Legendre (ləʒɑ̃dr). *Math.* The name of A. M. Legendre (see LEGENDRIAN *a.*), used *attrib.* and in the possessive to designate certain expressions investigated by him, esp. (a) the differential equation (1 - x²)d²y/dx² - 2xdy/dx + n(n + 1)y = 0, (b) its solutions y = P_n(x), where P_n(x) is a polynomial that is the coefficient of hⁿ in the expansion of (1 - 2xh + h²)^{-1/2}, and

(c) the associated functions P_n^m(x), equal to (1 - x²)^{m/2} d^m/dx^m P_n(x).

[OE. *lænān*, f. *læn* (see LOAN *sb.*). The other Teut. langs. have vbs. derived from the *sb.*, but they differ in conjugation from the OE. vb.; cf. OFris. *lêna*, *lênia*, Du. *leenen*, OHG. *lêhanôn* (MHG. *lêhenen*, mod.G. *lehnen* to enfeoff).

The substitution of *lend-* for *læn-* in the present-stem, which began early in ME., is explained by the fact that the *pa. t. lende* would regularly correspond either to *lænen* or *lenden* in the infinitive, and the preponderance of analogy (cf. LEND *v.*¹, also *bend*, *rend*, *send*, *wend*) was on the side of the latter form. The *Sc.* and northern form *len*, *lenn(e)*, owes its shortened vowel to the influence of the *pa. t.* and *pa. pple.*]

-**lent**, *suffix*, occurring in adjs. from Latin. The L. ending *-lentus* (which in some words has an alternative form *-lens*) has approximately the sense of the Eng. -FUL. It is believed to have been orig. a compound, formed by the addition of the suffix *-ento-*, *-ent-* (cf. *cruentus* gory) to derivative stems in *-lo-* or *-li-*; these stems, however, have not been preserved (exc. in the case of *gracilis* slender, whence *gracilentus* †gracilent), and in classical times *-lentus* was a productive suffix. Normally it is preceded by *u*, as in *turbulentus* turbulent, *pulverulentus* pulverulent (see -ULENT); but there are a few cases in which the stem-vowel of the primary sb. appears, as *pestilentus* (-lens) pestilent, f. *pestis* plague, and some which have an unexplained *o*, as *violentus* (-lens) violent, f. *vi-* force (cf. *violare* to violate), *sanguinolentus* bloody, f. *sanguin-*, *sanguis* blood.

OTeut. type **langito-*, **langiton-*) seems to be a derivative of **lango-* LONG *a.*, and may possibly have reference to the lengthening of the days as characterizing the season of spring. It is doubtful whether the ending of the longer form is a mere derivative suffix, or whether it represents an OTeut. **tino-* day, cognate with *-*tino-* in Goth. *sinteins* daily, and with Skr. *dina*, OSl. *dîni*, Lith. *dėnà* day.

The ecclesiastical sense of the word is peculiar to Eng.; in the other Teut. langs. the only sense is 'spring'. As an ordinary *sb.* *lenten* has been superseded by the shortened form *LENT sb.*¹; but the longer form has survived in attributive use, and is now apprehended as an *adj.*, as if *f. lent* + -EN⁴.

||**lepton**¹ ('leptən). Pl. lepta (-ə), *erron.* leptas. [Gr. λεπτόν (sc. νόμισμα coin), neut. of λεπτός

small.] a. An ancient Greek coin of the value of about one-fourth of a farthing; the 'mite' of the Eng. versions of the N.T. b. The smallest coin ('centime') of modern Greece, being the one-hundredth part of a drachma.

lepton² ('lepton). *Nuclear Physics*. [f. Gr. λεπτός small, slight, slender + -ON¹.] Any of the subatomic particles that do not participate in the strong interaction and have a mass less than that of a nucleon and a half-integral spin (viz. the electron, the muon, and the neutrinos, and their anti-particles); in recent use extended to include any other (hypothetical) particle, of whatever mass, which does not participate in the strong interaction. (Orig. introduced in a wider sense: see quot. 1948.)

1948 L. ROSENFELD *Nucl. Forces* p. xvii, This can be achieved . . by postulating a special kind of interaction between a nucleon and a pair of light particles, or leptons, consisting of an electron and a neutrino. [Note] Following a suggestion of Prof. C. Møller, I adopt—as a pendant to 'nucleon'—the denomination 'lepton' (from λεπτός, small, thin, delicate) to denote a particle of small mass, irrespective of its charge. 1959 *Sci. News*, LII. 101 A similar conservation law holds for leptons, a group of particles including neutrinos, electrons, and muons. 1964 *Cambr. Rev.* 24 Oct. 53/1 The . . equality of the Fermi coupling constant for many different particles, baryons, mesons and leptons. 1967 *New Scientist* 8 June 578/1 These, the leptons, consist of the electron, the muon, two types of the massless, chargeless neutrino . . and the anti-particles of these four. 1969 R. E. MARSHAK et al. *Theory Weak Interactions Particle Physics* i. 2 The fact that the weak interaction takes place at approximately the same level of strength between leptons . . between leptons and hadrons . . and between hadrons is a major distinguishing feature of the weak interaction. *Ibid.* 7 The names lepton, meson, and baryon were originally invented to denote light, intermediate mass, and heavy particles respectively, but we now know that the particles in each of the three classes share certain important properties in common; both the leptons and baryons are fermions . . whereas the mesons are bosons. However, of greatest importance is the presence of the strong interaction for the meson and baryon classes but not for the lepton class. 1971 *New Scientist* 17 June 669/3 If heavy leptons . . exist, Pontecorvo argues that they must have neutrinos also. 1973 *Sci. Amer.* Oct. 111/2 There may well exist a spectrum of leptons of increasing mass. The heavy leptons, if they exist, could be produced, like muons, in pairs in electron-positron annihilation reactions. *Ibid.* Nov. 36/2 The few particles that feel only weak or electromagnetic forces are classed as leptons. Electrons, muons and neutrinos are the only known leptons.

b. **lepton number**, a quantum number assigned to subatomic particles that is ± 1 for leptons and 0 for other particles and is conserved in all known interactions.

