OUTLINE HISTORY OF THE ENGLISH LANGUAGE

HAROLD WHITEHALL, B. A., PH. D.
PROFESSOR OF ENGLISH, CHAIRMAN LINGUISTICS, INDIANA UNIVERSITY

I

THE ULTIMATE origins of the English language, as modern scholarship sees them, can best be grasped from some such schema as that above. Whatever the demerits of this schema, it at least suggests the connection of English with the West Germanic sub-branch of the Germanic branch of the linguist's conception of a parent language called Indo-European. It also suggests that English is closely connected with Dutch and Frisian, more remotely with German, more remotely still with Latin, Greek, Welsh, and Russian, and very remotely with Sanskrit and Iranian. Consideration of series of cognate forms like English *brother*, Dutch *broeder*, German *Brūder*, Old Saxon *brōthar*, Lithuanian *broter-*, Greek *phrātēr*, Latin *frāter*, Irish *brathair*, Sanskrit *bhrātar-* underlines these relationships and gives a hint of the comparative method by which their existence was established. To the philologist, versed in the principles of phonetic differentiation, the interconnections between so unlikely a series as Latin *canō* 'I sing,' English *hen*, Old English *hana*, Old Icelandic *hane* 'cock,' German *Hahn*, Greek *kanássein* 'to sound,' and Sanskrit *kankani* 'bell' are equally apparent and significant.

The significant history of the English language, however, goes back no further than the 5th century A.D. when tribes from the northwestern Continental fringe, speaking a form of West Germanic, invaded and conquered Romano-Keltic England. To trace the development of the English language is to trace the process by which the dialects this handful of invaders spoke became the mighty instrument of communication, emotion, and literature now used by upwards of 190 million of the world's inhabitants. And the more we trace this phenomenon, the more we shall realize that the history of our language is merely one aspect of the social and cultural history of the invaders' descendants.

Change in Language

Language is, in fact, the predominant factor in the social organization of humanity. Its real existence lies not so much in the printed book, not even in a dictionary such as this, as in the sense of community or community of feeling of those who habitually use it. Inevitably, therefore, any dislocation of the community—whether geographical by extension or vertical by class-differentiation—will cause marked changes in the pattern of the language itself. But even within a stable community, linguistic change is constantly at work. Analyzed into its simplest elements, spoken language is no more than an organized and closely knit system of sound-signals produced by certain correlated movements of specific bodily organs. The child acquires this system from those around him by a process of trial and error, but not as a number of isolated sounds. He hears words; he tries, with imperfect results at first, to adjust his vocal apparatus to the series of complicated and minute adjustments that every word occasions; eventually, these adjustments, through self-training, become more or less automatic. But always the child will articulate a little differently from his parents, and although he is not conscious of it, his sound-system will differ in some particulars from that used by his parents. Curiously enough, the differences will tend to be most marked in the sounds which are most difficult to articulate and which are least closely correlated with the remainder of the sound-system. And, what is still more striking, in any speech community, at the same moment, and under the same conditions, the youngest generation will tend to modify the same sounds *in the same direction*. It is this fact that makes a science of language, and hence a history of the English language, possible.

Carried to its logical conclusion, this principle would imply that any speech community speaks differently from all other speech communities, and that within each community there is a difference in the speech of successive generations. And to some degree, that is true. The constant tendency towards change, however, is partially offset by tendencies that oppose it. Since the necessity for communication is the well-spring of language, too varied a differentiation would obviously defeat the primary purpose for which language was developed. The impulse towards differentiation is mainly supported by the complexity of social relationships; the impulse towards uniformity is supported by those elements of social and mental organization that make for unity—writing, education, the Church, the political organization of the community, and on the psychological plane, the principle of analogy. At any given moment, therefore, there tends to develop a kind of equilibrium between differentiation on the one hand and uniformity on the other. When great social upheavals or racial intermixtures occur, that equilibrium may be destroyed, and linguistic change will appear to be comparatively rapid; in periods of social stability, linguistic change will operate more gradually. It is this fact

that justifies the customary and arbitrary time-divisions in the history of any single language.

The Principal Periods of English

(*a*) The origins of the English language lie in a social dislocation, i.e., the emigration of certain groups from the Continent to England, with the consequent breaking of communication between these groups and their Continental kinsfolk. The great dislocation occurred during the Norman Conquest (1066–c.1120). Between the two events extends a period which, although marred by internecine wars and the incursions of Scandinavian invaders (850–1042), shows comparative social stability and an apparent if largely fictitious linguistic equilibrium. To the English language of this period, roughly from 450 to about 1150, we may give the name Old English (OE.).

Irrespective of their tribal origins, the Germanic invaders of England seem to have named their language *Englisc* (from *Engle* 'the Angles'). As a spoken language, however, it was not entirely uniform. Dialectal differences already developed on the Continent probably increased rather than decreased on English soil, where the conditions of settlement tended further to split up the original communities. These original differences, seconded by the Scandinavian invasions and the differentiation natural to some fifteen centuries of untrammeled development, have much to do with the complexities of Modern English dialectal speech. Yet Old English writings, our only real source of information about Old English, show a quite remarkable uniformity. The eventual national ascendancy of the West-Saxon kingdom, centered around the capital at Winchester, gave the written dialect of Wessex the importance of a written standard language; and the great bulk of Old English literature was either written originally in West-Saxon or was transcribed into it from its original Northumbrian and Mercian sources. Written West-Saxon is, therefore, an arresting example of the crystallizing power exerted by a powerful written standard upon the free stream of linguistic development.

(*b*) The next great period of the language, that of Middle English (ME.), cannot be fitted as neatly between dates as the preceding period. Time was needed to absorb the great historical shock of the Norman Conquest, and the terminal date for Middle English can be fixed only in the most arbitrary manner. The adoption of the limits 1150–1475 is dependent upon the emerging of a distinctive Post-Conquest literature and upon the social effects of the invention of printing.

It would be an error to regard the Conquest as producing a clean break in the history of English; it merely released and accelerated tendencies towards differentiation that must already have been in operation. Its most immediate result was to replace English, as an authoritative language, by the Norman-French of the conquerors for well over two hundred years. In the meantime, the effects upon the English language itself were three-fold: (1) The social prestige of Norman-French and the extension in the ecclesiastical, administrative, and scholarly use of Latin brought into English an enormous number of words borrowed from these languages; (2) the loss of the West-Saxon written standard allowed free-play to the dialectal peculiarities and disturbed the linguistic equilibrium of English; (3) the influence of French and Latin spelling did much to revise the traditional orthography of English.

The first part of the Middle English period is something like linguistic chaos. Important literary works were written in half a dozen dialects sufficiently diverse in themselves, and doubly diverse as a result of the frantic spelling expedients of their authors. Early Middle English is not one but a group of languages, each of which must be mastered separately by the student. The resolution of this confusion, which was the adoption of London English as a basis for a new *written* standard language, came about under the pressure of many disparate factors: (1) the break-down of direct English authority over Normandy (1204–65); (2) the gradual establishment of nationalism (1272–1400); (3) the rise to importance of the middle- and laboring-classes (1348–1430); (4) the intrusion of English into the conduct of government (from about 1337), law (1344–62), and education (1349–85); (5) the growing centralization of administration at the capital; (6) the timely appearance of important works by Chaucer, Lydgate, and Occleve, all of whom wrote London English. By 1420, at the latest, a written form of the South East Midland dialect used in and around London was on its way to becoming a written standard for the entire country. Although much fine literature continued to be produced in the rival literary dialects of the Northwest and the North, the predominance of written London English was never afterwards seriously challenged. When, in the years 1476–90, Caxton chose to use it for his printed books, the ground had already been fully prepared for him.

(*c*) The third and last period of English, extending from about 1476 to the present, actually consists of two distinct phases of the language.

In the earlier phase, which ends in the full tide of the Industrial Revolution about 1780, the principal pressures exerted on the language result from the invention of printing, the vast extension of literacy, the intellectual ferment of the Renaissance, and, above all, from a continuous social struggle between the rising middle classes and the dominant aristocracy. Theoretically, the wide diffusion of the printed word should have worked towards linguistic stability and uniformity. Actually, the converse is true. Its immediate result was to produce self-conscious awareness—awareness of ideas and ideologies, awareness of the implications of language, awareness of class and society. There were thus rapid accretions of foreign words, particularly of Latinic abstract words, that greatly modified the English vocabulary. And in spite of the normalizing tendencies of the printed language, in spite of the efforts of many self-conscious grammarians and orthoëpists, this phase of English is one of extremely rapid linguistic change. In fact, there is no period of the language which shows greater variation in pronunciation or a more drastic revision of the sound-system. At its beginning, the vowel system of English was Continental, i.e., the vowel symbols had more or less the same phonetic values as in Italian, Spanish, French, or German. At its end, the vowel distribution of English had undergone so thorough a regrouping that the sounds were completely divorced from the Continental values of the symbols and consequently from the system of orthography—still the basis of modern English spelling—fixed by Caxton and his followers.

Changes as violent as this are likely to have violent social causes. Insofar as any single social cause can be considered responsible, it would appear to lie in the dislocation of the community along vertical lines, the clash of phonetic system against phonetic system resulting from the clash of the aristocratic and middle classes. As early as 1400, the powerful bourgeoisie of England's first industrial stronghold, East Anglia, had developed a kind of generalized *lingua franca*, based on the local spoken dialect of that region, through which they were enabled to carry out their business affairs. Wherever industry later extended, this *lingua franca*, no longer purely regional, seems to have followed. In the 17th century, the settlement of the New England Colonies by immigrants drawn principally from South Eastern England brought this type of English to the New World, where it formed the basis for the Eastern American speech of today.

Yet for all its wide distribution, the middle-class *lingua franca* had the phonetic system of the East Anglian dialects; and that system varied greatly from the phonetic system used by the London aristocracy. Thus during the entire period 1476–1780—the so-called period of Early Modern English (EMnE.)—we have the spectacle of two important class dialects existing, often in the same localities, side by side, and influencing the formative years of each successive youngest generation from two directions at once. And it is from the unconscious attempts of each youngest generation to reconcile the conflicting signalling-systems of the two class dialects, to achieve a workable synthesis between them, that the Great Vowel Shift of the Early Modern English period seems to arise and continue.

Within the limits of the Early Modern period itself, no such synthesis was achieved. The social struggle went on. Linguistic change lost nothing of its rapidity. The two great class dialects of English not only held their ground, but even gained it; for if the middle-class type became standard for the New England Colonies, the aristocratic type became standard in the Southern Colonies, where it formed the basis of the Southern American of today. The final phase of the English language, the phase of Late Modern English (LMnE.), was not ushered in until the Industrial Revolution, by securing enormous material gains for the middle-classes, had secured their social, political, and economic victory and an authoritative predominance for their type of English.

Upon that type, pruned and 'regularized' by grammarians and lexicographers, both the cultivated British and the cultivated American of today are firmly rooted. As spoken English, the older aristocratic type lingers in Tidewater, Virginia, and a few other Southern localities—lingers also, in piecemeal fashion, in such conservative linguistic 'islands' as the Ozark Mountains and the Great Smokies where it is rediscovered by scholars under the strange guise of 'folk-dialect.' From England, it has disappeared almost without a trace. Thus the history of English between 1750 and 1850 is not the history of an evolution but the history of a replacement.

Within the actual limits of the Late Modern phase of English, from 1780 to the present, something like linguistic equilibrium has been re-established. Apart from certain necessary phonological generalizations, change has been slight and gradual. Individual, regional, and to some extent, class-divergencies still exist; but the written word, fostered by democratic social institutions, by popular education, and by the accessibility of grammars and dictionaries, has come to be of paramount importance. Even though modern methods of communication and organization have immensely extended the limits of the speech community, the tendencies towards uniformity are sufficient—or were recently sufficient—to balance the tendencies towards differentiation. How long this balance will continue remains to be seen.

II

Characteristics of English in the Old English Period (450–1150) Old English differs very considerably from Modern English in orthography, pronunciation, vocabulary, and grammar. Yet many of the characteristics and a good many of the words of MnE. are clearly recognizable in their OE. form, and the difficulties of OE. may easily be overstressed. The following short passage, containing an unusual proportion of words still present in MnE., suggests some of the outstanding points of similarity.

Ic eom munuc, and ic singe ælce dæg sofon tīda mid
I am monk, and I sing each day seven tides (with)
gebrōþrum; and ic eom gebysgod on rædinga and on sange;
brothers; and I am busied (in) reading and (in) song;
ac ic wolde betwēonum leornian sprecan on Englisc ongemong
(but) I would between learn (to) speak (in) English among
mīnum oþrum manigfaldum bysgum. . . .
mine other manifold businesses. . . .

(a) Orthography and Pronunciation

Although OE. had the so-called 'Continental' values for its vowel-symbols, and although many of its sounds have since been modified by sound-change, one of the chief difficulties is the actual form of OE. spelling. As a result of palatalizations that occurred after the OE. spelling system was already fixed, a single consonantal symbol may represent several sounds. Moreover, the priests who originally reduced OE. to writing tended to be almost too careful in expressing the vowels, even to the little glides which enable the vocal organs to pass smoothly between two points of articulation. The following summary should aid recognition:

(1) *C* = MnE. *k* in *cynn* 'kin,' *munuc* 'monk,' and MnE. *ch* in *cild* 'child,' *ceorl* 'churl.' (2) *G* = MnE. *y* in *gēar* 'year,' *gīet, gēt* 'yet,' *fæger* 'fair,' MnE. *g* in *grund* 'ground,' *gold* 'gold,' and German spirant *g* (not unlike MnE. *w*) in *boga* 'bow,' *folgian* 'follow.' (3) *H* = MnE. written *-gh* (no longer pronounced) in *niht* 'night,' and *sōhte* 'sought,' but had the phonetic values of *ch* in G. *ich* and *nacht*. (4) *Cg* = MnE. *-dge* in *brycg* 'bridge'; *sc* = MnE. *sh* in *scip* 'ship,' *Englisc* 'English.' (5) *F* = MnE. *f* in *fetor* 'fetter,' but had the value of MnE. *v* in *heofon* 'heaven,' *æfre* 'ever.' (6) MnE. *th*, as in *with, then* was expressed indifferently by the Runic symbols *ð, þ* as in *wiþ* 'with,' *ðū* 'thou.' (7) OE. *y*, always a vowel with the sound of *u* in Fr. *une*, corresponds chiefly to MnE. *i* as in *fyr* 'fire,' occasionally to MnE. *u* as in *bysig* 'busy,' *cycgel* 'cudgel,' and very occasionally to MnE. *e* as in *cnyll* 'knell.' (8) OE. *æ* = MnE. *a* in *bæc* 'back,' but OE. *æ* may correspond to MnE. *ea* as in *dælan* 'to deal,' or to MnE. *ee* as in *dæd* 'deed.' (9) Certain OE. diphthongs, like the *ea, eo* of *earm* 'arm,' *weorc* 'work, ME. *werk*,' are no more than ultra-accurate recordings of the simple vowels *æ* and *e* (*i*); others, like the *īe* of *stīele* 'steel,' and the *ea* of *ceald* 'cold,' are found only in West Saxon and have no influence on the later history of our forms for these words, which are derived from Anglian *stele, cāld;* all OE. diphthongs, irrespective of origin, were simplified in ME. and are therefore of no importance in the general development of English.

