HABER *Man in Space* 149 Whenever we move a limb or perform more complex physical tasks we rely on the delicate co-ordination of these three senses, and the so-called 'kinesthesis' sensations we derive from them serve as a very effective means of control. 1953 *Jrnl. BARTLEY *Princ. Perception* xiv. 321 This being the case, kinesthesis is responsible for more than appreciation of muscle position, movement and tension. It is the mediator of general well-being or general discomfort and malaise. 1960 *Aeroplane* XCIX. 804/2 Control is kinesthetic (body leaning) and top speed approximately 20 m.p.h. 1968 F. kinase ('kaineiz, -s). *Biochem.* [f. Gr. *κιν-εῖν* to move + -ASE.] *a.* Any substance which converts

an inactive precursor (a zymogen) into an active enzyme.

1902 W. H. THOMPSON tr. *Pawlow's Work of Digestive Glands* ix. 160 When a tube was introduced into the fistula, and the succus entericus afterwards collected in separate portions, the amount of kinase in the secretion became steadily less and less. 1903 *Jrnl. Chem.* II. xiii. 502 Many enzymes are inactive unless an activator is present. The inactive enzyme is known as a zymogen, and the activator as a kinase (if this is inorganic), e.g., trypsinogen (the zymogen) together with enterokinase (the kinase) forms the enzyme trypsin.

b. Any enzyme capable of catalysing the transfer of a phosphate group from adenosine triphosphate (or other nucleoside triphosphate) to another molecule; also used with preceding sb. or prefix indicating the accepting molecule, as in HEXOKINASE (from which this use derives).

1953 *Jrnl. Biol. Chem.* CC. 187 The enzyme myokinase, or adenylate kinase, which catalyses the establishment of an equilibrium between the three nucleotides, adenosinetriphosphate (ATP), adenosinediphosphate (ADP), and adenylic acid (AMP). 1962 P. D. BOYER et al. *Enzymes* (ed. 2) VI. i. 7 Enzymes transferring phosphoryl groups from ATP to acceptors have been termed kinases, phosphokinases, [etc.]. The term kinase stems from Meyerhof's designation of the enzyme that activates glucose as hexokinase. 1964 FLORKIN & STOTZ *Comprehensive Biochem.* (ed. 2) XIII. 34 A number of special words are used to indicate reaction types, e.g. 'kinase' to indicate a phosphate transfer from ATP to the named substrate (not 'phosphokinase'). 1970 *New Scientist* 29 Jan. 196/1 Elegant methods of joining large oligonucleotide sequences of DNA to one another using the enzymes polynucleotide kinase and ligase have, in fact, been worked out.

14. a. Kind of. Later usage transposes the syntactical relation in such constructions as *all kinds of trees* = 'trees of all kinds', *this kind of thing* = 'a thing of this kind'. For the history of this, see *KIN*¹ 6 b.

As the original genitive phrase was in attrib. relation to the following sb., the natural tendency is still to treat *all kind of*, *no kind of*, *what kind of*, etc. (like ME. *alkin, nakin, whatkin*), and, hence also, the simple kind of (colloq. *kind o', kind a, kinder*), as an attrib. or adj. phrase qualifying the sb. Hence the uses in b, c, d.

b. The feeling that *kind of* was equivalent to an adj. qualifying the following sb., led to the use of *all, many, other, these, those*, and the like, with a plural verb and pronoun, when the sb. was plural, as in *these kind of men have their use*. This is still common colloquially, though considered grammatically incorrect.

(Cf. the ME. use of *alkin, manykin, serekin*, etc.; see *KIN*. In quot. 1648, *other kind* is for the earlier *other kin*.)

c. *a kind of* . . : A sort of . . ; a (person or thing) of a kind; an individual that is, or may be, included in the class in question, though not possessing its full characteristics.

A kind of gentleman and *a gentleman of a kind* differ in that the former expresses approach to the type, admitting failure to reach it, while the latter emphasizes the non-typical position of the individual. Hence, *a kind of* may be used as a saving qualification, as in 'a kind of knave'.

d. *colloq. kind of* (vulgarily *kind o', kind a', kinder*, etc.) is used adverbially: In a way, as it were, to some extent. Also *kind of sort of, kinder sorter* (see *SORT* sb.² 8 c).

The adverbial use arises out of the adjectival: cf. 'She was a mother of a kind to me', 'She was a kind of mother to me', 'she kind o' mothered me'.

