Foreword

Measurements are used to help establish the size of something. How far is it to the Moon? What is the page size of this book? How strong is the wind? So that these questions may be answered, many standards of measurement have been developed, encompassing things as diverse as radio wavelengths, wind speeds, earthquakes, and laundry codes. Different standards have been created around the world, and units based on both the US units/UK imperial and metric systems of measurement are now encountered. As a result, knowledge is needed of how to convert values from one system to another. The simple need to measure has created a complex web of units that now affects every aspect of life.

Measurements & Conversions is a uniquely useful guide to this world of measures. The book is divided into twelve sections, each providing essential information on the main units of measurement or features of a particular topic. When relevant, individual sections have conversion formulas, e.g. for metric and US units/UK imperial conversion equivalents, with conversion tables to provide immediate visual reference.

Measurements & Conversions is an indispensable, handy-sized guide to the international variety in units of measurement. It is an essential companion, whether for school, office, or home.

Contents

- 6 HOW TO USE THIS BOOK**
- 7 Unit conversion index
- 10 Glossary
- 26 Unit systems
- 1: NUMBERS**
- 28 Named numbers
- 29 Numerical prefixes
- 32 Historic number systems
- 34 Roman number system
- 36 Mathematical symbols
- 37 Arithmetic operations
- 38 Binary numbers
- 39 Computer coding systems
- 42 Fractions, decimals, and percentages
- 46 Prime numbers
- 47 Fibonacci sequence
- 48 Square and cube roots
- 50 Multiplication tables
- 54 Multiplication grid
- 55 Interest
- 2: LENGTH AND AREA**
- 60 Formulas: length
- 62 Conversion tables: length
- 70 Formulas: area
- 72 Conversion tables: area
- 78 Geometry of area
- 79 Geometry of surface area
- 3: VOLUME**
- 80 Formulas
- 83 Conversion tables
- 97 Geometry of volume
- 98 Cooking measures
- 100 Beverage measures
- 4: WEIGHT**
- 102 Formulas
- 104 Conversion tables
- 110 Periodic table
- 112 Chemical elements
- 124 Scales of hardness
- 5: ENERGY**
- 126 Formulas
- 127 Conversion tables
- 130 Electromagnetic spectrum
- 132 Earthquakes
- 134 Decibels
- 136 Energy needs by activity
- 137 Energy values of selected foods

| 244 | Longest rivers |
| 246 | Largest lakes |
| 247 | Largest waterfalls |
| 248 | Largest deserts |
| 250 | Deepest caves |
| 251 | Capitals of the world |

How to use this book

Measurements & Conversions is divided into 12 sections, each of which is devoted to a particular category of facts and figures. If you know which category you wish to explore, merely turn to the table of contents to find the relevant page number.

Unit conversion index

In this book, there are tables for converting units from the US units/UK imperial system of measurement to the metric system (and vice versa), and for converting one type of unit to another within the same system. The Unit Conversion Index enables you to refer quickly to the tables in which a particular unit is converted.

Formulas

Within each section, you will find a selection of conversion formulas. These are easy-to-use formulas for common conversions; you will need to use a calculator for most of them, although many are simple, approximate conversions.

Conversion tables

Each group of units has its conversion tables: pages of quick-reference tables for all US units/UK imperial and metric measurements from meters to feet, grains to grams. These are particularly handy if you do not have a calculator. It would be impossible to accommodate tables listing every possible conversion, so the material included is not exhaustive.

You can use the following to convert figures larger than those in the table:

(a) separate the total into its parts: e.g., to convert 1,536

units of something, first convert the largest part in the table (1,000) and then each remaining part (500, 30, and 6). Then add these separate conversions together to find the total conversion; or

(b) move the decimal point in your original figure until it is at the same decimal place as those in the table. Look for the nearest number to this in the table and record the appropriate conversion. Then move the decimal point the same number of places in the opposite direction to give an approximate conversion of your original number.

Note also that the figures in the conversion tables are rounded up or down to the third decimal place, and so are not always exact.

Unit conversion index

Glossary

acre A measure of land: originally the amount of land that a yoke of oxen could plough in a day. Equal to 4,840 yd².

amu *see* Atomic mass unit.

ampere (A) The unit for measuring electric current.

ångström (Å) A unit of length, used mainly to measure the wavelength of light. Named for the Swedish physicist A.J. Ångström (1814–74). Equal to 10^{-10} m (10^{-8} cm).

apothecaries' system A system of weights used especially by pharmacists.

are (a) A unit of measure equal to an area of 10×10 m ($1\text{ a} = 100\text{ m}^2$). *See also* Hectare (ha): $100\text{ a} = 1\text{ ha}$.

astronomical unit (au or AU) A unit of measure based on the distance between the Earth and the Sun.

Approximately equal to 1.5×10^8 km.

atomic mass unit (amu)

chemical A unit of mass equal to $\frac{1}{16}$ of the weighted mass of the three naturally occurring neutral oxygen isotopes.

1 amu chemical = $(1.660 \pm 0.00005) \times 10^{-27}$ kg.

Formerly called the atomic weight unit.

international A unit of mass equal to $\frac{1}{12}$ of the mass of a neutral carbon-12 atom. 1 amu international = $(1.66033 \pm 0.00005) \times 10^{-27}$ kg.

physical A unit of mass equal to $\frac{1}{16}$ of the mass of an oxygen atom. 1 amu physical = 1.660×10^{-27} kg.

atto- In the US, a prefix meaning a quintillionth (10^{-18}); in the UK, meaning a trillionth (10^{-18}). For example, in

the US, 1 attometer = 1 quintillionth of a meter, in the UK 1 attometer = 1 trillionth of a meter.

avoirdupois system A system of weights based on the 16-ounce pound and the 16-dram ounce.

baker's dozen A counting unit equal to 13.

barleycorn A unit of measure of length equal to $\frac{1}{3}$ in.

billion (bil) In the US, equal to 10^9 ; in UK, equal to 10^{12} . Commonly now also used in the UK to mean 10^9 .

bolt A measure of length, usually for fabric. In the US, a bolt of wallpaper equals 16 yd and a bolt of cloth equals 40 yd; in the UK, a bolt of cloth equals 42 yd.

British thermal unit (Btu) Measure of heat needed to raise the temperature of 1 lb of water by 1 °F. Equal to 252 calories.

bushel (bu) A measure of dry volume. In the US, 1 bu = 8 gal (64 US pt); in the UK, 1 bu = 8 gal (64 UK pt). The measures are not to be confused: 1.03 US bu = 1 UK bu.

caliber A unit of length used to measure the diameter of a tube or the bore of a firearm, in $\frac{1}{100}$ in or $\frac{1}{1000}$ in increments.

calorie (cal) A measure of heat energy representing the amount of heat needed to raise 1 g of water by 1 °C. Also called "small calorie": 1,000 cal = 1 kcal or Cal. See also Joule; Kilocalorie.

carat A unit of weight equal to 200 mg (3.1 grains). Also used as a measure of gold purity (per 24 parts gold alloy).

centi- Prefix meaning a 100 or $\frac{1}{100}$; e.g., a centiliter (cl) is a unit of volume equal to $\frac{1}{100}$ (0.01) liter.

centrad A measure of a plane angle, especially used to measure the angular deviation of light through a prism. 1 centrad = $\frac{1}{100}$ (0.01) radian.

century A measure of time equal to 100 years.

chain A measure of length equal to 22 yd. Also known as Gunter's chain.

engineer's chain A measure of length equal to 100 ft.

nautical chain A measure of length equal to 15 ft.

square chain A measure of area equal to 484 yd².

chaldron A measure of volume. In the US, 1 chaldron = 36 US bu; in the UK, 1 chaldron = 36 UK bu (288 gal).

cord A unit of dry volume, especially used for timber. Equal to 128 ft³.

cubic units (cu or ³) These are arrived at by multiplying a number by itself twice. With a three dimensional object, the height, width, and length are multiplied together to give its volume, which is measured in cubic units.

cubit A unit of length approximately equal to 18 in. Originally based on the distance from the tip of the middle finger to the elbow.

cup A measure of volume (either liquid or solid) used especially in cooking. In the US, 1 cup = $\frac{1}{2}$ US pt (16 tbsp); in the UK, 1 cup = $\frac{1}{2}$ UK pt (16 tbsp). The two should not be confused: 1½ US cups = 1 UK cup.

day

mean solar day A measure of time representing the interval between consecutive passages of the Sun across the meridian, averaged over 1 year.

1 day = 24 hr (86,400 s).

sidereal day A measure of time approximately equal to 23 hr, 56 min, 4.09 s. A sidereal day represents the time needed for one complete rotation of the Earth on its axis.

deca- Prefix meaning ten; e.g., a decameter is a measure of length equal to 10 m.

decade A measure of time equal to 10 years.

deci- Prefix meaning $\frac{1}{10}$; e.g., a deciliter (dl) is a measure of liquid volume equal to $\frac{1}{10}$ (0.01) liter.

decibel (dB) A measure of relative sound intensity.

deka- see Deca-.

degree ($^{\circ}$)

geometrical A unit of measure of plane angle equal to $\frac{1}{360}$ of the circumference of a circle (1 circle = 360°).

temperature A measure of temperature difference representing a single division on the temperature scale. The centigrade scale has 100 equal degrees; the Fahrenheit scale has 212 equal degrees.

digit One of ten Arabic symbols representing numbers 0 to 9. Also used in astronomy as a unit of measure equal to $\frac{1}{12}$ the diameter of the Sun or Moon. Used in ancient Egypt as a measure of length: 1 digit = 1 finger width.

douzième A unit of length equal to $\frac{1}{12}$ line.

dozen A counting unit equal to 12.

drachm A unit of mass in the apothecaries' system. 1 drachm = $\frac{1}{8}$ apothecaries' ounce (60 grains).

dram (dr) A unit of mass equal to $\frac{1}{16}$ oz.

fluid dram A unit of liquid volume. In the US, 1 fl dr = $\frac{1}{8}$ US fl oz; in the UK, 1 fl dr = $\frac{1}{8}$ UK fl oz.

The two should not be confused:

0.960759 US fl dr = 1 UK fl dr.

dry Used in US to distinguish measures of dry (solid) volume as opposed to liquid (fluid) volume. For example, in the US, 1 fl pt = $\frac{1}{8}$ US gal; 1 dry pt = $\frac{1}{64}$ US bu. 1 US dry pt \approx 0.969 UK pt \approx 1.163 US fl pt. In the UK, the pint measures both dry and liquid volume.

dyne A unit of force equal to that needed to produce acceleration of 1 cm per second in a mass of 1 g. Replaced by the newton (N); 1 dyne = 10^{-5} N.

electronvolt (eV) A unit of energy measurement representing the energy acquired by an electron in passing through a potential difference of 1 volt.
 $1 \text{ eV} = (1.6 \pm 0.00007) \times 10^{-19} \text{ J}$.

erg A unit of energy measurement equal to the energy produced by a force of 1 dyne through a distance of 1 cm. Replaced by the joule, 1 erg = 10^{-7} J.

exa- In the US, a prefix meaning 1 quintillion (10^{18}); in the UK, meaning 1 trillion (10^{18}).

fathom (fm) Unit of length, especially used to measure marine depth. 1 fm = 6 ft. Originally based on the span of two outstretched arms.

feet per minute A unit of velocity representing the number of feet traveled in 1 min.

femto- In the US, a prefix meaning 1 quadrillionth (10^{-15}); in the UK, meaning 1 thousand billionth (10^{-15}).

firkin A unit of volume, used especially to measure beer or ale. In the US, 1 firkin = 9.8 US gal; in the UK, 1 firkin = 9 UK gal.

fluid Used to distinguish units of liquid (fluid) volume as opposed to dry (solid) volume.

fluid dram see Dram.

fluid ounce see Ounce.

foot (ft) A unit of length equal to 12 in.

furlong (fur) Unit of length equal to $\frac{1}{8}$ mi (660 ft).

gallon (gal) A unit of liquid volume. In the US, 1 gal = 8 US pt; in the UK, 1 gal = 8 UK pt. The two should not be confused: 1.2 US gal = 1 UK gal.

Winchester wine gallon (WWG) A unit of volume used for wine, honey, or other liquids. Equal to 0.83 UK gal.

gauge A unit of length used to measure the diameter of a shotgun bore; e.g., 6-gauge equals 23.34 mm.

Originally based on the number of balls, of certain size, contained in 1 lb of shot.

giga- In the US, a prefix meaning 1 billion (10^9); in the UK, meaning 1 thousand million (10^9). For example, in the US, 1 gigameter = 1 billion meters; in the UK, 1 gigameter = 1 thousand million meters.

gill A unit of liquid volume. In the US (gi), 1 gi = $\frac{1}{4}$ US fl pt; in UK, 1 gill = $\frac{1}{4}$ UK pt. The two should not be confused: $\frac{1}{2}$ US gi = 1 UK gill.

grade (g) A measure of plane angle in geometry.
 $1g = 0.9^\circ$.

grain (gr) A unit of mass measurement, used especially in the apothecaries' system. 1 grain = $\frac{1}{4,000}$ lb (avoirdupois); 480 grains = 1 ounce troy;
24 grains = 1 pennyweight.

gram (g) A unit of mass or volume measurement.
 $1 g = 0.001$ kg.

gross A counting measure equal to 144 (or 12 dozen).

hand A unit of length, used especially to measure horses' height. 1 hand = 4 in.

hectare (ha) A measure of area, usually of land, equal to 10,000 m².

hecto- Prefix meaning 100; e.g., a hectometer (hm) is a unit of length equal to 100 m.

hertz (Hz) A unit of frequency measurement equal to 1 cycle per second.

horsepower (hp) A unit of work representing the power needed to raise 550 lb by 1 ft in 1 s.

metric horsepower A unit of power representing that needed to raise a 75-kg mass 1 m in 1 s.

hour (hr) A unit of time measurement equal to 60 min (3,600 s).

hundredweight (cwt) A unit of mass.

1 hundredweight = 4 quarters; 1 hundredweight troy = 100 pounds troy

long (UK) hundredweight (cwt) 1 hundredweight = 112 lb.

short (US) hundredweight (sh cwt)

1 short hundredweight = 100 lb.

inch (in) A unit of length equal to $\frac{1}{12}$ ft.

inches per second A unit of velocity representing the number of inches traveled in 1 s.

joule (J) A unit of energy equal to the work done when a force of 1 newton is moved through a distance of 1 m. Used instead of calorie; 1 J = 0.239 cal. Named for J.P. Joule (1818–89).

keg A unit of volume, used especially for beer,

approximately equal to 30 gal. Also used as a measure of weight for nails, equal to 100 lb.

kelvin (K) A scale of temperature measurement in which each degree is equal to $\frac{1}{273.16}$ of the interval between 0 K (absolute zero) and the triple point of water. $K = ^\circ C + 273.16$. Named for William Thomson, Lord Kelvin (1824–1907).

kilo- Prefix meaning 1,000; e.g., a kilogram (kg) is a unit of volume measurement equal to 1,000 g.

kilocalorie (kcal or Cal) A unit of energy measurement representing the amount of heat required to raise 1 kg of water by 1 $^\circ C$. Also called the “international calorie.”
1 kcal = 1,000 cal. *See also* Calorie.

kilogram *see* Kilo-

kilometer (km) A unit of length equal to 1,000 m.

kiloparsec A unit of distance used to measure distance between galactic bodies. 1 kiloparsec = 3,260 light years (ly).

kilowatt (kW) A unit of power equal to 1,000 watts (W).

kilowatt-hour (kWh) A unit of energy equal to the energy expended when a power of 1 kW is used for 1 hr.

knot (kn) A nautical unit of speed measurement equal to the velocity at which 1 n mi is traveled in 1 hr.

1 kn = 6,076 ft per hour.

lakh An Indian counting unit equal to 100,000.

lambda (λ) A unit of volume measurement.

1 λ = 1 microliter (10^{-6} liter).

league A unit of length equal to 3 mi.

light year (ly) A unit of length (distance) representing the distance traveled by electromagnetic waves (light)

through space in 1 year. 1 light year = 9.4605×10^{12} km (or, in the US, 6 trillion miles; in the UK, 6 billion miles).

line A unit of length equal to $\frac{1}{12}$ in; 4 lines = 1 barley-corn. It can also be used to measure button diameters, when 1 line = $\frac{1}{40}$ in.

liter (l) A unit of volume measurement equal to the volume of 1 kg of water at its maximum density. 1 liter = 1,000 cm³.

magnum A measure of volume, used especially for wine or champagne. In the US, 1 magnum = $\frac{2}{3}$ US gal; in the UK, 1 magnum = $\frac{2}{3}$ UK gal.

mega- Prefix meaning 1 million; e.g., a megaton is a unit of weight equal to 1 million tons.

megahertz (MHz) A unit of frequency (for radio) equal to 1 million cycles per second.

meter (m) A unit of length equal to 100 cm.

meters per minute (m/min) A unit of velocity measurement representing the number of meters traveled in 1 min.

metric system A system of measurement based on the meter.

micro- Prefix meaning 1 millionth; e.g., a microliter is a unit of volume equal to 1 millionth of a liter.

micron (μm) A unit of length equal to $\frac{1}{1,000}$ (0.001) mm. Also called the micrometer.

mile (mi) A unit of length equal to 1,760 yd. Also called the statute mile in the UK.

nautical mile (n mi) A unit of length used in navigation. In the UK, 1 n mi = 6,080 ft; in the metric system, 1 n mi (international) = 1,852 m.

Also called the geographical mile.

sea mile A unit of length distinguished from the nautical mile. 1 sea mile = 1,000 fathoms (6,000 ft).

miles per hour (mph) A unit of velocity representing the number of miles traveled in 1 hr.

millennium A period of time equal to 1,000 years.

milli- Prefix meaning 1 thousandth or $\frac{1}{1000}$; e.g., 1 millimeter (mm) is a unit of length equal to $\frac{1}{1000}$ (0.001) m.

minim A unit of volume, usually for liquids. In the US, 1 minim = $\frac{1}{480}$ US fl oz; in the UK, 1 minim = $\frac{1}{480}$ UK fl oz. The two should not be confused: 0.961 US minim = 1 UK minim.

minute

geometric ('') A unit of measure for plane angles.

$1' = \frac{1}{60}^\circ$.

time (m or min) A unit of time measurement equal to 60 s. 60 min = 1 hr.

month

lunar A unit of time equal to 4 weeks (2,419,200 s).

sidereal see Year, sidereal.

tropical see Year, tropical.

nano- In the US, a prefix meaning 1 billionth (10^{-9}); in the UK, meaning 1 thousand millionth (10^{-9}). For example, in the US, 1 nanometer = 1 billionth of a meter; in the UK, 1 nanometer = 1 thousand millionth of a meter.

nautical mile see Mile.

newton (N) A unit of force equal to that creating an acceleration of 1 m per second when applied to a mass of 1 kg. This unit has replaced the dyne:

N $1\text{ N} = 10^5$ dynes. Named for Isaac Newton (1642–1727).

ohm (Ω) A unit of electrical resistance. One ohm equals the resistance across which a potential difference of 1 volt produces a current flow of 1 ampere. Named for G.S. Ohm (1787–1854).

ounce (oz) A unit of mass equal to $\frac{1}{16}$ lb.

fluid ounce A unit of liquid volume measurement.