(b) Vocabulary

About 85 per cent of the Old English vocabulary has been lost to MnE. partly because of later replacements from French and Latin, partly because of the development of idiomatic phrases. In estimating this loss, however, it should never be forgotten that the OE. words which managed to survive—the bulk of our prepositions, pronouns, auxiliaries, conjunctions, as well as our words of fundamental concept—occur more frequently in spoken and written MnE. than most other elements in our vocabulary. Moreover, much of this lost vocabulary consists of synthetic compounds of which the simplex elements still survive. *Dōm-bōc* 'law-book,' *eorþ-cræft* 'geometry,' and *gaderscipe* 'marriage' may be gone, yet *doom, book, gather, earth, craft* are still with us, and *-ship* is still an active formative suffix. The flexible formation of compounds from words and particles in current use, a feature still operative in German, is rightly considered to be one of the distinguishing marks of OE. vocabulary. Nowadays, English makes comparatively little use of it. Yet even today, formations like *steamboat, motor car, fire insurance* keep alive the method by which OE. *mōdcaru* 'sorrow,' and *glædmodnes* 'kindness' were formed.

(c) Grammar and Morphology

OE. was what is usually termed an 'inflected' or 'synthetic' language like modern German, i.e., the functional relationship between meaningful words was largely expressed by suffixal phonetic elements which served to denote such categories as number, gender, case, tense, and voice. Like most Indo-European languages, OE. possessed 'grammatical gender,' a device only remotely connected with sex, which served to classify nouns along analogical lines in such a manner that the determination of agreement was not impossible to the speaker and writer. Thus *mægden*, 'maiden' is neuter, *swāt* 'sweat' masculine, and *tīd* 'time, tide' feminine. Theoretically, the noun and adjective have inflections for four cases in the singular and the plural, and the latter has, in addition, forms for each of the three genders and variant forms according to whether it is accompanied by the article or not. The pronoun, the keystone to any system based upon inflectional agreement, is even more complex: it possesses not only distinctive forms for all genders, persons, and cases, but also preserves, in addition to the normal singular and plural, a dual number. The practical purpose of this serried array of inflections amounts simply to this: that the relationship between meaningful words expressed in MnE. partly through word-order and partly through the use of words empty of meaning—prepositions like *on, of, to* or words like *concerning, according* used as prepositions—is expressed in OE. by the addition of predetermined phonetic elements to the meaningful word. In OE. I should write *Hē wæs ān þara twelfa;* in MnE. *He was one of the twelve*. In OE. I might write *Lēof, þæs mē þyncþ þū eart wītega;* in MnE., to express the same relationship, I should have to write *Dear one*, according to *that* (or from *that*) *it seems to me you are a prophet*. Since inflections are phonetic elements, any phonetic changes which level and confuse them may finally result in a complete breakdown of the entire system and its replacement by the analytical expression of relationship that we find in MnE. That is precisely what happened to OE. From the first written records onwards, the inflections of noun and adjective lacked clarity and distinction; when final vowels became weakened, these inflections were rendered practically useless. Those of the pronoun (with the exception of the dual number) and, to some extent, those of the verb, still retained sufficient distinctiveness to continue their usefulness in ME. and MnE.

Characteristics of English in the Middle English Period (1150–1475) Consideration of the bewildering scope of the Middle English dialects lies outside the scope of this discussion. Even the great Northern literary dialect, lineal ancestor of the language of Burns, and that of the Northwest used by the *Gawain* poet must be passed over in silence. For the historian of the whole English language, the one

important variety of ME. is that of the South Eastern Midland area particularly as written by Chaucer.

(a) Orthography and Pronunciation

If the ME. of Chaucer resembles MnE. more closely than OE., the fact is due partly to a series of orthographic adaptations brought about by the influence of Fr. The most important of these are: (1) The use of *ch* for OE. *c* in *child;* (2) the use of *qu-* for OE. *cw-* in *quene, queen,* OE. *cwēn;* (3) the partial displacement of *þ, ð* by *th* in *with,* OE. *wiþ;* (4) the introduction of *v* for medial voiced *f* in *love,* OE. *lufu;* (5) the use of *sh, ssh* for OE. *sc* in *shal,* OE. *sceal,* and *wasshe,* OE. *wascan;* (6) the use of *k* before front vowels for OE. *c* in *kepen* 'keep,' OE. *cēpan,* beside the retained *c* before back vowels as in *cot;* (7) the eventual introduction of consonantal *y* for OE. *g* in *yere,* OE. *gēar* 'year,' etc.; (8) the use of *ou* for OE. *ū* to discriminate it from Fr. *u* and OE. *y,* spelled *u,* as in *mouth,* OE. *mūþ* beside *muchel,* OE. *mycel* 'much'; the use of *o* for the sake of clarity in the neighborhood of *v, u, m, n, w,* as in *monk,* OE. *munuc,* and *sone,* OE. *sunu;* (9) in the latest ME. the symbols *ea* and *oa,* imported from the Low Countries, began to be employed in words like *deal, boat* to distinguish the vowels from those of *deed, boot* which had a different pronunciation; (10) it is uncertain whether the replacement of OE. *æ* by ME. *a,* as in *that,* OE. *þæt,* is merely orthographic or a symbol of an actual sound-change; (11) equally uncertain is the replacement of OE. *æ* in *hælan* 'to heal' by ME. *e,* as in *hēlen.*

Actual phonetic changes as distinct from mere changes of orthography are also apparent: (1) OE. *ā* in *hām* 'home,' *stān* 'stone,' etc., shifted to the sound of the vowel in MnE. *law* and was spelled *o, oo* as in ME. *home, hoom* and *stone, stoon;* (2) the OE. diphthongs, where they survived in OE. itself, became simple vowels as in OE. *dēop,* ME. *depe, deep,* and OE. *strēam,* ME. *streem;* (3) OE. *y* as in *hyll, fyr* became *i* in South East Midland, as in *hill, fire;* (4) OE. spirant *g,* as in *boga,* already closely analogous to *w,* became and was written *w,* as in ME. *bowe;* (5) vowels of unstressed syllables lost their distinct character and became levelled, for the most part, under a sound written *e,* very like the sound we give the final *-a* of *sofa;* (6) long vowels were shortened before two or more consonants (whence MnE. *kept* beside *keep, depth* beside *deep*), and when they occurred in the first syllable of trisyllabic words (whence *holiday, halidom* beside *holy*); (7) the short vowels *a, e, o* were lengthened in open syllables, as in OE. *nama,* ME., MnE. *name,* and OE. *mete,* ME. *mēte,* MnE. *meat.*

(b) Vocabulary

The ME. vocabulary differs from that of OE. by the accretion of a vast number of words borrowed from other languages and by the consequent loss of many OE. words. The process had already commenced during the 10th and 11th centuries, i.e., during the latter part of the OE. period, with borrowings from the Scandinavian settlers resident in Eastern and Northern England. Because of the rigid traditions of the West-Saxon written language, comparatively few of such borrowings appear in OE.; we first realize their number and importance only after the Conquest. Permanent additions to the English language from this source include common nouns like *axle-tree, bull, dirt, law, leg, root, skin, want, window,* adjectives like *ill, rotten, tight, weak,* and verbs like *call, crawl, die, raise, scowl, take.*

Much more impressive, however, are the borrowings of words of Romance origin from the Norman conquerors, more especially during the years after about 1240 when the Norman-French were forced by political circumstances to reconcile themselves to their English neighbors. There is no other period of the language that shows the accession of so many alien, and on the whole, useful words as the period 1250–1450. Among them were the mundane *air, bacon, bucket, fry, gum, pork, push, sound, stew, stubble,* and *trip,* as well as the more abstract *beauty, color, heritage, honor, judgment, noble,* and *tragedy.* Some, like *abbey, cardinal, clerk, image, parson, penance,* and *piety,* are drawn from the special vocabulary of the Church; some, like *assize, attorney, fine, forfeit, pillory, plea, suit,* from that of the law; some from medicine, like *anatomy, balm, ointment, poison, stomach;* some from the army, like *ambush, archer, chieftain, dart, lance;* some from the table, like *appetite, taste, veal, venison;* some from the home, like *basin, lamp, lantern, towel.*

Side by side with these French words, many of which were ultimately of Latin origin, occur direct borrowings from Latin itself. But whereas the French words bear in many cases the stamp of actual usage, actual speech, most of the Latin words were plainly literary and scholarly borrowings: *custody, genius, immune, lucrative, necessary, private, rational, subjugate, temperate,* etc.

(c) Grammar and Morphology

The eventual result of the weakening of unstressed final vowels (see *b.* immediately above) was the disintegration of the complicated OE. inflectional system. In the English of Chaucer, 'grammatical' is completely replaced by 'natural' gender; the complex OE. article has become the invariable *pe, the;* the adjective is indeclinable; inflectional expression of case is limited to the genitive singular of nouns; a single ending *-es* has completely superseded the great variety of endings once used to indicate the genitive singular and the plural. To trace these changes in detail would require a volume of paradigms. Here, the practical results can be summarized in a single sentence: OE. was a 'synthetic,' while late ME. is an 'analytical' language. Of the once highly organized inflectional system of article, noun, and adjective, all that is left in MnE. is a group of fossil forms: *for the nonce, Atterbury, Nash, Noakes, Nalder,* and *Nelm* (earlier *for pen ones, æt pære byrig, at pen asche, at pen okes, at pen aldre, at pen elme*).

The pronoun and verb also underwent considerable phonetic modification during the ME. period, but partly because of adaptation and partly because of their importance in determining the categorical relationships within the analytical sentence, their main features are remarkably well-preserved. In the pronoun, the outstanding developments were: (1) Loss of the dual; (2) replacement of the masculine third person accusative *hine* by the dative *him;* (3) appearance of a mysterious feminine *she* to replace the original *hēo;* (4) intrusion of the Scandinavian plurals *they, their, them* to replace the English *hi, he, hir, hem.* Most of these changes were very gradual; Chaucer, for instance, still retains *hir, hem,* and the latter has still a kind of fictitious survival in MnE. *'em.* The net result of all the changes was to level off distinctions no longer needed and at the same time to reinforce distinctions that the operation of phonetic change threatened with obliteration.

Similarly with the verb. OE. had possessed two great classes of verbs, usually distinguished as *weak* and *strong.* In the first class the preterit and past participle were formed by adding to the present stem the dental suffixes *-ede, -ode, -de* and *-ed, -od, -d;* in the second, tense change was indicated by a modification (ablaut, gradation, or 'internal inflection') of the stem vowel itself. Cf. MnE. *talk—talked* or *drop—dropped* with *sing—sang—sung.* In the strong verbs, never important in numbers but extremely frequent in occurrence, the phonetic changes of the early ME. period brought about the loss of distinction between preterit singular and preterit plural, and seriously weakened the distinction between preterit and past participle. In the weak verbs, the operation of the sound change that weakened the vowels of final unstressed syllables obliterated the distinction between the class which added the suffixes *-ede, -ed* and that which added *-ode, -od* to indicate tense changes. By the end of the ME. period, therefore, the verb was fairly close to its modern development. One other important change concerns the personal ending of the third person singular indicative. The *-eth* that would be the regular development of OE. *-þ* still lingers on in verse, but during the late ME. period it had already been replaced in common usage by the ending *-es, -s,* borrowed from the Northern dialect.

III

The English language after the end of the ME. period does not lend itself to any such schematic treatment as we have attempted for Old and Middle English. The varied and flexible instrument used by Shakespeare, Milton, and, eventually, by ourselves, is altogether too gigantic to be compressed neatly into mnemonic schedules. Moreover, most of us have read the great authors of the EMnE. period and we are at least aware of the external appearance of EMnE. To proceed further, to delve beneath the spelling in order to explore the progress of the Great Vowel Shift during the 16th, 17th, 18th, and 19th centuries, would require the use of some such probe as the alphabet of the International Phonetic Association. And even if we familiarized ourselves with some

such alphabet, we might well end by knowing at once too much and too little. While it is easy to visualize the phonetic direction of the changes—to state, in phonetic terms, that long low- and mid-tongue vowels were raised, long high-tongue vowels diphthongized, short vowels centralized—the complicated correlations of vowel with vowel during the period of the changes would still elude us.

With the fixation of English spelling, which commenced with Caxton and was achieved about 1650, the English language acquired its modern external form. With the introduction of thousands of new words from various sources during the same period, it completed most of the circle of its vocabulary. Thanks to these facts, the modern reader may approach most English authors from Dryden onwards without being conscious of any particular sense of archaism. And this annihilation of time is perhaps the greatest benefit conferred on humanity by standard written language. Yet, consideration of this and other benefits should not blind us to events below the surface. For the user of the English language there is both illumination and an implicit warning in the famous simile of J. Vendryes:

"The ice borrows its substance from the river, it is indeed the actual water of the river itself—and yet it is not the river. A child, seeing the ice, thinks that the river exists no more, that its course has been arrested. But this is only an illusion. Under the layer of ice, the river continues to flow down to the plain. Should the ice break, one sees the water suddenly bubble up as it goes gushing and murmuring on its way. This is an image of the stream of language. The written tongue is the film of ice upon its waters; the stream which still flows under the ice that imprisons it is the popular and natural language; the cold which produces the ice and would fain restrain the flood is the stabilizing action exerted by grammarians and pedagogues; and the sunbeam which gives language its liberty is the indomitable force of life, triumphing over rules, and breaking the fetters of tradition."*

* J. Vendryes, *Language: A Linguistic Introduction to History*, translated by Paul Radin (New York, 1925), pp. 275–6.