1958 *Physical Rev.* CX. 1483/2 Such selection rules . . consist of giving opposite lepton numbers to μ^- and e^- . 1967 L. M. LEDERMAN in E. H. S. Burhop *High Energy Physics* II. 342 Conservation of lepton number now is a matter of N_e and N_μ being separately conserved. 1973 *Sci. Amer.* Aug. 33/2 The preference of the neutrino for the electron and of the antineutrino for the positron has been included in the theory of weak interactions by assigning a . . lepton number to the various weakly interacting particles. The convention is that the electron and the neutrino have a lepton number of + 1, whereas their anti-particles, the positron and the antineutrino, have a lepton number of - 1.

Hence **lep'tonic a.**, of, pertaining to, or involving leptons; **leptonic number** = lepton number.

1957 *Ann. Physics*. II. 422 Particles labelled by leptonic charge and electrical charge permit a complete identification with the known leptons. 1958 *Proc. 2nd Internat. Conf. Peaceful Uses Atomic Energy* (United Nations) 53 The law of conservation of leptons . . states that if a leptonic number is assigned to each particle then the sum of leptonic numbers must be conserved in all reactions. 1969 *Nature* 23 Aug. 780/2 The Λ hyperon has leptonic decays of a very similar kind to those of the Σ .

†**lepto'nology**. *Obs. rare*. [ad. G. *leptonologie* (F. Rinne 1916, in *Neues Jahrb. f. Min., Geol. u. Paläont.* II. 48), f. Gr. λεπτός (neut. λεπτόν) small, slight, slender: see -OLOGY.] (See quot.)

1917 *Jrnl. Chem. Soc.* CXII. II. 166 Alongside the science of stereochemistry is developing a stereophysics, and these, together with the study of crystal structure, form a new branch of science, which the author terms 'Feinbaulehre der Materie' (the study of the ultimate structure of matter) or Leptonology.

leptosomic (leptə'səumik), a. [f. Gr. λεπτός fine, small, thin + σώμα-a body: see -IC.] In Kretschmer's system, designating a type of physique characterized by leanness and tallness. Also **leptosomatic a.**, in same sense.

Orig. used by Kretschmer as a synonym of asthenic (ASTHENIC a. b) in his tripartite classification of human physique into pyknic, athletic (ATHLETIC a. 3), and asthenic types. Later he employed a bipartite classification in which only pyknic and leptosomic types were recognized.

1936 E. MILLER in W. J. H. Spott tr. *Kretschmer's Physique & Character* (ed. 2) 272 Kolle. . . [discovered] the existence of many cases with leptosomic physique who suffered from cyclothymia in one form or another. 1937 *Leptosomatic* [see ATHLETIC a. 3]. 1959 *Chambers's Encycl.* XI. 335/1 The two characteristic types of physique were

termed the asthenic, or leptosomatic, and the pyknic respectively. 1960 J. COMAS *Man. Physical Anthropol.* vi. 341 E. Schreider believes that Kretschmer's classification can be reduced to two bipolar types, pyknic and leptosomic, with the inclusion in the latter group of the following varieties: the asthenic, the true leptosomic and the athletic. It should be mentioned that in later editions of his book, Kretschmer abandoned the third (athletic) type, and fell back upon a dichotomy consisting of the pyknic and asthenic (leptosomic).

Hence **'leptosome sb.**, (a person with) a leptosomic physique; also as **adj.**, = LEPTOSOMIC a.

1931 *Times Lit. Suppl.* 10 Dec. 1004/2 The two main classes of white man, which he calls 'linear' and 'lateral' (corresponding to the 'pyknic' and 'leptosome' . . of other anthropologists). 1935 *Nature* 9 Feb. 236/1 Of Kretschmer's three types, the leptosome corresponds to the Nordic, the athletic to the Dinaric and the pyknic to the Mediterranean and the Alpine. 1960 J. COMAS *Man. Physical Anthropol.* vi. 341 According to the Italian biotopologists, the average or normal type is located between the leptosomes (slender type) and the pyknics (broad type). 1971 J. Z. YOUNG *Introd. Study Man* xxxix. 573 Kretschmer tried to force everyone into one of three classes, pyknic (round and fat), leptosome (long and thin), and athletic (broad and strong). *Ibid.* 576 Leptosomes were introverted.

leptospora (leptə'spəɪə). *Bacteriology*. Pl. -spiræ. [mod. L., f. Gr. λεπτός fine, small + σπείρα coil.] Any bacterium of the genus *Leptospira* (family Treponemataceae), structurally similar to the genus *Spirochaeta* and consisting of a few species either free-living or parasitic, of which *L. icterohæmorrhagiae* is parasitic in rats and the cause of Weil's disease in man.

[1917 H. NOGUCHI in *Jrnl. Exper. Med.* XXV. 759 It calls for a new genus, and on account of its fine and minute windings, the name *Leptospira* is suggested.] 1918 *Ibid.* XXVII. 588 Figs. 1 to 4 are intended to show the appearance of the leptospiræ in an air-dried specimen. 1922 *Lancet* 18 Nov. 1058/1 Uhlenhuth and Zuelzer record a leptospira (*L. pseudotricerogenes*) in salt springs. 1966 WRIGHT & SYMMERS *Systemic Path.* I. xxi. 629 Leptospires are demonstrable in the blood or urine in only half the fatal cases [of Weil's disease].

Hence **lepto'spiral a.**, of, characteristic of, or caused by leptospiræ; **leptospiral jaundice**, infectious or spirochætal jaundice, Weil's disease.

1924 *Brit. Med. Jnl.* 23 Feb. 314/1 In sections of the liver . . leptospiral forms were abundant. 1935 *Ibid.* 24 Aug. 339/1 Men who have been exposed to risk of leptospiral infection. 1937 *Proc. leptospire ('leptə'spəɪ(r)). *Bacteriology*. [Anglicized form of LEPTOSPIRA.] = LEPTOSPIRA.

1957 R. S. BREED et al. *Bergey's Man. Determinative Bacteriol.* (ed. 7) 907 Pathogenic leptospire were first isolated from human cases of Weil's disease. . . Since that time [sc. 1915] other leptospire . . have been recognized as causing disease in man and other animals. 1969 *New Scientist* 20 Feb. 414/2 The leptospiral structures, too, bud out from the surface of the leptospire itself.

leptospirosis (leptə'spəɪ'rəʊsɪs). *Med. and Vet. Sci.* [f. LEPTOSPIRA + -OSIS.] Infection with, or a disease caused by, leptospiræ.

