The illuminated letter "B" at the beginning of the Psalms in Extracts from Gregory the Great shows King David playing his harp and the young David killing Goliath. N. France, 12th century, Douai, Bibliothèque Municipale, Ms. 315A, Vol. 1, fol. 5.

BA-BLO

BAALAH (Heb. בַּעֲלָה), name of several biblical localities, evidently associated with the worship of Baal. (1) Mount Baalah is mentioned as one of the demarcation points on the northwestern boundary of the territory of Judah, between Shikkeron and Jabneel in the vicinity of Ekron (Josh. 15:11). Its location is dependent on the identification of *Ekron, but the prevailing opinion is the ridge of Mughār, near Wadi Qatra. (2) A city of Baalah is listed in the Negev district of Judah (Josh. 15:29). It is also among the settlements of Simeon as Balah (Josh. 19:3) or Bilhah (1 Chron. 4:29). Its identification is unknown. (3) Baalah is mentioned as another name for *Kiriath-Jearim (Josh. 15:9–10); in 1 Chronicles 13:6 it is called Baalath (Heb. version). (4) A city of Baalath appears in the list of Danite settlements (Josh. 19:44) after Eltekeh and Gibbethon; this is perhaps identical with the Baalath fortified by Solomon (1 Kings 9:18). It has been identified with the mound Mughār or of Qatra; in this case it would be identical with (1).

[Michael Avi-Yonah]

BAAL-BERITH (Heb. בַּעַל בְּרִית; "Lord of Covenant"), the name of the deity worshiped in the earliest Israelite period at the Temple of Shechem (Judg. 9:4). That temple was destroyed in the 12th century B.C.E. by *Abimelech, the half-Shechemite son of the great judge Gideon (Jerubbaal), after his suppression of a counter-revolt. Abimelech himself had come to power as "king" with the aid of funds from the Baal-Berith temple. As Abimelech's revenge moved apace, the terrified populace sought refuge in the "stronghold of El-Berith" (9:46), where they died en masse. The polemic of the narrative is directed against Abimelech and the conspirators who had

profaned the great Shechem temple; it was never again rebuilt, except as a granary, as archaeological work has shown. Critics have suggested that the narrative of Abimelech seems to be an old pre-Deuteronomistic account later inserted into the historical work because it explicated a brief Deuteronomistic reference to an early particularist tendency in 8:33–35. In that place it is asserted that Israel's whoring after the Baalim consisted of making Baal-Berith their god and forgetting YHWH when they betrayed the family of YHWH's charismatic deliverer. In later circles the original significance of the "house of Baal-Berith" had long been lost, and the element "baal" in such a combination could only smack of the repudiated fertility cult. Something of its earliest significance can be glimpsed, however, in patriarchal stories connecting Abraham, Jacob, and Joseph with the site in various ways and in the archaeology of Shechem. The Baal-Berith temple was preceded on the same site by a Middle Bronze Age fortress-temple, which in turn perpetuated a piece of ground considered holy since the first half of the 18th century B.C.E. Genesis 34:2 personifies Shechem as one of the sons of Hamor ("ass"), reminiscent of Amorite treaty terminology at Mari, where "killing an ass" is a technical term for concluding a covenant. That Joshua-Judges contains no developed conquest tradition for the Shechem area is largely due, according to some scholars, to the influence of the Baal-Berith sanctuary (Josh. 24). According to tradition, such a situation had been anticipated by the strategists (Deut. 27; Josh. 8:30–35).

The Hebrew term Baal-Berith is also applied to the father of the child at a *circumcision (*berit*) ceremony, and in modern Hebrew the term means "ally" based on the plural form in Genesis 14:13.

[Robert G. Boling]

BA'ALEI TESHUVAH (pl. of *ba'al teshuvah*; literally "penitent ones"). Beginning with the Bible (see Deut. 30), Jewish tradition has always encouraged those who stray from the path of mitzvah observance to return, to do "teshuvah" and readopt a traditional life style. The talmudic sages speak about repentance, "teshuvah," on numerous occasions, their most famous statement being, "where *ba'alei teshuvah* stand, a complete *zaddik* cannot stand" (*Yalkut Shimoni*, Gen. 20). In the post-talmudic period, innumerable scholars wrote about "*teshuvah*," encouraging even the observant Jew to become a *ba'al teshuvah* and improve his fulfillment of God's commandments. Maimonides codified the laws of "*teshuvah*" in his *Mishneh Torah*; Jonah ben Abraham *Gerondi wrote the classic, *Gates of Repentance*; and in modern times, Abraham Isaac *Kook wrote *The Lights of Repentance*. Unfortunately, we have no statistical record of the number of *ba'alei teshuvah* throughout history, just as we have no record of the number of Jews who abandoned their Judaism and its observance.

In the second half of the 20th century, the words *ba'alei teshuvah* took on new significance. Beginning in the 1960s in the U.S., the rise of the counterculture in general American society together with the search for new meaning and spirituality led an increasing number of college-age Jews to explore Jewish observance, many for the first time. For most of these young Jews, the exploration led them to Orthodoxy, of one form or another.

The essential factor that turned individual searching into a full-fledged movement was the internal state of Orthodoxy itself. Orthodoxy was enjoying a resurgence, following the semi-moribund state which largely characterized it during the first half of the century. The first to take advantage of the new interest in Judaism was the *Chabad-Lubavitch hasidic movement. By the mid-1960s, the Lubavitcher Rebbe, Menahem Mendel *Schneerson, had "emissaries" in place on most of the large college campuses with high concentration of Jews. Trained to reach out to other Jews, Chabad was most instrumental in assisting numerous young people to become *ba'alei teshuvah*, even if they did not become Chabad hasidim per se. At the same time, the first generation of "baby-boomers" graduated the Orthodox day schools and went to college. Through their involvement in Hillel, Yavneh (the religious Jewish students' organization), and NCSY (see below) they became a potent force in creating the *Ba'al Teshuvah* movement.

The *Ba'al Teshuvah* movement was further bolstered by the organized and institutionalized Orthodox community. A number of institutions that were in place began to have an increasing effect on the movement. The *Union of Orthodox Jewish Congregations of America, commonly known as the OU, established the National Conference of Synagogue Youth (NCSY) that effectively used Orthodox college students as counselors for the burgeoning number of non-Orthodox high school students who were interested in Judaism and in Jewish observance. To this day, NCSY continues to teach Orthodoxy to non-Orthodox high school children. Yeshiva University offered beginners-level Jewish studies for *ba'alei teshuvah* in its James Strier School. Many of those who graduated from this program went on to become Jewish educators and rabbis. Numerous other, more "right-wing" yeshivot opened their doors to *ba'alei teshuvah*. They include She'ar Yashuv, Far Rockaway, N.Y.; Hadar Ha Torah (Lubavitcher), Brooklyn, N.Y.; Maḥzikei Torah (Bostoner Rebbe), Brookline, Mass.; Or Yosef, Strasbourg, France. This helps explain one of the more interesting phenomena of the *Ba'al Teshuvah* movement. Throughout the 1970s, 1980s, and 1990s, increasing numbers of *ba'alei teshuvah* opted for stricter norms and uncompromising observance of "right-wing," "yeshivish" Orthodoxy.

In the wake of the Six-Day War, the nascent *Ba'al Teshuvah* movement in the former U.S.S.R. went public with demonstrations and an open call for more observance as well as permission to immigrate to Israel. As a result the KGB hounded those who wished to fulfill the Zionist dream and renew their Jewish observance. Hundreds of *refuseniks* were

jailed. Ultimately, the Soviet Union opened its gates and the mass *aliyah* to Israel began. Two prominent *refuseniks*, Joseph Mendeleovich and Eliyahu Essas, currently reside in Israel and continue to teach Judaism to the Russian immigrant community.

Eventually, the *Ba'al Teshuvah* movement spread to Israel. On the one hand, numerous institutions and organizations were created to teach and influence English-speaking students who arrived in Israel to continue their studies and enhance their Jewish observance. The most prominent are: Kefar Ḥabad (Lubavitcher), Kefar Ḥabad; Magen Avraham, Bene Berak; Diaspora Yeshiva (Har Zion), Jerusalem; Or Sameah, Jerusalem; Kollel Or Sameah, Zikhron Ya'akov; Or Sameah Work and Study Program, Givat Ada; D'var Yerushalayim, Jerusalem; Aish HaTorah, Jerusalem; Kehillat Yaakov, Jerusalem; Hamivtar, Efrat; Shapell College, Jerusalem; Neve Yerushalayim, Jerusalem; Isralight, Jerusalem; Machon Pardes (co-ed), Jerusalem. These institutions, in many cases, function not only as schools, but as the centers of living communities. Many of their students marry, set up homes within the community, continue their studies and, even after the end of formal studies, continue to maintain strong ties with the yeshivah or school. Thus these yeshivot may be seen as the vital center of the entire *Ba'alei Teshuvah* movement. On the other hand, the native, Israeli society has also witnessed a growing, Hebrew-speaking *Ba'al Teshuvah* movement. Here, the movers and shakers are primarily Sephardi rabbis, many of whom preach to large crowds, exhorting them to return to their religious roots. On the whole, the Israeli *Ba'al Teshuvah* movement can be characterized as “right-wing” or ultra-Orthodox.

In the U.S., in 1987 an organization called National Jewish Outreach Program (NJOP) was created to provide support and in-service training for those engaged in outreach to potential *ba'alei teshuvah*. Founded by a leading outreach rabbi, Ephraim Buchwald, NJOP has guided thousands of volunteer teachers and tens of thousands of Jewish adults. They participated in programs advertised via the mass media and taught at Reform, Conservative, and Orthodox synagogues, as well as Jewish non-religious organizations, such as Jewish community centers. There is also a complementary organization called Association for Jewish Outreach Professionals & Programs (AJOP), which was founded in 1988.

The *Ba'al Teshuvah* movement, both in Israel and throughout the Diaspora, can certainly claim great success. Though no accurate records exist, literally thousands of Jews have returned to Jewish observance over the past 45 years of the movement's history. The movement has generated a whole library of books aimed at *ba'alei teshuvah*, strengthened existing and built new communities in Israel and abroad, and experienced its own unique set of problems, such as the growing difficulties in educating and maintaining the observance of the second generation, i.e., the children, of *ba'alei teshuvah*. Nevertheless, the movement has been an integral element in the resurgence of Orthodoxy throughout the Jewish world over the last half century.

[Jonathan Chipman / David Derovan (2nd ed.)]

BAAL-GAD (Heb. בַּעַל גַּד), biblical locality below Mount Hermon that was apparently sacred to *Gad, the god of fortune. Perhaps the name of the locale means “Baal is fortune.” Baal-Gad is described as the northernmost point conquered by Joshua (Josh. 11:17; 12:7) and, accordingly, the “land that yet remaineth” (i.e., that the tribes did not conquer), extends “... from Baal-Gad under Mount Hermon unto the entrance of Hamath” (Josh. 13:5) or, as in a parallel passage “... from Mount Baal-Hermon unto Lebo-Hamath” (Judg. 3:3). The exact location of Baal-Gad is not known, but the sources clearly indicate that it must be situated in the southern part of the Lebanon Valley, at the foot of Mount Hermon, not far from Dan. It has been proposed to identify it with Ḥaṣḥbayyā on the Ḥasbani River.

BIBLIOGRAPHY: Maisler (Mazar), in: BJPES, 12 (1946), 91ff.; Abel, Geog, 2 (1938), 258ff.; Aharoni, Land, index. **ADD. BIBLIOGRAPHY:** N.S. Ahituv, *Joshua* (1995), 214; Na'aman, in: DDD, 144.

[Yohanan Aharoni]

BA'AL HA-BAYIT (Heb. בַּעַל הַבַּיִת, pl. *Ba'alei Battim*, “Head of the household”; in Yid., pronounced “*Balebos*”), head of a family. The term is often also associated with the notion of wealth and is used to describe a man of wealth and secure economic position, e.g., a landlord. The Yiddish adjective *balebatish*, in the sense of bourgeois, is derived from this term. *Ba'al ha-bayit* was also applied to married and tax-paying members of the congregation, as opposed to *baḥur (“young man”). In the learning sense *ba'al bayit* means a man whose Torah learning is basic but superficial, as against *baḥur yeshivah* (Yid. *yeshiveh bucher*) whose learning is intensive and deep. The feminine form is *ba'alat bayit*, in Yiddish *baleboste*, denoting a housewife, often in the sense of a good housekeeper.

BAAL-HAZOR (Heb. בַּעַל הַצֹּר), biblical locality “which is beside Ephraim” (11 Sam. 13:23; a Greek version reads Tophraim, i.e., Ophrah?) where *Absalom had *Amnon killed to avenge his sister Tamar at the feast of sheepshearing. It may be identical with the *Hazor mentioned in the territory of Benjamin in the post-Exilic period (Neh. 11:33). The identification of Baal-Hazor with the highest point in the central range of Mount Ephraim, Jebel al-‘Aṣūr, a mountain 3,293 ft. (1,003 m.) high, north of Beth-El and near Ophrah (al-Ṭayba), has been strengthened by the mention of Ramath-Hazor as a high observation point in the *Genesis Apocryphon* found among the Dead Sea Scrolls. Baal-Hazor is possibly the “mountain of Azor,” a proposed emendation of Azotus, which is found in 1 Maccabees 9:15 in the account of the battle of Eleasa, but the version is doubtful.

BIBLIOGRAPHY: EM, s.v.; N. Avigad and Y. Yadin, *Genesis Apocryphon* (1956), 28; Alt, in: *PJB*, 24 (1928), 12ff.; 25 (1929), 11ff.; Abel, in: *RB*, 23, p. 386–7.

[Michael Avi-Yonah]

BAALIS (Heb. בַּעֲלִיִּס), king of Ammon during the first half of the sixth century B.C.E. The name appears to be composed of the theophoric root “Baal” and a suffix of unclear meaning; it is ancient and appears in *Ugaritic documents in alphabetic writing as *B’ls* and in syllabic writing as *Ba’ala-si*. Although a connection has been made between the biblical Baalis and a stamp impression c. 600 B.C.E. from Ammonite territory reading *lmlkmr ‘bd b’lyš* this last, Baal-Yasha, is etymologically distinct from Baalis. The Bible mentions Baalis only once (Jer. 40:14), in connection with the murder of *Gedaliah, who had been appointed by the Babylonian king as governor of the Judean cities after the conquest of Jerusalem in 586 B.C.E. Johanan son of Kareah and some army officers warned Gedaliah that Baalis had dispatched Ishmael son of Nethaniah to murder him. For his motives, see *Ammonites and *Ishmael.

[Bustanay Oded]

BAAL-MAKSHOVES (pen name of **Israel Isidor Elyashev**; 1873–1924), Yiddish literary critic, pioneer, and creator of Yiddish literary criticism as an art form. Born in Kovno, Baal-Makhshoves was educated at a Courland yeshivah which combined the moral severity of the *Musar movement with a modern curriculum, including mathematics, geography, and German. The influence of the Musar movement intensified his skepticism, melancholy, and analytic sagacity. After completing his studies at a Swiss high school, he studied medicine at Heidelberg and Berlin. Although he practiced medicine in Kovno, Vilna, Riga, Warsaw, and St. Petersburg, and also translated a few popular works of science into Yiddish, his main interest was in belles lettres. In 1896 he began to write in German and Russian and in 1901 published his first Yiddish critical reviews in *Der Yud*. Influenced by the writer I.L. *Peretz, Baal-Makhshoves continued to write in Yiddish. In a brilliant essay, “Tsvey Shprakhn – Eynyentsike Literatur” (“Two Languages – One Literature”), he stressed the unity of Jewish literature despite its linguistic duality. In another famous essay, “Dray Shtetlakh” (“Three Towns”) he called attention to the three different interpretations of *shtetl* culture in the works of Peretz, Sholem Asch, and I.M. Vaisenberg. An early admirer of Theodor Herzl, he translated *Altneuland* into Yiddish (1902) and participated in the Fifth and Twelfth Zionist Congresses. His war years were spent as a medical officer in the Russian Army. Another burst of literary activity as Yiddish editor of *Klal-verlag* (Berlin, 1922–23), was cut short by his illness and subsequent death. Baal-Makhshoves introduced European aesthetic standards and norms into his

interpretation of Yiddish literature. He discovered new talents and encouraged H. *Leivick, David *Bergelson, and the postrevolutionary Kiev Group. He held that both Hebrew and Yiddish should be recognized as Jewish national languages, the former because it linked the Jewish people with its historic past and the latter because it united Jews in the Diaspora. He saw himself fulfilling a role in Yiddish literature similar to that of critics like Byelinski and Lessing in Russian and German literature, respectively, and as heralding a Jewish literary renaissance whose pioneers were Sholem Yankev *Abramovitsh (Mendele Mokher Seforim), *Sholem Aleichem, I.L. *Peretz, Sholem *Asch, and H.N. *Bialik, to each of whom he devoted a penetrating essay. He accepted Taine’s theory that historical, geographical, and ethnic environment determined the character of literary creativity, and formulated the view that true creativity led from regionalism to national culture, illustrating it in his essay on the impact of South Russian Jewish life on Yiddish literature. He translated authors like Turgenev (*Foters un Kinder*, “Fathers and Children,” 1922) and Tolstoy (*Kozakn*, “Cossacks,” c. 1920) into Yiddish.

Less well-known but no less valuable are his *Ironishe Maysলেখ* (“Ironic Tales,” after 1910), in which he expressed his increasing pessimism and disillusionment. His selected works appeared in five volumes (1915, 1923², 1929³) and in a single volume in 1953.

[Simha Katz and Shlomo Bickel / Shifra Kuperman (2nd ed.)]

BAAL-MEON (Heb. בַּעֲלֵי מְעוֹן), city in Transjordan also called Beth-Baal-Meon (Josh. 13:17), Beth-Meon (Jer. 48:23), and apparently Beon (Num. 32:3). It was allotted to the tribe of Reuben (Num. 32:37–38; Josh. 13:17) and remained in Israelite hands until the revolt of Meshah, king of Moab (mid-ninth century B.C.E.). According to Meshah’s stele (1.9), he captured the city from Israel and rebuilt it, constructing a pool or water channel there (*ashu’ah*). Baal-Meon is listed among the cities of Moab by Jeremiah (48:23) and Ezekiel (25:9). Its identification with the modern village of Ma’in, 4½ mi. (7 km.) southwest of Madaba, coincides with Eusebius (Onom. 44:21; 46:2), who identified Beelmaus with a large village nine miles from Hesbon near the hot springs of Ba’aru. The village is built on ancient remains, and the most important find there has been the mosaic pavement of a church on which a number of churches of the Holy Land are depicted. The Tosefta (Shev. 7:11) contains a reference to Baal-Meon in the Shephelah of Transjordan.

BAAL-PERAZIM (Heb. בַּעֲלֵי פְרָצִים), locality (perhaps an old Canaanite sanctuary) near Jerusalem, where David de-

feated the Philistines in their attempt to conquer Jerusalem from the Israelites (11 Sam. 5:20 and 1 Chron. 14:11, where the name is explained etiologically; called Mount Perazim in Isa. 28:21, where the same victory is referred to). Proposals for the identification of the site include the mountain of Sharafât, the mountain of Ramat Raḥel, and Deir Abu Tor; the latter two are supported by the mention of the valley of Rephaim in the same context.

[Michael Avi-Yoʻnah]

BAʿAL SHEM (Heb. בעל שם, “Master of the Divine Name”; lit. “Possessor of the Name”), title given in popular usage and in Jewish literature, especially kabbalistic and ḥasidic works, from the Middle Ages onward, to one who possessed the secret knowledge of the Tetragrammaton and the other “Holy Names,” and who knew how to work miracles by the power of these names. The designation *baʿal shem* did not originate with the kabbalists, for it was already known to the last Babylonian *geonim*. In a responsum, Hai Gaon stated: “They testified that they saw a certain man, one of the well-known *baʿalei shem*, on the eve of the Sabbath in one place, and that at the same time he was seen in another place, several days’ journey distant.” It was in this sense that Judah Ḥalevi criticized the activities of the *baʿalei shem* (*Kuzari*, 3:53). In medieval German ḥasidic tradition this title was accorded to several liturgical poets, e.g., Shephatiah and his son Amittai of southern Italy (in Ḥabraham b. Azriel, *Arugat ha-Bosem*, 2 (1947), 181). The Spanish kabbalists used the expression *baʿalei shemot* from the middle of the 13th century onward. Some even said that there were different methods used by the *baʿalei sefirot*, the theoretical kabbalists, and the *baʿalei shemot*, the magicians, in their kabbalistic teachings. Isaac b. Jacob Ḥa-Kohen, Todros ha-Levi Abulafia, and Ḥabraham de Leon all mentioned this tendency among the kabbalists without disapproval, whereas Abraham Ḥabulafia wrote disparagingly of the *baʿalei shem*. From the end of the 13th century, the term *baʿal shem* was also used for writers of amulets based on Holy Names (*Ozar Neḥmad*, vol. 2, p. 133). There were large numbers of *baʿalei shem*, particularly in Germany and Poland, from the 16th century onward. Some were important rabbis and talmudic scholars, such as Elijah Ḥalans of Frankfurt and Worms, Elijah Baʿal Shem of Chelm, and Sekel Isaac Loeb Ḥabormser (the *baʿal shem* of Michelstadt). Others were scholars who devoted themselves entirely to the study of Kabbalah, such as Joel Baʿal Shem of Zamosc and Elhanan “Baʿal ha-Kabbalah” of Vienna (both 17th century), Benjamin Beinisch Ḥa-Kohen of Krotoszyn (beginning of the 18th century), and Samuel Essingen. In the 17th and 18th centuries the number of *baʿalei shem* who were not at all talmudic scholars increased. But they attracted a following by their real or imaginary powers of healing the sick. Such a *baʿal shem* was often a combination of practical kabbalist, who performed his cures by means of prayers, amulets, and incantations, and a popular healer familiar with

segullot (“remedies”) concocted from animal, vegetable, and mineral matter. The literature of that period teems with stories and testimonies about *baʿalei shem* of this kind, some of which, however, were written in criticism of their characters and deeds. It was generally thought that the *baʿalei shem* were at their most efficacious in the treatment of mental disorders and in the exorcism of evil spirits (see Ḥabibuk). There is a variation to the title *baʿal shem*, known as “*baʿal shem tov*.” The founder of modern Ḥasidism, Ḥabraham b. Eliezer Baʿal Shem Tov, usually referred to by the initials “BeShT,” is the most famous and practically unique bearer of this title. The title “*baʿal shem tov*” existed before the Ḥasid, but it did not designate a special quality or a distinction between bearers of this title and *baʿalei shem*. For example, Elhanan Baʿal Shem Tov, who died in 1651; Benjamin Krotoschin, who so styled himself in his book *Shem Tov Katan* (Sulzbach, 1706); and Joel Baʿal Shem I, who actually signed himself “BeShT,” in common with the founder of Ḥasidism. In the 18th century, Samuel Jacob Ḥayyim Ḥabraham b. Eliezer Baʿal Shem of London, achieved considerable prominence. He was called “Doctor Falk” by Christians. The theory propounded by several scholars that these wandering *baʿalei shem* were responsible for spreading Shabbateanism has not been proved. Several books by these *baʿalei shem* have been published concerning practical Kabbalah, *segullot* (“remedies”), and *refuʻot* (“healing”). These include: *Toledot Adam* (1720) and *Mifalot Elohim* (1727), edited by Joel Baʿal Shem and based on the works of his grandfather Joel Baʿal Shem I, *Shem Tov Katan* (1706) and *Amtaḥat Bin-yamin* (1716). The deeds of the *baʿalei shem* became legendary. Fictitious characters of the same type were sometimes invented, such as Adam Baʿal Shem of Binger, the hero of a series of miraculous stories in Yiddish which were printed as early as the 17th century. Ḥasidic legend subsequently created an imaginary connection between this character and Israel Baʿal Shem Tov. The leaders of the Haskalah generally regarded the *baʿalei shem* as charlatans and adventurers.

BAAL WORSHIP

Name and Etymology

The word *baʿl*, common Semitic for “owner, master, husband,” became the usual designation of the great weather-god of the Western Semites. In spite of the fact that the word is used as the theophorous element in personal names, such as Eshbaal, Merib-Baal, Jerub Baal, it was long believed that the term remained an appellation and did not become a proper name, except in the case of the Mesopotamian Bel and in late theological speculation. The basis for this view was the fact that in biblical usage the plural of the term, with the article, “the

Baalim,” appears to designate minor local gods (Judg. 2:11; 3:7; 8:33), while the singular of the word in combination with other terms apparently designated minor or local gods, such as Baal-Berith, Baal-Gad, Baal-Hamon, Baal-Hazor, Baal-Hermon, or, in the feminine form, a goddess, Baalat-Beer, Baalat-Gebal. Further, in biblical usage when applied to the great weather-god, the singular regularly has the article, “the Baal,” which suggests that the word was not regarded as a proper name. Nevertheless, despite the biblical tendency to avoid the use of the word as a proper name, it is now quite clear that by pre-Israelite times the term had become the usual name of the weather-god of Syria-Palestine. In the El-Amarna letters the logogram for the weather-god is conventionally read *Addu*, but that it is sometimes to be read *Ba’lu* is indicated by the addition of the phonetic complement-*lu*, as well as by the names like *Mut* ⁴*Im* written syllabically as *mu-ut-ba-aḥ-lum*. In the El-Amarna letters Canaanite clients addressed the Egyptian king as “My Baal, my Addu.” In the Ugaritic mythological texts Ba’lu (*b’l*) is the name of the god which is used more than twice as often as his next most frequent name, Haddu (*hd*). The latter name (Amarna, Addu) is to be related to Arabic *hadda* (“break,” “crash”) with reference to thunder. The variant form Hadad (*hdd*) is attested to only once in Ugaritic.

That there were minor Baalim also at Ugarit is indicated by a god list in Akkadian (see *Ugaritica*, 5, p. 44 ll. 4–10; reconstructed text) which after the great “Weather-god, Lord of Mount Ḥazi” presents six other “weather-gods,” numbered two through seven. In the parallel Ugaritic list, which is unfortunately very fragmentary, the “Weather-god, Lord of Mount Ḥazi” apparently corresponds to Baal Ṣapān, while those following are termed simply Baalim (*b’lm*). It may be, however, that these extra Baalim are Baal’s attendants, mentioned as the seven or eight lads whom Baal is ordered to take with him in his descent into the netherworld.

Other Titles and Epithets

Besides the names Baal and Haddu, the Ugaritic texts furnish a variety of other titles, such as “Mighty Baal” (*ʿaliyn b’l*) and “Prince, Lord of Earth” (*zbl b’l arṣ*). The latter title has a biblical echo in the corrupted form Baal-Zebub (II Kings 1:2ff.), from an original Baal-Zebul, which is preserved in this form in the New Testament (Matt. 10:25, 12:24; Mark 3:22; Luke 11:15, 18). A frequent epithet is “Cloud Rider” (*rkb ʿrpt*) which has an almost identical parallel in Psalms 68:5. A vivid description of theophany in a thunderstorm is found in Psalms 18:7–15 (= II Sam. 22:8–16). Of special interest is the designation *ʿAliy(ly)* which is twice applied to Baal in the Krt Epic:

To the earth Baal rained,
To the field rained ʿAliy.
Sweet to the earth was Baal’s rain
To the field the rain of ʿAliy.

Before the discovery and recognition of this name in Ugaritic, H.S. Nyberg had restored it in Deuteronomy 33:12;

I Samuel 2:10; II Samuel 23:1; Isaiah 59:18, 63:7; and Hosea 7:16. Since the Ugaritic verified the antiquity and authenticity of this divine name, additional instances have been alleged in the Psalter and in Job.

A common designation of Baal in the Ugaritic myths is *bn-dgn* “son of Dagān”; but Baal is also considered the son of El who is called “Bull El his [i.e., Baal’s] father; El King who begot him [Baal]” (*tr il abh; il mlk dyknh*). Since El and Dagān are distinct deities, this seeming confusion over Baal’s paternity needs explanation. A solution has been supplied by a tradition ascribed to the ancient Phoenician priest Sakkunyaton (Greek Sanchuniathōn) that when El-Kronos defeated Ouranos, he captured in the battle Ouranos’ pregnant concubine and gave her to Dagān. The divine child was named Demarous, one of the cognomens of Zeus-Baal-Hadad. The Semitic original of this name has been recognized in one of Baal’s names in Ugaritic:

Then said Mighty Baal:
Foes of Hadd why haste ye?
Why haste ye opponents of Dmrn?

(The name is to be connected with the root $\ddot{d}mr$, “be strong, brave,” and is probably the same as that of Abraham’s son Zimrān ($\ddot{d}damarān$), the *-n* affirmative being preserved in the genitive case of the Greek form Demarountos). Thus, according to Sakkunyaton, Baal’s natural father was Ouranos and Dagān became his foster-father, while El-Kronos effected the transfer. That Baal appears to be a relative newcomer in the Ugaritic pantheon has been generally recognized, and it may be that Sakkunyaton’s story about Baal’s paternity reflects a mythologizing of the process by which Baal was integrated into the family of El.

Baal’s Residence

Baal’s abode was Mount Ṣapān, identified as Jebel el-Aqrā’ (“Mount Baldy”) some 30 mi. north of Ugarit. A god Baal Ṣapān was known from Egyptian and Akkadian sources before the discovery of the Ugaritic documents. In an Akkadian catalogue of Ugaritic deities Baal Ṣapān is listed as *4IM be-el hurṣān ḥa-zi*, “Storm-God, Lord of Mount Ḥazi” (see above; Ḥaz [z] i being the Hurrian name of Mount Ṣapān which survives in the Greek and Latin Kasios/Casius as the name of the storied mountain of the gods). Isaiah 14:13 alludes to this divine abode as “the Mount of Assembly in the recesses of *zafon*” (*har mōʿed be-yarkete zafon*), the latter phrase being the equivalent of Ugaritic *mrym ṣpn* or *ṣrrt ṣpn*, the height or fastness of Ṣapān. The cosmic character of *zafon* leads to its use as a synonym for “sky” in Job 26:7: “who stretched out *zafon* on emptiness who suspended earth on naught.” That *zafon* designated the “north” in Hebrew is presumably due to the fact that Mount Casius lies directly north of Palestine. In Psalms 89:13 *zafon* and *yamin*, in parallelism with Tabor and Hermon, hardly designate the directions north and south; *yamin* is almost certainly a corruption of *Amanah*, the southern portion of the Taurus mountains, the alteration of *amanah* to *yamin* being occasioned by the misunderstanding of *zafon* as

the direction rather than the name of the holy mountain. In Psalms 48:2–3, Mount Zion is equated with “the recesses of *zafon*” (the phrase quoted above from Isa. 14:13). The association of the name Baal-Zephon with Israel’s exit from Egypt (Ex. 14:2, 9; Num. 33:7) has been made the basis of intriguing speculation by Eissfeldt.

Baal in the Ugaritic Myths

The bulk of the Ugaritic mythological texts is concerned with the activities of Baal. In correlating the sequence of events, Baal’s victory over the sea-god, Yamm, is probably to be placed near the beginning of the action, since it was presumably this exploit which gained him the dominant position among the gods, just as *Marduk achieved preeminence by defeating the sea-monster Tiamat. With the help of wonder weapons supplied and blessed by the versatile Koshar (the craftsman god), Baal was able to defeat and rout the sea-god. It has been suggested that this clash was indirectly a conflict between Baal and El, with Yamm serving as champion for the venerable El, as the Titans fought on behalf of Kronos in the Greek version of the myth and the stone colossus Ulikummi for Kumarbi in the Hurrian-Hittite version which is roughly contemporary with the Ugaritic texts.

The biblical allusions to YHWH’s victory over the sea preserve echoes of the older exploit of Baal (cf. Isa. 27:1, 30:7, 51:9–10; Ezek. 29:3–5, 32:2–6; Nah. 1:4; Hab. 3:8; Ps. 74:13–14, 89:9–10, 93:1ff.; Job 3:8, 7:12, 9:13, 26:12–13, 38:8–11, 40:25). YHWH’s victory over the waters is connected either with the rescue of Israel at the Exodus (Ps. 114) or with eschatological victory (Isa. 27:1). The eschatological traits were taken over with the Canaanite myths. The triumph of Baal recounted in the myths and perhaps reenacted in ritual drama gave assurance of help in the present and the future as in the past. The prize of the victory was kingship over the gods and the enthronement ritual guaranteed the natural order of life and the welfare of the society. The motifs of these myths were adopted and adapted in Jewish and Christian eschatology.

The longest of the texts deals with the construction of Baal’s house on top of Mount Şapān. A complaint is made to Bull El, father of the gods, that Baal has no house like other gods. Apparently in anticipation of developments the artisan god Koshar had cast furnishings of gold and silver. Asherah, mother of the gods, was prevailed upon to intercede with El to gain permission for the building. El is praised for his wisdom in granting the request since now it is insured that Baal will give his rain in season. The building materials, gold, silver, and lapis lazuli, were procured and the architect-builder Koshar was invited to dinner and consultation. Koshar twice recommended that a window be installed and Baal twice vetoed the suggestion, although Koshar insisted that Baal would have to reconsider. Baal’s objection to the window somehow concerned his three daughters and the sea-god (Yamm), but the text is broken at this point. (The suggestion that Jer. 9:20 presents a parallel is mistaken since the Ugaritic text men-

tions the sea-god and not Death (Mot) in connection with the window.) Baal’s house was constructed in an extraordinary fashion. For seven days a fire burned inside the building, and when it subsided, the house was plated with gold, silver, and lapis lazuli. Baal rejoiced and celebrated with a banquet. After a sortie against the sea-god, Baal returned to his house and ordered Koshar to install a window; Koshar laughed, reminded Baal of the debate, and complied. Through the window, a cleft in the clouds, Baal gave forth his holy voice which convulsed the earth and sent his enemies scurrying to the hills and woods. Issuing a challenge to his enemy Mot (death), who presumed to rule gods and men, Baal dispatched his messengers to Mot’s infernal, filthy abode, warning them not to get close to Mot’s rapacious jaws.

The sequel to this action is furnished by the group of texts which recount Baal’s confrontations with Mot. In the first encounter, Baal is invited to a banquet at which he is to be both guest and main course. Baal’s response to Mot’s invitation to come and be devoured is abject surrender: “Thy slave am I, thine eternal.” Before descending to the realm of death, Baal copulates with a heifer and begets a male offspring. After a textual gap, there is a report that Baal’s corpse has been found. El and Anath mourn violently, mutilating their faces and bodies. With the help of the sun-goddess Shapsh, Anath locates the dead Baal, carries him to the height of Şapān, and weeping buries him with funerary sacrifices. Ashtar the Awful (*ʿtrʿrz*) was then nominated to replace Baal, but when he ascended the throne, his feet did not reach the footstool nor his head the top and so he declined to reign on the heights of Şapān and descended from Baal’s throne, but ruled over all El’s earth. Since the root *ʿtr* in Arabic is connected with artificial irrigation, it is apparent that Ashtar’s failure to measure up to Baal represents the inadequacy of irrigation as a substitute for natural rainfall.

Baal’s sister-consort Anath demanded that Mot release her brother. Mot refused and boasted how he had mangled Baal. Anath then dismembered Mot, scattered and burned the pieces, and gave them to the birds. Baal’s resurrection followed Mot’s demise, the good news being transmitted through a dream of El:

In a dream of Beneficent El Benign,
A vision of the Creator of Creatures,
The skies rained oil,
The wadies flowed honey.
So I knew that Mighty Baal lives,
The Prince, Lord of Earth, exists.

The fields were still parched from the drought and again Anath and Shapsh set out to find Baal. Next both Mot and Baal appear reconstituted and reactivated and again in conflict. They clash violently until both are prostrate and the Sun-goddess warns Mot not to fight with Baal lest El hear and overthrow him. This time, Baal puts up a fight and holds Mot off in battle. Thus it is clear that Baal, representing the life-giving rains, fluctuates in his ability to withstand the power of Mot, who represents drought, sterility, and death.

YHWH Versus Baal

The worship of Baal in Syria-Palestine was inextricably bound to the economy of the land which depends on the regularity and adequacy of the rains. Unlike Egypt and Mesopotamia, which depend on irrigation, the Promised Land drinks water from the rain of heaven (Deut. 11:10–11). During the summer months the rains cease, but the temporary drought is no threat unless it is abnormally prolonged. Figs and grapes ripen during the dry season and the grain harvest also takes place before the rains resume. In a normal good year, when the rains come in due season, there is no hiatus in productivity, for the land yields its increase, the trees produce their fruit, the threshing overlaps, the vintage overlaps the sowing, and there is food aplenty, prosperity, and peace (Lev. 26:4–6). But not all years are good, and in a bad year, or a series of bad years, when the rains fail, the skies become like iron, the land like brass, and man's toil is futile for the earth will not yield its increase (Lev. 26:19–20). A series of bad years, which were apparently believed to come in seven-year cycles (cf. Gen. 41; 11 Sam. 1:21), would be catastrophic. Thus in any year anxiety about the rainfall would be a continuing concern of the inhabitants which would suffice to give rise to rites to ensure the coming of the rains. Thus the basis of the Baal cult was the utter dependence of life on the rains which were regarded as Baal's bounty.

Biblical narrative incorporates tales of Baal worship into the traditions of the wilderness wandering, thus tracing Baal worship to the earliest period of Israel's existence. At Shittim they attached themselves to Baal-Peor, ate sacrifices for the dead, and indulged in sacred sexual orgies (Num. 25:1–11; Ps. 106:28). Life in a land dependent on rainfall enhanced the appeal of the Baal cult and its pervasive influence persisted through the centuries, as the unrelenting protests of the prophets and the sporadic efforts at reform attest. Horrendous and repulsive aspects of the worship – sexual excesses and perversions (Isa. 57:3–10), perhaps including copulation with animals (Hos. 13:2) such as Baal himself performed in the Ugaritic myth – are depicted in the prophetic tirades. Virtually all reference to Baal's consort, the violent "Virgin Anath" – with whom Baal copulates by the thousand in one of the Ugaritic mythological fragments – has been excluded from the Bible, but the goddesses Ashtart (Judg. 2:13) and *Asherah (Judg. 6:30; 11 Kings 16:32–33) are associated with him.

The conflict of Yahwism and Baalism reached a crisis with Elijah's challenge to Baal's prophets to settle the question whether it was Baal or YHWH who really supplied the rain (1 Kings 18). The spectacular victory for Yahwism did not have a lasting effect. Extra-biblical evidence for the flourishing Baal cult at Samaria in the ninth and eighth centuries B.C.E. was furnished by Harvard University excavations in the form of personal names containing Baal as the theophorous element, such as *b'yb'l*, "Baal is my father," *b'l zmr*, "Baal sings" or "Baal is strong," *b'l zkr*, "Baal remembers," *b'l m'ny*, "Baal is my answer," etc. Jehu's massacre of the Baal worshipers (11 Kings 10:18–28) did not eradicate bull worship (11 Kings 10:31). In

Judah the murder of the queen mother, *Athaliah, and of Mattan, priest of Baal, and the smashing of the altars and cult images in the Baal temple (11 Kings 11:18) did not wipe out the cult (11 Kings 12:3–4). Ahaz fostered Baal worship (11 Chron. 28:2); Hezekiah attempted to eliminate it; Manasseh his son again gave it royal support (11 Kings 21:3); and Josiah in his turn purged the Temple of YHWH of the utensils made for Baal and Asherah (11 Kings 23:4).

The contest on Mount Carmel was reported as demonstrating that Baal was an impotent non-entity and that the rain came only from YHWH. This viewpoint was developed as the basic and final argument against Baalism. With Baal's functions accredited to YHWH, it was natural and fitting that some of Baal's titles would also be taken over. Portions of ancient Baal liturgy were adapted to the praise of Israel's God, as the Ugaritic poems have shown. To accommodate Baal ideology to Yahwism required some radical transformations. The summer drought did not mean that YHWH had died (like Baal), nor did the return of the rains signal the resurrection. The rains were fully controlled by YHWH who called them from the sea and poured them out on the surface of the earth (Amos 5:8b; 9:6b). He could, and did, withhold the rain from one city and lavish it on another (Amos 4:7). None of the foolish practices of the heathen could bring the rains; only YHWH could and did (Jer. 10:11–13; 14:22). If the rains failed and drought and death came upon the land and people, it was not because Mot had mangled Baal and made the glowing sun-goddess destructive; it was rather YHWH's way of meting out merited punishment to a faithless and sinful people (Deut. 11:17; 1 Kings 8:35–36; Jer. 3:2–3). The continued worship of Baal was given as one of the causes for the destruction of Judah (Jer. 19:5ff.). Payment of the full tithe to the food stores of the Temple, some thought, would guarantee that YHWH would open the windows of heaven and pour down overflowing blessings (Mal. 3:10; cf. Avot 5:11 on the connection between tithing and rain). The prophet Haggai attributed the drought and scarcity in his day to the failure to rebuild the Temple (Hag. 1:7–11).

When the rain failed, it was inevitable that some would question YHWH's power and resort to Baal. In distress some would naturally revert to the old ways of reviving or reactivating the rain-god – prayer, mourning, self-laceration, dancing, and water-pouring (1 Kings 18:26–28; Hos. 7:14–16). The right remedy, according to Israel's prophets, was to repudiate Baal completely and to seek and return to Israel's true God (Isa. 55:6–13; Jer. 4:1–2; Hos. 14:2).

[Marvin H. Pope]

BAAL-ZEPHON (Heb. בַּעַל זְפוֹן), a location, perhaps a sanctuary, in Egypt which, according to the Bible, the Israelites passed during the *Exodus from Egypt (Ex. 14:2, 9; Num. 33:7). Presumably the toponym takes its name from the god Baal Zephon known from texts beginning in the early second millennium B.C.E. and continuing well into the first. Scholars disagree as to the site of Baal-Zephon and locate it according to their view of the route that the Bible claims was followed by the Israelites when they departed from Egypt. Those who assume that a southern passage was meant suggest Jebel Abu Ḥasan, 8 mi. (13 km.) N. of Suez, which is identified with a Migdal Baal-Zephon mentioned in a papyrus from the Hellenistic period (Cairo papyrus 31169). Others who prefer a northern route identify Baal-Zephon with the sanctuary of Zeus Casius, which is known of from the fifth century B.C.E. onward in the vicinity of the Serbonic Lake (Baḥr al-Bardawil, the “Reed Sea,” according to this theory). Since another mountain called Mons Casius (Jebel Aqra on the Syrian coast) was known in earlier times as Baal-Zephon, it is consequently assumed that the southern Baal-Zephon was also called Casius. The site is identified with a hillock on the western extremity of the lake called *Maḥmūdiyya*. W.F. Albright has identified Baal-Zephon with the Egyptian port Taḥpanḥes (Daphne). A survey in 1967 directed by M. Dothan has identified Baal-Zephon with Ras Kasrun near the Serbonic Lake; the survey also identified it as the site of the Hellenistic-Roman city of Casius.

[Michael Avi-Yonah]

BAAR, EMIL N. (1891–1985), U.S. Reform lay leader. Born in Vienna, Austria, Baar immigrated to the United States with his parents at the age of two. He received his J.D. degree from Columbia University in 1915 and practiced law until 1951, when he became a justice of the Supreme Court of the State of New York. He served as chairman of the board of the *Union of American Hebrew Congregations from 1959 to 1963, becoming lifetime honorary chairman in 1964. He was also a vice president of the *World Union for Progressive Judaism.

Baar presided over the UAHC during the stormiest period of Rabbi Maurice *Eisendrath's controversial social action leadership. Although a moderate Republican in his personal politics, Baar gave strong support to the Union's bold positions in support of civil rights, opposition to the war in Vietnam, and admission of a gay congregation into the UAHC. He will be remembered especially for leading the Union through the deeply emotional and potentially divisive battle that culminated in the establishment of the Religious Action Center in Washington, D.C., in 1961.

BAAR, HERMAN (1826–1904), U.S. rabbi and educator. Born in Stadthagen, near Hanover, Germany, Baar received his early education at the gymnasium of Hanover and after graduation took a course in philology and theology at the University of Goettingen. On the completion of his studies he took a position as teacher at the school at Seesen, Germany, which he held eight years. In 1857 he was named rabbi in Liverpool, England, where he received what was then called the ministerial appointment in the Seel Street synagogue, where he spent a decade. When he lost his voice, he left the congregation and opened a school in Brussels. In 1870 he came to Washington, D.C., but believing a change of climate advisable he went to New Orleans, La., where he directed a school. From there he went to New York, where in 1876 he was appointed superintendent of the Hebrew Orphan Asylum, New York City – a position he filled with great success until his resignation in 1899. He earned his national reputation as an educator with his addresses to students that were published in *The American Hebrew*. They were collected in a two-volume study called *Homely and Religious Topics*. He retired in 1900 and wrote for Jewish periodicals and published Bible stories for use by children.

[Michael Berenbaum (2nd ed.)]

BAASHA (or **Baasa**; Heb. בַּאשָׁא), son of Ahijah of the tribe of Issachar, king of Israel (906–883 B.C.E.). (A ninth century Aramean king bears the same name.) Baasha, perhaps an officer under King *Nadab, who was besieging *Gibbethon, then held by the Philistines, assassinated him there and proclaimed himself king. He massacred all the members of the House of Jeroboam I, which he had supported. By this act he overthrew the hegemony of Ephraim over the other tribes. Like his predecessor, he resided at Tirzah (1 Kings 15:27ff.). After ensuring by alliance the friendship and neutrality of his northern neighbors – the Arameans of Damascus – he turned to the south. According to 1 Kings 15:16, 32, he was at war with King *Asa of Judah throughout his reign. He succeeded in occupying Ramah, a dominating height north of Jerusalem, and began to fortify it, threatening the Davidic capital. Asa, in turn, bribed Ben-Hadad, king of *Aram, to break his alliance with Baasha and invade Israel (*ibid.* 17–21; 11 Chron. 16:1–5), and Baasha was forced to withdraw from Ramah. It has been suggested that he fell in battle while fighting the Arameans, but the biblical report suggests a peaceful death at home (1 Kings 16:16). Like Jeroboam before him, Baasha seems to have been sponsored by the prophet Jehu son of Hanani, who gave him the charismatic title *nagid*, and like Jeroboam he disappointed his sponsor (*ibid.* 16:1–4, 7).

According to rabbinic legend (Mid. Ag. to Num. 30:15), it was Baasha who murdered the prophet *Shemaiah.

[Hanoch Reviv]

BAAZOV, HERZL (1904–1945), Georgian writer. Born several weeks after Theodor *Herzl's death and named after him, Baazov grew up in Kutaisi in the house of his father, David Baazov, which was the first Zionist, Hebrew-speaking home in Georgia. Baazov became a well-known Georgian playwright and poet, and most of his writings were dedicated to Georgian Jewish life. At the age of 19, he translated the Song of Songs into Georgian. His first play, about the life and death of Itzko (Abraham Isaac) Rizhinashvili – a young Jewish revolutionary who was killed during the upheaval of 1905 in a fight with Czarist gendarmes – was staged at the Tbilisi (Tiflis) State Theater. Another of his plays, *The Dumb Opened Their Mouths*, dealt with the social changes in the life of the Tat-speaking *Mountain Jews after the Russian Revolution. He also wrote poetry, including the well-known poem "Cain." In the 1930s he began to write a trilogy about the changes in Jewish life in Georgia after the revolution. In spite of his positive attitude to the revolution as a social phenomenon, he was suddenly arrested and deported in 1937, after the publication of the first part of the trilogy. No indictment against him was ever published, but it is assumed that he was accused of "Jewish bourgeois nationalism." In 1945 he died in exile, somewhere in the Soviet far north. An indirect rehabilitation of his name occurred in 1964, when the official Georgian Writers' Union celebrated his 60th birthday. Several of his writings were republished, but were not translated into Russian. The Georgian writer G. Tsitsishvili published a book on Baazov's life and work (1964) that, inter alia, mentions his close relations with S. *Mikhoels, P. *Markish, and other Soviet Jewish writers and artists.

His younger brother, MEIR BAAZOV (1915–1970), an engineer, was also a Hebrew scholar and served in the 1940s as director of the Hebrew section of the Georgian National Library in Tbilisi.

BAB, JULIUS (1880–1955), German drama critic and literary historian. Born in Berlin, where he studied literature and philosophy, Bab was a critic of the Berlin theater for more than three decades. He was also lecturer and adviser to the Berlin people's theater, the *Volksbuehne*. In June 1933, in an attempt to maintain cultural life among the Jews after the rise of Nazism, Bab founded the *Juedischer Kulturbund*, which had its own theater. In 1940 he fled to the U.S., where he became the dramatic critic of the *New York Staatszeitung*. Bab's collected reviews of the Berlin theater, *Die Chronik des deutschen Dramas* (1921–22), are an important source for the history of modern German drama. His other works include monographs on Shakespeare, Shaw, Dehmel, and Albert Bassermann and a volume of essays, *Am Rande der Zeit* (1915). A

book of verse, *Ausgewahlte Gedichte...* (1930), includes the poem "Der Jude."

[Rudolf Kayser / Bjoern Siegel (2nd ed.)]

BABAD, a family of rabbis. The founder of the family was Isaac of Cracow, son of Issachar Berish, a *parnas* of the Council of Four Lands, and grandson of Heschel, *av bet din* of Cracow. He served as rabbi of Brzezany and then of Brody, where he died in 1704. His children added the word Babad (an acronym of *Benei Av Bet Din*, "children of the *av bet din*") to their signatures, and it eventually became their surname. Among members of the family were the following:

JOSHUA HESCHEL B. ISAAC BABAD (1754–1838). Joshua Heschel b. Isaac Babad grandson of the communal leader, Jacob Jekel Babad of Brody, who served as rabbi of Budzanow and, from 1801, of Tarnopol. He was one of the opponents, in 1813, of the teaching system in the school founded by Joseph *Perl, where secular studies were also taught. After a short stay in Lublin (1828), he was compelled to leave the city because of his dispute with the *Mitnaggedim* there, and he returned to Tarnopol, where he died. Joshua's responsa on the four parts of the Shulḥan Arukh, *Sefer Yehoshua*' (Zolkiew, 1829), was considered a basic halakhic work, upon which contemporary rabbis relied for their rulings.

MENACHEM MUNISH B. JOSHUA HESCHEL BABAD (1865–1938). Menachem Munish b. Joshua Heschel Babad a well-known personality in Galician Jewry and a halakhic authority of note. He was born in Brody where he was educated by his father and afterward by his father-in-law. He succeeded his father as *av bet din* of Strzyzow in 1892, and in 1894, after the death of his father-in-law, he accepted a call to serve as rabbi of Jaworow, a post which he occupied until 1911. The rest of his life was spent in Tarnopol. Menahem participated in rabbinical conferences of 1925 and 1927 in Cracow and Lvov. His method of study, resembling that of the Lithuanian yeshivot, was characterized by a logical analysis of the words of the sages, a comprehensive review of every aspect of the subject under discussion, and a summation of all the relevant views. His many responsa were collected in *Havazzelet ha-Sharon* (1931–38), covering all four parts of the Shulḥan Arukh.

[Josef Horovitz]

BABAD, JOSEPH BEN MOSES (1800–1874/5), Polish rabbi and author. Little is known about him. His father was *av bet din* at Przeworsk. Babad served as rabbi at Bohorodezany, Zabariz, Sniatyn, and Tarnopol. Babad's best-known work is his *Minḥat Ḥinnukh*, consisting of expositions of the *Sefer *ha-Ḥinnukh* ("The Book of Education") ascribed to Aaron ha-Levi of Barcelona (1869, frequently republished; the 1952 edition containing 26 addenda (commentaries, novellae, notes, and emendations) to *Sefer ha-Ḥinnukh* and *Minḥat Ḥinnukh* by various authors). The publisher, Reuben Kohen Rappaport, stated in the introduction that he had long tried to persuade the author to publish it, but in his modesty he had refused and finally agreed only after the theft of a manuscript containing his novellae on the Torah. As Babad himself states, the arrangement of his work is based on that of *Sefer ha-Hinnukh*. On each *halakhah* he quotes commentators and halakhic authorities. *Minḥat Ḥinnukh* together with *Sefer ha-Ḥinnukh* covers all the principles, laws, and customs concerning the commandments, from talmudic times to the *aḥaronim*. In his novellae and legal statements, Babad arrives at no final conclusion, but instead poses questions and problems, stimulating the reader to new ideas and further research. The many supplementary comments and novellae on *Minḥat Ḥinnukh* have created an entire literature around these two works.

There are extant two responsa addressed to Babad by his grandfather Joshua Hoeschel Babad, two from Joseph Joel Deutsch to Babad when he was *av bet din* at Zabariz and Sniatyn, and one responsum of Babad, dated 1850 (*Kovez Teshuvot*, Supplement to *Minḥat Ḥinnukh* (1952), 120 ff.). His son Simeon Babad, who served as rabbi at Tarnopol until 1909, wrote glosses to *Minḥat Ḥinnukh*. He was succeeded in turn by his son Joshua Hoeschel who occupied the position until his death in 1919.

[Yehoshua Horowitz]

BABAI BEN FARHAD (18th century), author of a versified short history of the Jews mainly of *Kashan and *Isfahan. His chronicle is called *Ketāb-e sargozasht-e Kāshān* and comprises approximately 1,300 verses written in Judeo-Persian (Persian using Hebrew script). The chronicle deals with the persecutions of the Jews in the above cities in the years 1729–30, when they were forced to convert to Islam for a period of seven months. The chronicle also notes some interesting details about the Afghan invasion of Isfahan and Kashan,

as well as Naderqoli Khan's (later Nader Shah) wars against them. The author mentions Mahmud and Ashraf, the leaders of the Afghans (especially the latter), favorably while he criticizes Naderqoli for his harsh measures against the Jews. We know from other historical sources that the Zoroastrians also mention the Afghan conquests favorably and even assisted them (as in the occupation of Kerman). The Jews and Zoroastrians were accorded by the Afghan conquerors superior status to Shi'ites in the socio-political structure of Iran. According to the chronicle, the Jewish community of Kashan was wealthy, mostly involved in the silk trade. According to the author, there were 13 synagogues in Kashan; nevertheless, he mentions with disapproval the lack of religious observance among most of the Jews of his town. Another Jew from Kashan named Mashī'ah ben Raphael appended approximately 80 verses to Babai ben Farhad's narrative in which he mentions favorably Mollā Ebrāhim, the leader of the Jews of Kashan, who together with a number of supporters was instrumental in getting the Jews who had been forced to accept Islam to return to Judaism.

Netzer, *Kronika shel Babai ben Farhad* (1978), 1–38 (photoprint of ms no. 917 of the Ben-Zvi Institute of Jerusalem); V.B. Moreen, *Iranian Jewry during the Afghan Invasion* (1990).

[Amnon Netzer (2nd ed.)]

BABAI BEN LUṬṬF (17th century), historian of Kashan who left the first and only written history of his time, covering a period from about 1613 until the beginning of the year 1662. His history, which contains about 5,300 lines of poetry in Judeo-Persian (Persian language written in Hebrew script), is called *Ketāb-e Anusi*. The work still remains in manuscript form, of which six copies are known to us in the major libraries of the U.S., Europe, and Israel. The author depicts the savage persecution of the Jews all over Iran by the two Safavid kings, *Abbas I (1588–29) and *Abbas II (1642–66). He mentions 19 cities by name whose Jewish population were killed, tortured, and forced to embrace Islam. The veracity of Babai's account is supported by the Iranian historians of the period, by the travelogue of Pietro della Valle, and by Arakel, the Armenian priest of Tabriz. The author speaks favorably of two Shi'ite priests with a strong Sufi orientation who interceded on behalf of the Jews: Shaikh Bahā al-Dīn Ameli (d. 1621), and Mollā Moḥsen Feiz of Kashan (d. 1680). Babai also mentions with respect Shah Safi (1629–42) who reigned after Abbas I. *Ketāb-e Anusi* is a valuable historical document also containing important information regarding Jewish demography and communal organization as well as historical events concerning Iran. We also know of a short Judeo-Persian poem, *Monājāt-Nāmeḥ*, composed by Babai ben LuṬṬF in praise of the prophet Elijah.

[Amnon Netzer (2nd ed.)]

BĀB AL-ABWĀB (“Gate of the Gates”; Persian **Darband**; modern ***Derbent**), a pass and town at the eastern end of the Caucasus range, where the road narrows between the mountains and the Caspian Sea. Bāb al-Abwāb is mentioned in both the “Letter of Ḥasdaï” and the “Reply of King Joseph” (see *Khazars), in the latter specifically as marking the southern limit of the Khazar domain. This agrees in general with the accounts of the Arabic geographers and historians. The latter described Bāb al-Abwāb as guarding one of the two main passes of the Caucasus through which the Khazars invaded the lands of Islam. Extensive arrangements for the defense of Bāb al-Abwāb are reported by the geographer al-İṣṭakhrī (tenth century). Previously, the town had more than once been overrun from the north, though the successful Khazar attack against Ardabil (apparently in 730), referred to in the “Reply of King Joseph,” was made via Dariel (now Daryal).

BIBLIOGRAPHY: Dunlop, *Khazars*, index; Dunlop, in: EIS² (incl. bibl.); al-İṣṭakhrī, *Kitāb al-Masālik wa-al-Mamālik* (1961), 109–10; M. Artamonov, *Istoriya Khazar* (1962), index.

[Douglas Morton Dunlop]

BABA RABBAH (or **Baba ha-Gadol**, “the Great Baba,” 4th cent. C.E.), Samaritan high priest, eldest son of the high priest Nethanel (300–332 C.E.). According to the dating of the Samaritan chronicles, Baba Rabbah lived in the middle of the fourth century C.E. He is regarded as the most outstanding Samaritan political leader and reformer. His epithet “the Great” distinguishes him from other high priests called Baba, before and after his time. All information about Baba Rabbah is derived solely from the Samaritan chronicles: the *Tolidah*, the Samaritan *Book of Joshua*, the *Kitāb al-Ta'rikh* of *Abu al-Fat, and the *New Chronicle* (see *Samaritans, Literature). The last three embellish their narrative with much legendary material. Of special interest is the legend of the Roman agent Jarman or Jarmūn related in the Samaritan *Book of Joshua*. By the emperor's decree, the Roman had been posted at the high priest Nethanel's door to prevent him from circumcising his eldest son Baba Rabbah; but Jarman was a God-fearing man who preferred to obey the law of the Eternal King rather than the earthly ruler. In gratitude, the Samaritans continue to bless his name at every circumcision ceremony at the conclusion of a poem composed by Markah in glorification of this act. According to the other two chronicles, however, the high priest in this story is Akbon, Baba's brother, who succeeded him in office.

Baba Rabbah lived in an age of great political and religious upheaval; pagan Rome had been succeeded by the Byzantine Empire. This turning point, when the foreign rulers were preoccupied with their own affairs, provided a brief respite for the oppressed Samaritan community. Baba Rab-

bah achieved numerous victories over the Romans and some neighboring states and time and again succeeded in driving the enemy out of Samaritan territory. To secure the safety of his country, he maintained an army of 3,000 men on constant alert. After he led his people for 40 years, the Byzantine emperor invited him to Constantinople to conclude a peace treaty. On his arrival he was received with princely honors but was held as a prisoner until his death.

During his rule, Baba Rabbah divided the country into 12 administrative districts, each under the leadership of a layman and a priest. The list of these districts indicates that at this time Samaritan communities existed in all parts of the Holy Land. Baba founded a legislative council of three priests and four laymen and conferred upon each member the title *hakham*. They constituted, after Baba Rabbah himself, the highest authority in the community. One of their tasks was to tour the country at regular intervals to ensure that people were instructed in the laws of the Torah and to decide on difficult halakhic matters. In conjunction with his administrative reforms, Baba Rabbah made efforts to promote a revival of religion and literature. He reopened all the synagogues and schools that the Romans had closed and founded many new ones, building one of the nine new synagogues at the foot of Mt. Gerizim. He had a cistern installed at this holy place for the purification of the people who came to pray there. Many old manuscripts of the law were then collected and preserved. It was probably also at this time that the foundations of the *Defter*, the Samaritan common prayer book, were laid by *Amram Darah and his son Markah, who composed liturgical and midrashic poems in Aramaic.

[Ayala Loewenstamm]

BABBITT, MILTON (1916–), U.S. composer and theorist. Born in Philadelphia, Babbitt started playing violin at the age of four and played in jazz performances and composed popular songs in high school. His father's involvement in mathematics stimulated Babbitt's interest in the subject. In 1931 he began studying mathematics at the University of Pennsylvania, but soon he transferred to the study of music at New York University. In 1935 he was a student of Roger Sessions in composition at Princeton University and in 1938–42 became a staff member there. During World War II Babbitt was ac-

tive as a mathematician both in research (Washington) and teaching (Princeton University). In 1948 he rejoined the Department of Music at Princeton University, where in 1960 he became Conant Professor of Music. From 1973 he was a member of the composition faculty of the Juilliard School, and taught as a guest lecturer in the U.S. and Europe. His 1983 Madison lectures were published as *Words about Music*. Babbitt received several honors, including membership in the American Academy of Science and Letters (1986) and its Gold Medal in Music (1988).

Together with Roger Sessions, Elliot Carter, and George Perle, Babbitt represents the stratum of the American avant-garde which was devoted to the rational methods in composition. He wrote the first formal and systematic research paper on Schoenberg's compositional method (1946). In his articles of the 1950s and 1960s Babbitt was a pioneer in his thinking on music, involving terms from mathematics, such as "source set," "secondary set," "derived set," "combinatoriality." In his innovative compositions of that time Babbitt sought to use and sometimes to combine Schoenberg's and Webern's technique of composition. From the 1970s and on the composer continued his intellectual search in 12-tone sound combinatoriality. During the 1960s and 1970s he also worked with the synthesizer, experimenting with electronic sounds.

[Yulia Krenin (2nd ed.)]

BABEL, ISAAC EMMANUILOVICH (1894–1940), Russian writer. He was born in Odessa, then the center of Yiddish as well as Hebrew literature (both Mendele and Bialik lived there), of Jewish communal and political life (Odessa was, simultaneously, the center of Zionist and Socialist movements), a cosmopolitan port with a strong Western European orientation. Although Russian was not, strictly speaking, Babel's native or even second language (he grew up in a Yiddish-speaking milieu, and his first literary efforts were written in French), he is now generally acknowledged as one of the truly great Russian stylists, and probably the most sophisticated Russian prose writer to emerge by mid-20th century. At the same time Babel is a profoundly Jewish writer not only in his choice of settings and of subject matter, but also in a more profound sense. His imagination is nourished primarily by the tension between his Jewish ethos and the non-Jewish environment and by his inability to conquer within himself traces of residual Jewishness, particularly those of a moral character.

Babel was not a prolific writer. His renown rests chiefly on two collections of short stories, *Red Cavalry* (*Konarmiya*, 1926) and *Odessa Tales* (1927). Together with two plays, *The Sunset* (1928) and *Maria* (1935), several tales and a few film scripts, these constitute his entire literary legacy.

The incongruities and paradoxes that are so characteristic of Babel's work are also, by a strange coincidence, to be found in Babel's biography. He fought for the Communist cause in

the ranks of Cossack horsemen, those traditional archenemies of Jewish shopkeepers, whose role in the antisemitic pogroms Babel knew from personal experience and had, in fact, described in sharp outline in "The History of My Dovecote." A peaceful intellectual, he sought acceptance by fierce warriors. Only recently emancipated from a religious orthodoxy, he desperately tried to embrace a secular faith that was even more rigid. The author of a book that made an army immortal, he was denounced by that army's commander, Semyon Budyonnyi, as a slanderer. A fighter for the Soviet regime, he was executed by it.

A disciple of Flaubert and Maupassant, Babel excelled in the highly polished *conte*, often an extended anecdote related by the protagonist in his own language – be it a peasant dialect, soldier slang, or the strongly Yiddish-accented Russian of Odessa slums. Few writers could equal Babel in the ability to portray a character by means of a few malapropisms, a partiality for a single "fancy" foreign word, or a slightly irregular syntactical construction.

In the neo-Romantic Babel the traditional motif of infatuation with a "noble savage" is found often and in many different forms. Babel, however, posits the problem somewhat differently. Where other writers – from Rousseau to Tolstoy – saw a confrontation between an intellectual and the natural man, Babel sees a Jew aspiring to the status of a pagan, yet destined to remain frustrated in his desire by the restraints of the Jewish ethic. Try as he may, he will never learn the ways of violence and will, therefore, never gain acceptance into the gentile world: in one of his tales the narrator vainly implores Providence to grant him "the simplest of all proficiencies, the ability to kill fellow men." He loses his best friend, Afonka Bida (to an ear attuned to Yiddish, "the Russian Misfortune") because he would not shoot a wounded comrade. To be admitted into a circle of Cossacks, he must first hideously kill a goose – but then, that night, he must wrestle with his Jewish conscience which abhors murder. Babel's Jewish narrator envies his non-Jewish protagonists' ability to kill one's own father, trample to death a former master, or shoot a black marketer masquerading as a helpless mother. His Jewishness and hence his alienations have numerous attributes – he wears glasses, he cannot learn to swim, he is a poor horseman, he carries with him books.

It is this envy of what he saw as gentile physical strength and absence of moral restraints that caused Babel to create a gallery of Jewish protagonists who bore little resemblance to pathetic Jews described in certain Yiddish literature or to the Zionist dreamers and visionaries in certain modern Hebrew novels. Babel's Odessa Jews who "bubble like cheap red wine" include an imposing amazon, who presides over a den of thieves and a brothel, dignified beggars with patriarchal beards who oversee Jewish cemeteries and discourse on the vanity of human existence, and the legendary Benya Krik ("Bennie the Howl"), a colorful gangster, the terror of Odessa's merchants and policemen. Babel's scenes of resplendent Jewish wedding

feasts and magnificent funeral processions are reminiscent of the lush canvases of a Breughel.

The picturesque world of Polish Ḥasidim and Odessa cart drivers, of waterfront philosophers and ritual slaughterers was disappearing before Babel's eyes, a victim of secularism, pogroms, and the Revolution. Its death was recorded in some of Babel's best tales. A few of these relate only an amusing or a paradoxical incident – e.g., an old-age home receives a new lease on life as a funeral cooperative, but only for as long as it continues the swindle of not burying the corpse together with the only coffin it owns; the first honest funeral arranged by it will also spell its doom. Other stories have moral overtones of varying degrees of significance. An infant is named Karl by its Communist atheist parents in honor of Marx; but the grandparents conspire to have it secretly circumcised and the infant emerges with the hybrid name Karl-Yankel (i.e., Jacob). A rabbi's son joins the Communist Party but, for the time being, continues to live with his parents because he does not want to leave his mother. Just as Babel, long after ceasing to believe in God, could not shed the commandment “thou shalt not kill,” so the rabbi's son remains faithful to another commandment which makes it incumbent upon us to honor our parents. In another story, the rabbi's son ultimately leaves his parental home to fight and then to die for the Revolution, but the break with his past is tortured and incomplete: among the killed soldier's belongings his comrades find a portrait of Lenin and another of Maimonides, Communist Party resolutions with Hebrew verse written in their margins, the text of the *Song of Songs*, and some empty cartridges.

The inability to shift one's allegiances completely was most poignantly illustrated in the short story “Gedali.” The protagonist, an old Jew, the owner of a Dickensian curiosity shop, is puzzled because murder and looting are his town's lot no matter whether its current masters are Communist or anti-Communist: how then, he asks, can one tell which is the Revolution and which the counter-revolution? Old Gedali cannot agree to the proposition that ends justify means. He is troubled because the Revolution demands that all of the old values, the good as well as the bad, be discarded: “To the Revolution we say ‘yes,’ but can we say ‘no’ to the Sabbath?” And he tells his Communist visitor that what the world really needs is not more politics, but an International of Good Men, in which all men could live in peace and harmony, and in which “every soul would get first category rations.”

After some twenty years of disgrace, Babel – or, more precisely, his memory – was cleared by the Soviet authorities of the false charges which caused his arrest and death. His best known works were reprinted in the 1950s and in 1966 but subsequently he was again ignored in the Soviet Union.

[Maurice Friedberg]

His Life

Until the age of 16, Babel was provided, by private tutors, with a thorough Jewish education, including Hebrew, Bible, and Talmud. At the same time he attended a Russian commercial

school in Odessa. During his student years he seems to have been active in Zionist youth circles. In 1915, after graduating from the Kiev Institute of Financial and Business Studies, he went to Petrograd, where he had to avoid the police because as a Jew he had no residence permit. It was in prerevolutionary Petrograd that his first two stories were published in Maxim Gorki's *Letopris* (November 1916; in English in *The Lonely Years*, 1964). After the revolution, he served on the Romanian front in 1918 and contracted malaria. According to his autobiographical note, the details of which are sometimes contested, he subsequently served the new regime in various functions, e.g., in the Cheka (security police), the Commissariat of Education, in “expeditions for provisions” (i.e., confiscating agricultural products in the villages), in the northern army against the White counterrevolutionaries, etc. During his service on the Polish front in Budyonny's 1st Cavalry Army, he developed asthma, and while convalescing in Odessa and the Caucasus, between 1921 and 1924, he wrote and published most of his Jewish *Odessa Tales*.

In 1931, while reporting on the collectivization in the Ukraine, Babel conceived a full novel or a cycle of stories on the collectivization. One chapter appeared in *Novy Mir* (October 1931), but it did not meet ideological requirements and the publication was stopped. Only one other chapter was found and published posthumously (both are in *The Lonely Years*). A fragmentary story called “The Jewess” (published for the first time in the New York Russian magazine *Novy Zhurnal*, June 1968, and in English in *You Must Know Everything*) also seems to have originated in the same period as the beginning of a full-fledged novel. In 1928 and 1932 he was allowed to visit his wife and daughter, who had emigrated to Paris. Babel was sent abroad for the last time as a member of the Soviet writers' delegation to a left-wing congress in Paris in 1935, but in the meantime he had virtually stopped publishing. The literary authoritarianism inaugurated in 1934 with the establishment of the Soviet Writers Union induced him to become “a master of silence.” He continued writing incessantly but evaded publishing by finding various excuses. “With the death of Gorki” (1936), says his daughter, Natalie, “Babel lost not only a friend but a powerful protector. The ground crumbled under him.” Babel was arrested and disappeared in 1939, and all his manuscripts, except those which were deposited with personal friends, were probably destroyed by the secret police. The reason for his arrest is unknown, though Ilya *Ehrenburg indicated in a speech in 1964 that it was somehow connected with his frequent visits to the house of the head of the secret police (НКВД), Nikolai Yezhov, whose wife Babel had known for a long time. Since Yezhov was deposed and executed in 1938, there might be something to this theory. Officially the date of his death was subsequently given as 1941, but after his arrest he was never seen in a camp or in exile, and apparently he was executed in January 1940.

Babel's ties with Judaism never ceased. Six of his stories appeared in 1926 in Hebrew translation, “edited by the author,” in the only issue of *Bereshit*, a Hebrew literary almanac

in the U.S.S.R. In 1937 he was given the task of preparing the jubilee edition of *Sholem Aleichem's works. He reported for a newspaper on the new Jewish agricultural settlements established in 1928. Though not religious, he went to synagogue on the Day of Atonement, celebrated with his friends the Passover *seder*, and in his letters always reminded his family of approaching festivals. Jewish themes were constantly on his mind as a writer, from the folkloric "Shabbos Nahamu" (intended as the first story in a cycle centered on the figure of Hershele Ostropoler) to the Judaic concept of a "revolution of good people" in the *Red Cavalry* story "Gedali."

The first English edition of *Red Cavalry* appeared in 1929 and the *Collected Stories* (with introduction by Lionel Trilling) in 1955. His other writings became known in the West only in the 1960s, when his daughter, Nathalie, edited and published in English *The Lonely Years, 1925–1939* (1964) containing unpublished stories and private correspondence and *You Must Know Everything* (1969), which also includes a biographical introduction and speeches and reminiscences by I. Ehrenburg, Konstantin Paustovsky, and others. Since that time his stories have appeared in various English editions along with his 1920 diary (1995) depicting the cruelty of the Polish and Russian armies toward the Jews. A definitive edition of his collected works, edited by his daughter, was published in 2001.

BABEL, TOWER OF, the edifice whose building is portrayed in Genesis 11:1–9 as the direct cause of the diversity of languages in the world and the dispersion of mankind over all the earth. According to the preceding narrative, mankind after the flood was descended from one common ancestor, *Noah. The story of Babel thus explains how the descendants of this one man came to be so widely scattered and divided into separate nations speaking so many different languages.

The story relates how, at the time when all men still spoke one language, there was a migration from the East to the plain of *Shinar (Babylonia). At this site it was decided to build a "city and a tower with its top in the sky," so that the builders would be able to make a name for themselves and avoid being scattered over the entire world. However, their building project was frustrated by the Lord who confounded their language. As a result, mankind was distributed over the face of the earth. The unfinished tower was called Babel, a name which was explained by its resemblance to the Hebrew verb *bll* ("to confuse"), since here the Lord "confounded the speech of the whole earth."

Scholars agree that the edifice referred to in Genesis 11 is clearly a *ziqqurat*, or Mesopotamian temple tower. The

ziqqurat (from Akk. *zaqāru*, "to raise up," "elevate") was the central feature of the great temples which were built in all important Mesopotamian cities. Rising in progressively smaller, steplike levels from a massive base, these towers ranged from three or four stories to as many as seven and were ordinarily constructed of crude sun-dried bricks covered with kiln-fired bricks. Clearly, the writer of the account in Genesis 11 was familiar with the building techniques of Mesopotamia, since he is at pains to point out that bricks and bitumen were used in the construction; that is in contrast to the stone and clay which were the common building materials in Canaan.

The particular *ziqqurat* described here was formerly identified with the tower of Ezida, the temple of the god Nebo (Nabû) in Borsippa, a city southwest of Babylon. However, the discovery at the end of the 19th century of Esagila, the great temple of *Marduk in *Babylon, has led most scholars to agree that it is the tower of this temple which inspired the writer of Genesis 11. This *ziqqurat*, which was called E-temen-anki, "house of the foundations of heaven and earth," rose to a height of about 300 feet, and contained two sanctuaries: one at its base, which was 300 feet square, and one at its summit. The tower was probably constructed at the time of *Hammurapi, but was damaged or destroyed several times and repaired by Esarhaddon (seventh century B.C.E.) and Nebuchadnezzar II (sixth century B.C.E.), among others. It is interesting to note that the Babylonians believed that Esagila was built by the gods, thus making the statement in Genesis 11:5 "... which the sons of men had built," particularly meaningful, since it may be understood as a polemic against this belief. This tower, which was the object of such pride among the Babylonians, was the product of strictly human endeavor which can be quickly and easily destroyed in accordance with the Divine Will. In fact, it is quite likely that it was the sight of the ruins of Esagila (which was destroyed in the mid-16th century B.C.E. with the destruction of Babylon by the Hittites) which inspired the creator of the Tower of Babel narrative.

Although it is clear from the story that the work on the city and tower displeased the Lord, the specific sin of the builders is nowhere mentioned. Many scholars believe that it was the presumption of these men in thinking that they could build a tower with "its top in the sky," and their conceit in wanting "to make a name" for themselves, which incurred the wrath of the Lord. Others believe that their goal was to storm the heavens and that it was for this sin that mankind was punished.

Modern scholars (already anticipated by R. *Samuel ben Meir) have pointed out that the desire to remain together in one place was in direct conflict with the divine purpose as is expressed to Noah and his sons after the flood: "Be fertile and increase and fill up the earth" (Gen. 9:7) and was, therefore, an affront to God and so necessarily doomed to failure. It is hardly likely that the expressed wish to "make a name for ourselves" could be construed as sinful, since a similar phrase is used in connection with the divine promises to Abraham (Gen. 12:2). Further, Babylonian temple inscrip-

tions frequently refer to the “making great” of the name of the king under whom the particular temple was built or repaired, thereby demonstrating that this formula was commonly used in such instances and need not be understood as expressing an inordinate desire for fame. As for the phrase “with its top in the sky,” it has been noted that there are several examples of Babylonian temple inscriptions which describe buildings as reaching to heaven so that the phrase should be understood not as an expression of the presumption of these people or of their desire to ascend to heaven, but rather as a borrowing by the biblical writer from the technical terminology of Mesopotamian temple inscriptions with which he was evidently familiar. According to this interpretation the sin of these people was, therefore, not presumption or a desire to reach heaven and gain fame, but rather an attempt to change the divinely ordained plan for mankind.

A new link to an ultimate cuneiform background of the Tower of Babel narrative has been provided by a Sumerian literary work, no doubt composed during the third Dynasty of Ur, which states that originally mankind spoke the same language, until Enki, the Sumerian god of wisdom, confounded their speech. Though the reason for the confusion of tongues is not stated, Kramer has suggested that it may have been inspired by Enki’s jealousy of another god, Enlil. Hence, in the Sumerian version it was a case of the rivalry between two gods, whereas in the Bible the rivalry was between God and man (see below, “The Meaning of the Story”).

The etymology of the name Babel given in this narrative is a contrived one, used ironically. The Babylonians understood it to mean “the gate of the god” (*bāb-ilim*), thereby endowing the city with additional honor and importance. By a play on words, the Bible has given it a pejorative sense, making the pride in this city seem almost ludicrous.

The Tower of Babel narrative is a turning point in history, as understood by the Bible, in that it signals the end of the era of universal monotheism which had existed since the beginning of time. Since the divine election of Abraham and his descendants immediately follows, it must be tacitly assumed that the incident led to the introduction of idolatry into the world.

[Myra J. Siff]

The Meaning of the Story

The bridge which some modern writers have constructed between the single short clause “and fill the earth” in Genesis 1:28 (or 9:7) and the account of the vain attempt of an early generation of men to avoid dispersal in Genesis 11:1–9, is superior homiletics but (quite apart from the finding of source analysis that the one belongs to document P and the other to document J) unsound exegesis. Genesis 1:28 reads as follows: “God blessed them [namely, the human beings, male and female, whose creation has just been narrated in the preceding verse] and God said to them, ‘Be fertile and increase, fill the earth and master it; and rule the fish of the sea, the birds of the sky, and all the living things that move about on earth.’”

This purports to be, and is, not a command but a blessing; moreover “and fill the earth” is preceded by “be fertile and increase.” It is absurd to read into it a wish of God that the human species shall spread over the earth otherwise than as, with increasing numbers, its own interests may dictate. And in 11:1–9 there is nothing to suggest that the human population has already attained such a figure that there is a need for a migration of colonists to realms beyond the confines of the plain of Shinar; and neither is there a word in 11:1–9 about that being the Deity’s motive in bringing about the dispersal. Instead, there is an explicit declaration of an entirely different motive by no less an authority than the Lord himself, who explains to the divine beings, verses 6–7; “If this is what, as one people with one language common to all, they have been able to do as a beginning, nothing they may propose to do will be beyond their reach. Come, let us go down, etc.” It takes a willful shutting of the mind to avoid hearing the same anxiety lest man should wrest complete equality with the divine beings (or worse) in these words as in the Lord’s earlier explanation to the same audience, in 3:22, of his motive in driving man out of the Garden of Eden: “Now that man has become like one of us in knowing good and bad [i.e., in being intellectually mature, the first evidence of which was his newfound modesty], what if he should stretch out his hand and take also from the tree of life and eat, and live forever!” Once, to obviate the danger of further baleful results from cooperation between man and snake, the Lord set up a barrier of enmity between them (3:15); now, in order to eliminate the threat of disastrous consequences from the cooperation of men with each other, he is erecting among them barriers of language and distance.

[Harold Louis Ginsberg]

In the Aggadah

The biblical account of the Tower of Babel is singularly brief and vague (Gen. R. 38). The prevailing opinion of the rabbis is that it was designed to serve the purposes of idolatry and constituted an act of rebellion against God (Sanh. 109a; Gen. R. 38:6; et al.), for which reason they also associated Nimrod (“the rebel”) with its building (Hul. 89a). Many additional reasons are also suggested, among them the fear of a recurrence of the flood and the need to guard against such a recurrence by supporting the heavens or by splitting them so that waters would drain away slowly from the earth’s surface (*Ma’asim al Aseret ha-Dibberot*; cf. Sanh. 109a). According to Josephus they were trying to dwell higher than the water level of the flood (Ant., I, IV). In this way the builders thought they would be spared, believing as they did that God had power over water alone (PdRE 24). At the same time the rabbis laud the unity and love of peace that prevailed among them (Gen. R. 38), as a result of which they were given an opportunity to repent, but they failed, however, to seize it (*ibid.*). Various opinions are expressed as to the punishment which the builders incurred (Tanḥ. B., 23). According to the Mishnah (Sanh. 10:3), they were excluded from a share in the world to come. In the view

of one *amora*, their punishment varied with the differing aims that inspired them; those who thought to dwell in heaven being dispersed throughout the world, those who sought to wage war against God being transformed into apes and demons, and those bent on idol worship being caught up in a confusion of tongues (Sanh. 109a). One-third of the tower was destroyed by fire, one-third subsided into the earth, and one-third is still standing. It is so high that to anyone ascending and looking down from the top, palm trees look like locusts (*ibid.*). This *aggadah* testifies to the existence of ruins at that time, which were popularly believed as being of the Tower of Babel. *Aggadot* about the tower are also to be found in Josephus and in the apocrypha (cf. Jub. 10:18–28), while several of its motifs are much discussed in Hellenistic Jewish literature.

[Israel Moses Ta-Shma]

In the Arts

The biblical story of the tower of Babel appears repeatedly in medieval and Renaissance literature, treated as an historical incident with strong moral overtones. Some examples are the *Chronicon* of Isidore of Seville (c. 560–636 C.E.), the *Weltchronik* of Rudolf von Ems (1200–1254), and the *Speculum humanae salvationis* (c. 1324), a Dominican manual of devotion which was frequently copied. Giovanni *Boccaccio wrote on the subject in his *De casibus virorum illustrium* (1355–60), as did an anonymous poet of Lyons in *Le Triumphe de Haulte Folie* (c. 1550). Two 17th-century Spanish works were entitled *Torre de Babilonia*: one was an *auto sacramentale* by the eminent dramatist Pedro Calderón de la Barca, the other by the Marrano author Antonio Enríquez *Gómez. Modern treatments include *Tower of Babel* (1874) by the English poet Alfred Austin and *Babel* (1952), an apocalyptic work by the French poet Pierre Emmanuel (1916–1984).

The subject appealed to medieval artists, appearing in 12th-century mosaics at Palermo and Monreale in Sicily and in the 13th-century Cathedral of St. Mark, Venice. There are representations in illuminated manuscripts from the 12th to the 14th centuries, including the German *Hortus Deliciarum* (Garden of Delights) and the Sarajevo *Haggadah*. Two 15th-century painters who used the theme were the Frenchman Jean Fouquet and the Italian Benozzo Gozzoli, who painted the fresco of Campo Santo, Pisa, now destroyed. With its landscape setting and the opportunities it offered for fantasy and close observation of the daily scene, the Tower was of considerable interest to the early Flemish painters. It was generally depicted either as a multistory structure, diminishing in size as it rose or, more often, as a square or circular building surrounded by a ramp. Some artists illustrated contemporary building methods, a fine example occurring in the Book of Hours of the Duke of Bedford (Paris, c. 1423), where the construction of the Tower proceeds at night under the stars. In Pieter Brueghel's *Tower of Babel* (1563), the building – leaning slightly – is shown in a vast landscape near the banks of a river, with a king arriving to inspect the progress of the work.

Although the Babel story might appear to be a temptation to composers, since the confusion of tongues can be expressed most effectively in music, very few works have in fact been written on the theme. These are mainly oratorios including César Franck's *La Tour de Babel* (1865) and Anton Rubinstein's markedly unsuccessful *Der Turm zu Babel* (1858; revised as an opera, 1872). Two 20th-century works are *La Tour de Babel* (1932) by René Barbier and Igor Stravinsky's *Babel*, a cantata for narrator, men's chorus, and orchestra (1944, published in 1952).

BABILÉE (Gutmann), JEAN (1923–), French dancer and choreographer. Babilée studied at the Paris Opera's ballet school and as a child showed astonishing technical facility and natural grace. His career began in Cannes during the German occupation, where he distinguished himself in *Le spectre de la rose* and the Bluebird pas de deux from *The Sleeping Beauty*. In 1945 he became the star of Roland Petit's Le Ballets des Champs Elysées (1945–50) in the role of *Jeune Homme et la Mort* (1946). His own choreography includes *L'Amour et son Amour* (1948) and *Til Eulenspiegel* (1940), as well as one of his best for the Monte Carlo opera – *Balance à trois* (1955). During the 1950s and 1960s he acted in French films and stage productions. In 1967 he earned the Gold Star for best dancer at the International Festival Dance in Paris. In 1979, at the age of 56, he danced in *Life*, created for him by Béjart. In 1995 a film, *Babilée '95*, was shown in France.

[Amnon Shiloah (2nd ed.)]

BABIN, VICTOR (1908–1972), pianist and composer. Babin was born in Moscow. He graduated from the Riga Conservatory in 1928, and then studied composition with Franz Schreker and piano with *Schnabel in the Berlin Hochschule fuer Musik (1928–31). He married the Russian pianist Victoria (Vitya) Vronsky in 1933 and with her formed a two-piano team, which soon became the most celebrated in the world. They immigrated to the United States in 1937; from 1951 to 1955, Babin was director of the Aspen Institute, Colorado, and director of the Cleveland Institute of Music from 1961 until his death. Babin composed mostly for Vronsky/Babin performances. Among his works are two concertos for two pianos

and orchestra and other compositions for one and two pianos, chamber music and songs.

[Max Loppert and Marina Rizarev (2nd ed.)]

BABI YAR, ravine on the outskirts of *Kiev which has come to symbolize the murder of Jews by the *Einsatzgruppen* (mobile killing units) in the German-occupied Soviet Union and the persistent failure to acknowledge Jewish memory.

On September 19, 1941, the advancing German army captured Kiev, the capital of the Ukraine. Within a week, a number of buildings occupied by German military and civilian authorities were blown up by the НКВД, the Soviet secret police. In retaliation, the Germans proceeded to kill all the Jews of Kiev. An order was posted throughout the city in both Russian and Ukrainian:

Kikes of the city of Kiev and vicinity! On Monday, September 29, you are to appear by 7:00 A.M. with your possessions, money, documents, valuables and warm clothing at Dorogozhitshaya Street, next to the Jewish cemetery. Failure to appear is punishable by death.

From the cemetery, the Jews were marched to Babi Yar, a ravine only two miles from the center of the city. A truck driver at the scene described what he saw:

I watched what happened when the Jews – men, women and children – arrived. The Ukrainians led them past a number of different places where one after another they had to remove their luggage, then their coats, shoes, and overgarments and also underwear. They had to leave their valuables in a designated place. There was a special pile for each article of clothing. It all happened very quickly ... I don't think it was even a minute from the time each Jew took off his coat before he was standing there completely naked....

Once undressed, the Jews were led into the ravine which was about 150 meters long and 30 meters wide and a good 15 meters deep...When they reached the bottom of the ravine they were seized by members of the Schultpolizei and made to lie down on top of Jews who had already been shot. That all happened very quickly. The corpses were literally in layers. A police marksman came along and shot each Jew in the neck with a submachine gun ... I saw these marksman stand on layers of corpses and shoot one after the other ... The marksman would walk across the bodies of the executed Jews to the next Jew who had meanwhile lain down and shoot him.

In the days between Rosh Hashanah and Yom Kippur, the Jewish New Year and the Day of Atonement, 33,771 Jews were murdered at Babi Yar. In the following months, Babi Yar remained in use as an execution site for “gypsies” (Roma and Sinta) and Soviet prisoners of war. Soviet accounts after the war speak of 100,000 dead. Research does not substantiate such a number. The true number may never be known.

In August 1943, in the face of the Red Army advance against German troops, the mass graves of Babi Yar were dug up and the bodies burned in an attempt to remove the evidence of mass murder. Paul Blobel, the commander of *Sonderkommando* 4a, whose troops had slaughtered the Jews of

Kiev, returned to Babi Yar. For more than a month, his men and workers conscripted from the ranks of concentration camp inmates dug up the bodies. Bulldozers were required to reopen the mounds. Massive bone-crushing machinery was brought to the scene. The bodies were piled on wooden logs, doused with gas, and ignited.

When the work was done, the workers from the concentration camp were killed. Under cover of darkness on September 29, 1943, 25 of them escaped. Fifteen survived to tell what they had seen.

Despite efforts to suppress the memory of Babi Yar, after the war the Soviet public at large learned of the murders through newspaper accounts, official reports, and belles lettres. In 1947 I. Ehrenburg in his novel *Burya* (“The Storm”) described dramatically the mass killing of the Jews of Kiev in Babi Yar. Preparations were made for a monument at Babi Yar as a memorial to the victims of Nazi genocide. The architect A.V. Vlasov had designed a memorial and the artist B. Ovchinnikov had produced the necessary sketches.

But since the Soviet antisemitic campaign of 1948–49, an effort was made to eliminate all references to Babi Yar. This policy had as an objective the removal from Jewish consciousness of those historical elements that might sustain it. Even after the death of Stalin, Babi Yar remained lost in the “memory hole” of history. Intellectuals, however, refused to be silent. On Oct. 10, 1959, the novelist Viktor Nekrasov cried out in the pages of *Literaturnaya Gazeta* for a memorial at Babi Yar, and against the official intention to transform the ravine into a sports stadium. Far more impressive was the poem *Babi Yar* written by Yevgeni *Yevtushenko published in the same journal on Sept. 19, 1961.

No gravestone stands on Babi Yar;
Only coarse earth heaped roughly on the gash;
Such dread comes over me.

With its open attack upon antisemitism and its implied denunciation of those who rejected Jewish martyrdom, the poem exerted a profound impact on Soviet youth as well as upon world public opinion. Dmitri Shostakovich set the lines to music in his 13th Symphony, performed for the first time in December 1962.

Russian ultranationalism struck back almost immediately. Yevtushenko was sharply criticized by a number of literary apologists of the regime and then publicly denounced by Premier Nikita Khrushchev in *Pravda* on March 8, 1963. The theme of a specific Jewish martyrdom was condemned. But Babi Yar would not remain suppressed. It again surfaced during the summer of 1966 in a documentary novel written by Anatoly Kuznetsov published in *Yunost* (Eng. tr. 1967). Earlier that year the Ukrainian Architects Club in Kiev held a public exhibit of more than 200 projects and some 30 large-scale detailed plans for a memorial to Babi Yar. None of the inscriptions in the proposed plans mentioned Jewish martyrdom. Only after the collapse of the Soviet Union did the new Ukrainian government acknowledge the specific

Jewish nature of the site and an appropriate rededication was held.

By the 2000s plans were underway for the creation of a Jewish Community Center and an appropriate Jewish memorial on the site. No stranger to controversy, the new use of the site has been challenged by some as being too close to the massacre site and being built therefore on sacred soil.

BABOVICH, SIMḤAH BEN SOLOMON BEN NAHAMU (1790–1855), Karaite *hakham* in the Crimea, living in Eupatoria (Yevpatoriya). Babovich mainly devoted himself to obtaining more rights for the Karaites in Russia. In 1827, in conjunction with the Karaite scholar Joseph Solomon *Luzki, he obtained exemption of the Karaites from the law pertaining to military service for Jews. The Karaites in Eupatoria commemorated this event in an annual prayer. In 1829/30 M. Jost asked Babovich to send him some Karaite books and to give him some information about these books. In 1830 Babovich made a pilgrimage to the Land of Israel together with A. *Firkovich, who at that time was a tutor of his children and his secretary. They visited Jerusalem, Hebron, Cairo, and Constantinople. In 1839 the Karaite Spiritual Council was founded through his support and he was appointed its head and remained so until his death, although he was not distinguished as a scholar. At the same year Babovich was instructed by the government to provide exact information on the origin, nature, and history of the Karaites. Babovich turned to A. *Firkovich, who then proceeded to produce a series of documents, some partly falsified.

He financially supported the Karaite community, donating the income from his mill to the community and after his demise bequeathed to it the village he had received from the government.

[Golda Akhiezer (2nd ed.)]

BABYLON (Heb. *Bavel*, בָּבֶל, Gk. Βαβυλών), ancient city on the eastern bank of the Euphrates River in what is now Iraq. (In contemporary convention, “Babylon” is used for the city name and “Babylonia” for the country. In biblical Hebrew בָּבֶל is used for both.) Its ruins lie within the suburbs of the modern

city of Baghdad. No satisfactory etymology for the city’s name has been proposed. Akkadian scribes derived the name from the words *bāb-ili* (“gate of god”), but in Genesis 11:9 the name is explained derogatorily as a derivation from the root *bll* (“to confuse”). The English word follows the Greek spelling.

Biblical tradition lists the city with Erech and Akkad in the land of Shinar (Gen. 10:10), as one of the earliest cities in Babylonia. This view of the antiquity of Babylon was also current in Babylon itself in the period after *Hammurapi, but in fact before 2050 B.C.E. the city was only a small provincial town.

The first certain mention of Babylon in cuneiform texts is from the time of the Third Dynasty of Ur (2112–2004 B.C.E.), when it served as a provincial capital and seat of a governor. During the Isin-Larsa period (2017–1794) it became the capital of a small independent kingdom under an Amorite dynasty. Its kings enjoyed unusually long reigns, and this may symbolize the stability which allowed them eventually to take a dominant role in Mesopotamian politics. The city gained fame during the time of Hammurapi (1792–1750 B.C.E.), when it extended its influence over most of southern Mesopotamia through diplomacy and then military conquest. The kings of Babylon saw themselves as heirs of the Old Akkadian rulers who had first unified Mesopotamia 400 years before. Under Hammurapi’s son Samsu-iluna, however, the southern part of the kingdom was lost.

During the subsequent Middle Babylonian period Babylon continued as a capital city in southern Mesopotamia. Assyria in northern Iraq tinkered in Babylon’s politics. Under the Assyrian king Tukulti-Ninurta I (1244–1208), Babylon was partially destroyed. When Tiglath-Pileser III (745–727) took Babylon, he gave it the status of an independent kingdom united to Assyria. In Babylon he reigned under another name, Pulu, which is found in the Bible (II Kings 15:19). Shalmaneser V (726–722) continued the practice of employing another name in Babylon, Ululayu, an adjective meaning “of the sixth month,” commemorating the month of his birth. The Chaldean Marduk-apla-iddina (biblical *Merodach-Baladan (Akk. Marduk-apla-iddina)) proclaimed an independent kingdom upon Shalmaneser’s death, but *Sargon II (722–705) overthrew him in 710; and, though he did not adopt a different throne name in Babylon, he made it his residence for a time and added “the king of Akkad, governor of Babylon” to his titles.

Following Sargon’s death Merodach-Baladan Marduk-apla-iddina returned, and this may be the time of his correspondence with *Hezekiah of Judah (2 Kgs. 20:12–19, II Chr. 32:31). Babylon again became a center of resistance to Assyria, inspiring the Assyrian king Sennacherib to destroy the city in 689, an act widely viewed as sacrilegious. His son Esarhaddon (680–669) rebuilt the city and expressed piety toward its gods. At the end of his life he divided his kingdom between his two sons, making Shamash-shum-ukin his heir in Babylon and Assurbanipal in Assyria. But Shamash-shum-ukin thwarted his father’s plans by trying to make southern Mesopotamia completely independent of Assyria. Assurbanipal besieged

Babylon and recovered it from his brother, but at considerable cost to the strength of the empire.

As Assyria was collapsing, in 626 Nabopolassar, a Chaldean, made himself king of Akkad at Babylon. He and his successor, *Nebuchadnezzar II, proceeded to build the Neo-Babylonian empire at the expense of the Assyrians.

As the capital of the Neo-Babylonian empire, to which Judah was forcibly annexed in 586, Babylon underwent a vast program of public building and fortification. After the fall of the empire to the Persians, Babylon still maintained its dominant position. With the fall of the Persian Empire to Alexander the Great, Babylon offered no resistance and was made the capital of his new empire. But Seleucus I Nicator (312–281), Alexander's successor, founded Seleucia not far away on the Tigris, and the inhabitants of Babylon slowly moved to Seleucia, deserting Babylon, which may have been uninhabited in the first centuries of our era.

As early as the 1780s visitors observed that the site had been looted. Major excavations were conducted by the German architect R. Koldewey (1855–1925) from 1899 to 1917. These excavations revealed data for all levels of occupation from Old Babylonian (1894–1595 B.C.E.) to Parthian times (250 B.C.E.–224 C.E.), but their main importance lay in the extensive evidence for the Neo-Babylonian period (625–539 B.C.E.). Old Babylonian levels were rarely reached, and the high water table impeded excavation of early periods. The excavations are important also in the history of archaeology because Koldewey was the first European systematically to try to trace mud brick architecture and to distinguish between buildings and later pits, leading to what we call stratigraphy.

Koldewey uncovered two palaces of Nebuchadnezzar and an ancient fortress that adjoined the interior wall of the city. The façade of one palace was made of enamel-covered bricks, decorated with pillars and capitals in various colors on a blue background. The royal throne was located in an alcove in the wall opposite the entrance. The hanging gardens referred to by Greek authors including Diodorus Siculus (60–30 B.C.E.) (2, 10:1, “the garden called hung”) and considered one of the wonders of the world have never been identified archaeologically. In the palace were discovered clay tablets upon which were inscribed allocations of food for those who ate at the king's table, including *Jehoiachin, the last legitimate king of Judah.

To the east of the palaces passed the main road, which was used for processions of the Babylonian New Year celebration. At the road's northern end the processions passed into the inner city by way of the Ishtar Gate, which was decorated with reliefs of fanciful animals with lion's feet. This gate has been partly reconstructed in Berlin and features in all histories of Mesopotamian art.

South of Nebuchadnezzar's palace, at the end of the parade road, was a large temple of Marduk, Esagila (“The house lifting [its] head [proudly]”) whose walls were made of trees decorated with gold, marble, and precious stones. North of it stood the *ziqqurat*, a pyramid-shaped structure built in stepped stages on a square base. Each of its sides was 295 ft.

(91 m.) long. The highest tower had a great temple according to Herodotus (1:181), who, however, may never have visited the city. The city and its suburbs, which extended to the west of the Euphrates, were connected by a bridge. Herodotus said that the city had many three- and four-story buildings (1:180).

The greatness of Babylon left its mark in biblical sources. Isaiah 13:19 called Babylon “the glory of kingdoms, the splendor and pride of the Chaldeans” while praying for its fall. Jeremiah was deeply concerned about Babylon, and his book has more than half of the references to the city in the Bible; in his day how one was to relate to Babylon was a major issue, and the prophet himself may have been seen by the Babylonians as a collaborator since he counseled not resisting Babylonian power.

Babylon's city-god, Marduk, became the dominant state god perhaps when Nebuchadnezzar I (1125–1104) recovered Marduk's statue from *Elam; the god was represented in the Creation Epic as having supremacy over the entire pantheon conferred on him by the other gods. Later the god was called Bel, “lord.” Both names are known in the Bible, in Jeremiah 50:2 (“Bel is put to shame, Merodach is dismayed”) and 51:44 (“and I will punish Bel in Babylon”) and in Isaiah 46:1 (“Bel bows down, Nebo [another Babylonian god] stoops”).

Babylon became synonymous in apocalyptic thought with decadence and evil and was sometimes equated with Rome and its empire. (For the figure in Christian apocalyptic see Rev. 17). But for most Jews it remained a real place where members of a thriving Jewish community made their homes. The Babylonian Talmud, for example, recalls that Babylon's Jewish community was healthy in terms of its orthodox practice in contrast to others in Media and Elam (Kid. 71b).

BABYLONIA, ancient country in Mesopotamia between the Tigris and the Euphrates Rivers; corresponding approximately to modern *Iraq. Babylonia is the Greek form of the name *babili* – sometimes translated as “gate of God” – known from cuneiform texts.

Introduction

The area was settled by the Sumerians in the third millennium B.C.E. Sargon I (24th century B.C.E.) founded the Akkadian dynasty, which dominated the area for 200 years. At a later

period (c. 1850 B.C.E.) the *Amorites (*mar-tu*, “people of the west”) ruled over northern Babylonia. The city gained greater strength during the time of *Hammurabi (1792–1750 B.C.E.) when it extended its influence over most of southern Mesopotamia, as well as over parts of northern Mesopotamia. Later rulers of the area were the *Hittites, Kassites and the Assyrians. The Assyrian kingdom was overthrown in 612 B.C.E. and succeeded by the neo-Chaldean kingdom of which the outstanding figure was *Nebuchadnezzar II (604–562 B.C.E.). However, 25 years after his death, the country was captured by *Cyrus, king of Persia, and ceased to exist as an independent kingdom.

For a full description of this period up to Cyrus see *Mesopotamia.

Achaemenid Period

A turning point in Near Eastern history was heralded by the Medes’ conquest of the Assyrian capital, Nineveh, in 612 B.C.E., and arrived when Babylon fell to the Achaemenid Persians in 539. After two millennia of Semitic rule in the ancient Near East, an age was beginning in which Iranians and then others would dominate; but the new masters of the area would continue to draw heavily on the older cultural heritage.

The first important Achaemenid, Cyrus, conquered Media in 549, Lydia in 546, and Babylon in 539; next, Cambyses took Egypt in 525; then *Darius extended the empire into northern India by some time before 513. This conquest ranks in its speed and its scale with the later exploits of Alexander (for whom it may have served as a model) and with the initial spread of Islam. While Persepolis, in an upland valley of what is today southwestern Iran, remained the Achaemenids’ ceremonial capital, much of the business of the extended empire was handled from Susa, at the edge of the Mesopotamian plain. Babylon, further to the west, became a more local administrative center.

Organized into a score of satrapies or provinces and held together by an effective system of roads, communications, and standardized coinage, the empire introduced a largely new conception of legitimacy or imperial ideology to the area. The ancient Near Eastern empires had often ruled by the forcible displacement of local institutions or had placed them in subservient vassal relationships by treaty. The Achaemenids, though still relying on the universal language of force, sought to exercise it by posing as heirs of local dynastic traditions and by following wherever expedient the local idiom. Thus in Egypt the Persian kings ruled as pharaohs, and in Babylon as kings of Babylon; and Isaiah 45 provides evidence that Jews in Babylonia on the eve of the Persian conquest expected Cyrus to be the anointed of the Lord. On taking Babylon, Cyrus did not in fact promulgate the Judean cult but restored a variety of local cults. He relates in a cylinder inscription (Pritchard, *Texts*, 315) that he restored to their localities the divine images which Nabonidus, the last Babylonian king, had carried off to Babylon. Later, Darius reprimanded his satrap Gadatas in Asia Minor for abuse of local shrine property (text in A.T.

Olmstead, *History of the Persian Empire*, 156). The policy seems to have been one of religious tolerance provided that subject populations were politically docile (Ezra 1 and 4–7); Xerxes’ inscription in which he tells of suppressing the worship of *daevas*, gods false by Zoroastrian standards (text *ibid.*, 232) could be interpreted either as a case of political rebellion or of heresy in the Iranian heartland, to which the lenient policy of more westerly regions was inapplicable. In any event, diversity of religion under imperial patronage appears to have replaced the Near East’s earlier close association of palace and temple wherever Jews were concerned.

Exiled from Judea by the Babylonians in 597 and 586 B.C.E., a small community of leading Judeans whose experience was to be adopted as the spiritual heritage of all Israel had been settled along the canals of Babylon (Ps. 137:1), such as the Chebar (Ezek. 1:1) and in ruined sites, such as Tel-Abib (Ezek. 3:15), Tel-Melah, and Tel-Harsha (Ezra 2:59; Neh. 7:61), which they were apparently expected to rebuild and cultivate (cf. Jer. 29:4–5). The initial feeling in this “foreign land” was one of intense yearning for Jerusalem (Ps. 137). Some not clearly datable biblical materials may describe this experience, such as the Tower of Babel account (Gen. 11, commonly regarded as much earlier), which associates the problem of linguistic diversity with the locality of Babylon; but Ezekiel provides the clearest contemporary evidence for conditions at the start of the Exile.

Following the Achaemenids’ permission to return to Palestine and restore the Judean cult, there is virtually no specific evidence concerning the status of the Jewish community of Babylon. That such a community remained there is evident from its mention, for example, as the home of Ezra, and from its existence in post-Achaemenid times. Later tradition emphasizes the continuity of the Babylonian community; the *Seder Olam Zuta* sets forth a line of exilarchs back to the deported Jehoiachin (Jeconiah), the next to last of the kings of Judah – evidence at least that the idea of exiles who did not return was credible later on. Scholars have sought to document Jewish business success in Babylonia on the basis of personal names in cuneiform texts of the family of Murashu in Nippur from the reign of Artaxerxes I, an attempt which while plausible puts severe strain on the linguistic evidence. That, in the course of time, Jews attained positions of privilege and responsibility is inferred from Nehemiah’s service as cupbearer at the Achaemenid court. Some may not have been trusted; Eusebius (*Eusebius Werke*, ed. by R. Helm 7 (1956), 112–3) relates Artaxerxes III’s deportation of Jews to Hyrcania, on the Caspian Sea, as the result of a revolt around 350 B.C.E.

Seleucid Period

Alexander led a Macedonian army in the conquest of Babylon in 331 B.C.E. and died there after his Bactrian and Indian campaigns in 323. His generals thereupon dismembered his empire in a struggle for control of it. The dynasty of Seleucus, which was to rule Mesopotamia for two centuries, was heir to a domain without a stable ethnic base or heartland.

Whereas Persians had been rulers of “Iran and non-Iran,” as later usage put it, the Macedonian Seleucids were rulers only of non-Macedonia. Seleucid imperial policy, therefore, began as a colonial policy throughout all the realm: it called for the founding of new cities, populated by immigrant Macedonian and Greek garrisons, administrators, and merchants, strategically situated and fortified along the principal roads and rivers. Seleucia on the Tigris, founded by Seleucus I, was one of these, and it tended to flourish at Babylon’s expense. Antiochus I transferred a considerable Semitic population to Seleucia from Babylon in 275 B.C.E., a policy of centralization causing a decline in Babylon’s material fortunes which is documented in cuneiform literature.

The initial Hellenization of Babylonia was followed in time by a more complex interaction between Seleucid institutions and those of the indigenous populations. In the name of royal if not divine prerogative, Antiochus III began to tap temple treasuries to pay the indemnity he owed after losing to the Romans, but encountered stiff resistance and was killed during one such attempt at a temple in Elam in 187. Antiochus IV sought to strengthen a shaky empire by extending Greek communities and institutions in the older centers of the empire, including a refurbishing of Babylon. But it was a desperate and futile attempt to stem the tide of history, and amounted to a Greek veneer on Semitic Babylon; the old local institutions survived, and individuals bore double, Greek-Babylonian, names. The Babylonia which came under Parthian rule in 129 B.C.E. was still ethnically and culturally heterogeneous.

With the Greeks as a ruling minority in Babylonia, the Jews as a subject minority appear to have prospered by trusting and being trusted. Josephus reports that Alexander reaffirmed the privileges which the Persians had accorded them (Ant., 11:338). Jews served in the Greek armies: Josephus (Apion, 1:192) mentions Alexander’s excusing Jewish soldiers on grounds of religious scruples from the army’s work on the temple of Bel in Babylon; and a Jewish contingent (in c. 220 B.C.E.) aided in the defense of Babylonia against a Galatian invasion (II Macc. 8:20). Antiochus III sent 2,000 Jewish families, about 210 B.C.E., as settlers to assist in an effort to control Asia Minor (Jos., Ant., 12:147–53).

The extent to which during the second century B.C.E. the declining fortunes of the Seleucids undermined any common interest between the Jews of the Babylonian Diaspora and the imperial government is difficult to judge, again owing to the scarcity of sources; but Babylonian silence during the Maccabean uprising in Palestine suggests that, to the end of Seleucid rule, loyalties were determined with reference primarily to local rather than distant conditions. A mark of Seleucid times which lasted when others passed was the Babylonian Jews’ use of the Seleucid era (counting the years from 312 B.C.E.) as the basis of dating under Parthian and Sassanian rule down to the time of the *geonim*.

[Willard Gurdon Oxtoby]

Parthian Period

The Parthians, an Iranian people, were originally a nomadic tribe called the Parni. They had settled in the region east and north of the Caspian, called Parthia, and so came to be called by the name of that territory. The Arsacid dynasty was founded about 240 B.C.E. by Arsaces, and all subsequent rulers bore that name. The expansion of the Parthian territory began with the annexation of Hyrcania, but moved slowly until the Seleucid Empire had been weakened elsewhere. Then the Parthians rapidly inherited the portions of the empire east of the Euphrates. Mithridates I, the real founder of the Parthian Empire, ascended the throne in 171, reached Media in 155, and Seleucia on the Tigris in 141. For the next 20 years, Babylonia was contested by Parthians, Seleucids, and the Hellenistic state of Characene. By 120, however, Mithridates II had permanently established his rule on the Euphrates’ frontier. Since the Parthians were fundamentally a military aristocracy, they were concerned with fostering local support among indigenous populations. They made little effort to win over the conquered peoples to their culture and religion. They preserved Greek legal forms and allowed the Jews to continue their usual way of life. The Greek colonies in the region accepted Parthian rule, which promised free access to, and preserved the security of, the trade routes of Central Asia. The Seleucids’ attitude to the Jews was favorable, and the Jews allied themselves with their regime.

From around 120 B.C.E. to their fall in 224 C.E., the Parthians treated the Jewish settlements well. Palestinian Jewry under the Hasmoneans and Arsacid Parthia had a common interest in the destruction of Seleucid power. In 140/39, a circular from Rome informed the various countries of the civilized world, including Parthia, of Roman friendship for the Jews (I Macc. 15:16–24; Jos., Ant., 14:145–7). In 129 B.C.E. Hyrcanus was forced to accompany the Seleucid Antiochus VII in a Parthian campaign. As soon as he could, he returned to Palestine and reestablished his independence of the Seleucids. According to tannaitic tradition (TJ, Ber. 7:2, 11b; Naz. 5:5, 54b; Eccles. R. 7:12) a Parthian embassy was sent to the court of Alexander Yannai (104–78 B.C.E.). It may be that the embassy was intended to arrange joint opposition to the rise of the Armenian Tigranes, who invaded both Palestine and Parthian Babylonia around 87 B.C.E., and exiled Palestinian Jews to his empire. After their great victory over Rome at Carrae, in 53 B.C.E., the Parthians for more than a decade became the dominant power in the Middle East, and attempted to contest Roman rule in Palestine. In 40–39 B.C.E., they deposed Herod, the ally of Rome, and put in his place as ruler of Judea Antigonus, nephew of Hyrcanus the Hasmonean. Elsewhere in the Middle East they replaced pro-Roman with pro-Parthian dynasties. The Parthian general, Pacorus, was killed in a brief engagement in 38 B.C.E., whereupon the Parthians withdrew across the Euphrates. Rome quickly reestablished her hegemony, which was never again seriously threatened by the Parthians. For the next century, domestic instability paralyzed the Parthian government.

Information on Babylonian Jewry under Parthian rule is not abundant. There is information on a Babylonian Jew, *Zamaris (Zimri), who emigrated to Palestine during Herod's reign. He went with his feudal retinue (Jos., Ant., 17:23 ff.). All the information about him points to him as a Babylonian Jewish noble, who had fully mastered the arts of war as practiced by the Parthians. In later times, we hear of Babylonian Jews called Arda, Arta, and Pyl-y Barish; Arda/Arta would be the equivalent of the Hebrew Barukh, justified or blessed. Pyl-y Barish, meaning elephant rider, is also an Iranian name. These Jews (referred to in Git. 14b; TJ, Kid. 3:4, 64a) were dressed like Parthian nobles, in the tall *bashlyk* ("high hat") characteristic of the nobility. They were, moreover, well acquainted with the common law, for they insisted that rabbinical collectors of funds for the Palestinian schools supply them with a quit-claim for a silver cup being transported to Palestine. The Palestinians reported that the nobles had great power: "If they give an order to arrest you, you are arrested; to kill you, you are killed." They enjoyed the usual retinue of horses and mules. It may therefore be inferred that among the Jews in Babylonia was an upper class of "assimilated" nobility, familiar with Parthian culture and possessing considerable legal learning, as well as authority in the Jewish community. About the traditions and culture of the mass of Jews, who were farmers and tradesmen, nothing is known. It may be supposed that they revered the Scriptures, Jerusalem, and the Temple cult. There are many references to Babylonian pilgrimage before 70 C.E. The Babylonian Jews accepted the Jewish calendar from the Jerusalem authorities. Traditions on Hillel and Nahum "the Median" are confused, enigmatic, and in no way probative. What sects or groups existed is not known. About 40 C.E., the royal family of *Adiabene, situated between two tributaries of the Tigris, converted to Judaism. Josephus reports (Ant., 18:314 ff.) that two Jewish brothers, *Anilaeus and Asinaeus (Ḥanilai, Ḥasinai) established a "Jewish state" in Babylonia, which lasted from about 20 to about 35 C.E.

Babylonian Jewry did little, if anything, to support the war against Rome. Its chief interest lay in the Temple cult. When the Temple was destroyed, the Romans quickly employed Josephus to absolve them of war-guilt, and he addressed himself specifically to "our brethren across the Euphrates." Similarly, the Bar Kokhba Revolt of 132–135 attracted no perceptible support from the Babylonian Jews. By contrast, when *Trajan invaded the Parthian Empire, in around 114 to 117, a great rebellion broke out behind his lines in the Jewish-occupied territories he had taken. The Jews in Cyprus, Egypt, and Cyrenaica also revolted. The chronology of Trajan's campaign is difficult to establish. It is not known for sure when the Jewish rebellions took place, or whether they were coordinated. The Babylonian one, however, seems clearly related to the Parthian cause.

