With this work, Bendavid's philosophical labors came to an end. During his remaining thirty years he wrote solely on Jewish problems. These writings reflect the struggles of the first post-Mendelssohnian Jewish generation with the problem of being Jewish. Bendavid regarded Reform Judaism as the only means of stemming the tide of conversion to Christianity. In his work *Etwas zur Charakteristick der Juden* (1793), he advocated the abolition of the ritual laws and the cultural and social assimilation of Jews. Nevertheless, he eschewed conversion to Christianity. Kant wrongly interpreted Bendavid's attitude as counseling Jews to accept Christianity and advised them, on the strength of Bendavid's views, openly to adopt the religion of Jesus and thus at long last attain a religious ethic and through it a religion (cf., Kant, *Der Streit der Fakultäten*; also, the pertinent remarks of Hermann *Cohen in his *Kants Begründung der Ethik* (1901), 49). Bendavid's biblical studies are in the spirit of extreme Haskalah rationalism. In an essay in 1797 he attempted to show that the Ark of the Covenant was an electrical device which helped to kindle the wood on the altar. He published studies on the jubilee year, the prohibition of usury, the mixture of wool and linen, the belief in the Messiah, and the written and oral Law. In his article on the Messiah he sought to demonstrate, by investigating the theory of the transmigration of the Messiah's soul, that the belief in the coming of the Redeemer is not a dogma of Judaism and that the bestowal of equal rights upon the Jews would signify that the "Messiah" had come.

[Samuel Hugo Bergman / Yehoyada Amir (2nd ed.)]

BENDEMANN, EDUARD JULIUS FRIEDRICH (1811–1889), German painter. Born in Berlin as the youngest child of Anton Bendemann and Fanny, née von Halle, a bourgeois Jewish family who later converted to Protestantism, Bendemann revealed his talent early in a portrait he painted of his

grandmother before he was 20. After having studied under Johann Gottfried von Schadow, he followed the son of Johann Gottfried, Wilhelm von Schadow, to Duesseldorf in 1827 and enrolled in the Duesseldorf School of Painting, whose head was Wilhelm Schadow. In 1830 he accompanied Schadow to Italy, where for one year he devoted himself exclusively to the study of Raphael, Michelangelo and the Nazarenes. There he apparently formed his taste for painting monumental historical scenes in a classicist style. Bendemann produced his best-known paintings between 1831 and 1835, among them *The Exiles of Babylon* (1832), *Two Girls at the Well* (1833), *Jeremiah at the Destruction of Jerusalem* (1836) and *Die Kuenste am Brunnen der Poesie* (1837). In 1835 Bendemann married Schadow's sister Lida. He was appointed professor at the Academy of Fine Arts of Dresden in 1838 and executed a number of murals for the royal palace there. In the revolution of 1848 he was an active member of pro-revolutionary leagues. In 1859 he succeeded his former teacher and brother-in-law as director of the Academy in Duesseldorf, but resigned in 1867 due to ill health. He was commissioned to paint portraits of well-known figures, and a large number of his works are exhibited in Berlin museums. In addition, his illustrations in the neo-classical style appear in such literary works as the *Nibelungenlied* (published 1840 in Leipzig) and Lessing's *Nathan the Wise*. His son RUDOLF (1851–1884) was also a well-known painter. His elder son FELIX (1848–1915) was an admiral and chief of Naval Staff.

BENDER, ALFRED PHILIP (1863–1937), South African minister. The son of a minister of the Dublin Hebrew Congregation in Ireland, he was the recognized leader of Cape Town Jewry for many years, both in religious and secular affairs. He was minister of the Cape Town Hebrew Congregation, the “mother congregation” of South Africa, from 1895 for 42 years and was responsible for initiating many educational, social, and cultural activities, including special services for children, confirmation services for girls, Sunday morning classes for women, and debating and social clubs for young men, taking a special interest in Jewish university students. Although very English in outlook and not sympathetic to the ways of “foreigners,” he always gave generous assistance to East European immigrants in their settlement problems. He was long opposed to the principle of a representative lay body for South African Jewry, and in consequence his congregation

did not affiliate with the Board of Deputies until 1919. He was also unsympathetic to the Zionist movement, but supported it after the Balfour Declaration. In the general community he was prominent in numerous educational and philanthropic endeavors, giving long service to the Cape Town hospital board, the school board, the council of the Cape Town University, and a variety of nondenominational philanthropic organizations.

[Gustav Saron]

BENDER, MORRIS BORIS (1905–1983), U.S. neurologist. Bender, who was born in Russia, was taken to the United States in 1914. After graduating in medicine he trained in neurology and psychiatry in several New York hospitals. He was research fellow in neurophysiology at Yale University (1936–38) and New York's Mount Sinai Hospital (1938–42). He then served as head of the laboratory of experimental neurology at New York University (1942–50). He joined the faculty of neurology at the New York University College of Medicine in 1938, becoming professor of clinical neurology in 1953. In 1966 he was appointed professor and chairman of the department of neurology of the Mount Sinai School of Medicine. He was also clinical professor of neurology at Columbia University's College of Physicians and Surgeons from 1953 to 1967. Bender's major research interests were the physiology of the visual and oculomotor systems and behavioral neurology, especially consciousness and perception. His major works are *Disorders in Perception* (1952) and *Visual Field Defects after Penetrating Missile Wounds of the Brain* (in collaboration with others, 1960); he also edited *The Oculomotor System* (1964) and *The Approach to Diagnosis in Modern Neurology* (1967).

[Fred Rosner]

BENDERLY, SAMSON (1876–1944), U.S. educator. Benderly, who was born in Safed, Palestine, emigrated to Baltimore in 1898. He received a medical degree at Johns Hopkins University. During his internship Benderly became interested in modern Jewish education in Baltimore and abandoned his medical career. In 1910 he was appointed director of the first Bureau of Jewish Education in the United States, in New York. This agency outlasted its parent body, the *kehillah* of New York City, and was molded by Benderly's lifework. Benderly conceived of a comprehensive educational program to raise the level of Jewish life in America. He was the American organizer of *Ivrit be-Ivrit* pedagogy – the use of Hebrew as the language of instruction. He initiated pilot schools that developed curricula and experimented with new ideas. He organized school board representatives, formed principals' and teachers' study groups, and initiated a leadership-training program to make Jewish education a profession. Benderly also pioneered in the education of Jewish girls, and in adolescent and secondary Jewish schooling. He experimented with Jewish educational

camping, initiated home-study projects for the preschool child, and designed extension programs for the unschooled. His bureau structure was the prototype for similar agencies throughout America, and the personnel he trained became foremost leaders of Jewish education in America.

[Nathan H. Winter]

BENDERY (Rom. **Tighina**), city in Bessarabia (in Romania 1918–40; 1941–44), Moldova. The presence of Jews there is first recorded in 1769 and a burial society, whose *pinkas* (register) is still extant, was founded in 1793. There were 101 Jewish families living in Bendery in 1808 (out of 331). In 1814 the *zaddik* Aryeh Leib Wertheim, son of Simeon Solomon of *Savran, became rabbi of Bendery; the descendants of the dynasty of *zaddikim* which he founded served as rabbis of Bendery until World War II. The Jewish population increased with the influx of immigrants into Bessarabia in the 19th century, numbering 4,297 in 1864 and 10,644 in 1897 (33.5% of the total population). Institutions of the community included a hospital founded in 1885, an old-age home, a secondary school founded in 1912, and an elementary school. In 1925, of the 1,526 members of the local Jewish cooperative loan-bank, 701 were employed in commerce, 363 in handicrafts, and 49 in agriculture. The economic situation of the Jews deteriorated as a result of growing antisemitism, as the city was the center of Alexander *Cuza's Fascist Party. According to the official census, the community numbered 8,294 (26.4% of the total population) in 1930. The communal organization was dissolved and its institutions were abolished or nationalized when Bessarabia became part of Soviet Russia in June 1940.

[Eliyahu Feldman]

Holocaust Period

Under Soviet occupation (1940–41), wealthy Jews were exiled to Siberia, as were wealthy non-Jews. With the beginning of the German-Romanian invasion, the Soviet authorities provided transport and many Jews fled to the interior of Russia. On July 4, 1941, the Romanian army assembled the remaining 700 Jews in the local castle, and shot them. After the liberation in September 1944, some 800 Jews returned, reestablishing the community, but they eventually left for Romania and from there Israel. In Bendery an agreement was signed between Germany and Romania, on August 31, 1941, concerning the plan to deport Jews to Transnistria.

BENDIX, BENEDICT HEINRICH (1768–1828), German engraver, known for his portraits of leaders of German Jewry in the early 19th century. Bendix was born in Berlin and studied engraving. He portrayed various contemporaries such as

the Duke and Duchess of Mecklenburg and the mathematician Abraham Wolff. He exhibited his works at the Academy of Berlin in 1788 and 1793. His only mezzotint (1808) portrays Aron Beer, the first cantor to be appointed to the Berlin Jewish community. Among his most important works are two plates, each consisting of three medallions: one depicting Napoleon I, Frederick William III, and Alexander I of Russia, and the other Empress Josephine, Queen Louise, and Empress Elizabeth of Russia. Bendix also executed an engraving of Nathan and the Templar (1806), a subject taken from Lessing's play *Nathan the Wise*. When the Berlin Jewish community opened a school in 1825 Bendix was engaged as teacher of drawing. He remained in that position until his death by suicide.

ADD. BIBLIOGRAPHY: U. Thieme, "Felix Becker," in: *Allgemeines Lexikon der bildenden Künstler von der Antike bis zur Gegenwart*, vol. 3 (1992).

BENDIX, OTTO (1845–1904), pianist, oboist, composer, and teacher. Born in Copenhagen, the brother of the conductor Victor *Bendix, he studied with Niels Gade and then with Kullak in Berlin and Franz Liszt in Weimar. Bendix taught piano at the Copenhagen Conservatory and was oboist in a theater orchestra.

In 1880 he immigrated to the United States to teach at the New England Conservatory in Boston, and in 1895 he founded his own music school in San Francisco. He also appeared as a concert pianist in the United States and Europe and published some piano pieces.

[Naama Ramot (2nd ed.)]

BENDIX, REINHARD (1916–1991), U.S. sociologist. Born in Berlin, Bendix left Germany after Hitler's rise to power and emigrated to the U.S.A. In 1943 he began his academic career as an instructor at the University of Chicago. He taught at the University of Colorado (1946–47) and then at the University of California at Berkeley. In 1956 he became full professor and chairman of the Department of Sociology. In 1959 he was elected president of the American Sociological Association. He served as director of the University of California Education Abroad Program in Göttingen, Germany (1968–70), and in 1972 he joined the Department of Political Science at Berkeley.

Bendix approached sociological problems typologically. His first published work, *Social Science and the Distrust of Reason* (1951), began to build bridges between European and American sociological traditions. He used the theories of Max Weber as a basis for his sociological explorations and refined and advanced them considerably. His book *Max Weber: An Intellectual Portrait* (1960) is largely biographical but his primary interests, as is shown in most of his books and numerous articles in sociological journals, were in political and industrial sociology, social stratification, and sociological theory.

His book *Class, Status and Power* (1953; 1967²), a collection of readings in stratification edited jointly with Seymour Martin *Lipset, became a standard work in the field. A later publication was *Social Mobility in Industrial Society*, which he also co-authored with Lipset. His best-known book, for which he received the MacIver award, is *Work and Authority in Industry: Ideologies of Management in the Course of Industrialization* (1956). It is based on historical data from England, the United States, Russia, and East Germany. Another work, *Nationbuilding and Citizenship* (1964), analyzes the processes leading to the formation of new nations. Bendix was the author of numerous scholarly papers, chiefly on topics of a theoretical nature. Throughout his career, Bendix saw himself living between cultures, building connections between academic disciplines in the United States and Germany. In his honor, the Institute of International Studies established the Reinhard Bendix Memorial Research Fellowship for graduate students in the field of political and social theory or historic studies of society and politics. Other books by Bendix include: *Kings or People: Power and the Mandate to Rule* (1978); *Force, Fate, and Freedom* (1984); *From Berlin to Berkeley*, (1986); *Embattled Reason, Vol. 1* (1988); *Embattled Reason, Vol. 2* (1989); and *Unsettled Affinities* (1993, published posthumously).

[Werner J. Cahnman / Ruth Beloff (2nd ed.)]

BENDIX, VICTOR EMANUEL (1851–1926), pianist, conductor, and composer. Born in Copenhagen, the brother of the pianist Otto *Bendix, Victor Bendix studied at the Copenhagen Conservatory with composer Niels Gade and as a pianist with, among others, Liszt (from 1881). He was répétiteur at the Copenhagen Royal Theater and later piano teacher at the Royal Academy of Music. Bendix was an excellent conductor, and in this role he made great contributions to the musical life of Copenhagen. He was the conductor of the choral society, which he founded in Copenhagen (1872–76), and of the Copenhagen Philharmonic Concerts (which he established in 1897). His concert performances of *Siegfried* and *Tristan und Isolde* and his staged performances of Verdi's *Don Carlos* were welcome innovations in the usual repertory of the Copenhagen Musical Society. From 1892 to 1893 he conducted the *Volkskonzerte* in Berlin. Bendix wrote many songs but his important works were his compositions for the piano; among them are Piano Trio op. 12, Piano Concerto op. 17, and Piano Sonata op. 26. He also composed *Psalm 33* for chorus and orchestra and four symphonies.

BEN-DOR, IMMANUEL (1901–1969), archaeologist. Ben-Dor, who was born at Okopy, Poland, was a member of the archaeological expeditions of the University of Pennsylvania in Beth-Shean, Egypt, Mesopotamia, and Italy and also took part in the American School of Oriental Research excavation at Beth-El and that of the University of Liverpool at Jericho.

He served as assistant keeper (1935) and librarian (1939) of the Palestine Archaeological Museum and conducted excavations at Nahariyyah and al-Zib. From 1948 to 1954 he was assistant director of the Israel Department of Antiquities and was also archaeologist to the Link Underwater Expedition at Caesarea. From 1958 to 1968 he was professor of biblical archaeology and Semitics at Emory University, Atlanta. He published articles on aspects of Palestinian archaeology.

[Michael Avi-Yonah]

BEN DOV, YAAKOV (1882–1968), photographer and Israeli pioneer. Ben Dov was born near Zhitomir, Russia and studied photography in Russia. Emigrating to Palestine in 1908, he was one of the first students and graduates of the Bezalel School of Arts (now the *Bezalel Academy of Arts and Design), supporting himself during his studies by working as a photographer and publishing illustrated postcards and albums of life in the country. At the outbreak of World War I he was mobilized in the Austrian army and served as a medical photographer in the Austrian military hospital in Jerusalem. After acquiring equipment from Austria he made several documentary films, including one of General Allenby's entry into Jerusalem. He thus became one of the pioneers of film in Israel, but abandoned filmmaking upon the advent of sound movies.

After the liberation of Jerusalem from Ottoman rule in 1918 he devoted himself to communal matters and helped organize the artisans' center and their Savings and Loan Bank, and was one of the representatives of the artisans on the First Jewish Municipal Council. In this capacity he was invited to be present at the official announcement of the Balfour Declaration.

Ben Dov was a founder of the Talpiot Quarter of Jerusalem and initiated other projects for building new suburbs in and around Jerusalem. In 1966 he was appointed a *Yakir Yerushalayim* (an honored citizen of Jerusalem). His works have been exhibited at the Israel Museum.

BIBLIOGRAPHY: *Tidhar*, 4:1629–30.

BENE-BERAK (Heb. בְּנֵי בְרָק). A biblical city 5 mi. (8 km.) E. of Jaffa. It is included in the territory of the tribe of *Dan together with Jehud and *Gath-Rimmon (Josh. 19:45), but it was no doubt in the area controlled by the Philistines until the period of the united monarchy. Assyrian sources describing Sennacherib's invasion in 701 B.C.E. speak of Bene-Berak as subject to *Ashkelon (together with Jaffa, Beth-Dagon, and Azur). After the destruction of the Second Temple, Bene-Berak became a center of Jewish learning when R. *Akiva established his school there, which was attended by such well-known pupils as Judah, Meir, and Simeon b. Yoḥai (Tosef., Ber. 2:14; Tosef., Shab. 3:3; Sanh. 32b; Gen. R. 95:30). The Passover *Haggadah* preserves an account of a famous *seder* held there by R. Akiva. When Eleazar b. Azariah accompanied Akiva to the public baths at Bene-Berak, it gave rise to a halakhic query (Tosef., Shab. 3:4). Echoes of religious persecution by the Ro-

mans (under Hadrian) are contained in both the passage in the *Haggadah* and in the Tosefta (Tosef., Ber. 2:14). Even after the *Bar Kokhba War (132–35 C.E.), Bene-Berak remained a Jewish city; Judah ha-Nasi visited it and was impressed by the extraordinary fertility of its orchards and vineyards (Mid. Tanḥ. to 26:9; TJ, Pe'ah 8:4, 20b). The same impression is reported by the *amora* Rami b. Ezekiel (third century C.E.), who applied to it the biblical phrase “a land flowing with milk and honey” (Ket. 111b). The Crusaders called the city Bombrac and built a fortress there to protect the approaches to Jaffa.

[Michael Avi-Yonah]

(2) One of the ten towns in Israel which form the metropolitan area of Tel Aviv, about 3 mi. (5 km.) northeast of downtown Tel Aviv, bordered on the north by the Yarkon River, on the east by the main highway to the south and north, and on the south and west by Ramat Gan. Bene-Berak was established in 1924 by a group of 13 Orthodox families from Warsaw, Poland, under the leadership of Rabbi Y. Gerstenkorn, who later became the town's first mayor. Until 1936 affairs were run by a local committee, and from 1936 to 1949 by a local council, but since 1950 Bene-Berak has been a township, comprising about 1,775 acres (7,100 dunams). The founders engaged mostly in farming and by 1929 the settlement grew to 100 families. It had 4,500 inhabitants in 1941, 8,800 in 1948, 25,000 in 1955, and 64,700 in 1968. In the mid-1990s the population was approximately 125,000 and in 2002 about 138,900, making it the tenth largest city in Israel, with a municipal area of 2.7 sq. mi. (7 sq. km.). Its dynamic growth was due to its proximity to Tel Aviv, and its special position as a place for a thoroughly Orthodox population and way of life. As a suburb, Bene-Berak is interrelated with the Tel Aviv nucleus for its public transportation, wholesale and retail trade, entertainment, education on the university level, and for employment – especially for white collar workers in Tel Aviv who live in Bene-Berak. Bene-Berak is known for its numerous yeshivot, headed by the Ponevezh Yeshivah, founded in 1941 by Rabbi Joseph *Kahaneman. It is also known for the strict public observance of the Sabbath, holidays, and Jewish laws, one consequence of which is that all its roads are closed to traffic on the Sabbath and holidays. There are more than 200 synagogues, many of them for ḥasidic *rebbe*s, and closed ḥasidic neighborhoods like Zikhron Meir, Vizhnitz, and Satmar (see *Satu Mare). Bene-Berak was the home of Ḥazon Ish (Rabbi Abraham I. *Karelitz), who established Tiferet Zion yeshiva. A Haredi College for academic studies geared to observant students was founded in 1999. It had around 100 students in 2002. The special character of the city as a bastion of ultra-Orthodoxy, with most men studying in the yeshivot rather than working, makes the city a center of poverty as well. The city includes one secular neighborhood – Pardes Katz.

Bene-Berak became one of Israel's important industrial areas and in 1969 had about 150 factories and numerous workshops for food preserves, cigarettes, wool textiles, and other branches, among them several of the country's largest such

enterprises, employing about 8,000 workers. At the beginning of the 21st century, the city had five industrial areas, with some of the largest plants in Israel.

BENEDEK, THERESE F. (1892–1977), U.S. psychoanalyst and psychiatrist. Born in Eger, Hungary, Benedek obtained clinical experience in Budapest and Leipzig, and emigrated to the United States in the early 1930s. She was appointed a staff member at the Chicago Institute for Psychoanalysis in 1936. In her research she concentrated on studying the psychological implications of female sexual functions and the personal disturbances associated with their impairment. She wrote (with B.B. Rubenstein) *The Sexual Cycle in Women* (1947), *Psychosexual Functions in Women* (1952), and *Insight and Personality Adjustment* (1946).

°**BENEDICT**, name of 16 popes, several of whom had significant contacts with Jews. **BENEDICT VIII** (1012–1024) ordered the execution of a number of Roman Jews in 1020 or 1021, on a charge that they had mocked the cross and thereby caused an earthquake which killed a number of Christians. **BENEDICT XII** (1334–1342) gave proof of his conversionary zeal when in 1320, while still bishop of Pamiers, he argued with a certain Baruch who had been forced into Christianity during the *Pastoureaux persecutions. He displayed the same zeal in 1338 by urging all Christians to aid in the pursuit of converted Jews who changed their places of residence in order to revert to Judaism. In 1335 he ordered the destruction of a synagogue in Posen because it had been erected too near a Cistercian chapel. He complained to King Pedro of Aragon in 1340 that Jews and Muslims were erecting too many synagogues and mosques and were enjoying too many contacts with Christians. At the same time, he was deeply concerned over the report by Albert II, duke of Austria, in 1338, that the Jews of *Passau had been falsely accused of having desecrated the *Host. A similar charge in *Nuremberg a few years previously had also proved false. The pope now ordered the bishop of Passau not to permit the Jews to suffer if they had been unjustly accused. **BENEDICT XIII** (Peter de Luna, 1394–1417) does not belong to the apostolic succession, since he is counted as an anti-pope during the Great Schism of the Church. His hostility to Jews and Judaism was evident during his period in Avignon (1394–1411). In 1396 he acted upon the accusation that the Jews of Geneva were enjoying many privileges under the protection of the local authorities; he also charged the leaders of the Avignon Jews with exceeding their powers. In 1403 he granted a three-year moratorium on debts owed by Christians to Jews. He did grant the Jews of Toro (Castile), in 1404, the right to have a synagogue in place of the two they had had before the persecutions in

Spain in 1391, but this had already been granted them by the king of Castile. His attempt in 1410 to calm the excessive zeal of the inquisitors in Majorca may also have been due to the exigencies of diplomacy rather than to personal good will. His really spectacular anti-Jewish activity began when, expelled from Avignon, he moved to his native Spain, still claiming to be the only legitimate pope. The depressed condition of the Spanish Jews at the time persuaded him that he could startle Christendom by obtaining the conversion of all Spanish Jewry. The Disputation of *Tortosa was the result. When it was concluded in May 1415, Benedict issued his Bull *Etsi doctoribus gentium* imposing every conceivable restriction on Jewish life. It condemned the Talmud and ordered it expurgated of every statement that might appear uncomplimentary to Christianity, and it made contact between Jews and Christians all but impossible. The Bull's enforcement lapsed after Benedict XIII was deposed by the Council of Constance in 1417; but its spirit remained alive and found echoes in a number of *Bulls by later popes. BENEDICT XIII (1724–1730) used every pressure, especially economic, on the inhabitants of the Roman ghetto to become converted to Christianity. He personally participated in the ceremonious baptism of 26 of them. He tried to limit Jewish trade to nonessentials. BENEDICT XIV (1740–1758) was deeply interested in the rigid interpretation and enforcement of Canon Law. Consequently, while reaffirming the right of the Jews of Avignon to trade in cloth, he increased the onus of the Jewish badge for the Jews of Rome by ordering them to wear it even when on a journey. A mere suspicion of consent was now enough to declare a Jew properly baptized; while a child, even if baptized without parental consent, was compelled to remain a Christian. Converts were limited to marrying only born Christians. Twice during his pontificate, in 1753 and 1755, Jewish books were confiscated and examined for anti-Christian statements. Yet he recognized that Jewish taxation was too heavy. Moreover, it was under his auspices that Lorenzo Ganganelli (later Pope *Clement XVI) drew up his memorandum concerning the *blood libel, and Benedict subsequently wrote to the authorities in Poland deploring the recent wave of accusations.

[Solomon Grayzel]

BENEDICT, SIR JULIUS (Isaac; 1804–1885), composer and conductor, born in Stuttgart. After conducting in Vienna (1823–25) and later in Naples, he settled in London in 1835. He

accompanied Jenny Lind on her American tour (1850–52) and conducted at Drury Lane and Covent Garden. Of his operas, the most successful was *The Lily of Killarney* (Covent Garden, 1862). Although a convert to Protestantism (1826), he set to music Psalm 84 (first verse) for the inauguration of the first British Reform Synagogue (West London) in 1840. His works include cantatas, symphonies, and piano concertos. He wrote biographies of Felix Mendelssohn (1853²) and Carl Maria von Weber (1881), whose pupil he was. He was knighted in 1871.

[Dora Leah Sowden]

BENEDICT BEN MOSES OF LINCOLN (d. 1278), English financier, in secular records called Magister Benedictus filius Magistri Mossei de Lincolnia. Benedict came from a family of scholars: his great-grandfather, Moses of Bristol (later of Oxford), had been a patron of letters; his grandfather, Yom Tov (apparently also known as Simeon), composed the lost *Sefer ha-Tena'im*; and his father, R. *Moses b. Yom Tov of London, was the leading Hebrew and talmudic scholar of his day in England. One of Benedict's brothers was Hagin (Ḥayyim), *archpresbyter of English Jewry from 1257 until his death in 1280; another was R. *Elijah Menahem b. Moses of London. Benedict's business activities in Lincoln date from 1252 and are often referred to in the records of subsequent decades. It is conjectured that the *blood libel at Lincoln in 1255 took place when a number of Jews from all over England were assembled to celebrate the marriage of Benedict's daughter Bellasset. Benedict was among those arrested. After his family had procured the intervention of the Castilian ambassador, Benedict was released in December 1255 and his sequestered property restored to him. In Hebrew Benedict was known as R. Berechiah of Nicole (Lincoln). He was regarded as one of the outstanding Anglo-Jewish halakhic scholars of his day and was mentioned with veneration long after his death. R. Berechiah was also known as an exegete. His name occurs along with those of other English rabbis of the 13th century in the works of several tosafists.

BENEDICTIONS (Heb. sing. בְּרָכָה, *berakhah*; pl. בְּרָכוֹת, *berakhot*), formulas of blessing or thanksgiving, in public and private services. The Hebrew noun *berakhah* is derived from the verb *brk* בָּרַךְ (“to fall on one's knees”). The Talmud ascribes the institution and formulation of the benedictions to “the Men of the Great *Synagogue” (Ber. 33a), to the sages of old (Sif. Deut. 33:2; Mid. Ps. 17:4), or to the “120 elders” at the head of the community in the time of *Ezra (Meg. 17b; TJ, Ber. 2:4, 4d). These references, however, cannot be considered histori-

cally authentic, although they are indicative of the fact that benedictions were known to have been instituted in very ancient times. In the Bible, mention is made of a number of individual benedictions (Gen. 24:27; Ex. 18:10; Ruth 4:14; I Sam. 25:32; II Sam. 18:28; I Kings 1:48; 5:21; 8:15, 56; I Chron. 16:36; II Chron. 2:11; 6:4; Ps. 28:6; 31:22). After the victory of the Maccabees over Nicanor, the people exclaimed, "Blessed be He who has kept His holy place undefiled" (II Macc. 15:34). According to the Book of Enoch (36:4), each time Enoch beheld some of the wonders of nature, he "blessed the Lord of Glory, Who had made great and glorious wonders to show the greatness of His work to the angels and to spirits and to men, that they might praise His work and all His creation."

The Origin of the Berakhot

Elbogen and other scholars have shown that the various benedictions probably originated in different congregations and localities. The formulas ultimately adopted by all Jews were selections from, and combinations of, local customs and traditions. The attempts of other scholars to establish a definite date for the formulation of each benediction and to reconstruct an "original" wording appear to lack foundation. There are indications which suggest that different formulas were known and used simultaneously. Similarities to the 18 benedictions which comprise the **Amidah* prayer are, for instance, to be found in various sources: the hymn recorded in Ecclesiasticus 51:12, and the prayer found in Ecclesiasticus 36:1 ff. The latter contains a series of benedictions petitioning for the ingathering of the exiles and the salvation of Israel. It also expresses the hope that Zion and the Temple may be filled with God's glory. The "eight benedictions," recited by the high priest on the Day of Atonement (Yoma 7:1; TJ, Yoma 7:1, 44b), and the order of the morning service of the priests in the Temple (Tam. 5:1), are also examples of this procedure.

THE END OF THE SECOND TEMPLE PERIOD. By the end of the Second Temple period, certain "orders of benedictions" had become the generally accepted custom in most communities. Prominent among these were the seven benedictions which comprise the *Amidah* for Sabbaths and festivals, the nine for Rosh Ha-Shanah (Tosef., Ber. 3:14), and most likely also the 18 benedictions for the weekday *Amidah*. The number and contents of the benedictions before and after the **Shema*, and the three benedictions of the **Grace after Meals*, were also standardized about this time. The "redaction" of the regular, prescribed prayers and benedictions under Rabban **Gamaliel II* at Jabneh (Ber. 28b ff.), at the end of the first century C.E., gave official sanction to what had been in essence the prevailing custom for a considerable time, and probably established the order and content of the benedictions. It did not, however, become the single, authoritative version.

THE TALMUDIC PERIOD. At the earliest, prayers were written down by the end of the talmudic period, and many alternative formulations of the same benediction are known from talmudic sources (some are in use in different rites to the pres-

ent day). The order of prayer was still relatively flexible, for while the general outline and the motifs of the prayers and blessings were well defined, their recital involved an element of improvisation and free composition. The latter was seen as a safeguard against mechanical prayer. Some *amoraim* were singled out for praise because they recited "a new prayer" or "a new benediction" every day (TJ, Bet. 4:3, 8a). During talmudic times, however, only the requirements for the wording of each benediction were fixed in greater detail, and various subsidiary motifs which had to be included in some of them were enumerated. Consistent attempts at establishing one single authoritative version of all prayers only came later.

The Benediction Formula

Every blessing opens with the words *Barukh Attah Adonai* ("Blessed art Thou, O Lord"). When the benediction occurs at the beginning of a prayer, the words *Eloheinu Melekh ha-Olam* ("our God, King of the Universe") are added. There are three types of formulas for benedictions: The first is a short blessing (*matbe'a kazar*, "short formula") which, after the above opening, is followed by a few words of praise specific to the occasion, e.g., the benediction over bread: *ha-mozi lehem min ha-arez* ("who brings forth bread from the earth"). The second is a long blessing (*matbe'a arokh*, "long formula"), in which the opening is followed by a more elaborate text, e.g., in the first section of the Grace after Meals, after which a concluding benediction formula must be recited at the end of the prayer, e.g., *Barukh Attah Adonai ha-zan et ha-kol* ("Blessed art Thou O Lord, Who feedest all"). The third type of benediction forms part of a series (*berakhah ha-semukhah le-ḥavertah*, "contiguous blessings"). The opening formula is omitted (except in the first benediction of each series), and only the conclusion is phrased in the benediction style. The second section of the Grace after Meals, for instance, begins with the words *Nodeh Lekha* ("We thank Thee"), and ends with the benediction *Barukh Attah Adonai al ha-arez ve-al ha-mazon* ("Blessed art Thou O Lord, for the land and the food"; TJ, Bet. 1:8, 3d). The mention of God as "King of the Universe" (known as *Malkhut*) occurs only in the first two forms, and not in the third. It is totally absent from the *Amidah*, and probably did not become customary before the second century C.E. (Ber. 40a). The introduction of *Malkhut* into the opening phrase of the formula may have been motivated by the desire to stress the exclusive kingship of God, as a protest against the Roman cult of emperor worship. Since most of the obligatory prayers, e.g., the *Amidah*, and the benedictions preceding and following the *Shema*, consist of a series of blessings, the form occurring most frequently in the synagogue service is the third, in which the benediction formula is used only as a conclusion.

The standard benediction formula occurs only twice in the Bible (Ps. 119:12; I Chron. 29:10); other formulas such as *Hodu la-Adonai* ("Praise God"), *Odekha Adonai* ("I will thank Thee, O Lord") are more frequent, as is the phrase *Barukh Attah* (without *Adonai*). The benedictions in Ecclesiasticus 51:12, for instance, are introduced by *Hodu la-Adonai*, and in

the Dead Sea Scrolls the benediction formula is used interchangeably with *Odekha Adonai*, and the like (e.g., Thanksgiving Scroll, cf. 2:20, 31; 4:5, with 11:28, 30; 16:8; and especially 5:20, where the latter formula has been struck by the scribe and replaced by the former). Nor do the Dead Sea Scrolls yet distinguish between the use of the divine names *Adonai* and *El* in benedictions. The Talmud also retains some traces of formulas other than the standard ones (Ber. 40b and 54b; Tosef., Ber. 4:4–5). The ultimate choice of the formula containing both the Tetragrammaton and the direct address of God in the second person was deliberate. It reflects the personal and even intimate relationship of the worshiper with God. It also ensures that supplications and petitions (such as the intermediary benediction of the *Amidah*) invariably conclude with words of praise. After asking for forgiveness, the prayer concludes: “Blessed art Thou ... who dost abundantly forgive.”

Laws of Benedictions

The Talmud (Ber. 40b) quotes Rav as saying that every benediction must include the name of God, and R. Johanan as saying that each benediction must also contain the attribute of God's kingship. It is also obvious from this talmudic passage that a benediction could be recited in the vernacular and did not have to be an exact translation of the Hebrew formula. A shepherd, Benjamin, is quoted as having said in Aramaic, “Blessed be God, the master of this bread,” and Rav agreed that it was sufficient (Ber. 40b). Particular stress is laid upon the closing formula (Ber. 9:5; Ta'an. 2:3; Tosef., Ber. 7:21–22). While the benediction formula is obligatory in every one of the prescribed prayers, its use is precluded in spontaneous free prayers: “He who recites a blessing which is not necessary is considered to transgress the prohibition “Thou shalt not take the name of the Lord Thy God in vain” (Ex. 20:7; Ber. 33a). Maimonides (Yad, Berakhot 1:4) divides the benedictions into three types: those which are recited before enjoying a pleasure (e.g., food); those which are recited for the performance of a religious duty (e.g., hearing the *shofar*); and those which are forms of liturgical thanksgiving and praise (e.g., Grace after Meals).

*Abudarham distinguished four classes or types of benedictions: those recited in the daily prayers; those preceding the performance of a religious duty; blessings offered for enjoyments; and those of thanksgiving or praise (*Abudarham ha-Shalem, Berakhot*).

Many benedictions, though obligatory and therefore couched in the characteristic *berakhah* formula, are not recited in congregational worship but by the individual in private prayer. Prominent among them are three groups: benedictions before and after the partaking of food and drink; benedictions to be recited before the performance of most *mitzvot*; and benedictions of praise for various occasions (the morning benedictions which express man's gratitude for awakening in possession of all his faculties were originally of this type). Since all three types of benedictions are essentially

of a private character, no *minyān* is required for their recital. (The Grace after Meals is, however, preceded by a special introduction when said in company.)

BENEDICTIONS RECITED BEFORE THE PERFORMANCE OF A MITZVAH. All benedictions recited before the observance of a *mitzvah* begin with the formula “Blessed ... who has sanctified us through his commandments and commanded us...,” and mention the specific *mitzvah* about to be performed. The same formula is also used before the performance of commandments of rabbinic origin (e.g., the lighting of candles on the Sabbath or on *Hanukkah*) since such commandments are implied in the biblical injunction to observe the teaching of the sages (Deut. 17:10; Shab. 23a). The actual benediction over the *mitzvah* is sometimes followed by further benedictions (e.g., on kindling the *Hanukkah* candles, the benediction “who has performed miracles for our fathers in days of old at this season” is recited). When a *mitzvah* is performed for the first time in the year, the *She-Heḥeyanu* benediction (“who has kept us alive and preserved us and enabled us to reach this season”) is also added. No blessings are recited after the observance of *mitzvot*, unless they involve public reading from the Scriptures (e.g. Torah, Prophets, *Hallel*). It is, however, recorded that Palestinian scholars recited one on removing the *tefillin*.

In practice, a benediction is not recited before the performance of every *mitzvah*. Some commentators have suggested that the determining principle is that no benediction should be recited before *mitzvot* which do not involve any action (e.g., leaving the corner of the field for the poor; Lev. 19:9), or the observance of which is possible only in undesirable circumstances (e.g., divorce, or the return of stolen goods). In the case of other *mitzvot* (e.g., the giving of alms), however, the reason for the absence of a benediction is not readily apparent, and there is no general agreement regarding the underlying principles. Custom on the matter seems to have varied as late as geonic times.

BENEDICTION OF PRAISE ON VARIOUS OCCASIONS. Among the many benedictions prescribed for various special occasions, those to be recited on hearing good and bad tidings, on witnessing awesome natural phenomena, on visiting a place where miracles have been performed in the past (in Erez Israel) are prominent. The blessing *Ha-tov ve-ha-metiv* (“Blessed is He Who is good and does good”) is recited by an individual upon hearing good news which will also benefit others, such as when hearing news that one has received an inheritance or when rain begins to fall after a drought. It is also recited when partaking of additional wine which is different in kind from that drunk previously. The *Birkat ha-Gomel*, a blessing recited upon individual salvation from danger, is included in this category. Known generally as “blessings of praise,” the main purpose of these benedictions is “to make us remember our Creator at all times” (Maim. Yad, Berakhot 1:4). While the benedictions over food are evidently intended to sanctify the physical act of taking nourish-

ment, and those recited before *mitzvot* serve to prevent the performance of the *mitzvah* in a thoughtless routine manner, the recital of the “benedictions of praise” is practically an end in itself. These benedictions serve to illuminate the educational function of blessings which transform a variety of everyday actions and occurrences into religious experiences designed to increase awareness of God at all times. R. Meir went so far as to declare that it is the duty of every Jew to recite 100 benedictions daily (Men. 43b), a custom which, according to one tradition, was instituted by King David (Num. R. 18:21). The rabbinical discussions of benedictions are contained in the Mishnah tractate *Berakhot, and the *gemara* in both Talmuds.

BENEDIKT, MORITZ (1835–1920), Austrian neurologist, anthropometrist, and criminologist. Born in Eisenstadt, Hungary, Benedikt served as a surgeon in the Austrian army during the wars with Italy and Prussia in 1859 and 1866. Appointed a lecturer at the University of Vienna, he rose to become professor of neurology. He achieved eminence for his varied contributions to neuropathology, the localization of brain function, and electrotherapeutics, a field in which he made important innovations. His interest in electricity was not confined to its medical application but extended to generic physics, and he produced a number of significant studies on magnetism and electric current. He contributed to various branches of medical research, including the physiology and pathology of the circulatory system, and was one of the founders of electrotherapy.

Benedikt also engaged in anthropometric studies of criminals, devoting particular attention to cephalometry and brain pathology and to criminal psychology. His studies in physical anthropology are to be found in his *Anatomische Studien an Verbrecher-Gehirnen* (1879; *Anatomical Studies upon Brains of Criminals*, 1881) and *Kraniometrie und Kephalmetrie* (1888). These made him, together with Cesare Lombroso, one of the pioneers of criminal anthropology.

Of diverse cultural interests and activist liberal propensities, he wrote on current affairs and contemporary literature and aesthetics, and participated actively in various reformist movements, notably the extension of women's suffrage. His memoirs, *Aus Meinem Leben*, appeared in 1906.

[Ephraim Fischhoff]

BENEDIKT, MORITZ (1849–1920), Austrian journalist and politician. Born into an acculturated German-Jewish trading family in Moravia, Benedikt was sent to Vienna to be educated at the *Schottengymnasium* and later studied at Vienna University, especially economics. His interest in politics was sparked by the battle of Koeniggratz (1866). He soon turned to journalism, contributing to various economic newspapers, periodicals, and yearbooks. In 1872, like E. *Bacher, he joined the staff of the liberal Vienna daily *Neue Freie Presse* (est. 1864 by Max Friedlaender and Michael Etienne), then the most influential newspaper in the Austro-Hungarian Empire. In 1879, after the death of Etienne, he was appointed editor of its economic section, publishing a widely read series of articles on financial, commercial, and economic affairs of Austria-Hungary. In 1881, he joined Bacher as editor-in-chief (and later part owner). Even before the death of his partner in 1908, he determined the editorial policy, trying to modernize the paper, from 1904 especially against the competing Vienna daily *Zeit* (est. 1896 as a weekly). With the financing of the Rothschild and *Creditanstalt* banks, he was able to engage prominent writers to contribute to the paper. Like Bacher, he made the *Neue Freie Presse* an organ of the German Liberal Party in Austria. He violently opposed the new Jewish national movement of Zionism, keeping *Herzl, then literary editor, from writing anything in support of Zionism in the paper. As stated in Herzl's diaries, Benedikt desperately tried to prevent him from publishing *Der Judenstaat* (1896) and later *Die Welt* (1897). Benedikt's fiercest Jewish opponent was K. *Kraus, regularly attacking him in his satirical magazine *Die Fackel* (from 1899). Through his editorials, Benedikt managed to achieve considerable influence in Austro-Hungarian politics, advocating peaceful solutions and a compromise between Austria and Hungary (cf. the “Benedikt formula”). His journalistic style was clear and precise. Though Benedikt served as a political adviser in financial affairs, as a Jew he never really succeeded in party politics. Only in May 1917, at the age of 68, was he appointed to the Upper House (*Herrenhaus*) of the Austrian parliament by Emperor Karl I. After 1918, with the end of World War I and the breakup of the old Austro-Hungarian Empire, Benedikt's paper lost in importance. Dismayed by the deteriorating political, economic, and social situation in Austria and especially Vienna, he failed to accommodate himself to the new era. The *Neue Freie Presse* was carried on by his son Ernst Benedikt (1882–1957).

[Johannes Valentin Schwarz (2nd ed.)]

BENE EPHRAIM, name adopted by a Judaizing movement of Telugu-speaking Indians from Andhra Pradesh. There is no historic element to the Bene Ephraim. They have come to a kind of Judaism for reasons which are somewhat obscure, but the ambitions of their religious leaders – the Sadoc brothers – or the brothers' disappointment with the Baptist Church – may figure among them. Nonetheless, the community as it is presently constituted has a genuine sense of Jewish identity: for the children and young people it is their main identity in the villages where they live. They are sincere in their desire to be recognized as Jews both by their neighbors and by foreign Jews; they practice Judaism as best as they can and learn Hebrew as best as they can. They feel embittered that they have been ignored by Jews elsewhere and point to their Christian neighbors who receive sustenance from overseas Christian churches in the U.S. and elsewhere. The community, which maintains two synagogues, seems to be marked by piety, a desire to better their lot, and a determination to raise the flag of Judaism in Andhra Pradesh. Because of their vague idea of descent from Israelites they feel ethnically as well as religiously Jewish.

BENEI AISH (Heb. בְּנֵי אֵישׁ), community in central Israel. The settlement is located a little over a mile (3 km.) south of *Gederah. It was founded in 1957 on land that had served as a British military base during the Mandate period. The first settlers were mainly new immigrants from Yemen, Persia, Iraq, and Morocco who were removed from nearby transit camps (see **ma'abarah*). In the beginning, they worked in the nearby moshavim. In 1981 Benei Aish received municipal status and during the 1990s it absorbed many new immigrants, with 1,500 new apartments built. By 1998, 65% of the inhabitants were recent immigrants. The absorption of the immigrants, mainly secular, led to tensions with the old-time religious settlers. Subsequently the municipality sponsored culture activities aimed at integrating the two populations. However, the result of demographic and social changes was to make Benei Aish less religious than before, though it still maintained religious services. Its population in 2002 was 7,570. The settlement is named after R. Akiva Joseph *Schlesinger, a leader of *Po'alei Agudat Israel and one of the founders of *Petaḥ Tikvah.

[Shaked Gilboa (2nd ed.)]

BENEI BINYAMIN (Heb. בְּנֵי בִּנְיָמִין, "Sons of Benjamin"), association of second-generation farmers in the veteran moshavot of Palestine, active from 1921 to 1939. It engaged mainly in promoting economic and cultural interests, along with matters of security and self-defense. Benei Binyamin was founded by Alexander *Aaronsohn and was named in tribute

to Edmond (Binyamin) de *Rothschild and Theodor (Binyamin Ze'ev) *Herzl. The association had as its motto: "To preserve the existing and to rebuild the destroyed." It was active in such veteran settlements as Petaḥ Tikvah, Rishon le-Zion, Nes Ziyonah, Ekron, Ḥaderah, Zikhron Ya'akov, Rosh Pinnah, Mishmar ha-Yarden, and Yesud ha-Ma'alah. The Benei Binyamin Cooperative Bank, opened in 1924, loaned money to members for agricultural development, which the association constantly encouraged. In the same year Benei Binyamin began publication of its own newspaper, *Yedi'ot ha-Va'ad ha-Merkazi shel Histadrut Benei Binyamin*. Netanyah, Kefar Aharon, Even Yehudah, and part of Herzliyyah were founded by Benei Binyamin. Its active supporters in the U.S. included Nathan *Straus (in whose honor Netanyah was named). Alexander Aaronsohn was its president, and Oved *Ben-Ami served as its secretary for a number of years.

BENEI DAROM (Heb. בְּנֵי דָרוֹם), moshav shittufi east of Ashdod, Israel, affiliated with the Ha-Po'el ha-Mizrachi Moshavim Association. It was founded in 1949 by members of *Kefar Darom who had defended it during the War of Independence, until it fell and remained within the Egyptian-controlled Gaza Strip. In 1961 the settlers decided to change from the kibbutz to the moshav shittufi form of settlement. Some settlers originated from Germany and North America, others were born in Israel. Its economy was based on intensive farming including citrus orchards and irrigated field crops. Later it added pasta and preservative factories and a visitor's center for tourists. In 1968 its population was 144, doubling to around 300 in the mid-1990s and maintaining its size into the 21st century.

[Efraim Orni]

BENEI DEROR (Heb. בְּנֵי דְרוֹר, "Sons of Freedom"), moshav in the southern Sharon, Israel, affiliated with Tenu'at ha-Moshavim, founded in 1946 by World War II veterans who were joined by immigrants from Turkey in 1949. Its economy was based on avocado plantations, citrus groves, a plant nursery, and milch cattle. In 1968 its population was 231, in the mid-1990s it increased to 300, and by 2002 it stood at 841.

BENEI MOSHE (Heb. בְּנֵי מֹשֶׁה, "Sons of Moses"), secret order of Ḥovevei Zion founded in Russia in 1889 to ensure personal dedication to the spiritual renaissance of the Jewish people and the return to Erez Israel. Benei Moshe, founded on the seventh of Adar, the traditional birth date of Moses, was active in Russia and Erez Israel until 1897. Its originator was Yehoshua *Barzillai (Eisenstadt), who returned from Erez Israel dissatisfied with the situation of Jewish agricultural settlement and the general state of depression in the small new *yishuv*. Barzillai's views conformed with those of *Aḥad Ha-

Am, as expressed in his historic article “*Lo Zeh ha-Derekh*” (“The Wrong Way”), then still in manuscript but known to a limited circle. Barzillai and Avraham *Lubarsky persuaded Aḥad Ha-Am to accept leadership of the order. In his article *Derekh ha-Ḥayyim* (“Way of Life,” 1889) and its supplements, Aḥad Ha-Am outlined the aim of the association: the return of the Jews to their historic homeland, but with prior spiritual preparation. The name Moshe (Moses) was to serve “as a sign to all members ever to keep in mind this chosen son of our people,” a symbol of humility and morality. In this spirit, the order attempted “to broaden the scope of nationalism, elevating it to an ethical ideal based on the love of Israel, and embracing moral values.”

Benei Moshe chapters consisted of at least five members, headed by leaders and advisers. A member was initiated in a ceremony in which he vowed to adhere faithfully to the group’s statutes. The language used was Hebrew, and knowledge of Hebrew was a prerequisite for membership eligibility. The minimal eligibility age was 20. Members were called “brothers.” Despite its very small membership (about 160), the order exerted considerable influence on the Ḥibbat Zion movement, whose leaders were, in fact, members of Benei Moshe. However, it had many opponents, namely those who advocated the primacy of practical settlement work in Erez Israel above everything else (among them Moses Leib *Lilienblum), as well as Orthodox circles that conducted a fierce campaign against what they regarded as the secular ideology of Benei Moshe (among them Jehiel Michael *Pines and Ze’ev Wolf Jawitz).

Benei Moshe’s practical achievements were in the field of modern Hebrew education in Erez Israel and elsewhere (e.g., the modernized Hebrew-speaking *heder* called *heder metukkan*); in helping to found the settlement *Reḥovot; and in the establishment of the Hebrew publishing house Aḥi’asaf. The order helped publish the Hebrew anthologies *Kavveret* (1890) and *Pardes* (2 vols., 1892, 1895) in Russia. In Erez Israel they published *Mikhtavim me-Erez Yisrael* (“Letters from Erez Israel,” 1893–94), edited by Barzillai under the pen name Beit ha-Levi.

In 1891 Aḥad Ha-Am left the leadership of the order, although he remained its spiritual guide throughout its existence. The Benei Moshe headquarters moved to Jaffa in 1893. The order gradually abandoned its secret form, and in 1895 Aḥad Ha-Am suggested that it become a political party. By this time, however, the order was embroiled in bitter controversy both with its opponents and within its own ranks. Neither changes in the statutes nor the opening of the association could remove the feeling of frustration and reinvigorate it, and in 1896 Aḥad Ha-Am himself suggested that Benei Moshe be dissolved. This came about naturally with the rise of political Zionism, particularly with the convening of the First Zionist Congress in Basel (1897), which gave a new impetus to the Jewish national movement. The aims of Benei Moshe were sustained in Aḥad Ha-Am’s continued opposition to Herzl’s political Zionism.

[Getzel Kressel]

BENE ISRAEL, Jewish community in India.

In India

The original tradition, as related to Christian missionaries early in the 19th century, is that the Bene Israel are the descendants of the survivors (seven men and seven women) of a shipwreck off the Konkan coast at Navgaon, about 26 miles south of Bombay. Their ship was said to have come “from northern parts” and the date was “some sixteen to eighteen hundred years ago” (J. Wilson, *Lands of the Bible* (1847) II, 667). In the 19th century various theories were propounded by Europeans about Bene Israel origins conjecturing that the Bene Israel were an offshoot of the Jewish settlements in Yemen, refugees from the persecution of the Jews by Muhammad, or descendants of the Babylonian-Persian Diaspora. Later, in the light of the study of the Bible, of other Jewish literature, of ancient history sources relating to India, the Middle East, etc., some members of the Bene Israel community itself delved into details of possible Bene Israel origins. H.S. Kehimkar (*History of the Bene Israel of India* (1937) written in 1897) favored the theory that the ancestors of the Bene Israel left the Galilee because of persecutions by Antiochus Epiphanes (175–163 B.C.E.). D.J. Samson’s argument for Bene Israel arrival in India at some time between 740 and 500 B.C.E. appeared in 1917 in an issue of the Bene Israel periodical *The Israelite* (i, no. 4, 68–70) in an article entitled *The Bene Israel: Who, Where, Whence*. In any case their descendants remained for centuries isolated from Jewish life elsewhere. Thus they forgot much of the Hebrew language, prayer and ceremonies, and adopted customs and dress of their Konkan neighbors, and their language, Marathi, as their mother tongue. Throughout the centuries they clung, however, to some fundamentals of the Jewish tradition and observed circumcision, dietary laws, the Sabbath, and most fasts and festivals prescribed in the Torah, and recited the *Shema*. But they were otherwise unaware of Torah, or of talmudic and halakhic lore. In their new surroundings the Bene Israel turned to the pursuit of oil-pressing and agriculture and became known to their neighbors as *Shanwar Tells* (“The Sabbath-observing oilmen”), indicating both their occupation and their religious observance. The presence of a special Jewish group in the Konkan region remained unknown to outsiders, except for casual references to them.

Bene Israel tradition tells of a Jew, David Rahabi, who about the year 1000 C.E. (or, some say around 1400 C.E.) discovered the Bene Israel in their villages, recognized their vestigial Jewish customs, and taught them about Judaism, preparing certain young men among them to be the religious

preceptors of the Bene Israel. They were called *Kajis* and their position became hereditary. They were also recognized officially as judges in disputes within the Bene Israel community. Somewhere along the line the Bene Israel formed a special attachment to the Prophet Elijah. They invoke his blessings on all auspicious occasions. Another typically Bene Israel feature is their custom called *Malida*, i.e., the preparation of a ceremonial food offering (composed of special ingredients) accompanied by recitation of Jewish prayers, psalms, and other appropriate biblical quotations on the occasions of purification after childbirth; preparation for a wedding; when taking, and after completing, a vow; after a circumcision, and for all other auspicious occasions; whenever there is a crisis or need for divine help; for the expression of gratitude to God; and on Tu Bi-Shevat to celebrate the first fruits of their locale, and also to give respect to the Prophet Elijah at Kandala, the place where he is believed to have appeared to the Bene Israel.

In mid-18th century, many Bene Israel moved from their villages into the rapidly developing new city of Bombay. Here the horizons of the Bene Israel were widened as they benefited from the educational and employment opportunities offered under British rule. The British authorities were anxious to recruit reliable soldiers to their “native” regiments. Some Bene Israel had already served in the army or in the navy of other Konkan potentates, and many enlisted under the British. Most of these rose to officer rank and established a reputation as good fighters in the Anglo-Mysore, Anglo-Afghan, and Anglo-Burmese wars of the 18th and 19th centuries. They were also efficient civil servants.

An impetus to their return to traditional Judaism was given to the Bene Israel through the cooperation of Cochin Jews who visited Bombay and the Konkan villages, and through the new wave of immigration of Arabic-speaking Jews from Baghdad to Bombay in the early decades of the 19th century. The secular education of the Bene Israel was considerably influenced by Congregational missionaries from America who opened schools both in Bombay and in the outlying towns and villages. They trained Bene Israel to become teachers in these schools, and it was in these schools that the Bene Israel got their first understandable introduction to the Bible. Then, in 1826 a Jew from Cochin, who had been converted to Christianity, Michael Sargon, was deputed to work among the Bene Israel. He not only devoted his energy to teaching them in the Marathi language, without any attempt at proselytization, but also mediated in their disputes. Somewhat later the most celebrated of all Christian missionaries to work among the Bene Israel, the Rev. John Wilson of the Scottish Presbyterian Mission, started his educational activities among them. In 1832 he published a Hebrew Grammar in Marathi, and Bene Israel studied Hebrew in the high school and in the college founded by him. Gradually the missionaries withdrew from the field of primary education and the Bene Israel took their education into their own hands. H.S. Kehimkar, in collaboration with his brother and A.D. Pezarkar, started a small primary school in 1875. It later became necessary to solicit for funds, and gen-

erous aid was given by the Anglo-Jewish Association of London, Jewish philanthropists in England and France, members of the *Sassoon family, and the Government of Bombay. The school, with its own building, grew into a high school teaching Marathi, English and Hebrew. Originally called the Israelite School, the name was changed in the early 1930s to the Elly Kadoorie School, in recognition of a large donation (earmarked for the reconstruction and extension of the old school building) by Sir Elly *Kadoorie of Hong Kong.

Religious development was also very much facilitated for the Bene Israel by translations of the Old Testament by an association of Protestant Christian missionaries of all denominations beginning in the early twenties of the 19th century. Since its establishment in 1857 Bombay University included Hebrew in its curriculum.

Originally, the communal organization, religious as well as secular, of the Bene Israel was headed by the *Kajis*. With the establishment of synagogues (the first was established in 1796 in Bombay by Bene Israel army officer Samuel Ezekiel *Divekar and was named Sha’ar ha-Rachamim (“Gate of Mercy”)), the secular functions of the *Kajis* were gradually taken over by the *Muccadams*, who either were the most prominent persons in the local community, or who succeeded their fathers in the office. In large synagogue congregations the *Muccadams* were aided by *Choglas*, or councilors. Eventually the ritual functions of the *Kajis* came to be performed by the *hazzanim* who were initially recruited from Cochin but later also from among the Bene Israel themselves.

The Bene Israel established additional synagogues in Bombay – Sha’ar Razon (1839), Etz Hayim (1888), and Magen Chassidim (1931) – and also several prayer halls. From 1848 onwards Bene Israel synagogues were also established in 12 different towns on the Konkan coast; and far afield in the cities of Poona, Ahmedabad, Karachi (now in Pakistan) and New Delhi.

The relations between the Bene Israel and the Hindu and Muslim communities of the Konkan coast proved to be very peaceful. The only thing that the Bene Israel found upsetting was that their neighbors did not always identify them as Jews, and until well into the second half of the 20th century associated them with the caste of oil-pressers because of the traditional occupation of their ancestors, though already in the later British period the occupations of the Bene Israel were quite diverse.

Apart from serving in the British “native” regiments they were employed as civil servants in government, railway, postal and customs offices; as teachers, hospital assistants, nurses; many were skilled carpenters, masons, and mechanics; but very few were engaged in trade or commerce. Many Bene Israel who attended Elphinstone, Wilson and other colleges affiliated to Bombay University became well known as engineers, lawyers, physicians, educators, architects, writers and social workers. Prominent among the leaders and educators of the 19th century were Hayim Samuel *Kehimkar, historian of the community, and Joseph Ezekiel *Rajpurkar, writer and

translator of Hebrew liturgical works into Marathi. One of the earliest liturgical works to be printed was by a Yemenite Jew from Cochin, Solomon Shara'bi, *Seliḥot According to the Sephardi Rite* (1841). It was followed by the publication of the Hebrew calendar (*Luah*, 1845) and the first Passover *Haggadah* (1846, facsimile reprinted by W.J. Fischel, 1968) with a Marathi translation. From the last decade of the 19th century the Bene Israel published a number of journals and periodicals in Marathi and English. Some of them were short-lived, but *The Israelite* continued from 1917 to 1927; *The Friend of Israel* lasted from 1916 to 1921; *The Maccabi* from 1946 to 1971.

In the first half of the 20th century some Bene Israel participated in the Indian nationalist movement.

Bene Israel who have received the *Padma Shri*, one of the highest awards of the Government of India, awarded on Indian Independence Day to outstanding individuals in various fields of endeavor are (1) Dr. (Miss) Jerusha Jacob Jhirad, in 1966, for her work in gynecology and for her services in social welfare; (2) Mr. David Abraham Cheulkar, in 1969, for his character acting in Indian films; and (3) Dr. Reuben David Dandekar, in 1975, for his outstanding work and originality as superintendent of the Ahmedabad Zoo. (A fourth Indian Jew to receive the *Padma Shri* Award is a member of the Baghdadi Jewish community of Bombay: Mr. Ezra Mir, in 1970, for his outstanding work in making Indian documentary films and children's documentaries.) Among the many other Bene Israel who have achieved careers of distinction in India are Khan Bahadur Jacob Bapuji Israel, who as chief administrator in the State of Aundh, made specific innovations for rural development many decades before similar reforms were begun elsewhere; Shalom Bapuji Israel, who from ordinary police constable rose to be Dewan of Janjira State; Dr. Abraham Solomon Erulkar, an ardent nationalist, who had attended upon Mahatma Gandhi during almost all of his fasts (not as Gandhi's personal physician) especially in his capacity as then president of the Indian Medical Council; David Solomon Erulkar who was the Junior Council for-the-defense in the famous trial of the freedom-fighter Lokamanya B.G. Tilak (a Hindu), working together with the Senior Council in the case, a famous Muslim, Muhammed Ali Jinnah. Erulkar was also on the governing body of the International Labor Organization of the League of Nations. He founded *The Israelite* magazine. David Ezra Reuben secured first place in the competitive examination for admission to the Indian Civil Service in 1917. He was the only Bene Israel ever to serve in the ICS. He was made Chief Justice in 1951 of the Patna Court (in Bihar State). Miss Rebecca Reuben obtained her T.D. degree from London University; was principal of the Israelite School 1922–1950; issued a monthly journal for Jewish children, called *Nofeth* (written in Marathi it served as an excellent tool for education in things Jewish); authored highly successful series of English readers for secondary schools, also a grammar, and guides for teachers; Dr. Elijah Moses, Mayor of Bombay 1937–1938. Several officers in the Indian Army, Navy and Air Force, notably including Vice Admiral Benja-

min Abraham Samson, former Commandant of the Indian Defense Academy, who commanded the Western Fleet during hostilities with Pakistan in 1965, subsequently managing director of the Mazagaon Docks where he supervised the construction of the first two Indian-built frigates; Major General Jonathan Reuben Samson of the Indian Engineers, now general manager of the Armored Vehicle Factory at Avadi, Madras; Dr. Sarah Jacob, principal of the Jaipur Government Medical College; Dr. Eliezar Moses Best, dean of B.J. Medical College and superintendent of Civil Hospital, Ahmedabad; Mrs. Meera Jacob Mahadevan, author and innovative social worker who conceived of and developed a network of Mobile Creches and Schools for the impoverished, neglected children of itinerant laborers; Solomon Shalom Aptekar, popular author and playwright of the 1920s; Joseph David Penkar, pioneer in the Indian screen industry, script and song writer; Nissim Ezekiel, highly rated Indian poet writing in English, editor, art critic, playwright, reader in American Literature at Mumbai (formerly Bombay) University; Dr. Esther Solomon, Ph.D., Sanskritist at Gujarat University; Samuel Israel, director of the National Book Trust of India since 1974; Ezra Kolet, formerly in government service in the Finance Ministry, later in the Ministry of Shipping and Transport as chief comptroller of chartering and as additional secretary to the ministry, the moving spirit of the Delhi Jewish community, and founder, secretary and violinist of the Delhi Symphony Orchestra; and Judah Reuben, India's only Jewish umpire (cricket), member of the All India Panel of Umpires.

Most Bene Israel congregations became affiliated (in reality very loosely) either with the World Council of Synagogues (Conservative) or with the Union of Orthodox Jewish Congregations. A significant development in the religious field was the establishment in 1925 of the Jewish Religious Union in Bombay by Dr. Jerusha Jhirad who, upon her return from medical training in England, used the London organization as the prototype. In Bombay this was an entirely spontaneous move without outside financial help, though prayer books and other literature were obtained from the Liberal Jewish Synagogue of London. The Bombay Jewish Religious Union was one of the founder members of the World Union for Progressive Judaism (established in 1926) and made a small annual contribution toward its expenses. In the 1950s the Bombay congregation's own funds were supplemented with financial aid from circles of Progressive Judaism outside India and from Sassoon Trust Funds, all of which enabled the Bombay Jewish Religious Union, now called Congregation Rodef Shalom, to obtain premises of its own and the services of two young rabbis, both graduates of *Hebrew Union College. In August 1957 Rabbi Hugo Gryn (for more than two full years), followed by Rabbi Elisha Nattiv (for about three years) ministered to this congregation and exerted an influence among the Jews of Bombay far beyond the three hundred members of Congregation Rodef Shalom.

The first contacts of the Bene Israel with the modern Zionist movement go back to the time of Theodor Herzl. In

1897 the Bene Israel were invited to participate in the First Zionist Congress. They refused with the explanation that the community was waiting for “the Divine Hand” to bring them back to Zion. The first Zionist association was founded in Bombay in 1919. Visits of Zionist leaders such as Israel *Cohen in 1921, the first Zionist emissary to India on behalf of the World Zionist Organization, and subsequently of Immanuel Olsvanger, and others, stimulated the community’s interest in and support of the Jewish National Home.

In the second half of the 20th century the numbers of the Bene Israel community have significantly decreased due to the emigration of its members to Israel, Europe, and the Americas. In the early years of the 21st century there were approximately 4,000 Bene Israel left in India, most of them living in Maharashtra State. Other Bene Israel communities functioned in Ahmedabad and New Delhi. Communities maintained a number of synagogues and prayer halls, such as the Magen Hassidim and Tiferet Israel synagogues in Mumbai (formerly Bombay), and the Shaar Hashamaim synagogue in Thane. In some places, there was a regular *minyán*; in others there were services on Saturday mornings and not on Friday nights, or on High Holidays only. The first synagogue in Bombay celebrated its bicentenary in February 1996.

[Walter Joseph Fischel, Shirley Berry Isenberg, and Benjamin J. Israel / Shalva Weil and Yulia Egorova (2nd ed.)]

In Israel

Between 1948 and 1952, approximately 2,300 Bene Israel emigrated to Israel. As a result of sit-down strikes and hunger strikes (see below), the Jewish Agency returned a total of 337 individuals, in several groups, between 1952 and 1954. Most of them were brought back to Israel by the Jewish Agency after several years. From the establishment of the state until 1969, over 12,000 Bene Israel emigrated to Israel. They were mainly absorbed into the branches of industry in which they were occupied in India, such as textiles and metals, as well as into public services. They settled mainly in Beersheba, Dimonah, Ashdod, and Eilat. Some settled in kibbutzim and moshavim.

SOCIAL-RELIGIOUS CRISIS. The Bene Israel became the focus of a controversy which arose in 1954 over the basic question of the personal status of the Bene Israel regarding marriage with other Jews. Although the Chief Rabbinate had laid down in essence that “the sect of the Bene Israel in India is of the seed of the House of Israel without any doubt,” several rabbis in Israel refused to marry Bene Israel to other Jews. This standpoint was based on halakhic decisions that had been given for Jews from Baghdad who had settled in India, and who denounced intermarriage with those whom they considered to belong to an inferior caste. On first coming to India in the 18th century, the Baghdadi Jews had prayed in the synagogues of the Bene Israel and buried their dead in their cemeteries. However, as they became more settled and acquired a higher status and education, they began to keep apart and to question whether the Bene Israel were legitimately Jewish. They considered that

association with the Bene Israel should be debarred for fear of illegitimacy (*mamzerut*), since the latter were unfamiliar with the Jewish laws of divorce (*gittin*), absolved themselves from levirate marriage, and did not practice *ḥalīzah*. Not one of the rabbis outside India who returned a negative decision concerning the Bene Israel in previous generations had ever visited there or met representatives of the Bene Israel community in order to obtain knowledge of their customs or information directly from them. In Israel the controversy arose between those who rejected the Bene Israel and those who regarded them as Jews in every respect. In 1962, the Israel Chief Rabbinate appointed a commission of four rabbis who were charged with meeting representatives of the Bene Israel. From the evidence of the leaders of the community who appeared before the rabbis and from earlier sources, it became clear that the Bene Israel had not been accustomed to divorce women at all, in the same way that divorce was not practiced among Indians other than Muslims until about a century ago. It was only on the arrival in India of rabbis from Baghdad and Yemen who were experts on the Jewish laws of divorce that a number of Bene Israel had approached them. Concerning widows the Bene Israel generally followed the custom of their Indian neighbors and did not permit them to remarry, so that the question of levirate marriage or *ḥalīzah* did not arise. On Oct. 18, 1962, the council of the Chief Rabbinate decided that marriage with Bene Israel is permissible. However, the rabbi registering the marriage was bound to investigate, as far back as three generations at least, the maternal ancestry of every applicant of the Bene Israel, man or woman, wishing to marry outside the community, in order to establish to what extent there were not intermixed in the family persons who were non-Jews or proselytes. The rabbi concerned was also bound to establish as far as possible that neither the parents of the applicant nor his grandparents had remarried after a previous divorce, and that they were not within the prohibited degrees of kinship.

These directives aroused fierce resentment, culminating in a stormy strike in Jerusalem in the summer of 1964, in which several hundred of the Bene Israel from all over Israel participated. Subsequently, the prime minister, Levi Eshkol, issued the statement that “the government of Israel reiterates that it regards the community of the Bene Israel from India as Jews in every respect, without any restriction or distinction, equal in their rights to all other Jews in every matter, including matters of matrimony.”

To these troubling afflictions had been added the difficulties of absorption of the Bene Israel into a society totally different from that to which they had been accustomed in India, and the difficulties of finding employment and of language. When the first groups of Bene Israel encountered the difficulties of absorption, they reacted by sit-down strikes of groups and individuals. The presence of Bene Israel strikers at the doors of the offices of the Jewish Agency became a regular feature of the 1950s. In the Indian Parliament, a debate upon discrimination against Indian Jews in Israel took place at the begin-

ning of the crisis. On Sept. 8, 1952, a statement of the Indian deputy minister for external affairs, Shri Anil R. Chanda, was read in answer to a question in the Indian Council of States in New Delhi, as follows: "The government of India has received complaints from some Indian Jews who had returned from Israel that there was discrimination against them on account of their color. The government has not verified any of these complaints, and in any event, such individual complaints do not justify a general statement that there is a color bar in Israel." The young generation of Bene Israel has become integrated into Israel society and found its place in all fields of Israel life. Their communal attachment is still strong and finds particular expression at meetings on festivals.

[Naftali Bar-Giora]

As a result of natural increase, the Bene Israel in Israel number over 50,000. They tend to live in well-defined communities such as Dimonah, Ashdod, Yeruḥam, Kiryat Gat, and Lydda (Lod); there are large communities in Ashkelon, Beersheba, Ramleh, and Kiryat Ata. Many Bene Israel are employed in the transportation and communications industries as skilled workers and clerks; others work in the armed forces and police. More than half the women are employed outside the home. Social life is organized around the synagogue, which acts as a community center in each urban settlement. Communal events are arranged by nearly 30 voluntary associations around the country; two associations are national and the rest serve local interests. Activities are conducted in Hebrew, English, and Marathi, the native tongue of the immigrant generation. A Marathi quarterly called *Mai Bolli* has been published in Israel since 1989. In 1995, the Indian Women's Organization celebrated its quartercentury celebration in Lydda.

BENEI ZION (Heb. בְּנֵי צִיּוֹן), moshav in central Israel, in the southern Sharon, affiliated with Ha-Ihud ha-Ḥakla'i middle-class settlements association. It was founded in 1947 by veteran farmers, who were later joined by immigrants from Poland, Romania, and North Africa. Its economy was based on citrus plantations and intensive farming. The moshav is named after

the B'nai Zion Order of America, which contributed funds toward the acquisition of the land. In the mid-1990s the population was approximately 430, increasing to 742 in 2002 after upscale expansion.

[Efraim Orni]

BEN-ELIEZER, BINYAMIN (Fuad; 1936–), Israeli military commander and politician, member of the Eleventh to Sixteenth Knessets. Ben-Eliezer was born in Basra in Iraq and immigrated to Israel on his own in 1950, when he was only 13. During the Six-Day War he served as the deputy to the Bedouin commander of the Shaked unit in the Southern Command. During the Yom Kippur War he was deputy commander of a brigade. In the mid-1970s he was appointed Israel's first commander in Southern Lebanon and was in charge of the opening of the "Good Fence" between Israel and Lebanon and creating the foundations for the Southern Lebanese Army under Major Haddad. In 1978 he was appointed military administrator of Judea and Samaria, a position he held for close to four years. In that period he participated in the effort to establish an alternative Palestinian leadership to the PLO in the form of the village leagues. He left the army in 1982 and for a brief period served as the secretary general of the ethnic Tami party established by Aharon Abuhazeira. However, he was recalled to active service by Minister of Defense Moshe *Arens in 1983 and appointed coordinator of operations in Judea, Samaria, and Gaza. In the course of his military service Ben-Eliezer graduated from the IDF Command and Staff Academy and the College for National Security.

After his final discharge from the IDF in 1984 Ben-Eliezer joined Ezer *Weizman in establishing a new party, Yaḥad, which was elected to the Eleventh Knesset and joined the Alignment before the formation of the National Unity Government. When not serving as a minister, Ben-Eliezer served on the Knesset Foreign Affairs and Defense Committee. In the government formed by Yitzhak *Rabin in 1992, he was appointed minister of construction and housing, a position he also held in the government formed by Shimon *Peres after Rabin's assassination. During this period he shifted the focus back to construction within the Green Line. In the government formed by Ehud *Barak in 1999, he was deputy prime minister and minister of communications, and after the NRP resigned from the government also served as minister of construction and housing. Following Barak's defeat in the elections for prime minister held in February 2001 and Labor's entry into the government formed by Ariel *Sharon, Ben-Eliezer was appointed minister of defense but resigned from the government with the Labor Party in November 2002.

As minister of defense he had to contend with the growing violence of the *Intifada* and was in charge of Operation Defensive Shield in the territories in the spring of 2002. As the violence escalated he favored the construction of a fence between Israel and the Palestinian territories, but continued to believe in a negotiated settlement which would lead to the establishment of a Palestinian state. Already in June 2001 he

advocated the need to remove outposts of the settlers in the territories. In primaries held for the Labor Party leadership in December 2001 Ben-Eliezer ran against Avraham *Burg, winning by a narrow majority. However, just before the elections to the Sixteenth Knesset, Amram Mitzna defeated him in another round of primaries for the party leadership.

[Susan Hattis Rolef (2nd ed.)]

BEN ELIEZER, MOSHE (1882–1944), Hebrew editor, author, and translator. Ben Eliezer, who was born in Shchuchin, near Vilna, became attracted to the Haskalah while studying at Mir yeshivah, and joined the staff of the Hebrew daily *Ha-Zeman*. From 1906 to 1910 he lived in the United States, where he established *Shibbolim* (1909), a journal devoted to modern Hebrew literature. Returning to Poland he edited several Hebrew journals for young people, and spent some time after World War I in Kovno as press officer for the Lithuanian Ministry for Jewish Affairs. Immigrating to Palestine in 1925, he joined the editorial staff of the newspaper *Haaretz*. His stories, feuilletons, and translations appeared in the Hebrew press of various countries and he also wrote and edited several series of books for children. His works include the historical novels *Yeravam u-Rehavam* (“Jeroboam and Rehoboam,” 1939) and *Don Yosef Nasi* (1945), the novel *Gavri'el* (1945), and translations of works by Scott, Dickens, Conrad, Hawthorne, and others.

[Getzel Kressel]

BENE MENASHE, name given to Judaizing groups from northeast India mainly in the two Indian states of Mizoram and Manipur. The Bene Menashe claim descent from the tribe of Manasseh, one of the ten tribes exiled from the Land of Israel by the Assyrians over 2,700 years ago. Members of the group include ethnic Chins, Lushais, Kukis, and Mizos. Collectively they are often referred to as Shinlung. The movement, if one can call it such, started in the 1950s as a by-product of the experience of colonialism and Christian missions. Remarkably, by the end of the 20th century several hundred Shinlung had formally converting to Orthodox Judaism. Many thousand more practiced a kind of Judaism. Others practiced Christianity while thinking of themselves as descendants of the ancient Israelites. By 2005 some 800 converts had settled in Israel, helped by an organization called Shavei-Israel, a Jerusalem-based group that attempts to give help and succor to “lost Jews” seeking to return to the Jewish people. For the most part the Shinlung do not see themselves as converts in the usual sense of the term: like other such groups – one might cite the *Bene Ephraim Telugu-speaking Jews of Andhra Pradesh who believe themselves to be descended from the Tribe of Ephraim – they believe that they are historically of Jewish descent. This controversial claim has found little sup-

port among scholars, although a gifted Israeli essayist and translator – Hillel Halkin – took up their cause in a colorful account published in 2002. He was joined in 2005 by the Sephardi chief rabbi of Israel, Shlomo Amar, who decided to formally recognize the Bene Menashe as “descendants of Israel” and agreed to dispatch a *beit din* from Israel to northeast India to convert them.

BENESCH, ALFRED ABRAHAM (1879–1973), U.S. attorney and civic leader. Benesch was born in Cleveland, Ohio, the son of Bohemian immigrants. He established a law practice in Cleveland and was elected to the Cleveland City Council in 1912. In 1914–15 he served as public safety director in Mayor Newton D. Baker’s cabinet. Under Benesch’s direction the first electric traffic signal lights were installed in Cleveland on August 5, 1914, by the American Traffic Signal Company. In 1922 Benesch gained prominence as a libertarian for his fight against a proposed quota system for Jews at Harvard. His public career was highlighted by 37 years of continuous service on the Cleveland Board of Education (1925–62); he was its president in 1933–34. Benesch made an immediate impact on school policy when he successfully opposed compulsory reserve military training in the city’s public high schools. He was Ohio State Director of Commerce during 1935–39. Benesch held many public and civic offices and was equally active as a Jewish communal leader, serving as a trustee of many local Jewish agencies.

[Judah Rubinstein]

BENEŠOV (Ger. *Beneschau*), town in Bohemia, the Czech Republic. The community, first mentioned in 1419, was among the earliest to be established in a seignorial town in *Bohemia. Five Jewish families were living there in 1570. A community is again mentioned there in 1845, numbering seven families in 1852. It was officially registered in 1893 with 786 persons (including those living in 27 surrounding villages). Benešov was a center of the Svaz *čechů-židů, Czecho-Jewish movement, and of the struggle against the German-language Jewish school at the end of the 19th century. In 1930 the community numbered 237 (2.8% of the total population), 24 of whom declared their nationality as Jewish. The anti-Jewish laws imposed during the

German occupation were sometimes not enforced in Benešov. Most of the community was deported by the Nazis to the Maly Trostinets extermination camp near Minsk in 1942. Only two Jews returned. The synagogue equipment was sent to the Central Jewish Museum in Prague; two cemeteries still remain. No community has been reconstructed.

[Jan Herman]

BENEVENTO, town in southern Italy. Epigraphical evidence may indicate that Jews were living in Benevento already in the fifth century. Around 950 the miracle worker *Aaron of Baghdad visited the town. Later, members of the *Ahimaaz family resided in Benevento, Hananeel b. Paltiel establishing his yeshivah there. In 1065, Landolfo VI, prince of Benevento, forced a number of Jews to become converted to Christianity, being reproved for this by Pope *Alexander II. In 1077 Benevento became part of the Patrimony of St. Peter and its Jews passed under the rule of the pope. When *Benjamin of Tudela visited Benevento about 1159 he found 200 Jewish families. Two Hebrew inscriptions on a sepulchral stone from 1153 also attest to the existence of a Jewish community in this period. The Jews were living in a fairly ample quarter; in 1198 three churches in Benevento were known as “de Judeca.” Jewish economic activities included weaving and especially dyeing, on which taxes were paid to the archbishop. Later Jews engaged in moneylending. In the early 16th century they also dealt in corn. When in 1442 Alfonso of Aragon became king of Naples, he also occupied Benevento. The Holy See compromised by nominating Alfonso apostolic vicar in the city, recognizing his rule *de facto*. In 1452 Alfonso accorded the Jews of Benevento the same privileges enjoyed by the Jews living in the Kingdom of Naples, in return for a thousand ducats. In 1458, upon Alfonso’s death, Benevento returned to pontifical rule. Benevento being a Papal enclave, the Jewish community which now maintained two synagogues was not disturbed at the time of the general expulsion from southern Italy in 1541. Nevertheless, after the election of Pope *Paul IV in 1555, their position sharply deteriorated and several Jews converted, among them a rich banker, Raphael Usiglio. In 1569 they were expelled from Benevento as from the other small towns in the Papal States. The municipal council readmitted Jews in 1617, but in 1630 they were accused of poisoning the wells. Thereafter, the organized Jewish community ceased to exist.

BENEVENTO, IMMANUEL BEN JEKUTHIEL (died c. 1560), Italian grammarian and kabbalist. Benevento, who lived in Mantua, was the pupil of R. Moses *Basola of Pesaro. He wrote *Livyat Hen* (Mantua, 1557) on Hebrew grammar

and poetry and published *Ma'arekhet ha-Elohut*, the kabbalistic work of Perez b. Isaac Gerondi (of Barcelona), which he annotated with his own commentary (Mantua, 1558). He was also one of the publishers of the first printed edition of the Zohar (Mantua, 1558–60), and went to the Ottoman Empire in search of new Zohar manuscripts for this edition. Benevento was also involved in the dispute about printing the Zohar, justifying it in the introductions to his books. He died before the printing was completed.

[Umberto (Moses David) Cassuto / Moti Benmelekh (2nd ed.)]

BENEVENUTUS GRAPHEUS HIEROSOLYMITANUS (c. 12th century), the most famous medieval non-Arab oculist. Probably Jewish, he practiced and lectured in Southern Europe. His work on ocular diseases was the best-known textbook until well into the 16th century. Twenty-two manuscripts and 18 printed editions are still in existence, differing in length and completeness. According to a Vatican Latin codex, the work was “translated from the Hebrew into Latin.” The Latin *editio princeps* is the Ferrara incunabulum (1474). Benevenutus’ knowledge of anatomy and his physiological and pathological conceptions follow closely Galen’s teachings. In therapy, however, he reflects ophthalmological knowledge of his own time. His description of seasonal ophthalmia is an indication of his having been a “Hierosolymitanus” (Jerusalemite), since it conforms surprisingly well with the summer and autumn epidemics of conjunctivitis in Erez Israel. His therapy is empirical and free from irrational elements. Among his numerous remedies some carry the adjective “Jerusalem.” From his descriptions of couching for cataract, the radical treatment of trichiasis, dacryocystitis, and “scabies” of the eyes (trachoma), Benevenutus must have been an experienced and skillful surgeon. He describes an astonishingly modern method for dealing with ocular injuries; embryos from freshly embryonated eggs, removed and reduced to a pulp, and regularly used as an ointment, “bring about a good consolidation of the wound.” Of the many names of Benevenutus, Grapheus seems to be the correct one. It would appear to be a stylized derivation of the Hebrew *rofe* (“physician”). In the Paris codex he is called “*Bien Venu Raffé*.” The various Christian invocations in his writings were probably later insertions and are not proof that he was not Jewish, nor does the frequently repeated assertion “nos Salernitani” prove that Benevenutus taught in Salerno.

BENFELD, town south of Strasbourg, eastern France. In 1349, a regional assembly of feudal lords was held in Benfeld to finalize measures to be taken against the Jews who were accused of spreading the *Black Death. Shortly afterward the Jews living in Benfeld were murdered or expelled. A new community was established in 1830, numbering 236 in 1836. A synagogue was built in 1845. It was one of the few in Alsace not desecrated during World War II under the German occupation, when 31 Jews were deported from Benfeld. In 1968, the community numbered 75 persons.

BENFEY, THEODOR (1809–1881), German comparative philologist and Sanskritist. Benfey was born in Noerten, near Goettingen, and lived in Goettingen from his childhood. His first works in classical philology were produced hastily and contained many inaccuracies (as in his *Griechisches Wurzellexikon*, 1839–42). As a young scholar he interested himself in the relationship of Egyptian to Semitic languages, on which he wrote *Ueber das Verhaeltniss der aegyptischen Sprache zum semitischen Sprachstamm* (1844), his sole work on Semitic linguistics. He also dealt extensively with the recurrence of certain motifs in narrative literature, tracing their derivation from Oriental, especially Indian, sources. His work turned increasingly to Indian linguistics, a field in which he became a recognized authority. His two Sanskrit grammars, the complete (1852) and the short (1855), for many years served as basic texts in this field. Though Benfey was a pioneer in the study of the language of the Veda, he never completed the Vedic grammar on which he worked for many years. In 1834 Benfey was appointed a lecturer at the University of Goettingen; in 1848, after converting to Christianity, he was appointed associate professor; and in 1862 full professor. A noted teacher, his students included Jacob Wackernagel and Theodor Noldeke. For the Bavarian Academy's history of sciences in Germany, Benfey wrote the volume *Geschichte der Sprachwissenschaft und orientalischen Philologie...* (1869), with an outstanding chapter on the beginnings of comparative linguistics and its spiritual background.

[Hans Jacob Polotsky]

BENGALIL (Abengalel), family which flourished in Spain and North Africa in the 13th century. JOSEPH BENGALIL was a rabbi probably living in Ceuta, Morocco, who corresponded with Solomon b. Abraham *Adret. His sons ABRAHAM and SAMUEL both served on diplomatic missions for the Aragonese kings to Granada and Morocco. Abraham resided in Valencia, and was authorized to conduct business there in 1276 by James I at the request of the sultan of Tunis, apparently also using his official journeys for business purposes; in 1280,

when his goods were impounded by the Castilian authorities, Pedro III retaliated in kind against Castilian merchants visiting Aragon. In 1291 Abraham took his family with him on a mission to Tlemçen (Algeria).

BEN-GAVRIEL, MOSHE YA'AKOV (originally **Eugen Hoeflich**; 1891–1965), Israeli author who wrote in German. Born into a bourgeois Viennese family (his mother was a cousin of pianist Arthur *Schnabel), he began studying Arabic at Vienna university, but after three years was expelled because of his socialist views. Wounded in Poland during World War I, Ben-Gavriel went to Palestine as an Austrian liaison officer with the Turkish forces in Jerusalem. After just a few months he was dismissed for his “pansemitic” activities and he had to return to Vienna. From there he contributed to Martin Buber's *Der Jude* and became an active Zionist. In *Der Weg in das Land* (1918), *Feuer im Osten* (1920), and *Die Pforte des Ostens* (1923), Ben-Gavriel presented Zionism as a pan-Asian movement, the *yishuv* being the link between East and West. Later he adopted the outlook of the Berit Shalom without actually joining the group. Returning to Palestine in 1927, Hoeflich changed his name to Ben-Gavriel. There he was the local representative of the Deutsches Nachrichtenbuero until 1933 and later worked for the Swiss press. His World War II experiences in a Palestinian unit of the British Army inspired the Schweik-like hero of *Frieden und Krieg des Buergers Mahaschavi* (1952; *Mahaschavi in Peace and War*, 1960). After 1948 Ben-Gavriel, living in Jerusalem, was successful in writing and broadcasting about the State of Israel in West Germany, where his many books on the Middle East, many of them styled as Oriental tales, such as *Kumsits* (1956), were bestsellers. Among his outstanding works is his novel *Das Haus in der Karpfengasse* (1958), set in Nazi-occupied Prague, which appeared in Hebrew in 1944. Two volumes of early recollections were *Zahav ba-Huzot* (1946) and *Die Flucht nach Tarschisch* (1963). A critical edition of Ben-Gavriel's 1915–27 diaries appeared in 1999.

[Marcus Pyka (2nd ed.)]

BENGHAZI, port city in the district of Cyrenaica (see *Cyrene), Libya. In ancient times it was called Hesperides, but was later renamed Berenice. After 74 B.C.E. it was part of Roman Cyrenaica, but according to an inscription of 13 B.C.E.,

found at Benghazi, the Jews of Berenice were considered citizens (as in the rest of Cyrenaica) but were ruled by their own Jewish archons and not by an ethnarch as in other parts of the Diaspora. Furthermore they are described as a “municipal community,” and appear from the inscription to be observant of the festivals (CIG 3:2, no. 5361). Another inscription found in 1938, gives thanks to certain donors for helping to dedicate a synagogue in Berenice in 56 C.E. In both this and the previous inscription the majority of the names mentioned are non-Jewish, testifying to a fair degree of hellenization, as in Egypt. During the revolt of the Jews of Cyrene in 115 and during the Byzantine era the Jews of Berenice suffered the same fate as those of Cyrene in general. After the Arab conquest in 660, Berenice was mostly deserted. In the 14th century it was called by its Arabic name Benghazi (*Bin Ghāzi*). In the beginning of the 16th century, many Jews from Tripoli helped to repopulate it, earning their livelihood by trade with North Africa and the Mediterranean area, or as smiths or tailors.

Following the Ottoman occupation of 1640, Jewish families from Tripoli were attracted to the city. In 1745 epidemics and poverty drove out the inhabitants, but about 1750 some members of the previous Jewish community returned and reorganized the community, which began to flourish about 1775 with the arrival of Jewish families from Italy. In the 18th and 19th centuries Benghazi had 400 Jewish families divided into two groups: those of the town and the surrounding region (*Kahal Bengazi*) and those who were born in *Tripoli and Italy. Although both groups recognized the authority of one rabbi, each had its own synagogue. The Muslim brotherhood of the Sanusiya, whose influence was considerable in Cyrenaica from the 1840s onwards, was well disposed toward the Jews of Benghazi, appreciating their economic-mercantile contributions and peaceful attitude. The Jews enjoyed complete freedom and were not forced to live in a special quarter. They lived in affluence, and because of their commercial activity the town became an important trading center for Europe and Africa. Several wealthy families occupied high positions in the service of the Ottoman authorities. Among scholars of this community were Elijah Lavi (1783–1883), author of *Sefer Ge'ullot Adonai* (1864) and other works written in Hebrew or Judeo-Arabic; Moses Ḥakmon; and Isaac Khalfon. A modernized *talmud torah* was organized under the leadership of Elia Juili (1890), Ḥai Teshuba, and others. In 1909 when a large fire broke out in the bazaar, the Ottoman soldiery, who were supposed to extinguish it, looted and attacked the population, especially the Jews. Because of this, several families moved back to Tripoli. From 1911 Italian rule attracted more Jews from the interior of the country, as well as from Italy, to Benghazi, and in 1935 the Jewish population numbered 2,236. Until 1936 life under Italian rule proceeded peacefully for the Jews. In 1936, however, the Italians began to enforce fascist legislation aimed at modernizing social and economic structures based on conditions current in Italy. With the implementation of anti-Jewish racial legislation in late 1938, Jews were removed from municipal councils, public offices, and state schools and their

papers stamped with the words “Jewish race.” When Benghazi fell to the British on Feb. 6, 1941, the Jews were overjoyed, but suffered in attacks by hostile Muslim youth when the city was recaptured by the Italians on April 3, 1941. On Dec. 24, 1941 the British retook the city but Italian-German forces once again conquered it on Jan. 27, 1942. This again resulted in anti-Jewish attacks, the systematic plunder of all Jewish shops, and the promulgation of a deportation order. Almost all the Benghazi Jews were deported to Giado, 149 miles (240 km.) south of Tripoli, a camp in the desert where they lived under severe climatic, health, and living conditions. Consequently, 562 of them died of starvation and typhus. Forced labor, however, was not general, and food distribution was not conditional upon it. The condition of the Jews in Giado improved only when the British entered the camp in January 1943. In November 1945 and June 1948 the Jews of Benghazi did not suffer anti-Jewish pogroms at the hands of Arabs similar to the Jews of Tripoli, though small-scale incidents did occur. Thus, several Jews were beaten up in mid-June 1948, a shop was looted, and a fire broke out in a synagogue, but the local police introduced order and there was no need for the British Army to intervene. Emergency measures were introduced, demonstrations and gatherings were forbidden, and a curfew was instituted. Still, the Jews felt unsafe and feared for their life and property. Violence against individuals as well as cases of kidnapping and forced Islamization of young Jewish women took place, especially in the countryside. As a result, once emigration to Israel was permitted in early 1949, the majority of the community of 2,500 persons emigrated to Israel through the end of 1951, with approximately 200 Jews left in Benghazi in 1967. During the Six-Day War of 1967, unlike other areas of Jewish settlement in Libya, the authorities reacted fairly rapidly to protect the Jews in Benghazi. Almost immediately after word of Israel-Arab fighting came, the Jews were rounded up and put into protective custody in army barracks outside the city. Subsequent to the Six-Day War most of the remaining Jews in Benghazi emigrated, mainly to Italy.

For bibliography see *Libya.

[David Corcos / Rachel Simon (2nd ed.)]

BENGIS, SELIG REUBEN (1864–1953), Lithuanian rabbi. Bengis studied in Volozhin under Naphtali Zevi Judah *Berlin and Ḥayyim *Soloveichik. In 1894 he was appointed rabbi of Bodki and, in 1912, of Kalvarija, Lithuania. At the outbreak of World War I he went to Smolensk, but in 1915 he returned to Kalvarija. In 1938 he was appointed head of the *bet din* of the separatist Orthodox community Ha-Edah ha-Ḥaredit of Jerusalem, and in 1949, on the death of Joseph Zevi *Duschinsky, became its rabbi. Despite the fact that his community consisted of active religious extremists, he succeeded in directing its affairs into practical channels and in curbing its most extreme wing, the *Neturei Karta. He also served as head of the Ohel Moshe Yeshivah in Jerusalem. Bengis' mastery of rabbinic literature, and his memory, were phenomenal; he could

unhesitatingly give the source of any random quotation from the Talmud, Rashi, or *tosafot*. He published *Li-Felagot Re'uvev* (in 7 parts, Kaidan, Riga, Jerusalem, 1924–46), consisting of **hadranim*, i.e., discourses delivered on completing the study of a talmudic tractate, interwoven with his novellae. He justified the unusual form of his work by maintaining that while novellae are little read, there was a considerable interest in this form of talmudic learning. Bengis himself stated that he had written, under the same title, a commentary on Alfasi, and sermons, which remained in manuscript. Some of his halakhic articles appeared in *Tevunah* (Jerusalem, 1941).

BIBLIOGRAPHY: S. Schurin, *Keshet Gibborim* (1964), 40–43.

[Itzhak Alfassi]

BEN-GURION (Gruen), DAVID (1886–1973), Zionist leader, Israeli statesman, first prime minister and defense minister of Israel; member of the First to Eighth Knessets.

Early Years

Ben-Gurion was born in Plonsk (then in Russian Poland). His father, Avigdor Gruen, was a member of Hovevei Zion and his house was the center of Zionist activity in the town. His mother Sheindel (née Friedman) died when he was 11 years old. He was educated in a modern Hebrew-language *heder*, and studied secular subjects with private tutors. At the age of 14, Ben-Gurion was among the founders of a Zionist youth group “Ezra.” He joined the *Po’alei Zion movement in 1903, traveling and speaking on its behalf in Plonsk, Warsaw, and smaller towns. During the 1905–06 revolution he was arrested twice but released at the intervention of his father. In September 1906 Ben-Gurion immigrated to Erez Israel, working in the orange groves of Petaḥ Tikvah and in the wine cellars of Rishon le-Zion. He was elected to the Central Committee of Po’alei Zion. In 1907 he managed to have the sentence “the Party aspires for political independence for the Jewish people in this country” included in the party’s first platform, which was drafted in the spirit of Ber *Borochov’s writings. Ben-Gurion’s ideological positions during this period combined Jewish nationalism with pragmatic socialism, which stressed the obligation of every member of the movement to settle in Erez Israel and the right of the settlers to manage their own affairs without interference from the Diaspora. He demanded that Hebrew be the sole language of all Jewish public life in Erez Israel, including Po’alei Zion, and refused to collaborate with the Yiddish party organ *Der Anfang*. In the 1907–10 Ben-Gurion was an agricultural worker and watchman in Sejera and Milḥamiyyah in the Lower Galilee, Kinneret, and Zikhron Ya’akov. In these years he became convinced that “the settlement of the land is the only true Zionism, all else being self-deception, empty words, and merely a pastime.” In 1910 Ben-Gurion joined the editorial staff of the new party organ *Aḥdut* (“Unity”) in Jerusalem, together with Izhak *Ben-Zvi and Raḥel Yanait. It was in this publication that he printed his first articles under the name “Ben-Gurion,” which he

adopted from one of the last Jewish defenders of Jerusalem against the Roman legions. The central theme of these articles was that the *yishuv* must organize politically, together with Jews in other parts of the new Ottoman state following the Young Turk Revolution of 1908, and strive for Jewish autonomy in Erez Israel. In 1911 he and Ben-Zvi were elected as delegates to the Eleventh Zionist Congress and participated in the third world conference of Po’alei Zion in Vienna. The same year Ben-Gurion joined a group of young Zionists who enrolled at Turkish universities, with the object of establishing close ties with the educated ruling circles in Turkey. At first he lived in Salonika, and established contacts with the large Jewish community there, but after Salonika was taken over by the Greeks in 1912, he moved to Constantinople to continue his law studies

1914–1921

When World War I broke out, Ben-Gurion and his party advocated loyalty to Turkey and the adoption of Ottoman citizenship. However, when the Turkish administration started persecuting the Zionists, both he and Ben-Zvi were arrested and accused of conspiring against Ottoman rule in order to establish a Jewish state. In March 1915 they were exiled to Egypt, where they met Joseph *Trumpeldor, who was engaged in forming the “Zion Mule Corps” within the British army, an activity to which both Ben-Gurion and Ben-Zvi objected, because they feared that it endangered the *yishuv* without benefiting the Zionist cause.

Later in 1915 Ben-Gurion and Ben-Zvi proceeded to New York, where their main efforts were directed to the establishment of the *He-Ḥalutz organization, preparing young Jews for settlement in Palestine after the war. In 1917 Ben-Gurion married Paula Munweis (born in Minsk, Russia, 1892), who was a nurse in New York, and an active member of Po’alei Zion. After the *Balfour Declaration Ben-Gurion was among the first in the United States to call for the formation of Jewish battalions to participate in the liberation of Palestine, writing that “England shall not return the country to us. . . . A country is acquired by a people only through the pain of labor and creation, construction efforts and settlement. The Hebrew people itself must turn this right into a living and existing fact.” Volunteering for the British Army in May 1918, he reached Egypt in August as a soldier in the *Jewish Legion – the 39th Battalion of the Royal Fusiliers. There he met volunteers from the labor movement in Palestine and with them started planning for the establishment of a united workers’ movement in Palestine after the War that would prepare for the mass Jewish immigration expected to follow the liberation of the country from Ottoman rule. However, they did not manage to see active service, since their unit arrived in the country after the British had already conquered it.

At the 13th conference of Po’alei Zion in Jaffa in February 1919, Ben-Gurion called upon Jewish workers in Palestine and abroad to unite in forming a political force that would direct the Zionist movement toward the establishment of a Jewish

socialist society in Palestine, based on the collectivist principles embodied in the *kevuṭzot* (see *Kibbutz Movement). In 1919 Ben-Gurion opened the founding conference of *Aḥdut ha-Avodah in PetaḥTikvah. He also participated in the world delegation of Po'alei Zion which prepared a blueprint for the future development of Erez Israel. After the Jerusalem riots of Passover 1920, Ben-Gurion traveled to London, where he and Shelomo *Kaplansky headed the Political Bureau of Po'alei Zion, which established contacts with the British Labour Party.

Building the Histadrut

On his return to Palestine at the end of 1921, Ben-Gurion was elected as the first secretary of the *Histadrut, which had been founded in 1920 – a position which he was to hold for the next 14 years. He was active on all levels – the struggle for the improvement of workers' conditions, the organization of strikes, the employment of Jewish workers in all sections of the economy, including government works, and provision for the unemployed. Since Ben-Gurion's objective was to turn the Histadrut into an instrument for settlement, as well as an economic and political body, he proposed that it become a cooperative "workers' society" (*hevrat ovedim*), which would undertake agricultural settlement, the promotion of industry and construction, as well as providing workers with all the financial and welfare services that they required. A version of this vision was adopted by the second Histadrut conference in 1923. In the early 1920s Ben-Gurion tried to develop economic relations between the Histadrut and the Soviet trade unions and economic bodies, in the hope that such relations would facilitate the operation of the He-Ḥalutz movement in the Soviet Union and Jewish emigration from there to Palestine. He visited the Soviet Union in 1923, when the Histadrut participated in the Moscow Agricultural Exhibition, but his efforts to gain Soviet support failed.

During the 1920s the non-socialist middle class within the Zionist Movement and in the *yishuv* gained in strength, and the *Revisionist movement declared its opposition to the idea of an all-embracing socialist workers' organization. The Revisionist leader Ze'ev *Jabotinsky called for the "breaking" of the Histadrut ("*ja brechen*"). Ben-Gurion's reaction was to strive to unite the various Zionist workers' parties, with the goal of attaining hegemony for the labor movement in the World Zionist Organization. In 1930 he was instrumental in getting Aḥdut ha-Avodah and *Ha-Po'el ha-Za'ir to unite into a single party that assumed the name *Mapai – an acronym for *Miflegat Po'alei Erez Yisrael*. In the next four years Ben-Gurion concentrated on efforts to prevent the Revisionists from gaining ascendancy in the Zionist Movement. At the 18th Zionist Congress in 1933, in which the workers parties comprised close to 50% of the delegates, Ben-Gurion became a member of the Zionist and *Jewish Agency Executive. In an attempt to prevent a split in the Zionist movement, he reached a tentative agreement with Jabotinsky which would establish a *modus vivendi* on labor matters between the Histadrut and the

Revisionist workers. To Ben-Gurion's great regret, however, this agreement was rejected by the members of the Histadrut. Ben-Gurion regarded the rejection as a "grave error" but accepted the verdict. In 1935 Ben-Gurion was elected chairman of the Zionist Actions Committee and the Jewish Agency, and during the next 11 years, he and the president of the Zionist Organization, Chaim *Weizmann, were to run all Zionist affairs. These two very different leaders frequently clashed over both strategy and tactics, but together they saw the movement through its most fateful years. After 1946 Ben-Gurion bore most of the burden on his own.

In the 1930s Ben-Gurion held talks with various leaders of the Arab national movement, but finally reached the conclusion that an agreement with the Arabs would be attained only after the latter became convinced that they could not defeat the Zionist endeavor by force of arms.

Toward the Founding of the Jewish State

Together with Weizmann and Moshe *Sharett, who after the murder of Chaim *Arlosoroff was appointed head of the Political Department of the Jewish Agency, Ben-Gurion accepted the plan for the partition of Palestine into an Arab and a Jewish state, as recommended by the Peel Commission Report in June 1937, believing that even a small Jewish state was better than none, and that the Zionists should accept whatever was offered. This position was opposed by Berl *Katznelson and Yizḥak *Tabenkin. When the British government abandoned the partition plan, Ben-Gurion participated in the St. James Round Table Conference held by the British in London in 1939, with separate Jewish and Arab delegations, since the Arabs refused to sit with the Jews. Following these talks, and with the clouds of war already looming on the horizon, the British declared their White Paper policy, which called for limited Jewish immigration to Palestine in the next five years, with future immigration dependent on Arab consent, and restrictions on Jewish land acquisitions. Ben-Gurion condemned the White Paper as a betrayal, and called for active resistance to its implementation, by means of intensified "illegal" immigration and enhanced land settlement in restricted areas. Upon the outbreak of World War II Ben-Gurion declared that the *yishuv* would fight on the side of the British against the Nazis as if there were no White Paper, and continue to fight against the White Paper as if there were no war against the Nazis. Active protests against the British policy continued until June 1940, when Italy entered the war, opening a second front against the British in the Mediterranean. Many members of the *yishuv* joined the British army, and in September 1944 the Jewish Brigade was formed. But at the same time Ben-Gurion started to plan for the struggle that would follow the war, and turned to the United States for moral and material support. In May 1942, while in New York and contrary to Weizmann's wishes, he was instrumental in drawing up the *Biltmore Program, which called for the opening of Palestine to free Jewish immigration and settlement, and defined the Zionist goal as the establishment of a Jewish Commonwealth in Palestine

that would be integrated into the structure of the new democratic world. When, towards the end of the war, the dissident underground organizations – the Irgun Zeva'i Le'ummi (IZL) and Loḥamei Ḥerut Israel (Leḥi) – carried out armed attacks against British targets in Palestine, Ben-Gurion ordered the Haganah to act against them. He even went so far as to cooperate with the British authorities in apprehending members of the dissident organizations, a policy nicknamed the “*Saison*” (i.e., the hunting season) that aroused much controversy within the ranks of the Haganah and the *yishuv*.

When, following the war, it became clear that the British government had no intention of abandoning the White Paper policy, Ben-Gurion led the active struggle against the British, for a time in cooperation with the dissident organizations, which came to be known as the Hebrew Resistance Movement (Tenu'at ha-Meri ha-Ivri), and intensified “illegal” immigration. In the meantime he embarked on a policy of acquiring arms from all available sources in preparation for a possible armed clash with the Arabs.

On June 29, 1946, known as “Black Saturday,” when members of the Jewish Agency Executive in Palestine were arrested by the British, Ben-Gurion was in Europe. Though he refused to reach a compromise with the British, he ordered a pause in the armed struggle in Palestine. Ben-Gurion's policy was approved at the 22nd Zionist Congress held in December 1946, which failed to reelect Weizmann as president of the World Zionist Organization but reelected Ben-Gurion as chairman of the Jewish Agency Executive, to whom the defense portfolio was added. After returning to Palestine, he started planning for the possibility of an armed clash not only with the Arabs in Palestine but also with the armies of the Arab states that had started to organize in the Arab League. Ben-Gurion was one of the chief Zionist spokesmen before the Anglo-American Inquiry Commission in 1946 and the United Nations Special Commission on Palestine (UNSCOP) in 1947.

War of Independence, 1947–1949

When the *War of Independence broke out in December 1947, following the adoption of the partition plan by the UN General Assembly on November 29, Ben-Gurion stood at the head of the defense effort, involving the raising of funds, the acquisition of arms, the recruitment of military experts, and the outlining of military goals, though he did not direct the actual military operations. It was he who, at the end of the war, ordered a withdrawal from the Sinai Peninsula, and refused to allow Yigal *Allon to conquer the West Bank from the Arab Legion. In his determination to free the newly established IDF from all separatist influences, Ben-Gurion ordered the disbanding of the *Palmaḥ command and the complete integration of all its units in the general framework of the new army, which was led by officers, most of whom were veterans of the British Army. He also had to deal with the dissident organizations – the IZL and Leḥi. In the case of the IZL, any chance for independent activity on its part was ended with the controversial order given by Ben-Gurion in June 1948 to sink the

Altalena, an IZL arms ship, while the fate of Leḥi was decided by the assassination of the Swedish UN emissary, Count Folke *Bernadotte, by its men.

1948–1963

As the termination of the British Mandate drew near in the spring of 1948, Ben-Gurion decided, despite the doubts of many of his colleagues and pressure from the American government to the contrary, to declare the establishment of the Jewish State. This he did in the Proclamation of the State of Israel on May 14, 1948. He became prime minister and minister of defense in the Provisional Government, and after the elections to the Constituent Assembly on January 25, 1949, continued to serve in these posts as the head of a coalition government. By 1963, when he resigned for good, Ben-Gurion had headed eight coalition governments, frequently using the tool of resignation from the premiership in order to get his way vis-à-vis his unruly coalition partners. In December 1949 Ben-Gurion declared Jerusalem the capital of Israel, even though there were few states that were willing to recognize it as such. As minister of defense, Ben-Gurion devoted most of his efforts to strengthening Israel militarily while introducing civilian control over it. In the international arena he struggled to win international support for Israel's right to security. In his domestic policy he insisted on *mamlakhti'ut* – a statist as opposed to a partisan approach.

In 1951 he traveled to the United States, where he launched the first *Israel Bond Drive. He used his full weight to get the emotionally loaded *Restitution Agreements with the Federal Republic of Germany approved, and this primarily because of Israel's grave foreign reserves situation.

Ben-Gurion was instrumental in making the in-gathering of the exiles a supreme principle in the ideology of the state; introducing a free, unified national education system; using the army as a means of integration and social consolidation; and making the advancement of science and research a central factor in the development of the state and its people.

In December 1953 Ben-Gurion announced his resignation from the premiership and retirement from active politics, citing his need for a rest after 18 years at the helm as his main reason for doing so. As part of his advocacy for the settlement of the Negev, he joined Kibbutz *Sedeh Boker. During his period in retirement Moshe Sharett was chosen by Mapai as prime minister, even though Ben-Gurion preferred Levi *Eshkol.

In February 1955, following the collapse of an Israeli intelligence network in Egypt, in what came to be known as the “*esek bish*” or “*mishap*,” and the resignation of Defense Minister Pinḥas *Lavon, Ben-Gurion returned to active politics, at first as minister of defense under Sharett. In this period Israel's international position deteriorated as a result of the Bandung Conference of Nonaligned States of April 1955, which refused to accept Israel into its ranks, and the Czechoslovak-Egyptian arms deal concluded with the blessing of the Soviet Union in September 1955. Terrorist activities from across Israel's borders

increased, and Ben-Gurion decided on a policy of military reprisals across the armistice lines. Following the elections to the Third Knesset in November 1955, Ben-Gurion once again assumed the twofold position of prime minister and minister of defense. He now concentrated on the development of close relations with France, which due to its own struggle in Algeria, viewed Egyptian President Gamal Abdul *Nasser as a bitter enemy. These ties became even closer when Nasser nationalized the Suez Canal in July 1956. In October 1956 Ben-Gurion went to France for a secret meeting with representatives of the French and British governments. At this meeting an agreement was reached on concerted military action against Egypt. On October 29, 1956, the Israeli Army moved into the Sinai Peninsula (see *Sinai Campaign), while Britain and France closed in on the Suez Canal. However, under international pressure Britain and France were forced to give up their effort to reverse Nasser's actions, and Israel was compelled to agree to the withdrawal of its forces from the Sinai Peninsula and the Gaza Strip. This withdrawal was completed in March 1957, and relative quiet was attained after UN forces were stationed in the Gaza Strip and the sea route to Eilat through the Straits of Tiran was reopened to Israeli shipping. Following the Sinai Campaign, and the election of Charles de Gaulle as president of France, Israel's relations with France remained cordial. However, Ben-Gurion increased Israel's efforts to diversify its sources of arms to include West Germany and the United States.

During the election campaign for the Fourth Knesset at the end of 1959, Ben-Gurion raised the issue of electoral reform. He advocated a system of personal elections in constituencies, which he believed would cure Israel's political ills by reducing the number of parliamentary groups in the Knesset. His opponents argued that Ben-Gurion's intention was to "gerrymander" the constituencies in such a way that Mapai would win an absolute majority of Knesset seats. The elections, however, produced no significant change in the composition of the Knesset, and Ben-Gurion did not have the power to change the electoral system.

In the years 1960–62 Ben-Gurion traveled a great deal, visiting the United States, where he met with President John *Kennedy, Western Europe, where he met with German Chancellor Konrad *Adenauer and French President Charles de Gaulle, and Burma. Towards the elections to the Fifth Knesset, what now came to be known as the Lavon Affair, concerning responsibility for the bungled intelligence operation in Egypt back in 1954, reemerged, not least of all because Ben-Gurion wanted the truth to be uncovered as to who had given the order for the operation. Ben-Gurion believed that Pinhas Lavon, now secretary-general of the Histadrut, was responsible. Ben-Gurion's obsession with this affair was severely criticized by his opponents both within Mapai and outside of it. However, a commission of seven ministers, set up to examine the relevant documents acquitted Lavon of responsibility, a verdict that Ben-Gurion refused to accept. He submitted his resignation in January 1961 and, before new elections were held for

the Fifth Knesset, demanded that the Mapai Central Council make a choice between himself and Lavon. On February 4 the Central Council decided by 159 votes to 96 to remove Lavon from his office as Histadrut secretary-general. However, this was a Pyrrhic victory for Ben-Gurion, whose position in the party was greatly undermined. In the elections Mapai was greatly weakened and Ben-Gurion experienced much difficulty forming a new coalition. He would not let the crisis over the Lavon Affair subside, and in June 1963 once again resigned from the premiership – this time for good.

Ben-Gurion in Opposition

Eshkol became prime minister upon Ben-Gurion's recommendation and Ben-Gurion once again retired to Sedeh Boker and devoted himself to writing. But soon he was back, once again advocating a reform of the electoral system, and expressing his opposition to the establishment of the Alignment between Mapai and Ahdut ha-Avodah. However, the Lavon Affair was still under his skin. In the autumn of 1964 he submitted a dossier of documents that he had prepared to Minister of Justice Dov *Joseph and to the attorney general and demanded that a judicial inquiry be opened on the issue. At a meeting of the Mapai Central Committee party conference in January 1965, a majority voted against Ben-Gurion's demands. Though it was only a minority that supported Ben-Gurion, Eshkol decided to put an end to the matter and resigned from the premiership, with the demand that the government be allowed to decide on the matter without party interference. He then formed a new government, with the same makeup as the outgoing one. Ben-Gurion's response was to leave Mapai with a group of his followers, who included Moshe *Dayan, Shimon *Peres, and Yosef *Almogi, and set up a new parliamentary group called *Rafi (Reshimat Po'alei Yisrael), which ran in the 1965 Knesset and Histadrut elections. While Rafi gained 10 seats in the Sixth Knesset, and Ben-Gurion was to remain a member of the Knesset until May 1970, to all intents and purposes he had lost his political clout and influence. Rafi rejoined Eshkol's government on the eve of the *Six-Day War, with Dayan assuming the Defense portfolio, and shortly after the war joined with Mapai and Ahdut ha-Avodah to form the *Israel Labor Party, a move to which Ben-Gurion objected, leaving him as a single Member of Knesset when the other nine members of Rafi joined the new parliamentary group. In the elections to the Seventh Knesset Ben-Gurion ran at the head of a new party – the State List – which received four seats. Half a year after the elections, at the age of 84, he resigned from the Knesset and returned to Sedeh Boker, where he once again dedicated himself to writing and studying, and occasionally expressing his views on the political situation, generally advocating an Israeli withdrawal from the territories occupied during the Six-Day War. Though in his last years Ben-Gurion cut a solitary figure, he continued to be admired as the most influential Zionist and Israeli leader in the modern age, an individual who had made some of the most fateful decisions in the history of the Jewish nation in its early years, more or less on his own. Though

he had little formal education, he was a learned man, and throughout his life he never ceased to study the Bible, Greek philosophy, Buddhism, the philosophy of Baruch *Spinoza, and many other subjects. Though he was frequently accused of having resorted to undemocratic methods to get his way, he had a deep belief in democracy, and his well-known statement in the early years of the State that the communists and the Herut movement could not be members of his government stemmed from his belief that neither was truly democratic. To the end of his life he believed that all Jews should immigrate to Israel, and expressed contempt for those who considered themselves Zionists but remained in the Diaspora. After his death Beersheba University, Lydda International Airport, the government compound in Jerusalem, and many other Israeli institutions and locations were named after him.

[Yehuda Slutsky / Susan Hattis Rolef (2nd ed.)]

BEN-GURION UNIVERSITY OF THE NEGEV, Israeli university with campuses in Beersheba and Sede Boqer. Established in 1969 as the Negev University, it became Ben-Gurion University (BGU) after the death of David Ben-Gurion. The university is Israel's youngest and smallest university, but it has become a major center of education and research. Ben-Gurion University, headed by Avishai *Braverman as presi-

dent, is known for its rapid growth. More than 10,000 students enrolled for the 1995/6 academic year in its four faculties, and by 2003 it already had 16,000 students.

Ben-Gurion University is intimately involved in the development of Israel's southern arid region, the Negev, which comprises nearly 60% of the country, but contains only 10% of its population. It plays a central role in the educational, social, and industrial developments of the region. The university promotes academic research with commercial applications as the key to economic development in the Negev. Through its pioneering research in arid zone communities, BGU has established a basis for cooperation with countries sharing a similar climate, particularly in the Middle East.

Approximately 50% of the students originate from the Negev, 40% from the center of the country, and 10% from the north. New immigrant students are absorbed in all BGU departments.

The university has four faculties:

(1) The Faculty of Health Sciences, founded in 1974, is located on the campus of the Soroka Medical Center, in close proximity to the university. Its establishment brought about major changes in health care in the Negev while developing an innovative medical education program. From the first year, students integrate academic theory with clinical care. The orientation of the school is strongly focused on community medicine. The faculty and students work in Beersheba at the Soroka Medical Center and travel to development towns, kibbutzim, and Bedouin encampments.

There are three Divisions: Health in the Community; the Division of Basic Medical Sciences, and the Division of Clinical Medicine. The faculty offers graduate degrees in Medical Science. The Recanati School of Nursing and Physiotherapy is also part of the faculty.

(2) The Faculty of Engineering Sciences comprises six departments: Nuclear Engineering, Materials Engineering, Chemical Engineering, Mechanical Engineering, Electrical and Computer Engineering, and Industrial Engineering and Management and the Program for Biotechnology.

(3) The Faculty of Natural Sciences consists of five departments: Mathematics and Computer Sciences, Physics, Chemistry, Life Sciences, and Geology and Mineralogy. Its scientists pursue both basic and applied research projects, many of which have served to advance the growth of science-based industry and the agricultural development of the Negev.

(4) The Faculty of Humanities and Social Sciences has eleven departments: Behavioral Sciences; Bible and Ancient Near Eastern Studies; Economics; Education; Geography and Environmental Development; Hebrew Language; Hebrew Literature; Foreign Literature and Linguistics; History; Philosophy; and Social Work. The unit for teaching English as a Foreign Language is also part of the faculty. The Department of Behavioral Sciences integrates psychology, sociology, and anthropology. The Hebrew Literature Department has the only Master's Program in Creative Writing in the country, and in the Department of Social Work all third-year stu-

dents are required to develop active projects within the Negev community.

The Overseas Student Program is given in English for either one semester or a full academic year. The curriculum focuses on Human Resettlement (Russians, Ethiopians, and Bedouin), Desert Studies and Archeology, and Pre-Med. The School for Continuing Education offers a wide variety of courses to the Negev community at large.

Since the beginning of BGU activities, its scientists have engaged in basic and applied research. This covers widely ranging areas as desert research, alternative energy, development of water resources, chemistry, biotechnology, agriculture, and medicine, regional development, social ecology, the David Ben-Gurion era, and medical education.

Originally found in 1957 as the Institute for Arid Zone Research, the Institutes for Applied Research became part of the university in 1973. Comprising the institutes are the Institute for Chemistry and Chemical Technology and the Institute for Agriculture and Applied Biology. The institutes for applied research are geared toward tapping the various natural resources for the region's development. Numerous plant species with industrial and agricultural value have been selected and developed for desert growth. Experiments with underground brackish water irrigation have resulted in new cash crops for Negev settlements. Other projects include research on food technology, desalination, recycling of waste water, the application of waste heat and solar energy for refrigeration and direct-contact cooling, and the synthesis of organic compounds for chemical industries.

The Jacob Blaustein Institute for Desert Research was established in Sede Boqer as a national center for arid zone research. Its goal is to provide the knowledge and skills to transform arid lands of low productivity, human deprivation and famine into areas that are productive and self-sustaining.

Members of the institute's 15 units work together to explore a wide array of problems relating to the settling of the desert. The fields of study touch on man's habitat and social organization, climate and the desert environment, water resources and natural energy sources, such as solar energy, the adaptive mechanisms to climatic extremes of plants and animals, and the development of unique biotechnologies suitable for desert areas.

By government decision, BGU was entrusted with some 750,000 documents associated with the late David Ben-Gurion, founding father and first prime minister of Israel. These papers form the Ben-Gurion Archives and serve the Ben-Gurion Research Center. They reflect the ideology, political activities, and spiritual testament of Ben-Gurion – the man, the Zionist, and the statesman – and constitute an invaluable record of the creation of the State of Israel. At the Ben-Gurion Research Center scholars study the Ben-Gurion era, Zionism, the history of Israel, and related subjects. The center publishes and disseminates relevant studies and, in conjunction with the Faculty of Humanities and Social Sciences, provides academic courses and educational programs.

BGU sponsors a host of innovative programs as part of its outreach service to the community. All students who receive financial aid from BGU commit themselves to participating in one of the university's wide range of social action programs, which include the Open Apartments Project, in which the students live in underprivileged neighborhoods and serve as part-time community workers; the "Kidma" (Progress) Program, which promotes the advancement of new immigrants from Ethiopia; a special program of Assistance for the Elderly; and the Matriculation Examination Program for the Bedouin Sector.

[Linda Livna]

BEN-HADAD (Heb. בֶּן־חֲדָד; "Son of [the god] Hadad"), the name of two, or perhaps three, kings of *Aram-Damascus (see *Damascus), as Hebraized in the Bible. In Aramaic inscriptions the name appears as *Brhdd* (בִּרְחֲדָד), with the native Aramaic word for "son," *br* (then pronounced *bir*, later *bar*), instead of the Hebrew *ben*.

BEN-HADAD I. Ben-Hadad I lived in the early ninth century B.C.E. He was the son of Tabrimmon and grandson of Hezion (1 Kings 15:18), and contemporary with King *Asa of Judah and King *Baasha of Israel. Like his father (cf. 1 Kings 15:19; 11 Chron. 16:3), he was bound by alliances to the kings of both Israel and Judah. However, when war broke out between Baasha and Asa, the latter won Ben-Hadad to his cause by sending him treasures from the Temple and the royal palace. Ben-Hadad invaded the kingdom of Israel, conquering *Ijon, *Dan, *Abel-Beth-Maacah, the region of Chinneroth, and all the land of Naphtali (1 Kings 15:20). (The Ben-Hadad who set up the votive stele, found in the vicinity of Aleppo, which was dedicated to the Tyrian god Melqart (COS II, 152–53) is probably not identical with Ben-Hadad I the son of Tabrimmon. This other Ben-Hadad seems to have ruled another Aramean kingdom, perhaps Arpad.)

BEN-HADAD II. Scholars (see bibliography in Pitard, *ABD* I, 665) have debated the identity of the Ben-Hadad referred to in 1 Kings 20–22 through 11 Kings 8. In 1 Kings 20 and 22, chapters which raise numerous critical problems, the royal protagonists in the battles between Aram-Damascus and Israel are *Ahab and Ben-Hadad. Chapters 5–8 of 11 Kings deal with relations between Ben-Hadad and Ahab's sons, Ahaziah and Joram. W. Albright identified the Aramean king as Ben-Hadad the son of Tabrimmon (= Ben-Hadad I) and assigned him a reign of 40 years. Others viewed the Aramean king of these chapters as a successor of Ben-Hadad son of Tabrimmon, to be designated Ben-Hadad II. That designation would make Hazael's son and successor (see below) Ben-Hadad III. However we designate him, this Ben-Hadad is described as a dominant ruler who could muster 32 vassals against Israel (1 Kings 20:1). On three occasions he waged war against Ahab, succeeding in the first conflict in besieging Samaria (20:2ff.). Ahab resolved to resist when the demands of Ben-Hadad became excessively harsh, and managed to defeat him. Later

Ben-Hadad again opened hostilities against Ahab, but was defeated a second time at *Aphek and taken prisoner (1 Kings 20:26 ff.). By the terms of the friendly alliance that he subsequently concluded with Israel, Ben-Hadad undertook to return the Israelite towns under his dominion and to put bazaars in Damascus at the disposal of the merchants of Israel. After three years of peace, Ahab, with the assistance of *Jehoshaphat, the king of Judah, embarked on a new war against Aram in Ramoth-Gilead, during which he met his death (1 Kings 22, where the king of Aram is referred to only by his title). It seems that between the second and the last war against Ahab, Ben-Hadad (who is referred to in Assyrian inscriptions as Adad-Idri, i.e., Hadadezer, perhaps his personal name as distinct from his throne name; but cf. Pitard in Bibliography) led an alliance consisting of the kings of Syria, Phoenicia, and Palestine (including Ahab) in a war against Shalmaneser III, king of Assyria, near *Qarqar in 853 B.C.E. After the war of Qarqar the coalition split up and the last war with Israel took place. Afterward Ben-Hadad resumed the leadership in an alliance against Assyria and thus succeeded in temporarily removing the Assyrian threat (848, 845 B.C.E.). Shortly after *Jehu's accession to the throne of Israel, Ben-Hadad was assassinated on his sickbed by Hazael (II Kings 8:15), who seized the throne of Aram (II Kings 8:7–15; cf. 1 Kings 19:15). The biblical depiction of Hazael as a usurper appears to be reflected in an Assyrian inscription of Shalmaneser III (858–24 B.C.E.) that describes him as “son of a nobody.” (See Cogan and Tadmor in Bibliography.)

BEN-HADAD III. Ben-Hadad III, son of Hazael, was the contemporary of *Jehoahaz and *Joash, kings of Israel (814–800 and 800–784 B.C.E.). During the early years of his reign the greater part of the kingdom of Israel was occupied by Aram. It is also possible that Ben-Hadad added to the conquests of his father because he headed an alliance of north Syrian and neo-Hittite kingdoms (e.g., *Que, *Sam'al) that attacked Zakkur, king of Hamath and Luath, and besieged Hadrach, though without success (COS II, 155). In 806–805, Adad-Nirari III, king of Assyria (810–782), renewed the war against Aram, besieged Damascus in 802, and imposed a heavy tribute on Ben-Hadad (whom the Assyrian inscriptions refer to by the Aramean title of *Mari*, “Lord”). It was this setback of Aram that enabled Israel to throw off the Aramean yoke. In the reign of this Ben-Hadad, Damascus lost its dominant position in Syria, and for a generation after, the kings of Israel and Judah were the predominant force there.

[Isaiah Gafni]

H. Winckler and E. Meyer (followed in the 1940s by W.F. Albright) believe that there were only two kings of Aram by the name of Ben-Hadad, the Aramean contemporary of Baasha being identical with that of Ahab.

Moreover, while the chronology of the books of Kings has been followed above, H.L. Ginsberg has suggested that, though there are bound to be differences as to just what adjustments need to be made, the distribution of the incidents during the

Aramean wars among the various kings of Israel cannot be correct in all respects. If the Aramean incident of 1 Kings 20 took place under the dynasty of Jehu, the above Ben-Hadad II is identical not with the above Ben-Hadad I but with the above Ben-Hadad III, and Ahab's Aramean ally had only the one name Adad-Idri / Hadadezer, for there is no difficulty in assuming that this legend in II Kings 8:15 is in error regarding the name of Hazael's predecessor. Also, the elaborate story in 1 Kings 20:1–35 about the anonymous king of Israel who dies in his chariot of an arrow wound sustained in a battle with the Arameans, in which he was assisted by King Jehoshaphat of Judah, at Ramoth-Gilead, bears a strong resemblance to the palpably historical account in II Kings 8:25–9:24. This tells of how King Jehoram of Israel, while recuperating (at Jezreel) from wounds sustained in a battle with the Arameans, in which he was assisted by King Ahaziah of Judah, at Ramoth-Gilead, is shot dead in his chariot with an arrow from the bow of Jehu, who follows him (to Jezreel) from the camp at Ramoth-Gilead. Thus one wonders if the suspicion that the former is a legendary parallel to the latter and has nothing to do with Ahab has not been voiced before. (The incident in the former, with the various prophets, probably contains a core of history, but also pertains to Jehoram and Ahaziah, not to “Ahab” and Jehoshaphat.)

BEN-HAIM (Frankenburger), PAUL (1897–1984), Israeli composer, one of the leading founders of Israeli art music. Ben-Haim was born in Munich. His father, Heinrich, was a respected professor of law. In 1920 Ben-Haim graduated from the Munich Academy of Music as conductor, composer, and pianist, and then was assistant to Bruno *Walter at the Munich Opera. In 1924 he became Kapellmeister of the Augsburg Opera. While in Germany he composed about 80 lieder as well as chamber and orchestral works (e.g., *Concerto Grosso*, 1931) which were very well received. In 1929 he met the Jewish composer Heinrich Schalit (1886–1976), who encouraged him to write a series of Jewish-oriented choral works to biblical verses. In October 1933 he settled in Tel Aviv and changed his name to Ben-Haim. He dedicated himself to composition and to teaching at the Jerusalem Academy of Music and at the Music Teachers Training College in Tel Aviv. Some of Israel's best composers were his private composition students. As a highly prolific and inspired composer, Ben-Haim found the way to retain his cherished European heritage, with his admiration for J.S. Bach (as in his *Metamorphosis on a Bach*

Chorale) and special liking for Debussy and Ravel (*Sonatina*) and with his commitment to the ideology of the vision of the East (his striking *Sonata à tré* for mandolin, guitar, and harp-sichord). From 1939 until 1955 he collaborated with the unique Yemenite singer Bracha *Zephira as pianist and arranger of 35 of her traditional songs, most of which he quoted in his chamber and orchestral works. His music was well received and frequently performed worldwide by great conductors and soloists, among them Leonard *Bernstein, Yehudi *Menuhin, Jascha *Heifetz, and Menahem *Pressler. Ben-Haim's orchestral works include two symphonies (1940 and 1945); concertos for piano (1949), violin (1960), and cello (1962); the symphonic movements *Sweet Psalmist of Israel* (1953), which were awarded the Israel Prize in 1957; *Liturgical Cantata* (1950); the cantatas *Vision of a Prophet* (1959), *Three Psalms* (1952), and *Kabbalat Shabbat* (1967). Ben-Haim founded the genre of the Hebrew Lieder to poems by prominent poets such as *Bialik, Sh. *Shalom, Lea *Goldberg, and *Raḥel. He composed a *String Quartet*, a *Clarinet Quintet*, a *Piano Trio (Variations on a Hebrew Tune)*, a *Piano Sonata* (1953) and several suites for piano, and a *Solo Violin Sonata*.

BEN-HAIM, YIGAL (1935–), *ḥazzan*. Born in Jerusalem, Ben-Haim was the 11th generation in a family of cantors originally from Bukhara. His early cantorial education was from his father. As a child he sang in the Jerusalem Taḥkemoni school under the direction of Cantor Mendel Tirnover and Zvi *Talmon. He sang in the Mizmor Shir choir established by Kol Yisrael. When 18 he debuted as the cantor of the Baba Tamma Synagogue in the Jerusalem Bukharan neighborhood. He studied cantorial theory and **maqamat*. He led services and appeared in concerts in Israel, the United States, South America, Europe, and the Far East. Ben-Haim sings on cassettes presenting selections from the prayers as rendered by the Oriental Jewish communities. He was an instructor of Sephardi cantorial skills in the Jerusalem Renanot cantorial school and Bat Yam school, thus continuing his longstanding activity of shaping cantors. In a CD called *Avot u-Banim* issued recently he and family members perform cantorial pieces

[Akiva Zimmerman]

BEN HA-MELEKH VE-HA-NAZIR (Heb. בֶּן הַמֶּלֶךְ וְהַנְּזִיר “The Prince and the Hermit”), Hebrew version by Abraham b. Samuel ha-Levi *Ibn Ḥasdai of an original Hindu tale about a prince who eventually became an ascetic. Balauhar and Budasaph, the names of the heroes of the tale in the old Pahlavi version, became Barlaam and Joasaph in the Greek version and Barlaam and Josaphat in the oldest Latin version (1048) and in later European translations. The Hebrew work is based on an Arabic version, but whether it is a translation or an adaptation cannot be determined until the Arabic text

is established. *Ben ha-Melekh ve-ha-Nazir* is the account of a prince, Joasaph, sent by his father to a luxurious palace on an island in an effort to avert the fulfillment of a prophecy that he would become a Christian monk. When the prince discovers the reason for his confinement, he implores his father to allow him to return to the mainland. The king yields, and the son soon becomes aware of evil in the world, with consequent unrest in his heart. A monk, Barlaam, who comes disguised as a merchant (monks being prohibited in the land) gains access to the prince and gradually teaches him to realize the vanity of this world and the advantages of the ascetic life. Unlike the Greek and the Arabic tales, the Hebrew does not reintroduce the father, nor does it relate his efforts to undo the effects of the monk's instruction. Instead, it continues the discussion on philosophic and theological questions until the monk is obliged to leave and the prince feels bereft and lonely. The course of transmission of the original tale until it evolved into a world classic is complicated, with many problems still unresolved. In the European texts, the prince adopts the Christian faith of his preceptor. The Hindu original is obviously modeled after the life of Buddha. The Hebrew version is attractively written, and the prose narrative is interspersed with versified aphorisms. There is a Catalan translation by T. Calders (1987).

BEN ḤAYYIM (Goldmann), ZE'EV (1907–), Hebrew scholar and linguist. Born in Mościska, Galicia, he emigrated to Palestine in 1931 and in 1934 became secretary of the Va'ad ha-Lashon. In 1948 he was appointed lecturer (1955, professor) of Hebrew language at the Hebrew University and in 1961 was elected vice president of the *Academy of the Hebrew Language in Jerusalem and in December 1973 was appointed its president, succeeding the late Prof. Naphtali *Tur-Sinai.

Ben Ḥayyim specialized in the Samaritan Hebrew dialect, literature, etc., on which he published *Ivrit ve-Aramit Nusaḥ Shomeron* (“The Literary and Oral Tradition of Hebrew and Aramaic among the Samaritans,” 5 vols., 1957–77; volume 5 was translated and slightly updated as *A Grammar of Samaritan Hebrew*, 2000) and *Tevat Marka – Asuppat Midrashim Shomroniyyim*, 1988. In these books, he discusses the evolution and historical development of the Samaritan languages (Hebrew and Aramaic), starting from their earliest literary sources through the linguistic tradition preserved in the modern idioms. They contributed not only to the recognition of these particular dialects, but also to the clarification of important aspects of the history of the Hebrew and Aramaic languages and their development.

In his pamphlet *Lashon Attikah bi-Mezi'ut Hadasha* ("Ancient Language in a New Reality," 1953) he deals with problems of the growth and development of modern Hebrew as the living language in the State of Israel. This article was republished along with most of his articles on modern Hebrew during the long period of his activity at the Academy in *Be-Milhamtah shel Lashon*, 1992. He was the editor of the historical dictionary of the Hebrew language – one of the major projects of the Academy. He also edited Hebrew dictionaries containing modern Hebrew terms in the fields of mathematics, anatomy, technology, etc., and contributed articles to leading linguistic journals on problems of Hebrew grammar and on the systems of Hebrew grammarians. Ben Ḥayyim was the *Encyclopaedia Judaica's* divisional editor for Hebrew and Semitic languages. He received the Israel Prize in 1964. A full list of Ben Ḥayyim's works and scientific publications appeared in *Leshonenu* (vol. 32, Tishri–Tevet 1967/68), the publication of the Academy, edited by Ben Ḥayyim from 1955 to 1965; updated in *Leshonenu* 65 (2003), 201–26 with an assessment of his scientific achievements, *ibid.*, p. 227–38.

BEN HE HE (c. first century), *tanna*. In *Avot* (5, end) appears a maxim in the name of Ben He He: "According to the labor is the reward." The same maxim is quoted as a popular saying in the name of Hillel the Elder (ARN¹ 12:28; ARN² 27:28), while a similar version occurs in Samaritan literature (see S. Liberman, *Greek in Jewish Palestine* (1942), 160, p. 113). The Talmud (Ḥag. 9b), implying that he may have been a pupil of Hillel, contains questions addressed to Hillel by Bar He He (see *Seder ha-Dorot*, s.v. *Ben Bag Bag*; cf., however, Liberman, *loc. cit.*). His name is said to have originated from his having been "a proselyte, i.e., the son [*ben*] of Abraham and Sarah, to each of whose names the letter ה [*he*] was added" (cf. Gen. 17:5, 15; Tos. to Hag. 9b; *Maḥzor Vitry*, ed. Hurwitz (1923), 563–4). Bacher (Tann, 1 (1903²), 8–9) suggests that he was converted under the influence of Hillel. He is also identified with *Ben Bag Bag (Tos. and *Maḥzor Vitry*, *loc. cit.*),

BEN-HORIN (Zelig Bidner), ELIAHU (1902–1966), Zionist activist, journalist and writer. Ben-Horin was born in Balta, Ukraine and studied at the University of Odessa where he was chairman of the Zionist Students' Union. He was active in Zionist and self-defense clandestine organizations during the early years of the Soviet regime. Immigrating to Palestine in 1921, he joined the Histadrut and was among the founders of the collective settlement Ha-Sharon (later to become Kibbutz Yifat). He broke away from the Labor movement in 1928 to join the *Revisionist party and served on the editorial boards of the Revisionist press (*Do'ar ha-Yom* and *Yarden*). In 1931 he left the Haganah, and joined the *Irgun Zeva'i Le'ummi (IZL), in which he served as *Jabotinsky's personal representative on its Supervisory Board. He participated in collecting funds and in the purchase of arms for the organization. He was a Revi-

sionist delegate to the 17th Zionist Congress (1931), and when the New Zionist Organization (NZO) was founded in 1935, he was elected to its presidency. During 1944–50 he cooperated with ex-President Herbert Hoover in formulating the "Hoover Plan" for settling Palestinian Arabs in Iraq. He also served as advisor on Middle Eastern affairs to the American Zionist Emergency Council. His works include *The Red Army* (1942) and *The Middle East: Crossroads of History* (1943).

BEN-HORIN, MEIR (1918–1988), U.S. Jewish educator. Born in Koenigsberg, East Prussia, Ben-Horin was assistant professor of education at the Boston Hebrew Teachers College from 1951 to 1957. From 1957, he headed the department of education of Dropsie College (now *Dropsie University) in Philadelphia, with the rank of professor from 1962. Ben-Horin wrote *Max Nordau: Philosopher of Human Solidarity* (1956) and *Common Faith – Uncommon People* (1970). Together with Judah *Pilch he coedited *Judaism and the Jewish School* (1966). In applying to Jewish education the Reconstructionist view of Judaism as a religious civilization, Ben-Horin follows the educational and philosophical thinking of Dewey, M.M. Kaplan, and Theodore Brameld.

[Leon H. Spotts]

BENICHO, PAUL (1908–2001), French literary critic and historian of literature. Born in Tlemcen to a Jewish Algerian family, Benichou, was soon recognized as a brilliant student and sent to study in Oran and then Paris' prestigious Lycée Louis-le-Grand high school. While teaching literature in Paris, he began the research and the writing on his first major essay on French classicism, *Morales du Grand Siècle*, but was barred from teaching in 1940 as a result of the antisemitic legislation of the Vichy regime, which stripped him, as an Algerian Jew, of French citizenship and forced him to flee to Argentina, where he pursued his teaching career. *Morales du Grand Siècle* was eventually published by Gallimard in 1948 and Benichou came back to France in 1949. During his Argentinean years, Benichou, unable to access French archives, began a critical study of the romancero, whose brilliant originality was highly praised, and became acquainted with writer Jorge Luis Borges, whom he would later translate into French. In five independent but interrelated essays tracing back the origins of French romanticism (*Le Sacre de l'écrivain*, 1973; *Le Temps des prophètes*, 1977; *Les Mages romantiques*, 1988; *L'École du désenchantement*, 1992; *Selon Mallarmé*, 1995), Benichou tried to account for the pessimism of most major 19th century French writers, as opposed to the general euphoria of the time. This series of essays, which Benichou began to publish only at the age of 65, renewed the vision of French romanticism and its link to classicism, and taken together they provide a panorama of French literature from 1750 to 1900, as well as a milestone in the general theory of literature. Benichou characteristically

linked literary theory to the history of ideas, thus providing insights on the relation of the writer to contemporary society whose far-reaching implications earned him recognition as one of the major scholars of the 20th century.

BENIDER, Moroccan family. **ABRAHAM BENIDER** (first half of 18th century), a native of Tetuan, later a resident of Gibraltar and Tangiers, was chandler to the British fleet and official interpreter. His son **JACOB**, born in Gibraltar, served as interpreter in the British consulates in Tetuan, Tangiers, Salé, Mogador, Safi, and Agadir. In 1768 he was vice consul in Salé. In 1772 the sultan of Morocco sent him as his ambassador to London on a special mission. However, Benider was not successful in his mission. Apparently he did not return to Gibraltar or Morocco.

[David Corcos]

BENIOFF, HUGO (1899–1968), U.S. seismologist. Born in Los Angeles, Benioff was assistant at the Mount Wilson observatory from 1917 to 1924. In 1923–24, he carried out seismological research at the Carnegie Institute in Washington. He then joined the staff of the California Institute of Technology in the seismological research department, where he was professor from 1950. He designed instruments for measuring movements of the earth's crust on land and in the sea. Benioff applied his knowledge as consultant to building firms to help plan against earthquake destruction and to the U.S. Navy submarine section. He was adviser to the geophysical department of the U.S. Air Force.

BENISCH, ABRAHAM (1814–1878), author, scholar, and precursor of Zionism. Benisch was born in Drossau, Bohemia. As a student of medicine at the University of Prague he joined Moritz *Steinschneider, who founded a student organization for the purpose of “reestablishing Jewish independence in Erez Israel.” Continuing his studies in Vienna in 1838, Benisch, and Albert Loewy, established a secret society, *Die Einheit*, whose purpose was to initiate organized Jewish immigration to Erez Israel. With this aim in mind he talked to Adolphe *Crémieux and, in 1841, proceeded to London with a letter of recommendation from the House of Rothschild to influential Jewish circles. Receiving no tangible support, Benisch nevertheless continued to promote his views in the periodical *The Voice of Jacob* (1841–48), and in 1853 started the *Hebrew Observer* as a rival to the then 12-year-old *Jewish Chronicle*. In 1854 the paper was merged with the *Jewish Chronicle*, which for the next 13 years, and again from 1875 to 1878, was edited by Benisch, under the title *Jewish Chronicle and Hebrew Observer*. During these years Benisch utilized every opportunity, including the *Damascus Affair and the Crimean War, to raise the question of Jewish revival in Erez Israel. He collaborated with Charles

*Netter in founding the *Mikveh Israel agricultural school. He was one of the founders and first directors of the *Anglo-Jewish Association and carried on an unceasing campaign for the rights of the Jews in Russia and the Balkan countries. In his articles before and during the Congress of Berlin (1878), Benisch stressed the importance of Jewish settlement of Erez Israel as integral to the solution of Near Eastern problems. Benisch published a Hebrew commentary on the Book of Ezekiel (1836), and wrote *Two Lectures on the Life and Writings of Maimonides* (1847). He translated the Bible into English (1851), and in the same year also translated into English the *Travels* of *Pethahiah b. Jacob of Regensburg. He wrote a Hebrew grammar and a scripture manual in 1852, entitled *Bikkurei ha-Limmud*, and *An Essay on Bishop Colenso's Criticism of the Pentateuch and Joshua* (1863). A collection of his lectures entitled *Judaism Surveyed* appeared in 1874.

[Nathan Michael Gelber]

BEN-ISRAEL, RUTH (1931–), Israeli legal scholar. Born in Port Said, Egypt, Ben-Israel received her LL.B. and LL.M., magna cum laude, and a Ph.D. degree from the Hebrew University of Jerusalem. She taught labor law, civil procedure, social security, and occupational equality at Tel Aviv University from 1975 and served as dean of the Law Faculty in 1990–91. Her extensive publications include nine books, one of which is *Israel Labor Law* (Heb., 1989), and many articles. She was a member of many international organizations and edited the *Israel Labor Law Year Book* in 1998–2000. She was awarded the Bar Niv Prize in Labor Law (1988), the Minkoff Prize for Excellence in Law (2000), the Israel Prize in law (2001), and the Israel Bar Association Prize for Women in Law (2001). She served as special legal adviser on labor legislation to the Labor and Welfare Committee of the Knesset (1985–92); public representative on the National Labor Court (1988–2000); special legal adviser to the minister of labor and welfare (1993–95); and chaired numerous public and government committees on women's rights and labor laws.

[Leon Fine (2nd ed.)]

BENJACOB, ISAAC (1801–1863), first modern Hebrew bibliographer. He was born near Vilna and spent most of his life in that city. After publishing original works and republishing several medieval writers, including *Hovot ha-Levavot* by *Bahya ibn Paquda (with a commentary of his own), Benjacob published, with Abraham Dov *Lebensohn (Adam ha-Kohen), a 17-volume edition of the Hebrew Bible (1848–53). It included Rashi's commentary, Mendelssohn's German translation (in Hebrew script), a new commentary by Lebensohn as well as Benjacob's own *Mikra'ei Kodesh*, an abridged version of *Tik-*

kun Soferim (“the scribes’ emendations to the biblical text”). This edition helped spread Haskalah among Russian Jewry and was utilized not only for the study of Scriptures, but also for learning German. Benjacob then began his magnum opus of 20 years’ duration, *Ozar ha-Sefarim* (Vilna, 1880; repr. New York, 1965), one of the greatest bibliographic achievements in Hebrew literature. The work lists approximately 8,480 manuscripts and approximately 6,500 books published up to 1863, with a description of their contents. Benjacob also wrote a collection of epigrams, poems, and literary essays, *Mikhtamim ve-Shirim Shonim* (1842). His son JACOB (1858–1926) was a merchant, banker, and Zionist. After first publishing his father’s work *Ozar ha-Sefarim* with the assistance of M. *Steinschneider (1877–80), he began expanding it, using new bibliographical methods but retaining its original chronological limit (1863). His son-in-law Moses *Schorr reported that the new edition contained 60,000 entries and comprised 12 volumes. Both Benjacob and Schorr tried unsuccessfully to have it published. The manuscript was lost during the Holocaust in Poland.

BIBLIOGRAPHY: Benjacob, *Ozar*, xxi–xxvii; B. Nathanson, *Sefer ha-Zikhorot* (1876), 112–5; Habermann, in: *Yad la-Kore*, 3 (1952/53), 1–6; Schorr, in: *YIVO Bleter*, 8 (1935), 138–46; idem, in: *Soncino Blaetter* (1927), 38–40; Waxman, *Literature*, index.

[Benzion Dinur (Dinaburg)]

BENJAMIN (Heb. בְּנֵימִינִי), youngest son of *Jacob by *Rachel (Gen. 35:16–18), and the eponym of the tribe of Benjamin. Benjamin was the only one of Jacob’s sons to be born in Canaan. Little is told of his life and personality. Our preserved texts attribute no words to him, though he is frequently mentioned in the stories about Jacob, because he was the youngest son and born of the beloved wife Rachel and also because he was, as *Joseph’s only full brother, closest to him. Jacob did not send Benjamin to Egypt with the other brothers to procure food during the famine, but when they applied to Joseph for rations he insisted that Benjamin should be sent for. Much against Jacob’s will, Benjamin eventually accompanied his brothers to Egypt after Judah had undertaken to be responsible for him. When Benjamin was presented to him, Joseph was so overcome with feeling that he went into a private room and wept there. He invited his brothers to dine and favored Benjamin with extra portions. Joseph, however, put his brothers’ integrity to the test and did not make himself known to them. He instructed his steward to conceal a silver goblet in Benjamin’s bag and later to overtake the brothers on their journey home and accuse him of stealing it. The brothers interceded for Benjamin, and Judah declared himself ready to sacrifice his liberty in exchange for Benjamin’s release to spare their father’s grief if he failed to return. Then Joseph finally disclosed his identity to them, and sent an invitation to his father to settle in Goshen with his family (Gen. 42–45).

Rachel had named her son Ben-Oni which could mean either “son of my vigor” or “son of my suffering,” though the second meaning better fits the context as her labor was hard

Territory of the tribe of Benjamin.

and she died in childbirth. The father, however, named the baby Benjamin, which literally means “son of the right hand,” and can be understood as having an auspicious sense. It could also mean “son of the south” (cf. Ps. 89:13), either because this son was the only one born in the south, that is in Canaan (all his brothers were born in Aram-Naharaim), or because the legacy of Benjamin was south (i.e., to the right) of that of his brother Joseph. A parallel to the name Benjamin used in the sense of “southerners” is to be found in the *Mari documents referring to West Semitic tribes called Dumu. Meš (= *binī-*) *Yamina*, meaning “southerners,” literally, “sons of the right,” in contrast to another group of tribes called Dumu. Meš (= *binī-*) *Simall*, “northerners,” literally, sons of the left.” There is a linguistic connection between the Hebrew term “Benjamin” and the Bini-Yamina tribes of the Mari documents (18th century B.C.E.) but no apparent historical connection.

The Genealogies

The Bible contains genealogical lists of the tribe of Benjamin which in part do not correspond with one another either in respect of the number of clans or their names (Gen. 46:21; Num. 26:38–41; 1 Chron. 7:6–12; 8:1–40; 9:35–44). The variations arise from the fact that some are fragmentary and that the lists may reflect differing traditions about the lineage of the tribe as well as periodic changes in its composition and in territorial boundaries. Beriah, for example, appears in the genealogical lists of Benjamin (1 Chron. 8:13–16), Ephraim (*ibid.* 7:21–23), and Asher (Gen. 46:17; Num. 26:44–45). If in each case the reference is to the same clan then this reflects a movement of Beriah from south to north or the reverse. Huppim and Shuppim are included in the genealogical lists of the tribes of both Benjamin (Gen. 46:21, where the latter is Muppim; Num. 26:39; 1 Chron. 7:12) and Manasseh (1 Chron. 7:15). In view of the close ties between Benjamin and the east bank of the Jordan (see below) it seems that the duplication reflects the migration of one or two clans from Benjamin to Manasseh or the reverse. 1 Chronicles 8:29–40 and 9:35–44 preserve two parallel lists of the family of Saul, which place “the father of Gibeon” in the genealogical records of Benjamin. The city of Gibeon was inhabited by the Gibeonite descendants of the Hivites and included in the territory of Benjamin, and the relationship of Saul to Gibeon in these lists indicates the intermingling of the Gibeonite population with the Benjaminites.

However, some scholars believe that “Gibeon” is a scribal error for “Gibeah,” the city of Saul (1 Sam. 11:4).

The Tribal Territory

The territory of Benjamin, which extended from the hill country of Ephraim to the hill country of Judah, is described in great detail in Joshua 18:11–28. The description of its southern border fits that of the northern border of Judah (Josh. 15:5–11), while the picture of its northern border accords with that of the southern border of the House of Joseph (Josh. 16:1–3, 5). The northern boundary began at the Jordan and continued in an almost straight line westward to Jericho, which it bypassed to the north; it then ascended the mountains in a west-northwesterly direction, encompassing Beth-El, turning south and continuing to the southwest, and circumventing lower Beth-Horon on the south. The western border of Benjamin is unclear; however, from the description of the territory of Dan, it would seem that it did not reach the sea, but ended in the vicinity of the valley of Ajalon, with the area of lower Beth-Horon and Kiriath-Jearim marking its northern and southern extremities (cf. Josh. 18:28 with 15:60). The southern border ran “from the outskirts of Kiriath-Jearim” (Josh. 18:15), eastward via the “spring of the Waters of Nephtoah” (Lifta) to Jerusalem, which was included in the territory of Benjamin; for the border passed Jerusalem on the south and descended east by way of En-Rogel, En-Shemesh, “the Stone of Bohan son of Reuben,” and Beth-Hoglah to the Dead Sea, near where the Jordan enters it. The eastern border was the Jordan.

The list of Benjaminite towns (Josh. 18:21–28) does not accord with the northern border of the tribe as described in Joshua 18:12–13 since Beth-El, Zemaraim, Ophrah, and Mizpeh are elsewhere included in the territory of Ephraim (cf. Josh. 16; 11 Chron. 13:4, 19). Possibly the list of cities and the list of border points are not from the same period and reflect fluctuating territorial and historical situations. It is generally believed that the list of border points antedates the period of the monarchy, whereas the list of cities is of later date. A westward expansion of the Benjaminites – possibly as early as the end of the period of Judges, but perhaps taking place during the monarchy – can be inferred from the list of Benjaminite towns in Nehemiah 11:31–35. Non-Israelite enclaves existed within the territory of Benjamin; the Jebusites dwelt in Jerusalem (Josh. 18:28), and there were four cities of the Hivites in the western portion. Echoes of the conflicts between the Benjaminites and the indigenous population are discernible in 11 Samuel 21:1–2 and possibly in 1 Chronicles 8:6–8.

The History of the Tribe

Despite the fact that the territory of Benjamin was smaller than that of most of the other tribes and although Benjamin was regarded as the youngest tribe (see the *Tribes of Israel), it played an important part in the history of the unification of the tribes of Israel during the period of the Judges and the beginning of the monarchy. One of the first judges who arose to save Israel was *Ehud son of Gera, of the tribe of Benja-

min (Judg. 3:15), and the first king to rule Israel was *Saul the Benjaminite (1 Sam. 9:1). Benjamin's importance was due to the strategic position of its territory, through which the divide (watershed) of the central hill country passed. The territory's main north-south road ran along the divide; a main highway connecting Transjordan with the west also passed through Benjamin's territory. It was this road that the Israelites used after they crossed the Jordan. When *Egdon king of Moab extended the boundaries of his rule westward, the oppressive effects were felt mainly by the tribe of Benjamin, since the corridor connecting regions on the banks of the Jordan was situated in its territory. Therefore it was not just by chance that the judge who saved Israel from Moab came from the tribe of Benjamin (Judg. 3:12ff). The close ties between the Benjaminites and the people of Jabesh-Gilead (Judg. 20–21; 1 Sam. 11; 31:11–13; Obad. 19) are also explained in part by the Benjaminites' easy access to Transjordan. In the days of *Deborah the Benjaminites joined in the war against Jabin and Sisera (Judg. 5:14). After forcing the tribe of Dan to move northward, Philistine pressure focused upon the territory of the Benjaminites because of the strategic importance of the area. The *Philistines dominated the entire central part of the country and placed a garrison in Gibeath-Benjamin (1 Sam. 10:5; 13:3). Opposition to Philistine rule was thus centered in Benjamin, and so it is hardly surprising that the first king, Saul, whose primary task it was to save Israel from the Philistines (cf. 1 Sam. 9:16), was a Benjaminite. This is also in keeping with Benjamin's reputation for military prowess, as expressed in Jacob's blessing: “Benjamin is a ravenous wolf; in the morning he consumes the foe, and in the evening he divides the spoil” (Gen. 49:27).

A count of Benjaminites made before the intertribal war that followed the affair of the concubine in Gibeah (Judg. 19–21) revealed “twenty six thousand men that drew the sword... Among all these were seven hundred picked men who were left-handed; every one could sling a stone at a hair and not miss” (Judg. 20:15–16; cf. 1 Chron. 8:40; 12:1–2). According to the account, Benjamin was defeated and its civilian population massacred. The survival of the tribe was only insured by seizure as wives for the 600 remaining warriors of the unmarried women of Jabesh-Gilead and Shiloh (Judg. 21). The kingdom of Judah established by David did not include Benjamin (see *Ish-Bosheth), and when Israel also chose David as its king, Benjamin continued to belong to “the House of Joseph” (11 Sam. 19:17–21). The tribe retained some rancor against David as the supplanter of the House of Saul, as is shown by the episode of *Shimei son of Gera and the revolt of *Sheba son of Bichri (11 Sam. 16:5–13; 20:1–2). Under Solomon, too, the territory of Benjamin constituted one of the administrative divisions of Israel (1 Kings 4:18). After Solomon's death and the revolt of Israel, the Davidides tried to regain as much of Israel as they could, and according to 11 Chronicles 13 for a time pushed the northern limit of their dominion well beyond Benjamin. Ultimately, however, they had to be content with the Benjaminite watershed as a

buffer between Israel and their place of residence, Jerusalem (1 Kings 15:22).

[Bustanay Oded]

In the Aggadah

Benjamin, according to one opinion, was the image of his mother, Rachel (Tanḥ. B. 1:197), and according to another resembled his father (Tanḥ., Mi-Kez 10). He alone of all the brothers took no part in the sale of Joseph; as a result he was privileged to have the Temple built on the territory of his tribe (Gen. R. 99:1). Another reason is that he was not yet born when his father and brothers prostrated themselves before Esau (Targ. Sheni to Esther 3:3). Although he knew of Joseph as having been sold into slavery, he never revealed it to his father (Mid. Ps. 15:6). The four additional portions given by Joseph to Benjamin (Gen. 43:34) consisted of one each from Joseph, Asenath, and their sons, Ephraim and Manasseh (Gen. R. 92:5). After Joseph's silver cup was found in Benjamin's sack, his brothers struck Benjamin on the shoulder saying, "O thief and son of a thief, thou hast brought the same shame upon us that thy mother brought upon our father when she stole the teraphim that were her father's" (Tanḥ. B. 1:198). Jacob's death-bed blessing to Benjamin contained the prophecy that his tribe would provide Israel with its first and its last ruler, both Saul and Esther being of the tribe of Benjamin (Gen. R. 99:3). He was untainted by sin (Shab. 55b), and when he died his corpse was not exposed to the ravages of worms (BB 17a).

In Islam

Though Muhammad does not mention the name Benjamin in the Sura of Yūsuf (Sura 12, verse 69ff.), there is no doubt concerning the identity of the brother whom Joseph wishes to bring to him in Egypt. The Koran continues with the biblical account (cf. Gen. 42–43), according to the version derived from the *aggadah*. Not only Reuben but all the brothers guarantee Jacob that they will bring Benjamin back (sura 12, 66; cf. Tanḥ. *Mi-Kez*, 8). There are many accounts in Muslim legends of the threats made by Benjamin's brothers when Joseph wanted to imprison him (cf. Gen. 44:17).

BENJAMIN II (originally **Israel Joseph Benjamin**; 1818–1864), Romanian explorer and writer born in Falticeni, Moldavia. He engaged first in the lumber trade (for this reason he was nicknamed *Christigiu* or "Lumberjack") but after some initial success, he lost his fortune at the age of 25. Influenced

by his failure and by the romantic trends of the time, he decided to emulate the medieval traveler Benjamin of Tudela. He styled himself Benjamin II and, in 1845, took to the road in search of the remnants of the Ten Lost Tribes. He traveled first to Egypt, from there through Erez Israel and Syria, and then to Armenia, Iraq, Kurdistan, Persia, India, and China. He came back by way of Afghanistan to Vienna (1851) and from there went on to Italy and to Tripoli, Tunisia, Algeria, and Morocco. Wherever his travels took him, he made a point of assembling information concerning the Jewish settlement in that place – the number of Jews of that community, how they earned their livelihood, their customs, and folklore. Although unscientific, his approach was simple and direct, and earned the praise of scholars like A. von Humboldt and A. Petermann. He described his experiences in a Hebrew travelogue, first published in French under the title *Cinq années de voyage en Orient 1846–1851* (1856; Eng. 1859). The Hebrew edition of the book, *Sefer Mas'ei Yisrael*, as revised by David *Gordon, was published in Lyck in 1859. He published at his own expense in 1863 Nathan Hannover's *Yeven Mezulah* on the 17th-century Chmielnicki massacres in Poland. Over and above his literary endeavors, Benjamin undertook to ease the plight of the Jews of Morocco. He also appealed to Turkey, France, and England in an attempt to ameliorate the condition of the Jews of Kurdistan and Persia. In 1859 Benjamin II began a three-year journey through the United States, describing his travels in *Drei Jahre in Amerika* (1862; republished in English in 1956 by the JPSA). He died in London in poverty while preparing another trip to the Orient.

BENJAMIN, BARUCH BEN ISRAEL (17th century), Jerusalem rabbi. After studying under his father, Baruch proceeded to the yeshivah of Isaac Gaon, where Kabbalah was included in the curriculum. He was a signatory to the regulation of 1646, which exempted rabbinic scholars from taxation (A. Ankawa, in *Kerem Hemed*, 2 (1871), 22b). In 1657 he, together with other Jerusalem kabbalists, endorsed the certificate which declared that Baruch Gad, the Jerusalem messenger to the East, had visited the Ten Lost Tribes. Some of his responsa were published in *Mishpetei Zedek* (1945, nos. 66, 95, 98, 100, 131, 133) of his friend, Samuel *Garmison. While serving as *dayyan* in Jerusalem he wrote a work on divorces (Jerusalem Ms. Heb. 8°199). Toward the end of his life he traveled to Egypt, possibly as an emissary, and he died there.

BENJAMIN, BARUCH BENZION (1904–?), Indian government official. Born in Bombay, of the *Bene-Israel community, Benjamin joined the Indian government service following independence in 1947 and was made deputy chief controller of

imports and exports in 1953. From 1955 until his retirement in 1959 he was an undersecretary in the Indian Ministry of Finance. Active in Jewish affairs, Benjamin was a vice president of the World Council of Synagogues and president of the Delhi Jewish Welfare Association.

BENJAMIN, ERNEST FRANK (1900–1969), British army officer and commander of the *Jewish Brigade in World War II. Born in Toronto, Canada, Benjamin was educated in England at the Royal Military Academy, Woolwich, and at the Staff College, Camberley. He was commissioned in 1919 and served in Turkey, Malaya, and Madagascar. During World War II Benjamin commanded the marine division of the Royal Engineers and later the Combined Training Center for the Middle East and Italy. From 1944 to 1946 he commanded the Jewish Brigade which went into action in north Italy in 1945 as part of the Eighth Army. Brigadier Benjamin later served in Hong Kong and retired in 1950. He was joint honorary treasurer of the Jewish Lads Brigade.

BENJAMIN, ISRAEL (c. 1570–1649), *posek* and kabbalist, who was among the greatest of Egyptian and Jerusalem scholars of his century. According to David *Conforte he was also called “Israel Eliakim.” Benjamin was a disciple of R. Eleazar Monzalavi and his friend Samuel b. *Sid, and corresponded with Jacob Castro of Egypt (*Oholei Ya'akov*, 1738, no. 58). According to Conforte a collection of more than a hundred legal decisions and a book of scriptural exegesis by Benjamin were in the possession of his son Baruch Benjamin in Jerusalem. H.J.D. Azulai also saw a manuscript of his responsa. Abraham Azulai quotes new rulings by Benjamin in his annotations. He was a disciple of the kabbalist *Joseph ibn Tabul in Egypt. In the manuscript *Ozerot Hayyim* by Hayyim *Vital (Ms. Jerusalem 80 370) there are annotations by Benjamin as well as statements of Ibn Tabul which the latter heard from Isaac *Luria. Benjamin taught Kabbalah in Egypt and Jerusalem. His disciples include Meir *Anashehon and Meir *Poppers. They had Benjamin's annotations to other writings of Isaac Luria, as well as a *maḥzor* based on the Kabbalah; these are found in *Beit Mo'ed* in the manuscripts of Solomon b. Benjamin ha-Levi. Hayyim Vital's *Sefer ha-Gilgulim* contains glosses by Benjamin. An immigrant from Carpi who went to Jerusalem in 1625 found manuscripts of Luria in the possession of Benjamin. He served in Jerusalem as *dayyan* and was one of the prominent scholars in the town. In 1623 he signed an agreement not to cause division in the community and in 1625 he signed an agreement to exempt the scholars from taxes. In that year the Jews of Jerusalem suffered from the oppressive rule of Ibn Farruk, and Benjamin signed a circular entitled *Hurvot Yerushalayim* which was handed to emissaries who were sent to the Diaspora with the aim of collecting money for the reconstruction of the community. His signature is also

found in a letter to Fez in 1630. In 1646 he was the head of the Jerusalem rabbis. In 1649 he signed first on the endorsement (**haskamah*) of Joseph *Caro's *Maggid Meisharim* (vol. 2, Venice 1649).

BENJAMIN, JUDAH PHILIP (1811–1884), U.S. lawyer and statesman. Benjamin was undoubtedly the most prominent 19th-century American Jew. He was a noted lawyer, whose services were requested in connection with some of the most significant legal disputes of the time, a powerful politician who was a leader in the cause of Southern rights and on behalf of the short-lived Confederacy.

Born in St. Croix in the West Indies, of British parents, Benjamin was a British subject. His family moved to Charleston, South Carolina, while he was still a boy. He was at Yale University for two years, but studied law privately in New Orleans while earning a meager living as a tutor in English and as a clerk in a business establishment. Deprived of a happy home through an unsuccessful marriage to a non-Jewess, Natalie St. Martin, a high-spirited Creole who left him to live in Paris after their only child was born after ten barren years, he was free to devote himself to law and politics. His legal eminence brought him wealth, and his political activity fame. He was the first professing Jew to be elected to the United States Senate, as a Whig in 1852, and as a Democrat (after the Democratic Party espoused the cause of Southern rights) in 1856. He became a leading member of the school of Southern politicians which favored secession from the Union as the only safeguard for Southern survival and delivered a number of major addresses in the Senate defending slavery. When Louisiana seceded, he withdrew from the Senate, and was immediately called to the cabinet of the newly created Confederate government (March 1861) as attorney general. President Jefferson Davis relied heavily upon Benjamin's companionship and counsel and appointed him to the more important position of secretary of war in September 1861. Benjamin quickly succeeded in antagonizing Davis's high-strung generals with his complacent lawyerly manner and became a convenient scapegoat for a number of military disasters and chronic supply problems, causing him to resign in March 1862. Loyal to Benjamin despite antisemitic attacks, Davis promptly appointed him secretary of state, a position which he held until the collapse of the Confederacy. In this role Benjamin came close to obtaining recognition of and help for the Confederacy from England and France. But the Confederacy's cause was doomed from the first, and after Lee's surrender to Grant (April 1865) Benjamin was the only leading Confederate to choose permanent exile rather than live in the defeated South, convinced that as both a rebel and a Jew he had little future in America. He parted ways with the fleeing president in South Carolina and escaped

to England through Florida and Nassau, and there made for himself a distinguished career as barrister (he was appointed Queen's Counsel), which in many ways outshaded his pre-war American legal career. Ill health forced his retirement from active work in 1882 and he died two years later in Paris where he had finally rejoined his wife and daughter.

Benjamin took no discernible interest in Jewish affairs, although he never denied his origin and was never converted to the Catholic faith of his wife. There is no record of membership on his part in any synagogue, nor did he ever give support to any Jewish cause or organization.

[Bertram Wallace Korn]

BENJÁMIN, LÁSZLÓ (1915–1986), Hungarian poet, born in Budapest. His first poems were published in the left-wing press and in such anthologies of working-class poetry as *Tizenkét költő* ("Twelve Poets," 1940). Benjámín's early poetry was based on the hopelessness preceding World War II and, during and immediately after the war itself, on the class struggle. The collections of this period include *A csillag nem jött fel* ("The Star Did Not Come Forth," 1939), *Betüöntök diadala* ("The Victory of the Typewriters," 1946), and *A teremés után* ("After the Creation," 1948). When the Hungarian Communist government was formed in 1949, Benjámín became one of its chief literary spokesmen. From 1953 his writing changed, and he turned to themes of self-criticism and personal confusion. This later poetry appears in *Éveink múlása* ("The Passing of our Years," 1954), *Egyetlen élet* ("Only During One Lifetime," 1956), and *Ötödik évszak* ("The Fifth Season," 1962).

[Itamar Yaos-Kest]

BENJAMIN, MOSES (first half of the 18th century), rabbi and kabbalist in Baghdad. He was the first of the Baghdad scholars known to have studied much Kabbalah and was an expert in Lurianic Kabbalah. Very little is known about his life; his wife and children died in an epidemic before 1737, and he never fulfilled his desire to immigrate to Jerusalem. He apparently served as rabbi, because he mentions among his writings "some legal rulings." His book *Ma'aseh Rav* (Constantinople, 1736) is a kabbalistic commentary on the sayings of *Rabbah b. Bar Ḥana. In the introduction he mentions the following of his own works: *Matteh Moshe*, a commentary on the masorah as well as an explanation of rabbinic verses and sayings; *Ho'il Moshe*, a homiletical interpretation of the Pentateuch; and a collection of sermons which he preached on Sabbaths and various occasions. His kabbalistic works are *Tefillah le-Moshe* and *Sha'arei Yerushalayim*, completed in 1731 (author's manuscript; Sassoon Library, 771). The lat-

ter contains kabbalistic principles according to the *Zohar and Isaac *Luria. These two books were stolen while en route to the publishers and the author was left with only the first draft.

BENJAMIN, RAPHAEL (1846–1906), U.S. Reform rabbi. Benjamin was born in London, England, received his B.A. degree from the University of London, and was ordained by the chief rabbi of the British Isles. In 1874, he was elected assistant minister and reader of the Melbourne Hebrew Congregation (Bourke Street Synagogue) in Melbourne, Australia as well as master of the Jewish schools of that city. He earned his M.A. from the University of Melbourne. In 1882, he was named rabbi of K.K. Benai Israel (the Mound Street Synagogue) in Cincinnati, Ohio, where he also served as vice president of the Young Men's Hebrew Association. In addition, Benjamin lectured and served as governor and examiner at Hebrew Union College. In 1889, he became rabbi of Congregation Shaarei Shomayim (the Fifteenth Street Temple) in New York. When his congregation merged with the Fifty-Fifth Street Synagogue (Congregation Ahavath Chesed), he ministered at large in New York City, serving as secretary of the Board of Jewish Ministers (later the New York Board of Rabbis) and conducting services at the Hebrew Orphan Asylum. In 1902, he became rabbi of the Keap Street Temple in Brooklyn (Congregation Beth Elohim). Benjamin was also a fellow in the American Association for the Advancement of Science.

BENJAMIN, RICHARD (1938–), U.S. actor and director. Born in New York City, Benjamin attended the New York High School of Performing Arts and then Northwestern University, where he met his actress wife Paula Prentiss; he graduated in 1960. While Prentiss' film career took off immediately, Benjamin focused his attention initially on the stage; his Broadway debut was *Star-Spangled Girl* (1966). Benjamin's first on-screen appearance was opposite Prentiss in the television series *He & She* (1967), while his film turn came with the adaptation of Philip Roth's *Goodbye, Columbus* (1969), which was followed by Mike Nichols' *Catch 22* (1970) and another Roth adaptation, *Portnoy's Complaint* (1972). He was first nominated for the Golden Globe for *The Marriage of a Young Stockbroker* (1971) and won the award for his supporting role as Walter Matthau's nephew in Neil Simon's *The Sunshine Boys* (1975). In 1982, Benjamin turned his attention to directing with *My Favorite Year*, followed by *City Heat* (1984), *The Money Pit* (1986), *My Stepmother is an Alien* (1988), *Mermaids* (1990), and a made-for-television update of Neil Simon's *The Goodbye Girl* (2004).

[Adam Wills (2nd ed.)]

BENJAMIN, WALTER (1892–1940), German philosopher and literary critic. Born in Berlin, Benjamin attended Humboldt, a country educational establishment, where he met the radical school reformer Gustav Wyneken. From 1910 to 1914 Benjamin took an active part in the youth movement influenced by Wyneken and was for some time the students' president at Berlin University. He published his first articles under the pseudonym Ardor in *Der Anfang* edited by Wyneken. In 1915 Benjamin broke off with Wyneken and his movement because of their acceptance of World War I. Benjamin studied philosophy in Freiburg, Berlin, Munich, and Berne. He returned to Germany in 1920 and lived there till 1933. His thesis written to obtain the qualification to teach aesthetics and history of literature at the university in Frankfurt was not accepted. Today, however, this work on the origin of the German drama (Berlin, 1928) is regarded as one of the most important philosophical interpretations of this field. In 1929 Benjamin joined Bertold Brecht (*Versuche ueber Brecht*, 1966), with whose ideas he identified himself to a large extent. Benjamin felt his Jewishness intensely and had for several years toyed with the idea of going to Palestine. When the Nazis came to power he first went to the Balearic Isles and then to Paris. At the outbreak of World War II he was interned as a German citizen, but was released in November 1939. He fled to the south of France and, with a group of refugees, crossed the Spanish border. When the police chief of the border town Port-Bou threatened to send them back to France, Benjamin took his own life.

Between 1914 and 1924, he did not publish much. Then he wrote a long essay, *Goethe's Wahlverwandschaften* (publ. by H. v. Hofmannsthal in *Neue deutsche Beitrage*, 1924–25; in book form 1964), and continued his intensive activity as essayist and literary critic, especially in the *Frankfurter Zeitung*, *Literarische Welt*, and *Die Gesellschaft*. During his lifetime, Benjamin published only two books: a volume of philosophical aphorisms *Einbahnstrasse* (Berlin, 1928), and, during the Nazi era, under the pseudonym Detlev Holz, *Deutsche Menschen, eine Folge von Briefen* (Lucerne, 1936), an annotated collection of 25 letters from 1783–1883, in which he discussed the flowering and the first decadence of German bourgeois culture. The first collection of his writings appeared posthumously in 1955 (*Schriften*, 2 vols., Frankfurt), edited by Theodore Adorno who had always stressed Benjamin's importance as a philosopher. *Illuminationen* (1961; *Illuminations*, 1969), *Angelus Novus* (1966), *Das Kunstwerk im Zeitalter seiner technischen Reproduzierbarkeit* (1963), *Staedtebilder* (1963), and *Zur Kritik der Gewalt* (1965) contain more of his essays, some taken from his literary legacy. G. Scholem and Th. Adorno published a selection of his correspondence (2 vols., 1966).

Benjamin is considered as the most important critic in the German language between the two wars, and his importance is growing. His thought, formed by Kant and the religious-philosophical current, had been metaphysically oriented in the beginning. Later, especially from 1930 on, Benjamin showed an inclination toward Marxism, whose ideas he, how-

ever, interpreted in a highly personal way. Benjamin considered himself as a philosophical commentator of important literary events, stressing especially historical, philosophical, linguistic, and social motives. Intellectually, he was extremely independent, a fact felt in everything he wrote, even in the short book reviews. His concentrated prose makes him difficult to read. He had a strong poetic streak, expressed clearly in his *Berliner Kindheit um Neunzehnhundert* (first published in Frankfurt, 1950). Benjamin was also important as a translator, especially of French literature, which attracted him deeply. He translated from Baudelaire (*Tableaux Parisiens*, 1923), several volumes of Proust (1927–30), and several novels by M. Jouhandeau.

[Gershom Scholem]

It was Gershom *Scholem who quoted the following remark by his friend Walter Benjamin: "Whenever I will find my own philosophy, it will be somehow a philosophy of Judaism" ("Wenn ich einmal meine Philosophie haben werde, so wird es irgendwie eine Philosophie des Judentums sein"). Scholem wished to point to Benjamin's hidden commentary on Judaism when he dealt with the philosophical question of language and translation (since Benjamin's early Essay *Über die Sprache überhaupt und über die Sprache des Menschen*, 1916), the question of a philosophy of history (e.g., in Benjamin's theses which promote a messianic philosophy of history), and also when he discussed German-Jewish writers like Karl Kraus and Franz Kafka (cf. Benjamin/Scholem, *Benjamin über Kafka*, 1980). In his philosophical as well as in his critical works Benjamin remains ambivalent, however: On the one hand he avoids the construction of Jewish or even less Zionist perspectives, on the other hand he engages in a subtextual and also critical dialogue with Judaism and Zionism, his philosophical starting point being the Neo-Kantianism of Hermann *Cohen, his early letters to Ludwig Strauß and, from summer 1916, his friendship with Scholem. Both Scholem and Benjamin agreed in taking a critical attitude towards assimilation as well as towards Buber's type of cultural Zionism and his legitimization of war during the World War I period. But whereas Scholem found a clear Zionist alternative, Benjamin placed himself intellectually between universal Judaism and Marxism. And whereas – after the failure of Benjamin to qualify as a teacher in 1925 at the University of Frankfurt with his thesis *Der Ursprung des deutschen Trauerspiels* – Scholem tried to convince him to come to Jerusalem between 1926 and 1930, Benjamin became inspired by the syndicalist French thinker Georges Sorel, the communist Asja Lacis, whom he met in Capri 1924 and in Moscow 1926, and approached the Frankfurter Institut für Sozialforschung and later on Bert Brecht, whom he joined in his Danish exile in 1934.

Already in the last years of the Weimar Republic, Benjamin moved to Paris, "the capital of the 19th century," where he also spent the most time after March 1933. Here (in the Paris National library) he worked on an encyclopaedic historiographical project on the modernity of Paris in the 19th century,

the so-called *Passagen-Werk*, which was not published until 1982 (in two volumes) and since then has come to be considered one of Benjamin's most important scientific works. Here he was combining the Marxist analysis of the "Warenwelt," the psychoanalytic method of "Traumdeutung," and the surrealist techniques of writing and quoting. On this basis he found a new method of performing history and by this means "saving" its neglected aspects much better than telling its linear story as the 19th century "Historismus" did. In the *Passagen-Werk* as well as in his thesis *Ueber den Begriff der Geschichte* (1940) he developed a philosophy of history which is apocalyptic and messianic at the same time: The historiographer is entitled to save the forgotten and the dead. Benjamin has seen here also a Jewish conception of history, which understands time not as "empty" and "homogeneous" but every "now," every "second" as "the little gate through which the Messiah may enter."

BENJAMIN, YEHOŠUA (1920–), Indian government official and scholar. Born in Lonavla, Maharashtra, of the *Bene-Israel community, by the time he retired he was the chief architect of India's Ministry of Works and Housing. His scholarly interests are reflected in his book *The Mystery of the Lost Tribes* (New Delhi, 1989).

[Tudor Parfitt (2nd ed.)]

BENJAMIN BEN AARON OF ZALOZCE (late 18th century), East European homilist. In his sermons he commented pointedly on the social and religious life of his time. His didactic works include instructions on personal behavior and on the conduct of Jewish community leaders. He was involved also in the controversy concerning the spiritual value of immigration to Erez Israel, which was a main issue among Jewish thinkers in the 1760s and 1770s. His writings include some important quotations from *Israel b. Eliezer Ba'al Shem, the founder of Ḥasidism, and other early ḥasidic teachers. His three main works are *Amtaḥat Binyamin*, a homiletic exegesis on Ecclesiastes (Minkowitz, 1796); *Ahavat Dodim*, on Song of Songs (Lvov, 1795); and *Turei Zahav*, a major collection of

sermons on the weekly portions of the Pentateuch, and on the holy days (Mogilev, 1816).

BENJAMIN BEN AZRIEL (11th century), liturgical poet, who apparently lived in France. His name and his father's are known only from his *piyyutim*, which are written in the spirit of the earlier *paytanim*. While the influence of Joseph *Bonfils and *Moses b. Kalonymus is apparent in the language of his *piyyutim*, Benjamin at times introduced new terms into the vocabulary of the *paytanim*. His hymns are found in the old French *maḥzor* and have not as yet been published. It is almost certain that a number of hymns signed merely "Binyamin" are his.

[Abraham Meir Habermann]

BENJAMIN BEN ELIEZER HA-KOHN VITALE OF REGGIO (1651–1730), Italian kabbalist. Benjamin, who was among the leading disciples of Moses *Zacuto in Mantua, was rabbi in his native town of Alessandria, Piedmont, until 1682 and afterward in Reggio. He became well-known as a preacher and poet, but in particular as a kabbalist; he was considered one of the major exponents of Isaac *Luria's Kabbalah in Italy. Most of his *piyyutim* (*Etha-Zamir*, Venice, 1707) were kabbalistic. He also wrote numerous notes and glosses on Luria's works, some of which were published together with the writings of Luria (particularly in the Korets editions). His books are written in the spirit of ascetic kabbalah. Benjamin was a close friend of Abraham *Rovigo in Modena, and desired to immigrate with him to Erez Israel. However, these plans failed. Both he and Rovigo were among the believers in *Shabbetai Zevi even after the latter's apostasy and for decades he was among the leading secret Shabbateans in Italy, without, however, relinquishing his ascetic way of life. Benjamin was among the chief proponents of a modern "ḥasidic" Shabbateanism which sought to combine traditional Judaism with the belief in the messianic character of Shabbetai Zevi. He did not openly express his Shabbatean views in print, but in *Allon Bakhut* (on Lamentations, Venice, 1712) he dared to explain the lamentations as joyful hymns on the Redemption, on the Shabbatean supposition of the change in their meaning in "the days to come." Many leading Shabbateans met in his home; he also made a point of collecting information about the "faith" and was greatly interested in every new manifestation of a Shabbatean prophet. While his Shabbateanism was still moderate, Benjamin was the teacher of Ḥayyim *Malakh. In his writings Benjamin kept apart the Lurianic Kabbalah from the new Shabbatean Kabbalah of *Nathan of Gaza. He refused to join in the persecution of the Shabbatean Nehemiah *Ḥayon (1714). One of his Shabbatean pamphlets, *Sod Adnut Adonenu* ("The secret of the Lordship of our lord [Shabbetai

Zevi] according to Nathan”), was published by A. Freimann. Isaiah Bassan, his son-in-law and successor as rabbi of Reggio, was Moses Ḥayyim *Luzzatto’s teacher. When the aging Benjamin learned of Luzzatto’s revelations in Kabbalah, he wrote asking him about the root (“*shoresh*”) of his soul, and its restitution (“*tikkun*”). A small part of the correspondence between Benjamin and Moses Zacuto, is extant in *Iggerot ha-Remaz* (Leghorn, 1780). Others are still in manuscript. A large collection of his sermons (*Gevul Binyamin*) was published in his old age (Amsterdam, 1727). Some of his halakhic rulings were published in *Lampronti’s *Paḥad Yizḥak*. Benjamin’s response, *She’elot u-Teshuvot ha-Re* (1970) were published by Chief Rabbi Yitzḥak *Nissim.

[Gershom Scholem]

BENJAMIN BEN ELIJAH (18th century), *Karaites pilgrim to Erez Israel. A resident of *Chufut-Kale (Bakhchisarai), in the Crimea, Benjamin made a vow to “cross seas and deserts and brave great hardships” in order to visit Jerusalem, where a small Karaite community had been revived in 1744. He embarked with six other Karaites from Eupatoria on June 27, 1785, and reached Jerusalem on October 18. After a month’s stay there Benjamin returned by way of Jaffa and Constantinople. Benjamin described his nine-month journey in his account, in which he relates, among other matters, that contributions from Crimean Karaites to those in Jerusalem were concealed from the Turkish authorities in order to prevent extortion of money. Some hymns by Benjamin are included in the Karaite liturgy.

[Avraham Yaari]

BENJAMIN BEN ELIJAH DUWAN (1747–after 1816), leader of Karaite community in Eupatoria (Yevpatoriya) and its *hazzan*. He was also the *dayyan* of the local *bet din*. In 1782–83 in the course of his visit in Constantinople he studied astronomy in order to deepen his knowledge of the calendar. In 1785 he made a pilgrimage to Erez Israel with four other Karaites. He described his impressions in his travelogue. In Jerusalem they stayed with the Karaite community, under the leadership of *hakham* Mordecai ben Samuel ha-Levi, which numbered 16 houses. They also visited Hebron, and stayed at Rabbanite houses which he claimed had once been Karaite houses.

In 1881, after a calendar dispute that lasted 18 years, Benjamin came to Chufut-Qaleh at the head of several Eupatorian Karaite dignitaries in order to confront the Karaite scholar

*Isaac ben Salomon. According to Isaac’s report, Benjamin was defeated, but he did not give in, and Yom Kippur was kept by him and his group on a Sunday against Isaac’s calculation which was supported by the majority. Benjamin authored a number of liturgical poems, some of which are included in the Karaite *Siddur*. He was familiar with Rabbanite books and was interested in Kabbalah.

[Golda Akhiezer (2nd ed.)]

BENJAMIN BEN ḤIYYA (Jehiel); 11th–12th century), liturgical poet. Benjamin lived in Germany during the First Crusade and was among the refugees from Neuss, Bacharach, and Speyer. The horrors of the Crusade constitute the theme of his poetry. According to a 13th-century commentary, his three-line *seliḥah* beginning “*Berit Kerutah*” refers to the claim made by two monks to have brought back from the Holy Sepulcher a document in which the extermination of the Jews is urged. It is probable that other *piyyutim* which bear the name Benjamin are attributable to him.

BIBLIOGRAPHY: Zunz, *Lit Poesie*, 158; Zunz, *Poesie*, 139, 166, 197; Landshuth, *Ammudei*, 52; Davidson, *Ozar* 2 (1929), 77, no. 1717.

BENJAMIN BEN JAPHETH (fl. third century), Palestinian *amora*. Benjamin studied under R. Johanan and transmitted legal rulings in his name (Ber. 33a, et al.). R. Zeira praised him for a report he transmitted in the name of Johanan (Shab. 53a). However, he would not rely upon him when he contradicted the tradition of Ḥiyya b. Abba in whom Zeira placed greater trust (Ber. 38b). Benjamin also transmitted many sayings in the name of R. Eleazar b. Pedat, noteworthy among them his comment on the fact that Jacob bowed to his son Joseph (Gen. 47:31), viz., “Bow to the fox in his season” (i.e., if you behold fortune favoring the fox, bow down to him, meaning that one should submit to an inferior person when he is in a position to convey a favor; Meg. 16b).

[Yitzhak Dov Gilat]

BENJAMIN BEN SAMUEL HA-LEVI (of Coutances; early 11th century), rabbi and liturgical poet. Benjamin lived in Coutances, Normandy. His poems are composed in the style of the old *piyyutim* and are, at times, of considerable artistic distinction. Benjamin wrote *piyyutim* for the three pilgrimage festivals, Rosh Ha-Shanah, and the Day of Atonement. Some of his poems are included in the *Mahzor Romania*. Benjamin was regarded as a talmudic authority and was often quoted by contemporary talmudic scholars.

BENJAMIN BEN ZERAH (c. 1050), liturgical poet. Benjamin probably lived in France or in Germany. He composed liturgical poetry of various sorts in the style of the earliest *paytanim*, but his works already contain the names of angels and other holy appellations. Because of the esteem accorded to him, he was designated *Ha-Gadol* (“the Great”). He was also called *Ba’al ha-Shem* (“Master of the Divine Name”), possibly on account of the numerous names of God and the angels in his poems. About 60 of his *piyyutim* are known, many being included in the Ashkenazi and Italian liturgies.

[Abraham Meir Habermann]

BENJAMIN NEHEMIAH BEN ELNATHAN (16th century), Italian Jewish chronicler. Exiled from Naples, and later a resident or perhaps rabbi of Civitanova near Ancona, he was arrested with five other members of the Jewish community in the summer of 1559 on a charge of being implicated in the conversion of a Catholic priest. They were sent to Rome for trial by the Inquisition but were released with the other prisoners of the Holy Office on the death of Pope *Paul IV. On Benjamin's return he wrote a vivid account of his experiences, viewing them in the historical context of Paul IV's persecution of the Jews and Marranos of Ancona, which he apparently witnessed. He wrote his account in fine, idiomatic Hebrew, and it is an important contribution to Hebrew literature as well as to Jewish history. The chronicle was discovered by I. Sonne and published in *Tarbiz* (vol. 2, 1930/31), and again in his *Mi-Paolo ha-Revi'i ad Pius ha-Hamishi* (1954).

[Cecil Roth]

BENJAMIN OF BRODY (18th-century), preacher. Benjamin was the official preacher of the Jewish community in Berdichev for 17 years, after which he moved to Brody. His sermons were collected in the book *Imrei Binyamin* (Tarnopol, 1814) by his grandson, Meir Eliezer b. Phinehas. Benjamin's sermons, which follow the order of the weekly Torah portions, are undoubtedly edited versions of those he had originally delivered orally. Rabbinic in character, they deal frequently with halakhic problems, interpretations of talmudic sayings, and moralistic preaching.

BENJAMIN OF CAMBRIDGE (12th–13th century), English scholar, pupil of R. *Tam. A number of Benjamin's opinions on *halakhah*, grammar, and exegesis are preserved in scattered secondary sources. He is referred to as “Benjamin of קנטבריא,” formerly interpreted as Canterbury, but without doubt designating Cambridge (“Caunbrige”). His English origin is confirmed by the citation of one of his opinions by *Elijah Mena-

hem b. Moses of London. He is to be identified with “Magister Benjamin” of Cambridge, mentioned in English records, who maintained the local synagogue.

[Cecil Roth]

BENJAMIN OF TIBERIAS, leader of Palestinian Jewry at the beginning of the seventh century C.E. At the time of the Persian invasion of Erez Israel in 614, Benjamin appears to have been among the Jewish leaders who negotiated with the Persians; as a result of these contacts, the Persian armies received Jewish military support. Benjamin then considered the Christians to be the enemies of his people; however, when the armies of Heraclius, the Byzantine emperor, reconquered the country in 628, he was compelled to receive them on friendly terms. Benjamin, who was exceedingly wealthy, accommodated the emperor in Tiberias and then succeeded in obtaining a general pardon from him for those Jews who had committed offenses against Christians under Persian rule. Benjamin accompanied Heraclius to Jerusalem in 629, and on the way the emperor succeeded in persuading him to be converted. He was baptized in the house of Eustathios, an influential Christian living in Neapolis (now Nablus). In Jerusalem the members of the Christian clergy influenced Heraclius to break the promise which he had given to the Jews through the intervention of Benjamin; the emperor condemned many of them to death, and prohibited the Jews from living in Jerusalem or within a three-mile radius of the city. There is no further mention of Benjamin in historical sources.

[Michael Avi-Yonah]

BENJAMIN (Ben Jonah) OF TUDELA (second half of 12th century), the greatest medieval Jewish traveler. Nothing whatsoever is known about him except that which emerges from his famous *Sefer ha-Massa'ot* (*Book of Travels*). (See Map: Benjamin of Tudela's Travels.) He is frequently called “Rabbi” by non-Jewish writers, but there is no authority for this except that the conventional abbreviation “ר” is prefixed to his name in the Hebrew sources. From internal evidence the beginning of his journeys has been dated either about 1159 or about 1167, and he returned to Spain in 4933 (1172/73). His journeys lasted therefore a minimum of 5 and a maximum of 14 years. Since he spent at least a year on the last lap of his journey, from the time he left Egypt to the time of his return to Spain, the latter conjecture is more probable. In any case, he obviously had leisure to spend some time in the places he describes. The object of his journey is unknown, though it has been suggested that he was a gem-merchant – he more than once shows an interest in the coral trade. His *Book of Travels*, largely impersonal,

Map showing the travels of Benjamin of Tudela.

was based on the materials which the author noted down in the course of his travels. From Tudela in northern Spain Benjamin traveled by way of Saragossa and Tarragona to Barcelona, and thence via Gerona into Provence. He gave a fairly full account of the cities and especially the scholars of this region (Narbonne, Beziers, Montpellier, Lunel, Posquières, Arles), paying adequate attention to economic life. From Marseilles he went by sea to Genoa, and thence through Pisa to Rome. Here he must have spent a fairly long time, for he has a detailed description of the antiquities of the city. Many of these he, like other writers of the period, interpreted as being associated with Jewish history. He also writes about the Rome Jewish community and their relations with the much-opposed Pope Alexander III. It is clear therefore that he was there either shortly after the beginning of Alexander III's pontificate in September 1159, or in the brief period between November 1165 and July 1167, when this pope was again securely established in the city. From Rome, Benjamin went southward, traveling throughout southern Italy and describing, sometimes at length, conditions in many places in this region such as Salerno, Amalfi, Melfi, Benevento, Brindisi. He embarked at Otranto, sailing by way of Corfu to Arta, and then through Greece, where he noted the Jewish silkweavers in various places, and the agricultural colony at Crissa on Mt. Parnassus. He seems to have spent a particularly long time in Constantinople, where his lively picture, excelled by no other medieval

traveler, is of great importance for knowledge of non-Jewish as well as Jewish conditions. Thence by sea through the Aegean archipelago (Mytilene, Chios, Samos, Rhodes) to Cyprus whence he crossed to the mainland, making his way south via Antioch, Sidon, Tyre, and Acre into Erez Israel, at that time under the rule of the Crusaders. He traveled throughout the country, giving a detailed account of the Holy Places (which he calls in many instances by their French names: thus Hebron is St. Abram de Bron). It is a document of primary importance for the Palestinian history of this period. His record of the Samaritans, although highly disapproving, is characteristic. On the whole, his descriptions are far more objective than those of Christian pilgrims of the age, and he shows himself to peculiar advantage in his account of Jerusalem and its monuments. On leaving Tiberias he traveled north to Damascus, and thence through Aleppo and Mosul – it is not easy to trace his precise route – to Baghdad. His account of the Druze is the first in the non-Arabic literature. Of Baghdad he gives a longer account than of any other city on his itinerary. He draws a graphic picture of the court of the caliph and the charitable foundations of the city. He also tells us of the organization of the still-surviving talmudic academies and the glories and functions of the Exilarchate. He seems to have traveled widely about Mesopotamia and into Persia, though his account of conditions here contains much legendary material. A good deal of space is devoted to the story of the pseudo-Messiah

David *Alroy which was, until recently, almost the sole historical source about his career. It is not probable that he ventured beyond this area, but he speaks with some fantastic detail of China, India, and Ceylon. His personal impressions are obviously resumed in his admirable and detailed account of Egypt in general and its Jewish life in particular, especially in Cairo and Alexandria, which he visited on his return voyage. After this he reembarked for Sicily, his account of Palermo being both accurate and picturesque. From here he probably made his way back to Spain by sea, though the itinerary as we have it ends with an idealized picture of Jewish life in northern France and Germany, presumably based on hearsay. He reentered Spain, as is specifically stated, through Castile, having left it by way of Aragon.

There is no general account of the Mediterranean world or of the Middle East in this period which approaches that of Benjamin of Tudela in importance, whether for Jewish or for general history. Most of his record is concise and clear, presumably only a precis of the ampler material he brought back with him. He indicates the distances between the various towns he visited, tells who stood at the head of the Jewish communities, and who were the most notable scholars. He gives the number of Jews he found in each place, though it is not clear in many instances whether he is speaking of individuals or of householders, and in some cases such as Baghdad, the figures seem to be exaggerated. This may be due to the corrupt state of the text as we now have it. He notes economic conditions, describing the activity of merchants from various lands in Barcelona, Montpellier, and Alexandria, and speaking frequently of the occupations of the Jews – the dyers in Brindisi, the silkweavers in Thebes, the tanners in Constantinople, and the glassworkers in Aleppo and Tyre. He was deeply interested in Jewish scholarship, and his account of intellectual life in Provence and Baghdad is of singular importance, as is his characterization of the organization of synagogal life in Egypt. Sects, too, engage his attention, not only the Samaritans in Palestine, but also the Karaites in Constantinople and a heretical sect in Cyprus which he relates observed the Sabbath from dawn to dawn. His characterizations of non-Jewish life are vivid, and sometimes very important. He speaks of the internecine fighting at Genoa and Pisa, the constant wars between these two republics, the embarkation ports of the Crusaders in south Italy, the palaces and pageants of Constantinople and the wealth and the weaknesses of the Byzantine Empire. His somewhat highly colored account of the Assassins of Lebanon and of the Ghuzz Turks are primary historical sources, and he is said to be the first European of modern times to mention China by the present name. The importance of the work can be gauged from the fact that it has been translated into almost every language of Europe, and is used as a primary source-book by all medieval historians

BIBLIOGRAPHY: The *Itinerary of Benjamin of Tudela* was first published at Constantinople in 1543 and, according to a much-differing manuscript, at Ferrara in 1556. The standard editions are those

edited by A. Asher, with very valuable notes and excursus and much additional material (London, 1840–41; reprinted New York, 1927, includes list of editions); and by M.N. Adler (London, 1907, with critical Heb. text and Eng. tr.; reprinted from JQR, vols. 16–18, 1904–06; reprinted 1964); there is also an edition by L. Gruenhut and M.N. Adler (Jerusalem-Frankfort, 1903–04) and another edition by H. Haddad (Baghdad, 1945). See also E. Carmoly, *Notice historique sur Benjamin de Tudèle* (1852), followed by J. Lilewel, *Examen géographique de ses voyages*; R. Luria, in: *Vessillo Israelitico*, 36 (1888), 56–58; Borchardt, in: JLG, 16 (1924), 139–62; idem, in: *Journal of Roman Studies*, 26 (1936), 68–70; C.R. Beazley, *Dawn of Modern Geography* 2 (1897), 218–64; Andréadès, in: *Byzantinische Zeitschrift*, 30 (1929–30), 457–62; Reissner, in: *Zeitschrift fuer Religions- und Geistesgeschichte*, 6 (1954), 151–5; E. García de Herreros, *Quatre voyageurs espagnols à Alexandrie d'Égypte* (1923). Most works dealing with the history of the Jews in Italy, Palestine, Byzantium, Mesopotamia, and the Middle East in the 12th and 13th centuries use and comment upon Benjamin's material.

[Cecil Roth]

BENJAMIN ZE'EV BEN MATTATHIAS OF ARTA (early 16th century), *dayyan* and halakhist. He first engaged in business but later became a member of the *bet din* at Arta (Epirus). After living at Larissa (1528) and Corfu (1530), Benjamin Ze'ev settled in Venice; but toward the end of his life returned to Arta (1538). As a result of his lenient decisions on an *agunah*, Benjamin Ze'ev was severely criticized by David ha-Kohen, Joseph Taitazak, and others. He replied in his *Binyamin Ze'ev*, containing 450 legal decisions and responsa, completed in 1534 at Venice, where it was published five years later. It constitutes an important source for a knowledge of the economic conditions and religious life of the Jews of Greece, Turkey, and Asia Minor. His legal decisions reflect his independence in halakhic matters, which led to the opposition of German and Italian rabbis to his book. He was hostile to Marranos who willingly "follow the laws of the Gentiles and transgress all the commandments of the Torah," and stated that "they are less than the Gentiles" (*Binyamin Ze'ev*, 203, end). Contemporaries, such as Isaac Gershon of Venice and David ha-Kohen, questioned his authority in legal decisions; while Solomon Luria (*Yam shel Shelomo*, BK 78) expressly states that "no one should follow Benjamin Ze'ev, unless he has made a thorough study of the relevant talmudic passages and the halakhic authorities." Several prominent rabbis, among them the rabbis of Salonika, agreed with Benjamin. Following the intensification of the dispute between Benjamin and his opponents at Arta (1530), the views of the Italian rabbis were sought by both sides. Some, including Azriel Diena (Dayyena), favored Benjamin Ze'ev's dismissal from the rabbinate. The dispute continued until 1532, but Benjamin nevertheless continued as rabbi at Arta after that date. His son Mattathias, who died in 1541, wrote a poem to mark the completion of his father's book (*Binyamin Ze'ev*, 573a).

[Yehoshua Horowitz]

BEN KALBA SAVU'A (1st century C.E.), according to tradition he was a wealthy man of Jerusalem, who was renowned for his generosity. The Bavli relates that during the Roman siege of Jerusalem, he and his two wealthy friends, Nakdimon b. Guryon and Ben Zizit ha-Kassat, provided food and other necessities for the inhabitants over a number of years, until the zealots set fire to their stores, in an attempt to force the people to make a desperate effort to break the siege (Git. 56a). Josephus mentions the burning of "provisions that would have sufficed ... for a long siege," although he does not mention Ben Kalba Savu'a or his associates (Wars, 5:25). The Bavli also relates that Rachel, Ben Kalba Savu'a's daughter, married R. Akiva, who in his youth had been Ben Kalba Savu'a's shepherd. This was against the wishes of her father, who disinherited them. When Akiva had become famous as a great scholar, his father-in-law was reconciled to him and bequeathed him half of his wealth (Ket. 62b–63a; Ned. 50a). Regarding the historicity of these traditions, see S. Friedman, "A Good Story Deserves Retelling: The Unfolding of the Akiva Legend."

[Zvi Kaplan]

BEN-KIKI (Quiqui), Moroccan family. REUBEN (late 17th and 18th century) participated in 1719 in negotiations with Great Britain; in 1721 he assisted Ibn Attar, the Moroccan royal treasurer, in concluding a peace treaty with Great Britain. After the death of the king of Morocco, Ahmad al-Dhahabi, in 1729, he became one of the ministers of the new king, Abdullah. His brother ELEAZAR had been appointed ambassador to Holland by Ahmad al-Dhahabi to take charge of the peace talks, and was in Gibraltar, on his way to Holland, when the king died. He was not allowed to continue his journey, nor to return to his country until 1730. After Reuben was appointed a minister in Morocco, he succeeded in sending his brother to Holland, but the latter was unable to negotiate a treaty.

[Abraham David]

BENKOW, JO (Josef Elias; 1924–), Norwegian politician. Born in Trondheim, he was a photographer by profession like his father and grandfather. Towards the end of the 1920s the family settled in Bærum, a municipality near Oslo. In World War II he and other male members of his family (his father, brother, and uncle) succeeded in fleeing to Sweden. The female members of his family were deported to Auschwitz, where they were killed on arrival. In March 1944 he left Sweden for service in the Norwegian Air Force in England and Canada.

In the 1950s his political interests brought him posts in the liberal conservative party Høyre, the second-largest political party. He was elected a member of the Bærum local council in 1959 and the first Jewish-born member of the Storting (the Norwegian parliament) in 1965. He was the vice chairman of

Høyre from 1973 to 1980 and the chairman from 1980 to 1984. He was then elected president of the Storting, a post he held until 1993. His Jewish connection has been expressed through his interest for Israel (e.g., as a speaker) and his involvement in the cause of Soviet Jewry. After leaving his post at the Storting he worked extensively to promote human rights and combat antisemitism and racism. From 1983 to 1984 he served as president of the Nordic Council. He was also the president of the International Helsinki Federation for Human Rights from 1993 to 1998. He spent two years (1994–1995) as visiting professor at Boston University and in 2000–04 he was a judge on the Oslo Conciliation Board. In honor of his contribution to society Benkow received titles and medals from the Norwegian King, the Finnish president, and the Austrian president.

In 1985 Benkow published his autobiography *Fra synagogen til Løvebakken* ("From the Synagogue to Lion Hill," a popular name for the Storting), which was a great success, over 240,000 copies being sold. In it, he describes his childhood and youth, his Jewish family and Jewish connections, his opinions concerning religious faith and absence of faith and tells about his political life. He also writes about general prejudices and touches on Jewish history (the history of his own family), Jewish customs, discrimination against Jews in the Soviet Union, and tells about his relations with Israel ("a turning point in Jewish self-understanding," as he says). He also published *Folkevalgt* ("Popularly Elected," 1988), an account of his life in parliament; *Vendepunkt – 9. april i vår bevissthet* ("Turning Point – April 9th in Our Consciousness"), written together with Prof. Ole Christian Grimnes, about the German occupation of Norway in 1940–45 and its aftermath; *Olav – Menneske og monark* ("Olaf – Human Being and Sovereign," 1991), a biography of the late king Olaf V; *Det ellefte bud* ("The Eleventh Commandment," 1994), a polemic directed against racism; and *Hundre år med konge og folk* ("A Hundred Years with King and People," 1998), an historical account of the 20th century in Norway. Through his objectivity, command of language, and calm and dignified manner, Benkow won widespread respect and recognition.

[Oskar Mendelsohn / Lynn Feinberg (2nd ed.)]

BEN LA'ANAH (Heb. בֶּן לְעָנָה), name of the author of an unknown apocryphal work. The Jerusalem Talmud (Sanh. 10:1, 28a), includes the book of Ben La'anah among the works forbidden to be read (cf. Eccles. R. 12:12 where the reading is Ben Tiglah). However, except for a reference by David Messer Leon in the 16th century to an apocryphal work called *Ben Ya'anah* (בֶּן יְעָנָה), which may be identical with Ben La'anah, nothing is known about the book or the author. Various scholars have tried to identify him either with the pagan philosopher Apollonius of Tyana (M. Joel), or with the author of a collection of fox fables *Mishlei Shu'alim* (J. Fuerst), but none of these theories is regarded as satisfactory.

BIBLIOGRAPHY: Perles, in: REJ, 3 (1881), 116–8; Kaufmann, *ibid.*, 4 (1882), 161; Klein, in: *Leshonenu*, 1 (1928/29), 340, 344.

BEN MEIR, AARON (early tenth century), scholar and *rosh yeshivah* in Erez Israel. Aaron lived apparently in *Ramleh, and traced his descent to the former *nesi'im* ("patriarchs") of Palestinian Jewry. His relations with the *Karaites in Palestine were extremely strained. In about 920 he went to Baghdad to complain to the central authorities of the malicious Karaite attacks upon the Rabbanites. After his return, Aaron conceived the idea of strengthening the religious hegemony of Palestine, which had been weakened by the Babylonian yeshivot. To achieve this, Aaron attempted to restore to the Palestinians the sole authority to fix the calendar, as they had had until the middle of the ninth century. On Hoshana Rabba 921 he proclaimed on the Mount of Olives to all communities of Palestine and of the Diaspora that the months of Marḥeshvan and Kislev would be defective, i.e., consisting of only 29 days. As a result, Passover of 922 would fall on Sunday and the New Year of 922 would fall on a Tuesday instead of on the following Thursday as it would have done were these months to contain the full 30 days (see *Calendar).

This proclamation aroused the opposition of several scholars, notably of *Saadiyah, who was on his way to Baghdad. The latter tried repeatedly to convince Aaron that there was no justification for opposing the Babylonian calendar calculations. Aaron stood his ground, however, and gave publicity to his proclamation. Fearing that the Jewish festivals might be celebrated at different times in different places, Saadiyah addressed himself to the Diaspora communities warning them against acceptance of Aaron's proclamation, but he could not prevent a split. In 922 the Jews of Palestine, and, apparently, also those of Egypt, celebrated Passover two days before the Jews of Babylonia, fixing also the date of the following Rosh Ha-Shanah accordingly. This split caused considerable agitation throughout Jewry. References to it are to be found even in Syriac literature. Thus, the Syrian, Elias of Nisibis, wrote: "The year 309 [of the Hijra] began on the Sabbath, Iyyar 12, 1232 of the Seleucid era; in that year dissension broke out between the Jews of the West [Palestine] and those of the East [Babylon] with regard to the calculation of their holidays. The former fixed the New Year on a Tuesday and the latter on a Thursday" (Baethgen, *Fragmente syrischer und arabischer Historiker* (Leipzig, 1884), 84). The Karaite Sahl b. Mazli'ah sought to prove from this controversy that the Rabbanite calendar calculations were altogether groundless.

The controversy between Aaron and his opponents on this issue continued for some time thereafter, ending in Aaron's defeat, and with it the failure of the attempt to strengthen the sole religious authority of the Palestinian scholars.

[*Encyclopaedia Hebraica*]

BENN (Benzion Rabinovich; 1905–1989), painter and graphic artist. Benn was born in Białystok, Poland, and finished the Hebrew gymnasium there, where he later started his education in art at the private studios of local artists. He also studied at the Academy of Arts in Warsaw. He made his debut in 1927 with his first solo exhibition, shown first in Białystok and then in Warsaw. During this period, he designed the typography for collections of Yiddish poetry. In Białystok, his native town, he became a leading figure in local cultural life. He was among the founders of the modernist group "3F" ("Forma-Farba-Faktura"), where most of the members were Jewish artists. In 1928, he organized the first Autumn Salon for Białystok and Vilna artists. In 1926–29, he designed the scenery for the performances of several Yiddish theater companies in Białystok. In 1929, the Białystok municipality awarded him a scholarship for a trip to Paris. On the eve of his departure, Benn arranged a "farewell" solo exhibition that was later shown in Warsaw with the assistance of the Jewish Society for Encouragement of Artists. In Paris, he studied with Fernand Leger. From 1932, Benn regularly exhibited in Paris art salons. His works were highly praised by critics and won public recognition. Six one-man shows in the 1930s at private art galleries in Paris are yet another indication of his success. During this period, he was also active in book design. During the German occupation of France, Benn went into hiding. However, not long before the end of the occupation, he was finally seized by the Gestapo and deported to the Drancy concentration camp. By sheer luck, he not only survived but also escaped further deportation to Auschwitz. In 1945, Benn returned to Paris. In the post-war years, having rejected the cubist and expressionistic techniques that had so strongly attracted him in the 1920s and 1930s, Benn crystallized his individual manner based on an organic combination of "metaphysical painting" techniques and surrealism. From the 1950s through the 1970s, while mainly active in painting, he also engaged in book design and, among other works in this field, executed a series of illustrations for *The Song of Songs* (1950, 1974) and other books of the Bible (1948, 1954, 1971), as well as for an edition of "*Had Gadya*" (1956). In these years, he had numerous one-man shows in France and other West European countries as well as in Canada and Israel.

[Hillel Kazovsky (2nd ed.)]

BENN, BEN (Benjamin Rosenberg; 1884–1983), U.S. painter. Benn was born in Russia and immigrated to New York with his family in 1889. After studying drawing in high school, he attended the National Academy of Design in New York City from 1904 to 1908, where he received traditional art training with Jewish classmates Benjamin *Kopman and William *Zorach. His first exhibition, "Oils by Eight American Artists,"

showed in New York at the Artist's Gallery. A 1915 El Greco exhibition at the Knoedler Gallery made an important impact on Benn, after which time he began to gently distort the human figure and employ a more painterly approach. Benn participated in the *Forum Exhibition of Modern American Painters* in 1916, organized by avant-garde artists of the period, including Alfred *Steiglitz. Although at times his palette would darken, throughout his career Benn painted simplified portraits, stilllives, and landscapes, influenced by the vibrant and colorful fauvist tendencies of Henri Matisse and the vigorous brushstroke of Chaim *Soutine. He had several one-man shows, notably an exhibition at the Jewish Museum in 1965. His works can be found in the permanent collections of the Whitney Museum of American Art and the Metropolitan Museum of Art.

[Samantha Baskind (2nd ed.)]

BEN-NAPHTALI, MOSES (Or Jacob) BEN DAVID, masorete. He is assumed to have been a contemporary of Aaron b. Moses *Ben-Asher, who dates from the ninth or tenth century C.E., and an inhabitant of Tiberias. Although nothing about him is known, except his name, there survives a list of some 850 minor differences from the reading of Ben Asher in vowels and accents in the Hebrew Bible. The list notes only eight variants in the consonantal text. The differences in vocalization and accents, especially as recorded by Mishael b. Uzziel (10th–11th centuries) with considerable deviations in detail in the different traditions (published by L. Lipschuetz), reveal no systematic features, and may be nothing but a gathering of traditional variants. Penkower (in bibliography) argues that the high level of agreement proves that Ben-Naphtali and Ben-Asher do not represent two rival schools regarding the biblical text, but rather the contrary. Some scholars have observed that the very name Ben-Naphtali is suspect: Naphtali in the Bible is the son of Jacob born after Asher, and the series "Ben-Asher, Ben-Naphtali" resembles the standard series of random names, "Reuben, Simeon." In Western and Central Asia in that period it was a common feature to systematize differences by assigning them to two "schools," only one of which existed. The closest parallel, as shown by Gotthold *Weil, is the invention of a Kufan School of Arabic grammar as a foil for the Basrian School.

There are, indeed, a number of Bible manuscripts with a type of Tiberian vocalization rather different from that of the Ben-Asher school (which itself is not entirely monolithic), but the slight similarity these manuscripts share with some variant readings ascribed to Ben-Naphtali in Mishael's list is not sufficient to substantiate the claim that they are representative of the Ben-Asher School.

[Chaim M. Rabin]

BEN-NATAN, ASHER (1921–), Israeli diplomat. Ben-Natan was born in Vienna and immigrated to Erez Israel as an "illegal" immigrant in 1938. He was one of the founders of the group which established kibbutz *Dobrath (Dovrat). In 1944 Ben-Natan joined the Aliyah Department of the Jewish Agency and was delegated to the British Department, which, in liaison with the Allied Forces, specialized in the interrogation of Nazi war criminals and in compiling lists of them and their crimes. In October of that year he was transferred to Vienna, where he was in charge of the *Berihah movement in Austria, holding the position until 1947. During this period he established a special group to search for war criminals. In 1947 Ben-Natan was a special assistant to David Ben-Gurion and in 1948 was appointed chief of special operations in the Political Department of the Israel Ministry for Foreign Affairs. From 1951 to 1953 he studied at the Institute of Higher International Studies in Geneva, and in 1956 was appointed special delegate of the Ministry of Defense for Europe, taking up the post in Paris in 1957. From 1960 to 1965 he served as director general of the Ministry of Defense and from 1965 to 1969 was first Israel ambassador to the Federal Republic of Germany. In 1970 he was appointed Israel ambassador to France. Ben-Natan was a candidate for mayor of Tel Aviv in Nov. 1978 but was not elected.

BEN-NER, YITZHAK (1937–), Israeli writer. Born in Kefar Yehoshua, Ben-Ner studied literature and drama at Tel Aviv University before spending a couple of years in New York. His first novel, *Ha-Ish mi-Sham* (1967; *The Man from There*, 1970), tells of a young Israeli soldier who is trapped in a small Egyptian border town. An Egyptian doctor protects and hides him in his fiancée's house. An ambiguous relationship develops, full of tension and surprises. The novel, which gained Ben-Ner much acclaim, was followed by prose works – novels and collections of stories – as well as by books for children (e.g. *Kishona*, 1977; *Jeans*, 1991), film and television scripts, and plays (e.g., the monodrama *David August*, 1983, *Ta'atuon*, performed at the Cameri Theatre in 1990, and *Uri Muri*, performed there in 1999). The collection *Sheki'ah Kafrit* (1976; *Rustic Sunset*, 1997) comprises eight short stories, tales of childhood and maturity, depicting urban life in Israel and looking critically at the seemingly heroic officers of the Israeli army. *Malakhim Ba'im* ("The Angels Are Coming," 1987) is a sophisticated parody on contemporary Israeli society through the story of David Halperin, a hedonistic Tel Aviv bachelor.

Boker shel Shotim ("Morning of Fools," 1992) is structured as a series of monologues by the mentally retarded Uzai, who observes life around him in his moshavah; the monologue technique, one of the characteristics of Ben-Ner's prose, is used also in the four stories entitled *Ta'atu'on*, dealing mostly with soldiers torn between duty and the desire for self-fulfillment. *Mitham Oyev* ("Enemy Territory," 1997) was written in the wake of Yitzhak Rabin's murder: A bodyguard of the assassinated prime minister seeks to assuage his guilt by penetrating a secret underground organization in the West Bank. As in most of his works, Ben-Ner introduced political and moral issues perturbing Israeli society. *Ir Miklat* ("City of Refuge," 2000) is yet again a cruel and barbed portrait of contemporary society, with seven monologues representing different aspects of life in a troubled, decadent Tel Aviv. Ben-Ner is also known for his radio and television work. He was awarded the prestigious Agnon Prize and the Bernstein Prize.

[Anat Feinberg (2nd ed.)]

BENNETT, ARCHIE (Aaron Baehr; 1891–1980), Canadian community leader. Bennett was born in Malech in the Brest-Litovsk district of Belorussia and was taken to Canada as a child. He was raised in Kingston, Ontario, where he became co-owner of a large real estate and building firm. In the summer of 1912 Bennett served as editor of the *Canadian Jewish Times* in Montreal. He began writing in Yiddish in that same year for the *Keneder Adler*. At this time in Montreal he became part of the circle of young intellectuals around Reuben *Brainin and wrote for the latter's short-lived *Der Veg* in 1914. In 1914 he settled in Toronto. In 1919 he was a delegate to the first Canadian Jewish Congress in Montreal, where he delivered a paper on nationality minority rights. In 1922 Bennett reorganized the structure of the Zionist movement in Ontario and instituted the province's first Keren Hayesod campaign. Bennett, in that same year, began writing for the *Canadian Jewish Review*, then published in Toronto. He helped establish the Menorah Society at the University of Toronto and from 1922 to 1924 was a faculty adviser to the Jewish students. In 1933–34 he led in the reorganization of the Canadian Jewish

Congress and in the World War II years was president of its central region, Ontario, active in refugee aid, war efforts, and community relations. Writing for the Jewish press was Bennett's lifelong avocation. In 1914 he began writing editorials for the *Canadian Jewish Chronicle* which absorbed the *Canadian Jewish Times*. During the 1930s and until the early 1940s he wrote regular columns for the *Canadian Jewish Review*; and from the mid-1940s in the *Jewish Standard*.

[Ben G. Kayfetz]

BENNETT, AVIE J. (1928–), Canadian property developer; best known as a philanthropist, dedicated supporter of the arts, and former owner of several Canadian publishing companies, foremost among them McClelland & Stewart of Toronto. Described as a "Maecenas with the courage of his convictions and the money to back them up" (MacSkimming, 314), Bennett worked tirelessly and creatively throughout his career to enrich the cultural landscape of Canada.

As a business pioneer, Bennett made his fortune as a developer of shopping malls, acting as chairman and president of First Plazas Inc., the successful commercial real estate company that has helped finance many of Bennett's ventures in the arts.

In January 1986, Bennett purchased McClelland & Stewart from the charismatic Jack McClelland, whose father had founded the company together with his colleague Frederick Goodchild in 1906. Following years of financial difficulty, with M&S on the brink of bankruptcy, Bennett stepped in to rescue a company that had become known as "the Canadian publishers." Bennett's infusion of cash was a stabilizing force, and his energy and vision ensured M&S's standing as a premier publisher of Canadian trade titles.

While at the helm of M&S, Bennett acquired Hurtig Publishers of Edmonton (in 1991); Tundra Books of Montreal (1995); and Macfarlane Walter & Ross of Toronto (1999). With Penguin Canada, he created Canbook, a joint warehouse and distribution center. In 2000, in an unprecedented move, Bennett donated 75 percent of M&S to the University of Toronto. As he proclaimed, "[t]o achieve the survival of one great Canadian institution, I have given it into the care of another great Canadian institution" (MacSkimming, 357). He sold the remaining 25 percent of the company to Random House of Canada. Bennett remains chairman of the board of M&S.

Bennett was a board member of many arts organizations in Canada. In 2005, he was vice chairman of the Historical Foundation and co-chair of the Canadian Democratic and Corporate Accountability Commission. He was made Officer of the Order of Ontario in 1996 and Officer of the Order of Canada in 1997. From May 1998 to June 2004, Bennett served as chancellor of York University in Toronto.

[Ruth Panofsky (2nd ed.)]

BENNETT, MICHAEL (1943–1987), U.S. producer, writer, choreographer, director, performer. Michael Bennett DiFiglia, whose mother was Jewish, was born in Buffalo, N.Y., and became the most influential director and choreographer of his generation as the creator in 1975 of *A Chorus Line*, once the longest-running show in Broadway history. In a career that spanned more than two decades, he received Tony Award nominations for every musical with which he was associated, and won eight.

A former chorus dancer, Bennett's talent emerged in the 1970s, first in his collaborations with Hal *Prince and then on his own as Broadway and Off Broadway director, choreographer, and producer. The dances in *Company*, *Follies*, *A Chorus Line*, *Ballroom*, and *Dreamgirls* flowed from the action of the plays and the motivations of their characters, and that seamlessness marked Bennett's work.

Bennett had started dance lessons at three and by 12 he was versed in tap, ballet, modern, and folk dancing. Just before he was to graduate from high school, he joined a company of *West Side Story* and spent a year in Europe with the show. When the tour ended, he went to New York and danced in the choruses of *Subways Are for Sleeping*, *Here's Love*, and *Bajour*. He participated in several commercial failures but with Neil *Simon's *Promises, Promises*, in 1968, his career took off. It was also his first work with Donna McKechnie, a dancer to whom he was briefly married and who became a noted actress and choreographer after stopping the show in *A Chorus Line*. In 1969 Bennett choreographed Andre *Previn and Alan Jay *Lerner's musical *Coco*, starring Katharine Hepburn as the fashion designer Coco Chanel. The play ran for more than 300 performances but was a commercial failure. By 1970, Bennett was collaborating with Prince on Stephen *Sondheim and George Furth's *Company*, which became a signature musical of the decade. A year later, Bennett won the first of his two Tony Awards, as choreographer and co-director, with Prince, of Sondheim and James Goldman's *Follies*, a homage to the Ziegfeld era and the first backstage musical Bennett came to be identified with. As one of Broadway's most celebrated show doctors, he took over the Cy *Coleman–Dorothy *Fields musical *Seesaw* and changed every element, from the choreography to the sets, costumes, and lighting. The show opened in 1973 and won for Bennett his second choreography Tony.

In 1974 Bennett held a late-night session with a group of dancers with whom he had worked, talking about the experience of being a Broadway gypsy. Discerning the potential of a show about Broadway's most-overworked and least heralded performers, Bennett persuaded Joseph *Papp, the theatrical Pied Piper, to finance a workshop to develop the material. Bennett hired Marvin *Hamlisch to compose the music, Ed Kleban to write the lyrics, and James Kirkwood and Nicholas Dante to write the book. After two five-week workshops at Papp's Public Theater, the show, *A Chorus Line*, inaugurated Lincoln Center's Newman Theater and moved to the Shubert Theater on Broadway a few months later. The show won nine Tony Awards, including best direction and choreography for

Bennett and best musical, as well as the Pulitzer Prize, which Bennett shared, and the New York Drama Critics Circle award. The final number in *A Chorus Line*, "One," became Bennett's signature: a company of disparate individuals emerging into a triumphant whole.

In 1981 Bennett won wide acclaim for *Dreamgirls*, a musical based loosely on the careers of the Supremes, a group of black women singers. "When Broadway history is being made, you can feel it," wrote Frank Rich, chief theater critic of the *New York Times*. "What you feel is a seismic jolt that sends the audience, as one, right out of its wits. Broadway history was made at the end of Michael Bennett's beautiful and heart-breaking new musical"

Bennett's death at 44 was attributed to lymphoma, a form of cancer, as a result of AIDS.

[Stewart Kampel (2nd ed.)]

BENNETT, SALOMON YOM TOV (1761–1838), English engraver and writer. Bennett was born in Polotsk, Belorussia. In 1792 he went to study in Copenhagen. Three years later he moved to Berlin, where he was admitted to the Royal Academy and engraved portraits of Frederick the Great, the king and queen of Prussia, and others. In 1799 he settled in London. However, as his standard of religious observance was open to criticism he found himself cold-shouldered in official circles. He began to attack the chief rabbi, Solomon *Hirschel, in books and pamphlets. Bennett produced a series of polemical, theological, and exegetical works, including: *The Constancy of Israel* (1809); *Discourse on Sacrifice* (1815); *The Temple of Ezekiel* (1824); *The Molten Sea* (1824); *Critical Remarks on the Authorized Versions of the Old Testament* (1824); and *A Theological and Critical Treatise on the Primogeniture and Integrity of the Holy Language* (1835). He began to prepare a new English translation of the Bible of which only the first two parts, comprising Genesis chs. 1–41, appeared (1841). As a frontispiece to the *Temple of Ezekiel* Bennett included an engraved portrait of himself painted by another artist. The work is illustrated by a fine and erudite reconstruction of the general view and ground plan of the Temple.

BENNY, JACK (formerly **Benny Kubelsky**; 1894–1974), U.S. vaudeville, film, radio, and television entertainer. Benny won virtually every award in the entertainment industry, including an Emmy as television's outstanding comedian. Benny portrayed an unyielding skinflint, an atrocious fiddler, and a demanding boss. A steady cast of characters, including his wife, Mary Livingstone (née Sadye Marks, 1909–1983), and valet, Rochester (Eddie Anderson), ran through his shows.

Born in Chicago, Illinois, Benny was raised in Waukegan, a place he made reference to during his entire career. Al-

though there is now a school named after him in Waukegan (Jack Benny Junior High School), Benny's education consisted of one term at Central High School. He worked in his father's haberdashery shop, then at age 16 he got a job playing violin in the pit of the town's Barrison Theater. After spending several years on the road with various partners in piano-violin duos he joined the Navy, where his talent for stand-up comedy was revealed. After his naval stint he created a solo vaudeville act, which ultimately got him noticed by the film industry. In 1928 he appeared in the short film *Bright Moments* and in 1929 headlined in the films *Hollywood Revue of 1929* and *Chasing Rainbows*, and in *Medicine Man* (1930). With this national exposure in film, Benny became a star.

In 1932 Benny hit the radio waves, featured on his friend Ed Sullivan's talk show. Two months later, Benny was the host of his own radio program. Over the next eight years, he became one of the biggest names in radio with his weekly half-hour comedy show. According to Benny, comedy was based on seven principles: the joke, exaggeration, ridicule, ignorance, surprise, the pun, and the comic situation. Fine-tuning those principles as he went along, Benny added a regular cast to his show. In addition to Rochester and his wife, Mary, they included Phil Harris, Dennis Day, and Don Wilson.

In 1950 Benny advanced to television. The Jack Benny Show entertained 18 million viewers for 15 years. Some of the classic recurring themes were his stinginess, his vanity about his supposed age of 39, a basement vault where he kept all his money, and a feigned ineptness at playing the violin. Added to Benny's famous pregnant pause and exasperated "Well!" were a mincing walk, an affected hand to the cheek, and a sustained look of disbelief when confronted by a problem. During that time he starred in several films as well: *The Big Broadcast of 1937*, *Buck Benny Rides Again* (1940), *Love Thy Neighbor* (1940), *Charley's Aunt* (1941), *To Be or Not to Be* (1942), and *Who Was That Lady?* (1962). When his TV show ended in 1965, the perennial 39-year-old was 71. But he did not retire from his beloved show business. He appeared in the films: *It's a Mad, Mad, Mad, Mad World* (1967), *A Guide for the Married Man* (1967), and *The Man* (1972). He returned to NBC once a year to do a TV special, performed with symphonies, and made numerous live appearances in theaters in the U.S. and abroad.

Although the character he portrayed on radio and tv was as miserly as they come, the real Jack Benny was extremely generous. And at age 60, he began to take violin lessons to perfect his craft. He played benefit concerts to sell-out audiences to raise money for musicians and concert halls. In 1961 his benefit concert helped save New York's Carnegie Hall from being demolished. In addition, he raised \$20,000 for the construction of a music center near Waukegan, and \$838,000 for a conservatory at the University of Hartford.

In 1974, his final year, he was working on his third TV Farewell Special for NBC and preparing for his first starring role in a film in 30 years. He was to co-star with Walter Matthau in the comedy *The Sunshine Boys*. However, when the movie was completed, Benny's best friend George Burns

played the part in his place. In 1989 Jack Benny was inducted into the Radio Hall of Fame. With his daughter, Joan, he co-wrote his memoirs, entitled *Sunday Nights at Seven*, which was published posthumously in 1990.

[Ruth Beloff (2nd ed.)]

°BENOÎT, PIERRE-MARIE (1895–1990), French priest and Righteous Among the Nations. Born Pierre Péteul, in Bourg d'Iré (Marne-et-Loire), France, to a family of flour millers, Benoît entered the Capuchin-Franciscan order in 1913. After a tour of duty in the French army during World War I, where he was wounded, he took up theological studies, earning a doctorate in theology and teaching at the Capuchin college in Rome. With Italy's entry into World War II in June 1940, he was sent back to France, and took up residence at the Capuchin convent in Marseilles, at 51 Croix-de-Regnier Street. This eventually became a beehive of activity to help Jews in flight to acquire lodgings, identity documents, and baptismal certificates as well as aid in crossing to Switzerland or Spain. In this he was coopted by local Jewish and non-Jewish religious and lay leaders. After the German occupation of the Vichy zone, in November 1942, Benoît traveled regularly to Nice, then under Italian occupation. There the Jewish-Italian banker Angelo Donati introduced Benoît to Guido Lospinoso, the newly appointed Italian commissioner for Jewish affairs, who agreed to Benoît's request to be allowed to continue his rescue activity of Jews. Fearing a German takeover of the Italian zone, Donati and Benoît devised a plan to remove the approximately 30,000 Jews there to Italy proper, and for this Benoît went to Rome to make arrangements. In an audience with Pope Pius XII, on July 16, 1943, Benoît requested the Vatican's intercession with the Italian government to facilitate the transfer plan. In addition, he asked the Vatican for aid in obtaining news of French Jews deported to Germany and improvement of the situation of Jews in French detention camps as well as intervention with Spain to allow the repatriation of Jews claiming Spanish ancestry. It is not known if the Vatican acted on these requests. In the meantime, with the overthrow of Mussolini, on July 25, 1943, the transfer plan was amended to move the Jews by ships to North African havens. The new Italian government of Marshal Badoglio was prepared to provide four ships and requisition trucks, and the U.S.-based Joint to underwrite the cost of this large-scale operation. Benoît also received support for this undertaking from Francis Osborne and Myron Taylor, the British and American diplomatic representatives to the Vatican. Italy's surrender to the Allies, however, on September 8, 1943, and the immediate occupation of Italy and its zone in France by the Germans scuttled this rescue operation. Benoît, now under the name of Padre Benedetto, worked closely with Delasem (*Delegazione per l'Assistenza dei Emigranti Ebrei*), originally created to deal with facilitating Jewish emigration, and presently occupied with helping Jews in hiding. Elected to Delasem's executive board, when its president Settimio Sorani

was arrested, Benoît replaced him as head. At first, Delasem's activities were centered in the Capuchin offices, on 159 Via Sicilia; then, for security reasons, it moved its operations from place to place. It dealt mainly with obtaining various forms of forged documents, food, ration cards, and residencies for the thousands of Jews in Rome, many of whom had fled there from other regions in Italy, and originating in various countries. Benoît, together with his Jewish aide Stefan Schwamm, also solicited the aid of the Swiss legation, as well as the Romanian and Hungarian legations, countries allied to Nazi Germany, in obtaining various documents, including "letters of protection." Financing came from Delasem funds, the Joint, and Genoa-based Cardinal Pietro Boetto. It is estimated that as many as 4,000 Jews benefited from Benoît's aid. As his fame spread among Jewish refugees, many sought out the "Father of the Jews." Benoît escaped several attempts to arrest him, and he eventually went into hiding for about a month, and returned to Rome to witness the city's liberation on June 4, 1944. Afterwards, Benoît was hailed by the Italian Jewish community. In 1966, Yad Vashem awarded him the title of Righteous Among the Nations. In 1978, he wrote: "What I did for the Jewish people, what I did to merit being called 'Father of the Jews' is but an infinitesimal contribution of what should have been done to prevent this most heinous and satanic slaughter of some six million Jews, which will undoubtedly remain mankind's foulest disgrace – a shame affecting all those who participated or allowed it to happen.... It is by divine providence that the Jewish people wishes to live and fulfill its divine goals – first, for its own good, then, for the good of all humanity."

[Mordecai Paldiel (2nd ed.)]

BENOLIEL, Moroccan family. **ELIEZER**, a leading citizen of *Fez (1730), established his family in Gibraltar; there **JUDAH** (d. 1839) was consul-general of Morocco (1817), the only agent of the sultan in the service of the European powers, signed the treaty with Austria in 1830, and was later the representative of that country. Judah negotiated with Sweden, Norway, Denmark, and Belgium and reestablished peace between Sardinia and Morocco. As president of the Gibraltar Chamber of Commerce, he enjoyed the confidence of European financiers. His financial interests were widespread and at his death he left a fortune estimated at about three million gold dollars. He was president of the Jewish community in Gibraltar and founded charitable institutions in Morocco. At his request the sultan authorized the reconstruction of the synagogue in Tangiers. Joseph *Benoliel was a scholar and bibliophile.

[David Corcos]

BENOLIEL, JOSEPH (José; 1888–1937), Portuguese scholar and bibliophile. Benoliel was born and died in Tangiers but spent most of his life in Lisbon. He was a distinguished philologist, fluent in Hebrew, Arabic, Spanish, French, and Portuguese. After studying in a yeshivah in Morocco and in the Oriental School of the Alliance Israélite Universelle in Paris, he taught for a time at Mikveh Israel in Palestine. He then became professor of French and Hebrew at the University of Lisbon as well as official translator for the Portuguese Ministry of Foreign Affairs. He wrote many books, including French grammars and French and Portuguese dictionaries; a volume of poetry entitled *Echos de solidão* which came out in 1897; a volume of liturgical pieces entitled *Porat Yosef*, published in 1887; and studies on the *Lusiadas* of Camões, parts of which he translated into Hebrew.

[Moses Bensabat Amzalak]

BEN PETURA (also **Ben Peturi**, **Ben Peturin**; early second century), *tanna*. He is best known for his dispute with R. Akiva: "Two men are traveling in the desert; one has a pitcher containing enough water to enable one of them to reach a place of habitation. If they share the water both will die; if one drinks, his life will be saved." Ben Petura taught: "It is better that both drink and die than one witness the death of his companion." But R. Akiva expounded: "It is written: that thy brother may live with thee (Lev. 25:36) this means that 'thy life takes precedence over that of thy brother'" (BM 62a; Sifra 9:5, with slight variations).

[Zvi Kaplan]

BEN-PORAT, MIRIAM (1918–), Israel jurist and state comptroller. Born in Vitebsk, Russia, Ben-Porat grew up in Lithuania and emigrated to Palestine in 1931. In 1945 she completed her law studies. She joined the Ministry of Justice in 1948, and from 1950 to 1958 served as deputy state attorney at the Ministry of Justice and from 1958 to 1975 as judge of the District Court of Jerusalem, appointed its president in December 1975. In November 1976 she was appointed acting judge of the Supreme Court and a permanent justice in 1977; from 1983 to 1988 she was vice president of the court. During these years, from 1964 to 1978, she held an academic position as associate professor in the Hebrew University and also wrote commentaries on the laws of assignments and contracts. In 1988 she retired from the court and became state comptroller, a position she held for 10 years, until 1998, when she retired

after two terms. During her time in office, she strengthened the institution of state comptroller as the “watchdog of Israel’s democracy,” closely examining the activities of government ministries and the public sector. In 1991 she was awarded the Israel Prize for special contribution to society and the State.

[Shaked Gilboa (2nd ed.)]

BEN-PORAT (Kazaz), MORDEKHAI (1923–) Israeli politician, member of the Sixth to Eighth and Tenth Knessets. Ben-Porat was born in Baghdad. In 1942 he joined the Ḥalutz movement in Iraq and immigrated to Eretz Israel in 1945. In 1947 he joined the *Haganah. He fought in the War of Independence, and finished the first officers’ course in the IDF in 1948. In 1949 he returned to Iraq to prepare over 120,000 Iraqi Jews for immigration to Israel. He remained in Iraq for two years and was detained by the Iraqi authorities four times, each time managing to escape – the last time after being tortured.

In 1955 he was elected as head of the Or-Yehuda local council, a position he held until 1969. He was the founder and first chairman of the Center for the Heritage of Babylonian Jewry in Or-Yehuda. He was one of the founders of *Rafi and was elected on its list to the Sixth Knesset in 1965. Following the foundation of the Israel Labor Party in 1968, he was elected to the Knesset on the Alignment list, and in 1970–72 was deputy secretary general of the Labor Party. He was elected on the Alignment list to the Seventh and Eighth Knesset, but left the parliamentary group in March 1977 and continued to serve as an independent MK. In 1975 he was one of the founders of the World Organization of Jews from Arab Countries, becoming one of its chairmen. In 1977 he was member of the Israeli delegation to the United Nations. In 1979, after the rise to power in Iran of the Ayatollah Khomeini, Ben-Porat was sent to Teheran to help Jews leave the country. In 1981 he was elected to the Tenth Knesset on behalf of Telem, a party formed by Moshe *Dayan a short time before his death, and a year later was appointed minister without portfolio in Menahem *Begin’s second government. In June 1983 Telem broke up, and Ben-Porat established a parliamentary group by the name of the Movement for Social Zionist Renewal. In January 1984 he resigned from Yitzḥak *Shamir’s government, demanding that a National Unity Government be formed. He joined the Likud in 1988.

He wrote *Le-Bagdad ve-Hazarah* (1996; *To Baghdad and Back: The Miraculous 2000-Year Homecoming of the Iraqi Jews*, 1998).

[Susan Hattis Rolef (2nd ed.)]

BENREMOKH (Rimokh, Remoch, Rimoc, Ramukh), family in Spain and Morocco. SOLOMON BENREMOKH (1285) was a communal leader in Lerida, Spain. The exegete ABRAHAM BEN ḤAYYIM was born in Barcelona. He wrote a commentary on Psalms, to which he appended an autobiography containing information on the situation of the Jews in southern Europe. In 1391 his home was pillaged, his possessions stolen, and he himself imprisoned. He participated in the disputation of

*Tortosa in 1413–14. In the 15th century the Benremokh family fled to Morocco, where it attained a position of leadership in the community before 1492. ḤAYYIM BEN SHEM TOV (d. after 1526) was one of the spiritual leaders of the indigenous communities of the kingdom of Fez, and SHEM TOV BEN ABRAHAM was their *nagid*. A dictatorial person, his dispute with the Spanish exiles of 1492 on questions concerning ritual slaughter created a friction of long duration between them and the native Jewish community. Dismissed from office in 1527, he was replaced by his relative SAUL BEN SHEM TOV who remained *nagid* until after 1563. YAMIN, confidential adviser to King Mūlay Zaydān, was sent on a mission to London in 1615 and in 1624 to Holland, where he remained until 1628. SHEM TOV (II) was *nagid* of Fez until his death in 1648. In 1650 his brother bought the position from the king against the will of the community, to which he caused great suffering. Thereafter, the family gave up political activity but remained among the most respected members of the Fez community. Part of the family settled in Gibraltar in 1785 and in London.

[David Corcos]

BENRUBI, ISAAC (1876–1943), philosopher. Born in Salonika, he was a member of a well-known Turkish family which produced rabbis and rabbinic emissaries. After serving as a teacher in a public school in Philippopolis (Plovdiv) in Bulgaria, he left for Jena, Germany, where he studied philosophy with Rudolf Eucken. In 1900, while attending the Sorbonne, he became interested in contemporary French philosophy. His participation in the Second International Congress of Philosophy in Geneva (1904) brought him into personal contact with the leaders of the philosophic schools in France. Benrubi decided to devote himself to the study of modern French philosophy and to disseminate its ideas abroad, especially in Germany, where almost nothing was known of French philosophy after Comte. In addition, he was eager to spread knowledge of the German philosophy of idealism in France. From 1907 to 1914 he attended the lectures of Bergson in Paris, where he was asked to prepare a German translation of Bergson’s book *Matière et Mémoire* (1896). Benrubi undertook this task with the assistance of Bergson. He engaged in frequent conversations with Bergson on philosophical, religious, social, and political questions, keeping current notes of these conversations, which took the form of his book *Souvenirs sur Henri Bergson* (1942), an important source for an understanding of Bergson’s personality. During World War I, he lectured at the University of Geneva on contemporary French and German philosophy. After the war, he finally completed the first part of his original project: an exposition of modern French philosophy, which was first published in an abridged version both in English, *The Contemporary Thought of France* (1926),

and in German, *Philosophische Stroemungen der Gegenwart in Frankreich* (1928). In 1933 the complete work appeared in French, under the title, *Les sources et les courants de la philosophie contemporaine en France*. Benrubi wrote this book, on the basis, among other things, of the comprehensive conversations he had had with the thinkers of whom he wrote. After his death, his friend, Axel Stern, published a book of selections illustrating his views on epistemology and ethics, *Connaissance et Morale* (1947).

[Samuel Hugo Bergman]

BENSANCHI, MENTESH (Mordecai; 1882–1943), Greek journalist and member of parliament. Born in Salonika, he worked as a journalist for the Judeo-Spanish newspaper *La Epoca*, and the French newspaper *Salonique*. With the termination of *La Epoca*, in 1912 he was the founding editor of *El Liberal*. He also worked for the government newspaper *La Liberta*. Later, he became editor of several Salonika newspapers, including *El Imparcial* and *L'Indépendant*. As a Zionist, he was active in the *Kadima* society, which promoted Hebrew culture and language, and as its general secretary he was active in Zionist propaganda and took an interest in problems of Jewish settlement in Erez Israel. He was one of the editors of the Zionist weeklies *La Esperansa* and *El Congreso Jidyó*, which appeared in French and Judeo-Spanish during WWI. During the years 1926–30, he was the head of the *Jewish National Fund in Salonika. A liberal Zionist and an outstanding orator, he was sent by Salonika Jewry as its representative to the Greek parliament. In the 1925 Greek national elections he was elected as a Kafandarist (Progressive Liberal). He was re-elected in 1928. As an active Jewish-Zionist public figure, he often clashed with ultra-Greek nationalists. After the 1931 antisemitic Campbell riots in Salonika, he gave a strong speech in parliament against the disturbances and the support of the local government for the rioters. Before WWII, the Jewish Agency decided to make him an emissary to Eastern Jewish communities for fundraising and Zionist propaganda. He was an eloquent speaker in Judeo-Spanish and French. In the 1930s, in the press, he exposed the antisemitic Kleiber, who had infiltrated into local Salonikan Jewish circles and eventually became a Nazi collaborator. Bensanchi wrote numerous articles against Germany and was blacklisted by the Germans. In the summer of 1942, he was caught by the Germans hiding with his family in a village in Crete, was interned in Larisa and Salonika, released, and in 1943 finally was deported to Auschwitz, where he died.

[Yitzchak Kerem (2nd ed.)]

BEN-SASSON, HAIM HILLEL (1914–1977), Israeli historian. Ben-Sasson was born in Volozhin, Lithuania, and immigrated to Palestine in 1934. He taught at the Hebrew Univer-

sity, Jerusalem, from 1949 and became a full professor in 1970. Among Ben-Sasson's published works are *Millon le-Munaḥei ha-Politikah* (1941), a Hebrew political dictionary; *Perakim be-Toledot ha-Yehudim bi-Ymei ha-Beinayim* (1958), a history of the Jews in the Middle Ages; and *Hagut ve-Hanhagah* (1959), on the social concepts of Polish Jewry at the end of the Middle Ages. He also edited the textbook of Jewish history *Toledot Am Yisrael* (3 vols., 1969–70; *A History of the Jewish People*, 1976). From 1966 served as one of the editors of the Hebrew historical quarterly *Zion*; he was also editor (first edition) of the *Encyclopaedia Judaica's* history division for Jewish history in Central and Eastern Europe and the departmental editor for general articles on Jewish history, Jewish economic history, and the history of the Jews in Poland and Lithuania.

BENSAUDE, Moroccan-Portuguese family. **ABRAHAM BENSAUDE** (1790–1868) left Morocco after the creation of a mellah in his hometown of Rabat in 1807. In 1819, he settled in São Miguel, in the Azores and founded the first Jewish community on the island. He was joined by his brother **ELIAS** and his cousin **SOLOMON**, who established the firm of Bensaude and Company. Under the direction of the latter's son, **ABRAHAM**, this became one of the most important enterprises in Portugal, with its head office in Lisbon. By the mid-19th century the Bensaude family had established a network of commercial relations between branches in Mogador, Gibraltar, Hamburg, London, Manchester, and Lisbon. The family of the first Abraham Bensaude contributed to the economic development of San Miguel for over a century. His son **JOSÉ** (1835–1922) established the tobacco industry and promoted the culture of pineapples, tea, and flax. José's son **JOAQUIM** (1859–1952) was a distinguished Portuguese historian, noted for his research into the history of Portuguese scientific navigation, *Lastronomie nautique au Portugal à l'époque des grandes découvertes* (Berne, 1912). He disproved Alexander von Humboldt's thesis concerning the German origin of scientific navigation in Portugal. In particular, he pointed out the important part played by Jewish astronomers and astrologers in the Iberian Peninsula during the Middle Ages, from which scientific navigation in Portugal originated.

[John Alfred Nathan]

BEN-SHABETAI, ARI (1954–), Israeli composer. Born in Jerusalem, Ben-Shabetai studied at the Guildhall School of Music in London, England and graduated cum laude in composition and theory of music; with Mark *Kopytman at the Jerusalem Rubin Academy of Music and Dance (1983); and with George Crumb and Richard Wernick at the University of Pennsylvania, U.S. (1984–87), where he received a Ph.D. in music composition.

Ben-Shabetai has won many awards and prizes. His *Sinfonia Cromatica* won first prize in the 1994 Israel Philharmonic Orchestra Composition Competition and was included

in the program of its tour to Germany, France, Italy, and the U.S. with Zubin *Mehta conducting. *Magreffa* for symphony orchestra was commissioned in 1995 by Lorin *Maazel for the Pittsburgh Symphony Orchestra and performed both in Pittsburgh and Jerusalem. In 1990 Ben-Shabetai was awarded the AKUM Composition Prize for *Yehezkel* (Concerto for Cello and Orchestra). In 1996 he received the Prime Minister's Prize for composers. His *Elegy For Anna Frank* won the Israel Sinfonietta Prize (1982) and his *Three Romances* for piano the AKUM Prize (1991).

Influenced by contemporary music of the 1980s and 1990s and Oriental music, Ben-Shabetai can be categorized as one of the earliest composers of the postmodern style. His individual style incorporates influences of heterophony, post-impressionistic harmony, and minimalism as well as modern rock and jazz music (*Blues and White* for piano, *Deus Ex Machina* for electric violin and DJ).

From 1987 he was a professor at the Jerusalem Academy of Music and Dance. He also served as chairman of the Israel Composers League for four years, during which period he founded the Israeli Music Center publishing house and produced the *Anthology of Israeli Piano Music* published by this organization. His chamber opera *Aya No Tsuzumi (The Damascus Drum)*, composed to a gibberish libretto and based on the Noh Theater play was commissioned by and premiered at the Tel Aviv Biennale 2004).

[Dushan Mihalek (2nd ed.)]

BEN-SHAKHAR, GERSHON (1942–), Israeli cognitive psychologist and president of Israel's Open University. Ben-Shakhar's fields of inquiry are cognitive psychophysiology, psychophysiological detection of information, psychological testing and individual differences, and the confirmation bias in expert opinions. Ben-Shakhar completed his academic studies at the Hebrew University of Jerusalem, receiving a B.A. in psychology and statistics in 1966, an M.A. in psychology in 1970, and a Ph.D. in psychology in 1975. In 1976, after a postdoctoral year at Northwestern University, he joined the department of psychology at the Hebrew University; he was head of the department 1987–90, becoming a full professor in 1991. Between 1992 and 1995 he was the dean of the Faculty of Social Sciences at the Hebrew University, and from 1995 until 1998 he was pro rector of the university. During these years he was visiting professor at Stanford, Toronto, and Brandeis universities. In 2003 he was appointed president of the Open University. Ben-Shakhar wrote many articles and a number of books, among them *Theories and Applications in the Detection of Deception: A Psychophysiological and International Perspective* (with J.J. Furedy, 1989) and *Studies in Psychology: Volume in Honor of Sonny Kugelmass* (edited with A. Liebllich, 1995).

[Shaked Gilboa (2nd ed.)]

BEN SHEMEN (Heb. בֵּן שֶׁמֶן), youth village and moshav in central Israel, in the northern Judean foothills, 1.8 mi. (3 km.) east of Lydda. Land bought here in 1904 by the Anglo-Pales-

tine Bank was transferred to the *Jewish National Fund in 1907, thus becoming one of its first holdings in the country. "Atid," a Jewish company for oil and soap production, founded a factory here in 1905. A year later, Kiryat Sefer, a children's village, was established for orphans of the *Kishinev pogrom, under the direction of Israel *Belkind. In 1908 the Palestine office of the Zionist Organization set up a training farm for agricultural workers; they planted groves of olives and other fruit trees. These plantations were then named "Herzl Forest." Ten Yemenite families were settled at Ben Shemen in 1911 to combine farming with arts and crafts in the style of the *Bezalel School of Jerusalem. During World War I Ben Shemen was a battlefield between the German-Turkish and the Allied armies. It was abandoned and largely destroyed. In 1921 one of the first moshavim was founded at Ben Shemen. In 1927 an agricultural school was opened under the direction of Siegfried *Lehmann and in 1934 it was among the first institutions to be included in the framework of *Youth Aliyah. Early in 1948, during the War of Independence, both the school and the moshav came under siege and the school was evacuated to the Hefer Plain until the end of the year, there constituting the basis for the Ne'urim Youth Village. In 1952 a new moshav (affiliated with Tenu'at ha-Moshavim) was established by settlers from Romania, whose main occupation was dairy and citrus farming. In 1968 Ben Shemen had 920 inhabitants, of whom 720 were in the youth village. In the mid-1990s Ben Shemen had approximately 1,360 inhabitants, of whom 990 were in the youth village. In 2002 the population of Ben Shemen (moshav) was 550 residents with another 638 in the youth village. The school includes an elementary and high school with dormitories. The name is taken from Isaiah 5:1.

[Efraim Orni]

BENSHEM, Ashkenazi term, probably derived (via Old French) from the Latin *benedicere*, meaning "bless" or "pronounce a benediction." It is mainly used for *Grace after Meals which, when recited by three adult males, is introduced by a formula, of which the Yiddish version is *Raboysay, mir volen benshen* ("Gentlemen, let us say Grace"). It is also used as a designation for the Prayer for the New Moon, *Rosh Hodesh benshen*, and for the benediction recited by a person who has survived a perilous escape, *gomel benshen*. The kindling of Sabbath and festival lights is called *likht benshen*. The blessing of children by parents is also called *benshen*. The term corresponds to the Sephardi *bencao*.

BEN SIMEON, RAPHAEL AARON (1848–1928), rabbi. Ben Simeon, who was born in Jerusalem, became chief rabbi of Cairo in 1891. Toward the end of his life he returned to Palestine and settled in Tel Aviv. Ben Simeon wrote a number of works, mainly dealing with questions of *halakhah* and ritual. They include *Nehar Mizrayim* (1908), on the ritual followed by the Jews in Egypt, and *Sha'ar ha-Mifkad* (1908–19), on the various rituals observed by the Jerusalem communities. His collection of responsa, *U-mi-zur Devash* (1912), includes rul-

ings by his father David; *Tuv-Mizrayim* (1908) gives genealogies of Egyptian rabbis.

[Eliyahu Ashtor]

BEN SIRA, ALPHABET OF, a narrative, satirical work, written probably in the geonic period in the East. The *Alphabet of Ben Sira* is one of the earliest, most complicated, and most sophisticated Hebrew stories written in the Middle Ages. Four versions of the work have been printed: (a) the usual text found in most editions and manuscripts, edited with notes by Steinschneider and published in Berlin in 1858; (b) a fuller version of part of the work that was discovered by Steinschneider in a manuscript in Leiden (parts of it were added as notes to his edition); (c) a totally different version printed by Loewinger and Friedman from a Kaufmann manuscript in Budapest, published in Vienna in 1926; and (d) part of a fourth version discovered by Habermann in a manuscript in Jerusalem and published in 1958. There are more than 50 extant manuscripts of the work, in full or in part, many of which contain different versions and additional stories.

There is no reason to doubt the unity of the work as a whole, despite the fragmentary character of the different versions. All the versions share a special, satirical, and even heretical, character, and this indicates that they all were written by a single hand. They seem to reflect varying degrees of censorship on the part of editors and copyists. The complete work contains four parts. The first part is the biography of Ben Sira from his conception until the age of one year. This story, omitted in many editions, explains how Jeremiah, the prophet, was simultaneously Ben Sira's father (the numerical value of Ben Sira's name equals that of Jeremiah), and grandfather. Ben Sira's mother was Jeremiah's daughter. The old prophet was forced to an act of onanism by wicked men, and his daughter conceived from his emissions when she came to bathe. The form of this story is based on a biblical verse that tells the glories and wonders of God's deeds; thus the story satirizes not only Jeremiah, but God's deeds as well.

The second part is more sophisticated in form. It tells how Ben Sira, now one year old, meets with his teacher, who tries to teach him the alphabet. Instead of repeating each letter of the alphabet after his teacher, Ben Sira responds with an epigram beginning with that letter. The epigrams lead the teacher to tell the story of his life. It may be assumed that the original structure of this part was 22 + 12 paragraphs, each containing a letter, an epigram, and a part of the story.

The third part is the longest and contains most of the narrative material in this work. It recounts the story of Ben Sira's life and adventures in the court of Nebuchadnezzar, king of Babylonia. It also includes stories told by Ben Sira himself as answers to the king's questions. These stories often include pornographic elements, as well as derogatory descriptions of biblical figures, like King Solomon or Joshua. Some of the stories in this section contain motifs from international folklore and may be based on folktales, but they were adapted to

the special framework of the work and satirical elements were added to them. Examination of the various versions indicates that here, too, there were 22 stories, arranged according to the letters of the alphabet, to which 12 other stories were added.

The fourth part, which is found in most versions and gave the work its name, contains 22 alphabetically arranged epigrams attributed to Ben Sira that serve as material for discussion and interpretation by Ben Sira's son, Uzziel, and his grandson, Joseph b. Uzziel. The contents are satirical and even heretical. It may be assumed that this part was constructed in the same manner as the two previous ones – 22 + 12 sections. The work, therefore, displays elements of unity both in structure and in its ideological aims. It is all but impossible, however, to discover the background upon which such a work could have been written. Some scholars (L. Ginzberg and others) believe that it aimed at ridiculing the story of Jesus' birth; but the basis for such a conclusion may be found only in the first part, and even this is not very clear, for the irony seems to be directed more against God than against Jesus. It is hardly possible that the author was a Karaite, as some of the abusive stories are directed against biblical figures, and not only against the Talmud and Midrash. It seems likely that the author did not belong to any organized group or definable ideological movement, but was merely a writer with an anarchistic tendency who used satire to ridicule all the institutions of established religion in his day.

Another difficult problem is the relationship between this pseudepigraphal work and the original proverbs of Ben Sira. Some of the proverbs and epigrams included in the work are originally in the work of Ben Sira, but many such proverbs are found in talmudic literature, and the author probably took them from there. The author of the pseudepigraphal work did not even know Ben Sira's first name. There is only one slight connection that might be accidental: the Wisdom of *Ben Sira has a preface written by the author's grandson, who edited the work, and in the pseudepigraphal work the figure of a grandson is also present.

It is impossible to fix even the approximate date of this work. It has been suggested that a quotation from the work is included in the tenth-century *Arukh*, but this now seems very doubtful. The *Alphabet*, however, seems to have been written in the East after the rise of Islam.

Maimonides and other authorities attacked the work vigorously, but it was generally accepted as part of the midrashic tradition, to the extent that a circle of Ashkenazi ḥasidic mystics in the 12th and 13th centuries attributed some of their mystical compilations to works and theories received from Joseph b. Uzziel, who inherited the wisdom of Ben Sira and Jeremiah. The anarchistic and heretical elements in the work went unrecognized, probably because of the censorship exercised by copyists, who prevented the full version from being known to readers.

[Joseph Dan]

BEN SIRÁ, SIMEON BEN JESUS (second century B.C.E.), Hebrew aphorist, sage, and scribe, the author of *Wisdom of *Ben Sirá* (Ecclesiasticus). Ben Sirá was a younger contemporary of the high priest Simeon (50:1ff.), apparently Simeon the Just, who according to the Talmud and Josephus (*Ant.*, 12:43, 157) lived at the beginning of the third century B.C.E. In the introduction to the Greek translation of the *Wisdom of Ben Sirá*, the author is referred to as Jesus, by which name he is generally known in the Christian tradition. In the more authoritative Hebrew version, however (50:27; 52:end), his full name is given as Simeon b. Jeshua b. Eleazar b. Sirá. The book was translated into Greek by Ben Sirá's grandson after his arrival in Egypt in 132 B.C.E. From this date, given by the grandson in the preface to his translation, it may be reckoned that Ben Sirá completed the book about 170 B.C.E. Apparently Ben Sirá's life was at one time in jeopardy because of a false charge leveled against him, from which, however, he was saved (51).

[Moses Zevi (Moses Hirsch) Segal]

BEN SIRÁ, WISDOM OF (also called **Ecclesiasticus**), a work of the Apocrypha, which, though usually known by this name, may have been called by its author, “The Words of Simeon b. Jeshua,” the title found on the Hebrew fragments. In Greek the book is called Σοφία (Ἰησοῦ υἱοῦ) Σειράχ, “Wisdom of (Jesus son of) Sirach,” and hence in Latin it was known as *Siracides* (i.e., Sirá's son). Its common name in modern times, *Ecclesiasticus* (abbr. *Ecclus.*) dates from the 4th-century custom of naming certain homiletical books *libri ecclesiastici* (i.e., books for (reading in) the church). The book is divided into eight sections, each introduced by a poem in praise of wisdom or of the wise man. The last section (Hebrew version 44–50), called “The Praise of the Fathers,” eulogizes the great figures of the Bible, with the exception of the final chapter which is devoted to praise of Simeon b. Johanan the priest, i.e., *Simeon the Just. The greater part of the work consists of maxims, poetic in form, like those in the book of Proverbs. It also contains psalms of supplication and of thanksgiving (36:1–17 (33:1–13; 36:16–22); 42:21–35 (15–25), 43, et al.), these latter being characterized by a lofty poetic style and by elevated thought (cf. 42:21 (15); 43:33 (58)). (References are given to two editions: the first to the Hebrew edition by M.H. Segal (19582), the second to the standard edition in the Greek text of the Apocrypha). The work also includes didactic poems on subjects of daily life and on historical events, after the man-

ner of certain psalms (13; 15; 16; 18; 34:19–35; 40:41; et al.), and concludes with an epilogue comprising two poems of praise and thanksgiving, and an alphabetic poem on the importance of acquiring wisdom.

The *Wisdom of Ben Sirá* directs man to the love of wisdom and ethical conduct, teaches him virtue and good deeds, and proper behavior in eating and drinking, speech and silence, work and commerce, studying and teaching, poverty and wealth, health and sickness. It also seeks to instruct man to perform all his actions with intelligence and understanding, moderation, care and wisdom, so that his deeds may bring to him and others the appropriate benefit. It teaches man how to behave within his family circle: toward his father and mother, his wife, his sons, and his daughters. It guides him in his conduct toward all men. It stresses, as does the book of Proverbs, that the fear of the Lord is the beginning and the end of all wisdom. The work, though written in the spirit of the Bible and in the language of the later biblical books, bears a contemporary impress of the second century B.C.E., and its faith, in general, is that of subsequent Pharisaic Judaism (everything is foreseen but man has freedom of choice: 15:15–17; cf. Avot 3:15). It also reveals some influence of Greek literature and idiom: men grow and fall like leaves on a tree (14:19; cf. Iliad 6:146–9); he becomes wise who is unfettered by affairs, corresponding to the σχολαστικός, the Greek man of leisure. The work also contains a trace of the Greek *gnosis* and perhaps also of its philosophical thought (cf. 42:29–33 (20–23)). Unlike other books of proverbs, in which the authors address themselves to youth, the *Wisdom of Ben Sirá* attaches prime importance to the well-ordered family, the effective basis of which is the father. It is primarily to him that the author addresses himself, advising and instructing him. A man should marry a suitable wife, beautiful and kindly-spoken, who, assisting him, will bring him supreme happiness. He should rear his sons in the Torah, marry off his daughters while they are young, and deal faithfully with his fellow man.

From a literary viewpoint, the work is well constructed. Most of the maxims are arranged according to subject matter, and the various sections have headings such as “The fear of the Lord,” “Honoring parents,” “Humility,” “Lovingkindness,” and the like. For the rabbis of the early talmudic period the work had an importance almost equal to that of the book of Proverbs. Its aphorisms, quoted either in Ben Sirá's name or anonymously, are scattered throughout talmudic literature and are cited by both *tannaim* and *amoraim*, such as R. Levitas of Jabneh (*Avot* 4:4, cf. *Ecclus.* 7:13), Akiva, and Rav. Several of Ben Sirá's maxims are to be found in other books of the Apocrypha, the New Testament, the Syriac version of the book of *Aḥikar as well as in the writings of early medieval Jewish scholars. Ben Sirá's influence on ancient Hebrew prayers and *piyyutim* is particularly great. Although the *Wisdom of Ben Sirá* is quoted in talmudic literature with the introductory phrase “as it is written,” ordinarily reserved for biblical quotations, and is once explicitly mentioned among the

books of the Hagiographa (BK 92b; cf. Ecclus. 27:9), it was not included in the canon. Some *amoraim* even forbade it to be read (Sanh. 100b; TJ, Sanh. 10:1, 28a). In the book of Proverbs the ethics are personal and worldly, and its general character is bound up with its secular origin, even though the religious content of the book is of prime importance. In the Wisdom of Ben Sira there is a notable difference. Wisdom, which is spoken of in the book of Proverbs as a primordial fascinating entity, is in Ben Sira identified with the Torah given to Israel, emphasizing that it is the true basis of all divine and human wisdom. In the Wisdom of Ben Sira there occur for the first time a number of ideas subsequently found in the *aggadah*, such as that Israel as well as the Torah was among the first acts of God's creation (cf. Ecclus. 36:15 and Gen. R. 1:4) and that the people of Israel (37:29 (25)), the Temple (17:20 (13)) and the priesthood of Aaron and of Phinehas (45:26, 45 (15, 24)) will endure forever (cf. Sif. Num. 92; Lev. R. 2:2). Ben Sira is also the original source for several customs which are later found in the *halakhah* (e.g., the blessing on seeing a rainbow – 43:13 (11)), and contains the earliest reference to the accepted basis of the Eighteen Benedictions and the like. The sages delivered homilies based on Ben Sira's maxims, but changing their form and language. They were even rendered at times in the mishnaic Hebrew or Aramaic spoken by the sages. Excerpts from these maxims, current among the masses, were collected in small compilations, not always in the original order, and they included not only biblical verses but some aphorisms which were not Ben Sira's. As a result these verses and aphorisms were erroneously ascribed to Ben Sira by the rabbis.

The original Hebrew text was no longer extant after the time of Saadiah Gaon (10th century). In the 19th century the work was translated from the Greek into Hebrew by Judah Leib *Ben-Zeev S.I. Fraenkel, and others. In 1896, however, S. Schechter discovered among the *Genizah fragments in Cairo a page of the original Hebrew work. During the next four years, Schechter and other scholars found many other fragments from various manuscripts, comprising about two-thirds of the entire book. In 1929 Joseph Marcus found a fragment from a fifth manuscript containing 46 verses; in 1957 J. Schirrmann found a new folio, and in 1959 yet another folio of manuscript B, as well as two folios of manuscript C. These fragments consist at times of no more than portions of verses, and contain many mistakes, omissions, and corruptions, as well as numerous additions and repetitions. Nonetheless, they presumably preserve an early or even original version. Some fragments of the Hebrew original (6:20–31) were discovered in Qumran Cave II. In 1964 Yigael Yadin discovered at Masada fragments containing chapters 39:27–44:25, which indicate that manuscript B of the *Genizah* represents substantially the original Hebrew version of the book. The Wisdom of Ben Sira was included in the Septuagint, from where it made its way into the Christian Bible. It was translated into Syriac in about 300 C.E. by a Christian (apparently a Jewish apostate). Although these versions contain very many mistakes, by com-

paring them with the Hebrew version it is generally possible to establish the original text of the work.

[Moshe Zevi (Moses Hirsch) Segal]

A critical edition of *Ben Sira*, giving the Hebrew original, including fragments from the Genizah, the Dead Sea Scrolls, and Masada, with facsimiles, was published (1973) by the Historical Dictionary of the Hebrew Language, under the aegis of the Hebrew Language Academy, with Professor Z. Ben *Ḥayyim as chief editor. It provides a complete concordance of all the words in these texts, with textual notes.

On the question of the date of the author and the book, see *Ben Sira, Simeon son of Jesus.

See also *Apocrypha and *Bible, Canon.

In the Arts

In literature and art the Wisdom of Ben Sira has not inspired great creativity. In music, by contrast, Ben Sira's work has proved to be of considerable importance. The use of its texts may be considered under three headings: (a) The Priestly Office. The text beginning *Ecce sacerdos magnus* ("This is the high priest"), a paraphrase based on the praises of Moses and Aaron in chapters 44 and 45, is used in the Catholic liturgy for the commemoration or welcome of high ecclesiastical dignitaries, especially popes and bishops. The traditional plainchant melody was used by Palestrina as a *cantus firmus* (compositional foundation) in the first of his published masses (1554), which was dedicated to Pope Julius III; and also for festive motets on the text itself, such as those written by Constanzo Porta (book of motets for 6 voices, 1585, dedicated to Pope Sixtus V) and Tomas Luis de Victoria (4 voices, in his *Motecta festorum totius anni* ... 1585). The last, like the Palestrina mass, has since been sung at many papal coronations. An *Ecce sacerdos* motet appears in the *Opus musicum* by Jacob Handl (Gallus; 1550–1591), in which other settings of Ben Sira texts also appear. It may be assumed that the attention of composers was drawn to Ben Sira as a text-source by the feeling of obligation, which the Counter-Reformation inspired, that no part of the liturgical cycle be neglected by composers. (b) "Now praise the Lord." The short hymnic passage in ch. 50:22–24, adopted by the Anglican *Book of Common Prayer*, was set by William Byrd (1545–1623) as an impressive six-voiced anthem, *Behold now praise the Lord*. The rhymed German paraphrase *Nun danket alle Gott*, by Martin Rinkart (first published by him in 1636 as a grace at table), became famous as the "German *Te Deum*" when it was sung on the occasion of the peace treaty ending the Thirty Years' War in 1648 to a chorale-melody composed by Johann Crueger (first published in the same year). Translated by Catherine Winkworth in 1858 as *Now thank we all our God*, it became popular in the English-speaking church; and both the German and the English versions have been sung on many historic occasions. Bach used the chorale-melody for his cantata no. 192, *Nun danket alle Gott*, and at the conclusion of his cantata no. 79. Felix *Mendelssohn adapted it for the *Festgesang* which he

wrote for the 400th anniversary of the invention of printing, celebrated at Leipzig on June 25th, 1840.

(c) “Let us now praise famous men.” The opening passage of the “Praise of the Fathers,” ch. 44, in the English version of *The Book of Common Prayer*, has been set for choir by Ralph Vaughan Williams (1923), Cyril Scott (1935), and other English-speaking composers.

Settings of other texts include those by Heinrich Schuetz; the rhymed Dutch paraphrase *Ecclesiasticus* by Jan Fruytier (1965), which used the tunes of Clemens non Papa’s famous *Souterliedekens* (“Little Psalter Songs,” 1556); and the three-voiced canon on “Non impediatis musicam” (“Do not impede the music,” ch. 32, 5²), in G.B. Martini’s *Storia della Musica* (vol. 1, 1757).

BENSON, ROBBY (Robin David Segal; 1956–), U.S. actor, director, voice-over artist. The son of a writer and a stage actress, Benson was born and raised in Dallas, Texas. He started his career in show business at the age of three, acting in commercials and community theater productions. At age 12 he made his Broadway debut starring in a production of *Zelda*, where he exhibited a natural talent for portraying sensitive adolescent characters. As a teenager Benson’s good looks and sympathetic talents landed him in a string of roles in romantic films in the 1970s and 1980s, most notably *Jeremy* (1975), *Ode to Billy Joe* (1976), *One on One* (1977), *Ice Castles* (1978), and the TV production of *Our Town* (1976). Some of these roles exhibited darker and more complex performances such as his memorable portrayal opposite Jack Lemmon in *Tribute* (1980) and his performance as Danny Saunders in Chaim Potok’s *The Chosen* (1981). After recovering from open-heart surgery in 1984, Benson began writing and directing for TV, film, and theater. In 1988 he directed his first feature, *Crack in the Mirror*, and went on to become one of the most successful sitcom directors of the 1990s, directing multiple episodes for such hit shows as *Friends*, *Dream On*, and *Ellen*. He also performed as the gruff voice of Beast in Disney’s Oscar-nominated *Beauty and the Beast*, and continued to voice characters for animated films. In addition, Benson composed scores for numerous films and received two gold records for songwriting with his wife and collaborator, Karla DeVito. Benson also taught in film and theater departments at several universities.

[Max Joseph (2nd ed.)]

BENSOUSSAN, GEORGES (1952–), French historian and Holocaust scholar. After completing a doctorate in modern

history, Bensoussan began teaching history in high school while pursuing a parallel career in historical research and writing. An active militant against antisemitism and Holocaust denial, to which he sought to oppose precise historical knowledge and provocative reflections on the transmission of memory (*Génocide pour mémoire: des racines du désastre aux questions d’aujourd’hui*, 1989; *Auschwitz en héritage? Du bon usage de la mémoire*, 2003), Bensoussan collaborated on several journals (*Raison Présente* in 1989; *Le débat* in 1994), and was eventually appointed chief editor of the *Revue d’Histoire de la Shoah*, a major publication first issued in 1946 as *Le Monde Juif* and renamed in 1997 to better suit its scientific purposes. Later, reacting to the resurgence of antisemitism in France against the background of the Israeli-Palestinian conflict, Bensoussan wrote several pamphlets (some under a pseudonym) and books about the new antisemitism (*Anti-Semitism in French Schools: Turmoil of a Republic*, published by the Hebrew university of Jerusalem, Vidal Sassoon International Center for the Study of Antisemitism, 2004), which echo his previous reflections on the convergence and relationship between antisemitism, anti-Zionism, and Holocaust denial (“Négationnisme et antiséonisme: récurrences et convergences des discours du rejet,” in: *Revue d’Histoire de la Shoah*, May–Aug. 1999), and his academic work on the history of antisemitism in France since the Dreyfus affair (*L’idéologie du rejet: enquête sur “Le monument Henry” ou archéologie du fantasme antisémite dans la France de la fin du XIXe siècle*, 1993). Bensoussan also wrote a general history of the Holocaust (1996) and an intellectual and political history of Zionism (2002).

[Dror Franck Sullaper (2nd ed.)]

BEN ŠTADA, or **Ben Štara**, a person mentioned in two apparently unrelated passages in the Tosefta, identified in later tradition with Ben Pandira (Jesus). The first passage is found in Tosefta *Shabbat* (11:15), which reports a dispute concerning someone who made markings on his flesh. R. Eliezer held such a person liable for the desecration of the Sabbath, while his colleagues considered him exempt from punishment, since this is not the normal way of writing. In support of his position, R. Eliezer said: “Isn’t it true that Ben Štara (other readings: Šitra, Soštra, Štada) learned in this way?” To this the Sages replied: “And because of one idiot, we should hold all of the normal people liable?” The second passage concerns the halakhah in Mishnah *Sanhedrin* (7:10) which permits the authorities to “entrap” someone who seeks to persuade a Jew to engage in idolatry. The Tosefta (San. 10:11), commenting on this halakhah, states: “And that is precisely what they did to Ben Štada (other readings: Štara) in Lydda – they placed two scholars in hiding [to testify against him] and stoned him.” (The spelling of his name is uncertain also in the parallel passages in the Talmudim (see below, and cf. Lieberman, *Tosefta ki-Feshuta*, 1 (1955), 179–80).)

The second baraita, which tells of Ben Štada’s execution, is brought in the Jerusalem Talmud (Yev. 16:6, 15d) virtually

verbatim. The first *baraita*, which describes his practice of writing on his flesh, is brought in the *JT Shabbat* (12:4, 13d) in a form very similar to the text of the *Tosefta*. It differs, however, in one important respect: the rather obscure allusion to Ben Ṣṭara's eccentric behavior ("Ben Ṣṭara, 'learned' in this way") is expanded and explained: "Isn't it true that Ben Ṣṭada [brought witchcraft out of Egypt] in this way?" While it is possible that the Jerusalem Talmud is preserving here an ancient tradition concerning Ben Ṣṭada, it is equally likely that this is a harmonistic interpretation of *Tosefta Shabbat* in an attempt to explain why he was executed in *Tosefta Sanhedrin*.

Both of these traditions were originally brought in the Babylonian Talmud, but they were eliminated in part from later editions as a result of Christian censorship, for reasons that will be made clear immediately. The later printed texts of *TB Shabbat* 104b read as follows: "R. Eliezer said to the Sages: Isn't it true that Ben Ṣṭara brought witchcraft out of Egypt by marking on his flesh? They said to him: He was an idiot, and one does not bring proofs from idiots." Here the *sugya* ends in the later printed editions. The continuation of the *sugya*, as represented by all manuscripts and the earliest printed text, reads as follows: "[Was he] the son of Ṣṭara (or: Ṣṭada)? Wasn't he rather the son of Pandira! Rav Ḥisda said: Ṣṭara was [his mother's] husband; Pandira was [his mother's] lover. [But his mother's] husband was Papos the son of Judah! Rather, his mother was Ṣṭara (or Ṣṭada), his father was Pandira. [But] his mother was Mary the hairdresser (*magdala*)! Rather [she was called Ṣṭada] because of what they say in Pumbedita: She cheated (*saṭa da*) on her husband." The name "Ben Pandira" was understood in the Babylonian Talmud as a euphemism for Jesus (cf. *Tosefta Ḥul.* 2:24, *TB Av. Za.* 16b-17a). It is fairly clear, therefore, that this entire talmudic passage is an anti-Christian polemic, ridiculing the doctrine of the virgin birth of Jesus (see D. Rokeah, "Ben Ṣṭara is Ben Pantira"). In keeping with this anti-Christian tendency, the version of the second *baraita* as brought in the uncensored text of *TB Sanhedrin* 67a reads as follows: "And that is precisely what they did to Ben Ṣṭada (or: Ṣṭara) in Lydda, and they hung him on the day before the Passover" – apparently a reference to the crucifixion. The text then continues as in *Shabbat* ("Was he the son of Ṣṭara? Wasn't he rather ...").

While the Babylonian tradition clearly seems to identify Ben Ṣṭada with Ben Pantira (Jesus), it is highly unlikely that this reflects any historical tradition deriving from the tannaitic period. On the contrary, it is almost certainly a classic example of the Babylonian Talmud's "creative historiography" which seeks to identify obscure and unknown figures (like Ben Ṣṭada) with significant and well known figures (like Ben Pantira = Jesus). The Babylonian Talmud here as elsewhere reworks early sources (*Tosefta* and *TJ*) in order to achieve its own literary and polemical ends. It is therefore not surprising that inconsistencies remain between the older, more original elements, and the more recent trends and interpretations which coexist in the Babylonian Talmud's final retelling of these stories. Attempts to relate all of these various elements

to a particular concrete historical figure will therefore almost always result in contradiction.

For example, Rabbenu Jacob b. Meir *Tam (in early editions of *tosafot* to *Sanhedrin*) mentions an interpretation which identifies Ben Stada with Jesus. This suggestion is based on the allusion to Pandira and strengthened by the mention of a Passover execution and of a mother named Miriam (Mary). R. Tam, however, rejects this view, pointing out that Pappos b. Judah lived a century after Jesus. Furthermore, Jesus was executed in Jerusalem and not in Lydda. Modern scholarship has suggested that Ben Stada may have been the Egyptian prophet who, during the administration of the Roman procurator Felix, persuaded "large crowds to follow him to the Mount of Olives," where at his command, "Jerusalem's walls would fall down and he would provide an entrance to the city" (*Jos., Ant.*, 20:169ff.; *Acts*, 21:38). The only real link between the two, however, is the mention of Egypt. Josephus claimed that the prophet disappeared, whereas Ben Stada (according to the earliest and most reliable evidence) was executed in Lydda, possibly in the second century C.E. (see Derenbourg, *Essai sur les formes des pluriels arabes* (1867), 468–71). Given the scanty evidence concerning Ben Stada which is preserved in the earliest sources, it is unlikely that any definite identification of the historical figure that stands behind these traditions can be made.

[Isaiah Gafni / Stephen G. Wald (2nd ed.)]

BENSUSAN (Ibn Sūsān or Shoshan, also Cohen ibn Sūsān and Levy Bensusan), Moroccan family that can be traced to the 12th century. JUDAH IBN SŪSĀN (d. 1165) was *Maimonides' teacher in *Fez; he was martyred there by the *Almohads. During the 13th and 14th centuries, members of the Ibn Sūsān family held important posts as rabbis, astronomers, physicians, financiers, and diplomats in Christian Spain. Their descendants returned to Morocco after 1391. Some time before 1539, the Moroccan mathematician ISSACHAR B. MORDECAI IBN SŪSĀN settled in Jerusalem and later in Safed, where he wrote *Tikkun Yissakhar* (Salonika, 1564), which was reedited under the title '*Ibbur Shanim*' ("Intercalation of the Years," Venice, 1578). The book includes two treatises on the rituals to be followed according to yearly variations of the Jewish calendar, and the apportioning of the *haftarot* according to the rites of different communities. NATHAN LEVI BENSUSAN was a leader of the *toshavin* ("native") community in Morocco in the early 16th century. Several of his descendants were scholars who were often named in the statutes of the Fez community.

The family constituted a powerful merchant clan in Rabat-Salé, and often acted against the interests of other members of the community. During the 17th and 18th centuries their activities extended to London, where they were active in the Sephardi community. In the 19th century they reinforced

their position in trade in Morocco, especially in Mogador and Marrakesh, where JOSHUA LÉVY-BENSUSAN (19th cent.) represented France in about 1881. SAMUEL LÉVY BENSUSAN (1872–1958), who lived in Essex, England, wrote a number of books about the English countryside, such as *Annals of Maychester* (1936), and also published studies of great artists. He traveled widely and wrote about Morocco, Spain, Paris, Germany, and the haunts of Shakespeare. Bensusan edited a weekly newspaper, *The Jewish World* (1897–98), and *The Theosophical Review* (1925–28).

[David Corcos]

BEN TEMALYON, name of a demon. According to talmudic legend it accompanied R. *Simeon b. Yoḥai on his journey to Rome where he pleaded with the authorities to annul the decree compelling the Jews to have intercourse with their menstruating wives, to desecrate the Sabbath, and not to circumcise their children. The demon entered into the Roman emperor's daughter and when Simeon b. Yoḥai exorcised it, his request was granted (Me'il. 17b). A more detailed account of this miracle is contained in **Halakhot Gedolot* (ed. Hildesheimer, 603–4), where, however, the demon is called "Shamdon" or "Ashmedai." The story frequently recurs in medieval folklore, sometimes with an anti-Jewish bias. Some scholars have attempted to identify Ben Temalyon (or Bar Temalyon) with the apostle Bartholomew about whom a similar legend is related in connection with his missionary voyage to India.

Ben Temalyon (or Telamyon) is also the name of a person who technically avoided perjury by concealing a hundred dinars which he owed to a plaintiff, in a hollowed cane which he asked the latter to hold, and taking an oath that he had returned him the money (cf. Ned. 25a).

BENTOR, JACOB (1910–2002), geologist specializing in the geology, petrology, and tectonics of the Middle East. Bentor was born in Königsberg, Germany, and after studying linguistics at the Sorbonne in Paris and physical science there and in Berlin immigrated to Erez Israel in 1933, where he continued his studies, including geology, at the Hebrew University as well as in Switzerland and France. Back in Palestine in 1940 he completed his Ph. D. theses at the Hebrew University in 1945 and in Clermont-Ferrand in 1952. During World War II he was a consultant to the British administration on various geological projects and in 1949 he joined Hemed Gimel (the Israeli army science corps) and headed the national efforts to map the Negev's natural resources and evaluate its economic potential. One of the major products of this activ-

ity was the Geological Map of the Negev, 1:100,000, which included the mapping of Israel's major mineral deposits – the Negev phosphates and the Timna copper. For this achievement Bentor and his colleague A. Vroman were awarded the Israel Prize for science in 1953. Until 1966 he was at the head of all national mineral and energy resources enterprises, including the Dead Sea resources, the Negev phosphates, Timna copper ore, and petroleum exploration. During his work he also discovered new geological phenomena, such as combustion metamorphism, a contribution in the field of mineralogy that has been recognized by the international mineralogical community, with the mineral "bentorite" being named in his honor. He introduced many new scientific disciplines, such as geochemistry, marine geology, and seismology to the entire earth science community in Israel, and especially to his many students at the Hebrew University, where he was appointed associate professor in 1957 and full professor in 1963. In 1967–74 he headed a large-scale geological study of the Sinai Peninsula. Focusing on the Precambrian Basement of this area, he made a major contribution to the understanding of the Precambrian Arabian Massif and guided many research projects in the framework of this study. He also had a long-term interest in the possible geological origin of many events chronicled in myth and history and wrote on geological events in the Bible. Bentor headed many national and international scientific committees, including the Council for Oceanographic Research, the World Geological Map Project, and the Council of the International Committee for the Scientific Research of the Mediterranean.

He retired from the Hebrew University in 1977 and was associated with the Scripps Institution of Oceanography, where he remained active in his studies on the Precambrian realm and on the combustion metamorphism of the Hatrum Formation in Israel ("Mottled Zone") as well as of similar phenomena in California. He was a recipient of the Freund Prize of the Israel Geological Society (1986).

[Yossi Bartov (2nd ed.)]

BENTOV (Gutgeld), MORDEKHAI (1900–1985). Israel politician, member of the First to Fifth Knessets. Bentov was born in Grodzisk, near Warsaw. He immigrated to Erez Israel in 1920, working for several years in road construction and draining swamps. He graduated from the government law classes in Jerusalem and later became a member of kibbutz *Mishmar ha-Emek, where he lived for the rest of his life. As a leader of the *Ha-Shomer ha-Za'ir movement, Bentov served as its representative in central bodies of the *Histadrut and the Zionist Movement. He was one of the members of Ha-Shomer ha-Za'ir active from the late 1930s in trying to find a peaceful solution to the Arab-Israeli conflict on the basis of bi-nationalism, and was an active member in the League for Jewish-Arab Rapprochement and Cooperation. He was a member of the Jewish delegation to the 1939 Round Table Conference with the British Government to discuss the future of Palestine. Following the failure of the Conference, Bentov

was chairman of a League of Nations committee that prepared a report published in June 1941 on a future constitution for Palestine, which came to be known as the "Bentov book." In 1947 he became a member of the Political Committee representing the Jewish Agency in the UN. In 1943–48 he served as editor of the Mapam daily, *Al ha-Mishmar*. In the 1948 Provisional Government of Israel Bentov was minister of labor and reconstruction. He was a member of the Knesset for Mapam in 1949–65, minister of development in 1955–61, and minister of housing in 1966–69. He wrote *Constitutional Development of Palestine* (1941); *The Road to Bi-national Independence for Palestine* (1947); *Yisrael, ha-Palestina'im ve-ha-Semol* ("Israel, the Palestinians and the Left," 1971); and a 1984 memoir.

[Benjamin Jaffe / Susan Hattis Rolef (2nd ed.)]

BENTWICH, English Zionist family who settled in Palestine during the 1920s.

HERBERT BENTWICH (1856–1932), British Zionist leader and lawyer. An authority on copyright law, for many years he edited the *Law Journal*. Bentwich was born in London. He became a leading member of the English Hovevei Zion and one of the first followers of Theodor *Herzl in England. In 1897 Bentwich organized the first pilgrimage to Erez Israel of the Order of the Ancient Maccabees, on whose behalf, in 1923, he acquired land for settlement at Gezer, near Ramleh. Bentwich was a founder of the English Zionist Federation in 1899 and for some time served as its vice chairman. He was a legal adviser for the *Jewish Colonial Trust. From 1916 to 1918 he served on the Zionist political advisory committee under Chaim *Weizmann. Bentwich settled in Palestine in 1929, spending most of his time at the family home in Zikhron Ya'akov.

His son, NORMAN DE MATTOS BENTWICH (1883–1971), English Zionist, lawyer, and scholar, was born in London, where he practiced law from 1908 to 1912. In 1913 he was appointed commissioner of courts in Egypt and lecturer at the Cairo Law School. During World War I he served in the British Army on the Palestine front and was demobilized with the rank of major. From 1920 until 1931 Bentwich was attorney general of the Mandate government in Palestine, and in this capacity was active in modernizing the country's courts and introducing British law and procedure to replace those of the former Turkish regime. In 1930 an attempt was made on his life by an Arab terrorist. The Mandate government's anti-Zionist policy led him to resign in 1931.

The following year Bentwich was appointed professor of international relations at the Hebrew University of Jerusalem. He advocated Arab-Jewish rapprochement, sharing the views of the *Berit Shalom group. He served as director of the League of Nations' Commission for Jewish Refugees from Germany between 1933 and 1936. In 1951 he retired from the Hebrew University and returned to England where he was active on behalf of the Hebrew University.

Bentwich was a prolific writer. His books on Zionism and Israel include *Palestine of the Jews: Past, Present and Future* (1919), *England in Palestine* (1932), *Fulfillment in the Prom-*

ised Land (1938), *Palestine* (1946²), *Jewish Youth Comes Home, 1933–1943* (1944), *Israel* (1960²), *Israel and her Neighbors* (1955), *Legislation of Palestine* (1926), and *The Criminal Law of Palestine* (1928); on international relations: *The Religious Foundations of Internationalism* (1959²), *From Geneva to San Francisco* (1946), *A Commentary on the Charter of the UN* (1950), and *The Mandates System* (1930); on Hellenism: *Hellenism* (1919), *Josephus* (1914), and *Philo-Judaeus of Alexandria* (1910); biographies: *Solomon Schechter* (1938), *For Zion's Sake* (on J.L. *Magnes, 1954), and on Brigadier F. Kisch. *Wanderer in the Promised Land* (1932), *Wanderer Between Two Worlds* (1941), and *Wanderer in War* (1946) are all autobiographies as is *My 77 Years* (1961). *Mandate Memoirs 1918–1948* (1965) was written in collaboration with his wife Helen, and a biography of his father, *The Pilgrim Father* (1940), in collaboration with his sister Margery (d. 1976). Bentwich's wife, Helen Caroline (née Franklin; 1892–1972), was chairman of the London County Council in 1956–57, and alderman from 1958 to 1965. She wrote *Our Councils, the Story of Local Government* (1962).

JOSEPH BENTWICH (1902–1982), another son of Herbert Bentwich, was an Israeli educator. Bentwich was born in London and settled in Palestine in 1924. From 1928 to 1948 he served as inspector of schools for the Mandate government, and from 1943 to 1948 as assistant director of the Department of Education. Bentwich was principal of the Reali High School in Haifa from 1948 to 1955, and from 1955 to 1958 he lectured on education at the Hebrew University. In 1962 he was awarded the Israel Prize for his contribution to Israel education. Bentwich was a leader of the Amanah ("Covenant") group, established to study and promote new interpretations of Judaism. He edited *Yalkut ha-Datot* ("Anthology of Religions," 1964) and *Yahadut, Mikra'ah* ("Judaism, a Reader," 1967). He published several textbooks for teaching English and mathematics and *Education in Israel* (1965).

Herbert Bentwich's ninth child, Thelma (1895–1959), was a cellist (see *Yellin-Bentwich, Thelma).

[Benjamin Jaffe / Cecil Roth]

°**BENTZEN, AAGE** (1894–1953), Danish biblical scholar, He was appointed professor of biblical studies at the University of Copenhagen in 1929. He was the first president of the International Organization of Old Testament Scholars, which was established in Leiden in 1950, and was instrumental in helping to establish its journal, *Vetus Testamentum*, in the same year.

Bentzen was a prolific scholar, expert in all phases of biblical exegesis. Since he observed little agreement between the J and E documents, and regarded them as independent of one another, he preferred to write in terms of etiological legends, myths, and cultic songs. He almost completely ignored the older classification of literary criticism, including the Documentary Hypothesis, and was inclined instead to emphasize historical narrative, historiography, and strata of traditions. Typical of Bentzen's methodology and thought is his *Mesias – Moses redivivus – Menschensohn* (1948; *King and Messiah*, 1955), where he attempts to assess the contributions of the

English and Scandinavian myth and ritual schools in regard to the cultic situations in the life of the king of Israel. Bentzen criticizes both schools and argues for the impact of history on the cultic myth. Furthermore, it is the “Urmensch” idea which underlies the role of the king, the priest, the prophet, and the messiah in Israel. He also wrote *Introduction to the Old Testament* (2 vols., 1948–49, 1961⁶).

[Zev Garber]

BENVENISTE (also **Bienvéniste**, **Benvist**, **Abenbenist**, etc.), personal name and surname of a widespread Sephardi family. The name originated in Spain and Provence and means “welcome.” It is first mentioned in documents from Barcelona in 1079. After the expulsion from Spain in 1492, the family was dispersed, especially throughout the Ottoman Empire.

Prominent members, in addition to those to whom separate articles are devoted, include **BENVENISTE IBN BENVENISTE** (early 14th century), translator of medical works from Arabic into Catalan during the reign of James II, king of Aragon (1291–1327); **IZMEL (ISHMAEL)** of Barcelona (early 14th century), physician, father of the physician Samuel *Benveniste; **ADZAY (=ḤASDAI) BENVENIST** (mid-15th century), member of the communal council in Saragossa; **JUDAH B. ABRAHAM** (1460–1515), born in Toledo, a descendant of Abraham *Benveniste of Soria, who, after the expulsion from Spain, was active in Salonika; and **NISSIM** (15th century), a scholar whose halakhic queries to Isaac *Aboab were published by Abraham Meldola in *Ziv ha-Einayim*.

BIBLIOGRAPHY: Baer, *Urkunden*, 1 pt. 2 (1936), index, s.v. *Bienvénist*; Baer, *Spain*, index; Cantera-Millás, *Inscripciones*, 180, 193–4; *Sefarad*, index to vols. 1–15 (1957), 399, 401.

BENVENISTE, ABRAHAM (1406–1454), “court rabbi” in Castile mentioned in crown documents dating from about 1430. The young king, John II, handed over the government of Castile to two noblemen, who appointed Benveniste, a native of Soria, to restore its shaky fiscal administration. Benveniste acted as tax farmer general of the realm and organized the levy of the taxes and customs duties with the assistance of subordinates, mainly Jews. He also supplied the army with money and grain. In 1432, at the request of the Jewish communities of the Castile, the king appointed Benveniste chief justice and tax superintendent of Castilian Jewry, with the title of *Rab de la Corte*. The same year he convened the representatives and scholars of the Castilian communities in Valladolid, and framed a number of ordinances designed to strengthen the status of Spanish Jewry, which had been undermined by the recent tragic events. These enactments were directed toward maintaining religious instruction, the fair administration of justice in Jewish courts, equitable tax apportionment, defense against informers, and curbs on extravagance in dress and entertainment. Benveniste was conservative in his approach to religious problems. He opposed the rationalist philosophical

trends widespread among Jewish scholars, and strove for the rehabilitation of Jewish communal life through strict observance of the precepts of Judaism.

[Zvi Avneri]

BENVENISTE, ABRAHAM (18th century), rabbi and communal leader in Smyrna. Benveniste was a son-in-law of Ḥayyim Ventura and of Abraham Ibn Ezra, both outstanding scholars of Smyrna. His communal activity brought him into contact with the scholars of Italy, and his correspondence with Moses Ḥayyim Morpurgo of Ancona during the years 1746–50 is extant. Morpurgo asked him to supply a list of books recently published in Turkey and to keep him informed of any new publications, while Benveniste on his part sent Morpurgo a list of books which he asked him to acquire for him in Venice. It is possible therefore that Benveniste was in the book trade.

BIBLIOGRAPHY: M. Benayahu, in: *Aresheth*, 1 (1958), 224–6, 231–9.