1926 STEDMAN *Med. Dict.* (ed. 9) 558/2 Leptospirosis, infection with some species of *Leptospira*. 1934 *Brit. Med. Mar.-Apr. 8/1 Leptospirosis in man and cattle is recognised as a serious rural problem in parts of New Zealand.

leptotene ('leptə'ti:n). *Cytology*. [ad. F. *leptotène* (H. von Winiwarter 1900, in *Arch. de Biol.* XVII. 55): see LEPTO- and -TENE.] The first stage of the prophase of the first meiotic division, in which the chromosomes are apparent as fine slender threads. Also **attrib.** or as **adj.**

[1900 *Jrnl. R. Microsc. Soc.* 654 The reticulum gives rise to a chromatic thread . . which at first fills the nuclear cavity (leptotænic stage).] 1912 *Jrnl. Exper. B. WILSON *Cell* (ed. 3) vi. 541 In the case of animals . . the leptotene-spirome is not continuous but consists of separate segments. 1964 G. H. HAGGIS et al. *Introd. Molecular Biol.* vii. 197 The chromosomes at leptotene must each consist of two chromatids so closely apposed as to give the appearance of a single structure. 1970 AMBROSE & EASTY *Cell Biol.* x. 325 The cell nuclei at this stage contain chromosomes in the form of very fine single threads, hence the name leptotene, meaning 'slender ribbon'.

leptynite ('leptnait). *Min.* Also leptinite. [app. f. Gr. λεπτήν-ειν (see next) + -ITE.] The same as granulite.

18. . DANA (Worc.), Leptynite. 1879 RUTLEY *Stud. Rocks* xii. 211 Granulite (Weiss-stein or leptinite) is also composed of felspar and quartz, the felspar being orthoclase.

†**leptyntic** (lep'tuntik). *Med. Obs.* Also leptuntic. [ad. late L. *leptyntic-us*, a. Gr. λεπυντικός-ός, f. λεπύνειν to make thin, f. λεπτός thin.] An attenuant.

sb. and as *uninflected adj.*) corresponds to OFris. *lēs*:—OTeut. type **laisiz*, f. **laiso-* (not elsewhere found with the sense 'small') + -iz comparative suffix (see -ER³), which in OE. disappears by phonetic law, as in BET, LENG *adv.* (2) The OE. *læssa* *adj.* corresponds to OFris. *lëssa*:—OTeut. type **laisizon-*, f. **laisiz*: see above, and cf. -ER³ A. The disappearance of the middle vowel was presumably prior to the WGer. change of *z* into *r*; the OFris. *lëssera* is doubtless, like Eng. LESSER, a new formation.

The OTeut. type **laiso-*, pre-Teut. **loiso-*, appears to be cogn. w. Lith. *lėsa*:-**leiso-*, small. Whether there is any connexion with **leid-*, **lid-* in Goth. *leitils* little is very doubtful. Cf. the alleged Crim-Gothic *lista* 'parum'.]

II. *absol.* (quasi-*sb.*)

From the point of view of the modern language, these substantival uses may be referred to the adj., though in OE. some of them originated from the adv., and the indeclinable form is therefore used.

b. Qualified adverbially by *far, little, much, nothing, something*, or phrase denoting quantity. Also *no less* = 'nothing less'; for examples see NO.

It is often impossible to say whether in the combinations *nothing less, something less*, the former word is used advb. or whether it is an indefinite pronoun in apposition with less used absol. The combination *nothing less than* has two quite contrary senses; in the use here treated it means 'quite equal to, the same thing as'; for the opposite meaning see B. 3.

-less (lis), *suffix*, forming adjs. The OE. *léas*, like its equivalents in the other Teut. langs. (see LEASE *a.*, LOOSE *a.*), was used in the sense 'devoid (of)', 'free (from)', both as a separate adj., governing the genitive, as in *firena léas* free from crimes, and (more frequently) as the second element of compounds, the first element being a sb., as in *fácnléas* guileless, *wifléas* without a wife. The adj., as a separate word in the relevant sense, did not survive in ME., and the ending *-léas* became a mere suffix, which was, and still is, very freely attached to sbs. to form adjs. with privative sense.

In many instances the sb. to which the suffix was attached was a noun of action, coincident in form with the stem of a related vb., and some of the adjs. so formed had the sense 'not to be —ed', 'un—able', as in *countless*, *numberless*. On the supposed analogy of these words, the suffix has been appended to many verbs, as in *abashless*, *dauntless*, *describeless*, *expressless*, *quenchless*, *resistless*, *tireless*, † *topless* (= not overtopped), *weariless*.

Of the very common recent use of the suffix in the formation of nonce-wds. a few examples are subjoined.

leste ('lestei). [a. Pg. *leste* east wind.] (See quot. 1967.)

1864 *Chambers's Encycl.* VI. 248/2 Sometimes a waft of the *lesté*, or east wind, raises it [sc. the temperature in Madeira] to 90°. 1911 *Encycl. Brit.* XVI. 499/2 The Leste is commonly accompanied by clouds of fine red sand. 1967 *R. W. FAIRBRIDGE Encycl. Atmospheric Sci.* 1155 *Leste*. This is a hot, dry, easterly wind occasionally encountered in Madeira and the Canary Islands at any season except in summer. Essentially it is an extension of the harmattan that blows across the Sahara and is accordingly hot and dry... It is similar to the sirocco of the Mediterranean and the leveche of Spain.

The root, Teut. **læt-*:—pre-Teut. **lêd-*, is related by ablaut to Teut. **lat-* (whence LATE *a.*):—pre-Teut. **lad-* (whence L. *lassus* weary); Brugmann compares Gr. *λῆδεις* (Hesychius) 'to be weary'. The primary sense of the vb. would thus seem to be 'to let go through weariness, to neglect'; cf. the development of the Romanic synonym (F. *laisser*:—L. *laxāre*, f. *laxus* loose). In all the Teut. langs., however, the word has the same senses as in OE.

The shortening of the root vowel (which is curiously parallel to the change of MHG. *lâzen* into mod.G. *lassen*) has not been satisfactorily explained, and no precisely analogous instance has been found, though in the vbs. *fret* and *get* the normal lengthening of OE. *e* in open syllables has not taken place before *t*, and the OE. *æ*, *ea* are very generally shortened before *d* and *p*, as in *dread*, *bread*, *breath*.]