The Jews normally profited from their position on both sides of the contested frontier between Rome and Parthia. The exilarch and patriarch, moreover, cooperated in the silk trade, one of the chief commodities of international commerce. Silk

was imported to Babylonia from the Far East, transshipped for reweaving according to Roman taste from the coarse, thick fabric of China to the preferable sheer weave desired in Rome, and then manufactured into garments. The textile factories of Syria and Palestine thus depended upon a steady supply of silk. Ḥiyya, Simeon the son of Judah ha-Nasi, and Rabban Simeon b. Gamaliel together traded in silks at Tyre (Gen. R. 77:2) and Judah b. Bathyra of Nisibis and Abba b. Abba, father of Samuel, similarly were in the silk trade (Mid., Sam 1. 10:3). Other evidences of Jewish participation in the silk trade are found in Christian Syriac sources (W. Cureton, *Ancient Syriac Documents*, 14). Silk merchants were, indeed, among the chief transmitters of Pharisaic Judaism and Christianity in the Orient. The earliest Christian apostles to Edessa and elsewhere in the Parthian Empire were originally Jewish silk merchants. Any effort to rearrange the trading routes of the Middle East thus would adversely affect the Jewish merchants of Babylonia and Palestine. Jewish opposition to Trajan may well have been motivated by considerations of international trade. But even without that the memory of the Roman destruction of the Temple would certainly have supplied a sufficient cause for opposition. Whether a messianic impulse motivated still others is not proved one way or the other. Further unrest in Palestine in the time of Parthian-Roman struggles, specifically in 161–165 and 193–197, suggests that some Jews regarded Parthian success as the harbinger of the Messiah. This is made quite explicit by Simeon b. Yoḥai, who said that if a man saw a Persian (Parthian) horse tethered to a gravestone in Palestine, he should listen for the footsteps of the Messiah.

Pharisaic Judaism exercised little influence in Babylonian Jewry before the destruction of the Temple. Only two Pharisaic authorities resident in the Parthian empire are known. One was Judah b. Bathyra, who was stationed at Nisibis, and was in charge of collecting and transmitting the contributions of the Jews of Mesopotamia to the Temple in Jerusalem. The other collection center was at Nehardea, in Babylonia, where lived Nehemiah of Bet Deli, about whom little more is known than that he lived in Babylonia before 70 C.E. and was originally a Palestinian Pharisee (Yev. 16:7). The first rabbinical academies were established in Parthian territory as a direct consequence of the Bar Kokhba Revolt. During the war and the consequent repressions, the students of Ishmael fled from Palestine to Huzal, in central Babylonia, and some of those of Akiva went to Nisibis. The latter, however, soon returned while those of Ishmael remained. There they educated the first native-born and -bred rabbis of Babylonia, in particular Aḥai the son of Josiah, and Issi b. Judah; other Babylonian *tannaim* included the group from Kifri, Ḥiyya, Rav, Rabbah b. Ḥana; and among the later figures were Ḥanina b. Ḥama, and the Nehardeans Abba b. Abba, father of Samuel, and Levi b. Sisi.

Nathan, son of the exilarch, was sent by his father to Palestine for studies with Akiva. The exilarch probably extended a warm welcome to Palestinian refugees, and certainly made use of the graduates of their academies in his courts and administration. Among Babylonian Jewry was a class of native-born

aristocrats, who probably acted, like other Parthian nobles, as local strongmen. In attempting to create a central administration for the Jewish community, the exilarch found useful the well-trained lawyers coming out of the Pharisaic-rabbinic schools, who were eager to enforce “the Torah” as they had learned it in Pharisaic traditions, and, unlike the Jewish nobility, were dependent solely upon the exilarch for whatever power they might exercise. For his part, the exilarch made use of the rabbinical bureaucrats to circumvent the power of the local Jewish nobility. Their claim to exposit “the whole Torah” as revealed to Moses at Sinai would have won for themselves and their patron considerable popular attention and support. The Palestinian schools after 140 were anxious to retain control of the new academies in Babylonia. When, therefore, in about 145 C.E. Hananiah, a nephew of R. Joshua b. Hananiah, presumed to proclaim the Jewish calendar in Babylonia, the Palestinians sent two sages, one of them the grandson of the last high priest in Jerusalem, to rebuke him (Ber. 63a; TJ, Sanh. 1:2, 19a; Ned. 6:13, 40a).

Sasanian Period

The change of dynasty from Arsacids to Sasanians represented more than the mere exchange of one Iranian royal family for another. The Parthians had, as stated, few, if any, cultural pretensions. They bore no special fealty to a particular divinity or cult. They ruled their vast empire mostly through local satraps or (as in the Jewish instance) ethnic-religious figures, dependent upon them for legitimation, but bound mainly by ties of feudal loyalty. Throughout the whole period of their rule, they made extensive use of the Jews, in particular, as allies in international politics and trade. When Artapan v fell, Rav lamented, “The bond is parted” (Av. Zar. 10b–11a), and rightly so, for the ancient alliance between Iran and Israel in Babylonia had come to an end.

The Sasanians on the other hand sought not merely to reign but to rule. They originated as a priestly family in a temple in Staxr, in Fārs (Persia), and never neglected the divinities who, they believed, had favored them with a royal throne and empire. They moreover determined to rule directly, not merely through feudal powers, and so established great bureaus of administration in the capital Ctesiphon. They claimed the Achaemenids as their ancestors, and intended to recreate the glorious empire of their alleged forebears, including its religion. Unlike the Arsacids, they had had no experience in ruling a heterogeneous population. While the Arsacid Empire had gradually expanded from northeastern Iran so that it slowly gained experience in governing Hellenes, Jews, Syrians, Babylonians, and other Semites, not to mention other Iranian peoples, the Sasanians came to power suddenly. They emerged in a few years from the obscurity of a provincial temple to the authority of the whole Iranian Empire. They supposed, therefore, that they might quickly convert everyone to the worship of Ohrmazd, Anahita, and other divinities held sacred in Persia proper, and they founded a “state-church,” hierarchically organized just like the secular bureaucracy, to

achieve just that end. As a result the situation for Jewry suddenly deteriorated.

The Sasanian administration used the Mazdean religion to strengthen its hold on Iran proper, including Babylonia, as well as on Armenia, Georgia, Adiabene, and other regions. The Jews probably suffered, but certainly not alone. The times of Ardashir (224–41) proved difficult. There are, however, few unequivocal accounts of “persecutions of the Jews” or of Judaism. Two important talmudic stories show that the status of the Jewish community had changed radically. First, the Babylonian Talmud, *Bava Kamma* 117a contains the story of the execution of capital punishment in a Babylonian Jewish court by R. Kahana. Rav thereupon said, “Until now, the Greeks [= Parthians], who did not punish bloodshed, were here, but now the Persians, who do punish bloodshed, are here.” R. Kahana was advised to flee to Palestine. Second, R. Shila administered lashes to a man who had intercourse with a gentile woman. The man informed against the Jewish judge, who successfully hoodwinked the Persian agent (*frestak*) who had come to investigate the execution of judgment without proper government authorization (*hermana*). These stories prove that the status of the Jewish government required renegotiation. Apparently at the outset the Jews supposed they could continue as before. The Sasanian regime quickly made it clear that they could not. There are, moreover, some references to “decrees against Judaism.” The Babylonian Talmud, *Yevamot* 63b, records that the Mazdean Mobads “decreed concerning meat... the baths... and they exhumed the dead.” Use of fire on Mazdean festivals was restricted; Rav was asked whether one may move a Hanukkah lamp “on account of the Magi” on the Sabbath (Shab. 45a). An equivocal reference suggests that “the Persians destroyed synagogues” (Yoma 10a). In any event, Jews clearly at this time preferred the rule of Rome, as is clear from Rav’s statement (Shab. 11a).

When *Shapur I came to power in 242, however, he extended freedom of religious and cultural life to all the disparate peoples of the Iranian Empire, hoping eventually to unify the disparate empire, possibly through the syncretistic teaching of Mani, who included in his pantheon Jesus, Zoroaster, and Buddha (though not Moses). Further, since the Persians planned to renew war with the West, it was to Shapur’s advantage to reconcile the peoples of the Tigris-Euphrates Valley, whose brethren lived on the other side of the frontier. Shapur’s success with Babylonian Jewry was complete. During his raid into Asia Minor in 260, he besieged Caesarea-Mazaca, the greatest city in Cappadocia. The Talmud (MK 26a) reports that when the amora Samuel heard Shapur had slain 12,000 Jews there, “he did not rend his clothes.” The same account reports that Shapur told Samuel he had never killed a Jew in his life, “but the Jews of Caesarea-Mazaca had brought it on themselves.” In the west, however, Shapur’s armies pillaged, burned, and killed; they were out not to build a new empire in the Roman Orient, but to destroy an old one. So the Jews, among other peoples behind the Roman lines, fought for their lives and for Rome. A far greater threat to Babylonian Jewry

came from the transient Palmyrene Empire, created by Odenathus (Papa b. Nezar of talmudic sources), who in 262–263 conducted a quick invasion of central Babylonia and devastated Jewish settlements there. Since Jewish and Palmyrene merchants competed with one another, an economic motivation may have played some part in the attacks on the Jews. The Palmyrene siege of Ctesiphon was raised by Shapur, but not before Nehardea was destroyed. The Jews of both Palestine and Babylonia applauded the fall of Odenathus' wife and successor, Zenobia.

Since the chief threat to Jewry lay in the cessation of the right to self-government, it was important to Samuel and to the exilarch whom he served to regain autonomous government. The early Sasanian regime, as noted, insisted upon supervising the Jewish court system. The best way to end that supervision was to agree at the outset that "the law of the land is law." This Samuel decreed (see *Dina de-Malkhuta Dina). The saying specifically applied to rules of land acquisition and tenure, collection of taxes, and similar matters of interest to the state. It was a strictly temporary and narrowly political agreement, which did not affect the religious or cultural policies of the Persians. The rabbis continued to work through prayer and study of Torah to hasten the coming of the Messiah, who would end the rule of all pagan kings and put into power the King of the king of kings.

Shapur I was succeeded by Hormizd I (272–73), Bahram I (273–76), Bahram II (276–92), and Bahram III (292). In the time of the Bahrams, Kartir, a leading Mazdean religious official, became a powerful influence in state policy. Calling himself "Soul-savior of Bahram," Kartir first saw to the martyrdom of Mani and the banishment of Manichaeans. He then turned to the extirpation of other non-Mazdean religions; in his famous inscription, he refers to his "opposition" to Jews, Brahmans, Nazoreans, Christians, and Manichaeans, among others. Shapur's policy of religious toleration, not to mention syncretism, was thus effectively reversed. There is little evidence in rabbinical sources to verify Kartir's claim to have given the Jews much trouble. The Babylonian Talmud, Gittin 16b–17a, tells the story that a Magus came and removed a lamp from the room of the ailing master, Rabbah b. Bar Hana, who thereupon exclaimed, "Merciful Lord! Either in your shadow or in the shadow of the son of Esau!" *Judah b. Ezekiel further refers to the exclusion of Jews from the offices of canal supervisor and chiliarch (Ta'an. 20a). But the Jews seem to have suffered less than did the Manichaeans, who were martyred and banished, and the Christians, whose churches were destroyed. No rabbi is known to have enjoyed the attentions of the king of kings, but possibly the rabbis simply did not preserve stories of what contacts did take place, presumably because exilarchic agents and not they were involved in the negotiations. In the time of Narseh (293–301), whatever persecutions earlier took place were brought to an end. Narseh renewed the tolerant policy of his father, Shapur. The reference of *Seder Olam Zuta* to a persecution of Jews in 313 is unverified by any earlier, more reliable source. Shapur II (309–79), crowned king at his

birth, was then four years old. The Sasanian government was weak, and the empire was in a state of disorder. Perhaps a local Mobad or government authority somewhere made trouble for the Jews. In 331, Rabbah b. Naḥamani, head of the academy of Pumbedita, was arrested because he was accused of assisting Jews to evade taxes. According to a legendary account the heavenly court required Rabbah's traditions on a matter of ritual cleanness, so he was called to heaven (BM 86a), but one can hardly base upon that a general persecution of the Jews. The Talmud contains stories about the friendship for the Jews of Shapur's mother, Ifra Hormizd, who is otherwise unknown (BB 8a, 10b; Ta'an. 24b; Nid. 20b, Zev. 116b). In any event, during the reign of Shapur II, the Jewish community was unmoled. That is an important fact, for in the same period, particularly after Shapur II unsuccessfully besieged Nisibis in 339, the Christian community was devastated. Priests and bishops were put to death and monks and nuns tortured and forced to violate their vows. Ordinary Christians were pressured to apostatize. In 363, *Julian "the Apostate" invaded the Iranian Empire and besieged Ctesiphon. Among the many towns and villages he destroyed was one Jewish town, Birta, specifically referred to by Ammianus Marcellinus and Sozomen (3,20). Piruz Shapur, with its large Jewish population, and probably Maḥoza, the Jewish suburb of Ctesiphon, were also destroyed. After Julian had proclaimed his intention of rebuilding a Jewish temple in Jerusalem, a local Babylonian pseudo-messiah called upon Maḥozan Jewry to follow him to Palestine. The Persian government massacred those who did so. The fortunes of war, rather than a specific Jewish policy, thus caused considerable hardship between 360 and 370. In his Armenian campaigns after 363, Shapur II deported from Armenia to Isfahan and other parts of the Persian Empire large numbers of Armenian Jews and Christians, with the intention of strengthening the economy of the territories sheltered from Rome by the Zagros mountains, including Fārs proper.

The Babylonian Talmud contains references to Yezdegerd I (397–417), who supposedly had some contacts with leading rabbis as well as with the exilarch. The persecution of Christians, renewed in 414, was not marked by similar treatment of the Jewish communities. Bahram V (420–38) is not referred to in Jewish sources. Yezdegerd II (438–57) in 456 decreed that the Jews might not observe the Sabbath. He was, according to Jewish sources, shortly thereafter swallowed by a serpent, in answer to the prayer of the heads of the academies Mar b. R. Ashi and R. Zoma. Firuz (459–86) persisted in his father's anti-Jewish policy. The Jews of Isfahan were accused of having flayed alive two Magi. Half of the Jewish population was slaughtered and their children given to Mazdeans. Firuz "the Wicked" also killed the exilarch Huna Mari, son of Mar Zutra I. The year 468 is called in the Talmud "the year of the destruction of the world," and, from that date to 474, synagogues were destroyed, study of Torah was prohibited, children were forcibly delivered to the Mazdean priesthood, and, possibly, Sura was destroyed. The next significant trouble took place in the time of Kovad I (488–531), when Mazdak

arose as a prophet of the doctrine of community of property and women. Kovad accepted the doctrine and, among other groups, the Jews were persecuted when they rejected Mazda-kism. The exilarch Mar Zutra II gathered an armed force and defended the Jewish community for seven years. He was captured and killed in 520, in Maḥoza. Nevertheless, a number of Jews then served in the Persian armies fighting the Byzantines. Information on the century between Kovad's death and the Arab conquest (640) is slight. Chosroes (531–78) was well liked by Iranian and Arab historians. The Jews were apparently well treated. The Christian Nestorians in his day found refuge in Persia from Christian Byzantine persecution. Apparently some persecutions of Jews recurred under Hormizd IV (579–80), and Pumbeditan rabbis took shelter in Firuz Shapur, near Nehardea, then under Arab rule. Under Chosroes Parwez (590–628) Jewish life returned to normal. When the Persians invaded Palestine and took Jerusalem in 614, they were enthusiastically welcomed by local Jewry.

BACALL, LAUREN (Betty Joan Perske; 1924–), U.S. actress. Born in New York, Bacall studied at the American Academy of Dramatic Arts and then turned to modeling. She was featured on the cover of *Harper's Bazaar* and within one month had a Hollywood contract. At the age of 19, Bacall co-starred in her first film with Humphrey Bogart, whom she married one year later (1945). Bacall made four of her first films with Bogart – *To Have And Have Not* (1944), *The Big Sleep* (1946), *Dark Passage* (1947), and *Key Largo* (1948). She also appeared in *How to Marry a Millionaire* (1953), *Woman's World* (1954), *The Cobweb* (1955), *Blood Alley* (1955), and *Designing Woman* (1957). After Bogart died in 1957, Bacall continued her career in films, which spanned more than half a century and included performances in *Written on the Wind* (1956), *Sex and the Single Girl* (1964), *Harper* (1966), *Murder on the Orient Express* (1974), *The Shootist* (1976), *The Fan* (1981), *Health* (1982), *Ap-*

pointment with Death (1988), *Mr. North* (1988), *Tree of Hands* (1989), *Misery* (1990), *A Star for Two* (1991), *Ready to Wear (Pret a Porter)* (1995), *The Mirror Has Two Faces* (1996), *My Fellow Americans* (1996), *Diamonds* (1999), *The Venice Project* (1999), *Presence of Mind* (1999), *The Limit* (2003), *Dogville* (2003), and *Birth* (2004).

In 1961 Bacall married actor Jason Robards, Jr. They divorced in 1969. Their son, Sam Robards, is a film and TV actor.

Bacall won a Tony Award for her performance in the Broadway musical *Applause* (1970). In 1997 she was nominated for an Academy Award as best supporting actress in *The Mirror Has Two Faces*. That same year *People* magazine chose her as one of the 50 Most Beautiful People in the World.

Her autobiography, *Lauren Bacall by Myself*, won a National Book Award in 1980.

In 1994 she wrote a book entitled *Now*, which is described as "part career memoir and part meditation on what it's like to be a single woman of lingering glamour, enduring vitality, and advancing age."

[Jonathan Licht / Ruth Beloff (2nd ed.)]

BACAU (Rom. **Bacău**), city in Moldavia, Romania. A Jewish community is attested there in the 18th century. A *hevra kaddisha* was established in 1774. In 1820 there were 55 Jewish taxpaying heads of families in Bacau. The Jewish population numbered 3,810 in 1859 and 7,902 (48.3% of the total) in 1899. From 1803 to 1858 Isaac of Botosani ("Botoshaner"), who acquired renown as a miracle worker (*ba'al mofet*) was rabbi there. A *talmud torah* was founded in 1828, the Po'alei Zedek Tailors' Association in 1832, a *Hevrat Gomelei Hasadim* (mutual aid society; their minute books are in the YIVO Archives) in 1836, and a *Hevrat Mishnayot* in 1851. When the Jewish autonomous organization lost its official status in Romania in 1862, communal activity in Bacau also disintegrated. After 1866 Bacau became one of the centers of anti-Jewish agitation in Romania, and the community suffered frequent persecution. During the last quarter of the 19th-century secular education began to spread among the Jews of Bacau and at the end of the 1870s and beginning of the 1880s one-third of the pupils in general schools in Bacau were Jewish. The first Jewish elementary school was founded in 1863. The main occupations of the Jews in Bacau were commerce and crafts: of the commercial enterprises in the town in 1899, 563 (85.6%) were Jewish, and there were 573 (66.6%) Jewish artisans in 1901. Bacau was also a center of Hebrew printing.

The Jewish population numbered 9,593 (30.8% of the total) in 1930, of whom 50.8% declared Yiddish as their mother tongue. By this time the community had a well-organized communal framework. It maintained a kindergarten, two primary schools (for boys and girls), a hospital, an old age home, an orphanage, and a *mikveh*, as well as 25 synagogues. Bacau was also a center of the Zionist movement. Among the rabbis of Bacau was Bezalel Ze'ev *Safran (1866–1930), who officiated

there from 1905 until his death. A ḥasidic center operated in the Leca Street synagogue.

[Eliyahu Feldman / Lucian-Zeev Herscovici (2nd ed.)]

Holocaust Period

With *Antonescu's rise to power, the Jews of Bacau were subjected to repression; their property and shops were confiscated, and a part of the Jewish cemetery was adapted for agriculture. When war against the Soviet Union broke out (June 22, 1941), the Jews from towns and villages in the district were driven from their homes and sent to Bacau, whose Jewish community did its best to help as the city's Jewish population rose to 12,000. The community kitchen dispensed 1,000 meals a day and 1,000 families received financial aid. The men were sent to Transylvania and Bessarabia on forced labor. In the spring of 1944, when the front was drawing near, the Jews were forced to dig defense trenches. Under Soviet occupation in the summer of 1944, all the local officials fled and the Jewish community took over municipal affairs, keeping law and order, burying the non-Jewish dead, running the municipal hospital, and paying the salaries of the municipal employees. The postwar Jewish population reached a peak of 18,000 but most subsequently emigrated to Israel. In 2004 there were 359 Jews in Bacau.

°**BACCHIDES** (second century B.C.E.), Syrian general and governor of Seleucid territories west of the Euphrates. A friend of Demetrius I, Bacchides was given the task of installing Alcimus as high priest. To this end he was assigned a large body of troops, for it was evident that opposition would be forthcoming from Judah Maccabee and the other leaders of the Hasmonean uprising. The pious *ḥasidim, rejoicing at the sight of a priest from the tribe of Aaron assuming the office of high priest, were inclined to accept the peaceful overtures of Bacchides. However, he disregarded his oath and immediately slew 60 of the *Ḥasidim*, thus reuniting the bulk of the Jewish population behind Judah. Leaving an army with Alcimus, Bacchides handed the country over to him and returned to Syria. Meanwhile, Judah decisively defeated another Syrian general, Nicanor (13 Adar, 161 B.C.E.). Within two months Bacchides returned to Judea, accompanied by a force of 20,000 foot soldiers and 2,000 horsemen. Judah's army, camped near Elasa, dwindled from 3,000 to 800, and in the fierce battle that en-

sued Judah was killed. Bacchides again entrusted the administration of Judea to the Hellenists, while the rebels, led by Jonathan and Simeon, dispersed and fled south and beyond the Jordan. Bacchides succeeded in tracking Jonathan down, but waited until the Sabbath to attack the Jewish army, thinking that they would not fight. However, Jonathan fought back and the Syrian general suffered many casualties in an indecisive battle. Bacchides retreated to Jerusalem and fortified the citadel there. He also fortified many places around Jerusalem in order to strengthen the Seleucid hold on the city. Believing that the royalist rule was secure, Bacchides returned to Syria and remained there for two years (until 158). His last expedition to Judea, at the request of the Hellenists, was virtually a disaster. By that time Bacchides had become dissatisfied with those Jews who repeatedly urged him to attack the Hasmonean brothers. Sensing this, Jonathan proposed peace and a release of prisoners. Bacchides agreed, considering this the most dignified way of withdrawing, and returned for the last time to Syria.

[Isaiah Gafni]

BACHARACH (Bacherach), town in the Rhine Valley, Germany. Jews were living in Bacharach in the first part of the 12th century and were engaged in moneylending. While the troops were assembling there in preparation for the Second *Crusade, several families left the town and took refuge in the nearby castle of Stahleck. Three householders who went on royal orders to collect their debts were martyred by the crusaders on the eve of Pentecost, 1147. In 1283, 26 Jews were massacred as the result of a *blood libel. Heinrich Heine's incomplete epic, *Der Rabbi von Bacherach*, was based on a massacre in 1287 following a blood libel in Oberwesel. The Jews in Bacharach were attacked by the *Armleder in 1338–39, and others lost their lives in the *Black Death persecutions, 1348–49. A document dated 1510 shows that the Jewish community had by then been reestablished. In the early modern era a synagogue and a ritual bath, probably used by the Jews of Bacharach, existed in nearby Steeg. There were 34 Jews living in the town in 1924 and 200 in the area in 1932. The five Jews who remained in Bacharach were deported by July 26, 1942 by the Nazis. A number of noted Jewish families derived their name from Bacharach (see next entry).

[Zvi Avneri]

BACHARACH (Bachrach; also spelled Bacherach, Bachrich), name of several families originally from *Bacharach on the Rhine. GOTTSCHALK OF BACHARACH is mentioned

in Frankfurt in 1391 and EPHRAIM GUMBRECHT BACHARACH in 1457. MENAHEM (Man) BACHARACH was rabbi in Worms from 1506 to 1520. Two *dayyanim* named Bacharach are mentioned in 15th-century Mainz. There were two branches of the family living in Frankfurt in the 16th and 17th centuries. ISRAEL and TOBIAS BEN JOSEPH SOLOMON were martyred in *Ruzhany on Sept. 19, 1659, following a *blood libel. Tobias' descendants lived at Tiktin and include the talmudist *Judah b. Joshua Ezekiel Bachrach and Jacob b. Moses *Bachrach, author of a history of the Hebrew script. The first Bacharach known in Vienna is JUDAH LOEB BEN AARON (d. 1657). His grandson JACOB found refuge in Třebíč, Moravia, in 1670 and became a leader of the community there. His descendants are found in Konice and Třešt (both in Moravia). Two Bacharachs are mentioned in a list of Nikolsburg (Mikulov) Jews of 1765. The best-known line, founded in Bohemia, is represented first by ABRAHAM SAMUEL BEN ISAAC BACHARACH (1575–1615), who was rabbi in Worms. His wife Eva (Ḥavvah; 1580–1651) had a wide knowledge of Hebrew and rabbinical literature rarely found among women in her day. She died in Sofia on her way to Erez Israel. Their son was Moses Samson *Bacharach and their grandson was Jair Ḥayyim *Bacharach. Common in Bohemia was the abbreviation Bacher. Others of the family in Hungary include the Hebrew poet Simon *Bacher and his son the scholar Wilhelm *Bacher.

BACHARACH, family of business, political, and communal leaders in Atlantic City, New Jersey. BENJAMIN (1865–1936) was a local merchant and banker. Born in Philadelphia, he and his brothers Isaac and Harry were brought to Atlantic City in 1881 by their parents. Benjamin served as president of the Beth Israel Synagogue of Atlantic City, in which the entire family was active. ISAAC (1870–1956) was a businessman and banker who pursued a political career. After serving on the Atlantic City Council (1907–13), Isaac, a Republican, was elected to the State Assembly in 1911 and in 1915 to Congress, where he represented the Second District of New Jersey until 1936. A member of the House Ways and Means Committee, Bacharach wrote the 1931 act providing for emergency loans based on the value of insurance policies. HARRY (1873–1947), a Republican, was appointed postmaster by President McKinley (1901) and was reappointed by President Roosevelt in 1905 and 1909. He won elections as mayor of Atlantic City in 1911, 1916, and 1932. He served for many years as member and chairman of the New Jersey Public Utilities Commission and as a member of the Water Policy Commission. He was also active in local banking, real estate, and civic affairs, and was a founder of the Jewish Community Center of Atlantic City (1924–25). The Betty Bacharach Home for Afflicted Children (Longport, New Jersey) was founded by the Bacharach brothers and two sisters in 1924 in memory of their mother.

[Joseph Brandes]

BACHARACH, ALFRED LOUIS (1891–1966), British chemist and writer on musical subjects. Bacharach was an innovator in the fortification of baby milks with vitamin D, which brought about the almost complete eradication of rickets in the northern cities of Britain. He was born in London, and graduated from Cambridge. After five years in the Wellcome Research Laboratory, he joined the Glaxo Laboratories in 1920. He pioneered the development of biological assay methods for vitamins and also in microbiological assay procedures. He wrote *Science and Nutrition* (1938), and edited *The Nation's Food* (1946), *Evaluation of Drug Activities: Pharmacometrics* (in two volumes, with D.R. Laurence, 1964), *Exploration Medicine* (with O.G. Edholm, 1965), and *The Physiology of Human Survival* (1965). Bacharach, an accomplished pianist, edited *The Musical Companion* (1934; new edition, 1957), *Lives of the Great Composers* (1935), *British Music of Our Time* (1946), and *The Music Masters* (1957).

BIBLIOGRAPHY: *Chemistry in Britain*, 3 (1967), 395.

[Samuel Aaron Miller]

BACHARACH, BURT (1928–), composer and pianist. Born in Kansas City, Missouri, Bacharach studied cello, drums, and piano from an early age. He studied music at the Mannes College of Music in New York, at the New School of Social Research, and at McGill University in Montreal. Among his composition teachers were Darius *Milhaud, Bohuslav Martinů, and Henry Cowell. He subsequently worked as an accompanist for several popular singers such as Polly *Bergen, Steve *Lawrence, Paula Stewart, and Marlene Dietrich from 1958 to 1961. He began composing popular songs in the mid-1950s, collaborating with the lyricist Hal David and later writing hit songs for Dionne Warwick. Bacharach's style includes heterogeneous elements such as variable meter, pandiatonic and jazz harmonies, rhythmic ostinatos, and effects from black American styles. He won two Academy Awards for *Butch Cassidy and the Sundance Kid* (1969) with the well-known song "Raindrops Keep Falling on my Head." In the 1990s he collaborated with Elvis Costello. His compositions include the musicals *Promises, Promises* (1968) and *Lost Horizon* (1973), the film score for *Alfie*, and many popular songs

[Israella Stein (2nd ed.)]

BACHARACH, EVA (Ḥavvah; 1580–1651), a rare example of a learned woman, credited with writing commentary on midrash and targum, although these writings are no longer extant. Born into an illustrious and scholarly family, Eva was the maternal granddaughter of the famous Rabbi *Judah Loew

ben Bezalel (the Maharal) of Prague. Her father was Rabbi Isaac ha-Kohen (Katz), also a learned rabbi, and her mother was Vogele Kohen. Eva's two brothers, Ḥayyim and Naphtali, were respected rabbis in Poland. Eva married Rabbi Abraham Samuel Bacharach (see *Bacharach family), a student of both her grandfather and her father, and was the mother of two daughters and a son. Left a widow at 30, Eva spent most of the rest of her life in Prague. Her son Moses Samson *Bacharach became the rabbi of Worms and his son, Rabbi Yair Ḥayyim, is the main source on Eva Bacharach's life and learning. In the introduction to his book of responsa, Rabbi Yair Ḥayyim explains that the title, *Ḥavvat Yair*, evokes his famous and erudite grandmother Ḥavvah, whom he calls "my elder, the pious woman, Marat Ḥavvah, the mother of my father ... who helped me to develop..." His grandmother, he continues, "was unique of her kind in her generation in Torah. She had an original explanation of *Midrash Rabbah*. She taught ... through her comprehension and knowledge ... and she explained in such a manner that all who heard her understood that she was correct.... She explained the festival and petitionary prayers and Rashi's commentary on the Torah, and the whole Bible, and the Targum and Apochrypha.... Her writing was superlative and her speech was clear and polished." Rabbi Yair Bacharach relates that Eva never remarried, although she had the opportunity to do so. At the age of 66, she died in Sofia en route to the Land of Israel; there she was honored, as she had been throughout her travels, "because her name was known."

BACHARACH, ISAAC (1870–1956), U.S. congressman, philanthropist, and civic leader. Born in Philadelphia, Bacharach and his two brothers were brought to Atlantic City by their parents in 1881, thereby being among the very first Jews to live in that seaside resort community. Their father helped found Atlantic City's first synagogue, the Reform Beth Israel. Isaac's brother BENJAMIN (1865–1936) would serve as the synagogue's president for more than 20 years.

Starting with a single clothing store, Isaac Bacharach and his brothers expanded their interests into banking, real estate, and lumber. The brothers put together a syndicate that developed Brigantine, a resort community on nearby Absecon Island, and built the seaside resort's first hotel. Brother HARRY (1873–1947) was the first to enter politics, winning a seat on the Atlantic City City Council in 1900. In 1911, he was elected mayor, an office he would hold on-and-off until the mid-1930s. Together, the three brothers founded and helped underwrite the Jewish Community Center of Atlantic City.

Although limited to a high school education, Isaac excelled in business. Before he turned 30, he had become president of the Second National Bank of Atlantic City and a director of the city's Safe Deposit Company. Isaac joined brother

Harry on the Atlantic City City Council in 1907. In 1912, he was elected as a conservative Republican to the New Jersey State Assembly. In November 1914, he was elected to the first of 11 terms in the U.S. Congress. Following the overwhelming victory of the national Republican Party in 1920, Bacharach, now a member of the majority, was appointed to the powerful House Ways and Means Committee. During his tenure in Congress, Bacharach was appointed, along with former House Speaker Nicholas Longworth of Ohio and future speaker (and vice president) John Nance Garner of Texas, to oversee the construction of a new House office building. Today the building is known as the "Longworth Building." In 1924, the three brothers, along with their two sisters, built and dedicated a Home for Afflicted Children in Longport, New Jersey. More than 80 years later, there is still a Betty Bacharach Rehabilitation Center in Pomona, New Jersey, and a Betty Bacharach Hospital in Longport, New Jersey.

Following his defeat in the 1936 elections, Bacharach returned to Atlantic City to oversee his many business interests.

[Kurt Stone (2nd ed.)]

BACHARACH, JAIR ḤAYYIM BEN MOSES SAMSON (1638–1702), German talmudic scholar, with an extensive knowledge in the general sciences. Bacharach was the son of R. Moses Samson b. Abraham Samuel *Bacharach. Born in Leipnik, where his father officiated as rabbi, Bacharach, in his childhood, accompanied his father to Prague where the latter functioned as preacher, and then to Worms, where his father assumed the position of rabbi of the community. In 1653 Bacharach married Sarlan, the daughter of R. Sussmann Brilin of Fulda. He spent six years at the house of R. Sussmann, acquiring a profound knowledge of the Talmud and its commentaries, with special emphasis on Alfasi and Asher b. Jehiel. Deeply immersed in kabbalistic studies, he, like his father, became very much interested in the Shabbatean movement. He accumulated an impressive library of writings connected with Shabbetai Zevi's messianic pretensions. Moreover, a group of 13 talmudic scholars obligated themselves to meet daily under his leadership for purposes of study and self-sanctification in preparation of the impending redemption. Even decades later, after he recognized Shabbetai Zevi as a pseudo-Messiah, he always referred to him as "Rabbenu Shabbatai Zevi." His stepbrother, Tobias b. Moses *Cohn, in his *Ma'aseh Tuviyyah*, wrote apparently alluding to him: "Even many of the sages of the land and the great renowned rabbis, whom I would not want to mention publicly, accepted him as master and king over them."

In 1666, Jair was appointed rabbi and *rosh bet din* ("head of rabbinic court") at Coblenz. This was a position that carried prestige and comfort with it. Suddenly, in 1669, he was compelled to leave his office. This must have been the result of

partisan intrigue. His character is shown by the fact that he did not record the names of the offenders. The same year he again settled at Worms. When his father died in 1670, Bacharach temporarily functioned in his place as rabbi of Worms. However, he was disappointed in his hope of assuming the rabbinate of Worms, the pretext being that it was against the rule to appoint a resident of the city as rabbi. His resentment at being passed over in favor of R. Aaron Teomim, whom he deemed far inferior in scholarship, appears to have found a measure of satisfaction in his work *Matteh Aharon*, left in manuscript, in which he severely criticized the scholarly methods of the elected rabbi who had just published a commentary on the Passover *Haggadah* under the same title. After the latter had suffered a violent death, Bacharach placed parentheses around the sharper expressions, solemnly instructing any future publisher to soften the more offending passages. The work was finally published by Jellinek in *Bikkurim* (1865), 4–26; and again in *Ha-Misderonah* (1887), 348–64.

In 1689 when Worms was occupied by the French armies of Louis XIV, Bacharach fled to Metz with his family. In March 1690 he left for Frankfurt by himself in an unsuccessful attempt to collect some debts, and at this time his family was in such dire straits that his wife, with his consent, sold his extensive library for 250 Reichsthaler. During the next few years he was often forced to change his domicile, residing in various cities in the Rhineland. At Frankfurt in 1699 he published his monumental collection of 238 responsa under the name *Havvat Yair*. The title comes from Numbers 32:41, and means “The Tent-Villages of Jair,” implying that his decisions were but modest expressions of his opinions in contrast to former respondents whose works were like fortified towns. In the German pronunciation the title becomes “Haves Yoir,” meaning also “the Jair of Havvah,” and thus constituting a tribute to his erudite grandmother, Havvah or Eva, the granddaughter of *Judah Loew b. Bezalel and the female founder of the Bacharach house. This epoch-making work, which has gone through many editions, demonstrates not only Bacharach’s exhaustive knowledge of all branches of traditional rabbinic learning, but also the whole extent of his knowledge of the general sciences, such as mathematics, astronomy, and music, and shows also his opposition to the distorted type of *pilpul* current in his day. It contains some writings of his father and his grandfather.

Other printed works of Bacharach include *Hut ha-Shani* (“Scarlet Thread,” 1679) containing responsa of his father and grandfather, as well as 17 refutations of R. Samuel ben David’s *Nahalat Shivah* (1677) and notes on Alfasi published in the Vilna edition. Altogether he is said to have left 46 volumes of manuscripts (some of these being excerpts or collections of the works of others). The more important of these are *Ez Hayyim*, a compendium on the Jewish religion; glosses to Maimonides’ *Guide*; a commentary on the *Shulhan Arukh*; chronological tables and genealogical lists.

In 1699, the reestablished Jewish community of Worms finally chose Bacharach, now deaf, old, and sick, as their rabbi.

He had been granted his dearest wish: the satisfaction of being elected by this historic congregation to succeed his father and grandfather. He lived three more years. Bacharach’s method was one of strict logic. He manifested his independence vis-à-vis his father, citing the precedent of Maimonides. Thus, he says in one passage, vindicating his right to disagree with earlier authorities: “The spirit of God has made me, as it has made them” (Responsum no. 155). He was strict with respect to the obligatory nature of established religious custom. While he was a believer in the Kabbalah and busied himself with *gematria*, he warned against giving oneself over to the study of Kabbalah or philosophy – placing great value on simple faith.

[Jacob Haberman]

BACHARACH, MOSES SAMSON BEN ABRAHAM SAMUEL (1607–1670), rabbi and author. Bacharach was born in Pohořelice, Moravia, where his father Abraham Samuel (a prominent scholar in rabbinics and in other fields) was then rabbi. His mother Havvah, the daughter of Isaac Katz, son-in-law of R. Judah Loew ben Bezalel of Prague, was also distinguished for her learning and even wrote comments on Midrash and Targum. At the age of eight, upon the death of his father, Bacharach was taken to Prague, where he was educated under the tutelage of his two uncles, R. Hayyim and R. Naphtali ha-Kohen, both distinguished scholars. In 1627 he married a daughter of R. Isaac b. Phoebus, chief rabbi of Moravia. His father-in-law was taken prisoner, and the payment of a 10,000 gulden ransom left Moses impoverished, forcing him to accept the rabbinate of Hodonin (Moravian Slovakia) in 1629. In 1632 he became rabbi and head of the yeshivah at Leipnik. He experienced the travails of the Jews in the Thirty-Years’ War, to which he gave expression in a *selihah* which the Jewish community of Leipnik recited annually on the 17th of Tammuz. Subsequently, on the foundation of a charitable religious association (the *Barukh she-Amar* society), he composed a joyous song of thanks for deliverance from danger during the war, which was recited every year on Simhat Torah. In 1650 he was chosen rabbi of the community of Worms – perhaps the most influential position in German Jewry. He was in that office 20 years until his death. Some of his writings were included in the published works of his son, the famed R. Jair Hayyim *Bacharach.

[Jacob Haberman]

BACHARACH, NAPHTALI BEN JACOB ELHANAN, kabbalist who lived in the first half of the 17th century. The

dates of his birth and death are unknown. Bacharach was born in Frankfurt, but also spent some years in Poland with the kabbalists before he returned to his home town, and in 1648 he published his comprehensive book *Emek ha-Melekh* ("The King's Valley"), one of the most important kabbalistic works. The book contains a wide and systematic presentation of theology according to the Lurianic Kabbalah. It was based on many authorities, but relied mainly on Israel *Sarug's version presented in his book *Limmudei Azilut* (1897), which Bacharach included almost in its entirety into his own book with hardly an acknowledgment of the fact. Bacharach's claims that he brought back the sources of Luria's Kabbalah with him from Erez Israel, where he supposedly lived for some time, do not deserve credit. He also accused Joseph Solomon *Delmedigo who he claimed had been his pupil, of transcribing kabbalistic manuscripts which were in Bacharach's possession, and then publishing them, with noticeable distortions, in his books *Ta'alamot Hokhmah* (1629) and *Novelot Hokhmah* (1631). However, the contrary seems much more likely; that it was Bacharach who culled from Delmedigo's work as well as from many other sources without acknowledging them. While Delmedigo's interest lay in the abstract philosophical aspect of Kabbalah, which he attempted to explain to himself, Bacharach appears as an enthusiastic and fanatical kabbalist, with a special flair for the mystical and non-philosophical traits of Kabbalah – in Isaac Luria's Kabbalah as well as in the Kabbalah of the early kabbalists. This accounts for the strong emphasis given to such elements as the doctrine of the *Sitra Ahra* ("Other Side" – the Evil) and demonology. He wove the old kabbalistic themes together with the later ones in an elaborately detailed style. Without referring to Sarug, who is his most important source, Bacharach claims to derive his teachings from the books of Hayyim *Vital, although important chapters of his doctrine, such as his version of the doctrine of *Zimzum* ("Withdrawal") and all it entails, are completely foreign to Vital's writings. The merger of both these traditions characterizes this book, written with talent and clarity. Bacharach also borrowed liberally from certain parts of the book *Shefa Tal* by R. Shabbetai Sheftel *Horowitz (1612). His style is pervaded by messianic tension. The book *Emek ha-Melekh* had a great impact on the development of the late Kabbalah. It was widely recognized as an authoritative source on the doctrine of Isaac Luria and kabbalists from many countries, especially Ashkenazim, the great Habad Hasidim, and the school of the Gaon *Elijah b. Solomon Zalman of Vilna, quoted him extensively. His influence is also noticeable in Shabbatean literature, in Moses Hayyim *Luzzatto's system of Kabbalah, and in the book *Kelah* [138] *Pithei Hokhmah*. On the other hand, strong criticism of the book was soon expressed. Already in 1655, Hayyim ha-Kohen of Aleppo, a disciple of Hayyim Vital, in the introduction to his book *Mekor Hayyim* (1655), protested against Bacharach's claim of being the true interpreter of Luria's doctrine. The protests of Benjamin ha-Levi in his approbation to *Zot Hukkat ha-Torah* by Abraham *Hazzkuni (1659), and of the preacher Berechiah Berach, in his introduc-

tion to *Zera Berakh* (2nd part, 1662), against misrepresentations of Luria's Kabbalah were also intended for Bacharach. Moses *Hagiz says in *Shever Poshe'im* (1714) that *Emek ha-Melekh* is called *Emek ha-Bakha* ("Valley of Weeping"). Isaiah Bassan complains to M.H. Luzzatto about the numerous translations of chapters from *Emek ha-Melekh* in Latin referring to the *Kabbalah Denudata* by *Knorr von Rosenroth "which were among the important causes of prolonging our exile" (*Iggerot Shadal*, 29). H.J.D. *Azulai also wrote: "I have heard that no genuine writings got into his (Bacharach's) hands... therefore the initiated refrain from reading either it or the *Novelot Hokhmah*." In *Emek ha-Melekh* there is a reference to many other books by Bacharach concerning aspects of the kabbalist doctrine. Of these only a part of the *Gan ha-Melekh* on the Zohar is extant in an Oxford manuscript.

[Gershom Scholem]

BACHAUER, GINA (1913–1976), Greek born pianist of Austrian and Italian parentage. Bachauer studied at the Athens Conservatory under Woldemar Freeman. She then went to Paris, where she took lessons with Cortot. Between 1933 and 1935 she received lessons from Rachmaninoff in France and Switzerland. Her French solo début took place in the Salle Chopin, Paris, in 1929, and she first played in England in 1932. In 1933 she won the medal of honor at an international piano competition in Vienna, and in the 1930s played concertos with the Paris Symphony Orchestra conducted by Monteux and the Athens Symphony Orchestra under Mitropoulos. During World War II she lived in Alexandria and played numerous concerts for the Allied forces in the Middle East. In 1946 she made her début at the Albert Hall, playing Grieg's Piano Concerto with the New London Orchestra under Alec Sherman, who became her second husband in 1951. After her New York début in 1950 she received unanimous acclaim from the critics and her career was assured. She toured in the U.S. and Israel. Her unusually wide repertoire ranges from Mozart to Stravinsky. In both standard and modern works, she displayed impeccable taste. Her flair, grand style, big line, and exciting vigor are put to best use in big virtuoso works. Among her recordings are concertos by Beethoven, Brahms, Chopin, and Grieg, as well as solo works by Debussy. After her death in Athens, a Gina Bachauer International Piano Competition was founded. The Bachauer Archive at Brigham Young University preserves diaries, scores, and recordings from her distinguished career.

[Naama Ramot (2nd ed.)]

BACHE, U.S. family of investment bankers and art collectors. BACHE, JULES SEMON (1862–1944) was born in New York. After some years with his father's trading firm he became a ca-

shier in 1880 for Leopold Cahn and Co., investment bankers. Twelve years later he became head of the firm, which he renamed J.S. Bache and Co. Under his leadership the company became prominent in investment banking and securities trading, with interests in railroads, mining, manufacturing, trading, and insurance. Bache's philanthropy included donations to hospitals and scientific research, civic institutions, and the arts. He gave his outstanding collection of paintings, sculptures, tapestries, enamels, furniture, and porcelains to the State of New York for the Metropolitan Museum of Art.

[Joachim O. Ronall]

BACHER, EDUARD (1846–1908), Austrian lawyer and journalist. Bacher was born in Postelberg (Postoloprty), Bohemia. While studying law in Prague and Vienna, he became interested in parliamentary affairs and soon was appointed stenographer of the Bohemian Parliament (c. 1861). After completing his studies, he became chief stenographer of the Vienna *Reichsrat* and practiced as a successful lawyer. In 1872, he joined the staff of the leading liberal Vienna daily *Neue Freie Presse* (est. 1864 by Max Friedländer and Michael Etienne) as parliamentary reporter. The same year, on Friedländer's death, he was appointed editor of the domestic politics section and on May 1, 1879, after Etienne died, became editor-in-chief (later also publisher and part owner). In 1881, Bacher was joined by Moritz *Benedikt as co-editor. For almost three decades the *Neue Freie Presse* was closely linked to Bacher's personality and political orientation, serving as an organ of the German Liberal Party in Austria. His editorials had considerable influence on Austro-Hungarian domestic politics, promoting a centrist structure set against anti-liberal, national, or federal aspirations, and therefore opposing the conservative Austrian government of Count Taaffe (until 1893) and later Count Badeni (1897). Bacher was a corresponding member of the Society for Promoting Science, Arts and Literature in Bohemia and served as literary adviser of the Austrian prince royal, Archduke Rudolf, who committed suicide in 1889. From 1896/97, Bacher's political creed also led him to reject the new Zionist movement of Theodor *Herzl, who had joined the *Neue Freie Presse* as Paris correspondent in 1891. As frequently deplored in Herzl's diaries, Bacher would not let him publish any reports on the Zionist movement or the Zionist Congresses in the paper. After Bacher's death, the *Neue Freie Presse* was continued by Benedikt until 1920.

[Johannes Valentin Schwarz (2nd ed.)]

BACHER, ROBERT FOX (1905–2004), U.S. physicist. Born in Loudonville, Ohio, Bacher joined the staff of the Massachusetts Institute of Technology in 1932. After teaching at Cornell University for a time, he returned to MIT as a research associate in the radiation laboratory. During World War II he worked on the bomb project at the Los Alamos laboratory, and he became head of the bomb physics division. He was a member of the Atomic Energy Commission from 1946 to 1949. He was then appointed professor of physics at the California Institute of Technology, heading the Mathematics, Physics, and Astronomy Division. He retired in 1976.

BACHER, SIMON (1823–1891), poet and Hebrew translator. Bacher was born in Szent Miklos, Hungary, and was the father of the Orientalist Wilhelm *Bacher and a descendant of Jair Hāyym *Bacharach. When writing in Hebrew, he used the latter's surname. In 1867 he moved to Budapest, where he was employed as a bookkeeper. From 1874 until his death he served as the treasurer of the Jewish community. Bacher wrote poetry in the flowery style of the Haskalah and also translated German and Hungarian poetry into Hebrew. He was a regular contributor to the Hebrew periodicals *Ha-Havazzelet* and *Kokhevei Yizhak*. In 1865 his Hebrew translation of Lessing's *Nathan der Weise* appeared in Vienna, and in 1868 he published *Zemiroth ha-Arez* ("Songs of the Land"), an anthology of translations from Hungarian poetry. His selected works, *Sha'ar Shimon* (3 vols., 1894), were published posthumously by his son.

BIBLIOGRAPHY: W. Bacher, in: *Sha'ar Shimon*, 1 (1894), 9–36; J. Patai, *Mi-Sefunei ha-Shirah* (1939), 31–35.

[Gedalyah Elkoshi]

BACHER, WILHELM (1850–1913), Hungarian Semitic scholar. Bacher was born in Liptó-Szent-Miklós (now Liptovsky Svätý Mikuláš, Slovakia), the son of the Hebrew poet Simon *Bacher. In 1876 he was ordained and appointed rabbi of Szeged, Hungary, and the following year professor at the newly founded rabbinical seminary in Budapest, where he taught biblical exegesis, Midrash, homiletics, and Hebrew poetry and grammar. From 1907 until the end of his life he was head of the seminary. In 1884 with Joseph Banoczi he founded the Hungarian Jewish monthly *Magyar Zsidó Szemle*. In 1894 he helped found a Jewish-Hungarian literary society, *Izraelita Magyar Irodalmi Társulat*, and was the editor of its yearbook until 1899; this society instituted the publication of a Hungarian translation of the Bible (1898–1907). At the same time Bacher served as a consulting editor for the *Jewish Encyclopedia* (1901–06) and wrote a number of monographs for it. Bacher's fields of study included biblical exegesis, Hebrew philology, *aggadah* and Midrash, and Judeo-Persian literature. Many of his works were translated into Hebrew by A.Z. *Rabinovitz. In his works on *aggadah* he classified aggadic sayings by author determining the contribution of each *tanna* and *amora*. These works include *Die Agada der Babylonischen*

Amoräer (1878, also in Hg., 1913²); *Die Agada der Tannaiten* (2 vols., 1884–90); *Die Agada der Palaestinischen Amoräer* (3 vols., 1892–99; repr. 1965); *Die Prooemien der Alten juedischen Homilie* (1913); *Rabbanan, Beitrag zur Geschichte der anonymen Agada* (1914); and *Tradition und Tradenten in den Schulen Palaestinas und Babyloniens* (1914). In the last work Bacher discusses the manner in which the *amoraim* in Babylonia and Palestine transmitted the teachings of the early scholars, especially the *tannaim* of the *beraitot*. Of particular significance from the standpoint of content and style is Bacher's *Exegetische Terminologie der juedischen Traditionsliteratur* (2 parts, 1899, 1905, repr. 1965). In the first part of this work Bacher arranged the Hebrew and Aramaic terms used by the *tannaim* in their exegesis in alphabetical order and in the second part, those of the Palestinian and Babylonian *amoraim*. He also dealt with the terms used by the *amoraim* to explain the terminology of the *tannaim*. Bacher dealt extensively with medieval Jewish biblical exegesis. In addition to *Die Juedische Bibelexegese vom Anfange des Zehnten bis zum Ende des Fuenfzehnten Jahrhunderts* (1892), he wrote detailed studies on Abraham ibn Ezra's works, Saadiah's Arabic translation of the Book of Job (in: Derenbourg, *Oeuvres Complètes de R. Saadiah*, 1899), Moses ha-Kohen ibn *Gikatilla's work on the same book, and on *Samuel b. Hophni. He published a study in German and Hungarian on the biblical exegesis of Jewish religious philosophers before Maimonides, *Die Bibel-exegese der Juedischen Religionsphilosophen des Mittelalters vor Maimünis* (1892), and on the exegetical methods of Maimonides, *Die Bibelexeges Moses Maimünis* (1896). He wrote two works on the biblical commentaries of Ibn Janah, *Leben und Werke des Abulwaïd Merwân ibn Ganâh* (1885), and a detailed study of the biblical exegesis of the Zohar. Bacher dealt extensively with the development of Hebrew during the Middle Ages, including the masorah, the beginning of the study of Hebrew grammar (*Die Anfaenge der hebraeischen Grammatik*, 1895), and the pioneering work of Judah ibn *Hayyuj in the field of Hebrew grammar (*Die Grammatische Terminologie des Jehuda b. Dawid Hajjug*, 1882). Bacher was the only Jewish scholar of his generation to deal with Judeo-Persian literature. His continuous flow of publications, based on the collection of Judeo-Persian manuscripts of Elkan Nathan *Adler, made him the undisputed authority in this field. Among his many works on Judeo-Persian literature are *Hebraeisch-Persisches Woerterbuch aus dem vierzehnten Jahrhundert* (1900) by Solomon b. Samuel of Turkestan; "Ein persischer Kommentar zum Buche Samuel" (in ZDMG, 51 (1897), 329–425); *Zwei juedisch-persische Dichter, Schahin und Imrani* (1907–08); and "Juedisch-Persisches aus Buchârâ" (in ZDMG, 55 (1901), 244–57; 56 (1902), 729–59). Bacher helped lay the foundations for the study of Hebrew grammar from the talmudic period to the end of the Middle Ages; he was the first scholar to deal with the Hebrew and Arabic poetry of Yemen. Above all, he was one of the first scholars to engage in the scientific study of *aggadah* and Midrash.

[Moshe Nahum Zobel]

BACHI, ARMANDO (1883–1943), Italian soldier. Born in Verona, Bachi went into the artillery where he was commissioned in 1902 and remained in this branch of the army for most of his career. In World War I he became deputy chief of staff of the 48th and 30th divisions, and was awarded the Military Cross. After the war he was a lecturer in artillery at the Turin Military Academy and in 1934 was given command of an artillery corps. By 1938 he had become a lieutenant general in command of a motorized army corps, but when the racial laws were enacted that year, he was forced to resign his commission. In 1943 he and his family were arrested in Parma and died in Auschwitz.

[Massimo Longo Adorno]

BACHI, RAPHAEL (1717–1767), French miniature painter. Born in Turin, he moved to Paris where he set up as tobacconist and snuff merchant. He learned the art of miniature painting through the decoration of snuff-boxes. His work was recognized when the French court employed him to paint miniature portraits on snuff-boxes presented to foreign notables. His clientele included many members of the nobility such as the Duke of Modena and the Prince de Condé. In an official list of the Jews residing in Paris during the years 1755–1759, he is mentioned as "peintre en miniature, de beaucoup de talent."

BACHI, RICCARDO (1875–1951), Italian economist and statistician. Bachi was born in Turin and studied in Venice. He laid the foundations for the scientific study of price fluctuations and wrote on the economic history of the Risorgimento. From 1904 to 1908 Bachi edited the Italian Labor Department bulletin on employment, and from 1909 to 1921 he issued *L'Italia Economica*, an annual publication which he founded. From 1915 Bachi taught statistics and economics at the universities of Macerata, Parma, and Genoa, and in 1926 he was appointed to the chair of political economy at the Royal Institute of Economic Sciences in Rome. After the enactment of the anti-Jewish laws in Italy in 1938, he went to Palestine, where from 1940 to 1946, he lectured at the Tel Aviv branch of the Hebrew University. In 1946 he returned to the University of Rome. Interested in Zionism from the 1920s, he investigated the economic history of Jews, in particular the

economic relations between Jews and non-Jews in the Diaspora. Noteworthy among Bachi's writings are his *Principi di scienza economica*, 2 vols. (1937–40), *Israele disperso e ricostruito* (1952), and his introduction to the Hebrew translation of Simḥah Luzzatto's "On the Jews of Venice" (*Ma'amar al Yehudei Venezyah*, 1950).

[Joseph Baruch Sermoneta]

BACHI, ROBERTO (1909–1995), statistician and demographer. Bachi was born in Rome and completed his studies in law and statistics at the University of Rome. He taught statistics in various universities in Italy and was appointed full professor in 1937. In 1938 he emigrated to Palestine soon after the decree of the Racial Laws by Fascist Italy. He worked as a statistician in the Hadassah Medical Organization, and during 1945–47 in the Department of Statistics of the Mandatory Government. From the early 1940s he taught statistics at the Hebrew University and was appointed full professor in 1947.

With the foundation of the State of Israel Bachi was appointed government statistician. He founded Israel's Central Bureau of Statistics, which he directed until 1971, and was responsible for its independent status and academic integrity. He was among the founders of the Faculty of Social Sciences of the Hebrew University and served as its first dean (1953–56). During the 1950s he headed the Department of Statistics and Demography and in 1959–60 he was pro-rector of the Hebrew University. In 1960 Bachi founded the Department of Demography and Statistics at the Institute of Contemporary Jewry of the Hebrew University, which became an international center. He devoted much attention to the practical implications of demographic studies, which are of vital importance to the Jewish people throughout the world. Under Prime Ministers Ben Gurion and Eshkol he chaired a committee on Israel's demographic policy. Bachi taught generations of students, many of whom have long occupied prominent positions in academic institutions. After his retirement in 1977 he concentrated on the two fields of methodological research, which occupied him throughout his life – geostatistics and graphical representation of statistical data. He developed innovative methods for reducing vast quantities of geographical-statistical data and their graphic representation in computerized maps. His most important work, summarizing these methods, was published posthumously: *New Methods of Geostatistical Analysis and Graphical Presentation: Distribution of Populations over Territories* (1999). Bachi published a large number of works, including: *La Mobilità della Popolazione all'interno delle grandi Città Europee* (Rome, 1933), *Graphical Rational Patterns* (Jerusalem, 1968), *Population Trends of World Jewry* (Jerusalem, 1976), and *The Population of Israel* (Jerusalem, 1977). He was member of the Israel Academy of Sciences and honorary member of the American Statistical Society.

Nathan, *Studies in the Population of Israel in Honor of Roberto Bachi* (1986); "Roberto Bachi: A Selected Bibliography," in: *Scripta Hierosolymitana*, 30 (1986), 417–24; S. Della Pergola and N. Gad, "Le-Zekher Roberto Bachi," in: *Ma'adei ha-Yahadut*, 36 (1996), 187–89.

[Margalit Bejarano (2nd ed.)]

BACHMANN, JACOB (1846–1905), Russian *hazzan* and composer of synagogue music. Bachmann served as a boy-singer with the *hazzan* of his native town of Berdichev. He developed a phenomenal voice and was admitted to the Petrograd Conservatoire in 1864. Anton *Rubinstein became his teacher and later took him on his concert tours as a solo singer. Bachmann, nevertheless, decided to be a *hazzan* and established his reputation at the synagogues of Berdichev, Rostov, and Constantinople. During his stay at Lemberg until 1884, Bachmann founded a mixed choir and took up composition. As successor to Osias *Abrass at Odessa (1884–85), he was acclaimed by the public. He later settled in Budapest. Bachmann's voice is said to have covered the entire range from dramatic tenor to powerful bass, highlighted by an extraordinary echo-falsetto. His compositions are influenced by Rubinstein, the "Westerner" in Russian music. Bachmann was eager to show command of contemporary musical devices (*Schirath Jacob*, pp. 54, 79, 89, 95, 96), including reminiscences of Bach (*ibid.*, p. 188) or Meyerbeer (*ibid.*, p. 89), and was able to write striking, though rather conventional, choral settings (*ibid.*, pp. 18–19). However, Bachmann has to be judged by his improvisations in traditional *hazzanut*, a small part of which is included in his printed works. Bachmann's cantorial recitative was at its best at the sublime moments of the High Holy Days' liturgy (*ibid.*, 159–64). Works: *Cantata* (Ps. 45) for the silver jubilee of Francis I (1879); *Schirath Jacob* (1884); *Uwaschofor godol* (1889); and *Attah Zokher* (after 1905). Unpublished works exist in manuscript form in the David Puterman Library, N.Y.

See also G. Ephros, *Cantorial Anthology*, 2 (1929), 117–119.

[Hanoch Avenary]

BACHRACH, JACOB BEN MOSES (also called **Ba'al ha-Ma'amarim** or **Jacob ha-Bachri**; 1824–1896), rabbi and grammarian. Bachrach, a descendant of Jair *Bacharach, was born in Sejny in the district of Suwalki; he studied with his grandfather Judah *Bachrach. In addition to being an accomplished talmudist he was versed in secular knowledge. For many years he was superintendent of the Hebrew department of a printing establishment in Koenigsberg. In 1858 he published in that press his *Mazref ha-Avodah*, which deals with the controversy over Ḥasidism between Benjamin Wolf of Slonim, a disciple of *Elijah b. Solomon Zalman the Gaon of Vilna, and Joseph

of Nemirov, a disciple of *Levi Isaac of Berdichev. Later editions of this book carry the title *Vikkuḥa Rabbah* ("Great Debate"). In 1858 he also published the *Sefer Yuḥasin* of Abraham *Zacuto with corrections and comments. Between 1861 and 1864 he published Jacob b. Asher's *Turim* with his own annotations. From Koenigsberg he moved to Sebastopol. There, while managing a refinery, he began to take an interest in the literature of the *Karaites and engage in polemics with them. In 1893 his book *Me-ha-Ibbur u-Minyan ha-Shanim* ("Concerning Intercalation and the Calendar") appeared in Warsaw. In it he attempted to prove the antiquity of the Hebrew *calendar, in opposition to the Karaite theory on one side and to the opinion of Ḥ.Z. Slonimsky on the other side. From there he moved to Bialystok, where he played an important role in founding the Hovevei Zion movement and was sent to Erez Israel in 1882. His findings during his visit there are contained in his *Sefer ha-Massa le-Erez Yisrael* (Warsaw, 1884), one of the earliest propaganda books of the Hovevei Zion. For a short time, he was also private secretary to Samuel *Mohilever. Bachrach also engaged in scientific study of the Hebrew language. Among other things, he tried to prove the antiquity of the Hebrew vowels and accents, in opposition to the opinion of Elijah *Levita who had held that these were not introduced until after the conclusion of the Talmud. These studies appeared in *Sefer ha-Yaḥas li-Khetav Ashuri ve-Toledot ha-Nekuddot ve-ha-Te'amim* ("History of the Assyrian Script, Vowels, and Accents," Warsaw, 1854) and *Hishtaddelut im Shadal* ("Engagement with Samuel David Luzzatto," Warsaw, 1897), a kind of extension to his earlier work. Despite the great acumen shown in his works, they did not meet with the general approval of the scholars of his time.

BIBLIOGRAPHY: E. Atlas, in: *Ha-Asif*, 1 (1884), 246 ff.; S. Wiener, *Kohelet Moshe* (1893–1918), nos. 3311, 4521, 4723; *Lu'ah Aḥi'asaf*, 5 (1898), 326; *EZD*, 1 (1958), 291–3; Kressel, *Leksikon*, 1 (1965), 241–2.

BACHRACH, JUDAH BEN JOSHUA EZEKIEL (1775–1846), Lithuanian rabbi and author. Judah succeeded Isaac Avigdor as *av bet din* of Sejny (near Suwalki in Poland) where he remained until his death. After his death, his novellae and glosses to the Talmud and to Alfasi were published in the Vilna (Romm) edition under the title *Nimmukei ha-Grib* (= **Ha-Gaon Rabbi Judah Bachrach**). His glosses to Maimonides' *Mishneh Torah* are also known. Bachrach is particularly important because of his ties with *Elijah b. Solomon Zalman Gaon of Vilna, who was a relative of his father-in-law, Israel Burlioner. Bachrach possessed a number of tractates of the Talmud which had been used by Elijah Gaon and which contained manuscript glosses by him, differing from those published in the Vienna edition of the Talmud of 1826–31. These volumes were purchased by the Romm publishers from Bachrach's children and the glosses were published in the Vilna edition of 1880–86.

[Yehoshua Horowitz]

BACHRACH, MOSES BEN ISAIAH MENAHEM (also known as **Moses Mendels**; 1574–1641), talmudic scholar. Bachrach was *av bet din* in Szydlow, Wlodzimierz, Cracow, and Frankfurt from before 1605 until after 1614. Apparently he then went to serve in a similar capacity in the district of Cracow since Meir b. Gedaliah *Lublin mentions him in one of his responsa of that period as being there. He carried on a halakhic correspondence with Benjamin Aaron *Slonik in 1619, at which time he was in Vladimir. In 1636 he was succeeded by R. Yom Tov Lipmann *Heller as *av bet din* in Prague, moving from there to Posen, where he succeeded Simeon Wolf b. David Auerbach as *av bet din*, and where he remained for the rest of his life. He participated in the sessions of the Council of the Four Lands in Yaroslav (1614) and in Lublin (1639). Jacob *Reischer in his *Shevut Ya'akov* refers to him as an outstanding talmudic scholar. *Moshel ba-Elyonim Attah Yadata*, a *seliḥah* he wrote during an epidemic, is still extant. It is included in the *Seliḥot* of Posen, Cracow, Prague, Worms, and Alsace. One of his responsa is included in the responsa *Hinnukh Beit Yehudah* of Judah Leib b. Ḥanokh (Amsterdam, 1708, no. 76). His son ISRAEL wrote *Sefer Marot ha-Zedek* and an index to the *Shelah* of Isaiah *Horowitz (Amsterdam, 1682). His daughter, Edal, translated an abridged version of *Josippon into Yiddish (Cracow, 1770).

BIBLIOGRAPHY: M. Horovitz, *Frankfurter Rabbinen* (1969²), 38, 47, 62, 280–1; Dembitzer, in: *Ozar ha-Sifrut*, 4 (1892), 230–1; Wettstein, in: *Ha-Eshkol*, 5 (1905), 253; Halpern, Pinkas, 61, 490; Davidson, *Ozar*, 3 (1930), 107 no. 834; D. Avron (ed.), *Pinkas ha-Keshirim shel Kehillat Pozna* (1966), 72, 120.

BACK, SAMUEL (1841–1899), rabbi and scholar. Back, who was born in Galgocz (now Hlohovec, Slovakia), served as rabbi in Prague-Smichov from 1872. He wrote on philosophical, historical, and talmudical subjects. His published works include *Josef Albos Bedeutung in der Geschichte der juedischen Religionsphilosophie* (1869), *Das Synhedrion unter Napoleon I* (1879), *R. Meir ben Baruch aus Rothenburg* (1895), *Entstehungsgeschichte der portugiesischen Gemeinde in Amsterdam und Rabbi Menasse ben Israel* (1883), *Elischa ben Abuja-Acher* (1891), and "Die Fabel in Talmud und Midrash" (in *MGWJ*, vols. 25, 29, 30, 33). Back also published sermons and eulogies as well as articles in learned periodicals.

BACKER, GEORGE (1902–1974), U.S. publisher, politician, and communal leader. Backer was born in New York. He worked briefly in the family's real estate firm, but devoted himself mainly to politics and the arts. In 1937 and 1938 Backer ran unsuccessfully for Congress as an American Labor Party candidate, and served on the New York City Council. From World War II he was a leader of the reform wing of New York

Democrats, and was closely associated, as friend and political adviser, with W. Averell Harriman. In 1939 Backer purchased the *New York Post*, became its publisher and editor, and imbued it with a strong liberal outlook. His former wife, Dorothy *Schiff, assumed control of the newspaper after their divorce in 1942. Backer had a deep interest in music and drama, sponsoring theatrical productions and writing plays. His novel *Appearance of a Man* was published in 1966. Backer's Jewish activities date from the early 1930s when he became alarmed at the rise of Nazism. He visited Germany and Poland in 1933, 1934, and 1936, urging Jews to emigrate, and was active in American organizations aiding refugees. Among the Jewish groups with which he was affiliated are the American Jewish Joint Distribution Committee, American ORT, Jewish Telegraphic Agency, and American Jewish Committee.

BIBLIOGRAPHY: *New York Times* (July 20, 1966).

[Morton Rosenstock]

BACKMAN, JULES (1910–1982), U.S. Reform lay leader. Backman was born in New York and received his D.C.S. from New York University in 1935. He became an economic advisor to federal and state governments, a professor at NYU, and an editorial writer for the *New York Times*. Backman served as national chairman of the Reform Jewish Appeal (1965–69) and was a member of the executive committee of the Union of American Hebrew Congregations. He was elected to the Board of Governors at Hebrew Union College-Jewish Institute of Religion in 1963, rising to become its chairman from 1976 until his death. Backman, who was instrumental in relocating the New York school of HUC-JIR to its present home near Washington Square and the NYU campus, received the seminary's American Judaism Award in 1970.

[Bezalel Gordon (2nd ed.)]

BACON, HIRSCH LEIB (1875–1928), *hazzan*. Hirsch Leib Bacon was born in Kolbuszow into the Bacon family of cantors. He studied in the yeshivah in Tarnow and during the period of his studies sang with Cantor Eliyahu Brandsdorfer. He moved to Nowy Sacz and established a choir that performed *hasidic* melodies and Psalms. In 1905 he was appointed cantor in the great synagogue of Chryzanow. He composed music for the Sabbath and holiday prayers, and for other occasions. He wrote hundreds of compositions. His son, Prof. Yitzhak Bacon, chairman of the department of Yiddish at Ben-Gurion University in Beersheba, is now publishing his father's compositions, which he wrote down from memory. In 1919 Hirsch Leib Bacon moved to Berlin and served as cantor in the *bet midrash* at Grenadierstrasse 37 until 1924, when he returned to Chryzanow.

[Akiva Zimmerman]

BACON, ISRAEL (1910–1943), *hazzan*. Bacon was born in Chryzanow, to a family of cantors, originating from Kolbus-

zow in Galicia. He was the son of Hirsch Leib Bacon. At the age of nine he went with his parents to Berlin and sang in his father's choir. At the age of eleven he was asked by the Jewish theater in Berlin to sing at a performance. His father did not approve and as a result he returned to Chryzanow with his son. Israel Bacon studied in the yeshivot of Tschebin and Bobov. At the age of 21 he appeared in various cities of Europe. He served as a cantor in Czechoslovakia and sang in concerts in London, Hamburg, Antwerp, and Berlin, where he also participated in activities of the Kulturbund. In Berlin he produced several records, including selections of Psalms and songs in Yiddish and Hebrew. Among his piano accompanists on these records was the musician Arno *Nadel. In 1939 he was appointed cantor at the *bet midrash* "Ahavat Re'im" in Cracow, but when he arrived there, the war broke out. He was transferred to the Tarnow ghetto where he encouraged the Jews with his singing. In 1943 he was taken to the extermination camp in Belzec where he was killed.

[Akiva Zimmerman]

***BACON, ROGER** (c. 1214–1294), English philosopher and Hebraist. Bacon studied at Oxford (probably) and – from 1236 at the latest – Paris. He learned Hebrew, and his transliterations, reflecting Sephardi pronunciation, imply Jewish assistance. Bacon's advanced criticisms of scientific and theological methodology led Bonaventura, general of the Franciscans, to stop his teaching at Paris; after Stephen Tempier's Paris condemnation (1277) of the 219 propositions and of magical instruction, he was allegedly imprisoned for 14 years by Jerome de Ascoli, later Pope Nicholas IV. Meanwhile, in 1266, Clement IV (Guy du Foulques) had directed him to disregard his order's instructions and to write up, *in extenso*, his scholarship and views on ecclesiastical abuses. Bacon's resultant writings contain frequent references to Hebrew as the fountainhead of all philosophical knowledge and as indispensable for Bible study, all Latin versions being corrupt. While criticizing *Andrew of Saint Victor for his addiction to Jewish exegesis and deprecating contemporary acknowledgment of Andrew as authoritative, Bacon commended the former's resort to the original Hebrew text. He extolled Robert Grosseteste's endeavors to promote Hebrew studies, and a certain "*homo sapientissimus*" (probably William of Mara) for pursuing them.

Besides substantial competence in biblical Hebrew, Bacon evinced interest in the Jewish calendar and a grasp of linguistic science; he appreciated the affinity of Hebrew, Aramaic, and Arabic as comparable to that of the Romance languages. He contemplated writing a Hebrew grammar, and a fragment – the earliest known Hebrew grammar by a named gentile scholar in the West – survives (Cambridge Ms. Ff. 6. 13; appended to Bacon's *Greek Grammar*, ed. E. Nolan, 1902). Hirsch, who assembled and translated the relevant passages in Bacon's works, tentatively connected some correspondence (Ms. Toulouse 402) regarding Hebrew grammar and

the calendar with Bacon (S. Berger, *Quam Notitiam...* (1893), 37–38).

BIBLIOGRAPHY: S.A. Hirsch, in: JQR, 12 (1899/1900), 34–35; B. Smalley, *The Study of the Bible in the Middle Ages* (1952²), index; A.G. Little, *Roger Bacon* (1928). **ADD. BIBLIOGRAPHY:** B. Clegg, *The First Scientist: A Life of Roger Bacon* (2004); ODNB online.

[Raphael Loewe]

BACON, SHLOMO REUVEN (1899–1986), *hazzan*. Shlomo Reuven Bacon was born in Tchekova near Chryzanow into the Bacon family of cantors originating from Kolbuszow in Galicia. From childhood he had a beautiful voice and sang in the choir of father cantor Haim Bacon, who served as *hazzan* in the cities of Des, Berlin, and Klausenberg, and was killed in the Holocaust. Shlomo Reuven Bacon also sang in the opera in Klausenberg and won great acclaim, but his father's opposition caused him to leave the opera. He was appointed as a cantor in London and from there moved to South Africa, serving for many years as a cantor in the Yovel Synagogue in Johannesburg. He was the secretary of the Cantorial Association in South Africa.

[Akiva Zimmerman]

BACON, YEHUDA (1929–), Israel painter. Born in Moravska Ostrava, Czechoslovakia, Bacon spent the years 1942–45 in concentration camps and was later sent on the "death march" to *Mauthausen, where he was liberated. In 1946 he was taken to Israel by *Youth Aliyah and studied at the *Bezalel School of Art, Jerusalem, and then continued his studies in Italy, London (1956–57 at the Central School of Art), New York, and Paris (1957–58, Beaux Arts). He was the head of the department of etching and lithography at the Bezalel School of Art and taught at Haifa University. Bacon concentrated on graphic work, but turned to a variety of media including oils, watercolors, and inks. The horror of the Holocaust was present in his work, tempered by faith in humanity. His later work, however, had a gentle, romantic quality. He was a witness at the Eichmann Trial in Jerusalem, and the Auschwitz Trial in Frankfurt. He won the Gold Medal of the Academie International in 1972, the Moshe Kol Prize in 1984, and the Sussman Prize for Artists from Yad Vashem for using the Holocaust as a subject. His drawing *In Memory of the Czech Transport to the Gas Chambers* depicting his father's murder is displayed at the Yad Vashem Museum.

BACON, YIDEL (1886–1954), *hazzan*. Yidel Bacon was born in Kolbuszow and belonged to the Bacon family of cantors. He studied cantorial singing with Cantor Baruch Shorr in Lvov. He sang in the choir of Cantor Eliezer Goldberg in Cracow, where he studied at the conservatory. He served as a cantor in Lancut in Galicia and from there moved to Leipzig. Later he moved to the United States and served as cantor at the Attorney Synagogue in New York City. He composed music for

many sections of the prayer service and assisted in the training of cantors. Some of his compositions for the prayers of the High Holy Days have been published by the Cantorial Council of America.

[Akiva Zimmerman]

BACRI, Algerian family prominent near the end of Ottoman rule, with special status within the community and at the dey's court. The family had an important role in diplomatic relations between the Ottomans and several European states as well as in ransoming Jewish captives and arming neutral fleets in the Mediterranean. It had two branches, one in the capital, *Algiers, which had relations with France in Napoleon's time, the other near the western borders, in *Oran, which had connections with Spain. Relations with France, however, were not smooth, as in 1795 when the authorities impounded their merchandise in retaliation for the family's arming a pirate ship. After the Napoleonic era the Bacris did increased business with Spain.

[Shalom Bar-Asher (2nd ed.)]

JOSEPH COEN BACRI (1740–1817), banker, trader, and communal leader, was born in Algiers. He founded the Bacri Frères firm which played a significant role in Algerian politics for fifty years. The firm was an important wheat supplier to France during the Napoleonic period. In 1811, after the execution on a charge of treason of his son David, who had been active manager of the firm for several years, Joseph reassumed the management of the firm's affairs and was appointed leader of the Algerian Jewish community by the dey. However, in 1816, the dey confiscated his possessions and banished him from Algiers. According to other sources, he fled because of the anti-Jewish atmosphere. Bacri died in poverty in Leghorn.

DAVID COEN BACRI (1770–1811), son of Joseph, was a financier and communal leader. David had widespread shipping and trading interests and served as the financial agent for many European firms and governments. In 1797 he married Aziza, a niece of Naphtali *Busnach. Busnach, a statesman who was able to manipulate the Algerian Regency for his own purposes, became a partner in the firm. Under David's management, the firm of Bacri Busnach became so powerful and its operations so extensive that it was able to defy the British government and buy captured allied vessels from French privateers.

Acting on the advice of Bacri Busnach, the dey authorized a five-million franc loan to the French Directory. The credit for the loan was later transferred to the firm. The subsequent 30-year-long dispute over the settlement of the loan was one of the factors which exacerbated relations between Algiers and France, and led eventually to the French occupation of Algeria in 1830. After Naphtali's assassination by a soldier of the dey's palace guard in June 1805, Bacri Busnach became insolvent. David was imprisoned for allegedly owing the government five million francs. The European gov-

ernments, however, which had profited by David's business activities, put pressure on the Algerian Regency and secured his release. These same governments then helped David set up the Bacri firm in payment for his past services to them. In 1806 the dey named him head of the Jewish community. Subsequently, his enemy, David Duran, who wanted the leadership for himself, denounced Bacri to the authorities and he was executed for treason.

JACOB COEN BACRI (1763–1836), a financier, served as French consul in Algiers under the restored Bourbon monarchy. In 1827, he represented Charles X in negotiations with Dey Hassan in regard to a French claim. Hassan, angered by Bacri's impassioned defense of French interests, insulted him. The French government regarded the dey's action as a national insult and as an immediate excuse to declare war. The war resulted in the French conquest of Algiers in 1830 and the banishment of the dey.

Bacri, who had left Algiers at the outbreak of the war, settled in Paris. During the last years of his life, he was continually importuned by creditors because of his inability to collect a 35-million-franc debt from the Spanish government.

BACRI, JEAN-PIERRE (1951–), French actor, playwright, and screenwriter. Bacri was born in Castiglione (French Algeria), where his father was a mailman and part-time worker at the local movie theater. The family moved to Cannes at the end of Algeria's war of independence and Bacri began to write copy for an advertising company in Paris in 1976 while studying theater at the prestigious Cours Simon and writing his first comedies, including the 1980 *Le grain de sable*, which was awarded the Tristan Bernard Prize. He began to make a name for himself as an actor in Alexandre Arcady's feature film *Le Grand Pardon*, dealing with the Jewish-Algerian mafia, and in Luc Besson's *Subway* (1985), where he established his trademark character, taciturn and grouchy but sensitive. After collaborating regularly with satiric playwright Jean-Michel Ribes, Bacri went on to create several witty, ironic, and biting but humanistic comedies, co-written with his wife, Agnes Jaoui, which became tremendous popular successes that were adapted for the screen: *Cuisines et dépendances* (1993) and *Un air de famille* (1995). The couple also adapted two plays by Alan Ayckbourn for the screen, *Smoking* and *No Smoking*, for renowned avant-garde film director Alain Resnais (1993). The collaboration with Resnais later gave birth to the musical comedy *On connaît la chanson* (1997), a witty exploration of French popular culture. Actor and co-screenwriter in Agnes Jaoui's first movies, *Le goût des autres* (2002) and *Comme une image* (2005), Bacri was also worked in films by Sam Karmann,

Alain Chabat, Nicole Garcia, and Claude Berry, establishing himself as one of France's most popular actors.

BADAJOS, city in Castile, western Spain, near the Portuguese frontier. Jewish settlement evidently began to develop in the 11th century, when Jewish artisans and merchants engaged in international trade are mentioned. After the Christian reconquest, the Jews of Badajoz were ordered to pay the *oncena* in addition to other taxes for which they were liable (1258). In the 15th century the Badajoz community claimed that it had been exempted from all taxes and imposts and was required to produce evidence at the synod of *Valladolid. The tax assessment for Castilian Jewry of 1474 required the Badajoz and Almendral communities to pay the sum of 7,500 *maravedis*. The enactment ordering the segregation of Jews from Christians was implemented in Badajoz during the 1480s, and many Jews were turned out of their homes. After the edict of expulsion of the Jews from Spain in 1492, large numbers of the exiles passed through Badajoz on their way to Portugal. Badajoz remained an important Converso center. Between 1493 and 1499 the local inquisitional tribunal punished no fewer than 231 New Christians. David *Reuveni was burned at an auto-da-fé in Badajoz in 1535 after a long imprisonment there. The temporary union of Portugal and Spain in 1580 facilitated the return of some descendants of the Castilian refugees to Castile. In 1635 a large group of Portuguese Marranos was discovered in Badajoz and was relentlessly pursued by the Inquisition. In 1639 some members of the Acosta family, one of the most important families in the city – two sisters and their sister-in-law – were accused by the Inquisition in nearby Llerena of remaining loyal to Judaism. The family's Jewish origin was well known in the city. The family had arrived from Portugal at the end of the 16th century. The scandal that the trial of members of a very wealthy and influential family caused was devastating. The three women, Isabel, Beatriz, and Clara, belonged to a family that had originally left Castile for Portugal in 1492 because they wanted to remain Jewish but soon found themselves trapped in Portugal and forcibly converted in 1497. The three were thrown into prison. The trial was the consequence of a love affair between a female member of the family and an employee of the family business who was of Morisco origin. During the trial the differences between the members of the same New Christian family became clear: Some were Crypto-Jews, others wished to integrate within Christian society, while a few wished to maintain the family link at all costs.

°**BADÈ, WILLIAM FREDERIC** (1871–1936), biblical archaeologist. Born in Carver, Minnesota, Badè taught Old Testament literature at Moravian Theological Seminary, Bethlehem, Pennsylvania, from 1898 to 1902; from 1902 to 1936 he was professor of Old Testament literature and Semitic languages at the Pacific School of Religion, Berkeley, California. He excavated Tell al-Naṣba (Mizpah?), north of Jerusalem, in five campaigns between 1926 and 1935, clearing the mound almost completely. Badè published *Old Testament in the Light of Today* (1915), *A Manual of Excavations in the Near East* (1934), and *Excavations at Tell al-Naṣba, 1926 and 1927: A Preliminary Report* (1928).

BADEN, part of the *Land* of Baden-Wuerttemberg, Germany. The former grand duchy was created in 1806 from parts of various territories (including the Palatinate), where until then the Jews had formed no united community or shared a common history. The earliest records of the presence of Jews in these territories relate to Gruensfeld (1218), Ueberlingen (1226), *Freiburg (c. 1230), Lauda and *Tauberbischofsheim (1235), *Constance (1241), and Sinsheim (early 13th century). The Jews had been expelled from several of these areas at various times: the Palatinate in 1391, the margravate of Baden in 1470, Austrian Breisgau in 1573, and the diocese of Basle in 1581. Until 1806 the history of the Jews in the margravate of Baden, which subsequently formed the nucleus of the state of Baden, may be summarized briefly. After the *Black Death, 1348–49, few Jews lived there but even these were expelled in 1470, as a result of the blood libel of *Endingen (South Baden). Jews were allowed to return to Baden at the beginning of the 16th century. In 1535 the margravate of Baden was divided into Baden-Baden and Baden-Durlach, to be united again in 1771. The Jews were expelled from Baden-Baden in 1614, but readmitted during the Thirty Years' War (1618–48). According to the first legislation concerning the status of the Jews in Baden-Baden in 1714, the territorial organization of the Jewry was headed by two lay officers (*Schultheisse*) and a rabbi. In Baden-Durlach Jews were first tolerated officially in 1537, but were expelled during the Thirty Years' War and readmitted in 1666. The Jewish population numbered 24 families in 1709, increasing to 160 families by 1738.

After the grand duchy of Baden was created, the position of its *Schutzjuden* ("protected Jews") improved. In the first constitutional edict of May 14, 1807, Judaism was recognized as a tolerated religion; a year later, the sixth edict afforded the Jews irrevocable civil rights and abolished the marriage restrictions imposed on them (see *Familiants' Laws). Local civil rights, however, remained severely restricted. The ninth edict (the so-called "*Judenedikt*" of Jan. 13, 1809) granted the Jews an officially recognized state organization, required them to adopt permanent family names, and determined their as yet very curtailed civil status. The constitution of 1818 im-

PLICITLY confirmed the civil rights granted to the Jews by the edicts but denied them equal political rights. The struggle for emancipation focused on local civil rights and met with fierce and sometimes violent resistance in many villages and towns. Baden's liberal movement failed to endorse the idea of Jewish emancipation, most of its leading figures echoing public sentiment on the matter instead. Anti-Jewish outrages, often connected with the issue of emancipation, occurred in Baden in 1819 (*Hep-Hep), 1830, 1848, and 1862. Severe and widespread anti-Jewish rioting accompanied the revolution of 1848, especially in Northern Baden, and as a consequence the Diet pulled back from granting full emancipation to the Jews once more. In 1862 local civil rights were eventually granted, and the last of Baden's cities to exclude Jews (Baden-Baden, Freiburg, Constance, and Offenburg), allowed them to settle there. Nevertheless, animosity toward the Jews continued to be expressed in Baden, where Adolph *Stoecker's antisemitic Christian Social Party found numbers of adherents. After the Baden Army Corps was incorporated into the Prussian army, no Jew was promoted to the position of reserve officer or medical officer. Professorships too were granted almost exclusively to baptized Jews.

In 1868 Grand Duke Frederick I appointed the Durlach lawyer, Moritz *Ellstaetter, his minister of finance, making

Jewish centers of population in Baden, Germany.

him the first German Jew to hold a ministerial position. Theodor *Herzl tried to interest the German emperor in Zionism through the intervention of the grand duke. The Jews of Baden also participated in its political life. In 1862 the lawyer R. Kusel was elected to represent Karlsruhe in the second chamber, and Ludwig Frank of Mannheim was elected to the Landtag and later to the Reichstag as Social Democratic member. He was among the 589 Baden Jews who fell in World War I. Two Jews were in the first postwar cabinet of Baden, L. Marum (minister of justice, murdered by the Nazis in 1933) and Ludwig *Haas (minister of the interior), who was also active in Jewish affairs.

In the Middle Ages Baden Jewry engaged in commerce and moneylending, later in livestock-dealing (which was the main source of income for the Jews in the countryside) and retail trading. In the 19th century occupational difficulties, the lack of progress in the struggle for emancipation, and anti-Jewish riots resulted in Jewish immigration to America. Baden Jewry was one of the earliest German Jewish Territorial Organizations to establish a state-recognized central organization (1809) – the Oberrat (“supreme council”) – which in conjunction with the Synod (established in 1895) represented and directed the affairs of the community. Until its reorganization on May 14, 1923, the Oberrat was under state control. Religious controversy between the Orthodox and *Reform factions began in the early 19th century, the Reform later tending to predominate with the decline of the rural communities. When the *Karlsruhe community included an organ in its new synagogue (1868) and introduced reforms into the services, the Orthodox Jews, led by B.H. Wormser, established a separatist congregation there, the only one in Baden, which was given state recognition.

In 1806 Baden had a Jewish population of about 12,000, which had risen to 24,099 by 1862. As the result of emigration after the rise of Nazism, it decreased from 20,617 in 1933 to 8,725 by 1939. The Jews of Baden were among the first to be deported from Germany. On Oct. 22, 1940, some 5,600 Baden Jews, along with others from the Palatinate and the Saar, were transported to *Gurs concentration camp (southern France), from where they were further deported to Poland from 1942 onward. Approximately 500 Jews from Baden survived in France. The Oberrat was reestablished after the war. In 1962 the cemetery in Gurs was leased to the Baden Oberrat for 99 years. In 1969 there were 1,096 Jews in six communities (66 Jews in Baden-Baden, 248 in Freiburg, 135 in *Heidelberg, 260 in Karlsruhe, 387 in *Mannheim and Constance), with N.P. Levinson as chief rabbi. After 1989 new communities were founded in Emmendingen, Loerrach, *Pforzheim, and Rottweil-Villingen. As a result of the emigration of Jews from the former Soviet Union, the number of community members rose to 4,485 in 2003.

[Bernhard Brilling / Stefan Rohrbacher (2nd ed.)]

BADEN BEI WIEN, spa in N.E. Austria. During the later Middle Ages Jews doing business there lived in nearby Tribuswinkel. In 1805 Isaac Schischa of Mattersdorf was granted permission to settle in the town, opened a Jewish restaurant, and established a prayer room. From around 1800 there was a *Judenbad*, a bath frequented by Jews in Baden, but Jews were not granted the right of residence in the city until 1861. A synagogue for 500 was built in 1873, and the community of 80 members was officially recognized in 1878. The first rabbi, W. Reich, installed in 1880, brought about a compromise between Orthodox and Liberal elements and was active in the foundation of the Agudat Israel orphan home. The community increased mainly by settlers from Hungary. By 1928 it numbered 1,500 (6.7% of the total population), and was the third largest in Austria, but in 1934 there were only 1,108 Jewish inhabitants. On Nov. 10, 1938, the synagogue and all community buildings were blown up, and the Jewish population was arrested to “make room” for Aryans. In 1946 the congregation was reconstituted, with a prayer room; it had 30 members. There were about 80 Jews in Baden in 2004. A synagogue was built in 2004/5.

BADER, GERSHOM (Gustav; 1868–1953), Hebrew and Yiddish journalist and writer. Bader, who was born in Cracow, taught there after attending rabbinical seminaries outside Galicia. From 1893 until 1912 he lived in Lvov, where in 1904 he founded the first Yiddish daily in Galicia, the *Togblat* (from 1906, *Nayes Lemberger Togblat*), and contributed regularly to *Ha-Maggid* and other Hebrew papers. From 1896 to 1912 he published and edited the *Yidisher Folkskalender*, a popular Galician literary almanac. He translated Genesis into Polish and published Hebrew language textbooks. His anthologies,

Leket Peraḥim and *Zer Peraḥim* (1895–96), helped to popularize Hebrew literature and in 1896 he edited the fifth volume of the literary miscellany *Ozar ha-Sifrut*. From 1896 to 1912 he produced the *Lukhes* annuals in Yiddish, and from 1903–04 a parallel Hebrew annual miscellany, *Hermon*. In 1912 Bader settled in New York, where he contributed to the *Togblat* and the *Jewish Morning Journal*. Of his Yiddish plays, the most successful was *Dem Rebens Nign* (“The Rabbi’s Melody”), produced in 1919. His writings include: *Ḥelkat Meḥokek*, a life of Jesus (1889); *Medinah va-Hakameha*, a lexicon of Galician Jewish cultural figures (1934); and *Maḥte’ah le-Rashei Tevot...*, a dictionary of talmudic abbreviations (1951); *Jewish Spiritual Heroes* (3 vols., in English 1940); and his memoirs, *Mayne Zikhroynes* (1953).

[Getzel Kressel]

BADGE, JEWISH, distinctive sign compulsorily worn by Jews.

Muslim World

The introduction of a mark to distinguish persons not belonging to the religious faith of the majority did not originate in Christendom, where it was later radically imposed, but in Islam. It seems that Caliph Omar II (717–20), not Omar I, as is sometimes stated, was the first ruler to order that every non-Muslim, the *dhimmī*, should wear vestimentary distinctions (called *giyār*, i.e., distinguishing marks) of a different color for each minority group. The ordinance was unequally observed, but it was reissued and reinforced by Caliph al-Mutawakkil (847–61). Subsequently it remained in force over the centuries, with a few variations. Thus, in Sicily the Saracen governor in 887/8 compelled the Christians to wear on their garments and put on their doors a piece of cloth in the form of a swine, and the Jews to affix a similar sign in the form of a donkey. In addition, the Jews were compelled to wear yellow belts and special hats.

Christendom

Although written documentary testimony concerning distinctive signs worn by Jews from the 12th century is still lacking, pictorial representations of this period, especially in the Germanic countries, introduce the pointed hat. This is subsequently referred to as the “Jewish hat,” worn by Jews or depicted in allegorical representations of Judaism (“Synagoga”). It would seem, however, that this distinction was instituted by the Jews themselves. There are some ambiguous references to the compulsory imposition of distinctive Jewish clothing in documents from the beginning of the 13th century (Charter of Alais, 1200: Synodal rules of Odo, bishop of Paris, c. 1200). The consistent record, however, can be traced back only to canon 68 of the Fourth *Lateran Council (1215): “In several provinces, a difference in vestment distinguishes the Jews or

the Saracens from the Christians; but in others, the confusion has reached such proportions that a difference can no longer be perceived. Hence, at times it has occurred that Christians have had sexual intercourse in error with Jewish or Saracen women and Jews or Saracens with Christian women. That the crime of such a sinful mixture shall no longer find evasion or cover under the pretext of error, we order that they [Jews and Saracens] of both sexes, in all Christian lands and at all times, shall be publicly differentiated from the rest of the population by the quality of their garment, especially since that this is ordained by Moses...” Both the allusion to biblical law (Lev. 19), and the inclusion of the canon among a series of others regulating the Jewish position indicate that the decree was directed especially against the Jews.

Implementation of the council’s decision varied in the countries of the West in both the form of the distinctive sign and the date of its application.

ENGLAND. In England papal influence was at this time particularly strong. The recommendations of the Lateran Council were repeated in an order of March 30, 1218. However, before long the wealthier Jews, and later on entire communities, paid to be exempted, notwithstanding the reiteration of the order by the diocesan council of Oxford in 1222. In 1253, however, the obligation to wear the badge was renewed in the period of general reaction, by Henry III, who ordered the *tabula* to be worn in a prominent position. In the *statutum de Judeismo* of 1275, Edward I stipulated the color of the badge and increased the size. A piece of yellow taffeta, six fingers long and three broad, was to be worn above the heart by every Jew over the age of seven years. In England the badge took the form of the Tablets of the Law, considered to symbolize the Old Testament, in which form it is to be seen in various caricatures and portraits of medieval English Jews.

FRANCE. In 1217 the papal legate in southern France ordered that the Jews should wear a *rota* (“wheel”) on their outer garment but shortly afterward the order was rescinded. However, in 1219 King Philip Augustus ordered the Jews to wear the badge, apparently in the same form. Discussions regarding the permissibility of wearing the badge on the Sabbath when not attached to the garment are reported by *Isaac b. Moses of Vienna, author of the *Or Zaru’a*, who was in France about 1217–18. Numerous church councils (Narbonne 1227, Rouen 1231, Arles 1234, Béziers 1246, Albi 1254, etc.) reiterated the instructions for wearing the badge, and a general edict for the whole of France was issued by Louis IX (Saint Louis) on June 19, 1269. This edict was endorsed by Philip the Bold, Philip the Fair, Louis X, Philip V, and others, and by the councils of Pont-Audemer (1279), Nîmes (1284), etc. The circular badge was normally to be worn on the breast; some regulations also required that a second sign should be worn on the back. At times it was placed on the bonnet or at the level of the belt. The badge was yellow in color, or of two shades, white and red. Wearing it was compulsory from the

age of either seven or thirteen years. Any Jew found without the badge forfeited his garment to his denunciator. In cases of a second offense a severe fine was imposed. When traveling, the Jew was exempted from wearing the badge. Philip the Fair extracted fiscal benefits from the compulsory wearing of the badge, by annual distribution of the badges by the royal tax collectors at a fixed price.

SPAIN. The obligation to wear the Badge of Shame was reenacted by the secular authorities in Spain shortly after the promulgation of the decrees of the Lateran Council, and in 1218 Pope Honorius III instructed the archbishop of Toledo to see that it was rigorously enforced. The Spanish Jews did not submit to this passively, and some of them threatened to leave the country for the area under Muslim rule. In consequence, the pope authorized the enforcement of the regulation to be suspended. The obligation was indeed reenacted sporadically (e.g., in Aragon 1228, Navarre 1234, Portugal 1325). However, it was not consistently enforced, and Jews who had influence at court would often secure special exemption. Alfonso X the Wise of Castile in his *Siete Partidas* (1263) imposed a fine or lashing as the penalty for a Jew who neglected the order. In 1268 James I of Aragon exempted the Jews from wearing the badge, requiring them on the other hand to wear a round cape (*capa rotunda*). In Castile, Henry III (1390–1406) yielded in 1405 to the demand of the Cortes and required even his Jewish courtiers to wear the badge. As a result of Vicente Ferrer's agitation, the Jews were ordered in 1412 to wear distinctive clothing and a red badge, and they were further required to let their hair and beards grow long. The successors of Henry III renewed the decrees concerning the badge. In Aragon, John I, in 1393, prescribed special clothing for the Jews. In 1397 Queen Maria (the consort of King Martin) ordered all the Jews in Barcelona, both residents and visitors, to wear on their chests a circular patch of yellow cloth, a span in diameter, with a red "bull's eye" in the center. They were to dress only in clothing of pale green color – as a sign of mourning for the ruin of their Temple, which they suffered because they had turned their backs upon Jesus – and their hats were to be high and wide with a short, wide *cuculla*. Violators were to be fined ten *libras* and stripped of their clothes wherever caught. When in 1400 King Martin granted the Jews of Lérida a charter of privileges, he required them, nevertheless, to wear the customary badge. In 1474 the burghers of Cervera sought to impose upon the local Jews a round badge of other than the customary form. In the period before the expulsion of the Jews from Spain in 1492, the wearing of the Jewish badge was almost universally enforced, and some persons demanded that it should be extended also to Conversos.

ITALY. Presumably the order of the Lateran Council was reenacted in Rome very soon after its promulgation in 1215, but it was certainly not consistently enforced. In 1221–22 the "enlightened" emperor Frederick II Hohenstaufen ordered all the Jews of the Kingdom of Sicily to wear a distinguishing

badge of bluish color in the shape of the Greek letter τ and also to grow beards in order to be more easily distinguishable from non-Jews. In the same year the badge was imposed in Pisa and probably elsewhere. In the Papal States the obligation was first specifically imposed so far as is known by Alexander IV in 1257: there is extant a moving penitential poem written on this occasion by Benjamin b. Abraham Anav expressing the passionate indignation of the Roman Jews on this occasion. The badge here took the form of a circular yellow patch a handspan in diameter to be worn by men on a prominent place on the outer garment, while women had to wear two blue stripes on their veil. In 1360 an ordinance of the city of Rome required all male Jews, with the exception of physicians, to wear a coarse red cape, and all women to wear a red apron. Inspectors were appointed to enforce the regulation. Noncompliance was punished by a fine of 11 scudi; informers who pointed out offenders were entitled to half the fine. The ordinance was revised in 1402, eliminating the reward for informing and exempting the Jews from wearing the special garb inside the ghetto. In Sicily there was from an early period a *custos rotulae* whose function it was to ensure that the obligation was not neglected. Elsewhere in Italy, however, the enforcement was sporadic, although it was constantly being demanded by fanatical preachers and sometimes temporarily enacted. The turning point came with the bull *Cum nimis absurdum* of Pope Paul IV in 1555, which inaugurated the ghetto system. This enforced the wearing of the badge (called by the Italian Jews *scimanno*, from Heb. *siman*) for the Papal States, later to be imitated throughout Italy (except in Leghorn), and enforced until the period of the French Revolution. In Rome, as well as in the Papal States in the south of France, it took the form of a yellow hat for men, a yellow kerchief for women. In the Venetian dominions the color was red. In Candia (Crete), then under Venetian rule, Jewish shops had to be distinguished by the badge. David d'Ascoli, who published in 1559 a Latin protest against the degrading regulation, was severely punished and his work was destroyed.

GERMANY. In Germany and the other lands of the Holy Roman Empire, the pointed hat was first in use as a distinctive sign. It was not officially imposed until the second half of the 13th century (*Schwabenspiegel*, art. 214, c. 1275; *Weichbild-Vulgata*, art. 139, second half of 13th century; cf. Council of Breslau, 1267; Vienna, 1267; Olmuetz, 1342; Prague, 1355, etc.). The church councils of Breslau and Vienna, both held in 1267, required the Jews of Silesia, Poland, and Austria to wear not a badge but the pointed hat characteristic of Jewish garb (the *pileum cornutum*). A church council held in Ofen (Budapest) in 1279 decreed that the Jews were to wear on the chest a round patch in the form of a wheel. The badge was imposed for the first time in Augsburg in 1434, and its general enforcement was demanded by Nicolaus of Cusa and John of Capistrano. In 1530 the ordinance was applied to the whole of Germany (*Reichspolizeiordnung*, art. 22). In the course of the

15th century, a Jewish badge, in addition to the Jewish hat, was introduced in various forms into Germany. A church council which met in Salzburg in 1418 ordered Jewish women to attach bells to their dresses so that their approach might be heard from a distance. In Augsburg in 1434 the Jewish men were ordered to attach yellow circles to their clothes, in front, and the women were ordered to wear yellow pointed veils. Jews on a visit to Nuremberg were required to wear a type of long, wide hood falling over the back, by which they would be distinguished from the local Jews. The obligation to wear the yellow badge was imposed upon all the Jews in Germany in 1530 and in Austria in 1551. As late as in the reign of Maria Theresa (1740–80) the Jews of Prague were required to wear yellow collars over their coats.

Discontinuance

In the new communities which became established in Western Europe (and later America) from the close of the 16th century under somewhat freer conditions the wearing of the Jewish badge was never imposed, though sometimes suggested by fanatics. In Poland, partly probably because the Jews constituted a distinct ethnic element, it was likewise virtually unknown except in some major cities under German influence. Similarly the Court Jews of Germany were unable to perform their function unless dressed like other people. In the course of the 18th century, although there was no official modification of the established policy, the wearing of the Jewish badge came to be neglected in a good part of Europe. In Venice the red hat continued to be worn by elderly persons and rabbis through sheer conservatism.

From the 17th century, there were some regional suspensions of the distinctive sign in Germany, as also for the Jews of Vienna in 1624, and for those of Mannheim in 1691. It was abrogated at the end of the 18th century with Jewish emancipation. Thus, on Sept. 7, 1781, the yellow “wheel” was abolished by Emperor Joseph II in all the territories of the Austrian crown. In the Papal States in France the yellow hat was abolished in 1791 after the French Revolution reached the area, although some persons retained it until forbidden to do so by official proclamation. In the Papal States in Italy, on the other hand, the obligation was reimposed as late as 1793. When in 1796–97 the armies of the French Revolution entered Italy and the ghettos were abolished, the obligation to wear the Jewish badge disappeared. Its reimposition was threatened but not carried out during the reactionary period after the fall of Napoleon, and it then seemed that the Badge of Shame was only an evil memory of the past.

It was to commemorate the yellow badge or hat that Theodor Herzl chose this color for the cover of the first Zionist periodical *Die Welt*. It was in the same spirit that the *Juedische Rundschau*, the organ of the Zionist Organization in Germany, wrote on the morrow of the Nazi rise to power: “Wear it with pride, this yellow badge” (no. 27, April 4, 1933).

[Bernhard Blumenkranz]

Yellow Badge in the Nazi Period

In 1938 the Nazis compelled Jewish shopkeepers to display the words “Jewish business” in their windows but did not introduce distinctive signs to be worn by Jews until after the occupation of Poland. The first to issue an order on his own initiative, without awaiting instructions from the central authority, was the town Kommandant of Wloclawek, s.s. Oberfuhrer Cramer, who, on Oct. 24, 1939, ordered that every Jew in Wloclawek was to wear a distinctive sign on the back in the form of a yellow triangle at least 15 cm. in size. The order was published in the *Leslauer Bote* (Oct. 25, 1939). The order applied to all Jews, without distinction of age or sex. This device was rapidly adopted by other commanders in the occupied regions in the East and received official approval, in consideration of the antisemitic sentiments prevailing among the local Polish public, which received the new German measure with enthusiasm. The dates of application of the measure varied. There were regions where the instructions were applied even before they were issued in the General-Government, such as in Cracow, where the Jews were compelled to wear the sign from Nov. 18, 1939, whereas the date throughout the General-Government was Dec. 1, 1939. In Lvov the order was applied as from July 15, 1941, and in eastern Galicia from Sept. 15, 1941. On the other hand, in certain places the instruction is known to have been applied only after publication of the general order, as for example in Warsaw on Dec. 12, 1939, and not on Dec. 1, 1939, even though Warsaw was included in the General-Government. In the smaller communities, the official German instructions were replaced by an announcement of the *Judenrat.

In the West, the situation was totally different. In the *Reichsgebiet* (the territory of the Reich proper, as opposed to the occupied territories), the order was issued on Sept. 1, 1941. It was published in the *Reichsgesetzblatt* and was applied as from Sept. 19, 1941. This date was also valid for the Jews of Bohemia, Moravia, and Slovakia. The age from which the wearing of the sign was compulsory was six years for Germany and Western Europe and ten years for Eastern Europe. In certain places the age differed. In Holland the order was applied as from May 1942, while in Belgium and France the Jews were compelled to wear the distinctive sign from June 1942. A meeting had been held in Paris in March 1942 to coordinate the application of the order in these three countries. In Bulgaria the order was applied from September 1942, in Greece from February 1943, and in Hungary from April 1944. The type of distinctive sign varied, the following being the principal forms: a yellow Shield (Star) of David inscribed with *J* or *Jude*, etc.; a white armband with a blue Shield of David on it; a Shield of David, with or without inscription and in various colors; a yellow armband with or without inscription; a yellow button in the form of a Shield of David; a metal tag inscribed with the letter *J*; a yellow triangle; a yellow circle. This general use of the Shield of David as the Jewish badge was unknown in the Middle Ages. The inscriptions

appearing on the badges were specially chosen to resemble Hebrew characters. After the Jews were compelled to reside in ghettos, they were also forced to wear the distinctive sign in conformity with the order applying to the region in which the ghetto was located. In the concentration camps they wore the sign which designated political prisoners on which was sewn a triangle or a yellow stripe to distinguish them from non-Jewish prisoners. In the *Reichsgebiet*, as well as in several of the occupied countries, the Germans introduced distinctive signs on Jewish business premises, passports, and ration cards, where the letter *J* was overprinted in a most conspicuous manner.

REACTIONS. Jews reacted with dignity to the order and wore the sign as if it were a decoration. However, they did not realize the danger which lay in wearing a distinctive sign. Non-Jews, especially in Eastern Europe, generally accepted this anti-Jewish measure with enthusiasm and saw in it an opportunity to remove the Jews from commercial, economic, and public life. In the West, reactions varied. The Jews could often rely on the hatred of the Germans by the public, and this even brought active support to the Jews. The Dutch wore the badge out of solidarity with the Jewish citizens. Three-hundred thousand replicas of the badge were produced and distributed throughout Holland bearing the inscription: "Jews and non-Jews stand united in their struggle!" In Denmark the badge was never introduced as a result of the courageous resistance of King Christian X, who was said to have threatened to wear it himself.

CONSEQUENCES. The principal objective in introducing distinctive signs for the Jews was to erect a barrier between them and non-Jews and to restrict their movements. The Germans achieved this objective to a large extent, despite the various reactions which rendered application of the order difficult. The Jews increasingly concentrated in closed districts, even before the establishment of the ghettos by the Nazis, for fear of being arrested and deported to concentration camps. A Jew had the choice of concealing the sign and thus becoming an offender liable to a deportation sentence to the concentration camps, or of wearing the sign and becoming an easy prey to his enemies. The distinctive signs were thus an effective means in the hands of the Germans to facilitate their plan to exterminate the Jews.

For special articles of clothing worn compulsorily or voluntarily by Jews, see *Dress.

BADHAN (Heb. בַּדְּחָן; "entertainer"), merrymaker, rhyme-ster who entertained guests, especially at weddings. The Talmud mentions professional jesters who cheered the melancholy (Ta'an. 22a) or who amused bride and groom (Ket. 17a; Ber. 30b–31a). Jewish itinerant singers, called *badhanim* or *leizanim* ("jesters") are mentioned in medieval rabbinical literature (e.g., R. Elijah b. Isaac of Carcassonne's *Asufot*); they seem to have appeared as professional entertainers at weddings and at Hanukkah and Purim celebrations, much after the pattern of the troubadours and ballad singers. The merrymaking of these *badhanim*, who were also the forerunners of Jewish theatrical art, consisted not only of folksongs and comic stories but also of skillful puns on scriptural verses and talmudical passages, which required a certain amount of Jewish learning. As a result, the rabbinical authorities protested against the *badhanim* who parodied the *Kaddish* at wedding festivities or who committed the near-blasphemy of "amusing the guests with jests on scriptural verses and holy words. Happy the man who abstains from such" (R. David ha-Levi, in *Turei Zahav* to Sh. Ar., OH 560:5).

In Eastern Europe the *badhan* (or *marshalik*, from Ger. *marschalch*, in the sense of "master of ceremonies," and not from Heb. *mashal*, "proverb"), acted as the professional wedding jester. The *Chmielnicki persecutions (1648–49), and the rabbinical opposition to unbridled merrymaking, even at weddings (based upon Sot. 9:14), led the *badhanim* to introduce a new style of entertainment – the *forshpil* – in which the *badhan* addressed the bride with a rhymed penitential exhortation while the women performed the ceremony of *bedeken*, i.e., covering the bride with the veil before proceeding to the *huppah* (see *Marriage Customs). In the case of orphans, the *badhan's* rhymes invoked the memory of the departed parents and injected a sorrowful note. Later, at the wedding feast, the *badhan* entertained the guests with music and with jests that contained personal allusions to the important guests and participants. In the course of time the literary style of the *badhan* developed into a sort of Hebrew and Yiddish folk-poetry, the most renowned exponent of which was Eliakum *Zunser of Vilna, who composed over 600 songs of this kind. A fine portrayal of the *badhan* is the character of Breckeloff in I. *Zangwill's *Children of the Ghetto*. In recent times the institution of the *badhan* has been replaced by more modern forms of entertainment.

[Meir Ydit]

BADHAV, ISAAC BEN MICHAEL (1859–1947), Jerusalem rabbi and scholar. Badhav was born in Jerusalem and was the

maternal grandson of Isaac *Covo. In his youth he studied in the *bet ha-midrash* Doresh Zion and in the yeshivah Shevet Ahim. He engaged to a considerable extent in communal matters, and in 1886 was one of the founders of the Jerusalem *Ḥevrat Shomerei Mitzvah u-Malbishei Arumim*. In 1887 he was sent on a mission to Tripoli by the Beth El congregation, returning in 1889. In 1901 he was appointed teacher in the *bet ha-midrash* of Ḥayyim Hezekiah *Medini, Sedei Ḥemed in Hebron, but he remained there for a short time only, returning to Jerusalem. He lived in poverty all his life. Badhav devoted himself to collecting old Hebrew books and manuscripts and assembled a large library containing exceptionally important documentary archives which included ancient and valuable documents and records. These he obtained from members of the old Jerusalem families by persuading them to furnish him with their personal accounts of Israel and Jerusalem. They are a valuable source for research, particularly into Jerusalem.

In 1900 he published a catalog of his manuscripts entitled *Ginzei Ziyon vi-Yrushalayim*. A second catalog, *Pardes ha-Torah ve-ha-Hokhmah*, was published in 1910. These manuscripts which contain materials dealing with the fields of *halakhah*, *aggadah*, philosophy, grammar, Kabbalah, geonica, medieval literature, history, poetry, and folklore are of great importance, because some of them are unique. Badhav also published many pamphlets containing laws and customs, poems and parables, amulets, prayers, petitions and memoirs, as well as responsa of early authorities, including some of the responsa of Maimonides. He translated into Ladino various historical studies. Because of his lack of means the pamphlets were issued in an irregular and haphazard manner. His two most important books are still in manuscript form: *Sefer ha-Gittin*, containing formulae of bills of divorce of the different communities, particularly those from Oriental countries – a book of importance not only for practical purposes but also for the purposes of research into Jewish history and folklore; and *Shem ha-Gedolim ha-Kelali*, an encyclopedia of great Jewish scholars and their works, both those which have been published and those which are extant in manuscript form.

[Abraham David]

BADIḤI, YAḤYA BEN JUDAH (c. 1810–1887), Yemenite author of works on the Pentateuch and *halakhah*. Badiḥi belonged to one of the distinguished wealthy families of Sanʿa, members of which were skilled goldsmiths by trade and served as minters to the Imams. This was a responsible but dangerous task for Jews since false accusations were frequently brought against them by the authorities. This was the case when Badiḥi and his father were imprisoned by the reigning Imam El-Mahdi (1815–1835). The father regained his freedom by paying a high ransom, but Badiḥi, faced with the choice between death or apostasy, succeeded in escaping to Karokaban, where the

ruler treated the Jews with greater tolerance. Here he served as head of the local *bet din*. When Jacob *Saphir visited Yemen in 1859, he met Badiḥi, whom he described as one of the leading and most God-fearing scholars of Yemen Jewry. Badiḥi wrote three works which are still in manuscript: *Ḥen Tov*, a collection of rabbinic commentaries on the Pentateuch to which he added his original explanations with an appendix of 52 of his own responsa; *Zivḥei Shelamim*; and *Leḥem Todah* (based on the *Zevaḥ Todah* of Yaḥya Ṣalaḥ) both on the laws of *sheḥitah* and *terefot*. This latter work, a resume of the laws of *sheḥitah* and *terefot* according to Yemenite customs, was written both to supply exact information for *shoḥetim* in the villages and to stimulate Torah study, which had declined considerably.