In the US, 1 fl oz = $\frac{1}{16}$ US pt; in the UK, 1 fl oz = $\frac{1}{20}$ UK pt.

metric ounce A unit of mass equal to 25 g. Also called a Mounce.

ounce troy A unit of mass in the troy system. Equal to $\frac{1}{12}$ pound troy.

pace A unit of length/distance equal to 5 ft, used in ancient Rome.

palm A unit of length used in ancient Egypt, equal to the width of an average palm of the hand (4 digits).

parsec (pc) A unit of length used for measuring astronomical distances. 1 parsec = 3.26 light years (ly).

pascal (pa) A unit of pressure equal to the force of 1 N acting over an area of 1 m².

peck (pk) A unit of dry volume. In the US, 1 peck = 2 US gal; in the UK, 1 peck = 2 UK gal. The two should not be confused: 1.032 US peck ≈ 1 UK peck.

pennyweight (dwt) A unit of weight in the troy system equal to $\frac{1}{20}$ ounce troy (25 grains).

perch A unit of length equal to 5½ yd. Also called a pole or a rod.

peta- In the US, a prefix meaning 1 quadrillion (10^{15});

in the UK, meaning 1 thousand billion (10^{15}).

pi (π) Symbol and name representing the ratio of a circle's circumference to its diameter. Its value is approximately 3.14.

pica A unit of length, used by printers, approximately equal to $\frac{1}{6}$ in.

pico- In the US, a prefix meaning 1 trillionth (10^{-12}); in the UK, a prefix meaning 1 billionth (10^{-12}). For example, in the US, 1 picometre = 1 trillionth of a metre; in the UK, 1 picometre = 1 billionth of a metre.

pint (pt) A unit of volume. In the US, two kinds of pint are used: 1 fl pt = $\frac{1}{8}$ US gal. In the UK, a pint measures either dry or liquid volume: 1 pt = $\frac{1}{8}$ UK gal;

$\frac{1}{64}$ US bu = 1 dry pt. These two should not be confused: 1.2 US fl pt \approx 1.03 US dry pt \approx 1 UK pt.

point A unit of length, used especially by printers, approximately equal to $\frac{1}{2}$ in.

pole Unit of length equal to $5\frac{1}{2}$ yd. *See also* Perch; Rod.

pound (lb) A unit of mass equal to 453.59 g.

force pound A unit of force equal to 32.174 pounds. Also called pound-force.

pound troy (lb tr) A unit of mass in the troy system. 1 pound troy = 12 ounces troy.

poundal A unit of force equal to that needed to give an acceleration of 1 ft per second to a mass of 1 lb.

PSI Pounds per square inch: a unit for measuring pressure. 1 PSI equals the pressure resulting from a force of 1 force pound acting over an area of 1 in². *See also* Pound.

quart (qt) A unit of volume, usually for liquids. In the US, 1 qt = 2 US fl pt; in the UK, 1 qt = 2 UK pt. The

two should not be confused: 1.2 US qt \approx 1 UK qt.

dry quart (dry qt) A unit of measure for dry (solid) volume in US.

reputed quart A unit of volume, used especially for wine, equal to $\frac{1}{6}$ of a Winchester wine gallon.

Winchester quart A unit of fluid volume equal to 2.5 liters.

quarter (qr)

mass quarter A unit of mass. In the US, 1 quarter = $\frac{1}{4}$ US ton (500 lb); in the UK, 1 quarter = $\frac{1}{4}$ UK hundredweight (28 lb).

quarter troy (qr tr) A unit of weight equal to 25 troy pounds.

volume quarter A unit of volume, in the US, equal to 8.24 US bu. In the UK, equal to 8 UK bu.

quintal (q) A unit of mass equal to 100 kg or 100 lb. Called the short hundredweight in the US.

rad A short form of radian, a unit of measure for plane angles. *See also* Centrad.

ream A unit of volume, used to measure paper in bulk. 1 ream equals about 500 sheets.

rod

area rod A unit of area equal to $30\frac{1}{4}$ yd². Also called a square perch or a square pole.

length rod A unit of length equal to $5\frac{1}{2}$ yd. *See also* Perch; Pole.

rood A unit of area equal to $\frac{1}{4}$ acre (1210 yd²).

score A counting unit equal to 20.

scruple A unit of mass in apothecaries' system equal to 20 grains.

second A unit of time equal to $\frac{1}{60}$ minute.

geometric ('') A measure of plane angle equal to $\frac{1}{360}^\circ$ and $\frac{1}{60}''$.

orbital A unit of time equal to $\frac{1}{31,557}$ of the tropical year 1900. Also called Ephemeris second.

sidereal A unit of time equal to $\frac{1}{26,400}$ of the interval needed for one complete rotation of the Earth on its axis.

square units (sq or 2) These are arrived at by multiplying a number by itself once. To find the area of, e.g. a square or rectangle, length and width are multiplied together to give the area, which is measured in square units.

stere A unit of volume, especially used for measuring timber. 1 stere = 1 m³.

stone (st) A unit of mass used in the UK. 1 st = 14 lb.

tablespoon (tbsp) A unit of volume used in cooking and equal to 1.5 centiliters (3 tsp). 16 tbsp = 1 cup.

teaspoon (tsp) A unit of volume used in cooking and equal to 0.5 centiliter. 3 tsp = 1 tbsp.

tera- In the US, a prefix meaning 1 trillion (10^{12}); in the UK, meaning 1 billion (10^{12}). For example, in the US, 1 terameter = 1 trillion meters; in the UK, 1 terameter = 1 billion meters.

ton A unit of mass. In the US, 1 ton = 2,000 lb. Called a short ton in the UK. In the UK, 1 ton = 2,240 lb. Called a long ton in the US.

ton troy (ton tr) A unit of mass equal to 2,000 pounds troy.

tonne (t) A unit of mass equal to 1,000 kg. Also called a metric ton.

tonne of coal equivalent A measure of energy production/consumption based on the premise that 1 tonne of coal provides 8,000 kilowatt-hours (kWh) of energy.

trillion In US, equal to 10^{12} ; in UK, equal to 10^{18} .

troy system A system of mass measurement based on the 20-ounce pound and the 20-pennyweight ounce.

volt (V) A unit of electromotive force and potential difference. Equal to the difference in potential between two points of a conducting wire carrying a constant current of 1 ampere (A), when the power released between the points is 1 watt (W). Named for Alessandro Volta (1745–1827).

watt (W) A unit of power equal to that available when 1 J of energy is expended in 1 s.

$1\text{ W} = 1\text{ volt}\cdot\text{ampere}$; $746\text{ W} = 1\text{ horsepower (hp)}$. Named for James Watt (1736–1819).

X-unit (x or XU) A unit of length used especially for measuring wavelength. $1\text{ x-unit} \approx 10^{-3}\text{ \AAngström}$ (10^{-13} m).

yard (yd) A unit of length equal to 3 ft (36 in).

yards per minute (ypm) A unit of velocity representing the number of yards traveled in 1 min.

year A unit of time measurement determined by the revolution of the Earth around the Sun.

anomalistic year Equals the time interval between two consecutive passages of the Earth through its perihelion (365 days, 6 hr, 13 min, 53 s).

sidereal year Equals the time in which it takes the Earth to revolve around the Sun from one fixed point (usually a star) back to the same point (365 days, 6 hr, 9 min, 9 s).

tropical year Equals the time interval between two consecutive passages of the Sun, in one direction, through the Earth's equatorial plane (or from vernal equinox to vernal equinox; 365 days, 5 hr, 48 min, 46 s).

Unit systems

International System of Units

The International System of Units (or Système International d'Unités – SI) is the current form of the metric system that has been in use since 1960. In the US, the SI system is increasingly used in education, science, and in everyday life.

The table opposite shows the common conversions from the metric to the US system of units.

Base units

There are seven base units in SI:

| Unit | Symbol | Quantity |
|-------------|---------------------------|---------------------|
| meter | m | length/distance |
| kilogram | kg | mass |
| ampere | A | electric current |
| K | thermodynamic temperature | |
| candela | cd | luminosity |
| second | s (or sec) | time |
| mole | mol | amount of substance |

Prefixes to use with SI units

Prefixes are added to each of the base units to indicate multiples and submultiples of ten:

Submultiple/

| multiple | Prefix | Symbol |
|-----------------|---------------|---------------|
| 10^{-6} | micro- | r |
| 10^{-3} | milli- | m |
| 10^{-2} | centi- | c |
| 10^{-1} | deci- | d |
| 10 | deca- | da |
| 10^2 | hecto- | h |
| 10^3 | kilo- | k |
| 10^6 | mega- | M |

Derived units

In addition, the SI system uses derived units. For example, velocity is given in meters per second (m/s , ms^{-1}). Other derived units in SI are referred to by special names: the watt (W) is a unit of power; the joule (J) is a unit of energy; and the newton (N) is a unit of force.

Common conversions

| | Metric US |
|---------------------------------------|---|
| Length | |
| 1 millimeter (mm) | 0.039 in. |
| 1 centimeter (cm) | 0.394 in. |
| 1 meter (m) | $3.281 \text{ ft} = 1.094 \text{ yd}$ |
| 1 kilometer (km) | $1094 \text{ yd} = 0.621 \text{ mi}$ |
| Area | |
| 1 square millimeter (mm^2) | 0.015 in. ² |
| 1 square centimeter (cm^2) | 0.155 in. ² |
| 1 square meter (m^2) | $10.764 \text{ ft}^2 = 1.196 \text{ yd}^2$ |
| 1 hectare (ha) | $2.471 \text{ acres} = 0.00386 \text{ mi}^2$ |
| 1 square kilometer (km^2) | 0.386 mi ² |
| Volume | |
| 1 cubic centimeter (cm^3) | 0.061 in. ³ |
| 1 cubic meter (m^3) | $35.315 \text{ ft}^3 = 1.308 \text{ yd}^3 = 227.020 \text{ dry gal} = 264 \text{ fl gal}$ |
| 1 milliliter (ml) | 0.034 fl oz |
| 1 centiliter (cl) | 0.338 fl oz |
| 1 liter (l) | $2.113 \text{ fl pt} = 1.056 \text{ fl qt} = 0.264 \text{ fl gal}$ |
| Weight | |
| 1 gram (g) | 0.035 oz |
| 1 kilogram (kg) | $2.205 \text{ lb} = 35.28 \text{ oz}$ |
| 1 tonne (t) | $1.102 \text{ tons} = 2204.623 \text{ lb}$ |

1: Numbers

Named numbers

Many numbers have names. Some of these names are in everyday use, others apply in more specialized areas such as music and multiple births and for sums of money. Some names for specialized numbers have the same first part (prefix). These prefixes indicate the number to which the name refers.

Everyday use

- 1/10** Tithe
- 2** Pair, couple, brace
- 6** Half a dozen
- 12** Dozen
- 13** Baker's dozen
- 20** Score
- 50** Half century
- 100** Century
- 144** Gross

Musicians

- 1** Soloist
- 2** Duet
- 3** Trio
- 4** Quartet
- 5** Quintet
- 6** Sextet
- 7** Septet
- 8** Octet

Multiple births

- 2** Twins
- 3** Triplets
- 4** Quadruplets (quads)
- 5** Quintuplets (quints)
- 6** Sextuplets

Slang for money

- 1¢** Penny
- 5¢** Nickel
- 10¢** Dime
- 25¢** Quarter, two bits
- \$1** Buck

Numerical prefixes**Prefixes in numerical order**

| | | | |
|-------------|---|-----------|---------------------------------------|

| ◁◁◁ | □□□ | אָלֹהֶת | |

Roman number system

The Roman numeral system is a method of notation in which the capitals are modeled on ancient Roman inscriptions. The numerals are represented by seven capital letters of the alphabet:

| | |
|---|--------------|
| I | one |
| V | five |
| X | ten |
| L | fifty |
| C | one hundred |
| D | five hundred |
| M | one thousand |

These letters are the foundation of the system; they are combined in order to form all numbers. If a letter is preceded by another of lesser value (e.g., IX), the value of the combined form is the difference between the values of each letter (e.g., $IX = X (10) - I (1) = 9$).

To determine the value of a string of Roman numbers (letters), find the pairs in the string (those beginning with a lower value) and determine their values, then add these to the values of the other letters in the string:

$$MCMXCI = M + CM + XC + I = 1,000 + 900 + 90 + 1 = 1991$$

A dash over a letter multiplies the value by 1,000 (e.g. $\overline{V} = 5,000$).

| | | | |
|------------------------|--------------------|-------------------|--------------------|
| 1 I | 12 XII | 35 XXXV | 100 C |
| 2 II | 13 XIII | 40 XL | 200 CC |
| 3 III | 14 XIV | 45 XLV | 300 CCC |
| 4 IV or IIII | 15 XV | 50 L | 400 CD |
| 5 V | 16 XVI | 55 LV | 500 D |
| 6 VI | 17 XVII | 60 LX | 600 DC |
| 7 VII | 18 XVIII | 65 LXV | 700 DCC |
| 8 VIII | 19 XIX | 70 LXX | 800 DCCC |
| 9 IX | 20 XX | 75 LXXV | 900 CM |
| 10 X | 25 XXV | 80 LXXX | 1000 M |
| 11 XI | 30 XXX | 90 XC | 2000 MM |

Mathematical symbols

| | | | |
|--------------|--|----------------------|--------------------------|
| $+$ | plus or positive | \geq | greater than or equal to |
| $-$ | minus or negative | \leq | less than or equal to |
| \pm | plus or minus, positive or negative | \gg | much greater than |
| \times | multiplied by | \ll | much less than |
| \div | divided by | $\sqrt{}$ | square root |
| $=$ | equal to | ∞ | infinity |
| \equiv | identically equal to | \propto | proportional to |
| \neq | not equal to | Σ | sum of |
| $\not\equiv$ | not identically equal to | \prod | product of |
| \approx | approximately equal to | Δ | difference |
| \sim | of the order of or similar to | \therefore | therefore |
| $>$ | greater than | \angle | angle |
| $<$ | less than | \parallel | parallel to |
| \geq | not greater than | \perp | perpendicular to |
| \leq | not less than | $:$ | is to |

Arithmetic operations

The four basic arithmetic operations are addition, subtraction, multiplication, and division. Each part of an arithmetic operation has a specific name.

Addition

$$\begin{array}{r} 29 \\ \text{Addend} \end{array}$$

$$\begin{array}{r} +6 \\ \hline 35 \\ \text{Sum} \end{array}$$

Subtraction

$$\begin{array}{r} 74 \\ \text{Minuend} \end{array}$$

$$\begin{array}{r} -16 \\ \hline 58 \\ \text{Subtrahend} \end{array}$$

Multiplication

$$\begin{array}{r} 46 \\ \text{Multiplicand} \end{array}$$

$$\begin{array}{r} \times 9 \\ \hline 414 \\ \text{Multiplier} \end{array}$$

Product

Division

$$\begin{array}{r} 3 \\ \overline{)44} \\ 39 \\ \hline 5 \end{array}$$

Divisor Quotient
Dividend Remainder

Fraction

$$\begin{array}{r} 5 \\ \hline 8 \end{array} \quad \frac{5}{8}$$

Numerator
Denominator

Simple (or vulgar) fraction

$$\begin{array}{r} 9 \\ \hline 7 \end{array} \quad \frac{9}{7}$$

Numerator
Denominator

Binary numbers

The binary system is formulated on a base of 2, or on a sum of powers of 2. For example, the number 101011 is equal to $2^5 + 0 + 2^3 + 0 + 2^1 + 2^0$; in the decimal system, this number equals 43. The system is used frequently in computer applications.

In describing computer storage, 1 bit = 1 binary digit; 1 byte = 8 bits in most systems; 1 megabyte (MB) = 1,048,576 bytes. The table below shows other decimal/binary equivalents.

| Decimal | Binary | Decimal | Binary |
|---------|--------|---------|-------------------|
| 1 | 1 | 21 | 10101 |
| 2 | 10 | 30 | 11110 |
| 3 | 11 | 40 | 101000 |
| 4 | 100 | 50 | 110010 |
| 5 | 101 | 60 | 111100 |
| 6 | 110 | 90 | 1011010 |
| 7 | 111 | 100 | 1100100 |
| 8 | 1000 | 200 | 11001000 |
| 9 | 1001 | 300 | 100101100 |
| 10 | 1010 | 400 | 110010000 |
| 11 | 1011 | 500 | 11110100 |
| 12 | 1100 | 600 | 1001011000 |
| 13 | 1101 | 900 | 1110000100 |
| 14 | 1110 | 1,000 | 1111101000 |
| 15 | 1111 | 2,000 | 11111010000 |
| 16 | 10000 | 4,000 | 111110100000 |
| 17 | 10001 | 5,000 | 1001110001000 |
| 18 | 10010 | 10,000 | 10011100010000 |
| 19 | 10011 | 20,000 | 100111000100000 |
| 20 | 10100 | 100,000 | 11000011010100000 |

Computer coding systems

ASCII (American Standard Code for Information Interchange) is an international coding system of character representation. Its 256 codes represent computer commands and letters of the alphabet.

Hexadecimal is a system of numbering based on 16 digits (as opposed to 10 in the decimal system): 1 to 9 and A to F.

Binary, ASCII, and hexadecimal systems are used in computer programming.

The table below shows character equivalents in decimal, hexadecimal, and ASCII systems.

| Dec | Hex | ASCII | Dec | Hex | ASCII |
|------------|------------|--------------|------------|------------|--------------|
| 000 | 00 | NUL | 016 | 10 | DLE |

Prime numbers

These are whole numbers that have only two factors – the number itself and the number 1. The only even prime number is 2; all other prime numbers are odd.

There are an infinite number of prime numbers. The first 126 are given below. The number at the foot of the table is the largest prime known in 1952. The largest prime known in 1983 has 39,751 digits.

| | | | | | | | | |
|----|-----|-----|-----|-----|-----|-----|-----|-----|
| 2 | 47 | 109 | 191 | 269 | 353 | 439 | 523 | 617 |

Fibonacci sequence

Each number in a Fibonacci sequence is the sum of the two numbers preceding it. The sequence can therefore be built up using simple addition. Below is an example of a Fibonacci sequence.

$$0+1 = \mathbf{1}$$

$$987+610 = \mathbf{1,597}$$

$$1+1 = \mathbf{2}$$

$$1,597+987 = \mathbf{2,584}$$

$$2+1 = \mathbf{3}$$

$$2,584+1,597 = \mathbf{4,181}$$

$$3+2 = \mathbf{5}$$

$$4,181+2,584 = \mathbf{6,765}$$

$$5+3 = \mathbf{8}$$

$$6,765+4,181 = \mathbf{10,946}$$

$$8+5 = \mathbf{13}$$

$$10,946+6,765 = \mathbf{17,711}$$

$$13+8 = \mathbf{21}$$

$$17,711+10,946 = \mathbf{28,657}$$

$$21+13 = \mathbf{34}$$

$$28,657+17,711 = \mathbf{46,368}$$

$$34+21 = \mathbf{55}$$

$$46,368+28,657 = \mathbf{75,025}$$

$$55+34 = \mathbf{89}$$

$$75,025+46,368 = \mathbf{121,393}$$

$$89+55 = \mathbf{144}$$

$$121,393+75,025 = \mathbf{196,418}$$

$$144+89 = \mathbf{233}$$

$$196,418+121,393 = \mathbf{317,811}$$

$$233+144 = \mathbf{377}$$

$$317,811+196,418 = \mathbf{514,229}$$

$$377+233 = \mathbf{610}$$

$$514,229+317,811 = \mathbf{832,040}$$

$$610+377 = \mathbf{987}$$

$$832,040+514,229 = \mathbf{1,346,269}$$

Square and cube roots

*Accurate to 3 decimal places – they have not been rounded up or down.

Multiplication grid

Below is a quick-reference grid giving products and quotients. It can be used for either multiplication or division.

| Row | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 |
|--------|----|----|----|----|----|----|----|----|-----|-----|-----|-----|
| Column | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 |
| 1 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 |
| 2 | 2 | 4 | 6 | 8 | 10 | 12 | 14 | 16 | 18 | 20 | 22 | 24 |
| 3 | 3 | 6 | 9 | 12 | 15 | 18 | 21 | 24 | 27 | 30 | 33 | 36 |
| 4 | 4 | 8 | 12 | 16 | 20 | 24 | 28 | 32 | 36 | 40 | 44 | 48 |
| 5 | 5 | 10 | 15 | 20 | 25 | 30 | 35 | 40 | 45 | 50 | 55 | 60 |
| 6 | 6 | 12 | 18 | 24 | 30 | 36 | 42 | 48 | 54 | 60 | 66 | 72 |
| 7 | 7 | 14 | 21 | 28 | 35 | 42 | 49 | 56 | 63 | 70 | 77 | 84 |
| 8 | 8 | 16 | 24 | 32 | 40 | 48 | 56 | 64 | 72 | 80 | 88 | 96 |
| 9 | 9 | 18 | 27 | 36 | 45 | 54 | 63 | 72 | 81 | 90 | 99 | 108 |
| 10 | 10 | 20 | 30 | 40 | 50 | 60 | 70 | 80 | 90 | 100 | 110 | 120 |
| 11 | 11 | 22 | 33 | 44 | 55 | 66 | 77 | 88 | 99 | 110 | 121 | 132 |
| 12 | 12 | 24 | 36 | 48 | 60 | 72 | 84 | 96 | 108 | 120 | 132 | 144 |

Multiplication

To multiply 6 by 9, for example, scan down column six until you reach row nine. The number in the square where column six intersects row nine is the product, 54.