BENVENISTE, EMILE (1902–1976), French scholar of language theory and comparative grammar. Holding a chair at the Collège de France from 1937 to his death, Benveniste was extremely influential on French theorists in various domains of linguistics and literary criticism, such as Gerard Genette for narrative discourse and Roland Barthes, Tzvetan Todorov, and Michel Riffaterre in the field of poetry theory. Benveniste’s linguistics perpetuates the heritage of his master, Antoine Meillet, and that of Ferdinand de Saussure, though his theory of communication notably diverges from Saussure’s. Benveniste published profusely, but his most influential essays and theories are collected in the two volumes of his *Problèmes de linguistique générale*, in the first volume of which key dichotomies are proposed: “*je/non-je*” (I/non-I), “*histoire/discours*” (story/discourse). These concepts are central to modern narrative discourse as well as communications theory: they help define the larger dichotomy between objective and subjective utterance.

Another crucial dichotomy is to be found in the chapter “*Sémiologie de la langue*” in the second volume: the dichotomy of “*semiotic*” (related to the sign) and “*semantic*” (related to discourse).

[Dror Franck Sullaper (2nd ed.)]

BENVENISTE (or **Benvenist**), **ḤAYYIM BEN ISRAEL** (1603–1673), Sephardi rabbinic scholar and codifier. Benveniste studied in his native Constantinople mainly under Joseph b. Moses of Trani, and also under Joseph *Samegah. In 1624, when he was only 21, he began to write his detailed commentary on the *Sefer Mitzvot Gadol* of *Moses b. Jacob of Coucy, which he called *Dina de-Ḥayyei* (“Law of the Living”). The same year he was appointed to decide cases dealing with

ritual law (*Issur ve-Hetter*). Benveniste was rabbi in Tirya, near Smyrna, from 1643 to 1655 when he settled in Smyrna. When Chief Rabbi Joseph Escapa of Smyrna reached an advanced age, Benveniste was appointed in 1661 to act for him in matters of ritual and matrimonial law, and succeeded him after his death the following year. In 1665 the council of the city's scholars (with Benveniste's consent) appointed Aaron *Lapapa in charge of civil cases, but at the end of the same year the latter was deposed by the many admirers of Shabbetai Zevi, whom Lapapa had excommunicated and condemned to death. After Shabbetai Zevi's conversion to Islam a small section of the Smyrna community unsuccessfully attempted to reinstate Lapapa. As a result, Benveniste became involved in a dispute with Lapapa. Benveniste's attitude to the Shabbatean movement as a whole was entirely negative, but he sought to avoid controversy in the interest of communal harmony, and was not resolute enough in certain instances to oppose openly the majority of his community, who followed Shabbetai Zevi and his followers.

Benveniste's role in this episode however did not detract from his dignity and authority as one of the greatest of the Jewish codifiers. Among his many disciples were Solomon ibn Ezra, Isaac Algazi, Ḥayyim Algazi, and Abraham b. Aaron de Boton. His principal work *Keneset ha-Gedolah*, was accepted by both Ashkenazi and Sephardi rabbis as an authoritative work of great practical value. In his work, which comprises eight large volumes, Benveniste cites and methodically explains all the conclusions and legal novellae to be found in the responsa and other halakhic works of the outstanding authorities after the time of Joseph *Caro, as well as some of the decisions of earlier scholars whom Caro had failed to cite.

In Benveniste's lifetime only three parts of the work were printed: on *Orah Ḥayyim* (Leghorn, 1658); *Sheyarei*, addenda on *Orah Ḥayyim* (Smyrna, 1671); and on *Ḥoshen Mishpat* (part 1, Smyrna, 1660). After his death there appeared the volume on *Yoreh De'ah* (3 parts, Constantinople, 1711–17); on *Even ha-Ezer* (Smyrna, 1731, new ed. Lemberg, 1861); on *Ḥoshen Mishpat*, part 2, with several appendixes by other authors (Smyrna, 1734). Also his *Dina de-Ḥayyei* was published posthumously from a defective manuscript (Constantinople, 2 pts. 1747). Additional legal novellae on the *Ḥoshen Mishpat* are to be found in Ḥayyim b. Menahem Algazi's *Benei Ḥayyai* published in Orta-koi (near Constantinople) in 1712. Benveniste also wrote important responsa (*Ba'ei Ḥayyei*, "Needs of the Living"), on the four parts of the *Turim*, the following of which have been published: on *Orah Ḥayyim* (part 2, Salonika, 1783), on 211 sections of *Yoreh De'ah* and on 24 of the *Even ha-Ezer* (*ibid.*, 1788), as well as on the *Ḥoshen Mishpat*, in two parts (*ibid.*, 1791). Benveniste also wrote novellae on a number of tractates: that on *Sanhedrin* which he called *Hamra ve-Ḥayyei*, only part of which is extant, was published, together with notes and extracts from the manuscripts of the novellae of the earlier halakhic authorities, under the title of *Hemer Hivver Attik* (Leghorn, 1802). Benveniste's son Israel (1644–1729) succeeded him as chief rabbi of Smyrna.

[Moshe Nahum Zobel]

BENVENISTE, IMMANUEL (Manoel; Venice? c. 1608–Amsterdam c. 1660), Hebrew printer in Amsterdam. Benveniste's name appears in an entry in the *Puiboken* of that city, dated Feb. 10, 1640: "Immanuel Benveniste of Venice, 32 years old, parents still living..." Among the approximately 50 works he printed between 1640 and 1659 are *Midrash Rabbah* (1641–42), *Mishnah* (1643), and Alfasi's *Halakhot* (1643). His outstanding production, however, was the Babylonian Talmud (1644–48), which restored some passages expunged by the censor in previous editions. As correctors Benveniste employed Moses di Cordova b. Isaac of Constantinople (for the *Midrash Rabbah*) and the Amsterdam rabbi Abraham b. Joshua of Worms (for the Alfasi edition). Benveniste's editions can usually be recognized by the title page frame of a gate of prism-shaped stones with his printer's mark, a castle flanked by a lion with a star superimposed.

BENVENISTE, ISAAC BEN JOSEPH (d. c. 1224), physician to James I of Aragon and *nasi* of Aragonese Jewry. He was the leading figure in the representative congresses of the Jewish communities convened at Montpellier and Saint-Gilles in 1214 and 1215 to consider protective measures in view of the approaching *Lateran Council. Subsequently he secured for the Aragonese communities a temporary suspension of the obligation to wear the Jewish *badge. In 1220, he received from Pope Honorius III a warm letter of recommendation to the king and the archbishop of Tarragona notwithstanding Isaac's "erroneous" views in matters of religion.

[Cecil Roth]

BENVENISTE, JOSEPH BEN MOSES DE SEGOVIA (second half of the 16th century), rabbi and author. Benveniste spent most of his life in Safed but died in Brusa, Turkey. His principal teacher was Elisha *Gallico, but he also studied under Isaac *Luria and Samuel b. Isaac de *Uceda. Joseph

*Ganso, rabbi of Brusa, was his pupil. He wrote many works which were lost. Benveniste mentions two of them: *Be-Zel ha-Kesef*, an ethical work modeled on the *Kad ha-Kemaḥ* of *Baḥya b. Asher, and *Yakhol Yosef* (also erroneously called *Yevul Yosef*) containing various novellae. A number of his biblical comments, including interpretations he learned from Isaac *Luria, are quoted in the *Dovev Siftei Yeshenim* (Smyrna, 1671) of his grandson Nissim Solomon *Algazi.

[Abraham David]

BENVENISTE, JOSHUA RAPHAEL BEN ISRAEL (1590?–1665?), Turkish rabbi, physician, grammarian, and poet; brother of Ḥayyim *Benveniste. Joshua was born in Constantinople and was a disciple of Joseph b. Moses *Trani and Abraham *Alegre. He studied grammar under Isaac *Uzziel, and medicine under Isaac Caro, the physician. While serving as rabbi in Constantinople, he accepted the rabbinate of Sophia, after the community had agreed to all of his conditions, but the Constantinople community objected and prevailed upon him to remain. For some years Joshua was rabbi of Bursa. Many communities, even Karaites, addressed their problems to him, and responsa written by him, as early as 1610, are extant. Benveniste was a versatile author and many of his works are still regarded as basic in their fields. He devoted himself particularly to the Jerusalem Talmud, which was largely neglected in his day. His commentary on it, *Sedeh Yehoshu'a*, was published with the text. Joshua's method was first to explain all difficult words according to the Babylonian Talmud, the *Arukh*, etc., and then to explain the passage, comparing it with the parallel passage in the Babylonian Talmud or explaining it according to the context where no such parallel exists. Where the *halakhah* differs in the two Talmuds he decided according to the Babylonian, "since it is the essential one." He also collected explanations which he found in works of *rishonim* and halakhists and added his own. He deals only with the halakhic portions, ignoring the *aggadah*. His language is very prolix. This may explain why the commentary did not become widespread among the scholars of Eastern and Western Europe.

His commentary to the following tractates was published: *Berakhot*, *Pe'ah*, *Orlah*, *Ḥallah*, and *Bikkurim* of the order *Zera'im* (Constantinople, 1662); a number of tractates of *Mo'ed*, *Nashim*, and *Nezikin* (Constantinople, 1749). The commentary has frequently been reprinted together with the text. His *Seder ha-Get* and *Seder Ḥalizah* were published in *Get Pashut* (Constantinople, 1719) of Moses ibn Ḥabib. According to Ḥayyim Joseph David *Azulai, his four volumes of responsa, *Sha'ar Yehoshu'a*, were destroyed by fire after 1677. Some of his 97 responsa on *Ḥoshen Mishpat*, which have remained in manuscript (Jewish Institute, Warsaw, no. 13), were published in Husiatin in 1904 and many of his responsa were published

in the books of his contemporaries. His other published works are *Oznei Yehoshu'a* (Constantinople, 1677), sermons, and *Avodah Tammah* (Constantinople, 1691–95), an exposition of the *Avodah in the Day of Atonement liturgy, and a clarification of the variant readings. The following remain in manuscript: *Mishmeret ha-Mitzvot* (JTS, Ms. 0347), a poetic arrangement of the commandments in accordance with the enumeration of Maimonides; *Levush Malkhut*, describing the greatness of the Creator as evinced in the human anatomy, written in the style of the *Keter Malkhut* of Solomon ibn Gabirol; *Perek be-Shir* (Montefiore Ms. 377), on prosody and meter; and a treatise on medicine.

BENVENISTE, MOSES (second half of the 16th century), Turkish physician. As medical attendant to the grand vizier, Siavouch Pasha, Benveniste attained considerable influence in Turkish politics; in 1582 he was largely responsible for reinstating Peter the Lame as *gospodar* (ruler) of Moldavia. In 1583, in conjunction with Nissim, the Jewish director of the mint, he recommended the currency reform which led to a revolt of the Janissaries. Later, he was associated with the Jew David *Passi and the Italian Paolo Maria in unsuccessful intrigues with the English ambassador Barton against Solomon *Aben-aes, Duke of Mytilene. In 1598 Benveniste, who had always favored the pro-Spanish party in Turkish politics, was one of the three Turkish plenipotentiaries in the peace negotiations with Spain. Having exceeded their instructions, they were banished. It is possible that Benveniste unsuccessfully tried to escape this sentence by embracing Islam, but died a political prisoner, probably in Rhodes. The poet Yehudah Zarko, a native of Rhodes, wrote a long poem about the exile of Benveniste to Rhodes. His son, Rabbi Israel Benveniste, visited him there. It seems that he became one of the leaders of the Jewish community in Rhodes. Rabbi Israel died after 1695 and we have the poem which was written on his tombstone. His well-known grandchildren were Rabbi Ḥayyim *Benveniste and Rabbi Moses Benveniste.

BEN-VENISTE, RICHARD (1943–), U.S. lawyer. A native New Yorker, Ben-Veniste is from a Sephardi family on his fa-

ther's side, with its roots in northern Spain and Greece, and has a German and Russian background on his mother's side. He earned his undergraduate degree magna cum laude from Muhlenberg College and returned to New York to get his law degree from Columbia University, where he was the Harlan Fisk Stone Scholar. He joined the United States Attorney's office in New York straight from Northwestern University's law school, where he received his master of law degree in 1968. He stayed on, assigned first to the Special Prosecutions Section and then as chief of the Official Corruption Section (where he prosecuted several celebrated cases), from June 1972, until, at the age of 30, joining the main Watergate task force, investigating the activities of President Richard M. Nixon, and questioning witnesses in connection with the White House tape recordings.

It was Ben-Veniste, an assistant special prosecutor, who presented the opening statement on behalf of the seven-member prosecution team in the Watergate cover-up trial, portraying Nixon as one of the central conspirators. In a four-hour presentation, Ben-Veniste told the jury that Nixon held a "multitude of meetings" in April 1973 with John D. Ehrlichman and H.R. Haldeman, then his chief aides and two of the five defendants in the trial. He also laid out details of the case against the other defendants, including Attorney General John N. Mitchell. Ben-Veniste thus had one of the key roles in the unraveling of the Nixon presidency and Nixon's resignation before he could be impeached.

Ben-Veniste practiced law in Washington, specializing in litigation involving high-profile white-collar clients, including, in the 1990s, the investigation of President Bill Clinton and his wife, Hilary, concerning the failed land deal known as Whitewater. That investigation found no evidence of criminal activity on the part of the Clintons.

In 2004, Ben-Veniste was a Democratic member of the independent commission investigating the Sept. 11 attacks, engineered by Osama Bin Laden and Al-Qaeda, on the World Trade Center in New York and on the Pentagon. As such he harshly questioned Condoleezza Rice, President George W. Bush's national security advisor, on her and the president's assessment of a briefing on Aug. 6, 2001, that carried the title "Bin Laden Determined to Attack Inside the United States." Rice described it as "historical information based on old reporting – there was no new threat information," a contention Ben-Veniste disputed. Ben-Veniste played a major role in shaping the commission's final report, in which it asserted that the Clinton and Bush administrations failed to grasp the gravity of the threat from Al Qaeda.

[Stewart Kampel (2nd ed.)]

BENVENISTE, SAMUEL (d. after 1356), physician and translator, who lived in Tarragona and Saragossa, Spain. Benveniste was a familiar figure at the court of King Pedro IV of Aragon, being physician to his brother, Don Manuel. In about 1300 he translated into Hebrew Maimonides' *Sefer ha-Kazzeret*

("Treatise on Asthma"), apparently from a Latin translation; his rendering is colloquial and fluent, although the surviving manuscripts were carelessly copied. Some scholars ascribe to Benveniste a translation of Boethius' *Consolations of Philosophy*.

BENVENISTE, SHESHET BEN ISAAC BEN JOSEPH (also called "Perfect de Pratis"; c. 1131–1209), Spanish financier, physician, and poet; grandson of Sheshet ha-Nasi of Barcelona. In his youth, Benveniste entered the service of the count of Barcelona. Subsequently, he served the kings of Aragon Alfonso II and from 1196 Pedro II as physician, translator into Arabic, political adviser, and diplomatic envoy. He also took an active part in the fiscal administration, and received certain state revenues in return for loans to the royal treasury. Like the nobility of the kingdom, Benveniste was exempted from taxes and enjoyed legal immunity from the jurisdiction of both the crown authorities and the local Jewish community. He received a royal grant of privileges on the basis of which he regulated the affairs of the Barcelona synagogue. His signature in Hebrew figures on official documents. Benveniste apparently had a wide knowledge in many subjects. He wrote Hebrew poetry, was in touch with Muslim scholars, knew general history, and wrote medical works still preserved in manuscript. Benveniste regarded the *Mishneh Torah* of Maimonides as the basic authority on *halakhah* and vigorously championed the latter's philosophical views. *Benjamin of Tudela and Judah *Al-Harizi, who met Benveniste in Barcelona, praise him highly. He was a patron of poets and scholars, such as *Isaac b. Abba Mari, and Joseph *Ibn Zabara, who dedicated to him his *Sefer ha-Sha'ashu'im*.

[Zvi Avneri]

BENVENISTE DE PORTA (d. 1268), financial official in Aragon during the reign of James I, from Villafranca del Panadés. Benveniste dealt in grain and owned flour mills in Barcelona. In the 1250s and 1260s he served the crown as *baile* (bailiff) in Barcelona and elsewhere, such as Gerona, Perpignan, and Lérida. In exchange for the sums he lent to the king and his ministers, Benveniste received concessions on royal revenues in Catalonia and the Balearic Islands. At one time, he provided the silver for the Barcelona mint. In 1264 his brother Astrug de Porta was accused of blaspheming Jesus during a religious discussion but, through Benveniste's influence, the sentence of banishment was commuted to a fine.

BENVENISTI, DAVID (1897–1993), Israeli geographer and educator. Born in Salonika, Greece, Benvenisti immigrated to Erez Israel with his parents in 1913 and studied at the Jerusalem Teachers' Seminary under David *Yellin. After serving in the Jewish Legion during World War I, he taught the geography of Erez Israel and was pedagogical adviser at the Jerusalem Teachers' Seminary from 1925 until 1963. Devoting himself to educational problems as much as to geography, Benvenisti distinguished himself by promoting an interest in the topography of Erez Israel and a love of nature. To popularize hiking, he was active in founding both the Israel Hikers' Association and the Israel Youth Hostels Federation. He wrote a number of textbooks and teaching guides on the subject of Israeli geography and also became interested in the folklore of the Jews of Salonika, publishing books on this subject, and in 1977 published a guide to the street names of Jerusalem. He was awarded the Israel Prize in 1982 for teaching an appreciation of the Land of Israel and its lore.

BENWAISH, ABRAHAM (16th–17th centuries), banker to the sultan of Morocco Aḥmad al-Manṣūr in Marrakesh (south Morocco) and later superintendent of finances (until 1627). Benwaish was extremely influential and it was because of him that members of the *Pallache family were appointed ambassadors of Morocco to Holland. He was responsible for one of his relatives, Abraham Buzaglo-Azulay, being sent to Venice in 1606 to buy expensive goods for the ruler. Benwaish was appointed **nagid* of the Jews of the kingdom of *Marrakesh and promoted study there. In his capacity as superintendent of finance he discriminated against the English and Dutch Christians in favor of his coreligionists, a policy which brought protests from the European governments. Accused of embezzlement, he had no difficulty in clearing himself. His descendant SAMUEL (1738–1817), *dayyan* of *Meknès, was renowned for his piety. His responsa are extant in manuscript.

[David Corcos]

BEN-YEHEZKI'EL, MORDEKHAI (1883–1971), Hebrew essayist and adapter of folktales. Born in Galicia, he moved in 1906 to Lvov where he was both student and tutor. After visiting Western Europe, he taught for a time in Lvov, and immigrated to Palestine in 1920. At first he taught at the Tel Aviv Teachers' Seminary and from 1925 was an instructor of Hebrew, Bible, and Literature at the Mizrahi Teachers' Seminary in Jerusalem. After the publication of his first article on *Ḥasidism in **Ha-Shilo'ah* in 1904, he wrote regularly on language, literature, Ḥasidism, etc., in the Hebrew press and was encouraged by Ḥ.N. *Bialik to publish his adaptations of various folktales, which appeared as *Sefer ha-Ma'asiyyot* ("Book of Folk Tales"; four volumes 1926–29; expanded edition in six volumes, 1957).

[Getzel Kressel]

BEN-YEHUDA, ELIEZER (1858–1922), Hebrew writer and lexicographer, generally considered the father of modern Hebrew, and one of the first active Zionist leaders. Born Eliezer Yiẓḥak Perelman in Luzhky, Lithuania, he officially adopted the pseudonym Ben-Yehuda, which he had previously used in his literary activities, when he went to Palestine. Ben-Yehuda's father, a *Ḥabad Ḥasid, died when Eliezer was five years old. At the age of 13, he was sent to his uncle to attend the yeshivah in Polotsk. The head of the yeshivah, a *maskil* in secret, introduced him to secular literature. To save him from heresy, his uncle sent him to study in Glubokoye, in the Vilna district, where Ben-Yehuda made the acquaintance of Samuel Naphtali Herz Jonas, also a Ḥabad Ḥasid, who was writing for Hebrew periodicals. Jonas persuaded him to prepare for secondary school matriculation, and his eldest daughter, Deborah, taught him Russian. After a year of preparation he entered the Dvinsk Gymnasium from which he graduated in 1877.

The Russo-Turkish War (1877–78) and the struggle of the Balkan nations for liberation planted in Ben-Yehuda the idea of the revival of the Jewish people on its ancestral soil. He maintained that the Jewish people, like all other peoples, had a historic land and a historic language. What was needed was to actuate a national movement that would restore Israel to its land and to its language. He wrote in the preface to his dictionary: "In those days it was as if the heavens had suddenly opened, and a clear, incandescent light flashed before my eyes, and a mighty inner voice sounded in my ears: the renaissance of Israel on its ancestral soil." He determined to settle in Erez Israel, and in 1878 went to Paris to study medicine so that he might have a profession to sustain himself. He discussed his plan for a Jewish national movement with some Hebrew writers; they, however, were not interested. His article "*She'elah Lohatah*" ("A Burning Question") was published in P. *Smolenskin's *Ha-Shaḥar* in 1879 (after *Ha-Maggid* had refused to accept it) under the name "E. Ben-Yehuda." For the first time the idea of a national spiritual center in Erez Israel was clearly propounded. Ben-Yehuda linked the Jewish national revival with the general European awakening and said that the Jewish people should learn from the oppressed European peoples that were fighting for political freedom and national revival. The Jewish people must establish a community in Erez Israel that would serve as a focal point for the entire people, so that even those Jews who would remain in the Diaspora would know that they belong to a people that dwells in its own land and has its own language and culture. In this essay, the fundamental principles of spiritual Zionism are anticipated: the settlement of the land not for the return of the entire people from the exile, but for the creation of a national center designed to save from assimilation those Jews that are scattered all over the Diaspora.

In Paris, Ben-Yehuda met George (Getzel) *Selikovitch, a Jewish journalist, who told him that in his travels through Asia and Africa he had spoken Hebrew with the Jews of these lands, so that in fact Hebrew was not dead. When Ben-Yehuda contracted tuberculosis in the winter of 1878, he decided to discontinue his medical studies and make his home in the more favorable climate of Erez Israel. He enrolled in the teachers' seminary of the Alliance Israélite Universelle, to qualify for a teaching post in *Mikveh Israel. There he attended the lectures of the Assyriologist Joseph *Halevy who in the periodical *Ha-Maggid* had advocated the coinage of new Hebrew words as early as the 1860s. As his health deteriorated, Ben-Yehuda entered the Rothschild Hospital in Paris, and there he met the Jerusalem scholar A.M. *Luncz who spoke Hebrew to him in the Sephardi pronunciation and told him that the members of the various Jewish communities in Jerusalem were able to converse with one another only in Sephardi Hebrew. This reinforced Ben-Yehuda's opinion that the Jews could not hope to become a united people in their own land again unless their children revived Hebrew as their spoken tongue. The Hebrew living language must have Sephardi phonetic sounds because that was the pronunciation which served in the transliteration of biblical names in ancient and modern translations of the Bible. In 1880 he published two articles in *Ha-Havazzelet* in which he advocated that Hebrew rather than the various foreign languages become the language of instruction in the Jewish schools in Erez Israel. In 1881, he left for Palestine. He traveled by way of Vienna, where he was joined by his childhood acquaintance, Deborah Jonas, whom he married in Cairo. In October 1881, they arrived in Jaffa where Ben-Yehuda informed his wife that henceforth they would converse only in Hebrew. The Ben-Yehuda household thus was the first Hebrew-speaking home established in Palestine, and his first son, Ben-Zion (later called Ithamar *Ben-Avi), the first modern Hebrew-speaking child.

To ingratiate himself with the Orthodox Jews who knew written Hebrew and could, therefore, readily learn to speak the language, Ben Yehuda at first adopted their customs. He grew a beard and earlocks, and prevailed upon his wife to wear a *sheytl* ("wig"). This did not last very long because the Orthodox Jews of Jerusalem soon sensed that for Ben-Yehuda Hebrew was not a holy tongue, but a secular, national language, and that his purpose for introducing spoken Hebrew was solely nationalist and political. They began to suspect him, and Ben-Yehuda became an extremist in his antireligious attitude. He registered as a national Jew "without religion."

As early as 1881 Ben-Yehuda, together with Y.M. *Pines, D. *Yellin, Y. *Meyuhas, and A. Masie, founded the society *Teḥiyat Israel* based on five principles: work on the land and expansion of the country's productive population; revival of spoken Hebrew; creation of a modern Hebrew literature and science in the national spirit; education of the youth in a national and, at the same time, universal humanistic spirit; and active opposition to the **ḥalukkah* system. During the period 1882–85, Ben-Yehuda worked on *Ha-Havazzelet* and put out

a supplement to the periodical under the name *Mevasseret Ziyyon*. At the same time, he taught in the Jerusalem Alliance school, which post he accepted only after he was permitted to use Hebrew exclusively as the language of instruction in all Jewish subjects. The school was thus the first in which at least some subjects were taught in Hebrew. In 1885, Ben-Yehuda published a geography of Palestine, called *Erez Yisrael* (only part 1 appeared). Toward the end of 1884, he founded a weekly, *Ha-Zevi*, which later became a biweekly, under the new name, *Ha-Or*. In 1908, it became a daily, known first as *Ha-Zevi*, and from 1910 onward as *Ha-Or*; it appeared until 1915. For several years, from 1897, Ben-Yehuda also published a weekly (from 1904, biweekly) called *Hashkafah*. In his periodicals he fought against the *ḥalukkah* system, championed agricultural labor, the new settlement, and, especially, the revival of spoken Hebrew. He spared no effort to enrich the language by coining new terms and introducing transliterations from foreign tongues. Financial difficulties in the economically poor Jerusalem environment were mainly responsible for the shortcomings of his magazine. Despite all its defects, however, Ben-Yehuda's periodical was the first in Hebrew to meet European standards. It removed the barrier between strictly Jewish topics and secular subjects, and discussed, insofar as the strict Turkish censorship permitted, all aspects of general political and cultural life.

In 1891, Ben-Yehuda's wife died, and about six months later he married her younger sister. She adopted the Hebrew name *Ḥemdah*. A constant companion to her husband in his literary activity, *Ḥemdah* Ben-Yehuda published translations and original Hebrew stories in his periodicals. It was she who incited Ben-Yehuda's extremism against the Jewish tradition. Ben Yehuda's unorthodox behavior, and the campaign which he waged in the columns of his periodicals against the *ḥalukkah* system and its administrators, aroused the vehement opposition of the extreme Orthodox Jews. Seeking a pretext for revenge, they found it in an article by Jonas in the 1894 *Ḥanukkah* number of *Ha-Zevi*, which contained the phrase "let us gather strength and go forward." Some of Ben-Yehuda's more bigoted enemies distorted its meaning and interpreted it to the Turkish authorities as "let us gather an army and proceed against the East." Ben-Yehuda was charged with sedition and sentenced to a year's imprisonment. The affair created a great stir throughout the Jewish world; an appeal was lodged and he was released.

Turkish censorship of *Ha-Zevi*, however, became more stringent from then on. As a result, Ben-Yehuda began to concentrate more on linguistic questions to which the censors could make no objection. He became increasingly engrossed in his dictionary for which he had begun to collect material from the day he arrived in Erez Israel. In order to conduct research and raise funds for its publication, Ben-Yehuda traveled several times to Europe, and later also to the United States where he worked in American libraries. In 1910, assisted by various sponsors, he began to publish his *Complete Dictionary of Ancient and Modern Hebrew* volume by volume; after his

death, his widow and his son Ehud continued his publication which was completed in 1959 (17 vols.), with an introductory volume, *Ha-Mavo ha-Gadol* ("Prolegomenon").

In 1890, together with David Yellin, Aaron Masie, and others, Ben-Yehuda founded the Va'ad ha-Lashon over which he presided until his death. This *va'ad* was the forerunner of the *Academy of the Hebrew Language which Ben-Yehuda had also suggested in 1920.

Ben-Yehuda was among the supporters of the *Uganda scheme; he wrote articles in *Ha-Zevi* advocating the idea, and even a special pamphlet called *Ha-Medinah ha-Yehudit* (1905). His views incurred many enemies for him among those who were not prepared to exchange Zion for any other country. On the other hand, he won general respect when he led the fight (1913–14) against the plan of the *Hilfsverein der deutschen Juden to introduce German as the language of instruction in its secondary schools in Palestine and in the technical college which was about to be established in Haifa.

During World War I, when Jamal Pasha, the Turkish commander in Palestine, outlawed Zionism, Ben-Yehuda left for the United States. There he wrote his book *Ad Eimatai Dibberu Ivrit?* ("Until When was Hebrew Spoken?" 1919). He returned to Palestine in 1919. Together with M. *Ussishkin, he prevailed upon Herbert *Samuel, the British high commissioner, to declare Hebrew one of the three official languages of the country. He founded Sefatenu, a society for the propagation of Hebrew, and also served as secretary of the Planning Committee of the Hebrew University. A number of his writings were collected and published posthumously: the anthology *Yisrael le-Arzo ve-li-Leshono* (1929) and *Avot ha-Lashon ha-Ivrit*; part 1: *Rabbi Akiva* (1945).

Ben-Yehuda's cultural activities and achievements fall into four divisions: (1) The revival of spoken Hebrew. Hebrew was spoken before the days of Ben-Yehuda but only intermittently. The very sanctity with which the language was invested prevented its daily use. Ben-Yehuda made Hebrew speech a national goal. He was convinced that a living Hebrew, spoken by the people in its own land, was indispensable to the political and cultural rebirth of the nation. In this view Ben-Yehuda differed from *Smolenskin, *Lilienblum, and *Herzl, who were able to envisage a Jewish homeland without Hebrew as its mother tongue. Ben-Yehuda fought untiringly and uncompromisingly for this ideal. He lived to see his vision realized: the revival of the *Hebrew language as a spoken tongue after more than two thousand years. (2) The creation of a simple, popular style in Hebrew literature. Ben-Yehuda fought against the use of inflated rhetoric and the archaic expressions and forms which had lost their appeal. He demanded simplicity and concreteness in Hebrew prose which, until then, had been rhetorical and florid. With this objective in mind, he translated a number of stories from various languages into plain, unadorned Hebrew. (3) Ben-Yehuda was the first to make a regular and systematic practice of coining Hebrew words. Neologism was not new to Hebrew, but it had never been done methodically and specifically to meet the practical demands

which were constantly being made on the language in daily speech, in journalism, in science, and in literature. (4) His dictionary complemented his achievement of the revival of spoken Hebrew. The dictionary attempts to include all the Hebrew words used in the different periods and developmental stages of the language. It is also arranged in the manner of modern European language dictionaries, and not according to word roots, as was customary in former Hebrew dictionaries. A characteristic feature of the dictionary is its bold omission of all Aramaic words, as well as other foreign words found in the Bible, Talmud, Midrash, and other works that are not of Semitic origin.

BEN-YEHUDA, HEMDAH (1873–1951), Hebrew author; wife of Eliezer *Ben-Yehuda. Her sister Deborah was Ben-Yehuda's first wife. After she died, Hemdah went to Jerusalem from Lithuania and married Ben-Yehuda in 1892. She aided her husband in his literary work, wrote articles and stories for his papers, and after his death in 1922 concerned herself with the continued publication of his multi-volume dictionary. Her two main works were *Ben Yehuda, Hayyav u-Mifalo* (1940), a life of Ben Yehuda, and *Nose ha-Degel* (1944) on her stepson Ithamar *Ben-Avi.

BEN YEHUDA, NETIVA (1928–), Israeli military officer, writer, and scholar of spoken Hebrew, who embodied the heroic voluntarism and utter loyalty to the "Jewish national rebirth in its homeland" that was the hallmark of the *Palmah from the 1940s. Fearlessness, physical prowess, and total devotion were some of the features that distinguished this young officer, whose military specialties included topography, reconnaissance, and demolition. Born in Tel Aviv and educated at the Herzlia Hebrew Gymnasium, where her father, Baruch (1894–1990), served as teacher and principal (he later became the first director general of Israel's Ministry of Education and Culture), Ben Yehuda volunteered for the Palmah and later served as an officer in the Israel Defense Forces. She married in 1950 and gave birth to a daughter, Amal, in 1953. Ben Yehuda and her husband separated in 1962 and later divorced.

She worked as an editor of the *Encyclopedia Hebraica* and as a spokeswoman in the Ministry of Labor.

Ben Yehuda's lifelong devotion to the cause of spoken Hebrew began a few years after independence. After study both at home and abroad (art, Hebrew language, linguistics, and philosophy), she became a freelance editor who mediated between the spoken Hebrew developed in the Palmah, marked by humorous slang and linguistic inventiveness, and the elevated, highly stylized standards then required by Hebrew *belles lettres*. Her dedication to this issue resulted in the 1972 publication of *Millon Olami le-Ivrit Meduberet* ("The World Dictionary of Hebrew Slang"; a second volume appeared in 1982), a hilariously irreverent book which she co-authored with another Palmah member, writer, and satirist Dahn *Ben Amotz (1924–1990).

Traces of this early work can be found in her later Palmah Trilogy, which consists of *Between the Calendars* (1981); *Through the Binding Ropes* (1985); and *When the State of Israel Broke Out* (1991). Unique both stylistically and generically, the trilogy, which preserves slang and idiomatic Hebrew of days gone by, is a subversive revision of a major chapter in the Israeli national narrative. By reducing the myth of a glorious past to human and at times petty proportions, the Palmah Trilogy contributed to the "new historical" de-mythologization of the 1948 War of Independence. At the same time, the trilogy also coincided with Israeli feminist research of the 1980s that exposed the gap between the Palmah's promise of "sexual equality" and the sexist reality in its ranks. A personal trauma caused by this fissure emerges as the hidden motivation behind Ben Yehuda's narrative and explains the "writer's block" underlying the author's 30-year-long reticence. Ben Yehuda's other books include *Autobiography in Shir va-Zemer* (1990).

[Yael S. Feldman (2nd ed.)]

BEN-YEHUDAH, BARUKH (1894–1990), Israeli educator. Ben-Yehudah, who was born in Marijampole, Lithuania, settled in Erez Israel in 1911. During World War I he joined *kevuzat* Deganyah, teaching there and at Rosh Pinnah. He then studied at the University of Brussels and, after receiving a degree in mathematics and physics in 1924, returned to teaching. He became principal of the Herzlia Gymnasium in Tel Aviv. In 1927 he helped found the pioneering high school youth movement *Hugim* (later known as *Maḥanot Olim*). He also founded the Teachers' Council for the Jewish National Fund. He was director of the education department of the *Vaad Le'ummi* in 1947, and the first director-general of the Ministry of Education and Culture of the State of Israel (until 1951). In 1979 he was awarded the Israel Prize for education. His books include *Toledot ha-Ziyyonut* ("The History of Zionism," 1943); *Ha-Keren ha-Mehannekhet: Tenu'at Morim Lema'an Ziyyon u-Ge'ulatah* ("The Educating Fund: The Teachers' Movement for Zion and its Redemption" 1949, 1952); *Taamei ha-Mikra le-Vattei Sefer* ("Biblical Cantillation

for Schools," 1968); *Kol ha-Hinnukh ha-Ziyyoni* ("The Voice of Zionist Education," 1955); and *Yesodot u-Derakhim* ("Fundamentals and Ways," 1952). He also wrote on teaching mathematics: *Hora'at ha-Matematikah be-Veit ha-Sefer ha-Tikhon* ("The Teaching of Mathematics in High School," 2 vols., 1959–60) and mathematics texts.

[Abraham Aharoni]

BEN YIZHAK, AVRAHAM (pen name of **Avraham Sonne**; 1883–1950), Hebrew poet. Born in Galicia, Ben Yizhak received a traditional Jewish and secular education, and then studied at the universities of Vienna and Berlin. From 1913 to the summer of 1914, he was visiting lecturer in Hebrew literature and psychology at the Jerusalem Teachers' Seminary. After a brief career in the Zionist organization, he served as teacher and later principal at the Hebrew Pedagogium (Teachers' Academy) in Vienna, founded by *H.P. Chajes. After the Nazi Anschluss of Austria in 1938, he emigrated to Erez Israel and settled in Jerusalem. Although he published only 11 poems during his lifetime Ben Yizhak is considered a distinguished figure in modern Hebrew poetry. Most of his poems appeared before World War I and immediately attracted attention. His first poem, "*Horef Bahir*" ("Bright Winter") was published in *Ha-Shiloah* in 1908. His last poem, "*Ashrei ha-Zore'im ve-Lo Yikzoru*" ("Happy Are They That Sow But Shall Not Reap") in 1928, a farewell to his craft, concludes with the words, "And their everlasting lot shall be silence." His refusal to publish further remains a mystery. Later poems were found among his effects, but others, which he had read to his friends, are lost. Some of his work has been translated into English and various European languages. Ben Yizhak wrote according to the Sephardi pronunciation (the one adopted in Erez Israel) long before it was adopted by other Hebrew poets, who wrote in the Ashkenazi accent used by Hebrew-speaking European Jews. Ben Yizhak's lyrics, with their terse style and biblical diction, focus on nature, meditation, and love. Though the form of Ben Yizhak's poems is occasionally reminiscent of the Psalms, their content expresses a modern outlook on life and poetry, and he is considered by many to be the first truly modern Hebrew poet. His prose works included anonymous articles in German-Jewish periodicals and an essay on *Mendele Mokher Seforim in *Der Jude*, 3 (1918–19). One of the most scholarly and sensitive thinkers of his generation, Ben Yizhak's personal influence on both Jewish and non-Jewish writers and philosophers was profound, yet he always declined to publish his obiter dicta. His collected poems appeared posthumously.

[Lea Goldberg]

BEN-YOSEF (Tabachnik), SHELOMO (1913–1938), first Jew executed by the British in Palestine. Ben-Yosef, who was born in Lutsk, Poland, joined *Betar in 1928. In 1937 he reached Palestine as an “illegal” immigrant and joined the Betar work brigade at Rosh Pinnah. Ben-Yosef and two of his comrades, Shalom Zurabin and Avraham Shein, decided to retaliate for the murder of Jews by Arab terrorists, and on April 21, 1938, tried to attack an Arab bus on the Rosh Pinnah-Safed road. The attack failed and the three were arrested and brought before a military court. Ben-Yosef and Shein were sentenced to death and Zurabin to imprisonment. Shein was reprieved because of his youth. All efforts to save Ben-Yosef from execution were in vain. He went to the gallows at Acre prison on June 29, 1938, singing Betar songs. On the day of his execution, riots broke out in Tel Aviv when demonstrators clashed with the British police. Ben-Yosef was buried at Rosh Pinnah, and after the establishment of the State of Israel a monument was erected in his memory on the Rosh Pinnah-Safed road.

[David Niv]

BENZAMERO, Spanish-Moroccan family. Its best-known members in Spain lived chiefly in Seville. **JUDAH BEN EPHRAIM** (1245–1330); **MOSES (I)** and his son **EPHRAIM**, were 14th-century financiers; and **SOLOMON (I)** and **MEIR (I)**, 14th-century physicians. **ISAAC (I)** settled in Badajoz, Spain, where shortly before the 1492 expulsion Ferdinand and Isabella intervened to ensure that the large sums he had advanced them for the war against Granada would be repaid. He was probably the same Isaac Benzamero who after 1496 settled in Safi (Morocco). He became the treasurer of the Portuguese governors there, exercising important political influence, and was entrusted with many diplomatic missions, both to the king in Lisbon and to the Moroccan leaders. With his relative **ISHMAEL** he led 200 Jewish soldiers who took part in the defense of Safi when it was besieged by the sharif of Marrakesh in 1510.

Isaac's brother **ABRAHAM BEN MEIR** (d. c. 1530), paytan, physician and diplomat, lived in Granada and Malaga, and then in Tlemcen and Oran. In 1493 in Oran he wrote philosophic poems, quoted by Abraham *Gavison in his *Omer ha-Shikkhah*. Later he settled in Safi, and there, in 1510, by decree of King Emmanuel I, was appointed chief rabbi with wide powers. Abraham b. Meir's political role in Portuguese affairs in Morocco was preeminent. He was highly regarded both by his coreligionists and the Muslims. He was also esteemed by King John III of Portugal, who received him at his court, and by the sultans of Fez and the sharifs of Marrakesh. David *Reuveni made his acquaintance in Lisbon.

In the 16th century **JUDAH** and **SLIMAN** held eminent positions in commerce. A letter is extant from their nephews **SAMUEL** and his brothers, which mentions the existence of independent Jewish warrior tribes in the western Sahara, a fact

which is confirmed in other sources. **AARON** (16th century) was deputy governor of Agadir (Morocco), where he built a synagogue that received the former Marranos from the Canary Islands. **ABRAHAM**, who was official interpreter in Mazagan (1527), was evacuated to Arzila when the Portuguese lost their southern Morocco territories (after 1541).

The Benzameros then settled in Fez. Even before 1560 **SOLOMON (II)** had undertaken official functions, for which he received secretly large sums of money from Jeanne d'Autriche. **MOSES (II)** converted at the Escorial (the Spanish royal palace), took the name Pablo de Santa-Maria, and became a royal councillor. This caused a great scandal but the family continued to hold a leading position in Moroccan Jewish affairs. **ISAAC (II)**, rabbi and *dayyan*, signed *takkanot* of Fez, when **DAVID** was *nagid* (1600–05). **JOSEPH** published *Divrei David* by *David b. Solomon ibn Abi Zimra at Leghorn in 1828, when his own work *Hon Yosef* appeared also. In Safi the family burial vaults, called the “Seven Zamero sons,” were until recent years the site of frequent pilgrimages.

[David Corcos]

BEN ZAQEN, Moroccan family descended from Spanish exiles. **SAMUEL BEN ZAQEN** (c. 1670–1745) lived in Fez, and studied under R. Judah Uzziel and R. Judah b. Attar. His works include *Peri Ez ha-Gan* (2 volumes, 1904), on the Bible and Midrash, *Gefen Poriyyah* (1904), also on the Midrash, and responsa. A part of the family emigrated from Morocco to Gibraltar in 1741, and from there some went to America, where, before 1750, they were well-established merchants in New York. **JACOB BEN SAMUEL BEN ZAQEN** was a communal leader in Gibraltar between 1834 and 1851. His cousin **ISAAC BEN VIDAL BEN ZAQEN** sent financial assistance to the Jewish poor in Rabat, Morocco. **JOSEPH BEN ZAQEN** served as *nagid* and was appointed the Swedish and Norwegian consul in Tetuan c. 1836. **LEON BEN ZAQEN** (1905–1977) studied medicine in Paris and became an ophthalmologist. He was much respected by his fellow Jews and had considerable influence with King Mohammed V of Morocco. When Morocco gained independence he was appointed minister of posts (1956–58).

[David Obadia]

BENZAQUÉN, SAADIA (1925–1986), rabbi of the Jewish Moroccan community in Argentina. Born in Tetuan, Morocco, he immigrated to Argentina in 1951 and was appointed chief

rabbi of the Asociación Comunidad Israelita Latina de Buenos Aires, serving until his death. In 1974 he succeeded in uniting all the synagogues and institutions of the Moroccan Jews in Buenos Aires in one central organization – ACILBA (Asociación Comunidad Israelita Latina de Buenos Aires).

[Efraim Zadoff (2nd ed.)]

BEN ZE'EV, JUDAH LEIB (1764–1811), grammarian and lexicographer; the first Jewish scholar to apply Western research methods to the study of Hebrew. Born near Cracow, Ben Ze'ev received a traditional Jewish education, but covertly, on his own, studied Hebrew philology and secular subjects. He belonged to the group of Polish-Jewish writers that published *Ha-Me'assef*, a literary organ in the spirit of the early Haskalah. Later, in 1787, when he moved to Berlin, he was admitted to the circle of Haskalah scholars there. In Berlin, he devoted himself to secular studies but returned to his native city which he was forced to leave when persecuted by Orthodox Jews because of his liberal opinions. He settled in Breslau and worked as a proofreader in a Hebrew publishing house. Later he moved to Vienna where he was employed in the same capacity, in the Hebrew printing establishment of Anton von Schmid.

Ben Ze'ev's versatile literary activities spread over a number of fields: grammar and phonetics, lexicography, Bible exegesis, translations, poetry, parodic works, and the editing of medieval texts. *Talmud Leshon Ivri* (Breslau, 1796), probably his best-known work, is a grammar that served as the main source for the study of Hebrew in Eastern Europe for a hundred years; it was frequently reissued and exerted considerable influence on subsequent grammarians. In it, Ben Ze'ev discusses phonetics (and vocalization); the theory of forms (parts of speech); the noun, the verb, the particles; selected aspects of syntax (particularly the combination of sentences); aspects of literary theory (parallelism, rhyme, and meter); and the theory of *ta'amei ha-mikra* ("biblical accentuation and cantillation"). In his study of phonemes, he followed the line of thought of S.Z. Henau; in the definition of the parts of speech that of M. Mendelssohn; in his description of the noun and the verb the ideas of Elijah *Levita, and in his discussion on syntax the foundations of David Kimḥi in *Sefer ha-Mikhlol*. Ben Ze'ev applied the methods used in the study and research of European language grammars; his rules, based on logic, are organized in a manner suitable for instruction. Many of the concepts in his books are original, not to be found in any previous grammatical work: especially, a new terminology in the field of composition and syntax; innovations in syntax; and the study of poetry. His most important achievement is *Ozar ha-Shorashim* (Vienna, 1807–08), a Hebrew-German and German-Hebrew dictionary which was inspired by the works of David Kimḥi. It is arranged in alphabetical order, e.g., in the German section, verbs with prefixes are listed alphabetically according to the prefixes; the definitions of the terms often include synonyms and examples of usage taken either from the Bible directly or cited in sentences formulated in biblical style; the German terms are written in Hebrew characters. Ben

Ze'ev laid the basis for the modern Hebrew terminology in linguistics, translating grammatical terms from German into Hebrew and indicating their German equivalent.

Among his translations is Ecclesiasticus rendered into Hebrew (Breslau, 1798; at a time when the Hebrew text had not yet been discovered). When later parts of the Hebrew text were recovered it was found that Ben Ze'ev's translation in a biblical gnomic style was imbued with the very spirit of the author. *Melizah le-Furim*, a collection of ironic prayers and *seliḥot* for Purim (Breslau, 1800), containing also many clever parodies on well-known Jewish texts and poetic writings, mainly in the genre of the fable, are among his literary creative works. Ben Ze'ev lacked a poetic flair and it is in his grammatical studies that he excelled.

[Menachem Zevi Kaddari]

BENZER, SEYMOUR (1921–), U.S. neuroscientist. Born in New York, Benzer graduated from Brooklyn College (1942) and received his Ph.D. from Purdue University, Indiana (1947), in physics where he progressed to distinguished professor (1945–67). During this period he collaborated with outstanding contemporary scientists, including M. Delbrueck (California Institute of Technology), F. Jacob and J. Monod (Pasteur Institute), and F.H. Crick and S. Brenner (Cambridge, U.K.). In 1967 he joined California Institute of Technology, first as professor and latterly as emeritus professor. Benzer moved from physics to molecular genetics followed by neuroscience. His initial discoveries concerned the molecular organization of genes, which he exploited to analyze the development of the nervous system and genetically controlled behavior in fruit flies (*drosophila*). This research has potential implications for understanding degenerative diseases of the nervous system in man and human behavior. His recent research concerned the genetic control of aging, notably muscle strength. His many honors included the Gairdner Award (1964), the Lasker Award (1971), the Harvey Prize of the Haifa Technion (1977), the Wolf Prize (1991), and the Neurosciences Award of the U.S. National Academy of Sciences. He is a member of the U.S. National Academy of Sciences and foreign member of the Royal Society of London.

[Michael Denman (2nd ed.)]

BENZINGER, IMMANUEL (1865–1935), German Protestant theologian and Orientalist. Benzinger was born in Stuttgart and served as lecturer in biblical studies at Berlin University from 1898 to 1902. He taught in Jerusalem at various Christian institutes and at the Ezra Society School from 1902 to 1911. Thereafter he was professor of Bible in Toronto, Canada (1912–15), Meadville, Pa. (1915–18), and Riga, Latvia (from 1921 until his death). His principal work, *Hebraeische Archäologie* (1894, 1927³), is a comprehensive reference book of biblical archaeology. His *Buecher der Koenige* (1899) and *Buecher*

der Chronik (1901) are commentaries on the books of Kings and Chronicles. His other major works include *Bilderatlas zur Bibelkunde* (1905), *Geschichte Israels bis auf die griechische Zeit* (1904, 1927³), and *Jahvist and Elohist in den Koenigsbuechern* (1921). At the outset of his scholarly career, Benzinger followed the *Wellhausen school of biblical criticism, but later became an adherent of the Pan-Babylonian school.

[Michael Avi-Yonah]

BEN-ZION (1897–1987), U.S. painter, graphic artist, and sculptor. Born Ben-Zion Weinman in the Ukraine, he was the son of a cantor and at one time planned to enter the rabbinate. His father discouraged his early artistic interest, but Ben-Zion prevailed and by the age of 17 traveled to Vienna to study art. After the art academy rejected him because of antisemitism, he wrote poetry, plays, and fairy tales in Hebrew.

In 1920 he settled in America, where he found little interest in his writing. He began teaching Hebrew to support himself and then in the early 1930s returned to painting. He used his art to comment on the rise of fascism in Europe, events he felt could not be adequately explored with words. Largely self-taught, Ben-Zion visited the museums of New York City to learn his new trade. His first painting on a large scale, *Friday Evening* (1933, Jewish Museum, New York), depicts a Sabbath dinner table as recalled from his family home. Ben-Zion supported himself by working odd jobs until the establishment of the Works Progress Administration's Federal Art Project. Under the auspices of the WPA, Ben-Zion thrived and galleries began to show his work. In 1936, after his first one-man show at the Artists' Gallery in New York, Ben-Zion joined "The Ten," which included such progressive artists as Mark *Rothko and Ilya *Bolotowsky. The group exhibited together until 1942.

His work steers away from pure representation, but even when eschewing academic modes, Ben-Zion maintains elements of realism. He imaginatively reinterpreted biblical scenes, a staple of the art world for centuries. His first biblical painting, *The Prophet in the Desert* (1935), was followed by many others, such as *Ruth and Boaz* (1948). Indeed, over 150 of Ben-Zion's paintings are of biblical subjects, reflecting the yeshivah education of his early years in Eastern Europe. Thirty-nine of these paintings were shown at the Jewish Museum in New York in 1948, and he had a retrospective there in 1959.

A series of 17 works, given the title *De Profundis* (Out of the Depths), express the artist's distress at the events of the Holocaust, while also functioning as a memorial to the Jews murdered under the Nazi regime. These paintings show only the figures' heads, often distorted and painted in muted color. The suffering of these figures is rendered by a strong linear structure.

His etchings of biblical subjects were collected in several volumes, including *Biblical Themes* (1951), *Prophets* (1952), and *The Book of Ruth, Job, and Song of Songs* (1954).

In 1959 Ben-Zion began sculpting in iron, one of the most difficult media in which to work. The sculptural quality of the figures in his paintings seems to have led to this new medium. As with his painting, Jewish themes preoccupy his sculptures, such as *Sacrifice of Isaac* (1961) and *Moses Dropping the Tablets* (1979).

BIBLIOGRAPHY: Ben-Zion and S. Kayser, *Ben-Zion, 1933–1959: A Retrospect* (1959); E. Grossman, *Art and Tradition* (1967); L. Dubin and T. Shalem, *Ben-Zion: Iron Sculpture* (1985).

[Samantha Baskind (2nd ed.)]

BEN-ZION, S. (pseudonym of **Simhah Alter Gutmann**; 1870–1932), Hebrew and Yiddish author. Ben-Zion, who was born in Teleneshty, Bessarabia, settled in Odessa in 1889. He taught there with Bialik, at the modern elementary school, where modern Hebrew was the language of instruction. With Bialik and *Rawnitzki, he founded the publishing house *Moriah and was editor of its juvenile division. The three also collaborated in the writing of Bible stories for children. Ben-Zion published the widely used reader, *Ben Ammi* (3 parts, 1905–11). From 1905 until his death he lived in Palestine, where he edited various journals and miscellanies; *Ha-Omer* (Jaffa, 1907–09); *Moledet* (1911); *Shai* (1918–19), the literary supplement of the weekly *Ḥadashot me-ha-Arez*; *Ha-Ezrah* (1919); and, for a short period (1930–31), the weekly *Bustanai*. Ben-Zion was also active in public life and was one of the founders of the Ahuzzat Bayit suburb, out of which Tel Aviv developed. Ben-Zion's main achievement was as a short story writer. He began as a realist, influenced by *Mendele Mokher Seforim, but his realism had none of Mendele's social satire. The main theme of his early works is the decline of the Bessarabian small Jewish town at the end of the 19th century. The younger generation longed to escape from the poverty and ignorance of their parents, but found themselves unequipped to do so. Their approach to life was blighted by an excessive leaning toward abstraction and they lacked a realistic approach to everyday problems. Ben-Zion's memories of his own childhood and youth occupy a prominent place in these stories. In *Nefesh Rezuzaḥ* ("A Crushed Soul," 1952), he denounces the anguish inflicted upon the Jewish child, crushed in the stifling atmosphere of the *heder*. Ben-Zion's emigration to Palestine marked a turning-point in his writing. Sensing that the true essence of Zionism at the time was to be found not in the reality but in the vision, he abandoned his realism for poetic lyricism and visionary symbolism. In this vein, he wrote his prose-poems *Raḥel* and *Leviyyim* which, though artistically imperfect, nevertheless represent a milestone in modern Hebrew literature. Toward the end of his life Ben-Zion wrote two lengthy historical novels, *Megillat Ḥananyah*, set in the period of the Second Temple, and *Ma'aseh ha-Nezirah*, the story of Judith and Holofernes. He also excelled as a translator and rendered several of the classical works of German poetry into Hebrew: Goethe's *Hermann und Dorothea* (1917); Schiller's *Wilhelm Tell* (1924); *Zelilim*, a selection of Heine's poems (1923); Heine's *Deutsch-*

land, ein Wintermaerchen (1938), published posthumously. In addition, Ben-Zion wrote monographs on the Biluim and the colonies of Nes Ziyonah and Gederah, edited an anthology entitled *Ha-Kotel ha-Ma'aravi* ("The Western Wall," 1929), and published *Zemirot li-Yladim* ("Songs for Children") with music by Joel *Engel (1923). His collected writings were first published in 1914 (in two volumes), and were later reissued in a single large volume (1949), with a complete bibliography, and illustrations by his son, Naḥum *Gutmann (1949).

BEN ZIZIT HA-KASAT (or **ha-Kassaf**; "silversmith"), wealthy and prominent citizen of Jerusalem at the time of the destruction of the Second Temple (Git. 56a; Gen. R. 42:1; Lam. R. 1:5, no. 31). It is related that Ben Zizit and his associates undertook to provide the needs of the inhabitants of Jerusalem throughout the war with Rome, but the Zealots burned their stores (see also *Ben Kalba Savu'a). Ben Zizit is possibly the Hebrew equivalent of the Latin *crispus* ("curly-headed").

[Zvi Kaplan]

BEN ZOMA, SIMEON (second century), *tanna*. A contemporary of *Akiva, he appears to have studied under *Joshua b. Hananiah (Naz. 8:1, and cf. Tos. Ḥag. 2:6). The Mishnah says that he was the last of the authoritative biblical expositors (Sot. 9:15). According to Tosefta Ber. 6:2, when Ben Zoma was convinced that the scholar was the "crown of creation," and when he would see the multitude of different kinds of people and professions which populated the world, he would declare: "Blessed be He who created all of them to serve me." In further explanation of his position he continued: "In what labors was Adam involved before he obtained bread to eat? He had to plow, sow, reap, bind the sheaves, thresh and winnow and select the ears of corn; he had to grind them and sift the flour, to knead and bake, and only then could he eat; whereas I get up and find all these things prepared for me. And how much Adam had to labor before he found a garment to wear. He had to shear, wash the wool, comb it, spin and weave it, and only then did he acquire a garment to wear; whereas I get up and find all these things done for me. All kinds of craftsmen come early to the door of my house, and I rise in the morning and find all these things before me" (Ber. 58a, cf. Tos. Ber. 6:2). Many of his sayings became proverbs, such as "Who is wise? – he who learns from every man. Who is mighty? – he who subdues his evil inclination. Who is rich? – he who rejoices in his lot. Who is honored? – he who honors his fellow men" (Avot 4:1). He was one of the *tannaim* who occupied themselves with cosmological speculation, the *ma'aseh bereshit* (Tos. Ḥag. 2:6). According to Tos. Ḥag. 2:4 he was one of the four sages who "entered paradise," it is said (ibid.) that "he cast

a look and went mad," while his companion Ben Azzai died as a result of this mystical experience. In the Jerusalem Talmud (Hag. 2:1, 77b) their roles are reversed. According to the Bavli he was regarded as "a disciple of the sages" (Kid. 49b and Rashi *ibid.*), and as one of those "who discussed before the sages" (Sanh. 17b and Rashi *ibid.*). Nevertheless, he was considered an outstanding scholar, so that it was said that whoever sees Ben Zoma in a dream "may hope for wisdom" (Ber. 57b).

[Zvi Kaplan]

BEN ZUTA (Ben Zita), ABU AL-SURRĪ (tenth century), Karaite exegete. A number of his explanations of the Scripture are sarcastically dismissed by Abraham *Ibn Ezra in his commentary on the Pentateuch (e.g., on Ex. 20:23; 21:35; 22:28) and his *Sefer ha-Ibbur*. In the absence of corroboration from Karaite sources, Ibn Ezra's citations remain a principal source for particulars about Ben Zuta's life. A passage in an anonymous Arabic commentary on Samuel suggests, however, that Ben Zuta lived in Jerusalem and at a somewhat later period than had been conjectured. Judah *Ibn Ba'lam also mentions Ben Zuta and cites his objection to an interpretation of Anan b. David, the founder of Karaism, to Ezra 18:6.

BEN-ZVI (Shimshelevich), IZHAK (1884–1963). Labor leader in the Yishuv, historian, Israeli politician, second president of the State of Israel; member of the First and Second Knessets. Ben-Zvi was born in Poltava, Ukraine, the eldest son of Zevi Shimshelevich. His father, a member of *Benei Moshe, visited Erez Israel in 1891 to explore the possibility of settling there. Ben-Zvi was educated in both a traditional and a modern *heder*, and in 1901–05 studied at a Russian gymnasium. He visited Erez Israel for the first time in 1904 for a period of two months. He entered the University of Kiev in 1905, but studies were interrupted due to a general strike. During the November pogroms he was active in the Jewish self-defense organization in Poltava. In 1906 he attended the founding conference of *Po'alei Zion (Zionist Social Democrats) of Russia, held in Poltava. Ben-Zvi served on the committee of three that formulated the final version of the party's program drafted by Ber *Borochov and contributed the section dealing with Palestine.

In June 1906 a search of Ben-Zvi's parents' home by the Russian police revealed a cache of weapons belonging to the self-defense organization that Ben-Zvi headed. His father was sentenced to lifetime exile in Siberia, serving 16 years before being allowed to leave the Soviet Union and settle in Erez Israel. His aunt, his sister, and his brother Aaron *Reuveni were also imprisoned, but Ben-Zvi himself escaped to Vilna

where he participated in the clandestine activities of the central committee of Po'alei Zion. He traveled to Germany, Austria, and Switzerland to try to influence Jewish students there. In Vienna he organized the first ties between Po'alei Zion branches in different countries. At the end of 1906 he returned to Vilna, which, after Borochoy's imprisonment, had become the center of the movement.

Ben-Zvi settled in Erez Israel at the beginning of 1907. In the same year he was a Po'alei Zion delegate from Erez Israel to the Eighth Zionist Congress held in The Hague. He participated in the founding of the Bar Giora organization in Jaffa in 1907, and in 1909 of *Ha-Shomer, along with Raḥel Yanait (*Ben-Zvi), who had settled in Erez Israel in 1908, and was to become his wife in 1918.

After the second Turkish revolution (1909), Ben-Zvi traveled to Turkey on behalf of Po'alei Zion. He visited Smyrna, Constantinople, and Salonika, as well as Beirut and Damascus, establishing ties with the Jewish communities and leaders. In Salonika he first encountered the remnants of the Shabbatean sect, later to become a subject for his research.

In 1910 Ben-Zvi, together with Raḥel Yanait, Ze'ev Ashur, and others, founded the first Hebrew socialist periodical in Erez Israel, *Aḥdut* ("Unity"). Upon the outbreak of World War I, Ben-Zvi interrupted his studies at the University of Constantinople and returned to Erez Israel. During the persecution of Jews by Jamal Pasha, the Ottoman governor, *Aḥdut* was closed down, and Ben-Zvi, together with David *Ben-Gurion, was imprisoned. They were both deported, and eventually made their way to New York. There they founded in 1915 the He-Ḥalutz movement of America.

Before the British offensive on the Palestine front, Ben-Gurion and Ben-Zvi initiated a volunteer movement for Jewish battalions in the U.S., and were among the first volunteers. They arrived in Egypt in 1918, and from there they went to Erez Israel as soldiers of the *Jewish Legion in the British Royal Fusiliers. During the disturbances of 1920, 1922, and 1929, Ben-Zvi was active in the ranks of the *Haganah, while also representing the *Yishuv* in negotiations with the British authorities.

He was elected to the Central Committee of the *Aḥdut ha-Avodah Party at its founding convention. During the summer of 1920 he participated in the world conference of Po'alei Zion held in Vienna, in which the movement split under the impact of the Bolshevik revolution in Russia. Ben-Zvi was instrumental in its reorganization on a firm Zionist platform.

In October 1920 he was appointed by the British High Commissioner to Palestine, Sir Herbert *Samuel, to the Palestine Advisory Council. But with the Jaffa riots of May 1921 and the subsequent temporary suspension of Jewish immigration, he resigned from the Council in protest against Mandatory government policy.

Ben-Zvi was elected to the Secretariat of the *Histadrut when it was founded in 1920. He devoted a considerable part of his public activity to Jerusalem and its Jewish population. He was first elected to the Jerusalem Municipal Council in

1927, but after the riots of 1929 he resigned from the municipality in protest against the stand of the city's Arab administration. In September 1934 he was reelected to the municipality.

In 1920 Ben-Zvi was elected to the Va'ad Le'ummi, first as a member, then in 1931 as its chairman, and in 1945 as its president. He participated as a delegate in all the Zionist Congresses during the 1920s, and as chairman of the Va'ad Le'ummi he represented the Yishuv at the coronation ceremonies of King George VI in 1937, and at the Round Table Conference on Palestine in London in 1939.

After the establishment of the State of Israel, Ben-Zvi was elected as a *Mapai member to the First and Second Knessets. Upon the death of President Chaim *Weizmann in 1952, he was elected president of the State. He was elected to a second term in 1957, and to a third term in 1962. He died in office on April 23, 1963.

Ben-Zvi headed the Institute for the Study of Oriental Jewish Communities in the Middle East, which he founded in 1948, and which was renamed the Ben-Zvi Institute in 1952. His research on the history of the people of Israel was a life-long endeavor. The scholarly works that he published were devoted mainly to research on communities and sects (such as the Samaritans, Karaites, Shabbateans, Jewish communities in Asia and Africa, the mountain Jews, and others) and to the geography of Erez Israel, its ancient populations, its antiquities, and its traditions. He was also a prolific journalist, publishing articles under his own name as well as under various pseudonyms.

His brochure *Ha-Yishuv ha-Yehudi bi-Kefar Peki'in* ("The Jewish Yishuv in Peki'in Village," 1922) was the beginning of series of studies on the Jewish villages in Erez Israel that preceded modern Jewish settlement, most of which were included in his book *She'ar Yishuv* ("The Remnant of the Yishuv," 1927) and in vol. 2 of his writings. His studies of communities were greatly facilitated by his direct contact with the subjects and by their willingness to reveal historical documents previously unpublished. Ben-Zvi's collected surveys on the non-Jewish communities of Israel appear in *Ukhlusei Arzenu* ("Populations in our Land," 1932), which, together with his book on the Jewish population of Israel, *Ukhluseinu ba-Arez* ("Our Population in the Land," 1929), is included in vol. 5 of his writings (1937). His studies on the history of the Samaritans, *Sefer ha-Shomeronim* (1935, and new enlarged edition 1970), is a basic work. Ben-Zvi also published *Masot Erez Israel le-Rav Moshe Basola* ("Journeys of R. Moses Basola in Erez Israel"), based on an original manuscript. This study, he believed, had enabled him to identify the unknown traveller in the *Masot ha-Nose'a ha-Almoni mi-Livorno mi-Shenat Resh Peh Bet* ("Journeys of an Unknown Traveler from Leghorn, from the Year 1521/22"). His book *Niddehei Yisrael* was translated into English (*The Exiled and the Redeemed*, 1958 and 1961), Spanish, French, Italian, Swedish, and Yiddish. The most important of his many studies on the history of the *yishuv* is *Erez Yisrael ve-Yishuvah bi-Ymei ha-Shilton ha-Ottomani* ("Erez Israel and

Its Yishuv during the Ottoman Empire,” 1955), which is based on Turkish documents and rabbinical responsa of the period. A large part of this work appears in English translation in L. Finkelstein (ed.), *The Jews, their History, Culture and Religion* (1960), pp. 602–88. His book *The Hebrew Battalion Letters* (1969) also appeared in English. A volume of his memoirs, *He-Hazon ve-Hagshamato* appeared in 1968. His complete works, including diaries, letters, and articles were republished, starting in 1965, by Yad Izhak Ben-Zvi, a memorial institute founded to perpetuate Ben-Zvi’s interests and works.

[Shneur Zalman Shazar]

BEN-ZVI, RAHEL YANAIT (1886–1979), labor leader and writer; from 1918, wife of Izhak *Ben-Zvi. Born in Malin, Ukraine, Raḥel Yanait was educated in Russia and in Nancy, France, where she pursued studies in agronomy. After helping to create the *Po’alei Zion labor movement in Russia, she settled in Erez Israel as a teacher in 1908, and was a cofounder of the Hebrew Gymnasium in Jerusalem, the second modern high school in the country. She played a pioneering role in *Ha-Shomer and Tenu’at ha-Po’alot (Women’s Labor Movement), and coedited the weekly *Aḥdut*, the first Hebrew organ of the Po’alei Zion movement in Erez-Israel, from its founding in 1910. After World War I, she became a founder of *Aḥdut ha-Avodah labor party and a leader of the *Haganah in Jerusalem, continuing her career as an educationist, and in 1920 established near Jerusalem’s Talpote quarter a girls’ agricultural high school of which she was the first principal. In 1948, she was the guiding spirit behind the founding of an agricultural youth village in Ein Kerem. After her husband became president of Israel in 1952, she assisted him in his official duties and worked particularly to make the president’s home a popular meeting place for all the communities of Israel. Upon her husband’s death in 1963, she became an active member of Yad Ben-Zvi, his memorial institute. She was the recipient of the Israel Prize for special contribution to Israel state and society in 1978. Her memoirs have been published: *Anu Olim* (1959; *Coming Home*, 1963) and *Eli* (Heb., 1957), a book written together with her husband about their son, who died in the Israeli War of Independence. She also coedited her husband’s writings, which began to appear in 1965.

BEN-ZVI, SHLOMO (1964–), media owner. Born in London as Michael Goldblum, Shlomo Ben Zvi was educated at Netiv Meir Yeshivah High School in Jerusalem and various other national-religious yeshivot in Israel and studied philosophy at the Hebrew University of Jerusalem. After making a substantial fortune in real estate and the technology sector

in Europe, he decided to become active in the Israeli media at the start of the 21st century. His first venture was the Tekhelet cable TV channel, whose programming concentrated on different aspects of Jewish life and which began broadcasting in 2003. He also purchased 20 per cent of Israel’s Channel Ten together with cosmetics heir Ronald *Lauder, who purchased 40 per cent.

He went on to concentrate his holdings in the right-wing and religious media, buying the weekly *Makor Rishon* in 2003 and acquiring control of the national-religious daily **Ha-Zofeh* and the monthly of the settlers movement, *Nekudah*, in 2004. His plans called for a relaunch of an expanded *Makor Rishon* in early 2005 and the start-up of a new right-wing daily newspaper. Ben Zvi was critical of the Israeli media for not being patriotic enough and for showing the IDF in a negative light. He was a member of the right-wing “Jewish Leadership” faction of the *Likud Party.

[Anshel Pfeffer (2nd ed.)]

BEN-ZVI, ZEEV (1904–1952), Israeli sculptor, whose work influenced a generation of sculptors. Ben-Zvi was born in Ryki, Poland and studied at the Warsaw Academy of Art before immigrating to Palestine in 1924. He entered the *Bezalel School in Jerusalem that year and studied under Boris *Schatz. Ben-Zvi specialized in portrait heads in beaten copper and molded plaster, which he treated in a cubist manner. When the New Bezalel School was opened in 1936 Ben-Zvi was appointed teacher of sculpture. During 1937 he visited France and England. On the outbreak of World War II, he executed the first model of *Outcry* – a hand lifted to the heavens. *Outcry* symbolized the horror and rebellion of Jews against the Holocaust in Europe – a subject to which Ben-Zvi frequently returned. In 1947, he executed his moving monument, *In Memory of the Children of the Diaspora*, at Mishmar ha-Emek. From 1947 to 1949 he tried to alleviate the hardships of the illegal immigrants detained by the British government in the Cyprus detention camps by teaching them art. Ben-Zvi’s works are to be found in museums and private collections in Israel and Great Britain. He won the Israel Prize for art in 1953 and the Dizengoff Prize in 1952.

[Fritz Schiff]

BEN-ZVI INSTITUTE FOR THE STUDY OF JEWISH COMMUNITIES OF THE EAST, Israeli research institute. The Institute was founded in 1947 by Izhak *Ben-Zvi, who later became Israel’s second president. His public career was highlighted by passionate concern for Jews of Muslim countries and the East, who in the 20th century were uprooted from their ancient communities. Their rich literature, traditions, and customs might have been completely lost were it not for the great efforts made to preserve them. The institute devotes itself to preserving the precious cultural legacy of these communities of the East. The scholars, scientists, poets, and communal leaders of Sephardi and Eastern communities made an indelible

mark on Jewish history. Their communal documents provide critical information to scholars in many fields. Furthermore, over half of Israel's population is rooted in these cultures. Their thorough appreciation is their entitlement and is essential to dealing with contemporary social and cultural issues.

The Ben-Zvi Institute is a fertile common meeting ground for scholars from all of Israel's universities and from abroad. The institute maintains a prestigious research staff, publishes books and periodicals, and holds lectures and symposia. It is affiliated with the Hebrew University of Jerusalem and Yad Izhak Ben-Zvi (see below). It cooperates with all of Israel's universities and enjoys the support of the Center for the Integration of the Oriental Jewish Heritage of Israel's Ministry of Education (since its establishment in 1977) and of the Israel Academy of Sciences. The institute initiates and supports research, publishes texts, periodicals, and monographs, and organizes academic conferences and lectures on the Jewish communities of the East.

Its specialized collection on Oriental Jewish communities, housed in the Yad Izhak Ben-Zvi library, contains the most comprehensive collection of its kind in the world. It is open to scholars and advanced students, who enjoy easy access to books on open shelves and individual attention by expert librarians. The Israel Prize was awarded to the Ben-Zvi Institute in recognition of its contribution to the study of Sephardi and Eastern Jewish history and culture.

The Institute publishes two periodicals: (1) *Pe'amim: Studies in Oriental Jewry* (a quarterly publication in Hebrew). Established by the Ben-Zvi Institute in 1979, *Pe'amim* provides scholars, teachers, and students with the best of recent academic research on the Jews of the East. The periodical has revolutionized the study of Oriental Jewry and the teaching of the subject. In recognition of its achievements *Pe'amim* received the Jerusalem Prize in 1982. (2) *Sefunot: Studies and Sources on the History of the Jewish Communities in the East* (Hebrew periodical). Appearing since 1956, this series is addressed to a scholarly audience and publishes textual studies of importance for the history, culture, language, and literature of Oriental Jewry. Among its research projects are (a) *Oriens Judaicus – Sources for the History of the Jews in Muslim Lands*. The purpose of this long-term project is to collect all the sources pertinent to the history of the Jews in Muslim lands. Materials are edited and published in volumes arranged by region and period. (b) *Archives in the Former Soviet Union*. The opening of libraries and archives in the former Soviet Union has offered scholars unprecedented opportunities to explore hitherto inaccessible archival sources. Scholars affiliated with the Ben-Zvi Institute are examining materials found in St. Petersburg (the Firkovich archive) and other sites. (c) *Ethiopian Jewry Legacy*. Initiated before the mass *aliyah* from Ethiopia, this project seeks to document the written and oral heritage of Ethiopian Jewry. Three issues of *Pe'amim* have been devoted to the subject and an annotated bibliography was published. The Institute hosts the Secretariat of the International Society for the Study of Ethiopian Jewry. (d) *The Karaite*

Jews. Several aspects of the history and culture of the *Karaites are being investigated. These include an encyclopedia of Karaite personalities, a bibliography of Karaism, and a study of the inscriptions of the Karaites in Crimea. (e) *Judeo-Arabic Culture and Literature*. This consists of three projects: (i) Judeo-Arabic halakhic literature; (ii) Judeo-Arabic biblical exegesis; and (iii) Judeo-Arabic philosophical, theological, and polemical works.

There is also the ongoing project to catalogue the Judeo-Arabic manuscripts in the Firkovitch Collection.

Yad Izhak Ben-Zvi

Yad Izhak Ben-Zvi was established in 1963 by a decision of the Israel government. During the first years of its existence its main activities were focused on gathering and consolidating the archives of Izhak and Raḥel Ben-Zvi and the publication of the writings of Izhak Ben-Zvi. In 1969 the Knesset adopted a law determining the aims of the Yad, which was charged with advancing research on the history of the Land of Israel and the dissemination of information about it and its various settlements and the heritage of the Jewish communities of Muslim lands. The law which defined Yad Ben-Zvi's objectives and *modus operandi* placed responsibility upon it to further study and education in this field. In addition, a few years later (1973), the study of the Jewish communities in Oriental countries and in the Sephardi Diaspora was added to its responsibility. In 1972 the Yad moved to its permanent headquarters in the building which had served as the residence of the president of Israel in Jerusalem. Yad Ben-Zvi has from its very inception involved leading scholars from all of Israel's universities in its activities. It has established joint centers for the study of Erez Israel with each of these universities. The basic principle which has guided Yad Izhak Ben-Zvi since its inception has been not to limit itself to academic activities for the benefit of small elite groups but to spread knowledge in these fields among all strata of Israeli society – senior officials and junior staff in government offices, the religious and the secular, veteran residents and new immigrants, the elderly and the young, teachers and pupils – throughout the entire country.

[Menahem Ben-Sasson (2nd ed.)]

BEOBACHTER AN DER WEICHSEL (Ger., "The Watcher by the Vistula"; Pol. title *Dostrzegacz Nadwisański*), the first Polish Jewish newspaper; published in Congress Poland from 1823 to 1824. Its editor was Anton *Eisenbaum, who approached the authorities for permission to publish a paper to serve the ideals of the Enlightenment (see *Haskalah). Permission and financial backing were granted, but only on the condition that a translation into Polish would be provided. The first issue of the paper accordingly came out at the end of 1823 with a Polish translation accompanying the Yiddish text (which was in fact German in Hebrew transcription). Some

items, calculated to please the authorities, were printed in Polish only. The paper was divided into five sections: official announcements and general news from Poland; foreign news and descriptions of Jewish life in other countries (including descriptions of Jewish agricultural settlement in Kherson province); commercial news; miscellaneous items including biographies of famous Jews such as Josephus, Maimonides, Moses Mendelssohn, and Rothschild; announcements. Official announcements were published without comment or criticism. Discussion of actual problems facing Jewry seems to have been deliberately avoided. Eisenbaum had no assistants and virtually produced the paper by himself. It was apparently difficult to find suitable candidates since the few Jewish writers who could write in Polish seem to have preferred non-Jewish platforms. The paper appeared for less than a year, from Dec. 3, 1823, to Sept. 29, 1824: altogether there were only 44 issues, with the circulation never exceeding 150. The paper had to close down when the grant it had received from the government was exhausted. It failed to gain increased circulation because the typical advocates of the Enlightenment were not particularly interested in Jewish problems, while the Jewish masses found the quasi-Yiddish incomprehensible. The extreme assimilationist views of the paper and its negative attitude toward Jewish religious traditions made it objectionable to the majority of the Jewish population of Warsaw.

[Moshe Landau]

BERAB (Beirav), JACOB (c. 1474–1546), halakhic authority and leader of the Jewish communities of Palestine, Egypt, and Syria during the first half of the 16th century. Berab was born in Maqueda near Toledo, Spain, and went to Morocco after the expulsion of Jews from Spain in 1492. According to his own statement, he was only 18 years old when he was appointed rabbi of Fez. A few years later Berab left Fez and traveled to Egypt, Palestine (Jerusalem, Safed), and Syria (Aleppo, Damascus) in connection with business concerns, which proved very successful. During these sojourns Berab also taught Torah, gathering wide circles of pupils, who respected him greatly. He considered himself superior to the majority of scholars in Egypt, Palestine, and Syria, and tried to impose his authority on questions of *halakhah* that were brought before him, or that he undertook on his own initiative. Although Berab had close associations with many of his contemporaries, his domineering tendency brought him into conflict with scholars who would not submit to him.

Berab was swept along with the messianic current of the early 16th century, which resulted in large measure from intensive study of the Kabbalah. Berab himself gave some impetus

to messianic anticipation by trying to revive the institution of **semikhah* (“rabbinical ordination”). According to Maimonides (Yad, Sanhedrin 1:3), the establishment of a “great *bet din*” will take place before the coming of the messiah. Since an institution competent to give *semikhah* had not existed for several hundred years, Maimonides provided instructions for its establishment. He authorized the rabbis of Erez Israel to nominate one among them who would be the first *samukh* (ordained rabbi). In turn, that rabbi would have the authority to ordain others, who could then form a Sanhedrin (Yad, Sanhedrin 4:11). The Spanish expulsion and the ingathering of many Jews in Erez Israel was interpreted as a sign that redemption was imminent.

Berab, while still in Egypt, conceived the idea of renewing *semikhah*. As the Palestinian settlement became stronger and the number of scholars increased, Safed became the seat of the messianic impetus. In 1538 Berab, who had been living in Safed periodically from at least 1524, succeeded in winning over the scholars there, including R. Joseph *Caro and R. Moses of *Trani, to his point of view. The scholars of Safed decided to renew the *semikhah* and they designated Berab as the first *samukh*. Immediately after this decision was taken, a messenger was sent to R. *Levi b. Ḥabib in Jerusalem, asking him to give his consent to the renewal of the *semikhah* and to accept the ordination of Berab. Not only did Levi b. Ḥabib, with whom Berab had had various disputes, refuse to accept the *semikhah* of Berab, he also opposed the decision of the rabbis of Safed on halakhic grounds. He also insisted that Maimonides’ statement concerning the reestablishment of *semikhah* did not represent a decision but only an opinion, and that Maimonides had retracted it later (Yad, Sanhedrin 4:2). The protests of Levi b. Ḥabib delayed Berab’s project. Discussions on the question of *semikhah* among the rabbis of both towns had been in progress for three months when Berab was forced by the Turks to leave Palestine. Apparently, he had become embroiled in a private affair, as a result of which his enemies denounced him to the Turkish authorities in Safed.

According to *halakhah*, *semikhah* could not be given outside Palestine. Berab feared that he might not be able to return and that all his plans would come to an end. Before he left, therefore, he gave *semikhah* to four rabbis of Safed, among whom were Joseph Caro and Moses of Trani. Levi b. Ḥabib, considering this to be a disregard of his protests, then publicly opposed the *semikhah*. From Damascus Berab conducted the discussion of the question in a vigorous manner, even by personal attacks on his adversary. Levi b. Ḥabib replied in kind and he was supported by an important ally – R. *David b. Solomon ibn Abi Zimra, who lived in Egypt. Thus, the project of establishing the “great *bet din*” came to an end; even the validity of the *semikhot* already given was in doubt. Nevertheless, those who had been ordained by Berab ordained other scholars after his death.

Berab wrote a commentary to all those parts of Maimonides’ work not dealt with in the *Maggid Mishneh* commentary by *Vidal Yom Tov of Tolosa. However, only a small

part was published (by Y.L. Maimon (Fishman) in *Sinai*, 36 (1955), 275–357). His responsa and his novellae to tractate *Kiddushin* were published together (1663). These novellae were republished from a manuscript in an enlarged form by Michael Rabinowitz (in Y.L. Fishman (eds.), *Sefer ha-Yovel... B.M. Levin* (1939), 196–299). Many of his halakhic decisions are reported in the works of his contemporaries, especially Joseph Caro.

Berab's grandson, JACOB BEN ABRAHAM (d. 1599), rabbi and halakhic authority, studied under Joseph Caro and was ordained by him. From 1563 he is mentioned in documents with the more important rabbis of Safed. By 1593 he was the most prominent of Safed's scholars and it was he who gave *semikhah*. He ordained R. Moses Galante, R. Eliezer Azikri, his own brother R. Moses Berab, R. Abraham Gabriel, R. Yom Tov Zahalon, R. Hiyya ha-Rofe, and R. Jacob Abulafia, all of Safed. In 1599 these seven rabbis reached an agreement not to ordain any other person without his approval. None of his writings remains, but his approvals of the decisions of his contemporaries, as well as some of his responsa scattered in the works of contemporary scholars, are known.

BIBLIOGRAPHY: J. Newman, *Semikhah* (Eng., 1950), includes bibliography; Graetz, *Hist.*, 6 (1949), index, s.v. *Jacob Berav*, Gruenhut, in: *Ha-Zofeh me-Erez Hagar*, 2 (1912), 25–33; Katz, in: *Zion*, 16:3–4 (1951), 28–45; Benayahu, in: *Sefer Yovel... Y. Baer* (1960), 248–69; Dimitrovsky, in: *Sefunot*, 6 (1962), 117–23; 7 (1963), 41–102; 10 (1966), 113–92; *Teshuvot Ralbah* (Venice, 1565), including a report of the controversy at the end.

BERAB (Beirav), JACOB BEN HAYYIM (end of 17th–18th century), poet and hymnologist. A descendant of R. Jacob *Berab, Berab was born in Safed. He left Palestine with his father-in-law R. Hayyim b. Moses *Abulafia before 1710 and settled in Smyrna (Izmir), Turkey. In 1740 they returned to Palestine and helped found the new Jewish settlement at Tiberias. Berab recorded all the events of the journey to Tiberias and their subsequent settlement in *Zimrat ha-Arez* (Mantua, 1745, etc). He also noted interesting details of the wars between the governor of Damascus, Soliman Pasha (1741–43), and the sheikh of Galilee, Dahr al 'Amr. The purpose of his work was to call to the attention of the Diaspora the importance of the resettlement in Tiberias. Appended to the published editions were 12 of his poems in Hebrew and Ladino praising the resettlement and Tiberias. Some of these poems were, until recently, sung to a special folk tune in the Balkan countries.

[Abraham David]

BERAH DODI (Heb. בְּרַח דְּוִי; “make haste my beloved,” Song of Songs 8:14), *ge'ullah piyyut* in the morning prayer of the first day of Passover in the Ashkenazi rite. It consists of three stanzas based upon the allegorical interpretation of the central

motif of *Song of Songs according to which “the beloved” is the people of Israel and the “lover” is God. Israel implores the “lover” to hasten his return to his “beloved.” It made use, at the end of each stanza, of the text of Song of Songs: “Behold he standeth behind our wall” (2:9); “Hark! my beloved! behold, he cometh” (2:8); “This is my beloved, and this is my friend” (5:16). On the basis of the initials interwoven in this *piyyut* (שלמה יגדל בתורה חוק), the authorship has been ascribed to the 10th-century liturgical poet Solomon b. Judah ha-Bavli. Another *ge'ullah piyyut* in the morning prayer of the second day of Passover recited outside Erez Israel (Ashkenazi rite), and composed by *Meshullam b. Kalonymus (c. 1000 C.E.), bears the same name. This *piyyut* of four stanzas is based upon the same motif as the aforementioned one. A third *piyyut* by the same name is recited on the Sabbath during the Intermediate Days of Passover. This was composed by Simeon b. Isaac, who also lived in the 10th century.

BERAJA, RUBEN EZRA (1939–), Argentinean community leader and Zionist activist. Born in Ciudadela, Province of Buenos Aires, to a family from Aleppo, Syria, from an early age Beraja was active in Jewish public life and after graduating as a lawyer from the University of Buenos Aires he joined the management of the Cooperativa Mayo, a credit cooperative established in 1961 that used its profits to support the Sephardi Jewish school network and for other beneficial activities. Beraja, who was the youngest member of the board, was soon appointed president of the cooperative. He continued to fill this position when the cooperative was transformed into the Banco Mayo (1978), acting in this capacity until the bank went bankrupt in 1998.

In the late 1960s Beraja was invited by Rabbi Itzhak Schehebar, the spiritual leader of the Aleppine community, to join the board of directors of the Congregación Sefaradí Argentina, becoming an active promoter of its educational and religious activities. At the same time he became one of the promising leaders of the Zionist Sephardi movement.

Using the financial success of the Banco Mayo, Beraja expanded its assistance to the educational, cultural and Zionist institutions of the Jewish community at large, increasing the influence of the Orthodox sector and the prestige of the Sephardi leadership.

In 1991 Beraja was elected president of the *DAIA, becoming the political representative of Argentinean Jewry. He was reelected in 1993 and 1996. Acting during the presidency of Carlos Saúl Menem, he was involved (1992) in the opening of the archives dealing with the immigration to Argentina of Nazi criminals in the postwar years under Peron's presidency. He also acted in defense of the Jewish community following the two dramatic events that shook its existence – the explosion of the Israeli Embassy in March 1992 and of the AMIA community building in July 1994.

However, the conflicting interests of his financial and political careers led to his downfall, caused by the collapse of Menem's economic policy and the political and economic crises that ensued. Beraja was held responsible for the losses of the Banco Mayo, which had bitter consequences for the Jewish community. Beraja was placed in preventive custody in December 2003 and at the beginning of 2005 was still awaiting trial. He accused the president of the Argentinean Central Bank during the crash of Banco Mayo – Pedro Pou – of discrimination and antisemitism.

Beraja served in several international Jewish organizations and was the vice president of the World Jewish Congress and the president of the Latin American Jewish Congress and the Fedración Sefaradí Latinoamericana (FESELA). He promoted the creation of important new projects, like the Universidad Hebrea Bar Ilan and a Jewish video-cable station (ALEPH), which did not last. He was the recipient of the Jerusalem Award for Jewish Education in the Diaspora from the World Zionist Organization and the Jewish Agency for Israel.

[Efraim Zaidoff (2nd ed.)]

BERAKHAH, ISAAC (d. 1772), rabbi and preacher in the Aleppo community. The support and encouragement of Elijah Silbirah enabled Berakhah to pursue his studies until he became a noted scholar. His *Berakh Yizhak* (Venice, 1763), a book of homiletics, contains several sermons for each weekly Reading of the Law; they deal mostly with halakhic problems. He often mentions Maimonides' *Yad ha-Ḥazakah*, Samuel Eliezer *Edels, the *tosafot*, and the responsa of *Isaac b. Sheshet. In addition to halakhic problems, he deals with such questions as the *kavvanah* and joy with which one should perform the *mitzvot*. Some of Berakhah's responsa were published in S.R. Laniado's *Beit Dino shel Shelomo* (Constantinople, 1775). Abraham Antibi, one of his many pupils, eulogized him at his death. Berakhah's sons Ḥayyim and Elijah were also rabbis in Aleppo.

BERAKHOT (Heb. בְּרָכוֹת: "Benedictions, Blessings"), first tractate of the Mishnah, Tosefta, Palestinian and Babylonian Talmuds. On its placement at the head of the order *Zera'im*, which deals with agricultural laws, see **Zera'im*.

The tractate deals with aspects of the daily liturgy (as distinct from the prayers of holy days, ritual readings of scripture, etc.). In keeping with the general objectives of the Mishnah, it is concerned primarily with the laws governing formal prayers and blessings, and deals only rarely or peripherally with the content, theology, or rationales for these prayers. These latter dimensions are discussed more extensively in the Tosefta, Talmuds, and cognate passages in midrashic works. Although the Talmud was able to identify some biblical foundation for

the liturgical topics dealt with in the tractate, the Mishnah organizes the material according to a topical sequence, with only occasional allusions to scriptural sources. Study of other literature from the Second Commonwealth, especially the liturgical texts from Qumran, allows us to better understand the place of rabbinic prayer in the broader evolution of Jewish worship of the time.

Mishnah *Berakhot* focuses primarily on three liturgical categories: (1) the *Shema*; (2) the *Tefillah*; (3) miscellaneous blessings to be recited on specified occasions, especially on the enjoyment of food and other physical pleasures. A "blessing" is a formal liturgical unit that is usually recognizable by its opening "Blessed are you, Lord our God [Sovereign of the Universe]"

Shema

Early rabbinic and apparently pre-rabbinic tradition interpreted the command (Deut. 6:6, 8) "And these words, which I command thee this day, shall be upon thy heart . . . when thou liest down, and when thou risest up" and the similar expressions in Deuteronomy 11:18–19 as explicit directives to recite the passages in which those expressions occur (Deut. 6:4–9, 11:13–21) daily in the evening and morning. This obligation was understood to be the fulfillment either of a separate precept, of the broader requirement to study Torah, or as a declaration of one's acceptance of the "yoke of the kingship of Heaven" in declaring "the Lord is one" (Deut. 6:4) and the "yoke of commandments" in Deuteronomy 11:1, as understood by Rabbi *Joshua ben Korḥa (Ber. 2:2). A third section was added to the *Shema*, at least in its morning recitation: Numbers 15:37–41, dealing with the commandment of ritual fringes. The Mishnah (1:5) sees this as fulfillment of the obligation to mention the Egyptian Exodus daily, though this seems doubtful. In both its morning and evening versions, the *Shema* is embedded in a framework of blessings that relate to the natural transition of the times of day, the divine love for Israel that was expressed in the giving of the Torah (of which the *Shema* is a part), and hopes for redemption.

The first three chapters of the Mishnah deal with the regulations for reciting the *Shema*. Topics include: the designated times when it may be recited, the appropriate physical postures, the accompanying blessings, laws about interruptions and irregularities in the recitation (e.g., if it was inaudible or in the incorrect sequence), and instances when a person is exempted from the obligation.

Tefillah

Mishnah chapters 4–5 deal with the *tefillah*, the central rabbinic prayer whose standard version consists of 18 blessings and was to be recited in the evening, morning, and afternoon. The structure and text of the prayer are presupposed, but not set out, in the Mishnah. Although the sages linked the institution of prayer at fixed times to the practices of the biblical patriarchs and the schedule of daily sacrificial offerings, the content and set times of the mandatory *tefillah* are considered

to be of rabbinic origin, albeit influenced heavily by biblical themes. Topics dealt with by the Mishnah include the designated times for the three services, occasions when the full 18 blessings or an abbreviated versions should be recited, occasions when one may forgo the normal physical requirements of standing facing towards the Jerusalem Temple, aggadah-like traditions about the preference for spontaneity and a reverent state of mind, and some prayer customs that are forbidden, evidently because of heterodox associations.

Blessings

Chapters 6 through 9 of the Mishnah are devoted to the blessings that accompany specified occasions. The Tosefta (4:1) supplies theological and scriptural rationales for this practice: "A person should not taste anything before reciting a blessing, as it says [Ps. 24:1] 'The earth is the Lord's, and the fullness thereof.' One who enjoys the benefits of this world without a blessing has committed a trespass," etc. The *halakhah* in the Mishnah requires that the precisely appropriate blessing be recited for each occasion. Accordingly, different blessings are designated for fruits of the earth, fruits of trees, bread, other baked goods, wine, "the seven species" of Deuteronomy 8:8; and guidelines are provided for choosing the correct blessings when there are numerous foodstuffs.

Chapter 7 discusses the procedures for the concluding blessing after a formal meal or banquet, especially the "invitation to bless" (*zimmun*).

Chapter 8 consists of a list of disputes between the Houses of Shammai and Hillel related to blessings recited at meals. Some of these disputes, or the reasons underlying the respective positions, remain obscure, and several were transmitted in differing versions in *baraitas* in the Tosefta and Talmuds.

Chapter 9 contains a miscellaneous collection of blessings for various occasions, including places of religious significance, wonders of nature, life-milestones, and deliverance from danger.

The Mishnah contains traditions covering the full range of the tannaic generations, including material dating from the Second Temple era (e.g., 1:1 cites the evening purification practices of the priests as a reliable sign of the advent of nightfall).

Both the Palestinian and Babylonian Talmuds contain full tractates for *Berakhot*. The Babylonian is the longest in the Talmud (by word count), owing to its extensive collection of aggadic material, much of it appearing as loosely connected digressions. Although some of these passages offer valuable insights into the rabbis' attitudes towards prayer (often defined as a plea for divine mercy), the material covers a vast assortment of themes, including biblical expositions, hagiographical narratives, dream interpretation, and a great deal of folklore.

[Eliezer L. Segel (2nd ed.)]

BERBERS, indigenous North African tribes who originally spoke dialects of the Berber language. Medieval Arab writers ascribed the ancestry of the Berbers to *Goliath the Philistine and maintained their Canaanite origin. The Phoenician colonization of Africa, the long Carthaginian domination, and the survival of Punic, a language closely related to Hebrew, supported these legends which spread among the Berbers themselves. Similar tales are found in the writings of Greek and Latin authors and in the Talmud which spread the legend that the Canaanites immigrated of their own free will to North Africa. It is said that the survivors of the Jewish revolt in *Cyrenaica (115–116 C.E.) found refuge among the Berbers of Western *Libya. Scholars have frequently claimed that the Jews' desire to proselytize found a favorable atmosphere among the Berbers from the first to the seventh centuries. African Christianity, whose early converts were Jews, clashed with Jewish proselytism. Archaeological discoveries, epigraphs, and writings of the Christian scholars Tertullian and St. Augustine, indignant at the growing Berber conversions to Judaism, attest to these facts. The persecutions by the Byzantines forced Jews to settle among the Berbers in the mountain and desert regions. Ibn Khaldun confirmed the existence of a large number of proselyte Berbers at the time of the Arab conquest of Africa. The Islamization of these countries, however, did not abolish all previous beliefs. Christianity was abandoned rapidly; Judaism continued to exist and – from Tripolitania to *Morocco – modern ethnographers and anthropologists encountered small groups whom they called "Jewish Berbers." These isolated groups of Jews lived in the high mountains of North Africa until the last few decades. Some scholars designated them as the descendants of Berber proselytes. In most cases they eventually intermingled with the rest of the population. However, the survival of such groups to the present is now doubted.

It is difficult to evaluate Jewish life in Berber society because Berbers did not have a written history. Berber history was completely oral. Thus, information on Jewish life comes from travelers who visited the Atlas Mountains, from a few written sources, and from interviews with people who lived in these areas. Two main sources are *Higgid Mordechai*, written by *Mordechai Hacohen*, a Jewish scholar from Tripoli who wrote about the Jews in Jabel Nafusa, south of Tripoli, and a statistical study carried out between 1961 and 1964 by the Mossad, the Israeli secret service, during the "Yachin Operation," in which the Mossad organized the *aliyah* of the Jews in the area.

Jews coexisted within Berber society. They had complete autonomy, communal organizations, and the possibility of practicing their religion. Jews were mainly occupied in trade

and the crafts and did not work in agriculture. There was some kind of understanding between Berbers and Jews about the occupational structure of each group, enabling each to earn a livelihood. They also shared religious rituals and customs. For example, at Shavuot the Berbers of Libya poured water on Jews as one of their customs.

The Mossad study referred to Jewish life in Berber society at the end of its existence. In the village of Gourama in southeast Morocco, for example, there were 285 Jews, 73% of them below the age of 30. About 20% of the families had eight members, 50% fewer than seven persons. Seven Jews were tailors, seven farmers, five merchants, and two butchers. Although more research is needed it seems that these figures characterize Jewish life in the Berber villages.

[David Corcos / Haim Sadoun (2nd ed.)]

BERCOVICI, KONRAD (1882–1961), U.S. novelist. Born in Romania, Bercovici used his experiences as an investigator for a controversial exposé, *Crimes of Charity* (1917). He wrote several books about the gypsies, including *Ghitza and Other Romances of Gypsy Blood* (1919) and *Story of the Gypsies* (1928). His other works include *Savage Prodigal* (1948), a biography of Rimbaud; *Dust of New York* (1919), set in the Lower East Side; *Main Entrance* (1932); and *Exodus* (1947), the story of Moses. His autobiography, *It's the Gypsy in Me*, appeared in 1941.

BERCOVITCH, PETER (1879–1942), Canadian labor lawyer, politician, and Jewish community leader. Bercovich was born in Montreal. The son of Romanian immigrants, he attended Université Laval à Montreal and McGill University before entering legal practice. He was an activist on behalf of Montreal's underprivileged Jewish workers and was soon a favorite speaker at many community political meetings and rallies of fraternal, charitable, and social organizations in the city's Jewish quarters. He represented the workers during the

protracted and bitter strikes in the Montreal men's clothing industry in 1916 and 1917, forcing improvement in labor conditions from the mostly Jewish manufacturers.

Bercovich became the first president of the Jewish Immigrant Aid Society and in the 1920s joined the Jewish community's court battle for equal rights for Jews in Quebec's schools, insisting on an accommodation within existing structures rather than a separate Jewish school system. A prominent Liberal Party member, Bercovich was elected to the Quebec Legislative Assembly for Montreal's Saint-Louis constituency in 1916 and was re-elected six times. He fought for a solution to the school question and supported measures to help the disadvantaged. He also shepherded a bill through the Quebec Assembly which validated Jewish marriages and authorized rabbis to keep registers of civil status. In 1938 Bercovich was elected to the federal House of Commons, where he served until his death.

[Gerald Tulchinsky (2nd ed.)]

BERCOVITCH, SACVAN (1933–), U.S. literary scholar. Bercovitch was born in Montreal of poor Ukrainian immigrant parents, both of whom were idealistic communists. His mother, Bryna, enlisted in the Red Army in 1917 and fought in the civil wars following the Revolution; his father, Alexander, an artist who had studied in Palestine, St. Petersburg, and Munich, had been conscripted into, and deserted from, the Russian Army during World War I. They immigrated to Canada in 1926. Bercovitch, who spoke Yiddish and French in childhood before learning English, was named after Sacco and Vanzetti.

Bercovitch began his higher education at the New School in New York and at Reed College in Oregon, but dropped out to live for four years in a left-wing kibbutz in Israel, where he met his first wife. He returned to Canada in 1958 and while working at a supermarket in Montreal attended night classes at Sir George Williams College (today Concordia College), where he earned his B.A. in 1961. He received his M.A. in 1962 and Ph.D. in 1965 from Claremont Graduate School in California. He taught at Brandeis (1966–68), the University of California, San Diego (1968–70), Columbia (1970–83), and finally Harvard (1983–2002), where he subsequently became professor emeritus and Powell M. Cabot Research Professor of American Literature. He was a visiting professor or lecturer at many universities around the world.

Bercovitch's scholarly work, growing out of his fascination with (and resistance to, in his words) American culture, has focused primarily on the formation of the American character and of American myth, what he has called the “symbolic construction of America,” through an examination of classic American literature from the 17th through the 19th centuries. He is the author of several influential works of scholarship, including *The Puritan Origins of the American Self* (1975), *The American Jeremiad* (1978), and *The Office of “The Scarlet Letter”* (1991); editor or coeditor of the equally influential collec-

tions *The American Puritan Imagination: Essays in Reevaluation* (1974), *Reconstructing American Literary History* (1986), and *Ideology and Classic American Literature* (1986, with Myra Jehlen); and author of numerous important essays, some of which are collected in *The Rites of Assent: Transformations in the Symbolic Construction of America* (1993). (The essay “The Music of America,” printed as the Introduction to this book, contains Bercovitch’s reflections on his personal and intellectual relationship to American culture as well as the Canadian and “Yiddishist-leftist” culture in which he grew up.) He was also the editor of the ongoing new multivolume *Cambridge History of American Literature* and published English translations of Yiddish writers.

Sacvan Bercovitch characterizes his work as “cultural close reading,” and its subject as the “American ‘consensus.’” “America was a venture in exegesis,” he says, “... a corporate identity built on fragmentation and dissent” whose “function was partly to mystify or mask social realities. Nonetheless it denoted something equally real: a coherent system of symbols, values, and beliefs, and a series of rituals designed to keep the system going” (*The Rites of Assent*, 29–30). His great erudition, intellectual depth, and skepticism of doctrinaire interpretation won him widespread respect and made him one of the most influential Americanists of his time.

[Drew Silver (2nd ed.)]

BERDICHEV, town in the historic region of Volhynia, now in Zhitomir district, Ukraine. Apart from two single references to individual Jews from Berdichev in 1593 and 1602, there is no evidence that a Jewish community existed in Berdichev before 1721. In 1732, the owner of the town granted a charter to the Jewish guild of tailors freeing them from interference by the communal authorities (*kahal*). The Jewish population gradually increased with Berdichev’s development as a fair town from 1765. According to the census of 1765, the Jews in Berdichev numbered 1,220 (out of a total population of 1,541) including Jews living in the vicinity; they numbered 1,951 in 1789 (out of 2,460). In 1794, Prince Radziwill, the owner of the town, deprived the rabbis of their right of civil jurisdiction, which was transferred to a court to be elected by majority Jewish vote. Berdichev had become an important center of Volhynian *Hasidism in the last quarter of the 18th century, and the Hasidim were thus able to secure the election of *dayyanim* so as to free themselves from the jurisdiction of the *kahal* and its *Mitnaggedim* rabbis. As the town grew, a number of noted scholars served as rabbis of Berdichev, including Lieber “the Great,” Joseph “the *Harif*,” and, from the end of the 18th century until his death in 1809, *Levi Isaac of Berdichev.

In 1797, Prince Radziwill granted seven Jewish cloth merchants the monopoly of the cloth trade in Berdichev, and in the first half of the 19th century the town’s commerce was concentrated in Jewish hands. Jews founded scores of trading companies and banking establishments there, with agencies in the Russian interior and even abroad. Jews also served as agents of the neighboring estates of the nobility, whose agri-

cultural produce was sold at the Berdichev fairs. The expatriation of Polish nobles and decline of the Polish nobility after the uprising of 1863 dealt a blow to Jewish commerce in Berdichev. The economic position of most of Berdichev’s Jews was further impaired by the restrictions imposed on Jewish settlement in the villages by the “Temporary Regulations” (*May Laws) of 1882 and other restrictive government measures.

The main increase in the Jewish population of Berdichev occurred in the first half of the 19th century. There were 23,160 Jews living in Berdichev in 1847, and 46,683 in 1861. It was then the second-largest Jewish community in Russia. Shortly afterward the numbers began to decline, and in 1897 Berdichev had 41,617 Jewish residents (80% of the total population). The 1926 census shows 30,812 Jewish residents (55.6% of the total); about the same number were probably living there in 1939. Until World War I, emigration was balanced by the natural increase in the Jewish population; after the 1917 Revolution the proportion of Jewish residents steadily decreased through emigration.

At the end of the 19th century, about half of the Jewish wage earners were employed in manual trades, mostly in tailoring, shoemaking, carpentry, metalwork, etc. About 2,000 were hired workers, while the remainder gained their livelihood from trade. Berdichev became one of the foremost centers of the *Bund. After the 1917 Revolution, the proportion of hired workers increased, while a considerable number of Jews were absorbed by the state administration.

The ideas of the Enlightenment (*Haskalah) began to spread in Berdichev early in the 19th century, especially among wealthier families. The Galician Haskalah pioneer and Hebrew author Tobias *Feder Gutmann settled in Berdichev toward the end of his life. Influenced by Isaac Baer *Levinsohn, a group of *maskilim* was formed there in the 1820s, in which the physician Israel Rothenberg was particularly active. Among the opponents of the *maskilim* was the banker Jacob Joseph Halpern, who had great influence in hasidic circles and close ties to the government. The first public school in Berdichev giving instruction in Russian was opened in 1850. With the economic decline of Berdichev, the wealthier *maskilim* left for the larger cities. Because of the poverty of the majority of the Jewish population, a large number of children were even unable to attend *heder*. According to the 1897 census, only 58% of Jewish males and 32% of Jewish females were able to read or write any language.

In Russian and Jewish literature and folklore, Berdichev epitomizes the typical Jewish town. It had some 80 synagogues and *battei midrash* and its cantors were celebrated throughout the Ukraine. It served as the model for the town depicted in the writings of *Mendele Mokher Seforim and *Shalom Aleichem (*Gants Berdichev*), as well as in *Der Nister (*Mishpokhe Mashber*). During the 1917 Revolution and the civil war of 1917–19, the head of the community and mayor of the town was the Bundist leader D. Lipets. In early 1919, the Jews in Berdichev became victims of a pogrom perpetrated by the Ukrainian army.

Under the Soviet government, most of the synagogues were closed. Yiddish continued to receive official acknowledgment and Yiddish schools were opened in Berdichev. In 1924, a government court of law was established there, the first in Ukraine to conduct its affairs in Yiddish. According to the 1926 census, of the 30,812 Jews in Berdichev 28,584 declared Yiddish as their mother-tongue. However, by the early 1930s, complaints were heard about curtailment of the use of Yiddish in government offices in Berdichev. A Yiddish periodical *Der Arbeter* appeared in Berdichev about twice weekly until the middle of the 1930s. The number of Yiddish schools dropped in the 1930s. By 1939, the number of Jews had fallen to 23,266 (37.5% of the total). All Jewish cultural activities there were suspended before World War II.

The Germans captured Berdichev on July 7, 1941; 1,000 Jews succeeded in fleeing from the city. In July around 1,300 were murdered. Thousands more were crowded in a closed ghetto. In late August 2,000 Jews were executed, and on September 5, 1941, another 4,300. In October the 15,000 remaining ghetto inhabitants were murdered near the village of Radianskoye. The few remaining artisans were killed by mid-1942. About 6,500 Jews lived in Berdichev in the late 1950s.

Although *mazzah* baking was prohibited in the early 1960s, it resumed after a few years. In 1970, there were an estimated 15,000 Jews in Berdichev with a synagogue, a cantor, and a ritual poultry slaughterer. The cemetery was reported to be neglected, but the Jews had erected a fence around the grave of Levi Isaac of Berdichev. Most of Berdichev's Jews left for Israel and the West in the 1990s.

[Shmuel Ettinger / Shmuel Spector (2nd ed.)]

Hebrew Printing in Berdichev

In 1807, Samuel C. Isachar Ber, who had established printing presses in several towns, set up a press in Berdichev, initially as a branch of his Ostraha house. Samuel and, after 1817, his son Jacob Funkelmann operated the press until 1820, when the business was transferred to Szdelkow. Altogether they printed over 30 works on Ḥasidism, Kabbalah, and *halakhah* in addition to prayer books and popular books in Yiddish. Another printing house was established by Israel *Bak in 1815–21. Before his immigration to Erez Israel in 1831, he produced 26 works on roughly the same subjects, most of them set in a new typeface designed and cut by Bak himself, with his own illustrations. Other Berdichev printers were M.H. Rothenberg (1834–36) and H.J. Sheftel (1885–1910); the latter published a great number of scholarly works, including a popular edition of the Babylonian Talmud (with Rashi) in one volume (1894).

BERDICHEVSKY SCHER, JOSE (d. 2000), general of the Chilean army born in Santiago (Chile). He realized a brilliant military career. In 1952 he was the personal pilot of President Gabriel Gonzalez Videla and rose to the rank of general in the Air Force, becoming the first Jewish general there. During the military regime of Augusto Pinochet (1973–89) he was named chief of staff of the Air Force, chief of the garrison of Santiago, and a member of the Military Junta. As chief of the garrison of Santiago he commuted death sentences handed down in court martial proceedings. He retired from the Air Force in 1978 and then served as ambassador to Israel.

[Moshe Nes El (2nd ed.)]

BERDUGO, family name of many distinguished rabbis in Morocco, chiefly in Meknès. According to tradition, the family was of Davidic descent through the exilarch Bustanai. *YAḤYA (or Ḥiyya) BERDUGO (d. 1617) endorsed an ordinance in Fez in 1605, later left for Tetuán and was nominated deputy rabbi there in 1614. A Yaḥya Berdugo was known in Meknès about the same time but it is not certain whether they are identical or not. MOSES BEN ABRAHAM, called “Mashbir” (c. 1679–1730), was head of the rabbinical court in Meknès, where the Berdugos settled after leaving Fez. Famous for his sense of justice (compilation *Or ha-Ḥayyim* to Deut. 1:15), he was the author of *Rosh Mashbir*, novellae on the Pentateuch and on some of the Talmud tractates (1840); *Kenaf Renanim I*, commentaries and novellae to the Bible (1909), and *Kenaf Renanim II*, an anthology of homilies (1932); and *Divrei Moshe*, responsa (1947). Other unpublished writings are at the National Library, Jerusalem (Ms. Heb. 8^o 1446), Ben-Zvi Institute, Jerusalem (Ms. 736), and in private possession. JUDAH BEN JOSEPH I (1690–1744), *dayyan* in Meknès (1730) following Moses b. Abraham Berdugo the Mashbir, was the author of *Mayim Amukkim*, a commentary on the Pentateuch and *haftarot* (1937). Some of his responsa have been published in the responsa of Jacob ibn ZUR. MORDECAI BEN JOSEPH, “Ha-Marbiz” (1715–1762), brother of Judah, was the grand-nephew, pupil, and son-in-law of Moses b. Abraham, and a noted *dayyan* (after 1748) in Meknès. He wrote many works, of which, however, only *Mordekhai* has been published (1948); others are still extant in manuscript. RAPHAEL (1747–1821), son of this Mordecai, *dayyan* and scholar, was the author of the following works: *Mishpatim Yesharim*, responsa (2 vols., 1891), *Torot Emet*, commentary on the Shulḥan Arukh (1939); bound with the latter are *Kizzur ha-Takkanot* and *Minhagei Terefoṭ*; and *Mei Menuhot*, a commentary on the Pentateuch (2 vols., 1900–42). Other works are still in manuscript, including translations of the Bible from Genesis to the end of Isaiah into Arabic, under the title *Leshon Limmudim*. MAIMON “the Mevin” (1767–1824), son of Raphael, was a *dayyan* and the author of responsa and other works, including *Lev Mevin* and *Penei Mevin* (issued together 1951). His novellae to the Talmud are in manuscript.

PETHAHIAH MORDECAI BEN JEKUTHIEL (1764–1820), the author of *Nofet Zufim*, responsa (1938), and *Pittuhei*

Hotam, a commentary on the Talmud (unpublished). JACOB (1783–1843), his brother, *dayyan* and poet, was known for his stand against the rabbis of Tiberias in favor of the Jerusalem rabbis in the controversy of 1836 over participation in the *ḥalukkah*. His works include *Shufrei de-Ya'akov*, responsa (1910); *Gallei Amikta*, a commentary on *Mayim Amukkim* of Judah Berdugo (1911); *Kol Ya'akov*, liturgical poems (1844). *To'afot Re'em* or *Karnei Re'em*, on Rashi and Elijah *Mizrahi, is still in manuscript (Ms. Jerusalem National Library, Ms. Heb. 80 3839, and 1448). JOSEPH (1802–1854), *dayyan* in Meknès, was a scholar whose works include a lexicon of Hebrew grammatical roots and their derivatives, *Ketonet Yosef* (3 vols. 1922–43). Other works are unpublished. JACOB BEN MORDECAI (d. 1901), brother of Joseph, was an *av bet din* in Meknès. SOLOMON BEN DANIEL (1854–1906), halakhic authority and poet, was a rabbi in Meknès and in 1897 was appointed rabbi of the community. He was the author of *Dei Hasher, Em le-Masoret*, responsa, a collection of laws and Torah novellae; appended are *Musar Haskel* and *Shirei Shelomo* (1950). JEKUTHIEL ḤAYYIM BEN ELISHA (1858–1940), great-grandson of Mordecai b. Joseph, was born in Rabat, and appointed *dayyan* there in 1893. The French government appointed him in 1922 a member of the supreme *bet din* (court of appeal) which had its seat in Rabat, the capital of Morocco. In 1934 he deputized for Raphael *Ankawa, chief rabbi of Morocco, during his illness, and he succeeded him after his death. In 1935 he was made president of the Supreme *bet din*. JOSHUA BEN JACOB (1878–1953) became chief rabbi of Meknès in 1904 and in 1941 chief rabbi of Morocco, where he served until his death. He had a strong personality and on a number of occasions was in conflict with the leaders of the Church and with members of the French government, by whom he was respected. The communal rules and regulations adopted during this time were published in the pamphlets of “The Council of Moroccan Rabbis” (Casablanca). None of his books was published.

BERDYANSK (in 1827–30 **Kutur-ogly**, in 1830–42 **Novo-Nogaïsk**, in 1939–58 **Osipenko**), town in the Zaporozhie region of the Ukraine. Berdyansk was founded as a village by order of the governor-general of Novorossia, Count M.S. Vorontsov, whose attitude to Jews was fairly liberal. In 1842 it became a district capital. From the beginning the Jews formed part of its population, employed as tailors and merchants. In 1847 the Jewish population was 572 and in 1860 a Talmud Torah school was founded. In 1864, 703 Jews were registered in the town and 744 in the district. In April 1881, concerned over anti-Jewish acts in the wake of the assassination of Alexander II (see *Pogroms), the Jews requested the authorities to dispatch troops to prevent pogroms.

In 1890 there were three Jewish schools in Berdyansk. A vocational branch of the Talmud Torah was also founded. According to the 1897 census the number of Jews in the town was 3,306 (including 258 *Karaites), i.e., 12.9% of the total population; while in the district it was 9,171 (3% of the population). During World War I new schools were opened for the children of the Jewish refugees from the frontline area. In the period of the Civil War Berdyansk changed hands a number of times and the Jewish population suffered from violence and pillage. In June 1920 seven members of the Jewish Communist Party, *Po'alei Zion, volunteered for the Red Army. According to the 1926 census there were 2,138 Jews in Berdyansk in 1926 and 2,393 in 1939 (4.6% of the population). Berdyansk was occupied by German troops in October 1941. About a thousand Jews were shot in a gorge near the town; the rest were annihilated in 1942. Little is known about Jewish life under subsequent Soviet rule. However, in the early 1990s a Jewish cultural society was founded and a synagogue congregation was active. According to the *Jewish Agency there were 2,000 Jews in Berdyansk in 1994 (1.3% of the total population).

[Naftali Prat (2nd ed.)]

BERDYCZEWSKI (Later: **Bin-Gorion**), **MICHA JOSEF** (1865–1921), Hebrew writer and thinker. Born in Medzibezh, Podolia, Berdyczewski was the descendant of a line of ḥasidic rabbis. His father served as the rabbi of Medzibezh during Berdyczewski's childhood. Berdyczewski began to read Has-kalah writers in his adolescence and the ensuing struggle between modern ideas and the concepts and forces of traditional Judaism was to animate his writings throughout his life. His first marriage (1883–85) ended when his father-in-law would not tolerate his preoccupation with modern Hebrew books. Shortly thereafter he moved to the yeshivah of Volozhin to study for over a year. Here he began his literary career and incurred the wrath of his teachers with his writings.

His first article was “*Toledot Yeshivat Eẓ Ḥayyim*” (in *Ha-Asif*, 1887) and his first story “*Heẓiz ve-Nifga*” (in *Ha-Meliz*, 1888). Most of his publications in this period were polemical articles, some popular and some scholarly, which contain many of the ideas he developed later. He often expressed his views in lyrical outbursts rather than in connected logical statements – a style which marked much of his writing throughout his life.

Berdyczewski left Russia for Germany (1890) and stayed two years in Breslau, studying at the rabbinical seminary and the university. He met frequently with David *Frischmann who strove to expand Berdyczewski's intellectual horizons and cultivate his literary taste. In 1892 he moved to Berlin and combined both Jewish and secular studies but continued the lonely existence of the poor, foreign university student. In Germany Berdyczewski's chaotic, revolutionary ideas were given shape under the impact of his studies in philosophy. The influence of Schopenhauer can be noticed in his famous article “*Reshut ha-Yahid Be'ad ha-Rabbim*” (“The Individual and the Community,” in *Ozar ha-Sifrut*, 1892), in which

he defended the claims of individual freedom and creativity against the stultifying demands of such abstractions as tradition, religion, public consensus and will, history, and ideology. Here and in other articles, Berdyczewski attacked the limited scope of much of Hebrew literature, the inadequacies of Has-kalah, Aḥad Ha-Amism, and Ḥibbat Zion. After two years of studies in Berne, Berdyczewski returned to spend four years (1896–1900) in Berlin, one of the most productive periods in his life. Stimulated by his opposition to both *Aḥad Ha-Am and *Herzl, and encouraged by his friends and other Hebrew writers there, Berdyczewski published in many of the leading Hebrew journals, vigorously attacking all accepted ideological positions and calling for a “transvaluation” – in the Nietzschean sense – of Judaism and Jewish history, and the expansion of the canons of Hebrew literary taste. His impulsive tone won him the admiration of the young and the scorn of the older, more conservative readers, mostly the admirers of Aḥad Ha-Am. The famous Aḥad Ha-Am versus Berdyczewski debate appeared in *Ha-Shiloḥ* (1897). In 1900 Berdyczewski firmly established himself in the history of Hebrew literature with the publication of nine volumes of articles and stories.

The year 1900 was also significant in Berdyczewski's personal life; he married Rachel Romberg, a dentist. During the next 20 years she assisted him in his literary and scholarly work and together with their son Immanuel Bin-Gorion continued to edit his writings after his death. With his bride he returned home for a brief visit to the Russian Pale of Settlement for the first time in ten years. The renewed confrontation with the harsh realities of Jewish life in the Pale both modified his stridency and rekindled his interest in the narrative possibilities afforded by this rapidly disintegrating organic community.

After a short stay in Warsaw, he returned to Germany and Breslau (1901–11) and, in self-imposed isolation from colleagues and current affairs, devoted himself to intense literary work which he carried out through many periods of poverty and infirmity until his death. In Breslau, where some of his finest works were written between 1906 and 1909, he continued to write in Hebrew, but embarked upon several new ventures – he wrote articles and stories in Yiddish; systematically collected rabbinic legends; studied the origins of Judaism with particular emphasis upon the Samaritan tradition; and began a still unpublished diary in German. His collected Yiddish writings were published in 1912. After moving to Berlin in 1911, he edited anthologies of legends, reworked his previous writings for the Stybel edition (1921–25), and studied Jewish history of the biblical and Christian period. The years after 1914 were particularly difficult: his health failed; his travel was restricted since he was a Russian citizen; and after the war he was deeply shocked at the news of the pogrom in Doubovo and his father's murder. Nevertheless, Berdyczewski wrote some of his major stories after the war, notably his short novel *Miryam*, which he completed shortly before his death.

Though Berdyczewski's writings are commonly divided into four groups: essay, fiction, folklore anthologies, and schol-

arship, the borders between them are often quite arbitrary. Written over a period of 35 years and edited by the author for the Stybel edition, Berdyczewski's literary output is rich but its ambivalent attitudes are the mark of an uprooted, marginal man capable of simultaneously embracing logically contradictory positions and emotions. Many of Berdyczewski's paradoxes can be understood in terms of the dialectical stages of his development, each a reflection of *fin de siècle* European moods.

In his literary criticism, Berdyczewski derided exhibitionistic mannerism and the submission of a writer's artistic individuality to the demands of ideology. He showed little appreciation for the outstanding literary figures of his day, *Mendele Mokher Seforim, Aḥad Ha-Am, Ḥ.N. *Bialik, and J. *Klausner, but supported younger writers like J.H. *Brenner and M.Z. *Feuerberg and others devoted to their art. He held literature to be one of the vital forces in human experience and reacted to it impressionistically in often fragmentary critical essays, replete with intemperate outbursts and bitter irony; hence his critical point of view is far from consistent.

Berdyczewski wrote more than 150 Hebrew stories, many in Yiddish, and several in German. These stories deal with two central subjects: life in the Jewish towns of Eastern Europe in the last decades of the 19th century and the life of the Eastern European Jewish students in the cities of Central and Western Europe. Heavily autobiographical, many of his pre-1900 stories are often impressionistic, emotional monologues with essayistic digressions.

The *shtetl* (“Jewish town”) served as the background for dramatic situations embodying Berdyczewski's philosophical outlook. He was obsessed with exceptional, individualistic types – lonely, rebellious, and ostracized, and the inevitable clash between them and the intolerant community. The archetypal topography of the town with its Jewish and gentile quarters separated by a river is symbolic of the psychological and social tensions in dozens of stories. Often there is an implied protest against pre-arranged marriages and other forms of coercion within the Jewish community which cause misery, particularly for the women. Life is often depicted as a struggle between light and darkness, beauty and ugliness, refinement and crudeness, and in this struggle the good and beautiful are vanquished. The stories after 1900 consciously strive to erect a literary monument to a fading society or to comprehend human existence in literary terms. Increasingly, the *shtetl* is comprehended as a society in the grip of a blind, cruel force.

In his fiction one can discern basic patterns and archetypal figures which appear in various forms: the gracious woman who is callously given to a commonplace or vulgar husband; the uprooted student; the undistinguished, almost impotent male; the virile, ruddy man. Berdyczewski attempted to discover the basic psychological features of his protagonists as they function in plausible, realistic situations and thus added a new dimension to the Hebrew short story. The recurring typology, however, and the use of key epithets and motifs

organized his more successfully integrated stories and opened them to symbolic interpretation. In their structure they resemble the rabbinic legends whose concrete situations and symbolic implications had always fascinated Berdyczewski. During his most rebellious period (1896–1900) he collected ḥasidic legends which he published as a separate volume in 1900. The vitality, individuality, and aesthetic sensibility of the Ḥasidim attracted him since they were the antithesis of rabbinic Judaism. Both the Hebrew and the German editions of these anthologies substantially expanded the library of Jewish literature available to the average reader.

One of the most seminal figures in both modern Hebrew literature and Jewish thought, Berdyczewski exerted a subtle yet crucial influence upon many readers after the turn of the century because he embodied, both in his personality and in his writing, the painfully ambivalent attitudes toward both traditional Judaism and European culture shared by many Jewish intellectuals. Characteristically, Berdyczewski rebelled against his religious background, but could never completely reject it.

Berdyczewski's collected works are *Kol Kitvei*, Stybel edition (20 vols. (1921–25) and various other later editions; collected Yiddish works *Yidishe Ksurim* (1924); rabbinic legends; *Me-Ozar ha-Aggadah* (2 vols., 1913; *Mi-Mekor Yisrael* (5 vols., 1930–45). A list of his works translated into English appears in Goell, Bibliography, 63, 94. An English translation of *Miriam* appeared in 1983. Among recent collections in Hebrew are A. Holtzman, Y. Kafkafi (eds.), *Kitvei M.J. Berdyczewski* (1996) and A. Holtzman (ed.), *Mehkarim u-Teudot* (2002)

His son IMMANUEL BIN-GORION (1903–1987), writer and translator, was born in Breslau. In 1936 he settled in Tel Aviv where he served as director of Bet Mikhah Yosef (a municipal library based on his father's collection). His writings in Hebrew and German include essays, literary criticism, and studies of folklore. He edited and published his father's writings. His Hebrew books include *Shevilei ha-Aggadah* (1950) and *Ḥidot ha-Sheloshah*, ancient Indian legends.

[Dan Almagor / Arnold J. Band]

BERECHIAH (fourth cent.), Palestinian *amora*; sometimes referred to in the Midrash as R. Berechiah ha-Kohen. His father's name was apparently Ḥiyya (Tanḥ. B. Gen. 60, cf. Lev. R. 31); was a pupil of R. *Helbo, whose aggadic sayings, as well as those of other scholars, he reported. His many aggadic sayings are found mostly in the Midrashim and in the Jerusalem Talmud, but he is also mentioned in the Babylonian Talmud. R. Berechiah preached and taught in his own *bet midrash* (TJ, Ber. 7:6, 11c). In his homilies he stresses the virtues of charity and the uniqueness of the Jewish people (Lev. R. 27:7; Ta'an. 4a). "God said to Israel: 'My children: If you see the merit of the patriarchs declining and the merit of the matriarchs diminishing, go and cleave to acts of charity'" (TJ, Sanh. 10:1, 27d). He gave voice to the expectation that God would exact vengeance upon Israel's enemies (Lam. R. 5:1). Although only a few of his *halakhot* are mentioned, it is clear that his views in the field of *halakhah* were regarded as authoritative (TJ, RH 3:1, 58d). Some scholars think that there was an earlier Palestinian *amora* (third century) called Berechiah or Berechiah Sabba ("old").

[Zvi Kaplan]

BERECHIAH BEN NATRONAI HA-NAKDAN (end of 12th–13th century), fabulist, translator, thinker, copyist, and grammarian. Some have identified him with Benedictus le Puncteur of Oxford, who presented a gift to Richard I in 1194, though many deny this. Berechiah lived in Normandy and at a certain period also in England. His title *ha-Nakdan* testifies to the fact that he punctuated Hebrew books. He also knew foreign languages and translated and adapted several books into Hebrew, including *Quaestiones Naturales* by Adelard of Bath, a popular 12th-century book on natural sciences. Berechiah entitled it *Dodi ve-Nekhdi* or *Ha-She'elot* (ed. by H. Gollancz, 1920). His collections of ethical treatises *Sefer ha-Ḥibbur* and *Sefer ha-Mazref* (ed. by Gollancz, *The Ethical Treatises of Berachyah, son of Rabbi Natronai Ha-Nakdan*, 1902) summarized the opinions expressed in Saadia Gaon's *Emunot ve-De'ot* (of which Berechiah used the old, unprinted translation in Hebrew), as well as the opinions of other *geonim*. In these essays he invented several Hebrew terms for philosophical concepts. He also wrote *Ko'ah Avanim* (unpublished), a translation-adaptation of a Latin book about the magical powers in stones.

His most famous work is *Mishlei Shu'alim* (English translation by M. Hadas *Fables of a Jewish Aesop*, 1967), a collec-

tion of fables translated mostly from the French fable collection *Ysopet* by Marie de France (c. 1170), and also from the lost Latin translation of Aesop, *Romulus*, as well as from other collections of Oriental origin. Berechiah writes in his preface: "These fables are well-known to all mankind and are in books by people of all languages, but my faith differs from theirs." The preface contains an appraisal in rhyming puns of the low moral state of English Jewry as seen through Berechiah's eyes: "The wicked are saved, the righteous groan, the bitter are sweetened, the evil rise, while the great are cast down, and prayer is tasteless, glory is folly, and the sacrifice is wicked." He concludes, "I would prefer toil and a dry crust to sharing my lot with them." *Mishlei Shu'elim* has appeared in 18 editions, most of them, including the first (Mantua 1557–59), being incomplete. Berechiah has been identified with Krespia or Crispia (Heb. קרישפיה, קרישפיה, קרשפיה) the grammarian, one of whose fables (Fable 119) was included in *Mishlei Shu'elim*, but this identification is unfounded. Berechiah's son, Elijah, who lived in "the city of Radom" (Darom, i.e., Dreux) was a copyist and grammarian. In those of his texts which have survived he expresses his feeling of honor at his father's respected position and refers to him as "the *tanna* and pedant."

[Abraham Meir Habermann]

BERECHIAH BERAKH BEN ELIAKIM GETZEL (c. 1670–1740), rabbi and author. Born in Cracow, Berechiah Berakh served as a rabbi in Klementow and later as a preacher in Yavorow (Yavorov). The leader of Polish Jewry, Abraham Isaac *Fortis (H̄azak), allowed him to preach in every place without previously obtaining the permission of the local rabbi. His eloquent sermons belong to the end of the period of the Council of Four Lands. He spoke out against the low moral standards prevailing in the upper strata of Polish Jewry in the first half of the 18th century. He criticized rabbis who took gifts from the parents of their pupils, judges who accepted remuneration beyond that permitted by law, and preachers and communal leaders who accepted gifts in return for their efforts. He also criticized the practice of lending money at interest. His outspokenness earned him many opponents. Isaac Eisik of Szydłowiec withdrew an approbation he had given to Berechiah's book of responsa when he learned that the latter, whose words were misinterpreted, prohibited a certain marriage permitted by Solomon *Luria. As a result, the above-mentioned book, together with four others on which Berechiah had labored for more than 22 years, was forcibly taken from him and he had to flee. Only a small part of his works (on the

Pentateuch, Psalms, Talmud, and *Turim*) survived, and was published by Berechiah in two volumes, entitled *Zera Berakh* as a supplement in two parts to the work of the same name in two volumes by his grandfather *Berechiah Berakh b. Isaac Eisik. The first consists of explanations and homilies to Genesis (Halle, 1714), and the second of novellae to the tractate, *Berakhot* (Frankfurt on the Oder, 1731). A commentary on the Pentateuch, *Zera Berakh*, part 4 (mentioned *ibid.*, part 3) has remained in manuscript.

[Samuel Abba Horodezky]

BERECHIAH BERAKH BEN ISAAC ESIK (d. 1663), called "the Elder" in differentiation from his grandson *Berechiah Berakh b. Eliakim Getzel; rabbinical scholar, *dayyan*, and preacher in Cracow; his father-in-law was Yom Tov Lipmann *Heller. Berechiah studied under the kabbalist Nathan Shapiro, and became a *dayyan* of the *bet din* of Joshua Hoeschel of Cracow. He officiated as chief preacher to the community in Cracow, belonging to a category of preachers held in high esteem. His sermons were published under the title *Zera Berakh* in two parts: the first (Cracow, 1646) includes Berechiah's exposition of Genesis, concluding with the portion *Masei*, and the second (1662) completes the commentary to the end of Deuteronomy and includes sermons on the Five Scrolls and the Passover *Haggadah*. His commentaries are not only representative of homiletics in 17th-century Poland-Lithuania, but provide wide-ranging disquisitions on central problems of Jewish society, such as the causes of the Chmielnicki massacres in 1648–49. He also composed a special elegy, entitled "*El Male Raḥamim*," on the martyr's death suffered by *Mattathias in Cracow in 1663, which was introduced into the Cracow liturgy. Berechiah died in Constantinople on his way to Erez Israel.

BEREGI, ÁRMIN BENJAMIN (1879–1953), Hungarian Zionist. Born in Budapest, Beregi was a relative of Theodor *Herzl and knew him from childhood. He graduated as an engineer in 1901 and worked in factory construction in various parts of Europe and later in Palestine. At Herzl's request he organized a Zionist student movement in Hungary. He served as president of the Hungarian Zionist Organization from 1911 to 1918. A Jewish defense force that he organized in 1918 for protection against pogroms was authorized by the Hungarian government. Beregi headed the Palestine Office (see *Jewish Agency) in Budapest from 1925 to 1935, when he settled in Palestine. The last years of his life were spent in Tel Aviv as construction manager of a brick factory. In 1933 he published a two volume novel about life in Palestine, entitled *Isten árnyékában* ("In the Shadow of God").

[Getzel Kressel]

BEREGI, OSZKÁR (1876–1966), Hungarian actor, famous for his Shakespearean roles. Beregi worked for three years with Max Reinhardt in Berlin and became a member of the Pest National Theater in 1899. Nationalist elements brought about his dismissal in 1910 and he went to Vienna. By 1925 he was acting in Hollywood and appeared in *Anything Can Happen* (1952), *Call Me Madam* (1953), and *Desert Legion* (1953).

BEREGOVO (Cz. **Berehovo**; Hg. **Beregszász**), city in Sub-Carpathian Ruthenia (now in Ukraine). Toward the end of the 18th century Jews were first permitted to settle there on the estates of the counts Schoenborn and to pursue trade. Most of them originated from Poland. By 1795 there was an organized community with a synagogue and *hevra kaddisha*. Abraham Judah ha-Kohen *Schwarz officiated as rabbi from 1861 to 1881, and Solomon Sofer (Schreiber) from 1884 to 1930. A Hebrew elementary school was opened after 1918, while Beregovo was within Czechoslovakia. There were 4,592 Jews living in Beregovo in 1921 and 5,865 (out of a total population of 19,379) in 1941. They owned 16 factories, three flour mills, and two banks, and were represented in the professions by 22 doctors and 17 lawyers. Most of the Zionist parties and youth were active in Beregovo. A number of Jews owned vineyards, and supplied the international market as vintners. After the Hungarian takeover in 1938, the Jews were deprived of their business licenses. Five hundred males were drafted into labor battalions and perished on the eastern front. In 1941 about 250 local Jews without Hungarian citizenship were deported to the German-occupied Ukraine and murdered there. In the winter of 1944 a ghetto and Judenrat were established, and in mid-May 1944 about 11,000 Jews were deported to Auschwitz, among them 3,600 from Beregovo with the others from the surrounding area. The big synagogue was confiscated while a service was being held during Passover 1959 in order to house the local theater. After that time, services were held in a rented room. The number of Jewish families was estimated at 300 in 1970. Presumably most left in the 1990s.

[Oskar K. Rabinowicz / Shmuel Spector (2nd ed.)]

BEREGOVSKI, MOSHE (1892–1961), Soviet Russian musicologist. Born in the Ukraine, Beregovski was the son of a *melammed* and reader (*ba'al kore*) and sang in the synagogue choir, where he received his first musical training. He studied composition at the Leningrad Conservatory and participated in the field expeditions of the late 1910s. He taught music and conducted a choir at the Jewish folk music society in Kiev. In 1918 he founded and directed the music section of the Jewish Culture League in Kiev and in 1927 began to collect and study

Jewish folk music at the Faculty of Jewish Culture of the Ukrainian Academy of Sciences. From 1928 to 1941 he was the head of the Folk Music Division of the Jewish Culture League and the Folklore Department of the Kiev Conservatory. By the beginning of World War II the folk music department had more than 1,200 cylinder recordings of 3,000 items and more than 4,000 transcriptions, of which more than 600 were recorded by Beregovski, as well as the collections of *An-Ski and Joel *Engel. In 1944 he received his diploma in music in Moscow for his thesis on Jewish instrumental music. In 1946 his doctoral work on musical theater and his thesis were rejected because of elements of Western culture which he described. In 1949 the department of Jewish culture was closed and in 1950 Beregovski was arrested and imprisoned for five years. After his release he tried to publish his work but could not do so for political reasons. He had written most of his projected five-volume study of East European Jewish folk music and given it to his family before his arrest. Most of his recordings and writings survived WWII and are kept in several institutions in the Ukraine. His five volumes include: (1) workers' and revolutionary songs of the 1905 period, domestic and army songs (published in 1934 under the title *Yevreyskiy muzikalny folklor* and in its Yiddish edition (in Latin characters) as *Jidisher Muzik Folklor*); (2) love and family songs; (3) klezmer music; (4) songs without words; (5) music of the *Purimshpil*. These are all being published in the U.S., Russia, and Israel. In 1938 Beregovski published another collection of Yiddish songs from several sources under the title *Yidishe Folkslider*, edited with Itzik *Fefer (1938), which contained 298 items influenced by Soviet ideology.

Beregovski was the first ethnomusicologist to record in the field with a recording machine the oral traditions of East European Jews. The material he collected between 1914 and 1948 includes songs of the Holocaust. He was a pioneer in addressing the question of modes and context in the study of Jewish folk music. Beregovski's extensive work represents the rich musical life of Jews in Russia and the Ukraine before the Holocaust and established the basis of modern studies of this material. The following of his works appeared posthumously: *Old Jewish Folk Music* (ed. M. Slobin, 1982); *Jewish Instrumental Folk Music* (ed. M. Slobin, R. Rothstein, and M. Alpert, 2001); *Evreiske Narodnye Muzikalno-Teatralnye Predstavleniya* (2001).

[Gila Flam (2nd ed.)]

BERENBAUM, MICHAEL (1945–), U.S. Holocaust scholar who played a prominent role in what he describes as the "Americanization" of the Holocaust: the transformation of a sacred Jewish memory into a significant part of the conceptual and physical landscape of the American public culture.

Berenbaum was born in Newark, New Jersey, and educated at Hebrew-speaking New York yeshivot, Queens College (B.A., 1963), the Jewish Theological Seminary, the Hebrew University of Jerusalem, Boston University, and Florida State University, completing his Ph.D. as a student of Richard Ruben-

stein, whose influence was apparent in Berenbaum's text of the President's Commission on the Holocaust (PCOH) Report presented to President Carter on September 27, 1979. Influenced by the magisterial work of Raul Hilberg, Rubenstein and Berenbaum understood the Holocaust in large measure as a bureaucratic triumph of a Nazi society of total domination. Among the recommendations to the president offered in Berenbaum's text was a "living memorial," to consist of a memorial and museum space, an educational foundation, and a committee on conscience. The commission's recommendation would eventually become the conceptual blueprint for the United States Holocaust Memorial Museum in Washington, D.C., which opened in April 1993. Berenbaum played a major role in the creation of the museum and the content of its permanent exhibition, serving as project director from 1988 to 1993 and director of the Museum's Research Institute from 1993 to 1997. Berenbaum directed a design team that created an exhibition narrative focusing on careful inclusion of non-Jewish victims, a balance between Jewish life before the Holocaust, the extermination, the return to life after, and an emphasis on Americans as bystanders (often complicit ones) and liberators.

In recent years, Berenbaum has served as president and chief executive officer of the Survivors of the Shoah Visual History Foundation (1997–99) and director of the Sigi Ziering Institute: Exploring the Ethical and Religious Implications of the Holocaust at the University of Judaism. He consults widely on the development of Holocaust museums and films. He was one of three American representatives to the international competition that chose the memorial at the Belzec death camp and a member of the team that created the accompanying and highly acclaimed museum. His many film projects include co-producing *One Survivor Remembers: The Gerda Weisman Klein Story*, which received an Academy Award for Best Short Documentary and an Emmy Award in 1995. He was historical consultant to *The Last Days*, which won the Academy Award in 1998.

Berenbaum has written or edited 16 books, including *After Tragedy and Triumph: Modern Jewish Thought and the American Experience* (1990); *Holocaust: Religious and Philosophical Implications* (co-edited with John Roth, 1989); *A Mosaic of Victims: Non-Jews Persecuted and Murdered by the Nazis* (1990); *The World Must Know: The History of the Holocaust as Told in the United States Holocaust Memorial Museum* (1993); *The Holocaust and History: The Known, the Unknown, the Disputed and the Re-examined* (co-edited with Abraham Peck, 1998); and *Bombing of Auschwitz: Should the Allies Have Attempted It?* (co-edited with Michael Neufeld, 2000). He also served as executive editor for the second edition of the *Encyclopaedia Judaica*.

Holocaust memory has become a compelling, volatile, sometimes controversial element in American public culture. Berenbaum's career, particularly his many years of service to the United States Holocaust Memorial Museum project, has been dedicated to ensuring that Holocaust memory moved beyond ethnic boundaries into a wider culture in the hope

that Holocaust memory – expressed through cultural representations of so many kinds – will offer a sober reminder of what is possible in a modern society.

[Edward T. Linenthal (2nd ed.)]

BERENBLUM, ISAAC (1903–2000), pathologist specializing in cancer research. Berenblum was born in Bialystok, Poland, and was taken to England in 1914. In 1923 he received his B.Sc. with honors in physiology and biochemistry, his M.B. and Ch.B. in 1926, his M.D. with distinction in 1930 and his M.Sc. (1936) all from Leeds University. As a student he became interested in cancer research, and from 1936 to 1948 was a member of the Dunn School of Pathology at Oxford University and in charge of the Oxford Research Center of the British Empire Cancer Campaign. During this period he developed the theory of the two-stage mechanism for the production of tumors. He found that in addition to the chemical that causes cancer, another chemical is required for the promotion of a tumor. He continued the development of this research theme at the National Cancer Institute at Bethesda in the United States from 1948 to 1950. In 1950 he joined the staff of the Weizmann Institute at Rehovot, where he set up the department of experimental biology. He developed an internationally recognized school of cell biologists and cancer workers. He served for three years (1965–68) as a member of the scientific council of the international agency for cancer research. Berenblum was deeply interested in the public aspects of cancer, and was chairman of the Israel Cancer Society. In 1974 Berenblum was awarded the Israel Prize for science, and in 1980 the Alfred B. Sloan Prize and Gold Medal. He wrote *Science Versus Cancer* (1946; U.S. ed. *Man Against Cancer*, 1952) and *Cancer Research Today* (1967).

[Jack Gross]

BERENDSOHN, WALTER A. (1884–1984), literary historian and critic. Berendsohn was born in Hamburg. He taught literature at Hamburg University, from 1921 until 1933, when the Nazi racist legislation forced him into exile. He then made his home in Copenhagen. While still in Germany he published works on Selma Lagerloef and Knut Hamsun, and his first work in his new home was *Der lebendige Heine im Germanischen Norden* (1935) in which he investigated the influence of the various translations of Heinrich Heine's writings into Danish, Swedish, Norwegian, Finnish, and Icelandic.

Berendsohn fled from Denmark to Sweden in 1943. There he continued his literary work, devoting extensive studies, inter alia, to August Strindberg, some of whose works he translated into German. Shortly after World War II he published *Die Humanistische Front* (1946), the first part of a two-volume work on "exile literature," created by refugees from the Third Reich all over the world. This work – with a title that marks the contrast between humanism and the Hitler regime's adoration of power and violence-laid the foundations for what later became a subject of study and research at many academic institutions in Europe and the U.S.A. In Sweden this research was

for many years headed by Berendsohn himself at the Institute for German Studies at Stockholm University.

Berendsohn later devoted much special research to Thomas Mann. While his book *Thomas Mann – Kuenstler und Kaempfer in bewegter Zeit* (1965; *Thomas Mann, Artist and Partisan in Troubled Times*, 1973) is a general introduction to his life and work, *Thomas Mann und die Seinen* (1974) also includes essays on the work of Mann's five children, his author brother Heinrich and his wife Katja. He also issued, with a preface, *Sieben Manifeste zur Juedischen Frage* (1966) – essays written by Thomas Mann between 1936 and 1948 in protest against Nazi persecutions of the Jews and in support of the Jewish renaissance in the Land of Israel, which he himself enthusiastically supported. Berendsohn visited Israel fourteen times and dedicated several articles and one major book (*Volk der Bibel im Land der Vaeter*, 1962) to it. Stockholm University issued his *Die kuenstlerische Entwicklung Heines im "Buch der Lieder"* (1970) and *Lion Feuchtwanger – Der Meister des politischen Romans* (1974). Amsterdam University published his *August Strindberg: Der Mensch und seine Umwelt – Das Werk – Der schoepferische Kuenstler* (1974) – perhaps the first work to concentrate on Strindberg's artistic achievement, rather than his biography. In the same year there appeared in Darmstadt his *Die Dichterin Juedischen Schicksals Nelly Sachs: Ekstatischer Aufstieg und kuenstlerische Entwicklung*.

A comprehensive bibliography of Berendsohn's books and articles (over 800 titles), edited by Brita von Garaguly, was published by the Royal Library in Stockholm in 1974.

BIBLIOGRAPHY: D. Stern, *Werke juedischer Autoren deutscher Sprache* (1969); *Allgemeine Wochenzeitung der Juden in Deutschland* (Sept. 12, 1960); *Neue Zuercher Zeitung* (Sept. 11, 1974). **ADD. BIBLIOGRAPHY:** R. Heuer (ed.), *Lexikon deutsch-juedischer Autoren*, 2 (1993), 141–62.

[Erich Gottgetreu]

BERENDT, GOTTLIEB MICHAEL (1836–1920), German geologist. Berendt was born in Berlin, where he studied mining geology. The results of his early field work in the Berlin area were published in his first major book *Die Diluvialablagerungen der Mark Brandenburg* (1863). This research made him an ardent protagonist of the new, and at the time controversial, glacial theory, for which he adduced additional evidence by a study of the Harz Mountains. In 1873 he was appointed professor at the University of Koenigsberg, and in 1875 professor at the University of Berlin. He was one of the first Jews to join the Prussian Geological Survey, where he directed the department for the North German Lowlands. Berendt engaged in extensive geological mapping, particularly of glaciated areas. His geological map of the province of Brandenburg was the first of its kind. Notwithstanding his open mind on modern geological theory, he was an opponent of Darwin whose theory of evolution he tried to refute in *Die Theorie Darwins und die Geologie* (1870).

BIBLIOGRAPHY: NDB, 2 (1955), 69–70.

[Yakov K. Bentor]

BERENICE (1) (last half of first century B.C.E.), daughter of *Salome, sister of *Herod and of Costobar the Edomite. She was the wife of *Aristobulus (son of Herod and Mariamne). Berenice bore Aristobulus three sons (*Herod, who became king of Chalcis; Agrippa, who became *Agrippa I; and *Aristobulus) and two daughters (Mariamne and *Herodias, the second wife of *Antipas (Herod Antipas)). Berenice did not live harmoniously with her husband, who was proud of his descent from the Hasmonean Mariamne. She was used by Salome to obtain information about her husband so as to arouse Herod's enmity against him. After Aristobulus had been put to death in 6 B.C.E., Berenice was given in marriage to Theudian, brother of *Doris, the first wife of Herod and mother of his son Antipater. She spent her last years in Rome, where she gained the friendship of the emperor *Augustus and *Antonia, the widow of Drusus. On the strength of this friendship Antonia was well disposed toward the young Agrippa I, even to the extent of assisting him with large sums of money when he was heavily in debt.

(2) (b. 28 C.E.), the oldest daughter of Agrippa I. At the age of 13 she was married to Marcus, son of the *alabarch Alexander Lysimachus. After the death of Marcus she was married to *Herod, king of Chalcis, her father's brother. Two sons were born of this marriage – Berenicianus and Hyrcanus. On the death of her husband in 48 C.E., Berenice went to stay with her brother *Agrippa II, who had succeeded Herod. The residence of brother and sister under one roof gave rise to calumny. Berenice was married a third time, c. 65 C.E., to Polemon II, then king of Olba in Cilicia. However, she left him after a short time and returned to the house of her brother. She was in Caesarea with Agrippa in 60 C.E. when Paul was put on trial before the governor Festus (Acts 25:13–26:30). The Jerusalem riots of 66 C.E. found Berenice in the city in fulfillment of a Nazirite vow made when she was ill. She risked her life in an attempt to keep Gessius Florus from provoking the multitude, but was unsuccessful. When she attempted to pacify the rioters, they burned down her palace, forcing her to flee. Later, when the Syrian governor *Cestius and his

army marched on Jerusalem, she went over to him with her brother. She remained in the Roman camp even when Vespasian commanded the army fighting against the rebels. Titus, son of Vespasian, fell in love with Berenice who was 39 years old at the time. She was with him during the siege of Jerusalem and witnessed the horrors of its destruction. In 75 C.E. Titus established her in the royal palace at Rome and conducted himself toward her as if she were about to become his legal wife. The ruling circles in Rome, however, did not look favorably upon the affair and when Berenice began to act like an empress, the opposition to her deepened and Vespasian compelled Titus to send her away. After Vespasian's death in 79 C.E., she returned to Rome. However, her previous relationship with Titus was not renewed. The Greek inscription in honor of Berenice by the civic leaders of Athens dates apparently from the period of her travels between Italy and Judea.

Her story has been the subject of fiction as in Leon Kolb's *Berenice, Princess of Judea* (1959) and Lion Feuchtwanger's *Josephus* trilogy.

BERENSON, BERNARD (1865–1959), U.S. art historian and art connoisseur. Berenson was born Valvrojenski in the Lithuanian village of Baltramantz, where his father, an ironmonger and grain and lumber merchant, was one of the leaders of the Jewish community. When Berenson was ten, the family emigrated to the United States, where they changed their name. Berenson was sent to the Boston Latin School and, with the financial assistance of the art collector, Isabella Stewart Gardner, was able to go to Harvard University. After graduating he went to London, Oxford, Berlin, and finally Italy, where he made his home for the rest of his life.

Berenson made a thorough study of Italian Renaissance art, and was soon able to purchase important masterpieces for his patron. Through his books – his earliest, *The Venetian Painters of the Renaissance*, appeared in 1894 – he became known as an authority. In 1907 he began his long association with the English art dealer, Joseph (later Lord) *Duveen. This connection enabled Berenson to amass a fortune by providing Duveen's pictures with "Berenson passports," cer-

tifying the expensive paintings as genuine. He and his wife, who came from a wealthy American Quaker family, acquired an old villa near Florence and filled it with art treasures and a vast library. Here Berenson's research into Renaissance art came to fruition in a number of important books, among them *The Study and Criticism of Italian Art* (in three series, 1901, 1902, and 1916), *Essays in the Study of Sienese Painting* (1918), and *Italian Pictures of the Renaissance* (1932). Berenson was a prolific writer. His bibliography, published on his 90th birthday, listed 73 pages of books and articles. Although he destroyed some time-hallowed attributions, he also rediscovered artists forgotten for hundreds of years whose works had been credited to better-known masters. He managed to bring light into the jungle of naïve or careless credits that prevailed in Renaissance connoisseurship when he began his career.

Berenson experienced a certain conflict in his relationship to Judaism. As a young man he contributed essays on Jewish topics to the *Harvard Monthly*, and throughout his long life never denied being a Jew and even boasted of carrying on the Jewish "traditions of great learning." However, he joined the Episcopal church as a young man, and later became a Catholic, although he never publicized these conversions. As an American citizen he was not affected by the antisemitic legislation in Italy before and during the Nazi domination. However, he became apprehensive for the safety of his art treasures, and in 1942 went into hiding until the German retreat from the country. In his autobiographical writings he vacillated between an enormous racial pride and a sharp condemnation of the Jewish people. One of his last autobiographical books was *Sketch for a Self-Portrait* (1949), which contained reminiscences of his childhood in Lithuania. For many years he was an anti-Zionist, but in his old age he accepted Zionism and the necessity for a Jewish state. He bequeathed his villa "I Tatti," with all its treasures, to Harvard, to be available to young scholars so that they could "live" art there as he had lived it.

[Alfred Werner]

BERENSON, LEON (1885–1943), Polish lawyer and diplomat. Berenson was born in Warsaw, and started his legal practice there in 1905 as defense counsel in political cases in which he showed himself a brilliant and courageous fighter for social justice. He soon became one of Poland's most famous lawyers. In 1914 he joined the Organization for the Civic Equality of Jews and Poles (later the Organization of Poles of the Jewish Faith, *Wyznania mojzeszowego*), which favored Jewish assimilation. He was elected to the Warsaw Municipal Council in 1916 as the representative of this party. When the Polish state was established in 1918, Berenson, as an official in the Ministry of Justice, helped to organize the Polish judiciary. In 1920 he entered the Foreign Ministry and served in Washington un-

til 1923 and later in the U.S.S.R. Berenson resigned from the foreign service in 1930, when the National Democratic Party (N.D. = Endeks) became a powerful force in the ruling Piłsudski regime. He resumed his legal practice and was defense counsel in several political trials of historical significance. He died in the Warsaw ghetto. His writings include *Z sali śmierci: Wrażenia obrónców politycznego* ("From the Death Cell: Memoirs of a Defense Counsel in Political Cases," 1929).

BERENSON (Abbott), SENDA (Valvrojenski; 1868–1954), "Mother of Women's Basketball" and a member of the Basketball Hall of Fame and the Women's Basketball Hall of Fame. Born in Baltramentz (Butrimonys), a town near Vilna, Lithuania, Berenson's family immigrated to Boston when she was seven, changing the family name from Valvrojenski to Berenson. She became the first director of physical education at Smith College in Northampton, Massachusetts, in January 1892, a month after James Naismith invented basketball in nearby Springfield. Berenson visited Naismith to learn the game and adopted it for her female students, organizing the first official game of women's basketball on March 22, 1893. It featured the Smith sophomores against the freshmen, with no male spectators allowed. Berenson introduced the first rules of women's basketball (1899), adapted to avoid the roughness of the men's game and stressing a refined game that favored socialization and cooperation over competition and winning. Her rules included dividing the court into three areas, with two players permanently designated for each area; eliminated stealing the ball; limited dribbling to three bounces; and restricted a player from holding the ball longer than three seconds. She was editor of *Spalding's Official Basketball Guide for Women* (1901–17) and chairwoman of the U.S. Women's Basketball Committee (1905–17). She left Smith in 1911 after marrying Herbert Vaughan Abbott, a professor of English at Smith, and chaired the physical education department at the Mary A. Burnham School in Northampton until 1921. In 1934, she moved to Santa Barbara, Calif., where she died. She was one of first three women elected to the Basketball Hall of Fame (1985). Her brother was the art historian Bernard *Berenson.

[Elli Wohlgernter (2nd ed.)]

BERENSON, ZVI (1907–2001), Israel Supreme Court justice. Berenson was born and educated in the Galilee. He received a grant for excellence from the British High Commissioner to study mathematics in England, where he also studied law. Returning to Israel, he served as legal adviser of the Histadrut (General Labor Federation) from 1934 until the creation of the State of Israel in 1948. At the request of Prime Minister David Ben-Gurion, he drafted the Declaration of Independence. In

1950, he was named director general of the Labor Ministry, and in 1954 he became a justice of the Supreme Court, where he served for 23 years until his retirement in 1977. His decisions were characterized by clarity, innovation, and a liberal approach to protection of individual rights. His major contributions were in administrative law, public tenders, torts, and labor and family law. He emphasized the legal basis of High Court of Justice decisions and judicial review of Knesset legislation and government decisions. He played a key role in the development of the Supreme Court ruling that administrative decisions of the government require it to state the grounds for them, the government's obligation to carry out court decisions and the right of the Supreme Court sitting as a court of equity to award administrative damages. His name is associated with several judicial precedents of public interest, such as the interim order compelling Prime Minister Golda Meir to allow television broadcasts on the Sabbath, equal allocation of assets between a married couple, and simplification of judicial procedures.

After retirement from the Supreme Court bench, Berenson served as chair of the arbitration board for the public sector for 17 years, until 1994.

[Leon Fine (2nd ed.)]

BERÉNY, RÓBERT (1887–1953), Hungarian painter and graphic designer. Born and educated in Budapest, Berény studied in Paris and Italy. On his return he joined the "Nyolcak," a progressive group of artists searching for new forms of pictorial expression. In 1948 he was appointed professor at the Academy of Creative Arts in Budapest. Berény's early work reflects the influence of Cézanne, while his later work is more expressionistic. He painted a wide variety of subjects, including life studies and landscapes. He was an outstanding graphic artist whose posters maintained a high standard. His *Self-Portrait with Straw Hat* (1906), *The Lady Cellist* (1929), *The Scrawl* (1933), *Ice-Carrying* (1937), and *The Student Painter* (1947) are in the Hungarian National Gallery. His portrait of Béla Bartók is in the Bartók Archives, New York.

[Jeno Zsoldos]

BERESTECHKO (Pol. **Beresteczko**), small town in Volhynia, Ukraine; until 1795 and from 1919 to 1939 within Poland. Jewish settlement there is first mentioned in a document dated 1569. Until 1648 the number of Jews exceeded 1,000. About 200 families perished in Berestechko during the *Chmielnicki massacres in 1648–49. In the battle fought at Berestechko between the Cossacks and Poles in 1651 some 1,000 Jews fought on the Polish side, according to Nathan Nata *Hannover. There were 872 Jews registered in the community in 1765, of whom 632 lived in the town. It was devastated by a pestilence at the end of the 18th century. Rehabilitated shortly afterward, the community numbered 1,927 in 1847, 2,251 in 1897 (45% of the total population), and 2,210 in 1931 (total population 6,514). Between the World Wars the economic situation deteriorated. Most Jewish industry consisted of small enterprises process-

ing agricultural produce for the local market. In addition, 177 shops of the town's 234 belonged to Jews, and they were the majority among artisans, accounting for 28 of 30 tailors and 18 of 19 furriers. A Hebrew school and a public library functioned and served as a cultural center for local Jews.

Holocaust Period

In September 1939 the Soviets annexed Berestechko, nationalized the economy, closed all Jewish communal institutions, and disbanded all parties and organization. The Hebrew school was turned into a Yiddish one.

On June 23, 1941, the Germans captured the city. On August 8 German police with the help of local Ukrainians rounded up 300 Jewish men and executed them near the local castle. A Judenrat was chosen from among former public activists and a heavy tax was levied on the Jews. From October 5 to 14 a ghetto was set up, surrounded by barbed wire. Some needed artisans were housed in separate quarters. Later Jews from nearby villages were brought in, causing great crowding in living quarters. From September 7 to 9, 1942, the ghetto population was murdered, with only a few managing to escape and hide. Berestechko was recaptured by the Soviet Army on April 24, 1944. The few survivors who returned from the Soviet Union found their homes in ruins.

[Aharon Weiss / Shmuel Spector (2nd ed.)]

BERETTYÓÚJFALU, town in Hajdú (in 1944 Bihar) county, eastern Hungary. Jews first settled in the town at the beginning of the 19th century, having moved in mostly from neighboring Zsáka. Their number ranged from 125 (2.5% of the total) in 1840 to 1,083 (9.9%) in 1930. According to the census of 1941, the last before the Holocaust, the town had a Jewish population of 982, representing 8.3% of the total of 11,781. The community established a *hevra kaddisha* in 1807, and built its first synagogue in 1840 and a *mikveh* in 1866. After the communal rift of 1868–69, the community identified itself as Orthodox. In 1876, the community established a Jewish elementary school. In 1885, several small Jewish communities in the neighboring villages, including that of Csökmő, joined the larger community of Berettyóújfalu. By 1920 the town also boasted a *hasidic* congregation. Among the rabbis who served the community were Amram *Blum (1883–1907), Mordechai Friedmann (1912–30), and Béla Benzion Blum, Amram's son (1930–44). Rabbi Béla Blum perished in the ghetto of Budapest.

During World War II, the Jews were subjected to drastic discriminatory measures, and many of the Jewish males were conscripted for forced labor. Shortly after the German occupation of Hungary in March 1944, the Jews were rounded up and first concentrated in a local ghetto. The ghetto also included the Jews from the neighboring villages in the district of Berettyóújfalu, including those of Bakonszeg, Csökmő, Hencida, Váncsod, and Zsáka. On June 7, the ghetto population was first transferred to the local brickyard, and a day later to the ghetto

of Nagyvárad (Rom. Oradea), from where they were deported to Auschwitz a few days later.

After the war 150 survivors, many among them former labor servicemen, returned. According to the census of 1949, the town had 221 Jews. These continued to maintain a congregation until 1956. The synagogue was sold in 1964. Most of the Jews either moved to other places or emigrated. In 1968 there were some 20 Jews living in the town; by the end of the century only two.

[Randolph Braham (2nd ed.)]

BEREZA (also *Kartuszkaya Bereza*; Pol. *Bereza Kartuska*), town in Brest district, Belorussian S.S.R.; until 1795 and between the two world wars in Poland; today in Belarus. A Jewish community existed there from the beginning of the 17th century. Erection of a synagogue was authorized in 1629. The community numbered 242 in 1766, 515 in 1847, and 2,623 in 1897 (42.1% of the total population). At the end of the 19th century barracks were built for the Russian army, which benefited Jewish tradesmen. Although their number decreased to 2,163 by 1921, the Jews still formed 61.3% of the total population. The main occupation of the Jews was in the lumber industry: sawmills, furniture, and other wood products, which were mostly exported. A number of noted rabbis served in Bereza, including Isaac Elhanan *Spektor who officiated there when a young man (1839–46), and Elijah *Klatzkin (1881–94). In the 1920s Jews served as the mayor and deputy mayor of the town. Jewish children studied in three schools: Hebrew, Yiddish, and a *talmud torah*.

[Shmuel Spector (2nd ed.)]

1939–1941

After the outbreak of World War II and the Soviet-German agreement on the division of Poland, Bereza fell to Soviet rule. All public, independent political activity of a national character was forbidden. The Jews' sources of livelihood were reduced by the creation of a network of government-owned stores, cooperatives, and services.

Holocaust Period

On June 23, 1941, a day after the outbreak of war between Germany and the U.S.S.R. German forces entered Bereza. On June 26 the synagogue and houses nearby were burned down. The community faced kidnappings for forced labor, starvation, and disease throughout that winter (1941–42). In July 1942 a ghetto was established, comprising two sections: ghetto "A" for "productive" persons employed by the Germans; and ghetto "B" for the "nonproductive," nonworking members of the community. On July 15, 1942, the inmates of ghetto "B" were taken to Brona Góra and murdered. Some of the Jews in ghetto "A" attempted to flee to the forests, or to *Pruzhaný Ghetto, which was still free from deportations. On October 15, 1942, the Germans

carried out an *Aktion* to liquidate ghetto "A" In defiance, the Jews set the ghetto ablaze. That day some of the members of the *Judenrat committed suicide at their last meeting. Many of the inmates were murdered in the ghetto itself, while about 1,800 were taken and killed outside the town. The community was not reconstituted after World War II.

BEREZHANY (Pol. **Brzeżany**), town in Ukrainian S.S.R. and Republic (formerly in E. Galicia). Jews had settled there by the 18th century. Jewish representatives from different communities met at the fairs held in Berezhany, e.g., in September 1740. There were 90 Jews living in Berezhany in 1765, in 1900, 4,305 (over 40% of the total population), and 3,580 in 1921. Of the 825 pupils attending the German high school in Berezhany in 1908, 186 were Jews. Before World War I the flour trade was mainly in Jewish hands. The community had a hospital and old-age home. Among the rabbis of Berezhany was Shalom Shvadron.

During the Holocaust, on Oct. 1, 1941, 500–700 Jews were executed by the Germans in the nearby quarries. On Dec. 18, another 1,200, listed as poor by the *Judenrat*, were shot in the forest. On Yom Kippur 1942 (Sept. 21), 1,000–1,500 were deported to Belzec and hundreds murdered in the streets and in their homes. On Hanukkah (Dec. 4–5) hundreds more were sent to Belzec and on June 12, 1943, the last 1,700 Jews of the ghetto and labor camp were liquidated. Few survived the war.

BEREZINO, small town in Mogilev district, Belorussian S.S.R., today Belarus. The Jews there suffered during the *Chmielnicki uprising in 1649. In 1702, during the Swedish campaign, the Jews were fined for failing to pay their post duties which had been imposed by the Polish Sejm (diet) in 1673. The community numbered 208 in 1766; 1,289 in 1847; and 3,377 in 1897 (69.3% of the total population). It suffered in 1920 when Berezhany was on the front line between the Polish and Soviet armies. In 1926 there were only 1,565 (53%) Jews. They worked in cooperatives, with 20 families in a multinational kolkhoz (farm). The Jews numbered 1,536 in 1939. Berezhany was occupied by the Germans on July 3, 1941. In August they murdered 150 Jews and on December 25–27 another 1,000 Jews, with most infants thrown alive into mass graves.

[Shmuel Spector (2nd ed.)]

BEREZOVKA, town in Odessa district, Ukraine. A Jewish community was established there by the first half of the 19th century. On April 26–27, 1881, the Jews were attacked in a pogrom and out of the 161 buildings owned by Jews only the synagogue and pharmacy were undamaged. The local population prevented another pogrom from occurring in October 1905. The Jewish population numbered 3,458 (56.2%) in 1897 and 3,223 (42.6%) in 1926, dropping to 1,424 in 1939. During the Soviet period Jews were employed in artisan cooperatives and Jewish kolkhozes. A Yiddish elementary school, a Yiddish evening school, a club, and a library were in operation. Berezhany was taken by the Germans on August 10, 1941. On August 14 they murdered 41 Jews and on August 25 another 100. By September, 211 were dead. Subsequently the town was included in Romanian Transnistria, and Jews from Bessarabia and Odessa were deported to the Berezhany area, with nearly 7,000 perishing.

[Shmuel Spector (2nd ed.)]

BEREZOVSKY, BORIS ABRAMOVICH (1946–), Russian tycoon and political figure. Born in Moscow, Berezhany graduated from the Moscow Timber Institute (Department of Electronics and Computer Engineering) and subsequently from Moscow State University (Department of Mechanics and Mathematics), pursuing postgraduate studies in the theory of decision making and receiving a doctorate at the age of 37. He published over 100 scientific papers and a number of monographs, some of them in the U.S., U.K., Japan, Germany, and France. From 1991 he was a corresponding member of the Russian Academy of Sciences and a member of the International Scientific Society for the Theory of Decision Making.

Berezhany worked as an engineer at a research institute connected to the Ministry of Instrument Making, Automation and Control Systems (1968–69). In 1969 he was an engineer at the Hydrometeorological Research Center and in 1969–87 worked at the Institute of Control Science of the Academy of Sciences.

Political and economic changes in Russia made it possible for Berezhany to go into private business. He was active in the automobile industry and in 1989 organized LogoVaz, which became a holding company in 1994. Subsequently he gained control of ORT (Obshchestvennoe Rossiyskoe Televidenie, Russian State Television) and the Siberian Oil Company (Sibneft), ultimately being called the richest man in Russia by *Forbes*. He also became influential in the political life of the new Russia. He became close to President Yeltsin and rose to the position of deputy secretary in Yeltsin's National Security Council in 1996 and executive secretary of the Commonwealth of Independent States (Sodruzhestvo Nezavisimykh Gosudarstv) in 1998, contributing to the settlement of the Chechnya crisis and the cessation of hostilities. Called the "grey eminence" by his enemies and represented as a typical "oligarch," a tycoon who made his fortune by illegal means

and interferes in Russian politics with the aim of furthering his narrow interests, he became a convenient target for antisemitic attacks in Russia's nationalist press. In March 1999 he was relieved of his post, accused of overstepping the bounds of his authority and not following instructions. In December 1999 Berezovsky was elected to the State Duma for the Karachai-Cherkess Autonomous Region. He opposed the new course of centralization inaugurated by President Putin, though he actively contributed to Putin's election victory. In July 2000 Berezovsky resigned from the State Duma in protest over Putin's policies and became active in the opposition as co-chairman of the Liberal Russia Party. Under criminal investigation, Berezovsky left the country in 2002, losing control of ORT and being granted political asylum in the U.K. in 2003.

Berezovsky always represented himself as a Jew “by nationality” although he converted to Russian Orthodoxy. To be elected to the State Duma he renounced his Israeli citizenship, which he acquired in accordance with Russian legislation allowing dual citizenship. He supported the arts through the Triumph Foundation and in 2000 set up the International Foundation for Civil Liberties, which supported liberal causes.

[Naftali Prat (2nd ed.)]

BERG, former duchy in Germany. After their expulsion in 1424, Jews from *Cologne are thought to have settled in Berg. The Jews were temporarily expelled from the duchy in 1461. Early in the 15th century, after the amalgamation of Berg with *Juelich, a joint communal organization was established for both communities. Assemblies were held at specified intervals to deliberate questions of tax allocation, rabbinical appointments, the prohibition of resort to the general law courts, and the maintenance of adequate facilities for Torah study. In the 18th century they were held every four years, except in time of war. The Grand Duchy of Berg established by Napoleon comprised a number of localities with ancient communities such as *Duisburg and Siegburg (dating from the early 12th century), *Dortmund, *Essen, *Soest, and Hamm (13th century), and *Recklinghausen and Unna (14th century). After the dissolution of the grand duchy in 1815, its territory was incorporated into *Prussia.

[Zvi Avneri]

BERG, GERTRUDE (Edelstein; 1899–1966), U.S. actress, scriptwriter, and creator of the popular radio family the Goldbergs. Born in New York, Gertrude Berg wrote, directed, and performed in *The Goldbergs* on radio for 17 years, in which she played Jewish housewife Molly Goldberg.

Berg began writing and performing skits at her father's resort hotel in the Catskill Mountains, later studying playwriting at Columbia University. In 1929, she submitted a script to NBC

for a daily radio show called *The Rise of the Goldbergs*, which was an instant hit. Shortened to *The Goldbergs*, it was on the air six days a week, and in 1931 it picked up a sponsor and ran until 1934. As the writer and producer as well as star of the show, Berg created an entire neighborhood of characters and a series of situations that won an audience which eventually numbered in the millions. Producer Sol Lesser called her to Hollywood, where she wrote screenplays for him. In 1938, Berg received a five-year, million dollar contract to write and star in the Goldberg series, which aired on the radio from 1938 to 1945.

Concerned about the growth of Fascism in the 1930s and the welfare of European Jews, Berg became active in many Jewish groups and during World War II participated in the larger war effort.

Berg wrote a Broadway play, *Me and Molly* (1948), and a film version entitled *Molly* in which she herself acted (1951). From 1949 *The Goldbergs*, sometimes referred to as the earliest soap opera, had a five-year run on television. An idealized vision of the American melting pot, the show centered on the dreams and aspirations of a lower-class Jewish family in the Bronx. The older members of the family, including Molly, her husband, Jake, and Uncle David, spoke with thick Yiddish accents, while the two children sounded like typical young Americans. In 1950 Berg won an Emmy for her comedic performance. In 1951 she took a stand against the blacklist, refusing to fire her long-time co-star Philip Loeb, who resigned to prevent the show's cancellation.

In later years Berg appeared in Broadway plays, including *A Majority of One* (1959), for which she won a Tony Award. In 1961–62 she starred as Sarah Green in the TV sitcom *The Gertrude Berg Show*.

In 1989 *The Goldbergs* was inducted into the Radio Hall of Fame. Berg wrote *The Molly Goldberg Cookbook* (1955) and her autobiography *Molly and Me* (1961).

[Ruth Beloff (2nd ed.)]

BERG, JACKIE “KID” (Judah Bergman; 1909–1991), professional boxer, junior welterweight champion 1930–31, member of the International Boxing Hall of Fame and World Boxing Hall of Fame. Born in the Whitechapel section of London's East End to Orthodox immigrant parents from Poland, Berg was one of nine children and had to quit school early to earn a living to help feed the family. Yiddel, as he was known, fought his first professional fight on June 8, 1924, 20 days before his 15th birthday, thus justifying his nickname “Kid.” When Yiddel Bergman introduced himself to the fight's promoter, Lewis Kurtz, the latter said, “You can't go in there with a respectable Jewish name. We'll change it around a bit and call you Jack Berg.”

Kid Berg spent his early career fighting in London, winning his first 20 fights and 56 of his first 59, with 25 knockouts. He gained the sobriquet “The Whitechapel Whirlwind” from his perpetual motion, piston-shooting style of fighting, which was neither boxing nor punching.

At 19, he moved to the U.S., winning 10 of his first 11 fights with his only loss to Billy Petrolle, the first time Berg was knocked out in 62 fights. He proceeded to win his next 18 fights, including one on October 21, 1929, against Bruce Flowers at Madison Square Garden in New York, in a benefit fight on behalf of the "Palestine Relief Fund," which raised \$101,000 from the crowd of 20,000.

Berg beat Tony Canzoneri on January 17, 1930, and then defeated fellow countryman and Jew Mushy Callahan in London on February 18, 1930, for the junior welterweight title, defending it six times over the next 14 months. Berg was considered by then one of the five best, if not the best, pound-for-pound fighter in the world.

On April 24, 1931, Berg again fought Canzoneri, who was now world lightweight champion. Berg was 88–4–5 coming into the fight at Chicago Stadium, having won 58 of his previous 59 fights over a five-year stretch. But Canzoneri scored a KO in the 3rd round, retaining his lightweight belt and winning Berg's junior welterweight title, as both fighters were under 135 pounds. Berg fought and won six more fights before challenging Canzoneri in a rematch at New York's Polo Grounds on September 10, 1931. Berg was fouled at least three times, was knocked down twice, and suffered a terrible gash below the eye, and lost the fight on points in 15 rounds. Berg was never the same champion boxer after his two losses to Canzoneri, though he continued fighting for another 14 years. The last fight of his 21-year-career was May 19, 1945, when he won a fifth-round KO over rookie fighter Johnny McDonald to retire a month shy of his 37th birthday. His record was 157 wins with 61 KOs, 26 losses, and 9 ties, with 14 of his wins coming on disqualifications – an all-time record for winning on fouls; he was knocked out eight times.

Berg was proud of his Jewishness, and, as many Jewish fighters have done in history, would wear a Star of David on his trunks, with his Hebrew initials "Yod-Bet" in the center. But Berg added a singular Jewish touch – he would also wear *tzitzit* into the ring, hanging them on the ring post. "It's comforting to have God on your side no matter what you are doing," he said.

[Elli Wohlgernter (2nd ed.)]

BERG, LEO (1862–1908), German essayist. A founder of the Berlin literary group *Durch* (1887) and editor of its *Akademische Zeitschrift*, he popularized the aesthetic principles of German naturalism. Berg called attention to the importance of Ibsen's innovations in *Henrik Ibsen und das Germanentum in der modernen Literatur* (1887). Five years later, he distanced himself from naturalism in his book *Der Naturalismus*. In the essays of *Zwischen zwei Jahrhunderten* (1896) he maintained his skeptical attitude toward all established writers. He defended *Heine against antisemitic detractors, and espoused the cause of Tolstoy. Berg prophesied that national literatures would give way to a common European literature as the expression of the emerging "good European." In his volume,

Der Uebermensch in der modernen Literatur (1897; *Superman in Modern Literature*, 1916), he revealed his adoption of Nietzschean doctrines.

[Sol Liptzin]

BERG, MOE (Morris; 1902–1972), U.S. baseball player, spy, scholar, linguist. Once called "the strangest fellah who ever put on a uniform" by Casey Stengel, Berg was an anomaly in the world of baseball, where few players had any formal education and where he was recognized as the best-educated man ever to play the game. He was born in a cold-water tenement in East Harlem in New York City, the third child of Bernard and Rose (Tashker). Bernard was himself of keen intellect and attended public school, which was rare for a Russian Jew in that era. He fled the pogroms of Russia in 1894 at the age of 24, arriving in New York with \$10 dollars in his pocket, and two years later sent for Rose, from the Kamenets-Podolski region of the Ukraine, to join him.

When Berg was nine months old, the family moved to Newark, New Jersey, where Bernard opened a pharmacy. The family was not religious, never went to synagogue, and the children never celebrated their bar mitzvah, though Bernard did teach Hebrew and Yiddish to his son, whose photographic memory retained everything. Berg became a star player at Barringer High School, where he began learning languages, excelling in Latin, Greek and French. Graduating at 16, he spent a year at New York University before transferring to Princeton. He was the star there as well, playing shortstop for three years and becoming captain his senior year, when he hit .337 and the team won 18 straight games. He majored in languages, adding Spanish, Italian, German, and Sanskrit to his growing list, and graduated in 1923 magna cum laude and 24th in his class of 211.

Berg began his baseball career with the Brooklyn Dodgers the day after his last game for Princeton, playing 15 years with the White Sox, Indians, Senators, and Red Sox, first as a shortstop and third baseman before settling in as a third-string catcher. With his lifetime average of only .243 and six home runs, it was to Berg that the classic expression "good field, no hit" was first applied.

Berg pursued his scholarly interests while he continued playing baseball, attending the Sorbonne in Paris, graduating from Columbia Law School second in his class, and adding Japanese, Chinese, Korean, Indian, Arabic, Portuguese, Hungarian, and a few regional dialects to his linguistic arsenal. While it was never established exactly how many languages Berg spoke, they were of no use to him in baseball. Said one player, "He can speak twelve languages, but he can't hit in any of 'em."

Berg's life changed in 1934, when he accompanied a team of baseball all-stars to Japan on a baseball barnstorming tour. While there, he went to the roof of the tallest building, a hospi-

tal, and photographed the Tokyo skyline, the harbor, and munitions facilities, which may have helped U.S. General Jimmy Doolittle in his bombing raids over Tokyo in 1942.

Moe's celebrated academic knowledge received national attention in February 1938, when he appeared on *Information, Please*, the intellectual's radio quiz show. Moe amazed all of America when he answered questions about the derivation of words and names in Greek and Latin, historical events in Europe and the Far East, and current international conferences.

After his career was over in 1939, Berg spent two years as a coach with the Red Sox. In 1942 he was named Goodwill Ambassador to Latin America by Nelson Rockefeller, head of the Office of Coordinator of Inter-American Affairs, and subsequently worked for the Office of Strategic Services (OSS), the forerunner of the CIA. His first assignment was to assess the political and military situation in embattled Yugoslavia. He spoke to the forces under Tito and to the Serbian camp of Mihajlovic, reporting back – correctly – that the Yugoslav people supported Tito. His most notable mission was to Switzerland, with instructions to kill top German scientist Werner Heisenberg, who was lecturing there and suspected of working on the A-bomb. Questioning Heisenberg with a loaded gun in his pocket, Berg determined that the Germans were not building the bomb, and his invaluable report was read by British Prime Minister Winston Churchill, U.S. President Franklin Roosevelt, and the scientists working on America's Manhattan project to develop the nuclear bomb.

Berg was also a loner and an eccentric, known among other things for always wearing a black suit and not letting people touch his newspapers until he had finished reading them. "Berg's was a life of abiding strangeness," wrote Nicholas Dawidoff in his definitive biography of Berg, *The Catcher Was a Spy*. Berg died seconds after asking a bedside nurse: "How are the Mets doing today?"

[Elli Wohlgeleerter (2nd ed.)]

BERG, PAUL (1926–), U.S. biochemist and Nobel laureate. Berg was born in New York and received his undergraduate degree in biochemistry from Pennsylvania State University in 1948 after serving in the U.S. Navy during World War II. He was awarded a doctorate from Western Reserve University in 1952 and then studied for a year in Copenhagen with Herman Kalckar at the Institute of Cytophysiology and for a second year with Arthur Kornberg at Washington University in St. Louis, where he stayed until 1959, when he moved to Stanford Medical School. In 1960 he was appointed professor of biochemistry at Stanford.

Gradually making a transition from classical biochemistry to molecular biology, Berg's interests shifted from studies with microorganisms to mammalian cells, and he spent a year experimenting with Polyoma and SV40 tumor viruses in mammalian cell culture at the Salk Institute. He served as chairman of Stanford's Department of Biochemistry from 1969 to 1974, in 1970 being appointed Willson Professor there. From 1973

to 1983 he was a non-resident fellow of the Salk Institute. He served as director of Stanford University's Beckman Center for Molecular and Genetic Medicine from 1985 to 2000 and from 1994 to 2000 as Cahill Professor in Biochemistry and Cancer Research. From 2000 he was Cahill Professor in Biochemistry, Emeritus, and director of the Beckman Center for Molecular and Genetic Medicine, Emeritus.

In the course of his career Berg succeeded in developing a general way to join two DNAs together *in vitro*, work that led to the emergence of recombinant DNA technology, a major tool for analyzing mammalian gene structure and function. This was the basis of his being awarded the 1980 Nobel Prize in chemistry. That same year he received the Albert Lasker Award for basic research, along with Dr. Stanley N. Cohen and Dr. Dale A. Kaiser, fellow Stanford University researchers, and Dr. Herbert W. Boyer of the University of California in San Francisco. They were cited for their work in manipulating the genetic material in cells.

Berg is a member of the Institute of Medicine, the National Academy of Science (member of the council since 1979), the American Academy of Arts and Sciences, the American Society of Biological Chemists (president, 1974–1975), and the American Society of Microbiology. He is an honorary member of the Academy of Natural Sciences of the Russian Federal Republic (1991) and a Foreign Member of the Royal Society, London (1992).

His most recent appointments include chairman of the National Advisory Committee to the Human Genome Project, chairman of the board of the National Foundation for Biomedical Research, member of the advisory panel to the Human Genome Education Program, and member of the NAS-CSIS Roundtable on Biotechnology and Bioterrorism.

BERG, PHILIP (Gruberger; 1929–), founder and director of The Kabbalah Center, a controversial organization dedicated to the popular dissemination of a modern synthesis of Kabbalah and New Age religion. Berg was born in Williamsburg, New York, studied at Beth Medrash Govoha in Lakewood, New Jersey, and was ordained at Torah VaDaat in Williamsburg. During the 1960s, Berg studied Kabbalah with disciples of kabbalist Yehudah Ashlag (1886–1955), such as Levi Isaac Krakovsky (1891–1966) and Yehudah Zevi Brandwein (1903–1969). Berg claims to have been appointed by Brandwein to carry on Ashlag's mission, namely, to spread kabbalistic knowledge to a wide audience and to assume the leadership of Kol Yehudah, Ashlag's kabbalistic yeshivah. Inspired by his wife KAREN (1945–), Berg established The Kabbalah Centre in 1969 to propagate their distinctive approach to Kabbalah to men and women of all faiths, ages, and ethnic backgrounds throughout the world. In the early 2000s there were over 50 centers internationally offering lectures, courses, spiritual counseling, and ceremonies to adults and children, as well as an extensive and sophisticated presence on the World

Wide Web. The Kabbalah Centre publishes popular literature on Kabbalah and translations of classic works in 10 languages. The Bergs' sons, born during their parents' 10-year sojourn in Israel, are important contributors to the Kabbalah Centre mission. They were educated at the Hafetz Hayyim and Shaar Hatorah yeshivot in New York and received ordination at Kneset Yehezkel in Jerusalem. In addition to writing popular literature, YEHUDAH (1972–) produced (with his father) a prayer book according to the Lurianic tradition that includes meditations from later kabbalists; MICHAEL (1973–) authored a full English translation of the Zohar with Ashlag's commentary *Ha-Sulam*.

Distinctive Kabbalah Centre teachings acknowledge that God designed Kabbalah as a gift to all humanity, even though it was preserved by and limited to Jews for centuries and was embedded within a Jewish society that advocated strict adherence to biblical and rabbinic Judaism. According to Philip Berg, the scientific advances of the 20th century and the beginning of the astrological Age of Aquarius fulfilled the preconditions for the inevitable worldwide spread of kabbalistic knowledge. Kabbalistic knowledge, he teaches, contains the foundation principles of all science, the structure for achieving spiritual perfection, the path to world peace, and the means to success in such earthly pursuits as business, personal relationships, and health. The *mitzvot* of the Torah are tools designed by God for humanity to achieve these ends, as are special kabbalistic devices (holy water, the red *bendel*) and ritual practices (meditations using divine names and Zohar texts). The Kabbalah Centre ignores the traditional Jewish context of these concepts and practices, as well as the many restraints upon and critiques of these practices voiced by Jewish teachers over the centuries. Kabbalistic teachings are synthesized with modern, particularly New Age, themes such as astrology, reincarnation, holistic healing, and spiritualism. In its effort to reach the widest possible audience, the Kabbalah Centre uses mass-market advertising and showcases its celebrity followers, the most prominent of whom is Madonna.

[Jody Myers (2nd ed.)]

BERGAMO, city in northern Italy; ruled mainly by Venice between 1430 and 1797. Jewish moneylenders in Bergamo are mentioned in the 15th century. The anti-Jewish sermons preached there by the Franciscan Bernardino da *Feltre in 1479 led to the temporary expulsion of the Jews. By the beginning of the 16th century, Jews in Bergamo still owned houses and real estate. When Louis XII of France captured the city in 1509 the Jewish inhabitants were expelled, but they were permitted to return when it reverted to Venice in 1559. There has been no Jewish community in Bergamo in recent times.

BERGEL (Abergel), Moroccan family. The Bergels came from Safi. They settled in Tangiers, Marseilles, and Gibraltar, where before 1810 MOSES founded a powerful commercial organization. His son YOM TOV (1812–1894), an outstanding figure in western Mediterranean Jewry, served as president of the Gibraltar community from 1860. He helped the Péreire family in establishing the Compagnie Générale Transatlantique in Morocco. Yom Tov and his son MOSES of Marseilles obtained the monopoly for the sale of specialized Moroccan products in Europe.

BERGEL, BERND (1909–1966), Israel composer. Bergel was born in Hohensalza, Germany, the nephew of Sammy *Gronemann, one of the principal leaders of the Zionist movement in pre-World War II Germany. He studied at the Berlin Music Academy where he was a student of Arnold *Schoenberg. He settled in Tel Aviv in 1938. Bergel was invited by the Music of the Twentieth Century Festival 1954 in Rome to compose his *Prayer of a Man in the Year 2100* for solo voice and 11 instruments. His works include *Divertimento* for small orchestra, *Variations* for orchestra (Israel Philharmonic Orchestra Prize), and the opera *Jacob's Dream* (1961) based on text by Richard Beer-Hoffmann.

[Ury Eppstein (2nd ed.)]

BERGEL, JOSEPH (1802–1884), physician, poet, and author. Bergel, who was born in Moravia, was a practicing physician, publishing papers in medical journals. He was a Hebrew poet of note and his poems appeared in the journals *Bikkurei ha-Ittim* and *Kokhevei Yizhak* and in a collection *Pirkei Leshon Ever* (1873). In these poems he was the first to scan by Ashkenazi word accent. He also translated German and Latin poems into Hebrew, including those of Goethe and Schiller. Probably his most important contribution to Jewish scholarship was *Medizin der Talmudisten* (1885), with an appendix on *Anthropologie der alten Hebräer*. He also wrote *Studien über die naturwissenschaftlichen Kenntnisse der Talmudisten* (1880); *Eheverhältnisse der alien Juden im Vergleich mit den griechischen und römischen* (1881); *Der Himmel und seine Wunder...* (also published under the title *Mythologie der alten Hebräer*, 1882); and a history of Hungarian Jewry, *Geschichte der Juden in Ungarn* (Ger. and Hg., 1879).

BERGELSON, DAVID (1884–1952), Russian Yiddish writer. Born in Okhrimovo (Sarna), near Uman, in the Ukraine, Bergelson was the son of a pious Talner ḥasid and prominent lumber and grain merchant, who died when Bergelson was only nine; his mother died five years later. He then went to live with older brothers in Kiev, Odessa, and Warsaw. His traditional *heder* education was supplemented by private instruction in

secular subjects. In 1901 and again in 1907–08, he studied as an external student in Kiev, but failed the examinations, and then audited courses in dentistry, without taking a diploma.

Bergelson read Hebrew and Russian literature before he was in his teens, and began writing in both those languages. His early literary efforts, a Hebrew story “*Reikut*” (“Emptiness”) and a Yiddish story “*Der Toyber*” (“The Deaf Man”), submitted to several periodicals, initially did not meet with success. “*Der Toyber*,” however, was later published in the first edition of his collected works (Berlin, 6 vols., 1922–23); it was dramatized under the title *Di Broyt Mil* (“The Mill,” 1930), and was staged with some success in both Russia and America. His first full-length work, *Arum Vokzal* (“At the Depot”), published in Warsaw in 1909 at his own expense, was warmly received by major critics; Bergelson thereafter wrote only in Yiddish, devoting himself to Yiddish literature and *belles lettres*. The novel *Nokh Alemen* (“After All is Said and Done,” 1913) was justly hailed as a masterpiece and established his reputation as both a gifted author of prose and the leading modernist prose writer in Yiddish, whose major theme was the slow decay of the Jewish bourgeoisie in village and town.

Bergelson was very active in Jewish cultural circles and one of the founding directors of the dynamic Kultur Lige, a Jewish cultural organization established in Kiev immediately after the Russian Revolution. He coedited two of its most influential publications: the literary miscellanies *Oyfgang* (1919, in which his work “*In Eynem a Zumer*,” “During One Summer,” appeared) and *Eygn*s (1920, in which his novella *Opgang*, “Descent,” was first published).

In 1920, Bergelson moved to Berlin where he coedited the journal *Milgroym* with *Der Nister, and then two issues of the short-lived literary journal *In Shpan* (“In Harness”), the title of which suggested a new leftist political orientation. In Berlin, he also published a series of short stories dealing with the theme of exile. Writing for the New York Jewish daily *Forverts* until 1925, he later became a correspondent for the Moscow *Emes* and the New York communist newspaper, *Morgn-Frayhayt*. In marked contrast to his earlier views, in which he originally argued that art should not provide “naked abstractions” for propaganda purposes, his writings of this period came increasingly to identify with Soviet ideology, and in his critical writing as well as his fiction he insisted that literature should be committed to the cause of the Revolution, the Communist Party, and the interests of the proletariat. His short novels and stories of those years dealt with revolutionary themes.

Bergelson traveled widely: in 1924, through the Jewish communities of Romania, under the auspices of ORT; to the Soviet Union in 1926, where he declared himself a “Soviet writer”; to Paris; to the United States for six months during 1929 where he was able to witness at first hand the Wall Street crash and the beginning of the Great Depression; through Poland on a lecture and reading tour; and to Copenhagen for a brief stay, in 1933. In 1934, he settled in Moscow after a visit to the Jewish autonomous region of Birobidzhan. His major work of the 1930s, *Baym Dnieper* (“On the Dnieper”), is a modified,

partly autobiographical *Bildungsroman* (2 vols., 1932–40). Like most Jewish and other Soviet writing of the decade, Bergelson’s work adapted itself increasingly to the thematic and stylistic demands of Socialist Realism.

After 1941, and for the duration of World War II, Bergelson was active in the Jewish *Anti-Fascist Committee; his wartime stories appeared in its publication, *Eynikeyt*. Two dramas, *Prints Reuveni* (“Prince Reuveni”) and *Mir Viln Lebn* (“We Want to Live”), were written during this time: the first was never performed in Russia; the second was staged by the Habimah Theater in Tel Aviv. Early in 1949, Bergelson was imprisoned (apparently without trial) with other leading Yiddish writers – including P. *Markish, I. *Feffer, D. *Hofstein – and together with them was shot on August 12, 1952, his 68th birthday. A Soviet edition of selected works from his *oeuvre*, published in 1961, indicated the extent of his subsequent “rehabilitation.”

Bergelson’s early theme – the decline of individual initiative in a period of widespread stagnation – finds its precise tonal correlative in his style: indirect quotation, passive verb forms, adjectival repetition, periodic sentences, and similar devices create a fatalistic atmosphere in his fiction that subtly suggests character while foregrounding the pessimistic curve of the plot. This style persists even in his “revolutionary” writing of the 1920s, but becomes more straightforwardly dramatic in his stories about Birobidzhan and Soviet progress. His wartime fiction, collected in *Naye Dertseylungen* (“New Stories,” 1947), shows an interesting variation of his early impressionism. Yiddish criticism considers Bergelson one of its foremost modern prose writers.

[Ruth Wisse / Joseph Sherman (2nd ed.)]

BERGEN, POLLY (Nellie Paulina Burgin; 1930–), U.S. actress, singer, entrepreneur. During her long professional life, Bergen distinguished herself as an extremely versatile entertainer and business executive. She enjoyed enduring success as an actress on the stage and screen, as a singer, and as the founder of her own cosmetic and jewelry lines. Born in Bluegrass, Tennessee, Bergen began working in radio at the age of 14. She arrived in Hollywood at age 19, making her feature film debut in *Across the Rio Grande* (1949). Bergen subsequently starred in three films alongside legendary comedy duo Dean Martin and Jerry *Lewis, including *At War With the Army* (1950), *That’s My Boy* (1951), and *The Stooge* (1953) as well as making her Broadway debut with a starring role in the revue *John Murray Anderson’s Almanac*. Bergen released

the first two of her 17 musical albums, *Polly Bergen* and *Little Girl Blue*, on the Jubilee record label in 1955. She became a household name as a regular on the TV game show *To Tell The Truth* (1956–61). Bergen's many film and television credits over the following half-century include two memorable performances opposite actor Robert Mitchum. The first as Peggy Bowden in the classic film *Cape Fear* (1962), and again two decades later as Rhoda Henry in the mini-series *The Winds of War* (1983), for which she was nominated for an Emmy Award. Bergen was also nominated for a Tony Award for her role in *Follies* (2001). She acted as the CEO and public face of several corporations, including Polly Bergen Cosmetics, Polly Bergen Shoes, and Polly Bergen Jewelry. Bergen is the author of three books, *The Polly Bergen Book of Beauty, Fashion and Charm* (1962), *Polly's Principles* (1974), and *I'd Love to, but What'll I Wear?* (1977). Continuing to perform, she made a notable TV appearance in 2004 on *The Sopranos*.

[Walter Driver (2nd ed.)]

BERGEN-BELSEN, Nazi concentration camp near Hanover, Germany. It was established in July 1943 as an *Aufenthaltslager* ("transit camp") in part of a prisoner-of-war camp, Stalag 311, and intended for prisoners whom the German government wished to exchange for Germans in allied territory. The camp was run by the SS, whose commandants were Adolf Haas, Siegfried Seidle, and Josef Kramer. It was built by Jewish prisoners from Buchenwald and Natzweiler. Five satellite camps were created: a prisoner camp for those constructing the camp; a special camp for Jews brought from Poland who possessed passports or citizenship papers of Latin American states, entry visas for Palestine (or the official promise of visas), hostages, prisoners who had paid a ransom, collaborators, and others; a neutral camp for Jewish citizens of neutral countries such as Turkey, Argentina, and Spain; a "star" camp for Jews who would be exchanged; and a Hungarian camp which was established at the conclusion of the deportations from Hungary on July 8, 1944, and held the 1,684 prisoners on the *Kasztner transport. During the war, two prisoner exchanges took place: 301 persons were sent to Switzerland (165 were detained on their way, and only 136 arrived in Switzerland) and 222 to Palestine. In August 1944, 318 Jews from the Kasztner transport reached neutral Switzerland and in December the remaining 1,365 reached freedom. There was room in Bergen-Belsen for 10,000 inmates, and conditions, though difficult, were at first better than in other camps. But during 1944 there was a significant deterioration in conditions. Food rations were reduced to below the minimum nutritional requirement, and the prisoners were forced to do hard labor and were cruelly beaten. In addition, whether from intent, incompetence or simply overwhelming conditions, the camp authorities failed to provide even essential services.

Bergen-Belsen became a destination point for prisoners sent inland away from the advancing Soviet front during what became known as the death marches of the winter of 1944–45. Just when most of the prisoners had reached the point of

physical and spiritual collapse, they were joined by prisoners removed from other camps as a result of the German retreat. Twenty thousand women arrived from Auschwitz and Buchenwald and thousands of male prisoners from Sachsenhausen and Buchenwald. The camp population swelled rapidly from 15,257 in December 1944 to 41,000 in March 1945; during the last few weeks there was an additional massive influx of prisoners from the East. The new prisoners, who arrived after forced marches sometimes lasting weeks, were starved and disease-ridden. Epidemics broke out, but there was no medical attention. Overwhelmed by the influx of arriving prisoners, the camp simply ceased to function. One survivor contrasted the orderly Auschwitz with the collapsing Bergen-Belsen after the arrival of the death march survivors. She recalls:

At least there [in Auschwitz] we worked. And every once in a blue moon, we ... we went into the showers. As much as we were afraid to go to the showers, because we didn't know if the showers would give us water or gas. Over there [in Bergen-Belsen], we had no showers.

As to the dead:

In Auschwitz there were well-planned facilities for cremation. When these did not suffice, bodies were burned in open fields and their ashes scattered.

At Auschwitz they took away the dead people. They gassed them and they burned them; and in the camps we didn't see any dead people. We only saw the people being hit or being dragged away, but we never saw any dead people lying around ... Bergen-Belsen was nothing but dead people. Skeletons, skin and bones. They piled them up as they died. They just piled them up, like a mountain.

The death rate was high: in March 1945 just weeks before liberation, nearly 20,000 people died (including Anne *Frank). A total of 37,000 died before the liberation.

Bergen-Belsen was the second major camp in Germany to be liberated by the Allies. The British entered on April 15, 1945. The horrors, which deeply shocked the British soldiers, received widespread publicity in the West. Among the arriving liberating troops were British filmmakers who recorded the scene of bulldozers burying the dead and filmed the burning of the camps. These films were shown widely in movie newsreels throughout the world and are emblematic of the liberation and of the Nazi crimes for those who saw them then and many years later. The British arrested the SS administrators, including the commandant, Josef Kramer, and almost all were put to work clearing and burying the thousands of corpses. Twenty of them died doing this work, probably from infectious diseases. The rest were tried at the end of 1945. Eleven were condemned to death, 19 to imprisonment, and 14 were acquitted.

When British troops entered the concentration camp of Bergen-Belsen they encountered more than 10,000 corpses and around 58,000 surviving inmates – the overwhelming majority of whom were Jews – who suffered from a combination of typhus, tuberculosis, dysentery, extreme malnutrition, and other virulent diseases.

Brigadier H.L. Glyn Hughes, deputy director of medical services of the British Army of the Rhine appointed Dr. Hadassah (Ada) Bimko, a 32-year-old Jewish dentist from Sosnowiec, Poland, to organize and head a team of 28 doctors and 620 female and male volunteers from among the survivors, only a few of whom were trained nurses, to help the military medical personnel care for the camp's thousands of critically ill inmates. Despite their desperate efforts, however – it was not until May 11 that the daily death rate fell below 100 a day – the Holocaust claimed 13,944 additional victims at Bergen-Belsen during the two months after liberation.

To contain the different epidemics rampaging through Bergen-Belsen, the British evacuated the survivors to the military barracks of a Panzer training school located about a mile away which in short order became the *displaced persons (DP) camp of Bergen-Belsen. On completion of the relocation on May 21, 1945, the British set fire to the concentration camp's wooden barracks.

Bergen-Belsen became the largest DP camp in Europe. From 1945 until 1950, it was an autonomous, self-governed, and largely self-contained Jewish community. Within days after the liberation, the camp's Jewish survivors elected their own political leadership headed by Josef *Rosensaft, a Polish Jew who had also survived Auschwitz, Birkenau, and Dora-Mittelbau. They focused on four main tasks: the physical rehabilitation of the survivors, the search for relatives, spiritual rehabilitation and – often against the will of the British military authorities – the political fight for rights and immigration to Palestine, or Erez-Israel.

The Jewish population of Bergen-Belsen was in constant flux, numbering approximately 12,000 within a few weeks of liberation, remaining around 10,000 through 1947, and then steadily declining as emigration from Germany became more feasible. While Jewish survivors from Western Europe and Czechoslovakia were repatriated in a matter of weeks after liberation, most Jewish survivors from Poland and many from Hungary chose not to return to their native countries. In 1946, when the British sought to prevent thousands of additional Polish Jewish refugees from entering the British zone, Rosensaft and his colleagues openly defied the Military Government by giving them sanctuary in Bergen-Belsen.

By June 1945, the Jewish Committee of the Bergen-Belsen DP camp was enlarged to represent all Jewish DPs throughout the British zone of Germany. In September 1945 the first Congress of Liberated Jews met at Belsen and elected the Central Jewish Committee for the British Zone, representing both the Jewish DPs from Eastern Europe and the newly reconstituted German Jewish communities of cities such as Hamburg, Cologne, Bremen, Duesseldorf, and Hanover. Josef Rosensaft served as its chairman and Norbert Wollheim, an Auschwitz survivor originally from Berlin who had organized the *Kindertransport*, was vice chairman. Rosensaft headed both the Central Committee and the Bergen-Belsen Jewish Committee until the DP camp was closed in the fall of 1950.

As Rosensaft explained 20 years later, "Our feelings and

ideas, unfortunately, were at variance with the political climate in 1945, and the calculations of those who held our fate in their hands. There were political factors in Germany that attempted to deny the Jewish character of the problems, which confronted the world as a result of the Hitler catastrophe. They sought by all means at their command to loosen the strong grip that Jewish pain and suffering and the tragic Jewish situation had on world conscience."

When the British officially renamed the DP camp "Hohne" in an attempt to at least nominally sever its relationship with the notorious concentration camp and thereby dilute the impact of the survivors' struggle for Jewish rights in international public opinion, Jewish leadership simply ignored the new designation. They understood full well the dramatic news value of the Bergen-Belsen name and were not about to surrender it. Official communications sent by the British military authorities to Rosensaft at "Hohne" were responded to on stationery that gave "Bergen-Belsen" as the Central Committee's address.

Yiddish was the official language of the Bergen-Belsen DP camp and Zionist politics were the order of the day. The first handwritten and mimeographed issue of the Bergen-Belsen newspaper, *Undzer Shtimme* (Our Voice), appeared on July 12, 1945. At first declared illegal by the British military authorities, it soon received official sanction and then appeared regularly. The first book published in Bergen-Belsen (on September 7, 1945) was a listing, in English and German, of the camp's Jewish survivors to facilitate the reunification of family members and friends, and some 60 other publications followed.

Several hundred children were liberated at Bergen-Belsen, and many more came there from Poland and other parts of Eastern Europe during 1945 and 1946. As early as June 1945, the first school was opened in Bergen-Belsen with separate classes in Polish, Romanian, and Hungarian. Jewish children from different parts of Eastern Europe soon joined them. In due course Bergen-Belsen had a kindergarten; an elementary, high, and vocational training school; and a full complement of Jewish religious educational institutions. In addition, the camp had a rabbinate, a hospital, its own Jewish police force, a library, two theater companies, an orchestra, and a host of youth and sports clubs.

Determined to create new lives for themselves, the Jewish DPs of Bergen-Belsen began to marry soon after liberation. More than 2,000 children – a veritable population explosion – were born in the DP camp between 1946 and 1950.

Bergen-Belsen was at the heart of the Zionist struggle to establish a Jewish state, resulting in frequent confrontations with the British authorities. At the September 1945 Congress of Liberated Jews, the Jewish DPs formally adopted a resolution calling for the establishment of a Jewish state in Palestine and expressing their "sorrow and indignation that almost six months after liberation we still find ourselves in guarded camps on British soil soaked with the blood of our people. We proclaim that we will not be driven back into the lands which have become the graveyards of our people."

Both the Anglo-American Committee of Inquiry on Palestine and the United Nations Special Committee on Palestine (UNSCOP) paid official visits to Bergen-Belsen. Following the establishment of the State of Israel in May 1948, many of the Bergen-Belsen DP's immigrated there. Others immigrated to the United States, Canada, and elsewhere, and the Bergen-Belsen DP Camp was officially closed in September 1950.

The World Federation of Bergen-Belsen Associations, based in New York and led by Josef Rosensaft, Norbert Wollheim, Sam E. Bloch, and Hadassah Bimko Rosensaft, was one of the first and most active organizations of Holocaust survivors, organizing commemorative events in the U.S., Israel, and Canada as well as frequent pilgrimages to the mass-graves of Bergen-Belsen, and publishing numerous memorial volumes about Bergen-Belsen and the Holocaust generally. In Israel, the survivors of Bergen-Belsen are represented by the Irgun She'erit ha-Pletah me-ha-Ezor ha-Briti (Organization of Survivors from the British Zone).

The *Gedenkstätte* (Memorial Site) of Bergen-Belsen includes the mass graves, the Jewish and International monuments erected there, a museum, and a major research center and archive. In May 1985, U.S. President Ronald Reagan visited the site in an attempt to alleviate the opposition to his decision to pay tribute to fallen German soldiers, including members of the *Waffen-SS*, at the *Bitburg military cemetery.

[Jozeph Michman (Melkman) and Yehuda Bauer / Menachem Rosensaft (2nd ed.)]

BERGEN COUNTY, district located in the northern part of the state of New Jersey, U.S., bordering the Hudson River, and including 70 individual municipalities. Bergen County's population in 2000 was about 897,500, of whom approximately 100,000 were Jews. The first Jewish settlers in Bergen County arrived in Englewood in the 1880s and the 1890s. They came primarily from Lithuania and Russia and made their living as farmers and small businessmen. The first religious service in Bergen County was held on Rosh Hashanah, 1896, in Englewood and was conducted by Benjamin Sher, a native of Lithuania. This group became the first congregation, Congregation Ahavath Torah, in Bergen County. Early Jewish settlers in other towns eventually built their own synagogues, most them immediately after World War I, in Park Ridge, Hacken-

sack, Ridgefield Park, and Westwood. The Hackensack Hebrew Institute, which later became Temple Beth El, was founded in 1913. A number of descendants of the early settlers still live in the county. The Jewish population of Bergen County grew slowly, with some spurts after World War I, until the completion of the George Washington Bridge in 1931, which opened the door for a huge migration from New York City. The first services for Jews in Teaneck, which has become a major hub of Jewish life in Bergen County, took place in the 1932. The High Holiday services were held in the studio of Israel Duskow, and they were led by Rabbi David Pearlman. This group began religious school classes in 1933, and 400 people attended High Holiday services that year at the Masonic Square clubhouse in Teaneck. The congregation dedicated the Teaneck Jewish Community Center in 1949. Temple Emeth, a Reform Congregation, began in 1947 when members of 50 families met in the Hackensack YMHA. This temple's current home was dedicated in 1959 and the sanctuary was completed in 1965. Congregation Beth Shalom, Teaneck's second Conservative synagogue, was formed in 1950 through the efforts of 28 families and Rabbi and Mrs. Barry Schaeffer. B'nai Yeshurun, Teaneck's first Orthodox congregation, was formed in 1958. Congregation Beth Am, Teaneck's second Reform temple, was formed in 1964 by 31 families. Congregation Beth Aaron was organized in 1971 by several women who felt the need for an Orthodox congregation in the Cedar Lane area of Teaneck.

The greatest increase in Jewish population took place after World War II with the housing boom. By 1950 there were approximately 20,000 Jews in the general population of 540,000. In the following two decades the Jewish population more than quintupled, whereas the general population has not quite doubled. In 2000 Teaneck, the largest municipality in Bergen County, had nearly 40,000 people and 15,000 Jews; Fair Lawn with a general population of 32,000 had an estimated Jewish population of 13,000; Englewood with 27,000 residents had 5,500 Jews. The Jewish community is affluent and well educated. According to the 2001 Jewish Community Study of Bergen County & North Hudson, Bergen is the 19th largest Jewish community in the United States. It has become an increasingly observant community. Nearly 30% of households keep a kosher home and 39% of Jewish children age 6–17 are enrolled in Jewish day schools – both being the highest percentages among any recently surveyed Jewish community in the United States. The strong connection between the Bergen County Jewish community and Israel is reflected by the 32% of households with Jewish children up to age 17 who have sent at least one Jewish child to Israel. This is by far, the highest percentage of any Jewish community in the United States.

Political Activity

Jews have been prominent in the political life of the county. Matthew Feldman, a native of neighboring Hudson County, who served as mayor of Teaneck, 1959–66, and as state senator, 1966–67, was chairman of the County Democratic Party in 1969. Nelson Gross of Upper Saddle River was appointed

chairman of the County Republican Party in 1966 and chairman of the State Republican group in 1969. Nat Feldman was elected councilman in Englewood in 1969 and was mayor of Englewood (1970). Alvin Moskin, a descendant of one of the earliest settlers, served as mayor of Englewood, 1956–59. Martin Kole of Fair Lawn and Abraham Rosenberg of Bogota were appointed to judgeships on the county bench in 1966. Franklin H. Cooper was elected to the Bergen County Board of Freeholders on the Republican ticket (1969). Loretta Weinberg, a Democrat from Teaneck, was first elected to the New Jersey Assembly in 1992 and was elected in 2002 to be the Majority Conference Leader for the Democratic Party in the Assembly. State Senator Byron M. Baer (D) has served in the State Senate since 1994 and was elected Senate Leader Ex-Officio in 2004. Congressman Steven Rothman is a Democrat from Fair Lawn who was first elected to the U.S. House of Representatives in 1996. He is now in his fourth term of representing the Ninth District, which includes a portion of Bergen County. Congressman Rothman served as the two-term mayor of Englewood (1983–89) and as the Bergen County Surrogate Court judge (1993–96). Robert M. Gordon of Fair Lawn was elected to the New Jersey State Assembly in 2004. In the early 2000s, Bergen County had many Jewish mayors, including Michael Wildes of Englewood, Jacqueline Kates of Teaneck, Jack Alter of Fort Lee, David Ganz of Fair Lawn, Michael Kaplan of Norwood, Sandy Farber of Palisades Park, Peter Rustin of Tenafly, and Fred Pitofsky of Closter. United States Senator Frank Lautenberg, who served in the Senate from 1982 to 2000 and was elected to a fourth term in 2002, was born in neighboring Paterson, New Jersey, and now resides in the Bergen County town of Cliffside Park. The growing political power of Jews in Bergen County, and the community's active participation in the area's social and cultural life, represents a radical change from the 1930s and the early 1940s. During this earlier period, the county was a hotbed of activity for pro-German Bundists. Country clubs that once discriminated against Jews are now fully integrated with all minority groups, and there is very little overt antisemitism in the county.

Organizational Life

Organizational life is very active, with over 185 known Jewish organizations. There are 23 Conservative synagogues, 15 Reform, 30 Orthodox, one Reconstructionist, and one unaffiliated. The Rabbinical Council of Bergen County (Orthodox) and the North Jersey Board of Rabbis (Conservative and Reform) seek to enhance the life of the North Jersey Jewish community by furthering the interests of the professional rabbinate and the congregations in the area. The umbrella organization for the community is the UJA Federation of Northern New Jersey, which was formed on July 1, 2004, by the merger of the UJA Federation of Bergen County & North Hudson and the Jewish Federation of North Jersey. The Federation is now the 18th largest UJA Federation out of the 186 major Federations in North America. It serves a Jewish population of 100,000 people living in 35,000 households in 90 communities in Bergen

County, Passaic County, and parts of Hudson County. In 2005, the Federation aimed to raise \$15 million to support 84 beneficiary agencies and community services funded by its Annual Campaign. In 2004, the Federation's Endowment Foundation went over \$50 million in holdings. The Bergen County Federation was founded on September 19, 1977. It was one of the leading Federations in the United States in raising the most money for the Operation Exodus Campaign on a per capita basis. Over \$15 million was donated to its Operation Exodus to help the Jews of the former Soviet Union make **aliyah* to Israel in the early 1990s. Among the Federation's major beneficiary agencies in Bergen County are the JCC on the Palisades in Tenafly, the Bergen County Y, a Jewish Community Center in Washington Township, the Jewish Family Service of Bergen County in Teaneck, and the Jewish Home at Rockleigh: Russ Berrie Home for Jewish Living. The Home opened its new state-of-the-art facility in 2001, after serving the Bergen County older adult community from its Jersey City site since the 1930s. The Bergen County YJCC, which began as the Hackensack YM-YWHA in the 1920s, opened its new building in 1987 to meet the recreational and cultural needs of the growing Jewish population in the Pascack Valley area of Bergen County. The JCC began in Englewood in 1950. The JCC's membership expanded so greatly that an expansion became necessary. In 1981, it opened its present-day facility – the JCC on the Palisades – in Tenafly, where it has become a major cultural and educational resource in Bergen County. The Jewish Family Service, which began in the 1950s, oversees counseling services, Kosher Meals on Wheels, a Job Search Network, New American services, and a Schony.com Computer Training Center. The Jewish Association of Developmental Disabilities established New Jersey's first kosher group home (Nathan and Naomi Berrie Group Home) in 1988. As of 2004, J-ADD oversees nine kosher group homes for Jewish people with developmental disabilities. There are 13 Jewish day schools, two regional Jewish high schools, and four educational programs for Jewish children with special needs. These schools are served by the Jewish Educational Services of the UJA Federation, which provides teacher training, and centrally organized programs and services. Israel Programs Center of the UJA Federation provides educational programs about Israel to schools and organizations in the community. In 1998, the UJA Federation launched a Synagogue Leadership Initiative, in partnership with the Henry & Marilyn Taub Foundation, to help strengthen the 70 synagogues in Bergen County. The Jewish Community Relations Council, which was created in 1969, is the public policy, community relations, and advocacy arm of the UJA Federation.

[Max M. Kleinbaum / Alan J. Grossman (2nd ed.)]

BERGER, ARTHUR VICTOR (1912–2003), U.S. composer, critic, and educator. Born in New York, Berger studied at the Longy School of Music, at Harvard (M.A. in musicology, 1936), in Paris with Boulanger and composition with Darius

*Milhaud. He taught at Mills College, Brooklyn College, the Juilliard School, and Brandeis University. In 1979 he became a member of the New England Conservatory, from whose composition faculty he retired in 1998.

In the 1940s and 1950s Berger wrote musical criticism for the *Boston Transcript*, *New York Sun*, and *New York Herald Tribune*. He served as editor of the *Musical Mercury* (1934–37) and was co-founder and editor of *Perspectives of New Music* (1962–63). He contributed to many music journals (including pieces on Stravinsky, Ives, and *Babbitt), produced a monograph on the music of Aaron *Copland (1953; reissued 1990), and wrote *Reflections of an American Composer* (2002). He was a member of the American Academy of Arts and Sciences and the Institute of Arts and Letters.

As a composer, Berger was distinguished for his economy of means, vigor of expression, and strong formal structures. His music in the 1940–57 period shows the influence of Stravinsky's neo-classicism; later works categorizes him as a serial or post-Webern composer. He evolved his own characteristics, especially an interest in musical space, both vertical and horizontal. From 1958 Berger showed increasing stylistic independence and paid increased attention to the use of instrumental color and to revisions of earlier works, utilizing a variety of techniques which range from re-composition to the simultaneous overlay of new materials. His compositions include works for orchestra (such as *Ideas of Order*, 1952; *Polyphony*, 1956), chamber music, vocal works, and many piano pieces.

[Max Loppert / Naama Ramot (2nd ed.)]

BERGER, DAVID (1943–), historian and Orthodox thinker. Berger was educated at Yeshiva College (B.A., 1964) and Columbia University (M.A., 1965; Ph.D., 1970). Primarily a medievalist, he has written about the history of medieval Jewry, Jewish-Christian relations and polemics, messianic ideas and movements, and the intellectual history of the Jews throughout the Middle Ages. In the 1990s he turned his attention to the contemporary Orthodox world, coming to castigate it for its indifference in the face of the “scandal” of the messianic claims surrounding the last Lubavitcher rebbe. He argued that Lubavitch messianism stands outside the acceptable range of messianic claims and must be opposed by the contemporary Orthodox world.

Berger was active in the major institutions of American Jewish academic life, having served as president of the Association for Jewish Studies and as a member of the Executive Committee of the American Academy of Jewish Research and vice chair of the Academic Advisory Committee of the National Foundation for Jewish Culture.

Among his publications are *The Rebbe, the Messiah, and the Scandal of Orthodox Indifference* (2001); *The Jewish-Christian Debate in the High Middle Ages: A Critical Edition of the Nizzahon Vetus with an Introduction, Translation, and Com-*

mentary (1979); and, as editor, *History and Hate: The Dimensions of Anti-Semitism* (1997).

[Jay Harris (2nd ed.)]

BERGER, ELMER (1908–1996), U.S. Reform rabbi and anti-Zionist propagandist. Berger was born in Cleveland, Ohio, and ordained at Hebrew Union College in 1932. He had begun his career serving two congregations in Michigan as rabbi when, in 1942, he wrote a widely circulated essay *Why I Am A Non-Zionist*, in which he challenged the Zionist claim “to represent something called ‘the Jewish people.’” As a result of his manifesto, which set forth the case for a universal and prophetic Judaism, he became executive director in 1943 of the American Council for Judaism, the leading U.S. Jewish organization opposed to the creation and existence of the State of Israel. As executive vice president of the ACJ from 1956, the pro-Arab Berger lobbied vigorously in the national media against Israel. After the Six-Day War in 1967, Berger fell afoul of the ACJ leadership and left to form a splinter group, American Jewish Alternatives to Zionism, which remained marginal. He summarized his life's crusades in his autobiographical *Memoirs of an Anti-Zionist Jew*, published in Beirut in 1978. His other books include *The Jewish Dilemma* (1945); *Judaism or Jewish Nationalism* (1957); *A Partisan History of Judaism* (1951); *United States Politics and Arab Oil* (1974); and *Who Knows Better Must Say So* (1956). Upon his death, Berger was eulogized as a hero in Arab scholarly publications.

[Bezalel Gordon (2nd ed.)]

BERGER, ISAAC (“Ike”; 1936–), U.S. Olympic weightlifter, winner of one gold and two silver Olympic medals, member of U.S. Weightlifters Hall of Fame. Born in Jerusalem to a rabbi, Berger was lightly wounded by shrapnel during Israel's War of Independence in 1948, a year before his family moved to New York. Measuring only five feet tall as a teenager, Berger started lifting weights and soon began competing, winning the national AAU championship from 1955 to 1961 and in 1964. He was the first featherweight to lift over 800 pounds and press double his own body weight. Berger won the gold medal at the 1956 Olympics, setting a record in the featherweight class (776.5 lbs. / 352.5 kg). The next year he won the gold medal at the 1957 Maccabiah Games and became the first athlete to establish a world record in Israel by pressing 258 pounds (117.1 kg.) in the featherweight class. He finished third that year in the world championships in the featherweight class but won the following year and again in 1961, while finishing second in 1959, 1963, and 1964. Berger also won the gold medal at the Pan American Games in 1959 and 1963. At the 1960 Olympic games, Berger won the silver medal lifting 798.75 pounds (362.6 kg.), losing to Yevgeny Minayev of the Soviet Union in a face-off that lasted 10 hours, until 4:00 A.M. Berger set an Olympic record at the 1964 games with a jerk of

336 pounds (152.5 kg.), which at a bodyweight of 130 pounds made him pound-for-pound the strongest man in the world, a record that stood for nine years. He also won a silver medal in the featherweight class (841.5 lbs. / 382.5 kg.). Berger was inducted into the U.S. Weightlifters Hall of Fame in 1965 and that same year started a program at the New York College of Music to become a cantor.

[Elli Wohlgelernter (2nd ed.)]

BERGER, LILI (1916–1996), Yiddish author and essayist. Born in Malkin, Poland, Berger settled in Paris in 1936, where she married the Jewish Communist leader Louis Gronowski. In 1949 she returned to Warsaw where she began publishing articles and stories in both Yiddish and Polish, followed by collections of literary criticism, short stories, and novels. In 1968 she resumed her literary activity in Paris. Many of her articles and essays are personal recollections replete with historical detail. Her award-winning fiction reflects the Polish Jewish experience in the 20th century. Among her books are *Ekhos fun a Vaytn Nekhtn* (“Echoes from Long Ago,” 1986); *Eseyen un Skitsn* (“Essays and Sketches,” 1965); *Fun Vayt un Noent* (“From Far and Near,” 1978); *In Loyf fun Tsayt* (“In the Course of Time,” 1988); *Oyf di Khvalyes fun Goyrl* (“On the Waves of Fate,” 1986).

Domankievich, in: *Tsukunft* (May–June 1971), 202–4; P. Hyman and D. Ofer (eds.), *Jewish Women: A Comprehensive Historical Encyclopedia* (CD-ROM, 2005).

[Vivian Felsen (2nd ed.)]

BERGER, MEIR (1901–1981), Mexican Jewish educator. Born in Suwalki, Poland, he studied in a yeshivah and in a teachers’ seminar in Lithuania. Later he taught in a Hebrew school. He immigrated to Mexico in 1924 and in the same year founded the first modern Jewish school there: Colegio Israelita de Mexico – Yiddishe Shul. This school imparted Jewish and general knowledge and Berger was its principal until 1944. In that year he was replaced by the educator Avraham *Golomb. Berger participated in the establishment of the first Zionist institutions in Mexico: in 1925 he was secretary of the Zionist Organization and in 1926 he headed the local Keren Kayemet le-Israel office. He was also the first editor of the Zionist periodical *Farn Folk* and he published numerous essays and articles in the Yiddish newspaper *Der Veg*.

[Efraim Zadoff (2nd ed.)]

BERGER, MEYER (1898–1959), U.S. journalist. During his career on *The New York Times* (1928–59), he wrote frequently on New York lore and life. In 1950 he won the Pulitzer Prize for his report on the shooting of 13 persons by an insane war veteran in New Jersey, and sent the prize money to the killer’s mother. A collection of his writings was published as *The Eight Million* (1942). Berger also wrote *The Story of the New York Times, 1851–1951*.

BERGER, SAMUEL R. (Sandy; 1945–), U.S. foreign affairs specialist. Born in Sharon, Conn., Sandy Berger, as he was usually known, became national security adviser to President Bill Clinton in his second term, serving from 1996 to 2001 as the senior White House aide on all international issues. Berger grew up in Millerton, N.Y., a rural community in dairy country. He father died when he was eight and his mother ran a struggling surplus clothing store. The Berbers stood apart from the Millerton mainstream as Democrats in a very Republican county and as Jews in an upper-income Republican area. Berger took his religious training from a rabbi in a nearby hospital for the mentally retarded. “Where I grew up is very important to what I am,” he said. “My perspectives are still more Millerton 1960 than Washington 2000. The small-town sense of community and social responsibility – that’s the lasting imprint of Millerton on me.”

At Cornell University, from which he graduated in 1967, he was active in student politics. He got a job as a student intern in Washington for Representative Joseph Resnick. At Harvard Law School, from which he graduated in 1971, he volunteered in the presidential campaigns of Eugene McCarthy and then for Robert F. Kennedy. Four years later, in the presidential campaign of George McGovern, he met Bill Clinton, and they became friends.

Berger joined one of Washington’s premier law firms, Hogan & Hartson, where he represented Japanese and other clients and talked often with the firm’s most eminent figure, former Senator J. William Fulbright. When Jimmy Carter was elected president, Berger served as deputy director of the Policy Planning Staff in the State Department, where he was involved in a wide variety of international economic, security, and foreign policy matters. During the 1980s Berger formed an alliance with Pamela Harriman, the Washington social doyenne, writing speeches for her and benefiting from her wealth and connections. When Clinton lost a re-election bid as governor of Arkansas, Berger persuaded Mrs. Harriman to put him on the board of her political action committee, which came to be a major fund-raising arm of the Democratic Party. When Clinton ran for president in 1992, Berger joined him as a senior foreign-policy adviser. After Clinton won, Berger persuaded him to send Mrs. Harriman to Paris as ambassador. Berger was offered the national security adviser’s job but demurred on the grounds of limited experience, suggesting Anthony Lake. Berger became Lake’s deputy and replaced him after Clinton’s first term.

Intimately involved with all aspects of Clinton foreign policy, Berger, considered the most influential foreign-policy adviser since Henry A. *Kissinger, was at the nexus of the Clinton strategy to end the war in Kosovo.

After leaving the White House, Berger served as chairman of Stonebridge International, a Washington-based strategy firm that he started to help build business relationships through Asia, Europe, and Latin America, and also had a senior position with *Lehman Brothers, the international investment firm.

[Stewart Kampel (2nd ed.)]

BERGER, VICTOR (1860–1929), U.S. journalist, socialist leader, and congressman. Berger was born in Nieder-Rehbach, Austria. In 1880 he immigrated to the United States and settled in Milwaukee, where he taught German and also taught Sunday School at the Bnei Yeshuron synagogue. In 1892 Berger became editor of the *Milwaukee Daily Vorwaerts*, a German-language socialist paper, and in 1897 he helped to found the American Socialist Party. A conservative socialist influenced by the writings of Eduard Bernstein, Berger joined ranks with Morris Hillquit in opposing the influence of the communists and such radicals as Daniel De Leon in the socialist camp. In 1908 he became editor of the weekly *Social Democratic Herald*, which was later replaced by the daily *Milwaukee Leader*, a newspaper that he then headed until his death. In 1911 Berger was elected to Congress from Wisconsin, thereby becoming the first avowed socialist to serve in the U.S. House of Representatives, where he was known for his advocacy of labor legislation and social reform. His opposition to America's entry into World War I led the postmaster general to revoke the mailing privileges of his *Milwaukee Leader* on the grounds of its being a subversive journal, and Berger himself was indicted under the Espionage Act. A court conviction led to a 20-year sentence, as a result of which the House refused to seat him when he won the off-year election in 1918 and again the following year when he won in a rerun. In 1921, however, the Supreme Court reversed his conviction, and a year later, in consequence of this ruling and the general abatement of war hysteria, the House allowed him his seat which he continued to hold until 1928. At the time of his death he was chairman of the National Executive Board of the American Socialist Party.

BERGER-BARZILAI, JOSEPH (original name **Isaac Zelaznik**, from 1922 **Barzilai**; 1904–1978), Israeli political scientist. Berger-Barzilai was born in Cracow. In 1920, having joined the newly created Zionist youth movement Ha-Shomer ha-Za'ir, he went to Erez Israel. Two years later he joined the small founding group of the illegal Palestine Communist Party, of which he was appointed secretary.

In 1924 he visited Moscow and the Comintern Executive there. On his return he helped organize Communist groups in Syria, Lebanon, Egypt, and Transjordan, and in his capacity as party secretary made contact with Arab leaders in Erez Israel, notably Jamal al-Husseini. He secretly visited Moscow several times and in March 1929 had a five-hour talk with Stalin on Erez Israel and Near Eastern affairs. During the Arab riots of 1929 he hid in the Arab village of Beit Safafa near Jerusalem, whence he directed Communist propaganda. In 1931 he was sent by the Comintern to Berlin to serve as secretary of the Anti-Imperialist League, whose chairmen were then Albert Einstein and Henri Barbusse. In 1932 he was called to Moscow to head the Near East Department of the Comintern and was given the name Joseph Berger. Two years later he was suddenly dismissed and expelled from the party, and in 1935 arrested for "Trotskyist agitation." Though he denied the charge, he was

sentenced to five years' hard labor. In 1936 he was brought to Moscow as a potential witness against Zinoviev; refusing to give evidence, he was sentenced to death. The sentence was unexpectedly commuted to eight years' imprisonment; 20 years later Berger-Barzilai learned that his life had been saved by his Jewish interrogator's sympathy for his Palestinian past. For more than 15 years Berger-Barzilai was sent from prison to prison and from camp to camp, undergoing such ordeals as a renewed death sentence which was later repealed, long hunger strikes, and physical torture. In 1951 he was released but condemned to exile for life in Siberia. Only in 1956, after the 20th Congress of the Soviet Communist Party, was Berger completely "rehabilitated" and accepted again into the party ranks. He left, however, with his family for Poland and worked for a while in the Polish Institute of Foreign Affairs in Warsaw. In 1957 he settled in Israel, and henceforth assumed the double name Berger-Barzilai. During the long years of imprisonment Berger-Barzilai returned to his Jewish loyalties and religious faith. In 1968 he was appointed senior lecturer in political science at Bar-Ilan University, and rapidly became an international authority on Communist and Soviet affairs, publishing numerous interviews and articles in journals and the daily press. He was invited to lecture at learned institutions and appeared as a commentator on Israel radio.

He described some of his experiences in the Soviet Union in several books: in Hebrew, *Zohar ba-Hazot* ("Light at Midnight," 1962), *Ha-Tragedyah shel ha-Mahpekhah ha-Sovyetit* ("The Tragedy of the Soviet Revolution," 1968); and in a more comprehensive volume in English: *Shipwreck of a Generation* (American title, *Nothing but the Truth*, 1971).

His wife, **ESTHER FELDMAN** (1898–1972), described her life in the U.S.S.R. as the Jewish wife of an "enemy of the people" in *Kele Beli Sogar* ("Prison without Bars," 1964).

[Binyamin Eliav (2nd ed.)]

BERGGRÜN, HEINRICH (1838–1889), *hazzan* and composer. Born in Warsaw, Berggrün was a music teacher in Vilna, and later a violinist at the Grand Theater, Warsaw. He studied singing in Milan, became choirmaster in Odessa, was appointed *hazzan* in Posen, and chief cantor in Hanover in 1870. His compositions include: "Festival *Kaddish*" for *hazzan* and choir on the occasion of the jubilee of the Hanover synagogue, 1892; "Complete *Kaddish*" for *hazzan* and choir, 1889.

BERGH, VAN DEN, Dutch family of industrialists. **ZADOK VAN DEN BERGH** (1769–1857) was a merchant and leader of the Brabant Jewish community, living in the small village of Geffen. His son **DANIEL VAN DEN BERGH** (1794–1866) headed a textile factory from 1836, which under the name Bergoss (1856–1986) made Oss into a center of the textile industry. His younger brother **SIMON VAN DEN BERGH** (1818–1907) continued their father's business, bartering groceries and dry goods for butter supplied by peasants from the surrounding countryside. In 1872, Simon, helped by his sons Samuel, Arnold, Henry, Isaac and Jacob, started production of "artificial but-

ter,” or oleomargarine, in a factory in Oss, in 1890 replaced by a bigger one at Rotterdam. Henry and Jacob opened a branch in London, while in 1888 a margarine factory was opened in Cleve (Germany). A few years later, in 1895, a factory was opened in Brussels. Subsequently, the firm developed rapidly and became one of the leading margarine manufacturers in Europe. In 1930 the Van den Bergh Margarine Union Ltd. merged with Lever Bros. Ltd., forming Unilever Ltd., which expanded into a giant international concern. Simon’s son, SAMUEL VAN DEN BERGH (1864–1941), obtained a leading position in the firm, but was active in politics as well and within the Jewish community. He was a Member of Parliament for the Liberal Party from 1905 to 1909, and a Member of the First House from 1923 to 1938. He was also the Dutch delegate to the International Jewish Agency and a member of the board of the Dutch branch of Keren Hayesod. His son, the lawyer and professor GEORGE VAN DEN BERGH (1897–1966), was active in the Socialist Party and was a Member of Parliament from 1925 to 1933. As the chairman of the board of the Zionist agricultural project in the Wieringermeer, he served the Jewish community. George’s brother, SIDNEY JAMES VAN DEN BERGH (1898–1978), was also active in public affairs. After serving as a commissioner for UNICEF, he was appointed minister of defense in 1959. The next generation too produced a Member of Parliament: George’s son ROBERT VAN DEN BERGH (1913–1997) represented the Socialist Party from 1963 to 1971. Thereafter he became a member of the Council of the State (1972–83).

BERGHEIM, village N. of Colmar in Alsace, E. France. Jews are first mentioned there in connection with the persecutions in the 14th century by the *Armleder gangs and following the *Black Death. During the Burgundian wars (1476–78) they again suffered severely. By the beginning of the 16th century, however, Bergheim had the largest Jewish community in Alsace. The Jewish settlement was pillaged by rebel peasants in 1525, and an anti-Jewish outbreak in 1784 followed the abolition of the “body tax” on Jews. The Jewish population declined from 327 in 1784 to 40 in 1926. In 1968 there were no Jews living in Bergheim.

[Zvi Avneri]

BERGMAN, ALAN (1925–) and **MARILYN** (1929–), U.S. songwriters, composers. Alan and Marilyn Bergman (Katz), a prolific husband-and-wife team, are best known for their many film score classics such as the Academy Award-winning songs “The Way We Were” (*The Way We Were* (1973))

and “The Windmills of Your Mind” (*The Thomas Crown Affair* (1968)). The couple received the Academy Award for Best Musical Score for *Yentl* (1983), writing the lyrics to accompany Michel Legrand’s music for the film. They were nominated for 16 other Academy Awards.

Alan Bergman was educated at the University of California-Los Angeles and received a B.A. from the University of North Carolina. His career began during WWII when he wrote and directed Special Services shows for American troops. After the war, he directed television shows for CBS from 1945 until 1953. He joined ASCAP in 1955 and began writing songs for television, revues, and nightclub acts, for performers such as Fred Astaire and Marge and Gower Champion. His notable stage scores include *That’s Life*, *Ice Capades of 1957*, and *Something More!*, while his albums include *Never Be Afraid* and *Aesop’s Fables*. He married his wife and songwriting partner, Marilyn, in 1958. Marilyn attended New York University. She joined ASCAP in 1953, two years before her husband. She also wrote songs for revues and nightclub performances and is credited with several television theme songs. Some of the couple’s other most memorable songs include “Nice ‘n’ Easy,” “Yellow Bird,” “The Way You Make Me Feel,” “It Might Be You,” “Moonlight,” “Cheatin’ Billy,” “Don’t Know Where I’m Goin’,” “I’ve Never Left Your Arms,” “That Face,” “Baby, the Ball Is Over,” “Ol’ MacDonald,” “Sentimental Baby,” “If I Were in Love,” and “That’s Him Over There.”

[Walter Driver (2nd ed.)]

BERGMAN, ANDREW (1945–), U.S. writer, director, producer. Born in Queens, N.Y., Bergman attended Harper College before earning his doctorate in American history at the University of Wisconsin. His doctoral dissertation, “We’re in the Money: Depression America and Its Films” (1971), earned him respect as a trenchant sociologist and film historian and led to a job as a youth contact in the PR department at United Artists. After writing the critically acclaimed Broadway comedy *Social Security*, Bergman received his first screenwriting credit for the Mel Brooks blockbuster farce *Blazing Saddles* (1974), which was based on Berman’s treatment for a film called “Tex X.” Bergman earned the sole screenwriting credit for the 1979 comedy *The In-Laws*, starring Alan *Arkin and Peter *Falk. He made his directorial debut two years later with *So Fine*, a Madison Avenue satire about a professor who conquers the garment industry with an idea for transparent jeans. Bergman was widely praised for his adaptation of Michael Ritchie’s novel *Fletch* (1985), featuring Chevy Chase as droll newspaper reporter Irwin Fletcher. Bergman continued to write and direct during the 1990s while also producing a number of films in conjunction with producer Michael Lobell and their joint venture Lobell/Bergman Productions. The versatile Bergman both wrote and directed *The Freshman* (1990), starring Marlon Brando and Matthew Broderick, as well as the features *Honeymoon in Vegas* (1992) and *Striptease* (1996), while writing the screenplays for *Soapdish* (1991) and *The Scout* (1994). His production credits include *Chances Are*

(1989), *Undercover Blues* (1993), *Little Big League* (1994), and *Striptease* (1996).

[Walter Driver (2nd ed.)]

BERGMAN, SAMUEL HUGO (1883–1974), philosopher. Bergman studied philosophy in Prague and Berlin. During his student days at Prague, he was a member and leader of the Zionist student circle, Bar Kochba, and in 1903 began to publish articles on Zionist and Judaic themes. From 1909, when Martin *Buber began to give his lectures on Judaism in Prague and other European cities, Bergman became his close disciple, although he sometimes was very critical of Buber, whose influence on him lasted throughout his entire life. The Bar Kochba circle and his close association with Buber were the pivotal and formative factors of Bergman's personality and philosophy. During World War I, he served as an officer in the Austro-Hungarian army. In 1919 he was nominated a member of the "National Council of Jews of the Czechoslovakian Republic" and of the "Committee of Delegations" for the Versailles peace treaty negotiations. He also served as the World Zionist's Organization's secretary of education in London and in 1920 emigrated to Palestine, where he became the first director of the Jewish National and Hebrew University Library in Jerusalem, a position he held until 1935. He was involved in founding the *Histadrut ha-Ovedim, and was elected a member of its executive council. In 1928 he became a lecturer in philosophy at the Hebrew University, and in 1935 was promoted to professor. From 1935 until 1938 he served as its first rector. One of the founders and editors of *Kiryat Sefer*, he was the editor of general philosophy for the *Encyclopaedia Hebraica*, and an editor of the philosophical quarterly *Iyyun*. Bergman was a member of *Ha-Po'el ha-Za'ir, being the first philosopher to delve seriously into the writings of the party's spiritual master, A.D. *Gordon. Later Bergman also became involved in *Berit Shalom and *Ihūd, of which he became the main spokesman. He headed the Jewish delegation from Palestine to the Pan-Asian Conference held in New Delhi in 1947.

Bergman's main intellectual interests were scientific knowledge and religious experience. He saw reason and faith as two sources of truth and as grounds for human moral orientation, which endow life with significance. Throughout his entire life Bergman strove for a comprehensive approach to these two sources of truth, an approach which would resolve the mutual context of rationality and of mysticism, of knowledge of being with the human longing for sanctity and eternity.

In Bergman's early years, his philosophical views were influenced by Brentano, and he applied himself chiefly to an analysis of the phenomena of perception and evidence. From the early 1920s on, he turned to Kantian philosophy and devoted quite a few of his studies to a critical analysis of the philosopher's struggle for evidence and for causality (see his *Ha-Filosofiyah shel Immanuel Kant* ("The Philosophy of Immanuel Kant," 1937, 1970²)). His approach to these questions was deeply influenced by the neo-Kantian school, especially that of Hermann *Cohen, who became one of his main sources

in philosophy and religion. Among his contributions to the study of philosophy are *Mavo le-Torat ha-Hakarah* ("Introduction to Epistemology," 1940); *Mavo le-Torat ha-Higayon* ("Introduction to Logic," 1954); *Ha-Filosofiyah shel Shelomo Maimon* ("The Philosophy of Solomon Maimon," 1932; Eng. trans., 1967); *Toledot ha-Filosofiyah ha-Hadashah* ("History of Modern Philosophy," 4 vols., 1970–77).

Bergman's intention, as stated in the opening remark of his *Hogei ha-Dor* ("The Philosophers of Our Time," 1935), was to show how scientific-philosophic discourse found itself at a dead end at the beginning of the 20th century and how philosophy "seeks in the last generation, in various directions and with the assistance of a variety of tools, to find the way out of it." The different directions he referred to, are mostly existential-religious ones, some of which he called "*Dialogical Philosophy*" (Heb. *Ha-Filosofiyah ha-Dialogit mi-Kierkegaard ad Buber*, Intro. N. Rotenstreich, 1973; Eng., 1991). Under this umbrella Bergman included the philosophies of some of his main masters, namely, besides Buber and Cohen, Franz Rosenzweig and A.D. Gordon. Of no less import for him was Abraham Isaac *Kook, on the Jewish side as well as Rudolf Steiner and Sari Aurobindu on the Christian and Hindu side.

Bergman's own religiosity combined a naive faith and a constant striving for God-experience and guidance, with highly sophisticated humanistic restrictions. Although he deeply believed in personal spontaneous prayer, he participated in the traditional public prayer prescribed by the *halakhah*. Although he believed in the central role and the necessary authority of *halakhah*, he was open to the need for change and personal autonomy. Bergman was a devoted Jew, but rejected the exclusiveness of the idea of the election of Israel, and affirmed the unity and messianic cooperation of all religions. He delved all his life into the literary sources of Judaism but was fully convinced that human consciousness should be the final authority for religious decisions and determinations.

This dynamic balance between religious commitment, human responsibility, and devotion to philosophic deliberation marks Bergman's attitude in the many areas in which he was active. He saw the human as being constantly called upon to live in covenant with God, to be His partner, and yet to be fully aware of God's sovereignty over humanity. This approach shaped his political Zionist view and led him to seek dialogue and compromise with the Palestinian people. It permeated his commitment to social justice and pluralism, and his understanding of philosophy and religion as endless journeys towards the truth, which one can progressively approach, but which always remains transcendently divine, and cannot be possessed by the human mind or deed.

Bergman's observations on religion are to be found, among his many publications, especially in his *Hogim u-Ma'aminim* ("Thinkers and Believers," 1959), *Faith and Reason: An Introduction to Modern Jewish Thought* (ed. A. Jospe, 1961), and *Anashim u-Derakhim* ("Persons and Paths," 1967). He also wrote *Ba-Mishol*, ed. N. Rotenstreich, 1976.

[Nathan Rotenstreich / Yehoyada Amir (2nd ed.)]

BERGMANN, ERNST DAVID (1903–1975), Israeli organic chemist. Bergmann was born in Karlsruhe, Germany, the son of Judah *Bergmann. He obtained his doctorate at the University of Berlin and joined the staff of the Chemical Institute of the university. In 1933 he moved to London and began his long and close association with Chaim Weizmann. After working in the Featherstone Laboratories in London, he was made responsible for the planning of the Daniel Sieff Research Institute in Rehovot, Palestine, and in 1934 went there to become its scientific director. In 1939 Bergmann went to France to work in the Ministry of Armaments and in 1940 to London, to work in the Grosvenor Laboratories of the Ministry of Supply. Weizmann and Bergmann developed the “catarole process” for making aromatic hydrocarbons from petroleum, and also worked on fermentation and a process for making isoprene. Bergmann returned in 1946 to the Daniel Sieff Institute and, when this was incorporated in the Weizmann Institute in 1949, was named scientific director. In 1948 he became scientific director of the science department of the Israel Ministry of Defense, a position he held for nearly 20 years. He resigned his position at the Weizmann Institute in 1951 and the following year was appointed professor of organic chemistry at the Hebrew University in Jerusalem. From 1953 to 1966 he was chairman of Israel’s Atomic Energy Commission. He was a member of Israel’s National Council for Research and Development and the Israel Academy of Sciences and Humanities. In 1968, he was awarded the Israel Prize for Natural Sciences. His output of scientific work covered a wide range of topics, including polycyclic aromatic hydrocarbons, carcinogenic agents, the addition of sodium to double bonds, dipole moments, molecular rearrangements, photochemistry, and insecticides. Bergmann and W. Schlenk wrote *Ausfuhrliches Lehrbuch der organischen Chemie* (2 vols., 1932–38; Bergmann’s name was deleted from the title page). In 1948 he published *The Chemistry of Acetylene Compounds and Isomerisation of Organic Compounds*.

BIBLIOGRAPHY: *Israel Journal of Chemistry*, 1 (1963), 323–50 (includes list of publications until 1962); D. Lazar, *Rashim be-Yisrael*, 2 (1955), 211–5.

[Samuel Aaron Miller]

BERGMANN, FELIX ELIEZER (1908–2002), Israeli organic chemist and pharmacologist. Born in Frankfurt on the Oder, Germany, to Hedwig (née Rosenzweig) and Dr. Judah Berg-

mann, who was a rabbi in Berlin and wrote on Jewish subjects, he received his Ph.D. in organic chemistry in 1933 from the Humboldt University in Berlin. Concurrently, he studied medicine, but received his diploma only after World War II. An active Zionist from his youth, he left for Palestine in 1933.

Bergman, belonged to the founding generation of science in Israel. Together with his eldest brother, Ernst David *Bergmann, he was among the founders of the Sieff Institute in Rehovot in 1934. Immediately upon his arrival in Israel, he was approached by the *Haganah, to find an explosive that would be safer than the gelignite then in use. Thus, concurrently with his research on polycyclic carcinogens at the Sieff Institute, he developed an efficient industrial method for producing the explosive PETN, nicknamed in Hebrew “Ten.” His devotion to scientific research was rivaled only by his dedication to the security of Israel. He conducted weapons research for the Haganah, developing, with a team of brilliant young Jewish scientists he recruited abroad, rocket fuel for the first locally made rockets, which were used effectively in the War of Independence. He was a key-figure in the founding of Hemed, the Army Science Corps, before the establishment of the State; after its dissolution, he continued as adviser to the Ministry of Defense and the Biological Research Institute in Nes Ziyonah. Bergmann was also a scientific advisor to the chemical and pharmaceutical industries. In 1950 he joined the newly founded Hebrew University and Hadassah Medical School in Jerusalem, where he established the Department of Pharmacology (1956) and its teaching curriculum. Bergmann served as head of department until his retirement (1976). His background in both chemistry and medicine enabled him to engage in a broad spectrum of research areas, ranging from organic chemistry to biochemistry, and from pharmacology to physiology and neurology. Already during World War II, he was instrumental in synthesizing an anti-malarial drug for the British army. Notable among his varied fields of research was his extensive work on the function of the neurotransmitter acetylcholine, particularly in the elucidation of the mechanism of action of its degrading enzyme, acetylcholinesterase. Later on, he was engaged in the characterization of the activity of xanthine oxidase, another enzyme of major biological and medical importance. He trained generations of Ph.D. and M.Sc. students in chemistry, pharmacology, and biology who later held key positions in universities and in industrial research. Bergmann was a member of the Israeli Academy of Sciences.

[Hanna Scolnicov (2nd ed.)]

BERGMANN, JUDAH (1874–1956), rabbi and author. Born in Brzezany (Galicia), Bergmann served as rabbi at Karlsruhe and Frankfurt on the Oder and from 1908 with the Berlin Jewish community. Bergmann took an early interest in Jewish scholarship and published various articles on Jewish history and folklore in Jewish scholarly journals. Among his published works are *Juedische Apologetik im neutestamentlichen Zeitalter* (1908), in which he described the self-defense of Palestinian

Judaism against emerging Christianity; *Legenden der Juden* (1919), a study on the nature and sources of *aggadah*; *Ha-Am ve-Ruho* (1938), studies and essays on the problems of scholarship and life; *Ha-Zedakah be-Yisrael* (1944), a study on the history and institutions of charity among the Jews; and *Ha-Folklor ha-Yehudi* (1953), about the popular knowledge, beliefs, characteristics, and customs of Jewish people. He was one of the founders of the Freie Juedische Volkshochschule in Berlin. When the Nazis seized power in 1933, he emigrated to Jerusalem. His son was E.D. *Bergmann.

[Abraham Meir Habermann]

BERGMANN, MAX (1886–1944), chemist, best known for his research in leathers. Bergmann was born in Fuerth, Bavaria. He obtained his doctorate in 1911 at Berlin, where he became the assistant to the organic chemist Emil Fischer. In 1920, Bergmann was appointed head of chemistry at the Kaiser-Wilhelm Institut fuer Faserstoff-Forschung in Berlin, and in 1921, director of the Kaiser-Wilhelm Institut fuer Lederforschung in Dresden and professor of the Technische Hochschule there. He held these positions until forced to leave Germany in 1934. His main area of research was in the chemistry and structure of proteins. Bergmann went to the United States where he became a member of the Rockefeller Institute for Medical Research.

[Samuel Aaron Miller]

BERGMANN, RICHARD (1920–1970), table tennis player, winner of seven world championships, including four singles crowns. Born in Vienna, Bergmann began playing table tennis at age 12 and won his first world championship in 1936 at the age of 16 as a member of the Austrian Swaythling Cup team. He also won the bronze medal that year in the men's singles event. A year later in 1937, Bergmann became and remains the youngest player in history to win the gold medal in the men's singles competition; he won the silver in 1938. When the Nazis invaded Austria in March, Bergmann fled to England. In 1939, he won his second world singles crown and the world doubles title with Victor *Barna. Following World War II, he reclaimed his title in 1948 as world singles champion and won the bronze in doubles again with Barna. In 1949 Bergmann and Barna helped England win the bronze in team competition, and Bergmann won the bronze in doubles with Tage Flisberg. In 1950 Bergmann won his fourth world championship singles 13 years after his first and led England to a team bronze. In 1952 he won silver in doubles (with Johnny Leach) as well as in team competition, and his seventh and final world championship was in team play in 1953. Bergmann won the bronze in singles and team in 1954, and his final medal was bronze with England in 1955. Bergmann also finished first in the English singles championships six times and the doubles

four times. Bergmann became the world's first professional table tennis player in the mid-1950s, touring extensively with the Harlem Globetrotters basketball team. Sometimes referred to as Richard the Lionhearted, Bergman was the author of *Twenty-One Up* (1950).

[Elli Wohlgeleitner (2nd ed.)]

BERGNER, ELISABETH (1897–1986), actress. Born as Ella Ettel in the Galician town of Drohobycz (today Ukrainian Drogobyc), she came in her youth to Vienna, where she studied. She acted there and in Berlin for Victor Barnowsky, Max Reinhardt, and her future husband, Paul Czinner. Especially as Rosalind in *As You Like It* on stage and in many films of the 1920s and early 1930s, she gained an international reputation, bolstered by her interpretation of the title role of Shaw's *Saint Joan*. Her androgynous type, which combined sex appeal with a female aspiration for emancipation, made her an idol on stage and screen in interwar Europe. Bergner toured the Continent and made her first appearance in Great Britain in Margaret Kennedy's *Escape Me Never* (1933). This was an immediate success, which she repeated two years later in New York. She remained there as an émigré until 1950, when she returned to London. Under the direction of her husband, Paul Czinner, she appeared in a number of films. Her films included *Der traemende Mund* and *Stolen Life* (1939). She was not a success in Hollywood films. After World War II she toured Germany and Austria. In 1978 she published her memoirs, *Bewundert und viel gescholten – Elisabeth Bergners unordentlichen Erinnerungen*.

ADD. BIBLIOGRAPHY: K. Voelker, *Elisabeth Bergner* (Ger., 1990); D. Wuensche: *Elisabeth Bergner. Dokumente ihres Lebens* (1990); Historisches Museum der Stadt Wien, *Unsere schwarze Rose* (catalogue, 1993).

[Pnina Nave / Marcus Pyka (2nd ed.)]

BERGNER, HERZ (1907–1970), Yiddish novelist. The younger brother of Melech *Ravitch, Bergner grew up in Radimno, Galicia. After a short stay in Warsaw, he immigrated to Melbourne in 1938. From 1928 he published short stories in leading Yiddish periodicals in Europe, Israel, Australia and the United States. In Warsaw he published the collection *Shtubn un Gasn* ("Houses and Streets," 1935) and was co-editor of *Shriftn* (1936). His novels, *Tsvishn Himel un Vaser* (*Between Sky and Sea*, 1946) dealing with a boatload of Jewish refugees, and *Likht un Shotn* (1960; *Light and Shadow*, 1963) describing the struggle of a Jewish family for acceptance in an Australian community, were translated into English. Bergner's Australian short stories, especially his volume *Vu der Emes Shteyt Ayn* ("Where the Truth Lies," 1966), realistically mirror various aspects in the life of Jewish immigrants in Melbourne.

BIBLIOGRAPHY: LNYL, 1 (1956), 379; M. Ravitch, *Mayn Leksikon* (1945), 43–45. **ADD. BIBLIOGRAPHY:** I. Kahan, in: *Australian Jewish Historical Society*, 7/4 (1973), 286–90; I. Turkov-Grudberg, in: *Di Goldene Keyt*, 56 (1966), 248–50.

[Sol Liptzin]

BERGNER YOSSL (Yosef; 1920–), Israeli painter. Born in Vienna, the son of the singer Fania Bergner and the Yiddish poet Melech *Ravitch. Bergner immigrated to Australia in 1937 and studied at the art school of the National Gallery of Victoria in Melbourne. He arrived to Israel in 1950 and settled in Safed. During his career Bergner exhibited his work all over the world. He represented Israeli art in international exhibitions such as the Biennale in Venice and the Biennale of Sao Paulo. In addition to painting Bergner produced book illustrations and designed theater sets and costumes for the Yiddish and Hebrew stage, particularly for plays written by Nissim *Aloni. In 1980 Bergner was awarded the Israel Prize. Bergner is married to the painter Audrey Bergner.

In his unique way Bergner remained a Jewish cosmopolitan refugee in spite of his Israeli citizenship and spending most of his life in Israel. Bergner's art consists of a large variety of subjects: Jewish, Australian aborigines, children of Safed, wall paintings, masks, angels and kings, still lifes, toys and flowers, paintings inspired by the Bird's-Head *Haggadah*, Kafka's images, Brighton Beach, chairs and tables, Zionists figures and pioneer images (*Pioneer's Funeral*, 1977, Israel Museum, Jerusalem). Bergner described himself as someone who has to express everything that goes through his head, in a very eclectic way.

Bergner's style moves freely between extremes, from compact compositions and minimal coloration to richness and dramatic style. He always maintained a rare combination between figurative description and surrealistic atmosphere. At the heart of his approach lies the understanding that the visual image is a more or less aesthetic representation of the meaning beyond it.

More than once Bergner has been defined as a literary painter, in his case meaning a painter who is as comfortable with world literature as he is familiar with Jewish literature. As the son of a Yiddish poet, the stories of Mendele Mokher Seferim (Sholem Yankev *Abramovitch), *Shalom Aleichem, and I.L. *Peretz were a part of his life. At the same time Bergner's art has been an inspiration to many Israeli poets like Dan *Pagis, Tuvia Rivner, and Hayim Hefer. They were drawn to the characteristic images of Bergner's art, referring to them as an integral part of their poems.

During the years 1971–72 Bergner dealt with the theme of the Crucifixion. The cross looms high in the foreground of a cloudy sky. Instead of a human being crucified there are graters or a white fabric. The atmosphere in these paintings is dramatic and magical (*Messenger – The Dismantled Cross*, 1972, Private Collection, Tel Aviv).

Bergner's paintings are very popular among religious people because of the absence of human figures and the focus on objects.

[Ronit Steinberg (2nd ed.)]

BERGSON (Berkson), assimilated Warsaw family, descended from the court factor Samuel *Zbitkower (d. 1800). Most of the children of his second wife, Judith Levi of Frankfurt on the Oder, were given a secular education, and converted to Christianity, founding the Fraenkel, Oesterreicher, and Flatau families which played an important role in Polish economic life. BER (Berek), Zbitkower's son by his first wife, alone remained Jewish, and under Prussian rule adopted the family name Sonnenberg. He and his wife, Tamar (Temerl), built a synagogue in the Praga suburb of Warsaw in 1807. Their home became a meeting place for the Hasidim in Poland. Their sons, Jacob, Leopold, and Michael, took the name Bergson (or Berkson, "son of Berek"). Members of the family included JOSEPH BERGSON (1812–?), a lecturer in medicine at Warsaw University (1841–61), and the musician MICHAEL *BERGSON (1820–1898), father of the most celebrated member of the family, the philosopher HENRI *BERGSON. Active in the Warsaw community was MICHAEL BERGSON, the son of Leopold, who served as president of the community from 1896 to 1918. Other family members were bankers and manufacturers.

[Nathan Michael Gelber]

BERGSON, ABRAM (1914–2003), U.S. economist and expert on the Soviet Union. Born in Baltimore, Maryland, Bergson earned his B.A. degree from Johns Hopkins University in 1933 and his M.A. and Ph.D. from Harvard in 1935 and 1940, respectively. While he was a graduate student, he and his brother Gustav, a physicist, decided to change their name to Bergson because they felt the name they were born with – Burk – did not convey their Jewish heritage.

From 1937 to 1940 Bergson was an instructor at Harvard, and from 1940 to 1942 assistant professor at the University of Texas. He spent 1942 to 1946 as an economist in various agencies of the U.S. government, and as chief of the division for the Office of Strategic Services, was a U.S. delegate to the Moscow Reparations Conference (1945). For the next ten years he was at Columbia University but returned to Harvard in 1956 as professor of economics, where he remained for the rest of his career.

He began his academic life as a theorist, publishing an extremely influential paper at the age of 23 on the measurement of well-being across society. His best-known work later became linked with that of Paul A. *Samuelson, a classmate at Harvard who won the Nobel in economic science. The Bergson-Samuelson social welfare function, which combines individual gauges of well-being, has been a fixture in economic analysis for decades.

Bergson was director of the Russian Research Center (now the Davis Center) from 1964 to 1968 and acting direc-

tor from 1969 to 1970. He remained involved in activities at the center until 2002, frequently leading off the question-and-answer period at lectures and symposia. His knowledge of Soviet economic policies and practices qualified him as the outstanding expert before congressional committees dealing with the Soviet economy. As the world's leading authority on the subject, he was consulted and cited far more than any other expert about the assessment and evaluation of Soviet economic performance. After the Soviet Union collapsed in 1991 Soviet scholars, once forced to adjust their findings to the "Party line," were free to express their esteem for Bergson's work. "They would make pilgrimages to see him as if they were coming to consult the oracle," observed Marshall Goldman, associate director of the Davis Center for Russian and Eurasian Research.

In 1983 Bergson received the Distinguished Fellow award of the American Economic Association.

Bergson was the editor of *Economic Trends in the Soviet Union* (1963). He wrote extensively on his special field of interest; his published works include *The Structure of Soviet Wages* (1944), *Soviet National Income and Product in 1937* (1953), *Soviet Economic Growth, Conditions and Perspectives* (1953), *Soviet National Income and Product 1940–48* (1954), *The Real National Income of Soviet Russia Since 1928* (1961), *The Economics of Soviet Planning* (1964), *Essays in Normative Economics* (1966), *Planning and Productivity Under Soviet Socialism* (1968), *Productivity and the Social System: The U.S.S.R. and the West* (1978), *Welfare, Planning, and Employment* (1982), and *The Soviet Economy: Towards the Year 2000* (co-editor with Herbert Levine, 1983).

[Joachim O. Ronall / Ruth Beloff (2nd ed.)]

BERGSON, HENRI LOUIS (1859–1941), French philosopher. His father, Michael *Bergson, came from a distinguished Warsaw family; his mother from England. He was born in Paris and from 1881 taught philosophy at the Angers Lycée and subsequently at Clermont-Ferrand, where he gave his famous lectures on laughter, and where, after long meditations in the countryside, he first devised the idea of the vital, continuous, and generative impulse of the universe. From the age of 25, Bergson devoted himself to elaborating this theory in various forms. In 1889 he returned to Paris, published his Ph.D. thesis *Essai sur les données immédiates de la conscience* (*Time and Free Will*, 1910), and lectured at the Lycée Henri IV and the Ecole Normale Supérieure. In 1900 he was appointed professor of philosophy at the Collège de France. His lectures were popular and were attended by the elite of Paris society. These lectures, like his books, especially *L'Évolution créatrice* (1907; *Creative Evolution*, 1911), were distinguished by their lucid and brilliant style and established his fame in France and throughout the world. In 1914 he became a member of the French Academy and in 1928 was awarded the Nobel Prize for literature. Bergson was also politically active, especially in foreign affairs, and headed a French delegation to the U.S. He was president of the League of Nations' Commit-

tee for Intellectual Cooperation. In 1940, after the French surrender to the Nazis, Bergson returned all his decorations and awards, and, rejecting the French authorities' offer to exclude him from the edicts against the Jews, queued for many hours to register as a Jew although he was weak and ill. In his latter years he was attracted to Catholicism but remained a Jew in order to maintain his identification with the persecuted. He died a Jew in 1941.

Most of his works deal with the conception and explication of the notions of "duration" and "movement," not as static concepts defined by the mind but as experiences, conceived by the intuition when it is freed from the limitations which the intellectual consciousness imposes upon the conceiver and the conceived. According to Bergson, the dynamic element of the duration, the flowing time, is the sole penetrator of real existence. "Time" abolishes the static world of the conscious mind and the concept of "duration" may be defined as the continual change which takes place in time. This change is not transcendently motivated but results from an inner energy – the vital impulse (*élan vital*) which derives from an unlimited source. The actual duration of the vital impulse is the basic element of the universe, while matter and awareness are only momentary manifestations or creations of the central stream. The consciousness can grasp the essence of reality, both in its primary purity as a duration and in its consolidation and objectification as matter in space. In the same manner consciousness can also reach self-knowledge in two different ways: through intellectual static self-consciousness, and through an intimate awareness of its essence as a conscious duration, a vital and fluctuating spirit, regenerating and developing continuously. From this it follows that the factor fashioning consciousness is memory. Memory comprises the duration for it accumulates all past achievements and within it "the past grows into the present." Through the intuition, which is the essence of the memory, man grasps his personal essence as a vital and conscious duration, and, similarly, grasps the creative duration, which is absolute reality.

Bergson's view also appears in his theories on the functions of instinct, intellect, and intuition. Life evolution advances in three directions: vegetative, instinctive, and rational. The instinct is the capability of utilizing organic instruments, but this function is merely a blind practical knowledge. The intellect has the ability of execution and of utilizing inorganic instruments, and it introduces, therefore, the knowledge of the qualities of objects, accompanied by self-knowledge. When the intellect has time enough to develop its knowledge, it judges all objects as if they were inorganic instruments, thus viewing the living reality itself in a mechanical, devitalized mirror. This perverted conception can be corrected by intuition, which is a developed instinct with self-awareness. Bergson conceived the intuition as the only means by which it is possible to inject a primary flexibility into fossilized scientific methods and draw them closer to reality.

Bergson recognized that the potential capability for immediately grasping reality is actualized only in a few select

men. Strong fetters of habit tie man down to the social, moral, and conceptual reality of his environment, and only an elite few are capable of extricating themselves. Therefore, Bergson admired the great mystics (see his *Les deux sources de la morale et de la religion*, 1932; *Two Sources of Morality and Religion*, 1935).

BERGSON, MICHAEL (1820–1898), Polish pianist and composer, born in Warsaw. He was the father of the French philosopher Henri *Bergson. Michael's opera *Luisa di Montfort* was produced in Florence (1847) and in Hamburg (1849); his operetta *Qui va à la chasse, perd sa place* in Paris (1859). For ten years he was piano professor, then director of the Geneva Conservatory. In 1873 he settled in London, where he collaborated with M. Hast in the compilation and editing of synagogue music. A pupil of Chopin, he composed in Chopinesque style, for which Schumann criticized him. One of his works, *Scena ed Aria*, is still widely played by military bands.

BERGSTEIN, FANIA (1908–1950), Hebrew poet. Born in Szczuczyn, near Lomza, Poland, she received a Hebrew and a Russian education. In her youth she became active in the Zionist youth movement He-Ḥalutz ha-Za'ir, immigrated to Palestine in 1930, and joined kibbutz Gevat. Her books include *Bazir* (1939), poems; *Avim Ḥolefot* (1950), poems; *Asif* (1955), collected poems; and *Reshimot* (1952), collected prose, edited by M. Poznański. Among her ten volumes of poems, stories, and plays for children is *Tekhelet ve-Adom* (1961). A list of her works that have been translated into English appears in Goell, Bibliography, index.

BIBLIOGRAPHY: *Fania* (Heb., 1950), memorial brochure, issued by Kibbutz Gevat; N. Goren, *Demuyyot be-Sifrutenu* (1953), 144–9; Y. Harari, *Ishah va-Em be-Yisrael* (1959), 455–7. **ADD. BIBLIOGRAPHY:** S. Even Shoshan, *Fania Bergstein: Parashat Ḥayyim vi-Yezirah* (1971).

BERGSTRAESSER, GOTTHELF (1886–1933), German Semitic scholar and linguist. Bergstraesser was born in Oberlosa (Thuringen). During World War I, while professor at the University of Constantinople, he studied the spoken dialects in Palestine and Syria on which he later published several scholarly works: *Sprachatlas von Syrien und Palaestina* (1915); *Zum arabischen Dialekt von Damaskus* (1924); *Neuaramäische Maerchen und andere Texte aus Ma'lula* (1915); *Glossar des neuaramäischen Dialekts von Ma'lula* (1921). Bergstraesser began to work on an edition of Gesenius' *Hebraeische Grammatik* of which only two parts appeared (*Einleitung, Schrift- und Lautlehre*, 1918; *Verbum*, 1929). He also edited a Hebrew reader *Hebraeische Lesestuecke aus dem Alten Testament* (1920). In addition to the linguistic studies which earned him international repute (*Einfuehrung in die semitischen Sprachen*, 1928), Bergstraesser engaged in research on textual criticism and reading of the Koran, Arabic translations from Greek, especially of Galen, and on Islamic law. A fierce opponent of Nazism, Bergstraesser spoke out strongly against antisemitism.

BERGTHEIL, JONAS (1819–1902), pioneer in Natal, South Africa. Bergtheil emigrated to Cape Colony from Bavaria in 1834 and moved in 1843 to Durban, where he formed a company to bring settlers from Europe and grow cotton for the first time in South Africa. To encourage immigration to South Africa he took a Zulu to Germany in 1847 as an example of the indigenous population and recruited 188 non-Jewish settlers whom he took to Natal. The 47 families concerned were each given 250 acres of land at New Germany in the Pinetown district some 15 mi. (24 km.) from Durban. Although cotton growing was initially a failure, the settlement prospered. Bergtheil was also director of a company which built the first railway line in South Africa, a short stretch starting in Durban. He was elected in 1857 to the first legislative council in Natal, holding the seat until 1866. He was one of the founders of the Cape Town Hebrew Congregation in 1841. In 1866 he left to settle in England.

[Louis Hotz]

BERIḤAH (Heb. בְּרִיחָה; “flight”), name of an organized underground operation moving Jews out of Poland, Hungary, Czechoslovakia, Romania, Yugoslavia, the Baltic countries, and the U.S.S.R. into Central and Southern Europe between 1944 and 1948 as a step toward their – mostly “illegal” – immigration to Palestine: also name of the spontaneous mass movement of Jewish survivors from Europe toward Erez Israel.

In 1939, Jewish refugees fleeing from the Germans were illegally crossing frontiers into Soviet-occupied Poland and thence to Lithuania or, in the south, to Romania. While this

movement was in the main chaotic, Zionist, Bundist, and Orthodox groups provided some organized nuclei. The same holds true of Jews fleeing from Slovakia to Hungary in 1942, and from Hungary back into Slovakia and into Romania in 1944. At the end of World War II, tens of thousands of Jews found that they could not remain in the countries of Central Europe either because of their memories of the *Holocaust and the destruction of their homes or because of the antisemitic atmosphere that prevailed in these countries. A mass migration of the remnants of the Holocaust began. It was partially spontaneous and partially organized as an attempt to find a way to reach Palestine. The first initiators of the organized Beriḥah came from among the leaders of Jewish resistance groups, partisans, and organizers of Zionist underground groups who already had participated in illegal border crossings in Nazi-occupied Eastern Europe during the war years.

In 1944, with the liberation of Rovno in Volhynia and Vilna by the Soviet Army in February and April, respectively, illegal groups of former Jewish partisans were formed independently of each other. Their aim was to take out the remnants of the Jewish population and bring them to Erez Israel. They were joined by Zionist groups returning from Soviet Asia, and met in Lublin in December 1944 under the leadership of Abba *Kovner. In January 1945, they were joined by the remnants of the Warsaw ghetto fighters under Yizḥak *Cukierman, and founded the Beriḥah organization under the leadership of Kovner. The first groups were sent to Romania in the middle of January 1945, in the hope of reaching Erez Israel with the help of emissaries (*sheliḥim*) of the *yishuv* staying at the time in Bucharest. During the first months after the war, before the borders of Central European countries were redrawn and closed and when millions of *Displaced Persons were returning to their homes, the movement of Jews searching for a way to Palestine also began. An event connected with this mass movement was the "Rescue Train," which, under the auspices of the International Red Cross, set out for Poland to return to Romania Jews who had been deported by the Germans. This project succeeded in returning from Poland to Romania about 5,000 Jews, including many children. But hopes of reaching Palestine from Romania had soon to be discarded, and in May, Kovner had instead established transit points in Hungary and Yugoslavia, moving his people toward Italy, which he himself reached in July. Polish Jews were now coming via Slovakia to Budapest, and thence to Graz in Austria, hoping to cross the Italian border from there. In August, however, the British occupation forces stationed there closed the border and 12,000 people were stranded in the Graz area. They managed to cross the border in small groups only in the winter of 1945/46.

A center (*Merkaz la-Golah*) for smuggling Jews into Italy from the liberated concentration camps in Germany and Austria was established by Palestinian Jewish soldiers stationed in Europe, both from the *Jewish Brigade and from other army units. It started its activities in June 1945 and brought

in some 15,000 people till August, when British forces sealed the border. Financing in this early period was from *Jewish Agency funds. The first attempt to organize the migration of Jewish survivors throughout Europe was made at a meeting of Beriḥah activists in Bratislava in March 1946. A central committee of the Beriḥah was chosen with Mordechai Surkis from the Jewish Brigade and Pinḥas Rashish (d. 1978), head of the Palestine aid delegation to Poland, as its heads. This committee exercised an ill-defined and shadowy control over Beriḥah activities in Europe until the end of 1946.

From August 1945 onward, a movement started out of Poland into the Displaced Persons (DP) camps of Czechoslovakia; the various routes led to the U.S. zone in Austria and into Bavaria. From October onward an alternative route operated via Szczecznyn (Stettin), Berlin, and the British zone (northern Germany) to the U.S. zone in the south. Transit through Czechoslovakia, Austria, and Hungary was controlled by Levi Kopelevich (Argov), a *shaliḥ* from Palestine, who from March 1946 headed the Beriḥah secretariat in Bratislava. Movements were coordinated with the Beriḥah in Poland under Isser Ben-Zvi, a *shaliḥ* who had taken over in October 1945. In the winter of 1945/46, funds began to be received from the *American Jewish Joint Distribution Committee for food and clothing for stranded refugees. The control over Beriḥah exercised heretofore through Surkis was now acknowledged to be in the hands of the "Mosad le-Aliyah Bet" (or "Mosad," center for "illegal" immigration) in Palestine, whose head, Shaul *Avigur, moved his office to Paris in 1946.

The movement was largely organized by Zionist youth movements whose representatives in Poland formed the Beriḥah "center," to which the commander was responsible. The movements and Zionist parties formed groups, many of which were influenced by the kibbutz idea and therefore known as "kibbutzim." The groups were directed to border towns where Beriḥah teams accommodated them in "stores" (temporary lodgings). There they were provided with slips of paper containing a code ("*parol*") and sent to the actual border station ("*point*") where the local Beriḥah team smuggled them across. Until 1946, forged Red Cross documents were employed to identify people as Greek refugees. In Czechoslovakia, an informal agreement was obtained not to hamper the movement of Jews, and UNRRA and the Czech government paid the train fares from the Polish border to either Bratislava or As on the Czech-German frontier. On the Szczecznyn-Berlin route, Soviet or Polish truck drivers were bribed into smuggling people in, and exit from Berlin to the British zone was effected either through UNRRA officials whose sympathy was obtained or with the help of forged documents. From October 1945 onward, the operation in Austria was under Asher Ben-Nathan, and in Germany under Ephraim Frank, both *sheliḥim* from Palestine. In Vienna a series of transit camps were clustered around the Rothschild Hospital, receiving refugees passing from Bratislava to the U.S. zone of Austria. From the U.S. zone of Austria transit was effected either to Italy (un-

til about May 1946), directed by Issachar Haimovich, or to the U.S. zone in Germany.

The U.S. Army did not encourage entry of Jewish refugees into their zones. However, poor conditions in DP camps in these zones had caused an investigation to be made by Earl G. Harrison in August, 1945, and the report that was published on Sept. 30, 1945, reflected badly on the army. To avoid arousing public opinion in the United States the army acquiesced in Jewish refugee movements, provided no very large numbers were involved. Simon H. Rifkind and Philip S. Bernstein, advisers on Jewish affairs to the U.S. command in Germany, played a large part in persuading the army to maintain its tolerant attitude.

The murder of 41 Jews in a pogrom at *Kielce (Poland) on July 4, 1946, created a wave of panic among Polish Jews, who now included the 150,000 repatriates from the U.S.S.R. who came out from February 1946 onward (before that there had been only 80,000 Jews in Poland). Pressure was exerted on Beriḥah by panic-stricken Jews to take them out of Poland. In July this was still done by the usual illegal means. But the Polish government, which arrived at the conclusion that it would not be able to restrain the outbursts against the Jews, saw their exodus from Poland as a solution to the problem. In late July, negotiations conducted by Yizḥak Cukierman with Polish government agencies led to an oral understanding whereby Jews were allowed to leave Poland without hindrance through the Silesian border into Czechoslovakia. Simultaneously (on July 26) the Czech government, largely through the influence of Jan Masaryk, the foreign minister, decided to open its frontier to Jews fleeing from Poland. In the three months of July, August, and September 1946 more than 70,000 Jews fled through Czechoslovakia. Transport was paid for by the Czechs, against an UNRRA promise to return the money later; food was obtained largely from the JDC and UNRRA. The exodus of those months was joined by 15,000 Hungarian Jews and some 1,000 Romanian and Czech Jews. Despite Polish insistence that only the Silesian route should be used after the July agreement, Beriḥah continued to send also large numbers of Jews via Szczecznyn to Berlin, a route which was controlled by Jewish Brigade soldiers. Others went from Szczecznyn to Luebeck and Hanover in the British zone by train or boat through PUR, the Polish agency expelling Germans from Poland: the Jews posed as Germans and were thus enabled to leave by "being expelled." The total number leaving Poland from July 1945 to October 1946 was estimated at 110,000, excluding PUR and a large number of people who came out not with the organized Beriḥah but with professional smugglers, Jews as well as non-Jews. From the beginnings of the Beriḥah until October 1946 no less than 180,000 people were involved in the migratory movements.

After some hesitation, and due again largely to the intervention of Rabbi Philip Bernstein, the U.S. Army allowed the large scale move into the U.S. zones of Germany and Austria to take place in the summer of 1946. Movements out of Germany into Italy were limited, especially during the second

half of 1946, until the route was reestablished in early 1947 through the Valle Aurina. In early 1947 the Polish government terminated the arrangement at the border; movement via Szczecznyn had almost come to a standstill in November 1946. During 1947, less than 10,000 Jews managed to leave Poland via Beriḥah routes. In Germany, Beriḥah cooperated with the committees of Jewish DPs to arrange for social and political absorption of the refugees into the camps. Beriḥah's orientation was clearly Zionist, but there were refugees who declared their preference for migration to countries other than Palestine.

The Beriḥah movement from the Soviet Union was a special case. Many Jews who had lived in prewar Poland left the U.S.S.R. with their families as part of the Polish repatriation program. The position of veteran citizens of the Soviet Union was a more difficult one. Nonetheless, activities of the Beriḥah were organized by a number of bodies, which, inter alia, brought out many Lubavitch Ḥasidim from the Soviet Union. When the new Soviet border was definitely sealed in 1946, the Soviet authorities began to seize the Beriḥah organizers, some of whom were arrested and sentenced to long prison terms. At the end of 1946 a meeting of Beriḥah commanders was held at Basle during the 22nd Zionist Congress. Shaul Avigur, head of the "Mosad," was present. There a new European commander of the Beriḥah, Ephraim Dekel, a former head of *Haganah Intelligence in Palestine, was nominated. Under Dekel Beriḥah became more closely linked with the "Mosad," but the numbers coming in from Eastern Europe were falling. In the spring of 1947 economic crisis and fear of antisemitism caused a panic flight of some 15,000 Romanian Jews to Hungary and Austria. On April 21, 1947, the U.S. Army decreed that no more Jews would be accepted into existing DP camps, but Beriḥah poured the refugees into the Viennese transit camps until the American authorities relented and allowed the people entrance into camps in the U.S. zone in contravention of the decree. The tension in Palestine between the *Haganah and the dissident underground organizations, *Irgun Zeva'i Le'ummi (IṢL) and *Loḥamei Ḥerut Israel (Leḥi), sometimes influenced the work of the Beriḥah as well, and in September 1947 a Beriḥah man was murdered at a "point" near Innsbruck by IṢL members. In general, however, the *Revisionists were part of the current of the Beriḥah and the "illegal" immigration to Palestine.

In 1948, Meir Sapir took over from Dekel as Beriḥah commander, and Beriḥah was slowly wound up, though Beriḥah points still operated on certain eastern borders in 1949. In the west, Beriḥah points existed on the German-French and, briefly, on the Belgian, frontier, and the 4,500 *Exodus* passengers passed through these in June 1947. However, entry into France was regulated by the "Mosad" rather than Beriḥah. The total number of people who left Eastern Europe between 1944 and 1948 can be estimated at about 250,000, and of these about 80% at least came with the organized Beriḥah. The Beriḥah was a prime factor in the struggle for the establishment of the Jewish State from 1945 to 1948. It dramatically underscored

President Truman's demand for a speedy admission of 100,000 Jewish refugees to Palestine (August 1945) and was reflected in the conclusions of the Anglo-American Committee (May 1946). It created a reservoir of people from which came the masses of immigrants that fought together with the *yishuv* to open the gates of Palestine to Jewish immigration and to establish the State of Israel.

[Yehuda Bauer]

BERINSKI, LEV (1939–), Yiddish poet. Berinski was born in Kauschan (Bessarabia) and became one of the most inventive of the post-Holocaust Yiddish poets. During World War II his family fled to Tadzhikistan, returning to Moldavia in 1945. In 1963 Berinski moved to Smolensk in order to study German, then to Moscow to study poetry and poetic translation. Initially he wrote poems in Russian, then later in Yiddish, and translated into Russian from Romanian, Spanish, German, and Yiddish. In 1991 he immigrated to Israel, and settling in Acre. In 1992 he founded and became the editor of the literary almanac *Naye Vegn*; in 2000 he published an anthology of contemporary literature and became co-editor of *Topfpunkt*, a quarterly journal of literature, art, and social issues. In 1997 he won the David Hofstein and Itzik Manger Prize, the most distinguished prize for Yiddish literature, and the following year he became chair of the *Fareyn fun Yidische Shraybers un Zhurnalistsn in Yisroel*. Berinski's Yiddish work comprises poems and poem cycles, stories, and essays. He is a postmodern poet who expresses the chaos that results from annihilation through collage, montage, intertextuality, quotation, proverb, aphorism, and mathematical formula, thus creating bold metaphors that connect the traditionally Jewish and philosophically enlightened with the surrealistically cosmic, while the whole opens up into the realm of the absurd and ironic. In addition to two volumes of Russian poetry (1992, 1997), he has published several volumes in Yiddish: *Der Zuniker Veltboy* ("Sunny Construction of the World," 1988); *Rendsburger Mikve* ("Rendsburger Ritual Bath," 1994); *Calystegia Sepium* ("Bindweed," 1995); *Fischfang in Venetsye* ("Fishing in Venice," 1996); *Luftblumen* ("Flowers in the Air," 1999).

BERIT HA-BIRYONIM (Heb. בְּרִית הַבְּרִיּוֹנִים), an underground group operating in Palestine from 1930 to 1933 against the Mandatory regime. Its founder and chief ideologue was Abba *Aḥimeir, and two other leading members were Uri Zevi *Greenberg and Yehoshua *Yeivin. The group comprised about 30 active members and a few score of sympathizers.

Ideologically the Berit stood on the extreme right of the *Revisionist movement, and in Palestine it dominated the party organ *Hazit ha-Am*. The activities of the Berit were of limited scope: it demonstrated against the visit to Palestine of the British Under-Secretary for the Colonies, Drummond Shiels; called for a boycott of the official census; organized the blowing of the Shofar at the end of the Day of Atonement service at the Western Wall; and pulled down the swastika flags from the German Consulates in Jerusalem and Jaffa. Berit ha-Biryonim disintegrated shortly after the murder of *Arlosoroff, as a result of persecution by the Mandatory authorities.

BERIT SHALOM ("Covenant of Peace"), society founded in Jerusalem in 1925 to foster relations of rapprochement between Jews and Arabs in Palestine, on the basis of a bi-national solution to the conflict between them, with Jews and Arabs having an equal share in the administration regardless of the size of their respective populations (see *Bi-Nationalism). Bi-nationalism for Berit Shalom was not an ideal but a function of reality. The trigger for the establishment of the society was a lecture at the opening of the Hebrew University in Jerusalem by the Orientalist Professor Joseph Horowitz of the University of Frankfurt on the Main. The initiative for founding Berit Shalom came from Arthur *Ruppim. The active members in the society belonged to several groups. The first, which was predominant in the early years, was made up of men who had immigrated to Palestine before World War I and were all (except Ruppim himself) of East European origin, had an academic education, and shared a practical political approach to Zionism. They included, in addition to Ruppim, Dr. Jacob *Thon, Dr. Joseph *Lurie, Dr. Yitzhak Epstein, Haim *Margolis-Kalvaryski, and *Rabbi Binyamin. The second group, which became predominant after 1929, was made up of intellectuals of a Central European liberal background, was much more ideological than the first group, and its members were all strongly influenced by the philosophy of Martin *Buber. They included Prof. Samuel Hugo *Bergmann, Prof. Hans *Kohn, Prof. Gershom *Scholem, Prof. Ernst *Simon, and Dr. Robert Weltsch. Finally there was a group of so-called "Anglo-Saxons," mostly men who were employed by the Palestine Administration, including Edwin Samuel, son of the first High Commissioner to Palestine, Herbert *Samuel, and the attorney general of Palestine, Norman *Bentwich, who did not become full members until 1929. Prof. Judah Leon *Magnes, who also advocated bi-nationalism in this period, was never a member of the society, even though his name was frequently identified with it. Berit Shalom never numbered more than 200 members. From the start there were differences concerning the purpose of the society. Ruppim wanted it to be a research group that would present the results of its studies to the Zionist leadership, while others urged that it formulate and attempt to implement its own political program. Ruppim

was chairman of the society until 1929, and the more activist line was carried out by his successor, Joseph Lurie. Rabbi Bin-yamin, the first editor of Berit Shalom's monthly, *She'ifotenu* ("Our Aspirations"), who demanded an agreement with the Arabs on the basis of unlimited Jewish immigration, was replaced when a majority of the members declared themselves ready to accept a temporary limitation of immigration to facilitate an agreement with the Arabs. In 1930 senior members of Berit Shalom published a series of memoranda, the first of which – *Memorandum by the Brit Shalom Society on an Arab Policy for the Jewish Agency* – was submitted to the Zionist Executive in London in February. The second memorandum, entitled *Practical Proposals for Cooperation Between Jews and Arabs in Palestine*, was prepared as a response to a suggestion by one of the members of the 1929 Shaw Commission. The third memorandum was a personal endeavor by Ernst Simon, and was distributed to the members of the Conference of the Administrative Committee of the Jewish Agency in London. The fourth and last one was a "Judeo-Arab Covenant" prepared by Kalvaryski in August (apparently unknown to his colleagues at the time), and submitted by him to a member of the Arab Executive. Berit Shalom was attacked by most of the Zionist parties, who viewed its members as defeatists at best and traitors and worst. By 1933 it had virtually ceased to exist, after many of its members deserted it, and it ran out of funds.

[Susan Hattis Rolef (2nd ed.)]

BERK, FRED (1911–1980), dancer and exponent of Jewish and ethnic dance in the U.S. Born in Vienna into an Orthodox Jewish family, he studied dance there at the studio of Gertrud Kraus and performed in her modern dance troupe. The Nazi annexation of Austria forced him to flee in 1939. He arrived in the U.S. in 1941. In 1950 Berk founded the Jewish Dance Division at the 92nd Street YMHA-YWHA, New York. Cofounder of the Merry-Go-Rounders, a children's dance group, he did the choreography for their *Holiday in Israel* and *Wedding in Austria*. He formed Hebraica Dancers in 1958. He wrote *The Jewish Dance* (1959).

BERKLEY, ROCHELLE (1951–), U.S. congresswoman. Rochelle (Shelley) Berkley, the elder of William and Estella (Colonomos) Levine's two daughters, was born in New York City. She was raised in the Catskill community of South Fallsburg, where her father worked at the famed Concord Hotel. In the early 1960s the family moved to Las Vegas, Nevada, where William found employment with the Sands Hotel; he would remain at the Sands for 36 years, the last ten as the hotel's maître d'.

During Berkley's formative years in Las Vegas, the city had a Jewish population of no more than 2,500. Berkley's mother served as president of the local Hadassah, while Shelly was elected president of the Las Vegas chapter of B'nai B'rith

Girls. Berkley attended the University of Nevada at Las Vegas, where she was elected student body president, and graduated from the law school of the University of California at San Diego. Returning to Las Vegas, she worked as deputy director of the Nevada State Commerce Department and as counsel for the Southwest Gas Corporation. Following a two-year stint (1982–84) in the Nevada State Legislature, Berkley became vice president for government and legal affairs for the Sands Hotel. In this position, she served as in-house counsel for Sands' chairman Sheldon Adelson, the man who virtually invented the computer trade show.

In 1998 Berkley ran as a Democrat for one of Nevada's two seats in the United States House of Representatives. Elected by a small margin, Berkley continued to be reelected by the people of Las Vegas. Her campaign brought her to the attention of national Democratic party leaders. Once elected, she was given a seat on the prestigious House International Relations Committee. As a member of the subcommittee on the Middle East, Berkley was an ardent supporter of Israel. Berkley also served on the Congressional Task Force on Antisemitism. During her first campaign for Congress Berkley was diagnosed with osteoporosis. Shocked to discover that her medical insurance did not cover the costs of a bone scan, she became an ardent supporter of the "Patients' Bill of Rights." This measure, which eventually fell short of passage, would have guaranteed that medical decisions be made by doctors and patients rather than by medical insurance carriers.

BERKLEY, WILLIAM R. (1945–), U.S. insurance holding company executive. Berkley received a B.S. from New York University (NYU) (1966) and an M.B.A. from Harvard (1968). During his business career, he founded a number of public and private companies which he continues to control or of which he serves as chairman or director. He also chairs or serves on the board of several banks and other financial institutions.

The W.R. Berkley Corp. was founded in 1967 and is headquartered in Greenwich, Connecticut. In 2005 it had 32 subsidiaries operating in the U.S. and globally and was ranked 431 by Fortune 500. Berkley serves as chair of the Board of Overseers of the NYU Stern School of Business; as vice chairman of the Board of Trustees of NYU, where he serves on the Executive and Finance Committees; on the Board of Directors of Georgetown University; as vice chairman of the Board of Trustees of the University of Connecticut; and as co-chairman of the Albert B. Sabin Vaccine Institute, Inc.

Berkley has received many awards for his business, civic, and philanthropic activities, including, most recently, an honorary doctor of law degree from Mercy College. In 1999, he was awarded the Medallion for Entrepreneurship by Beta Gamma Sigma, which honors outstanding individuals who combine innovative business achievements with service to humanity.

BERKOFF, STEVEN (1937–), English actor, director, and writer. Born in Stepney, London, he studied drama at the Webber-Douglas School in London and mime at the Ecole Jacques le Coq in Paris.

He established himself as one of the most innovative theater personalities in the last quarter of the 20th century. As a writer he adapted many works for the stage including Kafka's *The Trial* and "Metamorphosis" and Poe's "The Fall of the House of Usher." His first professional production was an adaptation of Kafka's "In the Penal Colony."

His personal acting style is original and highly physically controlled – the expression both hypnotic and threatening; although controlled, his stage rages are full of hurt and foreboding leaving an audience little solace. Each performance is unique.

He is a prolific playwright whose original works include *Decadence*, *Greek*, *West*, and *East*. Much of his work is based on the vernacular of the present day – *West* with the social language and mores of the West End; *East* with the East End of London, for example. *Kvetch* is, at the same time, amusing and discomfiting; it received the London drama critics' award as the best comedy of 1991. The language of his works is acerbic, clear, intelligent, and unpretentious. Many of his chosen characters as writer or actor are either disturbed or social misfits. He is also a master in the transposition of mythology on to modern life.

He has appeared in a number of films and TV productions, such as *Octopussy*, *Beverly Hills Cop*, *Rambo*, and *The Krays*, playing "baddies" (film villains) with relish and undisguised glee.

Berkoff has toured and acted in his own productions of *Hamlet*, *Macbeth*, *Salome*, and *Coriolanus* throughout Europe, Israel, and Australia. In his book on the theater *Coriolanus in Deutschland* he describes his unease as a Jew in Munich. Other publications include *I Am Hamlet*, *A Prisoner in Rio*, *The Theatre of Steven Berkoff* (1992), and an autobiography, *Free Association* (1996). In 1983 Steven Berkoff received the Los Angeles Drama Critics Award for directing.

[Sally Whyte]

BERKOVITS, ELIEZER (1908–1992), theologian and Jewish philosopher. Berkovits was born in Oradea, Romania, in 1908. He received his rabbinical ordination in 1934 at the Berlin ("Hildesheimer") Rabbinical Seminary, where he studied under Rabbi Jehiel Jacob *Weinberg, (author of the *Seridei Esh*); as well as from the Mir yeshivah and the rabbinate of Hungary. In parallel, he earned a doctorate in philosophy at the Friedrich-Wilhelms (now Humboldt) University of Berlin, where he studied under Wolfgang Kohler, one of the founders of Gestalt psychology. After escaping Germany in 1939, Berkovits served as a communal rabbi in Leeds, England (1940–46); Sydney, Australia (1946–50); and Boston, Massachusetts (1950–56). In 1958 he accepted the chair of the phi-

losophy department at the Hebrew Theological Seminary in Skokie, Illinois, which he held until 1975. At that time, at the age of 67, Berkovits relocated to Jerusalem, where he lived and worked until his death. During his lifetime, Berkovits wrote 19 books and hundreds of essays and articles, covering every major area of Jewish philosophy.

Berkovits' philosophy of Judaism places a heavy focus on the role of man in history. In his view, classical Judaism, as embodied in the Hebrew Bible and the Talmud, presents a coherent critique of Western culture and its ideas about man – a critique which can be applied to the most pressing questions of modern life. Building on both his philosophical training and talmudic background, Berkovits saw the task of Jewish philosophy to "make Judaism a significant philosophy of life in the intellectual climate of our age ... [and to] equip it with the truth of God in relationship to the vital issues of present-day human existence." Thus, in addition to his constructive philosophy of Judaism, his work includes explicit critiques, from a Jewish perspective, of many of the leading streams of thought in his time, including existentialism, radical theology, the 1960s drug culture, and situation ethics; of non-Jewish writers like Rudolf Otto and Arnold Toynbee, and of Jewish thinkers like Hermann *Cohen, Martin *Buber, and Franz *Rosenzweig.