[Yehuda Ratzaby]

BADINTER, ELIZABETH (1944–), French philosopher. Elizabeth Badinter is the daughter of Marcel Bleustein-Blanchet, founder of the Publicis advertising group, and remains its principal shareholder. Holding an “agrégation” degree in philosophy, she taught at the prestigious École Polytechnique for science and engineering. Married to the left-wing lawyer Robert Badinter, she was part of his successful fight against the death penalty during the 1970s, which led to its abolition by newly elected president Francois Mitterrand in 1981. Strongly influenced by the Enlightenment movement, as an academic specialist in 18th-century philosophers, Badinter dealt mainly with questions related to secularism, separation of religion and state, and, under the influence of Simone de Beauvoir’s works, the position of women in society. Herself an “intellectual” in the French, Sartrian sense of the term, meaning a thinker involved in the evolutions of society, “engagée” (politically committed), she took a deep interest in the intellectual history of France and its connection to politics, which she depicted in her major book *Les passions intellectuelles*, and which is central to her biography of Condorcet (*Condorcet, un intellectuel en politique*, co-written with Robert Badinter, 1988). The history of feminism since its inception in the 18th century (*Émile, Émilie: l’ambition féminine au XVIII^e siècle*) is also a major theme of hers. Reflections on the masculine and the feminine, on sexual identity, which she first developed in her book about the history of maternal love from the 17th to 20th century (*L’amour en plus*) and then in her essay *XY, le syndrome de l’identité masculine*, ultimately led her to take a sharp turn towards sharp criticism of the evolution of the feminist movement, which she developed in polemically in *Fausse route* (2003). She advocated a “moderate” feminism against what she viewed as the excessive claims of the feminists. Her provocative views were the subject of much controversy.

[Dror Franck Sullaper (2nd ed.)]

BADINTER, ROBERT (1928–), French lawyer and minister of justice. Born in Paris, Badinter studied law there and at

Columbia University. A lawyer and a professor of law, Badinter was a well-known opponent of the death penalty and fighter for civil rights. After taking office as minister of justice in 1981 he promoted and had passed – sometimes in the face of considerable opposition – legislation towards the abrogation of the death penalty, abrogation of the special tribunal for security offenses (“Cour de sécurité de l’Etat”), and curtailment of the powers of the police. His militant stand on these and related issues made him the target of virulent attacks, sometimes of an antisemitic nature. Prior to his joining the government he had been active in Jewish organizations.

Before the change in the political majority in 1986, Badinter was appointed president of the Constitutional Council, which is the highest authority in France for interpreting the constitution. He remained in this position till 1995. The same year, he was elected senator from the Hauts-de-Seine district and was reelected nine years later.

Badinter published *L’Exécution* (1973); *Liberté* (1976); *Abolition* (2000, about his fight against the death penalty); and two historical studies: *Libres et égaux, l’émancipation des Juifs sous la Révolution française* (1989), on the emancipation of Jews by the French Revolution, and *Un antisémitisme ordinaire, Vichy et les avocats juifs* (1997), on the treatment of Jewish lawyers by the Vichy regime.

[Gideon Kouts / Dror Franck Sullaper (2nd ed.)]

BADT, HERMANN (1887–1946), German civil servant and constitutional lawyer, active in the Zionist movement. He was the son of the classical scholar Benno Badt. Born in Breslau, he maintained Orthodox traditions and joined the *Mizrachi Party. From 1905 to 1908 he studied law in Breslau and Munich. During World War I Badt served as Feldkriegsgerichtsrat. In 1919, he was the first Jew in Prussia to be admitted to the civil service after the revolution of 1918, first as *Regierungsassessor*, then as a *Regierungsrat* in the German foreign office. From 1922 to 1926 he was a Social Democratic member of the Prussian Diet and then became the Ministerialdirektor in the Prussian Ministry of the Interior in charge of constitutional affairs. In 1932 he represented Prussia before the Staatsgerichtshof (State Court) of the German Reich in its unsuccessful legal action against Chancellor von Papen, who had deposed the legal government and instituted himself as a dictatorial “Reichskommissar” (Reich Commissioner) in Prussia. After his dismissal in 1933, he emigrated to Palestine, which he had visited several times before. Among other enterprises, he founded the Kinneret company to promote middle-class settlement on the land where kibbutz Ein Gev was founded.

BADT-STRAUSS, BERTHA (1885–1970), writer, Zionist, feminist. Badt-Strauss was born in Breslau. She was descended from a well-known family of Jewish scholars and studied lit-

erature, languages, and philosophy in Breslau, Berlin, and Munich. One of the first women awarded a doctoral degree in Prussia, she worked as a researcher and publisher. She became a Zionist and deeply involved in the Jewish Renaissance: the creation of a Jewish community with a special Jewish culture. With her husband Bruno Strauss, a teacher and expert on Moses *Mendelssohn, she lived in Berlin from 1913 on. In 1921 their only son, Albrecht, was born. Shortly after his birth Badt-Strauss fell ill with multiple sclerosis. In spite of this she continued writing numerous articles for Jewish publications, such as the *Jüdische Rundschau* and the *Israelitische Familienblatt*, and also for leading non-Jewish newspapers. She also co-edited the first scholarly edition of Annette von Droste-Huelshoff’s works and translated and edited volumes of works by Gertrud Marx, Profiat *Duran, *Suesskind von Trimberg, Heinrich *Heine, Rahel *Varnhagen, and Moses Mendelssohn. She contributed to the *Juedisches Lexikon* and the *Encyclopaedia Judaica*, wrote short stories, a serial novel, and a collective biography of Jewish women.

As a religious Jewess and a patriotic German, Badt-Strauss became not only one of the protagonists of the Jewish Renaissance, she also participated in the German women’s movement, wrote about German literature and included (supposed) “*Assimilanten*” like Moses Mendelssohn or converts like Rahel Varnhagen in her agenda. She tried to reinterpret the return of prominent Jews to Judaism as a self-determined step in the right direction and offered new role models for identification.

Badt-Strauss’ intensive engagement with Jewish women should also be mainly attributed to her aim of creating new role models. Her only belief was in the need to return to Judaism and eventually to Erez Israel. By not specifying too narrowly what this return should be like and what role women had to play in Judaism and in the “*Jischuw*,” she invited women to take part in the creation of a Jewish community that had not seen women’s role in this context because of the rigid male definition of Jewish femininity. Badt-Strauss was most successful with her individual interpretation of the aims of the Jewish Renaissance – her list of publications includes more than 600 editions and articles.

In 1939 Badt-Strauss immigrated to the United States. She continued writing and published a biography of the American Zionist Jessie *Sampter.

[Martina Steer (2nd ed.)]

BAECK, LEO (1873–1956), German rabbi and religious thinker, leader of Progressive Judaism. Baeck was born in Lissa (now Lenzno, Poland) the son of Rabbi Samuel Baeck. Leo Baeck first studied at the Conservative Jewish Theological Seminary of Breslau, and remained close to its approach throughout his life. From 1894 Baeck studied at the Liberal *Hochschule fuer die Wissenschaft des Judentums in Berlin. At the same time he also studied philosophy at the University

of Breslau under J. Freudental and at the University of Berlin under the philosopher Wilhelm Dilthey. Baeck served as rabbi in Oppeln (1897–1907), Duesseldorf (1907–12), and Berlin (from 1912 on), and as an army chaplain in World War I. He began lecturing on midrashic literature and homiletics at the Hochschule in 1912 and became a close adherent of Hermann *Cohen.

Baeck was a member of the committee of the Central-Verein deutscher Staatsbuerger juedischen Glaubens and published numerous articles in its journal, *C. V. Zeitung*, and periodical, *Der morgen*, Baeck was a non-Zionist member of the Jewish Agency and occasionally contributed to the German Zionist weekly *Juedische Rundschau*. From 1922 he served as the chairman of the Rabbinerverband in Deutschland, which included Liberal as well as Orthodox rabbis. From 1933 he was president of the Reichsvertretung, the representative body of German Jews, and devoted himself to defending the rights remaining for Jews under the Nazis. He refused all invitations to serve as a rabbi or professor abroad, declaring that he would remain with the last *minyán* (prayer quorum) of Jews in Germany as long as possible. At Terezin (*Theresienstadt) concentration camp, to which he was deported in early 1943, he was named honorary president of the Aeltestenrat and continued the work of encouraging his people. Thus, he became a “witness of his faith,” a theme that had long occupied a central position in his writings. According to a testimony he allegedly gave to Eric Boem, he was informed in 1943 of the death camps but decided not to share the information with the Jewish leadership of the camp in order not to undermine Jewish hope, a decision that was sharply criticized by some and provoked a bitter public debate. After the war, in July 1945, he moved to London, where he became president of the council of Jews from Germany and the chairman of the World Union for Progressive Judaism. From 1948 until his death he taught intermittently in the United States as professor of history of religion at Hebrew Union College in Cincinnati.

Thought and Works

Baeck saw himself primarily as a rabbi and a preacher, who understood his mission beyond the borders of his own Liberal affiliation, as shaped by his responsibility to the entire German Jewish community and the Jewish people at large. His philosophical-theological thought as well as his works on history of religion should be read and measured in light of his rabbinic mission. In 1901 he published a polemic article against *Wesen des Christentums* by the Protestant theologian Adolf von Harnack. Four years later Baeck published his main work *Wesen des Judentums* (1905; *The Essence of Judaism*, 1936). Many further editions and printings of it were published, as well as English (1948³), Japanese, and Hebrew (1968) translations. The apologetic character that dominated the first edition was considerably modified in the second and the extreme rationalism was eliminated. This transformation was the result of the influence of mysticism and Jewish nationalism. He identified the essence of Judaism with biblical prophecy, namely the direct

experience of God’s presence and the command to worship Him, a view he adopted from Rabbi *Judah Halevi. Hence, the essence of Judaism is a dialectic polarity between “mystery” and “command.” The commands, according to Baeck, do not necessarily form a system of commandments like the established *halakhah*, which imposes a required and fixed way of life; rather they appear from time to time in the form of instructions for action like flashes of lightning that break through the cloud covering the divine “mystery.” Baeck adhered to Hermann Cohen’s interpretation of Judaism as “ethical monotheism.” He believed that piety is achieved by the fulfillment of the duties between man and man, but in contrast with Cohen he gradually developed a deep appreciation of mysticism, which he understood to be a creative, artistic imagination, based on myth and symbolic language, which point to a supreme spiritual sphere transcending art and imagination. Ritual observances are directed toward this ethical religious aim as well as the deepening of “mystical prophecy.” His religious worldview was in that sense clearly liberal and deeply religious, though in practice he was quite traditionally observant.

Baeck sharply rejected Christianity, a religion that he regarded as a “romantic” one of the abstract spirit longing for redemption and as sharply distinguished from Judaism, the “classical” religion of the concrete spirit working for the improvement of this world. Judaism, in contrast with Christianity, is thus not aimed at the salvation of the individual soul but rather at the collective redemption of humanity and of the world. In line with his national and this-worldly view of Judaism and the Jewish people, Baeck had a sympathetic, although critical attitude towards Zionism. He thought that the building of Palestine was a valuable prospect for embodying the spirit of Judaism, but not a guarantee that it would be realized.

Other works of Baeck include *Wege in Judentum* (1933), a collection of essay and speeches; *Aus drei Jahrtausenden* (1938), a collection of scholarly papers destroyed by the Nazis and reprinted in 1958; *Die Pharisaeer* (1934; *The Pharisees and other essays*, 1947), *Maimonides, der Mann seine Werke und seine Wirkung* (1954) *Dieses Volk Israel* (2 vol., 1955–57; *This People Israel*, 1965), a work that he began to write in 1942 and whose first volume he completed while imprisoned in Terezin; *Judaism and Christianity* (1958). In 1954 Leo Baeck Institute for the study of the history of the Jews from German-speaking countries was established in his name, and he served as its first president. Other institutions carry his name, such as Leo Baeck College in London.

[Akiba Ernst Simon / Yehoyada Amir (2nd ed.)]

BAECK, SAMUEL (1834–1912), German rabbi and scholar. Baeck, who was born in Kromau (Moravia), the son and grandson of rabbis, served as rabbi of Leipa (Bohemia) and Lissa (Lezno, Poland) and was active in German-Jewish communal affairs. He successfully advocated the teaching of Jewish religion in Prussian high schools, for which he wrote some textbooks. His *Geschichte des juedischen Volkes und seiner Literatur...* (1888) went into three editions. To J. Winter and A. Wuensche (eds.) *Die juedische Literatur* (1894–96) Baeck contributed the sections on the halakhic, homiletic, and other literature from the 15th to the 18th centuries (also separately printed, 1893). Leo *Baeck was his son.

BAENA, JUAN ALFONSO DE (c. 1445), Spanish poet and scribe to Juan II of Castile. Most probably he was born a Jew and decided to convert. His conversion to Christianity enabled him to enter the court of Juan II and become one of his high officials. The *Cancionero de Baena*, an anthology of 14th- and 15th-century poetry which he compiled and presented to the king in 1445 deals with the social and political life of the period and includes many references to Jews and conversos. Hostility toward the conversos is expressed in several poems by Alfonso Alvarez de Villasandino (nos. 140–2, 183). Two *decires*, or poetic compositions, of the monk Diego de Valencia (probably a converted Jew himself) deal with conversos; the text of the first (no. 501) contains a number of Hebrew words. The *Cancionero* also includes poems celebrating the birth in 1405 of the future King Juan II. One of these (no. 230), the composition of a certain Don Mossé (described as surgeon to Henry III), indicates the part played by the Jews in Spanish cultural life. Baena's poetry is very rich and harmonious in its rhymes. Another Juan de Baena (also known as Juan de Pineda) rose from obscurity as a tailor in Córdoba to eminence at the court of Toledo. A converso, he was brought to trial and condemned to death in 1486.

[Kenneth R. Scholberg]

BAER, ABRAHAM (1834–1894), cantor. Baer was born in Wielen (Filehne), Poznan (Poland). He was a teacher and *hazzan* in various towns in western Prussia and in Posen, before becoming assistant cantor in Goteborg, Sweden, in 1857 and chief cantor in 1860. Collaborating with the organist of the synagogue, Joseph Czapek, he published a two-volume

collection of hymns (principally those of *Sulzer) for choir, with organ accompaniment, *Musik till sångerna vid Gudstjenssten* (2 vols., 1872). Five years later came his great work *Baal T'fillah*, a collection of melodies and recitatives according to the Polish, German, and Sephardi rituals, which became the basic manual for European cantors. The fruit of 15 years' work, it contains about 1,500 melodies which cover the liturgy of the year. Among them are several melodies of Sulzer, *Naumburg, and *Lewandowski, and some of his own. The collection went through five editions between 1877 and 1930.

[Haim Bar-Dayan]

BAER, GABRIEL (1919–1982), historian. Born in Germany, Baer immigrated to Erez Israel in 1933. His special field was the social history of the Middle East, particularly of Egypt, in modern times. A professor of Oriental Studies at the Hebrew University of Jerusalem, he was awarded the Israel Prize in 1976. His books include *A History of Landownership in Modern Egypt 1800–1950* (1962), *Egyptian Guilds in Modern Times* (1964), *Population and Society in the Arab East* (1964), *Studies in the Social History of Modern Egypt* (1969), and *Fellah and Townsman in the Middle East: Studies in Social History* (1982). Baer was also editor of two Middle Eastern quarterlies published in Jerusalem: *Hamizrah Hehadash* and *Asian and African Studies*.

ADD. BIBLIOGRAPHY: A list of Baer's published works appeared in *Asian and African Studies*, 17 (1983), 315–21. Obituaries: G.G. Gilbar, in: *IJMES*, 15, no. 1 (1983), 129–30; J.M. Landau, in: *Der Islam*, 41, no. 1 (1984), 8–9.

[Jacob M. Landau (2nd ed.)]

BAER, MAX (Maximilian Adelbert; 1909–1959), U.S. prize-fighter, world heavyweight champion 1934–35, member of the World Boxing Hall of Fame and the International Boxing Hall of Fame. Born in Omaha, Nebraska, Baer dropped out of school in the eighth grade to work with his father on a cattle ranch in California, where he developed his muscles and a powerful right hand. He began to box in 1929 and won 22 of his first 24 fights, nine with first-round knockouts. In a fight on August 25, 1930, heavyweight Frankie Campbell was killed in a fight with Baer in San Francisco, which led to a grand jury investigation of local boxing. Baer was charged with manslaughter but was later cleared of all charges, though he was suspended from fighting in California for a year. He quit boxing for several months after Campbell's death and then lost four of his next six fights, partly, it was said, because of his reluctance to go on the attack.

Baer recorded a major victory on June 8, 1933, when he beat Germany's Max Schmeling, a former world champion, with a 10th-round TKO in front of 56,000 fans at Yankee Stadium. Baer won the heavyweight title on June 14, 1934, knocking down Italy's Primo Carnera 11 times in 11 rounds, before

winning by a TKO in the 11th. Baer lost the title in his first defense on June 13, 1935, to Jim Braddock, “The Cinderella Man,” who was listed as a 10–1 underdog. It is considered by many the greatest upset in boxing history. Baer then lost in his next fight in four rounds to Joe Louis on September 24, 1935, before 88,000 fans at Yankee Stadium. On June 1, 1939, Baer fought Lou Nova at Yankee Stadium in the first boxing match ever televised. Baer lost his last professional fight to Nova again in 1941, retiring with a record of 71 victories (53 by knockout), 13 defeats, and one no-decision. He later refereed boxing and wrestling matches. In *Ring Magazine’s* 2003 list of the 100 greatest punchers of all time, Baer was ranked 22nd.

Baer wore a *Magen David* on his boxing trunks beginning with his fight against Schmeling, whom he taunted with “That one’s for Hitler” between blows. “I wore the insignia because I thought I should, and I intend to wear it in every bout hereafter,” he said after the fight. Baer claimed “Jewish blood” through the paternal line of his immigrant father Jacob, a German-Jewish immigrant who worked as a butcher, cattle dealer and rancher in Colorado and California. Jacob’s father, Aschill Baer from Alsace-Lorraine, married a non-Jew from Vienna, Fanny Fischiel. Baer became an actor while he was boxing and appeared in some 20 movies, including *The Prizefighter and the Lady*, which was banned in Germany because of Baer’s Jewish grandfather. He also had a successful nightclub act both solo and with Slapsie Maxie *Rosenbloom. His son, MAX, JR. (1937–), was an actor famous for playing “Jethro” on the 1962–71 television series *The Beverly Hillbillies*.

BUDDY (Jacob Henry; 1915–1986), a brother, also boxed in the heavyweight division, fighting Joe Louis for the championship twice. Baer lost the first time on a disqualification in the seventh round on May 23, 1941, when his manager claimed a foul and refused to leave the ring; and again on January 9, 1942, when Louis knocked him out in the first round. These were Buddy Baer’s last two fights, and he retired with a 50–7 record, with 44 KOs.

[Elli Wohlgelernter (2nd ed.)]

BAER, SELIGMAN ISAAC (1825–1897), Hebrew grammarian, masorah scholar, and liturgist. Born at Mosbach (Baden, Germany), Baer was a pupil of Wolf *Heidenheim, who left him many of his manuscripts. At the age of 19 he turned to masoretic studies. Franz *Delitzsch was impressed by Baer’s scholarly approach and together they published the Psalms with masorah (1860) followed by most of the other books of the Bible with masorah texts. Delitzsch prefaced each book with a Latin introduction (except the last two, which appeared after his death, Jeremiah in 1890 and Kings in 1895). These masoretic editions were compiled by Baer from manuscripts representing the variants of the masorah of *Ben Asher, *Ben Naphtali, and other masorah texts. All his life, Baer remained in the humble position of a teacher in the Jewish community school at Biebrich (Rhineland), but on the initiative of Del-

itzsch he was awarded an honorary Ph.D. by the University of Leipzig (1876). Baer’s masoretic Bible edition was generally regarded as a genuine rendition of the traditional masorah text although it also evoked some criticism, notably by C.D. *Ginsburg and E. *Kautzsch. Baer’s masorah text was printed in the widely accepted Vilna edition of the rabbinic Bible (*Mikra’ot Gedolot*). He also wrote a book on the cantillation in the poetical books of the Bible (*Torat Emet*, 1852) and on the secondary accent, the *meteg* (*Die Methegsetzung*, 1867); and published Ben Asher’s *Dikdukei Te’amim* (together with H.L. Strack, 1879) and *Zwei alte Thorarollen aus Arabien* (1870).

Baer’s greatest achievement lay in the field of liturgy. His many editions of liturgical texts, in which he followed the example and standards set by Heidenheim, were not only a scholarly feat but added dignity and decorum to Orthodox synagogue services throughout Western Europe, where his editions gained great popularity. The most important of these is his *Avodat Yisrael* prayer book with a scholarly commentary *Yakhin Lashon* (1868, several times reprinted, the latest in 1937) which has been accepted as the standard prayer book text by most subsequent editions of the *siddur*. Besides this major work, Baer edited *Selihot, Kinot, Seder ha-Berakhot* (1858), a handbook for mourners, cemetery use, etc., in three versions (*Toze’ot Hayyim*, 1862; *Sefer Gemilut Hasadim*, 1880; *Derekh la-Hayyim*, 1926); *Tikkun ha-Sofer ve-ha-Kore*, a handbook for scribes and readers of the Torah (1875); a prayer book, *Tefillat Yesharim* (1876, with prayers in German at the end; these also appeared separately as *Kol Bat Ziyyon*, 1875); *Piyyutim* (1874); *Divrei ha-Berit*, circumcision service (1874). These handsome little books ran into several editions and were reprinted after World War II.

[Isaak Dov Ber Markon]

BAER, YITZHAK (Fritz) (1888–1980), historian. Born in Halberstadt, where he obtained a thorough Jewish education, Baer studied philosophy, classical philology, and history (the latter under Heinrich Finke) at the universities of Berlin, Strasbourg, and Freiburg. From 1919 Baer was research associate of the Akademie fuer die Wissenschaft des Judentums in Berlin, under whose auspices he went twice to Spain (1925–26) to collect archival source material on the history of the Jews in Christian Spain. In 1928 he was appointed lecturer and in 1930 professor of medieval Jewish history at the Hebrew University in Jerusalem. From 1932 to 1945 he was professor of general medieval history; he served from 1930 to 1959 as head of the university’s department of Jewish history. Baer was one of the founders and editors of the Jewish historical review *Zion*. A coeditor of the “Historiographical Library” and *Sefer ha-Yishuv*, he took a leading part in the Israel Historical Society and was one of the 20 founding members of the Israel Academy of Sciences. He also contributed important articles to the German *Encyclopaedia Judaica* and its Hebrew counterpart

(*Eshkol*). Baer's first extensive research was into the history of the Jews of Christian Spain. On this subject he wrote his dissertation *Studien zur Geschichte der Juden im Königreich Aragonien während des 13. und 14. Jahrhunderts* (Berlin, 1913); *Untersuchungen über Quellen und Komposition des Schebet Jehuda* (Berlin, 1923; second printing 1936); *Probleme der jüdisch-spanischen Geschichte* (in *KAJ*), 6 (1925), 5–25; articles on Abner of Burgos (in *Tarbiz*, 11 (1939/40), 188–206), on the disputations of Paris, Barcelona, and Tortosa, on Isaac Abrabanel (in *Tarbiz*, 8 (1936/37), 241–59); *Die Juden im christlichen Spanien* (1929, 1936), an important two-volume collection of unpublished documents on Spain, which served as the basis for his *History of the Jews in Christian Spain* (Heb., 1945, 19592, repr. 1965; Eng. ed., 2 vols., 1961–66), which is regarded as the standard work on the subject. Baer's work is remarkable for its broad historical outlook, accuracy in detail, and scholarly synthesis. These qualities enabled him to throw new light on the economic, social, legal, political as well as the religious and cultural condition of Spanish Jewry. His works are a model of historiography. Especially important among his studies of the development and history of the Jewish communal organization are his *Das Protokollbuch der Landjudenschaft des Herzogtums Kleve*, 1 (1922, repr. 1936), and his article on the beginnings and fundamentals of Jewish communal organization in the Middle Ages (*Zion*, 15 (1949/50), 1–41). His method seeks to bring to light the internal forces that fashioned the Jewish communities within the framework of general history and local conditions. Baer believed that the essential features of Jewish communal organization were already set during the early generations of the Second Temple period and that these forms of organization were a product of the religious and national experiences of the people, and not that the Diaspora gave birth to them, although there were changes reflecting special conditions of time and place. Baer also investigated the spiritual and religious world of the Jewish people from the Second Temple period and the Middle Ages. Among his studies in this area are a series of articles in *Zion* written between 1932 and 1961 dealing with the theology of the *Sefer Hasidim* (see also Baer's contribution to *G. Scholem... Festschrift*, 1968) and the *Hasidei Ashkenaz* in general; with the historical basis of *halakhah*; with the relations between Jews, the early Christian Church, and the Roman Empire until Constantine; and his books *Galut* (Ger. 1936; Eng. 1947, Port. 1952) and *Yisrael ba-Ammim* (1955), and the article "Social Ideals of the Second Commonwealth" (in *Cahiers d'Histoire Mondiale*, 11 (1967/68), 69–91). From all these emerges an original view of the entire course of Jewish history. According to Baer the driving force of Jewish history lies in the continuing socioreligious activity of groups of pious and practical men of faith who aimed at perfecting the world. They succeeded in influencing the active elements among the people, with their beliefs and teachings, maintaining close ties with the non-Jewish world, and participating in its religiocultural and socioethical development. Baer reveals keen understanding of hellenistic and Christian culture and society. From this vantage point he examined the history of the

Jews in the days of the Second Temple. His conclusions may be evaluated from his above-mentioned works as well as from articles in *Molad* (21 (1963), 308ff.) and *Zion* (23–24 (1958–59), nos. 3–4) and on *Serekh ha-Yahad* ("The Manual of Discipline," *Zion*, 29, 1964), which he sees as a Judeo-Christian document of the beginning of the second century C.E. He also dealt with the image of Judaism in the synoptic gospels (*Zion*, 31, 1966) and came to the conclusion that the polemics reflect conditions of the period following the destruction of the Temple. Baer is recognized as one of the most fruitful students and teachers of Jewish history of modern times. A jubilee volume was published in his honor in 1961 on the occasion of his 70th birthday (including his bibliography up to 1959).

[Benzion Dinur (Dinaburg)]

BAERWALD, ALEX (1878–1930), one of the first Jewish architects in Erez Israel. He was born in Berlin, and studied architecture at Charlottenburg. In 1910, he was invited by the Hilfsverein to plan the Technion buildings and the Reali school in Haifa. In these buildings, Baerwald tried to create a Jewish style of architecture, based on Muslim architecture.

Baerwald settled in Palestine in 1925, when he was appointed a lecturer at the Technion (which had been opened in 1924), and founded its Faculty of Architecture. He built many buildings in Haifa, Tel Aviv, and elsewhere in Palestine, in the same style that he developed in the Technion buildings (Bet Struck, the Anglo-Palestine Bank in Haifa). In spite of the quality of these buildings and their high architectural standard their influence on the development of architecture in Jewish Palestine was very limited. Baerwald himself designed a number of buildings in the contemporary modern European style. These include the Central Jezreel Valley Hospital and the Electricity Company's power stations at Haifa and Tiberias. He also planned two buildings in kibbutz Merhavayah, combining rural European architecture with Middle Eastern motifs.

ADD. BIBLIOGRAPHY: A. Elhanani, "Israeli Architecture in the Twentieth Century" (Heb., 1998).

[Abraham Erlik]

BAERWALD, MORITZ (1860–1919), German lawyer and politician. Baerwald was born in Thorn, West Prussia, and founded a law firm in Bromberg, Posen, where Jewish business and professional men constituted the nucleus of the urban bourgeoisie and enjoyed privileges not easily available to them elsewhere in Germany. Baerwald was elected to the board of attorneys, to the Bromberg city government, and to the Prussian Diet in 1912. In 1919 he was elected to the German National Assembly but, like all the other deputies from

Posen, resigned when Posen was reincorporated in Poland. Baerwald was vice president of the assembly of representatives of the Jewish community of Bromberg.

BIBLIOGRAPHY: *Handbuch der Verfassunggebenden deutschen Nationalversammlung* (1919).

[Ernest Hamburger]

BAERWALD, PAUL (1871–1961), banker and philanthropist. Baerwald, born in Frankfurt, was the scion of a family of German bankers. He began his career with a banking firm in Frankfurt. In 1896 he immigrated to the U.S. and in 1907 became a partner in Lazard Frères of New York City. In subsequent years Baerwald held directorships in a number of corporations. Baerwald's Jewish communal work began in 1917 when he was asked to become associate treasurer of the *American Jewish Joint Distribution Committee (JDC) by his close friend, Felix M. *Warburg. He became treasurer (1920) and later chairman (1932). Baerwald's chairmanship of the JDC coincided with the Nazi period. During that time the JDC aided most of the European Jews who found haven in overseas countries. In 1938 Baerwald joined President Roosevelt's Advisory Committee on Political Refugees, which tried to find means to aid Nazi victims. He supervised the rescue work of the JDC during World War II and, risking its credit, sent money to Europe which had to be borrowed from New York banks. A high percentage of the President's War Refugee Board funds (1944–45) came from the JDC under Baerwald's direction. This financial policy was carried on in the postwar years when the JDC aided more than 500,000 refugees to reach Israel. In 1957 the American Jewish Joint Distribution Committee, the *Hebrew University of Jerusalem, and the Israel Ministry of Social Welfare founded the Paul Baerwald School of Social Work at the Hebrew University.

[Yehuda Bauer]

°BAETHGEN, FRIEDRICH WILHELM ADOLPH (1849–1905), German Bible critic and Semitic scholar, son of a Lutheran pastor in Lachem. After Baethgen completed his studies at Goettingen and Kiel, he was appointed lecturer in biblical studies at Kiel in 1878, and six years later became assistant professor of theology there. During this period he did pioneering work in the fields of biblical Hebrew poetry, Syriac grammar, and Peshitta on Psalms (*Die Psalmen*, 1897², 1904³). In 1888, the year in which his *Beitraege zur semitischen Religionsgeschichte* first appeared, he went to Halle as assistant professor of theology. In the following year he became professor of theology at Greifswald, where he was also an influential member of the Pomeranian consistory. From 1895 until his death he was professor of theology in Berlin.

BAEYER, ADOLF VON (1835–1917), German organic chemist and Nobel Prize winner. Baeyer was born in Berlin. His mother was the daughter of J.E. *Hitzig, literature historian and authority on criminal law and his father, Johann Jacob

Baeyer, a non-Jewish scientist. Adolf Baeyer made his first chemical discovery – a double carbonate of copper and sodium – when he was 12. He went to Heidelberg, where he came under the influence of his lifelong friend, August Kekulé, the German chemist, with whom he went to Ghent in 1858. In 1860 he returned to Berlin and was appointed professor of organic chemistry at the Gewerbeinstitut (later the Charlottenburg Technische Hochschule). There he worked on the study of uric acid, and began 20 years of research on indigo. This was the basis of synthetic indigo, which eventually completely displaced the natural product, and was the foundation of the German dyestuffs industry. His work on alizarin also led to alizarin dyes, driving the natural pigment off the market. His field then extended into physiological chemistry. In 1872 Baeyer became professor at Strasbourg and in 1875 in Munich, where he continued to teach and experiment until he was 80. His work covered many fields, including acetylenic compounds, strain within chemical molecules, the structure of benzene, the constitution of terpenes, oxygen compounds with quadrivalent oxygen, carbonium compounds, and the relationship between color and chemical constitution. His many papers in chemical journals helped to lay the foundations for the new science of organic chemistry. He was awarded the Nobel Prize in 1905 for “the advancement of organic chemistry and the chemical industry, through his work on organic dyes and hydroaromatic compounds.” His numerous other awards included the Davy Medal of the British Royal Society in 1881 and a German patent of nobility in 1885.

[Samuel Aaron Miller]

BAGHDAD, capital city of *Iraq. Baghdad was the capital of the *Abbasid dynasty from its foundation in 762. From then a Jewish community existed there which eventually became the largest Jewish community of Iraq, and the seat of the exilarch. During the gaonic period the Jews lived in a special quarter, Dār al-Yahūd (Jewish Quarter). The bridge in the western section of the town, which led to the Karkh quarter, was named Qanṭarat al-Yahūd (Bridge of the Jews). A tomb situated in this quarter was until recently the site of prayer gatherings. The local Jews believed it to be the tomb of Joshua son of Jehozadak, the high priest. By the end of the ninth century the famous yeshivot of Sura and Pumbedita were established in Baghdad. The Karaites also played an important part in the life of the city.

Early and Early Modern History

During the tenth century there were two distinguished Jewish families in Baghdad, *Netira and Aaron. They were both influential in the royal court and they showed concern for the

welfare of the community. At the end of the tenth century R. Isaac b. Moses ibn Sakrī of Spain was the *rosh yeshivah*. He had traveled to Iraq and “had been ordained as *Gaon* in order to fill the position of Rav Hai, of saintly memory.” During the 12th century, but beginning with the reign of Caliph al-Muktafi (902–908), the situation of the Jews in Baghdad greatly improved. A short while before 1170 *Benjamin of Tudela, the traveler, found approximately 40,000 Jews living peacefully in Baghdad, among them scholars and exceedingly wealthy people. He noted that there were 28 synagogues and ten yeshivot. During the reigns of Caliph al-Muktafi and his successors, the rights and the authority of the exilarch were increased and with it the prestige of the Baghdad community also grew. In that period the exilarch *Daniel b. Hasdai was referred to by the Arabs as “Our lord, the son of David.” The Baghdad community reached the height of its prosperity during the term of office of *rosh yeshivah* *Samuel b. Ali ha-Levi (c. 1164–94), an opponent of *Maimonides, who raised Torah study in Baghdad to a high level.

During the late 12th century through the middle 13th century, some prominent poets, as well as the great scholars and the *rashei yeshivot* appointed by the caliphs, lived in Baghdad. The most important were R. Eleazar b. Jacob ha-Bavli and R. Isaac b. Israel, whom Judah *Al-Ḥarizi, the poet and traveler, referred to as the greatest Iraqi poet. Isaac b. Israel headed the Baghdad yeshivah from 1221 to 1247. There were many physicians, perfumers, shopkeepers, goldsmiths, and moneychangers among the Jews of Baghdad; however, Judah Al-Ḥarizi considered this period as one of decline in view of the past importance of the community.

In 1258 Baghdad was conquered by the *Mongols and the Jews were not maltreated, as was the case with the Muslims. Arghūn Khān (1284–91) appointed the Jew *Sa’d al-Dawla, who had previously been the sultan’s physician, director of financial administration of Iraq. During the few years he held office, Sa’d al-Dawla developed the economic importance of Baghdad and as a result of this he was appointed chief vizier of the Mongol Empire in 1289. After the death of Arghūn, Sa’d al-Dawla was executed on the pretext that he had not given the khān the appropriate medical care. After their final conversion to Islam in the early 14th century, the Īl-Khānids reinstated decrees which they formerly had abolished, concerning the discriminatory dress of the Jews and Christians and the special taxes which applied to all “unbelievers” under Muslim rule. When Baghdad was conquered for a second time in 1393 by Tamerlane, many Jews fled to Kurdistan and Syria, leaving almost no Jews in Baghdad until the end of the 15th century.

During the struggle between the Ottomans and the Persian kings of the Safavid dynasty for the domination of Iraq, the political situation of the Jews of Baghdad underwent many changes. Generally, the Jews were oppressed by the Persians, who were fanatical Shi’ites and haters of non-Muslims; on the other hand they enjoyed fair treatment under the *Ottomans. The conquest of Baghdad in 1514 by Shah Ismā’īl I did

not worsen the situation of the Jews, but with the beginning of the reign of his son Ṭahmāsp I (1524–76), they suffered greatly from the hostile attitude of the Persian authorities. During the first part of the Ottoman rule, which lasted from 1534 to 1623, there was again an improvement in the situation for the Jews. Their economic position improved; their trade with foreign countries increased; and there were several wealthy merchants among them. In the early 17th century Pedro *Teixeria, the Portuguese Marrano explorer, found 25,000 houses in Baghdad, of which 250 belonged to Jews. In 1623 the Persians again conquered Baghdad, and during their rule, which lasted until 1638, there was a new deterioration in the situation of the Jews. Because of this, they gave their support to Sultan Murād IV, who conquered Baghdad in 1638. The day of the conquest, Tevet 16, 5399, was fixed as a *yom nes* (day of miracle). Additional evidence of the sympathy of the Jews toward the Ottomans is the custom fixing 11 Av, 5493 (1733), the day that the Persians were defeated trying to reoccupy Baghdad, as a *yom nes*. Carsten Niebuhr, a Danish traveler and scholar who visited Iraq some 30 years later, relates that there was a large Jewish community in Baghdad and that its influence was felt in the economic life of the city.

During the second half of the 18th century and the early 19th century Ottoman rule deteriorated in efficiency and the attitude of the government toward the Jews became harsh. Even so, some Jewish bankers were involved in the affairs of the governing circles, especially in the attempted rebellion of the governors.

During the reign of Sultan Mahmud II, the banker Ezekiel *Gabbai supported the removal of the governor of Baghdad, who had rebelled against the sultan in 1811. The last Mamluk governor, Dā’ūd Pasha (1817–31), who had also tried to rebel against the sultan, oppressed the Jews of Baghdad, and many of the wealthier ones fled to Persia, India, and other countries. Among them was David S. *Sassoon, a member of the distinguished Baghdad family.

The number of Jews at that time was still considerable. R. *David D’Beth Hillel, who visited the city in 1828, found 6,000 Jewish families there led by a pasha, also known as “king of the Jews,” who was also responsible for the judicial affairs of the community. The English traveler Wellsted, who visited Baghdad in 1831, praised the remarkable moral conduct of the Jews, which he attributed to their religious upbringing. Wellsted made special note of the feeling of mutual responsibility among the Jews of Baghdad. According to him, there were no poor among them because anyone who lost his means of livelihood was assisted by his companions. R. Jehiel Kestelmann, an emissary from Safed, claims to have found 20,000 Jews in Baghdad in 1860. With the opening of the Suez Canal in 1869 and the improvement of the city’s economic situation, the economic status of the Jews also improved. Many Jews from other localities settled in the city. According to the traveler Ephraim *Neumark, the Baghdad community numbered 30,000 in 1884; 50,000 in the early 20th century; and 100,000 in the 1930s.

Community Leaders

In the 18th and 19th centuries important changes in cultural and religious life occurred, because of the activities of outstanding rabbis in the community. A notable improvement took place with the arrival of R. Zedakah *Hozin from Aleppo in 1743. Hozin improved the educational system of the city and Jewish religious education improved. During the 18th century Palestinian emissaries visited the Baghdad community, strengthening its ties with the Palestinian population and reinforcing religious values within the community. Besides collecting funds for the communities of Jerusalem, Safed, and Hebron, these emissaries also delivered sermons and resolved halakhic problems. The most prominent of Baghdad's rabbis during the 19th century was R. 'Abdallah *Somekh, who is considered the greatest Iraqi rabbi of the last generations. In 1840 he founded a rabbinical college, Beit Zilkha, whose graduates filled rabbinical positions in many different localities. Among the Jews of Baghdad in the 19th century were still some writers of *piyyutim*, such as R. Sasson b. Israel (1820–1885). In the same century there were wealthy philanthropists who contributed generously to the community projects, especially to educational and religious institutions. The most prominent of them were Jacob Zemaḥ (d. 1847), Ezekiel b. Reuben Manasseh (d. 1851), Joseph Gurji (d. 1894), Eliezer Kadoorie (1867–1944), and Menaḥem *Daniel (1846–1940).

Until 1849 the community of Baghdad was led by a *nasi*, who was appointed by the vilayet governor, and who also acted as his banker (*ṣarrāf bāshī*). The first of these leaders claimed to be descendants of the house of David and their positions were inherited by members of their families. Later, however, the position was purchased. The most renowned of these leaders were Sassoon b. R. Zalah (1781–1817), the father of the *Sassoon family, and Ezra b. Joseph Gabbai (1817–24). From 1849 the community was led by the *hakham bashi* who represented the Jews to the Turkish authorities. The first one was R. Raphael Kazin. The *nasi*, and later the *hakham bashi*, were assisted by a council of 10 and later 12 delegates, which included three rabbis and nine laymen drawn from the wealthier members of the community. The council collected the taxes and dealt with community affairs. The collection of the *'askarī* ("military service ransom tax"), which replaced the *jizya* (poll tax), was sometimes the cause of violent conflicts within the community.

World War I and After

Until the British conquest of Baghdad in March 1917, the Jews were oppressed by the vilayet governor and the police commissioner, who attempted to extort money from them and to recruit their youth for the Turkish army. Hundreds of young men were recruited and the majority were sent to the Caucasus where many died of starvation and cold. Wealthy Jews were tortured and killed after being accused of devaluating the Turkish pound. The Jews naturally rejoiced when the British occupied Baghdad. The day of their entry was fixed as a *yom nes* (17 Adar, 5677, or February 3, 1917). From the conquest

until 1929, the Jews of Baghdad enjoyed complete freedom. Many of them were employed in the civil service, while others were even appointed to important government positions. Zionist activities also prospered for some time. However, in 1929, when the British decided to grant independence to Iraq, many Jewish officials were dismissed from government services, Zionist activity was prohibited, and, in general, there was an increase of antisemitism. This was especially so after Dr. A. Grobbe, the German ambassador in Baghdad, began to propagandize in 1932.

In 1934 there were large-scale dismissals of Jewish civil servants, and from 1936 murders of Jews and bombing of their institutions were added to even more dismissals. These attacks reached a climax on Shavuot 5701 (June 1–2, 1941) with Rashīd 'Ālī's pro-Axis revolution against the British. During those two days savage mobs massacred Jews and looted their property with the passive support of army and police officers. Neither the regent 'Abd al-Ilāh, who had arrived in the city before the beginning of the riots, nor the British troops, who were stationed outside the city, made any effort to intervene. According to various sources 120 to 180 Jews, including women, elderly people, and children, were killed and 800 injured during some 30 hours. This was accompanied by cases of rape and abduction of women. The value of the looted property was estimated at 1,000,000 dinars (or 1,000,000 pounds sterling – then 4,000,000 dollars). Thousands of Jews left the city, most of them for India and Palestine. However, many of them returned before the end of the year after failing to integrate themselves in these countries and having heard that the situation in Baghdad had improved. A period of prosperity ensued and continued until 1945; even though the decrees concerning their employment in government service and their admission to public schools had not been repealed, the Jews lived in Baghdad at ease and without fear.

After 1945 there were frequent demonstrations against the Jews and especially against Zionism. With the proclamation of the partition of Palestine, November 1947, even greater danger threatened the Jews of Baghdad. There was fear of a massacre, and the Jewish underground defense, organized with help of Palestinian Jews, was in a state of preparedness; the catastrophe was averted when martial law was proclaimed by the government. Nonetheless, many Jews were brought before military courts and fines were levied on the majority of them.

Immediately after the establishment of the State of Israel, hundreds of Baghdadi Jews were arrested. Many of the detainees were accused of communist or Zionist activities. A few hundred Jewish youth had joined these clandestine movements, especially after 1948. Two communist and two Zionist leaders were hanged publicly in Baghdad. During the government of 'Abd Al-Karīm Qassem (July 1958–February 1963) the attitude toward the Jews was more favorable. Even so, there were severe periodical restrictions on departure from Iraq, property confiscation, and a strengthening of economic pressure on the community.

Fourteen Iraqis, including nine Jews, were hanged publicly in Baghdad on January 27, 1969, after being convicted on charges of spying for Israel. Two other Jews were hanged in August of the same year. In April 1973 the total number of the innocent Jews who were hanged, murdered, or kidnapped and disappeared reached 46; dozens more were detained.

There were 77,000 Jews in Baghdad in 1947. After the mass exodus to Israel in 1950–51, approximately 6,000 Jews were left. Subsequently, Jews continued to leave Baghdad, so that only about 3,000 remained in 1963 when Qassem was toppled by ‘Abd al-Salām ‘Arif. This figure remained nearly the same until 1971, when the Jews began to escape from the country to Iran via Kurdistan and the authorities began to issue passports to Iraqi Jews. From this point on, the number of Jews dropped steadily to be about 350 in 1975. In 2005 there were only a few Jews still living in Baghdad.

[Abraham Ben-Yaacob / Nissim Kazzaz (2nd ed.)]

Institutions and Community Life – 1917–1970

During the British administration and after World War II, the number of Jewish educational institutions, especially the secondary ones, increased. In spite of the restrictions on the number of Jews admitted to government secondary schools, their number in these institutions was higher in 1950 than in 1920; but, because of lack of data, only the number in Jewish educational institutions will be mentioned. In 1920 there were some 6,000 Jewish youngsters in Jewish educational institutions: 2,500 in *talmud torahs*, 3,350 in kindergartens and elementary schools, and 150 in secondary schools; for 1950, the total was 13,476 pupils, of which 1,800 were in the *talmud torahs*, 8,970 in kindergartens and elementary schools, and 2,626 in secondary schools.

During this period there were also important social changes within the Baghdad community. The majority of women removed the gown (Arabic, *‘aba’*) and the veil (Persian, *pūshī*), which they formerly wore in the street. The number of girls engaged in teaching and in clerical work increased and some of them received a university education. There was also a change in the occupations of the Jews. Whereas in 1920 they were engaged in trade, banking, labor, and public services, in 1950 thousands earned their livelihood by clerical work or in the professions such as law. Immediately after the British conquest, the Jews began to leave their quarter to settle in all parts of the city. In the 1930s the Battāwīn and Karrāda quarters were established and inhabited by the wealthy. The attitude toward religion also underwent a change. During the first years after the British conquest there were only a few Jews who profaned the Sabbath or ate non-kosher food, whereas at the end of this period the number of Sabbath observers decreased.

From the end of the Ottoman period until 1931 the Jews of Baghdad had a “General Council” of 80 members, which included 20 rabbis and was led by the chief rabbi. The General Council elected a council for religious matters and a council for material welfare. The former dealt with ritual slaughter,

burials, and the rabbinical courts, while the latter was responsible for the schools, hospitals, and charitable trusts. In 1926, however, a group of intellectuals gained the upper hand in the latter council and attempted to remove the chief rabbi, Ezra *Dangoor. After a stormy period, in 1931, the community passed the “Law of the Jewish Community.” It deprived the rabbis of the community’s leadership and made it possible for a nonreligious person to assume leadership. In spite of this in February 1933 R. Sasson *Kadoorie was elected chairman of the community. His position was, however, a secular one, while a rabbi without any community authority was elected to the position of chief rabbi. Just before the mass emigration of 1951, there were about 20 Jewish educational institutions in Baghdad; 16 were under supervision of the community committee, the rest were privately run. In 1950 about 12,000 pupils attended these institutions while many others attended government and foreign schools; approximately another 400 students were enrolled in Baghdad colleges of medicine, law, economy, pharmacy, and engineering. All but two of the Jewish educational institutions closed in 1952. These two had approximately 900 pupils in 1960, while about 50 Jewish pupils attended government schools. The Baghdad community also had a school for the blind, founded in 1930, which was the only one of its kind in Iraq. It closed in 1951.

Pupils in Jewish educational institutions in Baghdad in 1920 and just before the mass exodus of 1950–51

Year	Talmud Torah	Kindergartens and Elementary Schools	Secondary Schools	Total
1920	2,500	3,350	150	6,000
1950	1,880	8,970	2,626	13,476

The Jews of Baghdad had two hospitals; one, a general hospital named for Meir Elias, founded in 1910, and the second, an eye hospital named for Rima Kadoorie, founded in 1924. At both these hospitals, Jews received treatment, and operations were performed for the needy for little or no payment. Every school in town had a clinic. The community also had several philanthropic societies to provide dowries for girls without means, help to mothers, maintenance of yeshivah students, and for the vocational training of poor children. All these institutions, including the hospitals, eventually closed. Afterward, the community committee arranged for the sick to be admitted to various hospitals in the town.

Only seven synagogues remained in 1960 of the 60 synagogues of Baghdad in 1950. The community committee had subcommittees for religious affairs and administration. These two subcommittees were elected by the general committee, elected in turn by men of the community every four years. In November 1949, Sasson Kadoorie was forced to resign, when local Jewry blamed him for not acting to free the numerous young Jews arrested on charges of Zionism. He was replaced by Ezekiel Shemtob, who served until 1953, when Kadoorie

again became president of the community. Kadoorie still presided in 1970. In accordance with an Iraqi law of 1954, a council elected every two years and supervised by the Ministry of Justice worked with the president. The subcommittees were abolished and a government law in December 1951 also abolished the rabbinical court in Baghdad.

Hebrew Printing

The first Hebrew (lithographic) printing press in Baghdad was founded by Moses Baruch Mizrahi in 1863. The press printed a Hebrew newspaper named *Ha-Dover* (The Speaker) or *Dover Mesharin* (Upright Speaker) until 1870 and three small books. A second printing press with movable characters was founded in Baghdad in 1868 by Raḥamim b. Reuben, a resident of Baghdad, who had previously gained printing experience in Bombay. The brothers Moses and Aaron Fetaya later formed a partnership with Raḥamim, and after his death they continued his work until 1882. Fifty-five books were printed on this printing press.

In 1888 a new press was founded in Baghdad by Solomon Bekhor Hutz (1843–1892), a scholar, poet, author, journalist, bookseller, and communal worker. He brought his printing letters from Leghorn, Italy. Besides prayer books, he also printed many books which he considered useful to the members of his community. These included tales and works by Baghdad scholars which had been in manuscript until then. After his death, the printing press was taken over by his son, Joshua Hutz, and operated until 1913. Seventy-five books were printed on it.

In 1904 a new press was founded in Baghdad by R. Ezra Reuben Dangoor (1848–1930), who was also *ḥakham bashi* of Baghdad. This printing press was in existence until 1921 and over 100 books were printed on it. For the greater part they were books of prayers and *piyyutim* according to the custom of the Baghdad Jews, but there were also some popular books in the Judeo-Arabic jargon and a Hebrew weekly, *Yeshurun*, of which five issues were published in 1920. This was a second and last attempt at Hebrew journalism in Baghdad. During the British Mandate in Iraq, two small Hebrew printing presses were founded in Baghdad: the al-Waṭaniyya al-Isrā'īliyya (The Israel Homeland) press, which printed about 20 books between 1922 and 1927; and the Elisha Shoḥet press, which printed more than 40 books between 1924 and 1937. When the British Mandate ended, these printing presses declined and finally ceased operation altogether.

BAGINSKY, ADOLF ARON (1843–1918), German physician and founder of modern pediatrics. Baginsky was born in Silesia and in 1881 joined the faculty of Berlin University, being appointed associate professor in 1892. In 1890, with the assistance of Virchow, he founded the children's hospital, Kaiser und Kaiserin Friedrich Kinderkrankenhaus, of which he became director. His main contributions to pediatrics were in the fields of infectious diseases, the study of milk, and hygiene. Baginsky was a leader in the movement for the promotion of child welfare and his services in this field won him orders and decorations from many governments. He was founder and editor of the pediatric journal, *Archiv fur Kinderheilkunde* (1879). His works included *Lehrbuch der Kinderheilkunde* (1982; “Textbook of Pediatrics,” translated into a number of languages), *Handbuch der Schulhygiene* (“Manual on School Hygiene,” 1877), and *Praktische Beitrage zur Kinderheilkunde* (“Practical Contributions to Pediatrics,” 1880–84), as well as many articles on physiological and chemical subjects.

Baginsky was an active member of the Jewish community in Berlin and of the movement to check antisemitism in Germany. He also wrote an interesting essay on the significance of hygiene in Mosaic legislation in which he expresses his admiration for the hygienic laws in the Bible.

BAGLEY, DAVID (1932–), *ḥazzan*. Bagley was born in Vilna where his musical talents were revealed at an early age. He spent the war years in Japan and China and studied in Mir Yeshiva in Shanghai. In 1947 he went to America, where he continued his religious studies and also furthered his cantorial learning. One of his outstanding teachers was Cantor Joshua Lind. His first post in the United States was in Atereth Zion Synagogue in Brooklyn, after which he went on to many important positions in the United States. He was chief cantor of the *Nidḥe Israel* congregation in Mexico City, and from 1967 to 1969 he was chief cantor in Ramat Gan, Israel. He has held posts in Johannesburg and Cape Town and has been chief can-

tor of Beth Shalom Synagogue in Toronto. He has produced many records of cantorial music (many under his own Shirei David label) and has composed several prayers, besides appearing in concerts throughout the world. Chanan Winternitz, a well-known Israeli liturgical arranger/accompanist, was for many years responsible for his concert repertoire. Besides two compilations of Recitatives and Melodies (*Ne'ilah* and *Hallel*), the Toronto Council of *hazzanim* together with the Council of *Hazzanim* of Greater Montreal has issued a volume of David Bagley's compositions entitled: *Al Yedei David* (2000).

[Akiva Zimmerman / Raymond Goldstein (2nd ed.)]

BAGOHI (Gr. Βαγώας), governor of the Persian satrapy Yehud (Judea) in the time of Darius II and Artaxerxes II. Among the *Elephantine papyri there was found a letter sent in 408 B.C.E. by the Jews of Elephantine-Yeb to "Bagohi, governor of Judah," in which it is written that a similar letter had been sent to "Delaiah and Shelemiah, sons of Sanballat, governor of Samaria." In this letter they appeal for assistance in the reconstruction of their temple, which had been destroyed by the priests of the Egyptian god Khnub. This letter reveals that a similar appeal had been made three years earlier to "Bagohi, governor of Judah," to Johanan, the high priest in Jerusalem, to Ostanes the brother of Anani, and to the nobles of the Jews, but no reply had been received. It is probable that the reason for the failure of the high priest to reply was his negative attitude toward this temple, but it may also have been the tense relations existing between the Persian governor and the high priest. Josephus (Ant. 11:297–301) relates that when Johanan the high priest murdered his brother Joshua in the Temple (probably at the beginning of the fourth century B.C.E.), Bagohi forced his way into the Temple, declaring to the priests who opposed his entry (since he was a Gentile) that his defilement of the Temple was less than that of a person guilty of fratricide. The discovery of the Elephantine documents has disposed of the attempts of Wilrich and Wellhausen to dismiss the story as a legend on the grounds that no person of this name was known.

[Abraham Schalit]

BAGRIT, SIR LEON (1902–1979), British industrialist and automation pioneer. Bagrit was born in Kiev, Russia, but his family arrived in England as refugees from Belgium at the beginning of World War I. He studied engineering at London University, helping to support himself at college by playing the violin in a philharmonic orchestra. He was employed for several years by engineering companies for which he designed machinery but in 1935, in order to be free to use his patents, he established his own firm. In 1937 it was taken over by Elliott Brothers, Bagrit becoming managing director. In 1962, as chairman of the company, now renamed Elliott-Automation, he turned to the development of automated control systems

for nuclear, aeronautical, and industrial purposes. The company was the first in Europe devoted to automation. In 1967 Elliott-Automation was taken over by the English Electric Company, with Bagrit as deputy chairman.

He was a member of the Council for Scientific and Industrial Research (1963–65) and the Advisory Council on Technology (from 1964). A director of the Royal Opera House, he founded the Friends of Covent Garden. He became a consultant on automation to the Israeli government. He was knighted in 1962. In 1964 Bagrit delivered the prestigious BBC Reith Lectures on "The Age of Automation."

BAGRITSKI, EDUARD GEORGIYEVICH, pseudonym of **E.G. Dzyuba** (1895–1934), Soviet Russian poet. Bagritski, who was born into a middle-class Odessa family and had a traditional Jewish upbringing, was a dedicated communist. His verse, at first complex and influenced by Symbolism, gradually became simpler and more graceful, earning him a place among the leading Russian poets of the 20th century. Like his fellow writers from Odessa, *Babel, Olesha, *Ilf, and the Katayev brothers, Bagritski successfully combined literary sophistication with romantic naïveté in his perception and salutation of reality. This combination of highly polished craftsmanship and childlike wonder constitutes the most endearing quality of his lyric verse. It also accounts for the success even of his propagandist poems. Bagritski's most important work was the poem "Duma pro Opanasa" (1926; "The Lay of Opanas"), a blend of lyric and narrative verse which contains elements of Ukrainian folk poetry and of the old Slavic epic. "The Lay of Opanas" describes a Ukrainian peasant who deserts from a Red Army unit commanded by a Jew named Kogan, joins an anarchist band, captures his former commander, but later offers to release him. Kogan, a devoted Communist, proudly refuses, and is thereupon shot by Opanas, who is himself subsequently executed by the Reds. Bagritski's is one of the most successful treatments of the revolutionary theme in Soviet literature. Some of Bagritski's best poetry appeared in the collection *Yugo-zapad* (Southwest, 1928). He was also known for his Russian translations of English, French, Yiddish, and Ukrainian verse.

[Maurice Friedberg]

BAHIA, the first region to be colonized in *Brazil and today a state within the federal republic situated in the northeast of the country. In 2005 the general population was 13,085,769, and the Jewish population about 800.

Colonial Period

The presence of Portuguese *New Christians began with the discovery, conquest, and colonization of Brazil, then inhabited by dozens of groups of indigenous peoples. When the tribunal

of the *Inquisition was established in Portugal (1536; operating until 1821), and after the first *auto-de-fé* (1540), the immigration of New Christians to the Brazilian colony grew, and many of them arrived in Bahia with the first governors. Some sources maintain that one New Christian, Gaspar da Gama, was part of Pedro Álvares Cabral's fleet, in 1500. There were a significant number of Jews involved in sciences and the art of navigation in Portugal during the period of overseas expansion in the early 1400s. The Tribunal do Santo Ofício da Inquisição, created in Portugal, did not settle permanently in colonial Brazil. As of 1591, the Tribunal do Santo Ofício made several visits to Brazil, powers were delegated to some bishops, like for instance the bishop of Bahia, and clergymen would indict people for Jewish practices directly in Lisbon.

In the second half of the 16th century, Bahia absorbed New Christians who contributed to the establishment of the first villages, to the mercantilist state, and to the Church struggle against the Indians, to the finance of and participation in the expeditions to the interior, and to cultivation of the land and of sugar cane in particular. Production and trade in sugar cane became the chief source of wealth of Brazil in the second half of the 16th and the 17th centuries. Besides sugar-mill lords, New Christians were slave merchants, farmers, and craftsmen, among other occupations. They ascended socially and economically, but they were faced with the restrictions of belonging to religious orders or political spheres, such as the Irmandades de Misericórdia and Câmaras Municipais.

News about the New Christian prosperity, their increasing numbers, and slight attachment to Catholicism led the inquisitors to set up a board of inquiry in Bahia to locate judaizers. Their sessions, known as *Visitações* (visitations), were held initially in 1591–95 and in 1618 aiming at judaizers, condemned sexual practices, witchcraft, and Holy Church slanderers. Between 1618 and 1619 a total of 134 people were indicted, of whom 90 were accused of being judaizers. Most of them were not taken to court and many fled from Brazil to other regions colonized by the Spaniards.

Between 1624 and 1625 the Dutch Colonial Empire conquered Bahia. Then religious tolerance was established, although just a few New Christians were in the region and a few Jews came to Bahia with the Dutch expeditionary forces.

An important investigation, known as the 1646 Inquiry, was carried out in Bahia in the 17th century, at the Jesuit seminary. With the aid of various testimonies, this inquiry revealed the role that the Portuguese of Jewish descent played in the political, economic, and administrative life in Bahia. In the 18th century many members of Brazilian families were still prevented from assuming public office because they were descendants of those denounced in 1646.

The New Christians continued to hold important positions in Bahian society until the end of the 18th century. In 1773, during the liberal government of Marques de Pombal, general governor of Brazil, the differentiation between new Christians and old Christians was abolished and the inquisitional procedures came to an end. Consequently the New

Christians were then totally integrated into society at large, their descendants being among the prominent and ancient families of Bahia.

The Inquisition in Brazil was less systematic and more infrequent than its Portuguese counterpart, probably owing to the difficult control of the colony, the fact that a permanent tribunal was never established, and the greater permeability within the social and religious relations established in the Portuguese New World.

According to Wiznitzer, around 25,000 people were brought to court by the Portuguese Inquisition, out of whom 1,500 were condemned to capital punishment. In Brazil, approximately 400 judaizers were sued, most of them condemned to imprisonment, and 18 New Christians were condemned to death in Lisbon.

The presence of New Christians in colonial Bahia and Brazil has always been a controversial issue in both Brazilian and Portuguese historiography. More studies on Jewish history have been published in Brazil with regard to the colonial period than about modern times, which shows the broad interest aroused by the theme of the New Christians and the Inquisition in Brazil. Some historians believe that the interventions of the Inquisition Tribunal in Brazil, supported by the nobility and the Catholic clergy, aimed at expropriating the New Christians' possessions and impeding the social ascension of a group with bourgeois aspirations. Therefore, the Inquisition created a myth regarding origin and purity of blood which discriminated against those with "infected blood" according to the Statutes on Blood Purity. Other historians see strictly religious and political reasons related to the history of the Portuguese Catholic Church and Portuguese Empire.

Meanwhile, some historians maintain that Judaism or Crypto-Judaism was "fabricated" during the inquisitional processes (that is, by means of intimidating, indicting, menacing, and torturing, the inquisition "created" such Judaism to justify its own existence and legitimacy); some others argue that New Christians deliberately and furtively professed Judaic or Crypto-Judaic elements inherited from their ancestors. According to Anita Novinsky, the New Christian was a "split human being," socially and existentially, with a differentiated identity in the Portuguese-Brazilian colonial world.

The antisemitism found in the Inquisition's procedures did not lead to the spread of antisemitism among the population in Bahia or Brazil, although the mental hold of the Inquisition and the terror it possessed can hardly be assessed. There are no apparent connections between the history of the New Christians and contemporary 20th-century Jewish history in Bahia. Nevertheless, the remote (and secret) Jewish origin of many traditional Catholic Portuguese families is quite well known, as a memory of the Jewish community and the Bahian population at large, specially among its elites.

Contemporary Period

The Jewish community in Salvador, the capital of Bahia, consisted of approximately 200 families with an active cultural

and political life, which reached its peak between the 1930s and 1950s. Jewish immigrants coming from Eastern Europe started settling in Salvador in the 1920s.

Records show that small groups of Jewish immigrants also settled in Ilhéus and Itabuna, in the region where a local economy based on cocoa flourished, and in Bonfim, Petrolina, Juazeiro, and Jacobina, along the banks of the São Francisco River (the most important in the State). In Salvador, a synagogue started to function at a private household in 1924, in 1925 the Jewish Jacob Dinenzon school was created. During the 1930s, a second school was founded, Ber Borochof, with Zionist leanings, differing from the Jacob Dinenzon school in its progressive and Yiddishist orientation. The new school operated slightly over a decade, after which the community favored the older school. In 1970, there were 120 students registered at the latter, which closed down in 1978 because many families had immigrated to other cities. In addition, the Jewish community in Salvador opened a cemetery and ran the Sociedade Beneficente. Zionist women's organizations emerged, such as WIZO and Naamat-Pioneiras, and the Jewish minority organized itself around the Sociedade Israelita da Bahia, founded in 1947. In 1968 the Hebraica Club of Salvador was founded. In politics, Mário Kertesz was mayor of the capital and Boris Tabacof was finance secretary of the State of Bahia. In 2004, those who remained organized themselves around the synagogue.

[Roney Cytrynowicz (2nd ed.)]

BAHIR, SEFER HA- (Heb. סֵפֶר הַבְּהִיר; “Book of Brightness”), kabbalistic, pseudoepigraphic and midrashic anthology which enigmatically depicts a sexualized, divine theosophy considered by scholarship to mark the literary emergence of Kabbalah at the beginning of the 13th century.

The Work and Its Titles

The *Sefer ha-Bahir* should not properly be considered a book as it has no known author and certainly no single author. It is comprised of numerous tradition-complexes, divided by Gershon *Scholem into 140 numbered passages. Many medieval Jewish esotericists contributed and revised the passages contained in this anthology, from its early and all but lost Ashkenazi version which lacked theosophic symbolism and on through its canonical status amongst kabbalists in Spain. The earliest manuscripts lack any title, although it was widely referred to in the 13th century as *Sefer ha-Bahir*, or *Midrash R. Nehunya ben ha-Kanah*, based upon the opening passages

wherein this tannaitic figure interprets a verse from Job (37:21) which mentions the bright light (*Or Bahir*).

Historical Setting and Earliest Use by the Kabbalists

Scholem placed the *Bahir* historically after the German Pietists and before the emergence of the Provençal kabbalists, so that the *Bahir* stood out as the earliest kabbalistic text. However, it is now understood that the first known kabbalist who composed a kabbalistic work in Provence, R. *Isaac the Blind, did not know the *Sefer ha-Bahir*. Accordingly, traditions quoted in the name of R. Isaac the Blind conclude with citations of passages from the *Sefer ha-Bahir*, but these citations are additions. No evidence exists that the Provençal kabbalists of his circle used or even knew of the work, although if they did, they certainly ignored it, preferring their own traditions and esoteric sources. R. Isaac's nephew, R. *Asher ben David, possibly cites the *Bahir* once in his *Sefer ha-Yihud* by the name *aggadah*, but here too, even if so, the lengthy book draws on other sources. R. Isaac's students in Gerona incorporated the *Sefer ha-Bahir* into their canon and writings, but only into their later works, suggesting the independent sources and development of these literary and esoteric circles. The anti-kabbalistic polemicist, R. *Meir ben Simeon of Narbonne, distinguished between what he heard from or about the Provençal kabbalists from what he read in the *Sefer ha-Bahir*, once again separating the Provençal kabbalistic phenomenon from this work.

Composition and Redaction: Between Germany and Spain

Accretions or revisions to certain passages display the mark of Provençal Kabbalah, although it cannot be determined when and by whom these passages were altered. One view places the main redactional activity as late as the kabbalists of Gerona. The 13th-century kabbalist, R. Isaac ha-Kohen, reports that the *Sefer ha-Bahir* “came from the Land of Israel to the early pietists, the sages of Ashkenaz, the kabbalists of Germany and from there to the early wise men in Provence who chase after all sorts of written [records of] wisdom, those who know the divine, supernal knowledge. But they saw only part of the book and not all of it because they did not see it in its entirety, in its complete form.” R. Isaac's testimony points to the Ashkenazi origin of some literary sources of the *Sefer ha-Bahir* as he denies that the Provençal kabbalists edited the work. Citations from the pre-theosophic version of the *Sefer ha-Bahir* by R. Ephraim bar Samson and other passages from *Sod ha-Gaddol* by R. Moses ben Eleazar ha-Darshan, both 13th-century German Pietists, point to the Ashkenazi origin of the textual sources to what later became the commonly accepted, theosophic version of the *Sefer ha-Bahir*. Scholem built an argument on the latter's quotations, suggesting that the work, *Sod ha-Gadol* can be traced back to the “Orient,” based on the mention of the title *Raza Rabba* in a ninth-century Karaite polemic against some rabbinic, magical works. This claim has since been dismissed as no citations can be offered to compare

the works, amongst a host of early and medieval works known by the title “Book of Secrets.” Recent scholarship has suggested that some passages in the *Bahir* are based on the Babylonian vocalization, pointing to ancient sources in the East. These claims aside, the literary production and kabbalistic recension are the products of unidentified circles of medieval, European esotericists which did not feed into, nor cause, the apparent “eruption” of kabbalistic thinking and literature at the end of the 12th and the beginning of the 13th centuries.

Literary Character of the Bahir

The *Sefer ha-Bahir* was not intended and should not be seen as a primer for kabbalistic study nor should it be understood through the lenses of the highly structured sefirotic symbolism which crystallized in the decades following its final stages of its composition and editing. The *Bahir* is rudimentary in its literary style, as it offers very complex mythic images, defying simple and structuralist interpretations based on the term *sefirot*. Many of its passages are based on parables of a king and his son or sons and a daughter, pointing to the *sefirotic* understanding, but effectively elucidating only some of the relationships within the supernal world, more than explicating any one, set doctrine.

Influences and External Sources

Scholem argued that the *Bahir* is the product of a merging of rabbinic and Gnostic traditions, at one point claiming that the work contains a literal translation of the Greek term *male*, *pleroma* (or: fullness), in describing the godhead. These phenomenological or hermeneutical parallels aside, no evidence can be shown to suggest the literary influence of Gnostic works on these early Jewish esotericists and the emerging Kabbalah. More recent attempts to explain the appearance of the *Sefer ha-Bahir*, have sought to explain the work as the first text to feminize the *Shekhinah* and focus on Her as the grade of the divinity closest to the kabbalist adept. Accordingly, the 12th-century Christian rites which focus on Mary in Provence are seen to be the impetus and influence which informed the kabbalistic invention of the feminized theosophy. Here again, only impressionistic parallels can be suggested between the two corpora and religious traditions, which in any event are anachronistic as the literary sources of the *Sefer ha-Bahir* predate this Christian phenomenon and the work emerges from a different geographical location, Ashkenaz. The *Sefer ha-Bahir* does offer many sexualized interpretations of the drama within the divine structure although it rarely mentions the *Shekhinah*. Locutions from *Sefer Yezirah* are central to a number of passages although no systematic attempt is made to transform the ancient esoteric work into a kabbalistic interpretation. The term “*sefirah*,” taken from *Sefer Yezirah*, rarely appears and there is no systematic use of the sefirotic names more commonly found in the later works to depict the ten divine grades of the divine theosophy. The term “kabbalah” is also not mentioned as the proper name for the esoteric lore, although there are two important uses of the root in other forms.

The Text and its Editions

The earliest dated manuscript from 1298 formed the basis for Scholem’s annotated German translation which comprised his doctoral dissertation in 1923. Scholem “corrected” or rather amended his Hebrew transcription, which formed the basis of his translation, with “better” readings from 13th-century kabbalists, changing the earliest textual witness in key places. The discrepancies between the earliest manuscript and the many citations which appear in later kabbalistic works, demonstrate that even the kabbalistic editing of the *Sefer ha-Bahir* was still in flux after the literary and social emergence of the Kabbalah. This process continued through the early modern period and on through the 20th century, when Reuven Margolioth edited a very popular edition of the Hebrew text by integrating all the readings from three late manuscripts, including words and phrases not found in the early manuscript witnesses. A number of passages cited as coming from the *Sefer ha-Bahir* but not found in the main manuscripts are quoted in other kabbalistic works. Numerous commentaries and translations were prepared from the 14th century to the present. In 1994 an edition based on the earliest manuscripts was published including a facsimile of the first printed edition (Amsterdam 1651), the celebrated Munich manuscript copied in 1298, listings of the Bahiric passages not found in the *Sefer ha-Bahir*, variant readings from citations found in manuscript works, listings of all translations and commentaries and a bibliography of references to the *Sefer ha-Bahir* in printed works and modern scholarship.

[Daniel Abrams (2nd ed.)]

BAHLUL, family of rabbis in Meknès, Morocco. DANIEL BEN JUDAH (second half of 17th century) was a halakhist, kabbalist, and preacher. He wrote copious notes on *Yazeh Yakar*, a work by Abraham Galanté on the Zohar to Exodus (Jerusalem National Library Ms.), and a volume of sermons which is fre-

quently quoted in the work of his son Eleazar. His other sons were Samuel and Joseph.

SAMUEL was also a rabbi of Meknès. His signature occurs on the halakhic rulings of the community, one of which is dated 1732. ELEAZAR was one of the important scholars of Meknès. His signature appears on the decisions given in 1726 and 1730. Of his many works, which are extant in manuscript, the most important is *Sefer Mareh Einayim* (Jerusalem National Library), composed in Fez between 1710 and 1712, a collection of sermons by Castilian exiles and Moroccan rabbis from the 16th century, as well as sermons which Eleazar had heard from Erez Israel emissaries. He also wrote *Pekuddat Elazar* on Proverbs, and a commentary on rabbinic maxims. In 1718 he edited and adapted *Refu'ot u-Segullot* and *Tivei Asavim* of Jacob Katan of Fez. JOSEPH was the secretary to the *bet din* of Meknès in 1834 and was later appointed *dayyan*.

BAHRAIN (Bahrein), territory extending along the Arabian shore of the Persian Gulf southward from *Basra including many small islands. Talmudic references to ports and islands on the Persian Gulf indicate that Jews were already settled in this region. The Jews in the old capital of Bahrein, Hajar, are recorded in Arabic sources as having refused to accept Islam when Muhammad sent a force to occupy the territory in 630. In the 12th century *Benjamin of Tudela refers to 500 Jews living in Qays and to a Jewish population of 5,000 in al-Qatifa (undoubtedly an exaggeration) who were said to control the pearl fishery. In the 19th century, Jewish merchants from Iraq, Persia, and India went to Bahrein, and there was a small Jewish colony. It has dwindled as a consequence of the political situation. In 1968 only some 100 Jews remained in the new capital city of Manama.

At the turn of the 20th century around 30 Jews remained in Bahrein, with services held in private homes on holidays. The Jewish community maintained its cemetery. Most of the Jews were prosperous and had good relations with their Muslim neighbors. Up until the Oslo Agreements (1993) between Israel and the Palestinians, the rulers of Bahrein had no official relations with Israel, but subsequently semi-official relations – commercial, in particular – were established.

[Walter Joseph Fischel]

BAHUR (Heb. בָּחֹר). In the Bible *bahur* is first used to mean “selected for military fitness” and applied especially to hand-picked warriors (I Sam. 26:2; II Sam. 10:9; Judg. 20:15; I Chron. 19:10; et al.). Later, *ne'arim* was used for “youngsters,” and *bahur* came to mean young men in the prime of their life; cf. “The glory of young men is their strength” (Prov. 20:29). In many cases it is mentioned with *betulah* meaning virgin (Deut.

32:25) and Jeremiah contrasts *bahur-betulah* with old-man-boy and with man-woman (51:22). Later the term was used for an unmarried man (Ket. 7a). The Talmud uses it also in the sense of an innocent young man who has not “tasted sin” (Pes. 87a), and eventually as a student at a talmudical school (*yeshivah*). In Yiddish, pronounced *boher*, it is also the term for an unmarried young man. In modern Hebrew it means a young man and the feminine *bahurah*, an unmarried girl.

BAHURIM (Heb. בְּחֹרִים, בָּחֹרִים), a biblical locality southeast of Jerusalem to which *Paltiel accompanied Saul's daughter Michal when he was forced to return her to her former husband, David (I Sam. 25:44; II Sam. 3:16). On his flight from Absalom, David passed Bahurim after ascending the western slope of the Mount of Olives. He was cursed there by Shimei, son of Gera, a native of the place (II Sam. 16:5ff.; I Kings 2:8). Jonathan and Ahimaaz, who acted as intermediaries between David and his secret supporters in Jerusalem, hid there in a well when they fell under suspicion (II Sam. 17:18ff.). Its accepted identification is with Ra's al-Tamim on the eastern slope of the Mount of Olives, where Iron Age pottery has been found.

[Michael Avi-Yonah]

BAHUZIM (probably from the Hebrew בְּחוּזִים, “outside”), name given by the Jews to the apparently Jewish tribes living in the 15th and 16th centuries along the Algerian-Tunisian border in the regions of Kabylia and Constantine in Algeria and of Le Kef in Tunisia, whom the Arabs named Yahud al-‘Arab (Arab Jews). These seminomadic tribes were agriculturists in Tunisia, and peddlers and jewelers in Algeria. Completely illiterate, the Bahuzim observed the Sabbath and swore by *Sidna Mūsā* (“our Master Moses”). They had their sons circumcised by the rabbi of the nearest town, who also officiated at their marriages and funeral rites. The theory brought forward by N. *Slouschz that these tribes were originally Berbers who had adopted Judaism was followed by several authors; hence they used the term “Judaized Berbers.” However, H.Z. *Hirschberg asserted that they were really marginal elements of the Jewish community living outside the Jewish centers. Their existence as such during the 16th century and their ignorance of the Berber language seem to confirm the latter's theory.

In 1852 there were about 1,500 Bahuzim in Algeria, and in 1912 there were still about a hundred Bahuzim tents in Tunisia. After the end of World War I these tribes steadily disappeared. Some of them converted to Islam, while others settled in the surrounding Jewish communities, which willingly accepted them.

[Rachel Auerbach]

BAḤYA (Pseudo), name given to the author of the Neoplatonic work *Kitāb Maʿānī al-Nafs* (“On the Essence of the Soul,” Ar. version ed. by I. Goldziher, 1902; translated into Heb. by I.D. Broydé, 1896), at one time attributed to *Baḥya ibn Paquda. Nothing is known of the author. It appears that Pseudo-Baḥya wrote this work sometime between the middle of the 11th and the middle of the 12th centuries, since he cites *Avicenna and *Nissim ben Jacob who lived in the first half of the 11th century, but gives no indication that he was influenced by the late 12th-century developments in Islamic and Jewish philosophy.

On the Essence of the Soul presents the structure of the universe as a hierarchy of ten emanations created by God. These emanations are the active intellect, soul of the universe, nature, matter, bodies of the spheres, stars, fire, air, water, and earth. Each emanation is dependent on its predecessor for the divine power necessary to activate it. From the ten emanations are formed the composite substances of the sensual world to which the soul must descend. Criticizing the naturalist position that the soul is an accident of the body, the author maintains that the rational soul is spiritual, a product of the soul of the universe. While passing through each emanation in its descent, the soul acquires “outer garments” of impurities until it finally reaches earth and is embodied in man. Different degrees of impurity depending on the length of the soul’s stay in each of the emanations through which it descends provide the differences between souls, which, however, are all similar in essence. Once it inheres in a body, the rational soul unites with the lower vegetative and animal souls, and it loses its original suprasensual knowledge. In order to reverse this process and ascend to the spiritual source from which it derived, the rational soul must purify itself by cultivating virtue and by governing the lower souls.

The author bases the immortality of the soul after death on the fact that all things composed of elements return back to their elements. Hence the soul returns to its origin, which is the spiritual soul of the universe, by means of an ascent which the soul can make once it has attained moral and intellectual perfection. Souls possessing only moral perfection can rise to an earthly paradise where they can acquire the knowledge necessary for their ascent to the suprasensual world. Souls possessing only intellectual perfection or no perfection at all are doomed to their earthly surroundings. As a part of their punishment these souls strive unsuccessfully to ascend to the suprasensual world. There is no direct evidence of the work having had any influence in medieval Jewish philosophy and it is not cited by other critics.

[David Geffen]

BAḤYA BEN ASHER BEN ḤLAVA (13th century), exegete, preacher, and kabbalist. His great commentary on the Pen-

tateuch (Naples, 1492) was written in 1291. According to tradition, he lived in Saragossa and served there as *dayyan* and preacher. He was a disciple of Solomon b. Abraham Adret, whom he called “my master,” whenever he quoted from his commentaries. Curiously enough, Baḥya mentions neither his teacher’s kabbalistic sayings nor his commentaries on the mystical teachings of Naḥmanides as did Solomon b. Adret’s other disciples. There are also kabbalistic matters quoted anonymously by Baḥya which are attributed to Solomon b. Adret by other authors. This might confirm the assumption of J. Reifmann (*Alummah*, 1 (1936), 82) that Baḥya was not Solomon b. Adret’s disciple in Kabbalah. It is also possible that he did not have his teacher’s permission to quote him in kabbalistic matters. Isaac b. Todros of Barcelona, the commentator on Naḥmanides’ esoteric teachings, is quoted by Baḥya only once, without the attribute “my teacher.”

His Writings

Following *Botarel and for various reasons, spurious works (as well as writings whose authors are unknown) have been attributed to Baḥya. J. Reifmann’s assumption that Baḥya wrote *Ha-Emunah ve-ha-Bittahon* (Korets, 1785), *Maʾarekhet ha-Elohut* (Mantua, 1558), and *Maʾamar ha-Sekhel* (Cremona, 1557), does not stand up to critical examination. Béla Bernstein has pointed out that a commentary on Job published in Baḥya’s name was really a compilation made from two of his books: *Kad ha-Kemaḥ* (Constantinople, 1515) and *Shulḥan shel Arba* (Mantua, 1514). There was also the opinion that Baḥya’s mention of *Ḥoshen Mishpat* was simply a printing error.

The clarity of Baḥya’s style and his easy exposition have made his books (which draw their material from a variety of sources) popular with the public, particularly his commentary on the Pentateuch which has been published frequently from 1492 (with explanations and references, 2 vols., 1966–67). Additional testimony to its popularity are the numerous quotations from it in the book **Z’e’erah u-Re’erah*. In his work Baḥya interprets the Pentateuch in four ways: literal, homiletical, rational, and according to the Kabbalah. He uses many different sources, beginning with talmudic and midrashic literature, exegetic and philosophic literature, and ending with kabbalistic literature. The way of *sekhel* (“reason”) does not always mean philosophic-rationalistic interpretation. According to Baḥya, all that is outside the divine world, including demonological matters, belongs to “the way of reason,” insofar as it is necessary to explain the verses or the *mitzvot* according to the subject. Baḥya is considered of great importance in Kabbalah and is one of the main sources through which the kabbalistic sayings of Naḥmanides’ contemporaries have been preserved. As a rule, Baḥya does not divulge his kabbalistic sources. With the exception of the *Sefer ha-ʾBahir*, which he considers an authentic Midrash, and Naḥmanides, who is his guide in Kabbalah, he rarely mentions other kabbalists, although he uses extensively the writings of Jacob b. Sheshet *Gerondi, *Asher b. David, Joseph *Gikatilla, and others. He treats the Zohar in a similar manner. Parts of the Zohar were known to him, and

he copied from them. However, he mentions it only twice (as “Midrash Rabbi Simeon b. Yoḥai”). *Kad ha-Kemaḥ* contains alphabetically arranged clarifications on the foundations of faith and had a wide circulation. The best edition is that of Breit which contains a commentary (1880–92). A critical edition of *Kad ha-Kemaḥ*, *Shullḥan shel Arba*, and Baḥya’s commentary to *Pirkei Avot* was published by C.B. Chavel (*Kitvei Rabbenu Baḥya*, 1970).

Baḥya ben Asher* (1970).

[Efraim Gottlieb]

BAHYA (Bahye) BEN JOSEPH IBN PAQUDA (second half of 11th century), moral philosopher. Little is known about the particulars of Baḥya’s life beyond the fact that he lived in Muslim Spain, probably at Saragossa. Baḥya was also known as a *paytan* and some of his *piyyutim* are metered. Twenty *piyyutim*, either published or in manuscript, signed with the name Baḥya are assumed to be his. Baḥya’s major work, *Kitāb al-Hidāya ilā Farāʾid al-Qulūb* (ed. A.S. Yahuda, 1912), was written around 1080. It was translated into Hebrew by Judah ibn *Tibbon in 1161 under the title *Ḥovot ha-Levavot* (“Duties of the Hearts”), and in this version it became popular and had a profound influence on all subsequent Jewish pietistic literature. Joseph *Kimḥi also translated portions of it, but his version gained no circulation and is still in manuscript. Several abridgments were made of the Hebrew translation, and the work was translated into Arabic, Spanish, Portuguese, Italian, and Yiddish. In more recent times it has been translated into English (*Duties of the Heart*, text and translation by M. Hyamson, 1962), German (*Choboth ha-Lʾbaboṭh. Lehrbuch der Herzenspflichten*, tr. by M. Stern, 1856), and French (*Introduction aux devoirs des coeurs*, tr. by A. Chouraqui, 1950). In his *Ḥovot ha-Levavot* Baḥya drew a great deal upon non-Jewish sources, borrowing from Muslim mysticism, Arabic Neoplatonism, and perhaps also from the *Hermetic writings. From Muslim authors he borrowed the basic structure of the book as well as definitions, aphorisms, and examples to illustrate his doctrines. In most cases his immediate sources cannot be identified, and the theory that he was influenced by *Al-Ghazali does not seem to be well-founded.

Despite the fact that Baḥya borrowed so liberally from non-Jewish sources, *Ḥovot ha-Levavot* remains an essentially Jewish book. In the introduction to this work Baḥya divides the obligations incumbent upon the religious man into duties of the members of the body (*ḥovot ha-evarim*), those obligations which involve overt actions; and duties of the hearts (*ḥovot ha-levavot*), those obligations which involve not man’s actions, but his inner life. The first division includes the various ritual and ethical observances commanded by the Torah, e.g., the observance of the Sabbath, prayer, and the giving of

charity, while the second consists of beliefs, e.g., the belief in the existence and unity of God, and attitudes or spiritual traits, e.g., trust in God, love and fear of Him, and repentance. The prohibitions against bearing a grudge and taking revenge are also examples of duties of the hearts. Baḥya explains that he wrote this work because the duties of man’s inner life had been sorely neglected by his predecessors and contemporaries whose writings had concentrated on religious observances, that is, the duties of the members of the body. To remedy this deficiency Baḥya wrote his work, which may be considered a kind of counterpart to the halakhic compendia of his predecessors and contemporaries. Just as their halakhic compendia contained directions for the actions of the religious man, so Baḥya’s work contained directions for his inner life. *Ḥovot ha-Levavot* is modeled after the works of Muslim mysticism, which attempt to lead the reader through various ascending stages of man’s inner life, toward spiritual perfection and finally union (or at least communion) with God. In similar fashion *Ḥovot ha-Levavot* is divided into ten “gates” (chapters), each of which is devoted to a particular duty of the heart, which the Jew must observe if he is to attain spiritual perfection. The ten chapters deal with the affirmation of the unity of God (*yihud*), the nature of the world disclosing the workings of God (*beḥinat ha-olam*), divine worship (*avodat ha-Elohim*), trust in God (*bittaḥon*), sincerity of purpose (*yihud ha-ma’aseh*), humility (*keni’ah*), repentance (*teshuvah*), self-examination (*heshbon ha-nefesh*), asceticism (*perishut*), and the love of God (*ahavat ha-Shem*).

In accordance with Platonic teachings (probably influenced partially by the Epistles of the Sincere Brethren), he maintains that man’s soul, which is celestial in origin, is placed, by divine decree, within the body, where it runs the risk of forgetting its nature and mission. The human soul receives aid from the intellect and the revealed Law in achieving its goal. To elucidate this point Baḥya makes use of the Muʿtazilite (see *Kalām) distinction between rational and traditional commandments. He holds that the duties of the members of the body may be divided into rational commandments and traditional (religious) commandments, while the duties of the hearts are all rooted in the intellect. With the aid of reason and the revealed Law the soul can triumph over its enemy, the evil inclination (*yezer*), which attacks it incessantly in an effort to beguile it into erroneous beliefs and to enslave it to bodily appetites. Since the basis of religion is the belief in the existence of God, the first chapter of the work is devoted to a philosophical and theological explication of the existence and unity of God and a discussion of His attributes. In the second chapter Baḥya examines the order in the universe and the extraordinary structure of man, the microcosm. Such an examination leads to a knowledge of God, and to a sense of gratitude towards Him as creator. In the third chapter he discusses divine worship which is the expression of man’s gratitude to God. To fulfill his duties to God without faltering and to achieve his true goal, man must diligently practice a number of virtues. One of these is trust in God, which is based on the belief that

God is good, and that he has a knowledge of what is best for man, and the power to protect him. To trust in God does not mean that one should neglect one's work, leaving everything to Him, but rather that one should conscientiously attempt to carry out one's duties, trusting that God will remove any obstacles which lie in the way of their fulfillment. While man has the freedom to will and choose, the realization of his actions is dependent on God's will. Further, a sound spiritual life requires sincerity, a perfect correspondence between man's conscience and behavior. Man's intentions must coincide with his actions in aiming toward the service of God. Humility, repentance, and self-examination are also essential. Another virtue is asceticism or temperance. Bahya considers total asceticism, involving the breaking of all social ties, an ideal rarely attained in the biblical past and hardly to be recommended in the present. Actually, he recommends the pursuit of the middle way prescribed by the revealed Law, defining the genuine ascetic as one who directs all his actions to the service of God, while at the same time fulfilling his functions within society. The observance of these virtues leads to the highest stage of the spiritual life, the love of God. True love of God is the ardor of the soul for union with the Divine Light, a concept of a distinctly mystic character. Bahya does not, however, develop this concept in all its implications. The love of God, in his view, is a synthesis of the degrees of perfection described above, but does not go beyond them. The lover of God, such as described by him, keeps at a distance from his loved one. Despite Bahya's dependence upon Muslim mysticism, which is here more pronounced than elsewhere in the work, his teaching remains in the line of Jewish tradition, and he cannot be called a mystic in the strict sense of the term. It has been definitely established that the Judeo-Arabic Neo-platonic tract, *Kitāb Ma'ānī al Nafs* (ed. by I. Goldziher, 1907; translated into Hebrew by I. Broydé as *Sefer Torat ha-Nefesh*, 1896) at one time attributed to Bahya, was not written by him (see *Bahya (Pseudo)).

[Georges Vajda]

BAIA-MARE (Hg. *Nagybánya*), mining and industrial town in Transylvania, Romania, within Hungary until 1918 and between 1940 and 1944. The prohibition against Jewish settlement in Hungarian mining towns (issued in 1693) was abolished in 1848. The oldest document indicating a Jewish presence dates from the year 1664 and mentions a Jew trading in the locally mined metal. In a document dated 1725 the

absence of the Jews is noted. In 1850 Jewish artisans, businessmen, and farmers began to settle in Baia-Mare. Subsequently Jews did much to develop local commerce and industry. A community was organized in 1860, and a burial society founded in 1862. The first synagogue was opened in 1887. During the *Tisza-Eszlar blood libel case in 1882, a mob attacked the synagogue and pillaged it. The community always remained Orthodox, and Satmar Hasidism (see *Teitelbaum) had a strong following. There was also a flourishing Zionist movement. In the period between the two world wars there was increasing tension between the ḥasidic community and the Zionists. The Jewish population numbered 701 in 1890 (out of a total of 9,838); 1,402 in 1910 (out of 12,877); 2,030 in 1930 (out of 13,904); and 3,623 in 1941 (out of 21,404).

[Yehouda Marton / Paul Schweiger (2nd ed.)]

Holocaust Period

Between the two world wars the Jewish population suffered from attacks by the Romanian Iron Guard. Between 1941 and 1944, the town served as the headquarters of Labor Service Battalion No. x, the recruitment center for many of the Jewish males of military age in Northern Transylvania. The Battalion was under the command of Lt. Col. Imre Reviczky (1896–1957), a decent Hungarian officer who saved a large number of Jews after the German occupation in 1944 by recruiting them into labor service and thus rescuing them from deportation. In 1962 he was posthumously recognized by Yad Vashem as a Righteous Among the Nations.

The roundup of the Jews of Baia Mare began on May 3, 1944, together with those from Northern Transylvania. The ghetto for the Jews of Baia-Mare was established in the vacant lots of the Koenig Glass Factory; at its peak, it held close to 4,000 victims. The approximately 2,000 Jews from the communities in the District of Baia-Mare, including Alsófernezely, Hagymásláros, Kapnikbánya, Láposbánya, Misztófalú, Nagysikárló, Tomány, and Zazár, were concentrated in a stable and barn in Valea Burcutului (Hung. Borpatak), which could accommodate only 200 people; the others had to be quartered outdoors. The 5,917 Jews concentrated in these two ghettos were deported to Auschwitz in two transports on May 31 and June 5, 1944, respectively.

[Randolph Braham (2nd ed.)]

The Jewish population in Baia-Mare numbered 950 in 1947. Subsequent emigration to Israel, Western Europe, and the United States reduced the community considerably. In 1969 it numbered 120 families. In 2004 a very small number of Jews remained in the town.

BAIERSDORF, village in Bavaria, Germany, formerly the summer residence of the margraves of Kulmbach-Bayreuth. Tombstones in the Jewish cemetery indicate the presence of Jews in Baiersdorf at the end of the 14th century, although the

first document in which they are mentioned dates from 1473. In 1632 they numbered 12 families. The synagogue, established before 1530, was rebuilt in 1651. After persecutions in 1680, the margrave issued an order in 1695 granting the Jews freedom of trade. In 1699 a "Jewish pharmacy" was opened in Baiersdorf. The community increased to 40 families (300 persons) in 1713 and 83 families in 1771. Baiersdorf was the seat of a district rabbinate in the 18th and 19th centuries. The Bavarian restrictions limiting Jewish households (*Matrikel-Gesetz*) led many of the younger sons to emigrate to England and America (for instance, the *Seligman family), and by about 1900 only 12 Jewish families remained. The rabbinate was dissolved in 1894. The synagogue built in 1711 was destroyed under the Nazi regime in November 1938; only three Jews remained in Baiersdorf at the time.

[Z'ëv Wilhem Falk]

BAIERSDORF, SAMSON SOLOMON (d. 1712), son of Judah Selke, court agent of the margrave of Brandenburg-Bayreuth. Baiersdorf entered the margrave's service in 1670. He influenced him to issue a decree in 1695 granting the Jews in the margravate freedom of trade. In 1698 he bought real estate from the margrave. Although later involved in a court intrigue, Baiersdorf managed to retain his position. He donated the money for the synagogue of *Bayreuth, consecrated in 1711. Baiersdorf's daughter married Moses, the son of *Glueckel of Hameln, who became rabbi of *Baiersdorf in 1700. His sons, Veit and Solomon, known by the family name of Samson, and his son-in-law and brother also became court agents; the latter was permitted to retain an armed guard.

BAIGNEUX-LES-JUIFS, village northwest of *Dijon. Jews settled in the commune at its establishment in the middle of the 13th century, giving the locality its name. They were expelled with the other Jews in the duchy of Burgundy in 1306. The inventory made of their debts and property indicates that the community was fairly numerous and prosperous. Green and red wax, parchment, ink, and paint were taken from a Jew referred to as Rebi or Rabi – most probably the scribe of the community. The medieval synagogue was located on the present Rue Vergier-au-Duc.

[Bernhard Blumenkranz]

BAIL, CHARLES-JOSEPH (1777–1827), French soldier, publicist, and civil servant. Bail was in charge of the administration of the Bonapartist kingdom of *Westphalia, and thus had close contacts with the heads of the Jewish *Consistoire there. After the fall of Napoleon, he continued to defend the basic principles of the revolution. In this spirit he published a pamphlet on "The Jews in the 19th Century or Considerations of their Civil and Political Status in Europe" (*Les Juifs au XIX^e siècle...* Paris, 1816). He here defended the basic principles of equality, ascribing the separatist characteristics of the Jews to their depressed civil and political status. The same year, following criticism from the Catholic Romantic side, Bail published a second edition in which he imputed some of the separatist characteristics of the Jews to their religion and form of society, although in the main still defending his original thesis. Bail took part in a competition held by the Académie des Inscriptions et Belles-Lettres on the history of the Jews in Europe in the Middle Ages. Although unsuccessful, Bail subsequently published his work "The Situation of the Jews in France, Spain and Italy" (*Etat des Juifs en France...* Paris, 1823).

Bail... et trois lettres de M. de Cologne, grand rabbin du consistoire Israélite de Paris* (n.d.); *Dictionnaire de Bibliographie Française*, 4 (1948), s.v.; *Nouvelle Biographie Universelle*, 4 (1853), s.v.

[Baruch Mevorah]

BAILY, BERNARD (1922–), U.S. historian. Born in Hartford, Connecticut, Bailyn received a B.A. from Williams College in 1945 and his M.A. (1947) and Ph.D. (1953) degrees from Harvard. Bailyn then joined the faculty of Harvard in 1953 and became professor of history in 1961. He was editor-in-chief of the John Harvard Library of American Cultural History from 1962 until 1970. He also served as coeditor of the journal *Perspectives in American History* (1967–77, 1984–86) and director of the Charles Warren Center for Studies in American History (1983–94).

Bailyn became Winthrop Professor of History in 1966, a position he held until 1981, when he became the first Adams University Professor. He was also named James Duncan Phillips Professor of Early American History, emeritus, at Harvard. He served as a senior fellow in the Society of Fellows and as director of the International Seminar on the History of the Atlantic World. In 1993 he received the Thomas Jefferson Medal and in 1994 the Henry Allen Moe Prize of the American Philosophical Society. In 1998 he was appointed the Jefferson Lecturer by the National Endowment for the Humanities and he delivered the first Millennium Lecture at the White House. In 2000 he was awarded the Bruce Catton Prize of the Society of American Historians for lifetime achievement in the writing of history, and in 2001 he received the Centennial Medal of the Harvard Graduate School of Arts and Sciences. He also received two Pulitzer Prizes in history (1968 and 1987).

Among his many publications, Bailyn wrote *The New England Merchants in the Seventeenth Century* (1955); *Massachusetts Shipping, 1697–1714* (with Lotte Bailyn, 1959); *Education in the Forming of American Society* (1960); *The Ideological Origins of the American Revolution* (1967), for which he received the Pulitzer and Bancroft prizes in 1968; *The Origins of American Politics* (1968); *The Ordeal of Thomas Hutchinson* (1974), awarded the National Book Award in History in 1975; *The Peopling of British North America: An Introduction* (1986); *Voyagers to the West* (1986), which won the Pulitzer Prize in history and other awards; *Faces of Revolution* (1990); *On the Teaching and Writing of History* (1994); and *To Begin the World Anew: The Genius and Ambiguities of the American Founders* (2003).

Specializing in American colonial and revolutionary history, Bailyn is known for meticulous research and for interpretations that sometimes challenge conventional wisdom, especially with regard to the causes and effects of the American Revolution. Bailyn taught his students that history is primarily about change and movement, and that however hard one has to work to understand what the past was like, the deeper challenge is to explain how one part of the past gave way to another. And because change can only be described through narrative, historians must be sensitive to all the matters of exposition that make narrative effective, which always involves understanding that expository decisions are as essential to historians as their mastery of sources and all the other technical skills on which historical scholarship depends.

[Ruth Beloff (2nd ed.)]

BAITLER, ZOMA (1908–1994), Uruguayan painter. Born and educated in Lithuania. Baitler, an impressionist, went to Uruguay in 1927 and exhibited for the first time at the “Free Artists Salon” in 1931. He was one of the founders of the atelier ЕТАР. Exhibitions of his work were held in North and South America as well as in Israel. In 1936 he issued the Art Magazine *Perseo* and wrote essays on art and on art criticism. In 1963 he was appointed cultural assistant to the Uruguayan Embassy in Israel for three years. His works are in the National and Municipal Museums of Uruguay and Israel.

BAITOS (Boethus) BEN ZONIN (beginning of second century), respected and wealthy resident of Lydda, whose home was a meeting place for scholars. It is related that the rabbis, headed by Rabban *Gamaliel of Jabneh, “reclined in the home of Baitos b. Zonin in Lydda and discussed Passover *halakhot* the whole of that night [of the *Passover Seder] until cockcrow” (Tosef., Pes. 10:12). He also discussed halakhic problems with the rabbis (TJ, Pes. 2: end of 4, 29c; Pes. 37a). Baitos conducted his life in accordance with the teachings of the rabbis, particularly *Eleazar b. Azariah (Meg. 27b; BM 63a; BB 13b), and his conduct is cited in tannaitic sources as evidence for the *halakhah* in both ritual and monetary matters (BM 5:3; Av. Zar. 5:2).

BAIZERMAN, SAUL (1899–1957), U.S. sculptor. Baizerman was born in Vitebsk, the same Russian town in which Marc *Chagall was raised. At 13 he decided to become a sculptor. He received some artistic training in Russia; the first of his teachers there told him he was not talented enough to succeed as an artist. After escaping from an Odessa prison where he had been incarcerated for a year and a half for revolutionary activities, Baizerman arrived in America in 1910 at the age of 22. In 1911 he began classes at the National Academy of Design, and then continued his artistic training at the Beaux-Arts Institute of Design in New York for four years. He also studied at the Educational Alliance, where he became acquainted with Moses *Soyer and Chaim *Gross.

In the early 1920s Baizerman began a series of carved plaster figures, later cast in bronze, to inhabit a model of New York City. Until his death he worked on this project, titled *The City and the People*. Approximately 56 pieces show urban life on a small scale; some of the figures are only three inches high. The actual city is a nearly abstract, geometric form in which the laborers of the metropolis might toil. Even so, Baizerman exhibited the small sculptures as independent entities rather than creating a narrative for figures such as *Man with Shovel* (1921–23) and *Rabbi* (1922).

While *The City and the People* is Baizerman’s most ambitious project, he is better known for the sculptural technique he adopted in 1926. He hammered copper sheets into representational forms, a physically exhausting procedure that displays the artist’s labor as much as the subject represented. This approach had its roots in Baizerman’s Russian childhood; his father, a harness maker, hammered leather into harnesses. Being concave as well as convex, Baizerman’s sculptures are meant to be seen in the round. Although the sculptures appear solid and heavy, the hammered metal is thin. A January 1931 fire in his New York studio destroyed much of his sculpture, but with renewed energy he created a new body of work that was shown in exhibitions in the 1930s and 1940s, including one-man shows in 1933, 1938, and 1948. His work occasionally took on biblical themes, such as *Eve* (1949), *Crucifixion* (c. 1947–50), and *Creation* (1950–57), which stands eight feet high. He also did a portrait head of Albert Einstein (1940–49).

[Samantha Baskind (2nd ed.)]

BAJA, the seat of Bács (earlier Bács-Bodrog) county situated on the Danube in southern Hungary. Jews settled there in 1725. In 1753 there were ten and in 1773 16 families, mainly merchants in wool, leather, and tobacco. In 1773 the Jews, mostly immigrants from Moravia, received permission to build a synagogue and appoint a rabbi. In March 1840 the communal buildings, including the synagogue, were devastated in a fire that swept through the town. A new synagogue was built in 1842. The community opened a secondary school in 1878,

complementing the primary school that had been in existence since 1771. In addition to several communal and charity organizations, the community also built a hospital in 1882. In 1885, the smaller Jewish communities of the neighboring villages, including those of Baracska, Bátamonostor, Borsód, Csátalja, Csávoly, Dantova, Felsőszentiván, Gara, and Vaskút, affiliated themselves to Baja organizationally. Baja's Jewish population ranged from 516 in 1840 (3.7% of the total) to 1,648 (5.9%) in 1930, with a maximum of 2,542 (13.2%) in 1880. Among the rabbis who served the Jewish community of Baja were József Márkus, who built the first synagogue in 1768; Rabbi Meir *Ash (Eisenstadt), a student of Hatam Sofer, who served from 1805 to 1815; and Rabbi Eliakim Schwerin Goetz Kohn, who served from 1815 to 1845. The latter also founded and headed a yeshivah. In 1941, Baja had a Jewish population of 1,378, representing 4.3% of the total of 32,369. In addition it had 149 (0.5%) converts who were identified as Jews under the racial laws then in effect. During the period of the Austro-Hungarian Empire, two Jews – Mór Hauser and Gyula Erdélyi – had served as the city's mayor. Hauser was also elected to the lower house of the Hungarian parliament.

After the German occupation of Hungary on March 19, 1944, the largely Neolog community numbered approximately 1,200 members. They were led by Zsigmond Weidinger and Rabbi József Klein. On April 14, the authorities arrested 150 prominent Jews, who were first taken to the Topolya internment camp and then deported to Grossrosen – a month before the start of the mass deportations from Hungary. Among the victims were Rabbi Klein, Lipót Kertész, the communal notary, and cantor Mór Rubovics. From Grossrosen, Rabbi Klein was eventually taken to Stettin (*Szczecin*), where he was beaten to death by German guards.

Baja served as a major concentration point for Jews rounded up in several neighboring districts, including those of Apatin, Baja, Hódság, Palánka, and Zombor. The roundup of the Jews was directed by Police Chief Béla Jeles. The Jews, including those brought in from the neighboring ghettos, were concentrated in three different locations, where they lived under miserable conditions until their deportation. Two of these ghettos were set up for the Jews of Újvidék (Novi Sad). The ghetto of Baja was led by a seven-member Jewish Council that included Ferencz Stein and László Biró. The approximately 8,200 Jews concentrated in Baja were deported to Auschwitz in two transports that left the town on May 28 and June 18, respectively. Prior to their deportation the Jews were subjected to still another round of expropriations under brutal conditions.

During the immediate post-liberation period, Baja had approximately 400 Jewish inhabitants, including those who moved in from the neighboring villages. The survivors reestablished the Neolog community in 1947 under the leadership of President Sándor Rostás, Rabbi József Rosenfeld, and Rabbi Tibor Klein. After 1948, the membership gradually declined. By 1953 only 180 identified themselves as Jews. This number

had shrunk to 70 by 1964. By the turn of the century only a handful were still left in the city. In 1985 the synagogue was transformed into a public library.

[Laszlo Harsanyi / Randolph Braham (2nd ed.)]

BAK (also **Pak**), a family of Jewish printers of Ashkenazi origin, who lived first in Venice and later in Prague. According to Zunz, the name represents the initials of *Benei Kedoshim* (Children of the Martyrs).

GERSON, the progenitor of the family, lived in Italy in the early 16th century, where his son JACOB followed the printing trade. Jacob printed the *Midrash Tanḥuma* in Verona (1595) and in Venice *Tanna de-Vei Eliyahu* (1598), and *Tiferet Yisrael* by *Judah Loew (the Maharal) of Prague in 1599. Apparently his connections with the latter brought him to Prague. From 1605 until his death in 1618 he printed numerous Hebrew and Judeo-German books. He was succeeded by his sons JOSEPH and JUDAH, who in 1623 set up a new printing house called "Jacob Bak's Sons." Their output was considerable, despite the temporary slowing down during the Thirty Years' War and the persecutions of 1648/49 and 1656. In about 1660 Joseph left the printing business, and Judah carried on alone. A libel action brought against the press led to its closing down in 1669. Judah died in 1671, and two years later his sons, JACOB (1630–1688) and JOSEPH (d. 1696), were authorized to resume printing books, as "Judah Bak's sons," but a special permit was required for each book. In 1680 Joseph completed a *maḥzor* at nearby Weckelsdorf – the only Hebrew work ever printed there. Between 1680 and 1683 Joseph apparently continued alone in Prague, while Jacob worked under the name "Judah Bak's Sons" (1682–88). Joseph was joined by Jacob's son MOSES (d. 1712), in 1686. From 1697 Moses ran the firm with his cousin, Joseph's son (later "The Bak Press"). Moses' son JUDAH (d. 1767/68), who was a compositor, managed the press from 1735 to 1756. In 1757 Judah's brother YOM TOV LIPMANN joined as his partner, and the firm became "Moses Bak's Sons." The firm later became "The Bak and Katz Press" (1784–89), and afterwards passed into other hands entirely. The Bak family members were pioneers in the field of Jewish printing, while also making an important contribution to the Jewish community of the time. Israel *Bak, the printer of Safed and Jerusalem, does not seem to have any connection with this Bak family.

[Abraham Meir Habermann]

BAK, printers and pioneers in Erez Israel. **ISRAEL BAK** (1797–1874) was born in Berdichev, Ukraine, into a family of printers. Later he owned a Jewish press in Berdichev, printing about 30 books between 1815 and 1821 when the press closed down. In 1831, after various unsuccessful efforts to reopen the works, he immigrated to Palestine and settled in Safed. There he renewed the tradition of printing Hebrew works, which had come to an end in the last third of the 17th century. During the peasant revolt against Muhammad Ali in 1834 his printing press was destroyed and he was wounded. Later he reopened his press, and also began to work the land on Mount Yarmak (Meron), overlooking Safed. His was the first Jewish farm in Erez Israel in modern times. After the Safed earthquake in 1837 and the Druze revolt in 1838, during which his farm and printing press were destroyed, he moved to Jerusalem. In 1841 he established the first – and for 22 years, the only – Jewish printing press in Jerusalem. One hundred and thirty books were printed on it, making it an important cultural factor in Jerusalem. Bak also published and edited the second Hebrew newspaper in Erez Israel, *Havazzelet* (1863). After a short time its publication stopped and was renewed only in 1870 by his son-in-law I.D. *Frumkin and others. Israel Bak was a leader of the ḥasidic community; as a result of his efforts and those of his son Nisan, a central synagogue for the Ḥasidim, called Tiferet Israel (after R. Israel of Ruzhin), came into being. In Jerusalem it was also known as “Nisan Bak’s synagogue.” It was destroyed in 1948 during the War of Independence.

NISAN (1815–1889), only son of Israel, was born in Berdichev and immigrated to Palestine with his father in 1831. Nisan managed the printing press after the death of his father until 1883, when he sold the business; thereafter he devoted himself exclusively to communal affairs in Jerusalem. He was an active worker in the ḥasidic community and the representative of the Ruzhin-Sadagura dynasty in Jerusalem. Through his contacts with the Turkish government he did much to modify decrees aimed against the *yishuv*. He initiated and executed several building projects in Jerusalem, such as the Kiryah Ne’emanah quarter, first named Oholei Moshe vi-Yhudit, but better known as Battei Nisan Bak. He and his brother-in-law I.D. Frumkin were pioneers of the Haskalah in Jerusalem; they also opposed the methods of **ḥalukkah* distribution. In 1884 Nisan and others founded the Ezrat Niddaḥim Society, which fought the missions and established the Yemenite quarter in Jerusalem.

[Getzel Kressel]

BAK, SAMUEL (1933–), painter. Bak was born in Vilna. A few years later the area was incorporated into the indepen-

dent republic of Lithuania. He was eight when the Germans occupied the city. Bak began painting while still a child and, prompted by the well-known Yiddish poet Abraham Sutzkever, held his first exhibition (in the Vilna ghetto) in 1942 at the age of nine. From the ghetto the family was sent to a labor camp on the outskirts of the city. Bak’s father managed to save his son by dropping him in a sack out of a ground floor window of the warehouse where he was working; he was met by a maid and brought to the house where his mother was hiding. His father was shot by the Germans in July 1944, a few days before Soviet troops liberated the city. His four grandparents had earlier been executed at the killing site outside Vilna called Ponary.

After the war, the young Bak continued painting at the Displaced Persons camp in Landsberg, Germany (1945–48), where he also studied painting in Munich. In 1948, he and his mother immigrated to Israel, where he studied for a year at the Bezalel Art School in Jerusalem. After fulfilling his military service, he spent three years (1956–59) at the École des Beaux-Arts in Paris. He then moved to Rome (1959–66), returned to Israel (1966–74), and lived for a time in New York City (1974–77). There followed further years in Israel and Paris, then a long stay in Switzerland (1984–93). From 1993 Bak lived and worked outside Boston, in Weston, Massachusetts. In 2001 he published a detailed autobiography, *Painted in Words: A Memoir* (Indiana University Press).

Bak’s paintings have been exhibited in museums and galleries and hang in public collections in England, the United States, Israel, Germany, and Switzerland. Many later works may be viewed at the Pucker Gallery (171 Newbury Street) in Boston. The editors of *Between Worlds: The Paintings and Drawings of Samuel Bak from 1946 to 2001* (Pucker Art Publications, 2002), a survey of more than a half-century of his work, summarize the sources of his vision as follows:

Bak’s life has inevitably influenced his choice of images and themes. The particulars of Vilna and the Holocaust, of surviving and being a wandering Jew, are part of his individual biography; but all are also aspects of our shared human condition. Bak has always sought to find the universal in the specific. His ongoing dialogues with the long-dead members of his family, with his early teachers, with the great masters of all epochs, with contemporary culture, and with the Bible and the diverse host of Jewish traditions – all come from his desire to represent the universality of loss and the endurance of man’s hope for a *tikkun*.

The fragile balance between ruin and repair remained a central theme of his efforts to create for modern consciousness challenging visual images of our contemporary world.

BAKAN, DAVID (1921–2004), U.S. psychologist. Born in New York, Bakan held several university positions from 1961, teaching at the University of Chicago, Ohio State, Harvard, and York University in Toronto, Canada. Bakan wrote on a wide range of topics including psychoanalysis, religion, philosophy, and research methodology, as well as child abuse. In his book *Sigmund Freud and the Jewish Mystical Tradition* (1958) he attempted to trace the roots of early psychoanalytic concepts and methods in the Kabbalah, the Zohar, and talmudic interpretations. His *Duality of Human Existence: An Essay on Psychology and Religion* (1966) made important contributions to the history of psychology, especially in relation to the problem of introspection, research methodology, and the psychology of religion.

Other books by Bakan include *On Method: Toward a Reconstruction of Psychological Investigation* (1967); *Disease, Pain, and Sacrifice: Toward a Psychology of Suffering* (1968); *Slaughter of the Innocents: A Study of the Battered Child Phenomenon* (1971); *And They Took Themselves Wives: The Emergence of Patriarchy in Western Civilization* (1979); and *Maimonides on Prophecy* (1991).

Professor emeritus in York University's Department of Psychology, Bakan retired from teaching in 1991.

[Ruth Beloff (2nd ed.)]

BAKER, EDWARD MAX (1875–1957), U.S. investment broker and communal leader. Baker was born in Erie, Pennsylvania. His maternal grandfather was Rabbi David *Einhorn, and his uncles were Rabbis Emil G. *Hirsch and Kaufmann *Kohler, leaders of Reform Judaism. In 1901 Baker entered the brokerage business in Cleveland. He became resident manager of a national brokerage firm in 1911 and served as president of the Cleveland Stock Exchange for 14 years. Baker was a founder of the Cleveland Federation of Jewish Charities (1903), serving as its president (1923–27) and as a trustee for more than five decades. He was also a member of the national board of the American Jewish Committee and of other major Jewish institutions. Equally active in Cleveland civic affairs, Baker served as chairman of the Republican County Committee (1907–08). He was a founder of the Cleveland Legal Aid Society; a founder and president of the Cleveland City Club, a community forum; and member of the first Board of Trustees of the Associated Charities of Cleveland.

[Judah Rubinstein]

BAKHCHISARAI, town in Crimea, Ukraine. From the 16th to the 18th centuries it was the capital of the khans of Crimea. A settlement of Rabbanite Jews (Krimchaks) as well as of *Karaites evidently existed in Bakhchisarai in the second half of the 18th century. In the 1870s the Karaites abandoned *Chufut-Kale, approximately 1¼ mi. (about 2 km.) to the east, and moved to Bakhchisarai. A Jewish traveler in the 1870s found about 20 families of Rabbanite Jews and some 70 Karaite families there: in 1897 there were 210 Rabbanites and 967 Karaites. The Hebrew poet Saul *Tchernichowsky wrote several poems about Bakhchisarai. During the Soviet period the number of Jews remained stable, numbering 228 souls in 1939. Bakhchisarai was occupied by the Germans on November 2, 1941, and they soon murdered 90 Jews. In the first half of July 1943 they murdered over 1,000 from the town and the surrounding area. The Karaites were not considered Jewish by the Germans and were therefore not harmed by them.