†kine⁻¹ (also rarely kyne-, kini-, cune-), the representative in early ME. of OE. *cyne-*, *cyni-*, used in numerous combs. with the sense of 'kingly, royal', as *cyne-bearn*, -*cynn*, -*dóm*, etc., also in personal names as *Cynebald*, -*gils*, -*mund*, -*wulf*, etc., corresponding to OHG. *chuni-* in *chuniriche*, *Chunipald*, -*per(h)t*, -*gund*, -*mund*, etc. (But in OHG., combs. are usually formed with *chuninc-*, king, as *chunincuom*, -*helm*, -*riche*, -*stuol*, whereas those formed with *cynig-* are comparatively rare in OE.: e.g. *cynig-cynn*, -*dóm*, -*feorm*, -*stán*.) Most words of Greek etymology beginning with *kine-* are now commonly pronounced with (i).

[Neither OE. *cyne* nor OHG. *chuni* is found as a separate word, and two views are possible as to the exact etymology of the element; either that it is the simple stem of OTeut. **kunjo-*, Goth. *kuni*, OE. *cynn*, KIN, race, in combination, or that it represents a masculine derivative of this, of form **kuni-z*, equivalent to ON. *konr* 'man of race, man of gentle or noble birth', taken also by some as the immediate source of OHG. *chuning*, OE. *cynig*, KING. For the former view, cf. the combining use of *dryht*, 'people, folk, army', in sense 'lordly', in *dryht-bearn* lordly or princely child, lit. child of the folk, etc.]

kinematic (kaini'mætik), *a.* and *sb.* [f. Gr. κίνημα, κίνηματ- a motion (f. κινεῖν to move) + -IC.]

A. *adj.* 1. a. Relating to pure motion, i.e. to motion considered abstractly, without reference to force or mass.

1864 *Athenæum* No. 1924. 340/3 Kinematic effects of revolution and rotation. 1879 THOMSON & TAIT *Nat. Phil.* I. i. 483 The design of a kinematic machine. . essentially involves dynamical considerations. 1880 *Nature* XXI. 244/1 M. Mannheim has recently introduced the expression kinematic geometry. . dealing with motion independently of forces and times.

b. *spec.* in *Mech.* Applied to a set of mechanical elements so disposed in relation to each other that the relative position and motion of each is uniquely determined by the relative position and motion of the other(s).

1876 A. B. W. KENNEDY tr. *Reuleaux's Kinematics of Machinery* i. 43 A machine consists solely of bodies which thus correspond, pair-wise, reciprocally. These form the kinematic or mechanisml elements of the machine. *Ibid.*, If a kinematic pair of elements be given, a definite motion can be obtained by means of them if one of the two be held fast or fixed in position. *Ibid.* 46 The whole now forms a linkage returning upon itself. . . A combination of pairs of elements in this way we shall call a chain, or more fully a kinematic chain. 1915 R. F. MCKAY *Theory of Machines* VIII. 92 When one of the links of the kinematic chain is fixed, the chain is called a mechanism. When the mechanism transmits force. . it is called a machine. 1957 R. M. PHELAN *Fund. Mech. Design* i. 1 A chain. . in which with one link fixed every point in every other link must move in a definite path is called a constrained or kinematic chain.

2. *kinematic viscosity*: see VISCOSITY.

B. *sb.* = KINEMATICS.

1873 W. K. CLIFFORD *Pure Sciences in Contemp. Rev.* (1874) Oct. 717 These rules are called the laws of kinematic, or of the pure science of motion.

kinematical (kaini'mætikəl), *a.* [f. as prec. + -AL.] Of or pertaining to kinematics; kinematic.

1864 in WEBSTER. 1879 THOMSON & TAIT *Nat. Phil.* I. i. §91 These and kindred curves, which give good instances of kinematical theorems. 1884 *Health Exhib. Catal.* 143/2 Kinematical Apparatus.

kinematically (kɪnɪ'mætɪkəlɪ), *adv.* [f. KINEMATIC, -ICAL *adjs.*: see -ICALLY.] From the point of view of kinematics.

1876 A. B. W. KENNEDY tr. *Reuleaux's Kinematics of Machinery* vi. 234 Thus...the force-closed beam-chains became the imperfect but still kinematically far more complete 'parallel motion'. 1915 R. F. MCKAY *Theory of Machines* viii. 93 A direct-acting steam engine and a quick-return motion are kinematically identical, though their general appearance would not suggest such a connection. 1955 J. S. BEGGS *Mechanism* vi. 194 The kinematically equivalent chain thus obtained has all lower pairs, and Eq. (6-5) may be applied. 1971 D. W. SCIAMA *Mod. Cosmol.* xvi. 198 The rotation of the Galaxy can be detected not only dynamically from its flattened shape but also kinematically by observing the motions of stars...far out from the centre.

kinematics. [In form a pl. of KINEMATIC: see -IC 2, and quot. 1840.] a. The science of pure motion, considered without reference to the matter or objects moved, or to the force producing or changing the motion. (Cf. KINETICS 1.)