Theology and the Holocaust

Berkovits' most important theological work appears in *God, Man, and History* (1959), which offers the central framework for his entire philosophy of Judaism. The essence of Judaism, he wrote, is found in the personal encounter of the prophet with God; it is through the memory of that encounter, no less than through rational speculation, that one understands the nature of God and his covenant. In this regard, he followed the tradition of the medieval thinkers *Saadia Gaon and *Judah Halevi, and in modern times Samson Raphael *Hirsch, who viewed revelation as axiomatic to any philosophy of Judaism. He thus challenged the Maimonidean approach to divine attributes, for example, according to which it is reason alone that allows one to comprehend the Absolute; in Berkovits' view, memory of the encounter is primary and irreducible to reason. Reason can only help one describe the nature of God; however, it is only through the encounter that one discovers the central principle of Jewish religion – that God cares about the fate of humankind. "The foundation of religion is not the affirmation that God is, but that God is concerned with man and the world; that, having created this world, he has not abandoned it, leaving it to its own devices; that he cares about his creation." God created the universe with man as its capstone; man is endowed with the capacity to take responsibility for creation, and therefore is charged by God with a duty to care for the world and for human history. Berkovits quotes, in this regard, the statement in Genesis 2:15 that God placed Adam in the Garden of Eden "to work it and to keep it." God's central concern for man is that he take responsibility for history, improving the world and caring for it. He de-

veloped these points further in his *Man and God: Studies in Biblical Theology* (1969).

In our own time, the most significant theological question in this regard concerns the problem of evil, especially in the wake of the Holocaust. Berkovits treated this subject most extensively in his *Faith After the Holocaust* (1973) and *With God in Hell: Judaism in the Ghettos and Death Camps* (1979). In these works, he offered a significant defense of the classical notion of the covenant, in the face of major theological opposition to it in modern Jewish writing, and established human responsibility as the focal point of any approach to dealing with the destruction of European Jewry. In this context, he also developed a highly critical view of the role that Christianity played in promulgating antisemitism in Europe throughout history, seeing this role as a significant antecedent to the Holocaust which cannot be discarded when considering the future of Jewish-Christian relations.

Morality and Halakhah

Berkovits' most developed statement on the nature of Jewish law appears in his *Not in Heaven: The Nature and Function of Halacha* (1983). Whereas the main streams of Western morality focus on the intentions of the individual, Judaism, he argued, is concerned principally with the outcome of one's actions. For this reason, Jewish law developed over time, showing flexibility of its rules in light of their effects within communal life. Jewish law, while a system of rules, nonetheless is guided by a higher set of moral values which are themselves concerned with providing real-world fairness, stability, economic prosperity, and concern with the fate of the unfortunate. He developed these themes further in *Crisis and Faith* (1976), where he discussed the issues of conversion and Jewish sexuality; *Jewish Women in Time and Torah* (1992), which offers a modern reconsideration of the role of women in Judaism; and his three Hebrew-language halakhic treatises: *Tenai be-Nisu'in u-ve-Get* ("Conditionality in Marriage and Divorce," 1966), a controversial attempt to address the problem of **agunot*, or refused divorce; as well as *Halakhah: Kohah Ve-Tafkidah* ("Halakhah: Its Authority and Function," 1981), and *Higayon ba-Halakhah* ("Logic in Halakhah," 1986).

Nationhood and Zionism

Because of the nature of human morals, Berkovits wrote, it is not enough to hope for the improvement of humankind through the teaching of good principles of conduct. Rather, Judaism insists on the creation of a "holy nation," a people that dedicates itself to righteousness in every realm of its life, and which may thereby serve as an example for humankind. But to fulfill this mission, such a people requires sovereignty in its own land. "A people in control of its own life, capable of implementing Judaism by applying it to the whole of life, is a people in its own land. Judaism, as the religion of the deed, requires a people in its land." For this reason, the State of Israel represented for Berkovits not only the salvation of the Jews from the trials and horrors of exile, but an opportunity to apply Judaism in its fullest sense. Berkovits' developed his

Zionist philosophy most thoroughly in *Towards Historic Judaism* (1943) as well as the final section of *God, Man, and History*. His critique of the modern Israeli reality in light of this ideal appears in *Mashber ha-Yehadut bi-Medinat ha-Yehudim* ("The Crisis of Judaism in the Jewish State," 1987).

Other Writings

Berkovits' doctoral dissertation, "Hume und Der Deismus" ("Hume and Deism," 1933) examines the epistemological issues concerning revelation and natural religion in the thought of David Hume. In *Was Ist Der Talmud?* ("What is the Talmud?" 1938), he offered an introduction to the methods and aims of the oral tradition. Other significant works include *Judaism: Fossil or Ferment?* (1956), a book-length response to Arnold Toynbee's depiction of the Jews; *Prayer* (1962), a monograph on the uniqueness of prayer in Judaism; *Major Themes in Modern Philosophies of Judaism* (1974), in which he offered extensive critiques of the philosophies of Hermann Cohen, Franz Rosenzweig, Martin Buber, Abraham Joshua Heschel, and Mordecai Kaplan; and *Unity in Judaism* (1986), in which he called for the rediscovery of Jewish collective identity above denominational divisions. His collected sermons from the war period appear in *Between Yesterday and Tomorrow* (1945).

A collection of his major essays was published in 2002 (Shalem Press), titled *Essential Essays on Judaism* (ed. David Hazony), which includes a bibliography of his writings.

[David Hazony (2nd ed.)]

BERKOW, IRA (1940–), U.S. sportswriter. Born and raised in Chicago, Berkow attended Sullivan High School (1957), Miami University (Oxford, Ohio, B.A., 1963), and Northwestern University (M.S.J., 1965). He worked as a sportswriter and book reviewer for the *Minneapolis Tribune* (1965–67), and a sportswriter, sports columnist, general columnist, and senior writer for the Newspaper Enterprise Association (1967–76) before joining *The New York Times* as a sports feature writer, sports columnist, and senior writer in 1981. Berkow won a Pulitzer Prize for national reporting in 2001 as part of a *Times* team for the series "How Race is Lived in America," contributing an 8,300-word essay on "The Minority Quarterback," and was a finalist for the Pulitzer for distinguished commentary in 1988. Berkow is the only sportswriter to have been represented for five decades in the respected annual anthology *Best Sports Stories*, and its successor, *Best American Sportswriting*. He was also reprinted in the *Best American Sports Writing of the Century* anthology. Berkow is the author of *Oscar Robertson: The Golden Year 1964* (1971); *Rockin' Steady: A Guide to Basketball and Cool* (with Walt Frazier, 1974); *Beyond the Dream: Occasional Heroes of Sports* (1975); *Maxwell Street: Survival in a Bazaar* (1977); *The DuSable Panthers: The Greatest, Blackest, Saddest Team from the Meanest Street in Chicago* (1978); *Carew* (with Rod Carew, 1979); *Red: A Biography of Red Smith* (1986); *The Man Who Robbed the Pierre: The Story of Bobby Comfort* (1987); *Pitchers Do Get Lonely, and Other Sports Stories* (1988); *Hank Greenberg: The Story of My Life* (with Hank Greenberg,

1989); *How to Talk Jewish* (with Jackie Mason, 1990); *The Gospel According to Casey: Casey Stengel's Inimitable, Instructional, Historical Baseball Book* (with Jim Kaplan, 1992); *To the Hoop: The Seasons of a Basketball Life* (1997); *Court Vision: Unexpected Views on the Lure of Basketball* (2000); and *The Minority Quarterback, and Other Lives in Sports* (2002).

[Elli Wohlgeleinter (2nd ed.)]

BERKOWICZ, JOSEPH (Józef; 1789–1846), Polish army officer, the son of Berek *Joselowicz. In 1809 he joined Napoleon's Polish Legion, and took part in the battle of Kock, where his father was killed. For his distinguished service in Napoleon's Russian campaign of 1812, in which he was severely wounded, Joseph was awarded two crosses for valor. Retiring because of his war injuries he was employed in forestry, becoming chief forester in various localities in Poland. At the time of the 1830–31 uprising he called upon the Jews to take up arms and fight for their Polish fatherland. After the Polish defeat, he left with his son Leon for France, where he lived in Besançon. He later moved to Liverpool, England, where he wrote a novel which he himself translated into English, *Stanislaus or the Polish Lancer in the Suite of Napoleon...* (published posthumously by his sons, 1846).

BIBLIOGRAPHY: A. Kraushar, *Syn Berka Joselowicza...* (1889); E. Tuniński, *Berek Joselewicz i jego syn* (1909), 51–109; M. Balaban, in: *Nowy Dziennik* (April 12, 1933); *Polski Słownik Biograficzny*, 1 (1935), 454–5; A. Levinson, *Toledot Yehudei Varshah* (1953), 122–3.

BERKOWITZ, HENRY (1857–1924), U.S. Reform rabbi. Berkowitz was born in Pittsburgh, Pa. He was a member of the first graduating class of *Hebrew Union College in 1883. After occupying pulpits in Mobile, Alabama, where he organized the Humane Movement for the Protection of Children and Animals from Cruelty and wrote *Judaism on the Social Question* (1888) on labor-capital relations. His family did not fare well in Mobile; a son died of yellow fever and his wife Flora wrote an article in Isaac Mayer *Wise's *Israelite* describing their plight. It resulted in a job offer from Kansas City, where he succeeded his brother-in-law Joseph *Krauskopf. Berkowitz became rabbi of Congregation Rodeph Shalom, Philadelphia (1892), succeeding the distinguished Talmud scholar Marcus Jastrow. Despite opposition he eliminated many traditional forms from the practice of his congregation and brought it within the mainstream of advanced Reform. Berkowitz established in Philadelphia the Jewish Chautauqua Society in 1893, an educational and interfaith organization modeled after Methodist teacher training and adult education programs, and was its chancellor until his death. After 1910 its focus was changed to educating non-Jewish college students about Judaism. He took an active part in the establishment of the Federation of Jewish Philanthropies in Philadelphia in 1901 and the Philadelphia Rabbinical Association in the same year. He was a member of the Mayor's Vice Commission in order to deal with the rise in prostitution among East European immigrant girls. He helped develop playgrounds throughout the

city. During World War I, he toured army bases and was chaplain to soldiers. His efforts led to the development of a heart condition and forced retirement. He was the first secretary of the Central Conference of American Rabbis. Among his publications are *Kiddush or Sabbath Sentiments in the Home* (1898) and *Intimate Glimpses of a Rabbi's Career* (1921).

[Sefton D. Temkin / Michael Berenbaum (2nd ed.)]

BERKOWITZ, MICKEY (1954–), Israeli basketball player. Born in Kefar Sava, Berkowitz joined the Maccabi Tel Aviv youth club at age 11, played with the junior squad at 15, and joined the senior team at 17 in 1971. He helped the Israeli team beat the U.S. team at the 1973 Maccabiah games, 86–80, and subsequently became the first Israeli to play NCAA Division I basketball, joining the third-ranked University of Nevada, Las Vegas in 1975. Though he had a guaranteed contract offer from the Atlanta Hawks and the New Jersey Nets, Maccabi Tel Aviv would not release him from his contract.

Berkowitz, a 6' 3" guard, returned to Maccabi Tel Aviv after the 1975–76 season and subsequently became one of the team's stars. Teaming up with Tal *Brody, Berkowitz helped lead the team to the European Championship in 1977 and 1981, scoring 17 points in the 78–77 win over Mobilgirgi of Varese, Italy, on April 7, 1977, and 20 points in the final against Sinudyne, Bologna, on March 26, 1981. Berkowitz played 17 seasons for Maccabi Tel Aviv, also winning 17 Israeli league championships and 13 Israeli State Cups. He also played on the Israeli national team that won a gold medal at the 1974 Tehran Asian Games and a silver medal at the 1979 European championships in Torino, Italy. Berkowitz's highest-scoring game in international competition occurred at the 1975 European championships in Belgrade, Yugoslavia, when he scored 44 points against Turkey. Berkowitz retired in 1996 and remained active on the basketball scene as a general manager and team owner. He was named Israel's Sportsman of the Year in 1975 and chosen Best Sportsman in the history of Israeli sports on the country's 50th anniversary.

[Elli Wohlgeleinter (2nd ed.)]

BERKOWITZ, YITZHAK DOV (1885–1967), Hebrew and Yiddish novelist, editor, and translator of *Shalom Aleichem. Born in Slutsk, Belorussia, Berkowitz studied in *heder* and educated himself in secular subjects. In 1903 he made his way to Lodz. He became friendly with Itzhak *Katzenelson. One of his first stories, "Moshkele Hazir," was printed in *Ha-Zofeh* in 1903 and won a literary prize. In 1905 he became literary editor of *Ha-Zeman*, and his articles and stories appeared in most of the Hebrew and Yiddish journals of the day. In 1906 Berkowitz married Shalom Aleichem's daughter, Ernestina, spent 18 months in Switzerland, and visited the U.S. in 1908. While there, he contributed to the local Yiddish and Hebrew press. In 1909 he moved to Warsaw, where he edited the liter-

ary page of the Yiddish journal, *Di Naye Velt*. Several volumes of his collected stories were published in Hebrew and Yiddish from 1910 onwards.

In 1913 he went to the United States where he edited the weekly *Ha-Toren* as well as *Miklat* (1920–21). He settled in Palestine in 1928, and became one of the first editors of the weekly, *Moznayim*. Berkowitz published his translation of the collected works of Shalom Aleichem and his masterfully written reminiscences of the great Yiddish writer and his generation, under the title *Ha-Rishonim ki-Venei Adam* (1933–48).

While his contemporaries, G. *Schoffman, J.H. *Brenner, and U.N. *Gnessin revolted against the style of *Mendele Mokher Seforim and H.N. *Bialik, Berkowitz remained true to the older prose writing tradition, displaying his individuality in the choice of subject, methods of characterization, and structure of the story. Although his less conformist contemporaries were not always accepted by the literary establishment, he himself was praised by Bialik. Berkowitz's stories, novels, plays, and memoirs appeared in Yiddish and Hebrew. The bulk of his work was written in Hebrew.

Berkowitz is important as a writer of short stories. In his early years he wrote realistic stories under the influence of Mendele, Bialik, and Chekhov but soon was captivated by the technique and style of Shalom Aleichem. The influence of the greater writer tended to weaken Berkowitz's originality. Berkowitz's stories were written out of the context of the social crisis which shook Eastern European Jewry in his day. Among his central themes are (1) the weakening of parental authority: "*Lifnei ha-Shulhan*" ("Before the Table"); "*Pere Adam*" ("The Ill-Mannered One"); "*Malkot*" ("Lashings"); "*Ba'al Simhah*" ("The Feted"); "*Maftir*"; "*Moshkele Hazir*"; (2) the problems resulting from changes in the protagonists' social status and from their cultural isolation: "*Viddui*" ("Confession"); "*Talush*" ("Severed," in *Israel Argosy*, 1936); "*Kelei Zekhukhit*" ("Glass," in *Reflex*, 1927); (3) problems resulting from emigration: "*Karet*" ("The Outcast," in *The Jewish Standard*, 1936); "*El ha-Dod ba-Amerikah*" ("To Uncle in America," in *B'nai Brith Magazine*, 1930); "*Yarok*" ("The Greenhorn," in *The American Jewish Chronicle*, 1917); "*Mi-Merhakim*" ("From Afar"); (4) problems from the social pressure of a strange world: "*Pelitim*" ("Refugees"); "*Ruhot Raot*" ("Evil Spirits"). The characters, generally unable to face up to the crisis, are "anti-heroes" who collapse under pressure, victims of social and psychological situations beyond their control. It is not the plot, but the social and psychological situation expressed through the plot, which is the main point of Berkowitz's stories. His characterization is not introspective (as is the case with J.H. Brenner and U.N. Gnessin), but external. The inner world of the protagonists is revealed through mannerism, habits, and dialogue. In many cases wider basic situations are implied through the specific case by the symbolic expansion of landscapes or verbal hints, extending the significance of the dialogue or characters. The background of most of Berkowitz's stories is Russia at the turn of the century, and the effect of the social and general crisis of the time on the country's Jews. Some of the stories

deal with the place of immigrants of the old generation in the U.S., others with the impact of Erez Israel on new immigrants: "*Amerikah Olah le-Erez Yisrael*" ("America Comes to Erez Israel," 1946); "*Ha-Nehag*" ("The Heart of a Chauffeur," in *Commentary*, 1953).

There is a change in direction as regards technique and theme in Berkowitz's novels. In the first of these, *Menaḥem Mendel be-Erez Yisrael* ("Menahem Mendel in Erez Israel," 1936) he attempted to transfer one of Shalom Aleichem's characters to the new environment of Erez Israel, continuing the epistolary technique. The correspondence is one-sided; Menahem Mendel writes to his wife, Sheine Sheindel; she does not reply. The theme is the ideological struggle between fathers, who still belong to the Diaspora in their way of thinking and try to make easy money out of the building boom in the Tel Aviv of the 1930s, and the sons, who are committed to the ideal of pioneer labor. The mode is satirical rather than humorous. *Yemot ha-Mashi'ah* ("Messianic Days," 1938) is a description of the emigration of Dr. Menuḥin, a Zionist intellectual, from the United States to Erez Israel. At times it reads like a *roman à clef*, in which the writer hints at real characters and at the struggle between the *Revisionist (right-wing Zionist) and the Labor movement. His hero, Menuḥin, is searching for a new truth and a new way of life, and he eventually finds a wife (Yehudit), after overcoming various prejudices, and discovers the attractions of "labor Palestine." The ideology of the labor movement is one of the important aspects of the novel and events are judged by its light.

Berkowitz also wrote several plays of different types, some of which appeared in a separate volume in 1928. The fourth, *Mirah*, was published in 1934. His play, *Ba-Arazot ha-Rehokot* ("In the Distant Lands," 1928), is a comedy on the life of immigrants to the United States. The appearance of Anton, a Russian farmer, in the midst of a Jewish family, causes various romantic complications and errors. *Oto ve-Et Beno* ("He and His Son," 1928), a realistic "somber drama," is a continuation of the story "*Moshkele Hazir*" – Moshke, a convert to Christianity who had a son, Jacob, by a non-Jewish wife, is nevertheless still tied to his Jewish origins. During a pogrom in the midst of the Russian Revolution, Moshke hides Jews in his home and this act brings about a clash between him and his son, in which Moshke murders Jacob and commits suicide. The play is written in realistic, Ibsenesque style and is well made; it was produced by the Habimah Theater in 1934. *Mirah* was influenced by Ibsen's *A Doll's House*, and deals with the status of women in the United States immigrant society, contrasting the heroine's moral qualities, despite her sin, with her husband's imperfections. In old age, Berkowitz published reminiscences, both of his childhood in Russia, *Pirkei Yaldut* ("Childhood Episodes," 1966), and of Erez Israel in the 1930s, *Yom Etmol Ki Avar* ("Yesterday," 1966). He also translated Tolstoi's *Childhood* (1912) and Chekhov's *Youth* (1922).

Berkowitz was received with enthusiasm by the critics of his time. Bialik praised him warmly while Brenner regarded him with mixed feelings, praising his clarity and freshness

but noting his limitations. A later generation dealt with the relationship between naturalism and realism in his work (Y. Keshet), emphasized the central psychological dilemma in his work, which confronts the little man with a situation beyond his control (D. Sadan), and described the alienation of his intellectual heroes (S. Halkin). The young Israeli critics have not devoted much attention to his work. Some have stressed the sociological aspect in his work (i.e., the breakup of the home – G. Katznelson) and others have studied in detail his technique in story and playwriting (G. Shaked). He has had little influence on the writers of his own and the subsequent generation or on the young Israeli writers. A list of his works translated into English appears in Goell, *Bibliography*.

BERKSON, ISAAC BAER (1891–1975), U.S. educator and philosopher. Berkson, who was born in New York, began his teaching career at the Central Jewish Institute in New York, of which he was appointed director in 1917. From 1918 until 1927 he supervised the schools and extension program of the city's Bureau of Jewish Education. In 1927 he began teaching education at the Jewish Institute of Religion (later merged with the Hebrew Union College), and in the same year accepted the invitation of Henrietta Szold, who headed the Palestine Executive's department of education, to survey Jewish schools in Palestine. After completing his survey, he remained in Palestine from 1928 to 1935 as superintendent of the Jewish school system. In 1938 Berkson began lecturing in the philosophy of education at the City College of New York (professor, 1955). Though a follower of the progressive education ideas of John Dewey and W.H. Kilpatrick, Berkson only partially accepted their pragmatic-instrumentalist philosophy. His merger of these views with his own, which were a reflection of the ideals and values of his Jewish heritage, was given expression in his book *The Ideal and the Community* (1958). In dealing with the specific problems of Jewish education he advanced the "community theory." According to him, the Jewish communities of the world constitute the "Knesset Israel," which has its own "heritage of cultural, social, and spiritual values." The cultivation of the individual's Jewish personality must therefore combine loyalty to his own community – the "Knesset Israel," including the State of Israel – and sharing with his fellow men in the "realm of universal ideals." Berkson's *Theories of Americanization* (1920) was an important influential state-

ment of the American theory of cultural pluralism which he applied specifically to the problems of Jewish education. Berkson's other works include: *Preface to an Educational Philosophy* (1940), *Education Faces the Future* (1943), *Ethics, Politics and Education* (1968), and *The Ideal and the Community: A Philosophy of Education* (1970).

[Ernest Schwarcz]

BERL, EMMANUEL (1892–1976), French author. A relative of *Bergson and *Proust, Berl was a passionate political essayist and critic of the French bourgeoisie. His works include *Mort de la pensée bourgeoise* (1925), *La politique et les partis* (1932²), *Discours aux Français* (1934), *La culture en péril* (1948), and *Nasser tel qu'on le loue* (1968). Berl was chief editor of the weekly, *Marianne* (1933–37). He also wrote short stories and novels including *Sylvia* (1952) and *Rachel et autres grâces* (1965), notable for their insight and an incisive style. Deeply affected by World War I after serving for two years, Berl, a convinced anti-fascist, adopted pacifist views that led him in June 1940 to write some of future Vichy leader Pétain's speeches. He quickly put an end to this cooperation when he became aware of the antisemitic direction of the new regime. After the war, he left politics and devoted himself exclusively to literature. In 1967, he was awarded the French Academy's *Grand Prix de Littérature*.

[Dror Franck Sullaper (2nd ed.)]

BERL, ERNST (1877–1946), Austrian-U.S. chemist. Berl was born in Silesia and worked at the Zurich Polytechnicum (1898–1907) and in a Belgian artificial silk factory (1910–14). In World War I he directed an Austrian explosives factory. Berl was professor of chemical technology and electrochemistry, Technische Hochschule, Darmstadt (1919–33); he emigrated to the U.S.A. and became research professor at Carnegie Institute of Technology, Pittsburgh. He worked on lead chamber process, nitration of cellulose, and combustion problems and was coauthor of *Chemisch-technische Untersuchungsmethoden* (4 vols., 1921–23) and *Chemische Ingenieur-Technik*.

BERLE, MILTON (formerly **Mendel Berlinger**; 1908–2002), U.S. comedian, known as "Mr. Television" and "Uncle Miltie." Born in New York, Berle played in nightclubs, films, and Broadway shows, including the *Ziegfeld Follies* of 1943. From 1948 to 1956 he did a weekly variety show on television in modern slapstick style. In the 1960s he also appeared in serious parts, including a role in the film *The Loved One*.

Berle's career began when he was five years old and spanned more than 80 years on stage, film, radio, and television. At the age of five, Berle won a Charlie Chaplin look-alike contest. And as a child he appeared in the silent films *The*

Perils of Pauline and *Tillie's Punctured Romance*. He moved up through the vaudeville circuit, finding his niche in the role of a brash comic known for stealing the material of fellow comedians. In 1931, he played the Palace Theater in New York, becoming the youngest master of ceremonies on Broadway. He also wrote some 400 published songs. But it was on television in the 1940s and 1950s that he made his most enduring mark. *The Texaco Star Theater*, featuring Berle and guest stars in what would become legendary comic skits, debuted in 1948 and caught on with the public almost immediately. It became a Tuesday night fixture in homes across America and was credited with helping sell millions of first-time TV sets to a nation just getting acquainted with the new medium. Known for his trademark cigars and for occasionally donning women's clothes to get a laugh, Berle, who hosted the show, was a mainstay on network television for nearly two decades. Even before his television success, he was reportedly one of the highest-paid comedians in show business. But *Texaco Star Theater* cemented Berle's fame. NBC gave him a "lifetime contract" of 30 years in 1951, paying him \$200,000 a year. In 1954 the show, replete with singers, comedians, acrobats, and comedy skits, was renamed *The Milton Berle Show*.

In 1965, Berle renegotiated his 30-year contract with NBC, allowing him to appear on any network. He later made guest appearances in dramas as well as comedy programs. In addition to television, Berle's career in later years included film, nightclubs, and benefit shows. He was the subject of nearly every show business tribute and award, including TV specials devoted to his contributions and legacy in broadcasting. He won an Emmy award in 1949 for Most Outstanding Kinescope Personality and received another Emmy in 1979 for Lifetime Achievement. He was one of the first members of the Academy of Television Arts & Sciences Hall of Fame, and for more than a decade he was president of the Friars Club. In 1984 he was inducted into the Television Hall of Fame, and he was the first entertainer to be inducted into the International Comedy Hall of Fame (1991). In 1996 he was awarded the American Comedy Lifetime Achievement Award.

Berle also wrote a number of books: *Laughingly Yours* (1939); *Out of My Trunk* (an autobiography, 1945); *Earthquake* (1959); *Milton Berle: An Autobiography* (with Haskel Frankel, 1974); *B.S. I Love You: Sixty Funny Years with the Famous and the Infamous* (a collection of stories and anecdotes, 1987); *Milton Berle's Private Joke File* (1989); and *More of the Best of Milton Berle's Private Joke File* (1993).

[Ruth Beloff (2nd ed.)]

BERLEWI, HENRYK (1894–1967), painter, graphic artist, stage designer, art critic, and theorist of art. Berlewi was born in Warsaw and as a child attended a *heder* for a short period of time. He started his art education at the Warsaw Art

School (1906–9), while at the same time studying at a local gymnasium. In 1909–10, he attended the Art Academy in Antwerp, where in addition he completed a course at a lyceum. In 1911–12, Berlewi lived in Paris and studied at the *École de Beaux Arts*. It was during this period that he established close ties with groups of Dadaists and futurists and was influenced by cubism and expressionism. In 1913, he returned to Warsaw and became acquainted with the young Jewish artists who combined a keen interest in avant-garde art with the pursuit for "a new Jewish style" in literature and art. After World War I, he participated in a number of epatage events initiated by Polish Futurist poets (e.g., the Futurist "Subtropical Evening" in Warsaw, 1918). Berlewi became a prominent figure in modernist artistic circles and was a member of various groups. In 1919, he showed his work at the Kultur-Liga exhibition in Białystok. He was close to the "Yung Yiddish" group and was part of its activities; from 1920, he collaborated with a group of Yiddish modernist authors who rallied around the *Warsaw Ringen* journal, did its cover drawings, and published articles on contemporary European and Jewish art. Berlewi was among the founders of the Jewish Society for the Encouragement of Artists and organized exhibitions of Jewish artists. His work in this period is guided by the idea of developing "contemporary Jewish art" by way of synthesizing the discoveries of the European avant-garde and Jewish folk art traditions. Utilizing scenes of Jewish life in most of his paintings, he treated them in a cubist and expressionist manner, thinking of these works as exemplars of "Jewish expressionism." As a book designer, he made an impressive contribution to contemporary Yiddish typography. In addition, he collaborated with Yiddish theater companies in Warsaw and designed the scenery for several of their productions. In 1921, Berlewi made his acquaintance of El Lissitzky, who introduced him to the theory of suprematism developed by Kazimir Malevich (1878–1935) and aroused his interest in non-figurative art. In 1922–23, Berlewi lived in Berlin and collaborated with the leading constructivist artists. Inspired by the environment, he started developing his personal version of constructivism, which he later called "*mechano-faktura*." He showed his work at the "Novembergruppe" exhibition and at the First International Exhibition in Duesseldorf. Together with Jankel *Adler, he represented East European Jewish artists in organizing the Congress of the Union of Progressive International Artists (Duesseldorf, May 29–31, 1922). In this period, he maintained close ties with the activists of the Jewish modernist movement who resided in Berlin. In 1922, he did the cover drawing for the second issue of the *Albatros* Yiddish journal under the editorship of Uri Zevi *Greenberg. He published a number of articles on new trends in European and Russian art in the Berlin *Rimon-Milgroim* Jewish journal. In 1923, Berlewi returned to Warsaw. To promote the "new Jewish art" within a broader universal and cosmopolitan context, he became an organizer and standard-bearer of the "Block" group that united Polish constructivist artists and adherents of non-figurative art, among them many Jewish artists. In 1924, he published his "*Mechano-faktura*" manifesto in Polish

(the German translation was published the same year in *Der Sturm* journal). Also in the same year, the first exhibition of his constructivist works was shown in the “Aussto-Daimler” Auto Salon. In addition, he founded “Reklama-Mechano,” a functional design bureau. At the same time, he remained active in book design and designed the typography for several books in Yiddish and Hebrew and published articles on art in Yiddish and Polish. His two one-man exhibitions took place in 1926 and 1928 in Warsaw, showing his figurative works and those inspired by Jewish themes. From 1928, Berlewi made his permanent residence in Paris. In the early 1930s, he returned to figurative painting and produced portraits and still lifes in the manner of the “Neue Sachlichkeit.” In the 1930s, his exhibitions were held in France, Belgium, and Holland. During World War II Berlewi joined the French Resistance. In the 1950s, he returned to his experiments in abstract art and developed a new version of “*Mechano-faktura*” which he called Op Art. In 1960, Berlewi founded “Les Archives de l’Art Abstrait et de l’Avant-garde Internationale.” He published articles in the Paris press in French as well as in Yiddish on European and Jewish art.

BERLIAND, SHLOMO MEIR (1868–1941), one of the first members of the Hovevei Zion in Bessarabia and a founder of the *Odessa Committee, the center of the Hovevei Zion in Russia (1890). Berliand was born in the Ukraine. In 1920 he became the secretary of the committee for aiding Jewish refugees from the Ukraine and in 1921 was a member of the delegation sent to Bucharest to the Romanian prime minister Averescu to ask for help. From 1926 until 1940 he served as chairman of the Zionist Federation and the central committees of *Keren Hayesod, of *Tarbut in Bessarabia, Romania, and of the Committee for Education and Culture of the Jewish community of Kishinev. He was also a member of the Municipal Council of Kishinev. Berliand was an advocate of *Aḥad Ha-Am’s “cultural Zionism.” Head of the Wissotzky Tea Company’s agency throughout this period, he worked for the Zionist movement wherever he traveled, and aided Jacob Bernstein-Kogan in his Zionist activities. At the outbreak of World War II Berliand refused to join his sons in London. When Bessarabia was occupied by the USSR (June 1940), he was forced to leave Kishinev. In June 1941, a week before the German attack on the USSR, he was arrested in Czernowitz, where he was living in his daughter’s home. Although he declared that he had ceased all political activity, he was sent to a forced labor camp in Kom along with a group of Zionists,

and died there. His wife, daughter, and son-in-law were also arrested and deported.

[David Vinitzky / Lucian-Zeev Herscovici (2nd ed.)]

BERLIGNE, ELIYAHU MEIR (1866–1959), *yishuv* leader and a founder of Tel Aviv. Berligne was born in Mogilev, Russia. He was a delegate to several Zionist congresses and at the Fifth Congress in 1901 joined the Zionist *Democratic Fraction under the leadership of Chaim *Weizmann. In 1907 Berligne settled in Erez Israel, where he established industrial plants producing olive oil and soap. He was one of the founders of Tel Aviv, served on its first administrative committee, of which he was appointed chairman in 1909, and was made an honorary citizen of the city in 1946. Berligne was a member of the board of Herzliah High School in Tel Aviv. In 1919 he was a member of the *yishuv* delegation to the Paris Peace Conference. He was active in the Provisional Council of Palestinian Jewry (Ha-Va’ad ha-Zemanni), was a member of the Va’ad Le’ummi from 1920 to 1948, also serving as its treasurer, and was a signatory of Israel’s Declaration of Independence in 1948. He was a member of the General Zionists (“A” Group) which later (1949) became the Progressive Party.

[Benjamin Jaffe]

BERLIJN, ANTON (Aron Wolf; 1817–1870), Dutch composer, born in Amsterdam. He was for many years conductor and director of the Royal Theater, and was made a member of the Order of Merit by King William III of the Netherlands. Other monarchs (of Belgium, Denmark, Greece, Sweden, and Austria) also decorated him. He founded many choral groups, wrote liturgical works for the synagogue, and composed a large body of other music. His compositions included nine operas (of which *Die Bergknappen* and *Proserpina* became popular), an oratorio *Moses auf Nebo*, a symphony (performed by Spohr at Cassel, 1857), seven ballets, and a cantata. His archives, including correspondence with Mendelssohn and Meyerbeer, among others, are preserved at the National and University Library, Jerusalem.

[Dora Leah Sowden]

BERLIN, largest city and capital of Germany.

The Old Community (1295–1573)

Jews are first mentioned in a letter from the Berlin local council of Oct. 28, 1295, forbidding wool merchants to supply Jews with wool yarn. Suzerainty over the Jews belonged

to the margrave who from 1317 pledged them to the municipality on varying terms, but received them back in 1363. Their taxes, however, were levied by the municipality in the name of the ruler of the state. The oldest place of Jewish settlement in "Great Jews' Court" (Grosser Judenhof) and "Jews' Street" had some of the characteristics of a Jewish quarter, but a number of wealthier Jews lived outside these areas. Until 1543, when a cemetery was established in Berlin, the Jews buried their dead in the town of Spandau. The Berlin Jews engaged mainly in commerce, handicrafts (insofar as this did not infringe on the privileges of the craft guilds), moneychanging, moneylending, and other pursuits. Few attained affluence. They paid taxes for the right to slaughter animals ritually, to sell meat, to marry, to circumcise their sons, to buy wine, to receive additional Jews as residents of their community, and to bury their dead. During the *Black Death (1349–50), the houses of the Jews were burned down and the Jewish inhabitants were killed or expelled from the town.

From 1354, Jews again settled in Berlin. In 1446 they were arrested with the rest of the Jews in *Brandenburg, and expelled from the electorate after their property had been confiscated. A year later Jews again began to return, and between 1454 and 1475 there were 23 recorded instances of Jews establishing residence in Berlin in the oldest register of inhabitants. A few wealthy Jews were admitted into Brandenburg in 1509. In 1510 the Jews were accused of desecrating the *Host and stealing sacred vessels from a church in a village near Berlin. One hundred and eleven Jews were arrested and subjected to examination, and 51 were sentenced to death; of these 38 were burned at the stake in the new market square together with the real culprit, a Christian, on July 10, 1510. Subsequently, the Jews were expelled from the entire electorate of Brandenburg. All the accused were proved completely innocent at the Diet of Frankfurt in 1539 through the efforts of *Joseph (Joselmann) b. Gershom of Rosheim and *Philipp Melancthon. The elector Joachim II (1535–71) permitted the Jews to return and settle in the towns in Brandenburg, and Jews were permitted to reside in Berlin in 1543 despite the opposition of the townspeople. In 1571, when the Jews were again expelled from Brandenburg, the Jews of Berlin were expelled "for ever." For the next 100 years, a few individual Jews appeared there at widely scattered intervals. About 1663, the Court Jew Israel Aaron, who was supplier to the army and the electoral court, was permitted to settle in Berlin.

Beginnings of the Modern Community (to 1812)

After the expulsion of the Jews from *Vienna in 1670, the elector issued an edict on May 21, 1671, admitting 50 wealthy Jewish families from Austria into the mark of Brandenburg and the duchy of Crossen (Krosno) for 20 years. They paid a variety of taxes for the protection afforded them but were not permitted to erect a synagogue. The first writ of privileges was issued to Abraham Riess (Abraham b. Model Segal) and Benedict Veit (Baruch b. Menahem Rositz), on Sept. 10, 1671, the date considered to mark the foundation of the new Berlin

community. Notwithstanding the opposition of the Christians (and also of Israel Aaron who feared competition) to any increase in the number of Jewish residents in Berlin, the community grew rapidly, and in the course of time the authorities granted letters of protection to a considerable number of Jews. In addition, many *unvergleitete* Jews (i.e., without residence permits) infiltrated into Brandenburg. The first population census of 1700 showed that there were living in Berlin at that time 70 Jewish *vergleitete* families with residence permits, 47 families without writs of protection, and a few peddlers and beggars (about 1,000 persons). The refugees from Austria now became a minority, and quarrels and clashes broke out within the community (see below). The Jews of Berlin engaged mainly in commerce. The guilds and merchants were bitterly opposed to them and they were accused of dealing in stolen goods. The Christians demanded the expulsion of the foreign Jews or restriction of their economic activity to dealing in secondhand goods and pawnbroking, not to be conducted in open shops. The government responded only partly to such demands, being interested in the income from the Berlin Jews. It imposed restrictions upon the increase of the Jewish population in the city and issued decrees increasing their taxes, making the community collectively responsible for the payment of protection money (1700), for prohibiting Jews from maintaining open shops, from dealing in stolen goods (1684), and from engaging in retail trade in certain commodities except at fairs (1690). Nevertheless, the number of Jewish stores grew to such an extent that there was at least one in every street. The Jews were subsequently ordered to close down every store opened after 1690, and all other Jews were forbidden to engage in anything but dealing in old clothes and pawnbroking. They could be exempted from these restrictions on payment of 5,000 thalers.

Electors Frederick III, who became King Frederick I of Prussia in 1701, began a systematic exploitation of the Jews by means of various taxes. The protection tax was doubled in 1688; a tax was levied for the mobilization and arming of an infantry regiment; 10,000 ducats were exacted for various misdemeanors; 1,100 ducats for children recognized as *vergleitete*; 100 thalers annually toward the royal reception in Berlin; 200–300 thalers annually in birth and marriage taxes; and other irregular imposts. Frederick William I (1713–40) limited (in a charter granted to the Jews on May 20, 1714) the number of tolerated Jews to 120 householders, but permitted in certain cases the extension of letters of protection to include the second and third child. The Jews of Berlin were permitted to engage in commerce almost without restriction, and in handicrafts provided that the rights of the guilds were not thereby infringed. By a charter granted in 1730, the number of tolerated Jews was reduced to 100 householders. Only the two oldest sons of the family were allowed to reside in Berlin – the first, if he possessed 1,000 thalers in ready money, on payment of 50 thalers, and the second if he owned and paid double these amounts. *Vergleitete* Jews might own stores, but were forbidden to trade in drugs and spices (except for to-

bacco and dyes), in raw skins, and in imported woolen and fiber goods, and were forbidden to operate breweries or distilleries. They were also forbidden to engage in any craft, apart from seal engraving, gold and silver embroidery, and Jewish ritual slaughter. Land ownership by Jews had been prohibited in 1697 and required a special license which could be obtained only with great difficulty. Jews might bequeath their property to their children, but not to other relatives. On Jan. 22, 1737, Jews were forbidden to buy houses in Berlin or to acquire them in any other fashion. In 1755 an equal interest rate was fixed for Jews and Christians.

The Jews in Berlin in the 18th century primarily engaged as commercial bankers and traders in precious metals and stones. Some served as *court Jews. Members of the *Gomperz family were among the wealthiest in Berlin. In the course of time, all trade in money in Berlin was concentrated in Jewish hands. One of the pioneers of Prussian industry was Levi Ilf, who established a ribbon factory in Charlottenburg in 1718. At the same time the royal policy continued of restricting the Jewish population of Berlin, and even decreasing it as far as possible. When in 1737 it became evident that the number of Jewish families in Berlin had risen to 234, a decree was issued limiting the quota to 120 families (953 persons) with an additional 48 families of "communal officers" (243 persons). The remainder (584) were ordered to leave, and 387 did in fact leave. However in 1743 Berlin had a Jewish population of 333 families (1,945 persons).

*Frederick the Great (1740–86) denied residence rights in Berlin to second and third children of Jewish families and wished to limit the total number of protected Jews to 150. However, the revised *Generalprivilegium* and the royal edict of April 17, 1750, which remained in force until 1812, granted residence rights to 203 "ordinary" families, whose eldest children could inherit that right, and to 63 "extraordinary" families, who might possess it only for the duration of their own lifetime. A specified number of "public servants" was also to be tolerated. However, during his reign, the economic, cultural, and social position of the Jews in Berlin improved. During the Seven Years' War, many Jews became wealthy as purveyors to the army and the mint and the rights enjoyed by the Christian bankers were granted to a number of Jews. In 1763, the Jews in Berlin were granted permission to acquire 70 houses in place of 40. While their role in the retail trade decreased in importance because of the many restrictions imposed, the number of Jewish manufacturers, bankers, and brokers increased. On May 2, 1791, the entire *Itzig family received full civic rights, becoming the first German Jews to whom they were granted. At the same time, the king compelled the Jews to supply a specified quantity of silver annually to the mint at a price below the current one (1763), to pay large sums for new writs of protection (1764), and, in return for various privileges and licenses, to purchase porcelain ware to the value of 300–500 thalers from the royal porcelain factory and sell it abroad.

As a concomitant of economic prosperity, there appeared the first signs of cultural adaptation. Under the influence of

Moses *Mendelssohn, several reforms were introduced in the Berlin community, especially in the sphere of education. In 1778 a school, *Juedische Freischule (Ḥinnukh Ne'arim), was founded, which was conducted along modern comprehensive principles and methods. Mendelssohn and David *Friedlaender composed the first German reader for children. The dissemination of general (non-Jewish) knowledge was also one of the aims of the Hevrat Doreshei Leshon Ever ("Association of Friends of the Hebrew Language"), founded in 1783, whose organ *Ha-Me'assef* (see *Me'assefim) began to appear in Berlin in 1788. Mendelssohn's home became a gathering place for scholars, and Berlin became the fount of the Enlightenment movement (*Haskalah) and of the trend toward *assimilation. The salons of Henrietta *Herz, Rachel *Varnhagen, and Dorothea *Schlegel served as rendezvous for both Jews and Christians of the social elite of Berlin. However, progress toward legally recognized civil equality was slow. After the new Exchange building was erected in Berlin in 1805, a joint "corporation" of Christians and Jews was established in which the latter were in the majority and had equal rights. In 1803–04, during the literary controversy over the Jewish question, the government took no action whatever on behalf of the Jews, but after the Prussian defeat by Napoleon the Municipal Act of Nov. 19, 1809, facilitated their attainment of citizen status. Solomon *Veit was elected to the Berlin municipal council and David Friedlaender was appointed a city councilor. The edict of March 11, 1812, finally bestowed Prussian citizenship upon the Jews; all restrictions on their residence rights in the state, as well as the special taxes they had to pay, were now abolished.

Internal Life (17th–18th Centuries)

The fierce controversies that had broken out in the Jewish community during the communal elections in 1689 resulted in governmental intervention in the administrative affairs of the community. Thus the decree of January 24 and the statute of Dec. 7, 1700, included government-approved regulations for the Jewish community. The communal leaders (*parnasim*), elected for three years, were empowered to impose fines (two-thirds of which went to the state treasury and one-third to the communal charity fund) and to excommunicate members with the consent of the local rabbi and government. The "chief *parnas*" acted as mediator between the Jews and the state. In 1717, complete anarchy in the conduct of communal affairs became evident; the *parnasim* were deposed and a fine was imposed on the community amounting to 10,000 thalers, later reduced to 6,500. In 1722 and in 1723 new statutes were promulgated regulating the organizational structure of the community. Apart from the chief *parnasim*, who were appointed by the king and functioned under the supervision of a Jewish commission, a communal committee of three, four, or five *parnasim* was set up which would coopt to itself two optimates (*tovim*) and two alternates (*ikkurim*) for handling particularly important matters. To decide on matters of extreme importance larger committees were ap-

pointed of 15, 18, or 32 members. In 1792 a supervisory committee was created consisting of three members to supervise the fiscal aspect of communal administration. The first rabbi, elected at the time of the erection of the Berlin synagogue in the Heiderentergasse, was Michael Ḥasid (officiated 1714–28). His successors include Jacob Joshua b. Zevi Hirsch *Falk of Cracow (1731–34), author of *Penei Yehoshua*, David *Fraenkel (1743–62), author of *Korban ha-Edah* on the Palestinian Talmud and teacher of Moses Mendelssohn, and Zevi Hirsch b. Aryeh Loeb (Hirschel *Levin, 1772–1800), known for his opposition to Haskalah.

From the Edict of Equality to the Accession of the Nazis

The political history of the Jews of Berlin after 1812 becomes increasingly merged with that of the Jews of *Prussia and *Germany as a whole. In the 1848 Revolution the Jews played an active role as fighters on the barricades and members of the civic guard, as orators and journalists, and the like. Despite the edict of 1812 Jews continued to be hampered by a number of restrictions, and formal civic equality was not attained until July 1860. Subsequently, Jews began to enter Berlin's political and social life in increasing numbers, and the Berlin municipality was for a long time a stronghold of liberalism and tolerance. About one-fifth of Berlin's newspapers were owned by Jews. The *Berliner Tageblatt* and the *Vossische Zeitung*, whose publishers and editors were Jewish, were read abroad with particular attention, although it was known that they did not express the opinions of circles close to the government. Berlin Jews played a prominent part in literature, the theater, music, and art. Their successes aroused fierce reaction among the more conservative elements and Berlin became a center of antisemitism. The "Berlin Movement" founded by Adolf *Stoecker incited the masses against the Jews by alleging that they were the standard-bearers of capitalism and controlled the press (see *Antisemitic Political Parties and Organizations).

The Jewish population of Berlin numbered 3,292 in 1812; 11,840 in 1852; 108,044 in 1890; and 172,672 in 1925. Thus, within a century it had increased more than fiftyfold. The Jews comprised about 2% of the total population in 1840, 5.02% in 1890, and 4.29% in 1925. The Jews in Berlin comprised 1.4% of German Jewry in 1811–28, 7.03% in 1871, and 30.6% in 1925. Despite the increasing instances of intermarriage, renunciation of Judaism, and conversion to Christianity, and the decline in the Jewish birthrate, the Jewish population of Berlin continued to grow through the arrival of Jews from provincial centers, especially from the province of Posen (Poznan) and from Eastern Europe. As Berlin grew in importance as a commercial and industrial center, Jews played an increasingly important role in the city's economic life, especially as bankers (*Mendelssohn, *Bleichroeder, and others), owners of department stores (*Wertheim, *Tietz, Jandorf), and in the grain and metal trades, the textile and clothing industries, building construction, the manufacture of railway engines and cars, the brewing of beer, and other branches of the economy. Lud-

wig *Loewe headed a large armaments factory in Berlin. The General Electric Company (AEG) was founded by the Jewish engineer Emil *Rathenau, and both his son Walter *Rathenau and Felix Deutsch were active in it. In 1861 53.17% of the Jews in Berlin engaged in commerce, and 17.3% in industry and the manual trades; by 1910 the percentage of those occupied in commerce had decreased to 41.61%, while 35.16% earned their livelihood in industry and the manual trades.

Internal Life of the Berlin Community (1812–1933)

Following the partitions of Poland-Lithuania, 1772–95, the Berlin community became increasingly influenced by the steady stream of Eastern European Jews (*Ostjuden*) who first arrived from the Posen district. This influx made up for the losses to the Jewish communities through assimilation and apostasy. Later there was growing immigration from the *Pale of Settlement. From the second half of the 19th century the increasing colony of Russian, mainly Jewish, students exerted a powerful cultural influence in Berlin. The organizational structure of the Jewish community was undermined after the emancipation of the Jews in 1812. The old regulations were abolished by the 1812 edict and no new regulations were instituted. For some time the community was not allowed to collect dues and faced disintegration. A statute issued in July 1837 permitted the renewal of normal communal life, and from then on the Berlin community was administered by a committee of seven members and three alternates and a council of 21 members and ten alternates. The first elections to the council took place in February 1854, and the community's first constitution was ratified in August 1860. During this period, the community was thrown into a ferment as a result of the aspiration of David Friedlaender and others for extreme liturgical reforms. The *Reform program was temporarily restrained by a decree of Dec. 9, 1823, which laid down that all divine worship was to take place in the local synagogue and according to accepted custom without any innovations in the language, ritual, prayers, and liturgy.

In 1819, the *Verein fuer Kultur und Wissenschaft des Judentums ("Society for Jewish Culture and Learning"), was founded in Berlin by Leopold *Zunz, I.M. *Jost, and Eduard *Gans, with Heinrich *Heine among its members (see *Germany). In the meanwhile, far-reaching changes had been introduced in education. The Ḥinnukh Ne'arim school was closed at the end of 1825 for lack of funds, and was replaced in 1826 by a new school for boys, founded by the community; Zunz was principal of this school until 1830. In 1835 the community founded a school for girls. There were also several Jewish private schools in Berlin, such as that of H.M. Bock (founded in 1807), whose principals were Jost (1816–35) and Sigismund *Stern (1835–45). R. Meir b. Simḥah Weyl, who charted a conservative course in education, opened a teachers' seminary in 1825. From 1840 to 1850 a teachers' seminary functioned under the direction of Zunz. A teachers' training institute was established in 1859 under the rectorship of Aaron *Horowitz.

In 1844 Michael Jehiel *Sachs was invited to be the third *dayyan* and preacher of the community. Although a Conservative, he was not opposed to moderate reform. In the wake of the foundation of the second Kulturverein ("cultural association"; 1840), Aaron *Bernstein founded the Reform Society in 1845, and later the Reform Congregation, which introduced far-flung liturgical reforms, especially during the rabbinate of Samuel *Holdheim (1847–60). At first, divine worship was held both on Saturdays and Sundays and later only on Sundays. The Reform Congregation was unsuccessful in its attempt to secede from the official community, but the latter was obliged to give very substantial financial support to the Reform Congregation since many of its members were among the largest taxpayers. The Berlin community was again violently shaken when many of its members pressed for the introduction of an organ and modification of the liturgy in the New Synagogue. The appointment of Abraham *Geiger as rabbi of the Berlin community (officiated 1870–74) met with strong opposition from Orthodox circles, and in 1869 Azriel (Israel) *Hildesheimer and his adherents left the main community and established the Adass Yisroel congregation, which received official recognition in 1885. Abraham Geiger had stipulated as a condition of his appointment that an institute for Jewish research be established in Berlin, and in 1872 the *Hochschule fuer die Wissenschaft des Judentums was opened there. A year later, Hildesheimer opened a rabbinical seminary for Orthodox Judaism (*Rabbinerseminar fuer das orthodoxe Judentum). Between 1880 and 1930, eight large synagogues were erected by the Berlin community, among them that in the Fasanenstrasse which was one of the most magnificent synagogues in the world. In all, the community owned 16 synagogues, seven of them Orthodox and the remainder Liberal and Reformist. Thirty rabbis served in Berlin after Abraham Geiger (12 Orthodox and the remainder liberal). In addition, most religious groups which were supported by the community had their own rabbis.

Berlin was the center of the national German-Jewish organizations, such as the *Deutsch-Israelitischer Gemeindebund (founded in 1869), Verband der deutschen Juden (1904), the *B'nai *Brith (1883), *Central-Verein deutscher Staatsbuerger juedischen Glaubens (1893), *Hilfsverein der deutschen Juden (1901), Zentralwohlfahrtsstelle der deutschen Juden (1917), and others. Likewise, Jewish newspapers and periodicals were published in Berlin, including the communal organ, whose circulation reached 60,000 copies. The Berlin communal institutions and their activities in every field served as a model for Jewish communities throughout the world. The annual communal budget in the 1930s was about 10,000,000 marks (as against 5,000,000 marks in 1914). About 70,000 Jews in Berlin paid dues to the community.

For about 80 years the Liberals were predominant in the Berlin community. But Liberals and Orthodox worked together in full harmony in the central organizations in which, at least for a certain period, the Zionists also participated. The *Hibbat Zion movement met with but a lukewarm reception

in Berlin, especially among the Orthodox, and the opposition to political Zionism was particularly keen. The Berlin rabbi S. *Maybaum was among the leaders of the "Protest Rabbis," and the Central-Verein and the *Vereinigung fuer das liberale Judentum launched a concerted effort against the Zionistische Vereinigung fuer Deutschland and its organ, the *Juedische Rundschau. When the procedure for communal elections was changed after World War I, four representatives of the *Juedische Volkspartei (a coalition of Zionists, *Mizrachi, and the Verband der ostjuedischen Organisationen) and one of the *Po'alei Zion were elected in 1920 to the representative council (Repraesentantenversammlung), which consisted of 21 members; two Zionists sat on the communal committee (Gemeindevorstand). In the 1926 election, a coalition of the Juedische Volkspartei, the Conservatives, and the Mittelpartei won a majority. For three years, the Zionist Georg Kareski headed the communal committee. However, in the elections of November 1930, 24 Liberals were elected to the representative council, 14 from the Juedische Volkspartei, and three from among the small parties; seven Liberals, three Zionists, and one Conservative sat on the communal committee. Max Naumann and his faction were the spearhead of the extremist anti-Zionist faction which rejected all cooperation with non-German Jews and demanded that the Zionists be deprived of their German citizenship and permitted to reside in Germany only as aliens. In 1922, at the initiative of the Berlin community, the Preussischer Landesverband juedischer Gemeinden was founded, comprising 655 communities, not including the Orthodox communities which formed their own association. A great boon to the Berlin community was the government support which was granted for the first time during the inflation of late 1923, without which it could not have survived. In later years, the government subsidy to the community was insufficient.

After the murders of Karl Liebknecht and Rosa *Luxemburg in January 1919, antisemitic propaganda in Berlin increased. The Kapp Putsch (March 1920) had blatant anti-Jewish undertones. Walter Rathenau, the German foreign minister, was assassinated by antisemitic nationalists on June 24, 1922. On Nov. 5, 1923, antisemites attacked the Jews living in Grenadierstrasse and Dragonerstrasse, which were centers of Jewish residence. In 1926, after the appointment of Joseph *Goebbels as *Gauleiter* in Berlin, anti-Jewish rabble-rousing increased. On the eve of the Jewish New Year (Sept. 12, 1931), Jews returning from synagogue in Kurfuerstendam were assaulted by gangs of Nazis, organized by Count Wolff Heinrich von Halldorf (later chief of police in the Third Reich).

[Joseph Meisl]

1933–39

At the time the Nazis came to power, Berlin's organized Jewish community numbered about 172,000 persons. In the preceding years as the Nazi movement was growing in influence, the rate of Jewish affiliation had increased. With Hitler's ascent to power on January 30, 1933, street demonstrations

were immediate and made Jews feel deeply uncomfortable. In 1933 the Nazi boycott (April 1) affected Jewish shop owners; April 7th legislation against non-Aryans led to dismissal of Jewish professionals and civil servants, including physicians and professors; while “aryanization” of Jewish firms and the dismissal of their Jewish employees was carried out by the exertion of steady economic pressure. The response of the community was mixed. There was a wave of suicides but also an attempt by the community to respond to deteriorating conditions. Economic assistance was provided to those in need; new vocations were found for youth, legal counseling and housing advice was provided. In response to the April 1st boycott of Jewish businesses, Robert Weltsch wrote an editorial in the *Judische Rundschau* called “Wear the Yellow Badge with Pride.” Synagogue attendance increased, as did Zionist activities. Still the community did not formally encourage emigration. It thought of Germany as the land of its fathers and its children, a perspective that was to dramatically change. Eight new Jewish elementary schools were founded in 1933. Jewish officials – “Jewishness” was soon defined to refer to one’s parents and grandparents and not one’s own identity – not affected by these early measures were eventually ousted under the provisions of the *Nuremberg Laws (1935). During this early period, such incidents as the murder of a Jewish physician, Dr. Philippsthal (spring 1933), and the suicide of Rudolf S. Mosse after mistreatment in prison (fall 1933), the first such instances of their kind, caused great consternation among the Jews. In these initial years, when the members of the Jewish community were being methodically deprived of their economic standing and civil rights, Jewish religious and cultural life in Berlin underwent a tremendous upsurge. Jewish children, most of them excluded from the public schools, attended schools set up and maintained by the Jewish community or private schools. In addition to the eight Jewish elementary schools that were maintained at one period to meet the community needs, the famous college for Jewish studies, the *Hochschule fuer die Wissenschaft des Judentums, was sustained to train leadership and its program greatly expanded. Jews were later forbidden to attend theaters and public places of entertainment. The Juedischer Kulturbund (“Jewish Cultural Society”) was established. In the summer of 1935 yellow benches for the segregation of Jews were set up in parks and inscribed *nur fuer Juden* (“only for Jews”). Signs inscribed *Juden unerwuenscht* (“Jews not wanted”) were displayed in public places. The economic condition of Jews in Berlin deteriorated rapidly. By 1935 welfare assistance was a significant responsibility of the community. Signs discriminating against Jews were removed for the duration of the Olympic Games held in Berlin (summer 1936). Antisemitic propaganda was reduced only to return with a vengeance once the Games were over and the tourists had returned to their native lands. Throughout this period from 1933 to 1938, raids and arrests became frequent occurrences and were accelerated in 1938. Until November 1938 Jewish newspapers and books were published on an unprecedented scale. Notable among the news-

papers was the *Berliner juedisches Gemeindeblatt*, a voluminous weekly published by the community. Zionist work was in full swing, especially that of He-Ḥalutz, and in February 1936, a German Zionist convention was held in Berlin (the last to meet there), still reflecting in its composition the vigorous party life of German Zionists. From March 28, 1938, the Jewish community was deprived of its status as a recognized public corporate body. The Berlin community was made a “private” organization, denied the right to collect dues from the community, and renamed the Juedische Kultusvereinigung Berlin (“Jewish Religious Society”).

In June 1938, mass arrests of Jews took place on the charge that they were “asocial,” e.g., had a criminal record, including traffic violations, and they were imprisoned in the *Sachsenhausen concentration camp. On November 9–10, *Kristallnacht marked a turning point in the affairs of Berlin Jewry: synagogues were burned down, Jewish shops destroyed, Jewish institutions were raided and closed, including libraries and museums, and Jewish manuscripts and documents were destroyed. In the wake of *Kristallnacht, 1,200 Jewish businesses were put up for Aryanization and 10,000 Jews from Berlin and other places were arrested and imprisoned in Sachsenhausen. The “*Bannmeile*” was decreed, which restricted Jews to an area within a certain radius from their place of residence; banished them from most of the main thoroughfares, and the area in which government offices were located; and evicted Jews from their apartments, a step which had begun earlier, but was now accelerated. Jewish newspapers had to cease publication. The only paper was the new *Das juedische Nachrichtenblatt* which was required to publish Gestapo directives to the Jews. Meetings of bodies of the Jewish community were no longer permitted, and the Jewish community’s executive council had to conduct its affairs from then on without consulting any representative group. Religious services, when resumed, were now restricted to three synagogues (on Levetzow, Luetzow, and Kaiser Streets) and a few small halls. The pace of Aryanization accelerated as did the rate of emigration. Most of Berlin’s rabbis left Berlin before *Kristallnacht*: the last three rabbis to stay were Felix Singerman (died in Riga in 1942), Martin Salomonski (died in Auschwitz in 1944), and the most prominent of all, Leo *Baeck, who was offered the opportunity to leave but decided to stay with his flock and was sent to Theresienstadt camp in early 1943. As the Germans arrived in his home, Baeck asked for half an hour, during which time he posted a letter to his daughter in England and with an unyielding sense of honor paid his gas and electric bills. At the end of January 1939, the Gestapo established a Zentralstelle fuer juedische Auswanderung (“Central Bureau for Jewish Emigration”) in Berlin. The Berlin community, presided over by Heinrich *Stahl, was the largest and most dynamic German-Jewish community, and was incorporated along with the Reichsvertretung der deutschen Juden into the Nazi-imposed Reichsvereinigung der Juden in Deutschland – the change in name from German Jews to Jews in Germany was essential, not incidental – established on July 4, 1939. After its incor-

poration into the Reichsvereinigung, the Berlin community maintained its autonomous function for some time.

1939–45

After the outbreak of war, some 82,000 Jews were living in Berlin – about half having left between 1933 and 1939. The living conditions and situation of the Jews worsened. Emigration was still permitted and even encouraged, and existing organizations and institutions (the Kulturbund, Jewish schools) were able to continue functioning. However, Jews were drafted for forced labor at wages far below the prevailing rate and with no social benefits, but this at least provided them with a minimum income and delayed their deportation. Many were employed in armament industries, which also slowed their deportation. On Jan. 31, 1940, a special Arbeitsamt fuer Judenarbeiter (“Labor Exchange for Jew-Workers”) was set up. In the spring of 1940 Stahl was removed from his post in the Reichsvereinigung by the Nazi authorities and replaced by Moritz Henschel, a former attorney. In September 1941, a drastic turn for the worse came about. First the *Judenstern* (“Jewish star,” i.e., yellow *badge) was introduced. Two weeks later, on the Day of Atonement, in the middle of a sermon by Rabbi Leo Baeck, the president of the community was summoned to the Gestapo and told that the community would have to prepare for a partial evacuation from the city, that large apartments still occupied by Jews would have to be cleared, that many additional parts of the city would now be out of bounds to Jews, and that the Levetzowstrasse synagogue would be turned into a *Sammellager* (“assembly camp”) for 1,000 persons. In due course more such assembly camps were added. Legal emigration was prohibited on October 23. The last transport of legal emigrants left Berlin on October 18 for Lisbon. In the preceding months (May–October), 1,342 emigrants had been permitted to leave. Between October 23 and the end of the year only 62 persons managed to leave, and in 1942 only nine Jews were permitted to go abroad. To make Berlin *judenrein, deportations began. There were five major phases in the process of deportation, the destination of Berlin’s Jews reflecting the changes in German policy from forced emigration to resettlement in the East and then to murder by gassing: (a) between fall 1941 and January 1942 the deportees were sent to Riga, Minsk, Kovno, and Lodz, sometimes directly to the killing fields; (b) those deported in spring 1942 were sent to Lublin (Trawniki); (c) between summer 1942 and February 1943 their destination was Theresienstadt, Auschwitz, Riga, and Tallinn (Rasiku); (d) Auschwitz was the destination of the deportees of March–April 1943; (e) those deported from spring 1943 until the end of the war were sent to Bergen-Belsen, Ravensbrueck, Sachsenhausen, and Auschwitz. Altogether there were 63 *Osttransporte* carrying some 35,000 victims to death camps in the east, and 117 *Alterstransporte*, transporting some 15,000 (mainly older) persons to Theresienstadt. It is believed that about 95% of the first and 90% of the second group perished. (For lists of transport numbers, dates, numbers of deportees and destinations, see bibliography, Sellenthin, 84–85.)

All through 1942 the deportations were kept up, although community employees and persons employed on forced labor were still excluded. In November and December 1942, the infamous commissar Alois Brunner (see Adolf *Eichmann) from Vienna was employed in Berlin and was responsible for organizing the picking up of the candidates for deportation in their homes, distinguishing himself by his extraordinary cruelty. Eventually, the deportations came to include groups of community employees, and from the fall of 1942, only those Jewish laborers who were employed in vital war production were still safe from deportation. At the beginning of 1943, the Gestapo persuaded the military administration to relinquish these workers, which resulted on February 27–28 in the so-called “*Fabrikaktion*” – marked by exceptional cruelty – in which all the workers were taken straight from the factories and deported from Berlin. Those Jews arrested in this “action” who had gentile wives were taken to a special camp for onward deportation, but when their wives carried out violent street demonstrations, the Gestapo yielded and set their husbands free. Even at that late date, the Nazis were seemingly responsive to public opinion. On May 13, 1942, an anti-Jewish exhibition, *Soviet Paradise*, was opened in Berlin, and was attacked by a group of Jewish communists, led by Herbert *Baum. The group was caught and hardly any of them survived. The Germans imposed collective – and disproportionate – reprisal. Two hundred and fifty Jews – 50 for each German who had been killed in the attack – were shot, and another 250 were sent to Sachsenhausen and perished there. The community offices were closed down on June 10, 1943, and six days later the “full” Jews among the members of its executive council were deported to Theresienstadt. The remaining Jews were looked after by the Neue Reichsvereinigung, which took up its seat in the Berlin Jewish Hospital, which together with the Jewish cemetery were the two Jewish institutions that continued to function throughout the war. While the deportations went on, many Jews tried to stay on illegally, a very difficult undertaking, owing to the need for frequent change of hideouts and the lack of ration cards; many were caught and deported. The “illegals” were given temporary help on an organized basis, by groups of people who were of mixed parentage (*Mischlinge*) and as such were not liable for deportation themselves; there were also some Germans who at the risk of their lives put their apartments at the disposal of the Jews who were hiding out. One group of Jewish youngsters and their instructor managed to hide in Grunewald for an extended period, spending their time in the study of Zionist subjects. No exact figure is available for the number of “illegal” Jews who survived in Berlin, and estimates vary from 2,000 to 5,000. Berlin became officially “*judenrein*” (“clean of Jews”) on June 16, 1943. On June 30, 1943, there were in fact 6,700, and on March 31, 1945, 5,990 Jews, comprising 4,790 Jews who had non-Jewish spouses, 992 “*Geltungsjuden*” (persons of mixed parentage, professing Jewish religion), 46 Jews from non-enemy countries, and 162 “full” Jews, most of whom were employed in the Jewish Hospital. The Jewish cemetery had remained in use – several Torah

Scrolls were hidden there during the years of the Nazi persecution in a concerted organized activity which encompassed over 500 scrolls to be restituted after the war.

Number of Jews in Berlin – 1816–1945

	Absolute Numbers	Percentages
1816	3,373	1.20
1837	5,648	1.98
1855	12,675	2.93
1871	36,326	4.15
1895	94,391	4.48
1905	130,487	4.30
1910	142,289	4.05
1925	172,672	4.30
1933	160,564	3.80
1939 ¹	82,788	1.70
Jan. 1942 ²	55,000	—
Dec. 1942 ²	33,000	—
Apr. 1943 ³	18,315	—
1945	9,000	—

¹ Including Jews by “race” – decrease due mainly to emigration but in small measure also due to a mortality rate higher than the birth rate. Emigration figures were actually higher for Berlin Jewry, but were offset by the influx of Jews from the provinces.

² Decrease due to deportation.

³ Decrease due to final mass deportations.

Dashes denote unavailability of information.

Size of the Jewish Population

The Table: Jewish Population of Berlin shows the decrease in the Jewish population of Berlin between 1925 and 1945. The statistics before 1933 refer to persons designated as members of the Jewish faith, whereas the later figures for the most part also include Jews “by race” (as defined by the Nuremberg Laws):

[Kurt Jakob Ball-Kaduri / Michael Berenbaum (2nd ed.)]

Contemporary Period

On July 15, 1945, the Jewish community was officially reconstituted. At first it was headed by Erich Nelhans, a former *Mizrachi leader, and from the fall of 1945 by Hans Erich Fabian, who had returned from Theresienstadt, the only member of the Reichsvereinigung to survive the war. Also active in the leadership of the community were Alfred Schoyer, a member of the Berlin Jewish Community Council before his deportation; Heinz Galinski, who had returned from Bergen-Belsen; and Julius Meyer, a survivor of Auschwitz. At the beginning of 1946, the community had a registered membership of 7,070 people, of whom 4,121 (over 90% of all married members) had non-Jewish spouses, 1,321 had survived the war by hiding, and 1,628 had returned from concentration camps. The Jews were dispersed throughout Berlin, a third of them living in the Soviet sector. The community was assisted by the military government, as well as by the *American Jewish Joint Distribution Committee (JDC), which initiated its activities in Berlin in the autumn of 1945. Several synagogues were opened, the Jewish Hospital resumed its work (although most of its patients and staff were not Jews), and three homes for the aged

and a children’s home were established. There was no local rabbi or religious teachers, but American Jewish army chaplains volunteered their services. The general assumption at this time was that the Jews would not be able to reestablish themselves in Berlin (or anywhere else in Germany) and that the community’s principal task was to help them to emigrate from the country. The community was thus defined as a “liquidation community” (*Liquidationsgemeinde*).

In addition to the organized Jewish community, Berlin also became a center for Jewish *Displaced Persons (DPS). Toward the end of 1945 and during the first half of 1946, the main *Berihah route from Poland led through Stettin and the Soviet Zone to Berlin, from where it continued through the remaining part of the Soviet Zone and the British Zone to the American Zone. It was a very arduous route, especially during the harsh winter months, and temporary shelter had to be provided in Berlin. A small camp was established in the Wittenau district of the French sector of the city in the autumn of 1945 with a capacity of 200; at the beginning of 1946 a large camp was established at Schlachtensee in the American sector, which could hold 4,000 refugees, and a third camp was established in the summer of 1946 in the Tempelhof district of the American sector. In July 1946, however, the Berihah from Poland took on a quasi-legal character and was rerouted through Czechoslovakia and Vienna to the American Zone in Germany and Austria. As a result the refugee population of Berlin became fairly stabilized. By the end of 1946, there were 6,785 DPS in the three Berlin camps. When the Soviet blockade of Berlin was lifted, the Occupation authorities decided to evacuate the DPS, and between July 23 and Aug. 1, 1948, 5,456 Jewish refugees were airlifted from Berlin to various camps in the American Zone.

By this time the Jewish community had reached a measure of consolidation, in spite of the difficult economic and political conditions in the city. Although a few hundred members had emigrated overseas and mortality exceeded the birthrate, the total number of Jews had increased as a result of the influx of Jews returning from abroad. Prominent among the returnees was a group of 500 refugees who had spent the war years in *Shanghai. The welfare services extended by the community were greatly improved; the return of confiscated property, a process which was initiated at this time, also helped raise the standing of the community. In 1946, upon the initiative of Fabian, the community established its own weekly, *Der Weg*, later to be merged with the Jewish weekly appearing in Duesseldorf. Jewish organizations in the United States arranged for American rabbis to undertake several years’ service in Berlin. In 1949 Galinski was elected as chairman of the community council.

The growing tension between the Western and Soviet Occupation authorities also had its effect upon Berlin Jewry. In 1947 Nelhans was arrested by the Soviets on the charge of aiding Soviet military personnel to desert; he was sentenced to 15 years imprisonment and was not heard of subsequently. Although the city administration was split in two, the Jew-

ish community remained unified until the end of 1952, when its own split became inevitable. In the following years, the situation of the Jews and the community in West Berlin was greatly improved as a result of the rising economic prosperity in West Germany (which also affected West Berlin) and the return of confiscated property and the indemnification of victims of Nazi persecution. The Berlin City Senate showed great concern for the rehabilitation of the community and its individual members; Joachim Lipschitz, the senator for internal affairs (who was the son of a Jewish father and a Christian mother), in particular did his utmost to help the development of the community. Four synagogues were operating in Berlin. In 1959, the City of Berlin erected a large Jewish community center on Fasanenstrasse at the site on which one of Berlin's most magnificent synagogues had stood until 1938. In 1954 the Zionist Organization and the Israel Appeal renewed their activities in Berlin. A Jewish women's organization, a B'nai B'rith lodge, a Jewish students' organization, and a youth organization as well as several organizations dedicated to the fostering of interfaith relations were established.

In 1954 the community had a membership of about 5,000 and by January 1970 this figure had risen to 5,577. The demographic composition of the community was marked by relatively high average age (4,080 were above the age of 41), a low birthrate, and a great number of mixed marriages.

EAST BERLIN. In 1946 the number of Jews in the Soviet sector was 2,442, while in 1966 it was estimated at 850 (according to figures given by the community's president, Max Schenk). Although there was officially no restriction on religious practice and the authorities supported the community (the great synagogue on Rykestrasse was reconstructed), the prevailing anti-religious atmosphere of a communist state had a detrimental effect upon the community. By 1990 the number of community members had fallen to 200.

[Chaim Yahil]

SINCE 1989. After the German reunification of 1989, the Jewish communities of former West and East Berlin merged in 1990. The community maintains six synagogues, an elementary school, and other educational institutions. Since 1995 the magnificent building of the former synagogue on Oranienburger Strasse has housed the Centrum Judaicum, which serves as a museum and a center of documentation and research. Jewish cultural institutions and initiatives are manifold and an integral part of Berlin's cultural life. A Jewish museum was opened in 2002 and has since been among the museums drawing the largest numbers of visitors in Germany. The number of community members has risen from 6,411 in 1989 to 11,167 in 2003, with many coming from the former Soviet Union.

[Stefan Rohrbacher (2nd ed.)]

Hebrew Printing in Berlin

The first Hebrew printer in Berlin was the court preacher and professor D.E. Jablonsky, as Jews could not obtain the

necessary license; nevertheless, the manager J.L. Neumark, and most of the setters and proofreaders were Jews. The first book published by them was the Book of Psalms (1697), followed by the complete Bible (1699), and other scholarly and liturgical works. An application by Rabbi Mirels for permission to print the Talmud in Berlin was refused by Frederick I, king of Prussia; the permission to publish Maimonides' Code was not taken up, as this was just being printed in Amsterdam by J. *Athias. But a Talmud edition was issued by Gottschalk and Jablonski, in partnership with a Frankfurt on the Oder printer, 1715–22. Among other printers to be mentioned are Baruch Buchbinder (Radoner) of Vilna (1708–17), who printed a number of important works such as the *Tzena Urena* and works by the Shabbatean Nehemiah *Hayon (1713), a Mishnah with Rashi and Jacob Hāgiz's commentary (1716–17), and a *Hoshen Mishpat* (1717). Nathan, son of the aforementioned J.L. Neumark, was active 1719–27, while his son-in-law Aaron b. Moses Rofe of Lissa built up an important press, 1733–62, publishing a series of well-known rabbinic works, above all the second Berlin Talmud edition 1734–39. Aaron's press was continued for a while by his grandson Moses b. Mordecai. An annual *Lu'ah* began to appear probably from 1725 but not later than 1738. Of some importance was the press of Isaac b. Jacob Speyer (1764–70), a son-in-law of the Berlin rabbi David Fraenkel, who printed notable rabbinic works – Steinschneider calls it “the highlight of Hebrew printing in Berlin”; and that of Mordecai Landsberg, also from 1764. The prolific writer and editor Isaac *Satanow took over Landsberg's press in 1772 and issued a considerable number of books, particularly his own (until 1804). In 1784 David Friedlaender and his friends founded the Verlag der juedischen Freischule, managed by A. *Wolfsohn-Halle, who bought the Landsberg press and obtained a license to print and sell books. Pupils of the society were taught the craft of printing and a number of books were published from 1796 with the imprint “Orientalische Druckerei.” During these years Berlin became the center for the printing of Enlightenment literature, notably the writings of M. Mendelssohn, N.H. Wessely, D. Friedlaender, etc. Mendelssohn's edition of the Pentateuch appeared here in 1783.

In 1830 the Landsberg press was bought by Isaac Levent. In that year the printer Trevitsch and son moved to Berlin from Frankfurt on the Oder. In 1834, the year of his death, David Friedlaender founded his own press and published a number of important books; the scholar D. *Cassel worked there as a proofreader. In 1836 the apostate Julius Sittenfeld set up a printing house which published the complete Talmud (1862–68), Maimonides' Code (1862), and other works. In the late 19th and early 20th century H. Itzkowski and Siegfried, Arthur and Erich Scholem were active as general, Jewish, and also Hebrew publishers and printers in Berlin. In 1930 a Pentateuch was printed for the *Soncino-Gesellschaft by the “Officina Serpentis” with a new Hebrew type cut for this occasion.

BERLIN, ARYEH LOEB BEN ABRAHAM MEIR (1738–1814), German rabbi. Berlin, the younger brother of Noah Hayyim Zevi Hirsch *Berlin, was born in Fuerth where his father, a well-to-do merchant, was communal leader of Franconian Jewry. Like his brother, he was appointed *dayyan* in Fuerth but Aryeh Loeb was at the same time rabbi of Baidersdorf in Bavaria. From 1789 he was rabbi of Bamberg, where his duties included that of civil judge. While there he was involved in an unpleasant lawsuit when the heirs of a large estate of which he was appointed executor accused him of abusing his office, exacting illegal fees, and not accounting for certain expenditure. He was acquitted of dishonesty, but made to pay a fine. The publication of the relevant documents by Eckstein (see bibl.) shows that the charges were groundless. In 1794 Berlin was appointed chief rabbi of Hesse-Kassel, but

owing to the opposition of his detractors in Bamberg he was unable to leave and did not assume his post until the following year. When the kingdom of Westphalia, with Kassel as its capital, was created by Napoleon in 1807 and given to Jerome Bonaparte, Berlin delivered a sermon in Hebrew welcoming the new king and composed a hymn of praise in Hebrew (published under the title *Davar be-Itto Mah Tov*, with a German translation, Kassel, 1807). In 1808, when the Jewish *consistory was organized on the basis of the French consistories he was appointed chief rabbi of the kingdom. The president of the consistory was Israel *Jacobsohn, and Berlin, despite the protests of the more extreme rabbis, agreed to certain relaxations of the strict laws of Passover, in particular permitting the eating of peas and beans on Passover.

Berlin's annotations to the Talmud appear in the three volumes of the Fuerth edition (1829–32) which were published, and his annotations to the tractate *Shevu'ot* are in the Romm-Vilna edition. Some of his novellae appear as an appendix to his brother's *Azei Almuggim* (Sulzbach, 1779).

BERLIN, CONGRESS OF, gathering of the great European powers in 1878 to settle problems concerning the Balkans and Near East arising after the war between Russia and Turkey in 1877. Held between June 13 and July 13, 1878, it was attended by representatives of Austria-Hungary, France, Great Britain, Italy, Russia, and Turkey, with some participation of representatives of the Balkan states (Greece, Montenegro, Romania, and Serbia). Among its most influential members was the head of the British delegation, Benjamin *Disraeli (Lord Beaconsfield). The position of the Jews in the Balkan countries (Romania, Serbia, and Bulgaria) was also placed on the agenda on the initiative of the "Zion" society in Bucharest, led by Adolf Weinberg and Adolf *Stern; these joined with the *Alliance Israélite Universelle in Paris and the Council for the Defense of Romanian Jews in Berlin, led by Moritz *Lazarus. The Jewish community of Berlin petitioned the chairman of the congress and head of the German delegation, Count *Bismarck, on Feb. 28, 1878, to raise the question of equal rights for Romanian Jews at the congress. As a result, the German representatives were instructed to demand equal civil rights for the members of all religions in the Balkan countries and the inclusion in the peace treaty of special paragraphs to this effect explicitly providing for their implementation. The question of equal rights for the Jews in these countries was also discussed in the parliaments of France, Italy, Austria, and Hungary, and the representatives of these countries at the congress were requested by special resolutions to ensure an appropriate settlement.

To deal with the Jewish questions a special council was established in Berlin consisting of the representatives of the Committee for Jewish Affairs in Berlin (Gerson von *Bleichroeder, M. Lazarus, Jacob *Bernays, and Berthold *Auerbach), representatives of the Alliance (Sacki Kann, Charles *Netter,

and Emanuel *Veneziani), the delegation of Romanian Jews (Adolf Stern, Marco Brociner, Taussig, and Hermann *Hirsch), and representatives of the Alliance in Berlin (Salomon Neumann, the banker Julius Platho, and Hermann Goldschmidt). This committee formulated a memorandum which was submitted to the entire congress, followed by a second memorandum to Bismarck. The memoranda contained a description of the plight of the Jews in the Balkan countries accompanied by a request that the members of all creeds and races should be guaranteed equal civil rights in the peace treaty (stipulated in special clauses). Special steps were also taken to submit the Jewish requests to the representatives of the different governments. To this end Baron Maurice de *Hirsch and Sir Moses *Montefiore began negotiations with the representatives of England and France, and Bleichroeder turned his attentions to Bismarck and the Russian representative, Count Shuvalov.

The members of the united committee also visited the representatives of the Balkan countries (Romania, Serbia, Bulgaria), who were not officially represented at the congress but were working behind the scenes. The Romanian representative, Kogălniceanu, endeavored to persuade the Jewish representatives not to appeal to the congress since the question of equal civil rights for Jews was an internal affair of the Romanian government. Threats against the Jews of Romania appeared in Romanian newspapers which also attempted to influence the Western Jews to withdraw their demands. These tactics, however, were vehemently condemned and rejected by the representatives of the Alliance.

On June 24, 1878, the Jewish problem came up for discussion as part of the general consideration of Bulgarian affairs. The French representative, Waddington, proposed that a clause be inserted in the peace treaty recognizing the independence of Bulgaria on condition that it granted equal civil rights to members of all races and religions. The proposal was accepted. On June 28, during the discussions on Serbia, the Turkish representative, Karatheodori (Caratheodory) Pasha, and the English representative, Lord Salisbury, demanded that a similar clause be inserted in the peace treaty as a condition for the recognition of Serbian independence. The Russian representative, Prince Gorchakov, opposed this resolution on the ground that the Jews of Serbia, Romania, and Russia could not be put in the same category with the Jews of Paris, London, Berlin, and Vienna. Despite his opposition it was decided to insert in the peace treaty a clause (par. 35) guaranteeing equal rights.

Also during the discussions on Romania it was proposed by Waddington that recognition of that country's independence should be made contingent on her granting equal rights to the members of all religions within her borders. The proposal received the full support of Beaconsfield, Count Andrassy of Austria-Hungary, and Bismarck, and even the agreement of Shuvalov. By a separate resolution, introduced into paragraph 44 of the peace treaty, equal rights were granted to the members of all religions in Romania. This

principle was also to be binding, according to a resolution introduced by Salisbury, on Turkey, Greece, and Montenegro.

The question of the future of Palestine was also touched upon by the congress indirectly. In June 1878 a group of Jews submitted a memorandum to the congress (addressed to Bismarck and Beaconsfield) requesting that the Jews in Palestine should be given their independence (in the same manner as had been restored to the Balkan peoples) and permitted to establish a constitutional Jewish monarchy in that country. This memorandum was listed in the protocol of documents submitted to the congress but was not discussed on the floor. Before the congress assembled, there were discussions in the English press concerning the political resurgence of the Jews in Palestine. After the congress was concluded, Serbia and Bulgaria complied with the clauses of the peace treaty obliging them to grant equal rights to their minorities, and even incorporated these clauses in their constitutions. Romania refused to meet her obligation, and the struggle to implement paragraph 44 of the peace treaty in this country extended over decades.

[Nathan Michael Gelber]

BERLIN, DAVID BEN (Judah) LOEB (d. 1771), German rabbi and talmudic authority. The brother of Isaiah *Berlin, he was probably born in Eisenstadt (Hungary). After serving as rabbi of Dessau and Marktbreit (Bavaria) and as chief rabbi of Schwarzburg, Berlin was appointed rabbi of the three united congregations of Altona, Hamburg, and Wandsbeck. In 1769 when the Danish government, at the instance of the Hamburg Town Council, sought to separate the Altona Jewish community from that of Hamburg, Berlin was elected a member of the delegation whose successful intercession with the Danish king resulted in the continuation of the status quo. His learned correspondence with his brother-in-law, Joseph Steinhardt, was published in the latter's work, *Zikhron Yosef* (EH 4:11; HM 1:2); a number of his responsa have been published in *Or Yisrael* of Israel b. Eliezer *Lipschuetz (Cleves, 1770) and in *Beit Evel u-Veit Mishteh* of Samuel Palaggi (Altona, 1770). Some of his talmudic novellae and homilies are in manuscript at the Bodleian Library.

[Joseph Elijah Heller]

BERLIN, HAYYIM (1832–1912), Lithuanian rabbi, eldest son of R. Naphtali Zevi Judah *Berlin, head of the yeshivah at Volozhin for some 40 years. Hayyim Berlin received his education from his father and became conversant with all aspects of rabbinic literature as well as being well versed in Jewish subjects. At the age of 17 he married into the wealthy Zeitlin family of Shklov (see Zeitlin, *Joshua), and later used part of his wealth to amass an excellent library which was acquired by the Yeshivat *Ez Hayyim of Jerusalem after his death.

In 1865 Berlin became the rabbi of Moscow. In 1889 he returned to Volozhin at the request of his aged father, who wanted his son to succeed him as head of the yeshivah. However, he was opposed by many of the Volozhin yeshivah students, who favored the election of his niece's husband, R. Hayyim *Soloveichik, who was renowned for his unique analytical approach to talmudic study. The controversy soon ended with the forced closing of the school by the Russian government on January 22, 1892.

With the closing of the yeshivah, Berlin became the rabbi of Yelizavetgrad (*Kirovograd), where he remained until 1906, when he settled in Jerusalem. His erudition, family heritage, and patriarchal appearance gained for him a leading role on the Jerusalem scene, and in 1909 he was elected to succeed R. Samuel *Salant as chief rabbi of the Ashkenazi community of Jerusalem.

R. Meir *Bar-Ilan (Berlin), who was nearly 50 years his junior, was his half-brother.

[Aaron Rothkoff]

BERLIN (Baline), IRVING (Israel; 1888–1989), U.S. popular songwriter. Berlin was born in Kirghizia, Russia, the son of a cantor, and was taken to New York in 1893. His first regular job was as a “singing waiter,” and it was then that he wrote the lyrics of his first song “Marie from Sunny Italy” in 1907. His second song, “Dorando” (1908), brought him \$25 and a job with a music company. He became a partner in the firm and later established his own music publishing house. Berlin had no musical training and never learned to read music. His technique remained primitive, and when he composed at the piano he did it only in one key; modulations were effected by a special set of pedals. After composing a tune, Berlin either sang or played it for an assistant, who would then transcribe it into musical notation.

His first big success was the song “Alexander’s Ragtime Band” (1911), which sold more than a million copies in just a matter of months. His melodies, for which he wrote the lyrics, were infectious, sentimental, and have maintained their popularity. He composed more than 1,000 songs, 19 musicals, and the scores for 18 movies. Among his most popular songs are “White Christmas,” “Easter Parade,” “There’s No Business Like Show Business,” “Blue Skies,” “Puttin’ on the Ritz,” “Cheek

to Cheek,” “Say It with Music,” “What’ll I Do?” “A Pretty Girl Is Like a Melody,” and “Always.” Films for which he wrote the songs include *The Cocoanuts* (1929), *Puttin’ on the Ritz* (1930), *Top Hat* (1935), *Follow the Fleet* (1936), *On the Avenue* (1937), *Holiday Inn* (1942), *Easter Parade* (1948), and *White Christmas* (1954). Among the Broadway shows for which he wrote the music, the best known are *Annie Get Your Gun* (1946) and *Call Me Madam* (1950). Among his many awards were an Academy Award for Best Original Song for “White Christmas” in 1942 and a special Tony Award in 1963.

As such a prolific writer and the rare combination of both a composer and a lyricist, Berlin was haunted all his life by the rumor that his songs were written by other people or were plagiarized from other material. Many people thought it was impossible for one person to write as many songs in as many styles as he did or for an untrained musician to write so many works of genius. But no evidence has ever been found that he ever plagiarized anything.

In 1918 Berlin wrote the stirring “God Bless America,” which he revamped two decades later as war loomed large over Europe. Kate Smith sang it on her radio broadcast on Armistice Day in 1938, and the song was an immediate sensation. It sold millions of copies, won numerous awards, earned immense royalties, and threatened to replace the national anthem because of its patriotism and popularity. Berlin donated all the royalties from the song to the Boy Scouts, Girl Scouts, and Campfire Girls, saying that he refused to capitalize on patriotism. He composed numerous other patriotic songs during the war that benefited the Navy Relief, Red Cross, March of Dimes, and Bond Drives and contributed all the royalties to war charities.

His altruistic acts were acknowledged with such accolades as the Army’s Medal of Merit from President Truman in 1945; a Congressional Gold Medal for “God Bless America” and other patriotic songs from President Eisenhower in 1955; and the Freedom Medal from President Ford in 1977.

Berlin also supported Jewish charities and organizations and donated generously to worthy causes. In 1944 he was honored by the National Conference of Christians and Jews for “advancing the aims of the Conference to eliminate religious and racial conflict.” Five years later, he was honored by the New York YMHA as one of “12 outstanding Americans of the Jewish faith.”

In 2002, the U.S. Army at Fort Belvoir, Virginia, named the Army Entertainment Division (AED) World Headquarters “The Irving Berlin Center” in his honor. Also that year he was commemorated on a U.S. postage stamp.

An intuitive businessman, Berlin was a co-founder of ASCAP (American Society of Composers, Authors, and Publishers), founder of his own music publishing company, and with producer Sam Harris, builder of his own Broadway theatre, The Music Box.

[Nicolas Slonimsky / Ruth Beloff (2nd ed.)]

BERLIN, SIR ISAIAH (1909–1997), English philosopher and political scientist. Born in Latvia, Berlin was taken to England as a boy. He later studied at Oxford, where he lectured in philosophy from 1932 and became the first Jewish Fellow of All Souls College in 1938. During and after World War II he served with the British Information Services in New York and with the British embassies in Washington and Moscow. From 1957 Berlin was professor of social and political theory at Oxford, and in 1966 he was appointed the first president of the newly founded Wolfson College in Oxford. Berlin was awarded the Order of Merit in 1971. In 1974 he was elected president of the British Academy, of which he had been vice president from 1959 to 1961, the first Jew to be appointed to this office. In November 1978 he was awarded the Jerusalem Prize.

His work was characterized by a strongly liberal attitude to social and political questions. His *Karl Marx* (1939) examines Marx's thought within the context of the intellectual atmosphere of the 19th century. In his *The Hedgehog and the Fox* (1953), Berlin considers Tolstoy as a writer who vainly sought some unifying thread in history. In *Historical Inevitability* (in: *Auguste Conte Memorial Lectures 1953–62*, 1964) he opposes the notion that events are inevitable and therefore predictable, and that political conditions are not capable of being changed by individuals. In *Two Concepts of Liberty* (1958), Berlin distinguishes between those thinkers who have sought to found liberty within a framework of mutual restraints while at the same time recognizing the diversity of human needs and behavior, and those who, espousing one all-embracing and dogmatic notion of liberty, seek to "force men to be free" and thus end by enslaving them. Among his other writings are *The Age of Enlightenment* (1956), *The Life and Opinions of Moses Hess* (1959), *Four Essays on Liberty* (1969), and numerous essays. Berlin earned a considerable reputation as a scholar, teacher, and conversationalist, and influenced generations of students in Britain and in the United States, where he was visiting professor at several universities. His long-standing ties with Israel and Zionism were distinguished by personal friendships with a number of Zionist leaders including Chaim *Weizmann. He was a member of the editorial board publishing the Weizmann letters and was a governor of the Hebrew University of Jerusalem. Berlin also served as president of the Jewish Historical Society of England and was the first president of Wolfson College, Oxford. He was certainly one of the most famous public intellectuals in the English-speaking world at the time of his death. In 1998 he published his reminiscences of 17 famous people, *Personal Impressions*.

[Brian Knei-Paz (Knapheis)]

BERLIN, ISAIAH BEN JUDAH LOEB (Isaiah Pick; 1725–1799), rabbi and author. Berlin was known also as Isaiah Pick after his father-in-law, Wolf Pick of Breslau, who supported him for many years. He was born in Eisenstadt, Hungary, but his father, an eminent talmudic scholar (who later became rabbi of Pressburg), moved to Berlin where the young Berlin studied under him. Later he studied under Zevi Hirsch Bialeh (Ḥarif), the rabbi of Halberstadt, at the latter's yeshivah. In 1755 Berlin moved to Breslau where he engaged in business. In 1793, when already advanced in years, he was elected to a rabbinical post, being appointed to succeed Isaac Joseph Te'omim as rabbi of Breslau. His election was marked by a dispute between the members of the community and the local *maskilim*, who had begun to organize themselves as a body and opposed Berlin, who, despite his love of peace, openly attacked their ideas. Berlin was elected by an overwhelming majority. According to ḥasidic sources, Berlin was sympathetically disposed toward that movement and extended a friendly welcome to one of its emissaries, Jacob Samson of Spitzevka. Berlin was renowned for his conciliatory attitude and for his avoidance of all disputes. Characteristically, he called a work *She'elat Shalom* ("A Greeting of Peace"), for "all my life I have been careful not to treat my fellow men with disrespect, even to the extent of not slighting them by faint praises." As a result of this moderation, leaders of the Breslau *maskilim*, such as Joel Brill and Aaron Wolfsohn, frequently visited him. Berlin corresponded on halakhic subjects with his brother-in-law Joseph *Steinhardt, Ezekiel *Landau of Prague, Eleazar b. Eleazar *Kallir, and Ephraim Zalman *Margolioth of Brody, among others. His chief claim to fame rests not on his rabbinic and halakhic but rather on his extensive literary activities devoted to glosses and textual notes on talmudic literature. He commented on the Bible, Mishnah, Talmud, Alfasi, Maimonides, the *Arukh*, and the whole corpus of the earlier halakhic authorities. Of his collated texts, in which he notes parallel passages and variant readings, the most important is that on the Talmud, entitled *Masoret ha-Shas* ("Talmud Tradition"), which supplements an earlier work by Joseph Samuel, rabbi of Frankfurt. First published at Dyhernfurth (1800–04), it has since been printed in every edition of the Talmud. Berlin not only cites parallel passages, but also amends and compares texts, displaying an acute critical faculty and a profound grasp of history.

His other works are (1) *She'elat Shalom* (Dyhernfurth, 1786), a commentary on Aḥai of Shabḥa's *She'iltot*, with sources and notes entitled *Rishon le-Zion*; (2) *Hafla'ah she-ba-Arakhin*, glosses and annotations to Nathan b. Jehiel of Rome's *Arukh* (first published, part 1, Breslau, 1830, part 2, Vienna, 1859), and thereafter in many editions of the *Arukh*; (3) *Minnei Targima*, expositions on Targum Onkelos (Breslau, 1831); (4) *Tosefot Rishon le-Ziyyon*, notes and brief comments on the Mishnah (first published at Sulzbach, 1783–85, and often reprinted); (5) *Kashot Meyushav* (Koenigsberg, 1860), in which all talmudic passages concluding with the word *kashya* ("difficulty") are answered; (6) *Omer ha-Shikhah*, containing

talmudic *halakhot* not mentioned by the codifiers. This work, first published as an addendum to *Kashot Meyushav*, was later printed separately (Johannisberg, 1866).

There was no early work to which Berlin did not write glosses and explanations, as he was in the habit of annotating every book that he read. Thus he wrote glosses to (7) the Bible (Dyhernfurth, 1775; Lemberg, 1861); (8) the prayer book in *Tikkun Shelomo* (Dyhernfurth, 1806); (9) Alfasi (Pressburg, 1836); (10) Maimonides' *Yad* (Dyhernfurth, 1809); (11) Elijah Baḥur's *Tishbi* (his annotations appearing in Moses Koerner's *Birkat Moshe*, Berlin, 1834); (12) Malachi b. Jacob's *Yad Malakhi* (Berlin, 1852); (13) Elijah b. Moses de Vidas' *Reshit Ḥokhmah* (Dyhernfurth, 1811).

His unpublished works include (14) *Yesh Seder la-Mishnah*, a commentary in several volumes on the Mishnah; (15) *Tena Tosefta*, a commentary on the Tosefta; (16) *Keneset Hakhmei Yisrael*, responsa; (17) *Shetarei ha-Me'uharin*, novella on Rashi and *tosafot* to the Talmud, dealing with those passages where proof was deduced from later biblical verses but could equally well have been inferred from earlier ones; (18) glosses and notes on the minor tractates.

Berlin was the first in Germany to interest himself in the history of post-talmudic literature. He was also the first to offer a solution to the problem of the identity and the period of the *paytan* Eleazar *Kallir, and although his conclusions are not accepted by scholars, they all use the extensive material cited by him (see J. Steinhardt's *Zikhron Yosef* to OḤ 13–15).

[Itzhak Alfassi]

BERLIN, ISRAEL (1880–?), Russian-Jewish historian, descended from a distinguished ḥasidic family. Berlin was educated at a Lithuania yeshivot and moved to St. Petersburg, where he became a member of the editorial board of the Russian Jewish Encyclopedia (*Yevreyskaya Entsiklopediya*, vols. 9–16) for which he edited the sections on the geonic period and rabbinic literature. He also contributed many basic articles on other topics, among them the Hebrew language, the Zohar, Ḥasidism, the Khazars, and Judaizers. He also contributed to the periodical *Yevreyskaya Starina*. In his fundamental study "Historical Settlements of the Jewish People on the Territory of Russia" (1919), Berlin attempted to explain the origins of Jewish settlements in Russia and trace their history up to the end of the 16th century. This work, based on copious literary and documentary material, was not completed. Berlin's fate under Soviet rule is not known.

[Yehuda Slutsky]

BERLIN, MOSES (1821–1888), Russian scholar and civil servant, born in Shklov, Belorussia. Berlin wrote his first paper in Hebrew under the Latin title *Ars logica* (1845). In 1849 he

was appointed teacher in the government school for Jews in Mogilev and in 1853 he became adviser on Jewish affairs to the governor-general of Belorussia. He subsequently held the post of adviser on Jewish matters at the Department of "Foreign Religions" (1856–66). Berlin translated into Russian Joshua b. David's *Zok ha-Ittim* on the *Chmielnicki massacres. For his work on the ethnography of the Russian Jews, *Ocherk etnografii yevreyskogo naseleniya v Rossii* (1861), Berlin was elected a member of the Imperial Russian Geographical Society. Berlin responded to the attacks on Jews and the Talmud, made in Russian literature and the press by antisemites. He was also active in the St. Petersburg community.

BERLIN, NAPHTALI ZEVI JUDAH (known as **ha-Neziv** from the initials of his name; 1817–1893), one of the leading rabbis of his generation, and head of the yeshivah at *Volozhin for some 40 years. He was born at Mir and already in his early youth was famed as a great talmudic scholar. In 1831 he married the daughter of R. Isaac b. Ḥayyim *Volozhiner who headed the large and important yeshivah in that town. When R. Isaac died in 1851 he was succeeded by his elder son-in-law Eliezer Isaac. When the latter died in 1854, Berlin succeeded him, transforming that institution of learning into a spiritual center for the whole of Russian Jewry. In his day, the yeshivah at Volozhin was attended by more than 400 students, among whom were many men of great talent and unusual intellectual caliber. He taught the whole of the Babylonian Talmud in the order of its arrangement, without omission and with a commentary of his own, in which he followed the system and method of R. Elijah b. Solomon the *Gaon* of Vilna. He avoided hairsplitting *pilpul*, being concerned only with determining the plain meaning of the text as well as establishing its accuracy by reference to parallel passages in the Jerusalem Talmud and in the halakhic Midrashim. Early in life he wrote a commentary on *Sifrei* (published 1959–61 in Jerusalem, in three volumes, under the title *Emek ha-Neziv*). He ascribed great importance to the study of geonic literature and the works of the early authorities who lived close to the time of the Talmud. This accounts for his special interest in the *She'iltot* of R. *Aḥa of Shabḥa which he published with a commentary. It was the most comprehensive of its kind on this work, and was titled *Ha'emek She'elah* (Vilna, 1861, 1864, 1867; second edition with addenda and corrigenda from Berlin's manuscripts, Jerusalem, 1948–53). Berlin also devoted considerable attention to the interpretation of the Scriptures, following again in the footsteps of the Vilna *gaon*. In the yeshivah he gave a daily lesson in the weekly portion of the Reading of the Law, an unusual innovation in the yeshivot of his day. His commentaries on the Torah, *Ha'emek Davar*, were published (Vilna, 1879–80; second edition with addenda from manuscripts, Jerusalem, 1938) as were those on the Song of Songs, *Rinnah shel Torah* (Warsaw, 1886). In his Bible commentaries, he sought to demonstrate the consonance of the interpretations of the Pentateuch as transmitted in talmudic sources with the plain meaning of the Written Law and the rules of Hebrew grammar and syntax. While steeped

in Talmudic and midrashic lore, the Neziv's comments were also highly original.

In the course of his long years as head of the yeshivah at Volozhin, Berlin dedicated his energies to that institution. He adamantly opposed any modernization of the yeshivah and the introduction of secular studies in its curriculum, as demanded by the *maskilim* in Russia, who were supported by the authorities. He feared that such innovation might detract from the purpose and mission of the yeshivah – the education of scholars of the traditional type. He did not negate secular learning per se, but regarded the study of the Torah and the production and maintenance of talmudic scholars as the very foundation of Jewish existence. He exhibited the greatest solicitude over any form of neglect of Torah study and professed a fatherly love for all his students, who in turn admired and revered him greatly, including those who later departed from his way of life and outlook. Bialik's poem "Ha-Matmid" reflects in large measure his personal impressions of his student days at Volozhin. Bialik describes the heart-warming personality of the "head of the yeshivah," and stresses his great love for the students of the Torah.

Berlin was keenly interested in the general community and its needs. He wrote many detailed responsa to questions arriving from various communities throughout the world on matters of *halakhah* and on general public affairs. A small part of his responsa was collected in his *Meshiv Davar* (2 vols., Warsaw, 1892) which revealed his general breadth of outlook. He completely rejected the demand of certain religious circles to establish separatist orthodox communities, stressing that "such advice is as painful as a dagger in the body of the nation," for all Jews are commanded to form "one union" (*Meshiv Davar*, vol. 1 responsum 42). He joined the *Ḥibbat Zion movement from its very inception, and at the Druzgeniki Conference (1887) was elected "counseling member" of its executive. In many letters he urged observant Jews to join the movement and to support the settlement of Jews in Erez Israel, even though some were nonobservant. At the same time, he stressed that "our contributions do not go to settle the land of the Philistines, but to restore the desolation of our Holy Land... so that the Torah and the precepts be observed among its inhabitants" (*Meshiv Davar*, vol. 2, responsum 50, on *shemittah*). With that end in view, he urged that a religious person be appointed supervisor of the settlers in the colonies in Erez Israel to ensure they conduct themselves in accordance with the Torah and the precepts. He also suggested that "secular" members of the Jewish settlements (referring to the Bilu'im in Gederah) be enabled to return to their countries abroad and that their place be taken by observant Jews from the old *yishuv* in Jerusalem. Later, however, he withdrew this suggestion, and even defended the Bilu'im because they had "improved their ways." Berlin was opposed to the permission granted by other rabbinic authorities for fields to be worked during the sabbatical year by means of the legal fiction of "selling" the land to non-Jews.

In his last years, he came into conflict with the Russian authorities as a result of their instructions both for a reduction in the number of students at the yeshivah of Volozhin and the introduction of secular subjects, especially the study of Russian, in the curriculum. Very much against his will, he reduced the student roll somewhat and introduced the study of Russian. However, even after these steps, the number of students at the yeshivah remained double that permitted by the Government, with few students among them attending the lessons in Russian. As a result the yeshivah was closed down by government decree in 1892 and Berlin and his family were exiled. They moved first to Minsk and later to Warsaw. The closing down of the yeshivah seriously affected his health and he was unable to carry out his desire to settle in Erez Israel. He died in Warsaw about 18 months after his departure from Volozhin. His sons were R. Ḥayyim Berlin and R. Meir *Bar-Ilan.

[Zvi Kaplan]

BERLIN, NOAH ḤAYYIM ZEVI HIRSCH (1734–1802), German rabbi and halakhist. Berlin was born in Fuerth and was the son of Abraham Meir Berlin, the communal leader of Franconia. He became a *dayyan* at Fuerth in 1764 and later served as rabbi in Bayersdorf and Bayreuth. In 1783 Berlin was appointed rabbi of Mainz and the surrounding district. His appointment was ratified by the prince elector. He established a yeshivah at Mainz, and lived there until 1799 when he succeeded Raphael ha-Kohen as the rabbi of the united communities of Altona, Hamburg, and Wandsbeck. Berlin showed skill and tact in uniting the various elements in these communities. Wolf *Heidenheim was his most outstanding pupil. Berlin wrote *Azei Almuggim* (1779), a commentary on the hand-washing ritual, *eruvei ḥazerot*, and marriages forbidden by rabbinical enactment; *Azei Arazim* (1790), a commentary on the Shulḥan Arukh, *Even ha-Ezer*; *Ma'yan ha-Ḥokhmah* (1804), on the 613 commandments (in verse and with a commentary). This work, unfinished by Berlin, was completed by his brother Aryeh Loeb *Berlin. Two further works, *Azei Besamim* and *Azei Levonah*, remained unpublished. He wrote glosses to the tractates of *Berakhot* (1829), *Shabbat* (1832), and *Shevuot*. The last was published in the Vilna edition of the Talmud. There is a rational basis to his explanation of the *halakhah*, and he makes use of the Jerusalem Talmud.

[Yehoshua Horowitz]

BERLIN, RAYNA BATYA (c. 1817–c. 1875), learned East European woman remembered for her concern with the status of women in traditional Judaism. Berlin lived her entire life in the orbit of the Volozhin Yeshivah. Her grandfather, R. Ḥayyim *Volozhiner, founded the yeshivah, and her father, R. Isaac *Volozhiner, would later take over. In 1831 Rayna Batya married R. Naphtali Zevi Judah Berlin (Neziv), a promising student who became leader of the yeshivah in 1854. The couple had four children, R. Hayyim, who married Rivka Zeitlin and was a rabbi in Moscow and later in Jerusalem, Michael, who died in his youth, and Sarah Resha and Dreyzl, who were married consecutively to R. Raphael Shapira.

In this environment of intense engagement with Jewish texts, where knowledge of Torah was honored above all else, it is not surprising that some of the women in the family would also take an interest in Jewish study and knowledge. Family stories about Berlin's grandmother, as well as Berlin and her sister, describe sharp-witted and sharp-tongued women committed to upholding the rabbinic world view. By far the most complete picture of Berlin comes from the memoirs of her nephew, R. Barukh ha-Levi Epstein. Epstein, whose mother was the Neziv's sister, spent the middle years of the 1870s as a student at the Volozhin Yeshivah. During these years he was also a frequent visitor at the home of his uncle and aunt. In a volume of his memoirs devoted to R. Naftali Zevi Judah Berlin, Epstein included one chapter on his aunt, entitled, "Wisdom of Women." The portrait of Rayna Batya Berlin produced by Epstein is of an unusually learned Jewish woman, frustrated by the limits imposed on her by gender and Jewish law. According to Epstein, Berlin spent her days sitting in her kitchen surrounded by Jewish texts including volumes of the Mishnah and *aggadah* as well as historical and other works. On his visits, she would frequently engage him in discussions about women in Jewish law, especially with regard to the study of the Torah. In recent years a number of scholars have taken an interest in Rayna Batya Berlin and her anomalous position in Orthodox Judaism.

[Eliyana R. Adler (2nd ed.)]

BERLIN, SAUL BEN ZEVI HIRSCH LEVIN (also called **Saul Hirschel**; 1740–1794), German rabbi. His father was Hirschel *Levin (Zevi Hirsch) and his brother, Solomon *Hirschel. At the age of 20, he was ordained by some of the greatest rabbis of the time. In 1768 he was serving as *av bet din* in Frankfurt on the Oder. In 1778 he wrote an approbation for Moses Mendelssohn's commentary on the Torah *Biur* (*Be'ur*; Berlin, 1783). Some time before 1782 Berlin, becoming disenchanted with what he considered antiquated rabbinical authority, retired from the rabbinate and settled in Berlin. There he joined the Haskalah group whose members, known as the *Me'assefim*, were the pupils and admirers of Mendelssohn. He was also an ardent supporter of Naphtali Herz *Wessely at a time when the most eminent rabbis of Germany violently opposed him. After the publication of Wessely's *Divrei Shalom ve-Emet* (Berlin, 1782), Berlin wrote a satire *Ketav Yosher* (published anonymously after his death, 1794), in which he sharply criticized the methods of education and the scholarship of his time as well as the customs and superstitions which had spread among the people. It also sought to dispel the rabbis' opposition to the work of Wessely. In 1784 he traveled to Italy, ostensibly to seek a cure for his rheumatism, but, quite conceivably, to meet those rabbis who had placed themselves in Wessely's camp. In Italy Berlin wrote a provocative anonymous pamphlet of objections to the *Birkei Yosef* of R. Ḥayyim Joseph David *Azulai (Leghorn, 1772), to which the latter replied in his book *Maḥazik Berakhah* (*ibid.*, 1785). Interesting himself in manuscripts, Berlin began to edit the *Or Zarua* of *Isaac b. Moses of Vienna, to which he added his own notes and novellae; these were omitted, however, from the posthumously published version in 1862. In 1789 his book *Mizpeh Yokte'el* appeared in Berlin under the pseudonym of Obadiah b. Baruch Ish Polonyah. It contained the most extreme criticism of the novellae to *Yoreh De'ah*, entitled *Torat Yekuti'el*, by Raphael b. Jekuthiel Susskind *Kohen, rabbi of the united communities of Altona, Hamburg, and Wandsbeck. Berlin's book, in which Raphael is accused of plagiarism and of condoning corruption, stirred up a storm among the rabbis, including Berlin's own father, who placed a ban upon the book and upon its author. When the identity of the author became known, his father regretted his action and tried to protect his son. However, before the storm had subsided, another of his books, *Besamim Rosh*, appeared in Berlin in 1793 and touched off a new tempest. The book contains 392 responsa purporting to be by Asher b. Jehiel and his contemporaries: on the title page it was stated that these responsa had been collected and prepared for publication by R. Isaac di Molina. Although Berlin maintained that he had copied the book from a manuscript in Italy and that he had only added his own notes and novellae (*Kassa de-Harsana*), it soon became evident that the statements attributed to Asher and the other rabbis quoted were full of strange leniencies which actually bordered on antinomianism. The suspicion was soon raised that the whole book was fictitious and that its author was Berlin. The first

to attack him was R. Wolf Landsberg in his pamphlet *Z'ev Yitrof* (Frankfurt on the Oder, 1793). After him came R. Mordecai Benet, who wrote to Berlin's father and to other rabbis. A massive rabbinical campaign then followed which branded Berlin as an atheist who sought to uproot the foundations of the Torah. Berlin's father came again to his aid, requesting the rabbis to retract their accusations against his son, and even attempting to establish the genuineness of the manuscript and R. Raphael ha-Kohen and his circle as the source of the libel. It seems that he succeeded in appeasing the rabbis, but not those scholars who held no rabbinical position. Disappointed, Berlin began to wander from one country to another. According to his relative Zevi Horowitz (*Kitvei ha-Ge'onim*, 1928), Berlin went to London in 1794 to take up the position of rabbi of the Ashkenazi community there but died before he was able to assume the office. His literary remains present many bibliographical problems, some of which have not yet been solved. He left critical essays which have been published in various places. He is probably the author of *Ha-Orev* (Vienna, 1795), attributed to R. Baruch *Jeiteles.

[Abraham David]

BERLINER, ABRAHAM (1833–1915), scholar and author. Berliner's vast knowledge of rabbinic literature and of ancient and modern languages was mostly self-taught (cf. his autobiographical *Aus meiner Knabenzeit*, JJGL, 16 (1913), 165ff.). After succeeding his father as teacher in his native Obersitzko, he became preacher and teacher in Arnswalde (both in the province of Posen, then Germany). From 1858 to 1865 he lectured at the *bet ha-midrash* of the Berlin Talmudic Society out of which developed the Rabbinical Seminary, founded by Azriel *Hildesheimer in 1873. Here Berliner lectured in Jewish history and literature and was also librarian. In subsequent years he paid frequent visits to the important libraries of Germany, England, Holland, France, and, above all, Italy, in search of their Jewish treasures. He prepared the first critical edition of Rashi's commentary on the Pentateuch, giving Rashi's sources and explanatory notes (1866); this book was accepted by Leipzig university as a Ph.D. thesis. In the completely revised second edition (1905) he added a vocabulary of foreign words used in the commentary. Berliner pursued his Rashi studies in a number of important monographs and also turned his attention to other medieval commentators (*Pelelat Soferim*, 1872, 1966²). He also provided a modern edition of *Targum Onkelos* (1884). Berliner's historical studies were chiefly devoted to Italian Jewry, as shown by his three-volume *Geschichte der Juden in Rom* (1893). On the history of German Jewry, he wrote *Aus dem Leben der deutschen Juden im Mittelalter* (1861, second revised and enlarged edition 1900, 1937³; Hebrew translation, 1900). Complementary to this work was a monograph *Persoennliche Beziehungen zwischen Juden und Christen im Mittelalter* (1882). Berliner also wrote bio-

ographies of Israel *Isserlein and of Isaiah *Berlin and a defense of *Maimonides against the accusation of apostasy (*Moses ben Maimon, sein Leben...* 2 (1914), 103ff.). Berliner published many bibliographical studies and works on liturgy and Talmud. He discovered in Rome parts of commentaries on the Bible and the Talmud by *Hananel b. Hushi'el and *Gershom b. Judah and was instrumental in the inclusion of both commentaries in the Vilna (Romm) Talmud edition. In 1874 Berliner began to publish a *Magazin fuer juedische Geschichte und Literatur* which two years later became the *Magazin fuer die Wissenschaft des Judentums* (with a Hebrew supplement, *Ozar Tov*), which he edited with David *Hoffmann until 1893. In 1885 he revived the *Mekize Nirdamim society. On his 70th birthday he was awarded the title of professor by the Prussian government. On that occasion too appeared a *Festschrift* in his honor, edited by A. Freimann and M. Hildesheimer (*Birkat Avraham*, 1903) with a bibliography of his writings. A three-volume collection of Berliner's writings was planned but only the first appeared in 1913. A two-volume collection was published in Hebrew (1945–49). Berliner was a staunch supporter of Orthodoxy and an opponent of Reform. He supported Hildesheimer in the establishment of the *Adass Jisroel* secessionist congregation and acted as the chairman of its council for many years. Yet in his *Randbemerkungen* he suggested certain changes in prayer texts and customs, which were not to the liking of some of his Orthodox friends.

BIBLIOGRAPHY: Eppenstein, in: *Jeschurun* (new series), 2 (1915), 457ff. **ADD. BIBLIOGRAPHY:** *Biographisches Handbuch der Rabbiner*, 1:1 (2004), 186–87 (bibl.).

[Alexander Carlebach]

BERLINER, EMILE (1851–1929), inventor. Born and educated in Wolfenbuettel, Germany, Berliner emigrated to the U.S.A. in 1870. He worked in New York and Washington, D.C., as a clerk, salesman, and assistant in a chemical laboratory. He studied electricity and in 1876 began experimenting with Bell's newly invented telephone, which he succeeded in refining with his invention of the loose-contact telephone transmitter or microphone and the use of an induction coil. The Bell Telephone Company immediately purchased the rights to his invention, which for the first time made the telephone practical for long-distance use. Berliner was appointed chief electrical instruments inspector of the company. In 1887 he improved Edison's phonograph by introducing a flat disc instead of a cylinder and the use of a shallow groove. The patent was acquired by the Victor Talking Machine Company and served as the basis for the modern gramophone. In his later years he engaged in aviation experiments and introduced the use of a revolving cylinder light engine. Between 1919 and 1926 he built three helicopters which he tested in flight himself. Berliner also interested himself in public matters, particularly in the field of health and hygiene. In 1890 he founded the Society for the Prevention of Sickness. In 1907 he organized the first milk conference in Washington, whose efforts contributed to

the pasteurization of milk and an improvement in its quality. He played a leading part in the fight against the spread of tuberculosis and wrote a number of articles on hygiene and preventive medicine. He set out his agnostic ideas on matters of religion and philosophy in his book *Conclusions* (1902). Toward the end of his life Berliner supported the rebuilding of Palestine and was active on behalf of the Hebrew University of Jerusalem.

[Grete Leibowitz]

Emile's son HENRY ADLER BERLINER (1895–1970), aeronautical engineer, did pioneering work with his father on helicopter construction during and after World War I. He was president of Berliner Aircraft, Inc. in Washington and from 1930 to 1954 chairman of Engineering and Research Corporation. In 1955 he became president of the Maryland firm of Tecfab Inc. In World War II, during which he lost an arm, he was chief of war plans for the Eighth Air Force.

BERLINER, ISAAC (1899–1957), Mexican Yiddish poet. Born in Lodz, Berliner immigrated to Mexico in 1922 and earned a precarious livelihood as a peddler in the Mexican provinces. In 1927 he and two other Mexican Yiddish poets, Moses Glikovski (d. 1980) and Jacob *Glantz, published a volume of lyrics *Dray Vegn* ("Three Roads," Spanish transl. *Tres Caminos*, 1997). His second volume *Shtot fun Palatsn* (1936), illustrated by the Mexican painter Diego Rivera, appeared in English as *City of Palaces* (1996). His national elegies *Ad Mosay* ("Until When?" 1941) were followed by *Shtil Zol Zayn* ("Let There Be Silence," 1948) and *Gezang fun Mentsh* ("The Song of Man," 1954). In style, imagery, use of neologisms, and rich rhythms, Berliner was influenced by his Lodz fellow poet Moses *Broderzon, but Berliner was more socially conscious. In many lyrics he cries out vehemently against the abysmal poverty of the Mexicans around the Tepito Market in the heart of the "city of palaces."

BERLINSKI, HERMAN (1910–2001), composer. Born in Leipzig, Berlinski studied piano, composition, and conducting at the Leipzig Conservatory (1927–32). He left Germany in 1933 and went to Paris, studying piano with Alfred Cortot and composition with Nadia Boulanger at the Ecole Normale de Musique (1934–38). In 1939 he joined the French Foreign Legion but on the fall of France he emigrated to the United States (1941). Berlinski's style combines twelve-tone techniques with traditional Hebrew cantillation. His works include a cantata, *Habakkuk*, pieces for organ and piano, *Flute Sonata* (1941), *Violin Sonata* (1949), *Symphonic Visions* (1949) and liturgical

Jewish compositions – *Kaddish* (1953), *Avodat Shabbat* (1957), and *Kiddush ha-Shem* (1958).

[Israela Stein (2nd ed.)]

BERMAN, ADOLF ABRAHAM (1906–1978), socialist Zionist. Born in Warsaw, he was the son of Isser Berman, a well-known Zionist and member of the Hovevei Sefat Ever society, and a brother of Jacob *Berman. Adolf Berman joined the Left Po'alei Zion as a student and edited both its Polish language organ and its Yiddish weekly, *Arbeter Tsaytung*. After the outbreak of World War II he was for some time chief director of "Centos," the organization for social welfare in Warsaw, and was active in the Polish underground movement. Upon the establishment of the Anti-Fascist Bloc in 1942, he became one of its leaders and coeditor of its paper *Der Ruf*. He left the ghetto after the mass deportation of Jews to Treblinka in the summer of 1942 and established himself in the so-called Aryan side of Warsaw, where he cooperated with left-wing political groups. He was a member of the presidium of the Jewish National Committee and its representative with the Polish underground organization. He fought in the Warsaw uprising of 1944 and after the liberation of Poland was a member of the Polish temporary parliament.

In 1947 Berman became president of the central committee of Polish Jews, but three years later he immigrated to Israel. Here he joined Mapam, and in 1951 was elected to the Knesset. In 1954 he left Mapam and became a member of the Communist Party. He was elected to the party's central committee and edited its Yiddish language weekly, *Frei Israel*. In 1956 he became a member of the general council and bureau of the International Resistance Organization.

[Abraham Wein]

BERMAN, HOWARD LAWRENCE (1941–), U.S. congressman. Raised in a traditional home in Beverlywood, Los Angeles, by an Orthodox Polish-immigrant father, Berman spent several summers at Machene Yehuda, a Jewish camp in the hills northeast of Los Angeles' San Fernando Valley. The camp's head counselor was the young Rabbi Chaim *Potok (1929–2002). Berman always considered his summers at Machene Yehuda to be "the single-most important Jewish experience" in his life.

Berman entered the University of California at Los Angeles (UCLA) in 1958, where he majored in political science and became active in the California Federation of Young Democrats, where he was befriended by the head of the Draft Stevenson campaign, fellow Angelino Henry Waxman. The two

became fast friends, eventually forming (along with Howard's brother Michael) an informal political alliance known as "The Waxman-Berman Machine." After graduating from UCLA in 1962, Berman went to the university's School of Law, receiving his LL.B. in 1965.

By 1965, Waxman had become president of the California Federation of Young Democrats (CFYD). Along with Waxman, Berman and the CFYD gravitated toward the party's insurgent faction, led by future United States Senator Alan Cranston, and against the party's more established wing, controlled by California Assembly Speaker Jesse ("Big Daddy") Unruh. By 1967, when Howard became a VISTA (Volunteers in Service to America) volunteer, he was irrevocably hooked on politics. Following his year with VISTA, Berman went into private practice, specializing in labor law. Meanwhile, brother Michael was masterminding Henry Waxman's election to the California State Assembly. Named chair of the Assembly committee that oversaw reapportionment in 1972, Waxman hired Michael Berman to help him draw up district lines. Part of their plan was to create an Assembly district for Howard right in his own backyard of Beverlywood. When California Governor Ronald Reagan vetoed the Waxman-Berman reapportionment plan, Howard moved from Beverlywood into a district that ran along the Santa Monica Mountains from Hollywood to the San Fernando Valley and successfully ran against a twenty-six-year incumbent Charles Conrad, the Assembly Republican leader.

Within days, the freshman legislator was named Assembly majority leader – the youngest in California history. As majority leader, Berman passed legislation that imposed stiff penalties on California banks that joined the Arab boycott against Israel. In 1980, after five years as Assembly majority leader, Berman narrowly lost a bid to become that body's speaker. After his defeat, Berman allied himself with San Francisco-area Congressman Phillip Burton in the 1982 congressional reapportionment plan. Burton, working alongside Michael Berman – who, by then had become a major player in California Democratic politics – managed to secure a congressional seat for Howard. Howard Berman was elected with 60 percent of the vote.

Upon entering the House of Representatives, he quickly broke out of the freshman pack by getting himself a seat on the Democratic Steering and Policy Committee. Berman managed to get himself seated on both the House Committee on Foreign Affairs (later renamed "International Relations") and House Judiciary – two plum assignments for a newly minted legislator. In Congress he forged a reputation for being "one of the most aggressive and creative members of the House – and one of the most clear-sighted operators in American politics."

In Los Angeles, Berman was one half of the powerful "Waxman-Berman Machine" that raised enormous sums of money, mainly from Jewish liberals. The Waxman-Berman Machine changed the face of American politics: they were the first to make contributions to the campaigns of other like-minded candidates.

Berman was one of Israel's strongest voices in the halls of Congress. He arranged tens of thousands of visas for immigrants without close relatives in the United States. These visas, selected randomly by computer, came to be known as "Berman visa applications" and were a boon to thousands and thousands of Soviet Jewish émigrés who settled in America in the 1980s and 1990s.

[Kurt Stone (2nd ed.)]

BERMAN, JACOB (1878–1974), rabbi, educator, and communal worker. Berman was born in Salant, Lithuania. He studied rabbinics at Telz Yeshivah and law at St. Petersburg University. While in St. Petersburg he played a part in the founding of the Baron Guenzburg Jewish Academy. In 1902 he was a delegate to the Zionist Conference in Minsk and the first Mizrahi Conference in Lida, where he lectured on the need for modernizing the yeshivot and initiated the founding of the Lida yeshivah of Isaac *Reines. He was principal of the yeshivah of Odessa, and rabbi in Berdichev, where he was active in saving and aiding refugees. In 1921 he immigrated to Erez Israel, and from 1924 to 1944 he was head of Mizrahi religious education, served as deputy director of the Keneset Yisrael education department, and was chief inspector of religious schools. He was active in enlarging and developing the state religious education network and founded and directed the Religious Pedagogical Institute for yeshivah graduates. He wrote *Torat ha-Medinah be-Yisrael*, *Pirkei Shulḥan Arukh le-Talmidim*, and *Halakhah le-Am*. He was awarded the Israel Prize for Education in 1968.

BERMAN, JAKUB (1901–1984), Polish Communist leader. Born in Warsaw, a brother of Adolf *Berman, Jacob graduated in law and then undertook research into the economic and social history of Poland. Some of his articles on these subjects dealt with Jewish problems, and in 1926 he published a dissertation on the tasks of the historical section of the Jewish Scientific Institute (YIVO). From 1928 to 1939 he worked for the Jewish Telegraphic Agency. Berman joined the Polish Communist Party in 1928, becoming one of its most active workers. During World War II he took refuge in the Soviet Union, and in 1943 helped to organize the Soviet-sponsored Union of Polish Patriots. He was a member of the political staff of the Polish Army in the U.S.S.R. and of the Polish National Liberation Committee. After the war he returned to Poland and was undersecretary of state in the presidium of the Council of Ministers from 1945 to 1952. From 1952 to 1956 he was a deputy premier. In these years Berman was a leading figure in the Political Bureau and a close colleague of the Polish president, Boleslaw Bierut. In 1956, when Wladislaw Gomulka came to power, Berman was accused of Stalinism and removed from all his government and party posts. From 1958 to 1968 he worked as editor in a publishing

house but in 1968, during the antisemitic campaign, he was forced to retire.

[Abraham Wein]

BERMAN, JULIUS (1935–), U.S. lawyer, rabbi, and communal leader. Berman was born in Dukst, Lithuania. Despite the German occupation the family managed to immigrate to the United States in April 1940 and settled in Hartford, Connecticut. After earning a B.A. at Yeshiva University (1956), Berman attended Yeshiva's Rabbi Isaac Elchanan Theological Seminary (in the daytime) and NYU Law School (at night). In 1959 he received his rabbinic ordination from the seminary and in 1960 he graduated first in his class from law school, having been named a member of the law review and the legal honor society.

Choosing to pursue a legal career rather than practicing as a rabbi, Berman joined the New York firm of Kaye, Scholer, Fierman, Hays & Handler (now Kaye Scholer LLP) in August 1959, where in the course of a career spanning more than 40 years he was an accomplished litigator in state and federal courts, a renowned negotiator, and a highly respected counselor for numerous clients throughout the United States, particularly those with Orthodox affiliations.

Berman was a pioneer among Sabbath-observing Jews in the New York legal world, particularly the larger law firms. By working Sundays and carrying a workload even greater than many of his colleagues, Berman was able to demonstrate that Sabbath observance did not hinder success; and his diligence and skill were rewarded in July 1969 when he was made a partner in the firm. Indeed, it was through his efforts (and those of a small number of others) that hiring observant Jews became a matter of routine in New York and other major cities. Unlike the Kaye, Scholer of the early 1960s, today many of the firm's attorneys wear *kippot* in the office and, due largely to Berman's efforts over the years, the firm today boasts a daily *minhah/ma'ariv minyan* and a weekly advanced Talmud lecture.

Berman's service to the American Jewish community began with an Orthodox focus. He was a founder and president of the National Jewish Commission on Law and Public Affairs (COLPA), which provided legal representation with respect to issues of interest to the Orthodox community; and the founding president of Camps Mogen Avraham, Heller, Sternberg, Inc., which operated four camps serving some 3,000 Orthodox campers. Berman was active in the Union of Orthodox Jewish Congregations of America (the Orthodox Union) from the outset of his career and ultimately was elected its president.

Berman was heavily involved in representing Orthodoxy in the broader Jewish community, in such organizations as the multid denominational Synagogue Council of America and

the National Jewish Community Relations Advisory Council. While serving as Orthodox Union president, he became the first Orthodox lay leader to become chairman of the *Conference of Presidents of Major American Jewish Organizations, which propelled him into a prominent role on the national and international Jewish scene. Other national positions included the chair of the American Zionist Youth Foundation, chair of the Jewish Telegraphic Agency, and board member of the Joint Distribution Committee. He was also a member of Yeshiva University's Board of Trustees and Executive Committee and chairman of the Isaac Elchanan Theological Seminary's Board.

Among the significant attachments in Berman's life was his close relationship with Rabbi Joseph *Soloveitchik, who had been his teacher at the seminary during his rabbinic studies. Over time, Berman became the "Rav's" lawyer, literary agent, and personal confidante. When Soloveitchik decided to publish many of his lectures and manuscripts, he entrusted the pertinent materials (including a large number of audio tapes of lectures) to Berman for safekeeping.

In the early 21st century Berman became chairman of the *Conference on Jewish Material Claims Against Germany, serving a rapidly aging survivor population. His role forced him to balance the needs of survivors, diminishing in numbers but in greater need of assistance, with the Claims Conference's commitment to use some of the funds for Holocaust education, scholarship, and remembrance. This placed him in an unenviable and certainly not an uncontroversial position.

[Michael Malina (2nd ed.)]

BERMAN, MORTON MAYER (1899–1986), U.S. Reform rabbi and organization executive. Berman was born in Baltimore, Maryland. He was a graduate of Yale (1921) and was ordained by the Jewish Institute of Religion in 1926, where he was deeply influenced by its president, Stephen S. *Wise. He attended the Hebrew University of Jerusalem as the school's first Guggenheimer Fellow in 1926 and then studied in Berlin in 1927; he served as rabbi in Davenport, Iowa (1927–29), the Free Synagogue in New York City (1929–37), where he was an assistant to Wise and director of education, and Temple Isaiah Israel in Chicago (later קאמ Isaiah Israel; 1937–57), a synagogue that had fallen upon hard times during the Depression, its membership depleted to 150 dues-paying members from 1,000 and which he brought back to its former prominence. During World War II Rabbi Berman was a chaplain in the Pacific with the U.S. Navy, where he won a Bronze Star for service on Okinawa. Berman was a political activist serving communal, national, and Zionist causes. From 1939 to 1957 he played leading roles in such national organizations as the Jewish National Fund, the Zionist Organization of America, and the American Jewish Congress. He edited the *Congress Courier*, now the *Congress Bi-Monthly*. A life-long Zionist, he took his own teaching to heart and in 1957 he moved to Jerusalem, where he became director of the department of English-speaking countries for Keren Hayesod. Rabbi Berman wrote *Jew's*

View of the Crucifixion (1929), *Role of the Rabbi* (1941), and *For Zion's Sake: A Personal and Family Chronicle* (1979).

[Michael Berenbaum (2nd ed.)]

BERMAN, MYRON R. (1928–), U.S. Conservative rabbi. Berman was born in New York, educated at the City College of New York, and ordained at the Jewish Theological Seminary. He also received a B.H.L. from its seminary college as well as an M.H.L. and an honorary D.D. degree. He served as chaplain in the United States Air Force, serving in New Mexico and Japan. He received his Ph.D. from Columbia University in 1963. From 1965 until his retirement in 1993, he served as rabbi of Temple Beth-El of Richmond, Virginia, a community he served as an educator, a civil rights activist, and a historian. His writings include *Richmond's Jewry, 1769–1976: Shabbat in Shockoe* (1979) and *The Attitude of American Jewry Towards Eastern European Jewish Immigration, 1881–1914* (1980), in which Berman demonstrated that American Jews, while helping individual immigrants, acquiesced in restrictive immigration laws in the late 19th century; it was only after the *Kishinev pogrom in 1903 that American Jews sought to liberalize immigration policies for their East European brethren. Berman came to Temple Beth-El in Richmond, Virginia, in August 1965 after serving as associate rabbi for Beth-El in Cedarhurst, New York, for seven years. He was the first rabbi to serve as president of the Richmond Area Clergy Association. He received the Richmond City Medallion for communal service and later was honored by the National Conference of Christians and Jews. He received a citizen's award from the Henrico Police Department. Berman had served as chairman of the board of education for the seaboard region of the United Synagogue.

Berman was a member of the Virginia-Israel Commission, appointed by Governor Baliles. He wrote the introductions to both Holocaust curricula published by the State of Virginia, and he was also a consultant to the state's commission on social studies. More recently, he served as a member of the Henrico 2000 Committee, which forecast trends in education for the next decade. He was cited by *Hadassah Magazine* and *Surroundings* as among Richmond's most influential citizens.

[Bezalel Gordon (2nd ed.)]

BERMAN, PANDRO S. (1905–1996), U.S. film producer. Born in Pittsburgh, Pennsylvania, Berman was responsible for the production of 85 films for RKO, including the Ginger Rogers-Fred Astaire musicals.

Born into the film industry, Berman's father, Henry, was general manager of Universal Pictures during Hollywood's formative years. Pandro spent most of the 1920s learning the business. He started out as a script clerk and then rose to film editor. By 1931, the 26-year-old Berman was an assistant di-

rector at RKO when David O. *Selznick took over the floundering studio. Selznick fired many people at RKO, but he saw something in Berman and made him his assistant. Berman was a success and, as a producer, brought to the screen many stars and great films. It was he who paired Rogers with Astaire, made Katherine Hepburn a star, and brought Elizabeth *Taylor to public attention. In 1940 he signed a contract with MGM. In 1963, when an MGM power play diminished his authority, Berman left to do independent work.

Berman's productions include *The Gay Divorcee* (1934); *Top Hat* (1935); *Shall We Dance* (1937); *Stage Door* (1937); *The Hunchback of Notre Dame* (1939); *National Velvet* (1945); *The Seventh Cross* (1944); *The Picture of Dorian Gray* (1945); *Of Human Bondage* (1948); *Madam Bovary* (1949); *Father of the Bride* (1950); *The Prisoner of Zenda* (1952); *Ivanhoe* (1952); *The Blackboard Jungle* (1955); *Tea and Sympathy* (1956); *Something of Value* (1957); *Jailhouse Rock* (1957); *The Brothers Karamazov* (1958); *Butterfield 8* (1960); *Sweet Bird of Youth* (1962); *The Prize* (1963); *A Patch of Blue* (1965); *Justine* (1969); and *Move* (1970). In 1977 Berman received the Irving Thalberg Award at the 49th annual Academy Awards.

ADD. BIBLIOGRAPHY: M. Steen, *Hollywood Speaks: An Oral History* (1974).

[Ruth Beloff (2nd ed.)]

BERMAN, SHELLEY (1926–), U.S. actor, comedian, author. Berman was trained as an actor at the Goodman Theater in his native Chicago before joining stock companies in Chicago and New York. In the mid-1950s he joined the Chicago Compass Players, the famed performance group now known as The Second City. Berman's first breakthrough as a comedian came in 1957 when he began performing at Mr. Kelly's in Chicago. His success as a comedian, including 21 appearances on *The Ed Sullivan Show*, led to three best-selling comedy records and the distinction of winning the first Grammy Award for a non-musical recording, as well as becoming the first stand-up comedian to perform at Carnegie Hall. His stage credits include starring roles in the Broadway musical *Inside Outside and All Around Shelley Berman* and Neil *Simon's touring musical production *Two by Two*. On television Berman appeared on both variety shows such as *The Ed Sullivan Show* and *The Jack Paar Show*, and scripted programs such as *L.A. Law*, *Friends*, *Arless*, *Walker*, *Texas Ranger*, *Dead Like Me*, and *Curb Your Enthusiasm*, on which he played the role of Larry David's father. His major film credits include *The Best Man*, *Every Home Should Have One*, *Divorce American Style*, *Teen Witch*, and *The Last Producer*. Berman is the author of three books (*Cleans and Dirty's*, *A Hotel is a Funny Place*, and *Up in the Air*), two plays (*First is Supper* and *Silver Sonata*). He was also a professor in the University of Southern California's Professional Writing Program and was awarded an honorary doctorate of humane letters from the Spertus Institute of Jewish Studies.

[Walter Driver (2nd ed.)]

BERMAN, SIMEON (1818–1884), precursor of Jewish agricultural settlement in Erez Israel. Berman, who was born in Cracow, founded a Jewish agricultural settlement society there in 1851. He immigrated to the United States in 1852 and settled in New York. There and in other cities he attempted to found societies for agricultural settlement, but received no support. In 1870 he went to Erez Israel and proposed that Mikveh Israel land be set aside for an agricultural settlement, but his proposal was rejected. Berman sent a request, through the U.S. consul, to the Ottoman government asking to be allowed to buy land in Erez Israel. The request was granted, and Berman moved to Tiberias, where he founded the cooperative Holy Land Settlement Society. He received messages of encouragement from rabbis Zevi Hirsch *Kalischer and Elijah *Guttmacher, who also promised funds. A parcel of land on the shores of Lake Kinneret was chosen for settlement, and Berman went abroad to propagate the scheme. His Yiddish book *Masot Shimon*, published in 1879, relates his experiences in Erez Israel. In 1882 Berman returned to Tiberias where he died. Toward the end of his life he witnessed the establishment of the first settlements in Judea and Galilee. Their founders, as the early settlers David Schub and Moshe *Smilansky testify in their memoirs, had been influenced by his book.

[Avraham Yaari]

BERMAN BERMAN, NATALIO (1907–1959), Chilean politician and Zionist leader. Born in Podolia (Russia), Berman immigrated to Chile in 1915 when he was eight years old. His family settled in Valparaíso, where he graduated from high school. From early childhood he demonstrated his qualities as a leader, organizing the Jewish youth of the small community of Valparaíso. At the age of 15 he was named a delegate from Valparaíso to the Zionist Congress of Chile. He studied medicine at the University of Santiago, working as an assistant in anatomy. During his studies he engaged in broad communal activity, founding the periodical *Nosotros*, which became the organ of the entire Chilean Jewish community. He was active in merging the four existing Jewish youth groups into one organization – the Asociación de Jóvenes Israelitas (AJI).

In 1930 Berman was elected president of the Federación Sionista de Chile. After his graduation in medicine he moved to Concepción, continuing his Jewish communal activities. At the same time, however, he was extremely active among the poor Chilean classes, starting his political career in the N.A.P. (Nueva Acción Pública), which later united with the Socialist Party.

In 1936 Berman led a public campaign against higher taxes, as a consequence of which the government exiled him to a remote island in the south of Chile and revoked his Chilean citizenship. This act provoked the general indignation among

the Chilean public, and the Parliament passed a law restoring Berman's Chilean citizenship.

In 1937 Berman was elected a member of Parliament for Concepción. During his term of office, which lasted until 1949, he was very active in the struggle against Nazism and in obtaining entry permits for Jewish refugees. Berman participated in the Popular Front government. In 1941 he withdrew from the Socialist Party, forming the Partido Socialista de Trabajadores (Socialist Workers' Party), which later united with the Communist Party. He abandoned the CP, however, due to Stalin's antisemitic policy. Throughout his political career he continued his activities on behalf of the Jewish community.

[Moshe Nes El (2nd ed.)]

BERMANN, RICHARD ARNOLD (1883–1939), Austrian author and journalist. Bermann was born in Vienna to an assimilated Viennese Jewish family, but spent much of his childhood in Prague. In 1906 he received his doctorate in philology; he began his career as a writer while still a student. From 1912 he was correspondent of the *Berliner Tageblatt* under the pseudonym of Arnold Hoellriegel; he traveled widely as a foreign reporter and "pacifist" war correspondent for the newspaper *Die Zeit* during World War I. After the war he continued his career as a journalist, travel writer, and film critic. He visited Palestine with Arthur Rundt, and their book *Palaestina* (1923) was a glowing account of early Zionist achievements. Both men were careful, however, to disclaim any personal adherence to Jewish nationalism. In Vienna, he maintained a close friendship with author Leo *Perutz, and also knew *Freud, Viktor *Adler, and Otto *Bauer. Bermann's most popular book, *Das Urwaldschiff* (1927; *The Forest Ship*, 1931), described an adventurous trip up the Amazon. The subject of *Der Wischtrommel* (1931), which appeared in English as *The Mahdi of Allah* (1931) with an introduction by Winston Churchill, was the Sudanese struggle against the British in the days of General Gordon and Lord Kitchener. After the Nazis occupied Vienna in 1938, Bermann attempted to flee three times to the United States. After being arrested and imprisoned, he was finally able to find refuge in the U.S. that same year, where he continued his resistance to the Nazis as director of the American Guild for German Cultural Freedom in New York, an organization which supported persecuted authors. He died in 1939 in the artists' colony of Yaddo in Saratoga Springs, N.Y.

Bermann," in: *Relation. Medien – Gesellschaft – Geschichte* (1996), 73–78.

[Sol Liptzin / Lisa Silverman (2nd ed.)]

BERMANN, VASILI (Ze'ev Wolf; 1862–1896), one of the first members of Hovevei Zion in Russia. He was born in Mitava, Russia (today Jelgava, Latvia) and studied at the Russian-Jewish school run by his father Eliezer Bermann, who published the Russian-Jewish newspaper *Russkii Yevrei* in St. Petersburg. He graduated as a lawyer from St. Petersburg University. After the 1881 pogroms in South Russia, he joined the Hibbat Zion movement. He published and edited the Russian-language anthologies *Palestina* (1884, with A. Flekser, Volynsky) and *Sion*, which expounded the intellectual basis for the Hibbat Zion ideology. Bermann attended the Hovevei Zion Druskoniki conference (1887) and aided in the efforts to obtain an official permit for the Hovevei Zion society to operate in Russia. He was secretary of the founding assembly of the society in Odessa (1890). Convinced that organized emigration was essential for Russian Jewry, Bermann supported Baron de Hirsch's plans to organize the mass exit of Jews from Russia, and regarded this as supplementing the settlement project in Erez Israel. He became secretary of the ICA (*Jewish Colonization Association) founded by Baron de Hirsch, conducted a comprehensive survey of the problem of Jewish emigration, and established and headed the ICA's emigration department. Bermann was also a founder of the Historical-Ethnographical Committee of the Society for the Spreading of Enlightenment among the Jews in Russia. He contracted tuberculosis and went to live in Cairo, where he died.

[Yehuda Slutsky]

BERMANT, CHAIM ICYK (1929–1998), Lithuanian-born Scottish humorist and journalist noted for his gently satirical sketches of British Jewry. His short novels, which reflect a traditional upbringing, include *Jericho Sleep Alone* (1964), *Diary of an Old Man* (1966), and *Swinging in the Rain* (1967). He also published a guidebook, *Israel* (1967), and *Troubled Eden: An Anatomy of British Jewry* (1969). Possibly Berman's most valuable work was his biographical history of England's "grandee" Jewish families like the Rothschilds and Montefiores, *The Cousinhood* (1961). Berman also published a biography of England's Chief Rabbi, *Lord Jakobovits* (1990). Berman wrote a weekly column in the *Jewish Chronicle* (of which he was Features Editor in 1964–66), which was widely noted and often controversial. Two volumes of Berman's best weekly columns appeared, *Murmurings of a Licensed Heretic* (1990) and *On the Other Hand* (2000), which was published posthumously. Berman also wrote a volume of autobiography, *Genesis: A Latvian Childhood* (1998).

[William D. Rubinstein (2nd ed.)]

BERMUDA CONFERENCE, Anglo-American Conference on Refugees in 1943. During World War II, Jewish and general public opinion in the U.S. and the British Commonwealth urged that the Allied governments rescue the

victims of the Nazi regime. Under pressure from parliament, churches, and humanitarian organizations, the British Foreign Office, on Jan. 20, 1943, proposed joint consultation between Britain and the U.S.A. to examine the problem and possible solutions. After an exchange of diplomatic notes, the Anglo-American Conference on Refugees was held in Bermuda from April 19 to 30, 1943. The American delegation was headed by Harold Willis Dodds, president of Princeton University; the British delegation, by Richard Law, parliamentary undersecretary of state for foreign affairs. No private organizations or observers were admitted but interested Jewish organizations in America and England prepared memoranda proposing rescue measures. Chaim *Weizmann submitted a document on behalf of the *Jewish Agency for Palestine, underlining the importance of Palestine in the solution of the problem of Jewish refugees, and demanding abandonment of the policy based on the British White Paper policy of May 1939. The delegates, however, anxiously avoided referring to the Jews as the Nazis' major victims. Disagreement between the two governments about continuing the Intergovernmental Committee of Refugees, founded at the *Evian Conference in July 1938, took up most of the time but it was decided eventually to extend its mandate to deal with postwar problems. British plans for opening up camps in North Africa as a haven for refugees during the war proved impracticable. After seven months – on Dec. 10, 1943 – the report of the conference was published. Its only positive decision – to revive the Evian Committee – came too late to save a single Jew from the Nazi Holocaust.

***BERNADOTTE, FOLKE, EARL OF WISBORG (1895–1948)**, Swedish statesman. Bernadotte was the youngest son of Prince Oscar August of Sweden, a brother of King Gustav V. During World War II he organized an exchange of disabled prisoners of war between Germany and the Allies on behalf of the Swedish Red Cross. He became vice chairman in 1943, and president in 1946, of the Swedish Red Cross. Stimulated by Norwegian and Danish intervention on behalf of their civilian prisoners in German concentration camps, he negotiated on behalf of the Swedish Red Cross with *Himmler who was persuaded to release more than 7,000 Scandinavians during March and April 1945, including over 400 Danish Jews, from *Theresienstadt. Following negotiations with a representative of the *World Jewish Congress in Sweden, Norbert Masur, he also effected the release of several thousand Jewish women from various countries interned in the Ravensbrueck concentration camp. Most of those released were transferred to Sweden. Subsequently, at a meeting in Luebeck on April 24, 1945, Himmler tried to use Bernadotte's good offices to forward peace proposals to the Allies. Bernadotte transmitted

the Allies' rejection of these proposals to Himmler on April 27, in Flensburg.

On May 20, 1948, six days after the proclamation of the State of Israel and five days after the commencement of military action, the Security Council of the United Nations appointed Bernadotte mediator in the Arab-Israel conflict. He succeeded in bringing about the first four-week truce on June 11, but failed to achieve Arab consent for its prolongation. Overextending his assignment as mediator, Bernadotte worked out a peace plan that deviated substantially from the UN partition resolution, suggesting, *inter alia*, the incorporation of Jerusalem and the whole Negev in Transjordan in exchange for the inclusion of Western Galilee in Israel. These proposals, which became public a few days after Bernadotte's death, met with stiff opposition by Israel and failed to achieve endorsement by the UN General Assembly in November 1948. On Sept. 17, 1948, Bernadotte was assassinated in Jerusalem. His assailants have not been identified but are believed to have been connected with *Loḥamei Herut Israel. A forest named in his honor has been planted by the *Jewish National Fund in the Judean Hills. Among his books are *The Curtain Falls: Last Days of the Third Reich* (1945) and *To Jerusalem* (1951).

[Leni Yahil]

BERNAL, Sephardi family of Marrano extraction. Its members included ABRAHAM (Manuel Nuñez) BERNAL (c. 1612–1655), a native of Almeida in Portugal, who was the leader of the crypto-Jewish group at Écija (Spain). After trial by the Inquisition at Córdoba he was burned at the stake for his faith, proclaiming his adherence to Judaism to the end. When the news reached Amsterdam the local Jewish poets collaborated in a volume in his memory under the title *Elogios que zelosos dedicaron á la felice memoria de Abraham Nuñez Bernal*, which was published by his cousin JACOB BERNAL. This volume also includes a sermon in honor of Abraham by Isaac *Aboab da Fonseca, and a prose account of the imprisonment and death of Abraham's nephew MARCO (Ishac de Almeida) BERNAL who was martyred also in 1655 at the age of 22. It ends with a sermon by Jacob Abendana in honor of both martyrs. In the course of the 18th century, some of the family settled in London. JACOB ISRAEL BERNAL, a West Indian merchant (d. 1766), served as a warden of the Spanish and Portuguese Jewish community there in 1745, but resigned in protest in 1752 when the synagogue authorities objected to his marriage to an Ashkenazi woman. His son JACOB (d. 1811) dissociated himself from the community and denounced its methods as inquisitorial when he failed to be elected to office; he did not formally abandon Judaism. In the course of time, however, the family left the Jewish community. His son RALPH (1783–1854), brought up as a Christian, was a politician and member of parliament from 1820 to 1853. In 1853 he was president of the

British Archaeological Society and a renowned art collector. His son RALPH BERNAL-OSBORNE (1808–1882) was a noted wit and Liberal politician, who was secretary to the admiralty (1852–58). The physicist John Desmond *Bernal (1901–1971) is also descended from this family. The Jewish origin of MES- TRE BERNAL, who accompanied Columbus' first expedition to America, is hypothetical.

[Kenneth R. Scholberg]

BERNAL, JOHN DESMOND (1901–1971), physicist. Bernal was born in Nenagh, County Tipperary, now in the Irish Republic, and graduated in science from Cambridge University (1923). After research at the Royal Institution, London (1923–27), he returned to Cambridge as a lecturer in structural crystallography before his appointment as professor of physics at Birkbeck College, London (1937). His main research achievements concerned the crystallographic study of proteins, an essential step in the emergence of molecular biology. His pupils included Rosalind *Franklin, Aaron *Klug, and Max *Perutz. Known as the "Great Sage of Cambridge," he was a polymath to the detriment of his personal achievements. His interests included the origins of life on Earth and the creation of the Mulberry harbors indispensable for the 1944 D-Day landings. He was deeply interested in the social concerns of science and he lectured and wrote prolifically in this field and on popular science and the history of science. His honors included election to the Royal Society of London, the Lenin Prize of the U.S.S.R., and the U.S. Medal of Freedom. The precocious child of Sephardi Jews on his father's side and an American mother, he became a Marxist and, with the rise of fascism in the 1930s, briefly a member of the Communist Party.

[Michael Denman (2nd ed.)]

BERNARD, EDWARD (1638–1697), English Orientalist and bibliographer. He had already studied Hebrew at school (in London), and at Oxford, when his mathematical ability secured him the professorship of astronomy at Oxford, first as Wren's deputy, and for one year (1676) he acted as tutor to Charles II's sons. He was devoted, however, to the study of Oriental languages. Bernard was one of the earliest students of Samaritan; he traced all alphabets to this script as putative parent (1689). His planned edition of Josephus foundered after the early books of the *Antiquities* (Oxford, 1700); he had written on the Septuagint and Letter of Aristeeas (*ibid.*, 1692) and published W. Guise's translation of part of Mishnah *Zera'im* (*ibid.*, 1690). The wider scholarly world knows Bernard as author of the still important combined catalog of English and Irish manuscript collections (*ibid.*, 1697). His publica-

tions and manuscript *reliquiae* are listed by A. Wood (*Athensae Oxonienses*, ed. by P. Bliss, 4 (London, 1813–20), 703), and a printed auction-catalog of his library survives in the British Museum.

[Raphael Loewe]

BERNARD, HAYYIM DAVID (1782–1858), Polish physician and ḥasidic leader. Born in Działoszyce, near Piotrkow, Bernard is reputed to have been the son of the poet and physician Issachar Falkensohn *Behr. At the age of 14 Bernard arrived in Berlin and later qualified as a physician in Erfurt. The liberal policies of King Frederick William II enabled him to become court physician at Potsdam and a medical officer in the Prussian Army – a considerable achievement for a Jew. After Napoleon's conquest of Poland, Bernard was appointed medical inspector for the western regions of the Grand Duchy of Warsaw (1807–15). A typical product of the German-Jewish Enlightenment, he at first remained aloof from Polish Jewry, but a spiritual crisis led him to approach R. David of *Lelov, who introduced him to R. *Jacob Isaac ha-Hozeh mi-Lublin, the Seer of Lublin. Bernard, known thereafter as R. Hayyim David, became a strictly Orthodox Jew and a follower of the Seer. He grew a beard, although he retained western dress, and never mastered Yiddish. As the Warsaw Jewish archives have shown, he was a leading communal figure and later worked in collaboration with R. *Simḥah Bunem of Przysucha. Among the Jews and Christians whom he treated, Bernard was venerated as a saint and he spent the rest of his life in Piotrkow, both as head of the local hospital and as a “wonder-working” Ḥasid. Although his wife opposed the Seer's wish to designate her husband as his successor, Bernard was widely regarded as the Seer's spiritual heir and for decades after the physician's death his grave was a center of ḥasidic pilgrimage.

BERNARD, JESSIE (1903–1996), U.S. sociologist and feminist. Born Jessie Sarah Ravitch in Minneapolis, Minnesota, the daughter of Jewish-Romanian immigrants, Bernard received B.A. (1923) and M.A. (1924) degrees from the University of Minnesota. Her M.A. thesis was entitled “Changes of Attitudes of Jews in the First and Second Generation.” In 1935 Bernard earned a Ph.D. from Washington University in St. Louis. In some of her work Bernard collaborated with her husband, Luther Lee Bernard, a professor of sociology whom she had met at the University of Minnesota. Bernard spent many years on the faculties of Washington University and Pennsylvania State University. In her early career she researched issues relating to Jewish life. Later, her concerns focused on the family, sexuality, and gender. In her sixties Bernard became an ardent advocate of feminism; she was an influential figure who was regarded as a role model for younger women. She served as president of the Eastern Sociological Association and president of the Society for the Study of Social Problems; in retirement Ber-

nard was a visiting professor at Princeton University. Among awards established in her name are the Jessie Bernard Wise Women Award of The Center for Women's Policy Studies and The American Sociological Association's Jessie Bernard Award for scholarly works dealing with the role of women in society, presented at the group's annual meeting. Among Bernard's publications are *Academic Women* (1964); *The Future of Marriage* (1972); *The Future of Motherhood* (1975); and *The Female World* (1981). Bernard's books were often best sellers and frequently controversial. *The Future of Marriage*, for example, concluded that, while men thrived emotionally in marriage, women were oppressed.

BERNARD, TRISTAN (1866–1947), French playwright and novelist. Born in Besançon, Bernard began his career as a sports writer, but soon turned to the theater, where he was able to exercise his talent for comedy, good-humored satire, and witty observation of the man in the street. His *bons mots* were so famous that for three decades he was credited with many of the jokes current in France. Bernard wrote several novels, notably *Mémoires d'un jeune homme rangé* (1899), *Amants et voleurs* (1905), and *Mathilde et ses mitaines* (1912). He is best remembered, however, as the author of such hilarious comedies as *Les pieds nickelés* (1895), *Langlais tel qu'on le parle* (1899), *Le petit café* (1911), *Le prince charmant* (1923), *Jules, Juliette, et Julien* (1929), *Le sauvagement* (1931), and *Que le monde est petit* (1935). Tristan Bernard combined the wit of the French with the bitter humor of the Jew. *Le Juif de Venise* (1936) attempts to reinterpret the character of Shakespeare's Shylock. He was arrested by the Nazis during World War II but was released, following the intervention of influential friends. His son, JEAN-JACQUES BERNARD (1888–1972), also wrote a number of popular plays including *Martine* (1922) and *L'invitation au voyage* (1924). Though a convert to Catholicism, he was imprisoned at Compiègne for part of the Nazi occupation. His war experiences were recorded in *Le camp de la mort lente* (1945) and are reflected in the story, *L'Intouchable* (1947).

[Moshe Catane]

BERNARDI, HERSCHEL (1924–1986), U.S. actor. Born in New York City, Bernardi was the product of a long-established family of Yiddish performers. On stage from childhood, he made his first on-camera appearances in 1939 in the Yiddish-language films *Green Fields* and *The Singing Blacksmith*. Bernardi toured in a one-man program of Shalom Aleichem stories and performed in *The World of Sholom Aleichem*, 1954. Along with many fellow entertainers, he was blacklisted by

Hollywood in the early 1950s for alleged Communist ties. Bernardi's first part on Broadway was in the musical *Bajour* in 1965. He then played Tevye in the Broadway production of *Fiddler on the Roof* (1966–67), as well as in a revival run at Lincoln Center in 1981. He also performed in the Broadway productions *Zorba* (1968–69) and *The Goodbye People* (1979).

In addition to his many television guest appearances and roles in TV movies, Bernardi is well remembered for his characterizations of Lt. Jacoby on the *Peter Gunn* detective series (1958–61) and Arnie Nuvo in the sitcom *Arnie* (1970–72). Bernardi also provided voiceovers for hundreds of cartoons and commercials, most notably the wisecracking Charley the Tuna and the laughing Jolly Green Giant. At one point in his career, he had strained his vocal chords so severely that his doctor ordered him not to speak for a full year or he might lose his voice permanently.

He appeared in a number of films over the years, among them *Murder by Contract* (1958); *The Savage Eye* (1960); *A Cold Wind in August* (1961); *Irma La Douce* (1963); *Love with the Proper Stranger* (1963); and *The Front* (1976). Bernardi was one of the main interviewees in the 1984 documentary *Almonds and Raisins*, written by Wolf *Mankowitz and narrated by Orson Welles. The film examines the dozens of Yiddish-language talking films made in the U.S. and Europe between the release of *The Jazz Singer* in 1927 and the outbreak of World War II.

[Ruth Beloff (2nd ed.)]

°**BERNARDINO DA FELTRE** (1439–1494), *Franciscan friar, born at Feltre, N. Italy. From 1471 Bernardino began to attain a great reputation throughout northern Italy as a preacher, especially of the Lenten sermons urging the people to repentance. Pursuing the policy of his order, Bernardino inveighed against the Jews and supported the foundation of public loan-banks (*Monte di Pietà) in order to displace Jewish moneylenders. His preaching was mainly responsible for the blood libel at *Trent in 1475. In the following year, he made a similar attempt at Reggio, and then in Bassano and Mantua; in 1485 he instigated the expulsion of the Jews from Perugia, and in 1486 from Gubbio. In 1488 he was expelled from Florence to prevent disorders. In 1491 in Ravenna he succeeded in having the Jews expelled and the synagogue destroyed. In 1492 he secured the expulsion of the Jews from Campo San Pietro, and from Brescia in 1494. Shortly after his death he was beatified.

BIBLIOGRAPHY: E. Lazzareschi, *Il beato Bernardino da Feltre, gli Ebrei e il Monte di Pietà in Lucca* (1941), Roth, Italy, 170–6, passim; Milano, Italia, index; U. Cassuto, *Gli Ebrei a Firenze nell'età del Rinascimento* (1918), 52–53, 56–60, 62–63.

[Cecil Roth]

°**BERNARDINO DA SIENA** (1380–1444), Franciscan friar, celebrated for his powerful oratory. One of the main themes urged by Bernardino in his sermons was the return of the

Church to its original purity and the exclusion of any form of association between Christians and Jews. Hence, Bernardino ruthlessly upheld the application of anti-Jewish restrictions, including segregation, exclusion from money-lending, limitation of economic activities, and wearing of the Jewish badge. He preached throughout Tuscany, Umbria, and Abruzzi, culminating in inflammatory sermons delivered at Aquila in 1438, attended by King René of Anjou. Almost everywhere, Bernardino's sermons resulted in a deterioration of the relationships between Christians and Jews and often provoked disorders. The circle of disciples which formed around Bernardino assiduously propagated his anti-Jewish doctrine. Most important of those whom he influenced were Barnabas of Terni, Giacomo della Marca, and *Bernardino da Feltre.

[Attilio Milano]

°**BERNARD OF CLAIRVAUX** (1090–1153), French Cistercian, homilist, and theologian. In 1146, when preaching the Second Crusade, he intervened orally and in writing to protect the Jews in the Rhineland from persecution incited by a certain monk Radulph, declaring that an attempt on the life of a Jew was a sin tantamount to making an attempt on the life of Jesus. A letter addressed by Bernard to the Germans implicitly repudiates the policy urged by *Peter the Venerable, abbot of Cluny, against the Jews (although without expressly naming the abbot) by emphasizing the difference between Jews and Muslims; Bernard, while considering it right to take up arms against Muslims, maintains that it is forbidden to attack Jews. While Peter wished to expropriate the wealth of the Jews to finance the Crusade, Bernard limited himself to recommending the abolition of interest on credit they had advanced to crusaders. He finally recalled in his epistle the fate of Peter the Hermit and his followers, who had persecuted the Jews during the First Crusade and led his supporters into such peril that practically none had survived. Bernard warned that the present crusaders might well suffer similar Divine retribution: "It is to be feared that if you act in like manner, a similar fate will strike you." Jewish chroniclers stress Bernard's disinterestedness in his defense of the Jews.

[Bernhard Blumenkranz]

BERNAYS, family originating in Germany with branches elsewhere in Central Europe and the U.S.

ISAAC BEN JACOB BERNAYS (1792–1849), rabbi of Hamburg, Germany, was born in Mainz, studied at Wuerzburg University and at the yeshivah of Abraham Bing and was appointed rabbi of Hamburg in 1821. While Bernays, who preferred the Sephardi designation of ḥakham, was committed to the preservation of inherited customs and ceremonies, he did modernize the curriculum of the local *talmud torah* and regu-

larly gave sermons in the German vernacular. In his struggle against Reform in the community, Bernays formulated elements of a “modern orthodoxy” which influenced the views of his disciple, Samson Raphael *Hirsch. In 1842 Bernays interdited the Reform siddur, then republished by the Hamburg Temple Congregation, stating that a Jew did not fulfill his religious duties if he read his *tefillot* from this prayer book. *Der biblische Orient*, the only work attributed to him, is considered by many to have been written by or in cooperation with J.A. von Kalb, a Christian friend of his from Munich.

Isaac’s eldest son JACOB (1824–1881), born in Hamburg, was a philologist and classicist. He taught Greek at Bonn University (1848–53), at which time he published the Teubner edition of Lucretius’ *De Rerum Natura* (1850), *Heraklitische Studien* (1850), and *Ueber Spinozas hebraeische Grammatik* (1850). Unlike his younger brother, Michael, Jacob was attached to Judaism and when, because of it, he could not gain promotion at Bonn he left and helped to found the Breslau *Jewish Theological Seminary in 1853/54. Jacob mainly taught classics, history, German literature and Jewish philosophy. He encouraged the publication of treatises with the annual report, himself contributing three (on the poetic fragments of Phocylides, 1856; on the *Chronicle* of Sulpicius Severus, 1861; and Theophrastus’ lost work *On Piety*, 1886). His greatest work, *Grundzuege der verlorenen Abhandlung des Aristoteles ueber die Wirkung der Tragoedie* (1857), on Aristotle’s treatise which preceded the *Poetics*, aroused considerable criticism. In 1866 Jacob finally overcame the prejudices at Bonn and was appointed (extraordinary) professor and chief librarian, but still maintained an interest in the seminary at Breslau. His collected works were issued in 1885 (edited by Usener; reprinted in 1971).

[Yehoshua Horowitz]

Isaac’s younger son, MICHAEL BERNAYS (1834–1897), was a distinguished literary critic and historian. He was professor of German literature at the University of Munich (1874–90) and wrote pioneering textual studies of Goethe. After his indifference towards Judaism led him to convert to Protestantism in 1856 his family broke with him completely. Isaac’s other son BERMAN BERNAYS (d. 1879), merchant and secretary to the Viennese economist, Lorenz von Stein, was father of MARTHA BERNAYS (1861–1951) who married Sigmund *Freud.

[George Schwab]

PAUL ISAAC BERNAYS (1888–1977), mathematician, is best known as the coauthor with D. Hilbert of *Grundlagen der Mathematik* (2 vols., 1934–39), which is considered a classic work. Bernays, who was born in London, became Hilbert’s assistant in Goettingen in 1917, and was appointed professor in 1922. In 1934 Bernays left Nazi Germany for Zurich, Switzerland, where he taught at the Polytechnicum. In the post-war era, Bernays was mainly concerned with the philosophy of mathematics. In “Some Empirical Aspects of Mathematics” (1965), he argued that his discipline has an objective (“phenomenological”) reality distinct from the natural world. Ber-

nays wrote numerous papers on this subject, coauthored with Abraham Fraenkel *Axiomatic Set Theory* (1958), and coedited *Information and Prediction in Science* (1965). A book in his honor entitled *Logica, Studia Paul Bernays Dedicata* was published in Switzerland in 1959. Edward L. *Bernays (1891–1995), was a public relations expert whose methods revolutionized the field of public relations.

Bach, *Jacob Bernays* (1974); Poppel, in: LBIYB, 28 (1983), 453–61; L. Tye, *The Father of Spin: Edward L. Bernays and the Birth of Public Relations* (1998).

BERNAYS, EDWARD L. (1891–1995), U.S. public relations executive. Born in Vienna, a nephew of Sigmund *Freud, Bernays is regarded by many as the “father” of public relations. His efforts helped popularize Freud’s theories in the United States. He also was responsible for molding public opinion on a variety of cultural issues in the United States in the 20th century. He was public relations adviser for the Ballet Russe of Sergei Diaghilev, the Metropolitan Opera, Enrico Caruso, Procter and Gamble, President Calvin Coolidge, Henry Ford, Conde Nast Publications, David *Sarnoff, William *Paley, Clare Booth Luce, Samuel *Goldwyn, Mack Trucks, United Fruit (bananas), American Tobacco, United Brewers Association, the National Association for the Advancement of Colored People, the American Civil Liberties Union, the Waldorf-Astoria hotel, General Electric, General Motors, Westinghouse Electric, and Columbia University. His mother, Anna (Freud) Bernays, was Sigmund Freud’s sister. His first cousin was Sigmund’s daughter, Anna *Freud, the renowned child psychologist, and his daughter, Anne *Bernays, was a novelist and the wife of Justin Kaplan, a Pulitzer Prize-winning author and biographer of Walt Whitman.

Bernays was raised in New York City from the age of one. He attended public schools and graduated from Cornell University’s College of Agriculture in 1912. After World War I (Bernays volunteered to aid the American effort, working in President Woodrow Wilson’s Office of War Information), he and his future wife opened an office to promote various clients and causes. Some of his efforts became legendary. To promote Ivory soap and make bathing more popular with children, he set up a national small-sculpture panel that for years oversaw soap-carving competitions. He enlisted “third party authorities” to plead for his clients’ causes: to promote the sale of bacon, he conducted a survey of physicians and reported their recommendations that people eat hearty breakfasts, including bacon and eggs.

In the early 1920s, Bernays arranged for the American publication of Freud’s *General Introduction to Psychoanalysis*. Bernays used his association with his uncle to establish his own reputation as a thinker and theorist. He wrote several

landmark texts, notably *Crystallizing Public Opinion* (1923), *Propaganda* (1928), and “The Engineering of Consent” in *Annals of the American Academy of Political and Social Science* (1947).

Several of his social ideas have had long-lasting effects. He helped make it acceptable for women to smoke in public, sponsoring demonstrations in which debutantes gathered on street corners to light up “torches of freedom.” In his later years, Bernays was a public opponent of smoking and took part in antismoking campaigns.

In his autobiography, *Biography of an Idea*, in 1965, Bernays recalled a dinner at his home in 1933 where Karl von Weigand, foreign correspondent of the Hearst newspapers, was talking about Joseph *Goebbels and his propaganda plans to consolidate Nazi power. “Goebbels had shown Weigand his propaganda library,” Bernays wrote. “Goebbels, said Weigand, was using my book *Crystallizing Public Opinion* as a basis for his destructive campaign against the Jews of Germany. This shocked me ... Obviously the attack on the Jews of Germany was no emotional outburst of the Nazis, but a deliberate, planned campaign.”

[Stewart Kampel (2nd ed.)]

BERNBACH, WILLIAM (1911–1982), U.S. advertising executive. Born in the Bronx, N.Y., he served in the U.S. Army in World War II and then worked at Grey Advertising, one of a few Jewish-owned advertising agencies in New York. His modest upbringing during the Depression and public school education instilled a strong sense of gratitude for the achievements that lay before him during his remarkable career in advertising.

In 1949, seeking to develop an environment based on the primacy of creativity, he joined with Ned Doyle, another Grey vice president, and with Maxwell Dane, a small agency owner, to form Doyle Dane Bernbach (DDB). They specialized in subtle, intelligent copy and graphics. So successful were these efforts that in less than 20 years the agency had become the sixth largest in the U.S. Bernbach’s influence on the contemporary advertising industry was profound. His creative leadership won him many awards.

One of his most famous slogans was “You don’t have to be Jewish to love Levy’s” (rye bread). That campaign elevated Levy’s to the largest seller of rye bread in New York and helped Bernbach and his partners acquire the first of many national and international clients. Other well-known slogans were “Think Small” for a small-car manufacturer and “We Try Harder Because We’re Only Number 2” for the Avis car-rental company. In 1954 DDB determined that the uniqueness of Dr. Edwin Land’s Polaroid breakthrough could best be demonstrated on live television, so they hired some of the most popular celebrities (Steve Allen, Jack Paar, Johnny Carson, and later Mariette Hartley and James Garner) to demonstrate the benefits of the Polaroid instant camera. The relationship between Polaroid and DDB lasted almost 30 years, and the campaign became one of DDB’s most widely recognized.

In its early years, DDB gained its reputation from its ad campaigns for Jewish clients. Orbach’s department store, Levy’s, and El Al airlines provided the ad agency the opportunity to develop noticeable work, which would eventually gain the attention of Volkswagen. Soon to follow was El Al Israel Airlines’ introduction of its trans-Atlantic service from Europe to the U.S. While most airlines would never have shown an image of the ocean in its advertising, for fear of reminding readers of the possibility of a crash, Bernbach faced this fear head on. El Al was the only airline at the time that could offer non-stop service between the two continents. Turning that to El Al’s advantage, DDB created the “torn ocean” ad with the headline “The Atlantic Ocean will be 20% smaller.” The one-time ad was so powerful, that within one year, El Al’s sales tripled.

Bernbach and his partners raised Jewish and other minority advertising agencies into the mainstream of the medium. In 1969 alone, more than 100 new Jewish and Italian agencies opened, ensuring Bernbach’s legacy for decades to come. Largely due to Bernbach’s business acumen, DDB’s \$775,000 off-Madison Avenue business in 1949 evolved into a multibillion-dollar international powerhouse by the mid-1980s, when it merged with Needham Harper Worldwide to create DDB Needham. Bernbach was one of the first inductees into the Copywriters Hall of Fame in 1961 and is in the Advertising Hall of Fame.

[Isadore Barmash / Ruth Beloff (2nd ed.)]

BERNE (Ger. Bern), capital of Switzerland. Jews in Berne, engaged in moneylending, are first mentioned in a document of 1262 or 1263. In 1293 or 1294 several Jews were put to death there in consequence of a *blood libel, and the remainder expelled from the city. However, an agreement was made with the citizenry through the intervention of Adolf of Nassau permitting the Jews to return, against a payment of 1,500 marks and a moratorium on debts owed to them. During the *Black Death (1348) the Jews in Berne were accused of poisoning the wells, and a number were burnt at the stake. The Jews were expelled from Berne in 1392 after Christians were permitted to engage in moneylending (1384). Although between 1408 and 1427 Jews were again residing in the city, the only Jews to appear in Berne subsequently were transients, chiefly physicians and cattle dealers. After the occupation of Switzerland by the French revolutionary armies and the foundation of the Helvetic Republic in 1798, a number of Jews from Alsace and elsewhere settled in Berne. They required a special license to engage in commerce and were obliged to keep accounts in German or French instead of their customary Alsatian Judeo-German. These restrictions were removed in 1846. An organized Jewish community was officially established in 1848: a synagogue was consecrated in 1855, and a cemetery in 1871.

In 1906 a beautiful Moorish-style synagogue was built, which was still in use at the beginning of the 21st century. For some 30 years, there was a separate East European Jewish community. Berne University was one of the first German-speaking universities (1836) to allow Jewish lecturers without requiring a change of professed faith, and many Jews subsequently held academic positions there. The university was attended by numerous students from Russia and Hungary before World War I, including Chaim Weizmann. The first Jewish woman lecturer in Switzerland, Anna Tumarkin, was active at Berne University. The famous trial in which evidence was brought that the *Protocols of the Learned *Elders of Zion* was a forgery was held in Berne in the 1930s. In the 1990s the Jewish communities of Berne and *Biel were jointly granted state recognition. In 2000 there were 807 Jews in the canton of Berne.

[Zvi Avneri / Uri Kaufmann (2nd ed.)]

BERNFELD, SIEGFRIED (1892–1953), psychoanalyst and educator. Born in Lemberg (Lvov), he studied at the universities of Freiburg and Vienna. A pupil of Sigmund Freud, Bernfeld was also influenced by Gustav Wyneken, the German educator and philosopher. He practiced and taught psychoanalysis in Vienna and Berlin and later in Menton, France. Leaving France in 1936, he settled in San Francisco, California. Bernfeld was active in Austrian and German youth movements, applying in practice the conclusions he drew from his psychoanalytic studies. During World War I, he organized the Zionist youth movement in Austria, and published the Zionist youth periodical *Jerubaal* in Vienna (1918–19). Among his other works of Jewish interest are *Das juedische Volk und seine Jugend* (1920). He was a founder of the Hebrew Paedagogium at Vienna and the Jewish children's home at Baumgarten. Bernfeld wrote extensively on a variety of topics. His examination of infant psychology and of Freud's childhood, and also his attempts at educational reform, are noteworthy.

[Shnayer Z. Leiman]

BERNFELD, SIMON (1860–1940), rabbi, scholar, and author. Bernfeld was born in Stanislav, Galicia, and was educated in Koenigsberg and Berlin. In 1886 he was appointed chief rabbi of the Sephardi community of Belgrade, Serbia; he remained there until 1894, when he returned to Berlin and devoted himself to scholarly pursuits. He continued his literary work until his death, despite blindness in his later years. Bernfeld wrote several monographs in Hebrew on Jewish history and philosophy, the earliest published when he was only 19

(in *Ha-Maggid*, 1 (1879), 91ff.). His best-known work is *Da'at Elohim* ("Knowledge of God," 2 vols., 1897), a history of religious philosophy. He also wrote *Toledot ha-Reformazyon ha-Datit be-Yisrael* (1900), a history of the Reform movement; *Benei Aliyyah* (2 vols., 1931), a collection of monographs on famous Jews of various periods; *Sefer ha-Dema'ot* ("Book of Tears," 3 vols., 1923–26), an anthology of historical sources in prose and verse on the persecution of Jews from the earliest periods until the Ukrainian pogroms of 1768, still an important reference work; and *Mavo Sifrutit-Histori le-Khitvei ha-Kodesh* (3 vols., 1923–25), an introduction to the Bible from the viewpoint of biblical criticism. Bernfeld also wrote in Hebrew on the history of the Haskalah in Germany and Galicia, *Dor Tahapukhot* (1897–98) and monographs on Muhammad (1898) and on the Crusades (1899). Bernfeld's works in German include *Juden und Judentum im neunzehnten Jahrhundert* (1898); *Der Talmud, sein Wesen, seine Bedeutung und seine Geschichte* (1900); and *Kaempfernde Geister in Judentum* (1907). His German translation of the Bible, which follows traditional translations, was published in several editions. Bernfeld edited *Die Lehren des Judenthums* (4 vols., 1920–24 and later editions; Eng. tr. of vol. 1 by A.H. Koller, *Teachings of Judaism* (1929), vol. 1: *Foundations of Jewish Ethics*, with new introduction by S.E. Karff, 1968). Although not original in his ideas, Bernfeld popularized and disseminated much important literary and scientific knowledge.

[Joseph Gedaliah Klausner]

BERNHARD, GEORG (1875–1944), German political economist and journalist. Born into an acculturated German-Jewish trading family in Berlin, Bernhard first went into in the banking business from 1892 to 1898, then turned to professional journalism. In 1896, he joined the financial staff of the Berlin *Welt am Montag* as "Gracchus." In 1898, he was appointed editor of the economic section of the *Berliner Zeitung* by L. *Ullstein and in 1902 created the first popular financial column of its kind at the *Berliner Morgenpost* (est. 1898). In addition, from 1901 to 1903, he contributed to M. *Harden's periodical *Die Zukunft* (est. 1892) as "Plutus." At the same time, he enrolled at Berlin University in 1899, completing his studies in economics and public law in 1902. As a revisionist Social Democrat, Bernhard was elected a member of the Reichstag in 1903 and thus had to resign from all journalistic posts. Instead, he founded his own financial weekly *Plutus. Kritische Zeitschrift fuer Volkswirtschaft und Finanzwesen* (1904–25). After a dramatic dispute with A. Bebel in 1903, he was eventually excluded from the Social Democratic Party. In 1908, he returned to the Ullstein company as publisher-editor of the dailies *Berliner Morgenpost* and *B.Z. am Mittag*. When Ull-

stein took over the prestigious *Vossische Zeitung* in 1913, Bernhard became its editor-in-chief from 1914 to 1930 (until 1920 together with Hermann Bachmann). He was also appointed lecturer at the Berlin *Handelshochschule* (1916–30, from 1928 as honorary professor). As one of the most influential journalists of the German Empire and Weimar Republic, Bernhard was deeply involved in communal and national politics. After 1918, he strongly supported a reconciliation between Germany and France, which, however, made him a public enemy of the political right, including the NSDAP. Subsequently, Bernhard was appointed to the National Economic Council and, as a leading member of the DDP (from 1924), again to the Reichstag (1928–30). Between 1913 and 1930, he was elected council member of several press associations and was active in German-Jewish communal organizations, e.g., as a council member of the Central-Verein, ORT, and, though critical of Zionism, the Pro-Palaestina-Komitee. At the end of 1930, Bernhard resigned from all journalistic and political posts, engaging in commerce instead. In February 1933, he managed to flee via East Prussia and Denmark to Paris, where he founded the influential emigrant paper *Pariser Tageblatt* (1933–36, continued as *Pariser Tageszeitung* until 1940). At the end of 1937, however, he had to resign as editor-in-chief, instead working as a representative of the World Jewish Congress in Paris. In addition, from 1933, he engaged in numerous emigrant organizations (e.g., Volksfront, FEAJ, ZVE, etc.), and served as an adviser to the French government. In 1940, he was interned at Bassens near Bordeaux but, after a dramatic flight to Spain, succeeded in escaping to the United States in 1941. On his arrival in New York, he was employed at the Institute of Jewish Affairs of the American Jewish Congress, continuing his restless activity for several German-American emigrant organizations. Among Bernhard's published works are numerous studies on politics, economics, and finance (cf. ABJ II (1993), 274–279). He published *Die Deutsche Tragoedie* (1933); *Meister und Dilettanten am Kapitalismus* (1936); *Warum schweigt die Welt?* (ed. B. Jacob, 1936, in collaboration with others), etc.

[Johannes Valentin Schwarz (2nd ed.)]

BERNHARD, SANDRA (1955–), U.S. actress, comedian, vocalist, author. Born in the suburbs of Flint, Michigan, the daughter of a proctologist and an artist, Bernhard's first public performance was singing “Hello Dolly” at a bar mitzvah.

She spent eight months working on a kibbutz in Israel. At 18 she moved to California, where she first worked as a manicurist for clients such as Tina Louise. Her comedy career began in the late 1970s in Los Angeles' comedy clubs and led to a spot as a regular on the short-lived *Richard Pryor Show*. Her first major film role was opposite Robert DeNiro in Martin Scorsese's *King of Comedy* (1983). Her other major film credits include *Hudson Hawk*, *The Apocalypse*, and *Inside Monkey Zetterland*. Bernhard has received critical acclaim for her distinctive one-woman shows, a format particularly well suited to her wide-ranging caustic social commentary and extremely personal performances. Her most notable one-woman shows are “Without You I'm Nothing” (1988), which was later adapted into film, and “I'm Still Here ... Damn It!” (1998). Throughout her career, Bernhard's controversial personal life has been deeply intertwined with her professional success. Her highly publicized relationship with Madonna coincided with her appearance in Madonna's 1991 video *Truth or Dare*, and she also received great attention for her regular role on the television show *Roseanne* as the title character's lesbian friend. Bernhard has released seven albums, winning high praise in particular for her 1985 debut album *I'm Your Woman*. Bernhard is also the author of three books, including her autobiography *Confessions of a Pretty Lady* (1988) as well as *Love, Love, and Love* (1993) and *May I Kiss you on the Lips, Miss Sandra?* (1998).

[Walter Driver (2nd ed.)]

BERNHARDT, SARAH (Rosine Bernard; 1844–1923), French actress. Fathered by a Frenchman (Edouard Bernard), she was the eldest of three illegitimate daughters born to Judith Van Hard, a Dutch-Jewish music teacher. When Sarah was ten years old she was sent to the convent of Versailles and baptized. However, she remained proud of her Jewish heritage. She made her debut at the Comédie Française in 1862 as Iphigénie in Racine's *Iphigénie en Aulide*. She acted at the Odéon from 1866 to 1872, and achieved popular acclaim in Coppée's *Le Passant* as the page Zanetto, her first male role. Returning to the Comédie Française, she became one of the greatest interpreters of Racine, playing *Andromaque* in 1873 and *Phèdre* in 1874. Temperament and impatience with authority ended her career at the Comédie in 1879. She embarked on a series of tours abroad and drew crowds wherever she appeared. She acted in a London season almost annually until as late as 1922. She visited the U.S. nine times, and acted in Germany, Russia, Latin America, and Australia. Everywhere she conquered her audience with *La Dame aux Camélias* by Alexandre Dumas, fils. Forming her own company, she appeared in both classical and modern works, and excelled in Sardou's *Fédora* (1882), *Théodora* (1884), and *La Tosca* (1889), all of which he wrote for her. Almost every role she acted became her personal triumph. In Edmond Rostand's *L'Aiglon* she played the part of Napoleon's 21-year-old son when she was herself 55. In 1899 she took over a large Paris theater, renamed it Théâtre Sarah Bernhardt, and directed it until her death. Here she pre-

sented *Hamlet* and herself played the title role. A neglected knee injury resulted in complications, and in 1914 Bernhardt was obliged to have her right leg amputated. She continued to appear in roles which permitted her to sit, such as Racine's *Athalie*. The "Divine Sarah," as she was called by Victor Hugo, died while at work on a film. Her autobiography *Ma Double Vie* was published in 1907.

[Linda Gutstein]

BERNHEIM, GILLES (1952–), French Orthodox rabbi and philosopher. Bernheim simultaneously completed rabbinical studies at the Seminaire Israelite de France and higher studies in philosophy. As a rabbi, he was first appointed chaplain for students (from 1978) and academics (until 1996). He gained recognition in the Jewish as well as the non-Jewish world through his effort to combine Jewish tradition and Western philosophy, an endeavor that he tried to convey through numerous articles, conferences, and books. From 1996 he headed the Torah Committee at the Consistory of Paris, and was appointed in 1997 chief rabbi of Paris' main synagogue, the Grande Synagogue de la Victoire. Committed to interfaith dialogue, Bernheim was deputy president of the Amitie Judeo-Chretienne de France, an association founded in the aftermath of World War II following in the footsteps of Jules Isaac's work. Ethics and social problems were also central to Bernheim's commitment, and he developed expertise on problems of medical ethics which led him to be chosen as an honorary member of the Conseil National du Sida, a government body dedicated to fighting the AIDS epidemic and helping its victims. Bernheim was also deputy president of the Medical Ethics Committee at the Consistory of Paris. According to him, "in the philosophy of Israel, there is neither dissociation nor a gap between ethics and religion. Concern and care for the other is the way to meet the divine." Such a vision of Judaism has deep implications for the life of the city (as clearly developed in his book *Un rabbin dans la cite*). Hence Bernheim's dedication to meeting the face of the other, in the sense defined by Emmanuel *Levinas, and his attitude of openness and dialogue towards Gentiles as well as Jews, with emphasis on reception and transmission, mutual teaching and enrichment. This commitment ran counter to ultra-Orthodox tendencies in modern-day French Jewry, which may explain his failure to be elected as France's chief rabbi in 1994.

[Dror Franck Sullaper (2nd ed.)]

BERNHEIM, HIPPOLYTE (1840–1919), French neurologist. Born in Alsace, he was appointed professor of internal medicine at Nancy University in 1878. In 1884 he began to devote himself to nervous and mental disease and was one of the first to concentrate systematically on the problems of psychotherapy. His methods included suggestion and hypnosis. He was

regarded as head of the Nancy school of psychiatry, as opposed to the Paris school headed by Charcot, which saw hypnosis as an investigative method and not as a method of treatment. Bernheim based treatment on persuasion – the doctor's psychological influence on the course of the neurosis. His methods became outdated but his activities were instrumental in winning acceptance for psychotherapy by the medical profession. Bernheim's most important work was *De la suggestion et de ses applications à la thérapeutique* (1886). His other works include *Hypnotisme, suggestion et psychothérapie* (1890). His work laid the foundation for an understanding of the human personality in the light of psychopathology rather than of philosophy. Bernheim recognized "automatisms" which were not under conscious control. He absolved the will as being the origin of mental disease and crime – thus attacking the stigma attaching to insanity and opening the road to the principle of "irresistible impulse" in the penal code.

[Joshua O. Leibowitz]

BERNHEIM, ISAAC WOLFE (1848–1945), U.S. distiller and philanthropist. Bernheim was born in Schmieheim, Baden. He emigrated to the U.S. in 1867 and settled in Paducah, Kentucky, where he worked as a salesman and bookkeeper. In 1872 Bernheim, together with a brother, established a distillery. The business was moved to Louisville, Ky., in 1882, and became one of the most important in the country. Bernheim made several gifts to public causes. In 1889 he organized the first YMHA in Louisville and contributed its first home. He contributed to Hebrew Union College its first library building (1912), and later helped subsidize its second. Other benefactions included an addition to the Louisville Jewish Hospital (1916), sculpture for Louisville and the Statuary Hall in Washington, a 13,000-acre nature reserve near Louisville, and gifts to the village of his birth. Bernheim was rigid and autocratic in temperament. Particularly hostile to Zionism, in 1918 he addressed a letter to the Central Conference of American Rabbis urging the founding of a "Reform Church of American Israelites" to consist of "100 percent Americans." In a 1921 address to the Union of American Hebrew Congregations, of which he was a vice president and for over 40 years member of the executive board, he called for a Sunday Sabbath and argued that the terms "Jew and Judaism" were a "reservoir from which is fed the perennial spring of hatred, malice, and contempt." Likewise he urged that foreign terms such as "temple" and "synagogue" strengthened the accusation that the Jews were a "foreign and indigestible element." From 1906 to 1921 Bernheim was treasurer of the American Jewish Committee. He wrote two autobiographical works, *Bernheim Family* (1910) and *Closing Chapters of a Busy Life* (1929). He also wrote *History of the Settlement of the Jews in Paducah and the Lower Ohio Valley* (1912).

[Sefton D. Temkin]

BERNHEIM, LOUIS (1861–1931), Belgian army officer. Born in Saint-Josse-ten-Noode, Bernheim was commissioned in the Grenadiers and was transferred to the general staff in 1888. Later he returned to the Grenadiers and on the outbreak of World War I commanded the 7th Infantry Regiment at Antwerp. At the battle of the Marne, Bernheim commanded a Belgian brigade in the First Division and later defended Antwerp against German attacks. He subsequently took command of the First Division. He was seriously wounded in September 1915 but was promoted to lieutenant general in the following year and in 1918 commanded three Belgian divisions in Flanders in the final advance on the German lines. Bernheim received numerous awards and honors and was given a state funeral. After his death a statue was erected in his honor in a Brussels square.

BERNHEIMER, CARLO (1877–?), Italian scholar. Born in Leghorn, Bernheimer taught Sanskrit at the University of Bologna from 1906 to 1938, when he was dismissed under the Fascist racial laws. Bernheimer devoted himself especially to the study of Hebrew paleography, and bibliography. In his *Paleografia ebraica* (1924) he set himself the task “of illustrating... everything that concerns Hebrew manuscripts.” He also published catalogs of the Hebrew and cognate manuscripts in the *talmud torah* of Leghorn (1915), in French, the Ambrosian Library of Milan (1933), and the Biblioteca Estense of Modena (1960).

[Alfredo Mordechai Rabello]

BERNHEIMER, CHARLES SELIGMAN (1868–1960), U.S. social worker. Bernheimer, who was born in Philadelphia, Pa., served with Jewish welfare and educational organizations during six decades, holding such posts as business secretary of the *Jewish Publication Society of America (1890–1906), executive director of the Hebrew Educational Society of Brooklyn (1910–19), and director of community studies for the *National Jewish Welfare Board (1921–40). He also edited the information bulletin of the Jewish Welfare Board, *The Jewish Center*, for many years. As assistant head worker of the University Settlement in New York City (1906–10), Bernheimer played a prominent role in support of the workers in the Shirtwaist Strike of 1909 that helped establish modern trade unionism in the garment trades. Bernheimer edited the pioneer study *The Russian Jew in the United States* (1905), in which he wrote the chapters on Philadelphia. He was coauthor of the book *Boys' Clubs* (1914) and contributed to many periodicals. His memoirs *Half a Century in Community Service* were published in 1948.

[Irwin Yellowitz]

BERNHEIM PETITION, petition against Nazi anti-Jewish legislation, signed by Franz Bernheim on the initiative of Emil *Margulies and submitted to the League of Nations

on May 17, 1933, by representatives of the *Comité des Délégations Juives (Leo *Motzkin, Emil Margulies, and Nathan Feinberg). At the same time they presented to the League a similar petition signed by the Comité, the American Jewish Congress, and other Jewish institutions. Since there was a special procedure regarding petitions addressed by inhabitants of German Upper Silesia, Bernheim's petition alone was immediately considered by the League. When the Nazis came to power, Bernheim, a warehouse employee in Upper Silesia, was dismissed from work as a result of racial discrimination, and took up temporary residence in Prague. In his petition he complained that the anti-Jewish legislation of the Third Reich was also being applied to Upper Silesia, in violation of the German-Polish Convention of May 15, 1922 (Geneva Convention), which guaranteed all minorities in Upper Silesia equal civil and political rights. The petition requested the League to state that all the anti-Jewish measures, if and when applied in Upper Silesia, infringed upon the Geneva Convention and were therefore null and void, and that the rights of Upper Silesian Jews be reinstated and that they receive compensation for damages. Bernheim's petition was placed on the agenda of the 73rd session of the League Council on May 22, 1933. The German representative, von Keller, lodged an objection denying Bernheim's right to submit the complaint, a plea that was rejected by an ad hoc committee of jurists. Four days later von Keller declared in the name of his government that internal German legislation did not in any way affect the General Convention and that if its provisions had been violated, this could only have been due to errors and misconstructions on the part of subordinate officials. The purpose of this public apology was to prevent a general debate on the petition, but these tactics failed, and in two public sessions (May 30 and June 6) the persecution of Jews in Germany was fully discussed. Many of the speakers severely censured Germany for the treatment of its Jews and demanded that they be accorded minimum human rights. In a unanimous decision, Germany and Italy abstaining, the Council adopted a resolution noting the German government's declaration and requesting it to furnish the Council with information on further developments. On September 30, 1933, the German government submitted a letter in which it claimed to have fulfilled its obligations, and that the rights of the Jews of Upper Silesia had been restored. The main objective of the Comité des Délégations Juives in bringing the petitions before the League was to focus world attention on the anti-Jewish legislation of Nazi Germany and the persecution of its Jews, and to have it condemned. The discussions in the League Council, and especially the declaration of the German government, helped the Jews of Upper Silesia in their struggle for their rights before such local bodies as the Mixed Commission established under the Geneva Convention. Until the expiration of the Convention on July 15, 1937, the Jews of Upper Silesia continued to enjoy equality of rights, and even *sheḥitah*, forbidden in the Third Reich, was permitted them.

[Nathan Feinberg]

BERNSTEIN, ABRAHAM MOSHE (1866–1932), *hazzan* and composer. Born in Shatsk, in the Russian province of Minsk, Bernstein was a cantor in Bialystok and choir director for cantor Baruch Leib Rosowsky in Riga before being appointed cantor of the Taharas Kodesh synagogue in Vilna (1893–1923). A prolific composer, he set to music more than 150 Hebrew and Yiddish poems, the best known being *Zam'd und Stern* and *Hemeril* (“The little hammer”). He compiled a collection of folksongs, *Muzikalisher Pinkos* (1927) and a cantorial collection, *Avodas Haborei* (3 vols. 1931). His son was the Israeli composer Aviassaf Bernstein (Barnea; 1903–1957).

BERNSTEIN, ALINE (1881–1955), U.S. stage designer. Born in New York City, Aline Bernstein worked at Neighborhood Playhouse from 1915, did settings for *The Dybbuk* and costumes for Max Reinhardt's *The Miracle*, 1924. Later she designed for the Theater Guild and Civic Repertory, and did settings in the 1930s for *Reunion in Vienna*, *Animal Kingdom*, *The Cherry Orchard*, *Romeo and Juliet*, and other plays. With Irene Lewisohn, she founded in 1937 the Museum of Costume Art in Rockefeller Center, which is now housed in the Metropolitan Museum of Art. She wrote her autobiography, *Actor's Daughter* (1941), and wrote and illustrated *Masterpieces of Women's Costume of the 18th and 19th Centuries* (1959).

BERNSTEIN, ARNOLD (1888–1971), German shipbuilder. Born in Breslau, Germany, Bernstein served in the German Army during World War I and was awarded the Iron Cross. After the war he began a small shipping business. His first successful venture came as a result of his construction of ships, called “floating garages,” on which uncrated automobiles could be shipped without risk of damage. The process involved a substantial saving in automobile transportation, and at one time his ships carried more than half the automobiles exported from America to Europe. With the sharp decline in tourism in the difficult economic period of the early 1930s, Bernstein converted his ships into combined freight-passenger vessels and introduced one-class tourist cabins. He bought the Red Star Line with the profits from this venture. Shortly thereafter he established the Palestine Shipping Company, which included the *Tel Aviv*, the first ship fully manned by a Jewish crew. After difficult negotiations with the Nazi government and in cooperation with Zionist organizations Bernstein was able to rescue many Jewish emigrants from Germany to Erez Israel on his ships beginning from 1935. During a visit to Germany in 1937 he was arrested by the Nazis on the charge that he had violated currency regulations. A prison sentence and a fine of \$400,000 were imposed on him. The Holland-Amer-

ica Line gained control of all his ships in return for payment of the fine, except those belonging to the Palestine Shipping Company. Some months later the latter went into bankruptcy. Upon Bernstein's ransom in 1939 he moved to New York where he organized the Arnold Bernstein Shipping Company and in the 1950s, the Atlantic Banner Line. This failed because it could not meet the competition of the airlines. In 2001, his autobiography was published posthumously in German translation (*Von Breslau ueber Hamburg nach New York*).

BERNSTEIN, ARON DAVID (1812–1884), German political and scientific writer and one of the founders of the Jewish Reform community in Berlin. Born in Danzig (Gdansk), he had a thorough religious education in a yeshivah in Fordon, but no secular schooling of any kind. At the age of 20 he went to Berlin, where he taught himself the German language, and literature and science. He earned his living for some years as an antiquarian bookseller, but began publishing in German in 1834 with an annotated translation of the Song of Songs. Bernstein combined progressive thought in politics, science and religion with a nostalgic affection for Jewish ghetto life. His main interest was natural science, of which he became a successful popularizer. He promoted the Jewish Reform Movement in Berlin, proclaiming that change is the basic principle of Judaism. In addition he edited the community monthly, *Die Reform-Zeitung*. Bernstein's widely read stories, written in the German-Jewish dialect (*Judendeutsch*) – *Voegel der Maggid* and *Mendel Gibbor* (1860; reissued 1934, 1935, 1994) – were forerunners of a literary genre which sentimentalized the Jewish lower middle class in small-town ghettos. They were translated into several languages. During the Prussian liberal era, Bernstein, who wrote under the pseudonym of A. Rebenstein, was influential as a political journalist. A champion of democracy, he fought on the barricades during the Prussian revolution of 1848. In 1849, when the revolutionary tide receded, he founded the *Urwaehlerzeitung*, an organ advocating moderate political reform. This brought him into conflict with the authorities, and in about 1852 the newspaper was suppressed and he was sentenced to four months' imprisonment. As a successor to the *Urwaehlerzeitung*, Bernstein founded the influential daily, the *Berliner Volkszeitung*, where his political editorials and articles on popular science appeared for nearly 30 years. A selection of his political articles was published in 1883–84. His essays on science, *Naturwissenschaftliche Volksbuecher*, were published in 21 volumes (1855–56), and a Hebrew translation (mainly by David Frischmann) entitled *Yedi'ot ha-Teva* appeared in Warsaw from 1881 to 1891. Bernstein himself was a practical scientist and experimented widely in telegraphy and photography.

juedischer Autoren 2 (1993), 289–300 (bibl.); G. von Glasenapp, *Aus der Judengasse* (1996).

[Robert Weltsch / Marcus Pyka (2nd ed.)]

BERNSTEIN, ARYEH LEIB (1708–1788), chief rabbi of Galicia, and merchant; born in Brody. While a young man he served for a brief period as rabbi of Zbarazh, subsequently returning to Brody where he entered commerce. The 1740s was a period of prosperity for Brody; the Jews there began to establish commercial links abroad. Bernstein succeeded in concentrating a large part of the trade in his hands. When in 1776 the election of a chief rabbi (*Oberlandesrabbiner*) of Galicia was about to take place, the rabbi-designate Ezekiel *Landau remained in Prague, and Bernstein was appointed. At his new place of residence in Lemberg, Bernstein took over control of the religious functionaries and the administration of taxes in the communities under his jurisdiction. His authoritarian ways and interference in the administration of the communities aroused opposition which was exacerbated by his financial dealings, which he continued while serving as chief rabbi. His opponents complained bitterly against him, and in 1785 an investigation was begun. However, through his influence, the charges were dropped and his accusers were punished. Despite this, his authority was undermined. The increasing dissatisfaction among the mass of Jews, coupled with the inclination of the authorities to abolish the centralistic chief rabbinate, led to its abrogation on Nov. 1, 1786. Bernstein, who was permitted to retain the title only, did not succeed in his intention to continue to manage religious affairs. He subsequently devoted himself mainly to commerce and left a large fortune to his heirs.

[Moshe Landau]

His father, ISSACHAR BER (d. 1764) was also a distinguished scholar, rabbi, and communal leader. Issachar Ber's first position was as a rabbi of the Kehillat Ḥayyatim ("Congregation of the Tailors") in Brody. In 1750, he was elected *rosh ha-medinah* ("head of the province") of Brody, and also was appointed "a trustee of the Council of Four Lands and *parnas* of Rydzyna Province." Despite the intense opposition of some communities, he remained a trustee until 1763.

BERNSTEIN, BÉLA (1868–1944), Hungarian Jewish historian. Bernstein was born in Várpalota; he graduated in 1892 from the Jewish Theological Seminary of Budapest, and received his doctorate in 1890 in Leipzig. He served as rabbi in Szombathely from 1892 to 1909 and then became rabbi in Nyiregyháza. He tried to introduce a uniform religious education in Hungary in 1901. Bernstein wrote works devoted to the history of the Jews in Hungary: *Az 1848–49-iki magyar szabadságharc és a zsidók* ("The 1848–49 Hungarian Revolution

and the Jews" (1898), preface by Mór Jókai); "The History of the Jews in Vasmegeye," in: *Magyar Zsidó Szemle*, vols. 30–32 (1913–15); and "Die Anfaenge der Judengemeinde in Nyiregyháza" in *Semitic Studies in Memory of Immanuel Loew* (1947). In his last years Bernstein worked on his memoirs. He was deported to Auschwitz by the Nazis in 1944 and died there.

BIBLIOGRAPHY: *Magyar Zsidó Szemle*, 49 (1932), 235–8.

[Alexander Scheiber]

BERNSTEIN, CARL (1944–), U.S. investigative reporter. Born in Washington, D.C., Bernstein, with Bob Woodward, succeeded, with their disclosures of the Watergate scandal in the 1970s, in helping to end the presidency of Richard M. Nixon, who resigned in disgrace rather than face impeachment.

After attending the University of Maryland from 1961 to 1964, Bernstein worked as a reporter for the *Washington Star*. He joined the *Elizabeth (N.J.) Daily Journal* in 1965 and worked until the following year as a reporter and columnist before joining the *Washington Post*, where he worked as a reporter for ten years, ending in 1976. Bernstein was a reporter for six years before he began work on one of the most important news stories of the 20th century. He covered local county and municipal governments, and liked to write long articles about Washington's people and neighborhoods. Although he was not assigned to the story of the break-in at the Watergate complex headquarters of the Democratic National Committee on June 17, 1972, he wrote an accompanying story about the five burglary suspects to complement Woodward's coverage of the break-in. He then persuaded his editors to let him cover leads that Woodward was not following. After Bernstein traced the origin of a \$25,000 payment to the burglars back to the Republican re-election committee, he and Woodward began working together. At first the relationship was testy but they agreed they had to discover more about the story, and began to cooperate. They labeled one anonymous source Deep Throat and vowed not to disclose his/her identity. As the Watergate stories began to implicate high officials in the Nixon administration, White House officials denied the stories vigorously. The pair worked on the story almost alone for a year. In March 1973, a letter from one of the burglars, James McCord, to the judge presiding over a grand jury, implicated highly placed administration officials in perjury and use of political pressure, confirming Woodward and Bernstein's reporting. The reporters wrote *All the President's Men*, recounting their exhaustive and exclusive reporting, and the account was a huge bestseller. It became a major motion picture, with Robert Redford portraying Woodward and Dustin *Hoffman playing Bernstein.

Within a week of Nixon's resignation, Woodward and Bernstein began writing *The Final Days*, a chronicle of the last 15 months of Nixon's presidency, culminating in the resignation in August 1974. The book was heavily criticized for its use of "backstairs gossip" and for alleged tastelessness. And some

denied their quoted statements, although Bernstein, backing the reporting, said that some of these sources were likely to deny that they had been interviewed. Both books had major sales in the United States and abroad.

His marriage to the writer-turned-film director Nora Ephron ended in divorce, as did his first marriage. Ephron used the marriage as the basis of her novel *Heartburn*, which became a film of the same name. Bernstein was portrayed in that movie by Jack Nicholson.

After Bernstein left the Post, he worked for the American Broadcasting Company and wrote for a number of magazines. With Marco Politi he wrote *His Holiness: John Paul II and the Hidden History of Our Time*, published in 1996.

[Stewart Kampel (2nd ed.)]

BERNSTEIN, EDUARD (1850–1932), German socialist theoretician, spokesman for the so-called revisionist group which challenged orthodox Marxist doctrines. Born in Berlin, Bernstein was the son of a Jewish engine driver. He joined the Social Democratic Party in 1872 and participated in the creation of the important Gotha program (1875). In 1878, Bernstein was forced to leave Germany after the enactment of the anti-socialist legislation. He lived first in Switzerland, where he edited the *Sozialdemokrat*, and then in London. It was while he was in London that he published his principal work *Die Voraussetzungen des Sozialismus und die Aufgaben der Sozialdemokratie* (1899; *Evolutionary Socialism*, 1909), in which he set out his nonconformist Marxist interpretation of history. Bernstein contested the view of the inevitable collapse of capitalism and urged the socialists to become a party of reform. His views were vehemently opposed as heretical by most of the party but gained numerous adherents, the so-called “revisionists.” In 1901 Bernstein returned to Germany and sat in the Reichstag from 1902 to 1906 and from 1912 to 1918. In World War I his pacifist views led him to disassociate himself from the right-wing faction and join the left-wing independent socialists who opposed the war. He returned to the majority party in 1918 and sat in the Reichstag again as a Social Democrat from 1920 to 1928. Concerning Judaism, Bernstein grew up in a Reform-oriented environment; Aaron David *Bernstein was his father’s brother. Thus, Eduard Bernstein was aware of Jewish traditions and ideas, but not interested in them. Nevertheless, throughout his tenure as a deputy in the Reichstag, he was an active fighter for Jewish emancipation and against antisemitism. In common with many Jewish socialists of the time, Bernstein left the Jewish community because the party disapproved of all religious affiliations. During World War I, however, he began to rethink his conception of being Jewish in the modern world. In his book *Die Aufgaben der Juden im Weltkrieg* (1917) he argued that because of their dispersion and universalist ideas, the Jews should be the pioneers of an internationalism which would unite nations and prevent war. Towards the end of World War I, he got in touch with the *Po’alei Zion movement, and established close contacts with Zalman Rubashov (later *Shazar, third president of Israel).

During the Weimar Republik, Bernstein became an active supporter of East European Jews. Because of their specific situation he accepted a distinct Jewish nationalism among them, while he disapproved of the same for Western and Central European Jews. Toward the end of his life, he came to support the concept of a Jewish national home in Palestine and became a leader of the “International Socialist Pro-Palestine Committee.” Bernstein’s writings include his autobiography *Erinnerungen eines Sozialisten* (1918; *My Years of Exile*, 1921), *Ferdinand Lassalle* (1919); *Die Deutsche Revolution* (1921), and *Sozialismus und Demokratie in der grossen Englischen Revolution* (1922; *Cromwell and Communism*, 1930).

[Robert Weltsch / Marcus Pyka (2nd ed.)]

BERNSTEIN, ELMER (1922–2004), U.S. composer. A prolific composer known primarily for his work in film and television, Bernstein was born in New York City. His musical compositions appeared in more than 200 films and television shows, receiving 14 Academy Award nominations, including an Academy Award in 1967 for *Thoroughly Modern Millie*, as well as an Emmy Award and several Golden Globe and Tony Awards. During the McCarthy era, Bernstein’s alleged leftist sympathies led to a spot on Hollywood’s “gray list,” a designation that kept him from working on major studio projects during the 1950s but did not result in a full ban from participating in the film industry. Despite being relegated to low-budget films during this period, Bernstein’s career is distinguished for both his endurance as well as his versatility. His compositions have appeared in films of virtually every genre, from the epic *Ten Commandments* (1956) to popular comedies like *Animal House* (1978) and *Ghostbusters* (1984), dramas such as *To Kill a Mockingbird* (1962), the Western *True Grit* (1969), the action/WWII film *The Great Escape* (1963), and the musical comedy *The Blues Brothers* (1980). Among Bernstein’s many other credits, his music appeared notably in *The Man with the Golden Arm* (1955), *Birdman of Alcatraz* (1962), *Hud* (1963), *The Sons of Katie Elder* (1965), *Meatballs* (1979), *Airplane!* (1980), *My Left Foot* (1989), *The Age of Innocence* (1993), and *Wild Wild West* (1999).

[Walter Driver (2nd ed.)]

BERNSTEIN, HAROLD JOSEPH (1914–1984), Canadian physical chemist. Born in Toronto, Bernstein completed his Ph.D. from the University of Toronto in 1938. A scholarship from the University of Copenhagen brought him to Denmark that year. In 1940, when Germany occupied Denmark, Bernstein was arrested and interned in Germany until 1945. He returned to Canada after the war and, in 1946, joined

the National Research Council of Canada in Ottawa and established a molecular spectroscopy section, opening up the study of nuclear magnetic resonance. In 1959, together with W.G. Schneider and J.A. Pople, Bernstein coauthored *High Resolution Nuclear Magnetic Resonance Spectroscopy*, a pioneering text in the field of Raman spectroscopy. In 1973 he cofounded the *Journal of Raman Spectroscopy* and served as coeditor until 1978.

Among other honors, Bernstein was awarded a fellowship in the Royal Society of Canada in 1953 and, the next year, in the Chemical Institute of Canada. He received the Herzberg Award from the Spectroscopy Society of Canada in 1978. In 1980 the International Conference on Raman Spectroscopy established the Harold Bernstein Award in Physical Chemistry for graduate students at Ottawa's two universities.

[Ruth Rossing (2nd ed.)]

BERNSTEIN, HARRY (1909–1993), U.S. historian. Born and educated in New York City, in 1958 he became professor of history at Brooklyn College. Bernstein's historical interests covered the post-18th century in geographical areas such as Mexico, Brazil, and the Caribbean. He emphasized regional factors in historical development. This approach appears in his textbook *Modern and Contemporary Latin America* (1952). Among his other works are *Origins of Inter-American Interest, 1700–1812* (1945), a pioneer study of economic and political ties between Pennsylvania, New York, and New England and portions of the Spanish Empire in America; *Dom Pedro II* (1973); *Venezuela and Colombia* (1974); *The Brazilian Diamond in Contracts, Contraband, and Capital* (1988); and *The Lord Mayor of Lisbon* (1989).

BERNSTEIN, HENRI-LEON (1876–1953), French playwright. Bernstein was born in Paris, and during his early period (1900–1914) wrote powerful, realistic plays depicting the cruelty of modern life and society. The best known of these are *La Rafale* (1905), *Le Voleur* (1907), *Samson* (1908), *Israël* (1908), and *Le Secret* (1913). Some of his plays deal with the Jew's position in modern society. There are echoes of the *Dreyfus case in *Israël*, which deals with one of the tragic results of assimilation. The young leader of an antisemitic movement discovers that his own father is a Jew. Overwhelmed by the revelation and unable to accept his new status, the young man is eventually driven to suicide. The plays written from 1918 to 1938 place increasing emphasis on the psychological problems of their heroes. To this period belong *Judith* (1922), *Félix* (1926), *Mélo* (1929), and *Espoir* (1936). The theme of antisemitism periodically recurs, and Nazism is attacked in *Elvire* (1940). During World War II, Bernstein lived in the United States. Although he continued writing after 1945, tastes had changed, and his plays declined in popularity.

BIBLIOGRAPHY: L. Le Sidaner, *Henri Bernstein* (1931); P. Bathile, *Henri Bernstein, son oeuvre* (1931); H. Clovard, *Histoire de la littérature française du symbolisme à nos jours*, 1 (1947).

[Denise R. Goitein]

BERNSTEIN, HERMAN (1876–1935), U.S. journalist, born in Neustadt-Schirwirdt (Vladislavov), Lithuania; one of the first to expose the *Protocols of the *Elders of Zion* forgery. Bernstein went to the United States from Russia in 1893 and wrote in Yiddish and English. His first book was *With Master Minds* (1912), a collection of interviews with European personalities. In 1914 he founded the Yiddish daily *Der Tog* (*The Day*), which became a recognized organ of liberal Jewish opinion. He was its editor until 1916 and editor in chief of the *American Hebrew until 1919. During World War I, Bernstein made an on-the-spot study of Jewish conditions in Eastern Europe and stimulated the organization of relief for Jewish war victims. In 1917, when he was correspondent of the *New York Herald*, he discovered 65 telegrams which had been exchanged between the German kaiser and the czar between 1904 and 1907, and published them as *The Willy-Nicky Correspondence* (1918). In 1921 Bernstein published *The History of a Lie* (1928), a book which was among the first exposures of the notorious *Protocols of the Elders of Zion* as a forgery. He also instituted legal proceedings against Henry Ford, who had helped to circulate the *Protocols* and had allowed anti-Semitic articles based on them to appear in his weekly *The Dearborn Independent*. Bernstein's postwar interviews for the daily press were reprinted as *Celebrities of Our Times* (1925) and *The Road to Peace* (1926). He wrote a study of Herbert Hoover in 1928. Bernstein served as United States envoy to Albania from 1931 to 1933.

[Sol Liptzin]

BERNSTEIN, IGNATZ (1836–1909), Yiddish folklorist and collector of proverbs. Born in Vinnitsa (now Ukraine), Bernstein was the son of a wealthy family of sugar merchants, and as a rich industrialist in Warsaw he was able to indulge in his hobby of collecting the folklore of many cultures. He accumulated one of the world's richest libraries in this field. Bernstein published a two-volume illustrated catalog of his collection of books and manuscripts (1900, 1968²). He traveled through Europe, North Africa, and Palestine, and for 35 years collected Yiddish proverbs current among the Jews of Russia, Poland, and Galicia. He published 2,056 Yiddish proverbs in Mordecai Spector's annual *Hoyzfraynd* ("Family Friend," 1888–89). Two decades later the number of proverbs had grown to 3,993, which he published in a magnificent volume *Yidische Shprikhverter un Rednsartn* ("Jewish Proverbs and Sayings," 1908, 1912, 1948, 1988). In the same year he published his collection of 227 Yiddish proverbs concerned with sex under the Latin title *Erotica et Rustica* (1908, 1918², 1975). Bernstein helped to found, and also supported, the central Jewish library in Warsaw.

BIBLIOGRAPHY: Rejzen, *Leksikon*, 1 (1928), 373–5; LNYL, 1 (1956), 407–8; J. Shatzky, *Geshikhte fun Yidn in Varshe*, 3 (1953), 325–8.

ADD. BIBLIOGRAPHY: G. Weltman and M. Zuckerman (eds.), *Yiddish Sayings Mama Never Taught You* (1975 repr. and trans. of *Erotica et Rustica*).

[Sol Liptzin and Charles Cutter / Benjamin Sadock (2nd ed.)]

BERNSTEIN, ISSACHAR BERUSH BEN ARYEH LOEB (1747–1802), German rabbi and author. Bernstein studied under his father, the son of Jacob Joshua *Falk, and Zevi Hirsch Levin of Berlin. In 1788 he succeeded his father as rabbi of Hanover. Legend attributes Bernstein's untimely death to his having insulted the son of Jonathan *Eybeschuetz, R. Wolf Eybeschuetz, who, as a young man, had held heretical views but had subsequently recanted. Several of Bernstein's novellae were included in his father's *Penei Aryeh* on *Bava Kamma* (printed with Jacob Joshua Falk's *Penei Yehoshua*; Fuerth, 1780, together with Bernstein's rejoinders to critical comments made by R. Judah Leib Friedenburg on this work). His *Hadrat Hakhamim*, discourses delivered on the conclusion of the study of talmudic tractates, is still in manuscript. Of his sons, the best known is SAMUEL (d. 1839) who succeeded his father-in-law, Jacob Moses b. Saul, as rabbi in Amsterdam, becoming the fifth member of the family to hold this position. Samuel wrote an approbation to the *Arzot he-Ḥayyim* of Malbim (1836), and corresponded with Moses *Sofer on halakhic matters. Samuel's son BERUSH was a *dayyan* in Amsterdam and later rabbi in The Hague.

[Itzhak Alfassi]

BERNSTEIN, JACOB NAPHTALI HERZ (1813–1873), Polish communal leader born in Lvov, descendant of a distinguished rabbinical family. Bernstein led the Orthodox Jews in Lvov in resisting the establishment of a *Reform temple and a secular Jewish school. He opposed the reforms introduced into the community in 1848 and its first Reform rabbi, Abraham *Kohn. However, his efforts to force Kohn to resign were unsuccessful. Kohn was later poisoned, and Bernstein, who was included among the suspects, remained in custody for a year. After his release he continued to oppose the Reform and Germanizing trends, with the backing of the Polish nobility. A street has been named after him for the services he rendered to the Lvov municipality. Bernstein was the grandfather of the Jewish scholar J.N. *Simchoni. The play *Herzele Meyukhes* by M. Richter is based on Bernstein's life.

BIBLIOGRAPHY: M. Balaban, *Dzieje Żydów w Galicyi i w Rzeczypospolitej Krakowskiej 1772–1868*, (1914); F. Friedman, *Die galizischen Juden im Kampfe um ihre Gleichberechtigung* (1929), 51, 60–63; N.M. Gelber, in: *EG*, 4 pt. 1 (1956), 247–64; J. Tenenbaum, *Galitsye Mayn Alte Heym* (1952), 50.

BERNSTEIN, JOSEPH (1945–), Israeli mathematician. Bernstein was born in Moscow. He received a M.Sc. in mathematics in 1968 and his Ph.D. in 1972 from the University of Moscow. He left the Soviet Union in 1981, teaching at the University of Maryland before joining Harvard University's Department of Mathematics, where he spent 10 years (1983–93). In 1993 he immigrated to Israel and joined Tel Aviv University, where he is became a professor in the School of Mathematical

Sciences. Bernstein's fields of interest include algebraic geometry, representation theory, number theory, and automorphic forms. From the very beginning of his academic career in the early 1970s, his research was unique and his impact profound. First with his teachers, and later with his students and independently, Bernstein wrote on a broad spectrum of mathematical areas, including representation theory of Lie algebras and Lie groups, theory of *D*-modules, representation theory of *p*-adic groups, and automorphic forms, to mention only a few. The concepts incorporated in his numerous papers have become cornerstones of modern-day mathematics theory, and his classic article on the localization of *D*-modules, written jointly with A. Beilinson in 1981, remains one of the most widely cited articles in mathematics today.

Bernstein was elected to the Israel Academy of Sciences and Humanities in 2002 and to the National Academy of Sciences (U.S.) in 2004. He was awarded the Israel Prize in mathematics in 2004.

[Ruth Rossing (2nd ed.)]

BERNSTEIN, JULIUS (1839–1917), German physiologist and medical educator, who laid the foundations of neurophysiology. Bernstein, the son of Aron *Bernstein, was born in Berlin and began his research career under Du-Bois Reymond in his native city, continued his investigations into electrophysiology at Heidelberg, and was appointed professor of physiology in Halle in 1872. Through his novel application of physical instrumentation, such as differential rheotome and photography, to the study of nerve and muscle function, Bernstein developed the concept of the polarized membrane as the major focus of the excitation process. His view that the impulse is a self-propagating wave of depolarization deriving from permeability changes forms the foundation of modern neurophysiology. Though best known for his *Untersuchungen ueber den Erregungsvorgang im Nerven- und Muskelsystem* (1871), Bernstein also published books on medical education, toxicology, electrobiology, and the significance of mechanism in biology.

[George H. Fried]

BERNSTEIN, LEONARD (1918–1990), U.S. composer and conductor. Bernstein was born in Lawrence, Mass., and studied at Harvard (1935–39), the Curtis Institute (1939–41), and the Berkshire Music Center (summers of 1940 and 1941), where he took composition with Walter Piston among others, orchestration with Randall Thompson, and conducting with Fritz *Reiner and Serge *Koussevitzky. In 1943 he was appointed Artur Rodzinski's assistant at the New York Philharmonic; he attracted national attention by acquitting himself brilliantly when called upon to conduct a difficult program at short notice. In 1953 he conducted Cherubini's *Medea* at the Teatro alla Scala in Milan with Maria Callas – the first time an American conductor had appeared there. From 1958 to 1969 he was the music director and conductor of the N.Y. Philharmonic, the first American-born musician to occupy this post.

He also succeeded Igor Stravinsky as president of the English Bach Festival. In 1989, on the occasion of the fall of the Berlin Wall, he conducted Beethoven's Ninth Symphony with an orchestra drawn from German musicians from both East and West. In his latter years he had a close association with the Vienna Philharmonic Orchestra.

Bernstein was closely associated with Israel from 1947, when he conducted for the first time in the country. After the establishment of the State of Israel he was instrumental in creating the Koussevitzky music collection at the JNUL in Jerusalem. In 1967 after the Six-Day War, he conducted the Israel Philharmonic Orchestra on Mount Scopus celebrating the reunification of Jerusalem in a program including symbolic work such as Mahler's Resurrection Symphony. In 1978 the Israel Philharmonic Orchestra decided to devote its World Festival entirely to the works of Bernstein to honor the 30th anniversary of his first appearance in Israel. The Israel Philharmonic also bestowed on him the lifetime title of Laureate Conductor in 1988. Over the years he made periodic guest appearances with the Israel Philharmonic Orchestra, both in Israel and on its tours abroad.

Bernstein was an innovator in using television to educate the audience. He produced programs for adults and children where he lectured about composers (such as Beethoven and *Mahler, whom he identified as the central figure of 20th-century music) and their music in a fascinating way. His lecture series started with the *Omnibus* program in 1954, followed by the Young People's Concerts with the N.Y. Philharmonic in 1958, which extended over 14 seasons (53 concerts). These programs, which were broadcast live and for which Bernstein would often feverishly prepare his script all through the previous night with the help of family and friends, became a centerpiece of his work, part of what he described as his educational mission. He also used the programs to introduce young performers to the musical world, among them the 16-year-old Andre Watts.

Bernstein, one of the dominant musical personalities of his time, soon became a celebrity. His private life came under scrutiny and he was known for his liberal political sympathies, supporting the Black Panthers in the 1960s. As a composer-conductor, Bernstein came closer than anyone since Mahler to achieving equal eminence in both spheres. His reputation as a composer began in 1943 with the ballet *Fancy Free*. His musical language never abandoned tonality, although in his later works he used serial devices (in "The Pennycandy Store beyond the El"). Among his works are the *Jeremiah Symphony*, with a vocal solo to the Hebrew text of Lamentations (1944); *The Age of Anxiety*, after a poem by W.H. Auden, utilizing jazz rhythms; *Kaddish* (in Hebrew), oratorio for narrator, chorus, and orchestra, which he conducted for the first time in Tel Aviv in 1963; *Chichester Psalms* (also in Hebrew), for chorus and orchestra (1965); the ballet *Dybbuk* (1974); three symphonies (1942, 1949, 1963); and the music for the film *On the Waterfront* (1954). Bernstein contributed substantially to the Broadway musical stage. He had his greatest popular triumph

with *West Side Story* (1957), an adaptation of the Romeo and Juliet story using youthful gang rivalry in New York City as the backdrop, which owed much of its success on both stage and screen to his dynamic music. Other shows for which he wrote the music were *On the Town* (1944), *Wonderful Town* (1953), *Candide* (1956), and *1600 Pennsylvania Avenue* (1976). His *Missa Solemnis* (1971), about the celebration of the Mass, aroused wide comment. He also published books on music, *The Joy of Music* (1959), *The Infinite Variety of Music* (1971), and *Findings / Fifty Years of Meditations on Music* (1982). Among his many honors were the Kennedy Center Honor for a lifetime of contributions to American culture, the Academy of the Arts Gold Medal for music, the Sonning Prize, the Siemens Prize, the Lifetime Achievement Grammy Award, and 11 Emmy Awards. Festivals of Bernstein's music have been produced throughout the world, such as a Bernstein Festival in 1986 produced by the London Symphony Orchestra and the Beethoven/Bernstein Festival in 1989 produced by the city of Bonn.

[Nicolas Slonimsky / Israela Stein (2nd ed.)]

BERNSTEIN, LOUIS (1927–1995), U.S. Orthodox rabbi and Zionist leader. Bernstein was born in New York City, received his B.A. from Yeshiva University in 1947, and was ordained at the Rabbi Isaac Elchanan Theological Seminary of Yeshiva University in 1950. In 1977, he earned his Ph.D. from Yeshiva University, which also awarded him an honorary D.D. degree in 1994. Bernstein began his rabbinic career at the Glenwood Jewish Center in Brooklyn (1947–50) and then served as a chaplain in the United States Army during the Korean War (1951–53). In 1953, he became rabbi of Young Israel of Windsor Park in Bayside, Queens, New York, where he was to remain until his death. Under his guidance, the congregation grew from a small *minyan* meeting in a house to the most prominent Orthodox synagogue in eastern Queens. Concurrently, he was professor of Jewish History at Yeshiva University's College of Hebraic Studies, specializing in American Jewish history. After teaching at the high school and college levels for 40 years, he was granted the title professor emeritus in 1994.

Bernstein made his mark writing with a passion that carried him to the highest levels of leadership in the world of modern Orthodox Judaism. As a graduate student, he was editor of the Yeshiva University newspaper *The Commentator*, on whose pages he exhorted the Orthodox community to support

the burgeoning movement for a Jewish state. From that point on, Bernstein made it a point to be the editor of the house organ of each and every organization he was to head, including *The Rabbinical Council Record* (published by the *Rabbinical Council of America), *Jewish Horizons* (the publication of the Religious Zionists of America), and even the newsletter of the Yeshiva College Alumni Association. He reached a larger, general audience as a columnist for *The Jewish Press*, the mass-circulation Brooklyn-based weekly.

A man of action as well as words, Bernstein was an effective lobbyist for Jewish causes. In the 1960s, when Congress was debating a humane treatment of animals bill whose provisions threatened the practice of **sheḥitah* (Jewish ritual slaughter), he met personally with influential politicians and galvanized opposition that succeeded in derailing the legislation. This kind of initiative and savvy led to his election as president of the Rabbinical Council of America, the foremost association of Orthodox rabbis in the United States. While his provocative editorials in the RCA's in-house publication occasionally sparked controversy, his popularity remained so high that he was re-elected to two additional terms as president, and ultimately died in office.

Bernstein was also president of the combined rabbinicality organization Religious Zionists of America, the U.S. affiliate of the worldwide *Mizrachi-Hapoel Mizrachi movement. Subsequently, he moved up to the position of chairman and represented the RZA as a member of the Board of Governors of the *World Zionist Organization and of the executive of the *Jewish Agency. His diplomatic skills were sorely tested during those stormy years, when he was called on to defend the traditional ideologies of religious Zionism even as many of its followers in Israel spearheaded the ultra-nationalist settlement movement in Israel.

Combining his devotion to Zionism with his dedication to the education of young people, Bernstein served as chairman of the board of the Rabbinical Council's *yeshivot* in Israel (1958–93), helping transform two small schools into burgeoning campuses. As director and spiritual leader of Camp Massad Bet in the Pocono Mountains of Pennsylvania, he promoted Zionist values and a love for modern spoken Hebrew in a unique atmosphere of tolerance embracing campers from Reform, Conservative and Orthodox backgrounds alike. During the rest of the year, back in his home community, he served as chairman of the Board of Education of Yeshiva of Central Queens, one of the largest day schools in North America.

In 1973 he received Yeshiva University's Samuel Belkin Award for Community Service Leadership. In 1993, the World Zionist Organization awarded him the Jerusalem Prize; he was one of only two recipients worldwide – and the only North American – to win the biennial prize that year. Also in 1993, he was honored by the Union of Orthodox Jewish Congregations of America with the organization's National Rabbinic Leadership Award.

A prolific writer, Bernstein wrote *Challenge and Mission: The Emergence of the English-Speaking Orthodox Rabbinate*

(1982), a history of the first 25 years of the Rabbinical Council of America that also chronicles the story of the formative years of modern Orthodox Judaism in the United States.

[Bezalel Gordon (2nd ed.)]

BERNSTEIN, LUDWIG BEHR (1870–1944), U.S. social worker. Bernstein was born in Jelgava (Mitau), Latvia, and emigrated to the United States in 1892. Bernstein taught languages in the New York City public schools for several years, and in 1903 became managing director of the Hebrew Sheltering Guardian Orphan Asylum in Pleasantville, New York. His contributions to Jewish child welfare administration included the development of a cottage home plan and the organization of the Home Bureau of the Hebrew Sheltering Guardian Society – a pioneer experiment in foster home placement. In 1919–20 Bernstein served as executive director of the Bureau of Jewish Social Research, supervising studies in child welfare and delinquency in the Jewish communities of Chicago, Philadelphia, and New York. He moved to Pittsburgh in 1921 as executive director of the Federation of Jewish Philanthropies. During the 1930s Bernstein was a pioneer in the movement to establish Jewish community councils in American cities.

[Roy Lubove]

BERNSTEIN, MOSHE (1920–), Israeli painter and draughtsman. Bernstein was born in Bereza Kartuskaya, Poland. He completed his studies at the Vilna Art School in 1939 and, immigrating to Israel in 1948, he took part in the exhibition of “Immigrant Art” held in Tel Aviv that year. In his paintings and pen drawings, Bernstein displayed his deep attachment to the Jewish world and which constituted an inseparable part of his life. He expressed the emotional experiences of his childhood, depicting the *bet ha-midrash* and the Jewish street. Like Chagall, he used in his pen drawings cubist form and compositional language. However, instead of using colors, he made skillful use of black pen and created effects of light and shadow and the impression of a colorful picture which is composed of juxtaposing layers, thus producing the illusion of depth.

Since his first one-man show in Tel Aviv in 1950, Bernstein had many exhibitions and participated in various group exhibitions, such as the 1974 Cyprus exhibition with Zeev *Ben-Zvi. He won the City Medal of Tel Aviv in 1980.

[Judith Spitzer]

BERNSTEIN, NATHAN OSIPOVITCH (1836–1891), Russian physiologist and civic leader. The grandson of Solomon Eger, chief rabbi of the Posen provinces, Bernstein moved to Odessa in 1849 with his parents. He studied medicine at the University of Moscow. From 1871 he lectured without official appointment at the New-Russian University at Odessa (1865). He wrote a textbook on physiology, and succeeded Leo Pinsker as editor of the Russian-Jewish periodical *Zion*. Bernstein was president of the Medical Society of Odessa for 14 years, and

became both a city councillor and an honorary Justice of the Peace. He was a director of the Odessa Talmud Torah.

BERNSTEIN, ORI (1936–), Israeli poet. Bernstein, who was born in Tel Aviv, studied law at the Hebrew University, serving as an attorney in the army and later in the private sector. For 23 years he acted as managing director of one of Israel's largest corporations. His first poems, *Be-Oto ha-Ḥeder, be-Oto ha-Or* ("Same Room, Same Light") appeared in 1962, followed by a dozen collections of poems, three books for children, and a volume of essays on poetry entitled *Isuk bein Haverim* ("Among Friends," 1998). While his early poetry is influenced by N. Alterman and N. Zach, Bernstein later developed his own, very intimate style, contemplating the dialectics of life and death, the yearning for love and friendship and, on the other hand, loneliness and bereavement. *Im Mavet* ("With Death," 1982) deals with the death of his mother, the sequel *Zafonah le-Tamid* (1987) with the death of his father. A selection of Bernstein's poems was published under the title *Shirim 1962–2002* (2004). Bernstein's only novel, *Safek Ḥayyim* ("A Dubious Life," 2002), is an autobiographical account in the tradition of Proust: The recollection of experiences from childhood and adolescence, hours of friendship and love, is interwoven with literary echoes. Bernstein is a professor at the Ben-Gurion University in Beersheba, where he teaches poetry and the theory of writing. He also translates English, Italian, and French poetry into Hebrew.

[Anat Feinberg (2nd ed.)]

BERNSTEIN, OSIP SAMOILOVICH (1882–1961), Russian-French chess master, born in Zhitomir. Bernstein placed second to Tchigorin in the Russian championship (Kiev, 1903) and tied with Akiva *Rubinstein for first place in a tournament at Ostend, Belgium (1907). He settled in France after 1916 and shared a first prize with Miguel *Najdorf, at Montevideo, Uruguay, when 72.

BERNSTEIN, PEREZ (Fritz) (1890–1971), Zionist leader, publicist, and Israel politician. Bernstein, who was born in Meiningen, Germany, studied commerce. In his youth he went to Rotterdam, Holland, where he entered business. In 1917 he joined the Dutch Zionist organization, and soon attained a prominent position. He later served as secretary of the Dutch Zionist Federation and as its president for four years. From 1930 to 1935 he was chief editor of the Dutch Zionist weekly, in which he fought for "unconditional Zionism," both in relations with non-Jews and in debate with the socialist and the religious Zionists. In his major work *Der Anti-semitismus als Gruppenscheinung* (1926; *Jew-Hate as a Sociological Problem*,

1951) he tried to prove that antisemitism is a sociological phenomenon which cannot be eliminated by better knowledge, by persuasion, or by education. He also rejected the theory that the Jews in the Diaspora have negative traits which encourage antisemitism. Another of his books is: *Over Joodsche Problematiek* (1935). In 1936 Bernstein settled in Palestine and became editor of the General Zionist newspaper *Ha-Boker*. From 1941 he was chairman of the Union of *General Zionists which, in 1946, elected him a member of the Jewish Agency, where he was responsible for commerce and industry. Bernstein was a member of the Knesset from its inception until 1965, and minister of commerce and industry in 1948–49 and from 1952 to 1955. When the Liberal Party was established he was elected one of its two presidents. Following the party split in 1964, he became honorary president of the larger faction which retained the name of the Liberal Party. Bernstein continued his journalistic activities during his political career. He often opposed the left wing in his articles and advocated a business-oriented policy.

[Joseph Michman (Melkman)]

BERNSTEIN, PHILIP SIDNEY (1901–1985), U.S. rabbi. Bernstein was born in Rochester, N.Y., and was ordained in the first graduating class of the Jewish Institute of Religion (1926). He served as rabbi of Rochester's Congregation B'rith Kodesh for half a century. Bernstein was a committed pacifist until the German invasion of Poland, which forced him to rethink his views. During World War II he was executive director of the committee on army and navy religious activities of the Jewish Welfare Board, a position he held until 1946. He was responsible for supervising the 300 rabbis of all denominations serving in the U.S. Armed forces. His service propelled him into national Jewish life. He served as a member of the Zionist Emergency Council and helped form the American Christian Palestine Committee. In 1946 he returned to his congregation in Rochester, only to leave again when he was appointed by President Truman as Jewish adviser to U.S. Army commanders in Europe (1946–47), where he played a significant role at the time in alleviating the conditions of Holocaust survivors and making conditions in the Displaced Persons camps less deplorable. In his non-military role, he assisted in moving Jews from Russian-occupied Poland to American-occupied Germany, working directly with *Berihah. In 1947 he returned to Rochester once again. He was president of the Central Conference of American Rabbis (1950–52). He was chairman (1954–68), and subsequently honorary chairman, of the American Israel Public Affairs Committee, then in its formative years. He was the author of *What the Jews Believe* (1951), which grew out of a series of articles published in *Life Magazine*. He also wrote *Rabbis at War* (1971), an account of his war years and the service of his colleagues to 600,000 American Jews who served in World War II.

ADD. BIBLIOGRAPHY: Y. Bauer, *Flight and Rescue: Brichah, the Organized Escape of Jewish Survivors of Eastern Europe* (1970); T.P. Liebschutz, "Rabbi Philip S. Bernstein and the Jewish Displaced Persons," Rabbinic Thesis, HUC-JIR (1965).

[Malcolm H. Stern / Michael Berenbaum (2nd ed.)]

BERNSTEIN, SID (1918–), U.S. music promoter, agent, and manager; most famous for bringing the Beatles to the United States in 1964. Bernstein was born in New York City, the only child and adopted son of Israel and Ida Bernstein, Russian immigrants who came from Lukshivka, a village near Kiev. His parents called Bernstein by his Hebrew name, Simcha. His career already showed promise in high school, when he landed a fellow student a spot on the Major Bowes Amateur Hour, a popular radio program in the 1930s and 1940s.

After serving as a soldier in France in World War II, Bernstein's show business career started in the Catskill summers of the early 1950s, working as activities director at the Brown's Hotel. Bernstein produced musical shows in New York at the Paramount, the Palace, the Brooklyn Paramount, and the Apollo, and the comeback tour for Judy Garland, but went broke promoting the Newport Jazz Festival in 1961. Bernstein suggested to Tony Bennett that he perform at Carnegie Hall, a performance that was instrumental in boosting Bennett's singing career. In early 1963, reading about a group called the Beatles and the hysteria they were causing in England, he called their manager, Brian Epstein, to arrange for them to perform in America, and on February 12, 1964, the esteemed Carnegie Hall hosted its first-ever rock concert. On August 15, 1965, Bernstein promoted the Beatles concert at sold-out Shea Stadium in New York, the largest crowd (55,000) for which the Beatles ever played and the first rock concert ever held in a sports stadium. It changed the face of the music business, and Bernstein himself.

Bernstein's instinctive vision was evident throughout the era of rock and roll's "British Invasion," when he brought over to the United States other English bands like the Rolling Stones, Dave Clark Five, the Kinks, the Animals, Manfred Mann, Herman's Hermits, and the Moody Blues. Bernstein also helped promote the careers of James Brown, Ray Charles, John Denver, Joan Baez, Miles Davis, Tito Puente, Muddy Waters, Ella Fitzgerald, Frankie Valli, and Frank Sinatra, and was the personal manager of the Rock Hall of Fame group The Young Rascals. But it was for his promotional work with the Beatles that Bernstein will always be remembered. "You know, Sid, at Shea Stadium I saw the top of the mountain," John Lennon once told him. "You know John, so did I," answered Bernstein.

[Elli Wohlgerlenter (2nd ed.)]

BERNSTEIN, SIDNEY LEWIS, BARON (1899–1993), British television pioneer and publisher. Born in Ilford, Essex, Bernstein inherited his interest in show business from his father, Alexander Bernstein (d. 1921), who owned a group of cinemas. Sidney Bernstein was a founder of the Film Society in 1924,

and started his Granada chain of cinemas at Dover in 1930. During World War II he was film adviser to the British Ministry of Information (1940–45) and chief of the film section, SHAEF (Supreme Headquarters, Allied Expeditionary Force; 1943–45). Bernstein introduced additional entertainments into his cinemas, including art exhibitions, and established links with Hollywood. However, his most important interest eventually became the Granada group of television companies operating mainly from Manchester. Bernstein had seen the possibilities of television in 1948 but could not obtain a license until the British Television Act of 1954. The Granada companies made many endowments to universities. He and his brother, Cecil Bernstein (a fellow director), gave £300,000 in 1965 for the establishment of a Northern Arts and Sciences Foundation. After 1961 he acquired a substantial interest in the publishing companies of Rupert Hart-Davis, McGibbon and Kee, and several others. A Labour supporter, he was awarded a life peerage in 1969.

[John M. Shaftesley]

BERNSTEIN, SIMON (1884–1962), journalist and Hebrew scholar. Bernstein was born in Latvia. From 1908 to 1911 he was Hebrew secretary of the Society for Spreading Enlightenment Among the Jews of Russia. In 1912 he joined the staff of the World Zionist Organization, being attached to the head office in Berlin until 1915, to the Copenhagen Bureau 1915–20, and to the London office 1921–22. In 1922 he settled in the United States, becoming editor of *Dos Yiddishe Folk*, organ of the Zionist Organization of America. He held this post until 1953. Bernstein was a prolific writer. Apart from his newspaper articles and Zionist pamphlets, he devoted himself to scholarly research, especially in the field of Hebrew poetry. He brought to light unpublished *piyyutim* of Spanish, Italian, and Byzantine poets; altogether he published over 3,000 such poems. Bernstein's major books are *Be-Ḥazon ha-Dorot* (1928), a volume of Hebrew essays; editions of *Divan Rav Immanuel ben David Frances* (1932); *Divan Yehudah Aryeh mi-Modena* (1932); *Shirei Yehudah ha-Levi* (1944), selected liturgical and secular poems; *Divan Shelomo Da Piera* (1942); *Al Naharot Sefarad* (1956), lamentations in the Sephardi rite on the destruction of Jerusalem and other calamities; and *Shirei ha-Kodesh* (1957), the collected liturgical poetry of Moses ibn Ezra.

BIBLIOGRAPHY: J. Modlinger, *Simon Bernstein* (1949); M. Glenn, in: *Or ha-Mizrah*, 11 (April 1963), 40–42; A. Ben Ezra, *ibid.*, 43–44; M. Schmelzer, in: *Hadoar*, 42 (1963), 195.

BERNSTEIN, THEODORE M. (1904–1979), U.S. editor and author. Born in New York, Bernstein joined the *New York Times* in 1925, became foreign-news editor, and in 1952 assistant managing editor. He was a founding editor of the newspaper's international edition in Paris. He taught at the Columbia School of Journalism, and wrote on English usage in such books as *Watch Your Language* (1958), *Headlines and*

Deadlines (1961), *Watch That Word* (1962), *More Language That Needs Watching* (1962), *The Careful Writer: A Modern Guide to English Usage* (1965), *Bernstein's Reverse Dictionary* (1975), and *Dos, Don'ts & Maybes of English Usage* (1977).

BERNSTEIN, THERESA (1890–2002), U.S. artist. Born in Philadelphia to cultured immigrant parents, Bernstein showed an interest in art as a child. She took some classes at the Pennsylvania Academy of Fine Arts and earned a degree at the Philadelphia School of Design for Women. By 1912 she was living in New York City, where she briefly studied at the Art Students League with William Merritt Chase. In these early years she painted in an Ashcan style, influenced by John Sloan and other artists of the period who depicted the everyday life of the city in dark tones. *New York Street* (1912) and *Waiting Room: Employment Office* (1917) exemplify Bernstein's realist tendency of this period. She had her first solo exhibition at the Milch Gallery in New York City in 1919, the same year that she married the artist William Meyerowitz.

An expressionist technique pervades Bernstein's work in the 1920s and 1930s, during which time she added jazz musicians to her large repertoire, a subject naturally in accord with her new style and her lifelong love of music. Beginning in the 1920s, she spent summers in Gloucester with her husband. These vacations produced paintings of beaches, harbors, and fish. In the 1930s she continued painting a wide range of subjects, including portraits, still lifes, and beach scenes. Under the auspices of the Works Progress Administration's Federal Art Project, Bernstein created a mural, *The First Orchestra in Americas* (1938), for the Manheim, Pennsylvania Treasury Department. While many artists in the 1930s joined the Communist Party, Bernstein's political consciousness centered around Zionism. Although *Zionist Meeting, New York* (1923) comes from an earlier period, the subject matter indicates her political sympathies.

Bernstein's Jewish identity was reinforced by her husband, the son of a cantor. *Prayer* (1938), Bernstein's most obviously religious canvas, shows the energy of the worshippers through a gestural brushstroke. After the establishment of the State of Israel, Bernstein and Meyerowitz visited there 13 times during a 30-year period. In her 1991 autobiography Bernstein devotes a full chapter to her experiences in Israel and her attraction to the land, of which she painted several canvases. She also published a journal dedicated to her Israeli trips in 1994.

BIBLIOGRAPHY: T. Bernstein, *Theresa Bernstein* (1985); P.M. Burnham, "Theresa Bernstein," in: *Woman's Art Journal*, 9:2 (1989), 22–27; T.B. Meyerowitz, *The Journal* (1991); T.B. Meyerowitz, *Israeli Journal* (1994).

[Samantha Baskind (2nd ed.)]

BERNSTEIN, ZALMAN CHAIM (1927–1999), U.S. businessman and philanthropist. Zalman Bernstein, or, as he was known for most of his 72 years, Sanford C. Bernstein, was born in New York City to middle class parents. He enlisted at 18 in the Navy, seeing service in World War II. After graduating

from New York University where he majored in economics, he was accepted by Harvard Business School and earned his M.B.A. He then spent three years in France, working with the Marshall Plan, becoming fluent in French, and marrying the first of his three wives. Upon returning to the United States, he worked at several security firms and in 1967 launched Sanford C. Bernstein & Co. by placing full-page advertisements in major newspapers containing a single word in bold type, "Bernstein." Investors were attracted by a reputation for integrity, reliance on careful research, prudent risk-taking and successful results. Though strongly opinionated, he tolerated and even welcomed and respected contrary views. At his death, his company was a respected name on Wall Street, managing more than \$80 billion for 25,000 private and institutional clients.

The turning point in Bernstein's Jewish life came with the passing of his father in 1977. Though then scarcely able to read Hebrew, he was determined to say *kaddish*, which led him to Lincoln Square Synagogue in Manhattan and Rabbi Shlomo Riskin, who was a major influence in his Jewish development. In 1984, collaborating with two friends more knowledgeable about Jewish life, he established the Avi Chai Foundation which became the prime focus of his philanthropy. In his lifetime, he contributed hundreds of millions of dollars to the foundation as well as Jewish causes in Israel and the United States. Avi Chai's mission was predicated on the teachings of Rabbi Abraham I. Kook, which Bernstein understood superficially, yet with a sincerity that ran deep. The Kookian principles that he embraced are an encompassing attachment to the land of Israel, recognition of the Covenant between God and Abraham as an eternal legacy of the Jewish people, and a commitment to Judaism's religious heritage that includes mutual understanding and sensitivity among Jews of different religious backgrounds and commitments to observance.

Originally functioning in North America, by the early 1990s Avi Chai expanded into Israel where Bernstein in his later years became a citizen and made his home. In Israel, he developed other notable philanthropic initiatives. In North America, day school education has been the major beneficiary of Avi Chai support. Projects have included widespread innovations in Hebrew language instruction and Judaica curriculum as well as a program, unmatched in scope, to encourage new day school construction through interest-free loans. In Israel, the goal of promoting mutual understanding has been manifested by a network of programs known as Tzav Pius.

He died in 1999 and left nearly his entire substantial estate to charity. Bernstein provided instructions that he not be eulogized and that no facility or project be named in his memory. He arranged in his life, with characteristic determination, to be buried in Jerusalem on the Mount of Olives, near the grave of Rabbi Kook.

[Marvin Schick (2nd ed.)]

BERNSTEIN, ZVI HIRSCH (1846–1907), publisher, editor, and pioneer of the Yiddish and Hebrew press in the United

States. Born in Russia, he received a traditional education and contributed articles to Hebrew literary magazines. In 1870 he emigrated to the United States and founded the first Yiddish paper *Di Post*. (J.K. Buchner's *Di Yidishe Tsaytung*, although published earlier in 1870, appeared only three or four times.) In 1871 Bernstein founded the first Hebrew newspaper in the United States, *Ha-Zofeh ba-Arez ha-Hadashah*, which survived until 1876. Afterward he became a successful businessman and a patron of the Yiddish theater.

[Eisig Silberschlag]

BERNSTEIN-COHEN, MIRIAM (1895–1991), actress and pioneer of the theater in Israel. Born in Romania, the daughter of Jacob *Bernstein-Kogan, she was educated in Russia and took a degree in medicine. Turning to the stage she worked for a time in the Russian theater. In 1921 she went to Palestine and joined David Davidow's (d. 1976) company known as the "Hebrew Theater." When the group dissolved in 1923, she and other members went to Germany to study stage work. In Berlin she met Menahem *Gnessin and helped him to organize the Teatron Erez Israeli. She returned with the company to Palestine in 1924 and worked with it until its merger with the *Habimah Theater a few years later. Subsequently she appeared with various companies, gave solo performances in Palestine and abroad, and eventually joined the Cameri Theater in Tel Aviv. She translated plays and stories by de Maupassant, Tolstoy, Henri Barbusse, and Pearl Buck. In 1975 she was awarded the Israel Prize for the arts.

[Mendel Kohansky]

BERNSTEIN-KOGAN (Cohen), JACOB (1859–1929), Russian Zionist leader. Bernstein-Kogan, who was born in Kishinev, studied medicine in St. Petersburg and Dorpat. After the wave of pogroms in southern Russia in 1881, he devoted himself to *Hibbat Zion* and Zionism. As a delegate to the First Zionist Congress, he was elected to the Zionist Actions Committee. He administered an information center called the Zionist "post office," which informed Zionist branches in Russia, numbering about one thousand, of developments in the movement. He was a leading member and ideologist of the *Democratic Fraction (1901) and was one of the leaders of the Russian Zionist opposition to the *Uganda Scheme. Settling in Erez Israel in 1907, he worked as a doctor in Lower Galilee and in Petaḥ Tikvah. He was a founder of the Medical Association of Erez Israel (1908). Conflicts with the conservative settlers of Petaḥ Tikvah induced him to return to Kishinev in 1910. He moved to Erez Israel again in 1925, but accepted a proposal of the *American Jewish Joint Distribution Committee to serve as a physician in the Jewish agricultural settlements in the Ukraine.

[Yehdua Slutsky]

BERNSTEIN-SINAIEFF, LEOPOLD (1867–1944), French sculptor. He was born in Vilna to an Orthodox family. He began to study drawing before moving to Paris at the age of fourteen. In Paris he studied under Rodin and Dalou and first exhibited at the Salon des Champs Elysées in 1890. He executed statues, portraits, groups of figures, and funerary monuments, and made busts in bronze and marble of important figures such as Pope Leo XIII. He received the Order of the Legion of Honor and his sculpture *Ezra Mourning* was acquired by the French nation. When the Germans occupied France they destroyed the sculpture *Youth and Age* to which Bernstein-Sinaieff had devoted over ten years. The Nazis arrested him and sent him to the prison camp at Drancy. Two weeks later he was released, only to be re-interred and sent to an extermination camp where he was killed.

BEROR ḤAYIL (Heb. בְּרוֹר חַיִּיל), place in southern Israel, 8½ mi. (14 km.) S.E. of Ashkelon. In Byzantine times the town was called Bouriron (Vita Sabeae, 10). It was the place where R. *Johanah b. Zakkai moved and taught after his stay in Yavneh. When the performance of Jewish marriages was prohibited under Emperor Hadrian, in the second century C.E., the inhabitants of Beror Ḥayil announced a clandestine marriage ceremony by putting a candle on the window sill (Sanh. 32b). Beror Ḥayil is now a kibbutz affiliated with Iḥud ha-Kibbutzim. It was founded on May 4, 1948, during the War of Independence, with the aim of reestablishing contact with the Jewish settlements spread over the northern Negev at a point where the Arabs had repeatedly cut off Jewish traffic to and from the south. The kibbutz was set up overnight. The initial settling group, pioneers from Egypt, was later joined by immigrants from Brazil, Uruguay, and other countries. In 1968 the kibbutz had a population of 520, dropping to 462 in 2002. Its economy was based on intensive farming (field crops, greenhouses, dairy cattle, orchards) and various small enterprises (software, a frozen pastry plant, and an educational tourist center). In the early 1960s, the *Ḥelez oilfield expanded southward when reserves were discovered at Beror Ḥayil (their exploitation was in no way connected, however, with the economy of the kibbutz).

[Efraim Orni]

BEROSUS (Berossus = Bel-Usur?; c. 330–250 B.C.E.), priest of Bel (Marduk) at Babylon, author of a history in Greek of Babylon (*Chaldaika* or *Babyloniaka*) in three books. This work, dedicated to Antiochus I, is extant only in fragments, particularly in *Alexander Polyhistor, *Josephus, the Church Father *Eusebius, and the Byzantine compiler George Syncellus. The first book described Babylonia and the creation and explained Chaldean astrology, the second covered the kings before the

Flood, the Flood itself, and the dynasties down to Nabonassar (747 B.C.E.), and the third brought the account down to Alexander. Recent discoveries of cuneiform texts on the Flood show that Berossus was faithful to his sources, and that in fact his account is in large part taken from the Gilgamesh epic.

Berosus was particularly important to Samaritan, Jewish, and Christian writers for apologetic purposes, since his chronology contradicted that of the Greek historians and since he appeared to confirm the antiquity of, and thus lent credibility to, certain portions of the Bible. But inasmuch as Berossus, under the influence of astrological theory, spoke of 600 periods of 3,600 years each, whereas the Bible mentions a much shorter period since creation, writers such as the Samaritan Eupolemus tried to reconcile these discrepant chronologies. Unfortunately, however, only part of Berossus' chronology has been transmitted, and his lists of dynasties have often been mutilated by those who cite him or by later copyists of the manuscripts.

Berosus was similarly found useful in confirming the biblical narrative of the Tower of Babel, since he too mentions a tower near Babylon built by men who gloried in their own strength and size and despised the gods, whereupon, as in the Bible, the gods brought about a confusion of their languages, though they had hitherto all spoken one tongue. Alexander Polyhistor later apparently attempted to synchronize this account with those of the Bible and the Greek poet Hesiod's story of Prometheus. Berossus is of great importance as a source for Josephus, although questions are still raised as to whether he used him directly or through some compilation such as that of Alexander Polyhistor or perhaps that of King Juba of Mauretania. Josephus cited Berossus in support of his statements that a portion of the ark of Noah (*Xisouthros* in Berossus) still survives in Armenia (Ant. 1:93; cf. Apion 1:130), that the patriarchs lived unusually long lives (Ant. 1:107), and that Abraham lived ten generations after the Flood and was well versed in astronomy (Ant. 1:158). In his polemic against Greek historians he cites with approval (Apion 1:142) Berossus' criticism of their reports of Semiramis' achievements. The fact that on two occasions (Ant. 10:219–28; Apion 1:134–44) he cites the same passage on Nebuchadnezzar from Berossus, together with precisely the same confirmatory references from *Philostratus and *Megasthenes, would indicate that at least here he was using a handbook. The accuracy of this passage from Berossus, particularly the description of the battle of Carchemish, has now been confirmed by Wiseman's publication of a chronicle of Chaldean kings on cuneiform tablets; but it must be noted that Josephus' account (Ant. 10:96–102) of the events leading to the fall of Jerusalem and the capture of Jehoiachin differs in several details from the Chronicle.

The attribution (Suidas, 10th century) of the Babylonian (or Egyptian) Sibylline books to him has been disputed. The founder of the astrological school on the Greek island of Cos to whom the Athenians erected a statue (Pliny, *Natural History*, 7:123) is pseudo-Berosus.

[Louis Harry Feldman]

BERR, JACOB (c. 1760–1855), French physician and publicist, nephew of *Berr Isaac Berr de Turique. Besides gaining a reputation as a surgeon, Berr was a fervent advocate of equal rights for French Jews. In 1789 he published a refutation of an anonymous pamphlet which contested the right of Alsatian Jews to enlist in the National Guard. Later, in a letter addressed to the bishop of Nancy (1790), he criticized his uncle's project to preserve a special status for French Jews. According to E. Carmoly, *Historie des médecins juifs* (1844), Berr was the first French Jew to marry a Christian without forsaking Judaism.

BERR (de Turique), MICHEL (1781–1843), French lawyer. Born in Nancy, he was the son of *Berr Isaac Berr and became the son-in-law of Isaiah *Beer-Bing. Like his father, Berr was an advocate of Mendelssohnian Enlightenment. He sided with its radical exponents, however, and tended to disregard the national and religious aspects of Judaism while concentrating on the struggle for civic equality for the Jews in their different countries. In this spirit he defended persecuted Jews in a pamphlet entitled *Appel à la justice des nations et des rois* (1801). Berr was the first Jewish lawyer to practice in France. In 1806 he and his father were deputies at the *Assembly of Jewish Notables, and in 1807 Berr was appointed secretary of the Napoleonic *Sanhedrin. He then held an official appointment in the Kingdom of Westphalia and subsequently in the Préfecture of La Meurthe, but his later career was disappointing and he dissipated his talents.

Many important non-Jewish personalities regarded Berr as the ideal type of modern Jew. Berr translated a number of works from Hebrew including panegyrics to Napoleon. His most voluminous work was *Abrégé de la Bible et choix de morceaux de piété et de morale à l'usage des Israélites de France* (1819). At first Berr's attitude toward Judaism tended to be radical and rationalist. He held that once Judaism had detached itself from "talmudic quibbling" it would appear as the universal truth, while Christianity, also freed from its superstitions, would simply merge with Judaism. Later Berr insisted on the retention of what, in his opinion, were essential Jewish practices, which he explained in his *Nouveau précis élémentaire d'instruction religieuse et morale à l'usage de la jeunesse française israélite* (1839), thus adhering in his eclectic way to Jewish religious reform.

tionnaire de biographie française, 6 (1954), 141; Szajowski, in: *JJS*, 14 (1963), 53–66.

[Moshe Catane]

BERR ISAAC BERR DE TURIQUE (1744–1828), leader in the struggle for Jewish *emancipation in France, born in Nancy. His father Isaac Berr had been appointed Jewish “syndic” by King Stanislaus of Poland, duke of Lorraine. Berr himself, a naturalized French citizen, was a tobacco manufacturer and banker. In August 1789 he was chosen as one of six members of a Jewish delegation sent to Paris from Alsace and Lorraine to put the case for granting Jewish civic equality, acting as their spokesman at the bar of the National Assembly. He was a member of the Nancy municipal council from 1792, and in 1806 was a leading delegate in the *Assembly of Jewish Notables, sitting on its “Committee of Twelve.” He later became a member of the Napoleonic *Sanhedrin. In 1816 he purchased an estate in Turique, adding “de Turique” to his name by royal permission. Berr translated N.H. *Wessely’s proposals for Jewish educational reform into French under the title *Instructions Salutaires Adressées aux Communautés Juives de l’Empire de Joseph II* (Paris, 1790). He also published letters in defense of Jewish rights, demonstrating the moral value of the Talmud. While supporting certain reforms in Jewish life and customs, including the abolition of Jewish communal and judicial autonomy, Berr did not advocate religious Reform (*Réflexions sur la Régénération Complète des Juifs en France*, 1806).

[Moshe Catane]

BERSHAD, small town in *Vinnitsa district, Ukraine. Jews started to settle there at the end of the 16th century. They were butchered by one of the Cossack bands during the *Chmielnicki massacres, and in the 18th century by the *Haidamak gangs. The community numbered 438 in 1765; 650 in 1787; 3,370 in 1847; 6,600 (out of a total of 8,885) according to the 1897 census; and 7,400 (61%) in 1910. At the beginning of the 19th century, when the *zaddik* *Raphael of Bershad lived there, Bershad became a center of Ḥasidism. It became celebrated for its *tallit* weaving industry which came to an end after many of the weavers immigrated to the United States. Most of the plants for sugar refining and distilling, flour mills, and tanneries established in Bershad toward the end of the century were owned by Jews. Of the town’s 175 artisans, 163 were Jewish. During the civil war of 1919–20, 150 Jews in Bershad were massacred by Ukrainian gangs and soldiers of *Denikin’s army. In 1926 they numbered 7,016 (total population 11,847), dropping to 4,271 in 1939. During this period, under the Soviets, many Jews worked in artisan cooperatives, some of which later developed into factories; about 20% of the Jews were blue-collar workers and clerks, and 20% were unemployed. A Yiddish high school had 621 students. Bershad was occupied by the Germans and Romanians on July 29, 1941, and included in

Transnistria on September 1. A ghetto was established in the town and 25,000 Jews deported from Bessarabia and Bukovina were sent there. Many died of hunger and disease as up to 25 people were packed into a room. By August 1942, 10,000 Jews remained. The situation improved after financial aid arrived from Jewish organizations in Bucharest. A hospital, pharmacy, soup kitchen, and orphanage were opened. Local Jews organized an armed underground and later took to the forest and joined Soviet partisan units. The Jews numbered 2,200 in 1959 and 553 in 1993. There was a synagogue, and both a rabbi and kosher poultry were available.

[Shmuel Ettinger / Shmuel Spector (2nd ed.)]

***BERSHADSKI, SERGEY ALEXANDROVICH** (1850–1896), historian of Lithuanian Jewry. He became interested in the history of the Jews in Lithuania through his teacher, F. Leontovich. Bershadski, who for many years worked in official archives, in particular those of the archduke of Lithuania, also lectured in law at the University of St. Petersburg. His first historical study of Lithuanian Jewry was published in the series *Yevreyskaya Biblioteka*, where he also published a collection of sources relating to Jewish history in southwest Russia and Lithuania. In 1882 he published two volumes of documents relating to Jewish history in Lithuania from 1388 to 1569, and in 1883 his book *Litovskiye Yevrei* (“The Lithuanian Jews”), a history covering the same period. His other works on this subject include a Russian history of the Jewish community in Vilna from 1593 to 1649 (*Voskhod*, nos. 10, 11, 1886, and nos. 3–8, 1887), and studies on Abraham Jesofovich, the Lithuanian treasurer (1888), and on Saul Wahl (*ibid.*, nos. 1–5, 1889).

In the 1890s Bershadski began to interest himself in the history of the Jews in Poland, for which he collected material from the central archives in Warsaw. He published several articles on the subject, the documents upon which he drew being published posthumously in *Russko-Yevreyskiy Arkhiv* (vol. 3, 1903). In response to the growing antisemitism of the time, Bershadski also undertook a study of the blood libel in Poland and Lithuania in the 16th to 18th centuries, published in *Voskhod* (nos. 1, 9, 11, 12, 1894). Before his death he began publication of a work on the “Jewish Statute” of 1804, but did not complete it.

After he began his researches, Bershadski, who had been formerly radically anti-Jewish, developed an appreciation of the Jewish people and became their warm supporter. In his wish to promote their integration into the Russian state and culture, he attempted to show the antiquity of the Jewish settlement there and that the Jews had made a positive contribution to Russian life and the Russian language. He attributed the isolation of the Jews by the rulers of Poland to the annexation of Lithuania in 1569. Bershadski considered that the union had brought Lithuania “the Talmud, Jewish autonomy, and *Kahal*

solidarity.” He was, however, not an expert in the internal developments in Jewish history.

BIBLIOGRAPHY: M. Vinaver, in: *Voskhod*, 17 no. 5 (1897), 49–54 (second pagin.); Vengerov, in: *Kritiko-Biograficheskiy slovar'*, 3 (1892), s.v.

[Shmuel Ettinger]

BERSHADSKY (Domashevitzky), ISAIAH (1871–1908), Hebrew novelist. Bershadsky, who was born in Zimoshti, Belorussia, received the traditional Jewish education of the period, and also acquired a knowledge of Russian. His novel *Be-Ein Mattarah* (“To No Purpose”) appeared in 1899 (under the pseudonym Bershadsky, an abbreviation of the Hebrew for Ben Reb Shimon Domashevitzky) in the *Biblioteka Ivrit* series founded by Ben Avigdor. It proved a landmark in Hebrew literature. For the first time in the 20 years since the foundation of the Hibbat Zion movement a novel was published in Hebrew giving a comprehensive view of contemporary society. *Be-Ein Mattarah* is a psychological realistic novel of the type prevalent in the European literature of the period. The background is the Jewish middle class in a town in the Pale of Settlement, and the main characters are the Hebrew teachers. The plot deals with their social and ideological problems arising from the question of a Jewish national rebirth. The hero, Admovitz, in common with Bazarov, Turgenev’s nihilist archetype of Russian literature, rejects idealism and favors theorizing and philosophizing. He thus reacts negatively to Zionism and to the concept of a resurrection of the Hebrew language, both of which threw the Pale of Settlement into a ferment in the 1890s. However, his rejection does not lead to any constructive alternative. His attempts to immerse himself in materialistic pleasures are accompanied by agonies of conscience, a result of his religious education. These he tries to hide beneath a mask of cynicism and mockery. His life is joyless and purposeless. In the character of Admovitz, who shares many personality traits with his author, Bershadsky created the prototype of the Jewish social misfit, who became the anti-hero of Hebrew fiction in the first quarter of the 20th century. A two-volume anthology of Bershadsky’s stories and sketches was published during 1899 and 1902 under the title *Tippusim u-Zelalim* (“Types and Shadows”). His second novel, *Neged ha-Zerem* (“Against the Stream”) appeared in 1901 in four parts. Written before *Be-Ein Mattarah*, it depicts the collapse of traditional Jewish life. The hero, Israelson, the representative of Zionist orthodoxy, discovers that the bourgeois youth has surrendered to anarchy, cynicism, and hedonism. He eventually reached the conclusion that no Diaspora-based system of education can contain assimilation. Bershadsky is one of the first modern Hebrew authors to describe the relationship between the sexes realistically. In general, his works mark the entry of realism into Hebrew fiction, ending its tradition of over-moralizing. There are, however, defects in his writing. These include weakly traced plots, an excess of propaganda, usually put into the mouths of the heroes during their numerous arguments, and a dry, unimaginative style, lacking lyrical finesse.

Bershadsky was a member of the editorial board of the periodical *Ha-Zeman* in 1904–05 in St. Petersburg and later in Vilna. He died in Warsaw. His later stories and sketches and his early and unpublished writings were collected and published posthumously in two volumes under the title *Ketavim Aharonim* (“Last Writings,” 1910).

[Gedalyah Elkoshi]

BERSOHN, MATTHIAS (1823–1908), Polish art collector and historian. Bersohn was active in the Warsaw Jewish community. He assembled an important collection of Jewish and Polish art in his own home and made generous presents to Polish museums. Since all his children converted to Christianity, he presented his collection and library to the Warsaw Jewish community, which established the “Bersohn Museum for Jewish Antiquities” to house it, at the time the only institution of its kind in Poland. In March 1940 the Germans broke into the museum and robbed it of its treasures. Bersohn’s general collection was given to Polish museums. One of the earliest researchers of the history of art in Poland, he wrote a study on the wooden-structured synagogues in Poland (Pol., 3 vols., 1895–1903; Ger., in *MGJV*, 8 (1901), 159ff.). He also wrote a study of Joseph Nasi (*MGWJ*, 18 (1869), 422ff.) and one of Tobias Cohen and other Polish-Jewish doctors (1872). His lexicon of Jewish scholars in Poland, 16th–18th centuries (Pol., 1906), and his collection of documents on Polish Jewish history from 1388 to 1872 (1910, ed. posthumously by his son-in-law A. Kraushaar) are not too reliable.

BERSON, ARTHUR JOSEPH STANISLAV (1859–1942), Austrian meteorologist. Born in Neu-Sandec, Galicia, he worked at the Prussian Aeronautic Observatory later transferred to Lindenberg and Friedrichshafen. In 1899 he introduced new methods for the study of the air strata structure at heights of tens of miles above the earth. Berson employed kites and balloons of rubber and paper filled with hydrogen gas and attached them to thin metal threads. Berson, in balloons of his own design, rose to the upper atmosphere a number of times with instruments for the measurement of the air pressure, the air temperature, and the relative humidity. Berson also carried out his observations over Spitzbergen, the Arctic Ocean, East Africa, Brazil, the Indian Ocean, and Indonesia. From these observations of Berson, the notion of the troposphere and the stratosphere were accepted generally. In 1901 Berson and a companion reached a height of about seven miles without oxygen masks. Berson also sent up unmanned balloons to heights of 18 miles. These balloons contained recording instruments which, if the balloon exploded, would come down by means of small parachutes. He also used red balloons sent up at a fixed rate which could be tracked and thus determine

the direction of the wind. During World War I this knowledge of the direction of wind at high altitudes was of great importance to the fighter planes. The observations and studies of Berson were first published in three volumes, together with those of R. Assmann, under the title *Wissenschaftliche Luftfahrten* (1899–1900).

[Dov Ashbel]

°**BERTHOLD OF FREIBURG** (13th century), Dominican preacher and theologian. In his *Summa*, completed in about 1295, the oldest known textbook of canon law in the German language, Berthold contests the validity of forced conversion to Christianity, obtained by “use of arrow or lance,” or by “pushing people under the baptismal font against their will.” He further prescribes that converts should be allowed to retain their property after baptism, in opposition to the fiscal policy followed by certain princes who commonly confiscated the property of the new converts to compensate for the loss of the Jewish tax.

[Emmanuel Beerl]

°**BERTHOLD OF REGENSBURG (Ratisbon;** before 1210–1272), Franciscan friar, the most celebrated preacher in Germany in the Middle Ages. From 1240 Berthold traveled throughout the German-speaking countries. In 1263 he began to preach the crusade. His sermons, delivered in fields or public squares, drew huge crowds. While preaching against Christian heresies, such as those held by the Cathari and Waldenses, he included the Jews in his attacks. Berthold declared that the heretics together with their allies the Jews, were so powerful that, but for the emperor’s opposition, they would have gained control over Germany. He even predicted that a time would come when Christians would have to defend themselves against them in the same way as against the “infidels” (the Muslims). Berthold strongly opposed the practice of usury by the Jews whom he also accused of proselytizing among Christians.

BIBLIOGRAPHY: DHGE, 8 (1935), s.v. *Berthold de Ratisbonne*; R. Iannucci, *Treatment of the Capital Sins and the Decalogue in the German Sermons of Berthold von Regensburg* (1942), includes bibliography.

[Bernhard Blumenkranz]

°**BERTHOLET, ALFRED** (1868–1951), Swiss Bible scholar and theologian, who taught biblical exegesis at the University of Basle.

Bertholet wrote extensively on the canonical and extracanonical books of the Bible. His works include commentaries on Leviticus (1901), Deuteronomy (1899), Ezekiel (1897), Ruth (with E.F. Kautzsch, 1923), and Ezra and Nehemiah (1902). His Appendix on the Apocrypha and Pseudepigrapha in the *Geschichte der althebraeischen Literatur* (ed., K. Budde, 1906, 1909²) is considered one of the best in the field. In his

works *Der Beitrag des Alten Testaments zur allgemeinen Religionsgeschichte* (1923) and *Das Dynamistische im Alten Testament* (1926) Bertholet maintained that the religion of ancient Israel, characterized by a strong personal conception of the Deity, was unique in a world dominated by dynamistic theories which viewed the universe as essentially constituted by natural and supernatural forces. His other works in biblical studies include: *Die Stellung der Israeliten und der Juden zu den Fremden* (1896), *Die juedische Religion von der Zeit Esras bis zum Zeitalter Christi* (1911), *Kulturgeschichte Israels* (1919), and a second commentary on the Book of Ezekiel (1936). His works in the field of comparative religion include *Buddhismus und Christentum* (1902, 1909²), *Dynamismus und Personalismus...* (1930), *Goetterspaltung und Goettervereinigung* (1933), *Das Geschlecht der Gottheit* (1934), *Der Sinn des kultischen Opfers* (1942), *Die Macht der Schrift in Glauben und Aberglauben* (1949), and the posthumous *Grundformen der Erscheinungswelt der Gottesverehrung* (1953).

BIBLIOGRAPHY: *Festschrift A. Bertholet* (1950), 564–78, includes a complete bibliography; Baumgartner, in: *Schweizerische Theologische Umschau*, 21 (1951), 121ff.

[Zev Garber]

BERTINI, GARY (1927–2005), Russian-born Israeli conductor and composer. After training in Israel and Italy, he studied in the Paris Conservatoire and at the Sorbonne. Among his teachers were Boulanger and Messiaen. In 1954 he returned to Israel and taught conducting in Tel Aviv at the Music Teachers’ College, and later at the Rubin Academy, where he was appointed professor in 1975. He played an important role in the development of Israeli music. He founded and directed many of Israel’s leading musical institutions such as the Rinat Choir (1955), the Israel Chamber Orchestra (1964–75), the Musical Evenings for Contemporary Music (1962–65), the Liturgical Festival (1978), and the Israel Festival. He was musical director of the Symphony Orchestra of Jerusalem (1978–86) and artistic and musical director of the New Israel Opera in Tel Aviv (1994–97). Bertini regularly conducted the major orchestras of the world and held appointments as conductor, musical advisor, and director with leading orchestras, among them the Scottish National Orchestra (1971–78), the Detroit Symphony Orchestra (1981–83), the Cologne RSO (1983–91), the Frankfurt Opera (1987–90), and the Tokyo Metropolitan Symphony Orchestra. He was later appointed musical director of the San Carlo Theater.

Bertini is known for a wide repertory ranging from Josquin des Près to contemporary composers. He is noted for his interpretation of Mahler and French music. He has given the premieres of many works of Israeli composers (such as *Partos, *Ben Haim, *Orgad, *Avni, *Seter, and *Tal) and others. His compositions include incidental scores, works for orchestra, chamber music, songs, and choral arrangements. Bertini is the recipient of the Israel Prize (1978), the Frank Pelleg Prize (1999), and the Grand Prix of the French music critics. He also wrote an essay on Anton Webern.

BERTINI, K. AHARON (1903–1995), poet and editor. Bertini, who was born in Bessarabia, began to publish poetry in 1924, and taught in Hebrew high schools in Bessarabia from 1927. He immigrated to Erez Israel in 1947, where he resumed his teaching career. From 1965 he served as an editor of *Moznayim*, the literary magazine of the Hebrew Writers' Association. His volumes of poetry include *Temol Deheh* (1939), *Mi-Layil ad Boker* (1951), *Marot al ha-Efer* (1954), *Shevil Kahol* (1961), *Bakbuk al Penei ha-Mayim* (1969), *Maḥshakim u-Derakhim* (1974), *Me'ahorei ha-Pargod* (1985), *Le-Orekh ha-Yamim, le-Orekh ha-Mayim* (1988) and the essays *Seder Re'iyah: Masot Sifrutiyot* (1977). With Z. Rosenthal and D. Vinitzky he edited the literary anthology *Min ha-Zad* (1939–40). He translated from French, Romanian, and Yiddish into Hebrew. Among the last are David *Bergelson's play *Prince Reuveni*, Moshe Altman's short story collection *Be-Omek Ha-Re'i* (1967, and H. Leivick's dramatic poem *Abelar un Heluiz*. Bertini also edited an anthology of translations from Yiddish literature for high schools (1958) and prepared an anthology of works by Romanian Jewish writers (1972). Dan Miron edited a collection in two volumes of Bertini's poems (2003) with a supplementary essay. His son Gary *Bertini is a noted composer and conductor.

[Getzel Kressel]

BERTINORO, OBADIAH BEN ABRAHAM YARE (Di or Of; c. 1450–before 1516), Italian rabbi and Mishnah commentator. The name Yare is an acrostic of the Hebrew יָרֵי רְצוּי אֶהְיֶה (Yehi Rezu'i Ehav; "Let him be the favored of his brethren"; Deut. 33:24). Little is known of his family, which derived from the town Bertinoro in northern Italy. At some time he apparently lived in Città di Castello, where he was a banker. His best-known teacher was Joseph *Colon. Much more is known about Bertinoro, after he left this place, from three letters he wrote during 1488–91 in which he described his travels and his early impressions of Erez Israel. (See Map: Journey from Italy to Israel). Leaving his home at the end of 1486, he went on via Rome to Naples and stayed there and at Salerno for four months, where he taught (probably Jewish matter). In 1487 he reached Palermo where he stayed three months, preaching every Sabbath. Though pressed to become rabbi, he refused, and sailed by way of Messina and Rhodes for Alexandria, where he arrived early in 1488. He describes at length the Jewish communities of these places and their customs. He proceeded to Cairo, and the *nagid* Nathan ha-Kohen *Sholal received him with great honor. Sholal asked Obadiah to remain in Cairo but he refused and continued his journey via Gaza, Hebron, and Bethlehem, reaching Jerusalem just before Passover in 1488. Jacob of Colombano, an Ashkenazi rabbi who had come to

Obadiah di Bertinoro's journey from Italy to Erez Israel, 1485–1488.

Jerusalem from Italy, welcomed him warmly. On his arrival Bertinoro became the spiritual leader of Jerusalem Jewry, and was embroiled with the local communal leaders, in his words – "zekenim" (elders). However, he was successful in uniting the oppressed and divided community. He established regular courses of study and preached twice a month in Hebrew. He even occupied himself with the burial of the dead since no one else was ready to undertake this religious duty. He enacted communal regulations and made himself responsible for the collection of funds from Italy for the support of the poor. Emanuel Hai Camerino of Florence, to whom Bertinoro had entrusted his property and who had promised to send 100 ducats a year, added an additional 25 ducats for charity. Bertinoro's wealthy brother also sent contributions. Nathan Sholal put his house in Jerusalem in Bertinoro's charge and authorized him to manage the communal affairs. It seems also that he officially served as a deputy **nagid* in Jerusalem. With the repeal of the communal tax and the arrival after 1492 of refugees from Spain, the community began to grow. An anonymous traveler testifies in 1495 to Bertinoro's fame in Erez Israel and in the Diaspora. From his third letter in 1491 from Hebron it appears that he left Jerusalem for a while and became rabbi of Hebron. By 1495, however, he was back in Jerusalem. He was buried on the Mount of Olives.

Bertinoro's fame rests on his commentary on the Mishnah which was completed in Jerusalem and published in Venice (1548–49). It has become the standard commentary on the Mishnah as is Rashi's on the Talmud. This commentary was published with the text in almost every edition of the Mishnah. Written in an easy, lucid style, it draws largely on Rashi, often quoting him literally, and on Maimonides, whose rulings he cites. For the sections of Mishnah which have no Talmud he drew on the commentary of *Samson b. Abraham of Sens and of *Asher b. Jehiel. Falsely attributed to him is *Amar Neke* (published: Pisa, 1810), a commentary on Rashi on the Pentateuch. The three letters mentioned above were written in a flowing, limpid Hebrew to his father, his brother, and possibly his friend, Camerino. They have frequently been pub-

lished under the title *Darkhei Ziyyon* or *Ha-Massa le-Erez Yisrael* and translated into many languages, such as, German, French, English, Italian, and Spanish. Other works remain in manuscript: responsa, novellae on R. Moses of Coucy, *Sefer Mitzvot Gadol*, and Maimonides' *Mishneh Torah*, as well as an exchange of letters, poems, and prayers.

BERTONOFF, DEBORAH (1915–), mimic-dancer, teacher, and researcher of dance; one of the pioneers of dance in Israel. Daughter of Yehoshua Bertonoff, a veteran of the *Habima Theater, she was still a child in Russia when she danced “*The Beggars’ Dance*” in *The Dybbuk* directed by Vakhtangov. She immigrated to Israel in 1928 with Habima. In 1929 she went to Berlin and studied dance at the school of Trumpy Skoronel. Upon her return to Israel in 1932, she produced recitals concentrating on the description of individual personalities and the dramatic stories of people’s lives: *Individuals at a Jewish Wedding*, *Two Jews Are Conversing*, and *The Maker of Magic*. In 1934, she went to study in England at the schools of Kurt Jooss and Sigurd Leeder. Bertonoff was awarded a first prize for mimic-dancing in Paris in 1936.

She opened a studio in Tel Aviv and produced *Exodus from Egypt* (1946) to the music of Yosef *Tal. This was a work of solo dances and readings whose subjects were national-biblical and which later (1957) became *Memories of a Nation*. Her first Broadway performance was in 1948. She represented Israel in the Theater of Nations in 1962. Thanks to a scholarship from UNESCO, she was able to go on research trips to Ghana in 1960 and 1965 and to India in 1966. Bertonoff left the stage in 1970 and, after a 15-year hiatus, returned to the stage in a recital that was a reconstruction of her dancing from the past. In 1991, she received the Israel Prize for dance. She wrote *Dance Towards the Earth* (1965), *Spirit Possessed* (1965), *Dance Towards the Horizons* (1968), *Dance, Drums, Drama* (1979), and *Journey to the World of Dance* (1982).

BERUREI AVERAH/AVEROT (Heb. עֲבֵרוֹת / עֲבָרָה; “the elected [to control] sin”), an institution of Catalonian origin

found in the Jewish communities in Spain from the second half of the 13th century and later in the *Sephardi Diaspora in the 16th and 17th centuries. The *berurim* were the leaders of the community, some of whom were especially appointed for special tasks. The *berurei averot* were responsible for people’s behavior in general. Officers so appointed mainly had the authority to deal with religious and moral transgressions. There were also similar officers (*berurei tevi’ot*) to investigate monetary suits. *Berurei averot* had the authority to impose punishments such as expulsion, excommunication, and flogging on guilty persons. The communities of Catalonia, Valencia, and Majorca had two or three such officers, while in Aragon this function was included in the duties of the *adelantados. A legend about Isaac b. Solomon *Luria in 16th-century Safed conveys the atmosphere in which this body practiced its activities: “It happened that the sages of Safed appointed ten men concerning transgressions, all of them learned and wise.” One of them looked out of his window early in the morning and saw a well-dressed woman. He followed her, and seeing her enter the courtyard of a man of light morals, “immediately after the end of the morning prayers ordered the beadle to call together his fellow appointees over transgressions, and [stated that] he would testify before them concerning a transgression that he had himself seen.” While they were in assembly Luria proved miraculously to the accuser that his suspicions were unfounded.

BIBLIOGRAPHY: Baer, *Urkunden*, 1 pt. 1 (1929), index s.v. *berurim do avero*; Baer, *Spain*, index; M. Benayahu (ed.), *Sefer Toledot ha-Ari* (1967), 159–60. **ADD. BIBLIOGRAPHY:** Y. Assis, *The Golden Age of Aragonese Jewry* (1997), 87, 104, 111, 315.

BERURYAH (second century), a learned woman mentioned once in the Tosefta, and identified in the aggadot of the Talmud Bavli as the daughter of R. *Hananiah b. Teradyon and wife of R. *Meir. Beruryah is the only woman mentioned by name in tannaitic sources whose view on an halakhic matter was taken into account by the scholars of her time. Tosef., *Kelim*, BM 1:6 reports a dispute between R. Ṭarfion and the Sages, in the context of which Beruryah expressed an opinion. The Tosefta goes on to state: “When this matter was reported to R. Judah, he said: ‘Beruryah spoke well.’” Significantly, the daughter of R. Hananiah ben Teradyon is also mentioned in Tosefta *Kelim* (BK 4:17), where her halakhic opinion also is quoted with approval, and in a very similar fashion: “When this matter was reported to R. Judah ben Bava, he said: ‘His daughter spoke better than his son.’” Aside from the similarity of the two cases and their proximity to each other in the Tosefta, there is no positive reason to identify these two figures. Moreover, if we assume that R. Ṭarfion was alive and active during the final years of the Second Temple (cf. Tosef. Soṭ. 7:16), it does not seem likely that a woman who was old enough to debate with Ṭarfion could have been R. Hananiah ben Teradyon’s daughter, let alone R. Meir’s wife. Indeed, one source mentions R. Meir’s wife, but without mentioning her by name (Mid. Prov. to 31:1). It would seem, therefore, that the

figure of Beruryah – talmudic scholar, daughter of R. *Hananah b. Teradyon and wife of R. *Meir – is in fact a conflation of a number of distinct figures, mentioned either by name or without name in earlier sources. The fascinating and problematic figure of Beruryah, therefore, must be seen as a synthetic literary product of the Talmud's method of "creative historiography," as was shown by David Goodblatt in his classic study, "The Beruriah Traditions." The notion that Beruryah was largely a product of the talmudic "collective consciousness" only increases the significance of her figure for an understanding of the talmudic mind and its problematic attitude toward scholarly and assertive female figures (Tal Ilan, 3–8). We will therefore summarize the basic elements of the Bavli's Beruryah aggadot in outline:

The Talmud tells of her great knowledge (Pes. 62b). It describes her as restraining her husband Meir in a moment of moral weakness. When certain evil persons antagonized her husband and he prayed for their death, she rebuked him, interpreting Psalms 104:35 as expressive of God's desire for the destruction of sin, and not of sinners, and exhorting him to pray, rather, that they repent of their evil ways (Ber. 10a). The *aggadah* also tells of her mocking wit. Once, when R. Yose the Galilean, meeting her along the way, asked, "By which road should we travel in order to reach Lydda?" she replied: "Galilean fool! Did not the rabbis say, 'Talk not overmuch with women?' You should have asked: 'How to Lydda?'" (Er. 53b). Another instance of her sharpness is her reply to a sectarian concerning the interpretation of a verse from the Prophets (Ber. 10a). Beruryah also guided students in their study. When she found a student studying in an undertone, she rebuked him, saying: "Is it not stated (II Sam. 23:5) 'Ordered in all things, and sure?' – If the Torah be ordered in the two hundred and forty-eight organs of your body, it will be sure, and if not, it will not be sure" (Er. 53b–54a). Finally, Rashi, in explaining the obscure phrase "the story of Beruryah," mentioned in Av. Zar. 18b, quotes a legend to the effect that as a result of her exaggerated self-confidence – feeling that she was above "feminine weakness" – she ultimately was led astray, with tragic consequences. Beruryah was also the heroine of a number of belletristic works and plays in Hebrew and in other languages.

[Stephen G. Wald (2nd ed.)]

BESALÚ (Latin *Bisuldunum*, *Bisuldum*; Heb. בֵּיִאֲלוּרִי, בֵּיִאֲלוּרִי בֵּיִאֲלוּרִי), town in Catalonia, N.E. Spain. Its Jewish community was one of the oldest in Catalonia, a tombstone dating from 1090 having been found there. In 1258 James I gave permission to the Jews of Gerona and Besalú, then forming a single *collecta* ("tax administrative unit"), to appoint five representatives to act in financial and administrative matters. In 1258 the two communities together paid a tax of 15,000 sólidos. In the 13th century there were 18 Jewish families (about 130 persons) in Besalú, and in the 14th century between 38 and 49 fami-

lies (170–220 Jews). The Zabara and Corvida families were among the leading members of the community of Besalú in the 13th through 15th centuries. Several of their number were baptized in 1391. Other important families were the Monells, the Payrusa, the Astrucs, the Caracaucas, the Bonanasms, the Bellcaires, and the Benvenists. As in the rest of Catalonia some rich Jews were moneylenders, very often in addition to their occupations or financial enterprises. Considering the size of the community, there were many Jewish physicians in Besalú – in the 14th century there were no fewer than 15. Among the best known there were the Castlars, Abraham and David, who were father and son, Bendit Deuslogar, Belshom Maymon, Moshe Abraham de Portal, Samuel Cabrit, Salamon Caravida, and Ishaq Adret. In 1271 the Jews of Besalú were empowered by the Infante Pedro to execute legal contracts in the same way as Christians and Moors. During a heresy hunt in Besalú in 1292 the Dominicans tried to interfere in Jewish affairs, but were prevented by the king. An outbreak against the Jews at Gerona during Easter 1331 had repercussions there. During the anti-Jewish outbreaks that swept Spain in 1391 the Jews were protected by the local authorities. Thus between 1392 and 1415, a period of general decline of the Jewish population in Catalonia, 36 Jewish families, around 160 Jews, lived there. Nevertheless the number of Jews who converted to Christianity increased significantly in the 15th century. A small Jewish community continued to exist in Besalú in the 15th century, until the expulsion from Spain. It had its own synagogue, cemetery, and *mikveh*. The *mikveh* was discovered in 1964 in the old Jewish quarter.

[Haim Beinart / Yom Tov Assis (2nd ed.)]

BESANÇON, capital of the department of Doubs, eastern France; from the 13th century a free city, annexed to France in 1674. The first reference to Jews in Besançon is found in 1245. The Jewish street was in the present Rue de Richebourg, and the cemetery in front of the present Porte de Charmont. Jewish bankers of Besançon are mentioned in the chronicles of the Anglo-French war of 1296–1301. In 1321, and between 1393 and 1404, Jews expelled from *Franche-Comté and *Burgundy reached the city. The Jews left Besançon in the 15th century, and in 1465 the cemetery was sold by the municipality. Jews were denied free access to Besançon from the end of the 17th to the end of the 18th century, a few permits of temporary residence for a limited period being granted to a small number of merchants. A permit of longer duration was issued to an engraver of semiprecious stones.

After the French Revolution the community in Besançon was reestablished. It numbered 20 families in 1807, and

sent a delegate to the Assembly of Jewish notables and to the Sanhedrin convened by Napoleon. The community was administered by the *Consistory of Nancy until 1858, and then later by Lyons. The present synagogue, in Moorish style, was consecrated in 1869. In 1872 an independent consistory was set up at Besançon. The community was increased by Jews who left Alsace after the Franco-Prussian war of 1870. At the beginning of the 20th century there were 170 families living in Besançon.

[Zvi Avneri]

Holocaust and Postwar Periods

The community was largely destroyed and dispersed under the German occupation during World War II. In May 1940, over one hundred Jews were deported by the Germans. After the war, the Jewish community slowly revived, and had 120 families in 1960. By 1969 their number had practically doubled, largely as a result of the influx of Jewish immigrants from North Africa. The community engaged a rabbi and cantor and maintained a number of institutions.

BESDIN, MORRIS J. (1913–1982), U.S. rabbi, pioneer in *keruv*. Besdin was born in Lithuania. His family immigrated to America when he was three years old. After completing his elementary schooling at Yeshiva Chaim Berlin, he continued his studies at the Rabbi Isaac Elchanan Theological Seminary, where he was ordained in 1936. He began his career as a pulpit rabbi in Scranton, Pa., and then as the successor to his father, who had died, on the Lower East Side. He became the rabbi of the Beis Medrash HaGadol in Washington Heights, a prominent congregation of first and second generation immigrants. The Beis Medrash HaGadol also had a tradition of scholarship which Besdin addressed with confidence. Living in the neighborhood at the time was Samuel *Belkin, the new president of RIETS. It was the beginning of a lifelong association.

The advent of World War II marked Besdin as a quiet “doer.” He gave up his pulpit and volunteered for military service as a chaplain in the South Pacific. In 1950, the Kew Gardens Synagogue invited Besdin to become their spiritual leader. This synagogue was the first Orthodox synagogue established and built in New York shortly after the war. The lay leadership was a group of strong, assertive German and Belgian Jews who had immigrated to the United States shortly before the beginning of World War II, just in the nick of time. They were reconstituting on American shores a community they were forced to leave behind. They soon fell in love with their modest, Yiddish-speaking Litvishe rav. Eight years later he was to leave them for a second career in Jewish education.

In a pioneering venture into what later became known as *keruv*, Yeshiva University established in 1958 the James Striar School. The new school was an attempt to capture the hearts and minds of inquiring, college-age young men for Judaism. Belkin did not like boisterous people. Spotlight seekers disturbed his sense of decorum. Having followed Besdin's career, Belkin knew that Besdin was the man he needed for this new school. Even as a pulpit rabbi, Besdin had been in the forefront of Jewish education. As one of the founders of the Yeshiva Dov Revel in Forest Hills, he had made his mark. Having been trained by talmudic giants, Moses *Soloveitchik and Bernard *Revel, Besdin was very conscious of the failure of the “about” theory of Jewish education. He believed in the “it” of Jewish learning. The student had to know – and had to be proud that he knew – the original text. He did not countenance false piety, premature piety. When his newly religious students would walk around with their *zizit* outside their shirts, Besdin would say: “A man in a tuxedo is elegant, but if his shirt is hanging out of his pants and his hat is on the side of his head, what is he?” He would answer his own question: “A clown.” He would advise: learn Hebrew, read the text well, and then decide on the externals.

[Victor Geller (2nd ed.)]

BESEKOW, SAMUEL (1911–2001), Danish actor, director, and author. After training in Berlin with Max *Reinhardt and Erwin Piscator he became director of a workshop theater in Copenhagen, *Riddersalen*, where he presented works by modern playwrights. During the last years of World War II Besekow was a refugee in Stockholm. After the war he worked as director in theaters in Copenhagen and abroad. Besekow staged Brecht's *Galileo* in Tel Aviv, in 1962, and Molière's *The Miser* for the *Freie Volksbuehne* in West Berlin in 1967. He wrote books about the theater, novels depicting the artist's life; *Guds Gölere* (“God's Jesters,” 1954), a novel dealing with Jewish life in Russia, Denmark, and Germany; *Ild brander, eng gror* (“Fire Burns, Meadow Grows,” 1958); *Letters to a Theater-Crazy Professor* (1959); *Skrevet i Vand* (“Written in Water,” 1962); *Skrædderens søn* (“The Tailor's Son,” 1964); *Syvtallet* (“The Number Seven,” 1966); *Komedianter* (“The Comedians,” 1969); *Det musiske faenomen* (“The Aesthetic Phenomenon,” 1979); *Fra majonaesekvarteret til det konglige teater* (“From the Neighborhood of Mayonnaise to the Royal Theater,” 1993).

[Torben Meyer / Bent Lexner (2nd ed.)]