[Yehuda Slutsky and Eliyahu Feldman / Shmuel Spector (2nd ed.)]

BAKI (Heb. בָּקִי; “expert”), person possessing expertise in a particular field of ritual law, e.g., in divorce law (“*Baki be-tiv Gittin*”) or in dietary laws (“*Baki bi-terefot*”); also a person well versed in Talmud and rabbinic literature is called “*Baki be-Shas u-Fosekim*.”

BAKKASHAH (pl. *bakkashot*; Heb. בְּקָשָׁה, בְּקָשׁוֹת, “Supplication(s)”), liturgical compositions of the same type as **seliḥot*. The word denotes a wide range of prayers in prose or verse, petitionary and abstract in content, mainly for recitation throughout the year. A number of *bakkashot* found at the beginning of the Sephardi prayer books from the 17th century onward are meant to be recited by congregants before dawn while waiting for the regular service to begin. Groups of Sephardim in Jerusalem called *Omerei Bakkashot* (“Sayers of Supplications”) continue this practice every Sabbath from midnight until sunrise. At first these *bakkashot* had been said daily, but later, as a result of reduced attendance, they were confined to the Sabbath except during the month of Elul. The custom apparently originated in Safed among the followers of Isaac *Luria, and from there spread to other communities. It is first mentioned in a letter of Solomon Shlumal dated 1603 (S. Assaf, in: *Kobez al Jad*, 3 (1939), 123). This practice is not to be confused with Ashkenazi societies of Shomerim la-Boker (“Morning Watchers”), which recite hymns on Monday and Thursday mornings before dawn. The term was, however, often applied arbitrarily to certain hymns included in the service. Saadia *Gaon's two *bakkashot*, that of *Baḥya ibn Paquda, and Solomon ibn *Gabirol's *Keter ha-Malkhut* (Venice, 1572) are examples. The term also refers to some of the short hymns by such poets as Abraham and Moses *Ibn Ezra and *Judah Halevi. Different collections of *bakkashot* exist, and all of them include the poem *Yedid Nefesh* by Eleazar *Azikri. Each composition concludes with a collection of scriptural verses be-

ginning with “And Hannah prayed...” (1 Sam. 2:1). Different collections have appeared, such as the volume of hymns published by Mordecai Hayyim Elijah Levi (1929) and the *Tehillat Yesharim ha-Shalem* (ed. by Z.J. Manzur, 1954).

[Ernst Daniel Goldschmidt]

Musical Tradition

Under the influence of the *Zohar and 16th-century kabbalists of Safed, the custom developed of rising at midnight to chant hymns from the Psalms, refrains, and *bakkashot* until dawn. The concomitant for *piyyutim* stimulated the creativity of talented poets steeped in mystical doctrine. Although the singing of *bakkashot* is traditional in many communities, it evolved into an organized form of semi-religious activity particularly in Syria (Aleppo and Damascus) and Morocco. The first of the great poets whose hymns were introduced in the Syrian and Moroccan *bakkashot* was Rabbi Israel *Najara. The melodies set to the appropriate hymns are extremely varied and include sophisticated and popular idioms, the latest innovations, and traditional tunes, which have disappeared from contemporary cultures. The musical factor is prominent and often tends to overshadow the basically religious purpose of the meeting. The singing of *bakkashot* may thus be considered as half religious concert and half prayer meeting, attended equally for religious, aesthetic, and social reasons.

The Aleppo *bakkashot* consist of certain fixed *piyyuṭim* and optional ones, which are selected for the occasion according to circumstances and the character of the audience. Each *bakkashah* is performed antiphonally by two groups. Between one *bakkashah* and the next, a soloist or smaller group takes turns in singing the so-called *petiḥah* (opening), which may be a psalm or a verse which derives from the preceding *piyyut* or from the classical Hebrew poetry. Their melodies are improvised, highly melismatic, and constructed so as to establish a modulation from the **maqām* (melodic pattern) of the preceding to that of the following song. The concluding *bakkashah*, *Yedid Nefesh*, is sung in the *maqām* of the current Sabbath. In the Moroccan *bakkashot*, the repertoire is standardized, it is grouped into several series of different *piyyutim* – except for three or four recurring ones – for each series, which also has its own dominant musical mode (*nūbā*). The general structure of each set is conceived in relation to the form of the “Andalusian” *nūba* of Moroccan art music, which is a kind of vocal and instrumental suite. Since instruments are not permitted, the singers add their own vocal imitations of instrumental passages. The Moroccan *bakkashot*, however, are also sung at celebrations outside the synagogue, and then the appropriate instruments are used. The *piyyutim* in the Moroccan *bakkashot* were collected into anthologies. One, entitled *shir yedidot*, which contains 550 *piyyutim* and was published in Marrakesh in 1921, is still used today.

After the establishment of an important community of Aleppo Jews in Jerusalem at the beginning of the 20th century, Aleppo *bakkashot* became a model for other Middle Eastern communities, but were themselves much modified by the par-

ticipation of non-Aleppo singers. The result was the generalized *bakkashot* style now common to several ethnic groups. The Syrian community in Brooklyn, New York, also perpetuates the Syrian tradition.

°**BAKRI, MOHAMMED** (1953–), controversial Israeli Arab actor/director whose 2002 documentary *Jenin Jenin*, about the IDF incursion into Jenin, was banned by the Israeli censor. Although the ban was lifted later, it focused attention on the movie, which was widely distributed on DVD. Many pointed out its inaccuracies and accused Bakri of inciting hatred. Prior to directing this inflammatory film, Bakri, who was born in the village of Al Bineh in the Galilee, had a distinguished career as a film and theater actor. His most famous role was as the Palestinian inmate who joins forces with Israeli prisoners in the 1984 film *Beyond the Walls*. He has appeared in more than 25 other films, including several in which he portrays Israeli Jews. His film credits include *Hanna K.* (1983), *Esther* (1986), *Cup Final* (1991), *Desperado Square* (2001), and *Private* (2004). He subsequently concentrated on acting in and directing theater in Galilee.

[Hannah Brown (2nd ed.)]

BAKSHI, RALPH (1938–), U.S. animator and film director. Bakshi was born in Haifa, Israel, but moved with his family to Brooklyn, New York, when he was a year old. He showed an early talent for drawing, winning an award in animation upon graduation from high school. He went to work for Terrytoons, an animation studio, and during his ten years there he directed episodes of the television series *Deputy Dawg* and worked on the popular cartoons *Hekyll and Jekyll* and *Mighty Mouse*. By 1965 he was in charge of Terrytoons and was asked to put together a “superhero” TV cartoon series. He demonstrated disdain for the assignment by creating odd superheroes: Tornado Man, Cuckooman, Ropeman, and Diaper Baby. The CBS Television network, which then owned Terrytoons, loved the concept and broadcast *The Mighty Heroes*, a short-lived series.

After Terrytoons shut down, Bakshi moved to Paramount's cartoon division and stayed until 1967, when the studio closed it down. After working for Steve Krantz Productions on its adaptation of the Spider-Man comic book series in 1967, Bakshi produced his first theatrical animated feature, an obscenity-laced adaptation of Robert *Crumb's under-

ground comic strip *Fritz the Cat* in 1972. The X-rated feline who uttered profanities onscreen stirred controversy. “There was talk about if I were a pornographer or not,” Bakshi said. “What I did was anti everything animation was about.” Animated characters, he felt, could elicit more powerful emotions than flesh-and-blood actors. His next feature, *Heavy Traffic*, was even more outrageous than *Fritz*, which went on to gross more than \$90 million worldwide, creating a previously unknown market, adult animation. *Traffic* was a nihilistic, highly scatological tale of a young New York artist’s drawing board fantasies. It featured several Jewish characters. In 1975 Bakshi released *Coonskin*, a savage attack on Hollywood racial stereotypes. It was one of the first animated features to depict black characters (drug dealers). Civil rights organizations boycotted the film to protest its unflattering portrayal of blacks.

After three urban animated dramas, Bakshi turned to fantasy in 1977 with *Wizards*, “about the creation of the State of Israel and the Holocaust, about the Jews looking for a homeland, and about the fact that fascism was on the rise again,” he said. Bakshi withdrew from animated films but returned in 1981 with *American Pop*, a social history about four generations of Jewish-American immigrants. He devoted the next decade to painting but returned to animation with the 1992 film *Cool World*.

[Stewart Kampel (2nd ed.)]

BAKSHI-DORON, ELIAHU (1941–), rabbi, Sephardi chief rabbi of Israel. Bakshi-Doron was born in Jerusalem, where he studied at Hebron yeshivah and in the *kollelim* of Mosad Ha-Rav Kook and Kol Ya’akov.

He served as a neighborhood rabbi in Bat Yam, becoming the city’s chief rabbi in 1972. In 1975 he was appointed chief Sephardi rabbi of Haifa, serving in that capacity until elected Sephardi chief rabbi of Israel in 1993. His ten-year term ended in April 2003.

On September 12, 2001, Chief Rabbi Bakshi-Doron called on the Islamic clerics who had published a *fatwa* (religious edict) ordering suicide-bombings and declaring the bombers *shahids* – martyrs – to rescind it and call on the world to preserve the sanctity of life, and to forbid large-scale attacks on innocent civilians. At times, Bakshi-Doron has taken controversial stands. At one point, he suggested that the Moslems retain their authority over the Temple Mount. However, he did decry the unsupervised Arab construction that has taken place on the Temple Mount in recent years. Bakshi-Doron also suggested that Israel’s Marriage Law be rescinded, thus ending the Chief Rabbinate’s monopoly on marriage and divorce. Since the rabbinic process was creating more enemies than friends of Judaism among secular Jews, perhaps the time had come for radical change. This particular statement caused a great uproar in religious circles.

Bakshi-Doron published dozens of articles reflecting his Torah learning, studies dealing with halakhic solutions to medical, economic, legal, and social problems as well as facets of political science. His work *Binyan Av* (vol. 1, 1982; vol. 2, 1989) deals with many facets of *halakhah* and also gives rab-

binic responses to current issues. A third volume appeared following the order of the weekly Torah readings to which Rabbi Bakshi-Doron brings new light to *aggadah* and Jewish thought. The book also contains speeches given by the rabbi. Throughout his career, Rabbi Bakshi-Doron has worked for Torah education, establishing, among others, a *kolel* in Tel Aviv, an advanced *bet midrash* in Bat Yam, and a Torah learning center in Haifa. Bakshi-Doron also served as president of the Committee of Sephardi Communities and was a board member of numerous social and charitable foundations. He was also a member of the Board of Directors of LIBI.

[David Derovan (2nd ed.)]

BAKST, LEON (born **Lev Samuilovich Rosenberg**; 1864–1924), Russian artist. Born in St. Petersburg, he took the name Leon Bakst to honor his maternal grandfather. In his youth he was baptized but later returned to Judaism. At the age of 15, on the advice of the sculptor *Antokolski, he enrolled in the Academy of Fine Arts. In 1890 he met Alexander Benois, a Russian artist who introduced Bakst to the Mir Iskusstva (“World of Art”) group that tried to overcome the prevailing provincialism of Russian art and to link Russia to the West. The impresario Serge Diaghilev was a member and he employed Bakst as chief designer of costumes and décors for his ballets. From its start in Paris, in 1909, until his death, Bakst was associated with Diaghilev’s Ballets Russes. The subjects for the ballets were usually taken from Russian folklore, or from Oriental tales. Bakst, with his vivid imagination and his predilection for bright color, provided an atmosphere that carried the audience into a fairyland. While his creations are no longer in use on the stage, his sketches in pencil, pen-and-ink, crayon, watercolor, gouaches, or mixed media often appear in exhibitions of Russian art. They have become particularly appreciated since the recent revival of interest in *art nouveau*. As a teacher at the Svaneva School in St. Petersburg, Bakst had a strong influence on the young Marc *Chagall.

[Alfred Werner]

BAKST, NICOLAI (Noah) IGNATYEVICH (1843–1904), Russian scientist, writer, and public figure. Born in Mir, Belorussia, Bakst studied at the rabbinical seminary in Zhitomir, where his father Isaac Moses taught Talmud, and thereafter at the University of St. Petersburg. After graduating, he was sent to Germany by the Russian Ministry of Public Instruction. There he continued his studies under the noted physiologist Hermann Helmholtz and others. In 1867 he was appointed lecturer in physiology at the University of St. Petersburg, specializing in the study of the nervous system. He wrote a number of works in German and Russian on physiology and the nervous system.

The emergence of antisemitism in Germany and the pogroms in Russia of 1881 awakened Bakst’s interest in the Jew-

ish question. For him the solution was to grant full civil rights to the Jews in Russia and improve their material and moral condition. Bakst became a highly esteemed public figure in Russian Jewry; he was one of the initiators of *ORT and active in its management. He served as an expert on the Pahlen Commission (1883–88), set up to examine the laws regulating Jewish life. This prompted Bakst to publish a series of articles on different aspects of Jewish life and thought in Jewish and non-Jewish journals.

BAKU, port on the western shore of the Caspian Sea, capital of Azerbaijan S.S.R. 1920–1991, from 1992 capital of *Azerbaijan. Jews are first mentioned in the area in the 13th century. A community of Persian Jews existed in Baku in the 18th century. The inhabitants, who were Muslims, harassed the Jews there and in 1814 threatened their lives following a blood libel. Although the Russian authorities offered them their protection, the Jews left and took refuge in *Kuba, also in the province of Baku, where there was a large community of *Caucasian Mountain Jews. Later, however, some returned to Baku.

A new chapter in the history of the community began in the 1870s with the development of the oil industry in Baku and its surroundings. Although restrictions were imposed to discourage Jews coming from European Russia, and on Jewish participation in the industry, the number of Jewish concessionaires and professional and skilled workers increased. Jews took a large share in initiating new enterprises and providing capital, in exploiting oil wells and setting up refineries, in developing transport facilities, and in marketing oil and oil products within Russia and abroad. Among pioneer industrial companies owned by Jews was that of Dembo and Kagan, founded by A. Dembo of Kovno and Ḥayyim Cohen of Brest-Litovsk. Also active in this sphere were the Dembot brothers, in collaboration with Baron H. Guenzburg, Bikhowsky, Leites, Ickowich, and A.M. Feigel. A central position in oil exploitation, transportation, and marketing was occupied by the *Rothschilds, who founded the Caspian-Black Sea Company and by the end of the 19th century headed a syndicate of many of the large oil companies. Another large company was Polak and Sons, owned by Grigori Polak and his sons Saveli (Shevah) and Michael. Prominent in the field of technology was the chemical engineer Arkadi Beilin, who worked in a number of companies, including those of the Rothschilds, and after marrying the daughter of Grigori Polak joined Polak and Sons. In 1913–14 the share of the Jewish companies in kerosene production in Baku reached 44% while the proportion of Jews occupied in oil products marketing was even greater.

Jewish communal and Zionist institutions followed in the wake of the economic development. According to the 1897 census there were 2,341 Jews in Baku, of whom the majority were Caucasian with some from European Russia. The Jewish population continued to increase after the 1917 revolution

through the influx of Mountain Jews who, deprived of their traditional livelihoods in the villages, moved to the towns. In 1926 the Jewish population numbered 21,995 (19,583 of European origin, 1,985 Caucasian Jews (Tats), and 427 Georgian Jews). In 1939 they numbered 31,050 and comprised about 4% of the total population. According to the 1959 census they numbered 29,179 (3% of the total) in Baku and its vicinity. In 1970 the Jewish population was 29,716 (2.2% of the total). Most of the non-European Jews resided in the old part of the city. The European, Tati, and Georgian communities each had their synagogue. The Tati synagogue was the oldest and largest. While *mazzot* could be obtained on Passover, ritually slaughtered meat was not available. Two local rabbis signed *Izvestia's* denunciation of the Sinai Campaign (on November 29, 1956). Consequently the European Jewish community was deprived of its rabbis who apparently were not replaced. In the 1990s most of the Jews emigrated to Israel and the West.

***BAKUNIN, MIKHAIL ALEKSANDROVICH** (1814–1876), Russian revolutionary, one of the founders and theoreticians of Anarchism. While imprisoned in the Petropavlovsk fortress in St. Petersburg (1851), he wrote his “Confession” (*Ispoved*), in which he reproached the Polish independence leaders Adam *Mickiewicz and Joachim Lelewel for their favorable attitude toward Jews. Through his conflict with *Marx, *Hess, and other Jewish Socialists at the end of the 1860s, Bakunin’s hatred of the Jews grew beyond bounds. In his answer to a letter of Moses Hess in the review *Le réveil* (October 20, 1869), he referred to the Jews as a nation of exploiters, entirely opposed to the interests of the proletariat. At another time he stated that the Jews were more dangerous than the Jesuits and constituted a real power in Europe: they reigned despotically over commerce and banking, and had taken over three-quarters of German journalism as well as a large portion of the press in other countries. Bakunin considered Marx as the modern Moses, a typical representative of the Jewish people.

***BAKY, LÁSZLÓ** (1898–1946), Hungarian antisemitic politician. Baky was a leading member first of the Hungarian National Socialist Party and later of *Szálasi’s *Arrow-Cross Party, which he left temporarily in 1941. In March 1944 he became undersecretary of state in the Ministry of the Interior, in charge of Jewish affairs. He presided at the secret meeting of April 4, 1944, where the arrangement for the deportations of Jews was drawn up, and was one of those who directed the setting-up of ghettos and the deportations. On June 29–30, 1944, Baky attempted an unsuccessful fascist coup against

Horthy. Nevertheless, he retained his position until September 5. Later he was one of the founders of a group of right-wing deputies who sought to give a legal framework to the Szálasi regime. Baky was sentenced to death by a Budapest People's Court and executed in 1946.

[Bela Adalbert Vago]

BALAAM (Heb. בַּלְעָם, בְּלַעַם), son of Beor, a non-Israelite diviner famous for his effectiveness, enlisted by Balak, king of Moab, to pronounce curses over the Israelites. The pronunciation Balaam reflects the Greek rendering of the name in the Septuagint. Balaam's exploits are related in Numbers 22:2–24:25, known in modern research as “The Balaam Pericope,” and traditionally recognized as a distinct literary unit within the book of Numbers. There we read that the numerous Israelites, encamped in the Steppes of Moab on their way to the land of Canaan, were feeding off the land, causing great apprehension in Moab. Balak despaired of driving them away by force, and he hoped to achieve victory by means of Balaam's execrations. To Balak's chagrin, however, Balaam refused to succumb to his offers of reward, and surprisingly, pronounced blessings over Israel instead of curses, predicting Israelite victories. His orations represent some of the most beautiful examples of early Hebrew poetry. Balaam's firm obedience to God's will is viewed with great favor. Similar praise is expressed in Micah 6:5, where Balaam's role in thwarting the design of one of Israel's enemies is evoked as a sign of God's providence over his people.

In contrast, Balaam is seen in a hostile light in several other biblical sources where he is mentioned. In a certain sense, the derogation of Balaam begins in the Tale of the Ass (Num 22:22–35), which mocks his reputed gifts as a seer (see further). And yet, as the tale unfolds, Balaam falls into line, and ends up obeying God's instructions. The attitude toward Balaam is decidedly unfavorable, however, in Numbers 31:8, 16, which report that Balaam's counsel had led to Israelite worship of Baal Peor, and that he was slain by the Israelites together with the kings of Midian in the course of the war against the Midianites. A resonance of the same episode is found in Joshua 13:22, where, in addition, Balaam is referred to as *ha-qôsem* (“the diviner”), as if to discredit him. In Joshua 24:9–10, within a narration of Israel's history, we read that God protected Israel, refusing to allow Balaam to curse the people. The underlying assumption is that Balaam had intended to do just that. Finally, according to Deuteronomy 23:5–6, the mere fact that Balaam had been retained by Balak, king of Moab, to curse Israel is adduced as a basis for prohibiting marriage with Ammonites and Midianites (cf. Neh. 13:2). It is difficult to explain this negativity toward Balaam against the background of the Balaam Pericope. Rather than following traditional explanations that Balaam's allegiances changed, it is more likely that subsequent Israelite misfortunes at the hands of neigh-

boring nations, with whom Balaam was identified, brought him into disrepute.

Recent archaeological discoveries have added significant information about Balaam. In 1967, a Dutch expedition under H. Franken discovered fragments of inscriptions written on plaster at a Transjordanian site named Tell Deir 'Alla, located about 5 mi. (8 km.) east of the Jordan, not far from the northern bank of the Jabbok (Zerqa) river that flows into the Jordan. In the Hebrew Bible this area is known as *cēmeq Sukkôt*, “the valley of Sukkoth” (Ps. 60:8, 108:8, cf. Gen. 33:17, Judg. 8, 1 Kings 7:46). Many of the plaster fragments were restored in the manner of a jigsaw puzzle, and the resulting “combinations” were published by J.A. Hoftijzer and G. van der Kooij in 1976. Composed in a language similar to biblical Hebrew, and dated in the late ninth to early 8th centuries B.C.E., the inscriptions attest the name of a seer, *bl'm brb'r* – “Balaam, son of Beor” – for the first time in an extra-biblical source of the biblical period. Previously, Balaam had been known outside the Hebrew Bible solely from post-biblical sources (Baskin 1983).

The Deir 'Alla inscriptions relate how a certain *bl'm brb'r*, referred to as “a divine seer” (*'zh < lhn*), was visited at night in a dream by gods who revealed to him that an impending misfortune would devastate the land. The seer, greatly distressed at this news, assembles his people to disclose to them what he has learned. In these inscriptions Balaam is depicted as an heroic figure, who strove to save his people and the land. In content and style, the inscriptions noticeably resemble the Balaam Pericope of Numbers, and other biblical sources as well, so that any discussion of the role of Balaam in biblical literature must henceforth take the Deir 'Alla inscriptions into account.

The Name Bil'am and the Identity of the Person

There are essentially two ways of parsing the name *Bl'm*: (a) *Bil+am*, whereby the component *am* is a kinship term, and *bil* would represent the divine name Bel, yielding the sense: “Bel is my kinsman.” As such, the Hebrew/Deir 'Alla name has been compared with Akkadian *Bill-am-ma* and *Amma-ba'li* “Bel is a kinsman,” or: “a kinsman of Bel” (*HALAT* 130, s.v. *Bil'am* 1). (b) A name incorporating the verb *b-l-* “to swallow up, destroy,” + *m*, an affix that can be represented as *am* (elsewhere also *an* and *-on*), and that characterizes the actor of the verb, hence: “the swallower, destroyer.” Reference would be to the potency of Balaam's spells and execrations. This understanding of the name gains support from its uncanny similarity to the name of the first Edomite king, *Bela*^c, son of *Be'ôr*, as recorded in Genesis 36:32. This resemblance can hardly be coincidental, and may argue for the identification of Balaam as a nearby Ammonite, Moabite, Midianite, or Edomite by origin, rather than as a more distant Aramean.

In fact, there appear to be two traditions concerning Balaam's homeland. One identifies Balaam as an Aramean, an extraction explicit in the opening verse of his first oration (Num. 23:7): “From Aram did Balak import me/ the king of Moab – from the mountains of Qedem.” At the same time,

there are indications that Balaam was perceived as a Transjordanian, or son of an inland nation. It is noteworthy that both the Vulgate and the Samaritan versions read in Num 22:5 *‘eres benê Ammô[n]* “to the land of the Ammonites.” in place of Hebrew *benê > ammô*, “the land of his people.” The attribution to a seer named Balaam of the inscriptions found at Deir ‘Alla which were, given their language and exposition, composed in the immediate area, would further endorse his identity as a figure who came from a neighboring, inland country. It is best, therefore, to allow for alternative traditions regarding Balaam’s place of origin (Levine, 2000, 145–48).

The Structure and Contents of the Balaam Pericope

The Balaam Pericope consists of prose narratives that serve as a rubric for the poems of the pericope and poetic compositions.

(A) THE POETIC REPERTOIRE. There are four major orations, followed by a series of three, brief prophecies. Each oration is introduced as a *mashal* “balanced verse.” Only the third and fourth orations explicitly identify Balaam as the speaker, though the first and second refer to Balak by name, making it virtually certain that Balak is the speaker. In the first oration (Num. 23:7–10), the speaker relates that he was called from Aram by Balak to pronounce curses over Israel, but was powerless to do so because Israel had been blessed by El/YHWH. Overlooking the Israelite encampment from the heights, Balaam was awed by its vast expanse, impressed that the Israelites needed no allies, and were capable of achieving victory on their own. He would willingly share the fate of such heroes! In the second (Num. 23:18–24), the speaker addresses Balak directly, insisting that El will not renege on his promise to bless Israel, and consequently his own mission could not be countermanded. YHWH would not countenance any misfortune overtaking Israel, a people strong as a lion and protected by a powerful deity who directly informs them of the future, thereby rendering divination unnecessary. In the third oration (Num. 24:3–9), entitled “The speech (Hebrew *ne’um*) of Balaam. Beor’s son,” the speaker’s professional gifts are enumerated. He is “one who hears El’s utterances,” and “who beholds the vision of Shadday” (the fourth oration adds: “who is privy to Elyon’s knowledge”). Balaam describes the beauty of the Israelite encampment in words that have become part of Jewish liturgy: “How lovely are your tents, oh Jacob/ your dwellings, oh Israel.” Alluding to Saul, king of Israel, he predicts that Israel will prevail over the Amalekite king, Agag (1 Sam. 15). In the fourth oration (Num. 24:15–19), similarly entitled, Balaam alludes to David’s conquests of Moab and Edom. (11 Sam. 8:2, 12–14), characterizing that king dramatically as a shooting star, as a meteor. In the three brief orations that follow (Num. 24:20–23) Balaam assumes the role of a “prophet to the nations” and predicts the ultimate downfall of the Amalekites and Kenites, and possibly of Assyrians, west of the Euphrates.

Viewing the Balaam orations in their entirety, it is clear that the agenda changes after the second poem. Having pro-

claimed Israel’s victorious destiny on the way to the Promised Land, Balaam proceeds in the third and fourth orations to predict Israelite victories over the Canaanite peoples and over hostile neighboring peoples in the interior. This purview is expanded in the brief prophecies to the nations. It is also the case that after the second oration Balaam ceases to justify his refusal to carry out Balak’s wishes, and, invoking his preeminent status as a seer, predicts without apology dramatic Israelite victories, including the subjugation of Moab itself.

The poetic sections employ several designations of divinity, in addition to YHWH and *‘elôhîm*, namely, Shadday, Elyon, and most frequently, El. It has been customary to interpret these names as epithets of YHWH. Although originally the names of discrete deities, they had, so the argument goes, been synthesized with YHWH, thereby becoming merely another way of referring to the God of Israel. On this basis, we would translate Numbers 23:7 as follows: “How can I curse whom *the deity* has not condemned? How can I doom whom YHWH has not doomed?”

Though the El-YHWH synthesis (Eissfeldt, 1956) is indeed evident in biblical literature, it remains to be determined whether it is expressed in the Balaam orations, or in other poems that may hark back to a stage in the development of Israelite religion when the worship of the Syro-Canaanite deity, El, was regarded as acceptable. It is in this spirit, after all, that the worship of El, sometimes registered as El Shadday, is imputed to the Patriarchs (Gen. 28:3, 31:13, 35:11, 46:3), an attribution explained in so many words in Exodus 6:2–3. This is the view most recently adopted by Levine (2000, 217–34), who sees evidence of an El archive in biblical literature, parts of which were redacted so as to conform to the El-YHWH synthesis. In Levine’s view, some of the El poems, most notably the Balaam orations, themselves were retained in their unredacted form, so that their references to El, in particular, should be understood as designations of the Syro-Canaanite deity by that name, not as epithets of the God of Israel. As will be observed, it is likewise El who presides over the gods in the Balaam inscriptions from Deir ‘Alla. Read in this manner, the biblical Balaam orations present a distinctive view of Israelite religion: YHWH is acknowledged as Israel’s national God, their divine King, who is present in their midst to assure them victory. At the same time, it is powerful El who liberated Israel from Egypt, and who has blessed Israel irreversibly, keeping faith with them. This earlier religious outlook would be precisely what Exodus 6:2–3 was aimed at disavowing.

This understanding of the religious predicates of the Balaam orations, and of the posture of Balaam, explains why there is no battle projected between YHWH and the gods of Moab, and why Balaam is powerless to curse Israel. It is not only YHWH who is providential over Israel, but El, Shadday, and Elyon, as well. It is as if to say that Moab’s own gods, members of the traditional West-Semitic pantheon, were arrayed against them. Most scholars, however, view the Balaam orations as expressing the El-YHWH synthesis, in essence proclaiming YHWH’s exclusive providence over Israel, as well as

his dominance over pagan seers like Balaam. In this perspective, the poetic orations are understood to express the same religious outlook as do the prose sections of the Balaam Pericope.

Just as the divine appellations in the Balaam orations are unusual, so are the designations of the Israelite collective. With only one exception (Num. 24:18–19), the consistent classification is (a) Jacob, (b) Israel, expressed in parallelism (Num. 23:7, 10, 21, 23, 24:5, 17). This nomenclature recalls the change of Jacob's name from *Yacaqôb* to *Yisra'el* after his combat with the angel, which, appropriately, occurred at Penueel, in the Valley of Sukkoth (Gen. 32), where the Deir 'Alla inscriptions were found!

There has been considerable progress in the exegesis of the Balaam orations, which because of their relative antiquity and the dialectal features they manifest have resisted interpretation. They employ rare, even unique forms that afford little basis for comparison. W.F. Albright (1944) achieved a breakthrough by reducing the Masoretic text to its consonantal base, and reading the poems as West-Semitic epigraphy. Sh. Morag (1981) sought to shed light on unrecognized meanings through linguistic analysis. More recent attempts are presented in commentaries on the Book of Numbers by Milgrom (1990) and Levine (2000).

(B) THE PROSE NARRATIVES. The prose sections pursue a sequential narrative, except for the tale of the ass (Num. 22:22–35), which derives from a separate source. It was undoubtedly inserted as a satire, poking fun at Balaam's reputed clairvoyance as a seer. In a mode familiar to us from Aesop's fables, and from ancient Near Eastern wisdom literature, as well, it depicts Balaam as being blind to what even the ass he was riding was able to see! Its theme is that the God of Israel initially objected to Balaam's willingness to accompany Balak's messengers to Moab, and sent an angel to block his path. The ass made several attempts to avert the angel, and each time Balaam struck her, until God gave speech to the ass, so that she could explain to Balaam what was going on. Ultimately, God opens Balaam's eyes, as well, and he submits to God's will, offering to return home. Balaam is then told by the angel that he is permitted to accompany Balak's emissaries on condition that he speak only what YHWH communicates to him.

The Tale of the Ass is preceded in Numbers 22:2–21 by a narrative of Balak's invitation to Balaam to pronounce curses over Israel on his behalf. Balaam at first refuses, insisting that he is under the authority of Israel's God. However, God appears to him at night and authorizes him to accompany the men, but to speak only what he is told. The intervening tale effectively brings us back to this point, in Numbers 22:35. In the ensuing narrative (Num. 22:36–23:6), we read that Balaam arrives in Moab and is welcomed by Balak, who offers him great rewards. After a feast prepared by Balak, Balaam proceeds to the mountain-top of Bamoth-Baal, where he is afforded a view of part of the Israelite encampment. There he pronounces his first blessings of Israel (Num. 23:7–10). When the prose narra-

tive resumes, we read that Balak is furious, but Balaam repeats that he can speak only what YHWH instructs him to say. In an effort to achieve greater efficacy, Balaam is advised to move to a more propitious site, the peak of Pisgah, where he erects altars and offers sacrifice. YHWH encounters Balaam and places an oracle in his mouth. Balak asks him: "What has YHWH spoken?" which indicates that he now accepts Balaam's subservience to Israel's God (Num. 23:11–17). Then follows Balaam's second oration (Num. 23:18–24). At this point, Balak is all but ready to give up, but again suggests moving to a different site, the summit of Peor, where altars are erected and sacrifices offered, prior to a third attempt by Balaam, who now realizes that it pleases YHWH to bless Israel. Without further ado, he prepares to declaim his third oration (Num. 23:25–30, 24:1–2), which predicts Israel's victory over the Amalekites of Canaan (Num. 24:3–9). When the prose narrative resumes, we read that Balak dismisses Balaam in anger, but that before returning to his own land, Balaam tells him that he will reveal what the Israelites will do to Moab (and Edom) in the future (Num. 24:10–14). This is the theme of Balaam's fourth oration (Num. 24:15–19). Numbers 24:20–29 present the three brief prophecies against neighboring nations.

Throughout the prose sections, YHWH and *'elohim* alternate exclusively as designations of the God of Israel, who is perceived as totally controlling the activities of Balaam from the outset. In fact, in Numbers 22:18 Balaam already refers to YHWH as *elohai* "my God," and in a manner not dissimilar from that of Pharaoh in the Moses sagas, Balak also becomes increasingly aware of YHWH's power, and of Balaam's subservience to it. In contrast to the Egyptian sagas, however, which repeatedly refer to the gods of Egypt, the prose sections of the Balaam Pericope nowhere refer to any other divine power, or use what would be regarded, in context, as epithets of YHWH or *'elohim*.

The Balaam Texts from Deir 'Alla

Notwithstanding their poor state of preservation, the plaster texts from Deir 'Alla add to our understanding of the Balaam Pericope, and in a reciprocal manner, the biblical sources enlighten us as to the meaning of the Deir 'Alla texts. Like most new discoveries, the Deir 'Alla texts raise problems of a literary and historical nature. The inscriptions were restored from plaster fragments that had fallen to the ground from the walls of a regional distribution center, where some cultic activity took place. (For transcriptions, translations, archaeological background and commentary see Levine, 2000, 241–75; idem, *COS II*, 140–45.)

COMBINATION I OF THE INSCRIPTION. Combination I relates that Balaam was visited at night by gods sent to convey to him a message from the high god, El. The message consisted of a celestial omen of disaster. A council (*mw'd* = Hebrew *mo'ed*) of deities who opposed El had ordered the goddess Shagar-we-Ishtar, a Venus figure of light and fertility, to sew up the heavens, thereby producing darkness and dread. Upon

hearing this, Balaam became greatly distressed, and took to weeping and fasting. He assembled his people and described the content of this revelation to them. Vultures will fly about shrieking, and wild beasts will occupy grazing lands. Although at this point the text becomes less clearly comprehensible, it is reasonable to read it as a recounting of Balaam's heroic attempt to free the goddess from the decree of the evil council, thereby saving the land from misfortune. Balaam admonishes the adversaries of Shagar-we-Ishtar, and takes the goddess to various diviners, oracles, priestesses, and magical practitioners to safeguard her from the punishment decreed upon her. His efforts were successful, and order was re-established in the land, which accounts for the commemorative installation of the inscriptions on the walls of the building at Deir 'Alla.

COMBINATION II. Combination II, which is even more fragmentary, vividly describes a necropolis (*byt 'lmm*) erected by El, a "house" where no traveler enters, nor any bridegroom. The portrayal recalls the Sheol oracle of Isaiah 14, and speaks of an unnamed, wise counselor, who will no longer be consulted, and who will be punished by being deprived of his ability to pronounce oracles and execrations. Although the name of Balaam does not occur in Combination II, it is suggestive to relate this text to Balaam. The opening title of Combination I, "The misfortunes of the Book of Balaam, the son of Beor," undoubtedly included Combination II, as well as additional compositions which may have been lost, or whose fragments have not as yet been restored in coherent form.

Both Combinations exhibit shared vocabulary and diction with the biblical Balaam orations, and with other biblical poems of the El archive. Indeed, the Deir 'Alla inscriptions resonate with biblical imagery.

The Phenomenology of Balaam's Performance

Now that we possess information from the Deir 'Alla inscriptions, we can draw up a more complete profile of Balaam. Albright (1971), and others have compared him with the Mesopotamian *barû* ("diviner"). The parallel West Semitic functionary would be the *qosem*, a title given to Balaam only in Joshua 13:22, although Numbers 22:18 does in fact report that the elders of Moab (and Midian) brought to Balaam payment for *qesamim* ("divination"), indicating that he practiced that art. We are also told in Numbers 24:1 that for a time, Balaam also engaged in *nehashimâ* ("augury"), but eventually gave that up (Num. 24:1).

For the most part, the biblical poems inform us that Balaam beholds visions, both while awake and asleep; he hears divine utterances, and possesses secret knowledge. He sees into the future and predicts events, and has a reputation for pronouncing effective curses. We may conclude that Balaam was expert at pronouncing effective blessings, which is what he actually did. The narratives provide additional information on Balaam's techniques: He offers burnt sacrifices as a means of attracting YHWH to particular sites, while also perambulating, walking around in search of an encounter with

YHWH, and possibly in search of omens, as well. In this connection, one notes that visual access is a factor in Balaam's praxis. In the preparations for what Balak hoped would be effective curses, sites were sought out that afforded a partial, or complete, view of the Israelite encampment, which was the target of the curses.

There are two additional points to be made about Balaam's performance. First, as is true of ritual experts, polytheistic and monotheistic, Balaam acted under divine authority. Balaam could only do what he was authorized to do by the divine power, or powers, that controlled him. It was only after the gods signaled their approval that diviners and exorcists and other ritual experts could undertake the prescribed operations. Secondly, both the poems and the prose narratives portray Balaam in personal terms. In the poems, he is said to be awed by the strength and heroism of the Israelites, and by a realization, based on his own observation, that this people had been blessed and protected, and was not marked for misfortune. In the prose narratives and in the Tale of the Ass, Balaam is depicted as one given to anger and frustration, who is not tempted by wealth, and, above all, who is honest in accepting the limitations of his own powers. Balaam is also reactive; his acceptance of subservience to the God of Israel increases as his encounters with YHWH progress, until he becomes more than willing to bless Israel. Thus, the fourth, and final oration was not requested by Balak, but offered to him voluntarily, as were the three, brief prophecies.

The Deir 'Alla texts shed further light on the performance of Balaam. We read more about his divinatory crafts, most notably his ability to interpret celestial omens, and of his admonitions directed at malevolent divine powers. Although the atmosphere of the Deir 'Alla inscriptions is polytheistic, and affords more attention to specific ritual practices, the difference between the Deir 'Alla inscriptions and the biblical pericope is more a matter of degree than of kind, especially if we accept the interpretation that in the biblical Balaam orations, El, Elyon, and Shadday are proper names of West Semitic gods and not merely epithets of YHWH and *'elohim*.

The Sitz-im-Leben of the Balaam Pericope

According to the internal, Biblical chronology, the encounters related in the Balaam Pericope would have occurred during the late 13th century B.C.E., or thereabouts, but we must be careful not to confuse temporal setting with time of composition. There are problems in attempting to assign both the poetic and narrative sections of the Balaam Pericope to the usual documentary sources, J and E, as pointed out most clearly by A. Rofe (1981). It would be preferable to seek clues in the poems themselves as to their time and place of composition. As for the Balaam narratives, it is safe to say that they postdate the poems.

The Deir 'Alla inscriptions help us to fix the context of the Balaam poems in more than one respect. For one thing, they raise the possibility that the biblical Balaam poems were also composed in Gilead, in central Transjordan, where an

active Israelite community lived for several centuries until driven out after the Assyrian invasions of the late eighth century B.C.E. The Valley of Sukkoth, where Deir 'Alla is located, figures notably in certain biblical traditions, such as the narratives of Genesis 32–33 and Judges 8. There is also a basis for seeing the Deir 'Alla inscriptions themselves as Israelite compositions, notwithstanding the absence of any mention of the God of Israel, and despite their polytheistic character (Weippert 1991). In this connection, the highlighting of El in the Balaam poems fits in well with the veiled references to El worship in Hosea 6:8, 12:12 by the Israelites of Gilead. Perhaps these very Transjordanian Israelites, regarded as sinful by Hosea, were the ones, or similar to the ones, who installed the Balaam plaster inscriptions on the walls of the building at Deir 'Alla.

Historically, the Balaam orations reflect a situation of conflict between Israel and Moab, wherein Israel is declared victorious. This context would suit conditions in the early to-mid-ninth century B.C.E., under the Omride dynasty, when northern Israel exercised hegemony over northern Moab. This would have been prior to Mesha's successful reconquest of that territory in the mid-ninth century, as recounted in the famous stele of that Moabite king. This is also the period during which the Heshbon Ballad of Numbers 21, which depicts the Israelite conquest of North Moab, would have been composed. As such, the biblical Balaam poems might have antedated the Deir 'Alla inscriptions by about 50 years.

Thanks to the Deir 'Alla discoveries we can now speak of Balaam as a biblical personage also known from external, Transjordanian sources. We know him better than we did before, whether we regard him only as a figure of legend or as an historical personage of legendary proportions.

[Baruch Levine (2nd ed.)]

In the Aggadah

Some rabbis inflated the importance of Balaam. They saw in him one of "The seven prophets who prophesied to the peoples of the world" (BB 15b; "God raised up Moses for Israel and Balaam for the peoples of the world" – Num. R., 20:1; Tanḥ., Balak, 1), and believed that in many respects he was greater than Moses: "No prophet like Moses had risen in Israel, but such a one has risen among the peoples of the world. Who is he? Balaam the son of Beor. But there is a difference between the prophecy of Moses and that of Balaam. Moses did not know who spoke with him but Balaam knew... Moses did not know when [God] would speak with him till he was addressed by Him, whereas Balaam knew... Moses did not speak with Him till he had stood up... whereas Balaam spoke with Him as he was falling" (Sif. Deut. end). They explained Balaam's power to curse by the fact that he could ascertain the exact hour of God's anger (Av. Zar. 4a–b; Sanh. 105b). Others, however, identified him with Elihu the son of Barachel the Buzite (Job 32:2) for Barachel means "God has blessed"; the epithet "Buzite" is derived from "buz" ("contempt"), hence it teaches

that Balaam's prophecy was of a low order and contemptible (T.J. Sot. 5:8, 20d). Some rabbis saw in him an immoral figure: "An evil eye, a haughty spirit and a proud soul" are the marks of the disciples of "Balaam the Wicked" (Avot, 5:19). Balaam was one of Pharaoh's counselors and it was he who advised that the male children should be cast into the Nile (Sanh. 106a); and in the end he wished "to uproot an entire people for naught and for no reason" (Num. R. 20:1; Tanḥ. Balak, 1) and counseled Balak how to destroy them. It was this act which caused the departure of the holy spirit from the gentile peoples (*ibid.*), and since then prophecy was preserved in Israel alone. There is no basis for the theory put forward by some scholars that Balaam in the *aggadah* represents Jesus (but see *Jesus in Talmud and Aggadah).

[Yehoshua M. Grintz]

In Islam

Balaam is not mentioned by name in the Koran, and it is not even clear that he is intended by the inference in Sura 7 (lines 174–5), as read by several interpreters of the Koran, historians, and authors of *Legends of the Prophets (Qīṣaṣ al-Anbiyā)*. The verses read: "Relate to them of him to whom we gave our signs, and who turned away from them; and Satan followed him, and he was of those who were led astray. But had it been our will, we would have exalted him through our signs, but he clung unto the earth, and followed his desire. He is like the dog who puts forth his tongue whether you chase him away or let him alone. That is the parable of the people who deny our signs. Tell them this history, that they may consider it."

It is the general opinion that the inference is to Balaam who acquiesced to the request of Balak, king of Moab (Num. 22–24), as related in the Bible and Jewish legend, and who was responsible for the going astray of the children of Israel with the daughters of Moab (*ibid.* 25). However, some interpret Muhammad's words as referring to *Umayya ibn Abī al-Salt, Muhammad's contemporary and competitor as a prophet who was sent to the Arabs. Others maintain that the inference is to Luqmān, an Eastern sage, to whom Muhammad dedicated Sura 31. Nevertheless, B. Heller presents a number of convincing arguments against this identification.

[Haïm Zew Hirschberg]

In the Arts

Balaam is regarded with general disfavor in Hebrew literature, and it was exclusively in Christian literature that he was accorded any importance – mainly because he was alleged to have predicted the advent of Jesus (Num. 24:17). By the Middle Ages, however, Balaam had become a figure of fun, and it is in this spirit that he is portrayed in such medieval miracle plays as the *Ordo Prophetarum*, the Chester and Stonyhurst cycles, and the *Mistère du Viel Testament*. Such treatment destroyed Balaam's literary standing, although the 16th-century French Christian kabbalist Guillaume Postel resurrected the "prophet of the Gentiles" in some of his patriotic visionary works. One rare later treatment is the dramatic poem *Balaam* (1787) by C. Davy.

Among artists, portrayal of the subject was largely influenced by Christian theological interpretation of Balaam's prophecy, that "a star rises from Jacob," which was seen as a prefiguration of the star of Bethlehem that according to the Gospels appeared to the Magi. Balaam is represented as a bearded figure wearing an antique tunic and mantle and a Phrygian cap or Oriental turban. Such early representations are found in third and fourth century catacombs. The figure of Balaam is sometimes placed next to the Madonna and Child and often appears on sarcophagi. In Byzantine art, Balaam is depicted as one of the foretellers of Jesus in a fresco on Mount Athos. There are similar treatments in the West, such as the 12th-century "Tree of Jesse" window at Chartres and the 14th-century ceiling of St. Michael's at Hildesheim. Balaam appears with his ass in a late 12th-century bronze door at Monreale and a 14th-century facade at Orvieto. There are other representations in illuminated manuscripts and incunabula, such as the Luebeck Bible (1494). Artists who painted the subject include Taddeo Zuccari (1529–66), Luca Giordano (1632–1705), and Rembrandt. There are also cycles covering Balak's command, his sacrifice, and Balaam and Balak on Mount Peor; a notable example of this is the illuminated Bible of San Paolo Fuori le Mura (c. 850). Others occur in later baroque Bible illustrations.

BALABAN, BARNEY (1887–1971), U.S. motion picture executive. Balaban was born in Chicago and worked at the age of 12 as a messenger for Western Union. In 1908, along with partner Sam Katz, he formed a company that developed a chain of deluxe movie and stage-show theater palaces. In 1917 they built what historians consider the city's first movie palace, the Central Park on West Roosevelt Road. Referred to as a "dream theater," it had a seating capacity of 2,200. It was here that they began working out the service system which soon spread to all quarters of the theater world. They outfitted their ushers in military-style uniforms, had them salute the theater patrons, and trained them to give quick, intelligent service.

At its peak, their cinema chain included 125 theaters in Chicago and the Midwest, such as the Riviera, the Tivoli, the Chicago, the Uptown, the McVickers, the Roosevelt, and the Norshore. The company introduced raked floors, comfortable

seats, balconies, and air-conditioning. To keep patrons entertained, Balaban and Katz supplemented the theater's first-run motion pictures with lavish stage shows, a policy that would become standard at Chicago movie palaces during the 1920s. In 1926 they opened the Palace Theatre. Modeled after Versailles, the Palace had rose-marbled walls, crystal chandeliers, gold plaster ornamentation, and immense mirrors. That year they also opened the Oriental Theatre in Chicago's Loop area. A virtual museum of Asian art, the ornate three-level theater had a large domed ceiling graced by seahorses and goddesses. Turbaned ushers led patrons from the lobby – with polychrome figures and large mosaics of an Indian prince and princess – through an inner foyer with elephant-throne chairs and multicolored glazed Buddhas, to the auditorium's "hashish-dream décor."

In 1928 Balaban and Katz opened the Paradise on Chicago's West Side. Throughout their career the partners had been haunted by sentimental memories of the West Side, where they were born and raised and had first overcome poverty. Wanting to give their home turf the finest theater of all, they built the Paradise in the center of the city's population. Larger than any other theater outside of New York City, more daring and original in its architecture than any theater in the world at that time, their opulent 3,600-seat French Renaissance-style Paradise embodied the farthest reaches of their imagination.

Ultimately, Paramount Pictures bought a two-thirds interest in their cinema chain, and in 1936 Balaban was elected president of Paramount Pictures in Hollywood. Under his guidance, Paramount invested in television and pioneered the wide screen. Balaban was active in Jewish affairs.

Over the decades, many of the movie palaces fell into disrepair. The Paradise, for example, billed as "the world's most beautiful theater," was demolished in 1965. With the advent of talking pictures, fatal flaws in the acoustics and design of the building were exposed, so Balaban and Katz decided to demolish the theater and sell the land to a supermarket chain. Built to last forever, it took two years to tear it down.

In 1996 Chicago Mayor Richard Daley announced that the Oriental would be restored to its original grandeur for the presentation of live stage musicals. Renamed the Ford Center for the Performing Arts in 1997, the theater opened its doors to the public in 1998. Similarly, the Palace was purchased by General Motors and, renamed the Cadillac Palace Theater, opened in 1999 to present live stage productions.

[Ruth Beloff (2nd ed.)]

BALABAN, MEIR (Majer; 1877–1942), historian of Polish Jewry. The Balaban family had been active in Lemberg and Zolkiew (Zholkva) as Hebrew printers from 1830 to 1914. After studying law at the university of his native Lemberg, Balaban taught for seven years in Galician towns in schools founded by Baron de Hirsch. He later returned to the university, devoting himself to the study of history. In those years he was active in the Zionist movement and served on the editorial staff of the Zionist weekly *Wschód* (The East). After graduat-

ing, Balaban continued teaching religion in various secondary schools. During World War I he served as a military chaplain in Lublin and as an official of Jewish affairs for the Austrian occupation authorities in Poland. From 1918 to 1920 he was head of the Jewish High School in Czeszochowa. From 1920 to 1930 he directed the rabbinical seminary Taḥkemoni in Warsaw, and from 1928 lectured on Jewish history at the University of Warsaw, becoming associate professor in 1936. He was one of the founders of the Institute for Jewish Studies in Warsaw (1927) and served as its director for several years.

Balaban published about 70 historical studies and about 200 short papers and reviews in various periodicals. He was justly considered the founder of the historiography of Polish Jewry, especially of its communal life. His studies were based on a wealth of source material found in government and municipal archives, as well as in the archives of the Jewish communities. His first book, *Zydzi lwówscy na przełomie XVI–XVII wieku* (The Jews of Lvov [Lemberg] at the Turn of the 17th Century, 1906), received a prize from the University of Lemberg. In this work he displayed a thorough grasp of his subject, scholarly meticulousness, and a capacity for presenting lucidly the various aspects of life in great detail. These characteristics also mark his second monumental work *Dzieje żydów w Krakowie i na Kazimierzu, 1304–1868* (“A History of the Jews of Cracow,” 2 vols., 1931–36). His book on the Jews of Lublin, *Die Judenstadt von Lublin* (Berlin, 1919), is a vivid survey of history of the Jews in that city. A series of articles on the organization of the Jewish communities in old Poland reflect his vast legal knowledge. These papers first appeared in Russian but were later revised and published again in Polish in the monthly publication of the Jewish community of Warsaw (1937–39). To the 11th volume of *Istoriya yevreiskogo naroda* (“A History of the Jewish People,” 1914), of which he was a coeditor, Balaban contributed an exhaustive study of the Council of the Four Lands. Collections of his articles and treatises, containing the biographies of rabbis, doctors, and communal leaders, and the history of printing houses, blood accusations, and the Karaites in Poland, were published in German, Polish, and Yiddish. Balaban contributed over 150 articles to the Russian-Jewish Encyclopedia *Yevreyskaya Entsiklopediya*. Particularly significant are his studies on the Shabbatean and Frankist movements, summarized in his *Le-Toledot ha-Tenu’ah ha-Frankit* (History of the Frankist Movement, 2 vols., 1934–35). He also wrote a book on the synagogues and other antiquities of the Jews in Poland, *Zabytki historyczne Żydów Polsce* (Jewish Antiquities in Poland, 1929). A summary of the history of the Jews in Poland until the end of the 18th century is contained in the second and third volumes of a textbook entitled *Historja i literatura żydowska* (The History of the Jewish People and its Literature, 1925; first of 3 vols. also in Hebrew, 1931); most of the historical chapters are included in *Beit Yisrael be-Polin* (vol. 1, 1948). His studies of the history of the Jews in 19th-century Poland are confined to Galicia. From the outset of his scholarly career Balaban applied himself to collecting a bibliography on the history of the Jews in Poland;

his first prizewinning publication in this field appeared in Polish in 1903. The first part of his own bibliography for the years 1900–30 appeared in 1939. When the Nazis overran Poland, Balaban refused to flee. He died in Warsaw in November 1942 before the liquidation of the ghetto and was thus vouchsafed burial in the Jewish cemetery.

[Raphael Mahler]

BALABANOFF, ANGELICA (1878–1965), European socialist and political activist. Balabanoff was born in Chernigov, near Kiev in the Ukraine, to a wealthy Jewish family. The daughter of a landowner and businessman, she was the youngest of 16 children, several of whom had died before her birth. Like most girls of her class and time, she was educated privately at home. At age 19 she left Chernigov to study at the Université Nouvelle in Brussels, Belgium, an institution noted for its radicalism. In her autobiography, *My Life as a Rebel*, Balabanoff asserted that a guilty awareness of her privileged background and a poor relationship with her mother, whom she considered dictatorial, motivated her to pursue goals of social justice. After receiving a doctorate in the philosophy of literature in Brussels, she began a wandering life of commitment to socialism which involved significant contact with prominent personalities and great historical events. In Brussels she came under the influence of George Plekhanov, a founder of the first Communist Party in Russia. Her acquaintances and comrades included Alexander *Berkman, Emma *Goldman, V.I. Lenin, Rosa *Luxemburg, Benito Mussolini, Leon *Trotsky, and Clara Zetkin. As an organizer and agitator, Balabanoff rejected feminism as a bourgeois philosophy. She was fluent in many languages, a firebrand speaker, and a talented journalist and editor. Balabanoff developed a close and lasting relationship with the Italian Socialist movement early in her political career. She also had a leadership role in the Swiss-based Zimmerwald Group, which attacked imperialism and demanded immediate peace. During and after World War I, Balabanoff became more sympathetic to the left wing of Socialism. After the Bolsheviks came to power, she returned to Russia, where she was appointed secretary of the Communist International. A year later, ousted from that position, she left Russia disillusioned, assailing the government and the movement it represented as corrupt and authoritarian. In response, the Bolsheviks attempted to malign her reputation. Balabanoff spent the interwar years in Paris and Vienna. During World War II, she found refuge in New York City where she became a friend of American socialist Norman Thomas and contributed occasionally to the *Socialist Review Journal*. Balabanoff also spoke out against Italian Fascism. She settled in Rome after the war and was active in the Italian Socialist movement. Balabanoff was the author of *Impres-*

sions of Lenin (1934); *My Life as a Rebel* (1938); and *The Traitor: Benito Mussolini and the "Conquest" of Power* (1942–3); she also wrote poetry in English, French, German, Italian, and Russian.

[Libby White (2nd ed.)]

BALAGUER, town in Aragon, northeastern Spain. At the time of the Christian reconquest at the end of the 11th century, several Jews already owned houses and land there. In 1280 Pedro III ordered an inquiry regarding violations of the interest laws by the local Jews. Efforts by the counts of Urgel to restore the community after the *Black Death and the anti-Jewish disorders accompanying it in 1348–49 were apparently successful. During the persecutions of 1391 the Jews in Balaguer took refuge in the citadel but were forced to leave by King John I. In 1416 Alfonso V, after suppressing a revolt, imposed a fine of 45 pounds of silver upon the Jews of the town, notwithstanding the fact that the community had become impoverished through migration to the estates of the nobility and the conversions to Christianity at the time of the *Tortosa disputation. New settlers were not granted exemption from taxes. The community existed until the expulsion of the Jews from Spain in 1492.

[Haim Beinart]

BALAK (Heb. בַּלָּק), son of Zippor; the first king of Moab whose name is known. Balak's memory survived only because of his ill-fated association with *Balaam, whom he had hired to curse Israel after the latter's victories over the Amorites (Num. 22–24; et al.). In Joshua 24:9 (cf. Judg. 11:25) he is described as having fought Israel. Micah 6:5 refers to the frustration of Balak's design as exemplifying God's kindness to Israel. No satisfactory explanation of the name has so far been advanced.

For bibliography, see *Balaam.

BALANCE (Heb. סֻלָּתַי, *peles*; Isa. 40:12; Prov. 16:11; cf. *pilles* "make straight, level," Isa. 26:7; Ps. 78:50; synonymous by synecdoche with pair of scales, *moznayim* – Lev. 19:36; Isa. 40:12; Jer. 32:10; et al. – and with balance beam כַּנֵּה, *kaneh*; Isa. 46:6). The equal arm balance of the ancient Near East (as distinguished from the unequal arm balance with counterpoise introduced by the Romans) consisted of a horizontal beam moving freely on a central fulcrum, with the object to be weighed and standard weights suspended at opposite ends in pans or on hooks. In its earliest form the beam was suspended at its center by a cord held in the hand, and equilibrium was esti-

mated visually. Under the 18th dynasty in Egypt larger balances were developed, supported by an upright frame resting on the ground. From the frame was suspended a weighing plummet (Heb. *mishkolet*, II Kings 21:13; Isa. 28:17) which could be compared with a pointer extending downward at right angles from the pivotal point of the beam.

The principle of the balance was probably derived from the yoke of the burden bearer (Isa. 9:3), with its two equalized loads. The earliest mechanical balances were small, and were used only for objects of high value in relation to their size, e.g., gold, silver, jewels, spices, etc. The oldest known example is a stone balance beam from the pre-dynastic Gerzean civilization in Egypt. Weights from the Sumerian and Indus civilizations show that the balance was in use there in the third millennium. Hand balances and large standing balances are illustrated in many Egyptian reliefs and wall paintings, the former also on a Hittite relief from Carchemish and the latter on one from ninth century Assyria. From ancient Israel a crude sketch of a man holding a pair of scales, incised on the base of a scale-weight of the seventh-sixth centuries B.C.E., is extant (unpublished). Biblical references to the balance are both literal (Lev. 19:36; Jer. 32:10; Ezek. 45:10; et al.) and figurative (Isa. 40:12; Ps. 62:10; Job 6:2; et al.). Fraudulent weighing is repeatedly denounced in the Bible, i.e., substandard weights (Amos 8:5), different sets of weights for buying and selling (Deut. 25:13), and false balances (Hos. 12:8; Prov. 11:1). An effort to standardize weights by marking them with an official shekel sign, attributable on archaeological grounds to Josiah, may have been accompanied by regulations for the construction and operation of balances. In later times the levites were made custodians of "all measures of quantity and size" (I Chron. 23:29).

[Robert B.Y. Scott]

BALANJAR, town of the *Khazars located between *Bāb al-Abwāb and *Samandar in the north Caucasus region. It was formerly identified by Artamonov (see bibliography) with the ruins of Endere near Andreyeva, or as the site of present-day Buinaksk, but is now placed by him south of Makhachkala, where the remains of a town have been found (communication of November 1964). Balanjar is mentioned in Arabic sources as existing in the seventh and eighth centuries. Originally the name appears to have been an ethnic designation. A Pehlevi source cited by the historian al-Ṭabarī (vol. 1, 895–6) states that in the time of the Sassanid ruler Khusraw Anūshirwān (531–79) a tribal group within the West Turkish empire was called Balanjar. According to the historian al-Mas'ūdī (*al-Tanbīh*, 62), Balanjar was formerly the Khazar capital. It was the principal objective of the Arabs after they reached the Caucasus in 641 or 642. In 652 the Muslims attempted unsuccessfully to besiege Balanjar, then a fortified town, and were heavily defeated nearby. In 723, during the second Arab-Kha-

zar war, it was captured by al-Jarrāḥ ibn ʿAbdallah al-Ḥakamī and is occasionally mentioned later.

[Douglas Morton Dunlop]

BALASSAGYARMAT, city in Nógrád county, northern Hungary. Jews first settled in the town toward the end of the 17th century. The poll of 1725 mentions only one Jewish family; in 1746 there were 19 families, and by 1778, 47 families. The number of Jews ranged from 529 in 1784 to 2,013 (17.4% of the total) in 1930, reaching a peak in 1920 with 2,401 (21.1%). According to the census of 1941, the town had 1,712 Jews, representing 13.9% of the total of 12,347. The Jewish community was organized in 1730, and its Chevra Kadisha in 1742. The community's first synagogue was destroyed in a fire in 1776; on its site a new synagogue was built in 1868. Among the rabbis who served the community were Judah Leb Engel (from 1730); Benjamin Ze'ev Wolf *Boskowitz; Mordecai and Ezekiel *Banet; and successive members of the Deutsch family (Aaron David, Joseph Israel, and David) from 1851 to 1944. The Jewish community, which was organized as Orthodox in 1868, was joined in 1885 by the smaller communities in the neighboring villages, including those of Dejtár, Érsekvadkert, Örhalom, Patak, and Szügy. During the interwar period, the community supported a number of social and welfare institutions, and together with the Jewish community of nearby Salgótarján published a Hungarian-language paper called *Szombati Értesítő* ("Sabbath News"). Located near the border with Slovakia, Balassagyarmat was a magnet for many Polish and Slovakian Jewish refugees who escaped persecution in their own countries.

After Hungary entered the war in June 1941, the Jews were subjected to ever harsher measures. Jewish males of military age were conscripted for labor service. The situation of the Jews took a turn for the worse after the German occupation of Hungary on March 19, 1944. According to a census conducted after the occupation, the Orthodox congregation had 1,516 members, led by President Mihály Lázár and Rabbi David Deutsch. The Jews were rounded up early in May 1944 under the direction of Mayor Béla Vannay. Balassagyarmat served as a major concentration and entrainment center for 5,820 Jews rounded up in Nógrád county. These Jews were concentrated in two ghettos: the approximately 2,000 local Jews were concentrated in the so-called "large ghetto," in and around Kossuth Lajos, Thököly, and Hunyadi Streets; the Jews brought in from the neighboring towns and villages in Nógrád county were concentrated in the so-called "little ghetto," located in Óváros Square. Among these were the Jews of Alsópetény, Apátújfalú, Becske, Bercel, Cserháthaláp, Diósjenő, Érsekvadkert, Galgaguta, Huguag, Losonc, Noógrádmárcal, Örhalom, Szécsény, Szügy, and several other locations. The Jewish Council was composed of Mihály Lázár (chairman), Dezső Sándor, Pál Sándor, Ferenc Hajdú, Imre Léván, and János Weltner. Internally, the ghettos were guarded by a Jew-

ish police force headed by Pál Sándor and András Fleischer. Externally, they were guarded by units of the police headed by László Eördögh and a gendarmerie unit from Miskolc. Just before their deportation, the Jews were relocated to the tobacco barns at Nyírjespuszta about 3 miles (5 km.) from the town. The Jews were deported to Auschwitz in two transports that left Nyírjespuszta on June 12 and June 14. The Germans used the synagogue as a munitions depot, and destroyed it prior to their departure.

Among the first survivors to return to the town were labor servicemen. They, together with the concentration camp survivors who returned in 1945–46, reorganized the community under the leadership of Rabbi Pinkász Kálmán. The Jews began to leave the town after 1948 and especially after the Hungarian Revolution of 1956. By 1970 only a handful of Jews were still in Balassagyarmat.

BALÁZS, BÉLA (1884–1949), Hungarian author and motion picture critic. Balázs was born in Szeged and studied at Budapest. After the revolution in 1918–19 he moved to Vienna and Berlin and finally settled in the U.S.S.R., where he lectured at the Moscow Film Academy. He returned to Hungary after World War II and taught at the Budapest Academy of Dramatic Art. Balázs' interest in philosophy is evident in all his writing. His books include *Halálesztétika* ("Aesthetics of Death," 1907), *A tragédiának metafizikus teóriája* ("Metaphysical Theory of Tragedy," 1908), and *Dialógus a dialógusról* ("Dialogue about the Dialogue," 1913). He also wrote poems and several plays, of which *A kékszakállu herceg vára* ("Duke Bluebeard's Castle," 1912), provided the libretto for an opera by Béla Bartók. Bartók also set to music Balázs' fairy-tale ballet, *A fából faragott királyfi* ("Wooden Prince," 1912). Balázs was a pioneer of motion picture criticism, and wrote two books on film technique (1952, 1961). The Hungarian communist regime established a prize in his name for work in cinema art.

[Jeno Zsoldos]

BALBO, MICHAEL BEN SHABBETAI COHEN (1411–after 1484), rabbi and poet in Candia (Crete). Although Candia was his permanent home, he is occasionally mentioned in nearby Canea and three sermons which he preached there in 1471, 1475, and 1477, are extant (Vatican Ms. 305). He functioned as *condostablo*, the leader of the Jewish community of Candia. Moses *Capsali in a responsum of 1458 refers to him as one of the communal leaders. Balbo's signature is found on many ordinances enacted in Candia between the years 1468 and 1479. He wrote letters and poems to many contemporary scholars, one poem dealing with the capture of Constantinople by the

Turks in 1453. In this lament on the fall of Constantinople, he associated the fate of the Jews with that of the defeated Greek-Orthodox. Balbo took issue with scholars on various topics; in his polemic against Moses Ashkenazi (who was known by the curious name of *Esrin ve-Arba* – “Twenty-Four”) he vigorously attacked Ashkenazi for his rejection of the doctrine of metempsychosis. Balbo also wrote on behalf of the Candia community on such topical subjects as the ransoming of captives and *agunot*. These writings are valuable material for the history of his time. In a colophon at the end of a manuscript of the *Sefer Mitzvot Katan*, which he copied, he refers to the deaths of his son Isaiah and of Isaiah’s son Michael in 1484.

[Yehoshua Horowitz]

BALCON, SIR MICHAEL (1896–1977), British film producer. Born in Birmingham, he began filmmaking in 1920 and during the next 40 years was responsible for many outstanding British films which opened new avenues in realism and humor. Among them were *The Captive Heart*, *It Always Rains on Sunday*, *Passport to Pimlico*, *Kind Hearts and Coronets*, *The Lavender Hill Mob*, *Whisky Galore*, *The Cruel Sea*, *Dunkirk*, and *The Long and the Short and the Tall*. His book *Michael Balcon Presents ... A Lifetime of Films* was published in 1969. He was knighted for his services to the industry in 1948. Balcon was born and educated in Birmingham. He founded Gainsborough Pictures Ltd. in 1928, was director of production for Gaumont-British, director and producer at Ealing Studios, and chairman of British Lion Films.

ADD. BIBLIOGRAPHY: ODNB online; *DBB*, 1, 110–15.

***BALFOUR, ARTHUR JAMES, EARL OF** (1848–1930), British statesman, signatory of the *Balfour Declaration. In 1902, he became prime minister, but was defeated in the general election of 1905. He returned to Asquith’s coalition as first lord of the admiralty in 1915 and served as foreign secretary in Lloyd George’s coalition government, formed in December 1916. Balfour began to take an interest in the Jewish question in 1902–03, when *Herzl conducted negotiations with Joseph *Chamberlain, the British colonial secretary, and with Lord Lansdowne, the foreign secretary, regarding Jewish settlement in areas adjoining Palestine, such as the Sinai Peninsula. In 1906 he met Chaim *Weizmann in Manchester and was impressed by his personality. Balfour’s interest in Zionism revived and grew more intense during World War I, when he became foreign secretary, in which capacity he signed the Balfour Declaration of Nov. 2, 1917. He was enthusiastically welcomed by the Jewish population when he visited Palestine in 1925 to attend the dedication ceremony of the Hebrew University in Jerusalem, at which he delivered the opening address.

His anthology, *Speeches on Zionism* (1928), was translated into Hebrew. The motivation behind Balfour’s attraction to Zionism has been the subject of conjecture. Being a rationalist it is doubtful whether religious tradition was a factor although his biographer Blanche *Dugdale introduces his Scottish ancestry with its Old Testament tradition. A more likely theory is that of Leonard Stein, who points out that Balfour had spoken out against the persecution of the Jews saying “The treatment of the race has been a disgrace to Christendom” and he saw the establishment of a Jewish state as an historic act of amends. Streets were named after him in Jerusalem, Tel Aviv, and Haifa. There is also a Balfour Forest at Ginnegar, and a moshav, *Balfouriyah, founded in 1922 in the Jezreel Valley. The Balfour family continued the tradition of interest in the Zionist movement. Robert Arthur Lytton 3rd Earl of Balfour (1902–1969), his nephew, supported *Youth Aliyah. In 1939 he offered the family estate and home, Whittingham, to a Jewish committee as a training school for refugee boys and girls from Germany. Balfour’s niece and biographer Blanche Dugdale worked in the political department of the Jewish Agency in London as a close collaborator of Chaim Weizmann.

[*Encyclopaedia Hebraica*]

BALFOUR DECLARATION, official statement which Arthur James *Balfour, the British foreign secretary, addressed to Lionel Walter Rothschild (2nd Baron Rothschild) on November, 2, 1917. It conveyed a declaration of sympathy with Jewish Zionist aspirations. The British government viewed with “favour the establishment in Palestine of a national home for the Jewish people.”

The Declaration was a deliberate act of the British cabinet and part of its general foreign policy. It was a national policy in the sense that it represented the views of the three British political parties. It had acquired international status since the principal Allies – Russia, France, Italy, and the United States – had given it their prior approval. It was subsequently endorsed by the League of Nations and incorporated into the *Mandate.

The Balfour Declaration recognized the collective right of world Jewry to Palestine and the “Jewish People” became an entity in the context of international law. Recognition of Zionism was in line with the principle of self-determination and with the struggle of small nationalities for freedom and independence.

There were many hands, both Jewish and non-Jewish, which shaped the policy which led to the Declaration, but it was Chaim *Weizmann who emerged as the central figure in the struggle. His scientific achievements early in the war enabled him to render important services to the British government which brought him to the notice of David *Lloyd George, minister of munitions. The latter’s personal admiration for Weizmann proved invaluable to the cause of Zionism when Lloyd George was serving as prime minister. Weizmann

had met Arthur James Balfour for the first time in Manchester, in 1905. British statesmen, public men, and officials listened readily to Weizmann because he was able to show that he could influence Jewish opinion and that Zionism was advantageous to Britain.

C.P. Scott, the celebrated editor of the *Manchester Guardian*, was one of the leading public men whom Weizmann converted to Zionism. It was Scott who cemented Weizmann's relationship with Lloyd George and introduced him to Herbert *Samuel, then president of the Local Government Board, at that time the only Jewish member of the cabinet. Like Weizmann, Samuel realized that Turkey's entry into the war on November 5, 1914, opened up great possibilities. He went further than Weizmann and envisaged that, with the probable disintegration of the Ottoman Empire, the foundation of a Jewish state in Palestine could be laid. He confided his views first to Sir Edward Grey, the foreign minister, and found him favorably disposed towards the idea. Lloyd George was also keen to see the establishment of a Jewish state in Palestine; his interest predated Grey's.

However, several weeks later, Samuel concluded that, since the number of Jews in Palestine did not exceed one-sixth of the total population, the time was not ripe for the establishment of an independent and autonomous Jewish state. In a memorandum circulated in January 1915 (and in a revised version in March 1915), he advocated the annexation of Palestine to the British Empire, as only under British rule would Jewish colonization prosper and immigration be encouraged, so that in course of time when the Jews would become a majority they would be conceded "such a degree of self-government as the conditions of that day may justify."

On February 5, 1915, when Samuel met Grey again, he found him still anxious to promote Jewish settlement in Palestine but very doubtful of the possibility or desirability of the establishment of a British Protectorate. Neither Samuel nor Weizmann gave sufficient weight to the fact that Britain was disinclined to undertake new imperial responsibilities and that the wishes of the French in that region were to be respected. The inter-departmental committee, better known as the De Bunsen Committee, appointed in April 1915, recommended that maintenance of an independent Ottoman Empire, but with a decentralized system of administration, would serve British interests best. With regard to Palestine the committee suggested that it should be neutralized and placed under an international regime. This concept ran counter to Samuel's and Weizmann's wishes. It was not until early in 1917 that their doctrine began to appear relevant to British strategic interests. But during 1915–16 it was still condemned to the sidelines. Weizmann and Nahum *Sokolow, a member of the World Zionist Executive who arrived in England in December 1914, pursued their activity in a low key, and it was only in 1916 that a collection of essays, edited by Harry *Sacher, entitled *Zionism and the Jewish Future*, was published with the intention of enlightening public opinion on the essence of Zionism.

If the British government's interest in Zionism persisted,

it was not in order to establish a claim to Palestine, as was manifested a year later, but in order to win over American Jewry, whose influence was thought to be considerable in the press, in finance, and in politics. Wooed by both belligerent camps, the attitude of the Jews in the United States was governed by the czarist government's hostile treatment of their kin in Russia. The British government regretted Russia's conduct but felt powerless to influence her. It was Horace *Kallen, a professor at the University of Wisconsin and an ardent Zionist, who first put to the Foreign Office (November 1915) an alternative method of winning over the American Jews to the Entente: should the Allies issue a statement similar to German promises in favor of Jewish national rights in Palestine, it would, he was convinced, counter German moves and elicit pro-British and pro-French sympathies among the Jewish masses.

Independently, a month later, Lucien *Wolf, a journalist and a historian, then secretary of the Conjoint Foreign Committee of the Board of Deputies of British Jews and of the Anglo-Jewish Association, made a similar proposal. Wolf was not a Zionist and deplored the Jewish national movement. But he was too much of a realist to ignore the shift in the balance of power which had taken place since the outbreak of the war. In America, he conceded, Zionism had captured Jewish opinion, and in view of the forthcoming American Jewish Congress he thought it important that "in any bid for Jewish sympathies ... very serious account must be taken of the Zionist movement ... This is the moment for the Allies to declare their policy in regard to Palestine." On March 3, 1916, he suggested a formula as a basis for a public pronouncement.

The Foreign Office was favorably disposed to the idea but had reservations about Wolf's eligibility to be the recipient of such a proclamation. Moreover, doubts later developed as to whether his suggested formula would make a strong enough appeal to Jewish communities all over the world.

While the matter was being considered, a rival proposition came from an unexpected quarter. Its author was Edgar Suarès, a prominent businessman and head of the Jewish community in Alexandria. Should the British government give concrete assurances on the Palestine question, he told Sir Henry McMahon, the High Commissioner in Egypt, it would "convert the indifference, if not hostility of American and other Jews into enthusiastic support." Suarès' scheme followed the familiar Zionist pattern but what made an impact on the Foreign Office, and particularly on Grey, was the allusion to the prospect of a German protectorate in Palestine.

On March 11, 1916, Lord Crewe, who was deputizing for Grey, drafted a cable to the British ambassadors in Paris and Petrograd asking them to sound out the French and the Russian governments about making a joint declaration with regard to Palestine which would satisfy Jewish aspirations. He quoted Wolf's formula but suggested instead a scheme which he thought would be far more attractive to the majority of Jews. It consisted of creating conditions which would enable Jewish settlers in Palestine to grow strong enough to cope

with the Arab population and lay the foundation for Jewish self-government. Neither McMahon nor Grey, nor any other member of the Foreign Office, saw any inconsistency between this scheme and the British promise made to Sharif Hussein of Mecca at that time to recognize Arab independence. It was understood that, like Lebanon, Palestine was excluded from the deal.

Against all expectations, Sazonow, the Russian foreign minister, approved of Grey's *aide-mémoire* but Briand, the French premier and foreign minister, gave it its *coup de grâce*. The British gave the French arguments little credence but did not want to irritate their ally at a time when mutual trust was of supreme importance. The idea of a joint declaration was shelved but the need for it did not decrease, especially since German propaganda in the United States was gaining the upper hand. The situation was all the more critical since growing estrangement from England stood in a direct ratio to her increasing financial dependence on the United States. At this juncture, Sir Cecil Spring-Rice, the British ambassador to Washington, remarked: "The Zionist movement is growing in importance and we can well sympathize with it. Perhaps here would be a basis of common action."

With Lloyd George's accession to the premiership in December 1916, British policy in the Middle East altered radically. One of his primary objectives was the acquisition of Palestine. He had advocated its annexation since the outbreak of the war, and to him British and Jewish Palestine were almost synonymous. He had a long-standing interest in Zionism and Samuel's memorandum made a strong appeal to him. It also fitted in well with his strategic and political concepts. He had had no hand in making the Sykes-Picot Agreement, which he regarded as an inconvenient legacy. The longer the war lasted, the stronger became his determination that Palestine, if recaptured, must be "one and indivisible."

However, the broader aim of Lloyd George's policy was to forestall the possibility of Turco-German predominance in Palestine. Herein lay the *raison d'être* of the alliance with British Zionism. It provided a way to outmaneuver the French without breaking faith, and a useful card at the future peace conference to play against any German move to rally the German-oriented and Turcophile Jews to buttress her claim.

Late in 1916 the British began to suspect that Germany was bent on an aggressive course in the East. Events lent support to this suspicion. The resounding defeat of Serbia by the German army and Bulgaria's adherence to the Central Powers virtually opened the road from Hamburg to Baghdad. A German foothold on the eastern bank of the Suez Canal would have placed British imperial communications in grave jeopardy. In these circumstances destruction of the Ottoman Empire became an unavoidable necessity. It was also essential that Palestine come under sole British control. Samuel's thesis, expounded in his memoranda of January and March 1915, was now fully vindicated.

However, British strategic requirements clashed with the principle of non-annexation enunciated by President Wilson

and upheld by the Provisional Government in Russia. It constituted the most serious threat to British war aims. Henceforth, one of the greatest dilemmas of British diplomacy was how to achieve its desiderata without giving offense to its allies. This could be done only by marriage with the principle of self-determination. It was here that the importance of Zionism, as far as Palestine was concerned, came in. It provided a cloak under which Britain could appear free from any annexationist taint. The anti-Turkish crusade was essentially negative in nature, and as such could hardly commend itself to American and Russian opinion; but, when clothed in the ideological garb of struggle for the liberation of small nationalities, it acquired a different aspect.

The first step, which was to lead to a compact with Zionism, was taken by Sir Mark Sykes, a leading expert on the East and a signatory to the Agreement with his French opposite number, François-Georges Picot. His conversion to Zionism was of particular importance. In January 1917 Lloyd George promoted him to the key position of assistant secretary to the war cabinet and delegated authority in Middle Eastern affairs to him. With his status enhanced he was in a position to play a major role in shaping British policy in that part of the world. His crucial meeting with the Zionist leaders, which included Rabbi Moses Gaster, Lord Rothschild, Herbert Samuel, Harry Sacher, as well as Sokolow and Weizmann, took place on February 7, 1917. He heard from them what he had expected. The common denominator in the spectrum of their views was the desire for a British protectorate of Palestine. This played directly into his hands. He remained silent about the agreement reached with Picot and Sazonow in Petrograd in March 1916, but pointed to possible difficulties from France. He thought it would be useful if the Zionists appointed a representative to discuss the matter with them. The representative chosen to put the Zionist point of view to Picot, then in London, and subsequently to the Quai d'Orsay, was Sokolow. In the meantime, quite independently, the French government had changed its policy drastically and, when Sokolow arrived in Paris, he was told that France took a sympathetic interest in Jewish national aspirations, which, however, could be sanctioned only if France had a rightful share in the administration of Palestine. Nonetheless, Sykes considered it a step in the right direction. Thereafter, Sykes paved the way for Sokolow's visit to the Vatican. On May 1, he was received by Cardinal Gasparri, the papal secretary of state, who reassured him that the Zionists need fear no opposition from the Church. "On the contrary, you may count on our sympathy." Pope Benedict xv expressed himself in even warmer terms. "The return of the Jews to Palestine is a miraculous event. It is providential; God has willed it ... I believe that we shall be good neighbors."

Sokolow's success did not go unnoticed by the Italian government and on May 8, Di Martino, the secretary-general of the Foreign Ministry, handed Sokolow an official declaration of sympathy with Zionist aspirations. Nor did the French government remain a passive onlooker. On June 4 Jules Cam-

bon, the secretary-general of the French Foreign Ministry, gave Sokolow a letter which for the Zionists constituted a political victory of the highest order. The Italian and French declarations enabled the British to follow suit. Had the French government objected, as it did in 1916, there would have been no Balfour Declaration.

Another factor that told strongly in the Zionists' favor was the situation in Russia. Since April there were growing indications that Russia was drifting out of the war. Particularly disturbing was the demand by the Council of Workers' and Soldiers' Deputies for the early conclusion of peace. Russia's collapse or the conclusion of peace would have transformed the whole strategic situation and the moral effect would have been devastating. Propaganda therefore was badly needed but the British were handicapped in getting their message through. Anglophobia was deep-seated under the czarist regime. Nor did the March Revolution improve the situation. The Russians had an ingrained dislike of outside interference and Lloyd George's message to Prince Lvov enjoining the Russian people to strengthen their resolve in preventing the war failed to achieve the desired effect. This helps explain why the Zionists were *personae gratae* at the Foreign Office. In return for meeting their wishes, they could produce in Russia and elsewhere an army of voluntary propagandists, all the more effective since they had the obvious advantage of being citizens of their respective countries. Russian Jews disliked the war. It was not of their choosing and they had nothing to gain from its continuation. Both for political and economic reasons they were inclined more towards Germany than to England, but recognition of their rights in Palestine might make all the difference. Not only would it immunize them against German-inspired pacifist propaganda but their influence in the press and public life could be brought to bear. The military campaign in Palestine would be presented as an act of liberation and Britain's presence there linked to the principle of self-determination. Moreover, having a close interest in the success of Allied arms, they would be all the more eager to support the moderate element in the Provisional Government against the extremists and, considering the precarious balance of power within the coalition, this was not without significance.

After the March Revolution the position of Russian Jews, 5,000,000 strong, was transformed. The abolition of civic disabilities released tremendous sources of vitality which became manifest in all fields of cultural and political activity. Although they comprised only four percent of the total population, their influence far exceeded their numerical strength.

The most influential party in post-revolutionary Russia was the Zionist party. Its rise was spectacular. The number of enrolled members, which before the war amounted to 25,000, rose steeply in the spring of 1917 to 140,000. By the beginning of 1918 there were 1,200 registered local Zionist societies all over the country with 300,000 active members. The elections to an All-Jewish Congress held in Southern Russia showed that the Zionist movement enjoyed overwhelming support

within the Russian Jewish community. These figures say nothing of those outside the movement, who by tradition and sentiment were attached to Palestine. British Military Intelligence estimated that "the great mass of the 6,000,000 Jews in Russia have been more or less in sympathy with the Zionist cause." Jehiel *Tschlenow was not exaggerating when, in his inaugural address to the Zionist Conference in Petrograd on June 6, 1917, he stated that Zionism had become a mass movement and as such, in a free country, was a formidable political factor.

In the United States, too, the Zionist movement had made much headway. Louis D. *Brandeis' leadership transformed it from a parochial organization into a significant force in Jewish communal life. One of its greatest assets was Woodrow Wilson, the president of the United States, who had come to believe that the Zionist program would help solve the Jewish question and had promised to lend his support to implement it.

In April 1917, when Balfour visited the United States, he thought it important to meet Brandeis, Palestinian policy being one of the subjects on which Balfour intended to explore American feeling. The broader aim of Balfour's mission was to prepare the ground for full Anglo-American co-operation and stimulate goodwill. He was fully aware that Brandeis' position in the President's Council might well facilitate friendship between the two countries. His meetings with Brandeis, both private and official (May 1), were rewarding. He gave Brandeis firm assurances of support for the Zionist cause but thought that the moment was not ripe to make a public pronouncement as Brandeis wished him to do.

International complexities apart, there was another difficulty that hindered Balfour from issuing an official statement. Aware of the strong opposition to Zionism among influential Jews, he was wary of antagonizing them. It was not before the controversy was resolved in the Zionists' favor at a meeting of the Board of Deputies on June 17 and the dissolution of the Conjoint Foreign Committee that the British government could move freely on the road to a public declaration.

The episode became a *cause célèbre* in Anglo-Jewish history. It resulted from mutual misunderstanding. The assimilationists feared that the recognition of Jews as a separate nationality would cause their alienation in the lands of their domicile and would play into the hands of antisemites. It was based on an erroneous assumption and was caused by misreading the term "nationality," mistaking conformity for civic loyalty.

On the other hand, the Zionists were guilty of indiscretions which tended to magnify their opponents' suspicions. Sensible enough to restrict the application of the concept of Jewish nationality to Palestine, they blundered in not making those most concerned aware of their thinking. A timely gesture might well have averted the crisis. With their diplomatic status in the spring of 1917 elevated, they chose to go it alone in their dealings with the British government. But since the agreement between the Conjoint Committee and the Foreign Office was still in force, such tactics could not lead them far. It

is indeed doubtful whether the British government would have ventured to issue a declaration of sympathy with Zionism before consulting all sections of the Anglo-Jewish community.

By June it became clear that a public statement by the British government could no longer be delayed. For some time the German press, ranging from the Conservative *Reichsbote* to the Liberal *Frankfurter Zeitung*, had been urging the Reich government to show a more accommodating attitude to the Zionist movement. On June 12 Weizmann called on Sir Ronald Graham, the under-secretary of state for foreign affairs, and told him that he had received some disquieting information. For Zionism to fall under German influence would have been a serious blow to his efforts to anchor the movement firmly to Britain, particularly at a time when it was emerging as a leading force in the Jewish world. He insisted that it was essential for the British government to counter German moves and give public expression of its sympathy and support.

On June 19, Balfour invited Lord Rothschild and Weizmann to submit a draft proposal for a declaration of support. However, a month elapsed before they were able to forward a text to Balfour. Members of the Political Committee were remarkably modest in their claims. They refrained from using the words “Jewish state,” on which some radical members like Harry Sacher insisted, and hit upon the more moderate “Jewish National Home.” It originated in the *Heimstaette* of the Basle Program to which in November 1916 Sokolow prefixed the word “national.” It was this word that infuriated leading British Jews so much. A term “home” or even “state” would have been less objectionable since such an entity would in no way have interfered with the loyalty of Jews outside Palestine.

After the dissolution of the Conjoint Foreign Committee, the attack was led by Edwin Montagu, a leading Jewish anti-Zionist who was secretary of state for India. The Zionist draft proposal filled him with horror. His memorandum, “The Antisemitism of the Present Government (August 23, 1917),” was the first in his campaign to suppress the proposed declaration. None of his memoranda convinced the cabinet. Ronald MacNeill, MP, subsequently under-secretary of state for foreign affairs, dismissed his views as unrepresentative and erroneous. However, in order to still his opposition and speed up the publication of the declaration, Leopold Amery (a member of the war cabinet secretariat) inserted (on October 3, 1917) two provisos. The first was to safeguard the rights of the native Moslem and Christian communities and protect them against possible dispossession; the word “in” (the national home was to be established “in Palestine”) was the operative word intended to insure against the imposition of Jewish domination on other inhabitants of Palestine. The purpose of the second proviso was to dispel the misconception that Jews *qua* Jews, irrespective of their convictions and place of domicile, “belonged to Palestine” and owed allegiance to the National Home. The provisos, however, as Amery recorded, “gave away nothing that was not self-evident,” and were not meant to impair the substance of the proposed declaration.

The Balfour Declaration

“His Majesty’s Government view with favour the establishment in Palestine of a national home for the Jewish people, and will use their best endeavours to facilitate the achievement of this object, it being clearly understood that nothing shall be done which may prejudice the civil and religious rights of existing non-Jewish communities in Palestine, or the rights and political status enjoyed by Jews in any other country.”

Brandeis was instrumental in convincing President Wilson to approve the proposed draft, whereas Sir Mark Sykes demolished Lord Curzon’s contention that Zionism was “a dream incapable of realization.” He pointed to the success of the Zionist colonization and felt certain that, given the proper conditions, the population in Palestine could be doubled within seven years without dispossessing anyone.

Sykes drew his information from Aaron *Aaronsohn, who, on October 1, had arrived in London. Both the War Office and the Foreign Office had a high opinion of his contribution to Military Intelligence and his presence weighed heavily in the Zionists’ favor. Sykes did not flatter him unduly when acknowledging his share in Allenby’s victory.

By October the news that the German government had begun to consider Zionism seriously instilled a sense of urgency in the Foreign Office and the cabinet. The British press was also clamoring for action. With the anti-Zionists’ arguments defeated, Balfour was able, on October 31, to wind up the debate in the war cabinet, which had lasted for two months. None of the members present (Montagu was away in India) contested his motives for publishing the declaration in favor of the establishment of the Jewish National Home in Palestine. Nor did anyone disagree with his interpretation of its meaning. On November 2, 1917 a letter signed by Balfour was sent to Lord Rothschild but was made public only on November 9 so that it could be first published in the *Jewish Chronicle*.

The enthusiastic response to the Balfour Declaration among Jewish communities all over the world, especially in Russia, made the Foreign Office staff regret that the document had not been published earlier. Sir Ronald Graham, who throughout the latter part of 1917, had pressed unremittingly for an early statement, minuted: “It is a misfortune that our declaration was so long delayed.” Belated as it was, London was still to reap some notable advantages from it. Zionism helped to legitimize Britain’s position in Palestine, which otherwise would have been based solely on military conquest. Britain acquired a friendly base in Palestine and massive popularity among Jews everywhere.

BALFOURIYYAH (Heb. בַּלְפוּרִיָּיָה), moshav in the Jezreel Valley, Israel. The settlement was founded on Nov. 2, 1922, north of Afulah, on land owned by the American Zionist Commonwealth Federation. Some of the founders were immigrants from the United States, the others from Eastern Europe. Balfouriyah's economy was based on field and garden crops, cattle, and poultry. In 2002 the population was 287. The moshav's name refers to the date of its founding which was the fifth anniversary of the *Balfour Declaration.

BALI, ABRAHAM BEN JACOB (second half of the 15th to the beginning of the 16th century), Karaite author and physician living in Turkey. Bali was a pupil of the Rabbanite R. Shabbetai b. Malchiel ha-Kohen. Although disagreeing with the Rabbanites, Bali refers with respect to the contemporary Rabbanite scholars Mordecai *Comtino, Moses ha-Yevani Capuzato, and Solomon "Sharvit ha-Zahav" in his works. Most of them survived in manuscripts kept in various libraries. They include *Iggeret Issur Ner Shabbat*, upholding the Karaite prohibition against burning lights on the Sabbath (contrary to the reform introduced by Elijah *Bashyazi; non-critical print, Ashdod 2002); *Iggeret ha-Kohanim*, on the status of Rabbanites of priestly descent who become Karaites; *Perush Inyan Shehitah*, a commentary on the chapter dealing with ritual slaughter in *Aaron b. Elijah of Nicomedia's *Gan Eden* (non-critical print, Ashdod 2003); a commentary on al-*Ghazālī's *Maqāṣid al-Falāsifa*, in which Bali used a Hebrew translation of it and followed the commentary of Moses Narboni, which he much admired; and *Perush al Ḥamishah Perakim min ha-Haysharah le-Abu Nasr*, a commentary on the first five chapters of al-*Fārābī's *Logic*, translated into Hebrew under the title *Iggeret le-Petiḥat Sifrei ha-Higgayon*.

BALI, MOSES BEN ABRAHAM, Karaite poet, physician, and *hakham* in Cairo in the late 15th and early 16th centuries. Two volumes of his liturgical poems have been preserved in the *Firkovich collection in Leningrad: the first, *Sefer Zerah*, completed in 1489, consists of 224 *piyyutim* arranged in the order of the weekly lessons; the second, *Tahkemoni*, contains 237 *piyyutim* for Sabbaths and festivals.

BALI, RIFAT (1948–), Turkish scholar. Bali was born in Istanbul and graduated from Sorbonne University, Ecole Pratique des Hautes Etudes. His fields of expertise are antisemi-

tism, conspiracy theories, relations between the Turkish state and the non-Muslim minorities, the Jews in the Republican period, and the appearance of the new bourgeoisie in Turkey after 1980. His works include: *Cumhuriyet Yillarında Türkiye Yahudileri Bir Türkleştirme Serüveni, 1923–1945* (1999); *Musa'nın Evlatları Cumhuriyet'in Yurttaşları* (2001), *Les Relations entre Turcs et Juifs dans La Turquie Moderne* (2001), *Tarz-ı Hayat'tan Life Style'a* (2002), *Cumhuriyet Yillarında Türkiye Yahudileri, Aliya Bir Toplu Göçün Öyküsü, 1946–1949* (2003), *Devlet'in Yahudileri ve 'Öteki' Yahudi* (2004), *Anadoludan Yeni Dünya'ya* (2004), *Türkiye'de Yayınlanmış Yahudilikle İlgili Kitap, Tez ve Makaleler Bibliyografyası 1923–2003* (2004), *Avram Benaroya: Un Journaliste Juif Oublié suivi de ses Mémoires* (2004).

BALIDEH (al-Balideh), MOSES (15th century), Yemenite scholar. Balideh was the author of more than ten works on diverse subjects, mostly in the form of commentaries and expositions of rabbinic sayings. With the exception of his *Midrash* on the last chapter of Proverbs, *Sharḥ Eshet Ḥayil*, all his works are in manuscript in the British Museum (Margoliouth, *Cat.*, no. 1101). Although he enjoyed a distinguished reputation, his works did not achieve wide circulation among Yemenite Jewry and were therefore almost unknown to succeeding generations. They include a commentary on the *Midrash Yelammedenu*, a commentary bearing a marked resemblance to the *Midrash ha-Gadol* in respect to sources, arrangement, and tenor. Balideh wrote a commentary concerning the ten items recounted as having been created on the (first) Sabbath at twilight (Avot 5:6) in addition to commentaries on some works of Maimonides.

BALIN, MARTY (Martyn Buchwald; 1942–), U.S. singer and songwriter. Born in Cincinnati, Ohio, the young Balin and his family moved to San Francisco in 1948. Balin founded the seminal Bay Area rock group Jefferson Airplane (1965–71). In 1975, Balin re-formed the band under the new name of Jefferson Starship and immediately had a top-of-the-chart album, *Red Octopus*. He became president of the Great Pyramid Ltd. and owner of Diamondback Music Co.

Balin's distinctive, soulful voice became one of the hallmarks of the Airplane/Starship's sound, and he composed many of the band's most memorable songs, including "It's No Secret" (1966), "Plastic Fantastic Lover" (1967), "Young Girls" (1968), "Sunday Blues" (1969), "Volunteers" (1970), and Jefferson Starship's biggest hit, "Miracles" (1975).

Balin left the group in 1978, writing the rock opera *Rock Justice*, a fantasy about a rock star on trial for not having a hit. He then began a solo career with his 1981 album *Balin*, which generated the singles "Hearts" and "Atlanta Lady." After issuing *Lucky* in 1983, he joined former bandmates Paul Kantner and Jack Casady to form the KBC Band (1985–87). In 1989,

all three participated in a Jefferson Airplane reunion, which yielded a new studio album and tour. In 1991, Balin issued *Better Generation* and two years later joined Kantner's Jefferson Starship – The Next Generation project, concurrently continuing his solo career with his 1997 album *Freedom Flight*. Balin's 1999 album *Marty Balin's Greatest Hits* was a compilation of re-recordings of past favorites.

With nine platinum and three gold records to his credit, Balin was inducted into the Rock & Roll Hall of Fame, and "Miracles" was inducted into BMI's Millionaires Club, having been played more than 2.7 million times.

Besides being a recording artist, Balin is a painter as well. His artwork depicts many of the musicians with whom he shared the stage, such as Janis Joplin, Jimmy Hendrix, Elton John, Jerry Garcia, John Lennon, Kiss, Bob Marley, and Grace Slick, as well as his idols Otis Redding, Robert Johnson, and Jerry Lee Lewis. In 1999 his exhibit "World of Rock & Roll Legends" toured art galleries in the U.S.

[Jonathan Licht / Ruth Beloff (2nd ed.)]

BALINT, MICHAEL (1896–1970), psychoanalyst. Born Mihály Maurice Bergmann in Budapest, the son of a physician, he changed his name to Michael Balint against his father's wishes. He also changed religion, from Judaism to Unitarian Christianity. In the 1930s Balint settled in Manchester, England, moving to London in 1945.

Balint devoted a lifetime of research and practice to the development of psychoanalysis as a science. Entering the field while it was still young and taking on form, Balint spent much time studying psychoanalytic technique as well as the patient's response to various forms of therapy. This work is discussed in his books *The Doctor, His Patient, and the Illness* (1957) and *Psychotherapeutic Techniques in Medicine* (1961). Balint also devoted much research to understanding the mechanisms of human sexuality, concentrating in large part on sexual perversions and their relation to neurotic and psychotic symptoms. In addition to writing *Problems of Human Pleasure and Behavior* (1957), he edited many anthologies on the subject of sexuality. In 1968 he was elected president of the British Psychoanalytical Society.

The Balint Society was founded in 1969 to continue the work begun by Balint in the 1950s. The aim of the society is to help general practitioners attain a better understanding of the emotional content of the doctor-patient relationship. The Balint method consists of regular case discussion in small groups under the guidance of a qualified group leader. Their objective is to reveal feelings unwittingly harbored by the doctor towards his or her patient, usually engendered by purely subjective factors, which interfere with the doctor's approach to a patient, thus jeopardizing not only the patient but also blurring or blinding the doctor's mind with regard to proper diagnostic procedures and further treatment. Balint societies have been formed in a number of countries. In 1972 the first international Balint conference was held in London.

[Maurice Goldsmith / Ruth Beloff (2nd ed.)]

BALKH, town in northern Afghanistan (within medieval Khurasan). Balkh was formerly the stronghold of Jewish settlements in Afghanistan. According to Persian and Muslim traditions, it was founded after the destruction of Jerusalem by Nebuchadnezzar (586 B.C.E.), who is said to have settled the exiled Jews there. It was to Balkh, according to Muslim tradition, that the prophet Jeremiah fled, and where the prophet Ezekiel was buried. According to the Muslim historian al-Ṭabarī, another Jewish prophet with the unidentifiable name of *SMY* conducted religious disputations with Zoroaster in Balkh. Reference by Arab geographers to a *Bāb al-Yahūd* (Gate of Jews) in Balkh, and to "*al-Yahūdiyya*" ("Jewish territory" or "Jewish town") provide additional evidence that a large Jewish settlement existed there. The name *al-Yahūdiyya* or *al-Yahūdān-al-Kubrā* (the Great Jewry) was, however, later euphemistically changed to *al-Maymana* (the 'auspicious' town) since the term "*al-Yahūdiyya*" was rejected by the Muslims. It was at Balkh that the sectarian *Hiwi al-Balkhī was born in the ninth century. The Jews of Balkh were forced to maintain a public garden. Maḥmūd of Ghazna (1034) imposed special taxes on the Jews of the town, stipulating, however, that not more than 500 *dirham* should be accepted from them. The Jewish community continued well into the 13th century, when a Jewish merchant from Balkh named Khawāja Rashīd al-Dīn al-Ḥakīm went from Khurasan to India. However, the community was evidently destroyed during the Mongol invasions.

BALLAGI (formerly **Bloch**), **MÓR** (1815–1891), linguist and theologian. Born in Inocz, Hungary, he attended yeshivot and studied mathematics at Pest, continuing in Paris and Tuebingen. In 1843 he became a Protestant. During the Hungarian revolution in 1848, Ballagi served as secretary to General Görgey. He taught Hebrew, Greek, and biblical exegesis at the theological academy of the Reformed Church at Kecskemét from 1851, and in Pest from 1855 to 1877. While still a Jew Ballagi published a monograph, *A zsidókról* (1840), advocating the emancipation of Hungarian Jewry and the establishment of a rabbinical college. He translated into Hungarian the Hebrew prayer book (1841), the Pentateuch (1840–41), and the Book of Joshua (1842), and wrote a primer of the Hebrew language, *A héber nyelv elemi tankönyve* (1856; 2nd edition revised by Ignaz Goldziher in 1872), *Renaniana* (Hg., 1864), and biblical studies (*Bibliai tanulmányok*, 2 vols., 1865). Ballagi also compiled a dictionary of the Hungarian language, and published a Hungarian-German, German-Hungarian dictionary.

BALLARAT, country town in Central Victoria, Australia. After the gold rush in 1851 a number of Jews went to Ballarat and in 1853 there was a *minyán* on the gold fields on the High Holidays and in 1859 there were 347 male Jews in the town. A Jew, Charles Dyte, took a leading part in the diggers' revolt in 1854 (known as the Eureka Stockade) against unjust government licensing. Later he became mayor of Ballarat. In 1855 a small synagogue was dedicated, the congregational president being Henry Harris. D. Isaacs was first minister, *shoḥet*, and teacher, followed in 1864 by S. Herman, I.M. Goldreich (1868), B. Lenzer (1905), M. Rosenthal (1922), L. Goren (1926), and Z. Mandelbaum (the last resident rabbi of Ballarat who ministered until 1942). A more commodious building, including rooms for a minister's residence and a Hebrew day school, was erected on land granted by the government in 1861. A *mikveh* was built and a burial plot consecrated. A Philanthropic Society, founded in 1857, was affiliated with the *Anglo-Jewish Association. In 1908 the congregation separated into two factions and the Central Hebrew Congregation was formed, with M. Levy as minister, but lasted only four years. In these early days Ballarat was regarded as the center of Orthodox Judaism in Australia.

Two Ballarat Jews achieved distinction in the arts: Nathan Spielvogel, a well-known short-story writer, and Abbey Alston, an artist whose works are found in most Australian national galleries. With the drift to Melbourne, the Ballarat community declined. In 1969 the Jewish population had dwindled to about 10–15 families. By the early 21st century a few families remained, as well as a historic Orthodox synagogue, open on High Holidays. Sovereign Hill, a popular local tourist attraction featuring a village from the Gold Rush era, includes Emanuel Steinfeld's Furniture Factory, an authentic recreation of the business of a prominent Jewish pioneer.

[Shmuel Gorr]

BALLAS, SHIMON (1930–), Israeli writer. Born in Baghdad, Iraq, Ballas immigrated to Israel in 1951 without any knowledge of Hebrew. Like his colleague Sami *Michael, Ballas had been close to the Iraqi Communist Party and was not particularly interested in Zionist ideology. He began his literary career in Israel with the local Arab press and later spent four years in Paris, where he earned his Ph.D. from the Sorbonne. He is the author of a comprehensive study called "Arab Literature under the Shadow of War" (1978; French translation 1980) and taught Arab Literature at the University of Haifa. His first Hebrew novel, *Ha-Ma'abarah* ("The Transit Camp," 1964), is one of the first Hebrew novels to shed light on the harsh realities, tensions, and struggle for power in an immigrant settlement in Israel of the 1950s. This realistically nar-

rated story was followed by novels and collections of stories. Among these are *Ḥoref Aḥaron* ("Last Winter," 1984), relating the experiences of a founding member of the Egyptian Communist Party who lives as an exile in Paris; *Ve-Hu Aḥer* ("And He is Different," 1991), depicting the fate of three protagonists in Iraq under a ruthless tyrant: the dictator's historian, a Jew who converted to Islam; a Communist; and an Arab-Jewish poet who later emigrates to Israel. The novel *Solo* (1998), set in Paris during the notorious *Dreyfus affair, is the story of an Egyptian-Jewish dramatist who fights for the independence of his homeland. Among his other prose works are the novels *Lo bi-Mekomah* ("Not in Her Place," 1994) and *Tel Aviv Mizrah* ("Tel Aviv East," 2003). The collections of stories include among others *Mul ha-Ḥomah* ("Facing the Wall," 1969) and *Otot Setav* ("Signs of Autumn," 1992). The stories in the latter collection are set – typically for Ballas – in Baghdad, Paris, and Tel Aviv: "Aya" tells of a Moslem nanny bidding farewell to the Jewish family for which she had worked; "Otot Setav" focuses on the complex identity of an old Egyptian intellectual torn between cultures. Ballas consciously abstains from Oriental exoticism and nostalgia. An English translation of "The Shoes of Tanboury" appeared in 1970.

[Anat Feinberg (2nd ed.)]

BALLIN, ALBERT (1857–1918), German shipping magnate. He was the 13th child of a Danish Jew who settled about 1830 in Hamburg, where he opened a wool-dyeing shop. Later his father established an agency for shipping immigrants, which young Ballin expanded after his father's death. During the large-scale emigration of the 1880s, Ballin, as chief passenger agent for the English Carr Line, adapted the company's vessels for the transportation of steerage passengers. After keen competition with Hapag (the Hamburg–America Line), Germany's leading shipping line, the two companies merged in 1886; Ballin became head of the passenger department and in 1899 he started to lead the company. Hapag rapidly grew into one of the world's foremost shipping lines. This success was due mainly to Ballin's foresight and his setting of new standards of speed and comfort. His capacity for negotiation and compromise enabled him to form the first trans-Atlantic shipping conference, called the North-Atlantic Steamship Lines Asso-

ciation. In 1901 he established the International Mercantile Marine Company, in cooperation with Morgan's shipping interests. Kaiser William II frequently turned to him for counsel on economic matters. Ballin became a behind-the-scenes negotiator. He was one of the few Jews, like Emil Rathenau and Walther Rathenau, who could get close to the antisemitic emperor. As an unbaptized Jew he married a Protestant woman. Not being close to the Jewish community of Hamburg he followed the ideal of acculturation as a Jew. Before World War I he failed in his efforts, together with Sir Ernest Cassel, to create the basis for German-British agreement on naval armaments. In 1914, Ballin undertook the organization of food supplies for the blockaded Reich and set up its central purchasing agency. During the war he remained a moderate in his ideas about "Mitteleuropa" and his plans concerning possible territorial gains by the Reich. These views conflicted with those of the military and reduced his influence with the Kaiser around 1917. In 1918 Ballin was entrusted with negotiations for an armistice and peace preparations. On Nov. 9, revolution broke out in Germany. Kaiser William II fled the country and Ballin – in despair over the collapse of his company and the loss of the monarchy that he admired – presumably committed suicide.

BALLIN, JOEL (1822–1885), Danish engraver and painter. He was born at Vejle, Jutland, and studied painting in Copenhagen, and engraving at Leipzig and Paris. His first painting was exhibited in 1841. Ballin lived from 1846 in Paris and London where he produced a series of reproductions of the paintings of Ostade and Protais and of some English and French artists. In 1861 he was awarded the gold medal of the Paris Salon. On his return to Denmark in 1883 Ballin was commissioned to engrave the works of prominent Danish artists. His "Procession on Simhat Torah in the Synagogue of Copenhagen" is owned by the Copenhagen Jewish community.

[Julius Margolinsky]

BALLIN, MOEGENS (1872–1914), Danish post-impressionist painter. Ballin settled in Paris in 1891. After meeting Jean Verkade, he was active in the Nabi group. In 1892 he went to Italy, where he converted to Catholicism. In 1894 he returned

to Copenhagen. In 1943 Danish intellectuals organized a retrospective exhibition of his paintings as a protest against Nazi policies.

BALLIN, SAMUEL JACOB (1802–1866), Danish physician, best known for his efforts to combat Asiatic cholera. Born and educated in Copenhagen, he was early recognized as an expert in the treatment of Asiatic cholera and in 1831–32 traveled abroad by royal order to study the disease further. His published findings became a valuable source of information concerning the disease. During the great cholera epidemic in Copenhagen (1853) he was appointed chief physician of the cholera hospital and a member of the Board of Health. In honor of his achievements, he was appointed a member of the Royal Medical Society and given a professorship. Ballin was an active member of the National Liberal Party and an enthusiastic supporter of a Scandinavian union. Ballin was physician of the Jewish community for a number of years.

[Nathan Koren]

BALLMER, STEVE (1956–), U.S. business executive. As the first business manager hired by Bill Gates at the Microsoft Corporation, Ballmer, over 25 years with the computer giant, rose to become chief executive officer. In the process, he became one of the richest Jews in the world.

Steven Anthony Ballmer was born in Detroit, Michigan, the son of a Ford Motor Company employee. Shy as a child, he remembered hyperventilating before heading off to Hebrew school. His mother studied Hebrew with him. A scholarship student at Detroit Country Day School, he turned out to be a whiz in math, ranking in the top 10 among high school students on a statewide test. Thus he was able to fulfill his Protestant Swiss-born father's dream, a Harvard education. There he got his start as a leader, as manager of the football team, the student newspaper, the *Harvard Crimson*, and the literary magazine. It was at Harvard that Ballmer met Gates; they lived at opposite ends of a dormitory floor. Their shared passions for math and science brought them together.

In 1980 Gates persuaded Ballmer to drop out of Stanford University's business school to help run a fledgling Microsoft that was growing so fast it was nearly out of control. Gates valued Ballmer's management experience at Procter & Gamble, where he had helped market Duncan Hines cake mixes. Microsoft was then grossing \$12.5 million in annual sales and had 43 employees. After taking over Windows in 1984, Ballmer drove engineers relentlessly to meet a launch deadline. But when Windows 1.0 was released, it flopped. It took Ballmer six more years to produce Windows 3.1, which took the world by storm. Ballmer played a classic role in tech start-ups: "He was the bottom-line-oriented grown-up," an article in the *New York Times* said, "who freed the computer nerds to focus on writing code." Gates was the code writer, Ballmer the hard-driving, charismatic, behind-the-scenes tactician, the arm twister and deal closer. Ballmer, and Microsoft, were highly competitive, and Ballmer was intimately

involved in the company's tough tactics. In 2000, at the age of 43, Ballmer became executive vice president of sales and support, where he drove all activities related to Microsoft's sales, support, and marketing, and president, responsible for broadening the leadership of the company and positioning it to take advantage of future growth opportunities. But Ballmer also became known for his blunt, aggressive style. By 2002, Microsoft had a stock market valuation of \$250 billion, and Ballmer was one of the leading businessmen in the world. He was also instrumental in making more than 10,000 Microsoft employees millionaires through stock options. According to F.A. Maxwell's biography, which was unauthorized, Ballmer "didn't turn his back on his Jewish heritage, even when doing so might have benefited him."

[Stewart Kampel (2nd ed.)]

BALLY, DAVICION (1809–1884), merchant and banker, a leader of the Sephardi community of Bucharest and its president for some time and a fighter for emancipation. Bally, who was self-educated, promoted *Haskalah among Sephardi Jewry in Romania, tending to favor assimilation into Romanian culture. In 1836 he was appointed treasurer of the police, a position which he held on an honorary basis for ten years; at the same time he was sympathetic to the national revolutionary movement in Walachia. Bally called for administrative reforms in the Sephardi community and for new methods of educating Jewish youth. In 1861, when a boys' school was founded in the Sephardi community of Bucharest, Bally was appointed president of the executive committee. He emphasized the study of Romanian in the community school and also proposed the establishment of an educational framework for girls. However, his proposals and reforms encountered strong opposition; some were not accepted at all, while the remainder were short-lived. Bally fought against antisemitism and published articles in defense of the Jews in the press; as a result of his intervention the governor (*Caimacam*) of Walachia withdrew a sharply anti-Jewish work from circulation in 1858. When anti-Jewish policy was enforced after 1866 by the government led by the former revolutionaries of 1848, Bally unsuccessfully attempted to influence them to abandon it. In 1882 Bally went to Erez Israel to spend his last years there and died in Jerusalem.

[Eliyahu Feldman / Lucian-Zeev Herscovici (2nd ed.)]

BALLY, ISAAC DAVID (1842–1922), Romanian rabbi and educator, son of the banker Davicion *Bally. Born in Bucharest, Bally received a traditional Jewish Sephardi education together with a modern one. He later studied at the Rabbinical Seminary of Breslau and was ordained as a rabbi. He was influenced by the ideas of Rabbi Zacharias *Frankel and at-

tempted to apply them to the Sephardi and general Jewish milieu of Romania. Bally also received a doctor of philosophy degree from Breslau University. After returning to Bucharest he taught Jewish religion and Hebrew language and became the principal of the modern girls' school of the Sephardi community and secretary of the *Hevra Kaddisha* Association of the Sephardi Jews. Because of his dual cultural background – Sephardi and Ashkenazi – he could serve institutions associated with both communities for the good of all Romanian Jews. In 1881 he became secretary of the "Infratirea Zion" Association, which later became *B'nai B'rith. In 1886 the Julius Barasch Jewish Historical Society was founded in his home and he became its librarian and treasurer. In these offices he fought for the emancipation of the Romanian Jews and for their return to Jewish life. In 1882–85 he published five textbooks on Judaism in the Romanian language for pupils of Jewish schools. Bally also published popular books on *halakhah* (marriage and family purity) and Jewish history for Romanian-speaking Jews, manuals of biblical Hebrew, and a manual of Judeo-Spanish for Sephardi Jewish children. He also published a translation and commentary in Romanian on the Passover Haggadah (1902). Some of his didactic and moralistic works remained unpublished.

[Lucian-Zeev Herscovici (2nd ed.)]