Division

To divide 56 by 8, scan down column eight to find 56 (the dividend) then scan across to find the row number. This is the quotient, 7.

Interest

Interest refers to the charge made for borrowing money or to payment given for investing money. It is usually expressed in terms of percentage rates. There are two types of interest: simple interest and compound interest.

Simple interest

This type of interest is calculated on the amount of money originally loaned (the principal). The formula used to calculate simple interest is:

$$I = \frac{P \times R \times T}{100}$$

I is interest, P is principal, R is the percentage rate per unit time, and T is the length of time (measured in units) over which the money is invested or loaned.

The final sum – or amount of money to which the principal will grow – is figured using the formula:

$$S(\text{sum}) = P\left(1 + \frac{R \times T}{100}\right)$$

Compound interest

Unlike simple interest, which is paid only on the principal, compound interest is paid also on the previous interest earned. Thus the sum – or amount to which the principal will grow – increases at a much faster rate than with simple interest.

Compound interest is figured using the formula:

$$S = P(1 + i)^n$$

The "i" represents the periodic interest; "n" is the number of periods.

Compound interest

The table below shows the compound interest paid (in dollars) on a principal of \$100. The interest rate is in percent per annum.

| Period | 4% | 5% | 6% | 7% |
|----------|-------|-------|-------|-------|
| 1 day | 0.011 | 0.014 | 0.016 | 0.019 |
| 1 week | 0.077 | 0.096 | 0.115 | 0.135 |
| 6 months | 2.00 | 2.50 | 3.00 | 3.50 |
| 1 year | 4.00 | 5.00 | 6.00 | 7.00 |
| 2 years | 8.16 | 10.25 | 12.36 | 14.49 |
| 3 years | 12.49 | 15.76 | 19.10 | 22.50 |
| 4 years | 16.99 | 21.55 | 26.25 | 31.08 |
| 5 years | 21.67 | 27.63 | 33.82 | 40.26 |
| 6 years | 26.53 | 34.01 | 41.85 | 50.07 |
| 7 years | 31.59 | 40.71 | 50.36 | 60.58 |
| 8 years | 36.86 | 47.75 | 59.38 | 71.82 |
| 9 years | 42.33 | 55.13 | 68.95 | 83.85 |
| 10 years | 48.02 | 62.89 | 79.08 | 96.72 |

Comparing the two

Money grows much more quickly with compound interest than with simple interest. Compare, for example, the amount of time required for an amount of money to double itself with simple interest and with compound interest:

| 8% | 9% | 10% | 12% | 14% | 16% |
|-----------|-----------|------------|------------|------------|------------|
| 0.022 | 0.025 | 0.027 | 0.033 | 0.038 | 0.044 |
| 0.154 | 0.173 | 0.192 | 0.231 | 0.269 | 0.308 |
| 4.00 | 4.50 | 5.00 | 6.00 | 7.00 | 8.00 |
| 8.00 | 9.00 | 10.00 | 12.00 | 14.00 | 16.00 |
| 16.64 | 18.81 | 21.00 | 25.44 | 29.96 | 34.56 |
| 25.97 | 29.50 | 33.10 | 40.49 | 48.15 | 56.09 |
| 36.05 | 41.16 | 46.41 | 57.35 | 68.90 | 81.06 |
| 46.93 | 53.86 | 61.05 | 76.23 | 92.54 | 110.03 |

| 99.90 | 117.19 | 135.79 | 177.31 | 225.19 | 280.30 |
| 115.89 | 136.74 | 159.37 | 210.58 | 270.72 | 341.14 |

| Rate | Simple | Compound |
|-------------|------------------|-----------------|
| 7% | 14 yrs, 104 days | 10 yrs, 89 days |
| 10% | 10 yrs | 7 yrs, 100 days |

2: Length and area

Formulas: length

Below are listed the multiplication/division factors for converting units of length from US units/UK imperial units to metric, and vice versa. Note that two kinds of factors are given: quick, for an approximate conversion that can be made without a calculator; and accurate, for an exact conversion.

| Milli-inches (mils) | Micrometers (μm) | Quick | Accurate |
|---------------------|-------------------------------|--------------|-----------------|
| ■■■■■ mils | ■■■■■ μm | $\times 25$ | $\times 25.4$ |
| ■■■■■ μm | ■■■■■ mils | $\div 25$ | $\times 0.0394$ |
| <hr/> | | | |
| Inches (in) | Millimeters (mm) | | |
| ■■■■■ in | ■■■■■ mm | $\times 25$ | $\times 25.4$ |
| ■■■■■ mm | ■■■■■ in | $\div 25$ | $\times 0.0394$ |
| <hr/> | | | |
| Inches (in) | Centimeters (cm) | | |
| ■■■■■ in | ■■■■■ cm | $\times 2.5$ | $\times 2.54$ |
| ■■■■■ cm | ■■■■■ in | $\div 2.5$ | $\times 0.394$ |
| <hr/> | | | |
| Feet (ft) | Meters (m) | | |
| ■■■■■ ft | ■■■■■ m | $\div 3.3$ | $\times 0.305$ |
| ■■■■■ m | ■■■■■ ft | $\times 3.3$ | $\times 3.281$ |
| <hr/> | | | |
| Yards (yd) | Meters (m) | | |
| ■■■■■ yd | ■■■■■ m | $\div 1$ | $\times 0.914$ |
| ■■■■■ m | ■■■■■ yd | $\times 1$ | $\times 1.094$ |

| Fathoms (fm) | Meters (m) | Quick | Accurate |
|-----------------------|-----------------|--------|-----------|
| fm | → m | × 2 | × 1.83 |
| m | → fm | ÷ 2 | × 0.547 |
| <hr/> | | | |
| Chains (ch) | Meters (m) | | |
| ch | → m | × 20 | × 20.108 |
| m | → ch | ÷ 20 | × 0.0497 |
| <hr/> | | | |
| Furlongs (fur) | Meters (m) | | |
| fur | → m | × 200 | × 201.17 |
| m | → fur | ÷ 200 | × 0.005 |
| <hr/> | | | |
| Yards (yd) | Kilometers (km) | | |
| yd | → km | ÷ 1000 | × 0.00091 |
| km | → yd | × 1000 | × 1093.6 |
| <hr/> | | | |
| Miles (mi) | Kilometers (km) | | |
| mi | → km | × 1.5 | × 1.609 |
| km | → mi | ÷ 1.5 | × 0.621 |
| <hr/> | | | |
| Nautical miles (n mi) | Miles (mi) | | |
| n mi | → mi | × 1.2 | × 1.151 |
| mi | → n mi | ÷ 1.2 | × 0.869 |
| <hr/> | | | |
| Nautical miles (n mi) | Kilometers (km) | | |
| n mi | → km | × 2 | × 1.852 |
| km | → n mi | ÷ 2 | × 0.54 |
| <hr/> | | | |

Conversion tables: length

Formulas: area

Below are listed the multiplication/division factors for converting units of area from US units/UK imperial units to metric, and vice versa. Note that two kinds of factors are given: quick, for an approximate conversion that can be made without a calculator; and accurate, for an exact conversion.

| | Circular mils (cmil) | Quick | Accurate |
|---|---|--------------|------------------|
| | Square micrometers (μm^2) | | |
|  | $\text{cmil} \longrightarrow \mu\text{m}^2$ $\mu\text{m}^2 \longrightarrow \text{cmil}$ | $\times 500$ | $\times 506.7$ |
| | | $\div 500$ | $\times 0.002$ |
|  | Square inches (in^2) Square millimeters (mm^2) | | |
| | $\text{in}^2 \longrightarrow \text{mm}^2$ $\text{mm}^2 \longrightarrow \text{in}^2$ | $\times 650$ | $\times 645.2$ |
| | | $\div 650$ | $\times 0.0015$ |
|  | Square inches (in^2) Square centimeters (cm^2) | | |
| | $\text{in}^2 \longrightarrow \text{cm}^2$ $\text{cm}^2 \longrightarrow \text{in}^2$ | $\times 6.5$ | $\times 6.452$ |
| | | $\div 6.5$ | $\times 0.15$ |
|  | Square chains (ch^2) Square meters (m^2) | | |
| | $\text{ch}^2 \longrightarrow \text{m}^2$ $\text{m}^2 \longrightarrow \text{ch}^2$ | $\times 400$ | $\times 404.686$ |
| | | $\div 400$ | $\times 0.0025$ |

| | Square miles (mi^2) | Quick | Accurate |
|---------------|-------------------------------------|--------------|----------------|
| | Square kilometers (km^2) | | |
| mi^2 | $\rightarrow \text{km}^2$ | $\times 2.5$ | $\times 2.590$ |
| km^2 | $\rightarrow \text{mi}^2$ | $\div 2.5$ | $\times 0.386$ |

| | Square miles (mi^2) | | |
|---------------|--------------------------------|--------------|------------------|
| | Hectares (ha) | | |
| mi^2 | $\rightarrow \text{ha}$ | $\times 250$ | $\times 258.999$ |
| ha | $\rightarrow \text{mi}^2$ | $\div 250$ | $\times 0.0039$ |

| | Hectares (ha) | | |
|------|---------------------------|--------------|----------------|
| | Acres | | |
| ha | $\rightarrow \text{acre}$ | $\times 2.5$ | $\times 2.471$ |
| acre | $\rightarrow \text{ha}$ | $\div 2.5$ | $\times 0.405$ |

| | Square meters (m^2) | | |
|---------------|--------------------------------|------------|----------------|
| | Square yards (yd^2) | | |
| m^2 | $\rightarrow \text{yd}^2$ | $\times 1$ | $\times 1.196$ |
| yd^2 | $\rightarrow \text{m}^2$ | $\div 1$ | $\times 0.836$ |

| | Square meters (m^2) | | |
|---------------|--------------------------------|-------------|-----------------|
| | Square feet (ft^2) | | |
| m^2 | $\rightarrow \text{ft}^2$ | $\times 11$ | $\times 10.764$ |
| ft^2 | $\rightarrow \text{m}^2$ | $\div 11$ | $\times 0.093$ |

Conversion tables: area

The tables below can be used to convert units of area from one measuring system to another. The first group of tables converts US units/UK imperial units to

Geometry of area**ABBREVIATIONS****a**= length of top**b**= length of base**h**= perpendicular height**r**= length of radius

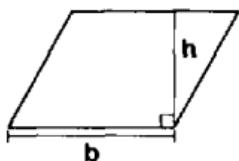

$$\pi = 3.1416$$

**Circle**

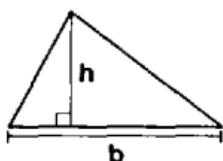

$$\pi \times r^2$$

**Rectangle**

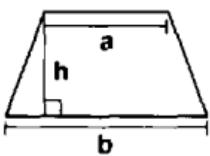

$$b \times h$$

**Parallelogram**

$$b \times h$$

**Triangle**

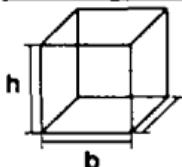

$$\frac{1}{2} \times b \times h$$

**Trapezoid**

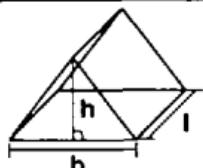

$$\frac{(a + b) h}{2}$$

Geometry of surface area**ABBREVIATIONS****b**=breadth of base**h**=perpendicular height**l**=length of base**r**=length of radius

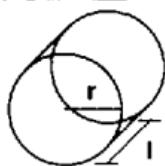

$$\pi = 3.1416$$

**Cube**

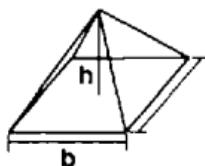

$$h \times b \times 6$$

**Prism**

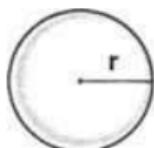

$$(b \times h) + (3 \times l \times b)$$

**Cylinder**

$$(2 \times \pi \times r \times l) + (2 \times \pi \times r^2)$$

**Pyramid**

$$(2 \times b \times h) + (b^2)$$

**Sphere**

$$4 \times \pi \times r^2$$

3: Volume

Formulas

Below are listed the multiplication/division factors for converting units of volume from one measuring system to another. Note that two kinds of factors are given: quick, for an approximate conversion that can be made without a calculator; and accurate, for an exact conversion.

| | | US fluid gallons (fl gal) | Quick | Accurate |
|----------|-----------|---|-------|----------|
| 1 | 1 | UK gallons (gal) | | |
| | | US fl gal → UK gal | ÷ 1 | × 0.833 |
| | | UK gal → US fl gal | × 1 | × 1.201 |
| 1 | 1 | US fluid quarts (fl qt) | | |
| | | UK quarts (qt) | | |
| | | US fl qt → UK qt | ÷ 1 | × 0.833 |
| | | UK qt → US fl qt | × 1 | × 1.201 |
| 1 | 1 | US fluid pints (fl pt) | | |
| | | UK pints (pt) | | |
| | | US fl pt → UK pt | ÷ 1 | × 0.833 |
| | | UK pt → US fl pt | × 1 | × 1.201 |
| 1 | 1 | US fluid ounces (fl oz) | | |
| | | UK fluid ounces (fl oz) | | |
| | | US fl oz → UK fl oz | ÷ 1 | × 1.041 |
| | | UK fl oz → US fl oz | × 1 | × 0.961 |
| 1 | 16 | Cubic inches (in^3) | | |
| | | Cubic centimeters (cm^3) | | |
| | | $\text{in}^3 \longrightarrow \text{cm}^3$ | × 16 | × 16.387 |
| | | $\text{cm}^3 \longrightarrow \text{in}^3$ | ÷ 16 | × 0.061 |

| | | | |
|----------|------------|---|--|
| 1 | 35 | Cubic meters (m^3) Cubic feet (ft^3) | |
| | | $m^3 \longrightarrow ft^3$ $\times 35 \quad \times 35.315$ | |
| | | $ft^3 \longrightarrow m^3$ $\div 35 \quad \times 0.028$ | |
| 1 | 1 | Cubic meters (m^3) Cubic yards (yd^3) | |
| | | $m^3 \longrightarrow yd^3$ $\times 1 \quad \times 1.308$ | |
| | | $yd^3 \longrightarrow m^3$ $\div 1 \quad \times 0.765$ | |
| 1 | 30 | US fluid ounces (fl oz) Milliliters (ml) | |
| | | $US\ fl\ oz \longrightarrow ml$ $\times 30 \quad \times 29.572$ | |
| | | $ml \longrightarrow US\ fl\ oz$ $\div 30 \quad \times 0.034$ | |
| 1 | 4 | US fluid gallons (fl gal) Liters (l) | |
| | | $US\ fl\ gal \longrightarrow l$ $\times 4 \quad \times 3.785$ | |
| | | $l \longrightarrow US\ fl\ gal$ $\div 4 \quad \times 0.264$ | |
| 1 | 2 | Liters (l) US fluid pints (fl pt) | |
| | | $l \longrightarrow US\ fl\ pt$ $\times 2 \quad \times 2.113$ | |
| | | $US\ fl\ pt \longrightarrow l$ $\div 2 \quad \times 0.473$ | |
| 1 | 1 | Liters (l) US fluid quarts (fl qt) | |
| | | $l \longrightarrow US\ fl\ qt$ $\times 1 \quad \times 1.056$ | |
| | | $US\ fl\ qt \longrightarrow l$ $\div 1 \quad \times 0.947$ | |
| 1 | 264 | Cubic meters (m^3) US fluid gallons (fl gal) | |
| | | $m^3 \longrightarrow US\ fl\ gal$ $\times 264 \quad \times 264.173$ | |
| | | $US\ fl\ gal \longrightarrow m^3$ $\div 264 \quad \times 0.004$ | |

| | | |
|------------|--|-----------------------|
| 1 | Cubic meters (m^3) US dry gallons (dry gal) | Quick Accurate |
| 227 | $m^3 \rightarrow$ dry gal $\times 227 \times 227.020$ $dry gal \rightarrow m^3 \quad \div 227 \times 0.004$ | |
| 1 | UK fluid ounces (fl oz) Cubic inches (in^3) | |
| 2 | $UK\ fl\ oz \rightarrow in^3 \quad \times 2 \quad \times 1.734$ $in^3 \rightarrow UK\ fl\ oz \quad \div 2 \quad \times 0.577$ | |
| 1 | UK fluid ounces (fl oz) Milliliters (ml) | |
| 28 | $UK\ fl\ oz \rightarrow ml \quad \times 28 \quad \times 28.413$ $ml \rightarrow UK\ fl\ oz \quad \div 28 \quad \times 0.035$ | |
| 1 | UK quarts (qt) Liters (l) | |
| 1 | $UK\ qt \rightarrow l \quad \times 1 \quad \times 1.137$ $l \rightarrow UK\ qt \quad \div 1 \quad \times 0.880$ | |
| 1 | UK gallons (gal) Liters (l) | |
| 4.5 | $UK\ gal \rightarrow l \quad \times 4.5 \quad \times 4.546$ $l \rightarrow UK\ gal \quad : 4.5 \quad \times 0.220$ | |
| 1 | Liters (l) UK pints (pt) | |
| 2 | $l \rightarrow UK\ pt \quad \times 2 \quad \times 1.760$ $UK\ pt \rightarrow l \quad \div 2 \quad \times 0.568$ | |
| 1 | Cubic meters (m^3) UK gallons (gal) | |
| 220 | $m^3 \rightarrow UK\ gal \quad \times 220 \times 219.970$ $UK\ gal \rightarrow m^3 \quad : 220 \times 0.005$ | |

Conversion tables

The tables below can be used to convert units of volume from one measuring system to another. The first group of tables, beginning below, converts US units to UK imperial units; the second, beginning on page 85, converts UK imperial units to US units.

US fluid gallons

$$\frac{4}{3} \times \pi \times \mathbf{r}^3$$

Sphere

$$\frac{\pi \times \mathbf{r}^2 \times \mathbf{h}}{3}$$

Cone

Cooking measures

Although the names of the units are often the same, US measures are slightly different from UK imperial measures – for example, the US pint is 16 ounces, and the UK imperial pint is 20 ounces. US cooks use different measures for liquids and solids; in the imperial system used in the UK, a fluid ounce is equal to a dry ounce. On average, US units are roughly $\frac{4}{5}$ the size of UK units. Metric measures are rarely used for cooking in the US or UK, except milliliters for small liquid amounts.