BESICOVITCH, ABRAM SAMOILOVITCH (1891–1970), mathematician. Besicovitch was descended from a Karaitic family. He began his academic career at St. Petersburg where he worked under Markoff. Owing to difficult conditions caused by the Revolution he moved to Perm in the Urals. Besicovitch left the Soviet Union in 1925 and in 1926 settled in Cambridge. He was elected a Fellow of the Royal Society in 1934 and received its Sylvester medal in 1952. Kekeya's famous problem, the determination of the least area swept out by a straight line which is reversed in direction by a continuous

motion in the plane, was solved by Besicovitch who proved the surprising result that there is no least area. He made important contributions to the theories of measure, sets of points, real analysis, surface area, and also to the additive theory of numbers. He was known for producing apparently simple problems which were extremely difficult to solve. His publications include *Almost Periodic Functions* (1955²).

BESREDKA, ALEXANDER (1870–1940), French immunologist, known for his research on anaphylaxis, local immunization, and immunization in contagious disease. Besredka was the son of a Hebrew writer, Elimelech Ish-Naomi. He first studied in Russia, but when it was proposed to him that he convert to Christianity in order to further his scientific career, he refused and moved to France. He completed his medical studies in Paris, became a French citizen, and was appointed a member of the Pasteur Institute of which he was later a director. Besredka maintained his contacts with Judaism all his life, was active in Jewish organizations such as *OSE, and wrote for Jewish scientific journals, including the Hebrew *Ha-Refu'ah*. His anaphylaxis research was based on original concepts, different from the accepted beliefs in immunology. In 1907 he discovered the possibility of eliminating hypersensitivity to foreign serum. His desensitization method was accepted throughout the world as the pretreatment of patients who had acquired a sensitivity toward a serum, in order to prevent anaphylactic shock by repeated serum treatment. Besredka was closely associated with the biologist Metchnikoff and in 1910 was appointed professor at the Pasteur Institute in Paris. His book *Immunitation locale, pansements spécifiques* was published in 1925.

[Aryeh Leo Olitzki]

BESSARABIA, region between the rivers Prut and Dniester; before 1812 part of Moldavia, with several districts under direct Ottoman rule; within Russia 1812–1918; part of Romania 1918–40; returned to Russia 1940, and together with the Moldavian Autonomous S.S.R. became the Moldavian S.S.R. After the disintegration of the Soviet Union, the state of Moldova was established.

Up to 1812

From the 15th century onward, Jewish Sephardi merchants from Constantinople frequented Bessarabia while using the trade route which crossed the length of the territory, connecting the countries of the East and the Black Sea shores with Poland. Later, Jewish merchants from Poland also began coming to Bessarabia. Some of them settled there, thus laying the foundation of the first Jewish communities in northern and central Bessarabia; in southern Bessarabia Jewish communities were found already in the 16th century. By the early 18th century, permanent Jewish settlements had been established in several commercial centers. Toward the end of the century, relatively large numbers of Jews were living in most of the urban settlements and in many villages. Their number was estimated at 20,000 in 1812. The legal status of the Jews in the part of Bessarabia under Moldavian rule was similar to that of the rest of Moldavian Jewry. They were organized in autonomous communities subject to the authority of the *hakham bashi* in Jassy. In the parts under Ottoman rule they were subject to the same laws as the other communities under this regime. In the 18th and 19th centuries, the Jews in Bessarabia mainly engaged in local commerce and liquor distilling; some traded on a considerable scale with neighboring countries. In the villages main occupations were leasing activities and innkeeping. In the cultural sphere, Bessarabian Jewry during this period was not advanced. The most prominent rabbis of the early 19th century were *Ḥayyim b. Solomon of Czernowitz, rabbi of *Kishinev, and David Solomon *Eibenschutz, rabbi of Soroki. Jacob *Frank exerted an influence from Podolia, and Khotin became a center for Frank and his adherents. Toward the end of the 18th century, Ḥasidism penetrated Bessarabia.

1812–1918

After the Russian annexation in 1812, Bessarabia was included in the *pale of Settlement, and many Jews settled there from other parts of the Pale. The Jewish population, mainly concentrated in Kishinev and its district and in the northern part of the region, grew from 43,062 in 1836 to 94,045 in 1867 (excluding New Bessarabia, see below), and to 228,620 (11.8% of the total) in 1897. Of these 109,703 (48%) lived in the towns (of them 50,237, or 22%, in Kishinev), 60,701 (26.5%) in small towns, and 58,216 (25.5%) in the villages. They formed 37.4% of the town population, 55.7% of the population of the small towns, and 3.8% of the village population. Regulations governing the legal status of the Jews of Bessarabia after the annexation were issued in 1818. In conformance with the Russian pattern, Jews were required to join one of three classes: merchants, townsmen, or peasants. All their former rights were confirmed, while the existent Russian legislation concerning the Jews did not apply, since Bessarabia had autonomous status. The regulations even expressly authorized Bessarabian Jews to reside in the villages and engage in leasing activities and innkeeping, in contradiction to the "Jewish Statute" of 1804 (see *Russia). Because of this regional autonomy, the Jews of Bessarabia were spared several of the most severe anti-Jew-

Main centers of Jewish settlement in Bessarabia in 1897, showing total Jewish population according to districts.

ish decrees issued in the first half of the 19th century. By 1835, when the liquidation of Bessarabian autonomy began, the “Jewish legislation” then promulgated in Russia was equally applied to Bessarabian Jewry, although the prohibition on Jewish residence in border regions was not enforced in Bessarabia until 1839, and compulsory military service until 1852. In the second half of the 19th century, the restriction on Jewish residence in the border area assumed special importance for the Jews of Bessarabia. According to the terms of the Treaty of Paris (1856), a territory in the southern part of the region was allocated to Romania, and many localities, including Kishinev, now fell in the border area. The restrictions were not strictly enforced and thousands of Jews settled in this region, although decrees of expulsion were issued in 1869, 1879, 1886, and 1891. Of these the most severe and extensive was that of 1869. Expulsions of individual Jews also became frequent. The Jews in New Bessarabia – the area incorporated within Romania by the Treaty of Paris – shared the fate of the other Jews in the country. The anti-Jewish riots which broke out in the towns of this region – *Izmail, Kagul, and Vilково – in 1872 aroused both Jewish and non-Jewish public opinion in Europe, and diplomatic intervention was enlisted to alleviate the position of the Jews. When New Bessarabia reverted to Russia in 1878, the Jews who were then recorded on the Romanian tax registers were permitted to remain there. The “*May Laws” of 1882 severely affected Jews in Bessarabia as a considerable proportion lived in the villages, and frequent expulsions ensued. In 1903 a frightful pogrom broke out in Kishinev. The wave of pogroms in 1905 swept Bessarabia. Three towns and 68 other

localities were struck and 108 Jews were murdered. The damage was estimated at 3,500,000 rubles. The 1917 Revolution in Russia brought civic equality for the Jews of Bessarabia.

During the 19th century, the economic structure of Bessarabian Jewry remained basically unchanged. In their old occupations Jews played an important role within the agrarian economy of the region. An increasing number of Jews entered agriculture, and between 1836 and 1853, 17 Jewish agricultural settlements were established in Bessarabia, mostly in the northern districts, on lands purchased or leased from Christian or Jewish landowners. There were 10,859 persons living on these settlements in 1858; 12.5% of Bessarabian Jewry were farmers, and the region became among the largest and most important centers of Jewish agriculture in Russia. There were 106,031 *dessiatines* (276,283 acres) in Jewish ownership in 1880 (representing 2.5% of the arable land in Bessarabia) and an additional 206,538 *dessiatines* (557,652 acres) leased by Jews. In time, especially after the application of the “May Laws,” most of the settlements were liquidated. According to a survey carried out by the *Jewish Colonization Association (ICA) in 1899, there were 1,492 families (7,782 persons), of whom 53% were landowners, on the six settlements still in existence. Of these families only 31.5% were engaged in agricultural work. The land in Jewish ownership also diminished. In 1897, 7.12% of the Jews in Bessarabia were engaged in agriculture; 26.81% in crafts and industry; 3.65% in transport; 2.34% in commercial brokerage; 39.53% in commerce (of these 58% engaged in the trade of agricultural produce); 8.9% as clerks or employees in private enterprises, domestics, daily workers, or unskilled laborers; 4.9% in public or government services or the liberal professions; and 6.75% in miscellaneous occupations. The 22,130 Jews engaged in commerce constituted 81.2% of the total number of merchants in the region, and 95.8% of the grain dealers. The proportion of Jewish artisans, mainly tailors, was lower (39%). From the early 1880s, the economic situation of Bessarabian Jewry deteriorated as a result of the frequent expulsions from the villages and border areas, and the agrarian crisis in Russia during this period. Many impoverished Jews emigrated overseas. The principal factor in Jewish spiritual life was Hasidism. Many of the village Jews of no marked learning adopted much of the way of life and customs of the Moldavian peasantry. A major influence was wielded by the *zaddikim* of the Friedman (see *Ruzhin) and *Twersky families. During the 1830s and 1840s, Haskalah began to penetrate into Bessarabia. From the end of the 1840s, Jewish government schools were opened in Bessarabia. In 1855 there were six such schools, in *Beltsy, Khotin, *Brichany, and Izmail, and two in Kishinev, with 188 pupils. Private secular Jewish schools also began to appear, and from the 1860s Jews in Bessarabia, especially wealthier ones, began to send their children to the general schools. During the 1870s, 30% to 40% of the pupils in some of the secondary schools of the region were Jewish. In 1894, however, 60.9% of Jewish children of school age still attended *heder*. The population census of 1897 revealed that only 27.8% of Bessarabian Jews above the age of ten

could read Russian. After the pogroms of the 1880s, Ḥovevei Zion societies were founded in Bessarabia as elsewhere, the most important in Kishinev, led by Abraham *Grunberg and Meir *Dizengoff. Toward the end of the 1880s and early 1890s, there was some movement toward pioneer settlement in Erez Israel (*aliyah*). Seven delegates from Bessarabia, of whom six were from Kishinev, took part in the founding meeting of the Ḥovevei Zion Odessa Committee (April 1890). The Zionists of Bessarabia were represented at the First Zionist Congress in 1897 by Jacob *Bernstein-Kogan of Kishinev. Toward the close of the 19th century and the beginning of the 20th, a line of poets and authors emerged on the cultural scene in Bessarabia, many of whom were to play an important role in Yiddish and Hebrew literature, including Eliezer *Steinberg, Judah *Steinberg, S. *Ben-Zion, Jacob *Fichman, Samuel Leib *Blank, and Ḥayyim *Greenberg. The chief rabbi of Bessarabia, Judah Loeb *Zirelson, wrote halakhic works.

1918–1941

After the incorporation of Bessarabia into Romania in 1918, the Jews there automatically received Romanian citizenship, in accordance with the commitments of Romania under the Treaty of Paris. However, as a result of the Nationality Law of 1924, many Bessarabian Jews who could not fulfill its requirements were deprived of Romanian nationality, and defined as aliens. According to a census taken in 1920, there were 267,000 Jews in Bessarabia. As in the other parts of Romania, they encountered popular hostility, anti-Jewish measures and suspicion on the part of the government, and petty administrative harassment. In 1938, 21,844 Jewish heads of families in Bessarabia were deprived of Romanian nationality (according to official statistics). The economic situation of Bessarabian Jewry also deteriorated. The separation of the region from its former Russian markets, the drought which struck Bessarabia three times during this period, the world economic crisis, and the government's policy of exploitation, all resulted in a severe crisis in the agricultural economy. Assistance from abroad was provided principally by the *American Joint Distribution Committee and ICA. The savings and credit cooperatives set up before the war supported by ICA also played an important role in this period. In 1930 there were 41 savings and loan banks operating in 39 localities with a membership of 30,202, i.e., two-thirds of Jewish breadwinners in Bessarabia. Of these 12% were farmers, reflecting the development of Jewish agriculture in this period. At the time of the agrarian reform in Bessarabia (1920–23), between 4,000 and 5,000 Jews received 7 to 10 acres of land each – altogether approximately 120,000 acres were cultivated. In Bessarabia agriculture as a Jewish occupation ranked second after Erez Israel. In 1935 about 3,000 families cultivating a total of approximately 20,000 hectares were supported by ICA. Two new agricultural settlements were established with assistance from ICA. Under Romanian rule, Jewish communal life flourished and leadership revived. A number of political parties, prominent among them the Zionist movements, were active, as well as other organizations.

The first conference of Bessarabian Zionists was convened in 1920 in Kishinev, and a central office for the Zionist Organization of Bessarabia was set up in Kishinev. On the basis of the minority treaties signed by Romania, a ramified network of Jewish elementary and secondary schools with instruction in Yiddish or Hebrew was established in Bessarabia at the beginning of Romanian rule. In 1922 there were 140 Jewish schools with 19,746 pupils (105 giving instruction in Hebrew with 16,456 pupils). A teachers' seminary was established in Kishinev. However, by the end of 1922 government policy changed. Many of the schools were deprived of their Jewish character and converted into Romanian schools. By 1929–30 there remained 64 Jewish educational institutions in 30 localities (15 kindergartens, 37 elementary schools, 11 secondary schools, and one vocational school) with 6,381 pupils and 312 teachers. Social welfare institutions in Bessarabia during this period included 13 hospitals, a sanatorium for tubercular patients, societies for assistance to the sick in 25 localities, 13 old-age homes, and four relief institutions for children. From 1923 the *OSE society was also active in Bessarabia where it maintained stations in eight localities. After the entry of the Red Army into Bessarabia on June 28, 1940, life for the Jews of Bessarabia was gradually brought into line with the general pattern of Jewish existence under the Soviet regime. On June 13, 1941, a comprehensive "purge" was carried out throughout the region. Thousands of Jews – communal leaders, active members of the Zionist movement, businessmen, and persons suspected of disloyalty to the regime – were arrested and deported to internment camps or exiled to Siberia.

[Eliyahu Feldman]

From 1941

The first Soviet occupation of the area lasted from 1940 until the beginning of hostilities between Germany and Russia in June of the following year. Romania was an ally of Germany. Bessarabia was reconquered by German and Romanian troops by July 23, 1941, and remained under Romanian authority until August 1944, when it was reoccupied by the Russians. Central and northern Bessarabia, as well as a narrow strip on the west side of the Dniester, became the Moldavian Soviet Socialist Republic with the capital in Kishinev. When Bessarabia was reoccupied by the Soviets, only a few Jews were still alive. The great majority had been massacred by the Einsatzkommandos of Einsatzgruppe D, and by the German and Romanian soldiers, while others were deported to *Transnistria, where more than half of them died. Many of the deported Jews preferred to slip back into Romania, and from there to leave for Israel.

For further information on the Holocaust in Bessarabia and subsequent events, see articles on *Russia and the various towns. For the period after the breakup of the Soviet Union, see *Moldova.

BESSELS, EMIL (1847–1888), German physician, Arctic explorer and naturalist. After his graduation from the University of Heidelberg in 1865, Bessels was appointed custodian of the Stuttgart Museum of Natural Science. In 1869 he was a member of a German Arctic expedition which studied the influence of the Gulf Stream on areas east of Spitzbergen. Bessels served as a surgeon in the German army in 1870. The following year Bessels sailed on the U.S. vessel *Polaris* as surgeon and naturalist with Captain Charles Francis Hall's expedition to the North Pole. Hall died unexpectedly in 1871 at Thank God Harbor, Greenland, after the *Polaris* had traveled farther north than any other ship. In the following year, the *Polaris* was caught in the polar ice and wrecked near Littleton Island. Nineteen members of the expedition, including Bessels, became separated from the rest of the crew and floated 1,300 miles on an ice-floe to the Bay of Melville off the Labrador coast, before they were rescued by a sealer. On his return to the U.S. in 1873, Bessels was accused by one of the crew of murdering Hall by administering morphine. An inquiry conducted by the surgeon-generals of the U.S. Army and Navy ruled that Hall had died of apoplexy and that Bessels was innocent. Subsequently, Bessels prepared the scientific results of this Arctic expedition (1876), wrote on natural history for scientific journals, and edited reports of the United States Naval Institute. Bessels was a member of an ethnological expedition which sailed on the steamship *Saranac* to the northwest coast of America. The vessel was wrecked in Seymour Narrows, British Columbia. Bessels died in Stuttgart.

BESSER, CHASKEL O. (1923–), Orthodox rabbi. Besser was born in Katowice, Poland. His father, Naphtali Besser, was a successful businessman who was the right-hand man to the *Radomsko rebbe, Solomon Rabinowich, and tried to get him to escape occupied Poland, but the rebbe refused to leave his people. As a child, Chaskel Besser studied in the Radomsker Keter Torah Yeshiva both in Katowice and in Lodz. He escaped Poland on September 1, 1939, as the Germans entered the country, and reached Erez Israel five days later. He continued his studies with Rabbi Herschel Eisenstadt (originally of Poland) of Jerusalem, who was the disciple of Rabbi Hayyim

Brisker. He was ordained in 1942 by Rabbi Joseph Blumenfeld, the head of the Bet Din of Tel Aviv.

Besser moved to New York in 1946, where he became a successful businessman in real estate. However, his real devotion was to working for the benefit of the Jewish people and labored on behalf of common causes. He was friendly with presidents and prime ministers as well as a diverse group of Jewish leaders including Nahum *Goldmann and Menahem *Begin as well as such rabbinic leaders as Moses *Feinstein and *Aaron Kotler and a variety of hasidic leaders.

Besser was instrumental in popularizing the *daf yomi* (study of the daily Talmud page in a 7½-year cycle) starting. He was one of three rabbis invited to the inauguration of President George H. Bush. In 1987, he was appointed to the U.S. Commission for the Preservation of American Heritage Abroad.

In 1987, Rabbi Besser met Ronald S. *Lauder, a leading businessman, philanthropist, and Jewish leader while Lauder was serving as U.S. ambassador to Austria. The following year, Lauder established the Ronald S. Lauder Foundation to develop and nurture Jewish life in former Communist countries. Besser quickly became Lauder's mentor and spiritual guide for the activities of the Foundation. Besser was already active in fighting for the preservation and restoration of Jewish cemeteries in Poland and in surrounding countries. This dedication led him also to seek out the remaining Jews of Poland and other countries, especially those who had only recently discovered their true Jewish identities. Being one of the first Jews to recognize that there were many more Jews remaining in Poland than previously thought, he labored ceaselessly to enable any Jew who wanted to return to the Jewish people to be able to do so. Today, there are more than 20,000 practicing Jews in Poland, in large measure due to the groundwork laid by Besser in the late 1980s on.

Besser became the rabbi of Bnai Israel Chaim on Manhattan's West Side. He was also one of the closest allies and confidants of Rabbi Moses Sherer, the executive director of Agudat Israel for several decades, helping him strengthen and expand the activities and the impact of the organization.

BESSIS, ALBERT (1885–1972), Tunisian politician. Born in *Tunis into a distinguished family of writers and *dayyanim*, Bessis qualified as a lawyer and was elected to the Grand Council of *Tunisia in 1934 where he became chairman of the committee on legislation. He participated in the negotiations with the French government in the early 1950s that led to the granting of autonomy to Tunisia in 1955. Bessis was minister of housing and town planning from 1954 to 1955 when he became minister of public works. He retained his post following the independence of Tunisia in 1956. He resigned in the following year and retired from public life. Bessis was an active

figure in the Jewish community and was president of the Tunisian *ORT and other communal organizations.

[David Corcos]

BESSIS, JESHUA (1773–1860), Tunisian scholar. Bessis was appointed chief rabbi of Tunis in 1847 and served in this office until his death. He wrote responsa and a work on the Shulḥan Arukh, only the section on *Yoreh De'ah* being published, part of it under the title *Avnei Zedek* (1902) and part as *Avnei Zedek u-Me'orot Natan* (1903). Bessis wrote introductions and approbations for the books of Tunisian scholars. He engaged in practical Kabbalah and was regarded as a saint; his grave became a place of pilgrimage.

BESSO, HENRY (1905–1993), scholar of Sephardi studies. Born in Salonica, Besso went to the College St. Jean Baptiste de la Salle. He moved to New York after the death of his parents, where he joined his brothers and worked with an export-import firm while pursuing his education in the evening at the City College of New York, where he earned his B.A. (1931) and later at Columbia University (1935). Because his firm collapsed he became eligible for work under the provisions of the WPA and began working as a teacher of French and Spanish in New York's Adult Education department and was soon training teachers and creating curricula to assist his students. With the world war looming, he was moved to Washington to train Army Air Force and Navy officers and government officials for their missions abroad and then became a research analyst and speech writer for the Voice of America beginning many decades of service to that agency.

In 1945 he was sent to Biarritz American University in France and then to the Command School in Germany to teach Spanish and French. While in Europe he lectured on Hispanic and Judeo-Spanish language and culture. He became a respected lecturer on Sephardi culture and a communal activist in the Sephardi Jewish Brotherhood of America and was for a time executive director of the World Sephardi Federation. In 1963, he researched and edited a listing of 289 Judeo-Spanish works he had uncovered at the Library of Congress in Washington, D.C. To this day *Ladino Books in the Library of Congress: A Bibliography* is still considered one of the definitive bibliographic listings of the world's great collections of Judeo-Spanish literature. In 1967 he became one of the founders of the American Society for Sephardic Studies at Yeshiva University.

On the eve of his retirement in 1976, the Foundation for the Advancement of Sephardic Studies and Culture devoted its *Tract XI* to him. Entitled *Study of the Meaning of Ladino, Judezmo and the Spanish-Jewish Dialect*, it included reprints of many of Besso's articles and writings, with an extensive and thorough bibliography of his works. The volume was dedicated to Besso as "a most distinguished contemporary scholar,

whose numerous and varied works on Sephardic culture and folklore will always be remembered."

[Efraim Zadoff (2nd ed.)]

BET (Heb. בֵּית ;ב), second letter of the Hebrew alphabet: a voiced bilabial plosive [b] and voiced labiodental fricative [v] (a positional variant); its numerical value is 2.

The earliest form of *bet* – in the Proto-Sinaitic inscriptions – is the acrophonic pictograph of a house (*bayit*) . While in South Arabic its shape is  and in Ethiopic , in the Proto-Canaanite script the main stages of development are  →  → . Variants of the latter form survive in the Phoenician (, , Hebrew (, , and Samaritan () as well as in the Greek ( → ) and Latin scripts.

The Aramaic *bet* like the *dalet*, *resh*, and *ayin* has an open top already in the seventh century B.C.E. While in the fifth century B.C.E. the downstroke has a diagonal flourish , from the fourth century B.C.E. onward the downstroke is vertical curving into a horizontal base; at the same time there is a tendency to straighten the top of the letter: . In the early Jewish script the tick on the left side of the top  is the only remnant of the half-circled head. Already in the Herodian period, the base of the Jewish *bet* is written occasionally with a separate left-to-right stroke . This fashion prevails, becomes common in the Jewish bookhand, and the *bet* does not change its basic shape during the ages: In some cursive trends, as in the period of Bar Kokhba and today, the *bet* is written without lifting the pen: . However, the Ashkenazi cursive developed as follows: .

Palmyrene *bet* follows the third-century B.C.E. Aramaic  and develops through  into Syriac . The Nabatean *bet* loses its top ; this form is adopted for Arabic *ba*, which later is distinguished by a diacritic sign  from *ta* (, *nun*) (, and *ya*) (). See *Alphabet, Hebrew.

[Joseph Naveh]

BET AGLAYIM, a place mentioned by Eusebius (Onom. 48:19) 8 mi. (13 km.) S. of Gaza, near the sea coast, which he erroneously identified with the biblical Beth-Hoglah (Josh. 15:6; 18:19–21). Bet Aglayim is most probably the ancient name of the important Tell al-'Ajjūl located about 4½ mi. (7 km.) southwest of Gaza, which was excavated from 1929 to 1931 by Sir Flinders Petrie (who identified it with ancient Gaza). The remains at Tell al-'Ajjūl date mainly from the Middle and Late Bronze Ages and include Hyksos fortifications and graves, and the palace of an Egyptian governor. Rich finds of gold, silver, and jewelry were discovered in the tombs.

[Michael Avi-Yonah]

BETA ISRAEL, ethno-religious group in Ethiopia which claims to be of Jewish origin and which is attached to a form

of the Jewish religion based on the Bible, certain books of the Apocrypha, and other post-biblical Scripture; living in the provinces surrounding and to the north of Lake Tana and now in Israel. The Beta Israel, as the group calls itself, were known until recently by others as the Falashas, a term regarded by the group as one of contempt.

Although Beta Israel have long fascinated scholars, many features of their history remain little known and inadequately studied. This article seeks to present a survey of the political history of the Beta Israel from earliest time. It seeks to reveal the dynamic character of Beta Israel society and the manner in which patterns of leadership changed throughout the group's recorded history. Special attention is given to the competing claims concerning different types of leadership: secular/religious; traditional/modernizing; externally/internally selected.

Early History and Legends

Given the dearth of reliable historical material concerning the earliest Jews in and Jewish influences on Ethiopia, it is virtually impossible to offer any detailed analysis of their political structure. Nevertheless, a number of tentative generalizations can be offered which shed some light on the character of their communal organization. On the basis of the available evidence it does not appear likely that the earliest Jews entered Ethiopia in a single united group. It seems far more probable that they arrived in the country in small groups alongside other non-Jewish merchants, settlers, soldiers, etc. In a similar fashion, since Judaized elements could have entered Ethiopia from Arabia at any time from the 1st to the 6th century, there appears to be no reason to confine the entry of Jewish elements to a single brief period. Finally, the widespread impact of Jewish practices and influences on Ethiopian culture is only understandable if we assume that the Jewish immigrants did not live in isolation from their neighbors.

While a number of scholars have claimed that the introduction of Christianity to Ethiopia in the 4th century led to the persecution of local Jews, there is no direct evidence to support this.

In fact, it appears unlikely that the earliest Christian emperors had either the political mandate or the religious zeal to pursue such a policy. A strong possibility does exist, however, that the 6th-century Ethiopian emperor Kaleb, who sent troops to punish the Judaized Arabian ruler *Yusuf Dhu Nuwas, may also have taken action against the Jews of the Aksumite (Ethiopian) kingdom. It is most interesting to note that during his reign we hear for the first time of the Semien region (later a Beta Israel stronghold) as "that country [to which] the King of the Aksumites exiles anyone whom he has sentenced to be banished."

None of the sources on the period between the 6th and 13th centuries is of sufficient historicity to permit anything more than the most tentative of conclusions. This is particularly the case with regard to the legendary "Beta Israel queen" Judith (Gudit). While Bruce and Rathjens treated stories con-

cerning this ruler with considerable enthusiasm, Conti Rossini and Ullendorff have more soberly concluded that they "possess no basis in historical fact." Even if the existence of a mediaeval queen is conceded, there is little evidence that she was a Jewess, much less a Beta Israel. Certainly, no Jewish dynasty ruled Ethiopia in this period. In the Hebrew sources for this period, neither *Eldad ha-Dani nor *Benjamin of Tudela appears to possess any first-hand knowledge concerning Ethiopia. Clearly we must wait for the "Early Solomonic" period in Ethiopian history (from 1270 onward) before we encounter any truly reliable sources on the Beta Israel polity.

WAR AND ADAPTATION. 1270–1632 The year 1270 marks a turning point in Ethiopian history. In that year a new dynasty which traced its descent to King Solomon and to the ancient Ethiopian Kingdom of Aksum came to power. Once these "Solomonic" Kings had consolidated their rule in the traditionally Christian areas of Ethiopia, they set out to impose their hegemony on all of the independent peoples of the Ethiopian highlands. Beginning with the reign of Amda Siyon (1314–1344) almost all these kings were to a greater or lesser extent concerned with the political subjugation of the Judaized population in the regions of Semien, Woggara, and Dambiya. In the middle of the 16th century, after the Ethiopian Christians had (with Portuguese assistance) successfully repulsed a major Muslim invasion, they turned their full attention to the Beta Israel. King Minas (r. 1559–1563) and his son Sarsa Dengel (r. 1563–1597) fought major battles against the Beta Israel and inflicted heavy losses upon them. Hostilities were renewed in the reign of Susenyos (1607–1632) and under his leadership the Ethiopian army totally defeated the Beta Israel who were led by their ruler Gideon. This defeat marked the end of Beta Israel independence.

A BETA ISRAEL KINGDOM. Although it has for many years been claimed that an independent "Beta Israel" kingdom existed in Ethiopia during this period, and the Beta Israel themselves claim to have been ruled by a long line of kings, these contentions should not be accepted without careful scrutiny. There is little support in the contemporary primary sources for the idea that the Beta Israel were united into a single political framework earlier than the 16th century. As was noted above, none of the sources from the period prior to the 14th century is of sufficient historicity for firm conclusions to be drawn. Nor is there any evidence for the existence of a unified Jewish kingdom in the 14th and 15th century reports. Judaized groups are invariably referred to in the contemporary hagiographic texts and chronicles by the region they inhabited. Their rulers are depicted as local governors, members of the regional nobility. Thus we read of people "like Jews" in Semien, Wagara, Salamt, and Sagade," of "sons of Jews" in Enfraz; of the governor of Semien and Cambiya, etc. Even James Bruce, who perhaps more than any other writer deserves credit for popularizing the exploits of the Jewish "kings" of Ethiopia, makes no mention of a monarchy in this period. It is therefore difficult to escape the conclusion that in the 14th

and 15th centuries the Beta Israel were politically divided and geographically dispersed.

The recognition of this reality has several important consequences for the interpretation of Beta Israel history. Firstly, it serves as a caution against attempts to artificially impose unity on the sources by treating scattered events in specific regions as if they affected all Beta Israel. The Christian Emperor Yeshaq's (r. 1413–1430) victory over the Beta Israel governor of Semien and Dambiya was not, for example, a defeat for all Beta Israel. Some were allies of the Emperor and benefited from his victory. In a similar fashion, the reported conversion to Christianity of much of the population of Salamt province by the 15th-century Christian missionary St. Takla Hawaryat must be evaluated in its proper geographic context. His successes in that region left the population of Semien at least temporarily untouched.

A recognition of the decentralized character of Beta Israel society during this period is also of crucial importance to the proper understanding of the dynamics of Beta Israel political history. If one accepts the existence of an ancient Beta Israel kingdom with its origins shrouded in the undocumented past, the rest of Beta Israel history appears almost automatically to be little more than an account of their decline from this mythical peak. In fact, the story is much more complex. According to the extant sources, a centralized relatively unified political organization existed among the Beta Israel only from the 16th and early 17th centuries. The effective military-political structure described in Ethiopian royal chronicles of this period was not, therefore, an aboriginal characteristic of Beta Israel society. Rather it developed relatively late, probably in response to the external threat posed by the Christian empire. Their history is not accordingly a story of continuous and unremitting decline but rather a gradual process of consolidation and unification followed by a series of catastrophic defeats.

Even when applied solely to the period of the 16th and 17th century the term Beta Israel kingdom should not be applied too casually. Even those later sources which portray a far more centralized polity than existed in earlier periods are far from unanimous as to the precise character of the group's political structure. It is, for example, of interest to note that while many medieval Hebrew sources (none of them eyewitness accounts) accept the existence of a kingdom as axiomatic, the first-hand reports of Ethiopian, Portuguese, and Muslim observers are far more restrained. The claim put forward in the *Chronicle* of Emperor Sarsa Dengal that the 16th-century Beta Israel leader Radai lived from his own labor ("he was a tiller of the soil, who ate his bread by the sweat of his brow"; cf. Gen. 3:19) is difficult to reconcile with the idea of a fully developed monarchy.

Nor should James Bruce's detailed reports on the Jewish kings be accepted uncritically. Bruce, it must be remembered, visited Ethiopia almost a century and a half after Susenyos' victory over the Beta Israel. He was, therefore, at least in this case, a recorder of traditions and not an eyewitness. In addi-

tion, his claim that a Beta Israel king and queen still ruled at the time of his visit scarcely enhances his credibility.⁸

THE RISE OF MONASTICISM. The gradual evolution of a more centralized political structure was only one of the responses engendered by the Christian threat to the Beta Israel. During the same period a major revolution took place within the structure of Beta Israel religious life. A new form of religious leadership began to emerge. Faced with increasing political and military pressure from the Christian Ethiopian emperors, the Beta Israel adopted the Christian institution of monasticism as a means of consolidating and developing their unique communal identity. Beginning with Abba Sabra and Segal Amalak, who lived in the 15th century and are credited with founding Beta Israel monasticism, monks played a vital role among the Jews in Ethiopia.

According to Beta Israel traditions, the introduction of monasticism was accompanied by a number of other religious innovations including the introduction of new religious literature, the composition of prayers, and the adoption of important laws of ritual segregation and purity. The Beta Israel monks can thus be justly claimed to have been the chief carriers of their people's distinctive religious heritage. It appears probable that it was they who provided the ideological basis for the creation of a unified political structure among their people. Just how successful the monks were in assuming a central position in Beta Israel society is evidenced not only by the fact that they survived the demise of the autonomous political leaders but also by the fact that nearly all the figures commemorated by the Beta Israel as holy men at various holy places in Ethiopia were monks.

1632–1860

Any doubts one might have with regard to the finality of the Beta Israel's defeat at the hands of Susenyos are resolved by the decision of his son Fasiledes (1632–67) to build his capital at Gondar near the heart of Beta Israel territory. The site would only have been chosen after the local people had been totally subdued. According to both Christian and Jewish traditions, Beta Israel soldiers and artisans were speedily incorporated into the military and economic life of Christian Ethiopia. Although the Beta Israel no longer ruled themselves, the Gondarine period (1632–1769) is remembered as a period when the "(Beta) Israel lived in peace and welfare." Beginning in 1769, however, Ethiopia was plunged into an extended period of conflict and internal struggle. Known as the *Zemane Masafent* (the era of the princes or judges), because it resembled the period of the Old Testament judges when "there was no king in Israel: every man did that which was right in his eyes," this period brought fresh sorrows to the Beta Israel. During a period of almost 100 years (1769–1855) Ethiopia lacked effective imperial rule and local rulers vied with each other for supremacy. The Beta Israel, whose well-being was largely dependent upon royal patronage and protection, suffered accordingly. Their decline from independence to imperial appointees to despised artisans is clearly visible in their changing patterns of leadership.

AZMACH AND BEJEROND. Following their loss of independence in the 17th century, the structure of Beta Israel political leadership underwent a dramatic change. Autonomous rulers no longer exercised control over the community or the regions in which the Beta Israel lived. Political power passed into the hands of royal-appointed governors, none of whom was chosen by virtue of their traditional roles among their own people. Rather they acquired land and titles through their ability to render services to the Christian Emperors who resided in Gondar. The principal secular leaders of the Beta Israel became those who were recognized as such by the dominant society, rather than those related to their own previous ruling families. A new elite of soldiers, masons, and carpenters emerged.

The Beta Israel leaders of the Gondarine period are remembered as having held two titles: *azmach* (commander) and *bejerond* (treasurer). The former, which was the higher of the two ranks, was used to refer to military leaders and local officials. The latter appears to have had connections with tax collection, although as applied to the Beta Israel it seems to have referred primarily to the “chief of the workers” – especially potters, carpenters, masons, and blacksmiths. While the *azmach* might exercise leadership over a heterogeneous community, the *bejerond*'s authority was confined to the Beta Israel. One informant stated, “The *azmach* was government administrator for many people, but the *bejerond* was only concerned with the Beta Israel.”

One of the clearest indications of the deterioration of the status of the Beta Israel in the late 18th and 19th century is the gradual disappearance of the *azmach*. In the Gondarine period Beta Israel were appointed both *azmach* and *bejerond*, by mid-19th century those few Beta Israel who had any titles at all were exclusively *bejerond*. As James Quirin has noted, this transition was symptomatic of their social-political decline and increasing identification as a low-status artisan group.

COMMUNAL ORGANIZATION. One immediate consequence of the Beta Israel's loss of autonomy was a return to the decentralized pattern of communal organization which had characterized their political structure prior to the 16th and 17th century. While it may be convenient to continue to speak of the Beta Israel “community,” no evidence exists for the survival of formal centralized communal institutions. Rather a large number of scattered communities existed with informal economic, political, marital, and religious ties. Halévy observed when he visited Ethiopia in 1867, “Chaque commune est autonomie et indépendante. C'est seulement dans les cas où un grand danger menace la religion qu'on se reunit, afin de repousser l'ennemie commun” (J. Halévy, in: *Bulletin de l'Alliance israélite universelle* (1868), 95).

The Beta Israel's lack of autonomy and of an effective political-military leadership also resulted in a sharp decline in the communities' coercive power. Abba Yeshaq, one of the Beta Israel's outstanding religious leaders of the 19th century, told the French explorer Antoine d'Abbadie that originally

the Beta Israel would stone to death any member of the community who ate leavened products on Passover. Following their loss of independence, however, they were compelled to change the punishment. “Mais aujourd'hui, comme on n'a pas de roi juif, on se contente d'infliger une pénitence qui est le don d'une chèvre d'un an.”

Abba Yeshaq's words serve as a reminder that however great the authority of the Beta Israel clergy, neither they nor any other group in post-independence Beta Israel society had the power to enforce its will upon the population. On the whole, the means of coercion in their hands were largely limited to steps such as ostracism, which depended upon the support of community opinion. As Halévy wrote, “Chaque province, chaque ville se soumet *volontairement* à la décision de son prêtre et de ses debteras.”

At the heart of the daily functioning of the voluntary system described by Halévy stood the village elders (*shmagilotch*). On their role he observed, “La justice est exercée par les anciens (chimaguélié). Les plaintes et les différends sont portés devant eux. Leurs jugements sont toujours respectés par les deux partis. Personne n'ose s'y opposer ni faire appel à l'autorité amharique.”

Although Halévy appears to have been the first witness to mention the role of the elders in Beta Israel society, the phenomenon he describes was probably of considerable antiquity. Certainly we can presume that it existed at least from the time when the Beta Israel lost their independence. More importantly, it formed an integral part of Beta Israel life throughout the 19th and 20th centuries, and thus forms a vital element in any comprehensive picture of their traditional leadership in the modern era.

Although we possess no specific information of the Beta Israel clergy during the Gondarine period, it appears likely that their importance was increased by the decline of the autonomous political leadership. In particular, the monastic clergy who became virtually the only leaders not dependent upon the Christian kings for their position, probably rose in status. The further decline of the secular leaders during the “era of the princes” could only have further enhanced their standing.

By the time we begin to receive detailed accounts of Beta Israel life in the first half of the 19th century, the paramount position of the monastic clergy is clearly established. Antoine d'Abbadie, one of the most important of the early European visitors to Ethiopia wrote, “Bien qu'il n'y ait pas de hiérarchie ecclésiastique, les Falachas reconnaissent pour chef les plus savants ou le plus habile de leurs moines.” The centrality of the monastic clergy during this period receives further confirmation in the Beta Israel's own sources according to which their religion survived a severe crisis in the early 19th century due to the efforts of the monk, Abba Wedaje. Significantly it was also the monastic clergy who served as communal spokesmen when the first efforts to communicate with world Jewry were made. Finally, it was upon the monastic clergy that the main responsibility fell to defend their people against the temptations of foreign missionaries.

1860–1905: The Missionary Challenge

By the middle of the 19th century a small number of Westerners had visited the Beta Israel and brought reports about them back to Europe. Although a number of these travelers were themselves missionaries, it was only in 1859 that organized Western missionary activity amongst the Beta Israel began. In that year the London Society for Promoting Christianity among the Jews established its Ethiopian mission. It is difficult to overestimate the impact of the mission's activities upon the Beta Israel. While the number of converts they procured was never very large, the educational opportunities they offered and the vernacular scriptures they distributed significantly disrupted the Beta Israel communities. Existing divisions between regions and groups within the population were exacerbated. New tensions were also created. For the monastic clergy in particular, the missionary intervention proved fateful.

THE DECLINE OF MONASTICISM. A crucial feature of the missionary program was a concerted effort to undermine the Beta Israel's confidence in their priests and monks. These clerics attracted the ire of the missionaries for a variety of reasons. Firstly, as evangelical Protestants the missionaries had a deep aversion to any monastic religious hierarchy. (They were, for example not less bitter in their condemnation of the clergy of the Ethiopian Orthodox Church.) The Beta Israel religious leaders were, moreover doubly blameworthy in their opinion, because they claimed biblical sanction for their office. Typical of their hostility to the monks was the encounter of the missionary Henry Aaron Stern with a "wild fanatical looking monk with a grin of contempt which imparted to his black face and capacious mouth a repulsive expression with an air of pride and self-complacency."

Stern and his colleagues not only attacked the priesthood and monasticism as institutions, but also exploited every opportunity to demonstrate their superiority by engaging individual clerics in disputations. Their task was not a difficult one. The Beta Israel clergy were honored by their people because of their piety and the communal and ritual roles they performed; not for their skill as debaters. Few, if any, Beta Israel priests possessed a complete Bible. The arts of citation and argumentation, at which the missionaries were so skilled, was totally foreign to them. Inevitably, they came out second best in the confrontations engineered by the missionaries.

The deleterious effects of the missionaries' direct attacks upon the monastic clergy were further supplemented by other activities with less immediate but no less important consequences. In particular, the opening of the mission schools and the distribution of Amharic Bibles (and religious tracts) set in motion a mini-reformation among the Beta Israel. Young men and secondary clerics (*debtera*) attracted by the mission's offer of education and an alternative avenue to achievement and status were among the most prominent early converts. The missionaries themselves drew a clear connection between literacy and familiarity with the biblical text, and the decision to defy clerical authority.

The missionary attempt to undermine the Beta Israel's trust in their religious leaders was based upon a shrewdly accurate assessment of their centrality to their people. In the mid-19th century as today most Beta Israel possessed only a rudimentary understanding of the symbols and rituals which comprised their religious traditions. The clergy, especially the monks, were not only the paramount ritual experts, but also the chief guardians of the community's traditions and beliefs. It thus, for example, fell to them to defend the community's interests before the king when in 1862 the missionaries succeeded in temporarily curtailing Beta Israel sacrifices. The monks moreover held tremendous sway over their followers. On no less than three occasions during the first decades of the missionary enterprise (1862, 1874, 1879) groups or individual monks succeeded in leading large bands of Beta Israel on ill-fated exoduses out of Ethiopia. Given such devotion, it becomes clear that the missionary assault on clerical prestige and status held the promise of totally undermining the Beta Israel religious system. In fact, the missionaries seem to have been confident that this was, in fact, happening.

"Respecting the Jews, or Falashas, one remarkable feature is at present observable, namely, that they have been greatly divided in their religious opinions, as also in respect of their adherence to the monks... Hence, a great division has arisen, and although we must not as yet be too sanguine, yet we may freely say that the balance is in our favor" (*Jewish Record* (January 1862), 2).

The earliest period of missionary activity also saw the creation of another sort of division among the Beta Israel, with the establishment of a major settlement in the Tigre province of northern Ethiopia.

Although Beta Israel villages appear to have existed in Tigre province during the Middle Ages, the modern Tigrean communities appear to have originated in 1862. In that year a large number of Beta Israel inspired by a prophet set out for the Promised Land. Their attempt ended not in a miraculous crossing of the Red Sea, but in disaster and starvation. Many died, some straggled back to Gondar, others settled in Tigre especially in the Shire region. As time passed they acquired many of the characteristics of their Tigrean neighbors, most notably the language Tigrinya. Their economic situation and historical experience also diverge significantly from their brethren further south. During the late 19th and early 20th century contact between the Jews of Gondar and Tigre was irregular, and no common leadership united the two regions.

While the activities of the missionaries may have posed a serious challenge to the religious authority of the Beta Israel monks, this problem pales in comparison to the threat to their survival created by the great famine of 1888–1892. During this four year period Dervish invasions, rinderpest, drought, locusts, and disease devastated most of northern Ethiopia. It appears likely that between a third and a half of the Beta Israel died during this period. Those who survived left their normal places of residence and scattered far and wide. Traditional village life and the customary separation from non-Jews broke

down in face of the danger of starvation. Beta Israel monks seem to have been especially hard hit. Certainly, none of the travelers who visited Ethiopia in the late 19th or early 20th century viewed them any longer as the central pillars of Beta Israel religiosity. Priests (*qessotch*) and elders had, by this time, become the new communal leaders.

1904–1936: Faitlovitch and His Students

The arrival of Jacques *Faitlovitch in Ethiopia in 1904 marks another turning point in the history of the Beta Israel. Although Faitlovitch's teacher, Joseph *Halévy, was the first practicing European Jew to visit the Beta Israel, it was only through the activities of Faitlovitch himself that they were slowly introduced into the mainstream of world Jewish history. He was moreover similarly instrumental in beginning the gradual trend towards the "normalization" of their religious belief and practice. Processes set in motion by Faitlovitch in the early 1900s were to reach their culmination in the *aliyah* of the majority of the Beta Israel in the decade of the 1980s.

Faitlovitch's activities were central for an understanding of the history of the Beta Israel in the 20th century even if his immediate effect on the majority of the Beta Israel population should not be overestimated. Either the symbolic impact of Faitlovitch's presence in the capital and his closeness to the *Negus* or the circulation of his letters written in Amharic, kept as precious relics by the families that possessed them, played a role creating imaginary links with the Jewish world among Beta Israel population living in the villages. The total number of students who studied in Addis Abeba, Asmara and small villages' schools Faitlovitch founded was never very large but information about new possibilities in education circulated even among distant villages.

Twenty-five young Beta Israel were educated mostly in Europe, ten in Palestine and 1 in Egypt. The boys were received by local Jewish communities and individual rabbis in different ways, sometimes strongly supported to adapt to the Western world and other times abandoned due to a lack of money, interest or commitment. Some of them contracted illnesses and died such as Solomon Isaac, Yizkiahu Finkas, Abraham Baroch, Abraham Meir. While, some students such as Ghetié Yirmiahu, Taamrat Emmanuel, and later Bayyu (Reuben) Isayyas, Menghestu Isaac, Taddesse Jacob and Yona Bogale used their education on behalf of their people, many never returned to the villages which they had left behind. Some of them took advantage of the opportunities they were offered when Haile Selassie regained his power in 1941 and offered them to work in different ministries in Ethiopia. The primary significance of Faitlovitch's efforts for the Beta Israel political structure may well lie in his attempt to develop a new modernized elite. The fact that Faitlovitch was very paternalistic and authoritarian in his decisions regarding the fate of the young Beta Israel he brought to Europe, imposing the adoption of new Western Jewish codes and the abandon of the entire Beta Israel culture for sure influenced the behavior of the future Beta Israel elite that didn't always act as expected by Faitlovitch. Certainly,

from Faitlovitch's time onward an ever-increasing gap existed between those perceived by outsiders as Ethiopian leaders and the internal realities of Beta Israel society. In part at least this gap reflects the differing rates of development between European and Ethiopian Jewry. The increasingly modernized and cosmopolitan world Jewish leadership sought their counterparts in Ethiopia and found them among Faitlovitch's students. Thus, a tiny group of urbanized, educated Beta Israel came to be seen as community representatives. At the same time in rural Ethiopia the priests and elders continued to dominate village life and a decentralized pattern of communal organization persisted. (T. Parfitt, E. Trevisan Semi (eds.) *The Beta Israel in Ethiopia and Israel*, Richmond (Surrey) 1999; T. Parfitt, E. Trevisan Semi (eds.), *The Beta Israel: the Birth of an Elite among the Jews of Ethiopia*, 2005)

[Steven Kaplan / Emanuela Trevisan Semi (2nd ed.)]

1935–1941: The Italian Conquest

The Italian invasion of Ethiopia in 1935/36 put a dramatic end to Faitlovitch's educational efforts. As Mussolini's troops approached Addis Ababa in the spring of 1936, the pupils of the Faitlovitch school took refuge in the French Legation. After Taamrat Emmanuel in 1937 was forced to flee the country Menghestu Isaac took his place as school's director. The Addis Ababa school continued to exist in bad conditions until the end of the occupation maintained by pupils working in the town. During the period of the Italian occupation a number of Beta Israel (such as Taamrat Emmanuel and Taddesse Jacob) distinguished themselves in the patriotic resistance. Others collaborated with the Italian authorities.

Since Italian policy towards the Beta Israel varied during the period of their occupation and was itself somewhat self-contradictory, its effects on community leadership and organization were complex. Although the Italians initially considered the possibility of pursuing a policy towards the Jews of Ethiopia similar to that exercised in Libya, it soon became clear to them that the absence of a formal community structure made this impossible. In the end they were forced to conclude that "if and when the Jews of Ethiopia will be organized in a community, they will be required to join the Union of Italian Jewish Communities." After promulgating "racial laws" in 1938 in Italy the Minister of Africa "no longer allowed the involvement of foreign Jewish organizations in the affairs of the Falashas" and there was no more an interest in that policy (D. Summerfield, *From Falashas to Ethiopian Jews: The External Influences for Change c.1860–1960*, London and New York, 2003, p.96). In the meantime, the Beta Israel were considered an oppressed tribal group "liberated" from the Christian Amhara. Bayyu (Reuben) Issayas, a former student with administrative experience, was appointed their chief and awarded the traditional Ethiopian title of *Gerazmach* (Commander of the Left Flank). The Italians appeared to have abolished the land restrictions that denied the Beta Israel to own land and established an area for Beta Israel to settle, near Gondar (Wuzeba and Ambober), linked by the building of roads. During the massacre of 120

Ethiopians in Mereba, a crime committed by the Italian occupants in 1937, thirty-two Beta Israel were killed (Taamrat's letter to Faitlovitch, 19.9.1937, in: E. Trevisan Semi, *L'epistolario di Taamrat Emmanuel: un intellettuale ebreo d'Etiopia nella prima metà del xx secolo* (Torino, 2000), 250–256.

1941–1974

Prior to the liberation of Ethiopia in 1941 only a handful of Western Jews had visited the Beta Israel. In the next three decades, their numbers were to swell dramatically. Trends which first became apparent in the period of Faitlovitch, such as outside intervention, education, and normalization of religious practice, escalated significantly. In a similar manner the pressure upon the Beta Israel to speak with one voice grew. The traditional religious leadership was increasingly challenged by Western-educated members of the community and contact with outsiders became an ever more important route to status.

No description of Beta Israel leadership and the influence of outside forces on community organization in the period after World War II would be complete without a discussion of the figure of Yona *Bogale. Born in Wolleqa, Gondar in 1910, Yona studied with Faitlovitch and Taamrat Emmanuel in Ethiopia. Later he pursued further studies in Jerusalem, Frankfurt, Zurich, and Paris. After his return to Ethiopia he worked as a teacher and a civil servant. In 1953 he left the imperial service and from that time on, until he left Ethiopia in 1979, he involved himself with various projects connected with the Beta Israel community.

During the more than 25 years of Ato Yona's activities as a spokesman for the Beta Israel, foreign involvement with the community in Ethiopia steadily increased. The Israel government, the Jewish Agency, ORT, JDC, political activists and casual travelers all made their impact felt upon the Jews of Ethiopia. From the perspective of the various Jewish organizations, which sought to aid their co-religionists in Ethiopia, the Beta Israel's lack of political unity and their tradition of village-level politics appeared inefficient and wasteful. In an attempt to rationalize and simplify the giving of assistance, such organizations sought to impose an artificial unity on the Beta Israel whereby a single individual represented all the communities and coordinated the distribution of assistance.

Despite, or perhaps because of, his unique background, Ato Yona came to represent the Beta Israel community to much of the outside world, especially to various Jewish organizations. As the interest and financial involvement of world Jewry with the Beta Israel grew, Ato Yona became a well-known and idealized figure. Yet, his position within the community was often a far cry from that depicted by outsiders.

Throughout the period of the 1970s, for example, an open dispute existed between Yona Bogale and the leading priest of the Gondar area, Abba Uri Ben (Berhan) Baruch. In part, the quarrel was based upon a disagreement as to how funds from the various "pro-Beta Israel" committees should be divided among different villages. However, it soon developed beyond

this specific issue to a more general dispute over the nature of community leadership and society: a conflict between internal religious leadership and external/political power. On the one hand, the religious leader was known, trusted, and respected throughout the Gondar region; and on the other hand the political leader, was educated and experienced, and had gained prestige and influence through both the money he received from abroad, and the recognition of foreign committees.

The quarrel also appears to have had a generational component as well, for it pitted the young Israeli-educated Hebrew teachers against the priests and elders. In the words of Uri ben Baruch "the young teachers want to lead the people, but the priests and the head of the elders don't want to surrender their leadership. . . . But, because the young teachers have access to the government, Beta Israel follow them, and only adults and the elderly continue to obey the priests as of old."

The divisions which arose in this case can as we have seen be analyzed on a variety of levels. Religious, political, and generational factors all appear to have been of relevance. There was, moreover, a minor geographical component insofar as the leadership struggle appears to have originated in the competition between villages for scarce resources. However, the importance of the geographical factor was relatively insignificant, when compared to the major role it assumed in the division between Amharan and Tigrean Beta Israel. In this case a major regional division developed whose repercussions are being felt to this day in Israel.

Despite the earlier visits of Faitlovitch and Rabbi Hayyim *Nahoum world Jewry remained largely ignorant of the Tigrean Jews. In a census undertaken in the 1950s the number of Jews in Tigre province was underestimated by more than two thirds (1,250 est. versus 4,000). Moreover, the Jews of Tigre benefited far less than those in the Gondar region from the relief and educational efforts of world Jewry. Thus existing social, economic, and linguistic differences were exacerbated by a growing gap in modernization, education, and secularization. By the time the Beta Israel were brought *en masse* to Israel in the 1980s (and here too the experience in the two regions varied tremendously) a latent hostility existed between many members of the Gondar and Tigrean communities.

[Steven Kaplan]

Developments in the Later 1970s

JEWISHNESS OF THE FALASHAS. The first major statement affirming the Jewishness of the Beta Israel was made in the 16th century by Rabbi David ibn Zimra, the Radbaz. After an intensive study, he declared the Beta Israel as "of the seed of Israel, of the Tribes of Dan." He further stated that marriage to one of the Beta Israel is permissible as long as that person accepts the more modern practices of rabbinic Judaism. And in later responsum, he became explicit and even more emphatic in stating the Beta Israel are unquestionably Jews.

Recognizing that the Beta Israel, because of their isolation, practiced a more biblical Judaism than the rabbinic Judaism of his time, the Radbaz wrote: "These who came from

the land of Cush (Ethiopia) are without doubt of the Tribe of Dan and because there are not among them scholars, masters of tradition, they seize unto themselves the literal meaning of Scripture... they are as a child who has been held captive among idolators.”

Thus spoke the great rabbi from Cairo, who lived in North Africa and was perhaps closer to the Beta Israel people and their issues than any rabbi of his time or since then.

After the Radbaz, a few other noted rabbis such as Rabbi Ya'akov Castro, also declared the Beta Israel as descendants of the Tribe of Dan. But it was not until Christian missionaries, especially the apostate Jew, Henry Stern, started to make inroads among the Beta Israel in the mid-19th century, that the western Jewish world once again became concerned about the Jews of Ethiopia.

It was the revered Rabbi Azriel Hildesheimer of Eisenstadt, founder of the Agudat Israel, who made a bold statement in favor of the Beta Israel in 1864. Rabbi Hildesheimer, described in the *Jewish Chronicle* as “one of the foremost leaders of the strictly orthodox party on the (European) continent,” urged that a special mission be undertaken to them. “Do not lose courage, my brethren, but be full of confidence; never yet have the unfortunate knocked at the door of a Jewish house without having found assistance.”

Yet little happened until the Alliance Israélite Universelle of Paris sent the semiticist Joseph *Halévy to investigate the situation in Ethiopia. Convinced that the Beta Israel were Jews by religion who wanted to be recognized as part of the Jewish people, Halévy inspired his pupil, Professor Jacques *Faitlovitch, to concern himself with the Beta Israel.

Faitlovitch, who probably more than any other single person was responsible for keeping interest in the Beta Israel alive, obtained a very important document. It was a letter written in 1906 addressed to the Beta Israel as “our brethren, sons of Abraham, Isaac, and Jacob, who dwell in Abyssinia.” It refers to the Beta Israel as “our flesh and blood,” and it assures them of help in religious education. It expressed hope that G-d” will gather us from the four corners of the earth and bring us to Zion.” The letter was signed by 44 leading rabbis from Europe, America and Egypt. Included in the list were Herman Adler (Chief Rabbi of London), H. Gaster, S. Daiches, Moritz Gudemann (Chief Rabbi of Vienna), Raphael Meir Panigel (Sephardi Chief Rabbi of Jerusalem and of Palestine), and Jacob Reines of Russia (the first head of the Miz-rachi movement).

Among the many documents Faitlovitch obtained was a letter, dated December 4, 1921, from Abraham Isaac *Kook, the highly respected Ashkenazi chief rabbi of Palestine. Rav Kook called out to World Jewry “to save our Beta Israel brethren from extinction and contamination... and to rescue 50,000 holy souls of the House of Israel from oblivion. A holy obligation rests upon our entire nation to raise funds with a generous hand to improve the lot of the Falashas in Ethiopia and to bring their young children to Jewish centers in Palestine and the Diaspora...”

It was on February 9, 1973, that the plight of the Ethiopian Jews was brought once more to the attention of world Jewry. Rabbi Ovadiah *Yosef, Sephardi chief rabbi of Israel, in a letter addressed to Mr. Ovadia Hazi, former spokesman for the Ethiopian Jews living in Israel, gave a ruling on the status of the Beta Israel as Jews according to the *halakhah*.

After quoting the views of a number of eminent religious authorities, including those of the Radbaz, Rabbi Hildesheimer, and the Ashkenazi chief rabbis of Israel, Rabbi Abraham Isaac Kook and Isaac Halevi *Herzog, in favor of their being in fact Jews, Rabbi Ovadiah Yosef wrote:

I have therefore come to the conclusion that Falashas are descendants of the Tribe of Israel who went southward to Ethiopia, and there is no doubt that the above sage established that they (the Falashas) are of the Tribe of Dan... and (these sages) reached the conclusion on the basis of the most reliable witnesses and evidence.

I, too... have investigated and inquired well into... (these matters)... and have decided that in my humble opinion, the Falashas are Jews, whom it is our duty to redeem from assimilation, to hasten their immigration to Israel, to educate them in the spirit of our holy Torah and to make them partners in the building of our sacred land...

I am certain that the government institutions and the Jewish Agency, as well as organizations in Israel and the diaspora, will help us to the best of our ability in this holy task... the mitzva of redeeming the souls of our people... for everyone who saves one soul in Israel, it is as though he had saved the whole world.

Rabbi Ovadia Yosef's letter refers to the Beta Israel as descendants of the Tribe of Dan. Support for this view can be traced back as far as the 9th century c.e. in the writings of the Jewish traveler Eldad Ha-Dani. Such rabbinic luminaries as Rashi cite Eldad as an unquestioned authority on these issues.

On March 11, 1975, it was reported that an Interministerial Committee had ruled that Israel recognized the Ethiopian Jews entitled to automatic citizenship and full benefits as prescribed under the 1950 Law of Return.

Chief Ashkenazi Rabbi Shlomo Goren expressed disapproval of this ruling, but after the winter of 1978 when he met a group of new immigrants from Ethiopia with the greeting, “You are our brothers; you are our blood and our flesh. You are true Jews... You have returned to your homeland,” he too joined the ranks of the long list of rabbis affirming the Jewishness of the Beta Israel.

Nonetheless, Rabbis Yosef and Goren requested a symbolic ceremony which is called a *hidush ha-yahadut*, meaning “renewal of Judaism.” This ceremony consists of a ritual immersion without the necessity of a blessing for the women. The men are also immersed because they are already circumcised. They need only a ceremonial *milah*.

This symbolic ceremony is not a conversion. It does not require any study period. The rabbis request that it be done within a few days of the Ethiopian Jews' arrival in Israel. Rabbi Ovadia Yosef expressed it best when he defined the ceremony

as “an act of renewing their covenant with the Jewish people” (*Jerusalem Post*, August 1977).

Some Ethiopian Jews, who have suffered much as a people to preserve their Judaism against almost insurmountable odds, felt the ceremony was an insult. Nonetheless, all went through with it until 1985 when they started to oppose to it. This opposition culminated in a month-long strike in the autumn of 1985 that ended with an agreement (S. Kaplan “The Beta Israel and the Rabbinate: Law, Politics and Ritual,” *Social Science Information* 27, 3, 1988, pp. 357–70). Nevertheless this issue continued to be considered very sensitive and when in 1989 rabbi David Chelouche was appointed marriage registrar for all Ethiopians in the country the question was settled by a compromise: “Since he did not believe that Ethiopians needed to undergo any form of conversion, those married under his auspices were exempted from any preconditions not imposed on other Israelis” (S. Kaplan and H. Salomon, “Ethiopian Jews in Israel: a Part of the people or Apart from the people?” in U. Rebhun and C. Waxman (eds.), *Jews in Israel: Contemporary Social and Cultural Patterns*, Hanover and London, 2003, pp. 118–148: 131)

[Howard M. Lenhoff / E. Trevisan Semi (2nd ed.)]

ORGANIZATIONAL EFFORTS. In the U.S. during April 1974, the old American Pro-Beta Israel Committee started by Professor Jacques Faitlovitch and another committee merged to form the American Association for Ethiopian Jews. This new organization, founded by Dr. Graenum Berger, has brought the plight of the Ethiopian Jews to the forefront of issues in American Jewry, and supports many absorption programs in Israel. Also in the U.S., the National Jewish Community Relations Advisory Council in 1980 formed a Committee on Ethiopian Jewry.

In 1977, the ORT World Union established a nonsecular training program in Addis Ababa and in the province of Gondar that affected a number of Ethiopian Jews.

ETHIOPIAN JEWS IN ISRAEL. In Israel, the Ethiopian Jews demonstrated against the government, the Jewish Agency and world Jewish leadership on January 1, 1979, and again on October 30, 1979, for not doing enough to bring their people to Israel. Following these demonstrations, Prime Minister Begin met with the leaders of the Ethiopian Jews of Israel and pledged his full support to save their people and to bring them to Israel. Renewed demonstrations took place in December 1981. At the end of the 1970s there were about 1,000 Ethiopian Jewish residents of Israel, whereas estimates of the number of Beta Israel remaining in war-torn Ethiopia ranged from 20,000 to 25,000.

[Howard M. Lenhoff]

1982–1992

In a decade of dramatic changes for World Jewry, the Beta Israel stood out as the Jewish community that had undergone the most dramatic transformation. At the end of 1982 the number of Ethiopian immigrants in Israel stood at about

2,300 and the vast majority of community members were still in Ethiopia. Ten years later the Beta Israel as a diaspora community had ceased to exist. By the end of 1992 over 45,000 Ethiopian immigrants had settled in Israel. When those born in Israel are included and those who have died subtracted, the total number of Ethiopian Jews in Israel exceeds 50,000. (See Table: Ethiopian Jews in Israel).

Despite the relatively short period within which the Beta Israel were brought to Israel, each period in their immigration had different characteristics. Most of those who came prior to 1984 were from the Tigre and Walqayit regions of northern Ethiopia. They arrived in small numbers through the Sudan and were gradually settled throughout Israel. In 1984 over ten thousand Jews from the Gondar region of Ethiopia flooded into Sudanese refugee camps. Initially they were brought out a few hundred at a time, but deteriorating conditions necessitated a more dramatic approach. During a period of less than two months starting in mid-November 1984, more than 6,500 Beta Israel were airlifted to Israel in what became known as “Operation Moses.” Premature publicity brought the operation to a halt, but in March 1985 a further 650 Jews were rescued in “Operation Joshua.” During the period from March 1985 to October 1989 only a relatively small number of Jews managed to leave Ethiopia. The renewal of diplomatic relations between Israel and Ethiopia, however, paved the way for legal emigration on the basis of family reunification. By the summer of 1990 over twenty thousand Ethiopian Jews had migrated to Addis Ababa in the hope of being taken to Israel. During 36 hours between May 24 and 25 as rebel troops threatened to conquer the capital, over 14,000 Beta Israel were airlifted to Israel in “Operation Solomon.” In the succeeding year and a half, several thousand more Beta Israel were brought to Israel. By the end of 1992 only a handful of Beta Israel remained in Ethiopia. A large number (estimates vary between 30–250,000) of *falas moura* (Christians of Beta Israel descent) remained in Ethiopia.

Although all the Beta Israel have left Ethiopia, their resettlement in Israel is far from complete. Virtually every aspect of their absorption process remains fraught with difficulties, and a clear danger exists that Ethiopian Jews in Israel will find themselves marginalized geographically, socially, and religiously.

Despite clearly stated criteria for dispersing Ethiopian immigrants around the country, settling them in permanent apartments has always proven difficult. Housing in the designated sites has not always been available, while local authorities and residents have not necessarily welcomed the influx of a dependent population. For their part the Ethiopians have been reluctant to abandon the protection of immigrant housing and have often refused to do so unless provided with housing that meets all of their criteria regarding cost, proximity to relatives, climate, and employment opportunities. Only after immigrants have been settled in permanent apartments can issues such as children’s education and long-term employment be seriously confronted.

As of September 1992 almost half the Ethiopian immigrants in the country were still in temporary housing: 2,500 were in hotels, 7,600 were in regular absorption centers, and 15,000 were living in mobile homes. Each of these groups presents officials with a different set of difficulties, but the last is probably the most problematic. Mobile homes for Ethiopian immigrants (as well as a relatively small number of Russians and veteran Israelis) were situated in 22 sites around the country. Most were located in isolated areas far removed from other Israelis, schools, and employment opportunities. It was anticipated that many immigrants would continue to live in such quarters for at least 3 or 4 years.

So long as the Ethiopians remained in temporary quarters, it was extremely difficult to complete their educational, social, and occupational absorption. Although official statistics were never released, it was generally estimated that prior to 1991, 80% of Ethiopian immigrants eligible for work had found jobs. Those who have arrived in the following two years had a much harder time finding employment both because of their geographic isolation and difficult conditions in the Israeli economy.

Although more than two decades have passed since Rabbi Ovadiah Yosef (at the time Sephardi chief rabbi) ruled that the Beta Israel were Jews, many details of their religious status remain unresolved. Despite recurrent demonstrations and court appeals, most Israeli marriage registrars continue to follow the Chief Rabbinate's guidelines and require Ethiopian immigrants wishing to marry to undergo ritual immersion. Rabbi David Chelouche of Netanya and other rabbis designated by him require no such ceremony and continue to perform weddings for Ethiopian Jews throughout the country. Some Ethiopian activists have demanded that *qessotch* (priests), the community's religious leaders, be allowed to conduct weddings and perform divorces as in Ethiopia. The Chief Rabbinate has firmly rejected this demand. Instead it has agreed to allow the *qessotch* to serve on religious councils in areas with large Ethiopian populations and has suggested that they study to become marriage registrars.

The ongoing controversy concerning marriages and the status of the *qessotch* is not merely a halakhic-legal issue. It is also symptomatic of the vast changes that have shaken the Ethiopian family in the past decade. Couples have divorced and remarried, children have asserted an unprecedented degree of independence, and women have redefined their roles. Changes have, moreover, not been limited to the restructuring of relations within the family. The family's relationship to the surrounding society has also been radically changed. In Ethiopia families and households were the foundation of rural communal life and served as schools, workshops, clinics, reformatories, and credit organizations. In Israel most of these functions have become the primary responsibility of other institutions. Thus, the past decade has witnessed not only a dramatic and irreversible change of location (in a geographic sense) for the Ethiopian family. It has also produced a no less

revolutionary transformation of its place (in a social-economic sense) and its relationship to its surroundings.

[Steven Kaplan]

1992–2005

The Ethiopian Jews continued to undergo dramatic changes in a very short period of time. In 2005 there were approximately 85,000 in Israel, of whom 23,000 were Israeli-born. Official Israeli absorption policy aimed to prevent the development of Ethiopian ghettos and thus encouraged Ethiopians not to concentrate in the same areas and to purchase homes in towns where employment and social services were available. This policy failed to some extent because immigrants wished to be housed near relatives and chose to live where it was cheapest, often preferring not to leave absorption centers. In 1993 the Ministry of Absorption initiated a special program to encourage immigrants to buy houses and apply for mortgages outside peripheral areas. Between 1988 and 2001, 10,542 Ethiopians purchased apartments with the help of government mortgages. If the special mortgage program permitted many Ethiopian families to own their homes, the goal of settling them in the center of the country was not achieved, because the Ethiopians concentrated in a few selected areas while Jerusalem and Tel Aviv remained with very small Ethiopian populations.

The State acted in the process of absorption of Ethiopians according to a model of "mediated absorption" and the Jewish Agency was responsible for the process. This policy encouraged employees to treat immigrants as a social problem, which led immigrants to conform to expectations and behave accordingly. In 1999 there were 14,778 Ethiopians aged 25–54 in the country but only 53 percent participated in the labor force (compared to 76 percent of all Israelis of the same age). Only 38 percent of the Ethiopians in the labor force were women (compared to 68 percent of all Israeli women). Most of the Ethiopians were employed in manufacturing (especially men) and in public services (especially women). Few of the Ethiopians were in academic and liberal professions (4 percent of men and 15 percent of women).

The Israeli education system planned to have all young Ethiopians attend state religious schools in the first year of their arrival. Government policy sought to restrict the percentage of Ethiopian students in classes to no more than 25 percent, but this program too was not achieved. Many students went to *Youth Aliyah boarding schools.

In 1996 *Maariv* revealed that the Magen David Adom blood bank had for years systematically thrown out blood donated by Ethiopian Israelis without informing the donors. This occurred because Ethiopian immigrants were considered a high-risk group for AIDS (especially those who arrived in Operation Solomon). The "blood scandal" was accompanied by many demonstrations covered by the international media and by a commission of enquiry. At the outset of the 21st century the absorption of Ethiopian Jews remained the most

problematic, economically, socially, and culturally, among all immigrant groups.

BET ALFA (Heb. בֵּית אֶלְפָּא), place in Israel in the eastern Jezreel Valley at the foot of Mount Gilboa. The name is historical and has been preserved in the Arab designation of the site, Beit Ilfa, which may have some connection with the proper name Ilfa or Hilfa which occurs in the Talmud (Ta’an. 21a). The foundations of an ancient synagogue were discovered in 1929 near Bet Alfa by E.L. *Sukenik and N. *Avigad, who were conducting excavations on behalf of the Hebrew University. The synagogue covered an area of 46 × 92 ft. (14 × 28 m) and included a courtyard, narthex, basilica-type hall with a nave and two side aisles, and, apparently, a women’s gallery. The apse at the end of the hall was oriented south toward Jerusalem, and a small cavity in its floor probably served as a *genizah*; above it once stood an ark for Scrolls of the Law. The entire floor of the structure is paved with mosaics: the courtyard, narthex, and aisles in simple geometric designs, while the floor of the nave is decorated with mosaic panels surrounded by a broad ornamental border. Two inscriptions were found at the en-

trance to the hall: one (in Aramaic) states that the mosaic was made during the reign of Emperor Justin (undoubtedly Justin I, 518–27); the other (in Greek) gives the names of the mosaicists, *Marianos and his son Ḥanina. Symbolic animals are depicted on either side of the inscriptions: a lion on the right and a bull on the left. The three mosaic panels in the center of the hall depict (from north to south): (1) *The Offering of Isaac*, which shows Abraham pointing a drawn knife at Isaac who is bound near an altar; behind Abraham a ram is tied to a tree, and alongside it appears the inscription “And behold a ram.” The hand of God is seen between the sun’s rays above; Abraham’s two servants and donkey stand behind him; a band of palm trees separate this scene from the next one. (2) *The Signs of the Zodiac*, with the sun in the center in the form of a youth riding a chariot drawn by four horses; each sign has its Hebrew designation inscribed above it. In the corners appear the four seasons of the year (Tishri, Tevet, Nisan, Tammuz), each in the form of the bust of a winged woman adorned with jewels. (3) *The Ark of the Synagogue*, in which the ark has a gable roof with an “eternal light” suspended from its top and two birds perched at its corners; on either side is a lion with a seven-branched *menorah* (candelabrum) and above it and between them are depicted *lulavim* (palm branches), *etrogim* (citrons), a *shofar*, and censers. Curtains adorn the scene on the left and right sides.

The simple but strong style of the mosaic pavement represents a folk art that appears to have developed among the Jewish villagers of Galilee. The figures are depicted frontally and the artist took great pains to make each scene expressive. The mosaics of Bet Alfa are striking in their coloring and stylization and are among the finest examples of Jewish art in the Byzantine period. In 1960 the synagogue structure was renovated and the pavement repaired by the Israel Government.

[Michael Avi-Yonah]

The kibbutz of Bet Alfa was founded in 1922 by pioneers from Poland. It was the first settlement of the Kibbutz Arzi ha-Shomer ha-Za’ir movement. For over 14 years it was the easternmost village of the Jewish region in the central valleys and was exposed to Arab attacks in the 1936–39 riots. In 1968 it numbered 670 inhabitants, in the mid 1990 its population increased to 785 residents, and at the end of 2002 it was 589. Its economy is based on intensive and diversified farming (field crops, dairy cattle, and fishery) and industry (thermostats, trailers, and a quarry).

BET(H)-ANATH (Heb. בֵּית עֲנַת), Canaanite city named after the goddess Anath. Beth-Anath may possibly be mentioned in the list of cities conquered by Thutmosis III in c. 1469 B.C.E.

(no. 97) but it definitely appears in the records of the campaigns of both Seti I in c. 1300 B.C.E. (between Tyre and Kadesh) and of Rameses II in c. 1280 B.C.E. (before Kanah). Although it is listed with the cities in the territory of the tribe of *Naphtali (Josh. 19:38), this tribe could not overcome it and only imposed tribute on the inhabitants (Judg. 1:33). Some scholars locate it in Lower Galilee at Bu'eina in the valley of Beth-Netophah or at el-Bina in the Bet ha-Kerem valley, but the archaeological survey makes a location in Upper Galilee more probable and its identification with Safd el-Batikh has been suggested. In talmudic times a Beth-Anath is mentioned as a city outside Erez Israel with a mixed Jewish-gentile population (Tosef., Kil. 2:16). The Zeno Papyri from 259 B.C.E. contain a reference to a vineyard at Baitoanaia. It has also been suggested that the Batnaea mentioned by Eusebius (Onom. 30:5; 52:24) refers to the same site. (If so, the Caesarea 15 mi. (24 km.) distant would be Caesarea Philippi.)

BETAR (abbreviated name of **Berit Trumpeldor**, Heb. בְּרִית תְּרוּמַתְּלֶדוֹר, בְּרִית תְּרוּמַתְּלֶדוֹר), an activist Zionist youth movement founded in 1923 in Riga, Latvia, and attaining significant proportions in the 1930s, mainly in Eastern Europe. Betar played an important role in Zionist education, in teaching the Hebrew language and culture, and methods of self-defense. It also inculcated the ideals of *aliyah* to Erez Israel by any means, legal and “illegal,” and of personal dedication to the creation of a Jewish state “on both sides of the Jordan.” The Betar ideology originated in a fusion of Vladimir *Jabotinsky’s “legionism” with the ideas of personal pioneering and defense exemplified in Joseph *Trumpeldor’s life and death.

1923–1935

At its inception Betar was a variation of the Zionist trend in East European Jewish youth that led to the Third Aliyah. The group of students and young workers that founded the movement declared themselves a “part of the Jewish Legion to be established in Erez Israel.” They organized a farm for the agricultural training of pioneer settlers in Palestine. The first Betar immigrants to Palestine (1925–29) joined the Histadrut and the Haganah as a matter of course. In the 1930s, however, with the growing rift and exacerbated conflict between the Revisionists and the Zionist-Socialist majority, Betar gradually became a bitter rival of Zionist-Socialist youth, both in the Diaspora and in Palestine. Sometimes relations deteriorated into physical clashes on the streets of Tel Aviv. Zionist-Socialist circles pointed to the brown shirts of the members of Betar as tangible proof of its “fascist character,” and called for its speedy elimination from public life, whereas Betar spokesmen asserted that the “red-brown” shade of their uniform symbolized the earth of Erez Israel, and in any event its adoption in the early 1920s preceded the rise of the German Nazis.

Betar members constituted a major part of the rank and file of the Union of Zionist Revisionists (from 1935, the New Zionist Organization) and also of the National Labor Federation and the *Irgun Zeva'i Le'ummi in Palestine. In 1926 the second world congress of the Union of Zionist Revisionists in Paris recognized the Latvian group as the sponsor and provisional center of its youth movement. The first world conference of Betar, which convened in Danzig in 1931 with 87 delegates representing 21 countries, formulated the principles of the movement and elected Jabotinsky as *rosh Betar* (“head of Betar”), empowering him to appoint the overall leadership (“*shilton*”).

Defense training was proclaimed the foremost duty of every member, and those going to Palestine were to enlist for two years in special work brigades. At the second world conference of Betar in Cracow, in 1935, Jabotinsky proposed a codified text of the Betar ideology called *Ha-Neder* (“the Oath”), which stipulated in its first paragraph: “I devote my life to the rebirth of the Jewish State, with a Jewish majority, on both sides of the Jordan.” It demanded, in addition to the basic tenets of all Zionist youth movements, a “monistic” conception of Zionism, rejecting any fusion with “alien” creeds (meaning mainly socialism). It also urged the inculcation of a mode of thought and deed called *hadar*, defined by Jabotinsky as “beauty, respect, self-esteem, politeness, and faithfulness.”

Betar in Palestine

In Palestine the Betar work brigades (from 1934 called mobilized groups) grew into a network of disciplined units based in villages and settlements. Most of these were in Upper Galilee but, after the outbreak of the Arab riots in 1936, such units were established also in the Jewish quarter of the Old City of Jerusalem and at Naḥalat Yizḥak, near Jerusalem. These groups engaged in clandestine defense training within the framework of Irgun Zeva'i Le'ummi, maintaining themselves collectively as laborers on the farms of old-time Jewish settlers or as wage earners in town. Some members eventually formed the nuclei of the first Betar settlements (Ramat Tiomkin near Netanyah, Tel Zur near Binyaminah, and in Mishmar ha-Yarden).

Systematic defense training was introduced in Betar in many Diaspora countries during the early 1930s by Yirmiyahu Halpern, who established training courses and camps where self-defense, drill, street-fighting, the handling of small arms, boxing, and military tactics were taught. In Poland members of Betar also underwent training in the official paramilitary units of the state. In Shanghai Betar members organized a separate Jewish unit as part of the international force which policed the non-Chinese sections of the city.

The first Betar instructors' school was set up in Tel Aviv in 1928 and its trainees took part in the defense of the city during the riots of 1929. In 1931 Betar units joined dissident Haganah members in Jerusalem in setting up the separate un-

derground organization Irgun Zeva'i Leummi. In 1930 a Betar naval unit was founded in Tel Aviv, training with sailboats. A central naval school of Betar was established in Civitavecchia, Italy, functioning there from 1934 to 1937 and graduating 153 cadets. About 50 sailors were also trained by Betar in Latvia between 1935 and 1939. These men later played important roles in the establishment of the Israel Navy and the Merchant Marine. In 1935 Jabotinsky's son Eri, heading a unit of mobilized Betar members in Palestine, constructed the first glider in the country. Flying courses were introduced later by the Irgun Zeva'i Le'ummi in Palestine; by 1939, 13 members had graduated as pilots.

Betar underwent rapid expansion during the 1930s as illustrated by the growth of its total world membership from 22,300 in 1931 to nearly 90,000 in 1938. In the late 1930s Betar was actively engaged in the Revisionists' "illegal" *aliyah* operation which, by 1939, took thousands of Jews to Palestine, among them many members of Betar. During World War II many Betar members in Palestine volunteered for the Palestinian units of the British Army and, later, the Jewish Brigade.

After the Holocaust

Most of the European branches of Betar were destroyed in the Holocaust. A few thousand members escaped by joining the anti-Nazi partisans, while Betar and Revisionist units took part in the ghetto uprisings, notably in Warsaw, Vilna, and Bialystok. With the loss of European Jewry, Israel became the center of the movement, which in the late 1960s numbered about 8,000 members, of whom over 4,000 were in Israel, and the rest in 13 other countries, mainly in Latin America, the United States, South Africa, and Australia. By the early 21st century its membership had grown to around 12,500 in Israel and 8,500 in the rest of the world.

Many members of Betar in Israel, upon joining the army, went into *Naḥal units. The movement in Israel also maintains youth towns in collaboration with *Youth Aliyah. Between 1948 and the late 1960s Betar, in cooperation with the Herut movement, established 12 collective and cooperative settlements, some of them border settlements, such as Amazyah in the Lachish area, Mevo Betar near the site of historical *Bethar, *Ramat Raziel in the hills of Jerusalem, and Zūr Natan in Central Israel.

Betar's membership in Palestine grew rapidly and by 1937 it had its own sports center which enabled its members to play, among other sports, football, basketball, and table tennis, engage in gymnastics, and train as boxers. Betar in Israel is affiliated with the Israel Football Association and the Israel Sports Federation.

BET(H)-ARABAH (modern Bet ha-Aravah) (Heb. בֵּית הַעֲרָבָה; "House of the Steppe"), place in southern Erez Israel, in the Jericho Desert of the Lower Jordan Valley. The ancient name is preserved in 'Ayn al-Gharaba, southeast of Jericho near the Jordan River, but no corroborative archaeological remains have been thus far discovered in the vicinity. According to the Bible it belonged to the tribe of Judah on the border of Benjamin (Josh. 15:61; 18:22). More recently it was a kibbutz situated 1,235 ft. (380 m.) below sea level, 1.8 mi. (3 km.) north of the Jordan mouth of the Dead Sea. It was founded on Oct. 8, 1939, by a group of the Maḥanot ha-Olim youth movement and young immigrants from Germany and other Central European countries, on land of the Palestine Potash Company. Bet ha-Aravah was affiliated with Ha-Kibbutz ha-Me'uḥad. The kibbutz succeeded in sweeping its extremely saline soil with fresh Jordan water, making it capable of producing abundant farm crops. The land thus won yielded out-of-season vegetables, fruit, fodder, and other farm products. Carp ponds were also installed. A number of members worked in the potash plant. Members of the kibbutz cultivated friendly relations with the Arab inhabitants of Jericho and even with the nearby villages of Transjordan. Bet ha-Aravah proved that both adults and children could overcome the health hazards of the torrid climate. In the Israel War of Independence (1948) the completely isolated settlement held out for six months. Eventually the settlers were evacuated by boat to Sodom, at the south end of the Dead Sea. Later its members erected two new settlements in Galilee, *Kabri and *Geshar ha-Ziv. The Arab Legion completely razed the empty settlement. Its soil again became saline and hardly any vestige of the village could be discerned when Israel forces reached the site in 1967. The following year a *Naḥal group set up a new settlement, Naḥal Kallia, in the general vicinity. In 1977 another Naḥal group settled about a mile (2 km.) west of the original settlement. In 1986 it was affiliated with Ha-Kibbutz ha-Me'uḥad. In 2002 the population of Beit ha-Aravah was 52. The main economic branch was farming, mainly dates, vineyards, and field crops. In addition, the kibbutz operated a food stall at its nearby gas station.

BET(H)-CHEREM (Heb. בֵּית הַכֶּרֶם, "Bet ha-Kerem," "The House of the Vineyard"), settlement west of Jerusalem in the First and Second Temple periods. It is first mentioned at the time of the Judean kingdom in an appendix of the Septuagint to the list of Judean cities in Joshua 15:49 (as Karem), situated between Suba (Tzova), Gallim (Beth Jala), Baither (Battir) and Manahath (Malcha). Judging by a passage in Jeremiah (6:1), the town was the capital of the district west of Jerusalem in the Iron Age, where beacons were lit in times of danger. Jeremiah warned of the pending destruction from the north with the approach of the Babylonians: "O ye Children of Benjamin [in the north], gather yourselves to flee out of the midst of Jeru-

salem, and to blow the trumpet in Tekoa [in the south], and to set up a sign of fire [i.e., beacons, *massa'ot*] in Beth-Cherem [in the west]; for evil appeareth out of the north, and great destruction." Jeremiah referred specifically in this passage to the ultimate territory of Jerusalem (a radius of five kilometers around the city), demarcated specifically by the furthest sites of Tekoa and Beth-Cherem, to the south and west, respectively, and with the northern limit set at the border between Judah and Benjamin (probably at Gibeah/Tell el-Ful). It again appears during the time of Nehemiah as the center of one of the Judean districts; Malchijah, son of Rechab, the ruler of the district of Beth-Cherem, took part in building the walls of Jerusalem under Nehemiah (Neh. 3:14). The valley of Beth-Cherem appearing in later sources should apparently be sought next to the town. According to the Mishnah (Mid. 3:4; Biq'at Beth-Cherem), the stones for the temple altar and its ramp were brought from the valley of Beth-Cherem (Ex. 20:25 (JPS 20:22); Deut. 27:5–6). The fertile valley in the proximity of Ain Karim was also noted as a source of a specific kind of flat stone, still seen there today. Elsewhere we hear that the bright color of the valley soils was discussed by the sages in reference to menstrual blood (Niddah 2:7). The town and its valley are also mentioned in two Dead Sea Scrolls from the end of the Second Temple period. In the Genesis Apocryphon on Genesis 14:17, the "vale of Shaveh – the same is the King's Vale" is thought by some scholars to be the same as "the valley of Beth-Karma." The Copper Scroll, which contains a list of hiding places for treasure, describes Beth-Cherem as a depository for treasure in a large water system (*asyw*). In Jerome's commentary on Jeremiah 6:1 (from the fifth century C.E.), Bethacharma is incorrectly situated on a mountain between Jerusalem and Tekoa. An attempt was made by Y. Aharoni to identify Beth Cherem with Ramat Rahel – a site which he excavated – in southern Jerusalem, based mainly on Jerome's misidentification.

Beth-Cherem should be identified as Ain Karim ("spring of the vineyard"), situated within the western suburbs of modern Jerusalem. In antiquity it was a major town in the hills east of a broad valley basin, with excellent sources of natural water and surrounded by rich agricultural lands. The main spring, known as the Spring of the Virgin, provided 1,135 cubic meters of water per day. Archaeological finds in the present village date back to the Middle Bronze Age II, Iron Age II and Persian periods. Later remains from the Roman, Byzantine and medieval parts are also known. Ain Karim is important in Christian sources as the birthplace of John the Baptist. Two churches in the village – the Nativity and the Visitation – are associated with the tradition of John the Baptist. In the hinterland is the traditional Monastery of John in the Wilderness, and nearby recent excavations have uncovered a Byzantine memorial cave dedicated to the Baptist, with earlier remains connected to baptism rituals dating back to the Roman period.

BET(H)-DAGON (Heb. בֵּית דָּגוֹן), several biblical places, named after a house (shrine) of the god Dagon (cf. the Temple of Dagon in Ashdod, 1 Sam. 5:1ff.). (1) An unidentified city in the southern Shephelah district of Judah (Josh. 15:41). (2) A place in Galilee on the eastern border of the tribe of Asher, northeast of Mount Carmel (Josh. 19:27), which is possibly mentioned in a list of cities of Pharaoh Ramses III. (3) A city mentioned as Bit-Daganna, near Jaffa, in the inscriptions of Sennacherib, king of Assyria, in whose time (701 B.C.E.) it was under the rule of Ashkelon. The Tosefta in reference to it (Oho. 3:9) specifies that it is located "in Judah," and distinguishes it from Beth-Dagon located by Eusebius (Onom. 50:16) "between Diospolis (Lydda) and Jamnia (Jabneh)," but called by him Kefar Dagon. The original name appears on the Madaba Map in the form (Bet)odegana. It was populated by Samaritans, who built a synagogue there in the fourth century; their presence is still attested to in the tenth century. The crusaders erected a castle there, known as Casal Moyen or Castellum de Maen, i.e., "midway" between Jaffa and Ramleh, which was destroyed by Saladin in 1187, but rebuilt by Richard the Lion-Hearted four years later.

[Michael Avi-Yonah]

Modern Period

This site is now the small town of Bet Dagan. In modern times the Arab village Beit Dajan existed there, which increased in population and wealth due to the development of nearby Tel Aviv. Heavy fighting took place there during the War of Independence (1948) to secure Jewish traffic to Jerusalem and the south, and the village was abandoned. It was settled by immigrants from Bulgaria at the end of 1948 and called Bet Dagan ("House of Corn"). This soon developed from a moshav into a semi-urban community. In 1953 Bet Dagan received municipal council status. In 1962 the Israel Institute for Meteorology was opened there along with a state-owned agricultural experimental station. The town had 2,680 inhabitants in 1968 and 4,830 in 2002, occupying a municipal area of 0.6 sq. mi. (1.5 sq. km.).

BET DIN AND JUDGES (Heb. בֵּית דִּין; lit. "house of judgment"). *Bet din* (pl. *battei din*) is the term, in rabbinic sources, for a Jewish court of law. In modern times it usually refers to

an ecclesiastical court dealing with religious matters such as divorce, and supervision of the dietary laws, and acting, with the consent of all concerned, as a court of arbitration. In Israel the term has come to mean the rabbinic court (as opposed to the secular court known as the *bet mishpat*) which has, by act of the Knesset, jurisdiction in matters of personal status in addition to its normal religious function. This article deals with the general meaning as found in rabbinic sources.

In Jewish Law

ORIGINS. The Bible records that Moses sat as a magistrate among the people (Ex. 18:13) and, either on the advice of Jethro, his father-in-law (Ex. 18:17–23), or on his own initiative (Deut. 1:9–14), he later delegated his judicial powers to appointed “chiefs of thousands, hundreds, fifties, and tens” (Ex. 18:21; Deut. 1:15) – reserving to himself jurisdiction in only the most difficult, major disputes (Ex. 18:22 and 26; Deut. 1:17). It is therefore probable that Israel was one of those civilizations in which the judicature preceded the law, and that some of the later, codified law may have originated in judicial precedents. The earliest reports of such legal decisions already indicate a high standard of judicial practice and qualifications. Judges had to be “able men, such as fear God, men of truth, hating unjust gain” (Ex. 18:21) and “wise men, and understanding and full of knowledge” (Deut. 1:13). They were charged to “hear the causes between your brethren and judge righteously between a man and his brother and the stranger;” not be “partial in judgment,” but to “hear the small and the great alike; fear no man, for judgment is God’s” (Deut. 1:16–17). When the children of Israel settled in their land, the allocation of jurisdiction on a purely numerical basis (“thousands, hundreds, fifties, tens”) was to be replaced by allocation on a local basis, i.e., that judges were to be appointed in every town within the various tribes (Deut. 16:18 and Sif. Deut. 144; Sanh. 16b). It is disputed whether this injunction to establish courts in every town applied only in the land of Israel or also in the Diaspora. Some hold that outside the land of Israel courts ought to be established in every district, but need not be established in every town (Mak. 7a); whereas others hold that the injunction applies only in Israel, viz. “in all the settlements that the Lord your God is giving you,” but not “in foreign countries in which He has dispersed you” (Maim. Yad, Sanh. 1:2). However, later authorities regard as obligatory the establishment of a court in every community (cf., e.g., *Arukh ha-Shulhan* חמ 1:18). In towns with less than 120 inhabitants, there was only a court of three judges – three being the minimum number – so that where opinions were divided, a majority could prevail (Sanh. 3b; Yad. Sanh. 1:4). In towns with 120 inhabitants or more, the court should have 23 judges and be designated as a “Sanhedrin Ketannah” (Sanh. 1:6; Yad, Sanh. 1:10). Courts of 23 judges also sat in the Temple precincts in Jerusalem (Sanh. 11:2; Yad. Sanh. 1:3). The highest court was the “Sanhedrin Gedolah” of 71 judges which sat in the Temple (*Lishkat ha-Gazit*) in Jerusalem (Mid. 5:4; Sanh. 11:2; Yad, Sanh. 1:3 and 14:12), corresponding to the 70 elders and offi-

cers who took their place with Moses to “share the burden of the people” (Num. 11:16–17).

The jurisdiction of the various courts was as follows.

(1) Courts of three judges exercised jurisdiction in civil matters generally (Sanh. 1:1), including those which might involve the imposition of *fines (Sanh. 1:1; Sanh. 3a). They also had jurisdiction in matters of divorce (Git. 5b) and *halizah* (Yev. 12:1). A court of three judges was required for the conversion of non-Jews (Yev. 46b); for the absolution from vows (Ned. 78a; TJ, Hag. 1:8, 76c and Ned. 10:10, 42b); for the circumvention of the law annulling debts in the Sabbatical year (“prosbul”; Shev. 10:4; Git. 32b); for the non-release of slaves after six years (Ex. 21:6; Mekh. Mishpatim 2; Yad, Avadim 3:9); for the enslavement of one who commits a theft and does not have the means to pay for the principal (Ex. 22:2; Yad, Sanhedrin 1:1; Genevah 3:11); and also for the taking of any evidence, even in noncontroversial cases (Yev. 87b; Resp. *Ha-Meyuhasot la-Ramban* 113; Resp. Rashba vol. 1, no. 749). Compulsory orders in matters of ritual would also require the concurrence of three judges in order to be valid (Ket. 86a; Hul. 132b), as would the imposition of any sanction for disobedience (*Mordekhai* Git. 384).

(2) Courts of 23 judges exercised jurisdiction in criminal matters generally, including capital cases (Sanh. 1:4). They also exercised jurisdiction in quasi-criminal cases, in which the destruction of animals might be involved (e.g., Lev. 20:15–16; Ex. 21:28–29; Sanh. 1:4). Where a case was originally of a civil nature, such as slander, but might in due course give rise to criminal sanctions, such as slander of unchastity (Deut. 22:14), it was brought before a court of 23 (Sanh. 1:1); if the slander was found to be groundless, the matter would be referred to a court of three for civil judgment (Maim. Yad, Sanh. 5:3). According to one view, the imposition of the penalty of *flogging required a court of 23 (Sanh. 1:2), but the prevailing view is that a court of three is sufficient (Sanh. 1:2; Yad, Sanh. 5:4), as it is really a penalty that is not necessarily for criminal offenses (see *Contempt of Court), as well as being the accepted method of judicial admonition (*makkot mardut*).

(3) The court of 71 judges had practically unlimited judicial, legislative, and administrative powers but certain judicial and administrative functions were reserved to it alone. Thus, the high priest (Sanh. 1:5), the head of a tribe (Sanh. 16a), and presumably also the president of the Sanhedrin (*nasi*), could, if accused of a crime, only be tried by the court of 71. Certain crimes were also reserved to its jurisdiction, such as the uttering of false prophecy (Sanh. 1:5), rebellious teaching by an elder (“*zaken mamre*”; Sanh. 11:2; see *Majority Rule), and the subversion of a whole town or tribe (Sanh. 1:5); and certain death penalties had to be confirmed by it before being carried out (such as of the rebellious son, the enticer to idolatry, and false witnesses; Tosef., Sanh. 11:7). The *ordeal of a woman suspected of adultery took place in the Great Court at Jerusalem only (Sot. 1:4).

Among the administrative functions reserved to the Great Sanhedrin were the appointment of courts of 23 (Sanh.

1:5; Maim. Yad, Sanh. 5:1); the election of kings (Yad, loc. cit. and Melakhim 1:3) and of high priests (Yad, Kelei ha-Mikdash 4:15); the expansion of the limits of the city of Jerusalem and of the Temple precincts (Sanh. 1:5), and the partition of the country among the tribes (according to Ulla; Sanh. 16a); the declaration of war (Sanh. 1:5); the offering of a sacrifice for the sin of the whole community (Lev. 4:13–15; Sanh. 13b); and the appointment and control of priests serving in the Temple (Mid. 5:4; Tosef., Hag. 2:9). The legislative functions of the Great Sanhedrin cannot easily be enumerated. It has been authoritatively said that the Great Court of Jerusalem was the essential source of all Oral Law (Yad, Mamrim 1:1). The law as laid down (or as interpreted) by the Great Sanhedrin is binding on everybody, and any person contravening or repudiating it was liable to the death penalty (Deut. 17:12; Sif. Deut. 155; Yad, Mamrim 1:2), even where the law as laid down (or interpreted) by the court might appear misconceived: “even though they show you as right what in your eyes is left or as left what is right – you must obey them” (Sif. Deut. 155; but cf. Hor. 1:1 and TJ, Hor. 1:1, 45d; and see *Rabbinical Authority). As a corollary of their legislative powers, the Great Sanhedrin also exercised advisory functions: wherever in any court any question of law was in doubt, the final and binding opinion of the Great Court at Jerusalem would have to be taken (Sanh. 88b; Yad, Sanh. 1:4). For the question of appeals see *Practice and Procedure.

(4) Apart from the regular courts mentioned above, there sat in the Temple a special court of priests charged with the supervision of the Temple ritual and with civil matters concerning the priests (cf. Ket. 1:5). Mention is also made of a special court of levites, presumably with similar functions (cf. Tosef., Sanh. 4:7). Originally, the priests performed general judicial functions: they were the sole competent interpreters (or diviners) of God’s judgment (Ex. 28:15, 30, 43; Num. 27:21; Deut. 33:8–10); later, they adjudicated matters together or alternately with the judges (Deut. 17:9; 19:17; 21:5), and it seems that the litigants had the choice of applying to the priest for the dictum of God or to the judges for judgment according to law; eventually, the judicial functions of the priests were reduced to their simply being allotted some seats in the Great Sanhedrin (Sif. Deut. 153).

(5) While no regular court could consist of less than three judges (Sanh. 3b), recognized experts in the law (“*mumheh la-rabbim*”) were already in talmudical times admitted as single judges (Sanh. 5a), albeit in civil cases only and not without express reservations and disapproval – there being no true single judge other than God alone (Avot 4:8; Yad, Sanh. 2:11). No litigant could be compelled to submit to the jurisdiction of a single judge (Sh. Ar., ḤM 3:2).

APPOINTMENT OF JUDGES. The appointment of judges presupposed the “*semikhah*” (“laying of hands”) by the appointer upon the appointee, as Moses laid his hands upon Joshua (Num. 27:23) thereby making him leader and supreme judge in succession to himself. The tradition is that through-

out the ages judges received their authority from their immediate predecessors who “laid their hands” upon them; so it came about that in law the president of the Great Sanhedrin would be the authority conferring judicial powers on graduating judges (Sanh. 5a), in a formal procedure before a court of three in which he participated or which he appointed (Yad, Sanh. 4:5). But judges were also appointed by kings (e.g., 11 Chron. 19:5–6), a power which appears to have eventually devolved on the *exilarch in Babylonia (Yad, Sanh. 4:13), but was superseded even there by the overriding authority of the heads of the academies (*rashei yeshivot*; cf. A. Harkavy (ed.), *Zikhron... Kammah Ge'onim*, 8of., no. 180). Courts need not be composed of authorized judges only: any duly authorized judge could form a court by co-opting to himself the necessary number of laymen (Yad, Sanh. 4:11).

The original practice of *semikhah* ceased about the middle of the fourth century and at the present time *battei din* exercise their judicial functions only as agents of, and by virtue of, an implied authority from the Ancients (Git. 88b; BK 84b; Yad, Sanh. 5:8). This “agency” does not extend to capital cases; even for cases involving fines nonauthorized judges would not be qualified (Sh. Ar., ḤM 1:1). It is only because of force of circumstances that the scope of jurisdiction was in practice never restricted, but extended to whatever causes local conditions required (cf. *Netivot ha-Mishpat*, *Mishpat ha-Urim*, ḤM 1:1; Nov. Ramban Yev. 46b).

One of the consequences of the cessation of the traditional authorization of judges was the adoption in many (mostly Western European) communities of a system of election of judges; in Spain, the judges were elected every year, along with all other officers of the community (cf. Resp. Ribash 207). The leading rabbinical authorities of the period were time and again consulted about election procedures (cf., e.g., Resp. Rashba vol. 3, nos. 417, 422–5; vol. 5, no. 284), so as to ensure that the best and most impartial candidates would be elected. It seems that, when elected, they could not refuse to serve, even though they had not put up their candidature (cf. *Rema* ḤM 25:3; see Judicial *Autonomy; *Mishpat Ivri).

In the State of Israel today, the procedure for appointing rabbinical judges is similar to that for appointing secular judges (*Dayyanim* Act, 5715 – 1955), but while the qualifications of secular judges are laid down in the law, those of rabbinical judges are in each individual case to be attested to by the chief rabbis on the strength of examinations.

No authorization (*semikhah*) and no appointment of a judge will be valid where the appointee did not possess the necessary qualifications (Maim. Yad, Sanh. 4:15); and the sin of appointing unqualified judges is said to be tantamount to erecting an **asherah* beside the altar of the Lord (Sanh. 7b); and where the man was appointed because he was rich, it was like making gods of silver or gods of gold (*ibid.*), not only causing miscarriages of justice but idolatry (Maim. loc. cit., 3:8); and it is reported that judges appointed because of their money were treated with open contempt (TJ, Bik. 3:3, 65d). “The Sages have said that from the Great Court mes-

sengers were sent out all over the country of Israel, and they looked for judges who were wise and feared sin and were humble and clear-sighted and of good appearance and good manners, and first they made them judges in their towns, and then they brought them to the gates of the Temple, and finally they would elevate them to the Great Court” (Maim. loc. cit., 2:8).

QUALIFICATIONS. The judicial qualifications have been enumerated by Maimonides as follows: judges must be wise and sensible, learned in the law and full of knowledge, and also acquainted to some extent with other subjects such as medicine, arithmetic, astronomy and astrology, and the ways of sorcerers and magicians and the absurdities of idolatry and suchlike matters (so as to know how to judge them); a judge must not be too old, nor may he be a eunuch or a childless man; and as he must be pure in mind, so must he be pure from bodily defects, but as well a man of stature and imposing appearance; and he should be conversant in many languages so as not to stand in need of interpreters. The seven fundamental qualities of a judge are wisdom, humility, fear of God, disdain of money, love of truth, love of people, and a good reputation. A judge must have a good eye, a humble soul, must be pleasant in company, and speak kindly to people; he must be very strict with himself and conquer lustful impulses; he must have a courageous heart to save the oppressed from the oppressor’s hate, cruelty, and persecution, and eschew wrong and injustice (Yad, Sanh. 2:1–7). Playing cards for money or other games of chance and lending money on interest also disqualify a person from judicial functions (Sanh. 3:3). A judge who is a relative of one of the litigants, or has any other personal relationship toward him (“loves him or hates him”), must disqualify himself from sitting in judgment over him (Sanh. 3:4–5). A judge should not engage in manual work, so as not to expose himself to popular contempt (Kid. 70a).

PRINCIPLES OF JUDICIAL CONDUCT. A judge must show patience, indulgence, humility, and respect for persons when sitting in court (Yad, Sanh. 25:1; Sh. Ar., ḤM 7:2–5); he must always hear both parties to the case (Sanh. 7b; Shev. 31a; and Codes); he may not in any way discriminate between the parties (Lev. 19:15; Shev. 30a–31a; Yad, Sanh. 21:1–2; 20:5–7; Sh. Ar., ḤM 17:1 and commentaries ad. loc.); nor may he act under the possible pressures of any undue influence, including *bribery by money or by words (Deut. 16:19; Sanh. 3:5; Shab. 119a; Ket. 105b; and Codes); he must, on the one hand, proceed with deliberation and care, and reconsider again and again before finally pronouncing his verdict (Avot 1:1; Sanh. 35a; Sif. Deut. 16 and Codes), but may not, on the other hand, unduly delay justice (Yad, Sanh. 14:10 and 20:6); and he must so conduct himself that justice is not only done but is also manifestly seen to be done (Yoma 38a; Shek. 3:2) and readily understood by the litigants (ḤM 14:4). Before joining a court, a judge must satisfy himself that the judges sitting with him are properly qualified (Yad, Sanh. 2:14); and no judge should sit together with another judge whom he hates or despises (Sh. Ar., ḤM

7:8). Nor may a judge – especially in criminal cases – instead of considering and deciding the issue before him on his own, rely on the opinion of greater judges in the court and try thus to disburden himself of his judicial responsibility (Tosef., Sanh. 3:8; Yad, Sanh. 10:1).

[Haim Hermann Cohn]

Talmudic Period

The rabbis ascribe the development of *battei din* to leading biblical personalities such as Shem, Moses, Gideon, Jephthah, Samuel, David, and Solomon (Mak. 23b; Av. Zar. 36b; RH 2:9; RH 25a). Historical evidence of the existence of a *bet din* in the time of Jehoshaphat is found in *Deuteronomy Rabbah* 19:8. However, the *bet din* belongs essentially to the period of the Second Temple, and its establishment is attributed to *Ezra. He decreed that a *bet din*, which was to sit on Mondays and Thursdays (BK 82a), be established in all populated centers. These were local courts, while the Great Sanhedrin of Jerusalem served as the supreme court (Deut. 17:8–13; Sot. 1:4; Sanh. 1:6). The Sanhedrin existed for the duration of the Second Temple. A decree against immoral behavior is ascribed to the *bet din* of the Hasmoneans (Av. Zar. 36b).

After the destruction of the Temple, *Johanan b. Zakkai established his *bet din* in Jabneh as the cultural and political center of the Jews, and it succeeded the previous Sanhedrin Gedolah. The Jabneh *bet din* was responsible for regulating the calendar and thereby became the religious and national center not only of Erez Israel, but also of the Diaspora. In addition to this central *bet din*, local *battei din* continued to function, particularly in the vicinity of the academies. The Talmud speaks of the courts of R. Eliezer in Lydda, R. Joshua in Peki’in, R. Akiva in Bene-Berak, and R. Yose in Sepphoris (Sanh. 32b). Under R. Johanan’s successor, *Gamaliel II, the power and influence of the central *bet din* increased. The summit of its authority was reached under *Judah ha-Nasi I. His grandson, Judah Nesia, may be regarded as the last *nasi* under whose direction the *bet din* was still the actual center of the Jewish people. The Talmud therefore refers to Gamaliel and his *bet din* (Tosef., Ber. 2:6) and to Judah ha-Nasi and his *bet din* (Av. Zar. 2:6), thereby indicating the central civil and religious authority of the Jews.

Toward the middle of the third century, the *bet din* of the *nasi* gradually lost its importance due to the rise of Jewish scholarship in Babylonia and the increased oppression of Palestinian Jewry under Roman rule. Although the office of the *nasi* continued until the end of the fifth century, his *bet din* was no longer the center of the Jewish people. In Babylonia, no *bet din* ever achieved preeminent authority, even for Babylonia alone. This situation continued throughout the geonic period, as no central *bet din* could be established because of the rivalry between the two academies.

Medieval and Modern Period

The *bet din* became the stronghold of Jewish *autonomy in the Middle Ages, and continued with reduced powers into modern times. It experienced many changes in the various centers

of Jewish life in the Diaspora, while retaining the continuity of the principles of talmudic law. A vast literature of rabbinic responsa grew out of the written judgments passed by the scholars of every age on actual cases, thus setting precedents and affording an orderly development of Jewish jurisprudence.

In some exceptional cases Jews resorted to non-Jewish courts. Such occurred in Egypt and Erez Israel in the 11th and 12th centuries, following the decline of the gaonate, and in Spain, Majorca, Tunis, and Algeria in the 14th century. In Germany, Jewish and Christian judges met in the synagogue to adjudicate cases between Jews and Gentiles.

The general rule in the Middle Ages, however, was that Jews were strictly prohibited from taking litigation among themselves to gentile courts. This was achieved partly by the control exercised by the community over the individual and by the conception that "Judgment is God's" and hence that recourse to gentile courts meant "aggrandizing the honor of alien gods," as well as by the fairness, incorruptibility, and swiftness of Jewish justice in the majority of countries and most of the time.

In the first half of the geonic period local judges were appointed centrally in Babylonia by the *exilarchs. Later the country was divided into three domains: one was under the jurisdiction of the exilarch, and the other two under the academies in *Sura and *Pumbedita respectively. The local court usually consisted of three judges, one appointed by the exilarch or by the *Gaon* and two more local associates co-opted by him. In Egypt the *nagid* selected local judges.

In the absence of a central authority in the newly developing Jewish settlements in Europe the judiciary became part of the local government of each community. Either the elders themselves constituted a court of justice, or special *daiyanim* ("judges") were selected. In the days of *Gershom b. Judah (tenth century) these local courts were invested with full judicial authority to impose fines and exact penalties. They were mostly constituted of laymen, not necessarily versed in the law. Later, when communities began engaging rabbis, the lay judges were expected to consult them on talmudic law.

In Spain the *bet din* achieved its fullest growth and widest powers. The prerogatives of every *alijama* ("community council") were often defined by a royal charter. The *bet din* thus derived its authority from the king through the *kahal*. The king often appointed a chief rabbi for the realm who was a grandee not necessarily expert in Jewish law, the judiciary being included within his competence. He usually sought the advice and guidance of trained Jewish jurists. The authority of the *bet din* extended to all spheres of Jewish life, social as well as individual, its judgments resting on rabbinic law. It developed a rigorous system of punishments, some of which were far removed from the legacy of ancient Jewish jurisdiction. It assumed, for instance, the right to mete out flagellation, fines (which generally went to the royal treasury), excommunication, chains, imprisonment, exile, and even bodily mutilation, such as cutting off hands or the nose, or cutting out the tongue, as well as the death penalty for *informers (*malshinim*). Hence

on the basis of temporary emergency legislation many local Christian legal mores were adopted by the Jewish *bet din*.

During the period when the *Councils of the Lands had jurisdiction over the communities in Poland and Lithuania these bodies included a supreme judiciary selected from among the talmudic scholars of the main communities. In general, appellate Jewish courts existed in many lands, including Spain, Italy, Moravia, Bohemia, Austria-Hungary, and Bulgaria.

Whereas the traditional *bet din* for civil cases consisted of three judges, there were other compositions of this court ranging from one person, usually the local rabbi, to the seven *tovei ha-ir*, the elders of the community. Large cities had more than one *bet din*. A court of arbitration whereby each litigant selected one judge and these two judges appointed the third was very common. Small rural settlements which were administratively allied with a neighboring *kahal* took their litigation to the *bet din* of that *kahal*. Associations within a community, mainly those of artisans, had their own *bet din* for their members by permission of the *kahal*. On the arrival of the Spanish exiles in Turkey after the Expulsion of 1492, each congregation established its own *bet din*.

In Russia the *bet din* was especially powerful until the latter part of the 19th century. Before the abolition of the *kahal* there in 1844 the *bet din* not only applied strict penalties to guilty individuals but also had jurisdiction over the *kahal* itself in claims of individuals against it. There is even a record of the imposition of capital punishment upon two informers in Novo-Ushitsa in 1836.

The distinguishing characteristic of the medieval *bet din* was that it served as an arm of the self-governing *kahal* which possessed powers of law enforcement. As emancipation of the Jew in the modern era dissolved the corporative structure, Jews tended increasingly to resort to the general courts. Wherever the *bet din* has survived to this day it enjoys the prerogatives only of a court of arbitration whose decisions are generally upheld by the law of the country. In many countries, in particular in England and its dominions, and to a lesser degree in France, the *bet din* system, headed by the *bet din* of the chief rabbi of the country, still plays a central role in Jewish life. In Erez Israel, under the mandatory government, an elaborate network of *bet din* courts was established under the Supreme Rabbinical Court in Jerusalem. The State of Israel has taken over this system, giving the *bet din* exclusive jurisdiction over the Jewish population in matters of personal status.

[Isaac Levitats]

In the State of Israel

GENERAL. A system of rabbinical courts operates in the State of Israel. In the legal system of the State, the rabbinical courts have jurisdiction over matters of marriage and divorce and additional matters related to family law. Furthermore, in an arbitration capacity they also preside over other issues in the area of civil and public law, when the both parties consent to their jurisdiction.

HISTORICAL BACKGROUND. Already during the Ottoman rule in the Land of Israel the authorities conferred official recognition on the Jewish Rabbinical Courts, (at that time the regime was based on the capitulation system in which judicial jurisdiction was determined in accordance with religion or citizenship). The head of the Rabbinical Courts system was officially recognized by the Ottoman authorities.

After the Erez Israel was conquered by the British, in 1922, the Kings Order in Council was enacted, conferring exclusive jurisdiction in family matter to the religious courts: Jewish, Islamic, and Christian. Jewish Rabbinical Courts were already in existence; they functioned for the duration of Jewish history. In the Erez Israel the Rabbinical Courts system was established by Chief Rabbi Abraham Isaac ha-Kohen Kook of blessed memory in conjunction with the establishment of the Chief Rabbinate of the Land of Israel, established in 1921 (see remarks of Justice Z.A. Tal in HC 3269/95 *Katz v. Regional Rabbinical Court*, 50 (4) PD 590, 617, hereinafter *Katz*).

This arrangement remained in force during the first years of the State's existence, in accordance with the constitutional principle established on the day of the State's establishment. Accordingly, the Mandate Law, which had been in force in Mandate Palestine (the Land of Israel) from its conquest in 1917 and until the termination of the Mandate in 1948, would remain in force (see sec. 11 of the Law and Administration Ordinance, 5708 – 1948).

POWERS OF THE RABBINICAL COURT IN ACCORDANCE WITH THE JURISDICTION LAW. In 1953 the Knesset enacted the Rabbinical Courts Jurisdiction (Marriage and Divorce) Law, 5713 – 1953 (hereinafter – “the Jurisdiction Law”). The substantive provision of section 2 provides: “Marriages and divorces of Jews shall be performed in Israel in accordance with Jewish religious law” (*din torah*). The term “Jewish religious law” includes biblical law, rabbinic law, and regulations according to the *halakhah*. Section 1 of the aforementioned law establishes the jurisdiction of the Rabbinical Courts: “Matters of marriage and divorce of Jews in Israel, being citizens or residents of the State, shall be under the exclusive jurisdiction of the rabbinical courts.”

The term “matters of marriage and divorce” includes the validity of the marriage and divorce. Accordingly the rabbinical court is the only forum competent to adjudicate and decide the personal status of a Jew, i.e., whether he is married or unmarried. This jurisdiction is limited to cases in which both of the spouses are Jewish. Where one of the spouses is Jewish and the other belongs to another religion, the judicial forum with jurisdiction to dissolve the couple's marriage is determined by the President of the Supreme Court.

Both or either of the parties file an application to the President of the Supreme Court, and the latter exercises his power only after the Attorney General gives him the written opinions of the relevant religious courts. These religious courts give their opinions in each particular file regarding whether the religious court would give a divorce judgment, or dissolve

the marriage, or declare the marriage void *ab initio*. After the President of the Supreme Court receives the opinions of the relevant religious courts (of both spouses, respectively) by way of the attorney general, he decides, at his own discretion, whether to refer the matter to one of the religious courts of the spouses or to the family court (see: Matters of Dissolution of Marriage (Jurisdiction in Special Cases) Law, 5729 – 1969; Regulations for Dissolution of Marriage (Special Cases) (Procedures) 5745 – 1984).

The Law further determines the substantive law to be applied by the family court in the event that it acquires jurisdiction pursuant to the decision of the President of the Supreme Court, under the aforementioned law (sec. 5 of the Law). Where a religious court acquires jurisdiction established pursuant to the decision of the President of the Supreme Court, it will then adjudicate the case in accordance with the religious law applicable in that court. Hence, where the rabbinical court acquires jurisdiction, it will decide the matter in accordance with the Jewish Law, i.e., the *halakhah*. For example, where the case concerns a mixed marriage of a Jew with a non-Jew, the halakhic position is that the marriage is not valid, and thus in terms of the *halakhah*, there is no need for an act of divorce – because the marriage was not valid in the first place.

In 2005 the legal position applying to mixed marriages changed (see: Matters of Dissolution of Marriage (Special Cases and International Jurisdiction) (Legislative Amendments), 5765 – 2005. Section 1 of this Law comprises all of the amendments to the Dissolution of Marriage Law, from 1969. Due to the tremendous volume of applications for dissolution of marriages filed with the President of the Supreme Court, it was decided that the family court would henceforth be empowered to decide which forum would adjudicate the matter, and that the family court would have residual jurisdiction over the matter, “unless in accordance with the provisions of this Law, the religious court has jurisdiction” (section 1 (a) of the 1969 Law, as amended in section 1 (2) of the law of 2005. The 2005 amendment did not affect the procedure for requesting the opinions of the respective religious courts, except that in accordance with the amendment, the application was made by the deputy president of the Family Court, who would apply directly to the head of the relevant religious courts. Accordingly, where one of the spouses is Jewish, an application is made to the president of the Rabbinical Court of Appeals (see section 3 (a) and section 3 (g)(1) of the 1969 Law, as amended in 2005). The purpose of the application for the head of the religious court was to determine “*whether there is a need for a divorce under the religious law by which he adjudicates, even by reason of a doubt, so that the spouse to whom that religious law applies will be able to remarry*” (section 3 (a)(1), *concluding passage*). If the head of the rabbinical court rules that a divorce is required under religious law, the family court will transfer the application for the dissolution of a marriage to that rabbinical court. On the other hand, the Law further emphasizes that in such a case the conferral of application does not as such confer the rabbinical court with

jurisdiction over matters included in the divorce (section 3 (c) of the Law, in the concluding passage). In this regard the Law specifies that the general rules governing jurisdiction and inclusion will continue to apply. These rules will be explained below. Should the head of the rabbinical court rule that there is no need for divorce, or if he fails to respond within three months, then the family court has jurisdiction to adjudicate the matter of dissolution of the marriage (section 3 (d) of the Law). In this respect, the new law introduced a significant innovation, because until that time the rabbinical court had exclusive jurisdiction for the determination of marital status in matters concerning Jews, and according to the new law of 2005, in such cases, the family court has jurisdiction.

For the sake of efficiency, the Law allows the head of the religious court to give a general notification to the President of the Supreme Court, stating that under specific circumstances there is no need for divorce under the religious law by which he adjudicates, as a condition for the ability of the party subject to that law to remarry. This condition obviates the need for an application to the religious court in such cases in the future (section 3 (f)). This power can be exercised in the case of a marriage between a Jew and someone who is not Jewish, for as stated above, according to the *halakhah*, mixed marriages are prohibited and invalid (see *Mixed Marriage). In the 1969 Law, the President of the Supreme Court was conferred the power to avoid determining jurisdiction for spouses belonging to different religions, “if he deems that under the circumstances, it would not be appropriate to grant a remedy to the applicant” (sec. 3 of the 1969 Law). This section was repealed in the 2005 Law. Nonetheless, upon application of one of the litigants, or the Attorney General, the President of the Supreme Court can order that the jurisdiction to dissolve the marriage should be conferred to the family court or the religious court (including, naturally, the rabbinical court) if the President is convinced that it is justified under the circumstances (section 3 (e) of the Law, as amended in 2005).

An additional condition for the jurisdiction of the rabbinical court is that the parties are “Jews in Israel, being citizens or residents of the State” (sec. 2 of the Jurisdiction Law). According to the Supreme Court’s ruling it is not sufficient that both spouses be Jewish; there is a need for an additional link connected them to the State of Israel, by force of their being (physically) in Israel, and by virtue of their personal link to Israel, by being residents or citizens of Israel (see, e.g., the decision of Justice Zamir, in CA 3868/95 *Werber v. Werber*, 52 (5) PD 817, 843); decision of Justice M. Cheshin in HC 1480/01 *Hagag v. Rabbinical Court of Appeals*, 55 (5) PD 214, 225–226). A decision recently given by the Supreme Court (HC 6751/04 *Sabag v. Rabbinical Court of Appeals* (not yet published) (hereinafter – *Sabag*), concerned a Jewish couple who were married in Monaco, in both a civil and a religious ceremony. They were divorced civilly, and the women petitioned to compel her husband to give her a *get* in accordance with religious Jewish law, because according to the *halakhah*, she was still married, and hence – an *agunah*. She turned to the Israeli rabbinical court.

The majority view in the Supreme Court, sitting as the High Court of Justice, was that insofar as neither of the spouses had any connection to Israel, the rabbinical court lacked jurisdiction to rule on their case, both on the question of marriage and divorce, and on the question of maintenance (per Justices A. Proccaccia, concurred with by Justice Y. Adiel). The minority view was that in order to prevent the woman becoming from an *agunah*, the rabbinical court was authorized to adjudicate the issue of maintenance, which includes the maintenance awarded under the rule of “*me’ukevet me-hamato le-hinaseh*” (a woman prevented from marrying for reasons dependent on the husband). For the same reason the rabbinical court was also empowered to delay the husband’s departure from Israel and to make his return to Monaco conditional upon him giving high financial securities (decision of Justice E. Rubinstein in *Sabag*). The minority viewed relied on the previous ruling in HC 1796/03 *Cobani v. Rabbinical Court of Appeals I* (not yet published).

In 2005, a major change was introduced into the issue of the rabbinical court’s jurisdiction over divorce, and its jurisdiction was extended so that it was no longer limited to spouses resident in Israel, but was also extended to six additional cases in which Jewish spouses had married under *din torah* (Jewish religious law) and in respect of which one of the following connections to the State of Israel sufficed for purposes of conferring jurisdiction to the rabbinical court, to adjudicate their divorce: (1) the defendant’s place of residence is in Israel; (2) both of the spouses are Israeli citizens; (3) the plaintiff’s place of residence is in Israel, provided that he/she lived there for at least one year immediately prior to the filing of the action; (4) the plaintiff’s place of residence is in Israel, provided that the most recent spousal residence was in Israel; (5) the plaintiff is an Israeli citizen, and his place of residence is in Israel; (6) the plaintiff is an Israeli citizen, and lived in Israel for at least one of the two years immediately preceding the filing of the action (see section 4A (a) of the Rabbinical Courts Jurisdiction (Marriage and Divorce) Law, 5713 – 1953, which was added under section 2 of the Matters of Dissolution of Marriage (Special Cases and International Jurisdiction) (Legislative Amendments), 5765 – 2005). In addition, the Law stipulates that where a Jewish couple was married in accordance with *din torah*, and was already divorced under the laws of the external state, the rabbinical court has jurisdiction to adjudicate an action for divorce in accordance with *din torah*, and an action to remove an impediment to remarrying in accordance with *din torah*, even where only the plaintiff is an Israeli citizen (see section 4A (c) of the aforementioned law). A classic example of this kind of case is where the Jewish spouses were married outside Israel both civilly and in accordance with *din torah*, and the court of that country issued an order for civil divorce. In these cases the husband may regard himself as being at liberty to remarry who ever he wishes (under the law of that state) whereas, in the absence of a *get*, the woman continues to be a married woman according to Jewish Law and therefore she prevented from remarrying, and any

conjugal relations with another man will be deemed as an act of adultery, and any child born from such relations will be regarded as a *mamzer. In such a case the rabbinical court is empowered to adjudicate her divorce, provided that the wife is an Israeli citizen, even if her husband is not an Israeli citizen. This is in addition to the other six possibilities, any one of which suffices to confer jurisdiction to the rabbinical court to adjudicate the divorce action. It should further be noted and emphasized that the Law confers jurisdiction for religious divorces only. The rabbinical court is not empowered to adjudicate and rule on matters of civil divorce (section 4A (b) (2) of the aforementioned law), if an action for a civil divorce was filed in the foreign state prior to the delivery of the *get*.

Furthermore, the conferral of jurisdiction to the rabbinical court over matters of divorce is exclusively for purposes of solving the problem of *aggunot*, and accordingly the new law does not “confer the rabbinical court with jurisdiction over matters included in divorce” (section 4A (e) of the Law) such as maintenance, property, or child custody.

The jurisdiction conferred to the rabbinical court under the 2005 law is not only the jurisdiction over divorce, but also enables it to adopt measures prescribed by the Rabbinical Courts Law (Upholding Divorce Rulings) 5755 – 1995. These measures range from the authority to prevent the husband's exit from Israel to the authority to order imprisonment of a recalcitrant husband (see in detail in entry on *Divorce (Enforcement of Divorce in Israel)). In this way the rabbinical court in Israel functions as the exclusive forum in the world that has jurisdiction to resolve the *agunah* problems of Jews who were married under *din torah*, by using the enforcement mechanism of the State of Israel including preventing exit from the State, and imprisonment.

Where the plaintiff is not in Israel, the rabbinical court still has jurisdiction to adjudicate divorce, if one of the conditions enumerated above exists. However, the Law provides that in such a case, the action must be served to the defendant outside Israel, together with a translation certified by a notary. Even where a judgment is issued due to the defendant's absence, he is permitted to apply for rehearing of the action (see section 4B of the aforementioned law).

The amendment of 2005 enables the Rabbinical Court of Appeals or one of its *dayyanim* to give a halakhic opinion regarding a *get pitturin* (divorce writ under Jewish Law) or a permit to marriage in a state abroad, provided that the rabbinical court receives a request for its halakhic opinion regarding one of these matters, and even if the Jewish spouses are not subject to the exclusive jurisdiction of the rabbinical court, but were married in accordance with *din torah*.

In order to resolve practical problems concerning *aggunot*, the law of 2005 provides that it will also apply to currently pending claims (section 3 (d) of the 2005 law). Conceivably, these could be regarded as retroactive application, but a reasonable interpretation of the law is that the issue concerns the conferral of jurisdiction in order to solve problems of *aggunot*, and the impeding party has no vested right to continue

impeding his /her spouse and there is therefore a moral and substantive reason for the immediate application of this Law, even with respect to currently pending actions.

The jurisdiction law also addresses additional matters pertaining to the rabbinical courts' jurisdiction:

(a) The divorce action can also include additional matters (such as maintenance and property), in which case the rabbinical court will have exclusive jurisdiction over those matters too (section 3 of the Jurisdiction Law). The case-law recognized two categories of inclusion (or attachment): (1) a matter which according to its nature and essence is included in the divorce action; (2) a matter which although not necessary a matter of personal status, but regarding which a decision is necessary for the efficient dissolution of the relations between the couple being divorced (decision of Justice M. Silberg in CA 8/59 *Goldman v. Goldman*, 13 PD 1085, 1091). Child custody is a matter which by its nature and essence is included in the divorce action, and therefore belongs to the first category, placing it under the jurisdiction of the rabbinical court, even if not expressly mentioned in the divorce action. (ST 1/60 *Winter v. Beeri*, 15 PD. 1457. in the decision of Justice M. Silberg and *dayyan* (judge in rabbinical court), Rabbi Goldsmith). To the extent that it concerns the second category of inclusion, under case-law there is a need to explicitly include the particular matter (for example maintenance for the wife, or property) in the divorce action, and in addition, according to the interpretation of the Israeli Supreme Court, the rabbinical court's exclusive jurisdiction is dependent on the fulfillment of three cumulative conditions: (1) the divorce suit filed in the rabbinical court must be *bona fide*; (2) the inclusion of the woman's maintenance or of property must be lawful; (3) the inclusion must also be *bona-fide*. The burden of proof for the fulfillment of these three conditions lies with the litigant claiming that jurisdiction resides in the rabbinical court and not the family court, because in the view of the Supreme Court, that person is attempting to deny the general jurisdiction of the territorial courts of the State and transfer it to a particularistic religious court (see e.g., decision of Justice M. Shamgar in CA *Givoli v. Givoli* 34 (4) PD 155). On the other hand, if the parties had already litigated the matter of maintenance and property in the rabbinical court, then the rabbinical court has jurisdiction, even if the three conditions were not fulfilled (see HC 5679/03 *Anon. v. State of Israel*, per President A. Barak with the concurring opinions of Y. Tirkel and Y. Adiel (not yet published). Notably, since the adoption of the principle of good faith in Israeli Law (see sec.39 of the Contracts (General Part) Law, 5733 – 1973), it has also been applied and implemented with regard to the jurisdiction of the rabbinical courts and the aforementioned criterion for inclusion (see, e.g., CA 700/81 *Paz v. Paz*, 38 (2) PD 736, 742 per Justice M. Elon).

(b) Section 4 of the Jurisdiction Law provides that when a woman files a claim for maintenance, unconnected to a divorce suit, or for maintenance from an estate, “the defendant's plea that the rabbinical court has no jurisdiction in the mat-

ter shall not be heard.” The courts interpreted this section as meaning that the rabbinical court and the civil courts have parallel jurisdiction over the wife’s maintenance when the case is unrelated to divorce. In these cases, the wife is entitled to apply to either court at her own discretion, and the forum that she turns to first acquires exclusive jurisdiction to adjudicate the matter of her maintenance. Having chosen either of these forums, she is no longer permitted to switch to another forum at a later stage.

(c) In matters of *haliza* (levirate marriage, see *Levirate Marriage and *Haliza*) and maintenance until the day of the *haliza* – the rabbinical court has exclusive jurisdiction (sec. 5 of Jurisdiction Law).

(d) The jurisdiction law enables consensual jurisdiction: In the specific matters of personal status over which the rabbinical court does not have exclusive jurisdiction under the Jurisdiction Law, the rabbinical court can acquire jurisdiction provided that all the parties concerned have expressed their consent to its jurisdiction (sec. 9 of the Jurisdiction Law).

The rabbinical court also has jurisdiction under other laws. For example, section 155 (a) of the Succession Law 5725 – 1965 provides that the rabbinical court is authorized to issue a succession order, a probate order, and to rule on maintenance from an estate, if all the parties concerned have given their written consent thereto (for the interpretation of this section, see also in decision of Justice M. Elon, CA 807/77 *Sobol v. Goldman* 33 (1) PD 789, 798 (hereinafter: *Sobol*). Similarly, the rabbinical court has exclusive jurisdiction in any matter relating to the creation or the internal management of a Wakf or a religious endowment that was established in accordance with Jewish Law (see sec. 53 (a) of the Kings Order in Council, 1922.)

THE STATE’S AUTHORIZATION FOR DECISIONS OF THE RABBINICAL COURT. In all of the matters under rabbinical court jurisdiction, the decisions and orders of the rabbinical court are enforced by the executive authority of the State, the Police and the Execution (civil) framework pursuant to section 1 of the Execution Law, 5727 – 1967. The court decisions enforced and executed by the Execution Office include decisions of a religious tribunal (including the rabbinical court). The rabbinical courts system is also empowered to summon witnesses and litigants, to issue restraining orders against leaving the country, and to impose liens. All of these powers are conferred by Knesset legislation, which even imposes the sanctions under the Contempt of Court Ordinance for a person who refuses to comply with the orders of the rabbinical court. (See: Religious Courts (Summons) Law; sections 6 and 7 of the Contempt of Court Ordinance, which applies to the rabbinical court by force of section 7A of the aforementioned law.)

In 1995 the Knesset adopted a law empowering the rabbinical courts to impose a series of sanctions, extending to imprisonment, in order to enforce a divorce judgment. (see at length in the entry *Divorce (Enforcement of Divorce in Israel).

THE LAW APPLYING IN THE RABBINICAL COURTS. Since their establishment during the period of Ottoman rule, under the British Mandate, and even after the establishment of the State of Israel, the rabbinical courts have applied and implemented Jewish Law, i.e., the Jewish religious law, which rabbinical courts have applied since ancient times. Where it concerns laws of personal status and ritual law, this phenomenon is anchored in the very act of conferring jurisdiction to rabbis, the assumption being that they will operate in accordance with the dictates of their religious convictions and will not deviate from the dictates of the *halakhah*. Hence, in the case of *Skornik v. Skornik* (CA 191/51 8 PD 141, per Justice S. Agranat) the rabbinical courts did not apply the rules of private international law, exercising instead the evidentiary and procedural rules of the *halakhah* (traditional Jewish law).

Both the Mandate Legislature and the Israeli Legislature recognized the rabbinical court’s subordination to the Jewish religious law, and consequently they significantly curtailed the number of laws directed at the rabbinical courts. In the isolated laws containing provisions directed at the rabbinical court, the rabbinical court had a monopoly over its interpretation. Nonetheless, in 1994 the Supreme Court ruled that the rabbinical courts were obligated to apply the doctrine of joint matrimonial property, a doctrine based in Israeli common-law and not the provisions of Jewish law on the matter (HC 1000/92 *Bavli v. Rabbinical Court of Appeals*), 48 (2) PD 221). This signaled a new direction in High Court policy, curtailing the powers of the rabbinical court by compelling it to apply Israeli Law, and as such was criticized

CIVIL LAW IN THE RABBINICAL COURTS AND A WRIT OF REFUSAL. Apart from its powers in defined areas of personal status in which Israeli Law confers jurisdiction to the rabbinical courts, it must also be remembered that throughout Jewish history rabbinical courts have always adjudicated disputes brought before them by two Jews. Today too, the rabbinical courts continue to function in this format. In such cases, from the perspective of Israeli law, these cases have the status of arbitration cases, and following the confirmation of the civil courts, the decisions are enforceable. Absent an arbitration agreement, the rabbinical court has no jurisdiction (see HC 2174/94 *Kahati v. Rabbinical Court of Appeals*, 50 (2) PD 214). On the other hand, signing an arbitration agreement is not required under Jewish Law, and in the State of Israel this measure is only adopted as a means of making the rabbinical court’s decision enforceable under the Arbitration Law, 5728 – 1968 (see decision of Dayyan, Harav Dickhovsky, File 14603/5743, as cited in the *Weiss* case, *ibid.*, 619)

Throughout Jewish history, where people refused to litigate before the Jewish rabbinical courts, an excommunication order (*ketav siruv*) was issued against them, intended to compel the *defiant litigant* to appear before the rabbinical court and accept its jurisdiction over the case, owing to fear of the pain of excommunication should he refuse to do so. When a decision had already been given, the excommunication or-

der was issued to enforce the compliance of the party against whom the decision was given. The ostracizing and excommunication components of the order meant that the order “served as an important sanction for the Jewish court, which while enjoying judicial autonomy all over the Jewish dispersion, nonetheless lacked the requisite coercive powers that are at the disposal of a sovereign state” (per Justice M. Elon, *Sobol, ibid.*, p. 803).

Despite the fact that the issue of an excommunication order by a rabbinical court had always been an accepted measure under Jewish law for ensuring compliance with a rabbinical decision, the Israeli High Court was unwilling to recognize this practice. When the Israeli rabbinical court issued a writ of refusal, and a person regarded himself as aggrieved by the order, he applied to the High Court of Justice and the latter ruled by majority opinion that the rabbinical court was not empowered to issue such orders. The High Court ruled that the rabbinical court lacked the power to issue writs of refusal, because matters of that nature exceeded the powers of the rabbinical court, as a body established by the State and operating under its laws (the view of Justices Y. Zamir and Justice D. Dorner in the aforementioned *Katz* case).

On the other hand, in his minority opinion Justice Z. Tal demurred, noting that the *ketav seruv* had been issued by rabbinical courts throughout Jewish history and there was no reason for not maintaining the institution in the State of Israel. Concededly, recourse to the *ketav seruv* should be cautious and measured, but the litigants had been directed to the rabbinical court to adjudicate their case, and the High Court of Justice was therefore unable to prevent the rabbinical court from making the declaration and issuing the excommunication order.

HIGH COURT SUPERVISION OVER THE RABBINICAL COURTS. The Rabbinical Courts are part of the Israeli Judiciary. Section 1 (b)(1) of the Basic Law: Judiciary provides stipulates: “Judicial power is vested also in the following: ... a religious court (*bet din*). Section 15 (d)(4) of the same Basic Law empowers the Supreme Court, sitting as the High Court of Justice, “to order religious courts to hear a particular matter within their jurisdiction or to refrain from hearing or from continuing to hear a particular matter not within their jurisdiction, provided that the court shall not entertain an application under this paragraph if the applicant did not raise the question of jurisdiction at the earliest opportunity.”

In fact, the Supreme Court exercised its supervisory powers over the rabbinical courts system when the latter exceeded the limits of their jurisdiction (*ultra vires*). To cite a few examples: Rabbinical adjudication where one of the parties is not Jewish, or not an Israeli resident (see: *Sabag, ibid.*), or adjudication by an incomplete panel (HC 7/83 *Biares v. Haifa Regional Rabbinical Court*, 38 (1) PD 673, per Justice M. Bejsky; *Katz*, p. 626). Moreover, if the rabbinical court operates in defiance of the rules of natural justice, and does not give each party the opportunity of submitting evidence and plead-

ing, or acts with bias, its ruling under such circumstances will be annulled by the High Court of Justice (see, e.g., HC 10/59 *Levi v. Tel Aviv-Jaffa Regional Rabbinical Court*, 13 PD 1182, per Justices M. Silberg and Y. Zussman; HC 323/81 *Vilozni v. High Rabbinical Court of Appeal*, 36 (2) PD 733, 739, per Justice M. Elon).

In addition to the High Court of Justice, every judicial forum has jurisdiction to decide whether or not it has jurisdiction over a particular matter. Thus, both the rabbinical courts and the family courts rule on the question of their jurisdiction when the question is raised before them. In a previous decision Supreme Court held that “where one judicial body has adjudicated and ruled in good faith on a particular matter, no other judicial body has the power to entertain another claim on the same matter – regardless of the formal jurisdiction” (CA 359/75 *Yahalomi v. Yahalomi*, 31(2) PD 25, 27, per Justice Chaim Cohn). The philosophical underpinning of this rule is “the principle of mutual respect that the civil courts and the religious courts must accord each other. This mutual respect is not a question of good manners and proper behavior alone; it is vital for the existence of a properly functioning legal system, especially in the sensitive legal area of matters of personal status, in which two judicial systems have parallel jurisdiction within the same legal system” (ST 1/81 *Nagar v. Nagar*, 38(1) PD 365, 397–398, per Justice M. Elon). When one judicial forum rules on a jurisdictional question, it is not proper for another forum to consider the matter further, and it must abide by the decision of the first forum. Recently, the Supreme Court ruled in a majority opinion that only when there is a special reason (e.g., when there was no preliminary hearing regarding the question of jurisdiction or where the ruling of the first forum on the jurisdiction is illegal or deviates from the rules of natural justice), the other judicial forum has no jurisdiction to rule again on the question of jurisdiction (see HC 8497/00 *Feig-Felman v. Felman*, 57(2) PD 118, per Justice D. Beinisch, and concurring opinion of Justice T. Strasberg Cohen). The dissenting opinion was that even in these exceptional cases there was no place for conflicting rulings of the rabbinical and the family courts and that the proper procedure was to petition to the High Court of Justice in order for it to render a decision in the matter (see opinion of Justice D. Dorner, *ibid.*, pp. 142–143).

When the question is whether a particular matter falls within the jurisdiction of the rabbinical court or of the civil court, Article 55 of the King’s Order in Council, 1922 sets forth a mechanism for resolving the matter, i.e., the establishment of a special tribunal composed of two Supreme Court justices and one judge from the highest level of the Rabbinical Court of Appeals (see entry Special Tribunal (*Bet Din Meyuhad*)).

RABBINICAL COURTS – COMPOSITION. The rabbinical courts comprise two levels: A regional court is located in each of the major cities in Israel. The regional court sits in panels of three judges, known as *dayyanim* (Section 8(e) of the *Dayyanim* Law). In matters that do not involve a dispute, and with

regard to temporary orders, the law provides that the proceedings will be conducted before one *dayyan* only (Section 8(e), *ibid* and The *Dayyanim* Regulations (Matters that May Be Adjudicated Before a Single *Dayyan*), 5750 – 1990).

The Rabbinical Court of Appeals in Jerusalem serves as a court of appeals regarding decisions and judgments of the regional rabbinical courts. The Rabbinical Court sits in panels of no fewer than three *dayyanim*.

This structuring of trial and appellate courts is a result of the initiative of the Mandatory Government. There were those who opposed this system, citing the situation throughout all of the years of exile, in which there were rabbinical courts in every city, with no hierarchical system. Others found support for the establishment of a court of appeals in the commentary of Sforno regarding Jethro's suggestion to Moses that he appoint officers of thousands, officers of hundreds, officers of fifties and officers of tens (Exodus 18:21): "There should be four levels, each higher than the previous one: The lowest will judge first, and he who is dissatisfied with the ruling will complain to the one above him, and from the second to the third and from the third to the fourth. And thus there will be only a few who will come before you for a judgment."

During the period of the Mandatory government, an appellant argued before the Rabbinical Court that Jewish Law does not recognize a right of appeal, the Rabbinical Court ruled that the appellant had a right of appeal on the judgment "because the right of appeal was accepted as an enactment of the sages (*takkanat hakhamim*), and it has the same validity as our holy Torah, and one who accepts its adjudication is considered to be aware of this" (File 1/4/705, *B. v. A. Collection of Rabbinical Judgments*, Z. Wehrhaftig, ed., 1950, p. 71).

There was another approach in the rabbinical courts, whereby each *dayyan* was entitled to maintain his independence, as part of his obligation to rule in accordance with Jewish law. Consequently, even when a judgment of that *dayyan* was overruled by the Rabbinical Court on appeal, he was of the opinion that he was not obligated to obey the Rabbinical Court of Appeals. A similar case came before the Supreme Court, and the Court expressed astonishment and reservation with respect to that opinion. The Supreme Court held that in establishing the Rabbinical Court of Appeals, a hierarchical structure was created in the rabbinical court system, under which a lower level court is not empowered to disobey the appellate level, and this was expressed in the procedural regulations of the rabbinical court (see CA 682/81 *Fried v. Fried* 36(2) PD 695, pp. 697–699 *per* Justice M. Landau).

APPOINTMENT OF DAYANIM. The *Dayyanim* Law, 1955, sets forth the manner of appointing *dayyanim*. The *dayyanim* are appointed by the President of the State (Section 5 of the Law), according to the recommendations of the Appointments Committee, whose composition is set forth in Section 6 of the Law, as follows: The two chief rabbis of Israel, two *dayanim* of the Rabbinical Court of Appeals, two ministers, two mem-

bers of the Knesset, and two practicing advocates. The composition of this committee is very similar to the composition of the Committee for the Appointment of Judges in Israel. It is evident that the representatives of the rabbinical court system do not command a majority on the committee, and great weight attaches to the sovereign bodies of the State of Israel.

The Appointments Committee chooses *dayyanim* from among those who are qualified to serve as *dayyanim*. The first condition for qualification is Israeli citizenship (Section 3a of the *Dayanim* Law). In addition, the conditions for qualification include rabbinical ordination under the auspices of the Chief Rabbinate Council, and passing the examinations for *dayyanut* (see: Section 1 of the *Dayanim* Regulations (Conditions and Procedures for Rabbinical Ordination), 1955). The regulations even set forth the subjects of the examinations, including knowledge of Talmud and the *Posekim*, the Shulhan Arukh, *Even ha-Ezer* and *Hoshen Mishpat*, drafting of a judgment in a hypothetical case and knowledge of the rules and procedures (Section 8 of the Regulations, *ibid*).

A person appointed to serve as a *dayyan* by the Appointments Committee must make a declaration of allegiance before the President of the State, in the presence of the Chief Rabbis of Israel, as follows: "I pledge allegiance to the State of Israel, to dispense justice fairly, not to pervert the law and to show no favor" (Section 10 of the *Dayanim* Law).

In the State of Israel there are two chief rabbis, one Ashkenazi and one Sephardi, who are chosen by an electoral assembly of the rabbis of the various cities and neighborhoods, mayors and public figures, as set forth in Sections 6–8 of the Chief Rabbinate of Israel Law, 1980. Pursuant to Section 16 of the law, Chief Rabbi serves for a term of 10 years, and Section 17 provides that for half of the term of office of the Chief Rabbis one of them serves as the President of the Council of the Chief Rabbinate and the other serves as the Head of the Rabbinical High Court, and in the second half of their term they exchange these positions.

STATUS OF THE DAYYANIM. The *dayyanim* enjoy the same degree of independence as any one serving in a judicial capacity in the State of Israel. Section 12 of the *Dayyanim* Law provides that "The *dayyan* shall be subject to no authority other than that of the law according to which he judges" The *dayyanim* are also accorded salaries and other benefits and pension terms similar to those of judges; the decisions regarding their salaries are made by the Knesset Finance Committee, as is the case regarding judges (Section 17 of the *Dayyanim* Law).

In this context it should be pointed out that until 2003 the rabbinical courts were part of the Ministry of Religious Affairs. With the dissolution of this ministry in 2004, the rabbinical courts were transferred to the Justice Ministry, placing them, from an administrative perspective as well, in their natural and appropriate place, i.e., the Ministry of Justice, which is responsible for the courts in the State of Israel.

An additional example of the Israel legislature's treatment of the *dayyanim* as part of the judicial system of the State of Israel is in the Commissioner for Public Complaints Against Judges Law, 2002. This law also grants the Commissioner jurisdiction over matters concerning *dayyanim* in the rabbinical courts (see Section 1 (5), the definition of "judge"). It bears emphasis that following his investigation of a complaint filed against a person serving in a judicial capacity, the Commissioner is authorized to act in one of several ways. The most serious of these is the referral of the matter to the Committee for the Appointment of Judges, in order for it to decide whether to terminate the appointment of the judge (Section 22(e) of the aforementioned law). This authority exists with respect to *dayyanim* as well, as set forth in Section 33(2) of the law, which amended the *Dayyanim* Law in this respect (see Section 16a(a) of the *Dayyanim* Law).

When the question arose before the High Court of Justice regarding whether a *dayyan* in the Rabbinical Court of Appeals could concurrently take part in political activity, the High Court of Justice ruled that a *dayyan*, as a judge, is obligated to be impartial and to merit the confidence of the public at large. Political activity is deleterious to this status and it is therefore forbidden for one serving in a judicial capacity (including a *dayyan* in a rabbinical court) to fulfill a political position, and to proffer advice to political parties (H. Cdi 732/84 *Tzaban v. The Minister of Religious Affairs*, 40(4) PD 141, per Justice A. Barak).

PROCEDURAL RULES . Even before the establishment of the State, during the British Mandatory rule, in 1943, the Council of the Chief Rabbinate established procedural rules for the rabbinical courts in Erez Israel. The preparation of these rules began when Rav *Kook and Rav Jacob *Meir were serving as chief rabbis. Most of these rules have their source in the Shulhan Arukh and the other halakhic authorities, while others were set forth by the Council of the Chief Rabbinate for Erez Israel for the purpose of organizing the proceedings and as *takkanat ha-rabbim*. These rules were replaced and amended in 1960. An updated version of the rules, including amendments and improvements, was enacted in 1993. The rules cover numerous matters related to procedure, including: local jurisdiction, the means of filing a claim and submitting a defense, provisions regarding courtroom procedures and hearing evidence, temporary orders and appeals.

In 2004, the Knesset enacted a law dealing with the disqualification of a judge. This law stipulates identical provisions for judges in the general court system in the State of Israel and *dayyanim* in the religious courts, including the rabbinical courts (see Section 19A of the *Dayyanim* Law as amended pursuant to the 2004 law).

The provisions of this law are unusual, inasmuch as until it was enacted, the starting point of all reference to the rabbinical courts was the autonomy of the rabbinical courts, both regarding application of the religious law and the promulgation of procedural rules. The civil courts also operated accord-

ing to internal rules or rulings of the court itself with respect to the disqualification of a judge. However, when the Knesset decided to enact legislation dealing with the disqualification of judges in the civil courts, it did so with respect to the religious courts as well, using the same terms and nearly identical provisions for all of the judicial forums in Israel, in order to achieve uniformity regarding the subject of disqualification of judges.

JUDGMENTS OF THE RABBINICAL COURTS. The rabbinical courts have handed down many judgments since the period of the Mandatory government. The early decisions did not include the reasons for the decision, but gradually the rabbinical courts, especially the Rabbinical Court of Appeals, began to provide the reasons for their decisions, even at length.

A collection of the rabbinical judgments during the Mandatory government was published by Z. Warhaftig in 1950. After the establishment of the State of Israel, the rabbinical judgments were published as official publications, under the auspices of the Ministry for Religious Affairs under the title *Piskei Din Rabbaniyyim* (PDR). Twenty volumes of the PDR have been published thus far. Since 1995, the judgments are published in *Shurat ha-Din* with eight volumes published to 2005. During the last year Rabbinical Court decisions have been published on the website: www.rbc.gov.il/judgment

A number of *dayyanim* publish their judgments in collections such as *Tehumim*. There are *dayyanim* who write responsa including judgments that they gave while serving as *dayyanim* in the rabbinical courts (see, e.g., *Ziz Eliezer* (Rav. Eliezer Waldenburg), *Binyan Av* (Rav Eliyahu Bakshi Doron), *Shema Shelomo* (Rav. Shelomo Amar), *Mishpateha le-Ya'akov* (Rav Zevi Yehudah ben Ya'akov).

CONCLUSION. The *dayyanim* in the rabbinical courts in the State of Israel make up the high-quality human cadre that transmits the Jewish tradition and *halakhah* from generation to generation. In this context we will remark that two of the foremost scholars of the generation (*gedolei ha-dor*), Rabbi Ovadia Yosef and Rabbi Yosef Shalom Elyashiv, served for many years as *dayyanim* on the Rabbinical Court of Appeals and their judgments are included in the PDR.

The rabbinical courts constitute an important part of the judicial system in the State of Israel, and they deal primarily with issues of family law. As we pointed out, the status of the *dayyanim* of the rabbinical courts is very similar to that of Israel's judges, both with respect to their independence, as well as other symbols of their status.

In the framework of the overall picture, it must be remembered that aside from the rabbinical courts, which operate according to the law of the State, as explained above, there are many private rabbinical courts operating in Israel, some of them under the auspices of political or quasi political parties (such as the *Beit Din Zedek* of Agudath Israel; the *Beit Din Zedek* of *Ha-Eidah ha-Haredit*), some under the auspices of the religious councils (the rabbinical court for civil matters un-

der the auspices of the religious council in Jerusalem, which has even published numerous collections of its judgments), and some of which are rabbinical courts that have achieved renown because of the head of the court (such as the rabbinical court of Rabbi S. Wuzner and the rabbinical court of Rabbi Nissim Karlitz, both of them in Bnei Brak).

In conclusion, it may be stated that from many perspectives, the rabbinical courts in the State of Israel constitute a continuation of the Jewish judicial system that has existed throughout history. These rabbinical courts have exclusive jurisdiction in the area of marriage and divorce, and accordingly they are on the frontline regarding the need to solve practical modern problems according to *halakhah*. Even in instances in which they deal with civil matters and questions of public law, their contribution to Jewish law is great.

BET(H)-EDEN (Heb. בֵּית עֵדֵן), the biblical name for Bit Adini, an Aramean kingdom some 200 mi. (320 km.) northeast of *Damascus that extended along the banks of the Euphrates from the mouth of the Sājūr River in the north to the mouth of the Balikh River in the south (see *Aram). Its capital was Til-Barsip. The name Beth-Eden appears in its entirety in Amos 1:5; the short form Eden is found in Ezekiel 27:23; and the phrase children of Eden (*benei Eden*) appears in 11 Kings 19:12 and Isaiah 37:12. The identification of Beth-Eden with Bit Adini is based on the fact that Beth-Eden is mentioned because of its importance along with the kingdom of Damascus (Amos 1:5). The kingdom was founded in the tenth century B.C.E., and during the first half of the ninth century was the most important Aramean kingdom in Mesopotamia. It was probably named for the father of the dynasty that founded it, and is first mentioned in the Annals of Adad-nirari II around the year 900. The biblical references to Beth-Eden belong to the period when the kingdom was an Assyrian province after being captured by Shalmaneser III (859–824) in 855 B.C.E.. A. Malamat views the expression “one who holds the scepter [i.e., a ruler] from Beth-Eden” (Amos 1:5) as a reference to Shamshši-ilu, the Assyrian governor, who, as is known from a document discovered at Til Barsip, was appointed over Beth-Eden in the time of Amos. (The toponym *byt > dn* in KAI 233: 14–15, a seventh century Aramaic letter, refers to a different locale.) The words spoken by the messengers of Sennacherib about “children of Eden who were in Telassar” (11 Kings 19:12; Isa 37:12) refer to the conquests of Shalmaneser III, who resettled the children of Eden in Telassar, perhaps located in the far-away Zagros region.

BET(H)-EL (Heb. בֵּית אֵל), Canaanite and Israelite town, 10½ mi. (17 km.) N. of Jerusalem, located at the intersection of the north-south mountain road along the watershed and the east-west road leading to the plains of Jericho and to the Coastal Plain (cf. Judg. 20:31). At present its site is occupied by the small Muslim village of Baytīn, 2,886 ft. (880 m.) above sea level. Excavations were conducted at Beth-El by W.F. *Albright and J.L. Kelso in 1927 and 1934 and resumed by Kelso in 1954, 1957, and 1961.

Settlement at Beth-El apparently began at the turn of the third millennium B.C.E., when it inherited the position of neighboring *Ai (al-Tell), which already lay in ruins. In the 16th century B.C.E. the settlement was enlarged and sur-

rounded by an 11 ft. (3½ m.) thick stone wall. The biblical account of Abraham's building an altar to the Lord between Beth-El and Ai (Gen. 12:6–8) is usually assigned to this period. Beth-El's main importance, however, is derived from its traditional association with Jacob's dream. Fleeing from his brother Esau, Jacob spent the night there and dreamed he saw a ladder reaching to heaven with angels of God ascending and descending it. A voice then spoke to him and assured him of God's protection and confirmed the promise that the land on which he rested would be given to him and his descendants (*ibid.*, 28:10–22). Arising the next morning, Jacob erected a *mazzevah* ("sacred pillar") over which he poured oil as a thanksgiving sacrifice. The name of the place, which was formerly Luz, was now called Beth-El (i.e., "home of God"; *ibid.*, 5:19; 35:6, 15; 48:3; Josh. 18:13; according to Josh. 16:2, however, Beth-El was east of Luz).

Canaanite Beth-El continued to flourish in the Late Bronze Age (15th–14th centuries, B.C.E.), when it had commercial relations with Cyprus, indicated by the pottery finds. The remains of a house with rooms built around a large courtyard, plastered or stone flooring, and masonry sewage channels belong to this period. A burnt layer indicates that the city was captured and burned down around the first half of the 13th century B.C.E. and resettled by an Israelite population (cf. Judg. 1:22ff.; Josh. 12:16). The city was on the southern border of Ephraim (Josh. 16:1–2; 18:13; 1 Chron. 7:28), but it is also listed as a Benjamite town (Josh. 18:22). There was a decline in the standard of living at Beth-El during the Israelite period, when the building became cruder, but a recovery is noticeable during the reigns of David and Solomon. The stormy epoch of the Judges is reflected in three building phases, while the relatively calm period of the United Monarchy is represented in a single building phase. The Tabernacle and the Ark were set there for a while, and in the conflict with Benjamin the Israelites prayed, fasted, and offered sacrifices there. They invoked the oracle of the Urim and the answer was provided by Phinehas (Judg. 20:18, 28). Deborah lived near the city (Judg. 4:5), and Samuel visited it periodically to judge the people (1 Sam. 7:16). During Saul's war with the Philistines, he concentrated his forces in the mount of Beth-El (1 Sam. 13:2).

With the division of the Monarchy, Beth-El passed into the possession of Jeroboam I. In order to wean his people away from making pilgrimages to Jerusalem, he erected one of the two principal shrines of his kingdom there (the other one was at Dan), with its own priesthood. The golden calf he set there was apparently designed to serve as a substitute for the cherubim in the Temple of Jerusalem. In the same spirit he ordered the 15th day of the eighth month to be celebrated instead of the Feast of Ingathering (Sukkot), which was observed on the 15th of the seventh month in Jerusalem as the main pilgrim festival (1 Kings 12:29–33). This schism aroused vehement opposition among the prophets (1 Kings 13) and caused a rift between Jeroboam and Ahijah the Shilonite (1 Kings 14:7ff.). The biblical story of Hiel the Bethelite, who ignored the curse

of Joshua and rebuilt Jericho on its ruins (1 Kings 16:34), and that of the children of Beth-El who mocked Elisha (11 Kings 2:23) may serve as proof of the strained relations existing between the inhabitants of Beth-El and the prophetic circles. This antagonism assumed its most acute form in the days of Amos (3:14; 4:4; etc.) and Hosea (10:15), both of whom call Beth-El Beth-Aven ("The House of Iniquity"; Amos 5:5; Hos. 4:15; cf. Jer. 48:13).

Beth-El and its surroundings were conquered by Abijah, king of Judah, in his war against Jeroboam (11 Chron. 13:19), but it was returned to Israel not later than the reign of *Baasha and remained there until the fall of the kingdom. In the eighth century B.C.E., Beth-El was enclosed by a thick wall with towers that was repaired in the following century. Even after the destruction of Samaria (721 B.C.E.), priests still served at Beth-El (11 Kings 17:28) until Josiah captured it, broke down its altar, destroyed its high place, and defiled the site (11 Kings 23:15). Beth-El was destroyed during the Babylonian invasion (587 B.C.E.) and remained in ruins until the Persian period. In the time of Nehemiah, it was included in the territory of Judah (Ezra 2:28; Neh. 7:32). During the Hasmonean revolt, it was fortified by the Syrian general Bacchides (1 Macc. 9:50). Beth-El is not mentioned again until its capture by Vespasian in 69 C.E. (Jos., Wars, 4:551). Coins found there date only from the period between 4 B.C.E. and its capture. In the Byzantine period, Beth-El was a village in the territory of "Aelia Capitolina" (Jerusalem), located 12 (Roman) miles from the capital "on the right, as one goes to Neapolis" (Eusebius, Onom. 192 etc.). The Christian traveler the Pilgrim of Bordeaux (333 C.E.) and the Christian writer Theodosius (c. 503 C.E.) also refer to it. According to Jerome (fifth century) a church was erected at Beth-El. On the Madaba Map "Luzah, which is also Beth-El" is also represented as a village north of Jerusalem. Very few remains of the Roman and Byzantine periods have been discovered at the site.

[Michael Avi-Yonah]

Modern Beit El

Beit El (Heb. בֵּית אֵל) is a settlement in the Judean hills, north-east of Ramallah. The first settlers, numbering 17 families, took over an army base in 1977. Subsequently the community divided into two settlements: Beit El Alef was a residential religious community and Beit El Bet a yeshivah community. Over the years, new religious settlers joined both settlements, until in 1997 the two were united again under a single municipal council. In 2002 the combined population was 4,410. As the seat of a regional council, Beit El provided a variety of social and educational services. There were also some private businesses, stores, restaurants, and light industry, most notably the Beit El tefillin factory.

BET ESHEL (Heb. **בֵּית אֶשֶׁל**), former Jewish settlement in southern Israel, southeast of Beersheba. It was founded in 1943 as one of the first three observation outposts in the Negev. The settlers, immigrants from Central Europe, lived as a kibbutz but intended to make Bet Eshel a moshav. They succeeded in growing grain crops with dry farming methods. A water well drilled at the spot enabled them also to grow vegetables and plant fruit orchards, thus proving the feasibility of agricultural settlement in the northern Negev. In the Israel War of Independence, Bet Eshel was besieged for over 10 months (December 1, 1947–October 21, 1948). It suffered heavy losses and was destroyed by continuous shelling. After the lifting of the siege, the settlers consented to leave and they established moshav Ha-Yogev in the Jezreel Valley. “Bet Eshel” means “House of the Tamarisk,” this tree being characteristic of the Beersheba desert flora.

[Efraim Orni]

BET GARMU, family of bakers who supervised the preparation of the showbread (*lehem ha-panim*) in the Temple (Shek. 5:1; Tosef., Yoma 2:5). The Mishnah states that the memory of the family was held in disrepute because they would not teach others how to prepare the showbread (Yoma 3:11). According to one *baraita*, “the sages sent for specialists from Alexandria of Egypt, who knew how to bake as well as they, but they did not know how to remove the loaves from the oven as well as the Bet Garmu,” and some report that “their bread became moldy” (Tosef., loc. cit., Yoma 38a). According to Tosefta *Yoma* 2:5, Bet Garmu agreed to return to work only after their remuneration was doubled. Other traditions report that they justified their refusal to teach their art to others, saying: “Our family knows that the Temple will be destroyed and perhaps an unworthy man will learn the process and use it for idolatrous worship” (Tosef., loc. cit.). The same source praises the family for never using bread made of fine quality flour, lest they be suspected of eating the holy showbread.

[Isaiah Gafni]

BET GUVRIN (Heb. **בֵּית גּוּבְרִין**).

(1) A prominent city in the period of the Second Temple, located in the southern Shephelah. Ancient Bet Guvrin rose to importance after the destruction of Maresha (Marissa) by the Parthians in 40 B.C.E. Betabris, mentioned by Josephus (*Wars*, 4:447) as one of two villages taken by the Romans in 68 C.E. “right in the heart of Idumea,” may possibly refer to Bet Guvrin. The city began expanding following the Bar Kokhba revolt, during the second half of the second century C.E., with the construction of public and administrative buildings. In 199/200 C.E. Septimus Severus conferred on it the privileges

of a Roman city and called it Eleutheropolis (“the city of free-men”). The city of that period covered an area of about 160 acres, and topographically it extended mainly over a hill located south of the present-day highway between Bet Shemesh and Ashkelon, with the northern extension of the city built on a low plain. Two aqueducts and an underground tunnel supplied water to the city. The Midrash (Gen. R. 41:10) interprets Mt. Seir of the “Horites” (Gen. 14:6) as Eleutheropolis – an interpretation based on a play of words, since *Hori* means both “freeman” and “cave dweller” and the Bet Guvrin region abounds in large caves. Severus also granted the new city a large area encompassing the districts of Bethlephtha, western Edom, and Hebron as far as En-Gedi, which made it the largest single region in Roman times, with over a hundred villages. Bet Guvrin also had its own system of dating and coinage. The wealth of its inhabitants is attested to by a mosaic pavement of a Roman house from the fourth century C.E. which depicts a hunting expedition, with representations of animals and the personifications of the four seasons. Public buildings have been uncovered in recent excavations, including a bath house with double arches and a system of vaults made of ash-lars with Severan-type stone dressing, and an amphitheater which was built on flat ground on the northwest edge of the city. The amphitheater has an elliptical plan and was erected during the second half of the second century C.E. Eleutheropolis suffered a severe earthquake in 363 C.E., at which point the amphitheater fell into disuse. The *tanna* Judah b. Jacob (Tosef., Oho. 18:15, 16) and the *amora* Jonathan (TJ, Meg. 1:11, 71b) resided at Bet Guvrin and there were still Jewish farmers in its vicinity in the fourth century. The place was regarded as being outstandingly fertile and the rabbis applied to it the verse from Isaac’s blessing of Esau: “And the dew of the heaven above” (Gen. 27:39; Gen. R. 68:6). In matters of *halakhah*, Bet Guvrin was regarded as belonging to Edom and was therefore exempt from the commandments applying only to Erez Israel (TJ, Dem. 2:1, 22c; TJ, Shev. 8:11, 38b). The talmudic region Darom (Gr. *Daromas*) was within the area of Bet Guvrin. An inscription found there records the donation of a column to the local synagogue in Byzantine times. Eleutheropolis appears on the Madaba mosaic map of the mid-sixth century C.E. Excavations have uncovered the mosaic pavements of two churches from this period; it was an Episcopal see from the fourth century or earlier. The city flourished in the Early Islamic period as archaeological finds testify. Clusters of burial caves from the Late Roman, Byzantine, and Early Islamic periods have been uncovered in excavations around the city. The castle of Bayt Jibrin was apparently constructed around 1134 and was granted to the Hospitalers by King Fulk of Anjou late in 1136; a civilian settlement subsequently developed around the castle. Sacked by the Moslems in 1158, the castle was eventually abandoned to Salah-a-Din (*Saladin) in 1187. A church belonging to this castle has recently been uncovered. In 1171, Benjamin of Tudela reported three Jewish families living there.

[Michael Avi-Yonah / Efraim Orni / Shimon Gibson (2nd ed.)]

(2) Kibbutz in the southern Judean Foothills, on the Ashkelon-Hebron road. Bet Guvrin is affiliated with Ha-Kibbutz ha-Me'uhad. In 1949, after the large Arab village of Beit (Bayt) Jibrin was abandoned by its inhabitants in the War of Independence, the present settlement was established. Most of its settlers were Israeli-born and its economy was based primarily on field crops, orchards, milch cattle, and poultry. Over the years the kibbutz also developed a tourist industry, which included visits to the Bet Guvrin caves, catering, a swimming pool, three hostels, and outdoor activities. In 2002 the population of the kibbutz was 231.

BET HA-EMEK (Heb. בֵּית הָעֵמֶק), kibbutz in northern Israel, northeast of Acre, affiliated with Ihud ha-Kibbutzim. Bet ha-Emek was founded on Jan. 4, 1949, by young survivors of the Holocaust from Hungary and Slovakia. Later, immigrant youth from England and Holland joined the settlement to form the majority of its members. The kibbutz has a number of cultural institutions set up with contributions from England and other countries. In addition to highly intensive farming (field crops, fruit plantations, dairy cattle and poultry), Bet ha-Emek had a plant laboratory and biomedical, silk, and shoe factories. A nearby mound is supposed to be identical with biblical Beth-Emek (Josh. 19:27), which belonged to the tribe of Asher and was also inhabited in the time of the Talmud. The village 'Amqa, abandoned by its Arab inhabitants during the War of Independence (1948), preserved the ancient name; and antique columns, capitals, ashlar, etc. were used in the construction of its dwellings. In 1970 Bet ha-Emek numbered 286 inhabitants; in 2002 the population was 444.

[Efraim Orni]

BET HA-LEVI (Heb. בֵּית הַלֵּוִי), moshav in central Israel in the Hefer Plain, founded in 1945 by settlers from Bulgaria. Its economy was mainly based on citrus plantations, garden

crops, and milch cattle. In 2002 the population of Bet ha-Levi was 502. The village bears the name of *Judah Halevi.

[Efraim Orni]

BET HANAN (Heb. בֵּית חָנָן), moshav in central Israel, west of Nes Ziyonah, founded in 1930 by settlers from Bulgaria. Its economy was based on citrus plantations, poultry, milch cattle, and other farm products. In 2002 the population of Bet Hanan was 534. The village's name resembles the former Arabic denomination of the site “Wadi Ḥanīn.”

[Efraim Orni]

BETHANY (Heb. **Bet Aniyya, Bet Hananyah**), a village about 1¾ mi. (3 km.) E. of Jerusalem, frequently mentioned in the Gospels (Mark 11:1; 14:3; Matt. 21:17; Luke 19:29; etc.). According to Christian tradition, it was the home of the sisters Mary and Martha, with whom Jesus lodged, and the scene of the resurrection of their brother Lazarus after he had been interred for four days (John 11). At the end of the fourth century, the Byzantines built a church and adjoining monastery at Bethany which was renovated in the following century. It was named after Lazarus, and from this comes the Arabic name of the village, al-‘Azariyya. During the Crusader period, the church was regarded as the property of the Church of the Holy Sepulcher, and it underwent extensive alterations. It was destroyed in the 16th century and a Greek monastery stands in its place. The ancient site of the church was apparently near the present Catholic monastery Ra's al-Shayyāh. Remains of ancient buildings and tombs dating from the period of the Second Temple and later have been uncovered there. A cistern from the Second Temple period, which served as a shrine in Byzantine times, has Christian-Greek graffiti on its plastered walls. It was discovered in 1949–53 together with oil presses, cisterns, and numerous tombs of later periods.

[Michael Avi-Yonah]

BETHAR (Betar) (Heb. בֵּיתָר), *Bar Kokhba's last stronghold in his war against Rome. It is identified with Khirbet al-Yahūd (“ruins of the Jews”), an area of ruins on the summit of a steep hill, northwest of the Arab village of Battir which has preserved the ancient name. Bethar is mentioned in the Septuagint in a verse added after Joshua 15:59 (Βαιθηρα) together with several other cities of Judah, including Beth-Lehem. It also appears in a manuscript of the Septuagint (Version “A”) after Beth-Shemesh in the list of Levitical cities in 1 Chronicles 6:44. The various transliterations of the name in the Septuagint and in Eusebius (*Historia Ecclesiastica* 4:6) – Bitter, Better – seem to indicate that it was originally called Bet-Ter (בֵּית־תֵּר). In aggadic literature the name has been preserved in the Aramaic Bei-Ter (בֵּי־תֵר).

Bethar lies on a rocky spur 7 mi. (11 km.) southwest of Jerusalem; it is bounded by the Rephaim Valley on the east,

north, and west. The upper part of the hill, c. 2,300 ft. (700 m.) above the level of the Mediterranean, constitutes the tongue of a plateau, sloping gradually to the north to the steep drop of the Sorek Brook c. 490 ft. (150 m.) above the bottom of the valley. The northern half of the spur may have served as an area of orchards of the ancient town and contains few building remains. A spring, the source of water of ancient Bethar and at present of the Arab village of Battir, flows from a rock southeast of the spur. Part of a defaced Latin inscription on the rock near the mouth of the spring mentions the Roman legions v Macedonica and xi Claudia, which participated in the siege of Bethar. Since Hadrian was forced to bring these legions from the northern part of the Empire this probably indicates the extent of the difficulties that the Romans suffered in overcoming the revolt. The site has been investigated by various explorers since the 19th century, notably by V. Guérin in 1863, who made the identification of Battir with Bethar, and by C. Clermont-Ganneau in the 1870s, who was the first to note the Latin inscription at the spring. Explorers and archaeologists who studied the site include: Germer-Durand (1894); Zickermann (1906); Carroll (1923); Alt (1927); Reifenberg (1950); S. Yeivin (1944–46); Kochavi (1968); and Z. Yeivin (1970s). This work indicated that the summit of Khirbet el-Yehud was surrounded by a fortified wall, with aerial photographs and ground surveys showing the existence of a Roman siege system, comprising a surrounding circumvallation wall and two Roman camps to the south, and with pottery evidence suggesting that archaeological remains at the site date not just from the Roman period but also to as early as the Iron Age II (7th–6th centuries B.C.E.).

In 1984 excavations were conducted at the site by Tel Aviv University under the direction of D. Ussishkin, and the history of the site and its features are now more or less clear. Access to the site was from the southeast with a path linking it to its agricultural hinterland and to the spring and its irrigated terraces. The fortifications visible around the site of Khirbet el-Yehud, encompassing an area of about 10 acres (40 dunams), did indeed date from the time of Bar Kokhba and showed evidence of having been hastily built. The surrounding defense wall had at least six semi-circular towers and three square ones. Segments of the curtain walls and three towers were uncovered during the excavations. Pottery, slingstones, iron arrowheads, and a few coins dated from the time of Bar Kokhba.

With the outbreak of the revolt, Bethar was chosen as Bar Kokhba's headquarters because it was situated close to Jerusalem, it was strategically located above the main road running between Jerusalem and Gaza, it had a spring with an abundant source of water, and it was provided with natural defenses by deep valleys on three sides. The settlement could have had a population of between 1,000 and 2,000 individuals. Bethar was Bar Kokhba's last bastion, but it appears from the careless and inconsistent way that the fortifications were built that they were erected not long before the siege by the Romans. It would appear that most of the defenders' efforts went into cutting a moat at the southern approach to the site

to render difficulties to the attacking Romans. The reference to the men "who went down to the rampart of Bethar" (Tosef., Yev. 14:15) may refer specifically to the southern side of the site. No archaeological evidence however exists at the site for a siege ramp. The Romans built a surrounding circumvallation siege wall and two rectangular camps, and it would appear that one section of the siege wall succeeded in cutting off the settlement from its spring. No historical account exists relating to the actual battle at Bethar, but the discovery of unused slingstones on the top of the wall suggests that the subjugation of Bethar may have been quite rapid. Following the conquest of Bethar, its inhabitants were slaughtered and the town was razed and never rebuilt.

In Israel's 1949 armistice agreement with Jordan, most of the village, together with the historical mound, remained on the Jordanian side, but the railway line at the bottom of the gorge and a narrow strip of land with a number of houses and gardens on its southern side were included in Israel territory. A certain area with a few dozen inhabitants belonged to Israel from 1948 but from 1967 the bulk of the village, with 1,445 inhabitants, became part of the territory under Israel administration. In recent years the village has been designated as part of the territory falling under Palestinian administration.

[*Encyclopaedia Hebraica* / Shimon Gibson (2nd ed.)]

A town with a similar name, Bethar Illit, was established nearby, 6 miles (10 km.) from Jerusalem, on the southwest side of the Judean hills. The settlement was the first town established under the program for public housing for the ultra-Orthodox population. Founded in 1988, it received municipal council status in 1990 and absorbed newcomers mainly from Jerusalem and Bene-Berak. In 2003 the population was 22,926.

BET(H)-HARAM (or **Haran**) (Heb. בֵּית הָרָם, הֶרֶן), town in the Jordan Valley, N. of the Dead Sea, allotted by Moses to the tribe of Gad and included in the list of its cities (Num. 32:36; Josh. 13:27). It is possibly mentioned in the Egyptian Execration Texts of the 18th century B.C.E. In the Talmud, Beth-Haram is identified with Bet ha-Ramta (TJ, Shev. 9:2, 38d; cf. Shab. 26a) which is also mentioned by Eusebius (Onom. 48:14) as Betharamphtha. *Herod Antipas, who fortified the city, called it Livias, in honor of the empress Livia, and also Julias,

as soon as Livia became a member of the Julian imperial family. In 56 C.E. *Agrippa II received Livias and its district from the emperor Nero (Jos., Wars, 2:59, 168, 252; Jos., Ant., 18:27; 20:159). Beth-Haram was the headquarters of a region as late as the Byzantine period. Springs and groves are reported to have existed in its vicinity. The Hellenistic and Roman cities are situated on Tell al-Rāma, in the lower Jordan Valley, which has preserved the ancient name; the Israelite city has been located by Nelson Glueck at Tell Iktanū nearby.

[Michael Avi-Yonah]

BET ḤARODON, locality 3 mi. (5 km.) S. of Jerusalem. It was on the road leading to Bukei'a in the wilderness where the he-goat that was allotted to *Azazel in the Temple ritual on the Day of Atonement was pushed to its death from a cliff (Yoma 4:2ff.; Yoma 66bff.). It has been identified with Khirbat Ḥarazān near the wilderness of Zūq. Bet Ḥarodon is also mentioned (in the form Ḥarodona) in a marriage contract from 117 C.E., written in Aramaic, found in the *Murabba'at cave.

[Michael Avi-Yonah]

BETHBASI (Βηθαλαγα), locality in Judea identified with Khirbat Beit Bassa southeast of *Bethlehem, where *Simeon b. Mattathias the Hasmonean was besieged by the Syrian general *Bacchides. Simeon managed to raise the siege by burning Bacchides' war engines (1 Macc. 9:62–64; cf. Jos. *Antiq.* XIII, 26). Bethbasi is also mentioned in a document from Murabba'at (115, 2). The ruins of Khirbat Beit Bassa consist of fragmentary structures, terraces, cisterns, and at least one rock-hewn stepped *mikveh* with a double entrance from the Second Temple period. No fortifications are discernible.

BETHE, HANS ALBRECHT (1906–2005), nuclear physicist and Nobel Prize laureate in physics (1967). Bethe was born in Strasbourg, Alsace-Lorraine. He studied physics at Frankfurt-am-Main University and received his Ph.D. in theoretical physics at Munich University in 1928. He held successive appointments at the universities of Munich, Stuttgart, and Tübingen. He emigrated to England in 1933 because his mother was Jewish, but he never acknowledged any personal Jewish affiliation. After a temporary appointment at Manchester University and a fellowship at Bristol University, he became assistant professor at Cornell, Ithaca, in the U.S., in 1935. He

was full professor in 1937–75 and then professor emeritus. In 1943–46 he worked in Los Alamos on the Manhattan Project as director of the theoretical physics division. His work in theoretical physics led to the Nobel Prize for his studies on atomic structure in general and more specifically for elucidating the sequence of energy-creating nuclear reactions in stars which culminate in helium production. His many awards include the Presidential Medal in 1948 and the Max Planck Medal in 1955. He was a member of the President's Science Advisory Committee in 1956–64 and in 1958 was scientific adviser to the U.S. at the Geneva test ban talks. In the 1980s and 1990s he campaigned for international control and peaceful use of nuclear energy. The books he wrote between 1955 and 1964 remain important sources of information on nuclear particle interactions and quantum theory.

[Michael Denman (2nd ed.)]

BET ḤERUT (Heb. בֵּית חֵירוֹת; “Home of Freedom”), moshav in central Israel, in the Ḥefer Plain, founded in 1933. The settlers, mostly from East and Central Europe, transformed their village in 1966 from a regular moshav into a moshav shitufi. Its economy was based on citrus plantations, garden crops, and milch cattle. In 1970 Bet Ḥerut numbered 290 inhabitants, more than doubling to 616 by 2002.

[Efraim Orni]

BETH HATEFUTSOTH – The Nahum Goldmann Museum of the Jewish Diaspora.

The idea of a museum to depict the Jewish Diaspora throughout the ages, and in all its various phases, was first suggested by Dr. Nahum Goldmann at a meeting of the World Jewish Congress held in Stockholm in 1959. The museum was opened in Tel Aviv on May 15, 1978, the 30th anniversary of the State of Israel.

Beth Hatefutsoth is unique among museums in the world in the field of the humanities. It contains no artifacts or historical relics and aims at presenting a kaleidoscope of Jewish history and life during 2,500 years of Diaspora through the use of the most varied and innovative techniques.

The permanent exhibit is not presented in chronological or geographical order but is divided into six thematic sections, the originator of which was the Israeli poet Abba Kovner, and it conveys a comprehensive picture of the spiritual and social life of Diaspora Jewry. The six sections are The Family, The Community, Faith, Culture, Among the Nations, and The Return. A seventh section, the Chronosphere, is a hall resembling a planetarium on whose dome and walls an audio-visual display of Jewish history is projected by a battery of 35 synchronized projectors, providing an overall historical and chronological frame of reference.

Four study areas are installed in various sections of the permanent exhibit. Each contains five two-seat booths in which short documentary films on topics related to the subject-matter of the museum can be selected by the visitor from a catalogue and viewed on TV-size screens. Each study area

has also a booth containing a computer screen terminal. The computer's memory contains information on Jewish Diaspora communities around the world, and the visitor can "converse" with the computer and request information concerning these communities.

A central architectural feature of the four-story building is the Memorial Column, suspended from the museum's roof. At the base of the somber pillar is a specially illustrated volume, *Scrolls of Fire*, recounting episodes of Jewish martyrdom.

In addition to the permanent exhibit, Beth Hatefutsoth presents several temporary exhibitions every year, all related to Diaspora Jewish life and history. These exhibitions are displayed in the Temporary Exhibitions Gallery and in the Foyer. In 1981 the "Jewish Heritage in the Eye of the Camera" attracted entries from Jewish communities the world over.

The exhibitions at Beth Hatefutsoth have become the basis for a dynamic network of educational and cultural activities. Lectures, symposia, study-days and seminars take place regularly in the museum's B'nai Zion auditorium. Thousands of Israeli high school children regularly visit Beth Hatefutsoth for special study programs led by the museum's Youth Division. A special department is charged with organizing study days and seminars for Jewish youth from the Diaspora. This operation, involving thousands of students each year, is run jointly with the World Jewish Congress and is conducted in English, French, Spanish and Portuguese. As such, the museum functions not as an Israeli museum but as a museum of the Jewish people.

Organizations of Friends of Beth Hatefutsoth have been established in various countries to assist the museum with special projects. The major portion of the finance for the establishment of the museum was donated by the Council of Organizations of the United Jewish Appeal in New York. The building was designed by the Israeli architects Eliahu Gwircman and Itzhak Yashar, following an international competition in which the renowned architect Mies van der Rohe headed the panel of judges. The planning of the museum's contents was entrusted to a team consisting of Karl Katz of the Metropolitan Museum of Art, New York (chairman), Abba Kovner, Professor Bezalel Narkiss, head of the Fine Arts Institute at the Hebrew University in Jerusalem, Paul Kedar, later Israel consul-general in New York, and Jesaja Weinberg, director-general of Beth Hatefutsoth who was in charge of the entire project from 1970. Dr. Geoffrey Wigoder and Dr. Ely Ben-Gal also participated in programmatic planning. An Academic Committee drawn from the faculty of Tel Aviv University and headed by Professor Shlomo Simonsohn, then rector of the university, guided the planning work. Advisory contacts were maintained with Professors Salo W. Baron and Meyer Schapiro of Columbia University. The exhibit was designed by two noted international experts – Charles Forberg of New York and James Gardner of London. Dozens of artists and craftsmen from Israel, England, and the United States were involved in the production of the exhibits.

In 1996 Beth Hatefutsoth launched its online site, aiming to serve as a link between Jews in the Diaspora and Israel. The site includes virtual exhibitions and information about the museum's activities as well as various data bases.

[Geoffrey Wigoder]

BET HILLEL (Heb. בֵּית הַלֵּל), moshav in northern Israel, in the Huleh Valley, founded in 1940 as one of the settlements then being established on the periphery of the then Huleh swamp. It suffered heavy damage in the War of Independence (1948) and was subsequently rebuilt by a group of demobilized soldiers. The population was composed of immigrants from Eastern Europe and other areas. Its economy was based on milch cattle, field crops, and fruit orchards. Guest facilities were also opened there. In 2002 the population of Bet Hillel was 550. The settlement was named after Hillel *Joffe.

[Efraim Orni]

BET HILLEL AND BET SHAMMAI, two schools of exposition of the Oral Law, named after *Hillel and *Shammai who lived at the end of the first century B.C.E. and the beginning of the first century C.E. These two schools existed from the time of these two sages, their founders, until the second generation after the destruction of the Second Temple, i.e., until the beginning of the second century C.E. Tannaitic literature, the *halakhah*, the halakhic Midrashim, and the *aggadah* record the numerous controversies which took place between Bet Shammai and Bet Hillel. These debates comprise the principal content of the Oral Law in the last two to three generations of the Second Temple period. Very little is extant of the teachings of individual scholars as they are frequently cited as part of the overall teachings of Bet Shammai and Bet Hillel. Many of the *halakhot* and tannaitic controversies dating from the generation of Jabneh (c. 70 C.E.) are probably, and a large number are explicitly, based on the views of Bet Hillel which were adopted as the *halakhah* in opposition to those of Bet Shammai (see below), while numerous anonymous *halakhot* are extant which may once have been the subject of dispute between Bet Shammai and Bet Hillel.

Their controversies are concerned with four areas.

(1) Halakhic decisions based on judgment and on logical reasoning. For example, in discussing the order of the blessings in the *Kiddush* for Sabbaths and festivals, Bet Shammai declares that the blessing is to be said first over the day (i.e., the Sabbath or festival) and then over the wine; whereas Bet Hillel maintains that the blessing is to be said first over the wine and then over the day (Ber. 8:1). Again, Bet Shammai contends that a woman may not remarry on the evidence of a "mere voice" (i.e., the voice of someone who, testifying to the death of the husband, cannot be identified), while Bet Hillel holds that she may remarry on the basis of such evidence (Yev. 122a).

(2) Determining the "fences" around prohibitions, and the extent to which a prohibition is to be applied. For exam-

ple, with regard to spiced oil, Bet Shammai declares it liable to tithing by one who buys it from an **am ha-arez* (a person who in his ignorance is not scrupulous in observing the laws concerning priestly and levitical dues), whereas Bet Hillel exempts it (Dem. 1:3). If one slaughters with a scythe with a forward movement (i.e., not against the serrated edge), Bet Shammai maintains that the slaughtering is invalid, while Bet Hillel declares it valid (Hul. 1:2).

(3) Halakhic Midrashim. For example, Bet Shammai maintains that in the evening a man should recline (on his side) and recite the *Shema*, and in the morning he should stand, according to the verse (Deut. 6:7), “When thou liest down, and when thou risest up.” Bet Hillel, however, declares that a man should recite it as it suits him, since it states (*ibid.*), “When thou walkest by the way.” Why then does the biblical verse state, “When thou liest down, and when thou risest up?” This means at the times when people customarily lie down and at the time they rise up (Ber. 1:3). Again, Bet Shammai states: “A man should not divorce his wife unless he finds some unchastity in her, since it says: ‘because he hath found some unseemly thing in her’ (Deut. 24:1), but Bet Hillel states: even if she has merely spoilt his food, since it says: ‘because he hath found something unseemly in her’ (i.e., anything the husband personally finds unfitting) (Git. 9:10).

(4) *Aggadah*, religious philosophy, and ethics. For example, Bet Shammai asserts that it were better if man had not been created at all, whereas Bet Hillel maintains that it is better for man to have been created than not (Er. 13b).

Only three controversies between Hillel and Shammai themselves have been preserved, but more than 350 are reported between Bet Hillel and Bet Shammai, most of which are in the *Zera'im*, *Mo'ed*, *Nashim*, and *Tohorot* sections of the Mishnah. They deal with personal life, with blessings and prayers, the separation of priestly dues and tithes, marriage and divorce, levitical cleanness and abstinence, and in a very few instances with sacrifices and the priestly service, and with civil and capital cases. In some of these controversies Shammai himself disputes the opinions of both Bet Shammai and Bet Hillel (Eduy. 1:7, 8, 10, 11). In several instances where the view opposed to that of Bet Shammai is quoted anonymously (*tanna kamma*) or in the name of the sages (Ber. 6:5; Dem. 3:1), the version is late as this is how the opinion of Bet Hillel was recorded after it had been adopted as the definitive ruling. Proof of this is found in a number of cases where the view of the *tanna kamma* or of the sages quoted in a Mishnah occurs in a *baraita* as that of Bet Hillel (cf. Ter. 4:3, with Tosef., Ter. 5:3, et al.). Generally, Bet Shammai is mentioned before Bet Hillel, and tradition sees in this an expression of the latter's humility (Er. 13b).

Many of the controversies between the two schools took place in Second Temple times. There is, for example, the argument whether on a festival hands could be laid on burnt and peace offerings, a subject on which Hillel and Shammai themselves held conflicting views (**Semikhah* on Sacrifices). A dispute concerning this *halakhah* took place in the forecourt

of the Temple between Hillel and the pupils of Bet Shammai, and between them and those of Bet Hillel. On this question, the *halakhah* was decided during the existence of the Second Temple (Ḥag. 2:3; Tosef., Ḥag. 2:10–12; and parallel passages). During this period Bet Shammai once achieved ascendancy over Bet Hillel in the Temple Chamber of Hananiah b. Hezekiah b. Garon with the adoption of the “Eighteen Measures” – restrictive decrees that increased the barrier between Jews and non-Jews (TJ, Shab. 1:7, 3c; and parallel passages). This event is believed by several scholars to have taken place shortly before the destruction of the Second Temple. The early date of other controversies is evident from the conflicting views of *tannaim* living in the period of the destruction of the Second Temple in formulating the disputes between Bet Shammai and Bet Hillel (Tosef., Pe'ah 3:2). There are, however, controversies about problems raised by the destruction of the Temple, e.g., procedure at the time of removal of **ma'aser sheni* (Ma'as. Sh. 5:7).

Very little is known about the identity of the pupils of Hillel and Shammai. A *baraita* states that “Hillel the Elder had eighty disciples... the greatest of them was *Jonathan b. Uzziel, the least *Johanah b. Zakkai” (Suk. 28a). None of the teachings of Jonathan b. Uzziel has been preserved, and while Johanah b. Zakkai's statements reflect the outlook of Bet Hillel, it is difficult, as a matter of chronology, to assume that he studied under Hillel himself. Several of Shammai's pupils are known, most of them from the period of the Second Temple, their connection with Bet Shammai being stressed in tannaitic literature. They are Bava b. Buta, a contemporary of Hillel (Tosef., Ḥag. 2:11; and parallel passages); Dostai of Kefar Yattamah who transmitted a tradition he had heard from Shammai (Or. 2:5); Joezer, master of the Temple, who once put a question to Gamaliel the Elder in the Temple court (Or. 2:12); and Johanah b. ha-Ḥoranit of the generation of the destruction of the Temple (Tosef., Suk. 2:3). Sometimes “the elders of” Bet Shammai and Bet Hillel are mentioned (Suk. 2:7; Tosef. RH 4:11; Men. 41b et al.). According to a *genizah* fragment of *Sifrei Zuta* on *Hukkat* (*Tarbiz*, 1 (1930), 52), Bet Shammai had Idumean pupils, their halakhic statements corresponding to those of R. Judah who taught the view of Eliezer b. Hyrcanus “*ha-Shammuti*” (Men. 18a). According to Rashi, Nid. 7b, this refers to the fact that R. Eliezer was excommunicated, but this interpretation is unacceptable. As Tos. *in loc* points out, it means “a Shammaite” (cf. also Rashi to Shab. 132b, where he gives this as an alternative). Eleazar b. Hananiah, the general for Idumea in the Jewish War against the Romans (Jos., Wars, 2:566), also followed the line of Shammai (cf. Mekh., Ba-Ḥodesh, 7 with Bezah 16a).

The circumstance that gave rise to the two schools is given in a tannaitic tradition: “At first there were no controversies in Israel... When anyone had need of a *halakhah* he went to the Great Sanhedrin... If they had heard (such a *halakhah*), they informed him of it, but if not, they decided the matter by taking a vote... From there the *halakhah* would spread in Israel. With the increase in the pupils of Shammai

and Hillel who had not sufficiently ‘ministered to sages’ (i.e., inadequately studied the Torah), controversy increased in Israel” (Tosef., Sanh. 7:1; and parallel passages). Even if the deficient learning of the pupils of Shammai and Hillel is ascribed to various historical factors, such as the dissolution of the Sanhedrin under Herod, or the Sadducean majority in the Sanhedrin which precluded any halakhic decisions being submitted to it by the sages, it is doubtful whether this tannaïc tradition adequately explains the numerous controversies which spanned almost a century. A more likely explanation is in terms of the expansion and crystallization of the *halakhah* involving a clash between different opinions and approaches in interpreting earlier traditions and in creating new *halakhot*. Tannaïc tradition presumably saw in the two views a legitimate expression of conflicting opinions: “Both of them are the words of the living God” (TJ, Ber. 1:7, 3b). It was reasonably permitted to follow the views either of Bet Shammai or of Bet Hillel but “a man who wishes to impose additional restrictions upon himself by adopting the stricter practices of Bet Shammai as well as the stricter practices of Bet Hillel, can be characterized by the verse ‘the fool walketh in darkness’” (Eccles. 2:14; Tosef., Eduy. 2:3). It was furthermore stated that “although one school prohibited what the other permitted, or forbade what the other declared eligible, nonetheless Bet Shammai did not refrain from marrying women from [the families of] Bet Hillel, nor Bet Hillel from [the families of] Bet Shammai.... Nor did either refrain from borrowing the utensils of the other for the preparation of food under conditions of levitical cleanness” (Yev. 1:4). In all this there is no indication that the controversies originated from “insufficiently ministering to sages,” but rather have their basis in the process whereby the *halakhah* was created.

Tannaïc tradition emphasizes that Bet Shammai adopted the stricter, Bet Hillel the more lenient view. The Mishnah (Eduy. 4) enumerates 23 (or 24) of their controversies that differ from the others in that they are “instances of Bet Shammai’s lenient and of Bet Hillel’s restrictive rulings.” To these, various sages added a further 17 examples (*ibid.*). There are others concerning which the Talmud and the commentators try to find an explanation as to why they too were not similarly cited. The total of all of these is about 50. Of Bet Shammai’s restrictive rulings the bulk extends the application of a prohibition, Bet Shammai, adopting the stricter view (i.e., the wider application of the prohibition). Bet Hillel usually adopts the more lenient approach.

Many scholars have sought to define the basic principles underlying the divergences between the two schools. Some have explained this divergence by claiming that they reflect the individual traits of their founders, of Hillel who was gentle and kind, and of Shammai who was stern and short-tempered. But this is inadequate, particularly since only a few controversies took place between Hillel and Shammai personally. Another interpretation regards their disputes as a social and economic conflict, holding that Bet Shammai belonged to the upper or middle landed classes, whereas the sages of Bet

Hillel were from the lower strata of society with their respective views reflecting the needs and life of these strata. However, this point of view has been attacked by some scholars on the grounds that there is scanty proof that Bet Shammai belonged to the wealthy middle class. It is moreover difficult to accept the interpretation given to the *halakhot* listed by these scholars. It is similarly difficult to accept theories such as that which attributes the difference to the divergent halakhic outlook, conception, and apprehension of the two schools, with Bet Shammai adopting a uniform, systematic approach to the *halakhah*, as against the particularized, heterogeneous viewpoint of Bet Hillel. It has also been suggested that Bet Shammai represented the continuation of an early halakhic tradition which was strict in its interpretation of the law. Some have even suggested that the differences between Bet Hillel and Bet Shammai can be found in the political tensions that existed towards the end of the Second Temple period. Bet Shammai represented a more extreme political position, possibly tracing its origins back to the Hasmonean rebellion and even serving as the inspiration for some of the more extreme elements in the rebellion against Rome, while Bet Hillel was representative of a more realistic and moderate approach which might have sought some sort of accommodation with Rome. A difficulty for all of the above mentioned theories is that many of the traditions of Bet Hillel and Bet Shammai were themselves subject to editorial revision and products of different time periods; therefore each source must be examined individually and critically before any attempted conclusions are made. Various factors and traditions, as well as different approaches and tendencies, probably combined to produce the divergent views. Difficult though it is to find the social or conceptual bases for the rise of the two schools, a certain line is evident in their homiletical exegesis of biblical passages and in their discussions of many *halakhot*. Bet Shammai tends in the former to the plain and sometimes even to the narrow, literal interpretation of a verse, as opposed to the wider significance assigned by Bet Hillel. Because of the limited number of controversies involving the exegesis of biblical verses it is impossible to ascertain what relation their disputes bear to the seven exegetical principles laid down or formulated by Hillel (Tosef., Sanh. 7:11). Insofar as the *halakhah* is concerned it is evident in many cases that the view of Bet Hillel is characteristic of theoretical *halakhah* which differentiates between principles of jurisprudence and that they decided in *halakhah* in accordance with such principles, in contrast to the view of Bet Shammai which is characteristic of the literal and even the conservative approach, conservative not in the sociological sense but in creativity and in halakhic innovation (cf. Pe’ah 6:1; Eduy. 4:1 and 5; Er. 1:2; Bezah 1:2). With the publication of the halakhic works from the Dead Sea Scrolls, some scholars have claimed that there can sometimes be found a similar approach to halakhic sources and reasoning in both the Dead Sea Scrolls and the *halakhah* of Bet Shammai. It is thus possible that the reasons for the gradual triumph of the *halakhah* of Bet Hillel over that of Bet Shammai is similar to

those reasons for the ascendance of Rabbinic halakhah over that found in the Dead Sea Scrolls.

The Mishnah reports several instances in which Bet Hillel retracted its opinion and agreed with that of Bet Shammai (Yev. 15:3; Eduy. 1:12, et al.) But there is only a single instance in which Bet Shammai retracted and agreed with Bet Hillel (Ter. 5:4), when it is stated “after they agreed,” i.e., Bet Shammai with Bet Hillel. In matters relating to the Temple the *halakhah* was decided according to the opinion of Bet Hillel on only one occasion (Tosef., Hag. 2:11, cf. Pes. 8:8; Tosef., *ibid.*, 7:13, et al.). At Jabneh, in the generation after the destruction of the Temple, Bet Hillel gained the ascendancy (first–second century), whereupon the *halakhah* was laid down according to Bet Hillel. It was then stated that the possibility of making a choice between the two schools applied only “before a **bat kol* [heavenly voice] went forth, but once a *bat kol* went forth, the *halakhah* was always according to Bet Hillel, and whoever acted contrary to the views of Bet Hillel deserved death. It was taught: A *bat kol* went forth and declared, ‘The *halakhah* is according to the words of Bet Hillel.’ Where did the *bat kol* go forth?... At Jabneh” (TJ, Ber. 1:7, 3b; and parallel passages). The determination of the *halakhah* according to Bet Hillel was probably not accomplished in a single act but was rather a process that continued during the entire Jabneh period, commencing with Johanan b. Zakkai, soon after the destruction of the Temple (70) and ending with the death of Rabban Gamaliel before the Bar Kokhba war (c. 135). This process was strongly opposed by the last adherents of Bet Shammai (Tosef., Eduy. 1:1; Tosef., Yev. 1:9–10; TJ, Shev. 4:5, 35b). In the amoraic period the *halakhah* of Bet Hillel was accepted in the schools of the *amoraim* who declared: “The opinion of Bet Shammai when it conflicts with that of Bet Hillel is no Mishnah” (Ber. 36b, et al.). Several *halakhot* were, however, decided according to Bet Shammai (see Ber. 51bff.; Tos. to Suk. 3a, s.v. *de-amar*), and traces of the decision of Bet Shammai are to be found in various passages in tannaitic and even amoraic literature. The Kabbalah and following it Hasidism explained the differences between the two schools in terms of their philosophies: Bet Shammai has its origin in *gevurah* (“might”) and Bet Hillel in *hesed* (“mercy”); in the future (i.e., the world to come) the *halakhah* will be according to Bet Shammai (Zohar, *Ra'aya Meheimna* 3:245a; Moses b. Menahem (Graft) *Sefer va-Yakhel Moshe* 2 (1699)).

BETH JACOB SCHOOLS, network of religious schools for girls organized in Poland in the post-World War I era with the aid of *Agudat Israel, an ultra-Orthodox organization whose schools for boys were to be found in every community. While the boys' schools were of the old traditional type, the newly formed schools for girls combined Jewish traditional studies and industrial training.

The first school was founded in Cracow in 1917 by Sara Schnirer. The school in Cracow had an enrollment of only 30 pupils, but the success of this early venture in imparting religious Jewish studies, some secular learning, and vocational training led to the formation of a large number of schools in a number of countries. By 1929 there were 147 such schools in Poland, and 20 schools in Lithuania, Latvia, and Austria. The Beth Jacob school system included teachers' training institutes founded in 1931 and post-graduate courses (1933). Two periodicals were published: *Beth Jacob Journal* and *Der Kindergarten*.

With the invasion of Austria, Poland, Lithuania and Latvia by the Nazis and subsequently by the Russians, the activities of the Beth Jacob schools were discontinued. At the end of World War II Beth Jacob schools were opened in Israel, England, Switzerland, Belgium, France, Uruguay, Argentina, and the United States. In Israel there are over 100 schools serving 15,000 girls. These schools, with their teacher-training programs at the post-high school seminary level, have become more flexible in recent years, allowing girls to study there simultaneously for technical degrees in such fields as computers, architecture, and interior design.

In the U.S. the Beth Jacob National Council was organized in 1943. By 1947 there were eight schools under their aegis. In 1951 two teacher-training schools were established and in the late 1950s two high schools were founded. At the turn of the century about 25 schools were in operation.

[Judah Pilch]

BETHLEHEM (Beth-Lehem) (Heb. בֵּית לֶחֶם; Arab. *Bait Lahm*), city in Judah located five mi. (eight km.) S. of Jerusalem. Bethlehem may be mentioned in the *el-Amarna letters (14th century B.C.E.) as a city in the territory of Jerusalem (*Bit ilu Nin*. *Ib* = the house of the god Ninib = Lahamu?; EA, 290; however, the meaning of the ideogram *Nin. Ib* is not certain). Tradition placed the tomb of *Rachel in the vicinity of Eph-

rath/Beth-Lehem where Jacob is said to have buried her (Gen. 35:19). Together with its neighboring cities (1 Chron. 2:51, 54), Beth-Lehem became the center of the tribe of *Judah and was settled by an important clan claiming descent from Perez, son of Tamar and Judah, among whose descendants were Boaz and Jesse the father of David. In the period of the Judges, the fields of Beth-Lehem were the scene of the idyll of Ruth and Boaz as related in the Book of Ruth. The levite youth in the story of Micah and the graven image (Judg. 17:7), as well as the levite's concubine mentioned in Judges 19, came from this city. *David and some of his warrior-kinsmen, sons of Zeruah, were also born at Beth-Lehem, and it was there that Samuel anointed David king (1 Sam. 16:1–13). The sacrificial act performed by Samuel on that occasion suggests that Beth-Lehem may have been a center for the worship of the Lord. At the end of Saul's reign, Beth-Lehem was occupied for a time by a Philistine garrison. The story of David's men bringing him water from the "well of Beth-Lehem, that was by the gate" (11 Sam. 23:15) implies that it was even then a fortified city. Some of the assassins of Gedaliah son of Ahikam, Nebuchadnezzar's governor in Judea after the destruction of the Temple, came from the neighborhood of Beth-Lehem (Jer. 40:8); the remnants of his followers withdrew to the same region before their flight to Egypt (Jer. 41:16–17). With the return from Babylonia, the exiles from Beth-Lehem went back to their city (Ezra 2:21; Neh. 7:26), and Jews inhabited the city until the time of Bar Kokhba. In 135 C.E. a Roman garrison was stationed there to root out the remnants of Bar Kokhba's army (Lam. R. 1:15). Later a gentile population resided in Bethlehem and erected a temple to Adonis (Tammuz) in a grove at the edge of the city (Jerome, Epistle 58 to Paulinus).

On the basis of Micah 5:1, the early Christians identified Jesus' birthplace with Bethlehem (Matt. 2:1, 5; Luke 2:4, 15; John 7:42). The location of this event in a cave east of the city is first mentioned by Justin Martyr (155–160) and by the time of Origen (third century) the site of the cave already corresponded to its present position. At the beginning of the reign of Constantine, his mother *Helena erected a Christian church over the cave. The church was destroyed during the Samaritan uprising against Byzantine rule (529): it was rebuilt by Justinian in the form that it has kept to the present time. On the facade of the building, over the entrance, were depicted the birth of Jesus and his adoration by the kings of the East. Because this picture portrays people in Oriental costume, the Persians are said to have spared the building when they captured Bethlehem in 614. In the fifth century *Jerome settled in Bethlehem and built a monastery there. In preparing his Latin translation of the Bible, the basis of the Vulgate, he was assisted by Jewish scholars who apparently lived in villages in the neighborhood of the city. The grotto in which he is reputed to have lived is still to be seen under the Church of the Nativity. Further evidence of the resumption of Jewish settlement in the hills of Jerusalem is also found in an extant account of the Persian campaign, according to which the invaders were aided by Jewish inhabitants of the hill country.

In the early Arab period Bethlehem suffered no damage. The city fell to Tancred's forces during the First Crusade without fighting. Baldwin I and II, the crusader kings of Jerusalem, were crowned in the church of Bethlehem. The crusaders built a fort in the city that was demolished in 1489 during clashes between the Christians of Bethlehem and the Muslims of Hebron. *Benjamin of Tudela visited the city (c. 1160) and found 12 Jewish dyers there. The church of Bethlehem remained in Christian hands during the rule of the Mamluks and the Turks, even though the Muslim rulers oppressed the Christian minority. The Christians continually reduced the size of the entrance to the church for security reasons, so that by now it is just a low and narrow opening. From time to time, the Christian rulers in Europe concerned themselves with the maintenance and repair of the church. The conflicts between the various Christian communities in Bethlehem caused damage to the church and served to motivate international friction; the theft of the Silver Star from the church in 1847 was one of the factors behind the outbreak of the Crimean War. In the middle of the 19th century, the Turkish authorities determined the division of the church among the various Christian communities and the order of their ceremonies, according to previous tradition; this decision has been observed, almost without amendment, to the present.

[Michael Avi-Yonah]

Modern Bethlehem

Until 1948, Bethlehem was a city with a Christian majority. Of its 8,000 inhabitants in 1947, 75% were Christians and the rest Muslims; this ratio, however, subsequently changed as a result of the influx of Arab refugees from Israel who settled there. During the Six-Day War (1967), Bethlehem surrendered to the Israel army without a fight. In the 1967 census taken by Israel authorities, the town of Bethlehem proper numbered 14,439 inhabitants, its 7,790 Muslim inhabitants represented 53.9% of the population, while the Christians of various denominations numbered 6,231 or 46.1%. The 1,874 inhabitants of the refugee camp, lying within the municipal confines, raised the percentage of Muslim citizens to 58.2%. However, the three townships of Bethlehem, Beit (Bayt) Saḥūr (the traditional Field of Ruth), and Beit (Bayt) Jala can be considered as a unit, as in 1967 they formed a continuous built-up area and a social and economic entity. Their total population amounted to 27,000, of whom 14,400 were Christians, constituting a 55% majority. The main Christian denominations are the Latins (Roman Catholics) and the Greek Orthodox. Other communities with over 100 adherents include the Syrian-Orthodox, the Syrian-Catholics, and the Melkites. There are also Protestants of various denominations, Maronites, and Armenians. Throughout most of its history, Bet (Bayt) Jālā was an exclusively Christian town. It has numerous churches and Christian institutions, including the Greek Orthodox St. Nicholas Church, the Catholic Patriarchate's Seminary, and a Lutheran secondary school. Nearby is the Cremisan Monastery of the Salesian fathers.

The Bethlehem town group has close economic and social ties with Jerusalem. In 1968 farming, trade, and tourism continued to constitute the mainstay of Bethlehem's economy. Inhabitants of the town own olive groves, vineyards, and deciduous fruit orchards. Bethlehem is a market town where Bedouin from the nearby Judean Desert trade their produce for local and imported goods. The town has a number of small hotels and restaurants catering to tourists and, more important, many workshops producing Christian souvenirs. Christian institutions contributed to raising the educational level and provided employment to a large number of inhabitants. The main building in Bethlehem is the Church of the Nativity (sections of which are maintained by the Greek Orthodox and the Catholics, the latter holding St. Catherine's Church adjacent to the main basilica). It is a major attraction for Christian pilgrims, especially at the Christmas celebrations of the Latins (Dec. 24 and 25), Orthodox (Jan. 6 and 7), and Armenians (Jan. 19 and 20). Bethlehem has numerous other Christian buildings, including convents of the Franciscans and the Rosary Sisters, edifices above the Milk Grotto, the Syrian-Orthodox Church, the Lutheran Church, parish schools, orphanages, and a French hospital. Near Bethlehem is the traditional "Shepherds' Field." Between Bethlehem and Jerusalem is the Greek Orthodox monastery of Mar Elias, the traditional resting place of Elijah the prophet when he fled from Jezebel.

In 1997 the populations of Bethlehem numbered 21,673, among them 6,568 refugees, while the population of Beit Jala was 11,957, including 5,329 refugees, and the population of Beit Saḥūr 11,285 with 1,913 refugees. The city was transferred to the Palestinian Authority after the Oslo agreements. In 2002 a group of Palestinian terrorists took over the Church of the Nativity and held hostages there for more than a month under siege by the Israeli army. During the second ("al-Aqsa") Intifada Beit Jala sheltered snipers firing at the nearby Jerusalem residential neighborhood of Gilo, consequently taking return fire from the Israel Defense Forces and in effect turning the once tranquil area into a frontline battleground.

BETHLEPTEPHA, town in Judea which, in the time of Herod, replaced Keilah as the headquarters of one of the toparchies into which the province was divided. It is sometimes written "Betholeptophon" and is mentioned by Josephus (*Wars*, 4:445) as "Pella." Schuerer regards the name as a distortion of the Hebrew *Bet Netofah (Beit Nattif) a village six miles (10 km.) north of Bet Guvrin. The identification has now been generally accepted, though some identify it with Bet le-Tappu'ah (the Tappuah of *Josh.* 15:34). Vespasian destroyed Bethleptepha and killed all its inhabitants on his

way from Emmaus to Edom. A mosaic floor of a fifth-century Byzantine church was discovered there as well as other mosaics, tombs, cisterns, and pillars from the Roman-Byzantine period.

BET(H)-HORON (Heb. בֵּית הַחֹרֶן; Upper, עֵלְיוֹן (*Elyon*), and Lower, תַּחְתּוֹן (*Tahton*)), two adjacent biblical towns named after the Canaanite deity Horon mentioned in Ugaritic literature and other texts. The towns, known as Upper and Lower Horon, were strategically located on the Gibeon-Aijalon road and guarded the important "ascent of Beth-Horon." Biblical tradition attributes their founding to Sheerah, daughter of Beriah, son of Ephraim (1 *Chron.* 7:24). They were located on the border between the territory of the tribe of Ephraim and that of Benjamin (*Josh.* 16:3; 18:13–14). One or both of the towns was a levitical city (*Josh.* 21:22; 1 *Chron.* 6:53). Solomon fortified Beth-Horon (the lower town only, according to 1 *Kings* 9:17; both towns according to 11 *Chron.* 8:5). Beth-Horon is mentioned together with Gibeon in the list of towns conquered by Pharaoh *Shishak (tenth century B.C.E.). It then became part of the kingdom of Judah (cf. 11 *Chron.* 25:13). In the Persian and Hellenistic periods, Beth-Horon was in Judea. During the Hasmonean Wars, *Bacchides fortified both towns (1 *Macc.* 9:50). The Mishnah (*Shev.* 9, 2) states that the Maritime Plain begins at Beth-Horon. It is located by Eusebius (*Onom.* 46:21) 12 (Roman) mi. from Aelia Capitolina (i.e., Jerusalem) and within its territory; on the *Madaba Map the two villages are marked as one place. Upper Beth-Horon is now identified with the Muslim Arab village 'Ur al-Fawqā (pop. 298 in 1967) and Lower Beth Horon with Beit 'Ur al-Taḥtā (pop. 920 in 1967). The road passing the two and the ascent between them were of military importance in ancient times. *Joshua pursued the Canaanite kings along this ascent after the battle of Gibeon (*Josh.* 10:10–11); the *Philistines passed this way after their setback at Michmas (1 *Sam.* 13:18); here also *Judah Maccabee defeated Seron, the Seleucid general (1 *Macc.* 3:16), and a Zealot force defeated the Roman governor *Cestius Gallus on his retreat from Jerusalem (*Jos., Wars*, 2:538ff., 546ff.). Archaeological finds indicate that Lower Beth-Horon, where potsherds from the Late Bronze Age onward have been uncovered, was established before Upper Beth-Horon, where the finds date only from and after the Iron Age (the Monarchy). An ostrakon found at Tell el Qasile (north Tel Aviv) mentions a consignment of gold for "Beth-Horon," but it is uncertain whether the name of the place Beth-Horon is meant or "the temple of [the god] Horon."

BETHPHAGE, village on the Mount of Olives in the immediate vicinity of *Jerusalem; it is named for green figs (*paggim*). In ancient times, it was surrounded by a wall. Bethphage marked the eastern confines of Jerusalem in the Second Temple period (Men. 11:2; Men. 75b). In the New Testament (Matt. 21:1–9; Mark 11:1–10; Luke 19: 29–38; John 12:12–19) it is mentioned as the place where *Jesus found the ass on which he entered Jerusalem. A church existed at this spot in the Byzantine period, and many pilgrims used it as a final stopping point on their journey to Jerusalem. The Crusaders put up many buildings in Bethphage, notably the Chapel of the Savior. It has been identified with the village of et-Ṭūr, on the southern of the three hills of the Mount of Olives. According to an ancient tradition the prophetess *Huldah was buried there. Recent excavations have uncovered the lower part of a Byzantine building, largely rock-hewn, which was used as an oil press.

[Michael Avi-Yonah / Shimon Gibson (2nd ed.)]

BETHSAIDA (Heb. בֵּית צַיְיָדָה, **Bet Zayyada**), fishing village that was situated on the northeast shore of the Sea of Galilee near the mouth of the Jordan River in the Second Temple period. Philip the son of Herod (*Herod Phillipus) renamed it Julias in 30 C.E. in honor of Livia-Julia, the wife of the emperor Augustus and mother of Tiberius. It was Philip's second capital and he was buried there in 34 C.E. (Jos., *Ant.*, 18:28, 108; Wars, 2:168; 3:515; Life, 398; cf. Pliny, *Historia Naturalis* 5:15). *Nero later presented it to *Agrippa II. The city is mentioned several times in the New Testament (Matt. 11:21; John 1:44, Luke 10:13, etc.) in accounts of visits of *Jesus and his disciples to villages on the shores of the Sea of Galilee and as the birthplace of the apostles Peter, Andrew, and Philip. It was the place to which Jesus withdrew on hearing of John the Baptist's death (Luke 9:10). It is also mentioned by Eusebius (*Onom.* 58:11) and the sixth-century pilgrim Theodosius (ch. 2, ed. Geyer). In the 19th century scholars suggested identifying Bethsaida with the site of et-Tell, a large mound situated inland and not far from where the Jordan flows into Lake Kinneret. Sixteenth-century travelers reported a Jewish fishing village there. The explorer Schumacher suggested the alternative sites of el-Araj, not far from the mouth of the Jordan River, and el-Mesadiyeh, an additional ruin located to the southeast of el-Araj. New excavations were commenced by Rami Arav and his associates at the site of et-Tell, bringing to light significant remains of settlements from Early Bronze I and II, as well as the remains of a well-fortified Iron Age II city with a well preserved gate with a carved stele and a large public building of *bit hilani* type. Impressive remains of a Hellenis-

tic period fishing village were uncovered at the site as well as poorly preserved remains dating from the time of Jesus, with some pottery and stone vessels. Stone looting occurred at the site during later periods.

[Michael Avi-Yonah / Shimon Gibson (2nd ed.)]

BETHUEL (Heb. בֵּית אֵל = בְּתוּאֵל; "house of God," cf. *Bati-ilu* in the *Tell el-Amarna letters or – מְתוּאֵל, "man of God"), the youngest son of *Nahor and Milcah (Gen. 22:21–22) and the father of Laban and *Rebekah (22:23, 24:15, et al.). In the list in Genesis 22, Bethuel appears as head of a tribe of Nahor's descendants and brother of Kemuel the father of Aram. Bethuel does not play as important a part in the biblical story of Rebekah as does Laban (24:28ff., et al.), and it appears that Bethuel was no longer alive, this being the reason that Laban received Abraham's servant, since in the organization of the patriarchal society that emerges from this story, the firstborn brother was regarded as head of the family. Bethuel is only mentioned in the discussion of the marriage and, even there, only after Laban (24:50). It is quite possible, as has been suggested by scholars, that this is a later addition, for even when Rebekah commences her journey, the members of the family salute her as "Our sister!" (24:60).

In the *Aggadah*

Bethuel was the king of Haran (Yal., Gen. 109). Bethuel's apparent disappearance in the middle of the negotiations with regard to Rebekah (cf. Gen. 24:50, 55) is explained by the assumption that he died suddenly while they were in progress. There are two Midrashim. According to one, when Bethuel saw the treasures Eliezer had brought with him, he tried to kill him by placing poisoned food before him. While he was telling his story, however, the angel who accompanied Eliezer changed the dishes so that the dish intended for Eliezer was set before Bethuel, who ate it and died (Yal., Gen. 109). According to the other account, Bethuel had introduced the *jus primae noctis* and his subjects declared themselves ready to submit to this outrage on the condition that his own daughters should not be exempt from it. He was about to exercise this right on Rebekah, but to spare her this shame, God caused his death (*ibid.*). With her approval Eliezer refused to let Rebekah remain in her father's house during the week of mourning (Gen. R. 60:12). From the fact that Rebekah was consulted before she accompanied Eliezer, the rabbis conclude that a fatherless minor girl may not be given in marriage without her consent (*ibid.*).

THE AGGADAH: Ginzberg, *Legends*, 1 (1942), 294–6; 5 (1947), 261–2; L. Rabinowitz, in: *JQR*, 58 (1967/68), 143–61.

BETHULIA, the home of *Judith, the heroine of the apocryphal Book of Judith, in which it is described as a Jewish city that was besieged by the Assyrian general Holofernes. His death brought the siege to an abrupt end. The name of the city is apparently a form of Beth-El (“House of God”), and the geographic context of the story indicates a location on the northern edge of the hills of Samaria, near Dothan, and Ibleam. Some scholars have identified Bethulia with Jerusalem, Bemeselis (Mithiliyya), or with other localities such as Shechem or Sheikh Shibl above Kafr Qūd. It seems most probable, however, that Bethulia was an imaginary city that was endowed with a theophoric name for the purposes of a historical romance.

BET (Bayt) IKSA (בֵּית אִכְסָא), Muslim-Arab village in the Judean Hills, west of Jerusalem; population (1967) 633. Located in mountainous terrain, its economy is mainly based on orchards of olives, almonds, and other fruit trees. In the Israel War of Independence (1948), hard battles were fought over the village which lies close to the Jerusalem–Tel Aviv highway. Israel forces captured Bet Iksā but under the terms of the 1949 Armistice Agreement the village was returned to Jordan, in exchange for small areas elsewhere given to Israel. The stipulation to keep the village demilitarized was not observed by the Jordanians. Bet Iksā was taken by Israeli forces in the Six-Day War.

[Efraim Orni]

BET KESHET (בֵּית קֶשֶׁת), kibbutz north of Mount Tabor, affiliated with Ha-Kibbutz ha-Me’uḥad. Bet Keshet was founded on Aug. 15, 1944, as the first settlement of the then clandestine *Palmah. Most settlers had received agricultural training in the nearby Kadoorie School, while others were demobilized soldiers who had served in World War II. South African immigrants and others joined the kibbutz after 1948. In the War of Independence (1948) hard battles raged around Bet Keshet and a monument was subsequently erected to its members who fell. Its economy was based on field crops, deciduous fruit, vines, beef cattle, and other farm products. In 2002 the population of Bet Keshet was 297. The name, “House of the Bow,” refers to the village being founded by pioneer soldiers (cf. 11 Sam. 1:18).

[Efraim Orni]

BET(H) LEḤEM (Ha-Gelilit), place located in western Galilee, near Kiryat Tivon, in the lower Zebulun region (Jos. 19:15; perhaps also Judges 12:8f.). It is referred to as Beth-Leḥem Zeriyah (TJ, Meg. 1, 70a), however this name has not yet been given a definitive explanation. Dalman believes that it means the Beth Leḥem which once belonged to Tyre. According to

the list of priestly places of residence in Galilee, members of the Malkiya priestly division lived in Beth Leḥem in the 3rd and 4th centuries; it may also have been the home of the amora Kahana bar Malkiya (of the Malkiya priestly division). The biblical name was preserved by an Arab site called Beit Laḥm, southeast of Haifa. At present there is a moshav affiliated with Tenu’at ha-Moshavim near the site. This was founded in 1948 on the land of the former German Templar colony Bethlehem whose inhabitants were interned during World War II and later deported from the country. The population was composed of immigrants from Central and Eastern Europe and native-born Israelis. Its population in 1968 was 270, rising to around 425 in the mid-1990s and 570 in 2002. The moshav’s residents earned their living in farming, tourism, and employment outside the moshav.

[Efraim Orni]

BET(H)-MAON (בֵּית מְעוֹן).

(1) See *Baal-Meon.

(2) A locality ½ mi. (¾ km.) from Tiberias (Tell Mā’ūn) where Josephus conferred with the men of Tiberias during the Jewish War in 66 c.E. (Life, 64, 67). In talmudic times Beth-Maon is frequently mentioned as a center of opposition to the Patriarchs residing in Tiberias and as a refuge for rabbis antagonistic to them (Gen. R. 80:1, 24; 31:2). The priestly family of Huppah settled there after the destruction of the Temple (ha-Kallir: *Yashevah Eikhah*). The sources mention a synagogue there (cf. TJ Ta’an, 4:2, 68a).

BIBLIOGRAPHY: Avi-Yonah, *Geog.*, 139; Press, Erez, 1 (1951), 90. Y. Tsafrir, L. Di Segni, and J. Green, *Tabula Imperii Romani. Iudaea – Palaestina. Maps and Gazetteer* (1994), 84.

[Michael Avi-Yonah]

BET MEIR (בֵּית מְעִיר), Israel moshav in the Judean Hills, west of Jerusalem, affiliated with Ha-Po’el ha-Mizrachi moshavim association. In the War of Independence (1948) the Arab garrison entrenched in the then-Arab village had cut off Jewish Jerusalem. The capture of the village by Israel forces opened the “Jerusalem Corridor.” Bet Meir was founded in 1950. Its inhabitants came mainly from Hungary, Romania, and Poland. The settlers made use of hydroponics in order to conform with the religious prescription of the *sabbatical year. In 2002 the population of Bet Meir was 527. The moshav lies in the center of the Martyrs’ Forest. It is named after Meir *Bar-Ilan.

[Efraim Orni]

BET (HA)-MIDRASH (pl. *battei (ha)-midrash*) (Heb. בֵּית (ה) מִדְרָשׁ, pl. בְּתֵי (ה) מִדְרָשׁ; “house of study”), study center where people assembled to listen to words of wisdom and exposition of the Law from very early in the Second Temple period. Esau and Jacob are said to have attended *beit ha-sefer* together until the age of 13, when Jacob continued his studies

at *bet ha-midrash*; Esau, instead, frequented idolatrous shrines (Gen. R. 63:10). The Talmud described the 394 courts of law in Jerusalem and the equal number of synagogues, *battei midrash*, and *battei sefer* that existed there (Ket. 105a). Simeon *Ben Sira in the second century B.C.E. invited people to “dwell in my *bet midrash*” (Ecclus. 51:47). In the mishnaic period it was an institution independent of the synagogue and regarded as being more holy. R. *Joshua b. Levi stated that a synagogue may be turned into a *bet midrash*, but not the contrary, for it is “a place where Torah is exalted” in contradistinction to the synagogue which is “a place where prayer is exalted” (Meg. 27a). Sleeping in a *bet ha-midrash* was prohibited, although an exception was made for scholars who spent all their time there (Meg. 28a; Ber. 25a). It was considered ill-omened for a family to eat its Sabbath repast while public study sessions met at the local house of study (Git. 38b). Mothers were praised for sending their children to the synagogue to study, and for waiting up for their husbands who returned late from *bet ha-midrash* (Ber. 17a). One who goes directly from the synagogue (after services) to *bet ha-midrash* (to study) is deemed worthy to welcome the Divine Presence (Ber. 64a); and whosoever enters synagogues and houses of study in this world will be privileged to enter synagogues and houses of study in the world to come (Deut. R. 7:1). The *bet ha-midrash* was the center of instruction for scholars and the common people alike and contributed to disseminating culture widely in Jewish society. In the Middle Ages it tended to be merged with the synagogue, but its specific characteristic was preserved: in the *bet ha-midrash* prayer was a secondary activity, while the study and discussion of Jewish Law and problems concerning Judaism were its main concern, and usually open to all who cared to attend. The *bet ha-midrash* normally had a library with works on various branches of rabbinical literature intended for all sectors of the public. Attendance at the *bet ha-midrash* was not limited as at the **heder* and **yeshivah*, and the instructors were often itinerant preachers engaged by the community. The *battei midrash* serving the yeshivot acquired a somewhat cloistered character. The rabbi prayed there with his students when he was not required to join the communal worship. The *bet ha-midrash* also afforded lodging to yeshivah students, and occasionally was used as a hostel for impecunious travelers.

In some *battei midrash* independent study was pursued. In some communities the *bet ha-midrash* became identical with the yeshivah or the synagogue, where scholars taught immediately after morning and evening prayers. Some *battei midrash* were established and maintained by the community, while others were built by philanthropists who bequeathed funds for their maintenance. In Germany, such *battei midrash* were known as *Klaus* (from Lat. *clausura*), and in Eastern Europe as *kloz*. The **Ḥasidim* developed a new combination of public instruction and prayer in the **shtibl* (“small room”). In Islamic countries, and some Sephardi communities, the *bet midrash* is called simply *midrash*.

BET NEHEMYAH (Heb. בֵּית נְהֵמְיָהּ), moshav northeast of Lydda. Bet-Neḥemyah is affiliated with Ha-oved ha-Ziyyoni moshavim association. It was founded in 1950 on the site of the former Beit (Bayt) Nabālā camp of the Arab Legion where a decisive battle was fought in the War of Independence in 1948. Bet Neḥemyah was initially a “work village” whose settlers, immigrants from Iran, were engaged in land reclamation. On its grounds is the site of the Second Temple village Nebellat. The village is named for Nehemiah. In 1970 Bet Neḥemyah numbered 227 inhabitants, expanding considerably to 632 in 2002.

[Efraim Orni]

BET NETOFAH (Heb. בֵּית נְטוּפָה), village in Lower Galilee, north of Sepphoris. It was known in talmudic times as a place where the vetch plant grew later than in other places (Shev. 9:5). Bet Netofah is identified with Khirbat al-Nāṭif, on the northeastern edge of the plain known in Arabic as Sahl al-Baṭṭūf and in Hebrew as the Bet Netofah Valley. Josephus (Life, 207) calls it the Valley of Asochis. High quality clay was found in this valley. In modern times, one of the reservoirs of the National Water Carrier (see *Israel, State of: Economic Affairs – Water and Irrigation) was built in the valley and is now called the Eshkol Reservoir in honor of Levi *Eshkol.

[Michael Avi-Yonah]

BET(H)-NIMRAH (Heb. בֵּית נִמְרָה), biblical locality in the Jordan Valley opposite Jericho, in the area allotted to the tribe of Gad (Num. 32:36; Josh. 13:27; called Nimrah in Num. 32:3). It is mentioned in the form Bethnambris in the time of the Jewish War with Rome (66–70/73; Jos., Wars, 4:420), after which it continued to exist as a Jewish settlement and is frequently mentioned in talmudic sources (e.g., Pe'ah 4:5, etc.). In Byzantine times it was known as Bethnambris (Eusebius, Onom. 44:17; Johannes Moschus, *Pratum Spirituale*, PG, 87, pt. 3, 2952) and it is mentioned in the Rehov Synagogue inscription as well. The biblical town of Beth-Nimrah has been identified with Tell Balaybil, and the later settlement with Tell Nimrīn, 11 mi. (18 km.) S.W. of *Gadara. The nearby Wadi Nimrin may very well be the “waters of Nimrin” (Isa. 15:6; Jer. 48:34). Explored in the 19th century by C.R. Conder, the site was visited by many scholars including W.F. Albright and N. Glueck. Following a new survey of the site in 1976, a sixth-century three-aisled church was uncovered by M. Piccirillo in 1980 with magnificent decorated mosaic floors. Since 1989 large-scale excavations have been conducted at the site, revealing the archaeological remains of settlements from the

Early Bronze IV, Middle Bronze II, Iron Age I–II. Destruction levels found in the Iron Age levels at the site date from the late 10th century B.C.E., late 9th century B.C.E., and the 7th century B.C.E. Persian through to Mamluk strata were also uncovered at the site.

[Michael Avi-Yonah / Shimon Gibson (2nd ed.)]

BET OREN (Heb. בֵּית אֶרֶן; “House of Pine Tree”), kibbutz on Mount Carmel, affiliated with Ha-Kibbutz ha-Me’uḥad. Founded in 1939, the settlement was initially isolated and had little land, so that its members had to work as hired laborers in Haifa. During the Mandate regime Bet Oren served as a clandestine training camp of *Haganah. After irrigable land on the Carmel coast was allocated to Bet Oren, it raised dairy and beef cattle, fodder, field crops, deciduous fruit, and other products. The kibbutz had a large rest house amid the natural pine and oak forests and nature reserves of the surrounding area. In 1970 Bet Oren numbered 220 inhabitants; in 2002, 299.

[Efraim Orni]

BET OVED (Heb. בֵּית עֹבֵד), moshav in central Israel, southeast of Nes Ziyonah. Bet Oved, affiliated with Tenu’at Ha-Moshavim, was founded in 1933 by workers from Russia. Its economy was based on citrus plantations, garden crops, and dairy cattle. In 1970 Bet Oved numbered 195 inhabitants, increasing to 285 in the mid-1990s and 304 in 2002.

[Efraim Orni]

BET(H)-REHOB (Heb. בֵּית רְחוֹב), biblical city, dynasty, or district, that gave its name to one of the *Aramean states existing at the time of David. In Num. 13:21 we have the phrase “to Rehob at Lebo-Hamath.” The city Laish-Dan is placed specifically in the “valley that belongs to Beth-Rehob” (Judg. 18:28) but its exact location remains unknown. The Arameans of Beth-Rehob were among the mercenaries hired by the Ammonites to fight Israel; they were thoroughly routed first by Joab at Medeba and then by David (II Sam. 10:6ff.; I Chron. 19:6ff.). It has been assumed that *Aram-Zobah, which is closely associated with Beth-Rehob/Rehob (II Sam. 10:6, 8; and see II Sam. 8:3, 12), already held the other Aramean kingdoms under its sway at that time; the period of Israelite control was broken by *Damascus, who took the lead in revolting against Solomon. The last appearance of Rehob may be in an inscription of Shalmaneser III (853 B.C.E.), which mentions a certain Ba’sa son of Ruhubi from Amana, in a list of Syrian-Palestinian kings.

BETROTHAL (Heb. שְׂדוּקִין, *shiddukhin*).

Definition

In Jewish law *shiddukhin* is defined as the mutual promise between a man and a woman to contract a marriage at some future time and the formulations of the terms (*tena'im*, see below) on which it shall take place. In general parlance, as opposed to legal terminology, it is known as *erusin* (Kid. 63a, Tos.), which is in fact part of the marriage ceremony proper (see *Marriage, Ceremony of). The concept of *shiddukhin* can entail either a promise by the intending parties themselves or one made by their respective parents or other relatives on their behalf (Kid. 9b; Sh. Ar., eh 50:4–6 and 51). The sages regarded *kiddushin* (consecration; see *Marriage) without prior *shiddukhin* as licentiousness and prescribed that “he who enters into a marriage without *shiddukhin* is liable to be flogged” (TJ, Kid. 3:10, 64b; TB, Kid. 12b; Maim. Yad, Ishut, 3:22 and Issurei Bi’ah, 21:14; Sh. Ar., EH 26:4). *Shiddukhin* as such has no immediate effect on the personal status of the parties – it being only a promise to create a different personal status in the future (Resp. Rosh 34:1; *Beit Yosef* EH 55). Nor does the promise give either party the right to claim specific performance from the other – since a marriage celebrated in pursuance of a judgment requiring the defendant to marry the plaintiff is repugnant to the basic principle that a marriage requires the free will and consent of both the parties thereto.

Gifts

(Heb. סְבִלּוֹנוֹת, *sivlonot*). The Talmud (Kid. 50b) discusses the question whether the bride’s acceptance of gifts from her bridegroom is to be regarded as an indication that *kiddushin* has already been celebrated between them – thus making it necessary for her to receive a divorce, on the grounds of “doubt,” in the event she does not marry him and wishes to marry someone else. The *halakhah* was to the effect that the matter be left dependent on local custom so that any “doubt” as to whether or not *kiddushin* had already taken place would depend on whether or not there was any custom in the particular place where the parties resided to send such gifts before or after *kiddushin*. From the time that it became the general custom for parties to initiate their intended ties with each other by way of *shiddukhin* (when the bridegroom would send gifts to his bride) and for the *kiddushin* and *nissu’in* (the marriage proper; see *Marriage) to take place simultaneously at a later date, there would usually be no opportunity for the bridegroom to send such gifts to the bride after the *kiddushin* but before the *nissu’in*, so the *halakhah* was then to the effect that the giving of gifts per se implied no suspicion of *kiddushin* as mentioned above (Sh. Ar., eh 45:2; *Arukh ha-Shulḥan* EH 45:16–18. See also *Minhag.

Tena'im

(Heb. תנאים, “conditions”). It is customary, but not generally or necessarily so, for the *tena'im*, or conditions of the *shiddukhin*, to be reduced to writing – whereby such matters would be prescribed as the date and place of the proposed marriage, the financial obligations of the parties, i.e., the *dowry (Heb. נדונייה, *nedunyah*) to be brought by the bride, or the period for which her father undertakes to provide for the couple. All such obligations undertaken at the time of the *shiddukhin* are valid and binding, even without a formal or symbolic *kinyan* (see Modes of *Acquisition), as obligations of this nature are “in these matters effected by mere verbal arrangement” (Ket. 102a; Kid. 9b; See also *Contract). It is also customary to stipulate a sum of money as a penalty to be paid in the event of a breach of promise without good cause. In the Talmud such written instruments are termed *shetarei pesikta* – abbreviated by the *posekim* to “*shetarei*” or “*tena'ei shiddukhin*” or simply “*tena'im*” (Rashi, ad loc.; Sh. Ar., eh 51: *Arukh ha-Shulhan*, EH 51:13; see also forms: A.A. Rudner *Mishpetei Ishut*, 178f, and Gulak, Ozar 1–19 (nos. 1–4), 362 (no. 403); see also **Shetar*).

Breach of the Shiddukhin

CONSEQUENCES OF BREACH. The party committing a breach of promise, i.e., by not marrying the other party, may be liable to compensate the other party for any actual damage sustained, such as the expenses of the preparations for the marriage, and may also be obliged to return the gifts he received on the occasion of the *shiddukhin*, whether from the other party or from relatives and friends (Sh. Ar., EH 50:3–4; Resp. Rosh, 35:8; *Arukh ha-Shulhan*, EH 50:20). The offending party may further be liable to pay the penalty stipulated in the *tena'im* – or, if not so stipulated, such amount as a court may determine as proper in the circumstances – having particular regard to the degree of mental suffering, shame, and public degradation suffered by the other party as a result of the breach of promise (Tos. to BM 66a; Sh. Ar., EH, 50:3–4; *Ba'er Heitev* 15). In cases where the sum stipulated in the *tena'im* to be paid by way of compensation exceeds the value of the actual damage caused, so as to make it a real penalty, the *posekim* debate the legal validity of such a condition on the grounds that the promise is tainted with **asmakhta*, i.e., that a promise to pay such a sum by way of compensation might possibly not have been meant seriously, since both parties would have been at the time so certain and confident of fulfilling their respective commitments. Some of the authorities, mainly Ashkenazi, took the view that the law requiring one who shamed another to compensate the latter should be strictly applied in these cases as well, and that the plea of *asmakhta* avails only if the stipulated sum is a highly exaggerated one (Tos. to BM 66a and to Kid. 8b; Resp. Rosh 34:2,4; *Rema* EH 50:6 and *Beit Shemu'el*, *ibid.*; *Arukh ha-Shulhan*, EH 50:21f.; *Rema* HM 207:16 and *Sifte Kohen*, *ibid.*). Other sages, primarily Sephardi, held that the plea of *asmakhta* would avail the offending party even in a breach of promise case involving *shiddukhin* (Maim. Yad, Mekhir 11:18; Sh. Ar., HM 207:16;

Beit Yosef EH 50; see also PDR 3:131–154). In order to avoid any doubts, however, in the Middle Ages the Sephardi authorities introduced the practice of two separate agreements between the parties – one whereby each party unconditionally undertook to pay to the other a fixed sum in the event of breach of promise and another whereby each party released the other from the former undertaking upon the fulfillment of all the obligations stipulated in the *tena'im* (Sh. Ar., HM, *ibid.*, and EH 50:6; Resp. Maharit, 131). Even if the *tena'im* had not been reduced to writing the court would adjudge the offending party to pay such compensation as may seem proper in the circumstances, having regard to the standing of the parties, provided the terms of the *shiddukhin* had been evidenced by *kinyan* between the parties.

DEFENSES AGAINST LIABILITY. Any justifiable reason for withdrawing from the *shiddukhin* is a valid defense to a claim for compensation. Since the matter in issue is a promise to marry, involving a personal tie between the parties, the court will tend to regard any ground for not entering the marriage as reasonably justified, even if it is not directly attributable to the defendant. For example, if the *tena'im* were agreed by the parents and subsequently the son or the daughter involved refused to accept them, such refusal would be regarded as justified and would not involve him or her in any liability (Resp. Rosh 34:1; Tur and Sh. Ar., eh 50:5; *Arukh ha-Shulhan*, EH 50:29; pdr 5, 322–9). However, if the grounds on which the defendant bases his withdrawal were known to him prior to the *shiddukhin* or if they became known to him thereafter and he did not immediately withdraw, he will be regarded as having waived his objections and such grounds will not later avail him as a defense.

Validity of the Tena'im after Marriage (Nissu'in)

Noncompliance with the terms of the *tena'im* after the marriage has taken place does not exempt the parties from the duties imposed on them by law vis-à-vis each other as husband and wife. Thus, the husband is not absolved from his duty to maintain and provide a home for his wife because she or her parents may have failed to honor their undertaking to provide a home for the couple – the husband's duty being imposed on him by law (see *Marriage) and being unconnected with any rights deriving from the *shiddukhin* (*Bayit Hadash* EH 52; *Rema* EH 52:1, and *Ba'er Heitev* 5). On the other hand, the existence of the marriage is not necessarily to be regarded as constituting a waiver and cancellation of the obligations created by the *shiddukhin*. In order to avoid such a contention, it is customary for the parties to draw up “secondary” or “new” *tena'im* at the time of the *kiddushin*, whereby they reaffirm the original *tena'im* – or else stipulate specifically in the **ketubbah* that the marriage is based on the terms of the original *tena'im*; the latter form being the customary procedure in the *ketubbah* adopted in the State of Israel (A.A. Rudner, *Mishpetei Ishut*, 179). Such procedures provide either party with a clear cause of action for claiming the specific performance of

all obligations undertaken in the *tena'im* after the marriage has taken place. According to some *posekim*, there is no need for the original *tena'im* to be specifically recalled at the time of the *kiddushin* – as it is presumed that the *kiddushin* was entered upon in accordance with the terms of such *tena'im* (PDR 1:289–313; 4:193–9, 289–304).

Customs

The ceremony and the writing of the agreement is called in Yiddish *teno'im shrayben*. The term *knas-mahl* (“penalty meal”) was also used because of the penalty (usually 50% of the promised dowry) stipulated in the document to be paid by the party guilty of breach of the promise to marry (Sh. Ar., EH 51).

Though of secondary importance from an halakhic point of view, the “betrothal” remains a significant ceremony in marriage arrangements. According to *Elijah b. Solomon, the Gaon of Vilna, a bridegroom, rather than break the engagement, should marry and then divorce his bride. In certain Jewish circles, a marriage is not contracted with a person who was a party to a broken engagement.

Among the Oriental Jews, the engagement ceremony is a very elaborate affair. Kurdish Jews had the custom of *hatlabba* (“bidding the bride”) and those of *Djerba indulged in great festivities. After the engagement, bride and bridegroom would exchange presents, and on Passover, Shavuot, and Sukkot, the groom would send his bride clothing, jewelry, and choice fruits. Similarly among Ashkenazi Jews, as *sivlonot* the groom usually sent the bride clothing or jewelry, and she reciprocated with a new *tallit* or a richly embroidered *tallit* bag she had made herself. At the Ashkenazi *tena'im* ceremony, it is customary to break a plate; the act is parallel to the crushing of the glass at the wedding ceremony.

[Ben-Zion (Benno) Schereschewsky]

BET(H)-SHEAN (Heb. בֵּית שְׁעָן), biblical city whose name is preserved in the former Arab town of *Beisan* (Josh. 17:11, 16; Judg. 1:27; 1 Sam. 31:10, 12; 2 Sam. 21:12; 1 Kgs. 4:12; 1 Chron. 7:29). Written sources mention Beth-Shean as being in a plain close to the Valley of Jezreel (Josh. 17:16) and Mt. Gilboa (1 Sam. 31:8, 10), and in close proximity to the Jordan River (Papyrus Anastasi 1), Rehov, and Pella (Stele

of Seti 1). Beginning in Hellenistic times the city was called Scythopolis (11 Macc. 12:29–30; Judith 3:10; Josephus, *Antiquities* v, i:22) or Nysa-Scythopolis in imperial coinage. C.R. Conder and H.H. Kitchener (1883, 101–4) and G.A. Smith (1894, 357–64) were the first to provide historical summaries on the site based on classical, medieval, and early modern sources.

Origin and Meaning of the Name

The origin and meaning of Beth-Shean is obscure. When part of a city name, *bet(h)* often refers to a sanctuary where a local deity is worshipped. In this particular case, *Shean* may be the name of such a deity. However, the only god we know to have been worshipped at Beth-Shean is Mekal, a Canaanite deity whose name and seated image was found carved on a small Egyptian stele dating to the 19th Dynasty (13th century B.C.E.). The god is mentioned a second time in a Hellenistic inscription from Cyprus.

During the time of the Diadochi, the successors of Alexander the Great, Beth-Shean took on the name Scythopolis, “City of the Scythians.” The origin of the name is obscure, but it may refer to a colony of Scythian mercenaries serving under Ptolemy II. The city was also known as Nysa or Nysa-Scythopolis. According to a legend mentioned by the ancient historians Pliny and Solinus, Dionysus (the Greek god of wine and revelry who the Romans called Bacchus) founded the city in honor of his nursemaid, Nysa, who he buried in this spot. He then apparently settled Scythian archers there to stand watch over her grave. In the Arabic period, following a destructive earthquake in 749 C.E., the name reverted back to its ancient Semitic name in the form of Beisan. This change supports the view that even after decades of Greco-Roman rule the local dialects were still spoken; thus the town’s Semitic name was never forgotten.

Historical Importance

The town’s historical importance derives from its strategic location at the junction of major roads that pass through the Jezreel and Jordan Valleys (Levant Grid 1977.2124). Moreover, throughout much of the Bronze Age, the international trunk road that linked Egypt with Syria and Mesopotamia passed by way of Beth-Shean to continue northwards to the Sea of Galilee region and points further north.

The summit of the mound is c. 10 acres (4 hectares/40 dunams). However, as excavations have shown, the Middle Bronze Age through Iron Age occupation was limited to the highest part of the tell in the south and did not exceed 5 acres (2 hectares/20 dunams). Thus, despite its strategic importance, Beth-Shean remained a small town throughout the biblical period. The main center at this time was at nearby Rehov (Tell ec-Sârem), c. 3.5 mi. (6 km.) to the south.

The site’s location on a naturally high hill defended on two sides by deep ravines carved by the Harod (Jalud) and Asi Rivers gave it an advantage that may have influenced its Arabic name, *Tell el-Husn*, “mound of the fortress.” Moreover, an

abundance of water and rich soil made the surrounding region attractive to human settlement throughout history. This may have inspired the comment by Rabbi Shimon ben Lakhish (ca. 350 C.E.) to write that if Paradise is in the Land of Israel, then its entrance is Beth-Shean (Er. 19a). Today, a number of agriculturally oriented kibbutzim dot the landscape.

History of Exploration

Beth-Shean was first investigated in 1921–33 by archaeologists from the University Museum of the University of Pennsylvania: C.S. Fisher (1921–23), A. Rowe (1925–28), and G.M. FitzGerald (1930–31, 1933). As a result of their work, Beth-Shean became the first tell in Palestine to produce a complete stratigraphic sequence spanning more than 18 layers of occupation from the late Neolithic period (fifth millennium B.C.E.) through medieval times. University Museum archaeologists also explored the Northern Cemetery on the northern bank of the Harod River opposite Tell Beth-Shean, as well as the nearby Byzantine period Monastery of Lady Mary.

For 50 years no work was done on the tell until Y. *Yadin of the Hebrew University of Jerusalem returned in 1983 to carry out a short three-week season to explore the Iron I period. This was followed by a longer project in 1989–96 headed by A. Mazar of the Hebrew University of Jerusalem, whose goal was to further study the Iron Age and Bronze Age remains.

While the tell saw a cessation of activity for half a century following the University of Pennsylvania excavations, work continued on Late Antiquity remains. At the foot of the mound, S. Applebaum (1961–62) and A. Negev (1962) excavated the second century C.E. Roman theater. A Byzantine-era synagogue known as the “House of Leontis” was excavated by N. Zori (1964) and D. Bahat and A. Druks (1970–72) for the Israel Department of Antiquities and Museums. Exploration of the Roman-Byzantine city of Scythopolis at the base of the tell began on a small scale in 1980–81, and developed into a large-scale project in 1986 under G. Mazar of the Israel Antiquities Authority and G. Foerster and Y. Tsafrir of the Hebrew University of Jerusalem. Today, Beth-Shean is part of the Israel National Parks Authority.

Beth-Shean in History and Archaeology

THE EARLY PERIODS (LEVELS XIX–XI). The earliest evidence for occupation on the mound is during the Pottery Neolithic period (Level XIX following E. Braun, fifth millennium B.C.E.) and Chalcolithic period (Level XVII, fourth millennium B.C.E.) at the bottom of FitzGerald’s deep sounding. Above this, several strata from Early Bronze Age I–III (Levels XVI–XI, 3500–2000 B.C.E.) reach a total depth of 25 ft. (8 m.). This must have been an impressive time of occupation; not only was Tell Beth-Shean occupied, but so was nearby Tell Ictaba directly opposite Beth-Shean on the north, creating twin tells separated from one another by the flow of the Harod River. The end of the Early Bronze Age, now called EB IV

by many scholars, is characterized by seasonal occupation on the mound and shaft tombs in the Northern Cemetery.

THE MIDDLE BRONZE AGE (LEVEL X). Following the end of Early Bronze Age there is a gap in occupation for most of MB I–II (ca. 2000–1750 B.C.E.). Resettlement occurred in the time of transition between MB II–III and continued until the end of the period around 1550 B.C.E. Strangely, at a time when most settlements in Palestine were fortified, it seems that Beth-Shean was not. Renewed excavations on the mound have verified that city walls are missing throughout the Bronze and Iron Ages. The well-known gate and city wall at the northwest corner of the mound dates to Crusader times. Either the mound was sufficiently high to protect the inhabitants, or as B. Arubas has argued, any pre-existing fortifications may have been removed by the Roman architects of Scythopolis who quarried away parts of the mound to make room for the grid pattern of streets. Whether with or without city walls, Beth-Shean remained its modest 5 acre size throughout the biblical period.

THE LATE BRONZE AGE (PRE-LEVEL IX–LEVEL VII). There are five settlement phases on the tell from the Late Bronze Age (1550–1200 B.C.E.). The earliest phase (Pre-Level IX, ca. 1550–1450) belongs to the beginning of the Late Bronze Age (LB IA) before the Egyptian garrison was established in Level IX. The four subsequent phases (Levels IXB, IXA, VIII, and VII) are from when the town functioned as an Egyptian stronghold.

The Hebrew University excavations introduced two important changes to the older Penn stratigraphy. The first is that Level IX comprised not one, but two, phases of occupation – Level IXB (LB IB) and Level IXA (LB IIA). The second is that the initial phase of Late Bronze Age occupation below Level IX was missed by the University Museum, even though some had suspected its existence based on the pottery. In this phase, Mazar revealed a modest tripartite Canaanite temple in a clear stratigraphic context above Level X (MB III) and below Level IXB (LB IB). To date, this is the earliest in a series of five sanctuaries that would continue into Iron Age IB (Upper VI). In this same vicinity, the Roman inhabitants of Scythopolis built a temple to Zeus and the Byzantine Christians a church. As the familiar maxim says, “once a holy place, always a holy place.”

THE EGYPTIAN GARRISON (LEVELS IX–LOWER VI). *Level IX (c. 1450–1300 B.C.E., Late Bronze Age IB–IIA).* With the establishment of Level IX around 1450 B.C.E., Beth-Shean was transformed into an Egyptian garrison; a role that it would maintain for some 300 years until Egypt pulled out of the country in the second half of the 12th century B.C.E. The key figure in bringing about this change in status from Canaanite settlement of Egyptian garrison was Thutmose III, an 18th Dynasty pharaoh who fought some 300 Canaanite rulers allied with the Hurrian kingdom of Mitanni against Egypt. The

showdown between them at Megiddo in the mid-15th century B.C.E. is recorded in the Annals of Thutmose III (Aharoni, 1979, 153–54); the earliest and most detailed record to date of a military campaign.

After his victory at Megiddo, Thutmose III makes a follow-up campaign in which he claims to have subjugated 119 cities. The topographic list is inscribed on the walls of the temple of Amen-Re at Karnak (Aharoni, 1979: 154–65). It is here that Beth-Shean is mentioned for the first time as *bt š'ir* (No. 110). It is probably after this that Thutmose III built the garrison of Level IXB (ca. 1450–1375 B.C.E.). Dating to a time slightly after this, when the settlement goes through renovations in Level IXA, Beth-Shean is mentioned a second time in Amarna Letter 289:20 (ANET 489) as *bit ša-a-ni*. The town is described as an Egyptian garrison staffed by Canaanite mercenaries loyal to Tagi the son-(father?)-in-law of Lab'ayu (see other references to these individuals in EA 252–54; 264–66). Additional testimony to these rulers came to light in 1993 when excavators of Roman-Byzantine Scythopolis found a small clay cylinder bearing the names Tagi and Lab'ayu in the spoil heaps of the University of Pennsylvania excavations at the foot of the mound.

Even though the settlement of Level IX in both of its phases was an Egyptian garrison as indicated in the textual references and from the various finds of Egyptian inspiration, the town nevertheless remained largely Canaanite in character. All the buildings, the temple complex, and most of the artifacts were typical of northern Palestine. The well-known basalt slab depicting a lion and dog (lioness?) in combat is regarded by most as a prime example of Late Bronze Age Canaanite art.

Levels VIII–VII (c. 1300–1200 B.C.E., Late Bronze Age IIB). At some point towards the end of the 18th Dynasty, the settlement of Level IX was destroyed and rebuilt on a new plan (Level VIII). This change reflects an intensification of Egyptian control, perhaps beginning with Seti I, ca. 1300 B.C.E. The explanation for this may lie in the growing Hittite threat to the north. To counter this, Egypt not only strengthened its hold on the Beth-Shean garrison, but increased the number of Egyptian outposts and exercised its influence in other ways as well. Level VII probably represents renovations to the original Level VIII settlement in the time of Ramesses II.

As noted above, the Ramesside period settlement was built on an entirely new plan with only the temple in the same location as the earlier sanctuary of Level IX. Residential units organized into city blocks with an orthogonal street configuration stood east of the temple. To the west of the temple were two large Egyptian-style structures that probably served the interests of the garrison – the so-called “Migdol” (fortified building) and the “Commandant’s House.” The first was probably an administrative building and the second a Three Room House. A third building revealed by Mazar further to the north below Building 1500 of Lower VI resembles in part the square fortress at Deir el-Balah from the same period.

This building may have been the residence of a high official. In contrast to the garrison of Level IX where Egyptian-style pottery comprised only 1% of the assemblage, the Ramesside era settlement produced around 25 times that amount.

During this time, Beth-Shean appears in the topographic lists of Seti I and Ramesses II (Aharoni, 1979, 176–83), as well as in *Papyrus Anastasi I* from the end of the 13th century (ANET, 477). Three stelae were also found in later reuse by the University Museum. Two belong to the time of Seti I and the third to his son Ramesses II. The first stela of Seti dates to the first year of his reign and describes an extensive campaign that included the rescue of Beth-Shean and Rehov (Tell ec-Sârem) from Pella (Pexel) and Hammath (Tell el-Amme) (ANET, 253; Rowe, 1930, 24–29). The second stela mentions a skirmish involving the ‘Apiru (ANET, 255; Rowe, 1930, 29–30). A third stela from the ninth year of Ramesses II mentions a campaign that probably passed by way of Beth-Shean (ANET, 255; Rowe, 1930, 33–36). A small stone stela dedicated to “Mekal, the god, the lord of Beth-Shean” was mistakenly attributed to Level IX; it actually belongs to the 13th century (James and McGovern, 1993, 240, Appendix, No. 8).

Late VII–Lower VI (c. 1200–1125 B.C.E., Iron IA). The 20th Dynasty, the final stage of Egyptian control in Palestine, begins with an ephemeral phase called “Late VII” (12th century B.C.E.). The main stratum of this period is Level VI, which the University of Pennsylvania divided into “Lower VI” (12th century B.C.E.) and “Upper VI” (11th century B.C.E.). The Level VI temple was rebuilt on the same spot as the Level VII sanctuary, while the Migdol and the Commandant’s House were replaced by probable storehouses. The square administrative building of Level VII was replaced in Lower VI by Building 1500, the “Governor’s Residence,” a square building with a central hall surrounded by rooms. In Egypt, this type of structure is known as a “Center Hall House.” Architectural fragments from this and other buildings included lotus-shaped column capitals, inscribed doorjambs, a life-sized statue of a seated Ramesses III which was found in the following level, and inscriptions. The most important inscription was a carved limestone lintel depicting Ramesses-Weser-Khepesh, who is identified as “commander of the troops,” with cartouches of Ramesses III next to him. These finds, as well as a high percentage of locally produced Egyptian pottery, attest to an intensive Egyptian presence at this time.

In the Hebrew Bible, Beth-Shean was assigned to the tribe of Manasseh, but they were unable to hold onto it because of the military superiority of the Canaanites (Josh. 17:11, 16; Judg. 1:27). According to the conventional chronology, this period in biblical history would correspond to Lower VI when the Egyptians were in control of Beth-Shean. It is uncertain when the Egyptians finally abandoned the site, but many scholars suggest the second half of the 12th century in the time of Ramesses VI or Ramesses VIII. In the ashes of the destruction of Lower VI were found sherds of Mycenaean IIIC

probably imported from Cyprus. This type of pottery is typical to the period of the Sea Peoples migration from the Aegean to the east.

IRON AGE IB (UPPER VI). With the construction of Upper VI emerges a new material culture typical to the 11th century B.C.E. and lacking the Egyptian component. The plan of the settlement represents a significant departure from that of the Egyptian garrison. Important buildings from this time include the twin temples, identified by the University Museum archaeologists with “the House of Ashtaroth” (I Sam. 31:10) and “the House of Dagon” (I Chron. 10:10). Both temples produced numerous cylindrical and house-like cult stands decorated with snakes and birds. The excavators assigned these two buildings to Level v, but they probably belong to Upper VI.

According to the biblical accounts of Saul’s death the Philistines killed Saul and his three sons in a battle at the foot of Mt. Gilboa. They cut off his head and placed it in the temple of Dagon, stripped off his armor and placed it in the “temple of their gods” (Chronicles) or in the “temple of Ashtaroth” (Samuel). Then they fastened his body and those of his sons to the city walls of Beth-Shean (I Sam. 31:10–12; I Chron. 10:9–10), or as I Samuel 21:12 reports, hung them in the public square. Following the original excavators, most commentators have assumed that the two temples were in Beth-Shean, but this is unclear from the text. They could just as easily have been in Philistia. No significant Philistine presence has ever been identified at Beth-Shean, although we can assume on the basis of the biblical narrative that they exercised some sort of political control over the region as the self-declared successors of the Egyptians.

IRON AGE II (LEVELS V–IV). It is generally assumed that Beth-Shean was brought under Israelite control by David, since by Solomon’s time, it was part of the fifth administrative district under Baana ben Ahilud (I Kgs. 4:12). If so, then David may have been the one who destroyed Upper VI. Excavations at the highest point of the tell (Level v) have produced the remains of an administrative complex from this era, hinting to the town’s continued strategic importance. The impressive building compound might also explain why Beth-Shean was singled out in the Kings passage with Megiddo and Taanach, since it may have been a regional center for the fifth administrative district.

The severe destruction that characterized the end of Level v is difficult to date with certainty, but one possibility is Pharaoh Shishak (Egyptian, Shoshenq), who lists Beth-Shean on the walls of the temple to Amen-Re at Karnak as one of the cities he conquered. Shishak’s campaign took place after the division of the United Monarchy in the fifth year of Rehoboam, ca. 925 B.C.E. (I Chron. 12). While the town’s final destruction in Israelite times (Level IV) is not mentioned in any biblical or extra-biblical source, the cumulative historical and archaeological evidence supports its capture by the Assyrian monarch Tiglath-Pileser III in 733/2 B.C.E.

The Hellenistic Period

Following the destruction of the Israelite town there is a gap in settlement until the site is resettled in the third century B.C.E. While there is evidence for settlement on the tell (Level III), for the most part, it seems that the city developed on Tell Ictaba to the north where Hellenistic structures were found, though badly damaged by later Roman ones.

Under the Seleucid ruler, Antiochus IV, Scythopolis was granted the status of a Greek city (*polis*). Beth-Shean is also mentioned in the context of the Maccabean wars (I Macc. 5:52; 12:40–42; II Macc. 12:29–31). In 107 B.C.E., during the Hasmonean period, it was conquered by John Hyrcanus I and made into an important administrative center. Later, perhaps after the conquests of the Roman general Pompey in 63 B.C.E. Scythopolis became the chief city of the Decapolis. It was the largest city of this group according to Josephus (*Wars* III, ix, 7), and the only one west of the Jordan River. The Decapolis is mentioned several times in the New Testament gospels, e.g. Matt 4:25; Mk 5:20.

The Roman Period

By the first century B.C.E., the city expanded around the foot of the mound where a number of remains were uncovered. On the summit of the tell (Level III) which served as the city’s acropolis stood a Roman temple probably dedicated to Zeus Akraios, god of the “High Mountain,” who is mentioned in inscriptions found in the lower city. The temple to Nysa appears to have been originally constructed in the first century C.E., but continued to stand until the 749 C.E. earthquake. Roman tombs were found in the Northern Cemetery, including a stone sarcophagus inscribed with the name of Antiochus, son of Phallion, possibly a cousin of Herod the Great. When the Great Revolt broke out in 66 C.E., Jewish rebels attacked Beth-Shean. Although the Jewish inhabitants stood alongside the Gentile population in resisting their countrymen, Josephus writes that the Gentiles later became suspicious and through an act of deception massacred around 13,000 inhabitants (*Wars* II, xviii, 3–5).

The vast civic center that one sees today started to flourish in the second century C.E., though not all of the buildings can be dated with precision. Late Roman period projects of the 2nd–3rd centuries C.E. included the theater, amphitheater, and nymphaeum (water fountain). Behind the nymphaeum, the Hebrew University excavated a basilica built sometime after the first century C.E. Inside the basilica was found a six-sided stone altar dedicated to Dionysus. The accompanying inscription identified him as the founder of the city. Its date in Year 75 of the Scythopolis era translates to 12 C.E. No city wall is known from this time, and it is quite possible that the city remained unfortified. Written sources indicate that Beth-Shean was a key center for making and exporting textiles. The Talmud mentions the manufacture of linen garments from locally-grown flax, farming, and olives as principal occupations (TJ, Pe’ah 7:4, 20a).

The Byzantine Period

In Byzantine times the city reached its greatest extent of 100 hectares. At this time the city was surrounded by a wall and had a population of 30,000–40,000. At the beginning of the fifth century C.E., Scythopolis became the capital of the province of Palestina Secunda, as well as the seat of the commissioner and the tribunal. Scythopolis was also the seat of a Christian episcopate and had numerous churches. The round church on the summit of the tell (Level 11) was dated by the University of Pennsylvania to the early fifth century C.E.

Several features of the city first established in the Roman period were refurbished and continued into the Byzantine period. The *cardo* (main north-south street) averaging 24 ft. (7.5 m) wide and the *decumanus* (main east-west street) were probably built in Roman times, but what one sees today is Byzantine. Flanking both sides of the *cardo* were two large bath house complexes. At the crossing point of the main streets stood a temple that may have been dedicated to Nysa; in any case, it would have been part of the cult of Dionysus or Tyche. While its superstructure no longer exists, two of four columns that supported the gabled roof of the facade to a height of 45 ft. (15 m.) still lie knocked down from the 749 C.E. earthquake. A cylindrical limestone pedestal in front of the temple has an inscription indicating that a statue or bust of the Roman emperor Marcus Aurelius Antoninus (161–180 C.E.) stood on it. The inscription also states how the citizens of Nysa-Scythopolis, a Greek city of Coele-Syria, had dedicated the statue of the ruler. Not far from the temple to Nysa is the Nymphaeum which brought water into the city by means of an aqueduct from the Sachne springs c. 2 mi. (3 km.) to the southwest. The theater, originally built in late Roman times, continued to be used in the Byzantine period and could seat up to 8,000 people. The amphitheater also continued in use and was capable of seating up to 7,000 spectators. At the western end of Tell Ictaba stood the sixth century C.E. Monastery of Lady Mary (in honor of a donor, not the Virgin Mary). A beautiful mosaic inside depicts the 12 months and the sun and moon as human figures. Numerous tombs from the Byzantine period were excavated in the Northern Cemetery.

SYNAGOGUES ON TELL ICTABA. Ancient sources indicate that Scythopolis was a mixed population of pagans, Jews, Samaritans, and Christians. Approximately 200 m northeast of the Monastery of Lady Mary, outside the city wall, is what may be a Samaritan synagogue dating to the 5th–early 7th centuries C.E. It is built in the form of a basilica. Its apse is oriented northwest (not south towards Jerusalem). The floor is covered by a beautiful mosaic depicting geometric and plant motifs, but no human images. The portion of the mosaic in front of the apse depicts a Torah shrine flanked by menorahs, shofars, and incense shovels. There are three Greek inscriptions, one of which refers to Marianos and Hanina, the artists who made the mosaic in the *Bet Alpha synagogue. Another inscription is in Samaritan script, but in the Greek language. Nearby, mosaics from a second synagogue of the sixth century C.E. also

has ritual vessels and a menorah, as well as Greek, Hebrew, and Aramaic inscriptions.

THE HOUSE OF LEONTIS. A short distance from the civic center of Nysa-Scythopolis and still within the city walls is another synagogue from the Byzantine period known as the “House of Leontis.” Based on its plan and a Greek inscription that refers to “Jose the innkeeper,” some have suggested that the synagogue was part of an inn. The synagogue is paved with a mosaic floor depicting geometric, animal, and plant motifs, and in the center, a medallion containing a menorah and the Hebrew word *Shalom* (peace). The mosaic also includes four dedicatory inscriptions – two in Aramaic and two in Greek. One Aramaic inscription refers to the “members of the holy community” who contributed to the synagogue’s renovation. The other refers to the unnamed artist who carried out the work. One of the Greek inscriptions invoke divine blessing on all those who names were known to God, while the other refers to “Jose the innkeeper” mentioned above. Another mosaic in the complex from Hall No. 3 depicts scenes from Homer’s *Odyssey*. It is in the center of this mosaic, adorned with birds, that a Greek inscription refers to Leontis and his brother Jonathan, who donated this mosaic and wished to be remembered for their act. Other depictions in the mosaic include a five-branched menorah and Nilotic scenes: the Nile River is personified as a bearded god, a building symbolizing a city that is identified as “Alexandria” in Greek, and a nilometer.

VILLA. East of the “House of Leontis” is a private house that probably stood two-stories high and contained some 25 rooms. The villa produced a rich collection of pottery and other objects made of stone, metal, glass, and bone.

The Islamic Period

In 636 C.E., Islamic forces conquered the city after the defeat of the Byzantine army at the Battle of Yarmuk. During this time the city ceased to be called Scythopolis and reverted back to its original Semitic name in the slightly altered form of Beisan. To honor their defeat of the Byzantine army, the Arab forces called their day of victory “Beisan Day.”

The excavations in Scythopolis have provided ample testimony to continued life in Beisan during the Umayyad period, including occupation on the tell (Level 1), until the huge earthquake struck on January 18, 749, bringing this ancient and glorious city to an end. The city was rebuilt in the Abbasid period (750–969), but only as a mere shadow of its former glory.

In Crusader and Mamluk times the city declined in size and clustered mainly along the valley road leading to Tell Ictaba. The Crusaders fortified the summit of the tell (Level 1) with a city wall and gate that was mistakenly attributed by the University Museum excavators to the Byzantine period. The Crusaders also built a square fortress south of the tell. It seems that the Crusaders were not too kind to the region. The Muslim geographer Yakut writes that as of 1225, the many date palms that used to exist in the area had been reduced to two.

In the 14th century, Beth-Shean was chosen by Estori ha-Parhi as the center for his historical and topographic research.

[Robert A. Mullins (2nd ed.)]

The Modern Period

In September 1918, Beth-Shean was captured by British forces. In the 1920–1930s Bedouin from the Beth-Shean Valley settled in the town, which numbered 2,000 inhabitants in 1921 and over 3,000 during the Israel *War of Independence (1948). From the beginning of the 20th century, Jews, mainly from Kurdistan and other Muslim countries, also took up residence in Beth-Shean, but temporarily left during the 1929 Arab riots; the Jewish population of Beth-Shean numbered 94 persons in the spring of 1936. Most of them abandoned the town immediately upon the outbreak of the 1936 riots. The town became a headquarters for Arab bands attacking Jewish villages in the neighboring Harod Valley, but the marauders' position was weakened when Jewish *tower and stockade settlements were established on all sides of Beth-Shean in the years to follow. In the War of Independence, Beth-Shean capitulated on May 12, 1948, to Jewish forces, who found it deserted by its former inhabitants. The settlement of Beth-Shean by Jewish immigrants began in 1949. In 1950, the town numbered 1,200 inhabitants, and in 1968, 12,800 – of whom half originated from North Africa (mainly from Morocco), 30% from other Muslim countries (Iran, Iraq, and Turkey), while 20% came from Europe or were Israel-born. In 2002 the population was approximately 15,900, occupying an area of 2.7 sq. mi. (7.1 sq. km.). As the town had no industry in the initial phase of its resettlement, the inhabitants had to subsist in the 1950s mainly on small trade and on doing hired farm work in the vicinity. Later, a number of industries were established, the largest being a textile mill, followed by a clothing factory, a plastics plant, and by smaller enterprises. A few factories in Beth-Shean were run by local kibbutzim, while the inhabitants of the town were also employed in industry and agriculture in the rural communities of the Beth-Shean Valley. Social and living standards were not satisfactory, however, particularly during the 1965–67 recession, and income remained considerably below the national average over the years.

After the *Six-Day War (1967), Beth-Shean, exposed to the Jordanian artillery positions beyond the Jordan River, suffered from occasional shelling. In addition, the city suffered from terrorist infiltration from Jordan, but since 1975 the area has been quiet. After the peace agreement with Jordan in 1994, a border station was opened nearby.

BET SHE'ARIM (Heb. בֵּית שְׁעָרִים; Gr. **Besara**), ancient city on the southern slopes of Lower Galilee situated on the hill of al-Sheikh Burayk (near Kiryat Tivon on the Nazareth–Haifa road). Although settlement at Bet She'arim apparently started during the period of the divided monarchy (Iron Age II), the first mention of the city occurs at the end of the Second Temple period, when it was a center of the estates of Berenice (the daughter of Agrippa I and sister of Agrippa II) in the Plain of Esdraelon. Josephus speaks of it as Besara (Life, 118–9). According to talmudic sources, important *tannaim* and *amoraim* lived there (Tosef., Ter. 7:14; Nid. 27a). Bet She'arim reached a position of great importance and prosperity in the late second century, when *Judah ha-Nasi took up residence there and made it the seat of the Sanhedrin (RH 31a–b). From the beginning of the following century the necropolis of Bet She'arim became a central burial place for Jews of Palestine and the Diaspora (TJ, MK 3:5, 82c). The city was thought to have been destroyed by Gallus during the suppression of the Jewish revolt in 352 C.E., but recent research suggests that the impact of the revolt may have been overstated. Although clearly affected by the earthquake of 363 C.E., the town quickly recovered and flourished during the Byzantine and early Arab periods.

The hill of al-Sheikh Burayk has been partly excavated by B. Mazar (1935–40; 1960) and N. Avigad (1953–58) under the auspices of the Israel Exploration Society. An inscription found there contains the name Besara, confirming the identification of the site with Bet She'arim. Additional excavations were conducted at the site by F. Vitto (1983) for the Israel Department of Antiquities.

The city of Bet She'arim extended over the entire summit of the hill – an area of some 25 acres (100 dunams), 450 ft. (137 m.) above sea level. It was surrounded by a wall, two sections of which were exposed. Remains of various large buildings were uncovered on the northeastern part of the hill. The most important of these was a spacious basilical-type synagogue, 115 × 49 ft. (35 × 15 m.), built of ashlar blocks, of which only two courses have survived. The front of the synagogue

was oriented toward Jerusalem and contained three entrances that led into the large columned hall; the bases of the columns have been preserved. The synagogue was decorated in the style characteristic of Galilean synagogues and was dated by the excavators to the third century C.E., though scholars now prefer dating it to the early fourth or fifth centuries C.E. many architectural fragments derived from this synagogue were found scattered among its ruins: column drums, capitals, jambs, lintels, and decorated friezes. The ruins of other buildings and courtyards were found in the vicinity of the synagogue, including a large two-story building with an outer wall 99 ft. (30 m.) long, built of fine ashlar blocks, as well as the remains of what was apparently a glassmaking workshop. Many small artifacts were found: metal, pottery, and glass vessels, inscribed marble slabs, and some 1,200 bronze coins, all of which were struck in the first half of the fourth century C.E. These coins suggested to the excavators the date of the destruction of all the buildings in the area. A gate and an oil press, used chiefly in the Byzantine period, were also found nearby.

The excavations, however, were concentrated mainly in the extensive ancient necropolis that stretched over the slope of the hill northeast, north, and west of the city and over the slopes of adjacent hills to the north and west. Rock-cut catacombs that were prepared to provide burial places to sell to people from outside Bet She'arim were found in all these areas. Some were family vaults, but the majority were for the general public. Each catacomb contained an open court and a number of tomb halls that were connected by a series of chambers to some of the branch burial compartments containing graves. The openings between the chambers are arched. The usual form of a grave is the *arcosolium* – an arched niche cut into the wall with trough-like graves hewn at the bottom. *Kukhim* (*loculi* – “burial recesses”) are also found frequently. Some of the catacombs lack all decoration, but many possess chambers that display a variegated ornamentation. The soft rock easily lent itself to carving and incision. The many reliefs, graffiti, and drawings adorning the walls are generally executed in the primitive style of the Jewish folk art popular in the Roman period. Jewish symbols and ritual objects are very common motifs, particularly the seven-branched candelabrum and the Ark of the Law, complete with columns and steps. The *shofar*, *lulav*, *etrog*, and incense shovel are also represented. But secular motifs also occur: human figures, animals, ships, geometric patterns, etc., as well as architectural ornaments that were carved in the rock (columns, capitals, arches, and niches). Ornamental stone doors were decorated to imitate wooden ones, complete with panels, nailheads, and knockers. These were locked by bolts, and lifted by keys. The doors still turn on their hinges. Some of the main entrances are adorned with built arches resting on pillars. The facades of two catacombs (nos. 14 and 20) are built of smooth ashlar stones in the form of an arcade of three arches. Over these facades are structures of monumental steps with prayer niches. A mausoleum was built over catacomb no. 11 and contained rich architectural decorations and reliefs.

Of special importance are the epitaphs, of which some 300 have been discovered. The majority are in Greek and the others are written in Hebrew, Aramaic, and Palmyrean. They are incised in the soft rock of the chamber walls, on the sides of the tombs, on lintels, on stone or marble slabs, or are painted in red or black. Their contents are generally restricted to the name of the deceased and his patronymic (or other family descent), with the addition of a word of affection or praise. The rank or occupation of the deceased, and occasionally his place of origin, are sometimes mentioned. Among the callings and titles are teacher, kohen, banker, goldsmith, government official, perfumer, chief warden of a community, chief of a synagogue, and rabbi (written *ribbi* and *bi-ribbi*). Typical examples of Hebrew inscriptions read: "Shalom to Judah," or "This tomb is (of) Rabbi Isaac bar Makim, shalom." An unusual Aramaic epitaph was found: "He who is buried here [is] Simeon, son of Johanan, and on oath, whoever shall open upon him shall die of an evil end." In catacomb no. 14 the following epitaphs were found: "Rabbi Simeon"; "This is the burial place of Rabbi Gamaliel"; and "Anina [Ḥanina] the Small." As it is known from the Talmud that before his death Judah ha-Nasi appointed his son Simeon *hakham*, Gamaliel (his second son) patriarch, and his most outstanding pupil, *Ḥanina b. Ḥama, head of the yeshivah (TB, Ket. 103b), one may assume that this catacomb was the burial place of the patriarch and his family. There are 218 Greek inscriptions and Greek was apparently the common language of the Jews at the time. Pure Greek names occur beside Hebrew ones in Greek transliteration. Some inscriptions express a belief in eternal life. The places of origin appearing in the epitaphs indicate that Bet She'arim was a central burial place for the Jews of Palestine-Elath (Exion-Geber), nearby Arabah and Baka, and of the Diaspora – Tadmor (Palmyra), Antioch, Byblos, Tyre, Sidon, and Beirut in Syria, Meishan in northern Mesopotamia, and Himyar in southern Arabia. Two inscriptions found incised on marble slabs in the mausoleum over catacomb no. 11 and in catacomb no. 18 are arranged in the form of Greek epigrams in the Homeric style. The former reads:

Here lie I, son of Leontius, dead, son of Sappho-Justus,
And after I had plucked the fruit of all wisdom
I left the light, the miserable parents who mourn ceaselessly
And my brothers. Woe to me, in my Besara!
After descending to Hades, I, Justus, lie here
With many of my people, for so willed stern fate.
Be comforted, Justus, no man is immortal.

The mausoleum also contained a reused sarcophagus on which Greek mythological scenes were depicted.

The largest catacomb excavated (no. 20) was comprised of 24 burial chambers with over 200 coffins made of local limestone and many fragments of imported marble sarcophagi decorated with mythological figures. On the coffins birds and animals and even human beings were depicted. These coffins were not apparently used for Jewish burial and were brought into the tomb in the Islamic period as raw material for the purpose of lime burning. The inscriptions found in the catacomb

(almost all in Hebrew) reveal that it was occupied by members of the patriarchal family, "holy" rabbis, and other sages.

Additional information on the industrial activities of Bet She'arim was supplied by the discovery of a huge glass slab (11 × 7 ft. (c. 3½ × 2 m.) and 18 in. (45 cm.) thick, weighing nine tons) in an underground cistern. It possibly served as raw material for village glassmakers in the region. The slab must have been heated for several days at about 1922 °F (1050 °C) in order to melt it. Recent research suggests that the slab should be dated to the ninth century C.E. Numerous lamps from this period were found within the necropolis, notably in Catacomb no. 20.

Modern Bet She'arim

A moshav named after ancient Bet She'arim, lies 3 mi. (5 km.) further west of it in the northwestern corner of the Jezreel Valley, founded in 1936 by a group of Israel-born and East European settlers. In 1968 the moshav's economy was based on livestock and crops. Its population was 320 in 1968. In the mid-1990s the population was approximately 370.

[Nachman Avigad / Shimon Gibson (2nd ed.)]

BET(H)-SHEMESH (Heb. בֵּית שֶׁמֶשׁ; "the house [temple] of [the sun-god] Shemesh"), name of a number of places mentioned in the Bible.

(1) A city in the Shephelah on the northern border of the tribe of Judah, between Chesalon and Timnah (Josh. 15:10). Beth-Shemesh appears on the list of cities of the tribe of Dan (Josh. 19:41, as Ir-Shemesh), but it was apparently never actually conquered by it (Judg. 1:35, if the identification of Harheres with Beth-Shemesh is correct). In the list of levitical cities, it is mentioned as belonging to the tribe of Judah (Josh. 21:16; 1 Chron. 6:44). Beth-Shemesh was located close to the border of Philistia, and the archaeological excavations there have shown that in the period of the Judges, the Philistines exerted a strong influence on the city. The Samson narratives all take place in the vicinity of Beth-Shemesh; his birthplace, Zorah, lay just to the south of it, and the Philistine city Timnah is to the west of it. It has even been suggested that the name Samson itself (Heb. *Shimshon*) indicates a connection with the city. When the Philistines returned the "Ark of God," which they had captured at the battle of Eben-Ezer, on an ox-driven cart, it was sent along the road that led straight from Ekron to Beth-Shemesh (1 Sam. 6). In the period of the monarchy, the city was part of Solomon's second administrative district, which included the former cities of the territory of Dan (1 Kings 4:9). The war between Amaziah and Jehoash,

kings of Judah and Israel, in about 790 B.C.E. was fought near Beth-Shemesh, and Amaziah was taken prisoner there (II Kings 14:11–13; II Chron. 25:21–23). The last reference to Beth-Shemesh in the Bible occurs during the reign of Ahaz, king of Judah, from whom it was captured by the Philistines in about 734 B.C.E. (II Chron. 28:18).

Beth-Shemesh is identified with Tell al-Rumayla, astride the Wadi al-Šarār (biblical Sorek Valley?) on one of the major highways connecting Jerusalem with the seacoast (the modern Jerusalem-Tel Aviv railroad follows this ancient route). The site was excavated by D. Mackenzie (1911–12) and E. Grant (1928–33); G.E. Wright assisted in analyzing the results. The excavations revealed that the first city (stratum VI) of Beth-Shemesh was established toward the close of the third millennium B.C.E. (end of the Early Bronze Age). The next city (stratum V), dating to the Hyksos period (c. 1750–1550 B.C.E.), is characterized by a high level of development. This Middle Bronze Age city was fortified by a massive wall with insets and offsets and towers. In the southern part of the wall, a strong gate was discovered with the entrance between two guard-rooms, a style typical of the period. The city continued to flourish in the Late Bronze Age (stratum IV, c. 1550–1200 B.C.E.). In this stratum plastered water cisterns, installations for the manufacture of bronze, numerous imported vessels from the Aegean area and Egypt, an inscription in the Ugaritic cuneiform alphabet, and an ink-inscribed ostrakon in early Canaanite-Phoenician script were found. The following stratum (III) dates to the period of the Judges (Early Iron Age). This city shows signs of a decline in the material culture as is also evident in other sites from this period. The decline, however, did not affect the metal industry, which continued to operate at its previous high level. The abundance of Philistine pottery found in this stratum is proof of the strong influence of the Philistines in the area during this period. The destruction of the city by fire in the second half of the 11th century B.C.E. was a result of the wars with the Philistines that preceded the establishment of the monarchy. The city was rebuilt (stratum IIA) sometime in the tenth century and was surrounded by a casemate wall – the typical fortification of Israelite cities in the period of the united monarchy. The large store house and granary erected in the city confirm the biblical description of the important administrative role held by Beth-Shemesh.

Settlement at Beth-Shemesh continued until the end of the First Temple period (strata IIB and IIC). The last city was unfortified. Between IIB and IIC there appears to have been some interruption in the occupation of the site, which may explain the absence of Beth-Shemesh from the detailed city list of Judah, where it would be expected to appear in the Zorah-Azekah district (Josh. 15:33–36). Scholars disagree as to whether the date of this gap in the history of Beth-Shemesh should be ascribed to Pharaoh Shishak's campaign in c. 924 B.C.E. or to the capture of the city by Jehoash, king of Judah, in the eighth century. In Roman times the settlement moved to nearby Ayn Shams, which preserves the ancient name. Talmudic sources describe Beth-Shemesh as a small

Plan of the excavations at Beth-Shemesh. Courtesy, Mosad Bialik, Jerusalem.

village (Lam. R. 2:2; etc.) and Eusebius (Onom. 54:11–13) accurately locates it 10 miles from Eleutheropolis (Bet Guvrin) on the road to Nicopolis (Emmaus).

(2) A Canaanite fortress town listed as part of the inheritance of Naphtali (Josh. 19:38) but not settled by the tribe in the early stages of the Israelite occupation of the country (Judg. 1:33). It was most likely located in the northern part of Upper Galilee, where remains of strong Canaanite settlements have been discovered. Some scholars identify it with the Beth-Shemesh of Issachar ((3) below) and accordingly place it in Lower Galilee on the border between Issachar and Naphtali.

(3) A city in the territory of Issachar, apparently close to the northern border of the tribe (Josh. 19:22). Khirbat Sheikh al-Shamsāwī in the southern part of the valley of Naphtali may preserve the ancient name. Some scholars, however, identify it with al-ʿUbaydiyya, farther east near the Jordan River, on the assumption that it is identical with (2) above.

(4) The city On-Heliopolis in Egypt whose temple to the Egyptian sun-god Re is mentioned in Jeremiah's prophecies against the nations (Jer. 43:13; cf. Isa. 19:18). It is the present-day el-Matariyeh, east of Cairo.

[Yohanan Aharoni]

Modern Period

In the vicinity is the modern town of Bet-Shemesh. Its beginnings go back to the village of Hartuv, founded in 1895 by Jews from Bulgaria who bought the land from a training farm set up 12 years earlier by the English Mission of Jerusalem which had tried unsuccessfully to convert Jerusalemite Jews working there. Hartuv made little progress due to its isolation

and the lack of water and good soil. In the 1929 Arab riots, the few inhabitants had to leave the village temporarily but soon returned. Shortly before 1948, the Tel Aviv municipality opened a youth training farm there, and construction of the large "Shimshon" cement factory was begun. Bet-Shemesh was abandoned for a few months during the 1948 War of Independence, but finally fell to Israeli forces on September 19, 1948. A *ma'barah* ("immigrant transit settlement") was set up there in 1950, and in 1951 a permanent urban settlement was begun as part of the program of populating and securing the "Jerusalem Corridor."

Bet-Shemesh grew to serve as an urban center providing community and commercial services to 60 rural settlements. The city had two large industrial areas, but some of its residents commuted to Jerusalem and Tel Aviv. It numbered 10,000 inhabitants in 1969 and received municipal status in 1991. In the mid-1990s the population was approximately 20,900 and by 2002 the fast-growing city had increased its population to 53,400, 50% among them under the age of 21. It occupied an area of 20 sq. mi. (50.5 sq. km.). In this latter period the city absorbed many new immigrants, mainly from the former Soviet Union. The majority of them were secular and their presence in the city led to a degree of cultural-religious tension. The Ramat Bet-Shemesh suburb south of the city attracted a religious population, including many English-speaking immigrants.

BET(H)-SHITTAH (modern Bet ha-Shittah; Heb. בֵּית הַשִּׁטָּה), biblical locality mentioned in the description of the Midianites' flight after their defeat by Gideon (Judg. 7:22). Some scholars locate it at the small village of Shata' (site of a prison), east of the hill of Moreh but most prefer to place it in the immediate vicinity of the Jordan. There is a kibbutz in the Valley of Jezreel named after the biblical locality of Beth-Shittah. The kibbutz is affiliated with Ha-Kibbutz ha-Me'uhad. Bet ha-Shittah was founded in 1935 by sabras and pioneers from Germany, later joined by immigrants from other countries. In 1968 Bet ha-Shittah had 885 inhabitants, maintaining its size over the years (pop. 900 in 2002). Its economy was based on farming (field crops, particularly cotton, fodder, fishery, dairy cattle, and other farm products) and industrial enterprises such as farm machinery and preservatives, the latter plant subsequently sold to the Osem food company. The kibbutz also operated a small shopping center at the nearby road junction.

[Efraim Orni]

BETTAN, ISRAEL (1889–1957), U.S. rabbi. Born in Kovno and educated in yeshivot in Lithuania, Bettan came to the

United States at the age of 18 where he enrolled at Rabbi Isaac Elchanan Rabbinical Seminary, but soon transferred to Hebrew Union College. He received his B.A. from the University of Cincinnati (1910), his ordination from HUC in 1912, and his D.D. three years later writing on early Reform in rabbinic responsa.

He then went to a Congregation B'nai Israel in Charleston, West Virginia, where he established his reputation as an excellent preacher and congregational leader. He served with the American Forces in France in World War I, having taken leave of his congregation, and then returned to Charleston, where he was rabbi until 1922, when he was named chairman of the Department of Homiletics of HUC. He taught at HUC for 35 years, including midrash. As a professor of homiletics it was his task to prepare future rabbis for the life cycle and communal events that they were to lead, from weddings to funeral, bar mitzvah to invocations and benedictions. He believed in the power of the pulpit and taught his students how to use that power to motivate their congregations. His unique style of teaching made him very popular among students who valued the practical experience as well as the intellectual guidance he offered.

Active in the Reform movement, he was twice named a member of the committee that revised the *Union Prayer Book*. He also served as president of the Central Conference of American Rabbis in 1956 and retired from teaching the next year to continue his presidency.

Among his writings was *The Five Scrolls: A Commentary* (1950) and *Studies in Jewish Preaching and Opposition of Orthodoxy to Early Reform* (1914).

[Michael Berenbaum (2nd ed.)]

BETTAUER, HUGO (1872–1925), Viennese journalist and novelist. Bettauer converted to Protestantism at the age of 18 and after a period in Zurich went to the United States, where he first worked in business and later taught German literature. In 1899 he returned to Europe as an American citizen, settled in Berlin, and became a journalist for the *Berliner Morgenpost*, a newspaper of the *Ullstein publishing house. He was several times imprisoned for offending Emperor William II and the Prussian police, causing him finally to be expelled from the country. Back in New York, he worked on German newspapers published by the Hearst group. In 1908 he returned to Vienna, where he worked for the *Zeit* and the *Neue Freie Presse*. He wrote several novels, successful in their time, which were also filmed, the most noteworthy of these being *Stadt ohne Juden* (1922; *The City without Jews*, 1926). The novel dealt with the extreme antisemitic atmosphere in Vienna after World War I, which was mainly directed at Jewish war refugees from Eastern Europe: A utopian

state, akin to the first Austrian republic, expels all Jews for economic and antisemitic reasons; as a result it breaks down completely and decides to call its Jewish population back. The novel, as well as the film version by Hans Karl Breslauer (1924), aroused controversy in Vienna and Berlin. In 1924 Bettauer founded the periodical *Er und Sie: Wochenschrift fuer Erotik und Lebenskultur* (later *Bettauers Wochenschrift*), advocating sex education, abortion, and homosexuality, but also calling attention to unemployment and poverty. His views made him the focus of attacks from right-wing newspapers. In March 1925 he was murdered in his office by the National-Socialist Otto Rothstock.

[Mirjam Triendl (2nd ed.)]

BETTELHEIM, family originating from Pozsony (*Bratislava, Pressburg), formerly in Hungary. According to tradition, one of its forebears frustrated a plot by the count of Bethlen to abduct his wife, and for this feat was called "Bethlen-Jude," which later became Bettelheim. The first noted member of the family, LOEB BETTELHEIM, served as *dayyan* in Pozsony in 1709. LIPOT LEOPOLD (MEYER LEB) BETTELHEIM (1777–1838) was physician to the count in Galgoc (now Hlohovec) and a noted Hebraist. MOSES BETTELHEIM (beginning of the 19th century) was head of the Jewish community in Pozsony. His son, FÜLÖP (RAPHAEL), represented the Orthodox Jews in Pozsony at the assembly of Jewish delegates held in Pest in 1868. Samuel *Bettelheim was a journalist and editor. Prominent members of the family outside Hungary include Albert (Aaron) Siegfried *Bettelheim, rabbi, publicist, and physician. KARL BETTELHEIM (1840–1895), also a physician, became head of a Vienna clinic and the editor of *Medizinisch-Chirurgische Rundschau* (1870–78).

[Jeno Zsoldos]

BETTELHEIM, ALBERT (Aaron) SIEGFRIED (1830–1890), U.S. rabbi. Bettelheim was born in Galgoc, Hungary. He served as correspondent on Jewish affairs for several periodicals, director of a network of Jewish schools, editor of a political weekly *Elöre* ("Forward"), and rabbi of a small congregation. Bettelheim's progressive political views brought him into trouble with the government, and he emigrated to America in 1867. He served as rabbi in Philadelphia, and on the faculty of the short-lived Maimonides College. He also acquired a medical degree. In 1875 Bettelheim accepted a pulpit in San Francisco. There he organized a society for Hebrew study for Christian clergymen, and was active in civic affairs, especially prison reform. He coedited a weekly, the *Jewish Times and Observer*, which represented the traditionalists' views. In 1887

he returned East to a pulpit in Baltimore. A foundation to aid needy scholars in Vienna was established in his memory by his daughter Rebekah, wife of Alexander *Kohut. Bettelheim left no complete scholarly work but he wrote many articles on art, medicine, and other subjects and some of his notes and suggestions were incorporated into Kohut's *Arukh*. His son, FÉLIX ALBERT BETTELHEIM (1861–1890), a physician, also moved to the United States and initiated the establishment of the first hospital in Panama, serving as head physician between 1883 and 1889.

[Jack Reimer]

BETTELHEIM, BRUNO (1903–1990), U.S. psychologist and educator, best known for his pioneering techniques in the treatment of emotionally disturbed children and his analysis of the psychological aspects of racial prejudice. Born in Vienna, Bettelheim studied at the university there. In 1938 he was sent to the Dachau concentration camp and then to Buchenwald. In 1939 he was released and permitted to leave for the United States. In 1943 he published a highly influential essay on the psychology of concentration camp prisoners.

Bettelheim worked with the Progressive Education Association and, for a short period, with Rockford College in Illinois. He was subsequently appointed principal of the University of Chicago's Sonia Shankman Orthogenic School, a residential institution devoted to the education and treatment of children with severe emotional disorders. In that capacity, he placed special emphasis on the treatment of autism. From 1944 to 1973 he was professor of educational psychology at the University of Chicago.

In a number of essays and reviews and in a volume entitled *The Informed Heart* (1960), Bettelheim, basing himself on limited documentation, appears as a stern judge of the Jewish masses who did not revolt against the Nazi terror.

Bettelheim wrote prolifically on the diagnosis and therapy of emotionally disturbed children. He wrote *Dynamics of Prejudice* (1950) in collaboration with Morris Janowitz, which was regarded as a vital work in its field. His other major publications included *Love Is Not Enough* (1950); *Truants from Life* (1955); *The Empty Fortress* (1967); *The Children of the Dream* (1969), an analysis of the rearing of kibbutz children; and *The Uses of Enchantment* (1976), which looks at fairy tales from a Freudian perspective.

Suffering from depression most of his life, Bettelheim committed suicide in 1990 at the age of 86.