BALMES, ABRAHAM BEN MEIR DE (c. 1440–1523), physician, philosopher, translator, and grammarian. His grandfather, also called Abraham de Balmes (d. 1489), mentioned repeatedly in the royal records between 1463 and 1480, was court physician to King Ferdinand I of Naples (1472). Balmes was born in Lecce, southern Italy, and obtained doctorates in medicine and philosophy at the University of Naples in 1492 by special permission of Pope Innocent VIII. In 1510 when the Jews were expelled from Naples, Balmes appears to have gone to northern Italy. Later he became personal physician to Cardinal Domenico Grimani, who was deeply interested in Hebrew literature. Under Grimani's auspices, Balmes translated the works of a number of medieval Arabic authors from their Hebrew versions into Latin. These included the *Liber de Mundo* (On the Quadrant) of Ibn al-Hayham (11th century), the *Epistola expeditionis* based on a philosophical work by Avempace, Geminus' work on astronomy under the title "Introduction to Ptolemy's Almagest," *Averroes' "Epitome of Aristotle's Organon," "Middle Commentary on the Topics," and on "Sophistical Refutation," part of *De Substantia Orbis*, and logical questions by Averroes and other Arabic authors. The translation of the "Long Commentary on Aristotle's Posterior Analytics" published in Venice about 1520 seems to have been part of a more ambitious project which was to have included, besides other versions, an original philosophical work of his own (*Liber de demonstratione Abrami de Balmes*), no longer extant. Balmes' Averroistic materials were incorporated in the standard 16th-century edition of Aristotle, published in Venice

in 1560. The Christian printer Daniel *Bomberg urged Balmes to write his famous Hebrew grammar *Mikneh Avram*. This appeared together with a Latin translation entitled *Peculium Abramae* in Venice at the end of 1523, some months after the author's death. The final chapter (on biblical accent marks) was completed by a fellow physician, Kalonymus b. David. In this work Balmes relied upon the grammarians *Ibn Janaḥ and Profiat *Duran. He mentioned Plato's *Cratylus* (which deals with semantics) – an indication of his interest in the philological conceptions of the Greek philosophers. His grammatical teachings lean too heavily on the theory of logic, and because of this and his attempt to use Latin philology to explain various aspects of Hebrew grammar, he exerted only limited influence upon Hebrew grammatical literature. Balmes' attempt to codify Hebrew syntax, to which he devoted a special section of his book (*Sha'ar ha-Harkavah ve-ha-Shimmush*) is, however, of some significance. The work was greatly used by Christian Hebraists of the ensuing period. According to Gedaliah *Ibn Yaḥya, who was present at Balmes' funeral, he had taught officially at the University of Padua, and many of his gentile students followed his bier.

[Joseph Elijah Heller]

BALOGH, THOMAS, BARON (1905–1985), British economist whose main interests were planning, development, and labor economics. Born in Budapest, he worked as a Rockefeller Fellow at Harvard University, from 1928 to 1930. In 1931 he joined the economic staff of the League of Nations and settled in London, working as an economist until 1939, when he became associated with the Oxford University Institute of Statistics. From 1955 to 1960 he taught in England and in the United States. Balogh served as a consultant to various United Nations agencies and foreign governments, including India, Malta, Greece, Peru, and Turkey. In 1964 he became an economic adviser to the British Labour government under Harold Wilson. He received a life peerage in 1968. Balogh's publications include: *Dollar Crisis* (1949), *Unequal Partners* (1963), *Planning for Progress* (1963), and *Economics of Poverty* (1966). When Labour returned to office in February 1974, Balogh was appointed minister of state in the Department of Energy, a post he held until December 1975. In 1976–78 he served as chairman of the National Oil Corporation.

BALSAM, spice designated in the Bible by various names: בֹּשֶׂם (*bosem*), בֶּשֶׂם (*besem*), זָרִי (*zori*), נָטָף (*nataf*), and, in rab-

binic literature, קָטָף (*kataf*), בְּלֶסֶם (*balsam*), אֶפְרֹבֶלְסִמוֹן (*appobalsamon*), אֶפְרֹסֶמוֹן (*afarsemon*), *afarsemon* occurring most frequently in the Talmud and Midrash and designating the perfume extracted from the sap of the *Commiphora opobalsamum*. It was the only tropical, and the most expensive, spice grown in Erez Israel. According to Josephus (Ant., 8:174–5), balsam was originally brought to Erez Israel by the Queen of Sheba as one of the gifts included in the “hundred and twenty talents of gold, and of spices very great store, and precious stones; there came no more such abundance of *bosem*” (1 Kings 10:10). Generally, in the Bible, *bosem* signifies spices of all kinds. Yet in the Song of Songs, in the verses “I have gathered my myrrh with my *bosem*” (5:1) and “the beds of *bosem*” (5:13; 6:2), the reference is to balsam alone. At present the tree grows wild in the valley of Mecca where it is called *beshem*. Many strains of this species are found, some in Somalia and Yemen. As a perfume it is hardly used today. It serves in the Orient as a healing agent for wounds and as an antidote to snakebite and the sting of scorpions. Apparently, the *zori* of the Bible also signifies some remedy compounded of balsam sap and other ingredients. The “balm (*zori*) of Gilead” is mentioned as having healing properties. *Nataf* was one of the elements constituting the incense burned in the Tabernacle (Ex. 30:34) and is identified as *zori* in an early *baraita* dating back to the Second Temple (Ker. 6a). The word in another context designates balsam oil (Shab. 25b–26a), and this identification appears to be correct (see also *Storax). Balsam oil was highly regarded in rabbinic literature and by Greek and Roman writers. Among the latter, Theophrastus, Strabo, Diodorus, and Pliny the Younger lavished high praise on the balsam grown in orchards near the Dead Sea. Pliny's remarks are especially enlightening. In their struggle against the Romans, the Jews strove desperately to destroy the balsam orchards and prevent them from falling into the hands of the enemy. The Romans, however, captured them and, in his triumphal march in Rome, Titus displayed balsam trees brought from Judea. The orchards in Jericho and En-Gedi henceforth provided the Romans with an important source of revenue (*Historia Naturalis*, 12:25). Admiration was expressed in the Talmud for the balsam “of Rabbi (Judah ha-Nasi's) household and the household of the emperor.” It was the best and most expensive spice of ancient times, and accordingly Rav, the Babylonian *amora*, composed for it a special blessing: “Who creates the oil of our land” (Ber. 43a). The perfume has a pungent odor and the Midrash cites it as one of the enticements of the sinful daughters of Zion: “She would place the balsam between her heel and her shoe and, when she saw a band of young men, she pressed upon it so that the perfume seeped through them like snake poison” (Lam. R. 4:18). Tradition has it that, after King Josiah hid away the “holy oil” with which the kings of Judah were anointed, balsam oil was used in its stead (Ker. 5b). In the messianic era, the righteous will “bathe in 13 rivers of balsam” (TJ, Av. Zar. 3:1, 42c). Remains of the terraces in the hills of En-Gedi, where balsam trees once grew, can still be seen. Excavations in the vicinity have uncovered a workshop complete with its ovens and

its vessels. From his investigations in the Arabian Peninsula, the German botanist Schweinfurth has reconstructed the process of balsam production. The bark of the tree was split and the sap soaked up in cotton wool. The sap was then squeezed into oil which absorbed the pungent odor. The tree is a thorn bush with trifoliate leaves, and belongs to the genus *Commiphora* which includes several species, among them myrrh.

BALTA, city in Odessa district, Ukraine. At the beginning of the 16th century, when Balta lay on the border between Poland and Turkey, there were Jews living in both sectors of the city (in the Józefgrad quarter on the Polish side). Many of the Jewish inhabitants together with refugees who had fled there from other districts were massacred by the *Haidamacks in 1768. The city was incorporated into Russia in 1791. Balta's importance as a commercial center increased after the construction of the Odessa-Kiev railroad in 1866. The Jewish population, which numbered 8,413 in 1863, mainly engaged in wholesale and retail grain dealing, the processing of agricultural products, tobacco and soap, tanning, flour milling, and liquor distilling. A pogrom broke out in 1882 in which over 1,200 Jewish houses and shops were pillaged; an attempt to organize Jewish *self-defense was suppressed by the police. Balta subsequently became the center of the Zionist movement in Podolia, Volhynia, and Bessarabia. The Zionist leader M. *Sheinkin served there as a government-appointed rabbi (*rav mi-ta'am*) in 1901–1904. Pogroms again broke out in the wake of the October revolution of 1905. The community was severely affected during the civil war of 1919, in which Balta repeatedly changed hands between the Bolsheviks and the troops of *Petlyura, the Ukrainian nationalist leader. Threatened by general pillage and massacre, many Jews fled to Odessa. The Jewish population, which numbered 13,234 in 1897 (57% of the total), had decreased to 9,116 by 1926 (39.6%). Owing to emigration to the big cities the Jewish population decreased further to 4,711 in 1939 (total population 17,945). At the beginning of the Soviet period the *He-Ḥalutz movement was still active and operated a farm, but during mass arrests on September 18–22, 1922, including He-Ḥalutz members, it was liquidated. In 1924 there were two Yiddish schools with 530 pupils in the city. Among the artisans there were many shoemakers. About 30 Jewish agricultural cooperatives operated in Balta county. Some were liquidated and the rest were turned into kolkhozes.

During World War II Balta was incorporated in the Romanian-occupied zone of *Transnistria. On August 8, 1941, 140 Jews were executed. About 1,500 who remained in Balta were confined in a ghetto together with deported Jews from Bessarabia and Bukovina, and a number were later executed.

With the help of money received from Bucharest the Judenrat opened workshops, two orphanages, and inexpensive restaurants. About 1,795 Jews (including 175 from Bukovina) remained after the liberation on March 29, 1944. Fourteen hundred Jews were listed in Balta in the 1959 census. Most of the Jews emigrated in the 1990s. A number of small Jewish communities formerly existed in the vicinity of Balta, of which the largest were Bogopol, Krivoye Ozero, and Golovanevsk.

[Yehuda Slutsky / Shmuel Spector (2nd ed.)]

BALTAZAR, CAMIL (pseudonym of **Leopold Goldstein**; 1902–1977), Romanian poet. Baltazar's first poems appeared in 1921 in *Sburatorul Literar*, a review edited by the Romanian critic Eugen Lovinescu, and his contributions were published thereafter in many of the leading literary periodicals. Baltazar's poetry was written mainly before World War II. His first collection, *Vecernii* (Vespers), appeared in 1923. This was followed by *Flaute de matase* (Silken Flutes, 1924), *Reculegeri in nemurirea ta* (Meditation on Your Immortality, 1925), *Biblice* (Biblical Poems, 1926, a volume of erotic poems with ancient Hebrew Biblical themes), *Strigari trupesti pe langa glesne* (Poems on Amorous Yearnings, 1927), and *Cina cea de taina* (The Last Supper, 1929). In his themes and mode of expression, Baltazar was, from the outset, hailed as an innovator. Though his sensitivity led to preoccupation with human suffering, he was widely known as “the poet of light” because of the serenity with which he transfigured the most somber themes. During the early 1930s, Baltazar published an anthology of Russian prose (1930) and translations from such German writers as Thomas *Mann, Franz *Werfel, and Jakob Wassermann. His completion of this work was marked by the verse collection *Intoarcerea poetului la uneltele sale* (The Poet's Return to his Tools, 1934), which are poems in prose about his work as a writer and a literary editor, written under the influence of Apollinaire and Blaise Cendrars. *Taram transcendent* (Transcendental Realm) appeared five years later. In 1928 he edited the literary review *Tiparnita literara* (The Literary Printer) and in 1932 was secretary of redaction of the literary weekly *Romania literara* (Literary Romania), edited by Liviu Brebeanu. After World War II, Baltazar became a contributor to the Romanian Jewish newspaper *Revista Cultului Mozaic* (c. 1965–77) and published further collections of his poems. He also published literary essays, memoirs, and publicistic writings in the volumes *Scrittor si om* (Writer and Man, 1947), *Contemporan cu ei* (Contemporary with Them, 1962), *Scrisori catre Camil Baltazar* (Letters to Camil Baltazar, 1965). Owing to the artistic dictates of the new (Communist) regime, Baltazar's “socialist” verse was largely devoid of literary value.

[Dora Litany-Littman and Abraham Feller / Lucian-Zeev Herscovici (2nd ed.)]

BALTIMORE, city in Maryland, U.S. When Abraham *Rice of Bavaria accepted the rabbinic post at Baltimore Hebrew Congregation in 1840, the congregation became the first in America to employ an ordained rabbi. While Baltimore Jewry remains justly proud of this distinction, for Rabbi Rice, the experience was not a happy one: as he famously wrote his mentor in Germany, “The religious life in this land is on the lowest level, most people eat foul food and desecrate the Sabbath in public.... Under these circumstances my mind is perplexed and I wonder whether it is even permissible for a Jew to live in this land.”

In Baltimore’s defense, Rice’s comment did not apply to Baltimoreans alone; his words pointed to the state of American Jewry in the mid-19th century. As an immigrant port of entry and border town between North and South, as a gateway to the nation’s interior and a manufacturing center in its own right, Baltimore has been well-positioned to reflect developments in American Jewish life. Yet the Baltimore Jewish community has maintained its own distinctive character as well, reflective of the personality of Baltimore itself – a city known for its cohesive communities, periodically fractious citizenry, and occasional eccentricities.

Settlement Patterns and Demographics

Founded in 1729 on an inlet of the Chesapeake Bay in the colony of Maryland, Baltimore remained a small waterfront village until emerging as an important trading center in the late 18th century. Few Jews arrived in the early years. In addition to the town’s slow start, they may have been deterred by Maryland’s discriminatory constitution, which required that public office holders swear an oath of allegiance to Christianity. Not until the Maryland legislature passed the “Jew Bill” in 1826, enabling Jewish public officials to swear a substitute oath, did Jews achieve full civic equality in the state.

Greater religious toleration and a rising economy came at the right time to draw a good number of the Jewish immigrants beginning to stream into America from German lands. Baltimore’s Jewish population surged from around 125 in 1825 to approximately 1,000 in 1840 and more than 8,000 in 1860. By 1880, Baltimore had some 10,000 Jews, mostly of Bavarian and Hessian origin. This profile would soon change dramatically, however. The mass migration of East European Jews that gathered force in the 1880s made an immediate impact, with Baltimore attracting many early arrivals, particularly from Lithuania. The city’s Jewish population reached 24,000 by 1890, 40,000 by 1907, and 65,000 by 1920. Although Lithuanians continued to have a major presence, Baltimore received Jewish immigrants from across Eastern Europe between the 1880s and 1920s. The city also welcomed subsequent waves of Jewish migration, notably German-Jewish refugees from

Nazism in the 1930s, Holocaust survivors in the post-World War II era, Iranians in the late 20th century, and Soviet and post-Soviet Jews in the late 20th century.

The diversity of Baltimore’s Jewish population mirrored that of the city itself. As a busy immigrant port of entry, Baltimore became a multi-ethnic patchwork of neighborhoods. East Baltimore, the original site of German Jewish residence, became the area of settlement for most East European Jewish immigrants. American-born descendants of German Jews began moving to more affluent precincts on the city’s northwest side by the late 19th century, where they tended to re-concentrate in predominantly Jewish enclaves. This pattern continued through the 20th century, as Jews moved away from the old East Baltimore neighborhood to a succession of residential areas in northwest Baltimore. As each Jewish sub-group moved up the economic ladder and into wealthier surroundings, its place was often taken by a less well-off sub-group.

At the turn of the 20th century, some 92,000 Jews lived in Baltimore: around one-quarter within the city limits, 70 percent in suburban Baltimore County, and the remainder in Carroll County. Most resided in predominantly Jewish areas in the northwest part of the metro region, in places such as Upper Park Heights, Mount Washington, Pikesville, Reisterstown, and Owings Mills. Jewish households made up 6 percent of households in the Baltimore area.

Economic Life

From the beginning, Baltimore’s Jews found opportunity for economic advancement, though never without struggle. Widow Shinah Etting arrived in 1780 with five children and opened a boardinghouse; another widow, Judith Cohen, came with her children in 1803. Their sons rose to become prominent business and civic leaders. The German Jews who settled in Baltimore after the Ettings and Cohens started primarily as poor peddlers and small shopkeepers. In time, most achieved a measure of success. German Jewish entrepreneurs were the pioneering founders of Baltimore’s most well-known retail establishments: Gutman’s, Hutzler’s, Hochschild Kohn’s, Hamburger’s, and Hecht’s. Others established small clothing manufacturing firms that became the basis of Baltimore’s nationally significant garment industry.

East European immigrants found a niche in the lowest rungs of that industry. Harsh conditions and low pay led them to forge a dynamic labor movement that met with bitter employer opposition, and for many years Baltimore’s garment industry was wracked by strikes and lockouts. In 1914 the Amalgamated Clothing Workers and the Sonneborn firm, one of the nation’s largest men’s clothing factories, signed a landmark collective bargaining agreement. During the struggle, Orthodox leader Rabbi Avraham Schwartz interceded on behalf of workers about to be fired for refusing to work on the Sabbath, enlisting the support of the Sonneborn family’s Reform rabbi, William Rosenau.

Many East European Jews left the sweatshops and factories (or avoided them altogether) to set up small family enter-

prises that relied on the labor of husbands, wives, and children. Pushcart peddlers and small shopkeepers reigned on Lombard Street, East Baltimore's bustling marketplace. Other entrepreneurs ranged well beyond the Jewish community. Lithuanian immigrant Jacob Epstein built the Baltimore Bargain House into a multimillion dollar wholesale business. The peddlers he sent out on the rail lines emanating from Baltimore became small shopkeepers and founders of Jewish communities from Pennsylvania to North Carolina. Louis *Blaustein and his son Jacob began selling kerosene door-to-door in 1910; their American Oil Company became one of the country's largest, pioneering the drive-in filling station. In less spectacular ways, many of Baltimore's East European Jews established successful businesses by the 1920s and began to exhibit an upward mobility that would extend in the coming decades despite reversals during the Great Depression.

Immigrants from later waves of Jewish migration also started low on the economic ladder, as door-to-door salesmen, cabdrivers, technicians, and the like. Coming from the upper professional levels in Germany, Iran, and the Soviet Union, most suffered a difficult loss of status, but their educated backgrounds helped many to advance. In the post-World War II era, Baltimore Jews increasingly gravitated to the professions, although business remained an important economic activity.

Religious Life

Abraham Rice would no doubt have been surprised to learn that Baltimore hosted the highest proportion of Orthodox Jews of any large American Jewish community at the end of the 20th century. The internationally known Ner Israel Rabbinical College and other highly regarded Orthodox institutions combined with Baltimore's relative affordability to enable the Orthodox community to attract new members from New York and other cities. But all branches of Judaism have been well represented in Baltimore. Jewish religious life has been marked by innovation as well as devotion to tradition, conflict as well as cohesion, and by leaders whose actions influenced the course of American Jewry.

With nationally prominent rabbis heading its congregations, Baltimore in the mid-19th century became the battleground of conflicting religious ideologies. The Baltimore Hebrew Congregation (incorporated as Nidchei Israel), the city's first, was established in 1830 by around 20 Jews of German and Dutch extraction. For the next 60 years, traditionalists and reformers clashed within the congregation or split off from it. Some German immigrants founded Har Sinai as a Reform counterpoint in 1842 and constructed America's first building specifically created as a Reform temple in 1849. Congregation Oheb Shalom formed in 1853 as a midway alternative to Baltimore Hebrew's Orthodoxy and Har Sinai's radical Reform. Its first rabbi, Benjamin *Szold, found himself in a bitter feud with Har Sinai's fiery Rabbi David *Einhorn shortly after arriving in Baltimore in 1859. Meanwhile, Baltimore Hebrew continued its slow but sure movement away from traditionalism.

Rabbi Rice left in 1849 and two years later founded Shearith Israel, which upheld German-Jewish Orthodoxy for decades and remained an Orthodox congregation into the 21st century. In 1870, Baltimore Hebrew's remaining traditionalists, led by the Friedenwald family, split off to form the Chizuk Amuno Congregation. By the early 1900s, Baltimore Hebrew and Oheb Shalom had joined the Reform movement, while Chizuk Amuno became a founding member of the Conservative movement's United Synagogue of America.

Amidst all the *Sturm und Drang* among the Germans, a small congregation named Bikur Cholim opened in 1865, the first congregation in Baltimore to follow the Polish style of worship. As East Europeans began to trickle in, small *landsman*-based congregations sprang up, mostly in East Baltimore. Dozens of these shuls were established over the next several decades. Two of the most influential, B'nai Israel (founded by Lithuanians in 1873) and Shomrei Mishmeres (founded by Volhynians in 1892), took over the imposing synagogue buildings on Lloyd Street built by Chizuk Amuno and Baltimore Hebrew, respectively, after those congregations relocated to more upscale neighborhoods. A second phase of East European synagogue development began in the early 1920s when the first American-born generation founded several congregations in northwest Baltimore, including Beth Tfiloh, one of the nation's first "synagogue centers." In ensuing years, small immigrant shuls either merged into larger synagogues or disappeared. By 1999 Baltimore hosted more than 50 synagogues, representing every branch of Judaism.

Jewish Education and Philanthropy

Innovation has been a hallmark of Jewish education in Baltimore. The first known community Hebrew school opened as early as 1842, and community-operated schools such as East Baltimore's Talmud Torah flourished from the late 1880s to the 1940s. Samson *Benderly, the father of modern Jewish education in America, started his revolutionary experiments in Baltimore in 1900 and the city benefited from his direct influence until he left for New York in 1910. In 1917 Rabbi Avraham Schwartz of Shomrei Mishmeres founded the Talmudical Academy, the first Jewish day school outside of New York. In the late 20th century, a dramatic rise in Jewish day schools (16 by 2004) gave Baltimore one of the largest day school populations in the nation. The two institutions of higher Jewish learning have been *Baltimore Hebrew University, founded in 1919 by Israel *Efros, and the Ner Israel Rabbinical College, founded by Rabbi Jacob I. *Ruderman in 1933.

Baltimore Jewry's long tradition of philanthropy and mutual aid started with the United Hebrew Benevolent Society, founded in 1834. Two key institutions, Sinai Hospital and the Levindale Hebrew Geriatric Center, also date back to the 1800s. Some charities established by German and American-born Jews in the late 19th century focused on helping poverty-stricken East European immigrants. East European Jews started their own aid societies shortly after their arrival, and by the first decade of the 20th century, two parallel philanthropic

networks had arisen: the German-sponsored Federated Jewish Charities and the East European-sponsored United Hebrew Charities. In 1921 the two combined into the Associated Jewish Charities. Ever since, the Associated has supported a comprehensive network of agencies offering social services, health care, and educational, recreational, and cultural programming. Widely recognized as one of the nation's leading Jewish federations, the Associated is known for its innovative programs, fundraising effectiveness, and leaders who have played important roles at the national Jewish communal level.

Community Life

Baltimore Jewry created a wide array of cultural, social, and recreational institutions through the years, as each wave of immigrants acted to meet the needs of its members. Several clubs and literary associations were established by the 1850s, including the first YMHA in the country (1854). A German-Jewish "high society" emerged by the 1880s, complete with debutante balls and exclusive social clubs. East European Jews developed a thriving Yiddish-based cultural scene in East Baltimore. Yiddish theaters, kosher restaurants, and bathhouses drew scores of neighborhood residents. Zionists and socialists, Orthodox and secularists aimed to enrich the immigrants' lives with classes, concerts, and lectures. Some *maskilim* collaborated with native Baltimorean Henrietta *Szold (daughter of Rabbi Benjamin Szold) to form the Russian Night School in 1889, a pioneering effort in immigrant education. The Jewish Educational Alliance, established in 1913, offered everything from youth sports leagues to adult English classes, and became a second home for thousands of newcomers.

For many decades the Jewish social scene was divided in two, with seemingly irreconcilable religious and cultural differences (as well as garment industry labor-management conflict) separating the "uptown" German Jews from the "downtown" Russian Jews. The rift began to heal in the post-World War II era. By century's end, new waves of Jewish immigration, generational change, and the emergence of a significant ultra-Orthodox community became more salient factors in shaping a pluralistic Jewish social and cultural life. A variety of sub-groups supported numerous organizations, activities, and newspapers – but all within relatively close proximity in northwest Baltimore, as the flowering of communal diversity did not alter the desire of most Jews to live in Jewish neighborhoods. Some institutions were shared by all, notably a popular two-campus Jewish Community Center and the well-read weekly *Jewish Times* (established in 1919). The Jewish Museum of Maryland remained in East Baltimore to preserve the legacy of the immigrant past. The nation's largest regional Jewish museum, its complex includes America's third-oldest surviving synagogue, the Lloyd Street Synagogue (1845).

National and International Jewish Issues

Baltimore Jews have provided leadership on the national Jewish stage since the mid-nineteenth century. David Einhorn launched his influential monthly *Sinai* in 1856, and America's

first Hebrew weekly, *Ha-Pisgah*, appeared in Baltimore in 1891. Simon *Sobeloff was the inaugural president of the American Jewish Congress. Real estate magnate Joseph *Meyerhoff served as national chair of the United Jewish Appeal and State of Israel Bonds, demonstrating that the two organizations were complementary and not competitive. His son, Harvey Meyerhoff, became chairman of the United States Holocaust Memorial Museum in 1987 and, despite doubtful prospects, brought the Museum to its successful opening in 1993. Rabbi Arthur *Hertzberg's Orthodox upbringing in East Baltimore strongly influenced his contributions to national Jewish life.

Baltimore women have a history of "firsts." The first woman to head a major American Jewish congregation was Helen Dalsheimer, installed as president of Baltimore Hebrew Congregation in 1956. Shoshana Cardin became the first woman to lead a major Jewish federation when she assumed the presidency of Baltimore's Associated Jewish Charities in 1983. Cardin went on to be the first woman to preside over the national Council of Jewish Federations.

Baltimore has been an important center of Zionist activity. One of America's first *Hibbat Zion groups organized here in 1884, and the only American delegate to the First Zionist Congress was a Baltimorean, Shearith Israel's Rabbi Shepsel Schaffer. Henrietta Szold, founder of Hadassah, began her Zionist activities in this city. Harry *Friedenwald served as second president of the American Zionist Federation. In 1947, a group of Baltimore Zionists secretly acquired, rebuilt, and launched an old Chesapeake Bay steamer which picked up refugees in France and unfurled its new name, *Exodus 1947*, upon being attacked by the British on its way to Palestine.

The Baltimore Scene

From the beginning, Baltimore's Jews have actively engaged in their region's political, civic, and cultural life. Ettings and Cohens participated in the pivotal battle of Fort McHenry during the War of 1812. During the Civil War, Jews were as divided as the rest of the population in this border city. Rabbi Einhorn led the antislavery faction, Rabbi Bernhard *Illoy of the Baltimore Hebrew Congregation defended the status quo, and Rabbi Szold spoke for Jewish neutrality. Einhorn's tenure at Har Sinai was abruptly cut short in 1861 when his newspaper, *Sinai*, was destroyed by a pro-slavery mob and he fled with his family to Philadelphia. Jews have served throughout state and local government, from Solomon Etting and Jacob Cohen – elected to the City Council immediately after passage of the "Jew Bill" in 1826 – to popular 1970s Maryland governor Marvin *Mandel (whose political career was cut short by corruption charges).

Jews have played a critical role in Baltimore's cultural scene as patrons and participants. Jacob Epstein's personal art collection became a core holding of the Baltimore Museum of Art, while Etta and Claribel Cone gave the BMA the unparalleled collection of modern art they acquired in their European travels. Joseph Meyerhoff's philanthropy created Meyerhoff Symphony Hall, home of the Baltimore Symphony Orchestra,

in 1982. Academy Award-winning film director Barry Levinson made significant contributions to American cinema with his three-part chronicle of Baltimore Jewish life, *Diner* (1982), *Avalon* (1990), and *Liberty Heights* (1999).

Jewish–Gentile Relations

Relations between Baltimore Jews and non-Jews have been generally amicable, though ethnic and religious prejudice, social snobbery, and discrimination occasionally vexed the Jewish community. In the 19th century, the city's large German population of Jews and non-Jews shared German-speaking clubs and many Jewish children attended Zion Lutheran Church's well-respected school, where instruction was in German. However, the local Catholic press, German and English, specialized in antisemitic articles until the appointment of Archbishop James Gibbons in 1877. Local antisemitism increased with the rise of Nazism in the 1930s, spurring the 1939 formation of the Baltimore Jewish Council, a community relations organization that continues to fight antisemitism, promote dialogue between Jewish and other local communities, and address broader urban issues.

The relationship of Jews to Baltimore's African American community has been complex. Jews participated in the civil rights movement, but the movement also targeted Jewish storeowners who maintained discriminatory policies. In one historian's words, a state of "intimate antagonism" existed between the two groups for much of the 20th century, as economic relations and geographic proximity promoted considerable interaction between Jews and blacks.

The close-knit nature of Baltimore's Jewish community arose from a combination of gentile prejudice and Jewish ties of kinship and culture. Residential discrimination kept Jews out of some areas until the mid-20th century, contributing to the emergence of intensely concentrated Jewish neighborhoods. Upper-class social and educational discrimination encouraged Jews to create separate clubs and "ecumenical" (largely Jewish) private schools. Such discrimination dissipated in the post-World War II era. By the dawn of the 21st century Baltimore Jewry emerged as a confident and assertive community determined to maintain its own distinct identity, neighborhoods, and institutions, while its members pursued ever-expanding ways to involve themselves in the broader society.

[Deborah Weiner (2nd ed.)]

BALTIMORE, DAVID (1938–), U.S. molecular virologist and Nobel laureate. Born in New York City, Baltimore received his B.A. with high honors in chemistry from Swarthmore Col-

lege in 1960 and his Ph.D. from Rockefeller University, N.Y. He started his postgraduate work in 1963 at the Massachusetts Institute of Technology in biophysics, decided to work on animal viruses, moved to the Albert Einstein College of Medicine, Bronx, New York, and later to the Rockefeller Institute. After finishing his postdoctoral fellowships in 1965, he became a research associate at Salk Institute for Biological Studies, La Jolla, California (1965–68), and associate professor of microbiology at MIT (1968–72). From 1972 to 1997 he was an institute professor of biology at MIT and from 1973 he was an American Cancer Society professor of microbiology. He was founding director of the Whitehead Institute for Biomedical Research at MIT and served from the institute's creation in 1982 to 1990, when he became president of Rockefeller University. In 1997 Baltimore became president of the California Institute of Technology. His career has been distinguished by his dual contribution to biological research and to national science policy. Baltimore helped pioneer the molecular study of animal viruses, and his research in this field had profound implications for understanding cancer and, later, AIDS. As one of the nation's most distinguished biologists, he was awarded the 1975 Nobel Prize for his work in virology.

Baltimore has been a major figure in Washington as head of the National Institutes of Health AIDS Vaccine Research Committee from 1996 to 2002, and also in 1986 as co-chair of the National Academy of Sciences and Institute of Medicine's Committee on a National Strategy for AIDS. In 1999 he was awarded the National Medal of Science. He was a co-recipient of the 2000 Warren Alpert Foundation Prize and was awarded the 2002 AMA Scientific Achievement Award.

[Bracher Rager (2nd ed.)]

BALTIMORE HEBREW UNIVERSITY. The Baltimore Hebrew College and Teachers Training School was founded in 1919 by the noted Hebrew poet and scholar Israel *Efras. According to its charter, the purpose of the college was "to establish a College for Higher Hebrew and Semitic learning; to study the Hebrew and cognate languages and literature; to train and qualify teachers for Jewish religious schools; and for such cognate purposes as may from time to time be determined by the Board of Directors of this corporation, with power to confer degrees." The first class met on November 2, 1919, in the Chizuk Amuno synagogue and the first graduation took place in June 1923. Dr. Efras resigned in 1928, and in 1930 he was succeeded by Dr. Louis L. *Kaplan, who served as president until 1970. The college was housed at 1201 Eutaw Place from the mid-1920s until 1959, when it moved to Park Heights Avenue. The college became a constituent of the Associated Jewish Charities and Welfare Fund (now the Associated: Jewish Community Federation of Baltimore) in 1930. The college received accreditation from the state of Maryland in 1963 and from the Middle States Association of Colleges and Schools in 1974. It was renamed Baltimore Hebrew University in 1987 when Middle States conferred university status on it.

Over the years the university expanded its academic outreach to offer a number of degree programs. In 1971 the university opened its graduate school, which in 1975 was named the Peggy Meyerhoff Pearlstone School of Graduate Studies. In addition to the B.A. degree in Jewish Studies which is offered by the University's Bernard Manekin School of Undergraduate Studies, the graduate school offers programs leading to the Masters and Ph.D. degrees in Jewish Studies. The graduate school also developed degree programs to train Jewish educators and communal professionals. These programs lead to the Master of Arts in Jewish Education or the Master of Arts in Jewish Communal Service. Graduates of these programs have become teachers, principals, and other educational specialists in the field of Jewish education and others have become executives in federations, Jewish Community Centers, community relations councils and in the field of Jewish family service. The university also maintains cooperative relations with Baltimore area colleges through the Baltimore Collegetown Network, which enables area colleges to share resources and jointly enhance the academic and social life of students.

While remaining committed to academic Jewish Studies and to the training of Jewish educators and communal professionals, the university also provides opportunities for Jewish learning to non-degree students through its program of Lifelong Learning. The program has featured weekend retreats with scholars, artists, and public figures; classes in Jewish Studies; a Distinguished Lecture series with major scholars, authors, playwrights, and filmmakers; and the Meah Program, a two-year 100-hour course of study covering the Jewish experience from biblical times to the present.

The University maintains the Joseph Meyerhoff Library, which contains over 70,000 books and periodicals in English, Hebrew, Yiddish, German, French, Russian, and other languages and includes a number of rare books going back to the 16th century. The library also houses the Baltimore Jewish Community Video Archive for Holocaust Testimonies and a collection of books that survived the Holocaust acquired through the Jewish Cultural Reconstruction Organization.

Among the distinguished scholars who have served on the faculty of the university are Moshe Aberbach, Joseph M. Baumgarten, Adele Berlin, Avram Biran, Cyrus *Gordon, Samuel Iwry, and Harry M. *Orlinsky.

The presidents who have served Baltimore Hebrew University are Israel Efros (1919–28), Louis L. Kaplan (1930–70), Leivy Smolar (1970–92), Norma Fields Furst (1992–95), Robert O. Freedman (1995–2001), and Rela Mintz Geffen (from 2001).

[George L. Berlin (2nd ed.)]

BAMBERG, city in Bavaria, Germany. There were Jews living in Bamberg before the First Crusade (1096), when they were forcibly baptized but later allowed to return to Judaism. Establishments in the medieval "Jewish Lane" (today Pfahlplatzchen) included a dance hall for weddings, a hostel (*hekdesch*) for the needy sick and transients, a *mikveh*, and a synagogue.

In 1298 during *Rindfleisch massacres 135 Jews were martyred in Bamberg. During the persecution following the outbreak of the *Black Death in 1348 the Jews there set fire to their homes and perished in flames. Between the 14th and 17th centuries Jews repeatedly attempted to settle in Bamberg, paying high "protection" taxes, only to be later attacked and expelled. In 1633 they numbered ten families, whose right of residence was recognized in 1644. An annual "plum fast" (*Zwetschen Taanit*) was observed by the Bamberg community, to commemorate the preservation of the Jews there during the riots of 1699 by one of their number who averted greater damage by pouring plums over the mob. The community increased from 287 in 1810 to 1,270 in 1880 (4.3% of the total population), subsequently declining to 812 in 1933 (1.6%) and 418 in May 1939.

Prominent members of the community included the talmudist and *paytan* Samuel b. Baruch *Bamberg (13th century). Notable rabbis were Moses *Mintz who served there from c. 1469 to 1474; Samuel Meseritz (c. 1661–65), author of *Naḥalat Shivah*; and Joseph Kobak (1862–82), editor of *Jeschurun*. A. Eckstein, rabbi of Bamberg (1888–1935), wrote a number of studies on the history of the Jewish communities in Bavaria.

During the Nazi regime, the synagogue was burned down on Nov. 10, 1938, and 30 to 40 Torah scrolls were destroyed. In 1933–41, 443 Bamberg Jews left Germany and another 66 fled to other German cities. The 300 who remained at the end of 1941 were deported to Riga, Izbica/Lublin, Theresienstadt, and Auschwitz. After the war many displaced persons assembled in Bamberg (14,000 in 1947), but only 17 of the former Jewish residents were among them. In 1965 the cemetery was desecrated. The community then numbered 70. In 1989, there were 106 community members; their number rose to 893 in 2003 as a result of the immigration of Jews from the former Soviet Union.

[Z'ëv Wilhem Falk]

BAMBERG, SAMUEL BEN BARUCH (first half of the 13th century), rabbi and *paytan*. Samuel was born in Metz, but lived in Bamberg, after which he was called. He studied under his father, *Baruch b. Samuel of Mainz, and *Eliezer b. Samuel of Metz. He corresponded on halakhic problems with *Eliezer b. Joel ha-Levi, *Simḥah b. Samuel of Speyer, and *Isaac b. Moses of Vienna, and was highly esteemed by leading contemporary scholars. Like his father, he was a talented poet, and fragments of his prayer book have survived. The name

is mentioned in the *Memorbuch* of Nuremberg, but it is difficult to assume that he was one of the martyrs there. *Meir b. Baruch of Rothenberg was his pupil. For a time Samuel was regarded as the author of *Likkutei ha-Pardes* (Venice, 1519), but this view is no longer accepted. Of his works no more than excerpts and fragments of his responsa remain. His decisions are of a very independent nature, though his style is modest and austere.

[Itzhak Alfassi]

BAMBERGER, BERNARD JACOB (1904–1980), U.S. Reform rabbi, scholar, and author. Bamberger was born in Baltimore, Maryland, educated at Johns Hopkins University (1923), and ordained at Hebrew Union College (1926). After serving as rabbi of Temple Israel in Lafayette, Indiana, where he continued to study at HUC earning a D.D. (1929), Bamberger moved to Congregation Beth Emeth in Albany, where he remained until 1944. He next served as rabbi of Congregation Shaarey Tefila in New York City until his retirement in 1970. Bamberger combined his service as a pulpit rabbi with an active life of community service and scholarship. He wrote several scholarly and popular books. They include *Proselytism in the Talmudic Period* (1968²); *Fallen Angels* (1952), a study of Jewish demonology and its influence on Christian thought; *The Bible: A Modern Jewish Approach* (1995); and *Story of Judaism* (1957). He served as president of the Synagogue Council of America (1950–51), and of the Central Conference of American Rabbis (1959–61) and later as president of the World Council for Progressive Judaism. He was a member of the interdenominational Jewish Publication Society's Bible translation committee that led to the new translation of the Bible and was the author of a modern commentary on Leviticus (1979) that served as part of the Union of American Hebrew Congregation's modern commentary published in its entirety after his death.

[Hillel Halkin]

BAMBERGER, EDOUARD-ADRIEN (1825–1910), French politician and physician. Born in Strasbourg, he moved in 1858 to Metz where he became vice president of the Metz Education League. He strenuously opposed the policies of Napoleon III and campaigned to bring about the anti-Empire majority in Metz in 1870. Elected as a Republican deputy in the National Assembly, Bamberger considerably influenced the votes on Napoleon III's responsibility for France's debacle and the subsequent deposition of the emperor. He voted against the treaty ceding his native Alsace to Germany and led the deputies from the annexed province out of the Assembly when the treaty was accepted. Recalled by Thiers following the 1871 insurrection, Bamberger resumed his seat at Versailles and voted regularly for the Republican majority. He was defeated in the 1881 elections, retired from politics, and became assistant librarian in the Museum of Natural History. During the parliamentary de-

bates on the law concerning child labor, he moved an amendment – which was rejected – demanding that Jewish apprentices be exempt from working on Saturday.

BIBLIOGRAPHY: *Biographie complète des 534 députés...* (1876).

BAMBERGER, EUGEN (1857–1932), German chemist; a pioneer in the field of semi-microtechniques. Bamberger studied at Berlin University and in 1883 became an assistant to Baeyer in Munich, where he was appointed professor in 1891. From 1893 he was professor of general chemistry at the Zurich Polytechnic. From 1905 he was semi-paralyzed but continued his experimental work. Bamberger was meticulous in his work, and he inculcated clean and safe experimental techniques in his assistants. He insisted on following up not only the main product of any reaction under study, but also the minor products. He was an entirely “pure” chemist, his vast output covering most of the contemporary aspects of organic chemistry. His contributions were notable in the field of constitutions of natural products.

[Samuel Aaron Miller]

BAMBERGER, FRITZ (1902–1984), philosophical scholar and author. Born in Frankfurt, Bamberger from 1926 to 1933 was a research fellow of the *Akademie fuer die Wissenschaft des Judentums and until 1938 occupied various teaching posts in Berlin. Emigrating from Germany to the United States, he became professor of philosophy at the College for Jewish Studies, Chicago, from 1939 to 1942, and was on the staff and later editor in chief of *Coronet* magazine from 1942 to 1961. He was a founder of the Society of Jewish Bibliophiles. From 1962 Bamberger was professor of intellectual history and assistant to the president of the Hebrew Union College-Jewish Institute of Religion in New York. His collection of Spinoziana was considered to be the finest private collection of its kind.

Bamberger's main interest in the field of Jewish philosophy centered on Moses *Mendelssohn (*Moses Mendelssohns geistige Gestalt* (1929) and “Moses Mendelssohns Begriff vom Judentum,” in: *Wissenschaft des Judentums im deutschen Sprachbereich*, ed. by K. Wilhelm (1967), 521ff.), and he edited three volumes of the bicentenary edition of Mendelssohn's writings (1929–32; cf. also *Denkmal der Freundschaft* (1929), and *Living Legacy* (1963), 86ff.). Other philosophers to whom he devoted studies were Spinoza (SBB, 5 (1961), 9ff.); Maimonides (*Das System des Maimonides*, 1935); Julius Guttmann (*Philosopher of Judaism*, 1960; also in German in: *Deutsches Judentum, Aufstieg und Krise* (1963), 85–119); and Leo Baeck (*The Man and the Idea*, 1958). Bamberger edited *Die Lehren des Judentums* (3 vols., 1928–30, together with S. Bernfeld); *Juedische Gestalten und ihre Zeit* (1936); *Das Buch Zunz* (1931; cf. also Zunz's *Conception of History* in PAAJR, 1941); and an anthology of ancient Jewish aphorisms (*Books Are the Best Things*, 1962).

BAMBERGER, HEINRICH VON (1822–1888), Austrian physician and teacher. Bamberger was born in Prague and studied medicine there. In 1854 he was appointed special professor of pathology at Wuerzburg University, where he remained until 1872, when he became professor at the University of Vienna. Bamberger became famous for his brilliant lectures and for his diagnostic techniques. He is especially known for his textbook on cardiac diseases and for his diagnoses of symptoms of cardiac diseases. His name was given to Bamberger's disease, Bamberger's bulbar pulse, and Bamberger's sign for pericardial effusion. He advocated the use of albuminous mercuric solution in the therapy of syphilis and reported albuminuria during the latter period of severe anemia. He also described muscular atrophy and hypertrophy. During the last two years of his life Bamberger was president of the Vienna Medical Association.

[Suessmann Muntner]

BAMBERGER, LOUIS (1855–1944), U.S. merchant and philanthropist. Bamberger was born in Baltimore, Maryland. As a boy, he began work in a dry goods store, but while still a young man he moved to New York to engage in wholesale merchandising. In 1892 he and his brother-in-law, Felix Fuld, founded L. Bamberger and Co., a small department store, in Newark, New Jersey. Adopting advanced methods of merchandising and the latest techniques of publicity, Bamberger's grew into one of the largest and most profitable American establishments. In 1929 R.H. Macy of New York took over the Bamberger firm but Louis Bamberger continued to serve as president of the Newark store until 1939. He gave his employees a cooperative interest in the firm, established a pension program for them, and marked his own retirement by distributing cash gifts and annuities to workers who had been employed for a minimum of 15 years. Another of Bamberger's successful enterprises was the Newark radio station WOR, which he built in the 1920s. Bamberger's philanthropies covered a wide range of interests. He gave generously to Newark's hospitals and Community Chest, and to the furtherance of the arts and sciences. The long list of Jewish causes and institutions to which he contributed included the *Jewish Theological Seminary of America. A charter member of the Newark Museum, and later its honorary president, he provided the funds for the new building, opened in 1926, and donated a vast quantity of art, archaeological, scientific, and industrial objects. Bamberger's greatest philanthropic act, which he shared with his sister, Mrs. Felix Fuld, was a gift of \$5,000,000 for the establishment of the Institute for Advanced Study at Princeton. He and his sister also contributed to the Fuld House at Princeton, which provided quarters for the Institute.

[Morton Mayer Berman]

BAMBERGER, LUDWIG (1823–1899), German banker, politician, and economist; leading advocate of a gold standard for German currency. He studied law at Heidelberg and practiced as an attorney in his native city of Mainz. He joined the revolutionary movement of 1848 and edited the republican newspaper *Mainzer Zeitung* which advocated the unification of Germany and democratic government. He took part in the insurrection of 1849, fled to Switzerland, and was condemned to death in absentia. When, in 1866, a general amnesty was declared, Bamberger returned to Germany, and entered politics as a liberal, sitting in the German Reichstag from 1871 to 1893. During the years of his exile in London and in Paris he had entered the family firm of *Bischoffsheim where he acquired considerable knowledge of finance. In 1870 he was a leading founding figure of the Deutsche Bank (together with Adelbert Delbrueck) and became one of Bismarck's principal advisers on financial matters after the Franco-Prussian war of 1870. Later, Bamberger disagreed with Bismarck's policy of protective tariffs which he considered reactionary and in 1884 he and other followers seceded and formed the more liberal Freisinnige Partei. Though in opposition, he continued to exercise great influence on legislation of economic or financial character. He was an enthusiastic advocate of the gold standard and a champion of free trade and founded an association for its promotion. Bamberger was not a practicing Jew but in his memoirs he deplors German antisemitism. Stung by the antisemitic attacks of the German historian, Heinrich von Trietschke, he published a pamphlet "*Deutschtum und Judentum*" which was a vigorous rejoinder. He made numerous contributions to political and economic literature and his articles in the weekly *Die Nation* were published in book form under separate titles: *Wandlungen und Wanderungen in der Sozialpolitik* (1898); *Bismarck Posthumus* (1899). He also published his collected writings in five volumes (1894–98), and his memoirs appeared posthumously (1899).

[Joachim O. Ronall / Marcus Pyka (2nd ed.)]

BAMBERGER, SELIGMANN BAER (*Isaac Dov ha-Levi*; 1807–1878), rabbinical scholar and leader of German Orthodoxy. Born in the Bavarian village of Wiesenbronn, Bamberger studied at the yeshivah of Fuerth and in his native village. Bamberger opposed the proponents of Reform at a meeting of Jewish communities of Lower Franconia in 1834, and at an assembly of notables called by the Bavarian government in 1836 where he represented A. *Bing, the district rabbi of Wuerzburg. In 1840 he was elected to succeed Bing in the face of fierce opposition from the Reformers. Bamberger continued the local yeshivah, founded an elementary school in 1855, and a teachers' training college in 1864.

By the middle of the 19th century, the Frankfurt Jewish community was dominated by the Reform movement. As a

result, the community closed the *mikveh* and refused financial support to the Orthodox community. In response, the Orthodox Jews withdrew from the larger community and formed the *Religiongesellschaft*, appointed Samson Raphael *Hirsch their rabbi, and began a 25-year struggle for official autonomy. In July 1876, the Orthodox community was officially recognized by the State. The Reform-led general Jewish community offered to restore all the support it had previously rescinded, but the group led by Hirsch refused the offer. To help settle the controversy, Orthodox community members turned to Bamberger. Contrary to their expectations, Bamberger ruled that it was unnecessary to secede from the Reform-led community since it was providing for all of the needs of the Orthodox. Throughout the ensuing year, Hirsch and Bamberger engaged in a public, somewhat acrimonious polemic. The central issue of their argument was whether or not the Reform Jews were to be considered heretics. Hirsch said yes, while Bamberger said no. In the end, only a small portion of the entire Orthodox community seceded with Hirsch from the larger Reform-led community. Ironically, Hirsch, who represented the more modern Orthodox perspective, became the forerunner of 20th century ultra-Orthodox communities who try to cut themselves off as much as possible from the surrounding non-Orthodox and secular Jewish community. Despite his religious conservatism, Bamberger's position became the basis for modern Orthodox openness and acceptance of the surrounding non-Orthodox and secular Jewish community.

The "Wuerzburger Rav," as he was called, was one of the last great German-style talmudists, and his literary work was chiefly devoted to subjects of practical *halakhah*; *Melekheth Shamayim* (on the writing of Torah Scrolls etc., 1860²); *Amirah le-Veit Yaakov* (laws of interest to women, originally German in Hebrew characters, 1858); *Moreh la-Zovehim* (handbooks for *shohatim*, 1864²); *Naḥalei Devash* (on the law of *ḥalīzah*, 1867). Bamberger also wrote a commentary on Isaac ibn Ghayyat's halakhic compendium (*Sha'arei Simḥah*, 2 pts., 1861–62) and a treatise on the *Al Tikrei* formula in Talmud and Midrash (*Korei be-Emet*, 2 pts., 1871–78). His responsa appeared posthumously in *Zekher Simḥah* (1925), *Neti'ah shel Simḥah* (1928), and *Yad ha-Levi* (1965), all published by one or another of his descendants. Together with A. Adler and M. Lehmann, Bamberger published a German translation of the Pentateuch (1873, 1913⁷) on behalf of the Orthodox-Israelitische Bibelanstalt to counter L. Philippson's Bible translation, against which he had published a polemical pamphlet (1860).

Descendants

Bamberger became the founder of a widespread rabbinical family. Five of his six sons became rabbis, and his three daughters all married rabbis. His son SIMON SIMḤAH (1832–1897) was rabbi at Fischach and Aschaffenburg (Bavaria). He published *Hinnukh la-Ne'arim* (on the laws of *zizit* and *tefillin*; with Yiddish translation, 1882³); *Pekuddat ha-Levi'im* (Aaron

b. Joseph of Barcelona's commentary on Alfasi, *Berakhot* and *Tàanit*, with notes, 1874); *Avodat ha-Levi'im* (Jonathan b. David of Lunel's commentary on Alfasi, *Hullin*, 1871). SOLOMON (1835–1918) was rabbi at Lengnau, Niederlangenthal, and Sennheim (the latter two in Alsace). His talmudic research dealt mainly with Nathan b. Jehiel's *Arukh* (*Limmud Arukh* on various talmudic tractates, 1868–97; *Hegyon Shelomo*, 1878). MOSES LOEB (1838–1899) was district rabbi at Kissingen, Bavaria. SECKEL ISAAC (1839–1885) was *dayyan* at Frankfurt. NATHAN (1842–1919) succeeded his father as rabbi and seminary principal at Wuerzburg. He published *Likkutei ha-Levi*, on the religious customs of Wuerzburg (1907), and collaborated with his brother Simon Simḥah on *Pekuddat ha-Levi'im*. He also wrote a memoir of his father (1897).

In the third generation: SECKEL (1863–1934), son of Simon Simḥah and district rabbi at Kissingen, wrote a halakhic tract on the immersion of vessels (*Tevilat Kelim*, with German translation, 1887); an edition of the *Midrash Lekah Tov* on the Song of Songs and Ruth (1887); and a translation with commentary of *Avot* (1897, 1935³). MOSES LOEB (II; 1869–1924), also a son of Simon Simḥah, was rabbi at Schoenlanke (Pomerania, now Trzcianka, Poland). He edited J. Ettliger's essays and addresses (1899) and Joseph ibn Naḥmias' commentary on Esther (1891–93), Proverbs (1911), and Jeremiah (1913). He also wrote on book censorship in the duchy of Baden (1902), on the history of the Jews of Wuerzburg (1905), and of Schoenlanke (1912). SELIG (1872–1936), son of Solomon and rabbi of the Hamburg *Klaus*, edited and translated into German a large number of halakhic, aggadic, and liturgical texts. He also edited Maimonides' commentary on tractate *Hallah* (1895). SOLOMON MENAḤEM (1869–1920), son of Seckel Isaac, was rabbi at Bingen, Burgpreppach, and Hanau. He was a cofounder of the *Juedisch-Literarische Gesellschaft. SIMON SIMḤAH (II; 1871–1961), son of Nathan and rabbi at Aschaffenburg (Bavaria), wrote on circumcision (*Beschneidungsakt*, 1913) and the creation (*Die Schoepfungsurkunde*, 1903).

The next generation included SIMON SIMḤAH (III; 1899–1957), son of Seckel Isaac, rabbi at Stuttgart and later in Israel, and his brother MOSES LOEB (III; 1902–1960), rabbi in Mainz and Nottingham and founder-principal of the Jewish Boarding School in Gateshead, England. Erich *Fromm, the social psychologist, and Saul Esh, the historian, were also descendants of S.B. Bamberger, as was the bookseller-publisher Nathan Wolf Bamberger (1888–1948), who in 1934 co-founded in Jerusalem the firm of Bamberger and Wahrmann which specialized in rare Jewish books.

BAMBERGER, SIMON (1846–1926), U.S. mining industrialist, railroad builder, and governor of Utah. Born in Germany, Bamberger immigrated to the United States when he was 14. He worked first in the store of his elder brother, Herman, in Wilmington, Ohio, and later the brothers became clothing manufacturers in St. Louis, Missouri. In pursuit of a debtor, Simon Bamberger found himself at Piedmont, Wyoming, a Union Pacific Railroad work camp. He decided to stay, erected shacks and tents which he rented to workers on the new railroad, and cashed their paychecks at a discount. He then moved on to Ogden, Utah, where he bought an interest in a hotel, and in 1869 settled in Salt Lake City. He was joined there by his brothers and they tended to his business interests, leaving him free to seek his fortune in gold mining. He found it in the lucrative Centennial Eureka Mines. Subsequently he built a railroad to a coalfield in southern Utah, and after a struggle lasting 17 years against competing interests and harassing litigation, the Bamberger Railroad went into operation between Salt Lake City and Ogden, with Simon Bamberger as director and treasurer.

In 1898 Bamberger entered public service as a member of Salt Lake City's Board of Education, where he devoted himself to improving teachers' conditions. From 1903 to 1907 he sat in the State Senate and then was elected governor of Utah (1916–20), the first Democrat and non-Mormon to become governor. During his administration Bamberger sponsored legislation for the control and supervision of public utilities, improved public health services, guaranteed full-year salaries for teachers, the right of workers to voluntary association, benefits for farmers, and other liberal measures.

Bamberger was one of the founders of Utah's first Jewish congregation, Bnai Israel, and was later its president. He supported the Utah colonization fund established by the Jewish Agricultural Society which attempted to settle 140 Jews from New York and Philadelphia in the Clarion Colony. He was also prominent in several Jewish philanthropic and communal institutions.

BAMBUS, WILLY (1863–1904), one of the first German Jews to join *Hibbat Zion. He propagated the organization's ideas in the periodical *Serubabel*, edited by him in Berlin (1887–88). Bambus became a leading member of *Esra, a society founded in 1883 for the advancement of Jewish agricultural settlement in Palestine and Syria. Later, together with Hirsch *Hildesheimer, Emile *Meyerson, and Isaac Turoff, he established the central committee of Hovevei Zion in Paris, with branches in many countries. His intention was to transform the movement into a world organization. Herzl's creation of the Zionist Organization led him to abandon his idea and for a time he became a political Zionist. However, disagreeing

with Herzl's rejection of the so-called "infiltration", i.e., small-scale settlement in Palestine without prior international agreement, he became strongly opposed to political Zionism. He expressed this primarily in the periodical *Zion* which he edited from 1895. In 1901 he was instrumental in the creation of the *Hilfsverein der deutschen Juden of which he became the first general secretary. After the Kishinev pogrom (1903) he worked in the defense organization against antisemitism (Komitee zur Abwehr Anti-semitischer Angriffe) in Berlin, and endeavored, unsuccessfully, to establish a bank for Jewish emigrants. His works included *Palaestina, Land und Leute* (1898), articles for *Die Welt* and the *Allgemeine Zeitung des Judentums*, as well as several works on Jewish settlement in Erez Israel.

[Oskar K. Rabinowicz / Marcus Pyka (2nd ed.)]

BA-MEH MADLIKIN (Heb. בְּמֵה מַדְלִיקִין; "with what may one kindle?"), opening words of the second chapter of the Mishnah tractate *Shabbat* which deals with the oils and wicks proper to be used for the Sabbath lights, and with what must be done on Fridays before the commencement of the Sabbath. This chapter, which consists of seven paragraphs, is recited, according to traditional practice, during the Friday evening service either before the start of the *Arvit* prayer (Sephardi and Ashkenazi ritual in Erez Israel) or at the end of it (Ashkenazi ritual). Some ḥasidic rites do not recite it at all. The reading of the chapter of the Mishnah was instituted in the geonic period as a reminder of the duty of kindling the Sabbath lights, as a precaution against any unintentional desecration of the Sabbath caused by adjusting the lamp, and as a safeguard for latecomers to the synagogue (the recital of this chapter by the congregation made it possible for latecomers to finish their prayers with the other congregants and to leave for home together without fear of injury in the dark). *Ba-Meh Madlikin* is not recited on a Sabbath falling on or immediately following a holiday because latecomers to the service would be few.

BANAI, family of Israeli actors and pop-rock singer-songwriters. For over half a century the Banais provided the country with leading theater and film actors, directors and pop and rock stars.

Foremost among the clan was YOSHI BANAI (1932–2006), one of Israel's leading actors and comedians, who also released a number of big-selling albums based on the French *chanson* singing style, and published several books. Banai followed in the footsteps of his older actor brother Ya'akov, joining the Nahal entertainment troupe at the start of his military service in 1951. On his return to civilian life Banai enrolled at

the *Habimah acting school and took part in numerous stage productions.

Banai always had a penchant for the comic side of his profession and in the 1960s joined forces with Rivka Michaeli in a program of humorous sketches and songs called *Yaldut Kashah* (“Difficult Childhood”). The songs from the show were later released on record. In 1968 Banai collaborated with Eli Gurelitzki in a comic-musical production, directed by Nissim *Aloni, called *Hakhamim ba-Layla* (“Smart Alecks”) for which he wrote some of the sketches and two songs. A record of songs from this show, too, was subsequently released.

During the 1960s Banai spent some time in Paris and was later among the leading performers of French music, which was popular in Israel during the 1950s and 1960s. Banai performed translated versions of French hits in several of his productions, including *Tel Aviv ka-Ketanah* (“Little Tel Aviv”) and *Yossiakhzakyuna*, and in 1969 he presented an entire show based on the music of popular French crooner Georges Brassens. In the early 1970s Banai released records that included the works of Belgian-born singer Jacques Brel and French singers Barbara and Georges Moustaki. Around this time he also put out several albums of original Hebrew compositions.

In 1973 Banai, Michaeli, and Aloni reunited for the comic production *Nissuin Nussakh Gerushin* (“Divorce-Style Marriage”) which spawned two successful albums. It was around this time that Banai joined forces with one of Israel’s top songstresses, Naomi *Shemer, with Banai providing the lyrics for Shemer’s music to “Sefirat Mellai” (“Stock Taking”).

In 1979 Banai created his most successful one-man show, *Ani ve-Shimon u-Moise ha-Kattan* (“Me, Shimon and Little Moise”), based on Banai’s childhood in Jerusalem. The show closed with Naomi Shemer’s composition *Al Kol Elleh* (“For All These”) which quickly took on anthemic popularity. Throughout the 1980s Banai continued making popular albums, including teaming up with leading pop-rock figures such as Matti *Caspi and Yoni Rechter. In 1990 he recorded a song entitled “*Eyfo Ani ve-Eyfo Hem*” (“Where Am I and Where Are They”), written by his rock star son Yuval. Throughout this period Banai continued to be active in serious theater, participating in the Cameri Theater’s *Gam Hu be-Azilim* (1989), *Mareh me-al ha-Gesher* (1990) for the Habimah Theater, and the 1999 production of *Melekhet Hayyim* for the Beit Lessin theater.

In 2000 Banai was awarded the Israel Prize in recognition of his contribution to the entertainment industry.

Other entertainers in the Banai clan include Yossi’s younger brother GAVRI, who was a member of the country’s leading comic team, *Ha-Gashash ha-Hiver, from its establishment in 1963.

Yossi’s son, YUVAL (1962–), was a founder-member of rock band Mashina in 1984, following a stint as the soloist of short-lived rock band Shelom ha-Zibbur. Mashina soon found success and became the country’s top rock act for much of its

lifetime up to 1995. Yuval and Mashina were heavily influenced by British punk rock and American funk and started out performing cover versions of punk, funk, and blues numbers in small venues in and around Tel Aviv. There was also something revolutionary and anti-establishment about the band. The debut album, *Mashina 1*, included several hits, such as “*Rakvet Layla le-Kahir*” (“Night Train to Cairo”), with lyrics written by Yuval’s cousin Ehud, and “*Ha-Tottakh Mezalzel Pa’amayim*” (“The Cannon Rings Twice”), the latter about a soldier who can’t get the sounds of artillery out of his head after returning from battle. Mashina’s material often touched on political and social issues, and its music had mass appeal as the band continued to fill the country’s largest venues and its albums sold consistently well. The group disbanded in 1995, after a sell-out tour, reuniting in 2003. In the interim, Yuval released three solo albums and toured with Mashina members Iggi Dayan and Shlomi Brakha.

Yuval’s cousin EHUD BANAI (1953–), the son of Yossi’s brother Ya’akov, took cello lessons from the age of 10 and was inspired by the hits of Elvis Presley, Cliff Richard, and The Beatles. He began developing his guitar-playing skills as an IDF soldier and honed his craft entertaining on the streets of London after his release from the army. After his return home he started writing songs and worked as a stagehand for his uncle Gavri’s Ha-Gashash ha-Hiver comedy team. Over the next few years Ehud wrote a number of hit songs and in 1982 tried, unsuccessfully, to start his own band together with vocalist Avi Mattos. At this time, his on-stage efforts received a welcome boost when he was hired to play guitar and provide backup vocals for his uncle Yossi’s production *Kemo Zipporim* (“Like Birds”) which was based on gypsy music. Ehud’s first breakthrough came in 1985 when he recorded the hit single “*Ir Miklat*” (“City of Refuge”) and the following year he established his Plittim (Refugees) band. Two years later, at the age of 34, Ehud finally got a recording contract and released his first album, *Ehud Banai ve ha-Plittim*, which was a smash hit. Ehud Banai became one of Israel’s most popular rock artists, including a generous amount of ethnic material in his records and performances. He had put out seven albums by 2005, the last, the eagerly awaited *Anneh Lee*, being his first in six years and selling well.

Other successful members of the Banai “dynasty” include rock guitarist-vocalist MEIR (1961–); his younger brother, rock, dance, electronic music pianist-vocalist EYATAR (1973–); and actress-comedienne ORNA (1969–).

[Barry Davis (2nd ed.)]

BANAT, region in the southwestern part of Romania which for many years was regarded as belonging administratively to Transylvania, though it also benefited from an independent administration in the framework of the medieval Transylvanian principality. It was inhabited for many centuries by Romanians, Hungarians, Germans (Swabians), Serbs, and Jews. The languages spoken there were German and Hungarian as the official languages and other vernacular languages.

The region is still considered to be a classical multicultural one.

The Jewish population of the region belonged to two principal Jewish groups, the Ashkenazim and the Sephardim, who coexisted under satisfactory conditions. However, the *Hapsburg authorities saw in the Jews of the region a certain danger because of the privileged relations they had with the Turks in the Ottoman Empire, who were contending for the region.

After 1867 there was a degree of competition between the Austrians and the Hungarians in the two-headed empire over who would better succeed in assimilating their Jews, a situation which had consequences for the Jews of Banat as the competing parties tried to Germanize and Hungarize them, respectively. After 1919, with the dismemberment of the Austro-Hungarian Empire, Banat became part of Greater Romania, which posed a language problem as most Jews did not speak the language. After the unification of Banat (as part of historical Transylvania) with Romania the region lost many of its multicultural specificities and a certain diversification set in. With the majority of Germans and Jews leaving the region under the Communist regime of Ceausescu, it underwent the most significant changes in its multinational history.

[Paul Schweiger (2nd ed.)]

BAND, ARNOLD (1930–), U.S. modern Hebrew literature scholar. Educated at Harvard University (where he trained as a classicist, writing a dissertation on Aristophanes) and Boston's Hebrew College, Band was the founding director of the Center for Jewish Studies at the University of California in Los Angeles and the founder of the Comparative Literature Department there. He also taught at Harvard College, Boston Hebrew College, Brandeis University, the Hebrew University, Tel Aviv University, Yale University, and the Jewish Theological Seminary of America. In the 41 years he spent teaching at UCLA, Band had a major impact on the historical and critical study of Hebrew literature, through his teaching, publishing, and training of graduate students, some of whom are now leading scholars in their own right. Band stressed historical contextualization in all his work; he was keenly aware of the need to place modern Jewish creativity in its broader contemporary context, as well as in its relation to earlier Jewish creative expression. Further, he insisted that 19th- and early 20th-century Hebrew literature is best appreciated when studied in tandem with literature written in Yiddish, the two literatures being seen as one cultural continuum. In more recent years he turned his attention to Kafka. Band's books, published in both Hebrew and English include *Ha-Re'i Bo'er ba-Esh* (a collection of Hebrew poetry), *Nostalgia and Nightmare: The Fiction of S.J. Agnon* (1968) and the *The Tales of Nahman of Bratlav* (1978). Band also published more than 125 articles in Hebrew and English on a range of topics in modern Jewish literature and Jewish cultural life. He was the recipient of many major awards, including a Guggenheim Fellowship, the UCLA Distinguished Teaching Award, and the National Endowment for

the Humanities Award, and the National Foundation for Jewish Culture's award for lifetime achievement in social, literary and cultural studies.

[Jay Harris (2nd ed.)]

BANET (Baneth, Benet, Panet, Benedict, Binet, Bineter), family of Moravian rabbis and scholars. Its first known member, MORDECAI BEN YOM TOV, approved a *maḥzor* following the Polish ritual in Nikolsburg (Mikulov) in 1716. ABER (Aberl; d. 1758), possibly Mordecai's son, was *dayyan* in Nikolsburg. A responsum (*Noda bi-Yhudah, Mahadurah Tinyana* HM no. 12) was addressed by Ezekiel *Landau to JOHANAN BANET, a *dayyan* in Alt-Ofen (Budapest). Johanan's son JACOB (d. 1812) was *dayyan* in Alt-Ofen. One of Jacob's four sons was Ezekiel b. Jacob *Baneth. FRADL, a daughter of Aber, married Abraham Bia of Csurgo (Hungary). Their son Mordecai *Banet, who took his mother's family name, became head of the Nikolsburg branch of the family. In the 19th and 20th centuries members of the family distinguished themselves in various fields of modern Jewish scholarship.

[Heinrich Haim Brody]

BANET (Benet), MORDECAI BEN ABRAHAM (1753–1829), Moravian rabbi, one of the leading talmudists of his time. Banet was born in Csurgo, Hungary. He studied at the yeshivah of Fuerth under Joseph Steinhardt, author of the responsa *Zikhron Yosef*. In 1784 he was appointed *dayyan* in Nikolsburg, Moravia. In 1787 and 1788 he served as rabbi of Lundenburg, Moravia, and subsequently of Sasvar, Hungary, and from 1789 as rabbi and head of the yeshivah of Nikolsburg, and district rabbi of Moravia. Banet's yeshivah attracted students from near and far, and during the 40 years that he headed it several thousands of students passed through. Banet fought vigorously against the Reform movement, particularly against Aaron *Chorin, and vehemently opposed the founding of the Reform Temple in Hamburg. At the same time he displayed a certain understanding of the spiritual needs of his contemporaries. At the request of the government, he prepared two courses of study for students for the rabbinate which included secular studies. His proposals were published in the *Toledot Mordekhai Banet* (1832) of his son Jacob Abraham. Under Banet's influence, his son Naphtali *Banet compiled a handbook (in Hebrew and German) on the fundamentals of the Jewish religion. Because of his great influence on his community, his talented leadership, and the support of the government, Banet succeeded in postponing the disintegration of Moravian Jewry for at least one generation later than that of the breakup of Bohemian Jewry. He was one of the chief opponents of Saul *Berlin in the controversy over his work *Besamim Rosh* (Berlin, 1793).

Of Banet's works, only *Be'ur Mordekhai* (2 vols. Vienna, 1805–13), novellae to the *Mordekhai* of Mordecai b. Hillel, was published during his lifetime. After his death the following were published: *Magen Avot* (Zolkiew, 1835; 1903²; with notes

by Shalom Mordecai ha-Kohen), on the main categories of work forbidden on the Sabbath; *Har ha-Mor* (Prague, 1861), responsa, published together with the *Hokhmat Shelomo* of Solomon Kwetsch, his pupil; *Parashat Mordekhai* (1889), responsa on the Shulhan Arukh, together with notes by the publisher, Abraham Isaac Glueck; *Tekhelet Mordekhai* (1892), aggadic homilies and talmudic novellae, also containing a biography of the author; *Maḥashevet Mordekhai* (1902), aggadic novellae to the Pentateuch; *Sefer Maharam Banet* (also called *Divrei Mordekhai*; 1906), novellae on aspects of the dietary laws with notes by the publisher Abraham Jungreis.

[Moshe Nahum Zobel]

BANET (Benet), NAPHTALI BEN MORDECAI (1789–1857), Moravian rabbi and author, third son of Mordecai *Banet. Banet officiated as rabbi and principal of the yeshivah in Safov (Schaffa, Moravia) from 1836 to 1857. He enjoined a fast and a penitential prayer to be recited on the 24th of Sivan in memory of the great conflagration of 1822 which almost destroyed the entire Jewish quarter of Schaffa; the custom was adhered to by the community until the Holocaust. Banet's writings include *Berit Melaḥ* on *meliḥah* (salting) laws (Prague, 1816); *Emunat Yisrael*, a catechism of the fundamentals of Judaism for Jewish youth, in Hebrew and German (*ibid.*, 1832); *Torat Dat Moshe ve-Yisrael*, on the principles of Judaism, in Hebrew and German (*ibid.*, 1826). The latter were intended to serve as a substitute for Herz Homberg's catechism *Benei Ziyyon* and expressed a conservative point of view.

[Moshe Nahum Zobel]

BANETH, family of scholars. **EDUARD EZEKIEL BANETH** (1855–1930), talmudic scholar, was a descendant of the well-known *Banet family of rabbis and scholars. He was born in Liptó-Szent-Miklós (Slovakia). From 1882 to 1895 he served as rabbi at Krotoszyn (near Poznan) and then as lecturer of Talmud at the Lehranstalt fuer die Wissenschaft des Judentums in Berlin. In 1919 the Prussian Ministry of Education awarded him the title of professor. Baneth's work was devoted mainly to talmudic and rabbinic literature, the development of *halakhah*, and the Jewish calendar. Among his published works are *Ursprung der Sadokaeer und Boethosaeer* (1882); *Maimunis Neumondberechnung* (4 vols., 1898–1903); *Der Sederabend* (1904); *Avot mit Maimunis arabischem Kommentar* (1905); *Maimonides als Chronologe und Astronom* (1914); *Soziale Motive in der rabbinischen Rechtspflege* (1922); *Bilder talmudischer Ethik* (1926); and *Der juedische und buergerliche*

Kalender (1928). Baneth also contributed to the Samter-Hoffmann German translation and commentary of the Mishnah (order of *Mo'ed*, 1927²).

His son **DAVID HARTWIG** (ZVI; 1893–1973) was an Arabist. Born in Krotoszyn, from 1920 to 1924 he was an assistant at the Akademie fuer die Wissenschaft des Judentums. He then went to Palestine where he was a lecturer at the Hebrew University on Arabic philosophy, language, and literature. From 1946 he was professor of Arabic language and literature. In his earlier years David made important contributions to ancient Aramaic and Canaanite studies, but his life's work consisted in the study of Jewish thought as expressed in Arabic, Arabic as used by Jews, and medieval Hebrew. He wrote on the enigmatic Jewish rationalist *Ibn Kammuna (MGWJ, vol. 69, 1925), on the relationship between *Judah Halevi and the Muslim theologian *Ghazali (*Korrespondenzblatt*, vol. 5, 1929; see also *Keneset*, vol. 7, 1942), and on the use made by both Ghazali and the Jewish pietist Bahya ibn Paquda of a passage in a book by a Christian author (*Magnes Jubilee Volume*, 1938).

Baneth was at his best in the editing and criticism of texts, such as his edition of Maimonides' letters (*Iggerot ha-Rambam*, 1946), his revisions of Maimonides' *Terminology of Logic* (edited by L. Roth, 1935) and of the *Book of Beatitude*, ascribed to Maimonides (prepared for publication by H.S. Davidowitz, 1939), as well as his discussion of the Hebrew translations of Maimonides' treatise on resurrection (*Tarbiz*, vol. 11, 1939/40, and vol. 13, 1941/42) and of Maimonides' Hebrew usage (*Tarbiz*, vol. 6, 1934/35 and vol. 23, 1951/52). He published many detailed reviews of Judeo-Arabic works in *Kirjath Sepher*. Of particular importance are Baneth's studies of the language and contents of the Cairo *Genizah* documents (cf. S. Shaked, *A Tentative Bibliography of Geniza Documents* (1964), 268–9). Most of the Arabic *Genizah* texts published by S. *Assaf were prepared for publication and translated into Hebrew by Baneth. By emphasizing that most deviations from classical Arabic grammar in the *Genizah* documents were not "mistakes," but represented the living language of the period, Baneth pointed the way for a sound approach to the understanding of those medieval writings.

[Moshe David Herr / Shelomo Dov Goitein / Samuel Miklos Stern]

BANETH (Benet, Paneth), EZEKIEL BEN JACOB (1773–1854), rabbi, born in Alt-Ofen (Budapest), Hungary. In 1810 Ezekiel was appointed rabbi of Szecseny. He became rabbi of *Paks in 1825 and subsequently of *Balassagyarmat, and from 1847 officiated at Nyitra. He corresponded on halakhic matters with Moses Sofer, Judah Aszód, and other rabbis. His yeshivah was attended by pupils from various parts of the country. One of his most talented students was his youngest son Jerachmeel Bernhard (1815–1871), rabbi of Liptoszentmiklos (Liptovsky Svaty Mikulas). Ezekiel was also an eloquent preacher. Recognized by his contemporaries as a halakhic authority, he left no written work, having destroyed his com-

mentary on the Tosefta before his death. His grandson was Eduard Ezekiel *Baneth.

[Jeno Zsoldos]

BANIAS, ruined city at the foot of Mount Hermon on the Hermon Brook, one of the sources of the River Jordan. The brook drains an area of about 60 sq. mi. (150 sq. km.), running swiftly for 2 miles (3.5 km.) and then dropping 600 ft. (190 m.). After another 5.5 miles (9 km.) it joins the Dan River and runs into the Jordan. The brook contains water all year round, with an annual total of 125 million cu. m. The city was called by the Jews *Dan or Mivzar Dan (“the Fort of Dan”; a suggested identification with the biblical Beth-Rehob is uncertain). It stood over a cliff with a grotto dedicated to the Greek god Pan and the nymphs, and hence was named Paneas (Baniyas being an Arabic corruption). In 198 B.C.E., Antiochus III conquered Palestine from the Ptolemies by his victory near this place. Later the city belonged to the Itureans, from whom it was transferred by Augustus to Herod who named it Caesarea in honor of Augustus and to whom he erected a temple there. Philip the Tetrarch (*Herod Philip), Herod’s son, developed the city, resided there, and struck coins with images of its buildings. It was generally known as Caesarea Philippi (“of Philip”) to distinguish it from the better-known Caesarea-by-the-Sea. As such it is mentioned in the New Testament (Matt. 16:13; Mark 8:27) in connection with Jesus’ visit to the area. In 61 C.E. *Agrippa II renamed it Neronias in honor of the emperor Nero, but it kept this name only until 68. In 70 *Titus held games there to celebrate his victory and many Jewish captives were put to death. In the Talmud, Caesarea is called Keissariyyon or Little Caesarea; the Mishnah also mentions the cave of Pamiyas referring to the same place. Caesarea’s territory extended as far as Hadar and the Phiale Lake; the Huleh Valley also belonged to it. A statue of Hadrian which stood there was regarded by the early Christians as representing Jesus healing a woman. The Talmud refers to the emperor Diocletian’s oppression of the people of Paneas (Lieberman, in *JQR*, 36 (1946), 350ff.; *TJ*, Shev. 9:2, 38d). In Roman-Byzantine times Caesarea belonged to Phoenicia; its bishops took part in church councils from 325 to 451. In Crusader times it was called Belinas and a powerful castle (Qal’at al-Subayba) was erected above it.

Baniyas and its rich archaeological remains were frequently visited by European and American explorers during the 19th century, who noted especially the rock escarpment to the north of the site with its caves, carved niches, and inscriptions. Small-scale Israeli excavations were conducted at the site in the 1970s and 1980s, with a very large ongoing archaeological project there since the 1990s, concentrating in two areas: the work directed by Z. Maoz in the area of the spring-cave and adjacent temples, and the other directed by V. Tzaferis in the central civic area of the site to the south of the springs. The Roman-period cultic compound next to the main spring

comprised at least two temples, dedicated to the gods Pan and Zeus, with adjacent halls and installations. Among the finds was a good representation of Roman statuary. In other parts of the city, fragments of buildings from the Hellenistic period through medieval times were discovered. An important discovery close to the civic center was that of a large palace complex comprising underground vaulted chambers, halls, and courts and dating from the first century C.E. This palace was apparently built by one of Herod the Great’s successors, i.e., Philip or Agrippa II. In addition to these finds, the expedition also brought to light remains of a bath house, a columned street from the Byzantine period, and a synagogue dating from the 11th century C.E.

[Michael Avi-Yonah / Gideon Biger and Shimon Gibson (2nd ed.)]

Since Baniyas was situated on the main road from Palestine to Damascus it served in the Middle Ages as an administrative center to a district with the same name. During the 11th century there was a relatively large Jewish community, whose members were called the Baniyasites. They were frequently mentioned in *genizah* documents. A document of 1056 shows that the Baniyas community was well organized and had a *bet din*.

Since Babylonian Jews had settled in Baniyas, the community was split into two sections, the Palestinians and the Babylonians, who differed in their versions of prayers. These two sections existed to the beginning of the 12th century. A Karaite pseudo-messiah is reported in 1102. *Benjamin of Tudela mentions no community in Baniyas in 1170 and it is possible that it ceased to exist during the Crusades. Later, Baniyas was reinhabited by Jews. Even during the early Ottoman period, Jews still lived at Baniyas, as attested by a document from 1624 which mentions the murder of a Jewish physician, by the name of Elijah ha-Kohen of Baniyas, by an Arab sheik (Ben Zvi, in *Tarbiz*, 3 (1932), 442). From 1948 to 1967 Baniyas served the Syrians as a base for attacks on *Dan. In June 1967 it was occupied by the Israel Defense Forces. Later the area was declared a nature reserve, under the supervision of the Nature Reserves Authority. The reserve includes the river and its natural surroundings as well as the archaeological relics scattered around the river route.

BANISHMENT, a form of punishment widely imposed throughout the ancient world. India, the Greek cities, the Roman republic, and the Teutonic peoples all used this practice to rid themselves of undesirables, ranging from criminals

to political agitators who threatened the safety of the state and the authority of its rulers. Bereft of his property and prohibited from ever returning home, the victim was reduced to the level of an outcast, a permanent stranger or wanderer in foreign lands. The custom seems to have been known in Canaan, as attested by the *Ugarit texts (*Aqhat*, 1:152–5; T.H. Gaster, *Thespis* (1961), 365–6; cf. 366n.). In ancient Israel, too, banishment was not unknown, although it appears almost exclusively as a form of divine punishment. Thus Adam was expelled from the Garden of Eden (Gen. 3:23–24) and Cain was doomed to be a wanderer, hidden from the presence of God (4:14–16). Two notable cases in the Bible are the banishment by Solomon of Abiathar the high priest to his family estate in Anathoth (1 Kings 2:26; cf. Jer. 1:1) and the banishment of Amos from the Northern Kingdom of Amaziah the priest (Amos 7:12). Collective banishment, or exile, was considered the ultimate punishment that could be meted out to the entire people for acts of defiance against God (cf. Deut. 28:64 ff.), which were variously interpreted in different times (see *Galut). *Karet was an extreme form of this divine punishment, involving the actual “cutting off” of the individual from life on earth (Lev. 20:2–6; cf. Zimmerli in bibl.). The only form of banishment still in existence in biblical society was that imposed on a man guilty of manslaughter or involuntary homicide, for whom *Cities of Refuge were provided (cf. Num. 35:10 ff.; Deut. 4:41–43; 19:1 ff.; Josh. 20). It has been conjectured that banishment was not otherwise sanctioned as a punishment because residence abroad was viewed as something that cut the victim off entirely from God (Hos. 9:3–5; cf. Gen. 4:14; Ezek. 11:15) and even forced him to worship idols (Deut. 4:27–28; 1 Sam. 26:19; Jer. 16:13). For this reason too, exile was dreaded (cf. Deut. 28:65; Ezek. 37:11) and deemed to have horrendous consequences. In later centuries, milder forms of banishment from the religious community were resorted to by means of excommunication, though, contrary to the view of some scholars, there does not seem to be any definite evidence of this practice in the Bible (cf. Greenberg in bibl.).

[David L. Lieber]

Second Temple and Talmud Periods

Banishment was resorted to by the Romans as part of their repressive policies. Thus *Archelaus the son of Herod I was banished by the Romans to Vienne in Gaul and probably remained there until he died. It is possibly to these administrative acts that *Avtalyon refers in his statement, “Ye sages, be heedful of your words lest ye incur the penalty of banishment [*galut*] and be banished to a place of evil waters” (Avot 1:11). Nevertheless the Pharisees seem also to have exercised this power. Josephus (Wars, 1:111) states that when they were in power they banished and brought back whomsoever they chose. The gravity of the punishment was not only that the victims would be exiled “to a place of evil waters and the disciples who come after you will drink thereof and die” (see above) but that they were also banished from the Divine Presence. On the verse, “For they have driven me out this day that

I should not cleave to the inheritance of the Lord” (1 Sam. 26:19), the Talmud comments that “he who lives outside the Land of Israel is regarded as worshiping idols” (Ket. 110b), and this sentiment is reflected in the words of the *Musaf* prayer for festivals: “But on account of our sins we were banished from our land and removed far from our country, and we are unable to appear and prostrate ourselves before Thee and to fulfill our obligations.”

[Louis Isaac Rabinowitz]

Middle Ages to 18th century

In the Middle Ages banishment continued to be one of the punishments imposed on offenders in communities having a measure of criminal jurisdiction over their members (see Judicial *Autonomy) or able to withhold or withdraw domiciliary rights (*hezkat ha-yishuv*). Hence it was imposed most frequently in Spain and Poland and Lithuania, although also occasionally elsewhere. A distinction was drawn between banishment of the offender from the city and from the realm, as also banishment for a limited period and for life. The Spanish kingdoms, especially at the height of Jewish autonomy in the 13th century, recognized the right of the communal organizations to banish recalcitrants or exclude new members. James I of Aragon (1213–76) gave the communities the right to punish offenders by fine, ban, flagellation, or expulsion. Privileges accorded to the Barcelona community in 1241 and 1272 empowered the communal elders “to eject or expel [recalcitrant members] from the Jewish quarter or the entire city.” A similar ordinance for Calatayud Jewry empowered the community in 1229 to expel two individuals of bad repute. In the 1280s the *kahal* of Alagon banished six butchers from the city for four years and excommunicated all members who ate meat purchased from them. James II of Aragon, on a complaint from the Valencia community in 1294, instructed the local prefect and judge to prevent influential Christians from concealing offenders condemned by the community to deportation. In 1280 Pedro III of Aragon, in a basic privilege granted to all Catalonian communities, empowered their elders to punish with incarceration and exile all crimes of assault and battery, libel, and the like, in accordance with Jewish law and their own judgment. The same privilege, granted by John I of Aragon to the Huesca community in 1390, provided that the elders could summarily sentence offenders to death, mutilation, flogging, or exile, without appeal. Offenses for which banishment was imposed included murder for which there was only one witness (Solomon b. Jehiel Luria, *Yam shel Shelomo le-Bava Kamma*, 8, no. 7), or for which no witness was available but where hearsay was convincing (Resp. Judah b. Asher, no. 58), and attack on a victim who dies after a lapse of a certain time (Resp. sent to Salamanca by Isaac b. Sheshet, no. 251). In Spain in particular banishment was meted out to delators and informers (communal statutes of the delegates of Castile, 1432). R. Menahem of Merseburg (early 14th century) banished a man for two or three years for viciously beating his wife (*Nimmukei Maharar Menahem me-Resburk* at the end of Resp. Jacob Weill, Venice,

1549). Prostitution and adultery were punished by life banishment by *takkanot* of Prague of 1612. There is even a report of a man who was excommunicated and “run out” of Erez Israel by the Safed rabbis in 1548 for indulging in unnatural practices with his wife (Eleazar Azikri, *Sefer Haredim* (1601), part 3, ch. 2). Forfeiture of domiciliary rights throughout Lithuania was applied by the Council of Lithuania to thieves, receivers, and forgers, and could be broadened also to any persons engaged in suspicious or prohibited dealings, infringing ethics, or disturbing the peace of the community. Since the whole community was liable to make good a claim by a gentile for money he had lent to a defaulting Jewish debtor, in Lithuania the Jew wishing to borrow from a gentile had first to obtain permission from the *av bet din*. A borrower who failed to do so could be banished, and his right of domicile forfeited (*Pinkas ha-Va'ad*, paras. 163 and 637). The Lithuanian Council also withdrew the right of domicile from and imposed banishment on a person provoking a gentile by quarrels or blows (*idem*, para. 21). Its regulations of 1623, when itinerant beggary and unlicensed behavior was widespread, lay down expulsion for a beggar, if necessary with the assistance of gentile officers. In 1628 the Lithuanian Council withheld the right of domicile from any Jew absent ten years from his community of origin who had failed to pay his fiscal contribution. Banishment was frequently applied in the Sephardi community of *Hamburg, its governing body (**mahamad*) being empowered by the Hamburg senate to expel from the community any of its members infringing morals or engaged in dishonest business dealings, among other offenses. The offender thus sentenced was served with a writ from the beadle (*shamash*). If he proved unable to travel for lack of funds, the *mahamad* lent his relatives money to defray the expenses of the journey. Sometimes the offender was sent abroad, mainly to Amsterdam, and if his conduct subsequently improved was permitted to return. This punishment was also meted out to juvenile offenders.

BANJA LUKA (Banya Luka), city in northern Bosnia. The earliest reference to a Jewish community dates from 1713, when Jewish merchants of Banja Luka appealed to the French government to appoint one of them French mercantile consul in the town. The community had both a Sephardi and an Ashkenazi synagogue and numbered 226 persons in 1875, 336 in 1895, and 457 in 1927. A joint community center was built in 1936. It was damaged by Allied bombing in 1944. Each congregation had its own rabbi: Menachem Romano for the Sephardim, Pinchas Keller and Mavro Frankfurter for the Ashkenazim. There was some Zionist activity under the leadership of Judah Levy and Hans Bramer. Both synagogues were destroyed during the Holocaust, when most of the local Jews perished.

From the 1990s Banja Luka was the seat of the Republika Srpska (Serbian Republic) as part of the Federation of Bosnia-Herzegovina. A small Jewish community was reestablished.

BANKING AND BANKERS

Antiquity

There is little likelihood that financial transactions played a prominent role in the pre-Exilic epoch in Erez Israel; according to the ethos of Jewish society, then founded on a pronounced agrarian structure, lending was part of the assistance a man owed to his neighbor or brother in need (cf. Deut. 23:21). During the Babylonian era Jews had greater opportunities to come into contact with a highly developed banking tradition and to participate in credit operations. After the Exile, commerce and credit certainly had a place in Erez Israel. Though the society remained predominantly agrarian, Jerusalem had a number of wealthy families, including tax agents and landowners, who speculated and deposited their gains in the Temple, which had in some ways the function of a national bank (see *Heliodorus). Organized banking probably arose in connection with *Ma'aserot* (“tithes”), in particular *Ma'aser sheni*, and the pilgrimages to Jerusalem, through the activities of the *money changers. The use of Greek terms indicates a strong Hellenistic influence on the establishment of banking. Meanwhile, the Jewish communities forming in the Diaspora, the most important at first being that of *Babylonia, were given an impulse toward a new way of life by the long-standing traditions of a capitalist type of economy existing around them (see Nippur and *Murashu's sons). In Babylonia, Jews engaged in financial transactions: some were farmers of taxes and customs, and the wealthiest of them were landowners; among the latter were *Huna, the head of the academy of Sura, and Rav *Ashi. However, talmudic references show that the standards of an agrarian economy were still dominant and therefore gamblers and usurers were not thought trustworthy witnesses (see e.g., Sanh. 3:3).

Another important Jewish colony was to be found at *Alexandria, center of the trade between the Mediterranean and the Arabian and Indian world, where Jews were engaged not only in commerce and international trade but in moneylending too. According to *Josephus, a Jewish tax agent was able to make a loan of 3,000 talents. The *alabarch Alexander Lysimachus, who loaned King *Agrippa I 200,000 drachmas (Jos., Ant., 18:159–160), was also the steward of Antonia, mother of Emperor Claudius. Another Alexandrian Jew was treasurer to Candace, queen of Ethiopia.

Middle Ages

THE CALIPHATE. With the rapid development of city life and commerce in the caliphate of Baghdad from the late eighth century and the transition of the majority of Jews under ca-

liphate rule from agriculture and a village environment to the cities, banking became one of the occupations of some upper-class Jews, especially in Baghdad and later under the Fatimids (from 968) in Egypt. This *Jahbadhiyya*, as it was called, was a form of banking based on the savings and economic activities of the whole Jewish merchant class and not only on the fortunes of the very rich: the bankers loaned to the state and its officers money deposited with them as well as from their own fortunes. The vast sums at the disposal of these Jewish bankers and their relative immunity from confiscation by the autocratic authorities both tend to confirm that these Jewish “court bankers” from the beginning of the tenth century onward were well-known to their Muslim debtors as a kind of “deposit banker” for Jewish merchants. Under the Fatimid caliph al-Mustansir the brothers *Abu Sa’d al-Tustari and Abu Naṣr Ḥesed b. Sahl al-Tustari (both died in 1048) were influential in the finances of Egypt. With the rise of *Saladin and the foundation of the Ayyubid dynasty in Egypt (1169), the position of the Jews deteriorated but they were able to continue their moneychanging activities at least. Toward the end of the Mamluk period (1517), Samuel, a moneychanger in Cairo, must have possessed considerable wealth, for the Arab chronicler Ibn Iyās tells that the sultan extorted from him more than 500,000 dinars. During the Muslim rule on the Iberian peninsula, Córdoba Jews were active in the financial administration in the tenth and eleventh centuries. The responsa of this period show a highly developed money economy existing before the First and Second Crusades.

EARLY MERCHANTS IN EUROPE. Persecution, such as occurred in Alexandria in 414 or the oppressive measures promulgated in the Byzantine Empire beginning with *Constantine and intensified under *Justinian, may have contributed to the fact that from the fifth century Jewish merchants followed their Greek and Syrian counterparts to Gaul and not only traded in luxury goods but also loaned money. With the disappearance of the Syrians and Greeks from Europe in the seventh century, the Jewish merchants were able to expand. Within the administration of the Merovingian kings (from 481) Jews possibly farmed taxes or advanced money on revenues to high officials; according to Gregory of Tours (c. 538–94), the count of Tours and his vicar were indebted to the Jew Armentarius. During the Carolingian period (from the mid-eighth century), Jews settled in the Rhineland again as they had done during the Roman Empire – some of them lending money on pledges or giving money to merchants in a kind of commenda partnership. Archbishop Anno of Cologne (d. 1075), as well as Emperor Henry IV (1056–1106), borrowed money from Jews.

THE MONEYLENDERS IN EUROPE. After the First Crusade (1096) the Jewish merchant, in his necessarily long journeys, no longer enjoyed even minimal physical security. In Western and Central Europe, especially in *Spain, the crystallization of the essentially Christian nature of the rising city communes combined with this insecurity to drive out the Jews from com-

merce and prohibit them from engaging in crafts. In France, England (up to 1290), Germany, Austria, Bohemia, Moravia, and northern and central Italy, Jews had to turn to loan-banking on a larger or smaller scale in order to make a living. The canonical prohibition against taking interest by Christians, which was stressed in successive *Church councils (especially the Fourth Lateran Council of 1215), and the vast opportunities for capital investment in land and sea trade open to the wealthy Christian made lending on interest for consumer and emergency needs virtually a Jewish monopoly in Western and Central Europe between the 12th and 15th centuries. By the 13th century the notion that the *Wucherer* (“usurer”) was a Jew was already current, for example, in the writings of *Berthold of Regensburg, Walther von der Vogelweide, and Ulrich von Lichtenstein. The word *judaizare* became identical with “taking interest.” Testimony from the 12th century shows that moneylending was then becoming the main occupation of the Jews; this was the case of those of Bacharach (1146) and of Muenzenberg (1188). However, there is little data to suggest that Jewish banking transactions were on a large scale even in the 13th century, but there is evidence that the bishop of Basle had debts with Basle Jews and that various monasteries had Jewish creditors.

The transition from a natural economy to a money economy in the course of the “commercial revolution,” and the stabilization of territorial principalities opened new possibilities for Jewish banking activity, especially in the Rhineland and in southern Germany. Jews from Siegburg, Trier, Mainz, Speyer, Strasbourg, and Basle as well as from Ulm and Nuremberg appear as sources of credit. The most important banking transaction in the first half of the 14th century went through the hands of Vivelin the Red, who transmitted 61,000 florins in gold which King Edward III of England paid to Baldwin of Trier for becoming allied with him against France. Margrave Rudolf III of Baden was indebted to David the Elder, called Watch, and to Jekelin of Strasbourg and his partners. Muskin and Jacob Daniels served the archbishop of Trier in the administration of his finances; during the first half of the 14th century, Daniels was probably the most important Jewish banker of the Rhineland. He was followed in the service of the archbishop by his son-in-law Michael. At the same time Abraham von Kreuznach at Bingen had a similar position with the archbishop of Mainz. Gottschalk von Recklinghausen and his company was another group on the lower Rhine. Such banking activity is recorded in other parts of Central Europe as far as Silesia.

Moneychanging and coinage privileges were often combined with moneylending, and Jews were frequently the sole agents arranging loans. From the first half of the 12th century moneychanging as a special form of banking is supported by documentary evidence. To spread the risk, partnerships of between two and ten persons were formed. As security, custom at first recognized mainly pledges, but from the middle of the 13th century the letter of credit came into use, though princes still preferred to pledge jewels. Often, instead of a pawn, bail

was given by several persons. In western Germany hypothecation of real estate was preferred, and in this way Jews acquired in pledge houses, vineyards, farms, villages, castles, towns, and even seigneuries. Interest rates do not seem to have exceeded 36% but in the case of deferred payment they could rise to 100% or beyond. From the 12th century popes and princes exploited the financial capacity of the Jews by frequent remission of debts or forced loans. The *Black Death and consequent persecutions of Jews gave rulers an opportunity forcibly to seize property and to restore pawns and letters of credit to debtors. The liquidation of Jewish debts by King *Wenceslaus IV of Bohemia around the end of the 14th century is a well-known example of such royal rapacity. With these and other measures and the rise of the merchant class, who gradually took over the function of loan-bankers to the princes and even to emperors during the 15th and early 16th centuries, the Jews were deprived of imperial protection and forced to leave the towns. They retired to the small seigneuries or migrated to Eastern Europe, where a less-developed economy offered them possibilities of making a livelihood. In Bohemia, Hungary, and in Poland and Lithuania both princes and nobility made use of their financial help. As the Eastern European kingdoms developed with the colonization of the forests, Jews played an increasing part in commerce and especially in the **arenda*. In the larger towns some engaged in moneylending and banking activities.

In 12th-century France moneylending was an important Jewish business, but in the 13th century Jewish lenders came up against the superior competition of the Lombards, a rivalry even more intense in the Netherlands. In England, where *Aaron of Lincoln and *Aaron of York were powerful bankers, a special *Exchequer of the Jews was set up to centralize Jewish transactions. However in the 13th century the crown began to rely on the greater resources of the Cahorsins and Italian bankers and in 1290 the Jews were expelled. In Italy Jewish bankers could expand their sphere of activity under the silent protection of the popes, despite resistance on the part of the Christian burghers (see *Popes and the Jews). From the second half of the 13th century they spread throughout central Italy and gradually expanded toward the north, migrating at first to the smaller and medium-sized towns. In Pisa and then in Florence the Da *Pisa family became important loan-bankers; in Florence in 1437 Cosimo de' Medici permitted a Jewish group to establish four loan-banks; in Venice in 1366 Jews, probably of German origin, obtained the right to lend on pledges. Here as in other places in northern Italy, Jewish loan-bankers from the south came into competition with Jews migrating from Germany or southern France. Finally only a few towns, such as Milan and Genoa, refused to admit Jewish loan-bankers. However, their activities were seriously challenged when the anti-Jewish preaching of the *Franciscans resulted in the establishment of branches of the *Monti di Pietà toward the middle of the 15th century.

The Iberian Peninsula after the Christian reconquest offers many examples of large-scale credit activities and tax

farming by Jews. It is known that they provided money for armaments against the Moors. El Cid borrowed from Raquel and Vidas, Jews of Burgos, for his expedition against Valencia. King Alfonso VI of Castile (1072–1109) also obtained loans from Jews for his military expeditions. His successors employed Jews in the financial administration, especially as *almoxarifes* (revenue collectors), an activity combined with moneylending. Thus, Judah Ibn Ezra was in the service of Alfonso VII, Joseph Ibn Shoshan of Alfonso VIII, and Solomon *Ibn Zadok (Don Çulema) and his son Çag de la Maleha were *almoxarifes* in the service of Alfonso X, while Meir ibn Shoshan served as his treasurer. When Sancho IV (1258–95) came to the throne, *Abraham el-Barchilon was prominent in the financial administration, supervising the farming of the taxes. Generally, in Castile the Jews abstained from farming the direct taxes, which from 1288 the Cortes opposed. The Jews therefore tended to prefer the administration of the customs and other rights belonging to the office of *almoxarife*. The court of Aragon relied on Jewish financial administrators in a similar fashion. King James I employed *Benveniste de Porta as a banker, probably giving him as security for his advances the office of bailiff of Barcelona and Gerona. Judah de la *Cavalleria, the most powerful Jew in the Aragonese administration, had control over all the bailiffs of the kingdom. Under Pedro III the family of *Ravaya were most influential. Though during the 14th century the Jews in Aragon and Navarre were subjected to increasing pressures, Judah Ha-Levi and Abraham Aben-Josef of Estella were general farmers of the rents under Charles II and Charles III of Navarre. In Castile – in spite of the Cortes' opposition – Jews such as the *Abrabanel family in Seville continued to be active as *almoxarifes*. The young Alfonso XI appointed Joseph de *Écija as his *almoxarife mayor* (c. 1322); Pedro the Cruel (1350–69) made Samuel b. Meir ha-Levi *Abulafia of Toledo, known as the richest Jew of his time, his chief treasurer, and Henry of Trastamara had Joseph *Picho as his financial officer (*contador mayor*) despite his promise to remove all Jews from royal office (1367).

THE CONVERSOS. The persecutions of 1391 and the mass conversions which followed brought an important change. Some of the Conversos were able to use the act of baptism to climb to high positions in the financial administration: examples are Luis de la *Cavalleria, chief treasurer under John II of Aragon, Luis *Sánchez, royal bailiff of the kingdom of Aragon (c. 1490), and his brother Gabriel *Sánchez, who was treasurer-general. Under Henry IV of Castile (1454–74) Diego Arias de Avila was the king's secretary and auditor of the royal accounts; in spite of Diego's unpopularity his son Pedro succeeded him. Even Isabella the Catholic depended on the financial advice of the Jew Abraham *Senior, from 1476 chief tax gatherer in Castile, and Isaac *Abrabanel, who after having been banker of Alfonso V of Portugal served as the queen's private financial agent and loaned her a considerable sum for the war against Granada. The Converso Luis de *Santangel, chancellor and comptroller of the royal household and great-grandson of

the Jew Noah Chinillo, loaned Isabella money to finance Columbus' expedition to America. Though some men like Isaac Abrabanel, who went to Naples, remained faithful to Judaism, a number of Jews of Spanish origin stayed in Portugal and, after accepting baptism, rose to financial influence there, especially in combination with the East Indian spice trade. Prominent among them were Francisco and Diogo *Mendes. The latter, who took up residence in Antwerp, became one of the most important merchant bankers there, lending money to the king of Portugal, the emperor, and Henry VIII of England. The firm "Herdeiros de Francisco e Diogo Mendes" was administered for some time after Diogo's death (1543) by Francisco's widow, Doña Beatrice de Luna (Gracia *Nasi) and her nephew João Miques (Joseph *Nasi). They subsequently immigrated to Turkey, where the latter combined commercial and banking activity with political influence. Another to rise to high position was Alvaro Mendes from Tavira, Portugal, who in Constantinople took the name Solomon *Abaenaes. Jewish money-changers and tax farmers were to be found in many places of the Ottoman Empire. After the union between Spain and Portugal (1580), a number of influential Conversos took the opportunity to invest their capital in financing the various ventures of the crown, provisioning the army in Flanders and in the East Indies, and supplying contracts for Africa. Their activities expanded especially after the financial crisis of 1626 and continued until the Portuguese revolt of 1640 which restored independent sovereignty to the country. After this all members of the *gente de nação* (as Conversos were called) living in Spain became suspect. The last important financial venture by *New Christians in Portugal was the financing of the Brazil Company established in 1649. However, Jewish involvement in banking proper really begins with the activities of those Conversos who, fleeing the Inquisition in Portugal and Spain, settled in *Antwerp, *Hamburg, and *Amsterdam, some remaining nominally Christian and some openly returning to Judaism. In Antwerp the Ximenes and Rodrigues d'Evora families were outstanding among an important group of merchant bankers who had commercial relations extending as far as the East Indies and Brazil. While they remained Catholics (like the Mendes de Brito group in Portugal), those who emigrated to Hamburg and Amsterdam formed Sephardi communities. In Hamburg they participated in the founding of the bank in 1619; 30 (by 1623, 46) local Jews were among its first shareholders, and some of them were financial agents for various North European courts, especially those of Denmark and Schleswig-Holstein. Most famous in Antwerp were Diego Teixeira de Sampaio (Abraham *Senior), consul and paymaster general for the Spanish government, and his son Manuel (Isaac Ḥayyim Senior), who succeeded him as financial agent of Christina of Sweden. Manuel Teixeira was an outstanding member of the Hamburg exchange and participated actively in the transfer of Western European subsidies to the German or Scandinavian courts.

At Amsterdam at first only a few Jews were shareholders in the bank founded in 1609 and of the East India Company.

One hundred and six Portuguese had accounts in 1620. Generally their resources were not sufficiently great to add any special weight to the formative stage of Amsterdam capitalism. Through Holland's developing overseas trade, especially with Brazil (until 1654) and then with the West Indies, as well as through the growth of the Amsterdam capital market and the transfer of subsidies and provisioning of armies through Amsterdam, Jewish financiers rose to importance in the exchange market, and were especially active in trading company shares. Outstanding were the *Pinto family and Antonio (Isaac) Lopez *Suasso (Baron d'Avernas le Gras); nevertheless the wealth of the Sephardi families remained far below that of their Christian counterparts. In the second half of the 18th century the Pinto family remained prominent, and another influential financier of Sephardi origin was David Bueno de *Mesquita.

Partly as a consequence of the marriage between Charles II of England and Catherine of Braganza (1662), and especially after William and Mary became joint sovereigns of England (1689), London, too, became a center of Sephardi banking, leading figures being Anthony (Moses) da Costa, Solomon de *Medina, and Isaac Pereira. In the reign of Queen Anne (1702–14), Manasseh *Lopes was a leading banker; during the 18th century Samson *Gideon, Francis and Joseph *Salvador, and the *Goldsmid brothers, leading members of the Ashkenazi community, were outstanding. In the middle of the 18th century Jacob Henriques claimed that his father had planned the establishment of the Bank of England (1694).

THE HOLY ROMAN EMPIRE. Only a few Jewish financiers, such as Joseph zum goldenen Schwan at Frankfurt or Michel *Jud, were active in the German principalities in the 16th century. In the early 17th century the Hapsburgs employed the services of Jacob *Bassevi of Treuenberg of Prague, Joseph Pincherle of Gorizia, and Moses and Jacob Marburger of Gradisca. The rise of the absolute monarchies in Central Europe brought numbers of Jews, mostly of Ashkenazi origin, into the position of negotiating loans for the various courts, giving rise to the phenomenon of *Court Jews. The most famous and most active of them in financial affairs were, in the second half of the 17th and the beginning of the 18th century, Leffmann *Behrends in Hanover, Behrend *Lehmann in Halberstadt, Bendix Goldschmidt in Hamburg, Aaron Beer in Frankfurt, and Samuel *Oppenheimer and Samson *Wertheimer in Vienna. Later Diego d' *Aguilar, and the *Arnstein and *Eskeles families became prominent. In the early 18th century Joseph Suess *Oppenheimer was the outstanding figure in southern Germany; his financial influence was widespread, especially in Wuerttemberg, until his fall and execution in 1738. Important court bankers around the end of the 18th century were Israel *Jacobson in Brunswick, the *Bleichroeder family in Berlin, Simon Baruch and Solomon Oppenheimer in Bonn, the *Rothschilds in Frankfurt, the Reutlinger, Seligmann, and *Haber families in Karlsruhe, the Kaulla family in Stuttgart, and Aron Elias Seligmann, later baron of Eichthal, in Munich.

ITALY. In the 15th and beginning of the 16th century the Italian loan-bankers reached their greatest eminence, including the Pisa, *Volterra, Norsa, Del Banco, *Rieti, and Tivoli families. In their wealth and style of life these men belonged to the Renaissance milieu as much as the artists and men of letters. However, with the expansion of the institution of the *Monte di Pietà* and the restrictive policy of the popes of the Counterreformation, their influence declined. The Da Pisa disappeared from Florence in 1570. However there were still between 60 and 70 loan-bankers operating in Rome toward the end of the 16th century and a century later about 20 were still in existence. In the first half of the 16th century about 500 loan-bankers were active throughout Italy; toward the end of the century about 280 remained in 131 places. Abraham del Banco was involved in the establishment of the famous Venetian Banco Giro in 1619.

[Hermann Kellenbenz]

WOMEN BANKERS. Jewish matrimonial and property laws permitted women to manage capital they acquired through dowry, inheritance, and, in case of innocent divorce or widowhood, their *ketubbah*. While *ketubbah* payments to a widow or divorcée might include real estate and houses, highly portable pawn pledges and bonds were particularly suitable. The percentage of women involved in moneylending was high: they were responsible for half of all loans in Northern France in the 13th and 14th centuries and in many communities in 13th century England, one-third in 41 German communities between 1350 and 1500, and from one-twentieth of the larger to one-third of the small loan sums in Austria. These figures represent loans granted by women alone (often widows) or at the head of a business consortium and do not include the many women who acted in conjunction with their husbands or relatives. Some women, most of them widows, were active in top-level business with the nobility or rulers. Such female “top bankers” with loans from 1,000 to 12,000 florins, like *Licoricia of Winchester (active 1242–77), Plume of Klosterneuburg (Austria, 1320–40), Reynette of Koblenz (1365–94), Zorline of Frankfurt (ca. 1380–95), Gentlin of Konstanz (ca. 1420–30), Eva (Hefe) *zum Buchsbaum* of Frankfurt (1401–52), Ricke of Frankfurt (1451–71), and Sara, called Gutlein of Wiener Neustadt (c. 1475–80), sometimes achieved considerable influence. Due to their high tax contributions, some gained administrative power as tax collector (Selda of Radkersburg, Styria, 1338) and even as *parnesset*, an elected officer of the local Jewish community (*Kaendlein of Regensburg 1354, Josephine of Regensburg 1374). Like wealthy male Jews, women were arrested to extort high ransoms and became victims of burglary and murder (*Dulce of Worms 1196, Licoricia of Winchester 1277, Kaendlein of Regensburg c. 1364). In contrast to the Sephardi world, women’s mobility was not restricted in Ashkenaz. Although contrary to halakhic standards of female personal modesty, contacts with Christians in connection with business dealings were permitted; business-women traveling alone were allowed to disguise themselves

as men or as nuns for self-protection (*Sefer Hasidim*). Some women used their husband’s seal (Reynette of Koblenz 1374, 1384, Ricke of Frankfurt 1451–71), others had their own seals (Dislaba of Regensburg 1398). Some signed their records with their Hebrew signature (Mirl of Friesach, Carinthia 1372, Plumel of Maribor 1442, Priba of Maribor 1468, Leah of Voitsberg, Carinthia 1496). Ricke of Frankfurt left a German will (1470). Many women submitted their financial cases to non-Jewish courts and took oaths. Although systematic research on women’s business activities in early modern Europe has yet to be done, it appears that the rate of female involvement was not as high as in medieval times. The outstanding personality was *Glueckel of Hameln (1646/47–1724); also important were other wives and widows of the early “Court Jews,” Brendele of Frankfurt (active c. 1541–60), Gertraud Munk of Vienna and Prague (1590–1614), and Esther *Liebmann of Berlin (1677–1713).

[Martha Keil (2nd ed.)]

19th and 20th centuries

Jewish banking in the 19th century begins with the rise of the house of *Rothschild in Frankfurt, a city which became the new banking center of Europe as a result of the political upheaval caused by the French Revolution and the Napoleonic Wars. The founder of the house (which became the symbol of the 19th-century type of merchant banking), Meyer Amschel Rothschild started as a banker to the elector of Hesse-Kassel. His sons rose to prominence as the major European bankers Amschel Mayer in Frankfurt, Solomon Mayer in Vienna, Carl Mayer in Naples, James Mayer in Paris, and Nathan Mayer in London. After the death of Abraham Goldsmid and Francis Baring in 1810, Nathan Rothschild became the dominant figure in the London money market. The majority of the English financial dealings with the continent went through the Rothschilds’ offices. After the Congress of Vienna (1815) the Rothschilds extended their business into most European states, specializing in the liquidation of inflated paper currencies and in the foundation of floating public debts. In 1818 they made loans to European governments, beginning with Prussia and following with issues to England, Austria, Naples, Russia, and other states, partly in collaboration with Baring, Reid, Irving and Company. Between 1815 and 1828 the total capital of the Rothschilds rose from 3,332,000 to 118,400,000 francs.

THE MERCHANT BANKERS. Prominent merchant bankers in Germany besides the Rothschilds were Joseph *Mendelssohn and Samuel *Bleichroeder. Mendelssohn founded his firm in Berlin in 1795, and was joined by his brother Abraham *Mendelssohn in 1804; they issued state loans for industrial development to several foreign countries, particularly Russia. Samuel Bleichroeder, Berlin correspondent of the Rothschilds, established his own business in 1803. His son Gerson Bleichroeder became a confidant of Bismarck and served as his agent for financing the war of 1866 and for the transfer of the French war indemnity in 1871. The Bleichroeder bank also made loans to foreign states. After the death of Gerson

Bleichroeder in 1893 his partner Paul Schwabach continued the business. The brothers Moses, Marcus, and Gerson *Warburg founded a bank in Hamburg in 1798. Its main business was concerned with the Hamburg overseas trade, especially transactions with England and the United States. Paul M. *Warburg, a brother of Max M. *Warburg, head of the Hamburg bank before World War I, established a branch office in New York. Toward the end of the 18th century J.M. *Speyer, through his bank's provisioning of armies and exchange business, had a capital of 420,000 florins, the largest Jewish fortune in Frankfurt at that time. In 1809 G.J. Elissen opened a banking house which took the name of J.L. Speyer-Elissen in 1818 and Lazard Speyer-Elissen in 1838. Philipp Speyer and Co., the U.S. branch, negotiated the American credit during the Civil War, participated in the development of the railroads in America, and conducted transactions in Mexico and Cuba, partly in association with the Deutsche Bank. In 1928 Speyer amalgamated with C. Schlesinger, Trier, and Company to form Lazard Speyer-Elissen K.a.A., Frankfurt and Berlin. The bank established by Solomon *Oppenheim in Bonn in 1789 acquired a leading position; at the beginning of the 19th century Solomon moved to Cologne, where his son Abraham became one of the most influential bankers in the Rhineland, financing insurance associations, railroad construction, and industrial investment.

Jewish bankers played an important part in the development of joint stock banks. Ludwig *Bamberger and Hermann Markuse were among the founders of the Deutsche Bank (1870), which was active in financing German foreign trade. The Disconto-Gesellschaft, established by David Hansemann in 1851, which amalgamated with the Deutsche Bank in 1929, had several Jewish partners. Eugen *Gutmann was the main founder of the Dresdner Bank, and Abraham Oppenheim was one of the founders of the Bank fuer Handel und Industrie (Darmstaedter Bank; 1853). The leading personality in the Berliner Handelsgesellschaft (established in 1856) was Carl *Fuerstenberg. Richard Witting, brother of Maximilian Harden, was one of the directors of the Nationalbank fuer Deutschland; when it merged with the Darmstaedter Bank in 1921, Jacob *Goldschmidt, then director of the latter, took control of the new enterprise. In 1932 the two other most important banks in Germany, the Deutsche Bank and the Dresdener Bank, were directed by Oskar *Wassermann and Herbert Gutman respectively.

In England, banks were established by Sir David *Salomons (London and Westminster Bank, 1832), the Stern brothers (1833), Samuel *Montagu (1853), Emile Erlanger (1859), the Speyer brothers, *Seligman brothers, and S. Japhet and Co., many of them immigrants from Frankfurt; the Speyer bank negotiated loans on behalf of Greece, Bulgaria, and Hungary, as well as for Latin American states. David *Sassoon and Company, established in Bombay in 1832, had branches throughout the Orient, handling extensive transactions. Sir Ernest *Cassel, partly in association with Sir Carl Meyer, established banks in Egypt and Turkey. Industrial banks were organized by Sir

Moses *Montefiore and the Anglo-American Corporation, which was connected with the diamond and finance corporation of A. Dunkelsbueler, established by Sir Ernest *Oppenheimer. In South Africa the General Mining and Finance Corporation was set up by Hamilton Ehrlich and Turk, and one of the most important enterprises in South African financing was the Barnato brothers' company.