-**let**, *suffix*, appended to sbs. The oldest words in Eng. with this ending are adoptions of OF. words formed by adding the dim. suffix -*et*, -*ete* (see -ET¹) to sbs. with the ending -*el*, in some cases repr. the L. dim. suffix -*ellum*, -*ellam*, and in others the L. ending -*āle* of neuter adjs. (see -AL¹). Examples are *bracelet*, *chaplet*, *crosslet*, *forcelet*, *frontlet*, *gauntlet*, *hamlet*, *mantelet*. It is somewhat difficult to see how these words gave rise to the Eng. use of -*let* as a diminutive suffix, as none of them, exc. the heraldic *crosslet*, have the appearance of being diminutives of Eng. words; possibly Fr. diminutives like *enfantelet*, *femmelette*, *osselet*, *tartelette*, were directly imitated by some Eng. writers.

An early diminutive in -*let* is *armlet* (sense 2, 'little arm of the sea', recorded 1538); others are *ringlet* (Shaks.), *kinglet* (Florio 1603, after F. *roitelet*). The formation did not become common until the 18th c.; from the first half of the century we have *streamlet* (Thomson), from near the end of it, *cloudlet*, *leaflet*. In the 19th c. the number of derivatives formed with the suffix is very great; among those recorded in this Dictionary are *booklet*, *brooklet*, *courtlet*, *crownlet*, *dukelet*, *hooklet*, *jokelet*, *keylet*; and in the formation of nonce-wds. -*let* is now perh. the most frequent of dim. endings.

In addition to its diminutive force, the suffix is in a few words (*anklet*, *armlet*, *leglet*, *necklet*, *wristlet*) appended to sbs. denoting parts of the body, forming names for articles of ornament or attire. The oldest word of this type, *armlet*, was perh. suggested by a false analysis of *frontlet* (cf., however, OF. *armillet*); in the formation, or at least the use, of the later words the analogy of *bracelet* has prob. been chiefly operative.

d. **Genetics**. Of an allele or chromosomal abnormality (such as a deletion): resulting in the death of an individual possessing it before the normal span or before sexual maturity, or (if recessive) capable of causing such premature death when homozygous.

1917 *Proc. Nat. Acad. Sci.* III. 620 The difficulty which was experienced in getting pure stock was due to the fact that the chief factor for beaded—B_d—is lethal, killing all flies homozygous for it. *Ibid.* 620 This remarkable genetic situation, wherein both types of homozygotes are prevented from appearing by the action of lethal factors lying in opposite chromosomes, may be termed a condition of 'balanced lethal factors'. **1939** STURTEVANT & BEADLE *Introd. Genetics* (1940) x. 160 It may be noted at once that the lethal genes ordinarily studied are recessive; a gene with a dominant lethal effect is necessarily lost before it can be studied. **1962** I. H. HERSKOWITZ *Genetics* xxviii. 239 Autosomes II, III, and IV of wild-type flies were individually made homozygous to detect the presence of recessive mutants... that are lethal (causing death of all individuals before adulthood), or semilethal (causing more than 90 and less than 100 per cent mortality before

adulthood), or subvital (causing significantly less than normal but greater than 10 per cent survival to adulthood). .. About 25% of all autosomes tested this way carried a recessive lethal or semilethal mutant. 1973 K. MATHER *Genetical Struct. Populations* ii. 21 Not all genes that affect viability are, however, completely lethal. Of some 3000 chromosomes tested in *Drosophila willistoni* over 35% carried genes that were lethal or semi-lethal. About half of the remainder carried other genes affecting the viability of flies homozygous for them.

B. sb. *Genetics*. A lethal allele or chromosomal abnormality (see A. 1 d).

lettour, obs. form of LECTERN, LETTER *sb.*³

||**lettre** (lɛtr). The French word for 'letter' in: a. *lettre de cachet* (lɛtr də kaʃe), lit. 'letter of seal', a warrant issued in the France of the *ancien régime* for the imprisonment of a person without trial at the pleasure of the monarch. Also *transf.* Cf. CACHET 1.

1718 VANBRUGH *Let.* 30 Aug. in *Athenæum* (1890) 30 Aug. 290/2, I am far from having the least doubt of his intentions to me; I fear only those same letters [*sic*] de cachet, that surprise folks every now and then. 1745 H. WALPOLE *Let.* I Aug. in *Corr.* (1941) IX. 23 Before the play itself is suppressed by a *lettre de cachet* to the booksellers. 1799 MALTHUS *Diary* 16 July (1966) 159 [Norway] These men seemed to have been placed by lettres de cachet exactly similar to those in France. 1824 SCOTT *Redgauntlet* III. vi. 163 There are sharp laws in France against refractory pupils—*lettres de cachet* are easily come by. 1849 THACKERAY *Pendennis* I. vii. 70 Why are there no such things as *lettres-de-cachet*—and a Bastille for young fellows of family? 1895 S. WEYMAN *From Mem. Minister of France* 138 M. de Clan . . . is for shutting him up. Getting a *lettre de cachet* . . . and away with him. 1916 A. HUXLEY *Let.* 31 Mar. (1969) 96 A *lettre de cachet* from a Lord Lieutenant . . . can put one snugly away in the Jail or Jug without any prospect of a trial for periods quite indefinitely coextensive with the war or even eternity. 1957 C. BROOKFIELD tr. *Durkheim's Professional Ethics & Civic Morals* vii. 87 Louis XIV, clearly, was able to issue his *lettres de cachet* against anyone he wished.

b. Used as the first element in *lettre bâtarde*, *lettre de forme*, *lettre de somme*, to designate groups of early type-faces based on manuscript forms then current, now more often described as BASTARDA, TEXTURA, and ROTUNDA or fere-humanistica types.