GUIDE TO PRONUNCIATION

PRONUNCIATION in this dictionary is indicated directly on the entry word by a system of symbols, or diacritical marks. Thus, the symbol c̲ is used to indicate the sound of the hard **c** in **cat**, and the word is entered in the vocabulary as **c̲at**. The Key to Pronunciation printed below gives a complete description of the symbols used and the sounds they represent. The modified sounds are unmarked, as the **e** in **cent**, the **a** in **apply**, the **i** in **pin**, the **u** in **tub**, the **o** in **on**, and the **y** in **myth**.

When two vowels stand together, only the one which indicates the sound of the word is marked, as in **strēak, brāin, mōat**. The clusters **ae** and **oe** ending a syllable are pronounced as **ē**; when followed by a consonant in the same syllable they are pronounced as **e** in **met**.

In a few instances it is impossible to indicate the pronunciation on the word itself; in such cases the word, or part of it, is respelled in parentheses immediately following the entry. The word is respelled phonetically, that is, according to its sound, regardless of the letters that compose it. Examples of respelling are **e̱ight** (āt); **guīde** (gīd); **heir** (ār); and **här'le-quin** (-kin *or* -kwin).

The accents are indicated thus: primary ′, secondary ″. The secondary accent or subordinate stress is normally indicated only when it falls at an irregular interval from the primary or main stress, that is, at an interval other than two syllables.

Although full vowel quality is indicated in all syllables, it should be understood that in totally unstressed syllables the vowel quality is variously reduced, or weakened, in colloquial speech to a more or less neutral sound. To avoid the confusion of excessive diacritical marks, sounds in non-English words are indicated by the English sounds most nearly approximating these.

A

A, a (ā), *n.*; *pl.* **A's, a's, As, as** (āz), 1. the first letter of the Roman and English alphabet: from the Greek *alpha*, a borrowing from the Phoenician.
2. a sound of A or a.
3. a type or impression for A or a.
4. *a symbol for* the first in a sequence or group.

A, a (ā), *a.* 1. of A or a.
2. first in a sequence or group.
3. first-class; A 1: see *A one*.

Among logicians, A, as an abbreviation, stands for a universal affirmative proposition. A asserts; E denies.

The Romans used A to signify a negative or dissent in giving their votes, A. standing for *antiquo*, I oppose or object to the proposed law. Opposed to this letter were U. R., *uti rogas*, be it as you desire—the words used to express assent to a proposition. These letters were marked on wooden ballots, and each voter had an affirmative and a negative put into his hands, one of which, at pleasure, he gave as his vote. In criminal trials, A. stood for *absolvo*, I acquit; C. for *condemno*, I condemn; and N. L. for *non liquet*, it is not evident; and the judges voted by ballots thus marked. In inscriptions, A. stands for *Augustus*; or for *ager, aiunt, aurum, argentum*, etc.

A. is used for *anno*, as in A. D., for *anno Domini*, in the year of our Lord, and A. M., for *anno mundi*, in the year of the world; and also for *ante*, as in A. M., for *ante meridiem*, before noon; and for *artium*, as in A. M., for *artium magister*, master of arts.

In algebra, *a* and other first letters of the alphabet usually represent known quantities —the last letters being used to represent unknown quantities.

In pharmacy, *ā* or *āā*, abbreviations of the Greek *ana*, signifies *of each separately*, or, that the things mentioned should be taken in quantities of the same weight or measure.

In commerce, A stands for *accepted*, as in case of a bill of exchange. Merchants also number their books by the letters A, B, C, instead of figures. Public officers number their exhibits in the same manner; as, the document *A* or B.

A (ā), *n.* 1. an object shaped like A.
2. in chemistry, *the symbol for* argon.
3. in education, a grade first in quality; as, an *A* in history.
4. in music, (a) the sixth tone or note in the scale of C major, or the first in the scale of A minor; (b) a key, string, etc. producing this tone; (c) the scale having A as the keynote.

A (ā), *a.* shaped like A.

a (ȧ *or* ā), *a., indef. art.* an abbreviation of Anglo-Saxon *an* or *ane*, one, used before words beginning with a consonant sound or a sounded *h*; as, *a* table, *a* home, *a* unicorn. [see *an*.]

a-, a combining form in many English words, as in *a*sleep, *a*wake, *a*foot, *a*ground, *a*going. In some cases, this is a contraction of the Teutonic *ge-*, as in *a*ware, from the Anglo-Saxon *gewaer*. Sometimes it is a corruption of the Anglo-Saxon *on*, as in *a*gain, from *ongean*; *a*wake, from *onwacian*, to watch or wake. In some words, *a-* may be a contraction of *at, of, in, to*, or *an*.

In some words of Greek origin *a-* is privative, giving to them a negative sense, as in *agastric*, from *a* and *gaster*, stomach. In some words derived from the Greek and Latin, *a* is used as a prefix and as a suffix; as, *a*spire, *a*mend, *a*byss, com*a*, Afric*a*, etc.

A 1 (ā wun), see *A one*.

ä·ä′, *n.* [Hawaiian.] a bed of lava that has become solidified with a rough surface.

äal, *n.* [Hind. *āl*, a plant.] a plant of the genus *Morinda*: it is commonly called *Indian mulberry*.

äam, *n.* [D.] a measure of liquids among the Dutch, varying in different cities from thirty-seven to forty-one English wine gallons.

äard′värk, *n.* [D., earth pig.] an African ant-eater, *Orycteropus capensis*.

AARDVARK

äard′wolf (-wulf), *n.* [D., earth wolf.] a digitigrade, carnivorous quadruped, *Proteles lalandi*, of South Africa, somewhat like the hyena and the civet.

Ãa·ron′iç, Ãa·ron′-iç·ăl, *a.* pertaining to Aaron, the first high priest of the Hebrews, or to the priesthood of which he was the head.

à·bac·i·nā′tion, *n.* the act of destroying eyesight by placing a red-hot copper basin close to the eyes: a form of medieval torture.

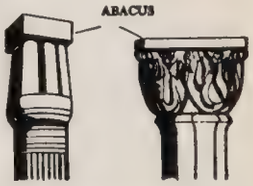
ab·à·cis′çus, *n.* in ancient architecture, a tile or square in a mosaic pavement.

ab′à·cist, *n.* [L. *abacus*, a counting board.] one who casts accounts with an abacus; a calculator.

à·back′, *adv.* [AS. *on bæc*, at, on, or toward the back.] toward the back; on the back part; backward. Now archaic except in nautical usage, where it signifies the situation of the sails when pressed back against the mast by the wind.

laid aback; having the sails purposely placed aback to give the ship sternway.

taken aback; having the sails carried back suddenly by the wind; hence, surprised.



ab·aç′ti·năl, *a.* [L. *ab*, from; and *actinal*.] pertaining to or situated at the opposite extremity from the mouth, especially in a radiate animal.

ab·aç′tion, *n.* a stealing of herds of cattle.

ab·aç′tŏr, *n.* [L. *abigere*, to drive from.] in law, one who steals herds of cattle, in distinction from one who steals a head or two.

ab·aç′ū·lus, *n.* same as *abaciscus*.

ab′à·çus, *n.* [L. *abacus*, anything flat, as a sideboard, a bench, a slate, a table or board for games; Gr. *abax*, a counting board.]

ABACUS

1. among the Romans, a cupboard or buffet.

2. an instrument for doing or teaching arithmetic. On this are drawn lines; a counter on the lowest line is one; on the next, ten; on the third, a hundred, etc. On the spaces, counters denote half the number of the line above. Other schemes are called by the same name, as the calculating frame employed by the Chinese, which consists of wires stretched in a framework, with counters sliding on the wires.

ABACUS

3. in architecture, a slab atop the capital of a column. It is square in the Tuscan, Doric, and Ionic orders, but its sides are arched inward in the Corinthian and Composite. The name is also given to a concave molding on

the capital of the Tuscan pedestal, and to the plinth above the boltel in the Tuscan and Doric orders.

IONIC CAPITAL
A, the abacus

DORIC CAPITAL
A, the abacus

abacus major; a trough used for washing ore in mines.

2. in chemistry, a catalyst.

aç·cel′ĕr·āte, *v.t.*; accelerated, *pt.*, *pp.*; accelerating, *ppr.* [L. *accelerare*; *ad*, to, and *celerare*, to hasten.]

1. to cause to move faster; to hasten; to quicken (motion); to add to the velocity of (a moving body).

2. to hasten the working of (a process, etc.); as, to *accelerate* the growth of a plant.

3. to bring nearer in time; to shorten (the time) between the present time and a future event; as, to *accelerate* a crisis.

accelerated motion; in mechanics and physics, motion with a continually increasing velocity.

accelerating force; the force that causes accelerated motion, as gravity.

Syn.—hasten, expedite, further, quicken, forward, advance.

aç·cel′ĕr·āte, *v.i.* to increase in speed; to go faster.

aç·cel·ĕr·ā′tion, *n.* 1. an accelerating or being accelerated.

2. change in velocity, either increase (*positive acceleration*) or decrease (*negative acceleration*).

3. the rate of such change.

acceleration of the moon; the increase in the speed of the moon's mean motion around the earth (less than 1/3 minute per century).

acceleration of the planets; the increasing velocity of the planets in proceeding from the aphelion to the perihelion of their orbits.

acceleration of the tides; priming of the tides, which occurs in the first and third quarters of the moon.

diurnal acceleration of the fixed stars; the time which the fixed stars gain on the apparent mean diurnal revolution of the sun, nearly three minutes, fifty-six seconds of mean time.

aç·cel·ĕr·ā′tion of grav′i·ty, the acceleration of a freely falling object, caused by the force of gravity: it is expressed in terms of the rate of increase each second of velocity per second (32 + ft. per second per second).

aç·cel′ĕr·ȧ·tive, *a.* of, causing, or increasing acceleration.

aç·cel′ĕr·ā·tŏr, *n.* [L. *ad*, to, and *celerare*, to hasten.]

1. one who or that which accelerates; anything that increases speed.

2. a device, such as the foot throttle of an automobile, for increasing the speed of a machine.

3. in anatomy, a muscle or nerve that speeds up a motion.

4. in chemistry, a substance that speeds up a reaction.

5. in photography, a chemical that speeds up developing.

aç·cel′ĕr·ȧ·tō·ry, *a.* accelerative.

aç·cel·ĕr·om′e·tĕr, *n.* [L. *accelerare*, to hasten, and Gr. *metron*, measure.] an instrument for measuring and recording the acceleration of an aircraft.

aç·cend′, *v.t.* [L. *accendere*; *ad*, to, and *candare*, to kindle.] to kindle; to set on fire. [Obs.]

aç·cend·i·bil′i·ty, *n.* the state or quality of being accendible.

aç·cend′i·ble, *a.* capable of being kindled; combustible; inflammable.

aç·cen′sion, *n.* the act of kindling or setting on fire, or the state of being kindled. [Rare.]

aç′cent, *n.* [L. *accentus*, from *ad*, to, and *canere*, to sing.]

1. originally, the modulation of the voice in reading or speaking, as practiced by the ancient Greeks, involving variation of musical pitch.

2. a particular stress or force of voice upon a certain syllable or word, which distinguishes it from the others. There are two kinds of *accent* in many English words, the primary and the secondary; thus, in uttering the word *aspiration*, the first and third syllables are distinguished—the third by a full sound, which constitutes the primary *accent*; the first, by a degree of force in the voice which is less than that of the primary *accent*, but evidently greater than that which falls on the second and fourth syllables.

3. a mark used in writing or printing to direct the stress of the voice in pronunciation, as in the primary (′) and secondary(″) accenting of English (*as″pi-ra′tion*).

ȧ·ces′cent, *n.* any substance which is slightly acid, or likely to become sour.

acet-, [see *aceto-*.] combining form of *acetic*, *acetyl*, before vowels.

ac·e·tab′ū·lăr, *a.* cup-shaped.

Ac·e·tab·ū·lif′ĕr·ȧ, *n.pl.* [L. *acetabulum*, a cup, and *ferre*, to bear.] see *Dibranchiata*.

ac·e·tab·ū·lif′ĕr·ous, *a.* having cup-shaped suckers like the cuttlefish.

ac·e·tab′ū·li·form, *a.* acetabular.

ac·e·tab′ū·lum, *n.* [L. *acetabulum*, a vinegar cup, from *acetum*, vinegar.]
1. among the Romans, a vinegar cruet or similar container; also, a measure of about one-eighth of a pint.
2. in anatomy, the cup-shaped socket of the hip bone, into which the thigh bone fits.
3. a cotyledon in the placenta of ruminating animals.
4. socket on the trunk of an insect, in which the leg is inserted.
5. a sucker of the cuttlefish and others of the *Dibranchiata*.

ȧ·cē′tăl, *n.* [*acet-*, *-ic*, and *al*(cohol).] a colorless liquid, $C_6H_{14}O_2$, obtained by the imperfect oxidation of alcohol, used in medicine as a hypnotic.

ac·et·al′dē·hȳde, *n.* [*acet-*, and *aldehyde*.] a colorless, soluble, volatile liquid, C_2H_4O, used as a solvent and in manufacturing various organic compounds.

ac·et·am′id, ac·et·am′īde, *n.* [*acet-*, *-ate*, and *amid*.] a white crystalline organic substance, CH_3CONH_2, the amide of acetic acid.

ac·et·an′i·lid, ac·et·an′i·līde, *n.* [Eng. *acetyl*, and *anilid*.] a white crystalline organic substance, $CH_3CONHC_6H_5$, produced by the action of acetic acid on aniline: used as a drug to lessen pain and fever.

ac·e·tā′ri·ous, *a.* used in salads, as lettuce, etc.

ac′e·tā·ry, *n.* an acid pulpy substance in certain fruits, as the pear, enclosed in a small gritty mass toward the base of the fruit.

ac′e·tāte, *n.* [L. *acetum*, vinegar, from *acere*, to be sour.] a salt or ester of acetic acid.

ac′e·tā·ted, *a.* combined with acetic acid.

ȧ·cē′tiç (*or* ȧ-set′-), *a.* [L. *acetum*, vinegar.] relating to vinegar; having the properties of acetic acid or vinegar; sour.
acetic acid; a sour, colorless, liquid compound, CH_3COOH, having a sharp odor: it is found in vinegar.
acetic ether; any ester of acetic acid.