In France Achille *Fould, a competitor of the Rothschilds, was a supporter of Napoleon III and later his finance minister. Together with his brother Benoit he inherited the Paris firm of Fould, Oppenheimer et Cie., which had been established by his father. Meanwhile the brothers Emile and Isaac *Péire, who moved to Paris from Marseilles in 1822, financed railway construction in France and Spain. Through the Crédit Mobilier, organized in 1852, they mobilized credit for various investment projects, but ran into difficulties in 1867. Among the other important Jewish banks was the Banque de Paris et des Pays-Bas (1872), with Henri Bamberger as one of the directors. The leading position among the private banks was held by Rothschild; from 1889 to 1901 all loans to Russia from Paris were issued through the Rothschild bank. Baron Maurice de *Hirsch from Munich, son-in-law of the Brussels banker Raphael Jonathan *Bischoffsheim, invested successfully in railroad construction. Other Jewish banks were those of Louis Dreyfus and Lazard Frères. In Italy, where Luigi *Luzzatti's agricultural associations were largely philanthropic, Jewish bankers played a leading part in the foundation of the Banca Commerciale Italiana and the Credito Italiano. The Rothschilds, Sterns, and Goldsmids also invested money in Spain and Portugal.

RUSSIA AND EASTERN EUROPE. A number of Jewish banks were established in Vienna during the 19th century, the most influential of which was Arnstein and Eskeles. This bank however was declared bankrupt in 1859. Weikersheim and Company and from 1821 Salomon Rothschild also established banks in Vienna. Jews participated in the foundation of the Niederoesterreichische Eskomptgesellschaft (1853) and the Kreditanstalt (1855), which made an essential contribution to the development of the Vienna stock exchange and extended international loan facilities, also investing in industry and railroads. Leading private banks in Hungary were of Jewish origin, such as the Ungarische Allgemeine Kreditbank (Hungarian General Credit Bank; established in 1867) with Siegmund Kornfeld as a general director, the Pester Ungarische Kommerzial-bank (Hungarian Commercial Bank at Pest), established in 1841 by Moritz Ullmann, and the Ungarische Hypotheken-bank (Hungarian Hypothecary Credit Bank; 1869) with Nándor (Ferdinand) Beck de Madarassy as its general director. In Prague the *Petschek family established a bank in 1920; in Galicia, under the Austrian regime, Brody (Nathanson, Kallir) and Lemberg had Jewish banks. Between the end of the 18th century and the beginning of the 19th Jewish banks of some importance rose in Russia. In St. Petersburg Nicolai and Ludwig *Stieglitz, immigrants from Germany, opened a

bank in 1803, which under Ludwig (who with his brother was converted to Christianity in 1812) became one of the leading financial institutions in Russia. Otherwise Jewish banking activity was limited to southern Russia, especially to Berdichev and Odessa. In 1860 Yozel (Yerzel) *Guenzburg, originally a tax farmer, established the St. Petersburg bank J.Y. Guenzburg, and later the discount and credit bank there, managed by his son Horace; Guenzburg also established banks in Kiev and Odessa. Lazar (Eliezer) *Poliakoff opened a bank at Moscow in 1860 and participated in the foundation of the Moskowsky Zemelny Bank and other Moscow banks. Poliakoff and his two brothers also founded banks in southern Russia. Abram *Zak was director of the Petersburg Discount and Credit Bank (1871–93), and Soloveitchik established the Siberian Trade Bank. At the beginning of the 20th century private banks of some importance were those of H. *Wawelberg in St. Petersburg, and O. Chayes and R. Sonschein and Company in Odessa.

Toward the end of the 18th century several bankers such as Koenigsberger, Levy, and Simon Simoni emigrated from the west to Poland. Jacob *Epstein, court purveyor to King Stanislas II Augustus, founded an important dynasty of bankers. The Polish revolt of 1863 caused the bankruptcy of many Jewish banks. The bank of Wilhelm Landauer in Warsaw, established in 1857, closed in that year. However, Landauer returned to Warsaw some years later and opened a joint stock company in 1913. Mieczyslaw Epstein founded the Warsaw Discount Bank in 1871. Leopold *Kronenberg took part in the foundation of the Warsaw Credit Union in 1869 and the following year established the first joint stock bank in Poland, Bank Handlowy at Warsaw. The Natanson family bank was in operation between 1866 and 1932. In Romania, Maurice *Blank (d. 1921) established the house Marmorosch, Blank and Company, which his son, Aristide, directed after him.

SCANDINAVIA AND THE NETHERLANDS. The Goeteborgs Bank in 1848 was established in Sweden through the agency of L.E. Magnes, Morris Jacobsson, Edward Magnus, and others. Theodor *Mannheimer was the first managing director of Scandinaviska Kreditaktiebolaget, and Louis *Fraenkel managed Stockholm's Handelsbank from 1893 to 1911. The Danish merchant financiers Joseph *Hambro and his son Carl Joachim *Hambro settled in London in 1832 and founded Hambro's Bank there. A leading Danish banker was Isaac *Glückstadt, who managed the Landsmans-Bank at Copenhagen from 1872 until his death in 1910; he was succeeded by his son Emil. A. Levy Martin was finance minister in 1870 and from 1873 till 1897 director of the Copenhagen Handelsbank. From 1913 until his death in 1923, Markus Rubin was director of the Danish Notenbank. In Holland the firm of Lissa and Kann was established in 1805. Another Dutch firm of the same era was Wertheimer and Gompertz, later known as the Bankassociatie. In 1859 the firm of Lippman, Rosenthal and Company was established as a subsidiary of the International Bank of Luxembourg. Its international activities were wide-

spread, especially through Netherlands state loans. The bank of Elzbacher in Amsterdam later merged with the Amsterdamsche Bank. In Rotterdam Rothschild was represented by Moses Ezechiels en Zonen (liquidated in 1888). The bank of Benjamin Marx (established in 1869), later Marx and Company, was in existence until 1922. In Belgium Jacques Errera, Joseph Oppenheim, and Isaac Stern, all from Brussels, and the brothers Sulzbach and J. May from Frankfurt participated in the foundation of the Banque de Bruxelles in 1871. Private banks were those of F.M. Philippson and Company, the Societé Henri Lambert and Cassel and Company. Moving from Alsace to Switzerland in 1812, Isaac Dreyfus established a bank in Basle; after 1849 the firm was known as Isaac Dreyfus Soehne. It participated in the foundation of the Basler Handelsbank as well as the Basler Bankverein. The Hitler regime spelled the end of Jewish banking in the greater part of Europe; all Jewish banks in Germany were liquidated or transferred to a non-Jewish company (Solomon Oppenheim Jr. and Company in Cologne, for example, was changed into the firm of Pferd-menges and Company).

THE UNITED STATES. Already in early colonial times individual Jews were active in America as money brokers, such as Asser *Levy, who functioned in New York City during the second half of the 17th century. Often such figures were helped by their extensive family or fellow-Jewish contacts overseas, as was the case with David *Franks, who was instrumental in raising money for the British army during the French and Indian War with the aid of his brother Moses, a London financier. The best known Jewish financier of the times was the legendary patriot Haym *Salomon, an immigrant from Poland who succeeded under extremely trying conditions in raising large amounts of desperately needed cash for the American Revolution by negotiating bills of exchange with France and the Netherlands. Yet another figure who helped finance the war for American independence was Isaac *Moses, later among the founders of the Bank of New York. It was not until the middle of the 19th century, however, with the arrival in America of a large German-Jewish immigration, that Jewish banking houses on the European model came to exist in the United States. Some of the founders of these firms, like Philip and Gustav *Speyer of Speyer & Co., went to the United States as American representatives of already established European concerns; others, like August *Belmont, crossed the Atlantic with a degree of previously acquired banking experience; still others, like the *Lehman brothers, Meyer and Emanuel, were essentially self-made men. Among other Jewish banking houses started by immigrants from Germany that developed into financial powers during the years 1840–1880 were Kuhn, Loeb Co., Lazard Frères, J.W. Seligman Co., Goldman, Sachs & Co., and Ladenburg, Thalman & Co. All of these firms functioned essentially as investment bankers – the more established field of commercial banking offered relatively few opportunities to the German-Jewish immigrant – a capacity in which they helped to finance large numbers of American

utilities and corporations whose rapid growth throughout the latter half of the 19th century created an insatiable demand for capital. To raise such funds these Jewish houses not only freely utilized their widespread European connections, particularly in France, England, and Germany, but created a chain of interlocking associations and directorates among themselves which enabled them quickly to mobilize sums many times larger than their individual holdings and to compete successfully with gentile firms several times their size. Not only was it common for the children and relatives of a given firm to marry each other, but marital alliances frequently occurred as well among different Jewish banking families, as was the case with the *Loebs, the *Kuhns, the *Schiffs, and the *Warburgs. Frequently too the children of such families married into families of large German-Jewish companies in a variety of other fields and the latter would then proceed to raise capital through the banking houses which they had joined. Socially, the result of such commercial and kinship ties was the creation of a German-Jewish banking and business aristocracy based in New York City whose descendants continued for over a century to play a dominant role in the financial, cultural, and political life of the American Jewish community, and to a lesser extent, of the nation at large. The contribution of such Jewish banking houses to the process of capital formation in the United States in the late 19th and early 20th century was considerable by any standard. Several of them, such as Speyer & Co., August Belmont & Co., and J. & W. Seligman, raised large sums for the federal government both during and after the Civil War (the Jewish house of Erlanger Co., on the other hand, obtained sizeable loans for the Confederacy); others, such as Kuhn, Loeb, were particularly active in the westward expansion of the railroads. In the late 19th century Seligman Co. alone was capitalized at an estimated \$10,000,000, while during the Russo-Japanese War of 1905 Jacob *Schiff of Kuhn, Loeb was able on short notice to float a bond issue of \$200,000,000 on behalf of the Japanese government. Although the total assets of such Jewish firms were nevertheless small when compared to those of the American banking system as a whole, their clannishness and ability to coordinate their actions made them the focus of antisemitic agitation from the 1890s on, when caricatures of ruthless Jewish oligarchs at the head of an international Jewish money conspiracy began to abound in the ranks of the Populist movement. In reality, however, the fiscal policies of the German-Jewish firms tended to be highly conservative and their owners exercised their fortunes with an unusual degree of social as well as fiscal responsibility. Although a number of the great 19th-century Jewish banking houses such as Lazard Frères and Kuhn, Loeb have survived into the present, none has continued as a family or even exclusively Jewish concern and even the most prosperous of them have lost their former importance as a result of the steady trend in the American financial market toward the predominance of ever larger and more impersonal corporations. At the same time, the general field of commercial banking in the United States

has remained relatively closed to Jewish participation despite heavy Jewish involvement in such related fields as stock brokerage, investment analysis, and corporate management. A study undertaken by B'nai B'rith in 1939 revealed that out of 93,000 bankers in the United States only 0.6% were Jewish, and that even in New York City Jews formed only 6% of banking executives as compared to 28% of the general population. Similar statistics for a later period are unavailable, but reports of discrimination against Jews in major banks throughout the country persist and in 1968 the American Jewish Committee publicly filed a complaint before the Human Rights Commission of New York City charging the banking system with job bias against Jews.

[Hermann Kellenbenz]

In the latter years of the 20th century and the early years of the 21st, the banking industry consolidated, and some old-line "Jewish" firms were bought or incorporated into others as buyouts and mergers changed the landscape. As Jews assimilated into American life, many advanced in the workplace less along ethnic lines and more along lines of achievement. To be sure, there were many Jews in leadership positions in prominent financial institutions: Felix *Rohatyn at Lazard Frères, Bruce *Wasserstein at several large firms, Sanford *Weill at Citibank, and others, but their financial success was largely attributed to their business acumen rather than to their religious or ethnic background.

George Soros, a Hungarian immigrant, became one of the most successful investors and later spread his wealth to nonprofit organizations and to political causes. Michael Steinhardt and others made their mark in hedge funds or as independent venture capitalists, accumulating great wealth but also making large philanthropic contributions. Carl *Icahn and Irwin L. *Jacobs developed reputations as corporate raiders. Abby Joseph Cohen was the leading investment strategist for Goldman Sachs, and Henry Kaufman, a well-known economist, offered advice about the stock market that was followed by many. In addition, on Wall Street, such firms as Schwab & Co., headed by Charles *Schwab, achieved great success as a low-price stock-market firm.

Some investors – Ivan *Boesky, Michael *Milken, Marc *Rich – became infamous for their questionable financial activities, but whether their religion played a role is highly unlikely. They were perceived as corrupt financial figures, not corrupt Jewish financial figures.

In the last years of the 20th century, a number of Jews had important positions in the nation's economic community. Alan *Greenspan, a Republican, headed the Federal Reserve System for almost 20 years and became a powerful force in Washington. During the Clinton administration, Jewish economists, including Robert *Rubin, the Treasury secretary, and Lawrence *Sommers, his successor and later president of Harvard University, held Cabinet-level positions, and James D. *Wolfensohn headed the World Bank from 1995 to 2005. His successor, chosen by President George W. Bush, was Paul

D. Wolfowitz, a veteran foreign policy and defense official in Republican administrations.

[Stewart Kampel (2nd ed.)]

Assessment of the Role of Jewish Bankers

As shown above, Jewish activity, in particular in the late Middle Ages and in the 18th and 19th centuries, often played an important, sometimes a central, constructive role in the economy and social life of various countries, sometimes even internationally. However, banking always remained a subsidiary Jewish economic activity. Frequently, when Jews appeared to command large assets, they gave this impression because they mostly owned mobile property. The wealthy Jews always formed a small group, particularly in comparison with the wealthy nobles or Christian merchants. It was really only in the 19th century that Jewish financiers achieved remarkable wealth, largely resulting from the activities of some European courts in consequence of the upheavals brought about by the French Revolution and the Napoleonic Wars. With the growth of joint stock banks and of central banks in the middle of the 19th century the field of private banking became limited. Around the beginning of the 20th century, Jewish influence in finance and banking had reached its zenith; afterward it declined at an accelerating rate.

BANNER, a recognized symbol shared by a large group of people: a family, tribe, military unit, or nation. In the Bible, banner is denoted by the word *nes*. Although scholars differ concerning the exact meaning of another term, *degel*, this term apparently designates a military unit (perhaps originally the emblem of the group). The *nes* was composed of two parts: a long pole with a symbol, the *’ot*, carved or drawn on it. Isaiah 30:17 gives a clear description of the pole: “Till you are left like a flagstaff on the top of a mountain, like a signal [*nes*] on a hill.” Numbers 21:8 distinguished the *nes* from the symbol that it bears: “Make a *seraf* [fiery] figure and mount it on a standard [*nes*]...” The *nes* (and the *’ot* which was on it) was positioned so that the community to whom it belonged could see it from a distance and converge around it. During the period of Israel’s wandering in the desert, the special design of each tribe’s *nes* and *’ot* enabled each of them to recognize and gather around its own standard and unit (Num. 2:2). The motif drawn on the *’ot* was apparently related to the tradition of the community, or was significantly associated with it, in a manner similar to the totem in use among certain present-day tribal societies. The term *nes* is also used symbolically in the Bible to denote a sign which can be seen from a distance and can serve as a summons not only for a tribe or the nation of Israel but also for the entire world (Isa. 5:26). When the people of Israel went into exile, this concept came to be the symbol for the gathering of the exiles scattered over the face of the earth, and for the redemption of Israel in general (Jer. 4:6). The verb derived from this noun, *nss*, serves as a metaphoric description for divine inspiration in the soul of man (Isa. 59:19). With a meaning closer to that of the word *nzz*, this verb also describes the landscape in which precious stones are scattered (Zech. 9:16). Many Egyptian monuments from all periods depict standards or flags attached to poles which are carried by men. The symbols which appear on these standards or flags include illustrations of gods, cartouches, and other religious symbols. Some of the standards consist of a shield of metal or some other material mounted on a pole, with a group of ribbons attached to the join of the symbol and pole. Two different types of standards are depicted on Assyrian monuments from Nineveh. The first type, consisting of a pole bearing a ring to which streamers were attached, was placed on the side of a chariot, toward the rear, in a special place designated for it. The second, consisting of a pole with an opening at the top into which the

symbol, probably of metal, was inserted, was carried by the charioteer. There are two recurring symbols on these monuments: one depicts two animals, and the other, a king or god standing on a bull. As is the case with other practical objects, these banners also served ritual needs. This type of ritual banner was found at Hazor (Stratum 1b). It consists of a silver-coated bronze tablet of approximately 4 in. (10 cm.). The snake goddess, surrounded by various other symbols, is depicted on it in relief. The base of the banner from Hazor was designed to be joined to the top of a pole as were the large banners.

BÁNÓCZI, Hungarian literary family. (1) JÓZSEF (1849–1926), Hungarian literary historian, philologist, and Jewish educator. József was born in Szentgál, abandoned his rabbinical studies for a university education, and graduated from Leipzig. In 1878 he became a lecturer in philosophy at Budapest University, and later an associate professor. From 1879 József was a corresponding member of the Hungarian Academy of Sciences. He was appointed principal of the Budapest Jewish Teachers' College in 1887 and held the post until his death. József distinguished himself mainly by his research into the history of the Hungarian language and literature. He also helped to create Hungarian terminology for philosophical expressions. He wrote biographies of Miklós Révai, the first Hungarian philologist (1879), and of the poet Károly Kisfaludy (1882–83). József encouraged Jewish studies and founded the *Izraelita Magyar Irodalmi Társulat* (the Hungarian-Jewish Society for Literature), whose annual he edited. József, together with Wilhelm *Bacher and Samuel *Krauss; published a Jewish-sponsored Hungarian translation of the Bible. (2) LÁSZLÓ (1884–1945), son of József Bánóczy, Hungarian playwright, author and translator. László graduated from the university of his native Budapest. He was responsible for the establishment of the Thália theater, which catered to working-class audiences and was its first director. László was prominent in the Hungarian Social Democratic Party, which he represented on the Budapest Municipal Council. His books on the drama included *Shakespeare a mai színpadon* ("Shakespeare on the Contemporary Stage," 1910). During World War II, László was active in the theater fostered by the OMIKE, a Jewish association for popular education, and it was mainly due to his efforts that Hungarian-Jewish cultural life was maintained in a wide field of activities.

BANSKA BYSTRICA (Hg. *Besztercebánya*; Ger. *Neusohl*), town in Slovakia. As Banska Bystrica was a mining town and settled partially by ethnic Germans, Jews were not permitted to live there until 1858. The Jewish congregation was established in 1868. The congregation chose the *Neolog (reform) rite. After World War I, Jews moved to the town from the neighboring village of Radvan, where a congregation had existed for about 100 years, and established an Orthodox congregation.

Local Jews engaged in intense Zionist and Jewish national activity. The local Zionist branch was established in 1897. In 1936 the *Maccabi World Union held its winter games in the town.

Most of the local Jews perished in the Holocaust after deportation to labor and concentration camps. During the Slovakian national uprising (Aug. 18–Oct. 28, 1944), thousands of Jewish refugees arrived in the town. About 1,000 were executed by the Germans near the neighboring village of Kremnička. A number of Jewish paratroopers from Palestine were among the victims, including Radvan-born Havivah Reik (Ada Robinson). After the fall of Communism in Czechoslovakia in 1994 a memorial was erected in Kremnička consisting of a Menorah and the Hebrew word ZAKHOR.

In 1947 there were 98 Jews in Banska Bystrica. Most emigrated to Israel in 1948–49. A small congregation continued to exist with prayer services for Jews in the vicinity on the high holidays.

BANUS (first cent. C.E.), ascetic who according to Josephus "dwelt in the wilderness, wearing only such clothing as trees provided, feeding on such things as grew of themselves, and using frequent ablutions of cold water, by day and night, for purity's sake" (Jos., Life, 11–12). In his youth, Josephus claims to have been a devoted disciple of Banus, living with him for three years (c. 54–56 C.E.) before returning to the city to lead the life of a Pharisee. It is probable that Banus was an adherent of one of the many sects which were spread over the whole country, especially in the wilderness of Judea, not necessarily an *Essene or a member of the *Qumran sect. He may have been a hemerobaptist.

[Isaiah Gafni]

BANUS, MARIA (1914–1999), Romanian poet. Born in Bucharest, Banus' first poems were published in 1928. She gained fame with her first collection of verse, *Tara fetelor* ("The Maidens' Land," 1937), a lyrical description of the awakening sensuality of adolescence. Maria Banus came to be regarded as Romania's outstanding poet on feminine themes. Despite her

early detachment from Judaism, she adopted a more positive attitude toward Jewish life in the shtetl as a result of her experiences during the Holocaust. *Bucurie* ("Joy," 1949) includes some important poems about Jewish suffering during the Holocaust. After World War II, Banus regarded the Communist Party as the savior of mankind. Social and humanitarian themes dominate her *Torentul* ("The Torrent," 1959) and *Magnet* ("The Lodestone," 1962), in which the poet denounces war and calls on mothers everywhere to join in the effort to secure lasting peace. In the "liberalization" period, she went back to writing personal poems, but as an aged woman. Her collections of verse include *Fiilor mei* ("To my Sons," 1949); *Versuri alese* ("Selected Poems," 1953); *Despre pamant* ("About the Earth," 1954); and *Se arata lumea* ("The World Shows Up," 1956). She also wrote two social dramas, *Ziua cea mare* ("The Great Day," 1951) and *Indragostitii* ("The Lovers," 1954), and published translations of Goethe, Pushkin, Rilke, and Shakespeare. Many of her poems have been translated into English, Russian, and Chinese, and some of them into Hebrew. She published *Din poezia de dragoste a lumii* ("Love Poetry in World Literature," 1965), including poems by Hebrew and Yiddish poets. In 1978 she published parts of her World War II journal, *Sub camuflaj* ("Under Camouflage"), which caused controversy because of its descriptions of her erotic experiences and her attitude to her Jewish identity. Although she identified with Jewish suffering, she preferred to be a Romanian, identifying with the Romanian language and culture.

[Dora Litani-Littman / Lucian-Zeev Herscovici (2nd ed.)]

BAPTISM, FORCED. The nature of the Christian sacrament of baptism created special problems when it was carried out compulsorily, which differentiated it sharply from forced conversion to Islam (see *Anusim; *Jadid al-Islam). There is evidence that when Christianity established itself as the dominant religion in the Roman Empire, from the fourth century, large numbers of Jews were forcibly baptized: a detailed account is extant of the process in the island of *Minorca in 418. In due course, the church doctrine regarding this matter crystallized. From the time of Pope *Gregory I, it was generally agreed that by its very nature baptism should be accepted willingly and not imposed by force. Various problems however still remained. It was difficult to define what baptism by force actually implied, apart from sheer physical immersion: did it cover also "willing" acceptance of conversion under menace of death, or under a remoter anticipation of violence, or with the alternative of expulsion? Moreover, when baptism was illegally imposed, did it remain valid, or was the victim at liberty to return to his former faith unmolested? This last was a peculiarly complicated problem in the context of medieval

Christianity, for if baptism was valid however conferred, the backsliding was an act of heresy, punishable by death according to the code later elaborated by the Inquisition. In any case, the conception of forcible baptism did not apply in the case of the children or grandchildren of the unwilling converts, who were frequently taken by their parents to church for baptism as a matter of routine when they were born (see *Conversos, *Marranos). Another problem presented itself in the case of infants: at what age could they be presumed to have minds of their own and to accept baptism "willingly" and not passively, or in return for some trivial temptation? On the whole, it may be said that whereas the church doctrine on the matter of forced baptism, which it theoretically condemned, remained unchanged, its attitude as regards *ex post facto* problems hardened through the centuries.

In the seventh century a wave of forced conversions spread over Europe, sparked off when in 614 Emperor *Heraclius forbade the practice of Judaism in the Byzantine Empire. He is said to have summoned his fellow sovereigns to follow his example; and similar steps were taken in Gaul in 626 by King Dagobert; in Italy in 661 by the Lombard sovereign Perctarit; and in Spain from 616 under successive Visigothic rulers. In the Byzantine possessions, including southern Italy, Heraclius' example was imitated in 873–4 under *Basil I. It is difficult however in most such cases to determine how effectively, and for how long a period, the edicts were put into execution; while on the other hand it is debatable how far baptism with the alternative of exile can be strictly considered in the category of "forced conversion." Moreover the mob sometimes took matters into its own hands and imposed baptism on the steadfast believers who had prepared themselves for the heroic alternative. This is what seems to have happened for example at the time of the campaign of the Byzantine emperor *Romanus I Lecapenus in 932–36 to suppress Judaism in his dominions, when a number of Jewish leaders died rather than submit.

Apart from such cases of mass baptism to escape expulsion as mentioned above, the earliest recorded instance of forced baptism in the more restricted sense seems to have been shortly after 820 in Lyons, where as part of his campaign to convert the Jews (described in his *Epistola de baptismo Judaicorum*), Archbishop *Agobard of Lyons assembled the children who had not been sent into safety by their parents and baptized all those who to his mind appeared to show some desire for conversion. When about 938 the archbishop of Mainz asked Leo VII whether he should force the Jews of his diocese to be baptized or expel them, the pope advised on the latter course. Many Jews, especially in the Rhineland, were baptized literally by force during the first and subsequent *Crusades, and the antipope *Clement III protested violently against their being permitted subsequently to revert to Judaism. On the other hand, after Benedict, the leader of the Jews of York was forcibly baptized on the day of Richard I's coronation (Sept. 3, 1189), the archbishop of Canterbury declared

that if he desired to return to worship the devil he should be given free choice. One of the clauses in the *Constitutio pro Judaeis* issued by successive popes (including some of those least favorable to Jews) from the beginning of the 12th down to the close of the 15th century (see *Popes) declared categorically that no Christian should use violence to force Jews to be baptized so long as they were unwilling – though without specifying what was to happen if the illegal process actually took place. Indeed, Pope *Innocent III, in a letter of 1201 to the archbishop of Arles, considered that a Jew who submitted to baptism under threat of force expressed a conditional willingness to accept the sacrament, with the corollary that he was not at liberty to renounce it. On the other hand, Innocent IV in 1246 categorically forbade the forced baptism of children, the same presumably applying a fortiori to adults. However, in the last decades of the 13th century the strength of the Jewish communities of the Kingdom of Naples was broken by a wave of forced baptisms, sparked off by an apostate from Trani named Manuforte: the descendants of the victims, known as neofiti (see *Crypto-Jews), long remained a recognizable group, suspected of secret fidelity to their ancestral religion.

The events in the Kingdom of Naples in a way set the example for the wholesale wave of compulsory baptisms which swept Spain in and after 1391. This left in its train the phenomenon of the Marranos, which continued to be a problem in the Iberian Peninsula for centuries to come. It may be noted that a very large number, perhaps the majority, of these insincere conversions, especially after the initial episodes, were not the immediate result of actual violence, but were ostensibly quasi-spontaneous in anticipation of it or as the result of moral rather than physical pressure. This did not however apply to the large-scale happenings in Portugal in 1496/97, when practically the whole of the considerable Jewish community of that country were hounded into Christianity by actual violence or were baptized forcibly notwithstanding their protests. This explains the greater tenacity of Marranism in that country in subsequent generations, and down to the present day.

Pope *Martin V categorically forbade (c. 1419) the baptism of Jewish infants below the age of 12 without the parents' permission, to counteract an abuse which was at this time becoming widespread. But a new chapter in the history of forcible baptism began with the institution in Rome in 1543 of the House of *Catechumens (Casa dei Catecumeni), speedily followed in other cities. To justify their existence these institutions had to elaborate a system of propagating the faith, in which ultimately it became difficult to differentiate force from persuasion. Any person who could be imagined by whatever casuistry as having shown an inclination toward Christianity, or who could be considered to be under the authority of a person already converted, could be immured in the House of Catechumens in order to "explore his intention," meanwhile being submitted to unremitting pressure. In 1635 it was decided that the baptism of the head of a household could entail, if he expressed the desire, that of all those members of his family who were under age or dependent upon him, and this

was subsequently extended to cover even more remote cases. There had moreover grown up a popular superstition that any person who secured the baptism of an unbeliever was assured of paradise, this leading to a spate of such ceremonies, verging on parody in execution though not in their tragic outcome, throughout the Catholic world.

At Reggio Emilia, during the plague of 1630, a barber summarily christened after his own style 17 or 18 Jewish children in the pest-house that had been set up – the survivors being thereafter brought up as Christians. In 1747 Pope *Benedict XIV decided that once baptized, even against the prescriptions of canon law, a child was to be considered a Christian and educated under church influence. In 1762, the son of the rabbi of Carpentras was pounced on and baptized in ditch water by a callous ruffian and thereafter lost to his family. The kidnapping for baptism of Terracina children in 1783, at the request of a remote relative, caused a veritable revolt in the Roman ghetto. Similar abuses took place in the Catholic lands of Central Europe and in Poland, where the *Jesuits were said to be the principal culprits in the mid-18th century. After the Napoleonic wars, the abuse in its worst form was restricted to those areas in Italy where the popes, now driven by circumstances into reaction, still wielded temporal power. The best-known instance was the *Mortara Case (1858) in Bologna; but it was neither the worst nor the last. In the Russian Empire in the second quarter of the 19th century the institution of the *Cantonists – involving the virtual kidnapping for military service of Jewish male children from the age of 12, or even 8 – was introduced in the expressed hope of compelling them to abandon Judaism. The number of forced or virtually forced baptisms which resulted probably exceeded all similar cases in other lands throughout history. During the Nazi persecutions in Central and Eastern Europe in 1940–45, many Jewish children were baptized by well-meaning Christians in order to help in saving their lives, or when contact with their parents was lost.

[Cecil Roth]

BĀQĀ AL-GHARBIYYA; BĀQĀ AL-SHARQIYYA, two Muslim-Arab villages in central Israel, east of Ḥaderah. The first became part of Israel following the 1949 armistice agreement with Jordan. The village's economy was developed by the introduction of new farming methods and the establishment of workshops and preserves-industry enterprises. It served as an administrative center for the Arab villages of the vicinity and the seat of the Muslim Shari'a Court for central Israel. In 1968 it had a population of 6,400, tripling to 19,800 by the end of 2002, with an area of 3.5 sq. mi. (9.1 sq. km.). In 1996

Bāqā al-Gharbiyya received municipal status. Bāqā al-Sharqiyya, which remained on the Jordanian side of the border in 1949, was occupied by Israel during the Six-Day War of 1967. In contrast to Bāqā al-Gharbiyya, its layout and economic and social structure remained largely traditional. Its population in 1967 was 1,205, rising to 3,054 in 1997.

[Efraim Orni]

BA'QŪBA, town c. 25 mi. (40 km.) north of Baghdad. Under the Abbasid caliphate, Ba'qūba was a district center, with a prosperous Jewish community. At the end of the eighth century, Manasseh b. R. Joseph of Ba'qūba, was head of the academy of *Pumbedita. Even later, many Jews lived in the town. In the early 12th century, a self-styled herald of the messiah, Ibn Shadad, appeared in Ba'qūba and began a movement which was suppressed by the Muslim authorities. The community existed into the 19th century.

BAR, town in Vinnitsa oblast, Ukraine. Bar passed to Russia at the second partition of Poland in 1793, and from 1796 to the 1917 Russian Revolution was a district capital in the province (government) of Podolia. The Bar community was one of the oldest in the Ukraine. Jews are first mentioned there in 1542. By an agreement concluded in 1556 with the citizens of Bar, the Jews were permitted to own buildings and had the same rights and duties as the other residents; they were permitted to visit other towns in the district for business purposes but were forbidden to provide lodging for Jewish visitors in the city. The agreement was formally ratified the same year by the Polish king Sigismund II. The community grew during the second half of the 16th and the first half of the 17th century, and Jews from Bar engaged in trade in places as far away as Moldavia. According to a contemporary chronicler, the Bar community in 1648 numbered some 600 Jewish families, "men of wealth and standing." During the *Chmielnicki uprising in that year, many of the Jews in Bar were massacred. There was a further slaughter of the Jewish inhabitants by Cossacks and Tatars in 1651. There were 17 houses (out of 107) in Jewish ownership in Bar in 1565, 23 in 1570–71, and approximately 20 in 1661. In 1717, authorization to erect a synagogue in Bar was granted by the bishop. After 1793, under Russian rule, the community also developed. The Jewish population numbered 4,442 in 1847, 5,773 in 1897 (58% of the total), and 10,450 (46%) in 1910. Between 1910 and World War I, Jews opened factories based on agricultural products, such as sugar, linen, tobacco, and vodka. They owned most of the shops in town, and the only pharmacy and were the majority of artisans. Twenty Jews in Bar lost their lives during a pogrom in the summer of 1919. Religious and communal life came to an end with the establishment of the Soviet government. In the 1920s some 300 families lived from workmanship, 28 were clerks and workers,

150 heads of families worked in agriculture, some of them in a Jewish farm cooperative. The Jewish population totaled 5,270 in 1926 (55%) and 3,869 (total population – 9406) in 1939. In the 1930s 1,000 worked in various factories and 400 in industrial cooperatives; 53 families were members of a Jewish kolkhoz. The Germans occupied Bar on July 16, 1941. In December two ghettos were created, surrounded by barbed wire. On August 19, 1942, 3,000 Jews of the first ghetto were concentrated and kept for three days without food and water. In the nearby Jewish cemetery 1,742 Jews were killed, and the others, mostly young people, were taken to the abandoned ghetto, which turned into a working camp. On October 15, 1942, the 2,000 Jews of the second ghetto were murdered. Most of the working youngsters were killed one by one or died from hunger or diseases. Bar was liberated on March 25, 1944. In 1993 there were 199 Jews living there.

[Yehuda Slutsky]

BAR, SHLOMO (1944–), singer, composer, drummer, and flutist. Bar was born in Morocco and came to Israel at the age of six. In 1977, against a background of social and cultural unrest in Israel, Bar founded a small ensemble which he called Ha-Breirah ha-T'ivit ("The Natural Selection"), whose very name hinted at the prevailing tensions. His first group included musicians of different origins: an American guitarist, an Indian Jewish violinist, and an Israeli-born Jew of Bokharian origin as contrabassist. They created an amalgamated, completely new style, dominated by his powerful personality. Bar supported the artistic ideals of the East in a broad sense, which stood in clear opposition to those of the West. In contrast to the complexity and sophistication of the architectonics of sound – the crowning achievement of Western musical art – Bar placed spontaneity at the center of his work, in improvisations characteristic of Eastern music. He created a style in which he integrated widely divergent musical traditions while endowing his work with a pervasive "Oriental" spirit. It thus represents a balance of stylistic plurality and stylistic fusion. From around the mid-1990s, the group evolved and changed, so that the music, like the group, came to represent a much greater range of cultures. The group made several tours, including trips to the U.S., Canada, and Europe, and participated in various international music festivals. Thus, Bar and some other musicians turned "Orientalization" into a conscious ideology, which reflected, in the field of music, the culturally as well as politically motivated aspiration to achieve "separate but equal" status for Oriental culture in Israel.

[Amnon Shiloah (2nd ed.)]

BARA, THEDA (**Theodosia Goodman**; 1885–1955), U.S. film actress. Born in Cincinnati, Ohio, Theda Bara was noted for her femme fatale roles. William Fox recognized her potential

and cast her in *A Fool There Was* (1915) under the name by which she came to be known as the foremost “vamp” of the silent screen. Among her other films were *The Devil’s Daughter* (1915), *The Serpent* (1916), *Heart and Soul* (1917), *The Forbidden Path* (1918), *Devil* (1918), *The Soul of Buddha* (1918), *When a Woman Sins* (1918), and *Lure of Ambition* (1919). However, of the more than 40 films she made from late 1914 through 1926, only three and a half remain.

Born in the wealthy, largely Jewish Cincinnati suburb of Avondale, Bara was close to her immigrant parents and siblings and had a happy childhood. Extremely intelligent and an avid reader, she attended college for two years. But she dropped out of school, dyed her blonde hair black, and set out to pursue her love of theater. Although she was not very successful on the Broadway stage, her role as the vampire in *A Fool There Was*, at the age of 30, made her an overnight success.

The first sex symbol for the masses, Bara was renowned for her portrayal of sinful, smoky-eyed women who lured proper husbands away from their wives, playing the relentless vamp in such films as *Sin* (1915), *Destruction* (1915), *The Vixen* (1916), and *The Rose of Blood* (1917). As the movie industry’s first fabricated movie star, publicists billed Bara as “The Serpent of the Nile,” who was born in the shadow of the Pyramids. They claimed that her first name was an anagram for “death” and her last name was “Arab” spelled backwards. Constantly being photographed with snakes, skulls, crystal balls, and opulent accouterments, Theda Bara epitomized evil at its most lavish. Because of her fatal allure for America’s husbands and her influence on young women, clergymen across the country regularly denounced her from their pulpits.

After a while, Bara began to demand better roles and succeeded in playing such heroines as Cleopatra (1917), Salome (1918), Carmen (1916), Juliet (1917), Madame DuBarry (1917), and Marguerite Gautier in *Camille* (1918). But her two favorite parts were the staunch Foreign Legion girl in *Under Two Flags* (1916) and the innocent Irish peasant in *Kathleen Mavourneen* (1919). However, her film career ended with the latter, as Irish and Catholic groups protested not only the way Ireland was depicted but also the fact that a Jewish actress had been given the leading role. The film was pulled out of circulation after several bomb threats and movie-theater riots.

Undaunted and unscathed, Bara married successful director Charles Brabin in 1921. The wealthy couple lived well and traveled widely; and when they were at home, Bara’s charm as a hostess and her skill as a gourmet cook made their Beverly Hills estate a haven for their friends in the film community. Bara wrote a memoir of her professional experiences entitled “What Women Never Tell,” but it was never published.

[Ruth Beloff (2nd ed.)]

BARACS, KÁROLY (1868–1929), Hungarian communal leader and bibliophile. Baracs, the maternal grandson of Immanuel *Loew, was born in Budapest, where he studied engineering. On the completion of his studies he entered the service of a railway company, eventually becoming manager, and was regarded as an outstanding expert on public transport in the country.

Baracs had broad humanistic interests and his home served as a center for intellectuals and men of the spirit. Before World War I he was one of the founders of the Radical Party in Hungary and an intimate of Count Michael Karolyi, who headed the republican revolution of 1918 and became the first president of the Republic. After World War I he began to interest himself in Jewish communal affairs, serving as president of the Buda Community Synagogue, the oldest in the capital, from 1921 to 1926. He was responsible for the establishment of the Pro Palesztina Szovettség (the Pro-Palestine Association), the purpose of which was, according to his definition, “to atone for the dissociation of contemporary [Hungarian] Jews from the work of upbuilding the Land of Israel.” Through his advocacy, his congregation, unlike others in Budapest, contributed to the Jewish national funds. He engaged in other pro-Zionist activity, although there was no official government sanction for this at the time.

Baracs was also active in other spheres of communal life, particularly higher education, and was a member of the directorate of the Budapest Rabbinical Seminary. He was a noted bibliophile, particularly of the works of Goethe.

[Baruch Yaron]

BARAITA, BARAITOT (Aram. בְּרִיתָא, pl. בְּרִיתוֹת), Aramaic for the Hebrew word *hizonah* (“external”) and an abbreviated form of the phrase *matnita baraita* – “external mishnah,” i.e., a tannaitic tradition which is not included in the Mishnah of Rabbi *Judah ha-Nasi (see *Mishnah). The term *baraita* occurs primarily in the Babylonian Talmud, where it is usually used in opposition to the Hebrew term *mishnatenu* or to the parallel Aramaic term *matnitin*, both meaning “our” Mishnah. The content of a given *baraita* may stand in opposition to the content of a parallel mishnah. Alternatively, it may provide additional information which supplements the tradition presented in the mishnah (Ber. 2b, Er. 2b). In this use, the term *baraita* is similar to the related Palestinian term *tosefet* (“addition” – see below). The content of a given *baraita* may in fact be unrelated to that of the mishnah under discussion, merely presenting another tradition for consideration (Ber. 34b). The term is sometimes used as a synonym for the general term *matnita* (Shab. 19b), without being juxtaposed to any particular mishnah at all. This more general sense is particularly characteristic of post-talmudic usage, where the term *baraita* is regularly used to designate any tannaitic source whatsoever.

ever – whether quoted in the *Talmudim*, or found in one of the original tannaitic works, like the *Tosefta, the *Sifra, *Sifrei, *Mekhilta, etc. In this sense, the *baraita* is often opposed to later and less authoritative traditions which derive from the amoraic period, which are usually referred to in the Talmud by the term *shemata* (tradition), or more rarely by the term *memra* (statement).

The term *baraita*, then, is used in a number of different ways, both within talmudic literature and in the post-talmudic commentaries. In order to minimize confusion, it will be necessary to clarify not only the meaning of the term itself, along with a number of related terms – *matnita*, *shemata*, *memra*, *tosefet* – but also the nature of the sources to which these terms refer, and particularly the way in which these sources function within the context of the talmudic *sugya* (discussion).

The Baraita as a Literary Source within the Talmudic Sugya

The vast literature of the Babylonian Talmud is made up of many distinct literary units, called *sugyot*. Taken as a whole, the Talmud is structured in the form of an elucidation and elaboration of the Mishnah of Rabbi Judah ha-Nasi, and the individual *sugya* usually takes the form of an extended commentary to, or discussion of, some particular mishnah. While the *sugya* as a finished literary unit usually has the appearance of a continuous and expansive dialectical discussion in Aramaic, one almost always finds embedded within it a number of discrete, relatively terse and well-defined literary sources, usually composed in rabbinic (mishnaic) Hebrew. These literary sources derive from the two primary historical periods of talmudic literature – the earlier tannaitic period (see *Tanna) and the later amoraic period (see *Amora). The Babylonian Talmud regularly distinguishes between its two primary types of literary source and employs certain terms in order to indicate this distinction.

An important terminological distinction is made between *matnita* (= tannaitic source) and *shemata* (= amoraic source). For example, in TB, Niddah 26a we are given a list of five related traditions, all terse and well-defined literary sources composed in identical rabbinic Hebrew. These five traditions are introduced by standard technical formulae, which indicate to which category they belong. The first tradition is introduced by the words *teno rabbanan*, two by the word *tanya*, and the last by the phrase “*teni Rav Ḥiyya*.” These four formulae all include a form of the verb “*teni*” – “to repeat,” “recite,” or “relate” – and they are all understood to indicate tannaitic traditions, or in the words of the Talmud: *matniyata*. Only one of the five is introduced by the formula *amar Rav Yoḥanan* (“Rabbi Johanan said”), and it is therefore to be understood as an amoraic tradition – a *shemata*, or a *memra* (from the verb *amar*, “to say”).

The continuation of this passage provides an important insight into the nature of the difference between these two categories. Following these five traditions, the Talmud provides a summary – more of their form than of their content – stat-

ing that three (!) of these five traditions are *matniyata*, and two (!) *shemata*. Now since four of the traditions were introduced by tannaitic formula, and only one was presented as an amoraic statement (*shemata*), the Talmud emends the wording of the fifth and final tradition, changing it from *teni Rav Ḥiyya* to *amar Rav Ḥiyya*. The only difference here is the change in the introductory formula from *teni* (= *matnita*) to *amar* (= *shemata*). In his commentary to this passage Rashi explains the difference between these terms: the words *teni Rav Ḥiyya* mean that Rabbi Ḥiyya related or transmitted the following tradition, whereas the wording *amar Rav Ḥiyya* indicates that Rabbi Ḥiyya was speaking in his own name, expressing his own opinion (*memra*), and not repeating an authoritative source (*matnita*).

From this we learn two important things. First, there is often no difference whatsoever between the actual wording of tannaitic and amoraic traditions. Secondly, the primary difference between the meanings of the verbs *teni* and *amar* lies in the fact that the former indicates the transmission of a received tradition, whereas the latter indicates that the rabbi whose name is linked to the tradition is expressing his own opinion and not reporting a received tradition. These two phenomena can, however, lead to certain ambiguities concerning the nature of the talmudic *baraitot*.

Baraitot and Memrot

First of all, the Talmud often introduces a given tradition by the following *double* formula: “Rabbi Abahu (or the name of some other *amora*) said and others report that it was recited as a *matnita*,” etc. This formula reflects the first fact mentioned above, namely that there is often no difference between the wording of tannaitic and amoraic traditions. As a result, an identical halakhic tradition may circulate both as a *shemata* in the name of a specific *amora* and at the same time also as a *matnita* – usually transmitted anonymously but sometimes in the name of a specific *tanna*.

Similarly, the use of the verb “*teni*” as the sole criterion for identifying ancient and authoritative tannaitic traditions is complicated by an ambiguity inherent in the meaning of the term as explained by Rashi above. According to Rashi, the verb “*teni*” indicates that a given rabbi is reporting a tradition, whereas the verb “*amar*” indicates that the rabbi is expressing his own opinion. But what happens when the disciples of an *amora* “report” his words – when the *amora*’s “own opinion” becomes a tradition? This situation is reflected in the common talmudic formula in which a form of the verb “*teni*” is used explicitly with regard to an amoraic tradition: *matni la leha shemata* = “they reported the following amoraic tradition.” This and other similar formulae reflect the obvious fact that amoraic traditions were also repeated, recited, studied, and transmitted alongside tannaitic traditions within the talmudic academies.

The Amoraic Baraita

When combined, these two phenomena give rise to a particularly difficult issue, namely, the amoraic *baraita*. We frequently

find in the Talmud that the verb *teni* is used in association with the name of an *amora*, for example: *teni Rav Yosef*. This specific formula occurs dozens of times in the Babylonian Talmud, and there are many other similar formula. Does this formula intend to introduce an ancient tannaitic tradition, preserved and transmitted in the school of Rabbi Joseph? Or alternatively does it intend to introduce a later post-tannaitic tradition, first formulated and recited within the school of Rabbi Joseph himself, or within the school of one of his teachers? We may still accept Rashi's distinction and assume that the use of the introductory term *teni* serves to designate a "tradition" preserved and transmitted by Rabbi Joseph or by his school, and to distinguish it from the individual opinion of the *amora* himself. It does not, however, provide clear evidence as to the historical roots of that tradition, whether it derives from the tannaitic period, or from the later amoraic period.

The Baraita as a Legal Category

An important distinction emerges from the previous discussion: between the *baraita* as a literary category and the *baraita* as a legal category. Up to this point we have dealt mostly with the *baraita* as a literary phenomenon – a distinct and well-defined source, usually in Hebrew, appearing in the talmudic discussion and introduced by certain standard formulae which indicate that it reports a received tradition. The term is also used in a more specific sense, to designate a tradition deriving from sources of the tannaitic period and hence presumably possessing a greater legal authority than similar sources deriving from the later amoraic period – a *shemata* or *memra*. In order to clarify this point, we must return to our discussion of the role that these sources play in the talmudic *sugya*.

The legal sources which provide the foundation for the talmudic *sugya* can be divided (using standard post-talmudic terminology) into three categories: mishnah, *baraita*, and *memra*. While the sources belonging to all three categories are considered to be authoritative, they are not equally authoritative. A mishnah is usually (but not always) held to be more authoritative than a parallel *baraita*. On the other hand, either a mishnah or a *baraita* – as a tannaitic source – is generally considered more authoritative than any parallel amoraic *memra*. This question of relative authority, however, only becomes relevant when these sources come into conflict with each other. Thus two sources of equal authority (e.g. two *baraitot* or two *memrot*) can be treated as mutually contradictory (*rumya, ramih*) for the purpose of talmudic analysis and interpretation, but one cannot be used to refute the other. A tannaitic source (a mishnah or a *baraita*), however, can be used to refute (*mativ, etive, tiyuvta*) the *memra* of an *amora*. Thus, in the case where there is no obvious way to resolve a contradiction between a *memra* and an alternative legal source, it becomes crucial to clarify whether that source is in fact a *baraita*, in the legal sense of an authoritative tannaitic source, or whether it is "merely" a *memra*, which the *amora* may dispute (cf. Git. 42b).

It is therefore significant that not all types of *baraitot* seem to possess equal authority in the context of the talmudic *sugyot*, as H. Albeck has shown in his classic study *Mehkarim ba-Baraita u-va-Tosefta* (1944), pp. 15–60. He especially singled out the *baraitot* associated with the names of *amoraim* mentioned above (and similar groups of *baraitot*), pointing out that they seem to possess little authority in the eyes of some *amoraim*, who felt free to disagree with them.

The Baraita as a Historical Source

Having distinguished between the *baraita* as representing a literary form and the *baraita* as representing a tradition deriving from sources of the tannaitic period, we will now introduce a second distinction – between the *baraita* as a *legal category* and the *baraita* as an *historical category*. This is an issue which has occupied scholars in recent years, especially Shamma Friedman, who has devoted a number of important studies to it (see Bibliography).

The legal authority of a talmudic *baraita* – the fact that it can be used to refute the *memra* of an *amora* – depends to a large extent on the presumption that the tradition it contains actually derives from the tannaitic period. Does this mean that a *baraita* found in the Babylonian Talmud, which reports the opinion of a rabbi of the tannaitic period and which clearly is accepted by the Talmud as authoritative, can be assumed to reflect the original views of that rabbi as they were first formulated in second century Palestine? The difficulty of this question is compounded by the fact that these talmudic *baraitot* often differ significantly in both form and content from the parallel versions of the same traditions found in earlier Palestinian tannaitic collections, such as the Tosefta, Sifra, Sifrei, etc.

One of the most influential views concerning this issue was elaborated by H. Albeck. Basing himself on the conclusions of his previous work, *Untersuchungen zur Redaction der Mishna* (1923), Albeck assumed that tannaitic sources – once they had received final redactional form – were not changed substantially, either with regard to their form or to their content. Significantly different versions of the same tannaitic halakhic source must therefore reflect ancient parallel traditions which developed independently in different tannaitic schools (see *Mishnah). Given that the form and the content of the *baraitot* in the Babylonian Talmud usually differ from the parallel halakhic sources found, for example, in the Tosefta, he concluded that the Talmud neither knew nor used the Tosefta as a source for its *baraitot*. From this it follows that the Talmud must have had access to alternative collections of tannaitic halakhic sources – all of which were subsequently lost (*Mehkarim ba-Baraita u-va-Tosefta*, 1944, 89–138).

A radically different understanding has emerged from the recent work of Shamma Friedman. In Friedman's view, "the *baraitot* in the Babylonian Talmud which have parallel versions in the Tosefta do not reflect a different tradition. On the contrary, they are very similar to their parallel texts in the Tosefta in content, order, language, and in structure. The dif-

ferences are by and large localized, and derive from redactional considerations. In other words, there is no justification for the assumption that the differences in these *baraitot* are ancient, nor that they preserve independent traditions which originated in the tannaitic period. The opposite is the case. They do not present alternative traditions, but rather redactional parallels” (*Tosefta Atiqta*, 78). This position has been substantially confirmed in numerous case studies, carried out both by Friedman and by his students, which have examined in detail the development of individual traditions, tracing the various steps through which original tannaitic traditions passed on the way to their final and often significantly different form as *baraitot* in the Babylonian Talmud sources.

This of course does not mean that the phenomenon of ancient independent traditions is not to be found in many individual cases. But it does mean that this phenomenon is not the only legitimate explanation for the existence parallel tannaitic texts, as Albeck would have us believe. As a result, we may have to reexamine the assertion, put forward by a number of scholars of the last century, that many alternative collections of tannaitic *baraitot* circulated in later talmudic times, since much of the evidence for this assertion is valid only if one accepts Albeck’s views regarding this issue. Friedman’s approach also has consequences for the historian, who may no longer use talmudic *baraitot* as direct and independent historical evidence for the state of rabbinic law and lore as they existed in second century Palestine, without first examining the redactional history of the tradition included in the *baraita*.

The Development of the Terms Baraita and Tosefet

The *baraita*, both as a literary and as a legal phenomenon, provided the foundation for the development of amoraic halakhic literature, from the very earliest literary levels of the Palestinian and Babylonian *Talmudim* to the very end of the amoraic period. At the same time, it is striking that the term itself only appears in the Babylonian Talmud, the sole exception being the case of the Jerusalem Talmud, Nid. 3:3, 50d. Even in the Babylonian Talmud, it is found almost exclusively in the words of Babylonian amoraim from the fourth generation onwards, as pointed out by Neil Danzig. Danzig suggested that the use of the term *baraita*, meaning “external mishnah,” as opposed to the more neutral term *matnita*, meaning “mishnah,” reflected the growing establishment of the Mishnah of Rabbi Judah ha-Nasi as the central and uniquely authoritative source of tannaitic *halakhah* in the later Babylonian academies, after an extended transitional period in which the various collections of tannaitic *halakhah* were accepted on a more equal basis. It remains questionable whether this transitional period, documented by J.N. Epstein (*Mavo le-Nusah ha-Mishnah*, 166–352), extended to the fourth generation of Babylonian *amoraim*. Moreover, the distinction between mishnah and *baraita* in the Babylonian Talmud is as often literary as legal, emphasizing the simple fact that a given tradition is part of the Mishnah of Rabbi Judah ha-Nasi – and so provides the literary foundation for a talmudic *sugya* – whereas some other tradition

is not part of this foundational literary work. It would seem that the acceptance of the Mishnah of Rabbi Judah ha-Nasi as a unique literary document for the purpose of study preceded its acceptance as a unique legal source of authoritative *halakhah* by several generations.

Moreover, there may be a connection between the use of the term *baraita* in later Babylonian rabbinic literature and the use of the term *tosefet* (“addition”) in earlier Palestinian rabbinic literature. In a number of places, tannaitic sources provide summaries of different categories of traditional study. Mishnah *Nedarim* (4:3), for example, mentions instruction in *mikra* (Bible) alongside instruction in *midrash*, *halakhot*, and *aggadot*. In another passage, *Tosefta Berakhot* (2:12) lists the same four categories of traditional study under two headings: the first category – *mikra* – is connected to the verb *likro* (= “to read”), while the other three (*midrash*, *halakhot*, and *aggadot*) are grouped together under the heading *mishnah* and connected to the verb *lishnot* (= “to recite”). In Palestinian rabbinic sources of the amoraic period (e. g. Tj, Hor. 3 5, 48c; Gen. R. 15, p. 147; Pesikta de-Rav Kahana 27, p. 405; cf. Ex R. 10, p. 225) we find similar lists, with the difference that the terms *tosefet*, *tosefot* have been added to the familiar list of tannaitic terms, *mikra*, *midrash*, *halakhot*, and *aggadot*. What is the significance of the inclusion of the term *tosefet* here, and how does it relate to the term *halakhot*, which was already a member of the original tannaitic list?

An answer to this question, as well as a possible connection to our term *baraita*, can be found in a midrash, which interprets the words of the Song of Songs (6:8): “There are sixty queens ... and there is no end to [the number of] handmaidens.” The version found in Song of Songs Rabbah (6 [9]:2) interprets the phrase “sixty queens” as a reference to the “sixty tractates of *halakhot*.” It then interprets the second phrase, saying: “there is no end to handmaidens – there is no end to *tosefot*.” When this tradition was restated in later midrashic collections (Num. R. 18:17, Tanḥuma Korah 12), the first interpretation was abbreviated to “sixty tractates” (an obvious reference to the sixty tractates of the Mishnah of Rabbi Judah ha-Nasi); and the second interpretation was reformulated in the following words: “And there is no end to handmaidens – *mishnah ḥizonah*.” As mentioned above, *mishnah ḥizonah* is the Hebrew translation of *matnita baraita*, and was one of standard ways of referring to *baraitot* in the early post-talmudic period (the period to which these late midrashic collections belong). It would seem therefore that the Palestinian term *halakhot* refers to the Mishnah of Rabbi Judah ha-Nasi, while the term *tosefot* (“additions”) refers to that body of supplementary tannaitic *halakhot*, which is commonly referred to in the Babylonian Talmud by the term *baraitot*.

One additional factor may also have influenced the use of the term *baraita* in the Babylonian Talmud in place of the earlier Palestinian term *tosefet*. At some point in the development of the Babylonian talmudic tradition, the term *tosefet* – or more precisely its Aramaic equivalent *tosefta* – came

to refer to a particular corpus of supplementary halakhic traditions (Meg. 28b, Kid. 49b, Sanh. 86a, Shavu. 41b), or perhaps even a particular literary work – like our Tosefta (see *Tosefta). As a result it may no longer have been able to serve as a “generic term” – as the name for an entire category of individual literary sources as well as a name for the individual sources themselves.

[Stephen G. Wald (2nd ed.)]

BARAITA DE-MELEKHET HA-MISHKAN (On the Building of the Tabernacle), ancient collection containing 14 chapters, giving a description of the building of the Tabernacle. The *baraita* is quoted by early authorities, including Hai Gaon, Rashi, the tosafists, and Naḥmanides, under the name *Baraita de-Melekhet ha-Mishkan* or *Mishnat Melekhet ha-Mishkan*. It is written in mishnaic Hebrew and contains practically no later additions. The sages quoted in it are *tannaim*, the latest of them being Judah ha-Nasi and his contemporaries. Extracts from it are cited in the amoraic literature. It was therefore evidently compiled at the same time as the other *beraitot*, i.e., after the close of the Mishnah but before that of the Babylonian Talmud. The chapter arrangement is as follows: chapter 1 – the dimensions of the Tabernacle, its boards, their appearance and arrangement; 2 – the curtains of *tekhelet* (blue), their preparation and the manner in which they were placed over the Tabernacle; 3 – the curtains of goats' skins and the other covers of the Tabernacle – the rams' skins dyed red and the *taḥash* (unidentified animal mentioned in the Bible) skins; 4 – the weaving of the veil and the screen at the entrance; 5 – the court of the Tabernacle; 6 and 7 – the ark of the covenant and the tablets which it contained; 8 – the table and the showbread; 9 and 10 – the candelabrum, its construction and manner of kindling; 11 – the altar of incense and the altar of burnt offerings; 12 – the laver; 13 – the work of the levites in the Tabernacle and the Israelite encampments in the wilderness; 14 – the clouds of glory. The priestly garments are not treated at all. Extracts from *Baraita de-Melekhet ha-Mishkan* are included in the *Baraita of 49 Rules*. Some are even of the opinion that the last two chapters, in which the aggadic element is considerable, originally belonged to the *Baraita of 49 Rules* (L. Gruenhut, *Sefer ha-Likkutim*, 2 (1898), 11–13). The *baraita* was first published in Venice in 1602, and a critical edition was published in 1908 by Meir Ish Shalom (Friedmann),

on the basis of various manuscripts and editions, together with an introduction.

[Yitzhak Dov Gilat]

In 1992 Robert Kirschner published a new critical edition of *Baraita de-Melekhet ha-Mishkan*, based on early medieval manuscripts and *genizah* fragments, along with an introduction and translation. He raised a number of new issues and reexamined a number of old ones. The genre to which this work belongs is particularly problematic. On the one hand, it is similar to the literature of the Mishnah, in that it is organized by topic. On the other hand, it is closely tied to the biblical description of the Tabernacle and is concerned with the explication of the biblical text. It is somewhat similar to certain extended passages in tannaitic literature which restate biblical events and institutions. As a whole, it must be viewed as a unique synthesis, or hybrid, of these literary forms. Kirschner also reopened the question of its date of composition. He examined the character of the mishnaic Hebrew in which it is composed, the exegetical terminology it employs, the tradents quoted in it, and compared the text of the work to parallel passages found in rabbinic literature. Kirschner's conclusions confirm the view that the *Baraita de-Melekhet ha-Mishkan* is essentially an authentic work of the tannaitic period.

BARAITA DE-NIDDAH, ancient work on ritual purity of sectarian character, already known in the early geonic period. It is mentioned in *Sefer ha-Mikza'ot* (cited in Aggur, sect. 1, Or Zaru'a esct. 360), and in Naḥmanides' commentary (Gen. 31:35), and is referred to by German-French talmudists of the 13th century, who were probably only indirectly acquainted with it in a fragmentary fashion and were not clearly aware of its sectarian nature. It was published in 1890 by C.M. Horowitz. The *baraita* consists of *aggadah* and *halakhah* concerning the biblical and post-biblical laws of the menstruant woman (*niddah*; Lev. 15:19–33). There is no mention of any Babylonian scholars and the chronology of *tannaim* and *amoraim* is ignored. The tendency of the *baraita* is to oppose the lenient rulings of the school of *Hillel and of R.*Akiva. The account in the Talmud (Er. 13b; TJ, Ber. 1:7, 3b) of a heavenly voice deciding in favor of the Hillelites is rendered in the *baraita* as follows: “Blessed be the strict. Both [Hillel and Shammai] speak the words of the living God; but we must regulate ourselves according to the teachings of the School of Shammai” (Horowitz, p. 21).

The *baraita* lays special stress on the laws of ritual cleanliness, particularly with regard to food. B.M. Lewin (*Metivot* (1933), 108–12) points out that the stringencies referred to have no basis in the Talmud, but did exist among Jews in Ereẓ Israel. S. Lieberman, however, maintains that although some of the

passages are difficult to understand and were not accepted as *halakhah*, a talmudic basis can be found for them (*ibid.*, addition to paragraph 78, p. 115–8). He is of the opinion that the laws concerning ritual cleanness and uncleanness contained in the *baraita* come from a rabbinic source in Erez Israel and not from the Samaritans or the Sadducees. There appears to have been a section of the community in Erez Israel that laid great stress on the laws of cleanness, as is reflected in Samaritan literature. It is possible that this *baraita* originated within such a framework. However, there may also be Sabaeen influences reflected in it. Thus, Maimonides, who rejects several of the rulings listed in it, describes customs of the late Zoroastrians (Guide 3:47) which bear definite affinities to some customs mentioned in the *baraita* (cf. W.W. Malandra, *An Introduction to Ancient Iranian Religion*, 1986, pp. 173–75). Its exact authorship and date of composition remain uncertain to the present day.

[Michael James Goldman / Daniel Sperber (2nd ed.)]

BARAITA OF 32 RULES, *baraita* giving 32 hermeneutic rules to be used in the aggadic interpretation of Scripture. Rashi makes frequent use of the *Baraita of 32 Rules* in his commentaries on the Bible and Talmud, referring to it by this name or as the *baraita* of Yose b. Eleazar, the Galilean. Until the 19th century it was known only from being quoted in the 14th century *Sefer Keritot*, the methodological work of *Samson b. Isaac of Chinon.

The *baraita* now appears at the beginning of the *Midrash Mishnat R. Eli'ezer* (discovered and published by H.G. Enelow (1933), 10ff.); and at the beginning of *Midrash ha-Gadol* to Genesis (ed. by M. Margaliot (1947), 22ff.). Although ascribed to Yose b. Eleazar, who lived about 150 C.E., many examples of the application of its rules are attributed to later *tannaim* and even to the *amoraim* Johanan, and Yose b. Hanina. It is therefore probable that the original *baraita* merely listed the rules, the examples being added later as a kind of *Gemara*. The *Midrash ha-Gadol* version contains the introductory statement, "These are the rules whereby the *aggadah* is to be understood," clearly indicating that these rules were to be applied only to the *aggadah* and not to the *halakhah*. The *baraita* deals mainly with the syntax, style, and subject matter of Scripture, and after each rule gives one or more examples of its application. Although the 13 halakhic rules of R. Ishmael (see *Hermeneutics) are included in the *baraita*, all the examples given are taken from aggadic passages, even Ishmael's rules being applied with less rigor. Under *ribbui* ("addition") for instance, the example given is that the word "and" in Genesis (Gen. 21:1) teaches that all the barren women in the world were blessed with children at the same time as Sarah. The word "also" in "I also saw in

my dreams" (Gen. 40:16) teaches that in addition to his own dream the chief baker saw in his dream the interpretation of the chief butler's dream. Some of the rules are almost word games. Number 29 is *gematria* computing the numerical value of words. The numerical value of Eliezer, servant of Abraham, for instance, is 318. Hence, it is inferred that when Abraham went to war with 318 men to save Lot (Gen. 14:14) the reference is to Eliezer only. Number 30 is *atbash*, the substitution of the last letter of the alphabet for the first, of the penultimate letter for the second, etc. Thus לָב קָמִי (Lev-Kamai; Jer. 51:1) becomes מִשְׁדֵּימ (Kasdim; Chaldees). Number 31 is *notarikon*, the interpretation of each letter of a word or its breaking up as an anagram or acrostic. Thus אַבְרָהָם (*avrekh*; "Abrech") applied to Joseph (Gen. 41:43) becomes the two words *av* ("father," in wisdom), and *rakh* ("tender" in years), describing the qualities of Joseph. Lieberman points out that some of these eccentric methods of interpreting texts were common literary devices among the Greeks, and were also used by them and by the rabbis in the interpretation of dreams. Being current literary devices, they were well-known and used by the rabbis both in aggadic interpretation and in finding some support in the biblical text for a decision. They were never used however, to derive halakhic decisions from the text. Lieberman finds support for this view in an anonymous Midrash, appended to the *Baraita of 32 Rules* in the *Midrash ha-Gadol*. Commenting on "For a dream cometh through a multitude of business" (Eccles., 5:2), the author says, "If the contents of dreams, which have no effect, may yield a multitude of interpretations, how much more then should the important contents of the Torah imply many interpretations in every case."

[Barnet David Klien]

BARAK (Heb. בָּרַק; "lightning"), Israelite military commander during the period of the Judges (Judg. 4–5), son of Abinoam, from Kedesh in Naphtali. It appears that Barak was well-known as a capable military leader before the prophet *Deborah encouraged him to go to battle against King *Jabin of Hazor. For this purpose Barak succeeded in organizing people mainly from his own tribe of Naphtali, along with warriors from the tribe of Zebulun. After mustering his forces on Mount Tabor, he advanced toward the vicinity of the Wadi Kishon, where the battle was waged under his command; in the ensuing battle, the army led by *Sisera, Jabin's military commander, was utterly routed.

There is no biblical datum available as to the nature and activities of Barak either before or after the aforementioned war. He is neither portrayed as endowed with the spirit of the Lord nor described as a judge. Because of a possible similarity in meaning between his name, Barak, and that of Deborah's husband, Lappidoth, some of the medieval commentators identified the two (David Kimḥi and Levi b. Gershom;

cf. *Midrash Yalkut Shofetim*, 42). However, this is not borne out by the context.

[Yehoshua M. Grintz]

BARAK, AHARON (1936–), Israeli jurist. Barak was born as Arik Brik in Kaunas (Kovno), Lithuania, where he was raised as a child and survived the horrors of World War II. During the war the Brik family lived in the ghetto. In 1943 his parents arranged for the six-year-old boy to escape the ghetto and stay with a family of Lithuanian farmers until the end of the war, when his family was reunited again. Shortly after the war, the Brik family planned to immigrate to Mandatory Palestine. After a long journey through Poland, Romania, Hungary, and Austria, it settled eventually in Rome, Italy, where Aharon attended formal school for the first time in his life. In 1947 the family finally immigrated to Israel and settled in Jerusalem, where Barak completed his elementary and high school education. While attending the Bet ha-Kerem high school, Barak met his future wife, Elisheva (later deputy president of Israel's National Labor Court). Upon the completion of his high school studies, Barak was selected to do his compulsory military service at the Academic Reserve (a military unit combining university studies with active military duty) and went on to study law, economics, and international relations at the Hebrew University of Jerusalem. During his military service, Barak completed a combat officers' course and received the rank of lieutenant. Between the years 1958 and 1963, he completed his LL.B., LL.M. and Ph.D. at the HU, followed by appointments there as lecturer in civil law (1963). In 1968 Barak was appointed associate professor of law and in 1974 full professor. Barak was also awarded the Israel Prize for law in 1974.

In the early 1970s Barak served as legal adviser to the UN Committee on International Trade Law. In 1974 he was appointed dean of the Hebrew University Law Faculty. A year later, however, Barak's career took a sharp turn when he was appointed attorney general and legal advisor to the government of Israel. Not only had Barak assumed public office but he also had to master public and criminal law. During Yitzhak *Rabin's first term as prime minister of Israel (1974–77), Barak was officially involved in several political affairs that turned out to be instrumental in bringing down Rabin's coalition and paving the way for the first transfer of power in Israel's history, in the elections of 1977. Barak had backed a series of investigations on charges of corruption involving the government's candidate for governor of the Bank of Israel, an acting minister, and finally the prime minister himself. When faced with the prospect of criminal charges for maintaining an illegal foreign bank account, Prime Minister Rabin resigned on the eve of the 1977 elections, thus providing the final blow to Labor's chances of retaining power. During that stormy period Barak had introduced into the legal culture the term "Buzaglo Test," a phrase pertaining to the principle of impartial

equality before the law for ordinary people and influential officeholders alike.

Barak then served for another year as attorney general under newly elected Prime Minister Menachem Begin. During that time he was also a member of the Israeli delegation to the Camp David talks with Egypt in September 1978. Despite his resignation from the office of attorney general upon his return to Israel and his appointment as a justice of the Supreme Court of Israel, during the negotiations on the peace treaty with Egypt in October 1978, he was asked yet again by the government to join the negotiating team and special permission for this purpose was granted by the minister of justice and the president of the Supreme Court. In this role Barak proved to be a key figure in reaching and drafting the peace agreement with Egypt.

As a Supreme Court justice, Barak served on many public committees, the most notable one being the *Kahan Commission created in September 1982 to investigate Israel's involvement in the 1982 massacres at the Sabra and Shatilla refugee camps in Lebanon. The Kahan Commission found that no Israeli was "directly responsible" for the massacre, but determined that Defense Minister Ariel Sharon bore "personal responsibility." It ruled that he was negligent in ignoring the possibility of bloodshed in the camps following the assassination of Lebanese leader and president-elect Bashir Jumayyil on September 14, 1982.

As one of the youngest justices ever named to the Israel Supreme Court, Barak became the most influential figure in Israeli jurisprudence, creating new legal doctrines and becoming the object of praise and attack from different quarters in Israeli society. Barak's contention that every human dilemma can be answered by a legal doctrine led to the development of several such doctrines that gradually expanded the Court's powers of review. One judicial doctrine which played an important role in the expansion of the Court's review was the doctrine of *reasonableness*: In HC 389/80 Barak drew the lines of reasonableness as an independent standard, ruling that an administrative act may be invalidated if it is unreasonable. This legal doctrine was later used to strike down a government decision to appoint to a high post a senior ex-Secret Service officer who had been granted a pardon for his part in a cover-up related to the deliberate killing of two captured terrorists (HC 6163/92). By exercising this measure of reasonableness, the Court also forced the resignation of a cabinet minister who maintained the right to remain silent during a criminal investigation (HC 3094/93).

Barak was the driving force in lowering the standing requirement that served as a barrier preventing citizens from petitioning the High Court of Justice. In the landmark Ressler case (HC 910/86), the Court affirmed the existence of the "public petitioner," providing that whenever a petition raises an issue of constitutional merit, or when there is suspicion of serious executive violations of the principle of the rule of law, *any* person is entitled to bring the petition into court, *regardless* of one's personal standing or interest in the outcome

of the litigation. In writing the Court's decision Barak also referred to the legal question of *judicability*, and outlined a legal theory that would haunt him in later years: "...Any [human] action is susceptible of determination by a legal norm, and there is no action to which there is no legal norm determining it."

Barak proved to be the mastermind in a series of decisions in the mid-1980s and early 1990s that redefined the power relations between the branches of government and established the Supreme Court as a key institute of Israeli politics. The initial success, however, brought with it political resentment against the court. Barak became the target of *ad hominem* attacks uniting all forces that resisted limits on political autonomy and the increased involvement of the Supreme Court in public affairs. These attacks intensified after the passage of two Barak-supported basic laws in 1992 that pertained to human rights (Basic Law: Freedom of Occupation and Basic Law: Human Dignity and Freedom). In his academic writings Barak defined this new legislation as a "constitutional revolution," thereby alarming the conservative and religious parties that traditionally resisted the adoption of a formal constitution. Those attacks have intensified following Barak's involvement in two court decisions viewed by many as interference with religious authority: In the Bavli case (HC 1000/92) Barak ruled that the Higher Rabbinical Court acted outside its jurisdiction by not applying a state law giving equal property rights to women and men in a case of divorce. Later, in the Danilowitz case (HC 721/94), Barak sat on the panel that granted the same-sex partner of an El Al male flight attendant the same privileges the company accorded the spouses of its other employees. Knowing that according to seniority, Barak was about to assume the office of president of the Supreme Court, personal attacks against him and against the alleged judicial activism of the Supreme Court became a common feature of Israeli public life, thereby eroding the Court's image as an institution standing over and above everyday political "squabbles." Barak received the appointment as president of the Supreme Court of Israel in 1995. During his term as president, the court turned out to be less active than before, showing more restraint and caution in political matters. Yet Barak was involved in several major decisions, among them the Ka'adan case (HC 6698/95), which accorded Israeli Arabs the same rights accorded to Jews to live on a communal settlement located on state land; the decision to outlaw torture during security-related investigations (HC 5100/94); a decision to release Lebanese detainees imprisoned in Israel as "bargaining chips" for securing the safe return of an Israeli air force navigator (Ron *Arad) captured on a combat mission (FH 7048/97); and redrawing the lines of the security fence in the West Bank (HC 2056/04) by taking the approach that the army's discretion related to lands under "belligerent occupancy" is not unlimited and that the fence's route must balance security considerations against the needs of local residents.

While serving as the president of the Supreme Court and head of the Judiciary, Barak continued to be active in

academic writing, publishing numerous books and articles including several volumes in a series of books on "Interpretation in Law." "The Judge in a Democracy" (Heb.) was published in 2004.

Aharon Barak was a member of the Israeli Academy of Sciences and the American Academy of Sciences.

[Menachem Hofnung (2nd ed.)]

BARAK, EHUD (1942–), Israeli military commander and politician; member of the Fourteenth and Fifteenth Knessets and prime minister of Israel. Barak was born in Kibbutz *Mishmar ha-Sharon. He joined the IDF in 1959, beginning his military service in the Armored Corps. In the Six-Day War he fought as the commander of a reconnaissance unit and a year after the war received his B.Sc. in physics and mathematics from the Hebrew University of Jerusalem. From 1971 to 1973 he served in the legendary special forces unit at GHQ and was appointed its commander. In May 1972 he commanded the rescue operation to free the passengers of a Sabena plane that had been hijacked by members of Black September and landed at Lydda Airport. In the Yom Kippur War Barak commanded an armored battalion that fought on the southern front in the Sinai. In 1976 he was one of the planners of the Entebbe Operation, which freed the Jewish passengers of an Air France flight hijacked to Uganda, after all the non-Jewish passengers had been released by the hijackers.

Barak was promoted to the rank of major general in 1981 and became head of the Planning Branch of the General Staff. During Operation Peace for Galilee he served as deputy commander of the unit that fought in Baka'a. In 1983 he was appointed head of the Intelligence Branch, and in February 1986 commander of the Central Command. In 1987 he completed a second degree in systems analysis from Stanford University in California and in the same year was appointed deputy chief of staff under Dan *Shomron, serving four years. In 1991 Barak became Israel's 14th chief of staff, serving in that capacity until 1995. Though he did not participate in the Oslo talks, he was reported to have had reservations about the agreement reached with the Palestinians. After the signing of the Declaration of Principles in September 1993, he dealt with the implementation of the security arrangements and the redeployment of the IDF. Before leaving active service he met his Syrian counterpart twice in Washington. By the end of his military service Barak was the most highly decorated officer in the IDF.

After the mandatory six-month cooling-off period, Barak was appointed minister of the interior in *Rabin's government, and after Rabin's assassination was appointed by Shimon *Peres as foreign minister in his government. Barak was elected to the Fourteenth Knesset, and on June 4, 1997, won the Labor primaries for party leadership. In the elections to the Fifteenth Knesset and the premiership in 1999, Barak won a decisive victory over Binyamin *Netanyahu as head of the One Israel list, which included the Labor Party, Gesher, and Meimad. He set up a coalition that included *Meretz, *Shas,

the Center Party, Natan *Sharansky's Yisrael be-Aliyah, and the *National Religious Party.

Barak fulfilled his election promise to take the IDF out of Southern Lebanon within a year of being elected prime minister. However, his attempts to reach a permanent settlement with Syria failed. Despite his willingness to make far-reaching concessions to the Palestinians, talks held with Yasir *Arafat under the auspices of President Bill Clinton in Camp David in July 2000 failed, and the second *intifada* broke out in the beginning of October. However, as a result of his willingness to reach an agreement with the Palestinians on the basis of far-reaching territorial concessions, Shas, the NRP, and Yisrael be-Aliyah left the government. Consequently Barak resigned and new elections for the premiership were held in February 2001, with Barak suffering a crushing defeat by Ariel *Sharon. After considering the possibility of joining Sharon's new government, Barak resigned from leadership of the Labor Party and his Knesset seat, deciding to take time out from political activity. In the beginning of 2004 he indicated that he was planning to make a political comeback towards the elections to the Seventeenth Knesset.

[Susan Hattis Rolef (2nd ed.)]

BAR-AM, MICHA (1930–), Israeli photographer. Born in Berlin, Bar-Am immigrated with his parents to Palestine in 1936. He joined the Haganah and the Palmah, and after the War of Independence became a member of kibbutz Malkiyyah and later of kibbutz Geshar ha-Ziv. Bar-Am began his photographic work with the 1954 archeological expedition to the Judean Desert led by Yigael *Yadin. His next large photographic venture, during the Suez Campaign in 1956, led to his first book of photographs, *Across Sinai*. This was followed by a nine-year engagement as staff photographer with the Israel army weekly *Ba-Mahaneh*. In 1967 Bar-Am covered the Six-Day War with Cornell *Capa, and later was associated with the prestigious Magnum Agency. From 1968 he was a regular contributor to the *New York Times*. In 1974 Bar-Am embarked on a new phase of work in photography as curator and photo-historian, first at the Israel Museum in Jerusalem, and from 1977 until 1992 with the Tel Aviv Art Museum, where he staunchly promoted Israeli photography. He also established the first photography department at the Israeli Museum. His works are exhibited in various museums, such as the Israel Museum, Tel Aviv Museum, and Museum of Modern Art in New York. In 2003 he was awarded the Israel Prize.

Perhaps Israel's most prominent contemporary photographer, Bar-Am had his pictures praised for values that extended beyond reportage and photojournalism into the world of esthetic journalism. According to one critic, "Bar-Am's bromides transcend the realistic aspect of photography by wrapping the event into a comprehensive esthetic package." Another point of synthesis in Bar-Am's work was related to the particular conditions of his work and existence. The *New York Times* called him "a deeply committed Israeli and a fiercely independent journalist." Bar-Am expressed concern about being pigeonholed as a "combat photographer," being deeply interested in human beings and their behavior. He sought to take photographs that contain all the information related to a certain event but that are also elevated above the event.

Bar-Am was a brilliant student of world photography and succeeded in assimilating its achievements despite his lack of formal photographic education. He created his own unmistakably recognizable personal style. This transmits a strong sense of directness, an intuition for immediacy as well as for formal compositional qualities. His pictures prove that in photography a work of art maintains its umbilical link to its original context.

[Yeshayahu Nir]

BARAM, MOSHE (1911–1986), Israeli politician. Baram was born in Zdolbunov in Russia. As a boy, he joined the *He-Ḥalutz and the Freiheit Dror movement connected to *Po'alei Zion, and immigrated to Palestine in 1931, settling in Jerusalem. Baram was employed as a construction worker and was active in the *Histadrut and the *Haganah. In 1934 he started to work in the *Jewish Agency and in 1938 became a member of the Secretariat of the *Mapai branch in Jerusalem, becoming secretary in 1943. In 1944 he was a delegate to the Fourth Elected Assembly of the *Yishuv*. During the War of Independence he was a member of the Emergency Commission and of Haganah Headquarters in Jerusalem. In 1948 he was appointed secretary-general of the Jerusalem Labor Council and in 1955 was elected to the Jerusalem Municipal Council, serving as chairman of the coalition executive. Baram was first elected to the Fourth Knesset in 1959 and was appointed chairman of the Knesset Labor and Welfare Committee. In the Sixth Knesset he served as chairman of the Coalition Executive, chairman of the Unemployment Insurance Commission, and head of the Jerusalem branch of the Labor Party. In 1974 Baram was appointed minister of labor in Rabin's first government, holding this position until the elections in May 1977. In the government he chaired the Ministerial Committee on Wages and the Inter-Ministerial Committee on Employment. In 1975, despite Histadrut opposition, he introduced the Work Sanctions Bill.

Moshe Baram's eldest son, Uzi *Baram, was a member of the Ninth to Fifteenth Knessets for the Israel Labor Party.

[Susan Hattis Rolef (2nd ed.)]

BARAM, UZI (1937–), Israeli politician. Member of the Ninth to Fifteenth Knessets. Born in Jerusalem and the son of Moshe *Baram, Uzi Baram studied political science and sociology at the Hebrew University of Jerusalem. In 1964–65 he was chairman of the Mapai National Students Union and in 1965 was one of the founders of the Young Guard in Mapai, serving as its secretary general in 1968–70. In 1970–72 Baram was responsible for the emigration of academics from North America in the Jewish Agency offices in New York and in 1972–74 he was chairman of the Future Generation Section in the Jewish Agency. In 1975–77 he was secretary of the Jerusalem Branch of the Labor Party. Baram was first elected to the Knesset in 1977. In the Tenth Knesset he served as chairman of the Knesset Immigration and Absorption Committee, and in the years 1984–89 as secretary general of the Labor Party, fighting for the internal democratization of the Labor Party and the adoption of primaries for the election of its leaders, Knesset list, and candidates for mayor. In 1984 Baram tried to get former President Yitzhak *Navon to run for the Labor Party leadership against Shimon *Peres, but was unsuccessful. In 1988 he fought against Labor's entry into another National Unity Government under Shamir, believing that under the changed circumstances Labor would suffer ideologically and electorally. Baram, who supported Yitzhak *Rabin in his leadership contest against Peres, was appointed minister of tourism in the government Rabin formed after the elections. He strongly supported the Oslo Accords. He served briefly as minister of the interior in 1995 but resigned for personal reasons. In the primaries for the Labor list towards the elections to the Fourteenth Knesset, Baram was unexpectedly elected to first place on the list after Shimon Peres. After Peres' defeat in the elections, Baram was one of those who demanded his resignation. He considered running for the party leadership, but finally decided not to and supported Ehud *Barak in the 1997 Labor leadership contest. He was not, however, appointed to a ministerial position in Barak's government. Like many other promising Labor politicians of his generation, Baram became disenchanted with developments in the party and decided to leave active politics towards the elections to the Sixteenth Knesset. Subsequently he was regularly invited by the media to act as a political commentator.

[Susan Hattis Rolef (2nd ed.)]

BARANGA, AUREL (**Leibovici**; 1913–1979), Romanian playwright and poet. Born in Bucharest, Baranga qualified as a physician and first published poems in the avant-garde review *Unu* (1928–32). In 1930–31 he edited *Alge*, a journal that cultivated the absurd. Later he wrote for the left-wing press. After World War II Baranga devoted himself entirely to writing; he became a reporter and wrote poems. When Romanian Nazis were put on trial in Bucharest in 1945, he was among the first to make the Romanian public aware of the full extent of Nazi crimes. His articles on the deportation of Romanian Jews to the Transnistria concentration camps were col-

lected in *Ninge peste Ucraina* (Snow Falls over the Ukraine, 1945, 1946)

It was, however, in the theater that Baranga increasingly displayed his creative talents. From 1947 he wrote many stage successes, some of which were translated into English, French, Russian, and Chinese. Among them are *Iarba rea* (The Ill Weed, 1949), *Mielul turbat* (The Rabid Lamb, 1953), *Reteta fericitiei* (Recipe for Happiness, 1957), *Sfantul Mitica Blajinul* (Saint Demeter the Kind-Hearted, 1965), *Opinia publica* (Public Opinion, 1967), *Simfonia patetica* (The Pathetic Symphony, 1969), *Travesti* (The Mask, 1968) and *Farsa infernala* (The Infernal Farce, 1969). These advocate a society based on the author's ethic of humanistic socialism and satirize Romanian inertia, bureaucracy, old-fashioned ideas, and insincerity. *Opinia publica*, which ran for a year in Bucharest, satirized "socialist realism" and parodied the Communist political trial, though it is evident that his satiric plays were written, performed, and published with the consent of the Communist Party, since Baranga was a privileged person. Nevertheless, his plays were popular with Romanian youth. Twice the winner of Romania's state prize for literature, Baranga was assistant director of the Bucharest National Theater, and coeditor of the periodical *Viata Romaneasca* (Romanian Life). In 1968 he published the verse collection *Poezii*. Some plays and verses contain "Jewish" allusions: a character speaks Yiddish, a poem is called *Kadis* (Kaddish), a play contains an allusion to the Six-Day War favorable to Israel.

[Dora Litany-Littman / Lucian-Zeev Herscovici (2nd ed.)]

BARANOVICHI (Pol., **Baranowicze**), capital of Baranovichi district, Belarus (from 1921–39 in Poland). After Baranovichi became a railroad junction at the end of the 19th century, Jews from the surroundings began to settle there without official permission (see *Russia). In 1897 the Jewish community of Baranovichi, then still a village, numbered 2,171 (total population 4,692). Jewish domicile was authorized in 1903 and the community rapidly expanded. In 1921 there were 6,605 Jews (57.5% of the total population). They were employed in the lumber, resort, and food industries.

After World War I Baranovichi became the center of residence of the *admorim* (hasidic rabbis) of the *Koidanovo and *Slonim dynasties. Educational institutions included Hebrew and Yiddish schools and two large yeshivot. Six Yiddish weeklies were published in Baranovichi between 1928 and 1939. The Zionist parties and youth movements and the Bund were very active. A kibbutz training center, Shahariyyah, of the He-Ḥalutz movement, was established near the city. In 1931 the Jewish population was 9,680. Jewish communal and cultural activities ceased and the economy was nationalized when Baranovichi became part of the U.S.S.R. in 1939. Jewish

party activists and wealthy industrialists and merchants were exiled into the interior of the Soviet Union.

[Yehuda Slutsky]

Holocaust Period

On the eve of the Holocaust, 12,000 Jews lived in Baranovichi. Under Soviet rule (1939–41), Jewish community organizations were disbanded and any kind of political or youth activity was forbidden. Some youth groups organized flight to Vilna, which was then part of Lithuania, and from there reached Palestine. The Hebrew Tarbut school became a Russian institution. A Jewish high school did continue to function, however. In the summer of 1940 Jewish refugees from western Poland who had found refuge in Baranovichi after September 1939 were deported to the Soviet interior. When Germans captured the city on June 27, 1941, 400 Jews were kidnapped, leaving no trace. A *Judenrat was set up, headed by Joshua Izikzon. The community was forced to pay a fine of five kg. of gold, ten kg. of silver, and 1,000,000 rubles. The ghetto was fenced off from the outside on Dec. 12, 1941. The ghetto inhabitants suffered great hardship that winter, although efforts were made to alleviate the hunger. The Jewish doctors and their assistants fought to contain the epidemics. On March 4, 1942, the ghetto was surrounded. In a *Selektion* carried out by the Nazis to separate the “productive” from the “nonproductive”, over 3,000 elderly persons, widows, orphans, etc., were taken to trenches prepared in advance and murdered. Resistance groups, organized in the ghetto as early as the spring of 1942, collected arms and sabotaged their places of work. Plans for rebellion were laid, but the uprising never came to pass, partly due to German subterfuge. In the second German *Aktion* on Sept. 22, 1942, about 3,000 persons were murdered. On Dec. 17, 1942, another *Aktion* was carried out, in which more than 3,000 persons were killed near Grabowce. Baranovichi was now declared **judenrein*. At the end of 1942 Jews were already fighting in groups among the partisans. A few survivors from the ghetto were still in some of the forced labor camps in the district, but most of them were liquidated in 1943. On July 8, 1944, when the city was taken by the Soviet forces, about 150 Jews reappeared from hiding in the forests. Later a few score more returned from the U.S.S.R.

[Aharon Weiss]

Postwar Period

In 1954 a monument was erected in the city as a memorial to the Jews murdered by the Nazis. Later it was destroyed and in its place a public latrine was built. The big synagogue was confiscated by the authorities, leaving a small one for the 3,000 Jews (1969 estimate). Most of the Jews emigrated in the 1990s. Societies of emigrants from Baranovichi function in Israel, the U.S.A., Argentina, Chile, and South Africa.

BARANOWICZ, DAVID ELIEZER (1859–1915), Hebraist. Baranowicz, who was born in Vilna, lived in great poverty. He wrote several books on Hebrew grammar which were well received and published in several editions. He wrote the following books: *Orah Selulah le-Dikduk Sefat Ever* (1883) on Hebrew grammar with an appendix in Yiddish on vocalization; *Luhot ha-Pe'alim* (1889); *Kunteres Yefalles Nativ* (1909), which is an abridgment of his major unpublished work by the same name containing a critique of the Hebrew grammarian Koestlin's *Sefer ha-Maslul* (“Book of the Path”) and of the methods of the ancient Hebrew grammarians; *Derekh Hadashah le-Ve'ur Kitvei ha-Kodesh* (“A New Way to Explain the Holy Scripture,” 1910), a commentary on the Scriptures based upon a grammatical approach. His best-known works are *Messibbot ha-Shem* (“Rules of the Noun”) and *Messibbot ha-Po'al* (“Rules of the Verb”) which contain analyses of the Hebrew nouns and verbs (last edition, 1945). He also edited several books of Hebrew grammar. His autobiography was printed in *Ha-Toren* 3 (1915), 226–7.

BIBLIOGRAPHY: Kressel, *Leksikon*, 1 (1965), 365.

BÁRÁNY, ROBERT (1876–1936), Austrian otologist and Nobel Prize winner. Bárány qualified at the University of Vienna in 1900, and for the next five years did research in hospitals in Frankfurt, Heidelberg, and Freiburg, returning to Vienna in 1905. By 1914 his research encompassed all aspects of the physiology and pathology of the inner ear. His greatest innovation in the clinical study of ear diseases was the discovery of a method of examination of each of the two labyrinths separately, using cold and hot water. He was also the first to describe a practical operative procedure for otosclerosis (“hardening of the ear”) cases. During World War I Bárány served as a surgeon in the Austrian Army. He was captured by the Russians in 1915. They released him after it became known that he had been awarded the Nobel Prize for medicine in 1914. Bárány was not made a full professor at Vienna because he was a Jew. However, in 1917 he was appointed professor of otology at the University of Uppsala, Sweden. Bárány only began to display interest in Judaism and Jewish questions toward the end of his life, when the Nazis came to power. In his will he left his valuable library to the National Library in Jerusalem. His major works are *Der primaere Wundnaht bei Schussverletzungen des Gehirns* (in: *Wiener klinische Wochenschrift*, 21 (1916)); and *Die Radikaloperation des Ohres ohne Gehoergangplastik bei chronischen Mittelohreiterungen* (1923).

[Yehiel G. Gumpertz]

BARASCH, JULIUS (Judah; 1815–1863), physician, writer, and communal leader from Walachia, Romania. Barasch, who was born in Brody, began his education in traditional Torah studies, but later came to the ideas of the *Haskalah and studied philosophy in Leipzig and medicine in Berlin. In the period of his studies, he published several articles in Ger-

man and Hebrew in Jewish journals and became friends with Moritz *Steinschneider. In 1841, after becoming a doctor of medicine, he settled in Bucharest where he practiced. From 1843 he served as a government physician, at first in Calarasi and Craiova and from 1859 in Bucharest. In addition he taught science in several colleges, being the first teacher in this field in Walachia. Barasch did much to popularize science by organizing lectures and courses for the public and publishing textbooks and periodicals on popular topics. His Romanian-language book *Minunile Naturii* ("Natural Wonders," 1 vol., 1850; 3 vols., 1852) and periodical *Isis sau Natura* ("Isis or Nature," 1856–59) were the first of their kind in Romania. In these publications Barasch attempted to formulate a scientific terminology in Romanian. He played a decisive role in spreading Enlightenment (Haskalah) among Bucharest Jewry. Barasch initiated the establishment of the first secular Jewish school in Walachia, which opened in Bucharest in 1851. For a time he served as its principal. He polemicized against Orthodoxy and also against baptism, and advocated a Judaism for every Jew. From his point of view, reform had to be very moderate and mostly esthetic in order to attract wayward Jews to Jewish religious life. Barasch encouraged the founding of the Societatea de Cultura Israelita ("Association for Jewish Culture") in 1862, which he directed. In 1857 he helped to found the first Jewish periodical in Walachia, *Israelitul Roman*, which appeared in Romanian and in French and was established principally to further the cause of Jewish emancipation in Walachia. Barasch saw Hebrew as the unifying bond of the Jewish people and did much to promote Hebrew literature. He conceived the idea of publishing a scientific encyclopedia in Hebrew for East European Jews who were not fluent in West European languages, spreading scientific knowledge and Haskalah ideas among them, but only one volume, on philosophy, was published – *Ozar Hokhmah*, 1856). Barasch wrote on Jewish subjects in German, describing Jewish communities in countries and localities he visited. The accounts are an important source of knowledge of Jewish life in the mid-19th century in the communities concerned and particularly of the history of the Jews in Romania.

[Eliyahu Feldman / Lucian-Zeev Herscovici (2nd ed.)]

BARASCH, MOSHE (1920–2004), Israeli art scholar. Barasch can be considered the father of art history in Israel, a fact acknowledged by the State in 1996 when it awarded him the first Israel Prize in art history. Born in Czernowitz, he was a child prodigy as a painter and writer. He had his first exhibition of Expressionist paintings in 1933, and in 1935 published his first book, *Die Glaubens schwere Wege*, stating his belief in Judaism and Zionism. During World War II, he joined the Romanian Resistance and later enlisted in the Red Army to fight

the Nazis, as well as the Haganah's *Berihah organization. Arriving in Israel in 1948, he fought in the War of Independence and published in *Abysmal Reflections* (1948) drawings reflecting his reactions to World War II. In 1956 he began teaching art history at the Hebrew University of Jerusalem, and in 1965 inaugurated there a Department of Art History, the first in Israel. He believed that one should be able to teach all periods of art and stressed the importance of a broad knowledge of philosophy and culture in understanding art. He began to publish books on the Renaissance and Crusader Art, and later broadened his scope to include studies on the depiction of God, the iconography of gestures and facial expressions, aesthetics and the theory of color in Renaissance art, the ways that art communicates with the spectator, and the way the mental concept of blindness is imaged in art.

His published works on art history include *Michelangelo* (1961); *The Image of Man in the History of Art* (1967); *Introduction to Renaissance Art* (1968); *Crusader Figural Sculpture in the Holy Land* (1971); *Gestures of Despair in Medieval and Early Renaissance Art* (1976); *Approaches to Art 1750–1950* (1977); *Light and Color in the Italian Renaissance Theory of Art* (1978); *Icon: Studies in the History of an Idea* (1981); *Theories of Art: from Plato to Winckelmann* (1985); *Giotto and the Language of Gesture* (1987); *Modern Theories of Art*, vol. 1 (1990), vol. 2 (1998); *Imago Hominis: Studies in the Language of Art* (1991); *The Language of Art: Studies in Interpretation* (1997); *Das Gottesbild: Studien zur Darstellung des Unsichtbaren* (1998); *Blindness: The History of a Mental Image in Western Thought* (2001).

[Ziva Amishai-Maisels (2nd ed.)]

BARASH, ASHER (1889–1952), Hebrew writer. Born in Lopatin, Eastern Galicia, at an early age he was already well acquainted with modern Hebrew literature; however, most of his juvenilia was written in Yiddish, the rest in German and Polish. At the age of 16, Barash left home and wandered all over Galicia, returning from time to time to Lvov. This period is reflected in several of his more important works: *Pirkei Rudorfer* ("Rudorfer's Episodes," 1920–27), *Sippurei Rudorfer* ("Rudorfer's Stories," 1936–44), and other autobiographical stories. At that time, Barash began to publish his literary efforts, first in Yiddish and then in Hebrew, the latter in 1910 with a number of Hebrew poems in the second *Me'assef Sifrutit*, edited by David Frischmann, and in *Shallekhet*, edited by Gershon Shofman. His first long story, "Min ha-Migrash" (1910), also appeared in *Shallekhet*. In 1914, Barash moved to Erez Israel, where he taught, first at the Herzlia secondary school in Tel Aviv and, after World War I, at the Reali high school in Haifa. This period is described in his work *Ke-Ir Nezurah* ("As a Besieged City," 1944).

After World War II he composed his best works in poetry and prose, wrote criticism, and edited several works. In conjunction with Ya'akov *Rabinowitz, he edited the prose volumes *Hedim*, the *Mizpeh Almanac*, and *Atidot*, a youth journal. He was also active in the organizational work of the Association of Hebrew Writers, and established the bio-bibliographical institute, Genazim, which now bears his name. Barash's works were collected in three volumes (*Kol Kitvei Asher Barash*, 1961²). In 1931, he wrote *Torat ha-Sifrut* ("Theory of Literature," in two volumes) which was the first attempt in modern Hebrew literature to present the Hebrew reader with a systematic theory of literature.

It is, however, as an author of fiction that Barash left his impact. His works mainly highlight the world he left behind. His description, often touched by nostalgia, is at the same time indicative of the author's awareness that this world must inevitably disintegrate. Barash was also aware of the new life evolving in Erez Israel, and this consciousness he conveyed in three works, *Ke-Ir Nezurah*, *Ish u-Veito Nimhu* ("The Man and His Home Perished," 1933–34), and *Gannanim* ("Gardeners," 1937–38). Among his historical fiction are two stories, "*Mul Sha'ar ha-Shamayim*" ("Facing the Gates of Heaven," 1924) and "*Ha-Nishar be-Toledo*" (1944; "Last in Toledo," in *Israel Argosy*, 8 (1962), 144–71).

Barash's literary works are characterized by a rather personal style, precise language, and a quiet tone tending to simplicity and clear and unsentimental description. He rejected both the traditional style of the school of *Mendele Mokher Seforim and the extreme impressionistic and psychological style of some modernists. These stylistic qualities rapidly won him the title of a cool realist, uninvolved in the world he creates.

Barash's affection for the "good people," who are mostly marginal characters in his stories, was interpreted as an "objective" description of the more pleasant aspects of life. This simplistic and superficial approach to his works, however, ignores the cracks in his seemingly tranquil world through which can be glimpsed the hidden abyss that he keenly sensed. In his essay on Barash (in *Arai va-Keva* (1942), 147–58) Halkin dwells on this hidden but basic aspect in Barash's writing. He points to the strange but consistent contrast between the seemingly realistic tranquility and the knowledge (which Barash may have tried to conceal from himself) that this pleasant existence is but a thin shell protecting the individual from the chaos which threatens to erupt at any moment and engulf him or her.

The early story "*Ahim*" ("Brothers," 1911) describes two brothers, one anchored in the full life of a traditional Jewish family, and the other living in debauchery and poverty. When engaged on a mission of mercy to his brother's family, the rich brother finds himself strangely jealous of the other's way of life. In his early book, *Temunot mi-Beit Mivshal ha-Shekhar* ("Sketches from the Brewery," 1915–28), considered his best, the theme of the story of "The Burning Bed" sharply offsets the peaceful enterprise at a brewery and hints at the inevitable destruction of this idyllic setting.

In *Ammud ha-Esh* ("The Pillar of Fire," 1936) Barash depicts the contrast between a good, stable, and humdrum provincial life, with its lovable yet ridiculous Zionist activity, and the explosion of the oil well, a pillar of fire. The burning oil well transforms the small town and its industrious life into a hell, simultaneously attractive and repelling, which threatens the sanity of the people. The thematic juxtaposition, found in almost all of Barash's stories, lends them depth and ambiguity. The same is evident in his method of characterization. Some of his characters appear to serve his "healthy" realistic tendencies, while others result from his romantic affinity for the strange, the rare, and the threatening.

Structurally, Barash's stories and novels follow a conservative, ordered, and clear pattern that seems to avoid confusion. Each story opens with a systematic exposition that acquaints the reader with the significance of events and characters. At times, the author introduces an omniscient narrator who defines the characters clearly. The dramatis personae, however, do not conform to this characterization. In the denouement of the plot and events, their deeds and behavior, whether openly or secretly, contradict the authoritative evaluation of the narrator. What at first seemed a simple structure is actually a literary device through which the complexity of the characters, originally imagined to be much more artless, is revealed. Barash tends toward short and limited narratives. This is clearly evident even in his more extensive works which are composed of more or less independent "sketches" or "episodes." *Ke-Ir Nezurah* is a collection of random contemporary historical fiction, narratives, and personal experiences which are organically disconnected. These portrayals may provide the main outlines of characters and events for a full-length novel, but they cannot sustain its necessary unity and complexity.

The novel *Ahavah Zarah* ("Alien Love," 1930–38) poignantly describes events and experiences characteristic of the problematic coexistence of Jews and non-Jews in a small Galician town. The "grandmother" is undoubtedly one of Barash's best-drawn satirical characters. Barash's simplistic solution to the love conflict of a Jew for a non-Jewish girl introduces a foreign tendentious element into the novel which reduces its tragic significance. Barash thus presents, but does not resolve, the problems in the sphere of human emotions. The girl marries a policeman who is an antisemite; the boy recognizes the evil that is rooted in the non-Jew, even in his own beloved. The solution is ideological and logical, stultifying the human elements in the story and the humanity of the characters.

In *Torat ha-Sifrut*, Barash attempts to guide the "novice poet" and the teacher of literature. His normative approach was undoubtedly useful and served as a guide to the teacher and the student of literature in the technique of writing. Today, however, Barash's dogmatic statements seem old-fashioned and at times even incorrect: they often unnecessarily limit literary concepts and terms. The anthology of Hebrew poetry edited by Barash, *Mivhar ha-Shirah ha-Ivrit ha-Hadashah* (1938), attests to good taste and knowledgeable

choice of material and is still a faithful and discerning reflection of the best of Hebrew poetry. In 1969, *Selected Stories of Asher Barash* appeared.

A list of his works translated into English appears in Goell, Bibliography, index.

[Yosef Ewen]

BARASH, EPHRAIM (1892–1943), head of the Judenrat in Bialystok. Barash, who was born in Volkovysk (then Russian Poland), was active from his youth in communal life, in Jewish self-defense, and the Zionist movement. During World War I he was a refugee in Russia. After the war he formed the municipal council of Volkovysk where he became president of the Jewish Trade Bank, a member of the community council, chairman of the local Zionist organization, and honorary chairman of He-Ḥalutz. In 1934 he settled in Bialystok and became general manager of the Jewish community council. When the Germans captured the town at the end of June 1941, Barash was appointed vice chairman of the Judenrat of which he was the guiding spirit. He represented a continuity of leadership of the Council. He organized ghetto life, established industrial enterprises, and, although well aware of German plans concerning the Jews, believed that the Jews would be spared if they could be employed in work essential to the German war effort, a view shared by Mordecai Chaim Rumkowski in Lodz. Unlike some other Judenrat leaders, including Rumkowski, Barash actively collaborated with the local Jewish fighting organization (led by Mordecai *Tenenbaum), and helped it financially and by providing material for manufacturing arms. Relations, however, broke off before the ghetto uprising in Bialystok. He was in personal contact with some of the Germans, and believed that they would give him ample warning of their intention to destroy – what the Nazis termed *liquidate* – the ghetto, at which time he intended to join the partisans. The Uprising commenced after the large deportations began on August 16, 1943. It took five days to suppress. The ghetto was destroyed on August 21–27, 1943, with the deportation of 25,000 Jews to Treblinka. For a short period of time Barash and his wife along with other Judenrat members and several hundred Jews were put in a small ghetto and from there they were sent to the Majdanek death camp, where he was killed.

BAR-ASHER (Ben Harosh), MOSHE (1939–), Hebrew scholar and linguist. Born in Ksar es-Suk (now Rashidiya), district of Tafilalt in southeast of Morocco, he immigrated to Israel in 1951 in the framework of *Youth Aliyah, studied in the Beiteinu “children’s village” in Ra’anana (1951–53) and in Yeshivat ha-Darom, Reḥovot (1953–58), and served in the Israeli Army (1959–62). Bar-Asher received his academic training in Hebrew, linguistics, Bible, and Talmud, at the Hebrew University of Jerusalem (1963–76). He also studied at the Sorbonne and College de France (1967–68) and at Harvard (1977–79). Bar-Asher’s major fields of research are Palestinian (esp. Syro-Palestinian) Aramaic, biblical, rabbinic, and modern Hebrew, Qumran texts, and the *sharh* (oral Maghrebian translations of the Bible and liturgical Jewish texts). Teaching at the Hebrew University of Jerusalem since 1964, he was appointed full professor in 1984 and chaired the Department of Hebrew Language (1981–83) and the Institute for Jewish Studies (1983–86). He was elected a member of the Hebrew Academy in 1977 and was appointed its vice president (1987–93) and president (from 1993). He taught as a visiting professor at various universities in France and the U.S. and lectured in many other universities around the world. He is regarded as the leading scholar in rabbinic Hebrew of the last generation and was the adviser of 28 Ph.D. students. He received the Israel Prize in 1993. Among his major publications are *Ha-Surit shel Eretz Israel u-V’ayot Nivḥarot be-Dikdukah* (1977); *La composante hebraïque du judeo-arabe algérien* (1992); *Masorot u-Ishonot shel Yehudei Tzefon Afrikah* (1998; 1999²); *L’hébreu Mishnique: études linguistiques* (1999); and *Leshon Limmudum le-Rabbi Raphael Berdugo* (3 vols., 2001). A full list of Bar-Asher’s works and scientific publications appeared in *Reshimat ha-Pirsumim shel Prof. Moshe Bar-Asher* (ed. S. Elkayam, 1999).

His father R. Abraham b. Harosh (d. 2003, in Jerusalem) was one of the last greatest informants of *sharh* and oral Hebrew and Arabic traditions, some of which are represented in the research of Bar-Asher; others are preserved as recorded materials in the Jewish Oral Traditions Research Center at the Hebrew University.

[Aharon Maman (2nd ed.)]

BARATZ, HERMANN (Hirsch; 1835–1922), jurist and historian born in Dubno, Volhynia. He graduated from the government rabbinical seminary in Zhitomir (1859) and from the law faculty of the University of Kiev (1869), and in 1863 was appointed adviser on Jewish affairs to the governor general of Kiev; from 1871 to 1901 he served as censor of Hebrew books. In 1881, with Max *Mandelstamm, he represented the Jews in the province of Kiev before the commission to investigate the causes of the pogroms in southern Russia. Baratz, who contributed to the Russian Jewish press from its beginnings in 1860, was one of the founders in 1904 of the Kiev branch of the *Society for the Promotion of Culture among the Jews in Russia. He wrote on the history of the Jews in Kiev, and published studies on the history of ancient Russian law; his chief work concerned the influence of the Bible and talmudic sources on

ancient Russian literature. Three volumes of his studies were published posthumously by his sons, the first dealing with the Jewish sources of the ancient Russian chronicle *Povest vremennykh let* (1922), and the second and third with the Jewish element in ancient Russian literature (1926, 1927).

[Yehuda Slutsky]

BARATZ, JOSEPH (1890–1968), Zionist labor leader; a founder of the collective settlement movement in Erez Israel. Baratz was born in Kamenets, Ukraine. In Erez Israel, where he settled in 1906, he worked as a laborer. In 1910, he became one of the founders of the first *kevuzah*, *Deganyah. He was a leading figure in the *Ha-Po'el ha-Za'ir Party (and later in *Mapai), and opened the founding conference of the *Histadrut in Haifa in 1920. During World War II and the Israel War of Independence, Baratz devoted himself to the welfare needs of the Jewish soldiers in Erez Israel, becoming chairman of the Israel Soldiers' Aid Committee in 1948. The Soldiers' House (Beit ha-Hayyal) in Tel Aviv is named for him. He was a member of the First Knesset. His books include *A Village by the Jordan: the Story of Degania* (1954), which appeared in 13 languages; and *Im Hayyaleinu* ("With Our Soldiers," 1945). His wife, Miriam (née Ostrovsky), was one of the first settlers of the Second Aliyah, living and working in Deganyah from its founding.

[Abraham Aharoni]

BARAZANI, ASENATH, daughter of the eminent Rabbi Samuel b. Nethanel ha-Levi of Kurdistan (1560?–1625/1635?). Her father, a scholar and mystic with a large following, aimed to rectify a dearth of educated leaders by building a yeshivah in Mosul, where he hoped to train young men who would become community leaders and scholars. Since he had no sons, he trained his daughter to be a learned scholar of the highest order. Asenath was married to one of her father's finest students, Rabbi Jacob Mizrahi, who promised her father that she would do no domestic labor and could spend her time as a Torah scholar. R. Mizrahi, who succeeded Asenath's father as head of the yeshivah, became so involved in his studies that his wife essentially taught the yeshivah students and provided them with rabbinic training. Following her husband's death, the leadership of the yeshivah naturally passed to his widow in a painless transition. Since neither her father nor her husband had been successful fundraisers, the yeshivah was always in financial straits, and Asenath wrote a number of letters requesting funds in which she described the dire situation that had befallen herself and her children. Her home and belongings had been confiscated, as had their clothing and books. She was still teaching Torah, but the debts were adding up and, as a woman, she felt it was inappropriate to travel in search of financial support. In letters addressed to her, one sees the

respect and admiration of fellow rabbis from far and near. Her few extant writings demonstrate a complete mastery of Torah, Talmud, Midrash, Kabbalah, and Hebrew, for her letters are lyrical as well as erudite. A recently discovered manuscript provides additional insight into her life, revealing inter alia an attempt to deceive her regarding transmission of contributions intended for her support. Nevertheless, she successfully ran a yeshivah which continued to produce serious scholars, including her son, whom she sent to Baghdad upon request, where he continued the dynasty of rabbinic scholars.

[Renée Levine Melammed (2nd ed.)]

BARAZANI, MOSHE (1926–1947), Jew condemned to death by the British in Palestine. Barazani was born in Arbel, Syria, and came to Erez Israel with his parents as a child and lived in Jerusalem. He joined Lehi and was arrested in 1947 when, during a search, a hand grenade was found in his pocket. He was sentenced to death by a military court after a trial lasting less than two hours. Together with Meir Feinstein, however, he cheated the gallows by taking his own life on the eve of his intended execution.

BARAZANI, SAMUEL BEN NETHANEL HA-LEVI (1560?–1630?), rabbi and kabbalist. His name derives from the town Barazan in Kurdistan, where he was probably born. His numerous wanderings were apparently the result of the political situation. He maintained yeshivot in Barazan, Akrah, Mosul, and Amadiyah. During his last years, he was the most distinguished scholar of Kurdistan and the acknowledged leader of Kurdistan Jewry. His authority was absolute though he held no official position. He revived the Jewish community of Kurdistan, where his disciples filled positions in many of the important communities. Barazani sent letters of rebuke and of comfort to the communities with the aim of preventing the prevalent religious laxity. He lived in great poverty and want. He was regarded as a saint, and his grave in Amadiyah became a place of pilgrimage. Barazani's books, many of which have been lost, are permeated with kabbalistic themes, and reflect an acquaintance with philosophy. Some of his *piyyutim*, festival prayers, and *reshuyot* are included in the liturgy of Kurdistan, and some have been published. Among Barazani's works extant in manuscript are *Avnei Zikkaron* of which many copies exist, on the laws of ritual slaughter, *Sefer ha-Iyyun*, *Sefer Derashot*, and fragments of *Sefer Haruzot*.

His daughter was Asenath *Barazani. The Barazani family included many rabbis of Mosul, other Kurdish towns, and until recently, Baghdad.

BARBADOS, Caribbean island. The uninhabited island of Barbados was visited in 1625 by Captain John Powel, who took possession of it in the name of James I, king of England. The first Jews reportedly arrived by the year 1628. Later on Jews arrived in three waves: (1) 1654 – after the Portuguese retook the province of Pernambuco in Dutch Brazil. The first official warrant of residence given to a Jew was to the physician from Dutch Brazil, Abraham de Mercado, and his son, the sugar production specialist David Raphael de Mercado; (2) 1664 – after the dispersal of the Jewish settlement in Remire on the island of Cayenne–French Guyana; (3) 1674 – when England surrendered Surinam to the Dutch and some Jews chose to leave with the English for Barbados.

In 1654 a Jewish community was founded in the capital Bridgetown and the Nidhei Israel synagogue was established. The Semah David synagogue was established in the second city, Speightown.

Jews, all of Spanish-Portuguese origin, also came from Hamburg and other Hanseatic cities in Germany, and from England, Guadeloupe, and Leghorn.

Jewish exiles from Brazil were needed in Barbados to help transform its lagging economy (its cotton plantations could not compete with the Carolinas; its tobacco was inferior to the product of Virginia) into a sugar-producing center. The Jewish newcomers introduced special modern methods of sugar refining and crystallizing sugar for export. The Jews, being Spanish-speaking, excelled in their commercial exchange with the Spanish colonies, mainly with Jews living in them as *Conversos.

The Jewish success and the support they received from the English governors Francis Lord Willoughby and his brother William Lord Willoughby stirred the envy and enmity of the local English colonists. This prompted the levy of special taxes on the Jews, disallowing them to employ Christians and limiting them to holding only one slave. This meant the Jews could not maintain plantations.

In 1739 the Jews left Speightown after a mob of English colonists attacked and destroyed the Semah David synagogue. As a result, a gradual abandonment of the island by the Jews began, with their new destinations being Nevis, Newport (Rhode Island), or England.

Jewish life was strictly Orthodox and distinguished owing to the prominent Hahams (rabbis) who served there: Eliahu Lopez, who was born in Malaga, Spain, as a Converso (1679); Meir Hacohen Belinfante (d. 1752), of a Dalmatian (Croatian) family; and Rafael Haim Isaac *Carigal from Hebron, who was in Barbados from 1774 to 1777. Jews only received full civil rights in 1820.

Nidhei Israel was finally abandoned in 1928 when the one remaining practicing Jew died. Led by Paul Altman, the synagogue, however, was rededicated by Jews from Trinidad and Eastern Europe, who reached the island in the 1930s. A group of Jews initiated the formation of a Caribbean Jewish Congress.