1887 T. B. REED *Hist. Old Eng. Letter Foundries* i. 53 The Gothic letter employed by the inventors of printing for the *Bible*, *Psalter*, and other sacred works, was an imitation of the formal hand of the German scribes. . . This letter, as a typographical character, took the name of *Lettre de Forme*. *Ibid.*, The term [*sic* *lettre de forme*] . . . was used by both Tory and Yeair to denote a class of letter which the former denominated *Canon*, or cut according to rule, as opposed to the more fanciful *lettres bâtarde*. *Ibid.* 54 The *Lettre de Somme* of the Germans . . . became in the hands of the fifteenth century printers a rival to the Gothic. 1922 D. B. UPPKE *Printing Types* I. iv. 60 Fifteenth century Gothic type-forms may be roughly sub-divided into Pointed, sometimes called *lettre de forme*, Round, sometimes called *lettre de somme*, and a vernacular Cursive black-letter, like the French *lettre bâtarde*. . . These three type-forms were the black-letter equivalents of the formal, less formal, and cursive manuscript-hands of the Roman period. *Ibid.* 63 The *lettre de somme* is said (without much authority) to derive its name from the *Summa* of St. Thomas Aquinas, for which . . . it was early employed. 1927 R. B. MCKERROW *Introd. Bibliogr.* 289 The *lettre de forme*, . . . derived from the most formal script, . . . is in general of a rather narrow and pointed character, tending everywhere to angularity. *Ibid.*, Certain of the smaller sizes used by Wynkyn de Worde and Grafton . . . seem very definitely to have that feeling of breadth and openness which is characteristic of the *lettre de somme*. *Ibid.*, The *lettre bâtarde* represents the cursive hand of its time. 1962 N. E. BINNS *Introd. Historical Bibliogr.* (ed. 2) xiv. 182 The rigid and formal types of this group are known as *Textura* types, or . . . *Lettre de Forme*. *Ibid.*, A broader, rounder, and less formal kind of type known as *Fere-Humanistica*, or *Lettre de Somme*. *Ibid.* 185 The early German and French printers also used various cursive types . . . known as *Bastarda*, or *Lettre Bâtarde*.

1946 *Time* 2 Dec. 31/2 Lettrism, founded by Isidore Isou . . . is a theory of poetry as 'rhythmic architecture'. The rapidly growing hordes of Lettrists . . . prefer meaningless combinations of letters to dictionary words. 1948 *Spectator* 9 Apr. 432/2, I have been reading this week some poems written in the new mode of 'lettrisme'. 1949 *Commentary* VIII. 183/2 'The new art,' declared Isou (his real name is Isidore Goldstein), 'accepts as its subject matter the letters reduced to, and become simply, themselves, replacing completely all poetic and musical elements which go beyond the letters in order to shape them into coherent works.' Thus was born Lettrisme, which may be regarded as a resurrection of some old avant-garde theories, or as a postwar symptom comparable to the explosions of Surrealism and Dada after World War I. 1951 *Amer. Mercury* LXXII. 659 In no time at all he [*sic* Isidore Isou] was writing 'lettrist' poetry and he and his followers were assaulting the ears of everybody in the cafés of the Latin Quarter. 1962 *Times Lit. 1964 *Ibid.* 3 Sept. 796/3 Lettrism is a creative movement . . which claims to be able first to revolutionize every aesthetic discipline . . from poetry to the theatre, by way of painting, and then to renovate the other cultural domains, whether philosophical or scientific. **1971** J. CLARK-LEWIS in T. A. Geissman *Chem. Flavonoid Compounds* viii. 218 Choice between the terms leucoanthocyanin and leucoanthocyanidin seems so far to have rested on the preference of individual authors, but there are sound reasons for using leucoanthocyanidin for the sugar-free molecules, and as the general term, and for reserving the term leucoanthocyanin for leuco-anthocyanidin glycosides. The terminations thus have the same significance as in anthocyanin and anthocyanidin. All the compounds of this class and known constitution so far discovered in nature are leucoanthocyanidins, i.e. do not contain sugar residues. 1967 J. B. HARBORNE *Compar. Biochem. In both these exercises which are constructed from the Piaffe, the hind quarters, deeply bent in the haunch, support the entire weight of the body, whilst the fore quarters with the fore feet drawn up under the body, rise more or less high above the ground; the duration of this position depends upon the dexterity and strength of the stallion. If the horse raises the fore quarters so high that his body reaches an angle of 45° with the earth, this is called 'Pesade'; on the other hand, if it raises the fore quarters less high, one speaks of a Levade.

levan (ˈli:væn). *Chem.* [f. LÆVO-, LEV(O- + -an, after *dextran*.)] A lāvulosan (fructan); *esp.* any fructan of the kind produced by certain bacteria, in which the linking of adjacent fructose units is between the second carbon atom of one unit and the sixth of the next.

1902 R. G. SMITH in *Proc. Linn. Soc. New South Wales* XXVI. 603 From a review of the lævo-rotatory gummy

substances that are hydrolysed to levulose, it appears that this bacterial gum has not hitherto been described. I therefore propose for it the name *levan*, which was suggested by the polariscopic nature of the gum and derived glucose, and also from the fact that another bacterial gum, which is derived from dextrose, and which yields dextrose on hydrolysis, is known as dextran. 1948 W. PIGMAN *Chem. Carbohydrates* xv. 604 Fructosans or levans are found widely distributed throughout the plant kingdom... and generally serve as reserve polysaccharides in place of, or in addition to, starch. 1953 WHISTLER & SMART *Polysaccharide Chem.* xi. 276 D-Fructose polymers occurring in plants... are designated as fructans while those elaborated by microorganisms are called levans... Actually the levans are structurally similar to some of the plant polyfructoses. 1965 T. AKAZAWA in Bonner & Varner *Plant Biochem.* xii. 287 Although the size of these substances is small, 3-30 hexose residues per molecule, their structure is basically the same as that of the high molecular bacterial *levan* produced by several microorganisms... The name grass *levan* has therefore been given to this group of plant compounds. A further interesting point is... that fructosans of inulin type, β -(2→1), and of *levan* type, β -(2→6), are the main constituents of stem and ear tissues, respectively, of cereal plants.

3. a. Position as marked by a horizontal line; an imaginary line or plane perpendicular to the plumb-line, considered as determining the position of one or more points or surfaces. *on a (or †the) level with*: in the same horizontal plane as.

b. *to find one's or its level*: said of persons or things arriving at their proper place with respect to those around or connected with them.

The primary use seems to be that referring to the tendency of two bodies of liquid to 'find their level', i.e. to equalize the vertical elevation of their upper surfaces, when free communication is established between them.