ȧ·cet″i·fi·çā′tion, *n.* an acetifying.

ȧ·cet′i·fī·ĕr, *n.* a device used in acetifying.

ȧ·cet′i·fȳ, *v.t.*; acetified, *pt.*, *pp.*; acetifying, *ppr.* to convert into acid or vinegar.

ȧ·cet′i·fȳ, *v.i.* [L. *acetum*, vinegar, and E. *-fy*.] to turn acid.

ac·e·tim′e·tĕr, *n.* an acetometer.

ac·e·tim′e·try, *n.* the act or method of ascertaining the strength of vinegar or the proportion of acetic acid contained in it.

ac′e·tin, *n.* a mixture of acetic acid and glycerin.

ac′e·tīze, *v.i.* to acetify. [Rare.]

ac′e·tō-, acet-, [L. *acetum*, vinegar.] a combining form used in chemistry to indicate compounds derived from acetic acid, acetyl, etc.; as, *aceto*-gelatin; *aceto*-bromide.

ac″e·tom′e·tĕr, *n.* [*aceto-*, and *-meter*.] an instrument used to find the amount of acetic acid in a definite quantity of vinegar or other liquid.

ac″e·tō·nae′mi·ȧ, *n.* [E. *acetone*, and Gr. *aima*, blood.] in pathology, a diseased condition due to the presence of acetone in the blood.

ac′e·tōne, *n.* [*acet-*, and *-one*.] a colorless, inflammable, volatile liquid, CH_3COCH_3, used as a paint remover and as a solvent for certain oils and other organic compounds: also called *dimethyl acetone*.

ac′e·tōne bod′y, a ketone body.

ac·e·ton′iç, *a.* derived from acetone.

ac″e·tō·phē′nōne, *n.* a chemical compound derived from acetic and benzoic acids.

ac′e·tōse, *a.* acetous.

ac·e·tos′i·ty, *n.* sourness.

ȧ·cē′tous (*or* ac′e-tous), *a.* of, producing, or like vinegar; sour; acid.
acetous acid; term formerly applied to impure and dilute acetic acid, under the notion that it was composed of carbon and hydrogen in the same proportions as in acetic acid, but with less oxygen. [Obs.]
acetous fermentation; the process by which alcohol or sugar is changed into acetic acid.

ȧ·cē′tum, *n.* [L. *acere*, to be sour.] vinegar.

ac′e·tyl, *n.* [L. *acetum*, vinegar, and *hytē*, substance.] the radical CH_3CO derived from acetic acid.

ȧ·cet′y·lāte, *v.t.*; acetylated, *pt.*, *pp.*; acetylating, *ppr.* [*acetyl*, and *-ate*.] to combine an acetyl radical with (an organic compound).

ac″e·tyl·çhō′line, *n.* [*acetyl*, and *choline*.] an alkaloid, $C_7H_{17}O_3N$, extracted from ergot and used in medicine to lower blood pressure and increase peristalsis.

ȧ·cet′y·lēne, *n.* a colorless gaseous hydrocarbon, C_2H_2, prepared by the reaction of water with calcium carbide: it is used as the starting material in the synthesis of many organic compounds, for lighting, and, with oxygen in a blowtorch, for welding, etc.

ac′e·tyl·sal″i·cil′iç ac′id, aspirin.

āce′y-deūce′y, *n.* [from *ace*, and *deuce*.] a variation of the game of backgammon.

A·çhae′ăn, *a.* of Achaia, its people, or its culture; Greek.

A·çhae′an, *n.* 1. a native or inhabitant of Achaia.
2. A Greek: so used in Homer.
The Achaeans are thought to have been a people from the northern Danube region who migrated into Greece about 1300 B.C.

Açh·ae·men′i·ăn, *n.* a Persian of the period of Achaemenes; also, the language of his dynasty.

ȧ·çhae′tous, *a.* [Gr. *a* priv., and *chaitē*, hair.] without hairs, as some caterpillars, plants, etc.

A·çhā′iȧ, *n.* a province of ancient Greece, in the Peloponnesus.

A·çha′ian, *adj.* and *n.* Achaean.

ȧ·chär′, *n.* [Per.] an Anglo-Indian name for a pickle or relish.

açh′āte, *n.* agate (the stone). [Rare.]

ȧ·çhāte′, *n.* [Fr. *achat*, purchase, from *acheter*; LL. *accaptare*; *ad*, to, and *captare*, to take.]
1. purchase; bargaining. [Obs.]
2. [*pl.*] same as *cates*.

A·çhā′tēs, *n.* [L.] in Virgil's *Aeneid*, a loyal friend and companion of Aeneas; hence, any loyal friend.

Açh·ȧ·tī′nȧ, *n.* a genus of land snails, popularly called agate snails. Some of them have shells nine or ten inches long.

ä·çhä·töur′, *n.* [Fr.] a purchaser or buyer of provisions; a caterer. [Obs.]

āçhe (āk), *v.i.*; ached, *pt.*, *pp.*; aching, *ppr.* [AS. *ace*, *ece*, ache, from *acan*, to ache.]
1. to suffer pain; to have or be in pain, or in continued pain; as, the head *aches*.
2. to yearn or long (with *for* or an infinitive); as, his heart *aches for* her.

āçhe (āk), *n.* a dull, continuous pain, as distinguished from a sudden twinge, or spasmodic pain.

A·çhē′ăn, *a.* see *Achaean*.

ȧ·çhē′lȧ·ry, *a.* same as *achilary*.

ȧ·çhē′lous, *a.* same as *achilous*.

ā·çhēne′, *n.* [Gr. *a-*, not, and *chainein*, to gape.] any small, dry fruit with one seed, whose thin outer covering (pericarp) does not burst when ripe.

ā·çhē′ni·ăl, *a.* pertaining to an achene.

ā·çhē′ni·um, *n.* an achene.

ACHENE—lettuce and buttercup

Açh′e·ron, *n.* fabled river of hell; hence, the lower regions.

Açh·e·ron′tiç, *a.* dark and forbidding, like the lower regions.

Ȧ·cheu′le·ăn, Ȧ·cheu′li·ăn (-shoo′), *a.* [Fr. *Acheulien*, from *St. Acheul*, France, where remains were found.] of or designating a type of paleolithic culture characteristic of the Heidelberg and Piltdown man.

ȧ·chiēv′ȧ·ble, *a.* that may be achieved.

ȧ·chiēve′, *v.t.*; achieved, *pt.*, *pp.*; achieving, *ppr.* [Fr. *achever*, *achiever*, to finish, from L. *ad*, to, and Fr. *chief*, from L. *caput*, head.]
1. to perform or execute; to accomplish; to finish, or carry on to a final close; as, he *achieved* his laborious task.
2. to gain or obtain as the result of exertion; to bring about by effort.

ȧ·chiēve′, *v.i.* to effect a desired result.
Syn.—accomplish, consummate, realize, attain, effect, execute, finish, fulfill, gain, perform, win.

ȧ·chiēve′ment, *n.* [Fr. *achevement*, from *achever*, to end.]
1. the performance of an action; the act of achieving; an obtaining by exertion.

FUNERAL ACHIEVEMENT

2. a great or heroic deed; a feat; something accomplished by valor, or boldness.

3. a tablet or panel bearing a coat of arms, granted for the performance of a great or honorable action. Especially applied to the escutcheon of a deceased person, it is displayed at the funeral and over the tomb: also called a *hatchment*.

achievement quotient; in educational psychology, the ratio of a person's achievement age (as shown by testing what has been learned) to his mental age: also called *accomplishment quotient*.

ȧ·chiēv′ẽr, *n.* one who achieves or accomplishes.

ȧ·ch(i′)lȧ·ry, *a.* [Gr. *a*, priv., and *cheilos*, lip.] in botany, without a lip, or labellum.

Ach·il·lē′ȧ, *n.* a genus of herbs of the thistle family, including the yarrow.

Ach·il·lē′ăn, *a.* unconquerable, like Achilles.

A·chil′lēs, *n.* [L., from Gr. *Achilleus*.] in Homer's *Iliad*, the Greek hero of the Trojan War, who killed Hector and was killed by Paris.

A·chil′lēs' heel, a vulnerable point. Achilles' mother held him by the heel when she dipped him in the Styx to make him invulnerable. He was, however, fatally wounded by Paris, who shot an arrow into his heel, the one vulnerable point on his body.

A·chil′lēs' ten′dŏn, the tendon connecting the back of the heel to the muscles of the calf of the leg.

a·ch(ī′)lous, *a.* in anatomy and botany, possessing no lips or only rudimentary ones.

āch′ing, *n.* continued pain or distress.

āch′ing, *a.* continuously painful.

ä·chī·ō′tę, *n.* [Sp. *achiote*, from Indian *achiotl*.] same as *arnotto*.

ach′i·rīte, *n.* an old name for dioptase.

A·chit′ŏ·phel, *n.* same as *Ahithophel*.

ȧ·ch(l)am′y·dāte, *a.* [Gr. *a* priv., and *chlamys*, cloak.] having no mantle: a term applied to certain gastropods.

Ach·lȧ·myd′ē·ae, *n.pl.* a group of plants having no perianth, as the willow, oak, and birch.

ach·lȧ·myd′ē·ous, *a.* [Gr. *a* priv., and *chlamys*, a garment.] in botany, having no floral envelope.

ȧ·ch(ō′)li·ȧ, *n.* [Gr. *a* priv., and *cholia*, bile.] lack of bile.

ȧ·ch(ol′)ic, *a.* acholous.

ach′ō·lous, *a.* lacking bile.

ach′ŏr, (*or* ā′chŏr), *n.* [Gr. *achōr*, dandruff.]

1. a disease of infants, the face, and often the neck and breast, becoming covered with scabs.
2. a scaly eruption of the scalp.
3. a pustule.

ȧ·ch(or′)dăl, *a.* [Gr. *a* priv., and *chordē*, a chord.] having no notochord.

Ach·or·dā′tȧ, *n. pl.* a general name for the animals which have no notochord.

ȧ·ch(ō′)ri·ŏn, *n.* [LL. *achor*, from Gr. *achōr*, scurf.] the parasitic fungus which causes favus in man.

Ach·rō·an′thēs, *n.* same as *Malaxis*.

ach′rō·īte, *n.* [Gr. *achroos*, from *a* priv., and *chroa*, color.] a colorless variety of tourmaline.

ach·rō·mā′si·ȧ (-zhi-ȧ), *n.* lack of pigment in the skin.

ach·rō·mat′ic, *a.* [Gr. *a* priv., and *chrōma*, *chrōmatos*, color.]

1. colorless.
2. forming visual images whose outline is free from prismatic colors: said of a lens.
3. in biology, (a) staining poorly with the usual stains; (b) made of achromatin.
4. in music, without accidentals; as, an *achromatic* scale.

achromatic lens; a compound lens so made and adjusted as to transmit light without breaking it up into its primary colors.

ach·rō·mȧ·tic′i·ty, *n.* the state or quality of being achromatic.

ȧ·chrō′mȧ·tin, *n.* organic tissue not easily colored or stained.

ȧ·chrō′mȧ·tism, *n.* the state or quality of being achromatic; lack of color.

ȧ·chrō″mȧ·ti·zā′tion, *n.* the process of achromatizing.

ȧ·chrō′mȧ·tīze, *v.t.*; achromatized, *pt., pp.*; achromatizing, *ppr.* [Gr. *a* priv., and *chrōma*, color.] to make achromatic; to rid of color.

ȧ·chrō·mȧ·top′sy, ȧ·chrō·mȧ·top′si·ȧ, *n.* [Gr. *a* priv., and *chrōma*, color, and *opsis*, sight.] color blindness.

ȧ·chrō·mȧ·tō′sis, *n.* a disease characterized by absence of coloring matter, as albinism.

ȧ·chrō′mȧ·tous, ȧ·chrō′mous, *a.* lacking color; colorless.

ā·chrō′miç, *a.* [from Gr. *achrōmos*; *a-*, not, and *chrōma*, color, and *-ic*.] without color.

ā·chrō′mous, *a.* [Gr. *achrōmos*, colorless; *a-*, not, and *chrōma*, color.] without color.

ach·rō·ō·dex′trine, *n.* [Gr. *achroos*, colorless, and Eng. *dextrine*.] dextrine not colorable by iodine.

ach·rō′ous, *a.* achromatic.

ȧ·chȳ′lous, *a.* [Gr. *a* priv., and *chylos*, juice.] without chyle.

ȧ·chȳ′mous, *a.* without chyme.

ȧ·ciç′ū·lȧ, *n.*; *pl.* **ȧ·ciç′ū·lae,** [L. *acicula*, a small needle.] in biology and geology, a needle-like spine, prickle, or crystal.

ȧ·ciç′ū·lăr, *a.* [L. *acicula*, a small needle.] slender and pointed; resembling a needle, as certain leaves and crystals.

ȧ·ciç′ū·lăr·ly, *adv.* in an acicular manner.

ȧ·ciç′ū·lāte, ȧ·ciç′ū·lā·ted, *a.* [L. *acicula*, a needle.] 1. having aciculae.

2. having marks like scratches made by a needle.

ȧ·ciç′ū·li·form, *a.* having the form of a needle.

ȧ·ciç′ū·lite, *n.* same as *aikinite*.

ȧ·ciç′ū·lum, *n.*; *pl.* **ȧ·ciç′ū·lȧ.** an acicula; a needlelike part.

ac′id, *a.* [L. *acidus*, sour, from root *ak*, sharp.]

1. sour, sharp, or biting to the taste.
2. of or like an acid.

ac′id, *n.* 1. a sour substance.

2. LSD. [Slang.]
3. in chemistry, a compound that can react with a base to form a salt, the hydrogen of the acid being replaced by a positive ion. The majority of *acids* contain oxygen, and are known as *oxyacids*; those not containing oxygen are termed *hydrogen acids*. *Acids* usually have the following properties: (a) a sour taste; (b) solubility in water; (c) the ability to turn blue litmus red; (d) the power of uniting in definite proportions with the metals, called bases, forming salts, the metal replacing the hydrogen of the *acid*; (e) the power of decomposing most carbonates, causing effervescence: according to modern theory an *acid* is a compound which yields hydrogen ions (protons) to a base in a chemical reaction. *Acids* vary in their terminations according to the quantity of oxygen or other electronegative constituent. Those having the maximum of oxygen end in *-ic*; those of a lower degree in *-ous*. *Acids* that end in *-ic*, as sulfur*ic acid*, form salts terminating in *-ate*; those ending in *-ous* form salts terminating in *-ite*.

ac′id-fȧst″, *a.* not readily decolorized by acids when stained, as the tubercle bacillus.

ac′id-form·ing, *a.* 1. forming an acid in chemical reaction; acidic.