1840 WHEWELL *Philos. Induct. Sc.* I. 146 M. Ampère, in his *Essai sur la Philosophie des Sciences* (1834)...proposes to term it Kinematics (*Cinématique*). 1859 J. R. LUNN *Motion* v. The phenomena of Motion...what has hitherto been called (though not universally) Kinematics. 1879 THOMSON & TAIT *Nat. 1952 R. L. BIRDWHISTELL *Introd. Kinesics* (U.S. Dept. kinesimeter (kai'nɪ:sɪmɪtə(r)). [f. KINESI- + -METER.] An instrument for investigating the properties of different areas of the skin, by which a movable point whose position can be measured may be applied to the surface with a known force.

kinesiology (kai'nɪ:sɪ'ɒlədʒɪ). [f. KINESI- + -OLOGY.] The field of study concerned with the mechanics of (human) bodily movement.

1894 N. POSSE *Special Kinesiology* p. v. I have deemed it desirable to change the title into *Special Kinesiology*,—it being a treatise on the mechanics, effects, and classification of special exercises. 1936 *Nature* 14 Mar. 438/2 This book [sc. *Mechanics of Normal and Pathological Locomotion in Man*] should take a prominent place in the literature of kinesiology. 1941 *Res. Hence **kinesio'logic**, -'logical *adjs.*, **kinesi'ologist**, a person who studies kinesiology or kinesics.

1941 *Res. Q. Amer. Assoc. Health & Physical Educ.* XII. 167 He presents a concise kinesiological analysis. *Ibid.* 165 The importance of the part he [sc. 2. *Biol.* [Adopted (in G.) by W. Rothert 1901, in *Flora* LXXXVIII. 374, after its use as a suffix in *photokinesis*.] An undirected movement of an

organism that occurs in response to a particular kind of stimulus.

1905 *Jrnl. Compar. Neurol.* XV. 139 Kinesis is a term which seems to have been first used by Engelmann for the increase or decrease of activity produced by certain agencies. The fact that certain bacteria increase or decrease movement in the light he called photokinesis. Rothert accepted the term kinesis for such changes in the amount of activity produced by chemicals, calling this chemokinesis. **1940** FRAENKEL & GUNN *Orientation of Animals* i. 10 The term *taxis* is to-day used for directed orientation reactions. ... Undirected locomotory reactions, in which the speed of movement or the frequency of turning depend on the intensity of stimulation, we call kinesis. **1955** STORER & USINGER *Elem. kinetoplast (ka'ni:təuplɑ:st, -æ-). *Biol.* [ad. F. *kinétoplaste* (A. Alexeieff 1917, in *Compt. Rend. heb. d. Séances et Mém. de la Soc. de Biol.* LXXX. 512): see KINETO- and -PLAST.] a. A structure lying close to a kinetosome in some protozoa, esp. trypanosomes. b. This structure together with the kinetosome; now *rare* or *Obs.*

1925 Manson's *Trop. Dis.* (ed. 8) 636 This composite body is known as the kinetoplast, and is composed of a minute blepharoplast, or basal body, and a parabasal body. 1938 *Trans. R. Soc. Trop. Med. & Hygiene* XXXII. 333 In referring to the prominent dark-staining structure at the base of the flagellum in trypanosomes I have at one time used the term *porobasol*, later changing to *kinetonucleus*, while the name *kinetoplast* has been employed to denote the complex kinetonucleus (or parabasal) + blepharoplast (or basal granule)... While the conception of the nuclear nature of this element (hence 'kinetonucleus') has been discarded long ago, considerable doubt has also been thrown on its interpretation as a parabasal body... In the present paper the term *kinetoplast* has accordingly been employed in its original sense, to denote the kinetonucleus alone (without the blepharoplast). 1961 MACKINNON & HAWES *Introd. Study Protozoa* ii. 101 In the Trypanosomidae and some other protomonads... there is a body lying near the blepharoplast which... is generally well preserved by acetic acid fixatives like Bouin; it is F +; it is self-perpetuating, divides when the blepharoplast divides, and one of its daughters goes to each product of fission... To it the name kinetoplast is applied... The term parabasal body (unfortunately applied at times to the structure just defined as a kinetoplast) is here reserved for an organelle best seen in the Trichomonadida... It is more complex than the kinetoplast, usually compound, F -, and rarely if ever completely preserved except by 'cytological' fixatives. It is not self-reproducing. 1971 *New Scientist* 13 May 370 Certain single-celled organisms are propelled forwards in the water by flagellae, which draw their power from a single huge mitochondrion called a kinetoplast.

kinetosome (ka'ni:təusəum). *Biol.* [f. KINETO- + -SOME⁴.] A cytoplasmic structure which forms the base of a cilium or flagellum.