1799 J. ROBERTSON *Agric. Perth* 413 We have adopted a cant-phrase, That things will find their level... It is true with regard to prices, and was at first introduced under this acceptance; But with regard to population it is most incorrect. 1809 MALKIN *Gil Blas* v. i. ¶ 64 It was in vain to fret about it; and I soon found my level. 1817 COLERIDGE *Lay Sermon*. 101 Instead of the position that all things find, it would be less equivocal... to say that Things are always finding their level. 1822 HAZLITT *Table-t.* Ser. d. A position (on a real or imaginary scale) in respect of amount, intensity, extent, or the like; the relative amount or intensity of any property, attribute, or activity. *Freq. preceded by a sb. denoting the property, etc., referred to, as danger, energy, noise level.*

e. *Physics*. More fully, *energy level*. An amount of energy associated with an atom or other quantized system and capable of being possessed by one of its constituents, being usu. measured relative to the minimum possible energy of that constituent; also, a discrete state of a quantized system characterized by such energy; *spec.* a state or group of states of an atom characterized by the quantum numbers *n*, *L*, *S*, and *J*, as distinguished from a 'term' (a group of levels: see *TERM sb.*) and a 'state' so called (a constituent of a level: see *STATE sb.*).

1922 A. D. UDDEN tr. *Bohr's Theory of Spectra* III. iv. 116 The values of the atomic energy corresponding to these [stationary] states are frequently referred to as the 'energy levels' of X-ray spectra. 1925 RUSSELL & SAUNOERS in *Astrophysical Jnl.* LXI. 69 When the series limit—or ionization level—can only be found inaccurately... the common convention of measuring terms from this level becomes inconvenient... A desirable alternative might be to set the zero-level at the lowest term and measure the others upward from this... In such cases, the numerical values referred to the lowest level might be called 'levels' to distinguish them from 'terms', referred to ionization as zero-point. 1926 R. W. LAWSON tr. *Hevesy & Peneth's Man. Radioactivity* vii. 75 This suggests that even in the nucleus of an atom there are different energy levels. 1934 H. E. WHITE *Introd. Atomic Spectra* v. 78 [In sodium] just as in hydrogen these energy levels represent certain possible energy states of an electron, and transitions between them represent spectrum lines. 1935 CONOON & SHORTLEY *Theory Atomic Spectra* iv. 122 All except s configurations split into two levels, corresponding to $j = l + \frac{1}{2}$ and $j = l - \frac{1}{2}$. The (one or) two levels into which each configuration is split are together said to constitute a doublet term. 1955 R. D. EVANS *Atomic Nucleus* iv. 122 After the emission of the β ray, each residual nucleus of Si^{28} is left in an excited level at about 1.78 Mev above its ground level. 1962 D. F. SHAW *Introd. Electronics* ix. 170 There are important modifications to the arrangement of energy levels when, as in a crystalline solid, the atoms are separated by distances of the same order of magnitude (10^{-8} cm) as the atomic diameters themselves... The valence electrons may no longer be associated with a particular atom. They become a group of 'free electrons' in energy levels which belong to the lattice as a whole. 1962 R. E. DODD *Chem. Spectroscopy* ii. 78 Transitions between rotational levels [of a molecule] without change in vibrational or electronic energy, give lines in the far infrared and microwave region. 1970 G. K. WOODGATE *Elem. Atomic Struct.* i. 5 The spin-orbit interaction is the largest relativistic effect and is responsible for fine structure. Each term splits into levels whose separations are of the order of $1-1,000 \text{ cm}^{-1}$. *Ibid.* 6 The levels are split further into states by the application of a laboratory magnetic field... This is called the Zeeman effect.

f. *Statistics*. In full, *level of confidence or significance*. A number chosen as the maximum (or minimum) value of the probability with which any statistical result must be false (or true) for that result to be accepted as having been demonstrated.

1925 R. A. FISHER *Statistical Methods for Research Workers* vi. 157 Taking the four definite levels of significance, represented by $P = .10, .05, .02$, and $.01$, the table shows for each value of *n*, from 1 to 20, and thence by larger intervals to 100, the corresponding values of *r*. 1931 L. H. C. TIPPETT *Methods of Statistics* iii. 48 Adopting the 0.05 level of significance, a deviation in the mean greater than twice its standard error is statistically significant. 1937 YULE & KENOALL *Introd. Theory Statistics* (ed. 11) xxii. 425 There are... two values of *P* [sc. a probability] which are widely used to provide a rough line of demarcation between acceptance and rejection of the significance of observed deviations. These values are $P = 0.05$ and $P = 0.01$, and are said to define 5 per cent. and 1 per cent. levels of significance. 1950 W. FELLER *Introd. Probability Theory* I. vii. 142 However, no sample size can give absolute assurance that $|p' - p| < 0.005$... Since absolute certainty is unattainable, we settle for an arbitrary confidence level α , say $\alpha = 0.05$, and require that $|p' - p| < 0.005$ with probability 0.95 or better. 1972 *Jrnl. Social Psychol.* LXXXVII. 39 The situations variable was significant at the .01 level for all four dependent variables. *Ibid.* 48 A *t* value of 2.33 or greater indicates that differences between the high and low criterion group means are significant at the .01 level of confidence.

c. *Linguistics.* (See *quots.*)

1935 *Trans. Philol. Soc.* 61 Now to illustrate this empirical analysis of meaning at the phonetic, morphological, syntactical, and semantic levels. 1942 C. F. HOCKETT in *Language* Jan.-Mar. 3 Linguistics is a classificatory science. The starting-point in such a science is to define (1) the universe of discourse and (2) the criteria which are used in making the classification. Selection and preliminary ordering of data determine the range of analysis; the choice of criteria fixes the level of analysis. In linguistics there are various ranges, and two basic levels, *phonological* and *grammatical*. 1958 C. RABIN in *Aspects of Translation* 130 Items which are the same at all levels (e.g. numbers) do not function as level-markers. 1959 M. HALLE *Sound Pattern Russ.* i. 25 The rules of translation which make up the grammar can all be subsumed under the formula 'replace x by y under condition 2'... A set of rules yielding representations of a particular type is called a *linguistic level*. 1964 E. BACH *Introd. Transformational Gram.* iv. 59 The word 'level' is also used occasionally in another sense to refer to the ordering of rules within a single level and also to the ordering of the PS, transformational, and phonological rules with respect to each other. 1964 M. A. K. HALLIDAY et al. *Ling. Sci.* i. 10 From these three types of patterning are derived the three principal levels; substance, form and context. 1964 R. H. ROBINS *Gen. 1. a. A bar of iron or wood serving to 'prize up' or dislodge from its position some heavy or firmly fixed object; a crowbar, handspike, or the like.