2. yielding a large acid residue in metabolism: said of foods.

ȧ·cid′iç, *a.* 1. acid-forming.

2. in geology, containing a high percentage of silica: opposed to *basic*.

ac·id·if′ẽr·ous, *a.* [L. *acidus*, sour, and *ferre*, to bear.] containing or yielding an acid.

ȧ·cid′i·fī·ȧ·ble, *a.* capable of conversion into an acid.

ac·id·if′iç, *a.* producing an acid or acidity.

ȧ·cid″i·fi·çā′tion, *n.* the act or process of changing into an acid.

ȧ·cid′i·fī·ẽr, *n.* 1. one who or that which acidifies.

2. in chemistry, that which has the property of changing a substance into an acid, as oxygen, chlorine, etc.

ȧ·cid′i·fȳ, *v.t.* and *v.i.*; acidified, *pt., pp.*; acidifying, *ppr.* [*acid*, and L. *facere*, to make.]

1. to make or become acid; specifically, to convert into an acid.
2. to make or become sour.

ac·id·im′e·tẽr, *n.* [L. *acidus*, sour, acid, and Gr. *metron*, measure.] an instrument for ascertaining the strength of acids.

ac·id·im′e·try, *n.* the measurement of the strength of acids; especially, the process of estimating the amount of acid in any liquid by finding how much of a standard alkaline solution is required to neutralize a measured quantity of the given solution.

ac″id in·tox·i·çā′tion, same as *acidosis*.

ȧ·cid′i·ty, *n.* [Fr. *acidité*, from L. *aciditas*, sourness.]

1. the quality of being sour; sourness.
2. the degree of this.
3. hyperacidity.

ac′id·ly, *adv.* in an acid manner.

ac′id·ness, *n.* acidity.

ac″i·doph′i·liç, *a.* [from *acid*, and *-phile*, and *-ic*.] staining readily with acid dyes, as some bacteria.

ac″i·doph′i·lus milk, milk with acidophilic bacteria added: used for medicinal purposes.

ac″i·dō′sis, *n.* in medicine, a condition in which the alkali reserve (blood bicarbonates) of the blood is lower than normal: loosely called *acid intoxication*, *autointoxication*.

ac″i·dot′iç, *a.* of or having acidosis.

ac′id test, a crucial, final test of the value or quality of a thing or person: originally, a test of gold by acid.

ȧ·cid′ū·lae, *n.pl.* [L.] an old name for medicinal springs impregnated with carbonic acid.

ȧ·cid′ū·lāte, *v.t.*; acidulated, *pt., pp.*; acidulating, *ppr.* [L. *acidulus*, slightly sour, and *-ate*.] to make somewhat acid or sour.

ȧ·cid′ū·lent, *a.* having an acid quality; tart.

ȧ·cid′ū·lous, *a.* [L. *acidulus*, slightly sour.] slightly sour; subacid, as oranges, etc.

ac′i·ẽr·āge, *n.* [Fr., from *acier*, steel.] the process of coating another metal with a layer of iron or steel, by electricity: stereotypes are sometimes steel-faced in this way.

ac′i·ẽr·āte″, *v.t.*; acierated, *pt., pp.*; acierating, *ppr.* [Fr. *acier*, steel, and *-ate*.] to change into steel.

ac′i·form, *a.* [L. *acus*, a needle, and *forma*, form.] shaped like a needle.

ȧ·cil′i·āte, *a.* without cilia.

ac·i·nā′ceous, *a.* [L. *acinus*, grapestone, and *-aceous*.] containing kernels.

ȧ·cin′ȧ·cēs, *n.* [L., from Gr. *akinakēs*, a short sword.] a short straight dagger worn by the Scythians, Medes, and Persians.

ac·i·nac′i·form, *a.* [L. *acinaces*, a scimitar; Gr. *akinakēs*, and *-form*.] in botany, formed like or resembling a scimitar.

Ac·i·nē′tae, *n.pl.* [L., from Gr. *a* priv., and *kinētos*, movable.] in zoology, an order of the *Infusoria* having shells and suctorial tentacles.

ac·i·net′i·form, *a.* having the form of *Acinetæ*.

ȧ·cin′i·form, *a.* [L. *acinus*, a grapestone, and *-form*.] having the form of grapes, or being in clusters like grapes.

ac′i·nous, ac′i·nōse, *a.* consisting of, containing, or resembling an acinus or acini.

ac′i·nus, *n.*, *pl.* **ac′i·nī,** [L. *acinus*, grapestone.]

1. in botany, any of the small parts (drupelets) which compose the fruit of the blackberry, and other similar plants.
2. in anatomy, any of the small sacs of a compound or racemose gland.

-ā′cious, [L. *-ax*, *-acis*; It. *-ace*, and OFr. *-ous*.] a suffix meaning full of, characterized by; added to verb stems to form adjectives; as, cap*acious*, aud*acious*, ten*acious*.

Ac·i·pen′sẽr, *n.* [L., from Gr. *akkipēsios*, a sturgeon.] a genus of cartilaginous ganoid fishes, distinguished by the bony scales or plates arranged at intervals along the body in five longitudinal rows. The gills are free, the snout long and conical, and the mouth retractile, toothless, and projecting from the under surface of the head. The genus includes the sturgeon, sterlet, huso, etc.

ACIPENSER
head of sturgeon

-ac′i·ty, [Fr. *-acité*, from L. *-acitas*.] a suffix used to form nouns corresponding to adjectives in *-acious*; as, ten*acity*.

ac′i·ūr·gy, *n.* [Gr. *akis*, a point, and *ourgia*, work, from *ergein*, to work.] surgery. [Obs.]

Ack-Ack, ack-ack, *n.* 1. an antiaircraft gun.

2. its fire.

ac·knōw′, *v.t.* to avow; to acknowledge. [Obs.]

ac·knowl′edge (ak-nol′ej), *v.t.*; acknowledged, *pt., pp.*; acknowledging, *ppr.* [OE. *ac-* (*a-*), *knowlechen*, *knoulechen*, acknowledge, from *knouleche*, *cnawleche*, know, *knowlage*, *knowen*, to know.]

1. to own, avow, or admit to be true, by a declaration of assent; as, to *acknowledge* the being of a God.
2. to own or notice with particular regard.
3. to own or confess, as implying a consciousness of guilt.
4. to admit or receive with approbation.
5. to own with gratitude, or as a benefit; as, to *acknowledge* a favor, or receipt of a gift.
6. to own or admit to belong to oneself; as, to *acknowledge* a son.
7. to receive with respect.
8. to confirm receipt of; as, please *acknowledge* this letter.
9. to show recognition of by an act, as by a bow, nod, smile, lifting of the hat, etc. as a mark of friendship or respect; to salute; as, she met him in the street, but barely *acknowledged* him.

10. to own, avow, or assent to (an act) in a legal form, to give it validity; as, to *acknowledge* a deed.

Syn.—allow, avow, confess, concede, admit, grant, own, recognize, accept, indorse, certify, profess.

aç·knowl′edġed, *a.* avowed, recognized, accepted, admitted, indorsed, confessed.

aç·knowl′edġed·ly, *adv.* avowedly.

aç·knowl′edġ·ēr, *n.* one who acknowledges.

aç·knowl′edġ·ment, *n.* 1. the act of admitting; confession; as, the *acknowledgment* of a fault.

2. the act of recognizing with approbation, or in the true character; as, the *acknowledgment* of God or of a public minister.

3. concession; admission of the truth, as of a fact, position, or principle.

4. the owning of a benefit received, accompanied with gratitude; an expression of thanks; hence, something given or done in return for a favor.

5. a declaration or avowal of one's own act to give it legal validity; as, the *acknowledgment* of a deed before a proper officer.

acknowledgment money; in some parts of England, a sum paid by a tenant on the death of his landlord, as an acknowledgment of his new lord.

Syn.—admission, avowal, concession, recognition, confession.

à·ċlas′tiċ, *a.* [Gr. *aklastos*, unbroken, from *a* priv., and *klastos*, from *klaein*, to break.] unable to refract light.

aċ′lē, *n.* a tree of the bean family, native to India, Burma, and the Philippine Islands. The timber is one of the hardest known woods, close-grained, heavier than water, and is used largely for furniture and cabinet work.

à·clin′iç, *a.* [Gr. *a* priv., and *klinein*, to bend.] not dipping or bending; as, the *aclinic* line, an imaginary line around the earth near the equator, where the magnetic needle ceases to dip.

aċ′ly,s, *n.*; *pl.* **aċ′ly·dēş,** [L. a javelin.] an ancient weapon consisting of a short club studded with sharp points and attached to a cord, which enabled the thrower to draw it back after having launched it against an enemy.

aċ′mē, *n.* [Gr. *akmē*, a point.]

1. the top or highest point; the height or crisis of anything.

2. the period of fullest development in the history of a species of an animal.

3. in medicine, the crisis of a disease.

4. mature age; people of mature age collectively. [Obs.]

Syn.—apex, height, culmination, climax, zenith.

aċ′mīte, *n.* [Gr. *akmē*, a point.] a mineral of the augite family, occurring in long, pointed crystals, of a dark brownish color and a bright and somewhat resinous luster.

aċ′nē, *n.* [perhaps altered from Gr. *akmē*, point.] a skin disease characterized by chronic inflammation of the sebaceous glands, usually causing pimples on the face, back, and chest.

aċ·nō′dăl, *a.* pertaining to an acnode or acnodes.

aċ′nōde, *n.* [L. *acus*, needle; *nodus*, a node.] in mathematics, the point of a curve where the curve turns sharply back on itself.

à·ċock′, *adv.* in a cocked or tilted manner.

à·ċock′bill, *adv.* [*acock* and *bill*, point, edge.] with the ends cocked or tilted up; a nautical term, used of the anchor when hanging at the cathead, and of the yards when tipped at an angle with the deck.

A·ċoe′là (à-sē′là), *n. pl.* [L. *acœlus*, from Gr. *akoilos*; *a* priv., and *koilos*, hollow.] a group of worms belonging to the *Turbellaria*, having no digestive tract.

à·ċoe′lō·māte, *a.* without a body cavity.

ac·oe·lom′à·tous, *a.* same as *acœlomate.*

2. of or produced by aerobes.

ā·ĕr·ō′biç·ăl·ly, *adv.* in the manner of the aerobes.

ā″ĕr·ō·bī·ō′sis, *n.* life in and by means of air or oxygen.

ā″ĕr·ō·bī·ot′iç, *a.* relating to aerobiosis.

ā·ĕr·ō′bi·um, *n.*; *pl.* **ā·ĕr·ō′bi·a,** [Mod. L.; see *aerobe.*] an aerobe.

Ā″ĕr·ō·brañ′çhi·à, *n. pl.* [*aero-*, and Gr. *branchia*, gills.] a former subclass of *Arachnida*, including the scorpions and spiders.

ā″ĕr·ō·brañ′çhi·āte, *a.* of the *Aerobranchia.*

ā″ĕr·ō·bus′, *n.* [*aero-*, and *bus.*] an aeroplane of sufficient size to carry many passengers. [Colloq.]

ā′ĕr·ō·çûrve, *n.* an aeroplane having a curved sustaining surface.

ā′ĕr·ō·cyst, *n.* [*aero-*, and Gr. *kystis*, bladder.] an air cell or air bladder of an alga.

ā″ĕr·ō·dō·net′içs, *n.* [from *aero-*, and Gr. *donetos*, agitated, from *donein*, to shake, and *-ics.*] the branch of aviation that has to do with gliding.

ā′ĕr·ō·drōme, *n.* [*aero-*, and Gr. *dromos*, course.] same as *airdrome.*

ā″ĕr·ō·dȳ·nam′iç, *a.* relating to the force of air in motion.

ā″ĕr·ō·dȳ·nam′içs, *n.* [*aero-*, and Gr. *dynamis*, power.] the science relating to the effects produced by air or other gases in motion.

ā′ĕr·ō·dȳne, *n.* [*aero-*, and *-dyne.*] any aircraft that is heavier than air.

ā″ĕr·ō·em′bō·lism, *n.* [*aero-*, and *embolism.*] a condition caused by a sudden, considerable lowering of air pressure, as in flying at high

altitudes, characterized by the formation of nitrogen bubbles in the blood, acute pain in the joints and lungs, etc.

ā′ĕr·ō·foil, *n.* same as *airfoil.*

ā′ĕr·ō·gram, *n.* [*aéro-*, and Gr. *gramma*, a writing.]
1. a message sent by radio; radiogram.
2. a letter sent by airmail.

ā′ĕr·ō·graph, *n.* [*aero-*, and Gr. *graphos*, a description or writing.] an apparatus, or a process, for conducting wireless telegraphy. [Rare.]

ā·ĕr·og′rə·phĕr, *n.* one versed in the science of aerography; an aerologist.

ā″ĕr·ō·graph′iç·əl·ly, *adv.* by means of aerography.

ā″ĕr·ō·graph′içs, *n. pl.* [construed as sing.] the study of atmospheric phenomena.

ā·ĕr·og′rə·phy, *n.* [*aero-*, and Gr. *graphein*, to describe.] a description of the air or atmosphere.

ā′ĕr·ō·gun″, *n.* an antiaircraft gun.

ā″ĕr·ō·hȳ″drō·dȳ·nam′iç, *a.* [*aero-*, Gr. *hydor*, water, and *dynamis*, power.] acting by the force of air in water; as, an *aerohydrodynamic* wheel.

ā′ĕr·ō·līte, *n.* [*aero-*, and Gr. *lithos*, a stone.] a meteorite of stone.

ā″ĕr·ō·li·thol′ō·ġy, *n.* [*aero-*, Gr. *lithos*, stone, and *logos*, word, description.] the science dealing with aerolites.

ā″ĕr·ō·lit′iç, *a.* of or pertaining to aerolites.