Israel is represented by its ambassador in Santo Domingo and an honorary consul in Bridgetown, Beny Gilbert. In the early 2000s the Jewish population numbered some 30 families.

[Mordechai Arbell (2nd ed.)]

BARBARA (Monique Serf; 1930–1997), French singer and songwriter. Daughter of an Alsatian Jew, André Serf, and a Jewess of Moldavian descent, Ester Brodsky, Monique Serf was born in Paris and raised in Marseille and Roanne in a state of relative poverty. During World War II, the family had to flee to Southern France and move several times after being denounced as Jews. Back in Paris after the war, the young girl was able to study music. In 1950 she ran away from home and found shelter in Brussels, then Charleroi, where she began singing in a small cabaret, L'etoile du Sud. With some bohemian friends and artists, she took part in the creation of a cabaret in Charleroi, "Le vent vert," but her piano playing and her voice were somewhat diffident and awkward and the audience was unappreciative. She persisted, and her style became more and more personal, and was soon to find a growing audience in various cabarets and concert halls in Paris and Brussels. She began working with France's major songwriters (Régine, Brassens, Georges Moustaki) and popular composers and arrangers like F. Rauber. Her songs were full of intimate childhood memories and uneasy feelings, and her long black clothing and thin silhouette earned her the nickname of "Dame en Noir" (Black Lady). Her relationship with her fans was passionate and immediate, as exemplified by the song "Ma plus belle histoire d'amour, c'est vous" ("You're My Most Beautiful Love Story"), which she would dedicate to her audiences. Often sad, even under a guise of lightness, sometimes humorous but never trivial, her songs ("Goettingen," "Laigle noir," "Nantes," "Une petite cantate," "Perlimpimpin") deal with the departure of loved ones, the tragedy of incest, the deep, ambiguous mixture of sadness and joy that characterizes childhood. She was a committed supporter of the left-wing politics often associated in the collective memory with President Francois Mitterrand. Towards the end of her career, she became involved in the struggle against AIDS ("Sid'amour a mort"), and when she died of illness in 1997, the general feel-

ing was that an icon of French song, “une grande dame de la chanson française,” had disappeared.

[Dror Franck Sullaper (2nd ed.)]

BARBARIANS, people of the Germanic linguistic group (Vandals, Franks, Goths, Burgundians, Lombards, Angles, and Saxons), of the Indo-Iranian group (Alans and Sarmatians), and the Hunnic peoples who were recruited by, allied to, or invaded the Roman Empire during the fourth, fifth, and sixth centuries C.E. Most of the barbarians were pagans when they entered the empire but were eventually converted to orthodox Christianity. One important exception were the Goths who, when they settled in Italy, Gaul, and Spain were Arian Christians. Even these were eventually converted to orthodox Christianity. During the barbarian invasions the Jews, mostly city dwellers who were outwardly assimilated to their neighbors, no doubt suffered together with the rest of the population. Although no factual record survives, it may be assumed that this contributed to the numerical decline of the once prosperous Jewish communities of the Roman Empire. On the sack of Rome in 455, the Vandals carried off to Africa the spoils of the Temple brought back from Jerusalem by Titus.

When the barbarians entered the Roman Empire, they were profoundly influenced by the Christian-Roman population. In general it can be said that, while the barbarians were pagans, they treated the Jews well, probably better than the vanquished Christians who posed a threat to their power, since a community of interest existed between Jews and barbarians as a result of the opprobrium with which they both were regarded by the orthodox population. The same favorable attitude existed when they adopted Arian Christianity. Once, however, the barbarians became members of the Orthodox church, the position of the Jews rapidly deteriorated. Restrictions were placed upon them, they were persecuted, and they were ultimately faced, especially in Spain, with the choice of conversion, exile, or death. General expulsions were decreed in Gaul in 626, in Burgundy about the same time, and in Lombardy in 661. More is known of the long attempt of the Visigothic kings of Spain to suppress Judaism from 613 onward. In this the Jews suffered equally with all those minorities who were not Orthodox Christians.

BARBASH, SAMUEL (c. 1850–1921), banker, leader of Ḥovevei Zion and of political Zionism in Russia. Barbash was born in Podolia. In the early 1880s he moved to Odessa, where he established a large bank, heading it until the Russian Revolution of 1917. He was one of the two guarantors to

the Russian government for the legalization of the *Odessa Committee, the center of the Ḥovevei Zion movement, and served as its treasurer throughout the committee's existence. He was a member of the board of directors of the *Jewish Colonial Trust in its first years and its representative in Russia. He was active in many economic spheres affecting Zionism. Throughout his life he supported Hebrew cultural and literary projects.

[Getzel Kressel]

BARBASTRO, city in northern Aragon, Spain. Ramón Berenguer IV, count of Barcelona, conferred an estate upon a Jew named Zecri of Barbastro in 1144 as a reward for his services. In 1179 the bishop of Huesca granted Benjamin Abenbital and Joseph b. Solomon permission to erect shops near the cathedral. Toward the middle of the 13th century the Jews occupied the Zuda, the citadel of Barbastro, which became the Jewish quarter. The charter of privileges granted to them in 1273 allowed them to request the bailiff to execute informers (*malshinim*) and prosecute Jews of dissolute morals. During the 13th–14th centuries the community of Barbastro, with a population of 200–300 Jews, was one of the important Aragonese communities of the group following the leading Jewish centers in Saragossa, Calatayud, and Huesca.

In 1285 Pedro II endorsed new communal tax regulations. The Jews of Barbastro paid for the right to maintain a bureau in which the promissory notes for loans were drawn up. In 1330 Alfonso IV acceded to the request of the community to abrogate his instruction that a Christian burgher should be appointed to administer Jewish communal affairs, and endorsed the continuation of the former administrative system. The circumstances of the community were so straitened at this period that a special levy imposed by the king did not amount to more than 20 Jaca *sólidos*. In 1363, however, a levy of 500 Jaca *sólidos* was imposed by Pedro IV to meet the cost of the war with Castile. In 1383 the king renewed the privilege of the Barbastro community prohibiting apostates from entering the Jewish quarter and preaching missionary sermons there, while Jews could not be compelled to enter into religious disputations with Christians.

During the massacres of 1391 the Jews of Barbastro took refuge in the citadel, which was subjected to a siege and on August 18, King John I instructed the local authorities to take measures against the culprits. The Jews of Barbastro suffered little compared to other communities. The community evidently ceased to exist after the disputation of *Tortosa and as a result of the pressure exerted by the Dominican preacher Vicente *Ferrer. In 1415 Benedict XIII ordered the synagogue to be converted into a church, known as the hermitage of San Salvador, because all the Jews in the city had become baptized and left the faith. It remained, however, a *Converso center. Many Conversos lived near the plaza del Mercado.

[Haim Beinart / Yom Tov Assis (2nd ed.)]

BARBIE, NIKOLAUS (“Klaus”), TRIAL OF, trial in Lyons, France, of ss Hauptsturmfuehrer (captain) Klaus Barbie (b. 1913). Known as “the Butcher of Lyons” for his wartime activities in France, Barbie joined the Nazi Party in 1932 and in 1935 became the personal adjutant to the head of the local Nazi Party office in Trier. In late September 1935 he also joined the ss, working in the SD (Security Service) main office and then as a specialist in the Duesseldorf region. On April 20, 1940, he was made an ss second lieutenant (Untersturmfuehrer). On May 29, 1940, shortly after the fall of the Netherlands, Barbie was assigned to the “culture” section of the SD in Amsterdam. His job was to monitor anti-Nazi tendencies in the fields of science, education, religion, sport, entertainment, and propaganda. In November of that year he was promoted to ss first lieutenant (Obersturmfuehrer); exactly two years later he would reach the rank of Hauptsturmfuehrer. During the disturbances in Amsterdam in February 1941, Barbie had acid thrown into his face by the Jewish owners of the Koko ice cream parlor. In reprisal over four hundred young Jewish men were arrested and sent to Mauthausen, where most of them perished.

Barbie was made the head of the Gestapo (KDS) in Lyons in November 1942 and remained in that post for nearly two years. To foil the Resistance, Barbie ordered that raids be conducted against arbitrary targets as well as places suspected of underground activity. His work was characterized by a combination of guile and cruelty. He was apparently responsible for the arrest of René Hardy, a resistance leader. Twice tried after the war, Hardy was found innocent of charges that he had divulged the names of French underground leaders to Barbie. Nevertheless, shortly after Hardy was interrogated, Barbie arrested Jean Moulin, Charles de Gaulle’s representative in southern France. Moulin had unified the major undergrounds and resistance movements under the National Resistance Council, which was founded on May 27, 1943. During the course of Barbie’s interrogation, Moulin was brutally tortured, but apparently gave away nothing before he died. Barbie was involved in the deportation of at least 842 other people from Lyons and its environs. Half of them belonged to the Resistance, and half of them were Jews. He also personally shot a number of persons and was responsible for the death of others from the villages of St. Rambert-en-Bugey, Evosges, Nivollet-Montgriffen, the Montluc prison in Lyons, and other places.

Perhaps his most ignominious act was the seizure and deportation of 41 children and five women who were found hiding in Izieu, a village about 44 miles (70 km.) east of Lyons on April 6, 1944. They were sent to Auschwitz on August 11,

1944. Barbie also was responsible for the deportation of 85 Jews taken in a raid on the headquarters of the Union Générale des Israélites de France (UGIF), on February 9, 1943, in Lyons.

In the spring of 1947, Barbie began working for the Counter Intelligence Corps of the U.S. Army in Germany. He became such a valuable informant that his superiors protected him from French attempts to extradite him and helped him escape to Bolivia. Arriving in Bolivia in 1951, he assumed the alias Klaus Altmann, eventually becoming an important advisor to several Bolivian governments. Barbie was tried in absentia in France in 1952 and in 1954. In the first trial he was charged with atrocities committed in the Jura region against the civilian population and the underground. In the second trial he was charged with committing a massacre at St. Genis-Laval and numerous shootings at the Montluc prison in Lyons. Both trials led to his conviction and sentences of death. In 1971 Barbie was found in La Paz, Bolivia, by Beate and Serge *Klarsfeld, French hunters of Nazis. It was not until 1983, however, following repeated appeals by the French, that he was expelled from Bolivia and brought to France for trial.

Barbie was charged with the raid on the UGIF office and the deportation of the Jews from Izieu, two acts for which he had not been previously tried. Coming under the rubric of “crimes against humanity,” these acts were not subject to the statute of limitation in France. The main proceedings against Barbie took place between May 11 and July 4, 1987. The trial aroused a great deal of interest in France and the rest of the world. Many Frenchmen had mixed feelings about the trial or opposed it. Some Jews thought it might arouse antisemitism or become a forum for the denial of the Holocaust. Extreme right-wingers actually advanced the claim that Barbie’s behavior was no worse than that of the Allies, who had bombed German cities and caused the death of civilians. Some feared it would raise the question again of events surrounding the death of Jean Moulin and of French collaboration with the Nazis.

Barbie himself, after making an early appearance in the courtroom, refused to be present for most of the trial. He was found guilty on July 4, 1987, and given the maximum penalty under French law, life imprisonment. He died in 1991.

[Robert Rozette]

BARBY, MEIR BEN SAUL (1729?–1789), rabbi of Pressburg. Barby took his name from his birthplace, Barby, a small town near Halberstadt. He studied under Zevi Hirsch b. Naphtali Herz Bialeh (Ḥarif) of Halberstadt and Jacob Poppers, rabbi of Frankfurt. On his return from Frankfurt, he was appointed *dayyan* of Halberstadt, was rabbi of Halle for a year, and was then appointed rabbi of Pressburg in 1763. In Pressburg he established a large yeshivah. Barby issued many community *takkanot*, some of them designed to prevent laxity in Jewish life – such as frequenting the theater and card playing. A vehement opponent of the *Shabbateans, he excommunicated one

of their adherents, Nathan Erholz, and dismissed him from the post of rabbi of Stampen. In 1771 he was a candidate for the vacant post of rabbi of Frankfurt, but was not elected. He was in halakhic correspondence with many prominent scholars, including Ezekiel *Landau, Isaiah *Berlin, and Meir Posner, and he gave approbations to many works. Aside from his Torah erudition, Barby had a good knowledge of medicine and music. Though he opposed the publication of his responsa, many of his novellae are cited in the works of his contemporaries. His only published work is *Hiddushei Hilkhhot Maharam Barby* (2 vols., Dyhrenfurth-Prague, 1786–92).

[Itzhak Alfassi]

BARCELONA, Mediterranean port in Catalonia, northeast Spain, seat of one of the oldest Jewish communities in the country. Amram *Gaon sent his version of the prayer book to “the scholars of Barcelona.” In 876/7 a Jew named Judah (Judacot) was the intermediary between the city and the emperor Charles the Bald. Tenth- and eleventh-century sources mention Jews owning land in and around the city. The prominence of Jews in Barcelona is suggested by the statement of an Arabic chronicler that there were as many Jews as Christians in the city, but a list of 1079 records only 60 Jewish names. The book of *Usatges* (“Customal”) of Barcelona (1053–71) defines the Jews’ legal status. Jewish ownership of real estate continued: the site of the ancient Jewish cemetery is still known as Montjuich. A number of Jewish tombstones have been preserved. From the end of the 11th century the Jews lived in a special quarter in the heart of the old city, near the main gate and not far from the harbor. The area known as Call, the name of the Jewish quarter throughout Catalonia, is still echoed in the names of some of its streets that contain the word, such as Carrer del Call. (The word *call* derives from the Latin *callum*). Barcelona’s Jews were subject to the jurisdiction of the counts of Barcelona. The forms of contract used by Jews there from an early date formed the basis of the *Sefer ha-Shetarot* of *Judah b. Barzillai al-Bargeloni, written at the beginning of the 12th century. In the first half of the 11th century, some Barcelonan Jews were minters, and coins have been found bearing the name of the Jewish goldsmith who minted them. In 1104, four Jews of Barcelona received the monopoly to repatriate Muslim prisoners of war to southern Spain. Shortly afterward, *Abraham b. Ḥiyya was using his mathematical knowledge in the service of the king of Aragon and the counts of Barcelona, possibly assisting them to apportion territories conquered from the Muslims. Abraham’s role in the transmission of Greco-Arabic culture to the Jews north of the Pyrenees who did not know Arabic was crucial. His encyclopedic works in Hebrew presented the scientific and philosophical legacy that was available in Arabic to the Jews of Christian Europe. It was probably due to his residence in Barcelona, a city that was for a very brief period under Muslim rule, but otherwise the most important city in Christian Spain in the early stages

of the *Reconquista*, that Abraham b. Ḥiyya was so appreciative of the need to disseminate in Hebrew the treasures of the Greco-Arabic world. The Jewish community reached the peak of its prestige in the 13th century, when the Crown of Aragon, under James I, doubled the size of its territories. Besides the important members of the community who served the kings and counts, the community had very distinguished scholars who were among its political, financial, religious, and intellectual leaders.

Communal Life

Documents of the second half of the 11th century contain the first mention of *nesi'im* (“princes”; see *nasi) of the house of Sheshet (see Sheshet b. Isaac *Benveniste), who served the counts as suppliers of capital, advisers on Muslim affairs, Arab secretaries, and negotiators. From the middle of the 12th century the counts would frequently appoint Jews also as bailiffs (*baile*) of the treasury; some of these were also members of the Sheshet family. Christian anti-Jewish propaganda in Barcelona meanwhile increased. In 1263 a public *disputation was held at Barcelona in which *Naḥmanides confronted Pablo *Christiani in the presence of James I of Aragon. The bailiff and mintmaster of Barcelona at the time was Benveniste de Porta, the last Jew to hold this office. In 1283, as a result of the French invasion following the conquest of Sicily by Pedro I, “the Great,” the Catalan noblemen, joined by their Aragonese and Valencian counterparts, forced Pedro to give up his Jewish civil servants who had occupied numerous positions throughout the Kingdom of Aragon. The Jews were subsequently replaced by Christian aristocrats and burghers and Jews from families whose ancestors had formerly acquired wealth in the service of the counts now turned to commerce and money-lending. Many of them returned to the communal political arena and aspired to hold important positions in the community leadership. However, learned Jews such as Judah *Bonenyor continued to perform literary services for the sovereign. In 1294 Jaime II gave him the monopoly on all Hebrew and Arabic documents drawn up in the territory of Barcelona. By the beginning of the 13th century, a number of Jewish merchants and financiers had become sufficiently influential to displace the *nesi'im* in the conduct of communal affairs. In 1241, James I granted the Barcelona’s Jewish community a constitution to be administered by a group of *ne'emanim* (*secretarii*, or “administrative officers”) – all drawn from among the wealthy, who were empowered to enforce discipline in religious and social matters and to try monetary suits. James further extended the powers of these officials in 1272. The class struggle within the Jewish community that erupted in 1263 in Saragossa and spread throughout the communities in the Kingdom of Aragon did not greatly affect the political regime in Barcelona. Nevertheless, one of the institutions that served as the community’s parliament, the Council of Thirty or *Ezat ha-Sheloshim*, was established on the model of the municipal Council of the Hundred or *Concell de Trente*. Solomon b. Abraham *Adret was now the leading halakhic authority and

public figure in Barcelona, a position he enjoyed for about 50 years. Under his guidance, the Barcelonan Jewish community became foremost in Spain in scholarship, wealth, and public esteem. He and his sons were among the seven *ne'emanim*, and he must have favored the new constitution. The *ne'emanim* did not admit to their number either intellectuals whose beliefs were suspect or shopkeepers and artisans. When the controversy over the study of sciences and philosophy took place in the years 1303–5 at the end of Adret's life, the intellectuals of Barcelona did not therefore dare to voice their opinions. In 1305, Adret prohibited, under ban, youth under 25 years of age from studying sciences and philosophy (except medicine): this provision was also signed by the *ne'emanim* and the 30 members of the Community Council.

A third constitution was adopted in 1327, by which time the community had been augmented, in 1306, by 60 families of French exiles. The privileges, such as exemption from taxes, enjoyed by Jews close to the court, were now abolished, and, alongside the body of *ne'emanim*, legal status was accorded to the "Council of Thirty," an institution that had begun to develop early in the 14th century. The new regulations helped to strengthen the governing body. Several Spanish Jewish communities used this constitution as a model. *Berurei averot* ("magistrates for misdemeanors") were appointed for the first time in 1338 to punish offenders against religion and the accepted code of conduct. In the following year *berurei tevi'ot* ("magistrates for claims") were elected to try monetary suits. The communal jurisdiction of Barcelona, which at times acted on behalf of all the communities of the Crown of Aragon, that is, Catalonia, Aragon, Valencia, Majorca, and Roussillon, extended to several communities, both small and large, which were included in its *collecta*. The *collecta* was an inter-communal organization originally created to facilitate the collection of the royal taxes but subsequently served other purposes as well. The *collecta* of Barcelona was headed by the community of Barcelona and included the communities of Tarragona, Montblanch, Villafranca, and Cervera. The other Catalan *collectas* were those of Gerona-Besalú, Léida (Lleida), and Tortosa. A nationwide body, consisting of seven members acting on behalf of Catalan Jewry, operated under the leadership of the community of Barcelona.

The community of Barcelona, called *aljama* as in the rest of the peninsula, had a number of institutions that were found in most communities throughout the medieval Jewish world. It had several synagogues, some of which had special characteristics. The *sinagoga mayor* was the Great Synagogue that was visited by James I during the *Barcelona Disputation. This synagogue has recently been restored. Another synagogue was the *sinagoga de les dones* (The Ladies' Synagogue), probably so called because it had special sections for women. The *sinagoga de los franceses* (The Synagogue of the French) was founded by the 60 Jewish families that were absorbed in Barcelona after the expulsion of 1306. The Jewish cemetery was situated on Montjuich (the Mountain of the Jews), where some tombstones with Hebrew inscriptions were found. An interesting

inscription was discovered in a building in the *call* indicating that it was donated by the famous Rabbi Samuel ha-Sardi, probably to serve as a *talmud torah*.

The community suffered severely during the *Black Death of 1348. Most of the "thirty" and the *ne'emanim* perished in the plague, and the Jewish quarter was attacked by the mob. Despite protection extended by the municipality, several Jews were killed. In December 1354, delegates for the communities of Catalonia and the province of Valencia convened in Barcelona with the intention of establishing a national roof organization for the Jewish communities of the kingdom in order to rehabilitate them after the devastations of the plague. In the second half of the century R. Nissim *Gerondi restored the yeshivah of Barcelona to its former preeminence. Among his disciples were R. *Isaac b. Sheshet and R. Hasdai *Crescas, both members of old, esteemed Barcelonan families who took part in the community administration after the late 1360s.

Economic Life

The Jews of Barcelona owned extensive property in the city and its surroundings. In the 13th century they held quite a substantial part of the real estate in the region. This property was mostly in the hands of the wealthy class. The Jews were mainly occupied as artisans and merchants, some of them engaging in overseas trade. They played an important role in maritime trade thanks to their international connections with Jewish merchants throughout the Mediterranean basin, their easy communication in Hebrew, which was universally used by Jews, and their ability to have partners, agents, and hosts in many localities. They overcame some of the difficulties that Christian and Muslim merchants encountered in trade between their two worlds. Sources from the *Archivo Capitular* of Barcelona show the extent of the participation of the Jews of the city in the trade between Catalonia and Muslim countries in the eastern Mediterranean. The Catalans spared no effort in putting an end to the predominance of Jewish merchants from Barcelona in trade with Muslim countries. They turned to the law prohibiting trade of certain merchandise with the Muslims. When this failed they used the Papal Inquisition to make trade with the east risky and costly. Many Jews returning from the east found themselves arrested and charged as soon as they landed in Barcelona. The king yielded to the demands of the Christian merchants of Barcelona and practically put an end to the commercial activities of the Jews overseas, particularly in Egypt and Syria. By the beginning of the 14th century Jews no longer played an important role in the trade with Muslims. The elimination of Jewish competition in maritime trade was considered a vital goal that was finally achieved. In another field of economic activity where there was much criticism of the Jews but no alternative was found, the Jewish moneylenders continued their credit transactions.

Most of the Jews in Barcelona were engaged in crafts and other professions. We know that the Jewish bookbinders of Barcelona had their own confraternity. There were also

some professionals, such as physicians, translators, and interpreters.

The Decline

Around 1367 the Jews were charged with desecrating the *Host, several community leaders being among the accused. Three Jews were put to death, and for three days the entire community, men, women, and children, were detained in the synagogue without food. Since they did not confess, the king ordered their release. However, Nissim Gerondi, Isaac b. Sheshet, Ḥasdai Crescas, and several other dignitaries were imprisoned for a brief period.

The community gradually recovered after these misfortunes. Jewish goldsmiths, physicians, and merchants were again employed at court. After Isaac b. Sheshet's departure from Barcelona and Nissim Gerondi's death, Ḥasdai Crescas was almost the sole remaining notable; he led the community for about 20 years. The main element in the Barcelona community was now the artisans – weavers, dyers, tailors, shoemakers, carpenters, blacksmiths, and coral-workers. These were organized into confraternities and now demanded their share in the communal administration. After the long period in which the ruling oligarchy had been exercising their authority to their own advantage, the 1327 charter was abolished by royal edict in 1386. A new charter was approved by which representatives of the two lower estates, the merchants and artisans, shared in the administration.

During the persecutions of 1391, the city fathers and even the artisans of Barcelona tried to protect the Jews of the city, but without success. The violence in Barcelona was instigated by a band of Castilians, who had taken part in the massacres in Seville and Valencia and arrived in Barcelona by boat. News of the onslaught on the Jewish quarter in Majorca set off the attack on Saturday, August 5. About 100 Jews were killed and a similar number sought refuge in the "New Castle" in the newer and second Jewish quarter. The gate of the *call* and the notarial archives were set on fire and looting continued throughout that day and night. The Castilians were arrested and ten were sentenced to the gallows. The following Monday, however, the "little people" (*populus minutus*), mostly dock workers and fishermen, broke down the prison doors and stormed the castle. Many Jews were killed. At the same time, serfs from the surrounding countryside attacked the city, burned the court records of the bailiff, seized the fortress of the royal vicar, and gave the Jews who had taken refuge there the alternative of death or conversion. The plundering and looting continued throughout that week. Altogether about 400 Jews were killed; the rest were converted. Only a few of them (including Ḥasdai Crescas, whose son, newly married, was among the martyrs) escaped to the territories owned by the nobility or to North Africa. At the end of the year John I condemned 26 of the rioters to death but acquitted the rest. In 1393 John took measures to rehabilitate the Jewish community in Barcelona. He allotted the Jews a new residential quarter and ordered the return of the old cemetery. All their former privileges were restored

and a tax exemption was granted for a certain period, as well as a moratorium on debts. Ḥasdai was authorized to transfer Jews from other places to resettle Barcelona, but only a few were willing to move. The project failed. Reestablishment of a Jewish community in Barcelona was finally prohibited in 1401 by Martin I in response to the request of the burghers. Thus the Jewish community of Barcelona ceased to exist a hundred years before the expulsion.

The Conversos

While Jews no longer resided in the city, the *Conversos, those forcibly converted during the massacres, continued to live there. The renewed prosperity of Barcelona during the 15th century should be credited in part to the Conversos, who developed wide-ranging commercial and industrial activities. Despite protests by the city fathers, in 1486 Ferdinand decided to introduce the Inquisition on the Castilian model in Barcelona. At the outset of the discussions on procedure the Conversos began to withdraw their deposits from the municipal bank and to leave the city. The most prosperous merchants fled, credit and commerce declined, the artisans suffered, and economic disaster threatened. The inquisitors entered Barcelona in July 1487. Some ships with refugees on board were detained in the harbor. Subsequently several high-ranking officials of Converso descent were charged with observing Jewish religious rites and put to death. In 1492 many of the Jews expelled from Aragon embarked from Barcelona on their way abroad.

20th Century

At the beginning of the 20th century a few Jewish peddlers from Morocco and Turkey settled in Barcelona. After Salonika came under Greek rule in 1912 and the announcement by the Spanish government of its willingness to encourage settlement of Sephardi Jews on its territory (1931), Jews from Turkey, Greece, and other Balkan countries migrated to Barcelona. Other Jews arrived from Poland during World War I, followed by immigrants from North Africa, and by artisans – tailors, cobblers, and hatmakers – from Poland and Romania. There were over 100 Jews in Barcelona in 1918, while in 1932 the figure rose to more than 3,000, mostly of Sephardi origin. After 1933 some German Jews established ribbon, leather, and candy industries. By 1935 Barcelonan Jewry numbered over 5,000, the Sephardim by now being a minority. During the Spanish Civil War (1936–39), many left for France and Palestine. Some of the German Jews left the city after the Republican defeat in 1939, but during and after World War II Barcelona served as a center for refugees, maintained by the *American Jewish Joint Distribution Committee, and others returned to resettle.

The Barcelonan community, consisting of approximately 3,000 people in 1968 and 3,500 in 2000, is the best organized in Spain. The communal organization unites both Sephardi and Ashkenazi synagogues. There is also a community center, which includes a rabbinical office and cultural center. The community runs a Jewish day school and Chabad is active in the city. Youth activities include summer camps

and a Maccabi movement. An old-age home supported by Jewish agencies outside Spain is maintained. The University of Barcelona offers courses in Jewish studies. Together with leaders of the Madrid community, Barcelona community heads were received in 1965 by General Franco, the first meeting between a Spanish head of state and Jewish leaders since 1492.

[Zvi Avneri and Haim Beinart / Yom Tov Assis (2nd ed.)]

BARCELONA, DISPUTATION OF, religious disputation between Jews and Christians in 1263. The apostate Paulus [Pablo] *Christiani proposed to King James I of Aragon that a formal public religious disputation on the fundamentals of faith should be held between him and R. Moses b. Nahman (*Nahmanides) whom he had already encountered in *Gerona. The disputation took place with the support of the ecclesiastical authorities and the generals of the Dominican and Franciscan orders, while the king presided over a number of sessions and took an active part in the disputation. The Dominicans *Raymond de Peñaforte, Raymond *Martini, and Arnold de Segarra, and the general of the Franciscan order in the kingdom, Peter de Janua, were among the Christian disputants. The single representative for the Jewish side was Nahmanides. The four sessions of the disputation took place on July 20, 27, 30, and 31, 1263 (according to another calculation, July 20, 23, 26, and 27). Nahmanides was guaranteed complete freedom of speech in the debate; he took full advantage of the opportunity thus afforded and spoke with remarkable frankness. Two accounts of the disputation, one in He-

brew written by Nahmanides and a shorter one in Latin, are the main sources for the history of this important episode in Judeo-Christian polemics. According to both sources the initiative for the disputation and its agenda were imposed by the Christian side, although the Hebrew account tries to suggest a greater involvement of Nahmanides in finalizing the items to be discussed. The initiative in the debate remained on the Christian side throughout.

Basing himself on the Talmud as a whole, and in particular on the aggadic and homiletical passages, the Christian contestant sought to prove three points: that the Messiah had already appeared; that he was “both human and divine,” and had died to atone for the sins of mankind; and that, in consequence, the precepts of Judaism had lost their validity. Against this Nahmanides argued that the literal meaning of the passages quoted from the Talmud do not admit this christological interpretation. On the question of *aggadah* he claimed that the homiletical passages in the Talmud are not obligatory for Jews. Rabbis and eminent scholars, such as Yitzhak Baer, H.H. Ben-Sasson, and Martin Cohen maintained that Nahmanides’ claim was purely political, put forward in a disputation that had been imposed on him, so that he even had to use arguments in which he did not believe in order to overcome the Christian attack. Other scholars, such as Cecil Roth and Robert Chazan, expressed a more moderate opinion. Chavel, H. Maccoby, and B. Septimus suggested that Nahmanides’ view was fully compatible with a well-established Jewish tradition. Marvin Fox argues that this latter attitude is based on a complete misunderstanding of Nahmanides’ views and beliefs as they are found so clearly throughout his commentary on the Torah and that Nahmanides’ view follows a Jewish tradition that, though paying full respect to the midrashic commentaries, does not accept them as necessarily binding, and avows that the main issue between Judaism and Christianity does not depend on belief in the Messiah. Nahmanides even went on to attack the illogicality in Christian dogma concerning the nature of the Divinity. Some of his utterances hint at the future destruction of Christendom. He referred slightly to the fate of Jesus, who was persecuted in his own lifetime and hid from his pursuers. Rome, which had been a mighty empire before Jesus lived, declined after adopting Christianity, “and now the servants of Muhammad have a greater realm than they.” Nahmanides also made the point that “from the time of Jesus until the present the world has been filled with violence and injustice, and the Christians have shed more blood than all other peoples.” He similarly attacked the whole concept of the combination of human and divine attributes in Jesus.

A number of ecclesiastics who saw the turn the disputation was taking urged that it should be ended as speedily as possible. It was, therefore, never formally concluded, but interrupted. According to the Latin record of the proceedings, the disputation ended because Nahmanides fled prematurely from the city. In fact, however, he stayed on in Barcelona for over a week after the disputation had been suspended in order to be present in the synagogue on the following Sabbath when

a conversionist sermon was to be delivered. The king himself attended the synagogue in state and gave an address, an event without medieval precedent. Naḥmanides was permitted to reply on this occasion. The following day, after receipt of a gift of 300 *sólidos* from the king, he returned home.

The disputation had far-reaching consequences. It prompted the Dominican Raymond Martini to devise a better method of providing christological interpretations to the *aggadah*. In 1280 Martini concluded his book *Pugio Fidei* (Paris, 1651), and henceforward it was used indiscriminately by every Christian controversialist wishing to invalidate Judaism. The king cooperated with missionary activities throughout the realm and the Jews were forced to listen to the sermons preached by the Dominican friars. An order was issued by the latter between August 26 and 29 directing the Jews to erase from their copies of the Talmud any passages vilifying Jesus and Mary. Failure to do so was punishable by a fine, and books which had not been censored as required would be burned. The *Mishneh Torah* of *Maimonides was also condemned to be burned because of the references to Jesus in the chapter on the laws of kingship at the end of the work. Subsequently, the bishop of Gerona obtained a copy of Naḥmanides' own account of the disputation. Perhaps through his agency, proceedings were then instituted against Naḥmanides in 1265 before the court of the Inquisition on the charge that he had blasphemed Jesus. James' intention to sentence him to two years' banishment and to condemn his work on the disputation to be burned, evidently did not satisfy the Dominicans. He thereupon ordered the case to be tried before him personally, intending to adjourn it until the fanaticism had abated. The militant Christian religious mendicant orders acted as the instrument of the church in its war on Judaism. It was at the request of the friars that Pope Clement IV ordered the archbishop of Tarragona to collect all the Jewish books in the Kingdom of Aragon and surrender them to the Dominicans and Franciscans for examination; Paulus Christiani was recommended as a trustworthy and able assistant for this task. The bull *Turbato Corde*, also issued by Clement, became the basis of the Inquisition policy for prosecuting suspected Judaizers (see papal *bulls), and may also be regarded as an outcome of the disputation. The inference drawn by Naḥmanides is self-evident: he left Spain for Erez Israel, arriving there in 1267. Judeo-Christian polemics continued in Barcelona in the days of *Adret, Naḥmanides' outstanding disciple. On the Christian side Martini and Ramon Lull participated in the debates that took place in a more private forum. The use of Jewish classical texts by Paulus in his confrontation with the foremost rabbinic authority in Spain was an innovation in Judeo-Christian polemics. The Barcelona Disputation was the first arena where Paulus Christiani was able to try out his new technique of missionizing and where Naḥmanides provided Jewish counterarguments to the newly formulated Christian claims. While the Disputation may have been a great achievement for Paulus Christiani in his innovative use of rabbinic sources in Christian missionary efforts, for Naḥmanides it

represented an additional example of the wise and courageous leadership which he offered his people.

BARCINSKY (Barczinsky), HENRYK (Henoeh; 1896–1941?), painter and graphic artist. Barcinsky was born in Łódź, Poland. As a child, he received a traditional Jewish education and prior to World War I attended a private art school in Łódź. In 1915–16 he studied at Henryk Glitzenstein's studio in Warsaw. As a teenager, he became close to the circles of young Jewish writers and artists who made it their aim to develop “contemporary national art.” These ideas were a formative influence on the development of Barcinsky's national and artistic *Weltanschauung*, and the artist maintained close ties with this environment all through his life. In 1918, he participated in the exhibition in Białystok organized by the Artistic Section of the local Kultur-Liga. In 1919, in Łódź, he joined the “Yung Yiddish” modernist group and published his drawings in its anthologies. In the same year, he moved to Dresden, where he attended the Academy of Arts. In 1924, upon completing his studies at the Academy, he traveled around Spain and then settled in Berlin. He joined Elsa Lasker-Schüler's group, which brought together German-Jewish intellectuals and cultural figures. In the 1920s, he participated in a number of exhibitions in Berlin and Dresden. Living in Germany, he never broke ties with Poland and regularly sent his works to be shown at exhibitions there. In 1933, when Hitler came to power, Barcinsky returned to Poland and settled in Łódź. In 1934, the Jewish Society for the Encouragement of Artists organized his solo exhibition in Warsaw, in the Jewish community building. Barcinsky is one of the most remarkable and original representatives of expressionism in Polish art. He drew his themes from the Jewish life around him, as well as from Jewish folklore. When German occupation troops entered Poland and were approaching Łódź, Barcinsky fled to Tomaszów in the hope of finding refuge with friends there. After 1941, no trace of him remained..

BARD, BASIL JOSEPH ASHER (1914–2002), English lawyer and chemist. Bard studied chemistry at the Royal College of Science and also became a barrister. During World War II he worked in the legal departments of various government ministries dealing with the production and supply of explosives and aircraft. In 1950 he entered the government National Research Development Corporation and successively served as commercial manager, technical director, executive director, and chief executive and was appointed its managing director in 1971. Bard became the first chairman of the British branch of the Licensing Executives Society and served on a number of government committees. Bard was actively interested in Jewish communal and Zionist affairs. From 1977 to 1981 he was chairman of the Birmingham Mint.

[Samuel Aaron Miller]

BARDACH, ISRAEL (Isaac ben Hayyim Moses; c. late 18th century), Hebrew grammarian. Bardach, who lived in Lithuania, is known as the author of *Ta'amei Torah* (Vilna, 1822), a book on the accents (cantillations) of the Torah which was published by his brother Meir Bardach. The second part of this work contains a treatise on Hebrew grammar. In the introduction to *Ta'amei Torah*, Bardach mentions that he had also written commentaries on the *Idra Rabba* (of the *Zohar), on the Babylonian and Jerusalem Talmuds, and on the Shulhan Arukh. However, the existence of all of these is unknown.

BARDAKI, ISAAH BEN ISSACHAR BER (1790–1862), Polish rabbi and later head of the Jerusalem community. Bardaki was born in Pinsk and settled in Erez Israel in 1810, after the death of his first wife. In 1823 he married the daughter of R. *Israel b. Samuel of Shklov who mentions Bardaki with great affection. This marriage assured him of a leading position in the growing Ashkenazi community of Jerusalem. Upon the death of his father-in-law, he became head of the community. Wherever he went he was accompanied by his own interpreter and his personal attendant. Bardaki greatly strengthened the community, although he was opposed to all modern trends. Several buildings adjoining the Or ha-Hayyim Yeshivah were constructed under his auspices and the compound was named after him Hazer Rabbi Yeshayahu. He was a vice consul of Austria (a post of great importance in the *capitulations regime prevailing in Jerusalem), and received the title of *hakham bashi* ("chief rabbi"). Several of his works are extant in manuscript.

BARDANASHVILI, JOSEF (1948–), Israeli composer. Born in Batumi, Georgia, Bardanashvili studied at the Music Academy in Tbilisi under Alexander Shaverzashvili, where he graduated with a Ph.D. in composition in 1976. He was the director of the Batumi College (1986–91) and cultural vice minister of Adjara (1993–94). He settled in Israel in 1995 and was composer-in-residence of the Israel Sinfonette Orchestra of Ra'anannah from 1996 to 1999. He taught at Camera Obscura College in 1998–99, at the Rubin Academy of Music, Tel Aviv, in 1998–2000, and at the Bar-Ilan University and Sapir Academy College. He served as musical director of the Tel Aviv Biennale for Contemporary Music in 2002 and 2004.

Bardanashvili composed the first Georgian rock-opera, *Alternative* (1976), and rock-ballet, *Tutor* (1982). Among his other works are three operas, *Moving Stars* (1982), *Eva* (1998), and *A Journey to the End of the Millennium* (2004); two ballets (1972, 1991); two symphonies (1980, 2001); concertos for guitar, flute, piano, and violin; a triptych for voices and orchestra, *Children of God*, with texts from the Talmud, Koran, New Testament, and Book of Psalms (1997); *Time to Love* with texts from the Song of Songs, the Evangelists, Samuel ha-Nagid, and Nahapet Kuchak (1999); string quartets, quintets, piano trios, piano sonatas, choir music, and music for over 20 films and 40 theater productions. Having been influenced by Schnittke's polystylistic music and Kancheli's music, Bardanashvili was one of the first postmodern composers in the former Soviet Union to build his compositions on Georgian folklore and the music of Caucasian Jews.

Bardanashvili's compositions have been successfully performed all over the world by famous soloists, conductors, and orchestras such as the Israel Philharmonic, the St. Petersburg Marinsky Theater, the Berliner Symphoniker, Jerusalem Symphony, Dochnanyi (Hungary), and festivals in Israel and abroad. Among his honors are the title of Honored Artist of Georgia (1988), the Paliashvili Award (1997), the AKUM Composer Prize (1998), the AKUM Prize for Lifetime Achievement (2002), the Margalit Prize (1999) for incidental music for the *Dybbuk*, the Israeli Prime Minister's Award (2000), and Israel Theater Music Oscar (2003).

[Dushan Mihakek (2nd ed.)]

BAR-DAROMA (Schermeister), HAYYIM ZE'EV (1892–1970), Israeli geographer. Bar-Daroma was born on a farm near Volkovysk, Poland, and in his youth studied in the famous Lithuanian yeshivot of Mir and Slobodka, secretly acquiring at the same time a knowledge of Russian and secular subjects.

In 1911 he joined his parents who had settled in the ICA settlement of Sejera (see *Ilaniyyah) and later moved to Petaḥ Tikvah. In 1918 he moved to Jerusalem where he adopted the name of Bar-Daroma and was one of the first students of the Hebrew University, studying among other subjects the geographical history of Erez Israel, geology, and archaeology. After receiving his M.A. in 1938, he proceeded to the United States

where he continued his education at Dropsie College, receiving his doctorate in 1942.

Returning to Israel in 1946, he engaged in teaching until ill health forced him to relinquish it in 1951. Thereafter he devoted himself to research in the geography of Erez Israel and published articles on topical subjects and literary criticism.

His first major work on the geography of Erez Israel, *Ha-Negev*, was published in 1935. A physical geographical study of the area from Beersheba to the Suez Canal and the Red Sea, which according to Bar-Daroma was mistakenly called Sinai, this book won him the Bialik Prize from the City of Tel Aviv in 1936. In the same year his book *Jerusalem*, on the topography of the Old City, was published. His most important work, *Ve-Zeh Gevul ha-Arez* (1958), was awarded the Rabbi Ouziel Prize of the City of Jerusalem in 1959 and the Ramat Gan literary prize.

BARDEJOV (Hg. **Bartfa**; Ger. **Bartfeldt**), town in Slovakia, on the eastern Polish border. The first Jews probably appeared in Bardejov in the 13th century, after the Tartar invasion, when the Hungarian king Bela IV invited foreigners to settle in the devastated country. The Jews engaged in trade and established inns along the Tokay (Hungary)–Brody (Poland) highway. Jews again appeared in the town in the 18th century, and with them Ḥasidism and the *Halberstam (Sanz) dynasty. Several Halberstams served as local rabbis. In 1808 the Hevra Kaddisha (burial society) was founded and in 1830 the Great Synagogue was built. In all, there were five synagogues in Bardejov. Jews continued to engage in the export of wine to Poland as a principal occupation and Jewish enterprise helped develop Bardejov as a fashionable health resort in the early 19th century. Two printing shops published Hebrew books. Jews from Bardejov participated in the First Zionist Congress on 1897 and the *Mizrachi Zionist religious movement became a strong force in the town.

The Jewish population numbered approximately 300 in Bardejov and its surroundings in 1848, 181 in the town itself in 1851, 480 in 1862, 1,710 in 1900 (of whom, in 1901, 220 owned businesses, 24 kept taverns, and 89 worked as artisans), and 2,264 in 1930. Most of the local Jews were deported by the Germans to the Lublin area of Poland on May 15–17, 1942.

After the war Bardejov became a rehabilitation center for Jewish survivors from the concentration camps and a transit center for “illegal” immigration to Palestine. (See *Berihah). In 1947, 384 Jews lived in the town, including 79 children. Antisemitism was still rife and Jews were attacked in June 1947 without being protected by the police. In 1965 only one Jewish family remained. Ritual objects from Bardejov are preserved in the Divrei Ḥayyim synagogue in Jerusalem, named in honor of R. Ḥayyim *Halberstam, the founder of the Sanz ḥasidic dynasty.

The New York filmmaker Jack Gurfein, a native of Bardejov, produced a film on the Holocaust in his town called *The Journey Back*. In 2003 a volunteer group of architects from

Israel restored a part of the former Jewish quarter of Bardejov, including the Great Synagogue.

[Yeshayahu Jellinek (2nd ed.)]

BARDIN, SHLOMO (1898–1976), educator. Bardin was born Shlomo Bardinstejn in Zhitomir, Ukraine, and emigrated to Palestine in 1918. After working as an administrative assistant at the Hebrew Secondary School in Haifa, he left to study at the University of Berlin in 1923 and University College in London in 1925. Returning to Haifa in 1926, Bardin taught at the Hebrew Boarding School before setting off for New York City and earning his M.A. at Columbia University’s Teachers College in 1930 and his Ph.D. in 1932. In 1933, he returned to Haifa to establish the Haifa Technical Institute, to which he added the Haifa Nautical School in 1938. In 1939, he went back to the United States, where he remained when World War II broke out. He was naturalized as an American citizen in 1943. He was appointed concurrent director of the Youth Department of Hadassah and the newly established American Zionist Youth Commission (1939), under whose auspices he founded a summer leadership-training program for young adults in 1941. Located in Amherst, New Hampshire, the summer institute was an innovative leadership program styled on the kibbutz model; in addition to daily classes and study sessions, he instituted gardening and physical labor. Shabbat was the centerpiece of the week, celebrated in song, drama, pageantry, and egalitarian services. In 1943, Bardin moved the program to the Poconos, naming it the Brandeis Camp Institute in honor of the recently deceased Supreme Court justice, whose philosophy of American patriotism combined with the commitment to Judaism and Zionism Bardin espoused. Bardin recast his own definition of Zionism from physical relocation to a Jewish homeland to a return to “the spiritual center of one’s mind.” Bardin expanded his summer operations to comprise a western camp in the Simi Valley near Los Angeles (1947) and a southern camp in North Carolina (1949). He soon took the camps out of the Zionist fold and established a separate camp organization that attracted young people from the entire spectrum of Reform, Conservative, and Orthodox Judaism and gave them, as Bardin promised, “an experience that will last a lifetime.” In 1951, he moved to Los Angeles and began transforming the west coast camp into an experiential educational center that comprised a summer camp program for youth and weekend institutes for young adults, couples, and families during the rest of the year. Enriched by the contribution of Hollywood writers and producers, the program-

ming at the Brandeis Camp Institute in southern California became a model for Jewish educators everywhere. In 1974, Boston Hebrew College honored him with its Philip W. Lown distinguished service award. Bardin wrote two books, *Pioneer Youth in Palestine* (1932) and *Jews and the Sea* (1943). In 1977, the name of the institute in southern California was officially changed to the Brandeis-Bardin Institute, honoring its founder. It is now the largest Jewish institutional landholding outside of the State of Israel and features year round educational activities for Jews of all ages and all levels of learning and observance.

[Bezalel Gordon (2nd ed.)]

BAREKHI NAFSHI (Heb. בְּרַכֵּי נַפְשִׁי; “Bless the Lord, O my soul”), initial words of Psalm 104. The central theme of this psalm is the glorification of God as the Creator of the universe, the majesty and beauty of which testify to the wisdom of the Master of all creatures. This psalm is regarded as one of the loftiest and most beautiful examples of ancient Hebrew poetry and a magnificent expression of monotheism. According to traditional Ashkenazi custom, this psalm is recited in private, on the afternoons of the Sabbaths between Sukkot and Passover, together with the 15 “Psalms of Ascent” (120–134). The reason for this custom may well be the analogy of this psalm with the account of creation given in Genesis and read on the Sabbath following the Sukkot festival (*Shabbat Bereshit*). After Passover the recitation of *Pirkei *Avot* replaces that of the Psalms. The praise of the Creator and the creation is also the reason why Psalm 104 is recited on New Moons after the morning service (and in the Sephardi rite also before the evening service).

BIBLIOGRAPHY: Baer S., Seder, 266 ff.; Eisenstein, Dinim, 56.

BAREKHU (Heb. בְּרַכּוּ), opening word of the call to worship by the *sheli'ah zibbur* at the formal beginning of the daily morning and evening services. The full invocation is *Barekhu et Adonai ha-mevorakh* (“Bless ye the Lord who is [to be] blessed”). The congregation responds *Barukh Adonai ha-mevorakh le-olam va-ed* (“Blessed be the Lord who is [to be] blessed for ever and ever”). “Bless,” in this context, is the equivalent of “praise.” *Barekhu* is also recited by the person who is called up to the Torah reading and is followed by the same congregational response. In the morning and evening services *Barekhu* also serves to introduce the reading of the *Shema*; this accounts for the absence of *Barekhu* before the **Minḥah* service which lacks the *Shema*. *Barekhu* is considered to be one of the *devarim she-bi-kedushah* (lit. “holy things”) and may only be recited in the presence of a quorum of at least ten grown male Jews (*minyan*; Sof. 10: 7; Sh. Ar. Oḥ 55:1). The invocation *Barekhu* possibly originated in the time of Ezra, as might have the practice of standing at *Barekhu*; compare with Nehemiah (9:5) “Then the Levites... said, ‘Stand

up [cf. the practice of standing at *Barekhu*] and bless the Lord your God from everlasting to everlasting and let them say: Blessed be Thy glorious Name, that is exalted above all blessing and praise.’” A shorter formula, *Barekhu et Adonai*, occurs in Psalms 134:1–2 and 135:19. In the opinion of R. Akiva, the liturgical invocation, in accordance with scriptural precedent, should consist simply of *Barekhu et Adonai*, whereas the formula *Barekhu et Adonai ha-mevorakh* was advocated by his contemporary, R. Ishmael (Ber. 7:3). The latter formula was preferred by most of the *amoraim* (Bet. 50a; TJ, Ber. 7:4, 11c), and became standard. There is evidence that in the early period *Barukh Adonai ha-mevorakh...* was the response to *Barekhu* only in the Torah reading, while different responses were used for *Barekhu* as the invocation to worship. These were *Barukh Shem kevod malkhuto le-olam va-ed* (“Blessed be His Name, whose glorious kingdom is for ever and ever”), the standard response when the Divine Name was mentioned in the Temple of Jerusalem; and *Yehe Shemeih rabba mevarakh le-alam u-le-almei almayya* (“Let His great Name be blessed for ever and to all eternity”; Sif. Deut. 306, ed. by M. Friedmann (1864), 132b). In the course of time, however, *Barukh Shem kevod...* became the response to the *Shema* only; *Yehe Shemeih rabba...* was reserved for the *Kaddish*; and *Barukh Adonai ha-mevorakh...* became the exclusive response to *Barekhu*. At one time *Barekhu* was also used as a summons to recite Grace after Meals, but in the amoraic period, it was felt that this second-person form of address removed the leader from group participation and the invitation was standardized to *Nevarekh* (“Let us bless”; Ber. 7:3 and 49b–50a; TJ, Ber. 7:2–3, 11b–c; Tosef. Ber. 5:18). This objection, however, did not apply to *Barekhu* in the synagogue. The Reader may employ the “you” form but only when inviting the congregation to join him in prayer. Even then, he repeats the congregational response, thus associating himself with the praise of God. The Sephardi rite, as well as some ḥasidic congregations, retained the paradoxical practice (Sof. 10:7) of reciting *Barekhu* at the conclusion of the daily morning and evening services when there is no Torah reading. The custom accommodates worshippers who arrive too late to hear *Barekhu* at the opening of the services.

[Herman Kieval]

BARENBOIM, DANIEL (1942–), Israeli pianist and conductor. Born in Buenos Aires to parents of Jewish Russian descent, Barenboim started piano lessons at the age of five with his mother, and then with his father, who remained his only other teacher. He gave his first public recital at the age of seven. Further education included Markevich's conducting classes in Salzburg (1954), and studies in Paris and Rome. Barenboim settled in Israel in 1952. Following his British and American debuts (1955, 1957), he toured widely and soon be-

came known as one of the most versatile pianists of his generation. He first conducted in Israel (1962), and from 1965 was active as conductor and soloist with the English Chamber Orchestra. In 1967 Barenboim married the cellist Jacqueline *du Pré in Jerusalem. They performed and recorded together in the coming years until her career was tragically cut short by multiple sclerosis.

Following his debut as conductor with the New Philharmonia Orchestra (London, 1967), Barenboim was in demand by all the leading European and American symphony orchestras. He conducted opera for the first time at the Edinburgh Festival in 1973, and from 1981 was a regular visitor at the Wagner Bayreuth Festival. He was music director of the Orchestre National de Paris (1975–1989), the Chicago SO (1991), and the Deutsche Staatsoper Berlin (1992).

In 2000 the Staatskapelle Berlin appointed him chief conductor for life. He works on a regular basis with the Berlin and the Vienna Philharmonics. Barenboim has always been active as a chamber musician, performing with, among others, *Perlman, *Zukerman, and singer Fischer-Dieskau. His numerous recordings include the complete Beethoven sonatas and piano concertos and the Mozart concerti. As a conductor, he has been most successful with scores from the Romantic era. He also championed contemporary works, and in recent years moved into popular and crossover repertory, such as Argentine tango. He provoked an outcry in Israel by defying the country's ban on Wagner, playing the Prelude from *Tristan und Isolde* with the Berlin Staatskapelle as an encore in concert at the Israel Festival (2001). He has been a prominent advocate of peace in the Middle East. In the early 1990s, he met the Palestinian-born writer and Columbia University professor Edward Said, who shared his vision of peaceful co-existence in the area. This led to Barenboim's first concert on the West Bank, a piano recital at Bir Zeit University. Barenboim and Said established a foundation that promotes music and co-operation through projects targeted at young Arabs and Israelis. They jointly received Spain's Prince of Asturias Concord Prize (2002). Among Barenboim's other honors are the Tolerance Prize (2002) and in 2004 the Buber-Rosenzweig Medal, the Wolf Prize for the Arts, and the Haviva Reik Peace Award. A new version of Barenboim's autobiography, *A Life in Music*, was published in 2002, as was his book with Said, *Parallels and Paradoxes: Explorations in Music and Society*.

[Naama Ramot (2nd ed.)]

BARGAS, ABRAHAM DE (c. 1740), Spanish Marrano author and physician. After escaping from Spain, Bargas settled first in France, where he was personal physician to the duke of Gramont, and later in Italy, where he became physician to the Leghorn Jewish community. There he composed a volume of

ethical discourses on the Bible, *Pensamientos sagrados y educaciones morales...* (Florence, 1749). He also wrote an account of the earthquake of 1742, *Fiel relación de los terremotos...* (Leghorn, 1742), and translated into Spanish the order of service for the fast-day instituted to commemorate that event: *Traducción de la oración del ayuno y de los temblores de tierra...* (Pisa, 1746). He wrote some occasional poems, among them *El Casto Niceto* (Leghorn, n.d.).

[Cecil Roth]

BAR GIORA, SIMEON, Jewish military leader in the war against Rome (66–70 C.E.). Simeon was born, according to Josephus, in *Gerasa, a large Hellenistic city in Transjordan, where the Jews lived in peace with the city's non-Jewish population. Some scholars, however, identify his birthplace with the village of Jerash in the neighborhood of Hartuv (Press, *Erez*, 1 (1951²), 174, s.v. *Geres*), others with Kefar Jorish near Shechem on the grounds that Simeon's activity began in its vicinity, i.e., in the province of Acrabatene. Since the word *giora* means proselyte in Aramaic, many scholars hold that his father was a convert to Judaism. The main source of information about Simeon is Josephus who is to be treated with circumspection, especially where an appraisal of the man and his activities are concerned, since Josephus entertained feelings of intense animosity toward him.

Simeon, already apparently known as a partisan leader, first distinguished himself in the battle at Beth-Horon against *Cestius Gallus (66 C.E.), in which the Jews inflicted a crushing defeat on the Roman army. Despite this achievement, however, Simeon was relegated to the background, since in Jerusalem the moderate party in control was disposed to come to terms with Rome. Simeon gathered around him a band of ardent patriots and, according to Josephus, engaged in brigandage. It is obvious, however, even from Josephus' own biased account, that these acts of "brigandage" were military operations conducted by the rebels under the leadership of Simeon against their internal enemies, opponents of the revolt, and sympathizers with Rome. In retaliation for these operations, the forces of the moderate government in Jerusalem compelled Simeon to take refuge among the *Sicarii who, under the command of *Eleazar b. Jair, had captured *Masada. For a time Simeon remained with them, taking part in their raids. Subsequently leaving them, he parted company, and "terrorized" the southern part of Erez Israel. Although growing increasingly stronger, he was unable to capture Jerusalem. The Zealots in Jerusalem, who were fearful of him, seized his wife but released her because of his threats. In addition to his continuous war against the party in control in Jerusalem, Simeon also fought against the Idumeans and succeeded in occupying Idumea with the help of supporters among the Idumeans themselves. Hebron, too, fell into his hands. In April 69 C.E. he entered Jerusalem, the gates of the city having been opened to him by the enemies of *John of Giscala, who had called on

Simeon to come to their aid. Simeon thus gained control of the larger part of Jerusalem, both of the Upper and a considerable section of the Lower City.

The struggle between Simeon and John of Giscala continued. Constant hostilities were waged between them in the city, and came to an end only when Titus' forces reached the outskirts of Jerusalem (April 70 C.E.). Although all the rebels joined together during the siege to fight against the Romans and performed deeds of astounding bravery, the advantage enjoyed by the Roman army proved decisive. The Temple was burned and the devastated city captured by the enemy. Simeon and several of his most loyal friends hid in an underground passage among the ruins, but, unable to escape, Simeon finally surrendered to the Romans and was taken prisoner. The circumstances of his surrender were extremely strange. Josephus relates that Simeon suddenly appeared among the Temple ruins, as though out of the bowels of the earth, dressed in white and covered with a purple mantle. At the sight of him the Romans were terrified, but after recovering from their fear, bound him in chains. His strange appearance was probably connected with messianic expectations on his part; or by submitting to the victorious enemy he may have deliberately invited martyrdom.

Simeon was led as a prisoner in the triumphal procession held in Rome by Vespasian and his sons to celebrate their victory over the Jews. Scourged all the way, he was taken to the Mamertine prison, at the northeast end of the Forum, and executed at the moment of the culmination of the triumph. That he and not John of Giscala played this part in the triumphal procession shows that the Romans regarded him as the most important leader in Jerusalem and as the rebel commander. This is evident from other extant information as well. His army was far larger than that of his rivals, having numbered about 15,000 at the beginning of the siege of Jerusalem. His soldiers were also the best organized and disciplined. The fact that he was invited to Jerusalem by the priests and the people may have provided him with some legal basis for his leadership, although not all the patriot elements recognized his authority. Since information about them is very sparse, it is difficult to comprehend and explain the basis of the conflict between their different parties. At times it is even difficult to distinguish between the parties themselves. Nevertheless, from extant information it would appear that Simeon b. Giora was the leader of a clear eschatological trend in the movement of rebellion against Rome, and possibly filled the role of "king messiah" within the complex of eschatological beliefs held by his followers. His exceptional bravery and daring, mentioned by Josephus, undoubtedly attracted many to him, and won him preeminence among the rebel leaders. In contrast to the bitter hostility that existed between him and John of Giscala, there was a measure of understanding between him and the Sicarii at Masada.

Conspicuous among Simeon's characteristics was the enmity he bore toward the rich and the sympathy he showed to the poor, even to the extent of freeing slaves. This approach of

his doubtless had its origin in his party's social outlook, opposed as it was to the existing order also in regard to the economic system and social justice.

[Uriel Rappaport]

°BAR HEBRAEUS (or Bar 'Ebhrya or Ibn al-'Ibri), JOHANAN (later: Gregorius or Abu al Faraj; 1226–1286), the last of the important writers in Syriac. He was the son of an apostate Jewish physician, Aaron (hence the appellation Son of the Hebrew), and knew Hebrew. Born in Malaṭiya (in Asia Minor) he went with his father to Antioch, where he became a monk. He also pursued secular studies, at first under his father's tutelage and later with a Nestorian scholar in Tripoli (Syria). In 1246 he was ordained Jacobite (Monophysite) bishop of Gubos (near Mulafrin) and assumed the name Gregorius. In 1252 he was appointed Maphriyan (archbishop) of Mesopotamia and Persia. Bar Hebraeus traveled widely, supervising the congregations of his church. He died at Maghāra in Azerbaijan.

Bar Hebraeus was a prolific writer. His commentary *Oẓar Razei* ("Treasury of Secret Wisdom") on the Old and New Testaments, reveals the influence of traditional Jewish exegesis. In addition to theological works such as *Hokhmat Hokhmeta*, which contains a systematic exposition of Aristotle's teaching, he also wrote on Syriac grammar and composed a Syriac *Chronicle*, a history of the world from creation to his own time, in two parts: ecclesiastical history and secular history. It was translated into English by E.A.W. Budge in 1932, and became widely known. Bar Hebraeus also wrote many poems and compiled a collection of entertaining stories (English translation, *Oriental Wit and Wisdom, or the Laughable Stories*, 1889). In addition, he translated Arabic works into Syriac (including the philosophical work of *Avicenna, *Kitāb al-Ishārāt*), and also wrote works in Arabic, including an abridgment of the secular portion of his *Chronicle* with some revisions and addenda, and an epitome of the large work of al-Ghāfīkī on medications (part published in the original with an English translation, with a commentary by M. Meyerhof and G.P. Sohby, 1932).

[Eliyahu Ashtor]

BAR HEDYA (fl. first half of the fourth century), Babylonian scholar. Bar Hedya was one of the *nehutei, amora'im* who moved between Babylonia and Erez Israel, transmitting the rabbinical traditions of both countries. He testified, among other things, that in Erez Israel care was taken to ensure that Hoshana Rabba (the 7th day of Tabernacles) did not fall on a

Sabbath (Suk. 43b). Known for his interpretations of dreams, *Abbaye and *Rava turned to him in this connection. Abbaye, who paid him, received favorable dream interpretations; Rava, who did not pay him, received unfavorable interpretations. Upon the materialization of Bar Hedy's predictions, Rava also began to pay him, whereupon his dreams were then favorably interpreted. It finally became clear to Rava that the secret of Bar Hedy's ability lay in the fact that "all dreams follow the mouth" (of the interpreter) (Ber. 56a).

[Yitzhak Dov Gilat]

BAR-HILLEL, YEHOSHUA (1915–1975), philosopher and theoretical linguist. Bar-Hillel was born in Vienna, educated in Germany, and after 1933, at the Hebrew University. He served in World War II, and lost an eye fighting in the Israeli War of Independence. At the end of the war, he returned to the Hebrew University. He became a professor in 1961, a member of the Israel Academy of Arts and Sciences in 1963, and president of the International Union of History and Philosophy of Science in 1967. Bar-Hillel's early writings were concerned with the philosophy of mathematics, and culminated in the publication of his book with A.H. *Fraenkel, *Foundations of Set Theory* (1958). This sets out the major foundational approaches to mathematics and emphasizes their connection with broader philosophical issues. As distinct from Fraenkel's Platonism, Bar-Hillel's contributions stress that mathematical entities have only a pseudo-existence. Bar-Hillel's writings deal with the philosophy of language, philosophy of science, inductive logic, machine translation, mechanization of information retrieval, algebraic linguistics, and the semantics of natural languages. Some of these latter topics form the subject of his *Language and Information* (1964), which is concerned with the development of a science of language.

[Avrum Stroll]

BARI, Adriatic port in southern Italy. Bari was one of the flourishing Jewish centers of *Apulia which according to tradition were founded by captives brought to Italy by *Titus. However, no inscriptions have survived to show that the community may be traced back to the Roman period, as is the case in neighboring towns. The community in Bari evidently rose to importance somewhat later. An epitaph dating from the ninth century preserves the memory of Eliah ben Moses "strategos" and a stele (of uncertain date) commemorates Moses ben Eliah, devoted teacher of the law and poet, compared to the biblical Moses. In the ninth century the miracle-worker *Aaron of Baghdad visited Bari. The names of scholars who taught at the local rabbinical academy in the tenth and eleventh centuries are recorded, including Moses Calfo, who is mentioned in the *Arukh* of *Nathan b. Jehiel. Legend talks of "four rabbis," who sailed from Bari in 972, were captured at sea by Saracen raiders, and sold into slavery in Spain and

North Africa; after being ransomed, they founded famous talmudic academies (see *Moses b. Hanokh). The legend at least indicates that Bari was known as a center of talmudic learning. This is confirmed by the adage cited by Rabbenu *Tam in the 12th century: "From Bari shall go forth the Law and the word of the Lord from Otranto" (a paraphrase of Isa. 2:3). The theological teaching of the Bari schools evidently attained a wide influence: Andrea, archbishop of Bari (d. 1078), actually became converted to Judaism (see *Obadiah the Proselyte).

The Jews of Bari underwent a number of vicissitudes. They were included in the edicts of forced conversion issued by the Byzantine emperors in the ninth and tenth centuries (see *anusim). In about 932, the Jewish quarter was destroyed by mob violence and several Jews were killed. Between 1068 and 1465 the Jews in Bari suffered from the rival claims of the king and the archbishop on taxes levied on the Jews in the city. The Jews in Bari were also victims of the campaign to convert Jews to Christianity initiated by Charles of Anjou in 1290; in 1294, 72 families were forced to adopt Christianity, but continued to live in Bari as *neofiti* (see *Crypto Jews). There followed a century and a half of tranquility until the Jewish quarter was again attacked in 1463. A notable figure in this period is the physician David Kalonymus of Bari. In 1479 David Kalonymus and his family were offered Neapolitan citizenship along with exemption from commercial taxes, and in 1498 he requested the Sforza Duke of Bari to confer on him the same special rights in Bari as he already possessed in Naples. In 1495, during the unrest that accompanied the French invasion, Jewish property worth 10,000 ducats was pillaged. The expulsion of the Jews from the kingdom of Naples in 1510–11 sealed the fate of those in Bari: a small number were readmitted in 1520 and finally forced to leave in 1540–41. The Via della Sinagoga in Bari remains to attest the existence of the former community, and several early medieval tombstones are in the Museo Provinciale. Jewish communal life was briefly resumed during World War II, when in 1943 many Jews from other parts of Italy and from Yugoslavia took refuge in Bari from Nazi-occupied territories. Toward the end of the war a refugee camp was established at Bari. The beginning of the "illegal" immigration to Palestine movement in Italy was situated in the area around Bari. During this period Jewish soldiers, mainly from Palestine, were active in aiding and organizing the refugees.

[Attilio Milano / Nadia Zeldes (2nd ed.)]

BAR-ILAN, DAVID (1930–2003), Israeli journalist and pianist. Bar-Ilan was born in Haifa. A gifted pianist, he won a scholarship to Juilliard School of Fine Arts in New York at the age of 17. As a soloist he appeared with major orchestras and recorded six albums, including the works of Chopin, Beethoven, Mussorgsky, Tchaikovsky, and Brahms. In 1961 he was the first Israeli to perform in Germany. He began his writing career in the 1960s, becoming a staunch defender of Israel's case in articles he published in the American media. He also helped found Americans for a Safe Israel. Bar-Ilan was identified with Zionist Revisionist ideology and the Land of Israel Movement. He returned to Israel in 1990, where he joined *The Jerusalem Post*, first as editorial page editor and in 1992 as executive editor. Editorial policy under Bar-Ilan was characterized by right-wing positions on Arab-Israeli matters and support for the *Likud party. He wrote a weekly column, "Eye on the Media," castigating foreign media reporting on Israel. Yet, as editor he zealously kept the paper's op-ed pages open to a broad spectrum of political views. In 1996, after Netanyahu won the elections in Israel, Bar-Ilan joined Netanyahu's staff as his chief of information and policy planning. After Netanyahu's failure in the 1999 elections, he returned to *The Jerusalem Post*.

[Yoel Cohen (2nd ed.)]

BAR-ILAN (Berlin), MEIR (1880–1949), leader of religious Zionism. Bar-Ilan was born in Volozhin, Russia, the son of R. Naphtali Zevi Judah *Berlin. He completed his studies in yeshivot at Volozhin, Telz, Brisk (Brest-Litovsk), and Novogradok. As a young man he joined the *Mizrachi movement, representing it at the Seventh Zionist Congress (1905), at which, unlike the majority of Mizrachi delegates, he voted against the *Uganda Scheme. In 1911 he was appointed secretary of the world Mizrachi movement, working in Berlin, and he coined the Mizrachi slogan "*Erez Yisrael le-Am Yisrael al Pi Torat Yisrael*" ("The land of Israel for the people of Israel according to the Torah of Israel"). He moved to the United States in 1915, served as president of the U.S. Mizrachi, and from 1925 was a member of the Board of Directors of the *Jewish National Fund. In 1926 Bar-Ilan settled in Jerusalem where he served as president of the World Mizrachi center and as the Mizrachi representative in Zionist and *yishuv* institutions, including clandestine committees for defense. Between 1929 and 1931 he was a member of the Zionist Executive. A leading opponent of the Palestine partition plan in 1937, and of the British White Paper of 1939, he advocated civil disobedience and complete noncooperation of the Jewish population toward the British government. After the establishment of the State of Israel, he organized a committee of scholars to examine the legal problems of the new state in the light of Jewish law, and was an initiator of the National Religious Front, the group of religious parties that presented a united platform in the first Knesset elections. A central figure in the Zionist religious movement, Bar-Ilan founded and edited a religious Zionist weekly, *Ha-*

Ivri ("The Hebrew"), which was published in Berlin from 1910 to 1914 and in New York from 1916 to 1921. Between 1938 and 1949 he was editor in chief of the Mizrachi daily, *Ha-Zofeh*, in Tel Aviv. Some of his articles were collected in his books *Bi-Shevilei ha-Tehiyah* ("In the Paths of Renaissance," 1940) and *Kitvei Rabbi Meir Bar-Ilan* (1950). His memoirs, *Mi-Volozhin ad Yerushalayim* ("From Volozhin to Jerusalem," 1939–40), were originally published in Yiddish. He also wrote a book about his father, entitled *Rabban shel Yisrael* ("Rabbi of Israel," 1943). He initiated and organized the publishing of the *Talmudic Encyclopaedia*, begun in 1947. He also founded the institute for the publication of a new complete edition of the Talmud. Bar-Ilan University near Tel Aviv, founded by the American Mizrachi movement, is named in his honor, as is the Meir Forest in the Hebron hills, and the moshav Bet Meir near Jerusalem.

[Zvi Kaplan]

BAR-ILAN UNIVERSITY, a religiously oriented university, founded in 1955. In the mid-1990s Bar-Ilan was the third largest university in Israel. The university's aim is to advance knowledge in both Jewish studies and general science in accordance with the ideology of *Torah im Derekh Erez* ("Torah with general knowledge") and to serve as a bridge between religious and secular in Israel.

In the late 1940s a plan evolved to establish a religious university in Erez Israel, supported by the *Mizrachi movement in the United States. The idea received further impetus under the leadership of Prof. Pinkhos *Churgin of Yeshiva University in New York, and the university was inaugurated in 1955. Classes opened with 80 students and 19 lecturers. At the opening ceremonies, Prof. Churgin said that Bar-Ilan would "demonstrate that Judaism is not a cloistered way of life, removed from scientific investigation and worldly knowledge." Named for Meir *Bar-Ilan (Berlin), Bar-Ilan received little encouragement in Israel at the outset. The government doubted the need for another university in addition to the Hebrew University in Jerusalem. *Agudat Israel and similar Orthodox groups were fearful of imperiling certain types of religious education, particularly the yeshivot. However, it gradually became clear that Bar-Ilan served an important function in combining modernity with tradition, and in expanding the country's scientific and Jewish studies' capabilities. Prof. Churgin served as first president of the University. In 2005 Moshe Kaveh was president. In 1957 Prof. Joseph Lookstein was appointed chancellor, holding the position until 1976. Under Lookstein's leadership the university grew rapidly and received a charter from the State of New York (the only institution of higher learning in Israel to do so).

The Bar-Ilan campus is located east of the city of Ramat-Gan and administers another five regional colleges throughout

the country. The campus includes 63 buildings, 165 classrooms, 130 laboratories, and 25 libraries. It employs 1,650 academic staff, teaching in six faculties and 38 academic departments: exact sciences, natural sciences, social sciences, humanities, Jewish studies, and law. The campus also includes schools of education, social work, engineering, and business administration. In 2005 Bar-Ilan had 31,200 students and 59,000 alumni. Its annual budget was \$130 million.

Bar-Ilan is the only Israeli university where all students benefit from a compulsory enrichment program in Jewish heritage (Bible, Jewish literature and history, ethics, culture, etc.), in addition to the full university curriculum. The university offers over 500 elective courses in Basic Jewish Studies. Degrees offered by Bar-Ilan's academic departments include: B.A., B.Sc., LL.B., M.A., M.Sc., M.S.W., LL.M., M.B.A., and Ph.D.; diplomas in communications, local government, music therapy, teaching, translation and interpreting. It has also taken a leading role in applied scientific research in the biomedical and pharmaceutical fields, and houses several national scientific centers, such as the Israel National Center for Magnetic Measurements. The university also houses high-level research centers in the fields of physics, medical chemistry, mathematics, brain research, economics, strategic studies, psychology, music, archaeology, and Jewish philosophy and law. Unique to Bar-Ilan are the Institute for Advanced Torah Studies and the counterpart Midrasha for Women, through which over 1,300 students combine intensive yeshivah-style studies with a full academic curriculum.

Bar-Ilan maintains academic cooperation agreements with 54 leading universities around the world. There are 64 endowed chairs and 66 research centers operating at the university, including several leading research institutes in physics, medical chemistry, mathematics, brain research, economics, strategic studies, developmental psychology, musicology, Bible, Talmud, Jewish education, Jewish law and philosophy. A special project of the university is the publication of responsa texts, historical and present, with special computer applications developed for this purpose. Bar-Ilan University Press published to the mid-1990s some 350 publications in addition to 20 periodicals and professional journals. The university owns the Bar-Ilan Research & Development Company aimed at marketing research results to private companies. The university sponsors many social and community outreach projects, including a prisoner rehabilitation effort, a big-brother program, legal aid, study programs for senior citizens, educational counseling, and a network of social counselors in development towns.

[David M. Weinberg / Shaked Gilboa (2nd ed.)]

BARISHANSKY, RAPHAEL (1864–1950), rabbi. Barishansky was born in Lipnishtok, Lithuania, and studied at the outstanding yeshivot of Eishishok and Mir as well as the kolel in Kovno and with the Gaon Rabbi Ḥayyim Lev. In Bialystok he

studied with Rabbi Samuel *Mohilewer. Mohilwer influenced him to become a religious Zionist and Barishansky joined Hovevei Zion (see *Ḥibbat Zion).

For 30 years, beginning in 1893, Barishansky was the pulpit rabbi in a large congregation in the town of Gomel in Belorussia, even attracting non-observant Jews to Judaism. He worked to help Jewish soldiers in the Russian Army by sending them kosher food and ritual items for Jewish holidays.

Barishansky was a committed religious Zionist who sought to bring others to the cause; he attended several World Zionist Congresses. Barishansky's Zionism also brought him into conflict with the fairly large community of Lubavitcher Hasidim in Gomel. When *Mizrachi opened a chapter in Gomel, and there was community opposition, Barishansky vigorously defended the ideology of religious Zionism.

In the early 1920s, Barishansky publicly criticized Jewish communists for closing Jewish schools and discrediting Zionism. As a result, he was sentenced to two years in prison, but was released after six months, thanks to the intervention of several Zionists. By February 1924, he had fled Russia and arrived in New York. Because of his experiences in the "old country," when the American Jewish community wanted to ameliorate the conditions of the Jews in Soviet territories, he opposed attempts to keep them there, because even the Jewish communists were anti-religious and were suppressing Judaism, especially around the Jewish holy days.

Once in New York, Barishansky accepted a teaching position at the Talmud Torah Torat Moshe in the Bronx. He became an active member in the American Mizrachi movement and a member of the Agudat Harabbonim, but left when he disagreed with their policy of denying the certification of kosher meat in factories that also produced non-kosher meat. In 1926 he was a rabbi in Washington, D.C. When he retired in 1929, he returned to the Bronx. An autobiographical memoir of the trial in Russia in 1922 appeared in the *Morgen Journal* (Nov. 19, 1923) and was reprinted in M. Altshuler, "The Rabbi of Homel's Trial," in: *Michael*, 6 (1980), pp. 9–61.

[Jeanette Friedman (2nd ed.)]

BARIT, JACOB (1797–1883), Russian talmudist and communal leader. Born in Simno, Suvalki province, he left in 1822 for Vilna, where he kept a distillery. Attracted by the ideas of the *Haskalah, he studied foreign languages, mathematics, and astronomy. In 1850 he became principal of the yeshivah founded by R. Ḥayyim Nahman Parnas, a position he held for 25 years. By the end of 1840 he was the acknowledged leader of the Vilna community. When Sir Moses *Montefiore visited Vilna in 1846 Barit advised him on his petition to Nicholas I. He was a member of the delegation sent to St. Petersburg in 1852 in connection with the oppressive new conscription law.

On several rabbinical committees summoned by the Ministry of the Interior, Barit was eloquent in advocating Jewish rights. In 1871 when the governor general of Vilna formed a committee to investigate the accusations made against the Jews by the apostate Jacob *Brafmann, Barit successfully convinced the committee of their falsehood.

BARKAI (Heb. בָּרְכַי; “first morning light”), kibbutz in central Israel, at the western entrance of the Iron Valley, affiliated with Kibbutz Arzi ha-Shomer ha-Za'ir. It was founded on May 10, 1949, by pioneers from North America, joined later by newcomers from Romania and from English-speaking and other countries. In the mid-1990s the population was approximately 500, and by the end of 2002 it had decreased to 327. Farm branches included dairy cattle, poultry, avocado plantations, and field crops. The kibbutz runs a factory for polyethylene products.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

BAR KAPPARA (beginning of third century C.E.), Palestinian scholar in the transition period between the *tannaim* and the *amoraim*. When quoted in *tannaitic* sources, he is called by his full name, “R. Eleazar ha-Kappar Beribbie.” In his role as an *amora*, both when expressing his own opinion and when transmitting earlier *tannaitic* sources, he is referred to by the more informal title “Bar Kappara.” The term “Beribbie,” often used as a title of respect, may serve here as an abbreviation for “Beribbie Eleazar ha-Kappar,” i.e., “the son of R. Eleazar ha-Kappar,” as it seems that the father and the son were called by the same name. This fact has led to some confusion as to which traditions, especially those mentioned in the later literary levels of the *tannaitic* works and in the *talmudic beraitot* are to be ascribed to the father and which to the son. Some scholars tend to ascribe almost all of the R. Eleazar ha-Kappar traditions to the father, and others to the son, while others have claimed that they are one and the same person. While there is clear evidence for the distinction between the father and the son – for example the use of the long form “R. Eleazar ben Eleazar ha-Kappar Beribbie” (e.g., *Tosef.*, *Bezah* 1:7), to refer to the son – the notion that the two engaged in an *halakhic* dispute with each other (cf. *Hul.* 27b–28a) seems unfounded, as it fails to distinguish between Bar Kappara’s role as a *tanna*, and his role in transmitting earlier *tannaitic* sources (cf. *Sifra*, *Sherazim* 10:1, *Sifre Deut.* 78).

Bar Kappara was a disciple of *Judah ha-Nasi and like his contemporaries, *Ḥiyya bar Abba and *Oshaya Rabbah, was the author of a compilation of *halakhot*. These were called “The Mishnah of Bar Kappara” or “The Great Mishnayot of Bar Kappara” (*BB* 154b; *Eccles. R.* 6:2). This collection, a supplement to the Mishnah of Judah ha-Nasi, was used to explain obscure passages in the standard Mishnah and brought to the

knowledge of the *amoraim* various traditions and opinions that differed from the Mishnah of Judah ha-Nasi.

The academy of Bar Kappara was reported to be in the “south” (*TJ*, *Nid.* 3:2, 50c), perhaps in Caesarea or in nearby Parod (*Av. Zar.* 31a). It has also been suggested that it was in Lydda (*Lieberman*, p. 123). In 1969, however, a stone, which was apparently the lintel over the main entrance to a *bet midrash*, was found in the Golan area, inscribed with the words: “This is the *bet midrash* of Rabbi Eliezer ha-Kappar.” It is unclear whether this inscription refers to the father or to the son. Some scholars have suggested that Bar Kappara was the final compiler of *Sifrei Zuta*, and, though a number of their proofs have been challenged, more research is still needed in order to arrive at a definite conclusion in this matter. Among his associates were some of the outstanding scholars of the generation, such as *Oshaya and *Joshua b. Levi, who transmitted his *halakhah* and *aggadah* (*Ker.* 8a; *Ber.* 34a, et al.).

In addition to his role in the transmission of *halakhic* tradition, Bar Kappara’s opinions on a number of important *aggadic* traditions have been preserved. For example, it is reported in his name: “Whosoever can calculate the movements of the solstices and planets, but fails to do so, to him is applied the verse [*Isa.* 5:12] ‘But they regard not the work of the Lord; neither have they considered the operation of His hands’” (*Shab.* 75a). This tradition reflects the notion, common also among gentile sages of the time, that the celestial order reflects both divine wisdom and power, and so represents an early form of “natural theology.” He apparently also looked favorably upon the use of Greek, even recommending it to his disciples: “Let the words of Torah be uttered in the language of Japheth [Greek] in the tents of Shem” (*Gen. R.* 36:8, in reference to *Gen.* 9:27). While permitting metaphysical speculation, he placed limitations on such speculations (*Gen. R.* 1:10; cf. *Tos. Hag.* 2:7, *TJ*, *Hag.* 2:1 77c), perhaps in response to the excesses of Gnostic teaching that were widespread at that time. Commenting on the verse, “For ask now of the days past, which were before thee, since the day that God created man upon the earth, and from one end of heaven unto the other” (*Deut.* 4:32), Bar Kappara stated: “You may speculate upon what came after creation and not upon what came before it. You may investigate from one end of heaven unto the other, but not what is beyond it.” His opposition to asceticism is seen in the statement, “to what does Scripture refer when it says [of the Nazirite, *Num.* 6:11], ‘Make atonement for him, for that he sinned by reason of the soul?’ Against which soul did he sin? Against his own soul, in that he denied himself wine. And if one who denied himself only wine is termed a sinner, how much more so he who denies himself the enjoyment of all permitted things” (*Ta’an.* 11a, and parallel passages).

Bar Kappara showed great talent as a poet, and as an author of fables and epigrams. The Jerusalem Talmud (*Ber.* 1:8, 3d) quotes a beautiful prayer which he composed and which he used to recite during the repetition of the Thanksgiving blessing in the *Amidah*. It is related that during the marriage feast of Simeon, son of Judah I (or of his son, see *Lev. R.* 28:2),

Bar Kappara told 300 *fox fables, and so intently did the guests listen that they completely ignored the fact that their food was becoming cold. According to the Talmud, tensions existed between Bar Kappara and the house of Judah ha-Nasi: "On one occasion, Simeon, son of Judah, and Bar Kappara were studying together when a difficulty arose about a certain *halakhah*. Simeon said to Bar Kappara, 'Only my father, Rabbi Judah, can explain this.' Bar Kappara retorted, 'There is no rabbi in the world who understands it' [Rashi to MK 16a]. Simeon told his father, who was vexed, and when Bar Kappara next presented himself, Judah said to him, 'I have never known you'" (MK 16a), thus disowning him. On another occasion, Bar Kappara and Ben Elasa, the rich but ignorant son-in-law of Judah, were in the *nasi's* house at a gathering of scholars who were engaged in learned discourse. Bar Kappara proposed to Ben Elasa that he too take part in the discussion, and to this end composed for him a poetic riddle to present to his father-in-law as a genuine problem. The riddle was in fact a criticism of the conduct of Judah's household and of the fear which he inspired. The *nasi*, realizing from the smile upon Bar Kappara's face that he was the author of the riddle, exclaimed, "I do not recognize you as an elder" (i.e., "I do not wish to grant you recognition"), and Bar Kappara understood that he would not be ordained (TJ, MK 3:1, 81c). It is nevertheless told that Bar Kappara was the first to inform the sages, in moving words, of the *nasi's* death: "Mortals and angels have been wrestling for the holy ark; the angels have won and the ark has been taken captive."

BARKAT (Burstein), REUVEN (1906–1972), Israeli politician. Member of the Sixth and Seventh Knessets and speaker of the Knesset, 1969–72. Barkat was born in Taurig (Taurage), Lithuania, where his father, Abraham Aaron Burstein, headed the local yeshivah. Barkat attended a Hebrew secondary school in Ponevezh (Panevezys). He was one of the founders of He-Ḥalutz ha-Za'ir and chairman of Ha-Ivri ha-Za'ir in Lithuania. He studied literature and law at the Sorbonne in Paris and was chairman of the Hebrew Students Union in the Diaspora. He immigrated to Erez Israel in 1926 and immediately entered political life. In 1933–38 he was involved in the **Ha'avarah*. Subsequently, in 1940–46 he was secretary general of the National Committee for the Jewish Soldier, directing cultural and welfare activities for the members of the Palestinian Jewish units of the British Army and subsequently of the Jewish Brigade. At the end of the war these activities also involved clandestine activity connected with the rescue of Jewish sur-

vivors of the Holocaust (see *Berihah). In 1946 Barkat joined the Political Department of the *Histadrut. In 1949 he was appointed head of its International Department, a position he held until 1960. He was also appointed chairman of the Arab Department of the Histadrut. In 1961 Barkat was appointed ambassador to Norway. He was soon offered the position of ambassador to the Soviet Union, but finally he declined the post to become secretary general of *Mapai. He held this position in the years 1962–66, when the party was torn by internal dissension over the "Lavon Affair" (see Pinḥas *Lavon). Barkat was first elected to the Sixth Knesset on the Alignment list, serving in the Knesset Foreign Affairs and Defense Committee. He was elected to the Seventh Knesset and chosen to become speaker, a position which he held until his sudden death on the last day of Passover 1972.

BAR KOCHBA ASSOCIATION, an organization of Jewish university students in Prague. It was founded in 1893 by students of the Prague German University and subsequently became a focal point of Zionist intellectual activities. Among the members who later played prominent roles in the Zionist movement were Shmuel Hugo *Bergman, Oskar Epstein, Hugo Hermann, Leo *Hermann, Hans Kohn, and Robert *Welsch. The members of Bar Kochba contributed much to the deepening of Zionist ideology, particularly in the years preceding World War I. They were largely influenced by Martin Buber who, between 1909 and 1911, delivered his *Drei Reden über das Judentum* before this group. The Zionist outlook of these young men found expression in the weekly *Selbstwehr*, which they edited for a time, and in *Vom Judentum*, a collection of essays on the problems of Zionism and Judaism in general (1913). There were small-scale attempts at renewing the activities of Bar Kochba after World War I, including the publication of *Juedische Jugendblaetter* (jointly with *Blau-Weiss). Its functions were taken over by its sister society, Theodor Herzl, which consisted of Czech-speaking Jewish university students in Prague.

[Oskar K. Rabinowicz]

BAR KOKHBA (d. 135 C.E.), leader of the revolt in Judea against Rome (132–135 C.E.).

The Man and the Leader

Bar Kokhba is known in talmudic sources as Ben Kozevah, Bar Kozevah, or Ben Koziva (Heb. בן כּוּזִיבָא, בַּר כּוּסְבָא, בֶּן כּוּזִיבָא; Sanh. 93b; BK 97b; TJ, Ta'an. 4:8, 68d), and in Christian sources as Βαρχαχουβας (Eusebius, *Historia Ecclesiastica*, 4:6, 2). In

the recently discovered contemporary letters addressed to or originating from him, he is referred to as Simeon bar Kosevah, Bar or Ben Koseva (בן כוסבא, בר כוסבא שמועון בר כוסבה, the last form being found also in a contemporary Greek letter). The name שמועון (or its abbreviation שמע), which appears on coins of the revolt, undoubtedly refers to him. His original name was probably Bar Koseva, and it is doubtful whether it was derived from a settlement in the Judean mountains or whether it indicates his father's name or a general family name. The appellation Bar Kokhba was apparently given to him during the revolt on the basis of the homiletical interpretation, in a reference to messianic expectations, of the verse (Num. 24:17): "There shall step forth a star [כוכב, *kokhav*] out of Jacob." Bar Kokhba was general midrashic designation for the "king messiah" (see *Messiah), and customarily used before the destruction of *Jerusalem. Thus, in the verse "a star out of Jacob ... a scepter ... out of Israel" (*ibid.*), Onkelos renders "star" as *malka* ("king") and "scepter" as *meshiḥa* ("messiah"), a midrashic interpretation current among the *Zealots who joined in the war against the Romans. While this appellation became the popular one, his original name was retained in documents and letters. The disappointment that followed in the wake of the defeat (and perhaps even at the height of the revolt) may have led the people to give a derogatory turn to his original name of Bar Koseva by altering it to Bar Kozivah (בר כוזיבה) in a punning allusion to "a lie" (*kazav*). Even the homiletical interpretation of "a star out of Jacob" quoted by R. *Akiva was from then on interpreted ambiguously, as evidenced by R. *Simeon b. Yoḥai's statement: "There shall step forth a star out of Jacob" – Kozeva stepped forth out of Jacob" (TJ, *loc cit.*). Similarly, in talmudic sources Bar Kokhba coins are referred to specifically as those of Ben Koziva. "A coin of one who rebelled, such as Ben Koziva," or "Koziva coins" (BK 97b; TJ, Ma'as. Sh. 1:1, 52d; Tosef., *ibid.*, 1:6).

Bar Kokhba's personality does not emerge clearly from the scant and obscure sources available, some of which, like those in the Talmud and Midrash, have legendary overtones, while later ones, such as the sparse references by Church Father Eusebius, are tendentious. The few traits of his personality that emerge from the administrative and economic documents found in the Judean Desert do not contradict the main features of his character as incidentally portrayed in the literary sources. He may be described as a leader who, in charge of both the economy and the army, ruled imperiously, concerned himself even with minor details, and did not refrain from threatening senior officers of his army with punishment or even from inflicting deterrent punishment.

Bar Kokhba's title in documents is הנסי על ונשיא ישראל ("nasi of Israel"), the former occurring also on coins of the revolt. According to the Talmud, Akiva said: "This is the king messiah" whereupon Johanan b. Torta answered him derisively: "Akiva, grass will grow in your cheeks and the son of David will still not have come" (TJ, Ta'an. 4:8; Lam. R. 2:2, no. 4). Eusebius states that Bar Kokhba regarded himself as the savior who had come down to the Jews like a star from

heaven, to deliver them from their somber troubles. Some adduce proof of Bar Kokhba's messiahship from the *Vision of Peter*, a Christian work written a few years after the revolt, which refers to a deceiver who falsely represented himself as a messiah and was – according to this tendentious account – nothing but a murderer. But these are simply expressions of the Christian authors' hatred which distorted their outlook, and are devoid of real historical value. Nevertheless, the messianic hopes which were cherished by the nation centered on Bar Kokhba. As might be expected from such a powerful, dominant personality, he himself probably had pretensions to being a redeemer and fostered these hopes. That the very appellation Bar Kokhba expresses a messianic belief in the "star out of Jacob" as an ideal ruler can be seen from apocryphal literature (Test. Patr., Levi 18:3; and Judah 24:1; and cf. Rev. 22:16; *The Damascus Document*, 7:19–20; and *War of the Sons of Light with the Sons of Darkness*, 7:5, 1). *The Damascus Document* states that the "star out of Jacob" will be "the nasi of the entire community" and accordingly it might be contended that Bar Kokhba's title of nasi had a messianic allusion. But the documents contain no hint of a messianic reference, and the sway of the nasi applied to wholly mundane affairs such as the army, administration, and the economy. According to coins struck during the revolt, the nasi may have assigned in a compromise matters relating to worship and faith to Eleazar ha-Kohen (perhaps on the basis of the division between the nasi and the priesthood, as described in Ezek. 44–46). The basically authentic statement about a Sanhedrin at Bethar (Sanh. 17b) suggests that at a certain time a *bet din* participated in Bar Kokhba's rule. Therefore, the title nasi may itself have indicated a more restricted role than that regarded as implicit in "king messiah."

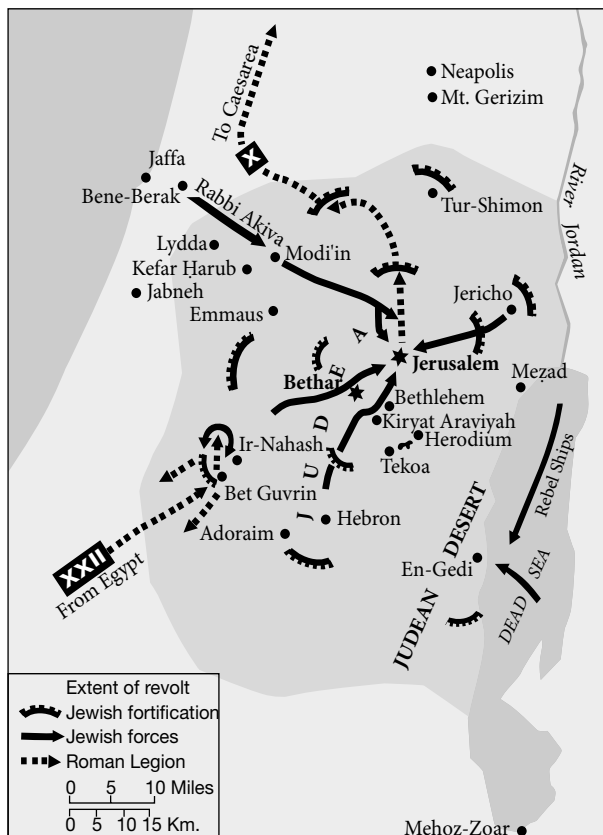

The *aggadah* which relates how Bar Kokhba's men were selected – by having a finger cut off or by uprooting a cedar tree (TJ, *loc cit.*; Lam. R. 2:2 no. 4) – reflects the exclusiveness of an elite rebel army and the harshness and even cruelty of its leader. The controversies between him and the sages, and his reliance on his own powers rather than on help from Heaven, are depicted in the *aggadah* as self-aggrandizement against God: "When he went forth to battle, he said 'Neither assist nor discourage us.'" To decide precisely the historical kernel that has been preserved in this tradition is difficult, but Bar Kokhba's letters to his subordinates (such as to Jeshua b. Galgolah or Jonathan and Masbelah) confirm that he was a stern leader who vigorously insisted on his views and with a firm hand controlled not only the population but also his senior officers. In contrast to the situation during the Jewish War (66–70/73 C.E.), the nation was now united under the leadership of a single commander-in-chief. This is evident from documents indicating that even in the final stages of the revolt he still exercised unlimited authority over his men. Presumably the unity of the nation in this war derived not only from the nasi's powerful personality, but also from the memory of past sufferings and the yearning for liberation. Geography, too, may have been a factor in this unity, for while the revolt

spread to Galilee and Transjordan, it was mainly although not exclusively centered in Judea, making it both possible and practicable to exercise effective control.

Such was the background to the acceptance of a strong leader's authority, unopposed apparently by the soldiers. This unanimity of the nation can be inferred from Eusebius (as from the *Book of Revelation*) where Bar Kokhba is described as a murderer and bandit who deceived the people. Even in later generations, despite the disappointment engendered by his defeat, his image persisted as the embodiment of messianic hopes. This is evident from Maimonides who, in referring to the "king messiah," states: "Rabbi Akiva, the greatest of the sages of the Mishnah, was a supporter of King Ben Koziva, saying of him that he was the king messiah. He and all the contemporary sages regarded him as the king messiah, until he was killed for sins which he had committed" (Maim. Yad, Melakhim, 11:3).

The Bar Kokhba Revolt

Only sparse and fragmentary information exists, some of it late, on the Bar Kokhba revolt, its origins, course, and outcome. The main source consists of the scant statements of the Roman historian Dio Cassius in the 69th part of his history of Rome, written between 194 and 216 C.E. As for Bar Kokhba's documents, they contain nothing specific about the war itself or about its political and military significance, being mainly economic and administrative records. The revolt most probably broke out in 132 C.E. Dio Cassius states that before it began Hadrian had established a new city in Jerusalem, called Aelia Capitolina (after his own name Aelius and in honor of Jupiter Capitolinus). He built a temple to Jupiter in the new city, thereby infuriating the Jews and provoking "a fierce and protracted war." On the other hand, Eusebius declares that Aelia Capitolina was established after the revolt. Hadrian probably began to build Aelia Capitolina before the revolt, and its non-Jewish character inflamed the Jews against Rome, but the work was not completed until after the war (see *Hadrian and "New Archaeological Finds" below, for a contrary view). During 129–132 C.E. Hadrian stayed in Erez Israel and its neighborhood, and his departure for Greece in the summer of 132 was the signal for the outbreak of the revolt. There were other factors that aggravated the situation, e.g., the harsh rule of *Tinneius Rufus, the new Roman governor of Judea; and the disillusionment of the Jews who had hoped that Hadrian would restore the ruins of Jerusalem, when rumors that he was rebuilding the Temple fostered messianic expectations. Their hopes, speedily shattered, were replaced by profound resentment. Agitation against Rome had, it seems, existed in Judea many years before the outbreak of the revolt, and the sages may have tried to mitigate it, as may be inferred from the account of the assembly in the valley of Rimmon at which *Joshua b. Hananiah calmed the turbulent mood of the people (Gen. R. 64:10). Ultimately, however, the revolt was a continuation of the uprisings of the Jews of the Diaspora against Rome in 115–117 C.E., which included "the war of *Quietus" ending

Map 1. Extent of the Bar Kokhba revolt in its first year, 132 C.E. After Y. Aharoni, *Carta's "Atlas of the Bible," Heb. ed., 1966.*

in 117. Even if Hadrian intended no particular enmity against the Jews and behaved in Judea with the same degree of cultural universalism that he adopted in other places, his innovations, bearing as they did a Hellenistic-Roman stamp, provoked the vehement opposition of the Jews both against non-Jewish culture and more especially against emperor-worship.

Dio Cassius gives a brief account of the course of the revolt. Accumulating arms by deceiving the Roman authorities, the Jews awaited a suitable opportunity, and when Hadrian left they openly rebelled. At first the Jews did not fight pitched battles. Instead they seized towns which they fortified with walls and subterranean passages. In an increasing number of clashes the rebels inflicted losses on the Romans. Hadrian was compelled to hurriedly send for one of his ablest generals, *Julius Severus, who specially came from Britain to Judea. Due to the large number of the rebels and their desperate fury, Severus refrained from waging open war and preferred to surround their fortresses and hem them in to prevent food from reaching them. Gradually he succeeded in wearing down the Judean fighters, on whom he inflicted heavy blows without respite until he reduced them to a state of complete submission. Dio Cassius relates that the Romans demolished 50 fortresses, destroyed 985 villages, and killed 580,000 people in addition to those who died of hunger, disease, and fire. He adds that many Romans perished as well, and when Hadrian informed

Map 2. Extent of the Bar Kokhba revolt in its third and fourth years. After Y. Aharoni, *Carta's "Atlas of the Bible," Heb. ed., 1966.*

the Senate of his victory he did not begin with the usual formula: "I and my army are well." Dio Cassius states that the insurrection, which was prepared in detail, spread until "the whole of Judea was in revolt" (he referred apparently to most of Erez Israel, including Galilee and Golan). He further states that the Jews "throughout the world" supported the uprising as did non-Jews, too, and it was "as though the whole world raged." In its scope and vehemence, the revolt assumed the dimensions of a war which constituted a threat to the empire. As usual with Roman historians, Dio Cassius cites a supernatural omen, to show that the destruction of Judea was predestined, when he states that the "sanctified" tomb of Solomon had fallen down of itself.

Greek and Roman inscriptions mention the participation in the war of detachments of legions brought from all parts of the empire, from Egypt and as far away as Britain – the Tenth "Fretensis," the Third "Cyrenaica," the Fourth "Scythica," the Second "Trajana," the Twenty-Second "Diotrajana" legions, and perhaps also the Sixth "Ferrata" legion. The Syrian navy also presumably took part in the war. Although exact figures cannot be computed since these were auxiliary troops and detachments of legions, the magnitude of the Roman army indicates the dimensions of the war. Isolated evidence – an inscription on a tomb, third-century talmudic references to the destruction of Galilee (BK 80a; TJ, Pe'ah 7:1, 20a), the remarks of Sulpicius Severus (fourth century C.E.) on the rebellion of

the Jews in Syria and Palestine in the days of Hadrian – shows the revolt spread to the north of Erez Israel, to Beth-Shean and Galilee. However, the main conflict took place in Judea, the Shephelah, the mountains, and finally in the Judean Desert.

The war apparently lasted about three and a half years, during which Jerusalem was taken by the rebels, as evident both from the inscription *לחרות ירושלים* on coins of the revolt and perhaps also from the Judean Desert documents. Appian, a contemporary of the revolt, Eusebius, in his *De Theophania*, and Jerome (fifth century C.E.), in his commentary on Jeremiah 31:15, all state that Jerusalem was destroyed in the days of Hadrian. It would therefore appear that Bar Kokhba captured the city and only after his military defeat did Hadrian regain control and destroy it. There may be an allusion to this in Midrashim which tell of Hadrian's entry into Jerusalem and his desecration of the Temple Mount (Tanḥ. B., Ex. 128; Ex. R. 5:5; Deut. R. 3:13). Some maintain that the design on coins of the revolt, depicting a four-columned building surmounted by a star, symbolizes the Temple, and if the undated coins bearing the inscription *לחרות ירושלים* or simply *ירושלים* are indeed to be assigned to the third year of the revolt, Jerusalem was still in Bar Kokhba's hands toward the end of the revolt in the third year of the war, that is, in Tishri 134 C.E. This is confirmed by one of the Judean Desert documents which is dated *שנת תלת לחרות ירושלים* ("the third year of the freedom of Jerusalem"). This scant evidence shows that during the Bar Kokhba revolt Jerusalem not only symbolized the yearning for freedom but also served the political expression of the consolidation of the revolt and of its sway in Judea. There is, however, no evidence that the Temple was rebuilt at that time, nor is there any proof that Bar Kokhba was about to rebuild the Temple. However, an altar may have been erected for sacred worship.

Bar Kokhba made a final stand at *Bethar in the Judean Hills, but from the finds in the Judean Desert it would appear that after the fall of the last stronghold the flame of revolt continued to flicker in the desert and in the vicinity of the Dead Sea. Nevertheless, in talmudic and midrashic sources Bethar represents the fortress in which the rebels found refuge, and its fall, along with the defeat of Bar Kokhba who met his death there, symbolizes the end of the revolt. The place was apparently chosen as the rebels' main stronghold because of its strategic situation on the edge of a mountain overlooking the Valley of Sorek and dominating the important Jerusalem-Bet Guvrin road, and possibly also because of its fertile soil. Since it was not adequately fortified, Jerusalem could not serve as a stronghold. At that time Bethar was considered a large city (*kerakh*; TJ, Ta'an 4:8, 69a; Lam. R. 2:2 no. 4; cf. Mid. Hag. to Deut. 28:52), perhaps because numerous inhabitants from the entire neighborhood had gathered there, as attested by Jerome (in his commentary on Zech. 8:19), who mentions that many thousands of Jews found refuge in it – *Bether ad quam multa milia confugerant Judaeorum* (and cf. the midrashic references to 400 synagogues in Bethar).

The actual siege of Bethar began apparently after the recapture of Jerusalem. Whether Bar Kokhba's men had intended it from the outset to be their principal fortress or were driven there by the force of circumstances cannot be known. Even during the siege those in Bethar maintained contact with camps of fighters in the Judean Desert. One of the documents states: "Near the well of Ben Koseva, Nasi of Israel, in the camp," referring probably to the camp of Bethar, which is not mentioned, however, in the Dead Sea documents. Severus' strategy was to intensify the siege on the fortress, and a siege wall (*circumvallatio*) was built for this purpose. It was attacked by the besieged in desperate sallies, while the blockade grew tighter. A clear reminder of the Roman armies' presence in Bethar itself was preserved in a Latin inscription which was engraved on a rock near the well of Bethar and mentions detachments of the Fifth "Macedonica" and the Eleventh "Claudia" legions. The inscription is now illegible.

Eusebius states that Bethar was besieged in the 18th year of Hadrian's reign, that is, in 134 C.E., about two years after the outbreak of the revolt, and that its fall was caused by hunger and thirst. According to the talmudic account (TJ, Ta'an 4:8, 68d; Lam. R. 2:2, no. 4), Hadrian unsuccessfully laid siege to Bethar for three and a half years, until a Samaritan pretended that *Eleazar of Modi'in (ha-Moda'i) had conspired with him to surrender the city to the Romans. Incensed at this, Bar Kokhba killed Eleazar. "Immediately Bethar was captured and Ben Koziva met his death." Presumably great importance was attached in besieged Bethar to sages such as Eleazar of Modi'in, one of the leading rabbis of his generation, but whether he is identical with the Eleazar whose name appears on coins of the revolt cannot be determined. (In one of his letters, Bar Kokhba mentions a בר מיטה, whom he regarded as a great man.) These circumstances suggest that eventually a dispute broke out between the sages and the commander-in-chief and spread among the besieged. In any event these reports, like the statement of Eusebius, indicate that the capture of Bethar was difficult and was achieved under unusual circumstances.

The death of Bar Kokhba is enveloped in a legendary halo. The accounts of the massacre perpetrated in Bethar attest to the ferocity of the struggle (Git. 56a–b; Song. R. 2:17; cf. ARN 138, 115: "Not a soul escaped"). The sages state that on Av 15th the burial of the slain was permitted (Ta'an. 31a). Tradition has it that Bethar was taken on the Ninth of Av (*ibid.*, 29a), and Jerome (*loc. cit.*) also says that it occurred in August: *in hoc mense* (scil. *Augusto*). On the basis of the latest date – the fourth year of the liberation of Israel – mentioned in one of the documents, Bar Kokhba's rule lasted more than three years. In Jewish tradition the fall of Bethar was a disaster equal to the destruction of the First and Second Temples.

The Jewish population of Judea was largely exterminated in the period of repression which followed the fall of Bethar. The subjugation was associated with massacres and religious persecution, the sale of Jews into slavery, and uprooting of the people from the soil. The Jewish center of gravity now moved

northward, chiefly to Galilee. Thus ended the final and perhaps greatest war of liberation of the Jews in ancient times. The independence of Judea had come to an end.

The Judean Desert Documents

The finds, dating from the days of Bar Kokhba and brought to light in the Judean Desert in 1952–61, contain additional facts of great importance for an understanding of the social and economic conditions prevailing during the Bar Kokhba war in 132–135 C.E. The first documents were found in 1952 in Wadi Muraba'at about 11 mi. (18 km.) southwest of *Qumran. Among them are commercial contracts, letters of divorce, two letters from Bar Kokhba, and one from the administrators of the community addressed to Jeshua b. Galgolah. An archaeological expedition undertaken in the Judean Desert south of En-Gedi in 1960–61 uncovered, alongside material finds such as skeletons, linen, remnants of clothes, metal and glass vessels, and remains of food, many documents of the time of the Bar Kokhba war, chiefly in one of the caves in Naḥal Ḥever, now named "The Cave of the Letters." The letters and economic documents in Hebrew, Aramaic, and Greek uncovered in the cave testify to the economic position in southern Judea on the eve of the revolt and at the height of the war (on the documents, their language, literary form, and historical significance see *Dead Sea Scrolls).

The letters, written apparently in Bar Kokhba's name but not personally by him, deal with everyday matters. Some of them are not entirely clear. The dates mentioned in them range from the second to the fourth year of the liberation of Israel (132–134 C.E.). The letters open with an almost identical formula:

משמעון בן כוסבה לישע בן גלגולה לאנשי הכרך שלו. משמעון לישוע בן גלגולה שלום; שמעון בר כוסבה הנסי על ישראל ליהונתן ולמסבלה שלום; משמעון בר כוסבא לאנשי עינגדי למסבלה. בעין שלום; שמעון ליהודה בר מנשה לקרית ערביה (ר) ליהונתן ב(ו).

"From Simeon ben Kosevah to Jeshua ben Galgolah and the men of his fortress!"; "From Simeon to Jeshua ben Galgolah, peace!"; "Simeon bar Kosevah the *nasi* ["prince"] of Israel to Jonathan and Masbela, peace!"; "From Simeon bar Koseva to the men of En-Gedi to Masbela (and) to Jonathan B(ar) Ba'ayan peace!" "Simeon to Judah bar Manasseh to Kiryat Araviyah."

In a letter to Jeshua b. Galgolah, one of his army commanders, Bar Kokhba refers to the גללים (*gll'ym*), who are to be protected and, sternly reminding his men of this, threatens them with irons: "I call Heaven to witness against me ... that I shall put your feet in irons." The actual occasion and the identity of the גללים are not clear from the letter. In another letter to Jeshua, Bar Kokhba orders him to offer hospitality on the Sabbath to men who were bringing wheat to the camp and to provide them with accommodation until "after the Sabbath."

In other letters found in Naḥal Ḥever, the *nasi* writes to Masbela b. Simeon and Jonathan b. Bayahu, who were apparently in command of the En-Gedi front, about the wheat supply, the grain harvest, the confiscation of property, the supervision of the men, and the mobilization of the men of *Tekoa

on the border of the Judean Desert. His language is harsh, and he frequently threatens them with punishment if they fail to carry out his orders (“and if you will not do this, you will be punished”). In a Hebrew letter to Jonathan and Masbelah of En-Gedi, Bar Kokhba orders them to attend to the loading of a boat anchored in the harbor there. To the commanders in the rear and the population of the inhabited area of the desert, with whom he was incensed for having failed to supply food as he had commanded and who had neglected their duty, Bar Kokhba uses stern language: “You are living well, eating and drinking off the property of the house of Israel, and care nothing about your brethren.”

In an Aramaic letter to Judah b. Manasseh of Kiryat Araviah, Bar Kokhba orders Judah to supply him with the *Four Species for Tabernacles and apparently reminds him about separating the tithes: ותקן יתהן (“and give the dues from them”). Such references, made incidentally or hinted at in the letters, may indicate that Bar Kokhba’s men, even under danger, strictly and quite naturally kept the commandments of Judaism, such as the sanctity of the Sabbath, the laws of the priestly and levitical dues, and the fullest observance of festivals.

The letters and other documents uncovered in the Judean Desert contain nothing specific about the attitude of the sages toward the rule of Bar Kokhba nor is there any mention in them of Bethar and of the war there. Nevertheless it is possible to comprehend from them explicitly and at first hand about Bar Kokhba’s aggressive personality and his status, the economic straits in which the fighters of Judea found themselves, and the geographic extent of the revolt. The *nasi* was concerned about supply problems, food for his camp, and matters pertaining to real estate. The economic documents found in Wadi Muraba’at show that leases were made in the name and with the sanction of Bar Kokhba: “On the instructions of Simeon b. Koseva.” Apparently the land belonged nominally to the *nasi*, it being clearly stated in a lease, “You have leased the ground from Simeon, the Nasi of Israel.” In his name the lessors laid down the quota of grain that was to be given to them. As was to be expected in a time of war, the authorities insisted on the cultivation of the fields and confiscated the lands of those who neglected to till them. They “were dispossessed of the land and lost everything.” In effect, Bar Kokhba regarded himself as holding the authority of the Roman emperor and transferred the lands of liberated Judea to his own possession. His orders concerning leases, sales, and confiscations were grounded on a juridical succession to the Roman rule, by virtue of which he was empowered to exercise control over the lands of Judea and confiscate property for the public good. Contracts found in Naḥal Hever indicate that Bar Kokhba wished to prevent the concentration of the lands of En-Gedi in the hands of a few owners in order to increase the supply of food in a time of stress.

From the names of the settlements mentioned in these documents, Bar Kokhba’s men apparently controlled extensive areas, in the frontier regions of the Judean mountains, in the neighborhood of Bet Guvrin (Ir-Nahash), and in the Judean

Desert, and maintained contact, it seems, with regions east and south of the Dead Sea, such as Ma’aleh ha-Luḥit in the district of Eglatin in Moab and Zoar in the Aravah. Herodium, the town of Herod about 6 mi. (10 km.) southeast of Jerusalem and mentioned in the documents, became an economic center in which the *nasi*’s representatives were stationed; En-Gedi was an important supply harbor for the rebels. The settlements of Tekoa and Kiryat Araviah in the vicinity of Bethlehem are mentioned in the documents. According to the reconstruction of שלים... ג as Jerusalem, proposed by J.T. Milik who made a study of the Wadi Muraba’at documents, that city is referred to in two of them, one dating from the second, and the other from the fourth year “of the liberation of Israel” (Elul, 133 and Tishrei, 134, respectively). After the defeat, the fugitives from the war in Judea gathered in the Judean Desert, which then became the rebel center. The remains of Roman military camps found above the caves in Naḥal Hever show that the legions besieged the remnants of the fighters who, together with their families, had taken refuge in these hiding places. Surrounded by the Romans, there they met their death.

[Samuel Abramsky]

New Archaeological Finds

Since the writing of the above in the late 1960s new archaeological information concerning the Bar Kokhba revolt has emerged as a result of the intensive investigation of hundreds of refuge caves and underground hiding complexes. Refuge caves are found mainly in the Judean Desert and in the cliffs overlooking the Dead Sea, and were used as shelters for Jewish refugees at the close of the Bar Kokhba revolt. Underground hiding complexes, however, were subterranean warrens hewn artificially under or near residential buildings within Jewish towns and villages (some 125 sites according to a recent count). They have been found in the Judean Shephela, and in the Beth-El and Hebron Mountains, and reflect the general boundaries of the area that was under Bar Kokhba’s administration. Excavations at the Abi’or Cave in the Judean Desert in 1986 and later in 1993 brought to light numerous fragments of new documents written on papyri in Greek and Aramaic. Additional finds from the cave consisted of textiles, ropes, and parts of sandals. These items were brought to the cave and hidden there towards the end of the revolt.

Excavations conducted in 1984 by Tel Aviv University confirmed that Khirbet al-Yahud (10 acres in size) is indeed *Bethar, the last bastion of Bar Kokhba. Hastily erected fortifications were uncovered and the discovery of slingstones and arrowheads indicates that a battle took place there. Roman siege camps were also identified in the vicinity of Bethar (present-day Battir).