During his lifetime Bettelheim was well respected for his work. However, after his death his credibility began to be questioned. Not formally trained in analysis, Bettelheim and his theories, as well as his biographical data, were challenged in journalist Richard Pollak's controversial book *The Creation of Dr. B: A Biography of Bruno Bettelheim* (1998).

[Abraham J. Tannenbaum / Ruth Beloff (2nd ed.)]

BETTELHEIM, SAMUEL (1872–1942), early Zionist and Mizrahi leader in Hungary, later in Czechoslovakia. Bettelheim was born in Pressburg (later Bratislava), where he received a religious and secular education. Under Herzl's influence, he formed the first Zionist association in Hungary. When the Mizrahi movement was founded in 1904, he became one of its leaders. From 1908 he published and edited in Pressburg a Zionist weekly, *Ungarlaendische Juedische Zeitung*. During World War I, the Austro-Hungarian government sent him on a mission to the United States to influence American Jewry in its favor. After the war, he became a leading Zionist in Czechoslovakia. However, Bettelheim, who opposed the political and cultural activities of the Zionist Organization, soon joined Agudat Israel, taking an extreme anti-Zionist stand. He edited their newspaper *Juedische Presse* in Bratislava and Vienna and from 1922 *Juedische Zeitung* in Bratislava, where he propounded Agudat Israel. In 1934–35, he published in Bratislava a German-language monthly called *Judaica*, devoted to Jewish literature and history and containing material on Jewish and Zionist history in Hungary. In his last years he lived in Budapest.

BETTMAN, GARY (1952–), commissioner of the National Hockey League since 1993. Bettman was born in Queens, New York, and raised by his mother. He graduated from Cornell in 1974 and New York University Law School in 1977. After law school he worked at Proskauer Rose, a prestigious sports law firm in New York, where he met David *Stern, who went on to become commissioner of the National Basketball Association. Bettman joined Stern at the NBA as assistant general counsel in 1981 and worked in the NBA league office for 12 years.

Bettman became commissioner of the NHL on February 1, 1993, the sixth man to run the NHL since 1917. When he arrived, the league had teams in only 14 U.S. cities, league sponsorships were almost nonexistent, and the NHL had not had a network television agreement in almost 20 years. Bettman expanded the league from 24 to 30 teams, including teams in new locales such as Dallas, Anaheim, Miami, Phoenix, Carolina, Nashville, and Columbus, and new teams in former NHL cities such as Denver, Atlanta, and Minnesota. He increased revenues from \$400 million to over \$1.6 billion, and negotiated two network television contracts, including a \$600 million deal with ABC and ESPN in 1998. In 1998, Bettman allowed NHL players to participate in the Olympic Winter Games, marking the first time NHL players had played in the

Olympics. The NHL also suspended the regular 2001–2 season for 10 days to allow 125 players to participate in the Olympic Winter Games in Salt Lake City. Bettman made changes to the game itself, realigning and renaming the league's divisions to reflect geography; adopting a two-referee system; moving goal lines, blue lines, and defensive-zone circles; and changing the playoff formats.

However, his term in office was also marked by labor strife, first in 1994 when owners voted to lock out the players at the start of the season, which wiped out 32 games of the 80-game season; and in the 2004–5 season, which was canceled altogether.

[Elli Wohlgeleinter (2nd ed.)]

BETTMANN, BERNHARDT (1834–1915), U.S. Reform lay leader. Born in Germany, Bettmann immigrated to the U.S. in 1850, settling in Cincinnati and building a successful clothing business. Early on, he formed a close relationship with Reform leader Rabbi Isaac Mayer *Wise, who tapped him to serve the Zion Collegiate Association. An active leader of the Reform movement throughout its formative years, Bettmann joined the first executive board of the *Union of American Hebrew Congregations upon its founding in 1873. In 1875, he became the first chairman of the Board of Governors of the *Hebrew Union College, a position he held until becoming its honorary president in 1910. Ideologically, Bettmann was a non-Zionist, contending that while Palestine could possibly serve as a haven for the oppressed Jews of Russia, there was no need for a general return to a Jewish homeland. Spurning Jewish nationalism, he believed that the mission of Judaism was to spread the word of God and the brotherhood of man. A noted philanthropist, Bettmann was a pioneer in the development of community-wide social services. He was instrumental in founding the United Jewish Charities of Cincinnati and served as the organization's first president (1896–1903).

BET YANNAI (Heb. בֵּית יָנָאִי), coastal moshav in the Hefer Plain, affiliated with Tenu'at ha-Moshavim; founded in 1933. Its settlers came from Poland, Lithuania, and North America. Its economy was based on farming (mostly citrus plantations) and tourism (the moshav also became a seaside resort). In 1968 its population was 229, increasing to 330 in the mid-1990s and 370 in 2002. It is named after the Hasmonean king Alexander Yannai.

[Efraim Orni]

BET YEHOSEHU'A (Heb. בֵּית יְהוֹשֻׁעַ), moshav shittufi in central Israel, in the southern Sharon, affiliated with Ha-Oved ha-Ziyyoni. It was founded as a kibbutz in 1938 by pioneers from Poland. Its economy was based mainly on citrus plantations and dairy cattle. In 1968 its population was 260, ris-

ing with expansion to 420 in the mid-1990s and 652 in 2002. The village's name commemorates the Zionist leader Osias (Yehoshu'a) *Thon.

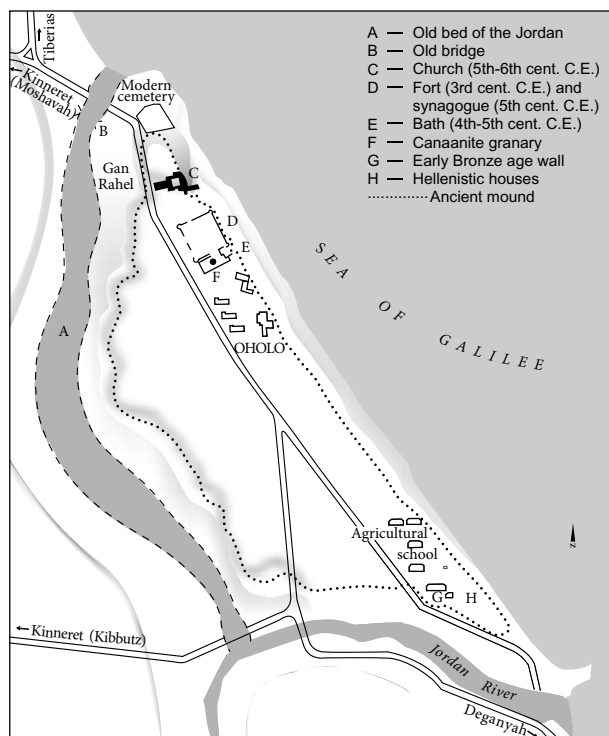

[Efraim Orni]

BET YERAḤ (Heb. בֵּית יֶרֶחַ), large Canaanite city on the shore of the Sea of Galilee extending over a tell of approximately 50 acres, from the site of the present-day moshavah *Kinneret, to the outlet of the *Jordan River from the lake near *Deganyah. This location is based on the Jerusalem Talmud (Meg. 1:1, 70a) which speaks of two autonomous cities surrounded by walls, Bet-Yeraḥ and Zinabri (*Sennabris), in the vicinity of the Sea of Galilee. An additional reference is found in *Bekhorot* 51a, which states that the Jordan River “began” at Bet Yerah. Inasmuch as Sennabris is usually identified with Ḥazar Kinneret, it is probable that Bet Yerah was situated on the site known to the Arabs as Khirbat al-Karak. Although not mentioned in the Bible, the name points to an ancient Canaanite settlement whose deity was a moon god. Excavations were conducted there in 1944–46 by the Jewish Palestine Exploration Society and, from 1949, by the Department of Antiquities and the Oriental Institute, University of Chicago.

The earliest settlement at Bet Yerah is dated at the end of the Chalcolithic and the beginning of the Early Bronze Age I (c. 3200 B.C.E.). The inhabitants lived in huts some of which were sunk into pits dug to a depth of about 1½ ft. (3.5 m.). Traces of pavements and ovens were found in the pits. The

erection of a brick wall, the first of Bet Yerah's fortifications, was followed by the building of mud-brick houses and in the 29th century B.C.E. (Early Bronze Age II), stone houses made their appearance. A tomb from this period found at moshavah Kinneret contained gold ornaments in the style of Asia Minor. The settlement reached its zenith in the Early Bronze Age III (26th–24th centuries B.C.E.), when a large granary, 3,936 sq. ft. (1,200 sq. m.) in area, was constructed to the north of Bet Yerah, indicating that at that time it was already the center of a large region of irrigated farmlands. The pottery of this epoch is light red or red-black burnished ware (a type common in Syria and Asia Minor) and its presence is apparently to be attributed to influences of northern peoples who penetrated through trade or invasion. In the Middle Bronze Age I the settlement was concentrated in the southern part of Bet Yerah. No settlement existed there after that for about 1,500 years until the Persian period; to this period belong several graves found there. The city's location in ancient times east of the Jordan, on a narrow tongue between the river and the Sea of Galilee, necessitated building the main fortifications on the southern side. Here, where the Jordan now flows, the city lacked natural defenses in ancient times. The settlement at Bet Yerah flourished again in the Hellenistic period. It has been identified with Philoteria, a Ptolemaic center, captured by *Antiochus III in 198 B.C.E. and also mentioned among the cities conquered by *Alexander Yannai (according to George Synkellus, 1:559). Remains uncovered from this period include a stone wall with vaulted openings and several houses, some with floors, plastered and painted walls, and windows overlooking the lake; numerous Rhodian stamped jar handles were also discovered.

In the early Roman period, a large Roman structure, covering an area of 105 × 59 ft. (32 × 18 m.), was erected on the ruins of the Hellenistic houses on the south. A large rectangular fort built of dressed masonry with towers at its corners was constructed on the northern part of the tell in the third century C.E. From this period there are several reports of a mixed Jewish-gentile population at Bet Yerah (TJ, Meg. 1:1, 70a). After the Bar Kokhba war, priests of the Haaziah family settled there. The verse “Naphtali is a hind let loose” (Gen. 49:21) was interpreted by rabbis of the time as referring to Bet Yerah, the territory of which was “entirely irrigated” (Gen. R. 98:22). The statement in the Jerusalem Talmud (loc. cit.) “The city was destroyed and became the possession of gentiles” also alludes to some event which occurred in the third century at Bet Yerah or in its vicinity. In the fourth and fifth centuries, the fort seems to have been abandoned and its southern wall was used as the northern wall of a bathhouse. Excavations have shown that the bathhouse, the water for which was conducted through earthenware pipes from the aqueduct of *Tiberias, had a central hall with a circular pool in the center and heated rooms. In the fifth century, a synagogue was built within the fort. It was basilical, with an apse oriented to Jerusalem, and was one of the largest contemporary synagogues in the country, 121 × 72 ft. (37 × 22 m.). Its foundations have survived as

Map showing the site of the Canaanite city of Bet Yerah in relation to the modern Oholo. After P. Delougaz and R.C. Haines, A Byzantine Church at Kirbat Al-Karak, 1960.

well as part of its mosaic floor depicting a citron tree, a man and a horse (possibly a representation of the story of Mordecai and Haman), and also the base of a column incised with a seven-branched candelabrum.

North of the synagogue, a Christian church was built, basilical in form, with a central hall and two aisles; an atrium containing a well lay on its west side. The church had been enlarged to the north by a baptistery with a mosaic pavement dating from 529 C.E. Bet Yerah was resettled in the seventh century after having been destroyed during the Persian or Arab invasion, but it was abandoned shortly afterward and re-occupied only in recent years. In 1945 an agricultural secondary school for the settlements of the Jordan Valley was built south of the tell and in 1949 Oholo, a conference and study center in memory of Berl *Katznelson, was erected north of it. Oholo opened in 1957 on the initiative of Ben Zion Yisreeli of Kevuzah Kinneret, a leading personality of the labor and kibbutz movement. It houses courses for soldiers after their discharge; a teachers' seminary, principally for students hailing from Middle Eastern countries who intend to teach in immigrant villages and development towns; and a field school of the Society for the Preservation of Nature.

[Michael Avi-Yonah / Efraim Orni]

BET YIZḤAK (Heb. בֵּית יִזְחָק), moshav in central Israel, in the Hefer Plain. It was founded in 1940 as an unaffiliated middle-class settlement by immigrants from Germany, many of whom were formerly members of academic professions. Later, Bet Yizḥak merged with the neighboring moshav Nirah, most of whose settlers came from Czechoslovakia and Austria. In 1968 Bet Yizḥak had a population of 825. Its economy was based on citrus orchards, a natural fruit preserve factory, and intensive farming. In the mid-1990s the population was approximately 1,440, increasing to 1,560 in 2002. Its name commemorates the German Zionist Yizḥak Feuerring, whose bequest was instrumental in financing the settlement.

[Efraim Orni]

BET YOSEF (Heb. בֵּית יוֹסֵף), moshav in Israel, in the north of the Beth-Shean Valley near the Jordan River, affiliated with Tenu'at ha-Moshavim; founded on April 9, 1937 as a “tower and stockade” settlement. Its inhabitants came from Kurdistan. Its economy was based mostly on livestock and field crops, including cotton. Following the Six-Day War in June 1967, Bet Yosef frequently suffered from Jordanian artillery fire and acts of sabotage. In 2002 the population was approximately 350. Its name commemorates the Israel labor leader, Yosef *Aharonovitch.

[Efraim Orni]

BET ZAYIT (Heb. בֵּית זַיִת), moshav west of Jerusalem, affiliated with Ha-Mo'azah ha-Ḥakla'it association of “middle-class” settlements. Bet Zayit was founded in 1949 by immigrants from Yugoslavia, Romania, and Hungary. Later, immigrants from Egypt settled in the village. Its economy was based on fruit orchards, vegetables, poultry, and other farm products. Situated on the fringe of the Jerusalem Forest Park it operated a swimming pool and guest house as well. Near the village is the Ein Kerem dam built to store winter flood waters. The name, “House of the Olive Tree,” refers to the extensive olive groves on the slopes around the village. In 1970 Bet Zayit numbered 468 inhabitants, in the mid-1990s the population was 840, while by 2002 it had increased still further 1,110. A place of the same name mentioned in the books of the Maccabees stood further north, possibly at the site of the Arab village Bīr al-Zayt, north of Ramallah.

[Efraim Orni]

BET ZEKHARYAH (Heb. בֵּית זְכַרְיָה), site 10 mi. (16 km.) S.W. of Jerusalem and 6 mi. (9½ km.) N. of Beth-Zur, where the Hasmonean army clashed with that of Antiochus V Eupator, king of Syria, in 162 B.C.E. In this battle *Eleazar, a brother of *Judah Maccabee, was crushed to death by one of the enemy's elephants whom he attacked, believing it to be carrying the king. The Jewish force was compelled to retreat (1 Macc. 6:32–3; Jos., Ant., 12:369ff.). Bet Zekharyah is present-day Khirbat Beit Zakarya, 2.2 mi. (4 km.) S.W. of Solomon's Pools.

[Michael Avi-Yonah]

BET ZERA (Heb. בֵּית זֵרַע, “House of Seed”), kibbutz in Israel, 1¼ mi. (2 km.) S. of Lake Kinneret, affiliated with Kibbutz Arzi ha-Shomer ha-Zair, founded in 1927 by pioneers from Germany who had previously participated in establishing *Mizra in the Jezreel Valley. It received part of the Umm Jūnī lands (among the first acquired in the country by the Jewish National Fund), ceded by nearby *Deganyah when it intensified its farming methods. The settlers developed a farming economy adapted to the hot climate, based on field crops, bananas, and other tropical fruit. In addition, it raised dairy cattle. In the mid-1970s, industry began to replace farming as the main source of livelihood, with the kibbutz manufacturing a variety of plastic goods. In 1968 Bet Zera had 660 inhabitants, increasing slightly to 715 in 2002. In its initial years, the settlement was named also Kefar Nathan Laski, after the English communal leader. The site is supposed to be that of Kefar Agun of talmudic times, home of R. Tanḥum b. Ḥiyya (Gen. R. 100:7).

[Efraim Orni]

BET ZERIFA, Jewish family of the Second Temple period. According to the Mishnah “there was a family of Bet Zerifa

in Transjordan and Ben-Zion rejected it by force” (Eduy. 8:7; see also TJ, Yev. 8:3, 9a; TJ, Kid. 4:1, 65c). Scholars are divided as to whether this implies that Ben-Zion (of whom nothing more is known) had it ejected from the priesthood because he questioned its legitimacy. Possibly the learned Judah, son of Sariphaeus (Zerifa), who – according to Josephus – incited his disciples to pull down the golden eagle erected by Herod the king over the temple gate, belonged to this family, as well as R. Judah son of Zipporai, also known as Ben Zerifa.

[Isaiah Gafni]

BET(H)-ZUR (Heb. בֵּית צוּר), ancient city in Erez Israel, 4½ mi. (7 km.) N. of Hebron, and, according to Eusebius (Onom. 52:1–2), 20 Roman miles south of Jerusalem, on the Hebron-Jerusalem road. The name has been preserved at Khirbat Burj al-Šūr but the ancient city was located nearby at Khirbat al-Tubayqa, on a high isolated plateau. Beth-Zur seems to have first been settled during the Early Bronze Age (third millennium B.C.E.). The earliest city, however, was apparently established by the *Hyksos in the second half of the Middle Bronze Age (c. 18th century B.C.E.). Only meager traces of the Late Bronze Age have been discovered. The site was rebuilt during the period of the Israelite settlement and appears to have been associated with the rule of the sons of *Caleb and the tribe of Judah (Josh. 15:58; 1 Chron. 2:45). The Israelite city was destroyed by fire c. 1,000 B.C.E., apparently in one of the Philistine attacks. Rehoboam included Beth-Zur in his system of fortifications (1 Chron. 11:7). In the days of *Nehemiah, it was the capital of a sub-district. Its ruler, Nehemiah, son of Azbuk, took part in the rebuilding of the walls of Jerusalem (Neh. 3:16). From this time onward, Beth-Zur served as a defense post on the southern frontier of Judea against the Idumeans in the Hebron district. It played an important role in the Hasmonean wars; a Seleucid garrison stationed there from 175 B.C.E. was routed by Judah *Maccabee in 165 B.C.E. This victory and Judah’s fortifications of Beth-Zur as a border stronghold of Judea made possible the resumption of the service in the Temple and its rededication (1 Macc. 4:29). Two years later, the Syrians regained control of the city and thereby of the road to Jerusalem (1 Macc. 6:60). Their general *Bacchides rebuilt its fortifications, c. 160 B.C.E. (1 Macc. 9:52), but after a prolonged siege it was finally captured by the Hasmonean *Simeon son of Mattathias in the mid-forties of the second century B.C.E. and its defenses were strengthened. Remains of the Maccabean fortress, containing large rock-hewn cisterns, were uncovered in excavations conducted in 1931 and resumed in 1957. The city was destroyed and abandoned, apparently during *Vespasian’s campaigns, but as shown by the Madaba Map, it was reestablished in the Byzantine period, probably on the opposite hill, Khirbat Burj al-Šūr, whose ruins date from Crusader times.

[Michael Avi-Yonah]

BET-ZURI, ELIAHU (1922–1945), Jew executed in Egypt in the Mandate Period. Bet-Zuri was born in Tel Aviv. He became a member of *Leḥi after its secession from IZL. Together with Eliahu *Ḥakim he was sent by his organization to Cairo to assassinate Lord Moyne, then British minister of state for the Middle East, whose seat was in Cairo. The attempt was successful, but Bet-Zuri and Ḥakim were apprehended. They were sentenced to death by a military court in Cairo on Jan. 1, 1945, and executed on Mar. 22. Their remains were interred in the Jewish cemetery of Cairo.

°BEUGNOT, AUGUSTE ARTHUR (1797–1865), French lawyer, senator (1841), and delegate to the National Assembly (1848). Beugnot was keenly interested in the improvement of the situation of the Jews in France. In 1822, together with J.B. Capefigue and G.B. Depping he won a French Academy competition for a paper *Juifs d'occident, ou recherches sur l'état civil, le commerce, la littérature des Juifs en France, en Espagne et en Italie, pendant la durée du moyen âge* (Paris, 1824). Beugnot showed thorough knowledge of Jewish history and concluded his study with an exposition of the contributions of the Jews to the growth of European economies and culture. He asserted that whatever negative traits the Jews possess can be blamed on the Christians. In 1824 the Institute of Science, Agriculture, and Art in Strasbourg announced a competition under the patronage of an anonymous Jew, which had as its purpose to find “the most helpful ways in enabling the Jewish population of Alsace to enjoy the accomplishments of civilization.” Beugnot won first prize but his submitted work never appeared in print. A résumé of his “Quels sont les moyens les plus propres à faire jouir la population israélite de l'Alsace des bienfaits de la civilisation?” appeared in *Journal de la Société des Science, Agriculture et Arts du Département du Bas Rhin* (1 (1824), 114–6; 2 (1825), 297–320). He proposed that a council of Alsatian Jews be formed, under state sponsorship, to form committees for schools, publication of textbooks, experimental farms, trade, and charity. He argued that it was necessary to found a modern theological school and also proposed changing the Sabbath to Sunday.

[Noe Gruss]

°BEVAN, EDWYN ROBERT (1870–1943), historian and philosopher. He was educated at Oxford and became lecturer in Hellenistic history and literature at King’s College, London. Bevan’s main publications of Jewish interest are *The House of Seleucus*, 2 vols. (1902) and *Jerusalem under the High Priests* (1904), still a standard work. He also was coeditor (with Israel Abrahams and Charles Singer) of the *Legacy of Judaism* (19282), to which he contributed the article on Hellenis-

tic Judaism. Bevan was a close friend of Claude *Goldsmid-Montefiore and an active member of the Society of Christians and Jews. Paradoxically, his sister was the notorious conspiracy theorist Nesta Webster. His brother, ANTHONY ASHLEY BEVAN (1859–1933), taught Oriental languages at Cambridge University. His chief interests were Arabic and Hebrew and he wrote a commentary on the Book of Daniel (1892).

°BEVIN, ERNEST (1881–1951), British trade union leader and statesman. He was a member of the British War Cabinet in World War II (1941–45), and foreign secretary in the Labor government (1945–50) when Palestine was transferred de facto from the aegis of the Colonial Office to that of the Foreign Office. Bevin's Palestine policy was based on two premises: first, he felt that since the vast majority of the Middle East population was Arab, nothing should be done against their will, lest this set the Arab world against Great Britain and the West in their global struggle with the U.S.S.R. and Communism; second, he believed that Palestine could not essentially solve the Jewish problem as Jews should continue residing in Europe and contributing to its welfare. Rather than impose a Jewish state on the Arabs, he desired some kind of settlement between Jews and Arabs. In an attempt to obtain U.S. government approval for his Palestine policy, Bevin proposed appointing an Anglo-American commission whose task would be to plan a solution to the Palestine question. In the summer of 1946 he rejected the committee's proposals for the immediate admission of 100,000 Jewish refugees from Europe and the annulment of the provisos in the Macdonald White Paper restricting the acquisition of land by Jews. As a result, the situation in Palestine deteriorated, and Bevin began applying severe repressive measures against the *yishuv*. Leading members of the Jewish Agency and the Va'ad Le'ummi were arrested, "illegal" immigrants were deported to detention camps in Cyprus, and the *Exodus*, bearing 4,500 such immigrants, was shipped back to Germany. At the same time, Bevin proposed other ways of solving the problem. One of these was the cantonization of Palestine, better known as the Morrison Scheme, which allocated about 17% of the country to the Jews; another was the Bevin Plan to give the British government a five-year trusteeship over Palestine with the declared object of preparing the country for independence. On Feb. 15, 1947, after both plans had been rejected by Jews and Arabs, Bevin announced that he was referring the entire matter to the United Nations. As a result, the United Nations Special Committee on Palestine (UNSCOP) was appointed and, on Nov. 29, 1947, the UN voted to divide Palestine into a Jewish and an Arab State. Bevin gradually became reconciled to the idea of a Jewish state; in January 1949, eight months after the proclamation of the State of Israel, he granted it de facto recognition.

[Moshe Rosetti]

BEYTH, HANS (1901–1947), *Youth Aliyah leader. Beyth, who was born in Bleicherode, Germany, was active in his youth in the *Blau-Weiss Zionist youth movement. In 1935 he went to Palestine, where he worked as Henrietta *Szold's assistant in Youth Aliyah. His resourcefulness in rescuing and warmth in educating the Youth Aliyah wards made him an outstanding personality in the organization. He was instrumental in the establishment of Youth Aliyah institutions in communal settlements, and in the absorption of many wards into kibbutz life. Beyth was sent to Europe at the end of World War II to prepare the emigration and absorption of surviving Jewish children. In the last year of his life he arranged for the care of 20,000 wards. Beyth was murdered by Arabs in December 1947 while on his way home to Jerusalem from Haifa and Athlit, where he had been welcoming children on their arrival from a youth village in Cyprus.

[Arye Lipshitz]

BEZAH (Heb. בֵּזָה; "egg"), a tractate (so called after its opening word) of the order *Mo'ed*, in the Mishnah, Tosefta, Babylonian Talmud, and Jerusalem Talmud. The tractate deals with the laws of festivals, but whereas other tractates of the order *Mo'ed* deals with specific festivals, *Bezah*, in the main, discusses the laws common to festivals in general; for this reason this tractate is also called *Yom Tov* ("festival"). The tractate consists of five chapters in both the Mishnah and the Talmud, but of only four in the Tosefta. The first two chapters of the Mishnah consist chiefly of differences of opinion between Bet Shammai and *Bet Hillel (e.g. 2:7; 3:8; 5:5) but also includes traditions from the period of Jabneh (2:6). The Mishnah ascribes most of the halakhot to various *tannaim* who were disciples of R. *Akiva, but it also contains many anonymous mishnayot of later *tannaim* who were contemporaries of Judah ha-Nasi. *Bezah* in the Babylonian Talmud contains many teachings of Palestinian scholars who reached Babylon by way of the **nehutei*, but which do not appear in the Jerusalem Talmud. Conversely, the text of the tractate in the Jerusalem Talmud contains statements of Babylonian scholars which are not found in the Babylonian Talmud. *Bezah* contains many additions of the *savoraim* (26a, 27a, 35b), as well as older material revised by them. Aside from the regular editions and commentaries, one of the earliest commentaries on the Jerusalem Talmud has been preserved for *Bezah*, that of R. Eleazar Azikri, edited by Israel Francis (1967).

[Zvi Kaplan]

BEZALEL (Heb. בְּזַלְלֵל; “in the shadow [under the protection] of God,” cf. Ps. 91:1; similar to the Akkadian *ina-šilli-Bēl* (“in the shadow of Bel”), *ina-šilli-Nabû*, “in the shadow of Nabu,” and the like), son of Uri, son of Hur of the tribe of Judah; an expert in metalwork, stonecutting, and woodcarving. Moses appointed Bezalel head of the artisans who were employed both in the construction of the *Tabernacle and its equipment and in designing the priests’ vestments (Ex. 31:1–11; 36–39). He was assisted by *Oholiab son of Ahisamach the Danite, who was an expert craftsman and embroiderer (31–6; 35: 34–35).

The Bible views Bezalel’s construction of the Tabernacle and its equipment as the execution of a plan that the Lord detailed to Moses on the Mount (Ex. 25:9, 40; 26:30; 27:8; Num. 8:4). The idea that the Temple’s construction should be detailed according to a divine plan is also found in Ezekiel’s vision concerning Jerusalem and the Temple (40:2ff.). Similarly, the author of 1 Chronicles (28:19) asserts that the instructions for building the First Temple were given “in writing, by His hand.” Parallel notions are to be found in the literature of other nations as, for example, in the inscriptions of Gudea, king of Lagash, concerning certain structures he erected in his land, and in Babylonian inscriptions dealing with the temple of Marduk. Drawing upon Exodus 31:3, which describes Bezalel as being endowed with “... a divine spirit of skill, ability, and knowledge....” “Philo viewed Bezalel as a symbol of pure knowledge (II Gig. 23). He inferred from the name “Bezalel” that he knew God by seeing the divine shadow, that is, by seeing only God’s works, and not God Himself, as had Moses (ILA 3: 102).

[Yehoshua M. Grintz]

In the *Aggadah*

When Moses was instructed to erect the Sanctuary and fashion its vessels, God showed him the name of Bezalel written in the Book of the Generations of Adam (Gen. 5:1), in which are inscribed all the deeds of future generations, as the divinely appointed architect. Nevertheless he was told to obtain the approval of the Children of Israel for the appointment, in order to teach that no leader should be appointed without the consent of the people (Ber. 55a; cf. Jos., Ant., 3:104). At the side of Bezalel, who belonged to the aristocratic tribe of Judah, worked Oholiab, of the lowliest tribe, that of Dan, to show that before God “the great and the lowly are equal” (Ex. R. 40:4). God filled Bezalel with wisdom (Ex. 31:3) “because he already possessed wisdom,” since “God does not grant wisdom save to those who already have wisdom” (Tanḥ. Va-Yakhel, 2; Ber. 55a). Bezalel had five other names: Reaiah (“the seer”), Shobal (“the builder of the dovecote,” a synonym for the Tabernacle), Jahat (“the dreadful”), Ahumai (“the unifier of Israel”), and Lahad (“one who beautified Israel,” or “one who was near to the poor”; Ex. R. 40:4).

[Elimelech Epstein Halevy]

BIBLIOGRAPHY: Ginzberg, Legends, index.

BEZALEL, Academy of Arts and Design in Jerusalem. The Bezalel Academy of Arts and Design was founded in 1906

by Boris *Schatz, first named the Bezalel School of Arts and Crafts. It was named after the artist in charge of the construction of the *Tabernacle, Bezalel ben Uri (Ex. 31:1–5, 35:30–32). Schatz, who had a utopian vision, believed that the students would be able to help build a Third Temple in Jerusalem. In 1903 Schatz broached his idea to Theodor Herzl, and the decision to establish Bezalel was confirmed at the Seventh Zionist Congress (Basel, 1905).

From the beginning the institute contained three divisions: a school for painting, workshops, and the Bezalel Museum. In 1908, when the school moved to new premises it already taught 30 different crafts, such as silverwork, weaving, woodcarving, ivory inlaying, etc. In 1913 the number of students was around 500. In 1911–14 a separate branch for Yemenite goldsmiths operated in *Ben Shemen. The works of art created in the workshops were displayed by Schatz in Europe and New York as means of getting financial support.

The Bezalel style in crafts was a combination of Art Nouveau, the Oriental style, and the Art and Crafts Movement. Most of the objects were Judaica artifacts utilizing images from Jewish tradition, from the Bible as well as from the Zionist ideology (*Elijah’s Chair*, 1916–25, Israel Museum, Jerusalem).

Economic factors in the main caused the closure of the Bezalel institute in 1929. A basic argument about its artistic style was one of the reasons its influence on Israeli art declined. The leading opponents were a group of young artists from Tel Aviv who desired a connection with modern Western art styles such as Expressionism, Primitivism, and Cubism.

German-influenced teachers founded the New Bezalel in 1935, and it was directed in that spirit by Josef *Budko, Erich *Mendelson, and Mordecai *Ardon. At that time the influence of modernism and the aesthetics of the Bauhaus became dominant. Since the 1970s Bezalel has been the major institute for fine arts and design in Israel.

[Ronit Steinberg (2nd ed.)]

BEZALEL BEN MOSES HA-KOHEN (1820–1878), Lithuanian rabbi and unofficial rabbi of Vilna. At the age of 11, Bezalel already knew by heart two of the six orders of the Talmud; at 13, he had covered the entire Talmud and amazed his listeners with his original halakhic discourses. A sermon which he delivered before the rabbis of Vilna at the age of 18 was subsequently published in his *Reshit Bikkurim*. His novellae were collected in a work *Torat Yisrael* which is no longer extant. In 1843 although only 23 years of age, Bezalel was chosen as one of the rabbis of Vilna in succession to Joseph Shiskes. He soon became the leading “*moreh zedek*” of Vilna, an office equivalent to that of rabbi of the city. Bezalel was well versed in secular subjects, particularly mathematics and engineering. *Reshit Bikkurim*, responsa and comments on the *Sifra* (1868), reveals his extensive scholarship and his firm attitude in halakhic questions. His glosses on the Talmud, *Mareh Kohen*,

bearing the same title as his notes on *Yoreh De'ah*, were published in the Vilna edition of the Talmud (1884). His commentary on the *Sefer ha-Mitzvot* of Maimonides appeared in the Vilna edition of 1866. He also published a pamphlet entitled *Hora'at Hetter*, dealing with the permissibility of using *etrogim* from Corfu on Sukkot (1876). Many of Bezalel's responsa appear in the works of his contemporaries and a number of his writings are still in manuscript.

[Itzhak Alfassi]

BEZALEL BEN SOLOMON OF KOBRYN (17th century), preacher and author. Bezalel was active in Slutsk (Minsk region), Boskowitz (Moravia), and Przemysl. The following of his books are worthy of note: (1) *Pelah ha-Rimmon* (Amsterdam, 1659), consisting of 20 different expositions of various Midrashim; (2) *Ammudei ha-Shivah* ("Seven Pillars," Lublin, 1666), sermons on obscure Midrashim. The "Seven Pillars" are Abraham, Isaac, Jacob, Moses, Aaron, David, and Solomon, and each section has in its title a biblical verse containing the respective names of these worthies. In his introduction the author states: "I found favor in the eyes of the rulers and leaders of the country [Lithuania], who were moved to make a large contribution toward the publication of the book, and it also received the approbation of the Council of the Four Lands." Selections from the book were published by Joshua Abraham b. Israel of Zhitomir under the title *Nofet Zufim* (Lemberg, 1804). (3) *Korban Shabbat* (Dyhernfurth, 1691), homilies on the Sabbath precepts and customs, compiled from the halakhic authorities and works of Kabbalah. Other of his works are still in manuscript.

[Yehoshua Horowitz]

BEZEK (Heb. בֶּזֶק), place-name mentioned in the Bible. Saul mustered his army there before undertaking his campaign to relieve *Jabesh-Gilead, which was being besieged by the Ammonites under Nahash (1 Sam. 11:8). Bezek has been identified (following Eusebius, *Onom.* 54:8) with Khirbat Ibbiq, 15 mi. (24 km.) north of Shechem on the road leading to Beth-Shean. Its position on the road descending from the hill country of Ephraim to the Jordan Valley would explain its choice as a mobilization point.

A Bezek is also mentioned in Judges 1:4–5, as the place where the tribe of Judah defeated the Canaanites and Perizzites. Their dying overlord, Adoni-Bezek, was taken to Jerusalem. Attempts to locate this Bezek in the vicinity of Jerusalem have so far been unsuccessful. Some scholars accept its identification with the other Bezek, assuming that the tribe of Judah crossed the Jordan Valley in the direction opposite to that taken by Saul and then continued south to its inheritance.

[Michael Avi-Yonah]

BEZEM, NAFTALI (1924–), Israeli painter. Born in Essen, Germany, the youngest son of a Polish-Jewish immigrant family, Bezem immigrated to Eretz-Israel with the assistance of *Youth Aliyah. His parents were murdered in Auschwitz. In 1943 Bezem began his studies at the Bezalel Academy of Art and Design in Jerusalem under the guidance of Mordecai *Ardon, whom he adopted as a father figure. Later Bezem himself became a teacher in the institute. In 1949 he traveled with his wife, Hannah Liberman, to Paris and studied at the Centre d'Art Sacre, a Catholic art school specializing in modern sacred art. Over the years Bezem had many one-man shows and produced a number of reliefs for public buildings, wall paintings, stained glass, and tapestries. In 1975 his eldest son was murdered in a terrorist attack in Jerusalem's Zion Square. Bezem divided his life between Israel and Switzerland.

Besem's art was much involved in the history of Israel. Some of his art works are located in official institutes of the State of Israel, such as the ceiling painting in the President's Residence in Jerusalem and the metal relief at the Yad Vashem Holocaust Memorial in Jerusalem. In his symbolic style he integrated Jewish and Zionist contents with the formal requirements of these institutes.

During the years Bezem devised a symbolic language. The *beheaded fish* or the *rooster* were symbols of atonement and in the context of the Holocaust served as a symbol of the victim being sacrificed. *Boats with oars* were the means of transport by which he arrived to Israel; the forward motion symbolized progress with the boat a protective device. The *lion* was his characteristic symbol for Jewish objects and *stones* represented an old city on which a new city is built. The *Sabbath candles* symbolized the happiness of his childhood and the candles of his mother but also the light that went out when his son died.

For several years after the death of his son Isaac, Bezem, the mourning father, dedicated himself to the theme of Isaac's sacrifice (the **Akedah*). In these paintings he created an analogy between the sacrifice of the father and sacrifice of the son, without a ram for redemption.

[Ronit Steinberg (2nd ed.)]

BEZIDUL NOU (Hg. *Bözödújfalú*), village in Transylvania, Romania, inhabited by Szeklers, a distinctive ethnic group of Hungarian origin who speak a specific Hungarian dialect. In the 17th century it was an important center of the Sabbatarians, who practiced their religion mostly in secret. There were other centers of Sabbatarians in 18th century Transylvania, but they disappeared in the face of Christian hatred and enmity towards them. In 1868–69, after equal rights had been granted to Hungarian Jewry, the Sabbatarians, then numbering approximately 100, mostly poor farmers, openly practiced

Judaism. The seal of the community they established was inscribed the “Proselyte Community Congregation of Jeshurun.” At the beginning of the 20th century a few Jews by birth settled in the village and intermarried with the proselytes. In 1940 Bezidul Nou passed from Romania to Hungary and there followed a period of disaster because of the strong racial laws which existed in Horthiite Hungary. The authorities ordered the demolition of the synagogue; under pressure from the local Christian clerics and the Hungarian Horthiite authorities, most of the community became converted to Unitarianism. From 1940 the leaders of the congregation tried to obtain exemption for their members from the anti-Jewish racial laws. On Oct. 3, 1941, the Hungarian minister of justice signed an order enabling the descendants of Sabbatarians to obtain certificates of exemption. There were then 94 proselytes living in Bezidul Nou, while an additional 30–40 persons originating from the village or the vicinity also obtained certificates. These were still being issued by the Hungarian ministry of justice in spring 1944, a few days before the German occupation. When ghettos were established, the proselytes were deported to the Marosvasarhely ghetto together with the other Jews who lived in the region. Some of their leaders succeeded in reaching Budapest and obtained certificates for a small number already confined in the ghetto, who were subsequently released. Those who did not wish to accept the certificates were deported to *Auschwitz.

After World War II Bezidul Nou reverted to Romania; those who survived the Holocaust remained formally Christians, although some continued to follow Jewish observances. In 1960 they began to emigrate to Israel, where by 1968 they numbered approximately 50. Only five families, all aged persons, remained in the village in 1969, formally belonging to the Unitarian Church. But they observed the Sabbath and their wives lit candles on Sabbath eve as they had learned from their forefathers; they also maintained close contact with their relatives in Israel for some time. A small cemetery with a few hundred tombstones attests to the past existence of the community. The Hebrew inscription (*Ger Zedek*, “proselyte”) appears next to the name on many of the tombstones, most of which bear the *menorah* and a *Magen David*. Today these are almost the only memory of the existence of a specific Sabbatarian community among the Szeklers, though even today there are stories about these the “Jewish” predecessors.

[Yehouda Marton / Paul Schweiger (2nd ed.)]

BÉZIERS (Heb. בְּזִירָה; based on the Latin form), city in the department of Hérault, France. Natives of the city were known as בְּזִירָה normally transliterated as “Bedersi.” An estate near Béziers belonging to Jews (*Guardia Judaica*) is mentioned in a document of 990. In the 11th century, the Jews lived in both parts of the city, which was divided between the bishop and the count. They paid the count taxes on honey, cinnamon,

and pepper. The synagogue was built in 1144 or 1164 in the present rue de la Promenade. Its mosaic pavement, with Hebrew inscriptions and its foundation stone, were discovered in the first half of the 19th century. The cemetery was situated outside the city walls to the east and two Hebrew tombstones have been discovered there. A rue de la Juiverie recalling one of the medieval Jewish quarters still exists. Both the count and the bishop made use of Jewish commercial and financial agents. In 1160 the bishop abolished the ancient local custom of stoning the houses of the Jews on the Sunday before Easter. In return, the Jews undertook to pay an annual tax. Count Roger II was kindly disposed toward the Jews, even entrusting them with administrative functions. The Christian inhabitants of Béziers, who had *Albigensian leanings, were also, as a rule, favorably disposed. About 200 Jews were among the victims of the massacre of the Albigenses in Béziers in 1209. Most of the Jewish population had previously fled from the city. Some of the refugees settled in Narbonne; some apparently in *Gerona, Spain; an inscription apparently intended for the synagogue they founded there has been discovered in Gerona. The revenues formerly derived by the counts of Béziers from the Jews now went to the king. The bishop however retained his right, and even built a new synagogue in the part of the city under his jurisdiction in an effort to attract Jews from the area. In 1278, however, the king compelled him to destroy the synagogue and ordered the Jews who had moved to the bishop's territory to return.

Béziers was known to the medieval Jews as “the little Jerusalem.” Abraham *Ibn Ezra stayed there for some time in about 1155; he dedicated his *Sefer ha-Shem* to two scholars of Béziers. *Benjamin of Tudela, visiting the town in about 1165, remarked on “a congregation of learned men.” The best known of these are the liturgical poet Abraham b. Isaac *Bedersi, his son *Jedaiah ha-Penini, and *Meshullam b. Moses. The poets Eleazar Hanan Ezobi, Astruc of Béziers, and Meshullam Ezobi also lived in Béziers. Samuel Ibn *Tibbon lived there for some time. Solomon b. Joseph ibn Ayyub of Granada and Jacob b. Moses, translators of Arabic works into Hebrew, settled at Béziers.

The Jews were expelled from Béziers in 1306. An indication of the scope of the Jewish settlement there is provided by three deeds of sale which have been preserved concerning the subsequent liquidation of their real estate on the king's behalf. The documents mention at least 13 houses which had belonged to some ten Jews. In 1367 the community was renewed by an agreement made by a number of Jews with the bishop. The general expulsion of the Jews from France in 1394 again forced them to leave. During World War II, 300 Jewish refugees stayed in Béziers, where they had two prayer rooms at their disposal, until 1943. A new community was formed after the war which in 1968 comprised some 400 persons, mostly from North Africa.

[Zvi Avneri]

BIALA, town in W. Galicia, S. Poland, on the river Biala opposite the Silesian town *Bielsko with which it was amalgamated in 1950 to form Biala-Bielsko. The two were closely connected through their joint textile industry. In 1765 the Jews were expelled from Biala. Many of them subsequently returned and formed a community in conjunction with the Jews in the suburbs which until the middle of the 19th century remained under the jurisdiction of the Oswięcim community. A cemetery was established in 1849 and an independent congregation constituted in 1872. The Jews in Biala numbered about 2,600 in 1929. With the exception of the *hevra kaddisha* the charitable and cultural institutions were maintained jointly with those of the Bielsko (Bielitz) community. For Holocaust period see *Bielsko.

BIALA PODLASKA, town in Lublin province, Poland. The first mention of Jewish settlement in Biała Podlaska dates from 1621 when 30 Jewish families were granted rights of residence there. In 1841 there were 2,200 Jews out of a total population of 3,588; in 1897, 6,549 out of 13,090; in 1921, 6,874 out of 13,000., and in 1939, 7,439 (36.9% of the total population). The main Yiddish newspaper, *Podlasyer Leben* was published there between the two world wars.

Holocaust Period

On September 26, 1939, the Soviet army entered the town, but withdrew a month later when the Soviet-German boundary agreement was reached. About 600 Jews left the town together with the Soviet army. The remaining Jewish population was immediately subjected to Nazi persecution and terror. At the end of 1939 about 2,000 Jews from Suwalki and Serock were forced to settle here. A few months later about 1,000 Jewish prisoners of war who had served in the Polish army were brought to Biała Podlaska from the prison camp in Czarne near Chojna. Several score of them were murdered during the march on foot to Biała Podlaska. They were imprisoned on arrival in a forced labor camp and about a year later were transferred to a Lublin prisoner of war camp. During 1940 and 1941 further deportations to Biała Podlaska took place. Several hundred Jews from Cracow and Mława were dispatched there. As a result of all the “resettlements” the Jewish population in the town grew to about 8,400 in March 1942. At the end of June 1941 a number of Jews were sent to the concentration camp in *Auschwitz for giving bread to Soviet prisoners of war marching through the town. They were among the first Jewish victims to perish in Auschwitz.

On June 11, 1942, the first deportation from Biała took place. About 3,000 people were sent to *Sobibor death camp and exterminated. In late September and early October 1942, a second deportation was carried out in which the entire remaining Jewish population was sent to the ghetto in

Miedzyrzecz, and from there to *Treblinka death camp in November. Only 300 Jews were left in Biała Podlaska in a newly established forced labor camp. This was liquidated in May 1944 and all its inmates transferred to *Majdanek concentration camp, where only a few survived. Several hundred Jews fled to the woods during the deportations, but only about 30 of them survived in hiding until the liberation of the region in July 26, 1944. After the war the surviving Jewish remnant, together with a few hundred former residents who came back from the Soviet Union, tried to rebuild the Jewish community, but were forced to leave the town in the summer of 1946 because of antisemitic manifestations among the Polish population. In June 1946 Polish antisemites killed two young Jews and destroyed the monument which the Jewish survivors had erected in memory of the murdered Jewish community. Societies of former Biała Podlaska residents were active in Israel, the U.S., Argentina, France, Canada, and Australia.

[Stefan Krakowski]

BIALE, DAVID (1949–), U.S. historian of Jewish culture, religion, and politics. Biale was educated at Harvard University, the University of California at Berkeley, the Hebrew University, and UCLA, where he received his Ph.D. in history in 1977. He taught Jewish history at the State University of New York, Binghamton, and Graduate Theological Union in Berkeley, and from 1999 served as Emmanuel Ringelblum Professor of Jewish History at the University of California at Davis.

He is the author of a number of books, among them *Gershon Scholem: Kabbalah and Counter-History* (1979), *Power and Powerlessness in Jewish History* (1986), *Eros and the Jews: From Biblical Israel to Contemporary America* (1992), and is the editor of *Cultures of the Jews: A New History* (2002), a significant re-conceptualization of the entirety of Jewish history.

Biale’s work is characterized by attention to the broad sweep of Jewish history; while he is primarily a specialist in modern European Jewish history, his investigations took him to all periods and geographic centers. Especially significant is his edited volume, *Cultures of the Jews*, a work designed to re-focus the discipline of Jewish history on everyday matters, on the multifaceted interaction of Jews with their social and political environments, and on neglected groups within the Jewish community.

[Jay Harris (2nd ed.)]

BIALEH, ZEVI HIRSCH BEN NAPHTALI HERZ (1670–1748), German rabbi and *rosh yeshivah*. Bialeh was born in Lemberg. He served as rabbi of Biała (hence his name) and then as head of a yeshivah in Lemberg. In 1718 he was appointed to Halberstadt (hence his other appellation Zevi Hirsch Halberstadter) where he remained until his death. Because of his acumen he was also called Hirsch Ḥarif (“sharp”). He established a large yeshivah in the town and among its

pupils were such outstanding rabbis of the following generation as Akiva *Eger, Isaiah *Berlin, and Mordecai *Halberstadt. He refused to publish his novellae on the grounds that through the continual publication of works by *aḥaronim*, students would neglect the *rishonim*, but glosses and responsa by him can be found scattered in various works of his contemporaries. His works, which were published only after his death, are *Ateret Zevi* (1804), comprising responsa, sermons, eulogies, and novellae; *Kos Yeshu'ot* (1902), Part 1 novellae on *Bava Kamma* and *Shevu'ot*, Part 2 on *Bava Me'zia* and other material. He preferred to penetrate deeply into the understanding of the sources, stress the plain meaning of the Talmud, and avoid excessive *pilpul*. Five of his children were rabbis: Solomon Dov Berush in Glogau; Naphtali Herz in Dubno; Abraham in Rawicz; Samuel in Halberstadt; and Simḥah in Dessau. His brother, Israel b. Naphtali Herz (d. 1744) lived in Cleves, Offenbach, and Hanau. His talmudic novellae are contained in his brother's *Ateret Zevi*.

[Yehoshua Horowitz]

BIALIK, HAYYIM NAḤMAN (1873–1934), the greatest Hebrew poet of modern times, essayist, storywriter, translator, and editor, who exercised a profound influence on modern Jewish culture. Born in the village of Radi, near Zhitomir (Volhynia), Bialik's development as a poet was influenced by his environment – the simplicity and fervor of a folk spirituality – which characterized Volhynian Jewry, and the ḥasidic ambience, alive with mystic lore, in which it was steeped. His father, Isaac Joseph, came of scholarly stock and had been engaged in the family timber trade and in flour milling before coming down in life through his impracticality. For his father as well as his mother, Dinah Priva, this was a second marriage, both having been widowed previously. Despite his family's dire economic circumstances, Bialik retained many happy memories of the first six years of his childhood in Radi. In some of his best poems, “*Zohar*” (“Radiance,” 1901) and “*Ha-Berekhah*” (“The Pool,” 1905), attempting to recapture the lost paradise of childhood, he idealizes the enchanted hours which he spent romping in the dazzling light of the fields and in the secret shade of the forest. Others have fewer happy references and are marked by loneliness, parental neglect, and the almost narcissistic withdrawal of a sensitive, artistic child, e.g., the prose poem “*Safi'ah*” (“Aftergrowth,” 1908).

Childhood Period (1880–1890)

When Bialik was six, his parents moved to Zhitomir in search of a livelihood and his father was reduced to keeping a saloon on the outskirts of town. Shortly thereafter, in 1880, his father

died and the destitute widow entrusted her son to the care of his well-to-do paternal grandfather, Jacob Moses. For ten years, until he went to yeshivah in 1890, the gifted, mischievous Hayyim Naḥman was raised by the stern old pietist. At first he was instructed by teachers in the traditional *heder* and later, from the age of 13, pursued his studies alone. He was a lonely figure in the almost deserted house of study on the edge of town, for the expanding modernization of Jewish life had restricted the traditional study of Torah to a secluded nook. Passionate and solitary dedication to study shaped traits of character that Bialik was to exalt: “A fertile mind, lively logic, a trusting heart when the knee falters.” From this experience of his adolescence stems the sense of vocation of the chosen individual who dedicates his life to an ideal, sacrificing youth and the delights of the world in order to remain faithful to the last. This theme of vocation was to become central to Bialik's thinking and his poetry is a spiritual record of the paradoxical struggle to free himself from his calling and at the same time to remain faithful to it. During this period too his reading of medieval theology and Haskalah works stimulated ambitions for secular knowledge, moving him to seek a more comprehensive education. He dreamed of the rabbinical seminary in Berlin, and of acquiring the cultural tools that would give him entrance to modern European civilization.

Volozhin Period

Convinced by a journalistic report that the yeshivah of *Volozhin in Lithuania would offer him an introduction to the humanities, as well as a continuation of his talmudic studies, Bialik persuaded his grandfather to permit him to study there. In Volozhin, a center of *Mitnaggedim*, his hopes for a secular academic training were not fulfilled since the yeshivah concentrated only on the scholarly virtues of talmudic dialectic and erudition. For a short time Bialik immersed himself in the traditional disciplines. In some of his poems the image of his stern grandfather merges with the image of the uncompromising *rosh yeshivah*, becoming a symbol of the burning imperatives of traditional Judaism. In the end, however, modernist doubts triumphed over traditionalist certainties. Bialik began to withdraw from the life of the school and lived in the world of poetry. At this time, he read Russian poetry and started his acquaintance with European literature. During the following year in Volozhin and later in Odessa, he was deeply moved by Shimon Shemuel Frug's Jewish poems, written in Russian, and many of Bialik's early motifs echo him. His first published poem, “*El ha-Zippor*” (“To the Bird”), was written in Volozhin. In the yeshivah Bialik joined a secret Orthodox Zionist student society, Neẓaḥ Israel, which attempted to synthesize Jewish nationalism and enlightenment with a firm adherence to tradition. Bialik's first published work (in *Ha-Meliz*, 1891) is an exposition of the principles of the society and reflects the teachings of Aḥad Ha-Am's spiritual Zionism.

Aḥad Ha-Am's Influence

*Aḥad Ha-Am, whose thinking had a profound impact on Bialik and his generation, first began publishing his essays

in 1889. They provided a framework of ideas that helped his contemporaries translate their Jewish loyalties from a religious context into a modern, philosophically oriented humanist rationale for Jewish existence. Bialik recognized Aḥad Ha-Am as his great teacher. He wrote of this period, "... the day a new essay of Aḥad Ha-Am's appeared was a holiday for me." Bialik later wrote a poem in tribute to his mentor: "Receive our blessing for each seed of... idea/That you have sown... in our desolate hearts." But Aḥad Ha-Am also had an inhibiting influence on Bialik's poetic imagination. Preferring a classical and lucid style, Aḥad Ha-Am discouraged many of Bialik's ventures into more modernist or more experimental poetry.

First Stay in Odessa

The break with tradition occurred in the summer of 1891 when amid disruptions in the yeshivah, Bialik left for Odessa, the center of modern Jewish culture in southern Russia. He was attracted by the literary circle that formed around Aḥad Ha-Am and harbored the dream that in Odessa he would be able to prepare himself for the entrance to the modern Orthodox rabbinical seminary in Berlin. Penniless, alone, unemployed, and hungry, he earned a livelihood for a while by giving Hebrew lessons. He continued to study Russian literature, reading and admiring the poetry of Pushkin and Frug, as well as the stories and novels of Dostoevski and Gogol. He was tutored in German grammar and read works of Schiller and Lessing. At first the shy youth did not become involved in the literary life of the city but when he showed his poetry to Moses Leib *Lilienblum the latter commended the poem "*El ha-Zippor*" to Aḥad Ha-Am who passed it on to Yehoshua Ḥana *Rawnitzki to be published in the first volume of *Ha-Pardes* (1892, p. 219f.). The poem, a song longing for Zion written in the style of the poets of the Ḥibbat Zion era, was favorably received by the critics. During the six months he spent in Odessa, Bialik wrote several poems and made the acquaintance of prominent literary figures with whom he was to establish lasting relationships. He was especially close to Rawnitzki and their friendship was to develop into a unique collaboration in literary and publishing endeavors.

Return to Zhitomir

When Bialik learned, early in 1892, that the yeshivah of Volozhin had been closed, he cut short his stay in Odessa and hurried home in order to spare his dying grandfather the knowledge that he had forsaken his religious studies. On returning home he found that his older brother too was dying. Dejected by the whole atmosphere, which for him embodied the chronic despair and spiritual squalor of Jewish life, he wrote "You have not changed from what you were/Old oldness, nothing new/Let me join your company, my brothers,/Together we will rot till we stink" ("*Bi-Teshuvati*" ("On My Return"), 1892). Another poem of this period which is reminiscent of Frug "*Mi-Shut ba-Merḥakim*" ("From Wandering Afar") also develops the theme of unfulfilled return. The alienated son, full of youthful vitality, is repelled by the melancholy of a moribund traditionalist society. The death of

Judah Leib *Gordon, the last significant poet of the Haskalah period, in the summer of 1892, closed an era. Rawnitzki asked Bialik to compose an elegy for the second volume of *Ha-Pardes* (1893, p. 248f.), and he complied with "*El ha-Aryeh ha-Met*" ("To the Dead Lion"). Like other early poems, it still showed the influence of the Haskalah poets and was omitted from the collected poems. The elegiac mood characterizes a considerable part of Bialik's early work and tears are a recurring motif in the first volume of poems (1901). Before leaving Odessa he wrote "*Hirhurei Laylah*" ("Night Thoughts," 1892; "My song is a bottle of tears, a bottle of tears"), and in a later poem "*Shirati*" ("My Song," 1901) he describes his mother's tear falling into the dough she is kneading and it is this tear that enters his bones and is transformed into poetry.

1893–1896

In the spring of 1893, after the death of his brother and grandfather, Bialik married Manya Averbuch (d. 1972) and for the next three years joined her father in the timber trade in Korostyshev, near Kiev. Since business kept him in the forest for long stretches, he read widely and broadened his education considerably during this lonely period. At that time he wrote "*Al Saf Beit ha-Midrash*" ("On the Threshold of the House of Study," 1894) which predicts the ultimate triumph of Israel's spirit. While the themes of the poem, which poignantly speaks of the abandoned house of study, are vocation and return, the underlying priestly symbolism, relating to the Ninth of Av, the date on which the poem was written, endows the house of study with the universal metaphor of ancient ritual. In the hymn "*Birkat Am*" ("The Blessing of the People," 1894), written several months earlier, which is permeated by intricate allusions to Temple ritual, the poet metamorphoses the builders of Erez Israel into priests and Temple builders. Temple imagery seems to be a predominant symbol both of Bialik's thought and of his poetry and is a basic point of reference of his brilliant cultural interpretation of the two Jerusalems – the earthly and the celestial – in his address at the opening of the Hebrew University (1925).

1897–1900

In the spring of 1897, failing in business, Bialik found a position as a teacher in Sosnowiec, near the Prussian border. The pettiness of provincial life depressed him and he wrote several satires that were published under pseudonyms. During this period he started to write stories (e.g., "*Aryeh Ba'al Guf*," 1899) and to experiment with Yiddish writing. Some of his poems appear to reflect the life-affirming themes of the "new way" embraced by the writers of the 1890s, although Bialik remained wary of what he felt was the literary pretensions of its members. The poet's ire against Jewish apathy toward the rising national movement found expression in "*Akhen Ḥazir ha-Am*" ("Surely the People is Grass," 1897) in which he called out to the people, "Even when the horn be sounded and the banner raised/Can the dead awaken, can the dead stir?" Widely acclaimed, it was the first of his poems of wrath and reproof in which he speaks to the people in the tones of

prophetic visions. While biblical themes were not uncommon in the period, Bialik's unequaled mastery of the prophetic diatribe added a dimension of authenticity to his utterances, and he began to be considered the national poet. Other poems indicate his preoccupation with the implications of the First Zionist Congress. Welcoming the high tide of national enthusiasm, as in "*Mikra'ei Ziyon*" ("Convocation of Zion," 1898), he was at the same time faithful to Aḥad Ha-Am's spiritual ideology and wrote a satire against Herzl's political Zionism, "*Rabbi Zerah*" (1912), which, because of its tone of levity, Aḥad Ha-Am refused to print in *Ha-Shilo'ah*. "*Al Levav-khem she-Shamem*" ("On Your Desolate Hearts," 1897), his most profound response to the Zionist Congress, gives vent to Bialik's despair with contemporary Jewish life. In it he develops his own set of symbols which were to recur throughout his poetry; the cat, which first appears in "*Levadi*" (1902), as a symbol of boredom and despair; the sanctuary as the symbol of tradition; and the spark of fire, appearing in many poems in various forms (a burning coal or candle, a twinkling star, or flaming torch), representing the true ideal. "*Ha-Matmid*" ("The Talmud Student," 1894–95), his first long poem, apparently begun in Volozhin, was an immediate triumph. In the poem Bialik traces the inner struggles of the dedicated student who represses his natural inclinations and sacrifices life, movement, change, nature, and family for the ascetic study of Torah. This was an ideal figure who captured the imagination of the reader. He embodied the moral qualities that build societies and preserve cultures. The ability to sublimate for the sake of higher values was a basic idea in Bialik's conception of vocation. The key metaphor of the poem is, characteristically, the twinkling light.

Settling in Odessa

In 1900 Bialik finally succeeded in finding a teaching position in Odessa where he lived until 1921, except for a year's stay in Warsaw (1904), where he served as literary editor of *Ha-Shilo'ah*. He was drawn into the circle of writers and Zionist leaders that gathered around Aḥad Ha-Am, *Sholem Yankev *Abramovitch, and Simon *Dubnow. Other members of the group were Mordecai (Ben-Ami) Rabinowicz, Ḥayyim *Tchernowitz, and Alter Druyanov. As Bialik gained a reputation, young poets such as Zalman Shneur, Jacob *Fichmann, and Jacob *Steinberg went to Odessa to meet him. Working with Mendele, he translated the latter's "*Fishke the Lame*" into Hebrew from the original Yiddish. He had tried his hand at Yiddish poetry before leaving Sosnowiec and now his work with Mendele, a master in Hebrew and Yiddish literatures, turned him to Yiddish again. His realistic stories in Hebrew, "*Aryeh Ba'al Guf*" and "*Me-Aḥorei ha-Gader*" ("Behind the Fence," 1909), were influenced by Mendele's realism of style – indeed they came into being because Mendele had forged a new and pliant Hebrew idiom. Bialik's poetry, however, including the prose poem "*Safi'ah*," was relatively free of his mentor's influences. Together with Rawnitzki, Simḥah *Ben-Zion, and Elḥanan Leib Lewinsky he founded the Moriah Publishing

House which produced suitable textbooks for the modern Jewish school written in the spirit of Aḥad Ha-Am's educational ideals. In his dark rooms in Odessa Bialik created nature poems that evoke a childhood intoxicated with light (e.g., "*Zohar*," 1901). During this period also a self-imposed challenge to cast folk expression into Hebrew, only a literary language then, led the poet to write the first of a series of folk songs. In his first decade in Odessa he wrote poems of wrath in Yiddish ("*Fun Tsar un Tsorn*" ("Of Sorrow and Anger"), 1906) and in Hebrew ("*Ḥazon u-Massa*" ("Vision and Utterance"), 1911). Both were products of that critical period in Jewish life when the initial impetus of Zionism was retarded and other movements and ideologies, such as Yiddishism and territorialism, offered different solutions to national problems. When Bialik's first volume of poems appeared in 1901, Joseph Klausner hailed him as "the poet of the national renaissance." In 1902 he wrote "*Metei Midbar*" ("The Dead of the Desert"), a long descriptive poem whose motifs are taken from the legend that the generation of the Exodus did not die but slumbers in the desert. Gigantic in stature, they awaken from time to time to utter defiance against the divine decree which consigned them to their state of living death, and to fight for their own redemption. It may also reflect the universal predicament of modern man whose struggle for the right to determine his own destiny involves the desperate rejection of the divine imperative.

Kishinev

The Kishinev pogroms in 1903 deeply shocked the whole civilized world. Bialik, on behalf of the Jewish Historical Commission in Odessa, went to Kishinev to interview survivors and to prepare a report on the atrocity. Before leaving he wrote "*Al ha-Shehitah*" ("On the Slaughter," 1903) in which he calls on heaven either to exercise immediate justice and, if not, to destroy the world, spurning mere vengeance with the famous lines "Cursed is he who says 'Revenge/Vengeance for the blood of a small child/Satan has not yet created.'" Later he wrote "*Be-Ir ha-Haregah*" ("In the City of Slaughter," 1904), a searing denunciation of the people's meek submission to the massacre, in which he is incensed at the cowardliness of the people, bitter at the absence of justice, and struck by the indifference of nature – "The sun shone, the acacia blossomed, and the slaughterer slaughtered."

Influence of Warsaw

In 1904 Bialik became the literary editor of *Ha-Shilo'ah* and moved to Warsaw, where, among the members of the circle of Isaac Leib *Peretz, he found a lighter mood. They were less cautious and less involved with higher principles than the Odessa group. In Warsaw he wrote several memorable love poems. The symbolist emphasis of Peretz may have influenced the poem "*Ha-Berekhah*" ("The Pool," 1905), most of which was written during the Warsaw stay. The pool, guarded by the forest, reflects the changing moods of nature and the observer, meditating on the "riddle of the two worlds," objective reality and reality as it is reflected in the pool, ponders which

is primary – the external manifestation, or the inner conception of the soul (of art). This was Bialik's most prolific period and "*Ha-Berekhah*" was followed by his most enigmatic and experimental work, "*Megillat ha-Esh*" ("The Scroll of Fire," 1905). The work is a prose poem which fuses elements drawn from Jewish legend (*aggadah*) and Jewish mysticism. Its overt theme is the destruction of the Temple and of Jerusalem, and the exile which followed. The destruction of the Temple appears to represent the destruction of the poet's soul on one level and that of the religious faith of an entire generation on the other. The youths, marooned on the island, as they are transported into exile may symbolize spiritual isolation; at the same time the two youths represent the struggle between faith and despair which is the poem's central theme. The chosen youth himself is caught between the call to preserve the last spark of redemption and the lure of *eros*, the girl. Torch in hand, he moves toward the girl and plunges into the abyss.

Silence

After "*Megillat ha-Esh*" Bialik fell into a period of silence, writing few poems and becoming occupied with manifold cultural activities: public lectures, essays, criticism, translating, and editing. The growing tension and the stark dichotomies in his poetry point to an inner crisis; the lonely poet can no longer find solace either in his individual talent or in his God. The radical split of personality in the autobiographical prose poem "*Safiah*" (1908), in which the child's inner self is abandoned by its double, who accompanies the crowd, marks the farthest development of Bialik's ambivalent attitude to tradition and religion. Baruch Kurzweil has shown that the change in the motif of return in "*Lifnei Aron ha-Sefarim*" ("Before the Book Case," 1910) marks a turning point in Bialik's poetry. The poet desperately realizes that his attempt to return and to repent fails because there is no one to return to, and no condition of dialogue with God or the world. The flame of the study candle has died, the people's past is a graveyard that offers nothing, and the returning son, despairing, welcomes death and departs. Bialik's poetry now becomes acutely personal. The poet, sensing his strangeness in the world, retreats and longs for death. Having lost the purity of childhood and the grace of the chosen, he is preoccupied with death – a broken, useless twig, dangling from its branch ("*Zanah lo Zalzal*" ("A Twig Fell"), 1911). Before his death Bialik wrote the cycle "*Yatmut*" ("Orphanhood" poems, c. 1933) in which the existential predicament is fused with the poignancy of his own orphaned childhood.

Berlin and Palestine

Bialik lived in Odessa until 1921 when Maxim Gorki interceded with the Soviet government to permit a group of Hebrew writers to leave the country. Bialik went to Berlin, which had become a center of Jewish émigré writers, engaging in publishing and editing, until he settled in Tel Aviv in Palestine in 1924 where he spent the rest of his life. He died in Vienna where he had gone for medical treatment.

Essays

A series of essays written between the years 1907 and 1917 secures Bialik's place as a distinguished essayist. In it he charts the course of modern Jewish culture: the state of Hebrew literature, the condition of Hebrew journalism, the development of language and style, the existential function of language, and the role of authority in culture. "Ha-Sefer ha-Ivri" ("On the Hebrew Book," 1913) propounds his basic idea of selecting and collecting the best of classic Jewish literature.

Cultural Role

After 1905, he became more active in public affairs, devoting his abundant vigor, vision, and charm to the preservation and advancement of Jewish culture. He participated in Zionist Congresses (1907, 1913, 1921, and 1931) and the Congress for Hebrew Language and Culture (1913). His cultural missions took him to the United States (1926) and to London (1931). From 1928 on, ill health forced him to spend his summers in Europe and these trips became occasions for the promotion of Jewish culture. He was active in the work of the Hebrew University, served as president of the Hebrew Writers Union and of the Hebrew Language Council, and initiated the popular *Oneg Shabbat*, a Sabbath study project.

Editor and Translator

Bialik was the literary editor of several periodicals, *Ha-Shilo'ah* (1904–09), *Keneset* (1917), and *Reshumot* (1918–22), and he founded *Moznayim* in Palestine (1929). Together with Rawnitzki he compiled a selection of rabbinic lore, *Sefer ha-Aggadah* (1908–11) and the collected works of the medieval poets Solomon ibn *Gabirol (1924) and Moses *Ibn Ezra (1928). In 1932 he published a commentary to the first order of the Mishnah. His masterful translations of *Don Quixote* (1912) and *Wilhelm Tell* (1923) are an integral part of his work. After his death some of Bialik's lectures and addresses were collected in *Devarim she-be-Al Peh* (2 vols., 1935) and part of his huge correspondence was published in *Iggerot* (5 vols. 1938–39).

For English translations of his work see Goell, Bibliography, index.

Evaluation

Bialik's literary career is a watershed in modern Hebrew literature; when he arrived on the scene, Hebrew poetry was provincial and by and large imitative. It could not free itself of the overwhelming biblical influence which had dominated it for centuries and, except for the poetry of a few, the stylized florid biblical *melizah* (ornate phrase) had a stifling effect on the creativity of the Haskalah poets. At the same time most of these poets slavishly imitated in subject and in genre the European models – mainly German romantic poetry. Bialik, who more than any other Hebrew poet since *Judah Halevi had a thorough command of Hebrew and the ability to use the many resources of the language, forged a new poetic idiom which enabled Hebrew poetry to free itself from the overwhelming biblical influence and yet, at the same time, retain its link with "the language of the race." While his Hebrew remained

learned and “literary,” he anticipated the conversational verse which was to become the hallmark of the Palestinian poets (e.g., in his folk poems and children’s verse). Not an experimenter, Bialik nevertheless opened new vistas when on rare occasions he abandoned the accepted accented syllabic meter for purely biblical cadences, or when he developed the Hebrew prose poem. While he wrote his serious verse in the Ashkenazi accent, he was among the first to try out the Sephardi accent in his children’s verse. He freed Hebrew poetry from its didactic and propagandistic tendency. Although his works are often filled with fervent Jewish hopes, memories, and ideals, content is always subordinate to aesthetic criteria. Early Bialik criticism invariably reads all his poems as expressions of national ideas, but many of his poems are purely lyrical and have been misinterpreted by critics whose love of ideals exceeded their literary taste. Lyric poems like “*Zanaḥ lo Zalzal*” or “*Im Dimdumei ha-Ḥamah*” are among the finest in Hebrew literature. Bialik’s dominant theme is the crisis of faith which confronted his generation as it broke with the sheltered and confined medieval Jewish religious culture of its childhood and desperately sought to hold on to a Jewish way of life and thought in the new secularized world in which it found itself. He adopted the ethico-humanist reading of Judaism which was proffered by Aḥad Ha-Am, but as Kurzweil has pointed out, he often had grave misgivings as to its efficacy in bridging the traditional and the modern. His doubts find conscious and unconscious expression in his writings. Despite his moments of despair, Bialik did not completely abandon the Aḥad Ha-Amian hope of reconciling modernism with tradition within the context of a new national Jewish culture (Kurzweil’s view on this is to the contrary).

Bialik’s poetry, growing out of the cultural milieu of Eastern European Jewry in a particular area, is in a sense regional, but because of its great artistic merit has become the concrete expression of the general crisis of faith which faced an entire generation of Europeans. His poetry can be read on three levels: the individual, the Jewish, and the universal. As an individual, the poet emerges as a sensitive artist who seeks to preserve the purity of his “calling” in the face of the materialism and the erotic drive of modern man. He loses his purity as he leaves the security of his childhood Eden and vainly attempts to recapture it. At times he is not sure whether his preoccupation with society, with his people and its ideals, may not actually hinder his self-fulfillment as an artist. On the Jewish level, the poet becomes the spokesman of his generation. Born in the pious world of the East European Jewish town, he is cast into a secular materialist world which questions the old values. He strives to reconstruct a way of life in which he can survive as a Jew and thus fulfill Judaism’s historical mission. On the universal level, the poet, a product of a preindustrial rural world, is driven into the secular city, driven out of the Eden of good order and faith. He is left to agonize about his loneliness, his barrenness, and his ultimate death.

Searching out new and further vistas yet rooted in the rich Jewish heritage, Bialik is both the product and the domi-

nant motivator of the cultural revolution of his age, embodying its very essence – to carve out of the past the foundation on which the people might build with dignity in the future. In answering the silent cry of a people needing articulation in a new era, he has gained its permanent recognition. As a poet his genius and spirit have left an indelible imprint on modern Hebrew literature.

BIALKIN, KENNETH J. (1929–), U.S. lawyer. Born in the Bronx, N.Y., to immigrant parents, Bialkin graduated from the University of Michigan in 1950 with a degree in economics and then earned a J.D. degree from Harvard in 1953. His law practice encompassed a broad range of corporate and securities law matters, first when he was senior partner in the law firm of Willke, Farr & Gallagher and then with Skadden, Arps, Slate, Meagher & Flom. At the same time, he taught securities law at New York University School of Law for 18 years and became involved in a number of Jewish organizations. As such he was frequently quoted in the press on issues of Jewish interest. He was national chairman of the Anti-Defamation

League; president and chairman of the American Jewish Historical Society, president of the Jewish Community Relations Council of New York; chairman of the Conference of Presidents of Major American Jewish Organizations, and chairman of the America Israel Friendship League. He also served for 30 years as vice chairman of the Jerusalem Foundation.

In his law practice, Bialkin represented insurance companies, broker-dealers, investment bankers, and other financial institutions. In 1998 he represented Travelers Group in its merger with Citicorp. The year earlier, he represented Travelers in its acquisition of Salomon Inc., and he represented the stock exchange Nasdaq in its restructuring to separate it from the NASD in 2000 and 2001. He was involved in some of the largest insurance company mergers and acquisitions in the United States, including the Metropolitan Life Insurance Company in its merger with New England Mutual Life Insurance Company. He also represented Travelers Group in its \$4 billion acquisition of Aetna's property-casualty operations.

Bialkin is a former editor of *Business Lawyer* magazine and was chairman of the American Bar Association's committee on federal regulation of securities. His wife, Ann Bialkin, who earned a master's degree in social work from Columbia University, established Elem (a Hebrew acronym for "youth in distress"), a foundation that assists teenagers in Israel who commit crimes or use drugs and who are apparently overlooked by the judicial system.

In recognition of his 16 years as a member of its board of directors, Citigroup established the Kenneth J. Bialkin/Citigroup Public Service Award at the American Jewish Historical Society.

[Stewart Kampel (2nd ed.)]

BIALOBLOCKI, SAMUEL SHERAGA (1888–1960), talmudic scholar born in Pilwizki (western Lithuania). Bialoblocki studied for many years at the Lithuanian yeshivot of Telz, Slobodka, and Ponevezh; at the last he studied under Isaac Jacob Rabinowitz and Isaac *Blaser. After World War I he entered the Bet Midrash Elyon of Ḥayyim *Heller in Berlin. He also attended various universities and graduated from Giessen with a thesis on *Materialien zum islamischen und juedischen Eherecht...* (1928) and became instructor in modern Hebrew. Between 1928 and 1934 he was one of the contributors on talmudic subjects to the German *Encyclopaedia Judaica*. With the advent of the Nazis he emigrated to Palestine where first he taught at the Mizrahi Teachers' Training College in Jerusalem but later ventured into the real estate business, though continuing to devote most of his time to his studies. When Bar-Ilan University was opened in 1955, Bialoblocki was appointed head of its Talmud department; he also served as chairman of the university's Senate.

Bialoblocki, though a profound scholar of vast erudition, did not publish much; his importance lay chiefly in his influence as a teacher. His method, both in teaching and writing, expressed a spirit of conservative criticism. He began to prepare an anthology of early commentaries on the

Talmud with notes on the variants and sources for the Mak-hon ha-Talmud ha-Yisre'eli ha-Shalem, of which a first part was published posthumously (*Bar Ilan, Sefer ha-Shanah*, 2 (1964), 65–69). In Germany he published his *Beziehung des Judentums zu Proselyten und Proselytentum* (1930, Heb. tr., 44–60). Various learned articles of his appeared in: *Keneset*, 6–8 (1942–44); *Yovel Shai...* S.J. Agnon (1958); and *Alei Ayin (Sefer Yovel...* S. Schocken 1952). He contributed the article on Personal Status (*Ishut*) to the *Encyclopaedia Hebraica*. Bialoblocki also contributed articles on the Torah centers in Lithuania and on his teacher I.J. Rabinowitz in: *Yahadut Lita*, 1 (1960), 185ff., 394ff.

BIBLIOGRAPHY: H.Z. Hirschberg and S.J. Agnon, in: *Bar-Ilan, Sefer ha-Shanah...*, 2 (1964), 7–43 (Eng. summaries); Ungerfeld, in: *Ha-Zofeh* (Jan. 2, 1970).

[Yehoshua Horowitz]

BIALOBLITZKY (Bialloblotzky), CHRISTIAN HEINRICH FRIEDRICH (1799–1869), hebraist and missionary. Bialoblotzky converted to Christianity as a young man and studied ecclesiastical history and philosophy at Goettingen, where he also was active as preacher. He traveled in Asia and Africa on behalf of different Protestant missions, and after serving as head of a private school in England, became lecturer at the University of Goettingen. Among his published works are *Das Biblische Unterrichtswesen* (1828); *The Chronicles of Joseph b. Joshua Meir the Sephardi* (2 vols., 1835–36), a translation with introduction and notes of Joseph *ha-Kohen's *Sefer Divrei ha-Yamim*; a Hebrew lexicon, *Ozar ha-Shorashim (Lexicon radicum hebraicarum, 1843)*, in Hebrew and Latin as well as in Hebrew and English; and *Psalms* (first book 1846), Hebrew, Greek, and English, as part of Origen's *Hexapla*.

ADD. BIBLIOGRAPHY: K.H. Voigt, in: F.-W. Bautz (ed.), *Biographisch-Bibliographisches Kirchenlexikon* 15 (1999), 132–42; N.M. Railton, "Transnational Evangelicalism: The Case of Friedrich Bialloblotzky 1799–1869," in: M. Brecht et al. (eds.), *Arbeiten zur Geschichte des Pietismus*, 41 (2002).

BIALOSTOTZKY, BENJAMIN JACOB (1893–1962), Yiddish poet, essayist, and folklorist, born in Pumpenai (Pumpian), Lithuania. Bialostotzky was the son of the famed "Posvoler Maggid." He immigrated to the United States in 1911 and studied at the City College of New York. From 1914 a member of Poale Zion, he helped found Yiddish schools, was active in various organizations, co-edited Yiddish journals and, from 1922, wrote for the Yiddish daily *Forverts*. His works were first collected in *Lider un Eseyen* ("Poems and Essays," 1932). In 1953 he edited the memorial volume for the poet David *Edelstadt. His own volume of poetry *Lid tsu Lid* ("Poem to Poem," 1958), includes his bibliography by E.H. Jeshurin. His folklore studies resulted in several collections of legends: *Fun Golus Bovl bis Roym* ("From the Babylonian Exile to Rome," 1949), *Di Mesholim fun Dubner Magid* ("Parables of the Maggid of Dubno," 1962); *Yidisher Humor un Yidishe Leytsim* ("Jewish Humor and Jewish Jesters," 1963).

[Melech Ravitch]

BIALYSTOK (Rus. **Belostok**), industrial city in N.E. Poland; latterly one of the principal Russian/Polish Jewish centers; incorporated into Russia between 1807 and 1921 and administered by the U.S.S.R. between 1939 and 1941, reverting to Poland in 1945. Originally the Bialystok community formed part of the *Tykocin (Tiktin) community. Jewish settlement in the village of Bialystok was encouraged by the manorial overlords, the counts of Branicki. In 1745 the Bialystok community became self-governing, although remaining within the Tykocin province. The heads of the Jewish community were permitted to take part in municipal elections in 1749. In 1759 the Jews had to contribute two-thirds of the funds required to provision the armies in transit through Bialystok. The character of the craft guilds explicitly admits Jewish membership. Communal affairs were regulated by the counts in 1749 and 1777. By 1765, there were 765 Jews living in Bialystok. (See Table: Jewish Population of Bialystok, 1765–1948.)

The Jewish Population of Bialystok, 1765–1948

	Absolute Numbers	Percentages
1765	765	22.4
1808	4,000	66.6
1856	9,547	69.0
1861	11,873	69.8
1895	47,783	76.0
1910	52,123	68.5
1913	61,500	68.6
1929	43,150	47.8
1932	39,165	60.5
1936	42,880	43.0
1945	1,085	n.a.
1948	660	n.a.

The position of the Jews deteriorated when Bialystok passed to Prussia (1795), and subsequently to Russia. Its situation on the western border was favorable for developing trade with Russian markets, however, and the Jews were able to earn a livelihood as army purveyors or importers of tea and other commodities. The economic situation deteriorated when there was an influx of Jews expelled from the neighboring villages in 1825–35 and 1845, under the 1804 discriminatory legislation (see *Russia), who crowded into Bialystok. There was a steep increase in the Jewish population which in 1856 numbered 9,547 out of a total population of 13,787, many of them homeless or unemployed. Welfare institutions were established in an attempt to alleviate matters.

The development of the large textile industry in Bialystok after the Napoleonic wars owes much to Jewish enterprise. A number of the soldiers from Saxony were expert weavers and spinners who settled in Bialystok and established workshops largely financed by Jews; textile mills were erected by two Jews

in 1850. As they acquired spinning, weaving, knitting, and dyeing skills, Jews replaced the German specialists. In 1860, 19 of the 44 textile mills in Bialystok were Jewish owned, with an output valued at 3,000,000 rubles; in 1898, of the 372 mills in Bialystok, 299 (80.38%) were Jewish owned, while 5,592 (59.5%) of the workers were Jewish. Of the total output of the Bialystok mills for this year, valued at 12,855,000 rubles, the Jewish share amounted to 47.3%.

The Jewish labor movement found strong support in Bialystok, and in 1897 many Jewish workers there became members of the *Bund. The Bialystok Jewish workers issued an underground newspaper, *Der Byalistoker Arbayter*, the same year. The intensive activities of the labor movement in Bialystok during the Russian revolution of 1905–06 provoked savage acts of reprisal by the Russian authorities. The *pogroms in Bialystok that occurred between June 1 and 3, 1906, were the most violent of the mob outbreaks against Russian Jewry that year, resulting in 70 Jews being killed and 90 gravely injured. The commission of inquiry later appointed by the Duma to investigate the circumstances surrounding the pogrom held both the local police and the central authorities to blame for the tragedy. A prolonged crisis in Bialystok's trade and industry followed.

The contacts with German Jewry during the period that Bialystok was governed by Prussia had introduced the spirit of Enlightenment (*Haskalah) into Jewish circles in Bialystok. Prominent in the movement were members of the *Zamenhof family; Abraham Schapiro, author of *Toledot Yisrael ve-Sifrut* (1892); Jehiel Michael Zubludowsky, a contributor to *Ha-Karmel* and author of *Ru'ah Hayyim* (1860); and the poet Menahem Mendel *Dolitzki. A Hovevei Zion group was formed in Bialystok in 1880. Zionism in its manifold ideological ramifications subsequently gained numerous supporters. The Bialystok Zionists were led by Samuel *Mohilewer, and later by Joseph *Chasanowich. Rabbis living in Bialystok in the 19th century included Aryeh Leib b. Baruch Bendit (1815–20), author of *Sha'agat Aryeh*; Yom Tov Lipmann Heilpern (1849–79); and Samuel Mohilewer (1883–98).

Modern Jewish elementary schools, such as the modern *heder* (*heder metukkan*), a girls' school, and institutes for commerce and crafts were founded while Bialystok was part of Russia; the language of instruction was Russian, but Hebrew was also taught. The first Hebrew kindergarten was founded in 1910. Hebrew elementary and high schools were established after World War 1.

In 1895 the Jewish population numbered 47,783 (out of 62,993). Of the 3,628 merchants and shopkeepers in the city in 1897, 3,186 (87.8%) were Jews. In 1913 the Jewish population numbered 61,500 (out of 89,700). In 1921, 93% of the businessmen were Jewish, and 89% of the industrial plants were Jewish owned; later the proportion of Jews in business decreased (to 78.3% in 1928). In 1932 there were over 39,165 Jews (out of 91,207) in Bialystok.

[Nathan Michael Gelber]

dustrialist, Oskar Stefen; Jews were also employed in various German enterprises outside the ghetto. Two thousand persons were employed by the Judenrat, not including those in charge of the ghetto's economic enterprises. Over 200 men served in the "Jewish Police." The Judenrat maintained important departments: industry and artisans, labor, finances, and supply; its other departments dealt with health, welfare, housing, culture, and vegetable gardening for staples for a small segment of the ghetto; in the main, however, the Judenrat concentrated on factories engaged in war production in the hope of thus prolonging the survival of the ghetto inhabitants. The deputy chairman of the Judenrat, Barash, knew the truth about the deportations and death camps and had also read German documents containing plans to liquidate the ghetto. Nevertheless, up to his last day, he trusted in the idea that the inmates' hard work and economic "usefulness" would delay their destruction or even save them. Most of the inhabitants of the ghetto trusted Barash and shared his illusions. He stayed at his post until he was deported to Majdanek and murdered.

The Germans embarked upon the liquidation of the Jews on Feb. 5–12, 1943, when the first *Aktion* in the ghetto took place. The Jews were dragged from their homes and hiding places. One thousand of them were killed on the spot, while 10,000 were deported to Treblinka death camp. The period following the first *Aktion* was marked by Jewish underground preparations for armed resistance in the event that the deportations would be resumed. At this time the local German authorities, who were interested in prolonging the existence of the ghetto for economic reasons, were negotiating with the Berlin and Koenigsberg authorities on the date for the liquidation of the ghetto. The differences of opinion were resolved in the latter's favor, leading to the final destruction of the ghetto on Aug. 16, 1943.

RESISTANCE. An underground came into existence in the early days of the ghetto and expressed itself mainly through sabotage acts at the members' places of work. It lacked, however, a uniform plan of action and a clear idea of its aims. Finally, in November 1942, Mordecai *Tenenbaum (Tamaroff), sent by the *Warsaw Jewish Fighting Organization to organize resistance in Bialystok Ghetto, arrived in the city and gave the movement direction. The underground's main problems were the lack of arms and disunity in the ranks. The ghetto stood alone in its struggle, for no help could be expected from the Polish underground. Arms had either to be stolen from the German armories or purchased at high prices outside the ghetto; only the hand grenades were of home manufacture.

In the early stage, Barash supported the ghetto underground and supplied it with finances and information through Tenenbaum. Barash also passed on copies of the Judenrat's minutes and proclamations as well as copies of German documents for the underground's secret archives. These archives were established by Tenenbaum on the model of the *Ringelblum *Oneg Shabbat* archives in the Warsaw Ghetto. Tenen-

baum wrote a great deal himself and also collected diaries, depositions, historical articles, folklore, and Judenrat and German documents. These archives were hidden outside the ghetto and uncovered after the war; most of its contents are now in the custody of *Yad Vashem in Jerusalem. Until January 1943, the Bialystok underground maintained regular contact with the Jewish Fighting Organization in Warsaw, *Vilna, and other ghettos.

Barash supported the underground, however, only as long as the Germans were unaware of its existence. When the first *Aktion* took place, in February 1943, the underground was not yet ready. However it stepped up its activities. The men were trained in the use of arms, more weapons were acquired, and attempts were made to establish contact with the partisans in the forests. Several sentences of death were also carried out on Jews who acted as informers or otherwise cooperated with the Gestapo. The ghetto youth were greatly attracted to the forests, where there was a chance of fighting and personal salvation. Three small groups left the ghetto for the forests (January, March, and June 1943). But the Jewish partisan groups there were in a difficult situation, for they had few arms, and there was no Soviet partisan activity in the vicinity in this period. The ghetto therefore remained the base for the provision of food, medical aid, clothing, and arms to the small number of Jewish partisans.

One of the weaknesses of the underground, disunity, stemmed from differences in the members' political background and views on the underground's character and goals. Some were convinced that the minimum conditions necessary for military operations could not exist inside the ghetto, and that in fighting in the forests, side by side with the other partisans, the Jews could contribute to the common struggle against the Nazis. Tenenbaum on the other hand, adhered to the view that the underground had to concentrate on the struggle inside the ghetto, and that only after they had carried out this national duty could the members of the underground continue the struggle in the forests. It was not until July 1943, after the break with the Judenrat chairman, that the various underground movements in the ghetto united, on the basis of Tenenbaum's views, in a united fighting organization. Tenenbaum was elected its chairman, and Daniel Moszkowicz deputy chairman. Other prominent members of the underground were Zerach Zylberberg, Hershel Rosenthal, Haika Grosman, and Israel Margulies.

The united Jewish underground called upon the Jews to disregard the orders for deportation, and join the active resistance. Most of the Jewish population, however, stupefied by the Germans' surprise attack, which launched the final liquidation of the ghetto on Aug. 16, 1943, obeyed the orders given. The Germans were aware of the existence of the underground and therefore made careful secret preparations for the *Aktion*, for which a special commando unit from *Lublin was brought under the command of Odilo *Globocnik. The Jewish Fighting Organization tactics were to open battle, prevent the Jews from leaving the ghetto for the deportation trains, break

through the German ranks, and seek refuge in the forests. German fire, however, supported by tank action, crushed the rebellion. After a day of fighting, 72 fighters retreated to a bunker in order to organize their escape to the forests. The Germans discovered the bunker and killed all the fighters, with a single exception. The ghetto fighters held out for another month, and night after night the gunfire reverberated through Bialystok. The commanders, Tenenbaum and Moszkowicz, presumably committed suicide when the revolt was quashed. A month later the Germans announced the completion of the *Aktion*, in which some 40,000 Jews were dispatched to Treblinka and Majdanek. The members of the Judenrat were among the last group to be deported. A few dozen Jews succeeded in escaping from the ghetto and joined the partisans in the forests. The revolt made a deep impression upon the Poles and the Germans. After the ghetto's liquidation, six Jewish girls remained who had posed as "Aryans." They acted as underground couriers, and now helped those who escaped to reach the partisans. After suffering many losses, the Jewish partisans in the forests united to form a single group, "Kadimah." They in turn were absorbed into a general partisan movement led by Soviet parachutists at the end of 1943.

After the war there remained 1,085 Jews in Bialystok, of whom 900 were local inhabitants, and the rest from the neighboring villages. Of the ghetto inhabitants 260 survived, some in the deportation camps, others as members of partisan units. The community presumably dwindled and dissolved.

BIARRITZ, coastal town in southwestern France. The Jewish community dates to the beginning of the 17th century. In 1619, after disorders in St. Jean-de-Luz, many *Marranos left that town to settle in Biarritz; according to the contemporary Pierre l'Ancre they numbered 2,000. In the census of Jews taken in 1942, 168 families were registered in Biarritz. The present synagogue, built in 1904, contains the Torah scrolls, the Ark, and the silver candelabrum from the former synagogue of Peyrehorade. In 1968, the Biarritz community had 150 members, many of whom originated from North Africa.

[Roger Berg]

BIBAGO, ABRAHAM BEN SHEM TOV (15th century), Spanish scholar, religious philosopher, commentator on Aristotelian works, and preacher. His name is also spelled Bivach. Bibago was born in the province of Aragon. He first resided in Huesca, where, in his youth, he completed a commentary on Aristotle's *Posterior Analytics*, and where there is reference to his having a wife and children (1446). Bibago seems to have been forced out of his community; in his own words, "for they suspected me for my studying the books of the Greeks ... and I was wandering and alone, away from my land and the place of my desire, exiled among the nations." Bibago presumably outgrew or overcame his reputation as a radical. In 1465 he participated in the conversion of a Maranno in Huesca. He later settled in Saragossa, where he was head of the yeshivah (c. 1470), and preached publicly on Sabbaths and festivals. He engaged in numerous disputations with Christian scholars at the court of Juan II, king of Aragon, on the Trinity and other Christian tenets, and for this reason kept abreast of Christian theology and scholastic philosophy. He died before the Inquisition's trial and execution in 1489 of the participants in the Huesca conversion years before, including Bibago's brother Isaac, a physician.

Works

Bibago knew Arabic and Latin, and his works are replete with references to Greek, Latin, and Arabic as well as a wide variety of Hebrew sources, including the Kabbalah. He knew the works of Aristotle and wrote commentaries to several of his books, including *Posterior Analytics* (preserved in Vatican ms. 350 and Paris ms. 959), *Physics* (no longer extant), and *Metaphysics* (Munich ms. 357), based on the Middle Commentaries of *Averroes. Among the Greeks, he quotes Euclid, Galen, Ptolemy, Alexander of Aphrodisias, Themistius, Apollonius of Perga and others. Among Christian sources, he quotes the Gospels, Eusebius, Duns Scotus, William of Ockham, and Thomas Aquinas. Among the Arabic philosophers, besides Averroes he mentions, Al-Farabi, Avicenna, Al-Ghazali, Ibn Tufayl, and Avempace. Many of his numerous works, including on medicine and astronomy, and some of his philosophical works, have not survived.

Bibago's *Ez Hayyim* ("Tree of Life") has survived in a single manuscript (Paris ms. 995), dealing with the creation of the world, and presenting arguments against the doctrine of eternity. Several of Bibago's letters to Moses *Aroni (who had also participated in the 1465 conversion) have survived (Parma ms. 457), as have a treatise on the multiple forms, which M. Steinschneider and A. Nuriel attribute to Bibago (Paris ms. 1004/1), and *Zeh Yenaḥamenu* ("He will comfort us," Gen. 5:29; printed in Salonika, 1522/3, and also found in Paris ms. 995 and Adler ms. 28), a homily for the first Sabbath of the year. Bibago's most important work is his *Derekh Emunah* ("Path of Faith"), probably written in Saragossa around 1480, and printed in Constantinople in 1521/2. (A defective photo-offprint, Jerusalem, 1970, is missing pp. 98–101). Annotated selections were published by Chava Fraenkel-Gold-

schmidt (Jerusalem, 1978). Four manuscripts of the book exist (Paris ms. 747 and ms. 995; Munich ms. 43; Cambridge Trinity College). The book is divided into three treatises. The first discusses the acts of God, His knowledge, and His providence; the second the intellect and its objects, faith and reason, sin, and related topics; and the third, the principles of the Jewish religion, miracles, creation, and special articles of faith.

His “Derekh Emunah” and Philosophy

M. Steinschneider called Bibago “a rational believer” (“*Denkgläubigen*”), and A. Altmann described him as a “staunchly ... Orthodox thinker.” Perhaps the experiences of his youth, when he felt his faith and piety were wrongly doubted, led him to insist on the supremacy of faith (thus, the name of his book, “the Path of Faith”), although he accepted the view of many of his predecessors that the ancient prophets and rabbis originally knew the sciences, and that in fact science had originated as Jewish wisdom, which subsequently became forgotten in exile. Since the ancient Jewish authors knew the rational truth, by accepting their truth on the authority of faith one shares in their rational knowledge without having to resort to speculation. Faith and reason thus differ in method but not in content. Indeed, since it is the conclusion that matters, once we have true conclusions, we do not need the speculative principles which led to those conclusions (DE 70c).

Faith is thus both rational in content and superior to reason, because “faith itself is that by which the soul becomes actualized and immortal, and is thus the immortality itself ... For the path of faith (*derekh emunah*) is what saves (*moshi'ah*) and provides immortality to the faithful nation ... and gives perfection to conception and verification” (DE 59c–60a). Rational speculation can only provide the basis of salvation for a few intellectuals, “but in faith, every person is saved, ‘for the just will live by his faith’ (Hab. 2:4)” (DE 49d). Faith is thus the highest human perfection, and “I say that the ultimate purpose of miracles is the imparting of faith” (DE 85b). In an interesting collective twist on Maimonides’ intellectual theory of providence, Bibago suggests that since the Torah, teaching true faith, actualizes the Jews’ intellects, the Jewish people enjoys special national providence. Faith thus provides for national as well as individual salvation.

Faith being both superior to reason and rational in content, Bibago opposed both the extreme opponents and proponents of philosophy. On the one hand, he sharply denounced the bigoted zealots “who retain the shell but reject the kernel, posing as pious before the multitude, while vilifying and mocking the master [i.e., Maimonides] and his disciples” (*Derekh Emunah* 45:4). On the other hand, however, he sharply criticized the destructive tendency of some of the rationalists in their pursuit of philosophy and free enquiry.

Influence

Bibago’s views influenced Isaac *Arama, who refers to them, without, however, mentioning the author’s name. It appears that Arama gained this knowledge through personal contact

rather than through reading the *Derekh Emunah* (Wilensky, *Yizhak Arama*, 44–5; cf. J.S. Delmedigo, *Mazref la-Hokhmah*, 8b). Arama describes Bibago as “one of the most important scholars and philosophers of our people” (*Akedat Yizhak*, Gate 80). Isaac *Abrabanel quotes the *Derekh Emunah* in his *Rosh Amanah*, without, however, mentioning its author’s name. Jacob *Ibn Habib speaks highly of Bibago’s scholarship, although he objects to his allegorical interpretation of talmudic passages (*Ein Yaakov*, end of tractate Berakhot).

[Raphael Jospe (2nd ed.)]

BIBAGO (Bivach), ISAAC (d. 1489), physician in Huesca, Spain; brother of Abraham *Bibago. In the 1460s he and others of his circle helped to bring back to the faith Jews who had been forcibly converted to Christianity (see *Anusim). These included the wealthy Converso *Juan de Ciudad, who spent some time as a guest of the Bibago brothers in order to be instructed by them in the principles of Judaism. In 1489 the Inquisition uncovered the Huesca community’s proselytizing activities, and Isaac was among the few suspects still living at the time. He was arrested and was condemned to be burned at the stake. However, as he accepted baptism he was strangled before his body was consigned to the pyre; his fellow prisoners were burned alive.

BIBAS, family of rabbis and physicians originating in Spain. After 1492 the Bibas family fled to Morocco where its members became spiritual leaders of important communities. ABRAHAM BIBAS was one of the leaders of the Castilian community in Fez in 1526. HAYYIM became *daiyyan* of Tetuan in 1575; there he built the Great Synagogue, which was destroyed by the Muslims in 1667. His direct descendants succeeded him as leaders of the community until after 1700. Other members of the family were *daiyyanim* in Salé. Known for their piety and learning, they exercised great influence and had many disciples. Their decisions and responsa were collected and many of them were published with others of their works. Members of the Bibas family settled in Safed, Jerusalem, Cairo, Leghorn, Amsterdam, and Gibraltar. SHEM TOV was a member of Joseph Caro’s *bet din* in Safed. JOSEPH was one of the leading rabbis in Safed at the end of the 17th century. He was the father-in-law of the Shabbatean Nehemiah Hayyon who found in his library an

old manuscript of the Zohar, attributed to Benjamin ha-Levi. SAMUEL (d. 1793), a friend of H.J.D. *Azulai, was *dayyan* in Salé. His son JUDAH (1780–1852), a prominent rabbi and precursor of Zionism, was born in Gibraltar, and studied there and in Leghorn, Italy. He received a secular education in Italy and was apparently granted a doctoral degree by an Italian university. Between 1805 and 1832 he lived in Gibraltar, London, and Leghorn, gaining a reputation as a Jewish scholar. In 1832 he was appointed rabbi of Corfu, where he reorganized the Jewish community and its education system, and introduced reforms which aroused opposition from some of the heads of the community. He traveled through Europe in 1839, visiting Turkey, the Balkans, Vienna, and Prague. In Zemun he met Judah *Alkalai, from whom he learned of the new concept of *teshuvah* as a return to the Land of Israel, and not merely as “repentance.” Alkalai incorporated his impressions of Bibas in his book *Darkhei No’am*. Two Scottish missionaries, A. Bonar and R.M. M’Cheyne, relate of a visit to the Holy Land in their book *Narrative and Mission of Inquiry to the Jews in 1839* (1878), that Jews in Romania quoted Bibas as saying: “The Jews must be instructed in sciences and in arms so that they may wrest the land of Palestine from the Turks under the conduct of the Messiah, as the Greeks wrested their country.” It appears that Bibas conceived the idea of the return to Zion in active, contemporary terms, on a religious basis. In 1852, after a stay in London and another ten-year period in the rabbinical post in Corfu, Bibas went to Erez Israel and settled in Hebron.

CANON

General Titles

There is no single designation common to all Jews and employed in all periods by which the Jewish Scriptures have been known. The earliest and most diffused Hebrew term was *Ha-Sefarim* (“The Books”). Its antiquity is supported by its use in Daniel in reference to the prophets (Dan. 9:2). This is how the sacred writings are frequently referred to in tannaitic literature (Meg. 1:8; MK 3:4; Git. 4:6; Kelim 15:6; et al.). The Greek-speaking Jews adopted this usage and translated it into their vernacular as τὰ βιβλία. The earliest record of such is the Letter of *Aristeas (mid-second century B.C.E.) which uses the singular form (v. 316, ἐν τῇ βίβλῃ) for the Pentateuch. The translator of The Wisdom of *Ben Sira into Greek (c. 132 B.C.E.) similarly employs “The Books” to designate the entire Scriptures (Ecclus., prologue, v. 25 “καὶ τὰ λοιπὰ τῶν βιβλίων”). It is from this Hellenistic Jewish usage of τὰ βιβλία, which entered European languages through its Latin form, that the English “Bible” is derived.

The term *Sifrei ha-Kodesh* (*Sifre ha-Qodesh*; “Holy Books”), although not found in Hebrew literature before the Middle Ages, seems to have been used occasionally by Jews even in pre-Christian times. The author of I Maccabees (12:9), who certainly wrote in Hebrew (c. 136–135 B.C.E.), speaks of “the Holy Books”. In the early first century C.E., the Greek writer of II Maccabees 8:23 mentions “the Holy Book” (... τὴν ἱερὰν βίβλον) and toward the end of that century, both Josephus (Ant., 20:261) and Pope Clement I (*First Epistle*, 43:1) refer to “the Holy Books” (αἱ ἱερὰ βιβλοὶ). The appellation is rare, however, since the increasing restriction of *sefer* in rabbinic Hebrew to sacred literature rendered superfluous any further description. On the other hand, *Kitvei ha-Kodesh* (*Kitve ha-Qodesh*; “Holy Writings”), is fairly common in tannaitic sources as a designation for the Scriptures (Shab. 16:1; Er. 10:3; Yad. 3:2, 5; 4:6; BB 1:6; Par. 10:3). Here the definition is required since the Hebrew כתב (*ktb*) did not develop a specialized meaning and was equally employed for secular writing (cf. Tosef., Yom Tov 4:4). The title “Holy Writings” was also current in Jewish Hellenistic and in Christian circles, appearing in Greek as αἱ ἱερὰ γράφαί (Philo, Fug. 1:4; Clement’s *First Epistle* 45:2; 53:1), as τὰ ἱερὰ γράμματα (Philo, Mos. 2:290, 292; Jos., Ant., 1:13; 10:210; et al.). Closely allied to the preceding is the title *Ha-Katuv* (“The Scripture”; Pe’ah 8:9; Ta’an. 3:8; Sanh. 4:5; Avot 3:7, 8, et al.) and the plural *Ha-Ketuvim* (“The Scriptures”; Yad. 3:5 et al.). These, too, were taken over by the Jews of Alexandria in the Greek equivalent, probably the earliest such example being the Letter of Aristeas (vv. 155, 168, διὰ τῆς γραφῆς). This term was borrowed by the early Christians (ἡ γραφή John 2:22; Acts 8:32; II Tim 3:16 et al.; αἱ γραφαί Mark 12:24; I Cor. 15:34 et al.; τὰ γράμματα John 5:47).

These uses of the Hebrew root *ktb* (“to write”) to specify the Scriptures have special significance, for they lay emphasis on the written nature of the text in contradistinction to the

oral form in which the rabbinic teachings were transmitted. In the same way, *Mikra* (*Miqra*; lit. “reading”), another term for the Bible current among the rabbis, serves to underline both the vocal manner of study and the central role that the public reading of the Scriptures played in the liturgy of the Jews. The designation is found in tannaitic sources (Ned. 4:3; Avot 5:21; TJ, Ta’an, 4:2, 68a), but it may be much older, as Nehemiah 8:8 suggests. It is of interest that *Miqra*’ as the Hebrew for “Bible” achieved wide popularity among Jews in the Middle Ages. The acronym תנ”ך (*TaNaKh*), derived from the initial letters of the names of the three divisions of the Bible (*Torah*, *Nevi’im*, *Ketuvim*), became similarly popular.

Still another expression for the Scriptures is *Torah, used in the widest sense of the term as the revelation of religion. While it is only occasionally so employed for the Bible in rabbinic literature (cf. MK 5a with respect to Ezek. 39:15; Sanh. 91b citing Ps. 84:5; PR 3:9, in reference to Eccles. 12:12), the fact that νόμος, the Greek rendering of Torah, is found in the New Testament in the same way (John 10:34, quoting Ps. 82:6) indicates that it may once have been in more common use among Jews.

Thoroughly Christian is the characterization “Old Testament” (i.e., Covenant; II Cor. 3:14; cf. Heb. 9:15–18). This term is used to distinguish the Jewish Bible from the “New Testament” (i.e., Covenant; I Cor. 11:25; II Cor. 3:6; Christian interpretation of Jeremiah 31:30–32). At the same time, it is possible that the designation “Testament” (i.e., “Covenant”; Gr.: διαθήκη) may have been a reflection of an extended use among Jews of the Hebrew *berit* (“covenant”) or *Sefer ha-Berit* (“Book of the Covenant”; Ex. 24:7; II Kings 23:2, 21). Jeremiah (31:30–32) himself uses “covenant” and “Torah” synonymously, and the “Book of the Torah” found in the Temple (II Kings 22:8, 10) is alternatively styled the “Book of the Covenant” (*ibid.* 23:2, 21). The Wisdom of Ben Sira (24:23) actually uses the latter term βιβλῶς διαθήκης parallel with Torah (νόμος), and a similar usage is found in I Maccabees 1:56–57.

[Nahum M. Sarna]

The Canon

The term as applied to the Bible designates specifically the closed nature of the corpus of sacred literature accepted as authoritative because it is believed to be divinely revealed. The history of the word helps to explain its usage. “Canon” derives ultimately from an old Semitic word with the meaning of “reed” or “cane” (Heb. קנה), later used for “a measuring rod” (cf. Ezek. 40:5), both of which senses passed into Greek (κάννα, κανών). Metaphorically, it came to be used as a rule or standard of excellence and was so applied by the Alexandrian grammarians to the Old Greek classics. In the second century, κανών had come to be used in Christian circles in the sense of “rule of faith.” It was the Church Fathers of the fourth century C.E. who first applied “canon” to the sacred Scriptures.

No exact equivalent of this term is to be found in Jewish sources although the phrase *Sefarim Hizonim* (“external books”; Sanh. 10:1), i.e., uncanonical, is certainly its negative

formulation. However, tannaitic literature does employ the phrase *mettame et ha-Yadayim* (“rendering the hands unclean”) to convey what is commonly understood by “canonical.” According to rabbinic enactment, hands that came into direct contact with any biblical book contracted uncleanness in the second degree, so that if they then touched *terumah* without prior ritual washing they rendered it unfit for priestly consumption (Kelim 15:6; Yad. 3:2; 4:6). Whatever the true origin and purpose of this legislation (Yad. 3:3–5; Tosef., Yad. 2:19; Shab. 13b–14a; TJ, Shab. 1:6, 3c), the effect was to make the phrase “rendering the hands unclean” synonymous with canonical. Hence, rabbinic discussions about the full canonicity or otherwise of Ecclesiastes, Song of Songs (Eduy. 5:3; Yad. 3:5; Tosef., Yad. 2:14), Esther (Meg. 7a), Ben Sira, and other books (Tosef., Yad. 2:13) are expressed in terms of this formula.

THE SIGNIFICANCE OF THE CANON. The concept enshrined in the “canon” is distinctively and characteristically Jewish. Through it the canonized Scriptures were looked upon as the faithful witness to the national past, the embodiment of the hopes and dreams of a glorious future, and the guarantee of their fulfillment. They constituted, in time, the main source for the knowledge of Hebrew and typified the supreme standard of stylistic excellence. Through the instrumentality of the Oral Law they represented the force of truth, wisdom, law, and morality. In short, the development of the canon proved to be a revolutionary step in the history of religion, and the concept was consciously adopted by Christianity and Islam.

THE PROCESS OF CANONIZATION. It should be noted, however, that the above refers to the canon solely in respect of its religious connotation. There is evidence that as early as the second half of the second millennium B.C.E., the classical literary texts of Mesopotamia were beginning to assume standardized form. There emerged a widely diffused, recognizable body of literature with fixed authoritative texts, the sequence and arrangement of which were firmly established. This discovery is significant because it provides an important precedent for the external features of canonical literature, and it means that the process of canonical development could have begun quite early in Israel’s history. Unfortunately, there is no direct information about the origins of the canon, nor can the criteria of selectivity adopted by those who fixed it be ascertained.

It is clear that the books that make up the Bible cannot possibly have contained the entire literary production of ancient Israel. The Scriptures themselves bear testimony to the existence of an extensive literature which is now lost. The “*Book of the Wars of the Lord” (Num. 21:14) and the “*Book of Jashar” (Josh. 10:13; II Sam. 1:18) are certainly very ancient. Prophetic compositions are ascribed to Samuel, Nathan, and Gad (I Chron. 29:29) of the early monarchy period and to Ahijah, Jedo/Iddo, and Shemaiah from the time of the division of the kingdom (II Chron. 9:29; 12:5; 13:22). The references to the chronicles of King David (Chron. 27:24), of Solomon (I Kings 11:41), and of the Kings of Israel and Judah (*ibid.*

14:19, 29; I Chron. 9:1; II Chron. 16:11; 20:34; 27:7; 32:32; 33:18) all bear witness to royal annalistic sources no longer extant. A category of literature called “Midrash” (II Chron. 13:22; 24:27) is also ascribed to the times of the monarchy, and a book of dirges to the end of that period (II Chron. 35:25). While it is true that in many of these instances it is possible that the same work has been referred to under different titles and that the caption *sefer* might indicate a section of a book rather than the whole, it cannot be doubted that numerous other works must have existed which were not mentioned in the Bible. In fact, the very concept of a scriptural canon presupposes a process of selection extending over a long period.

The quantitative disproportion between the literary productions and the literary remains of ancient Israel is extreme. The main factor at work was the natural struggle for survival. The absence of mass literacy, the labor of hand copying, and the perishability of writing materials in an inhospitable climate all combined to limit circulation, restrict availability, and reduce the chances of a work becoming standard. In addition, the Land of Israel was more frequently plundered and more thoroughly devastated than any other in the ancient Near East. At the same time, in the historical realities of the pre-Exilic period Israel’s cultural productions had scant prospects of being disseminated beyond its natural frontiers. Developments within Israel itself also contributed. The change of script that occurred in the course of Persian hegemony doubtless drove out of circulation many books, while the mere existence of canonized corpora almost inevitably consigned excluded compositions to oblivion.

Certainly there were other books, including some of those cited above, which were reputed holy or written under the inspiration of the divine spirit, but why they did not enter the canon cannot be determined. The possibility of chance as a factor in preservation cannot be entirely dismissed. Some works probably survived because of their literary beauty alone. A very powerful instrument must have been scribal and priestly schools which, by virtue of their inherent conservatism, would tend to transmit the basic study texts from generation to generation. Similarly, the repertoire of professional guilds of Temple singers would be self-perpetuating, as would the liturgies recited on specific occasions in the Jerusalem Temple and the provincial shrines. Material that appealed to national sentiment and pride, such as the narration of the great events of the past and the basic documents of the national religion, would, particularly if employed in the cult, inevitably achieve wide popularity and be endowed with sanctity. Not everything that was regarded as sacred or revealed was canonized; but sanctity was the indispensable ingredient for canonicity. It was not, in general, the stamp of canonization that conferred holiness upon a book – rather the reverse. Sanctity antedated and preconditioned the formal act of canonization, which in most cases, simply made final a long-existing situation. Of course, the act of canonization, in turn, served to reinforce, intensify, and perpetuate the attitude of reverence, veneration, and piety with which men approached the Scrip-

tures, and itself became the source of authority that generated their unquestioned acceptance as the divine word.

CONTENTS AND TITLES OF THE BOOKS. The Jewish Bible is composed of three parts, designated in Hebrew: *Torah* (תורה), *Nevi'im* (נביאים), and *Ketuvim* (כתובים). The earliest name for the first part of the Bible seems to have been “The Torah of Moses.” This title, however, is found neither in the Torah itself, nor in the works of the pre-Exilic literary prophets. It appears in Joshua (8:31–32; 23:6) and Kings (1 Kings 2:3; 11 Kings 14:6; 23:25), but it cannot be said to refer there to the entire corpus. In contrast, there is every likelihood that its use in the post-Exilic works (Mal. 3:22; Dan. 9:11, 13; Ezra 3:2; 7:6; Neh. 8:1; 11 Chron. 23:18; 30:16) was intended to be comprehensive. Other early titles were “The Book of Moses” (Ezra 6:18; Neh. 13:1; 11 Chron. 35:12; 25:4; cf. 11 Kings 14:6) and “The Book of the Torah” (Neh. 8:3) which seems to be a contraction of a fuller name, “The Book of the Torah of God” (Neh. 8:8, 18; 10:29–30; cf. 9:3).

With the widespread dissemination of the Torah in the generations following the activities of *Ezra and *Nehemiah, it became customary, for strictly nonliturgical purposes and for convenience of handling, to transcribe the work on five separate scrolls; hence the Greek name ἡ πεντάτευχος (βιβλος), “the five-volumed [book],” which has passed into English as Pentateuch. In rabbinic literature the Hebrew equivalent is “The Five Books of the Torah” (*Ḥameshet Sifrei Torah*; TJ, Meg. 1:7, 70d; *Ḥamishah Sifrei Torah*; TJ, Sot. 5:8, 20d), or “The Five Fifth-parts of the Torah” (*Ḥamishah Ḥomshei* (popularly, but inaccurately called *Ḥumshei*) *Torah*; Ḥag. 14a; TJ, Sanh. 10:1, 28a; Sanh. 44a).

The English names for the books of the Torah – Genesis, Exodus, Leviticus, Numbers, and Deuteronomy – derive from those of the Latin Bible which, in turn, have their origins in titles current among the Greek-speaking Jews, who translated Hebrew designations in use among their coreligionists in Palestine. These titles are descriptive of the contents or major theme of the respective books and they have partly survived in rabbinic literature and medieval Hebrew works in these forms: *Sefer Beri'at ha-Olam* (“The Book of the Creation of the World”); *Sefer Yezi'at Mizrayim* (“The Book of the Exodus from Egypt”); *Torat Kohanim* (“The Book of the Priestly Code”); *Ḥomesh ha-Pekuddim* (*Ḥomesh ha-Pequddim*; “The Book of the Numbered”), *Mishneh Torah* (“The Repetition of the Torah”; cf. TJ, Meg. 3:7, 74b et al.). Another method of naming was to entitle a book by its opening word or words, or by its first significant word; cf. the Babylonian “When on High” and “Let me Praise the Lord of Wisdom.” This was common in rabbinic sources (*Elleh ha-Devarim*; “These Are the Words” = Deuteronomy, Sot. 7:8; Gen. R. 3:5; TJ, Meg. 3:1, 74a) and has remained the most popular mode of designation in Hebrew to the present time. Finally, there is also evidence that ordinal numbers were used (cf. Gen. R. 3:5; TJ, Meg. 3:1, 74a).

The second division of the Bible is known as *Nevi'im*

(“Prophets”), later subdivided into “Former Prophets” and “Latter Prophets.” This distinction, one of convenience only, serves to differentiate between the narrative, historical works – Joshua, Judges, Samuel, and Kings – and the (largely poetic) literary creations of the prophetic orators Isaiah, Jeremiah and Ezekiel, and the Twelve “minor” prophets – Hosea, Joel, Amos, Obadiah, Jonah, Micah, Nahum, Habbakuk, Zephaniah, Haggai, Zechariah, and Malachi. The popular epithet “minor” in connection with these twelve has a solely quantitative connotation and is no indication of relative importance. The names of the books are based upon the central figure or reputed author. The subdivision of the Prophets into “Former” and “Latter” was not known in the modern sense in talmudic times. The rabbis employed “former” in reference to the prophets up to the destruction of the First Temple (Sot. 9:12; Ta'an. 4:2; Sot. 48b; cf. Zech. 1:4; 7:7, 12), and reserved “latter” exclusively for the postexilic prophets; Haggai, Zechariah, and Malachi (Tosef., Sot. 13:2; Sot. 48b).

The *Ketuvim* (“Writings,” *Hagiographa*), the third division of the Bible, is a varied collection composed of liturgical poetry – Psalms and Lamentations; secular love poetry – Song of Songs; wisdom literature – Proverbs, Job, and Ecclesiastes; and historical works – Ruth, Chronicles, Ezra, Nehemiah, Esther, and a blend of history and prophecy in the Book of Daniel.

This tripartite division of the Scriptures is simply a matter of historical development and does not, in essence, represent a classification of the books according to topical or stylistic categories. The Hellenistic Jews, apparently sensitive to the more or less random nature of the organization of biblical literature, attempted to effect a more systematic arrangement (see Hellenistic Canon, below).

The Tripartite Canon

The earliest sources consistently refer to the three corpora of scriptural books. *Ben Sira, approximately 180 B.C.E., speaks of “the Law of the Most High,” “the wisdom of the ancients,” and “prophecies” (Ecclus. 39:1). His grandson who wrote the Prologue to the Book of Ben Sira (c. 132 B.C.E.) refers explicitly to “the Law and the Prophets and the others that followed them,” “the law and the prophets and the other books of our fathers,” “the law..., the prophecies and the rest of the books.” The author of 11 Maccabees (2:2–3, 13) mentions “the Law,” “the kings and prophets, the writings of David...” *Philo is familiar with the Law, the “Prophets and the Psalms and other Writings” (Cont. 25). Josephus knows of the “five books of Moses,” “the Prophets” and “the remaining... books” (Apion, 1:39–41). The same threefold arrangement is specified in the New Testament. To the author of Luke (24:32, 44) the Scriptures consist of “the Law of Moses and the Prophets and the Psalms.”

From these sources it becomes clear that the third collection of Scriptures was not known by any fixed name. In fact, it was often not referred to by any name at all. 1V Maccabees (18:10) mentions simply the “Law and the Prophets” even

though Daniel, Psalms, and Proverbs are included in the designation (18:13–16). It must have been a widespread practice to refer to the entire Bible in this manner for it is encountered in the most diverse sources, rabbinic (Tosef., BM 11:23), New Testament (Matt. 5:17 7:12; 11:13; 22:40; Luke 16:16; John 1:45; Rom. 3:21), and the Scrolls from the Judean Desert (1QS 1:2–3). All this can mean only one thing: the *Ketuvim* were canonized much later than the Prophets and the tripartite canon represents three distinct and progressive stages in the process of canonization. This is not to say, however, that there is any necessary correlation between the antiquity of the individual books within a given corpus and the date of the canonization of the corpus as a whole. Further, a clear distinction has to be made between the age of the material and the time of its redaction, the period of its attaining individual canonicity and the date that it became part of a canonized corpus.

THE CANONIZATION OF THE TORAH (PENTATEUCH). Where is this differentiation more applicable than in respect of the Torah. A clear distinction must be made between the literature of the Torah and the Torah book. Whatever the details of the incredibly complex history of the pentateuchal material, it is beyond doubt that much of it is of great antiquity and was venerated at an early period. The traditional doctrine of Mosaic authorship of the entire Torah has its source in Deuteronomy 31:9–12, 24, more than in any other passage. But the reference here seems more likely to be to the succeeding song (Deut. 32), as is indicated by verses 19 and 22. The Torah itself contains no explicit statement ascribing its authorship to Moses, while Mosaic attribution is restricted to legal and ritual prescription and is hardly to be found in connection with the narrative material. Moreover, the term “Torah” (which means “teaching,” as well as “rule” and “law,” has to be examined in each case in its own context and in no instance can it be unequivocally understood in its later, comprehensive sense. In fact, the phrase “Torah of Moses” is not pentateuchal.

An important stage in the history of the pentateuchal canon is the tale of the chance finding of the “book of the Torah” in 622 B.C.E. as described in II Kings 22–23; II Chronicles 34. It is highly significant that there is no suggestion that the book is new. Indeed, given the renewed interest in antiquity, and the veneration of the past that marked the Near East of the seventh century B.C.E. and the following two or three centuries, newness would have been no virtue. The enquiry of the prophetess Huldah and her reply serve to authenticate the book and its message. The “Torah” was publicly read and accepted as binding in a national covenant ceremony. The identity of the book is not given, nor is it termed Mosaic in direct speech (II Kings 23:25 and II Chron. 34:14 are editorial remarks). Yet insofar as the ensuing reform of the cult expresses precisely the leading motifs of *Deuteronomy, it may be assumed that the ceremony described represents the beginning of the formation of the Pentateuch, not as literature, but as a sacred book.

The Law <i>Torah</i> Pentateuch	Genesis	50	Chapters

		Ezra	10	
		Nehemiah	13	
		I Chronicles	29	
		II Chronicles	36	

The first report of the reading of the Torah in public assembly subsequent to Josiah comes from the post-Exilic period, namely, the ceremony conducted in Jerusalem by Ezra, approximately 444 B.C.E. (Neh. 8–10). This ceremony cannot be the occasion of the canonization of the Pentateuch, as has often been claimed, since the initiative for the public reading comes from the people and there is no hint that the promulgation of a new law is involved. The book is called “the book of the Torah of Moses which the Lord commanded Israel” (Neh. 8:1) and the emphasis is on its dissemination and exposition. It would appear that the Torah, or at least some form of it, had achieved canonical status.

Further evidence that the Torah had already been canonized by this time is provided by the Chronicler and by Samari-

tan tradition. The former, writing approximately 400 B.C.E., frequently appeals to the “Torah of Moses” and shows familiarity with every book of the Pentateuch. The Samaritans adopted the entire Torah together with the belief in its Mosaic authorship. Since hostility to the Judeans was already acute in Ezra’s time and since the Samaritan-Jewish schism could not have taken place much after this, it follows that the canonization of the Pentateuch could not then have been a very recent event.

It may safely be assumed that the work of collection, fixing, and preservation of the Torah took place in the Babylonian exile (cf. Ezra 7:14, 25). But our extant sources preserve no recollection of a formal canonization.

THE CANONIZATION OF THE PROPHETS. The existence of the Torah Book served as a stimulus to the collection and organization of the literature of the prophets. A consistent tradition, repeatedly formulated in rabbinic sources, regards Haggai, Zechariah, and Malachi as the last of the prophets, the “divine spirit” having ceased to be active in Israel with their death (Tosef., Sot. 13:2; Sot. 48b; Yoma 9b; Sanh. 11a). Indeed, the absence of prophecy was regarded as one of the features that characterized the Second Temple period as opposed to the First (TJ, Ta’an. 2:1, 65a; Yoma 21b). Josephus, too, reflects this same tradition (Apion, 1:39–41). By the middle of the second century B.C.E., the institution was accepted as having lapsed (I Macc. 9:27; cf. 4:46; 14:41).

That contemporary prophecy was falling into discredit soon after the return from the exile is clear from Zechariah 13:2–5, and it is quite likely that the closing verses of the last prophetic book (Mal. 3:22–24) are actually an epilogue to the entire collection indirectly expressing recognition of the cessation of prophecy and the hope of its eschatological renewal (cf. I Macc. 4:45; 14:41; 1QS 9:11). The cessation of prophecy could thus be understood ideologically as part of the spiritual punishment that Israel must endure for its sins (Jer. 18:18; Ezek. 7:26; Amos 8:11–12; Micah 3:6–7). More important was the ironic fact that once the writings of the great prophets of the past became immortalized in written form, it became increasingly difficult for living prophets to compete with them.

The tradition declaring the prophetic canon to have been closed during the era of Persian hegemony, i.e., by 323 B.C.E., can be substantiated by several unrelated facts. That Chronicles belongs to the *Ketuvim* and neither displaced nor supplemented Samuel-Kings in the Prophets is best explained on the assumption that the latter were already sealed at the time Chronicles was canonized. Similarly, the omission of Daniel from the Prophets (cf. Sanh. 94a) would be inexplicable if their canonization occurred in Hellenistic times. The absence from the Prophets of Greek words or of any reference to the historical fact of the downfall of the Persian empire and the transition to Greek rule provides further evidence. Notwithstanding assertions to the contrary, the tannaitic discussions

about Ezekiel (Ḥag. 13a) have nothing to do with the history of canonization. The suggestion to relegate the book to the bibliocrypt (*lignoz*) was intended solely to remove it from common use. In fact, only sacred things could be so treated. Apparently, some time must have elapsed between the canonization of the Torah and that of the Prophets, since only the former and not the latter were publicly read at the great assemblies described in Nehemiah 8–10, while the Samaritans, who became schismatic in the days of Ezra or soon after, received the Torah but not the Prophets.

THE CANONIZATION OF THE KETUVIM (HAGIOGRAPHIA). The third collection of biblical books does not constitute a unified entity either contextually or ideologically. Many of the books were certainly written while prophets were still active and the books were individually canonized quite early. They were excluded from the prophetic collection because their inspiration appeared to be human rather than Divine, or because they did not otherwise conform to the special ideological content or historical-philosophic framework of that corpus. This would be true of such works as Psalms and Proverbs. Other books, like Ezra, Chronicles, and Daniel, must have been written too late for inclusion in the Prophets. They were certainly canonical, as was Job too, by the generation before the destruction of the Second Temple (Yoma 1:6). At the same time, there is plenty of evidence to show that the collection of the *Ketuvim* as a whole, as well as some individual books within it, was not accepted as being finally closed until well into the second century C.E. As noted above, the practice of calling the entire Scriptures the “Torah and Prophets” presupposes a considerable lapse of time between the canonization of the second and third parts of the Bible. The fact that the last division had no fixed name points in the same direction. Even the finally adopted designation “*Ketuvim*” is indeterminate, since it is also used in rabbinic Hebrew in the two senses of the Scriptures in general and of individual texts in particular.

Other indications of lateness in *Ketuvim* are that the Song of Songs contains two Greek words (3:9, אַפְרַיִן = palanquin; 4:4, תִּלְפִּיּוֹת = τηλωπις = far-off), as does Daniel (3:5, 15, סוּמְפוֹנִיָּה = συμφοωνία = bagpipe; 3:5, 7, 10, 15, פְּסִנְתְּרִין = Ψαλτήριον), קִיתָרִס = κιθαρῆς which even refers to the break-up of the Greek empire (by name 18:21; 11:2) and which most likely did not achieve its final form before approximately 167 B.C.E. (For the influence of Persian and Greek on the Book of Ecclesiastes see *Ecclesiastes.) Ben Sira (c. 180 B.C.E.), who shows familiarity with all other biblical books, does not mention Daniel or Esther. The latter book, in fact, seems not to have been accepted among the sectarians of Qumran; at least no fragments of it have yet turned up among the scrolls from the Judean Desert. Indeed, that there was once a certain reserve in respect of the sanctity of the Book of Esther is apparent from rabbinic discussion (Meg. 7a; cf. Sanh. 100a).

The ambivalent attitude on the part of the rabbis to the

Wisdom of Ben Sira is highly significant. The fact that in the middle of the second century C.E. it was necessary to emphasize the uncanonical status of this book (Tosef., Yad. 2:13) and to forbid its reading (TJ, Sanh. 10:1, 28a) proves that the corpus of *Ketuvim* was still fluid at this time, and that Ben Sira had acquired a measure of sanctity in the popular consciousness. Despite the ban, the book continued to achieve wide circulation. The *amoraim* even quote from it, employing the introductory terminology otherwise exclusively reserved for Scripture (cf. Nid. 16b *di-khetiv*; Ber. 55b *she-ne'emar*). In one instance, a third-generation Babylonian *amora* actually cites Ben Sira as *Ketuvim* as opposed to Torah and Prophets (BK 92b).

It is true that in the generation after the destruction of the Temple the author of IV Esdras 14:41–46 (cf. Joseph., Apion, 1:39–41) seems to imply a closed biblical canon of 24 books; nevertheless, tannaitic and amoraic disputes about the canonicity of Proverbs, Song of Songs, and Ecclesiastes (Eduy. 5:3; Yad. 3:5; ARN 1:2), as well as of Esther (Meg. 7a), show that the widely held, though unsupported, view that the formal and final canonization of the *Ketuvim* occurred at the Synod of Jabneh (c. 100 C.E.) has to be considerably modified. More probably, decisions taken on that occasion came to be widely accepted and thus regarded as final in succeeding generations.

The Hellenistic Canon

The needs of the Hellenistic Jews, whether of Alexandria in particular or of the Greek-speaking Diaspora in general, led to the translation of the Bible into Greek. Beginning with the Torah about the middle of the third century B.C.E. the process took many centuries to complete. The formation of much of the Greek canon was thus coeval with the emergence of the Hebrew Bible as a sealed collection of sacred literature. The final product, however, diverged from the Hebrew – apart from the problem of the text – in two important respects. It adopted a different principle in the grouping and sequence of the biblical books, and it included works not accepted into the normative Hebrew canon. It must be understood, however, that, with the exception of a few fragments, all extant manuscripts of the Greek Bible are of Christian origin, and while it is reasonable to assume a Jewish prototype, the content and form of the Hellenistic Jewish canon cannot be known with certainty.

The Greek Ben Sira (prologue) clearly shows that the Palestinian tripartite division of the Bible was known in Alexandria in the second century B.C.E.; yet the Greek Bible does away with the *Ketuvim* as a corpus and redistributes the books of the second and third divisions according to categories of literature, thus creating a quadripartite canon of Torah, history, poetic and didactic writings, and prophecy. The sequence of books in the Greek Bible varies greatly in the uncial manuscripts and among the different patristic and synodical lists of the Eastern and Western churches. The Torah, however, always takes priority, followed by the Former Prophets. Ruth is attached to Judges, sometimes before, sometimes after it. The

Minor Prophets invariably appear as a unit, though in slightly different order (Hosea, Amos, Micah, Joel, Obadiah, Jonah, etc.) and frequently preceding the three major prophets. Lamentations is affixed to Jeremiah, its reputed author. Of those books excluded from the Hebrew canon but included in the Greek Bibles, the number varies, but the following are found in the fullest collections: I Esdras (Ezra), Wisdom of Solomon, Wisdom of Ben Sira, Judith, Tobit, Baruch, the Letter of Jeremiah, I–IV Maccabees, and the Psalms of Solomon.

The order of the books in the Greek Bibles is illustrated in the table below:

Order of the Books in the Greek Bibles
(the Hebrew Codex Aleppo is given for comparison)

CODEX VATICANUS (B)	CODEX ALEXANDRINUS (A)	CODEX ALEPPO (C)

The Number of Books

By dividing Samuel, Kings, and Chronicles into two books each, and by individually enumerating Ezra, Nehemiah, and the twelve minor prophets, English Bibles usually list 39 books. This reckoning, however, is not traditional, for the twelve were written on a single scroll and counted as one; Ezra and Nehemiah were likewise treated as a unit, and the convenient bisection of Samuel, Kings, and Chronicles was unknown in Hebrew Bibles before the Bomberg edition of 1521 (see Editions, below). In this way the traditional total of 24 books is obtained.

This number is consistently specified in the literature of the *amoraim* (cf. Ta'an. 5a) and is implicit in the tannaitic listing of the biblical books (BB 14b). It must be quite ancient for it is expressly mentioned as something well understood in IV Ezra 14:45, a passage deriving from about 100 C.E. From about this same period derives a variant tradition of Josephus limiting the canon to 22 books (Apion 1:39–41). It is possible that the Song of Songs and Ecclesiastes were not yet included in Josephus' Bible. More likely, however, the difference is to be explained by the practice of attaching Ruth to Judges or Psalms, and Lamentations to Jeremiah. Since many of the Church Fathers also mention a 22-book canon (cf. Origen in Eusebius, *Historia Ecclesiastica* 6:25, 1), it must be assumed that the observation of Josephus reflects a fairly widespread, if minority, Jewish scribal tradition that persisted for several centuries. Either way, the specified number really refers to the sum of separate scrolls used in transcribing the corpus of canonized literature. The artificiality of the number 24 and the absence of any authentic tradition to explain its origin are clear from the homiletics of the *amoraim*, who variously connected it with the like number of ornaments in Isaiah 3:18–24 (Ex. R. 41:5; Song. R. 4:11; Tanh. B., Ex. 111–117), of priestly and levitical courses in I Chron. 23:28; 24:4 (Num. R. 14:18; Eccles. R. 12:11; PR 3:9), and of the bulls brought as dedicatory offerings by the chieftains of the tribes (Num. 7:88; Num. R. 14:18).

It has been suggested, but with little probability, that Jewish practice may have been influenced by the pattern set by the Alexandrian division of the Odyssey and Iliad of Homer into 24 books each, an innovation itself dictated as much by the practical consideration of avoiding the inconvenience of handling a scroll containing more than 1,000 verses as by the desire to create a correspondence with the number of letters in the Greek alphabet. The 24-book division may have been regarded as a model for the national classics, especially because it is a multiple of 12, a number which was charged with special significance in the ancient world, even in the literary sphere. This is evidenced by the 12-tablet division of the Gilgamesh Epic, the 12 sections of the Theogony of Hesiod and the Laws of the Twelve Tablets. The 22-book division might well have been an adaptation of Greek practice to the Hebrew alphabetic enumeration.

The Order of the Books

In considering the arrangement of the biblical books in a spe-

cific sequence, two distinct problems have to be differentiated. The first relates to the very meaning of "order," the second to the underlying rationale of the diverse arrangements found in literary sources and manuscripts. The earliest list of biblical books is that preserved in an anonymous tannaitic statement (BB 14b):

Our Rabbis taught: the order of the Prophets is Joshua, Judges, Samuel, Kings, Jeremiah, Ezekiel, Isaiah, and the Twelve...; the order of the Ketuvim is Ruth, the Book of Psalms, Job, Proverbs, Ecclesiastes, the Song of Songs, Lamentations, Daniel, the Scroll of Esther, Ezra, and Chronicles.

The question of "order" would normally apply to books produced as codices, rather than scrolls. However, the above-cited *baraita* cannot be later than the end of the second century C.E., whereas the codex was not accepted by Jews until many centuries later. Sarna seeks the solution in the library practices of the Mesopotamian and Hellenistic worlds.

The steady growth of collections, whether of cuneiform tablets or papyrus rolls, necessitated the introduction of rationalized and convenient methods of storing materials in ways that facilitated identification and expedited usage. At the same time, the requirements of the scribal schools engendered an established sequence in which the classic works were to be read or studied. This combination of library needs and pedagogic considerations would then be what lies behind the fixing of the order of the Prophets and *Ketuvim* as recorded in the list above. The reference would be to the order in which the individual scrolls in these two corpora were shelved and cataloged in the Palestinian archives and schools. Haran has challenged Sarna's theory on the grounds that the small number of the books of the Bible made literary cataloguing unnecessary. It would have been simple to follow Roman practice and lay out the scrolls on shelves divided by panels. Alternatively, scrolls might have been tagged as they were

at Qumran, and much earlier in Mesopotamia. Haran suggests instead that the *baraita* reflects a time when scribes had begun to resort to larger scrolls containing several books rather than using one scroll per book. This technological change would have necessitated a fixed order. The silence about the Pentateuch in the *baraita* is due to the fact that its priority in its long fixed order was so universally known as to make it superfluous. As to the underlying principles that determined the sequence, it is clear that the historical books of the prophetic division are set forth as a continuous, consecutive narrative with Jeremiah and Ezekiel following in chronological sequence. The anomalous position of Isaiah after Ezekiel (reflected also in some manuscripts) (see Table: Order of the Latter Prophets) has been variously explained. According to the *Gemara* (BB 14b) contextual considerations were paramount:

The Book of Kings ends with a record of destruction; Jeremiah deals throughout with destruction; Ezekiel commences with destruction and closes with consolation, while Isaiah is entirely consolation. Therefore, we juxtapose destruction to destruction and consolation to consolation.

This explanation is hardly adequate since Jeremiah contains prophecies of comfort and the observation on Isaiah applies only to chapters 40–66. Nor is it likely that the late exilic origin of the last 27 chapters of Isaiah determined its place after Ezekiel, since there is no evidence that the rabbis recognized the heterogeneous nature of the book. More persuasive, perhaps, is the thesis that the sequence Jeremiah, Ezekiel, Isaiah, and the Twelve was conditioned by their respective lengths in decreasing order. There may have been a tendency to place in close proximity prophets who were considered to have been contemporaries so that the great similarity between Isaiah 1:1 and Hosea 1:1 might well have been re-

sponsible for the juxtaposition of the books of Isaiah and the Twelve.

The *baraita* gives no list of the Minor Prophets. It simply designates them “the Twelve,” implying that the order was well-known and universally accepted. The same conclusion is to be drawn from Ben Sira’s reference to “the twelve prophets” (Ecclus. 49:10). Doubtless, the arrangement of the 12 small books, always written on a single roll, was based on chronological principles as understood by the religious authorities responsible for the canonization of the prophetic corpus. The present sequence is uniform in all Hebrew manuscripts and printed editions.

No reason for the tannaitic order of the *Ketuvim* is given in the *Gemara*, but it may be noted that the 11 books are arranged chronologically in groups according to rabbinic notions of their authorship. Ruth, which closes with the genealogy of David, precedes Psalms, which was ascribed to that king. Job follows, probably because of a tradition assigning the book to the time of the Queen of Sheba (BB 15b; cf. Job 1:15). Proverbs, Ecclesiastes, and Song of Songs were all attributed to Solomon; Lamentations was thought to have been written by Jeremiah; Daniel was credited to the exilic period and the last two to the Persian era. Notwithstanding the tannaitic notice, it would seem that the sequence of the *Ketuvim* was never really fixed, for the manuscripts and printed editions exhibit a variety of systems (see Table: Order of the Hagiographa). Nevertheless, the differences are restricted to specific books or clusters of books. In the manuscripts and early editions, Chronicles never appears other than at the beginning or end of the corpus. Ezra-Nehemiah is invariably either the penultimate or final book depending on the position of Chronicles. The three larger works: Psalms, Job, and Proverbs, always constitute a group, with Psalms invariably first and the other two interchanging. The Talmud itself lists the “three larger books

of the *Ketuvim*” as Psalms, Proverbs, and Job (Ber. 57b), a variant possibly conditioned by the view that Job was among those who returned from the Babylonian exile (BB 15a).

The most unstable books in respect of their order in the *Ketuvim* are the five Scrolls (*Megillot*). Their position varies in the manuscripts and printed editions both as part of the corpus of *Ketuvim* and as separately attached to the Pentateuch (see Table: Order of the *Megillot*). Nowhere in rabbinic sources are all five listed in immediate succession, nor is the term “Five *Megillot*” used. The chronological sequence, according to reputed author, that underlies the tannaitic listing is essentially reflected in another talmudic source which identifies “the three smaller books of the *Ketuvim*” as the Song of Songs, Ecclesiastes, and Lamentations, in that order (Ber. 57b). In fact, six of eight main variations basically preserve this chronological principle (see Table: Order of the Hagiographa, cols. 1–5, 7). The practice of grouping all five *Megillot* together has its origin in the custom of reading these books on festival days: the Song of Songs on Passover, Ruth on Pentecost, Lamentations on the Ninth of Av, Ecclesiastes on Sukkot, and Esther on Purim (cf. Soferim 14:1, ed. Higger, p. 251–2). This is the order as it crystallized in the early printed Hebrew Bibles and in some manuscripts and early printed editions of the Pentateuch, to which all five *Megillot* have been attached.

The Order of the *Megillot* after the Pentateuch

1. mss. Nos. 1,2,3	2. mss. Nos. 4,5,6	3. mss. Nos. 7, 8	4. mss. No. 9	5. Early Editions
Song of Songs	Esther	Ruth	Ruth	Song of Songs
Ruth	Song of Songs	Song of Songs	Song of Songs	Ruth
Lamentations	Ruth	Ecclesiastes	Lamentations	Lamentations
Ecclesiastes	Lamentations	Lamentations	Ecclesiastes	Ecclesiastes
Esther	Ecclesiastes	Esther	Esther	Esther

The nine mss. collated for this Table are the following in the British Museum: (1) Add. 9400; (2) Add. 9403; (3) Add. 19776; (4) Harley 5706; (5) Add. 9404; (6) Orient. 2786; (7) Harley 5773; (8) Harley 15283; (9) Add. 15282.

The fifth column represents the order adopted in the first, second and third editions of the Hebrew Bible, as well as that of the second and third editions of Bomberg's Quarto Bible (Venice 1521, 1525), in all of which the five *Megillot* follow immediately after the Pentateuch

The final position of Chronicles is most remarkable since Ezra-Nehemiah follows naturally in continuation of the narrative. The anomaly is emphasized by the widespread support it received in the manuscripts and early printed editions. It would appear that the New Testament, too, reflects this arrangement (Matt. 23:35; Luke 11:51). As an explanation, it might be suggested that the position of Chronicles represents the chronology of canonization, though there is no evidence to support this. More likely, it resulted from a conscious attempt to place the biblical books within a narrative framework. Genesis and Chronicles both begin with the origin and development of the human race and both end with the promise of redemption and return to the Land of Israel. The two books actually employ the same key verbs in this con-

nection (Gen. 50:24–25; II Chron. 36:23; עִלָּה, פִּקֵּד; *pkd* (*pqd*, *lh*). Indeed, the messianic theme of the return to Zion as an appropriate conclusion to the Scriptures was probably the paramount consideration in the positioning of Chronicles. Further evidence that the arrangement of the Scriptures was intended to express certain leading ideas in Judaism may be sought in the extraordinary fact that the initial chapter of the Former Prophets (Josh. 1:8) and of the Latter Prophets (Isa. 1:10) and the closing chapter of the prophetic corpus (Mal. 3:22), as well as the opening chapter of the *Ketuvim* (Ps. 1:2), all contain a reference to Torah, a conscious assertion of the theological priority of the Torah.

The Languages of Scripture

The books of the Bible have come down in the Hebrew language with the exception of two words in Genesis (31:47), a single verse in Jeremiah (10:11), and sections of Daniel (2:4b–7:28) and Ezra (4:8–6:18; 7:12–26), all of which are in Aramaic. The problem of the language of Scripture is, however, more complicated than would appear on the surface and it constitutes part of the larger issue of the history of the growth and formation of the canon. Some scholars, for instance, regard Job, Ecclesiastes, and Chronicles, as well as the Hebrew sections of Daniel and Ezra-Nehemiah as translations, in whole or part, from Aramaic. This implies that the original is lost, and at once raises the possibility of error in the course of rendition from language to language. It should be noted, though, that in dealing with the problem of translation care must be taken to distinguish between Aramaisms and Aramaic influence on Hebrew style on the one hand, and a translation that may betray its Aramaic substratum on the other.

Even works unquestionably composed in Hebrew are not without their linguistic history. In dealing with biblical Hebrew it must be remembered that the language of Scripture represents a period of creativity covering several hundred years during which internal development inevitably took place. In general, it may be said that the poetic texts in the historical books have preserved the earliest strata of the language (Gen. 49; Ex. 15; Num. 23–24; Deut. 32; 33; Judg. 5), while the Hebrew of those works deriving from the postexilic period – like Haggai, Zechariah, Malachi, Ecclesiastes, Chronicles, Ezra-Nehemiah, and Daniel – exhibits features that distinguish the known characteristics of postbiblical Hebrew. In between there are several linguistic layers, the isolation of which is complicated by the relatively small amount of material available for comparison, the difficulties in dating the different documents, and the problem of distinguishing between the age of the material and the period of the final stage of its redaction. Much scholarly effort in recent years has been directed to identifying the specific linguistic features of Late Biblical Hebrew (LBH). Also, it is not known to what extent the editors “modernized” the language of the material they worked with. Comparative Semitic phonology and morphology make it certain that the present system of vocalization of the Hebrew consonants reflects the stage of Hebrew

pronunciation more or less as it had crystallized in the Second Temple period. It can be said from internal biblical evidence (cf. Judg. 12:6) and from several inscriptions that there were important differences in dialect between northern Israel and southern Judah. Consequently, since much of the biblical literature originated in the north but was mediated through the Judean scribes, it must have been stylistically transformed to conform to the standard Jerusalemite dialect. Finally, in evaluating the language of the Bible, the problem of the reliability and integrity of the Hebrew consonantal text tradition cannot be overlooked.

TEXT

The History of the Biblical Text

In the medieval codices of the Hebrew Bible, as in the printed editions to the present times, the text generally comprises three distinct components. These are the consonants, the vowel symbols, and the liturgical, diacritical notations. The latter two elements were invented by the masoretes (see *Masorah) while the history of the consonantal text, with which this section is exclusively concerned, represents the crystallization of a textual critical process of very great antiquity and of remarkable complexity. The second edition of the Rabbinic Bible, edited by Jacob b. Ḥayyim and published by Daniel *Bomberg (Venice 1524/25), served as the model for all future printed editions (see Printed Editions, below). Between this date and that of the most ancient fragments of the Hebrew Scriptures found in the Judean Desert intervenes a period of approximately 2,000 years, and many more centuries of textual transmission separate the earliest documents from the *editio princeps* of a biblical book.

THE EARLIEST PERIOD (up to c. 300 B.C.E.) It is no longer possible to reconstruct the textual evolution of the Hebrew Scriptures between the time of the composition of an individual work and the age of the first known witnesses, approximately 300 B.C.E. The existence of divergent texts of the same books may be postulated since this is the only way to explain the variants in the many passages duplicated in the Bible. (II Sam. 22 = Ps. 18; II Kings 18:13–20:19 = Isa. 36–39; II Kings 24:18–25:30 = Jer. 52; Isa. 2:2–4 = Micah 4:1–3; Ps. 14=53; 40:14–18=70; 57:8–12 = 108; 2–6; 60:7–14 = 108; 7–14; 96 = I Chron. 16:23–33; Ps. 105:1–15 = I Chron. 16:8–22; 106:1, 47–48 = I Chron. 16:34–36; the parallels between Sam.–Kings and Chron.).

As late as the 13th century traditions were still preserved about a period of disorder in biblical texts and the textual-critical activities of the “Men of the Great Assembly” (David Kimḥi, preface to his commentary on Joshua). This conclusion is reinforced by the findings from caves in Qumran. Here a plurality of text-types has been discovered – a situation which must represent a state of affairs much older than its earliest documentation. Indeed, it may be argued that the very idea of canonicity carries with it an attitude of reverence for the text and fosters care and accuracy in its transmission.

This would be particularly true of a written text since scribal activities would naturally be restricted to a relatively small circle of specialists. Furthermore, the use of sacred literature in public worship and in the curriculum of influential schools would tend to endow a certain version of a scriptural text with greater prestige. All these factors would tend to work in the direction of inhibiting the multiplication of textual versions and would serve to give some text-types greater prominence than others.

The situation presupposed here finds support in the history of Mesopotamian literature, where all the evidence points to the emergence of authoritative standard versions of the classical texts by the end of the second millennium B.C.E. As a consequence of this development, the great cuneiform literary texts appear in very limited editions despite wide geographic distribution and considerable chronological variability. A similar state of affairs is discernible in connection with the Greek classics. As early as the sixth century B.C.E. the production of a definitive text of the *Odyssey* and the *Iliad* was commissioned by Pisistratus, tyrant of Athens, though this is not necessarily the text that finally became predominant. From the third century B.C.E. on, considerable textual-critical work on the manuscripts of Homer to determine the correct readings was undertaken by scholars at the museum library of Alexandria. There is no reason why the textual history of the sacred Scriptures of Israel should have been more anarchic than that of the Mesopotamian and Greek classics. In fact, the existence of a fixed text of at least part of the Torah before the close of the pentateuchal canon is presupposed by the injunction in Deuteronomy (17:18–19) that the king have a copy of the law transcribed for himself for purposes of regular study, as well as by the prescription to hold a periodic public reading of the Law from an official copy deposited in the central sanctuary (Deut. 31:9–12, 26). There is no way of knowing, however, whether any one recension achieved greater national importance or prominence within this period. It can only be concluded that since the prototype of the text-family that ultimately achieved hegemony is present at Qumran, the history of that text must be much older.

THE SECOND PERIOD (c. 300 B.C.E.–First Century C.E.) The starting point, it should be noted, is somewhat arbitrary and is conditioned by the fortuitous existence of manuscript documentation; and the limiting point is fixed by the observation of a radical change after the destruction of the Temple. The evidence for development within this period involves Hebrew sources and Greek translations and is both direct and indirect. It is characterized by the diversity of text-types, though the number seems to have been very limited and each family of manuscripts appears to have maintained its homogeneity over a long period of time.

Until the discovery of the *Dead Sea Scrolls, the evidence of textual diversity in this period consisted mainly of the Samaritan *Pentateuch and the Septuagint; the latter must have been translated from a Hebrew source at variance

with the received text. Further evidence for a still fluid state of the text is provided by the citations of Scripture found in the books of the *Apocrypha and by rabbinic traditions about the activities of the *soferim. These latter are credited with responsibility for textual emendations (*tikkunei soferim*, Mekh., Shira, 6; Sif. Num. 84), for marking dislocated verses (*ibid.*; Shab. 115b–116a) and suspect readings (ARN¹ 34, 100–1; ARN² 37, 97; Sif. Num. 69), as well as for deletions (*itturei soferim*, Ned. 37b). Other rabbinic traditions tell of the need for “book correctors” (*maggihei sefarim*) in Jerusalem attached to the Temple (Ket. 106a; TJ, Shek. 4:3, 48a) and even of divergent readings in pentateuchal scrolls kept in the Temple archives (TJ, Ta’an 4:2, 68a; Sif. Deut. 356; ARN² 46, 65; Sof. 6:4).

This fluidity of text is precisely the situation that was revealed at Qumran, particularly Cave IV which has yielded about 100 manuscripts, complete or fragmentary. The outstanding phenomenon is the ability of the sect to tolerate, with no apparent disquiet, the simultaneous existence of divergent texts of the same book, as well as verbal and orthographic variety within the scope of a single recension. Clearly, an inviolable, sacrosanct, authoritative text did not exist at Qumran. Whether the identical conclusion is also valid for the normative Jewish community of Palestine in this period is less certain. It is true that there is nothing specifically sectarian about the Qumran Bible scrolls, either in the scribal techniques and conventions employed or in the nature of the divergent readings, which are decidedly neither tendentious nor ideological. Nevertheless, caution must be exercised in the use of the Qumran evidence for reconstruction of a generalized history of textual development in this period. The lack of more examples of the masoretic text-type may be solely accidental. It is also possible that this is less a library than a *genizah* which would tend to preserve discarded texts and so present a distorted picture. In many instances, the fragments are very small and are only *dissecta membra*, making the derivation of overall characteristics very hazardous. Finally, the isolated, cloistered, and segregated existence led by the sect of “covenanters,” with its implacable hostility to the Jerusalem religious establishment, could well have insulated Qumran from normative developments elsewhere in Judea, where a less tolerant approach to textual diversity may have prevailed.

In fact, the rabbinic testimony cited above demonstrates the existence of a movement away from a plurality of recensions and toward textual stabilization. The textual-critical activities of the *soferim* are all directed to this end and they are expressly reported to have worked on a text fixed even in respect of the number of its letters (Kid. 30a). Whatever its intrinsic worth this talmudic tradition could not have arisen among the rabbis had the fixing of the text been recent. The presence of Temple-sponsored “book correctors” implies the acceptance at some point in the Second Temple period of an authoritative text by which the accuracy of other scrolls was measured (Ket. 106a; TJ, Shek. 4:3, 48a; Sanh. 2:6, 20c). The record of the variant Temple scrolls is a tradition concerned

with an attempt to ensure just such a standardized recension. Indeed, that there existed an official Temple Scroll (*Sefer ha-Azarah*) which enjoyed high prestige is amply attested in rabbinic sources (TJ, Sanh. 2:6, 20c; Shek 4:3, 48a; MK 3:4; Kelim 15:6; cf. Jos., Wars, 7:150, 162), though it is not possible to tell exactly to what period they refer. Certainly, the seven rules of biblical hermeneutics, compiled but not invented by Hillel the Elder (Tosef., Sanh. 7:11; ARN¹ 37, 110; cf. Pes. 66a; TJ, Pes. 6:1, 33a), take the history of the attempt at textual stabilization at least back to the time of Herod.

Soon after the destruction of the Temple, Josephus (Apion, 1:8) wrote about the inviolate nature of the text of the Jewish Scriptures and it is clear that he regarded this as a virtue of long standing. Further proof for the existence of the notion of an authoritative text is provided by the Letter of Aristeas which is well aware of the circulation of carelessly written books of the Law (Arist. 30) and has Ptolemy send to the high priest in Jerusalem for a Hebrew text from which to make the Greek translation (*ibid.*, 33–40, 46; cf. 176). Once produced, this translation itself came to be regarded as sacrosanct by the Jews of Alexandria (*ibid.*, 311). Nevertheless, there is evidence from Qumran that the Greek translation was the object of much recensional activity, the purpose of which was to bring it into line with developments in the Hebrew texts current in Palestine. This phenomenon reveals, once again, both that the Hebrew text was still fluid and that there was a movement toward textual stabilization.

Within this period the notion of an authoritative text was well rooted outside the Qumran community. A very limited number of textual families is discernible, probably each having achieved local authority. Each family, however, exhibits internal textual variety. The religious leadership in Jerusalem appears to have recognized a fixed text and to have been engaged in textual-critical activity aligning divergent exemplars with it. The beginnings of this movement may possibly be traced to the Maccabean victories. At any rate, the recensional family that ultimately crystallized into what came to be known as “masoretic” is well represented among the Qumran collection, the most outstanding example being the Isaiah scroll (1Q15b).

THE THIRD PERIOD (First Century C.E.–Ninth Century C.E.)
The existence of an official text with binding authority from the generation of the destruction of the Temple is clearly reflected in halakhic discussions. Zechariah b. ha-Kazzav, who was apparently a priest in the Temple (cf. Ket. 2:9), based legal decisions on the presence of a conjunctive *vav* (Sot. 5:1). *Nahum of Gimzo, of the first generation of *tannaim*, employed the principle of “extension and limitation” in the interpretation of certain Hebrew particles (Ḥag. 12a; Pes. 22b), a hermeneutical system later developed to the full by R. *Akiva to whom not a word of the Torah, nor even a syllable or letter, was superfluous. Hence, he could derive a multiplicity of rules from each title on the letters of the Torah (Men. 29b). He,

too, warned against teaching from “uncorrected” books (Pes. 112a) and emphasized the importance of the protective devices (*masoret*) for the Torah text (Avot 3:13). Further, it was in Akiva’s day that the question arose as to whether the established consonantal text or the traditional manner of reading was to determine the halakhic interpretation (Mak. 7b; Sanh. 4a; Pes. 86b; Kid. 18b). R. *Ishmael, his contemporary, formulated the 13 *hermeneutical norms (Sifra 1:1) which presuppose a fixed recension. He also advised R. Meir to be extraordinarily meticulous in his work of transcribing sacred texts lest he omit or add a single letter (Er. 13a). This period is distinguished from its predecessors in that a single stabilized text attained unimpeachable authority and achieved hegemony over all others. This development seems to have occurred in the course of the first century C.E., probably as a consequence of the need for religiocultural cohesion and national unity following the destruction of the Temple. Before long, all other Hebrew recensions were discarded and passed into oblivion, leaving only a few traces behind.

It is true that in the generation after R. Akiva copies of the Torah made by R. Meir might still contain a few textual oddities (Gen. R. 9:5; 20:12), and medieval tradition could retain a record of variant readings found in a Torah scroll stored in the synagogue of Severus in Rome (*Bereshit Rabbati*, ed. Albeck, p. 209). It is also true that rabbinic literature has preserved several hundred deviations from the received text in scriptural quotations and in reconstructed readings underlying a specific piece of midrashic exegesis, while the same phenomenon may be discernible in citations in Jewish Palestinian apocryphal and pseudepigraphical literature, in the New Testament, and in the Church Fathers. Even in the third century C.E., R. Ammi, a Palestinian *amora*, might still find it necessary to warn against the retention of “uncorrected books” for more than 30 days (Ket 19b). Nevertheless, at this period all this constitutes a survival and not a living tradition.

The hegemony of the masoretic-type text is amply attested, apart from halakhic sources, by two independent classes of witnesses. On the one hand, the Hebrew biblical scrolls and fragments discovered at Masada (66–73 C.E.), at Wadi Murabba’at, and at Naḥal Ḥever (both from c. 132–35 C.E.) are all practically identical with the received text. On the other hand, the Jewish Greek translation of the Minor Prophets found in Naḥal Ḥever, and the second-century Greek translations of the Bible attributed to *Aquila, *Symmachus, and Theodotion all testify to revisions of the Septuagint attempting to bring it closer to a masoretic-type Hebrew text which had become exclusively authoritative. Whether this development resulted from an official promulgation by accepted religious authorities, or whether it was the culmination of a long period of growth during which the masoretic type had always represented the mainstream of tradition can no longer be determined. Whatever the case, no further developments of any significance in the biblical Hebrew consonantal text took place during the 600 years that elapsed between the latest manu-

scripts from the tannaitic period (c. 200 C.E.) and the earliest medieval ones (c. ninth century C.E.). None of the medieval manuscripts and codices, and not even the thousands of Bible fragments from the Cairo **Genizah* represent a recension different from the received text.

[Nahum M. Sarna / S. David Sperling (2nd ed.)]

PRINTED EDITIONS (HEBREW)

The story of the printing of the Hebrew Bible begins with the 1477 edition of the Psalms, most probably produced at Bologna. Each verse is followed by the appropriate passage from David *Kimhi's commentary, an arrangement which does not appear again in Hebrew Bibles. Since the first printers had considerable difficulty with the vowel-points, they abandoned them after Psalm 4:4, excepting only three consecutive verses, 5:12–6:1. Many words are printed *plene* (with vowel letters (*matres lectionis*, Heb. *imnot ha-keri'ah*)), including even *yod* for

segol. There are frequent errors, whole verses (108), half verses (3), and odd words (43) are omitted, and there are dittographs both of letters and of words.

The next venture was due to the *zedakot* ("charities") of the rich and pious Joseph b. Abraham Caravita. Knowing that the vigor of Judaism depends on serious and continued reading and study of the Bible, many wealthy Jews employed scribes to copy manuscripts in order to foster this study. In Spain they continued using scribes, but Jews in Italy quickly realized that the invention of printing with movable type would enable them to ensure the more effective dissemination of the Bible. In 1479–80 Joseph b. Abraham invited from Ferrara to Bologna Abraham b. Hayyim di Tintori, a master craftsman who had largely solved the problems of both vowel-points and accents. The result of this move was the Bologna Pentateuch of 1482, which set the pattern for many future editions, culminating in the Bomberg rabbinic Bibles of the next century. The folios consist of Rashi's commentary across the page, top and bottom, with the Hebrew text in the inner and wider column and Targum Onkelos in the outer column. The type is larger than that of the 1477 psalter, but, as in some Ashkenazi manuscripts, the final letters *kaf*, *nun*, and *pe* do not extend below the base-line of other consonants, so that it is virtually impossible to distinguish between *dalet* and final *kaf*.

A little later, a certain Israel Nathan b. Samuel moved to Soncino, a small town in the duchy of Milan. There he set up a printing press for his son, and this was the beginning of the great firm of Joshua Solomon *Soncino and his nephews, Moses and Gershom. Attracting Abraham b. Hayyim from Bologna, they produced the first complete Bible, the Soncino Bible of 1488, with vowels and accents, but without a commentary, as was the custom of the Soncinos. The Soncino brothers also were responsible for the 1491–93 Naples Bible, in which the vowel-points and accents are better placed than before. Gershom Soncino moved to Brescia, where he produced the 1495 Brescia Bible, an improved edition of the 1488 Soncino Bible, but, more important, in small octavo format, making it a pocket edition specifically produced for the persecuted Jews who, perpetually moving from place to place, found it difficult to carry the huge and costly folio Bibles. It was this edition which Martin Luther used when he translated the Bible into German.

In Spain a Hebrew Pentateuch with Targum and Rashi was printed by Solomon Salmatic b. Maimon in 1490 at Ixar (Hijar). There were also printing presses in Portugal, where in 1487 the Faro Pentateuch was produced. In this edition the printer was unable to solve the problem of placing a dot in the middle of a consonant, so there is no *dagesh*. This was followed in 1491 by the Lisbon Pentateuch in two volumes with the Targum and Rashi's commentary, and in the next year by Isaiah and Jeremiah at Lisbon and Proverbs at Leira. The expulsion of the Jews from Spain (1492) put an end to the printing of new editions of the Bible, both in Portugal and Italy, for wealthy Jews needed all their means to help the refugees, over a quarter

of a million of them. The Portuguese tradition was revived in Salonika 23 years later in an edition of Psalms, Proverbs, Job, and Daniel with Don Judah Gedaliah as patron and Joseph b. Mako Golphon as printer. The first Bible to be printed in Spain was the 1514–17 Complutensian Polyglot printed at Alcalde Henares (Lat. *Complutum*) under the patronage of Cardinal Ximenes de Cisneros, founder of the university there, regent of Castile, and archbishop of Toledo. The project was completed in 1517, but it was nearly three years before Pope Leo X authorized the work and a further two years before publication, by which time Cardinal Ximenes had been dead for five years. Accents were deliberately rejected; other signs were introduced to mark the colons and the penultimate accented syllables. The vowel-points are far from reliable.

By the year 1511 the Soncinos, now at Pesaro, were able to make a new start and in stages they completed a fourth edition of the complete Bible. Gershom had used the interval to perfect his technique and this edition is the best produced by Ashkenazi Jews in Italy. Around this time Daniel *Bomberg, a Christian merchant of Amsterdam, arrived in Venice and established his printing office there. In 1516–17 he published the first Great Rabbinic Bible, edited by Felix Pratensis, who was born a Jew but was baptized in 1506. The work is in four volumes, with Targums and commentaries. For the first time the *kerei* is given, but in the variants in the margin (see *Masorah). The last volume contains additional material, notably Maimonides' "Thirteen Articles" and the treatise on accents entitled *Dikdukei ha-Te'amim* said to be by *Ben Asher and here printed for the first time. Here also for the first time in Hebrew Samuel and Kings were each divided into two books in imitation of the Vulgate. The strangest thing about this edition is the statement made to the pope when his *imprimatur* was sought; it claimed that the many previously printed Bibles "contain as many errors as words" and that "no one had attempted it before." Daniel Bomberg and Felix Pratensis duly received the pope's blessing, though it proved more of a hindrance than an asset. Even before this four-volume Bible was published, Bomberg realized that he had made two bad mistakes: employing an apostate Jew as his editor, and requesting the pope's *imprimatur*. He therefore remade the columns as soon as the folios of the large Bible had been run off and issued a quarto edition at the same time, this time without any mention of either editor or pope. A second edition was called for within four years, when the whole was reset; on this occasion the two sons of Baruch Adelkind were mentioned as printers, and great emphasis was laid on the fact that they were Jews, thoroughly Orthodox and already engaged in printing the whole of the Talmud. However, something had to be done about the Great Rabbinic Bible, and, as though divinely guided and certainly opportunely, Jacob b. Ḥayyim ibn Adonijah arrived in Venice after his family had been driven out of Spain and again out of Tunis. After seven penurious years of wandering Jacob b. Ḥayyim found work with Bomberg in Venice. The chief fruit of the partnership was the second Great Rab-

binic Bible of 1524–25, the text of which became the standard masoretic text and continued as such for 400 years. Jacob b. Ḥayyim was very conscious of the importance of the masorah as the guarantee of the correct text, and he went to great pains and undertook several journeys to secure as many codices with a masorah as possible. Thus, for the first time, there was a printed Hebrew Bible with a marginal masorah. As the editor discovered that "the masorah did not harmonize with the majority of the codices," he had to exercise his discretion. The edition was in four volumes, with Targums, and with commentaries by Rashi, Ibn Ezra, David and Moses Kimḥi, and Levi b. Gershom. A third Bomberg quarto edition appeared in 1525–28, the text being a combination of that of Felix Pratensis and that of Jacob b. Ḥayyim.

Daniel Bomberg's tribulations were not over, for soon after 1525 Jacob b. Ḥayyim became a Christian. In 1527 Elijah *Levita, a refugee originally from Neustadt near Nuremberg, came to Venice and found employment with Bomberg. No more is heard of Jacob b. Ḥayyim, Elijah Levita being henceforth chief adviser to the Bomberg firm. In subsequent reprints of the 1524–25 Bible, there is no mention of the editor. Bibles printed after 1525 all follow substantially the text of Jacob b. Ḥayyim ibn Adonijah until *Buxtorf's small-format Bible of 1611 and his four-volume rabbinic Bible of 1618–19, printed at Basle, in which the text was influenced by Sephardi traditions, and not dominated by the Ashkenazi ones as were all previous editions printed under Jewish auspices. The text was edited by Jablonski in 1699, but the most important edition based on the Buxtorf text is that of J.H. Michaelis in 1720. It is a critical edition, quoting 19 printed editions and five Erfurt manuscripts, especially the very important Erfurt 3 with its masorah, and containing also *Okhlah ve-Okhlah*, an 11th-century masoretic work of great importance then printed for the first time. The critical notes and the variants provided by Michaelis indicate a masoretic tradition different from that of the 1524–25 Bible of Jacob b. Ḥayyim. They form a pattern, already discernible in Jablonski's 1699 edition, but more clearly in *Lonzano's *Or Torah* and *Norzi's *Minḥat Shai*. Norzi depended mostly on the de'Rossi codex 782, which had a strange, disturbed history, though *de'Rossi (vol. 1, p. 128) recognized it as "the most perfect exemplar of the masoretic text." This tradition must have come to Spain at a comparatively early date, and it is firmly established in Sephardi tradition. It is responsible for at least some of the differences between the Complutensian Polyglot and the standard text based on Ashkenazi codices. Michaelis' critical edition is an early and neglected precursor of the modern editions of the Hebrew Bible, those by P. Kahle and N.H. Snaith.

The story of modern times begins with Seligmann *Baer, who published the Hebrew Bible in single volumes with notes, except for Exodus to Deuteronomy (for which see the Roedelheim Pentateuch, a popular edition without notes). The dates of these volumes are 1869–1895. Baer believed that the masorah is supreme, that firm rules can be established, and that

these must be rigidly followed, whatever the manuscripts may say. In this he is the literary descendant of Elijah Levita and his *Masoret ha-Masoret*. Baer, who regularly followed a masorah or a rule against the codices and frequently “corrects an error,” worked according to the rules laid down by Jekuthiel in *Ein ha-Kore*, and later by Heidenheim. Baer was supported by Franz *Delitzsch, whose authority was immense. In his books on the accents, W. Wickes (*Verse Accents*, 1881; *Prose Accents*, 1888), similarly makes and adopts fixed and rigid rules. In contrast, C.D. *Ginsburg (British and Foreign Bible Society edition, 1911–26) followed Jacob b. Ḥayyim; where the various masorah traditions disagreed either with the text or with each other, he exercised his judgment, with the result that he paid more attention to the manuscripts than to either masorah or to Jacob b. Ḥayyim. With the third edition of R. Kittel’s *Biblia Hebraica* (BH3; 1936), a new signpost was erected. P. Kahle was responsible for the text, based on the Leningrad codex (Firkovich collection B19a) which Kahle claimed was a true, accurate, and genuine Ben Asher codex. (The Leningrad codex itself is now available in an affordable photographic reproduction edited by D.N. Freedman (1998).) Ever since Maimonides supported the Ben Asher tradition against *Saadia b. Joseph Gaon, who favored the *Ben Naphtali tradition, it had been agreed that a true masoretic Bible must follow Ben Asher.

The 1928 Foreign Society (N.H. Snaith) edition was based mainly on British Museum’s mss. Orient. 2626–28, a beautifully illustrated codex, close to the notes of Lonzano, Norzi, and the tradition found in the 1720 Michaelis Bible. The text, though compiled from completely different sources, is very close to the Kahle text. This indicates that the Ben Asher text is to be found not only in Leningrad manuscript but also in the best Sephardi manuscripts (in the first hand, and not as corrected by a second hand to the Ben Ḥayyim tradition, as often happened after 1492 when the exiled Jews came into close contact with the other traditions).

Recent years have witnessed great progress towards the production of a truly critical edition of the Hebrew Bible. Despite its superiority to previous efforts the numerous shortcomings of BH3 pointed out by reviewers necessitated a fourth edition (including variants from biblical manuscripts from Qumran), *Biblia Hebraica Stuttgartensia* (BHS) published in 1977. Differing in kind from its predecessors a new *Biblia Hebraica* edition Quinta (BHQ) is appearing in fascicles. (*Megilloth* appeared in 2004). In the manner of its predecessors BHQ uses Leningrad as a base text, but includes the large and small masorah with the text accompanied by a single critical apparatus. When completed BHQ will be printed as a single volume, accompanied by a separate volume with translations, notes, and commentary on the masorah. Even more ambitious is the multi-volume Hebrew University Bible Project (HUBP), based on the excellent but incomplete Aleppo codex (ca. 925). HUBP has four separate apparatuses and suggests no conjectural emendations. Of special note is the inclusion of variants recovered from biblical citations in rabbinic literature. Thus far

three volumes have appeared: Isaiah (1995), Jeremiah (1997), and Ezekiel (2004). Of interest too is N. Ben-Zvi (ed.), Jerusalem Crown: The Bible of the Hebrew University of Jerusalem (2000), Not to be confused with HUBP, Jerusalem Crown is an aesthetically pleasing “scholarly manipulation” (Sanders 2004) of the Aleppo and Leningrad codices into a rabbinic Bible.

Bibles containing the original Hebrew text (or Greek in the case of New Testament) together with the important ancient versions arranged in parallel columns are termed polyglots. They were at one time important in ascertaining correct readings or meanings of the text. The oldest one in print is the *Complutensian Polyglot*, mentioned above containing the Hebrew masoretic text, the Vulgate, the Aramaic Targum (with a Latin translation), and the Septuagint (with a Latin translation). The most comprehensive are Brian Walton’s *London Polyglot* (1654–57) which contained texts in Hebrew, Samaritan, Aramaic, Greek, Latin, Ethiopic, Syriac, Arabic, and Persian (all with Latin translations), and Samuel Bagster’s *Polyglot* (1831) in Hebrew, Greek, Samaritan, Latin, Syriac, German, Italian, French, English, and Spanish. More modern polyglots have contented themselves with giving the texts in Hebrew, Greek, Latin, and a modern language.

TRANSLATIONS

ANCIENT VERSIONS

Aramaic: the Targumim

The word *targum* (תַּרְגוּם) means “translation,” corresponding to the verb *tirgem* (תִּרְגַּם; “translate”), of which passive participle, *meturgam*, occurs in Ezra 4:7: “The letter was written (*katuv*) in Aramaic and translated” (*meturgam*; the second mention of “Aramaic” in the verse is a note to the reader that the Aramaic version of the letter follows (Blenkinsopp 109–10)). There are no other biblical attestations of *trgm*. In Jewish Babylonian Aramaic the verb *trgm* means “translate into Aramaic,” “explain.” In Syriac the verb means “explain,” “translate” (Sokloff DJBA, 1231–32). In Jewish Palestinian Aramaic *trgm* means “translate” into any language (Sokoloff, DJPA, 591). In Samaritan the verb means “translate,” “relay the message” (Tal, DSA, 963). *Tirgem* is a denominative verb, being derived from the noun *turgesman*. The term may have entered Hebrew and Aramaic through Akkadian *targumānu* (“interpreter”) whence, ultimately, the English *dragoman*. The

Akkadian noun itself has been connected by some scholars with the verb *ragāmu*, “call out,” “summon,” “prophesy,” “sue” (CAD R, 62–7), and with Ugaritic *rgm*, “speak,” “say.” Others have argued for a non-semitic origin (details in Starke). In Aramaic and Hebrew the word *turgeman* exists alongside a more native-looking Hebrew adaptation, *meturgeman*. In tannaitic and amoraic Hebrew *tirgem* is said of translating from Hebrew into any other language (TJ, Kid. 1:1, 59a; TJ, Meg. 1:11, 71c), but the noun *targum* does not seem to occur with reference to any but Aramaic versions of the Bible (Shab. 115a; TJ, Kid. 1:1, 59a; TJ, Meg. 1:11, 71c). In fact, the Mishnah (Yad. 4:5) refers to the Aramaic originals of certain sections of Daniel and Ezra as *targum*.

ORIGIN OF THE TARGUMS. The Jewish diaspora in Babylonia must have exchanged Hebrew for Aramaic as its vernacular in only a few generations. In Palestine the process was much more gradual, but Aramaic was probably the language of the majority of Jews there before the end of the Persian period. During the period of Persian domination (539–333 B.C.E.), Aramaic was the language of the Persian administration and the lingua franca of southwestern Asia. The bilingual character of the books of Ezra and Daniel is due to the attempt to make these books more “biblical” by providing them with Hebrew beginnings, but they reflect a period of Aramaic dominance. The practice of translating the Bible reading into Aramaic in the synagogue is attributed to Ezra by *Rav (third century C.E.), who interprets the word *meforash* in Nehemiah 8:8 to mean an interpretation of the Hebrew text of the Bible in Aramaic translation (Meg. 3a; Ned. 37b; cf. TJ, Meg. 4:1, 74d), but both the meaning of the word and the reliability of the account in Nehemiah 8 are subjects of controversy. At any rate the custom of interpreting the synagogue reading of the Bible text with the Targum after each verse (or after each three verses) in the presence of the congregation, so as to permit a translator to repeat it in Aramaic, is attested in the Mishnah (Meg. 4:4).

MANNER OF USAGE. The professional translator of the Hebrew Bible text in the synagogue was called *meturgeman* (Meg. 4:4). His oral explanations were given along with the reading of the Sabbath lesson. The rules for reading the Targum are formulated in the *halakhah* (Meg. 4:4–10; Meg. 23b–25b; Tosef., Meg. 4:20–41). The Targum was to be read after every verse of the *parashah* of the Pentateuch and after every third verse of the reading from the Prophets. There is no mention in this source of reading from a written Targum, and elsewhere (TJ, Meg. 4:1, 74d) the use of such writings was forbidden, at least for the Pentateuch, for the Sabbath worship service, but the preparation and use of them by individuals for private study and school instruction was permitted. Although certain portions of the Bible were read but were not translated (as Gen. 35:22), others were neither read nor translated (as Num. 6:24–26; II Sam. 11–13). *Judah b. Ilai, a *tanna*, and a

pupil of Akiva rhetorically expressed the difficulty faced by all Bible translators in his declaration that whoever translates (*ha-metargem*) a verse of Bible literally is a fictionalizer, while he who makes additions is a blasphemer (Tosef., Meg. 4:41; Kid. 49a). A later anonymous opinion (Kid. 49a) cites Judah’s statement as proof that one may not translate the Bible on one’s own but must translate only from “our targum,” i.e., Onkelos (see below). In *Sifrei* (Deut. 161), the Targum is mentioned as a branch of study that falls between the Bible and the Mishnah. The Targums as a whole are not always primarily literal translations of the corresponding Hebrew text; they are often intermingled with various paraphrases and agadic supplements such as one meets in exegetical or homiletic works like the Talmud and the Midrash. They also contain explanations and alterations adapted to secure the sense of the masoretic text current among the rabbinical authorities, offering it to the people in an intelligible form. In this period an important concern of Jewish criticism and exegesis was the need to remove or tone down all references to God that could lead to misunderstanding in the popular mind. The Targum thus employs various devices to obviate the appearance of a very distinct anthropomorphic character of God. These, however, are not consistently applied. Indeed at times anthropomorphic phrases are translated literally or even amplified, e.g., PT to Exod. 15:17 (Klein, 1982; 1986, xxxii).

DATE OF TARGUM. There are early indications that the Targum was committed to writing, although for private use only. A tannaitic tradition refers to an Aramaic translation of the book of Job which existed in written form at the time of *Gamaliel I (first century C.E.) and which, after being withdrawn from use, reappeared in the lifetime of his grandson Gamaliel II. Targum Onkelos, which was made the official Targum of the Babylonian schools, was committed to writing and redacted as early as the third century C.E., since there is a masorah to it which dates from the first half of that century (see below). The official recognition of a written Targum and the final redaction of its text, however, belong to the post-talmudic period, thus not earlier than the fifth century C.E.

LITURGICAL USE OF THE TARGUM. Two Palestinian *amoraim* of the third century C.E. (Ber. 8a–b) urged that in private worship the Hebrew text of the weekly *parashah* be read twice and the Targum once, exactly as was done in public worship. There are still pious Jews who do this before the Sabbath, although Aramaic is no longer the vernacular of the Jews. The Yemenite Jews have even retained the public reading of Targum Onkelos (see below). Targums to all the books of the Bible except Daniel and Ezra–Nehemiah (this constituting in Jewish tradition a single book of Ezra) have survived to this day.

Targums to the Pentateuch

TARGUM ONKELOS. The official Targum to the Pentateuch, the only such Aramaic version that was subjected to a unified

and scholastic redaction, is known by the name of Targum Onkelos. The origin of this name is derived from the Babylonian Talmud (Meg. 3a), where the Targum to the Torah is attributed to the proselyte *Onkelos, who is said to have composed it (literally, “spoke it,” “declaimed it”) under the guidance of R. Eliezer and R. Joshua (An anonymous statement (*ibid.*) goes so far as to say that the original targum was given at Sinai, subsequently forgotten, and then restored by Onkelos.) The Palestinian Talmud, however (Meg. 1:11, 71c), contains the statement: “Aquila the proselyte translated (*tirgem*) the Pentateuch in the presence of R. Eliezer and R. Joshua,” in a context which shows that a translation into Greek is meant. These accounts are obviously related: in the Babylonian Talmud only the name Onkelos occurs, while Aquilas (= Akylas, the Greek adaptation of the Latin Aquila) alone is found in the Jerusalem Talmud. The latter is historically reliable – Aquila did compose a scrupulously exact and literal Greek translation of the Bible, and Targum Onkelos, however, is almost a literal Aramaic translation of the Pentateuch. In addition to this, a great deal of what is revealed about Onkelos in Babylonian sources is attributed to Aquila in the Jerusalem ones. Important works that discuss the identity of Onkelos and Akylas (= Aquila) are those of M. Friedmann, A.E. Silverstone, and D. Barthélemy. Silverstone argues that Aquila was identical with Onkelos, and that this one individual produced both a Greek and an Aramaic translation. Friedmann believes that they were two different personalities. Barthélemy argues that the Babylonian Jewish scholars possessed an anonymous Aramaic translation to which they gave the name Targum Onkelos. This was based on mistakenly transferring the western tradition of Aquila’s Greek translation of the Torah into Greek to the Aramaic Targum of the Torah that the Babylonians possessed.

The Aramaic of this Targum exhibits a mixture of the Western (e.g., *yat* as nota accusativi) and Eastern (e.g., *hzy*, “to see”) features. This combination gave rise to a variety of opinions about the Targum’s place of origin. A. Berliner, T. Nodeldeke, G. Dalman, and E.Y. Kutscher believe that it originated in Palestine, while its final redaction took place in Babylonia. The opposing view is held by P. Kahle and his followers, who consider this Aramaic version to have originated entirely in Babylonia. Adherents of Palestinian origin have argued from the content of the Targum that it was composed in Palestine (particularly in Judea) sometime in the second century C.E., since both the halakhic (legal) and aggadic (non-legal) portions betray the influence of the school of Akiva. In addition, they have maintained that the western Aramaic elements, e.g., preservation of the absolute state, are much stronger. Kutscher (11–13) argued that the Aramaic of Onkelos is quite close to that of the Genesis Apocryphon found at Qumran in Palestine; and Greenfield, in the same vein classified both as examples of Standard Literary Aramaic. After the destruction of the Second Temple and the suppression of the Bar Kokhba revolt, which destroyed the cultural centers of Judea, Targum Onkelos disappeared from Palestine. The old Standard Literary Aramaic was superseded by the local Western Aramaic

dialects, and since the center of Jewish life shifted to Galilee, a new Targum in the Galilean dialect evolved in the course of time. At the beginning of the Amoraic period (end of second century C.E.), before it had disappeared from Palestine, Targum Onkelos was imported, the argument continues, along with the Mishnah to Babylonia. There it underwent final revision during the third century C.E. and was recognized as the authoritative Aramaic version of the Pentateuch for the local Jewish population. In the Babylonian Talmud (Kid. 49a) it is mentioned as “our Targum” or by the expression “as we translate.” A special masorah prepared for it contains statements concerning the divergencies between the Babylonian academies of *Sura and *Nehardea. More recently, however, Mueller-Kessler has argued that the similarity between the language of the targums and the Aramaic literary dialect of the Mesopotamian Jewish Aramaic magic bowls of the fourth-seventh centuries C.E. points to a Babylonian origin of both the Targum Onkelos and Jonathan.

This Targum Onkelos is the most literal translation of the Pentateuch. The text from which it was prepared was in all essentials the masoretic one. The principal objective was to conform the Targum as closely as possible to the original text, and the grammatical structure of the Hebrew was thus followed closely. One prominent example of this is the use of the particle *yat* as a sign of the accusative for the corresponding Hebrew particle *’et*. Yet there are numerous exceptions where the Targum does not adhere to the original. Paraphrase occasionally takes the place of translation: in the poetic portions (e.g., Gen. 49) there are aggadic (non-legal) supplements of moderate size, while halakhic (legal) regulations are often read into the legal portions (e.g., Ex. 21:16). Offensive or disagreeable material is paraphrased or rendered by some sort of circumlocution (e.g., Gen. 20:13; Ex. 24:11). The paraphrastic style of translation affected by the Targums in general, in order to obviate anthropomorphisms and anthropopathisms in reference to God, is quite prominent in the Targum Onkelos. Thus, the embarrassing Genesis 20:13 “when the gods (*elohim*) caused me to wander” (plural verb *hit’û* following *elohim*) is rendered “when the gentiles (*f’ô* with *tet*) strayed after the works of their hands.” The rhetorical Exodus 15:11, “Who is like you among the gods Yahweh?” is translated as “There is none other than you, you are God, Adonai.” Nonetheless, Onkelos has no problem with the plurals in Genesis 1:26, “let us make the human in our image.” Figurative language, as a rule, is not translated literally but is explained (e.g., Gen. 49:25; Ex. 15:3, 8, 10; 29:35). Geographical names are sometimes replaced by those current at a later time (e.g., Gen. 10:10; Deut. 3:17). Apart from *Megillah* 3a (previously mentioned), all the references to Onkelos as the author of the Aramaic translation of the Pentateuch originated in the post-talmudic period, although they are all based on this passage in the Babylonian Talmud. The earliest of those is in the late midrashic work known as *Pirkei de-R. Eliezer* (38), where the targumic passage on Genesis 45:27 is cited in the statement “Onkelos has translated.” The ninth-century *gaon* *Sar Shalom (*Sha’arei Teshu-*

vah, 29) names Targum Onkelos as the Targum that was in circulation in the Jewish community at that time and as having more claim to sanctity than any other existing Targums. The gaon *Natronai (*Seder Rav Amram*, Warsaw (1865), p. 29) attributes this Targum to the rabbis of the Talmud and attaches a canonical value to it. Accordingly, the designation "Targum Onkelos" was firmly established in the early part of the geonic period.

Noteworthy is the fact that the Jews of Yemen received this Targum, like that of the Prophets, with the Babylonian supralinear punctuation. A critical edition of Targum Onkelos to the Pentateuch (as well as Targum Jonathan to the Prophets) with supralinear punctuation according to Yemenite manuscripts has been edited by A. Sperber (see bibliography. See also Cohen, *Haketer: Joshua–Judges*, 79*–82). Yemen and Yemenite synagogues in Israel were the only places where the reading of Targum Onkelos continued to accompany that of the Pentateuch on Sabbaths into the 20th century. Elsewhere, some pious Jews still observe the custom of going over the weekly portion of the Torah privately on the eve of the Sabbath, verse by verse in Hebrew, Targum, and Hebrew again (Ber. 8a–b; Sh. Ar., OF, 285).

PALESTINIAN PENTATEUCH TARGUMS. *Codex Neofiti I*. Since 1930, there has been great progress in the recovery of the old "Jerusalem," properly speaking, Galilean, Targums. In that year Kahle edited for the first time some *genizah* fragments of such Targums (see bibliography) dating from between the seventh and ninth centuries C.E.

Because they overlap, they exhibit divergences which show that their text, unlike that of Targum Onkelos, was never fixed. Further texts have since been published by A. Diez-Macho, Y. Komlosh, W. Baars, and M. Klein. In 1956 Diez-Macho, who had studied with Kahle, announced the discovery of a complete Palestinian Targum to the Pentateuch called Neofiti I, which he had found in the Vatican Library (VT Supplement, 7 (1960), 222–245). The text had been incorrectly catalogued as Targum Onkelos.

Prior to the discovery of Neofiti I, the Galilean Targum was represented by two main recensions: Targum Yerushalmi I (TY I), also known as Targum Jonathan or Targum Jonathan b. Uzziel in Hebrew and hence as Pseudo-Jonathan in Western languages; and Targum Yerushalmi II (TY II), the so-called Fragmentary Targum. More correct than Targum Yerushalmi, "Jerusalem Targum," is Targum Erez Israel, "the Palestinian Targum," by which it is designated in a responsum by R. Hai Gaon, but it is already called "the Targum of the People of the Holy City" by *Menahem b. Solomon, the 12th-century author of the *Midrash Sekhel Tov*. With the appearance of Neofiti I, three principal Galilean Aramaic versions of the Pentateuch are now in existence. Whereas Neofiti I is complete, 15 verses are missing from Targum Yerushalmi I, and Targum Yerushalmi II contains only 850 verses of the Pentateuch. Codex Neofiti I differs from other Galilean Targum manuscripts in orthography, grammar, and range of paraphrase.

It also contains a large number of marginal and interlinear variants.

Targum Yerushalmi I (Pseudo-Jonathan). This targum is quite expansive, being almost twice as long as the Hebrew original. The ascription of this Targum to *Jonathan b. Uzziel is believed to date back to the 14th-century commentator Menahem b. Benjamin Recanati, who erroneously analyzed the abbreviation, י"ת (Targum Yerushalmi) as Targum Jonathan. W. Bacher believed that Recanati probably misinterpreted a passage in the Zohar (1:89a) according to which Jonathan translated *ha-mikra* (הַמִּקְרָא), which in this case refers to the Prophets rather than to the whole Bible (hence the Pentateuch). The name Targum Erez Israel is found in writers of the 11th century. The Tosafot cite the Galilean Pentateuch Targum variously as Targum Jonathan (to Hag. 27a), Jonathan b. Uzziel (to Av. Zar. 59a), and Targum Yerushalmi (to Ber. 8b). The language of this version of the Pentateuch is Galilean Jewish Aramaic (outside the manuscript it was not transmitted in its pure form). Its most distinctive characteristic is the free aggadic handling of the text. Like the other Targums, it sets aside figurative speech and eliminates most anthropomorphic expressions referring to God. Early geographical names are replaced by those current in a later age. This Targum contains abundant information on most of the religious and dogmatic teachings of Judaism of the talmudic period. One finds the Jewish (not always biblical) doctrines of the being of God, His dwelling place, His revelation in the Torah, angels, creation, sin, death, the messianic kingdom, resurrection of the just and the future life, gehenna, and the world to come.

This Targum is not earlier than the seventh century C.E., although it contains material which is much earlier than the date of its final compilation and redaction. A very ancient date has been claimed for the following passages: Genesis 15:19, Numbers 24:21, the interpretation of "Kenites" as Salmeans, contemporaries and allies of the Nabateans, and Deuteronomy 33:11, the reference to Johanan (b. Hyrcanus) the high priest. Indications of a late date of composition, however, occur in Exodus 26:9, in which reference is made to the Six Orders of the Mishnah; in Genesis 21:21, where the Hebrew names of the two wives of *Ishmael (regarded as the ancestor of the Arabs) are rendered respectively by עִישָׁא or עִישָׁא, i.e., the name of Muhammad's wife Ayesha or of his wife Khadijah, and פִּטְיִמָּא, the name of his daughter Fatima; and in Genesis 49:26 and Deuteronomy 33:2, where Edom (i.e., Byzantium or Christian Europe) and Ishmael are spoken of as world powers in a way that was possible only in the seventh century at the earliest.

Targum Yerushalmi II (the Fragmentary Targum). This Targum contains renderings of only certain verses, phrases, or words of the Pentateuch, estimated at about 850 verses altogether. Three-fourths of these are on the historical sections of the Pentateuch, while the remaining fourth is on the legislative sections in Exodus, Leviticus, and Numbers. There are about 14 chapters which have no translation at all, while for

some 90 verses there are translations of only a single word of the Hebrew text. The earliest known fragments were first published in Bomberg's Great Rabbinic Bible in 1516–17, based on Vatican Codex 440 (a good portion of the fragments had already appeared under the title "Tosefta Yerushalmi" in the Lisbon Bible of 1491). In 1899 M. Ginsburger edited a number of other fragments from manuscript sources, especially from Paris Codex 110, as well as from quotations from the Targum Yerushalmi found in early works, under the title *Das Fragmententhargum*. This work also contained numerous fragments that occur under the title *Nuṣṣa Aḥarena* in the Venice Bible of 1591. These plus other variants are sometimes referred to as Targum Yerushalmi III. The language of this Targum is Galilean Jewish Aramaic, and it includes many foreign loan words. Its fragmentary condition has been accounted for in various ways.

The fragments are not all contemporaneous. The text of the majority of them is older than Pseudo-Jonathan. Many of these fragments, especially the aggadic paraphrases, agree with Pseudo-Jonathan, which may, on the other hand, be older than some of them. Similarly, aggadic additions were made to the text of the Targum in later centuries, so that a North African manuscript of 1487 alludes to the capture of Constantinople by the Turks in 1453. Early in the 12th century, *Judah b. Barzillai wrote of these additions: "The Jerusalem Targum contains aggadic sayings added by those who led in prayer and who also read the Targum, insisting that these sayings be recited in the synagogue as interpretations of the text of the Bible." These numerous additions to the Jerusalem Targum and the majority of the fragments are all of a later date than Onkelos, yet both Pseudo-Jonathan and the Fragmentary Targum contain much that has survived from a very early period. According to W. Bacher, the nucleus of the Jerusalem Targum is older than the Babylonian one, which was, in his opinion, redacted from it.

The Targums to the Prophets

TARGUM JONATHAN. This Targum gradually became recognized as the official Aramaic version of the Prophets. According to P. Churgin, its final redaction was accomplished by the seventh century C.E. in the form in which it is now known. Like the Targum to the Pentateuch, it originated in the synagogue, where it was recited after every three verses from the Hebrew text of the Prophets during that part of the service. According to the Babylonian Talmud (Meg. 3a), it was written by Jonathan b. Uzziel "at the dictation of Haggai, Zechariah, and Malachi." The talmudic account thus traces the origin of the Targum of the prophets to the last prophets, making for an unbroken chain of transmission. The account continues to relate that because of this translation the entire land of Israel was shaken and a voice from heaven cried out: "Who has revealed my secrets to man?" The story adds that Jonathan wished to translate the Hagiographa as well, but that a heavenly voice bade him to desist. According to W. Bacher the Targum to Job, which was withdrawn from circulation

by Gamaliel I, may have resulted from Jonathan's attempts to translate the Hagiographa. Jonathan b. Uzziel is named as "Hillel's most prominent pupil in the first century B.C.E. and was a contemporary of Gamaliel I. In the Babylonian Talmud, this Targum is quoted quite frequently by R. Joseph b. Hiyya (270–333 C.E.), head of the Pumbedita Academy (MK 28b; Sanh. 94b; Meg. 3a). Thus, as early as the beginning of the fourth century, the Targum to the Prophets was recognized as being of ancient authority. Hai Gaon (commentary to *Tohorot*, quoted in *Arukh ha-Shalem*, 2 (1926), 293a) regarded R. Joseph as its author, since he cited passages from it with the words "Rav Joseph has translated."

Targum Jonathan contains Eastern as well as Western Aramaic linguistic traits. It has a few Persian loan words, such as *dasteqa* / *disteqa* ("hilt," "handle" = Syriac *dasteqa*. Cf. Pahlavi *dast*, "hand," *dastag*, "bundle," Farsi *daste*, "handle," Judg. 3:22) and *idron* (Persian; *andarōn*, "inside," "within," Joel 2:16). Its style is very similar to that of Targum Onkelos, especially in the Former Prophets – the historical narratives. In the prose sections one meets an occasional reading which is not in the masoretic text (Josh. 8:12) or an apparent conflation of two variants (*ibid.* 8:16). Proper names are sometimes transformed into their (often, surely, merely guessed) up-to-date appellations (*ibid.* 7:21, where Shinar is interpreted as Babel and Jer. 46:25, where No (נֹ) is interpreted as Alexandria), but for the most part they are taken over unchanged from the Hebrew text. The usual rules of targumic interpretation are observed in the rendering of anthropomorphic expressions and figurative language (Hos. 1:3). Poetic passages are drastically paraphrased (e.g., Judg. 5; 1 Sam. 2:1–10). The same holds true for difficult passages, where paraphrasis is specially employed in an attempt to explain the Hebrew text (cf. 1 Sam. 15:23; 17:8; 11 Sam. 14:11; 20:18). The rendering in the Latter Prophets is more paraphrastic on the whole than the Former Prophets, which is to be expected in view of their more exalted and rhapsodic style (cf. Targum Jonathan's amplification of the Heb. text of Isa. 29:1 and Jer. 10:11; for instances of *aggadah* in this Targum see Isa. 12:3; 33:22; 62:10; Micah 6:4). This Targum is noteworthy for its unity of style and character throughout the historical as well as the prophetic books. This can be seen, as Gesenius pointed out, from a comparison of the passages 11 Kings 18–19 (= Jer. 36–39) and Isaiah 2:2–4 (= Micah 4:1–3), which are translated alike with only slight variations, and from other features, such as the rendering of Tarshish by Yama, which is common to Jonah, Jeremiah, and Ezekiel.

A conspicuous affinity exists between Targum Jonathan and Targum Onkelos, as seen from certain passages which are identical word for word. Most of the early writers on this subject recognized this identity but differed in their conclusions. Thus, while de' Rossi and Herzfeld were certain that Onkelos knew the Targum to the Prophets, L. Zunz took the view that Jonathan and Onkelos before him had quoted it in Judges 5:8 (= Deut. 32:17), 1 Samuel 12:3 (= Num. 16:15), 11 Kings 14:6 (= Deut. 24:16), and Jeremiah 48:46 (= Num. 21:28–29).

TARGUM YERUSHALMI TO THE PROPHETS. The existence of such a Targum is inferred mainly from the frequent citations from it by early authors, especially Rashi and David Kimḥi. Fragments from the books of Joshua, Judges, Samuel, Kings, Isaiah, Jeremiah, Amos, Jonah, and Zechariah are contained in Codex Reuchlinianus, written in 1105 (ed. Lagarde, *Prophetica Chaldaica*, 1872), in the form of 80 extracts. W. Bacher investigated their character in his detailed article “Kritische Untersuchungen zum Prophetentargum” (in *ZDMG*, 28 (1874), 1–58). The language is Palestinian in character, yet its aggadic additions are frequently traceable to the Babylonian Talmud. This Targum thus belongs to a later period, when the Babylonian Talmud began to exercise a considerable amount of influence on Palestinian literature. There are also “Toseftas” (additions) to the Prophet Targum that are similar to the Targum Yerushalmi and are also cited by Kimḥi (see esp. A. Sperber, *The Bible in Aramaic*, 2 (1959), ix–x, 3 (1962), xi, 23–25, 462–5, 479–80; for Tosefta to Targum Onkelos, see 1 (1959), xvii–xviii, 354–357). For a list of targumic Toseftas see Klein, *Genizah*, xxix.

Targums to the Hagiographa

Although there are extant Targums to the Hagiographa, they did not enjoy official recognition. They did not originate until a later period, and were written at different times by various authors, yet they contain old material. W. Bacher considers them to have originated in Palestine, since they contain expressions known in the Jerusalem Talmud and the Midrash, although in the Targums to the Five Scrolls many linguistic features of the Aramaic of the Babylonian Talmud occur. Their unofficial status was probably due to the fact that they were not used in the public synagogue service (with the exception of Esther, though in later times all Five Scrolls were used in the liturgy of the synagogue) or school. The Targum to the Book of Job, which existed in the first century C.E. according to the Babylonian Talmud (Shab. 115a), cannot be identified with the Targum to this biblical book in existence now, which is a product of a much later period. Its relation to the Aramaic translation of Job from Qumran (see below) is a matter for speculation. The various Targums of this part of the Bible may be conveniently classified into three categories: Targums of Job, Psalms, and Proverbs; of the Five Scrolls; and of Chronicles.

JOB. This Targum and that of Psalms may have had a common origin, in view of the many similarities between them. Both aim at giving a fairly faithful rendering of the Hebrew text, and although aggadic additions are present from time to time, they are brief and can easily be separated from the translation itself. Each Targum contains a number of double renderings (Job has between 40 and 50, Psalms has fewer); the second rendering is introduced by *תרגום אחר* (*targum aḥer*) and is considered by some the original one. In such cases, one of the translations is generally aggadic, while the other is more literal. About six verses in Job even have a third rendering.

An indication of an early date is contained in Job 4:10, where the word *שני* which the masoretic pointing interprets, in accordance with the context, as *shinnei* (“the teeth of”) is interpreted by the translator as *shenei* (“the two”), apparently alluding to Rome and Constantinople as the two capitals of the Roman Empire – a fact which would indicate that the work was composed before the fall of Rome in 476 C.E. (cf. the Targum on Ps. 108:10). Another common feature of these two Targums is the fact that between them they contain about a hundred variants in vowels and even consonants from the masoretic text, a feature not found with such frequency in the other Targums. Since a number of these same variants also occur in the Peshitta and the *Septuagint, they offer adequate proof of an early date of composition for these two Targums. In both the two constant themes are the law of God and its study as well as the future life and its retribution. A Targum to Job was among the many finds discovered among the Dead Sea *Scrolls in 1947. A preliminary study on some of the fragments was published by J.P.M. van der Ploeg (see bibliography; see also A.S. van der Woude, in *VT Supplement*, 9 (1962), 322–31). This was followed by their editio princeps, and then by an edition by Sokoloff (bibliography) in 1974. A neglected fragment was rediscovered by Reed and Zuckerman in 1992.

PSALMS. This Targum is partly allegorical and partly literal; thus it was probably the work of more than one hand. The paraphrase in it is explanatory rather than simply expansive (e.g., 29:1; 46:4). An indication of an early date is Psalms 108:10, which still mentions the Western Roman Empire. In Psalms 18 the targumist has availed himself of the Targum to 11 Samuel 22, although without adopting the linguistic peculiarities of the Babylonian recension of Targum Jonathan

PROVERBS. A unique feature of this Targum is its striking similarity to the Peshitta. Various explanations have been offered for this phenomenon (Komlosh, 31–32). Some think that the Targum was influenced by the Peshitta and was actually a Jewish recension of it; others consider the possibility of both versions being separate reworkings of an older Aramaic version. About one third of the verses in this Targum agree with the Peshitta against the reading of the Hebrew original (e.g., 1:7; 4:26; 5:9; 7:22, 23; 9:11; 12:19; 16:4, 25)

FIVE SCROLLS. The Targums of these books are essentially a collection of Midrashim, and consequently they are exclusively paraphrastic and verbose in form. Only in a few instances, where no Midrash can be utilized, are they literal in their approach. The exception is the text of the Targum Esther in the Antwerp Polyglot, which is almost a literal translation; the text of the London Polyglot, which is essentially the same as that of the Antwerp Polyglot but has many aggadic additions, is now the standard Targum text to Esther. The Targums of Ruth and Lamentations are somewhat less paraphrastic than those of Esther, Ecclesiastes, and Song of Songs. An additional Targum exists to the Book of Esther (Targum Sheni). It is much more voluminous than the first Targum of this scroll

and is regarded as an amalgam from other Targums and Mi-drashim. The commentators refer to it as “*aggadah*” and as “Midrash.” The earliest mention of Targum Sheni occurs in tractate *Soferim (13:6), and it was probably not completed before 1200 C.E. The Targum of Song of Songs interprets the biblical book as an allegory on the relation between God and Israel and on the history of Israel. The types of paraphrase employed by the various Targums to the Five Scrolls may be summarized as follows: historical parallels; motives and reasons to explain the occurrences of events; etymology and explanation of proper names; figurative language rendered into prose and allegory in the place of narrative; the Sanhedrin, as well as the study of the law, frequently mentioned; appendage of elaborate genealogies to names; and general statements related to names of particular individuals, such as the Patriarchs, Nimrod, Pharaoh, Nebuchadnezzar, Titus, Alexander, and the Messiah.

CHRONICLES. No Targum to this book was known to exist until the appearance of the Polyglot Bibles. It was first published, in a somewhat incomplete form, in 1680–83 from an Erfurt manuscript of 1343 and edited with notes and translation by M.F. Beck. In 1715 a more complete form of the text was edited by D. Wilkins on the basis of a Cambridge manuscript of 1347, which contained a later revision of the targumic text. This Targum is essentially a literal rendering of the Hebrew original, although midrashic amplifications are also employed at times (e.g., I Chron. 1:20, 21; 4:18; 7:21; 11:11, 12; 12:32; II Chron. 2:6; 3:1; 23:11). Instances where the author made use of “Jerusalem” Targums to the Pentateuch are Genesis 10:20 and I Chronicles 1:21, and Genesis 36:39 and I Chronicles 1:43. Similarly, acquaintance with Targum Jonathan to the Prophets is suggested when one compares the readings from the books of Samuel and Kings to the readings from the Targum in the synoptic passages in Chronicles, only slight variations occurring between them. The date of the Targum may be surmised from the translation of geographical names, as well as their rendering into modern forms. The final redaction of the Erfurt manuscript has been assigned to the eighth century, and that of the Cambridge manuscript to the ninth century C.E. (M. Rosenberg and K. Kohler in bibliography).

R. JOSEPH AND THE AUTHORSHIP OF THE HAGIOGRAPHIA TARGUMS. The 1680–83 Augsburg edition of Targum to Chronicles carries the title “Targum Rav Yosef.” This fact is related to the view that prevailed in early times that R. Joseph b. Hama, the Babylonian *amora* who had the reputation of being thoroughly versed in the Targums of the Prophets, was the author of the Targum of the Hagiographa. Thus, a quotation from Targum Sheni to Esther 3:1 is introduced as *kedimtargem Rav Yosef* in tractate *Soferim* 13:6. Furthermore, the Breslau Library manuscript of 1238 appends the following statement to apocryphal additions to Esther known as “*Halom Mordekhai*”: “This is the end of the book of the Targum on the Hagiographa, translated by R. Joseph.” The 12th-century commentator *Samuel b. Meir quoted passages on Job and Prov-

erbs in the name of R. Joseph (see Ex. 15:2; Lev. 20:17). In the Talmud, the phrase *kedimtargem Rav Yosef*, “as R. Joseph has translated,” occurs frequently, but it occurs only with reference to passages in the Prophets and once in the Pentateuch (cf. Sot. 48b). It was inferred that R. Joseph was also the author of the known Hagiographa Targums, but on the basis of the basically Palestinian linguistic character of the Hagiographa Targums, as well as the variety of the translation techniques, which mitigate against the view of one author for all of them, this opinion has been rejected as historically without basis. Furthermore, the *Tosafot* (Shab. 115a) assign the origin of the Hagiographa Targums to tannaitic times (cf. Meg. 21b).

[Bernard Grossfeld / S. David Sperling (2nd ed.)]

Greek: The Septuagint

The Septuagint (or LXX) is an important corpus of ancient Jewish writings that includes Greek translations of all of the books of the Hebrew Bible and of other works originally composed in Hebrew or Aramaic, plus several original compositions in Greek. It functioned as Sacred Writ for Greek-speaking Jewish communities from the mid-third century B.C.E. until sometime in the early centuries of the Christian Era. At an early period, Christians adopted the Septuagint as their Old Testament, which led to its losing favor, although not all of its status, among Jews. The Septuagint is important as the first written translation of the Hebrew Bible; as a repository of otherwise unobtainable data about the beliefs, practices, and language of Hellenistic Judaism; and as an influence on the thinking of subsequent, primarily (although not exclusively) Christian religious thinkers.

Evidence of the origins of the Septuagint can be found in documents such as the Letter of *Aristeas, which probably dates to the early or mid-second century B.C.E. Although it purports to be an eyewitness account of the events it describes, in all probability it is separated from them by about a century. As related in the Letter, the reigning king of Egypt, *Ptolemy II Philadelphus (285–246 B.C.E.), sought to include in his growing Library at Alexandria, a Greek copy of the Jewish Law; that is, the Torah. To accomplish this, he invites the High Priest in

Jerusalem to send 72 elders, of unblemished moral character and outstanding linguistic skills in both Hebrew and Greek, to Alexandria to prepare the desired Greek text. After a series of lavish banquets, distinguished by the depth of conversation as much as the breadth of foodstuffs – the elders/translators go off to palatial quarters to accomplish their task. They work in teams, as is often the case to this day, preparing preliminary drafts and arguing back and forth to arrive at renderings on which they could all agree. When their finished version is read before the assembled Jews of Alexandria, it elicits great acclaim and an anathema/curse is pronounced on anyone who would change even a word of it.

This narrative, which describes only the origins of the Greek Pentateuch, contains sufficient historical inaccuracies and inconsistencies to render it impossible to consider the work a product of the reign of Ptolemy II. Over the past century, there has been considerable scholarly debate on how much, if anything, can be salvaged from the Letter that is historically reliable or at least probable. On the positive side, there is firm consensus that the LXX Pentateuch does originate in Alexandria and from a period prior to the mid-third century B.C.E. It is also clear that its translators were indeed Jews who were reasonably well versed in Hebrew and in koine Greek. Additionally, it is certain that the books of the Torah were the first to be translated and that they served as a model (sometimes followed, sometimes ignored) by those responsible for subsequent books of the LXX.

Serious doubt, however, has been cast on the Letter's portrayal of royal initiative as the decisive factor in the creation of the text. Does it not, it might be asked, make more sense to seek LXX origins within the Alexandrian Jewish community itself, which saw the need for an authoritative Greek version of Sacred Writ, as fluency in, or even familiarity with, Hebrew became rarer and rarer? But it is most likely that both internal and external causes were responsible for this groundbreaking endeavor (this was the first time, so far as we know, that a “barbarian text” such as Hebrew Scripture was rendered into Greek); such a confluence of interests accords better with both the history of the times and later developments in Bible translation than does a dogmatic either/or formulation.

Although Aristeas pictures the LXX Pentateuch as the result of committee actions at one particular time and place, modern scholars detect at least five (and perhaps six) different translators at work on the Five Books of Moses. They are different enough to be identifiable, but all five (or six) were working within the same general parameters: what might be termed reasonable and somewhat flexible literalism, on occasion bending the Greek rather far in the direction of the Hebrew original, at other times showing a deep concern for a Greek-speaking audience.

The author of the Letter of Aristeas sees little of what might be called “miraculous” in the production of the LXX Pentateuch. He does note, somewhat sheepishly, that the 72 translators worked exactly 72 days (and nights). Later on,

within both Judaism and especially Christianity, this relatively restrained account was embellished in many directions. Within the Jewish world, it is primarily to the first century C.E. philosopher *Philo, himself a native of Alexandria, that we owe several significant additions to Aristeas' narrative. For example, Philo names the Island of Pharos as the location at which the translators worked, and he describes an annual festival, still observed in his day, to honor their work. Moreover, he speaks of those responsible for the Septuagint as prophets rather than (mere) translators. In this way, he is able to account for material that was found in the Greek but not in the Hebrew text.

As fully elaborated in the work of the fourth century Christian writer Epiphanius, each of the translators was isolated in a cell and cut off from discussion or comparisons with his colleagues – and yet all 72 produced texts that were identical in every detail (in other forms of the tradition, the translators worked in pairs). This and other “miraculous” occurrences served to demonstrate the sacredness of the text produced and the role it was to play as Scripture for Christians.

It is not entirely clear what the author of Aristeas intended in this regard. On the one hand, as noted above, the deliberations of the elders proceeded in much the same way as modern teams of Bible translators operate. Nonetheless, what they produced was accepted as somehow authoritative by the Alexandrian Jewish community and, by extension, the larger Jewish world. This is seen not only in the curse uttered against all who might change it, but also in the deliberate way in which the reception of the Septuagint is modeled on the reception of the Ten Commandments and accompanying laws in the biblical book of Exodus.

It is likely that when the author of the Letter of Aristeas fashioned a communal curse on those who would change the Greek Pentateuch, he had some specific concerns in mind that were relevant to his own second century B.C.E. context; that is to say, as early as that date, if not even before then, there were individuals who were revising the Septuagint of the Pentateuch and of other books subsequently translated. Such individuals, who may have come from or worked in Jerusalem, judged most, if not all, differences between the LXX and their Hebrew text as deficiencies in the Greek, and they therefore sought to “correct” the LXX in the direction of the Hebrew text of their community. Although they probably also had some linguistic interests, their goal, as well as their motivation, was primarily what may be described as theological.

As noted above, Philo, while also recognizing differences between the Greek and the Hebrew, devised another explanation entirely; namely, that these divergences were as much a part of God's inspired message as were the far more numerous places where the Greek and the Hebrew were in agreement. It may be that the author of the Letter of Aristeas had, in some inchoate sense, a similar intimation; if so, he did not explicitly express it. For most early Christians, the creators of the LXX, whether they knew it or not, were prophetic in the sense that much of their distinctive wording looked forward

to the coming of Jesus as Christ. And this was in spite of the fact that the LXX was created for Jews by Jews, almost three centuries before Jesus' birth!

We are, it would seem, without much, if any, external information (that is, outside of the text of the LXX itself) on the location, order, or *modus operandi* of those responsible for the LXX beyond the Pentateuch. With few exceptions, it is reasonable to place these translators within the context of Alexandria. It is also likely that the book of Joshua was translated next after the Pentateuch. Beyond that, there are a few, but only a few, references to historical figures or events that can be gleaned from any of the LXX books; more numerous are likely examples of dependence of one LXX book (or, better, its translator) on another, thereby allowing for some tentative relative, although not absolute, ordering of books chronologically.

The task of discerning the history of the creation of the LXX is further complicated by the nature of the evidence. For the most part, our earliest texts for this Greek material derive from codices (manuscripts in book form, rather than scrolls) from the third and fourth centuries C.E.; in particular, Codex Vaticanus, Codex Alexandrinus, and Codex Sinaiticus. The codices are uncials (that is, written in all capital letters) from important Christian scriptoria; therefore, they contain the LXX as part of their “Bible” (the New Testament completes it for them). There is no reason to think that Christian scribes deliberately changed the originally Jewish text for tendentious, theological reasons, although it is certain that all sorts of scribal changes led to many differences, some substantial, between what the codices contain and what the earliest Greek (or Old Greek) read. We are not without earlier evidence in the form of a limited number of Greek texts from Qumran and other Dead Sea locales; citations, allusions, and reworkings in the New Testament; and Qumran scrolls that preserve in Hebrew the likely *Vorlage* or text that lay before the LXX translators (which, as noted above, is sometimes close to our received or Masoretic Text, but on occasion quite different from it).

A reasoned and important conclusion from an analysis of all of this material is that what we term *the* Septuagint is in fact an almost accidental gathering together of texts from diverse sources. Some of the books of the Septuagint, as in the Pentateuch, appear to be quite close to the Old Greek. In other cases, the earliest form of the translation is lost in almost all sources (as in Daniel), or is entirely lost (as for Ecclesiastes), or is combined with later material (as in Reigns [that is, the books of Samuel and Kings]). Even when due allowance is made for this diversity of origins, scholars are struck by the very different ways in which translators approached their Hebrew. The range runs the gamut from almost wooden literalism to recontextualizing to paraphrase. It used to be argued that the translators of Ketuvim were freer inasmuch as those books were considered somewhat less important than the Torah and *Nevi'im*. Such a contention does not, however, stand up under close scrutiny. The point needs to be made that we simply do

not know why translators treated their material as they did or why one Greek version of a book was chosen over another (when competing versions were available).

We cannot even be sure of exactly what the LXX “canon” contained. Surely, all the books of the Hebrew Bible were included, as well as additions to Daniel and to Esther that, although attached in one way or another to the earlier Hebrew material, have been preserved only in Greek (whether they were translations of now lost Hebrew or Aramaic texts or original Greek compositions). Other books that apparently were never part of the Hebrew Bible are also found in the fully developed LXX corpus. For the most part, this material is found in the Old Testament of Roman Catholics and Orthodox Christians; Protestants tend to refer to it as the Apocrypha. It is likely that for some communities, this assemblage reflected Scripture. Whether or not that determination comes from Christians, it is important to keep in mind the Jewish origins and early development of the LXX.

In the third century C.E., the Church Father *Origen gathered together in his *Hexapla* as many examples as he could find of the Greek Bible. Among them were three apparently continuous Greek texts later than the Old Greek, all of which seem to have originated within Jewish communities (although ancient evidence and modern scholarship remain ambivalent on key issues). One of these texts is attributed to *Aquila (traditionally dated to the second century C.E.); it is hyperliteral and can almost serve as a primer to the Hebrew language as well as to biblical thought and teaching. Another version is associated with Symmachus (late second century C.E.); it reads well in Greek, but at the cost of linguistic and other departures from the Hebrew original. A third version, attributed to Theodotion (second century CE), seems to balance the often-competing interests of source language (in this case, Hebrew) and target language (here, Greek).

It is entirely likely that all three of these individuals, about whom very little can be definitely said, were Jewish, although the ancient (and sometimes modern) connection of each with a particular rabbi or school of rabbinical thought can no longer be held. The case of Theodotion is particularly interesting, since some of his distinctive language found its way into the New Testament – almost two centuries earlier than the “historical” Theodotion is said to have lived. This has led to the supposition of a “Proto-Theodotion,” who would have been active in the first century B.C.E. In the case of Aquila, it is accurate to describe him as a reviser; that is to say, he started with an older form of the Greek, which he changed only when he saw a theological or linguistic reason for doing so. Theodotion was also a reviser in some instances; elsewhere as in Daniel, where his text supplanted the Old Greek in nearly all manuscripts, Theodotion appears as a fresh translation, as seems often to be the case with Symmachus as well.

The observation that at least some of these later Greek texts are the result of Jewish revision should cause the rejection or at least serious modification of the often-expressed view that Jews abandoned the Septuagint when Christians

adopted (or co-opted) it. The very fact that at least some Jewish translators chose to revise the older Greek demonstrates their allegiance to it, even when circumstances led them to change it in a given number of instances. Moreover, as can be seen from fragments preserved in the Cairo Genizah and elsewhere, Greek-speaking Jews continued to rely on a Greek “Bible,” in particular a developed form of Aquila, well into the Byzantine era.

Nonetheless, it is true that the Septuagint ceased to be a concern for most Jews from the first century of the common era until early in the 19th century, when some Jewish scholars (such as Z. *Frankel) began to look seriously at it as a heritage of their past. In so doing, they uncovered many places where interpretative material in the LXX reflected concerns found in rabbinic discussions. Also fairly numerous are instances of what might be termed rabbinic-like midrash.

These findings alert scholars once again to the fact that the Septuagint, as a document of Hellenistic Judaism, is a repository of thought from that period. It is very difficult, often impossible, to determine whether distinctive elements of LXX presentation are the results of “creative activity” on the part of the translators themselves or accurately reflect their *Vorlage*, which in these cases differed from the MT. Caution is strongly advised when making statements that characterize LXX thought in one way or another, since, as noted above, the LXX is not a unified document, and its translators did not adopt a standardized approach to their Hebrew text. Moreover, it is inappropriate to describe the “world of the LXX or LXX thought” solely in terms of differences between it and our received Hebrew Text, for this would leave out their many points of near or total convergence.

It is then not surprising that the rabbis of the early common era had decidedly negative things to say about the LXX (see, for example, Tractate *Soferim* 1:8) as well as some positive statements about its value (as in Meg. 9 a–b); see also the passages within rabbinic literature that cite a tradition according to which between 10 and 18 alterations were inserted into the Greek translation of the Pentateuch. It is not easy to organize these differing opinions chronologically or geographically – or in any other way. The rabbis, or at least some of them, were open to extra-Jewish (re)sources so long as they were kept subservient to what the rabbis understood as the core values of Judaism. But, as has often been pointed out, a given language cannot be completely separated from the values of the society in which it is spoken. Thus, whatever acceptance the LXX found among the rabbis can be aptly described as grudging.

Today the LXX is studied by a growing number of Jewish scholars worldwide. As part of their heritage, Jews in general should not be averse to learning about the Septuagint, its development, and its distinctive features. It is a priceless reminder of a time and place, not unlike our own, when Jews struggled to varying degrees of success with issues of self-identification and accommodation within a cosmopolitan world in and of which they were a creative minority.

[Leonard J. Greenspoon (2nd ed.)]

Old Latin / Vulgate

The earliest evidence for a Latin translation of the Bible comes from the scriptural quotations of the Christian writer Cyprian of Carthage in the middle of the third century C.E. By the end of the following century, different recensions of the Latin Bible were circulating in Italy, Gaul, and Spain. Whereas some modern scholars believe the evidence indicates that there was a single original Latin text that underwent various developments (corruption, revision, expansion) to produce these recensions, the evidence is inconclusive and there remains no consensus. In the face of such historical obscurity and textual uncertainty, the term “Old Latin” or *Vetus Latina* (OL) refers not to a single and complete translation of the Bible but rather to the various Latin texts prior to Jerome’s new translation from the Hebrew, production on which began in the late fourth century. Until the late fourth century, the OL was constantly being revised based on a growing number of Greek versions produced during the first centuries C.E. (e.g., those of Aquila, Symmachus, and Theodotion). Indeed, Augustine of Hippo complained that in his day so many Christians were inserting Greek-based corrections into the Latin text that there appeared to be as many Latin versions as codices.

In contrast to the LXX and the Masoretic Text (MT), the OL has not enjoyed rigorous and systematic study. Thus much of what may be said about the OL in relation to these other ancient translations is subject to revision, particularly as scholars continue to study these ancient translations in light of the biblical texts of the Dead Sea Scrolls. While the OL Pentateuch is assumed to have direct Jewish and Hebrew origins, in general the OL is considered to be a translation of the LXX, and as such, constitutes a secondary witness to the text of the Hebrew Bible. Like the LXX, the OL is not a unified translation, varying from book to book. At times, some texts of the OL can preserve earlier forms of the LXX, often referred to as the Old Greek (OG), that have not survived in Greek manuscript form. It is here that the OL can be an important witness to the textual criticism of the OG. Furthermore, the study of the OL can be particularly valuable when considering a book

for which the LXX and MT may vary greatly like Samuel. In these situations, it is possible that the OL can contain an earlier Hebrew text than that found in the MT.

In 383, Pope Damasus I commissioned *Jerome (c. 347–420), the leading biblical scholar of the day and his personal secretary, to revise the OL Gospels in light of the LXX. He continued, on his own initiative, by revising the Psalter according to the LXX. This recension became known as the Gallican Psalter because of its use by Charlemagne in Gaul. In 386, shortly after relocating to Bethlehem, where he spent the last part of his life, Jerome discovered Origen’s *Hexapla* in the library of nearby Caesarea. The *Hexapla* was Origen’s edition of the Hebrew Bible / Old Testament presenting most of the books in six parallel columns, the fifth consisting of a critical text of the LXX with signs indicating where the Greek differed from the Hebrew. Jerome used these signs in his amended edition of the Latin versions of the Psalms, Job, Chronicles, and the books attributed to Solomon (viz., Proverbs, Ecclesiastes, Song of Songs). Through this work, Jerome found the LXX increasingly unsatisfactory and became convinced of both the supreme authority of the Hebrew and the necessity of producing a fresh translation based on the original “Hebrew truth” (*Hebraica veritas*). Jerome embarked on his new Latin translation “according to the Hebrew” (*iuxta Hebraeos*) around 390 and by 405 had completed his work on the Hebrew Bible.

Because he accepted the Hebrew canon as authentic Scripture (i.e., as *Hebraica veritas*), Jerome did not translate the deuterocanonical books (with the exception of Tobit and Judith). Thus, the Latin version of the Bible that became the official text of the western Church from the early Middle Ages and that was given the name Vulgate in the 16th century was not produced entirely by Jerome. Rather, the Vulgate includes Jerome’s translations from the Hebrew text (the Psalter excepted), his versions of Tobit and Judith, his revision of the Gospels, and his revision of the Psalter made from the *Hexapla* (i.e., the Gallican Psalter). It is now generally believed that the Vulgate version of the epistles, Acts, and the Apocalypse is not the work of Jerome himself but rather that of an unknown hand or hands.

From the early medieval period, the biblical text of the Vulgate has exerted an incalculable influence not only on Roman Catholic teaching and piety, but also on the languages and literature of western Europe. This text remains the basis for some modern translations (e.g., that of Ronald Knox into English). In 1979, Pope John Paul II promulgated a new official revision of the Vulgate according to the Hebrew and the Greek. Furthermore, in 1987 Benedictine monks of the Monastery of St. Jerome completed a critical edition of the Vulgate that includes the most certain findings of modern biblical scholarship and exegesis.

Samaritan

The Samaritan Bible contains only the *Pentateuch. In many Pentateuch manuscripts the Samaritan Hebrew text is accompanied by a targum into Samaritan, a western Aramaic dialect. Sometimes the targum was copied separately. Tal, who provided the first reliable critical edition, dates the production of the Samaritan targum to the middle of the third century. No manuscripts survive from the time that Samaritan Aramaic was a spoken language. As a result much of the ancient text was corrupted by the penetration of Arabic, which replaced Aramaic as the spoken language, and by Hebrew. Nonetheless, several manuscripts preserve the older Samaritan Aramaic, which is very close to that of the Palestinian targums. The Samaritan targum is more literal than the Jewish targums and usually has one Aramaic word for each Hebrew word. Tal (1988) has shown, nonetheless, that subtle midrashic and paraphrastic interpretations are to be found, especially when it comes to apologizing for the actions of biblical heroes and defaming unpopular characters like Esau and Nimrod, a penchant it shares with Jewish midrash. The younger manuscripts tend to be more paraphrastic than the older. Similarities between the Samaritan targum and Onkelos are probably due the late activity of learned Samaritan scribes (Tal 1989).

Syriac Aramaic: Peshitta and Other Versions

There is no unanimity as to the precise meaning of the term “Peshitta” (*pšyṯt*), the Syriac Bible translation in use in the Church of the East (“Nestorian”), the Syrian Orthodox (“Jacobite”) Church, and the Maronite Church. Until the late Middle Ages the Peshitta was also the Bible of the Byzantine Syrian Malkite Church. The Peshitta comprises the Old Testament (*diatiqi atiqta*), the New Testament (*diatiqi ḥdata*), and the Apocrypha or deuterocanonical books (on the classification of Syriac within the dialects of Late Aramaic see S. Kaufman, *ABD* IV, 174–75). Once confined in the main to Asia, Syriac-speaking churches that use the Peshitta are now found in the United States and Europe as well. Grammatically, the feminine form of the passive participle of the verb *pešaṭ*, “stretch out,” “extend,” “make straight,” “Peshitta” has been taken to mean “simple,” as opposed to paraphrastic; “in common use,” as against the Syro-Hexaplaric translation (see below) and “monolingual edition.” (Unlike its Jewish-Aramaic and Middle Hebrew cognate *pšṯ*, the Syriac verb does not mean

“explain.”) The Peshitta conforms closely to the Hebrew text though it often makes additions for the sake of clarity. (For translation techniques see Weitzman 1996.) Although this version was used by the fourth-century scholars Aphrahat and Ephraim the Syrian and Theodore of Mopsuestia (d. 428) the name Peshitta was first used by Moses b. Kefa (d. 913) and then in the 13th century by *Gregory Bar Hebraeus. Almost every assertion regarding the authorship of the Peshitta and the time and place of its origin is the subject of controversy among scholars. Jacob of Edessa (eighth century) ascribes the origin of the Peshitta to the efforts of Abgar, “the believing” king of Edessa, and Addai the apostle, who are said to have sent scholars to Palestine to translate the Bible into Syriac (cf. Bar Hebraeus, *Commentary to Ps.* 10). However, this tradition apparently conflates Abgar IX (179–216), who may have been history’s first Christian king, with the first century Abgar V, to whom later specious documents attributed epistolary correspondence with Jesus. Addai the apostle is completely legendary. J Other legendary traditions with no historical value assign the work to the time of Solomon, and ascribe the translation to an order of Hiram, king of Tyre, or to the priest Assa (alternative: Asya) sent by an Assyrian king to Samaria (a legend based on 11 Kings 17:27–28).

Although the Peshitta is the Bible of eastern Christians, at least parts of it were known to medieval Jews. *Naḥmanides in his introduction to Genesis cites and translates into Hebrew a long passage that he had seen in a book he calls “The Great Wisdom of Solomon,” which he refers to as *ha-sefer ha-meturgam*, “the translated book.” The citation, in Syriac in Hebrew characters, is essentially identical with a verse from Wisdom of Solomon in Peshitta. This same scholar in his commentary to Deuteronomy 21:14 cites a passage from Peshitta Judith 1:8 which he describes as being “in the Aramaic language.” As to the origin of Peshitta’s Old Testament section, some scholars argue for Jewish translators, others for Christian translators, and still others for Jewish-Christians. The general contemporary consensus that the Peshitta’s Old Testament section was directly translated from the Hebrew indicates strongly that the translators had a Jewish background. There are very few obvious Christological elements. For example, the translation, *betulah*, “virgin,” for Hebrew *almah*, “young woman,” in Isaiah 8:14 in line with Matthew 1:23, “behold the virgin shall conceive,” may be seen in the light of Biblical Hebrew *betulah*, “virgin,” “young woman,” and Greek *parthenos* with the same meanings. Even if *virgo intacta* is meant, Peshitta *betulta* could be a late Christian adaptation (Vööbus 1958), as are the superscriptions of certain Psalms. Evidence for Christian origins has also been adduced from the indifference or negative attitude of the translators to rabbinic and even Pentateuchal legal norms relating to the calendar, sacrifice, and, possibly, the dietary laws. This too is not conclusive. The last few decades of new discoveries and refined scholarly methods have shown the diversity in both Judaism and Christianity and the porousness of the borders between the two religions. Weitzman (1999)

concludes that the Old Testament Peshitta is of non-rabbinic Jewish origin, the work of translators in Edessa, somewhat estranged from the larger Jewish community. The gradual absorption of the Jewish community of Edessa into Christianity could have facilitated the adoption of the Peshitta by Syriac-speaking Christians as their Bible. The Peshitta itself was probably complete by the third century.

The literary relation among the Peshitta and the Jewish Targums has been debated by scholars for 150 years. In his dissertation of 1859 published as *Meletamata Peschitthonia*, J. Perles collected cases in which Peshitta's translation could only be understood as reflective of Jewish legal and non-legal exegesis, an indication of Jewish origins (e.g., Ex. 22:30 and Hül. 102b; Lev. 16:7 and Hül. 11a; Lev. 18:21 and Meg. 25a; Lev. 24:8 and Men. 97a). Perles goes as far as to say that the text was used in the synagogue since it was divided into weekly lessons for the Palestinian triennial cycle; the portions read in the synagogue on the festival are indicated (Lev. 23:1; cf. Meg. 30b); and the superscriptions to Exodus 20:1 עֲסֵרָא פִתְגָמֵי ("Ten Commandments") and Leviticus 17 נְמוּסָא דְקִרְבָנָא וּדְבַחָא ("The Law of Offerings and Sacrifices") are in the rabbinical spirit (cf. Meg. 30b). According to Perles, the shared Aramaic Jewish exegetical tradition was available orally. Others (Baumstark, Kahle) accounted for these relations by positing a written west Aramaic Jewish Targum that was brought east and rewritten in Syriac. Vööbus accepted the western origin but saw the transformation as gradual. Still others (Sperber) posited an originally Jewish targum geographically and dialectally closer to Syriac. More recently, in his studies of the Peshitta to the Pentateuch, Maori agreed with Perles that Peshitta did not depend on any particular targum but made use of stylized written literary material as well as oral traditions that had already been stylized.

Recent research into the history of the Peshitta text indicates that it was the accepted Bible of the Syrian Church from the end of the third century c.e. Ephraem Syrus, who died in 373, speaks of it as an old translation. In the fifth century theological differences divided the Syrian Christians into two distinct groups, the Nestorians and the Jacobites. Differences were exacerbated by the use of different Syriac scripts. Each group then proceeded to formulate its own Peshitta text based upon previous versions, with the result that there are two different text forms of the Peshitta: Western Syriac and Eastern Syriac. In the fifth and sixth centuries the Melchites (Palestinian Syrians) attempted to make the Eastern Syriac version conform with the Septuagint, the official text of the region, thus creating a text which was a mixture of the Peshitta and the Septuagint.

Knowledge of these versions, recently augmented by finds of textual fragment, is important for an understanding of the evolution of the Peshitta and subsequently in the assessment of the masoretic text. The oldest manuscript dates back to 464. It was first published in the Paris Polyglot Bible of 1645. This edition did not contain the Apocrypha,

which were later added in the London Walton Polyglot of 1657. In 1823, the Peshitta was printed separately by the British Foreign Bible Society in London and known as the Lee Edition. This edition, in Jacobite characters, practically reproduces the London Polyglot which itself was based on the Paris Polyglot. Two editions were prepared by American missionaries: The Urmia edition of 1852, and the Mosul edition of 1887–91 (1951²), both in Nestorian characters: the first work was proved to be influenced by the Lee edition, while the second is dependent on the Lee and Urmia editions and corrected according to the Vulgate. Attempts to publish the Peshitta in Hebrew characters include Hirsch's edition of the Five Scrolls (1866), Eisenstein's edition of the first two chapters of Genesis (1895), and Heller's Genesis (1928). A new era in Peshitta studies began in the late 20th century with the production of reliable texts. The Peshitta Institute in Leiden, Netherlands, is well on the way to the publication of a critical edition of the Peshitta, *Vetus Testamentum Syriace* (1972 ff.) as well as monographs on specific books. The text is based in the main on the Ambrosian manuscript 7a1 accompanied by an apparatus of variants from manuscripts through the 12th century. The project is under the general editorship of K. Jenner and A.v.d. Kooij.

THE CHRISTIAN-PALESTINIAN VERSION. Around the fifth century the Melchite Christian in Palestine published a Bible translation in the local western Aramaic dialect, referred to in earlier Anglophone scholarship as Syro-Palestinian but now more accurately referred to as Christian Palestinian Aramaic (CPA). (To refer to this dialect as "Syriac," or "Palestinian Syriac," is erroneous.) The script of CPA is a development from Syriac Estrangelo, which distinguishes it from the closely related western Aramaic dialects of Samaritan and Palestinian Jewish Aramaic. The distinction served to set boundaries among the speakers of these dialects. It is generally admitted that this translation was made from the Greek, rather than the Hebrew, but Jewish Aramaic targums were influential, and perhaps, secondarily, the Peshitta. On the estimate of Mueller-Kessler and Sokoloff only about ten percent of the CPA text of the Old Testament has survived. The apocrypha are represented by fragments of Wisdom of Solomon, Ecclesiasticus, and the Epistle of Jeremiah.

[S. David Sperling (2nd ed.)]

THE PHILOXENIAN VERSION. In an attempt to displace the Peshitta, Philoxenus, the Jacobite bishop of Mabbugh, ordered a translation of the Septuagint (Lucian's version) and the Greek New Testament. Polycarp, his coadjutor, finished the work in 508. Of this translation only fragments from the Old Testament (Isaiah) were preserved, while five books from the New Testament entered into the printed edition of the Peshitta. A century later a version with marginal notes, taking into account various Greek manuscripts, was published by Thomas of Heraclea. It is not known whether in this work Thomas re-

vised the Philoxenian Version completely or confined himself to adding the marginal notes.

THE SYRO-HEXAPLA. Commissioned by the patriarch Athanasius I, Paul, the bishop of Tella (near Alexandria), prepared a translation based on the fifth column of Origen's Hexapla. The translations of Aquila, Theodotion, and Symmachus were taken into account in marginal notes. This translation was completed in about 617. A manuscript of this work from the eighth or ninth century is extant in Milan. Paul of Tella's Syro-Hexapla, as it is called, is of great importance since Origen's Hexapla, upon which it was based, was almost completely destroyed.

[Bernard Grossfeld / S. David Sperling (2nd ed.)]

Ethiopic

Christianity arrived in Ethiopia in the fourth century, and the need for a translation of the Bible and the New Testament was felt not long afterward. The original translation into classical Ethiopic (Ge'ez), beginning with the New Testament gospels and the psalms, was probably made during the fifth and sixth centuries, and completed by the mid-seventh century. The translation of the Bible was based on the Greek (Septuagint), the underlying Greek text types varying from book to book. It has commonly been believed that there were also Syriac-speaking missionaries involved in the translation, but this is not proven, and seems unlikely; most of the Aramaic loanwords in early Ethiopic likely derived not from Syriac but rather from a “pre-Christian Jewish element in early Christianity” (Polotsky; Knibb). While there are a few 13th- or possibly 12th-century manuscripts of New Testament gospels, there are no known manuscripts of the Ethiopic Old Testament that survive from before the 14th century, at which time, especially during the literary renaissance under King Amda Sion (1314–44), the text was much revised under the influence of a Syriac-based Arabic version of the Bible; this revised text is known as the “vulgar recension.” It was probably later still, during the 15th or 16th century (when there was an Ethiopian community in Jerusalem) that further revisions were made to bring the text closer into alignment with the Hebrew masoretic text; manuscripts of this “academic recension” exhibit a number of Hebrew words simply transliterated into Ethiopic (Knibb). In addition to canonical and apocryphal books, the Ethiopic Bible often contains pseudepigraphic works as well, such as Enoch and Jubilees, which are held in the same regard. Translations of the Bible into modern languages of Eritrea and Ethiopia, such as Tigrinya, Tigre, and Amharic, have been produced over the past century, generally by European missionaries.

Egyptian (Coptic)

Coptic versions of biblical literature – that is, the texts of the Bible translated into a late antique form of the Egyptian language, written in an augmented Greek alphabet which includes seven demotic Egyptian characters – began appearing in the third century C.E. and were well established by the fourth century. Coptic was written, and biblical texts have been preserved, in several dialects and dialect families, the most important for the study of biblical literature being Bohairic (Delta region, to the north) and Sahidic (Upper Egyptian, to the south). Important fragments remain in Fayyumic and Akhmimic.

It is generally agreed that the Coptic versions have as their source Greek witnesses. Of interest is the richness of the extant versions. For example, the Sahidic witnesses vary from each other, bespeaking independent translators and translation families, as well as, perhaps, differing Greek base texts. It should be noted that a host of literatures and genres related to the Bible (among them apocryphal works, hagiography, liturgical texts, and Gnostic literature) were variously written and preserved in Coptic in late antiquity, and that Coptic remains a language in which biblical and liturgical texts are regularly read, spoken, and sung.

Armenian

The need for an Armenian Bible arose once the court converted to Christianity early in the fourth century. According to Armenian tradition the Bible was the first book translated into that language. The translation was undertaken directly after the invention of the Armenian alphabet in 406 C.E.; the story of the translation is preserved in the Armenian tradition for which the prime source is the *Vark^c Maštocⁱ*, “Life of Mashtots” (ca. 345–440; after the fifth century the name begins to appear as Mesrop Mashtots) written by Koriwn, his pupil and colleague. Employing the new alphabet, Mashots along with his ecclesiastical patron the Catholicos Sahak Partéw and their disciples translated the Bible as well as other Christian religious writings. The initial translation, which according to these sources was made from Syriac, was subsequently revised twice in the light of Greek manuscripts brought from Constantinople and Alexandria. The work was completed by c. 450.

The translation of the Bible as preserved by the Armenian Church is predominantly Hexaplaric in character, equipped with Hexaplaric signs and showing a full text. Further relationships of the versions have been studied only for few books, where it has been demonstrated that it reveals relationships with certain non-Hexaplaric Greek text types and with the Peshitta. There is also evidence for the existence of two recensions in certain books, such as Chronicles and Ben Sira, and Revelation in the New Testament. Khalatianz (Moscow, 1899) published a version of Chronicles apparently reflecting the translation made from Syriac prior to the revision according to Greek manuscripts. The translation has been characterized as “queen of the versions” and its closeness to the Greek original

is reflected in sentence structure and word order. It is one of the central works of the golden age of Armenian literature.

The first edition is that of Oskan, published in 1666 in Amsterdam. The best is that published in Venice in 1805 by J. Zabrabian who based his work on eight complete Bible manuscripts and certain additional manuscripts for Isaiah and Psalms. His edition is no longer adequate for scholarly purposes today. There are numerous manuscripts still unstudied. The earliest complete Bible codices date from the 13th century but there are psalters of an earlier date.

The canon is substantially that of the Septuagint. IV Ezra, Testaments of the Twelve Patriarchs, and the Book of Joseph and Asenath are often included in Bible manuscripts. The canon of Zabrabian's version however is that of the Vulgate. The Armenian Bible is of great value in textual criticism of the Septuagint. Critical editions of individual books of the Armenian Bible are underway.

Arabic

The need for translation of the Bible into Arabic arose with the expansion of the Islamic empire. During the eighth century the Arabic language spread and replaced Aramaic as the cultural language of Jews and other non-Arabs living under Islamic rule. Around that time, both scholars and lay people started producing translations of the Bible into Judeo-Arabic using the Hebrew alphabet. Evidence for such translations exists in the various collections of the Ben Ezra *Genizah* of Cairo as well as other private and public collections. Other translations were preserved and transmitted within the Jewish communities living in the Islamic milieu. Scholars divide these translations into several main categories – pre-Saadian, Saadian, Karaite, post-Saadian *sharḥ* – and glossaries.

PRE-SAADIAN TRANSLATIONS. Fragments of pre-Saadian translations were identified in the *Genizah* collections by scholars such as Y. Tobi, J. Blau, S. Hopkins, M. Polliack, and Y. Avishur. These fragments are characterized by their typical Judeo-Arabic phonetic orthography common to texts prior to the 10th century (Blau and Hopkins 2000). This early spelling is solely based on Hebrew orthography and is devoid of any influence of classical Arabic (Blau 1992). In addition, these

fragments present a strict literal translation. Hence word order and use of prepositions reflect Hebrew syntax and stand in contrast to Arabic. The preposition that marks the Hebrew definite accusative, which does not exist in classical Arabic, is present in these translations in the form of an artificial morpheme (Tobi 1993). These literal translations are often interrupted in the body of the text by strings of alternative translations for a single word. In some instances expansions of an interpretative nature are also added (Polliack 1998). The pre-Saadian fragments found to date include sections from the Books of Proverbs, Genesis, Exodus, Numbers, and Deuteronomy (Blau 1992). It is very likely that additional fragments will surface in the future as the *Genizah* material is researched further. Y. Tobi has shown that these translations were initiated in the Arabian Peninsula by and for Jewish communities prior to the rise of Islam (Tobi 2005). They reflect an oral tradition that was subsequently put into writing.

SAADIAH'S TRANSLATION. By the 10th century the need for a standard translation of the Bible became apparent. The best-known translation of the Bible into Judeo-Arabic was written by *Saadiah (Gaon) b. Joseph al-Fayyumi (882–942), who was born in Fayyum, Egypt, studied in Palestine, and eventually became the *gaon* of Sura, Babylonia. His translation of the Pentateuch soon became the most widespread among the various Jewish communities under Islam and continued to be the most authoritative in some communities until our time, in particular among Yemenite Jewry. In his translation Saadiah standardized Judaeo-Arabic orthography and created a spelling system that reflects classical Arabic. The main principles of this system of spelling include choosing phonemes according to their cognates rather than following audible similarities, and using *matres lectionis* to indicate long vowels in agreement with Arabic orthography. As far as his method is concerned, Saadiah follows Arabic syntax and his translation is anything but literal. He avoids repetitions, and shortens or expands the text for stylistic reasons. To create a coherent text he subordinates originally coordinated clauses. He often changes the legal text by additions and adaptations. At times he alters the text in order to avoid what he deems to be exaggerations. Echoes of the Aramaic translations are detected in his translation as well as an avoidance of anthropomorphism. In fact, Saadiah's translation is one of the most free and individual in the history of Bible translations as it reflects his personal interpretation (Blau, "Saadya ..." 1998). Scholars believe that Saadiah completed the translation of the entire Bible; however, so far only the Pentateuch, Isaiah, Job, Proverbs, Psalms, Song of Songs, Ruth, Lamentations, and Esther have been recovered. No autographed manuscripts of Saadiah's translation of the Bible have been found to date. The vast majority of the manuscripts attributed to Saadiah's translation are written in Hebrew characters; however, scholars disagree on the nature of the initial manuscripts. Abraham Ibn Ezra, a medieval Bible commentator, contends that Saadiah wrote his translation "in the language of the Ishmaelites and in their writing (*ketiva-*

tam)” (see Ibn Ezra’s commentary to Gen. 2:11). Some scholars understand this statement to mean that the original was written in the Arabic language in Arabic characters. Others interpret it as Arabic language precisely transliterated into Hebrew characters according to Arabic orthography. In fact, in support of the latter opinion, some of the *Genizah* fragments attributed to Saadiah and written in Arabic characters seem to have been transliterated from a text originally written in Hebrew letters (Blau 1981, Tobi 1993, and Polliack 1998). Evidence from the *Genizah* supports the speculation that Saadiah created his interpretative translation first and named it *tafsir*, modeled after similar koranic compositions of his time. He then composed his expanded commentary to the Pentateuch (Polliack 1998). The long *tafsir*, which included both the translation and the commentary for the Pentateuch, fell out of use eventually. However, fragments of the long *tafsir* were found in the *Genizah* and Firkovitch Collections. A compilation of such fragments containing commentary on Genesis were assembled and studied by M. Zucker (Zucker 1984).

Manuscripts and printed editions of Saadiah’s translation of the Pentateuch were widespread in Yemenite communities until recent times. The most famous of them is the *Taj*. Two editions of the *Taj* were printed in Jerusalem, one in 1894 and the other in 1982. N.J. Derenbourg published a critical edition of Saadiah’s translation to the Pentateuch in 1893 in Paris. His edition is based mainly on the Jewish polyglot of Constantinople (1546) but also on a Yemenite manuscript and on the Christian polyglot of London (1657) (Blau 1998).

Saadiah’s translation and commentary to other books of the Bible were less known and of smaller circulation. Some of these manuscripts, which were found in Yemenite collections, were translated into Hebrew and published by Rabbi Y. Kafah. These publications include the Five Scrolls, the Book of Psalms, the Book of Job, the Book of Proverbs, and the Book of Daniel (Kafah 1962, 1965, 1973, 1976, and 1981).

KARAITE TRANSLATIONS. Rejection of rabbinical authority and the Oral Law led the Karaites to reject Saadiah’s approach to Bible translation and compelled them to create alternatives. Most Karaite translations of the Bible date back to the 10th and 11th centuries, a time in which scholarly Karaite activity reached its zenith. The Karaites used the same orthography as the one Saadiah standardized. However, they drew upon the pre-Saadiah traditions of translation, which they developed further by emphasizing the principles of individualization and pluralism of biblical commentary. Their approach enabled the composition of creative and original translations free from midrashic influence. The Cairo *Genizah* contains numerous Karaite manuscripts from Egypt and Palestine from the 11th and 12th centuries. It is not quite clear how these fragments ended up in the *Genizah* of the Rabbanite synagogue of Palestinian Jews in Fustat. It may partially be attributed to the Crusade of 1099, which caused the destruction of the Karaite centers in Palestine and forced the survivors to join their coreligionists in Cairo.

Karaite translations of the various books of the Hebrew Bible are known, of which the translations of Psalms, Minor Prophets, the Five Scrolls, and the Pentateuch are the most prevalent. Typically the Karaite translation of the Hebrew Bible is sandwiched between a section of the Hebrew source and an Arabic commentary. This structure is also reflected in Rabbanite exegetical works of the time such as Saadiah’s. However, Saadiah’s *tafsir* of the Pentateuch deviates from this formula and his translation is disconnected from his commentary (Polliack 1997). Often these tripartite manuscripts, which were primarily used for the purpose of study, contain the Hebrew Bible text transliterated into Arabic characters. The Arabic translation may also be found written in Arabic letters, however the Karaite Bibles that were used for religious purposes were written in Hebrew. This bilingual orthography reflects the Karaite ambivalence toward the rabbinical masoretic tradition (Polliack 1997).

Karaite tradition emphasizes accuracy and the implementation of linguistic knowledge in translation and interpretation of scripture. Linguistic studies were regarded as religious duty, and as a consequence the Karaites created literal translations aimed at reflecting accurately the structures of the Hebrew language. Two distinct features characterize Karaite translations. The first is the occasional rendering of two or three synonyms in translating a single word or phrase. The second is the occasional insertions of small clauses of an interpretative nature into the text. In these respects the Karaites’ translations resemble pre-Saadiah traditions. The Arabic reflected in Karaite translations is Middle Arabic with a great affinity to classical Arabic, albeit spiced with a limited degree of vernacular features. Polliack speculates that the tradition of literal translations is characteristic of the region of Palestine as reflected in ancient Greek translations (cf. Aquila) as well as Palestinian Aramaic translations. Karaite translations, mostly created in Palestine, may have also been influenced by this literal approach (Polliack 1997).

The single most prolific Karaite translator and commentator who is believed to have translated the entire Bible into Judeo-Arabic is Yefet b. Eli al-Basri (*Japheth ben Ali Ha-Levi) who lived in Jerusalem in the 10th century. The numerous copies of his works found up to date attest to his vast popularity and authority within Karaite circles (Polliack 1997). Yefet’s threefold structure, in which his Bible translation was embedded, seems to have been composed in the years 960–990 (Ben Shammai 1976). Furthermore, in the introduction to his work he states his intention to provide a translation of the words of the Book, hence a verbal rendition faithful to the wording of the biblical source. Yefet derives authority from a received tradition of translation, and it is likely that the literal tendencies of his versions do not originate with him. While his literal translation results in often slavish and ungrammatical Arabic it also reflect a conscious interpretative intention and a method intended to demonstrate to the reader the linguistic structure and the basic meaning of the text (Polliack 1997 and Polliack and Schlossberg 2001). Recent publications of

his work include his commentary to Genesis (Ben Shammai et al. 2000) and his translation of the Book of Obadiah (Polliack and Schlossberg 2001).

*Jeshua b. Judah, an influential scholar and leader of the Karaite community of Jerusalem in the 11th century, wrote both a short and a long commentary to the Pentateuch. His short commentary includes also a translation of the Pentateuch. Jeshua did not intend to produce a comprehensive translation and commentary on the entire Bible; instead he mostly concentrated on the legal material. Nevertheless his translation of the Pentateuch is the second major source for study of the Karaite tradition of translation. Jeshua's translation seems to rely on an already existing tradition of translation rather than being solely his own product. Presumably, he was influenced by the school of Karaite scholarship that existed in Jerusalem in the 11th century (Polliack 1997).

SHARḤ. Saadiah Gaon's monumental translation of the Pentateuch spread quickly throughout the various Arabic-speaking Jewish communities. It was canonized in no time and accepted as the authoritative translation. About one-third of all translations of the Bible into Arabic found in the *Genizah* are attributed to Saadiah and attest to its great popularity and authority. However, from the 14th century on Saadiah's translation was no longer clear enough to these communities, who had lost their familiarity with the intricate subtleties of classical Arabic. Against this background, popular translations that incorporated features of the local vernaculars began to surface. In a lengthy introduction for his new translation written in the 15th century in Safed, Rabbi Y. ben Susan explains that Saadiah composed his translation in classical Arabic, a dialect no longer understood by Ben Susan's contemporaries, neither by the students nor by the teachers (Doron 1985). Unlike the Yemenite diaspora which adhered to Saadiah's translation until our time, other Jewish communities started creating new translations which are referred to collectively as *sharḥ* (pl. *shurūḥ*). These translations were geared more towards the general public in a synagogue setting than to the scholarly oriented. They often include large sections borrowed from Saadiah's translations, however, simplified both in style and language as well as in their religious content (Maman 2000, Avishur 1998, and Bar Asher 1998). They were composed literally, reflecting the original Hebrew word order and they incorporated local linguistic features. The language of the *sharḥ* stands between middle Arabic and the spoken vernacular. Typically, young school children would recite one verse of the Bible followed by its *sharḥ*, or they might even alternate reciting one Hebrew word followed by its corresponding *sharḥ* (Bar Asher 1998).

Some *sharḥ* are found in printed editions while others are still in manuscripts. Recently scholars have been recording oral recitations creating audible collections of *sharḥ* (Avishur 1988). Fragments of *sharḥ* manuscripts that were found in the *Genizah* collections have been dated between the 14th and the 17th centuries (Polliack 1998). While Ben Susan wrote his *sharḥ* in Palestine there are many other *sharḥ* found in the

communities of North Africa, Egypt, Iraq, Syria, and Yemen. Several studies have been conducted recently concerning this corpus. Y. Avishur has studied the Eastern *sharḥ* and B. Hary concentrated on the Egyptian while M. Bar Asher, A. Maman, O. Tirosh-Becker, and D. Doron have studied the Western *sharḥ* of North Africa.

It is worthwhile to mention a few *sharḥ* that have been studied lately by scholars such as the aforementioned Palestinian *sharḥ* by Ben Susan, the 200-year-old *sharḥ* of Rabbi Raphael Birdugo of Morocco (Bar Asher 2001), and an Egyptian *sharḥ* of the Book of Esther probably from the 18th century (Hary 1994). Others include Rabbi Mordecai Hai Dian's of Tunis (Doron 1991) and a more recent one, compiled by Rabbi Joseph David Genasia (1879–1962) of Algeria (Tirosh-Becker 1990).

In general, the *sharḥ* attests to the popular and vibrant culture in which the Bible was translated into Arabic in the pre-modern era (Polliack 1998). While some *sharḥ* seem to have been adapted from Saadiah's translations others bear similarities to the literal pre-Saadian versions. It is reasonable to assume that a tradition of translation that started before Saadiah survived in the shadow of his translation mostly as oral tradition in the private domain, in schools and synagogues, and surfaced again in the post-Saadian era in the form of *sharḥ* (Tobi 1996).

A thorough study of the language of *sharḥ* was undertaken by B. Hary who worked mainly on a collection of Egyptian manuscripts called the Cairo Collection dating to the 18th through the 20th centuries. Hary concludes that the language of the *sharḥ* shows evidence of multiglossia, i.e., that it is composed of several linguistic layers. He further observes that the language of the different *sharḥ* is not constant and can be placed on a continuum from literary to colloquial Judeo-Arabic (Hary 1992 and 1994). Hary suggests that the language of *sharḥ* exhibits a constant tension between the intention of the translator to convey the Hebrew text word-for-word and his desire to be understood and to occasionally interpret the text by substituting words, paraphrasing, and adding elements of the local vernacular. Hary proposes that the compelling desire to adhere to word-for-word translation even when it violates Arabic linguistic structures stems from the motivation to preserve the sacred Hebrew text as literally as possible and to maintain links with a Jewish heritage in a foreign environment. He further suggests that because of their close connection to the Hebrew sacred texts *sharḥ* evolved into sacred texts themselves. Hence they were not updated, and with time they also became unintelligible as the dialects of the old *sharḥ* and the contemporary readers grew apart (Hary 2000).

GLOSSARIES. A special genre, glossaries and word lists, sheds light on the roots of the tradition of Bible translation. Word lists that were found in the *Genizah* are divided into three groups. The first is a list of Hebrew words taken from a continuous biblical segment along with their translation. These lists when read may seem like an uninterrupted translated

text. The second is a list of selected words also taken from a continuous segment of text. These words are typically difficult and/or rare. The third group contains a random list of words selected by topics such as botany or zoology or they may be selected according to poetic principles such as alliteration or assonance. In some lists the principle behind their compilation is not apparent, and they may have been created for a one-time didactic situation or a particular sermon in the synagogue. Some of these word lists are spelled phonetically, and often include several alternative translations for a single word. These features are reminiscent of pre-Saadian translations (Polliack 1998). Saadia himself compiled such a list named “*Pitron shiv'im Millim Bodedot*.” Biblical glossography may be viewed as the initiation of Hebrew lexicology and as a phase leading to Hebrew lexicography (see Polliack and Someh 2000, Eldar 2001, and Tobi 1998).

[Ilana Sasson (2nd ed.)]

MODERN VERSIONS

Introduction

Although the translation of the Bible was carried out already in antiquity, in Aramaic, Greek, and Latin, it was the burgeoning Protestant Reformation, some decades after the invention of movable type, which provided the impetus to make the Bible the most translated book in world history. In its desire to bypass the Catholic Church's monopoly on the meaning of the text, the Reformation sought to return “to the source,” and

the resulting sharpening of focus on the Bible itself, especially for lay people, paved the way for both the modern study of the Bible and its translation into European vernaculars. It is thus the modern period, broadly speaking, that may be described as the energetic, even frenetic, era of Bible translation. Since the 16th century, but especially in the 20th something approaching 3,000 versions of the Bible, including individual books, have appeared, in well over 2,000 of the world's languages, and new ones are continually in preparation. The proliferation of Protestant subgroups, the eventual acceptance of translation by Catholic authorities, and the needs of post-Emancipation (and even traditional) Jews for a fuller understanding of the text in their own tongues, combined with the explosion of knowledge about the biblical world and its languages over the past two centuries, have all played a role in the far-ranging creation and dissemination of multiple Bible translations in modern times. Thus, Franz Rosenzweig's famous phrase, “To translate is to serve two masters,” in truth tells only part of the story.

The problems facing modern translators of the Bible, as well as those who worked in antiquity, are twofold, reflecting issues of translation in general. The text to be translated, the “target text,” must first be understood on its face. For this, multiple tools are necessary: grasping the place of the Bible's language in context, i.e., amid the linguistic heritage of the ancient Near East; noting the usage of specific words and phrases within a book or even across the Bible as a whole; appreciating historical changes with respect to technical terms; perceiving rhetorical devices utilized in the text, such as alliteration, paronomasia, and the use of theme words; and sensing the innate rhythm of the text. All these activities must be accompanied by the painful awareness that they will sometimes fail to be apprehended, or apprehended correctly, and that there are texts which will stubbornly continue to remain obscure.

Second, the translator must be able to cast his or her creation, the “receptor text,” in such a way as to have the desired effect upon the audience. For some, this will mean producing a Bible that reflects traditional Jewish or Christian interpretation; for others, it will lead to one that speaks in contemporary language; many will seek to give the reader a glimpse, however limited, of the qualities of biblical Hebrew, while others will want to provide a text that transfers old ideas and expressions into easily understandable modern form, “as if it had been written in English.”

Consequently, translations of the Bible are usually described as occupying one of two poles on a continuum. The first one, variously termed “idiomatic,” “dynamic equivalent,” or “domesticating,” aims to move the text toward the reader, by making it accessible in its language, imagery, and manner of speech. In this mode, the Bible is thus to be read as a text with clear messages, in language that is readily apprehensible. By using contemporary language that tries to produce a reader reaction similar to that imagined in the original, such a translation is willing to sacrifice form in the interests

of communication. Most modern translations have tended toward this ideal. The second pole, called “literal,” “formal equivalent/correspondent,” or “foreignizing,” seeks to move the reader back toward the text, as part of a more active process. Here the reader must make the effort to know the text as something from a partially unfamiliar world, with its own distinctive modes of expression, and learn how to read it. In such an approach, stylistic features and modes of speech, such as word order, idioms, and wordplays are particularly important. The result, as in the 20th-century German Buber-Rosenzweig translation, may confound some readers, who are seeking mainly a comfortable way into the text.

Regarding these two directions of translation, E. Greenstein has noted in the former a tinge of Christian missionizing, which is, to be sure, one of the goals of a number of institutions involved in Bible translation, such as the American Bible Society. The latter methodology he views as more essentially Jewish, concerned as it is with the precise wording and nuances of the Hebrew.

Scripture itself seemed to encourage formal correspondence: Deut. 4:2: “You shall not add anything to what I command you or take anything away from it.” Consequently, a literal translation alleges exactness. Similarly, for the rabbis, according to Max Margolis, “the multiple sense of the scriptural word was an accepted fact and it is for this very reason that they frowned upon all translation.” In a transitional mode, Jerome translated the Vulgate through stages, developing from formal correspondence to a dynamic equivalence. He saw the work of Aquila (a second century C.E. Greek literal translation) as slavish literalism and disparaged “the word for word,” seeking instead a “sense for sense” translation. Ultimately, dynamic equivalence was not unappreciated by translators. The 16th-century Martin Luther, who translated the Bible into German, could describe dynamic equivalence:

Whoever would speak German must not use Hebrew style. Rather, he must see to it – once he understands the Hebrew author – that he concentrates on the sense of the text, asking himself, Pray tell what do the Germans say in such a situation? Once he has the German words to serve the purpose, let him drop the Hebrew words, and express the meaning freely in the best German he knows.... I endeavored to make Moses so German that no one would suspect he was a Jew.

It may be helpful to visualize the broad spectrum of translation by means of a hypothetical illustration. If one imagines a culture in which the description of a heavy rainfall, whether in everyday language or in a recited story, translates out as “the rains fall rhinos and zebras,” there are at least four possibilities that present themselves to the translator: (1) “the rains are falling like rhinos and zebras”; (2) “the rain is like stampeding animals”; (3) “it’s raining cats and dogs”; and (4) “It’s pouring outside!” It will be observed that the first is rather literal, although not totally so (“like” has been inserted for clarity); the second retains the basic concept but is less language-specific; the third uses a parallel image from the target culture,

in this case, American; and the fourth is a clear rendering of the action, but without any reference to the original language or mode of cultural expression. In the end, the degree of literalness or idiomatic fluidity in a translation will depend on the translator’s goals and on the audience at which the work is aimed. Broadly speaking, 20th century Bible translations tended in the direction of choices 3 and 4, with some more recent movement back toward the earlier numbers.

One specifically biblical illustration of the possible range of translation can be found regarding a common expression, *limzo hen be-einei x*. Available translations render this across the spectrum from literal to idiomatic; hence, in Gen. 19:19, the New International Version has “Your servant has found favor in your eyes,” while the New American Standard Bible, 1995 Revision, renders “Your servant has found favor in your sight”; the Revised English Bible for the same phrase reads “You have shown your servant favor,” whereas the New Jerusalem Bible proposes “You have already been very good to your servant” (note also the New American Bible’s “You have already thought enough of your servant”).

Despite the best of intentions, it will not always be possible to realize the translator’s goals. For those committed to a “modern,” idiomatic rendering, there will be cases where current language sometimes runs afoul of changes in usage. In this regard, the New Revised Standard Version translators note how they had to change the 1952 Revised Standard Version’s rendering of Psalm 50:9, “I will take no bull from your house,” to “I will not take a bull from your house,” for obvious reasons. Similarly, E. Fox’s 1972 translation of Gen. 28:17, “How awesome is this place!,” gave way to “How awe-inspiring is this place” (1995), to avoid using what had by then become teenage lingo. Such examples demonstrate that changes in usage and taste dictate changes in performance.

At the same time, like any language, biblical Hebrew abounds in idiomatic expressions which pose dilemmas for the literally minded translator. Phrases such as “he lifted up his eyes” or “to fill the hand” (e.g., Ex. 28:41), usually rendered by less literal equivalents such as “he looked up” and “to consecrate,” provide one kind of example. Further, *yamim* will often signify “years” instead of “days” in biblical usage, while *lehem*, nominally “bread,” in many contexts denotes the broader “food.” Another type of construction is that found in Gen. 44:18, literally “like you is like Pharaoh,” which virtually all English translators, albeit some with an explanatory note, render as “you are like Pharaoh.”

The Bible translator therefore must decide where he or she fits along the spectrum; yet since a “pure” translation of one extreme or the other is not possible, decisions, often compromises, must be made on every page, in every verse. Tyndale famously coined many words and phrases in his work which have become standard, not only in the English Bible but in the language in general (e.g., scapegoat, Passover) but he also did not hesitate to be less literal in the many cases where he felt that clarity of style was paramount. Thus he felt no compunction to reproduce biblical Hebrew wordplays

such as *tohu va-bohu* in Gen. 1:2, or *ve-ha-oniyyah hishevah le-hishaver* in Jonah 1:4.

FEMINIST SENSITIVITIES OF TRANSLATION. Contemporary problems for the translator concern inclusive language that does not neglect more than half the human race. The term “inclusive language” primarily refers to gender concerns; the word, however, also includes the concerns of Jews, handicapped, and people of color. In any case, the modern translator is seriously obliged to bring the right word into the right place.

The *Inclusive Lectionary* has brought the problem of inclusive language to worship services. This lectionary is a collection of fixed readings used for services among Anglican, Protestants, and Roman Catholics. The *Inclusive Lectionary* modifies the Revised Standard Version (RSV) of Ps. 23:1: “God is my shepherd ... God makes me lie down ...” This avoids the male term “Lord” and the pronoun “he.” Other examples are “realm” for “kingdom”; “Abraham and [Sarah]”; “God the [Mother and] Father”; “a person with a disabling condition” for “a cripple”; “the religious authorities” for, when applicable, “Jews,” etc. Furthermore, “man” is the celebrated example since the English word is ambiguous, meaning “people,” “a human,” and “an adult male.”

A major example of a translation that attempts to adjust the biblical text to such recent concerns is *New Testament and Psalms: An Inclusive Version* (1995), which is based on New Revised Standard Version. To use its own illustrations, not only is gender-specific language modified – so that, for instance, “son” becomes “child,” and in an extreme case, God as “Father” becomes “Father-Mother” – but whenever possible, pejorative references to disability, race, religion, etc., are replaced by more inclusive terms. Thus, in the New Testament, Jews are referred to as “unbelievers,” the Pharisees as “the authorities” or “the leaders,” and the concept of “darkness” is replaced by “gloom” or “night.” In the Psalms, there is a conscious attempt to move away from masculine designations of God (23:2, “God makes me lie down in green pastures,” and 8:1, “O God, our Sovereign”). Even the term “right hand,” when it denotes power, is designated as the “mighty” or “powerful” hand. This kind of “adjustment” of the text, while jarring to some readers, is but another illustration of the Bible-reading audience’s continual need to experience the text on their own terms.

Another recent and more modest attempt at gender-neutral language is a revision of the New International Version, *Today’s NIV* (2005); the revised edition of W. Plaut’s *The Torah: A Modern Commentary* (2005) also makes gender-related modifications (see below).

Such an approach has, not surprisingly, spawned both acceptance and criticism, often passionately argued. In 1997, a group of evangelical Christian leaders, spearheaded by the group Focus on the Family, issued the “Colorado Springs Guidelines,” which sought to mitigate the use of gender-neutral language in English Bible translation, feeling that it

distorts the text. The issue will no doubt continue to be debated.

JEWISH SENSITIVITIES OF TRANSLATION (NEW TESTAMENT). The second contemporary problem for the translator also concerns the choice either of dynamic equivalence or formal correspondence. Christian translators of the New Testament have options in how to translate the word, “the Jews,” especially in the Gospel of John. There are many examples where “the Jews” in John is the equivalent to “the chief priests and elders” in the other Gospels. There are places in John where “the Jews” are spoken of in a positive context, e.g., “salvation is from the Jews” (John 4:22). There are, however, many places in John that could make the reader think that John is antisemitic. The impression is given that John makes Jesus a non-Jew, rather than a Jew, put to death by Jews, rather than by Gentiles.

Some proposals to solve this problem are to excise passages. Others wish to use dynamic equivalent expressions for “the Jews,” as: “my own people”; “in our law”; “some Jews”; “the Jewish leaders”; “the Judeans”; “those opposing him”; “religious leaders.” Some demur and prefer a more formal correspondent rendering of “the Jews” since the substitutes do not express John’s dualistic thought or his fondness for collective nouns. Yet others think that it is only part of the overall polemical rhetoric of the day.

The Episcopalians have taken a lead on this issue. In their *Guidelines for Jewish-Christian Relations* of 1988, they state: “It is recommended that in the services of the Church and in church school teaching, careful explanations be made of all the New Testament texts which appear to place all Jews in an unfavorable light, particularly the expression ‘the Jews’ in the English translations of the Gospel of John and in other references.”

Other sensitivities are more of an ecumenical nature than a strict translation problem. Some English translations are concerned about the use of the phrase “Old Testament” and have begun to use the phrase the “Hebrew Scriptures.” The (NRSV) New Revised Standard Version has on a title page: “The Hebrew Scriptures commonly called The Old Testament.” The others have proposed, “First Testament” and “Second Testament” or “Prime Testament” for “Old Testament.”

Another ecumenical problem is the ordering of the books in the Bible. The Jewish ordering of the books is not maintained in Christian Bibles so that the Major and Minor Prophets remain as an introduction to the New Testament. The Jewish order ends the Old Testament with the Writings.

TRANSLATING THE NAME OF GOD. A third translation problem is the rendering of the Tetragrammaton. Since the Septuagint and through the Vulgate and the KJV, overwhelmingly the translation has been the equivalent of “the Lord.” Even before the closing of the Hebrew biblical canon, the divine name was not pronounced, out of reverence. Later in the New Testament, there is a tendency to avoid saying the name by substituting

a surrogate, e.g., “heaven.” After World War II, R. Knox, the Jerusalem Bible, the Anchor Bible, and the A.B. Traina *Holy Name Bible* used the Tetragrammaton with supplied vowels, i.e., “Yahweh.” E. Fox’s *The Five Books of Moses* (1995), a formal correspondent translation, uses just the four consonants without vowels (YHWH), leaving it to the reader to utilize his or her preferred reading (“Lord,” “Hashem,” etc.). This spelling is fairly standard scholarly practice as well (cf. many volumes of the *Anchor Bible*), and in this vein, one notes the orthography of the Tetragrammaton in Dead Sea Scroll manuscripts, where it alone is written in the older (“Canaanite”) Hebrew script. The revised edition of the Plaut *Torah* (2005) has returned to the Mendelssohnian “The Eternal,” also popular in French translations. The crucial question here is whether one uses a dynamic equivalent of a proper name and not a title, such as “the LORD,” or respects an ancient Masoretic sensitivity.

THE NATURE OF BIBLE TRANSLATION. With all that Bible translation involves detailed philological work, it should not be ignored that it is also, ultimately, about performance in the artistic sense. Many analogies present themselves. One could cite the task of the dramaturg in the theater: establishing a good text, being conversant with historical background and historical performance practice, sensing the proper tone of the work, and monitoring the unfolding of the performance, with the ultimate goal of remaining true to guiding principles and an overall concept of what the work is. Or one could turn to the task of the orchestral conductor, where, once again, it is crucial to establish an accurate working score, to have a sense of past performance history, and to come up with a compelling conception of the piece, marshalling one’s forces to present it as clearly as possible. Whether one accepts that the Bible was originally oral or written, it is clear that from antiquity it was recited aloud in some form, whether in public or in private (similar to the Koran), and attention must be paid to this “live” aspect of the text. Many Bible translations have been conceived, as was the King James Version, “to be read in churches,” and this fact has had an immeasurable influence on the history of translations.

[Everett Fox (2nd ed.)]

Jewish Languages

JUDEO-PERSIAN. As *Maimonides (*Iggeret Teiman*) attests, a Persian translation of the Pentateuch was in existence centuries before Muhammad. In fact, theological works of the Sassanid period (*Dinkard* and *Shikand Gumanik Vigar*) contain biblical quotations which point to the existence of a Pahlavi version. Nevertheless, this fact and even the reference to the reading of the Book of Esther in the dialects of Media and Elam (Meg. 18a) provide no firm evidence for the existence of a complete or partial translation of the Bible into these languages. The earliest such text is a Pentateuch of 1319 written in *Judeo-Persian, and there are also manuscripts of the Pentateuch, Psalms, and even fragments of the Apocrypha, all predating the 16th century. Their stylistic uniformity suggests that

there may possibly have been a school of Judeo-Persian Bible translation in the 14th–15th centuries. The earliest printed text is the Pentateuch of Jacob b. Joseph *Tavus, apparently based on a 13th-century version, which appeared in the Polyglot Pentateuch of Constantinople (1546); here the Judeo-Persian is printed in Hebrew characters. There are also some modern Bible translations in this dialect, notably versions of Psalms, Proverbs, and Job published by a Bokharian Jew, Benjamin Kohen, in 1883, and Simon *Hakham’s translation of the Pentateuch (5 vols., 1901–02).

See also *Judeo-Persian Literature.

JUDEO-TATAR. The Bible translations into Judeo-Tatar (not to be confused with *Judeo-Tat, spoken by the “Mountain Jews” of Daghestan and the Caucasus) originated among the Karaites of the Crimea, Russia. Authorship of the Tatar translation claimed by the Karaites has been disputed by the Krimchaks (Rabbanite Jews of the Crimea), who also used such texts. There are manuscript copies of this version in the Firkovich collection (Leningrad Library) and elsewhere. Fragments of the Judeo-Tatar Bible are contained in Benjamin *Mussafia’s *Zekher Rav* (1831), which includes translations of certain words into Turkish by Joseph Solomon of Eupatoria, a Karaite *hakham*. A Hebrew Pentateuch intended for the Karaites of Turkey and the Crimea, containing a translation into Judeo-Tatar (i.e., in Hebrew characters), was published in Constantinople (1836). A complete Judeo-Tatar Bible (ed. Mordecai Tirishkan) followed soon after (4 vols., 1841–42).

[Isaak Dov Ber Markon]

JUDEO-ROMANCE LANGUAGES. During the Middle Ages, there were Jewish translations of the entire Bible in the Romance languages. They appear to have a common source – a traditional version of the Bible in Low Latin, which the Jews of imperial Rome used in the synagogue and for the purposes of study. This translation was probably transmitted orally, and in time the text underwent morphological and phonetic modifications as Low Latin developed into the various Romance languages in various countries. The Judeo-Romance Bible translations are therefore as old as the Romance languages themselves, and much older than the manuscripts containing them or the glosses relating to them. This development may be traced most fully in Italy, where the Jews lived uninterruptedly from Roman times. Traces of the old Latin translation have been discovered in Jewish funerary inscriptions at Rome and in southern Italy dating from early Christian times; a novella of Justinian (553 C.E.) mentions a Jewish Bible translation in the vernacular. Hebrew works from the 11th century onward contain glosses, and in the 13th century the rabbis of Rome decided that for liturgical purposes, Italian versions of the Bible might be considered equivalent to the Targum. From the 15th century onward, Romance dialect versions of the Bible and of the prayer book were preserved in manuscript, as well as handwritten glossaries and a Bible dictionary in Hebrew, Italian, and Arabic (*Makre Dardeke*),

which was first printed (at Naples?) in 1488. Their impact has been felt in modern translations.

Several Judeo-Romance versions of biblical books are extant, including a 14th-century *Judeo-Provençal fragment of the Book of Esther by Crescas du Caylar, and manuscript translations of Song of Songs (the oldest dating from the 13th century) and of the entire Bible written in *Judeo-Italian. Although the Old French versions have been lost, their existence is attested by six 13th-century glossaries and two complete biblical dictionaries in *Judeo-French. There may also have been Jewish translations of portions of the Bible in Catalan, since (as in the case of Old French and Judeo-Provençal) biblical glosses (*Laʿazim) and glossaries in this dialect have inspired scholarly research (see below).

LADINO (JUDEO-SPANISH). Judeo-Spanish translations of the Bible dating from the 13th to 15th centuries were among the earliest Castilian versions of the Bible, and three manuscripts have been preserved in the Escorial Library, Madrid. These early works were invariably written in Latin characters, as was the famous Ferrara Bible (1553), published by Abraham *Usque, of which there were separate editions for Jews and Christians. After the Spanish expulsion, however, Ladino versions of the Bible were mainly printed in Hebrew characters for the use of Jewish refugees in the Sephardi Diaspora. These translations, which were clearly distinguishable from Spanish Christian editions, include Psalms (Constantinople, 1540), the Pentateuch (in the Polyglot Pentateuch, Constantinople, 1546), and Prophets (Salonika, 1572). Judeo-Spanish Bible translations were later produced by Manasseh Ben Israel (1627) and Abraham b. Isaac Assa, whose complete Bible (Constantinople, 1739–45) was long the most popular work of its kind among Sephardi communities of the Orient (see also *Ladino Literature).

[Umberto (Moses David) Cassuto]

YIDDISH. The oldest Yiddish versions of the Bible stem from the scholarly work of German rabbis who produced Yiddish (or Judeo-German = *Juedisch-Deutsch*) glosses of biblical texts from the 13th century. These were subsequently inserted in rabbinical commentaries and specialized glossaries were prepared, five dating to the 13th–14th centuries and four to the 14th–15th centuries. Copies of these have been preserved in various German libraries. Prose translations of various biblical books were written from the 14th century onward, and these were specifically designed for the unlearned and for women, in view of the widespread ignorance of Hebrew. Such “*Teitsch*” versions include a 14th–15th century translation of Proverbs, Job, and Psalms (the oldest extant); one of Psalms (before 1490); and others of Psalms, Proverbs, and the Pentateuch. These are literal and awkward, and appear to derive from a 13th-century source.

Rhymed Yiddish translations of the Bible, which also appeared in medieval times, owe their origin to the influence

of the Bibles and chronicles in rhyme produced by German writers from the ninth century onward. There are also rhymed Yiddish paraphrases of the Bible, which flourished in the 14th century, predating the rhymed translations. These paraphrases, unlike the translations, go beyond the original text and show the influence of German epic minstrelsy. The best-known work of this type is the so-called *Shemuel Bukh, a rhymed paraphrase of I and II Samuel, the prototype of which appeared no later than about 1400, although the first printed edition is of a much later date (Augsburg, 1543). The *Shemuel Bukh* served as the model for a host of other biblical paraphrases in rhyme, including: three 14th-century paraphrases of Esther; one of Judges (14th–15th centuries); paraphrases of the five *Megillot*, which were apparently the work of Abraham b. Elijah of Vilna (15th–16th centuries); paraphrases of Judges and Isaiah by Moses b. Mordecai of Mantua (before 1511); and poetic reworkings of the account of the death of Moses and the *Akedah*. The last two display great originality, adorning the biblical stories with legendary motifs drawn from the midrashic *aggadah*, and endowing the biblical personalities and events described with medieval characteristics. By the 15th century there were also prose paraphrases of certain biblical books, most of which have, however, been lost. The existence of such literary works is indicated by the late 15th-century *Maʿasiyyot* (“tales”), stories in prose about the *Akedah*, Jonah, and King Solomon.

From the 16th century onward no new type of Bible translation made its appearance. The only noticeable development was the steady displacement of other genres by the prose paraphrases. Three notable Yiddish glossaries of the Bible, all rooted in medieval scholasticism, were the so-called *Sefer R. Anshel* (Cracow, 1584), Moses Saertels’ *Beʿer Moshe* (Prague, 1605–05?), and *Lekah Tov* (Prague, 1604). The same scholastic tradition characterizes the oldest printed Yiddish editions of the Pentateuch with *haftarot* and the five *Megillot*, that of the convert Michael Adam (Constance, 1544); another by the convert Paulus Aemilius (Augsburg, 1544); a revision of the Constance edition by Leo Bresch (Cremona, 1560); and a further translation based on the preceding Cremona edition, together with a summary of Rashi’s commentary in Yiddish (Basle, 1583). The publishers rarely did more than bring the Yiddish translations up to date, and this was also true of the Yiddish version of Psalms by Elijah *Levita (Venice, 1545), which closely followed earlier editions by Moses b. Mordecai of Brescia (before 1511) and Joseph Yakar (*siddur*, Ichenhausen, 1544). Two further Yiddish translations of the 16th century were Shalom b. Abraham’s Judith and Susanna (Cracow, 1571) and an edition of Isaiah with extracts from Kimḥi’s commentary (Cracow, 1586). Toward the end of the 17th century, two complete Yiddish Bibles appeared almost simultaneously: one by Jekuthiel b. Isaac Blitz (Amsterdam, 1676–78) and another by Josef Witzgenhausen (Amsterdam, 1679), which was more significant than the first.

Rhymed Yiddish translations were rare after the 16th cen-

tury. They include one of Judges (Mantua, 1564); one of Genesis (Venice, 1551); Moses Stendal's edition of Psalms (Cracow, before 1586); a 17th-century version of Psalms (the *Teitsch-Hallel*), whose author copied the verse form of contemporary German church hymnology; and *Mizmor le-Todah* (Amsterdam, 1644) rhymed translations of stories from the Pentateuch and the *Megillot* by David b. Menahem ha-Kohen. Rhymed paraphrases of various biblical books were still popular in the 16th and 17th centuries, the outstanding example being the *Shemuel Bukh* (see above), of which there were at least seven editions during the years 1543–1612. Another work of this type was a version of the Pentateuch, Joshua, and Judges, written by Jacob b. Isaac ha-Levi of Roethelsee (*Kehillat Ya'akov*, 1692).

Later, Yiddish prose paraphrases of the Bible were much in favor. Some notable examples were the so-called *Lang Megile* on Esther (Cracow, 1589); the *Teitsch-Khumesh* by *Isaac b. Samson ha-Kohen of Prague (Basle, 1590), a paraphrase of the Pentateuch with Midrashim; the *Ze'ènah u-Re'ènah* (*Tsenerene*; cf. Song 3:11) by Jacob b. Isaac Ashkenazi (Lublin, 1616), a reworking of the Pentateuch filled with edifying and instructive material drawn from the Talmud, the Midrash, and folklore; and the *Sefer ha-Maggid* by the same author (Lublin, 1623), an adaptation of the Prophets and Hagiographa with Rashi's commentary.

The most famous of these was *Ze'ènah u-Re'ènah*, which ran to many editions and continued to serve as a second Bible among East European Jewry during the 19th century. An extract was translated into Latin by Johann Saubert in 1661, and the whole work into French by A. Kraehhaus in 1846. A German version (with an introduction by A. Marmorstein) was serialized in 1911.

With the decline of Yiddish among German Jewry, from the early 19th century onward, these Bible translations and paraphrases were read only by the Jews of Eastern Europe and the U.S. Mendel *Lefin (of Satanow), an early 19th-century Polish apostle of the Enlightenment, produced an excellent Yiddish version of Proverbs (Tarnopol, 1817). Bible translations of outstanding linguistic and artistic merit were later written by two leading Yiddish poets of the 20th century – I.L. *Peretz (the *Five Scrolls*, 1925) and *Yehoash (pen name of S. Bloomgarten; *Yiddish Bible*, 1910ff.). The latter, in particular, was considered a great masterpiece of the Yiddish language. It became a standard work for Yiddish-speaking homes throughout the world. In 1929 Yehuda Leib (Zlotnick) *Avida translated Ecclesiastes into Yiddish. N. Gross published fluid versions of the *Five Scrolls* (1936) and the *Torah* (1948). See also *Yiddish Literature.

English

EARLIEST VERSIONS. The Latin Bible, in an essentially Italian form, first reached England in the sixth or seventh century; however, it should be understood that until the late Middle Ages, the "Bible" of the West comprised, for practical purposes, only the Gospels, Catholic (i.e., canonical) Epistles,

and Psalms. Codices of the complete Latin Bible were almost unknown before approximately 800 c.e. From the Latin, the Venerable Bede (d. 735) translated the Gospel according to John into Anglo-Saxon, and Aelfric of Eynsham made abridgments of the Old Testament from Genesis to Judges and of some other books. Caedmon wrote an Anglo-Saxon verse paraphrase of Genesis and other portions of the Bible (c. 670) and Alfred the Great attached an Anglo-Saxon version of the Ten Commandments and parts of the Pentateuch to his legal code. The earliest attempts, however, took the form of continuous interlinear glosses to the Latin, e.g., as in the Lindisfarne Gospels (ca. 700; British Museum, coll. Cotton, Ms. Nero D. iv). Psalters with interlinear glosses seem to have been used, particularly in women's convents (coll. Cotton, Ms. Vespasian A.I. from the ninth century, perhaps being the earliest surviving work). Eadwine's Canterbury Psalter (Trinity College, Cambridge, Ms. R. 17. 1) dates from the middle of the 12th century. The Psalter of Richard Rolle of Hampole (c. 1300–49) enjoyed wide popularity and ecclesiastical approbation up to the Reformation.

THE LOLLARD BIBLE. The first comprehensive English translation was produced late in the 14th century; it is connected with the Wycliffite movement, whose adherents were nicknamed Lollards and were treated by the Church as heretics. John Wycliffe (c. 1328–1384) was himself responsible, though not necessarily as a translator, for the earlier version made from the Latin. In his insistence that the Bible, not the Church, was the source of faith, he anticipated the Reformation. The Old Testament part of the translation was done, at least in part, by Nicholas of Hereford, whose translation is characterized by a slavish adherence to the Latin. John Purvey is assumed to have been mainly responsible for the later version (c. 1388), the preface to which acknowledges the use made of *Nicholas de Lyr's commentary on the Old Testament. This version is consequently the first point at which the English Bible was subjected, albeit at one remove, to the influence of Jewish exegesis. Numerous manuscripts of the Lollard Bible are extant, and it was disseminated in part by word of mouth because of ecclesiastical hostility. A measure of the opposition to Wycliffe's work is the fact that in 1425, some four decades after his death, he was denounced at the Council of Constance; three years later, his remains were exhumed and burned.

The Lollard Bible received limited circulation due to its predating the invention of movable type; there was no printed English Bible before the Reformation.

THE 16TH–17TH CENTURIES. Several interacting factors afford the background to the "classical" period of English translations, which may be dated from W. Tyndale (New Testament, 1526) to the King James ("Authorized") Version of 1611. A new theology was to lead, in Protestant churches, to the Authorized Version (1611). The revival of learning meant the provision of chairs for teaching Greek and Hebrew at Oxford and Cambridge, as well as the dawning of a critical approach to

the texts of both the Greek New Testament and the Latin Vulgate, printed editions of which were prepared by Erasmus. Estienne (Stephanus) in Paris also published scholarly texts. The polyglot Bible editions made it easier to compare the ancient versions. The new (or rediscovered) methodology of textual criticism demonstrated the importance of basing vernacular versions on original and not on secondary texts; Reuchlin and Luther in Germany were pioneers of the new scholarship. A new theology was to lead, in the reformed churches, to the recognition that ultimate Christian authority lay in Scripture, rather than in the tradition of the Church, and conversely, in the Catholic Church it led to insistence by the Council of Trent in 1546 on the “authentic” quality of the Latin Vulgate, notwithstanding the possibly greater accuracy of contemporary Latin versions of the Bible. Finally, the period – which embraces the age of Shakespeare – witnessed the spectacular advance of the English language as a literary medium.

TYNDALE AND HIS SUCCESSORS. It is primarily to William Tyndale (1494?–1536) that the English-speaking world owes its Bible. He was educated at Oxford, and subsequently at Cambridge, where he learned Greek and was influenced by the writings of Erasmus and, perhaps, by Luther. By the time his revised New Testament appeared in 1535, Tyndale had already learned enough Hebrew on the continent to publish the Pentateuch (1530), followed by Jonah (1531) and further lectionary Old Testament material (1534); the “historical” books of Joshua–II Chronicles, left by Tyndale in manuscript, and somehow preserved after his execution at Antwerp, were printed in 1537 in the *Matthews Bible*, edited by Tyndale’s disciple John Rogers but pseudonymously named after two of the New Testament disciples, Thomas and Matthew.

Tyndale’s great contribution, along with his impeccable learning, was to create a new and supple English, with a Saxon diction and clarity that encouraged reading aloud. Over two-thirds of the King James Version (properly, of the books he translated), and thus of the English-speaking world’s historical experience of much of the Bible, comes from his hand, despite his remove at several generations from the later classic. His ear was unerring, and even those immortal phrases coined by the King James committee, such as “a still small voice” (I Kings 19:12), often owe something to his creativity (in this case, “a small still voice”). It should be noted that, through the medium of the 1917 JPS translation, which is basically the King James-based Revised Version of 1885 in Jewish garb, Tyndale has strongly influenced the ways in which English-speaking Jews have experienced the Torah and Former Prophets, up to the appearance of the NJV (“New JPS Version”) in 1962.

An illustration of Tyndale’s way with language, in modern spelling, may be seen in his rendering of Ex. 4:10–16:

And Moses said unto the Lord: Oh my Lord, I am not eloquent, no not in times past and namely since thou hast spoken unto thy servant: but I am slow mouthed and slow tongued. And the Lord said: who hath made man’s mouth, or who hath made the dumb or the deaf, the seeing or the blind? Have not I the Lord?

Go therefore and I will be with thy mouth and teach thee what thou shalt say. And he said: Oh my Lord, send I pray thee whom thou wilt. And the Lord was angry with Moses and said: I know Aaron thy brother the Levite that he can speak. And moreover behold, he cometh out against thee, and when he seeth thee, he will be glad in his heart. And thou shalt speak to him and put the words in his mouth, and I will be with thy mouth and with his mouth, and will teach you what you shall do. And he shall be thy spokesman unto the people: he shall be thy mouth, and thou shalt be his God....

The King James translators follow the Hebrew structure a bit more closely, in such passages as, “neither heretofore, nor since thou hast spoken” (Tyndale: “no not in times past and namely since thou hast spoken”), “send, I pray thee, by the hand of *him whom* thou wilt send” (Tyndale: “send I pray whom thou wilt”), and “he shall be, *even* he shall be to thee instead of a mouth, and thou shalt be to him instead of a god” (Tyndale: “he shall be thy mouth, and thou shalt be his God”). Yet Tyndale’s natural directness of language is winning, and illustrates his stated goal of helping even the “boy that driveth the plow” to understand the Bible, without sacrificing elegance. It is astonishing that the English of 1530 should be clear and readable basically half a millennium later, yet that is precisely the case with this first “modern” English translation of the Bible.

Tyndale’s Bible, a factor in promoting the English Reformation, raised hostility less by its content than by its Luther-inspired prefaces and provocative notes, a number of which rail against popes and monks. Ironically, within a year of Tyndale’s martyrdom, his famous prayer at the stake – “Lord, open the King of England’s eyes” – was answered when Henry VIII broke definitively with the Church of Rome. In 1535 Miles Coverdale, Tyndale’s assistant, produced an English Bible under royal auspices, which was actually a private enterprise, and was based not on the original texts but on the Vulgate, together with Pagninus’ literal Latin rendering of the Old Testament, and other versions including those of Luther and Erasmus. It was followed by the aforementioned Matthew’s Bible of 1537, in which the remaining books were the work of Coverdale himself. This in turn was the basis of the “Great” Bible (so called because of its size, appropriate for public reading) of 1539, known also as Cranmer’s from the preface to the 1540 edition, which Henry VIII had ordered to be placed in every parish church. Coverdale was editor, but some of his earlier provocative inclusions were dropped, and although surplus words found in the Vulgate Latin were rendered into English, they were typographically distinguished. Some Latinisms of diction crept in. The translation of the Old Testament was improved by reference to Muenster’s Hebrew-Latin Bible of 1535. This edition’s Psalter is the one that has been retained ever since in Anglican church usage.

ANGLICAN, CALVINIST, AND CATHOLIC BIBLES, 1560–1610. In spite of the radicalism of his ecclesiastical politics, Henry VIII was doctrinally a moderate conservative; the successors of his “Great” Bible, produced under Elizabeth I

and James I, reflected the “Anglican Compromise.” The Scotsman John Knox was the most prominent Briton to take refuge from the Catholic restoration of Mary, in Geneva, where he began to study Hebrew. At the time, not only was Calvin himself teaching there, but French and Italian Bible-making was also in progress. English versions of Psalms were issued from 1557 on, corrected, and finally superseded by the complete *Geneva* or “*Breeches*” Bible (so-called from its rendering of Gen. 3: 7) of 1560, an elegant and powerful rendering that retains much of Tyndale’s accomplishment. It was the first English version in which the poetic sections of the Hebrew Bible – fully half of the text – were translated directly from the original. Typographically, additional words which were idiomatically essential were printed in italic type; the remainder, in roman instead of the black letter of earlier prints. It also contained illustrations and, more importantly, helpful notes which clarify the text at many points. The influence of David Kimhi’s commentaries may be observed in the Geneva Bible, which was reprinted until 1644, in well over one hundred editions, reflecting its hold on English hearts until finally overtaken by KJV. It was the Bible of Shakespeare and the Pilgrims.

The next major translation, the *Bishops’ Bible* (1568), was fathered by Archbishop Parker, himself responsible for translating Genesis, Exodus, and some of the New Testament. It was intended to offset the pressures of the returned exiles of Mary’s reign for an English church settlement on Calvinistic lines and the popularity of their Geneva version from which, however, the Bishops retained some notes and renderings. The contributors were enjoined to avoid polemical exegesis, and were directed to correct the Great Bible, following Pagninus and Muenster for the Hebrew. This Bible was not a great success; its importance lies in its forming the basis of the Authorized Version of 1611, which, in the opinion of many, would have been better served by taking the *Geneva Bible* as its model.