US liquid measures

60 minims = 1 fl dram
8 fl drams = 1 fl oz
4 fl oz = 1 gill
4 gills = 1 pint
2 pints = 1 quart
4 quarts = 1 gallon

US dry measures

1 dry pint = $\frac{1}{2}$ dry quart
2 dry pints = 1 dry quart
8 dry quarts = 1 peck
4 pecks = 1 bushel
36 bushels = 1 chaldron

UK liquid and dry measures

60 minims = 1 dram
8 drams = 1 fl oz
5 fl oz = 1 gill
1 gill = $\frac{1}{4}$ pint
1 pint = 20 fl oz
2 pints = 1 quart

4 quarts = 1 gallon
1 gallon = 10 lb (weight
in water)
2 gallons = 1 peck
4 pecks = 1 bushel
36 bushels = 1 chaldron

Water weights

1 fl oz water = 1 oz
1 pint water = 1 lb

1 quart water = 2 lb
1 gallon water = 8 lb

Handy measures

| Object | US units | Metric |
|---|--------------------|---------------|
| 1 thimbleful  | 30 drops | 2.5 ml |
| 60 drops  | 1 teaspoon | 5 ml |
| 1 teaspoon  | 1 fl dram | 5 ml |
| 1 dessertspoon  | 2 fl drams | 10 ml |
| 1 tablespoon  | 4 fl drams | 15 ml |
| 2 tablespoons  | 1 fl oz | 30 ml |
| 4 tablespoons  | 2 fl oz | 60 ml |
| 1 wine glass  | 4 fl oz (1 gill) | 120 ml |
| 1 cup  | 8 fl oz (1/2 pint) | 240 ml |

Beverage measures**Beer measures**

1 nip = $\frac{1}{4}$ pint
 1 small = $\frac{1}{2}$ pint
 1 large = 1 pint
 1 flagon = 1 quart
 1 anker = 10 gallons
 1 firkin = 9.8 gallons

1 barrel = $3\frac{1}{2}$ gallons
 1 hogshead = 2 barrels
 1 butt = 2 hogsheads
 1 tun = 2 butts
 252 gallons

Handy measures

small jigger = 1 fl oz
 small wine
 glass = 2 fl oz
 sherry glass = 2 fl oz
 cocktail glass = $\frac{1}{4}$ pint
 large wine
 glass = $\frac{1}{4}$ pint
 tumbler = $\frac{1}{2}$ pint

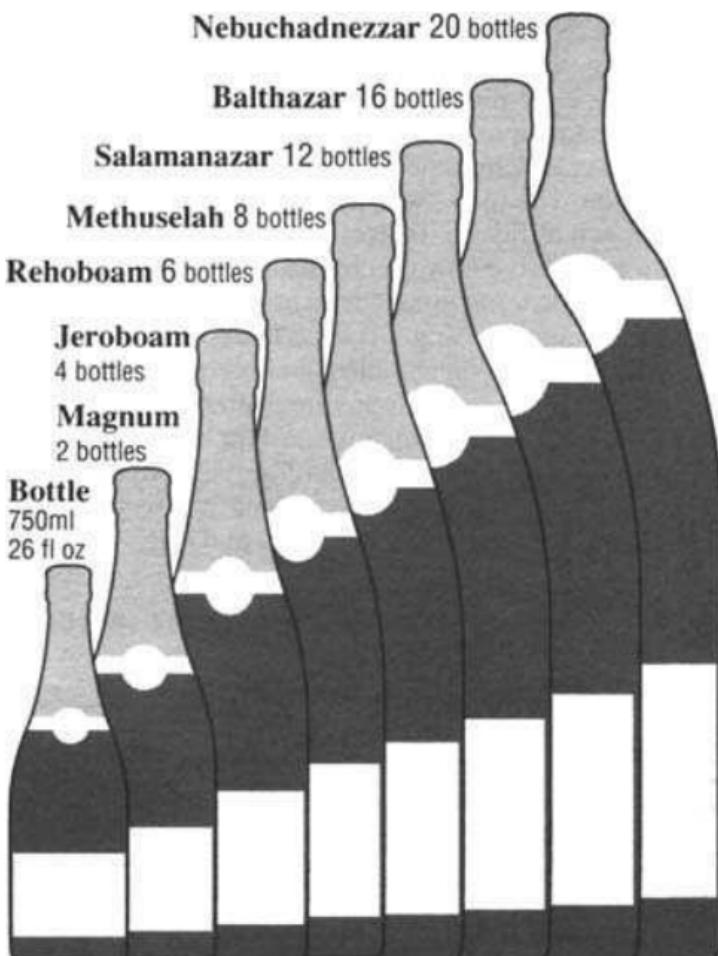

Wine measures

10 gallons = 1 anker
 1 hogshead = 63 gallons
 2 hogsheads = 1 pipe
 2 pipes = 1 tun
 1 puncheon = 84 gallons
 1 butt = 126 gallons

US spirits measures

1 shot = 1 fl oz
 1 pony = 1 shot
 1 jigger = $1\frac{1}{2}$ shots
 1 pint = 16 shots
 1 fifth = 25.6 shots
 1.6 pints
 0.8 quart
 0.758 liter

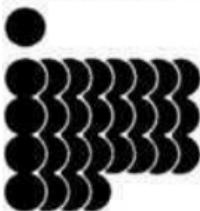

1 quart = 32 shots
 1 $\frac{1}{4}$ fifths
 1 magnum
 of wine = 2 fifths
 2 bottles

Champagne bottle sizes

4: Weight

Formulas

Below are listed the multiplication/division factors for converting units of weight from one measuring system to another. Note that two kinds of factors are given: quick, for an approximate conversion that can be made without a calculator; and accurate, for an exact conversion. The term "weight" differs in everyday use from its scientific use. In everyday terms, we use weight to describe how much substance an object has. In science, the term "mass" is used to describe this quantity of matter. Weight is used to describe the gravitational force on an object and is equal to its mass multiplied by the gravitational field strength. In scientific terms, mass remains constant but weight varies according to the strength of gravity. All units that follow are strictly units of mass rather than weight, apart from the pressure units kg/cm² and PSI.

| | Grams (g) Grains (gr) | Quick | Accurate |
|---|--------------------------|-------------|-----------------|
|  | $g \longrightarrow gr$ | $\times 15$ | $\times 15.432$ |
|  | $gr \longrightarrow g$ | $\div 15$ | $\times 0.065$ |
| | Ounces (oz) Grams (g) | | |
|  | $oz \longrightarrow g$ | $\times 28$ | $\times 28.349$ |
| | $g \longrightarrow oz$ | $\div 28$ | $\times 0.035$ |

| | Dounces troy (oz tr) Grams (g) | Quick | Accurate |
|--|---|--------------|-----------------|
| | oz tr → g × 31 × 31.103 g → oz tr ÷ 31 × 0.032 | | |
| | Stones (st) Kilograms (kg) | | |
| | st → kg × 6 × 6.350 kg → st ÷ 6 × 0.157 | | |
| | Long (UK) tons (l t) Tonnes (t) | | |
| | l t → t × 1 × 1.016 t → l t ÷ 1 × 0.984 | | |
| | Kilograms (kg) Pounds (lb) | | |
| | kg → lb × 2 × 2.205 lb → kg ÷ 2 × 0.454 | | |
| | Kilograms per square centimeter (kg/cm²) Pounds per square inch (PSI) | | |
| | kg/cm² → PSI × 14 × 14.223 PSI → kg/cm² ÷ 14 × 0.070 | | |
| | Tonnes (t) | | |
| | Short (US) tons (sh t) | | |
| | t → sh t × 1 × 1.102 sh t → t ÷ 1 × 0.907 | | |
| | Ounces troy (oz tr) | | |
| | Ounces (oz) | | |
| | oz tr → oz × 1 × 1.097 oz → oz tr ÷ 1 × 0.911 | | |

Conversion tables

The tables below can be used to convert units of weight from one measuring system to another. The units included in the tables are troy, US units/UK imperial, and metric.

| Grains to Grams | |
|--------------------------------|----------|
| gr | g |
| 1 | 0.065 |
| 2 | 0.130 |

Periodic table

The periodic table is a means of classifying and comparing chemical elements. Substances as different as hydrogen, calcium, and gold are all elements; each has distinctive properties and cannot be split chemically into a simpler form.

The table groups elements into seven rows or periods. Elements in the vertical columns, or groups, have similar properties. For example, the first element in any period (called an alkali metal) is reactive; while the last element (a noble, or inert, gas) is almost totally nonreactive.

The elements are listed in the table in order of their atomic numbers, from 1 to 109 (appearing in the upper left-hand corner of each box). The atomic number represents the number of protons the element has in its nucleus.

The two bottom rows are the lanthanides (57–71) and the actinides (89–103). These are separate because they have such similar properties that they fit the space of only two elements in the main table.

Chemical elements

On the following pages, the elements are listed in three separate ways: **1** by atomic number; **2** by element name; and **3** by letter symbol. Each listing includes the atomic number, element name, symbol, and atomic weight (or relative atomic mass) of each element.

* Indicates atomic weight of the isotope with the longest known half-life.

1 BY ATOMIC NUMBER

Atomic

| No. | Name | Symbol | Atomic weight |
|-----|------------|--------|---------------|
| 1 | Hydrogen | H | 1.0079 |
| 2 | Helium | He | 4.0026 |

Scales of hardness

Solids vary in their degree of hardness, which indicates their resistance to being scratched or cut.

A Mohs' scale

Mohs' scale is used to measure the relative hardness of minerals. The framework uses the 10 minerals – talc to diamond – shown in the scale. Each of these minerals is assigned a numerical value from 1 to 10: the higher the number, the harder the mineral.

Order is determined by the ability of a mineral to scratch all those that have a lower number and to be scratched by those with a higher number. Once this is established, it is possible to place all other minerals on the scale by means of the same scratching procedure.

B Knoop scale

Another system of measuring the hardness of minerals is the Knoop scale. The Knoop scale gives absolute rather than relative measurements. Readings on this scale are made by measuring the size of the indentation made by a diamond-shaped device dropped on the material.

Again, the higher the number the harder the substance, but the intervals between minerals and levels of hardness differ greatly from scale to scale. Minerals with values between 1 and 7 on Mohs' scale fall below 1,000 on the Knoop scale, and between 8 and 9 fall below 2,000, but diamond falls at 7,000.

C Common-object scale

A simple way of measuring hardness uses common objects, whose hardness on the Mohs' scale is known:

- a) fingernail (2–2.5 Mohs')
- b) coin (4)
- c) knife blade (5–6)
- d) knife sharpener (8–9)

5: Energy

Formulas

Below are listed the multiplication/division factors for converting units of energy from one measuring system to another. Note that two kinds of factors are given: quick, for an approximate conversion that can be made without a calculator; and accurate, for an exact conversion.

| | Kilowatts (kW) Horsepower (hp) | Quick | Accurate |
|---|--|----------------------------|----------------------------------|
|  | | | |
|  | $kW \rightarrow hp$ $hp \rightarrow kW$ | $\times 1.5$ $\div 1.5$ | $\times 1.341$ $\times 0.746$ |
|  | | | |
|  | $cal \rightarrow J$ $J \rightarrow cal$ | $\times 4$ $\div 4$ | $\times 4.187$ $\times 0.239$ |
|  | | | |
|  | $kcal \rightarrow kJ$ $kJ \rightarrow kcal$ | $\times 4$ $\div 4$ | $\times 4.187$ $\times 0.239$ |

Conversion tables

The tables below can be used to convert units of energy from one measuring system to another.

**Horsepower
to
Kilowatts**

| hp | kW |
|------------|-----------|
| 1 | 0.746 |
| 2 | 1.491 |

Electromagnetic spectrum

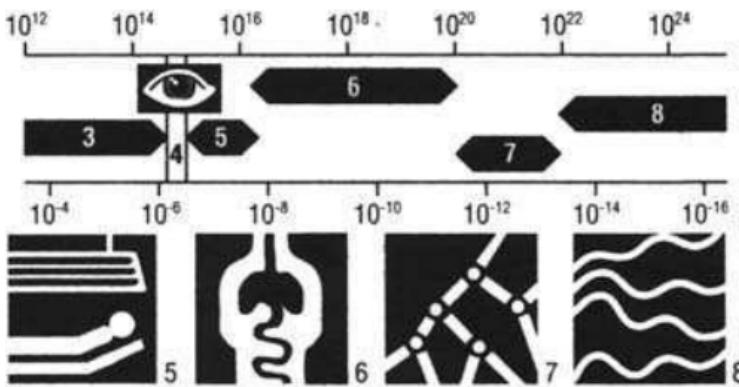

Measuring energy

Light and radio waves, X-rays, and other forms of energy are transmitted through space as electromagnetic waves. These waves have alternating high and low points – crests and troughs – like actual waves. The distance between wave crests is called the wavelength; this is measured in meters. Frequency refers to the number of waves per second passing a certain point; this is measured in hertz (Hz).

Above is an electromagnetic spectrum, showing the different forms of energy in order of frequency and wavelength. The top part of the diagram shows the frequency in hertz; the lower part measures the wavelength in meters.

1 Radio waves

These waves transmit television and radio signals. This section of the spectrum is divided into bands, from VLF (very low frequency) – used for time signals – to SHF (super-high frequency) – used for space and satellite communication.

2 Radar and microwaves

Radar bounces waves off objects, allowing unseen objects to be seen; microwaves can cook food quickly.

3 Infrared waves

These waves are emitted by all hot objects.

4 Visible light

The band of visible light from red to violet.

5 Ultraviolet light

In small amounts, these waves produce vitamin D and cause skin to tan; in larger amounts they can damage living cells.

6 X-rays

Used to photograph the internal structures of the body.

7 Gamma rays

Emitted during the decay of some radioisotopes, these waves can be very damaging to the body.

8 Cosmic rays

Caused by nuclear explosions and reactions in space, nearly all of these waves are absorbed by the Earth's atmosphere.

Earthquakes

Earthquake magnitude is measured in units on the Richter scale, which measures the amount of energy released. Each year there are more than 300,000 earth tremors with Richter magnitudes of 2 to 2.9. An earthquake of 8.5 or higher occurs about every 5 to 10 years.

Intensity

The intensity of an earthquake is measured on the Mercalli scale; the numbers refer to an earthquake's effect at a specific place on the Earth's surface.

Below are listed numbers on the Mercalli scale and the characteristics of each.

No. Characteristic

- I instrumental (detected only by seismograph)
- II feeble (noticed only by people at rest)
- III slight (similar to vibrations from a passing truck)
- IV moderate (felt indoors, parked cars rock)
- V rather strong (felt generally, waking sleepers)
- VI strong (trees sway, some damage)
- VII very strong (general alarm, walls crack)
- VIII destructive (walls collapse)
- IX ruinous (some houses collapse, ground cracks)
- X disastrous (buildings destroyed, rails bend)
- XI very disastrous (landslides, few buildings survive)
- XII catastrophic (total destruction)

Listed below are the Mercalli and Richter scales, with equivalents in joules, and a table comparing the Richter scale with joules.

| Mercalli | Richter | Joules | Richter | Joules |
|----------|---------|-------------------------|---------|------------------------|
| I | <3.5 | $<1.6 \times 10^7$ J | 0 | 6.3×10^{-2} J |
| II | 3.5 | 1.6×10^7 J | 1 | 1.6×10 J |
| III | 4.2 | 7.5×10^8 J | 2 | 4.0×10^3 J |
| IV | 4.5 | 4.0×10^9 J | 3 | 1.0×10^6 J |
| V | 4.8 | 2.1×10^{10} J | 4 | 2.5×10^8 J |
| VI | 5.4 | 5.7×10^{11} J | 5 | 6.3×10^{10} J |
| VII | 6.1 | 2.8×10^{13} J | 6 | 1.6×10^{13} J |
| VIII | 6.5 | 2.5×10^{14} J | 7 | 4.0×10^{15} J |
| IX | 6.9 | 2.3×10^{15} J | 8 | 1.0×10^{18} J |
| X | 7.3 | 2.1×10^{16} J | 9 | 2.5×10^{20} J |
| XI | 8.1 | 1.7×10^{18} J | 10 | 6.3×10^{22} J |
| XII | >8.1 | $>1.7 \times 10^{18}$ J | | |

Actual earthquakes

The table below lists the year of selected earthquakes in different parts of the world and where they occurred, as well as the Richter magnitude of each.

| Earthquakes | Richter |
|----------------------------|---------|
| Assam, India (1897) | 8.7 |
| Alaska, USA (1964) | 8.6 |
| Concepción, Chile (1960) | 8.5 |
| San Francisco, USA (1906) | 8.25 |
| Mexico City, Mexico (1985) | 8.1 |
| Guatemala (1976) | 7.9 |
| Tangshan, China (1976) | 7.6 |
| Messina, Italy (1908) | 7.5 |
| Vrancea, Romania (1977) | 7.2 |
| San Francisco, USA (1989) | 6.9 |

Decibels

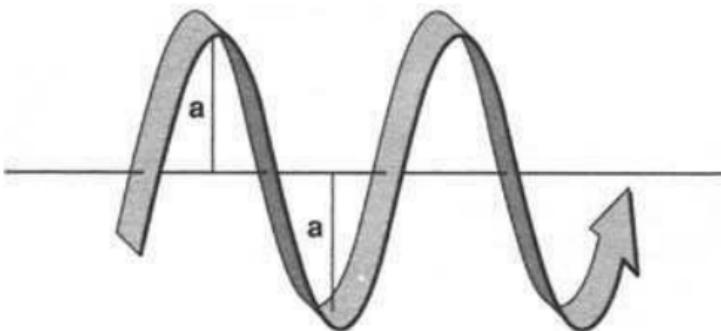

The loudness of a sound is measured by the size of its vibrations; this is measured in decibels (dB).

Decibel scale

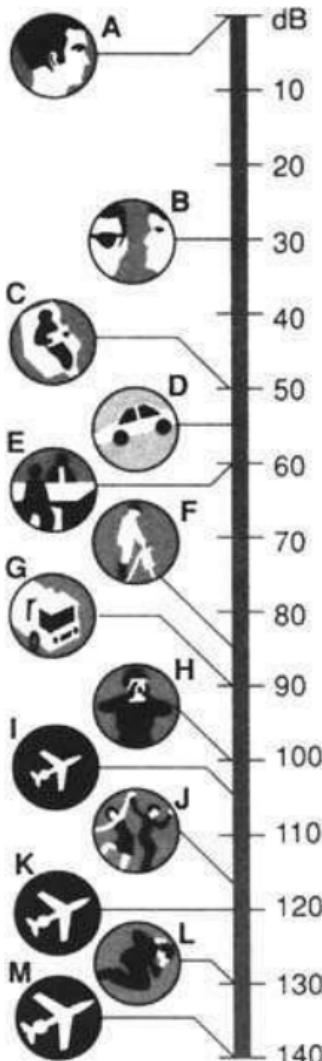

The dB scale is relative and increases exponentially, beginning with the smallest sound change that can be heard by humans (0–1 dB). A 20 dB sound is 10 times louder than a 10 dB sound; a 30 dB sound is 100 times as loud as that. Noises at the level of 120–130 dB can cause pain in humans; higher levels can cause permanent ear damage. The dB ratings (at certain distances) of some common noises are listed on page 135.

Wave amplitude

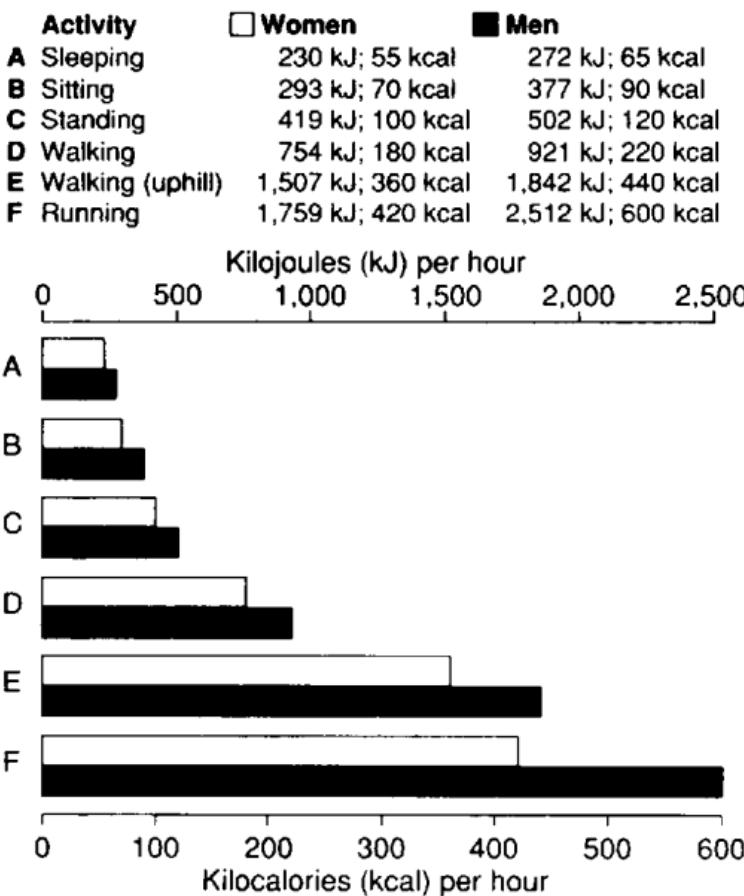

Amplitude (**a**) is the distance between a wave peak or trough and an intermediate line of equilibrium. The greater the amount of energy transmitted in a sound wave, the greater is the wave's amplitude and the louder the sound heard.