ā″ĕr·ō·loġ′iç, ā″ĕr·ō·loġ′iç·ăl, *a.* of aerology.

ā·ĕr·ol′ō·ġist, *n.* one versed in aerology.

ā·ĕr·ol′ō·ġy, *n.* [*aero-*, and Gr. *logos*, description.] that branch of physics which treats of the air, its constituent parts, properties, and phenomena.

ā′ĕr·ō·man″cy, *n.* [*aero-*, and Gr. *manteia*, divination.] divination by means of the air and winds; hence, humorously, the science of forecasting weather.

ā″ĕr·ō·mə·rīne′, *a.* [*aero-*, and *marine*.] of the navigation of aircraft above the ocean.

ā″ĕr·ō·mē·çhan′iç, *n.* [*aero-*, and *mechanic*.] a mechanic whose work is repairing and adjusting aircraft.

ā″ĕr·ō·mē·çhan′iç, *a.* relating to aeromechanics.

ā″ĕr·ō·mē·çhan′içs, *n.* the science of air or other gases in motion or equilibrium: it has two branches, aerodynamics and aerostatics.

ā″ĕr·ō·med′i·cine, *n.* a branch of medicine concerned with the diseases and disorders that are incident to flight in the earth's atmosphere.

ā″ĕr·om′e·tĕr, *n.* [*aero-*, and Gr. *metron*, measure.] an instrument for weighing air or other gases, or for ascertaining the density of air and gases.

ā″ĕr·ō·met′riç, *a.* pertaining to aerometry.

ā″ĕr·om′e·try, *n.* the science of measuring the weight, density, etc. of air and gases; pneumatics.

ā′ĕr·ō·nąut, *n.* [*aero-*, and Gr. *nautēs*, a sailor.] the pilot or navigator of a balloon or dirigible.

ā″ĕr·ō·nąut′iç, ā″ĕr·ō·nąut′iç·ăl, *a.* 1. of aeronautics.
2. of aeronauts.

ā″ĕr·ō·nąut′içs, *n.* the science or art of making and flying aircraft; aviation.

ā″ĕr·ō·neū·rō′sis, *n.* a nervous condition of aviators under severe stress, with severe stomach pains, digestive disturbances, etc.

ā″ĕr·ō·phā′ġi·ə, ā″ĕr·oph′ə·ġy, *n.* an abnormal, spasmodic swallowing or gulping of air.

ā″ĕr·ō·phō′bi·ə, ā·ĕr·oph′ō·by, *n.* [*aero-*, and Gr. *phobos*, fear.] an abnormal fear of air, especially of drafts.

ā′ĕr·ō·phōne, *n.* [*aero-*, and Gr. *phōnē*, voice.]
1. an apparatus for intensifying sound waves in the air, used to detect approaching aircraft.
2. A trumpetlike appliance for the relief of the deaf.

ā′ĕr·ō·phore″, *n.* [*aero-*, and *-phore*.] an apparatus for supplying air or oxygen through a face mask, as to workers in mines, under water, etc.

ā″ĕr·ō·phō·tog′rə·phy, *n.* the science, art, or practice of taking photographs of the ground, etc. from an aircraft.

ā′ĕr·ō·phyte (-fīt), *n.* [*aero-*, and Gr. *phyton*, a plant.] same as *epiphyte.*

ā′ĕr·ō·plāne, *n.* [*aero-*, and L. *planus*, flat, level.] same as *airplane.*

ā′ĕr·ō·pulse″, *n.* [*aero-*, and *pulse* (throb).] a jet engine in which the high pressure developed in the burning of the fuel closes the air-intake valves of the combustion chamber: when the air is expelled from the jet, the pressure is lowered enough to open the valves for a fresh air supply.

ā′ĕr·ō·sçep″sy, ā″ĕr·ō·sçep′sis, *n.* [*aero-*, and Gr. *skepsasthai*, to explore.] the faculty of perception by the medium of the air, supposed to be a function of the antennae of insects.

ā′ĕr·ō·sçōpe, *n.* [*aero-*, and Gr. *skopein*, to look out.] in biology, a device for gathering dust, bacteria, etc. from the atmosphere, for microscopic examination.

āe·rōse′, *a.* resembling copper or brass.

ā″ĕr·ō·sid′ĕr·īte, *n.* [*aero-*, and Gr. *sidēritēs*, of iron.] a meteorite consisting chiefly of iron.

a″ĕr·ō·sid′ĕr·ō·līte, *n.* [*aero-*, and Gr. *sidēros*, iron, and *lithos*, stone.] a meteorite containing both iron and stone.

ā′ĕr·ō·sol″, *n.* [*aero-*, and *sol* (solution).] a suspension of colloidal particles in a gas.

ā′ĕr·ō·sol″ *a.* 1. designating or of a small container in which gas under pressure is used to aerate and dispense liquid through a valve in the form of a spray or foam.
2. dispensed by such a container; as, an *aerosol* insecticide, *aerosol* shaving cream.

ā′ĕr·ō·spāce″, *n.* [altered from *air·space*, from *air* and *space*.] the earth's atmosphere and the space outside it considered as one continuous field.

ā′ĕr·ō·spāce″, *a.* of aerospace, or of spacecraft or missiles designed for flight in aerospace.

ā′ĕr·ō·sphēre, *n.* [*aero-*, and *sphere*, from Gr. *sphaira*, a ball.] the air surrounding the earth; the atmosphere.

ā′ĕr·ō·stat, *n.* [*aero-*, and Gr. *statos*, sustaining.] a dirigible, balloon, or other lighter-than-air craft.

ā″ĕr·ō·stat′iç, ā″ĕr·ō·stat′iç·ăl, *a.* 1. of aerostatics.
2. aeronautic.
3. used in aerostats.

ā″ĕr·ō·stat′içs, *n.* the science that treats of the equilibrium of air or other gases, or of bodies sustained in them.

ā″ĕr·ō·stā′tion, *n.* 1. aerial navigation of lighter-than-air craft.
2. the science of aerostatics.

ā″ĕr·ō·ther″ə·peū′tiçs, *n.pl.* [construed as sing.], [*aero-*, and *therapeutics*.] the treatment of disease by the use of air, especially by exposing the patient to changes of atmospheric pressure.

ā″ĕr·ō·trop′iç, *a.* [*aero-*, and Gr. *tropē*, from *trepein*, to turn.] of, characterized by, influenced by, or having the nature of, geotropism.

ā·ĕr·ot′rō·pism, *n.* in botany, the deviation of roots from the natural direction of growth, by the action of gases.

ae·rū′ġi·nous (ē-), *a.* [L. *æruginosus*, adj. from *ærugo*, rust of copper, from *æs*, copper.] pertaining to or resembling copper rust; bluish-green.

ae·rū′ġō (ē-), *n.* [L., from *æs*, brass, copper.] the rust of brass or copper; verdigris.

ā′ĕr·y, *a.* airy; ethereal; spiritual. [Poetic.]

āer′y, (*also pronounced* ē′rē, ā′ĕr-y), *n.* same as *aerie.*

aes′çhy·nīte (es′), *n.* [Gr. *æschynē*, shame.] a rare mineral found in the Ural Mountains, an ore containing titanium, thorium, cerium, etc.

Aes·çhy·nom′e·nē, *n.* [L., a sensitive plant, from Gr. *aischynomenē*, f. ppr. of *aischynein*, to disfigure.] in botany, a genus of plants of the pea family, *Fabaceæ*, mostly found in South America.

aes·çhy·nom′e·nous, *a.* sensitive, as the leaves of some varieties of *Æschynomene.*

Aes·çū·lā′pi·ăn, Es·çū·lā′pi·ăn, *a.* relating to Aesculapius or the art of healing.

Aes·çū·lā′pi·us, Es·çū·lā′pi·us, *n.* [L., from Gr. *Asklēpios*.] in Roman mythology, the god of medicine, the son of Apollo by the nymph Coronis: identified with the Greek Asclepius.

aes′çū·lin, *n.* see *esculin.*

am·mō′ni·āte, *n.* any of several compounds containing ammonia.

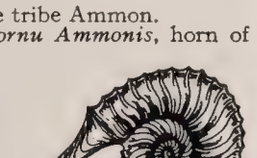
am·mō′ni·āte, *v.t.*; ammoniated, *pt., pp.*; ammoniating, *ppr.* to mix or combine with ammonia.

am·mō′ni·ā·ted, *a.* combined, saturated, or impregnated with ammonia.

am·mō′niç (*or* -mon′iç), *a.* of or pertaining to ammonium or ammonia.

am·mŏn″i·fi·çā′tion, *n.* 1. infusion with ammonia or ammonium compounds.
2. the production of ammonia by bacterial action in the decay of nitrogenous organic matter.

am·mon′i·fȳ, *v.t.*; ammonified, *pt., pp.*; ammonifying, *ppr.* to cause to undergo ammonification.



am·mon′i·fȳ, *v.i.* to undergo ammonification.

am·mō′ni·ō-, a combining form denoting the presence of ammonia or ammonium in a chemical compound.

Am′mŏn·īte, *n.* a member of the Semitic tribe Ammon.

Am′mŏn·īte, *a.* of the tribe Ammon.

am′mŏn·īte, *n.* [L. *cornu Ammonis*, horn of Ammon, from *Jupiter Ammon*, whose statues were represented with ram's horns.] the serpent stone, or *cornu Ammonis*, a fossil shell, curved into a spiral like a ram's horn, ranging in size from five inches to six feet in diameter. Fossils are found in strata of limestone and clay, and in argillaceous iron ore.

AMMONITE (5 in.–6 ft.)

am″mŏn·i·tif′ĕr·ous, *a.* [from *ammonite*, and *ferous*, from L. *ferre*, to bear.] containing the remains of ammonites.

am·mō′ni·um, *n.* in chemistry, the radical NH_4, present in salts produced by the reaction of ammonia with an acid: its compounds are like those of the alkali metals.

am·mō′ni·um çhlō′rīde, a white crystalline compound, NH_4Cl, produced by the reaction of ammonia with hydrochloric acid; sal ammoniac: it is used in dry cells, fertilizers, dyes, etc., and as a flux in soldering.

am·mō′ni·um hȳ·drox′īde, an alkali, NH_4OH, formed by dissolving ammonia in water.

am·mō′ni·um nī′trāte, a colorless, crystalline salt, NH_4NO_3, used in some explosives.

am·mō′ni·um sul′fāte, an ammonium salt, $(NH_4)_2SO_4$, made chiefly from synthetic ammonia and used in making fertilizers, in treating water, in tanning hides, etc.

am′mŏ·nō″, *a.* 1. of or containing ammonia.
2. derived from ammonia: used to describe compounds bearing the same relation to ammonia as certain other compounds bear to water; as, sodium amide, $NaNH_2$, is an *ammono* base corresponding to sodium hydroxide, NaOH.

am′mŏ·nō″-, [from *ammonia*.] a combining form meaning *of ammonia, containing ammonia*.

am″mŏ·nō·tel′iç, *adj.* [*ammono-*, and *telic*] excreting ammonia as the main nitrogenous waste: characteristic chiefly of freshwater fishes, frogs, etc.

Am·moph′i·là, *n.* [L., f. of *ammophilus*; Gr. *ammos*, sand, and *philos*, loving.]
1. a genus of hymenopterous insects, popularly called sand wasps.
2. a genus of grasses growing on the sandy coasts of North America and northern Europe.

am·moph′i·lous, *a.* sand-loving; growing in sandy places.

am·mū·ni′tion (-nish′un), *n.* [Fr. *amunition*, from L. *munitio*, from *munire*, to fortify; the *a* is due to mistaking *la munition* for *l'amunition*.]
1. bullets, gunpowder, shot, shells, bombs, grenades, rockets, and other projectiles and missiles.
2. any resources that may be used for attack and repulse, considered either literally or figuratively; as, boys use snow for *ammunition*; facts are his *ammunition*.
3. any military supplies; munitions. [Archaic.]

am·mū′ni′tion, *v.t.*; ammunitioned, *pt., pp.*; ammunitioning, *ppr.* to provide or equip with ammunition.

am·nē′si·à (*or* -zhà), *n.* [L., from Gr. *a* priv., and *mnasthai*, to remember.]
1. partial or total loss of memory caused by brain injury, or by shock, repression, etc.
2. loss of memory for certain kinds of words: a variety of aphasia: in full, *verbal amnesia*.

am·nē′siç, *a.* characterized by amnesia.

am·nē′siç, *n.* a person suffering from amnesia.

am·nes′tiç, *a.* producing amnesia.

am′nes·ty, *n.* [L. *amnestia*, from Gr. *amnēstia*, forgetfulness, *amnestos*, forgotten; *a* priv., and *mnasthai*, to remember.]
1. an act of oblivion; a general pardon of offenses against a government, or the proclamation of such pardon.
2. a deliberate overlooking, as of an offense.

am′nes·ty, *v.t.*; amnestied, *pt., pp.*; amnestying, *ppr.* to grant pardon or amnesty to.

am′niç, *a.* same as *amniotic*.

am″ni·ō·cen·tē′sis, *n.* [Mod. L., from *amnion*, and Gr. *kentēsis*, a pricking.] the surgical procedure of inserting a hollow needle through the abdominal wall into the uterus of a pregnant woman and extracting amniotic fluid for analysis to determine the presence of disease, genetic defects, etc.

am′ni·ŏn, *n.*; *pl.* **am′ni·ŏns** *or* **am′ni·à,** [Gr. *amnion*, the membrane around the fetus, dim. of *amnus*, lamb.]
1. the innermost membrane surrounding the fetus in mammals, birds, and reptiles.
2. a similar membrane of certain invertebrates, especially insects.
false amnion; in anatomy, the outer layer of the amnion, which, in a state of maturity, unites with the chorion.

Am·ni·ō′tà, *n.pl.* the group of vertebrates having an amnion during the embryo stage.

am·ni·ot′iç, *a.* pertaining to the amnion; contained in the amnion; as, the *amniotic* fluid.
amniotic acid; allantoin. [Obs.]

amn't, am not: see also *ain't*. [Colloq.]

à·moe′bà, *n.*; *pl.* **à·moe′bàs** *or* **à·moe′bae,** [Mod. L., from Gr. *amoibē*, change, from *ameibein*, to change.]
1. a microscopic, one-celled animal, that absorbs its food at every point of its body by means of processes which are also locomotive, being protruded and withdrawn at will, so that it constantly changes its shape; written also *ameba*.
2. [A–] a genus of microscopic protozoans, of which *Amœba proteus* is common.