English Catholics who fled to Flanders under Elizabeth I produced their own New Testament at Rheims (1582), followed by the Old Testament printed at Douai (1609–10). This version – characterized by the outspokenly apologetic tone of its editorial matter – was naturally based on the Latin Vulgate.

THE KING JAMES, OR “AUTHORIZED,” VERSION, 1611. The incomplete success of the *Bishops’ Bible* had made James I sympathetic to pleas from scholars – especially, perhaps, the Hebraist Hugh Broughton – for a fresh translation; after its publication in 1611, printing of the *Bishops’ Bible* was discontinued, and thus the King James version became – without any explicit declaration – the “Authorized” Version, i.e., that “appointed to be read in churches.” The work of translation was done by a team of 54, in Westminster, Oxford, and Cambridge; the 47 identified translators including most of the best English Orientalists (although Broughton was himself too cantankerous to be included) and Greek scholars. By now there were much-improved tools of biblical scholarship in the shape of

dictionaries and The Antwerp Polyglot Bible (*Biblia Regia*) of 1572, and the team included experts in the cognate Oriental languages, particularly Syriac and Arabic. In addition, the translators paid substantial attention to the Latin version of the Hebrew by the apostate Jew Immanuel Tremellius (1579), who had settled in England and taught at Cambridge. Then, too, the *Geneva Bible* notes are said to have made James uncomfortable. The *Bishops’ Bible* was the basis of the new work; that of Geneva contributed something in precision, and that of Rheims, some Latinizing vocabulary, although standard Anglican ecclesiastical terms were retained. Caution sometimes relegated the correct translation to the status of a marginal variant. Further editorial treatment – other than chapter summaries and headlines – was excluded *a priori*; the loss of the Geneva notes is particularly unfortunate. At the same time, some of the translators’ own notes have survived, and the full introduction to the translation is immensely illuminating. As for the language of the work, by 1611, the diction and grammar were slightly archaic, and although the Geneva version was far from being superseded – Lancelot Andrewes, himself one of King James’ translators, continued to use it in his sermons, and it is quoted in the introduction to KJV – the Authorized Version ultimately achieved, and has retained, a preeminent and quasi-sacrosanct position within the English-speaking world. Of other unofficial English ventures in translation prior to the late 19th century none achieved widespread popularity save H. Ainsworth’s Psalms (1612), introduced by the Pilgrim Fathers to America, and sundry metrical Psalters such as that of Tate and Brady (1696).

G. Hammond notes that one of the great merits of the KJV, despite its defects of a tone that is sometimes too lofty and a tendency to flatten the style, so that the entire Bible reads as if it were a uniform text, is that in its “care to maintain verbal equivalence” – that is, to in the main keep key words in English as they repeat in the Hebrew – it manages to both echo Hebrew style and create an equivalent in English. It also, following Tyndale, reproduces the Hebrew copula *vav*, usually by “and,” a practice dropped by many modern translations.

1611–1945. Subsequent nonofficial translations have been inspired partly by doctrinal and sectarian considerations (for Jewish enterprises), partly by a scholarly desire for improved accuracy, and partly by the motive of either “improving” the literary quality of the English (e.g., E. Harwood, New Testament, 1768) or colloquializing it (e.g., D. Mace, New Testament, 1729). A Revised Version of the Bible was published in Britain in 1881 (New Testament) and 1885 (Old Testament) in order to modernize the 17th-century language of the King James and to revise it in accordance with 19th-century scholarship. The American Standard Version, in cooperation with the Revised, appeared in 1901. Both translations soon proved of great importance to scholarship, but were not widely employed in worship. Subsequent versions created by individuals were those of J. Moffatt (1913–24; revised 1935), E.J. Goodspeed

(New Testament, 1923) and J.W. Powis Smith with others (Old Testament, 1927).

ANGLO-JEWISH VERSIONS. From the early 18th century, progressive anglicization of Jewish settlers in England and America rendered first the Spanish, and ultimately the Yiddish, translations inadequate for educational needs. The King James Version became current in spite of the Christianizing tendency of some of its “headlines” to the Prophets. The Pentateuch with *haftarot* published in London by David Levi (1787) appears to be the King James Version but without offending captions and with Jewish annotations. An earlier Pentateuch was produced by A. Alexander in 1785. In the U.S. Isaac *Leeser published a Pentateuch (5 vols., 1845) and subsequently a complete Old Testament in English (1853), which incorporated matter from the Mendelssohn school’s German translation and included the Hebrew text. Leeser used the KJV as a basis, de-Christianizing some renderings (e.g., substituting “this young woman” for *ha-almah* in Is. 7:14) and incorporating rabbinic readings of the Bible into his text via parentheses. Leeser’s version stood as pre-eminent in the American Jewish community until the appearance of the “Old JPS” translation of 1917. C.G. *Montefiore’s *Bible for Home Reading* was published in 1896. A. *Benisch issued a *Jewish School and Family Bible* (1851–61) and M. *Friedlaender’s *Jewish Family Bible* (1881) used the Authorized Version. After the Revised Version of 1885 had appeared, the London Jewish Religious Education Board published (1896) a pamphlet listing essential emendations to make that version acceptable for Jewish use. These modifications were among the material utilized for the version published by the *Jewish Publication Society of America in 1917, which also took into account 19th-century Jewish Bible scholarship and rabbinical commentary (e.g., *Malbim); the edition – issued by a committee representative of both traditional and Reform Judaism – was basically the work of Max L. Margolis. The New Jewish Version, in the course of translation by an American Jewish team presided over by H.M. Orlinsky, while probably being more open than any earlier Jewish version to the findings of non-Jewish biblical scholarship, still remains tied to the Masoretic text, even though it incorporated on its margin emendations based on evidence gathered from ancient versions of Hebrew manuscripts. Its Pentateuch, published in 1962, has consequently met with substantial criticism from Orthodox Jewish circles. Two traditional Pentateuchs are the *Pentateuch and Haftorahs* edited by Chief Rabbi J.H. Hertz (1929–36), which first used the Revised Version and later the 1917 JPS translation – although it was popularly supposed that the translations were Hertz’s own – and I. Levi’s Hirsch Pentateuch (1958–62), translated from the German [but see Torah Translations by Jews below].

[Raphael Loewe / Everett Fox (2nd ed.)]

SINCE WORLD WAR II. *Introduction.* From 1611 to 1900, some 500 English biblical translations were unable to break the dominance of the King James Version [KJV]. The history of Bible translation since World War II primarily consists of

further attempts to break away from the KJV. Many, however, continue to prefer the spiritual nostalgia of the KJV, since it has influenced so much of the English-speaking world. President Harry Truman states it bluntly:

We were talking about the Bible, and I always read the King James Version, not one of those damn new translations that they’ve got out lately. I don’t know why it is when you’ve got a good thing, you’ve got to monkey about changing it. The KJV of the Bible is the best there is or ever has been or will be, and you get a bunch of college professors spending years working on it, and all they do is take the poetry out of it.

Nevertheless, each age has its need for a new translation; textual and philological scholarship make advances, English usage changes, and communities have specific needs. In the case of postwar translations, L. Greenspoon cites the cataclysmic events of the first half of the 20th century, along with the challenge posed by such forces as secularism and Communism, as providing a strong impetus to revisit the Bible, including its retranslation. Thus the last half-century has seen a large number of major renditions of the Bible into English.

Major Versions Since World War II. The fact is that since 1945, as many new translations of all or parts of the Bible have appeared in English as in the three centuries preceding. In the following discussion, major post-World War II versions will each be treated in terms of: (1) the history of the translation; (2) the principles of the translation and representative examples; and (3) the acceptance of the translation. It should be noted that many of these are available for instant comparison on popular Bible software programs, with sophisticated search capabilities.

Knox Bible [= Knox] (1949). *History.* The Knox Bible is the work of the writer-scholar, Ronald Arbuthnott Knox. His father was the Anglican bishop of Manchester, and both of Knox’s grandfathers were Protestant divines. He was a prize-winning student in classics at Oxford and was to become an accomplished author, writing six detective novels. In 1917, at age 29, he joined the Roman Catholic Church.

For nine years he worked an eight-hour-day, six-day-a-week schedule, turning out 24 verses a day on the average. He published the New Testament (1945), the Psalms (1947), and the Old Testament (1948–1949), for which he received the Roman Catholic imprimatur (1955). This authorized version came to surpass the Douay-Rheims-Challoner Version for Catholics.

Principles and Representative Examples. Although Knox translated from the Vulgate, he took cognizance of the original languages in his footnotes. His knowledge of Greek was better than that of Hebrew. His work, however, is a translation of a translation, and the Clementine Vulgate (1592) at that. He stuck closely to the Clementine Vulgate, even where it was evidently in error. Since Jerome relied heavily on the Septuagint and on the Hexapla (which included various Greek versions),

Knox's translation can be said to be a translation of a translation of a translation.

Knox has many deft characteristics in his translation. The poetry of the Bible is not printed as such. Describing parallelism, he said "To our notions of poetic composition, these remorseless repetitions are wholly foreign; when you have read a page or two on end, they begin to cloy." Knox was always looking for "what an Englishman would have said to express this."

His translation of the acrostics in the Hebrew Bible (seven Psalms, Prov. 31, and Lam. 1–4) appealed to him. In 1924, Knox had already published *A Book of Acrostics* and to get a literary taste of the original was his purpose: Ps. 25 (24 in Vulgate) *An Alphabet of Trust*: "All my heart goes out to thee ... Believe not the trust ... Can any that trust in the ... Direct my way, Lord ... Ever let thy truth guide ... Forget not ..."

Knox used "thou" throughout, and Latin spellings of proper names, for example, "Osee" for "Hosea" and "Paralipomena" for "Chronicles."

Many of his translations are idiomatically pleasing. For the Song of Songs 1:1: where RSV has "O that you would kiss me with the kisses of your mouth! For your love is better than wine," Knox reads: "A kiss from the lips. Wine cannot ravish the senses like that embrace."

Acceptance. In 1943, Roman Catholics were given the freedom to translate from the original Hebrew and Greek. Knox's translation has thus been dubbed the "last translation of the Vulgate." Other Catholic translations (Jerusalem Bible [JB] and New American Bible [NAB]) have overshadowed the work of Knox, although not for their prose style. Knox's aspiration was: "To secure, as far as possible, that Englishmen of 2150, if my version is still obtainable then, shall not find it hopelessly 'dated.'" The translation still reads well, but is at present out of print.

Revised Standard Version [= RSV] (1952) and New Revised Standard Version [= NRSV] (1989). History. The RSV is the most scholarly and most modern revision in the tradition of the King James Version. In 1929 the International Council of Religious Education already began to plan a revision of the American Standard Version, which is a 1901 revision of the KJV. In 1937 the council authorized a new version "which embodies the best results of modern scholarship."

The continuing committee of the RSV and NRSV has been working and publishing for half a century: the New Testament (1946), the Old Testament (1952), the books of the Apocrypha (1957), a second edition of the New Testament (1957), an *Oxford Annotated Bible* with a Catholic imprimatur (1966), an ecumenical [for Protestants, Catholics, and Eastern Orthodox] expanded edition with the Apocrypha (1977), a *Reader's Digest Bible*, which abridged the Old Testament to one-half of its original length (1982), and most recently the NRSV (1989). The RSV's formal correspondent translation lends itself to an effective use of a concordance, and one such was published by Richard Whitaker in 1980.

The RSV is a revision in line with the KJV, in contrast to the New English Bible [NEB], which is a completely new translation. In the *Preface to the RSV*: "The RSV is not a new translation in the language of today... It is a revision which seeks to preserve all that is best in the English Bible as it has been known and used through the years." In committee, a 2/3 vote was needed to change the American Standard Version. The RSV, then, aims to be a formal equivalent translation without being wooden.

Principles and Representative Examples. The RSV and NRSV translations are more radical than the slight alterations in the New American Standard Bible [= NASB] or the New King James Bible [= NKJV (1982)], which are both revisions of the KJV. This does not make the RSV a radical translation. Although the RSV is still more often a formal correspondent translation, the guiding maxim seems to be "as literal as possible," and "as free as necessary."

Many examples of modernizing the language of the American Standard Version could be cited. At Gen. 31:36: "Jacob was wroth, and chode with Laban," became in RSV (and NRSV): "Then Jacob became angry, and upbraided Laban."

New forays into modern scholarship show something more than a conservative attitude. Of 13 emendations of Isaiah from the Dead Sea Scrolls, M. Burrows has changed his opinion, "A brief review will show that even in these 13 places the superiority of the manuscript's reading is not always certain. For myself I must confess that in some cases where I probably voted for the emendation I am now convinced that our decision was a mistake, and the Masoretic reading should have been retained."

In the NRSV (1989) there is a new concern for the use of more inclusive language. The NRSV has been even more aggressive than the NEB concerning this point. Ps. 54:3: where the RSV had "insolent men" and "ruthless men" and the word "men" was not actually in the original, the NRSV has rendered "the insolent" and "the ruthless." Ps. 1:1: "Blessed is the man who walks not in the counsel of the wicked," has become in the NRSV: "Happy are those who do not follow the advice of the wicked." The "Fathers" of Israel are now "ancestors." The expression "son of man" in Ezekiel is now rendered in NRSV as "mortal." Yet, masculine metaphors, such as referring to God as "Father," were left intact. There is another type of inclusive language that refers to "people of color" that was also considered in NRSV. RSV had in Cant. 1:5: "I am very dark, but comely," while NRSV has: "I am black and beautiful."

RSV retained "thou" in prayer and praise addressed to the Deity. NRSV drops these remaining occurrences of "thou" and "thy" from the RSV. Another interesting update in language includes Prov. 6:6 in the RSV: "Go to the ant, O sluggard; consider her ways, and be wise." while the NRSV has: "Go to the ant, you lazybones; consider its ways, and be wise."

In NRSV there are many textual changes, especially in Deuteronomy and Jeremiah. The books of Samuel are most affected by text-critical considerations. The sheer number of

footnotes in Samuel, for example, went from 174 in the RSV to 268. At 1 Sam. 4:1, the NRSV now follows the Greek and adds to the Hebrew: "In those days the Philistines mustered for war against Israel." In 1 Sam. 10, at the end of the chapter, NRSV adds four sentences from Qumran, which do not appear in the Masoretic Hebrew.

Acceptance. The RSV was burned in fundamentalist pulpits and the RSV committee was accused of being in league with the devil, especially because of their translating Isa. 7:14 as "young woman." The Christian Reformed Church rejected the RSV for pulpit use in 1954. The New International Version [NIV] evangelicals felt that all the messianic prophecies were taken out of the RSV Old Testament.

Despite all the uproar, in the first year, the RSV sold 2 million copies. Until the appearance of the NRSV, it enjoyed wide use on college campuses, especially in study editions such as the *Oxford Annotated Bible*.

Modern Language Bible [= MLB] (1959). History. This Bible is the work of a Dutch-born American, Gerritt Verkuyl, and 20 Hebrew scholars. In 1894, he came to America, not knowing English, and hired himself out as a farm hand in California. He was later educated at Princeton Theological Seminary and the University of Leipzig and did graduate work in Berlin. He served on the Presbyterian Board of Christian Education and became aware that the KJV "was only in part the language of the people." In 1936, in Berkeley, California, Verkuyl began his work of translating. He finished the New Testament in 1945 and completed the work in 1959. This translation was then known as the *Berkeley Version in Modern English*. A revised edition in 1969 took the name, *The Modern Language Bible, The New Berkeley Version in Modern English: Revised Edition, A Completely New Translation From the Original Languages With Informative Notes to Aid the Understanding of the Reader*.

Principles and Representative Examples. The editor in chief had a clear notion of his task of translating. He states: "I aimed at a translation less interpretive than Moffatt's, more cultured in language than Goodspeed's, more American than Weymouth's, and freer from the King James Version than the Revised Standard." The KJV, nevertheless, still so held sway that Verkuyl put in brackets translations that were based on unreliable manuscripts, simply because the KJV had them. Verkuyl also stated that the MLB was not to be a paraphrase, for "that leads so readily to the infusion of human thought with divine revelation, to the confusion of the reader."

For the most part his translation of the Old Testament was concordant or literal ("a translation of every word"). MLB does emend and does accept the Dead Sea Scroll of Isaiah (Isa. 14:4; 45:8; 56:12).

From the conviction of a conservative evangelical, the MLB translates passages using capital letters to point out messianic meanings: Gen. 3:15: "And He will crush your head." Psalm 2 has many capital letters: "The Lord and his Anointed are Supreme.... The Lord said to Me, Thou are My Son."

The footnotes are doctrinal and often moralistic: at Gen. 3:12: "Passing the buck is as old as humanity: it shows lack of repentance." At Ps. 23: "One reason this psalm is so deeply loved is that it comes warm from the heart of a man who knew the meaning of sheep and shepherd and who knew the Lord as thus related to him."

Acceptance. The MLB has been criticized for its wooden, stilted style. In a competitive market, this evangelical Bible has never been popular.

New World Translation [= NWT] (1961). History. This translation is the work of the Watchtower Bible and Tract Society, by a group of scholars who "wish to remain anonymous even after death." They published the New Testament (1950), the Old Testament (1961), and revisions (1970–1971).

Principles and Representative Examples. The most obvious characteristic of this translation is the representation of the divine name as "Jehovah." A feature of this translation is the frequent use of capitals for the plural "you," and for the plural imperative. Since the English "you" is ambiguous as to singular and plural, the meaning often suffers. One example from the NWT is Hosea 2:1 [Masoretic Text 2:3]: "say to your brothers, 'My people!' and to your sisters, 'O woman shown mercy!'"

Another venturesome point in the NWT is that the translators use the term "Hebrew-Aramaic Scriptures" (instead of the deprecating "Old Testament"), and for "New Testament" they use "Christian Greek Scriptures." This is not, however, done in response to sensitivities of Jews, but rather because Witness theology denies that these are "covenants."

The translation style is wooden: Ex. 20:3: "You must not have any other gods against my face." Gen. 17:4: "You will certainly become father of a crowd of nations." Another notable feature is the translation's considerable use of the auxiliary verbs "proceeded to," "proved to be," "went on to," and "began" at the beginning of verses, where the Hebrew uses the narrative imperfect with consecutive *vav*.

Acceptance. Being an extremely biased denominational version, this translation is suitable only for the Jehovah's Witnesses, and even they often avoid it. According to the Bible Scholar H.H. Rowley, this version is an example of "how not to translate." Nevertheless, several million copies have been printed.

Anchor Bible [= Anchor] (1964–). History. The Anchor Bible was originally intended to be an ecumenical translation of the whole Bible, to be completed in 1970. Under the general editorship of D. Freedman, however, the series has become a scholarly project in which the individual volumes have come to serve as the standard works for study and reference in the field. Each is accompanied by extensive, often exhaustive, introduction, commentary, notes, and bibliography. *The Anchor Bible* and other sets of commentaries like the *Hermeneia Series* and *Word Biblical Commentary* have new translations that are

not subject to the demands of a denomination which authorizes translations. They are translations by individuals – not by committee – and customarily have a freshness and creativity about them.

Principles and Representative Examples. The principles of translation are as different as the different authors, although the first workers for the Anchor Bible were students of William Foxwell Albright's methodology.

Acceptance. The Anchor Bible volumes are used primarily for study, and thus do not figure in wide public usage such as in congregations. At the same time, they are laboratories for future translations. For the Anchor Bible of the Psalms, E. Speiser's Genesis volume was a fresh approach, strongly influencing the NJV even though it officially appeared after that work. Mitchell Dahood, the author of the Psalms volume, emended extensively, relying on the use of other Semitic languages, especially Ugaritic, for elucidating the Hebrew. W. Propp, in the Exodus 1–18 volume, created a translation that experimentally sought to reflect the stylistic characteristics of the Hebrew text more closely than many of the other contributions to the series.

Jerusalem Koren Edition (1964). History. Koren Publishing published the first Hebrew biblical text edited, typeset, and printed in the State of Israel (1962). The Koren text was published with an English text on facing pages (1964) and called "The Jerusalem Koren Bible." (This should not be confused with the *The Jerusalem Bible* [= JB] (1966) and *The New Jerusalem Bible* [= NJB] (1985).) The presidents of the State of Israel are sworn in on this Bible.

Principles and Representative Examples. The English text is based on the Jewish Family Bible, a translation by Michael Friedlander (1881, 1884, repr. 1953) and edited by Harold Fisch (1964). Salient is its transliteration of Hebrew names such as "Iyyov" for "Job." The Hebrew accents and vowels have been rectified. The Qere is vocalized in the margin, leaving the Ketiv unvocalized in the text. The English text is a formal equivalent translation in line with KJV but follows the paragraphing of the Hebrew text.

Acceptance. With the publication of New Jewish Publication Version [NJV] from the years 1962–1982 and its one volume edition (1985), the Koren edition does not have wide circulation.

Jerusalem Bible [= JB] (1966) and New Jerusalem Bible [= NJB] (1985). History. The JB is the first complete Catholic Bible translated into English from the original languages; previously, Catholic translators had relied on the Vulgate. JB's history begins at the Ecole Biblique in Jerusalem, which in 1949 was entrusted with the Dead Sea Scrolls. Under the leadership of Père Roland de Vaux in the 1940s and 1950s, the Ecole Biblique published 43 individual fascicles of the books of the Bible (1948–1954), commentaries not entirely unlike the *Anchor Bible*, *World Biblical Commentary*, and *Hermeneia*, mentioned above.

The JB (1966) is a derivative of the one-volume abridgment of these French fascicles, *La Sainte Bible de Jérusalem* (1956). The English JB was translated by Alexander Jones of Christ's College, Liverpool, and 27 principal collaborators. It is a clear departure from the KJV and the Douay-Rheims-Challoner. The JB translation often verges upon a translation of a translation and this French connection is often evident in its choice of words. JB's scholarship benefits from the card catalog of the Ecole Biblique library, which lists every biblical article of the century according to verses treated. The footnotes, marginal notes, introductions, chronological tables, calendar, table of weights and measures, index of biblical themes handled in the notes, and maps, all make this both a study Bible and a translation with commentary. The notes reflect the best Catholic scholarship of its time. The JB weighs in just under five pounds, with some 2,062 pages.

The NJB (1985), edited by H. Wansbrough, corrected shortcomings of the JB. The NJB looked more closely at the original languages, reduced the number of Britishisms, depended on newer scholarship both for translation and footnotes, and generally became more readable.

Principles and Representative Examples. This dynamic equivalent translation is idiosyncratic for its use of Yahweh, the Tetragrammaton. The decision to translate the unpronounced name of the Lord is described in the introduction: "It is not without hesitation that this accurate form has been used, and no doubt those who may care to use this translation of the Psalms can substitute the traditional 'the Lord.'" Scholarship prevailed over Catholic theology. Many renderings were true to scholarship: Job 19:25: "This I know: that my Avenger lives, and he, the Last, will take his stand on earth," for the KJV: "For I know that my redeemer liveth, and that he shall at the latter day upon the earth." (NJB has "I know that I have a living Defender and that he will rise up last, on the dust of the earth.") The scholars often go to the Greek Septuagint while the NJV stays more closely to the Hebrew, often rearranges verses, and proposes conjectures (e.g., Isa. 53).

Acceptance. In 1966 nearly a million copies had been sold by Doubleday. The expense of the NJB, however, has not made it a best seller. Moreover, many comparable scholarly translations, such as NAB, RSV, NJB, REB, and NJV have not become commercial successes. All of these collectively are guessed to be less than 10 percent of the American market.

New American Bible [= NAB] (1970). History. The NAB is the first American Roman Catholic translation from the original languages. Originally, the Confraternity of Christian Doctrine [= CCD] asked the members of the Catholic Biblical Association to translate the Vulgate. This was to be a revision of the Douay-Rheims-Challoner English Version, which itself was a translation of the Latin Vulgate. The New Testament (1941) was translated first.

As a consequence, however, of Pius XI's liberating encyclical, *Divino Afflante Spiritu* (1943), Roman Catholics were

permitted to abandon the CCD revision and translate from the original languages. This new Catholic translation appeared piecemeal: *Genesis to Ruth* (1952); *Job to Sirach* (1955); *Isaiah to Malachi* (1961); *Samuel to Macabees* (1969). Non-Catholics were included in the translation committee: Frank Cross did 1–11 Samuel; David Noel Freedman retranslated Genesis with expanded notes; and James A. Sanders, 11 Kings. The complete NAB with the deuterocanonicals appeared in 1970. Companion commentaries to the NAB are published under the auspices of the Catholic Biblical Association, *The Jerome Biblical Commentary* (1968) and the updated *The New Jerome Biblical Commentary* (1989).

A revised translation of the New Testament for the liturgical readings appeared in 1987 and was translated with Protestant cooperation. Since the Psalms were actually translated from the *New Latin Psalter* (1944–1945) of the professors of the Pontifical Biblical Institute at Rome, Psalms is in the process of being newly translated (1990) from the Hebrew.

Principles and Representative Examples. There is a strong Catholic bent both to the translation and to the footnotes: the traditional Catholic division of the Ten Commandments is presented (Ex. 20:1–17); Isa. 7:14 is translated as “virgin,” and the footnote speaks of a “transcendent fulfillment” of this verse in Matthew; Ps. 51:7 is seen as “foreshadowing the basic Christian doctrine of original sin; the “manna” of Ex. 16:4 is seen as a type of Eucharist; Catholic spelling of proper names (“Isaias,” “Osee,” “Aggaeus,” “Paralipomenon,” etc.), was dropped. The NAB retains “Lord,” where the JB/NJB have the Tetragrammaton. The “burnt offering” is rendered infectiously as the “holocaust.” The Book of Samuel has been heavily guided by the Cave 4 materials from Qumran and the Greek Septuagint.

Acceptance. The NAB is highly respected and has found its place in the English liturgy of the Roman Catholic church. Theophile Meek of the Chicago Bible noted about the Sapiential books: “It is much more modern in its English and much truer to the original than the highly vaunted RSV.” James Barr has said about NAB that it is in advance over NEB for its application of comparative philology and of textual study, keeping in step with the accepted opinion of scholars.

New English Bible [= NEB] (1970) and Revised English Bible [= REB] (1989). **History.** The NEB is a complete break from the KJV and is authorized by the main Christian churches of the British Isles. British chaplains during World War II complained that they had to translate the KJV for the soldiers into the current language of the day.

The idea of a Bible in contemporary language was proposed by the Church of Scotland (1946). The New Testament (1961) was directed by C.H. Dodd. The Old Testament (1970) was directed first by T.H. Robinson (d. 1957), then by Sir Godfrey Driver, whose use of Arabic for the understanding of difficult Hebrew words was well known in scholarly literature. The Apocrypha was directed by W.D. McHardy and G.D. Kilpat-

rick. Finally, after 24 years, the Old Testament and the Apocrypha were published (1970), along with a second edition of the New Testament containing 400 minor revisions. A further update of both testaments was published as the REB (1989), a major revision done under the direction of W.D. McHardy.

The NEB is a new translation and has departed from the Tyndale-King James tradition. With modernity of speech, with new meanings for words, with translating “sense for sense” not “word for word,” with a boldness for emendation – often the easiest way out of a textual difficulty – and with a strong dependence on the versions, English Christians have truly abandoned the KJV.

Principles and Representative Examples. The NEB has made wide use of the versions and comparative Semitics, especially the use of Arabic for coming up with new meanings for the Hebrew (e.g., 2 Chr. 34:6: “he burnt down” in both NEB and REB; Num. 16:1: “challenged the authority” in both NEB and REB). Often, these new meanings are proposed to scholars for the first time in the NEB. Furthermore, the NEB has about 50 readings in Isaiah derived from the Dead Sea Scrolls. This boldness with the Dead Sea Scrolls is matched with a timidity in the use of Ugaritic.

Some renderings in the NEB engage the reader with its modernity. Ruth 1:1: “Long ago in the time of the Judges;” Ruth 2:1: Boaz is a “well-to-do-man.” Some scatological “Driverisms” have made NEB famous or infamous. The most well known concerns Achsah in Judges 1:14: “broke wind,” is now changed in REB “she dismounted from her donkey.”

Some innovative characteristics of the NEB were not carried through to the REB: the single column page of NEB was replaced in REB with the traditional double column page, thus saving paper; NEB’s three levels of indentation, reflecting the number of stressed syllables in Hebrew poetry, were not employed by REB; the marginal verse numbers of the NEB are put back inside the text of REB; the omission in NEB of the traditional superscriptions from the Psalter are restored in REB; the Hebrew *selah* in the Psalms, omitted by NEB, has been restored in the REB; the hybrid word “Jehovah” was used four times for “Lord” (Ex. 3:15; 6:3; 33:19; 34:5–6) in NEB and now in REB all are rendered “Lord”; some of the transpositions of verses in the NEB are returned to their original Masoretic Hebrew order in the REB (e.g., Job 14:21–22; Isa. 5:24–25, etc.); some NEB Britishisms were changed in the REB: “gaoler” in Isa. 10:4 to “prisoners”; “corn” to “grain” in Judg. 15:5.

In response to a period of radical change of language used in the churches, this Bible for the 1990s has abandoned the “thou” form of address for God. In addition, “O” as a form of address is mostly abandoned in REB. Numerous topical sub-headings have been added in REB. The REB has also begun to use more inclusive language, especially where “men” applies to both genders. Ps. 8:4 in the NEB: “What is man that thou shouldst remember him?” becomes in the REB: “What is a frail mortal, that you should be mindful of him?” Male references to the deity are retained, as are the metaphorical “king” and

“son.” Other inclusive sensitivity is found in Job 14:22: “His flesh upon him becomes black” becomes in REB “His kinsfolk are grieved for him.” In general, REB plays less fast and loose with both Hebrew and English than its predecessor.

Acceptance. The NEB sold two million in its first two years; the newer REB became a Book-of-the-Month Club selection, as was the NEB, assuring high sales. This was buttressed by a 1989 poll of British churchgoers under 45 years old, which found that up to 80% preferred the modernized translations of the Scriptures. T.S. Eliot, however, criticized the style, compared with the KJV, as “vulgar, trivial and pedantic.”

New American Standard Bible [= NASB] (1971; rev. 1995). History. The Lockman Foundation, a non-profit Christian organization from La Habra, California, published NASB New Testament (1963) and Old Testament (1971). The translation was carried out by 58 anonymous conservative Protestants, often teachers in seminaries. The purpose of the translation was to “preserve the scholarship and accuracy of the American Standard Version” and to use “a fluent and readable style.”

Principles and Representative Examples. This formal equivalent translation is a wooden updating of the American Standard Version of 1901 which has nevertheless been praised for its accuracy. Each verse is printed as a separate paragraph; “Thou” is retained when the Deity is addressed; “Lord” is used for the Tetragrammaton.

Acceptance. With the appearance of the NIV, the popularity of the NASB has dropped off, although in 1990 the text has become accessible on computer. F.F. Bruce has said of the NASB: “If the RSV had never appeared, this revision of the American Standard Version would be a more valuable work than it is. As things are, there are few things done well by the NASB which are not done better by the RSV.”

Living Bible [= LB] (1971). History. The LB grew out of Kenneth Taylor’s desire to paraphrase the Bible for his 10 children, because they could not understand the American Standard Version of 1901 (a KJV revision) during family devotions. His vision grew from his Wheaton, Illinois, farmhouse until, like Tyndale – “the Father of the English Bible” – he wanted to bring the Bible to “every plowboy.” He first paraphrased the Epistle to Romans (1956), and then the *Living Prophecies* (1965). The New Testament was finished in the same year as the *Living Psalms* (1967). Finally, he published the complete *Living Bible Paraphrased* (1971) in his own Tyndale Press.

Principles and Representative Examples. Taylor’s work is an evangelical paraphrase – a restatement with the additive of evangelical theology. Some of his renditions that raise eyebrows are the following: Gen. 3:4: “That’s a lie! the serpent hissed”; Ex. 11:8: “Then, red-faced with anger, Moses stomped from the palace”; 1 Kings 4:1: “Here is a list of Solomon’s cabinet members”; Judg. 18:25: “Be careful how you talk, mister.” Job, Psalms, and the Prophets are entirely in prose format.

In the creation story, LB makes an addition to the text that is not internally obvious and for which he offers no explanation: “So he let it shine for awhile, and then there was darkness again.”

There is much deserved criticism for the antisemitic character of LB’s interpretative paraphrases, John 1:17: “For Moses gave us only the Law with its rigid demands and merciless justice, while Jesus Christ brought us loving forgiveness as well.” (NRSV: The law indeed was given through Moses; grace and truth came through Jesus Christ.) The word “Messiah” is switched for “Son of Man,” “Son of David,” and “Lord,” to make a theological point.

Acceptance. The conversational style made it the best seller of 1972 in America. Evangelist Billy Graham, also of Wheaton, Illinois, dispensed some 600,000 free copies for his television crusade. In seven years, 22 million copies of LB were sold.

Scholars have roundly criticized the work for its many errors and rigid evangelical positions. However, Taylor’s work has actually licensed every person to make his/her own paraphrase. To this end, in 1974 Tyndale House has published *Eight Translation New Testament* (= KJV, LB, Phillips, RSV, TEV, NIV, JB, NEB). The year 1996 saw a revision of the Living Bible, The New Living Translation.

Today’s English Version [= TEV] also called Good News Bible [= GNB] (1976). History. Around 1950, the American Bible Society received requests for a simplified English Version. In 1961 Robert G. Bratcher, an ordained Baptist minister and a research associate on the ABS, was to translate the NT with a team of translators for the Old Testament.

First appeared the Gospel of Mark, *The Right Time* (1964) and then the whole NT *The Good News for Modern Man* (1966). After some publications of individual books, the Old Testament (1976) was published, and with the Apocrypha, *Good News Bible: The Bible in Today’s English Version* (1979). Some 600,000 were sold very quickly, and by the end of the first year total sales reached 5 million copies. There are some 500 stick-figure line drawings by Annie Vallotton, a Swiss-born artist living in Paris, which reinforce the relaxed and accessible tone of the work.

Principles and Representative Examples. The principles of the TEV are basically two, and these constitute a radical break from the KJV. First, it is based on the principles of modern linguistics and the ground-breaking work of Eugene A. Nida and his application of the principles of Dynamic Equivalence (cf. *Theory and Practice of Translation* (1969)). Secondly, the TEV chose simple vocabulary that could even appeal to people to whom English is a second language. Its simplicity, however, should not disguise the gargantuan research and the use of modern knowledge of the world of the Scriptures. The language was to appeal to the educated and the uneducated, new learners of English, and the “unchurched” or “unsynagogued.” Given that Hebrew is a language that uses

its few words well, the translation accords with this purpose. New Testament Greek was koine Greek as TEV is koine English. [Koine means “common,” not the classical Greek].

To this end, the translators took advantage of word-frequency lists, such as that used by the United States Information Agency in its program for editing books into Easy English. Technical terms for the biblical institutions were maintained, such as, unleavened bread, Pentecost, Tabernacles, etc., but “council” was used for “Sanhedrin,” and “teachers of the Law” for “scribes.” In addition, there is a word list in the back of the TEV with definitions of unfamiliar words, e.g., “Abib,” “Abyss,” “Acacia,” etc.

Acceptance. As people are becoming more aware of the value of dynamic translation, the TEV is becoming more acceptable. J.B. Phillips, the translator of the Phillips New Testament, favorably describes the translation of New Testament as “ordinary workaday English. If the style is rather of the ‘plain Jane’ variety, well so long as Jane does her work and speaks the truth, what’s wrong with her?” Catholics have been encouraged to use an approved (i.e., with an imprimatur) edition of the TEV that includes the deuterocanonical/apocrypha. The sales of the TEV are extremely numerous, usually sold at prices subsidized by the United Bible Society and the American Bible Society. In total, the United Bible Societies in 1981 distributed some 500,000,000 Bibles or parts of Bibles throughout the world.

New International Version [= NIV] (1978). History. The NIV is the Evangelical Christians’ answer to their dissatisfaction with the RSV. The 1954 Evangelical Synod advised its consistories that in a number of passages the RSV did not do justice to the unity of Scriptures, the deity of Christ, and messianic prophecy. Therefore, the RSV was unapproved for public worship. After much labor and expense, Zondervan published the NIV New Testament (1973) and completed the Old Testament (1978).

The New International Version was to be an international version – avoiding Britishisms and Americanisms – a language that all understand and no one speaks. The work was sponsored by the New York International Bible Society and done by scholars of 34 different religious groups, working in 20 teams. This was the largest committee ever to work on a translation. The actual work of translation took some 11 years.

Thirteen denominations were represented; 87 of the 97 scholars were Americans; and seven were from Trinity Evangelical Divinity School in Illinois. The whole project took 25 years, 200,000 hours of work, and \$2,000,000. It is estimated that 170 man-hours were invested in translating each chapter of the Bible.

To control the total 115 scholars involved an elaborate system of committees was formed: (1) the first draft to be done by two co-translators, two consultants, and an English stylist; (2) an Intermediate Editorial Committee composed of five scholars concerned mainly with exegetical matters; (3) General editorial committees, which included seven scholars to

attend to the theology and style; and finally (4) a committee of 15 members, who had the final authority.

Principles and Representative Examples. The principles of the translation are, namely, that the NIV is (1) to be faithful to the original; (2) not to be a paraphrase; (3) to be in the language of the people; (4) to be for both public worship and private study; (5) to be translated by scholars who have a high view of Scripture; (6) and to reflect the unity and harmony of Scripture. “The Bible alone, in its entirety, is the Word of God and is therefore inerrant in the autographs.” In effect this means that if a translation is to be reliable, the Old Testament must agree exactly with the New Testament. All efforts are made to “harmonize” the texts of the Old and New Testaments.

There are many translations that reflect the theological interest of the NIV. Is. 7:14: “The virgin will be with child and will give birth to a son, and will call him Immanuel.” This harmonizes with Matt. 1:23. Not even a footnote mentions that the term “virgin” might be rendered “a young woman.”

Psalm 2 is a parade example of harmonization. Ps. 2:9 rejects the Hebrew MT “you shall break” in favor of the LXX, Vulgate “you shall shepherd,” because of the New Testament quotations in Revelations 12:5 and 19:15. At Ps. 2:12 NIV has “kiss the Son” with a marginal note: “son.” (RSV has “kiss his feet”; TEV “bow down to him”; NEB “kiss the king.”) Through the use of capital letters, Psalm 2 becomes thoroughly messianic: “Anointed One,” “King,” and “Son,” and “Father.”

Without comment in the footnotes, the order of creation in Gen. 2 is made to harmonize with Gen. 1 by translating 2:8 and 19 as past perfects: “had planted” and “had formed.” Thereby, Adam is not made first in the second account, thus agreeing with Gen. 1.

Another translation avoids a misunderstanding of Jonah 3:3 (RSV), “Now Nineveh was an exceedingly great city, three days’ journey in breadth.” Such hyperbole is rendered, “Now Nineveh was a very important city – a visit required three days.” In Gen. 3:5; polytheism of the KJV is avoided in “you shall be like God,” instead of “as Gods” (KJV). In Job 1:6, “Satan” is so rendered despite the definite article that indicates the meaning as “the adversary” or “the accuser.”

Theological problems are often relegated to footnotes: Gen. 18:22, “Abraham remained standing before the Lord” instead of the “Lord remained standing before Abraham,” which is noted in the footnote. In Job 32:3: “they condemned him (= Job)” with the footnote reading: “condemned God.” NIV, at Hos. 4:7, does not follow the *tikkun* [= a Masoretic correction]. “I will exchange.” Instead, NIV has “they exchanged their Glory.”

Wide scholarship is evident in the NIV. Isa 15:1 translates the Heb. *ki* as an asseverative (i.e., emphatically) from the understanding of an Ugaritic particle. At Gen. 47:21, NIV follows the Samaritan Pentateuch, the Septuagint (and Vulgate) in correcting the Hebrew: “Joseph reduced the people to servitude.”

The following sample of interesting translations gives a flavor of the whole: in Isa. 22:5, NIV echoes the Hebrew assonance of “*mehumah, mevusah, mevukhah*,” with “a day of tumult and trampling and terror.” For “vanity of vanities” NIV renders Ecc. 1:2: “Meaningless! Meaningless!” says the Teacher. “Utterly meaningless! Everything is meaningless.”

Acceptance. The NIV has the largest first printing ever for an English Bible. After 4 weeks, 1.2 million copies were sold. These singular sales have continued, and according to the best estimates, they captured some 20–25% of the market in the 1980s, and in the 1990s became the most popular in the U.S. outside of KJV. In spite of its great commercial success, the NIV continues to be criticized for its theological position in translating.

Other Protestant Translations. Two recent works maintain that they have gone to great pains to create a more literal translation of the Bible. The *English Standard Version* (2001) aims at being “essentially faithful” to the text, hewing to “the structure and meaning of the original.” In fact it is a finely honed version in the tradition of KJV and RSV, with care taken to consult the original languages, and includes a helpful set of notes. Yet it retains “without form and void” in Gen. 1:2, and “sin offering” in Lev. 4:3, to cite a few instances in which traditional English renderings are retained at the expense of both the form and meaning of the Hebrew. The *Holman Christian Standard Bible* (2004) advertises itself as a cross between dynamic and formal equivalence, coining the term “optimal equivalence” to indicate that it begins with literal understanding and then crafts a readable translation. Produced under Southern Baptist auspices, it does not attempt to introduce modern concepts of gender correctness or to simplify the language (the editors emphasize how the translation retains “rich terms like ‘propitiation’... and ‘sanctification’”). Its advertising slogan is “Nothing Could Be Closer to the Truth.”

Recent examples of freer translation, i.e., paraphrase, have enjoyed widespread circulation. In this regard, the 1990s saw a return to the legacy of *The Living Bible* and TEV. Like other similar works, *The New Century Bible* (1993), which stemmed from the 1986 *International Children’s Bible*, looked for clarity as its chief goal. Thus its version of Gen. 3:17 reads, “So I will put a curse on the ground, and you will have to work very hard for your food.” *The Contemporary English Version* (1995), designed to be comprehensible by both children and non-native speakers of English, also utilizes colloquial ease, as in Gen. 29:5–6: “Do you know Laban, son of Nahor?” “Yes,” they replied. “How is he?” he asked. “He’s fine,” they replied.” A trenchant example of paraphrastic variation can be found in considering 1 Sam. 20:20, which the *Living Bible* actually renders as “You son of a bitch!” whereas the 1996 *New Living Translation* uses “You stupid son of a whore” – with the note “Heb. You son of a perverse and rebellious woman.” Thus in this kind of translation, the variations, and possibilities, are endless. In yet another attempt at a contemporary language Bible, in 1993 retired minister Eugene Peterson published his

fourth and final volume of *The Message*, which renders the Bible “not in refined language that appeals to our aspirations after the best but a rough and earthy language that captures God’s presence and action when we least expect it.” This version, clearly born of pulpit experience, seems best suited for the Prophets and the Psalms; his English rhetoric is vivid and colloquial, often verging on the “hip.” As an example, Peterson renders the opening of Psalm 1 as “How well God must like you – / you don’t hang out at Sin Saloon, / you don’t slink along Dead-End Road, / you don’t go to Smart-Mouth College.”

New Jewish Version [= NJV] (1985). History. The Jewish Publication Society Bible [= JPS] of 1917 was only a slight modification of the KJV. The JPS kept the vocabulary and Tudor grammar of the Authorized Version [= The Revised Version (of the KJV) of 1885]. Many of the readings of the Authorized version had been made with the help of David Kimḥi’s commentary. This Bible, however, was unsatisfactory, and the idea of a new translation was proposed in 1955.

The NJV translation would be completely independent of the KJV and be a rendering in a modern English. In addition, there would be an erudite use of Semitic languages (Akkadian, Aramaic, Syriac, Ugaritic) and of the medieval Jewish scholars (Abraham Ibn Ezra, Kimḥi, Rashbam [Samuel ben Meir], Rashi, and Saadiah). The publication came out in separate volumes over 20 years: *The Torah* (1962 revised in 1967), *The Five Megilloth and Jonah* (1969); *The Book of Isaiah* (1973); *The Book of Psalms* (1972); *The Book of Jeremiah* (1974); *Nevi’im* [= The Prophets] (1978); *Job* (1980); and *The Writings* (1982). A one-volume edition was finally published, *Tanakh: The Holy Scriptures* (1985); a dual-language edition, with Hebrew text from BHS, appeared finally in 1999. The three branches of American Judaism, Orthodox, Conservative, and Reform, were all represented on the translation committees. For the *Torah* and *Nevi’im*: Harry M. Orlinsky (Hebrew Union College), editor-in-chief, who had served on the RSV and NRSV Old Testament committees; H.L. Ginsberg (Jewish Theological Seminary); Ephraim A. Speiser (U. of Pennsylvania); Max Arzt (Jewish Theological Seminary); Bernard J. Bamberger (West End Synagogue, N.Y. City); Harry Freedman (Yeshivah University); Solomon Grayzel (editor of the Jewish Publication Society). For the *Kethubim*: Moshe Greenberg (Hebrew University); Jonas C. Greenfield (Hebrew University); Nahum M. Sarna (Brandeis University); Rabbi Saul Leeman (Conservative); Rabbi Martin S. Rozenburg (Reform); Rabbi David Shapiro (Orthodox); Chaim Potok (Editor of the Jewish Publication Society). Over the years the NJV has appeared in a number of formats and settings, eventually coming to occupy a place of prominence in the Jewish community outside of Orthodoxy. It serves as the English text for the Reform Movement’s UAHC Commentary of W.G. Plaut (1981, rev. 2005, with additional revisions to Exodus-Deuteronomy; Genesis was newly translated by Chaim Stern), the Conservative Movement’s *Etz Hayim Torah/Haftarot* volume (2001), the JPS Commentary series (1989–), and *The Jewish Study Bible*

(2003). The NJV is also the one most frequently quoted in the works of Jewish Bible scholars in English.

Principles and Representative Examples. There is a plethora of English renderings which are deliberately not literal translations of the Hebrew. The Hebrew word “five” is rendered “several” and “a few”; the Hebrew “ten” is also translated dynamically as “many.” Footnotes note the literal Hebrew. The Hebrew torah is translated: “teachings,” “instructions,” “ritual,” “directions,” “procedure,” “obligation,” and “law” (Ex. 12:49). “Ark of the Pact” is used for “ark of the testimony.” The Hebrew conjunctive, *vav*, often slavishly “and” in other English Versions, is rendered “when” or “so” or “then” or “thus” or “although” or “but” or “yet” or “and” or left untranslated. The Hebrew *mishpat* has a variety of meanings: “norm,” “rights,” “regulation,” “due,” “decision,” “true way,” and “custom.” The Hebrew *zedek* is rendered “grace,” “victory,” “vindication.” Ex. 10:19 has “Sea of Reeds.” Some Hebrew words are left transliterated: “ephod,” and “Ehyeh-Asher-Ehyeh” in Ex. 3:14.

The 54 *parashiyot* (sections of the Pentateuch) are given with the Hebrew names written in Hebrew. In line with the Vulgate, KJV, RSV, the NJV employs “the LORD” to indicate the personal name of Israel’s God. In Ex. 6:3, however, where specific mention is made of the name, the four Hebrew letters, known as the Tetragrammaton, appear in the English text in Hebrew characters. Deut. 6:4: “Hear, O Israel! The Lord is our God, the Lord alone,” since monotheism was the issue in a polytheistic society. Isa. 1:8: for the traditional “daughter of Zion,” NJV has “fair Zion.”

The footnotes present consistent and reliable information and an illustrative example is offered by the first verses of the *Tanakh*: The NJV is the first official (i.e., denominationally approved) translation to read: “When God began to create... and a wind from God...” instead of “In the beginning... the Spirit of God...” The footnotes to this verse are instructive: “When God began to create^a the heaven and the earth – the earth being unformed and void, with darkness over the surface of the deep and a wind from^b God sweeping over the water – God said, ‘Let there be light’; and there was light.”

Footnote (a) Or “In the beginning God created” [“Or” is defined: “Indicates an alternative reading that the committee found almost as acceptable as the one adopted for the text.”]

Footnote (b) Others “the spirit of” [“Others” is defined: “Indicates a well-known traditional translation, especially if it was used in the older (1917) JPS version that the committee does not find acceptable even as an alternative reading.”]

The footnotes also present renderings from the Dead Sea manuscripts, propose emendations and transpositions in difficult passages (especially in the poetic books), and, unlike most translations, frequently use the intellectually honest term “meaning of Heb. uncertain.” In this, the NJV reflects Jewish tradition, with its strong sense of multiple interpretive possibilities and openness to ambiguity. Orlinsky discusses the translation choices in NJV at length in his illuminating *Notes on the New Translation of the Torah*.

Acceptance. NJV’s effort to determine the accurate meaning of the Hebrew text has been rewarded with wide acceptance. Theophile Meek, a translator himself, has called the NJV “assuredly the best that has been produced thus far.” Most especially, the NIV translators have verified that the Masoretic Text is actually clear in passages where others emend.

The acceptance has a broad base among scholars. The reason for its acceptance is conspicuous from the ecumenical words of H.L. Ginsberg: “Our work does *not* owe all its virtues to our use of sources, mostly Jewish, which others have neglected and to our acumen and ingenuity. Our translation would not be worth the paper it’s printed on if we had not drunk deeply at the wells of Gesenius, and Delitzsch, and Driver, and Kittel – aye, and Wellhausen too – and the other Christian scholars who revived biblical and Oriental scholarship while Jewry slept, and are still vigorously cultivating it.”

Despite praise for the accuracy of and impressive scholarship behind NJV, it has also occasioned criticism on an artistic level, with some feeling that it does not do justice to the rhetorical force of the Hebrew or to some of its stylistic features.

It should be mentioned that, outside of the aegis of NJV, numerous other translations of single books have been done by Jewish scholars, usually for a wider audience, either as part of a commentary series (e.g., the *Old Testament Library*, which includes J. Levenson’s *Esther* (1997) and A. Berlin’s *Lamentations* (2002)) or as free-standing volumes. Some examples of the latter, usually accompanied by commentary, are renditions of the Song of Songs by M. Falk (1982, 1990) and C. and A. Bloch (1995); of Samuel by R. Alter (*The David Story*, 1999; includes 1 Kings 1–2) and E. Fox (*Give Us a King!*, 1999); of Job by R. Gordis (*The Book of God and Man*, 1965) and R. Scheindlin (1999); of Ecclesiastes by Gordis (*Koheleth: The Man and His World*, 1968) and M. Fox (*A Time to Tear Down and a Time to Build Up*, 1999); and of Psalms by M. Rozenberg and B. Zlotowitz (1999).

A revised English translation, by Harold Fisch, appeared in 1964. Based on the “Jewish Family Bible” of M. Friedlander, published in 1881, which retained much of the language of the Authorized Version of 1611 but also paid attention to Jewish sentiment and tradition, the language has been modernized where it was felt that the previous linguistic and grammatical forms would cause difficulty to the modern reader. An entirely new system of transcription of proper names has been introduced, providing for the pronunciation of the name to conform exactly to that of the original. A list is given of the new form side by side with that hitherto accepted.

Torah Translations by Jews. The Torah’s centrality in Jewish life merits separate discussion when considering Bible translation. In recent decades there has been an upsurge of activity in the translation of the Torah into English among Jews. This may be attributed to a number of factors: the desire of “movements” to produce their own commentaries and accompanying translations, the need to incorporate further discoveries in Semitics and archaeology into translations, and the eagerness

of individual scholar-translators with particular approaches to present their own vision of the text. Major translations since NJV (1962) include three traditionalist versions and three more “literary” renderings. Some of these are clearly intended for synagogue use, while others aim at a broader audience.

Aryeh Kaplan, *The Living Torah: A New Translation Based on Traditional Jewish Sources* (1981, no Hebrew), is an example of a translation wrought in line with traditional Jewish teachings. Kaplan was known for his interpretations of Kabbalah and his expositions of traditional Judaism. In his Introduction to *The Living Torah*, he cites the Rabbinic tradition against literal translation (Kid. 49a, Tosef., Meg. 3:21), and promotes an idiomatic approach as the one most likely to avoid misreading. Kaplan approaches narrative texts with an eye to making them readable, as in storytelling; in contrast, he treats legal texts primarily in the light of “the final decision in Jewish law.” He summarizes his goal as attempting to create a translation that is “accurate, clear, modern, readable, and above all, in consonance with the living tradition of Judaism.” As a rule he supplies a healthy dose of translation alternatives in his notes, drawing mostly on ancient versions (especially Targumim) and a wide selection of medieval commentators.

Example A: Gen. 35:22, “While Jacob was living undisturbed in the area, Reuben went and disturbed the sleeping arrangements of Bilhah, his father’s concubine.” Kaplan derives this reading from טב Shabbat 55a, b, as distinct from the usual “Reuben went and lay with Bilhah...” but gives other choices in his notes.

Example B: Ex. 33:14, 18, “‘My Presence will go and lead you,’ replied [God].”... “‘Please let me have a vision of Your Glory,’ begged Moses.” These passages feature a less formal tone, and offer differing renderings for *vayyomar*.

Samson Rafael Hirsch, *The Pentateuch* (English Translation by Gertrude Hirschler) (1990, includes Hebrew), an unusual project in that it incorporates a translation of a translation, reflects the 19th-century German Neo-Orthodox leader’s approach of deriving “the meaning of the words from the treasure of linguistic explanations which we possess in our traditional literature” and from his own phonetic-etymological system. His lengthy commentary is largely philosophical, and often makes use of biblical language as a springboard for his thoughts.

Example A: Gen. 1:26, “‘Let Us make an Adam (a deputy) in a form worthy of us.’” Here Hirsch understands *adam* as flowing from the “majesty of plurality” suggested in *na’aseh adam* (“Let Us make man”), and notes that “only as a representative of the community as a whole can the sovereign rule over his subjects. In the same spirit, the Creator now wishes to inform the terrestrial world that its [human] master is to be appointed for its own welfare.” He also derives *adam* from *adom*, red, which, as “the least-broken ray of the spectrum,” is “the closest manifestation of the Divine earth.”

Example B: Ex. 17:12, “The hands of Moshe became heavy; and they took a stone and placed it under him, and he sat upon it. Aharon and Hur supported his hands, the one on the one

side and the other on the other side; so his hands remained an expression of trust until the sun went down.” Hirsch reads *emunah* not as the customary etymology would have it, “firm,” but rather theologically, “an expression of trust.”

The Chumash (ArtScroll Series: *The Stone Edition*; ed. Nosson Scherman) (1993); incorporated in *Tanach* (*The Stone Edition*) (1996, includes Hebrew), like the previous two works, translates with an eye to rabbinic understandings of the text and incorporates these into the translation when it feels them to be warranted. Strikingly, the English text is printed entirely in italics. The translation is part of ArtScroll’s program of presenting classical Jewish texts in English and Hebrew, accompanied by traditionally-based commentaries.

Example A: Deut. 6:5, “You shall love HASHEM, your God, with all your heart, with all your soul, and with all your resources.” The choice of “resources” reflects the understanding of *me’od* found in Targum Onkelos, Sifre (Deut. 32), and M. Ber. 9:5.

Example B: Lev. 20:27, “Any man or woman in whom there shall be the sorcery of Ov or of Yid’oni, they shall be put to death.” The reader is directed to a note that reads in part, “Ov and Yid’oni were magical means of foretelling the future,” differing somewhat from modern scholarly interpretation, which understands them as related to departed spirits.

Everett Fox, *The Five Books of Moses* (*The Schocken Bible*, Vol. 1) (1995; rev. 1997, no Hebrew), following in the footsteps of the German Buber-Rosenzweig translation (q.v.), seeks to echo rhythms and literary devices of the Hebrew text. While not as radical as the German work, given the less malleable nature of English, it is designed, like its predecessor, to be read aloud and to give the English reader an aural feel for the Hebrew text. Thus it is printed in a form resembling free verse, names retain their Hebrew forms, as in Hirsch, and the principle of “leading words” (Buber) – theme words in the text – is reflected in English. Fox’s line divisions do not strictly follow the traditional *te’amim*, but they often correspond to them. The text is accompanied by commentary on thematic issues, and notes on specific words. Previous versions of his Genesis appeared in 1972 and 1983; of Exodus, in 1986.

Example A: Ex. 2:10, “She called his name: Moshe/He-Who-Pulls-Out; / she said: For out of the water *meshitihu*/I-pulled-him.” The translation, using the Hebrew form of Moses’s name and the Hebrew phrase attached to it by Pharaoh’s daughter, points to the grammatical significance of the form *Moshe* (in *hiph’il*) as an active foreshadowing of Moses’s future role.

Example B: Gen. 6:11, 13, “Now the earth had gone to ruin before God, the earth was filled with wrongdoing. / God saw the earth, and here, it had gone to ruin, / for all flesh had ruined its way upon the earth. / ...here, I am about to bring ruin upon them, together with the earth.” The repetition of key word “ruin,” representing the Hebrew root *sh-h’-t*, appears to be used by the text to express the biblical concept of the punishment corresponding to the crime.

Richard Elliott Friedman, *Commentary on the Torah (with a New English Translation and the Hebrew Text)* (2001), by a prominent advocate of the Documentary Hypothesis, provides along with his commentary a translation that attempts to be clear and to steer a middle course between English and Hebrew. Friedman also published a version of the Torah with documentary sources demarcated, *The Bible with Sources Revealed: A New View of the Five Books of Moses* (2003), and included renditions of passages from the Former Prophets in *The Hidden Book in the Bible* (1998).

Example A: Gen. 1:1–3a, “In the beginning of God’s creating the skies and the earth – when the earth had been shapeless and formless, and darkness was on the face of the deep, and God’s spirit was hovering on the face of the water – God said, “Let there be light.” “Skies” reflects the predominant meaning of *shamayim* in the Biblical world; “shapeless and formless” is meant to echo *tohu va-vohu*.

Example B: Gen. 18:17, “And YHWH had said, ‘Shall I conceal what I’m doing from Abraham, since Abraham will become a big and powerful nation, and all the nations of the earth will be blessed through him? For I’ve known him for the purpose that he’ll command his children and his house after him, and they’ll observe YHWH’s way, to do virtue and judgment....’” Friedman uses italics (“will become”) to express the Hebrew form *hayoh hayah* (lit. “becoming he will become”), utilizes the simple “big” for *gadol*, and in general adopts a relaxed tone.

Robert Alter, *The Five Books of Moses* (2004, no Hebrew), attempts to elicit rhetorical characteristics of the Hebrew text in a readable English style – “an experiment in re-presenting the Bible... in a language that conveys with some precision the semantic nuances and the lively orchestration of literary effects of the Hebrew and at the same time has stylistic and rhythmic integrity in English.” His introduction and accompanying commentary discuss these issues in some detail, following in the footsteps of his books on biblical narrative and poetry. Alter previously published a translation of Genesis (1995).

Example A: Gen. 3:6, “And the woman saw that the tree was good for eating and that it was lust to the eyes and the tree was good to look at...” Alter notes, following A. Funkenstein, that *le-haskil* is connected in the Targumim with “looking, regarding,” a reading which parallels “a lust to the eyes” and which is also suggested by the usage of *maskil* in Psalm 41:2.

Example B: Ex. 15:1, “Let me sing unto the lord for He surged, O surged...” Alter understands the use of the verb *ga’oh* as a pun here, reflecting both the customary “triumphed” and the alternate image of the rising tide, appropriate in the context of the divine victory at the Sea of Reeds.

A more direct comparison of the differences between these six works (with the addition of NJV), in approach and tone, might be gleaned from the following table, which presents translations of two passages. The first is Gen. 32:21 (the Hebrew text is:

KAPLAN [Jacob] said [to himself], “I will win him over with the gifts that are being sent ahead, and then I will face him. Hopefully, he will forgive me.”

HIRSCH For he thought: “I will first appease his anger with the gift that goes before me and then I will

HIRSCHLER see his countenance; perhaps he will raise my countenance.”

ARTSCROLL For he said, “I will appease him with the tribute that precedes me, and afterwards I will face him;

STONE (SCHERMAN) perhaps he will forgive me.”

FOX For he said to himself: / I will wipe (the anger from) his face / with the gift that goes ahead of my face; / afterward, when I see his face, / perhaps he will lift up my face!

FRIEDMAN Because he said, “Let me appease his face with the offering that’s going in front of me, and after that I’ll see his face; maybe he’ll raise my face.”

ALTER For he thought, “Let me placate him with the tribute that goes before me, and after I shall look on his face, perhaps he will show me a kindly face.”

NJV For he reasoned, “If I propitiate him with presents in advance, and then face him, perhaps he will show me favor.”

Clearly, all these translators struggle with how to deal with the multiple uses of the sound and concept of Hebrew *panim*, coming up with a variety of solutions that present different English tones. They also are compelled to render *ki amar* in a way that does justice to its semantic range.

A second comparison of translations makes use of a legal passage, Ex. 20:9–10 (the Hebrew reads:

שֵׁשֶׁת יָמִים תַּעֲבֹד וְעֵשִׂיתָ כָּל־מְלֹאכְתֶּךָ: יוֹם הַשְּׁבִיעִי שִׁבְתָּ לַיהוָה אֱלֹהֶיךָ
לֹא־תַעֲשֶׂה כָל־מְלֹאכָה אַתָּה | וּבְנֶךָ וּבִתֶּךָ עֲבָדְךָ וְאִמְתֶּךָ וּבַהֶמְתֶּךָ וְגֵרְךָ
אֲשֶׁר בְּשַׁעְרֶיךָ:

It yields the following:

KAPLAN Remember the Sabbath day to keep it holy. You can work during the six weekdays and do all your tasks. But Saturday is the Sabbath to God your Lord. Do not do anything that constitutes work.

HIRSCH Remember the Sabbath day to sanctify it. Six days shall you serve and do all your [creating] work, and the seventh day is a Sabbath to *God*, your God. On it you shall not perform any kind of [creating] work....

ARTSCROLL Remember the Sabbath day to sanctify it. Six days shall you work and accomplish all your work; but the seventh day is Sabbath to *HASHEM*, your God; you shall not do any work....

FOX Remember / the Sabbath day, to hallow it. / For six days, you are to serve, and are to make all your work, / but the seventh day / is Sabbath for YHWH your God: / you are not to make any kind of work....

FRIEDMAN Remember the Sabbath day, to make it holy. Six days you shall labor and do all your work, and the seventh day is a Sabbath to YHWH, your God. You shall not do any work....

ALTER Remember the Sabbath day to hallow it. Six days you shall work and you shall do your tasks, but the seventh day is a Sabbath to the *LORD* your God. You shall do no task....

NJV Remember the Sabbath day and keep it holy. Six days you shall labor and do all your work, but the seventh day is a Sabbath of the LORD your God: you shall not do any work....

In these illustrations, rhythm, style, diction, and vocabulary point up quite different approaches, all along the spectrum from more literal to more idiomatic translation. Some retain key repeating words, preferring even to stretch English style in the process (Fox's "make work" keeps an important verb in Ex. 25–40 intact), while others focus on clarity in English as a major goal (cf. Kaplan's startling "Saturday" for *yom ha-shevi'i*). Notable also is the varied treatment of the Tetragrammaton, reflecting different forms of both traditional practice and scholarly convention. What the six translations share, despite their considerable differences, is an essentially Jewish approach to the text: they exhibit a reliance on classical sources (Midrash and medieval commentators) to varying degrees, and more significantly, they share a central commitment to the specific wording of the text, with all of its nuances and ambiguities.

A recent entry into Torah translation is the revised edition (2005) of W. Plaut's (UAHC) *The Torah: A Modern Commentary*. Genesis and the *haftarot* were translated anew by C. Stern in a "sense for sense" manner; following his death in 2001, the editors decided to lightly revise the NJV of Exodus-Deuteronomy, incorporating some of JPS's own changes since 1962 and adding some of their own, particularly regarding sacrificial terms. Generally speaking, the new edition pays attention to gender-related issues. For instance, "He said," when God is the subject, is rendered "[God] said," and "His covenant" as "the covenant." The editors characterize their approach as "gender accurate" rather than "gender neutral" – that is, they mitigate the maleness of the text when such an interpretation does not intrude upon the Hebrew. At the same time, they seek, for instance, to tone down a negative view of menstruation, which, they point out, is not a stigma but a state of being. An example of Stern's style in Genesis can be seen in 8:20–21: "Noah then built an altar in honor of the Eternal [a change from the NJV "LORD"]; taking some pure beasts and some pure birds, he offered up whole burnt offerings on the altar. The Eternal, inhaling the soothing fragrance, thought: 'Never again will I bring doom upon the world...'" Similarly idiomatic is his rendering of 48:1: "Look, your father is fading" (for Heb. *hinneh avikha h'oleh*).

In discussing Torah translation, one additional body of work is relevant. Translation problems, especially as reflected in German versions since Luther and English ones since King James, are frequently discussed by Nehama Leibowitz in her well-known collections of comments to the weekly *parashiyot* of the Torah, based on the insights of classical commentators, *Iyyunim Be-sefer Bereshit/She'not/Vayikra/Bemidbar/Devarim*, tr. *Studies in Genesis/Exodus/Leviticus/Numbers/Deuteronomy* (1976–93).

Conclusion. The history of English Bible translation since World War II is a history of Protestants and Jews moving away from the KJV and its English, and of Catholics moving away from the Douay-Rheims-Challoner English translation of the Vulgate. Catholics, after *Divino Afflante Spiritu* (1943), were free to translate from the original languages, and consequently now use the NAB and NJB in worship. For Protestants, the KJV is still entrenched in the hearts of many people and remains one of the top three in sales. Protestants can now choose among a wide variety of translations. Some, particularly in the evangelical community, in which there exists a "King James Only" movement that regards the 1611 classic as the authentic word of God, choose to read the variously cast new editions of the KJV (in modern spelling and/or vocabulary revised in different degrees), which have been published since the 1980s (e.g., *New KJV*, *KJ2000*, *KJ21*, *Revised KJV*, *Modern KJV*, *Third Millennium Bible*). For others, the RSV and NIV sufficiently echo the KJV. Others still have gone to the opposite extreme, embracing the LB and its paraphrase, or using the TEV, a clean break from the KJV because of its use of dynamic equivalence as a principle of translation. For Jews, the NJV has been a decisive move away from the KJV, or more precisely, away from the Old JPS, which had taken the latter's place since 1917. In their use of different translations, usually based on personal or congregational preference, Jews echo their tradition, present already in biblical literature itself, of multiple voices and multiple understandings of the text.

The Bible is the chameleon of world literature, changing in the eyes of readers to accommodate each era. The act of translating it typically reflects profound religious, communal, psychological, and aesthetic trends. As such, to paraphrase Ecclesiastes, of the making of English Bible translations there will be no end.

VARIATIONS IN ENGLISH VERSIONS OF PSALM 23. In the following list, nine widely used English translations of this famous poem are cited, verse by verse. They represent a broad swath of denominational and stylistic approaches. Omitted are notes, which occasionally give alternate readings, including those from the KJV. The present layout also flattens the line divisions, which differ slightly from translation to translation.

Verse 1

- KJV The LORD is my shepherd; I shall not want.
 NAB A psalm of David. The LORD is my shepherd; there is nothing I lack.
 NIV A psalm of David. The LORD is my shepherd; I shall not be in want.
 NJB Yahweh is my shepherd, I lack nothing.
 NRSV The Lord is my shepherd, I shall not want.
 REB The LORD is my shepherd; I lack for nothing.
 CEV You, LORD, are my shepherd. I will never be in need.
 STONE A psalm by David. HASHEM is my shepherd, I shall not lack.
 NJV A psalm of David. The LORD is my shepherd; I lack nothing.

Verse 2

- KJV He maketh me to lie down in green pastures: he leadeth me beside the still waters.
- NAB In green pastures you let me graze; to safe waters you lead me;
- NIV He makes me lie down in green pastures, he leads me beside quiet waters,
- NJB In grassy meadows he lets me lie. By tranquil streams he leads me
- NRSV He makes me lie down in green pastures; he leads me beside still waters;
- REB He makes me lie down in green pastures, he leads me to water where I may rest;
- CEV You let me rest in fields of green grass. You lead me to streams of peaceful water,
- STONE In lush meadows He lays me down, beside tranquil waters He leads me.
- NJV He makes me lie down in green pastures; He leads me to water in places of repose.

Verse 3

- KJV He restoreth my soul: he leadeth me in the paths of righteousness for his name's sake.
- NAB you restore my strength. You guide me along the right path for the sake of your name.
- NIV he restores my soul. He guides me in paths of righteousness for his name's sake.
- NJB to restore my spirit. He guides me in paths of saving justice as befits his name.
- NRSV he restores my soul. He leads me in right paths for his name's sake.
- REB he revives my spirit; for his name's sake he guides me in the right paths.
- CEV and you refresh my life. You are true to your name, and you lead me along the right paths.
- STONE He restores my soul. He leads me on paths of righteousness for His Name' sake.
- NJV He renews my life; He guides me in right paths as befits His name.

Verse 4

- KJV Yea, though I walk through the valley of the shadow of death, I will fear no evil: for thou art with me; thy rod and thy staff they comfort me.
- NAB Even when I walk through a dark valley, I fear no harm for you are at my side; your rod and staff give me comfort.
- NIV Even though I walk through the valley of the shadow of death, I will fear no evil, for you are with me; your rod and your staff, they comfort me.
- NJB Even were I to walk in a ravine as dark as death I should fear no danger, for you are at my side. Your staff and your crook are there to soothe me.
- NRSV Even though I walk through the darkest valley, I fear no evil; for you are with me; your rod and your staff – they comfort me.
- REB Even were I to walk through a valley of deepest darkness I should fear no harm, for you are with me; your shepherd's staff and crook afford me comfort.
- CEV I may walk through valleys dark as death, but I won't be afraid. You are with me, and your shepherd's rod makes me feel safe.
- STONE Though I walk in the valley overshadowed by death, I

will fear no evil, for You are with me. Your rod and your staff, they comfort me.

- NJV Though I walk through a valley of deepest darkness, I fear no harm, for You are with me; Your rod and Your staff – they comfort me.

Verse 5

- KJV Thou preparest a table before me in the presence of mine enemies: thou anointest my head with oil; my cup runneth over.
- NAB You set a table before me as my enemies watch; You anoint my head with oil; my cup overflows.
- NIV You prepare a table before me in the presence of my enemies. You anoint my head with oil; my cup overflows.
- NJB You prepare a table for me under the eyes of my enemies; you anoint my head with oil; my cup brims over.
- NRSV You prepare a table before me in the presence of my enemies; you anoint my head with oil; my cup overflows.
- REB You spread a table for me in the presence of my enemies; you have richly anointed my head with oil, and my cup brims over.
- CEV You treat me to a feast, while my enemies watch. You honor me as your guest, and you fill my cup until it overflows.
- STONE You prepare a table before me in view of my tormentors. You anoint my head with oil, my cup overflows.
- NJV You spread a table for me in full view of my enemies; You anoint my head with oil; my drink is abundant.

Verse 6

- KJV Surely goodness and mercy shall follow me all the days of my life: and I will dwell in the house of the LORD for ever.
- NAB Only goodness and love will pursue me all the days of my life; I will dwell in the house of the LORD for years to come.
- NIV Surely goodness and love will follow me all the days of my life, and I will dwell in the house of the LORD forever.
- NJB Kindness and faithful love pursue me all the days of my life. I make my home in the house of Yahweh for all time to come.
- NRSV Surely goodness and mercy shall follow me all the days of my life, and I shall dwell in the house of the Lord my whole life long.
- REB Goodness and love unfailing will follow me all the days of my life, and I shall dwell in the house of the LORD throughout the years to come.
- CEV Your kindness and love will always be with me each day of my life, and I will live forever in your house, LORD.
- STONE May only goodness and kindness pursue m all the days of my life, and I shall dwell in the House of HASHEM for long days.
- NJV Only goodness and steadfast love shall pursue me all the days of my life, and I shall dwell in the house of the LORD for many long years.

That the different approaches represented by these translations – and here we are only dealing with English! – cannot be fully bridged by one “definitive” work is a testimony to both the richness of the biblical text and its greatly varied post-canonical life. This must lead to the recognition that many translated versions of the Bible are possible and even

desirable, not to mention inevitable. The reality is that for the translator as for the dramatic or musical performer, preconceptions and prejudices, conditioned both by personality and historical/sociological background, always play a role in the final outcome. Thus the success or failure of a translation will be judged differently by scholars, clergy, and audiences of various stripes, and often differently within these categories. Whether the translator's needs and desires, and attempts at solutions, correspond to those of an audience will always be at issue. As an aggregate, however, English translations of the Bible will continue to reflect the powerful hold this text exerts on Western minds and hearts.

[Raphael Loewe / Everett Fox (2nd ed.)]

Arabic

Catholic and Protestant Arabic Bibles were, until the second part of the 19th century, based on the 1671 edition of the (Vatican) Congregation of Propagation of the Faith when three new versions appeared. The American Protestant missionaries in Beirut published in 1864 a translation in modern Arabic, which was started by Eli Smith and finished by C.V.A. van Dyck, with the help of Arab scholars, especially Sheik Nasif el-Yaziji. This version was reprinted in 1869 and became known as the Oxford Arabic Bible. The Dominicans of Mosul published a four volume Bible based on C.J. David's version (1874–78). About the same time (1876–80) the Jesuits in Beirut published a translation in classical Arabic, in three volumes. The Arabic Bibles in circulation among Christians are based on those versions, although other missionary work has produced more modern renditions (e.g., the *Book of Life* of 1982/1988, in modern Arabic, and a version published in 2003).

Catalan

A Catalan Bible, probably based on a French prototype, was prepared in 1281–91 at the request of Alfonso III of Aragon, but this has not been preserved and perhaps remained unfinished. Various Catalan translations – Psalms (14th–15th centuries), part of Genesis (14th century), a complete Bible by Sabruera (14th century), and other 15th-century Bibles – were made from the Vulgate using the French and Provençal versions. Sabruera's Bible was revised by Jaime Borrell and by Bonifacio Ferrer (c. 1400), the printed edition of 1477–78 reproducing the work of the latter, which was destroyed by the Inquisition. During the 16th century, some biblical books were translated from the original Hebrew. In 1832 a complete Catalan Bible was made by the Protestant scholar J.M. Prat (published by the British and Foreign Bible Society). Various Catholic translations appeared in the 20th century, including those by Clascar (1915), the monks of Montserrat (1926), and the Catalan Biblical Foundation (1928–48).

Danish

Although Hans Tausen's Pentateuch (Magdeburg, 1535) is thought to have been only part of a complete Danish translation of the Bible, the earliest surviving complete edition – the so-called Christian III Bible (1550; 1950) – was a reworking by

Christiern Pedersen of Luther's German Bible. Like its prototype, the latter was written in an extraordinary pithy style and had a significant impact on the Danish language. It was later revised as the Frederick II Bible (1588–89) and the Christian IV Bible (1632–33). Meanwhile, the need for a translation from the original languages had been recognized, and in 1607 Professor (later Bishop) H.P. Resen published an edition of the Bible that was linguistically distinct from its predecessors. Revised by Professor (later Bishop) Hans Savning in 1647, this remained until modern times the "authorized" Danish version of the Bible. There were also innumerable translations of separate portions of the Bible; and various private biblical projects, two of which were a translation by C.A.H. Kalkar (1847), who was a Jew by birth, and a more significant version by the Orientalist and theologian J.C. Lindberg (1837–54). The first Danish Bible to take cognizance of modern biblical criticism was that produced by Frants Buhl and his associates in 1910; this was in part the basis for a new translation, directed by Bishop Goetzsche, of which the Old Testament appeared in 1931. Another new version of the Old Testament in Danish appeared in 1931, and Catholic Bibles based on the Vulgate were published in 1893 and 1931. The most recent version, produced by the Danish Bible Society, appeared in 1992. Another, ongoing project is a scholarly "secular" translation of the Hebrew Bible, begun in 1998, which treats the text as a product of the ancient Near East and eschews the centuries of interpretation based on Western (mostly Christian) religious traditions. It uses Hebrew names for biblical figures, as well as for books (e.g., "When God Began" for Genesis), and retains the Jewish ordering of biblical books. There have also been some Danish translations under Jewish auspices, notably the Pentateuch of Chief Rabbi A.A. *Wolff (1891), published with the Hebrew text. A new edition, revised by the Jewish education authorities and to which the *haftarot* were added, appeared in 1894. Chief Rabbi Friediger also published Esther with a Danish translation in 1924.

Dutch

There were several medieval Dutch versions of biblical books, but the first Dutch Bible – the complete Bible except for the Psalms – dates from a Flemish work (c. 1300) and was a translation from the Vulgate (published Delft, 1477). A Dutch version of Psalms, produced by another translator, was frequently reprinted from 1480 onward. Later, there was a Dutch translation of Luther's Bible (Antwerp, 1526), and an Old Testament based on Luther and the Delft Bible appeared in 1525. Claes (Nicholas) van Winghe's Dutch Catholic Louvain Bible (1548) underwent many revisions and remained in use well into the 19th century. The Dutch Protestants – Reformed, Lutheran, and Mennonite – all pursued their own adaptations of the Bible, but the first editions based on the original Hebrew appeared only in 1614 and 1623. Early in the 17th century the Dutch States-General commissioned the famous *Statenbijbel* (Leyden, 1636–37), the text of which was later published in the German *Biblia Pentapla*; frequently revised, it remained in use

until the mid-20th century. Three early modern Dutch Bibles are the versions of A. van den Schuur and H. van Rhijn (2 vols., 1732); I. van Hamelsveld (1802–03), based on the original languages; and J.H. van den Palm (2 vols., 1818–19). A. *Kuenen's (with I. Hooykaas, W.H. Kusters, and H. Oort) "Leidsche Vertaling," translation and interpretation of the Bible, appeared in Leiden in 1899–1901. A Catholic Bible was published in 1936–37 by the Petrus Canisius Society and a Bible published by the new Katholieke Bijbelstichting St. Willibrord was finished in 1995. An entirely new Protestant Old Testament was published in 1951 by the Dutch Bible Society (NBG). Beginning in 1967, the NBG, together with the Flanders Bible Society, the Flemish Bible Foundation, and the Catholic Bible Society, initiated a new ecumenical translation which was completed in 2004. It has thus far attracted some criticism as being "too modern." In contrast, a group of scholars which had founded the Societas Hebraica Amstelodamensis in 1961 has sought for some years to create a translation which they describe as "concordant" or "idiolectical," grounded in the rhetoric of the Hebrew text after the model of Buber-Rosenzweig. Since 1974, the group has published single books of the Bible under the rubric "A Translation to be Read Aloud," including Ruth, Jonah, Judges, Amos, Obadiah, Micah, the Song of Songs, Genesis, and Ecclesiastes (some of these works have subsequently been revised). Dutch Jews have translated selected Psalms (by M. Levie, 1966) and most of the Old Testament (1826–38, etc.). A new translation of the Pentateuch by I. Dasberg was published in 1970.

See also *Dutch Literature.

Finnish

Because of the linguistic separation of Finland from the rest of Scandinavia, Finnish biblical translation has had an independent history. In 1551 Bishop Michael Agricola published a revised Lutheran version of Psalms, but it was not until 1642 (Stockholm) that a complete Finnish Bible, translated from the original texts, made its appearance. This has since undergone various revisions. A new Finnish Bible translation (*Pyhiz Raamatta*) was published in 1938, and another in 1992.

French and Provençal

FRENCH. Although there were two early French (Anglo-Norman) versions of Psalms (c. 1100) and a 12th-century version of Samuel and Kings, the first to possess a complete and accurate translation of the Old Testament in spoken French – and to make regular use of this in teaching and worship – were the Jews. Religious scruples may have prevented the Jews from setting down their whole text in writing, but it did not preclude their compiling explanatory glossaries in the vernacular (*la'azim*). A few of those which have survived, in whole or part, contain fairly long Hebrew commentaries. The glossaries were an aid to teachers instructing children in the Bible according to the traditional word for word method; they also served as an aid to scholarly commentators (*poterim*) working at a higher level, who debated the meaning of a text and, relying upon the glossaries, proposed more subtly phrased

translations. Lastly, these glossaries were used by translators officiating in the synagogue.

By contrast, the Church always looked askance at unsupervised reading of the Bible. Herman de Valenciennes' metrical version of the Bible (c. 1190) was followed in 1199 by Pope Innocent III's edict prohibiting any reference to the suspect French Bible. Although the Church declared its opposition to the translation of the Bible into any vernacular at the Council of Toulouse (1229), Louis IX commissioned a French version of the complete Bible (c. 1230), and in the 14th century it was revised by order of John II and Charles V. Nevertheless, the biblical text was subsumed, during the later Middle Ages, under a mass of scholastic glosses and amplifications.

The most famous medieval French version was the late 13th-century *Biblehistoriale* of Guiard des Moulins, a paraphrase based on the scholastic compilation of Pierre Comestor. This Bible, much revised and often versified, was one of the earliest French printed books (1478). Only the Psalms inspired fairly accurate translations.

The first Bible translation of the 16th century, which returned to the original Latin – suppressing accumulated glosses and interpolations – was that of Jacques Lefèvre d'Étaples (1528). It was rightly suspected by Rome, Lefèvre's earlier Psalter (1509) having influenced Martin Luther. In its revised form (Louvain, 1550), Lefèvre's Bible ran to more than 200 editions. However, the Louvain Bible, too, contained borrowings from the first Protestant version by Pierre Rovet Olivétan (Neuchâtel, 1535; rev. 1724), which was based on the original Hebrew and Greek texts. Olivétan's version (known from its place of publication as the Serrières Bible) was the outcome of the religious fervor which the Bible had roused among the Waldenses. The Bible of Sebastian Castellio (Châteillon, d. 1555), the tolerant French humanist and theologian who opposed the severity of Calvin, appeared at Basle in 1555. This was written in a style uniquely designed to convey the original meaning of the Hebrew.

In the 17th century the Protestant translation of G. Diodati (Geneva, 1644) is known to have inspired more than one passage in the Jansenist Port-Royal version (Paris, 1672–95), which was mainly the work of Louis Isaac Le Maistre, known as de Sacy. Unfortunately, however, the *Bible de Sacy*, no less than the many versions subsequently based on it, was no more than a paraphrase, overburdened with notes and commentaries. Among the versions of individual biblical books produced at this time was J.B. Bossuet's French edition of Song of Songs (1695).

It was only during the second half of the 19th century that French lay scholars began to devote their attention to the Bible: Ernest Renan published editions of Job (1859), Song of Songs (1862), and Ecclesiastes (1882), and F. Lenormant produced a translation of Genesis (1883). The 19th-century Catholic Bibles of Genoude, J.J.B. Bourassé (illustrated by Doré), Jean Baptiste Glaire, and others possessed little elegance or accuracy and were eventually displaced by better versions: the *Bible de Maredsous* (1949), the J.T. Crampon Bible (1894–1904; 1960),

and especially *La Sainte Bible de Jérusalem* (43 vols., 1948–52; in 1 vol., 1956). These modern Catholic translations nevertheless still remained hampered by notes and directions as to “what must be understood from the text.”

Despite their wish to preserve textual accuracy, French Protestants were not content with Olivétan’s ponderous style and accordingly produced various revisions, the most widely distributed of which were those of D. Martin (Amsterdam, 1707), and J.F. Ostervald (Amsterdam, 1747), and the French *Geneva Bible* (1802–05); perhaps the most successful was the version of Louis Segond and H. Oltramare (2 vols., 1874). The Segond version has been continually revised (1910, with a thorough revision in 1975 and *La nouvelle Bible Segond* in 2000). French Protestants generally use the officially approved *Version synodale* (1910), although the *Bible du Centenaire* (by Société Biblique de Paris, 1916–47; 1950) is considered to be the finest text produced by the Reformed Church. Some Protestants still treasure the Olivétan translation as revised by J.F. Ostervald (1663–1747) (recent revision 1996).

The 19th century also saw the appearance of critical Bible editions, notably that of E. Reuss (11 vols., 1874–81), whose substantial annotations display with unerring, though by now, dated erudition the whole historical and philological background of the biblical text. Two other critical editions are those of P. Giguet (1872), based on the Septuagint, and the more recent, penetrating, and lucid version of E. Dhorme (2 vols., 1956–59).

Modern French Jewish translations only appeared toward the end of the 18th century, and these were followed by the biblical passages and books (Psalms, Job, Five Scrolls) which Mardochée Venture included in his *siddur* (4 vols., Nice, 1772–83). In the 19th century, Samuel Cahen published *La Bible, traduction nouvelle* (7 vols., 1831–51), a remarkable achievement of its kind, in which he secured the collaboration of other modern Jewish commentators. Half a century later this was superseded by the French rabbinate’s own clear translations of the Bible, produced under the supervision of Zadoc Kahn (*La Bible du rabbinat français*, 2 vols., 1899–1906; 1966). Though without “claims to great learning,” this was faithful to the masoretic tradition and to rabbinic interpretation; combining the letter and the spirit of the Bible in a lucid and stirring style, it succeeded in “satisfying the reader who wishes for religious and moral inspiration from the Bible.” Partial translations of the Bible under Jewish auspices include L. Wogue’s rather constricted version of the Pentateuch (5 vols., 1860–69), and editions of Psalms by A. Ben-Baruch Créhange (1858), B. Mossé (1878), and André Chouraqui (1956).

There has been a good deal of biblical translation into French in recent years. This activity in many ways mirrors what has transpired in English, with some attempts that present the text in “today’s language” (*la Bible en français courant*, 1982, 1997, and *la Bible Parole de vie*, 2000, which uses a 3,500-word vocabulary); renditions under Catholic auspices (*La Bible de Jérusalem*, above, and *La Bible Pastorale de Maredsous* (1977), done by Belgian monks in collaboration

with French colleagues); and translations that appeal across denominational lines (*Traduction oecumenique de la Bible*, 1975). A notable and controversial addition is the “Bayard Bible” (*La Bible Nouvelle Traduction*, 2001), cast in modern French usage, in which each book has been prepared by a biblical scholar teamed with a writer of note. As a result, there is no attempt to smooth the overall text into a unified style, and thus, in the view of the editors, the Bible’s own diversity is represented. The text is laid out with a minimum of critical apparatus, heightening poetic effect.

In the more literal sphere, one might mention the 1973 translation of E. Osty, and two works by Jews. The first, by André Chouraqui (1974–77, including the New Testament!), seeks to bend French toward Hebrew. Thus, for instance, *sefat ha-yam* is rendered as *levre de la mer*, as opposed to a more conventional and idiomatic *bord de mer* or *ricage*. Of more recent vintage are the translations of the literary critic Henri Meschonnic (The Five Scrolls, 1970; Jonah, 1981; Psalms, 2001; Genesis, 2002; and Exodus, 2003). He characterizes his work as an attempt to “rehebraicize the Bible,” using Hebrew names (including those of books; his Genesis is not *Genese* but *Au Commencement*) and reflecting Hebrew style (as in such wordplays as *tohu va-vohu* [*vaine et vide*]). Meschonnic is less literal than Chouraqui, who frequently lays bare Hebrew etymology in French (his Genesis begins *En tete*), but both evince an approach and spirit that are akin to Buber-Rosenzweig.

[Everett Fox (2nd ed.)]

PROVENÇAL. In southern France the reformist movements of the Albigenses (Cathars) and Waldenses (Vaudois) promoted the translation of the Bible from the 12th century onward. This partly accounts for the hostile attitude toward vernacular Bibles displayed by the Church of Rome. Provençal versions of Psalms and of a portion of Genesis are known from the 14th century, and a translation of the historical books of the Bible was made from the French during the 15th century. As part of the Félibrige movement for the revival of Provençal culture from the mid-19th century onward, Frédéric Mistral produced an original translation of Genesis (1906). The Waldenses, who survived various persecutions to join French Protestantism, were active from the early 14th century as translators of the Bible. Their dialect versions cover Proverbs, Song of Songs, Ecclesiastes, and parts of Genesis and Job. It has been surmised that there were connections between the translators of the Provençal and Vaudois biblical books, and between them and the scholars who prepared the earliest texts in Italian.

German

BEFORE LUTHER. Only a few verses (from Ezra and Nehemiah) are extant of the Old Testament portion of the Bible translation by the Gothic bishop Ulfilas (Gothic *Wulfila*; 311–383). According to old tradition, Ulfilas (who, according to the Byzantine church historian Socrates (d. c. 450), invented the Gothic alphabet for the purpose of his translation) wrote

a complete version of the Bible, excluding only I and II Kings because of the warlike disposition of the Goths.

In fragments of an Old Saxon Genesis in alliterative verse, a parallel to the Teutonic paraphrase of the New Testament Gospels (the so-called *Heliand*, c. 830) has been found, although it was probably not written by the same author. The surviving fragments cover the biblical narrative from Adam to the destruction of Sodom.

Early in the 11th century, Notker Labeo, a monk of St. Gallen, translated the Psalms and the Song of Songs, as well as the Book of Job, which has been lost. Later in the same century, William of Ebersberg also wrote a commentary on Song of Songs (c. 1065) in Middle High German (critical edition, 1967). Subsequently many other partial translations of the Bible appeared, mainly versions of the Psalter.

Toward the end of the 14th century, a second German Bible (restricted to the Old Testament), renowned for its improved style, made its appearance; the earliest manuscript copy of this translation, written by Martin Rother, was the so-called *Wenzel Bible* (Vienna, after 1389).

The first German Bible to appear in print was Johann Mentel's edition (Strasbourg, 1466), probably written about a century before. This translation, based on the Vulgate, was frequently revised and reprinted, inspiring 13 further pre-Lutheran editions. In 1477 the first Bible in Low German appeared in print. Johann Rellach of Resoem, who may have prepared the original of the 1466 edition, translated Joshua, Judges, and Ruth.

LUTHER AND THE PROTESTANT BIBLES. The classic German Bible is that of Martin *Luther, who transformed it into a German literary work. His translation, which created literary German and consolidated the Reformation, was the basis of all subsequent German versions and also of most other European translations. Luther's Bible, based on the Brescia Hebrew edition of 1495, continued the work of his pioneering New Testament (1522), with the Pentateuch, historical books, Hagiographa (1523–24), Prophets (1532), and Apocrypha (1534). His first complete Bible, *Biblia, das ist: die gantze Heilige Schrift Deusch* (6 vols., Wittenberg 1534), underwent 11 successive revisions during his lifetime. The last of these (1544–45) was reproduced at Halle in seven volumes (1845–55) and later reprinted in 1926–28. Over the years, Luther's Bible, which became the canonical version of the German Protestant church, also underwent linguistic revision. The so-called Lutheran Bibles that followed include the Uniform Bible (*Einheitsbibel*) of 1581, the Stader Bible of 1695, the so-called *Probibibel* (1883), and the revised editions of 1892 and 1912. Textual modifications affected not only the German style but also certain concepts that were clarified and explained in the light of later scientific research.

While Luther was engaged in his work, an Anabaptist translation of Prophets, by Ludwig Haetzer and Johann Denck, appeared at Worms in 1527. Until Luther's version reached completion there also appeared several, so-called, "Combined

Bibles," in which those portions of the Bible which Luther had not yet completed were supplemented by other translations. The Zurich (Swiss-German) Bible (1527–29) of the Swiss Reformed Church largely preserved a suitable text reworked by Luther; the Prophets were translated by the "Zurich preachers"; and the Apocrypha were translated by Leo Jud, who also headed the project. This edition, repeatedly revised (1755–56, 1772, etc.), increasingly deviated from Luther's version. The so-called (Johannes) Piscator Bible (Herborn, 1602–03) was based on Latin translations and became the Berne Church Bible. Other Protestant editions were J.F. Haug's pietistic Berleburg Bible (8 vols., 1726–42), an adaptation of Luther's with reference to the Zurich text, and three others by J. Saubert (Helmstedt, 1665), Triller (Amsterdam, 1703), and Junckerot (Offenbach, 1732).

From the 18th century onward, many other German Protestant Bibles made their appearance. Johann Lorenz Schmidt's so-called Wertheim Bible (1735), the first rationalist translation, again referred to the original Hebrew, as did J.D. *Michaelis' scholarly ecclesiastical edition (Goettingen, 7 vols., 1769–85). The translation produced by J.C.W. Augusti and W.M.L. de Wette (1809–14) was the first Bible to proceed from modern biblical investigation, but another translation by Bunsen (9 vols., 1858–70) was a more popular work. Later German Bibles include the edition of P.W. Schmidt and F. von Holtzendorff (1872); the sectarian Eberfeld Bible (1855); scholarly editions by Eduard Reuss (7 vols., 1892–94) and E.F. Kautzsch (1894; 1900; 1922–23⁴); and two popular works, F.E. Schlacter's *Die Heilige Schrift; Miniatur Bibel* (1905, 1952²⁰) and Hermann Menge's Bible (1929; 1963). There are also scholarly translations in the exegetical works of W. Nowack, E. Sellin, and H.L. Strack and O. Zockler; and poetical versions by other scholars, such as H. Ewald's *Die Dichter des Alten Bundes* (2 vols., 1866–67), J. Wellhausen's *Die kleinen Propheten* (1893²), Duhm's *Die poetischen und prophetischen Buecher des Alten Testaments...* (4 vols., 1897–1910), and H. Gunkel's *Ausgewahlte Psalmen* (1917⁴). Some leading German poets also turned their attention to the Old Testament, Goethe and Herder translating the Song of Songs (1778), and F. Rueckert attempting a metrical version of Isaiah 40–66 and the Minor Prophets (*Hebraeische Propheten*, 1831).

Some current translations are *Die Bibel in heutiger Deutsch* (1982), the 1984 edition of the Luther Bible, the 1995 edition of the evangelical and quite literal *Revidierte Eberfelder Bibel*, and the *Gute Nachricht Bibel* (rev. 1997).

CATHOLIC BIBLES. The earliest complete German Catholic Bible was that of Johann Dietenberger (Mainz, 1534), which was partly modeled on the works of Luther and Leo Jud. The second was by Luther's opponent, Johann Eck (Ingolstadt, 1537), who followed the Vulgate. Caspar Ulenberg's edition (Cologne, 1630), based on Dietenberger and the Vulgate, long remained the standard Catholic text and was often revised, the subsequent translations of T.A. Erhard (1722), G. Cartier (1751), Rosalino (1781), Seibt (1781), I. Weitenauer (1777–81),

and Fleischuetz (1778) also referring occasionally to the original Hebrew. Another Catholic Bible appeared anonymously at Vienna in 1794. Heinrich Braun's version (1788–1805) provided the basis for the widely distributed edition of J.F. von Allioli (1830–37), which was revised by Arndt and furnished with notes indicating textual divergences between the Vulgate and the original (1898–99). C.M. Brentano made a translation from the original text (1797), and Jaeck, one from the Vulgate (1847), while Leander van Ess's Bible (1822; 1950–55) and that of V. Loch and W. Reischl (1851) enjoyed the success of Allioli's earlier translation. Modern Catholic editions include those of Nivard Schloegl (1920), which was the first critical edition under Catholic auspices. F. Feldmann and H. Herkenne (1923), J. Nikel (1911–33), P. Riessler (1924), and Pius Parsch (1952).

A work of special interest was the so-called *Biblia Pentapla* of 1710–12 (3 vols.), which compared the texts of Martin Luther, Caspar Ulenberg, and Johannes Piscator, the two remaining columns containing Joseph Wizenhausen's Judeo-German version and the Dutch *Statenbijbel* version. A parallel Bible of 1887–88 contained Luther's text together with a literal translation in modern German.

A translation that has seen widespread use is the *Einheitsuebersetzung* of 1980 (rev. 1994), which combines the work of Catholic and evangelical translators.

JEWISH BIBLES IN GERMAN. The first Jew to translate the Bible into High German was Moses Mendelssohn, whose work was fiercely attacked by the rigidly Orthodox (notably Ezekiel Landau and Phinehas Horowitz of Frankfurt) and repeatedly placed under a ban. Mendelssohn's closest collaborators were Solomon Dubno, Hartwig Wessely, Naphtali Herz Homberg, and Aaron Jaroslaw. The translation, printed in Hebrew characters, appeared under the title *Netivot ha-Shalom*, together with the original Hebrew and a commentary, designated *Be'ur (Biur)*. Mendelssohn himself translated the Pentateuch (1783), Psalms (1785–91), Ecclesiastes (1770), and Song of Songs (1788; ed. J. Loewe and A. Wolfsohn), and he also prepared a version of the Song of Deborah. The project was completed by his collaborators and successors, the "Biurists." Translations of separate portions of the Bible were supplied by various scholars. A complete edition of the Minor Prophets, prepared by Moses Philippson (Arnsvalde), Josef Wolf, Gotthold Salomon (S. Lipman), Israel Neumann, and Joel Loewe, appeared as *Minḥah Ḥadashah* (1805) and reappeared in Moses Israel Landau's edition of the complete Bible (1833–37). Aside from what Mendelssohn had himself prepared, the translation of the remaining biblical books was the work of M.J. Landau, Josef Weisse, Salomon Sachs, Wolf Mayer, Abraham Benisch, and Marcus Goldmann. Mendelssohn's Bible translation also appeared in German orthography (Genesis, 1780; Pentateuch, 1815). In contrast to Luther, who based his rendering of God's name, "der Herr," on the Greek *kyrios* of the Septuagint and the Latin *dominus* of the Vulgate, Mendelssohn used "der Ewige" ("The Eternal"), a term which was accepted by German-speaking Jews. Mendelssohn's work was a landmark for his

community, providing a medium through which they could assimilate an elegant German and be weaned away from the Judaeo-German which they had spoken heretofore. It is thus forms a kind of opening to the modern German-Jewish experience, enabling the initial integration of Jews into modern German life and culture.

The next translator of the Bible was Josef Johlson, who furnished his text with scholarly notes (1831–36; only the first half was actually published). Separate biblical books were translated by A.A. Wolf, Phoebus Philippssohn. A. Bernstein (A. Rebenstein), S.H. Auerbach, L. Herzberg, L.H. Loewenstein, and Heymann Arnheim and Michael *Sachs (the combined work of the latter two was later retained in the Bible of Leopold Zunz). With the support of I.N. Mannheimer, Gotthold Salomon published *Deutsche Volksund Schul-Bibel* (1837), the first complete German Bible under Jewish auspices. In his *Die vierundzwanzig Buecher der Heiligen Schrift* (2 vols., 1837; 1935¹⁷) L. Zunz translated only Chronicles, the remainder being the work of Arnheim, Julius Fuerst, and Sachs. Solomon *Herzheim's edition (4 vols., 1841–48) was intended for Christians as well as Jews. Jacob Auerbach's *Kleine Schul- und Haus-Bibel* (1858) had a very wide distribution. *Die israelitische Bibel* (3 vols., 1839–54) of Ludwig Philippson was revised by W. Landau and S.I. Kaempf and illustrated with pictures by Doré; this had been preceded in 1865 by an Orthodox edition produced under the auspices of Isaac Dov (Seligman Baer) Bamberger, A. Adler, and M. Lehmann. Orthodox approval was also given to I. Cosman's Pentateuch (1847–52) and, above all, to Samson Raphael *Hirsch's translations of the Pentateuch (5 vols., 1867–78; 3 vols., 1956–58) and Psalms (1882; 1960), to which the latter's son, J. Hirsch, added a version of Isaiah (1911). Other editions were an *Illustrierte Pracht-Bibel* (1874) by J. Fuerst; a Pentateuch (1899, 1939⁷) by J. Wohlgenuth and I. Bleichrode; and a complete Bible (1902; 1929⁵) by Simon Bernfeld and H. Torczyner (4 vols., 1935–37).

Apart from the foregoing, there were also many German Jewish translations of individual books of the Bible, such as L.I. Mandelstamm and M. Kirschstein's edition of Genesis (3 vols., 1862–64). H. Graetz's version of Psalms (1881), and D.Z. Hoffmann's translation and commentary on Leviticus (2 vols., 1905–06) and Deuteronomy (2 vols., 1913–22). An isolated modern attempt to reproduce the Old Testament in German verse was that of M.A. Klausner's *Die Gedichte der Bibel* (1902). Two outstanding modern editions are Lazarus Goldschmidt's *Die heiligen Buecher des Alten Bundes* (the Pentateuch, historical books, and Prophets having appeared by 1923), which referred to rabbinic exegesis, and *Die Schrift* (15 vols., 1926–37?, rev. 4 vols., 1954–1968) by Martin *Buber and Franz *Rosenzweig, which endeavored to do justice to the language and rhythm of the Hebrew text. This last work forms a bracket to the history of modern German Jewry; in its conscious departure from Luther and its attempt to "Germanize the Hebrew" (the translators termed the work a "*Verdeutschung*"), it reversed the usual direction of translation. As mentioned a number of times previously, it has strongly

influenced Bible versions in other languages, as well as contemporary (non-Jewish) German readers.

Hungarian

In the 15th century the Hussite movement assailed the Latinity of the Church. Behind the heresy lay, among other social aims, the wish to make the Bible available to the masses, so that people might know the world of the Bible even in the oppressive reality of feudalism, and so become acquainted with the admonitions of the biblical prophets. The oldest Hungarian Hussite Bible translations are preserved in the late 15th-century Vienna codex (Ruth, Esther, Minor Prophets) and the Apocrypha Codex (Psalms). The Codex of Dobrenite contains the translations of the Song of Songs and Job (1508). The first Catholic Pentateuch survives in the Jordanszky Codex (1516–19). The Hungarian reformers translated the Bible in the spirit of Erasmus and also emphasized its social message. Unlike the Catholics, who adhered to the Vulgate, Protestant scholars referred to the Hebrew text of the Old Testament. Gáspár Heltai and four Protestant colleagues translated the entire Bible, but several books of the Hagiographa did not appear in this edition (Kolozsvar, 1552–65). The first complete, and most readable, Bible translation was that of Gáspár Károlyi, a Calvinist preacher (Vizsoly, 1590); revised by Albert Szenczi Molnár (1608), it became the official text of the Hungarian Protestant Church and was the basis of a modern (London) Bible Society version.

The Reformation enhanced the ecclesiastical importance of the Psalms, most translations of which were, however, merely paraphrases. Christian terminology and political references were inserted into the text, to the detriment of the original. The first renderings were those of Sztáray (1575), a more poetical version being that of Balint Balassa (1554–94). Accumulated accretions were eliminated by Miklós Bogáti Fazekas, a Unitarian preacher, in his unpublished versified translation of Psalms (1587). Protestant translations of Samuel, Kings, and Job were produced by Peter Melius Juhász in 1565–67.

The Bible translations of the 15th and 16th centuries were stimulated by social motives, while in the 17th century religious concern proved to be the creative force. The greatest accomplishment of Hungarian Protestantism at the time was the *Psalterium Ungaricum* of A. Molnár (Hanau, 1608). This was the first complete Hungarian translation of the Psalms in verse, running to more than 100 editions and it is still extant. It endured because of the beauty of its style and because of its faithfulness to the original text. Simon Péchi, the most renowned member of the Hungarian *Szombatos* (Sabbatarian) sect, who had a good command of the Hebrew language, interpreted the biblical text and his translation adhered strictly to the original (1624–29). The first complete Hungarian Catholic Bible was published by the Jesuit György Káldi (Vienna, 1626). Toward the end of the 17th century a new Protestant Bible translation was prepared by György Csipkés of Komorn

(often called György Komáromi, 1675; published Leiden, 1719), who was widely known for his Hebrew sermons.

In time Károlyi's Bible was reworked and his text improved, while Samuel Kámory produced a new version of the Bible for Hungarian Protestants (1870). Poets began to be interested in the Psalms from an aesthetic point of view, the translations of Benedek Virág and Ferenc Versegi having a classical mood in antique verse form. More significant translations of Psalms were those by Károly Kálmán (1883), Sándor Sik (1923), and Béla Teleki (1929). Two versions of the Song of Songs were those of Károly Kerényi, which was based on the Latin text (1941), and István Bernáth (1962).

Although Mór Bloch (Ballagi) produced a Pentateuch in 1840, there was for a long time no demand for a Hungarian Jewish Bible, since the Jews of Hungary used Yiddish and German. The first complete Bible translation under Jewish auspices was that of the Jewish Hungarian Literary Society (IMIT), published in 1898–1907 (in 4 vols.), with Vilmos Becher, József Bánóczy, and Samuel Krauss as editors. Earlier partial translations were József Mannheim's Psalms (1865); H. Deutsch's Pentateuch and *haftarot* (1888); Mór Stern's Psalms (1888); Ignác Füredi's Joshua and Judges (1893); and the Füredi-Stern Pentateuch (1894–95). Bernát Frenkel edited and published the "Holy Scriptures for Family and School" (1924–26) and the IMIT began publishing a Bible for the young, which remained incomplete, only the first and second volumes being printed (1925). During the years 1939–42 the IMIT published a Hungarian version of the Pentateuch edited by Britain's chief rabbi, J.H. Hertz; this was the work of Michael Guttmann, Simon Hevesi, Samuel Loewinger, and others.

Hungarian Jewish prose versions of the Psalms began with Mór Rosenthal's translation (1841); later there were versified translations by József Kiss, Immanuel Loew, Emil Makai, and Arnold Kiss. The translations of Attila Gerő (1894) and Endre Neményi (1917) both displayed an original approach. Other versions of individual biblical books include Immanuel Loew's Song of Songs (1885) and Simon Hevesi's versified Lamentations (1916).

Icelandic

Although there was no Icelandic translation of the Bible during the Middle Ages, the *Stjórn* ("Guidance") was, as a partial paraphrase of the historical books of the Old Testament, woven together with some later biblical books (republished 1956). Following the Reformation, Gudbrandur Thorláksson, bishop of Hólar, made a complete translation of the Bible (Holum, 1584). Like the Danish Bible of 1550 (Christian II Bible), this had marked literary power and mainly drew from Luther's translation. It was revised by a later bishop of Hólar, Torlak Skulasson, who referred to the Danish Christian IV edition of 1644. Bishop Steinn Jonsson's Icelandic version of H.P. Resen's Danish translation was so unsuccessful that the old edition of Skulasson had to be printed. Headed by the philologist S. Egilsson, an Icelandic commission later undertook a

thorough revision of the Icelandic Bible (1841); the work was continued by Haraldur Nielsson in collaboration with other scholars (1912).

Italian

The earliest Italian versions of the Bible, preserved in manuscript, mostly contain only a traditional text, which perhaps originated in northern Italy during the 13th century, but which was also conceivably derived from Waldensian heretical circles. The version gave rise to the two Italian editions of the Bible (based on the Vulgate), which were published in Venice in 1471. Antonio Brucioli's translation (Venice, 1532) labored under the suspicion of heresy (in fact it inspired the Geneva Protestant Bible of 1562). It was followed by the 1607 Geneva version of the Italian Protestant, Giovanni Diodati, based on the original texts; widely distributed, this version has periodically been republished. Archbishop Antonio Martini's authoritative Catholic translation (based on the Vulgate) first appeared in 1776–81. Translations of separate biblical books include editions by G.B. de Rossi and G. Ugdulena in the 19th century, and modern ones by S. Minocchi, di Soragna, G. Ricciotti, and F. Valente as well as new versions of the complete Bible by the Waldensian Protestant, G. Luzzi (4 vols., 1921–30), and by the Pontifical Biblical Institute (1923–58). More recent works include the ecumenical translation of the *Conferenza Episcopale Italiana* (1974, along the lines of the *Bible de Jerusalem*), *Traduzione Interconfessionale in Lingua Corrente* (1985), *La Nuova Diodati* (1991), and *La Sacra Bibbia Nuova Riveduti* (1990 revision of the 1927 *Riveduti*). The CEI has also produced *La Bibbia interattiva* (1995), an ecumenical, modern-language version.

During the 16th and 17th centuries, Jewish Bible translations in Italian were undertaken by David de Pomis, whose *Ecclesiastes* appeared in 1571 (Job and Psalms were never printed), and C. Rieti (Proverbs, Venice, 1617). Leone Modena also compiled a glossary of the Old Testament entitled *Galut Yehudah* (1612). Jewish translations of the 19th century include those of I. Reggio (Pentateuch, 1821), Lelio della Torre (Psalms, 1854), Samuel David Luzzatto (Job, 1853; Isaiah, 1855–67; Pentateuch, 5 vols., 1858–60), and David Castelli (*Ecclesiastes*, 1866; *Song of Songs*, 1892; *Job*, 1897). A complete Bible was produced by Luzzatto and his disciples in 1866–75 and revised in 1960.

Norwegian

The pre-Reformation *Stjórn* of Iceland (see below) was the first biblical work current in Norway. Norway subsequently turned to Denmark for translations of the Bible, even after the political separation of the two countries in 1814. With minor modifications, Hans Sarning's revised Danish Bible of 1647 was Norway's standard text during most of the 19th century (rev. 1819, 1830, and 1873). After many tests the Norwegian Bible Society's new *Riksmål* (Danish-Norwegian) translation made its appearance in 1891. The scholars collaborating in this

project included the theologian and Orientalist C.P. Caspari, who was of Jewish birth. Linguistically, this Norwegian Bible still remained close to literary Danish. A complete Protestant Bible in *Landsmål* (pure Norwegian) appeared in 1921 (revised in 1938). A Norwegian Catholic *Riksmål* Bible, based on the Vulgate, appeared in 1902 (revised in 1938).

Portuguese

The only notable early Portuguese translations of the Old Testament were the Protestant edition of João Ferreira d'Almeida (Batavia, 2 vols., 1748–53) and a Catholic Bible based on the Vulgate by Antonio Pereira de Figueiredo (Lisbon, 23 vols., 1778–90). A modern edition was published by M. Soares (1927–30), and a new Brazilian Portuguese Bible appeared by the Liga de Estudos Bíblicos in 1955.

The upswing in evangelical movements in the 1990s has produced or spurred numerous translations, e.g., *Nova Versão Internacional* (1993/2000), *Almeida Revista e Corrigida* (1997), and *Bíblia na Linguagem de Hoje* (1998).

Romanish (Raeto-Romance)

The neo-Latin dialects known as Romansh, Friulian, Ladin(o), etc., once spoken widely in Austria, northern Italy, and Switzerland, gave rise to Bible translations from the 16th century onward. A complete Romansh Bible was prepared by Vulpi and Dorte (1617) and another by later scholars in 1719.

Romanian

Among the earliest documents preserved in Romanian are two manuscript versions of the Psalms: the *Psaltirea Scheiană* (1482) and the *Psaltirea Voronețeană* (1580). After the invention of printing, various editions of Psalms appeared. The first (1578, 1580) was produced by Coresi, a friar of Brasov; there subsequently appeared a translation in verse by the Moldavian metropolitan Dosoftei Uniev (1673) and a prose version by the metropolitan Antim Ivireanu (1694). Translations of the Psalter multiplied during the 18th century. The Prophets (1673) were soon followed by the first complete Romanian Bible, *Biblia lui Șerban* (Bucharest, 1688; revised, 1795), which was based on the Septuagint. This version of the Bible had a decisive impact on the Romanian language and greatly influenced later translations of the Bible. Other Romanian Bibles include those by Samuil Micu (1795), Ion Eliade Rădulescu (1858), and the outstanding modern Orthodox edition by Gala *Galaction and Vasile Radu (1938). The *Palia* (*Palaoa*), a Romanian version of Genesis and Exodus containing much legendary material, appeared in 1882. A 20th-century Romanian Protestant Bible, printed in both Cyrillic and Latin characters, was published by the British and Foreign Bible Society. The Cornilescu Version of 1923 remains available, including online. Two modern Romanian editions of the Pentateuch intended for Jewish readers were those of A. Gold (1902) and Moscovic.

Slavonic

BULGARIAN. Translations of the Bible that have been preserved among the Bulgarians are almost exclusively written in Old Church Slavonic. The revival of the old Bulgarian literary and ecclesiastical tradition had its origin in 16th-century Russia. Two modern Bulgarian Bibles are those of P.R. Slaveykov (Constantinople, 1860–64) and of the Orthodox synod (1925). By 1912, a complete Protestant Bible was published (in Constantinople); revisions followed in 1921 and 1924. Despite the strictures of Communist rule, several Bulgarian translations published abroad in the 1950s and 1960s found their way into the country. In 1995, a new Orthodox translation appeared; three new Protestant revisions were published in 2000–1.

CHURCH SLAVONIC. The oldest Slavonic version of the Bible is that of the missionary monks Cyril and Methodius (ninth century C.E.). Cyril, who first acquired a knowledge of Hebrew on a journey to the *Khazar kingdom, borrowed some Hebrew characters for the Slavic alphabet which he invented (see *Bulgarian Literature), and it is thus reasonable to suppose that he was familiar with the original Hebrew text of the Old Testament. It was probably toward the middle of the ninth century that the entire Book of Psalms and liturgical extracts from other biblical books (mainly the Pentateuch, Job, and the Prophets) were translated into Old Moravian, almost certainly with the assistance of Cyril. Presumably these Scriptural portions were first rendered into the Old Moravian tongue and only then into Old Bulgarian (Church Slavonic). According to some accounts, the work of Cyril (d. 869) was completed by his brother, Methodius (d. 885). Although neither the text nor the language of these translations has survived, it may be assumed that they were written in Moravian-Bulgarian. The historical influence and dissemination of the so-called Cyril-Methodius translation among the Slavic peoples passed from the Moravians to the Bulgarians, Serbs, and Poles, and then to the Russians. The Old Bulgarian biblical and liturgical texts reached the Russian Slavs in the second half of the ninth century C.E. – the era of Christianity’s spread to the Kiev region. A manuscript Bible in Church Slavonic, dated 1499 and named after Archbishop Gennadi of Novgorod, is extant; revised editions of this translation appeared in 1581, 1663, and 1751.

CZECH AND SLOVAK. The earliest known translations of isolated biblical books into Czech probably date from the 13th century, but it was only in the 15th century, under the impact of the Hussite movement, that the entire Bible was first translated into Czech. John Huss revised and modernized earlier Czech versions at the beginning of the 15th century. The first Czech printed edition (1475) was based on the Vulgate. An impressive Czech version of the Scriptures, based on the original Hebrew and Greek texts, was Jan Blahoslav’s *Kralice Bible* (1579–93). Another classic Czech translation was the Catholic Bible edited by Durich and Prochaska at the request of Empress Maria Theresa (1778). Other Czech versions include the Jesuit *Wenceslas Bible* (1677–1715) and that of Sýkora, which was revised by Hejčl and, in 1947, by Col and Josef Heger (1925–48), the

latter noted for its stylistic distinction. Recent work continues on the stylistically modern *Nova Bible Kralicka* (NBK), following the trend in many countries that traditionally have used older, “classic” versions. Also in process is a “study edition,” with appropriate software, of a translation by the Christian Mission Society. Also to be noted are the *Ekumenická Bible* (1985) and *Slova na cestu* (2000). The first complete Slovak Bible by J. Palkovič (1829–32) was followed by other Catholic versions based on the Vulgate. J. Rohaček’s complete Protestant Bible (1926) was also a Slovak translation.

POLISH. Until the 13th century, Polish translations of the Bible were, it is believed, written in Polish Cyrillic rather than Latin orthography. By the end of the 13th century the earliest Polish versions in Latin script made their appearance: the so-called Queen Margaret Psalter and the Bible of Queen Sophia (also known as the Szaros Patak Bible). These texts were written in rather clumsy Polish and based on Czech prototypes. Two early Polish biblical translations were the 14th-century Florian Psalter (published 1834; critical edition by W. Nehring, 1883) and the 15th-century Puławy Psalter (published 1880). With the onset of the Reformation in Poland during the 16th century, various printed editions made their appearance: some Psalters, the first complete Bible in Polish, known as the Cracow Bible (or the Leopolda Bible) of Jan Leopolda (1561), the so-called Radziwill or Brésć Bible of the Polish Calvinists (1563), and S. Budny’s Unitarian Nieśwież Bible (1572). Budny’s was perhaps the most famous of these. They were followed by the classic Catholic edition of J. Wujek (Cracow, 1599), which was also used by Protestants and has been compared with the King James (Authorized Version) Bible in English. Wujek’s edition greatly influenced the development of Polish as a literary language. Another Protestant translation was the Gdansk Bible (Danzig, 1639, reprinted in 1944). The Old Testament had a notable impact on many Polish writers from the 16th century onward. Jan Kochanowski’s verse rendering of the Psalms (Cracow, before 1578) inspired a later version by Maciej Rybiński (1605) and paraphrases by Mikołaj Sęp-Szarzyński (*Rytmy*, 1601) and other authors. Two 20th-century versions were the *Poznań Bible* (1926–32) and the new Cracow Bible (1935; ed. by S. Styś and J. Rostworowski); in 1965 a new edition of the Scriptures was in preparation (to be called the Tyniec Bible). Translation activity since the fall of Communism includes the *Polish Millennium Bible* (1984) “Polish Bible Translation Project,” in process under the auspices of the Evangelical Bible Institute in Poznań. Jewish translations of the Old Testament include those of J. Cyłkow (1883–1914); F. Aszkenazy (1927–30); J. Mieses (1931); and S. Spitzer (1937). A modern version of Psalms was written by the émigré poet Janusz Artur Ihnatowicz.

See also *Polish Literature.

RUSSIAN AND UKRAINIAN. During the early pre-Mongol period of the Church Slavonic Bible in Russia (before 1240), there was, according to the hypothesis of Golubinski, a whole complex of Old and New Testament writings that were adopted by

the Bulgarians. However, only fragments of these have been preserved, mainly the Psalms. On the other hand, a host of biblical texts from the post-Mongol period (15th century onward) has survived. The so-called Judaizing sects of the 15th century gave the strongest impetus to the codifications of the Bible. Adherents of the sects in Novgorod were in possession of a complete Russian Bible, and this moved the archbishop Gennadi to compare the texts of the Greek Orthodox Bible (Septuagint) with those of the Judaizers (see also above on Church Slavonic). With the exception of Esther, all the missing biblical books were translated from the Vulgate. Esther and Psalms were once thought to have been translated from the original Hebrew by the convert Fyodor (Theodore) the Jew, but this has been disputed by Harkavy. Gennadi's great achievement was to produce, for the first time in the annals of Church Slavonic literature, a complete and unified text of the Bible unconnected with the liturgy of the Orthodox church. The 16th-century Bible of the Moscow metropolitan Makari reverted to the former liturgical orientation and order of the biblical books. The first printed Psalter in Russian appeared in 1564–68. The first complete Ukrainian Bible, commissioned by Prince Constantine of Ostrog (1581), followed the text of Gennadi. The first Moscow edition of the Russian Bible (1663) was a more elegant version of the Ostrog text. Soon after this, an attempt was made by Avraami Firsov in his Psalter (1683) to translate the Scriptures into lively Russian. In 1714 Peter the Great commissioned a Church Slavonic Bible, whose text was compared with the Septuagint; this revision (the Czarina Elizabeth Bible) appeared in 1751 and was edited by Valaam Liashevski. Here the Old Testament was based on the Septuagint and those biblical books which had earlier appeared only in a translation based on the Vulgate were also translated from the Greek text.

Bible translations of the first half of the 19th century are linked with the activity of the Russian Bible Society. This development was impeded by the political reaction which marked the last years of the reign of Alexander I and the entire reign of Nicholas I. Translations of several biblical books from the original Hebrew, undertaken by the first Russian Hebraist Pavski in the mid-19th century, were placed under a ban. However, the Moscow metropolitan Philaret managed to obtain the Russian Orthodox synod's authorization for a Russian version of the Scriptures in 1860. From 1868 onward a complete translation of the Bible was undertaken by Daniel A. Chwolson; later collaborators in the project included Gulyayev and Bashanov. By virtue of its accuracy and style, this so-called Synodal Bible (1875) is the best available in the Russian language. Canonical books were translated from Hebrew; non-canonical portions, from the Greek and Latin. Ukrainian Bible translations were first attempted in the late Middle Ages, the earliest printed edition being that published at Ostrog in 1581. A Ukrainian version of Psalms appeared at Vilna in 1526, and complete Bibles were printed at Pochayev (1798) and Przemysl (1859), both of these being based on the Russian Czarina Elizabeth Bible of 1751. A 20th-century version was that of P.

Kulish, I.S. Levvytski, and J. Puluj (1903); another Orthodox Bible was by Metropolitan (John Ohienko) Ilarion (1962); and a third was the Catholic Bible of Ivan Khomenko (1963). All were translated from the original Hebrew and Greek texts. Translation activity has picked up in the 1990s, as in other formerly Communist countries. A Russian Protestant Bible, printed in London in 1875, was first banned in Russia, but a reprint prepared there was later permitted. A new illustrated Russian Old Testament, the first of its kind since the 1917 Revolution, was issued in 100,000 copies by the Soviet State Publishing House in 1967.

The translation of the Bible into modern Russian is clouded by a number of issues: the multiplicity of Russian literary styles, questions of authority and distribution, and above all the relatively small role the Bible has historically played in Eastern Orthodox liturgy and tradition (Batalden, 1990). The periodical *Mir Biblii* (1993–) contains articles, reviews, and translations of portions of Scripture into Russian by different translators.

Among Jewish scholars, various attempts were made from the 1860s onward to produce Russian translations of the Bible. Leon Mandelstamm published a Pentateuch in Berlin (1862), the second edition (1872) being accompanied by his version of Psalms. Pumpyasnski also issued a translation of Psalms (1872), which was followed by Proverbs in 1891. Meanwhile, the Society for the Enlightenment of the Jews in Russia had published a new version of the Pentateuch (1875), which was prepared by J. Herstein with the assistance of the Hebrew poet J.L. Gordon. Another version of the Pentateuch, that of Joshua Steinberg, appeared under the Society's auspices in 1899, and in 1906 Steinberg published translations of Joshua, Judges, and Isaiah.

See also *Russian Literature.

SERBIAN AND CROATIAN; WENDISH. Until 1847 the literary language of the Serbs was Old Slavonic, and Church Slavonic remained dominant in the Serbian Orthodox Church. The earliest complete translation of the Old Testament was produced by the reformer Primož Trubar in Slovenia during the late 16th century; a Croatian Lutheran edition appeared in Tuebingen (1563), and two 19th-century versions were prepared by Matia Petar Katančić in Croatia (1831) and by G. Daničić in Serbia (1865; revised, 1932, 1933). A popular version is the "Zagreb Bible" into modern language (1968). In 2002, the World Bible Translation Center – once again, an evangelical group! – finished a new Bible translation into Croatian; the *Biblija Prijevod* КС had appeared in 1988. A modern Serbian Bible was that of Petar Vlaisić (1923–25).

The oldest Protestant translation of part of the Old Testament into the South Lusatian dialect of the Wends (a declining Slav people isolated in eastern Germany) was an edition of Psalms by Pastor Wille (Guben, 1753); a complete Bible was published by Johann Gottlieb Fritz (Cottbus, 1796). There were earlier translations into the North Lusatian Wendish dialect: Psalms by Paul Pretorius, and later Proverbs, Ecclesiastes,

Song of Songs, and Daniel by Christian Leonhardi Georg Dumisch (Loebau, 1719). A complete Bible by Johann Lange, Matthaeus Jockisch, and Johann Boehmer (Bautzen, 1727–28) was prefaced by an introduction in German. The Catholic Wends have no printed versions of the Bible apart from an edition of Psalms translated from the Hebrew by Johann Lara (1872).

See also *Yugoslav Literature.

Spanish

Translations of the bible into Spanish were undertaken in the 13th century, Jews and Christians collaborating in versions antedating 1250. Since the Old Testament translations were based on the original Hebrew rather than on the Vulgate (and perhaps also because of the interreligious scholarly activities), Juan I of Aragon prohibited further Bible translations in 1233, suspecting them of heretical tendencies. However, the more tolerant Alfonso the Wise (Alfonso X of Castile and Leon) encouraged the translation of the Bible into Spanish, but only parts of this version have been preserved. Numerous Bible manuscripts dating from the 14th century onward are extant, and these Spanish versions – some based on the Vulgate, others on the original Hebrew – were the work of Jews or Jewish apostates. The most important of these was the Alba Bible (1422–33), which Moses *Arragel produced at the command of Don Luis de Guzmán, Grand Master of the Order of Calatrava; an edition of this Bible appeared in Madrid in 1920–22. During the 16th–18th centuries, Spanish Catholic scholars only translated the Psalms, the biblical “songs,” and the wisdom books, although Fray Luis de León wrote a version of Song of Songs (c. 1561; printed, Madrid, 1798) based on the original Hebrew. Two Protestant translations of the complete Bible (based on the Hebrew text) were Cassiodoro de Reina’s (Basle, 1567–69) and an edition by Cipriano de Valera (Amsterdam, 1602). Later Catholic Bibles by Felipe Scio de San Miguel (Valencia, 1790–93) and Felix Torres Amat (1823–25) appeared, as well as translations of separate biblical books by Garcia, Carvajal, and other scholars. The last great Jewish Bible project in Spanish, Abraham Usque’s Ferrara edition of 1553, was based on Arragel’s 15th-century version and is thought to have inspired translators in Christian Spain. Two modern Spanish Bibles have been produced by E. Nacar Fuster and C.E. Colunga (1944; 1959⁹) and J.M. Bover and F. Cantera Burgos (2 vols., 1947). In 1960 a revision of the classic Reina-Valera version in simple language appeared; it was updated in 1995. The year 1985 saw a translation along the lines of TEV, *Dios habla hoy* (*Version Popular*). As elsewhere over the last two decades, evangelical-inspired translations have been published in Spanish, notably *Nueva Versión Internacional* (1999, following the method of NIV, but from the original languages), *La Biblia de las Américas* (1986/1997), and the World Bible Translation Center’s *La Palabra de Dios para Todos* (2005).

Swedish

There was no complete Swedish translation of the Bible during the Middle Ages, although individual biblical books were translated during the 14th and 15th centuries. However, af-

ter the Reformation, the Gustav Vasa Bible, directed by the archbishop Laurentius Petri, appeared in 1541 and was widely used for some time. A revised version, the Charles XII Bible (1702–03; 1961 ff.), which was more closely modeled on Luther’s translation, was Sweden’s authorized “Church Bible” for a considerable time. A thorough revision of this work, the product of more than a century’s research (1773–1878), never received official recognition. A new translation, produced by many scholars, including the philologist Tegnér, enjoyed greater success and, on its completion in 1917, received royal approbation. The outstanding private translation of the Bible was that of H.M. Melin. A Swedish Catholic translation of the Bible, based on the Vulgate, appeared in 1895. A new Lutheran translation, in preparation for over two decades, is *Bibel 2000*. It is cast in contemporary language.

[David Jacob Simonsen]

Other Languages

Complete Bibles and portions of the Old Testament have also been translated into hundreds of other languages in recent centuries; versions in many of the more remote languages and dialects were the work of Protestant missionary groups, particularly the British and Foreign Bible Society, during the 19th and 20th centuries. Maltese Bible translations include M.A. Camillari’s edition of Psalms based on the Hebrew text (1845), R. Taylor’s Psalms and Song of Songs (1846), C. Cortis’ Ruth (1924), and P.P. Saydon’s complete Maltese Bible, *Il-Kotba Mkaddsa bil-Malti* (1929–59). The earliest modern Greek translations of the Old Testament, consisting of the Pentateuch and other biblical books, were probably the work of an unknown Jewish scholar of the 14th century. There were also two early versions of Jonah in *Judeo-Greek. Two early Judeo-Greek works printed at Constantinople were a translation that appeared in the Polyglot Pentateuch (1547) and Job (1576) by Rabbi Moses b. Elias Pobian. A Greek Christian version of Psalms, based on the Septuagint, was published in 1543. The first complete Bible in modern Greek was the Protestant edition of 1840, and an entirely new version was in preparation in Athens during the 1960s, but this was denied general distribution owing to the hostile policy of the Greek government. A Protestant Basque Bible (1859–65), based on the Vulgate was published in London, and Catholic Lithuanian Bibles appeared in 1922 and 1936.

Celtic versions of the Scriptures were first attempted in the Middle Ages, the earliest being a partial translation in Welsh (1346). The English Reformation gave a considerable impetus to Celtic Bible translation. The first complete Welsh Bible was produced by William Morgan and others in 1588 (revised 1620 by R. Parry and J. Davis), and this remained in use with only slight modifications well into the 20th century. An interdenominational Welsh Bible project was begun in 1926 and again after World War II. The first complete Irish (Erse) Bible, based on the English Authorized Version, was produced by Bishop William Bedell and others (1685), and inspired the Scots Gaelic edition of 1783–1801. A new Irish Prot-

estant Bible appeared in 1817. An Irish Catholic Pentateuch, based on the Vulgate, was published in 1861 together with an annotated English text. Two Breton Bibles of the 19th century were Le Gonidec's Catholic edition of 1866 and G. Le Coat's Protestant version of 1889.

The more exotic translations include versions of the Scriptures in Chinese, Japanese, and American Indian dialects. There have been pioneering Bible translations in Sanskrit (1822), Chinese (1823), and Burmese (1834), as well as many translations into the dialects of India. The first Japanese Protestant Bible appeared in the late 19th century (1887), a Catholic version being published only in 1959. A widely distributed Japanese Protestant edition, the work of Japanese scholars, was published in 1955, and the first complete Catholic Bible, in 1964. In North America, John Eliot produced the earliest Amerindian Bible for the Massachusetts Indians in 1663, and by 1830 parts of the Bible had been translated and printed in the Creek and Cherokee languages of the "Five Civilized Tribes," using the alphabet devised by the Cherokee chief Sequoyah. Recent translations along these lines include 2002's Tzotil: Chamula Bible, produced for an indigenous people in Chiapas, Mexico, and a draft of a Bible in Inuktitut, the language of Canadian Inuits, released the same year. Translation work is also burgeoning in Africa: Jerusalem's Home for Bible Translators and Scholars, in conjunction with the Hebrew University's Rothberg International School, has for some years trained participants in biblical Hebrew, with the goal that they may translate the Hebrew Bible for Christians into mostly African languages with a potential readership of 35 million. In the age of the Internet, Bible translations into non-European languages (e.g., Amharic, Creole, Maori, and Vietnamese) may also be found online.

At the turn of the twenty-first century, what is avowedly missionary work continues to produce translations into most of the world's languages and dialects, reaching especially into the Third World. That the Bible remains the gold standard for demonstrating the translator's art can be seen, taken to its logical but absurd conclusion, in the handling of some biblical texts by fans of the late twentieth century television program *Star Trek*. In 1994 a translation of the book of Jonah into Klingon, the language of a fictional planet of aliens, appeared, thus beginning one of several renditions of biblical texts into languages which technically do not exist.

In Cyberspace

Bible translation is well suited for representation on the Internet. A variety of websites explore theoretical aspects of translation as they apply to the Bible as well as provide detailed information about individual translations, even making some of them available online. Further, there are a number of sophisticated software programs (searchable on the Internet under "Bible software programs") which, in addition to providing analytical tools for searching terms and forms in both Hebrew and English, make it possible to toggle between multiple translations of the same passage. They constitute a valu-

able tool for immediate comparison and for conveying at least a preliminary sense of translation possibilities.

Websites that discuss issues of Bible translation are most easily found under the rubrics "Bible translation," "Bible versions," "modern Bible translation," and "[a particular language] Bible translation." A good deal of information may be found on the websites of the American Bible Society and the International Bible Society; not surprisingly, these organizations, along with the others such as the United Bible Society and the World Bible Translation Center, have as their express purpose the active promotion of Christianity. Thus, many or even most sites on Bible translation are doctrinally driven; a discriminating reader may still, however, glean much useful information from them.

At the turn of this century, one new media-driven development is the NET (New English Translation) Bible, a fresh version which seeks to be simultaneously conservative (i.e., evangelical) and scholarly, and is intended for viewing on and printing off the Web. It contains extensive notes on the text and its translation which are accessible with a mouse click; revisions will be electronically incorporated as time goes on. The avowed purpose of the work is "translating passages consistently and properly within their grammatical, historical, and theological context."

EXEGESIS AND STUDY

TALMUDIC LITERATURE

The voluminous body of talmudic literature – the *Oral Law – is essentially a compilation of hermeneutic, interpretative, and analytic exegesis of the Bible – the Written Law. According to rabbinic tradition, Moses not only received the Oral Law on Mount Sinai, but also the definitive explanation of the meaning buried in the Torah's compact and cryptic literary style. "Moses received the Torah from Sinai and transmitted it to Joshua" (Avot 1:1), providing the material on which generations of exegetes worked, creating the vast store of talmudic literature. According to the talmudic tradition, *Ezra, upon his arrival in Palestine, founded the institution of the *scribe (*sofer*), whose contribution to the teaching and understanding of the Bible has been fundamental. "These early scholars were called *soferim* [which can mean "scribes" or "reckoners"]" the Talmud relates, "because they used to count all the letters in the Torah" (Kid. 30a). In order to certify a biblical text as traditionally correct, the *soferim* first counted the letters to ascertain omissions or additions. The scribal appellation has been associated with certain facets of talmudic interpretative work (see above, The History of the Biblical Text).

The scribes continued their work until the end of the period of the Great Assembly. The *tannaim, who emerged toward the end of the scribal era (second century B.C.E.), together with the *amoraim* (third–sixth centuries C.E.), devoted their efforts to teaching their disciples the true meaning of Scripture. They practiced their exegetical methods on such subjects as theology, ethics, lexicography, homiletics, and religious and civil law. The body of their work is incorporated in the Talmud corpus, comprising the Mishnah, *Gemara*, *Tosefta*, and *baraita*. An important repository of exegetical work is the midrashic literature, which is made up of a number of collections reflecting different approaches to the task of transmitting the essence of the biblical text; one approach is the halakhic, which produced a collection of Midrashim in order to explain the legalistic (ritual and tort) portions of the Bible and the manner in which the commandments were to be fulfilled. Notable among the collection of halakhic Midrashim are the **Mekhilta*, **Sifrei*, and **Sifra*. Collections exemplifying the ag-

gadic approach, or use of parable and anecdote to explain the text, include, among others, **Genesis Rabbah* and **Ecclesiastes Rabbah*. **Pesikta* and **Tanḥuma* are collections of Midrashim representing the homiletical approach. Based on the Sabbath Torah reading, homilies are arranged according to the text of the weekly portion. Methodologically, a complex system of exegesis was employed. It consisted of a diversified analysis of the text by one or all of the elements of **pardes*, an acronym representing the following: *peshat*, literal translation; *remez*, implied meaning; **derash*, homiletic comprehension; and *sod*, mystical, allegorical meaning. *Peshat* and *derash* are the more popular methods of exegesis, since they are comprehensible to most, while *remez* and *sod* represent the esoteric, mystical, and kabbalistic approaches. These latter exegetical methods were at times considered dangerous for use by the unscholarly man, who might arrive at misinterpretations and risk heresy. *Peshat* is an objective method of obtaining the literal meaning of a passage by analysis of the language, whereas *derash* is a subjective method which attempts to make the text applicable to the time of the exegete. The sages believed that the Oral Law accompanied the receipt of the Written Law, and that it renews itself in each era, i.e., the interpretation of the Oral Law, which is a continuous process, reformulates the Bible's eternal verities, giving them continuing applicability.

**Shemaiah* and **Avtalyon* were among the earliest expositors of the law. Their disciple, **Hillel*, formulated the seven **hermeneutical* precepts by which exegesis could be accomplished. These precepts were subsequently expanded by R. **Ishmael* into 13 principles, and finally by R. **Eliezer* into 32 rules. Two great schools of midrashic interpretation emerged, those of R. *Ishmael* and R. **Akiva*. R. *Ishmael's* approach was didactic and literal, because he believed that the Torah is written in the language of ordinary usage, and, therefore, holds no hidden meanings. R. *Akiva*, however, analyzed each word (see above, The History of the Biblical Text). These two schools produced the material collected in *Mekhilta*, *Sifrei*, and *Sifra*. At times, the lines between the respective schools were not clear because disciples were not above enlisting other methods, perhaps more suitable for a particular topic.

MEDIEVAL RABBINIC COMMENTARIES

From the period of the *geonim* until the age of the *Haskalah* (about 1,000 years), Bible exegesis constituted one of the main themes of Jewish literature, not only in books especially de-

voted to biblical exegesis, but also in those dealing with philosophy or linguistic research, which often included interpretations of biblical verses. Generally speaking, two broad approaches to biblical exegesis are discernible – the literal and the homiletical. In the former the commentator bases himself on the plain meaning of the text and on the context, and the interpretation is objective. In the homiletic approach the commentator strives to interweave his ideas with the text even if the simple meaning of the language and the context are at variance with his interpretation, and his interpretation is subjective. Homiletic commentary developed because of various cultural requirements and because of the necessity of finding a correspondence between scriptural views and the prevailing opinion in different ages.

A considerable portion of the exegesis of the geonic period consisted of assembling and editing material, much of which had accumulated through traditions handed down over the generations. Included in this material were midrashic collections and the masorah. The task of the masorah scholars, particularly in establishing vocalization and cantillation, was of the utmost importance, providing as they did the most valuable interpretation of the Bible. Vocalization and cantillation insured correct reading of the biblical text and were established, as a rule, in accordance with the *peshat*, the literal meaning. The greatest commentators such as **Rashi*, Abraham **Ibn Ezra*, and others, based their interpretations on the masorah.

In addition to this work of collation new and original works were created in the geonic period, opening up fresh paths in the field of exegesis and powerfully influencing succeeding generations. Two historic events led to this development: the expansion of Islam and the rise of **Karaism*. The efflorescence of learning and science among the Muslims influenced the Jews living among them to participate in philosophic enquiry and linguistic research. Along with the decline of Aramaic as the vernacular came a decline in the use of Aramaic translations of the Bible. The intensification of the Karaitic-Rabbanite controversy over readings and interpretations of biblical texts also contributed to this development. The Karaites produced a number of commentators, among them **Anan*, the founder of Karaism, who in his interpretations frequently applied the hermeneutic methods of the tannaitic Midrashim, and Benjamin **Nahawāndi*, who made use of allegorical explanations. The Rabbanites were thus compelled to intensify their biblical research and to seek new methods of exegesis.

The Work of Saadiah Gaon and Its Influence

The new era was ushered in by **Saadiah Gaon*, a considerable portion of whose extensive literary work is connected with Bible commentary. Saadiah endeavored to prove the impossibility of explaining the Scriptures without the masorah and to show that the Midrashim and *halakhot* of the rabbinic sages were based on the literal meaning of scriptural texts. In this context, Saadiah's Arabic translation of the Bible and his commentaries are noteworthy. The translation is actually a

paraphrase of the text. His commentaries, particularly those on the Pentateuch, include a wealth of material: explanation of the text, linguistic and philosophic research, and polemics, directed primarily against the Karaites. He even composed a special work against the extreme and heretical views of *Hīwī al-Balkhī on biblical subjects.

As a result of Saadiah's biblical studies, Bible commentary emerged from the sphere of homiletics to embark upon the pursuit of direct and close exposition of the biblical text. In his linguistic and philosophic approach Saadiah provided directives for scholars who came after him. That influence is particularly noticeable in *Samuel b. Hophni and his son-in-law *Hai. Samuel b. Hophni, an unusually prolific writer, engaged extensively in Bible commentary. In addition to translating the Scriptures into Arabic, he applied himself to philosophic inquiry. His attempts to explain miracles as natural phenomena were attacked by Hai.

In Spain

A significant flowering of Bible commentary took place in Spain, which had its basis in the researches of *Menahem b. Jacob ibn Saruq, his critic *Dunash b. Labrat, and Menahem's pupil, *Judah b. Ḥayyuj (tenth century). Although their works are mainly concerned with grammatical and linguistic considerations, they are interspersed with numerous elucidations of verses and individual words in Scripture. The novelty of their approach lies in its philological orientation.

Particularly important are the investigations of Jonah *Ibn Janāḥ (Abu al-Walid) in *Sefer ha-Rikmah* and *Sefer ha-Shorashim*. In illustrating and elucidating his philological and grammatical rules, he cites many biblical passages, explaining them in a profound and original manner. He is unfettered in his inquiry, at times ignoring the masoretic text, and, in some instances, even transposing and emending biblical texts. Though his deviation from the masorah provoked much opposition, his influence on later commentators was very great.

Ongoing progress in Hebrew linguistics produced the philological commentary, two of whose famous exponents were Moses ha-Kohen *Gikatilla and Judah *Ibn Bal'am (11th century). The former is characterized by his freedom and originality, interpreting, for example, the predictions of the prophets as applying strictly to their own times and not to the Messianic era. Judah ibn Bal'am opposed his approach, writing in a far more conservative spirit. In a class by itself stands the Bible research of Moses *Ibn Ezra. Though his book *Shirat Yisrael* was expressly written as a guide to the composition of poetry, his analysis of the various literary forms – "The Twenty Portals of Poetic Embellishment" – is rich in biblical references. Ibn Ezra's investigations bear the strong impress of Arabic poetry and of the scholarship in that area. Belonging to a completely different class of commentary, which was also greatly influenced by Arab culture, is philosophical commentary (see below).

Literal Commentary

Of a quite different nature is the literal commentary, fostered by Rashi and his disciples, which flourished in northern France, and which is relatively free of outside influence. The Jews of France, though occasionally engaging in discussion with Christians on the interpretation of biblical passages, had only limited cultural relations with their neighbors, whose standards in this area in any event were quite low. Thus, their commentaries do not contain such philosophical or philological elements as abound in the commentaries of the Spanish school. The commentary of this school is characterized by the search after the plain meaning, although a certain conflict is discernible between the inclination toward homiletical exegesis and the conscious effort to explain biblical passages according to their plain meaning.

The interpretations of *Menahem b. Helbo contain much homiletics. Rashi, too, introduced many ancient rabbinic Midrashim, but only in addition to the plain meaning, frequently remarking that they were not to be taken as representing the literal meaning of the passage. Rashi often reiterates as his aim the explanation of the text according to its plain meaning or according to the closest aggadic interpretation. This tendency becomes even more marked with Rashi's successors Joseph *Kara, *Samuel b. Meir, *Eliezer of Beaugency and Joseph *Bekhor Shor. It is somewhat surprising that this phenomenon should exist particularly in northern France. Samuel b. Meir and Joseph Bekhor Shor, for example, who are outstanding exponents of literal commentary, are also among the foremost tosafists, and their method with regard to their biblical exegesis is in contrast to that adapted by them in their talmudic exposition. In some instances they even assigned to a biblical text a meaning at variance with the *halakhah*, despite the fact that the *halakhah* was unquestioningly accepted by them, their serene spirit and unswerving faith ruling out any feeling of strain or conflict. A contributing factor to the growth of literal exposition may have been the need felt to counter christological interpretations of certain biblical passages, although these commentators – and particularly Rashi – had a definite influence on some of the Christian biblical exegetes.

Synthetic Commentary

Certain commentators embody all the above methods of interpretation. The main representatives of this synthetic approach are: Abraham ibn Ezra, David *Kimḥi and Naḥmanides. Their commentaries include philological, philosophical, literal, homiletical and, in the case of Naḥmanides, even kabbalistic elements.

While Ibn Ezra bases his commentary principally on the philologic method, contributing much to linguistic research, he also introduces many philosophical explanations. In dealing with halakhic material, he accepts the rabbinic **Midrash Halakhah*, but opposes *Midrash Aggadah* when it is in conflict with the plain meaning of Scripture. He argues that homiletical explanations should not always be taken literally, there be-

ing even in *halakhah* instances of derivations which are only formally associated with a biblical verse.

Joseph *Kimḥi was active in Narbonne at the same time and was followed by his sons, Moses and David. The latter's work constitutes a kind of melting pot for the various methods of commentary. From Spain he borrowed the topical, philological, and philosophical commentary, and from Franco-Germany the literal and homiletic methods. He very frequently quotes Midrashim, but gives the literal interpretations with them. He has little recourse to philosophic commentary, resorting to it only when he sees a special need to do so.

An important turning point is reached with the introduction by Naḥmanides of Kabbalah into his Bible commentary. Naḥmanides' approach, too, is eclectic, a blend of the Franco-German school with that of Spain, but the emphasis is less on philological commentary than on a penetrating investigation of the context. Though he discusses the problems raised by philosophers, he does not regard the rational aspect as paramount, and in many places attacks the Aristotelian approach. On occasion, along with other interpretations which he considers acceptable, Naḥmanides quotes from the "Secret Discipline," the Kabbalah, but he employs it sparingly. It is included as an adjunct only, mostly by way of mere allusion and intended solely for those with a knowledge of Kabbalah.

Later Commentary

Philosophic commentary enjoyed a resurgence despite Naḥmanides' opposition, especially in the 14th century. This trend was continued, with certain limitations, by Isaac *Abrabanel in 15th-century Spain. Though he resorts to philosophic explanations, he is at the same time often opposed to the rational approach to Bible commentary. He does not touch on philological questions in his interpretations, confining himself to the conceptual problems arising from Scripture.

In the 16th and 17th centuries occupation with biblical exposition diminished. Two commentators, however, who stand out in this period are David and Hillel *Altschuler, who wrote literal commentaries on the Prophets and the Hagiographa. Their commentaries, *Mezudat David* and *Mezudat Ziyyon*, attained wide circulation, though they were for the most part gleanings from the works of others (see also *Malbim). Gradually, under the influence of the *pilpul* which characterized Torah study in Poland, there was introduced into biblical commentaries the method of "novellae and ingenious interpretations." A fundamental change in biblical exegesis took place in the Haskalah period. It is characterized by the great influence of Christian Bible commentary on Jewish exposition and, in the wake of this, the expansion of Bible criticism. These are discussed below.

[Avraham Grossman]

ALLEGORICAL INTERPRETATIONS

Allegorical interpretation of Scripture is concerned with the "inner" or "spiritual" meaning of the biblical text. Used consistently in the writings of Philo, the Church Fathers, the medieval Jewish philosophers, and the kabbalists down to the ḥasidic teachers, this method does not necessarily discard the literal meaning (*peshat*) but tends to prize the allegorical one more highly. While the Bible itself makes occasional use of allegory, the allegorists claim the right to treat the Bible as a whole or certain of its parts, as a series of allegorical expressions.

(1) Rabbinic *aggadah* and Midrash employed the allegorical method in an uninhibited homiletic rather than in a systematic manner. Their guiding motive was not, as that of the allegorists, a concern for the true, inner meaning of the text, but a pious endeavor to find "everything" (Avot 5:22), in Scripture, to make every biblical passage or word (Sanh. 34a) yield as many "meanings" (*te'amim*) as necessary. Thus while the *aggadah* and Midrash contain many instances of allegorism (*mashal* or *dugma*), these fail to exhibit, as I. Heinemann has shown, any pattern of consistency. The only exceptions are the allegorical interpretations of Proverbs 31:10-31 (the "woman of valor" being understood as the Torah) and of the Song of Songs. But even in the interpretation of the Song of Songs at least three different allegorical themes are apparent: the love between God and Israel; the exodus; interpretations of Jewish laws. Ezekiel's vision of the resurrected dry bones (ch. 37) and the figure of Job are described as allegories (BB 15a; Sanh. 92b), but no detailed allegorical interpretation of these texts is provided. Nor was Proverbs, in spite of its suggestive title

(*mishlei*), expounded allegorically, except for a few passages (including 31:10ff.) and terms (e.g., “father,” God; “mother,” Israel). Systematic, philosophical allegory was absent in rabbinic literature because no philosophical system presented a real challenge to the literal meaning of Scripture.

(2) The situation, however, differed radically among Hellenistic Jews, many of whom felt the need to prove that the teachings of the Bible are consonant with Greek wisdom. Here the allegorical method, which had been used by the Stoic philosophers to interpret the old Greek myths, provided a means of harmonization. It appears, however, that at first Hellenistic Jewish writers were reluctant to use allegory. The Greek version of the Bible, the Septuagint (see above), shows hardly any traces of it. *Aristobulus of Paneas, who is considered an allegorist (see Eusebius, *Praeparatio Evangelica* 8:10, 2), does distinguish between “mythical” expressions in the Bible and their allegorical sense, i.e., their “physical” or cosmological meaning. However, he only offers metaphorical interpretations of anthropomorphic descriptions of God. The Letter of *Aristeas, on the other hand, emphasizes the symbolic meaning of Jewish law and ritual, and does so for apologetic reasons. Similarly, the Wisdom of *Solomon uses allegorical interpretations: the garments of the high priest, for instance, are said to represent an image of the entire cosmos (18:19). The sect of the *Therapeutae is likewise described by Philo (Cont. 78) as employing the allegorical exposition of Scripture. Nevertheless, it is only in Philo himself that the method comes into its own. According to *Philo, the true significance of Scripture lies in the “underlying meaning” (*hyponoia*, also termed *allegoria*), which is “obscure to the many” and comprehensible only to “the few who study soul characteristics rather than bodily forms.” According to H.A. Wolfson, “everything in Scripture, from names, dates, and numbers to the narration of historical events or the prescription of rules for conduct, is to Philo subject to allegorical interpretation” (*Philo*, 1 (1947), 116). Yet this does not mean that the historicity of the Bible or, for that matter, its legal validity is dissolved; its literal meaning is upheld. Thus, the three men who appeared to Abraham (Gen. 18), while representing metaphysical symbols, are still to be regarded as real beings; and, the laws of the Pentateuch, no matter how spiritual in significance, are still to be observed. In fact, Philo denounced those allegorists who regarded practical observances as superfluous (Migr. 93). His main concern, however, was to impress the authority of the Bible upon Jews and Gentiles by showing that its symbolic language concealed profound metaphysical and psychological truths; and that its laws were meant to guide the soul toward the contemplation of God by freeing it from material attachments. His allegorism bears all the marks of a deeply personal spiritual religion.

(3) In the medieval period allegorism in its proper sense, as distinct from the mere employment of metaphorical interpretation, was applied by Jewish neoplatonic and Aristotelian philosophers and kabbalists. By contrast, the Jewish theologians following the methods of Islamic *Kalām, did not en-

gage in allegorism but were content to treat biblical anthropomorphism as metaphors (*taʿwīl*). *Saadiah Gaon laid down the philosophic position on the propriety as well as the limitations of metaphorical interpretation (*taʿwīl*) and it was later acknowledged by Abraham *Ibn Daūd and *Maimonides. According to Saadiah, the literal meaning of a biblical text is to be discarded in favor of *taʿwīl* in four instances only: if it is contradicted by sense perception, by reason, by some other explicit text, or by rabbinic tradition qualifying its apparent meaning. He argued that if license were given for metaphorical interpretation in other than these four instances, all the commandments of the Torah and all the miraculous events narrated in Scripture might be explained as mere metaphors (*Book of Beliefs and Opinions*, 7). Saadiah upholds the literal meaning of passages presumably referring to the resurrection of the dead, but insists on the metaphorical sense of the anthropomorphic descriptions of God. His use of the *taʿwīl* method is sufficiently restricted to prevent allegorism on any significant scale.

(4) Under the impact of neoplatonic and Aristotelian philosophy the situation changed fundamentally. Having expanded the meaning of *taʿwīl* to include the philosophic interpretation of doctrinal matters, the Islamic neoplatonic and Aristotelian philosophers distinguished between the “inner” (*bāṭin*) and “apparent” (*zāhir*) meaning of certain words and teachings of the Koran, treating the “apparent” meaning as an allegory replete with philosophic truth. Concurrent with this distinction it was often held that the philosophical truths contained in the allegory should be kept secret from the multitude. Following this tradition Moses *Maimonides insists that the true meaning of certain biblical passages, such as Ezekiel’s vision of the Chariot, and chapters in Proverbs, etc., lies in the philosophical truths which they express in allegorical fashion and which should not be revealed to the philosophically untrained. Applying the simile of Proverbs 25:11 (“A word fitly spoken is like apples of gold in settings of silver”), he said that “the inner meaning bears the same relation to the apparent one as gold to silver” (Guide, introd.). Here allegory proper comes into its own. The “inner” meaning is considered superior to the “apparent” one since it alone establishes “the truth in all its reality” (*ibid.*). Philosophic truth, as far as it is demonstrable, is thus made the arbiter of biblical exegesis. Maimonides was less radical when he interpreted anthropomorphic or spatial terms applied to God as either homonyms or metaphors. Maimonides cites the rabbinic phrase, “The Torah speaks in the language of men” (BM 31b), in the sense that Scripture speaks of God in terms appropriate to the mental capacity of the multitude (Guide 1:26). This phrase had already been applied in this sense by earlier exegetes and theologians such as Judah *Ibn Quraysh, *Jacob b. Nissim, *Baḥya ibn Paquda, Judah *Halevi and others. The question of the legitimacy of the allegorical method had been raised by Abraham *Ibn Ezra, who rejected the search for hidden meanings (*sodot*; *ḥidot*) in passages whose plain meaning did not conflict with reason or sense perception. He also asserted that the apparent and the

inner meanings should be allowed to coexist, like body and soul (Commentary on the Torah, introd., method no. 3).

The issue of the merits or demerits of allegorism became pronounced at the close of the 13th century and was keenly contested in the polemical literature of the second *Maimonidean controversy. While Maimonides declared as allegorical all biblical passages (1) announcing a change in the laws of nature (in the messianic age), (2) dealing with the resurrection of the dead, and (3) foretelling the ultimate destruction of the world, he warned (as reported by Joseph ibn *Aknin) against allegorizing biblical laws.

Maimonides interprets Ezekiel's vision of the Chariot as an allegory of metaphysical doctrines conforming to his neoplatonic brand of Aristotelianism, but he saw no compelling reason to allegorize the biblical account of the createdness of the world, maintaining that Aristotle's view of the eternity of the world had not been demonstrated. Other instances of allegorism in Maimonides are that the ladder in Jacob's dream means the ascent of prophetic knowledge; the adulterous wife in Proverbs 7 is an allegory of matter; the Song of Songs is an allegory of man's love for God. Some of Maimonides' successors went beyond the limitations he had imposed upon himself. Following the more radical allegorism of *Averroes, Isaac *Albalag interpreted the biblical account of the creation in the sense of eternal creation. *Levi b. Gershom, taking his cue from Maimonides' cryptic remarks in the *Guide* 2:30, saw in the story of Paradise an allegory of the human soul, its faculties and its rise to felicity. Jacob *Anatoli and *Levi b. Abraham of Villefranche (author of *Livyat Hen*) were frequently denounced as radical allegorists. There is, however, little evidence in their works to justify this accusation. The animosity toward allegorism shown by the traditionalists (e.g., Solomon b. Abraham *Adret) stemmed chiefly from their observation that the philosophical interpretation of Scripture tended to weaken practical religious observance. Jacob b. *Reuben, author of *Milhamot ha-Shem* (12th century), had already polemicized against those who "twist the verses of Scripture by the allegorical method" (*be-derekh dimyon u-mashal*) and thereby "bring themselves into disrepute" (*le-mashal ve-li-sheninah*; ed. J. Rosenthal (1963), 37). The more orthodox type of Jewish philosophy, aroused by the dangers of Averroism, on the one hand, and the rising power of Kabbalah, on the other, did not discard allegorical interpretation but made it subservient to dogmatic beliefs, strongly emphasizing the validity of the literal meaning side by side with the allegorical. Joseph *Albo (*Sefer ha-Ikkarim*, 3:21) pointed out that the Torah was called "testimony" (*edut*) and as such should be taken as literally as would be a witness in court. Hence, its narratives and laws must not be negated through allegorism, notwithstanding the right to see in them symbols of something higher and more precious than the literal sense. Philosophizing preachers like Joshua *Ibn Shu'ayb, Joseph b. Shem Tov *Ibn Shem Tov and his son Shem Tov, Isaac *Arama and others were eager to plumb the deeper meaning of Scripture and rabbinic *aggadah*, laying particular stress on the themes of creation and

providence. Their sermons are an interesting blend of homiletics (*derash*) and allegory (*mashal*; *sod*). Some of them exhibit strong traces of Kabbalistic influence. *Bahya b. Asher's commentary on the Torah exemplifies the trend to make use of philosophic and kabbalistic interpretations alike. It offers interpretations: (1) by the literal method; (2) by the homiletical method; (3) by the method of reason (*sekhel*), i.e., the philosophical method; and (4) by the method of Kabbalah. Allegorism, then, in its strict sense is here two-faced, rational and mystical.

[Alexander Altmann]

EXEGESIS AMONG JEWS IN THE MODERN PERIOD

Jewish biblical exegesis in the period of the Enlightenment must be understood mainly against the background of the period itself. The main concern of the Enlightenment among Western European Jewry was the enlightenment and education of the Jews – and the Bible served as a means for achieving this goal. Moses *Mendelssohn, the "father of the Enlightenment" among the Jews and its earliest spokesman, was also the father and founder of the biblical exegesis of the time, through his bilingual project, the German translation of the Bible and its Hebrew *Biur* (*Be'ur*; "commentary"; see above: Translations, German). Mendelssohn's purpose in undertaking this project was twofold. On the one hand, he wished to open to the Jews a gateway to general culture, since he believed that the Bible could serve as a cultural bridge between European Jews and non-Jews. On the other hand, Mendelssohn wanted to educate the Jews toward good taste and to help them develop an aesthetic outlook, especially toward the Bible.

Mendelssohn's German translation of the Bible introduced nothing new in terms of content, but was novel in terms of form. It is written in a literary, ornate German which is aimed at removing the Jews from Yiddish and at bringing them closer to the Enlightenment through knowledge of the

German language and its literature. The writing of the Hebrew “commentary” to the Torah was actually carried out by various people who were commissioned by Mendelssohn, but Mendelssohn’s stamp and his viewpoint are manifest in the commentary (particular mention should be made of Solomon *Dubno, who interpreted Genesis, and Naphtali Hirz Wessely, who interpreted Leviticus). The method and approach of Mendelssohn and his group were influenced by contemporary Christian biblical research and commentary. It should be pointed out that in 1753, approximately 15 years before the beginning of the project, three basic works were published which ushered in a revolution in biblical research, each of which reflected a particular approach: R. *Lowth’s book on form criticism (*Praelectiones academicae de sacra poësi Hebraeorum; Lectures on the Sacred Poetry of the Hebrews*, 1829); J. *Astruc’s work on source criticism (*Conjectures sur les mémoires originaux dont il paroît que Moïse s’est servi pour composer le livre de la Genèse*); and C.F. Houbigont’s work on text criticism (*Biblia hebraica cum notis criticis et versione latina ad notas criticas facta*, 4 vols.). (See below, Bible research and criticism). A short while later J.G. Herder’s book on Hebrew poetry (*Vom Geist der hebraeischen Poesie*, 1782) and J.G. Eichhorn’s introduction to the Old Testament (*Einleitung in das Alte Testament*, 3 vols., 1780–83) were published.

Mendelssohn’s “commentary” was first intended to be an explanation of the reasons for translating the Bible, but it broadened into a comprehensive commentary on the entire Pentateuch. The “commentary” places emphasis on grammatical points, cantillation points, and elements of style, and is based both on traditional Jewish exegesis and biblical research. In matters of style, the commentary relies mainly on Lowth and Herder (see the summary of Mendelssohn’s aesthetic views in the preface to Ex. 15). The “commentary” on the Pentateuch was written in simple language and in a scholarly Hebrew style, and despite the fact that five authors collaborated in its composition, the unity of language and style was preserved because of Mendelssohn’s editing. In the “commentary” Mendelssohn was attempting to establish a single and homogeneous method for the study of the Bible among the Jews, and for this reason early Jewish commentaries do not appear alongside his commentary (for it is, essentially, an eclectic exegesis). The commentary was very popular and was reprinted about 20 times.

Mendelssohn’s followers continued with the method established in the “commentary” in interpreting the Prophets and the Hagiographa, but they made no innovations. These interpretations are only a collection of commentaries, particularly from the medieval commentators, but the introductions to these commentaries were influenced by biblical research, especially by Eichhorn’s introduction to the Old Testament.

In the generation after Mendelssohn, young Jews studied in the German universities and adopted the critical method which was prevalent there. Thus they moved to critical interpretation, which was also written in German. In the 19th cen-

tury, German Jews wrote a number of works on biblical research, but the only one who also dealt with exegesis was H. Graetz in his commentaries to the Song of Songs, Ecclesiastes (1871), and Psalms (1881). The Mendelssohnian Enlightenment’s view of the Bible as an independent aesthetic, religious, and moral tract found expression only in Western Europe and Italy (see below), while in Central and Eastern Europe, the Bible was viewed mainly from a talmudic perspective, and the approach to the Bible took on the form of “lower criticism,” rather than “higher criticism.”

Most noteworthy among the commentaries of Eastern Europe is that of Meir b. Jehiel Michael *Malbim (1809–79). While it was written in the period of the Enlightenment, and reflects, in a number of places, influences of the Enlightenment, this commentary is nonetheless an authentic and typical work of “the culture of the ghetto as it developed among the outstanding and brilliant scholars of Eastern Europe” (Segal). This commentary, which follows the method of *pilpul* (casuistry and harmonization), contains *halakhah* and *aggadah*, philosophy and Kabbalah, philological investigation and moralistic homilies. Despite his declaration that he was interpreting the text in accordance with its literal meaning, Malbim did not recognize the boundaries between literal and homiletical exegesis. He collected investigations of style and language, classifying them into 613 rules, corresponding to the number of the commandments of the Torah. He gathered these rules from the Midrash, and added to them some of his own.

In Western Europe, in contrast to Eastern and Central Europe, the Enlightenment penetrated Italy and influenced Jewish Italian commentators, such as Samuel David *Luzzatto (*ShaDaL*; 1800–60) and others. Luzzatto combined a comprehensive knowledge of traditional Jewish exegesis in all its forms with a knowledge of non-Hebrew biblical research. He did not, however, tread the beaten path, but was both independent and original, disagreeing with both early and late commentators. He drew on early and late commentaries, ancient translations, and Semitic philology. He had a poetic bent, and understood biblical poetry. Like Mendelssohn’s, his work was bilingual and included translation and interpretation. He translated and interpreted the Book of Isaiah (1855). His commentary on the Torah was collected for publication from his lectures in the rabbinical seminary in Padua (1871). His commentaries on Jeremiah, Ezekiel, Proverbs, and Job were published by his son (1876).

Luzzatto introduced many new elements in his interpretations and investigations, but at the same time he relied on his predecessors. He introduced the method of textual emendation (outside of the Pentateuch) into Hebrew biblical analysis, his emendations following his own rules of interpretation. The textual emendations he allowed himself to make were based on the incorrect separation of words in the traditional text, similar letters in the ancient Hebrew script and square (Aramaic) characters, dittography, haplography, incorrect vocalization and cantillations, metathesis, and abbreviations. In these emendations Luzzatto used translations and manuscripts of

the Bible. His emendations serve as fundamental touchstones in biblical research.

While non-Hebrew biblical research reached its peak and culmination at the end of the 19th century, its influence on Hebrew interpretation was gradual. At the end of the 19th century and at the beginning of the 20th century there were three Hebrew commentators whose exegesis was novel and original: Meir *Friedmann (Ish-Shalom), Benjamin *Szold, and Arnold *Ehrlich. Friedman and Szold did not rely in their commentaries on non-Hebrew criticism, though they were acquainted with it, but rather on the rabbinic scholars and traditional exegesis, while Ehrlich displayed originality, both in relation to traditional Jewish exegesis and non-Hebrew biblical research.

Arnold Ehrlich's writing was bilingual. His biblical commentary on difficult passages, *Mikra ki-Feshuto* (3 vols, 1899–1901), was written, according to him, "in Hebrew for the sake of my brethren and my people who only know Hebrew." He later published an expanded version of this work in German: *Randglossen zur hebraeischen Bibel* (7 vols., 1908–14). He had a free attitude toward the Bible and his approach was almost secular. He directs sharp criticism against the method of the non-Jewish critics, but emphasizes that in his system "interpretation is primary while criticism is secondary." Rather than referring to the Documentary Hypothesis, Ehrlich prefers to assign "early" and "late" dates to specific passages based on linguistic usage, concepts and institutions. Comments on historicity such as the denial of a factual Egyptian enslavement or exodus are buried in notes to specific passages. Exegesis though, remains the major and decisive basis of his work. With his erudition, his knowledge of Semitic languages, and especially his intuition, his interpretations are often very much to the point. Ehrlich's contribution is described by Orlinsky in the following manner: "The *Randglossen* by A.B. Ehrlich ranks as one of the more important and better-known contributions to biblical studies textual and contextual." While his Hebrew commentary contains some minor emendations, Ehrlich's German commentary is replete with emendations. Haran says of Ehrlich's place in the history of Jewish biblical exegesis: "In his partially secular approach to the Bible he did not lag behind the period of the Enlightenment but rather anticipated the national revival. This moment assures his place at the crossroad of the two periods."

In the period of the Enlightenment, Judaism did not liberate itself from a dogmatic approach to the Bible. The extent of the criticism of Jewish scholars depended on the degree of holiness of the particular section of the Bible with which they were dealing. Thus, they dealt mainly with the Hagiographa, less with the Prophets, and very little with the Pentateuch. As has been stated, this investigation dealt with "lower criticism" and not with "higher criticism," which is concerned with the character of the author, the composition of the work, its editing, and its time. The national revival brought about a change and new evaluation of the Bible. Non-Hebrew biblical criticism made deep and incisive incursions into Hebrew litera-

ture. The depth of this penetration is reflected in the thought of *Aḥad Ha-Am, "the father of spiritual Zionism," and it was he who wished for the publication of a Hebrew modern, critical interpretation of the Bible. This desire was actually fulfilled by the exegetical activity of Abraham *Kahana.

Abraham Kahana surrounded himself with the best Jewish scholars of Eastern and Western Europe and divided the labor among them (Samuel by M.Z. Segal; Isaiah by S. Krauss; the Minor Prophets by J.B. Weinkopf, D.S. Loewinger, G. Hirschler, M.L. Margolis, and P. Chajes; Psalms by P. Chajes; Song of Songs by A. Kaminka; Lamentations by F. Perles; Esther by G. Hirschler; Daniel by M. Lambert). He himself interpreted much of the remainder (Genesis, Exodus, Numbers, Jonah, Haggai and Zechariah, Proverbs, Job, Ruth, Ecclesiastes, and Ezra and Nehemiah). Although the commentary was not completed (it was published in 1904–1930), until 1990 it was the only multi-volume critical commentary on the Bible in Hebrew. This series is not uniform and includes interpretations of varying value (the best are those of Chajes on Psalms and Krauss on Isaiah). It gives very clear expression to the conclusions of non-Hebrew analytical investigation in Hebrew and Semitic philology, in comparative literature, based on the great discoveries in the ancient East, and in the Documentary Hypothesis in the study of the Pentateuch.

N.H. *Tur-Sinai (Torczyner), who engaged extensively in the study of the Bible and the Hebrew language, collected his commentaries and summarized his studies in this area in his book *Peshuto shel Mikra* (4 vols. in 6, 1962–68). There is a similarity in name, content, and method, between this work and that of Ehrlich. Tur-Sinai's work also reflects a broad knowledge of Semitic languages together with a familiarity with rabbinic scholarship and the early translations, but numerous textual emendations are suggested in his commentary. Of these suggested emendations, there are some which have been accepted by many scholars. Tur-Sinai wrote a special commentary to the Book of Job, which has been published in various corrected editions (2 vols., 1941, 1954; Eng., 1957). This work, which is the crowning achievement of his exegetical career, is also marked by the same characteristics; and the argument that Job was translated from Aramaic sometimes dictates the interpretation. M.Z. *Segal, who interpreted the Book of Samuel within the framework of Kahana's project (1919, 1922), returned to it later and published a new interpretation (1956), which is very different from the original one. Segal also published many investigations on various books of the Bible. Umberto *Cassuto intended to compose a broad and comprehensive interpretation of the Pentateuch, but did not succeed in completing the work. He did interpret the entire Book of Exodus (1952, Eng., 1967) but only managed to reach chapter 13 of his interpretation of Genesis (2 vols., 1944–49; Eng., 2 vols., 1961–64). Cassuto opposed the Documentary Hypothesis in his comprehensive Italian investigation (*La questione della Genesi*, 1934), and briefly in his Hebrew work (*Torat ha-Te'udot*, 1941; *The Documentary Hypothesis*, 1961). A conception of the unity of the Torah and its form served as a

basis for Cassuto's philologic-aesthetic approach. In addition to his monumental work *Toledot ha-Emunah ha-Yisre'elit*, Y. Kaufmann also engaged, toward the end of his life, in interpreting the books of Joshua (1959, 1963²), and Judges (1962), which actually only served to complete and consolidate the foundations of his theories, both on the history of Israelite religion and on the antiquity of the writing and editing of the books. In these outstanding analytical interpretations Kaufmann inveighs strongly against the German school of biblical analysis of Wellhausen and his circle. In his comprehensive introductions, both to the two commentaries as a whole and to the various chapters, he presents a knowledgeable discussion of the Bible and its research. He attempted to prove that his own method was correct and was the one to be preferred. In his commentaries he demonstrated that the method of omitting a verse or dividing it into various sources and different editions is not always essential. The need for a Hebrew multi-volume critical commentary is finally being met by *Mikra le-Yisrael* (1990–).

[Isaac Avishur]

BIBLE RESEARCH AND CRITICISM

“Research and criticism” of the Bible is, in one sense, as old as, if not older than, the traditional Bible. Some modern scholars have devoted great efforts to the attempt to trace the details of the process whereby the older semi-canonical materials which went into the final shaping of the canon itself were reapplied and made relevant to their day. After the closing of the canon, quite similar methods continued to be used for centuries (see above, Canon). That is to say, from a purely literary or external (as distinguished from a religious or theological) viewpoint, the distinction between canonical and non-canonical literature is artificial.

Increasing attention has been devoted to the study of the history of the interpretation of the Bible as methods and schools have proliferated. It may be observed that, *mutatis mutandis*, the problem has always been how to be both historically faithful to the text's original significance as well as adequately to convey its meaning and relevance to the contemporary situation. Furthermore, it may be asserted that, in general, the precise methods used in this task at any given time tend, up to a point, to be quite similar in both Judaism and Christianity. Thus a certain common influence exerted by the prevailing philosophy of the time is often noticeable: the strong Platonic influences of the early Common Era; the mystical and Aristotelian influences of the Middle Ages; the philosophical impetus provided by the Renaissance; and the

rationalism, historicism, existentialism and most recently, post-modernism. Correspondingly, the precise methods in the two communities also often have much in common: the multiple (and often fourfold) senses ascribed to a text in the Middle Ages as well as the specific types of literary and historical investigation employed in modern times.

Nor is it surprising to note a fair amount of interaction and cross-fertilization: developments within Christianity tended to set the general cultural tone and atmosphere, while there was always much in Judaism's retention of the grammatical text (even when interpreted allegorically) which Christianity, especially with its early preference for the Septuagint, was always in danger of forgetting. Jewish influence on Christian interpretation is especially clear in the case of the dependence of the Antiochene school and of Jerome on the rabbis, and the influence especially of Rashi via Nicholas of Lyra and Reuchlin upon Luther, not to speak of the many contributions by modern Jewish scholars. These generalizations begin to hold true as soon as the two streams diverge. It has long been realized that New Testament principles of interpretation had much in common with that of the mainstream of rabbinism (classically in H.L. Strack and P. Billerbeck, *Kommentar zum Neuen Testament aus Talmud und Midrasch*, 1922–56, and J. Bonsirven, *Exégèse rabbinique et exégèse paulinienne*, 1939). More recently, it has become clear from Qumran that the specific apocalyptic motifs of the Essenic stream of Jewish thought were also very influential in early Christianity (see F.F. Bruce, *Biblical Exegesis in the Qumran Texts*, 1959).

Early Moves Toward Critical Study

Much of the intellectual endeavor of both Judaism and Christianity, until well after the Reformation, was directed to Bible study. In retrospect, various individuals and schools seem to stand out as precursors of modern biblical study. Among these must be noted: the Christian school of Antioch and especially Theodore of Mopsuestia (d. c. 428); the philological emphasis of Saadiah Gaon, especially under the influence of the Aristotelian revival in the Muslim world; its sequel in a sense when Aristotelianism conquered the West in the rationalism of Maimonides and somewhat related manifestations in Rashi, David Kimḥi, and Abraham Ibn Ezra within Judaism, and the 12th-century Victorine School, and Nicholas of Lyra in the 13th century among the Christian expositors.

With the Reformation came a tremendous upsurge of emphasis upon literal, “grammatical” exegesis. “Allegory” and multiple interpretations were indignantly rejected – although, by most modern definitions, sometimes retained under a different title. Simultaneously, the Renaissance and its resurgent humanism were placing great stress upon early sources and plain meanings; in comparison with the ecclesiastical revolution it was sometimes hard to say what was cause and what effect. Most significant, however, in terms of future developments, were the extra-ecclesiastic philosophies which began to appear and slowly gained momentum to usher in the “modern” era. The fundamentally new situation which

was gradually developing was that the context of Bible study would no longer exclusively be the synagogue, the church and their related yeshivahs, seminaries, and faculties of theology, but the secular university as well. Among the major names which must be mentioned are René Descartes (d. 1650), who with his *Cogito ergo sum*, “I think therefore I am,” virtually provided the creed of the rationalism which dominated the century after his death; Benedict *Spinoza, who applied the new thought more specifically to biblical study, including a portentous questioning of the Mosaic authorship of the Pentateuch; Hugo *Grotius, a Dutch jurist, whose probings have sometimes earned him the title of the “father” of the historical-critical method; Gotthold Ephraim *Lessing, with his famous pronouncement that “accidental truths of history can never become proof of necessary truths of reason”; and Immanuel *Kant, whose emphasis upon “practical reason,” i.e., man’s conscience and its ethical judgments, was to be of incalculable influence in succeeding years. With Kant’s divorce of the “phenomenal” and “noumenal” worlds, the stage was set for that loss of the authority of an inspired Scripture and of a sense of the transcendent in general, which dominated most of the succeeding centuries. Much of the new mood was introduced into Judaism especially through Moses Mendelssohn. In both Judaism and Christianity, there was (and sometimes still is) uncompromising resistance to “higher criticism” (i.e., those aspects of biblical criticism which deal with literary analysis and historical and ideological considerations; as opposed to “lower criticism” which deals with the text, canon, etc.) because of its original connection with rationalistic and other anti-supernaturalistic philosophies. In this climate, precursors of the more technical aspects of the critical study of the Bible also began to appear, especially Isaac la *Peyrere and Richard *Simon, who postulated various authors of the Pentateuch, and particularly the 18th-century Jean *Astruc, who first used criterion of different Hebrew names for the deity in Genesis. These and other preliminary critical investigations were summarized and ordered by Johann *Eichhorn in a three-volume work on the Old Testament. Two 18th-century scholars were especially important in developing further the theoretical foundations of the movement, specifically in breaking away from the restraints of ecclesiastical dogma and tradition. Johann Semler (d. 1791), especially in his *Abhandlung zur freien Untersuchung des Kanons*, campaigned for an approach to the Bible exactly “like another book,” free from all dogmatic pre-assumptions. Similarly Johann Gabler (d. 1787), often known as the father of “biblical theology” because of the distinction he advocated between that discipline and the traditional dogmatic theology, urged that the latter should concentrate on biblical teachings of universal relevance, while “biblical theology” should concern itself with historically and temporally conditioned matters.

Nineteenth-Century Pentateuch Criticism and Wellhausen

Critical investigations into the *Pentateuch in particular continued throughout the 19th century by scholars like Martin de

Wette (d. 1843), the first to isolate Deuteronomy as a separate source and associate it with Josiah’s reformation (11 Kings 22), and Heinrich Ewald (d. 1875), a prolific writer who changed his own position repeatedly, thus typifying the exploratory nature of that period’s investigations. By 1850, late datings for Daniel, Second Isaiah (i.e., Isaiah 40–66), the second part of Zechariah, and Psalms had become generally accepted, but no unanimity had been reached on the Pentateuch. W. Vatke’s recognition of the lateness of the *Grundschrift* (the later “Priestly Document”) eventually provided the needed breakthrough, but his thoroughgoing Hegelianism and Ewald’s rejection of his views led to a stalemate which was broken only by Wellhausen and his congeners. When this intermediate period (after Eichhorn) came to an end, a certain “critical orthodoxy” was introduced in the epoch-making *Prolegomena to the History of Israel* of Julius Wellhausen (1844–1918) in 1878 (Eng. tr. 1965). Others beside Wellhausen were influential in the formulation of the final hypothesis and others worked alongside him in its subsequent elaboration, but Wellhausen’s work so successfully presented and popularized the approach that few dispute the appropriateness of epithets like “Wellhausenian,” “classical criticism,” etc.

The great significance of Wellhausen’s achievement lay in the fact that it represented not only the latest in a series of isolated critical investigations, but that these were integrated into an entirely new synthesis and reconstruction of the total course of Israel’s religious history, to the stages of which the various literary documents were related. Although L. Perlitt (*Vatke und Wellhausen*, 1965) has attempted to disprove it, it still seems that, however indirect, the ultimate philosophical inspiration of Wellhausen’s reconstruction was the idealistic monism of Hegel. (For better or for worse, much of the historicism and immanentalism of this period survived even in the later corrections, and it is doubtful if even the most determinedly conservative today have remained uninfluenced by this “Copernican revolution” which stresses that things can be understood only when their history is known.)

Wellhausen postulated a slow evolutionistic rise from the animism of the earliest, “patriarchal” periods to the “ethical monotheism” of especially the eighth-century prophets. The purest of the pentateuchal sources, from this perspective, was judged to be J or the Yahwist (which used the divine name transliterated as YHWH; JHWH in German), dated to the ninth century, followed by a slow but sure degeneration toward formalism and institutionalism in the subsequent sources, E or the Elohist (using the divine name *Elohim*) perhaps a century later, D or the Deuteronomist (the author of the Book of Deuteronomy) with his incipient “biblicism,” writing in connection with Josiah’s abortive ventures shortly before the fall of Judah, and P (author of the Priestly document) during or after the Exile, providing the constitution for the small semi-independent hierocracy within the vast Persian empire. All of the sources were understood as providing reliable information primarily only of the period of composition, not of the earlier periods which they described. The Pentateuch was alleg-

edly given its final shape by circles akin to P about the time of Ezra. It was asserted that during the same period, and indeed down to that of the Maccabees, the earlier prophecies of doom were supplemented by more optimistic oracles, and most of the psalms, understood mostly as gems of individualistic piety, were also composed. Vast modifications of Wellhausen's synthesis continue to be made, and the underlying unilinear notion of progress in history has been almost totally repudiated; nevertheless, very little scholarship has turned its back on him completely and his influence is still to be widely detected in biblical research.

In general, it is probably true that much Jewish scholarship, even that which was not totally traditionalistic, was initially and, to a degree, still remains rather cool toward the standard results of German biblical scholarship, well aware of the subtle anti-Judaism, if not antisemitism, which by no means necessarily but very often *de facto* accompanies any depreciation of the Old Testament – and it is undeniable that such implications were often present in much of the “classical” critical literature. Prominent 20th century Israeli scholars including U. *Cassuto attacked the hypothesis frontally, and a coolness is apparent in the works of, M.H. *Segal and others. (Y. Kaufmann opposed Wellhausen's evolutionary explanation of monotheism and differed on the dating of P but fully accepted the Documentary Hypothesis.)

The Influence of Archaeology

Probably the major development that led to a modification of the Wellhausenian synthesis was archaeology (and it is perhaps in this area and the subsidiary philological ones that modern Jewish scholars, both in Israel and elsewhere, have made their major contributions). Apart from the various particulars, archaeology's contribution can be summed up by saying that it provided an actual, historical context for interpreting ancient Israel's life and literature instead of the *a priori*, philosophic one on which Wellhausen had largely depended. “Biblical Archaeology” was especially prominent in the United States and Israel in the middle decades of the 20th century. For some of its leading practitioners such as W.F. *Albright and Nelson *Glueck, G.E. Wright and Yigael Yadin the general net effect of archaeological discoveries was seen to enhance the general trustworthiness and substantial historicity of the biblical tradition, although not in the naïve, uncritical sense sometimes expressed by the “prove the Bible true” slogan. Israel's military victory in 1967 facilitated the exploration of the west bank of the Jordan River, the heart of ancient Israel, and the Sinai desert. The newer archaeological evidence has undercut the claims of “substantial historicity,” but nowhere to the extent claimed by extreme minimalists.

Gunkel and “Form” Criticism

The first “school” to exploit the new resources provided by archaeology was that of *Religionsgeschichte* (“History of Religion”) and, closely allied with it, that of form criticism. In both cases, Hermann *Gunkel (1862–1932) was probably the leading spirit, and his name can be used to epitomize a considerable

diversity almost to the extent that Wellhausen's name does for the preceding era. Not only the newer discoveries, but also the tradition of romanticism, as exemplified in the studies of Johann *Herder of ancient Hebrew poetry and to a certain extent the theology of Friedrich Schleiermacher (d. 1834), were highly influential in determining the direction of his work. Various anthropological investigations contributed to the new climate as well. During his lifetime, Gunkel's approach often won only very slow and grudging acceptance from his German colleagues schooled in the more classical approaches, but today it can safely be said that even in Germany, Gunkel generally determined the direction of 20th-century biblical research far more directly than Wellhausen.

In essence, Gunkel's thesis was that in ancient society each *Sitz im Leben* (“life-setting”) had its own *Gattung* or “form” (pattern, outline, style, etc.), and the latter could really be understood only in the light of the former. In his *Die Sagen der Genesis* (“Legends of Genesis,” 1901) and *Einleitung in die Psalmen* (“Introduction to the Psalms,” 1933) and a host of other works, he proposed categories which, in the main, are largely still accepted today. A certain sympathy for the ancient literature on its own terms tended to result, as well as a disposition to date the literature, or at least its roots, much earlier than had previously been the case. Even the cult began to receive more sympathetic treatment as indisputably an important component of pre-secular cultures. Similarly, the recognition of the role of memory in ancient cultures, preceding and continuing alongside written materials, led to consideration of the nature of oral tradition as well as of scribal habits and strictly textual criticism. All these aspects of the new movement were developed, especially by Gunkel's successors, in different ways by various groups and individuals too numerous to detail here.

Perhaps the greatest weakness of the central form-critical effort was its very concentration on individual units, thus, ironically, often leading to an atomism quite similar to the older “scissors-and-paste” literary criticism which it had sought to correct. The subsequent corrective movement of “tradition criticism” (so-called if it dealt with oral materials; often called “redaction-criticism” if the subject was written texts) has attempted to compensate for this weakness by trying to ascertain the “laws” and the process by which the individual units were united. Another weakness was the tendency – in practice at least – to assume the non-historicity of the material unless there was overwhelming evidence to the contrary, or at least to argue that the question itself was irrelevant. The more archaeologically oriented scholars in particular took exception to this tendency, arguing that “external evidence” was required in order to test factuality, something which mere literary techniques could never do, and that Israel's own subjectivity made the question of factual reality something which could not simply be ignored. This division of opinion was for a long time the most serious of all within the ranks of 20th-century biblical scholarship. Many aspects of the division as concerns the early (pre-monarchical) history

of Israel may be seen in the two major mid-twentieth century histories of Israel by the American John Bright (1959) and the German Martin *Noth (1950). The disposition of some “biblical theology” writers (especially Gerhard von Rad), to argue that Israel’s original theological interpretations stand even if there are no factual traditions behind them may be of help to the theologically minded but to few others.

Certain of the *religionsgeschichtliche* developments stemming from Gunkel’s work were at least as problematic. Whereas Wellhausenianism and classical liberalism had solved the problem of distance and relevance by a drastic reductionism to what allegedly had timeless truth and value (mostly ethics!), *Religionsgeschichte* tended to accentuate – and often exaggerate – the distance of the material from modern man and its strangeness to him and evidenced little or no concern for the questions of the relevance and factuality of the material, or for the contemporary philosophical and theological debates in general. Furthermore, the exploitation of the many parallels between Israel and her neighbors easily developed into a “parallelomania” (Sandmel) which judged Israel almost totally in the light of her neighbors. The “pan-Babylonianism” of A. *Jeremias, Friedrich *Delitzsch, and H. *Winckler was one of the major manifestations of this mood, but it continued to some extent in the later “myth and ritual” school of S.H. Hooke, the Uppsala school of I. Engnell, and in the works of Sigmund *Mowinckel. (Not quite so all-encompassing and pretentious were the collections of comparative materials in the many works of J. *Morgenstern and T.H. *Gaster.) Impressive theories about “divine kingship” in Israel and about an alleged autumnal “New Year” festival, strongly patterned along foreign lines are especially associated with Mowinckel. Rival theories, drawing more upon the biblical sources as they now stand, were developed especially by Artur Weiser and Hans-Joachim Kraus. One of the most devastating critiques ever leveled against the cultic “patternism” common to many of these efforts was H. *Frankfort’s *Kingship and the Gods* (1948).

Furthermore, in connection with many of the theories of this type, the common assumption was that the cult created its own supporting stories which were later “historicized,” rather than celebrating historical events to begin with. Similarly, many traditio-historical theories saw the cult as the major factor in not only the production of the stories but in their canonical ordering and interrelationship as well. One of the more curious developments in the attempt to understand biblical antiquity on its own terms was the attempt to isolate “Hebrew thought,” especially in contrast to “Greek” (classically perhaps in T. Boman, *Hebrew Thought Compared With Greek*, 1960). While this line of investigation was helpful in excluding certain alien concerns of Western philosophy and rationalism, it easily left the impression that the difference was intrinsically linguistic or ethnic, rather than a matter of pre-secular and pre-philosophic (not “prelogical”!) forms of expression. Sometimes this approach was confused with “biblical theology,” and at other times it confused the “mythologic” of paganism with Israel’s “empirical logic” (the terms

are Albright’s) in an indiscriminate “primitivism” (the weakness of J. Pedersen’s *Israel* (1926), which, however, is still useful). James Barr leveled especially devastating critiques at this approach. H. Frankfort’s *The Intellectual Adventure of Ancient Man* (1946; later reprinted under the title *Before Philosophy*) remains an outstanding study.

“Biblical Theology”

In a way, the last of the supplements to classical Wellhausenianism, although it often overlapped with the movements already noted above, was that of “biblical theology,” a movement that initially attracted minimal attention in Judaism. Its roots lay in the post-World War I disillusionment with both the reductionism of the earlier liberalism and the deliberate “irrelevance” of *Religionsgeschichte* (as expressed also in the “neo-orthodoxy” of the Swiss Reformed theologian Karl Barth (1886–1968) in particular). While unwilling to return to the pre-Kantian “orthodoxy” of an objective norm in an inspired Scripture, this movement did strongly affirm the truth of the Bible’s “record of revelation” because it allegedly “rang true” to man’s existential condition. It revolted especially against the earlier critical tendency to limit criticism to questions of date, authorship, sources, etc., without pressing on seriously to consider the message. No doubt, since Gabler’s manifesto, most “biblical theology” had in actuality been little but “history of Israel’s religion.”

Most work in this field tended to have somewhat of a *Heilsgeschichte* (“salvation history”) character. However, no unanimity at all was reached concerning the order or system which was most appropriate, and on this reef the movement itself eventually foundered. Among the major names may be mentioned: Edmond Jacob (1955) who produced a theology using quite traditional categories; Walther Eichrodt (1933) who tried to arrange his material around the internal biblical category of *covenant; and Gerhard von Rad (1957), author of the last and perhaps the greatest of the works of this school, who attempted to return to a more strictly chronological arrangement, thus abandoning all attempts to find any real internal unity in the material. Hence it became plain that this movement too had come full circle, and in subsequent years works on the “religion” of Israel again began to supplant “theologies.” Interestingly, Jews showed little interest in biblical theology in its heyday but now seem increasingly open to the enterprise (Brettler in bibliography).

Finally, there is the ecumenical spirit of the age, which has seen Roman Catholicism join most of the rest of Western Christendom and Judaism in the historical-critical enterprise. Jewish and Catholic Bible scholars now participate in collaborative scholarly projects that were once exclusively Protestant. (Oddly, despite Jewish participation in Protestant translations, no Christian scholars have participated in the translations or commentaries sponsored by the Jewish Publication Society.) To the extent that this cooperation has progressed beyond theologically neutral philological matters, probably two traditional blindspots of the previously dominant Protestantism

appear to be increasingly corrected: its disregard of cult and ritual, and its tendency to view "Torah" as essentially legalistic, and less worthy an object of study than the more "spiritual" parts of the Bible.

Archaeological Evidence

The contributions of archaeology, beyond those already mentioned, are especially significant in the area of lexicography and textual criticism. In general, the literary finds discovered since 1929 at Ras Shamra (the ancient *Ugarit destroyed in the 12th century B.C.E.) on the northern Phoenician coast are easily the most important for biblical studies. Here in three major epics and many other literature in the *Ugaritic language, there are not only classical versions of the paganism which was Yahwism's major competitor, but also the "language of Canaan" as it was spoken at a time and place not too far removed from "biblical Hebrew" (i.e., mostly, the pre-Exilic dialect of Jerusalem). As a result, all sorts of obscurities in the older biblical text (e.g., Ex. 15, Judg. 5, etc.) can be clarified, as well as many features in even younger texts where tradition apparently transmitted the consonantal text faithfully, but using idioms which the masoretes or other later commentators no longer understood (e.g., an "enclitic *mem*," various meanings of *lamed*, etc.)

H.L. *Ginsberg was among the earliest to recognize and explore the potential of Ugaritic for biblical research and many others have followed suit. It is now clear that ancient Israel was heir to old poetic traditions of Syria-Palestine. The central Syrian city of *Emar, which only began to be unearthed in 1972, has yielded much important comparative material relating to Israelite religion. Biblicists have likewise benefited greatly from having access to the documents published in the ongoing Finnish series State Archives of Assyria (1987ff).

The *Dead Sea Scrolls have been of great importance for an understanding of the complexities of the Judaism of the times as well as of the origins of Christianity. For the Old Testament, however, their significance is largely limited to the field of textual criticism – where their influence has been nearly revolutionary. Above all, since the oldest manuscripts previously known had been nearly a millennium younger, the Qumran scrolls eliminated with one stroke much of the great skepticism which had previously reigned in some quarters concerning the age and reliability of the texts. At the same time, the variation in detail in some of the Hebrew manuscripts showed that no absolutely standardized and uniform text had been fixed at the beginning of the Christian era.

Even more significant, in a way, was the discovery of Hebrew manuscripts in recensions agreeing with the Septuagint and the Samaritan Pentateuch. In the past, the pendulum had swung from one extreme to another in the comparative evaluation of the Hebrew text and the versions; in general, "Wellhausenianism," true to its anti-traditional stance in general, had preferred the versions, while some later correctives discounted them almost entirely. Now it increasingly became plain that all three streams had equally ancient roots, that

no *a priori* preferences could be maintained in favor of any of the three, and that, in all likelihood, the original tradition was richer than any one of its three major later derivatives. That is, in contrast to much of the textual criticism of the 19th century which attempted, often on the basis of highly subjective assumptions, to eliminate all the later additions and restore the original "pure" text, it now seems likely that the text has suffered more from losses than from glosses. Apparently, as an official rabbinic or masoretic text gradually came into existence around the beginning of the Christian era, at least three major attempts to revise the Septuagint in conformity with it can be traced. (See F.M. Cross, "The Contribution of the Qumran Discoveries to the Study of the Biblical Text," in *IEJ*, 16 (1966), 81ff.; E. Tov, *Textual Criticism of the Hebrew Bible* (2001).

[Horace D. Hummel / S. David Sperling (2nd ed.)]

Developments in the 1970s

Bible research and criticism was actively pursued in the 1970s. Yet, despite the intensive discussions and new publications, it is often difficult to discern new major trends, motifs, or "schools."

This situation is partly the result of the passing from the scene of many of the great pacesetters of the previous generation (e.g., Albright, Wright, Mowinckel) without obvious successors; partly the increasing specialization of a burgeoning discipline, and partly, apparently, a reflection of the increasing fragmentation of much Western thought in general. Certainly in the United States, the proliferation of departments of religion at universities has been a major catalyst in the change.

The period witnessed frontal attacks on historical critical method, not only from traditionalist circles, but even from within the ranks themselves. Often it is a matter of semantics, but the challenge nonetheless bears witness to the intensity of the ferment. Thus, W. Wink (*The Bible in Human Transformation*, 1973) decries the objectivism of much biblical study, and proposes paying more attention to the interpreter's subjectivity. With that new approach, "liberation theology," the feminist movement, and other contemporary sociopolitical trends have left their mark. Most, however, do not think so much of abandoning the "method" as of perfecting it somehow.

Although source-critical investigations of a more or less classical type certainly continue, together with it there have appeared massive assaults on the classical results. R. Rendtorff (*Das Überlieferungsgeschichtliche Problem des Pentateuch*, 1977) attacks the traditional documentary hypothesis, and regards the Pentateuch as formed by the linking together of self-contained units which developed independently of each other. Among the less radical, the centrality of the "Deuteronomists" has generally become more axiomatic and pivotal than ever, so much so that some complain of a "pan-Deuteronomism"; cf. E. Nicholson *Preaching to the Exiles* (1970), M. Weinfeld (*Deuteronomy and the Deuteronomist School*, 1972) makes those circles the redactors of the Priestly document, but in other

quarters “P” is subject to even more revisionism. Menahem *Haran (*Temples and Temple Service in Ancient Israel*, 1978) regards “P” as having reached literary form already before the Exile, while Frank Cross (*Canaanite Myth and Hebrew Epic*, 1973) doubts if it ever was more than a supplement.

Form-critical efforts of the more classical type also continue, but there is evidence of a certain exhaustion, if not abandonment. A plateau may have been reached, and the results to date are conveniently summarized in: John H. Hayes (ed.), *Old Testament Form Criticism* (1974).

In reaction to the “diachronic” or atomistic tendencies of both source-criticism and form-criticism, however, the general trend of the period has clearly been in more holistic or “synchronic” directions. Although of various sorts, they often overlap. Most novel has probably been French-based “structuralism,” rooted in the theories of de Saussure, Levi-Strauss, Barthes, and others. It searches for “deep structures” or modalities apart from the author’s intentionality. No clear verdict is yet possible, but structuralism’s preference for philosophic universals over historical particularities and its dependence upon an esoteric, almost impenetrable, jargon appear to becloud its future. Probably the best general introduction to the approach is R. Polzin, *Biblical Structuralism* (1977).

Also French, but closer to the center of gravity, is the work of Paul Ricoeur (*The Conflict of Interpretations*, (1974), and many other works), who increasingly attracts a following. Ricoeur speaks of a “second naïveté” enabling us to read the ancient texts again with a “hermeneutic of belief,” which is “beyond the deserts of criticism.”

Less philosophically oriented is the “rhetorical criticism” of Muilenburg and his disciples, which notes overarching unities of stylistic and compositional features in the finished product. A memorial volume to Muilenburg, entitled *Rhetorical Criticism* (J. Jackson and M. Kessler, eds., 1974) explores many of the issues involved. A more extensive example of this type of research is: W. Holladay, *The Architecture of Jeremiah 1–20* (1976). Not immediately aligned, but of the same general type is: D.J.A. Clines, *The Theme of the Pentateuch* (1978).

Mainstream efforts to compensate for the centrifugality of much traditional criticism, however, are best characterized by the label “tradition-history/criticism.” In fact, if anything today might be labeled “critical orthodoxy,” it would be this approach. Major effort is devoted to attempting to reconstruct the process by which discrete traditions are combined, expanded, supplemented, reinterpreted, and actualized in the course of time, in response to new historical stimuli. The presumably later levels no longer tend to be discounted as “ungenuine” or “epigonic,” but an effort is made to listen to the “whole choir of witnesses” – or at least to that one (not necessarily the earliest) which seems most relevant. One can compare two applications of this method in the commentaries on the minor prophets of H.W. Wolff and J. Mays. An excellent, popular introduction is W. Rast, *Tradition History and the Old Testament* (1973). Many issues are thoroughly aired in D. Knight, (ed.), *Tradition and Theology in the Old Testa-*

ment (1977), and G. Coats and B. Long (eds.), *Canon and Authority* (1977).

As the last two titles indicate, such literary concerns inevitably overlap with the more theological issues of the nature of biblical authority. The “canonical criticism” of James Sanders (*Torah and Canon*, 1972) attempts to interpret traditional-historical pursuits in relation to the shaping and significance of a *canon*. Brevard Childs goes further. In a series of efforts, beginning especially with *Biblical Theology in Crisis* (1970) and culminating in his *Introduction to the Old Testament as Scripture* (1979), Childs argues that, in the formation of a canon, the literature was deliberately loosened from its original historical particularity in order to expose and release its universal, transhistorical significance. Thus, the normative meaning of a passage is to be found on its canonical level, not at any of the earlier stages (though their existence is not denied, nor the usefulness of the search for them entirely repudiated). Most scholars, however, are not prepared to go that far, and continue to affirm the potential authority of also precanonical stages. Within the same period, J. Blenkinsopp (*Prophecy and Canon*, 1977) has resuscitated an essentially Wellhausenian picture of the canonical process.

In some respects, Childs’ unique isagogics is about as close as the period has come to “biblical theology.” Although followed by others, he once pronounced that movement as good as dead. Von Rad continues to cast a long shadow, however, and, often following his lead, there have been many investigations of the theologies of individual writers or traditions. But, in spite of much discussion, no agreement could be reached on what “center,” if any, could be found in the Bible. Cf. G. Hasel’s survey *Old Testament Theology: Basic Issues in the Current Debate* (1972).

Only toward the end of the period have more ambitious “theologies” begun to become frequent again. The noteworthy titles are (in alphabetical order; the first three, 1977): R. Clements, *Old Testament Theology*; W. Kaiser, *Toward an Old Testament Theology*; S. Terrien, *The Elusive Presence*; C. Westermann, *Theologie des Alten Testaments in Grundzüge* (1978); and W. Zimmerli, *Old Testament Theology in Outline* (1972, 1977², 1978, ET).

The situation is equally confused in the area of archaeology. There has certainly been no abatement of scientific excavation in biblical lands, especially not in Israel (and it is impossible to note here even the major ones). In fact, so much raw material is accumulating that even specialists are scarcely able to stay abreast of it, and there is great concern here about the “knowledge explosion.” Furthermore, there is no consensus on how to deploy the material vis-à-vis biblical studies. The very term “biblical archaeology” is increasingly coming under fire. Some of the debate is merely semantic, and some of the objection to the term is well founded (sometimes shoddy workmanship and attempts to “prove” the Bible true). But, on the whole its rejection scarcely conceals a trend away from primary concern with *biblical* history and culture to broader anthropological interest, in which the Bible is often only one

concern among many. Parallel to the shift in archaeological goals has been a shift in results, or, at least, in interpretation of the finds (which is cause, and which effect, is debatable). The synthesis hammered out by Albright, Wright, Glueck, etc., ought to defend at least the “substantial historicity” of the biblical traditions about the patriarchs, the exodus, and the conquest. In the past decade, however, that construction has increasingly been assailed from all sides. At the extreme, T. Thompson (*The Historicity of the Patriarchal Narratives*, 1974) and J. van Seters (*Abraham in History and Tradition*, 1975) have championed a return to a sort of prearchaeological *status quo ante*, largely divesting the patriarchs of historicity altogether, and viewing those traditions as mainly postexilic constructs in support of the land claims of that time.

Tradition and Interpretation (G. Anderson, ed., 1979), containing essays by members of the “British Society for Old Testament Study,” summarizes developments between Rowley’s predecessor’s work (1951; see bibliography) and about 1974. To the annual *Book List* of that same society may now be welcomed the American *Old Testament Abstracts* (since February 1978), reviewing also periodical literature. J.W. Rogerson, *Anthropology and the Old Testament* (1978) offers a succinct overview of once popular approaches, which now appear to be in decline. *Encounter with the Text. Form and History in the Hebrew Bible* (M.J. Buss, ed., 1979) contains a helpful review of contemporary methodological competitors. B. Childs’ *Introduction to the Old Testament as Scripture* (1979) begins each chapter with a masterful survey of recent research usually highlighting diversity and often mutual incompatibility as a backdrop for his own proposals (see above). *Israelite and Judean History* (J. Hayes and J. Mueller, eds., 1977) offers an indispensable summary of recent developments in that field. Finally, H. Frei, *The Eclipse of Biblical Narrative* (1974) must be included for its penetrating analysis of the development of modern attitudes toward biblical history. The archaeological evidence itself continues to be indirect, at best, but especially the Ebla finds (see Bible: Related Epigraphic Finds) have raised the possibility that Abraham should be dated some five hundred years earlier than the previous consensus (c. 2300 B.C.E. instead of 1800, i.e., in the “Early Bronze” rather than the “Middle Bronze” period). Excavations in Jordan, at and around Bab-edh-Dhra, near the southeast corner of the Dead Sea, may point in the same direction, conceivably having even located the cities of Sodom and Gomorrah.

Neither has archaeological evidence always been “cooperative,” perhaps most notably in Aharoni’s various excavations in the Negev. Increasingly ambivalent evidence has been matched by a tendency to think of an “infiltration” rather than a conquest, and to view the process more from a sociological aspect. Some regard “Israel” as entirely a later idealization, it not being a conceptual entity until the monarchy. Mendenhall advanced one version of this thesis in his *Tenth Generation* (1973), as did C.H. de Geus in *The Tribes of Israel* (1976), and, more radically, Gottwald in *The Tribes of Yahweh* (1979). The “nomadic ideal,” on which some of the older constructs

were based, has been demolished and replaced by a theory of “transhumance” (seasonal migration with flocks) in V.H. Matthews, *Pastoral Nomadism in the Mari Kingdom* (1978).

The hypothesis of an Israelite “amphictyony,” which a previous generation regarded as all but established, has been almost completely abandoned. R. de Vaux took strong exception to it in his incomplete *Early History of Israel* (ET, 1978) and A.E. Mayes reached similar conclusions in his *Israel in the Period of the Judges* (1974). With the fall of the amphictyonic hypothesis, the viability of various other once favored hypotheses has been jeopardized, especially that of an early Israelite “covenant renewal festival” and its various spinoffs. A more sociological approach to the phenomenon of prophecy may be noted in this connection: R. Wilson, *Prophecy and Society in Ancient Israel* (1980).

The wisdom corpus has been perhaps the major beneficiary of the newer mood in biblical studies. Not only has there been concern to redress the previous “benign neglect” of that literature, but the surfeit of “*Heilsgeschichte*” and the ascendancy of the more introspective and immantalist fashion has made “Wisdom” very congenial. Von Rad, developing ideas already set forth in his *Old Testament Theology*, has again set the pace in his *Wisdom in Israel* (1970) (although, it should be noted, his proposal that apocalyptic was an offshoot primarily of wisdom rather than of prophecy, has not been generally accepted). Out of the vast literature, Perdue’s important *Wisdom and Cult* (1977) calls for special mention. In it he demonstrates that the ancient wisdom both in Israel and surrounding cultures did not assume the simply anti-cultic posture, which earlier writers had tended to assume.

In general, research into Israel’s cultus seems increasingly to be moving toward relative objectivity, at least in contrast to the pejorative dismissal or the bondage to patternistic dogmas, from which it once suffered. A major contribution came in M. Haran’s, *Temples and Temple Service in Ancient Israel* (1978), putting together studies of tabernacle-temple ritual theory accumulated over the years. Even sacrifice, long the stepchild of cultic studies in spite of its obvious prominence in the biblical texts, has been accorded attention; particularly to be noted are B.A. Levine, *In the Presence of the Lord* (1974), and J. Milgrom, *Cult and Conscience* (1976).

Apocalyptic literature has also moved toward center stage in recent years, probably partly in resonance with the “apocalyptic” quality of much contemporary history. An increasingly popular construct is that of sharp polarization after the Exile, with the priestly party (Ezekiel, Ezra, etc.) seizing the reins of power, and the more utopian losers (beginning with Deutero-Isaiah) increasingly withdrawing into an otherworldly apocalypticism. O. Plöger (*Theocracy and Eschatology*, 1959; ET 1968) had earlier developed this view, and P. Hanson (*The Dawn of Apocalyptic*, 1975) has given it wide currency in the United States; cf. also D. Petersen, *Late Israelite Prophecy*, 1977). In this scenario, Chronicles is sometimes seen to reflect a mediating, compromise stance (cf., for example, H. Williamson, *Israel in the Books of Chronicles*, 1977). Among the many studies and

commentaries on Daniel, worthy of special mention is J. Collins, *The Apocalyptic Vision of the Book of Daniel* (1977).

Recent study of the psalter, in contrast to the above areas, does not appear to describe so marked a contrast to earlier work. The older cultic approach appears to thrive only in England: J.H. Eaton, *Kingship and the Psalms* (1976; cf. his *Festive Drama in Deutero-Isaiah*, 1979); A.R. Johnson, *The Cultic Prophet in Israel's Psalmody* (1979); and J. Gray, *The Biblical Doctrine of the Reign of God* (1979). In contrast to that more corporate accent, there are signs that the pendulum may be swinging back to a more individualistic perspective; a harbinger may be R. Albertz, *Persönliche Frömmigkeit und offizielle Religion* (1979).

Finally, the continuing intense research into the nature of biblical poetry may be noted. The pioneering study of F. Cross and D. Freedman has been reprinted (*Studies in Ancient Yahwistic Poetry* (1975)). Other important investigations include D. Robertson, *Linguistic Evidence for Dating Early Hebrew Poetry* (1972) and M. O'Connor, *Hebrew Verse Structure* (1980). It is apparent, however, that in this area also consensus is far off.

[Horace D. Hummel]

Developments in the Late 20th Century

The last thirty years of the 20th century were momentous in biblical scholarship. The feminist movement brought women scholars into a field that had been almost exclusively male, and in addition, added a feminist dimension to biblical criticism that male scholars had often ignored. In Orthodox Jewish circles in Israel and to a lesser extent in the United States, text-critical and historical study of the Bible became increasingly tolerated, if not whole-heartedly embraced. In the United States, the academic legitimation of ethnic studies, including Jewish studies, the rise of the Christian religious right with its bibliocentrism, and court decisions permitting the teaching of religion in publicly funded schools made for heightened interest in Bible. One result of increased undergraduate instruction in Bible was the "Bible as Literature" movement, now in decline. In contrast to classical "literary criticism" of the Bible, the "literature" approach focused on the final form of the text from a literary-aesthetic point of view, often borrowing methods employed in criticism of world literature after they had passed their prime in their original settings. Ignoring the inconsistencies and inner contradictions of texts resulting from multiple authorship and concentrating on uncovering the "integrated literary whole" (Alter) of the final editor or redactor, the new literary reading made the Bible more accessible to a wider public whose members did not require competence in the increasingly refined text-critical methods or in the ancient literatures that had themselves influenced the Bible. Among the earlier borrowed approaches was structuralism, which asserted the existence of binary oppositions that structure human thought that could be viewed objectively by an observer and could unlock the actual meanings of a text. The weakness of structuralism lay in the simple

fact that different readers failed to agree on what constituted an objective understanding. In opposition to structuralism, reader-response theory focused on the role of the reader in progressively producing meaning against the background of the interpretative communities to which the reader belonged. The parameters of meaning would be fixed by the communities. For example, readers of the Old Testament in Christian communities would produce meaning different from communities of rabbinic Jews. A different attack on structuralism was mounted by post-structuralism, or deconstruction, famously associated with the name of the philosopher Jacques *Derrida (1930–2004), which attacked the notion of binary opposition as artificial. Applied to biblical texts (as well as others), deconstruction frankly abandoned the attempt to understand the meaning that an author might have wished to convey in favor of engaging the text and discovering the ways in which it "inscribes" power and privilege. Deconstruction, along with post-Freudian psychoanalytic perspectives, neo-Marxism. M. Foucault's (1926–1984) attention to the complex relations between power and "discourses," and F. Jameson's identification of the contemporary focus on the present and the consequent loss of connection to history, are often grouped under the rubric of post-modernism. As applied to the Bible, post-modernist interpretation resurrected the pre-critical lack of interest in the temporal distance between the biblical text and the contemporary audience. Borrowing the notion of undecidability from physics, post-modernism maintained the impossibility of deciding between two (or more) competing interpretations, harking back to the pluriform approaches of medieval Christianity and Judaism. A useful corrective to modern notions that one could recover the "original meaning" of an ancient text with full confidence, post-modernism tended to reveal more about the interpreter than about the Bible.

The last decade of the twentieth century inaugurated the Minimalist-Maximalist debate. Primarily associated with the names of the Sheffield scholar Philip Davies and the Copenhagen scholars Niels Lemche and Thomas Thompson, the Minimalists (sometimes called "Revisionists") argue for very late datings of the books of the Bible, sometimes characterizing the Bible as a Hellenistic book. They claim, in addition, that the Jewish community of post-exilic times was a mixed population not continuous with the Iron Age people who lived in the central mountain regions of Israel. Accordingly, Minimalists maintain that the biblical narratives covering the period from Abraham to the fall of Jerusalem in 586 lack probative value, and that "Ancient Israel" is a modern scholarly misconstruction. "Maximalists" covers a broader range than the term might imply, including scholars who are skeptical of the biblical accounts of enslavement, exodus and conquest as well as some who continue to maintain the existence of a historical Abraham. Maximalists are united in their belief that the Bible and archaeological evidence clearly establish the existence of an ancient Israel, the contours of whose history are recoverable. The Minimalist critique of earlier overly enthusiastic claims of biblical historicity has proved useful. For their

part though the Minimalists have exhibited a tendency to deny archaeological evidence contrary to their position and to accuse archaeologists of outright forgery.

RELATED EPIGRAPHIC FINDS

Archaeological excavation in Israel and the neighboring Lands of the Bible since the 1970s has added much new inscriptional material to the store of texts which illuminate diverse aspects of life in Ancient Israel and its surroundings. Unfortunately, numerous forgeries have appeared on the antiquities market and all material whose provenance is unknown must be treated with suspicion. The more significant finds are noted here:

- (1) Arad ostraca
- (2) Khirbet al-Qom
- (3) Kuntillet 'Ajrud

- (4) Seals and bullae
- (5) Deir-'Alla texts
- (6) Tel al-Rimah stele
- (7) Iran stele
- (8) Tel Dan Inscription
- (9) Ammonite Inscriptions
- (10) Ketef Hinnom
- (11) Philistine ostraca
- (12) Edomite

Arad Ostraca

In the debris of the Judahite fortress of Arad, over 100 inscribed sherds, seals and vessels were recovered. This singular find doubled the available corpus of Hebrew inscriptions and brought to light details concerning the organization and the functioning of a royal outpost during the 10th–6th centuries B.C.E. The ostraca record the receipt and distribution of food supplies in the eastern Negev, frequently to Kittite (Greek?) mercenaries, under the supervision of Elyashib, perhaps commandant at Arad. (See, e.g., Nos. 1, 2, 4, 7 *et al.*) One text warns of impending Edomite attacks and orders the dispatch of army units to Ramot Negev (see No. 24). A ration list employing Egyptian Hieratic signs for the numerals and an Egyptian measure of volume recovered from a late 7th-century level, testifies to the presence of Egyptians at Arad, under circumstances which remain obscure (No. 25; cf. 34 made up entirely of Hieratic numerals). A number of texts relate to the local sanctuary at Arad, the first such sanctuary to be excavated. The names of many priestly families are recorded, perhaps for purposes of tithing and gifts. (E.g., Korahites, Meremot, Pashhur; see Nos. 49, 50, 54, 103–104). Finally, an intriguing fragment of a letter, seemingly written by a Judahite king, mentions a king of Egypt (No. 88).

Khirbet El-Qom

Located West of Hebron in the hills of ancient Judah, the site whose Arabic name means "ruins of the heap/ tribe" may be ancient Makkedah. An eighth-century tomb inscription for one Uriyahu, difficult to read, refers to YHWH and rth, this last somehow related to *Asherah the goddess or a cultic object of the same name, both of which the biblical writers strongly disapprove. If the reference is to the goddess, the text appears to show that Yahweh was believed by some to have a consort. (Cf. the next paragraph.)

Kuntillet 'Ajrud

Numerous Hebrew and Phoenician inscriptions written on plaster and clay and engraved on stone were recovered at Kuntillet 'Ajrud ("Hill of the water- source"), a site near the main road midway between the southern Mediterranean coast and Eilat. These texts coordinate historically with Judah's renewed activity in the south in the mid-9th century B.C.E. under king Jehoshaphat and his son (cf. 1 Kings 22:49). At the same time, the script, dialectal features of the texts, and the place name Samaria show Northern Israelite connections perhaps reflecting the good relations between Judah and Israel described in

1 Kgs 22. The inscriptions refer to YHWH of Teman, as well as Yahweh of Samaria followed by $yrth$. The excavator conjectures that these religious references may indicate the presence of a traveler's chapel at this Negev way-station. Both at this site and at Khirbet El-Qom, whenever a name contains a divine element, it is *yh* or *yhw*, which may, or may not, be significant (Heide in Bibliography). The artistic remains at the site are also of great interest.

Seals and Bullae

Of the numerous stamp seals which have come to light, a few deserve individual mention. The first bears the inscription: [Belonging to Ze]charyau, priest of Dor and may be evidence for priestly activity at a local cult site in the coastal city of Dor. A second seal, preserved only on a bulla, reads: Governor of the City. The paleography and the pronounced Assyrian influence in motif design of the two standing figures suggest that the seal belonged to a senior officer in the Jerusalem administration in the mid-7th century B.C.E. From the same collection as this seal are three others which belonged to personalities who figured in the life of the prophet Jeremiah: Berechiah (Baruch), son of Neriah, his personal scribe (cf. Jer. 36:4); Seriah, son of Neriah (Jer. 51:59), and Jerahmeel (Jer. 36:26), officials at the court of Zedekiah.

A most unusual find of this category is the cache of more than 70 seals and bullae from an unrecorded site in the Jerusalem region dating from the early years of the Judean restoration (end of the 6th century B.C.E.). The stamp of a new governor of the province of Yehud (Judah), Elnathan, and that of his female servant Shelomith, point to the official nature of this collection. Furthermore, the administrative independence of Judah from Samaria prior to the arrival of Nehemiah (c. 445 B.C.E.) is affirmed by the governor's seal.

Deir-'Alla Texts

On the Deir-'Alla texts, see *Balaam.

Among the inscriptions in the Akkadian language and in cuneiform script relevant to biblical history are two royal stelae of the New-Assyrian period.

Tel al-Rimah Stele

A stele of Adad-nirari III (810–783 B.C.E.) discovered at Tel al-Rimah, Iraq, commemorates the king's military victories, especially in the west, which were probably accomplished during several campaigns to the area. Among the tributaries is Jehoash, king of Israel (*Iu<asu Samerinâ, Jehoash*, the Samaritan). According to biblical records, it was during the reign of King Jehoash (800–784 B.C.E.) that the pressure upon Israel from the Arameans of Damascus eased, this through the aid of a God-sent deliverer (11 Kings 13:5). The deliverance ought to be connected with the defeat of Ben-Hadad III of Damascus (Mari' – in the stele) at the hands of Adad-nirari in 796 B.C.E. Upon this occasion, Jehoash recognized the Assyrian monarch as his overlord and delivered the tribute recorded on the stele.

Iran Stele

The Israelite King Menahem (*Minihime Samerinaya* – Menahem: the Samaritan) is mentioned among the tribute-paying kings of the west in a stele of Tiglath-Pileser III (744–727 B.C.E.) set up in Iran after the Assyrian campaign in 737. This mention of Menahem clarifies a disputed point in biblical chronology. It is now certain that the Israelite king reigned at least until 738, with Assyrian support and as an Assyrian vassal. (The name of the Tyrian king, Tubail, hitherto unknown, is also recorded in the text).

Ebla

For the significance of *Ebla, see separate entry.

Tel-Dan

A damaged Aramaic inscription discovered in at Tel-Dan in northern Israel dating from the ninth century relates the victories of an Aramaean king. There is mention of a *mlk y<or<l* "king of Israel, whose name has been variously restored. Much attention and controversy have been directed to the phrase *bytdwd*. (See Schiderski in Bibliography.) Written as a single word, this would appear to be the first extra-biblical reference to the "house of David," which in the Book of Isaiah (7:2,13) refers to a specific king.

Ammonite (see *Ammon, Ammonites)

Ammonite seals have long been known. Larger inscriptions have been available only since the late 1960s. The earliest known Ammonite text, the Citadel inscription, dates from the ninth century. Most of the known texts date from the seventh and sixth centuries. The Tel-Siran bronze bottle (ca. 600 B.C.E.; Ahituv, 223) contains an inscription of King Amminab that enables reconstruction of the Ammonite royal succession. Other inscriptions have been found at Tel Hesban (biblical Heshbon) and as far away as Calah in Iraq. (Ahituv, 228–39; Cross, 70–94). The Ammonite corpus confirms the biblical datum that Milcom was an Ammonite deity, as was El. The Ammonite language is a dialect of Northwest Semitic that would have been intelligible to any reader of Hebrew.

Ketef Hinnom

Two Hebrew silver amulets found at this site in Jerusalem date from the mid-seventh century B.C.E. These contain texts very close in wording to the biblical priestly blessing found in Num. 6:24–26.

Philistine Inscriptions

Two ostraca of the early seventh century were found at Tell-Jemmeh, some 10 kilometers south of Gaza. These are administrative lists in a local form of the Hebrew script, apparently demonstrating Judite influence on Philistia (Cross, 165). Of special interest is a seventh century dedicatory temple inscription from Tel Miqne (Ekron). The builder identifies himself as Achish, ruler of Ekron, and provides the name of four ancestral predecessors in that office. Orthographic and dialectal forms identify the language as Phoenician.

Edomite

The Edomite corpus remains small. An ostrakon found at Horvat Uzzah, east of Arad, from the beginning of the sixth century is in the form of a letter. The formula “I commend you to (the god) Qaus” is quite similar to Hebrew greeting formulae (Ahituv, 213–14).

[Mordechai Cogan / S. David Sperling (2nd ed.)]

SOCIOLOGY OF THE BIBLE

In the final decades of the 20th century the scholarly study of the Hebrew Bible and ancient Israel was marked by an increasing fondness for interdisciplinary projects. Fin-de-siècle biblicalists turned with enthusiasm to fields of inquiry such as feminist analysis, psychology, countless varieties of literary theory, and sociology. Those biblical scholars who embraced the latter would seem to have had a considerable “head start.” For they had at their disposal texts written about Scripture by figures who ranked among the architects of sociology itself, if not social-scientific discourse in general. Max Weber (1864–1920), regarded as one of the most influential and brilliant practitioners of his craft, devoted a full-length study to biblical Israel in his *Ancient Judaism* (originally published as essays between 1917 and 1919 and collated in 1921 by Weber’s wife, Marianne). William Robertson Smith (1846–1894), whom the anthropologist T.O. Beidelman referred to as “the founder of modern sociology of religion,” engaged Scripture in his seminal *The Religions of the Semites* (first series, 1889) and the infamous “Bible” entry in the 1875 *Encyclopaedia Britannica*. That contribution, among others, elicited the trans-continental ructions associated with the advent of higher criticism. It is here, amidst the intellectual turbulence of the late 19th and early 20th centuries, where the sociological study of the Hebrew Bible was born; a birth that coincides with the chrysalis of sociological inquiry.

In spite of such auspicious beginnings, the attempt to bring explicit sociological insights to bear on the Hebrew Bible did not immediately take root in either Europe or the United States. Professional sociologists, for their part, completely ignored the problematic and continue to do so. The reasons for this are complex and rarely discussed, but a few possibilities may be briefly suggested here. As with most social scientists, sociologists tend to view their discipline as distinctly “modern.” They thus evince a sort of allergy to the humanistic intellectual traditions and texts of antiquity. Moreover, sociology’s well-known secular orientation may conceivably turn its workers’ attention away from serious and sustained engagement with issues falling under the purview of religious studies.

In biblical studies as well, the period following Weber’s death was not marked by great interest in either his or Robertson Smith’s work. Contemporary surveys of Old Testament sociology (McNutt, 16–23; Frick, 20–21) often cite the studies of biblicalists such as Johannes Pedersen, Adolphe Lods, A. Causse, Albrecht Alt, Roland de Vaux, and Martin Noth as functioning as a bridge between the “first wave” (i.e., the generation of Robertson Smith and Weber) and the “second wave” which emerged in the 1970s (see below). Yet many of the putatively transitional writers just mentioned used the research of the canonical social theorists sparingly, if they used them at all. The varied questions they posed seemed more in line with what might be called “social studies” than with the types of increasingly specialized initiatives associated with the burgeoning discipline of sociology at mid-century. These biblicalists of the post-Weberian era did not confront their subject matter armed with specific sociological theories or methodologies. Rather, they asked general questions about broad social aspects of ancient Israel. As such, Pedersen wrote chapters about “Tribe and City,” “The Family, the Father’s House and the People,” and “The Property of the Family.” Lods focused on “Hebrew Nomadism” and the economic and social organization of pre-exilic Israel. Alt submitted influential studies on “The Settlement of the Israelites” and “The Formation of the Israelite State in Palestine.” An entire monograph about institutions in ancient Israel was written by Father Roland de Vaux. C. Van Leeuwen studied the poor of ancient Israel. Causse took up the same issue, though here one finds a more strenuous engagement with the writings of Robertson Smith and Émile Durkheim and his school.

Weber’s notion of an ancient Israelite confederacy, or a loose, occasionally mutually antagonistic coalition of pre-monarchic tribes who spontaneously coalesced in times of war was taken up, most notably in the work of Noth and Alt and other studies of the “amphictyony” (see Mayes). In the main, however, his insights and those of Robertson Smith were left to languish in obscurity. This is regrettable in so far as *Ancient Judaism* positively teems with hypotheses, insightful asides, and intriguingly refutable hunches. It was Weber who saw ancient Israel as a hodgepodge of competing, even hostile, status groups, each vying to improve their status posi-

tion. It was Weber who delineated distinct groups of Israelite intellectuals and, using the source-critical insights of his day, correlated them with specific biblical texts and literary/theological genres. It was Weber who argued that the prophets of Israel aspired to de-magize the world. In this manner they were harbingers of the slow, millennial process of rationalization that culminated in Occidental modernity. It is important to note the trans-civilizational scope of his analysis; the inchoate rationalism of these ancient Israelite intellectuals provides one way in which “Jewish religion has world-historical consequences” that extend into the modern period. It was Weber who audaciously suggested that biblical Decalogues were something of a mnemonic device for the less theologically sophisticated masses. And it was Weber who wondered if the austere ritualistic segregation of ancient Judaism inadvertently triggered the antisemitism of antiquity and beyond.

Yet these theories and their corresponding methodological initiatives were overlooked for nearly half a century. It was only in the 1970s that a sustained effort to think sociologically about ancient Israel garnered widespread interest. Central to the rise of this second wave was Norman Gottwald’s *The Tribes of Yahweh: A Sociology of the Religion of Liberated Israel 1250–1050 B.C.E.* This work elicited denunciations of the sociological method as applied to the Bible (Mendenhall) and charges of rank amateurism (Rainey). Whether one agrees with Gottwald’s thesis of a peasant rebellion in ancient Palestine, a revolt catalyzed by the enigmatic group known as the *habiru*, his text was crucial in that it consciously attempted to engage in dialogue with the writings of Marx, Weber, Durkheim and Talcott Parsons (Berlinerblau, 2002; Boer). What characterizes Gottwald’s project and that of other contemporary biblical sociologists is an attempt to use biblical, epigraphic, and archaeological data as a means of reconstructing ancient Israelite history (Wilson) and society (McNutt). They work closely, if somewhat uncritically, with the biblical text in order to gain insight into ancient Israel as it actually was in the early Iron Age. Gottwald and a few others notwithstanding, biblical sociologists tend to eschew serious engagement with sociological research. Indeed, an astonishingly large number of studies in this field use terms such as “social location,” “social world,” “social setting,” “social-scientific analysis” (a trend initiated by the sociologist Peter Berger’s important 1963 article on the social location of prophecy). All of these terms are useful in their own way, but decidedly distinct from the lexicon employed in standard sociology.

What would the third wave of biblical sociology entail? A list of desiderata might be framed as follows. The move from “social studies” to sociology will only take place when bibliacists thoroughly and creatively confront the immense canon of sociological literature. Next, a greater degree of sophistication in approaching the Hebrew Bible *qua* historical text is necessary. Philip Davies, in commenting on Gottwald’s *Tribes*, aptly notes that there exists a difference between the society represented in the Hebrew Bible and the real society in which

the Hebrew Bible was produced. Accordingly, biblical sociology must develop criteria for assessing when scriptural data offers accurate data for sociological reconstruction. Self-reflexivity has always been a staple of the sociological imagination and the study of how knowledge has been produced in biblical studies (across two millennia) and who produces such knowledge, stands as one of the most fertile areas for further exploration. Finally, as a means of moving beyond the rather positivistic project of reconstructing ancient Israelite society, and as a means of remaining loyal to Weber’s trans-historical vision, biblical sociologists might look at how the Hebrew Bible itself has functioned across sociological time and space. A sociology of interpretation, or “socio-hermeneutics” (Berlinerblau, 2005) would look at how situated Jewish and Christian interpreters have read the Bible and how such readings came to exert world-altering effects upon the social body in question.

[Jacques Berlinerblau (2nd ed.)]

RELIGIOUS IMPACT

IN JUDAISM

In Hellenistic Judaism

Hellenistic Jewish literature, dating from about 250 B.C.E. to 40 C.E., may be regarded as the fusion of the biblical tradition with the Greek language and culture. The literary activ-

ity included paraphrases and analyses of biblical narratives, philosophical commentaries, epic and dramatic poetry. Some of these writings are strictly monotheistic; in others the pagan influence is pronounced; and there are a few remnants whose contents supposedly run counter to the current concepts of monotheism. But, except in one or two instances, the “Jewishness” of these fragments seems assured. The common characteristic that distinguishes these writings from the apocryphal and pseudepigraphal literature is that the names of the authors, though sometimes pseudonymous, are almost invariably known.

The tradition of the translation of the Torah by the Seventy during the reign of Ptolemy Philadelphus presupposes the existence of a professional cadre of translators in Alexandria, who were the first Hellenistic Jewish literati. They coined the term “Holy Bible” (ἡ ἑρὰ Βίβλος), recorded for the first time during the last two decades of the third century B.C.E. The Bible, or rather what is now known as the Pentateuch, was also called the Law (a translation of Torah), to which epithets were attached such as “the Holy,” “God’s,” “Moses,” or “Israel’s.”

*Demetrius, who flourished during the reign of Ptolemy IV Philopater (221–204), may be regarded as a representative of the Alexandrian school whose immediate antecedents go back to the Septuagint translators. “Someone asked,” he says, “After having come here unarmed, how did the Israelites have weapons?” (Ex. 13:18).” This suggests that his question had been raised by other biblical commentators. It also shows that the question and answer method, current among Alexandrian pagan exegetes, was adopted by the Jews. Their rendition of the Hebrew word *va-ḥamushim* (Ex. 13:18) differed from that of the known versions of the Septuagint, which translate the term as the fifth generation (of the Israelites in Egypt). In general, in the extant fragments at least, Demetrius devotes most of his comments to chronological and genealogical problems. Chronology was also of great concern for a certain Philo, who may not be identical with *Philo the Elder, mentioned in *Josephus (Apion, 1:218), or Philo the Epicist; *Eupolemus, and Josephus’ rival – Justus of *Tiberias.

In contrast to Demetrius and *Aristeas, the author of a history *On the Jews*, who show no direct awareness of the pagan world, writers such as *Pseudo-Eupolemus and *Artapanus reflect syncretistic traditions of biblical Hellenistic historiography. Pseudo-Eupolemus identified Enoch with the Hellenic Atlas, the reputed discoverer of astrology; Noah with Belus, the traditional founder of Babylon; and Melchizedek with the king and priest of the temple on Mount Gerizim. The last identification indicates that syncretistic and Euhemeristic tendencies were prevalent also among the Samaritans. Artapanus, who flourished during the second century B.C.E., represents the most extreme syncretistic school. According to him, Abraham, Joseph, and primarily Moses developed Egypt’s science, statecraft, and religion. The story of Moses’ war against Ethiopia, found in Artapanus and Josephus (Ant., 2:238–53), may be due to a common source. There is no evidence for the

suggestion, maintained by Freudenthal, that Artapanus was a Jew who paraded as an Egyptian priest.

Alexandrian scholars in the middle of the second century B.C.E. also published commentaries that began to interpret Scripture allegorically, somewhat as many Greek exegetes explained Homer. *Aristobulus, “the teacher of Ptolemy” (II Macc. 1:10), argued that anthropomorphic expressions of the Bible such as “God’s hand” must be understood as God’s power. This may not seem to be quite allegory as the term is now understood, but Aristobulus’ censure of the literalists’ understanding of Scripture suggests the beginnings of a symbolic exegesis of Scripture (see above Allegorical Interpretations). Interestingly, Aristobulus says that there had existed a Greek translation of the Torah prior to the Septuagint which Homer, Hesiod, Pythagoras, Socrates, Plato, Hecataeus of Abdera and others had allegedly utilized. This indicates that the Jewish forgeries of Greek poets that extolled Jewish religion antedate the middle of the second century B.C.E.

From a literary point of view, the great achievement of the Greco-Jewish writers was in the field of poetry and drama. Philo the Elder composed an epic in Homeric hexameters on Jerusalem; short fragments on Abraham, Joseph, and the fountains and canals of Jerusalem survive. An epic by a Samaritan, *Theodotus, recounts the rape of Dinah (Gen. 34). Without introducing radical changes in the biblical story, there is considerable invention in the remaining 48 lines, attesting to a high degree of poetic inspiration and technical proficiency. Hellenistic Jewish literature attained its zenith in the drama *Exagoge* (*Exodus*) by *Ezekiel the Poet. In a sense this work seems but a paraphrase of the relevant chapters of the Septuagint Book of Exodus. But the dramatist was able to weave into the play interpretations that had been proposed by biblical commentators. Thus Zipporah, Moses’ wife, is said to have been identical with the “Ethiopian woman” (Num. 12:1), a view earlier put forward by Demetrius. The heathen environment supplied Ezekiel the Poet with the forms of the play; the Torah, with its content and meaning. The same may be said of most of the Greco-Jewish literature – it was primarily Jewish and secondarily Greek.

See also *Apocrypha, *Josephus, *Pseudo-Philo.

[Ben Zion Wacholder]

Talmud and Medieval Times

With the famous convocation of the people called by Ezra in the fifth century B.C.E., at which the Bible was solemnly and publicly read to the assembled people – “they read in the book, in the law of God, distinctly, and they gave the sense and caused them to understand the reading” (Neh. 8:8) – the Bible became for centuries the main, and for a long time the sole, intellectual preoccupation of the Jewish people. The Talmudic interpretations (Meg. 3a) that “they read in the book” refers to the Hebrew text, and “distinctly” (or “with an interpretation”) to its translation into the Aramaic vernacular are probably correct, and serve to indicate that for the first time the Bible had become the common cultural and religious

possession of the entire Jewish people. This determination to spread knowledge of the Bible among the entire people is probably reflected in the adage of the Men of the Great *Synagogue, who carried on the activity thus initiated: "Set up many disciples" (Avot 1:2).

In discussing the Bible among the Jews it is essential to make a sharp distinction between their preoccupation with the Pentateuch and with the other sections of the Bible. The purpose of the study of the Pentateuch was mainly for the systematic development of the *halakhah*, the "way of life" which the Jew was to follow, and secondarily for homiletical exegesis. The former gave rise to the **Midrash Halakhah* and the latter to the **Midrash Aggadah*. The Pentateuch was regarded as the main authoritative source for the *halakhah*, and verses from the prophets and the Hagiographa were regarded merely as giving secondary support to it. They were called "Kabbalah" (tradition) and it was laid down that "no inference may be drawn concerning statements of the Pentateuch from statements found in the Kabbalah" (Hag. 10b). As a result, for the purpose of *halakhah* the entire weight was laid on the Pentateuch, and from the time of Ezra until the compilation of the Mishnah, the Pentateuch was practically the sole textbook for study. Since the purpose of that study was to arrive at the *halakhah*, this became the main subject of study with the compilation of the Mishnah.

A somewhat different situation existed with regard to the study of the Bible by the aggadists. Although their main preoccupation was also with the Pentateuch, they added to it the other portions of the Bible which were publicly read in the **haftarot* and the Five Scrolls. In addition to that, however, they deliberately sought to acquaint their listeners with the Bible as a whole, and almost invariably selected as the text of their proem a verse from the Hagiographa, linking it with the scriptural portion. As a result the entire Bible was gradually subjected to intensive study. This process is reflected in the statement of the Midrash: "Ben Azzai was engaged in stringing together verses of the Pentateuch to those of the prophets, and of the prophets to the Hagiographa, and the words of the Torah rejoiced as on the day they were given on Mr. Sinai" (Lev. R. 16:4; cf. Song R. 1:10 where the same is said of "Abba b. Mimi and his colleagues"). As a result of this extensive exegesis, it was possible for later authors to compile Midrashim on individual books of the Prophets and Hagiographa, as well as on the entire Bible, of which the **Yalkut Shimoni* is the outstanding example. Their principal sources were the Midrashim to the books which formed part of the synagogue lectionary and exegesis found in the Talmud. Consequently a large proportion of the non-pentateuchal portion of the Bible is commented on in Talmud and Midrash. It should be pointed out, however, that this exegesis was overwhelmingly homiletical and midrashic. Literal exegesis was almost entirely neglected during this period. It is true that R. Kahana stated that "a verse does not lose its interpretation according to the *peshat*" (Shab. 63a), but it is highly doubtful whether *peshat* in this context has the meaning "literal interpretation" given

to it in later ages, probably first by Rashi. It seems to mean "the accepted interpretation as given in the schools." Certain interpretations referred to as "*peshat*" in one passage appear as "*derash*" in parallel passages; moreover, in *Ketubbot* 111b, R. Dimi, after giving a homiletical interpretation of Genesis 49:11 in answer to a question as to the "*peshat* of that verse," gives one which is much more midrashic than his previous one. As stated, the importance attached to the study of the Bible was conditioned by its liturgical use. Pride of place was given to the Pentateuch, which was not only read completely from beginning to end (in one year in Babylon and in a triennial cycle in Erez Israel), but also was the basis of the *halakhah*. Next came the Five Scrolls which alone of the Hagiographa are read in their entirety in the synagogue. Of the prophets only the portions selected as the *haftarot* were read. Such portions were chosen from all the books of the Prophets with the exception of Joel, Nahum, Haggai, and Zephaniah. Until recent times it was the traditional and almost invariable practice for the Jewish preacher to select the text of his sermon from the scriptural reading of the week, either expounding its theme or applying his interpretation of the verse to the theme on which he was preaching (see **Preaching*).

Insofar as concerns the Bible in the liturgy, one of its interesting aspects is the gradual increase of the number of Psalms included in the liturgy. In talmudic times, apart from the six Psalms of **Hallel* and the seven daily Psalms, one of which was recited daily as "the Psalm which the Levites used to say in the Temple," the Psalms did not form part of the daily liturgy, and in fact, the only biblical passages included in the actual prayers were the three paragraphs of the **Shema*. As against this, the *Standard Authorized Daily Prayer Book*, current among Ashkenazim in England, gives an index to the 72 Psalms included therein. Of these, 53 belong to statutory services. In addition to the above, the bulk is made up of seven Psalms in the *Pesukei de-Zimra* of weekdays (100 and 145–150) and nine (in the Sephardi rite 11) additional ones for Sabbaths and festivals, six (95–99 and 29) for the Inauguration of the Sabbath, and 16 (104 and 15 Songs of Degrees 120–134) for Sabbath afternoon in winter. The balance comprises Psalm 30 as an introduction to the *Pesukei de-Zimra*; Psalms recited when the Scroll of the Law is returned to the ark (already included in the above); Psalms 6 (in **Taḥanun*) and 20 in the concluding part of the daily service; Psalms 144 and 67 for the conclusion of the Sabbath; Psalm 27 during the month of Elul and until Hoshana Rabba; and a number of voluntary additional Psalms. Psalms are also included in every type of non-statutory service, e.g., in the night prayer, the service for the consecration of a house, for sickness, in the house of mourning, at the setting of a tombstone. A number of the above are recited on more than one occasion.

Various other sections of the Bible have also found their way into the prayer book. 1 Chronicles 16:18–36 is included in the *Pesukei de Zimra* (in the Sephardi rite it precedes them) as are 1 Chronicles 24:10–13, Nehemiah 9:6–11, and the Song of Moses (Ex. 14:30–15, 18). The last chapter of Proverbs has been

instituted for home reading on Friday night. Among other biblical verses, mention should be made of the ten verses each of **Malkhuyyot*, *Zikhronot* and *Shofarot* – of which four are from the Pentateuch, three from the Prophets, and three from the Hagiographa – and Psalm 47 recited before the sounding of the *shofar* on Rosh ha-Shanah. The individual biblical verses introduced into the liturgy are too numerous to be detailed.

The intensive preoccupation with the aggadic and homiletical interpretation of the Pentateuch brought in its wake a profound familiarity with the Bible, in which, however, the Midrash was paramount. The worthies of the Bible were regarded not as figures from the past but almost as living contemporaries. Abraham's smashing of the idols of his father and his deliverance from the fiery furnace, Esau as the embodiment of wickedness and the prototype of the archenemy of Israel, Aaron as the personification of the love and pursuit of peace, Judah as the mighty warrior, David as the wholly righteous monarch without sin or flaw, all of them the creation of the Midrash, appeared as real, if not more so, than the literal portrayal of them in the biblical narrative. In the Talmud it is laid down (Bet. 8a–b) that one should revise the weekly scriptural reading during the preceding week "twice in the original and once in the Aramaic translation [Targum]." It was later laid down (Tur., OH 2:285) that the commentary of Rashi could be substituted for the Targum. This injunction was widely followed throughout the ages, with the natural result that the ordinary Jew acquired an unparalleled and intimate acquaintance with the Pentateuch. Nevertheless, it was emphasized that the study of the Oral Law took precedence over and was regarded as more meritorious than that of the Bible. "Those who occupy themselves with the Written Torah (alone) are of but indifferent merit (lit. "a quality and not a quality"); but they do receive their reward; with Mishnah, are wholly meritorious, with *Gemara – there can be nothing more meritorious" (BM 33a). Tractate *Soferim* expands this with the statement, "the Bible is compared to water, the Mishnah to pepper, the *Gemara* to spices." The world needs all three, and the wealthy man can indulge in all, but "happy is the man whose occupation is with *Gemara*," the only rider being that the study of Bible should be thorough and not a mere springboard ("jumping") to the study of the Oral Law (15:8–9).

The Talmud declares that a person should divide his time into three equal portions, one of which should be devoted to the study of the Bible. Rashi maintains that one should therefore devote two days weekly to the study of Bible, but his grandson R. Tam, while applying the division to each day rather than the week, makes the significant comment that "a person who studies Talmud can ignore that of Bible since Bible is 'intermingled' in it" (Av. Zar. 19b and Rashi and Tos. in loc.). Maimonides, however (Yad. Talmud Torah 1:11), posits the talmudic injunction in its literal sense, which is probably the reason that knowledge of the Bible – indeed its memorization – has been much more widespread among Oriental Jews than among Ashkenazi Jews. The close study of the biblical text, pursued with meticulous care and devotion by the maso-

retes, who not only set themselves the task of establishing the correct text but provided both punctuation and accents, was of immense service in establishing the accepted and standard text. It became the basis of the independent study of the Bible which was to characterize the Middle Ages.

The other non-Pentateuchal books of the Bible were also studied in the talmudic period. Every child was given a specific verse of the Bible which was, so to speak, regarded as "his own" (Hag. 15a–b; Esth. R. 7:13). (It may, however, refer to the verse he had studied that day.) The verses quoted in these two passages alone are from Isaiah (four verses), Jeremiah (two verses), Psalms and Proverbs. The child was introduced to the study of the Bible at an early age. The standard age of five is given in *Avot* (5:21), but a certain amount of flexibility was permitted (BB 21a – see *Education). The Mishnah, however, continues "the age of 10 for the study of Mishnah and of 15 for *gemara*," evidence that the study of the Bible was regarded as belonging to elementary education, although it was insisted that it be studied thoroughly (Sof. 15:9).

In the Middle Ages and After

The stimulus behind the emergence of the study of the Bible as an independent discipline was largely the result of the challenge provided by biblical exegesis of the *Karaites. Rejecting the entire corpus of talmudic tradition as incorporated in the Oral Law, and calling themselves "Benei Mikra" ("students of the Scripture"), they paid especial attention to the investigation of the biblical text and the derivation of new rules of conduct from it. There is no doubt that it was this challenge which stimulated Saadiah Gaon to branch out into what was to become the new intellectual activity of independent biblical exegesis, which largely took the form of literal exegesis. He was followed, among the Babylonian *geonim*, by Samuel b. Hophni and his son-in-law Hai Gaon, and they may be said to have laid down the foundations for literal exegesis of the Bible. (For the history of subsequent exegesis see above section on Exegesis.) An aspect of this study of the Bible in medieval times as an independent discipline is the fact that from Rashi onward biblical commentary covered the entire Bible. The commentary to the Pentateuch and Early Prophets of Isaac Abrabanel can be regarded as marking the close of this period.

The influence of the close study of the Bible, especially in Spain, is also evident in the neo-Hebrew poetry which developed during this period. Unlike the *paytanim* of Erez Israel and the Franco-German school, the poets of Spain, particularly Solomon ibn *Gabirol, Moses *Ibn Ezra and *Judah Halevi confined themselves to classical biblical Hebrew in their works, paying close attention to the rules of grammar and displaying a perfection and finish which reveals a thorough knowledge of the Bible. Mention must be made of a different approach to the study of the Bible which left a permanent mark. This is the kabbalistic exegesis of the Bible, which reached its full development in the *Zohar, "the Bible of the Mystics." This famous work can be regarded as a midrashic commentary to the Pentateuch, but the interpreta-

tion is mystic (*sod*; see *Kabbalah). It is difficult, however, to determine whether the burgeoning of the study of the Bible as a whole, and particularly in France (and Spain) was confined to scholars, or whether it encompassed the entire people. The remarkable explanation given by Rashi, who wrote commentaries on practically the entire Bible, of the deathbed statement of R. Eleazar: "Keep your children from *higgayon*" (meditation) – "Do not accustom them to excessive study of the Bible, because of its attractiveness" (Ber. 28b) – certainly seems to point to a discouragement of the "excessive" study of the Bible as a whole.

The 16th to the 18th centuries are characterized by an almost complete neglect of the study of the Bible as such. Talmud and Kabbalah became almost the sole subjects of study. Only in Italy was the study of the Bible as such pursued, and it produced such epoch-making works as Elijah *Levita's *Masoret ha-Masoret*, Azariah dei *Rossi's *Me'or Einayim*, Abraham *Portaleone's archaeological researches, and the commentaries of Obadiah *Sforno and Moses Hefez (*Gentili). Otherwise, biblical commentary consisted largely of novellae, supercommentaries and homiletical disquisition. Various attempts were made, e.g., by *Judah Loew b. Bezalel of Prague, to revive the study of the Bible, but with little effect.

Modern Times

The revival of the study of the Bible among Jews was inaugurated by the pentateuchal commentary of Moses *Mendelssohn, the *Biur*. That commentary heralded the return to the study of the Bible *per se*, with emphasis upon the literal interpretation of the Bible according to its natural meaning. Basing itself largely upon the classic rabbinical commentators of the Bible, Rashi, Samuel b. Meir (Rashbam), Ibn Ezra, and Nahmanides, it eschewed homiletical interpretation entirely and confined itself solely to establishing the literal meaning of the text. However, this renewed interest in the study of the Bible was confined to scholars. The number engaged in it was small, and it had little effect on renewing interest in the Bible, and hardly penetrated into the consciousness of the Jewish masses. There were theological inhibitions which prevented the introduction of the fruits of modern biblical study, and those scholars who did engage in it had largely to make their contributions in European languages, in which almost all biblical study was developed. The prohibition against women studying Torah enunciated by R. Eliezer (Sotah 3:4) and accepted as *halakhah* (YD 246:6) was regarded as applying only to the Oral Law, and not to the Written. Women were, nevertheless, not encouraged to study the Bible; "she should not be taught in the first instance, but if she was so taught it is not regarded as obscenity" (YD loc. cit. Yad. Talmud Torah 1:13). Thus there was no special study of the Bible by women, yet the **Z'e'nah U-Re'elah*, a midrashic exposition of the Bible in Yiddish especially written for women, achieved an immense popularity.

An almost dramatic transformation took place with the rise of the national movement after the end of the 19th century. On the one hand, the revival of Hebrew as a spoken language

made possible the study and teaching of the Bible in the language in which it was written, and on the other hand, for the first time among the Jewish masses, that study was liberated from the theological confines to which it had been limited. A secular approach to the Bible, which regarded it solely as the greatest cultural and literary monument of Jewish culture, the outstanding achievement of the Jewish people when it lived a full national life in its own homeland, was adopted. It gave impetus to the most striking aspect of study in modern Israel, the restoration of the study of the Bible *per se*. The Bible and its study has come into its own in modern Israel. It is studied with equal interest both in religious and non-religious schools, with the obvious difference, however, that whereas in the former the religious aspect is paramount and there is a complete absence of any reference to biblical criticism, in the latter it is studied from the point of view of literature and history. Its study can be regarded almost as a national pastime. It has become a significant feature of Israel life; it is divided into daily readings so that the entire Bible is read in the course of the year, and those readings (for Prophets and Hagiographa), with a topical commentary, are the subject of a daily broadcast. Biblical "quizzes," whether among youth, in the army, among the general populace, or international have become a popular feature. Criticism has been leveled against this phenomenon in that it tends to emphasize a wide and comprehensive knowledge of the text alone, with no consideration given to its more profound aspects. But for the first time a public exists which employs the language of the Bible as its vernacular and which has a considerable knowledge of the text. As a result, practically for the first time since biblical study became an independent discipline, the possibility has been created for that study to be undertaken and disseminated in Hebrew. It has been suggested that the great enthusiasm for the Bible in Israel is a search for roots. It is witnessed in the popular interest in Bible conferences, in archaeological digs, in the revival of biblical place- and personal-names. Contact with the land of the Bible and its distinctive natural features and tangible conditions has had a distinct influence, for example, in the fields of topography, the history of settlement in Israel, and biblical realia, which have been intensified in recent years.

IN CHRISTIANITY

Christianity began as a conventicle in Judaism, with a complete and unquestioned acceptance of what had come to be

the foundation stone of Judaism's serious view of itself as the one true revealed religion, destined to be the religion of all mankind. Through the years the confidence had matured that in the Bible was the complete and all-embracing record of all that men would ever need to know. Here stood revealed the full and complete will of God: all that men were to do and to be had been revealed to them. Their conduct toward one another and toward Him, the way they were to worship Him and regard Him, even their attitudes of mind and will, all had been revealed and was man's for the knowing. No circumstance could ever arise that had not been anticipated, no question for which the certain answer had not been given. Even before the moment of creation it had stood in the mind of God. Subsequently the blueprint for all time had been revealed by God to men through the agency of Moses and the other specially designated and inspired agents. The Bible was not 24 books, as it might superficially seem to be to Jewish eyes, or 29, to those of the Christians. It was fundamentally one book, with God its one author.

As the movement eventually to be styled Christianity became separate from the parent, it never lost this confidence in the nature of its inherited Scriptures, which, as the true Israel it regularly conceived itself to be, it easily came to believe were actually primarily its own, not the parent's, "for," as Justin *Martyr phrased it in his *Dialogue with Trypho* (ch. 29): "we believe them, but you, though you read them, do not catch the spirit that is in them."

Gradually, in the course of almost exactly 100 years, a large number of additional chapters, so to speak, were produced. As the years passed, many of these later writings became dear to an ever-increasing body of believers, with the result that by the middle of the fourth century 27 more writings had come to be widely regarded and formally accepted as a part of God's Revelation, of which He was the actual author, having seen fit to reveal His mind through the records which evangelists and apostles had written at His dictation.

Through the centuries this view was maintained. It is this which is meant by the statement in the twentieth of the still-authoritative Thirty-Nine Articles that the Bible is "God's word written." In the 18th century Locke was asserting nothing new when he insisted: "It has God for its author, salvation for its end, and truth without any mixture of error for its matter." A century later, an Oxford theologian, Dean Burgon, spelled it out: "The Bible is none other than the voice of Him that sitteth upon the throne. Every book of it, every chapter of it, every word of it, every syllable of it (where are we to stop?), every letter of it, is the direct utterance of the Most High. The Bible is none other than the Word of God, not some part of it more, some part of it less, but all alike the utterance of Him who sitteth upon the throne, faultless, unerring, supreme" (*Inspiration and Interpretation* (1861), 89).

This view of Scripture, despite two centuries of inquiry during which in the eyes of an increasingly large group it has been discredited or drastically qualified, is still with nuances

the verdict of Christianity, Orthodox, Roman Catholic, and Protestant alike. The Protestant Reformation did not affect the matter in the slightest. There was and is no real difference between Catholics and Protestants as to the proper attitude toward the Bible or the basis on which they rest their creeds. The sole difference lay – and still lies – in the fact that to the Catholic (and Orthodox) Scripture is not the sole authoritative and infallible source of belief. Scripture (i.e., Old and New Testament including the deuterocanonical books) and tradition are the source of God's revelation. For the Protestants the Scriptures alone can have such a claim. Both, however, accept the Bible as the authoritative and infallible statement of revealed truth. Actually, Protestant scholars at times went to greater extremes in their stress upon biblical interpretation than did Catholics. During the years, ecclesiastical infallibility and scriptural infallibility had grown up together. As a result of the Reformation, ecclesiastical infallibility was thrown overboard by Protestants. The infallibility of the Bible was set up as a bulwark against the rejected infallibility of the Church. It is accordingly not surprising that in consequence a literal view of inspiration, like that enunciated by Dean Burgon, resulted.

Thus the real and distinctive note in the Christian attitude toward the Old Testament has never been whether the Old Testament is or is not Scripture, to be accepted and prized, for this acceptance has been universal. Rather, the problem has always been how the Old Testament is to be interpreted and used.

Beginning, and continuing for many years, as a part of Judaism, sounding the proclamation of Jesus, whom they believed to have been raised from the dead by God and to be with him in heaven soon to return to establish the speedily expected new age, which, like him, they styled the kingdom of God, the Christians' main differences from the rest of orthodox Jewry were their developing views of Jesus himself. So far as fundamentals were concerned, they remained orthodox Jews, in their views of the unity of God, of His relation to Israel, of His complete revelation in Scripture.

With their basic view of the all-inclusive content of the Divine Revelation in Scripture it was not unnatural that Christians saw prophesied therein their movement and their Christ. As the movement came more and more to be separate from Judaism, the conviction deepened that Judaism, which failed to see in the predictions in the Old Testament the Christian Jesus and the success of the movement resulting from his preaching, was blind to the real content of the Scriptures, which Scriptures they were confident were theirs. The Old Testament, according, for example, to the *Epistle of Barnabas*, has meaning only when it is understood in terms of the gospel. It was held that God's covenant has always been made with Christians, and the Old Testament has always been misunderstood by the Jews. This in no wise minimized the Old Testament. "All scripture is inspired by God and helpful for teaching," as the author of 1 Timothy 3:16 was to insist; but it must be rightly understood.

Much has been written about Paul's rejection of the Mosaic law, but although this is true, it is far from meaning that he rejected the Old Testament. It remains Scripture for Paul and of the profoundest value, as his constant citation to establish or buttress this contention or that indicates, but it is no longer letter but spirit, no longer law but a ministry of grace. By the aid of the Spirit he holds, the Old Testament can be interpreted as a spiritual book – the reason others cannot do so is because they have not received the gift of the spirit. They have been blinded by Satan; true understanding of the Old Testament comes only from God. Paul is adept in finding “spiritual meaning” in the most unlikely texts. He does not view the Old Testament as the Christian's moral guide, for his break with the law, ceremonial and moral alike, was complete. Rather this standard or guide is to be found based on what he calls Jesus' law of love, more exactly, what is worthy of one in Christ. The point often overlooked is that the kind of life which Paul felt worthy of in Christ is precisely the type of life which as a Jew he had been from birth trained to revere, as he had found it revealed in Scripture.

The whole insistence in the *Epistle of Barnabas* is that Christians must avoid a Judaistic conception of the Old Testament. Despite Barnabas' blistering criticism of the literal understanding of passages regarding sacrifices and the food laws, he never thinks of giving up the Old Testament or its divine Creator, as Marcion and most of the Gnostics were subsequently to do. Instead his pages are filled with such words as “Moses received these doctrines concerning food and thus spoke of them in the Spirit; but they [the Jews] received them as merely referring to food, owing to the lust of their flesh” (*Epistle of Barnabas* 10). His reference to gnosis and his anti-Judaism do not mean that he was either a Gnostic or that he rejected the Old Testament. Gnosis, as he uses the term, is simply deeper insight into the truths of Christianity with the aid of allegorical interpretation of the Old Testament which allowed him to find what he sought to discover. His allegorization constantly does violence to the meaning of the text and resolves historical events into exaggerated fantasy. Nor is Barnabas alone. Justin Martyr indicates the same naive and uncritical attitude toward the Old Testament. That he revered it as inspired Scripture is evident in every page; his devotion to allegorical interpretation, which can find Jesus clearly predicted in the most impossible passages and the cross prefigured not alone throughout the Scriptures – the paschal lamb roasted on a spit (*Dialogue with Trypho* 40), the extended hands of Moses (*ibid.* 90), the serpent in the wilderness (*First Apology* 60), the horn of the unicorn (*Dialogue with Trypho* 91) – but also in the nautical rig of masts and yardarms, in the plow and tools of the farmer and mechanic, in the more obscure and misty discourses of Plato, or in the nose which juts from the face which enables the prophet to say, “The breath before our face is the Lord Christ” (*First Apology* 55), reveals vividly, if to a modern age grotesquely, the early Christian confidence that the Old Testament was primarily a Christian book, at least of a sort which must be rightly read to be prop-

erly understood. Like Paul, Justin does not deny the historical reality of God's relationship with Israel. What he insists upon is that the earlier covenant looks forward to being superseded. The prophets herald a new covenant with God, and in Christianity with its two predicted advents of Christ – the one already experienced, the other yet to come – their predictions are fully realized.

The Alexandrian school, notably *Origen, deeply indebted to Philo, sets forth most thoroughly the principles or purport of Christian allegorization, and with far less of the bizarre overemphasis of a Barnabas or Justin Martyr. For Origen the fulfillment of prophecy is the proof of its unquestioned inspiration. Thus, in the advent of Jesus the inspiration of the prophetic words and the truly spiritual nature of Moses' law come into full light. The purpose of Scripture is to reveal intellectual truths, not to show God's working in history. Actually history often conceals truth. This, Origen sees clearly evidenced in the pages of both Old and New Testaments. In addition – for, like Philo, Origen was in many ways a very practical and down-to-earth man – much of the legislation in both Testaments cannot be literally observed. Such passages must, accordingly, reveal other important, if less obvious, values. But Origen is far more restrained than were some of his predecessors: the passages which are historically true, he is sure, far outnumber those which are composed with purely spiritual significance – that is, which are not historically true. In sum, all Scripture has a spiritual meaning. It should be observed that Origen is a scholar and thinks and writes as such. His protests against what he terms the literal meaning are directed essentially against the superficial and often absurd misinterpretations put upon Scripture by ignorant people who cannot understand metaphors and parables and who thus regularly read poetry as pedestrian prose.

The allegorical method of interpreting Scripture, which was the outgrowth of the Christian confidence that their movement and their Christ were of course revealed in the all-inclusive Scriptures, and that it was their task to set forth these facts clearly so that when their Lord returned from heaven he would find faith on the earth, encountered much criticism. Marcion, a devoted if misguided Christian – and in no small degree driven to his rejection of the Old Testament as a Christian book by these absurd excesses of allegorization – insisted on a literal understanding of the Hebrew Scriptures, the better to emphasize their crudity. In his eyes the Old Testament was not a Christian book, and no amount of allegorization could make it such. Jesus was not foreseen in any of the prophecies of the Old Testament, nor did his coming in any sense fulfill them; rather, he had come to destroy both the law and the prophets. Marcion stands alone in this rejection, and many interpreters have denied that he was a Christian in any sense of that word.

Others, notably the group of scholars styled the Antiochian school and *Jerome, had a profound respect for the literal meaning of Scripture. Jerome had earlier been an allegorist, as his first biblical commentary clearly shows, but

his contacts with Jewish teachers had been influential in his change of front. It is not too much to say that wherever the influence of the Synagogue is to be seen – as in Dorotheus, head of the catechetical school in Antioch, who painstakingly learned Hebrew – there was a tendency toward a literal understanding of the Old Testament. This was not to deny the deeper meaning of Scripture, which was to them unquestioned. Rather, the deeper meaning was built onto the literal, not flatly opposed to it as Barnabas had fulminated.

The most influential of the school of Antioch was Theodore of Mopsuestia. He insisted on the historical reality of biblical revelation. In the prophecies of Christ's coming, allegory is not to be seen, as the Alexandrians had maintained. Rather, the prophets actually foresaw what was to come to pass in Israel and announced it, but in addition they saw – or some of them did – the ultimate coming of Christ. Nor could Alexandria rightly claim Paul's words in Galatians 4 and 1 Corinthians 10 as its support. Despite Paul's phrase, he was not indulging in allegory. His words were typological. The incident was real, but in addition it typified a deeper truth. The events had taken place; nonetheless they were comparisons and so he could use them as warning examples. Actually Theodore insisted that only four of the Psalms (2, 8, 44, 109) are in any sense to be seen as predictive of Jesus, and that they are not truly messianic but rather give glimpses of the incarnation. Only books containing a prophetic element are to be regarded as canonical; thus Job, Chronicles, Ezra-Nehemiah, and Esther, as well as all the books of the Apocrypha, are to be seen as containing human wisdom alone and are to be rejected from the canon. This exclusion of any of the books of the Hebrew canon was most unusual, and a century later Theodore's writings were burned as heretical – in part because of the views of his pupil Nestorius, for which he was held responsible, and in part because of his exclusion of books universally revered as canonical, quite regardless of the way they were interpreted.

As the Christian movement spread into the gentile world, it was but natural that the current Greek version of their inherited Scripture became their Bible. Because of the confidence that Jesus and the Christian movement were to be found in its pages and because of the Christian conviction that the Jewish understanding of the Scriptures was in error regarding what to them was palpably a Christian book, it is not surprising that the Septuagint speedily lost all authority in Jewish eyes and that the second century saw several new Greek translations (Aquila, Symmachus, Theodotion) stemming from Jewish feelings of outrage that their Scripture was being so crassly misused and turned into a weapon against them. One of the most significant achievements by any early Christian scholar, well indicating the universal Christian acceptance of the Old Testament as a part of their inspired Scripture, was the gigantic Hexapla, with the Old Testament standing in six parallel columns (cf. above, Ancient Versions, Greek). Well aware of the fact, as he was, that frequently the Septuagint and the Hebrew diverge, Origen sought to indicate this. Material in the Septuagint but not in the Hebrew was indicated by warning

obelisk; material in the Hebrew but not in the Greek was indicated by asterisks. In addition to this monumental work by Origen, other recensions of the Septuagint (Hesychian and Lucianic) were subsequently made. Occasionally Christian scholars in the early days had some knowledge of Hebrew and made use of Hebrew texts, although regularly chided by Jewish scholars for employing inferior and corrupted texts; by and large until the 16th century, when knowledge of Greek and Hebrew became a scholarly must, study of the Old Testament was based upon the Greek texts. Although translations of both Testaments into Latin and Syriac were made early, Greek continued to be the usual medium until the fourth century. Gradually Latin became the common Christian tongue, and a standard authoritative Latin version of both Testaments became necessary to bring order out of the chaos which had arisen and of which Augustine remarked: "Whenever in earlier days a Greek manuscript came into any man's hand, provided he fancied that he had any skill at all in both languages, he did not hesitate to translate it." After completing his revision of the Latin text of the New Testament at Rome at the behest of Pope Damasus, Jerome went to Bethlehem and produced a version of the Old Testament. He claimed that it was a new translation into Latin of the Septuagint on the basis of Origen's hexaplaric text, that is, the fifth column of the Hexapla. Whether this was actually a fresh translation, as Jerome claimed, or simply a revision of the Old Latin text, is uncertain, for Jerome's claims are often unreliable. At any rate, he speedily became convinced of the need of a fresh translation of the Old Testament from the Hebrew text. This he made and, except for the Psalms, it is the present Vulgate (cf. above, Ancient Versions, Latin). His translation of the Hebrew Psalter was never likely to oust in popular regard his earlier translation from the Greek (Gallikan Psalter). In consequence of his work, Jerome became convinced that only the books in the Hebrew Bible had warrant to be considered part of the Bible. Despite his arguments and insistence, the Roman Church continued to use the Apocrypha, which had been regularly regarded as canonical by Christians to whom the Septuagint was their Bible; the Apocrypha continued to be, as it is today, an unquestioned part of the Bible of the Roman Catholic Church, not collected at the end, but interspersed, as it was in the Septuagint, among the other Old Testament books. Jerome's objections eventually found acceptance in Protestantism. Luther relegated the Apocrypha to the end of the Old Testament. Subsequently British and American churches came to exclude these books, even as a separate collection, from printed editions of the Bible, although in the 20th century they have regained a measured popularity as valuable reading. They are not, and they have not been since the Reformation, a veritable part of the Bible in Protestant eyes (see also *Luther; *Reformation; *Protestantism). For many centuries the basic contention of both Judaism and Christianity maintained that the Bible is totally different from all other books, and in consequence the rules and procedures for studying and appraising other writings do not apply here. The past three centuries have seen the rise and development of a direct chal-

lenge to this contention, in what is commonly styled Higher Criticism. The source analysis of the first six books of the Old Testament, from Astruc and De Wette to Colenso and Wellhausen, has resulted in far more than just a transfer of authorship from Moses to a host of nameless men at a distinctly later date or dates. It has brought these books into clear view as the record of centuries of achievement and of the long pilgrimage of men and women, constantly confronted with the tasks and problems of life, making their mistakes, achieving new and sounder insights. In short, to many Christians the Old Testament now stands as the longest and best record of man's evolution and the growth of his ideas about himself and his God, and the record of the development of morality, politics, and religion, which have, for better or worse, very definitely molded our own culture and patterns of thought.

IN ISLAM

The presence of Jewish and Christian communities in the northern and southern Arabian Peninsula during the centuries which preceded the advent of *Muhammad is sufficient explanation that the Arabs already knew of the existence of the Bible in these communities during the period of the *Jāhiliyya* ("ignorance"), i.e., before the "Prophet of Islam" began to herald his religion. The pre-Islamic poets saw the books of the Bible in the possession of the Jewish *ḥakhamim* and the Christian clergymen and monks, and since the overwhelming majority of them could not read or write – Muhammad also prided himself on his ignorance in this field (Sura 7:156; cf. also 4:162; 40:78) – the letters appeared to them as the "faded traces of abandoned campsites" which could only be distinguished with difficulty (but see Brockelmann, *Arab Lit*, supplement 1 (1937), 32 n. 2). The poets mention the *zabūr* – the definition of which appears to be (the book of) Psalms (of David); Muhammad later pluralized it as *zabūr* in the Koran to denote the whole of the Bible (see Sura 17:57; 26:196). Muhammad knew of the Torah (*tawrāt*; e.g., Sura 3:58, 87), which was given to *ahl al-kitāb* ("the people of the book," i.e., Jews and Christians) and like the Koran it is a revelation of the word of God. The *tawrāt* is held as a way of uprightness and light. According to the book of Allah, the Prophets – who were loyal to Allah – as well as the rabbis and the *aḥbār* (Jewish *ḥakhamim*), judged the Jews (Sura 5:48). Even though it is obvious that Muhammad had heard much of the contents of the Bible, there is no doubt that all of his knowledge was acquired from teachings and tales told to him by Jews and Christians. It appears that he was not the only one in his time

who repeated these to his followers. His opponents therefore often mocked him because he told them *asātīr al-awwālīn*, stories of the ancients which had been heard more than once (see e.g., Sura 6:25; 8:31; 16:26; et al.). It was natural that such religious sermons – whether their contents were intended for the purpose of teaching or amusement – be delivered in a free style (i.e., not verbatim). Accurate translations of the Bible or enlargements with aggadic paraphrases (similar to Targum Jonathan) were however certainly to be found among the *ahl al-kitāb* – if not in writing, then at least in a fixed oral tradition. Nonetheless, it is doubtful whether Muhammad heard these verbatim – at least not during the first years of his appearance. Even though the Koran relies on the words of the *kitāb* ("the Book") – and in many Suras there is a clear allusion to the Pentateuch and the Prophets – the instances which may be regarded as (rather free) translations of the Bible are very few: in Sura 3:87 "all food was lawful to the children of Israel save what Israel (i.e., Jacob) made unlawful to himself before the law was revealed" (see Gen. 32:33; Sura 5:49; cf. Ex. 21:25–26; both Suras belong to the Medina period). Only in Sura 21:105 (of the Mecca period) can one find a quotation from Psalms (37:29) with the mention of the source: "And already have we written in *zabūr* [Psalms]... "The earth shall my righteous servants inherit." ("The righteous shall possess the land, and dwell upon it forever.")

Muhammad points out that Allah gave The (Holy) Book to Mūsā (= Moses; Sura 25:37; 2:81, 140–1, et al.). However, even before Mūsā, *ṣuḥuf* ("holy scrolls") were given to Ibrāhīm (= Abraham; Sura 53:37–38; 87:19; 19:42) and to Ismā'il (= Ishmael; 19:55), and their contents were also revealed to earlier generations (20:13; 87:18). According to Sura 20:133, these scrolls contain clear proofs of the prophecy and the mission of Muhammad; they are identical with the *kitāb*, the original book being in Heaven; it was revealed to the prophets and is the source of all revelations. This book is the *umm al-kitāb* (the "mother of the [Holy] Book," 43:3; 85:21). All the deeds of men from the Creation of the World until the final Day of Judgment are also inscribed in this book. According to Speyer (p. 334) the origin of this expression lies in a Midrash ("Torah... which is called a mother to its students"). The notion of the "Book" preserved in Heaven, in which everything is written and which also serves as a register for the deeds of all creatures, is found in the Bible (Ex. 32:32; Isa. 4:3; et al.); Muhammad received it from Judaism (cf. Hirschberg, *Diwan des as-Samau'āl*, 24, 52–58).

When Muhammad met face to face with the *aḥbār*, the Jewish *ḥakhamim*, at *Yathrib-Medina, they began to doubt his prophetic mission, and particularly ridiculed his lack of knowledge of the tales of the Bible. Muhammad then accused the Jews (and also the Christians) of having altered (*ḥarrafa*) the words of the Torah and having substituted (*baddala*) what was written in it (Sura 2:56, 70, 73; 4:48; 5:16; 61:6). At Yathrib-Medina, the sharp turning point in Muhammad's attitude toward the Jews occurred. Indeed, Muhammad's lack of familiarity with the Old and New Testaments was particularly

revealed in his Bible tales, because with regard to true monotheistic beliefs there are hardly any conflicts with Jewish views; this is not the case with respect to the divinity of Jesus and the Trinity. In the Bible tales, however, the inexactitudes, changes, lack of consistency, and even errors on almost every subject are conspicuous. However, during the years of Muhammad's activity, many changes also occurred in his approach to the Bible tales, which he sometimes deliberately adapted to the new conditions that had emerged; some of these were political, others were connected with information acquired from others or conclusions which he had reached himself. The commentators of the Koran later attempted to explain some of these faults, but with regard to others they did not conceal the truth. The cause of these errors is sometimes the defective source from which Muhammad drew his information, but one may also assume that Muhammad did not attribute much importance to these details. He employed the narrative material as a creator who sought to form a new structure from it, and therefore often adapted it to his requirements. The function of the tales of the Prophets on the events in antiquity and the attitude toward the emissaries who had preceded him was to explain his mission, his war against the inhabitants of Mecca, his policy, and also his failures. Hence the phenomenon that there is no uniform system in the Koran concerning the tradition of the Bible tales.

(A) Certain figures are mentioned by their names, but with occasional changes in the pronunciation which have been influenced by the Greek or Syrian languages, e.g., Ilyās – Elijah; Ismā'il – Ishmael; Sulaymān – Solomon; Fir'awn – Pharaoh. Other changes are due to Muhammad's affection for the creation of paronomasian couples, such as Hābīl and Qābīl (Abel and Cain), Hārūn and Qārūn (Aaron and Korah), Jālūt and Ṭālūt (Goliath and Saul), Yājūj and Mājūj (Gog and Magog), etc. Other changes must be attributed to Arabic writing, which as of yet did not have the diacritic marks, e.g., *Qitfir instead of Poti-Phar; Asiya (wife of Pharaoh; see *Fir'awn) instead of Asenath (the daughter of Poti-Phera). (In both cases the difference in the reading lies in the placing of the diacritic mark.)

(B) Some figures are alluded to in the Koran in such a way that there is no doubt as to whom Muhammad referred, even though they are not mentioned by their biblical name, e.g., the three (or four!) sons of *Noah (Sura 11:44–49), and Joshua son of Nun (5:23–29). This anonymity at times stems from Muhammad's obvious tendency to use insinuations. In some cases, however, the name was not sufficiently clear to him and he then preferred not to name the person (see: e.g., the Sura on *Balaam son of Beor, in the identification of which the commentators of the Koran also encounter difficulties, 7:174–5).

(C) In contrast to this anonymity, some figures are mentioned in the Koran with different names from those in the Bible; figures from the world of fantasy are cited as well: e.g., *Terah, the father of Abraham, is named Āzar; a figure from the world of folklore is the prophet to whom *Moses went dur-

ing his journey with his servant. The third Sura of the Koran known as the Sura of 'Amrān Family, i.e., Amram. It refers to a man whose wife (known as Hannah in post-Koranic legend) gave birth to Mary (Miriam), the mother of Jesus, the messiah, as is apparent from the continuation of the tale (3:31ff.). Miriam, the sister of Aaron and Moses, is not referred to by her name in the Koran. Parenthetically, it should be noted that the space allocated in the Koran to the tales and legends of the New Testament is disproportionately small, a fact which has drawn the attention of all researchers (Hirschberg, *Juedische und christliche Lehren*, 64–66). On the other hand, Christian influence is discernible in the descriptions of some of the biblical characters, such as Lot, Solomon, and Jonah. Many attempts, some of them successful, have been made in the post-Koranic Muslim literature to correct the curiosities in the tales of the Koran, to clarify the intentionally or unintentionally obscure places, to call by their correct names those figures who are mentioned by incorrect names or only by allusion, and to complete that which has been omitted in the continuity of the Bible tales. It is remarkable that in spite of the excessively large number of biblical characters referred to by the title of prophet because God spoke to them, and the figures of the prophets who were sent to the Arab tribes (e.g., *Hud, Ṣāliḥ), the three great prophets, Isaiah, Jeremiah, and Ezekiel, are unknown. Speyer has already noted that Muhammad does not allocate a place of importance to women in the Koran, especially not to unmarried girls. In his opinion this is the reason why the rescue of Moses is attributed to Asiya, the wife of Pharaoh (Sura 28:8), and not his daughter. Similarly, there is no mention in the Koran of the names of Sarah, Hagar, Rebekah, Leah, and Rachel (to whom there is a distinct allusion in Sura 4:27), or to Zipporah, the wife of Moses. He presents the wives of Noah and Lot in dreadful disgrace and describes the wife of Pharaoh as a righteous woman (Sura 66:10–12). In the post-Koranic literature all the above women are mentioned by their names and even Keturah, the wife of Abraham, is not forgotten. This process of exegesis and completion began within the circle of Muhammad's friends and supporters immediately after his death. Similar to the *Hadith collections (traditions dealing with *sunnat al-nabī* – the ways of the Prophet, his practical conduct (*halakhah*) – and based on *isnād*, i.e., an unbroken line of transmission which has been handed down from mouth to mouth beginning from the companions of the Prophet or the Prophet himself) they also began to insert, according to the same system, the explanations, commentaries, and legendary additions of the Koran. The legends which originated in Judaism were called *Isra'iliyyāt and are to be found in three literary categories: (1) *The commentaries on the Koran*, the most renowned, detailed, and ancient of which is that of the historian Abu Ja'far Muhammad al-Ṭabarī (838/9–992). Al-Ṭabarī published a 30-volume anthology of commentaries in accordance with the Hadith system; he presents the various opinions then prevalent on many subjects (see, e.g., in the entry "Isaac" concerning the question of who was bound by Abraham). Al-Ṭabarī,

however, was also familiar with the Bible and knew the details of the story of the conquest of Canaan by Joshua.

(2) *Arabic history books*. Again the first volume of the detailed historical work by al-Ṭabarī is a rich source of Bible tales, as they were current among the Arabs and the Muslims in general.

(3) A third source is the *Qiṣaṣ al-Anbiya'* ("Legends of the Prophets"), in which the tales were also collected in chronological order. The first to gather these tales in writing appears to have been *Wahb ibn Munabbih, the author of the *Isrā'īliyyāt* which have been lost and are only known from quotations. The detailed work which has been printed many times is that of al-Tha'labī (d. 1035), who presents his subjects according to the Hadith system. In addition to the legends, his work contains literal translations and paraphrases from the Bible. A second collection which was published is that of al-Kisa'ī (lived during the 11th century). A third collection is extant in manuscript in the Vatican (Cod. Borgia 165); it is the earliest of the collections and belongs to 'Umāra ibn Wathīma (eighth century). His work does not attain the completeness of those mentioned above. Much romantic material, which cannot be traced to the Bible or to Jewish literature, has also entered into these tales: e.g., the story of Jarāda, the daughter of the king of Sidon, whom Solomon took for his wife after he had defeated her father and whom he loved more than all his other wives because of her beauty (Ṭabarī, *Tārīkh*, 1 (1357 A.H.), 351–352). She continued to worship the idols and Aṣaf ibn Barakhyā, the righteous adviser of Solomon who frequented his palace, rebuked him for this. According to the commentators, there is an allusion to this Aṣaf in Sura 27:40, in the story of Bilqīs, the queen of Sheba.

Abundant and rich biblical material has entered Arabic and Muslim literature by the way of the Koran and tales of *aggadah*. Some of the Bible tales, as well as Muhammad's accusations against the changes (*tabdīl*) and the forgeries (*tahrīf*) in the Bible in order to refute the prophecy of his coming – found in the Holy Scriptures of the Jews and the Christians – served as the Islamic *polemic against Judaism (and Christianity) in Muslim literature. Ibn Ḥazm used this particular method when he argued with Samuel ha-Nagid (11th century), and also the Jewish apostate al-Samaw'al al-Maghribī (Samuel b. Yaḥya; 12th century). One may see the last echo of this polemic in the words of R. David ibn Abi Zimra, who laments: "The Arabs... regard our prayer as heresy and they say that we have added to, subtracted from, and changed our Torah..." (responsa, vol. 4 (Sudilkov, 1836), 21c).

For biblical tales in Islam see also the following articles: *Aaron (Hārūn); *Abraham (Ibrāhīm); *Adam (Ādam); *Balaam (Bal'am ibn Bā'urā); *Benjamin (Binyāmīn); *Cain and Abel (Qābil wa-Hābīl); *Canaan (Kan'an); *Daniel (Dāniyāl); *David (Da'ūd); *Elijah (Ilyās); *Elisha (Alyas'a); *Enoch (Idrīs); *Eve (Ḥawwa'); *Ezekiel (Ḥizqīl); *Ezra (Uzayr); Gog and *Magog (Yājūj and Mājūj); *Goliath (Jālūt); *Haman (Hāmān); *Isaac (Ishāq); *Isaiah (Sha'yā); *Isrā'īliyyāt; *Ishmael (Ismā'il); *Jacob (Ya'qūb); *Jeremiah (Irmīyā); *Job

(Ayyūb); *Jonah (Yūnus); *Joseph (Yūsuf); *Joshua (Yūsh'a); *Korah (Qārūn); *Lot (Lūt); *Miriam (Maryam); *Moses (Mūsā); *Nebuchadnezzar (Bukhtanaṣr); *Nimrod (Namrūd); *Noah (Nūḥ); *Pharaoh (Fir'awn); *Potiphar (Qitfir) Queen of *Sheba (Bilqīs); *Samaritans (Sāmīrī); *Samuel (Shamwīl); *Saul (Ṭālūt); *Seth (Shīth); *Solomon (Saleiman); *Terah (Āzar).

IN THE ARTS

Gabriel Sivan's *The Bible and Civilization* (1973) provides, *inter alia*, the first comprehensive survey of the Hebrew Bible's impact on world literature, art, and music.

LITERATURE

Although the Greek Septuagint translation of the Old Testament inspired a few writers in classical times, the Hebrew Bible's first significant impact on the secular literature of other nations really dates from the Middle Ages with the beginning of drama. Old Testament episodes figured in various cycles of Sacred Mysteries or Miracle Plays sponsored by the Church (mainly in England, France, and Germany), the vernacular eventually replacing Latin dialogue. During the Reformation, writers in many countries produced biblical epics which expressed the national aspirations and religious yearnings of their people. New scope was given to original treatment of Old Testament themes through the appearance of numerous Bible *translations (largely the works of Protestant scholars in Switzerland, Germany, England, Hungary, and other lands); and these not only popularized the Bible stories, but also very often had linguistic repercussions. From the Renaissance era onward, biblical works increasingly contained political and social overtones. Although *Yiddish literature is several centuries old, Yiddish fiction based on biblical themes other than *Purim plays is of recent date. Some notable treatments of Old Testament themes are dramas by Abraham *Goldfaden (*Akeydas Yitskhok*, 1897) and Sholem *Asch's novels *Moses*

(1951) and *The Prophet* (1955). *Judeo-Provençal contains a late 17th-century *Tragediou de la Reine Esther* by Mardochee Astruc, revised and published by Jacob *Lunel (The Hague, 1774); *Ladino literature the early 15th-century *Poema de Yoçef* and Abraham de Toledo's *Coplas de Yoçef* (Constantinople, 1732); and *Judeo-Persian literature four poetic paraphrases of Bible stories by the 14th-century writer Maulana *Shahin of Shiraz, who was emulated by the poet *Imrani in the 16th century and by Yusuf *Yahudi in the 18th century. In other literatures, Jewish writers either followed conventional approaches to Old Testament subjects, or, more frequently, reinterpreted the biblical stories in the light of issues such as Jewish emancipation, religious toleration, and political Zionism.

Allusions as well as explicit references to the Old Testament pervade modern Hebrew literature. The earlier writers based their works on biblical themes and biblical figures (see, for instance, *Mapu's prose or David *Frischmann's *Ba-Midbar*). *Agnon's prose reverberates with biblical allusions and motifs. Saul *Tchernichowsky wrote a number of poems focusing on King Saul, disclosing his empathy for the rather tragic figure of the first Hebrew king. Similarly, some poets identified with biblical figures whose name they bore and expressed it in verse: Legendary poetess *Raḥel (Bluwstein-Sel'a) wrote a number of poems about Jacob's beloved wife Rachel, underscoring her inability to give birth to the much-longed for son; Avraham *Shlonsky mentioned his namesake, the biblical patriarch Abraham, while poetess Yocheved *Bat-Miriam chose her family name to underline her identification with Moses' sister, Miriam. Moshe *Shamir depicts the political tensions and military actions of the early state of Israel in the context of the Hasmonean period (*Melekh Basar va-Dam*, 1954), and reverts to an earlier biblical period, to the story of King David and Bath-Sheba in *Kivsat ha-Rash* (1957). Other biblical heroes feature prominently: Samson (for instance in David *Avidan's *Shimshon ha-Gibbor*), Sisra's mother (notably, as a tragic figure!) in a poem by Haim *Gouri), Job (as, for example, in Hanoch *Levin's play *Yisurai Iyov* (*Job's Passion*), 1988). Shulamit *Hareven based many of her prose works on biblical motives (for instance, *Sone ha-Nisim*, *The Miracle Hater*, 1983). Meir *Shalev gave his own original reading of the Bible in *Tanakh Akhshav* (*Bible Now*) and coalesced biblical materials with original fiction in some of his novels, as for example in *Esav* (*Esau*, 1991). Zeruya *Shalev's heroine Yaara in the bestseller *Love Life* (1997) writes a dissertation on legends relating to the destruction of the Temple and even *Kishon's satirical oeuvre is full of references to biblical characters. No doubt the most prominent biblical motive in modern Hebrew literature is that of the *Akedah, the binding of Isaac, which is handled, often with ironic twists and in a most unconventional manner, in poems by Amir *Gilboa, Yehuda *Amichai, David Avidan, Tuvia Ruebner and Chanoch Levin, to name but a few. For some of the poets (Gilboa, for instance) it is not only the son who is sacrificed, but the father. Benjamin Galai, on the other hand, sees (in "Sarah's Lives") the biblical mother Sarah as the real victim of the planned sacrifice of her son, Isaac, while

Yehuda Amichai suggests that the real victim of that famous biblical episode is neither Abraham nor Isaac, but – typically for Amichai – the ram that was caught in the thicket by his horns. The Bible has also served as a source of inspiration for various historical novels, such as Shlomit Abrahamson's *Ma'ase Tamar* (2005), which is based on Genesis 38 and the biblical figure of Judah's daughter-in-law.

In *English literature a vast array of biblical figures appear in poetry and prose from the seventh century C.E. onward. Among the Puritans, John *Milton was outstanding (*Paradise Lost*, 1667; *Samson Agonistes*, 1671), biblical motifs also dominating some works by John Dryden (*Absalom and Achitophel*, 1681). After a lull in the 18th century, the impact of the Bible was again evident in Lord *Byron (*Hebrew Melodies*, 1815) and the scholarly Robert *Lowth and Matthew Arnold; while a more mystical vein appeared in the writings of William *Blake. The 19th century saw the emergence of a reckless biblicism in various works by the British *Israelites. With the exception of Isaac *Rosenberg, Jewish writers in England have largely avoided biblical themes. Some later non-Jewish authors who drew inspiration from the Bible were G.B. Shaw (*Back to Methuselah*, 1921); J.M. Barrie (*The Boy David*, 1936); James Bridie (plays including *Tobias and the Angel*, 1930); and Christopher Fry (*A Sleep of Prisoners*, 1941). The Old Testament's first significant impact on *French literature can be traced to the late 16th century, when French Protestants wrote epics of biblical grandeur, notably Salluste *Du Bartas (*La semaine ou création du monde*, 1578; *La seconde semaine*, 1584) and Agrippa d'Aubigné (*Les Tragiques*, 1577–94; published 1616). Biblical dramas of the same era were written by Jean de la Taille (*Saül le furieux*, 1562) and Robert Garnier (*Sédécie ou les Juives*, 1589). An epic poet of the Renaissance whose works were full of biblical and kabbalistic allusions was Guy Le Fèvre de la *Boderie. In the 17th century, Bossuet and *Pascal were profoundly influenced by the Bible, as was the dramatist Jean *Racine (*Esther*, 1689); *Athalie*, 1691). The 18th-century French philosophers were mainly hostile to the Old Testament, but later writers favorably reassessed the Bible, notably Chateaubriand, and the poets Lamartine, de Vigny, and Victor Hugo. Biblical themes also attracted the Catholic writers Léon *Bloy, Paul *Claudel, and Charles *Péguy. In the 20th century, there were plays by André Obey (*Noé*, 1931), and André Gide (*Saül*, 1903), and poems by Pierre Emmanuel and Jean Grosjean. Among Jewish writers, Edmond *Fleg, André *Spire, Gustave *Kahn (*Images bibliques*, 1929), and Benjamin *Fondane were outstanding interpreters of the Bible. The impact of the Old Testament in *Italian literature was rather more limited, although the ex-Marrano poet Solomon *Usque wrote a Purim play about Queen Esther (performed in Venice, 1558), which was both successful and influential. Originally written in Portuguese or Spanish it was reworked in Italian and published by Leone *Modena (1619). Giambattista Andreini's drama *Adamo* (1613) is thought to have inspired the character of Satan in Milton's *Paradise Lost*; and biblical themes dominated some works by Feo Belcari, Pietro Metastasio, and Vittorio Alfieri (*Saul*,

1782; *Abele*, 1797). Two Jewish writers who turned to the Bible for inspiration were David *Levi, the author of an allegorical drama about Jeremiah (*Il profeta*, 1866), and Guido *Bedarida, whose *La bella ridestata* (1927) was a Zionist allegory invoking the figure of Abishag the Shunamite. In *Spanish and Portuguese literature, more than a quarter of the biblical *autos* of the Madrid Codex (1550–75) deal with Old Testament themes. During the Renaissance Luis de *Léon, a humanist of partly New Christian descent, wrote biblical poems and translations, while Usque's Purim play was staged at Venice. Two leading 17th-century dramatists who used biblical motifs were Tirso de Molina (*La venganza de Tamar*, 1634) and Calderón. Marrano and Jewish writers were, however, more prominent as interpreters of Old Testament themes in Spanish during the 17th and 18th centuries. They include the eminent preacher Felipe *Godínez; Francisco (Joseph) de *Caceres; Antonio Enríquez *Gómez (*El Sansón nazareno*, 1651; *La Torre de Babilonia*, 1649); and João (Mose) *Pinto Delgado. Like Pinto Delgado, Isaac Cohen de *Lara was attracted to the story of Esther, publishing a *Comedia famosa de Aman y Mordochay* (Leiden, 1699). Although many Jewish writers made their appearance in Latin America from the late 19th century, few, if any, paid more than cursory attention to biblical motifs.