1912 C. E. ALLEN in *Archiv für Zellforschung* VIII. 134 It seems plain... that the plates and the groups of smaller bodies—which will be referred to as kinetosomes—are mutually equivalent. 1934 L. W. SHARP *Introd. Cytol.* (ed. 3) xiv. 203 The granules and plates in the earlier spermatogenous cells [of bryophytes] were called 'kinetosomes' and 'kinoplasmic plates' by Allen (1912). 1949 *Growth XIII*. Suppl. 61 In all animals or plants, as well as in flagellates or ciliates, at the basis of each flagellum or cilium, a spherical corpuscle is to be seen: the kinetosome. 1960 L. PICKEN *Organization of Cells* vii. 273 In molluscan, amphibian, and ciliate kinetosomes, but not in those in mammalian ciliated tissues, there is a prolongation of the kinetosome base as a single or double, striated fibre. *Ibid.*, In the ciliates, kinetosomes appear to generate not only cilia but (and alternatively, only) trichocysts and a variety of types of fibril. 1961 MACKINNON & HAWES *Introd. Study Protozoa* ii. 71 Asexual reproduction is universal [among the Mastigophora]... The basal granule (blepharoplast or kinetosome) of the flagellum divides, and it frequently acts as a centriole. 1974 BROWN & BERTKE *Textbk. Cytol.* (ed. 2) xiii. 273/2 At the base of the shaft of a cilium or flagellum but within the cell itself is the basal body... This structure is called the kinetosome by protozoologists or the blepharoplast by some phycologists.

Hence **kineto'somal a.**

kinety ('kaməti). *Biol.* [ad. F. *cinétie* (Chatton & Lwoff 1935, in *Compt. Rend. heb. d. Séances et Mém. de la Soc. de Biol.* CXVIII. 1069), f. Gr. κίνητ-ικός for putting in motion: see -Y³.] In ciliates and flagellates, a kinetodesma together with its row of associated kinetosomes.

You see: 1) a fiber: the kinetodesma; 2) a line of kinetosomes. 1953 *Biol. Bull.* CIV. 408 The primary fibrillar apparatus of ciliates consists of a number of parallel structural units, the kineties. 1967 J. H. WILMOTH *Biol. Invertebr.* ii. 19 The connecting kinetosomes and kinetodesma form a functional and structural unit called a kinety... but are not connected to other kineties. *Ibid.*, It is of extreme significance that flagellates at cell division cleave parallel to the kineties, while among ciliates the cleavage plane crosses kineties.

Teut. word: OE. *cýning* = OFris. *kin-*, *ken-*, *koning*, OS. *kuning* (MDu. *coninc*, Du. *koning*, MLG. *kon(n)ink*), OHG. *chun-*, *kuning*:—O Teut. **kuningō-z*, a derivative of **kunjo-*, Goth. *kuni*, OE. *cynn*, *kin*, *race*, etc. The ON. equivalent was *konong-r*, -*ungr* (Sw. *konung*). Finnish *kuningas* king, and Lith. *kuningas* lord, priest, were early adoptions from Teut. In most of the Teut. languages two

reduced forms appear: 1) OE. *cynig* = OFris. *kinig*, etc., OS. *kunig* (MDu. *conich*), OHG. *chun-*, *kunig* (MHG. *künic*, *künec*, G. *könig*, *†kūnig*); 2) OE. *cyng*, *cing* = MHG. *künc* (obs. As to the exact relation, in form and sense, of *king* to *kin*, views differ. Some take it as a direct derivative, in the sense either of 'scion of the kin, race, or tribe', or 'scion of a (or the) noble kin', comparing *dryhten* (:-**druhtino-z*) 'lord' from *dryht* (:-**druhti-z*) 'army, folk, people', *dryht-beorn* 'lordly or princely child, prince', lit. 'child of the nation', ON. *fylkir* 'king' from *folk*, Goth. *þiudons* 'king', from *þiudo* people, nation. Others refer **kuningō-z* immediately to the supposed masc. **kuni-z*, preserved in comb. in OHG. *chuni-*, OE. *cyne-* (see KINE-¹), taking it as = 'son or descendant of one of (noble) birth'. See Hildebrand in Grimm, and Kluge, s.v. *König*; Franck s.v. *Koning* etc.] (The genitive plural in southern ME. was *kingene*, -*en*, -*yn*.)