AMOEBAS

am·oe·bae′um, *n.*; *pl.* **am·oe·bae′à,** [L., neut. of *amœbæus*, from Gr. *amoibaios*, alternate; *amoibē*, change.] a poem in which persons are represented as speaking alternately.

Am·oe·bē′à, *n.pl.* in zoology, the division, in some classifications, of the protozoans which includes the amoebas and similar organisms.

am·oe·bē′ăn, *a.* same as *amoebic*: written also *amebean*.

am·oe·bē′ăn, am·oe·bae′ăn, *a.* [see *amœbæum*.] alternately answering or responding.

à·moe′bi·ăn, *n.* a protozoan of the genus *Amœba*.

à·moe′biç, *a.* 1. of or like an amoeba or amoebas.
2. caused by amoebas.
Written also *amebic*.

à·moe′biç dy′sen·ter″y, a form of dysentery caused by a certain kind of amoeba.

à·moe′bi·form, *a.* of or characteristic of an amoeba: written also *amebiform*.

à·moe′bō·cȳte, *n.* see *leucocyte*: written also *amebocyte*.

à·moe′boid, *a.* like or characteristic of an amoeba, as in constantly changing shape: written also *ameboid*.
amoeboid movements; the alternate prolongation and retraction of an amoeba or other simple mass of protoplasm, as a colorless blood corpuscle.

à·moe′bous, *a.* resembling an amoeba: written also *amebous*.

à·moe′bū·là, *n.* a diminutive amoeba: written also *amebula*.

à·mŏk′, *a.* and *adv.* same as *amuck*.

ARCH

a, abutments
v, voussoirs or archstones
s, springers
p, piers
Ex, extrados
t, impost
In, intrados
k, keystone

5. in mining, a piece of ground left unworked near a shaft.
6. in geometry, an arc. [Obs.]
7. in architecture, a curved structure, as of masonry, used as a support over an open space, as in a bridge, doorway, etc. The separate stones which compose the arch are called voussoirs, or archstones; the extreme, or lowest, voussoirs are termed springers, and the uppermost, or central, one is called the keystone. The under or concave side of the voussoirs is called the intrados, and the upper or convex side the extrados of the arch. When the curves of the intrados and extrados are concentric or parallel, the arch is said to be extradosed. The supports which afford resting and resisting points to the arch are called piers and abutments. The upper part of the pier or abutment where the arch rests—technically, where it springs from—is the impost. The span of an arch is, in circular arches, the length of its chord; for the span is generally the width between the points of its opposite imposts whence it springs. The rise of an arch is the height of the highest point of its intrados above the line of the impost; this point is sometimes called the under side of the crown, the highest point of the extrados being the crown. Arches are designated in two ways; first, in a general manner, according to their properties, their uses, their position in a building, or their exclusive employment in a particular style of architecture. Thus, there are arches of equilibration, equipollent arches, arches of discharge, skew and reversed arches, Roman, pointed, and Saracenic arches. Second, they are named specifically according to the curve the intrados assumes, when that curve is the section of any of the geometrical solids; as, segmental, semicircular, cycloidal, elliptical parabolical, hyperbolical, or catenarian arches; or from the resemblance of the whole contour of the curve to some familiar object, as lancet arch and horseshoe arch; or from the method used in describing the curve, as equilateral, three-centered, four-centered, ogee, and the like. When any arch has one of its imposts higher than the other it is said to be rampant.

[A–] in Greek legend, (a) a giant compelled to support the heavens on his shoulders; (b) in Homer, a god in charge of the pillars of heaven; (c) a king changed into a mountain. 2. [A–] one who bears a great burden. 3. a collection of maps in a volume: supposed to be so called from a picture of Atlas supporting the globe, which often appeared on the front page of early atlases. 4. a book of tables, charts, illustrations, etc. of a specific subject or subjects; as, an anatomical *atlas*. 5. a large, square folio, resembling a volume of maps: called also *atlas folio*. 6. the top vertebra of the neck, articulating immediately with the occipital bone, and thus supporting the head, whence the name. 7. a size of drawing paper, 26 by 33 or 34 inches. 8. a collection or volume of plates or engravings explanatory of some subject. 9. the atlas beetle, *Chalcosoma atlas*. 10. *pl.* **at·lan′tēṣ,** in architecture, any of the atlantes.

Atlas powder; a compound of nitroglycerin used in blasting.

at′lăs, *n.* [Ar., smooth, bare, satin.] a fine fabric of silk and satin, manufactured in the East Indies.

at′lăs fōl′iō, a large, square folio size of books.

at′lăs ġrid, a system of parallel and perpendicular lines on an aerial photograph, dividing it into small squares for locating points on the photograph quickly.

at′lee, *n.* [native name.] the East Indian tamarisk salt tree, *Tamarix orientalis*.

Ät′li, *n.* [ON., from Goth. *Attila*, lit., little father.] in Norse mythology, a king of the Huns, killed by his wife, Gudrun, because he had killed her brothers for the treasure of Sigurd.

at′lō-, at·loid′ō-, a combining form used in anatomy, signifying *pertaining* or *referring to the atlas*.

at′loid, *a.* [*atlo-*, and Gr. *eidos*, form.] in anatomy, pertaining to the atlas.

ät′măn, *n.* [Sans., breath, soul, Supreme

Spirit.] in Hinduism: (a) the individual soul or ego; (b) [A–] the universal soul; source of all individual souls; oversoul.

at·mi·dom'e·tẽr, *n.* [Gr. *atmis, atmidos*, vapor, and *metron*, a measure.] an atmometer.

at·mi·dom'e·try, *n.* the science of ascertaining and measuring evaporation in the atmosphere.

at·mō·loġ'iç, at·mō·loġ'iç·ăl, *a.* pertaining to atmology.

at·mol'ō·ġist, *n.* one skilled in atmology; a student of atmology.

at·mol'ō·ġy, *n.* [Gr. *atmos*, vapor, and *logia*; from *legein*, to speak.] that branch of science which treats of the laws and phenomena of aqueous vapor.

at·mol'y·sis, *n.* [Gr. *atmos*, vapor, and *lysis*, a loosing, from *lyein*, to loose.] a method of separating mingled gases by causing them to pass through a vessel of porous material, such as graphite.

at″mol·y·zā'tion, *n.* the separation of mingled gases by atmolysis.

at'mō·līze, *v.t.*; atmolyzed, *pt., pp.*; atmolyzing, *ppr.* to separate by atmolysis.

at'mō·lī·zẽr, *n.* an instrument for atmolyzing.

at·mom'e·tẽr, *n.* [Gr. *atmos*, vapor, and *metron*, a measure.] an instrument used in measuring the evaporation from a humid surface in a given time; an evaporometer.

at'mŏs·phēre, *n.* [Gr. *atmos*, vapor, and *sphaira*, a sphere.]
1. all the air surrounding the earth.
2. the gaseous mass surrounding any star, planet, etc.
3. the air in any given place.
4. a pervading or surrounding mental or social influence; social environment.
5. the general tone of a work of art; as, a play with a fateful *atmosphere*.
6. the general effect, often exotic, produced by decoration, furnishings, etc.; as, the food is good but there's no *atmosphere*. [Colloq.]
7. in physics, a unit of pressure equal to 14.69 pounds per square inch.

at·mŏs·pher'iç, at·mŏs·pher'iç·ăl, *a.* 1. pertaining to, characteristic of, or existing in the atmosphere; as, *atmospheric* air or vapors, *atmospheric* currents.
2. dependent on the atmosphere. [Rare.]
I am an *atmospheric* creature. —Pope.
3. caused, produced, or acted upon by the atmosphere; as, an *atmospheric* effect.
4. of, having, or giving atmosphere or an atmosphere; as, *atmospheric* lighting.
atmospheric engine; a steam engine in which the steam is admitted only to the under side of the piston and for the up stroke, the steam being then condensed and a vacuum thereby created under the piston, which in consequence descends by the pressure of the atmosphere acting on its upper surface.
atmospheric line; in a steam pressure diagram, a line drawn by the pencil when the steam is shut off from the piston of the indicator and it is acted on by the pressure of the atmosphere alone. The height of the steam line above this shows the pressure of the steam, and the depth of the vacuum line below shows the degree of condensation which is then taking place in the engine.
atmospheric pressure; the weight of the atmosphere per square inch of surface; the pressure of 14.69 pounds per square inch exerted in all directions, at the sea level, by the atmosphere.

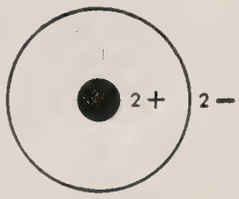
at·mŏs·pher'iç·ăl·ly, *adv.* 1. with regard to atmosphere.
2. by atmospheric pressure or influence.

at·mŏs·pher'içs, *n.pl.* in radio, (a) disturbances in reception, produced by natural electric discharges, as in a storm; static; (b) the phenomena producing these disturbances.

at·mŏs·phē·rol'ō·ġy, *n.* [Gr. *atmos*, vapor, *sphaira*, sphere, and *logia*, from *legein*, to speak.] the science which treats of the atmosphere.

at·mos'tē·ăl, *a.* relating to or of the nature of an atmosteon.

at·mos'tē·on, *n.*; *pl.* **at·mos'tē·ȧ,** [Gr. *atmos*, air, and *osteon*, bone.] in ornithology, an air-bone; an ossified tube that conveys air into the interior of a bone.



at'ō·kous, *a.* [Gr. *atokos*, barren; *a* priv., and *tokos*, offspring.]
1. in zoology, producing only asexual offspring, as the eggs of certain species of the *Annelida*.
2. asexual: applied to certain worms.

at'ọll, *n.* [from Maldive Is. term; perhaps from Malayalam *adal*, closing, uniting.] a coral island consisting of a ring of coral surrounding a central lagoon, very common in the Indian and Pacific Oceans.

ATOLL

at'ŏm, *n.* [Fr. *atome*; L. *atomus*; Gr. *atomos*, an atom, indivisible; *a* priv., and *tomos*, from *temnein*, to cut.]
1. a tiny particle; an extremely small bit of anything; a jot.
2. in chemistry and physics, any of the smallest particles of an element that combine with similar particles of other elements to produce compounds: atoms combine to form molecules, and consist of a complex arrangement of electrons revolving about a positively charged nucleus containing protons and neutrons; the fission of a nucleus by bombardment either with neutrons (as in atomic bombs), or with certain other very small particles, releases energy.
3. according to the theory of atomism, one of the extremely small particles which are not capable of division, out of which the entire universe is composed.

ATOM OF HELIUM

at'ŏm·bomb″ (-bom″), *n.* an atomic bomb: also *atom bomb*.

at'ŏm·bomb″, *v.t* to attack or destroy with atomic bombs.

ȧ·tom'iç, ȧ·tom'iç·ăl, *a.* 1. pertaining to an atom or atoms, atomic bombs, the energy in the atom, etc.
2. separated into atoms.
3. very small; tiny; minute.

Ȧ·tom'iç Āġe, the period characterized by the use of atomic energy: regarded as beginning with the creation of the first self-maintaining nuclear chain reaction on December 2, 1942.

ȧ·tom'i·çăl·ly, *adv.* in an atomic way; specifically, (a) into atoms or very small particles; (b) by atomic energy.

ȧ·tom'iç bomb (bom), an extremely destructive type of bomb, the power of which results from the immense quantity of energy suddenly released when a chain reaction of nuclear fission is set off by neutron bombardment in the atoms of a charge of plutonium or of the uranium isotope which has an atomic weight of 235 (U235): first used in warfare (1945) by the United States against the Japanese cities of Hiroshima and Nagasaki.

ȧ·tom'iç en'ẽr·ġy, the energy released from an atom in nuclear reactions; especially, the energy released in nuclear fission.

at·ō·mic'i·ty, *n.* 1. the condition of being made up of atoms.
2. in chemistry, (a) the number of atoms in a molecule; (b) the number of replaceable atoms or groups of atoms in the molecule of a compound; (c) valence.

ȧ·tom'iç num'bẽr, in chemistry, a number representing the relative position of an element in the periodic table, in which the elements are arranged in the order of either their atomic weights or their nuclear charges; a number representing the positive charge or the number of protons in the nucleus of the atom of an element: isotopes have the same atomic numbers but different atomic weights.

ȧ·tom'iç struç'tūre, in physics, a conventionalized, hypothetical concept of an atom, regarded as consisting of a central, positively charged nucleus and a number of negatively charged electrons revolving about it in various orbits: the number and arrangement of the electrons vary in the different elements.

ȧ·tom'iç thē'ō·ry, the theory that all material objects and substances are composed of atoms: see *atom*.

ȧ·tom'iç vol'ūme, in chemistry, the quotient obtained by dividing the atomic weight of an element by its specific gravity.

ȧ·tom'iç weight, in chemistry, a number representing the weight of one atom of an element as compared with an arbitrarily selected number representing the weight of one atom of another element taken as the standard (usually oxygen at 16).

at'ŏm·işm, *n.* [*atom*, and *-ism*.] the theory that the universe is made up of tiny, simple particles that cannot be destroyed or divided.

at'ŏm·ist, at″ŏm·is'tiç, *a.* of atomism or atomists.

at'ŏm·ist, *n.* one who believes in atomism.

at″ŏm·i·zā'tion, *n.* an atomizing or being atomized.

at'ŏm·īze, *v.t.*; atomized, *pt., pp.*; atomizing, *ppr.* 1. to separate into atoms.
2. to reduce a liquid to a fine spray.

at'ŏm·ī·zẽr, *n.* 1. one who atomizes.
2. a device for breaking a liquid, especially a medicine or perfume, into very small particles and spraying these out.

ATOMIZER

at·ŏm·ol'ō·ġy, *n.* the doctrine of atoms.

at'ŏm·y, *n.*; *pl.* **at'ŏm·ies,** 1. an atom.
2. a pygmy.

at'ŏm·y, *n.*; *pl.* **at'ŏm·ies,** [*anatomy*, separated into *an atomy*.] a skeleton. [Archaic.]

ȧ·tōn'ȧ·ble, *a.* capable of being atoned for.

ā·tōn'ăl, *a.* [*a-*, priv., and *tonal*.] having atonality; lacking tone.