The Old Testament was a prime cultural influence in *Dutch literature, the Calvinists of Holland seeing themselves as Israelites engaged in a war of liberation against Catholic Spain. The outstanding Dutch biblical writer of the 17th century was, however, a Protestant convert to Catholicism, Joost van den Vondel, whose many biblical dramas include *Joseph in Egypten* (1640), *Salomon* (1648), *Jephta* (1659), *Koning David hersteld* (1660), *Adam in Ballingschap* (1664), and *Noah* (1667). After some decline of interest in the 18th and 19th centuries, biblical writing revived with works such as H. de Bruin's epic drama about Job (1944). Three Jewish writers of the 20th century who dealt with biblical themes were Israël *Querido (*Saul en David*, 1915; *Simson*, 1927), Abel *Herzberg (*Sauls dood*, 1958), and Manuel van *Loggem (*Mozes in Egypte*, 1960). Old Testament themes in *German and Austrian literature have been traced back to the 11th century but, apart from the Miracle plays found also in England and France, the Bible's influence was more important during and after the Reformation. Biblical themes attracted first Sixtus Birck and Hans Sachs, then Christian Weise (*Nebukadnezar*, 1684; *Athalia*, 1687; *Kain und Abel*, 1704) and Johann Bodmer (*Die Synd-Flut*, 1751). Their successors included Solomon Gessner, Friedrich Klopstock, and J.K. Lavater (*Abraham und Isaak*, 1776). Biblical culture exerted varying degrees of influence on *Herder, *Schiller, and *Goethe (whose *Faust* owes much to the book of Job). Old Testament motifs also preoccupied some of the leading 19th-century dramatists, notably Franz Grillparzer (*Esther*, 1877). In the 20th century, Georg Kaiser, Frank Wedekind (*Simson oder Scham und Eifersucht*, 1914), and Thomas *Mann (*Joseph und seine Brueder*, 1933–43) were only three of the many leading writers who turned to the Bible. The Bible also inspired a remarkably large number of Jewish authors from the 19th cen-

tury onward. Biblical poems were written by *Heine; plays by Karl *Beck (*Saul*, 1841), Arno *Nadel (*Adam*, 1917), Richard *Beer-Hofmann (*Jaakobs Traum*, 1918; *Der junge David*, 1933), Sammy *Gronemann, Max *Brod, Stefan *Zweig (*Jeremias*, 1917), and many others; and biblical novels were published by Joseph *Roth (*Hiob*, 1930), and Lion *Feuchtwanger (*Jefta und seine Tochter*, 1957). The European Holocaust, however, put an end to this vast and creative literary output. In *Hungarian literature, too, biblical influences were at work during the Middle Ages and the Reformation. Biblical themes inspired Protestant epics of the 16th century, and 18th-century dramas, notably *Izsák házassága* ("The Marriage of Isaac", 1704) by Ferenc Pápai Páriz. The Hungarian national revival in the 19th century prompted works by Mihály Tompa (*Samson*, 1863) and Imre Madách (*Mózes*, 1860); and biblical poems were composed by 20th-century writers such as Endre Ady and Attila József. Jewish writers who reinterpreted biblical themes included Emil *Makai, Lajos *Palágyi, Lajos *Szabolcsi and Károly *Pap (*Batséba*, performed 1940; *Mózes*, performed 1944). Several Jewish writers in Hungary also dealt with biblical motifs after World War II. Themes from the Bible have received differing emphases in the Balkan lands. A classic drama of modern *Greek literature was Vikentios Kornaros' *I Thysia tou Abraam* ("The Sacrifice of Abraham, c. 1675), a humanistic interpretation of the *Akedah story. One 20th-century Greek work of biblical inspiration was the drama *Sodhoma kye Ghomorra* (1956) by Nikos Kazantzakis and books by Jewish writers, such as Joseph *Eliyiya and Nestoras *Matsas. In *Romanian literature, one of the earliest biblical works was J.A. Vaillant's *Legenda lui Aman și Mardoheu* (1868). Alexandru Macedonski and Cincinat Pavelescu wrote the tragedy *Saul* (1893); the book of Job inspired poetic works by G. Gârbea (1898) and N. Davidescu (1915); while Eugen Lovinescu wrote the play *Eliezer* (1908). Romania's most prominent biblical writer was the Christian Zionist Gala *Galaction. Among Jewish authors, those who dealt with Old Testament motifs included Enric *Furtuna (*Abişag*, 1963), Camil *Baltazar, and Marcel Breslaşu, who wrote an oratorio based on the Song of Songs. Some of the outstanding figures in *Yugoslav (Serbo-Croatian) literature sought biblical inspiration from the 16th century onward, notably the Ragusan poet Mavro Vetranović. Later Milovan Vidaković composed Serbian epics about Joseph (1805) and Tobias (1825), while Aron Alkalaj, a Jewish banker of Belgrade, wrote a biographical work about Moses (1938). One of the early classics of *Bulgarian literature was Ioan (John) the Exarch's ninth-century *Shestodnev* ("The Six Days"), based on the Creation story. During the later Middle Ages, many biblical works were written by the heretical Bogomils. In the 20th century, Emanuil Pop Dimitrov published *Rut* and *Deshcherite na Yeftaya* ("Jephthah's Daughter"). In *Czechoslovak literature two outstanding biblical works by non-Jews were *Vúdce* (1916; *The Leader*, 1917), a drama about Moses by Stanislav Lom, and *Adam stvořitel* (1927; *Adam the Creator*, 1929), a play by the brothers Josef and Karel Čapek. However, Old Testament themes proved more attractive to Jewish authors. Julius

*Zeyer (*Sulamit*, 1883), Jaroslav *Vrchlický, and Eduard *Leda were among the most prominent of these. Biblical works were also written by two later Jewish authors, Ivan *Olbracht and Jiří *Orten. The treatment of Old Testament subjects in early *Polish literature was largely colored by the religious controversies of the Reformation. The Calvinist Mikołaj Rej, who versified the Psalms, wrote a work on Joseph (*Żywot Józefa z pokolenia żydowskiego*, c. 1545) and his contemporary, Jan Kochanowski, who also translated the Psalter, produced epics on the Flood (1558) and Susannah (1562), as well as the biblical *Threny* ("Lamentations", Cracow, 1580). Later Polish writers whose biblical themes symbolized the fate of their homeland were Adam *Mickiewicz, Kornel Ujejski (*Pieśni Salomona*, 1846; *Skargi Jeremiego*, London 1847), *Melodye biblijne*, 1852; and the dramatist Stanisław Wyspiański (*Daniel*, 1908). Since Yiddish was Polish Jewry's cultural language before the Holocaust, Jewish treatments of the Bible in Polish fiction are rare. In *Russian literature, on the other hand, biblical motifs were generally less prominent, although many leading writers were clearly steeped in the language of the Old Testament. The 11th-century *Primary Chronicle* begins with an account of the Tower of Babel, while in the 15th century Bible translations and even some rabbinic motifs appeared in the writings of various Judaizing sects. Modern Russian drama is largely the creation of Semyon Polotski and the German Lutheran pastor Johann Gottfried Grigori, who wrote biblical plays for the Moscow court, where a drama about Esther was staged in 1672. Old Testament themes have been reinterpreted in the 20th century by the writers Alexander Kuprin (*Sulamif*, 1908) and Leonid Andreyev; and by two Jewish authors of the post-Stalin "thaw", Semyon *Kirsanov and Joseph *Brodski.

The Bible and the associated traditions of the Midrash were a major source of Moslem legend. Though in general unspectacular, the Islamic sphere of *Oriental literature also produced a few works on biblical subjects, beginning with poems by the 9th-century Hejaz poet *Samuel b. Adiya (Al-Samw'al Ibn 'Adiyā). There are also biblical allusions in the poems of a 13th-century Spanish Arabic author, *Ibrāhīm b. Sahl al-Andalūsi (Abu Ishāq). A 20th-century writer who versified the Old Testament was the Egyptian Karaite Murād *Faraj. The literary use of biblical motifs in *United States literature is very much more recent. Old Testament influence may be seen in the writings of major 19th-century authors such as Emerson, Hawthorne, Whitman, and Whittier. Two best-selling religious romances by Joseph Holt Ingraham were *The Pillar of Fire* (1859) and *The Throne of David* (1860). Some writers of the 20th century who dealt with Old Testament themes were William Vaughn Moody (*The Death of Eve*, 1912), and Archibald MacLeish (*Nobodaddy*, 1926; *J.B.*, 1958). Marc Connelly's play *The Green Pastures* (1930) was a black reinterpretation of the Bible stories. American Jewish writers were prominent among those who sought new ideas in the Old Testament. They include the novelists Robert *Nathan (*Jonah*, 1925), Irving *Fine-man (*Jacob*, 1941; *Ruth*, 1949), Howard *Fast (*Moses, Prince of Egypt*, 1958), and Maurice *Samuel; the playwrights Clifford

*Odets (whose *The Flowering Peach*, 1954, reinterpreted the story of Noah) and Paddy *Chayefsky (*Gideon*, 1961); and poets such as James *Oppenheim, Charles *Reznikoff, Delmore *Schwartz (*Genesis*, 1943), and Louis *Untermeyer. In *Canadian literature the poets Irving *Layton and Eli Mandel made much of biblical imagery; and Adele Wiseman (in *The Sacrifice*, 1956) retold the story of the *Akedah* in a prairie setting. In more recent years, the women of the Bible have received special attention. Notable works are Anita Diamant's *Red Tent* (1997), telling the story of Dinah, and Marek *Halter's trilogy on Sarah, Zipporah, and Lilah (2004–6).

The Hebrew Bible has been one of the most powerful literary stimuli of the past millennium, inspiring poems, plays, novels, and stories in many languages. The Old Testament's portrayal of the human condition and of man's relation to the Divine remains an inexhaustible source of inspiration for Jews and non-Jews alike, wherever the Bible is freely taught and imbibed.

MUSIC

The musical setting of biblical texts or subjects is a basic element in both the Jewish and the Christian cultures. A biblical text may be attached to a simple melodic pattern and incorporated in the liturgy, or it may be set, with the technical resources of art music, for an ensemble of voices and instruments for performance on the concert stage. The extent of quotation may range from the repetition of a single verse – chosen for its overt or symbolic content – to an exposition of entire chapters or even books, which may vary from the simplest to the most complex. Finally, the "musicalization" of a biblical text or story-subject may serve as a means of carrying both performer and listener away from everyday reality, to the reenactment of a religious or historical experience; or it may be intended to achieve the exact opposite, drawing the traditional words, stories and characters into the contemporary world (as in the *Purimspiel, the Negro Spiritual, or the contemporary Israel "verse-song"). The mere enumeration of the repertoire of "The Bible in Music", even within the limits of printed sources of European art music, is a virtually impossible task, although partial lists have been published. The situation is further complicated by the use of mixed texts, especially in motets and cantatas, where biblical quotations, texts from the New Testament and ecclesiastical literature, and new poetic creations, alternate and complement each other symbolically.

There is no field of Western art music in which the Bible has not been reflected at one time or another; the major forms are the Mass, oratorio, cantata, motet, and opera and operetta. Biblical subjects have also furnished the inspiration for various forms of instrumental music (such as Johann Kuhnau's "Biblical Sonatas" in the 18th century), as well as ballet.

The problem of censorship has left its imprint on the history of the "Bible in Music", as it has on the spoken and visual arts, and especially in those forms intended for actual stage representation. Even when biblical characters were permitted

to appear, move and sing, the appearance of God was often forbidden, even as a disembodied voice. The late development of oratorio in France, for instance, is directly connected with such a ban, which was relaxed officially only about the middle of the 18th century. In Russia the prohibition against representing biblical characters in a sung work was in force until the end of the Czarist regime.

ART

The Hebrew Bible has been a continual source of inspiration to artists from classical antiquity until the present day and was a major source until the 17th century. In early Christian wallpaintings in the Roman catacombs and in the carvings on sarcophagi certain images including "Sacrifice of Isaac", "Moses striking the Rock", the "Three Men in the Fiery Furnace" (Shadrach, Meshach and Abed-Nego), and "Jonah and the Whale" continually recur. These images, which were associated with Christian doctrines concerning the life to come, have their artistic origins in pagan art and also, perhaps, in Jewish visual representations of the Bible, such as those that survive in the wallpaintings of the synagogue at *Dura-Europos. In the East Roman (Byzantine) empire, the visual interpretation of the Bible was dominated by the icon, or "holy image", whose form, credited with a divine origin, was preserved unchanged for hundreds of years. This precluded the development of any narrative interest. The characteristic art-form of Byzantium was the mosaic, but the troubled condition of the West after the fall of Rome discouraged ambitious schemes of architectural embellishment and favored instead the more modest illuminated manuscript. This was at first somewhat stylized, but the Carolingian period of the ninth century witnessed a renaissance of creativity. Traditional images were transformed, iconography was developed, and a number of important schools of illumination came into being. Until the close of the Middle Ages, Christian representations of the Bible were governed by certain dogmatic considerations. Scenes from the Old Testament were held to prefigure episodes from the New, and were generally depicted in that light. Thus, the sacrifice of Isaac was taken to be symbolic of the Crucifixion of Jesus; the story of Jonah and the whale as a prefiguration of the Resurrection. In the age of the great Romanesque and Gothic cathedrals, from the 12th century onward, most of the arts tended to be subordinated to a total architectural ensemble. Gradually, however, each art began to regain a life of its own. The static carved figures round the cathedrals began to converse in groups; in Italy they were placed in niches which isolated them in an independent area of space. The same tendency was to be seen in other arts.

The Gothic architecture of the North eliminated wall-space in order to let in the light, so that frescoes were re-

placed by stained-glass windows. In Italy wallpainting continued to develop but, instead of remaining subordinate to the architectural scheme, it became increasingly of equal importance to its setting. This tendency reached its culmination in Michelangelo's great biblical frescoes in the Sistine Chapel in Rome. In the same way, illuminations which had formerly been integral to the text of a manuscript now developed into miniature paintings, in which an artist's individuality could be expressed. Other changes occurred. Images no longer depended to the same degree on their purely symbolic significance. Artists sought to treat figures naturalistically, placing them in their natural settings. More and more, the biblical subject provided an opportunity for the study of contemporary life. Paintings developed a third dimension, with colors that were naturalistic rather than symbolic. The interest in the natural setting finally developed into landscape-painting. By the 17th century, the landscape in the paintings of Nicholas Poussin was given the same importance as the biblical figures, and in the paintings of his contemporary Claude Lorrain it is given even more. Some of Poussin's biblical scenes are primarily studies of nature; thus his "Ruth and Boaz" (c. 1660–64, Paris, Louvre) is in reality a portrait of summer.

National schools of painting developed, each with its own characteristics. The Italians rendered space according to the laws of perspective and took inspiration for their figures from the art of antiquity. French painters such as Claude Lorrain utilized standardized compositions resembling stage-sets. The Germans sometimes divided up the picture-plane into a number of sections according to the theme. Italian painters favored boldly constructed landscapes and interiors, showing man as the master of space. Italian interiors were clearly visible and well defined, whereas northern interiors could be dark and mysterious, with filtered light such as is found in the works of *Rembrandt. The Italian Renaissance glorified man. In his *Creation of Adam* (1511, Vatican, Sistine Chapel), Michelangelo depicted Adam as the perfect man, the image of God. Michelangelo created several of the most famous interpretations of Old Testament figures. His sculpture of Moses on the tomb of Pope Julius II (c. 1513–16, Rome, S. Pietro in Vincoli) and David (at the Florence Academy) and his painting of Jeremiah (c. 1511) in the Sistine Chapel frescoes are particularly noteworthy. In the 17th century, Rubens treated biblical themes with great dramatic freedom, and Rembrandt restored an element of supernatural mystery to painting, from which it had been banished by the development of naturalistic representation. Rembrandt lived in the heyday of Protestantism, which had brought the Old Testament into favor but at the same time disapproved of paintings of the Bible. Nevertheless, it was a major theme in Rembrandt's work. In his biblical paintings, he abandoned the longstanding tradition of typology and treated each episode on its merits and not as a prefiguration of something else. His tender, emotional treatment often suggested a subject rather than described it. His famous painting of David and Saul, for example, depicts their psychological relationship

but not an exact textual passage. He also made many biblical etchings and drawings.

After the late 18th century there was no longer a universally accepted style of painting, and hence no longer a language through which a painter of biblical subjects could easily communicate with the public. Moreover, the authority of the Scriptures was no longer unquestioningly accepted. Paintings of the Bible became sporadic, and largely anecdotal or antiquarian. In the 19th century, however, major Jewish artists treated the subject for the first time, and, in the 20th century they accorded it a far more comprehensive treatment. Thus the Old Testament has been the subject of over 40 paintings and numerous etchings by Marc Chagall and of many works by Ben-Zion, which bear witness to the fascination the Bible continues to exert on artists up to the present time.

Islamic Art

In Islamic art Bible figures often occur in manuscript illustration, but in less than profoundly religious context, being encountered in histories, scientific works, or the type of book called *Stories of the Prophets*. The important period for this art was from the 14th to the 17th centuries, and the area was that under Persian influence. Various Genesis topics recur – Adam and Eve, Abel, Noah's Ark, and especially Joseph and Potiphar's wife. Moses and Solomon, both part of the Muslim canon, appear, and also Jonah and the whale. Style changes reflect those in the Persian secular miniature, and the manner is equally sensuous and realistic.

ILLUSTRATED BIBLES IN MEDIEVAL ILLUMINATED MANUSCRIPTS

Pictorial biblical cycles in the early Middle Ages probably grew out of early Jewish art. Similarly, iconographical elements of the surviving biblical representations in Jewish monumental art of the third and fourth centuries, and some Christian Greek and Latin illumination, suggest an earlier Jewish prototype. Representations of the midrashic *aggadah* in medieval Christian illumination also point to the same ancient source. It is not known whether the original source for biblical representation was architectural art, such as the third-century fresco cycle in the synagogue of Dura-Europos, or an illustrated biblical text. No ancient or early medieval Hebrew illuminated Bible has survived, although this does not exclude the possibility that there may have been one in scroll or codex form before the 3rd century. The Cotton Genesis, fragments of a Greek fifth-century Bible probably from Egypt (B.M. Cotton Ms. Otho. B. VI) is the earliest surviving illustrated biblical manuscript. Its framed miniatures, placed within the text pages, may allude to an illustrated scroll as an archetype. The direct iconographic relation of the Cotton Genesis to the mosaics in the church of Sta. Maria Maggiore in Rome further suggests a common prototype. The Cotton Genesis Recension maintained its influence during the Middle Ages in Eastern and Western biblical representations, such as 13th-century mosaics of S. Marco in Venice, and the 12th-century *Hortus Deli-*

ciarum, formerly in Strasbourg. Byzantine biblical representations apparently belonged to another recension related to an important Greek manuscript, the Vienna Genesis (Vienna National Library Ms. Theo. Gr. 31). The incomplete text paraphrases the Book of Genesis, and illustrations appear at the bottom of each page. The position of the illustrations suggests a scroll archetype for the manuscript, since classical scientific scrolls were illustrated in this way. It has been suggested that the manuscript was made for a child's biblical education. This theory accounts for the textual paraphrase, the legendary material, and many everyday scenes. Since the manuscript was painted on purple-tinted vellum, it was probably meant for a child of royal family. The style and motifs date it to the time of Justinian (sixth century). The Cotton and Vienna Genesis manuscripts are but two surviving examples of an important Eastern school of illumination in Alexandria, Antioch and Constantinople. The "Joshua Roll" in the Vatican Library (Palat. Grec. 431), probably of the tenth century, has a very shortened Greek text as captions to the consecutive pictorial episodes from the Book of Joshua, painted on a scroll. The style, iconography and some Classical motifs suggest a prototype which may go back to the second century C.E.

Biblical illustrations of the Western tradition are best exemplified by the full-page illustrations of the Latin Ashburnham Pentateuch (Bib. Nat. Nouv. Acq. Lat. 2334). Dating from the seventh century, but of unknown origin, this manuscript contains iconography different from the Eastern tradition of the Cotton and Vienna Genesis recension, although a complete comparison is not possible because most of the full-page miniatures have been cut out. In the early Middle Ages illustrations existed in the East and West for books of the Bible other than the Pentateuch. There were, for example, the fifth-century "Itala Fragments" illustrating episodes from 1 Samuel, and the Syrian Book of Kings of 705 C.E. (Paris, Nat. Ms. Syr. 27). The "Itala Fragments" (Berlin Ms. Theo. Lat. fol. 485), which use a Latin translation earlier than that of St. Jerome, were found in a 17th-century binding. Some of the color had disappeared, exposing written instructions by the scribe to the artist regarding what he should illustrate in the miniatures. These instructions suggest the possibility that the illustration of Bible manuscripts may have been a matter of individual choice. By the pre-Iconoclastic period, Byzantine illuminators had developed a system of consecutive biblical illustrations. Such pictures were used, for example, to illustrate the book of Christian Topography by Cosmas Indicopleustes. As soon as the Iconoclastic bans were lifted after 843 C.E., biblical representations returned to Byzantine illumination, fashioned after the surviving Early Christian and Antique representations. One example is the manuscript of the Sermons of St. Gregory of Nazianzus (c. 880 C.E.), which has extensive biblical illustrations. Consecutive cycles also continued in post-Iconoclastic times, mainly in illuminated psalters. Psalters illustrated the life of David, episodes from the Exodus from Egypt, and other passages mentioned in the text. The

two main types were the “aristocratic”, with full-page miniatures and the “monastic”, with marginal illustrations. Among the best known Byzantine biblical manuscripts are the Greek Octateuchs, which contain the Pentateuch and the books of Joshua, Judges, and Ruth. The 11th- to 13th-century Octateuchs have small miniatures within the text.

In the West, the most famous Carolingian center for biblical illustration was the French city of Tours. The Bibles of this school illustrate the life of the first men and Moses with the Israelites in the desert. It is possible that the large Bibles from Tours were inspired by a biblical illuminated manuscript of the Cotton Genesis recension and also by the Ashburnham Pentateuch, which was probably in Tours by the ninth century. Psalters were also illustrated in Carolingian art centers, the most notable being the Utrecht Psalter and the Stuttgart Psalter, which contain illustrations above each psalm. For an unknown reason, no consecutive cycle of biblical episodes existed in Ottonian illumination, and the few biblical representations were usually symbolic. Other regional schools, such as the Anglo-Saxon, Franco-Saxon and Italian, followed the same symbolic method. In Spain, however, a system of biblical text illustrations survived from later antiquity, and formed the Catalan school of illumination of the 10th to 13th centuries. Artists used this system to illustrate the commentaries of Beatus of Liébana on the Apocalypse as well as complete Bibles. It was only through the influence of Byzantine art that biblical cycles were reestablished in the other parts of Western Europe during the 12th century. Most French, German and English Bibles of the 12th century had a few illustrations, probably all derived from Byzantine prototypes. The custom of adding a sequence of full-page biblical illustrations to the psalter was possibly also derived from Byzantine aristocratic psalters. The spread of biblical cycles attached to psalters from England to France during the 13th century is parallel to the development of the Gothic style in illuminated manuscripts. A complete series of biblical illustrations from the Creation to the building of the Second Temple was produced in France, mainly in Paris, during the reign of *Louis IX. The best examples are the Pierpont Morgan Picture Bible and the *Psalter of St. Louis*. This biblical series quickly spread from France to most European countries, and was incorporated into other types of books, such as the German *Weltchronik*s and *Armenbibel*, the French *Histoire Universelle*, *Bible Moralisée*, *Biblia Pauperum* and *Speculum Humanae Salvationis*, and the Hebrew Spanish *Haggadot*. During the early part of the Italian Renaissance, it became fashionable to illustrate biblical texts with elaborate miniatures on the first page of each book. Their iconography is mainly based on central and south Italian tradition, which preserved the most classical iconography, both in miniatures and in the monumental art of the period. Examples are the Pantheon Bible of the 12th century, the Padua Bible of the 14th century, and the Bible of Borso d’Este of the 15th century. The early printed bibles mainly used the 15th-century system of Italian illuminated bibles and some of the early printed Gutenberg Bibles were hand decorated as if they were manuscripts. The

printed editions of the Poor Men’s Bibles mainly followed the hand-produced examples of this type.

[Bezalel Narkiss]

Illuminated Hebrew Manuscripts

The *halakhah* explicitly forbids the decoration of the Scroll of the Law read in the synagogue. (Tradition condemns the Jerusalemites of Alexandria for adorning their scroll with the name of God in gold; Sof. 1:8.) However, Hebrew Bibles in codex form, not used for reading in the synagogue, may have been decorated and illustrated in antiquity, though no such manuscripts have survived. Those illuminated Hebrew Bibles which still exist belong to a later period. They consist of four regional types: Oriental, Spanish, Ashkenazi, and Italian. Their styles differ but they share iconographic and formal elements.

Oriental Bibles may have originated in the first or second century and may have served as a model to the surviving illuminated Bibles. A comparison of ninth- and 13th-century illuminated manuscripts with first- and second-century monuments, such as wall paintings and floor mosaics, suggests that illuminated Bibles consisted of textual illustrations, implements of the Temple, and fully decorated pages which, from their likeness to designs on Oriental carpets, are known as carpet pages. The wall paintings in *Dura-Europos may be an example of a cycle inspired by Bible manuscripts. Later medieval Greek, Latin, and Hebrew illuminated manuscripts contain similar iconography. The Jewish legendary material (*aggadah) depicted in early synagogues and in later manuscripts may allude to an illustrated paraphrase of the Bible, rather than to the canonic text. The early identification of the Temple portal and implements of the Temple with messianic and national aspirations made them an important subject of decoration in minor cult objects as well as in synagogal art. Another element which appears in early synagogal decoration, such as the Aegina and the *Bet Alfa floor mosaic, is the framed carpet-like area decorated with geometrical, repetitive patterns. The reappearance of such decorations in later illuminated Bibles makes it plausible that early Hebrew Bibles might well have been similarly illustrated.

ORIENTAL. Most of the existing Oriental illuminated Hebrew Bibles come from Egypt. The earliest illuminated Bibles, of the ninth and tenth centuries, are of *Karaites rather than *Rabbanite origin. Of these, the earliest existing illuminated manuscript is a ninth- or tenth-century codex of the Latter Prophets, found in the Karaite synagogue in Cairo. This manuscript, together with two Pentateuch fragments of 929 C.E. (Leningrad, Firkovich collection, II, 17) and 951 C.E. (Ms. Firkovich, II, 8), and a tenth-century Karaite Pentateuch written in Arabic characters (British Museum, Ms. Or. 2540) help to establish the system of decorating Oriental Hebrew Bibles from the ninth to the 13th centuries. The style is Oriental and may be either Palestinian or Mesopotamian. Preceding the biblical text, there are fully decorated pages, colored in gold, green, red, and blue, either carpet pages or decorated pages containing

patterned masoretic micrography. The carpet pages are composed of repeated geometric designs or a central motif with ornamented frame. In several manuscripts, such as the Cairo Karaite Latter Prophets, there are two geometrical, patterned carpet pages which have an additional palmette motif on the outer border. The origin of such carpet pages is unknown, but similar types can be found in the eighth-century Christian sacred books of Hiberno-Saxon and Northumbrian origin, such as the *Lindisfarne Gospels*. In Hebrew Bibles they are directly related to the traditional opening and closing pages of Koran manuscripts of the same period.

The other type of fully decorated pages in Oriental Bibles incorporates floral and geometric motifs outlined in micrography. The text of the minute script is usually the *masorah magna. Some masoretic pages have a portal-like motif, although most have round, square, or rhomboid shapes. Floral and geometric elements sometimes frame dedicatory and colophon pages. In addition to the carpet pages, the Pentateuch manuscript dated 929 C.E. has two pages with a display or plan of the sacred implements of the tabernacle and Temple. These consist of the seven-branched candelabrum, shovels, the table of shewbread, jars, basins, Aaron's flowering staff, and a highly stylized triple arcade, perhaps symbolizing the facade of the Temple, as well as a stylized Ark of the Covenant. The exposition of the *menorah*, the Ark, the jar of manna, and the triple-gate facade of the Temple probably originated in late Hellenistic tradition. All these elements appear on minor Jewish art objects of the first to the third centuries, such as clay oil lamps, painted gold-leaf glasses, and coins, as well as in monumental wall-painting in synagogues and catacombs and in later synagogal floor motifs.

Within the text of the Oriental Bibles, traditionally written in three columns, divisional motifs demarcate the end of books, portions (*parashot*), and verses. At the end of books, there is usually an ornamental frame containing the number of verses in the book. Sometimes, these frames were extended to decorative panels, like the *Sūra* headings in the Koran. Decorated roundels or other motifs, occasionally with mnemonic devices, mark the different *parashot* as well as the chapters of the Psalms. The roundels resemble the *'ashira* (division into verses), and the *sajdah* (pause for prostration) signs in contemporary Korans. Other sections contain similar decorations. Most frequent is a paisley motif, derived from the Arabic letter *ha*, which resembles the *khamise* (five-verse section) notation in Korans. The Songs of Moses (Ex. 15; Deut. 32) are traditionally written in a distinct verse form, sometimes framed by decorative geometric and floral bands. An example is an 11th-century Persian Bible in the British Museum (Or. Ms. 1467, fols. 117v–118v). Of the few existing examples of Oriental Bibles that contain text illustrations, two are 11th-century Persian Pentateuchs. One has pictures of sacred vessels between the text columns of the page, illustrating the text's description of the princes' gifts to the tabernacle in the desert (Num. 7:1; Brit. Mus., Or. Ms. 1467, fols. 43–43v). The other has an illustration of the two tablets of the law inscribed with

the opening words of each Commandment, next to the text of the Ten Commandments (Ex. 20:2–17; Brit. Mus., Or. Ms. 2363, fol. 73v). Portions of the Bible, especially the Pentateuch, intended for educational use were also decorated in the same manner. One example is the Jerusalem *Shelah Lekha* portion of 1106 C.E. Oriental Bibles of the 12th and 13th centuries carry on the tradition of carpet pages, decorated micrography, and divisional signs.

SPANISH. The illumination of Spanish Bibles is derived from the Oriental ones. Like them, they contain carpet pages, illustrations of the Temple implements, divisional signs for books, portions, and verses, and patterned masorah. Spanish Bibles also contain innovations, mainly in the comparative masoretic tables. No illuminated Bible from the Islamic "Golden Age" in Spain has survived. The extant Bibles of Christian Spain suggest a link between them and the early Oriental Bibles because of their similar plan and iconography. The carpet pages of 13th- and 14th-century Spanish Bibles are placed mainly at the beginning and in the major divisions of the Bibles. These carpet pages combine painted motifs with figured masorah and are framed by verses in monumental scripts.

The earliest recognizable Spanish school of Bible illustration developed in Castile during the second half of the 13th century. Examples of illuminated Bibles from this school indicate an Oriental origin in both the type of decoration and the main floral, geometric, and micrographic motifs. The carpet page from the *Damascus Keter*, in the National and University Library in Jerusalem, a Bible copied in Burgos in 1260 by Menahem b. Abraham ibn Malik, is a good example of the Spanish style. The Oriental flavor of the foliage scroll, outlined by micrography, is somewhat subdued by the Western touch of a burnished gold filling and magenta-brown background. Other Bibles from Castile, such as the 14th-century codex from Cervera, near Toledo (Lisbon, National Library, Ms. 72) reveal more Westernized taste, and were probably influenced by the southern French schools of illumination; Provence should be regarded both culturally and socially as part of the northern Spanish schools.

The most common illustrations of the Spanish Bibles are the implements of the Temple. They are usually shown in a double-page spread in front of the manuscript, next to the carpet pages, rather than in the form of a plan of the Temple or tabernacle. A Bible copied in Perpignan in 1299 (Paris, Bibliothèque Nationale, cod. heb. 7) contains one of the earliest full-page expositions of the implements of the tabernacle. The implements are arranged arbitrarily within frames. The first page (fol. 12v) shows the seven-branched *menorah* and its tongs and fire pans, with two step-like stones on either side of the base, the jar of manna, the staff of Moses and Aaron's flowering rod, the Ark with the tablets of the law deposited in it, the two winged cherubim over the Ark-cover, and the table with the shewbread – two rows of six loaves – above which are two incense ladles. On the second page (fol. 13) are the gold incense altar, silver trumpets, the horn, the sacrifi-

cial altar with a leaning ramp, the laver on its stand, vessels, basins, pans, shovels, and forks. An earlier Bible of the same type from Toledo (1277) is in the Biblioteca Palatina, Parma (Ms. 2668).

The *Farḥi Bible* (Sassoon Collection, Ms. 368), one of the richest Bibles of the 14th century, was both copied and decorated by Elisha b. Abraham b. Benveniste b. Elisha, called Crescas (b. 1325). It took him 17 years, from 1366 to 1382, to complete the work which, as his colophon reveals, he undertook for his own use. The manuscript was previously in the possession of the Farḥi family of Damascus and Aleppo. The actual biblical text is preceded by 192 fully decorated pages, 29 of which are carpet pages and nine, full-page miniatures. Among the illustrations are several pages of drawings of the implements. The Bible became a substitute for the Temple and was called *Mikdashiyah* ("God's Temple"). Thus, in Spanish Bibles the implements symbolize the messianic hope for the rebuilding of the Temple. A tree on a hill representing the *Mount of Olives, where tradition states that the precursor of the Messiah will appear, is included among the implements – a further indication of the messianic intent of the illustration. Plans of the Temple also exist in Spanish illumination. One early example is attached to the *First Ibn Merwas Bible* of Toledo, 1306 (British Museum, Ms. Or. 2201). A large fragment, executed by Joshua b. Abraham ibn Gaon in Soria (1306), is bound together with the *Second Kennicott Bible* (Oxford, Bodleian Library, Ms. Ken. 2). It contains all the implements and vessels of the Second Temple arranged in ground-plan form, unlike the more common random arrangement.

A few Bibles have other illustrations next to the carpet pages. The *Farḥi Bible* has several, among which are the labyrinth of the seven walls of Jericho and the tents of Jacob and his wives. Two novel features appear in the carpet pages of Spanish Bibles. One is the calendar page, according to the Jewish year. Most of the calendars are circular, similar to the zodiac form; some, such as that in the *First Joshua Ibn Gaon Bible* of 1301 (Paris, Bibliothèque Nationale, cod. heb. 21), consist of movable disks. Contemporary calendars were also added, usually beginning with the year in which the manuscript was written. The second major novelty is the comparative tables of the masorah. The different versions of the masorah of *Ben-Asher and *Ben-Naphtali are written in columns framed by arcades which resemble the early medieval canon tables. In some manuscripts, the tradition of the fully arcaded pages persists even though the text is different. The *First Kennicott Bible*, a masterpiece of Spanish-Jewish art (Oxford, Bodleian Library, Ms. Ken. 1), was copied, punctuated, and edited according to the masorah by Moses Jacob ibn Zabara, and completed, as his colophon shows, on July 24, 1476, in the Spanish town of Corunna, for Isaac son of Don Solomon de Braga. The manuscript was planned and fashioned in scope and decoration on the model of the *Cervera Bible* (1300, Lisbon, Univ. Lib. Ms. 72). The illumination was done by Joseph *Ibn Ḥayyim, who fashioned his colophon in zoo- and anthropomorphic letters, similar to those of *Joseph ha-Zarefati, the artist of the *Cervera*

Bible. Joseph ibn Ḥayyim however, added many new elements to his work. These additions include 14 fully decorated carpet pages, some illustrating the traditional array of implements of the tabernacle. As in the *Cervera Bible*, a number of pages are decorated with arcades which serve as frames for David *Kimḥi's grammatical compendium. Some of these arcades have pictorial borders, such as an army of hares besieging a wolf in a castle (fol. 443).

The Spanish artists, following the Oriental tradition, used divisional signs for books and *parashot* although in a more elaborate way and with some text illustrations. These can be seen as early as 1260, in some *parashot* signs in the *Damascus Keter*. The *First Kennicott Bible* has several such illustrations (e.g., Phinehas brandishing his spear). Unlike Oriental Bibles, the beginnings of books in some Spanish manuscripts have a text illustration. The *Kennicott Bible* presents Jonah and the whale (fol. 305). The *Cervera Bible* has several text illustrations. The indicator for *Parashat Ki-Tavo* (Deut. 26) displays a basket of fruit, illustrating the offerings of the first fruit in the Temple; above it are an elephant and castle, the royal arms of Castile. At the end of Exodus there is a panel showing the *menorah* (fol. 60). A stag is painted alongside Psalm 42 (fol. 326), and a lamenting grotesque decorates Lamentations (fol. 371v). Zechariah (fol. 316v) is illustrated by his vision of the two olive trees providing oil for the *menorah*. Jonah (fol. 304) opens with a picture of a ship with sailors, under which the prophet is being swallowed head first by a whale – a not uncommon scene in illuminated Spanish Bibles.

A similar picture of a sailing vessel is found at the beginning of Jonah in a Bible written in Soria (1312) by Shem Tov b. Abraham ibn Gaon, probably a brother of Joshua ibn Gaon (Sassoon Collection, Ms. 82). Further resemblances between the *Shem Tov Bible* and the *Cervera Bible*, such as the grammatical and masoretic treatises written within columns and the crouching lions at the bases of arcades, suggest that they are based on a common model. These two manuscripts are also related in artistic style. The numerous text illustrations in the margins and between the columns of the *First Joshua Ibn Gaon Bible* (Paris, Bibliothèque Nationale cod. heb. 20) include Noah's ark (fol. 13), the dove holding an olive branch (fol. 14), Hagar's water jug (fol. 20), Abraham's sacrificial knife (fol. 20v), the goblet of Pharaoh's butler (fol. 133), David's sling with Goliath's sword, and the bear and lion killed by David (fol. 170). Of all the 15th-century Bibles, the *First Kennicott Bible* has the largest number of text illustrations. At the opening of the Book of Jonah (fol. 305), the traditional picture of the prophet being swallowed head first by a whale, beneath a decorated ship, is depicted in a way similar to that in the *Cervera Bible*. There is also an illustration of King David at the beginning of II Samuel (fol 185) in the *Kennicott Bible*. Floral and geometric shapes composed of micrographic masorah decorate the margins of some text pages. As in the Oriental Bibles, the two songs of Moses are often written in a special form and sometimes have a frame decorated with colors or

micrography, which is also used in the ornamentation of carpet pages from the 13th to the 15th centuries.

Hebrew illustrated Bibles must have been so common in Spain that Castilian translations of the Bible may have used their illustrations as early as the 13th century. Jewish iconography is also predominant in the Castilian *Alba Bible.

The 15th-century Yemenite school of illumination, like the Spanish, follows the Oriental school. Many Yemenite Bibles contain carpet pages ornamented with floral and animal motifs in micrography of colors (e.g., Brit. Mus., Or. Ms. 2348 of Sana'a, 1469, and Or. Ms. 2211 of 1475). The micrography in these manuscripts is of biblical verses and Psalms, not the masorah.

ASHKENAZI. Hebrew Bibles of the Ashkenazi school fall into two categories: one consists of complete Bibles, mostly in large, even giant, format, such as the *Ambrosian Bible* (Ulm, 1236–38), written in large script with Aramaic translation incorporated into the text after each verse; the other contains the Pentateuch with its Aramaic translation, the five scrolls, *haftarot, parts of Job, and sometimes the “passages of doom” in Jeremiah (2:29–3:12; 9:24–10:16). Ashkenazi Bibles are illuminated in a different fashion from the Oriental and Spanish ones. Most are decorated by the punctuator-masorete in micrography and pen drawing, either in large initial-word panels or in the margins of the text area. Illuminated Bibles of the Ashkenazi tradition do not contain carpet pages and only occasionally have expositions of the Temple implements. What sometimes appears like a carpet page is in fact an excess of masoretic material copied in decorative shapes, either at the beginning or the end of books of the Bible. Implements of the Temple are very rare. One example occurs in the *Regensburg Pentateuch* of about 1300, now in the Israel Museum, Jerusalem, which has an exposition of the tabernacle implements, including Aaron in his robes extending his arm to light a very large *menorah*, which is depicted on the facing page.

The most common illuminations of French and German Bibles are initial-word panels, which sometimes include text illustrations. The Rashi commentary on the Pentateuch from Wuerzburg, 1233 (Munich, Cod. Heb. 5) has initial-word panels to each *parashah* which includes a text illustration. The *Ambrosian Bible* (Mss. B. 30–32 inf.) has illustrated panels to most of the books. At the end of the third volume, this manuscript has full-page eschatological illustrations, which depict the Feast of the Righteous in Paradise, and a cosmological picture. The *British Museum Miscellany* (Ms. Add. 11.639) of c. 1280 contains three cycles of full-page miniatures of biblical episodes, which were probably intended to illustrate a northern French Bible. Painted initial-word panels also exist and sometimes extend to a full page, as in the *Duke of Sussex Pentateuch* in the British Museum. Sometimes these painted panels illustrate the text, but a few are merely decorative. The 46 medallions of the frontispiece to Genesis in the *Schocken Bible* in Jerusalem depict episodes from the entire Pentateuch, beginning with Adam and Eve by the Tree of Knowledge and

ending with Balaam being stopped by an angel while riding his ass.

The other most prominent type of decoration in the Ashkenazi Bible is the elaborate marginal micrography. The masoretic micrography sometimes contains text illustrations. Some opening panels and colophons are also decorated by micrography, and the micrography within the text sometimes forms an illustration of the text. The *Duke of Sussex Pentateuch* (fol. 28) shows the ram caught in a thicket alongside the text of the sacrifice of Isaac. A Bible in the British Museum (Ms. Add. 21160, c. 1300), has some interesting examples of such illustrated micrography; e.g., Joseph riding a horse (fol. 192), Pharaoh's baker carrying a triple basket on his head (fol. 43), the four beasts of Ezekiel's vision (fol. 285), and Jonah being spewed from the mouth of the whale and seated under a tree (fol. 292–292v). However, most of the masoretic variations surrounding the text form grotesques. Ashkenazi Pentateuchs of the second half of the 14th century are smaller and illustrated in a manner differing from that of the earlier period – the *Coburg Pentateuch* of 1369, is an example of this later type.

ITALIAN. Very few illuminated Italian Bibles of the 13th century survive, and most of them are of Roman origin. The *Bishop Bedell Bible* of 1284 (Cambridge, Emmanuel College) is a typical example. It contains two full-page decorated panels, which include some inscriptions. Decorated arches surround the opening pages or text columns of the different books, and the initial word is written in a larger script. *Parashot* signs in the margin follow the Oriental type. A two-volume Bible in the British Museum (Ms. Harl. 5710–11), from about 1300 preserves the two typical techniques of decoration – watercolor pen drawings and painted illuminations. The openings of each book of the Bible are headed by painted initial-word panels and surrounded by foliage scrolls – either around the whole page or one text column. The foliage scrolls are wiry and incorporate animals, birds, fish, and grotesques in a style which was common in the province of Emilia and influenced mainly by the Bolognese school. This Bible contains a few text illustrations. Under the initial-word panel of Genesis (fol. 1), there is a painted panel containing seven medallions, five of which represent the creation of heaven and earth, the sun, moon, and stars, water, trees, and beasts. Each medallion shows the hand of God emerging from segments of the sky. At the end of the Pentateuch (fol. 136), there is a full-page drawing of a delicately formed *menorah* painted in red, green, ochre, and brown. The entire page is framed and filled with painted foliage scrolls combined with grotesques and dragons. Another delicately painted manuscript of Emilian style, from the end of the 13th century, is a psalter in the Biblioteca Palatina in Parma (Ms. 1870). Many of the chapter openings have small initial-word panels with grotesques and animals in the margins. Some illustrate the text: weeping people, with their violins hung upon a willow, illustrate Psalm 137, “By the waters of Babylon there we sat down... We hung our harps upon the willows in the midst thereof”; a man conducting a

choir illustrates Psalm 149, "Hallelujah, sing to the Lord a new song." Italian Bibles of the 14th and 15th century are decorated by initial-word and -letter panels, with marginal ornamentation and some illustrations.

The Aberdeen Bible (University of Aberdeen, Ms. 23) was completed probably in Naples in 1493 by Isaac b. David Balansi (i.e., Valensi), presumably a Spaniard who had been expelled from Spain in 1492. While the Spanish influence is evident in the manuscript's masoretic micrography and *parashot* indicators, it does not appear in the fully decorated pages containing the comparative tables of masorah, initial-word panels, and border illumination; these are purely south Italian. The heavy borders, decorated with foliage scrolls, animals, birds, and large pearls framing the table of *haftarot*, are typical of the other illuminated pages in this Bible.

With the Renaissance in Italy, Hebrew illumination reached its artistic peak. It developed through the ready patronage of affluent Jewish loan-bankers who supported such fine illuminators as those who produced the *Rothschild Miscellany* (Ms. 24, Jerusalem, Israel Museum) and the Bibliothèque Nationale's *Portuguese Bible* (Ms. héb. 15). Unique in the richness of their decoration, these manuscripts were in great demand, but only a few families could afford the single productions.

With the invention of the printing press, by the end of the 15th century handwritten Bible illumination practically ceased. The decoration of printed Bibles developed a different form and content, except for the illuminated scrolls of Esther, which evolved a specific tradition.

BIBLE CODES, a system of inquiry involving the discovery of pairs of conceptually related terms in the biblical text using Equidistant Letter Sequences (ELS). The system involves choosing or finding a sequence of letters that make up a name or a date, not necessarily in the order in which the name is spelled, that is found in the biblical text at equal distances from one another. Thus, the letters of the Hebrew name, *Rambam*, might appear every 10 letters in a portion of the book of Genesis. Nearby, the letters of the Rambam's date of birth might appear in another sequence of say every 12 letters. The assumption is that the close proximity of these two related letter sequences is not due to chance. The Bible Codes are understood to be the result of a divine hand that planted them in the Bible text. How else can we explain the existence of the names and birth dates of medieval rabbis in a text that is over 3,000 years old – it is asked.

ELS was first applied scientifically to the Bible by Professor Eliyahu Rips, an Israeli mathematician, in 1983. In 1985, Rips, together with Doron Witztum and Yoav Rosenberg, conducted an experiment to find the names of famous rabbis and the dates of their birth or death in the book of Genesis using ELS. The experiment utilized a list of names based on the *Encyclopedia of Great Men in Israel* (Hebrew) compiled by Shlomo Havlin. The experiment, conducted using a computer program, resulted in the discovery of the rabbis' names in close proximity to their dates of birth, a result that could not, it was argued, be the result of chance or coincidence. The Bible text used for the experiment was the Koren Hebrew edition of the Bible. The editor of the professional journal *Statistical Science* requested that the experiment be repeated and it was. Thus, in 1994, Rips, Witztum and Rosenberg published their findings in *Statistical Science* (vol. 9, 1994, no. 3, 429–38).

Since then, the Bible Codes have become the subject of great controversy. The debate can be divided into three areas: (a) statistics; (b) Bible; and (c) education.

Statistics

A number of scholars, especially Brenden McKay, Maya Bar-Hillel, Dror Bar-Natan, Gil Kalai, and Barry Simon have severely criticized the findings of Rips, Witztum, and Rosenberg. They are critical of the way the list of names was compiled because variations on the spelling of names or appellation could have negated the results. In addition, not all of the pairs of rab-

bis and dates were actually discovered. Barry Simon writes, "...the complexity of the experiment suggests that the result may be sensitive to changes of the method of measuring distances and the statistical method used" (<http://www.wopr.com/biblecodes/>). Simon, along with others, have used the Bible Codes system to discover rabbis' names and other word sets in both English and Hebrew texts other than the Bible.

Bible

Jewish Bible scholars, such as Menachem Cohen of the Hebrew University (http://cs.anu.edu.au/~bdm/dilugim/cohen_eng.html), and Christian Bible scholars, such as Richard Taylor (*Journal of the Evangelical Theological Society*, December 2000), of the Dallas Theological Seminary, have been very critical of the Bible Codes. Taylor writes, "...most important, I do not believe that the real issues in this discussion actually lie in the discipline of mathematical probability. Bible code advocates have based much of their theory upon arguments from statistical probability. However, the Bible code phenomenon is ultimately an issue of Old Testament textual criticism, and no amount of statistical probability or mathematical speculation can alter that fact. Any Bible code theory that plays loose with known facts concerning the transmission of the Biblical text is working with an inherent flaw that is actually fatal to its claims and conclusions" (ibid.). Put simply, the Koren edition of the Bible is in no way the "authoritative" text of the Bible, for there is none. For instance, there are variant spellings of words throughout the bible that appear in the Aleppo Codex, the Leningrad manuscript, the Sassoon Manuscript, and the original printing of the *Mikra'ot Gedolot* in Venice. These variant spellings, along with other textual phenomena in the Bible, such as *ktiv* and *qeri*, certainly affect the results of a code based on equal distances between letters. Taylor sums it up by saying, "If there are significant textual problems in the Hebrew Bible – whether in the form of pluses, or minuses, or substitutions, etc. – such a problem causes a fatal disaster for any theory of ELS, even if it were theoretically possible to allow for such a phenomenon in the non-extant original text" (ibid.).

Education

The only Jewish organization that is actively using the Bible Codes as part of their educational curriculum is *Aish HaTorah. A lesson about the Bible Codes is included in their Discovery seminars, the purpose of which is to prove the Divine origin of the Torah. An active defense of the Codes and their use is found on their website (<http://www.aish.com/seminars/discovery/Codes/codes.htm#prime>). Many Jewish educators object to the use of the Codes, especially in teaching those who are relatively uninformed about Judaism (the target population of the Discovery Seminars), given the debate surrounding the validity of the Codes themselves.

In recent times, numerous people have written books purportedly predicting future events on the basis of the Codes, particularly Michael Drosnin (*The Bible Code*, 1997, and *The Bible Code 2*, 2002). Such works have been rejected by both

sides of the scholarly debate. It is interesting to note that a Google search of "Bible Codes" reveals 990,000 related websites, the overwhelming majority of which are Christian sites. The Christian community has eagerly accepted the Bible Codes while the broader Jewish community has expressed a greater skepticism. Bible Codes computer programs can be purchased so consumers can run their own Bible Code searches.

[David Derovan (2nd ed.)]

BIBLE SOCIETIES, associations intended to propagate the Christian Bible, i.e., the Old and New Testaments. The first association of this kind was founded in 1719 in Halle an der Saale, and from 1775 was called the Cansteinsche Bibelanstalt. Numerous Bible societies were founded from the beginning of the 19th century in the wake of the missionary societies established between 1792 and 1800 in England, Holland, and Germany. The British and Foreign Bible Society was founded in 1804, the Bible Society of Basle in 1804, that of Berlin in 1805, Holland in 1814, Norway in 1815, the American Bible Society in 1816, and the Société Biblique de Paris in 1818. Other important societies are the American Board of Commissioners for Foreign Missions, the American and Foreign Bible Society, the Baptist Missionary Society, the Bible Translation Society, the Church Missionary Society, the National Bible Society of Scotland, the Society for Promoting Christian Knowledge, and the Trinitarian Bible Society. In general, these societies publish the biblical texts without commentaries, but they have also issued emended texts of existing translations and editions. They have also published the Greek and Latin editions of Nestlé (1879), Kittel's *Biblia Hebraica* (1905; the Bible Society of Wuerttemberg), and the *Bible du Centenaire* (1916–48; Société Biblique de Paris). Photographic reproductions of the British and Foreign Bible Society Hebrew Bible have been issued in various formats by some Jewish publishers. The masoretic Bible of C.D. *Ginsburg was published by the same society in 1926 in London.

Bibles published by these societies are disseminated by the mission societies or by large-scale retailing. Since the beginning of the 19th century, over a thousand million copies of biblical texts in over a thousand languages have been thus published and distributed. The British and Foreign Bible Society alone has published texts in 700 languages and dialects and distributed a total of 550,000,000 copies, 130,000,000 of which were of the Old Testament. In a single year before World War II, this society distributed 11,000,000 copies of

the Bible, the National Bible Society of Scotland 4,000,000, and the American Bible Society 7,000,000. In China, before the accession to power of the Communists, 9,000,000 copies of biblical texts were distributed annually. Owing to the low prices they charge, these societies frequently succeed in selling their Hebrew editions of the Bible, with or without translation, to Jews. The issue of equally low-priced Hebrew Bibles by Jewish authorities or institutions, with or without translations, to counteract this disguised missionary activity of the Bible societies is a relatively recent undertaking. The edition of the New Testament in Hebrew translation is more openly designed for missionary work among Jews. The first New Testament in Hebrew was published in 1817 by the London Society for Promoting Christianity among Jews (better known as the London Jews' Society). The translation of the New Testament by F. *Delitzsch appeared between 1877 and 1892 in at least 13 editions. Other translations openly intended for Jews have been published in Yiddish, Judeo-Arabic, Judeo-Perisian, and Ladino.

°BIBLIANDER (Buchmann), THEODOR (1504–1564), Swiss Hebraist and theologian. In 1531, Bibliander succeeded Zwingli as lecturer in Septuagintal studies, but his denial of absolute predestination cost him his post. His publications include a Hebrew grammar (1535), a commentary on the Hebrew text of Nahum (1534), and a treatise interpreting Ezra with reference to Roman history (1553²). Bibliander left Basle with a projected translation of the Koran (of which he published an interpretation, 1543) when the enterprise encountered local difficulties; he was also a collaborator of Leo Juda in his Latin version of the Bible (1543).

BIBLIOGRAPHY. As in general bibliography, the development of Hebrew bibliography is characterized by the transition from brief listings to more detailed catalogues. The listing of the books of the Bible which appears in the Talmud (BB 14b, 15a) had as its purpose the fixing of an authoritative order for the biblical books as a guide for the copyists. Lists of books for broader purposes, among them those of the Cairo *Genizah*, have come down from the 11th century. Sometimes these listings contain only the name of the book; in other cases, the author's name is also included. In some of the later booklists, short annotations also appear. Bibliographical lists within the biographical listings are found in genealogical works of the 16th century, as in *Sefer Yuhasin* by Abraham *Zacuto and in

Shalshet ha-Kabbalah by Gedaliah *Ibn Yahya. In the early part of the 17th century several important ventures in the field of bibliography were undertaken. Johannes *Buxtorf the elder published *De abbreviaturis hebraicis, liber novus et copiosus* (Basle, 1613) in which he included a section on rabbinic literature entitled *Bibliotheca rabbinica ordine alphabetico disposita*. This listing of 324 works, arranged in alphabetical order by titles, is the first bibliographic catalogue of rabbinic literature. *Manasseh Ben Israel, in his listing of sources used by him in the first part of his *Conciliador* (Frankfurt, 1632), distinguished six categories of Hebrew literature: Talmud and Midrash; commentaries on these; commentaries on the Bible; Kabbalah; *posekim* and responsa; sermons, grammar, chronology, and legal literature. The first, however, to compile a true bibliography of Hebrew literature was Giulio *Bartolucci in his *Bibliotheca Magna Rabbinica* (4 vols., Rome, 1675–93; repr. 1969). The Christian scholar Carlo Giuseppe Imbonati added a fifth volume, *Bibliotheca Latina Hebraica* (Rome, 1694). Bartolucci's work is arranged in alphabetical order of authors, supplemented by a list of subjects in Latin and an abridged listing in Hebrew. Leone *Modena assisted the bishop of Lodève, J. Plantavit de la Pause; in his *Bibliotheca Rabbinica* (appended to his *Florilegium Biblicum*, 1645) by supplying him with a list of 500 names of rabbis, which he used for his alphabetic dictionary of 780 Hebrew books. The first Jewish bibliographer was Shabbetai *Bass whose *Sifte Yeshenim* (Amsterdam, 1680) contains a bibliography arranged by title, followed by the name of the author, the date and place of publication, the format, and some indication of content. The approximate number of listings in this bibliography is 2,200, including manuscripts. The third important pioneer bibliographer was another Christian, Johann Christoph *Wolf. He utilized the two previous bibliographies in compiling his own four-volume work, *Bibliotheca Hebraea* (Hamburg, 1715–33; repr. 1969). He corrected some of the material found in the earlier works, using the library of David b. Abraham *Oppenheim. The genealogical reference work of David *Conforte *Kore ha-Dorot* (1746, 1846²) contains much valuable bibliographic material. It should be noted, also, that Jehiel *Heilperin included in his *Seder ha-Dorot* (Karlsruhe, 1769) the names of the books which are referred to in Bass' bibliography, though generally he omitted the place and year of publication, even when these were included in the *Sifte Yeshenim*. Especially valuable from a bibliographical standpoint is the H.J.D. *Azulai's *Shem ha-Gedolim* (1774–86, 1853, 1876), which contains an alphabetical listing of Hebrew books and manuscripts. Azulai noted every unusual Hebrew book or manuscript, even those in non-Jewish collections, which came to his notice in the course of his extensive travels without, however, always giving the date and place of publication. The major work of the Christian scholar G.B. *de' Rossi, *Annales Hebraeo-Typographici Seculi xv* (Parma, 1795), dealing with Hebrew incunabula, together with his *Annales Hebraeo-Typographici ab anno 1501 ad 1540* (Parma, 1799), and the *Dizionario storico degli autori Ebrei e delle loro opere* (2 vols., Parma, 1802), as well as assorted lists

of Hebrew publications from various Italian cities, serve as a transition to modern bibliography.

With the development of Jewish studies, Hebrew bibliography became a scientific discipline in its own right. L. *Zunz's *Zur Geschichte und Literatur* (1845) contains a complete section on bibliography (pp. 214–303), including material on the dates found in books; on printers and typography in Mantua from 1476 to 1662; and on Hebrew printing in Prague from 1513 to 1657. This work laid the foundation for modern Hebrew bibliography. In 1849 Julius *Fuerst published the first part of his *Bibliotheca Judaica* (3 vols., 1849–63). The book is neither all-inclusive nor completely accurate, but it is important in view of its comprehensiveness. It is arranged according to author, commentator, editor, and publisher, with an alphabetical index to the Hebrew works appended to the end of the third volume. The format of each book is noted, and sometimes the number of pages as well. The preceding bibliographies are overshadowed by the works of Moritz *Steinschneider, in particular by his *Catalogus Librorum Hebraeorum in Bibliotheca Bodleiana* (1852–60) and *Die hebraeischen Uebersetzungen des Mittelalters* (1893). These works set the definitive standard for modern Jewish bibliography. Another important bibliography is Isaac *Benjamin's *Ozar ha-Sefarim*, (1877–80), listing Jewish books and manuscripts until 1863, and published by the author's son Jacob, together with notes by Steinschneider. By the late 19th century Jewish bibliography, comprising Jewish literature in all languages, had undergone considerable development and today compares favorably with general bibliography. Aaron *Walden, who followed Azulai with the *Shem ha-Gedolim he-Hadash* (1864) included a section entitled, "A Catalogue of Books," which includes ḥasidic works absent from earlier listings. However, this listing was not done scientifically. William *Zeitlin, in his *Kiryat Sefer, Bibliotheca Hebraica post-Mendelssohniana* (1891–95), listed the works of the Haskalah movement to that date (more than 3,500 volumes). Ḥayyim David Lippe published a catalogue called *Asaf ha-Mazkir* (1881–89), "a complete listing of all the books, treatises, and Hebrew periodicals which appeared during the period 1880–1887." He also issued a follow-up catalogue, *Asaf ha-Mazkir he-Hadash...* (1899), "listing all the books, treatises, and periodicals which appeared during the period 1882–1898." From 1928 to 1931 H.D. *Friedberg published his *Beit Eked Sefarim*, a bibliographical lexicon covering the general field of Hebrew literature, with particular attention to books written in Hebrew and Yiddish; but also including works written in Italian, Latin, Greek, Spanish, Arabic, Persian, and Samaritan, and printed in Hebrew characters from 1475–1900, with their general content, author, date, place of publication, and number of pages. An expanded edition of this work appeared in 1951–54. Though not truly scientific in its approach, it is still very useful. The many, important studies of Abraham Yaari include *Mehkerei Sefer* (1958), containing among its studies in Hebrew booklore a section on the catalogue of Israel. M. *Kasher and Dov Mandelbaum compiled a bibliography of works covering the years 500–1500 called *Sa-*

rei ha-Elef (1959). Important monographs and articles in the field of Hebrew bibliography have been written by S. *Wiener, I. *Sonne, S. *Seeligmann, D. *Chwolson, A. *Jellinek, A.M. *Habermann, C. *Lieberman, A. *Marx, M. *Roest, G. *Kressel, J. *Zedner, I. *Rivkind, S. Shunami, N. Ben-Menahem, and others. The indispensable handbook today is S. Shunami's *Bibliography of Jewish Bibliographies* (1936, 1965²; repr. 1969, with supplement) which also includes sections on Jewish and Modern Hebrew literature (nos. 1146–1240; 4875–85) as well as on Judeo-German and Yiddish (nos. 1241–1357; 4586–95). In 1960 the Hebrew University, in cooperation with Mosad Bialik and the Ministry of Education and Culture, initiated the Institute for Hebrew Bibliography under the direction of N. Ben-Menahem. Its aim is to compile a definitive bibliographical listing of every Hebrew book which has been published up to 1960 (specimen brochure, 1964).

The first scholar to publish a special periodical devoted to Hebrew and Jewish bibliography was Steinschneider: *Ha-Mazkir, Hebraeische Bibliographie, Blaetter fuer neuere und aeltere Literatur des Judenthums* (HB, 1858–65, 1869–82). Nehemiah *Bruell continued Steinschneider's project in the bi-monthly *Centralanzeiger fuer juedische Literatur* (1890) but succeeded in publishing it only during one year (6 issues). At the same time M. *Kaysler published his bibliographical dictionary of Spanish and Portuguese works on Judaism and Jews (the *Biblioteca española-portuguesa judaica*, 1890). A few years later the *Zeitschrift fuer Hebraeische Bibliographie* (ZHB; 1896–1921) appeared. The editor of volumes 1–3 was H. Brody; volumes 4–9 were edited jointly by Brody and A. Freimann; and the remaining volumes appeared under the editorship of Freimann alone. The two great authorities on the bibliography of Anglo-Jewish history are C. Roth's *Magna Bibliotheca Anglo-Judaica* (1937), and R.P. *Lehmann's *Nova Bibliotheca Anglo-Judaica* (1961), the latter dealing with the years 1937–60. The most important contemporary bibliographical journal is *Kiryat Sepher* (KS), a quarterly published since 1924 under the auspices of the Jewish National and University Library. Editors during the first two years were S.H. Bergmann and H. Pick, and after that I.B. Joel. Since 1953 a new bibliographical magazine, *Studies in Bibliography and Booklore* (SBB), has been published by the Hebrew Union College Library, Cincinnati. The *Jewish Book Annual* (JBA; founded in 1942) published in New York also contains useful bibliographical material. Of Jewish bibliographic periodicals whose life-span was limited, the following deserve mention: *En Hakore*, edited by D.A. Friedman and Z. *Woyslawski, three issues (Berlin, 1923); *Soncino-Blaetter, Beitrage zur Kunde des juedischen Buches*, edited by H. *Meyer (3 vols., Berlin, 1925–30); and *Journal of Jewish Bibliography*, a quarterly edited by Joshua *Bloch (New York, 1938–43).

The first bookdealers' catalogue of secondhand Hebrew books was published in Amsterdam around 1640 by Manasseh Ben Israel, but no copy is now extant (cf. Roth in *Aresheth*, 2, 413–4). In 1652 his son Samuel published *Catalogo de los Libros que Samuel ben Israel Soeiro vende, estampados todos na*

sua Typographia, adjuntos os preços, para que cada qual saiba o que valem. In this catalogue 65 books are noted together with their prices in Dutch currency. The earliest known auction sale catalogues are those of the libraries of two Amsterdam rabbis, Moses Raphael *d'Aguilar (1680) and Isaac *Aboab da Fonseca (1693). The only earlier commercial listings of Hebrew books are in manuscript form, such as some found in the *Genizah*, or the catalogue of Hebrew books printed in Venice prior to 1542, which came into the possession of Konrad Gesner and appeared in his *Pandectarum sive partitionum universalium libri xxi* (20 vols., Zurich 1548–49; cf. ZHB, 10 (1906), 38–42). A catalogue of books compiled for business purposes was printed as an appendix to the collection of responsa by Joseph ibn Lev (vol. 4, Fuerth, 1692). Another commercial book listing, called *Appiryon Shelomo*, was published in 1730 by Solomon Proops, printer and bookdealer of Amsterdam. The advance in the field of Hebrew bibliography resulted in the publication of improved commercial catalogues (see *Book-trade). A number of these newer catalogues are of definite scientific value such as those of M. *Roest, R.N.N. Rabinowitz, L. Schwager and D. Fraenkel, J. Kauffmann, N.W. Bamberger and Wahrman, Rosenthal (Munich, Oxford), and others. In addition, the detailed catalogues of such libraries as those of Oxford, Amsterdam, Leiden, Leningrad, Frankfurt, the British Museum, and the Bibliothèque Nationale, Paris, have proved extremely useful.

[Abraham Meir Habermann]

In 1975 Shunami published a supplement to the second edition of his *Bibliography of Jewish Bibliographies* (1965). The 500-page supplement contains information on over 2,000 bibliographies published between 1965 and 1975. In his introduction Shunami notes that this number compares with that for the first hundred years of the Wissenschaft des Judentums. He comments on the rapid growth of bibliographies relating to the Holocaust and to the State of Israel. On the other hand, the small number of entries related to Hebrew printing is a reflection of the decline of study of this subject with little extra interest having been aroused by the 500th anniversary of Hebrew printing. There is also a decrease in entries relating to private collections, reflecting a decline in major Jewish book collectors. Shunami also decries the shortage of Jewish bibliographers.

BIBLIOPHILES. Little is known about private book collectors in antiquity and in the early Middle Ages. It might be assumed, however, that patrons of learning, such as *Hisdai ibn Shaprut, collected important Hebrew and other books. Historical sources refer to the library of *Samuel ha-Nagid.

Judah ibn *Tibbon's advice on how to care for a library is well known. Unfortunately, little is known about the titles of the books making up his collection. Several book lists, some compiled for auctions after the owner's death, were found in the Cairo *Genizah, the best known being that of R. *Abraham b. Samuel he-Ḥasid. His collection consisted of 27 Hebrew books and a number of volumes on medicine, probably in Arabic. The most remarkable of known medieval Jewish book collectors was the world traveler and physician Judah Leon *Mosconi of Majorca. His library included Hebrew and Arabic books in many branches of learning. Two catalogues have been preserved, one of them drawn up for the auction after his death in 1377. The king of Aragon ultimately canceled the sale and seized the library for himself. In Renaissance Italy there were many enthusiastic book collectors, such as *Menahem b. Aaron of Volterra (15th century), whose library is now in the Vatican. The library of Solomon *Finzi, son of the Mantuan scientist Mordecai (Angelo) *Finzi, contained 200 volumes, at that time a number considered worthy of a great humanist. Elijah *Capsali, a Cretan scholar of the 16th century, possessed a famous collection of Hebrew manuscripts, now at the Vatican. The largest Jewish library in the Renaissance period was that built up in successive generations by the family of Da *Pisa. They were outdone in the 17th century by Abraham Joseph Solomon *Graziano, rabbi of Modena, who wrote the initials of his name *ish ger* (אִישׁ גֵּר) in vast numbers of books now scattered in Jewish libraries throughout the world. His contemporary Joseph Solomon *Delmedigo, a physician who traveled widely, boasted that he collected no fewer than 4,000 volumes, on which he had expended the vast sum of 10,000 (florins?). Doubtless, many of these were in languages other than Hebrew.

The first printed sale catalogues of private Hebrew libraries emerged in Holland in the 17th century, for example, the one printed for the disposal of the collections of Moses Raphael d'*Aguilar, the earliest such publication known to Jewish booklore, and that of Isaac *Aboab da Fonseca's collection, comprising about 500 volumes, many in Spanish, French, and even Greek and Latin, including some classics and the writings of the Church Fathers. Other book collectors of that period in Amsterdam were *Manasseh Ben Israel and Samuel Abbas. One of the greatest Jewish book collectors of any period was David *Oppenheim, rabbi of Prague, who in 1688 compiled the first catalogue of his collection, comprising the 480 books he owned at the time. Ultimately, he acquired 4,500 printed works in addition to 780 manuscripts, possibly the most important Jewish library in private ownership that has ever been assembled. It was purchased in 1829 by the Bodleian Library in Oxford. The Italian Catholic abbé Giovanni Bernardo de'*Rossi, a Hebrew scholar of repute and a book collector of genius, had opportunities in Italy that were unequaled elsewhere. His great collection of Hebrew manuscripts, catalogued by him and including several superb illuminated codices, is now housed at the Palatine Library in Parma, having been acquired after his death by the ruler of that petty principal-

ity. What the printed book collection includes is still barely known, but one example of its treasures is the only known copy of the earliest of dated Hebrew printed books – Rashi's Commentary printed at Reggio di Calabria in 1475. The next century produced a large number of more self-conscious collectors, such as Heimann Joseph *Michael, a Hamburg businessman, not very affluent but a considerable scholar. The learned catalogue he composed, still a standard work of reference, describes 860 manuscripts and 5,400 printed books, which in due course joined the Oppenheim collection in Oxford. At about the same time Solomon *Dubno of Russia and Holland assembled some 2,000 printed books and about 100 manuscripts, which were sold by auction in Amsterdam in 1814. Another scholarly collector was Solomon *Halberstam of Poland. Business reverses compelled him to dispose of his manuscript collection, part going to the Montefiore Library (now in the library of Jews' College, London), and part to the library of the Jewish Theological Seminary, New York. The most valuable part of his collection of printed books was sold to the library of the Vienna Jewish community; the bulk was acquired by Mayer Sulzberger and presented to the Jewish Theological Seminary in New York. Eliakim *Carmoly, rabbi in Brussels, who destroyed the value of everything he owned by embellishing it with ingenious, but sometimes transparent, forgeries possessed some 1,200 printed volumes and 290 manuscripts. His manuscripts can be found in Oxford, the British Museum, and the Guenzburg Library in Moscow.

In Russia David *Guenzburg of St. Petersburg built up a magnificent manuscript collection, which is now in the Lenin State Library, Moscow. In the United States Mayer *Sulzberger, assisted by the dealer Ephraim *Deinard, built up an important collection. In 1903 Sulzberger gave his collection of 3,000 rare books to the Jewish Theological Seminary. Moritz *Steinschneider's library in Berlin, some 4,500 books and manuscripts, was important both for the caliber of its contents and for the copious, scholarly annotations that Steinschneider added to his books. His collection passed into the ownership of the Jewish Theological Seminary, most of it being destroyed by fire in 1966. Judaica was only part of the great library which Salman *Schocken assembled in Germany, but in that field he concentrated on Hebrew poetry and rare printed books. This collection is now housed in the Schocken Library, Jerusalem, in recent years enriched by some remarkable illuminated manuscripts. A specialized library of another sort was that of David *Montezinos of Amsterdam, who created a unique collection of works, largely in Spanish and Portuguese, illustrating the history of that community. He gave it to the Sephardi synagogue, where he then became librarian. This library worked in friendly competition with the Bibliotheca Rosenthaliana in that city for many years. The latter, the library of Leiser *Rosenthal, a rabbi, was given by his son George to the city of Amsterdam; it is now a constituent of the University Library. Another outstanding rabbinical bibliophile was the Hungarian scholar David *Kaufmann whose remarkable collection, largely of Italian provenance, includ-

ing some splendid illuminated manuscripts, was presented by his widow to the Hungarian Academy of Sciences. Elkan Nathan *Adler, an English lawyer, who traveled around the world in the course of his business affairs, built up a library of incunabula, rare printed works, and manuscripts, which for bulk, if not for quality, was perhaps the greatest collection assembled by a private person. Just after World War I in order to make good the defalcations of a business associate, he was compelled to sell his library to the Jewish Theological Seminary, thus elevating it to a foremost place among the Jewish libraries of the world. Adler's collection also contained some 30,000 fragments from the Cairo *Genizah*, which he had visited even before it achieved fame. Moses *Gaster, *haham* of the English Sephardi community, also built up a great collection of manuscripts reflecting every side of his versatile interests. Toward the end of his life he sold the bulk to the British Museum. Some of the remainder was ruined during the German air raids on London in World War II; what remained, including the Samaritan manuscripts, was acquired by the John Rylands Library in Manchester to add to its already remarkable Hebrew collection. David Solomon *Sassoon of London had the advantage of great wealth, close connections with the Orient, and a family tradition of book collecting. He assembled his collection of manuscripts with scholarly discrimination and described it in an elaborate catalogue, perhaps the most exhaustive work of its type that has appeared in print. This collection went into the possession of his son Solomon David Sassoon in Letchworth, England. The important collection of Berthold Strauss of London (1901–1962), catalogued in part in his *Ohel Barukh* (1959), was acquired after his death for Yeshiva University, New York. The 20th-century scholars whose private collections have become part of established libraries include Israel *Davidson (Jewish Theological Seminary, where it was destroyed by fire), Hyman *Enelow (Jewish Theological Seminary), Lazarus *Goldschmidt (second collection, Royal Library, Copenhagen), Mordecai *Margoloth (Bar-Ilan University), and Alexander *Marx (Jewish Theological Seminary, partly destroyed). Other large private collections were assembled by Saul *Lieberman, Cecil *Roth, and Gershom *Scholem. Significant private collections were also built up by hasidic dynasties, e.g., Gerer, Sadagorer, and Lubavitcher. Christian scholars and collectors who owned many important Hebrew books included Johannes *Buxtorf, Bishop Huntington, Bishop Kennicott, Sir Thomas Phillips, Edward Pococke, the Duke of Sussex, and Aldis Wright. Other important private collections belonged to Abraham *Merzbacher (now in Frankfurt City and University Library), Nathan *Porges, Israel *Solomons (Jewish Theological Seminary and Hebrew Union College libraries), Mathias Straschun (part in Heikhal Shelomo, Jerusalem), and Michael Zagayski. Among other collectors, mention should be made of Fritz *Bamberger (New York), Ludwig Jesselson (New York), Jacob Lowy (Montreal), and Israel Mehlman (Jerusalem). A very important collection of early Yiddish literature was that of Judah A. Joffe (Jewish Theological Seminary).

[Menahem Schmelzer]

BIBLIOTHÈQUE NATIONALE, French national library founded in the 14th century. There was no trace of Hebrew books there before 1544; however, by 1739 there were 516 manuscripts mainly from the collections of Catherine de' Medici, Cardinal Richelieu, and Gilbert Gaulmin. The catalogue of works printed in Hebrew and prepared by Nicolas Rigault remains unedited. The reforms brought about by the French Revolution resulted in several important collections being transferred to the National Library. These consisted of books and manuscripts from convents and from the Sorbonne library. Through the efforts of Solomon *Munk still further acquisitions were added. A description published in 1866 by Herman Zotenberg (*Catalogue des Manuscrits Hébreux et Samaritains de la Bibliothèque Impériale*, based on the preliminary work by Solomon Munk, Joseph *Dernbourg, and Adolphe *Franck), numbers 1,313 works in Hebrew and 11 in Samaritan. In the early 21st century there were a total of 1,481 manuscripts, including some discovered at Qumran, and 61 Samaritan manuscripts. Recent acquisitions were registered in the *Catalogue général des livres imprimés* and in *Ouvrages imprimés en caractères hébraïques*.

[Georges Vajda]

BICK, JACOB SAMUEL (1772–1831), Hebrew writer and one of the pioneers of *Haskalah in Galicia. Bick, a friend of Solomon Judah *Rapoport, translated French and English poems into Hebrew and published delightful, satirical letters in *Bikkurei ha-Ittim*, *Kerem Hemed*, and in the anthology *Ha-Zefirah*, edited by *Letteris. Bick, like other Galician *maskilim* of his day, began by scoffing at the boorish Ḥasidim, but his strong attachment to the common people and his love of tradition led to a change in his views. When Tobias *Feder published his pamphlet *Kol Meḥazezīm* (1816), criticizing Menahem *Lefin (Levin Mendel of Satanov) for having translated the Book of Proverbs into Yiddish, Bick defended Lefin and argued that one should be pleased that the book had been made accessible to the people in a language that they understood. Most of Bick's literary works were destroyed by fire. However, shortly before World War II, Dov Sadan discovered the manuscripts of three anti-ḥasidic Hebrew plays written by Bick in the Jo-

seph Perl library in Tarnopol. These plays probably belong to Bick's early period.

[Gedalyah Elkoshi]

BICKEL, ALEXANDER M. (1924–1974), U.S. lawyer and a leading authority on the United States Constitution. Son of Solomon *Bickel (1896–1969), Yiddish essayist and literary critic, Bickel was born in Bucharest, Romania, but immigrated to the United States at the age of 14. After graduating from the City College of New York and from Harvard Law School, he became a law officer in the State Department, and subsequently served as clerk to Justice Felix *Frankfurter. He joined the faculty of Yale Law School in 1956, and from 1966 until his death he held distinguished chairs at this institution. He was the author of a number of widely read books on the Supreme Court and on constitutional law: *The Least Dangerous Branch* (1962), *Politics and the Warren Court* (1965), *The Supreme Court and the Idea of Progress* (1970), and *Reform and Continuity* (1971). Bickel became nationally known when he represented the *New York Times* in the famous Pentagon Papers case before the Supreme Court in 1971.

In constitutional and legal philosophy, Bickel was a conservative, not a liberal-activist. In his basic orientation, he was a follower of Justice Frankfurter, who stressed the belief that the ultimate reliance for the vindication of interests and rights must be, not on the courts, but on other agencies of the democratic process. From this point of view, Bickel found many occasions to criticize various decisions of the Supreme Court during the years when Earl Warren was chief justice. His style was often sharply polemical and even strident. But like Frankfurter, Bickel was a liberal in his own political views. Thus, for example, though opposed to any form of racism, he opposed the use of bussing to help achieve school desegregation. His philosophy may perhaps best be associated with that of the Historical School of jurisprudence. In *The Supreme Court and the Idea of Progress* (1970), Bickel wrote that in dealing with problems of great magnitude and with complex roots and unpredictable offshoots, society is best allowed to develop its own strands out of its own traditions; "it moves forward most effectively, perhaps, in empirical fashion, deploying its full tradition, in all its contradictions, . . . as it retreats and advances, shifts and responds in accordance with experience, and with pressures brought to bear by the political process." In such contexts, he concluded, judicial supremacy is not possible. Bickel's book *The Morality of Consent* (1975) was published posthumously. He also wrote the first part of *History of the Supreme Court of the United States: The Judiciary and Responsible Government: 1910–1921* (vol. IX, 1984).

[Milton Ridvas Konvitz]

BICKEL, SOLOMON (Shloyme; 1896–1969), Yiddish essayist and literary critic. Born in eastern Galicia, Bickel was an officer in the Austrian army during World War I. As an active Labor Zionist, he was editor of *Di Frayhayt* (1920–22), the Yiddish organ of the Po'alei Zion of Bukovina, and later editor and co-editor of Yiddish literary periodicals in Romania. Emigrating to the United States in 1939, he served, from 1940, as literary critic of the New York Yiddish daily, *Der Tog* and in the 1960s as head of *YIVO's Commission on Research.

Among his ten books, which appeared between 1936 and 1967, the following are the most significant: *A Shtot Mit Yidn* ("A City with Jews," 1943, 1960), a survey of the vanished culture of Kolomyia – written with mild irony, deep sympathy, and tolerant understanding – which highlights acts of moral greatness and poetic, joyous moments in the lives of ordinary Jews; *Dray Brider Zaynen Mir Geven* ("We Were Three Brothers," 1956), further recollections of Kolomyia's Jews; *Remenye* ("Romania," 1961), which chronicled developments of Jewish cultural life in Romania between the two world wars, intimately experienced by the author; *Shrayber fun Mayn Dor* ("Writers of My Generation," 2 vols., 1958–65), essays on Yiddish writers.

Bickel was one of the foremost literary critics and essayists, writing significant works on such writers as Isaac *Bashvevis Singer, Itzik *Manger, Avrom *Sutzkever, the *Inzikhist movement, and editing a memorial volume for fellow literary critic Shmuel *Niger. He set each writer in his specific environment, defining his uniqueness at the same time. A jubilee volume, *Shloyme Bikel Yoyvl-Bukh* (1967) summarized and evaluated his role in Yiddish literature, including numerous poetic and prose tributes to him.

[Sol Liptzin]

BICKELS-SPITZER, ZVI (1887–1917), Yiddish dramatist and literary critic. Born in Lemberg (now Lvov), after finishing school, he studied law there and in Vienna and became a practicing attorney. He sympathized with Zionist ideas but was also an active supporter of and participant in the young Yiddish literary movement in Galicia. In 1910, he co-edited the first modern Yiddish literary collection of the Galician region, *Yung-Galitsisher Almanakh* and in the period 1915–17 edited *Tagblat* (Lemberg). He also wrote dramas, most notably *Der Goyel* ("The Savior"). His selected writings were posthumously published in Hebrew translation, edited by Dov Sadan (1948).

[Melech Ravitch]

BICKERMAN, ELIAS JOSEPH (1897–1981), historian. Bickerman was born in Kishinev, Russia, and studied at the University of Petrograd (Leningrad). In 1918 he escaped to Germany, studied at the University of Berlin until 1926, and taught there from 1929 until 1932, when he emigrated to France. He was *chargé de cours* in the Ecole Pratique des Hautes Etudes from 1933 to 1940 and in the Centre National de Recherche Scientifique from 1937 on. After the German conquest of France he again escaped, this time to the United States. There he taught at the New School for Social Research and the Ecole Libre in New York (1942–46), was research fellow at the Jewish Theological Seminary (1946–50), taught at the University of Judaism in Los Angeles (1950–52), and was professor of ancient history at Columbia University (1952–67). After his retirement from Columbia he taught at the Jewish Theological Seminary.

Bickerman wrote innumerable articles in scholarly journals in many fields of ancient history, notably law, religion (especially Judaism), epigraphy, chronology, and the political history of the Hellenistic world. Outstanding among his many books are *Der Gott der Makkabaeer* (1937); *The Maccabees* (1947; also as part 2 of his *From Ezra to the Last of the Maccabees*, 1962), which revolutionized the historical understanding of the Maccabean revolt; *Institutions des Séleucides* (1938); and *Chronology of the Ancient World* (1968) – the last two being the fundamental works on their respective subjects. He also wrote *The Ancient History of Western Civilization* (1976); *Studies in Jewish and Christian History*, vol. 3 (published in 1986); and *The Jews in the Greek Age* (published in 1988).

[Morton Smith]

BIDACHE, village in the department of the Basses-Pyrénées, S. France. A Jewish community composed of Marrano refugees from Spain and Portugal was established there from the beginning of the 17th century. The duke of Gramont granted his protection to the Jews of Bidache in statutes of 1665 and 1668. When at the beginning of the 18th century the Auch district authority wished to conduct a general tax assessment on the Portuguese Jews in the area, the duke of Gramont intervened on behalf of the Jews in Bidache, including those not of Portuguese origin, who "enjoyed the privilege of non-assessment." The Jewish community dispersed after the French Revolution and was never reestablished. The former cemetery lies on the Port Road outside Bidache and contains tombstones often with epitaphs in both Hebrew and Portuguese.

[Bernhard Blumenkranz]

BIDNEY, DAVID (1908–1987), U.S. anthropologist and philosopher. Born in the Ukraine, Bidney was educated in Canada. He taught philosophy at Toronto, Yeshiva, and Yale uni-

versities and then gradually shifted the focus of his academic interest to anthropology. Between 1942 and 1950 he was research associate anthropologist with the Wenner-Gren Foundation for Anthropological Research and was then appointed professor of anthropology and philosophy at the University of Indiana. His major interest in philosophy was in interpreting Descartes and Spinoza, as shown in his *Psychology and Ethics of Spinoza* (1962²). In anthropology Bidney was concerned primarily with the philosophical foundations and implications of the discipline, which appeared in his *Theoretical Anthropology* (1967²). He interested himself in the history of anthropological thought, theory of myth, primitive religion, and comparative ethics and law. The symposium he organized, the papers of which he edited in *The Concept of Freedom in Anthropology* (1963), surveyed freedom in the framework of diverse cultures.

[Ephraim Fischhoff]

BIE, OSCAR (1864–1938), writer on music and the fine arts. Bie studied music with Philipp Scharwenka in Berlin and devoted himself to musical journalism and the writing of monographs. He was editor of the *Freie Buehne* and the literary review *Die neue Rundschau*; he wrote opera reviews for the *Berliner Boersenkurier*. Bie was appointed lecturer on the history of art at the Berlin Technical High School in 1890 and in 1921 teacher at the Berlin High School of Music. Among his books are *A History of the Pianoforte and Pianoforte Players* (1899), *Intime Musik* (1904), *Tanzmusik* (1905), *Der Tanz* (1906), *Die moderne Musik und Richard Strauss* (1906), *Die Oper* (1913), *Das Ratsel der Musik* (1922), *Franz Schubert* (1925), *Das Deutsche Lied* (1926), and *Richard Wagner und Bayreuth* (1931).

[Israella Stein (2nd ed.)]

BIEBER, HUGO (1883–1950), German literary historian. Bieber was born in Berlin, where he studied German literature and philosophy. He was for many years editor of the *Volksverband der Buecherfreunde*, Germany's most important book club. Bieber wrote a history of the intellectual and literary movements of the 19th century, *Der Kampf um die Tradition* (1928). *Confessio Judaica* (1925), an anthology of Heinrich *Heine's opinions on Jews and Judaism, demonstrates Heine's unbroken adherence to his Jewish heritage. Bieber wrote another work entitled *Heinrich Heine* which was translated into English and edited by M. Hadas (1956). After the rise of Hitler, Bieber immigrated to New York.

[Rudolf Kayser]

BIEBER, MARGARETE (1879–1979), archaeological scholar and teacher. Born in Schoenau, West Prussia, she studied at Bonn, and then was for some years an assistant at the German Archaeological Institute in Athens. On her return to

Germany she worked at the archaeological museum in Cassel until 1919, when she joined the University of Giessen, where she was appointed professor in 1931. She left Germany in 1933, and after a period at Oxford settled in New York, where she first lectured at Barnard College and then became associate professor in the Fine Arts department of Columbia University. After her retirement she was a visiting lecturer at Princeton (1949–51). She was a member of the American Academy of Arts and Sciences. Bieber concentrated on Classical and Hellenistic art, and was distinguished for her profound knowledge of Greco-Roman sculpture and her penetrating insight into archaeological problems. During the first phase of her career her publications included the catalog of the Cassel Museum (1915) and two handbooks, *Die Denkmäler zum Theaterwesen im Altertum* (1920; *The History of Greek and Roman Theater*, 1939), and *Griechische Kleidung* (1928), on ancient Greek dress. In America, her books include *German Readings in the History and Theory of the Fine Arts* (1946), and the monumental *Sculpture of the Hellenistic Age* (1955).

Bieber's last work, *Copies: a Contribution to the History of Graeco-Roman Sculpture*, was published in 1977 when she was 96 years of age. She was buried as a Christian.

[Penuel P. Kahane (2nd ed.)]

BIEDERMANN (Freistaedtl), MICHAEL LAZAR (1769–1843), Austrian financier, entrepreneur, and communal leader. Born in Pressburg, Biedermann first took up engraving. He settled in Vienna when a youth, and in 1798 was commissioned to engrave the imperial seal. In 1800 he opened a store for jewelry and antiques. He subsequently turned to the wool industry into which he introduced modern production methods. In business with L.A. *Auspitz, Biedermann succeeded in transferring the center of the wool trade in the Hapsburg Empire from Budapest to Vienna. He founded one of the first banks in Austria, and in 1816 gave the emperor an interest-free loan of 300,000 florins to combat famine in Vienna. In 1830 he became court jeweler. Biedermann played a leading role in organizing a congregation in Vienna, of which he became a representative in 1806. He was instrumental in the foundation of a Jewish school in 1812 and of the first synagogue in Vienna (the Seitenstetengassetempel) in 1826. He encouraged welfare activities and built a hospital. I.N. *Mannheimer was invited to Vienna to officiate as rabbi on his recommendation. An advocate of moderate *Reform, Biedermann was one of the leaders in the struggle for Jewish *emancipation.

BIEGELEISEN, HENRYK (1855–1934), Polish literary historian and ethnographer. On his mother's side a grandson of Nahman *Krochmal, Biegeleisen was assimilated and even made his sons convert. He was for many years principal of a girls' school run by the Jewish community at Lvov. Biegeleisen published a number of studies and monographs on Polish romantic literature. These include *Pan Tadeusz Mickiewicza* ("Mickiewicz's Pan Tadeusz," 1884); *Lirnik mazowiecki* ("The Bard of Mazovia," 1913) on the poet Teofil Lenartowicz; and *Ilustrowane dzieje literatury polskiej* ("An Illustrated History of Polish Literature," 5 vols., 1898–1901). He also edited the works of Słowacki, *Mickiewicz, and Fredro, and a Polish translation of Shakespeare. In the field of ethnography Biegeleisen wrote a number of original studies, among them *Matka i dziecko w obrzędach, wierzeniach i zwyczajach ludu polskiego* ("Mother and Child in the Rites, Beliefs, and Customs of the Polish Folk," 1927); *Wesele...* ("Wedding..." 1928); *U Kolebki – przed ołtarzem – nad mogiłą* ("At the Cradle – Before the Altar – By the Tomb," 1929); *Lecznictwo ludu polskiego* ("Popular Cures of the Polish Folk," 1930); and *Śmierć w obrzędach, zwyczajach i wierzeniach ludu polskiego* ("Death in the Rites, Customs, and Beliefs of the Polish Folk," 1931). One of his sons, BRONISŁAW BIEGELEISEN-ŻELAZOWSKI (b. 1881), was professor of psychology in various Polish universities, and published works in his field.

[Moshe Altbauer]

BIEL, township near Uncastillo, Aragon, Spain. The earliest information on the community of Biel dates from 1294, when a Christian girl disappeared; rumors were spread that the Jews were responsible, and the Jews of Biel were arrested. It was only after the intervention of James II that the charge was withdrawn. In 1305, however, Açaç de Çalema, the wealthiest Jew of Biel, was accused of having derided the Christian religion. He was arrested and brought to trial before the Dominicans, and his property was confiscated. In 1294 and in 1305, the Jews of Biel paid an annual sum of 250 *solidi*, amounting to a quarter of the income derived by the king from the locality. In 1361, the king requested Solomon de la *Cavalleria to annul an irregular Jewish marriage at Biel. A Jewish community continued to exist until the expulsion of the Jews from Spain in 1492.

[Haim Beinart]

BIEL (Bienne), town in the Swiss canton of Berne. Citizenship (Burgerrecht) was granted to several Jewish families in 1305, although Jews probably settled in Biel earlier. They were allowed to trade freely and engage in moneylending, until their expulsion from the city, the date of which is unknown.

Communal life revived after 1848, when several Jewish families from *Alsace-Lorraine settled in Biel. A Moorish-style synagogue was built in 1883. Between 1916 and 1945 the Orthodox Chaim Lauer was its rabbi. For some years there was a separate East European *minyán*. The number of members of the Biel Jewish community dwindled from 1945. This problem was met by a closer cooperation with the community of *Berne and by state recognition for both communities in the 1990s along with the right to levy taxes by the state.

[Uri Kaufmann (2nd ed.)]

BIELEFELD, city in North Rhine-Westphalia, Germany. Jews there were massacred during the *Black Death, 1348–49. In 1370 a few Jews again settled in Bielefeld. The prohibition of 1554 on Jewish residence in the duchy of *Juelich also applied to Bielefeld, but Jews resettled there in 1586. Their main occupations were commerce and moneylending. Jews from Bielefeld attended the fairs at *Leipzig at the beginning of the 18th century. The cemetery continued in use from 1665, until a new one was opened in 1891. In 1905 a synagogue to seat 800 was consecrated. The Jewish population numbered 65 in 1783 and 800 in 1933. On Nov. 10, 1938, the synagogue was burned down. At least 500 members of the community perished during the *Holocaust. Only 12 survivors returned to Bielefeld after the war. A few Jews settled there from other places, and there were 66 Jews living in Bielefeld in 1955. A new synagogue was inaugurated in 1951. The Jewish community numbered 23 members in 1989 and 193 in 2003.

[Zvi Avneri]

BIELSKI, TUVIA (1906–1987), **ASAEL** (1908–1944), and **ZUS** (1912–1995), Jewish partisans in World War II. The three brothers grew up in the small village of Stankewicz in western Belorussia. The Bielskis were a poor peasant family and the only Jews in the community. David Bielski, the father, owned a mill and the family farmed its land. They observed the Sabbath and Jewish holidays, but were on good terms and mixed freely with their gentile neighbors.

When the Germans invaded the area in 1941, the widespread murder of its Jewish population began. The brothers' first-hand knowledge of German brutality and intentions regarding the Jews prompted them to take action. At first, they hid separately in the countryside. When their parents, siblings, and other relatives were killed in the Nowogrodek ghetto in 1942, the brothers escaped into the forest. With a few guns

and 30 other Jews, they formed a partisan group. Tuvia was the commander, Asael was second in command, and Zus was in charge of reconnaissance. Because they grew up nearby, the Bielski partisans knew the area and its people intimately. This served them well in their efforts to elude the Germans and their collaborators.

The Bielski "Otriad" (partisan unit) was created by and for Jews. From its inception, Tuvia Bielski insisted that saving Jewish lives was as important as acts of sabotage. Some argued that this would compromise the unit's safety, but Tuvia strictly upheld the policy of accepting any Jew into the group regardless of age, gender, or health. Its membership grew to include women, children, and the elderly. As the Final Solution gained momentum, the Bielski partisans' rescue efforts became more aggressive and innovative.

The unit took in Jews who were hiding in the forest and punished those who denounced Jews. Those who left Soviet partisan groups because of antisemitism knew they would find refuge in the Bielski unit. The Otriad even dispatched members to the ghettos to help those inside escape and join their ranks. By cooperating with Soviet partisans in anti-German operations as well as procuring food, the Bielskis earned some protection from them.

From 1942 to 1943, the Bielski group moved from place to place. When, by the end of 1943, the group had grown to 400 people, they established a more permanent base in the Naliboki forest. Within this dense, swampy forest, the camp became a small, organized community with schools, a synagogue, and workshops that enabled economic cooperation with Soviet partisans. By this time the Germans were actively searching for the Bieskis, Tuvia especially, but they evaded the enemy by moving deeper into the forest. While a small number of the unit perished, the Bielski brothers' efforts constituted the largest rescue of Jews by Jews during the Holocaust. When the Russians liberated the area in 1944, 1,200 Jewish men, women, and children emerged alive from the family camp in the forest.

Asael was killed a short time later fighting with the Russians in the battle of Marienbad, Germany. Tuvia and Zus eventually settled with their wives and children in New York.

[Beth Cohen (2nd ed.)]

BIELSKO (Ger. **Bielitz**), town in southwest Poland on the river Biala opposite *Biala, amalgamated with Biala in 1950 to form the city of Biala-Bielsko. A community existed in Bielsko in the first half of the 19th century, which was authorized to open a prayer hall in 1831 and a cemetery in 1849. It became an independent community in 1865. The Jewish population numbered 1,977 in 1890 increasing to 3,955 by 1921, and approximately 5,000 in 1939; most were German speaking. According to the 1921 census, 2,737 declared their nationality as Jewish, of whom 513 declared Yiddish as their mother tongue. The Jews in Bielsko took an important part in the city's commerce and woolen textile industry. Most of the communal institutions were maintained jointly with the Biala community. Michael

Berkowicz, Theodor Herzl's Hebrew secretary, taught religious subjects in the secondary school at Bielsko, and attracted many Jews to Zionism. The Hebrew scholar and bibliophile S.Z.H. *Halberstam lived in Bielsko and the scholar Saul *Horowitz officiated as rabbi there from 1888 to 1895.

[Abraham J. Brawer]

Holocaust and Postwar Periods

The approach of the Germans led to mass flight but many had to return to the city when their escape routes were cut off. The German army entered the town on Sept. 3, 1939, and immediately initiated an anti-Jewish reign of terror. On Sept. 4, 1939, the Nazis burned down both synagogues in Bielsko and the H.N. Bialik Jewish cultural home. A few days later the Germans burned down the two synagogues in nearby Biala, and its Orthodox Jews were forced to throw the holy books into the fire. In the summer of 1940 a ghetto was established in Bielsko. The ghetto was liquidated in June 1942 when the town's remaining Jewish population was deported to the death camp in Auschwitz. Bielsko was amalgamated with *Biala in 1950 to form the city of Bielsko-Biala. After the war a few hundred Jews settled in Bielsko-Biala. A children's home for orphans, survivors of the Holocaust, functioned there for a few years. The Jewish Cultural Society ran a club until June 1967 when the Polish government initiated its antisemitic campaign. After that date almost all the remaining Jews left Poland.

[Stefan Krakowski]

Berenstein and A. Rutkowski, in: *BZIH*, no. 38 (1961), 3–38, passim; *Yad Vashem Archives*, 0–3/1251. **ADD. BIBLIOGRAPHY:** P. Maser et al., *Juden in Oberschlesie*, 1 (1922), 87–95.

BIELSK PODLASKI, town in N.E. Poland, Bialystok district. Jews are mentioned there in 1487 leasing the local customs house. An organized community existed in Bielsk in the early 16th century and a synagogue was built in 1542. In 1564 a Jewish tax-collector in the town was condemned to death following a blood libel. The Jewish population numbered 94 in 1816 and 298 in 1847. With the coming of the railroad, trade and industry developed and the Jewish population rose to 4,079 in 1897 (54.6% of the total). In 1920 a Jewish school was founded and the Zionist youth organizations began their educational work in the town. Between the world wars the economic condition of the Jews deteriorated as a result of discriminatory government measures and the generally depressed economy

[Shlomo Netzer (2nd ed.)]

In 1921 Bielsk had 2,392 Jews, but under Soviet rule (1939–41) its Jewish population increased to 6,000 when large numbers of refugees arrived from the western parts of Poland occupied by the Germans. In the summer of 1940 a number of refugees were exiled to the Soviet interior. In the spring of 1941 young Jews were drafted into the Soviet Army. When the war broke out between Germany and the U.S.S.R. (June 22, 1941), groups

of Jews attempted to flee eastward with the retreating Soviet forces, but few of them succeeded. The Germans entered Bielsk on June 24, 1941. Within ten days they assembled 30 of the Jewish leaders and intellectuals and put them to death. The Germans exacted a fine of four kilograms of gold and 200,000 rubles from the Jewish community. They also imposed a Judenrat, headed by Shlomo Epstein. In August 1941 an "open" ghetto was established. In February 1942 the ghetto was surrounded by barbed wire and closed off from contact with the outside. In Feb. 1943, the Germans rounded up over 5,000 ghetto inhabitants for the Treblinka death camp and murdered 200 old and sick Jews in the local Jewish cemetery. About 40 experts and skilled craftsmen were picked out and sent to the Bialystok ghetto, where they were eventually liquidated along with the rest of the Jewish inmates. The community was not reconstituted after the war.

BIEN, JULIUS (1826–1909), U.S. lithographer. Bien was born in Naumburg, Germany, where he studied lithography. After participating in the unsuccessful revolution of 1848, he fled to New York where he established a small lithographic business in 1850. His abilities soon earned him most government contracts for engraving and printing major geographic and geological publications, including a map of the territory west of the Mississippi River, which was standard for 25 years. He produced the maps and atlases accompanying the federal census reports from 1870 to 1900, as well as atlases of New York State (1895) and Pennsylvania (1900). Bien was president of the National Lithographers' Association (1886–96). A director of the Hebrew Technical Institute and Hebrew Orphan Asylum in New York, he was president of the B'nai B'rith order (1854–57, 1868–1900) and instrumental in forming its international structure. Julius' brother HERMAN M. BIEN (1831–1895), U.S. rabbi and author, founded a Hebrew school in San Francisco and served as rabbi of Temple Emanu-El until 1860. He then moved to Virginia City, Nevada, where he organized a school and was elected to the state legislature (1863–65). Moving to New York, he became a merchant in Fort Henry. In 1881 he was appointed rabbi of Congregation Beth Shalom in Chicago, but moved to Vicksburg, Mississippi, in 1885. Among his numerous works are the drama *Samson and Delilah* (1857), and *Ben Beor* (1891), a portrayal of anti-Semites.

[Edward L. Greenstein]

BIENENFELD, FRANZ RUDOLF (1886–1961), lawyer, writer, and Zionist. Born and educated in Vienna, Bienenfeld became an active figure in Zionist and in Jewish communal affairs. He succeeded Robert Stricker as chairman of the Austrian section of the World Jewish Congress. Under the nom de plume Anton van Mueller, Bienenfeld published *Deutsche und Juden* (1936; *The Germans and the Jews*, 1939), an analysis of the relationship between Jews and Germans in the

period of Hitler, and followed it with *Religion der religionslosen Juden* (1938; *Religion of the Non-Religious Jews*, 1944). In 1939 he fled to England where he worked on the staff of the World Jewish Congress, later becoming a member of the executive, and drafted the claims for German reparations after World War II. Bienenfeld took part in the juridical preparations for the Nuremberg processes. His book *Rediscovery of Justice* (1947) argued the claim of the Jews to compensation. His writings on Austrian civil law include *Die Haftung ohne Verschulden* (1933).

[Josef J. Lador-Lederer]

BIENENSTOCK, MAX (1881–1923), writer, educator, and Zionist leader of the labor movement. Bienenstock was born in Tarnow, Galicia, and educated at an Austrian high school. He graduated as doctor of philosophy from Cracow University. He taught in government high schools from 1904 until the collapse of the Hapsburg monarchy. From his early youth he was an active Zionist. During the short-lived Jewish autonomy in western Ukraine (1918–19), he was director of the Department of Education and Culture. When the Ukrainian Republic was overthrown by the Polish army, he was arrested for a few months as a political criminal. Afterwards the Polish authorities refused to confirm his appointment as teacher and director of the Hebrew high school in Cracow. From then on, he devoted his efforts to writing and to Zionist education. Attracted by socialist ideology, Bienenstock formed and led the Hitaḥadut party in eastern Galicia. In the Polish parliamentary elections of 1922, his party, in the framework of the Jewish national bloc, elected him to the senate for the Lvov district. Bienenstock was a progressive educator and a gifted writer in Polish, German, and, later, Yiddish. He published two books, *Das juedische Element in Heines Werke* (1910) and *Henrik Ibsens Kunstanschauungen* (1913). He translated Polish classics into German, including *The Ungodly Comedy* by Krasiński. He wrote essays on Zionist socialist topics and, in his last years, on Yiddish literature. He died in Lvov.

[Aryeh Tartakower]

BIENSTOK, JUDAH LEIB (Leon; 1836–1894), Russian writer and community leader. He was born in Volhynia and educated in Zhitomir at the government-sponsored rabbinical seminary. He served as government-appointed rabbi at Zhitomir from 1859 to 1862. Afterward he worked as a specialist for Jewish affairs in the office of the governor of Volhynia. He wrote for the Jewish press in Russian and Yiddish. In 1879 he went to St. Petersburg where for a time he became the secretary of both the Jewish community and the "Society for the

Spreading of Enlightenment.” As a friend of *Mendele Mokher Seforim, he translated his *He-Avot Ve-ha-Banim* (“Fathers and Children”) into Russian and collaborated with him on a few popular pamphlets in Yiddish, also writing one of the first biographical articles about him (*Voskhod*, 12, 1884). In 1891 he published a study of the Jewish agricultural settlements in the district of Yekaterinoslav (now Dnepropetrovsk). In 1892 when Vladimir *Tiomkin resigned from his post as Hovevei Zion representative in Erez Israel, the *Odessa Committee appointed Bienstok in his place. He assisted in the establishment of modern schools in the country and the founding of the Sha’arei Zion library in Jaffa.

BIERER, RUBIN (1835–1931), one of the first active Zionists and members of Hovevei Zion in Galicia, Austria, and Bulgaria. Bierer, who was born in Lemberg, completed his studies in medicine in 1863. He was a founder of the Jewish association Shomer Israel in Galicia. From the early 1880s he lived in Vienna, where he was a founder of the Jewish student organization *Kadimah (1882). In the same year, he was one of the founders of the Ahavat Zion society for the settlement of Erez Israel, of which both Perez *Smolenskin and Zalman Spitzer, the leader of the Orthodox Viennese community, were members. He published articles on the idea of Jewish nationhood and settlement of Erez Israel in most of the German Jewish periodicals. Invited to Belgrade to serve as court physician, he transferred his Zionist activities there, and thereafter to Sofia, where he later lived. In Bulgaria he was a devoted assistant to *Herzl, who sent him the first copy of *Der Judenstaat*, inscribed “to the first pioneer of the Zionist idea.” He returned to Lemberg in 1905, and continued his Zionist activities almost until his death.

[Getzel Kressel]

BIGAMY AND POLYGAMY. In Jewish law the concept of bigamy (or polygamy) can involve either (1) a married woman (*eshet ish*) purporting to contract a second marriage to another man (or to other men) during the subsistence of her first marriage; or (2) a married man contracting marriages to other women during the subsistence of his first marriage. These two aspects must be considered separately.

(1) Relating to Women. The general principle is that “a woman cannot be the wife of two [men]” (Kid. 7a and Rashi). In relation to a wife the term *kiddushin* implies her exclusive dedication to her husband. There can therefore be no *kiddushin* between her and another man while the first *kiddushin* subsists, and a purported marriage to another man is thus totally invalid. Such a bigamous “marriage” does incur severe legal consequences – primarily because of the law that sexual

intercourse between a married woman and a man other than her husband (i.e., adultery) results in her subsequently being prohibited to both men forever and she then requires a *get* (“divorce”) from both of them (see *Divorce, *Adultery). She requires a divorce from her husband, *mi-de-Oraita* (“according to biblical law”), because, although her adultery renders her prohibited to him, her legal marriage to him continues to subsist. To resolve this paradox she needs a *get*. She also requires a divorce from her adulterous “husband,” *mi-de-Rabbanan* (“according to rabbinical enactment”) – even though her marriage to him is invalid – so that people, ignorant of the true facts and perhaps under the impression that her second “marriage” was a valid one, should not be misled into thinking that she is free of him without a proper divorce (Yev. 88b and Rashi; Maim. Yad, Gerushin 10:5; Sh. Ar., EH 17:56).

Notwithstanding her divorce by both men, on the death of either of them she continues prohibited to the survivor forever (Sot. 27b; Yev. 87b and 88b; Yad, Gerushin, 10:4–5; Sh. Ar., EH 17:56). The aforementioned consequences result whether the bigamous “marriage” was intentional or inadvertent; e.g., if the woman was incorrectly informed by two witnesses of her legal husband’s death (Yev. 87b; Yad, Gerushin 10:4 and Sh. Ar., EH 17:56). If, in spite of the said prohibitions, she does subsequently contract a later marriage with either of the two men, such a later marriage is a prohibited one (see Prohibited *Marriages) and must be dissolved (Maim. Yad, Gerushin 10:4). Further legal consequences of a woman’s bigamous “marriage” are that her children of the second, adulterous, union are classed as *mamzerim according to biblical law and also that her financial rights are affected (Yev. 87b).

(2) Relating to Men. The law is different in the case of a married man who purports to take a second wife while still married. According to Jewish law this second marriage (and any others) is valid and can therefore only be dissolved by death or divorce (Yev. 65a; *Piskei ha-Rosh*, *ibid.*, 17; Yad, Ishut, 14:3; Sh. Ar., EH 1:9; 76:7). Permitted according to biblical law, polygamy was practiced throughout the talmudic period and thereafter until the tenth century (*Piskei ha-Rosh* to Yev. 65a; Sh. Ar., EH 1:9). Already in amoraic times, however, the practice was frowned upon by the sages, who prescribed that polygamy was permissible only if the husband was capable of properly fulfilling his marital duties toward each of his wives (see *Marriage). The opinion was also expressed that if a man takes a second wife, he must divorce his first wife, if the latter so demands, and pay her *ketubbah* (Yev. 65a; Alfasi, *Piskei ha-Rosh*, and Sh. Ar., EH 1:9). Similarly, according to talmudic law, a man may not take a second wife if he has specifically undertaken to his first wife, e.g., in the *ketubbah*, not to do so (Sh. Ar., EH 76:8). Taking a second wife is also forbidden wherever *monogamy is the local custom since such custom is deemed an implied condition of the marriage, it being presumed that the wife only wishes to marry in accordance with local custom (Sh. Ar., EH 1:9; *Beit Shemu’el*, *ibid.*, 20; *Helkat Mehokek*, *ibid.*, 15, 76:8). Generally, the husband can only be

released from this restriction with his wife's consent (loc. cit.; *Darkhei Moshe*, EH 1:1, n. 8; Sh. Ar., EH 76).

Herem de-Rabbenu Gershom

SUBSTANCE OF THE BAN. In the course of time and for varying reasons (*Ozar ha-Posekim*, EH 1:61, 2), it became apparent that there was a need for the enactment of a general prohibition against polygamy, independent of the husband's undertaking to this effect. Accordingly, relying on the principle of endeavoring to prevent matrimonial strife (which principle had already been well developed in talmudic law) Rabbenu *Gershom b. Judah and his court enacted the **takkanah* prohibiting a man from marrying an additional wife unless specifically permitted to do so on special grounds by at least 100 rabbis from three "countries" (i.e., districts; see below). This *takkanah*, known as the *Herem de-Rabbenu Gershom*, also prohibited a husband from divorcing his wife against her will. Various versions of the *takkanah* exist (*Ozar ha-Posekim*, EH 1:61, 1) and, indeed, scholars have even questioned the historical accuracy of ascribing its authorship to Rabbenu Gershom. This, however, does not in any way affect its validity.

Since the prohibition against polygamy is derived from this *takkanah* and not from any undertaking given by the husband to his wife, she is not competent to agree to a waiver of its application, lest she be subjected to undue influence by her husband (Sh. Ar., EH 1:10; *Ozar ha-Posekim*, EH 1:61, 5). Nevertheless, if the husband does enter into a further marriage it will be considered legally valid (Tur, EH 44; *Darkhei Moshe, ibid.*, n. 1; Sh. Ar., EH 44; *Beit Shemu'el* 11), but as a prohibited marriage, and the first wife can require the court to compel the husband to divorce the other woman. Since the first wife cannot be obliged to live with a *zarah* ("rival"), she may also ask that the court order (but not compel) the husband to give her (i.e., the first wife) a divorce (Sh. Ar., EH 154; *Pithei Teshuvah*, 5; PDR vol. 7, pp. 65–74, 201–6). The husband continues to be liable to maintain his wife until he complies with the court's order – even though they are living apart – because as long as he refuses to divorce her he is preventing her from remarrying and thus being supported by another husband (*Keneset ha-Gedolah*, EH 1, Tur 16–17; PDR vol. 7 p.74). However, if the first wife and the husband agree on a divorce and this is carried out, he is then released from his obligation to divorce his second wife, although his marriage to her in the first place was in defiance of the prohibition (Sh. Ar., *Pithei Teshuvah*, 5; *Ozar ha-Posekim*, EH 1:80, 1 and 2).

APPLICABILITY OF THE HEREM AS TO TIME AND PLACE. Many authorities were of the opinion that the validity of the *herem* was, from its inception, restricted as to both time and place. Thus, it is stated: "He [Rabbenu Gershom] only imposed the ban until the end of the fifth millennium," i.e., until the year 1240 (Sh. Ar., EH 1:10); others, however, were of the opinion that no time limit was placed on its application. At any rate, even according to the first opinion the *herem* remained in force after 1240, since later generations accepted

it as a binding *takkanah*. Accordingly, the *herem*, wherever it was accepted (see below), now has the force of law for all time (Resp. Rosh 43:8; Sh. Ar., EH 1:10; Arukh ha-Shulhan, EH 1:23; *Ozar ha-Posekim*, EH 1:76). In modern times it is customary, in some communities, to insert in the *ketubbah* a clause against the husband's taking an additional wife "in accordance with the *takkanah* of Rabbenu Gershom...." However, the prohibition is binding on the husband, even though omitted from the *ketubbah*, as such omission is regarded as a "clerical error" (*Keneset ha-Gedolah*, EH 1, Tur 17; Arukh ha-Shulhan, EH 1:23).

The *herem* did not extend to those countries where it was apparent that the *takkanah* had never been accepted (Sh. Ar., EH 1:10). In a country where the acceptance of the *takkanah* is in doubt, however, its provisions must be observed (Arukh ha-Shulhan, EH 1:23). In general it can be said that the *herem* has been accepted as binding among Ashkenazi communities, but not among the Sephardi and most of the Oriental communities. This is apparently because in those countries where Ashkenazim formed the main part of the Jewish community, as in Europe, America, or Australia where European Jews migrated, polygamy was also forbidden by the dominant religion, Christianity, and therefore by the secular law. This was not the case in Oriental countries, as in Yemen, Iraq, and North Africa, polygamy being permitted in Islam (Arukh ha-Shulhan and *Ozar ha-Posekim*, loc. cit.). Thus, Maimonides, who was a Sephardi, makes no reference at all to the *herem*. In practice, therefore, to prohibit polygamy Oriental communities would customarily insert an express provision in the *ketubbah*, whereby the husband was precluded from taking an additional wife except with the consent of his first wife or with the permission of the *bet din*. As this provision was a condition of the marriage, any breach thereof entitled the wife to demand either that her husband complied with the provision, i.e., by divorcing the second wife, or that she be granted a divorce with payment of her *ketubbah* (*Sedei Hemed*, Asefat Dinim, Ishut 2; *Keneset ha-Gedolah*, EH 1, *Beit Yosef* 13, 16; *Ozar ha-Posekim, ibid.*, 1:80, 8; PDR 7:65).

People who move from a country where the *herem* is binding to a country where it is not, or vice versa, are subject to the following rules: (1) the ban adheres to the individual, i.e., it accompanies him from place to place and he always remains subject to it (Arukh ha-Shulhan, loc. cit.; *Ozar ha-Posekim*, EH 1:75, 1; Sh. Ar., EH 1); (2) local custom is followed, so that if the *herem* applies to a particular country it is binding on everyone, irrespective of their country of origin (Arukh ha-Shulhan, *ibid.*; *Ozar ha-Posekim, ibid.* and 1:75, 3; *Keneset ha-Gedolah*, EH, *Beit Yosef*, 22). Both these rules are strictly applied with the intent of extending the operation of the *herem* as widely as possible. On the other hand, if a man legally married two wives in a country where this was permitted, he is not obliged to divorce either of them on arriving in another country where the *herem* is in force, as the law is only infringed by his taking an additional wife and not when a man already has two (Arukh ha-Shulhan, *ibid.*).

RELEASE FROM THE PROHIBITION. The object of prohibiting bigamy is to prevent a man from marrying a second wife as long as he is not legally entitled to dissolve his first marriage. Thus, in order to avoid any circumvention of the prohibition, the *herem* also generally prohibits divorce against the will of the wife. This double prohibition may, however, result in the husband being unjustifiably fettered in circumstances where he would not otherwise be required by law to maintain his ties with his wife – and yet may not divorce her against her will. This can, therefore, be obviated by the availability of a *hetter* (“release”) from the *herem* against bigamy, which is granted by the *bet din* in the appropriate circumstances. This *hetter* does not mean that the first wife is divorced, but that the husband is granted exceptional permission to contract an additional marriage. Naturally, such a step is only taken if the court, after a full investigation of the relevant facts, is satisfied that a release is legally justified. Thus, for example, a release would be granted in a case where a wife becomes insane. Her husband cannot, therefore, maintain normal married life with her, a fact which would ordinarily entitle him to divorce her; this he cannot do because of her legal incapacity to consent. However, as the first marriage must continue to subsist, the husband remains liable to support his wife – including medical costs – but he is permitted by the court to take an additional wife (Baḥ, EH 119; Sh. Ar., EH 1; *Beit Shemu’el* 1, n. 23; 119, n.6; *Ḥelkat Mehokek*, *ibid.*, 10–12; *Ozar ha-Posekim*, EH 1:72, 19). Should the first wife subsequently recover her sanity she cannot demand that her husband divorce his second wife, as he married her in accordance with the law. On the contrary, the husband would be entitled – and even obliged – to divorce his first wife, so as not to remain with two wives, and if she refuses to accept his *get* he would be free from any further marital obligations towards her, save for the payment of her *ketubbah* (Sh. Ar., EH 1; *Beit Shemu’el*, *ibid.*; *Ozar ha-Posekim*, EH 1:72, 17–18; PDR 3:271). However, the *hetter* would be revoked if the first wife recovered her mental capacity before the second marriage took place (Sh. Ar., EH 1, *Pithēi Teshuvah*, 16, concl.; *Ozar ha-Posekim*, EH 1:72, 14).

On the strength of the aforementioned rule, a release from the *herem* may also be obtained by a man whose wife refuses to accept a *get* from him, despite the court’s order that she does so, e.g., in the case of her adultery or where the marriage is a prohibited one (Sh. Ar., EH 1:10; *Ḥelkat Mehokek*, *ibid.*, 16; *Ozar ha-Posekim*, EH 1:63, 7). Some authorities are of the opinion that in the event of the wife’s adultery the husband only requires a *hetter* from a regular court and not from 100 rabbis, since the *herem* was not meant for such a case (*Ozar ha-Posekim*, EH 1:73, 2). A *hetter* would be justified where a wife who has had no children during a marriage which has subsisted for at least ten years – a fact which entitles the husband to divorce her – refuses to accept the *get* and thus prevents her husband from remarrying and fulfilling the *mitzvah* to “be fruitful and multiply.” In such a case the husband is obliged to take another wife to fulfill the *mitzvah* and so he

would be entitled to the *hetter* (Sh. Ar., EH 1:10; *Ozar ha-Posekim*, EH 1:68; *Arukh ha-Shulḥan*, EH 1:25).

As has already been stated, in Oriental communities for a husband to take a second wife requires either his first wife’s consent or the court’s permission. The wife is required to give her consent before a regular court (not 100 rabbis) and the court will permit the second marriage only if satisfied, after a thorough investigation of the facts, that the wife has consented wholeheartedly, without anger or under undue influence (*Ozar ha-Posekim*, EH 1:61, 5, subsec. 3; *Sedei Ḥemed*, *Asefat Dinim*, Ishit 2). Without her consent, the court will generally only grant a release to the husband in such cases where it would do so were the *herem* to apply (*Sedei Ḥemed*; *Ozar ha-Posekim*, *ibid.*), since it is presumed that the husband’s undertaking the *ketubbah* is given on the understanding that no circumstances shall exist which, if the *herem* were to apply, would warrant his release from the prohibition (*Sedei Ḥemed*, *ibid.*; *Ozar ha-Posekim*, EH 1:72, 9).

PROCEDURE FOR GRANTING THE HETTER. After the court has decided that a release from the *herem* should be granted, the matter is referred to 100 rabbis of three “countries” (*Ozar ha-Posekim*, EH 1:61, 9) for approval and, if so approved, the *hetter* takes effect. As a preliminary, the husband is required to deposit with the court a *get* for his first wife, together with an irrevocable authority for the court to have the *get* delivered to his first wife as soon as she is able and willing to receive it from an agent appointed by the husband at the request of the court. However, in the case where the *hetter* is given because of the first wife’s insanity, it is customary to give her a new *get* when she recovers, rather than the one previously deposited with the court, as some doubt could be cast on the latter’s validity, since it was the wife’s insanity that made it impossible to deliver the *get* to her originally and there may therefore possibly be other legal objections to its validity. The deposited *get* is usually only delivered to her if she is in danger of becoming a deserted wife (see *Agunah*; *Arukh ha-Shulḥan*, EH 1:26; *Ozar ha-Posekim*, EH 1:72, 30–31). Furthermore, the husband is also generally required to deposit with the court the amount of the wife’s *ketubbah* in cash or provide adequate security (Baḥ, EH 119; Sh. Ar., EH; *Beit Shemu’el* 1, n. 23; *Arukh ha-Shulḥan*, EH 1:25; *Ozar ha-Posekim*, 1:72, 23–24). Some authorities are of the opinion that the husband must also deposit with the court, or adequately secure in like manner, such sum as the court may determine to cover the wife’s maintenance and medical expenses (*Ozar ha-Posekim*, EH 1:72, 29).

State of Israel

At a national rabbinic conference called in 1950 by the chief rabbis of Israel, an enactment was passed making monogamy (apart from the above-mentioned permissions) binding upon all Jews irrespective of their communal affiliations. This *takkanah*, however, does not render a second marriage invalid according to biblical law, and therefore, if such a marriage does take place, it can be dissolved only by divorce. The criminal law of the state, however, renders it an offense on pain of im-

prisonment for a married person to contract another marriage (Penal Law Amendment (Bigamy) Law, 5719–1959). Nevertheless, for Jewish citizens no offense is committed if permission to marry a second wife was given by a final judgment of a rabbinical court and approved by the two chief rabbis of Israel. The latter's approval is accepted as conclusive proof that the permission was given according to the law. Special provisions relating to the grant of this permission are laid down in the *Takkanotha-Diyyun be-Vattei ha-Din ha-Rabbaniyyim be-Yisrael*, 5720–1960.

[Ben-Zion (Benno) Schereschewsky]

Following the enactment of the Penal Law, 5737 – 1977, the prohibition on polygamy is now regulated in sections 175–183 of that Law. Polygamy will not be considered an offense if committed pursuant to a permit granted in a final judgment of the rabbinical court, subject to the judgment having been approved by the president of the Rabbinical High Court of Appeals (section 179 of Law).

The Supreme Court was confronted with a question concerning the range of circumstances under which the rabbinical court could give a marriage permit, and thereby decriminalizing the act of bigamy in certain given cases. The specific question considered was whether the rabbinical court was authorized to permit an additional marriage even where the granting of the permit was not the result of the woman's inability to receive a *get* – e.g., due to insanity etc, as stated above – but was a tactic adopted by the rabbinical court to exert pressure on a recalcitrant wife who refuses to accept a *get*. In its ruling in *Street* (HC 301/63, *Street v. Chief Rabbi of Israel* 18 (1) PD 598) the Supreme Court ruled that the goals of the section dealing with the permit that may be given by the rabbinical court must comport with the overall goals of the law prohibiting bigamy. As such, the granting of a permit is only possible when it does not diverge from the purpose of the law, i.e., when the need for a marriage permit stems from an objective inability to give the *get*. In keeping with this determination, the court revoked the permit granted by the rabbinical court in that particular case.

In the judgment in *Boronovsky* (FH 10/69, *Boronovsky v. Chief Rabbis of Israel*, 25 (1) PD 7) the Court changed the *Street* ruling, determining that the statutory recognition of a permit given by the rabbinical court extended to any permit that could be granted *on the basis of any halakhically based grounds*, even when this was done as a means of compelling a recalcitrant wife to accept a *get*.

BIGART, JACQUES (1855–1934), Alsatian rabbi and long-time secretary general of the *Alliance Israélite Universelle. Bigart began his service to the Alliance in 1882 as assistant to the secretary general Isidore Loeb, whom he succeeded in 1892. Single-minded in his devotion to every detail of the policy and administration of the Alliance, Bigart was deeply involved in refugee rescue and immigration management. In 1915, he developed an enduring partnership with Lucien *Wolf of the British Jewish Conjoint, later Joint Foreign Committee, to resist Zionist and Jewish nationalist diplomatic initiatives and uphold acculturationist Judaism. Their joint efforts, which ended only with Wolf's death in 1930, grew and prospered through World War I and into the Paris Peace Conference as they coordinated strategies to protect Jewish minority rights in the succession states and developed programs and relief for refugees and stateless people.

As an Alsatian patriotically committed to France and as a Jew unreservedly committed to regeneration on the French model, Bigart shared the values and objectives of the professional gentlemen who sat on the Alliance's Central Committee. Under his administration, the Alliance prospered and grew, particularly in the area of education, founding schools from Morocco to Teheran, from the Balkans through the Middle East to Cairo. The numbers peaked at the outbreak of World War I when 48,000 students attended 188 schools. Bigart, who knew the minutest detail of every classroom and school building, micro-managed the budgeting and administration of each Alliance-supported institution. Under his leadership, elementary schools for boys and girls grew into secondary schools and vocational and agricultural schools blossomed. Alliance normal schools trained teachers for Romania and ICA schools in South America and Sephardi rabbinical training began in Constantinople. In recognition of his signal services and contributions, the French government awarded Bigart with the Legion of Honor and promoted him to officer.

So many commitments, however, overextended resources just when American and German Jews grew less inclined to support a Franco-centric enterprise and Bigart preserved Gallo-centrism and Jewish heterogeneity at the cost of serious institutional losses and international support. Bigart, who had little interest in the rise of Hebrew studies, was hostile to the Jewish nationalism of Eastern Europe and uncompromis-

ingly rejected Zionism as an overt threat to everything emancipated Jewry had accomplished. Towards the end of his life, the surge of European antisemitism, the coming of Nazism, the threats to Soviet Jewry, and the failure of more liberal options in the succession states, together with consistently closing doors to Jewish emigration, made him slightly more receptive to a broader federation of Jewish organizations to combat these threats

[Eugene C. Black (2nd ed.)]

BIHALJI MERIN, OTO (1904–1990), Yugoslav writer and art historian. He studied painting in Belgrade and Berlin. While his approach to modern art was pan-European, his politics were of the extreme left wing. In Berlin he edited a Communist daily and later he fought in the Spanish Civil War and reported on it. In 1929, he founded the Belgrade progressive publishing house "Nolit," with his brother Pavle Bihalji, who was shot by the Nazis in 1941. Bihalji Merin was taken prisoner by the Germans (1941–45) and became one of the leaders of the Yugoslav resistance in prisoner-of-war camps. In 1945 he returned to Belgrade and with his wife successfully resumed his publishing career. He edited the house magazine and monographs of the publishing firm "Jugoslavija," one of whose notable editions was the **Haggadah* of Sarajevo. An authority on naive art, he helped to keep Yugoslav thinking in touch with new trends. Many of his works have been translated into major languages, the more important being: *Modern German Art* (1938), *Das naive Bild der Welt* (1959; *Modern Primitives: Masters of Naive Painting*, 1961), *Umetnost naivnih u Jugoslaviji* (1963), and *Adventure of Modern Art* (1968). He also wrote two satirical novels on Yugoslavian life.

[Zdenko Lowenthal]

BIHARI, ALEXANDER (1856–1906), Hungarian *genre* painter. The son of a poor housepainter, Bihari studied in Budapest and Vienna. In 1883, a wealthy patron made it possible for him to travel to Paris, where he fully assimilated the style of the French naturalist or realist masters, such as Jules *Adler. Upon his return to Hungary, Bihari settled in Szolnok, an agricultural center in the great Hungarian plains, rather than in a fashionable Budapest studio. He continued to paint *genre* pictures and was soon recognized as Hungary's leading painter in this field. A quality of Parisian wit seemed to guard him against the temptation of overt sentimentality. Using broad brush strokes, Bihari grouped and painted his figures as he saw them in their everyday surroundings. Bihari's masterpiece is perhaps his *Sunday Afternoon* which showed the influence both of Courbet and the impressionists. His work is represented almost exclusively in Hungarian collections.

[Edouard Roditi]

BIJUR, NATHAN (1862–1930), U.S. jurist and communal leader. Bijur achieved prominence in corporation law and participated in the reorganization of many large companies. In 1909 he was elected, with Republican Party endorsement, for a 14-year term as a New York State Supreme Court justice and was reelected in 1923 without opposition. His judicial decisions included important questions of constitutional law involving the extension of legal doctrines to meet modern conditions. Bijur's civic activities included service on the New York State Prison Commission and a special commission that established a municipal ambulance service in New York City. He was among the founders of the National Conference of Jewish Charities and the *American Jewish Committee, and he was a trustee of the Baron de Hirsch Fund and the Hebrew Free Trade School. In 1905 he was elected president of the New York Conference of Charities. Bijur was a supporter of the Hebrew Sheltering and Immigrant Aid Society and was often consulted on legal questions involving Jewish immigration.

[Morton Rosenstock]

BIKAYAM, MEIR BEN ḤALIFA (d. 1769), kabbalist and crypto-Shabbatean. The family name is rare, and the origin of the family is unknown. Bikayam lived in Smyrna. He studied Kabbalah under Jacob *Wilna, belonged to his circle, and was initiated by him into the "mystery of the Godhead" revealed by *Shabbetai Zevi (Ms. 2262, Ben-Zvi Institute). Bikayam received from his teacher the kabbalistic works of Solomon ha-Levi which the latter had received from his father, Benjamin ha-Levi. Some of the most learned and pious of the Smyrna community belonged to his circle. Bikayam was a close friend of Ḥayyim *Abulafia and Isaac ha-Kohen Rappaport, the rabbi of the community. One of the wealthy Jews of the town, Solomon *Ardit, supported him and his circle, and even in his old age (c. 1745) the latter studied Kabbalah under him. The wealthy leader of the Constantinople community, Samuel ha-Levi, and Moses b. Joshua Soncino of Smyrna supported and financed the publication of his books. When he went to Salonika in 1747, Abraham Enriques Miranda and Joseph Enriques Miranda, wealthy men of the community, welcomed him with great honor. There he also taught Shabbatean Kabbalah to a group of devotees and published two of his books. He returned to Smyrna about 1747. His books are all concerned with Kabbalah; his Shabbatean leanings are hinted at, but never explicitly revealed. He wrote the following books: (1) *Golel Or*, on the doctrine of **gilgul* ("transmigration"; Smyrna, 1737); (2) *Me'ir la-Arez*, on the portions of the Pentateuch, according to the principles of Lurianic Kabbalah (Salonika, 1747); (3) *Magen Avot*, on *Pirkei Avot* (Salonika, 1748); (4) *Me'orei Or*, on the Pentateuch, based on Lurianic Kabbalah (Salonika, 1752); (5) *Kera Mikreh* (Salonika, 1752); (6) *Me'ir Bat Ayin*, on *Ein Ya'akov* (Smyrna, 1755). He composed esoteric as well as nonesoteric prayers. His books contain *piyyutim* on the Redemption which he apparently expected in the year 1740 or before.

BIBLIOGRAPHY: A. Freiman (ed.), *Inyanei Shabbetai Zevi* (1912), 145; M. Benayahu, in: *Yerushalayim*, 4 (1952/53), 203–4.

BIKEL, THEODORE MEIR (1924–), actor and folksinger. Born in Vienna, Bikel went to Palestine and joined Kibbutz Massada in 1941. In 1943 he worked at the *Habimah theater in Tel Aviv. In 1944 he became one of the co-founders of the Israeli Chamber Theatre, later called the *Cameri.

Bikel entered the Royal Academy of Dramatic Art in London in 1946, graduating with honors in 1948. Sir Laurence Olivier, impressed with Bikel's performance in several local plays, gave him a small role in his production of *A Streetcar Named Desire* (1949), and in a matter on months Bikel took over the part of Mitch. In London he also performed in *The Love of Four Colonels*. On Broadway, Bikel's stage performances include *Tonight in Samarkand* (1955); *The Rope Dancers* (1957–58); *The Lark* (1956); *The Sound of Music* (1959–63), in which he played Baron von Trapp; *Cafe Crown* (1964); *Pousse-Cafe* (1966); and *The Inspector General* (1978). In American national tours he starred in *Jacques Brel Is Alive and Well and Living in Paris*, *Zorba*, *The Rothschilds*, *The Good Doctor*, and *She Loves Me*. Most widely identified with Tevye in *Fiddler on the Roof*, Bikel played that role more than 2,000 times from 1967 – more than any other actor. In 1997 he co-authored and co-starred with Bruce Adler in the stage show *Greetings ... Sholom Aleichem Lives*.

The films Bikel appeared in include *The African Queen* (1951), *Moulin Rouge* (1952), *The Enemy Below* (1957), *The Defiant Ones* (Oscar nomination for Best Supporting Actor, 1958), *I Want to Live* (1958), *The Blue Angel* (1959), *My Fair Lady* (1964), *The Russians Are Coming* (1966), *Sweet November* (1968), *My Side of the Mountain* (1969), *Prince Jack* (1984), *Dark Tower* (1988), *Crisis in the Kremlin* (1992), *My Family Treasure* (1993), *The Lost Wooden Synagogues of Eastern Europe* (as narrator, 2002), and *Crime and Punishment* (2002).

In addition, Bikel made more than 100 appearances on TV drama series. Fluent in several European and Middle Eastern languages and skilled at accents and dialects, Bikel also sang folksongs in nearly 20 languages, accompanying himself on guitar, mandolin, balalaika, and harmonica, and recorded numerous albums, including many in Yiddish. He traveled widely in the U.S., New Zealand, Australia, and Europe, performing his eclectic repertoire that includes songs from Russia, Eastern Europe, and Israel.

Bikel co-founded the Newport Folk Festival (1960), was a founder of the Arts Chapter of the American Jewish Congress (1961) and served as its national vice president (1963), was president of Actor's Equity (1973–82), and was appointed to the National Council for the Arts (1977–82).

[Ruth Beloff (2nd ed.)]

BIKERMAN, JACOB JOSEPH (1898–1978), U.S. physical chemist. Bickerman was born in Odessa, Russia, and attended the University of St. Petersburg (Leningrad). He held a variety of academic and industrial positions in the U.S.S.R., Germany, and Britain before going to the U.S. in 1946. From 1956 to 1964 he was head of the Adhesives Laboratory of the Massachusetts

Institute of Technology. Bickerman contributed many papers to scientific journals, dealing with adhesion, electrokinetics, colloids, rheology, surface tension, contact angles, lubrication, and friction. His works include *Kapillarchemie* (with H. Freundlich, 1932); *Foams: Theory and Industrial Applications* (with J.M. Perri a.o., 1953); *Surface Chemistry* (1958²); *The Science of Adhesive Joints* (1961); and *Contributions to the Thermodynamics of Surfaces* (1961).

[Samuel Aaron Miller]

BIKERMAN (Bickermann), JOSEPH (1867–1941), journalist active in Jewish political life. Born in Okny, Podolia, Bickerman graduated in philology at Odessa University in 1903. In an article written in 1902 in the monthly *Russkoye Bogatstvo*, he strongly opposed Zionism, and called upon Jews to join with progressive elements in Russia to help in the country's rebirth. His article aroused a controversy in which V. *Jabotinsky and B. *Borochof took part. He contributed to the democratic journal *Yevreyskiy Mir*, and wrote studies in Russian on the Pale of Settlement (*Cherta yevreyskoy oszedlosti*, 1911) and on Jews in the grain trade (*Rol yevreyev v russkoy khlebnoy tor-govle*, 1912). After the Bolshevik revolution, Bickerman settled in Berlin. He was one of the founders of the short-lived "Patriotic Union of Russian Jews Abroad," which supported the ideal of the restoration of the Russian monarchy. His views on Jewish political problems are summarized in his Russian pamphlet on the self-knowledge of the Jew (*K samopoznaniyu yevreya*, 1939). He was the father of the historian Elias J. *Bickerman and the scientist Jacob J. *Bickerman.

BIBLIOGRAPHY: B. Dinur, *Bi-Ymei Milhamah u-Mahpekhalah* (1960), 66–68; J. Frumkin (ed.), *Russian Jewry* (1966), index.

BIKKUREI HA-ITTIM (Heb. בְּכֻרֵי הָעֵתִים; "First Fruits of the Times"), Hebrew literary-scientific annuals, published in Vienna for 12 successive years (1821–32), and a central forum for *Haskalah literature. The editor of the first three volumes, Shalom b. Jacob *Cohen, sought to continue in this publication the tradition of *Ha-Me'assef*, the journal which initiated Hebrew periodical publications in the Haskalah period. (He had previously published and edited the last three volumes of *Ha-Me'assef he-Ḥadash*.) The first volumes also contained a German section (transcribed in Hebrew letters), which was later discontinued. The editors following Cohen were: Moses *Landau (vols. 4–5), Solomon Pergamenter (vol. 6), Issachar Baer Schlesinger (vols. 7–8), Isaac Samuel *Reggio (vols. 9–10), and Judah Loeb *Jeiteles (vols. 11–12). All the various literary genres were represented in these volumes – e.g., fiction, research, as well as translations of world literature (but mainly from German) – and were contributed by writers from Italy, Bohemia, Austria, Galicia, and Hungary. Reprints of a selection of works from *Ha-Me'assef* were also included. The standard improved in the last volumes, especially with S.J. *Rapoport's publication of his biographical monographs on geonic medieval Jewish scholars and authors. Other contributors included S.D. *Luzzatto and Isaac *Erter. With the discon-

tinuation of these annuals, M.E. *Stern attempted in 1844 to publish *Bikkurei ha-Ittim*, and Reggio together with Isidore *Bush, *Bikkurei ha-Ittim ha-Ḥadashim* in 1845. While these attempts were unsuccessful, another annual, *Kokhevei Yizḥak*, did succeed. Its publication began in 1845 in Vienna, under the editorship of M.E. Stern, and lasted until 1873.

[Getzel Kressel]

BIKKURIM (Heb. בִּכּוּרִים; "First Fruits"), last and shortest tractate of the Mishnah, Order *Zera'im*, dealing with laws relating to first-fruit offerings (Deut. 26:1–11; cf. also Ex. 23:19; 34:26; Num. 18:13). The Torah commands that the first fruits of the land be brought joyfully to the sanctuary, where they are to be offered in baskets to priests who are entitled to consume them in a state of purity. The offerers must recite a passage expressing their gratitude to God for delivering them from slavery in Egypt and bringing them to a rich land.

The laws set down in the Mishnah are based on an elaborate process of midrashic exegesis of the biblical texts, and the Mishnah (e.g., 1:2–5, 9) cites some of the relevant verses and their interpretations. Thus, the allusions in the recited passage to "fruits of thy land" and "the land which the Lord swore unto our fathers" were understood as excluding from the scope of the obligations people who did not own land or were not of Jewish descent. Similarly, the rabbis limited the precept to the seven fruits enumerated in Deuteronomy 8:8. From these basic premises, the Mishnah (especially in Chapter 1) develops its more detailed discussions of such topics as the relationships between the bringing of the fruits and the scriptural recitation, the appropriate time-frame for performing the precepts, precise identification of which fruits are subject to the obligation, what constitutes land ownership, the status of proselytes, and the extent of the owner's responsibility for the first fruits between the time of their designation and their delivery to the priest.

Most of Chapter 3 is devoted to a vivid narrative description of the ceremonial procession of bringing the first fruits to the Temple in joy, music, and fellowship. As noted by S. Lieberman, the abundance of details that cannot be ascribed to biblical sources or literary convention (e.g., the presence of an ox adorned with a garland on his gold-plated horns, a common feature of pagan *panegyre*) lends credence to the basic historicity of the Mishnah's description of the rustic folk custom. The statement in 3:4 that "even King Agrippa would take the basket and place it on his shoulder" was taken by scholars as an indication that the Mishnah was composed during the reign of one of the kings of that name.

Chapter 2 in the Mishnah is from a separate collection of traditions arranged by the formal pattern "There are features of x that are not in y, etc." By virtue of the references to first fruits at the beginning of the collection, the entire source was incorporated into the Mishnah.

Some Mishnah editions include a fourth chapter outlining laws related to the status of the *androgynos*. This represents a variant tradition of a passage also found in the Tosefta 2:3–7.

There is a full Palestinian Talmud to the three chapters of the Mishnah, but no Babylonian.

Lieberman, *Hellenism in Jewish Palestine* (1962²); D. Hoffmann, *The First Mishna and the Controversies of the Tannaim*, trans. P. Forchheimer (1977).

[Eliezer L. Segel (2nd ed.)]

BILBEIS, capital of the "Eastern Province" of Egypt (Sharqīya) during the Middle Ages. It had a well-organized Jewish community, mentioned in a letter written about 1100 by the *dayyan* Abraham b. Shabbetai to all Jews of the area, and also in a letter written by his son and successor Shabbetai later in the 12th century. When Ashkelon was conquered by the Crusaders in 1153, many Jews fled to Bilbeis; 15 years later Bilbeis was itself captured by the Crusaders and the Jewish community undoubtedly suffered. At the end of the 12th century Bilbeis was still considered one of the chief Jewish communities of Egypt. In a community law dated 1187, R. Judah ha-Kohen is mentioned as *dayyan* of Bilbeis (Maimonides, *Responsa*, ed. by J. Blau, 2 (1960), no. 346). Documents of the early 13th century found in the Cairo **Genizah* contain his signature as head of the rabbinical court. In a letter R. *Abraham b. Moses b. Maimon asked the Bilbeis community for financial assistance for the Jews in Jerusalem. Other documents mention Jews from Jerusalem who were visiting Bilbeis. Throughout the *Fatimid and *Ayyubid caliphates the Jewish community in Bilbeis had its own customs, such as indicating the value of a bride's dowry in the *ketubbah*. According to a late Jewish source, the persecution of Jews in Egypt in 1301 resulted in the conversion of all the Jews in the city to Islam, and of the synagogue into a mosque. However, in the late 15th century, Meshullam da Volterra mentions 50 Jewish families in the city in 1481, while Obadiah di Bertinoro estimated them at 30 a few years later.

[Eliyahu Ashtor]

BILDERSEE, ADELE (1883–1971), U.S. educator and author. Adele Bilderssee was born in New York City. After teaching in New York City's elementary and secondary school system (1903–11), she was appointed instructor of English at Hunter College and remained there for the next 20 years, becoming acting dean in 1926. In 1931 she became dean of women at Brooklyn College, where she was also director of admissions from 1944 until her retirement in 1954. She also

served as principal of the Temple Beth-El and Emanuel religious school and wrote several textbooks for Jewish children. Among her published works are *Jewish Post-Biblical History Through Great Personalities* (1918); *Bible Story in Bible Words* (6 vols., 1924–30); *Out of the House of Bondage* (1925); *Imaginative Writing: A Course in College Composition* (1927); and *Hidden Books: Selections from the Apocrypha for the General Reader* (1956).

The Dean Adele Bildersee Scholarship provides full or partial tuition to an outstanding student for graduate study at Brooklyn College.

BILETZKI, ISRAEL HAYYIM (1914–1992), Yiddish poet and Hebrew essayist. Born in Kobrin, Biletzki immigrated to Palestine in 1934, and published extensively in Yiddish before and after the founding of the State of Israel. From his first book of Yiddish verse *Umru* (“Anxiety,” 1937) to his 15th lyric volume *Shures Tsvantsik* (1982), he displayed impeccable artistry in simple rhymed quatrains as well as in sophisticated free rhythms. While he published books in Yiddish about Itzik *Manger (1976) and Uri Zevi *Greenberg, most of his studies about individual Yiddish writers (e.g., H. *Leivick, *Bashevis Singer (English translation 1995), A. *Sutzkever) and various periods of the Yiddish literature were written in Hebrew.

[Sol Liptzin]

BILGORAJ, small town in Lublin province, Poland. A Jewish community had been established there by the second half of the 17th century. Many of the Jews perished during the massacres of 1648–49. In 1765 Jewish poll-tax payers in Bilgoraj and the vicinity numbered 661. The Russian prohibition on Jewish settlement of the western border area (see *Russia) halted the growth of the community until the restriction was rescinded in 1862. The Jewish population numbered 1,637 in 1841; 3,486 in 1897; 3,715 in 1921, and 4,596 in 1931. In interbellum Poland many Jews were employed in the horsehair-weaving industry. The brothers I.J. *Singer and I. Bashevis *Singer, Yiddish writers, were born in Bilgoraj. A Hebrew printing press was established there in 1909 and continued to publish numerous Hebrew and Yiddish books until the Holocaust.

Holocaust Period

It is estimated that over 5,000 Jews lived in Bilgoraj before the outbreak of World War II, constituting more than half the town's population. On Sept. 11, 1939, almost the whole Jewish quarter was set on fire in a heavy bombardment by the German air force. A few days later German troops entered the town and immediately organized anti-Jewish pogroms. On September 29 the German army withdrew, but the occupying Soviet army had to cede the town to the Germans a week later. About 20% of the town's Jewish population left for the Soviet Union together with the retreating Soviet troops. On

June 25, 1940, a ghetto was established. In the course of 1941 and 1942 a number of deportations took place; on Nov. 2, 1942 almost all the remaining Jewish population was deported to *Belzec death camp. On Jan. 15, 1943, the last 27 survivors who had remained in hiding were shot. A group of young men organized a small partisan unit which operated in the surrounding forests. The Jewish community was not reestablished after the war.

[Stefan Krakowski]

BIBLIOGRAPHY: T. Brustin-Bernstein, in: *Bleter far Geshikhte*, 3 no. 1–2 (1950), 65–76, table 3; *Khurbn Bilgoraj* (1957).

BILHAH (Heb. בִּלְהָה), servant girl presented to *Rachel by her father (Gen. 29:29). Bilhah was given by Rachel to her husband Jacob as a concubine (see *Nuzi). Bilhah bore two children by him, *Dan and *Naphtali (30:1–8). Reuben cohabited with her while his father was still alive, apparently by way of asserting his right of primogeniture (35:22). This offense is given as the reason for the loss of birthright by Reuben (Gen. 49:3–4; 1 Chron. 5:1). The meaning of the name is uncertain. It may be derived from the Arabic root *balaha* which means “to be confused” or “lacking in understanding” (cf. Heb. *bhl*), perhaps having some symbolic connotation relative to the status of the tribes descended from this concubine (see also: *Matriarchs, *Patriarchs, The Twelve *Tribes).

[*Encyclopaedia Hebraica*]

In the Aggadah

The *aggadah* indicates Bilhah's righteousness by the statement that, after the death of Rachel and Leah, the *Shekhinah* (which had been continuously present in their households) passed to Bilhah (Zohar 1:175b). After the death of Rachel, Jacob moved Bilhah's bed into his chamber. Bilhah is identified as the “messenger” (Gen. 50:16) sent by the brothers to Joseph, to inform him of his father's will (Tanḥ. B. 3:18).

BIBLIOGRAPHY: C.H. Gordon, in: *RB*, 44 (1935), 35–36; Noth, *Personennamen*, 10; S. Yeivin, *Mehkarim be-Toledot Yisrael ve-Arzo* (1960), 149–50.

BILL-BELOTSEKOVSKI, VLADIMIR NAUMOVICH (1885–1966), Soviet Russian playwright. Born to a poor, Yiddish-speaking family in Ukraine, Bill-Belotserkovski received little traditional Jewish education. At the age of 16, he ran away to sea and spent the years from 1911 to 1916 in the United States (hence the nickname “Bill,” which he eventually adopted as part of his name). After his return to Russia in 1917, Bill-Belotserkovski fought in the Civil War and was one of the founders of the Communist propaganda theater as well as the author of some of the best-known plays in its repertory. These plays, called *agitki*, were primitive one-act dramas designed to rally audiences to the Communist cause; their artistic value was slight. Bill-Belotserkovski's best play, *Shtorm* (“The Storm,” 1925), dealt with the Civil War. Its effectiveness was enhanced by its documentary, matter-of-fact style and coarse humor. In later years the playwright tried to tackle social and moral top-

ics, but his tendency to see everything in clearcut terms, his aversion to intellectual subtlety, and his fondness for heroics limited his range. After World War II, Bill-Belotserkovski, who had earned a reputation as an “American expert,” was commissioned to produce a number of anti-American works, the best known of which was *Tsvet kozhi* (“The Color of Skin,” 1948). In 1937 Bill-Belotserkovski wrote *Pogranichniki* (“The Frontier Guards”). The play’s hero, a Soviet army officer, is a Jew named Kogan. Interrogated by anti-Soviet intelligence agents, Kogan proudly emphasizes his Soviet, Communist Jewishness (“My father is the best pig-breeder in Birobidzhan”) and, in the end, not unlike the biblical Samson, succeeds in killing himself and his jailers. During the antisemitic, anti-cosmopolitan purges of 1947 through 1953 the play was revived, but the Soviet censorship carefully obliterated all references to Kogan’s Jewishness other than his Jewish-sounding name.

BILLIG, LEVI (1897–1936), Arabist. Born in London, he compiled *An Arabic Reader* with Avinoam *Yellin (1931, 1963) which is still one of the best introductions to classical Arabic. In 1926 he was appointed the first lecturer in Arabic language and literature at the Hebrew University. Billig also studied Shi'a and spent time in Persia for this purpose. During the Palestine riots of 1936 he was shot to death by an Arab terrorist while working in his home. His untimely death prevented him from finalizing a study of the theory of the Imams (the successors of Muhammad).

BILLIKOPF, JACOB (1883–1950), U.S. social worker. Billikopf, born in Vilna, emigrated to the United States in the late 1890s. He was a son-in-law of Louis *Marshall. An imaginative administrator and fund raiser, receptive to fresh ideas, Billikopf became professionally active in labor relations as well as Jewish social work. He served as superintendent of the Jewish Settlement, Cincinnati (1904–05), of the United Jewish Charities of Milwaukee (1905–07), and of the United Jewish Charities, Kansas City, Missouri (1907). While in Kansas City Billikopf played an important role in the establishment of the pioneering municipal Board of Public Welfare. During World War I Billikopf directed the campaign to raise \$25 million for Jewish war relief and in 1918 he directed the National Coordinating Committee for Aid to Refugees and Emigrants. He was appointed executive director of the Federation of Jewish Charities, Philadelphia (1919), which became his base for many services in the labor field. He was the impartial chairman of the Men's Clothing Industry, New York City, and the Ladies' Garment Industry, Philadelphia. In the 1930s he was appointed impartial chairman of the federal Regional Labor Board. Billikopf also served as vice president of the American

Association for Old Age Security, chairman of the Committee of One Hundred on Unemployment Relief, Philadelphia (1930–31), and board chairman of the New York Clothing Unemployment Fund.

[Roy Lubove]

BILLROTH, THEODOR (1829–1894), Viennese surgeon and distinguished representative of the Vienna Medical School. His remarks in a work on the study of medicine in German universities, *Ueber das Lernen der medizinischen Wissenschaften an den Universitaeten der deutscher Nation* (1876; the Eng. translation (1924) tones down the vehemence of the original) gave considerable impetus to antisemitism in the Vienna Medical School. Billroth claimed that Jewish students from Eastern Europe threatened to lower the high standards of the school and recommended the imposition of a numerus clausus against them. Stating that Jews could never be Germans and never make competent physicians he introduced a racial component into early modern feelings against Jewish doctors. The book caused rioting among German nationalist students at Vienna University and a fierce controversy ensued, in which Berthold *Auerbach participated. Billroth's allegations were answered by the German naturalist Matthias Jakob Schleiden in his essay *Die Bedeutung der Juden fuer Erhaltung und Wiederbelebung der Wissenschaften im Mittelalter* (1877; *The Importance of the Jews for the Preservation of Learning in the Middle Ages*, 1911). Although Billroth later acknowledged that he had been wrong, supported the cause of his disadvantaged Jewish colleagues, and became a member of the Verein zur Abwehr des AntiSemitismus, his former agitation had succeeded in unleashing antisemitism at Vienna University.

[Mirjam Triendl (2nd ed.)]

BILTMORE PROGRAM, declaration of policy by the World Zionist movement during World War II (May 1942), to the effect that the cause of Zionism could no longer be advanced by the existing British Mandatory regime. It urged, as the next step, that Palestine be established as a Jewish commonwealth and that the Jewish Agency replace the British Mandatory administration's authority for developing the country. The name of the program was derived from the New York Biltmore Hotel where the Extraordinary Zionist Conference was held from May 6 to May 11, 1942. Since no Zionist Congress could be convened because of the war, this conference was practically vested with the authority of a Congress. Its delegates came from every American and Canadian Zionist organization and included all available leaders from Palestine and Europe, among them the president of the World Zionist Organization Chaim *Weizmann. The main speaker was David Ben-Gurion, chairman of the Jewish Agency Executive, who went to New York specifically for the Conference. He explained that the Jews could no longer depend on the British administration to facilitate the establishment of a Jewish National Home

in Palestine as promised by the *Balfour Declaration of 1917, and that unless Jewish authority were established over Palestine progress would cease. He stressed the need for immigration and settlement, maintaining that no other regime could accomplish as much in these spheres as the Jews if they were given the required authority. The Biltmore Program was the object of controversy in Zionist and non-Zionist ranks before and after its adoption as official policy by the Zionist General Council (October 1942). The opposing minority included those who objected to the idea of a Jewish state, and others who considered the demand premature and would have preferred to work for the abolition of British restrictions (contained in the White Paper of 1939) and let a Jewish majority gradually develop in the country, or who would have turned over the Mandate to the United Nations. Still others insisted that the whole of Palestine should become an independent "bi-national" Jewish and Arab state, because a Jewish state would include only part of the country. In fact, neither in the resolution itself nor in Ben-Gurion's address was there any mention of the boundaries of the proposed Jewish Commonwealth. However, the Biltmore Program was in time adopted not only by the organized Zionist movement but by nearly all Jewish organizations in America and formed the basis for the political struggle of the Zionist movement from 1943 until the establishment of the State of Israel in 1948.

[Moshe Zvi Frank]

BILU (Heb. בֵּילִי"וּ, Hebrew initials of *Beit Ya'akov Lekhu ve-Nelkhal*; "House of Jacob, come ye and let us go," Isa. 2:5), an organized group of young Russian Jews who pioneered the modern return to Erez Israel. Bilu was a reaction to the 1881 pogroms in southern Russia, when the ideology of Jewish nationalism began to replace that of assimilation, which was prevalent among the youth. At first not linked with any particular country, the Bilu ideology soon came to mean a return to Erez Israel. One of the first Bilu'im, Ḥayyim *Hisin, testified: "The recent pogroms have violently awakened the complacent Jews from their sweet slumbers. Until now, I was uninterested in my origin. I saw myself as a faithful son of Russia, which was to me my *raison d'être* and the very air I breathed. Each new discovery by a Russian scientist, every classical literary work, every victory of the Russian kingdom would fill my heart with pride. I wanted to devote my whole strength to the good of my homeland, and happily to do my duty, and suddenly they come and show us the door, and openly declare that we are free to leave for the West."

The reawakening of the Jewish spirit coincided with the increasing waves of emigrants and fugitives leaving Russia as a result of the pogroms. Jewish leaders devised various solutions, one of which was settlement of Erez Israel, but most of

the emigrants were attracted to the United States. Although a thin stream of settlers flowed to Erez Israel, anticipating the Bilu group by a few months, Bilu was the first organized group of pioneers to go there. Lacking financial resources, they desired only to work, and especially, to work the land.

Founding of Bilu

Bilu was initiated when a fast was held by the Jewish communities in Russia on Jan. 21, 1882, as a result of the pogroms. Israel Belkind, then a student, invited a group of young Kharkov Jews to his home to discuss the state of Russian Jewry. Unlike the *Am Olam Group, which was organized for the purpose of emigration to the U.S., Belkind's group decided to settle in Erez Israel. It first called itself Davio, Hebrew initials for *Dabber el Benei Yisrael Ve-Yissa'u* ("Speak unto the Children of Israel that they go forward," Ex. 14:15), but later changed the name to Bilu for, according to Belkind, "instead of advising the people to go to Erez Israel, we decided to go there ourselves."

Founded with only a handful of members, Bilu rapidly increased its membership to over 500 as a result of effective recruitment campaigns, though only a few were ready to leave for Erez Israel. Kharkov became the Bilu headquarters, and Belkind its leader. Bilu ideology was expressed in different and even contradictory ways. Of the many statutes formulated by the group, one defined the aim as the creation of "a political center for the Jewish people," while another stated that the society pursues "an economic and national-spiritual aim" for the Jewish people "in Syria and Palestine." Ze'ev *Dubnow, a member of Bilu, wrote: "The aim of our journey is rich in plans. We want to conquer Palestine and return to the Jews the political independence stolen from them two thousand years ago. And if it is willed, it is no dream. We must establish agricultural settlements, factories, and industry. We must develop industry and put it into Jewish hands. And above all, we must give young people military training and provide them with weapons. Then will the glorious day come, as prophesied by Isaiah in his promise of the restoration of Israel. With their weapons in their hands, the Jews will declare that they are the masters of their ancient homeland."

Eventually, headquarters were moved to Odessa, from where the pioneers intended to sail. The leaders of the Jewish national movement in Russia were generally opposed to the *aliyah* of the Bilu'im and urged them not to go. Among the Bilu'im themselves two trends emerged. One advocated immediate *aliyah* to Erez Israel in order to work there. The other contended that no practical settlement should be begun so long as Jews had no political guarantees from the Turks. The internal debate between the two trends in Bilu lasted for about two years, diminishing the strength of the group and hindering the first efforts of the group that went to Erez Israel. At first the Bilu'im hoped to receive support from wealthy Russian Jews. Disappointed by their lack of interest, they turned to Laurence *Oliphant, then living in Constantinople and rumored to have close relations with the sultan's court. However,

they discovered that Oliphant could give them no practical help, and again split into divergent groups. Some advocated continuing political activity in Constantinople to gain recognition from the Ottoman authorities, while the rest, led by Belkind, decided to go to Erez Israel immediately.

In Erez Israel

The first to arrive in the country was Ya'akov Shertok (father of Moshe *Sharett), who preceded the first group of 14 Bilu'im by a few weeks. The group, led by Belkind, reached Jaffa on July 6, 1882. The day after their arrival they began work at the *Mikveh Israel agricultural school where they lived in a commune, the household being run by the only woman in the group. There they underwent great hardships, as they were unused to physical labor, received meager wages, and were subject to oppression by the director of the school. However, they found a great friend in Charles *Netter, the founder of Mikveh Israel, who adopted a paternal attitude to the Bilu'im, encouraged them, and openly identified himself with their aims. With Netter's death that same year (1882), the Bilu'im were again without a patron, until Yehiel *Pines, a writer and public figure, came to their assistance. Elected by the Bilu'im as their leader and guide, he transferred some of them from Mikveh Israel to Jerusalem to become artisans. The Bilu group in Jerusalem called itself "Shehu" (שהו), the initial letters of *Shivat he-Harash ve-ha-Masger* ("Return of the Craftsman and the Smith," cf. II Kings 24:16), and they established a carpentry and woodcraft workshop. However, the scheme eventually failed because of lack of experience, and the Jerusalem members of Bilu dispersed elsewhere in Erez Israel.

In November 1882 some of the members of Bilu, under Belkind's leadership, moved to *Rishon le-Zion, working as hired laborers, sharecroppers, and manual laborers for the village council. Poor yields and difficult relationships between the settlers and hired laborers in the village were greatly disappointing, especially as the Bilu'im hoped to found their own settlement eventually. They continued their search for satisfactory work between Rishon le-Zion and Mikveh Israel. Even the Russian Hovevei Zion disappointed them, for they failed to provide them with the means for settlement. After a steady decline in their number abroad, the Bilu association in Russia died out. In June of 1883, about a year after *aliyah*, Bilu numbered 28 members in Erez Israel, of whom 13 were at Rishon le-Zion, seven at Mikveh Israel as hired laborers, and three in Jerusalem. They met on festivals and holidays, organizing a trip on Passover of 1884, together with Eliezer *Ben-Yehuda, speaking Hebrew among themselves and singing Hebrew songs.

When the Bilu members who were in Constantinople realized that their political activities had failed, they also went to Erez Israel (1884). However, their economic situation deteriorated steadily. They worked for a while as laborers at Mikveh Israel but were soon dismissed, and the director of the school even supplied them with means to emigrate to America. At the very last moment, Pines succeeded in saving them

by acquiring the land of the Arab village Qatra in the Judean foothills, an area of 3,300 dunams (c. 800 acres). Borrowing the money, Pines sent an envoy abroad to sell the land parcels to Zionist associations, on condition that each of them hand over their parcel to the Bilu'im. The Bilu settlement of *Gederah was thus founded, and the Bilu members who had worked at Mikveh Israel and Rishon le-Zion settled there in December of 1884. Although a few Bilu'im settled in Rishon le-Zion and elsewhere, Gederah became known historically as the Bilu settlement.

An estimated total of 53 Bilu members left Russia for Erez Israel during the early 1880s. Some returned to Russia or went on to the U.S., while others remained faithful to the ideal of settling Erez Israel, and some of them later became leaders in the public life of the country.

[Getzel Kressel]

BIMAH (Heb. בִּמְיָה; "elevated place"), platform in the synagogue on which stands the desk from which the Torah is read. Occasionally, the rabbi delivers his sermon from the *bimah*, and on Rosh Ha-Shanah the *shofar* is blown there. In Sephardi synagogues, the *hazzan* conducts most of the service from the *bimah*. In some Ashkenazi synagogues, the *hazzan* has a separate reading stand immediately in front of and facing the ark from which he conducts the service. Alternative names are *almemar* (from the Arabic *al-minbar*, "platform") or, among Sephardi Jews, *tevah* ("box"). The use of the *bimah* as a pulpit for reading the Torah in public was known as early as the times of Nehemiah (Neh. 8:4). Raised platforms were also known to have existed in the times of the Second Temple (Sot. 7:8). The Talmud mentions a wooden pulpit in the center of the synagogue of Alexandria in Egypt (Suk. 51b). In Orthodox synagogues of the Ashkenazi rite, the *bimah* is often in the center, with some intervening seats between the *bimah* and the ark (based upon the opinion of Maimonides, in *Yad*, *Tefillah*, 11: 3; *Tur.*, OH 150, and *Rema*, OH 150: 5). In Sephardi and Oriental synagogues, the *bimah* is placed in the middle of the room opposite the ark and without intervening seats. The location of the *bimah* close to the western wall in Sephardi synagogues was permitted by Joseph *Caro. In his commentary *Kesef Mishneh* (to Maimonides, *loc. cit.*), he wrote: "It is not essential to place the *bimah* in the center; all depends upon the place and time." A heated dispute, however, resulted from moving the *bimah* from the center toward the ark in Liberal synagogues after the Reform movement started. The most vehement antagonists of this innovation were Moses *Sofer (*Ḥatam Sofer*, OH 28), and Ezekiel *Landau (*Noda bi-Yhudah*

Mahadura Tinyana, OḤ 18). Their protest led to a proclamation by 100 rabbis prohibiting worship in a synagogue that does not have the *bimah* in its center (see *Sedei Hemed*, Assefat Dinim, Bet ha-Keneset no. 13). Almost all modern Reform and Conservative synagogues combine the *bimah* with the ark.

Forms of the Bimah

Examples of the *bimah* surviving from early times are simple in form and built close to the ground. For instance, the *bimah* at the synagogue at Bet Alfa (sixth century) is one step high. In medieval Spain the *bimah* was a wooden platform raised high above the ground on columns. It was sometimes surmounted by a canopy and reached by an attached stairway. Until the Renaissance the *bimah*, which was placed in the center of the synagogue, had a more dominant position than the ark. In Italy from the 16th century, they were given equal emphasis by being placed at opposite sides in the center of the hall. The ark in the synagogue at Worms, Germany (1175), was placed on the central axis between the two main columns. This became the usual arrangement among Ashkenazi Jews in Central and Eastern Europe. In this area, a new form of *bimah* came into being in the late 17th century. The four central pillars which supported the vaulted ceiling of a synagogue were used as the framework of the *bimah* which thus became a roofed structure. The *bimah* assumed curved, circular, octagonal, and other forms, and was made of many materials such as stone, wood, bronze, marble, and wrought iron. In Eastern Europe from the 16th century it could be found enclosed by a wrought iron cage.

BIMKO, FISHEL (1890–1965), Yiddish dramatist and novelist. Born in Kielce, Poland, Bimko's first realistic narrative, *Di Aveyre* ("The Transgression"), was published in 1912 and his first play, *Oyfn Breg Vaysel* ("On the Shores of the Vistula"), was staged in Lodz in 1914. Thereafter his plays were produced in the Yiddish theaters of Europe and America. Especially popular were *Ganovim* ("Thieves," 1921), a realistic play depicting the Polish-Jewish underworld, and *East Side* (1938), a naturalistic drama of Jewish life in New York, where Bimko settled in 1921. His selected dramas were published in seven volumes in 1936, and his selected narratives in three volumes in 1941 and 1947.

[Sol Liptzin]

BIMSTEIN, "WHITEY" (Morris; 1897–1969), U.S. boxing trainer. One of the greatest trainers in boxing history, Bimstein worked in the corner of approximately 25 world champions, including Gene Tunney, Max Baer, Jimmy Braddock, Primo Carnera, Harry Greb, Jake LaMotta, and Jewish fighters Bar-

ney *Ross, Jackie "Kid" *Berg, Benny *Leonard, Charley Phil Rosenberg, Slapsie Maxie Rosenbloom, Ruby Goldstein, Abe Goldstein, and "Kid" Kaplan. Born on the Lower East Side of Manhattan, Bimstein dropped out of school at the age of 12 and began boxing as a 15-year-old at St. Jerome's Church in the Bronx under the name Johnny White, because he was afraid his father would get angry if he read about his son in the paper. But Bimstein's father allowed him to fight when he found out his son was making more money than he. Bimstein fought as a bantamweight and featherweight until he joined the navy in World War I. After serving in the navy, and a career of 70 professional fights, Bimstein decided to switch to corner work and became an expert cut man. Called Whitey by everyone but his family, Bimstein began a partnership in 1925 with the legendary trainer Ray *Arcel, and the two worked together for nine years, calling themselves the "Siamese Training Twins." After World War II, Bimstein paired with another legendary trainer, Freddie Brown. He worked with Tunney during his two historic fights with Jack Dempsey in 1926 and 1927, and was the corner man for four victorious world champions – Barney Ross, Lou Ambers, Harry Jeffra, and Fred Apostoli – in one night at the Polo Grounds on September 23, 1937. He was also the cut man for Rocky Marciano, closing a split on Marciano's nose during his fight with Ezzard Charles that helped Marciano retain his undefeated record. Bimstein estimated that he worked approximately 35,000 to 40,000 fights during his career, which lasted into the 1960s.

[Elli Wohlgelernter (2nd ed.)]

BI-NATIONALISM, one of the solutions to the Jewish-Arab national conflict in Erez Israel offered by various Jewish individuals and groups in the period before the establishment of the State of Israel. The bi-national idea was based on the principle that since two nations – the Jews and Arabs – laid claim to the same land, which to one was Erez Israel and to the other Palestine, it should not be given to one of them but should become the state of both, and that irrespective of the numerical strength of each, the relations between them should be based on equality. Some supported the idea because they temporarily or permanently lost faith in the ability of the Jewish people to establish an independent Jewish State in Erez Israel, while others supported it for moral or ideological reasons. Some advocated a federal or confederal structure for the bi-national state, while others sought to avoid the partition of the country into states or cantons, and advocated bi-nationalism that was to be based on communities.

The first body to advocate bi-nationalism was *Berit Shalom, which existed from 1925 to 1933. *Ha-Shomer ha-Za'ir started to advocate bi-nationalism as part of its platform in 1929, and some of its members, including Mordekhai *Bentov and Aharon Cohen, continued to support the idea until after the establishment of the State in 1948. Following the outbreak of the 1936 disturbances (or Arab Revolt) a new organization, advocating a rapprochement with the Arab population, was set up, bearing the name Kedmah Mizrahah ("Forward to the

East"). Towards the end of its existence in 1938, the organization became associated with bi-nationalism, as Haim *Margolis-Kalvaryski became its most active member. Another group that was active in this period, and advocated an agreement with the Arabs which included certain features of bi-nationalism, was known as "the group of five." This group, which included Gad *Frumkin, Moshe *Smilansky, Pinḥas *Rutenberg, Moshe *Novomeysky, and Judah L. *Magnes, and held meetings with both Arab leaders and Zionist leaders, proposed as part of an agreement with the Arabs that would enable continued Zionist development, the establishment of a legislative council based on parity.

On the eve of World War II, all the various groups and individuals that sought a solution of the Jewish-Arab problem on the basis of bi-nationalism got together in an organization that called itself the League for Jewish-Arab Rapprochement and Cooperation. The group included former members of Berit Shalom and Kedmah Mizraḥah, leaders of Ha-Shomer ha-za'ir and Po'alei Zion Semol, members of Aliyah Ḥadashah (a political group made up primarily of new immigrants from Germany), and several members of Mapai and the General Zionists B. The first act of the new group in March 1939 was to publish a pamphlet called *Al Parashat Darkenu* ("At the Crossroads"), which dealt with the Arab problem and ways of resolving it. Among the articles appearing in it were several by Martin *Buber, who had recently immigrated to Erez Israel from Germany and was a supporter of bi-nationalism for moral reasons. In the course of its existence the League published various constitutional proposals for a federal state based on the idea of bi-nationalism. The adoption in May 1942 of the *Biltmore Program, which for the first time singled out the establishment of a Jewish commonwealth in Palestine as the Zionist goal, and news coming out of Europe regarding the Nazi "final solution," strengthened the resolve of the League to struggle for the only plan that it regarded as realistic. Within the League a new group was formed in August 1942, calling itself Iḥud (Unity). Iḥud opposed the idea of establishing an independent Jewish state, which it regarded as ruinous, and advocated a bi-national solution. Among the active members of this group was Judah L. Magnes, Martin Buber, Haim Margolis-Kalvaryski, Moshe Smilansky, Henrietta *Szold, and Justice Joseph Moshe *Valero. Magnes tried to get the Sephardim and Agudat Israel involved in the new organization but failed. Iḥud published a periodical called *Be'ayot* ("Problems"). At the same time Ha-Shomer ha-Za'ir joined the League as an organization.

When the Anglo-American Committee of Inquiry appeared in Erez Israel in March 1946, the League did not appear before it, but Magnes, Buber, and Smilansky did, as representatives of Iḥud. Ha-Shomer ha-Za'ir submitted a memorandum to the Committee, entitled "The Case for a Bi-National State." Both Iḥud and the League appeared before the United Nations Special Committee on Palestine (*UNSCOP). Though the members of both Committees, however, were impressed

by the presentations, neither was convinced that a bi-national solution was feasible.

The adoption by the UN General Assembly of the partition plan on November 29, 1947, effectively put an end to the activities of the bi-nationalists, though Iḥud was revived in the early 1950s under the leadership of R. Binyamin, who edited its monthly *Ner* (Candle). After R. Binyamin's death, the monthly was edited by Simon Shereshevsky, until it ceased publication in 1964. Iḥud now devoted its energies to organizing discussions, searching for a solution to the Arab-Israeli conflict on the basis of compromise between Israel and the Arab states, and trying to defend the civil rights of Israel's Arab minority, which until 1966 was subject to a military administration.

BINDER, ABRAHAM WOLF (1895–1966), U.S. composer. Born in New York, son and grandson of cantors, Binder became a choir director at the age of 14. In 1916 he formed the Hadassah Choral Union, and in 1917 he organized a music department, the first of its kind, at the 92nd Street YMHA in New York. In 1921 he became instructor in Jewish music at the Jewish Institute of Religion, and in 1922 music director at the Stephen Wise Free Synagogue. Here he was able to reintroduce the traditional chanting of the Bible, while keeping to the spirit of the Reform movement. In his revision of the *Union Hymnal* (1932) he also encouraged contributions by contemporary American Jewish composers. When the Jewish Institute of Religion was combined with the Hebrew Union College in New York, Binder was appointed professor of Jewish liturgical music there and helped to found its School of Sacred Music (1948). A prolific composer, he wrote synagogal services and songs, Hebrew and Yiddish songs, nine cantatas and oratorios (including *Amos on Times Square* and *The Legend of the Ari*), and piano, violin, chamber, and orchestral music. His music library and manuscripts were bequeathed to kibbutz Ein ha-Shofet.

[Bathja Bayer]

BING, name of a number of Jewish families from the *Bingen community, which branched out in Germany, Lorraine, England, and the Netherlands. Bingen Jews are mentioned in *Frankfurt in the early and middle 15th century. Expulsions in the 16th and 17th centuries helped to disseminate the name in northeastern France and southwestern Germany; four families from Bingen settled in Frankfurt around 1530 and ten additional families named Bing settled there by the end of the 17th century. *Court Jews named Binge were active in *Hanau and elsewhere. In the late 18th century persons bearing the name were prominent in the community of *Metz. Abbé *Grégoire wrote (February 1789) to Isaiah *Beer-Bing of Nancy encour-

aging him to avail himself of the opportunity offered by the meeting of the General Estates “to take counsel with other members of your nation, in order to claim the rights and advantages due to citizens...” Prominent also were the physician SOLOMON, born in Bingen (1615), a pupil of Joseph Solomon *Delmedigo; JOSEPH, of Mons, who fought in 1786 for the abolition of the Jewish tax; ABRAHAM, renowned talmudist (b. 1752), Rabbi of Wuerzburg from 1798 to 1839; and ALBERT (1844–1922), Austrian ear specialist. The Danish and English Bing families are not necessarily connected with them.

BING, ILSE (1900–1998), photographer. Born into an affluent family in Frankfurt, Germany, Bing was trained in music and art. While she pursued a doctorate in art history and photographed buildings for her dissertation, she developed a passion for photography. In early 1929 she produced picture essays for a Frankfurt newspaper, but she decided to leave for Paris that summer after seeing an exhibition of photographs by Florence Henri, an exponent of New Photography, which was characterized by tight close-ups, unusual angles and the rendering of everyday objects as abstract geometric forms. In the 1930s Bing used the newly marketed 35-millimeter Leica as an extension of her personal vision, and she mastered dark-room techniques to show the subtleties of light and movement against the treacherous streets of Paris at night. She favored overhead shots and tilted angles of German Constructivists, but her photographs were often infused with softer, more lyrical and humanistic qualities.

Like Andre Kertes and Henri Cartier-Bresson, she caught the spare geometries in ordinary Parisian life. She photographed at night with available light and produced images that were studies of light and deep shadow. She said that as she walked through Paris with her camera, reacting intuitively to what she saw, she was unencumbered by thoughts about “making art.” She became a technical innovator, improvising lenses, experimenting with cropping, and discovering the dramatic effects of solarization, which produces a black outline resulting from the controlled use of light during printing. She discovered the process by accident in the darkroom, she said. Her photographs were regularly shown in galleries in Paris in the 1930s alongside the work of other members of the photographic avant-garde. In 1936 she was included in the first modern photography exhibition held at the Louvre, and the next year she was part of the landmark photography show at the Museum of Modern Art in New York. Her best-known work from that period is a self-portrait. She photographed a mirror image of herself, one bent arm leaning against a table,

a Leica on a tripod positioned in front of one eye, with a side view of herself reflected in another mirror.

When Bing visited New York in 1936 she was offered a position with the new *Life* magazine but she rejected the offer because her future husband, Konrad Wolff, a pianist and musicologist, lived in Paris. They married in 1937. Three years later, as German Jews, they were interned as enemy aliens by the Vichy government but managed to get themselves free. Later in 1940 they sailed for New York, where they remained for the rest of their lives. Bing continued to photograph, changing to the larger format Rolleiflex in 1950 and working intensively in color from 1957 to 1959. That year, she gave up photography because, she said, “everything moves, nothing stays and I should not hold on.” Bing turned to poetry, creating what she called “snapshots without a camera.” She also made collages with old photographs and objects, and illustrated whimsical books on etymology and on numbers. Her dealer described her as “very sharp, very funny and very active – she took up the motorcycle when she was in her 70s.” For a living, she groomed dogs.

[Stewart Kampel (2nd ed.)]

BING, ISAAC BEN SAMUEL (17th century), scholar. Born in Jerusalem, he went to Europe after his sons had died in a plague, and during 1645–46 wandered from town to town in Poland. In 1646 he arranged for the printing in Lublin of the first part of the *Maggid Meisharim* of Joseph *Caro on the basis of an incomplete manuscript which he had brought with him. In 1654 he was still in Europe and, together with Elisha Hayyim b. Jacob Ashkenazi (father of Nathan of Gaza), who had brought the remainder of the manuscript from Jerusalem, published it in Venice (Friedberg, *Eked* II 546 no. 471; but see Werblowsky, p. 25 and n. 5). Bing should not be confused with the Isaac b. Baruch Bing who lived in Safed during the first quarter of the 17th century.

[Avraham Yaari]

BINGEN, town in Rhenish Hesse, Germany. *Benjamin of Tudela (mid-12th century) heard of a community there. The Christian burghers attacked the small Jewish quarter on the Jewish New Year's Day of 1198 or 1199, and its inhabitants were then driven from the city. Jews are again found in Bingen as moneylenders in the middle of the 13th century under the jurisdiction of the archbishop of Mainz. In 1343 French Jews settled in Bingen. During the *Black Death (1348–49) the Jews in Bingen, too, suffered severely. They were later placed under the jurisdiction of the Church in order to save them from further excesses (1365). In 1405, however, the archbishop declared a moratorium on one-fifth of the debts owed to Jews by Christians, and subsequently the archbishops repeatedly extorted large sums. Noted rabbis who taught in the small community included Seligmann Oppenheim, who convened

the Council of Bingen (1455–56) in an unsuccessful attempt to establish his authority over the whole of Rhineland Jewry. After the proposal was opposed by Moses *Minz, the matter was referred to Isaac *Isserlein, who rejected the project. The Jews were again expelled from Bingen in 1507, and did not return until the second half of the 16th century. There were 21 Jewish families living in Bingen in 1689, and 343 in 1754. The Jewish population numbered 465 in 1933, and 222 in 1939 in the wake of flight and emigration. The 169 Jews who remained in Bingen in 1942 were deported and only four ultimately returned. The synagogue was demolished in 1945, and the community was not reestablished after the war.

BINSWANGER, ISIDORE (1820–1890), U.S. businessman and communal leader. Binswanger was born in Wallerstein, Bavaria. He immigrated to the United States in 1841, living first in Baltimore, then in Philadelphia, and finally in Richmond, Virginia. In 1869 he became president of the Richmond Granite Company, a position he held until shortly before his death. Binswanger was chairman of the board and later president of the Hebrew Education Society in Philadelphia, and president of the board of trustees of Maimonides College. He was also active in various aid societies and helped organize relief measures in the early 1880s for Jewish immigrants from Russia. His three brothers, Lewis, Samuel, and Harry S., settled in Richmond too, where they also went into business and were active in local Jewish life.

BINYAMINAH (Heb. בִּנְיָמִינָה), moshavah in central Israel, at the southern spur of Mt. Carmel, founded in October 1922 by the Palestine Jewish Colonization Association (PICA). The first settlers were immigrants from East Europe. Later, immigrants from Bulgaria, Georgia (U.S.S.R.), and other countries were housed in a new quarter. Naḥalat Jabotinsky, a moshav founded nearby by the *Revisionist movement in 1947, was later incorporated into the village. In 1950 Binyaminah received municipal council status. In 1968 it had 2,570 inhabitants, with its economy based on intensive farming, principally fruit plantations. Prominent among its industrial enterprises was a wine and liquor factory. In the mid-1990s the population was approximately 3,950, increasing to 6,300 by 2002 on 6 sq. mi. (16 sq. km.) of land. The location of a major railroad station in Binyaminah pushed up local housing prices and made it very attractive for people working either in Haifa or Tel Aviv. In 2003 the local municipality of Binyaminah was united with the municipality of nearby *Givat Ada. Binyaminah is named after Baron Binyamin (Edmond) de *Rothschild.

BIOGRAPHIES AND AUTOBIOGRAPHIES. Apart from the Book of *Nehemiah, which may well be considered an autobiography, *Josephus' apologetic *Vita*, and *hagiographic works, autobiographies and biographies are completely unknown among Jews in ancient times. The first biography known is that of *Saadia Gaon which was written by his two sons She'ërit and *Dosa at the request of *Ḥisdai ibn Shaprut (published by J. Mann, JQR, 11 (1920/21), 423–8, and by A. Scheiber in KS, 40 (1964/65), 571).

In Medieval Hebrew Literature

The biographic genre was also unknown to medieval Hebrew literature and there is almost no writing in the field. The lack of development of this literary vehicle is rooted in two main aspects of medieval Hebrew culture. Historians and chroniclers were mainly concerned with events and not personalities as such; a person was important only insofar as he influenced or participated in a major historical event. The lives of major Jewish personalities are, therefore, outlined only briefly in Jewish historiography, and there is no full biography in the modern sense. Historiographers, who were mainly interested in the process of the transmission of the Torah, tended to list scholars and rabbis in chronological order, briefly describing the achievements of each in the field of learning, and only mentioning by the way such details as birthplace, travels, family, and death. Jewish historiography, focusing primarily on historical events, developed the art of historical description at the expense of biography.

The Influence of Hagiography on Biography

Hagiography, however, influenced the fate of biographic literature probably more than historiography. Hebrew medieval writers who concentrated on an historical figure and gave some biographic facts, usually added legendary or panegyric details and thus turned their accounts into hagiographies. Medieval Judaism viewed the actions of an outstanding personality as model behavior to serve as an exemplum. No full description of his life and personality (his faults and his virtues) was, therefore, needed. The only interest the medieval writer and reader could find in the story of a great personage was in the moral to be drawn from his actions and his character. This ethical and didactic approach, driven to the extreme, rendered almost all Hebrew writings about major personalities into heroic legends and not authentic biographies. The cycle of stories about such figures as Abraham *Ibn Ezra, *Naḥmanides, *Rashi, *Judah b. Samuel he-Ḥasid, Isaac *Luria, *Israel b. Eliezer Ba'al Shem Tov, and many others are legendary hagiographies, having little direct historical data and giving a partial portraiture of the protagonist. Historians like Abraham *Ibn Daud, author of *Sefer ha-Kabbalah*, only briefly mention the sages and scholars who transmitted the Torah. When he dwells on actual personalities, like the scholars in "The Four Captives," his description is purely hagiographic. The same is true of Gedaliah *Ibn Yahya and many others, including the first Hebrew medieval chronologist, *Sherira Gaon. Personal accounts sometimes formed polemic material

in a religious conflict, e.g., the biography of Anan, the founder of the Karaite sect. Sherira describes him as a frustrated, ambitious, evil man; the Karaites wrote hagiographies to extol his deeds. Biographic elements are scattered throughout Hebrew epistolary, hagiography, and historiography, but as a literary form, biography came into its own only in modern Hebrew literature. An exception to this, however, is the biographical introduction to the *Ma'yenei ha-Yeshu'ah* of Isaac *Abrabanel by Baruch Uzziel b. Baruch Forti (Ḥazketto) in 1551. The author probably gleaned Abrabanel's autobiographical fragments from his introductions to commentaries to Joshua, Kings, and Deuteronomy, and from his responsa to Saul Kohen. *Ahimaaz b. Paltiel wrote his *Megillat Yuḥasin* in the middle of the 11th century on the history of his family.

Historiography Written as Personal Experience

The autobiographic genre was a more apt vehicle of literary expression than the biography in the Middle Ages. This was mainly due to the intrinsic nature of the art itself. The need for self-scrutiny (the characteristic of autobiography) has greater impetus than the biographic sketches of authors. Medieval and Renaissance writings, letters, introductions to books, apologies, and personal diaries contain autobiographic elements and sketches much more than biographic elements. In these works, however, the writer also focused on the historical event and the part he had played in it rather than on his own personal life. Maimonides, describing his life in his letters, gives an account of his daily working schedule and of certain aspects of his life. Azariah dei *Rossi, in the introduction to his *Me'or Einayim* (Mantua, 1574), describes the Ferrara earthquake of 1570 which he witnessed and which in part was the stimulus of the book.

Legendary Autobiography

Since the early Middle Ages, another aspect of autobiography was known in Jewish writings: the legendary autobiography. *Eldad ha-Dani, the first writer of this autobiographic form (appeared in Babylonia in the late ninth century), claimed to be a member of the tribe of Dan. In his work, he describes the life of the Ten Lost Tribes in detail. This, however, forms only part of his whole account, much of which is devoted to his various adventures in faraway lands among strange peoples. This narration is typical of imaginary or legendary autobiography.

The thread of this literary expression was picked up centuries later by a much more accomplished autobiographer, David ha-*Reuveni. In a detailed autobiography he describes his birthplace in the lands of the Ten Lost Tribes, his numerous adventures on his way to Italy and especially in Palestine, and his political and diplomatic efforts to organize an army to conquer Palestine. He even includes in his work a detailed expense account, listing his expenditures at every step of his travels. His autobiography is, in fact, an apology: he blames various treacherous friends for the failure of his venture.

Another autobiography, also an apology, is *Gei Hizzayon* by Abraham *Jagel (16th century). It is an imaginative vision of

the afterworld containing autobiographical elements. Jagel, in prison, relates his life story and how he came to be imprisoned, to his dead father who appears to him in a dream and takes him on a trip to the various heavenly spheres. This autobiography is probably the first to be written in Hebrew by a minor writer about a comparatively trivial life. The focus is not on any major historical event, nor on the author's participation in a noteworthy adventure. Jagel used the autobiographic form to express his misery and to complain about the injustice done to him. Due to its concentration on the personal, *Gei Hizzayon* may be described as the first autobiography to be written in Hebrew. Earlier works belong more to the field of historiography which were written as personal experience.

Modena's Hayyei Yehudah

Probably the most representative work of the genre and literally the best-developed autobiography written in Hebrew during the Middle Ages is *Hayyei Yehudah* ("The Life of Judah"), by Leone (Judah Aryeh) *Modena. In short passages and sometimes long stories, Modena describes in detail a 20-year span in his life. The sincere revelation of the inner self in Modena's account has not been equaled by any Hebrew writer until modern times. He candidly describes his addiction to card-playing, which repeatedly threw him into debt and obliged him to use any means and choose any work to earn enough to cover them. He depicts in detail the tragic fate of his three sons: one was killed in an unsuccessful alchemic experiment, the second, in a street fight, and the third left Italy after being condemned to row in the galleys without his father ever learning of his whereabouts. His various illnesses, those of his wife and of his relatives, are discussed in detail, as well as his dreams, his visions, and his astrological beliefs. A profound cynical skepticism can be discerned in his writings. Modena's work may also be seen as an apology: the apology of a man who saw himself as a failure in every way (history today contradicts this judgment). He blamed the stars for the tragedies he had suffered and the misfortunes which befell him. Probably his belief in astrological determinism psychologically allowed him to lay bare unashamedly the different facets of his character (of which he was far from proud).

Other Autobiographic Elements and Sketches

In line with Modena's work, almost full autobiographies can be reconstructed from the letters of R. Moses Ḥayyim *Luzzatto, and from the letters of other writers. Some autobiographic elements and sketches are to be found in ḥasidic literature where various rabbis sincerely describe their own spiritual development, e.g., R. *Naḥman of Bratslav. In kabbalistic literature, another type of autobiography is to be found: kabbalists describing their visions and the development of their mystical insight. The most noteworthy among these are the visions of Solomon *Molcho which, together with some actual autobiographical passages, form a full spiritual autobiography in the modern sense (Abraham b. Joseph Rothenburg, *Ḥayyat Kaneh, Ḥazon Shelomo Molkho*, ed. by A.S. Aescoly, 1938). Such elements are found also in *Maggid Meisharim*, R.

Joseph *Caro's diary on his heavenly revelations, and in other writings of kabbalists.

[Joseph Dan]

Memoirs and Introductions

Memoirs, from those of Glueckel of *Hameln of the 17th century to the diary of Anne *Frank, may be termed "unconscious autobiographies" which were not intended for publication. The valuable autobiographical material, which was sometimes included in the introduction to halakic works, is the nearest approach to autobiographies of the rabbis. Notable among them are Isaac *Abrabanel's introductions to his biblical commentaries, and those which were produced under the stress of two great catastrophes which overtook European Jewry, the expulsion from Spain in 1492 and the *Chmielnicki massacres of 1648. Prominent among those who described their sufferings in the expulsion from Spain was the author Isaac *Caro (see H.H. Ben-Sasson, in *Zion*, 26 no. 2 (1961), 23–64). Shabbetai b. Meir ha-Kohen and Moses b. Abraham *Mat of Przemyśl (in *Matteh Moshe*) are among those who described the period of the Chmielnicki massacres.

Modern Times

With the dawn of emancipation and enlightenment, real biographies began to make their appearance. Among the first of these was Isaac *Eichel's *Toledot Rambaman* on Moses Mendelssohn. Ezekiel *Feivel's *Toledot Adam* on Solomon Zalman b. Isaac of Volozhin (1801), and Moses Kunitz's *Beit Rabbi* on Judah ha-Nasi (1805). Dov Ber *Birkenthal of Bolechow wrote his *Zikhroynes*, an important source for material on Jews of Galicia in the 18th century (Heb., Eng., Yid., 1922). Solomon Maimon's autobiography (1792) was revolutionary in more than one sense and evoked the approval of such literary giants as Goethe and Schiller. The autobiography of L. *Benda-vid (1804) also belongs here. The scholarly impulse given by the movement for Wissenschaft des Judentums and the related Haskalah in Eastern Europe prompted men like L. *Zunz and S.J. *Rapoport to write biographical sketches of the great Jewish scholars of the past, whose lives – as distinct from their scholarly work – had remained obscure. Zunz wrote a "Life of Rashi," a task that was later taken up by Maurice Liber and Eliezer Meir Lipschuetz. Rapoport published a series of biographical sketches (*Toledot Gedolim*) covering Eleazar Kallir, Saadia Gaon, *Hananel b. Hushi'el, Nissim b. Jacob, and others. Since then, biographies or lengthy monographs have been written about many of the significant figures in Jewish history and literature. Some, like Louis Finkelstein's *Akiba*, have been major studies, as is the two-volume work in history on *The House of Nasi* by Cecil Roth (*Dona Gracia, The Duke of Naxos*), while Louis *Ginzberg wrote a series of penetrating biographical studies of famous scholars. In recent years some biographies of ḥasidic rabbis, who were previously described in a distinctly hagiographic character, have been written on a rational and scientific basis, an example of which is *The Zaddik* on *Jacob Joseph of Polonnoye, by S.H. Dresner. The list is too numerous to be given, but mention may be made

of what may be called biographical anthologies. Israel Kamelhar has written biographies of all the great figures of medieval German Ḥasidim. The *Sarei ha-Me'ah* on the rabbis of the 19th century by Rabbi J.L. *Fishman, though sometimes uncritical, is a treasurehouse of biographical material. Much biographical material from prominent Jewish characters of the 18th–20th centuries is contained in the last three volumes of "The Jewish Library" series, edited by Leo Jung (vol. 6, *Jewish Leaders 1750–1940*, 1953; vol. 7, *Guardians of Our Heritage*, 1958; vol. 8, *Men of Spirit*, 1964). Naturally the general vogue of compiling biographies of contemporary Jewish figures after their decease is as marked among Jews as in general literature, but it contains no specific Jewish aspect. From the end of the last century autobiographies have become more common. Mention may be made of those of Isaac Hirsch Weiss, J.L. Gordon, H.N. Bialik, Chaim Weizmann, Cyrus Adler, and Nahum Goldmann. H. Ribalow has published an anthology of autobiographies of American Jews (1965). Other collections have included Leo W. *Schwarz's *Memoirs of my People* (1943) and H. Bach's *Juedische Memoiren aus drei Jahrhunderten* (1936).

Yiddish Life-Writing

With the exception of a few pre-modern Yiddish memoirs, most notably the memoirs of Glueckel of Hameln (1689–1719; publ. as *Zikhroynes*, 1896), Yiddish life-writing has developed since the 1860s, beginning with fictional autobiographies Sholem Yankev *Abramovitsh's *Dos Kleyne Mentshle* ("The Little Man," 1864) and Yitskhok Yoel Linetsky's *Dos Poylishe Yingl* ("The Polish Lad," 1867). The first biographical entries on Yiddish writers appeared in Nahum Sokolov's *Sefer Zikaron le-Sofrei Yisrael ha-Hayyim Itanu ka-Yom* ("A Memoir Book of Contemporary Jewish Writers," 1889), and *Sholem Aleichem presented biographical entries on Yiddish writers in his *Di Yidishe Folks-Bibliotek* ("The Yiddish Folk Library," 1888). While the first Yiddish literary autobiography was Sholem Yankev Abramovitsh's *Shloyme Reb Khayims* ("Shloyme, Hayim's Son," 1894–1914, first part in Hebrew, *Petikhta*, later reworked in Yiddish), the two other classical Yiddish writers, Sholem Aleichem (*Funem Yarid*, "From the Fair," 1913–16) and I.L. *Peretz (*Mayne Zikhroynes*, "My Memoirs," 1913–16), also wrote autobiographical novels.

In addition to literary autobiography, other subgenres emerged in the 20th century. Yekhezkel Kotik's *Mayne Zikhroynes* ("My Memoirs," 1913) exemplifies the rich subgenre of Yiddish ethnographic memoir, while the memoirs of Jewish political leaders and party members, cultural leaders, actors, painters, and other artists also appeared. A rich subgenre also developed in the *poeme* or long narrative poem, e.g. Menakhem Boreysho's *Der Geyer. Kapitln fun a Lebn* ("The Walker: Chapters from a Life," 1943). A particularly rich subgenre is the Holocaust memoir, originally crafted as testimony and eyewitness account to the era's unspeakable crimes, exemplified in Mark Turkov's 176-volume series, *Dos Poylishe Yidntum* ("Polish Jewry," Buenos Aires 1946–66), which in-

cludes Elie *Wiesel's *Un di Velt hot Geshvign* ("And the World Was Silent," 1955, later reworked in French, *La Nuit*, and English *Night*).

The outstanding examples of Yiddish life-writing are Jacob *Glatstein's autobiographical novels *Ven Yash iz Geforn* ("When Yash Set Out," 1938) and *Ven Yash iz Gekumen* ("When Yash Arrived," 1940); Jonah *Rosenfeld's *Eyner Aleyn* ("All Alone"); Y.Y. *Trunk's seven-volume *Poyln: Zikhroynes un Bilder* ("Poland: Memoirs and Pictures," 1944–53); I.J. *Singer, *Fun a Velt Vos iz Nishto Mer* ("From a World That is No More," 1946); Dovid *Bergelson's *Bam Dnyepr* ("On the Dnieper," 1932, 1940); and I.B. *Singer's rich and diverse oeuvre. More recent examples include Joseph Buloff's *Fun Altn Mark-plats* ("From the Old Marketplace," 1995) and Boris Sandler's *Lamedvovnikes fun Mayn Zikorn* ("Lamedvovniks from My Memory," serialized in *Forverts*, 2005).

While Yiddish women writers have produced few major novels, some, in addition to Glueckel of Hameln, have excelled as autobiographers: e.g., Bella *Chagall's *Brenendike Likht* ("Burning Lights," 1945) and Ester Singer *Kreitman's *Sheydim-Tants* ("Demon's Dance," 1936; published as *Deborah*, 1983). One of the greatest achievements of modern Yiddish literature, Yiddish life-writing differs significantly from the genre in mainstream literatures: the Yiddish writer tends to reject the model of self-revelation that has characterized the genre since Rousseau's *Confessions* (1781) and instead elaborates on his life in entertaining, often humorous ways that depicts "a world that is no more."

[Jan Schwarz (2nd ed.)]

Biographical Lexicons

Although much biographical material about Jews can be found in the medieval Jewish chronicles, the first lexicon of Jewish biographies did not appear till the end of the 18th century. S. Shunami's *Bibliography of Jewish Bibliographies* (1965; supplement 1975) contains sections on biographical dictionaries of Jews in general (nos. 2594–2661), of Jews in Zionism (nos. 1872–76), Jews in America (nos. 2172–83), Jews in the Holocaust (nos. 2539–44), Jews in Palestine and Israel (nos. 2017–27, 2057–66a), as well as on biographical literature (nos. 2662–67). The following is a list of dictionaries of the history of the lives of individual Jews:

GENERAL JEWISH BIOGRAPHICAL LEXICONS

- S. Wininger, *Grosse juedische National-Biographie* (7 vols., 1925–36), the most comprehensive work of this kind; *Juedischer Plutarch; oder biographisches Lexikon der markantesten Maenner und Frauen juedischer Abkunft* (2 vols., 1848); *Juedisches Athenaeum. Galerie beruehmter Maenner juedischer Abstammung und juedischen Glaubens* (1851), limited to the 19th century;
- H.S. Morais, *Eminent Israelites of the Nineteenth Century* (1880), 100 biographies, mainly of rabbis and community leaders, but also of some Jews prominent in public life;

- A. Kohut, *Beruehmte israelitische Maenner und Frauen in der Kulturgeschichte der Menschheit* (2 vols., 1901), classified by professions, such as writers, composers, etc.
- R. Heuer (ed.), *Lexicon deutsch-juedischer Autoren*, 11 vols. (1992–2002).

RABBIS AND TALMUDISTS

- J. Heilprin, *Shemot Ba'alei Mehabberim* (1769);
- H.J.D. Azulai, *Shem ha-Gedolim* (2 vols., 1774–86, reprinted and revised several times, latest edition 1967);
- H.J. Michael, *Or ha-Hayyim* (1891, reprint 1965). The author, who died in 1846, left incomplete a bio-bibliographical work including over 1,200 entries, covering the same ground as Azulai, but with more modern scientific tools. The work also had the benefit of being edited by the great scholar Leopold Zunz;
- A. Hyman, *Toledot Tanna'im ve-Amora'im* (2 vols., 1964²), sages of the Talmud;
- M. *Margalioth, *Enziklopedyah le-Hakhmei ha-Talmud ve-ha Ge'onim* (2 vols., 1945–46), sages of the Talmud and the geonim; idem, *Enziklopedyah le-Toledot Gedolei Yisrael* (4 vols., 1945–50), Jewish scholars from the 9th to the 18th centuries;
- S.J. Fuenn, *Keneset Yisrael* (1886), scholars from the geonic period up to the present; incomplete, ending with the Hebrew letter *Yod*;
- Abraham Stern, *Melizei Esh* (3 vols., 1930–38; 1962²), medieval and modern rabbis and scholars;
- A. Walden, *Sefer Shem ha-Gedolim he-Hadash* (1865), continuation of Azulai (see above);
- B. Eisenstadt, *Dorot ha-Aharonim* (vol. 1, 1913–15; vol. 2, 1937–41), rabbis of the recent past;
- I. Lewin, *Elleh Ezkerah* (6 vols., 1956–65), rabbis and scholars who perished during World War II;
- S. Federbusch, *Hokhmat Yisrael be-Ma'arav Eiropah* (3 vols., 1958–65). Vol. 3 also deals with East European scholars.

MEDIEVAL SPAIN

- A. Sáenz-Badillos and J. Targarona, *Diccionario de Autores Judíos (Sefarad. Siglos X–XV)* (1988);
- M. Orfali, *Biblioteca de Autores Lógicos HispanoJudíos (Siglos XI–XV)* (1997).

ḤASIDIM

- Y. Raphael, *Sefer ha-Ḥasidut* (1955²).

MODERN HEBREW WRITERS

- G. Kressel, *Leksikon ha-Sifrut ha-Ivrit be-Dorot ha-Aharonim* (2 vols., 1965–67);
- W. Zeitlin, *Kirjath Sepher, Bibliotheca hebraica post-Mendelssohniana* (1891–99).

YIDDISH WRITERS

- Z. Rejzen, *Leksikon fun der Yidisher Literatur, Prese un Filologye* (4 vols., 1926–30);
- Leksikon fun der Nayer Yidisher Literatur* (8 vols., 1956–81), ed. by Saul Raskin.

E.E. Lifschutz, *Bibliography of American and Canadian Jewish Memoirs and Autobiographies* (1970);
National Yiddish Book Center list: "BI, Biography, Autobiography, Memoirs" (approx. 850 titles).

YIDDISH THEATER

Z. Zylbercweig, *Leksikon fun Yidishn Teater* (6 vols., 1931–69).

ZIONISTS

S.L. Zitron, *Leksikon Ziyroni* (1924).

AUSTRO-HUNGARY

M. Fruehling, *Biographisches Handbuch der in der k.k. oesterreichisch-ungarischen Armee aktiv gedienten Offiziere juedischen Stammes* (1911), on Jewish officers in Austria-Hungary.

GERMANY

S. Osborne, *Germany and Her Jews* (1939);
E.G. Lowenthal, *Bewahrung im Untergang* (1966²), German Jews who perished during World War II;
E. Duckesz, *Hakhmei AHW* (1908), religious leaders of Altona, Hamburg, and Wandsbek; with German summary.

ITALY

M. Mortara, *Indice alfabetico dei rabbini e scrittori israeliti in Italia* (1886).

PALESTINE AND ISRAEL

D. Tidhar, *Enziklopedyah le-Haluzei ha-Yishuv u-Vonav* (18 vols., 1947–67, in progress), for 19th and 20th century; a combination of national biography and current Who's Who.

POLAND AND RUSSIA

S. Buber, *Anshei Shem* (1895), lay and rabbinic leaders in Lemberg (Lvov) from 1500–1900;
P. Kaplan, *Byalistoker Leksikon; Biografyefun Byalistoker Yidishe Perzenlekhkeyten* (1935), for Bialystok.

UNITED STATES

J.R. Rosenbloom, *A Biographical Dictionary of Early American Jews, Colonial Times Through 1800* (1960).

CONTEMPORARIES

Who's Who in World Jewry (1955, 1965, 1972, 1978).
World Jewish Register (1955–56), same material as in *Who's Who in World Jewry* (1955), arranged by professions.

Rabbis and Scholars

B. Eisenstadt, *Dor, Rabbanav ve-Soferav* (6 vols., 1895–1903). Volume 5 is devoted exclusively to the United States;
S.N. Gottlieb, *Oholei Shem* (1912), mainly for Eastern Europe.

Israel

Sefer ha-Ishim (1937) and *Palestine Personalialia* (1947);
Who's Who in Israel (1945/46–1967/68), title of first edition: *The Near and Middle East Who's Who*, published almost every year;

Ishim be-Yisrael (1960, 1966), personalities in Israel.

United States

J. Pfeffer, *Distinguished Jews of America* (1917–18). Volume two was also published separately under the titles: *Eminent Jews of America* and *Prominent Jews of America; Who's Who in American Jewry* (1925, 1926, 1928, 1938/39);
Biographical Encyclopedia of American Jews (1935);
American Jews, Their Lives and Achievements (1947, 1958);
Israel Honorarium (5 vols., 1968). Volumes 2–5 contain biographical sketches of American Jews.
M.D. Sherman, *Orthodox Judaism in America: A Biographical Dictionary and Sourcebook* (1996);
P.S. Nadell, *Conservative Judaism in America: A Biographical Dictionary and Sourcebook* (1988);
K.M. Olitzky, L.J. Sussman, and M.H. Stern, *Reform Judaism in America: A Biographical Dictionary and Sourcebook* (1993);
P. Hyman and D.D. Moore, *Jewish Women in America: An Historical Encyclopedia* (1997)

BIRAM, ARTHUR (Yizhak; 1878–1967), Hebrew educator. Biram, who was born in Bischofswerda, Germany, attended Berlin University and the *Hochschule fuer die Wissenschaft des Judentums in Berlin. From 1909 to 1913 he taught classics in German high schools. An early member of the Zionist movement, he went to Erez Israel in 1914 and was appointed by the Zionist Executive principal of the Reali High School in Haifa. After serving with the German Army in Palestine during World War I, Biram became in 1918 deputy principal of the Hebrew Teachers' College in Jerusalem. He returned to Haifa in 1920 and again became principal of the Reali High School, where he also taught Bible, until 1948. During his tenure, the school was enlarged and its activities diversified. In 1937 he initiated the paramilitary training program of high school pupils, called *Hagam* (abbreviation for *Hinnukh Gufani Murhav*, i.e., "extended physical education"), later renamed *Gadna. In 1943 he established and headed a teachers' seminary at the Reali High School and, in 1953, initiated the establishment of a military academy there. He wrote the three-volume *Divrei Yemei Yisrael bi-Zeman ha-Mikra be-Misgeret Toledot ha-Mizrah* ("History of Israel in Biblical Times in the Context of Near Eastern History," 1962–64), based mainly on

his own method of teaching the Bible. For Biram the training of pupils toward fulfilling their duties as citizens, and the inculcation of discipline, order, and precision, were educational principles which could determine the fate of the nation. He devoted special attention to physical education, military training, and scouting. Under his direction, the course of studies at the Reali High School consisted of six years of primary and six years of secondary education, the latter being divided into two stages, permitting specialization in the senior grades. Some of Biram's reforms were later incorporated into the educational system of the country. Biram received the Israel Prize for Education in 1954.

BIRAN, AVRAHAM (1909–), archaeologist and diplomat. Born in Petah Tikvah, of a third generation Erez Israel family, Biran received his education at the Reali Secondary School in Haifa and at the David Yellin College in Bet ha-Kerem, Jerusalem. He obtained his M.A. and Ph.D. from Johns Hopkins University in Baltimore, where he studied with William Foxwell Albright.

From 1935 to 1937 he participated in various archaeological excavations with the University of Pennsylvania in Iraq and with the American Schools of Oriental Research near Irbid in Jordan. He also accompanied Nelson Glueck on his discoveries along the Gulf of Elath, and in Palestine directed the excavations of the birthplace of the prophet Jeremiah in Anathoth (1935).

In 1937, Biran was appointed District Officer of the Palestine Mandatory Government for the area of the Jezreel Valley. During this period he carried out an archaeological survey of the area. Transferring to Jerusalem in 1945, he became District Officer of the Mandatory Government for Jerusalem. He served as liaison between the United Nations representatives and the Jewish military authorities during the fighting before the 1948 Declaration of Independence.

Biran held a variety of positions with the government of Israel, initially as administrative assistant to Dov Joseph, the military governor of Jerusalem, becoming governor of Jerusalem for several months. From 1949 to 1958 he was Israel Consul-General in Los Angeles and in 1958 was the director of the Armistice Affairs in the Foreign Ministry.

Returning to archaeology, Biran took up the position of director of antiquities and museums of Israel and in 1974 became director of the Nelson Glueck School of Biblical Archaeology of the Hebrew Union College-Jewish Institute of Religion in Jerusalem. In this capacity he directed the excavation of the Israelite sites of Ira and Aroer in the Negev; the ancient synagogue of Yesud ha-Ma'alah; and the longest ongoing excavations in Israel, at Tel Dan. These last excavations revealed a city founded in the 6th millennium B.C.E.; massive fortifications of the 2nd millennium, including a unique triple-arched gate of the 18th century B.C.E. still standing as originally built; a 14th-century B.C.E. tomb with Mycenaean imports; evidence

for the first settlement of the tribe of Dan, their installations for metal work; the Israelite sanctuary where Jeroboam had set the golden calf, the religious center of northern Israel with its high place, chambers, altars; a royal scepter; and a dedicatory inscription in Greek and Aramaic – “To the God who is in Dan.” Biran was chairman of the Israel Exploration Society from 1978 (in 1999 he was named its president), the Government Names Committee, and the International Committee of Museums and Sites (Israel) of UNESCO. In 2002 he was awarded the Israel Prize.

[Elaine Hoter]

BIRANIT (Heb. בִּירְנִית; “small fortress”), kibbutz in Israel, on the Lebanese border. Biranit was planned as the large rural center of a group of settlements including Zarit, Netu'ah, Shetulah, and Yakinton, in the framework of the Central Galilee Development Project inaugurated in 1963. Its nucleus was established on Dec. 1, 1964, by a Naḥal group affiliated with Ha-Kibbutz ha-Me'uḥad. The center's initial tasks consisted of land reclamation, afforestation, and restoration of ancient woodlands, planting of fruit orchards, road building, and other development work. In the course of time the settlement was abandoned, the site becoming a military camp.

[Efraim Orni]

BIRIYYAH (Berai) (Heb. בִּירְיָה; בִּירְיָה), in the talmudic period an important Jewish town in Upper Galilee, 1 mi. (1½ km.) N. of Safed. After Safed's importance decreased in the first century C.E. as an outcome of the Jewish war against Rome, Biriyyah took over its role as a regional center and became an important place of learning. Both in the Jerusalem and Babylonian Talmuds (Er. 45a, Git. 34a, Tj Meg. 2:3, 73b et al.) six sages who were residents of Biriyyah are mentioned. The Talmud also relates several episodes from the life of “Benei Berai,” i.e., Biriyyah's inhabitants. In Biriyyah, R. Abba Sha'ul, one of the important sages of the Mishnah, is assumedly buried together with his wife, a fact mentioned by a number of travelers as late as 1876. According to kabbalist tradition, the tomb of Benaiah son of Jehoiada, one of the commanders of King David, is also to be found near Biriyyah. The *genizah* literature testifies that Jews lived at Biriyyah also between the 11th and 13th centuries C.E., and it is possible that their descendants continued to be inhabitants of the village until the 16th century, when Biriyyah entered a new phase of ascendancy as many Jews expelled from Spain settled in Safed and its vicinity. It was then that Joseph Caro completed at Biriyyah the first part of the **Shulḥan Arukh* on the 2nd of Elul 5315 (1555 C.E.). The local Jews of that time were farmers and tradesmen, as were the Jewish inhabitants of neighboring villages. At the beginning of the 17th century, there were no longer any Jews living at Biriyyah, but the local synagogue existed until the 18th century, serving the Jewish community of Safed in case of need; its keys were kept by local Arabs who showed great reverence for the synagogue.

After the 1837 earthquake that destroyed Safed, a Hebrew printing press was temporarily brought to Biriyyah before being transferred to Jerusalem. It was the site of an Arab village Biryā. In January 1945 a group from *Bnei Akiva founded a kibbutz on top of Mt. Biriyyah at an elevation of 3,135 ft. (1950 m.) above sea level, working principally on land reclamation. On March 5, 1946, British Mandatory authorities carried out an arms search and, after discovering weapons, arrested the settlers and occupied the village. Ten days later 3,000 youths went up the mountain, set up a tent camp near the village, and started clearing stones. The British moved up strong military forces and drove the settlers away, but they returned the following night, setting up a new camp. The whole *yishuv* supported the settlers, and the British gave in, first permitting the camp to remain, then releasing the imprisoned settlers, and finally (June 7, 1946) evacuating the village buildings. In September 1948, a new religious kibbutz took over the site and was replaced in 1949 by a moshav founded by immigrants from Tripolitania (Libya). The moshav supported some hill farming, but most of its inhabitants worked in Safed and elsewhere. In the mid-1990s the population was approximately 550, rising to 771 in 2002. A large forest (with nearly 6 million trees in 1968) was planted on Mt. Biriyyah.

[Efraim Orni]

BIRK, YEHUDITH (1926–), Israeli biochemist. Birk was born in Grajewo, Poland, and immigrated to Erez Israel in 1935. She received her M.Sc. in biochemistry and microbiology from the Hebrew University of Jerusalem (1950). Her studies were interrupted by service in the Israel Defense Forces during the War of Independence. In 1954 she received her Ph.D. in nutritional biochemistry at the Hebrew University's Faculty of Agriculture in Rehovot. After a postdoctoral fellowship at Rutgers University, New Jersey, with Nobel Laureate Selman *Waksman, she returned to the Faculty of Agriculture in 1957, where she became professor and first incumbent of the Karl Bach Chair in Agricultural Biochemistry from 1970.

Birk was the founding director of the School of Nutritional Sciences at the Hebrew University (1972–74) and subsequently professor emeritus. Her world-renowned research concerns the biochemical and nutritional properties of legume seed proteins. With Donald Bowman she identified and characterized a protease inhibitor in legume seeds, the Bowman-Birk Inhibitor (BBI), which protects against contaminating insects and also has anti-cancer properties. Her honors include the Rothschild Prize in agricultural research (1978), election to the Israel Academy of Sciences (1993), and the Israel Prize in agricultural research (1998). She was elected to the European Academy of Sciences and Art in 2004 and was the 2004 awardee of the International Women's Forum (IWF), for "women who make a difference." She made major contributions to developing higher education at all levels in Israel and her academic appointments included dean of the Faculty of Agriculture (1977–80) and pro-rector and acting rector of the Hebrew University of Jerusalem (1990–95). She wrote more

than 150 scientific articles and chapters in books and in 2003 published *Plant Protease Inhibitors: Significance in Nutrition, Plant Protection Cancer Prevention and Genetic Engineering*.

[Bracha Rager (2nd ed.)]

BIRKAT HA-MINIM (Heb. בִּרְכַת הַמִּינִים, "benediction concerning heretics"), the twelfth benediction of the weekday *Amidah* (the *Shmoneh Esreh* prayer). The benediction belongs to the latter part of the *Amidah* petitions, which beseech the redemption of the people of Israel. Worded more like an imprecation (see *Tanḥuma* [Buber ed.], *Vayikra* 3), in its invocation of divine wrath against internal enemies to Jewish integrity and against external enemies of the Jewish people, it differs from the other petitions.

Birkat ha-Minim is also distinguished from the other *Amidah* benedictions by the fact that it was appended after the formulation and fixing of the *Amidah* text. The tradition of its secondary addition at Jabneh is shared by T1 (Ber. 4:3, 8a) and T2, which attributes its formulation to Samuel ha-Katan at the explicit request of the Nasi, Rabban Gamliel (Ber. 28b). Scholarly opinion is divided, however, with regard to the precise understanding of this process. One view holds that the tradition reflected by T2 (ibid.) should be accepted literally; accordingly *Birkat ha-Minim* was formulated at Jabneh and added to the already existing eighteen benedictions (see Fleischer), upping the number to nineteen. Accepted in this nineteen-benediction form in the early Babylonian rite, it was subsequently transmitted from this rite to all prayer books up to the present. Others contend (see Heinemann) that Rabban Gamliel's request simply concerned the updating of an already existing benediction among the eighteen – whose content spoke out in general against separatists (see T. Ber. 3:25) – to incorporate explicit mention of the *minim*. This also explains why the versions of the *Amidah* in the Palestinian rite number only eighteen benedictions, inclusive of *Birkat ha-Minim*. The proponents of this view submit that the nineteen-benediction form of the *Amidah* in the Babylonian rite reflects a Babylonian custom of splitting the petition for the building of Jerusalem and for the coming of the Davidic messiah into two separate benedictions. In Palestine, both subjects were combined in a single benediction regarding Jerusalem.

Its exceptional importance in Christian-Jewish relations from the first century C.E. to the present has focused intense scholarly attention on this benediction. The relatively crystallized wording of the benediction in the extant early *siddurim* (ninth to twelfth centuries) makes it likely that the text preserved there closely resembles its original formulation. We find the following wording in a Palestinian *siddur* from the Cairo Genizah:

For the apostates let there be no hope. And let the arrogant government be speedily uprooted in our days. Let the *nozerim* and the *minim* be destroyed in a moment. And let them be blotted out of the Book of Life and not be inscribed together with the righteous. Blessed art thou, O Lord, who humblest the arrogant" (Schechter).

This was also the version commonly used in the Babylonian rite, in which the penultimate sentence, “And let them be blotted out,” was replaced by a petition to cut off all enemies, “may all the enemies of your people and their opponents be speedily cut off.” Other variants reflect a longer, more elaborated request for obliteration of enemies. The language of the benediction clearly demonstrates that it was directed, not at non-Jews in general, but rather specifically aimed against external persecutors of the Jews and against Jewish separatists who posed a danger to Judaism’s internal cohesion. Nonetheless, as early as the first centuries C.E. we find church fathers voicing the claim that the Jews curse the Christians in their prayers. Such contentions, alongside censorship of *siddurim*, wrought significant changes in the wording of the benediction during the Middle Ages. Also contributing to this modificatory process were shifts in the social environment of the Jews and in their worldview. Without exception, the word *nozerim* was expunged from all Jewish prayer rites, and in many, substitutions were made for *minim* (heretics) and *meshummadim* (apostates), as in the accepted opening in the Ashkenazi rite: “may the slanderers (*malshinim*) have no hope.” Some Reform prayer books omit this benediction entirely.

[Uri Ehrlich(2nd ed.)]

BIRKAT HA-TORAH (Heb. בְּרִכַּת הַתּוֹרָה), the blessing over the Law. The study of the Law was always regarded as a foremost religious duty and hence had to be preceded by a formula of benediction. This requirement applies both to the liturgical reading of the Torah and to ordinary study. Various formulas are given in the Talmud (Ber. 11a–b) in the name of several rabbis and all have been integrated into the traditional liturgy. These benedictions were instituted in talmudic times based upon Deuteronomy 32:3 (see TJ, Meg. 4:1, 74d) and by *a fortiori* inference from the duty to recite Grace after Meals (TJ, Ber. 7:11a; TJ, Meg. loc. cit.). Three blessings over the Law are pronounced at the beginning of the daily morning prayer. The first praises God for granting Israel the privilege and the duty of studying Torah; the second is a prayer that the study of Torah may be pleasant and that it should be cultivated by one’s offspring and the whole house of Israel; the third is identical to the benediction recited before the Reading of the Law in the synagogue service: “Who has chosen us from all

nations and hast given us Thy Law.” They are followed by selections from Scripture (Num. 6:24–27), the Mishnah (Pe’ah 1:1) and the Talmud (Shab. 127a), recited in symbolic fulfillment of the duty to study Torah. Jacob b. Asher interpreted the words “Torah of truth” to refer to the written Torah, and the words “everlasting life” to refer to the oral tradition. These benedictions contain 40 words, said to symbolize the 40 days Moses spent on Mount Sinai (Tur OH 139). The benedictions over the Law have uniform wording in all modern rituals, including that of Reform Judaism. Only the Reconstructionist trend, which repudiates the notion of the election of Israel, has changed the wording of the middle part of the benediction to read “who hast brought us close to Thy service” instead of “who hast chosen us.”

BIRKENTHAL (Brezhover), DOV BER (Ber of Bolechow; 1723–1805), Hebrew writer and memoirist. Born in Bolechow, Birkenthal adopted a German name in accordance with the decree of Joseph II in 1772, when the city passed from Polish to Austrian rule. He received a traditional Jewish education, but his father, who was a wine dealer and had contact with Polish and Hungarian nobles and priests, agreed to engage a non-Jewish tutor – an unusual step for the time – who taught him Polish, Latin, German, and French. Birkenthal took over his father’s business and became the leader of the Bolechow community. In the debate with the followers of Jacob *Frank, which was held in the main church of Lemberg in 1759, Birkenthal served as interpreter and adviser to R. Ḥayyim b. Simḥah ha-Kohen Rapoport, the chief rabbi of Lemberg. His main literary work, *Imrei Binah*, is a study of false-Messiah movements in Jewish history, and the debate with the Frankists occupies a central position in it. The work was discovered in 1910, long after his death, and published by A.J. Brawer in *Ha-Shiloah* (vols. 33 and 38). A manuscript of his memoirs was discovered in Jews’ College, London, in 1912 and was published – with introduction – in 1922 in Berlin by M. Wischnitzer. It was published in Yiddish (*Ber Bolekhovers Zikhroynes*) and in English translation (*The Memoirs of Ber of Bolechow*) in the same year. These two works contain valuable information for the study of Jewish history in Galicia in the 18th century, not only for the Frankist movement but also for the history of the Council of the Lands, the Jewish census in Poland (1764), and for Jewish economic history of that period.

[Abraham J. Brawer]

BIRMINGHAM, city in Alabama, U.S. The city grew from the intersection of two railroads in 1871, and the discovery of

all ingredients necessary to make steel within a short radius. Jews were among the first settlers, but Jewish communal life did not begin to develop until 1882 when Birmingham had a population of 3,086. That year, Temple Emanu-El was formed. The Reform congregation was led in the 1890s by Samuel Ullman, who served on the board of education and pushed for the establishment of the state's first black high school. A poem Ullman wrote later in life, "Youth," was a favorite of General Douglas MacArthur's and has become a cultural mainstay in Japan. Ullman's Birmingham home is now a museum.

Morris *Newfield, who served as rabbi of Temple Emanu-El from 1895 to 1940, was president of the Central Conference of American Rabbis and an acknowledged civic and cultural leader.

An influx of East Europeans arrived from 1900 to 1920. Most of the immigrants had a poor command of English and were impoverished, but quickly found their way in the "Magic City." In 1892, an Orthodox congregation was established, Knesseth Israel, followed by Temple Beth-El in 1906, formed by KI members who wanted mixed seating. In 1926, Beth-El followed Emanu-El as the Jewish population shifted from the Northside to the city's Southside.

Jewish merchants started most of Birmingham's department stores, and Jews entered many other phases of civic life. In the financial panic of 1893, the Steiner brothers of Steiner Bank kept the city from going bankrupt.

After 1920 several important changes took place in the Jewish community. Antisemitism became more pronounced as the Ku Klux Klan gained strength, there was a sharper division between the generations, and there was an increased pace at which Jews moved from their old neighborhoods in the Northside. There was also the beginning of a united, local Jewish community, despite the continuance of a sharp division between the German Jews and the East European Jews. KI and the YMHA were the last to leave the old Northside, in the 1950s. The YMHA had been built in the 1920s with substantial non-Jewish support.

Since Jews were frozen out of local country clubs, they established the Hillcrest in 1883 for German Jews, and the Fairmont in 1920, for East European Jews. They merged in 1969, forming the Pine Tree Country Club, which opened its membership to non-Jews in 1991.

There were many strong Zionists in Birmingham in the 1940s. Rabbi Milton Grafman, who served Emanu-El from 1941 to 1975, broke with much of the Reform movement to support a Jewish state, and for a time anti-Zionist Reform Jews established their own congregation. The aftermath of the Holocaust, the establishment of Israel, and the emerging hostilities of the civil rights struggle began to eliminate the division between Birmingham's Jews.

A bomb with enough dynamite to level a city block was discovered outside Temple Beth-El in 1958. It had malfunctioned just short of detonation. White supremacists also threatened numerous local Jews who spoke out on behalf of civil rights, and much anti-integration material was overtly

antisemitic. Many local Jews therefore worked behind the scenes to resolve the crisis, including the effort to change the city's form of government in 1963. The Jewish merchants were caught in the middle, between black customers using their only leverage through boycotts and white city officials who employed boycotts and legal intimidation. Local Jews resented the presence of northern Jews in the civil rights movement, who came down south for what was seen as grandstanding. In the decades that followed, there were numerous ongoing interfaith and interracial dialogues and groups.

The YMHA moved from downtown in 1958 and became the Levite Jewish Community Center. It underwent a major expansion in 1993 and now houses the N.E. Miles Jewish Day School, established in 1973, Collat Jewish Family Services, and the Birmingham Jewish Federation and Foundation. Half of the LJCC's membership is non-Jewish.

In the 1990s, Beth-El and Emanu-El underwent major expansions, a Chabad Center was established, and KI planned to build anew in 2005.

In 2005, the Jewish population of Birmingham was approximately 5,300 in a metro area of 1 million.

[Lawrence Brook (2nd ed.)]

BIRMINGHAM, city in England. The Jewish community there is believed to have come into existence around 1730. The early Jewish settlers included peddlers who used Birmingham as a base. The first known Birmingham glass furnace was set up by Meyer Oppenheim (or Opnaim) in or about 1760. In 1783 a synagogue existed in "The Froggery." A new synagogue, constructed in Severn Street in 1809, was wrecked in the riots of 1813 along with the Nonconformist chapels but was rebuilt and enlarged in 1827. Internecine strife at this period resulted in the formation of a second congregation, but the two groups united to build the Singers Hill Synagogue, consecrated in 1856, and still in use. There were then about 700 Jews in Birmingham. The Jewish community included jewelers, merchants, and manufacturers. In the 20th century Jews were leading figures in property development and in the entertainment world. On the other hand, immigration from Eastern Europe affected Birmingham less than other large cities. Rabbis of the community included M.J. *Raphall (1841–49) and George J. Emanuel (1863–1911), succeeded by Abraham *Cohen (1913–49). To serve the East European Jews who settled in Birmingham a *bet midrash* was opened in 1901, which later became the Central Synagogue. The Hebrew Philanthropic Society, established in 1838, and the Board of Guardians, in 1870, were consolidated in 1926 in the Birmingham United Jewish Benevolent Board. The Birmingham Jewish Representative Council was established in 1937. About 500 German Jewish refugees settled in Birmingham in the late 1930s. Jews have played a prominent part in the civic and business life of Birmingham. Sir David Davis served as lord mayor in 1922 and 1923, as did Louis Glass in 1963–64. Birmingham, whose Jewish population numbered approximately 6,300 in 1967, had the lowest percentage of Jews of any

great city in England. By the mid-1990s the Jewish population had dropped to approximately 3,000, while the 2001 British census, which asked an optional question about the religious affiliation of respondents for the first time, found 2,340 declared Jews in Birmingham, although the actual figure was probably still about 3,000. In 2004, Birmingham had two Orthodox synagogues and a Reform temple, a *shehitah board, and other local institutions.

[Sefton D. Temkin]

BIRNBAUM, ABRAHAM BAER (1864–1922), cantor and composer. Birnbaum, who was born in Pultusk, Poland, was regarded as an *illui* (“prodigy”) in Talmud. He studied the violin in Lodz with Ḥayyim H. Janowski, founder of the Ha-Zamir choral society. At the age 19, he accepted a position as cantor in Hethar, Hungary, but in due course returned to Poland as chief cantor in Czestochowa. His *Hallel ve-Zimrah*, consisting of Sabbath eve melodies arranged for choir and organ, was published in 1897. His main work, which much enriched synagogue music, *Ommanut ha-Ḥazzanut*, was a treatment of liturgical music for cantor and choir, written in two parts (1908, 1912). He composed a “Romance for Violin and Piano” and set to music poems of Bialik, Frischmann, Yaakov Cohen, and Frug. Birnbaum’s activities included publishing, and he brought out four numbers of *Yarḥon ha-Ḥazzanim* (“Cantors’ Monthly”) in 1897, textbooks on music, in Yiddish and Hebrew, written for the cantorial school he opened at Czestochowa (1907) and for the Lodz teachers’ seminary. He organized the conference of cantors held in Warsaw for the purpose of founding the Aguddat ha-Ḥazzanim (“Cantorial Association”). His musical collection is in the Hebrew Union College Library, Cincinnati.

[Joshua Leib Ne’eman]

BIRNBAUM, EDUARD (Asher Anshel; 1855–1920), German cantor and one of the early research workers in Jewish music. Born in Cracow, he spent three years in Vienna studying *ḥazzanut* with Solomon *Sulzer. In 1872 he was appointed assistant cantor of the Magdeburg community. Two years later he became chief cantor of Beuthen, where his duties allowed him to travel to other cities and meet cantors and scholars. He started to collect printed and manuscript music, literature and documents, which became source material for his research and led directly to his critical essay on the *Baal T’fillah* of Abraham *Baer (*Das juedische Literaturblatt*, nos. 24 and 27, 1878). In 1879, Birnbaum succeeded Zvi Hirsch Weintraub

as chief cantor of Koenigsberg and held this position till his death. Many young cantors came to study with him and some were stimulated to undertake research. He conducted educational work among cantors and teachers by means of lectures and the publication of printed material (*Liturgische Uebungen*, 2 vols., 1900, 1912). He also composed liturgical works, some of which were published after his death (*Aseh le-Ma’an, Ha-Melekh, Kedushah, Lekhah Dodi* in the supplements of *Der juedische Kantor*, 1927–31). Birnbaum’s most important achievements were his writings and the “Birnbaum collection”, subsequently acquired by the Hebrew Union College, Cincinnati. These contain his thematic catalogue of synagogal melodies, comprising about 7,000 cards, and his collection of references to music in rabbinic texts.

[Haim Bar-Dayan]

BIRNBAUM, MENACHEM (1893–1944), Austrian portraitist and graphic artist, son of Nathan and Rosa *Birnbaum; brother of philologist Solomon Asher *Birnbaum and the poet Uriel *Birnbaum. Born in Vienna, Birnbaum had limited contact with art teachers and thus trained himself as an autodidact. He moved to Berlin in 1911. In 1912 Menachem Birnbaum was art editor of the Yiddish monthly *Der Ashmeday*, and in 1919 became art editor and contributor to *Der Schlemiel*. In 1920 he published a volume of his drawings, *Chad Gadjō*, which made him famous. He was appointed art director of two important Jewish publishing houses, Juedischer Verlag and Welt-Verlag and designed book covers and illustrations. With the advent of the Nazis (1933) he fled to Holland where he continued to draw portraits. In 1937 he published a small book with caricatures, *Menachem Birnbaum zeigt Karikaturen*, in The Hague. Caught by the Nazis in 1943, he perished in Auschwitz concentration camp. Menachem Birnbaum did not join his father, Nathan, in turning to traditional Judaism but always kept himself aware of his Jewish identity as an individual and as an artist.

[Sonja Beyer (2nd ed.)]

BIRNBAUM, NATHAN (1864–1937), writer (early pen name: **Mathias Acher**), philosopher, one of the originators of Zionism ideology, later a leader of religious Judaism. Born in Vienna of parents of Galician and Hungarian origin, his rabbinical ancestry can be traced back to the Middle Ages. At school he became estranged from observant Judaism. He did not, however, follow the assimilationist path of that period, but con-

ceived the idea that the Jews were an ethnic entity, a people, and propagated his ideas among his schoolmates. In his first year at the Vienna university studying law he founded, together with Reuben *Bierer and Moritz *Schnirer, Kadimah, the first Jewish nationalist students' organization (1882) with the aim of criticizing assimilation and setting up a Jewish nationalist consciousness. In 1884 his first publication appeared, a pamphlet called *Die Assimilationssucht, Ein Wort an die sogenannten Deutschen, Slaven, Magyaren etc. mosaischer Confession von einem Studenten juedischer Nationalitaet*. In 1885 he founded and edited the first Jewish nationalist journal in German, *Selbstemanzipation* (later entitled *Juedische Volkszeitung*), where he coined the terms "Zionist" and "Zionism." The policy and name of the journal came from Leo *Pinsker's pamphlet "*Autoemanzipation*." Birnbaum was, during the decade 1885–1895, "the most distinguished intellectual personality in Jewish national circles in Austria and Germany" (Bein). In 1893 he published *Die nationale Wiedergeburt des juedischen Volkes als Mittel zur Loesung der Judenfrage, Ein Appell an die Guten und Edlen aller Nationen*, a summing up of his first Zionist phase. He now gradually passed to a cultural conception of Zionism, as evidenced by his publication *Die juedische Moderne* (1896) and his official address, *Zionism as a Cultural Movement*, at the First Zionist Congress (1897).

After a short period of service as chief secretary of the central Zionist office run by *Herzl, ideological disagreements broke out between the two. After the Second Zionist Congress (1898) Birnbaum made a fundamental turn in his political thinking: He became a spokesman for "diaspora nationalism," publishing articles in which he severely criticized Herzl's "diplomatism," the "inorganic" nature of the Zionist movement, and the Zionist "negation of the Diaspora," its culture and language (Yiddish). He gradually withdrew from Zionism, affirming that "Israel comes before Zion," i.e., that the striving for Erez Israel must not entail neglect of the Jewish People itself. His concept was now that of an interterritorial nation, comprising and integrating all existing Jewish groups which had a cultural life of their own. The most important group in his eyes was the Yiddish-speaking one in Eastern Europe. The political aspect of these ideas found expression in a demand for the cultural autonomy of the Jews, in conformity with the autonomy principle for the various peoples of the Austro-Hungarian Empire which was then gaining ground. One of its cornerstones was language. In the case of the Jews this was Yiddish. Birnbaum set about working for its recognition as a language in its own right and an important cultural value, mainly through articles in his weekly *Neue Zeitung* (1906–1907). He learned Yiddish himself and used it as a literary medium. In 1907 he ran in Buczacz, Galicia, for the Austrian Reichsrat as a Jewish Nationalist but was fraudulently defeated by the Polish candidate. In 1908, while on a visit to America, he proposed that a world conference on behalf of Yiddish should be called. This took place in Czernowitz in 1908 with the participation of the leading Yiddish writers. A resolution was passed there declaring Yiddish to be a (not the) national language of the Jewish

people. From 1908 to 1911 Birnbaum lived in Czernowitz, publishing the newspapers *Dos Folk* and *Vokhen-Blat*.

Birnbaum's acquaintance with East European Jewry was now deepening and he "arrived at the religious core of the nation." His basic attitude underwent another fundamental change. The atheism of his materialist philosophy as well as his secular nationalism were gradually replaced by the conviction that the vocation and destiny of the Jewish People was a religious one. Finally, "God entered into his consciousness." The turning point seems to have been an intimate religious experience in 1908. He later wrote that he had not "sought" God but that God had "sought" him. During the next few years before World War I his writings and lectures dealt with problems of religion. He gradually accepted the Jewish tradition and way of life, and finally joined the ranks of religious Jewry as a practicing Jew. However, he did not feel satisfied with the state of affairs he met with there. He maintained that religious Jewry was not making a serious attempt at fulfilling its world mission as an exemplary people living on the basis of God's Word. He outlined a program toward effecting a change. Those things in the environments, occupations and habits of the Jews which were barring the way to spiritual advancement must be altered. The highest authority of the Jewish nation was to be vested in a body of Guardians of the Faith. The first step would be the founding of a small community of "Those Who (want to) Ascend" (Hever Olim), who would act as a nucleus, and for whom he laid down a scheme for disciplined living. These ideas were embodied in *Et La'asot* ("The Time Has Come for Action") and *Divrei ha-Olim* ("The Words of Those Who (want to) Ascend," both in 1917, Heb. and Yid.). He repudiated his own former "pagan-Jewish" life in *Gottes Volk* (1917), with further editions in 1918 and 1921 (translated into English under the title *Confession*, 1946). In *Vom Freigeist zum Glaebigen* (1919) he described his spiritual development. Upon the refounding of the *Agudat Israel World Organization (1919) he became its first general secretary. At that time, after the war, revolution, and pogroms in Eastern Europe, he devoted much effort to the problem of emigration and endeavored to enlist general Jewish cooperation toward regulating on a big scale what amounted to an unorganized, panic mass flight. His book *Im Dienste der Verheissung* (1927) contains a critical analysis of the "activism" of the Orthodox as a grafting of fashionable ideologies onto an organism that was inherently of a different nature and suggested to the "activists" a more fruitful field – the gigantic task of creating the necessary material preconditions toward effecting a metamorphosis. Nearness to God can only result from a complete inner transformation of the masses through their sociological stratification in favor of a life based mainly on agriculture, and this is to be achieved by the large-scale colonization of sparsely populated or practically uninhabited territories. The anarchy in the life of the Jewish community can be remedied by the establishment not of an interterritorial, state-like organization but of an interterritorial "All Israel Congregation," under authoritative spiritual leadership. The next publication devoted

to these ideas was the journal *Der Aufstieg* (1930–1933), many of whose pages were written by himself.

At the advent of Hitler (1933) he left Berlin where he had lived most of the time since 1911, and settled in the Hague-Scheningen, where he published a journal *Der Ruf* (1934–1937). A series of articles were republished in a booklet, *Rufe* (1936), published in Antwerp, his “testament to the Jewish People.” “The great ideal is to create the new Jew, based in the Torah, near to nature and to God, creative, harmonious, happy.” There are three books of selections from his writings: from his secular period the important collection, *Ausgewählte Schriften zur juedischen Frage* (2 vols, 1910), from his early religious phase, *Um die Ewigkeit* (1920) and from the later one, *Et Láasot* (1938, in Yid.). His son, Solomon *Birnbbaum edited a short selection of his religious works, *The Bridge* (1956). His other sons were Menachem *Birnbbaum and Uriel *Birnbbaum.

BIRNBAUM, PHILIP (1904–1988), U.S. author and translator. Birnbbaum was born in Zamowiec, Poland, and immigrated to the United States in 1923. He attended Howard College and completed a Ph.D. degree at Dropsie College. In 1942, he published his dissertation, a critical, scientific edition of the Arabic commentary of the Karaite Yefet Ben Ali, on the Book of Hosea. Birnbbaum’s edition of Yefet Ben Ali’s work was edited from eight manuscripts and included an English language introduction, a translation into Hebrew of the Arabic original, and critical notes on the text.

But Birnbbaum’s talent and lasting contribution was in popularizing Jewish law and custom, and in translating synagogue liturgy. His popular works included *A Treasury of Judaism* (1957), *A Book of Jewish Concepts* (1975), *The Concise Jewish Bible* (1977), and a selection of the Maimonides Code, the *Mishneh Torah* (1944, 1967), with Hebrew and English translation. Birnbbaum was widely known and respected for his fine translation and annotation of synagogue liturgy. His editions of liturgy for daily prayer, Sabbath, festivals, and the High Holidays became immensely popular, selling an estimated 300,000 copies. The Hebrew Publishing Company described him, at his death, as “the most obscure bestselling author.”

Birnbbaum was a regular columnist and book reviewer for

the Hebrew-language weekly, *Hadoar*. He also served on the board of directors of the Histadrut Ivrit b’America, an American association for the promotion of Hebrew language and culture. He also served for many years (1943–63) as principal of a Jewish day school in Wilmington, Delaware, and directed Jewish schools in Birmingham, Alabama, and Camden, New Jersey.

[Moshe Sherman (2nd ed.)]

BIRNBAUM, SOLOMON ASHER (1891–1989), Yiddish philologist and Hebrew paleographer. Birnbbaum was born in Vienna, the son of Nathan *Birnbbaum, and is the father of Jacob Birnbbaum, a key initiator of the U.S. Soviet Jewry Movement. After World War I service, he specialized in Oriental languages. Appointed lecturer in Yiddish at Hamburg University (1922), he was the first in any university to hold a teaching post for Yiddish. He emigrated to England (1933) and then to Toronto (1970). He taught Hebrew paleography at London University’s School of Oriental and African studies (1936–57) and Yiddish at the School of Slavonic and East European Studies (1939–58).

Birnbbaum wrote over 150 major articles on Yiddish, other Jewish languages, and Hebrew paleography, in German, Yiddish, and later mostly in English. He wrote *Praktische Grammatik der jiddischen Sprache* (1918, 1966², 1979³, 1984⁴), the first fully systematic Yiddish grammar, *Die Yiddische Sprache* (1974, 1986²), and *Yiddish, A Survey and a Grammar* (1979), as well as *Life and Sayings of the Baal Shem* (1933). His *Hebrew Scripts* (part 2, 1954–57, part 1, 1972), the first comprehensive work on Hebrew paleography with hundreds of illustrations and detailed paleographical examinations, charted the evolution of Hebrew script. He wrote *The Qumran (Dead Sea) Scrolls and Paleography* (1952). Due out in 2007 was S.A. Birnbbaum, *A Lifetime of Achievement: 63 Jewish Linguistic and Paleographic Studies*, ed. C. Timm.

BIBLIOGRAPHY: S. Hiley, “S.A. Birnbbaum,” in: D.B. Kerler (ed.), *History of Yiddish Studies* (1991); Rejzen, *Leksikon* (1956); J. Spalek and S. Hawrylchak (eds.), *Guide to Archival Materials of German-speaking Emigration to U.S....*, 3/1 (1997).

BIRNBAUM, URIEL (1894–1956), poet and artist; son of Nathan *Birnbbaum. Born in Vienna, he began his career as an artist and poet at a very early age as an autodidact. In 1911 the family moved to Berlin, where Uriel volunteered at the “Berliner Sezession.” His graphic and literary output continued throughout World War I, even after he was severely wounded when fighting in the Austrian Army. His war experiences found expression in a volume of sonnets, *In Gottes Krieg* (1921). Like his father Nathan, Uriel returned to traditional Judaism in 1913 and his favorite subject in poetry became trust in God as the principle of human life. He chose to deal with biblical history in order to demonstrate God’s relationship to man and published several portfolios and volumes of lithographs and paintings: *Welkuntergang* (1921), *Das Buch Jona*

(1921), *Das Kaiser und der Architekt* (1924), *Moses* (1924). In addition, he illustrated the German version of Lewis Carroll's *Through the Looking Glass* (1923). For Birnbaum the breakup of multinational Austria-Hungary was a catastrophe, as he had pushed himself out of contemporary discourse as a result of his pro-monarchical ideas. When Austria was occupied by Nazi Germany he was granted entry to the Netherlands upon the intervention of leading Dutch artists. Here he continued to write but gave up his graphic work for lack of artists' materials. His selection from his poetical output (*Gedichte, eine Auswahl*), appeared in 1957. Because of his uncompromising opposition to fashionable modern ideologies he became an outsider again and died underappreciated in the Netherlands. Since then there has been a revival of interest in him. *Die verschlossene Kassetten. Die Legende vom gutherzigen Engel und Von der Seltsamkeit der Dinge*, ed. C. Schneider (incl. bibl.) were published in 1978.

[Sonja Beyer (2nd ed.)]

BIRNBOIM, MOSES JOSEPH (1789–1831), secret agent of the czarist police and blackmailer. He started to work for the Warsaw police in 1820, in charge of about 30 servants recruited to spy on their employers, mostly persons prominent in Polish political and economic life. Later sent to Germany, he mixed in Polish student circles purporting to be an opponent of czarist absolutism to gain the students' confidence. He subsequently returned to Warsaw, using his position to blackmail Jews, exploiting the czarist anti-Hasidic legislation, and earning the hatred of both Jews and Poles, until he himself was denounced to the police. In an effort to save himself, he apostatized and adopted the name Mateusz Józef, but was arrested in 1824 and in 1830 sentenced to ten years' imprisonment. During the Polish uprising of 1831, Birnboim, along with many traitors and others hated by the Poles, was taken from prison by Jews, brought to Franciszkańska Street in Warsaw, where most of his Jewish victims lived, and hanged from a lantern.

BIRÓ (Blau), LAJOS (1880–1948), Hungarian author and playwright. Biró was born in Vienna. He studied in Hungary, and became a journalist working for the liberal *Budapesti Napló* and the radical *Vil g*. In 1906, for political reasons, he went with his family to Berlin, but returned to Budapest in 1909. During the October Revolution of 1918, Biró was appointed secretary of state at the Foreign Ministry. However,

he left Hungary and finally settled in Great Britain, where together with Sir Alexander Korda he founded the London Film Production Company, of which he remained a director until his death. Biró's Hungarian writing covered short stories and drama. The former included *Huszzonegy novella* ("Twenty-one short stories," 1908) and *Kunsz ll si emberek* ("People of Kunszállás," 1912), and among his plays were *Sárga liliom* ("Yellow Lily," 1912) and *Hotel Imperial* (1917). In his later years he turned to writing film scripts, of which the most famous were *The Way of All Flesh* and *The Private Life of Henry VIII*. In 1921, when living in Vienna, he published *A bazini zsidók* ("The Jews of Bazin"), a story about a blood libel in 1529, when the entire Jewish community of a village near Pressburg was tortured and burned to death. In this vivid description, Biró depicts the fate of the Jew in the Diaspora. In his essay, *A zsidók útja* (1921, "The Way of the Jews") he rejected both assimilation and Jewish nationalism, defining the Jewish question as unanswerable, but enthusiastically accepting the existence and continuity of the Jewish people.

[Baruch Yaron]

BIROBIDZHAN, colloquial name of the district (oblast) in Russia, for which the official designation was the "Jewish Autonomous District" (*Avtonomnaya Oblast*). Part of the Khabarovsk territory (*kray*) in the former Soviet Far East, the region is located between 47° 40'–49° 20' N. and 130° 30'–135° E. To the west, south, and southeast, it is bordered by the Amur River, the boundary between the former U.S.S.R. and Manchuria (China). Its area is 13,900 sq. mi. (36,000 sq. km.). On January 1, 1961, the estimated population of the district numbered 179,000 and that of the capital, the city of Birobidzhan, 49,000. The Jewish population of the region numbered 14,269 (8.8% of the total) in 1959; of these 83.9% lived in cities and urban settlements, while 16.1% lived in villages. The capital is located on the Bolshaya Bira River and on the Trans-Siberian Railroad which cuts through the northern sector of the territory from west to east. Its industries include farm machinery, transformers, textiles, clothing, and furniture. The climate is influenced by the prevailing monsoons and the surrounding mountains to the west and north. It improves progressively southward, the most favorable conditions prevailing in the Amur River strip in the southern part of the region. The winter is cold and dry with little snow, spring is mild, summer is hot and humid, and fall is dry and pleasant. Birobidzhan has numerous rivers and lakes abounding with fish. Most of its area is composed of heavy soils with an excess of moisture. A considerable part consists of swamps and about one-third is covered with forest. Birobidzhan has abundant mineral wealth, for the most part not commercially exploited, except for tin ores which are the basis of a large national metallurgical works, the "Khinganolovo." Grains, pulses, potatoes, vegetables, and other crops are grown. However, at the time when Jewish settlement began here, the region suffered from an almost

Map of the Birobidzhan region.

complete absence of roads and land suitable for agriculture, insufficient and poor living accommodations, harsh climatic conditions, “*gnus*” (local name for bloodsucking insects), and unsanitary conditions. The Soviet decision to select Birobidzhan for Jewish settlement was influenced by several factors, the decisive one being the desire to strengthen the security of the Soviet Far East, in view of its proximity to Japan and the danger of penetration by the Chinese. The settlement of Birobidzhan became of particular importance to the U.S.S.R. after the Japanese occupation of Manchuria in 1931–32. Since the Soviet government attempted in the late 1920s and early 1930s to improve its relations with the West, the Birobidzhan project could have also played a role in influencing Jewish and pro-Jewish public opinion there. The association of Jews with the settlement of Birobidzhan was also meant to obtain financial support from their conationals abroad, and thus alleviate the allocation of Soviet resources for this purpose. Moreover, such settlement seemed to provide a partial solution to the economic difficulties facing Soviet nationalities. To some of those active in the *Yevseksiya (the Jewish Section of the Communist Party), Birobidzhan seemed to constitute an ideological alternative to the Zionist idea. The first official step toward implementation of the project was the dispatch of a scientific delegation to Birobidzhan in the summer of 1927, to investigate the feasibility of an agricultural settlement there. Its recommendations led to a resolution by the presidium of the central executive committee of the Soviet Union on March 28, 1928, to entrust Komzet (committee for settling Jews on the land) with the supervision of Jewish settlement in the region. On May 7, 1934, the “Birobidzhan county” (*rayon*), which had been established in 1930, was granted the status of the “Jewish Autonomous District” (JAD), by a decree of the central executive committee.

Jewish immigration to Birobidzhan began in April 1928 and continued at a varying rate. Colonization proceeded under most difficult conditions, especially at the beginning. The first year proved particularly difficult, with heavy rains, floods, and an outbreak of anthrax (horse disease). In the following years a comparatively large number of Jewish settlers arrived in Birobidzhan. However, the inadequate facilities and diffi-

cult climatic conditions seriously affected the rate of those who stayed there permanently. Out of prospective settlers who arrived between 1928 and 1933, more than half left. (See the table “Birobidzhan, Jewish Population.”) The Birobidzhan project aroused a controversy among those active in Jewish settlement in the U.S.S.R. and among Yevseksiya leaders. Among its critics were Mikhail (Yuri) *Larin and Abraham Bragin, both active in the Jewish settlement movement. Larin argued that other areas of the Soviet Union, especially the Crimea, were far more suitable for Jewish colonization. The Birobidzhan project found an ardent supporter in Mikhail Kalinin, the titular head of state. In a speech delivered at a congress of the society for Jewish agricultural settlement, Ozet, in 1926, before the Birobidzhan project was born, he had declared: “The Jewish people now faces the great task of preserving its nationality. For this purpose a large segment of the Jewish population must transform itself into a compact farming population, numbering at least several hundred thousand souls.” In a reception given to representatives of Moscow workers and the Yiddish press in May 1934, he suggested that the creation of a Jewish territorial center in Birobidzhan would be the only way to normalize the national status of Soviet Jews. He also expressed his hope that “within a decade Birobidzhan will be the most important and probably the only bulwark of national Jewish socialist culture.” and that “the transformation of the region into a republic is only a question of time.” The visit of Lazar *Kaganovich, a Jew and member of the Politburo, to Birobidzhan in February 1936 greatly encouraged the Jewish leadership of the region. Birobidzhan aroused wide interest in world Jewry, especially among those who believed in Jewish *territorialism. The fact that Jewish settlement in Birobidzhan coincided with the intensification of anti-Jewish repressions in Nazi Germany also contributed to support of the idea by Jews outside the Soviet Union. Almost all sectors of the Zionist movement opposed it. Jewish organizations outside the U.S.S.R. which participated in Jewish colonization projects in the Soviet Union, such as Agro-Joint (American Jewish Joint Agricultural Corporation) and the *Jewish Colonization Association (ICA), generally took a neutral stand. The *Ort-Farband gave limited assistance to the development of industry and workshops. Those Jewish organizations abroad whose membership consisted mostly of Communists and their sympathizers supported the plan without reservation. Among the most active organizations was Icor (the American Association for Jewish Colonization in the Soviet Union), which cooperated closely with Ozet. In 1929 Icor organized a scientific delegation consisting of American specialists in agriculture and settlement to investigate the possibilities for further colonization of Birobidzhan. Ambidjan (American Committee for the Settlement of Foreign Jews in Birobidzhan) supported Jewish settlement in Birobidzhan for a short period in the mid-1930s and after World War II. Jewish organizations supporting Birobidzhan existed in Canada, Western Europe, and South America. Representatives of the Argentinian Jewish organization Procor (Society to Assist the Productivization of

the Economically Ruined Jewish Masses in the Soviet Union) visited Birobidzhan in 1929. These organizations, besides holding meetings, issuing publications, and collecting money, also propagandized the colonization of Birobidzhan by Jews from abroad. Thus, about 1,400 Jewish immigrants from countries outside the Soviet Union arrived in Birobidzhan in the early 1930s, emigrating from the United States, South America, Europe, Palestine, and other places.

From the beginning of Jewish colonization in Birobidzhan, and particularly in the mid-1930s, much was done to promote the Jewish character of Birobidzhan. Jewish collective farms were established and Jewish village councils organized. Jews served in key positions of the region. Y. Levin, formerly active in the party apparatus in Belorussia and in the secretariat of Ozet, was appointed as first party secretary of the Birobidzhan district in 1930. After the establishment of the J.A.D. in 1934, another Jew, M. Khavkin, was appointed first secretary of the regional party committee. Joseph Liberberg, head of the Jewish section of the Ukrainian Academy of Sciences, was appointed at the same time chairman of the regional executive committee. He was one of those intellectuals, who, by settling in Birobidzhan, inspired others in their pioneering efforts. A number of resolutions were passed regarding the use of Yiddish as the official language of the region, along with Russian. Schools were established with Yiddish as the language of instruction, and experiments were made to teach Yiddish even in non-Jewish schools. Street signs, rail station signs, and postmarks appeared in both Russian and Yiddish. A Yiddish newspaper and periodicals were published. In 1934 a Jewish state theater was established. A regional library, named after Shalom Aleichem, containing a sizable collection of Judaica and Yiddish works, was founded in the city of Birobidzhan. The mid-1930s was a period of great expectations for Birobidzhan's development as a center of Jewish settlement and culture in the Soviet Union. However, the purges of 1936–38 delivered a severe blow to the developing and rather weak framework of the nascent Jewish statehood in the JAD. Leading Jewish personalities of the district, such as Liberberg, were denounced as nationalists and Trotskyites, demoted from their posts, and liquidated. The purges particularly affected the immigrants from abroad. As a result, the late 1930s witnessed a shattering setback in the development of the region. Despite the optimistic plans for continuous settlement of Jews in Birobidzhan, their number was only 13,291 in 1939 (18.57% of the total population), with 10,415 (35.13% of the total) in the capital city. The Soviet annexation of the Baltic states and parts of eastern Poland and Bukovina in 1939–40 resulted in a sudden increase in the Jewish population of the U.S.S.R. During that period plans were initiated to transfer Jewish settlers from the annexed territories to Birobidzhan. However, the outbreak of the Soviet-German war in 1941 put a fast end to these plans. Although the war years did not witness any sizable increase in the Jewish population of the region, the very idea of Birobidzhan as a center for Jewish statehood in the Soviet Union received new meaning.

Jewish population of Birobidzhan 1928–59. The lower graph shows the total Jewish population, the upper one the immigration into the region.

The Holocaust and growth of antisemitism in the U.S.S.R. during the war resulted in revived interest in the JAD among Soviet Jews. The growth of national feelings and the difficulties faced by Soviet Jews who had fled to the East, upon their return to their prewar homes in the western parts of the U.S.S.R., caused some to turn to Birobidzhan. Moreover, since the hopes for a planned settlement of Jews in the Crimea did not materialize, Birobidzhan remained the only alternative for a compact Jewish settlement. Numerous requests for immigration to Birobidzhan were received by the JAD authorities in the postwar years, and a flow of new Jewish settlers reached the region between 1946 and 1948. Articles in the *Eynikayt*, organ of the Jewish anti-Fascist Committee, emphasized the idea of Jewish statehood in Birobidzhan. The Soviet Jewish writer *Der Nister, who accompanied a trainload of new settlers, wrote: “There are some travelers whose intentions are only materialistic, and there are others whose intentions are different, of a national character ... and there are also burning enthusiasts, ready to give up everything in order to live there ... and among them a former Palestinian patriot.... Although in his fifties, he hustles about during the day and is sleepless at night, hoping to see his new enterprise come true....” The short postwar migration to Birobidzhan increased the local Jewish population by one-third, and by the end of 1948 it was estimated at about 20,000, the largest ever in the district. The postwar period witnessed an increase in the number of Jews in the local administration and an intensification of Jewish cultural activities. Among local Jewish writers active in the “Soviet Writers’ Association of the JAD” were Buzi Miler, Israel *Emiot, H̄ayyim Maltinski, Aaron *Vergelis, and others. Assistance from Jews abroad was permitted once again. The revival of Birobidzhan as a Jewish center came to a halt toward the end of 1948, as a result of Soviet policy to suppress Jewish activities

throughout the U.S.S.R., and purge those involved. While the purges of the late 1930s mainly affected individual Jews holding official positions, those of 1948 and thereafter aimed to destroy any sort of Jewish activity in the region. Thus, most of the local Jewish writers were imprisoned, the Birobidzhan Jewish theater was closed, teaching of Yiddish in local schools was discontinued, and a great number of Yiddish books were removed from the Shalom Aleichem Library. Jewish immigration to Birobidzhan ceased, and its Jewish population shrank considerably. The post-Stalin period did not bring any substantial changes to Jewish life in Birobidzhan. Jewish inhabitants comprised less than one-tenth of the general population of the region in 1959, party and administrative positions were not generally held by Jews, and Jewish agriculture was almost nonexistent. In 1970 the Jews numbered 11,452. The sole kolkhoz with a comparatively large Jewish membership is that of Valdheim in the vicinity of the capital, but it is now only a branch of the large kolkhoz "Ilich's Wills" and its Jewish population is diminishing. Such key positions as secretary or chairman of the local party regional and district committees (the district is divided into five administrative counties) were generally not held by Jews, although in 1970 Lev Shapiro was appointed first secretary of the regional Communist Party organization. Of the five deputies to the Council of Nationalities of the U.S.S.R., only a minority was Jewish. The sole expression of Jewish cultural activity in 1970 was a two-page Yiddish newspaper, *Der Birobidzhaner Shtern*, nearly devoid of all Jewish content, which appeared three times weekly and had a circulation of 1,000. There were also a few street signs in Yiddish, and Shalom Aleichem Street remained one of the thoroughfares of the capital. There was one synagogue. All official and public business was conducted exclusively in Russian. N.S. Khrushchev, Soviet premier and first party secretary, stated in an interview for *Le Figaro*, which appeared on April 9, 1958, that "it must be admitted that if we strike a balance we would have to state that the Jewish settlement in Birobidzhan was a failure." He further put the blame for it upon the Soviet Jews, who, according to Khrushchev, never liked collective work and group discipline. It is difficult to ascribe the failure of the Birobidzhan experiment to one single cause. In the history of the Jewish people it belongs to the series of other futile attempts at planned Jewish mass settlement, based on agriculture, whose failure is often attributed to its implicit or explicit negation of the ultimate return to Zion. However, viewed in the context of Soviet Jewish reality, the immediate cause of its failure was undoubtedly the fact that twice, in 1936–37 and in 1948–49, the Stalinist purges put a brutal end to the short periods of developing autonomous Jewish life and culture in Birobidzhan. In the 1990s most remaining Jews immigrated to Israel and the West.

[Jacob Lvavi (Babitzky) / Shimon Redlich]

BIRSTEIN, YOSSEL (1920–2003), Hebrew and Yiddish writer. Born in Poland, Birstein left his hometown at the age of 17 for Australia. During World War II he served in the Australian army and immigrated to Israel in 1950. For several years he was a member of Kibbutz Gevat, where he worked as a shepherd. He then lived in Kiryat Tivon, working in a local bank before settling in Jerusalem, where he held a position at the archives of the Hebrew University. Birstein's early prose was written in Yiddish; Gershon *Shaked in fact considers him to be the definite heir in Israel of Yiddish writer *Shalom Aleikhem. Birstein was introduced to Hebrew readers by Menahem Peri, who translated his stories from Yiddish and published all his works in his series *Ha-Sifriah ha-Hadashah*. Birstein's prose is suffused with melancholy humor, with wisdom and compassion, marked by the author's sensitive observation of people and a fine touch for minute details of everyday life. Birstein is the author of four novels and seven collections of stories. *Ha-Mutavim* ("The Collector," 1982) depicts the world of banks and the stock exchange. *Panim be-Anan* ("A Face in the Cloud," 1991) is the story of old Tishbein, trying to write about his love for a French dancer while being confronted with the fortunes of the dead crook Bitman and his wish to salvage the lost honor of Yiddish literature. The novel is an elegy to European Jewry and to a culture that was brutally destroyed. *Al Tikra Li Iyov* ("Don't Call Me Job," 1996) takes an ironic, gently humorous view of the biblical story. The strains of Job's lament can be heard even in the most mundane and fortunate lives, in that of Shlomo Shapira, who became a millionaire in Australia and later settled in Jerusalem, as well as in that of locksmith Daddon. The comic and the grotesque mark Birstein's realism. His collections of stories include *Midrakhot Zarot* ("On Narrow Paths," 1959), *Ketem shel Sheket* ("A Drop of Silence," 1986), *Sippurim mi-Ezor ha-Shalvah* ("Stories from the Realm of Tranquillity," 2004), and others. Several of these collections and novels have been translated into German, Chinese, and Italian. An English translation of the story "Fuchs Was Already Old" is included in M. Gluzman and N. Seidman (eds.), *Israel: A Traveler's Literary Companion* (1996).

[Anat Feinberg (2nd ed.)]

BIRTH. The injunction to "be fruitful and multiply" (Gen. 1:28) is regarded as the first commandment of the Bible. As a consequence of the disobedience of Eve in the Garden of Eden,

the pangs of childbirth were foretold (Gen. 3:16). References to pangs of travail as the most intense of pains are very frequent in the books of the prophets (e.g., Jer. 6:24; 22:23; 49:24; 50:43; and Micah 4:9–10). Midwives assisted in the delivery (Gen. 35:17), and it seems that a birthstool, called *ovnayim*, was often used (Ex. 1:16). The Bible records the deaths of Rachel (Gen. 35:18) and the daughter-in-law of Eli (1 Sam. 4:20) in childbirth. The Talmud states that Michal (11 Sam. 6:23) also died during childbirth (Sanh. 21a).

Biblical law regarding birth is confined to laying down the period of ritual impurity of the mother (Lev. 12). The mother of a male child is unclean for seven days, followed by a 33-day period of impurity; these periods are doubled in the case of a female child. At the conclusion of these periods a sin-offering and burnt-offering were brought by the mother. According to the Talmud, the sin-offering is incumbent upon her because during the anguish of childbirth, she foreswears any future relations with her husband, which she later regrets (Nid. 31b).

In the Talmud and the Midrash

The sages attributed death during childbirth to neglect of the laws of family purity, failure to separate the dough-offering, and carelessness in kindling the Sabbath lights (Shab. 2:6). Viability began from the time the fetus was six months and one day old, although it was considered as a fact that an eight-month-old fetus was not viable (Tosef., Shah. 15:7; see *Abortion). However, many midrashim and later commentaries report births of a seven-month-old fetus. Thus, according to the commentaries, many of Jacob's sons were born at age seven months. Before birth, it is permissible to perform an embryotomy when the mother's life is in danger, since "her life comes before that of the child." Once the greater part of the child has been born, or his head alone has emerged from the birth canal, he is considered a living being and the mother's life no longer takes precedence (Oho. 7:6). The child is not considered viable until it is 30 days old. No death penalty is therefore incurred for killing a newborn child unless it is certain that he could otherwise have lived for 30 days (Nid. 5:3, Nid. 44b). All work necessary for the delivery of a child may be performed on the Sabbath (Shab. 18:3); if the mother dies during labor, the Sabbath must still be desecrated and all attempts made to save the unborn child (Ar. 7a).

For the purposes of birthdate and setting the time of circumcision, birth is determined by the projection of the fetus' head out of the birth canal (Nid. 42b). Midwives were considered reliable witnesses for accounting for the hour of the birth. The delivery of a child by Caesarean section was not regarded as "an opening of the womb" (Ex. 13:2), and the child had neither the privileges nor the obligations of the firstborn (Bek. 8:2).

Throughout Jewish history, male offspring were desired. However, despite differing opinions, Bet Hillel's position that the birth of a son and a daughter constituted the fulfillment to be fruitful and multiply was eventually accepted (Yev. 62a). In addition, despite contrary opinions in the Talmud, it became

accepted that the injunction to be fruitful and multiply was a male and not a female responsibility.

Customs and Folklore Among Ashkenazi Jews

Most of the customs surrounding birth belong to the category of popular folklore, much of which is not specifically Jewish but was adapted from local cultural surroundings (Tosef., Shab. 6:4; Sh. Ar. YD 178). The following biblical selections were recited for a woman in labor: Psalms 20; 1 Samuel 1; Genesis 21:1–8 or Exodus 8:11. Precious stones and a variety of herbs were used to facilitate delivery, which was usually supervised by an experienced midwife and friends and relatives of the parturient. A magic circle was drawn with chalk or charcoal on the floor of the room to guard against evil spirits. As a good omen for easy and speedy delivery, all the ties and knots in a woman's garments were undone and in some societies all doors in the house were opened wide. If her travail was difficult, the keys of the synagogue were placed in her hand, she was girded with the band of a Torah Scroll, and prayers were recited at the graveside of pious relatives. In extreme danger, prayers were said for the parturient in the synagogue and a Torah scroll was brought to the house and was left in the corner of the birthing chamber. At times the circumference of the cemetery walls was measured and according to their length a number of candles were donated to the synagogue. Mother and child were surrounded by various charms and talismans from the moment of birth until the circumcision (see *Amulet). Most of these charms were to guard them against the female demon *Lilith and her counterparts, such as Frau Holle, and they were known by different names, such as *kimpetsel* (from *kindbet*, "child bed" and *tsetl*, "a note"), *Shir Hamalos-Tsetl* (from *Shir ha-Ma'lot* – the Song of Degrees), and *Shmir-Tsetl* (from *shemirah*, "guarding"). They were placed above the bed of the woman and above the doorposts of the room. In medieval and early modern Germany, it was customary for the woman to keep an object made out of iron (**BARZEL** – an acronym of Bilhah, Rachel, Zilpah and Leah, Jacob's wives) with her at all times during the weeks following the birth, to protect her from evil spirits. Some of these amulets used kabbalistic names of God, especially the 42-letter name beginning with **ABAG YATATZ**, which is derived from the abbreviation of the prayer hymn *Anna be-Kho'ah*.

A popular custom until modern times, in the case of the birth of a male child, was the vigil ceremony which was performed every night. In Oriental communities it was called *tahdid*. Friends and relatives nightly gathered at the home of the newborn to recite the *Shema in order to protect the child from demons. Schoolchildren led by their teachers also participated in this ceremony and were rewarded with apples, nuts, and sweets.

Whereas a boy is named at the circumcision, there is no evidence concerning the naming of girls until the 15th century. In early modern sources, we hear of a naming ceremony in the synagogue or at home. In Germany and Western Europe the naming took place in a home ceremony on Sabbath after-

noons. Called *Hollekreisch*, the custom originated in German folklore and superstition. This custom, which was observed for boys and girls, included the lifting of the cradle and the giving of a name. For boys, this was a non-Jewish name, a *shem ḥol*, whereas for girls, this was the only naming ceremony. This ritual took place on the afternoon of the Sabbath when the parturient left her home for the first time, about a month after the birth. During the 16th and 17th centuries, in some communities, it became a customary to name girls in the synagogue when the father was called to the reading of the Torah. This custom is still commonly found today. More recently, many families in Israel and the Diaspora have adapted the Sephardi custom of having a special ceremony, often called *Zeved ha-Bat* or *Simḥat Bat*, at which the girl is named.

[Elisheva Baumgarten (2nd ed.)]

Middle Eastern Customs

Among the methods utilized to protect the mother and infant from evil spirits – particularly *Broshah*, the female demon who steals newborn children – was the hanging of a *hamsikah*, an *amulet in the shape of the palm of the hand with fingers, or a seven-branched candelabrum. Amulets containing biblical verses were also used, and it was customary to place sweetmeats under the bed so that the evil spirits would be occupied with eating them. In Salonika it was customary to leave the doors of the house and all its cupboards open during pregnancy to ensure that the mother would not miscarry. It was also customary to measure a string seven times around the grave of a renowned rabbi and then bind it around the stomach of the pregnant woman to ensure an easy pregnancy. The mother and her relatives also prayed at the graves of pious men in the fifth month of her pregnancy. To ensure that the child would be a male, the mother pronounced the intended name of a boy every Friday. She was guarded for 15 days after birth, and blue beads or pieces of ivory and coral were hung above the cradle of the child. Garlic and other plants were hung in the room, and an open hand was painted on the door. An attempt was made to keep the mother awake for the first three days after birth to prevent Lilith from harming her. In Yemen, a festive meal, at which the name was given, was held on the third day. In Kurdistan the mother was not allowed to leave the house after nightfall for 40 days. Since delivery usually takes place now in modern hospitals, most of these traditional customs at childbirth have tended to disappear, particularly since they were primarily based on medieval superstitious folklore. Naming a daughter at the synagogue, however, has been retained in traditional, Conservative, and Reform Jewish practice.

Contemporary Developments in Birth Rituals for Girls

The Jewish feminist movement that began in the 1970s encouraged the development of ceremonies to publicly sanctify the entry of Jewish baby girls into the covenant. By the beginning of the 21st century, public welcomes for baby girls had become normative in American Judaism. Numerous versions of *Brit Bat* (the covenant of a daughter) or *Simḥat Bat* (the joy of a

daughter) rituals were available for home and synagogue use by parents and rabbis from all Jewish religious movements. Some of the ceremonies made use of symbols such as candles (*brit ha-nerot*). Although ceremonies for baby girls are most often held in synagogues during services where the Torah is read, many are now conducted at home like those that accompany circumcisions. In Israel the ceremony or party celebrating the birth of a daughter is sometimes called *brita* (a feminization of the word for covenant).

Simḥat bat ceremonies may include a formal welcome by those present as the baby girl is carried in; spelling the child's Hebrew name out with biblical verses; bestowing the priestly benediction and traditional Friday night daughter's blessing; a naming prayer including both father's and mother's names in that of the daughter; explaining the rationale for the name; an expression of thanks for return to good health by the mother (*birkat ha-gomel*); a series of short blessings including the one over wine and sometimes in the format of the seven benedictions (*sheva brakhot*) of the traditional Jewish wedding ceremony; and special added benedictions to the grace after meals after the festive meal (*se'udah shel mitzvah*) which follows the ritual. Often, booklets are printed and distributed which announce the name and provide a "script" for the ceremony so that all present may participate. These manuals serve as vehicles for innovation and as educational tools to enable assimilated Jews and the growing number of non-Jews who attend Jewish life cycle rituals to understand and follow what is going on before them.

Another evolving aspect of contemporary rituals connected with birth is the inclusion of the mother in ceremonies for sons and daughters. Until the last quarter of the 20th century mothers were often absent from the ceremonies for their sons and the naming of their daughters in the synagogue. Today, in some circles the family waits to name the daughter until the mother is able to be present. She may have a Torah honor in the synagogue and recite the prayer for a safe recovery. Both boys and girls may be named as the children of both mother and father. At a circumcision, the mother as well as the father may be in the room and say the prescribed benedictions.

BIRTH CONTROL. Jewish tradition ascribed the practice of birth control to the depraved humanity before Noah (Gen. R. 23:2, 4; Rashi to Gen. 4:19, 23). The sole explicit reference in the Bible to what may be considered as some form of birth control occurs in Genesis 38:9–10: the Lord punished Onan by death because he had “spilled his seed on the ground” to prevent the birth of a child from the *levirate marriage to his deceased brother’s wife Tamar. On the strength of this passage, and as constituting a deliberate violation of the first commandment to “be fruitful and multiply” (Gen. 1:28), the Talmud sternly inveighs against “bringing forth the seed in vain,” considering it a cardinal sin (Nid. 13a). Legislation on contraception proper is to be found in a talmudic passage which permits (or requires, according to another view) the use of a contraceptive tampon by minor, pregnant, or lactating women, to prevent any danger to their own or their offspring’s life resulting from a conception under those circumstances (Yev. 12b). A permissive ruling extended to women, but not to men, also allows for the use of a “cup of roots” or “potion of sterility” (Tosef., Yev. 8:4), probably some oral contraceptive known to the ancients, which was to produce temporary or in certain dosages even permanent sterility. While the medieval codes strangely omit any reference to physical birth control devices, they codify the permissive ruling on the oral sterilizing agent (Sh. Ar., EH, 5:12). It is in the rabbinic responsa, especially those of the past 200 years, that the attitude of Jewish law to birth control is defined and discussed in great detail. The many hundreds of rulings recorded in these responsa consider urgent medical reasons as the only valid justification for certain contraceptive precautions. Jewish law regards such decisions as capital judgments and it would, therefore, insist on dealing with each case on its individual merits and on the evidence of competent medical opinion. Where some grave hazard to the mother, however remote, is feared, as a result of pregnancy, the rabbinic attitude is usually quite liberal, all the more readily if the commandment of procreation (which technically requires having a son and a daughter) has already been fulfilled. Under no circumstances, however, does Jewish law sanction any contraceptive acts or safeguards on the part of the male, nor does it ever tolerate the use or distribution of birth control devices outside marriage. While the law proscribes sexual intercourse among spouses in times of famine (Ta’an. 11a; Sh. Ar. OH 240:12; 574:4), this is not to be taken as a recognition of the economic argument in favor of birth control. On the contrary, the restriction from which childless couples are in any case excluded is meant simply to curb the pleasures of marital indulgences at a time of great national suffering, just as conjugal relations are among the experiences of pleasure and comfort forbidden on days of national or private mourning. More characteristic of the spirit, if not the letter, of Jewish law

is the story related in a famous 13th-century moralistic work: A poor person complained that he could not afford to support any more children and asked a sage for permission to prevent his wife from becoming pregnant again. The sage said: “When a child is born, the Holy One, blessed be He, provides the milk beforehand in the mother’s breast; therefore, do not worry!” But the man continued to fret. Then a son was born to him. After a while the child became ill and the father turned to the sage: “Pray for my son that he shall live!” “To you applies the verse,” exclaimed the sage, “Suffer not thy mouth to bring thy flesh into guilt” (Eccles. 5:5; *Sefer Hasidim*, ed. R. Margoliot (1957), no. 520). The sources of Jewish law and morals do not present the problem of “the population explosion” as relevant to birth control. According to some rabbinic authorities, the restrictions on birth control do not necessarily apply to non-Jews as the latter are not held to be bound by the commandment to “be fruitful and multiply” (see *Mishneh le-Melekh*, to Maim., Yad, Melakhim 10:7). The threat of a “population explosion” is less likely to agitate a people that for most of its history has been threatened with virtual annihilation and is now haunted by the specter of “the vanishing Jew,” due to the gross imbalance between a low natural increase and a high artificial decrease through drift, assimilation, and intermarriage. In recent times, the practice of birth control has invariably been more prevalent among Jews than other groups living in the same general society, as shown by the disproportionately low Jewish birthrates according to comparative surveys in America, in Europe, and notably in Israel. In Israel, fertility rates for Jewish women in 1995 were down to 2.6 children, as opposed to a high of 4.0 in 1950 and as opposed to 4.7 in 1995 among Israeli Arabs (and 7.4 in Gaza). The Jewish birthrate is appreciably higher only among the Orthodox who, for religious reasons, do not usually resort to birth control. In common with the attitude of most Protestant denominations, Reform Judaism would generally leave the decision on birth control to the individual conscience, recognizing social and economic factors no less than the medical motivation.

BIRTHDAY. The celebration of birthdays is unknown in traditional Jewish ritual. A comparatively late exception, however, is the *bar mitzvah and the bat mitzvah. The only reference to a birthday in the Bible is that celebrated by Pharaoh (Gen. 40:20). In Reform and Conservative synagogues, special prayers of thanksgiving are recited on the occasion of significant birthdays (e.g., 50th, 70th, 80th, etc.) and at silver and golden wedding anniversaries.

BIRZAI (Lith. **Birži**; Yid. בִּירְזֵי), district capital in northern Lithuania, near the Latvian border. Jews started to settle there in the beginning of the 17th century. Birzai was one of the three leading communities of the “*medinah* [province] of Zamut” (Zhmud) in the mid-17th to mid-18th century. A small Karaite community also existed there. The Jewish population numbered 1,040 in 1760; 1,685 in 1847; and 2,510 in 1897 (57% of the total). In 1915 the Jews were expelled from Birzai by the Russian military authorities. After the war some of the exiles returned. The Jewish community developed during the period of Lithuanian independence (1918–39). There were approximately 3,000 Jews living in Birzai in 1934 (36% of the total). Three of the 12 city councilors were Jewish. Hebrew and Yiddish schools and a *talmud torah* were in operation. Most Jews earned their livelihoods from trade in wood products and flax; several factories for weaving and spinning were owned by Jews.

Shortly after the occupation of the town by the Germans in June 1941, the Lithuanian nationalists began to murder and maltreat the Jews. A ghetto was established and on August 8, 1941, Lithuanians executed 500 Jewish men. The remaining Jews were similarly murdered shortly thereafter.

BIRZULA (from 1935, Kotovsk), town in Ukraine. Until May 1903 it was a village, and under the “Temporary Regulations” of 1882 (see *May Laws) Jews were prohibited from settling there. The Jewish inhabitants engaged in trade and crafts. They were attacked in a pogrom on October 24, 1905. In 1919, 50 Jews were massacred in Birzula by the followers of Simon *Petlyura. The Jewish population numbered 2,507 in 1926 (25% of the total) and 2,735 in 1939. In the Soviet period they earned their living as blue-collar workers, artisans, and clerks. Birzula was occupied by the Germans on August 6, 1941. In the same month, with the help of the Romanians, they murdered 113 Jews. A ghetto was established, and in November the Jews were marched toward Dubossary, with 650 murdered on the way. Hundreds of Jews from Bessarabia and Bukovina were deported to the area; most were killed or died of starvation or disease. Only 95 were alive on September 1, 1943.

BISCHHEIM, French town in the department of the Bas-Rhin. Jews settled there after their expulsion from *Colmar in 1512. H. *Cerfberr, one of the general syndics of Alsace Jewry

in the second half of the 18th century, lived in Bischheim, as did his brother-in-law, David *Sinzheim. Cerfberr set up a foundation on behalf of the community with a capital of 175,000 livres for charitable activities and education. There were 473 Jews living in Bischheim in 1784. The wooden synagogue, built in 1781, was replaced by a new one in 1838. It was sacked during the German occupation in World War II, destroyed in 1944, and rebuilt in 1959. The Jewish community in 1968 had 360 members. It has a *mikveh* which belonged to David Sinzheim.

[Roger Berg]

***BISCHOFF, ERICH** (c. 1867–1936), German biblical and talmudic scholar. Bischoff repeatedly served as expert on Judaism in court cases, furnishing memoranda on the *blood libel, the ethics of the Talmud and the Shulhan Arukh, etc. He refused to be termed either anti- or philo-Semitic, but was criticized by Jewish writers and organizations for his views (cf. C. Bloch, *Blut und Eros im Judentum*, 1935). In his *Klarheit in der Ostjudenfrage* (1916) he suggested the introduction of a special *Ostjuden* tax to be raised by Jewish organizations either to improve the conditions of unwanted Eastern European Jews in Germany or to settle them in Palestine. Among Bischoff's published works are also *Kritische Geschichte der Thalmud-Uebersetzungen aller Zeiten und Zungen...* (1889), *Rabbinische Fabeln ueber Talmud, Schulchan Aruch, Kol Nidre...* (1922), *Das Blut im juedischen Schrifttum und Brauch* (1929), and *Das Buch vom Schulchan Aruch* (1942⁴). Bischoff also edited and translated – from an Oxford manuscript – the famous anti-Christian tract *Toledot Yeshu (Ein juedisch-deutsches Leben Jesu)*, 1895). Though Bischoff pretended to be objective in his judgment on Judaism, his work misinterpreted Jewish sources and was fully exploited by the Nazis.

[Arnold Paucker]

BISCHOFFSHEIM, family of bankers in Belgium, Britain, and France. The family's founder RAPHAEL (NATHAN; 1773–1814) was born in Bischoffsheim on the Tauber and settled as a young man in Mainz, where he became a prominent merchant and president of the Jewish community. His elder son, LOUIS (LUDWIG) RAPHAEL (1800–1873) found work at a banking house in Frankfurt. When he was twenty he moved to Amsterdam where he established a bank. Through his marriage to Amalie Goldschmidt, he became related to Europe's banking aristocracy. His business expanded rapidly and in 1827 he established a branch in Antwerp, in 1836 together with the Goldschmidt family a London branch known as Bischoffsheim and Goldschmidt, and in 1846 another branch in Paris. In 1848 he moved to Paris, where his bank cooperated with great French houses in national and international transactions. At some stages in the development of his banking busi-

ness, he had the help of his nephew, Ludwig *Bamberger. His many philanthropies were devoted to charitable and educational purposes, including support of the Association Philotechnique, of which he was president, and the Athenée Theater, which he founded.

His brother, RAPHAEL JONATHAN (1808–1883), moved to Brussels in 1830 after Belgium achieved its independence and became one of that country's most influential financial figures. In 1850 he helped found the National Bank of Belgium and served on its board of directors for twenty years. He was adviser to the royal house and in 1862 became a senator, who was regarded by his colleagues as the principal authority in his field. He was an active member of the Jewish consistory and was well known for his benefactions, such as the endowment of a chair for Arabic at the University of Brussels. A street in that city bears his name. His daughter, Clara, married Baron Maurice de *Hirsch in 1855.

Louis Raphael's son RAPHAEL LOUIS (1823–1906), who was born in Amsterdam, succeeded his father as head of the Paris bank. His principal outside interest lay in astronomy, and his generous gifts made possible the building of a number of observatories, the best-known of them at Mont Gras, near Nice. In 1881 he was elected to the Chamber of Deputies.

Louis Raphael's second son, HENRY LOUIS (1828–1907), married Clarissa Biedermann, the sister-in-law of James *Stern

of Stern Brothers of London. He headed the London house of Bischoffsheim and Goldschmidt. In conjunction with other financial institutions his bank participated in many international projects, including railway construction in France, Italy, and the Balkans, and the government financing of Turkey, Egypt, and various Latin American countries. In 1881 his eldest daughter, ELLEN ODETTE (1857–1933), married William Ulick O'Connor, the fourth Earl of Desart, and lived at the Desart seat at Kilkenny until her husband's death in 1898. Despite her anti-suffrage agitation, she became the first woman senator of the Irish Free State. This signal honor was the product of her efforts on behalf of Ireland's cultural and economic welfare. Lady Desart remained an active Jew throughout her life, holding office in a number of Jewish philanthropic organizations and supporting them generously. Her sister AMALIA married Sir Maurice Fitzgerald, 20th Knight of Kerry. She also retained her Jewish interests, was active in support of the work of the Jewish National Fund, and organized a project for the rescue of Jewish children from German-controlled territories in the 1930s.

[Joachim O. Ronall]

BISGYER, MAURICE (1897–1973), U.S. social worker and administrator. Bisgyer was born in Brooklyn and graduated from New York University in 1918, beginning his career in Jewish communal service a year later as executive director of the Baltimore Jewish Education Alliance, a post which he held for three years. After a year with YMHA in Trenton, N.J., he became director of the Jewish Community Center in Washington. In the 1930s, his pioneering effort in obtaining sponsors willing to facilitate the entry of Jewish refugees into the United States made it possible to bring 15,000 refugees from Europe to the United States. President Hoover appointed him to the National Advisory Committee on Education in 1929, and President Roosevelt reappointed him in 1933. In 1946, he became a member of Attorney General Tom Clark's Committee on Juvenile Delinquency.

In 1937, Bisgyer became chief administrative officer of the B'nai B'rith, and held the position of executive vice president until his retirement in 1964, when he was named honorary vice president. In addition to his work in the United States, he traveled all over the world and took part in meetings with leaders of governments and with Popes John XXIII and Paul VI. He played an important role in arranging the meeting of President Truman with Chaim *Weizmann in March 1948, to which he accompanied Weizmann. Bisgyer was also a pioneer in Jewish social service. He was co-author (with Henry Monsky) of *Man and his Work* (1947) and wrote *Challenge and Encounter* (1967).

[Frederick R. Lachman]

BISHOP, JOEY (Joseph Gottlieb; 1918–), U.S. actor and comedian. Born in the Bronx, New York, and raised in South Philadelphia, Bishop earned fame as an actor, comedian, talk show host, and member of the “Rat Pack.” After dropping out of high school and serving a stint in the U.S. Army during WWII, Bishop began doing stand-up comedy at clubs in New York, Cleveland, Miami, and Philadelphia. He adopted the surname “Bishop” while working with Morris Spector and Sammy Reisman in the comedy troupe “The Bishop Trio,” whose members borrowed the name from their chauffeur. During the 1950s, Bishop’s relationship with Frank Sinatra led to his inclusion in the “Rat Pack,” in which he played the role of the straight-man in their stage performances, and wrote much of the group’s comic material. Sinatra considered Bishop such an integral part of the “Rat Pack” and its enormous success that he called Bishop “the hub of the big wheel.” Bishop co-starred alongside his fellow “Rat Pack” members in *Ocean’s Eleven* (1960). He went on to host two versions of *The Joey Bishop Show* during the 1960s. Bishop also owns the distinction of having co-hosted *The Tonight Show* (starring Johnny Carson) more times than anyone else, 177. His other notable screen credits include *The Deep Six* (1958), *The Naked and the Dead* (1958), *Texas Across the River* (1966), *Valley of the Dolls* (1967), and *The Delta Force* (1986).

[Walter Driver (2nd ed.)]

BISLICHES (Bisseliches), MORDECAI (Marcus) LEIB (1786–1851), bibliophile and rabbinic scholar. Bisliches left his native Brody, Galicia, to lead an unsettled life. In 1816 he went to Paris where he successfully engaged in business. There, in association with his brother Ephraim, he prepared for publication Isaac *Abrabanel’s *Yeshu’ot Meshi’ho* from a manuscript in the Bibliothèque Nationale (1828). Bisliches returned home, but soon left again, this time for Holland and England, always searching for rare books and manuscripts. On a third journey he went to Italy where he made many discoveries, and on his return prepared the following works for publication: Shem Tov b. Joseph *Falaquera’s *Sefer ha-Nefesh* (1835) and *Moreh ha-Moreh* (1837, 1961²); Samuel ibn *Tibbon’s *Yikkavu ha-Mayim* (1837), with a largely autobiographical introduction; *Naḥmanides’ novellae to tractate *Shabbat* under the title *Ozar Neḥmad* (1837); Abba Mari b. Moses (of Lunel)’s *Minḥat Kena’ot* and *Sefer ha-Yare’ah* (1838), with a letter concerning Maimonides’ Guide; and Abraham *Ibn Ezra’s *Sefat Yeter* (1838), with an introduction by M. Letteris. In 1846 Bisliches, in partnership with S.G. Stern, sold 111 manuscripts in 102 volumes to the archduchess Marie Louise of Parma for 8,500 lire; they were added to the *De’Rossi Collection in the Palatine Library. These manuscripts were basically the collection of the 18th-century bibliophile and bookdealer Moses Benjamin *Foà (b. 1729), who was book purveyor to the dukes of Modena. Bisliches also published *Ha-Palit* (1850), a catalog of 80 of his rare Hebrew manuscripts prepared by L. Zunz with annotations by Senior Sachs.

°**BISMARCK, OTTO VON** (1815–1898), Prussian statesman and from 1871 first chancellor of the German Empire. His attitude to Jews and Judaism was ambivalent. In 1847, when he was simply a conservative Eastelbian deputy in the Prussian “Vereingte Landtag,” he strongly opposed opening senior governmental positions to Jews. Later he was attacked by antisemites for “being duped by Jewish financiers” (their main target being G. von *Bleichroeder), and for passing the laws of 1869 and 1871 which abolished restrictions based on religious differences, first in the “Norddeutsche Bund,” later in the newly founded Deutsche Reich. This legislation, however, was mainly directed by political expediency, while Bismarck’s relations with Bleichroeder were financially beneficial to both men. The Jewish Liberal parliamentarians E. *Lasker and L. *Bamberger supported Bismarck in the early years, but when he turned to the Conservatives after 1878 they became his bitter adversaries.

Although Bismarck regarded the rabidly antisemitic court preacher Adolph *Stoecker with disdain, he appreciated Stoecker’s services in opposing socialism. In 1878, during the Congress of *Berlin, Bismarck generally supported a policy favorable to the Jews, which resulted in the incorporation of written guarantees in the peace treaties assuring their equality in the Balkan states, in particular in *Romania. A petition (bearing 250,000 signatures) demanding the dismissal of Jews from all government positions (1881) was ignored by Bismarck, who was suspicious of all popular manifestations. However, only apostates were allowed to reach the upper echelons, while the careers of the few Jews employed by the state were severely restricted. In 1885–86, Bismarck supported the expulsion from Prussia of thousands of Russian and Austrian citizens, including around 9,000 Jews. Bismarck, who was contemptuous of all things Polish, despised the East European Jews and adopted the prejudices against *Ostjuden* current even among the Jewish community in Germany. He was also suspicious of the connection between Jewish *Reform in religion and political radicalism, and had a higher opinion of Jewish *Orthodoxy. In the early years of his political career, Bismarck had the support of the vast majority of German Jewry, but he gradually lost it later, as Jews in Germany increasingly turned toward radical liberalism. Concerning his own religious attitudes, Bismarck cultivated strong pietist attitudes, so that he had a vast knowledge of Old Testament.

BISTRITA (Rom. **Bistrița**; Hg. **Beszterce**; Ger. **Bistritz**), town in Northern Transylvania, Romania; within Hungary until 1918 and between 1940 and 1944. The town was established by Saxon immigrants during the 12th century. It was populated over the centuries mostly by German-speaking people, but later Romanians and also Hungarians started to live there. After the prohibition on Jewish settlement there was lifted after 1848, as in general in Transylvania, Jews began to settle in Bistrita, mainly from Bukovina and Galicia. The community in Bistrita was Orthodox with a strong ḥasidic element although there were also Jews who adopted the German and Hungarian culture and language. During the second half of the 19th century the Jewish community there developed and grew strongly. The first Zionist youth organization in Bistrita, in Hungary, Ivriyah, was founded in 1901 by Nissan Kahan, who corresponded with Theodor *Herzl. In World War I, 138 Jews of Bistrita were mobilized in the army. After the war the central office of Orthodox Jewry in Transylvania was established in Bistrita. It represented 80 communities (135,000 persons) and was headed by the rabbi of Bistrita, Solomon Zalman Ullmann, until his death in 1930. Between the two world wars there was an important Zionist movement in the town. There was a large and important yeshivah in Bistrita under the direction of the rabbi.

The Jewish population of the city numbered 718 in 1891 (out of a total of 9,100); 1,316 in 1900 (out of 12,155); 2,198 in 1930 (out of 14,128); and 2,358 in 1941 (out of 16,282). In 1941 the Hungarian authorities deported several dozen Jewish families from Bistrita to *Kamenets-Podolski in the Ukraine, where they were murdered by Hungarian soldiers. In the course of World War II, the Jews were subjected to many restrictions, and Jewish males of military age were drafted into forced labor service. Early in May 1944 the Jews were concentrated in a ghetto set up at the so-called Stamboli Farm, located about two miles from the city. At its peak the ghetto, consisting of a number of barracks and pigsties, held close to 6,000 Jews, including those brought in from the neighboring communities in Beszterce-Naszód County. Among these were the Jews of Borgóbeszterce, Borgóprund, Galacfalva, Kisilva, Marosborgó, Nagyilva, Nagysajó, Naszód, Óradna, and Romoly. The ghetto was liquidated with the deportation of the Jews to Auschwitz in two transports on June 2 and June 6, 1944.

The 1,300 Jews who resettled in Bistrita in 1947 included survivors from the camps, former residents of neighboring villages, and others liberated from camps in *Transnistria and other places. Subsequently, the Jewish population declined steadily as a result of emigration to Israel, the United States, and Canada. By 2002, only 15 mostly elderly Jews lived in the city.

BITAN AHARON (Heb. בִּיתָן אֶהָרֵן), moshav in central Israel, in the Hefer Plain, affiliated with Tenu'at ha-Moshavim, founded in 1936 by pioneers from East and Central Europe. Its economy was based principally on citrus plantations. It also had a summer vacation center and a rest home for civil servants. In 2002 the population of Bitan Aharon was 505. The village is named after the Canadian Zionist Aharon (Archibald J.) Freiman.

[Efraim Orni]

BITBURG CONTROVERSY. The “Bitburg Controversy” of 1985 constituted one of the most acrimonious confrontations between any U.S. administration and the American Jewish community. At stake was the planned visit by U.S. President Ronald W. Reagan in the company of West German Chancellor Helmut Kohl to the Bitburg Military Cemetery, which contained the graves of 49 members of the Waffen-ss.

Ostensibly, Kohl invited Reagan to accompany him to a German military cemetery during the state visit to celebrate the normalization of relations between their two countries on the 40th anniversary of the end of World War II. In fact, however, ever since coming to power in 1982, the conservative Kohl had endeavored to rehabilitate as many Germans who had served the Third Reich as possible. In 1983, for example, his government had removed the veterans’ organizations of the Waffen-SS from a list of extremist right-wing groups on which the West German Ministry of Interior was required to make annual reports to Parliament, and Kohl had repeatedly blocked demands by the opposition Social Democrats to ban the highly controversial reunions of former Waffen-SS members. Kohl’s request to have Reagan go to Bitburg was thus part of a strategy to rewrite recent German history and curry favor with the most reactionary elements of the West German electorate.

Reagan’s planned trip to Germany first drew fire because it did not include a stop at the site of a Nazi concentration camp. At a press conference on March 21, 1985, Reagan explained that “since the German people have very few alive that remember even the war, and certainly none of them who were adults and participating in any way ... they have a feeling and a guilt feeling that’s been imposed upon them.” Thus, he considered a visit to a concentration camp “unnecessary.” Reagan’s comments drew a sharp response from Menachem Z. Rosensaft, the founding chairman of the International Network of Children of Jewish Holocaust Survivors. Writing in *The New York Times* on March 30, he pointed out that all Germans who were the same age as the president certainly remembered the war, and that two years earlier he had told a gathering of thousands of Holocaust survivors that the Holocaust must never be forgotten. Rosensaft noted that while it was “politically advantageous for [Reagan] to speak about the Holocaust to Jewish audiences in the United States, he does not want to risk offending anyone – even Nazis – in Germany.”

On April 11, the White House announced that the Bitburg cemetery was on Reagan's itinerary, and that Reagan and Kohl would lay a wreath there "in a spirit of reconciliation, in a spirit of forty years of peace, in a spirit of economic and military compatibility." Kenneth J. Bialkin, chairman of the Conference of Presidents of Major Jewish Organizations, called Reagan's decision to visit Bitburg but not Dachau "deeply offensive," and noted author and Holocaust survivor Elie Wiesel, then chairman of the United States Holocaust Memorial Council, told *The New York Times* that he could not believe that the president "would visit a German military cemetery and refuse to visit Dachau or any other concentration camp."