1. a. The usual title of the male sovereign ruler of an independent state, whose position is either purely hereditary, or hereditary under certain legal conditions, or, if elective, is considered to give to the elected the same attributes and rank as those of a (purely or partly) hereditary ruler.

In OE. the title appears first as the name of the chiefs of the various Anglian and Saxon 'kins', tribes, or clans, who invaded Britain, and of the petty states founded by them, as well as of the native British chiefs or princes with whom they fought, and of the Danish chiefs who at a later time invaded and occupied parts of the country. Among the Angles and Saxons the kingship was not strictly hereditary, according to later notions; but the *cyning* was chosen or accepted in each case from a recognized kingly or royal *cynn* or family (usually tracing its genealogy up to Woden). With the gradual ascendancy and conquests of Wessex in the 9th and 10th c., the king of the West Saxons became the king of the Anglecynn, Angelpéode, or English (*Angligenarum*, *gentis Angligenæ*, *Anglorum*), and the tribal kings came to an end. But there still remained a King of Scotland, and several petty kings in Ireland. In European and other more or less civilized countries, *king* came to be the title of the ruler of an independent organized state called a *kingdom*; but in mediæval times, as subsequently in the German Empire, some *kings* were really or nominally subordinate to the Emperor (as ostensibly representing the Roman *Cæsar* or *Imperator*), and a King was held to rank below an Emperor. In reference to ancient times the name is applied, like *L. rex*, Gr. *βασιλεύς*, Heb. *melek*, to the more or less despotic rulers not only of great dominions like Assyria, Persia, Egypt, but of petty states or towns such as Jericho, Ai, Mycenæ, Ithaca, Syracuse, and Rome. It is still applied to the native rulers of petty African states, towns, or tribes, Polynesian islands, and the like.

kino¹ ('kɪnəʊ). [app. of W. African origin: cf. Mandingo *cano* = Gambia kino, the first kind used, called by Fothergill in 1757 (*Med. Obs.* I.) *gummi rubrum astringens Gambiense*, in Edinb. Pharmacop. 1774 *Gummi Kino*, and in London Pharmacop. 1787 *Resina Kino*.]

1. A substance resembling catechu, usually of a brittle consistence and dark reddish-brown colour, consisting of the inspissated gum or juice of various trees and shrubs of tropical and sub-tropical regions; used in medicine and tanning as an astringent, and also (in India) for dyeing cotton. Sometimes called *gum kino*.

African or Gambia kino (the kind first known in Europe, but now out of use) is the produce of *Pterocarpus erinaceus* (N.O. Leguminosae); Bengal k., of *Butea frondosa* and *B. superba* (N.O. kino-('kɪnəʊ), comb. form of Gr. κινέω to set in motion, as in kino'cilium (pl. -cilia) *Biol.*, a cilium which is capable of moving (in contrast to an immobile cilium, called a stereocilium), *spec.* such a cilium borne singly on each hair cell of the maculae of the inner ear amid a group of about a hundred stereocilia; 'kinoform' *Physics*, a transparent plate with a contoured surface so made as to introduce phase differences into an incident parallel beam in such a way as to form a single three-dimensional image of the particular object for which the calculation of the surface was made; 'kinoplasm' *Cytology* [ad. G. *kinoplasma* (E. Strasburger *Histol. Beiträge* (1892) IV. 60)], a supposed special kind of cytoplasm which was formerly held to be fibrillar in nature and to give rise to the active parts of a cell (such as the membrane and the mitotic apparatus); hence kino'plasmic a.