- A** 0 dB human minimum audibility
- B** 30 dB soft whisper at 15 ft
- C** 50 dB inside urban home
- D** 55 dB light traffic at 50 ft
- E** 60 dB conversation at 3 ft
- F** 85 dB pneumatic drill at 50 ft
- G** 90 dB heavy traffic at 50 ft
- H** 100 dB loud shout at 50 ft
- I** 105 dB airplane take-off at 2,000 ft
- J** 117 dB inside full-volume disco
- K** 120 dB airplane take-off at 200 ft
- L** 130 dB pain threshold for humans
- M** 140 dB airplane take-off at 100 ft

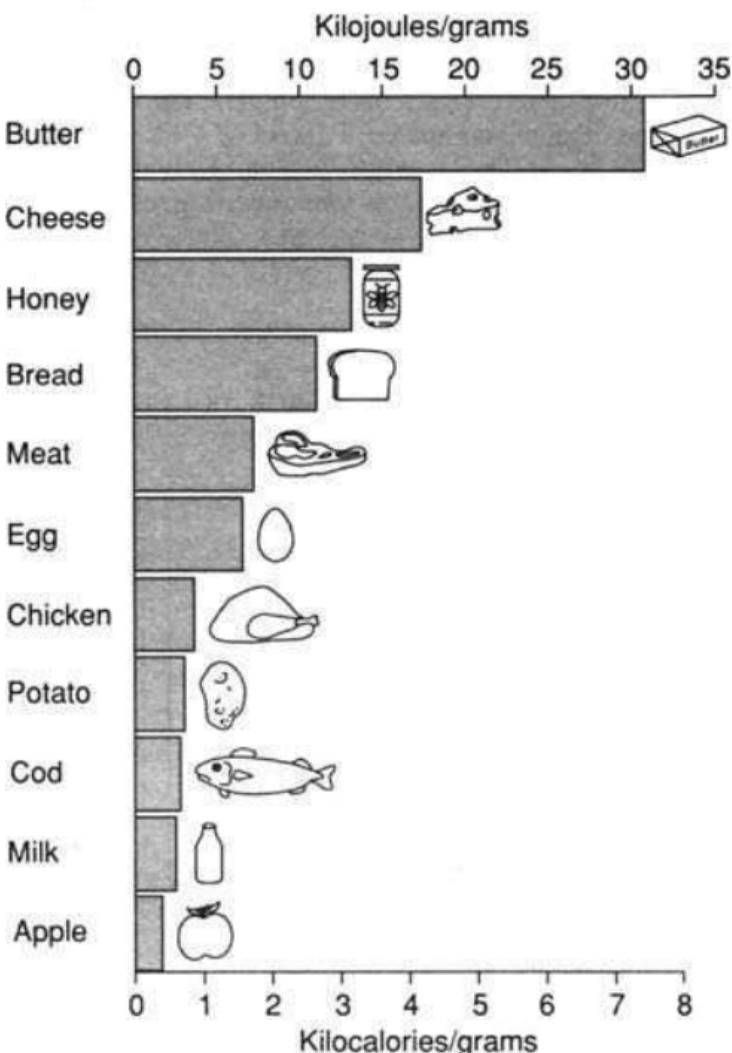

Energy needs by activity

Men use more kilocalories than women for all activities because men have more weight to carry around, and because women usually have more body fat and so need less energy to retain body heat.

Energy values of selected foods

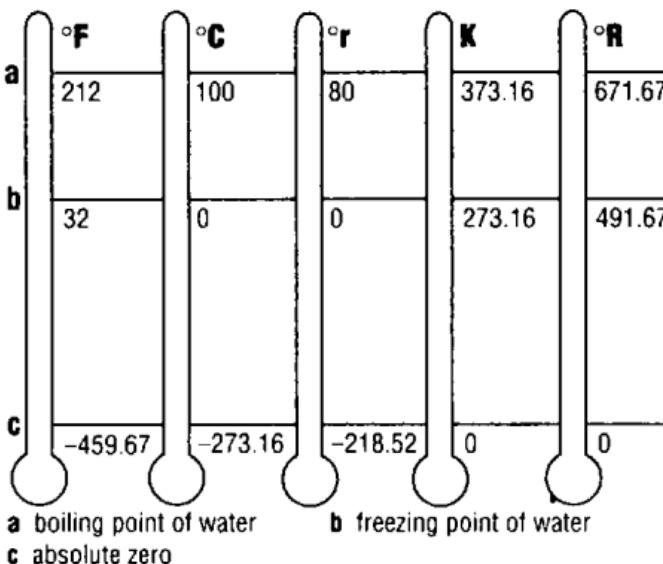

6: Temperature

Systems of measurement

Below, the different systems of temperature measurement are compared: Fahrenheit ($^{\circ}\text{F}$), Celsius ($^{\circ}\text{C}$), Réaumur ($^{\circ}\text{r}$), Rankine ($^{\circ}\text{R}$), and Kelvin (K). Also listed are the formulas for converting temperature measurements from one system to another.

Formulas

$$\begin{array}{lll} ^{\circ}\text{F} \rightarrow ^{\circ}\text{C} & (^{\circ}\text{F}-32) \div 1.8 & ^{\circ}\text{r} \rightarrow \text{K} (^{\circ}\text{r} \times 1.25) + 273.16 \\ ^{\circ}\text{C} \rightarrow ^{\circ}\text{F} & (^{\circ}\text{C} \times 1.8) + 32 & ^{\circ}\text{R} \rightarrow \text{K} ^{\circ}\text{R} \div 1.8 \\ ^{\circ}\text{F} \rightarrow \text{K} & (^{\circ}\text{F} + 459.67) \div 1.8 & \text{K} \rightarrow ^{\circ}\text{F} (\text{K} \times 1.8) - 459.67 \\ ^{\circ}\text{C} \rightarrow \text{K} & ^{\circ}\text{C} + 273.16 & \text{K} \rightarrow ^{\circ}\text{C} \text{K} - 273.16 \end{array}$$

Useful temperatures

Quick temperature reference

| Condition | °F | °C |
|------------------|-----------|-----------|
| Water freezes | 32 | 0 |
| Mild winter day | 50 | 10 |
| Warm spring day | 68 | 20 |
| Hot summer day | 86 | 30 |
| Body temperature | 98.6 | 37 |
| Heat wave | 104 | 40 |
| Water boils | 212 | 100 |

Oven temperatures

Below is a table of Fahrenheit/Celsius conversions for common oven temperatures.

| °F | °C | Oven |
|-----------|-----------|----------------|
| 225 | 110 | very cool |
| 250 | 130 | |
| 275 | 140 | cool |
| 300 | 150 | |
| 325 | 170 | moderate |
| 350 | 180 | |
| 375 | 190 | moderately hot |
| 400 | 200 | |
| 425 | 220 | hot |
| 450 | 230 | |
| 475 | 240 | very hot |

For other conversions, use the following formulas:

°F to °C Subtract 32, then divide by 1.8.

°C to °F Multiply by 1.8, then add 32.

7: Time

Units of time

Listed below are the names of time periods that are artificially derived, as opposed to astronomical periods.

Time periods

Below are some widely used names for periods of time.

| Name | Period | Name | Period |
|-----------------|-------------|-----------|------------|
| millennium | 1,000 years | leap year | 366 days |
| half-millennium | 500 years | year | 365 days |
| century | 100 years | year | 12 months |
| half-century | 50 years | year | 52 weeks |
| decade | 10 years | month | 28–31 days |
| half-decade | 5 years | week | 7 days |

Days, hours, minutes

Below are listed the basic subdivisions of a day and their equivalents.

$$1 \text{ day} = 24 \text{ hours} = 1,440 \text{ minutes} = 86,400 \text{ seconds}$$

$$1 \text{ hour} = \frac{1}{24} \text{ day} = 60 \text{ minutes} = 3,600 \text{ seconds}$$

$$1 \text{ minute} = \frac{1}{1,440} \text{ day} = \frac{1}{60} \text{ hour} = 60 \text{ seconds}$$

$$1 \text{ second} = \frac{1}{86,400} \text{ day} = \frac{1}{3,600} \text{ hour} = \frac{1}{60} \text{ minute}$$

Seconds

Greater precision in measuring time has required seconds (s) to be broken down into smaller units, using standard metric prefixes.

$$1 \text{ terasecond (Ts)} \quad 10^{12} \text{ s} \quad 31,689 \text{ years}$$

$$1 \text{ gigasecond (Gs)} \quad 10^9 \text{ s} \quad 31.7 \text{ years}$$

$$1 \text{ megasecond (Ms)} \quad 10^6 \text{ s} \quad 11.6 \text{ days}$$

$$1 \text{ kilosecond (ks)} \quad 10^3 \text{ s} \quad 16.67 \text{ minutes}$$

$$1 \text{ millisecond (ms)} \quad 10^{-3} \text{ s} \quad 0.001 \text{ seconds}$$

| | | |
|--------------------------|--------------|--------------------------|
| 1 microsecond (μ s) | 10^{-6} s | 0.000001 |
| 1 nanosecond (ns) | 10^{-9} s | 0.000000001 |
| 1 picosecond (ps) | 10^{-12} s | 0.000000000001 |
| 1 femtosecond (fs) | 10^{-15} s | 0.0000000000000001 |
| 1 attosecond (as) | 10^{-18} s | 0.0000000000000000000001 |

Astronomical time

Time can be measured by motion; in fact, the motion of the Earth, Sun, Moon, and stars provided humans with the first means of measuring time.

Years, months, days

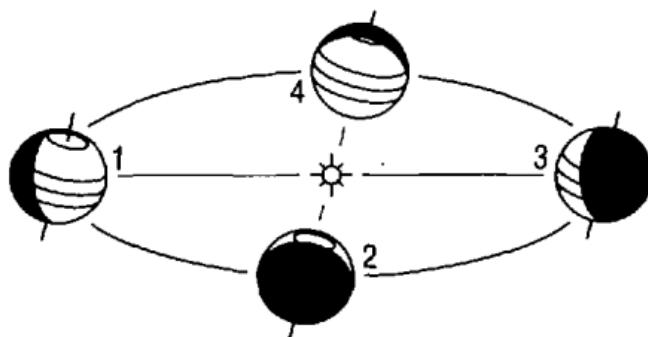

Sidereal times are calculated by the Earth's position according to fixed stars. The anomalistic year is measured according to the Earth's orbit in relation to the perihelion (Earth's minimum distance to the Sun). Tropical times refer to the apparent passage of the Sun and the actual passage of the Moon across the Earth's equatorial plane. The synodic month is based on the phases of the Moon. Solar time (as in a mean solar day) refers to periods of darkness and light averaged over a year.

| Time | Days | Hours | Minutes | Seconds |
|------------------|------|-------|---------|---------|
| sidereal year | 365 | 6 | 9 | 10 |
| anomalistic year | 365 | 6 | 13 | 53 |
| tropical year | 365 | 5 | 48 | 45 |
| sidereal month | 27 | 7 | 43 | 11 |
| tropical month | 27 | 7 | 43 | 5 |
| synodic month | 29 | 12 | 44 | 3 |
| mean solar day | 0 | 24 | 0 | 0 |
| sidereal day | 0 | 23 | 56 | 4 |

Equinox and solstice

The inclination of the Earth to its plane of rotation around the Sun produces variations in the lengths of day and night at different times of the year. Solstices are when the Sun appears to be overhead at midday at the maximum distances north and south of the Equator. At the summer solstice, days are longest and nights are shortest; this is reversed at the winter solstice.

Equinoxes are when day and night are equal everywhere; at these times, the Sun appears overhead at midday at the Equator.

The table lists the dates of the solstices and equinox in each hemisphere, keyed by number to the diagram above, which shows the Earth at four points in its orbit.

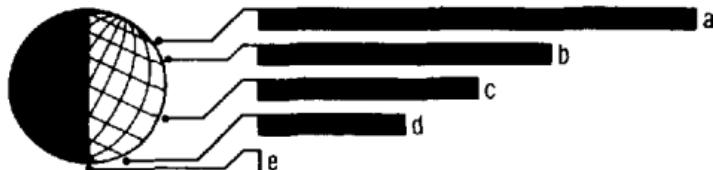

| Date | Northern | Southern |
|-------------|------------------|------------------|
| 1 June 21 | summer solstice | winter solstice |
| 2 Sept. 23 | autumnal equinox | vernal equinox |
| 3 Dec. 22 | winter solstice | summer solstice |
| 4 March 21 | vernal equinox | autumnal equinox |

Years and seasons

Seasonal variations are another result of the inclination of the Earth's axis to its plane of rotation around the Sun. Parts of the globe tilted away from the Sun receive less radiant energy per unit area than those receiving rays more directly. The table below lists the seasonal equivalents in the two hemispheres, keyed by number to the diagram on the previous page.

| Northern | Southern |
|----------|----------|
| 1 summer | winter |
| 2 fall | spring |
| 3 winter | summer |
| 4 spring | fall |

Length of days

a Arctic Circle: $66^{\circ} 33'N$ – 24 hours daylight

b $49^{\circ} 3'N$ – 16 hours daylight

c The Equator: 0° – 12 hours daylight

d $49^{\circ} 3'S$ – 8 hours daylight

e Antarctic Circle: $66^{\circ} 33'S$ – 0 hours daylight

The diagram above illustrates the variety in the length of the day (21 June) at different latitudes ($^{\circ}$ = degrees; ' = minutes). On this day, the northern hemisphere receives the maximum hours of daylight; the southern hemisphere, the minimum.

Geological timescale

| Era millions of years ago | Period | Epoch |
|--|-------------------------|--------------------------|
| Cenozoic 65-present | Quaternary 2-present | Holocene 0.01-present |

Types of calendar

The number of days in a year varies among cultures and from year to year.

Gregorian

The Gregorian calendar is a 16th-century adaptation of the Julian calendar devised in the 1st century BC. The year in this calendar is based on the solar year, which lasts about $365 \frac{1}{4}$ days. In this system, years whose number is not divisible by 4 have 365 days, as do centennial years unless the figures before the zeros are divisible by 4. All other years have 366 days; these are leap years.

Below are the names of the months and number of days for a non-leap year.

| | | | |
|----------|-----|-----------|----|
| January | 31 | July | 31 |
| February | 28* | August | 31 |
| March | 31 | September | 30 |
| April | 30 | October | 31 |
| May | 31 | November | 30 |
| June | 30 | December | 31 |

* 29 in leap years.

Jewish

A year in the Jewish calendar has 13 months if its number, when divided by 9, leaves 0, 3, 6, 8, 11, 14, or 17; otherwise, it has 12 months. The year is based on the lunar year, but its number of months varies to keep broadly in line with the solar cycle. Its precise number of days is fixed with reference to particular festivals that must not fall on certain days of the week.

Below are the names of the months and number of days in each for the year 5471, a 12-month year (1980 AD in Gregorian).

| | | | |
|----------|-----|--------|----|
| Tishri | 30 | Nisan | 30 |
| Cheshvan | 29* | Iyar | 29 |
| Kislev | 29* | Sivan | 30 |
| Tevet | 29 | Tammuz | 29 |
| Shevat | 30 | Av | 30 |
| Adar | 29† | Elul | 29 |

* 30 in some years.

† In 13-month years, the month Veadar, with 29 days, falls between Adar and Nisan.

Muslim

A year in the Muslim calendar has 355 days if its number, when divided by 30, leaves 2, 5, 7, 10, 13, 16, 18, 21, 24, 26, or 29; otherwise it has 354 days. As in the Jewish calendar, years are based on the lunar cycle.

Below are the names of the months and number of days in each for the Muslim year 1401 (1980 AD in Gregorian).

| | | | |
|-----------|----|--------------|-----|
| Muharram | 30 | Rajab | 30 |
| Safar | 29 | Sha'ban | 29 |
| Rabi'I | 30 | Ramadan | 30 |
| Rabi''II | 29 | Shawwal | 29 |
| Jumada I | 30 | Dhu l-Qa'dah | 30 |
| Jumada II | 29 | Dhu l-Hijja | 30* |

* 29 in some years.

Wedding anniversaries

| Year | Traditional (alternative) | Modern |
|-------------|----------------------------------|------------------------------|
| 1st | Paper (plastics) | Clocks |
| 2nd | Cotton (calico) | China |
| 3rd | Leather | Crystal, glass |
| 4th | Linen (silk, synthetics) | Electrical appliances |
| 5th | Wood | Silverware |
| 6th | Iron | Wood |
| 7th | Wool (copper, brass) | Desk sets |
| 8th | Bronze (electrical appliances) | Linen, lace |
| 9th | Pottery (china) | Leather |
| 10th | Tin (aluminum) | Diamond jewelry |
| 11th | Steel | Fashion jewelry, accessories |
| 12th | Silk (linen) | Pearls or colored gems |
| 13th | Lace | Textile, furs |
| 14th | Ivory | Gold jewelry |
| 15th | Crystal (glass) | Watches |
| 20th | China | Platinum |
| 25th | Silver | Sterling silver jubilee |
| 30th | Pearl | Diamond |
| 35th | Coral (jade) | Jade |
| 40th | Ruby (garnets) | Ruby |
| 45th | Sapphire (tourmalines) | Sapphire |
| 50th | Gold | Gold |
| 55th | Emerald (turquoise) | Emerald |
| 60th | Diamond (gold) | Diamond |

Perpetual calendar

How to use the calendar To discover on which day of the week any date between the years 1780 and 2046 falls, look up the year in the key and the letter shown to the right will indicate which of the calendars A–N you should consult.

Key:

| | | | | | |
|------|---|------|---|------|---|

Time zones of the world

Some countries, including the US, adopt Daylight Saving Time (DST) in order to receive more daylight

in summer. Clocks are put forward 1 hour in spring and back 1 hour in fall. The maps below do not reflect DST adjustments.

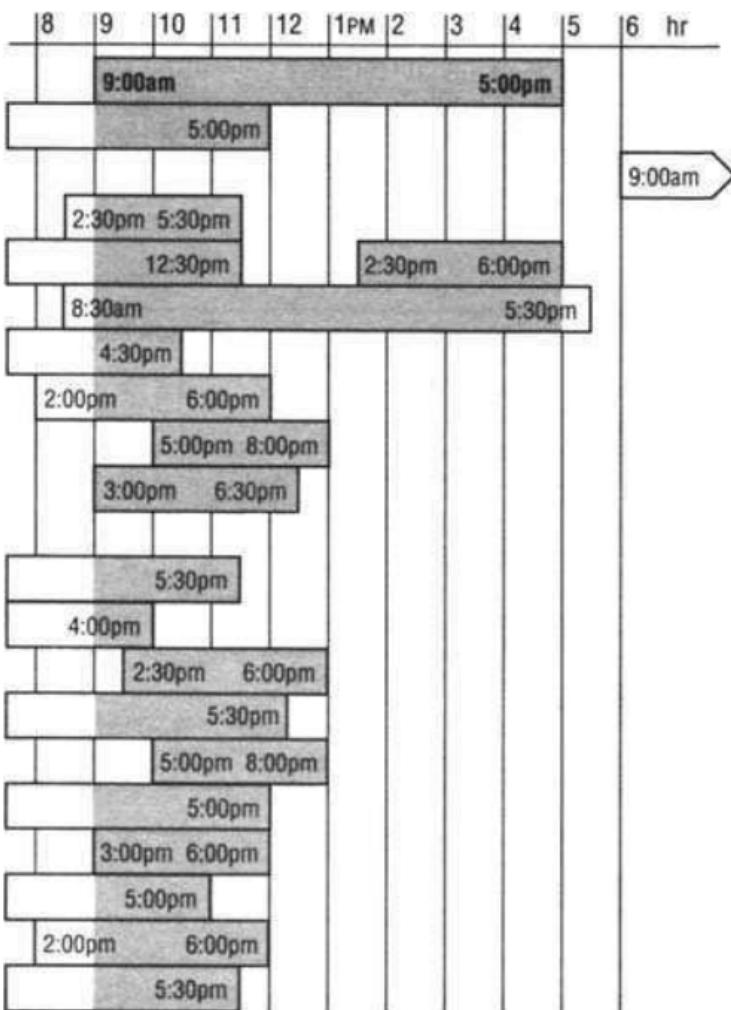

Office times

The table shows the usual office hours (local time) in various cities around the world compared to New York

| New York time | 10 | 11 | 12 | 1AM | 2 | 3 | 4 | 5 | 6 | 7 |
|-----------------|--------|----|----|--------|--------|--------|---------|---------|---|---|
| New York | | | | | | | | | | |
| London | | | | | | | | 9:00am | | |
| Sydney | 9:00am | | | 5:00pm | | | | | | |
| Brussels | | | | | | 8:30am | 12:00pm | | | |
| Rio de Janeiro | | | | | | | | | | |
| Toronto | | | | | | | | | | |
| Copenhagen | | | | | | 8:00am | | | | |
| Paris | | | | | 9:00am | | 12:00am | | | |
| Athens | | | | | 8:00am | | | 2:00pm | | |
| Milan | | | | | | 8:30am | | 12:45pm | | |
| Tokyo | 9:00am | | | 5:00pm | | | | | | |
| Amsterdam | | | | | | 8:30am | | | | |
| Oslo | | | | | | 8:00am | | | | |
| Lisbon | | | | | | | 10:00am | 12:30pm | | |
| Dublin | | | | | | | | 9:30am | | |
| Riyadh | | | | | 8:00am | | 1:00pm | | | |
| Johannesburg | | | | | | 8:30am | | | | |
| Madrid | | | | | | 9:30am | | 1:30pm | | |
| Stockholm | | | | | | 8:30am | | | | |
| Geneva | | | | | | 8:00am | 12:00pm | | | |
| Frankfurt | | | | | | 8:00am | | | | |

(east coast time). Los Angeles (west coast time) is three hours behind.