At a press conference on April 18, Reagan made matters worse by appearing to equate dead German soldiers with the victims of the Holocaust. "They were victims," he said of the soldiers buried at Bitburg, "just as surely as the victims in the concentration camps." Reagan's comments drew angry responses from American Jewish leaders. Rabbi Alexander Schindler, president of the Union of American Hebrew Congregations, described Reagan's remarks as a "distortion of history, a perversion of language, and a callous offense to the Jewish community."

A long-scheduled ceremony in the White House on April 19, awarding the Congressional Medal of Achievement, provided the charismatic Wiesel with an unprecedented opportunity to publicly confront the White House on national television. Despite fierce pressure to mute the confrontation with Reagan, whose strong support of Israel was valued, Wiesel implored him not to go to Bitburg. "That place," he told the president during a nationally televised White House ceremony, "is not your place. Your place is with the victims of the ss." Other Jewish leaders similarly called on Reagan to reconsider, as did 53 U.S. senators on April 15, and 101 members of the U.S. House of Representatives on April 19 in bipartisan letters to the president.

Immediately after the public castigation by Elie Wiesel, the White House announced that Bergen-Belsen had been added to the president's German itinerary. Two days later, Menachem Rosensaft, addressing thousands of Holocaust survivors gathered in Philadelphia, called on survivors, children of survivors, and American war veterans to confront Reagan at the gates of Bergen-Belsen. If the president insisted "on going to Bitburg," Rosensaft said, "we do not need him and we do not want him in Bergen-Belsen."

Former President Richard M. Nixon, former Secretary of State Henry Kissinger, and conservative columnist William F. Buckley, among others, endorsed the Bitburg visit, and several public opinion polls indicated that only about 52 percent of Americans were opposed to it. West German officials, meanwhile, pressured the Reagan Administration to stand fast. On April 19, Alfred Dregger, the chairman of Kohl's parliamentary group, wrote to U.S. senators who had urged Reagan to change his itinerary that his only brother had died on the Eastern Front in 1944, and that "If you call upon your

President to refrain from the noble gesture he plans to make at the military cemetery in Bitburg, I must consider this to be an insult to my brother and my comrades who were killed in action."

Reagan's insistence on going through with the Bitburg visit, and his attempt to combine back-to-back tributes to the Jewish victims of the Holocaust at Bergen-Belsen and to German soldiers at Bitburg, served primarily to offend the Jewish community in general and Holocaust survivors and their families in particular. "President Reagan and Chancellor Kohl have embarked on a macabre tour, an obscene package deal, of Bergen-Belsen and Bitburg," declared Menachem Rosensaft at a protest demonstration at Bergen-Belsen on May 5, minutes after the two leaders had left for Bitburg. "Today we say to them that they can either honor the memory of the victims of Belsen, or they can honor the ss. They cannot do both. And by entering Bitburg, they desecrate the memory of all those who were murdered by the ss, and of all those whom they pretended to commemorate here at Belsen."

In a short speech at the U.S. Air Force base at Bitburg on May 5, Reagan said: "Our duty today is to mourn the human wreckage of totalitarianism, and today, in Bitburg Cemetery, we commemorated the potential good and humanity that was consumed back then, 40 years ago." President Reagan and West German Chancellor Helmut Kohl spoke about the importance of Holocaust remembrance beside the mass-graves of the Nazi concentration camp of Bergen-Belsen, and then proceeded to the Bitburg military cemetery where they participated in a wreath-laying in memory of German soldiers killed during World War II. The visit to Bergen-Belsen was widely seen as a desperate attempt by the White House staff to deflect the controversy over Reagan's agreement to join Kohl at Bitburg during the president's long-planned state visit to Germany.

In fact, however, as a *New York Times* editorial observed on May 6, Reagan's decision to go through with the Bitburg visit was a "blunder," one of the few times that he lost a confrontation in the court of public opinion. Known as the great communicator, Reagan found that Wiesel and others could get their message across to the mass media and the normally sure-footed White House was reeling. From the perspective of two decades, the German chancellor attempt to rehabilitate the reputation of the Waffen-SS has also failed. New research and public exhibitions in German museums further link them to the crimes of the Holocaust. It was, however, regarded by many observers as one of American Jewry's finest moment, when in the words of Wiesel, "truth was spoken to power."

BITHIAH, name given by the rabbis to the daughter of Pharaoh who found the infant Moses. Many legends are told of her in the *aggadah*. The name Bithiah (“daughter of God”) was given her as a reward for her devotion in treating Moses as her own child (Lev. R. 1:3). Her purpose in bathing in the Nile was to cleanse herself of the impurity of the idolatry rampant in Egypt (Sot. 12b). When her handmaidens refused to disobey the royal decree and save the Israelite child, her arm was lengthened miraculously so that she could reach the casket in which Moses lay; as soon as she reached it she was cured of her leprosy. She called the child Moses, not only because she had “drawn” him out of the water, but because she knew he would “draw” the children of Israel out of Egypt (Mid. Hag. to Ex. 2:10). Although Moses had many names, God called him only by the name Bithiah gave him (Lev. R. 1:3). At Moses’ intercession, Bithiah was not afflicted by any of the ten plagues and therefore was the only female firstborn to be spared in Egypt (Ex. R. 18:3). She became a proselyte and married Caleb because, as she had opposed her father, he would oppose the spies (Lev. R. 1:3). Bithiah was one of those who entered Paradise in her lifetime (Mid. Prov. 31:15). She is numbered among the 22 women of valor (Mid. Hag. to Gen. 23:1, s.v. *Takom*).

BITHYNIA, district of Asia Minor identified in the Talmud with the biblical Tubal (Yoma 10a). There is information, dated from 139 B.C.E., of a Jewish settlement in Amysos which was included in the territory of Bithynia during the period of its expansion (Sampsames in 1 Macc. 15:23 being identified by Schuerer and others with Amysos in Pontos). Philo, too, testifies to the existence of a Jewish settlement there (*De Legatione ad Gaium*, 281). A Jewish tombstone with a Greek inscription found near the Bosphorus marks the burial place of a Jew called Shabbetai who served as elder, scribe, and leader to a Jewish community which is called *παλαιοι* (“The Ancients,” REJ, 23 (1893), 167–71). Talmudic sources (Av. Zar. 2:4; Tosef., Av. Zar. 4:13; Tosef., Shev. 5:9) frequently mention cheeses from Bet-Unyaki which were forbidden “because the majority of calves of that place are offered as sacrifices to idols” (Av. Zar. 34b). This Bet-Unyaki is identified with Bithynia, whose excellent cheeses are also attested to by Pliny (*Natural History* 11:241). The spread of Christianity in Bithynia at the beginning of the second century so alarmed its governor, Pliny the younger (c. 112), that he applied to Trajan for instructions on how to deal with it. The detailed answer given by Trajan exerted a decisive influence for some generations on Rome’s policy toward Christianity.

BITTELMAN, ALEXANDER (1890–1982), U.S. Communist leader and journalist. Bittelman was born and grew up in Odessa, Russia. He joined the socialist *Bund* at an early age,

then emigrated to America in 1912 and settled in New York City. Bittelman studied engineering, worked for the People’s Relief Committee, and in 1919 became editor of *Der Kampf*, the organ of the Jewish Communist Federation. In the same year he joined the American Communist Party, soon becoming its “Jewish specialist.” He was sent to Moscow in 1922 to obtain funds for establishing the party’s Yiddish paper, the *Morning Freiheit*. From 1923 to 1928 Bittelman worked in the party’s national office in Chicago. He traveled to India on a political mission; then edited the *Communist* upon his return. He devoted himself to writing articles of a historical and ideological nature, several of which were published in 1937 in his *Milestones of the History of the Communist Party*. A member of the Communist Party National Committee after World War II, Bittelman also served as general secretary of the Morning Freiheit Association, which he sought to reorganize as a center for Jewish Communist propaganda and culture. In 1943 his 63-page *Jewish Unity for Victory* was published. Bittelman was indicted under the Smith Act in 1951 for conspiring to overthrow the government and was jailed in 1955 for a three-year term. Released from prison in 1957, he wrote for the *Daily Worker* until his expulsion from the party for revisionism in 1958. In 1960 he published his personal testament, *A Communist Views America’s Future*. He also wrote *Jewish People Face the Post-War World* (1945) and *To Secure Jewish Rights: The Communist Position* (1948).

BITTERN (Heron; Heb. אַנפֿאָה, *anafah*), mentioned among the unclean birds (Lev. 11:19; Deut. 14:18) and referring to birds of the family *Ardeidae* which are aquatic and marsh birds. Various species occur in Israel such as the white heron (*Egretta alba*) whose span can be as much as a yard. On the other hand the buff-backed heron (*Bulbucus ibis*) is much smaller. The latter, as well as many other species of bittern, have greatly increased in recent years in Israel with the spread of fish ponds and irrigation.

[Jehuda Feliks]

BITTUL HA-TAMID (Heb. בְּטוּל הַתְּמִיד; lit. “abolition of the daily offering”), interruption of prayers and of Torah reading in the synagogue (Heb. עֲכִיב הַקֶּרֶן יָאֵה, *ikkuv ha-keri’ah* and, therefore, also called *ikkuv ha-keri’ah ikkuv ha-tefillah*, “delay the reading of the Torah,” “delay the morning prayers”) to seek redress of a wrong, mainly a judicial or moral one. This practice was prevalent mainly in the Middle Ages among Ashkenazi Jewry. The custom of interrupting public religious services was a form of protest and way of arousing public indignation afforded to an individual who felt that an injustice had been perpetrated upon him or her by the constituted au-

thorities or by rich and violent individuals. Ashkenazi *takkanot* of the 12th century set various limits to the exercise of this right to arouse “public scandal for the rights of the individual,” while *takkanot* attributed to *Gershom b. Judah sought to regulate it: “If a man summons his neighbor to court and the latter refuses to appear, the plaintiff may not stop the morning prayers and reading of the Torah, unless he has first three times stopped the evening services.” A Book of Customs compassionately adds: “However an orphan or a widow may interrupt even the first time until justice is done them.” Until 1876 a Jew wishing to protest communal abuses was permitted to rise and say, “*Ich klame*.” This privilege was extended to the aggrieved in Eastern Europe also, including cases of complaints against the *kahal* itself. In Russia, after the conscription law of 1827, many a poor mother availed herself of the opportunity to prohibit further prayer until she had stated her protest over the cruel drafting of her male child as a *Cantonist.

[Isaac Levitats]

BITUMEN (Heb. חֵמָר, *hemar* and כֹּפֶר, *kofer*; LXX), a black, flammable substance which becomes viscous and absorbent on heating. It occurs in almost every part of the world, including Mesopotamia, Iran, and Israel, and is found in various natural forms: in pure form, as in the Dead Sea, where it floats and collects along the coast; as an ore in sandstone; and in semi-solid and fluid forms. The “pits” in the Valley of Siddim referred to in Genesis 14:10 were probably bitumen quarries. In Mesopotamia bitumen was used in building as a mortar which at the same time soaked into the porous bricks, making them stronger. Bitumen was employed too for waterproofing boats, for constructing model boats for cultic purposes, and for sealing water ducts and irrigation canals. It was used in this way to caulk Noah’s ark (Gen. 6:14) and the basket which carried Moses (Ex. 2:3). Whether used for strengthening bricks or for sealing against water, bitumen was mixed with sand, chalk, plaster, or with its own ore, since in its pure form it has a low melting point and will not harden unless amalgamated with another mineral.

[Z’eev Yeivin]

BIZTHA (Heb. בִּזְתָּה; Gr. Βαζάν, Μαζάν, Βαζεά), one of the seven eunuchs of *Ahasuerus (Esth. 1:10). On the seventh and last day of his feast for the peoples of Susa, when King Ahasuerus was in high spirits from drinking, he sent his seven attendant eunuchs to summon Queen Vashti so that he might display her beauty before the assembled company. The

name Biztha is apparently Persian but no agreement has been reached on its meaning (suggestions include: *besteh*, “bound”; *biz-da*, “double gift”; *Mazdā* [*dā*]na, “gift of Mazda”).

[Bezalel Porten]

BIZZARON (Heb. בִּזְרוֹן; “stronghold,” cf. Zech. 9:12), moshav in the southern Coastal Plain of Israel, affiliated with Tenu’at ha-Moshavim, founded in 1931 by pioneers from the Soviet Union whose training farm “Tel Hai” in the Crimea had been closed by the Soviet authorities. They themselves had been imprisoned as Zionists but later permitted to leave. Farming was highly intensive, with citrus plantations as the principal branch. In 2002 the population of Bizzaron was 822.

BLACK, ALGERNON DAVID (1900–1993), educator, author and Ethical Culture leader. Born to immigrant Russian Jewish parents, Black began a lifelong involvement with the Society for *Ethical Culture after receiving a scholarship to the Ethical Culture School in New York City. After graduating from Harvard in 1923, he returned to teach history, business, and ethics in the Ethical Culture school system. Black combined his teaching responsibilities with voluntary work for a variety of social causes, including efforts to strengthen workers’ rights and equalize housing opportunities. This civic engagement reflected the principles and priorities of the Ethical Culture movement, particularly its belief in the importance of the individual, its emphasis on living by ethical standards, and its work on behalf of the poor and disenfranchised. A protégé of Felix *Adler, Black rapidly moved into the leadership cadre of the New York Society for Ethical Culture. He was appointed to the Society’s Board of Leaders in 1934, chosen as executive leader in 1943, elected chairman of the Board of Leaders in 1945, and installed as Senior Leader ten years later. He held this office until 1973, but remained active within the Society as its leader emeritus for another decade. “Articulate, energetic, and magnetic in personality,” Black was the public face of the movement for over 40 years, speaking regularly on the radio, participating on a plethora of boards, panels, and committees that dealt with social and civil rights issues, and writing five books.

[Adam Mendelsohn (2nd ed.)]

BLACK, MAX (1909–1988), U.S. philosopher. Black was born in Baku, Russia, and educated in Germany and England. He received his B.A. from Queens College, Cambridge in 1930 and was awarded a fellowship to study at Goettingen. He received his Ph.D. from the University of London in 1939. He lectured on mathematics at the Institution of Education in London from 1936 until 1940, then was appointed to the Phi-

losophy Department at the University of Illinois at Urbana. After six years at Urbana, Black accepted a professorship in philosophy at Cornell University in New York, later becoming Susan Linsage Professor of Philosophy and Humane Letters (1954). Black retired in 1977 but continued lecturing at many universities around the world. He was president of the International Institute of Philosophy from 1981 to 1984, being only the second American at the time to assume that position.

Black's work dealt mainly with problems in contemporary analytical philosophy, ranging from the nature and function of mathematics to the role of ordinary language in the solution of philosophical problems. Though influenced by formalists, his own contributions stress the effectiveness of informalist approaches in the elimination of philosophical perplexity. He edited the influential journal *The Philosophical Review*.

Black's major publications include *The Nature of Mathematics* (1933), *Language and Philosophy* (1949), *Problems of Analysis* (1954), *The Importance of Language* (1962), *Models and Metaphors* (1962), *A Companion to Wittgenstein's Tractatus* (1964), *Philosophy in America* (1965), *The Labyrinth of Language* (1969), *Margins of Precision: Essays in Logic and Language* (1970), *Art, Perception, and Reality* (1972), and *The Prevalence of Humbug and Other Essays* (1983).

[Avrum Stroll / Ruth Beloff (2nd ed.)]

BLACK, SIR MISHA (1910–1977), British architect and industrial designer. Born in Baku, Russia, Black was taken to England as an infant. Before World War II he helped to found the Artists International Association, a radical organization with an anti-Nazi program for assisting refugee artists then attempting to enter Great Britain. In 1933 together with the designer Milner Gray he set up a firm called Industrial Design Partnership in an effort to bring total design methods to Britain. In 1944 they founded the Design Research Unit. Black became a nationally recognized design leader as coordinating architect for a major part of the 1951 Festival of Britain; he later took part in the design of exhibitions in many other countries. Among the most important activities of the Design Research Unit is the redesigning of British Railways, including Black's designs for a diesel locomotive and an electric train, supervision of the Victoria Line opened by the London Underground in 1969, and the Clore Pavilion at the London Zoo.

Black was appointed professor of industrial engineering design at the Royal College of Art in 1959. He served as president of the British Society of Industrial Arts and Design and as a trustee of the British Museum. His publications on exhibition and interior design include *The Practice of Design* (1946) and *Public Interiors* (1959). He was the brother of the philosopher Max *Black (1909–1988), who chiefly taught at Cornell University in the United States.

[Charles Samuel Spencer]

BLACK DEATH, epidemic of various contagious diseases, bubonic, septicemic, and pneumonic, all caused by the same bacillus, *pasteurella pestis*, a combination of which raged throughout Europe between 1348 and 1350. (See Map: Black Death). It was the worst plague experienced since the sixth century. Between one-quarter and one-half of the total population perished. In centers with denser populations, such as the monasteries, the proportion of victims was much higher. As the bacteria of this disease live in certain temperatures only, the peak periods of sickness and mortality usually occurred at certain months in the year, according to the local climate.

The impact of this unprecedented catastrophe had a profound effect on the behavior of the population. People reacted by extremes, either seeking recourse to religion through repentance and supplication to God, or reverting to licentiousness, lawbreaking, and savagery. These two types of reaction often combined, in particular where they concerned the attitude of the non-Jewish population to the Jews. Toward the end of 1348 and in early 1349 countless numbers of Jews lost their lives in a wave of massacres which spread throughout Europe as a result of the accusation that the Jews had caused the death of Christians by poisoning the wells and other water sources. According to L.F. Hirst, a leading authority in this field, the Black Death "in all probability... originated somewhere in the central Asiatic hinterland, where a permanent reservoir of infection is maintained among the wild rodents of the steppes. Rumors of a great mortality among Asiatics, especially Chinese, reached Europe in 1346, and by the spring of that year bubonic plague had reached the shores of the Black Sea.... From ports on the shores of the Crimea besieged by Tatars, who perished in vast numbers from the epidemic... the infection was carried on shipboard to Constantinople, Genoa, Venice, and other European ports. The disease spread as rapidly as the transport of those days permitted... to the Mainland." At the time of the Black Death no one was aware of this connection and the existence of contagion was only vaguely perceived. By some persons the catastrophe was ascribed to astrological conjunctions; others regarded it as a divine visitation. Pope *Clement VI, in his bull defending the Jews from these accusations, saw it as "the pestilence with which God is afflicting the Christian people." The vast majority of the population, however, was inclined to view it as a *pestis manufacta* (an artificially induced malady), the simplest explanation to the unsophisticated mind, and therefore sought the human agents thought to be spreading the disease. Initially, the Jews were not the only persons accused; strangers of every type were suspected. An Avignonese physician relates: "Many hesitated, in some countries people believed that the Jews intended to poison the whole world and therefore killed them. In other countries they expelled paupers suffering from deformity; and in yet others, the nobles." Sometimes itinerant monks were suspected of placing the poison and spreading the disease, and they were attacked instead.

Well Poisoning Libel

Soon, however, the feelings of helplessness to stem the plague, and the fierce urge to react against the death and destruction it caused, concentrated the force of the populace on the age-old target of popular Christian hostility, the Jews. Anti-Jewish violence was particularly rabid in Germany, where it had been preceded by a dark half century of anti-Jewish persecution in conjunction with a succession of blood libels and accusations of host desecration. This had added to the sinister traits already attributed to the hateful image of the Jew. In France, also, the way had been paved for this accusation by a similar charge leveled during the Pastoureaux persecutions of 1321. Amid the general atmosphere of hostility, and the cruelty of the persecutions to which the Jews had been subjected, it was almost logical that Christians could imagine that the Jews might seek revenge. Thus, a Jew who was tortured in Freiburg im Breisgau in 1349, "was then asked... 'why did they do it...?' Then he answered: 'because you Christians have destroyed

so many Jews; because of what king Armleder did; and also because we too want to be lords; for you have lorded long enough.'" ("... *wan umb das, das ir cristen so menigen juden verdarpten, do kuenig Armleder was, und ouch um das, das wir ouch herren wolten gewesen sin, wan ir genug lang herren gewesen sint;*" *Urkundenbuch der Stadt Freiburg im Breisgau* (1828), nos. 193, 382).

The first occasion on which Jews were tortured to confess complicity in spreading the Black Death was in September 1348, in the Castle of Chillon on Lake Geneva. The "confessions" thus extracted indicate that their accusers wished to prove that the Jews had set out to poison the wells and food "so as to kill and destroy the whole of Christianity" (*ad interficiendam et destruendam totam legem Christianam*). The disease was allegedly spread by a Jew of Savoy on the instructions of a rabbi who told him: "See, I give you a little package, half a span in size, which contains a preparation of poison and venom in a narrow, stitched leathern bag. This you are to dis-

The Black Death. The map shows, in progressive shades of gray, the spread of the plague across Europe in six-month periods from Dec. 31 1347, to June 30, 1350.

tribute among the wells, the cisterns, and the springs about Venice and the other places where you go, in order to poison the people who use the water....” This indictment, therefore, shows that his accusers recognized that the plague had spread from the south northward. As the case dragged on, details were extracted telling of further consultations held among the Jews, about messengers from Toledo, and other wild allegations. On Oct. 3, 1348, during the summing up, an allegation providing a motive for the total destruction of Jewry was made; it was asserted that “before their end they said on their Law that it is true that all Jews, from the age of seven, cannot excuse themselves of this [crime], since all of them in their totality were cognizant and are guilty of the above actions” (*asseruerunt praefati Iudaei ante eorum ultimum supplicium per legem suam esse vera dicentes quod omnes Iudaei a septem annis circum non possint super hoc se excusare, quoniam universaliter sciunt omnes, et sint culpabiles in dicto facto*”).

Outbreak of Persecutions

These “confessions” were sent to various cities in Germany. The accusation that the Jews had poisoned the wells spread there like wildfire, fanned by the general atmosphere of terror. The patricians of *Strasbourg attempted to defend the Jews at a meeting of representatives of the Alsatian towns at Benfeld, but the majority rejected their plea, arguing: “If you are not afraid of poisoning, why have you yourselves covered and guarded your wells?” Correspondence on the subject between the authorities in the various cities has been preserved. In general, it reveals a decision to expel the Jews from the locality concerned for good, and to launch an immediate attack to kill them while they still remained. At *Basle the patricians also unsuccessfully attempted to protect the Jews. In various cities Jews were tortured to confess their part in the conspiracy. The defamation, killings, and expulsions spread through the kingdoms of Christian Spain, France, and Germany, to Poland-Lithuania, affecting about 300 Jewish communities. On Sept. 26, 1348, Pope Clement VI issued a bull in Avignon denouncing this allegation, stating that “certain Christians, seduced by that liar, the devil, are imputing the pestilence to poisoning by Jews.” This imputation and the massacre of Jews in consequence were defined by the pope as “a horrible thing.” He tried to convince Christians that “since this pestilence is all but universal everywhere, and by a mysterious decree of God has afflicted, and continues to afflict, both Jews and many other nations throughout the diverse regions of the earth to whom a common existence with Jews is unknown [the charge] that the Jews have provided the cause or the occasion for such a crime is without plausibility.” Both the emperors Charles IV and Peter IV of Aragon also tried to protect the Jews from the results of the accusation. The arguments generally put forward by the rulers were expressed by the physician Konrad of Megenberg in his *Buch der Natur* arrived at in the light of his own experience: “But I know that there were more Jews in Vienna than in any other German city familiar to me, and so many of them died of the plague that

they were obliged to enlarge their cemetery. To have brought this on themselves would have been folly on their part.” However, all these appeals to reason were ineffective. The massacres of the Jews continued, and Jewish property was confiscated. Despite his policy of protecting the Jews, in 1350 the emperor Charles IV formally absolved the burghers of *Cheb (Eger) in Bohemia for the killings and robbery they had committed among the Jewish population. In doing so, he stated: “Forgiveness is [granted] for every transgression involving the slaying and destruction of Jews which has been committed without the positive knowledge of the leading citizens, or in their ignorance, or in any other fashion whatsoever.” By this time it was well-known that the accusation that Jews had spread the plague was false. In many places Jews were killed even before the plague had visited the locality. Further outbreaks of plague continued later in the 14th century but Jews were no longer accused of being the cause.

The Martyrs

It was recognized by the Jews that the Christians “have opened wide their mouths about me: they have put and spread poison on the water, so they say, in order to libel and attack us,” to quote a contemporary dirge. Faced with this overwhelming antagonism, the Jews tried to defend themselves wherever possible and in whatever way they could. In many localities fierce conflicts took place between the Jewish population and their attackers. At *Mainz the Jews set fire to their homes and to the Jewish street: according to some sources, 6,000 Jews perished in the flames. This also occurred at *Frankfurt on the Main. In Strasbourg, 2,000 Jews were burnt on a wooden scaffold in the Jewish cemetery. The manner in which the martyrs met their deaths is described in a contemporary Hebrew source concerning “the holy community of Nordhausen....They asked the burghers to permit them to prepare themselves for martyrdom: permission having been given...they joyfully arrayed themselves in their prayer shawls and shrouds, both men and women. They [the Christians] dug a grave at the cemetery and covered it with wooden scaffolding...The pious ones [among the Jews] asked that a musician be hired to play dancing tunes so that they should enter the presence of God with singing. They took each other by the hand, both men and women, and danced and leapt with their whole strength before God. Their teacher, R. Jacob, went before them; his son, R. Meir, brought up the rear to see that none should lag behind. Singing and dancing they entered the grave, and when all had entered, R. Meir jumped out and walked around to make certain that none had stayed outside. When the burghers saw him they asked him to save his life [by apostasy]. He answered: ‘This now is the end of our troubles, you see me only for a while, and then I shall be no more.’ He returned to the grave; they set fire to the scaffolding; they died all of them together and not a cry was heard” (*Sefer Minhagim* of Worms). This was the spirit that enabled European Jewry to emerge spiritually unscathed from the avalanche of hatred and cruelty released on the Jews by the Christians in Europe.

The Black Death not only resulted in the immediate destruction of thousands of Jewish lives and the loss of Jewish homes and property in hundreds of communities, but had more far-reaching consequences. Popular imagination invested the already odious image of the Jew with even more horrible characteristics. It was this image that helped to shape the stereotype of the Jew represented by *antisemitism and racism in modern times. After the Black Death the legal status of the Jews deteriorated almost everywhere in Europe. Although Jews were frequently received back into the cities where many had been killed or driven out, sometimes within a year of the decision to expel them for good, they usually only gained permission to resettle on worse terms and in greater isolation than before. The position of the Jews in Aragon and Castile (*Spain) deteriorated sharply after 1348–49. The only countries in Europe where the events of the Black Death did not leave a permanent scar on the Jewish communities were Poland-Lithuania. The reconstruction of the Jewish communities and of Jewish life and cultural activity in the second half of the 14th and the beginning of the 15th century clearly evidence the social and spiritual vitality of the Jewish people in Europe in the period.

[Haim Hillel Ben-Sasson]

BLACK-JEWISH RELATIONS IN THE UNITED STATES.

Black-Jewish contacts, and thus black-Jewish relations, date from the earliest years of settlement. Many of the tiny number of Jews who came to America in the colonial period, especially those from Spain and Portugal, engaged in international trade and thus were directly involved in the triangle trade of slavery, sugar, and rum. Others settled in many of the American colonies. In northern cities like Newport, New York, and Boston, Jewish merchants and early industrialists found their livelihoods intertwined with various aspects of slavery and the slave trade; in the South a few Jews owned or traded slaves. By and large, these early Jews reflected the views of their white Gentile neighbors; most Northern Jews opposed slavery, while most Southern Jews supported it. Few were outspoken or active on either side, although there were notable exceptions like abolitionist August Bondi; Rabbi David *Einhorn, who spoke out against slavery in Baltimore and had to leave the city for his own safety; Judah *Benjamin, Jefferson Davis's secretary of war and later state; and Rabbi Morris *Raphall, who used biblical passages to justify slavery. By and large, however, there was very little direct "relationship" at all between them. Most African Americans lived in the rural South, and Jews clustered in the urban North.

In the late 19th and early 20th centuries, however, they began to meet in Northern urban centers as two major migration streams intersected: African Americans moving North and into cities in a decades-long flight from oppression, violence, and discrimination called the Great Migration, and East European Jews fleeing the same forces in a different setting. Both groups often ended up in the same cities, sometimes even in the same neighborhoods. Similarly poor, they had few housing options. And Jews, who were considered not fully white themselves, who had had less exposure to American racism, were less violent than others, and by and large more radicalized by egalitarian ideologies like communism, socialism, and trade unionism, put up less resistance when African Americans moved into their neighborhoods. This is why, over time, many Jewish neighborhoods became black, not without tension but generally without violence.

These migrations enabled both communities to organize politically to address concerns about opportunity and equality. At the same time blacks and Jews met one another face to face, often for the first time, in economic interactions that more often revealed differences between the two communities than any sense of common cause. Both developments were critical in shaping what we call black-Jewish relations.

Migrants from both communities needed help settling in. Both were poor, subject to discrimination and bigotry, and both needed to help others left behind. So both communities established defense and protective organizations. Mutual aid societies, fraternal and trade union groups such as the *Workmen's Circle and the National Association of Colored Women's Clubs encouraged economic development and sustained social and community ties; other agencies like the NAACP and *American Jewish Congress concerned themselves explicitly with political issues affecting their group. Others joined multiracial political organizations like the Communist, Socialist, Democratic and Republican parties, and brought their community's social and cultural values with them. The political Left in particular participated actively in civil rights efforts benefiting blacks and Jews, and stressed interracial action.

Faced with similar challenges, however, there was virtually no cooperation between organizations from the two communities except on the Left. On the individual level, elite or politically well-connected Jews and African Americans often cooperated with one another. Black socialist labor leader A. Philip Randolph considered Jews among his most reliable supporters; Jews were disproportionately represented on the founding boards of the NAACP and National Urban League. The NAACP's first two presidents, Joel and Arthur Spingarn, were Jewish. African American Judge Hubert Delaney defended Jewish interests; Jewish Julius Rosenwald underwrote black educational endeavors; before his appointment to the Supreme Court Louis *Brandeis offered his legal services and his contacts to the NAACP. The black press described East European pogroms and the Jewish press covered lynchings. Beyond these individual or informational contacts, however,

formal organizations rarely contacted their counterparts in the other community for cooperative action.

Too poor, too overwhelmed with their own needs, black and Jewish agencies were small and limited in resources. Blacks and Jews stayed apart as well because of black anti-semitism and Jewish racism. These attitudes were less potent there than they were among white Christians but they had an impact nonetheless. And there was one more concern, at least from the Jewish side. Jewish organizations struggling for acceptance recognized that racism was the stronger force and feared that any association with such a pariah group as blacks would hurt their own efforts. When Jewish Leo Frank was convicted of murder in 1913 on the testimony of a black man in an antisemitic trial in Atlanta, and lynched two years later, it prompted the newly formed Anti-Defamation League (ADL) to proclaim its commitment to defending the rights of all. But in practice, Frank's murder convinced many Jews that life in the United States was dangerous enough without taking on black people's problems as well.

While relatively few blacks and Jews interacted politically (outside of the Left), far more encountered each other in economic venues. In virtually every case, Jews had the upper hand. Because Jews were white, they were able to benefit from the American system that apportioned opportunity more by race than by ethnicity or religion. Their white skin and the urban skills they had brought from Europe enabled Jews to succeed more quickly than African Americans; it was the exodus of better-off Jews into better neighborhoods that brought black tenants to Jewish areas in the first place. These Jews, and those that remained, continued to run their original businesses; Jews owned up to 90% of the stores in many black neighborhoods. So the inevitable tensions in poor neighborhoods between landlords and tenants, shopkeepers and customers, social workers and clients came to be seen as black-Jewish conflicts, and they reinforced stereotypes of greedy and unscrupulous Jews, or lazy or irresponsible blacks.

Another point of contact between the two communities was the arts, especially music and the new medium of motion pictures. Meeting first in vaudeville and other performance areas, Jews also rose to positions of greater power and became impresarios and agents for black performers. The same was also true in sports.

Given the limited and hierarchical nature of relations between African Americans and American Jews, and although members of each community recognized the plight of the other, and were sensitive to prejudice, there was little positive mutual interaction in the first third of the 20th century. This changed with the rise of Nazism. With Jews threatened in Europe, and with the rise of fascist and antisemitic groups in the United States, it became clear to Jewish organizations that they desperately needed allies. And for black people, who recognized bigotry when they saw it, anti-Nazi efforts also offered the strongest challenge to American racism. The black press and several black groups therefore launched what

they called a Double v campaign: victory against Nazism abroad and racism at home. Outspoken in their protest of Nazi atrocities, black groups also lost no opportunity to draw parallels with lynching and racial bigotry in the United States.

Black-Jewish cooperation in the 1930s was clearly based on mutual self-interest, but one that recognized the shared danger inherent in any form of bigotry. These groups had come to recognize what the Left had been saying all along: that unity among the oppressed was the most effective weapon to bring about change. The Ribbentrop-Molotov, German-Soviet pact, however, discredited the Left in the eyes of many liberals, and the emerging Cold War made suspect all programs espoused by Communists. Stalin's purges alienated still more Jews, who abandoned the Communist Party for liberal and progressive Jewish political organizations. Thus, Nazism and the war brought black and Jewish liberals to a new recognition of the importance of civil rights and racial tolerance. At the same time, anti-Communism also led them to limit their strategies, goals, and coalitions in ways that hobbled the potential for fundamental social change. The stage was set for what many consider the "golden age" of black-Jewish relations.

Political relations between black and Jewish political agencies warmed further as the modern civil rights movement gained real force. The two communities had gotten to know one another through common work. Their organizations had become more desirable allies as their earlier successes brought increased membership, stronger finances, and greater political access. And they shared a set of liberal values, including bringing change within the existing system; employing moderate, non-confrontational tactics in doing so; a commitment to the centrality of individual rights rather than privileges bestowed by membership in a group; and a conviction that it was the obligation of government to foster equal opportunity. They advocated litigation, education, and legislation to bring about equality, evidenced, for example, in the American Jewish Congress's new Commission on Law and Social Action.

By the late 1940s, liberal civil rights organizations rooted in the two communities slowly began to develop a close partnership, launching programs separately and jointly to improve conditions for racial and religious minorities. This can still be viewed as self-interest, but it was now a broader concept. The NAACP, with the help of all the main Jewish organizations, won a Supreme Court case declaring restrictive housing covenants unenforceable, which benefited both groups but particularly economically mobile Jews. The NAACP came to the *Brown v. Board of Education* case, as well as its predecessors, armed with amicus briefs from virtually every other black and Jewish civil rights organization (along with other progressive, union, religious, and civic groups). The creation of New York's state college system was a joint black-Jewish effort to combat religious and racial discrimination in higher education. Together they fought to make permanent the war's Fair

Employment Practices Act, which outlawed employment discrimination based on race, religion, or national origin.

They cooperated on passing anti-Klan and anti-violence legislation, fighting restrictions on employment applications, and challenging racism and antisemitism with educational programs that appealed to American ideals of fairness and democracy. The two leaders of the Leadership Conference on Civil Rights were an African American, Walter White, and a Jew, Arnold *Aronson.

Nor was such collaboration one-sided. Jewish organizations participated in racial segregation cases; black groups advocated expanding immigration to accommodate wartime refugees, endorsed (and lobbied for) the UN resolution on the creation of the state of Israel, and protested Soviet anti-semitism.

Because the persistence of economic tensions threatened these partnerships and contradicted their non-discriminatory rhetoric, black and Jewish organizations began to intervene directly. Jewish activists met with (or picketed) Jewish landlords and storeowners, urging them to end segregationist and discriminatory practices. The AJ Congress and ADL organized Jewish merchants in black neighborhoods into associations charged with improving race relations, hiring more African-American clerks, and contributing to community improvement projects. (In many areas, Jews left black neighborhoods completely, diminishing tensions that way.) In both communities leaders worked to educate their own people on the dangers of bigotry against any other group. Such efforts succeeded widely, revealed in the disproportionate number of Jews supporting black civil rights compared with other whites, and a rapid decline in reported antisemitism in the African-American community. In many ways this truly was a golden age for black-Jewish relations.

But these liberal successes brought new challenges. Jews continued to outperform blacks economically and socially. No longer segregated or discriminated against overtly or legally, Jews could make their way in the world far more easily than blacks, who continued to suffer from open discrimination and legal segregation. This divergence produced not only resentment on the part of black people but also Jews' greater satisfaction with the current system. For Jews, educational and reformist methods worked. For African Americans, who continued to face structural barriers, such approaches were inadequate. As black groups turned to increasingly confrontational tactics such as boycotts and mass demonstrations, most Jews moved toward a greater commitment to the status quo.

The 1960s sit-ins and the rhetoric of the more activist civil rights workers heightened these tensions and laid bare the different social positions of Jews and blacks. Southern Jews in particular refused to get involved, save a courageous few very often from the more radical segment of the community. Most Jews, North and South, still supported the goals of, and contributed financially to, black civil rights organizations, but some questioned the tactics of what they feared could become

demagogic mob action. For a community invested in law and order to maintain its own security, pickets, civil disobedience, and nationalist rhetoric seemed particularly dangerous. So while younger and more radical – and often more assimilated – Jews continued to be overrepresented among white civil rights workers in groups like the Student Nonviolent Coordinating Committee, their liberal counterparts became skittish at the sound of “Black Power.” Two of the three civil rights workers killed in Mississippi in the summer of 1964 were Jews. Abraham Joshua *Heschel marched with Rev. Martin Luther King, Jr., who expressed strong support for Zionism; Rabbi Joachim Prinz, a Berlin-born naturalized American, addressed the 1963 March on Washington. Yet as the civil rights movement moved North and African Americans sought greater social equality, Jewish suburbanites became wary.

Black activists (and white leftists) had become radicalized by the failure of the liberal promise: white resistance, police violence, and the persistence of poverty and segregation suggested that liberal whites could not be trusted. And Jews constituted one of the largest and most visible segments of liberal whites. Nor did it seem that polite, liberal strategies could successfully challenge racism. Might confrontation, even violence, be appropriate? Should primacy be given to individual rights, when black rights were systematically threatened by virtue of their being members of a group? Perhaps race blindness was not as effective as programs that emphasized group rights. To pay for the structural changes required, black manifestos demanded aid and reparations from government, churches, and synagogues. Pan-African nationalism and anti-colonialism shifted black sympathy from Israel to the Palestinians – just at the time of the *Six-Day War. Black antisemitism became visible again. All these developments left Jews feeling threatened and, perhaps more importantly, betrayed.

Meanwhile, riots, violence, nationalism, and confrontational black demands reinforced Jewish racism. Skeptical Jewish leaders backed off from earlier alliances. Many of their constituents, now in suburbs, felt less concerned with urban strife. Others became neoconservatives, arguing that liberalism had lost its way. So African Americans in turn felt betrayed by Jews, whom they believed had abandoned them, and the fight for civil rights.

Dozens of incidents from the late 1960s through the 1990s reveal these stresses, from the struggle over control of schools in Brooklyn, New York's Ocean Hill-Brownsville to the refusal of most Jewish groups to support the NAACP in the 1974 and 1978 affirmative action cases; from Jesse Jackson's “Hymietown” remarks of 1984 to New York City Mayor Ed *Koch's claim that Jews would “have to be crazy” to vote for Jackson. The Nation of Islam and its leader Louis Farrakhan advertised its antisemitism, while academics and students fought their own battles on campuses across the country. At the City University of New York, for example, Professor Leonard Jeffries blamed Jews for the problems facing black people, and

Professor Michael Levin insisted that black people were inferior to whites. And of course there was real violence like that in the Afro-Caribbean and Orthodox Jewish neighborhood of Brooklyn's Crown Heights in 1991. After a member of the Lubavitcher rebbe's entourage accidentally hit and killed a black child, black youths attacked Jewish passers-by. One Jewish youth was stabbed to death. One early dimension of affirmative action particularly troubled Jews: quotas. African Americans intended quotas as a floor, designed to open up and include them, but Jews, for whom quotas were historically used to exclude and limit, balked. Once the legal concept was clarified, most Jews came to support affirmative action.

All this played out against the backdrop of a rightward shift in the larger political scene. Even for those still committed to black-Jewish cooperation, it appeared that few shared issues remained. The black community struggled with problems of poverty, racism, crime, and improving education and opportunity, while Jews became increasingly concerned with issues surrounding Israeli security, Jewish "continuity," and church-state separation. Jewish Studies programs competed with Black or Africana Studies for college curricula funding. It seemed all that was left between the two groups was friction. Pundits proclaimed the death of the black-Jewish relationship.

But that is a distortion. Civil rights coalitions remained active into the 21st century, if less visible. There have been hundreds of local economic and political initiatives around the country: books, articles, and documentaries about blacks and Jews, congregational exchanges, public discussions – from Jews for Racial and Economic Justice and Boston's Black-Jewish Economic Roundtable to *Common Cause*, a journal jointly published by the American Jewish Committee and Howard University; from the Reform Movement Religious Action Center's Common Road to Justice to the Marjory Kovler Institute for Black-Jewish Relations. In Congress, the Black Caucus has established routine and productive cooperation with the more informal "Jewish caucus."

All this sustained, even increasing, mutual engagement suggests that many overlapping concerns do remain, not least of which is the rightward movement of the country itself, opposed by a majority of both communities, who remain staunch Democratic voters. Problems of discrimination, unequal access to opportunity, voting, and education still top both black and Jewish political agendas, as do commitments to civic community, tolerance, and diversity.

°**BLACKSTONE, WILLIAM E.** (1841–1935), Chicago businessman who became an evangelist, missionary, and ardent supporter of the return of the Jews to Palestine. His "Zionistic" views sprang from his millennialist theology as expressed in his first book *Jesus is Coming* (1878), which was translated into many languages, including Hebrew. He considered the Jewish restoration to Zion as the fulfillment of biblical prophecies signifying the approach of the second Advent of Jesus. After a visit to Palestine in 1888/89, Blackstone organized meetings of Jews and Christians to promote his Zionist ideas. In 1891 he initiated a memorandum to President Harrison urging the restoration of Palestine to the Jews as a primary solution to the problem of Jewish persecution in Czarist Russia. The petition was signed by 413 outstanding Jewish and Christian personalities in the United States. In 1916 a similar memorandum was sent to President Wilson which may have influenced his positive attitude to the Balfour Declaration.

[Yona Malachy]

°**BLAKE, WILLIAM** (1757–1827), English poet and engraver. One of the great figures of the English romantic movement, Blake described his poems as prophecies, declaring that his model was the Bible, which he termed "the great code of art." The works of Homer and Ovid were for him, by contrast, perversions of art and imagination. Blake was in touch with various occult circles and shared with them the belief that Britain was the cradle of the Israelite people. This explains his tendency to identify English names and places with those in the Bible. His work is saturated in biblical imagery and allusion. His main biblical poems are "*The Four Zoas*," "*Milton*," and "*Jerusalem*." The last quatrain of his preface to "*Milton*" well illustrates Blake's revolutionary mystique: "I will not cease from mental fight/Nor shall my sword sleep in my hand,/Till we have built Jerusalem/ In England's green and pleasant land." In freeing his verse from the shackles of classical prosody and adopting for his prophetic books something resembling the syntax of the Bible, Blake may have been influenced by the 18th-century Oxford scholar, Robert Lowth. Although he knew little or no Hebrew, and was not Jewish, Blake was also influenced by ideas which can be traced to the Kabbalah. His notion of the Giant Albion, whose limbs contain heaven and earth, is derived from the kabbalistic image of **Adam Kadmon* (Primal Man). Equally kabbalistic are his notions of a divine world divided into male and female principles, and his conception of a primordial "Fall" from which all evil flows in both the divine and the human realms. In spite of many Judaistic ideas and currents of feeling, Blake's moral ideas are, paradoxically enough, anti-Judaic, even antisemitic. Like the Gnostics, he viewed the Law and the Commandments as an evil system, and he identified the God of Sinai with some evil demiurge.

[Harold Harel Fisch]

BLANC, MEL (1908–1989), U.S. voice actor. Born in San Francisco, California, Blanc was one of America's most distinguished and versatile voice actors during his long career with Warner Brothers and Hanna-Barbera cartoons. Blanc was the voice of a number of Warner Brothers' and Hanna-Barbera's most famous cartoon characters, including such favorites as Bugs Bunny, Daffy Duck, Porky Pig, Woody Woodpecker, Tweety Bird, Speedy Gonzalez, and Sylvester the Cat. Blanc's talents first gained recognition when he worked as a regular on the *Jack Benny Program*, on which he served as the voice of Benny's automobile, violin teacher Professor LeBlanc, Polly the Parrot, and Benny's pet polar bear, Carmichael. Blanc appeared on various national radio programs including *Burns and Allen*, *Point Sublime* and *G.I. Journal*, before joining Warner Brothers' renowned cartoon studio, the Leon Schlesinger Studios, in 1936. It was at Warner Brothers that Blanc became the voice of his most celebrated characters. In addition to the aforementioned roles, Blanc was also responsible for the voices of Yosemite Sam, Pepe Lepew, Foghorn Leghorn, Wile E. Coyote, Road Runner, Marvin the Martian, the Tasmanian Devil, and Elmer Fudd, a role inherited from Arthur Q. Bryan. During the early 1960s, Blanc began working at Hanna-Barbera studios, where he worked alongside the prominent vocal actors Daws Butler and Don Messick. Blanc's best-known characters from the Hanna-Barbera era are Barney Rubble, Cosmo G. Spacely, Hardy Harr Harr, and Captain Caveman. His last original character was Heathcliff the Cat, who first appeared in 1981. Blanc's tombstone and autobiography both bear his signature phrase, "That's all, folks!"

[Walter Driver (2nd ed.)]

BLANCHOT, MAURICE (1907–2003), French writer, novelist, essayist, and literary critic, Blanchot began his career as a young monarchist and right-wing journalist in the *Journal des Debats*. While studying German literature and philosophy in Strasbourg, he became a close friend of Emmanuel *Levinas, who introduced him to Heidegger's thought. During the 1930s, despite this friendship, Blanchot wrote in various right-wing newspapers, most of them related to Maurras' *Action Francaise*, which he admired, and his articles were occasionally antisemitic in tone, describing for example Leon Blum in 1937 as "a wog"; but Blanchot was critical of the persecution of the Jews as early as 1933. He also wrote in Thierry Maulnier's *Combat* review, which was anti-Hitlerian but favored a "rational antisemitism." In 1940, he joined the Jeune France movement, a cultural association set up by the Vichy regime. In 1942 he published his novel *Aminadab*, named for a brother of Levinas murdered by the Nazis in Lithuania.

After the war, Blanchot began a journey towards Jewish philosophy and literature, following in the footsteps of Levinas, whose concepts and philosophical language impreg-

nated Blanchot's literary criticism. This turn towards Judaism, clearly perceptible in *L'Entretien infini*, to the point that Philippe Mesnard wrote that Blanchot "tries to think Jewish like Holderlin tried to think Greek," may be seen as an endeavor to cope with the horrors of genocide. Blanchot commented on Kafka, Edmond Jabes, and Martin Buber. In the wake of the May '68 movement, Blanchot joined the extreme left wing, but ultimately left it when French left-wingers became increasingly anti-Israel.

[Dror Franck Sullaper (2nd ed.)]

BLANCKENHORN, MAX (1861–1947), German geologist who became famous principally for his research and publications on the geology of the Near East, Syria, and particularly Erez Israel. Blanckenhorn visited the countries of the Near East many times and worked together with A. *Aaronsohn and the zoologist Israel *Aharoni. He was also a friend of Otto *Warburg, with whom he worked to deepen and spread knowledge of the natural resources of Erez Israel. As the then virtually only expert on the geology of Erez Israel, Blanckenhorn often advised Zionist leaders on matters concerning economic resources of the country. From 1889 to 1940 he published more than 50 pieces of research on the general and structural geology of the Near East, on the stratigraphy, paleontology, prehistory, seismology, and climatology, and on mineral resources such as phosphates, bitumen, and the salts of the Dead Sea. He prepared the first geological maps of the Jerusalem area (1905), of the Near East (in International Map of Europe containing the Mediterranean area, 1902–11), and of Erez Israel on a scale of 1:700,000 (1912). Of great importance are his paleontological monographs on the fossils from Erez Israel and Syria. A detailed list of his publications on the Middle East appeared in *Israel Journal of Earth-Sciences*.

[Moshe A. Avnimelech]

BLANES, JACOB (1877–1943), one of the last cantors of the Portuguese Synagogue of Amsterdam before the Holocaust. He was appointed in 1902. Blanes insisted on full accuracy in recitation, a characteristic feature of Sephardi cantorial singing in Amsterdam. He had a deep knowledge of *Hazande*, including many ancient melodies for the *Kaddish, etc. He had great influence on younger men anxious to preserve the tradition of *hazzanut*, and the few pupils of his who survived World War II were afterward to be found in communities in various parts of the world. Blanes himself died after being deported from Holland in 1943.

BLANK, ARTHUR M. (1942–), U.S. entrepreneur, philanthropist. Born in Queens, N.Y., Blank received an accounting degree from Babson College and worked as an accountant before joining a small pharmaceutical company started by his father. When the company was bought by Daylin, Blank became an executive at a Daylin drugstore unit. He then moved to the Handy Dan Improvement Centers, a division of Daylin, where he met Bernard *Marcus. In 1978, Blank and Marcus were fired by Daylin over disagreements about the small chain's future and decided to go into the home-improvement business. After surveying four cities, they settled on Atlanta as the place with the right market and real estate conditions to test their theory that consumers would flock to huge stores offering a broad selection of home improvement products, low prices, and hospitable service. They opened three Home Depot stores in 1979, employing 200 workers, and had \$7 million in sales. They lost nearly \$1 million. But their fortunes changed and the company went public in 1981. Their goal was to encourage creativity from everyone from sales people to managers, with stock options offered even to the lowest-level employees. Their adversary was the lumberyard down the street, not the boss. This familial structure, plus a ferocious sense of competition, proved a winning combination. Eventually, their muscle helped put Handy Dan out of business. By the end of 1998, Home Depot had grown to almost 800 stores, had 157,000 employees, and recorded more than \$30 billion in sales. Home Depot became the do-it-yourself giant, providing everything from screws to electrical wiring for American fixer-uppers. It also opened stores in other countries, in Canada and South America.

Blank served as chief executive from May 1997 until December 2001, when he turned over day-to-day management to an executive from General Electric. During Blank's tenure, Home Depot sales more than doubled and the company's stock price almost tripled. Blank said he planned to devote more time to his family foundation and to his wife, who was expecting twins. In December 2001, Blank also completed a deal to buy the Atlanta Falcons professional football franchise for \$545 million. Blank and Marcus became philanthropic leaders in Atlanta and Blank was chairman of the local Chamber of Commerce. When he retired, his stock holdings were estimated at \$1.6 billion. His foundation gave away \$100 million from 1995 through 2002. His philanthropies ranged from a new venue for the Atlanta Symphony Orchestra to restoring green space in the inner city to helping such nonprofits as Outward Bound and Zoo Atlanta. About 90 percent of the funds the Blank Family Foundation gives away goes to youth projects, but other causes also receive support. The foundation gives to many Jewish organizations. The Home Depot company has spawned as many as 1,000 millionaires. One former executive vice president, Ronald M. Brill, who helped start the company, gave \$1 million for an endowment at the Atlanta Jewish Community Center in 1999.

[Stewart Kampel (2nd ed.)]

BLANK, LEON (1867–1934), Yiddish actor. Born in Lithuania, Blank and his family subsequently moved to Romania. He sang in synagogue choirs as a child but was attracted to Yiddish theater. He reached the U.S. in 1886, as a stowaway with Mogulesko's company. He started out as a member of the chorus but soon turned to acting. As a singer and a dramatic reader, Blank made a number of recordings in Yiddish.

His appearance in the play *David's Fidele* ("David's Violin," 1897) brought him recognition and started him on a successful career. Blank was one of the founders of the Hebrew Actor's Union in 1899. In the 1920s he starred in many of Jacob *Gordin's plays at the National Theatre, Liberty Theatre, and Public Theatre in New York. For a short period he was a member of a Yiddish theater company in Philadelphia, but he spent most of his time on the road, performing across the U.S. Despite offers from Broadway and Hollywood, Blank remained attached to the Jewish theater. His memoirs were serialized in *Der Forverts* (Oct. 5, 1928–Jan. 29, 1929).

[Ruth Beloff (2nd ed.)]

BLANK, MAURICE (1848–1921), Romanian banker. Born in Pitesti, Romania, Blank was one of the first Romanian Jews to receive diplomas in economics and finance at the Vienna and Leipzig universities. He went to work in Bucharest in the banking house of Jacob Marmorosh, who later invited him to become a partner. Marmorosh, Blank and Company became Romania's largest bank after the Romanian National Bank. Blank made important connections with East European financial institutions and was instrumental in developing his country's economic relations with the rest of Europe, particularly after Romania became independent in 1878. His bank shared in developing many of the country's industries, helped to introduce steel trains, and made possible the financing of the great tunnel project at Barbosi. Blank was involved in Jewish and general communal affairs, giving generous support to cultural institutions and founding theaters and publishing houses. His son ARISTIDE BLANK (1884–1962) became general director of the bank on his father's death and was also a supporter of many Jewish and general causes. He published a number of studies on finance, and some plays in Romanian and French. Aristide Blank was also a promoter of Romanian culture: he financed the publication of books on history and archaeology, bought the *Adevarul* and *Dimineata* dailies, and supported the Popular Theater of Bucharest and the Romanian school in Paris. He also founded the nonprofit Cultura Nationala publishing house, which published books in the fields of literature, the humanities, and social sciences, with the aim of encouraging writers and promoting good literature. He also financed the translation of the Bible into Romanian by the writer-priest Gala Galaction. In 1950, ruined and persecuted by the Communist regime, Aristide Blank left for Paris, where he lived in poverty and died.

[Joachim O. Ronall / Lucian-Zeev Herscovici (2nd ed.)]

BLANK, SAMUEL LEIB (1893–1962), Hebrew novelist and short-story writer. Blank, who was born in the Ukraine, spent his formative years in Bessarabia and in 1922 settled in the United States. His early stories described the Jewish farmers of Bessarabia, and his tetralogy *Zon, Adamah, Nahalah* (1930–33), and *Moshavah* (1936) focused upon a simple protagonist, significantly and symbolically called “Bo’az.” Blank was not a subtle psychologist, but he vividly depicted the Jewish man of the soil in his primitive surroundings. When he attempted to portray the harsher realities of life after World War I, such as the pogroms in the Ukraine in his *Bi-She’at Herum* (1932) or the maladjusted immigrant in America, as in *Mr. Kunis* (1934) or *Iy ha-Dema’ot* (1941), he verged on melodrama. *Al Admat Amerikah* (1958) and *Ez ha-Sadeh* (1961) were among his last works.

BIBLIOGRAPHY: Waxman, *Literature*, 4 (1960²), 1055–58; 5 (1960²), 202–4; M. Ribalow, *Im ha-Kad el ha Mabbu’a* (1950), 237–43.

[Eisig Silberschlag]

BLANK, SHELDON HAAS (1896–1989), U.S. rabbi and Bible scholar. Blank was ordained at Hebrew Union College, Cincinnati, Ohio, in 1923. From 1926 he taught Bible at the Hebrew Union College. Blank published numerous studies on many aspects of biblical scholarship, dealing with questions of the text and of social and political history. He made a special contribution by his insights into the religious experience of biblical personalities, especially the prophets, and by his exposition of their religious ideas. These qualities characterize his books *Prophetic Faith in Isaiah* (1958) and *Jeremiah: Man and Prophet* (1961) as well as such essays as “Men against God, the Promethean Element in Biblical Prayer” (in *JBL*, 72 (1953), 1–13), “Doest Thou Well to Be Angry? A Study in Self-Pity” (in *HUCA*, 26 (1955), 29–41), and “Of a Truth the Lord Hath Sent Me, an Inquiry into the Source of the Prophet’s Authority” (1955). In these studies he strictly followed the canons of critical scholarship. Elsewhere, however, he sought to reinterpret biblical thoughts in terms of the present day: “The Relevance of Prophetic Thought for the Modern Rabbi” (*CCARY*, 65 (1955), 163–72) and *The Dawn of Our Responsibility* (1961). He was editor of the *Hebrew Union College Annual* for more than 60 years,

BIBLIOGRAPHY: *Dictionary Catalog of the Klau Library*, 4 (1964), 465–70. **ADD. BIBLIOGRAPHY:** *HUC-JIR at 100 Years* (1976).

[Bernard J. Bamberger]

BLANKENSTEIN, MARCUS VAN (1880–1964), Dutch journalist. From 1909 to 1920, Blankenstein reported from Berlin, returned to Rotterdam in 1931, and became chief for-

eign editor of the *Nieuwe Rotterdamsche Courant*. He left in 1936 when his articles were considered too anti-Nazi. He reached England in 1940 and became chief editor of the Free Dutch weekly *Vrij Nederland* in London. After the war he was a foreign editor and roving correspondent of the daily *Het Parool*.

ADD. BIBLIOGRAPHY: E. van Blankenstein, *Dr. M. van Blankenstein: een Nederlandse dagbladdiplomaat, 1880–1964* (1999).

BLANKFORT, MICHAEL S. (1907–1982), novelist, and screenwriter. After publishing *The Widow-Makers* (1946) and *Big Yankee, the Life of Carlson of the Raiders* (1947), Blankfort, an ardent Zionist, achieved international success with *The Juggler* (1952), which deals with a young refugee’s adjustment to normal life in the State of Israel. His other works include *The Strong Hand* (1956), about a young Orthodox rabbi’s tragic love affair with a war widow; screenplays, such as his adaptation of Herman Wouk’s *The Caine Mutiny* (1954); and *Behold the Fire* (1965), a novel based on the exploits of the *Nili conspirators for which he was awarded the S.Y. Agnon Prize.

ADD. BIBLIOGRAPHY: “Michael Blankfort, 74,” in: *New York Times* (July 16, 1982), B4.

BLANKSTEIN, CECIL (1908–1989), Canadian architect. Blankstein was born in Winnipeg, Manitoba, into a building and architectural dynasty. His grandfather Meyer was a contractor and stonemason in Odessa and his father Max was a Russian-trained architect who practiced in Winnipeg from 1905, the first registered Jewish architect in western Canada. Cecil Blankstein graduated with a degree in architecture from the University of Manitoba in 1929. His sister Evelyn and brother Morley were also architects and his son Arthur became an interior designer in Winnipeg and son Max a town planner in Israel.

Heavily influenced by the German Bauhaus tradition, Blankstein’s contemporary designs graced residential, commercial, and public building in Winnipeg and elsewhere in Canada, including the Winnipeg Concert Hall, Winnipeg Airport, Winnipeg City Hall, Winnipeg Post Office, the Lorne Building in Ottawa, which until recently housed The National Gallery of Canada, and buildings on several Canadian university campuses. Of special note are Blankstein’s contemporary postwar design for Winnipeg’s Shaarey Zedek Synagogue and his imaginative conception, in the late 1960s, for a major terraced housing project, Tzameret Habirah, in Jerusalem’s French Hill quarter. Blankstein’s artful combination of row housing with stacked building techniques set a new standard for hillside residential construction in Israel.

[Harold Troper (2nd ed.)]

BLANTER, MATVEY ISAAKOVICH (1903–1990), songwriter. Born in Pochep, Ukraine, Blanter studied violin, theory, and composition in various institutions in Kiev (1915–17) and Moscow (1917–21). His pieces and music for the Lenin-grad Satirical Theater attracted early attention. During the

period that he worked with the Krokodil miniature theater in Gorky, he developed an individual humorous style. He wrote for musical comedies, and his tune “Katyusha” attained popular success during World War II. His music, which made use of folk melodies, also shows an urban vernacular and jazz influences.

BLASER, ISAAC (1837–1907), Russian rabbi and educator. Blaser was one of the foremost disciples of R. Israel *Lipkin (Salanter), whose Musar (ethicist) *movement he helped develop and lead. In the early 1850s, Blaser moved from his native Vilna to Kovno, Lithuania, where he came under the influence of Lipkin. In 1864 he reluctantly accepted the rabbinate of St. Petersburg, hence the name by which he is familiarly known, “Reb Itzelle Peterburger.” During this time he wrote halakhic works and responsa, arousing the opposition of the *maskilim*. He left the rabbinate in 1878, returning to Kovno where he headed the *kolel* (“advanced talmudical academy”), and sent emissaries throughout the world to gain support for it. He helped to found the yeshivah of *Slobodka. About 1891, as the result of bitter controversy concerning the Musar movement, he left the *kolel* of Kovno and helped to found other such Musar-oriented schools elsewhere. Increasing opposition to the Musar movement (1896–98) and to Blaser, its chief exponent, forced the yeshivah to leave its premises in Slobodka, and it finally became established in Kelm (1898). In 1904 Blaser, favoring the idea of Jewish colonization of Palestine, immigrated to and settled in Jerusalem, where he died. His main contribution to the Musar movement was his emphasis on acquiring “fear of the Lord” (i.e., piety) by means of emotional meditation in works of *musar*. Unlike other disciples of Salanter, who expounded *musar* intellectually, Blaser held that knowledge and conceptualization were inadequate to the task of curbing man’s baser instincts. “Fear of the Lord” could be aroused only by an unsophisticated contemplation of man’s physical vulnerability, his moral lowliness, and his punishment for continued disobedience. Since he held that the form of such meditation makes a more lasting impression than the contents, he prescribed the reading aloud of *musar* texts in a melancholy melody, with frequent periods of weeping. Similarly, his preaching was simple, sad, and usually accompanied by tears. Blaser’s major literary contribution to the Musar movement, *Or Yisrael* (“Light of Israel,” 1900), was often reprinted, and for several decades was the only available exposition of *musar*. Blaser here expounded the fundamentals of the Musar approach and presented excerpts from the letters of Israel Lipkin, along with evaluations of the teachings of the founders of the Musar movement and of some of its leading personalities. His major halakhic work is *Peri Yizhak* (“Fruit of Isaac”); the first volume was published in Vilna in 1881, some 14 years after he had completed writing it. The second volume was published posthumously in 1912. He contributed numerous articles, both on *halakhah* and *musar*, to

the various rabbinic journals of the day. Much of his writing remained unpublished.

BIBLIOGRAPHY: D. Katz, *Tenu’at ha-Musar*, 2 (1954), 220–73; S. Bialoblotzki, in: *Yahadut Lita*, 1 (1959), 194–7; Ch. Zaichyk, *Ha-Me’orot ha-Gedolim* (1962), 109–29.

[Norman Lamm]

BLASPHEMY, in the broadest (and least precise) sense any act contrary to the will of God or derogatory to His power. Blasphemy is the term employed to translate the Hebrew verbs *heref*, *giddef*, and *niez* (e.g., Isa. 37:6, *gd*, where the servants of the king of Assyria denied the Lord’s power to save Israel; and Ezek. 20:27, where it refers to Israel’s sacrifices on the High Places). In the narrower and more precise sense, the word is used to mean speaking contemptuously of the Deity. The classic instance in the Bible is Leviticus 24:10–23, where the pronouncement (*nakav*, *naqav*) of the name of God appears in conjunction with the verb *killel* (*qillel*). God (*Elohim*) also appears as the object of the verb *qillel* in Exodus 22:27 (see also I Kings 21:10, 13, where *qillel* is euphemistically displaced by its antonym *berekh*, “to bless” or “to renounce”; see *Euphemism and Dysphemism). The rabbinic interpretation of Leviticus 24:10–23 and Exodus 22:27 as wishing (i.e., wishing harm, Sanh. 7:5) establishes a definition of blasphemy such as to render the actual perpetration (and the application of the penalty, capital punishment) out of the realm of probability. The verb *qallel* rarely means “to curse.” Rather it subsumes a wide range of abuse, often nonverbal in nature. “To curse” the Deity meant to repudiate Him, to violate His norms; blasphemy on the part of an Israelite, in the narrow sense, is a concept alien to biblical thought.

[Herbert Chanan Brichto]

In the Talmud

The Mishnah (Sanh. 7:5), rules that the death sentence by stoning should be applied only in the case where the blasphemer had uttered the *Tetragrammaton and two witnesses had warned him prior to the transgression. In the Talmud, however, R. Meir extends this punishment to cases where the blasphemer had used one of the *attributes, i.e., substitute names of God (Sanh. 56a). The accepted *halakhah* is that only the one who has uttered the Tetragrammaton be sentenced to death by stoning; the offender who pronounced the substitute names is only flogged (Maim., Yad, Avodat Kokhavim, 2:7). In the court procedure (Sanh. 5:7 and Sanh. 60a) the witnesses for the prosecution testified to the words of the blasphemer by substituting the expressions “Yose shall strike Yose” (*yakkeh Yose et Yose*). Toward the end of the hearing, however, after the audience had been dismissed, the senior witness was asked to repeat the exact words uttered by the blasphemer. Upon their pronouncement (i.e., of the Tetragrammaton), the judges stood up and rent their garments. The act expressed their profound mourning at hearing the name of God profaned. The custom of tearing one’s clothes on hearing blasphemy is attested to in II Kings 18:37, where it is told that Eliakim and his associates tore their garments upon hearing the blasphemous

words of the Assyrian warlord *Rab-Shakeh (Sanh. 60a). It is codified in Shulḥan Arukh (YD 340:37) that whoever bears a blasphemy whether with the Tetragrammaton or with attributes, in any language and from a Jew, even from the mouth of a witness, must rend his garment. The second and any successive witnesses only testified: "I have heard the same words" (Sanh. 7:5); according to the opinion of *Abba Saul, whoever utters the Tetragrammaton in public is excluded from the world to come (Av. Zar. 18a). Besides the sacrilege of God, vituperation against the king, God's anointed servant, was also considered blasphemy (cf. Ex. 22:27 and I Kings 21:10). Gentiles, too, are obliged to refrain from blasphemy since this is one of the Seven *Noachide Laws (Sanh. 56a, 60a). Maimonides also classified as blasphemy the erasure of God's name written on paper or engraved on stone, etc., which was to be punished by flogging (Yad, Yesodei ha-Torah 6:1–6). After Jewish courts were deprived of jurisdiction in those cases where capital punishment was applied, excommunication (see **herem*) was the usual sanction against a blasphemer (J. Mueller (ed.), *Teshuvot Ge'onei Mizrah u-Ma'arav* (1898), 27a, responsum no. 103 by Amram Gaon).

BIBLIOGRAPHY: Eisenstein, Dinim, 68.

BLAU, AMRAM (1894–1974), rabbi, leader of the ultra-Orthodox sect *Neturei Karta. Blau was born in Jerusalem into a noted religious family. He was a leading member of the Agudat Israel youth movement in the early 1930s. Blau and some of his colleagues left the movement in 1935 and founded the extreme anti-Zionist *Ḥevrat Ḥayyim*, later to become Neturei Karta. His fierce opposition to Zionism and Agudat Israel, sometimes expressed violently, led on several occasions to his prosecution and imprisonment. His anti-Zionist attitude did not change with the establishment of the State of Israel (1948), which he refused to recognize. Blau and his followers rejected the State of Israel on so-called "halakhic" grounds, rejecting a state run by secular Jews. In addition, Blau continually denounced the establishment of a Jewish state before the coming of the Messiah as an act of infamy and blasphemy. In 1965, after the death of his first wife, he married a proselyte, Ruth Ben-David, despite the opposition of the ultra-Orthodox *bet din* and some of his followers.

[Menachem Friedman / David Derovan (2nd ed.)]

BLAU, BRUNO (1881–1954), German lawyer and sociologist. Born in West Prussia, Blau practiced law in Berlin. In 1908 he joined A. *Ruppin as editor, and from 1909 was the sole editor, of the *Zeitschrift fuer Demographie und Statistik der Juden* (1904–19; new series 1924–27), published by the Buero fuer Statistik der Juden, of which Blau became director after Ruppin left for Palestine in 1907. Because of his severe illness, the Nazis did not deport him during World War II but kept him confined in the police section of the Berlin Jewish Hospital. Blau immigrated to the United States after the war, but returned to Germany before his death. Among Blau's many published works are *Kriminalitaet der deutschen Juden* (1906)

and *Das Ende der Juden in Deutschland* (1950; *Last Days of German Jewry*, 1953). He also edited the anthology *Statistik der Juden* (1918). Of particular importance is his work on anti-Jewish Nazi legislation and administrative orders, *Ausnahmerecht fuer die Juden in den europaeischen Laendern* (vol. 1, 1952), which is a collection of documents from Germany and was reprinted as *Ausnahmerecht fuer die Juden in Deutschland, 1933–1945* (1954).

BLAU, FRITZ (1865–1929), Austrian chemist. From 1890 he taught at Vienna University. In 1902 he joined the Auresgesellschaft in Berlin, and from 1919 was head of research of the Osram Company in Berlin, at that time one of the foremost industrial firms in Germany. He took out 185 patents, some in organic chemistry, but most dealing with tungsten, incandescent electric lamps, gases, and radiation. This work led to other patented developments in wireless telegraphy, electric furnaces, and X-ray machines and techniques. In addition, Blau published many papers in scientific journals on these subjects.

BIBLIOGRAPHY: *Zeitschrift fuer technische Physik*, 6 (1925), 278–359.

[Samuel Aaron Miller]

BLAU, HERBERT (1926–), U.S. theater director and educator. Born in New York, Blau received a bachelor's degree in chemical engineering from New York University (1947), an M.A. in drama from Stanford University (1949), and a Ph.D. in English and American literature from Stanford (1954). He formed the Actor's Workshop in San Francisco with Jules *Irving, in 1952. One of Blau's innovative acts was to present a play to the inmates of San Quentin penitentiary. On November 19, 1957, a group of actors faced an audience of 1,400 convicts. No live play had been performed at San Quentin since Sarah Bernhardt had appeared there in 1913. Now, 45 years later, the play that had been chosen, largely because no women appeared in it, was Samuel Beckett's *Waiting for Godot*. It was an unequivocal success. Overall, this repertory theater was highly successful but failed financially, and closed in 1965. Blau and Irving then directed the Lincoln Center Repertory Theater, New York, but Blau resigned in 1968. His last extended work in the theater was as artistic director of the experimental group *KRAKEN* (1968–81). Blau served as its first provost as well as dean of the School of Theater. A radical departure from the already innovative theater that Blau had been associated with, the work of *KRAKEN* included some of the first productions in the U.S. of such controversial dramatists of the modernist period as Brecht, Beckett, *Pinter, Ionesco, Whiting, Arden, Duerrenmatt, Frisch, and Genet.

Blau was distinguished professor of English and Modern Studies at the University of Wisconsin, Milwaukee, where he was also a senior fellow at the Center for 20th Century Studies. Subsequently he was the Byron W. and Alice L. Lockwood Professor in the Humanities at the University of Washington.

Regarded as the reigning theorist of theater and performance in our time, Blau wrote many books on the subject. *Sails of the Herring Fleet: Essays on Beckett* (2000) traces Blau's encounters with the work of Samuel Beckett. He directed Beckett's plays when they were still virtually unknown, and for more than four decades remained one of the leading interpreters of his work. In addition to now-classic essays, the book includes two interviews – one from Blau's experience directing *Waiting for Godot* at San Quentin prison and one from his last visit with Beckett, just before the playwright's death. *Take Up the Bodies: Theater at the Vanishing Point* (1982) and *Blooded Thought: Occasions of Theater* (1982) received the George Jean Nathan Award for Dramatic Criticism. Other books by Blau include *The Impossible Theater. A Manifesto* (1964), *The Eye of Prey: Subversions of the Postmodern* (1987), *The Audience* (1990), *To All Appearances: Ideology and Performance* (1992), *Nothing in Itself: Complexions of Fashion* (1999), and *The Dubious Spectacle: Extremities of Theater, 1976–2000* (2002).

Blau received *The Kenyon Review* award for literary excellence.

[Ruth Beloff (2nd ed.)]

BLAU, JOSEPH LEON (1909–1986), U.S. educator and historian of ideas. Born in Brooklyn, New York, Blau was educated at Columbia University. He taught at Columbia from 1944, where he later became a professor of religion (1962–77). In 1966 he became vice president of the Conference on Jewish Social Studies. Blau followed the philosophic tradition of naturalistic humanism in the line of John Dewey and his school at Columbia. He carried on their interest in the history of philosophy in America in his book *Men and Movements in American Philosophy* (1952) and in monographic studies.

As Blau was a student (and, later, collaborator) of Salo W. Baron, his approach to Jewish history emphasizes interdisciplinary and cross-cultural influences. He opposes the conventional interpretation that the development of the Jewish religious and philosophical tradition is mainly linear, maintaining that the Jews were not cut off from cross-cultural contact for any significant period of their history. He compiled *The Jews of the United States, 1790–1840* (ed. with S.W. Baron, 1963), and wrote *Judaism in America* (1976). His book *The Story of Jewish Philosophy* (1962) explores the ways in which Jewish thinkers absorbed and modified the ideas current in their cultural environment. In *Modern Varieties of Judaism* (1966), Blau demonstrates the same principle of interplay of tradition and environment in the shaping of Jewish religion since the 18th century. *The Christian Interpretation of the Cabala in the Renaissance* (1944) investigates the flow of ideas in the reverse direction – that is, from Jewish to Christian thinkers.

Blau also edited the book *Essays on Jewish Life and Thought: Presented in Honor of Salo Wittmeyer Baron* (1959).

ADD. BIBLIOGRAPHY: M. Wohlgeleinter, *History, Religion, and American Democracy* (1993).

BLAU, JOSHUA (1919–), scholar of biblical Hebrew grammar, Middle Arabic, and **Genizah* manuscripts. Born in Cluj, Transylvania, Blau studied in the Jewish Gymnasium in Budapest and Baden. He had barely spent a year in Jewish studies at the Rabbinical Seminary and Semitic languages at the University of Vienna when he had to flee the country in 1938 after its occupation by the Nazis. He immigrated to Palestine with his parents, where he continued his academic studies in Hebrew, Bible, and Arabic at the Hebrew University of Jerusalem (M.A., 1942). In 1948 he presented his dissertation on *The Grammar of Judeo-Arabic*, but was only awarded a Ph.D. two years later, after the War of Independence, during which he served in the army and took part in battles in Jerusalem.

In 1956 he was appointed senior lecturer at Tel Aviv University and a year later lecturer at the Hebrew University (professor from 1962), where he taught until his retirement in 1986.

Blau was a member of the Academy of Hebrew Language from the 1950s, was its president in 1981–93, and editor of its journal, *Leshonenu*, in 1981–99. Blau was also a member of the Israeli Academy for Sciences and Humanities from 1968 and head of Humanities, 1989–95; honorary fellow of the Royal Asiatic Society; and corresponding fellow of the American Academy for Jewish Research.

Blau's research focused on the fields of biblical Hebrew grammar, Semitic languages, and medieval Arabic. His books *Torat ha-Hegeh ve-ha-Zurot* ("Phonology and Morphology of Biblical Hebrew," 1971), *Ozar Leshon ha-Mikra* ("A Concordance and Dictionary of the Bible," with S.A. Loewenstamm and M.Z. Kaddari, vol. 1 (1957), 2 (1960), 3 (1968)), *Dikduk ha-Aravit ha-Yehudit shel Yemei ha-Beinayim* ("Grammar of Judeo-Arabic of the Middle-Ages," 1962, updated 1980) and others (see below) along with hundreds of articles brought him the fame as the leading authority on Judeo-Arabic and a prominent expert on other branches of Semitic languages. Blau described the rise of Judeo-Arabic in *The Emergence and Linguistic Background of Judaeo-Arabic: A Study of the Origins of Middle Arabic* (1965, 1999³), and also published *A Grammar of Christian Arabic* (3 vols., 1966–67). In these works Blau provided a solid foundation for research into medieval Judeo- and Christian-Arabic. These linguistic types had never been sufficiently studied or assessed before, because they were outside the scope of Muslim culture. In his studies, Blau provided a profound analysis and thorough description of a full-fledged and unique literature. He also showed the importance of this layer of Arabic in the crystallization of general standard Arabic as it has come down to us. Together with Prof. Simon Hopkins, he discovered an early phonetic method of Judeo-Arabic spelling, which enables us to reconstruct the very beginnings of Judeo-Arabic culture. Blau's research project on Middle Arabic will be completed with the publication of his immense *Dictionary of Medieval Judeo-Arabic Texts*.

Another important achievement of Blau's consists in his annotated critical edition of *Teshuvot ha-Rambam* ("Responsa of Maimonides") in three volumes (1958, 1960–61)

with a Hebrew translation of the Arabic original, and an additional volume (1986).

Blau was founding president (1983–99) of the Association for Medieval Judeo-Arabic, which holds an international biannual conference.

Blau also contributed to the field of education. Thousands of high school and college students learned Hebrew grammar from his series *Dikduk Ivri Shittati*, *Yesodot ha-Taḥbir*, and *Yesodot Torat ha-Lashon* (2 vols.).

Blau was awarded the Ben-Zvi Prize in 1980; the Wilhelm Bacher Medal (Hungary) in 1999; the Mark Lidzbarski Medal in 2000; the Rothschild Prize in 1992; and the Israel Prize in 1985.

A list of Blau's publications up to 1991 is to be found in *Hebrew and Arabic Studies in Honour of Joshua Blau, Presented by Friends and Students on the Occasion of his Seventieth Birthday* (ed. H. Ben-Shammai; 1993), pp. 1–34. Subsequently he published over 60 articles and three books: *Iyyunim be-Valshanut Ivrit* (1996), *Topics in Hebrew and Semitic Linguistics* (1998), and *A Handbook of Early Middle Arabic* (2003).

Blau's father, Pinchas (Paul), was one of the founders of the Hungarian Zionist daily newspaper *Uj Kelet at the end of World War I.

[Aharon Maman (2nd ed.)]

BLAU, LUDWIG LAJOS (1861–1936), scholar. Blau studied at yeshivot, the Jewish Theological Seminary of Budapest, and the University of Budapest. As a student he was invited to teach at the Seminary where in 1889 he became a full professor. In 1914 Blau became director of the Seminary. For 40 years he was the editor of the Hungarian Jewish scholarly journal, *Magyar Zsidó Szemle*. In 1911 he founded the Hebrew review *Ha-Zofeh le-Hokhmat Yisrael be-Erez Hagar*, which he edited until 1931. Blau was a prolific Jewish scholar who contributed to almost every aspect of Jewish learning. He was a regular contributor to most of the Jewish and non-Jewish scholarly periodicals dedicated to theology and philology. His bibliography includes 887 items and in the *Zsidó Szemle* he reviewed 1,383 books. He was among the first to evaluate the talmudic information on the Bible and the masorah (*Masoretische Untersuchungen*, 1891; *Zur Einleitung in die Heilige Schrift*, 1894). He also investigated the information contained in traditional literature on ancient Hebrew booklore (*Studien zum althebraeischen Buchwesen*, 1902). His works subsequently gained added importance in light of interest in old Hebrew scrolls. Blau enriched general folklore by his book *Das altjuedische Zauberwesen* (1898). Equally his *Juedische Ehescheidung und der juedische Scheidebrief* (2 vols., 1911–12) broke new ground; with the discovery of divorce documents among the Bar Kokhba finds, this work takes on new relevance. Blau was among the

first to make use of Greek papyri for the evaluation of talmudic law (*Papyri und Talmud in gegenseitiger Beleuchtung*, 1913; "Prosbul im Lichte der griechischen Papyri und der Rechtsgeschichte," in *Festschrift der Landesrabbinerschule*, 1927). He also published the letters of Leone *Modena (*Leo Modenas Briefe und Schriftstuecke*, 2 vols., 1905–06).

[Alexander Scheiber]

BLAU, MOSHE (1885–1946), *Agudat Israel leader; brother of Amram *Blau. Blau, who was born in Jerusalem, directed the Agudat Israel office there from 1924 until his death. He served as a member of the movement's world executive and edited its weekly *Kol Yisrael* ("Voice of Israel"). From 1933 to 1945 he headed the independent, ultra-Orthodox Edah Haredit (Orthodox community). Despite the community's segregation policy, he cooperated with *yishuv* leaders in representing Jewish interests in dealings with the Mandate government. Blau represented Agudat Israel before various British and international commissions which dealt with the Palestine problem. In 1946, while on a rescue mission to Jewish survivors of the war, Blau fell ill and died in Messina. He was taken to Jerusalem for burial. He wrote *Ammuda di-Nehora* ("Column of Light," 1932), a biography of Rabbi Y.H. *Sonnenfeld, and *Al Homotayikh Yerushalayim* ("Upon thy Walls, O Jerusalem," 1946), autobiographical notes and memoirs.

BIBLIOGRAPHY: A. Blau, *Shomer ha-Homot* (1957); Tidhar, 1 (1947), 175–6.

[Zvi Kaplan]

BLAU, PETER MICHAEL (1918–2002), sociologist. Born in Vienna, Blau immigrated to the United States. He received his doctorate in sociology from Columbia University in 1952 and held professorial appointments at the University of Chicago. He was a professor of sociology at Columbia University. During the academic year 1966–67, he was Pitt Professor of American History and Institutions at the University of Cambridge. His main interests were the development of group social structure, formal organizations, and occupations. Considered one of the founders of contemporary American sociology, Blau studied macrostructural characteristics of society. His theories sought to explain how such social phenomena as upward mobility, occupational opportunity, heterogeneity, and population structures influence human behavior.

In addition to numerous contributions to professional journals and books, Blau published a large number of his own books, which include *The Dynamics of Bureaucracy: A Study of Interpersonal Relations in Two Government Agencies* (1955), *Bureaucracy in Modern Society* (1956), *Formal Organizations: A Comparative Approach* (1962), *Exchange and Power in Social Life* (1964), *The American Occupational Structure* (1967), *The Structure of Organizations* (1971), *The Organization of Aca-*

demic Work (1973), *On the Nature of Organizations* (1974), and *Crosscutting Social Circles* (1996).

Blau was editor of the *American Journal of Sociology* from 1961 until 1967, a member of the board of the Social Science Research Council in 1967–69, and served as the 65th president of the American Sociological Association in 1974.

From 1979 through 1983 he taught at SUNY-Albany as Distinguished Professor. He taught in Tianjin in China at the Academy of Social Sciences as a Distinguished Honorary Professor (1981 and 1987). In 1988 he retired as a faculty member from Columbia University but taught at UNC at Chapel Hill as the Robert Broughton Distinguished Research Professor until 2001. Blau was professor emeritus at Columbia, a fellow of the National Academy of Sciences, senior fellow at King's College, fellow of the American Philosophical Society, and fellow of the American Academy of Arts and Sciences.

[Jacob Jay Lindenthal / Ruth Beloff (2nd ed.)]

BLAU, TINA (1845–1916), Austrian painter. Blau was born in Vienna. Realizing her early interest in painting her father arranged for lessons with the landscape painter Antal Hanély, with whom she started painting still lifes with fruits and flowers. In the early 1860s August Schaeffer became her tutor. From 1867 her paintings, especially landscapes, were shown in public exhibitions. While visiting Munich and the First International Exhibition in 1869, she discovered the paintings of the School of Barbizon, which influenced her later works, but in the end she adapted French impressionism and became one of the leading Austrian impressionist painters. After her initial success in selling her paintings, she enrolled in the *Kunstschule fuer Maedchen* in Munich and took an atelier in the house of her teacher Wilhelm Lindenschmitt. Together with her colleague Emil Jakob Schindler she traveled to Hungary and Holland, where she painted *Jew's Street of Amsterdam* (1875/1876, coll. Vera Eisenberger, Vienna). After two sojourns in Italy (1876 and 1879) she opened an atelier in the Vienna Prater, from where her most popular paintings originated, namely luminous views of the Prater such as *Springtime in the Prater* (1882, Vienna, Oesterreichische Galerie Belvedere).

In 1884 Blau returned to Munich, where she converted to Protestantism and married the painter Heinrich Lang. At that time, her own works were presented at international exhibitions such as the World Exhibitions of Antwerp in 1885 and of Paris in 1889. Moreover she started working at the *Damenakademie des Muenchner Kuenstlerinnenvereins*, an academy of fine arts solely for women, where she taught still life and landscape painting. In the summers she continued traveling, especially to France, Northern Germany, and Denmark. A first solo exhibition in the Munich *Kunstverein* contributed to the wide appreciation of her work at the end of the 19th century. She continued teaching at the academy until 1915, a year before she died, but was never accepted as a member of the *Wiener Kuenstlerhaus*.

BLAUBAUM, ELIAS (1847–1904), Australian Jewish minister. Born in rural Hesse, Germany, Blaubaum immigrated to Australia in 1873, learning English on the boat en route, and served as minister of Melbourne's St. Kilda Hebrew Congregation until his death. Learned in Jewish law, he defended traditional Orthodoxy and, although never ordained as a rabbi, served on Melbourne's Beth Din. From 1879 he edited the *Jewish Herald* newspaper and was one of the earliest Jewish voices in Australia to assert Jewish identity in an aggressive manner and to combat antisemitism.

[William D. Rubinstein (2nd ed.)]

BLAUSTEIN, U.S. industrialist family. **LOUIS** (1869–1937) was born in Russia and emigrated to the U.S. in 1888. Starting in business as a kerosene peddler, Blaustein went to work in 1892 for the Standard Oil Company at its Baltimore plant and by 1910 had risen to an executive position. In that year he left Standard Oil and, with a small amount of capital, founded the American Oil Company in Baltimore. The enterprise flourished due in large part to Blaustein's innovations in oil distribution in a period when the automobile was emerging as the major user of petroleum products. He experimented with new forms of gasoline and claimed the first high-test gasoline developed in the country. Blaustein's filling stations spread from Baltimore through Maryland and eventually covered the entire East Coast. In 1924 the giant Pan-American Petroleum and Transport Company (later controlled by Standard Oil Company of Indiana) paid \$5,000,000 for a half interest in the American Oil Company and merged with it in 1933. Blaustein remained active in the firm as it continued to expand, building steamship terminals and petroleum refineries. During his later years he gave large sums to charity, usually anonymously. **JACOB** (1892–1970), son of Louis, was associated with his father in the founding of the American Oil Company in 1910, serving in executive positions and as its president during 1933–37. Later he served as president of the American Trading and Production Corporation as well as director and executive committee member of major national companies in the fields of petroleum, insurance, and banking. He was reportedly one of the richest individuals in America. During World War II Blaustein was vice-chairman of the U.S. Petroleum Administration's marketing committee and served on other wartime committees. His civic activities include support of the American Heritage Foundation, United Negro College Fund, and American Association for the United Nations. Blaustein played an active role in Jewish affairs, with a major commitment to the American Jewish Committee, which

he served as executive committee chairman (1944–49) and president (1949–54). As president, Blaustein worked to protect the civil and religious rights of Jews and other minorities and to promote tolerance among races. He served on the boards of the American Friends of the Hebrew University and the Weizmann Institute of Science. His philanthropic activities ranged from local philanthropy in Baltimore, to the American Jewish Joint Distribution Committee, United Service for New Americans, and the Conference on Jewish Claims Against Germany. He was a member of the American delegation to the tenth UN General Assembly and was a leader in the movement to adopt the Convention on Genocide and the Declaration of Human Rights, helping to promote the idea of a UN High Commissioner for Human Rights, a position that was established more than two decades after his death.

Several important institutions have been created and/or funded by the Blaustein family.

The Blaustein Philanthropic Group, located in Baltimore, Maryland, is a constellation of foundations inspired by the legacy of Louis and Henrietta Blaustein. Each foundation represents a different branch of the Blaustein family and has a unique identity, set of priorities, and geographic focus. United by their roots in Jewish tradition, the foundations are dedicated to social justice and equal opportunity. As part of the Blaustein Philanthropic Group, the Jacob and Hilda Blaustein Foundation provides grants to help further the cause of human rights as well as strengthen Jewish life, Israeli democracy, educational opportunity, health, and mental well-being. The Jacob Blaustein Center for Scientific Cooperation, located in Israel, supports a variety of activities related to the promotion of scientific cooperation with scientists and institutions in Israel and around the world. The Institute for Desert Research, established in *Sedeh Boker in 1974 under the auspices of Ben-Gurion University in Beersheba, received a generous contribution from The Jacob and Hilda Blaustein Foundation in 1980 and was named The Jacob Blaustein Institute for Desert Research (BIDR).

[Morton Rosenstock / Ruth Beloff (2nd ed.)]

BLAUSTEIN, ABRAHAM (1836–1914), *hazzan*. Born in Riga, Blaustein became a cantor in Lomza, later in Vilna, and then settled in Germany. In 1877 he was appointed chief cantor of Bromberg (now Bydgoszcz in Poland), a position he held until his death. He edited a weekly paper for cantors and founded an association for raising professional standards.

BLAUSTEIN, DAVID (1866–1912), educator and communal worker. Born in Lida (province of Vilna), Blaustein fled to Germany in 1883 to evade conscription. There he worked and studied, moving to Schwerin to continue his religious stud-

ies, but in 1886 he left for the United States. In Boston he established a modern German-Hebrew school – the first of its kind in the United States – and continued his studies. From 1892 to 1896 he served as rabbi of a Providence Reform congregation and taught at Brown University.

In 1898 Blaustein was appointed superintendent of the Educational Alliance of New York City, then the most important social-educational institution for the Americanization of foreigners. With the untrained social workers of that institution he worked diligently to raise the standards of social work and to turn it into a profession. Respected by Jews and non-Jews alike, he accompanied Robert Watchorn, immigration commissioner at Ellis Island, to Romania in 1900 to study the conditions of the Jews there and the causes of the large-scale emigration from that country.

In 1905 Blaustein became the first president of the Society of Jewish Social Workers of New York. Active in Zionist affairs in New York, he was the first *nasi* (presiding officer) of Order of the Sons of Zion. In 1908 he became director of the Chicago Hebrew Institute, and in 1910 took up a lectureship on Jewish, Italian, and Slavic immigration at the New York School of Philanthropy, where a chair had been established for him.

[Judah Pilch]

BLAU-WEISS (“Blue-White”), first and one of the most influential Jewish youth movement in Germany, founded in 1912. It initiated a Zionist program, basing its organizational format on the German nationalist youth movement *Wandervogel* (whose increasing antisemitism greatly contributed to the expansion of Blau-Weiss). Before and immediately after World War I Blau-Weiss groups engaged almost exclusively in outings and intimate gatherings, emphasizing nature appreciation and “manliness” in the manner of the German *Jugendbewegung* (youth movement). Instead of the cult of German peasantry and folk traditions, Blau-Weiss introduced new forms of celebrating Jewish holidays outdoors and an interest in the Hebrew language, Hebrew songs, and Yiddish folklore. The main aim of Blau-Weiss was to combine being a Jew with love of the German fatherland. The movement strove to strengthen the body, mind, and spirit of the young with an introduction to Jewish education. Blau-Weiss reached its peak in the early 1920s, with about 3,000 members. At this time a pioneering, Palestine-oriented tendency developed in its ranks and became, under the leadership of Walter Moses, its official program at the Blau-Weiss conference in Prunn (August 1922). The conference decided upon the establishment of a Blau-Weiss settlement in Palestine based not only on agriculture but also on precision workmanship in such fields as tool mechanics. It also decided to streamline the organizational structure of the movement along “hierarchical” lines, and to participate actively in Zionist politics. Subsequent friction with the German Zionist leadership, as

well as the economic crisis in Palestine, thwarted this ambitious program. While many members of Blau-Weiss settled in Palestine, some of them prior to the Prunn conference, no specific Blau-Weiss settlement or enterprise materialized. The movement dissolved in Germany in 1929, retaining only the *Praktikantenschaft*, i.e., small *hakhsharah* groups. After the disintegration of the Blau-Weiss most of its remaining members joined the *Kadimah group.

Blau-Weiss also existed in Austria, where it flourished for a time. The Czechoslovak branch of the movement, which from 1919 called itself by the Hebrew equivalent, *Tekhelet-Lavan*, continued as a pioneering organization into the 1930s. The main impact of “the Blau-Weiss experience” was felt in Germany in the early 1920s among Jewish boys and girls of assimilated and semi-assimilated families. Alienated from their affluent parents and excluded from the “Aryanized” youth movements, these young people found their way back to the Jewish people and to Zionism.

BLAYER, PIETRO (1902–1978), Italian industrialist and Jewish communal leader. Born in Fiume, Blayer graduated in economics at the University of Trieste, and embarked on a banking career. In 1938, however, after the fascist racial laws, he entered his family’s printing plant, and toward the end of World War II escaped through the German lines and settled in Rome. Following nationalization of his family properties by the Yugoslavian government, which had annexed his native Istria region, he started a new advanced graphic-printing plant in Rome. In 1961 he was elected to the council of the Unione delle Comunità Israelitiche Italiane, where he directed the Finances and Properties Department for several years, displaying outstanding qualities as administrator. In 1972 he was elected vice president of the U.C.I.I. and in 1976, following the death of S. *Piperno-Beer, was appointed president.

[Sergio Della Pergola (2nd ed.)]

BLAZKO, MARTIN (1920–), Argentine sculptor. Born in Germany, Blazko emigrated to Poland in 1933 and studied under Jankel Adler. Six years later, he settled in the Argentine where he helped to found the Madi group. Blazko’s sculptures, intellectually ordered though lacking sensuality, do not require effects of light for vivid presentation. The light values emanate from the planes and the hollows. Blazko consistently based his work on the relationship between plastic form and structure. He received many awards both national and international.

BLECH, LEO (1871–1958), German opera conductor and composer. Born in Aachen, Blech studied with the composer Humperdinck. He was conductor at the Aachen Stadttheater from 1893 to 1898. In 1906 he was appointed choirmaster of the Berlin Royal Opera (State Opera from 1918) and from 1913 to 1923 was its general musical director. In 1924 he became first conductor of the Berlin Folk Opera. Blech returned to the Berlin State Opera in 1926 and remained its conductor until 1937, when the Nazis forced him to resign. He left Germany for Latvia and in 1941 fled to Sweden, where he became conductor of the Stockholm Royal Opera. He returned to Germany in 1949 and once again conducted the Berlin State Opera. Blech composed a number of one-act and three-act operas, the latter including *Aschenbroedel* (“Cinderella”, 1905) and *Rappelkopf* (1917).

BLECHER, MARCEL (1909–1938), Romanian author. Blecher was born in Botoşani, but spent most of his life in the town of Roman. He was something of a phenomenon in Romanian literature. Afflicted with tuberculosis of the bone he was bedridden for the last ten years of his short life. His illness led to a heightened sensitivity and an obsession with death which contributed to the artistry of his writing. Blecher’s work appeared in various periodicals before he published his first collection of poems, *Corp transparent*, in 1934. His first novel, *Intîmplări în irealitatea imediată* (“Incidents in the Immediate Unreality,” 1935), was one of the first attempts at surrealism in Romanian literature. Despite his remoteness from reality Blecher drew some remarkable portraits of a middle-class Jewish family in a provincial town and some lively scenes of Jewish customs. In his autobiographical novel *Inimi cicatrizate* (“Scarred Souls,” 1937) Blecher described life in the sanatorium at Berck-sur-Mer in France where he spent a long time encased in a plaster cast. In his book he examined with deep psychological insight not only his own spiritual experiences but those of his fellow patients. A Yiddish version of “Scarred Souls” appeared in Romania and two editions of the original were published in Israel. At the suggestion of André Gide, Blecher began translating the novel into French, but died before he could complete the task. Among his unpublished works, he left the manuscript of a novel on a Jewish theme entitled *Vizuina luminoasă* (“The Bright Vision”).

[Dora Litani-Littman]

BLEEK, FRIEDRICH (1793–1859), German Bible critic; professor of theology at Bonn from 1829 to 1859. Bleek maintained that the basic document of the Pentateuch is the Elohist (the E document) which has been supplemented by sections

from an unconnected Yahwist strand. He argued for the unity of Daniel, and he wrote on the composition of Isaiah, Ezra, Nehemiah, and the Sibylline Oracles. His most important work was in the area of New Testament exegesis, where he was primarily interested in the defense of Christian tradition against the criticism of the Tuebingen school.

Two of his important works are *Einleitung in das Alte Testament* (1860, 1878⁴), and *Einleitung in das Neue Testament* (1866²).

[Zev Garber]

BLEICH, J. DAVID (1941–), U.S. rabbi and professor; one of the world's leading authorities on Jewish medical ethics. Born in Brooklyn, he studied at Yeshiva Torah Vodaath (1948–53) and was ordained by Mesivta Torah Vodaath (1957). He earned his B.A. at Brooklyn College in Jewish studies (1960); his M.A. from Columbia in philosophy, and a Ph.D. from New York University (1974), writing on *Providence in Late Medieval Jewish Philosophy*.

Bleich was simultaneously the *rosh yeshivah* (professor of Talmud) and *rosh kolel* at the Kollel le-Hora'ah (Postgraduate Institute for Jurisprudence and Family Law) of the Rabbi Isaac Elchanan Theological Seminary; professor of law at the Benjamin N. Cardozo School of Law; and Tenzer Professor of Jewish Law and Ethics, Yeshiva University, while serving as rabbi at the Yorkville Synagogue, New York City. Previously he had taught at the University of Pennsylvania (1991–93), Hunter College, Rutgers University, and Bar-Ilan University.

His writing centers on problems of *halakhah* and on Jewish medical ethics. His books include *Contemporary Halakhic Problems* (5 vols., 1977–83, 1989, 1995, 2005), *Be-Netivot ha-Halakhah* (3 vols., 1996, 1998, 2000), *Bioethical Dilemmas* (2 vols., 1998), *Judaism and Healing* (1980, 2002), *Time of Death in Jewish Law* (1991), *Providence in the Philosophy of Gersonides* (1973), and *Bircas Ha-Chammah* (1980). He is the editor of *With Perfect Faith: Readings in the Foundations of Jewish Belief* (1983) and, with Fred Rosner, of *Jewish Bioethics* (1979, augmented in 1999); and has written extensively on topics of Jewish law and ethics. His teaching, like his writing, is clear, methodical, and resourceful, and some of his students (e.g., Michael Broyde, Michael Berger) are already, like Bleich himself, among the most learned and analytic students of Jewish law in the next generation of Orthodox scholars. Bleich has also served on numerous boards and committees in all his areas of interest.

BLEICHROEDER, German banking family. SAMUEL BLEICHROEDER (1779–1855), German banker, the son of a sexton, opened in his native Berlin a money-changing and lottery store in 1803 which developed into the banking firm of S. Bleichroeder. In 1837 the Rothschild banking house of Frankfurt appointed him their representative in Berlin. The

firm became a member of the Rothschild and the Preussen consortiums.

His son GERSON VON BLEICHROEDER (1822–1893), was born in Berlin. He entered the firm at 17, and became its head upon his father's death. Under his direction the bank developed into one of the leading financial houses in Germany, mainly engaged in issuing, underwriting, and financing railroad loans. During the 1860s Bleichroeder became financial adviser and private banker to Bismarck who relied on his advice and assistance to overcome his difficulties with the Prussian parliament concerning the financial preparations for the 1866 war. Bleichroeder also advised Bismarck regarding the indemnities payable by France after the 1870–71 war. In 1872 Bleichroeder was raised to the nobility. During the Congress of Berlin (1878), he cooperated closely with Sir Moses Montefiore and Adolph Crémieux and successfully invoked Bismarck's assistance for the protection and emancipation of the Romanian Jews. But his close connections to Bismarck and Emperor Wilhelm I could not save him from becoming one of the main targets of antisemitic (and anticapitalist) agitation from the mid-1870s until his death; the government did not take any serious measures to oppose the assaults.

After Bleichroeder's death, his cousin, JULIUS LEOPOLD SCHWABACH (d. 1898) and then his son PAUL VON SCHWABACH (d. 1938) continued to run the firm as senior managing directors for Bleichroeder's three sons, HANS, GEORG (d. 1902), and JAMES (d. 1937), who all abandoned the Jewish faith. In 1931 the bank entered into a "community of interest" with the Jewish banking firm of Arnhold Brothers and in 1937 a successor firm was formed in New York under the name of Arnhold and S. Bleichroeder, in anticipation of the "Aryanization" of the Berlin house, which took place in 1938. The New York house does not include any bearers of the Bleichroeder name.

BLEJER, DAVID (1913–1997), Argentine lawyer and politician. Blejer, the son of Jewish colonists in the province of Entre Ríos, was born in Buenos Aires.

He graduated as a lawyer from the University of La Plata and settled in Villaguay in the province of Entre Ríos. He became active in politics and before reaching the age of 30 was elected as councilor of the city.

He was a legal adviser to the Argentine Agrarian Institute and lectured on agrarian economics. He joined the Unión Cívica Radical Party in 1930. In 1956, when the party divided over internal conflicts, Blejer aligned himself with the Unión Cívica Radical Intransigente, which was led by Arturo Frondizi who was elected president of Argentina (1958–62). In 1958 Blejer was appointed undersecretary of the Ministry of the Interior and in 1959 minister of labor and social security.

It was the first time in the history of Argentina that a Jew had become a member of the presidential cabinet. Afterwards he served as ambassador to Mexico. In 1961 he was named chairman of the Instituto Indigenista Interamericano and head of the official delegation of Argentina to the conference of the International Labor Organization. Blejer also published humorous essays under the pseudonym Julio Mococho.

[Efraim Zadoff (2nd ed.)]

BLEJER, MARIO ISRAEL (1948–). Israeli economist. Born in Córdoba, Argentina, to a traditional family, Blejer studied in the local Jewish day school and in 1967 made *aliyah* to study at the Hebrew University of Jerusalem, where he received his B.A. (1970) in economics and Jewish history and his M.A. (1972) in economics. He received his Ph. D. in economics from the University of Chicago in 1975. During his academic career Blejer held the Walther Rathenau Chair in Economics at the Hebrew University of Jerusalem (1996–99) and taught at Boston University, New York University, Johns Hopkins, the University of Geneva, George Washington University, Universidad de San Andrés in Buenos Aires, and the Central European University in Budapest. At the same time (1980–2001) he served at the International Monetary Fund, where he reached the level of senior. In 2001 he returned to Argentina to be appointed deputy governor and in 2002 governor of the Central Bank. He served in that position for one year, dealing with the country's financial crisis. In January 2003, Blejer moved to London, where he became the director of the Centre for Central Banking Studies at the Bank of England and a member of the Financial Stability Board of the Bank. He also served as an advisor to the governor. He published books and numerous articles in specialized journals.

[Efraim Zadoff (2nd ed.)]

BLEMISH (Heb. מַזְוֵה), a defect in the body of a man or an animal. Defects of conduct are also metaphorically called blemishes (Deut. 32:5; Prov. 9:7; Job. 11:15). A blemished priest was unfit to serve in the priesthood (Lev. 21:16–23) and was precluded from approaching the altar to offer the fire-offerings. He was permitted to carry out only Temple functions not involving actual service at the altar, since he was not standing before the Lord. The Bible forbade a priest who had been blemished to approach the veil (Lev. 21:23), and as a result he was forbidden during the Second Temple period not only to enter the Temple but even to step between the altar and the sanctuary (Kelim 1:9). He was permitted, however, to go into the other parts of the Temple area and to “eat of the food of his God, of the most holy as well as of the holy” (Lev. 21:22).

Just as the officiating priest had to be unblemished, so no blemished animal was permitted to be offered on the altar (Lev. 22:17–25; Deut. 15:21–23; 17:1; cf. Mal. 1:6ff.). An animal whose blemishes were slight – “with a limb extended or contracted” (Lev. 22:23; see below) – could only be offered as a freewill offering, which was less stringent. A blemished priest

was forbidden to approach the veil and approach the altar because “he shall not profane these places sacred to Me” (Lev. 21:23). A blemished sacrifice that was offered would not be acceptable on behalf of the one offering it (Lev. 22:20). Such a sacrifice is called an “abomination” in Deuteronomy 17:1 (cf. the strong words in Mal. 1:8ff. against a prevailing laxness in this regard). The flesh of a blemished animal, however, is permitted as food (Deut. 15:21–22).

The requirement that priests and sacrifices should be without blemish was common to all the ancient civilizations, and there is evidence of this from Egypt, Mesopotamia, Hatti (the land of the Hittites), Greece, and Rome. Egyptian documents state that candidates for the priesthood were examined for blemishes, and that the sacrifices were examined in the same way, marking animals fit for sacrifice. Documents from Mesopotamia state that priests and the sacrifices had to be perfect, without any blemish. The Hittites also regarded the presence at the ceremonial ritual of those blemished as an affront to the gods. The requirement that both priests and sacrifices be without blemish is also known from Greece and Rome.

The following blemishes are enumerated as making priests unfit for service in the Temple (Lev. 21:18–20): *ivver* (*iwwer*), a blind man; *pisse'ah*, one injured in the thigh, from birth or as the result of an accident (cf. 11 Sam. 4:4), in contrast to a man who has a broken leg; *harum*, a man whose nose is sunk in between his eyes; *saru'a*, apparently one with hands or feet of unequal length; a man who has a broken leg or broken arm; *gibben* and *dak* (*daq*), whose meanings depend on whether the words are connected with the following (Rashi, Maimonides) or with the previous bone deformities (Ibn Ezra; according to the first explanation *gibben* is one whose eyebrows are long and descend over his eyes and *daq* is one who has a kind of skin (pterygium) over the cornea of his eye; according to the second explanation, *gibben* is a hunchback and *daq* is one whose foot or hand muscles degenerated as a result of corrosion, and are thinner than usual); *tevallul*, a sufferer from cataract; *garav* and *yallefet*, skin diseases, not identified with certainty (*garav* is probably dermatitis and *yallefet* is probably Egyptian herpes, ringworm); *mero'ah ashekh*, one with a crushed testicle.

Blemishes that render an animal unfit for sacrifice are (Lev. 22:22, 24) *avveret*, (*awweret*) blindness; *shavur* or *haruz*, broken or cracked limbs that cause the animal to be lame; skin diseases (*yabbelet*, a wen, referring to a swelling discernible because of its size; *garav* and *yallefet* (see above)); defects of the testicles due to bruising by hand (*ma'ukh*), or cutting with an implement (*katut*), tearing with pincers or a cord (*natuq*), or even complete severance by castration (*karut*); *saru'a* and *qaluṭ*, very slight blemishes, referring to an animal having one leg longer or shorter than the other (these animals may be sacrificed as a freewill offering (Lev. 22:23)). According to some, only *saru'a* means “living limbs of unequal length,” whereas *qaluṭ* means “club-footed,” i.e., in the case of cattle, sheep, and goats, with the hoof unclown.

In the Talmud

Blemishes in the Talmud can be divided into four categories: those mentioned in the Bible as physical blemishes disqualifying priests for service; physical blemishes disqualifying animals for sacrifice; nonphysical blemishes in both; and moral blemishes.

BLEMISHES IN ANIMALS. Whereas the Bible enumerates only 12 disqualifying blemishes in animals and 12 in the case of a priest, the Mishnah subdivides them in the minutest detail. The whole of chapter 6 of tractate *Bekhorot* is devoted to an enumeration of those blemishes in an animal. They are divided into permanent and transient blemishes, the former referring to those which continue for 80 days. As an example of the detail, where the Bible merely says “blind,” the Mishnah 6:2 enumerates a pierced, defective, or slit eyelid, a speck in the eye, a commingling of the iris and the outer part, various growths in the eye, and rheum, or if its lip is pierced. According to the legend of *Kamza and Bar Kamza in the Talmud, it was the infliction of one of those two blemishes by Bar Kamza in the sacrifice offered up by the Roman emperor “which we count as a blemish and Romans do not,” and the obstinate refusal of R. Zechariah b. Avkulas to make any exception, which was the immediate cause of the Roman War (Git. 55b, 56a). The list even includes such blemishes as “if the tail of the animal does not reach the knee joint” or if its lower jaw protrudes beyond the upper. Maimonides lists 50 disqualifying blemishes in man and beast (Yad, Bi’at ha-Mikdash, ch. 7).

BLEMISHES IN PRIESTS. All the blemishes enumerated for animals similarly disqualify priests from serving in the Temple, but chapter 7 of *Bekhorot* gives another extensive list of blemishes which disqualify a priest but which are not considered blemishes in an animal, such as baldness, flat nose, bow-leggedness, black skin, red skin or albino, and many others. Maimonides numbers 90 blemishes which particularly apply to man (*ibid.*, ch. 8).

NONPHYSICAL BLEMISHES. In addition to bodily defects, the Mishnah enumerates some moral blemishes which disqualify a priest: if he has been guilty of homicide or murder, if he has married a woman forbidden to a kohen (though permitted to a non-kohen), or if he becomes ritually unclean by contact with the dead. In the last two cases he can resume his service if he undertakes to separate himself from the woman or undertakes to adhere in the future to the rules of ritual cleanness applying to a kohen. These blemishes originally applied to actual service in the Temple, and it is explicitly stated that a priest so disqualified could and did participate in reciting the *Priestly Blessing (see Second *Temple, Order of Service). It was, however, stipulated that if a kohen had a disfigurement which caused people to stare at him, he was not to recite the priestly blessing, not because the blemish disqualified him but because it would distract the recipients of the blessing. Thus as far as physical blemishes were concerned, this applied only to the hands, and even included a

dye whose hands were dye-stained (Mishnah Meg. 4:7). The *Gemara* (Meg. 24b) extends this prohibition to the feet, and even to speech impediments. The test was purely pragmatic; thus if the kohen was so well-known that his blemish raised no curiosity, the ban was removed. A complete list of such “non-statutory” blemishes is given in Shulhan Arukh, Orah Hayyim 128:30. Although the prohibition against a blemished priest officiating in the Temple is given in the Bible, the Talmud justifies it by interpreting the word *shalom*, in Numbers 25:12, as *shalem* (“whole”) since according to the masorah the *vav* is written with a break (Kid. 66b).

MORAL BLEMISHES. The word *mum* for a blemish in the Bible also refers to moral blemishes (cf. Deut. 32:5) and is used extensively in this sense in the Talmud: “Do not ascribe to your fellow your own blemish” (BM 59b). If a man falsely accused someone of being a slave, it was evident that he himself was a slave, since “a person stigmatizes another with his own blemish” (Kid. 70b).

BLESSING AND CURSING. In the Bible these two antonyms have three meanings: (1) the invocation of good or evil; (2) good fortune or misfortune; and (3) the person or thing upon whom or which the fortune or misfortune falls.

Thus the first meaning is best represented in English by the terms benediction and malediction or imprecation. The most common formulas of invocation use the terms *barukh* and *ʾarur*. Despite the frequent assertion that words themselves were regarded as intrinsically power-laden, there is little evidence that biblical Israel was any more prone to such a view than is contemporary man. When, in the Bible, man does the invoking, the source of power is (explicitly or implicitly) the Deity; hence both blessings and curses are basic prayers. When the Deity pronounces either good or evil against anyone, the pronouncement is to be understood as a decree rather than a prayer; when man is the subject of the verb *berekh* and the Deity is the object, the verb denotes praise, for nowhere in the Bible is there any indication that the power of God is itself increased by man's pronouncements. As substantive good, blessing is most frequently represented by the terms *berakhah*, *shalom*, and *tov*; its most common antonyms are *kelalah* (*qelalah*) and *ra'ah*. Blessings include health, long life, many and enduring progeny, wealth, honor, and victory. The dependence of Palestinian agronomy on rainfall is reflected in the use of *berakhah* for the rains in their due season. Curses, it follows, bring sickness and death, barrenness in people and cattle, crop failure, poverty, defeat, and disgrace. That the ben-

eficiary of good fortune or the victim of ill fortune is himself sometimes regarded as a blessing or a curse is reflected in such passages as Genesis 12:2, “be a blessing” and Numbers 5:21, “may the Lord make you a curse.” This use of the terms reflects the usage of beneficiaries of good or victims of evil as examples of felicity and disaster in benedictions and imprecations (Gen. 48:20; Jer. 24:9).

Terminology

The basic term for imprecation in the Bible is *alah*. In most instances it represents an adjuration, i.e., a conditional curse upon someone in the second or third person. As “imprecation” the *alah* is implicitly present in every oath (*shevu'ah*), for an oath is by definition a conditional self-curse. The close relationship between these two terms accounts for the confusion of the two in many translations; indeed, by the operation of metonymy the term *hishbi'a*, which normally means “to administer an oath,” may have the meaning “to adjure.” The root *rr* (רר; and the noun derived from it, *me'erah*) shows traces of the concept of “spell,” a malignant state in which the victim is barred from such benefits as a share of the earth's fertility, participation in a fellowship or society, and the like. Thus where *alah* reflects the curse as formulation, *rr* reflects the curse as operational. The third term most frequently associated with the idea of curse is the verb *kallel* (*qallel*; קלל) and the cognate noun *qelalah*. This term has a far broader connotative range. It reflects attitudes, behavior, and actions all the way from contempt, through verbal abuse, to physical violence; just as *berekh* (ברך) and *kibbed* (כבד; and the nouns derived from them) express respect, compliments and good wishes, and material benefit. The failure to recognize the broad range of meanings expressed by *qillel* resulted in the notion (as early as the Septuagint translation) that *qillel 'Elohim* means to “curse God” (cf. Ex. 22:27; Lev. 24:10–23). To avoid this horrendous formulation, the biblical text was altered: in 1 Samuel 3:13 from *'Elohim* (“God”) to *la-hem* (“to them”); in 1 Kings 21:13, and Job 1:5, 1:11, 2:9 the original *qillel* is replaced by the euphemistic antonym *berekh*. The rabbinic tradition in Sanhedrin 7:5 also had recourse to a euphemism in an attempt to understand how imprecation against the Deity is possible in a monotheistic system. In fact, it has been demonstrated that the phrase translated “curse God,” *qillel 'Elohim*, usually really means “show disrespect for God” – for the most part by disobeying His moral standards. The antonymous phrase is *yare'yir'at Elohim*, “to fear God,” i.e., show respect for His maxims. Since both blessings and curses are types of prayers, it is not surprising that they are encountered everywhere in the Bible, in everyday contexts, legal and diplomatic proceedings. Salutations of greeting and departure are normally expressions of goodwill, hence the term *b-r-kh* (ברך) for such salutations. Recourse to prayer, i.e., an address to the Deity, is to be expected when human resources are exhausted or, by nature of the situation, unavailing. Hence one notes the employment of oath and adjuration in legal disputes and in treaty formulations.

Ancient Near Eastern treaties exhibit the feature of curses, in that the subjected power invokes its own god or gods to administer punishment in the event of failure to observe the agreed upon (i.e., imposed) terms of the treaty (cf. Ezek. 17:11–19). The formulation of the covenant between Israel and its God follows the pattern of such “vassal treaties.” An examination of the curses in Deuteronomy 27:15–26 reveals the essential function of the curse, for all the enumerated breaches of provisions of the covenant are of such a nature that society would be unable to punish them. It follows also that the invocation of God in a curse (be it oath or adjuration) is not only blameless but also praiseworthy, for every such invocation is implicitly an acknowledgment of the Deity's sovereignty. This is made explicit in such passages as Deuteronomy 6:13, 10:20, and Isaiah 45:23. Heinous, by contrast, is swearing or cursing “by the name of” other deities. A frequent formulation of biblical curses is *Ko ya'aseh YHWH ve-kho yosif* (“May the Lord do such-and-such and worse if...”). Another formulation invokes the power of both king and Deity or of one of them only: “by the life (Heb. *hai*) of the king/the Lord.” This formula is a frozen form, i.e., a relic of a concept no longer in consonance with the thinking of the people who continue to employ it. The earlier belief was that the life of the king or a god could be put in jeopardy by a solemn pronouncement in support of a promise or of the truth of an assertion; thereby involved in the outcome, the king or god (and his punitive power) was brought into an issue which might otherwise have been of no concern to him. (This type of thinking remains in evidence today when a person swears “by” or “on” something more precious than his own life, e.g., the head of his child, or his mother's grave.) Alternatives to *hai* in cursing/swearing by the life of God or king are *nefesh* (“life,” “soul”) and *shem* (“name”). Thus the Deity Himself is pictured as employing this oath form, swearing “by Myself” (Gen. 22:16, Jer. 22:5; 49:13) or “by My great Name” (Jer. 44:26).

[Herbert Chanan Brichto]

In the Talmud

The rabbis continued to stress the efficacy of blessings and curses. With regard to the former, they ordained that God's name be utilized in the blessing uttered when meeting or greeting people in accordance with the practice of Boaz (Ber. 9:5; Ruth 2:4). Continuing biblical traditions, the rabbis introduced blessings at circumcisions (Targum Uzziel to Gen. 48:20), at marriages (Gen. 24:60), and upon separating from an acquaintance one was advised to say, “Go unto peace” (Ex. 4:18; MK 29a). The sages declared that even “the blessing or the cursing of an ordinary man should not be lightly esteemed” (Meg. 15a). The Jew was also encouraged to respond “Amen” after the blessing of a Gentile (TJ, Ber. 8:9, 12c). Great emphasis was placed upon the blessing of an elder, and people were urged to receive their blessings (Ruth R. 6:2). Likewise, people were encouraged to bless the righteous whenever they mentioned them (Gen. R. 49:1). Abraham blessed everybody, and he was constantly blessed by God (Gen. R. 59:5). The abil-

ity to bless others was passed on by Abraham to Isaac (Gen. R. 61:6). All blessings were considered incomplete unless they were also accompanied by peace (Num. R. 11:7).

Cursing

According to the Talmud, even an undeserved curse by a scholar is effective (Mak. 11a), and an undeserved curse will fall back upon him who utters it (Sanh. 49a and Rashi, ad loc.). The biblical prohibitions of cursing were elaborated in rabbinic *halakhah* to comprise (1) The cursing of God (see *Blasphemy). (2) The cursing of parents (Ex. 21:17; Lev. 20:9; cf. Prov. 20:20; 30:11; Sanh. 7:8). This prohibition applies to proselytes toward their unconverted parents (Maim. Yad, Mamrim, 5:11). (3) The cursing of judges and of the chiefs of the people: kings, heads of Sanhedrin, etc. (Ex. 22:27; Eccles. 10:20; Maim. Yad, Sanhedrin, 26:1). (4) The biblical prohibition of cursing the deaf (Lev. 19:14) was interpreted to include any poor, physically handicapped, or even any person in his absence (Sanh. 66a; Yad, loc. cit.). (5) The prohibition of cursing is extended to self-cursing (Shevu. 4:13; Yad, loc. cit.). (6) The cursing by a woman of her husband's parents in his presence is a valid reason for divorcing her without the repayment of her *dowry as stipulated in the **ketubbah* ("marriage contract"; Ket. 72a-b; Sh. Ar., EH 115:4). Cursing is permissible only when prompted by religious motives such as the cursing of those who are guilty of reprehensible actions (Men. 64b), or who mislead the people by calculating the date of the coming of the Messiah (*mehasehvei kizzin*; Sanh. 97b). While rabbinic ethics does not go to the length of the New Testament demand to "bless them that curse you..." (Luke 6:27), it disapproves of cursing in general and the Talmud quotes a popular proverb, "Be rather of the cursed than of the cursing" (Sanh. 49a). These ideas found their expression in the prayer cited in the Talmud (Ber. 17a) and said thrice daily at the conclusion of the *Amidah: "O my God, guard my tongue from evil and my lips from speaking guile; and to such as curse let my soul be dumb, yea, let my soul be unto all as the dust..."

The popular belief in the magical power of a curse, even if pronounced unintentionally, has led to the custom of reading the verses of the Bible, Leviticus 26:14-43 and Deuteronomy 28:15-68, called *Tokheḥah* ("chastisement"), in a low voice. Out of fear, people were reluctant to be called up to the Torah reading of these particular sections, so it became customary in some congregations to call for a volunteer (*mi she-yirzeh*), or, when a beadle (*shammash*) was hired, it was agreed that it would be his duty to be called up for the reading of the *Tokheḥah* sections (see Isserles to Sh. Ar., OH 428:6). Some pious rabbis volunteered to read the *Tokheḥah* to prevent embarrassment to other people.

BLESSING OF CHILDREN. Belief in the value and efficacy of parental blessing of children is attested in biblical stories, such as those of Noah's blessing of Shem and Japheth (Gen. 9:26-27); Isaac's blessing of Jacob and Esau (Gen. 27, and 28:1-4); and Jacob's blessing of his sons (Gen. 49) and his grandsons Ephraim and Manasseh (Gen. 48:13-22). The importance of parental blessing is also stressed by Ben Sira (Ecclus. 3:9). The blessing of the children is performed on Sabbath eve either in the synagogue or in the home; on the eves of holy days, of the Day of Atonement, and before leaving for a journey. The blessing is usually given by the father, on special occasions also by the mother, to both small and adult children, by laying the hands upon the head of the child and pronouncing (for a boy) the verse "May God make thee like Ephraim and Manasseh" (Gen. 48:20) or (for a girl) the verse "May God make thee like Sarah, Rebekah, Rachel, and Leah" (cf. Ruth 4:11), followed by the priestly benediction (Num. 6:24-26). From the Middle Ages, the ceremony of blessing children became deeply rooted (see J. Buxtorf, *Synagoga Judaica* (1604), ch. 15, and Jacob *Emden's *Siddur*, 1748). The parental blessing is also recited prior to a child's wedding ceremony and by parents on their deathbed. When grandparents are still alive, it is customary to receive their blessing, too, especially on the eve of the Day of Atonement and before the wedding ceremony (Abraham Danzig, *Ḥayyei Adam* (1810), 143:19). In some communities the parental blessing is also bestowed after the *Havdalah ceremony at the end of the Sabbath (Baer, Seder, 309).

BLEUSTEIN-BLANCHET, MARCEL (1906-1996), French advertising executive and radio pioneer. Born in Enghien, France, Bleustein-Blanchet founded a number of businesses over the years through which he became the foremost individual in advertising in France, a field which he virtually established by introducing advertising into French film, radio, and television. Among his companies were "Publicis" (est. 1927), the largest privately owned advertising agency in France; Radio Cité (1935); Regie Press of which he was chairman (founded 1938); and Cinéma et Publicité (1938). In the early 1920s Bleustein-Blanchet established a private company, "Radio Paris," making him a pioneer of French radio broadcasting. He was sole or part owner of other types of businesses as well, such as the Drugstore restaurants in Paris, and he was the owner of the sixth television network of France, specializing in music. In 1960 he created a foundation named after him that grants scholarships to deserving young writers.

During World War II he was an active member of the Resistance. He served as an adviser for French Foreign Commerce from 1973 to 1975. Bleustein-Blanchet was active in the support of social welfare of the French Jewish community and was president of the Montmartre Israelite Center from

1965. He received France's highest award, Grand Officer of the Legion of Honor.

He wrote *La rage de convaincre* (1970), *La nostalgie du futur* (1978), *Les ondes de la liberté* (1984), *Mémoires d'un lion* (1988), and *Les mots de ma vie* (1990).

[Gideon Kouts]

BLINDMAN, YERUḤAM (c. 1798–1891), cantor and composer. Blindman, who was called “Yeruḥam ha-Koton” (“little”) because of his small stature, served as cantor in Kishinev, Tarnopol, and Berdichev. Though not universally admired, his voice was a remarkable lyric tenor with unlimited falsetto range. The public was attracted by his pious appearance in long, white beard and his great artistry in improvisation. His formal knowledge of music was rudimentary, but his own melodies, composed in the spirit of Jewish folksong against a liturgical background, earned him a reputation as a composer of synagogal music. His singing with choir consistently attracted large crowds, including gentiles. He performed with his choir throughout Russia and Austria.

[Joshua Leib Ne'eman]

BLINDNESS. The standard Hebrew term for a blind person is (Heb. עִוְר) (*ivver*; Ex. 4:11; et al.), a noun in the form used for bodily defects. The abstract form is עִוְרוֹן (*ivvaron*, “blindness”; Deut. 28:28; Zech. 12:4). The word סְנַוְרִים (*sanverim*; Gen. 19:11; II Kings 6:18), sometimes incorrectly translated “blindness,” means a blinding light causing (possibly temporary) loss of vision (E.A. Speiser). Eyes which cannot see are described by the verbs כָּהָה (“be dim”; Gen. 27:1; et al.), קָוַם (“be fixed,” “still”; I Sam. 4:15; I Kings 14:4), חָשַׁךְ (“be darkened”; Lam. 5:17; et al.), כָּבַד (“be heavy”; Gen. 48:10), and שָׁעַע and טָחַח (“be smeared over”; Isa. 6:10, 32:3; 44:18; et al.). Genesis 29:17 describes Leah's eyes as *rakkot*, but whether this means “tender” or “weak” is moot.

Incidence and Causes

Blindness was widespread in the ancient Near East. Preventive techniques included the application of hygienic ointments, especially kohl, and surgical operations (cf. *The Code of Hammurapi*, 215–20 in Pritchard, *Texts*, 175). (There is no evidence that the biblical injunction against eating pork was intended or understood to prevent trichinosis or other diseases which cause blindness.) Biblical cases include Isaac (Gen. 27:1), Jacob (Gen. 48:10), Eli (I Sam. 3:2; 4:15), and Ahijah the Shilonite (I Kings 14:4), all of whose eyesight failed in old age. (Deut. 34:7 makes a point of reporting that Moses' eyesight had not failed in old age.) Both Isaac and Jacob in their blindness reversed the status of a younger and an older descendant in blessing them (Gen. 27 (cf. 29:23–6); 48:8–19).

Aside from old age, natural causes of blindness are not mentioned in the Bible. In a few passages blindness is mentioned as a punishment inflicted by God: it is threatened for Israel's violation of the covenant (Deut. 28:28–29; M. Weinfeld takes this passage metaphorically; see below) and for the “negligent shepherd” of Zechariah 11:15–17; Proverbs (30:17) warns that the eye which is disrespectful to parents will be plucked out by birds of prey (cf. *The Code of Hammurapi*, 193, in Pritchard, *Texts*, 175). Theologically speaking, all cases of blindness are attributed to God (Ex. 4:11), just as the restoration of sight is credited to Him (Ps. 146:8). However, outside of the specific cases mentioned, blindness in general is nowhere stated to be a punishment for sin. In a few passages God strikes His servants' assailants with blinding flashes (Gen. 19:11; II Kings 6:18–20) or permanent blindness (Zech. 12:4; Ps. 69:24) in order to protect His servants.

As a punishment inflicted by human agency one finds the penalty of “an eye for an eye” in the talion formula (Ex. 21:24; Lev. 24:20; Deut. 19:21), although it is debated whether this was ever carried out literally in Israel (cf. *The Code of Hammurapi*, 196–9, where the relation of the law to actual practice is similarly uncertain). Samson and King Zedekiah were blinded, respectively, by the Philistines and Nebuchadnezzar (Judg. 16:21; II Kings 25:7; Jer. 39:7; 52:11). Nahash the Ammonite demanded the putting out of the right eye of all the people of Jabesh-Gilead as a condition for sparing the city (I Sam. 11:2). Several passages speak of the eyes being “spent” or “pining away” from tears and grief. The verb used is usually לָלָה (“Be spent”); the context makes it clear that soreness rather than blindness is meant (e.g., Lev. 26:16; Deut. 28:65; Jer. 14:6; Lam. 2:11; 4:17; cf. also עָשָׂשׁ, Ps. 6:8, “be spent,” “waste away”).

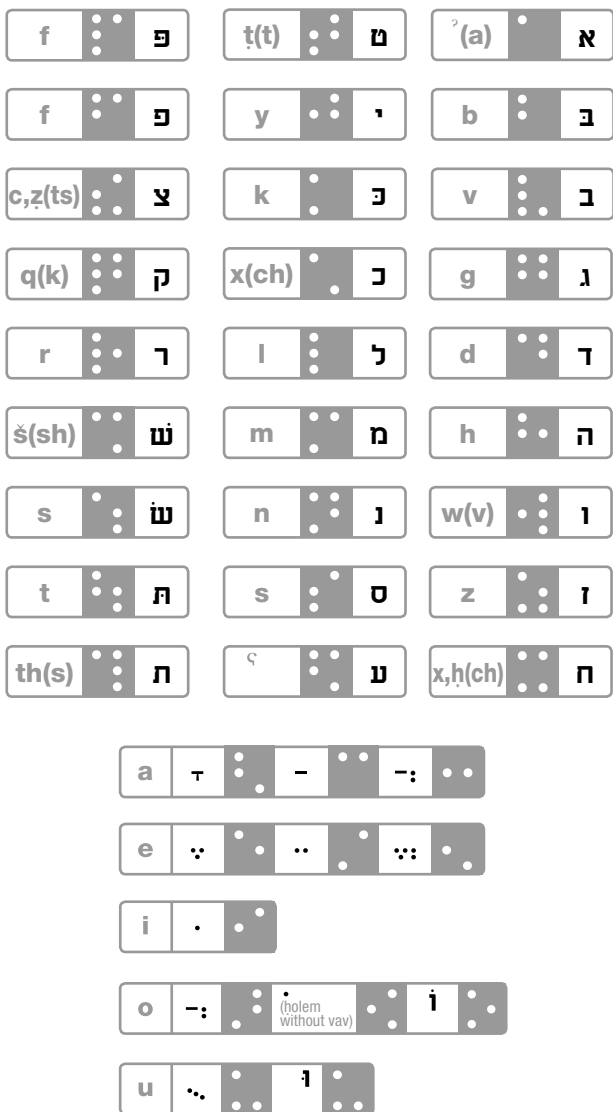

Effects

Blind persons are naturally helpless in many ways (cf. II Sam. 5:6; Isa. 35:5–6; Jer. 31:7, which invoke the blind, the lame, and the mute as representative examples of helplessness) and subject to exploitation (Deut. 28:29). Biblical ethics warned against exploiting them (Lev. 19:14; Deut. 27:18; Job 29:15).

As a physical defect blindness disqualified priests from sacrificing or approaching the altar (Lev. 21:17–23) and rendered sacrificial animals unacceptable (Lev. 22:21–22; Deut. 15:21; Mal. 1:8). Some have taken the enigmatic saying “the blind and the lame shall not come into the house” (II Sam. 5:8) to indicate that at one time these were forbidden entrance to temples.

Metaphoric Uses

Blindness is used with several metaphoric meanings in the Bible. Frequently it refers to the lack of intellectual or moral understanding (Isa. 29:9–10, 18). Judges are warned that bribes, or gifts, blind the eyes of the discerning (Ex. 23:8; Deut. 16:19). Isaiah is told that his mission is to besmear the eyes of Israel so that it will not “see” and repent and be healed (6:10). In Isaiah 56:10 blindness refers to negligence, while in Numbers 16:14 putting out the eyes is usually taken to mean deceiving. The

The Hebrew Braille system adopted universally in the 1950s.

helplessness and exploitability of the blind made blindness a natural metaphor for oppression and injustice in Deuteronomy 28:28–29 and Isaiah 59:9–10 (cf. Lam. 4:14; M. Weinfeld has noted that the association of blindness and darkness with oppression in these passages also reflects the Mesopotamian association of the sun-god with justice (cf. a related association in II Sam. 23:3–4; Hos. 6:5b; Zeph. 3:5)). A related metaphor is the use of blindness to describe those who dwell in the darkness of prison or captivity (Isa. 42:7, 16–19; 43:8; 49:9; 61:1; cf. Ps. 146:7–8; this use has roots in Mesopotamian royal inscriptions).

[Jeffrey Howard Tigay]

In Talmud and Jewish Law

The unusually large number of talmudic sages who were blind probably reflects the wide prevalence of this disability in ancient times. In addition to Bava b. Buta, who was blinded by

Herod (BB 4a), mention may be made of Nahum of Gimzo (Ta’an. 21a), Dosa b. Harkinas (Yev. 16a), and R. Joseph and R. Sheshet in Babylon (BK 87a), as well as a number of anonymous blind scholars (cf. Hag. 5b; tj Pe’ah, end). Matya b. Heresh is said to have deliberately blinded himself to avoid temptation, but his sight was subsequently restored by the angel Raphael (Tanh. B., ed. Buber, addition to *Hukkat*). The talmudic name for a blind man is *suma* (Hag. 1:1; Meg. 4:6), but the euphemism *sagi nahor* (“with excess of light”) is often used (Ber. 58a.; TJ Pe’ah end; and especially Lev. R. 34:13 “the *suma* whom we call *sagi nahor*”).

Unlike the deaf-mute, who is regarded in Jewish law as subnormal, the blind person is regarded as fully normal, and most of the legal and religious restrictions placed upon him are due to the limitations caused by his physical disability. The statement (Ned. 64b) based on Lamentations 3:6 – “He hath made me to dwell in darkness as those that have been long dead” – that “the blind man is regarded as dead,” is of purely homiletic interest and has no practical application. In the second century R. Judah expressed the opinion that a blind man was exempt from all religious obligations, and as late as the time of the blind Babylonian *amora* Joseph (fourth century) the *halakhah* had not yet been determined (see his moving statement in bk 87a), but it was subsequently decided against his view. Even the statement of R. Judah that a person blind from birth cannot recite the *Shema*, since the first of the two introductory blessings is for the daily renewal of light (Meg. 4:6; TB Meg. 24a), was later amended since he enjoys the benefit of light (Rosh, resp. 4:21); the law that a blind man could not be called up to the reading of the Torah, since the passage must be read from the scroll (OH 53:14), was abolished with the institution of the *baal kore*, who reads the passage for those called up (Taz. to OH 141:1). The ruling of Jair Hayyim Bacharach (*Havvot Ya’ir* 176) that if there were a person more suitable, a blind person should not conduct the service is an individual opinion and Yehudai Gaon, who himself was blind, gives a contrary opinion (J. Mueller, *Maftēaḥ li-Teshuvot ha-Ge’onim* (1891), 67).

Similarly, although it was laid down that a totally blind person may not act as a judge, it is stated that when R. Johanan heard of a blind man acting as judge he did not forbid it (Sanh. 34b, cf. HM 7:2; for instances in the Middle Ages see *Paḥad Yizḥak* S. V. *Suma*). Even as late as the time of Joseph Caro in the 16th century, it was laid down that a blind person is forbidden to act as a *shoḥet* only “in the first instance”; the total prohibition was enacted later (YD 1:9 and commentaries). A special case was the exemption of a blind person from the duty of going up to Jerusalem on the Pilgrim Festivals. The special nature of this law, which is derived from the homiletical interpretation of a word, is seen in the fact that it applied even to a person blind in only one eye (Hag. 1:1, and TB Hag. 2a).

During the Middle Ages, blinding was imposed by some *battei din* as a form of extrajudicial punishment and was condoned by contemporary rabbis (Assaf in bibl. nos. 97, 98, 135). Blindness was said to be caused by bloodletting at unfavor-

able times and by the machinations of demons (see Zimmels in bibl., pp. 88 and 153).

The question has been raised in recent times as to the permissibility of removing the cornea of a deceased person and grafting it on a blind person to restore his sight. Halakhic opinion is almost unanimously in favor, and in a responsum I.J. Unterman added the consideration that the danger to the life of a blind person through accidents is such that it can be regarded as a special case of *pikku'ah nefesh* (see *Autopsy).

[Louis Isaac Rabinowitz]

Care of the Blind

The Jewish blind have been traditionally assisted by regular communal and voluntary agencies and associations, as well as special institutions. In the United States the New York Guild for the Jewish Blind, founded around 1908, had a home for aged blind, has offered integrated services to the visually handicapped, and has initiated a nonsegregated living plan for the blind. In the United Kingdom the central agency was the Jewish Blind (now Jewish Blind and Disabled) Society in London, founded in 1819. By 1970 it was caring for the needs of over 1,500 Jewish blind. It maintained a number of residential and holiday facilities, day centers in provincial cities, and the Burr Center for Personal Development which offered various courses for the blind and disabled.

The special conditions in Israel as a country of immigration created the problem that the proportion of blind persons of working age in the state was three times higher than in Anglo-Saxon countries (1956). Much has been done to alleviate this position, while the blind person is as far as possible not treated as a social case. He is, however, exempted from paying income tax. Special placement officers facilitate his employment. In 1956 the proportion of blind to ordinary residents was estimated at approximately 2.5 per 1,000; 87% of them had immigrated after 1948. Over 85% were born in countries of Asia and Africa where in many cases the blind were not cared for or enabled to work. There was a comparatively high proportion of married women or widows due to marriage of blind girls to elderly men. The Jewish Institute for the Blind in Jerusalem, founded in 1902, cared for the majority of blind children in the country. It included a kindergarten, elementary school where subjects were taught in braille, and boarding facilities for 60–90 pupils attending regular secondary school. It also had a vocational school, industrial training shop, a braille printing press, and two houses for mentally or physically handicapped blind adults.

Other agencies and associations for help of the blind in Israel included Migdal Or, the American Israeli Light-house Rehabilitation Center for the Blind in Haifa (Kiryat Hayyim), which gave casework reorientation, special training and courses, and has developed home industries for blind who are physically incapacitated. The Women's League for Israel of New York assisted joint projects with the Ministry of Social Welfare for rehabilitation of blind girls and women, and maintained a sheltered workshop, Orah, and a bookbindery,

Malben, which in 1951 took over Kefar Uriel, a village for the blind established in 1950 by the Jewish Agency for blind immigrants; in 1962 it had 63 families (about 350 persons). Heads of families were employed in four workshops. The Israel Foundation for Guide Dogs for the Blind in Haifa was established around 1950. A Central Library for the Blind, established in 1952 in Netanya, had over 5,000 volumes in braille and a talking book library.

The Association for the Blind and Prevention of Blindness, founded in 1953, had branches in nine centers. The National Council for the Blind, established in 1958 for coordinating, research, and planning, was represented on the World Council for the Blind. Voluntary agencies giving assistance from abroad include Hilfe fuer Blinde in Switzerland and Aide aux Aveugles Israéliens in France. Training for non-Jewish blind has also been given by the Saint Vincent Roman Catholic hostel in Jerusalem, and at handicraft centers established in Nazareth and Shefaram. Isolated Arab villages have been visited by home teachers.

Modern Incidence and Causes

There is no statutory registration of blindness anywhere in the world. All comparative statistics on the incidence and causes of blindness are therefore largely speculative, and this applies in particular to statistics on blindness in Jews, for whom data are usually lacking in whatever national statistics are available. Comparative studies are thus impossible, and little more than some generalizations can be advanced.

The incidence and causes of blindness in most parts of the world are determined essentially by environmental factors. Jews, as a widely dispersed community, therefore suffer from the locally prevailing environmental causes of blindness. In this respect, if the incidence of blindness in a particular Jewish community is different from that in the general population, it will merely reflect the differences found in the various social groupings of the population at large. Thus it occurs in all countries where trachoma is endemic. The disease is more prevalent in rural areas, ill provided with sanitation and health services, than in the more developed urban centers with their populations relatively well housed and well served medically. The high incidence of trachoma in Oriental Jews who immigrated to Israel reflects country of origin and social level, rather than their Jewishness.

In the more highly developed countries, infections and other environmental causes of blindness are steadily declining, and most cases of blindness are now due to affections seen in the elderly (such as "senile" cataract and "senile" macular degeneration) or in the middle-aged (such as glaucoma and, to a lesser extent, myopic atrophy, uveitis, and diabetic retinopathy). These are all "constitutional" diseases, and clinical experience in Western Europe and the United States has brought out a greater incidence of three of these affections in Jews: myopia, diabetic retinopathy, and Tay-Sachs disease, a rare lethal disorder. Although adequate statistics are lacking, this clinical experience is probably well-founded and would

be readily explained by the fact that these three affections are all genetically determined, generally by recessive or by polygenic inheritance. Although there is no such thing as a Jewish gene pool, it is true that inbred groups – Quakers no less than Jews and royal families no less than village communities – have many features and genes in common. These are readily perpetuated under the prevailing conditions: a recessive mutant gene is much more likely to spread in a closed community than elsewhere. (The gene for Tay-Sachs disease probably originated as such a mutant in a Jewish family in White Russia during the last century, and by emigration, carriers have spread it into the Jewish communities of Great Britain and the United States.) Contrary to early beliefs, the affection is not exclusively Jewish, for it is seen in other ethnic groups as well. These occasional cases do not add substantially to the instances of hereditary blindness in Jews, and it is a moot point whether the greater incidence of blindness from high myopia and diabetic retinopathy in Western Jews adds to that load. The numbers involved would be relatively slight, and compensating deficiencies in other hereditary causes are theoretically possible; actual data are lacking, however.

BLIOKH (Bloch), IVAN STANISLAVOVICH (1836–1901), Russian financier, writer, and pacifist. Born in Radom, Poland, Bliokh studied in Warsaw and Berlin. In Warsaw, he engaged in banking, a field he developed extensively in St. Petersburg. He also played a leading role in the construction of the Russian railroads and put their operation on a sound management basis. Bliokh won international fame through his dedication to pacifism, which is the theme of his six-volume publication *Budushchaya voyna v tekhnicheskoy, ekonomicheskoy i politicheskoy otnosheniyakh* (1898; last vol. translated as *The Future of War... Is War Now Impossible?*, 1899). He attempted to prove that wars were of no value to a nation because of the massive expenditures involved and the consequent damage to national economies, apart from the human cost. This book, as well as Bliokh's personal endeavors, were among the factors which influenced Czar Nicholas II to convene the 1899 Hague Peace Conference in order to consider the limitation of armaments and the arbitration of international disputes.

Although Bliokh converted to Calvinism, he maintained his interest in the Jewish question and in improving the lot of Russian Jewry. After the pogroms of the 1890s, he fought strenuously in defense of the Jews and pressed the government to end discrimination. In a five-volume work, *Sravneniye materialnogo i npravstvennogo blagosostayaniya guberniy*

zapadnykh, velikorossiyskikh i polskikh ("A Comparison of the Material and Moral Welfare of the Western, Great Russian, and Polish Provinces," 1901), the preparation of which, with the help of many outstanding experts, cost him hundreds of thousands of rubles, he analyzed the economic condition of the Jews in Russia and emphasized their great contribution to the economy. This work constituted a brilliant defense against the government's anti-Jewish arguments, but was confiscated and burned after publication. Fortunately, a number of copies were by chance saved from the censors, and eventually its contents became widely known through a summary by A.P. Subbotin entitled *Yevreyskiy vopros v yego pravilnom osveshchenii* ("The Jewish Question in its Right Light," 1903).

In 1897 Bliokh became involved in the work of the *Jewish Colonization Association (ICA) in Russia and supported it generously. He showed an interest in Zionism and became a friend of Theodor *Herzl, whom he had met in 1899 at the Hague Peace Conference. (Herzl had come to ask the Russian delegates to help him to obtain an audience with the czar. With Bliokh's assistance Herzl met the head of the Russian delegation, de Staal, and other statesmen.) At Herzl's request, in July 1899 Bliokh tried to persuade the Russian authorities to revoke the decree prohibiting the sale of *Jewish Colonial Trust shares. Shortly before his death, Bliokh established the International Museum of War and Peace in Lucerne, Switzerland.

BLIS, DAVID (1870–1942), Cuban communal leader. David Blizhnianski-Halpern was born in Grodno and studied in a yeshivah in Volozhin. He continued his studies in the Rabbinical Seminary in Breslau and the Hebrew Union College in Cincinnati. He joined his parents, who settled in *Moisessville (Argentina), but he continued his travels, being more interested in business than in agriculture. He lived in Mexico for a few years and participated in the foundation of the first Jewish organization there, Alianza Monte Sinai (1912). He apparently lent money to President Francisco Madero and fled from Mexico following his assassination, reaching Cuba in 1913. Blis took an active part in the foundation of almost all the early Jewish organizations of Cuba and was later nicknamed "the grandfather of the Jewish community." He founded the Young Men's Hebrew Association (1916), a common social framework for Americans and Sephardim in Cuba. From the early 1920s he took an active part in assisting immigrants from Eastern Europe, and was co-founder (1924) and president of the Centro Hebreo, and the president of the Centro Israelita, which developed from it. From 1933 to 1934 he was president of the Comisión Jurídica, which protected the Jewish community during the political upheavals of that period.

Blis was an ardent Zionist and promoted the early Zionist activities of the Sephardi Jews. As one of the most prominent members of the Unión Sionista he was named honorary president in 1937. On Blis's initiative the Cuban Senate approved unanimously in 1919 a resolution supporting the efforts of the

Jewish people to achieve self-determination and national independence..

BLISS, FREDERICK JONES (1859–1937), British archaeologist. The son of a missionary, Bliss taught for a time at the Syrian Protestant College, Beirut. On behalf of the *Palestine Exploration Fund, he excavated at Tell al-Ḥasī (1891), Jerusalem (1894–97), and (in collaboration with R.A.S. *Macalister) at various mounds in the *Shephelah (1899–1900). At Tell al-Ḥasī Bliss continued the work of Sir William Flinders *Petrie and in Jerusalem he discovered the walls of “Mt. Zion” and the wall enclosing the Tyropoeon Valley, in addition to many other minor discoveries. His work in the Shephelah was marked by some important finds but was too hurried to be of lasting value. His publications include *Mound of Many Cities* (1898); *Excavations at Jerusalem 1894–1897* (1898); *Excavations in Palestine 1898–1900* (1902), with R.A.S. Macalister; *Development of Palestine Exploration* (1906); and *Religions of Modern Syria and Palestine* (1912).

[Michael Avi-Yonah]

BLITZER, WOLF (1948–), U.S. journalist. Blitzer earned a bachelor’s degree in history from the State University of New York at Buffalo and a master’s in international relations from the Johns Hopkins School of Advanced International Studies in Washington. While at SUNY, he spent a year at the Hebrew University of Jerusalem. He started in the news business as a reporter for *Reuters in Tel Aviv in 1972. Three years later he became the Washington correspondent of the *Jerusalem Post* and served for 15 years until 1990. He joined the all-news television network CNN that year as Pentagon correspondent and appeared frequently on screen during the Persian Gulf War. With his work for the *Post* and his coverage of the prosecution of Jonathan *Pollard, an American Jew charged with spying for Israel, Blitzer became an expert on the weapons systems of the Pentagon and on the Iraqi military. He was among a team of CNN reporters who won a Golden Cable Ace award for coverage of the war. In 1992 he became CNN’s senior White House correspondent, covering the administration of President Bill Clinton, and served in that capacity until 1999. He became host of *Wolf Blitzer Reports*, a nightly newscast, in December 2000 and took over CNN’s *Night Edition*, a Sunday talk show which in 2004 was seen in more than 200 countries. In 1996 Blitzer won an Emmy award for his coverage of the bombing in Oklahoma City. In 1999 he won the Lowell Thomas Broadcast Journalism Award for contributions to broadcast journalism.

Over the years Blitzer covered many key events on the international political scene. In 1973 he was on hand when Willy *Brandt traveled to Israel, marking the first visit of a German chancellor. He also covered the first Israeli-Egyptian

peace conference in Egypt in 1977 and in 1979 he traveled with President Jimmy Carter for the final round of negotiations that resulted in the signing of the Israel-Egypt peace treaty.

In addition to receiving several honorary degrees, Blitzer is the author of two books, *Between Washington and Jerusalem: A Reporter’s Notebook* (1985) and *Territory of Lies* (1989), which dealt with the Pollard affair. The son of Holocaust survivors, Blitzer has noted an irony in his personal family history. His grandparents were killed on Yom Kippur and two of his parents’ grandchildren, Blitzer’s nephew and daughter, were born on Yom Kippur.

[Stewart Kampel (2nd ed.)]

BLITZSTEIN, MARC (1905–1964), U.S. composer. Born in Philadelphia, Blitzstein studied with Nadia Boulanger in Paris and Arnold Schoenberg in Berlin. Intensely interested in political problems, he developed a genre of operas of “social significance.” His short works, *The Cradle Will Rock* (1937) and *No for an Answer* (1941), were important though transitory landmarks in the American “proletarian opera” movement. Among his other works are *The Airborne* (1946), a cantata resulting from his service with the U.S. army in England during World War II, and a musical drama, *Regina*, based on Lillian *Hellman’s play *The Little Foxes* (1949). Blitzstein also made an idiomatic American translation of the libretto of Kurt Weill’s *Dreigroschenoper*. His opera on the theme of Sacco and Vanzetti, commissioned by the Ford Foundation for production by the Metropolitan Opera, was left unfinished. He died on the island of Martinique of head injuries suffered in an attack by a group of sailors.

At the time of his death Blitzstein left unfinished two one-act operas based on the short stories of Bernard Malamud. One of them, *Idiots First*, was completed by Leonard Lehrman, assistant chorusmaster of the Metropolitan Opera, and performed on March 1977 in Bloomington, Ind., and received its first New York premiere in January 1978. The story, in 13 short scenes, is of an old Jew, Mendel, spending the last night of his life in seeking means to provide for his retarded son, Yizḥak.

[Nicolas Slonimsky]

BLOC, ANDRÉ (1896–1966), French sculptor and engineer, who was concerned with the relationship of architecture to sculpture. He was the creator of “habitacles” (pieces of sculpture which could be entered) and “constructions,” sculptural forms which lie on the borderline between the two arts. Born in Algiers, Bloc studied science in Paris. He then took a degree in engineering, which he practiced from 1930 onward. In 1941 he began to sculpt, and his first important work was executed in 1949. This was a 38-foot “signal” placed outside the Public Works Museum, Paris, on the occasion of the centenary of the invention of reinforced concrete. In 1951 he helped to found the “Espace” group. He was also associated with the founda-

tion of several architectural journals. Bloc died of a fall while visiting a temple in India.

BLOCH, family of U.S. book publishers. The Bloch Publishing Company was founded by EDWARD BLOCH (1829–1906), who emigrated to the United States from Bohemia. He learned the printing trade in Albany, New York, and in 1854 set up a company in Cincinnati, which published newspapers and books of specific Jewish interest in English and German. His publications included *The American Israelite* and *Die Deborah*. Later the company diversified its activities, and one of its regular clients was a monastery to which he supplied religious books.

In 1885 Edward's son, CHARLES (1861–1940), established a branch of the company in Chicago. He took over the management of *The Chicago Israelite*, an edition of *The American Israelite*, and in 1891 he co-founded the Chicago-based *Reform Advocate*. He succeeded his father as president in 1901 and moved the Bloch Publishing Company to New York City where, in addition to publishing, it was also one of the leading bookstores in the U.S. representing several publishing houses. It concentrated on books of Jewish interest. Charles was also highly active during his years in New York in the Reform movement, taking part in 1907 in the founding of the Free Synagogue of New York, of which he later served as president, and in 1922 of the Jewish Institute of Religion. On his death, Charles was succeeded by his son EDWARD H. (1898–1982), who headed the company for 40 years and under whose management the company's activities continued to expand. Reaching its fifth generation, the company continued to serve the cultural life of American and world Jewry through its publication and distribution of Judaic and Hebraic literature.

[Abraham Meir Habermann]

BLOCH, ANDRÉ (1873–1960), French composer. Born in Wissembourg, Alsace, Bloch studied with Guiraud and Massenet at the Paris Conservatory and received the Prix de Rome in 1895. After World War I he conducted the orchestra of the American Conservatory at Fontainebleau. In 1931–32 he composed the symphonic poems *Béquinage*, *Kaa*, and *Les moissons de l'éternité* with cello as principal instrument. His two operas, the one-act *Brocéliande*, and *Guignol*, were first performed, respectively, at the Opéra Garnier in 1925 and at the Opéra Comique in 1949. In 1948, following the creation of the State of Israel, he composed his most interesting piece, the *Suite Palestinienne*, with cello as principal instrument.

[Amnon Shiloah (2nd ed.)]

BLOCH, CAMILLE (1865–1949), French historian, archivist, and librarian. A professor at the Sorbonne, Bloch was an authority on the French Revolution and its economic and

social antecedents; he was secretary-general of the Society for the Study of the French Revolution. He was archivist of the Aude departement (1891–96) and the Loiret departement (1896–1904) and in 1904 became inspector general of libraries and archives. In World War I he became director of the War Library and War Museum in Paris, and historian of the war period. His *Les causes de la guerre mondiale* (1933; *The Causes of the World War*, 1935) is an important work. During the Nazi period, Bloch was hidden in southern France. After 1945 he supervised for the French government the recovery of books looted by the Germans. He left an unfinished study on the Munich Pact of 1938.

[Herbert A. Strauss]

BLOCH, CHAIM ISAAC (1867–1948), Orthodox rabbi. Bloch was born in Lithuania and studied under Rabbi Simcha Sisel Ziv at the Yeshiva of Grubin (1880–83) and then in Volozhin, Poland (1883–91), under Rabbi Naphtali Zevi Judah *Berlin and Rabbi Hayyim *Soloveichik. He received his rabbinical ordination from Rabbi Soloveichik and Rabbi Eliezer *Gordon of the Telshe Yeshivah in 1890. He founded a yeshiva in Plunge in 1895, and served at its head until 1899, when he became a pulpit rabbi in Palanga, a nearby town. While he was there, he also earned the equivalent of a high school degree from the local gymnasium.

From 1905 to 1912, after Rabbi Abraham Isaac *Kook left for Palestine, Bloch served as chief rabbi of Bauska in Courland, now Latvia, and became the district rabbi by governmental appointment. In 1914, he was elected chief rabbi of Antwerp but could not accept the position because of the outbreak of World War I. In 1915, he fled to Russia, where he served as an army chaplain, and in 1916 he organized a yeshivah for exiled Jewish children in the Crimea. He then returned to Bauska in 1920. In 1922–23, he left for America and settled in Jersey City, New Jersey, where he was the pulpit rabbi of Congregation Agudath Shalom. He founded *talmud torahs* and societies to encourage people to observe the Shabbat (the Sabbath Alliance) and encouraged a five-day workweek.

For many years, Bloch was dean of Yeshiva of Hudson County, then a fledgling day school and now known as the Rosenbaum Yeshiva of North Jersey with almost 1,000 students from kindergarten through *mesivta*, located in the cities of River Edge and Newark in New Jersey, and also served on the board of Yeshiva University. He was an avid Zionist and member of Mizrahi and the Religious Zionists of America, as well as a member of the Agudat Harabbonim, where he served as treasurer in 1925 and vice president in 1931. He was also treasurer of Ezrat Torah. During World War II, he worked with the Va'ad ha-Hazzalah to help rescue the Jews of Europe.

Bloch's literary career began in 1897, when he edited a column for **Ha-Zefirah*, a weekly Hebrew newspaper in War-

saw, and he was a regular contributor to the Slutzk *Yagdil ha-Torah* and *Migdal Torah*. In the U.S. he was a contributor to *Ha-Pardes*, wrote many essays, and published several volumes on the Talmud about material related to the glosses of the medieval rabbi *Yom Tov Ishbili, the Ritba.

[Jeanette Friedman (2nd ed.)]

BLOCH, CHARLES (Shelomo Yeshayahu; 1916–), U.S. *hazzan*. Bloch was born in New York and studied *hazzanut* under Simon Raisen and music at the Brooklyn Conservatory. He also attended the Jewish Theological Seminary and St. Johns University where he graduated in law. After serving as *hazzan* for congregations in New York, Maryland, and Pennsylvania, in 1967 he became *hazzan* of Temple Anshei Chesed in Manhattan. Bloch made several recordings, including melodies which he composed, and appeared on American radio and television; he gave concerts throughout the United States and Israel.

[Akiva Zimmerman]

BLOCH, CLAUDE (1878–1967), U.S. admiral; commander in chief of the United States Fleet. Born in Woodbury, Kentucky, Bloch entered the U.S. Naval Academy in 1895. He served in the Spanish-American war and was decorated for saving Spaniards from burning ships. In 1900, he fought in the Chinese expedition to suppress the Boxer Rebellion. During World War I Bloch was commander of the *USS Plattsburg* and in 1918 was appointed assistant chief of the Bureau of Ordnance. He was promoted to rear admiral in 1923 and in 1927 he commanded the battleship *California*. After serving as commandant of the Washington Navy Yard, he was promoted to commander of the battle force with the rank of admiral. In 1938, Bloch was made commander in chief of the United States Fleet. Bloch commanded the shore installations of the 14th Naval District, Hawaii, when Pearl Harbor was attacked, but played no significant role in the events of that day. Retired because of age in 1942, he was retained on active duty as a member of the General Board until 1946.

[Mordechai Kaplan]

BLOCH, ELIJAH MEYER (c. 1894–1955), Lithuanian rabbi and dean of the Telz (Telshe) Yeshivah in the U.S. Bloch, who was born and educated in Telz, Lithuania, was appointed to the faculty of the yeshivah there in 1917. With the Russian occupation of Lithuania, the yeshivah was moved to Cleveland, Ohio, in 1941, under Bloch's leadership. Bloch retained the singular "Telz style" in Talmud study, which stresses precise inductive reasoning. He resisted every attempt at compromise with the Reform elements of the community, yet succeeded in obtaining the support of the Cleveland Jewish Federation

for the local Orthodox high school. Active with the Agudat Israel since the Marienbad Conference of 1937, Bloch played a leading role in the American Agudah. He was also a member of Mo'ezet Gedolei ha-Torah, the international body which guides the World Agudah on questions of Torah principle, where he was known for the universality of his approach. Bloch actively supported Israel.

BLOCH, ERNEST (1880–1959), composer. Bloch, who was born in Geneva, revealed his musical gifts as a child and was only ten when he wrote down a vow that he would become a composer and then, in ritual fashion, burned the inscribed paper over a mound of stones. In the face of parental opposition, he left home at the age of 16 and studied music for eight years in Brussels, Frankfurt, Munich, and Paris. At that time he composed his first big work, the *Symphony in C Sharp Minor*. Returning to Geneva in 1904, Bloch entered the family clockmaking business. During the next three years he composed his opera *Macbeth*. It was first produced in 1910 at the Opéra-Comique in Paris, and was warmly received. Major works produced during the years immediately following include *Trois Poèmes Juifs* for orchestra (1913), *Schelomo*, a "Hebrew rhapsody" for cello and orchestra (1916), and the *Israel Symphony* for orchestra and five solo voices (1912–16). Bloch first went to America in 1916, as conductor for the dancer Maud Allan, and soon won recognition. Early in 1917, Karl Muck invited him to conduct the *Trois Poèmes Juifs* in Boston, and a few months later a concert of his orchestral works was given in New York. In 1920, he founded and organized the Cleveland Institute of Music. He left it in 1925 to become director of the San Francisco Conservatory of Music. During his five years in this post, Bloch composed a number of large-scale works. Best known of these is *America*, an "epic rhapsody" for chorus and orchestra (1926). A counterpart to this work is *Helvetia*, a "symphonic fresco" written in tribute to Bloch's native land.

One of Bloch's most important works is the *Avodath Hakodesh* ("Sacred Service") for Sabbath morning for baritone, mixed chorus, and orchestra which he wrote in seclusion in Switzerland during 1930–33 (commissioned by Gerald Warburg). He spent the years 1934–38 in a remote French village. From this period came the piano sonata, *Voice in the Wilderness* (symphonic poem with cello obbligato), and the violin concerto. Bloch also composed three string quartets (1916, 1945, and 1951–52). In 1938 Bloch returned to America. After a number of tours as conductor, he finally settled in 1941 in Agate Beach, Oregon. There he spent the rest of his life except for annual lecture visits to the University of California. The manuscripts he left when he died are in the university's music library at Berkeley, where an Ernest Bloch Archive was set up.

Many honors came to Bloch in his last years. He continued, however, to go his own way without much regard for musical fashion, and ended his career true to the ideals with

which he had begun it. As he once stated: "I do not propose or desire to attempt a reconstruction of the music of the Jews. . . . It is rather the Hebrew spirit that interests me – the complex, ardent, agitated soul that vibrates for me in the Bible; the vigor and ingenuousness of the Patriarchs, the violence that finds expression in the books of the Prophets, the burning love of justice, the desperation of the preachers of Jerusalem, the sorrow and grandeur of the Book of Job, the sensuality of the Song of Songs. All this is in us, all this is in me, and is the better part of me. This it is which I seek to feel within me and to translate in my music – the sacred race-emotion that lies dormant in our souls."

[Dika Newlin]

BLOCH, ERNST (1885–1977), German philosopher. Bloch was born in Ludwigshafen, studied philosophy, musicology, and physics at the universities of Munich and Würzburg, and became doctor of philosophy under the direction of O. Kuelpe with a dissertation on "Rickert und das Problem der modernen Erkenntnis." From 1908 to 1912, he studied in Georg Simmel's seminary of philosophy and sociology in Berlin; from 1912 to 1914, he lived in Heidelberg, where he was a permanent guest in Max Weber's seminary. Living in Munich and Garmisch from 1914 to 1917, he was close to the expressionist painters. As a pacifist and opponent of the regime of German Emperor William II, he lived in exile in Switzerland from 1917 to 1919. In his essay "Symbol – die Juden" (1911/12), which begins with the assertion, "The pride in being Jewish is now again awakened," Bloch analyzes the principal characteristics of Jewish identity in the era of modernity. His first book, *Geist der Utopie* (1918, 1923; *Spirit of Utopia*, 2000), which includes "Philosophy of Music," is a metaphysical inquiry into the question of self-recognition and self-identity, marked by the influence of romanticism, mysticism, socialist utopianism, and both Christian and Jewish religiosity. *Thomas Muenzer als Theologe der Revolution* (1921) is marked by a revolutionary romanticism and simultaneously by the effort to bring to the fore the forgotten and repressed history of a radical messianic tendency in German Protestantism (linked to the Peasant's Revolt in the 16th century) opposed to Martin Luther. Three years after the publication of *Spuren* ("Tracks," 1930) – a book which has often been compared to the *Einbahnstrasse* by Walter *Benjamin, he was forced to leave Germany and live as a refugee in Switzerland, Austria, France, and Czechoslovakia. *Erbschaft dieser Zeit*, published in Zurich in 1935, explains the rise of Nazism by the phenomenon of "uncontemporaneity (*Ungleichzeitigkeit*)" in the consciousness of the German middle class. Leaving Prague in 1938, six months before the

invasion of the Czech Republic by Nazi Germany, he emigrated via Poland to the United States, where he wrote his major work, *Das Prinzip Hoffnung* (*The Principle of Hope*), whose original title had been *Träume vom besseren Leben* ("Dreams of Better Life") – a great compendium of all the forms of wishful and utopian thinking in culture, religion, architecture, music, etc., based on the theory of the "*antizipierendes Bewusstsein*" ("consciousness in anticipation"). It also outlines a "philosophy of praxis" as "humanity in action, linking messianic hope and the Marxist project of the transformation of world. By the mediation of the category of "possibility," wishes are to be transformed into real human praxis. The second volume, *Freiheit und Ordnung Abriss der Sozialutopien*, is not only a synopsis of all manifestations of utopian thought in the history of philosophy, literature, architecture, music, etc., but also contains a chapter on Zionism ("Altneuland, Programm des Zionismus"), where Bloch's main concern is to criticize Theodor Herzl's "bourgeois Zionism" and to assert that Judaism should not become a territorial nationalism but acknowledge and preserve the best that was in Moses Hess' *Utopia* and transform it into a *messianic international socialism*. During his exile in the United States, Bloch also wrote *Subjekt-Objekt. Erläuterungen zu Hegel* (1951, enlarged ed. 1962). In 1949, he returned to Europe, accepting a professorship in philosophy in Leipzig and the direction of the Institute of Philosophy. In December 1956, after the bloody repression of the Hungarian uprising by the Russians, he was publicly denounced by the *Neues Deutschland* (the official journal of the East German Communist Party s.e.d.) as a "revisionist," an "idealist," and a "mystical" philosopher, distracted by historical and dialectical materialism. After a political campaign against him, he finally was obliged to accept compulsory retirement in 1957. In August 1961, during a visit to the German Federal Republic, frightened by the news of the construction of the Berlin wall, he resolved not to return to Leipzig but to stay in Tuebingen, where he taught until his death. During the Six-Day War in June 1967 he was the most vocal speaker in an assembly organized at Frankfurt University to proclaim Israel's right to exist ("Frieden im Nahen Osten," 1967). During the 15 years of his last period, Bloch dedicated himself entirely to the publication of his complete writings (*Gesamtausgabe*) in 16 volumes, published by Suhrkamp. These included *Naturrecht und menschliche Würde* (1961; *Natural Law and Human Dignity*), *Philosophische Aufsätze zur objektiven Phantasie* (1969), *Atheismus im Christentum* (1968), *Politische Messungen, Pestzeit, Vormärz* (1970), and *Experimentum Mundi* (1975). *Tendenz-Latenz-Utopie*, including the *Gedenkbuch fuer Else Bloch-von-Stritzky* (Memorial Book for Else Bloch-von-Stritzky, Bloch's first wife), followed in 1978.

[Arno Muenster (2nd ed.)]

BLOCH, FELIX (1905–1983), U.S. physicist and Nobel Prize laureate. Bloch was born in Zurich. He studied first at the Federal Institute of Technology, where his interest in physics developed and he received his Ph.D. in theoretical physics under Heisenberg's supervision at the University of Leipzig (1928). He worked successively with leading contemporary physicists including Pauli, *Bohr, and Fermi before emigrating to the U.S. in 1933 after the Nazi rise to power. He joined Stanford University (1934), where he was Max Stein Professor of Physics from 1961. He served for one year (1954) as the first director general of CERN. Bloch's research interests started with his doctoral dissertation on the quantum mechanics of electrons in crystals. During World War II he worked on theoretical issues in the early stages of the Manhattan Project and on counteracting radar. He was awarded the Nobel Prize in physics (1952) jointly with E.M. Purcell for his discovery of nuclear induction. This process uses a magnetic field to align nuclear particles on the basis of their intrinsic angular moment (spin) and magnetic moment parallel to this spin. The resulting signals, analogous to radio-frequency spectroscopy, enabled him to measure the moment of the neutron with great accuracy. This discovery forms the basis of nuclear magnetic resonance scanning in medicine and related techniques for analyzing other solid structures. In his later years Bloch worked on the theory of superconductivity at low temperatures.

[Michael Denman (2nd ed.)]

BLOCH, GUSTAVE (1858–1923), French scholar in Roman history. He was deeply influenced by his grandfather, Rabbi Alexandre Aron. Bloch taught at the *lycée* in Besançon until 1873, when he joined the new *Académie Française* in Rome. He was so successful there that he was invited to lecture on Greco-Roman antiquities at Lyons University. While at Lyons he received his doctorate for two brilliant theses: *Les origines du Sénat romain* and *De decretis functorum magistratuum ornamentis* (1883). In 1888 Bloch was named *maître des conférences* at the École Normale in Paris, and established his reputation firmly by a series of articles in learned journals and in the classical encyclopedia of Daremberg and Saglio as well as *la Gaule indépendante et la Gaule romaine* (1900) in the *Histoire de France* edited by Lavissee. In 1904 the post of professor of Roman history was created for him at the Sorbonne. Bloch placed all these honors in jeopardy as an active supporter of *Dreyfus.

[Howard L. Adelson]

BLOCH, HAYYIM ISAAC BEN HANOKH ZUNDEL HA-KOHEN (1864–1948), rabbi and scholar. Bloch, born in Plunge, Lithuania, studied at Grubin and Volozhin. In 1894 he founded a yeshivah in his native town where he was appointed rabbi in 1898. He became rabbi of Bausk in 1902, succeeding Abraham Isaac ha-Kohen *Kook. Bloch was also appointed the official rabbi by the government. During World War I he wandered in Russia, returning to Bausk in 1920. In 1922 he went to the United States and was appointed rabbi in Jersey City, New Jersey, where he remained until his death. In 1932 Bloch was elected honorary president of the Union of Orthodox Rabbis of the U.S. and Canada. During World War II, he was one of the leaders of the Va'ad ha-Hazalah, which worked to save the Jews of Europe. He published *Hiddushei ha-Ritba* (Yom Tov b. Abraham *Ishbili) on *Mo'ed Katan*, *Megillah*, and *Makkot*, giving the sources, together with an introduction and his own notes and corrections, entitled *Divrei Hibah* (Hayyim Isaac Bloch Ha-Kohen; 1935–39). Under the same title he published in 1941 a work containing some of the halakhic novellae from discourses that he had delivered at the Plungian yeshivah. Bloch was the author of two works on ethics, published anonymously, *Likkutei ha-Rayiv* (1904) and *Ha-Mavḥin* (1928).

[Mordechai Hacohen]

BLOCH, HERBERT (1911–), U.S. classical scholar. Born in Berlin, Bloch achieved prominence in the fields of Latin epigraphy, paleography, archaeology, Greek and Roman historiography, and medieval Latin literature. He participated in excavations at Ostia, Italy, (1938–39) and then went to the United States, where he was appointed instructor in Greek and Latin at Harvard in 1941 and professor in 1953. He taught there until 1982.

While still in Italy, Bloch published the results of his research there on Roman brick stamps, the meager bits of information inscribed on bricks in Roman construction (republished in book form with indices in 1947). He pursued this subject in basic articles in *Harvard Studies in Classical Philology*, vols. 56–59 (1947–48). This work, with its extremely elaborate indices to the portion of the corpus of Latin inscriptions dealing with brick stamps and with many additional inscriptions of the genre never previously published, has proved to be a mine of information for the study of the great senatorial and equestrian families involved in the building industry. It is also important for the study of Roman history, and especially Roman economic history, providing excellent insights into the history of the decline of the Roman Empire, particularly as evinced by the gradual absorption of one of the most important industries into the hands of the emperors. In ad-

dition, the stamps have proved extremely valuable in dating buildings. Bloch also wrote important monographs on the historians of the 4th century B.C.E., the manuscript tradition of Sallust's *Histories*, and the pagan revival in the West in the 4th century C.E. He was the editor of Felix Jacoby's collected essays on Greek historiography (1956) and completed a work in three volumes, *Monte Cassino in the Middle Ages* (1986), on one of the most significant intellectual centers of the Middle Ages, which he studied for 30 years. It was awarded the Praemium Urbis in Rome in 1987 and the Haskins Medal of the Medieval Academy in 1988.

While on leave from Harvard, Bloch was professor in charge of the School of Classical Studies of the American Academy in Rome (1957–59), and from 1964 he held the positions of senior fellow of the Society of Fellows at Harvard (1964–79) and trustee of the Loeb Classical Library (1964–73). Bloch was president of the American Philological Association (1968/69) and president of Fellows of the Medieval Academy (1990–93). He was a member of the American Academy of Arts and Sciences, the American Philosophical Society, the Pontificia Accademia Romana di Archeologia (an honorary member since 1990), the German Archaeological Institute, the Zentralkommission der *Monumenta Germaniae Historica*. In 1989 he was awarded an L.L.D. by the University of Cassino, and in 1999 he received the *Cultori di Roma* prize.

[Louis Harry Feldman / Ruth Beloff (2nd ed.)]

BLOCH, HERMANN (Ḥayyim Ben Zevi; 1826–1896), rabbi and author. Born in Breslau, Bloch was a grandson of Abraham *Tiktin, chief rabbi of Breslau, whom he mentions in the introduction to his *Mevo ha-Talmud*. He studied in Breslau under his uncle Solomon Tiktin, and then in Hamburg. At various periods of his life he engaged in business and in his later years was a teacher at a *bet midrash* in Breslau. Bloch did research on the development of the Oral Law, and published *Mevo ha-Talmud* (vol. 1, Berlin, 1853). In his view, "the individual character of a *tanna* or an *amora* was the factor which determined his particular teachings or mode of exegesis in all matters, regardless of whether they were financial, ritual, scientific, or ethical" (p. 11). "Nevertheless, the underlying unity of *tannaim* and *amoraim* forms the foundation of 'the chain of tradition' and of 'the unity of the oral law,' whose source is in the written law" (p. 56). He devotes a detailed study, under the title *Hirhurei Torah* (4 pts., 1887–93), to the rule of the majority (based on Ex. 23:2), discussing its application in the Bible and the Talmud. In *Zurat ha-Bayit* (1883) he reconstructs the design of Herod's temple according to talmudic sources. He also published *Omrei Inshei* (1855), a collection of 107 parables found in the Babylonian Talmud, accompanied by a German translation.

[Yehoshua Horowitz]

BLOCH, HERMAN SAMUEL (1912–1990), U.S. petroleum chemist. Bloch was born in Chicago and spent most of his career there. After receiving his Ph.D. from the University of Chicago's chemistry department, he joined the Universal Oil Products Company, eventually becoming associate director of its process research department (1959). He won many awards and distinctions for his patents and contributions to the knowledge of petrochemistry and catalysis, as well as for his public service in the fields of education and human relations. These include the North American Catalysis Society's first Eugene J. Houdry Award in Applied Catalysis (1971) and the E.V. Murphree Award in Industrial and Engineering Chemistry (1974). He was a member of the American Chemical Society.

[Ruth Rossing (2nd ed.)]

BLOCH, HYMAN MORRIS (1905–1963), South African Supreme Court judge. Born in the Transvaal, Bloch was admitted to the Cape bar in 1927. He was king's counsel in 1944 and in 1958 was appointed to the bench. He was prominent on the Western Province Zionist Council and the Cape Council of the South African Jewish Board of Deputies. He headed campaigns on behalf of Israel in the Western Province.

BLOCH, ISSACHAR BAER BEN SAMSON (1730–1798), Austrian rabbi. Bloch was born in Hamburg and studied under Jonathan *Eybeschuetz and Ezekiel *Landau. After serving as rabbi in several communities he was rabbi in Boskovicze (1793–96), and later in Mattersdorf where he died. He wrote *Binat Yissakhar* (Prague, 1785), a collection of his sermons with a rhymed appendix on the precepts of the priestly benediction and the redemption of the firstborn. He also wrote glosses on the Mishnah (published in the Lemberg edition, 1869) under the title *Benei Yissakhar*. He carried on a halakhic correspondence with some of the renowned contemporary scholars, to which reference is made in Ezekiel Landau's *Noda bi-Yehudah* (1928, pp. 87–89; cf. also Eleazar b. Aryeh Loeb, *Shemen Roke'ah*, (1902), 181–2; and Moses *Sofer, *Ḥatam Sofer*, 7 (1912), nos. 17, 18, 21). Bloch, who was childless, adopted Jacob Patraselka, ancestor of the rabbinical family of Duschinsky and the first rabbi in Nádasd (Hungary), who also carried on a correspondence with Moses Sofer (*Ḥatam Sofer*, OḤ, nos. 104, 106, 139; YD, nos. 243, 305; ḤM, no. 206).

Stein, *Magyar rabbik*, 2 (1905), 103; 3 (1906), 145.

[Samuel Abba Horodezky]

BLOCH, IWAN (1872–1922), German dermatologist and medical historian. After graduating from Wuerzburg University in 1896, Bloch settled in Berlin as a practicing dermatologist. He was one of the first to engage in the scientific study

of sex and a leader in the movement for sexual reform. His scientific publications include *Die Praxis der Hautkrankheiten* ("The Practice of Skin Diseases," 1908) and *Ursprung der Syphilis* ("Origin of Syphilis," 1911). In the latter he suggests that the disease was introduced to Europe through the Spaniards after the discovery of South America. Bloch made important contributions to the history of medicine which were published in the monumental *History of Medicine* of Max Neuburger. He also wrote on the history of dermatology and of Indian and Byzantine medicine. Many of his works were written under the pseudonyms of "von Welsenburg" and "Eugen Dühren."

BIBLIOGRAPHY: S.R. Kagan, *Jewish Medicine* (1952), 427.

[Suessmann Muntner]

BLOCH, JEAN-RICHARD (1884–1947), French author and political journalist. Bloch was born into an assimilated family in Paris. His Jewish consciousness was stirred in his boyhood by the antisemitism engendered by the Dreyfus Affair, and Jewish themes came to play a significant part in his writing. He was educated at the Sorbonne and became a teacher of history and literature. One of his earliest books was *Lévy* (1912), in which one of the stories deals with the effects of the Dreyfus case on a Jewish family in a provincial town. His most powerful novel, ... *et compagnie*, (1918; ... & Co., 1929), is the story of Jewish cloth merchants from Alsace who move their business to a small town in western France. This work portrays the conflicts facing the Jew who wishes to maintain his identity while integrating into French culture. In 1910 Bloch founded a literary review, *Leffort libre*, but his work was interrupted by World War I, in which he was wounded three times. During the 1920s and early 1930s he wrote many novels, short stories, plays, poems, and essays. Two of the novels, *La nuit kurde* (1925; *A Night in Kurdistan*, 1930) and *Sybilla* (1932), reflect his fascination with the East. In 1925 he visited Palestine for the inauguration of the Hebrew University, and thereafter wrote a number of articles on the future role of the Jewish people, notably "Quel service les Juifs peuvent-ils rendre au monde?" (in *Palestine*, 1 (1927), 97–102). An essay entitled "Destin du siècle" (1931) showed that his approach to the Jewish problem had become somewhat ambiguous. From his student days, Bloch had been a socialist, and from the mid-1930s his interests centered mainly in politics. He had joined the Communist Party in 1921 and in 1923 helped to found the communist-oriented literary magazine *Europe* and in 1937, together with the poet Louis Aragon, the Communist daily *Ce Soir*. When the Germans occupied France in 1940 Bloch became an active member of the underground and in 1941 escaped the Gestapo by fleeing to Moscow, where he engaged in resistance broadcasts to the French people. He returned to France in 1945. Jean-Richard Bloch was a brother-in-law of André *Maurois.

[Denise R. Goitein]

BLOCH, JOSEPH (1871–1936), German socialist and journalist. Born in Lithuania, he immigrated to Germany where he edited the *Sozialistische Monatshefte*, a monthly publication which attracted a team of outstanding writers. Bloch advocated a union of Continental Europe and when the Bolsheviks came to power in Russia, he proposed a Franco-German Union. After the German revolution of 1918, he advocated a system of German democracy based on workers' councils. The *Monatshefte* gave considerable attention to Jewish questions and supported the Zionist movement. Bloch favored mass immigration to Palestine and was highly critical of British policy there. One of the first victims of Nazi persecution in Germany, he never wavered in his belief in the triumph of socialism and the future of the Zionist enterprise. He died a lonely refugee in Prague.

BIBLIOGRAPHY: K. Blumenfeld, *Erlebte Judenfrage* (1962), 57, 123. **ADD. BIBLIOGRAPHY:** C. Bloch, "Der Kampf Joseph Blochs und der 'Sozialistische Monatshefte' in der Weimarer Republik," in: *Jahrbuch des Instituts für Deutsche Geschichte*, 3 (1974), 257–88.

BLOCH, JOSEPH LEIB (1860–1930), Lithuanian yeshivah head. He showed exceptional ability from childhood and at the age of 14 he traveled to Chelm where he studied under R. Eliezer *Gordon. He continued his studies with Naphtali Zevi Judah *Berlin at Volozhin. After his marriage to the daughter of Eliezer Gordon, he moved to Telz, where he assisted his father-in-law, who had been appointed rabbi and *rosh yeshivah*. In 1902, after resigning from the yeshivah in protest against the resistance of a number of the students to the study of *musar*, he was appointed rabbi of Varna, a small village near Telz. He served later as rabbi of Shadova, where he established his own yeshivah. In 1910 Bloch was appointed rabbi of Telz and *rosh yeshivah*, succeeding his father-in-law. Under his leadership, the yeshivah attracted large numbers of students. In addition to his lectures on *halakhah*, Bloch also gave talks on *musar*. He took the unusual step of founding a teachers' seminary, which produced hundreds of educators, and a preparatory school, in which secular studies were taught. Thanks to these auxiliary institutions, the yeshivah of Telz occupied a central position, with an enrollment, at times, of as many as 500 students. Active in communal affairs, Bloch served as a member of the executive of the Association of Lithuanian Rabbis and as one of the leaders of *Agudat Israel. Prominent among his sons were Abraham Isaac, who succeeded his father in Telz, and Elijah Meir, who was one of the yeshivah principals. His other sons and sons-in-law also taught in Telz. Bloch's ethical essays were published in *Shi'urei Da'at* (pt. 1, 1949; pt. 2, 1953; pt. 3, 1956). His halakhic lectures appeared in *Shi'ur Halakhah* (pt. 1, 1932; pt. 2, 1943; pt. 3, 1958).

BIBLIOGRAPHY: D. Katz, *Tenu'at ha-Musar*, 5 (1962/63), 17–109.

[Itzhak Alfassi]

BLOCH, JOSEPH SAMUEL (1850–1923), rabbi, publicist, and politician in Austria. He acquired distinction for his de-

fense of Judaism against the *blood libel and was praised by Adolf *Jellinek as the “Hercules of the antisemitic Augean stables.” Son of a poor baker in Dukla (east Galicia), Bloch attended yeshivot at Lemberg and Eisenstadt and then the universities of Munich and Zurich. After officiating in provincial communities, he became rabbi of the Vienna suburb of Floridsdorf and a teacher at Jellinek’s *bet ha-midrash*. During the *Tisza-Eszlár blood libel trial in 1883, when August *Rohling undertook to attest on oath that Jews practiced ritual murder, Bloch attacked him in the press. He challenged Rohling’s competence as a scholar, accused him of lying, and offered him 3,000 florins for translating a random page of the Talmud. Rohling was forced to sue Bloch for libel, but after two years’ investigations withdrew his action 13 days before the trial was due to open.

Bloch was elected in 1884, 1885, and 1891 to the Austrian Parliament from a preponderantly Jewish constituency of Galicia, and was the first parliamentarian to make Jewish affairs his main political concern, regarding himself as an interpreter and defender of Jewish thought to the non-Jewish public. In 1884 he founded a weekly, *Dr. Blochs Oesterreichische Wochenschrift*, for combating antisemitism, which existed until after World War I, and also established the *Oesterreichisch-Israelitische Union (from 1921: Union deutsch-oesterreichischer Juden). He also lectured in Social Democratic associations on social conditions in the time of Jesus. Bloch was guided in his political activities by Adolf *Fischhof. He developed a previously unknown militancy and Jewish awareness which brought him into conflict with other Jewish leaders in Austria. In *Der nationale Zwist und die Juden in Oesterreich* (1886) he asked Jews to remain neutral in the struggle of the various nationalities within the Hapsburg Empire and to consider themselves “Austrian Jews” and “Jewish Austrians.” He thus supplied the ideology for the Hapsburg patriotism with which the majority of Jews in the realm associated themselves around the beginning of the 20th century. Bloch saw the struggle for Jewish rights as part of the fight for the principle of equality for all nationalities in the empire, which the monarchy would have to recognize in order to exist. He also initiated proceedings against further ritual murder accusations by Franz Deckert and Paulus *Meyer and was active during the *Hilsner case.

At first a supporter of Zionism and Theodor *Herzl, Bloch published one of Herzl’s articles in 1896 and introduced him to the finance minister, Bilinski. However, Bloch preferred the concept of “colonization-Zionism,” regarded Jewish nationality as closely linked with the Jewish religion, and refused to close his paper to non-Zionists. Herzl, on the other hand, failed to appreciate Bloch’s fight against antisemitism. By around 1900 Bloch had become alienated from the Zionists. He visited Erez Israel before his death.

For his work in the Jewish cause Bloch was warmly received on visits to the United States in 1912, and again in 1920. During World War I he raised funds on behalf of the Austrian government in neutral countries. He published a compendium of apologetics, *Israel und die Voelker* (1922; *Israel*

and the Nations, 1927), based on the evidence of the experts in connection with the Rohling trial, and his memoirs *Erinnerungen aus meinem Leben* (1922; *My Reminiscences*, 1927). He also wrote prolifically on Jewish lore.

Bloch, in: *Herzl Yearbook*, 1 (1958), 154–64; J. Fraenkel (ed.), *Jews of Austria* (1967), index; M. Grunwald, *Vienna* (1936), 433–57; W.J. Cahnman, in: *YLBI*, 4 (1959), 111–39 and *passim*.

[Meir Lamed]

BLOCH, JOSHUA (1890–1957), U.S. librarian, bibliographer, and reform rabbi. Born in Dorbian, Lithuania, Bloch went to the U.S. in 1907. He taught at New York University from 1919 to 1928; from 1922 until his death he served as chaplain in several hospitals of the New York State Department of Mental Hygiene. His main work, however, was as head of the Jewish Division of the New York Public Library, a post which he held from 1923 to 1956; under his direction the Library developed as one of the major collections of Judaica in the United States. Bloch arranged many major exhibitions of Judaica there. Many of his bibliographical researches into the history of Hebrew printing were published by the Library, such as *Hebrew Printing in Riva di Trento* (1933; *Bulletin of the New York Public Library*, vol. 37), *Early Hebrew Printing in Spain and Portugal* (1938; *ibid.*, vol. 46). He also founded the quarterly *Journal of Jewish Bibliography* in 1938 and was its editor until 1943. In 1940 he was appointed to the publication committee of the Jewish Publication Society and a year later to the editorial board of the Jewish Apocryphal Literature Series; as a result of these connections he wrote *On the Apocalyptic in Judaism* (1952) and *Of Making Many Books* (1953; an annotated list of the books issued by the Jewish Publication Society, 1890–1952). The following year he published *The People and the Book*, on 300 years of Jewish life in America. His bibliography was collected by Dora Steinglass in *A Bibliography of the Writings of Joshua Bloch (1910–1958)* (1960).

[Abraham Berger]

BLOCH, JULES (1880–1953), French philologist, specialist in Indic languages. Bloch taught in Paris at the École Pratique des Hautes Études and the École des Langues Orientales Vivantes. His work covered the entire range of Indic languages, ancient, medieval, and – especially – modern. Bloch’s main research was into the Indo-European languages of India, on which he wrote *La formation de la langue marathe* (1915) and *L’Indo-Aryen du Véda aux temps modernes* (1934; *Indo-Aryan from the Vedas to Modern Times*, 1965). He also published an important book on Dravidian languages, *Structure grammaticale des langues dravidiennes* (1946; *The Grammatical Structure of Dravidian Languages*, 1954).

[Herbert H. Paper]

BLOCH, KONRAD (1912–2000), U.S. biochemist and Nobel laureate. Bloch was born in Neisse, Germany (now Poland) and graduated from the Technische Hochschule of Munich in 1934. Forced to leave because he was Jewish, Bloch found a temporary position at the Schweizerische Forschungsinstitut in Davos, Switzerland. In 1936 he immigrated to the United States (becoming an American citizen in 1944) and joined the Department of Biochemistry, College of Physicians and Surgeons, Columbia University, New York. After obtaining his doctorate at Columbia University in 1938, he became a member of the staff there. His collaboration with R. *Schoenheimer stimulated his interest in the biological origin of cholesterol and he began to concentrate on this field in 1941. In 1942 Bloch and David Rittenberg discovered that the two-carbon compound acetic acid was the major building block in the 30 or more steps in the biosynthesis (natural formation) of cholesterol, a waxlike alcohol found in animal cells. In his search to determine how acetic acid molecules combine in this process, Bloch was also joined by Feodor Lynen and his collaborators in Munich and Sir John Warcup Cornforth and George Popják in England. Their discovery facilitated medical research on the relation of blood cholesterol levels to atherosclerosis; research in physiology; and research on the chemistry of terpenes, rubber, and other isoprene derivatives. In 1946 Bloch joined the University of Chicago, becoming professor of biochemistry in 1952. During his years at Chicago Bloch investigated the enzymatic synthesis of the tripeptide glutathione. As a Guggenheim fellow he spent the year 1953 at the Organisch-Chemisches Institut, Eidgenössische Technische Hochschule, in Zurich with L. Ruzicka, V. Prelog, and their colleagues. In 1954 Bloch was appointed Higgins Professor of Biochemistry in the Department of Chemistry, Harvard University, and in 1968 he became chairman of the department. He continued research on various aspects of terpene and sterol biogenesis, going on as well to the enzymatic formation of unsaturated fatty acids and biochemical evolution. He became emeritus professor in 1982. Bloch shared the 1964 Nobel Prize in physiology and medicine with Feodor Lynen for discoveries concerning the synthesis of cholesterol by the body from acetic acid.

He was a member of the American Chemical Society, U.S. National Academy of Sciences, American Academy of Arts and Sciences, and American Society of Biological Chemists, among others. He was associated with the Committee on Growth of the American Cancer Society, the Biochemical Section of the U.S. Public Health Service, and the National Institute of Neurological Diseases and Blindness. He served as an associate editor of the *Journal of Biological Chemistry* and published hundreds of papers. Apart from the topics mentioned, these dealt with creatinine, glutathione, amino acids generally, proteins, and several metabolic processes.

[Samuel Aaron Miller / Ruth Rossing (2nd ed.)]

BLOCH, MARC (1886–1944), French historian. Bloch was professor of medieval history at the University of Strasbourg from 1919 to 1936 and then at the Sorbonne. He fought in both world wars and after the fall of France in 1940 was a leader of the Resistance. He was arrested, tortured, and executed by the Gestapo. One of Bloch's most significant works was in the field of French medieval agrarian history, *Les caractères originaux de l'histoire rurale française* (1931; *French Rural History*, 1966). A further contribution to economic historiography was his founding (together with Lucien Febvre) of the important review, *Annales d'histoire économique et sociale*. Bloch's *La société féodale* (1939–40; *Feudal Society*, 1961) became a standard work on feudalism. He did not accept the identification of feudalism with military service, the view held in England and Germany, still less the Marxist oversimplification of feudalism as exploitation of peasants by landlords. Instead, he analyzed the structure of feudal society and the relationship between history and economics during that period. In a posthumous work, *L'étrange défaite* (1946; *Strange Defeat*, 1949) Bloch affirmed his detachment from the Jewish faith and from all other religious dogmas. Nevertheless, he acknowledged his Jewish descent and his admiration for the tradition of the Hebrew prophets. His other works were *L'Île-de-France* (1913); *Rois et serfs* (1920); *Apologie pour l'histoire, ou métier d'historien* (1949; *The Historian's Craft*, 1954).

BIBLIOGRAPHY: L. Febvre, in: *Les Cahiers politiques* (March, 1945), 5–11. **ADD. BIBLIOGRAPHY:** C. Fink, *Marc Bloch: A Life in History* (1989); S.W. Friedman, *Marc Bloch, Sociology and Geography* (1996); E. Bloch, *Marc Bloch (1886–1944): Une biographie impossible* (1997); O. Dumoulin, *Marc Bloch* (Fr., 2000).

[Avrom Saltman]

BLOCH, MARCUS (Mordecai) ELIEZER (1723–1799), physician and zoologist. He was born in Bavaria, the son of a poor trader. Bloch received a traditional Jewish education and, at the age of 19, he began to learn German, French, and Latin. He was helped by wealthy relatives to study medicine at Frankfurt on the Oder, and received his doctor's degree in 1747. He became a physician in Berlin, and soon gained a reputation at all levels of society. His friends included Moses *Mendelssohn, who was also his patient. Bloch's main achievement was in his morphological and systematic work on fish. He built himself an aquarium and acquired a marine collection which after his death was incorporated in the Berlin Zoological Museum. He wrote his great ichthyological work, *Allgemeine Naturgeschichte der Fische*, in 12 volumes (1781–1795). The work describes and classifies over 1,500 species of fish. Although Bloch's classification system was primitive and superficial, his book retains its scientific value, with its excellent drawings and diagrams. Bloch also wrote several short works on medical and zoological subjects.

BLOCH, MARTIN (1883–1954), German expressionist painter, who became a master of British landscape. Bloch lived in Spain during World War I and subsequently spent many summers painting in Italy. In these years he was influenced by Cézanne, the “fauves,” and the German expressionists. When Hitler came to power he fled to England, where he was interned during World War II. During his internment he restricted himself to black and white studies in contour crayons heightened with red chalk. His mature style emerged with a period of painting in Dorset in 1947. He developed a deep love of the British landscape, retaining a German expressionist sense of the dramatic but abandoning the tendency to exaggerate. His developed sense of color became subtle and harmonious. A posthumous exhibition held in 1955 established his reputation.

[Sonja Beyer (2nd ed.)]

BLOCH, MATTATHIAS BEN BENJAMIN ZE'EV (Wolf) ASHKENAZI (1610/1620–after 1668), preacher and one of the leaders of the Shabbatean movement. Bloch was born in Cracow. His grandfather, Feivel Bloch, was one of the leaders of the community during the first half of the 17th century and its representative at the meetings of the Council of Four Lands in Poland. He studied under the Cracow rabbis Menahem Mendel *Krochmal and Abraham Joshua *Heschel. He suffered during the persecution of the Jews under *Chmielnicki and during the Swedish occupation (1648–57) and was expelled from his town. In 1660 he was in Jassy and in 1665, on his way to Erez Israel, was in Constantinople, where he published *Kelal Katan*, a homily on Deuteronomy 32. He relates that he had two important homiletical books in his possession: *Sefer Kelal Gadol*, written in the *peshat* (“literal”), *remez* (“symbolic”), and *derash* (“homiletic-allegoric”) styles; and the second, *Sefer Mattityahu*, a kabbalistic commentary on all sections of the Torah. Apparently Bloch became a Shabbatean in 1665 either while he was still in Constantinople or when he arrived in Jerusalem and met Shabbetai Zevi before the latter had left Erez Israel. When, at the end of 1665 in Smyrna, Shabbetai Zevi appointed kings in a similar order to that of the ancient kings of Israel and Judah, he appointed Bloch “King Asa.” In 1666 Bloch was among the leaders of the Shabbatean movement in Egypt. With the failure of the messianic hopes after Shabbetai Zevi’s apostasy, he persisted in his belief, but he left Egypt to settle in Mosul (Iraq) where he was accepted as a rabbi or *dayyan*. His influence spread to the communities in Kurdistan, which he encouraged in their Shabbatean belief. His activities as rabbi of the community as well as a Shabbatean leader are recorded in various letters preserved from 1668. After that year nothing is known about him. According to Jacob *Saspor-

tas, Bloch was already elderly at the start of the Shabbatean movement.

[Gershom Scholem]

BLOCH, SIR MAURICE (1883–1964), Scottish distiller and philanthropist. Born in Dundee, Bloch settled in Glasgow in 1910. He founded a family distilling business and at the same time played an active role in Jewish communal work. In 1937 he was knighted “for political and social services.” In 1954 he gave up his large business to devote himself to civic and Jewish communal affairs. He was president of the Board of Guardians, he represented Scotland on the Chief Rabbinate Council and became chairman of the Queen’s Park Synagogue. He was keenly interested in Jewish education and was president of the Glasgow yeshivah, made a generous donation in 1956 to Jews’ College, London, and set up a trust fund for the Hebrew University. He also gave sizable gifts to Glasgow University and Royal Faculty of Physicians and Surgeons in Glasgow. In 1948 Bloch was involved in the investigations of the Lynskey Tribunal into the conduct of some ministers of the crown. Throughout Bloch denied corruption though admitting to indiscretions. Nevertheless at the end of the trial his name was removed from the list of magistrates in Glasgow where he had been a justice of the peace for 25 years.

BLOCH, MOSES (1815–1909), rabbi and author. Bloch, who was born in Ronsperg, Bohemia, served as rabbi in several cities of Bohemia and Moravia. In 1877 he was appointed together with David *Kaufmann and Wilhelm *Bacher to the academic staff of the newly founded rabbinical seminary in Budapest. Bloch was professor of Talmud and Codes and also the rector of the seminary, in which capacities he served for 30 years. His main work was *Sha’arei Torat ha-Takkanot* (in 7 volumes, 1879–1906) which traces, on the basis of talmudic sources, the development of **takkanot* from Moses to the end of the talmudic period. In a sequel to this work, *Sha’arei ha-Maalot* (1908), Bloch gives a detailed exposition of the various states and degrees of holiness, ritual and family purity as defined in the Mishnah and Talmud. Bloch published important monographs, in German and Hungarian, on biblical and talmudic law, in the yearbooks of the Budapest Seminary. He published the Prague 1608 edition of the responsa of *Meir b. Baruch of Rothenburg, together with notes and indexes (in 1885; 1896³), and also some hitherto unpublished responsa of R. Meir for the Mekize Nirdamim (1891).

[Moshe Nahum Zobel]

BLOCH, MOSES RUDOLPH (1902–1985), physical chemist. Born in Czechoslovakia, Bloch studied chemistry at the Uni-

versities of Prague and Leipzig, and then proceeded to Switzerland and received his doctorate in physical chemistry at Berne in 1926. From 1927 to 1933 he headed the department of metallography and X-ray spectrography at the Higher Technical Institute of Karlsruhe. His researches on silver iodide and refrigeration were interrupted when the Nazis came to power, and he thereafter served as consultant on the technology of refrigeration in Holland, England, and France. Immigrating to Erez Israel in 1936 he worked at the potash works at the Dead Sea, where he introduced a method of increasing evaporation by the sun and was head of the research division of the works. From 1940 to 1968 he was a member of the Scientific Council of Israel and the Advisory Technological Council of the Israel Government. In 1967 he was guest professor for research on water resources at the Hebrew University and at the Institute of Atomic Physics at Heidelberg from 1967 to 1968. Bloch also undertook research on bromine and potash in nature, and climatic and geological research. He was awarded the Israel Prize for Science in 1966.

BLOCH, PHILIPP (1841–1923), German historian and Reform rabbi. He was born at Tworog (Silesia) and studied in Breslau. After a period as teacher with the Munich Jewish communal school (1869–71), he became rabbi of the Liberal congregation Bruedergemeinde of Posen where he remained active for some fifty years. When that city reverted to Poland after World War I, Bloch retired from the rabbinate and moved to Berlin. He took a leading part in the association of Liberal rabbis and in the work of German Jewish scholarly societies; in 1905 he was a co-founder of the General Archives of German Jews. Bloch's contributions to Jewish scholarship were concerned mainly with the philosophy of religion, *aggadah*, and Kabbalah; he also wrote about the history of Jews in Poland and the city and province of Posen. Among his works are a translation of and introduction to the first book of Saadiah's *Emunot ve-De'ot* (1879); a translation of and commentary on the fifth chapter of Book II of Crescas' *Or Adonai* concerning free will (1879); essays on the development of Kabbalah and Jewish religious philosophy for Winter-Wuensch's *Die juedische Literatur* (1894–96); *Die Kabbalah auf ihrem Hoehpunkt...* (1905); *Spuren alter Volksbuecher in der Aggadah* (in *Festschrift ... Hermann Cohen, Judaica*, 1912); and *Piskoth fuer die drei Trauersabbathe*, translation and commentary (in *Festschrift ... Steinschneider*, 1896).

Guttman, in: *KAWJ*, 5 (1924), 1–7; N.M. Gelber, in: S. Federbusch (ed.), *Hokhmat Yisrael be-Ma'arav Eiropan*, 2 (1963), 59–63.

BLOCH, ROLF (1930–), Swiss Jewish community leader. Born into a family of Alsatian origin in Berne, he studied law. His father, Camille Bloch, had built up a chocolate firm in Courtelary, which also produced kosher chocolate.

Rolf Bloch was president of the Berne community be-

tween 1975 and 1985. Between 1992 and 2000 he served as president of the Swiss Federation of Jewish Communities. As a moderate figure, he mediated in the clash between American-Jewish organizations and Swiss bankers and politicians in the furor surrounding the assets of Nazi victims. He headed a private foundation endowed by the banks and Swiss industry, distributing 296 million Swiss francs to the victims, 90% of them Jewish. As an able administrator and conciliatory personality he became a popular public figure. The Catholic Faculty of the University of Berne awarded him an honorary Ph.D. for his promotion of Christian-Jewish understanding in Switzerland.

[Uri Kaufmann (2nd ed.)]

BLOCH, ROSINE (1844–1891), singer. Bloch made her debut at the Paris Opera as Azucena in Verdi's *Il Trovatore* in 1865 and remained there as one of its most prominent members. Among her most notable parts was that of Fides in Meyerbeer's *Le Prophète*. She sang Amneris in the first French production of *Aida* in 1880, the year she retired.

BLOCH, SAMSON BEN MOSES (d. 1737), *dayyan* and rabbi of Hamburg. Bloch, known also as "Samson the Ḥasid," was one of the first scholars and teachers and later the principal in the *bet midrash* built by Issachar Baer Kohen in 1707. He was known for his erudition and for his close ties with the great halakhic authorities of his generation. Bloch greatly exerted himself for the benefit of his community and it was through his efforts that the Jews were permitted to escape to Altona during a time of danger. The glosses and novellae which he wrote in the margins of the Shulḥan Arukh, *Orah Ḥayyim* were published under the title *Nezirut Shimshon* (Berlin, 1764), and, again, together with the text of the *Orah Ḥayyim* (Prague, 1785). *Tosafot Ḥadashim* (Amsterdam, 1775), his commentary on the Mishnah, was published with the text and later republished in many editions of the Mishnah. Samson also wrote halakhic novellae which have not been published. His sons were Issachar Baer and Moses, *dayyan* of Mezhirech.

[Abraham David]

BLOCH, SAMSON (Simson) HA-LEVI (1784–1845), one of the early Hebrew authors of the *Haskalah in Galicia. He was, for a number of years, a student of Naḥman *Krochmal and a close friend of Solomon Judah *Rapoport. In the early 1800s he settled in Zamosc, in Russian Poland. In 1809 he published a new edition of *Iggeret ha-Rashba* (Epistle of R. Solomon b. Abraham *Adret) against the study of philosophy, together with *Iggeret ha-Hitnazzelut* (Letter of Defense) by *Jedaiah ha-Penini on behalf of philosophy. In his introduction, Bloch explained that Adret had objected only to philosophi-

cal studies at too early an age. In 1813–14, Bloch worked as proofreader of Hebrew books for the Viennese printer Anton Schmid. He published a Hebrew translation (from the German) of *Manasseh Ben Israel's *Vindiciae Iudaeorum* with the title *Teshu'at Yisrael* ("Israel's Salvation," 1814) with an introduction and the author's biography by David Franco-Mendes. Bloch won his place in Hebrew literature with his *Shevilei Olam* ("Paths of the World"), the first general geography in the Hebrew language. The first two parts of this work, on Asia and Africa, appeared during his lifetime (1822–1827); the unfinished third part, on Europe, edited by N.M. Schorr and published posthumously in 1855, under the title *Zehav Shebah. Shevilei Olam*, which ran into four editions, is, in the main, an adaptation of German geography books. However, Bloch was able to give his work a popular Jewish flavor by the inclusion of stories about unusual phenomena in far-off lands, mysterious tales and legendary anecdotes, and by special stress on the importance of each country for Jewish history. Bloch's style is extremely florid and stilted even for his own period, and the book as a whole suffers from numerous irrelevant notes. In 1840 Bloch published a Hebrew translation of Leopold Zunz's biography of Rashi, with important emendations and notes. Bloch spent his last years in solitude and illness in his native town of Kulikow (near Lemberg).

[Gedalyah Elkoshi]

BLOCH-MICHEL, JEAN (1912–), French novelist and essayist. Bloch-Michel was influenced by his experiences during the Nazi occupation of France and by the moral confusion and crises of conscience affecting his country after World War II. Both his fiction and his essays show him to be a moralist in the French classical tradition with notable psychological insight. Among his best-known works are *Le témoin* (1949; *The Witness*, 1950); a book of war memoirs, *Les grandes circonstances* (1949); *La fuite en Egypte* (1952; *The Flight into Egypt*, 1957), and *Frosinia* (1966). He also wrote a study of French politics, *Journal du désordre* (1955), and an essay on the contemporary novel, *Présent de l'indicatif* (1963). Bloch-Michel was a contributor to a collective work on capital punishment, *Reflexions sur la peine capitale* (1957). Although culturally assimilated, Bloch-Michel expressed his solidarity with Russian Jewry and the State of Israel.

[Arnold Mandel]

BLOCK, H & R, U.S. tax preparation and financial services firm.

HENRY WOLLMAN BLOCH (1922–) was born in Kansas City, Mo., the second son of a prominent lawyer. He began his college career at the University of Missouri but transferred to the University of Michigan, from which he graduated in 1944. He joined the Army Air Corps and as a navigator on

B-17 bombers he flew 31 combat missions over Germany. He was awarded the Air Medal and three Oak Leaf Clusters. The Army Air Corps sent him to the Harvard Business School for training in statistical control. Bloch came under the influence of Sumner Schlichter, a noted economist, who suggested that small business did not have the resources of big business and labor. In 1946 Bloch and his brother Leon founded the United Business Company to offer bookkeeping and other services to small businesses. After a year, Leon left the business to return to law school. But as the company grew, Henry was joined by another brother, Richard, and they offered bookkeeping and tax services to small businesses. Shortly before the 1955 tax season, they placed an ad in *The Kansas City Star* offering tax preparation. The Internal Revenue Service had just discontinued free tax preparation so the Blochs' skills were in demand. The Blochs named the company H&R Block because, they said, the family name had been difficult for people to pronounce and Block could be spelled phonetically. Their success prompted Richard to suggest expanding to New York City, the next city the IRS stopped servicing. H&R Block opened seven offices in 1956 and in its second year the company more than tripled revenues. By 1962 the company had 206 offices and became a public company.

In the 1970s H&R Block built a national brand by offering professional services for a mass market. Beginning in 1972 Henry Bloch appeared in television commercials, which also helped build H&R Block into a national firm. Soon there were 8,600 offices. By 1978 the company offices prepared more than one of every nine tax returns filed in the United States, and by the turn of the century it had over 100,000 associates at more than 12,000 offices around the world.

Widely known as a businessman, civil leader, and avid supporter of the arts in Kansas City, Henry served on the boards of the American Jewish Committee and the Jewish Federation.

RICHARD BLOCH (1926–2004) entered the Wharton School of Finance at the University of Pennsylvania at the age of 16. The youngest member of his class, he received a bachelor of science degree in economics in 1945. Ever the entrepreneur, while in college he purchased and repaired used cars and sold them for a profit to help pay for college expenses. After graduation, he returned to Kansas City and worked in the municipal bond business before joining his brother.

In 1978 Richard was diagnosed with terminal lung cancer and was told he had three months to live. Refusing to accept this diagnosis, he underwent aggressive therapy for two years and was pronounced cured. He promised himself that if he survived he would devote his life to helping others fight cancer. By 1980 he was fulfilling his commitment; in 1982 he sold his interest in H&R Block. Richard and his wife founded the Cancer Hotline in 1980. It educates and provides information to thousands of newly diagnosed cancer patients and their families. They also founded the R.A. Bloch Cancer Management Center and the R.A. Bloch Cancer Support Center at the University of Missouri in Kansas City. Richard Bloch and his

wife, Annette, wrote three books about fighting cancer. Their cancer foundation oversees annual rallies each year on the first Sunday in June to raise awareness that death and cancer are not synonymous. At the first rally, in 1990, they dedicated a park to Americans who have been diagnosed with cancer. Since then the Blochs have completed 19 additional cancer survivor parks. Richard Bloch also served a six-year term on the National Cancer Advisory Board.

[Stewart Kampel (2nd ed.)]

BLOCK, HERBERT LAWRENCE (Herblock; 1909–2001), U.S. editorial cartoonist. Born in Chicago, Block started to draw when he was quite young and won a scholarship to the Chicago Art Institute at 12. His critical eye and rapier pen made him one of the leading journalists of his time. In 1929 Block dropped out of Lake Forest College after two years to work for *The Chicago Daily News*. His cartoons were syndicated almost from the start. In 1933 he joined the Newspaper Enterprise Association, where he won his first Pulitzer Prize in 1942. The following year he joined the army, which employed his talent for cartooning in its Information and Education Division. He was mustered out as a sergeant in 1946 and joined *The Washington Post*, where his woodcut-like strokes and pungent, succinct captions chronicled and skewered national and world leaders for decades. Block coined the term “McCarthyism” for the prosecutorial Communist-hunting tactics of Senator Joseph R. McCarthy of Wisconsin, whom he depicted emerging from a sewer with a thug-like heavy beard. It was said that McCarthy shaved twice a day to avoid resembling the caricature. He began drawing Richard M. Nixon the same way in 1948, and Nixon, too, shaved twice a day. Block was unperturbed, saying both men had a “moral 5 o’clock shadow.” Sometimes Nixon appeared as a vulture, other times as an undertaker, always as a man ready to benefit from the failure of others. When Nixon was elected president, a Herblock cartoon showed him with a clean shave, but as the administration became mired in Watergate, Nixon’s eyebrows grew heavier and his wattles fleshier. Nixon, like Dwight D. Eisenhower before him, canceled the delivery of *The Washington Post* to his home when his children were young, because, he said, “I didn’t want the girls to be upset.”

Block’s second Pulitzer Prize was awarded in 1954 for a drawing of Stalin, who was being accompanied to his grave by the robed figure of death. “You were always a great friend of mine, Joseph,” the caption said. In addition to his work as a cartoonist, for which he won another Pulitzer Prize in 1979, Block wrote 12 books in his customary punchy style. “The Soviet state builds bodies,” he wrote typically in one of them. “Mounds of them.” He continued contributing cartoons to the *Post* until three months before his death when he was 92. In addition to three Pulitzers and a fourth he shared with *The Post* for its coverage of Watergate, Herblock received several honorary degrees and won dozens of journalism prizes. In 1966 he was selected to design the postage stamp commemorating the 175th anniversary of the Bill of Rights. President Bill

Clinton, who was often at the end of Herblock’s sharp quill, in 1994 awarded him the nation’s highest civilian honor, the Presidential Medal of Freedom. In 2000 the Library of Congress mounted a retrospective of Herblock’s work. *The Washington Post* so valued Herblock that they referred to his contribution to the editorial page as a signed editorial opinion and not a cartoon.

[Stewart Kampel (2nd ed.)]

BLOCK, PAUL (1877–1941), U.S. publisher of an early newspaper chain. Born in Elmira, N.Y., Block made his first venture into newspaper ownership by purchasing the *Newark Star-Eagle* in 1908. He bought the *Evening Sun* and *Morning Post* (both of Pittsburgh) in 1927 and later was president and publisher of *Pittsburgh Post-Gazette*, the *Toledo Blade*, and *Toledo Times*. He was a contributor to Jewish and other philanthropic causes, and donated \$100,000 to Yale University in 1930 for a study of newspapers in the modern world.

BLOEMFONTEIN, capital of the Orange Free State, Republic of South Africa. Jewish families played an important pioneering role in the development of Bloemfontein. Isaac Baumann of Hesse-Cassel (1813–1881), one of the first settlers to buy land in the new township in 1848, established the first trading store. The earliest Day of Atonement services in Bloemfontein were held in his house in 1871. In 1873 marriages by Jewish rites were legalized in the Orange Free State. A Hebrew congregation was formed in 1876, and a synagogue built in 1903. The first president (1902–24) was Wolf Ehrlich. As the East European element increased the communal leadership gradually passed to them, a prominent part being played by Jacob Philips and Henry Bradlow. Jews also took an active part in municipal affairs. Baumann was the second chairman of the Bloemfontein municipal board, the forerunner of the town council. His son Gustav was the first surveyor-general of the Orange Free State. The Baummanns fought on the side of the Boers in the South African War (1899–1902). Moritz Leviser, who took part in the Basuto War of 1865–66, helped to establish the town’s first hospital and founded the National Museum. His wife Sophie wrote *Ouma Looks Back*, an account of the early days, and became known as the “Grand Old Lady of Bloemfontein.” Wolf Ehrlich, a friend of the Boer leader General Hertzog (later South African prime minister), sat as a senator in the South African parliament. Jewish mayors of Bloemfontein included Ehrlich (1906–07 and 1911–12), Ivan Haarburger (1912–14), and Sol Harris (1929). The community had a well-developed network of institutions, including a fine communal center for cultural and educational activities. A large new synagogue was built in 1965. In 1956 the Hebrew congregation, *Chevra Kaddisha, talmud torah*, and the charitable institutions combined to form the United Hebrew Institutions of Bloemfontein. Other Jewish institutions included the OFS provincial committee of the South African Board of Deputies and the OFS and Northern Cape Zionist Council. There was also a small Reform group. The Jewish population in 1967 numbered 1,347 out of a

total population of 119,000. Thereafter, in common with most other Jewish communities outside the main urban centers of *Johannesburg, *Cape Town, and *Durban, the Bloemfontein Jewish community declined steadily. In 1997, the synagogue was sold and the congregation relocated to the smaller premises of the now defunct Reform congregation. In 2004, the community numbered about 180 Jews.

[Lewis Sowden]

BLOGG (also **Bloch**), **SOLOMON BEN EPHRAIM** (c. 1780–1858), Hebrew grammarian and liturgist. He was a teacher at the Jewish community's school at Hanover (Germany), where he founded the Hebrew printing press in 1827, Telgener, which was noted for its neatly and accurately printed books. Blogg published Psalms as well as a Passover Haggadah (1829) with German translation and his own commentaries. He wrote a history of the Hebrew language and literature with a short study on the Targums, *Korot Leshonenu ha-Kedoshah – Geschichte der hebraeischen Sprache und Literatur* (Berlin, 1826²), included also in his *Binyan Shelomo – Aedificium Salomonis* (Hanover, various ed. starting 1926), dealing with the history of Hebrew and of the Talmud. Blogg also re-edited Solomon London's *Kohelet Shelomo*, a Hebrew work on the liturgy and ceremonial customs according to the Ashkenazi (Polish and German) rite. This work was first published in Amsterdam, in Hebrew (1744), then in Yiddish, in Frankfurt on the Oder (1790 and 1799). Reedited and translated into German by Blogg (1830), it enjoyed great popularity and was several times reprinted (reedited by A. Sulzbach, 1908). Blogg also wrote: a book of devotion for the sick and for the mourners, *Sefer ha-Hayyim* (1856, several times reedited, last in 1930); *Seder ha-Piyyutim*, a German translation of the *piyyutim* (1824); *Massekhet Purim*, a parody of a Talmud tractate with a travesty of evening prayers (*ma'aravit*) and *selihot* for Purim (1844); and further minor treatises on Moses the elect prophet (1824), on the Jewish Oath (1826), etc.

[Moshe Nahum Zobel]

BLOIS, capital of the department of Loir-et-Cher, north-central France. The earliest information concerning Jews in Blois dates from 992. The community is known in medieval Jewish annals for the tragic consequences of a *blood libel in 1171, the first ritual murder accusation to be made in France. Thirty-three members of the community including men, women and children, were burned at the stake on May 26, on the orders of Count Theobald. Jacob b. Meir *Tam established the 20th of Sivan, the date of the martyrdom, as a fast day for the Jews

in France, England, and the Rhineland. *Ephraim b. Jacob of Bonn, his brother Hillel, and others composed elegies on the martyrs. The tragedy was the subject of a Hebrew drama by S.D. *Goitein, *Pulzelinah* (1927). Jews possibly settled in Blois again, for in 1345 a quarter known as *la Juiverie* is reported. The present-day rue des Juifs near the cathedral is probably located on the same site. During World War II a few Jews from Alsace settled in Blois. In 1968 there were 60 Jews living in Blois, mainly from North Africa.

[Zvi Avneri]

BLOK, ARTHUR (1882–1974), English engineer, first head of the Haifa Technion. Blok studied electrical engineering at University College, London, and became personal assistant to Prof. Ambrose Fleming, the inventor of the radio tube. He personally operated the instrument which flashed radio signals, for the first time in history, from Cornwall to America, in 1901, and became principal examiner in the British Patent Office. Blok became a Zionist during World War I and in 1920 was appointed by the Zionist Executive as a member of the Governing Board of the Haifa Technion. He was the only engineer on that body and was invited to become the first head of the institution. At the request of Sir Herbert Samuel, the British Patent Office granted him extended leave to enable him to take up his position, which he did in August 1924, organizing the first academic staff.

Blok returned to England a year later and did research in nuclear polymers. In 1946 he was awarded the Order of the British Empire for outstanding scientific services during World War II. He continued to take an interest in the Technion and was a member of the Council of Jews' College.

BLONDES, DAVID, victim of a *blood libel in Vilna in 1900. Blondes, a young Jewish barber, was accused by his Polish housemaid of assaulting her and was subsequently imprisoned. Since the charge was made shortly before Passover, rumors began to circulate that the girl had been wounded to obtain blood for ritual purposes. The implications of the accusation deeply stirred Russian Jewry, and the eminent non-Jewish lawyers P.G. Mironov and D.V. Spassovich, led by the noted Jewish lawyer Oscar O. *Grusenberg, were engaged to defend Blondes. The trial jury in Vilna convicted Blondes of injurious intent, but acquitted him of intent to murder; he was sentenced to 16 months imprisonment. The ritual implications of the accusation still remained. Grusenberg appealed to the Russian Senate, and the case was reopened before the same court in 1902. Medical experts from St. Petersburg testified for the defense, showing that the woman's injuries were self-inflicted. The jury subsequently returned a verdict of "not guilty."

[Chasia Turtel]

BLONDHEIM, DAVID SIMON (1884–1934), U.S. Romance scholar. Born in Baltimore, Maryland, Blondheim studied at Johns Hopkins University where he became professor of Romance philology in 1924. During his studies at the *École des Hautes Études* in Paris he began to work on the notes left by A. *Darmesteter on the Old French glosses, over 1,000 in number, in Rashi's talmudic commentaries. Blondheim, after collating these with early manuscripts, restored their original form, established their exact meaning and published them as the first volume of his *Les glosses françaises dans les commentaires talmudiques de Raschi* (1929). He then proceeded to study each term in all its ramifications, but on his untimely death left only 125 completed studies. They were published posthumously as the second volume of his *Glosses*, with his biography and a very extensive bibliography (1937). The vast amount of historical and philological documentation gathered by Blondheim offers an invaluable source of information.

Examining, at the same time, the biblical translations in Romance languages in medieval Jewish manuscripts, Blondheim was struck by the particular form of the glosses in the different sources and by the close connection between them. He first published 30 such Old French glosses found in Jewish texts (his doctoral dissertation, in *Romania*, 39 (1910), 129ff.), and went on to prove that the specific traits of these Judeo-Romance texts is encountered also in the earliest Latin Bible translation known as the *Vetus Latina*. This was the theme of his major work *Les parlers judéo-romans et la Vetus Latina* (1925). He concluded that the Jews in the Western Roman Empire must have spoken their own *koiné*, which developed into the various Judeo-Romance dialects, and that Jews were responsible for the translation of the Septuagint in the *Vetus Latina*. Blondheim's views, however, did not obtain general approval, being criticized in particular by Cassuto, Banitt (Berenblut), and Fiorentino.

Blondheim's minor writings included many other contributions to the medieval Judeo-Romance dialects, e.g., medieval Judeo-French hymns. His indefatigable scientific endeavors did not hinder him from taking an active part in Jewish affairs, both philanthropic and Zionist. Blondheim prepared the first English translation of L. *Pinsker's *Auto-Emancipation* (1904, 1916²). His life ended on a tragic note. His manuscripts and papers are now in the National and University Library, Jerusalem.

[Menahem Banitt]

His son, SOLOMON HILLEL BLONDHEIM (1918–), Israeli physician, worked in various New York hospitals and did research into metabolic diseases and bilirubin metabolism before emigrating to Israel in 1951. There he joined the Hadasah-University Hospital in Jerusalem, becoming head of the metabolic unit and laboratory (1957) and associate professor

of medicine (1966). He was professor emeritus in the hospital's department of medicine.

BLOOD. In the Bible there is an absolute prohibition on the consumption of blood. The blood of an animal must be drained before the flesh may be eaten (Lev. 3:17; 7:26; 17:10–14; Deut. 12:15–16, 20–24). This prohibition is not found anywhere else in the ancient Near East. Moreover, within Israelite legislation it is the only prohibition (coupled with murder) enjoined not on Israel alone but on all men (Gen. 9:4). It is thus a more universal law than the Decalogue.

That none of Israel's neighbors possesses this absolute and universally binding prohibition means that it cannot be a vestige of a primitive taboo, but the result of a deliberate, reasoned enactment. This is clear from the rationale appended to the law: blood is life (Lev. 17:11, 14; Deut. 12:23). Men (the sons of Noah) are conceded the right to eat meat, if they drain off the lifeblood, which belongs to the Creator (Gen. 9:3–4, see *Noachide Laws). Israel has an additional obligation to drain the blood of sacrificial animals on the authorized altar, "for it is I who have assigned it to you upon the altar to expiate for your lives; for it is the blood, as life, that can expiate" for your lives when you take the animal's life for its flesh (Lev. 17:11; cf. verse 4; see *Atonement).

An unresolved problem is presented by a second blood prohibition, differently worded: *lo' tokhelu 'al ha-dam* ("do not eat over the blood"; Lev. 19:26; 1 Sam. 14:32–33; Ezek. 33:25). Various interpretations of this have been offered: in one, *'al* is interpreted as "with" (so LXX, ad loc.; for usage, cf. Ex. 12:8; 23:18; Lev. 23:18, 20; et al.). Thus, the two prohibitions are synonymous: both forbid blood as food. A second interpretation holds that *'al* means "over," figuratively. The situation envisaged is that the blood has not been consumed, but has been spilled to the ground instead of being brought to the altar. Such a profane disposition of the blood is forbidden by this law. This accords with the requirement of the priestly code (and of King Saul, 1 Sam. 14:32–33) that all permitted flesh must be sacrificed (Lev. 17:11, above). However, it is not in agreement with the Deuteronomistic Code, which allows profane slaughter and expressly orders that blood be spilled upon the ground (Deut. 12:15, 21–22). *'Al* has also been interpreted as "over," literally, in which case the prohibition refers to a pagan rite (see Ibn Ezra and Samuel b. Meir (Rashbam) on Lev. 19:26, and Maimonides, *Guide*, 3:46). According to a recent formulation of this view by Grintz, it harks back to the worship of underground deities, who drank the blood out of a pit in which the animal was slaughtered (e.g., *Odyssey*, 10:530–40).

Blood plays a pervasive role in the cult. When daubed on the horns of the *altar or sprinkled inside the sanctuary

(see *Sacrifices), it purges ritual impurity (see *Atonement; *Day of Atonement). It may also serve this purgative function in the initial rites of purifying the leper (Lev. 14:4–6, 18–29; cf. verses 49–53; see *Leprosy), and in consecrating the priest (Ex. 29:20–21, 33). When dashed upon the side of the altar, as in the case of animals sacrificed for food (see above), its purpose is to expiate sin (see *Kippur). It also operates as an apotropaic to ward off future harm, e.g., by smearing the paschal blood on doorposts and lintels (Ex. 12:7, 13, 22–23). This usage may also underline the rites of covenanting (*dam berit*; Ex. 24:6–8) and circumcising the Israelites (Ex. 4:24–26; Ezek 16:6).

[Jacob Milgrom]

In Halakhah

The prohibition of blood enjoined in the Bible is defined by the Talmud as referring to the blood of cattle, beasts, and fowl, and prescribes the punishment of **karet* for the consumption of the minimum amount of the volume of an olive (Ker. 5:1). The blood for which one is so liable is “the blood with which the soul emerges,” i.e., the lifeblood, but not the blood which oozes out subsequently, or blood in the meat. Blood of all other creatures, fish, locusts, and human blood, is permitted according to the rabbinical interpretations of biblical law, although according to one source (*Tanna de-Vei Eliyahu Rabbah*, 15) human blood is equally forbidden by the Bible. All authorities agree, however, that it is forbidden by rabbinic law (Maim. Yad, Ma’akhalot Asurot, 6:2). The Talmud uses the peculiar phrase “bipeds” (Ker. 20b), and although all the halakhic authorities regard this phrase as a synonym for humans (Sh. Ar., YD 66: 10), J.S. Bloch, in answer to the *blood accusation whose fomenters quoted this passage in support of their allegation, put forward the intriguing suggestion that it actually refers to simians. Although the content, which enumerates “blood of bipeds, the blood found in eggs, the blood of locusts and of fish” would appear to lend some support to this view, it must be regarded as belonging to the realm of apologetics. Nevertheless, the repugnance felt by Jews for blood caused an extension of the prohibition even of permitted blood “because of appearances” if it were collected in a vessel. Thus it is permitted to swallow the blood from one’s bleeding teeth and suck one’s bleeding finger, but should a piece of bread, for instance, be stained by blood it must be discarded. Similarly the blood of fish collected in a vessel is forbidden (Ker. 21b).

The prohibition of blood is confined to its consumption; it is, however, permitted for other uses, and the Mishnah (Yoma 5:6) states that the sacrificial blood which flowed into the brook of *Kidron was collected and sold to gardeners as fertilizer. For the most extensive prohibition of blood, the need for its removal from meat before it is fit for Jewish consumption, see *Dietary Laws.

[Louis Isaac Rabinowitz]

Menstrual Blood

The biological reality that women regularly menstruate is central to biblical and rabbinic constructions of the female. Pro-

hibitions against male contact with menstrual blood, deeply rooted in the cultures of the ancient Near East, appear in Leviticus 11–15, where the *niddah*, the menstruating or postpartum woman, is listed among a number of threats to male ritual purity. Leviticus 18:29 specifies sexual contact with a *niddah* as among those sinful acts punished severely by *karet*, or extirpation from the community. In Leviticus 18:9 and 20:18 such contact is part of a list of prohibited sexual unions that has nothing to do with ritual purity. Even when the purity system lapsed after the destruction of the Second Temple in 70 C.E., the prohibition of union with a menstruant endured.

Menstrual blood, an indication of the failure of fertility in women’s natural cycle of fruitfulness, is strongly linked with death in rabbinic Judaism. In a religious system which likened ritual impurity to a state of spiritual extinction, periodic female flows of blood were repugnant to men both as a potential source of ritual pollution and as a reminder of women’s supposed responsibility for human mortality. Several aggadic passages suggest that women menstruate as punishment or atonement for spilling the blood (*dam*) in perpetuity of Adam (*adam*), who is designated “the blood of the Holy One, blessed be He” or “the blood of the world” (ARNB 9, 42; Gen. R. 17:8, Tanḥ. Noah 1).

BLOOD-AVENGER. A person who is authorized by law, or who is duty-bound, to kill a murderer is called *go’el ha-dam* – usually translated as an avenger of blood, but more accurately to be rendered as a redeemer of blood (cf. Lev. 25:25; Ruth 3:12; 1 Kings 16:11). By putting the murderer to death (Num. 35:19, 21), the avenger expiates the blood shed on the polluted land (Num. 35:33). Originally private revenge was legitimate in Israel, as in other ancient civilizations, not only for homicide but also for mayhem (cf. Gen. 4:23–24) and rape (Gen. 34:25–26); and the restrictions on the avenger’s rights and their legal regulation marked the beginnings of a system of criminal law (see B. Cohen in bibl.). It was stipulated that only murder with malice aforethought (Num. 35:20–21; Deut. 19:11–13) or committed with a murderous instrument (Num. 35:16–18; for further examples, see Maim., Yad, Roze’ah u-Shemirat Nefesh 6:6–9) gave rise to the avenger’s right (see Mak. 12a, Sanh. 45b); the unintentional manslayer was entitled to refuge from the avenger (Num. 35:12, 15; Deut. 19:4–6) and was liable to be killed by him only when he prematurely left the city of refuge (Num. 35:26–28). It may be considered a concession to human nature that avenging was not wholly prohibited, but only re-

stricted and regulated: the natural “hot anger” (Deut. 19:6) of the victim’s next of kin is left at least some legal outlet.

The avenger’s rights were further restricted by being made subject to and dependent on the prior judicial conviction of the murderer – whether the murder was premeditated or not was a question not for the avenger but for the court to decide (Maim. loc. cit. 1:5, following Num. 35:12; “the manslayer may not die unless he has stood trial before the assembly”; but cf. Yad, loc. cit. 5:7–10). Opinions of later jurists were divided as to what the avenger’s real function was; some held that he initiated the proceedings, searching for the murderer and bringing him to court for trial (Ramban; Nov.; Sanh. 45b; *Beit ha-Behirah* ad loc.); some thought he should appear before the court and participate in the proceedings as a prosecutor (Nissim Gerondi, basing himself on the Targum pseudo-Jonathan who renders *go’el ha-dam* as “claimant of blood”); others relegated the avenger to the role of an executioner, it being his right and privilege to execute the death penalty pronounced by the court (Yad, loc. cit. 1:2; Ritba, Nov., Mak. 10b). That the avenger had a *locus standi* in court appears probable from the scriptural injunction that the court “shall decide between the slayer and the blood-avenger” (Num. 35:24). While the slayer would protest his innocence or, alternatively, his lack of malice, the avenger would plead premeditation (cf. *Malbim* ad loc.); by finding a lack of malice, the court is said to “protect the manslayer from the blood-avenger” (Num. 35:25). When an alleged murderer stood trial but was not convicted (either because of lack of sufficient evidence or because the verdict had not yet been given) and the avenger killed him, most jurists held that while the killing was unlawful, the avenger was not guilty of murder (*Beit ha-Behirah*, Sanh. 45b) – the proffered reason being that the avenger had a better right to kill than even the unintentional manslayer (Yad, loc. cit. 6:5), or that Scripture itself recognized the avenger’s “hot anger” (Deut. 19:6) as negating premeditation (*Redak* to II Sam. 14:7). However, if the avenger killed the murderer within the walls of the city of refuge, it was murder pure and simple (Tosef., Mak. 3:6).

Any next of kin entitled to inherit the deceased’s estate qualified as an avenger (Yad, loc. cit. 1:2). Some later authorities even include maternal relatives although they are not in line for inheritance (*Or Same’ah* to Yad, loc. cit., against Maimonides). Women also qualify as avengers (Yad, loc. cit. 1:3). There are biblical instances of a father (II Sam. 13:31–38), a son (II Kings 14:5–6), brothers (Judg. 8:4–21; II Sam. 2:22–23), and also the king (I Kings 2:29–34) as avengers. It was later stipulated that when no next of kin was available or came forward, an avenger was to be appointed by the court (Sanh. 45b).

There is little doubt that legally the rights (and duties) of the blood-avenger became obsolete (*Havvat Ya’ir* 146), though the killing by the avenger of a murderer is even today legally regarded by some scholars as no more than unintentional manslaughter (e.g. *Kezot ha-Hoshen* חמ 2). Apart from the law, the right and duty of avenging the blood of one’s nearest relatives are still deeply imprinted on the mind and religious conviction of most Oriental (including many Jewish)

communities; notwithstanding repeated efforts from various quarters, blood vengeance is not, however, recognized in Israeli law even in mitigating circumstances.

[Haim Hermann Cohn]

BLOODGUILT, liability for punishment for shedding blood. The biblical concept of bloodguilt derives from the belief that deeds generate consequences and that sin, in particular, is a danger to the sinner. The most vivid examples of this belief appear in connection with unlawful homicide, where innocent blood (*dam naki (naqi)*; Jonah 1:14) cries out for vengeance (Gen. 4:10), is rejected by the earth (Isa. 26:21; Ezek. 24:7), and pollutes it (Num. 35:33–34). Bloodguilt attaches to the slayer and his family (II Sam. 3:28ff.) for generations (II Kings 9:26), and even to his city (Jer. 26:5), nation (Deut. 21:8), and land (Deut. 24:4). The technical term for bearing bloodguilt *damo bo*, or *damo bero’sho*, meant originally “his blood [remains] in him/in his head” (Josh. 2:19; Ezek. 33:5), and the legal formula *mot yumat damav bo* (Lev. 20:9–16) means that in the case of lawful execution, the blood of the guilty victim remains on his own person and does not attach itself to his executioners.

The concept of bloodguilt in the Bible pervades all sources, legal, narrative, and cultic, and entails the following system of graded punishments for homicide.

Deliberate Homicide

The penalty is death by man (Gen. 9:6), or failing that, by God (Gen. 9:5; cf. Lev. 20:4–5). A man can be either the direct cause (Num. 35:16–21) or the indirect cause, e.g., a watchman (II Kings 10:24; Ezek. 33:6), priests (Num. 18:1, 3), homeowner (Deut. 22:8), or subordinate (I Kings 2:31–35). The punishment of the murderer is primarily the responsibility of the *blood-avenger (after court conviction, Num. 35:19; Deut. 19:12), but God is the final guarantor that homicide is ultimately punished. His personal intervention is expressed by the verbs פקד *(pakad (paqad))*, “attend to,” Hos. 1:4; נקם *(nakam (naqam))*, “avenge,” II Kings 9:7; דרש *(darash)*, “exact punishment,” Ezek. 33:6; and שוב *(heshiv, heshiv)*, “return” in the idiom *heshiv damim ‘al ro’sh* (II Sam. 16:18; I Kings 2:33), which indicates that God will turn back to the head of the slayer the blood of the slain, the punishment the murderer believed he had averted. In the Bible, it should be noted, these idioms have become technical terms: the original phrase remains, but without the crudity of its more primitive implications in other ancient sources. God may postpone punishment to a

later generation (II Sam. 12: 13–14; I Kings 21:21). Man, however, does not have this option (Deut. 24:16; II Kings 14:6) unless divinely authorized (II Kings 9:7, 26).

There is no commutation of the death penalty. The notion that deliberate homicide cannot be commuted is the foundation stone of criminal law in the Bible: human life is invaluable, hence incommutable. This concept is not found in any other body of law in the ancient Near East.

Accidental Homicide

Since accidental homicide also results in bloodguilt, the killer may be slain by the *gô'el* with impunity (Num. 35:26–27; Deut. 19:4–10). However, as his act was unintentional, the natural death of the high priest is allowed to substitute for his own death (Num. 35:25, 28). In the interim, he is confined to a *city of refuge to protect him from the blood-avenger (Num. 35:9ff; Deut. 4:41–43; 19:1–13; Josh. 20:1ff.) In cases where the slayer is unknown, the community nearest the corpus delicti must disavow complicity and, by means of a ritual, symbolically wash away the blood of the slain (Deut. 21:1–9; see *Eglah Arufah).

Homicidal Beast

The penalty is death by stoning and the shunning of the carcass. The supreme value of human life in the Bible is best expressed in the law that a homicidal beast is also guilty and that not only must it be killed but its carcass, laden with bloodguilt, must be reviled (Ex. 21:28–29; cf. Gen. 9:5).

Unauthorized Slaughter of an Animal

The reverence for life that informs all biblical legislation reached its summit in the priestly law which sanctions the use of an animal for food on the condition that its blood, containing its life, be drained upon the authorized altar (and thereby be symbolically restored to God; Lev. 17:11). All other slaughter is unlawful bloodshed, punishable by death at the hand of God (Lev. 17:4).

Exceptions

No bloodguilt is incurred by homicide in self-defense (Ex. 22:1), judicial execution (Lev. 20:9–16), and war (I Kings 2:5–6). The priestly legislation may indicate some qualification of the view that war is justifiable homicide. For example, David was disqualified from building the Temple (I Chron. 22:8).

[Jacob Milgrom]

BLOODLETTING, removal of blood in treating diseases. Bloodletting is frequently mentioned in the Talmud. It was performed not by a physician but by a skilled functionary called *umman* or *gara*, whose status was less than that of a physician. The bloodletter is mentioned in various passages in the Talmud, both favorably and unfavorably (e.g., Ta'an. 21b; Kid. 82a). Some of the directives about bloodletting in the

Talmud relate to specific ailments (e.g., Git. 67b; Av. Zar. 29a), but most are in the realm of preventive medicine based on the belief that the regular removal of blood from the body was of hygienic value. Among the ten indispensable requirements of a town, in the absence of which “no scholar should reside there” (Sanh. 17b), is a bloodletter. According to the Talmud, bloodletting is one of the things which should be applied in moderation (Git. 70a), and, in practice, the amount of blood to be let varies with the subject's age. Maimonides (Yad, De'ot 4:18), though in general agreement, suggests, in addition, consideration of the subject's “blood richness” and physical vigor (*Pirkei Moshe*, 12). Many instructions are given in the Talmud with respect to diet and precautions to be taken both before and after bloodletting (e.g., Shab. 129a–b; Git. 70a; Ned. 54b; Av. Zar. 29a; et al.). Maimonides advises moderation in bloodletting: “A man should not accustom himself to let blood regularly, nor should he do so unless he is in great need of it” (Yad, loc. cit.). The views of the Talmud and of Maimonides provide a sharp contrast to those of the ancient and medieval world, where the practice of bloodletting was unrestricted. In late Hebrew literature (e.g., the *Ozar ha-Hayyim* of Jacob *Zahalon and the *Ma'aseh Tuvivyyah* of Tobias b. Moses *Cohn) directions for bloodletting and cupping are also found.

[Joshua O. Leibowitz]

BLOOD LIBEL, the allegation that Jews murder non-Jews, especially Christian children, in order to obtain blood for the Passover or other rituals: most blood libels occurred close to Passover, being basically another form of the belief that Jews had been and still were responsible for the passion and crucifixion of Jesus Christ, the divine child; a complex of deliberate lies, trumped-up accusations, and popular beliefs about the murder-lust of the Jews and their bloodthirstiness, based on the conception that Jews hate Christianity and mankind in general. It is combined with the delusion that Jews are in some way not human and must have recourse to special remedies and subterfuges to appear, at least outwardly, like other men. The blood libel led to trials and massacres of Jews in the Middle Ages and early modern times; it was revived by the Nazis. Its origin is rooted in ancient, almost primordial, concepts concerning the potency and energies of *blood. In the early 2000s a controversy among scholars surrounded the argument that the blood libel began in the Middle Ages in the wake of the sacrifice of Jewish children by their parents during Crusaders raids on Jewish communities on their way to the Holy Land.

Origins

Blood sacrifices, practiced by many pagan religions, are expressly forbidden by the Torah. The law of meat-salting (*meliḥah*) is designed to prevent the least drop of avoidable blood remaining in food. Yet pagan incomprehension of the Jewish monotheist cult, lacking the customary images and

statues, led to charges of ritual killing. At a time of tension between Hellenism and Judaism, it was alleged that the Jews would kidnap a Greek foreigner, fatten him up for a year, and then convey him to a wood, where they slew him, sacrificed his body with the customary ritual, partook of his flesh, and while immolating the Greek swore an oath of hostility to the Greeks. This was told, according to *Apion, to King *Antiochus Epiphanes by an intended Greek victim who had been found in the Jewish Temple being fattened by the Jews for this sacrifice and was saved by the king (Jos., Apion, 2:89–102). Some suspect that stories like this were spread intentionally as propaganda for Antiochus Epiphanes to justify his profanation of the Temple. Whatever the immediate cause, the tale is the outcome of suspicion of the Jews and incomprehension of their religion.

To be victims of this accusation was also the fate of other misunderstood religious minorities. In the second century c.e. the *Church Father Tertullian complained: “We are said to be the most criminal of men, on the score of our sacramental baby-killing, and the baby-eating that goes with it.” He complains that judicial torture was applied to the early Christians because of this accusation, for “it ought ... to be wrung out of us [whenever that false charge is made] how many murdered babies each of us has tasted.... Oh! the glory of that magistrate who had brought to light some Christian who had eaten up to date a hundred babies!” (*Apologeticus* 7:1 and 1:12, Loeb edition (1931), 10, 36).

Middle Ages

During the Middle Ages some heretical Christian sects were also afflicted by similar accusations. The general attitude of Christians toward the holy bread of the Communion created an emotional atmosphere in which it was felt that the divine child was mysteriously hidden in the partaken bread. The popular preacher Friar Berthold of Regensburg (13th century) felt obliged to explain why communicants do not actually see the holy child by asking the rhetorical question, “Who would like to bite off a baby’s head or hand or foot?” Popular beliefs and imaginings of the time, either of classical origin or rooted in Germanic superstitions, held that blood, even the blood of executed malefactors or from corpses, possesses the powers of healing or causing injury. Thus, combined with the general hatred of Jews then prevailing, a charge of clandestine cruel practices and blood-hunting, which had evolved among the pagans and was used against the early Christians, was deflected by Christian society to the most visible and persistent minority in opposition to its tenets.

As Christianity spread in Western Europe and penetrated the popular consciousness, using the emotions and imagination even more than thought and dogma in order to gain influence, various story elements began to evolve around the alleged inhumanity and sadism of the Jews. (See Map: Blood Libels.) In the first distinct case of blood libel against Jews in the Middle Ages, that of *Norwich in 1144, it was alleged that the Jews had “bought a Christian child [the ‘boy-mar-

tyr’ William] before Easter and tortured him with all the tortures wherewith our Lord was tortured, and on Long Friday hanged him on a rood in hatred of our Lord.” The motif of torture and murder of Christian children in imitation of Jesus’ Passion persisted with slight variations throughout the 12th century (Gloucester, England, 1168; Blois, France, 1171; Saragossa, Spain, 1182), and was repeated in many libels of the 13th century. In the case of Little Saint Hugh of *Lincoln, 1255, it would seem that an element taken directly from Apion’s libel (see above) was interwoven into the Passion motif, for the chronicler Matthew Paris relates, “that the Child was first fattened for ten days with white bread and milk and then ... almost all the Jews of England were invited to the crucifixion.” The crucifixion motif was generalized in the *Siete Partidas* law code of Spain, 1263: “We have heard it said that in certain places on Good Friday the Jews do steal children and set them on the cross in a mocking manner.” Even when other motifs eventually predominated in the libel, the crucifixion motif did not disappear altogether. On the eve of the expulsion of the Jews from Spain, there occurred the blood-libel case of “the Holy Child of *La Guardia” (1490–91). There, *Conversos were made to confess under torture that with the knowledge of the chief rabbi of the Jews they had assembled at the time of Passover in a cave, crucified the child, and abused him and cursed him to his face, as was done to Jesus in ancient times. The crucifixion motif explains why the blood libels occurred at the time of Passover.

The Jews were well aware of the implications of sheer sadism involved in the libel. In a dirge lamenting the Jews massacred at Munich because of a blood libel in 1286, the anonymous poet supposedly quotes the words of the Christian killers: “These unhappy Jews are sinning, they kill Christian children, they torture them in all their limbs, they take the blood cruelly to drink” (A.M. Habermann (ed.), *Sefer Gezerot Ashkenaz ve-Zarefat* (1946), 199). These words, written in irony, reflect another motif in the libels, the thirst of the Jew for blood, out of his hatred for the good and true. This is combined in 13th-century Germany with the conception that the Jew cannot endure purity: he hates the innocence of the Christian child, its joyous song and appearance. The motif, found in the legendary tales of the monk Caesarius of Heisterbach in Germany, underwent various transmutations. In the source from which Caesarius took his story the child killed by the Jews sings *erubescat judaeus* (“let the Jew be shamed”). In Caesarius’ version, the child sings the *Salve Regina*. The Jews cannot endure this pure laudatory song and try to frighten him and stop him from singing it. When he refuses, they cut off his tongue and hack him to pieces. About a century after the expulsion of the Jews from England this motif only became the basis of Geoffrey *Chaucer’s “Prioress’ Tale.” Here the widow’s little child sings the *Alma Redemptoris Mater* while “the serpent Sathanas” awakens indignation in the cruel Jewish heart. The Jews obey the promptings of their Satanic master and kill the child; a miracle brings about their deserved punishment. Though the scene of this tale is laid in Asia, at the end of the

story Chaucer takes care to connect Asia explicitly with bygone libels in England, and the motif of hatred of the innocent with the motif of mockery of the crucifixion.

In the blood libel of *Fulda (1235) another motif comes to the fore: the Jews taking blood for medicinal remedies (here of five young Christian boys). The strange medley of ideas about the use of blood by the Jews is summed up by the end of the Middle Ages, in 1494, by the citizens of Tyrnau (*Trnava). The Jews need blood because “firstly, they were convinced by the judgment of their ancestors, that the blood of a Christian was a good remedy for the alleviation of the wound of circumcision. Secondly, they were of opinion that this blood, put into food, is very efficacious for the awakening of mutual love. Thirdly, they had discovered, as men and women among them suffered equally from menstruation, that the blood of a Christian is a specific medicine for it, when drunk. Fourthly, they had an ancient but secret ordinance by which they are under obligation to shed Christian blood in honor of God, in daily sacrifices, in some spot or other ... the lot for the present year had fallen on the Tyrnau Jews.” To the motifs of crucifixion, sadism, hatred of the innocent and of Christianity, and the unnaturalness of the Jews and its cure by the use of good Christian blood, there were added, from time to time, the ingredients of sorcery, perversity, and a kind of “blind obedience to a cruel tradition.”

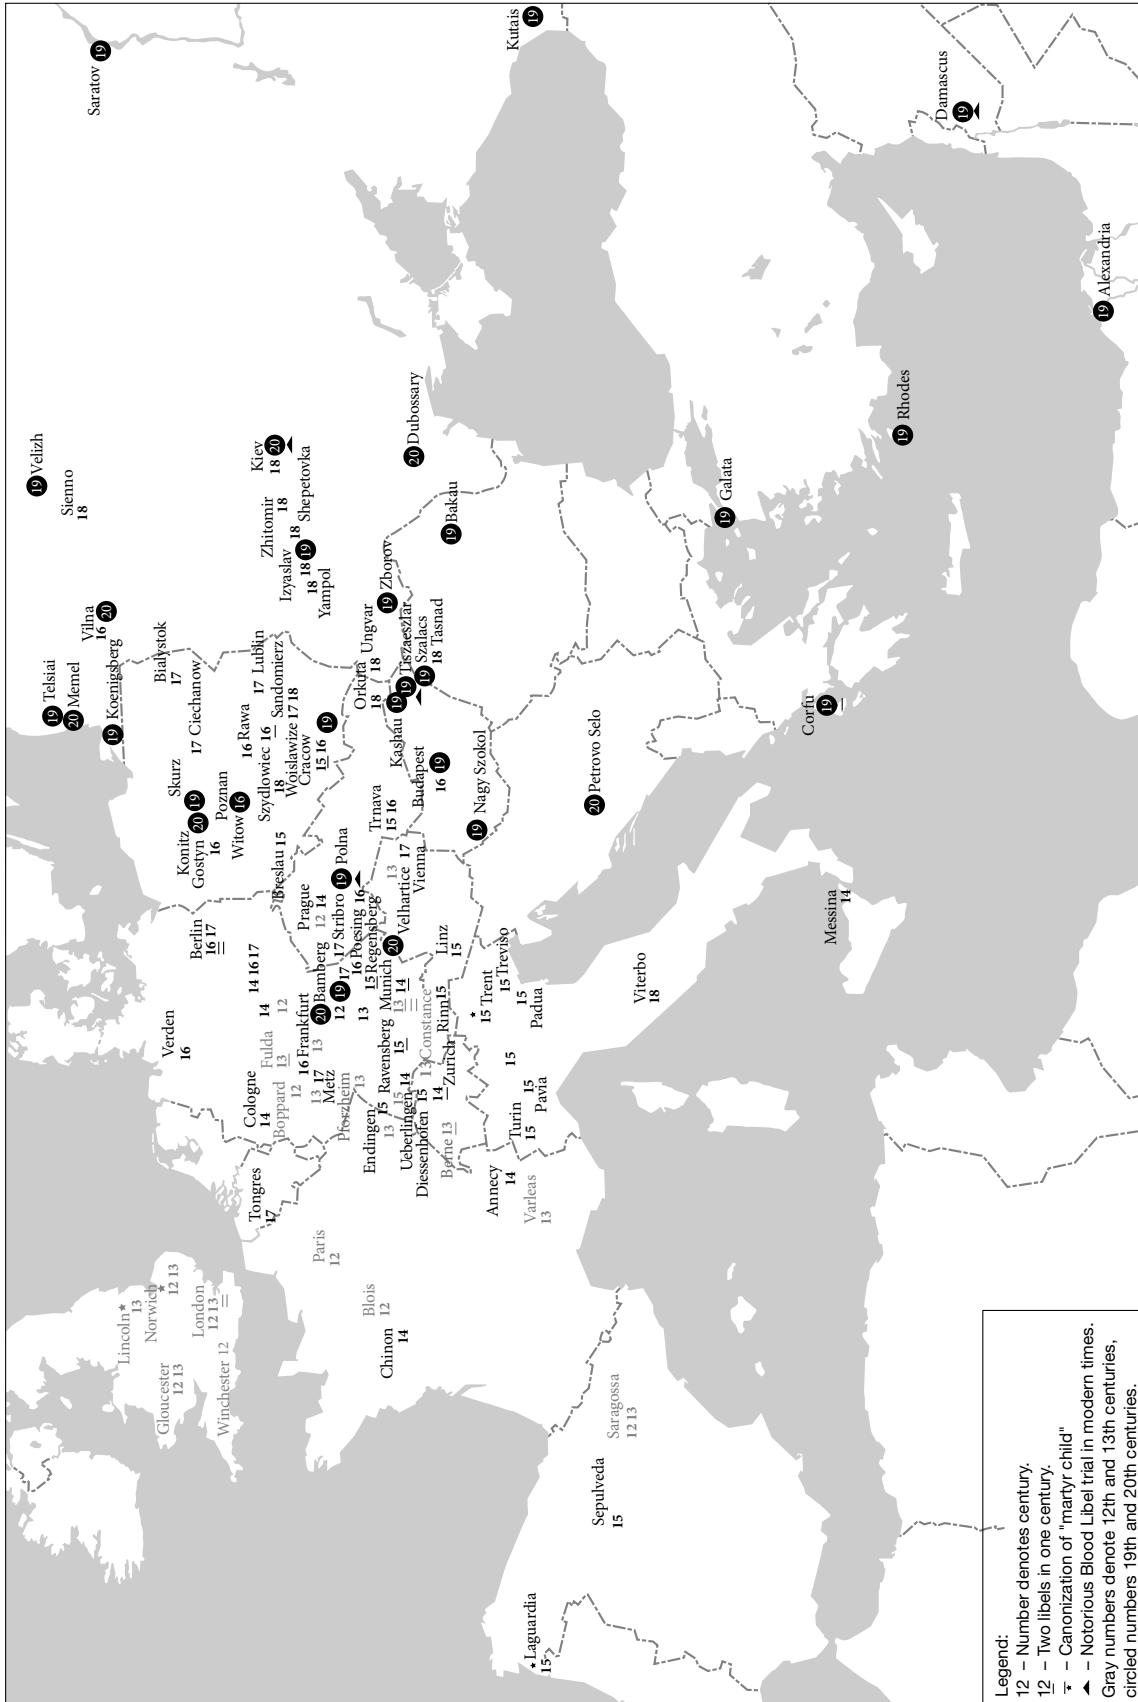

Generation after generation of Jews in Europe was tortured, and Jewish communities were massacred or dispersed and broken up because of this libel. It was spread by various agents. Popular preachers ingrained it in the minds of the common people. It became embedded, through miracle tales, in their imagination and beliefs. This caused in Moravia, for instance, in about 1343, “a woman of ill fame to come with the help of another woman and propose to an old Jew of Brno, named Osel, her child for sale for six marks, because the child was red in hair and in face.” Yet the Jew invited Christian officials, who imprisoned the women and punished them horribly (B. Bretholz, *Quellen zur Geschichte der Juden in Maehren* (1935), 27–28). The majority of the heads of state and the church opposed the circulation of the libel. Emperor *Frederick II of Hohenstaufen decided, after the Fulda libel, to clear up the matter definitively, and have all the Jews in the empire killed if the accusation proved to be true, or exonerate them publicly if false, using this as an occasion to arbitrate in a matter affecting the whole of Christendom. The enquiry into the blood libel was thus turned into an all-Christian problem. The emperor, who first consulted the recognized church authorities, later had to turn to a device of his own. In the words of his summing-up of the enquiry (see ZGJD, 1 (1887), 142–4), the usual church authorities “expressed various opinions about the case, and as they have been proved incapable of coming to a conclusive decision ... we found it necessary ... to turn to such people that were once Jews and have converted to the worship of the Christian faith; for they, as opponents, will not be silent about anything that they may know in this matter against the Jews.” The em-

peror adds that he himself was already convinced, through his knowledge and wisdom, that the Jews were innocent. He sent to the kings of the West, asking them to send him decent and learned converts to Christianity to consult in the matter. The synod of converts took place (in about 1243) and came to the conclusion, which the emperor published: “There is not to be found, either in the Old or the New Testament, that the Jews are desirous of human blood. On the contrary, they avoid contamination with any kind of blood.” The document quotes from various Jewish texts in support, adding, “There is also a strong likelihood that those to whom even the blood of permitted animals is forbidden, cannot have a hankering after human blood. Against this accusation stand its cruelty, its unnaturalness, and the sound human emotions which the Jews have also in relation to the Christians. It is also unlikely that they would risk [through such a dangerous action] their life and property.” A few years later, in 1247, Pope Innocent IV wrote that “Christians charge falsely ... that [the Jews] hold a communion rite ... with the heart of a murdered child; and should the cadaver of a dead man happen to be found anywhere they maliciously lay it to their charge.” Neither emperor nor pope were heeded.

Jewish scholars in the Middle Ages bitterly rejected this inhuman accusation. They quoted the Law and instanced the Jewish way of life in order to refute it. The general opinion of the Jews is summed up thus: “You are libeling us for you want to find a reason to permit the shedding of our blood” (the 12th–13th centuries *Sefer Nizzahon Yashan – Liber Nizzachon Vetus*, p. 159 in *Tela Ignaea Satanae*, ed. J.Ch. Wagenseil, 1681). However, the Jewish denials, like the opinion of enlightened Christian leaders, did not succeed in preventing the blood libels from shaping to a large extent the image of the Jew transmitted from the Middle Ages to modern times. (It was only in 1965 that the church officially repudiated the blood libel of *Trent by canceling the beatification of Simon and the celebrations in his honor.)

Modern Times

From the 17th century, blood-libel cases increasingly spread to Eastern Europe, most notably to Poland and Lithuania). The atmosphere at such trials is conveyed by the protocols of the investigation of two Jews and a Jewess who were put to torture in a blood-libel case at *Lublin in 1636: “Judge: ‘For what purpose do Jews need Christian blood?’ Fegele: ‘Jews use no Christian blood.’ Judge: ‘And are you a sorceress?’ Fegele: ‘No. I have nothing to do with this.’” She remained unbroken under torture, even the threat of torture with a red-hot iron, and bravely denied all allegations of sorcery and ritual use of blood, and so did the other accused Jews, who insisted that all Jews are innocent. Hugo *Grotius, the Protestant legal philosopher, when told about the case expressed the opinion that the blood accusation was simply a libel generated by hatred of the Jews and recalled that the early Christians and later Christian sectarians were accused in a similar way (Balaban, in *Festschrift S. Dubnow* (1930), 87–112).

Map showing sites and periods of blood libels.

In Eastern Europe, as late as the 17th century, the blood libel is identified with Jewish sorcery in the minds of the accusers, while the motif of the use of Christian blood for Passover *mazzot* increasingly comes to the fore. As conditions in Poland deteriorated, blood-libel cases multiplied. Through the *Councils of the Lands the Jews sent an emissary to the Holy See who succeeded in having an investigation ordered and carried out by Cardinal Lorenzo Ganganelli, later Pope *Clement XIV. In a detailed report submitted in 1759 Ganganelli examined the veracity of the blood libel in general and of the recent cases in Poland-Lithuania in particular, quoting *in extenso* from former church authorities against the libel. His main conclusion was: "I [...] hope that the Holy See will take some measure to protect the Jews of Poland as Saint Bernard, Gregory IX, and Innocent IV did for the Jews of Germany and France (see bibl., Roth, p. 94).

In the 19th century the ringleaders of Jew-hatred in its modern form of antisemitism made conspicuous use of the blood libel for incitement against Jews in various countries. It was also used as a weapon to arouse the uneducated masses for specific political reasons, as occurred, for instance, in the *Damascus Affair (1840) in the struggle among the western powers for influence in the Near East. Antisemitic self-proclaimed experts wrote treatises which set out to prove the truth of the libel from the records of past accusations and Jewish sources. Two such were Konstantin Cholewa de Pawlikowski (*Talmud in der Theorie und Praxis*, Regensburg, 1866) and H. Desportes (*Le mystère du sang chez les Juifs de tous les temps*, Paris, 1859, with a preface by the French antisemite Edouard-Adolphe *Drumont). In the blood-libel trials held in the second half of the 19th and early 20th century, such as the *Tisza-Eszlar and *Beilis cases, August *Rohling and other known antisemites appeared to testify in court; all were irrefutably answered by Jewish and pro-Jewish scholars (J.S. *Bloch, H.L. *Strack, J. *Mazeh). Another way of implying the truth of the blood-libel charge was to state it as a fact without denying it. For example, in the article *Blut* (in *Handwoerterbuch des deutschen Aberglaubens*, 1 (1927), cols. 1434–42) it is remarked (col. 1436): "Moses in vain prohibited the drinking of blood," and "Trials in modern times show the problem of ritual murder has still not disappeared"; col. 1439).

The Nazis used the blood libel in full force for anti-Jewish propaganda. They revived old allegations and instituted reinvestigations and trials in territories under their rule or influence: at Memel in 1936; at Bamberg in 1937 (a revival); and at Velhartice, Bohemia, in 1940. On May 1, 1934, the Nazi daily, *Der Stuermer*, devoted a special illustrated number to the blood libel, in which German scientists openly served the Nazi aims. The above-mentioned *Handwoerterbuch* (vol. 7 (1935–36), cols. 727–39) printed an article entitled *Ritualmord* written by Peuckert, a man who remained active and respected in German science, which is throughout simply an affirmation and propagation of the blood libel, although using some cautious phrasing. The epitome appears in the remarkable enquiry: "In conclusion to this shocking list, there

remains only one question: for what purpose did the Jews use the blood?" (col. 734).

The blood libel, in the various forms it assumed and the tales with which it was associated, is one of the most terrible expressions of the combination of human cruelty and credulity. No psychological or sociological research can convey the depths to which the numerous intentional instigators of such libels, and the more numerous propagators of this phantasmagoria, sank. It resulted in the torture, murder, and expulsion, of countless Jews, and the misery of insults. However, the dark specters it raised were even more harmful in their effects on the minds of Christians. In modern times *Aḥad Ha-Am found "some consolation" in the existence of the blood libel, for it could serve as a spiritual defense against the influence on Jewish self-evaluation of the consensus of hostile opinion. "This accusation is the solitary case in which the general acceptance of an idea about ourselves does not make us doubt whether all the world can be wrong, and we right, because it is based on an absolute lie, and is not even supported by any false inference from particular to universal. Every Jew who has been brought up among Jews knows as an indisputable fact that throughout the length and breadth of Jewry there is not a single individual who drinks human blood for religious purposes.... 'But' – you ask – 'is it possible that everybody can be wrong, and the Jews right?' Yes, it is possible: the blood accusation proves it possible. Here, you see, the Jews are right and perfectly innocent" (*Selected Essays* (1962), 203–4).

[Haim Hillel Ben-Sasson / Dina Porat (2nd ed.)]

IN RUSSIA In modern times Russia has been the principal perpetrator of the blood libel, both medieval and modern factors (see above) combining to enable its deliberate dissemination among the ignorant masses. The first blood-libel case in Russia occurred in the vicinity of Senno, south of Vitebsk, on the eve of Passover 1799, when the body of a woman was found near a Jewish tavern: four Jews were arrested on the ground of the "popular belief that the Jews require Christian blood." *Apostates supplied the court with extracts from a distorted translation of the Shulḥan Arukh and *Shevet Yehudah*. The accused were released through lack of evidence. Nevertheless the poet and administrator G.R. *Derzhavin, in his "Opinion submitted to the czar on the organization of the status of the Jews in Russia," could state that "in these communities persons are to be found who perpetrate the crime, or at least afford protection to those committing the crime, of shedding Christian blood, of which Jews have been suspected at various times and in different countries. If I for my part consider that such crimes, even if sometimes committed in antiquity, were carried out by ignorant fanatics, I thought it right not to overlook them." Thus a semiofficial seal was given to the libel in Russia at the opening of the 19th century. Official Russian circles were divided in their views on the libel. A number of inquiries into the charges were instituted, while the views of the czars themselves fluctuated.

Between 1805 and 1816 various cases of blood libel oc-

curred in places within the *Pale of Settlement, and the investigations always ended by exposing the lie on which they were based. In an attempt to stop their dissemination the minister of ecclesiastic affairs, A. Golitsyn, sent a circular to the heads of the guberniyas (provinces) throughout Russia on March 6, 1817, to this effect. Basing his instruction on the fact that both the Polish monarchs and the popes have invariably invalidated the libels, and that they had been frequently refuted by judicial inquiries, he stated in his circular that the czar directed "that henceforward the Jews shall not be charged with murdering Christian children, without evidence, and through prejudice alone that they allegedly require Christian blood." Nevertheless Alexander I (1801–25) gave instructions to revive the inquiry in the case of the murder of a Christian child in *Velizh (near Vitebsk) where the assassins had not been found and local Jewish notables had been blamed for the crime. The trial lasted for about ten years. Although the Jews were finally exonerated, Nicholas I later refused to endorse the 1817 circular, giving as a reason that he considered that "there are among the Jews savage fanatics or sects requiring Christian blood for their ritual, and especially since to our sorrow such fearful and astonishing groups also exist among us Christians." Other blood libels occurred in Telsiai (Telz) in the guberniya (province) of Kovno, in 1827, and Zaslav (*Izyaslav), in the government of Volhynia, in 1830. The Hebrew writer and scholar I.B. *Levinsohn was stirred by this case to write his book *Efes Damim* (Vilna, 1837), in which he exposed the senselessness of the accusations. A special secret commission was convened by the Russian Ministry of Foreign Affairs to clarify the problem concerning "use by Jews of the blood of Christian children," in which the Russian lexicographer and folklorist V. Dahl took part. The result of the inquiry, which reviewed numerous cases of blood libel in the Middle Ages and modern period, were published in 1844 in a limited edition and presented by Skripitsin, the director of the Department for Alien Religions, to the heads of state. In 1853, a blood libel occurred in *Saratov, when two Jews and an apostate were found guilty of the murder of two Christian children – the only instance in Russia of its kind. The council of state which dealt with the case in its final stages announced that it had confined itself to the purely legal aspect of the case and refrained from "anything bearing on the secret precepts or sects existing within Judaism and their influence on the crime." It thereby *prima facie* deprived the case of its test character as a blood libel. While the case was being considered, between 1853 and 1860, various Jews were accused of "kidnapping" on a number of occasions. The special committee appointed in 1855 had included a number of theologians and orientalis, among them two converts from Judaism, V. Levinsohn and D. *Chwolson. The committee reviewed numerous Hebrew publications and manuscripts, and came to the conclusion that there was no hint or evidence to indicate that the Jews made use of Christian blood.

With the growth of an antisemitic movement in Russia in the 1870s, the blood libel became a regular motif in the anti-Jewish propaganda campaign conducted in the press and

literature. Leading writers in this sphere were H. *Lutostansky, who wrote a pamphlet "concerning the use of Christian blood by Jewish sects for religious purposes" (1876), which ran into many editions, and J. Pranaitis. Numerous further allegations were made, including a case in Kutais (Georgia) in 1879, in which Jewish villagers were accused of murdering a little Christian girl. The case was tried in the district court and gave the advocates for the defense an opportunity of ventilating the social implications of the affair and the malicious intentions of its instigators. The chief agitators of the blood libels were monks. At the monastery of Suprasl crowds assembled to gaze on the bones of the "child martyr Gabriello," who had been allegedly murdered by Jews in 1690. The wave of blood libels which occurred at the end of the 19th century in central Europe, including the cases in Tiszaeszlar in 1881, *Xanten in 1891, Polna in 1899, etc., also heaped fuel on the flames of the agitation in Russia.

A number of works were published by Jewish writers in Russia to contradict the allegations, such as D. Chwolson's "Concerning Medieval Libels against Jews" (1861); I.B. Levinsohn's *Efes Damim* of 1837 was translated into Russian (1883). Some of the calumniators were also prosecuted (see *Zederbaum v. Lutostansky, 1880). Despite the growing antisemitism and their officially supported anti-Jewish policy, the czarist authorities during the reign of Alexander III (1881–94) did not lend credence to the blood libels. It was only at the beginning of the 20th century that further attempts were renewed. These included the *Blondes Case in Vilna, in 1900, and an attempt in *Dubossary, in the guberniya of Kherson, where a Russian criminal tried to pin the murder of a child on the Jews. However, with the victory of the reactionaries in Russia after the dissolution of the Second *Duma in 1907, and the strengthening of the extreme right wing (*Union of Russian People) in the Third Duma, another attempt at official level was made by the regime to use the blood libel as a weapon in its struggle against the revolutionary movement and to justify its policy toward the Jews. An opportunity for doing so occurred in the *Beilis Case engineered by the minister of justice Shcheglovitov. The trial, which continued from spring 1911 to fall 1913, became a major political issue and the focal point for anti-Jewish agitation in the antisemitic press, in the streets, at public meetings, and in the Duma. The whole of liberal and socialist opinion was ranged behind Beilis' defense, and even a section of the conservative camp. Leading Russian lawyers conducted the defense, and in Russia and throughout Europe hundreds of intellectuals and scholars, headed by V. Korolenko and M. *Gorki, joined in protest against the trial. The exoneration of Beilis was a political defeat for the regime. Despite this, the government continued to assent to the instigation of blood libels and support their dissemination among the masses until the 1917 Revolution. The Soviet government's attitude toward the blood libel was that it had been a weapon of the reaction and a tactic to exploit popular superstition by the czarist regime. The instigators of the Beilis trial were interrogated and tried at an early stage after the revolution. In later years the

specter of the blood libel was raised in the Soviet press in remote regions of the U.S.S.R., such as Georgia, Dagestan, and Uzbekistan, in the context of the violent propaganda campaign conducted by the Soviet government against Judaism and the State of Israel. After these attempts had aroused world public opinion, they were dropped.

[Yehuda Slutsky]

IN ARAB COUNTRIES The blood libel was repeated in the Arab countries in modern times in a number of ways in various books, as in Egypt in the 1960s, the titles referring to “talmudic human sacrifices” or “the secrets of Zionism.” Mustafa Tlass, a key political figure in Syria for decades, first published his book on the 1860 Damascus blood libel in 1983. The book, called “Matzah of Zion” and reprinted in a number of editions and translated into many languages, became an influential and frequently quoted authority on how Jews and Zionists constantly perpetrate cruel ritual murders. Newspapers as well joined in, with the Egyptian government-sponsored *Al-Ahram* publishing in October 2000 a full-page article called “Jewish Matzah Made from Arab Blood.” TV series and discussions also evoked the blood libel, as on the al-Jazeera station and in the Al-Manar (Hizbullah television network) series *The Exile* in 2003. The image of the Zionist in these visual depictions, watched by millions all over the world, is that of the *Der Sturmer* Jew, bloodthirsty and frighteningly ferocious.

BLOOM, BENJAMIN SAMUEL (1913–1999), U.S. educator. Bloom studied at Pennsylvania State University and at the University of Chicago, where he taught from 1940 (professor of education, 1953) and worked as a university examiner. He participated in several major educational assessment research efforts, both in America and abroad. His evaluation of school performance among youth of different nationalities was pub-

lished in *International Study of Achievement in Mathematics; A Comparison of Twelve Countries* (with T. Husen and others, 1966). His other work was in basic studies of measurement and evaluation procedures in education, analyses of stability and change patterns in human behavior, and the classification of educational objectives. At the invitation of the United States Office of Education, Bloom helped set guidelines for federally supported research efforts throughout the United States. He was a member of the Advisory Committee on National Educational Laboratories. In 1965 he was appointed president of the American Educational Research Association and in 1966 was elected a member of the National Academy of Education. His major publications include *Taxonomy of Educational Objectives, Handbook I and II* (1957–64) and *Stability and Change in Human Characteristics* (1964).

Bloom believed that when looking at test scores, a teacher must understand that many factors affect the results: time of learning, resources provided, quality of teaching, and environment. He stressed that environment influences learning and is therefore a significant factor in a student’s success. The teacher’s role, then, is to give students guidance and support – two ways to help pupils reach their potential. A strong supporter of the theory of mastery learning, Bloom advocated that objectives be written in manageable steps and that they be reached through proper instruction. He believed that learning is a process, so teachers should design lessons and exercises to enable students to meet each objective as well as adjust their methods to achieve that aim. Because students learn at different rates and in different ways, he felt that time was not a relevant factor in the learning process. But feedback and correction, Bloom asserted, should be immediate and students should help one another.

Bloom’s taxonomy theory incorporates cognitive, psychomotor, and affective spheres of knowledge into the learning process. During the 1970s and 1980s, his theories were adopted by many public school districts, particularly in Chicago and Boston. But they were subsequently criticized as being ineffective, and many schools no longer implement them.

Other books by Bloom include *Handbook on Formative and Summative Evaluation of Student Learning* (1971), *Human Characteristics and School Learning* (1976), *All Our Children Learning: A Primer for Parents, Teachers, and Other Educators* (1980), and *Developing Talent in Young People* (1985).

[Abraham J. Tannenbaum / Ruth Beloff (2nd ed.)]

BLOOM, CLAIRE (1931–), British actress. Claire Bloom won acclaim in *The Lady’s Not for Burning* (1949) and as Juliet in the 1952 Old Vic production of *Romeo and Juliet*. Later plays include *Duel of Angels* (London, 1958) and *Rashomon* (Broadway, 1959). She gained screen fame as the ballerina in Charlie Chaplin’s *Limelight* (1951). Other films include *Richard III* (1956), *Alexander the Great* (1956), *The Brothers Karamazov* (1958), *The Pawnbroker* (1965), *The Spy Who Came in From the Cold* (1966), *Charlie* (1968), *A Doll’s House* (1973), *Islands*

in the Stream (1977), *Sammy and Rosie Get Laid* (1987), and *Crimes and Misdemeanors* (1989). She has continued to make films and TV dramas into the 21st century. Claire Bloom has been married three times; her third husband (from 1990 to 1995) was Philip Roth, the American writer. She is the author of several autobiographical works, including *Limelight and After: Education of an Actress* (1982) and *Leaving a Doll's House: A Memoir* (1998).

[Jonathan Licht and William D. Rubinstein (2nd ed.)]

BLOOM, HAROLD (1930–), U.S. literary critic. Born to Yiddish-speaking parents in New York City, Bloom taught at Yale from 1955. An authority on Romantic and Victorian poetry, he wrote lengthy studies of Shelley, Blake, and Yeats. Bloom's most significant critical works, including *The Anxiety of Influence: A Theory of Poetry* (1973), *A Map of Misreading* (1975), and *Agon: Towards a Theory of Revisionism* (1982), explore the issue of influence, asserting that poetic creativity involves an Oedipal struggle between a writer and the great poetic figures of the past. All would-be artists, Bloom asserts, experience the anxiety that the great works have already been written; to deal with this anxiety of belatedness, they misread their precursor's work in order to find space at the poetic table. Bloom has applied this model to religious and Jewish texts. In *Ruin the Sacred Truths: Poetry and Belief from the Bible to the Present* (1989), he argues that the Hebrew Bible contains a power and sublimity that permeates all of the best of Western literature. In *The Book of J* (1990), for which he wrote the introduction and commentary, Bloom argues that the J or Yahwist author of earliest elements of the Torah – actually a woman attached to the court of the Israelite successor king to Solomon – was writing an ironic literary critique of the dogmatic, patriarchal religion of her time. Bloom spoke of himself as a “Jewish Gnostic.” He delved into Gnosticism and Kabbalah's influences on American spiritual practices in *The American Religion: The Emergence of the Post-Christian Nation* (1992) and *Omens of Millennium: The Gnosis of Angels, Dreams, and Resurrection* (1996), and in *Kabbalah and Criticism* (1975) he uses Kabbalah as a model for contemporary literary criticism.

With *The Western Canon: The Books and School of the Ages* (1994), Bloom aroused widespread interest and controversy, entering into the heart of the American culture wars occurring between those arguing for a multicultural curriculum and those arguing for a return to the Western canon. Many in the press viewed Bloom as the keeper of the canon, asking for his opinions about which contemporary authors did or did not belong in the canon. The more interesting aspect of the work was Bloom's adoption of an organizing principle for literary history based on the 18th-century Neapolitan philosopher Giambattista Vico's cyclical theory of history. Bloom went on to predict the imminent arrival of a new Theocratic Age, possibly Islamic. Mourning the death of reading and attacking what he coined the School of Resentment – the Marxist,

feminist, multiculturalist, and historicist schools of criticism, which he characterizes as too focused on a social agenda – for diminishing literature, he argued for the primacy of Shakespeare and Dante, arguing that “the Western Canon is Shakespeare and Dante. Beyond them, it is what they absorbed and what absorbed them.” Bloom's celebration of Shakespeare, the J author of the Bible, and other canonical writers continued in later works of popular criticism, including *Shakespeare: The Invention of the Human* (1998), in which he argues that our modern sense of the psychologically complex human originated with Shakespeare, *How to Read and Why* (2000), and *Where Shall Wisdom Be Found?* (2004).

BLOOM, HYMAN (1913–), U.S. painter. Born in Latvia, Bloom and his family moved to Boston in 1920, whereupon they changed their name from Melamed to the more American sounding Bloom. Around the age of 14 Bloom began studying art at a Jewish Community Center with Harold Zimmerman, who was already mentoring Jack Levine. Bloom and Levine later studied art with Denman Waldo Ross of Harvard University. Some of Bloom's early drawings from this period are part of the permanent collection of Harvard's Fogg Art Museum.

The Federal Art Project of the Works Progress Administration provided Bloom with financial assistance in the late 1930s and early 1940s. At this time, Bloom's Orthodox upbringing influenced his propensity toward religious subjects, which included impressions of Judaic rituals and synagogue interiors rendered in thick pigment in luminescent tones. This style first won him acclaim in 1942 when New York's Museum of Modern Art purchased *The Bride* (1941), a personification of the Sabbath bride, and *The Synagogue* (c. 1940), the latter of which he created in two versions. In the 1940s Bloom painted four canvases of Jews holding torahs. These images employ rich colors that blend the figure with the ritual object.

Bloom based his chandelier paintings of 1945 on the light fixtures in the Boston synagogue he attended as a child. These paintings show enlarged, dazzling chandeliers dominating the canvas. In the same year he painted Christmas trees, indicating that the subject of the work, a glowing object, interested Bloom more than the identity of the light source.

By 1948 Bloom began painting cadavers, influenced in part by his interest in the art of Chaim Soutine, whose work he had seen at the Museum of Fine Arts in Boston. Even as abstraction rose to prominence, Bloom never let go of representational forms. Indeed, in an artistic climate sometimes hostile to such imagery, Bloom continued to paint traditional subjects, such as landscapes and still lifes, in an expressionistic, painterly fashion.

[Samantha Baskind (2nd ed.)]

BLOOM, SOL (1870–1949), U.S. businessman and politician. Bloom, born in Pekin, Ill., was brought to San Francisco by his parents as a child. He was largely self-educated. At the age of 17 he became a theatrical producer, and began successful financial investments. Moving to Chicago, Bloom managed part of the World's Columbian Exposition of 1893 and prospered as a music publisher. In 1903 he moved to New York where he entered the real estate and construction field. Extremely successful in business, Bloom retired in 1920 and went into politics. He was elected to Congress as a Democrat in 1923, and served continuously until his death. As chairman of the Foreign Affairs Committee he strongly supported and advanced President Roosevelt's internationalist policies. He was a member of the American delegation to the 1943 Bermuda conference on refugees during World War II, and was criticized by those who, unlike Bloom himself, found its results unsatisfactory. He was a delegate to the 1945 San Francisco Conference that wrote the UN Charter; to the UN Relief and Rehabilitation Administration Conference of 1946; and to the 1947 Inter-American Conference at Rio de Janeiro. Bloom, who was favorable to Zionism, opposed President Truman's early Palestine policy and took part in gaining American and UN support for the establishment of the State of Israel. His *Autobiography* was published in 1948.

[Stanley L. Falk]

BLOOM, SOLOMON FRANK (1903–1962), U.S. historian of modern Europe. Born in Romania, Bloom went to the U.S. in 1920. In 1931 he was appointed professor of history at Brooklyn College, New York. In 1949 Bloom wrote an article entitled "Dictator of the Lodz Ghetto." Based on sources in Yiddish and French, it was the first English-language account of Mordechai Chaim Rumkowski, the controversial Nazi-appointed chairman of the *Judenrat of the *Lodz ghetto in Poland (*Commentary* 7 (Feb. 1949): 111–22). In 1950 Bloom wrote an essay on the political role of the heads of the *Judenrate*, entitled "Toward the Ghetto Dictator" (*Jewish Social Studies* 12 (Jan. 1950): 73–78). In *Commentary* magazine, Bloom also wrote his memoirs, entitled "On the Horizon: Memoir of a Rumanian Rope-Climber" (vol. 21, Feb. 1956). Bloom's major works were *The World of Nations* (1941, 1967²), a study of Karl Marx in the larger context of history; *Europe and America* (1961); and *A Liberal in Two Worlds* (1968).

[Ruth Beloff (2nd ed.)]

BLOOMBERG, MICHAEL R. (1942–), founder of Bloomberg LP, philanthropist, and mayor of New York. Born in Medford, Mass., where his father was the bookkeeper at a local dairy, Bloomberg evinced a thirst for information and technology that led him to Johns Hopkins University, where he parked cars and took out loans to finance his education. After his college graduation, he gained an M.B.A. from Harvard and in 1966 was hired by Salomon Brothers to work on Wall

Street. He rose quickly and became a partner in 1972. Soon after he was supervising all of Salomon's stock trading, sales, and its information systems.

When Salomon was acquired by another company in 1981, Bloomberg was ousted. But he used his stake from the Salomon sale to start his own company, an endeavor that would revolutionize the way Wall Street does business. As a young trader, Bloomberg felt that the information-gathering process was archaic, relying on penciled notations in oversize ledgers. On his own, and with the financial backing of Merrill Lynch, he created a financial information computer that would collect and analyze different combinations of past and present securities data and deliver it immediately to the user. In 1982 the company sold 20 subscriptions to its service; 20 years later Bloomberg LP had more than 165,000 subscribers worldwide.

In 1990 the company entered the media business, starting a news service and then radio, television, Internet, and publishing operations. It employed more than 8,000 people, including 2,500 in New York City, in more than 100 offices. As the company grew, Bloomberg dedicated more of his time to philanthropy and civic affairs. He gave to projects to improve education, advance medical research, and increase access to the arts. He donated money to a variety of Jewish causes, including the Anti-Defamation League and the American Jewish World Service, and served on the board of the American Friends of the Israel Museum. He financed programs for victims of domestic violence in New York City, supported construction of new high school athletic fields, and served on the boards of 20 civic, cultural, educational, and medical institutions. He served as chairman of the board of trustees of Johns Hopkins until 2002, and the university named its School of Hygiene and Public Health for him. In 1997 he published his autobiography, *Bloomberg by Bloomberg*.

In 2001, Bloomberg, a long-time Democrat, decided to run for mayor of New York as a Republican, to succeed Rudolph Giuliani, who was barred from seeking re-election. Despite putting \$50 million of his own money into the campaign, Bloomberg was a decided underdog, but he received a last-minute endorsement from Giuliani, who became nationally known for his handling of a city in crisis after terrorists struck on Sept. 11, 2001. Bloomberg, who had never run for public office before, won handily against a splintered Democratic Party. Among his first acts as mayor was to ban smoking in bars and clubs, and he also launched a campaign against street vendors.

During the campaign, Bloomberg said that antisemitism had never been a factor in his life. "I don't know whether when I didn't get an opportunity it was because of that or something else," he said. "But if there is anyone who has not been ashamed of their last name, it's me. We do business throughout the world and it has never been an issue, even in the Middle East."

[Stewart Kampel (2nd ed.)]

BLOOMFIELD, LEONARD (1887–1949), American linguist. Bloomfield, chiefly through his book *Language*, became the most influential individual in guiding the development of American descriptive linguistics. He taught at various American universities and from 1940 to 1949 was professor of linguistics at Yale. His interests widened from Indo-European to other language groups and into problems of general linguistics. He published his first inclusive survey of the field *An Introduction to the Study of Language* (1914); later he published *Tagalog Texts with Grammatical Analysis* (1917); and in the early 1920s began his long series of important contributions to the study of the Algonquian languages spoken by many North American Indian tribes. His interest in the practical application of linguistics to the teaching of languages remained strong throughout his life, and he wrote a number of textbooks and a general work, *Outline Guide for the Practical Study of Foreign Languages* (1942). He was one of the founders of the Linguistic Society of America, and served a term as its president. His most important work, *Language* (1933), though outdated in several respects, is still used as a standard textbook in many places. It has provided generations of linguists with a survey of the whole field, an analytical framework, and a basic approach to language as a subject for scientific inquiry.

BLOOMFIELD, MAURICE (1855–1928), U.S. expert in Sanskrit. Born in Austria, Bloomfield was taken to the U.S. as a child and received his higher education at the University of Chicago and at Yale, where he studied under the Sanskritist W.D. Whitney. Bloomfield concentrated on research in Vedic language and literature, and after further study at Berlin and Leipzig (1879–81) was appointed professor of Sanskrit and comparative linguistics at Johns Hopkins University. His major works are *A Vedic Concordance* (1906), and *Vedic Variants* (completed after his death by his student and colleague, Franklin Edgerton, and published 1930–34). Bloomfield was president of the American Oriental Society (1910–11).

BIBLIOGRAPHY: *Studies in Honor of Maurice Bloomfield* (1920).

BLOOMFIELD-ZEISLER, FANNY (1863–1927), U.S. virtuoso pianist, known for her recitals in Europe and the U.S. Born in Vienna, Fanny Bloomfield-Zeisler was taken to the U.S. in 1868. She made her debut in Chicago at eleven and then went to Vienna for further study with Theodor Leschetizky (1830–1919). She first toured Europe in 1893 and continued to appear in leading cities until World War I. She gave a special performance in Chicago in 1925, to mark the half-century of her concert career.

BLOOMGARDEN, KERMIT (1904–1976), U.S. theatrical producer. Born in Brooklyn to Zema and Annie Groden Bloomgarden, he graduated from New York University in 1926

as an accounting major and practiced as a certified public accountant for six years, when he met a Broadway producer at a dinner party who convinced him that “the theater was for me,” Bloomgarden recalled. In 1935 Bloomgarden began a ten-year association with Herman Shumlin’s production organization, and he was associated with the presentation of several successful plays by Lillian Hellman, including *The Children’s Hour*, *The Little Foxes*, and *Watch on the Rhine*. Later he produced other Hellman plays on his own. His first venture as a producer was *Heavenly Express*, starring John Garfield, which gave him experience but no profits before it closed quickly in 1940. Following World War II, Bloomgarden produced *Deep Are the Roots*, a powerful drama about racial conflict, and Hellman’s *Another Part of the Forest*. Perhaps the best-known play he produced in that period, in 1949, was Arthur Miller’s *Death of a Salesman*, with a cast headed by Lee J. Cobb. It is considered one of the greatest American plays of the 20th century, and it won the Tony and New York Drama Critics Circle awards as well as the Pulitzer Prize.

He had failures as well as hits. But between September 1955 and the following May, Bloomgarden, alone or in association with others, presented four major productions: Hellman’s adaptation of Jean Anouilh’s *The Lark*, the musical *The Most Happy Fella*, Miller’s *A View From the Bridge*, and *The Diary of Anne Frank*, based on a diary kept by a doomed Jewish girl in World War II. Directed by Garson Kanin, it ran for 717 performances, made a star out of Susan Strasberg, and won the three major drama prizes of 1956: the Pulitzer, the Tony for best play, and the New York Drama Critics Circle award. The play, written by the husband and wife team of Albert Hackett and Frances Goodrich went through eight drafts over several years before emerging on the stage. The playwrights visited Amsterdam to see the secret hideaway and conferred with Otto Frank, Anne’s father. The work was based on *Anne Frank: The Diary of a Young Girl*, the best-selling book about the Dutch girl’s wartime experience hiding from the Nazis. The play contains the pivotal line from the diary: “In spite of everything, I still believe that people are really good at heart.”

In 1957 Bloomgarden produced *Look Homeward, Angel*, based on the novel by Thomas Wolfe, as well as Meredith Willson’s *Music Man*, which won eight Tony awards and ran for 1,375 performances. Over the years his name preceded the credits of Hellman’s *Toys in the Attic*, Miller’s *The Crucible*, Stephen Sondheim’s *Anyone Can Whistle*, and Lanford Wilson’s *The Hot L Baltimore*. He produced more than 30 plays on Broadway, including seven by Hellman and three by Miller. In 1974, after the amputation of his right leg because of arteriosclerosis, he returned to Broadway with Peter Shaffer’s *Equus*.

[Stewart Kampel (2nd ed.)]

BLOOMINGDALE, prominent U.S. family. The founder of the family was LYMAN GUSTAVUS (1841–1905), merchant and philanthropist. He was born in New York, son of German Jew-

ish immigrants. After service in the Civil War in the Kansas Volunteers, he returned to New York where he and his brother Joseph opened a hoopskirt and ladies' notion store. In 1886 Bloomingdale Brothers Department Store was established on its present site in midtown New York City. Lyman was a patron of the arts and a noted philanthropist, with his chief interests the Metropolitan Museum of Art and Montefiore Hospital. JOSEPH BERNHARDT (1842–1904), brother of Lyman, was associated with the family's business endeavors in the West and later in New York. Retiring from Bloomingdale Brothers in 1896, he was president of the Hebrew Technical Institute and one of the founders of Barnard College. EMANUEL WATSON (1852–1928), lawyer and merchant, a third brother, received a law degree from Columbia University and was active both as an attorney and in the family business. His major interests included Republican politics, the New York State Bridge and Tunnel Commission, and the Society for Reformation of Juvenile Delinquents. SAMUEL JOSEPH (1873–1968), son of Lyman, was educated at the Columbia University School of Architecture but devoted himself to the management of the family's store, serving as its president during 1905–30. An innovator in retailing techniques, he became a director of Federated Department Stores when it absorbed Bloomingdale Brothers in 1930. Samuel was trustee of the Federation of Jewish Philanthropies and active in the American Jewish Committee, also continuing the family association with the Metropolitan Museum of Art and Montefiore Hospital. HIRAM C. (1876–1953), another son of Lyman, served as vice president of Bloomingdale Brothers and was a leader in the movement to establish standards for accuracy in advertising. Hiram's son ALFRED S. (1916–1982) was founder and chairman of the Diners Club credit organization. In 1970 he left Diners Club, acquiring its International Floatels division. Alfred Bloomingdale and his wife, Betsy, became good friends with Ronald and Nancy *Reagan. In 1981, after Reagan was elected U.S. president, he appointed Bloomingdale to the President's Foreign Intelligence Advisory Board and the following year named him a member of the United States Advisory Commission on Public Diplomacy. When he died at age 66 Alfred Bloomingdale, a practicing Catholic, was buried in the Holy Cross Cemetery in Culver City, California.

But the Bloomingdale legacy lives on. A fixture on New York City's Third Avenue since 1927, in addition to branches nationwide, Bloomingdale's department store is renowned for its flair for fashion and merchandising. Over the years, Bloomingdale's has helped launch the careers of many world-

famous designers, such as Ralph *Lauren, Tommy Hilfinger, Calvin *Klein, and Donna *Karan.

[Morton Rosenstock / Ruth Beloff (2nd ed.)]

BLOWITZ, HENRI GEORGES STEPHANE ADOLPHE OPPER DE (1825–1903), French journalist. As chief Paris correspondent of *The Times*, London, in 1875, he originated the technique of interviewing celebrities (among them Bismarck, the sultan of Turkey, and Pope Leo XIII). In 1875 Blowitz, by now influential in European political circles, exposed plans of the military party in Germany for a second invasion of France. Three years later, he obtained the full text of the Berlin Treaty while it was still being negotiated, enabling *The Times* to print it the day it was signed. Blowitz was born Adolf Opper in Bohemia, but in 1860 added the name of his birthplace to his surname. He left home at 15, traveled, learned several languages, and taught for some years at the *lycée* in Tours and then in Marseilles. He wrote for the Paris newspapers and though sometimes in conflict with the French authorities, became naturalized after the Battle of Sedan. At the close of the Franco-Prussian War (1870–71), he helped to suppress the Commune at Marseilles by maintaining a private telegraph line to Versailles. Blowitz showed an excessive desire to remain detached from the Dreyfus Affair. He wrote short stories, comedies and *My Memoirs* (1903).

°**BLOY, LÉON** (1846–1917), French Catholic writer whose work contained many Jewish themes. His prose poem, *Le salut par les Juifs* (1892), described by the author as the “only one of my books I would dare to present to God,” opens with a condemnation of antisemitism and its arch-priest, Edouard *Drumont. However, holding a theory of the identity of opposites, Bloy regards the Jews as both glorious and despicable, at one and the same time the elect of God and “une poignée de boue merveilleuse” (“a handful of wonderful mud”). Among Bloy's later writings, *Le Sang du Pauvre* (1909) contains a moving chapter devoted to the Yiddish poet, Morris *Rosenfeld. Those whom he converted to Catholicism included Jacques and Raïssa *Maritain.