FERNÁN-NÚÑEZ tr. *Ramón y Cajal's Histol.* x. 148 These cilia [of ciliated epithelium] are completely free and carry out spontaneous vibratory and whip-like movements, both of flexion and extension in the greater number of cases (kinocilia); in other cases, as in the epididymis, they appear immobile (stereocilia). 1956 *Acta Oto-Laryngol. B. LESEM et al. in *IBM Jnl. Res. & Devel.* XIII. 150/1 The kinoform is a new, computer-generated wave-front reconstruction device which, like the hologram, provides the display of a three-dimensional image. In contrast, however, the illuminated kinoform yields a single diffraction order and, ideally, all the incident light is used to reconstruct this one image. *Ibid.* 151/2 Unlike the making of holograms, which can be physical recordings of actual wavefront interference patterns...it does not appear possible to create a kinoform using completely optical techniques. 1970 *Physics Bull.* Nov. 493/1 Kinoforms, like digital holograms, are also made by calculating the wavefront scattered from the numerically defined object, but instead of adding in a reference beam, the amplitude of the scattered wavefront is assumed constant. A photographic plot of the phase distribution (mod 2π) is made, and translated into a phase plate. *Ibid.* 495/2 Kinoforms can be used as arbitrarily shaped phase plates in lens applications. 1894 *Jnl. R. Microsc. Soc.* 581 Prof. E. Strasburger concludes that in the cytoplasm two constituents are contrasted in their activity. To one of these, the kinoplasm, the radiations round the centro-spheres, the spindle-fibres, and the combining filaments...owe their origin...The other constituent...is the trophoplasm. 1910 G. M. CALKINS *Protozoöl.* i. 29 Some [observers]...have endeavored to show that archoplasm, or, in a larger sense, kinoplasm, is not only specific, but a kind of 'superior' protoplasm, self-perpetuating and distinct. 1934 L. W. SHARP *Introd. Kipp (kɪp). *Chem.* The name of Petrus Jacobus Kipp (1808-64), German chemist, used in the possessive (less commonly *absol.* or *attrib.*) to denote an apparatus for the generation of gas by the action of a liquid on a solid as and when gas is required.

The apparatus consists essentially of three glass bulbs, of which the upper and lower ones are connected and contain the liquid and the middle one is connected with the lower one and contains the solid; while a tap in the middle bulb is open, liquid rises into the bulb and gas is evolved, whilst closing the tap causes the pressure of the gas to increase until the liquid is forced out of the middle bulb into the lower and upper ones, out of contact with the solid.

kipper ('kɪpə(r)), *sb.*¹ and *a.* Forms: (1) *cypera*, 4 *kypre*, 6-7 *kypper*, 6-8 *kepper*, 6- kipper. [Etymology uncertain; it is also doubtful how sense A. 2, which goes with KIPPER *v.*, is

connected with **1**, and indeed whether it is the same word.

At the approach of the breeding season, the lower jaw of the male salmon becomes hooked upward with a sharp cartilaginous beak known as the *kip*, which is used as a weapon by the fish when two or more fight for the same female; from this 'kip', the name 'kipper' is currently explained; but this is not compatible with the identity of *kipper* and OE. *cypera*, ME. *kypre*, which, itself, though phonetically unobjectionable, is also unproved, since the exact sense in which these words were used does not appear from the context. Moreover, in the quotes. of 1376 and 1533-4, in **B. 1**, *kipper* appears to include both sexes.]

A. sb. 1. A name given to the male salmon (or sea trout) during the spawning season. (The female is then called a *shedder*.)

Some recent writers give as the meaning 'the male salmon when spent after the spawning season', thus making the term equivalent to **KELT**; but this is not borne out by the earlier instances, which, when clear, evidently relate to the time when the fish is full of milt, and needs protection on account of its breeding value; nor does it harmonize with some later authorities, e.g. Jamieson, who says, '*kipper*, salmon in the state of spawning'; it is directly challenged by some (cf. quot. 1879); and it seems to have arisen from misapprehension of such qualifications as 'unseasonable', 'not wholesome', really applied to fish from the approach of the spawning season. For this Pennant seems largely responsible: see quot. 1766 in **B. 1**.

Kirchhoff ('kɪrtʃɔf, ||kɪrxɦɔf). Also (erron.) Kirchhoff. The name of Gustav Robert Kirchhoff (1824-87), Ger. physicist, used in *Kirchhoff's law*: a. *Electr.* Either of two laws concerning electric networks in which steady currents are flowing: (a) (the first law) the algebraic sum of the currents in all the conductors that meet in a point is zero; (b) (the second law) the algebraic sum of the products of current and resistance in each part of any closed path in a network is equal to the algebraic sum of the e.m.f.s in the path.

NELKON *Electr.* v. 130 Kirchhoff's first law is a mathematical statement of the fact that the charges do not accumulate at any junction of an electrical circuit. *Ibid.* 132 We need to apply Kirchhoff's second law to two complete circuits as there are two unknowns.

b. *Physics*. The law that the absorptivity of a body for radiant energy of any particular wavelength is equal to its emissivity at the same temperature for the same wavelength.