8: Speed

Formulas

Below are listed the multiplication/division factors for converting units of speed from one measuring system to another. Note that two kinds of factors are given: quick, for an approximate conversion that can be made without a calculator; and accurate, for an exact conversion.

| | Miles per hour (mph) | Kilometers per hour (km/h) | Quick | Accurate |
|--|-------------------------------|----------------------------|--------------|-----------------|
| | | | | |
| | mph | km/h | $\times 1.5$ | $\times 1.609$ |
| | km/h | mph | $\div 1.5$ | $\times 0.621$ |
| | | | | |
| | | | | |
| | Yards per minute (ypm) | | | |
| | Meters per minute (m/min) | | | |
| | ypm | m/min | $\div 1$ | $\times 0.914$ |
| | m/min | ypm | $\times 1$ | $\times 1.094$ |
| | | | | |
| | | | | |
| | Feet per minute (ft/min) | | | |
| | Meters per minute (m/min) | | | |
| | ft/min | m/min | $\div 3$ | $\times 0.305$ |
| | m/min | ft/min | $\times 3$ | $\times 3.281$ |
| | | | | |
| | | | | |
| | Inches per second (in/s) | | | |
| | Centimeters per second (cm/s) | | | |
| | in/s | cm/s | $\times 2.5$ | $\times 2.54$ |
| | cm/s | in/s | $\div 2.5$ | $\times 0.394$ |

International knots (kn)
Miles per hour (mph)

Quick**Accurate**

$$\begin{array}{l} \text{kn} \longrightarrow \text{mph} \\ \text{mph} \longrightarrow \text{kn} \end{array} \quad \begin{array}{ll} \times 1 & \times 1.151 \\ \div 1 & \times 0.869 \end{array}$$

British knots (UK kn)
International knots (kn)

$$\begin{array}{l} \text{UK kn} \longrightarrow \text{kn} \\ \text{kn} \longrightarrow \text{UK kn} \end{array} \quad \begin{array}{ll} \times 1 & \times 1.001 \\ \div 1 & \times 0.999 \end{array}$$

International knots (kn)
Kilometers per hour (km/h)

$$\begin{array}{l} \text{kn} \longrightarrow \text{km/h} \\ \text{km/h} \longrightarrow \text{kn} \end{array} \quad \begin{array}{ll} \times 2 & \times 1.852 \\ \div 2 & \times 0.540 \end{array}$$

Miles per hour (mph)
Feet per second (ft/s)

$$\begin{array}{l} \text{mph} \longrightarrow \text{ft/s} \\ \text{ft/s} \longrightarrow \text{mph} \end{array} \quad \begin{array}{ll} \times 1.5 & \times 1.467 \\ \div 1.5 & \times 0.682 \end{array}$$

Kilometers per hour (km/h)
Meters per second (m/s)

$$\begin{array}{l} \text{km/h} \longrightarrow \text{m/s} \\ \text{m/s} \longrightarrow \text{km/h} \end{array} \quad \begin{array}{ll} \div 3.5 & \times 0.278 \\ \times 3.5 & \times 3.599 \end{array}$$

Conversion tables

The tables below can be used to convert units of speed from one measuring system to another. The first group

| Miles per hour to Kilometers per hour | | Kilometers per hour to Miles per hour | | Yards per minute to Meters per minute | |
|--|-------------|--|------------|--|--------------|
| mph | km/h | km/h | mph | ypm | m/min |
| 1 | 1.609 | 1 | 0.621 | 1 | 0.914 |
| 2 | 3.219 | 2 | 1.242 | 2 | 1.829 |
| 3 | 4.828 | 3 | 1.864 | 3 | 2.743 |
| 4 | 6.437 | 4 | 2.485 | 4 | 3.658 |
| 5 | 8.047 | 5 | 3.106 | 5 | 4.572 |
| 6 | 9.656 | 6 | 3.728 | 6 | 5.486 |
| 7 | 11.265 | 7 | 4.349 | 7 | 6.401 |
| 8 | 12.875 | 8 | 4.970 | 8 | 7.315 |
| 9 | 14.484 | 9 | 5.592 | 9 | 8.230 |
| 10 | 16.093 | 10 | 6.213 | 10 | 9.144 |
| 20 | 32.187 | 20 | 12.427 | 20 | 18.288 |
| 30 | 48.280 | 30 | 18.641 | 30 | 27.432 |
| 40 | 64.374 | 40 | 24.854 | 40 | 36.576 |
| 50 | 80.467 | 50 | 31.068 | 50 | 45.720 |
| 60 | 96.561 | 60 | 37.282 | 60 | 54.864 |
| 70 | 112.654 | 70 | 43.495 | 70 | 64.008 |
| 80 | 128.748 | 80 | 49.709 | 80 | 73.152 |
| 90 | 144.841 | 90 | 55.923 | 90 | 82.296 |
| 100 | 160.934 | 100 | 62.137 | 100 | 91.440 |

of tables converts US units/UK imperial units to metric, and vice versa. The tables beginning on page 192 convert knots, imperial, and metric units.

| Meters per minute to Yards per minute | | Feet per minute to Meters per minute | | Meters per minute to Feet per minute | |
|--|------------|---|--------------|---|---------------|
| m/min | ypm | ft/ min | m/min | m/ min | ft/min |
| 1 | 1.094 | 1 | 0.305 | 1 | 3.281 |
| 2 | 2.187 | 2 | 0.610 | 2 | 6.562 |
| 3 | 3.281 | 3 | 0.914 | 3 | 9.842 |
| 4 | 4.374 | 4 | 1.219 | 4 | 13.123 |

The Beaufort scale

The speed of wind is measured by using the Beaufort Scale, based on easily observable factors such as tree movement, smoke behavior, and damage incurred. It was devised by a 19th-century British admiral, Sir Francis Beaufort.

| Number | Description | Speed range mph |
|----------|-----------------|-----------------|
| Force 0 | Calm | Below 1 |
| Force 1 | Light air | 1–3 |
| Force 2 | Light breeze | 4–7 |
| Force 3 | Gentle breeze | 8–12 |
| Force 4 | Moderate breeze | 13–18 |
| Force 5 | Fresh breeze | 19–24 |
| Force 6 | Strong breeze | 25–31 |
| Force 7 | Moderate gale | 32–38 |
| Force 8 | Fresh gale | 39–46 |
| Force 9 | Strong gale | 47–54 |
| Force 10 | Whole gale | 55–63 |
| Force 11 | Storm | 64–75 |
| Force 12 | Hurricane | Over 75 |

As air moves across the surface of the Earth, its direction is determined by such factors as the Earth's rotation, variations in temperature, air pressure, and land features such as mountains. Listed below are examples showing the effects of wind as measured on the Beaufort Scale, the variety of winds that are measured, and the range of speeds to which they apply.

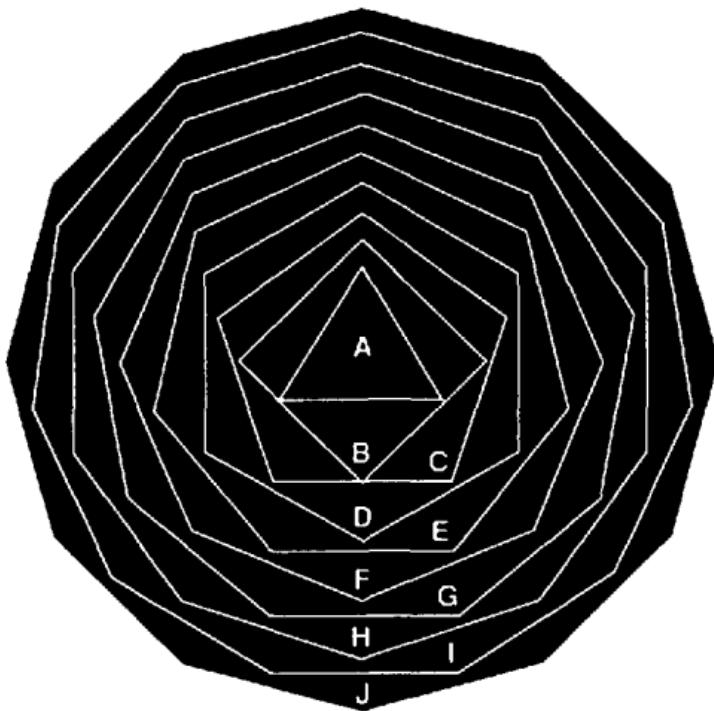

| Number | Characteristics |
|---------------|--------------------------------------|
| Force 0 | Smoke rises straight up |
| Force 1 | Smoke shows wind direction |
| Force 2 | Wind felt on face |
| Force 3 | Flag extends |
| Force 4 | Dust and paper blow in wind |
| Force 5 | Small trees sway in wind |
| Force 6 | Umbrellas are difficult to use |
| Force 7 | Difficult to stand up in wind |
| Force 8 | Twigs break off trees |
| Force 9 | Chimney tops and tiles are dislodged |
| Force 10 | Trees are uprooted |
| Force 11 | Extensive damage |
| Force 12 | Extremely violent |

9: Geometry

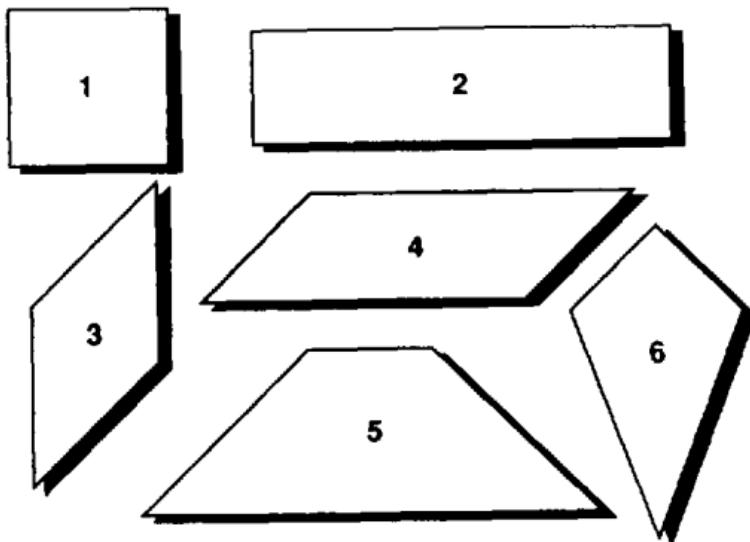

Polygons

| Name of polygon | Number of sides | Each internal angle | Sum of internal angles |
|---|-----------------|---------------------|------------------------|
|  Triangle | 3 | 60° | 180° |
|  Square | 4 | 90° | 360° |
|  Pentagon | 5 | 108° | 540° |

J Dodecagon

Quadrilaterals**Quadrilaterals**

A quadrilateral is a four-sided polygon.

- | | |
|------------------------|---|
| 1 Square | All the sides are the same length and all the angles are right angles. |
| 2 Rectangle | Opposite sides are the same length and all the angles are right angles. |
| 3 Rhombus | All the sides are the same length but none of the angles are right angles. |
| 4 Parallelogram | Opposite sides are parallel to each other and of the same length. |
| 5 Trapezoid | One pair of the opposite sides is parallel. |
| 6 Kite | Adjacent sides are the same length and the diagonals intersect at right angles. |

Triangles**Triangles****A** Equilateral

All the sides are the same length and all the angles are equal.

B Isosceles

Two sides are of the same length and two angles are of equal size.

C Scalene

All the sides are of different length and all the angles are of different sizes.

D Right angle

A triangle that contains one right angle.

E Obtuse angle

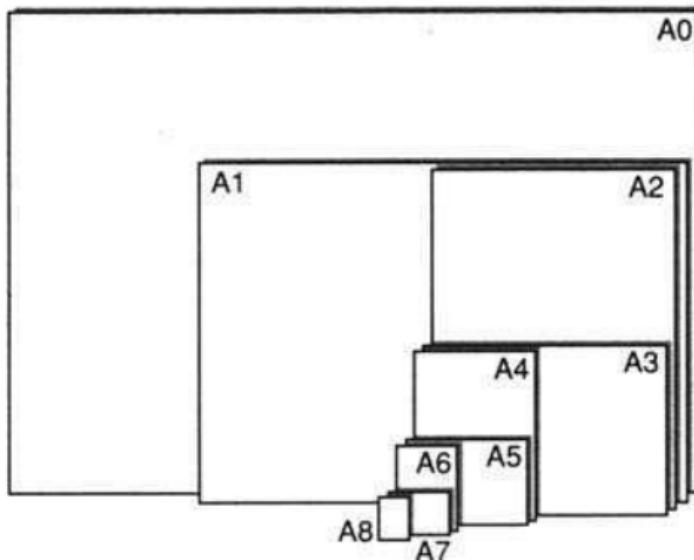

A triangle that contains one obtuse angle.

F Acute angle

A triangle with three acute angles.

10: Everyday measures

Standard international paper sizes

| | | |
|-----------|---|-----------------------|
| A0 | $33\frac{1}{2} \times 46\frac{3}{4}$ in | $841 \times 1,189$ mm |
| A1 | $23\frac{3}{8} \times 33\frac{1}{8}$ in | 594×841 mm |
| A2 | $16\frac{1}{2} \times 23\frac{3}{8}$ in | 594×420 mm |
| A3 | $11\frac{3}{4} \times 16\frac{1}{2}$ in | 297×420 mm |
| A4 | $8\frac{1}{4} \times 11\frac{3}{4}$ in | 297×210 mm |
| A5 | $5\frac{7}{8} \times 8\frac{1}{4}$ in | 148×210 mm |
| A6 | $4\frac{1}{8} \times 6$ in | 148×105 mm |
| A7 | $3 \times 4\frac{1}{8}$ in | 74×105 mm |
| A8 | 2×3 in | 74×52 mm |

Stock paper sizes

Although special paper sizes may be ordered from paper merchants, the grades of paper that are most popular in the US are provided in standard sizes. These standard sizes are measured in the metric system used in Europe, as is the "A series" given on the previous page.

Stock sizes for book paper

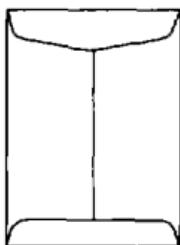

In the US, the sizes of the presses used for book printing and the most popular book trim sizes dictate the stock sizes for book paper. The figures for some of these sizes are given below.

| Sheet size | No. of pages per sheet | Folded size before trimming | Trim size |
|------------|------------------------|---|---|
| 35 × 45 in | 64 | 5 ⁵ / ₈ × 8 ³ / ₄ | 5 ¹ / ₂ × 8 ¹ / ₂ |
| 38 × 50 in | 64 | 6 ¹ / ₄ × 9 ¹ / ₂ | 6 ¹ / ₈ × 9 ¹ / ₄ |
| 41 × 61 in | 128 | 5 ¹ / ₈ × 7 ⁵ / ₈ | 5 × 7 ³ / ₈ |
| 44 × 66 in | 128 | 5 ¹ / ₂ × 8 ³ / ₄ | 5 ³ / ₈ × 8 |
| 45 × 68 in | 128 | 5 ⁵ / ₈ × 8 ¹ / ₂ | 5 ¹ / ₂ × 8 ¹ / ₄ |
| 45 × 69 in | 128 | 5 ³ / ₄ × 8 ⁵ / ₈ | 5 ¹ / ₈ × 8 ³ / ₈ |

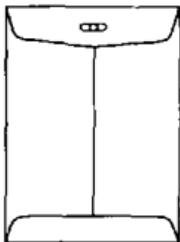

Envelope sizes and styles

There are two basic styles of envelope: open-end and open-side. Within these two categories, there are as many variations of style and size as there are uses. Here, a selection of styles is given, together with the smallest and largest sizes in which they are available.

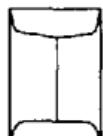

Open-end envelopes

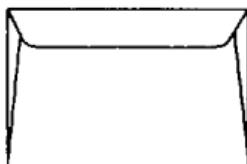

Catalog A strong envelope used for magazines, booklets, reports, and catalogs.
Smallest (glove): $3\frac{7}{8} \times 7\frac{1}{2}$ in
Largest (catalog): $12 \times 15\frac{1}{2}$ in

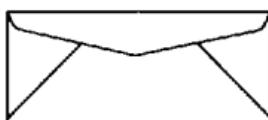

Clasp/string and button A strong, reusable catalog envelope, with a metal clasp or string and button, used for mailing bulky material.
Smallest: $2\frac{1}{2} \times 4\frac{1}{4}$ in
Largest: $12 \times 15\frac{1}{2}$ in

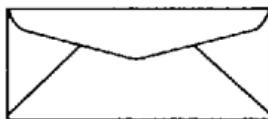

Coin Used for coins, currency, pay, etc.
Smallest: $1\frac{11}{16} \times 2\frac{3}{4}$ in
Largest: $3\frac{1}{2} \times 6\frac{1}{2}$ in

Open-side envelopes

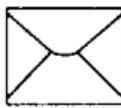

Booklet Used for direct mailing, brochures, annual reports, sales literature, etc.
Smallest: $3\frac{1}{4} \times 6\frac{3}{4}$ in
Largest: $9\frac{1}{2} \times 12\frac{5}{8}$ in

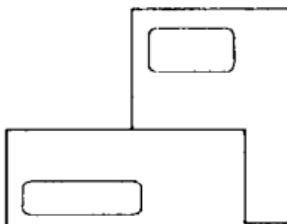

Commercial/official Used for all types of correspondence, both personal and official.
Smallest (commercial): $3\frac{1}{16} \times 5\frac{1}{2}$ in
Largest (official): $5 \times 11\frac{1}{2}$ in

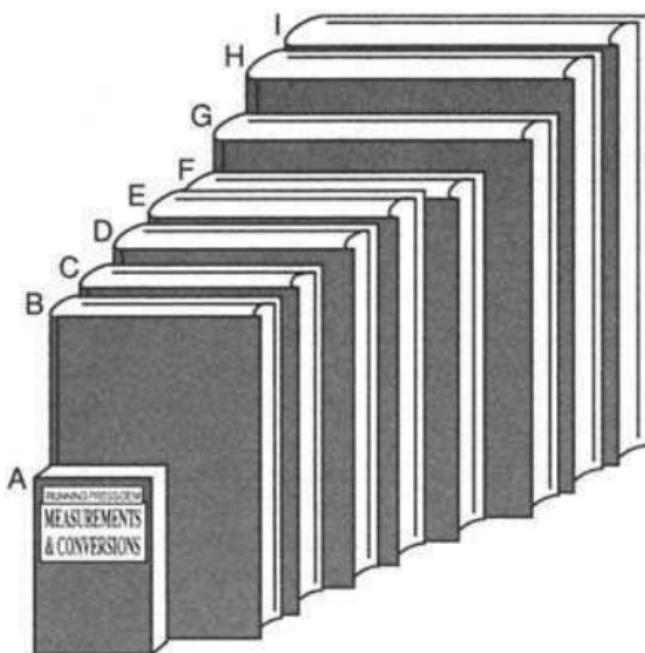

Banker's flap Stronger than a commercial envelope.
Smallest: $3\frac{7}{8} \times 7\frac{1}{2}$ in
Largest: 6×12 in

Baronial Used for invitations and greetings cards.
Smallest: $3\frac{5}{8} \times 5\frac{1}{8}$ in
Largest (card): $4\frac{5}{8} \times 6\frac{1}{4}$ in

Window envelopes

These are available in many different sizes and styles.