2. *Mechanics.* Adopted as the name for that type of 'simple machine' which is exemplified in the 'lever' (sense 1). It consists of a rigid structure of any shape (a straight bar being the normal form), fixed at one point called the fulcrum, and acted on at two other points by two forces, tending to cause it to rotate in opposite directions round the fulcrum.

The force which is regarded as intended to be resisted by the use of the lever is called the *weight*, and the force which is applied for this purpose is called the *power*. Levers are said to be of the *first*, *second*, or *third kind* or *order* according as the fulcrum, the weight, or the power is in the midmost position of the three.

lewis ('lu:is), *sb*.¹ Also lewiss, louis, luis. [Of obscure origin; possibly f. *Lewis* or *Louis* as a surname or Christian name. A dial. form *levis* (Whitby Gloss. 1876) suggests connexion with F. *lever* to raise; but the formation and the phonology are not easily explained on this hypothesis.] An iron contrivance for raising heavy blocks of stone. Also called LEWISSON.

It consists of three pieces arranged so as to form a dovetail, the outside pieces being fixed in a dovetail mortise by the insertion of the middle piece. The three pieces are then connected together by the pin of the clevis passing through them.

1895 HUSSAK & PRIOR in *Mineral. Mag.* XI. 83 We have given the name of Lewisite to this new titanio-antimonate from Brazil in honour of Prof. W. J. 1930 LARSEN & SHANNON in *Amer. Mineralogist* XV. 326 Some of the hexagonal prisms which are very much like the dehrnite have less alkali and much more water. Chemically they are so different from dehrnite as to give them species rank and the name lewistonite is proposed after Lewiston, Utah. 1942 *Ibid.* XXVII. 297 Lewistonite... shows wide variation in its properties. b. in British politics.

Early in the 19th c. the sb. occurs chiefly as applied by opponents to the advanced section of the Whig party: sometimes in Sp. or Fr. form, app. with the intention of suggesting that the principles of those politicians were un-English, or akin to those of the revolutionaries of the Continent. As, however, the adj. was already English in a laudatory sense, the advocates of reform were not reluctant to adopt the foreign term as descriptive of themselves; and when the significance of the old party distinctions was obliterated by the coalition of the moderate Whigs with the Tories and of the advanced Whigs with the Radicals, the new names 'Liberal' and 'Conservative' took the place of 'Whig' and 'Tory' as the usual appellations of the two great parties in the state.

The spelling *license*, though still often met with, has no justification in the case of the *sb.* In the case of the *vb.*, on the other hand, although the spelling *licence* is etymologically unobjectionable, *license* is supported by the analogy of the rule universally adopted in the similar pairs of related words, *practice sb.*, *practise vb.*, *prophecy sb.*, *prophesy vb.* (The rule seems to have arisen from imitation of the spelling of pairs like *advise sb.*, *advise vb.*, which expresses a phonetic distinction of historical origin.) A slight argument for preferring the *s* form in the *vb.* may be found in the existence of the derivatives *licensable* and *licensure* (U.S.) which could not conveniently be spelt otherwise.

Johnson and Todd give only the form *license* both for the *sb.* and the *vb.*, but the spelling of their quotes. conforms, with one exception, to the rule above referred to, which is recognized by Smart (1836), and seems to represent the now prevailing usage. Late 19th-c. Dicts., however, almost

universally have *license* both for *sb.* and *vb.*, either without alternative or in the first place.]

Lie (li:), *sb.*³ The name of Sophus Lie (1842-99), Norwegian mathematician, used *attrib.* to denote certain concepts investigated by him, as *Lie algebra*, a vector space extending over a field in which a product operation (×) is defined such that for all *x, y, z* in the space *x × y* is bilinear, *x × x* = 0, and (*x × y*) × *z* + (*y × z*) × *x* + (*z × x*) × *y* = 0; *Lie group*, a topological group in which it is possible to label the group elements by a finite number of coordinates in such a way that the coordinates of the product of two elements are analytic functions of the coordinates of the two elements and the coordinates of the inverse of an element are analytic functions of the coordinates of that element.

1935 *Bull. Amer. Math. Soc.* XLI. 344 A Lie algebra *L* over a non-modular field *F* will be called normal simple over *F* if *H* is an algebraically closed extension of *F* and *L_H* is a simple algebra. **1939** H. WEYL *Classical Groups* vii. 188 The process of averaging over a compact Lie group presupposes our ability to compare volume elements at different points of the group manifold. **1965** H. J. LIPKIN *Lie Groups for Pedestrians* i. 14 The use of the Lie algebra therefore simplifies the solution of the eigenvalue problem for the Hamiltonian by defining a number of integrals of the motion. **1967** G. STEINER *Lang. & Silence* 33 One cannot 'translate' the conventions and notations governing the operations of Lie groups. . . into any words or grammar outside mathematics. **1969** *Sci. As in OTeut. **siſjan* SIT *v.*, the present-stem has a *j* suffix, though the pa. t. and pa. pple. are strong. In WGer. and consequently in OE., the pres.-stem has two forms, due to the diversity in the phonetic character of the flexional suffixes: (1) The WGer. *lig-*, OE. *līg-*, appears in the 2nd and 3rd pers. sing. pres. ind. and the sing. imp., and is the source of the mod.Eng. *lie*; (2) the WGer. *ligg-*, OE. *licg-*, appears in the inf., the 1st pers. sing. and the pl. pres. ind., the pres. subj., and the pl. imp.; it is represented in mod. northern dialects by *lig*; the southern *ligge* has been found only in the Wexford dialect, though the ME. *ligge* in southern texts can only represent the pronunciation (lidʒa).]

[a. OF. *lige*, *liege* (med.L. *ligius*, *legius*) = Pr. *litge*, It. *ligio*; the ultimate derivation is disputed.