Meteorol.* iv. 288 It is an immediate consequence of Kirchhoff's law that the intensity emitted by a body can never exceed the black-body intensity and can equal it only in the spectral regions where the body is opaque. 1967 R. W. FAIRBRIDGE *Encycl. Atmospheric Sci.* 793/1 We assume black-body radiation which is that of a body that is characterized by maximum possible absorption at all incident wavelengths, insuring maximum emissivity according to Kirchhoff's Law.

Kirman (kɪr'mɑ:n, kə'mɑ:n). Also Karman, Kerman. The name of a province and town in south-east Iran, used (freq. *attrib.*) to designate a carpet or rug made there, usu. having soft delicate colouring and naturalistic designs.

1876 O. B. ST. JOHN in F. J. Goldsmid *Eastern Persia* I. vi. 101 Not only flowers and trees, but birds, beasts, landscapes, and even human figures are found on the Karmān carpets. 1900 J. K. MUMFORD *Oriental Rugs* xi. 187 It has been customary, until very lately, among the rug dealers of the West and Constantinople as well, to attribute the Kirman rugs to Kermanshah. 1931 A. U. DILLEY *Oriental Rugs & Carpets* iv. 94 Of all the villages weaving Kerman rugs, Rawar only has general rug fame. 1953 A. C. EDWARDES *Persian Carpets* xiii. 208/2 The new styles were dictated by America, which is by far the largest consumer of Kermān carpets. 1953 R. GODDEN *Kingfishers catch Fire* xv. 184 It was a Kirman rug: a Kirman is the only Persian carpet that looks feminine. 1957 R. STOUT *If Death ever Slept* (1958) iii. 30 Through the reception room, across a Kirman twice as big as my room at home. 1967 S. REED *Oriental Rugs & Carpets* v. 69 By the turn of the century some very good Tabriz and Kirman pieces were being made. 1969 C. W. JACOBSEN *Check Points How to buy Oriental Rugs* vii. 132 Take the name Kirman, which is one of the highest priced and best of new rugs being woven today... Many people bought these as Kirmanshah (also spelled Kermanshah). 1970 *Canad. Antiques Collector* Dec. 22/2 On the floor is a fine pile pink Persian Kerman rug [etc.].

Kirmanshah (kɪr'mɑ:n'ʃɑ:, kə-). Also Kermanshah. The name of a city in west Iran, used confusedly (freq. *attrib.*) to designate a carpet made in Kirman, usu. one with white field and flowered medallion and borders. See *prec. word*.

The confusion with *Kirman* seems to have arisen because of the similarity of the two names and the great importance of Kirmanshah as a wool-trading town.

1900 J. K. MUMFORD *Oriental Rugs* xi. 188 In design, the best of the Kermanshahs affect the floral treatment. 1904 M. B. LANGTON *How to know Oriental Rugs* ii. 78 There are a few antiques in this country; but the modern Kirman or Kermanshah rug, made throughout the district, rivals the old. 1931 A. U. DILLEY *Oriental Rugs & Carpets* Pl. 20 (*caption*), Kerman, Southeast Persia (mistakenly called Kermanshah). *Ibid.* iv. 94 Some fifty years ago, large flower-strewn medallion patterns with graceful pendants and floriated corners were devised and applied to large carpets by weavers working for Tabriz rug-merchants who saw in the fine Kerman workmanship opportunity for commercial enterprise. These rugs and carpets were called

Kermanshah, to permanent confusion with the rug-weavings of the city of that name located miles to the west. 1969 C. W. JACOBSEN *Check Points How to buy Oriental Rugs* vii. 133 The Kirmanshah was never a correct name for these rugs because they were woven in and around Kirman, while the town of Kirmanshah was 1,000 miles to the west.

kirmess, -mish, variants of KERMIS.

†**kirmew**. *Obs.* [a. Ger. *kirmewe*, f. *kirren* to coo, chirp, cry with a harsh sound + *meve* gull, MEW.] The common Tern.

It is doubtful whether the word has any standing in English except as occurring in quot. 1694 (transl. from German), which is also the source cited by Pennant, from whom subsequent writers get the name. Montagu (*Ornith. Dict.* 1802-33) gives also *kirman*, prob. an error.

kirn (kɜ:n, *Sc.* *kirn*), *sb.*² *Sc.* and *north. dial.* Also 9 *kern*, *kurn*, *cur*n. [Of uncertain etymology: see Note below.]