Clothing sizes

US clothing sizes are equal to UK sizes for some items, such as children's shoes; for others, the two vary slightly. Below are listed the European equivalents of US and UK clothing and shoe sizes. Remember also that sizes vary depending on the manufacturer.

Men's shoes

| USA | UK | Europe |
|-----|-----|--------|
| 7 | 6½ | 39 |
| 7½ | 7 | 40 |
| 8 | 7½ | 41 |
| 8½ | 8 | 42 |
| 9 | 8½ | 43 |
| 9½ | 9 | 43 |
| 10 | 9½ | 44 |
| 10½ | 10 | 44 |
| 11 | 10½ | 45 |

Children's shoes

| USA/UK | Europe |

N inside leg

O back

Body measurements

The standard body measurements shown on the diagram on the opposite page are those needed for garment fitting.

Below are a few tips on taking some of these measurements.

Neck

Measure at the fullest part.

Chest/bust

Measure at the fullest part of the bust or chest and straight across the back.

Waist

Tie a string around the thinnest part of your body (the waist) and leave it there as a point of reference for other measurements.

Hips

There are two places to measure hips, depending on the garment: one is 2–4 in below the waist, at the top of the hipbones; the other is at the fullest part, usually 7–9 in below.

Arm

Measure at the fullest part, usually about 1 in below the armpit.

Arm length

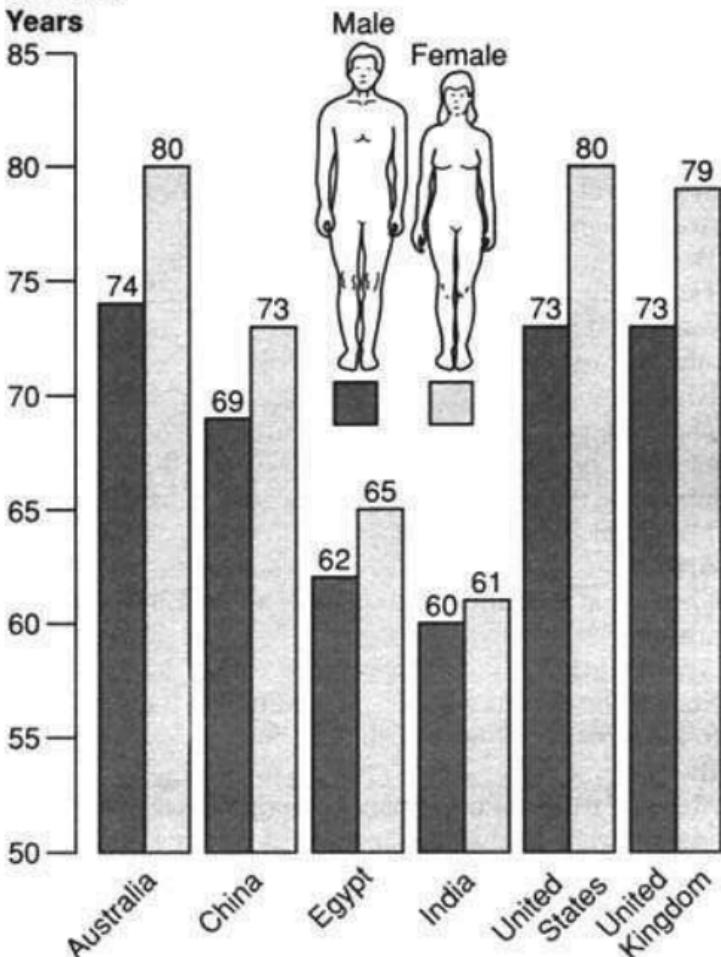

Start at the shoulder bone and continue past the elbow to the wrist, with the arm slightly bent.

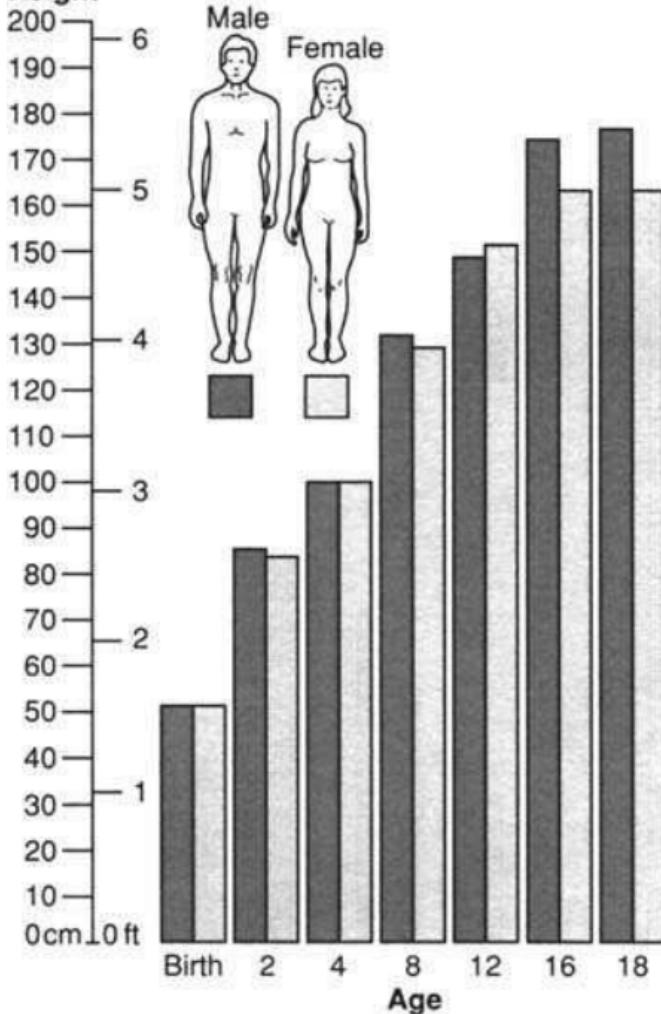

Back

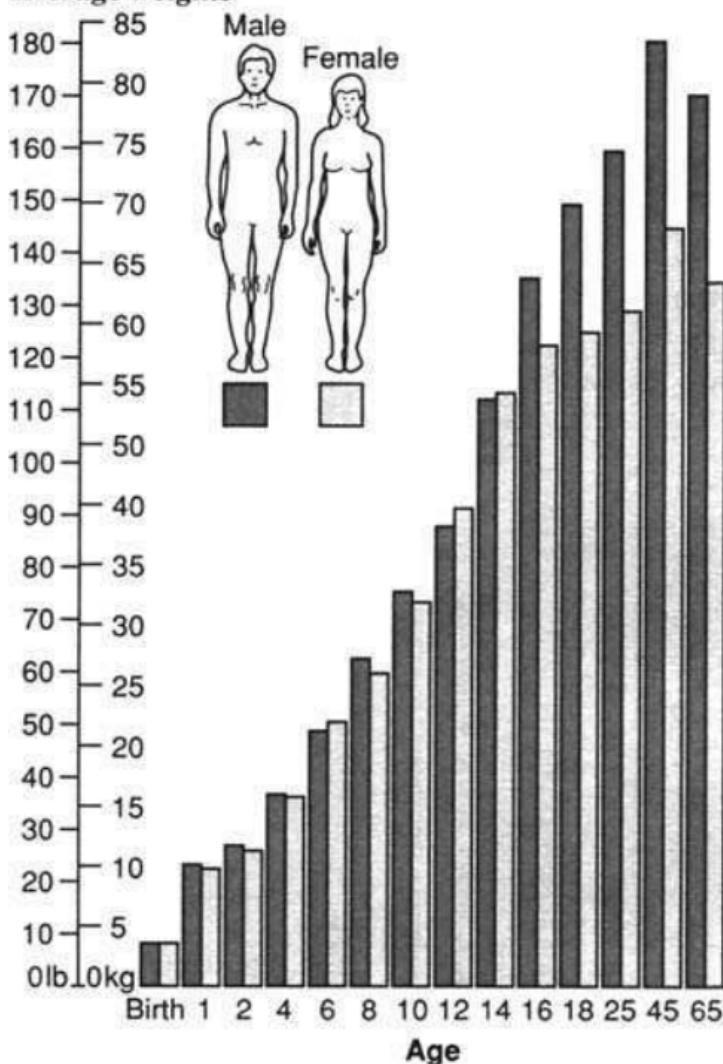

Measure from the prominent bone in the back of the neck down the center to the point at which you want the garment to end, e.g. the hips.

Life expectancy

The table below shows life expectancy figures for selected countries. Age in years appears at the top of each bar.

Average heights**Height**

Average weights

Laundry codes

Most garments contain a label giving laundering instructions (the International Textile Care Labeling Code [ITCL]), usually shown in terms of symbols, that tell you if any item is washable (or should be dry-cleaned) and how to wash it. The codes are listed below.

The table on the following pages lists the old and new codes, recommended temperatures (for machine- or hand-washing), and other machine settings, and the types of fabric that should be washed according to that code.

- A Machine or hand wash
- B Can be bleached
- C Do not bleach
- D Iron
- E Do not iron

- F Dry cleanable
- G Do not dry clean
- H Tumble dry
- I Do not tumble dry

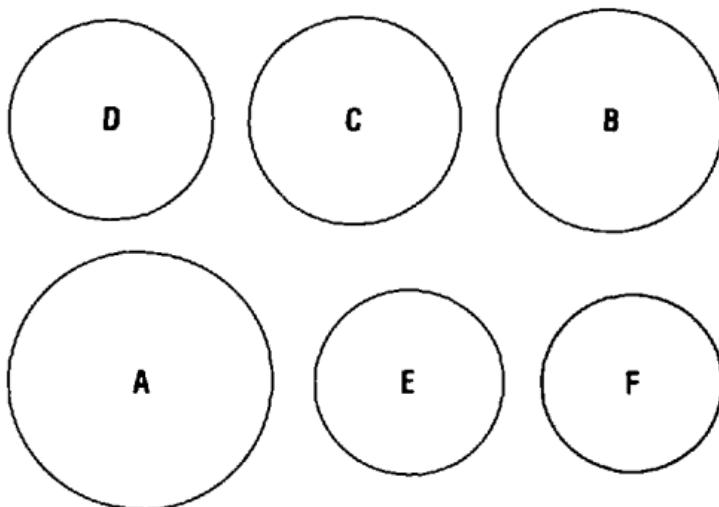

| OLD | NEW | MACHINE WASH | HAND WASH |
|---------|---------|---|--|
| CODE | | TEMPERATURE | |
| 1 95 | 9 95 |  | Very hot 95 °C (203 °F) to boil Hand hot 50 °C (122 °F) or boil |
| 2 60 | 3 60 |  | Hot 60 °C (140 °F) Hand hot 50 °C (122 °F) |
| 4 50 | |  | Hand hot 50 °C (122 °F) Hand hot 50 °C (122 °F) |
| 5 40 | |  | Warm 40 °C (104 °F) Warm 40 °C (104 °F) |
| 6 40 | |  | Warm 40 °C (104 °F) Warm 40 °C (104 °F) |
| 7 40 | |  | Warm 40 °C (104 °F) Warm 40 °C (104 °F) |
| 8 30 | |  | Cool 30 °C (86 °F) Cool 30 °C (86 °F) |

| AGITATION | RINSE | SPIN | FABRIC |
|---------------------|--------------|-------------------------------|---|
| Maximum | Normal | Normal | White cotton and linen with no special finish |
| Maximum | Normal | Normal | Cotton, linen, viscose, color-fast with no special finish |
| Medium | Cold | Short spin or drip dry | Colored nylon, polyester, cotton, and viscose with special finish |
| Maximum | Normal | Normal | Cotton, linen, viscose, color-fast to 40 °C (104 °F) |
| Minimum | Cold | Short spin | Acrylics, acetate, and mixtures with wool |
| Minimum: do not rub | Normal | Normal: do not hand wring | Wool and wool mixtures |
| Minimum | Cold | Short spin; do not hand wring | Silk and printed acetate, not color-fast at 40 °C (104 °F) |

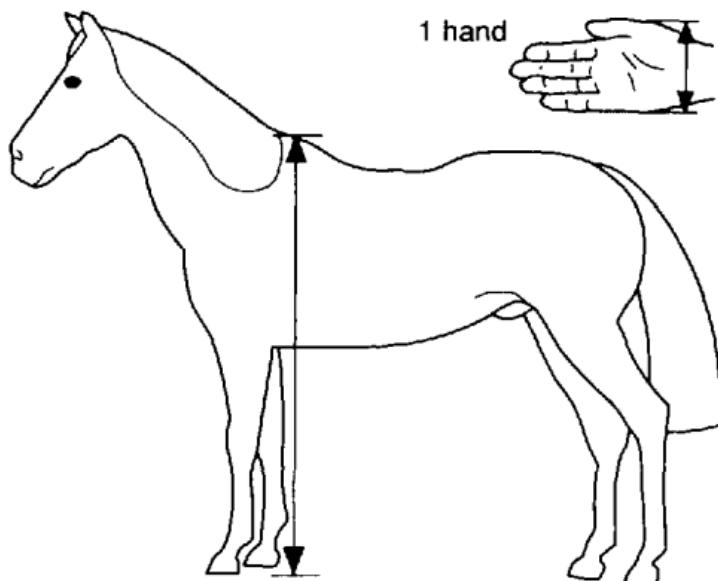

Gun gauge/caliber

A shotgun bore (diameter) is expressed in terms of gauge. Gauge was originally determined by the number of round lead balls – each the size of the shotgun bore – in a pound. For example, a 10-gauge shotgun was one that used balls that were 10 to the pound. The exception is the 410 bore, which is measured in inches: .410 in diameter, using 67.5 gauge. The most popular size today is the 12-gauge.

The table below shows gauge and equivalent bore size.

| Gauge | A | B | C | D | E | F |
|-----------|-------|-------|-------|-------|-------|-------|
| Bore (mm) | 23.34 | 19.67 | 18.52 | 17.60 | 16.81 | 15.90 |

Horse measurements

The height of a horse or pony is measured to its withers (on the highest point on its back at the neck base), as shown above. Height is expressed in "hands high" (hh). One hand is 4 in (10 cm), the average width of a person's hand. Height is given to the nearest inch – a pony measuring 50 in (127 cm) is said to measure 12.2 hands. The table below shows recommended heights of ponies for young riders.

Pony's height (hh)

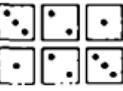

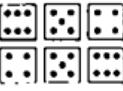

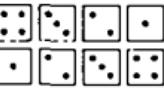

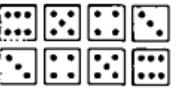

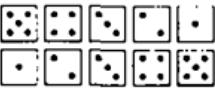

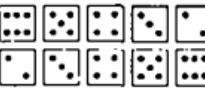

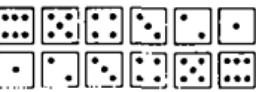

| | |
|-----------|-------|
| 11–12 | 7–9 |
| 12–13 | 10–13 |
| 13–14.2 | 13–15 |
| 14.2–15.2 | 15–17 |

Child's age (years)

Odds in dice and cards

Dice

Odds in dice-throwing are determined by comparing favorable results with unfavorable. With one die, you have six possible results – one for each side of the die; with two die, you have 36 possible results. Some results – a 12 or a 2 – you have only one chance to achieve. Thus the odds against throwing a 12 or 2 are 35 to 1. For results with two possible combinations, the chances are 35 to 2, or 17 to 1. The table below shows the odds for each possible combination.

| Combination | Chances | Combination |
|-------------|--|---|
| 2 |  35-1 |  12 |
| 3 |  17-1 |  11 |
| 4 |  11-1 |  10 |
| 5 |  8.5-1 |  9 |
| 6 |  7-1 |  8 |
| 7 |  5-1 | |

Poker

Odds in poker are figured against a total number of possible combinations of 2,598,960. Thus, the odds of getting a royal flush (4 possible combinations) are 2,598,960 to 4, or 649,739 to 1.

| Hand | Chances |
|-----------------|----------------|
| royal flush | 649,739 to 1 |
| straight flush | 72,192 to 1 |
| four of a kind | 4,164 to 1 |
| full house | 693 to 1 |
| flush | 508 to 1 |
| straight | 254 to 1 |
| three of a kind | 46 to 1 |
| two pairs | 20 to 1 |
| one pair | 2.4 to 1 |
| nil | 2 to 1 |

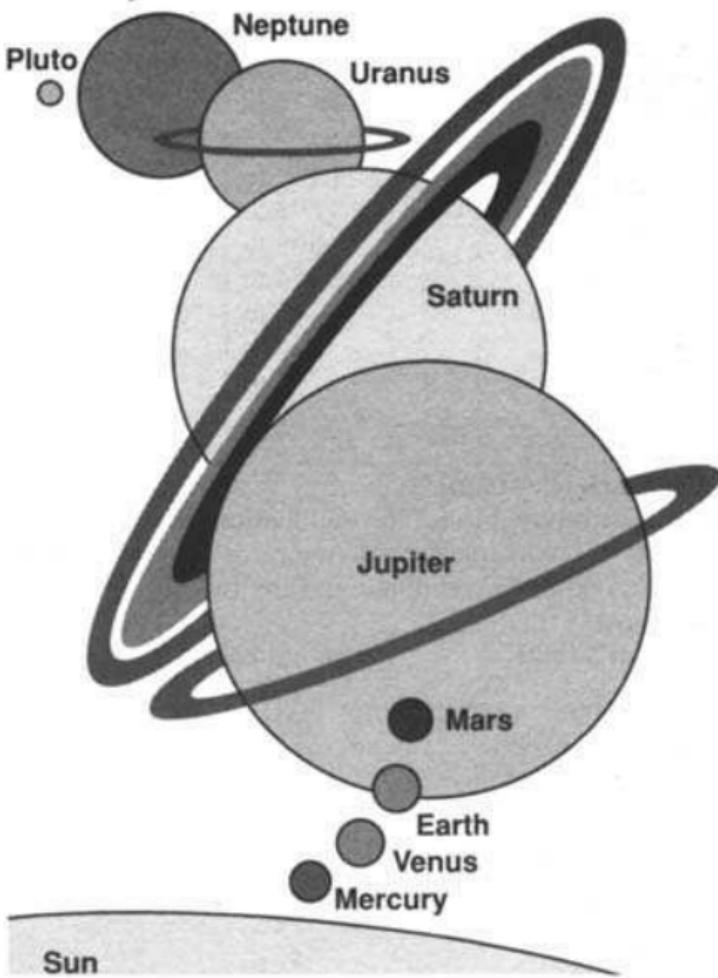

Blackjack (Pontoon)

There are a possible 1,326 combinations in blackjack; the odds of reaching 21 with two cards from a 52-card deck (64 possible combinations) are thus 1,326 to 64, or 21 to 1.

| Two-card total | Chances |
|-----------------------|----------------|
| 21 | 21 to 1 |
| 20 | 9 to 1 |
| 19 | 16.5 to 1 |
| 18 | 15 to 1 |
| 17 | 14 to 1 |
| 16 | 15 to 1 |
| 15 | 14 to 1 |
| 14 | 13 to 1 |
| 13 | 11 to 1 |