The prevailing view that the word represents an adoption of OHG. *ledig* free (mod.G. *ledig* unoccupied) is supported by a passage in a charter of 1253 (Du Cange, s.v. *Ledighman*), which contains the words 'ligius homo, quod Teutonice dicitur Ledigh-man'. The assumption of 'free' as the primary sense also seems in accord with the meaning of the med.L. *ligia potestas* (LIEGE POUSTIE), *ligia voluntas*.)

lieutenant (lef-, lɪf'tənənt, U.S. lju:'tənənt). Forms: a. 4-5 lutenand, -a(u)nt; 5 leu(e)-, leu3-, lyeu-, 5-7 lieu-, 6 lyue-, liue-, lieue-, leaue-, lew-, 7 leui-; 4-7 -tenante, -aunt, 5-6 -aunte, 5-7 -ant, 6-7 -ent, -tennent, -ante; 6 Sc. lewtennand, 4-lieutenant. β. 4 leaf-, 4-5 leyf-, lyef-, 4-6 leve-, 5-6 lyff(e)-, 5-8 lief-, 6 lefe-, lyffe-, lyve-, lieuf-, 6-7 live-, liefe-, leive-, leif-, 7 liev-, life-, + second element as in a.; 5 luf-tenand, luff tenande, 6 lefteuant, -tennant, -tenant. [a. F. *lieutenant*, f. *lieu* place + *tenant* holding (see TENANT); cf. LOCUM TENENS.]

The origin of the β. type of forms (which survives in the usual British pronunciation, though the spelling represents the α. type) is difficult to explain. The hypothesis of a mere misinterpretation of the graphic form (*u* read as *v*), at first sight plausible, does not accord with the facts. In view of the rare OF. form *luef* for *lieu* (with which cf. esp. the 15th c. Sc. forms *luf-, lufftenand* above) it seems likely that the labial glide at the end of OF. *lieu* as the first element of a compound was sometimes apprehended by Englishmen as a *v* or *f*. Possibly some of the forms may be due to association with LEAVE *sb.* or LIEF *a.*

In 1793 Walker gives the actual pronunciations as (lev-, lɪv'tənənt), but expresses the hope that 'the regular sound, *lieutenant*' will in time become current. In England this pronunciation (lju:'tənənt) is almost unknown. A newspaper quot. of 1893 in Funk's *Standard Dictionary* says that (lɪf'tənənt) is in the U.S. 'almost confined to the retired list of the navy'.]

b. The Biblical phrase *this life* (Vulg. *hæc vita*, Gr. *ἡ ζωὴ αὐτῆς*, 1 Cor. xv. 19) is used (as also *the* or *this present life*) to denote the earthly state of human existence in contradistinction to *the future life* (occas. *another life*, etc.), the state of existence after death. (Phr. *to depart this life, from this life*: see *DEPART v.* 7, 8.) Hence arises an occasional use of *life* for: Either of the two states of human existence separated by death.

Brit.* XXV. 104/1 The sustaining power, or 'lift', . . . in horizontal flight must be equal to the weight. *Ibid.*, The present data indicate that, with concave surfaces, angles of 2° to 5° will produce adequate 'lift'. 1919 H. SHAW *Text-bk. Aeronaut.* iii. 43 The upper surface of an aerofoil is considerably more important than the lower surface from the point of view of lift, as the suction over the top surface is numerically much greater than the pressure beneath. 1937 DODGE & THOMPSON *Fluid Mech.* vii. 127 Usually the component opposing the motion is referred to as the drag, while the cross-stream component is called the lift, even though it may not always be acting vertically upward. 1948 *Sci. News* VII. 23 In aerodynamics it is customary to resolve the reaction of the air on a surface into two components, namely lift, which is that part of the force acting upwards . . . and is thus desirable, and drag, which is the component at right angles to the lift and . . . resists the forward motion of the surface through the air. 1959 *Chambers's Encycl.* I. 110/2 In straight level flight the lift equals the weight. 1973 *Nature* 28 Sept. 182/1 Most flying insects depend, for their lift and thrust, on conventional aerofoil action which sets up a bound vortex around the moving wing to create a steady-state flow of air. 1974 *Encycl. Brit. Macropædia* I. 371/1 An airship derives lift from two sources: (1) by displacement of air as a balloon (static lift) and (2) from the reaction of airflow over its envelope and control surfaces when it is under way (dynamic lift).

(ii) The (maximum) weight that an aircraft can raise (including or, more commonly, excluding its own weight).

1910 *Blackw. Mag.* July 4/1 The compartments [of the Zeppelin] contained 351,150 cubic feet of hydrogen, giving a lift of eleven tons. 1929 *Nature* 14 Dec. 916/2 Recourse to the Servo-motor gear was not found necessary (if this holds good at full speed the gear may be removed, and then about ½ ton will be added to the useful 'lift'). 1971 *Daily Tel.* 19 Aug. 2/6 It is much lighter and can be lifted by the Puma tactical transport helicopter, which has a total lift of up to 5,500 lb.

f. *Pros.* An element of high intensity in an alliterative measure, marked by stress or tone. (*G. hebung.*) Cf. DIP sb. 1 g.

1894 [see DIP sb. 1 g]. 1927 E. V. GORDON *Intro. Old Norse* 293 The rhythm consists of regular alternation of strong and weak metrical elements, known as lift and sinking respectively. 1953 C. L. WRENN *Beowulf* p. xxxvii, [Alliteration] is never repeated on the last lift. 1961 [see DIP sb. 1 g].

g. *Dance.* A movement in which a dancer lifts his partner in the air.

1921 *Dancing Times* Aug. 867/2 Miss Jules Andre . . . filled the roll [sic] of 'boy' in . . . many . . . numbers. Her lifts and adage work were delightful. 1943 K. AMBROSE *Ballet-Lover's Pocket-Bk.* 40 With the invention of each new ballet, new lifts are devised. 1944 'BRAHMS' & 'SIMON' *Titania has Mother* ii. 11 'He's a frightfully bad dancer, mother. His lifts!' She shuddered. 1950 *Ballet Ann.* IV. 69 She is equally at home in the most intricate acrobatic lifts . . . as [her body] is swung upwards in the air by her attendant cavaliers.

h. Transport by air (cf. AIR-LIFT 2); also, a number of persons or an amount of supplies so transported. Cf. LIFT v. 11 i.