1. A feast or merry-making held on the completion of the harvest; a harvest-home or harvest-supper. (Thing and name are passing out of use.)

1777 [see KIRN-BABY]. 1786 BURNS *Twa Dogs* 124 As bleak-fac'd Hallowmass returns, They get the jovial, ranting kirns, When rural life, o' ev'ry station, Unite in common recreation. 1806 DOUGLAS *Poems* 143 (E.D.D.) 2. The cutting of the last handful of corn (the kirn-cut) on the harvest-field. Chiefly in the phrases *to win (get) the kirn*: to gain the distinction of cutting down the last armful of corn; to succeed in finishing the harvest; *to cry* or *shout the kirn*: to cheer or shout in token of this. (Now rare.)

1808-18 JAMIESON, *Kirn*, the last handful of grain cut down on the harvest-field. 1821 *Blackw. Mag.* 400 (Jam.). I shall either gain a kiss from some fair lip for winning the kirn, or some shall have hot brows for it. 1836 J. M. WILSON *Tales Bord.* II. 209 (E.D.D.) Counties* 66 When the sickle is laid down, and the last sheaf of golden corn set on end, it is said that they have 'got the kern'. [The words I have heard used in crying the kirn in Roxburghshire, a 1860, were 'The corn's shorn, the kirn's won, Kirnie, kirnie, coo-oo-ool' the last word much prolonged. J.A.H.M.]

3. *attrib.* and *Comb.*, as *kirn-bannock*, -*feast*, -*night*; *kirn-cut* = sense 2; *kirn-supper*, the harvest-home supper (see also *churn-supper*, s.v. CHURN *sb.* 5); *kirn-winning* = sense 2.

1824 MACTAGGART *Gallovid. Encycl.* (1876) 405 A piece... of the 'kirn-bannock. 1810 CROMEK *Rem. Ball.* 65 To murry-neets, *kurn-winnins, Hannah ne'er went.

[*Note.* The instances of the word *kirn* or *kern* are quite recent, and leave us in the dark as to its earlier history. The popular notion often associates it with KIRN *sb.*¹, CHURN; and there are positive statements that a churnful of cream was a prominent item in the harvest-supper (J. Nicol *Poems* (1805) I. 154; Hone *Year-bk.* (1832) 10 Sept. 534/2; Haliburton *Puir Auld Sc.* (1887) 148-9). See also *churn-supper*, s.v.

CHURN *sb.* 5. But this may be due only to popular etymology. If the word were old, it might in form represent an OE. **ge-cyrn* = OHG. *gikurni*, shortened *kurni*, *churni*, MHG. *kürne*, *kürn*, 'corn collectively or of all kinds' (see Grimm, s.v. *Korn* 1 d). But this hardly suits the sense, unless indeed **ge-cyrn* could have meant something like 'completion (of the reaping or ingathering of all the corn)'. (Prof. E. Sievers.)]

'**kirn-baby**. Also *kern-*. [f. KIRN *sb.*² + BABY *sb.* 2, 'doll, puppet'.] A rude semblance of a human figure made out of the last handful of corn cut on the harvest-field, and dressed as a female, which formerly played a part in the ceremonial of the kirn or harvest-home, and was afterwards often hung up on the farmer's kitchen wall until the next harvest, when its place was taken by a new one. Also called *kirn-doll* or -*dolly*, *maiden* or *kirn-maiden*, *harvest-queen*, and, in books, after a mistaken suggestion of Brand (quot. 1777), *corn-baby*.

In the most usual form, the cluster of ears formed the head of the figure, while part of the stalks were plaited into two arms, and the rest expanded as a body in skirts, the whole being decorated with ribbons or gaily dressed in doll's clothes.

1777 BRAND *Pop. Antiq.* xxxi. 307 *Kern Baby*... the northern Word is plainly a Corruption of *Corn Baby* or *Image*, as is the *Kern* or *Churn Supper* of *Corn Supper*. 1787 GROSE *Prov. kirombo (kɪ'rɒmbəʊ). [Malagasy.] The cuckoo-roller, *Leptosomus discolor*, a large grey or black and brown bird found only in Madagascar and the Comoro Islands.

1891 *Ibis* Apr. 224 The natives of the north-west of Madagascar give this bird the name of *Kirombo*. It has the curious habit of hovering in the air and uttering a very loud note, striking its wings against the body as it calls. 1915 J. Birds* 172/1 Cuckoo-roller: *Leptosomus discolor*, sole member of the Leptosomatidae (Coraciiformes, suborder Coracii).