11: Astronomy

Planetary features

Diameter at equator

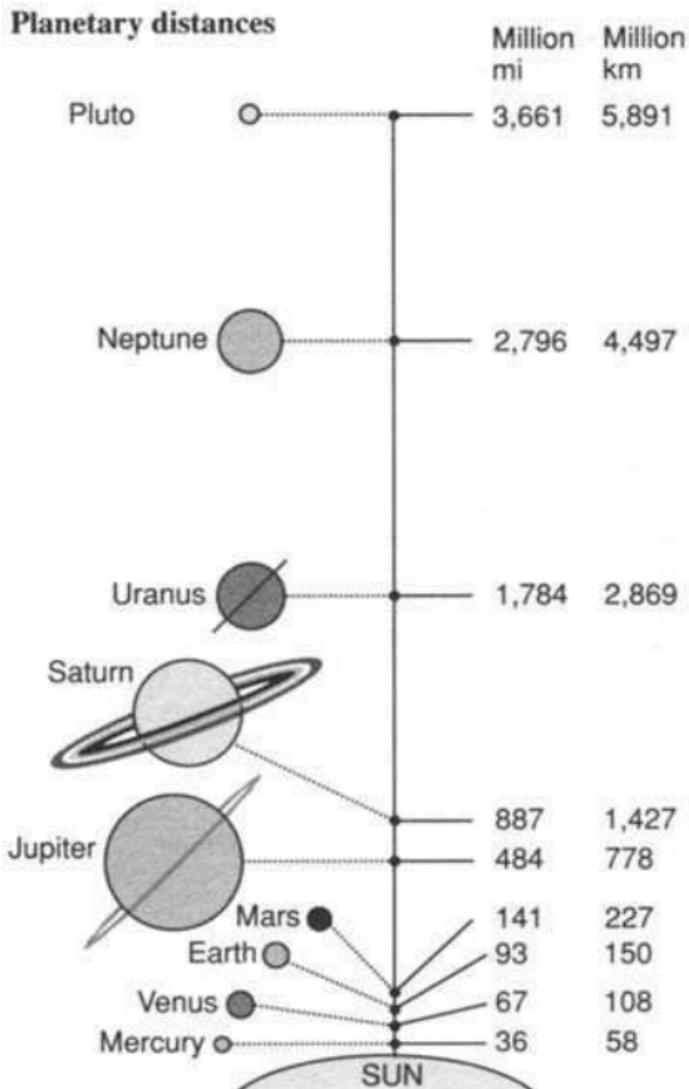

| Planet | mi | km |
|---------------|-----------|-----------|
| Mercury | 2,926.8 | 4,878 |
| Venus | 7,262.4 | 12,104 |
| Earth | 7,653.6 | 12,756 |
| Mars | 4,077.0 | 6,795 |
| Jupiter | 85,680.0 | 142,800 |

| Jupiter | 9 hr 50 min |
| Saturn | 10 hr 14 min |
| Uranus | 16 hr 10 min |
| Neptune | 18 hr 26 min |
| Pluto | 6 days 9 hr |

Average surface temperatures

| Solid surface | | Cloud surface | |
|----------------------|---------------------------------|----------------------|---------|
| Mercury { | 662 °F (day) -274 °F (night) | Jupiter | -238 °F |
| | | Saturn | -292 °F |
| Venus | 896 °F | Uranus | -346 °F |
| Earth | 72 °F | Neptune | -364 °F |
| Mars | -9 °F | Pluto | -382 °F |

Planetary distances

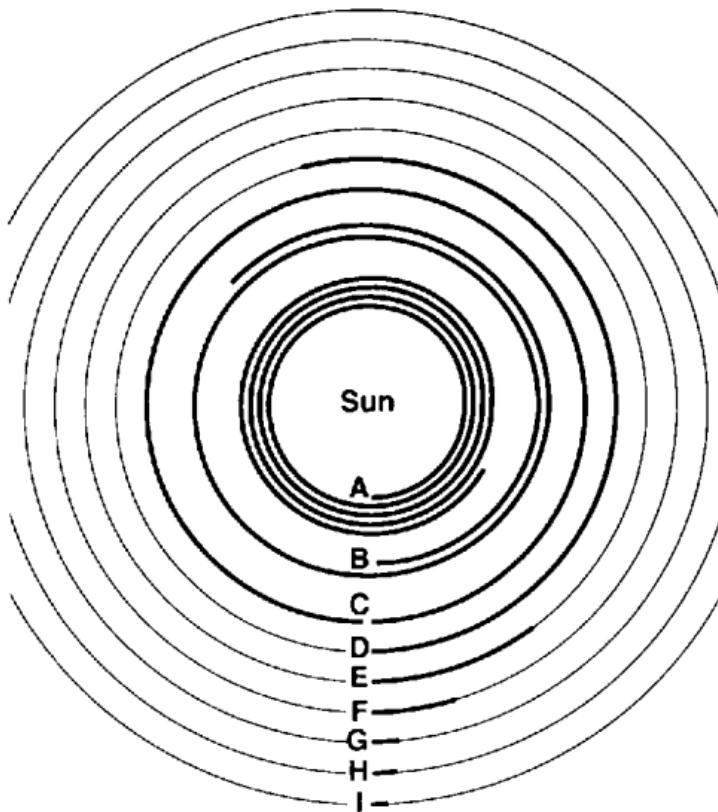

Mean distance from the Sun

| Planet | mi | km |
|---------------|---------------|---------------|
| Mercury | 36,000,000 | 58,000,000 |
| Venus | 67,000,000 | 108,000,000 |
| Earth | 93,000,000 | 150,000,000 |
| Mars | 141,000,000 | 227,000,000 |
| Jupiter | 484,000,000 | 778,000,000 |
| Saturn | 887,000,000 | 1,427,000,000 |
| Uranus | 1,784,000,000 | 2,869,000,000 |
| Neptune | 2,796,000,000 | 4,497,000,000 |
| Pluto | 3,661,000,000 | 5,891,000,000 |

Closest distance to the Earth

| Planet | mi | km |
|---------------|---------------|---------------|
| Mercury | 50,000,000 | 80,800,000 |
| Venus | 25,000,000 | 40,400,000 |
| Mars | 35,000,000 | 56,800,000 |
| Jupiter | 367,000,000 | 591,000,000 |
| Saturn | 744,000,000 | 1,198,000,000 |
| Uranus | 1,607,000,000 | 2,585,000,000 |
| Pluto* | 2,670,000,000 | 4,297,000,000 |
| Neptune | 2,678,000,000 | 4,308,000,000 |

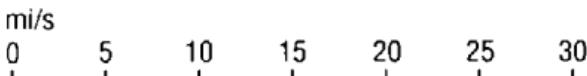

*Between 1979 and 1999 Pluto will be closer to the Earth than Neptune because of the unusual shape of its orbit.

The solar system – Orbits and rotation

Sidereal period

Sidereal period is the time it takes a planet to orbit the Sun. Planets' orbital speeds vary, as does their distance from the Sun, so these periods are different for each planet. The diagram shows how far each planet travels in its orbit during the time it takes the Earth to complete one orbit (approximately 1 year).

| | Sidereal period | Average orbital speed |
|-----------|------------------------|------------------------------|
| A Mercury | 88.0 days | 28.75 mi/s |
| B Venus | 224.7 days | 21.7 mi/s |
| C Earth | 365.3 days | 18.5 mi/s |
| D Mars | 687.0 days | 14.97 mi/s |
| E Jupiter | 11.86 years | 8.14 mi/s |
| F Saturn | 29.46 years | 5.97 mi/s |
| G Uranus | 84.01 years | 4.23 mi/s |
| H Neptune | 164.8 years | 3.36 mi/s |
| I Pluto | 247.7 years | 2.92 mi/s |

Light years

The table below lists standard abbreviations and equivalents for the units used in measuring astronomical distances. These are very large units and are related to the Earth's orbit.

A light year (ly) is the distance light travels – at its speed of 186,282 mi/s – through space over a tropical year.

An astronomical unit (au) is the mean distance between the Earth and the Sun.

A parsec (pc) is the distance at which a baseline of 1 au in length subtends an angle of 1 second.

$$1 \text{ au} = 93,000,000 \text{ mi} = 149,600,000 \text{ km}$$

$$1 \text{ ly} = 5,878,000,000,000 \text{ mi} = 9,460,500,000,000 \text{ km}$$

$$1 \text{ pc} = 19,174,000,000,000 \text{ mi} = 30,857,200,000,000 \text{ km}$$

$$1 \text{ ly} = 63,240 \text{ au}$$

$$1 \text{ pc} = 206,265 \text{ au} = 3.262 \text{ ly}$$

Planetary data

12: Earth

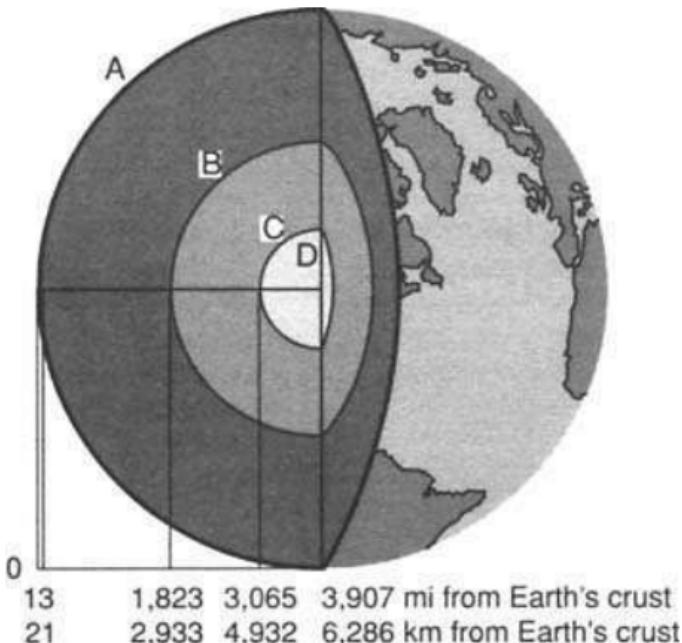

Earth's interior

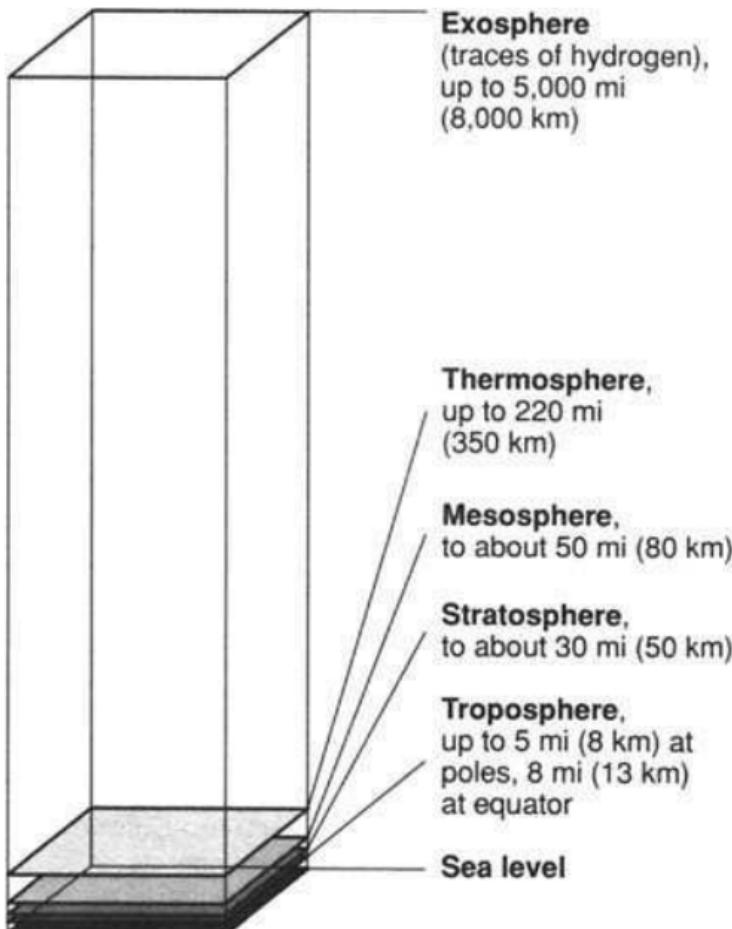

A Crust (under oceans) 4 mi (6 km) deep; made of basalt (a type of rock). Crust (continental): average 22 mi (35 km) deep; made of granite

B Mantle 1,810 mi (2,912 km) deep; probably containing peridotite (a heavy, dark rock), dunite (olivine rock), and eclogite (a dense form of basalt)

C Outer core 1,242 mi (1,999 km) deep; probably liquid iron with some dissolved sulfur and silicon

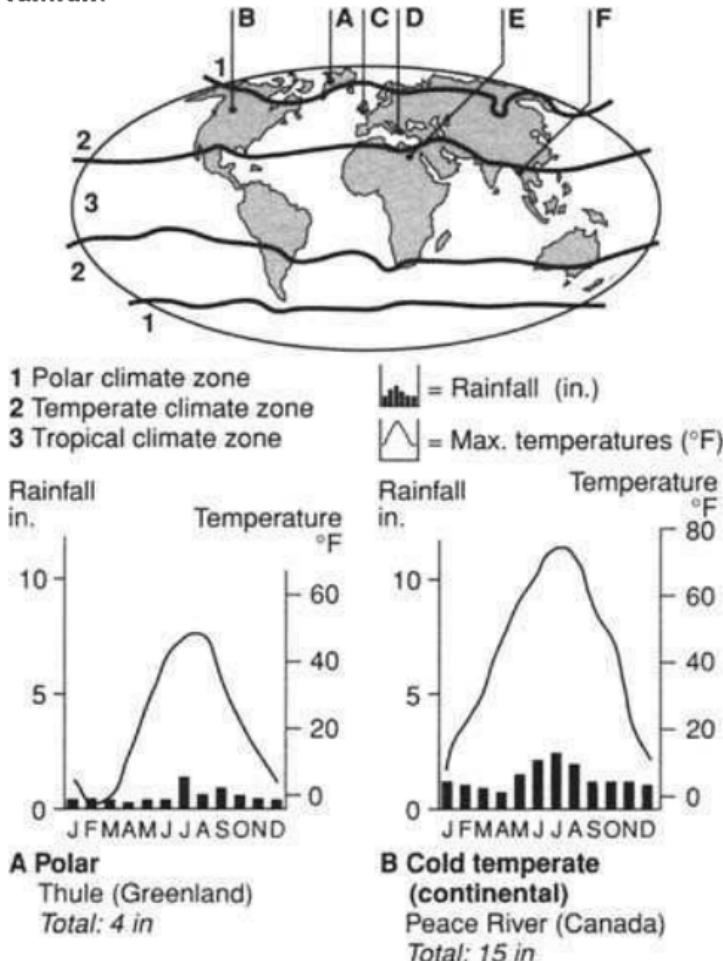

D Inner core 842 mi (1,354 km) deep; probably solid iron

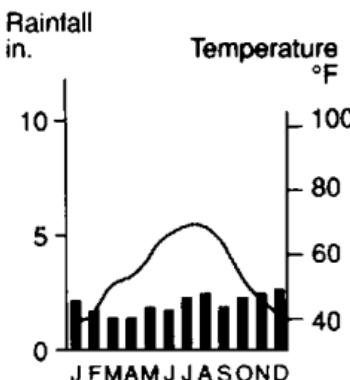

Atmospheric layers and depths of the Earth

Climate

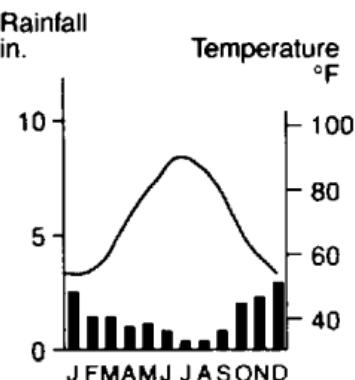

The climate of a region is primarily the result of location (latitude and longitude); altitude (height above sea level); the air pressure; the wind patterns; and the rainfall.

**C Cool temperate (marine)**

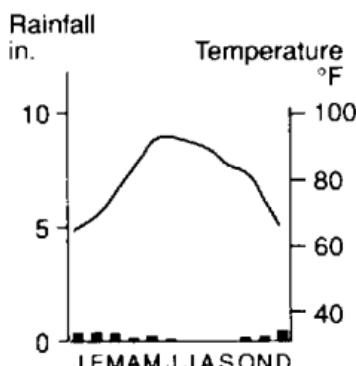

London (UK)

Total: 23 in

**D Warm temperate**

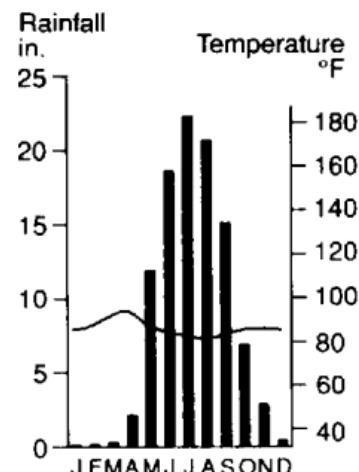

Athens (Greece)

Total: 16 in

**E Tropical (desert)**

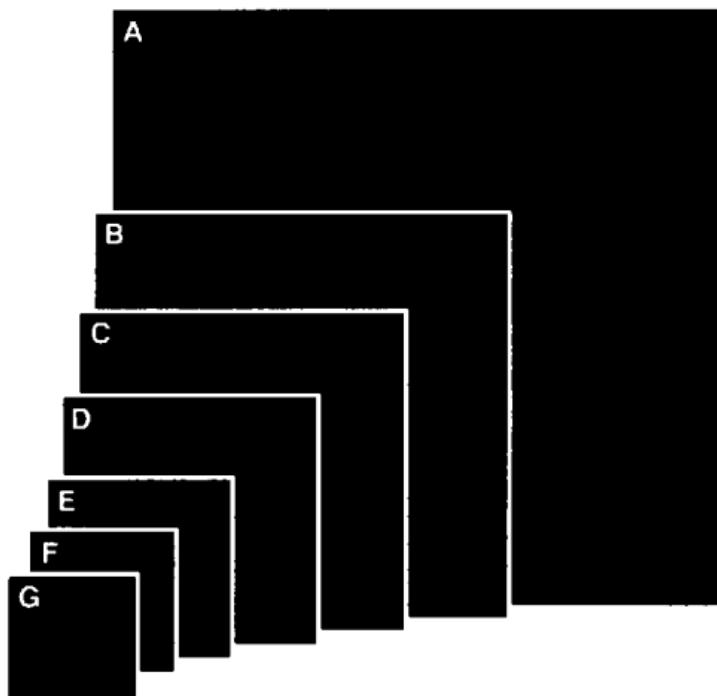

Cairo (Egypt)

Total: 1 in

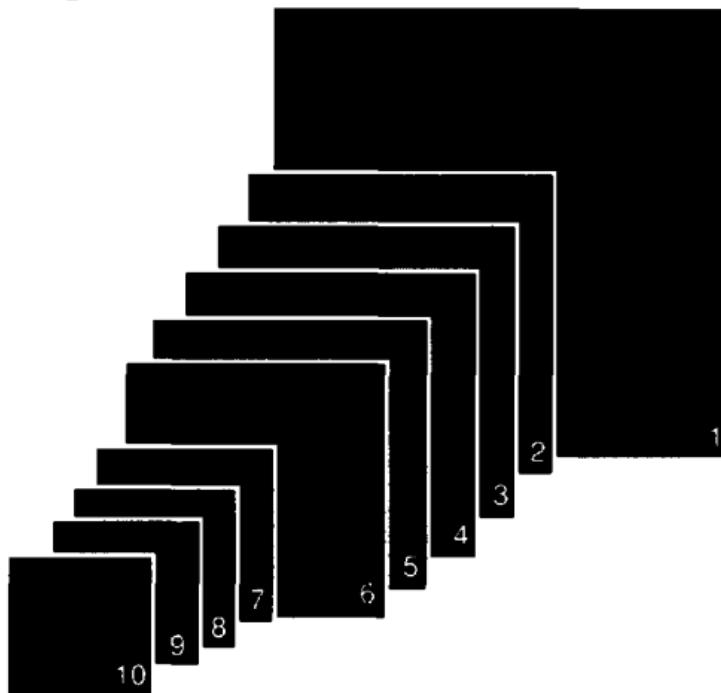

**F Tropical (monsoon)**

Yangon (Myanmar)

Total: 103 in