ā·tōn'ăl·işm, *n.* the use or theory of atonality in composing music.

ā·tō·nal'i·ty, *n.* [*a-*, priv., and *tonality*.] in music, lack of tonality through intentional disregard of key.

ȧ·tōne', *v.i.*; atoned, *pt., pp.*; atoning, *ppr.* [ME. *attone, atoon, aton, at one*, at one, agreed.]
1. to make amends or reparation (*for* wrongdoing, a wrongdoer, etc.).
2. to be in agreement. [Obs.]

ȧ·tōne', *v.t.* 1. to expiate. [Obs.]
2. to harmonize. [Obs.]

ȧ·tōne'ment, *n.* 1. agreement; concord; reconciliation after enmity or controversy. [Obs.]
2. an atoning.
3. expiation; satisfaction or reparation given for an offense, injury, etc.: with *for*.
4. [A–] in theology, (a) the effect of Jesus' sufferings and death in redeeming mankind and bringing about the reconciliation of God to man; (b) this reconciliation.

ȧ·tōn'ẽr, *n.* one who makes atonement.

ȧ·ton'iç, *a.* [Gr. *atonos*, not stretched; *a* priv., and *tonos*, from *teinein*, to stretch.]
1. caused by or characteristic of atony.
2. unaccented: said of a word or syllable.
3. in phonetics, lenis. [Rare.]

ȧ·ton'iç, *n.* 1. an unaccented word or syllable.
2. in phonetics, a lenis consonant. [Rare.]

at'ō·ny, *n.* [Fr. *atonie*; L. *atonia*; Gr. *atonia*, languor; *a* priv., and *teinein*, to stretch.]
1. lack of bodily tone; weakness of the body or of a muscle or an organ.
2. in phonetics, lack of accent or stress.

ȧ·top', *prep.* on the top of.

ȧ·top', *adv.* and *a.* on or at the top.

-ā·tor, [L. *-ator*, in which *-tor*, an agency suffix is added to stems in *-a* of the first conjugation.] a suffix signifying the doer, agent, actor, as in cre*ator*, liber*ator*, educ*ator*.

-ȧ·to·ry, [L. *-atorius*, a compound suffix in which *-ius* is added to nouns in *-ator*.] a suffix signifying *of* or *pertaining to, of the nature of, produced by*, as in accus*atory*, exclam*atory*, declam*atory*.

ȧ toute force (ȧ tọọt), [Fr., with all force.] certainly; by all means.

at″rȧ·bi·lā'ri·ăn, *n.* a melancholy person.

at″rȧ·bi·lā'ri·ous, at″rȧ·bi·lā'ri·ăn, *a.* [L. *atrabilarius*, from *atra bilis*, black bile.] affected with melancholy, which the ancients attributed to the black bile; atrabilious.

at″rȧ·bi·lā'ri·ous·ness, *n.* the state of being melancholy, or atrabilious.

at·rȧ·bil'iăr (-yăr), *a.* atrabilious.

at·rȧ·bil'iȧ·ry (-yȧ-ry), *a.* in medicine, (a) of or relating to black bile; (b) pertaining to or designating certain renal organs; as, the *atrabiliary* capsules or blood vessels.

at·rȧ·bil'ious (-yus), *a.* 1. melancholy or morose: from the supposed preponderance of black bile.
2. hypochondriac.

at·rac·teñ′ch̤y·mȧ, *n.* [L., from Gr. *atraktos*, a spindle, and *enchyma*, infusion.] vegetable tissue consisting of spindle-shaped cells.

at·rȧ·men′tăl, at·rȧ·men′tous, *a.* [L. *atramentum*, black ink, from *ater*, black.] inky; black, like ink.

at·rēde′, *v.t.* to excel in council. [Obs.]

ȧ·trem′ble, *a.* trembling.

at·ren′, *v.t.* to outrun. [Obs.]

ȧ·trē′si·ȧ, (-shi-ȧ), *n.* [L., from Gr. *atrētos*, not perforated; *a* priv., and *trētos*, from *tetrainein*, to perforate.] absence or abnormal constriction of any natural passage of the body.

Ā′treus (-trọọs), *n.* [L.; Gr. *Atreus*.] in Greek legend, a king of Mycenae, son of Pelops and father of Agamemnon and Menelaus: to avenge the treachery of his brother, Thyestes, who seduced his wife and planned his murder, Atreus killed Thyestes' sons and served their flesh to him at a banquet.

ā′tri·ȧ, *n.*, pl. of *atrium*.

ā′tri·ăl, *a.* in anatomy, of or pertaining to an atrium.

ȧ·trich′i·ȧ, *n.* loss of the hair, especially of the head; baldness.

ā′tri·ō-, a combining form used in anatomical and medical terms to denote some relation to an atrium, as in *atrio*ventricular.

ā·tri·op′ō·răl, *a.* pertaining to the atrial pore.

ā′tri·ō·pōre, *n.* [*atrio-*, and Gr. *poros*, a passage.] the atrial pore.

ȧ·trip′, *adv.* in nautical language, said of an anchor just raised clear of the bottom. Sails are *atrip* when they are sheeted home, and ready for trimming. Yards are *atrip* when hoisted up, ready to have the stops cut for crossing; an upper mast is said to be *atrip* when the fid is loosed.

At′ri·plex, *n.* [L., from Gr. *atraphaxys*, an orach.] a genus of plants, order *Chenopodiaceæ*. They are mealy or scaly herbs or shrubs, with small unisexual flowers.

ā′tri·um, *n.*; *pl.* **ā′tri·ȧ, ā′tri·ums,** [L.]
1. the central court or main room of an ancient Roman house, generally ornamented with statues and pictures.
2. a hall or court in front of the entrance of certain ancient temples.
3. in anatomy, a chamber or cavity, especially an auricle of the heart.
4. in zoology, the large chamber into which the intestine opens in the *Tunicata*.

at′rō·chȧ, *n.* [L., from Gr. *a* priv., and *trochos*, a wheel, from *trechein*, to run.] the larva, or embryo, of a chaetopod worm, in which the cilia are spread over the body and do not appear in distinct rings.

at′rō·ch̤ous, at′rō·ch̤ăl, *a.* pertaining to or like the atrocha.

ȧ·trō′cious, *a.* [L. *atrox*, fierce, cruel, from *ater*, black.]
1. extremely brutal or cruel; outrageously wicked; evil.
2. very bad; in bad taste; abominable; as, an *atrocious* dress. [Colloq.]
3. very grievous; violent; as, *atrocious* symptoms. [Obs.]
Syn.—outrageous, flagitious, monstrous, villainous, flagrant, heinous, wicked, cruel.

ȧ·trō′cious·ly, *adv.* in an atrocious manner.

ȧ·trō′cious·ness, *n.* the state or quality of being atrocious; atrocity.

ȧ·troc′i·ty, *n.* [Fr. *atrocité*; L. *atrocitas*, from *atrox*, *atrocis*, cruel; *ater*, black.]
1. enormous wickedness; extreme cruelty.
2. a specific act of extreme cruelty.
The *atrocities* committed in that holy name.
—De Quincey.
3. a thing in very bad taste; a very displeasing thing; as, that picture's an *atrocity*. [Colloq.]

At′rō·pȧ, *n.* [L., from Gr. *Atropos*, one of the Fates, who cut the thread of life, unchangeable; from *a* priv., and *trepein*, to turn.] a genus of poisonous plants, of the order *Solanaceæ*. *Atropa belladonna*, or deadly nightshade, has a shining black berry like a cherry enclosed in the permanent calyx.

at′rō·păl, *a.* in botany, erect; orthotropous: said of an ovule.

ȧ·troph′i·c̤, *a.* pertaining to or affected with atrophy.

at′rō·phied (-fid), *a.* affected with atrophy; wasting or wasted away.

at′rō·phy, *n.* [Fr. *atrophie*; L. *atrophia*; Gr. *atrophia*, a wasting away; *a* priv., and *trephein*, to nourish.] a wasting away, especially of body tissue, an organ, etc., or the failure of an organ or part to grow because of insufficient nourishment.

at′rō·phy, *v.t.*; atrophied, *pt.*, *pp.*; atrophying, *ppr.* to cause to be wasted away.

at′rō·phy, *v.i.* to waste away; to fail to grow.

ȧ·trō′pi·ȧ, *n.* same as *atropin*.

at′rō·pine, at′rō·pin, *n.* [Gr. *atropos*, inflexible; *a* priv., and *trepein*, to turn.] a crystalline alkaloid, $C_{17}H_{23}NO_3$, obtained from the deadly nightshade, *Atropa belladonna*. It is very poisonous and is used to dilate the pupil of the eye and to relieve spasms.

at′rō·pism *n.* poisoning resulting from the improper use of atropine.

At′rŏ·pos, *n.* [L.; Gr. *Atropos*, lit., not to be turned, from *a-*, not, and *trepein*, to turn.] in Greek mythology, that one of the three Fates who is represented as cutting the thread of life.

Syn.—adherence, fondness, affection, inclination, bond, tie, adjunct, appendage.

at·tack′, *v.t.*; attacked (-takt′), *pt.*, *pp.*; attacking, *ppr.* [Fr. *attaquer*, to attack; another form of *attacher*, to fasten, join; *a*, L. *ad*, to, and Breton *tach*, a nail.]
1. to use force against in order to harm; to start a fight or quarrel with; to take the offensive against; to assault.
2. to begin a fight against with unfriendly words or writing; to begin a controversy with; to attempt to bring into disrepute, by satire or criticism; as, to *attack* a man or his opinions in the newspapers.
3. to begin to perform energetically; to undertake vigorously; as, to *attack* a piece of work.
4. to begin to destroy or affect injuriously; as, he was *attacked* by malaria; restlessness *attacked* the community; sulfuric acid *attacks* zinc vigorously.
Syn.—encounter, assail, assault, charge, invade, fall upon.

at·tack′, *v.i.* to make an assault; as, to *attack* methodically.

at·tack′, *n.* 1. the act of attacking.
2. any hostile offensive action, especially with armed forces; also, a body of troops making such action.
3. the beginning of any action or undertaking; the start; the entering upon a piece of work.
4. the act or manner of such beginning.
5. an onset or occurrence of a disease.
6. destructive action, as by a chemical agent.
Syn.—assault, invasion, onset, inroad, charge.

at·tack′ȧ·ble, *a.* open to attack; assailable.

at·tack′ẽr, *n.* one who attacks.

at′tȧ·ġen, at′tȧ·ġas, *n.* [L. *attagena*, from Gr. *attagen*, *attagas*, a bird.] any of various European birds, as the common partridge.

at′tȧ·ghan, *n.* same as *yataghan*.

at·tāin′, *v.i.*; attained (-tānd′), *pt.*, *pp.*; attaining, *ppr.* [ME. *attainen*, *atteinen*; OFr. *ataindre*; L. *attingere*, to touch upon, attain; *ad*, to, and *tangere*, to touch.] to come or arrive by motion, bodily exertion, or effort toward a place, object, etc.; also, to reach a goal: usually with *to*.

at·tāin′, *v.t.* 1. to gain through effort; to achieve or accomplish.
Is he wise who hopes to *attain* the end without the means! —Tillotson.
2. to reach or come to; to arrive at.
But ere such tidings shall his ears *attain*.
—Hoole's Tasso.
3. to reach in excellence or degree; to equal. [Obs.]
4. to ascertain; to get possession of. [Obs.]
5. to overtake. [Obs.]
Syn.—accomplish, acquire, compass, procure, achieve, reach, gain, get, earn, win.

at·tāin′, *n.* attainment. [Obs.]

at·tāin·ȧ·bil′i·ty, *n.* attainableness.

at·tāin′ȧ·ble, *a.* capable of being attained.

at·tāin′ȧ·ble·ness, *n.* the quality of being attainable.

at·tāin′dẽr, *n.* [ME. *attayndere*; OFr. *ataindre, ateindre*, to accuse, convict, from L. *attingere*; *ad*, to, and *tangere*, to touch, attain.]
1. the act of attainting or state of being attainted; the legal consequences of judgment of death or outlawry pronounced for being sentenced for a treason or felony. By English common law, the attainder formerly brought the consequences of forfeiture of lands, tenements, and hereditary rights, and loss of civil rights generally: see *bill of attainder*.
2. a disgracing; a state of being in dishonor. [Obs.]

at·tāin′ment, *n.* 1. the act of attaining; the act of arriving at or reaching by effort; as, the *attainment* of excellence.
2. that which is attained, as an acquired skill or accomplishment; as, a man of great *attainments*.

at·tāint′, *v.t.*; attainted, *pt.*, *pp.*; attainting, *ppr.* [ME. *ataynten*, *atteinten*, to convict; OFr. *ateint*, pp. of *ateindre*, from L. *attingere*; *ad*, to, and *tangere*, to touch, fasten.]
1. to condemn to attainder; to find guilty of a crime, as of felony or treason, involving forfeiture of civil privileges.
2. to convict; to prove guilty. [Obs.]
3. to disgrace; to taint or stain.
4. to infect, as with some noxious quality. [Rare.]
5. to make a charge of crime or misconduct against; to accuse. [Archaic.]
6. to touch. [Obs.]

at·tāint′, *n.* 1. a taint; dishonor; especially some mark of personal dishonor or social corruption.
2. an attainder.
3. a blow or wound on the legs or feet of a horse, from overreaching.
4. the conviction of a jury for the rendering of a false verdict; also, a writ issued after such conviction, reversing the original verdict.

at·tāint′ment, *n.* the state of being attainted, or the act of attainting; conviction; attainder.

at·tāin′tūre, *n.* attaintment; attainder.

At·tā′lē·ȧ, *n.* [L., from Gr. *Attalos*, a king of Pergamum.] a genus of palms allied to the coconut palm, found in tropical America. One species, *Attalea funifera*, yields a valuable fiber, the piassava.

at·tāme′, *v.t.* 1. to begin. [Obs.]
2. to make an incision into. [Obs.]

at·tam′i·nāte, *v.t.* to contaminate. [Obs.]
at′tap, *n.* [Malay.] the nipa palm.
at′tăr, *n.* [Pers. *'atar*, fragrance, from Ar. *'atara*, to smell sweet.] a highly fragrant essential oil or perfume obtained from flowers, especially from the petals of roses; also called *ottar*, or *otto*.
attar of roses; a fragrant oil made from the petals of roses, especially damask roses.