Various artifacts dating from the time of the revolt have been unearthed at a number of sites and within underground hiding complexes, notably various forms of pottery, stone vessels, and coins. An important discovery was that of a lead weight found at Horvat ‘Alim in the Shephela, bearing the name and title of Bar Kokhba, which was evidently used for

administrative purposes. A signet ring bearing the name of Bar Kokhba is also reported from the vicinity of Quneitra in the Golan, and perhaps was brought to this destination by Jews fleeing persecution at the end of the Bar Kokhba revolt. A number of coin hoards have become known, many of them through clandestine digging, containing Jewish coins mixed with those produced in Aelia Capitolina. Clearly, Aelia Capitolina was founded before the outbreak of the revolt. There is no evidence that Bar Kokhba at any time held Jerusalem (see above for contrary view). Coins dating from the Bar Kokhba revolt have also begun emerging from controlled excavations, especially within the refuge caves and underground hiding complexes.

BARLAD (Rom. *Bârlad* or *Bîrlad*), town in Moldavia, E. Romania. The Jewish community there is first attested in 1738 when the prince of Moldavia, Grigore Ghica, appointed Marco (Mordechai) as leader (*staroste*) of the Jews of Barlad “according to ancient custom.” “A row of Jewish stores” is mentioned in 1767 and a “Jewish street” in 1819; 53 Jewish households were recorded in 1803. In 1838 the Jews were accused of desecrating Christian holy objects, and 23 notables of the community, including three women, were imprisoned. They were released only after payment of a heavy fine. In December 1867, there was an outbreak of violence when the Jews were accused of murdering an antisemitic priest. The community numbered 2,000 in 1859; 5,883 (24% of the total) in 1899, about one-third of the merchants and artisans in the city being Jews; and 3,727 in 1930 (14% of the total), mainly occupied in commerce (many as clerks) and as artisans. There were then in Barlad a Jewish kindergarten and two Jewish schools, for boys and

for girls. Aizic Taubes (1834–1920) was among the prominent rabbis. Barlad was also a Zionist center.

In November 1940, all Jewish men were sent to forced labor. However, the intellectuals were liberated due to protests by Romanian intellectuals. When the war against the U.S.S.R. broke out (June 22, 1941) the Jews from towns in the district were driven from their homes and sent to Barlad. The community founded a gymnasium and aided many pauperized Jews. After World War II Jewish life was reorganized for a short period only due to the considerable decrease in population through emigration, mainly to Israel. In 1969, 100 Jewish families lived in Barlad where there was one synagogue. In 2004, 46 Jews lived in Barlad.

BAR-LE-DUC, capital of the Meuse department, northeastern France; former capital of the Duchy of Bar. The 12th-century Jewish community in Bar-le-Duc was reputedly expelled by the count of Bar, but Jews are again found there from 1220. They were expelled in 1309 but were allowed to return to the county in 1321, and settled in 30 localities. In 1322 the Jews were again expelled, but had returned by 1328 to be banished again in 1477. They resided in Bar-le-Duc in the Rue des Juifs, the present Rue de la Couronne. After the French Revolution Jews again settled in Bar-le-Duc. From 1808 the community was affiliated to the Consistory of Nancy and administered by the rabbinate of Verdun. It numbered 170 in 1892. During World War II 18 Jews living in Bar-le-Duc were deported or shot. In 1968, 40 Jews lived there.

BAR-LEV (Originally **Brotzlewsky**), **HAIM** (1924–1994), eighth chief of staff of the IDF and Israeli politician; member of the Ninth to Twelfth Knessets. Bar-Lev was born in Vienna, and immigrated to Palestine in 1939 from Yugoslavia. In 1942 he graduated from the Mikveh Israel agricultural school and served in the *Palmaḥ until 1948. In 1946 he participated in the detonation of the Allenby Bridge near Jericho, as part of the struggle against the British. In the War of Independence he served successively as commander of the Eighth Battalion in the Negev Brigade, commander of a mechanized battalion, and brigade operations officer. In 1956, after attending the Senior Officers’ School in Britain, he became director of training in the General Staff. During the Sinai Campaign he commanded an armored brigade which reached the Suez Canal. In 1958–61 he was commanding officer of the Armored Corps. He then went to the United States for two years and studied for an M.A. in economics and business administration at Columbia University. After returning to Israel, he served

in 1964–66 as head of the Operations Branch in the General Staff, after which he went to Paris to study political science. He was recalled the following year, however, and appointed deputy chief of staff on the eve of the Six-Day War. In 1968–72 he served as chief of staff. In this period the Bar-Lev Line was constructed as Israel's defensive system along the Suez Canal – a system which collapsed in the first days of the Yom Kippur War, largely due to complacency. In the course of the Yom Kippur War Bar-Lev was recalled to active service as commander of the front with Egypt.

Even though he was not elected to the Eighth Knesset, Bar-Lev was appointed by Golda *Meir as minister of commerce and industry and development in the government she formed in March 1974 – a post he continued to hold under Yitzhak *Rabin. Bar-Lev was elected on the Alignment list to the Ninth Knesset, and after the Alignment's electoral defeat was appointed secretary general of the Labor Party – a position he held until 1984. In this period he acted together with Party Chairman Shimon *Peres to rehabilitate the party's organization and finances. In the National Unity Government of 1984–90 Bar-Lev served as minister of police. In 1992, following the resumption of diplomatic relations with Russia, Bar-Lev was appointed Israeli ambassador, a position he held until his death.

[Susan Hattis Rolef (2nd ed.)]

BARLEY (Heb. שְׂעוֹרָה; *se'orah*), one of the seven species (see *Food) with which Erez Israel was blessed (Deut. 8:8). In biblical times barley bread was a staple food and was extensively cultivated, especially as it grows even in poor soil and in areas with a low rainfall. The fact that barley was so widely sown accounts for the biblical ruling that the value of a field is to be estimated on the basis of the amount of barley required to sow it (Lev. 27:16). In the days of the Judges the farmer in Erez Israel sustained himself mainly on barley, a cake of barley bread symbolizing the agricultural Israelites (in contrast to the nomadic Midianites) in the dream of the Midianite soldier (Judg. 7:13). It formed part of the diet of David's army (II Sam. 17:28) and also of the hewers of the timber in Lebanon for the Temple of Solomon (II Chron. 2:9).

In mishnaic times wheat largely replaced barley as human food, and barley was used mainly as animal fodder (it is referred to in this connection only once in the Bible (I Kings 5:8)) and the rabbis, therefore, in a homiletical view, give as the reason for the offering of barley meal in the ordeal of a woman suspected of adultery (Lev. 5:15) "that she had behaved like an animal" (Num. 5:15; cf. Sot. 9a). It became principally the poor man's food; hence the proverb, "Why do you eat barley bread? – Because I have no wheat bread" (Sif. Num. 49). In the Bible the price of barley flour is given as half that of fine wheat flour (II Kings 7:1), which was also the ratio of their prices in mishnaic times (Tosef., BM 9:10), the nutritive value of the former being regarded as half that of the latter (Pe'ah

8:5). The Karaite Anan held that for fulfilling the commandment on Passover unleavened bread made of barley was to be used, this being in his view, "the bread of affliction" and poverty. Of the cereals, barley ripens first (Ex. 9:31) and "the barley harvest season" is the designation of the spring (Ruth 1:22). On the second day of Passover, the *Omer* ("sheaf"), the first fruit of the harvest, was reaped (Lev. 23:9–15), and although there is no specific reference to its being barley, the rabbinic tradition to that effect is undoubtedly correct (Men. 84b) as the barley harvest begins at Passover time. One kind of beer was brewed from barley (BB 96b), another from a mixture of barley, figs, and blackberries (Pes. 107a), and yet another called "Egyptian *zythos*" from a third part of barley, a third part of safflower, and a third part of salt (*ibid.*, 42b). The brewing of beer has a long tradition in Egypt; it is depicted in ancient Egyptian drawings. *Se'orah*, the Hebrew name for barley, derives from the long hairs (Heb. *se'ar*, "hair") of its ears, and the cereal is designated by cognate words in almost all Semitic languages. The Greeks regarded barley as the very earliest crop grown in the world. In Erez Israel there are at present cultivated species of two- and six-rowed barley (*Five Species). These species have been found in Egyptian tombs. A wild barley (*Hordeum spontaneum*) which grows in Erez Israel is thought to be the origin of two-rowed barley. In excavations at Gezer four-rowed barley has been uncovered, and in the caves of En-Gedi and of the Judean Desert, two- and four-rowed barley of the mishnaic and talmudic periods has been found.

BARLIN, FREDERICK WILLIAM (fl. early 19th century), English portrait painter. Barlin, who worked in London, was the son of Berliner, the *hazzan* of the Chatham synagogue. Barlin exhibited at the Royal Academy in 1802 and 1807. Two of his portraits are of particular significance: that of Solomon *Herschel, chief rabbi of the Ashkenazi Jews in England, and that of the Sephardi haham Raphael *Meldola. The latter was painted wearing a three-cornered hat in a courtly, elegant, and typically English manner. This portrait was later engraved and published by Joshua Lopez.

BARMAS, ISSAY (1872–1946), violinist and teacher. Born in Odessa, Barmas studied with I. Grzimali in Moscow and with J. Joachim in Berlin. He made his debut as a soloist in Berlin in 1899 and toured Europe. He also formed his own quartet in 1919. From 1900 to 1929 he taught in Berlin (Stern Conservatoire, 1900–05; Klindwort-Scharwenki Conservatoire, 1905–29) and later moved to London. Among his publications are *Die Loesung des geigentechnischen Problems* (1913), *Ton-*

leiter-Spezialstudien, Doppelgriff-Spezialstudien, redactions, and editions of classical works.

BAR MITZVAH, BAT MITZVAH (Heb. masc. בַּר מִצְוָה, fem. בַּת מִצְוָה; lit. “son/daughter of the commandment,” i.e., a person under obligation, responsible), term denoting both the attainment of religious and legal maturity as well as the occasion at which this status is formally assumed for boys at the age of 13 plus one day, for girls at 12 plus one day (Maim. Yad, Ishut, 2:9–10). Upon reaching this age a Jew is obliged to fulfill all the *commandments (Avot 5:1; cf. Yoma 82a). Although the term occurs in the Talmud for one who is subject to the law (BM 96a), its usage to denote the occasion of assuming religious and legal obligations does not appear before the 15th century (*Sefer Ziyiyoni* of R. Menahem Ziyiyoni to Gen. 1:5). A special celebration for a girl, the bat mitzvah, is not found mentioned before *Ben Ish Hai*, the legal code by Joseph Ḥayyim b. Elijah (19th cent.).

While the occasion of becoming bar/bat mitzvah was thus formalized only in later times, it is obvious from various sources that the status of obligation for boys of 13 was assumed in early times. According to Eleazar b. Simeon (second century C.E.), a father was responsible for the deeds of his son until the age of 13. For example the vows of a boy 13 and a day old are considered valid vows (Nid. 5:6). From then on a person can perform acts having legal implications, such as being a member of a *bet din*, being reckoned as part of a *minyān*, and buying and selling property. Yet there are notable exceptions, e.g., the testimony of a 13-year-old is not valid regarding real estate because he is “not knowledgeable about buying and selling” (Maim. Yad, Edut, 9:8).

Jewish law fixed 13 as the age of responsibility considering this the time of physical maturity for boys (and 12 for girls; Kid. 16b). At this age young people are thought to be able to control their desires (ARN² 16, 62–63). Rashi claims that bar mitzvah as a status of obligation was “in the category of biblical laws, as it was given to Moses at Sinai” (comment. to Avot 5:1). Midrashic literature gives many references for 13 as the turning point in the life of a young person, e.g., Abraham rejected the idols of his father at this age (PDR 26), and at 13 Jacob and Esau went their separate ways, the former to study Torah, the latter to idol-worship (Gen. R. 63:10). Until 13 a son receives the merit of his father and is also liable to suffer for his parent’s sin; after that each one bears his own sin (Yal. Ruth 600). This is also the time of transition from elementary school to the *bet ha-midrash* (*ibid.*). A tradition recorded in talmudic literature (Sof. 18:7, ed. M. Higger 1937) alludes to the fact that in Jerusalem during the period of the Second Temple, it was customary for the sages to bless a child who had succeeded in completing his first fast day at 12 or 13.

Being Called to the Torah

The calling up to the reading of the Torah is a symbol of a boy’s attaining maturity. He is called up on the first occasion that

the Torah is read following his 13th birthday according to the Jewish calendar. This is the first public demonstration of his new role as a full member of the community and, in modern times, it is to this occasion that the term bar mitzvah usually refers. When the boy’s father is called to the Torah, he recites the benediction, “Blessed is He who has now freed me from the responsibility of this one” (Gen. R. *loc. cit.*). Among observant Jews in Eastern Europe the boy was usually called up to the Torah on the Monday or the Thursday following his birthday. In Western Europe, the occasion took on a more ceremonial importance, and it was customary for the bar mitzvah boy to be called up to the Torah to read the *maftir* portions and the *haftarah* on the first Sabbath after his birthday. For this task he had previously been prepared. According to an old Ashkenazi custom in Lithuania, Erez Israel, etc., the boy recited the *maftir* on the Sabbath just before becoming fully 13, and immediately upon coming of age he received an ordinary *aliyah*. In the 17th and 18th centuries the custom was recorded in Worms, Germany, that those boys who were able and had pleasing voices conducted parts or all of the service. In some communities it was and still is customary for the young man to read the whole portion of the week. On a Sabbath when a bar mitzvah is celebrated, the morning service assumes a more festive atmosphere. Members of the boy’s family are also called up to the reading of the Torah, and a special sermon is frequently delivered by the rabbi, stressing the boy’s new responsibilities and privileges. In many modern synagogues, the rabbi ends his sermon by invoking the *Priestly Blessing or other blessing, and the bar mitzvah boy is given a gift from the congregation. After the service, a festive *Kiddush* is often held, with a banquet on the same or the following day. Some authorities ruled that parents must arrange a banquet when their son became bar mitzvah just as they do on the day of his wedding (see Magen Avraham on Sh. Ar., Oḥ 225:2). Among the Jews of Morocco a special *piyyut* is recited when a bar mitzvah boy is called up to the Torah and, in most synagogues, a special **Mi she-Berakh* blessing is made at the end of the reading for the boy and his family.

Putting on Tefillin

The major ritual innovation obligatory on a boy reaching bar mitzvah is that henceforth he is required to put on *tefillin* for the morning prayer. He is usually coached in the forms of the rite some time before the bar mitzvah. The Sephardim and some of the Ḥasidim, interpreting the Kabbalah very exactly, insist that *tefillin* cannot be worn one day before bar mitzvah. Only when the boy has become fully 13 and one day does he keep this commandment. For the Sephardim the first occasion of putting on the *tefillin* was part of the celebration of the bar mitzvah itself. At that time a scholar or elder was honored with aiding the young man in donning the *tefillin*. Ḥasidim of the *Ḥabad* school taught that boys began putting on *tefillin* two months prior to the actual bar mitzvah, the first month without pronouncing the blessing, and the second month saying it.

The Bar Mitzvah Derashah

Solomon Luria (16th century) states that the bar mitzvah celebration was customary among Ashkenazim and that the boy was tutored to deliver a *derashah* (“talmudic discourse”) during the banquet (*Yam shel Shelomo BK 7:37*). It usually dealt with some aspect of the rite; Sephardim call it the *tefillin derashah*. The discourse frequently serves as an occasion for the boy to thank his parents for their love and care, and the guests for their participation in his celebration. The custom is still observed today, with sons of traditional families giving a talmudic discourse, and others a more general talk. In Conservative, Reform, and some Orthodox synagogues a prayer before the ark is sometimes said by the bar mitzvah boy in place of the *derashah*.

Most congregational Hebrew schools have special classes for the preparation of bar/bat mitzvah students. In some congregations (notably the United Synagogue of Great Britain) the boy is not allowed to celebrate his bar mitzvah until after he passes an examination in Hebrew and the fundamentals of the Jewish religion.

Since 1967, some boys from Israel and abroad celebrate their bar mitzvah at the Western Wall. Some Jews from outside Israel make a special pilgrimage to celebrate their son's bar mitzvah there.

Confirmation

Reform congregations have instituted what is known as a Confirmation ceremony. This was originally in 19th century German Reform a substitution for bar mitzvah. The ceremony was held at a later age – 16 or 17 – on the grounds that before that age a young person cannot really understand the implications of the rituals. In modern times, especially in the U.S., confirmation has been adopted as a ceremony additional to bar mitzvah which is celebrated in a more traditional manner. The main intention of confirmation was to prolong the period of a child's Jewish education, and as such it is usually a ceremony with a “class” of young people being confirmed at the same time. The ceremony is usually held on or about Shavuot. The confirmands recite various sections from Scriptures and publicly declare their devotion to Judaism. The boys and girls frequently receive a special certificate, testifying their acceptance into the Jewish community.

[Zvi Kaplan]

Bat Mitzvah

The term bat mitzvah occurs only once in the Talmud (BK 15a), in reference to the time a girl becomes subject to the obligations of Jewish law incumbent on adults. While Avot 5:21 asserts that 13 is the age of adult responsibility, Niddah 5:6 rules that the vows of a girl who is 12 and one day are deemed valid, as are the vows of a boy who is 13 and one day. Similarly, after their respective 12th and 13th birthdays, girls and boys must fast on Yom Kippur (Yoma 85). Talmudic discussion in Kidushin 16b clarifies that a boy is of age when physical signs of adulthood appear after he is 13 plus one day. Maimonides (Yad, Ishut 2:9–10) completes the equation and specifies that

a girl's signs of adulthood are those that appear only after her 12th birthday plus one day. Aside from assuming ritual obligations, adult responsibility meant that a young woman was no longer dependent on her father, mother, or brother in marital arrangements and could act on her own behalf. Prior to the modern era this change in a female's status was rarely celebrated in a communal context. It is not until the 19th century that indications of ceremony or public recognition come from Italy, Eastern and Western Europe, Egypt, and Baghdad. These acknowledgements of female religious adulthood include a private blessing, a father's *aliyah* to the Torah, a rabbi's sermon and/or a girl's public examination on Judaic matters. Bat mitzvah as a female ceremony equivalent or identical to the male bar mitzvah is not found until the middle of the 20th century and is an American innovation, discussed in more detail below.

ITALY. The earliest source, from Verona on Passover 1844, refers to an *iniziazione religiosa delle fanciulle* and *la maggiorita delle fanciulle*. This reference to entrance “into minyan” was used for boys and girls. By the end of the century, this ritual had also spread to other cities such as Ancona, Bologna, and Rome. During this confirmation-like process the girl recited some biblical verses and a liturgical selection and a rabbi delivered a sermon. There was great debate in the 19th century Italian community as to whether this was a permitted rite. In Italy today a 12-year-old female is examined by a rabbi, usually on Shavuot or Purim, after which she reads special prayers in Hebrew and Italian in the synagogue; a celebratory party follows. Edda Servi Machlin describes her 1938 bat mitzvah experience in her cookbook, *The Classic Cuisine of Italian Jews* (1981), p. 69.

EUROPE. Some scholars have mentioned Rabbi Jacob *Ettlinger of Germany as favoring some form of puberty lifecycle event. It is clear, however, in Ettlinger's *Binyan Ziyon* 107 (1867), p. 145, that he opposed confirmation or any similar celebration. Rather, in accordance with Danish regulations, he gave some girls a public exam on the completion of their religious studies (*limmudei kodesh*) and then delivered a sermon. All this took place in the synagogue. Intriguing references to bat mitzvah celebrations in various European cities include a confirmation in Warsaw in 1843 and a party in Lvov in 1902. Rabbi Musafiya notes that bat mitzvah celebrations were held in France towards the end of the 19th century. Anecdotal references to bat mitzvah celebrations include that of Charlotte Salomon (1917–1943) in Berlin (see Mary Lowenthal Felstiner, *To Paint Her Life* (1997)).

EGYPT. Rabbi Elijah Hazzan held a synagogue celebration for *benot mitzvah* (pl.) girls who had completed studies in religion and Jewish history in 1907 in Alexandria.

BAGHDAD. One significant early reference to a celebration for a girl is found in the book *Ben Ish Hai* by Rabbi *Joseph H̄ayyim b. Elijah of Iraq (1834–1909). In his discussion of *parashat Re'eh*, note 17, vol. 1, p. 132, Rabbi H̄ayyim posits that there

is an equal sense of *simḥah* for boys and girls as they reach juridical responsibility; he recommends celebrating the girl's 12th birthday in some liturgical fashion. He declared that even though it was not the custom in his community (Baghdad) to make a *se'udat mitzvah*, nonetheless the event should be celebrated on that day and the girl should wear special (Sabbath) clothing. If at all possible, her father should buy her a new dress so that she could say the benediction *sheheḥeyanu* on the occasion of her bat mitzvah.

ISRAEL. In Israel it became customary to celebrate a girl's 12th birthday with a party. It was called a bat mitzvah but there was rarely any liturgical or synagogue component. In the early 21st century, often all the girls in a class prepare for a group celebration after studying relevant material throughout the school year. Some synagogues and schools do enable a ritual format for girls while some families go to Rachel's tomb or other sacred sites for a party. Tourists and Israelis who desire a liturgical and Torah element for a girl's bat mitzvah may go to the Western Wall to pray with the Women of the Wall.

NORTH AMERICA. There are reports of various forms of bat mitzvah ceremonies in the American Midwest as early as 1907, but the best-known bat mitzvah ritual was created in 1922 by Rabbi Mordecai *Kaplan for his daughter Judith Kaplan *Eisenstein. Although innovative in concept and held in a synagogue, it was not identical to a contemporary bar mitzvah which would have included an *aliyah* and the ritual recitation of a *haftarah*. Rather, Judith Kaplan read a section selected by her father from a printed *Ḥumash* (Five Books of Moses). The egalitarian bat mitzvah format, identical to a bar mitzvah, is not documented until 1940 and did not spread across North America until after the 1960s. The history of these ritual performances developed along denominational lines. Initially, the Reform movement was divided over any bat mitzvah rite as many congregations preferred a group confirmation ceremony for girls and boys at age 15 or 16. However, by the early 1960s, many North American Reform congregations offered prepared girls the option of bat mitzvah as well as confirmation. Although these early *benot mitzvah* generally read from the Torah scroll, their liturgical roles were often less than those of a bar mitzvah. Within the Conservative movement of the 1950s and 1960s there was debate as to where to place a ceremony for girls and what its content should be. During the 1970s and 1980s, the ritual celebration of bat mitzvah became ensconced within Reform, Conservative, and Reconstructionist congregations. At the beginning of the 21st century, most *benot mitzvah* in the Reform, Conservative, and Reconstructionist movements perform the same liturgical roles as a bar mitzvah, including reading from the Torah scroll and recitation of a *haftarah*. For some the ceremony is held on Friday night; but for most it takes place during Sabbath morning services.

By the 1970s many in Orthodox movements also sought ways to fit a bat mitzvah into the established order of worship in ways that were halakhically permissible. One option, es-

tablished by Hebrew day schools in response to an Orthodox preference for home- or school-based rituals for girls, was a group bat mitzvah celebration. Another choice was to hold a ceremony in the synagogue at a time when no prayer services were taking place. An alternative possibility was to celebrate the bat mitzvah at a separate women's prayer service during which a non-liturgical reading from the Torah could occur. Even in contemporary ḥasidic and ḥaredi communities some format for the recognition and celebration of a girl's initiation as an adult Jew now exists

The major impact of bat mitzvah celebrations has been to increase the level of women's Jewish education and synagogue ritual participation. By the first decade of the 21st century adult bat mitzvah ceremonies had also become a common occurrence in synagogues of all denominations.

LEGAL RESPONSA. Rabbi Moses *Feinstein forbids the use of the sanctuary for an official bat mitzvah. He does allow a special birthday *kiddush* in the sanctuary, adding that the girl may say some appropriate words there after services; he also permits some form of public celebration in synagogue social halls or in the family home. Rabbi J.J. *Weinberg recommends a modest home-based celebration to strengthen the girl's education and attachment to Jewish traditions. A number of 20th century rabbinic decisors, including Rabbi Y. *Nissim, (*Noam* 7:4), Rabbi Ovadiah *Yosef (*Yabi'a Omer* 6:29.4, *Yehaveh Da'at* 2:29, 3:10), and Rabbi Chanoch Grossberg (*Ma'ayan*, 13:42), assert that a *se'udat mitsvah* (obligatory festive meal) is held in honor of a girl's bat mitzvah on her birthday. Rabbi Abraham Musafiya, writing in the latter part of the 19th century (first printed in *Noam* 7 (5724, 1964) p. 4), claims that there is no difference between a boy and a girl in terms of the obligatory nature of the festive meal and that this festive meal is customarily held for boys and girls in France.

RELATED BLESSING. At the time of a bar mitzvah blessing a father traditionally says *Barukh she-petarani me-onsho shel zeh*, indicating that he has been released from responsibility for his son's acts. There is disagreement within Orthodox Judaism whether this blessing is also recited for a girl. Some decisors claim that a father cannot say it on the occasion of a bat mitzvah since he is not obligated to teach his daughter Torah. Others claim that the girl's coming of age at 12 years requires the same parental blessing as that for a boy at thirteen years. Rabbi Ovadiah Yosef favorably quotes Rabbi A. Aburbia, who recommends saying the blessing without God's name (*Yabi'a Omer* OH 6:29, p. 98).

BARNA, VICTOR (Vic, formerly Gyoza Braun; 1911–1972), table tennis champion, winner of 22 world championships in singles, doubles, and team play. Born in Budapest to a printer, Barna learned table tennis playing at the local sports club before joining the Hungarian national team that won the 1929 Swaythling Cup. Barna won his first world singles title in 1930 in Berlin, eventually winning five world singles titles, including four consecutively in the 1930s, plus 17 others in men's and mixed doubles and team championships for Hungary. He also won several open tournaments in North America, Europe, and Australia. Barna's singles career ended when his right (playing) arm was severely injured in an auto accident in 1935, though he continued playing doubles and indeed won the 1939 world championships in mixed doubles. Barna moved to France in 1936 and played there professionally, before moving to England just before the outbreak of World War II. He adopted British nationality and competed for Britain the rest of his career. He played his last world championships in 1954, when he was runner-up in the men's doubles. Barna was noted for his legendary backhand drive, known as the "Barna Flick," and for being extremely agile on his feet, with terrific powers of anticipation and concentration. He is credited with popularizing the sport of table tennis worldwide. He was recognized in his native Hungary as "the most successful Hungarian sportsman of the twentieth century." He wrote *Table Tennis Today* (1962).

BARNACLE GOOSE MYTHS. The barnacle goose is a migratory bird, whose winter habitat is the Arctic region, when it is seldom seen outside the Arctic circle. In summer, however, large flocks are found on the western shores of the British Isles and other parts of the temperate zone. According to a popular medieval fable, the barnacle goose was produced out of the fruit of a tree, or grew upon the tree attached by its bill (hence called the tree goose), or was produced out of a shell. This fable – the origin of which is obscure – was taken quite literally by both Jews and non-Jews, and in consequence it was a matter of doubt whether it was to be regarded as bird, fish, or a completely distinct species. *Isaac b. Moses of Vienna (*Or Zarua*) quotes R. Tam – who was the first to deal with the subject – as ruling that it may be eaten after ritual slaughtering like poultry. This decision was in opposition to the views of contemporary famous scholars who permitted it to be eaten in the same way as fruit. Samuel he-Hasid and his son *Judah he-Hasid of Regensburg agreed with R. Tam. R. *Isaac b. Joseph of Corbeil forbade it (*Sefer Mitzvot Katan* no. 210), as he regarded it as a species of shellfish. The Zohar (3:156) states that R. Abba saw a tree from whose branches grew geese. The Shulhan Arukh (YD 84:15) rules that birds that grow on trees are forbidden since they are regarded as creeping things. The fable was disputed, however, by various scholars but as late as 1862 R. Bernard Issachar Dov *Illowy in New Orleans quoted a conflict of authorities whether it might be eaten and vigorously denounced those who would permit it. He too referred to the belief of many early naturalists that it grows on trees.

BARNATO, BARNEY (Barnett Isaacs; 1852–1897), South African financier and mining magnate. Born in London, Barnato was educated at the Jews' Free School and went to Kimberley, South Africa, in 1873, during the diamond rush. He joined his brother Henry and they began buying diamonds as well as claims which were becoming unworkable as separate units. Within a short time the mines were bringing in an income of \$9,000 a week. In 1881 the Barnato brothers formed the Barnato Diamond Mining Company, with capital of over \$500,000. It soon rivaled the De Beers Mining Company of Cecil J. Rhodes, who was aiming at control of the diamond fields. The struggle between Rhodes and Barnato ended in 1888 with the amalgamation of the two companies into the De Beers Consolidated Mining Company, in which Barnato became a life governor. In the same year he was elected to the legislative assembly of Cape Colony. With the discovery of the Witwatersrand gold fields, Barnato acquired large holdings in Johannesburg, where the Barnato group eventually became one of the big mining units. In 1895 his optimism and business acumen saved the Rand from a serious slump. He denounced the Jameson Raid of that year which was aimed at

overthrowing the government of Paul Kruger, but interceded with Kruger to reduce the offenders' sentences. Barnato was a colorful figure who loved to act in Shakespeare and sport fancy waistcoats. His wealth, financial shrewdness, and mode of living made him almost legendary. His vast interests, however, imposed a considerable strain on him and on a voyage to England in 1897, apparently emotionally disturbed, he jumped overboard and was drowned.

BARNAY, LUDWIG (1842–1924), German actor. Son of the secretary of the Hebrew congregation in Budapest, Barnay had a remarkable career as a leading German actor, first in Bohemian Trautenau, then in Budapest, Graz, Leipzig, Vienna, and Frankfurt/Main. In 1874 he became member of the famous ensemble of Meiningen Hoftheater, with which he toured Europe and the U.S. several times. He distinguished himself in heroic roles in Schiller and Shakespeare, winning particular acclaim as William Tell and Mark Antony. Together with Adolph L'Arronge he founded the Deutsche Theater in Berlin in 1883. Despite his famous quarrels with the actor Joseph Kainz, he remained an influential and important figure in German theater life. In competition to L'Arronge, he was founding director of the Berliner Theater from 1887 to 1894 and later he acted in Wiesbaden as director at the Koenigliche Schauspielhaus Berlin and eventually at the Koenigliche Hoftheater in Hannover. His main achievement of lasting effect was the foundation for the union of professional actors ("*Genossenschaft deutscher Buehnenangehoeriger*") in 1871, which considerably improved the position of actors in German society. Barnay published his memoirs, *Erinnerungen* (2 vols), in 1903.

[Marcus Pyka (2nd ed.)]

BARNEA, EZRA (1935–), ḥazzan, educator, and head of Renanot – Institute for Jewish Religious Music. Barnea was born in Jerusalem and from his youth was familiar with Sephardi cantorial music. He studied with Shaul Abbud, author of *Shirei Zimrah*, and with the Jerusalem cantor Moses Ner-Gaon. From the age of ten he was a chanter of the Torah readings and after his bar mitzvah a cantor in the Bukharan neighborhood in Jerusalem. In 1985 he opened a school for Sephardi cantorial music in Jerusalem and was appointed in 1986 the principal of Renanot in Jerusalem. In 1989 he received the Prize of the Ministry of Religious Affairs for his activities on behalf of Jewish music. Among his activities were the documentation and production of recordings of traditional Jewish music, especially liturgical pieces recorded from cantors and

other knowledgeable individuals. He also organized a yearly conference on Jewish music during Hanukkah and published books and the periodical *Dukhan* on Jewish music.

[Gila Flam (2nd ed.)]

BARNEA, NAHUM (1944–), Israeli journalist. Barnea was born in Tel Aviv and graduated in history and political science from the Hebrew University of Jerusalem, where he began his writing career on the university student newspaper. Subsequently, he joined **Davar*, where he worked first as the paper's Jerusalem affairs correspondent, then as the paper's representative in Washington, D.C., for six years, and later as a columnist. In 1981 he won the Sokolow prize for journalism. In 1982 he co-founded the **Koteret Rashit* news magazine. After its closure due to economic difficulties, Barnea joined **Yedioth Ahronoth* as a political columnist. He covered most important political, military, and economic stories in Israel. His reportage was characterized by broad knowledge, analytic acumen, and the ability to give a perspective to events. These qualities, together with his regular presence at news events and an easy pen, made him one of the most widely read newspaper journalists in Israel. His son was killed in a Jerusalem terrorist attack.

[Yoel Cohen (2nd ed.)]

BARNERT, NATHAN (1838–1927), U.S. businessman, public figure, and philanthropist. Barnert was born in Santomischel near Posen, Prussia, and was taken to the U.S. in 1849. After his travels in California during the gold rush, Barnert moved to Paterson, New Jersey, at 20, and opened a clothing establishment. During the Civil War, he filled large contracts for Union Army uniforms, using his profits for business expansion and acquisition of real estate holdings. Barnert retired from mercantile life at the age of 40 to devote all his attention to his profitable real estate interests. He used his capital to create a new industry in Paterson, the furnishing of supplies for paper mills. He also had great success in building large, modern textile mills as speculative projects. A Democrat in a normally Republican city, Barnert was elected to the Paterson Board of Aldermen in 1876 and 1879. He was elected mayor of Paterson in 1883 and 1889, and pursued a reform administration. An observant Jew, Barnert never appeared at City Hall on the Sabbath or festivals. He was a devoted worshiper at Congregation B'nai Jeshurun, to which, in 1889, he donated the land and assumed construction costs for a new synagogue building, whose dedication was attended by President William McKinley. Barnert built a Hebrew school (1904), and a non-sectarian hospital and nurses' home. Among his other philanthropic gifts were the construction of a synagogue for the Jewish community of Santomischel and an orphan asylum in Jerusalem. A statue of Nathan Barnert was dedicated in Paterson's City Hall Square in 1925.

[David H. Panitz]

BARNET, WILL (1911–), U.S. painter, graphic artist, and teacher. Barnett was born in Beverly, Massachusetts. He started drawing at age six, recording his childhood home and family. His artistic studies began at the Art School at the Boston Museum of Fine Arts in 1928. In 1931, the year he issued his first lithograph, he received a scholarship to study at the Art Students League (1931–34) in New York City. There he began classes with Stuart Davis and Charles Locke. By 1935 he began serving as the League's official printer, supervising editions by William *Gropper, among others; two years later he became an instructor of graphic art at the League. During these early years Barnett depicted social themes influenced by the work of the Mexican muralists, particularly José Clemente Orozco. He recorded city life in prints such as *Idle Hands* (1935), which shows the mind-dulling effect of the Depression on a homeless man, and in prints such as *Cafeteria Scene* (1934) and *Conflict* (1934). This latter scene depicts a group of bulky men storming a city building. Barnett held his first one-man show at the Eighth Street Playhouse in New York in 1935 and served as the technical adviser in graphic art for the Federal Art Project of the Works Progress Administration in 1936.

In the 1940s he showed his works in various venues in New York and beyond. At this time he began to focus on painting, making colorful, simplified canvases of his children and wife. He taught in several settings, most notably painting at the Art Students League (until 1980) and graphic art at the Cooper Union in New York. Other institutions at which Barnett taught include the Pennsylvania Academy of Fine Arts and the University of Minnesota at Duluth. Students who later went on to illustrious art careers include Mark *Rothko, Audrey Flack, and Donald Judd. In the 1950s, Barnett's printwork and painting became even more abstract, influenced by the simple design and balance of American Indian handicraft design. This interest relates to his goal of creating a "real American art." Throughout his career, Barnett oscillated between abstraction and figuration.

[Samantha Baskind (2nd ed.)]

BARNETT, JOEL, BARON (1923–), British politician. Educated in Manchester and by profession an accountant, Joel Barnett was a Labour member of Parliament from 1964 until 1983. After serving as an Opposition spokesman on economic affairs from 1970 to 1974, Barnett held office as chief secretary to the Treasury from March 1974 until the fall of the Labour government in May 1979. From February 1977 until May 1979 he served in James Callaghan's cabinet. Barnett is probably best known for devising the Barnett Formula, under which grants to Scotland and Wales were greater per capita than grants to England, in order to reflect the geographical problems of service provision in these two areas. He is the author of *Inside the Treasury* (1992) and was given a life peerage after he retired from the House of Commons in 1983.

[William D. Rubinstein (2nd ed.)]

BARNETT, JOHN (1802–1890), composer. Barnett was born in Bedford, England. His father Bernhard Beer, a cousin of Giacomo Meyerbeer, had changed his name to Barnett upon settling in England. John Barnett was a prolific composer for the London stage. In his opera *The Mountain Sylph* (1834) he reintroduced the composed recitative into English opera in place of the spoken dialogue. His attempt to establish an opera house at St. James's Theater was unsuccessful. In later life he settled at Cheltenham as a music teacher. He composed chamber music and songs, and published some writings on singing. His daughter, Clara Kathleen Rogers (1844–1931), became a well-known opera singer.

BARNETT, JOHN FRANCIS (1837–1916), composer. Born in London, nephew of the composer John *Barnett, he won the Queen's Scholarship at the Royal Academy of Music at the age of 12, and played Mendelssohn's piano concerto at a performance conducted by Louis Spohr. He was appointed professor at the Royal College of Music, London, in 1883. His works include piano, chamber, and orchestral music, and choral cantatas; the most successful were settings of Coleridge's *Ancient Mariner* (1867) and Keats' *Eve of St. Agnes* (1913).

BARNETT, LIONEL DAVID (1871–1960), British Orientalist. Barnett, who was born in Liverpool, was keeper of the department of Oriental printed books and manuscripts at the British Museum from 1908 to 1936. He was an authority on Indian literature, and lectured in Indian history at the London University School of Oriental and African Studies until 1946. He wrote *Antiquities of India* (1913) and *Hindu Gods and Heroes* (1922), and his translations included *A History of Greek Drama* (1900) and, from the Sanskrit, *Brahma-Knowledge* (1907). Barnett was an elder of the Spanish and Portuguese congregation in London, and in 1931 published *El libro de los acuerdos*, an English translation from the earliest records of the congregation, for the years 1663 to 1681. He also edited the Bevis Marks records of the contributions made to history by the congregation (2 vols., 1940–49).

Lionel Barnett's son, RICHARD DAVID BARNETT (1909–1986), like his father, made his career at the British Museum. Born in London, he began in 1932 as assistant keeper in the department of Egyptian and Assyrian antiquities and in 1955 was appointed head of the newly established department of Western Asiatic antiquities. From 1933 to 1935 he was secretary of the British School in Athens. Richard Barnett's research extended to Assyriology, the cultures of Syria, Phoenicia, and Asia Minor as well as biblical archaeology. In 1956 he organized the special exhibition at the Victoria and Albert Museum in London commemorating the tercentenary of the resettlement of Jews in the British Isles, and his catalog of the exhibition was one of his most distinguished publications. He was president of the Jewish Historical Society of England (1959–61) and contributed several important papers on the history of the Sephardim in England to its transactions. His publications include: *Carchemish: Report on the Excavations*

at *Djerabis* (vol. 3 (with Sir L. Woolley, 1952)); *Catalogue of the Nimrod Ivories in the British Museum* (1957); *Assyrian Palace Reliefs and Their Influence on the Sculptures of Babylonia and Persia* (1960); *The Sculptures of Aššur-našir apli II...* (1962); and *Illustrations of Old Testament History* (1966). After his death the Jewish Historical Society of England established an annual lectureship in his honor.

BARNETT, SIR LOUIS EDWARD (1865–1946), New Zealand surgeon and professor. Barnett was born in Wellington, New Zealand, and in 1895 received a permanent lectureship in surgery at Otago University, where from 1905 to 1924 he was professor. He served with the rank of lieutenant-colonel in the Royal Australian and New Zealand Medical Corps (1915–17) and was knighted for his overseas war service. Barnett was one of the founders of the Radium Institute in Dunedin and a pioneer in X-ray and radium research at Otago University. Most of his work was in the fields of cancer and hydatids research, and as a result of his efforts the incidence of hydatids in New Zealand was considerably reduced.

[Maurice S. Pitt]

BARNETT, ZERAH (1843–1935), pioneer of the modern Erez Israel settlement and one of the founders of Petah Tikvah. Barnett, who was born in Tytuvėnai, Lithuania, settled in London in 1864 as a fur manufacturer and trader. There he organized communal life for the East European immigrants who remained outside the Anglo-Jewish community. After acquiring British nationality in 1871, he went to Erez Israel for the first time and helped establish the Me'ah She'arim quarter outside the walls of Old Jerusalem. Having spent all his savings, Barnett returned to London to earn money and then went back to Erez Israel – a process which he repeated 15 times. Wherever he went, he advocated Jewish settlement in Erez Israel. In 1878 Barnett joined the group that established Petah Tikvah. As London Hovevei Zion delegate to the *Katowice Conference (1884), he described the experiences and hardships of the new settlers from first-hand knowledge. Early in the 1890s Barnett settled in Jaffa, where, in order to improve living conditions, he built the Neveh Shalom quarter, and moved there with his family. He helped build the Sha'arei Torah school, introducing Hebrew as the language of instruction. He also founded the Or Zore'ah Yeshivah in Jaffa. Barnett published his memoirs, *Zikhronot*, in 1929. He died in Jaffa and was buried in Jerusalem.

[Getzel Kressel / Yehuda Slutsky]

BARNOWSKY, VIKTOR (1875–1952), German actor and theater director. Born in Berlin, Barnowsky became director of the Kleines Theater in 1905. From 1913 to 1924 he managed the Lessingtheater, and from 1925 to 1930 the Theater in der Koenigraetzerstrasse and the Komoedienhaus, becoming one of the most important figures in the privately owned German theaters. He left Germany when Hitler came to power and went to the U.S., where he wrote film scripts and taught theater history at Fordham University and Hunter College, New York City.

BARNSTON, HENRY (1868–1949), U.S. Reform rabbi and scholar. Barnston was born Henry Barnstein in Dover, England, and ordained at Jews College, London. He attended University College in London and earned his Ph.D. in ancient Semitic languages at the University of Heidelberg, where he published *The Targum of Onkelos, According to the Yemenite Manuscripts* and collaborated on Aramaic and Chaldean dictionaries. In 1900, seeking an atmosphere more conducive to the practice of liberal Judaism, he immigrated to the United States to serve as the rabbi of Congregation Beth Israel in Houston, Texas. Beth Israel, the oldest and wealthiest synagogue in the city, had suffered a split when more traditional members left in protest against the congregation's move to Reform. Barnston, who changed his name after World War I in order to sound less German, took maximum advantage of his congregants' financial resources to build a temple widely considered to be the finest in the Southwest. At the same time, under Barnston's leadership, the congregation's membership increased tenfold to become the city's largest synagogue. Barnston's influence extended far beyond his congregation: he founded the Jewish Welfare Service, served as president of the local B'nai B'rith, and lectured on behalf of the Jewish Chautauqua Society and the Houston Conference of Christians and Jews. Statewide, he co-founded the Texas Kallah of Rabbis (comprising Orthodox, Conservative, and Reform members) and was elected president of the Texas Association of Rabbis. Over the course of his half-century in Houston – he became rabbi emeritus in 1943 and held that position until his death – Barnston emerged as a civic leader as well: he founded the Community Chest and is credited with forming the Houston Symphony Society and nurturing it into the renowned Houston Symphony Orchestra. He was also active in Houston's Ministerial Alliance and Rotary Club. While Barnston would not take any public stand on civil rights, he did join together with the First Methodist Church in an unprecedented gesture of ecumenical defiance of the Ku Klux Klan. Although he was a member and supporter of the anti-Zionist American Council for Judaism, he resisted his congregation's pressure for him to become a more outspoken activist in the organization. By the time Barnston was promoted to rabbi emeritus, he was the dean of Houston clergymen.

[Bezalel Gordon (2nd ed.)]

BARON, BERNHARD (1850–1929), industrialist and philanthropist. Born in Rostov-on-Don, Russia, Baron immigrated to the United States as a boy and worked in a Maryland cigar factory. In 1890 he began manufacturing cigarettes by hand, to be sold at a cheap price. He opened a factory in Baltimore in 1894 and two years later perfected his own cigarette-making machine. In 1896 he took his invention to London, where he set up a company for manufacturing cigarettes. Seven years later he purchased Carreras, one of the oldest tobacco companies in England, and as a result of an extensive advertising campaign expanded it into one of the largest cigarette companies in the world. Within 20 years Baron had accumulated a fortune with over \$20 million, much of which he proceeded to give away on an unprecedented scale. He set up two charitable trusts in his name, which distributed over £1 million to hospitals and children's homes, and made substantial gifts to the Jewish National Fund, the Keren Hayesod, and the Hebrew University of Jerusalem. He also made possible the erection of a new building for St. George's Jewish welfare settlement in the East End of London. Despite his enormous wealth – he left £4.9 million – Baron remained simple in his tastes and despised opulence. He refused a title but after his death his son, Louis Bernhard Baron (1876–1934), was made a baronet.

BARON, DEVORAH (1887–1956), Hebrew author. Daughter of a rabbi, she was born in Ozdah, Belorussia, and published her first Hebrew stories in Eastern European periodicals (**Ha-Meliz* and **Ha-Zefirah*). In 1911 she settled in Erez Israel and later married Yosef Aharonovitz, a prominent Labor Zionist leader and the editor of **Ha-Po'el ha-Za'ir*, for which she was the literary editor.

She published *Sippurim*, her first volume of short stories in 1927, and in 1934, when the Bialik Prize was instituted, she was its first recipient. Following her husband's death in 1937, she edited his collected works together with Eliezer Shohat. She received awards for *Le-Et Attah* (1943), a volume of short stories drawn from her experiences as an exile in Egypt during World War I, and for her collected short stories *Parshiyot* (1951). Childhood reminiscences and Jewish life in Eastern Europe are major themes in Devorah Baron's fiction. Her style, influenced by 19th-century European fiction, combines realism with impressionism. She writes movingly of her parents' home and her mother is often her favorite heroine. She is first described in "Bereshit" ("In the Beginning"), in "Mezulah" ("Depths"), and in other stories, frequently portrayed as an unfortunate widow, struggling to maintain her orphaned children. Devorah Baron's Jewish town is permeated by a deep sense of loneliness experienced in the midst of an alien world and of the insecurity caused by poverty and anti-Jewish prejudice. At the same time, until the Holocaust, the Jewish town throbbed with a life which drew upon the inner

resources of a deep faith. Its spirit was nurtured by a remarkable historical memory; its physical existence was safeguarded by the fertility of its families. The story "Mishpahah" ("Family"), for example, describes how an attempt to force divorce upon a childless couple is prevented, and ends with a miracle of triumphant motherhood. *Me-Emesh* ("Since Last Night," 1956), the last volume to be published during the writer's lifetime, contains four stories which describe Erez Israel during World War II, the volunteers who joined the British Army, and an encounter with the remnants of European Jewry. The short story of one bereaved mother epitomizes the fate of the Jewish town and of all Eastern European Jewry, from the period of the slaughter of the defenseless in "normal" times to the "final solution" under the Nazis.

In her later years, while confined to her sickbed, Devorah Baron composed a group of stories depicting the world as seen through the window of an "invalid's room" (*"Be-Lev ha-Kerakh,"* in *Parashiyot*). Her perception remained sharp to the end, and her stories are animated by a deep empathy for the weak and the innocent. No other woman writer in Israel was as familiar with the sources of Judaism as Devorah Baron. Every human experience in her stories finds an echo in the age-old heritage of her people and in its literature. The rhythm of almost every period of Hebrew prose is clearly felt in the flow of her narrative. She is a true poet of the lost world of the Jewish town. In the wake of the growing interest in the works of Hebrew women writers, various academic studies and plays (e.g., those by Avivah Gali) have dealt with the life and writing of Baron. A selection of her stories translated into English appeared in 1969 under the title *The Thorny Path*, followed in 2001 by *The First Day and Other Stories*. A list of her works translated into English appears in Goell, Bibliography, 62. Bibliographical information and 118 letters appear in the posthumously published *Aggav Orha* (1960).

[Rachel (Katznelson) Shazar]

BARON, JOSEPH ALEXANDER (1917–1999), English novelist. Born Joseph Alexander Bernstein in Maidenhead, Berkshire, Baron's first work, *From the City, from the Plough* (1948), was inspired by World War II service during the invasion of Normandy. Anglo-Jewish tensions are explored in *With Hope, Farewell* (1952; reissued in 1962 as *The Thunder of Peace*); and the East London of Baron's childhood is the setting of *The Lowlife* (1963) and its sequel, *Strip Jack Naked* (1966). He also

wrote a historical novel, *The Golden Princess* (1954), and *King Dido* (1969). During the 1930s, Baron was a Communist but increasingly broke with radical politics. His current reputation is that of an outstanding but neglected writer.

[William D. Rubinstein (2nd ed.)]

BARON, JOSEPH LOUIS (1894–1960), U.S. Reform rabbi and author. Baron was born in Vilna, Poland (then Lithuania), and immigrated with his family at the age of 13 to the United States, where they settled in New York City. He attended the Rabbi Isaac Elchanan Yeshiva and Columbia University, where he earned his B.A. (1914) and M.A. (1916). While at Columbia, he also studied at the Jewish Theological Seminary, helped found the Zionist youth movement *Young Judaea (1910), served on the staff of the New York Board of Education, and contributed articles to several New York newspapers and magazines. In 1920, Baron was ordained at *Hebrew Union College, having interrupted his rabbinical studies to serve Temple Sholom of Chicago when the congregation's rabbi entered the U.S. Army Chaplaincy during World War I. He had also attended the University of Cincinnati, edited the Hebrew Union College Monthly, and organized both the Young Judaea Council of Cincinnati and the Jewish Center of Norwood, Ohio. He earned a Ph.D. from the University of Chicago in 1932.

In 1920, Baron became rabbi of Tri-City Temple Emanuel, which served the Jewish populations of Davenport, Iowa, and Moline and Rock Island, Illinois. During his six-year tenure, he established the Tri-City Jewish Charities, the *Tri-City Scribe*, the Ezra School, the Emanuel Religious School, the Davenport Lodge of B'nai B'rith, and the local Council of Jewish Youth Clubs. He also taught at an extension of the University of Iowa and helped found Congregation Judah of Cedar Rapids, Iowa. In the summers, Baron traveled to New York City to work in social service under Rabbi Stephen *Wise of the Free Synagogue.

Baron's second – and last – congregation was Temple Emanu-El (later Emanu-El B'ne Jeshurun) in Milwaukee, Wisconsin, where he was to spend 35 years as a religious and civic leader (1926–51 as rabbi, 1951–60 as rabbi emeritus). Under his stewardship, the congregation grew to comprise a library, a museum, a modernized religious school, and auxiliary organizations. In the larger community, he was instrumental in establishing the Milwaukee Round Table of the National Conference of Christians and Jews, the Milwaukee Jewish Council, the Milwaukee Chapter of the American Jewish Committee, and the Yavneh School for Unaffiliated Jewish Children. In addition, he served on the boards of the Milwaukee Jewish Community Center, Federated Jewish Charities, and the Jewish Welfare Fund.

Statewide, Baron helped establish a number of synagogues and organizations. He also served on the Governor's Commission on Human Rights. On a national level, Baron was a member of the Board of Governors of Hebrew Union College (1937–40) and of the Joint CCAR-UAHC Commis-

sion on Religious Education (1926–27). In 1939, the Union of American Hebrew Congregations adopted his plan for a network of youth clubs that was to become, under the full-time guidance of Rabbi Samuel *Cook, the National Federation of Temple Youth (now called the North American Federation of Temple Youth).

Baron, who lectured on philosophy at State Teachers' College and the University of Wisconsin-Milwaukee, as well as for the Jewish Chautauqua Society, also developed a reputation as a scholar. A frequent contributor to academic journals and encyclopedias, he was the author of four books: *Death in Jewish Folk Religion* (1932); *In Quest of Integrity* (1936); *Candles in the Night* (1940); and *Stars and Sand* (1943). He is best known, however, for researching, compiling, and editing the valuable compendium of Jewish wisdom from throughout the ages, *A Treasury of Jewish Quotations* (1956, 1985). With its vast collection of 18,000 quotations, it remains one of the greatest Jewish reference resources of the 20th century.

[Bezalel Gordon (2nd ed.)]

BARON, SALO (Shalom) WITTMAYER (1895–1989), historian. Baron was born in Tarnow (Galicia) and taken to Vienna early in World War I. He studied at the university there and received doctorates in philosophy (1917), political science (1922), and law (1923); he was ordained by the Jewish Theological Seminary in Vienna in 1920. Baron taught history at the Jewish Teachers College (Juedisches Paedagogium) in Vienna during the years 1919–26. He went to the United States at the invitation of Stephen S. Wise to teach at the Jewish Institute of Religion in New York and remained at the Institute from 1927 until 1930. From 1930 to 1963 he taught at Columbia University, and served as director of the Center of Israel and Jewish Studies at Columbia from 1950 to 1968. From 1957 he also taught at the Jewish Theological Seminary. Baron was the first member of an American history faculty to teach Jewish studies. The many such chairs that now exist owe much to his example, and a substantial number of his former students are among their occupants.

Among Baron's many involvements in public and academic affairs were his presidency of the American Academy for Jewish Research (1940–43, 1958–66, and 1968 on); his presidency of the Conference on Jewish Social Studies (1941–54, 1963–67), and honorary presidency (1955–62 and 1967 on); his presidency of the American Jewish Historical Society (1953–55); his founding and presidency of Jewish Cultural Reconstruction, which after World War II worked in identifying and reclaiming the libraries and other cultural treasures despoiled by the Nazis; and his trusteeship of Tel Aviv University from 1967. From 1952 he was a corresponding member of the International Commission for a Scientific and Cultural History of Mankind. Baron's first major work, *Judenfrage auf dem Wiener Kongress* (1920), dealt with the Jewish question at the Congress of Vienna. He began to write articles as a youth and subsequently wrote many hundreds. Using his exceptional range of talents in many languages and disciplines,

Baron undertook the largest synthetic work of Jewish history in the contemporary period, *A Social and Religious History of the Jews* (3 vols., 1937; 2nd ed., vols. 1–17, 1952–80; index to vols. 1–8, 1960). His emphasis has been on the social history of the people, rather than on the achievements of individual figures; on elements and areas of cross-fertilization between Jews and their environment, rather than on pogroms and suffering; and on the Jewish Diaspora and Erez Israel as the two centers of Jewish creativity, contrary to the views both of a Diaspora-oriented historian, such as Simon *Dubnow, and the new school of Israel-centered scholars, such as Ben Zion *Dinur. A bibliography that covers his works to 1955 appears in a Festschrift in his honor (*Essays on Jewish Life and Thought*, 1959). In addition to the works mentioned above, Baron's major publications are *Bibliography of Jewish Social Studies 1938–39* (1941), *The Jewish Community* (3 vols., 1942), *Modern Nationalism and Religion* (1947), *Jews of the United States, 1790–1840, A Documentary History* (edited with J.L. Blau) 3 vols., 1963, *Russian Jews Under Tsars and Soviets* (1964), and *History and Jewish Historians* (1964). Baron edited *Essays on Maimonides* (1941), *Judaism, Postbiblical and Talmudic Periods* (1954); he co-edited *Freedom and Reason* (1951), a Festschrift in memory of Morris Raphael Cohen, and wrote the introductory essay for *Jerusalem: City Holy and Eternal* (1954). Baron's *Ancient and Medieval Jewish History* (1973) is a volume of essays written over a long period of time which deal in particular with the status of Jews in Christian lands during the Middle Ages. He was also one of the editors of the quarterly *Jewish Social Studies* from its appearance in 1939, and a consulting editor of the *Encyclopaedia Judaica*.

[Arthur Hertzberg]

BARON DE HIRSCH FUND, fund established by Baron Maurice de *Hirsch, the financier and philanthropist who dedicated his fortune to the welfare of East European Jews at a time when worsening conditions in Russia made mass emigration a stark necessity. Convinced that modern secular education could ameliorate the lot of his oppressed brethren, De Hirsch hoped to regenerate them into a class of independent farmers and handicraftsmen in the New World. In 1889, on the advice of Oscar S. *Straus and Michael *Heilprin, De Hirsch allocated the proceeds of a \$2,400,000 fund toward agricultural colonies and trade schools in the United States. With the cooperation of Jacob Schiff and other American Jewish leaders, the Baron de Hirsch Fund was incorporated in New York in 1891. Judge Myer S. Isaacs became president; Schiff, vice president; and the trustees included Straus, Mayer Sulzberger, and William Hackenbarg. A subsidized rural community, Woodbine, was established in southern New Jersey, with an agricultural school which functioned until 1917. In New York the Baron de Hirsch Trade School continued to serve a generation of immigrants. Significant also was the fund's support of the Jewish Agricultural Society and of classes in English, legal aid, and other services to integrate newcomers in America.

BIBLIOGRAPHY: S. Joseph, *History of the Baron de Hirsch Fund* (1935).

[Jehoshua Brand]

BARONDESS, JOSEPH (1867–1928), U.S. labor and communal leader. Barondess was born in Kamenets-Podolsk, Ukraine. He immigrated to the U.S. in 1888, working in New York City as a cloakmaker. Soon after, he joined the United Hebrew Trades and became a labor organizer in the garment industry, helping to lead the first great cloakmakers' strike in 1890. Indicted in 1891 on an extortion charge brought against him by the cloak manufacturers, Barondess was sentenced to a 21-month prison term but was released in a few weeks, after widespread protests and petitions for his pardon. His career as an organizer ended when he led an unsuccessful strike in 1894, but he remained active in the Socialist Labor Party, joining its moderate wing in 1898 in the battle against Daniel *De Leon, which led to the founding of the Socialist Party in 1901. By then, however, Barondess had retired from socialist politics and was devoting himself largely to an insurance business that he had started. In his new role as a successful businessman, Barondess accepted appointment to the National Civic Foundation in 1900 and to the New York City Board of Education in 1910. Partly as a reaction to the Russian pogroms of 1903, Barondess became active in the Zionist movement and during the last years of his life served as an honorary vice president of the Zionist Organization of America. He was also among the founders of the American Jewish Congress and a member of the American-Jewish delegation to the Versailles peace talks in 1919. His career typified that of many immigrants, whose process of integration in the U.S. was marked by initial disillusionment with American society, socialism, a higher economic status, and finally a retreat from radical political activity and a return to the Jewish fold.

BAROU, NOAH (1889–1955), economist. Born in Poltava, Russia, Barou became involved in revolutionary activities as a student and was exiled. After studying in Germany, he returned to Russia in 1913 and was general secretary of the central committee of the illegal left-wing Zionist organization, *Po'alei Zion. After the 1917 Revolution he was one of the three secretaries of the Ukrainian Trade Union Congress. In 1922 he left Russia and eventually settled in England, where he served from 1923 to 1936 as general secretary of the Po'alei Zion World Federation. He was one of the founders of the *World Jewish Congress and an active member of the *Board of Deputies of British Jews. In the early 1950s, Barou made the first contacts with representatives of the West German Federal Republic that led to the meeting of Nahum *Goldmann, president of the Jewish Material Claims Conference, with Chancellor Konrad Adenauer. This meeting laid the foundations for the *reparations eventually made to Jews for material losses at the hands of the Nazis. An authority on cooperative finance, Barou pub-

lished numerous monographs in English. They include *Cooperative Banking* (1932), *Cooperation in the Soviet Union* (1946), and *British Trade Unions* (1947). He edited *The Cooperative Movement in Labour Britain* (1948).

BIBLIOGRAPHY: H.F. Infield (ed.), *Essays... in Memory of Dr. Noah Barou 1889–1955* (1962), includes bibliography.

[Cecil Roth]

BARR, ROSEANNE (1952–), U.S. actress and comedian. Brought up in Salt Lake City, Utah, Barr had a checkered youth and adolescence. Dropping out of high school, she worked as a waitress and regaled her customers with her brash, irreverent humor. She made her way into comedy, working punk clubs and motorcycle bars. She evolved an act that, in her own words, could “get inside the stereotype [of the housewife] and make it three-dimensional from within.” She toured nationally on the comedy club circuit, where she fine-tuned her characterization of the frumpy, controlling, acid-tongued “Domestic Goddess.” She made well-received appearances on late night talk shows before starring in her own comedy specials on HBO. In 1985 she successfully auditioned for the Comedy Store in Los Angeles. In 1986 the Carsey-Werner Company approached her with a proposal for developing a situation comedy based on her stand-up routines. By 1987 *The Roseanne Barr Show* had won cable television’s Ace awards for best special feature and Barr herself was named best female in a comedy.

Barr rose to American media superstardom with *Roseanne* on ABC (1988–97). With John Goodman playing her husband in the series, Barr succeeded, as the eponymous mother of three, in presenting a realistic, no-holds-barred portrayal of working-class American life. In 1993 Barr won an Emmy and a Golden Globe award for outstanding lead actress in a comedy series.

The popularity of her sitcom broadened the audience for Barr as a public persona and greatly increased her power within show business. She pushed boundaries by having the series take risks and raising such issues as gender, homosexuality, and family dysfunction. The forthrightness of these dramatic moments was rare in primetime sitcoms, but the series continued to appeal to a wide audience. She did not write the scripts but had a good deal of artistic control. Many of the plots drew on aspects of her life prior to her success or referred to events in her own life at the time. Other episodes included dialogues that she proposed which addressed particular themes or issues.

In 1998 Barr was the host of her own daytime talk show, which lasted two seasons.

She appeared in several films: *She-Devil* (1989); the voice of Julie in *Look Who’s Talking Two* (1990), *Freddy’s Dead* (1991); *Even Cowgirls Get the Blues* (1994), *Blue in the Face* (1995), and the voice of Maggie in *Home on the Range* (2004).

Like certain other high-profile celebrities such as Madonna, Sandra Bernhard, Britney Spears, and Demi Moore, Barr became involved in Kabbalah, asserting that it was the force behind her own reinvention and helped her transform

chaos into serenity. Barr has written two books – *Roseanne: My Life as a Woman* (1989) and *My Lives* (1994).

[Rohan Saxena and Ruth Beloff (2nd ed.)]

BARRASSA, JACOB (17th century), Marrano physician and writer. Born as Diego de Barros, probably in Portugal, he studied science, medicine, and astronomy in Spain, and published an annual “prognostication and calendar,” *Prognóstico e lunario* (e.g. Seville, 1630 and 1635), based in part on Semitic sources. He embraced Judaism in Amsterdam shortly afterward and wrote a polemical work (still unpublished) on the ostensibly difficult passages of Scripture. He was one of the “Parnasim de Talmud Torah” in 1642, and a warden of the community in 1651.

BIBLIOGRAPHY: C. Roth, *Life of Menasseh ben Israel* (1934), 122–3.

[Cecil Roth]

BARRENNESS AND FERTILITY, the inability or ability of man and woman to procreate. Procreation is considered a blessing in the Bible and it is a commandment (Gen. 1:28; 9:7; Rashi, *ibid.*) applicable to all Jewish men, although not to Jewish women (Yev. 65b–66a). The world was created to be inhabited (Isa. 45:18) and God’s blessings bestowed on Israel always included fecundity (Lev. 26:9; Deut. 28:11) and the absence of barrenness (Ex. 23:26; Deut. 7:14). Children are seen as the greatest blessing: “a heritage of the Lord” (Ps. 127:3–5); “Thy wife shall be as a fruitful vine... thy children like olive plants...” (*ibid.*, 128:3–4). The prodigious fertility of the Israelites in Egypt antagonized the Egyptians (Ex. 1:7, 12) and is interpreted by the Midrash (Tanh. and Rashi ad loc.) to imply that the women bore “six (children) at once.” Procreation is one of the main purposes of marriage, and in later times an offspring (especially a male offspring) was also prized because it meant that *Kaddish* would be recited in one’s memory; hence the popular phrase “to have a *Kaddish*” for a (male) child. Barrenness was a curse and a punishment (Lev. 20:20–21; Jer. 22:30, and MK 27b); Abimelech and his wives were punished, though only temporarily, with barrenness (Gen. 20:17–18), and so was Michal, Saul’s daughter and David’s wife (II Sam. 6:23). Sarah, Rebekah, Rachel, Samson’s mother, Hannah, and the Shunamite woman were all barren at first, but God, who holds the key to fecundity (Ta’an. 2a; cf. Men. 98a), granted their and their husbands’ prayers (cf. Ps. 113:9). The Midrash fully acknowledged the domestic suffering of childless women: even if the barren wife had no religious obligation to fulfill, she had failed to fulfill the primary expectation of her social role, since “it is children who assure a wife’s position in her home” (Gen. R. 71:5). The childless matriarchs became important metaphors for consolation and comfort. Enumerations of these seven barren women whose yearnings for children were ultimately fulfilled included the personified Israel of some future time, based on the characterization of Zion as a barren woman in Isaiah 54:1 (Pesikta de-Rav Kahana 20:1).

Rachel preferred death to childlessness (Gen. 30:1), which prompted the comment of the *amora* Joshua b. Levi that to be without children is death (Ned. 64b). A childless scholar is not eligible to sit on the Sanhedrin (San. 36b. However, teaching Torah to the son of another person is equivalent to having fathered him (Sanh. 19b, 99b). Ben Sira said that it was better to die childless than to have children who were without the fear of the Lord (Ecclus. 16:1–4). According to a rabbinic story, King Hezekiah had refrained from procreation because he had foreseen that his children would be sinners but was rebuked by the prophet Isaiah, “What have you to do with the secrets of the All Merciful? You have to do your duty and let God do what it pleases Him” (Ber. 10a). The cause of sterility may lie as much with the husband as with the wife; this is suggested by Abraham (Gen. 15:2) and by the Talmud for both Abraham and Isaac (Yev. 64a; cf. Num. R. 10:5). A husband should divorce his wife after ten years of childless marriage; though she may marry again (Yev. 6:6; Sh. Ar., EH 154:6). Some men in childless marriages chose to take a second wife rather than divorce an apparently infertile spouse (Yev. 65a). Conversely, the Talmud records instances of childless wives who successfully petitioned rabbinic courts to compel their unwilling husbands to divorce them after 10 years of infertile marriages based on their fears of an impoverished widowhood and old age without the support of offspring (Yev. 65b). Aggadic texts generally deplore dissolution of marriages, even when male procreation is at stake, presenting preservation of a loving childless marriage as a situation where human needs and feelings overrule legal prescriptions. Such midrashic traditions emphasize instead the efficacy of prayer and the necessity of faith in God (*Pesikta de-Rab Kahana* 22:2; Song R. 1, 4:2).

Distinction ought to be made between accidental sterility and congenital or self-inflicted impotence or barrenness. Deuteronomy 23:2 prohibits an impotent man to marry a free-born Israelite (see Yev. 8:2) when the impotence is self-inflicted (*ibid.*, 75b; cf. Jos., Ant., 4:290). A priest who “hath his stones crushed” is unfit for Temple service (Lev. 21:20). The Talmud defines an *eilonit* (“ram-like, barren”) as a woman who by the age of 18 or 20 is without the symptoms of femininity (ET, 1 (1947), 243–46 and ref.). According to some authorities, marriage to an *eilonit*, when contracted in ignorance of her condition, is invalid. Impotence and sterility may be only temporary, due to undernourishment (Ket. 10b). Certain foods, such as eggs, fish, garlic, wine, milk, cheese, and fat meat increase sexual potency (Ber. 40a; Sot. 11b; Yoma 18a–b, BK 82a), while salt, egg-barley, sleeping on the ground, bloodletting, and crying are detrimental to it (Git. 70a–b; ARN1 41:132). The *duda'im* (mandrakes, “love-flowers”), which Reuben brought to his mother Leah, who gave them to her sister Rachel (Gen. 30:14ff.), have been interpreted to be an aphrodisiac flower, though this is far from certain (see B. Jacob, Genesis, ad. loc.). The Talmud suggests that the suppression of the urge to urinate is a cause of sterility in men, and many pupils of the *amora* Huna (third century) became sterile on account of his

over long lectures (Yev. 64b). See also *Birth Control; *Castration; *Vital Statistics.

[Alexander Carlebach / Judith R. Baskin (2nd ed.)]

°BARRÈS, AUGUSTE MAURICE (1862–1923), French writer and politician. His extreme individualism and nationalism greatly influenced his generation. He contributed regularly to the nationalist antisemitic daily *La Cocarde* (founded in 1888), which he edited for a while, and there propounded many of the views on blood purity, the state, and the individual which were later developed and put into practice in Germany. He also expressed these opinions in his novels. Like Charles *Maurras, Barrès was influenced by H.A. Taine, who emphasized race and environment as the determinant factors in history, and by *Proudhon, who identified capitalists with bankers and bankers with Jews. With Maurras, Barrès laid the ideological foundations of the *Action Française, a forerunner of the Fascist movement. At the time of the *Dreyfus case, Barrès was among the most vehement of Dreyfus’ accusers. During World War I, however, he became an ideologist of the “Union sacrée,” and temporarily setting aside his prejudices accepted the Jews as members of the “spiritual family” of France.

BARRETT, DAVID (1930–), Canadian social worker, politician. Barrett was born in Vancouver, British Columbia, and raised in a secular Jewish home on the city’s east side, where his father ran a produce market. Barrett studied philosophy and social work in the United States. He returned to Canada in 1957 and began work for the British Columbia Department of Corrections. Angered by what he regarded as wretched working conditions in an archaic prison system, he was soon an outspoken critic of the provincial penal system and organizer of a prison employee union. He was fired.

Carrying his battle into the political arena, in 1960 Barrett was elected to the provincial legislature for the Co-operative Commonwealth Federation (CCF), forerunner of the democratic socialist New Democratic Party (NDP). In 1969 he was elected leader of the British Columbia NDP and in 1972 led his party to victory with a major reform agenda. His was the first NDP government in British Columbia history and Barrett was the first Jewish provincial premier in Canadian history.

Defeated in 1975, he served for a time as leader of the opposition followed by a stint in broadcasting. He went on to

become an NDP member of the federal Parliament from 1988 to 1993, when he retired.

[Harold Troper (2nd ed.)]

BARRIOS, DANIEL LEVI (Miguel) DE (1635–1701), Spanish poet and playwright. Barrios was born in Montilla, of a Portuguese Marrano family, and was one of the most eminent exiles who contributed to Spanish literature. Following the execution in 1655 of a relative, Marco (Isaac) de Almeyda *Bernal, Barrios' family left Spain, his parents settling in Algiers and he in Italy. After a sojourn at Nice and Leghorn (where he reverted to Judaism), he sailed with his first wife, Debora Vázquez, to Tobago, where she soon died. Barrios then moved to the Netherlands and in 1662 married Abigail de Pina in Amsterdam. At about the same time he took a commission as a captain in the Spanish Netherlands, and for the next 12 years lived outwardly as a Christian in Brussels, while simultaneously maintaining a connection with the Jewish community in Amsterdam. In 1674, Barrios renounced his military commission and thereafter lived openly as a professing Jew in Amsterdam. A follower of Shabbetai Zevi, Barrios had mystical delusions and often fasted for long periods. This so alarmed his wife that she hurried to R. Jacob *Sasportas on the first day of Passover, 1675, and pleaded for his assistance. Sasportas found Barrios prepared for the Messiah's advent before the New Year and convinced that the Christians, headed by the Dutch monarch, would convert to Judaism. As he dryly records in his *Zizit Novel Zevi* (1737), Sasportas found it necessary to remind the deluded poet of his immediate family obligations and of the perilous state of his health.

Barrios' work can be divided into two periods, before and after 1674. In Brussels, he emphasized classical and pagan allusions and in Amsterdam stressed his Jewishness, while retaining a great admiration for the Spanish poet Luis de Góngora. His first work, *Flor de Apolo* (Brussels, 1665), is a collection of poetry on varied themes; in the same volume he published three plays, *Pedir favor al contrario*, *El canto junto al encanto* and *El Español de Orán*, which were typical of the contemporary Spanish theater. An allegorical drama, *Contra la verdad no hay fuerza* (Amsterdam, undated, but before 1672), glorified the memory of three martyrs who died in an auto-da-fé in Cordoba in June while *Coro de las Musas* (Brussels and Amsterdam, 1672) contains poetic eulogies of the Spanish provinces and of famous people and cities, preceded by a panegyric on Charles II of England.

Barrios was one of the outstanding men of letters of 17th century Spain, who, together with other New Christians, contributed a great deal to the Spain's Golden Age. Like most Jews who left the Iberian Peninsula, as Jews in 1492 or as New Christians in subsequent years, Barrios retained the Spanish tongue as his language for every need and occasion. Whereas the Sephardi refugees developed Judezmo or Ladino, written in Hebrew script, the New Christians who returned to Judaism continued to use the Spanish and Portuguese languages as

they were accustomed to in the Peninsula. Even though they returned to Judaism, many like Barrios continued to live in a culturally Spanish and Portuguese milieu, in Amsterdam or in Venice. Besides the cultural and linguistic legacy from the Peninsula, writers like Barrios brought with them into the Sephardi Diaspora certain concepts that can best be described as Marranism. This consisted mainly of relying on the Old Testament part of the Bible as well as the apocryphal books, preserving certain very elementary dietary regulations, and celebrating in some way some Jewish festivals. Quite a number of Christian practices were adopted as a matter of course. To gain Jewish knowledge from books was difficult in Spain, but not impossible, thanks to the Spanish Hebraists. Poets of New Christian origin had different experiences once they returned to Judaism. Barrios had enough Jewish knowledge while a Crypto-Jew, but he found it rather difficult to adjust. He finally adopted messianic tendencies which might have been Christian-inspired. This affected the style and mood of his poetry.

The works of Barrios' Amsterdam period constitute five major collections. *Sol de la vida* (Antwerp, 1679) contains the *Libre albedrío*, a defense of the doctrine of free will. His *Triumpho del gobierno popular y de la antigüedad holandesa* (Amsterdam, 1683), of which at least seven versions exist, includes sections on the history of the Amsterdam Sephardi community and its organizations. Some copies contain two religious poems: *La mayor perfección de Ley santísima* and *Triumpho canta la inmortalidad del Pueblo de Israel*. The undated treatise, *Relación de los poetas y escritores españoles de la Nación judaica amstelodama* (republished by M. Kayserling in REJ, 18 (1889), 276–89), is a rich, though sometimes highly romanticized, source of information on Sephardi literary figures. *Alegrías o pinturas lucientes de himeneo* (Amsterdam, 1686), a collection of wedding poems and panegyrics, commemorates some eminent Sephardi families. The most notable compositions in *Estrella de Jacob sobre Flores de Lis* (Amsterdam, 1686) are "La Memoria renueva el dolor," on the death of the poet's wife, and two religious compositions, "Providencia de Dios sobre Israel" and "Días penitenciales." *Metros nobles* (Amsterdam, 1675?) contains the religious poems also found in the (presumably earlier) *Triumpho del gobierno popular*. Outstanding among Barrios' many other writings is his *Imperio de Dios en la armonía del mundo* (Brussels, 1673?), the first part of a grandiose work intended as a poetic version of the Pentateuch. Barrios' literary output is uneven in quality, since he wrote to gain patronage to provide for himself and his family. As the poet laureate of Amsterdam Jewry he was a facile versifier, but some of his religious poems, thanks to their sincerity of feeling and elegance of expression, deserve wider recognition. Their general themes are the permanence and excellence of the Jewish faith, belief in free will, the author's repentance for the sin of posing as a Christian, and the harmony of Creation. Barrios glorified Sephardi culture (and its prime center, the Jewish community of Amsterdam), and perpetuated the memory of notable victims of the Inquisition. There is some evidence

that Rembrandt's painting, "The Jewish Bride" (c. 1665) was a portrait of Barrios and his second wife.

[Kenneth R. Scholberg / Yom Tov Assis (2nd ed.)]

BARRIS, CHUCK (Charles; 1929–) U.S. television producer. Barris is known for his role as the producer of popular TV game shows, including some of the earliest forms of "reality television." Barris was born in Philadelphia, Pennsylvania, and attended the Drexel Institute of Technology. After graduating, he moved to New York, where he began his career in the television industry with a low-level job at NBC. Laid off a year later, Barris was unemployed for a year before being hired by ABC, where he worked with Dick Clark, the host of *American Bandstand*. Barris later sold the pilot of his own show, *The Dating Game*, to ABC. *The Dating Game* was an immediate hit, moving to primetime in 1966 and paving the way for Barris' popular *The Newlywed Game*. Barris continued to utilize the same formula in three more shows, *The Family Game*, *Dream Girl of 1968*, and *How's Your Mother-in-Law?* In 1968, he founded his own company, Barris Industries, which would produce television programs such as *The Game Game* and *Operation Entertainment*. *The Newlywed Show* was canceled in 1974, and Barris struggled to find a new niche in the television market until 1976, when he made his first appearance as the host of the talent competition *The Gong Show*. Barris' antics as the host of *The Gong Show* transformed the producer into a celebrity during the show's four-year run. Barris wrote his autobiography *Confessions of a Dangerous Mind* in 1986, which made the controversial claims that he had lived a double-life during the 1960s, working both as a TV producer and as an international CIA assassin. Barris also published a second autobiography, *The Game Show King* (1993), which made no reference to his alleged involvement with the CIA. In 2002, *Confessions of a Dangerous Mind* was made into a feature film of the same title directed by George Clooney.

[Walter Driver (2nd ed.)]

BARRON, JENNIE LOITMAN (1891–1969), U.S. lawyer, suffragist, judge, and community leader. Barron was born in Boston, the third of four daughters of Fannie and Morris Loit-

man. An outstanding student, she earned her undergraduate, law and master of law degrees from Boston University between 1908 and 1914 while working at night teaching Americanization classes. She opened a law practice in Boston in 1914. An active suffragist, Barron became the first president of the Boston University Equal Suffrage League and continued working for women's causes throughout her life, including women's rights to serve on juries, to become notaries, and to have uniform laws on marriage and divorce. Following her 1918 marriage to Samuel Barron, a graduate of Harvard Law School, she and her husband founded Barron and Barron, a law firm that continued until 1934 when Jennie Barron began a 30-year career in the judiciary when she was appointed a special judge for Norfolk County, Massachusetts. Barron and her husband had three daughters. Throughout her life she hosted Friday night Sabbath dinners at her home for her children and their growing families. Barron was awarded the National Mother of the Year Award by American Mothers, Inc. in 1959 when she was already a grandmother several times over.

In 1937, Barron was named an associate judge of the Boston Municipal Courts. In 1957 she was the first woman appointed as a full-time justice of the Massachusetts Superior Court. Active in numerous volunteer organizations, Barron was the president of the Massachusetts Association of Women Lawyers, the first president of the Women's Division of the American Jewish Congress, a national board member of Haddassah, and chair of the League of Women's Voters, among numerous other appointments.

[Judith R. Baskin (2nd ed.)]

BARROS BASTO, ARTURO CARLOS DE (1887–1961), leader of *Marrano revival in Portugal. Born at Amarante near Oporto, of a New Christian family, he was introduced to the secret practices of the Marranos by his grandfather, entered a military career in 1906 after he moved to Lisbon, where he tried to be accepted by the local Jewish community, and in the revolution in 1910 hoisted the Republican flag on the town hall of Oporto. On returning from World War I, he studied Hebrew, entering Judaism officially at the age of 33 in Tangiers, where he was circumcised, assuming the name Abraham Ben-Rosh. In Lisbon he married a member of a prominent Jewish family. He was the founder of the revivalist movement among the New Christians in Portugal that flourished under his leadership in the 1920s and 1930s. In 1923, together with some East European Jews he organized a community at Oporto, called *Mekor Haim*, secured foreign support for the construction of a monumental synagogue, set up a rudimentary seminary, called Yeshivat Rosh Pinnah in connection with it, and went on missionary journeys through the Marrano centers of northern Portugal. Two months after its establishment in June 1923, the community was officially recognized by the Portuguese authorities. Barros Basto served as the leader of the

community in Porto. Barros Basto established a Portuguese periodical, *Ha-Lapid* ("The Torch"), to spread Jewish ideas among the Marranos. In some articles he published in *Ha-Lapid* he referred to the mysteries of the survival of Crypto-Jewish life in Portugal. He also edited various handbooks of religious guidance and wrote a history of the Jews of Oporto. He found in Samuel Schwarz (1880–1953), a mining engineer from Poland who settled in Portugal in 1915, an enthusiastic supporter for his plans to help descendants of New Christians return to normative Judaism. As a result of the activities of Barros Basto and Schwarz, some international Jewish organizations jointly sent Lucien *Wolf in 1926 to investigate the situation of Crypto-Jews. His report did not favor the intensive activity the Lisbon community or Barros Basto advocated. The latter continued to engage in an active educational and religious campaign designed to bring back to Judaism as many descendants of Crypto-Jews as possible. Barros Basto went on publishing his journal *Ha-Lapid*, which appeared until 1958. He attracted the attention of a number of Jewish personalities, such as Paul *Goodman, Cecil *Roth, and David de Sola *Pool. Rabbi Barukh Ben-Jacob, from Salonica, visited northern Portugal in 1931 and was deeply impressed by Barros Basto. It was in 1932 that the synagogue in Oporto was inaugurated, after the *Kadoorie family extended substantial financial support. Students and graduates of Rosh Pinnah helped Barros Basto in his task. He was able to establish communities in Bragança (*Sha'arei Pidyon* synagogue), in Covilhã (*Sha'arei Kabbalah* synagogue), and some religious activities were conducted in Belmonte. As anti-Jewish feelings increased in the early 1930s, opposition to the activities of Barros Basto spread. In December 1934 he was accused of homosexual relations with the students in Rosh Pinnah. In 1936 renewed accusations were leveled against him. In 1937 the Supreme Disciplinary Council declared him unfit to serve in the army. Although the military tribunal decided that the accusations were unfounded, he was not restored to the army. Even Schwarz no longer supported him. He died in 1961, almost blind, a disappointed man. He was buried, in accordance with his will, next to his grandfather in Amarante, his birthplace.

[Cecil Roth / Yom Tov Assis (2nd ed.)]

°**BARRUEL, AUGUSTIN** (1741–1820), French Jesuit and anti-revolutionary polemicist. Barruel specialized in propagating fantastic stories about the part played by Freemasonry and secret societies in the Revolution. In 1807 Barruel alerted the French Government to an alleged world Jewish conspir-

acy. A mysterious Italian called Simonini (whose existence is doubtful) had delivered to Barruel the "plans of world Jewry" to become "masters of the world, turning the churches into as many synagogues, and reducing Christians to utter serfdom." Barruel's fantasies received the endorsement of Pope *Pius VII and were possibly the cause of *Napoleon's sudden decision to dissolve the French *Sanhedrin. In the longer perspective it was to have graver consequences, for the "Jewish plot" theme has served as a prototype for other deliberate fabrications, last but not least the Protocols of the *Elders of Zion.

BIBLIOGRAPHY: L. Poliakov, *Histoire de l'antisémitisme*, 3 (1968), index; DHGE, 6 (1932), 937; N. Cohn, *Warrant for Genocide; the Myth of the Jewish World Conspiracy and the Protocols of the Elders of Zion* (1967), 25–32, passim.

BARSHAI (Borisovich), RUDOLF (1924–), conductor, founder and leader of the Moscow Chamber Orchestra, viola soloist and orchestrator. Barshai was born in Stanitza Labin-skaja in Russia. His grandfather was a high-ranking Cossack officer of the Subbotnik (Seventh Day Adventist) sect who had married a Jewish woman. During World War II his father fled to Central Asia and finally to the Moscow area. There, at the age of 15, Barshai started to play the violin. He entered the Special School for Musicians and later the Moscow Conservatory, where he became a pupil of the famous violinist Lew Zeitlin. He played the viola in the orchestra of the Bolshoi Theater and was a co-founder of the Borodin Quartet and the founder and leader of the Moscow Chamber Orchestra, which toured the world during the 1960s and 1970s. His soloists were Maria Judina, Svjatoslav Richter, David *Oistrach, and other well-known Russian musicians as well as Yehudi *Menuhin. Barshai and his orchestra produced numerous highly acclaimed recordings.

In 1967 Barshai begun to conduct major orchestras in the U.S.S.R. and in 1969 he conducted the premiere of Shostakovich's 14th Symphony. He made numerous transcriptions for small orchestra, notably of Shostakovich's String Quartet No 8, Prokofiev's piano suite *Visions fugitives*, Bach's *Kunst der Fuge*, and Mahler's Symphony No 10. In 1976, Barshai decided to immigrate to Israel, where he worked with the Israel Chamber Orchestra. He then moved on to England, where he became chief conductor of the Bournemouth Symphony Orchestra. Subsequently he settled in Switzerland, touring the world and conducting well-known orchestras. He is the last of a generation of conductors with a singular and deep understanding of the great Viennese tradition of music.

[Bernd Feuchtnert]

BARSHAI, CHARLENE (1950–), U.S. lawyer and government trade representative. A native of Chicago, Barshefsky was born to Polish parents who did not speak English. She graduated from the University of Wisconsin, B.A. (1972) and the Catholic University, J.D. (1975). She was in private practice in the prestigious Washington firm of Steptoe and

Johnson from 1975 and 1993 and was then appointed by President Bill Clinton to serve as deputy trade representative under the president's key political ally, Mickey *Kantor. She was nominated to the office of trade representative when Kantor was named commerce secretary. Her nomination generated considerable controversy because as a private attorney Barshefsky had represented foreign governments in trade agreements. She was confirmed and was instrumental in negotiating agreements in China and Japan regarding piracy and movies. As the United States trade representative and a member of the president's cabinet, Ambassador Barshefsky was at center stage in global economic policymaking and international relations. As the administration's leader in the opening of foreign markets and the elimination of regulatory and investment barriers around the world, and as the architect of U.S. trade policy, she was a central figure for international business.

Barshefsky is best known for negotiating the historic market opening agreement with China on its entry into the World Trade Organization, which helped lead to the voluminous trade between the United States and China. She was an essential actor in the opening of foreign markets at the World Trade Organization and throughout the world, overseeing the negotiations of hundreds of complex trade and commercial agreements with virtually every major market, from Japan and the European Union to the smallest states of Latin America, Africa, and the Middle East. She negotiated agreements for the emerging information age, concluding global agreements covering the world's telecommunications markets, global financial services, information technology products, intellectual property rights, and cyberspace.

In addition to the China agreements, she was the architect of the negotiations to create a hemispheric free trade zone, the Free Trade Area of the Americas. She negotiated historic market opening agreements with Vietnam and Jordan that transcend international economic relations and are used as a basis for further regional integration. She also initiated free trade negotiations with Singapore and Chile, which further extended the broad trade agenda that she shaped.

After leaving the government, she became senior international partner at Wilmer, Cutler, Pickering Hale and Dorr, LLP and served on the corporate Board of Directors of the American Express Company; The Estee Lauder Companies Inc.; Intel, Idenix Pharmaceuticals, Inc., and Starwood Hotels & Resorts Worldwide, Inc.

[Michael Berenbaum (2nd ed.)]

BARSIMSON, JACOB, regarded as the earliest Jewish resident of New Amsterdam (later New York). Barsimson probably arrived there on July 8, 1654, aboard the ship *Peartree*, from Holland, thus preceding the 23 Jews who arrived in September of that year from Brazil. A man of small means, he was taxed below the majority of other New Amsterdam residents. In November 1655 Barsimson joined with Asser *Levy in petitioning for the right held by other inhabitants to stand

guard and thus avoid payment of a special tax. The Dutch West India Company overruled Governor Peter Stuyvesant, who had rejected the petition. Barsimson may have returned to Amsterdam in 1659.

[Leo Hershkowitz]

BART, LIONEL (1930–1999), playwright and composer. Born Lionel Begleiter in London, Bart first won success with the lyrics and music of *Fings Ain't Wot They Used t'Be* (1959), which had a two-year run. This was followed by other shows, including *Blitz* (1962) and *Maggie May* (1964). His greatest success, *Oliver!* (1960), was made into a motion picture in 1968. *Oliver!* became probably the most famous musical ever written by an English composer. Its depiction of Fagin is notable for its balance and humanity. Bart was unable to repeat his success in later works.

BARTH, JACOB (1851–1914), Semitic linguist. Barth was born in Flehingen, Baden. Among his teachers in Talmud was his future father-in-law, Azriel *Hildesheimer. He studied Semitic philology at the universities of Berlin, Leipzig (under H.L. Fleischer), and Strasbourg (under Th. Noeldeke). From 1874 until his death he taught Hebrew, biblical exegesis, and Jewish philosophy at the Orthodox Rabbinical Seminary founded by Hildesheimer at Berlin. In 1876 he was appointed lecturer in Semitic philology at the University of Berlin, and in 1880 associate professor. Being a Jew, he was not appointed full professor, but he received the title of Geheimer Regierungsrat. Barth was one of the most important Semitic linguists of his time, and at least two of his works are still standard reference books: *Die Nominalbildung in den semitischen Sprachen* (1894), and *Die Pronominalbildung in den semitischen Sprachen* (1918). Despite Barth's tendency to adopt odd etymologies and to excessive schematization, these works, as well as others, show his genius in discerning linguistic analogies. Barth was also one of the outstanding Arabic scholars of his time. He edited grammatical, poetical, and historical texts as well as the commentary of Maimonides to Mishnah *Makkot* (1880). His contributions to the study of Hebrew include both linguistics and lexicography (especially his *Etymologische Studien zum semitischen, insbesondere zum hebraeischen und aramaeischen Lexikon* (1902)). Being strictly Orthodox, he avoided higher criticism, but accepted the separate authorship of Isaiah 40ff, which, in his view, was supported by the Talmud. Similarly, he usually refrained from emendation of the Bible text, although he had a natural tendency to text corrections (as exhibited in his Arabic studies). His commentary on almost all the books of the Bible, which originated in his lectures at the Hildesheimer Seminary, has not been published.

[Joshua Blau]

His son, AHARON (1890–1957), was an Israeli banker and Zionist leader. Born in Berlin, as a young man he became an active leader in the Mizrahi movement in Germany, representing it at most of the Zionist Congresses after 1920. From 1921 to 1938 he served as attorney for the Zionist Congress court, and from 1946 as its chairman. He settled in Palestine in 1933 and was appointed director-general of the Anglo-Palestine Bank (later Bank Leumi le-Israel) in 1947, retaining this post until his death. Of his articles and brochures on various Zionist and religious topics, the most important is *Dorenu mul She'elot ha-Nezah* published in 1954 and republished in 1955 (Eng. tr. *The Modern Jew Faces Eternal Problems*, Jerusalem 1956). In it, he summarized his views on traditional and modern aspects of Judaism. He is noted for his modern religious interpretation of Orthodoxy, stressing the contemporary relevance of Orthodox Jewish practice. He wrote the brochure *Letter to an English Friend* (1948), in which he propounds the religious basis for the Jewish claim to Palestine, and *The Mitzvoth: Their Aim and Purpose* (1949).

ELIEZER (LAZAR) (1880–1949), Aharon's elder brother, was a leader and central figure in the religious Zionist movement in Germany. Born in Berlin, he became a leader of the Zionist Organization of Germany, participated in most Zionist Congresses after 1903, and served as a member of the Zionist General Council. During 1929–31 he represented Mizrahi on the Zionist Executive in London. He published numerous articles on Zionist topics.

°**BARTH, KARL** (1886–1968), Swiss Protestant theologian. From 1922, he served as professor of theology in various German universities. With the Nazi rise to power in Germany and the consequent split in German Protestantism, Barth helped to found the Confessing Church (Bekennende Kirche) which opposed Hitler and the National-Socialist ideology as incompatible with Christian commitment to the teaching and kingship of Jesus. In 1934, he drafted the theological declaration of Barmen, whereby the German Lutherans and Reformed united to define and defend their position against the totalitarian claims of the state. Expelled from Germany in 1935, he returned to his native Basle, where he was appointed professor of dogmatics.

His principal theological work, the monumental *Kirchliche Dogmatik*, which remained incomplete at his death, was published between 1932–53. While Barth took a courageous stand against antisemitism, seeing in hatred and persecution of the Jews an attack on the very foundations of the Christian message, his work evinces no understanding of actual Juda-

ism. Throughout Barth's writings Judaism appears as a theoretical construction, a kind of figment of theological imagination, whose purpose it is to serve as a foil to the message of the gospel.

While not hostile in its intention, Barth's representation of Judaism is a complete caricature and falsification of Jewish reality. According to Barth, Israel is God's Chosen People and in spite of its obstinacy in assimilating to other peoples, the Divine election remains valid. Since the crucifixion of Jesus, there simply cannot be any normal existence for the Jewish people, for the Jew represents man as such, sinner, called by God's grace and rejecting this grace. In this exemplary role of man, the Jew necessarily irritates the nations of the world by acting as a kind of mirror in which the nations see their sinful humanity reflected. The Nazis sought to destroy the Jews, the people of Jesus, in order to liberate themselves from the rule of God and to break, as it were, the mirror in which fallen man sees himself reflected. Beside his numerous theological, literary, and political writings, Barth also wrote some works on the church in the Third Reich, and on the existence of Christians in the countries under communist rule.

BARTHOLDY, JACOB (1779–1825), Prussian diplomat and art connoisseur. Born in Berlin into a prosperous Jewish family as Jacob Salomon, he was an uncle of the composer Felix Mendelssohn. He converted in 1805 and adopted the family name Bartholdy from a rented estate near Berlin. He was one of the group of gifted apostate Jews whose services were enlisted by von Hardenberg, the Prussian chancellor. Bartholdy studied law and philosophy, traveled extensively in Western Europe before becoming an officer in the Austrian army in the 1809 war against France. After entering the Prussian diplomatic service, he was appointed Prussian consul-general in Rome and took part in the conference of Aix-la-Chapelle (1818). In the same year he became Prussian chargé d'affaires at the court of Tuscany with the title of privy councillor of legation.

Bartholdy was an enthusiastic art patron and his home was decorated with frescoes by the Nazarenes, a group of contemporary German artists devoted to the revival of Christian art. After his death, the murals were bought by the Prussian government who also acquired his important collection of Etruscan vases, bronze, and ivory.

[Ernest Hamburger]

°**BARTOLOCCI, GIULIO** (1613–1687), Italian Christian Hebraist and bibliographer. Bartolucci was taught Hebrew by the convert Giovanni Battista Jonah Galileo (formerly Judah

Jonah of Safed), and in 1651 became professor of Hebrew language and rabbinic literature at the Collegium Neophytorum (for Jewish converts) in Rome; at the same time he served as *scriptor hebraicus* in the Vatican Library. He is remembered above all for his *Bibliotheca Magna Rabbinica... de scriptoribus et scriptis hebraicis, ordine alphabetico hebraice et latine digestis* (Heb. title *Kiryat Sefer*), a comprehensive bibliography of Jewish books (Rome, 4 vols., 1675–93). The last volume was edited by Bartolucci's student Carlo Giuseppe Imbonati, who added a fifth volume, *Bibliotheca Latina-Hebraica* (1694; all 5 vols. repr. 1969), containing a bibliography of Latin works by Christian authors on the Jews or on Judaism. Bartolucci's work is the first systematic, all-inclusive bibliography of Jewish literature. It served as the basis for Wolf's *Bibliotheca Hebraea* and for subsequent works in the field. Some of the works which Bartolucci regarded as most important he presents in full, in the Hebrew (or Aramaic) original and in Latin translation. Among these are the *Antiochus Scroll*, *Alphabet of Ben Sira*, and *Otiyyot de-Rabbi Akiva*. Occasionally, he gives biographies of important writers. His biographies of biblical commentators, such as Rashi, Ibn Ezra, David Kimḥi, Gersonides, and Abrabanel, were published also in A. Reland's *Analecta Rabbinica* (Utrecht, 1702). His work still retains some importance. Other works by Bartolucci remain in manuscript.

[Cecil Roth]

BARTOV, HANOCH (1926–), Israeli novelist. Bartov, who was born in Petaḥ Tikvah, served in the Jewish Brigade during World War II and during the War of Independence served in the Israel Army. Bartov was a member of kibbutz Ein ha-Ḥoresh, and a reporter for the daily *La-Merḥav*. He served as cultural attaché at the Israel Embassy in London, in 1966–68. A prolific writer, his writings include stories, novels, plays, and journalism, written in the more than five decades that have passed since the publication of his first novel, *Ha-Ḥeshbon ve-ha-Nefesh* ("The Reckoning and the Soul," 1953), in which he discussed the ideological disillusionment of Israeli youth when they returned to civilian life after the War of Independence. Problems of new immigrants are treated in the novel *Shesh Kenafayim le-Eḥad* (1954; *Everyone Had Six Wings*, 1974), which he later adapted for the stage. A visit to the U.S. is vividly recorded in the travel-book *Arba'ah Yisra'elim ve-Khol Amerikah* ("Four Israelis and All The U.S.A.," 1961). The subject of *Pizei Bagrut* (1965; *The Brigade*, 1967) is the Jewish Brigade during World War II and the conflict between Jewish morality and the wish to avenge the Holocaust. For this novel, one of the finest Hebrew examples of an Israeli *Bildungsroman*, Bartov was awarded the Shlonsky Prize. Another novel in this genre is Bartov's *Shel Mi Attah Yeled?* (1988; *Whose Little Boy are You?*), recollecting childhood experiences in one of Israel's oldest moshavot. Bartov's realistic style is always suffused with humor and a touch of irony. The complex, dynamic Israeli

identity is at the heart of all his works. Other works include: *Ha-Shuk ha-Katan* ("The Small Market," 1957); *Sà ha-Bayta, Yonatan* ("Go Home, Jonathan," 1962). *Be-Emza ha-Roman* ("In the Middle of It All," 1988), which won Bartov the Bialik Prize, tells the life story of Balfour Shub, a writer, as it is reconstructed by his son, who returns from the United States with his father's coffin and a literary inheritance consisting of 26 tapes. The gap between generations, the relations of fathers and sons, is a recurring motif in the prose of Bartov. The protagonist in *Zeh Ishl Medaber* ("Ishl Speaking," 1990), is yet another account of a life full of activity intertwined with political events in Israel. *Regel Aḥat Ba-Ḥuẓ* ("Halfway Out," 1994), describes the effects of World War II on life in British-ruled Israel, while the novella *Lev Shafukh* ("A Heart Poured Out," 2001) tells of an encounter between two men representing two worlds: Amos Gefen, a well-known Hebrew writer of Ashkenazi origin, and Sami Sasson, a house painter of Oriental origin, hired to whitewash the writer's apartment. The ups and downs of married life is one of the main issues in the novella, as in Bartov's 2004 novel *Mi-Tom ad Tom* ("From Innocence to Innocence").

In 1978 Bartov was awarded the Yizḥak Sadeh Prize for military literature for his *Dado*, a study of Lt.-General David *Elazar (Eng. trans. 1981). Other works include *Arba'ah Yisra'elim be-Ḥazar Saint James* (1969); *An Israeli at the Court of St. James* (1971) and the travel account "A Fair in Moscow" (1988).

[Gitta (Aszkenazy) Avinor / Anat Feinberg (2nd ed.)]

BARUCH (Heb. בָּרוּךְ; "blessed"), son of Neriah son of Mahseiah, scribe and trusted companion of the prophet *Jeremiah, who set down in writing all the latter's prophecies and may have composed the biographical narrative about Jeremiah (Jer. 36:4). Baruch's brother Seraiah was the quartermaster of Zedekiah (51:59), the last king of Judah. In the fourth year (or possibly the fifth) of the reign of *Jehoiakim, Baruch wrote down, at Jeremiah's dictation, all of the prophet's oracles and read them in the temple court before the entire community, which had assembled for a fast day proclaimed in Kislev of that year. Baruch then read them before the king's ministers

(36:4ff.). When the king was informed of these events, he ordered the scroll to be read before him. When he heard the prophet's message forecasting doom, Jehoiakim tore the scroll, cast it into the fire, and ordered Jeremiah and Baruch to be placed under arrest; they, however, succeeded in hiding from him. Then Jeremiah redictated the contents of the destroyed scroll and added to it (36:32). As a reward for Baruch's loyalty, Jeremiah declared that he would be saved (45:1ff.).

In the tenth year of Zedekiah's reign, when Jerusalem was under siege by the Babylonians, Jeremiah bought a field from Hanamel, his uncle's son. He entrusted the deeds of purchase to Baruch, asking him to place them in an earthenware vessel for safekeeping "that they may last for a long time" (32:1-16). The Babylonian commanders released Baruch together with Jeremiah and did not force him to go into exile to Babylon (40:1-7). Baruch apparently exerted a great influence over Jeremiah. When *Gedaliah son of Ahikam was killed and the remnant of the population that had escaped exile, fearing the vengeance of Nebuchadnezzar, asked Jeremiah whether they should stay in the country or go down to Egypt, he advised them to remain. But they suspected him of acting under Baruch's instigation, thinking that Baruch, out of hatred for them, planned to place them at the mercy of the Babylonian king. Baruch was then taken along with Jeremiah and the remnant of the population to Egypt.

In the Aggadah

Baruch is held to be a priest as well as a prophet and one of the descendants of Rahab (Meg. 14b; SOR, 20). He is identified with Ebed-Melech the Ethiopian, who saved Jeremiah from the dungeon (Sif. Num., on 12:1). Five years after the destruction of the Temple, Baruch (with Jeremiah) was taken from Egypt to Babylon, where he died (Meg. 16b; SOR 26:1; cf. Jos. Ant., 10:181-2). He is also said to have prophesied there in the second year of the reign of Darius, but was unable to return to Judah because of his advanced age. According to this tradition, Ezra was his pupil (Song. R. 5:5; Meg. 16b).

In the Middle Ages the Iraqi Jews possessed several legends about Baruch's grave, which was said to be near that of Ezekiel in Mushid A'li. A certain Arab ruler in Baghdad – at the time of the exilarch Solomon – wished to see the graves of Ezekiel and Baruch. When the grave was opened, Baruch's body was found in a marble coffin, looking as if alive. It was decided to transport him some distance from Ezekiel's grave, but, after a mile-long journey, the cart stopped and would not move, and he was buried at that spot (*Travels of R. Petachia of Ratisbonne...*, ed. and tr. by A. Benisch (1856), 21, 23, 49, 51). Jewish tradition extolled Baruch's piety and several apocalypses were attributed to him as well as an apocryphal letter.

Baruch came to have considerable importance in the apocryphal literature where a number of books were attributed to him. Moreover, there are apparently fragments of Baruch and Jeremiatic apocryphal literature among the Dead Sea Scrolls. According to the apocryphal books he received many

visions and revelations of an apocalyptic nature. In 11 Baruch his assumption is foretold (11 Bar. 25.1, 76:1).

[Yehoshua M. Grintz]

BARUCH, name of several kabbalists.

BARUCH SHELI'AH ZIBBUR TOGARMİ. Baruch Sheli'ah Zibbur Togarmi, as is suggested by his cognomen Togarmi, was a cantor of eastern origin. He wrote a treatise, extant in several manuscripts (Paris, Oxford, New York), called *Maftēhot ha-Kabbalah* ("The Keys to Kabbalah"), which contains a short, factually complete commentary on the Sefer *Yezirah, identical with the one described by Abraham *Abulafia in his *Ozar Eden Ganuz* as being by his master, Baruch (no surname). In the early 14th century, *Isaac b. Samuel of Acre quotes a Baruch Togarmi in *Me'irat Einayim* in such a way as to suggest a scholar who lived at least one generation earlier. He says, "I saw written in the name of Baruch Togarmi" and ends with the eulogy for the dead. The three quotations display the same characteristic of short allusions to kabbalistic secrets through wordplay as the above-mentioned treatise, *Maftēhot*. This is significant for the early history of the Abulafian current in the Kabbalah. The author already knows a distinct group of such kabbalists who are occupied with the (mystical) knowledge of the name of God. From his statements, it is to be understood that he belonged to a circle whose members believed themselves able to discover "by the three ways of the Kabbalah," i.e., *gematria* ("numerical value of words"), *notarikon* ("interpretation of each letter in a word as abbreviation of other words"), and *temurah* ("interchange of letters according to certain systematic rules") particularly profound mysteries of the mystic cosmology and theology. However, according to his testimony, he was not allowed either to divulge in public or even merely to set down in writing most of it. The treatise is full of obscure wordplay and peculiar *gematriot*. For example, the word "body" here means the evil principle, through the equation גוף רע (*guf ra*, "evil body" – 359) equals שטן (*satan* – 359). The work originates clearly from the same circle as the book *Sod ha-Levanah* (ed. by J. Klausner, in *Madda'ei ha-Yahadut*, 2 (1927), 240-1), which has survived in the name of Jacob Cohen (c. 1260-70, that is at the time of R. Baruch). According to this, Baruch would have lived in Spain. Thus, it is a plausible assumption that it was through him that Abulafia, during his stay in Barcelona in 1270-73, was introduced to the Kabbalah of this circle.

BARUCH THE KABBALIST. Baruch the Kabbalist was author of the book *Maftē'ah ha-Kabbalah* ("Key to Kabbalah") which was in Carmoly's possession (Cod. 249 of the Kirchheim Catalogue of Carmoly's Mss. of 1876). This book has no connection with the work of the above-mentioned Baruch Sheli'ah-Zibbur Togarmi. It belongs to an entirely different literary environment and it dates from the 14th century. This author

already quotes the *Zohar and the *tikkunim*, and is familiar with the homily on Jeremiah 9:22 from the end of the 13th century and possibly later (preserved in the Berlin Hebr. Ms. 193, fol. 79–98 and dated by Steinschneider not before 1350; cf. also HB, 18 (1877), 20). He also copied several passages from Shem Tov *Ibn Gaon's work *Baddei ha-Aron*, which was completed in 1325. That is the origin of all the passages which are common to Baruch the Kabbalist's work, and that of Shem Tov's *Sefer ha-Emunot*. Since Baruch undoubtedly knew Shem Tov ibn Gaon's works, there is nothing to uphold Carmoly's assumption that Baruch's book was the one used in the *Emunot*. *Maft'e'ah ha-Kabbalah* was not a comprehensive work (Carmoly's manuscript, which is incomplete, contains only 28 folios) and did not add anything novel to the doctrines of Kabbalah, only excerpts from other sources in defense of the Kabbalistic tradition. Moses Botarel relied apparently on this book when he quoted in length from a spurious work *Hoshen ha-Mishpat* in his *Yezirah* commentary (to ch. 4, mishnah 4). It is possible, however, that Botarel had in mind Baruch Togarmi as the author of a *Yezirah* commentary. Botarel also named Baruch among the authorities who dealt with the technique of *She'elat Halom* ("Dream Queries") and, as a matter of fact, Baruch's exposition is still extant in manuscripts (Gaster 603, fol. 9 and in other manuscripts). Apart from this, an older kabbalist named Baruch, who could not have lived after 1400 since he is already mentioned in manuscripts from that period, is mentioned occasionally in manuscripts dealing with practical Kabbalah. In the old Paris manuscript no. 602, he is described as the "father-in-law of the kabbalist Menahem," who is himself unknown. In the Gaster manuscript no. 720, the theurgic use of the so-called *shem ha-kanaf*, i.e., of the mystic "name" *Zemarkad*, was transmitted "from the tradition of Baruch." In a work of similar character such as his *Yezirah* commentary (which is partly preserved in a Jerusalem manuscript), Botarel attributes a commentary on the *Hagigah* talmudic tract, particularly its second chapter, to a kabbalist called Baruch of Narbonne. It is to be assumed that he means by this the same person, who therefore belongs to the second half of the 14th century. S. Sachs, who mistakes this Baruch for the one mentioned above, ascribes *Ma'amar ha-Sekhel* (Cremona, 1557), which gives the 613 commandments a kabbalistic explanation, to him.

BARUCH ASHKENAZI. Baruch Ashkenazi who is called by Shem Tov *Attia, in the introduction to his commentary on the Psalms, an "old kabbalist," is, as clearly shown by his surname, a third person. There are no further details about him.

BIBLIOGRAPHY: Scholem, *Mysticism*, 127.

[Gershom Scholem]

BARUCH, prominent U.S. family.

SIMON (1840–1921) emigrated from his native Posen, Prussia, to America in 1855. He settled in South Carolina, where his first employers, impressed with his talents, assisted him in his studies at the medical colleges of South Carolina and Virginia.

Baruch received his degree in 1862 and became a surgeon in Lee's Confederate Army, serving at the front for three years. Captured and interned at Fort McHenry, he wrote a book on military surgery, *Two Penetrating Wounds of the Chest*, which remained a standard work through World War I. In 1864 he was sent to Thomasville, North Carolina, to prepare hospital facilities for Confederate troops pursuing Sherman. After the war he lived in South Carolina, where he was elected president of the State Medical Association (1874) and chairman of the State Health Board (1880). In 1881 he moved to New York to escape the turbulence of Reconstruction, occupying the chair of hydrotherapy at Columbia University's College of Physicians and Surgeons. Credited with being the first doctor to successfully diagnose and remove a ruptured appendix, he also contributed to the treatment of malaria, childhood diseases, and typhoid fever. He edited the *Journal of Balneology*, the *Dietetic and Hygienic Gazette*, and *Gaillard's Medical Journal*.

Simon's wife, the former ISOBEL WOLFE of Winnsboro, South Carolina, was a descendant of Isaac Rodriguez Marques, an early colonial settler. The couple had four sons, Hartwig, Bernard Mannes, Herman Benjamin, and Sailing Wolfe (1874–1962). **HARTWIG** (1868–1953), the eldest, became a Broadway actor. **HERMAN** (1872–1953) received a medical degree from the College of Physicians and Surgeons in 1895. He practiced medicine until 1903, when he joined his brother Bernard's Wall Street firm and became a member of the New York Stock Exchange. In 1918 Herman became a lifetime partner in H. Hentz and Company. He entered public service in 1943 when he participated in a Brazil conference sponsored by the board of Economic Warfare. After World War II Herman served as U.S. ambassador to Portugal (1945–47) and as ambassador to the Netherlands (1947–49).

BERNARD BARUCH (1870–1965), stock analyst, self-styled "speculator," and statesman, was born in Camden, South Carolina. He received a B.A. from the City College of New York, and in 1889 he joined the Wall Street firm of Arthur A. Housman. Bernard became a partner in 1896, and a member of the New York Stock Exchange. By 1902, by means of his financial wizardry and careful market research into raw materials such as gold, copper, sulfur, and rubber, he had amassed a fortune of over three million dollars.

Bernard first entered public life in 1916. Then, as a result of his keen knowledge of the raw materials market, President Wilson appointed him to the advisory commission of the Council of National Defense and made him chairman of the Commission on Raw Materials, Minerals, and Metals. During World War I he served as chairman of the War Industries Board with power to virtually mobilize the American wartime economy. At the war's end he served on the Supreme Economic Council at the Conference of Versailles, where he was President Wilson's personal economic adviser, and from that time on his advisory services were sought by every president of the United States. During World War II President Franklin Roosevelt named him chairman of a committee to report on

the rubber shortage and to plan a solution. In 1943 he became adviser to War Mobilization Director James Byrnes, and in 1946 he was named the U.S. representative to the United Nations Atomic Energy Commission. In 1939 Bernard advocated a "United States of Africa" in Uganda, as a refuge for Jews and all victims of persecution. The founding of Israel he saw as only a part-way solution. No Zionist, he opposed the establishment of any state on the basis of religion, and looked upon himself always as first an American and then a Jew. Bernard was the formal author of the first official U.S. policy on the control of atomic energy, which he proposed before the United Nations on June 14, 1946. His plan called for the creation of an International Atomic Development Authority, empowered to universally control all dangerous uses of atomic energy and to inspect all atomic installations. It did not prohibit atomic weapons outright, which the Russians demanded, although they rejected inspection. It was vetoed by the U.S.S.R. in 1948 and it was never adopted. Bernard wrote *American Industry in the War* (1941), *My Own Story* (1957), and a sequel, *Public Years* (1960).

[Margaret L. Coit]

BARUCH, ADAM (1945–), Israeli columnist, writer, and editor. Born Baruch Rosenblum in Jerusalem to a rabbinical family of the old Yishuv, Baruch was brought up in Ramat Gan and educated at Midrashiyat Noam Yeshivah High School. He studied law at the Hebrew University of Jerusalem and later traveled extensively in the U.S. He began his journalistic career in the art section of **Haaretz* and in 1971 began writing a personal column in **Yedioth Ahronoth*. He edited *Mussag*, a periodical dealing with art and culture (1974–75) and the monthly magazine *Monitin* (1978–82). During the 1980s and early 1990s Baruch served as a senior editor at *Yedioth Ahronoth* and then at **Maariv* and was the editor of the business daily **Globes* (1992–96). From 1997 he wrote a weekly column in *Maariv* dealing with a wide range of issues but most notably with modern interpretations of rabbinical law. The column had a wide following in Israel and won him the Avi Hai Prize and the Yeshayahu Leibowitz Prize. The column's popularity also built his image as a spiritual mentor to many Israelis, and he became known as the *admor* (hasidic leader) of the *hilonim* (secular Israelis).

In addition to journalism, Baruch was active in Israeli art and photography. He was the curator of the Israeli exhibition at the international biennale for art in Venice (1988, 1990) and served as president of the Camera Obscura art school in Tel Aviv (1996–2002). Among his books are "Lustig" (1984), a political novel; an appreciation of the sculptor Yehiel Shemi

(1988); "He Was a Hero" (1998), a collection of short stories; a series of three books on contemporary Judaism and Jewish law; and "How Are Things at Home" (2004) on Israeli society.

[Anshel Pfeffer (2nd ed.)]

BARUCH, APOCALYPSE OF (Syriac) (abbr. 11 Bar.), an apocalyptic work ascribed to Jeremiah's scribe Baruch and purportedly containing the visions of Baruch on the eve of and subsequent to the destruction of Jerusalem. The work has been preserved partly in Greek and all of it in Syriac.

Contents

Chapters 1–4: In the 25th year of Jeconiah, king of Judah, Baruch is commanded to leave Jerusalem as its hour of destruction has come, and as long as he and his righteous companions are in the city, God is unable to destroy it. Baruch is informed in a vision that the destruction will be temporary, affecting only the earthly Jerusalem, the reflection of the heavenly and eternal Jerusalem. Chapters 5–8: The following day Baruch sees four angels with torches setting fire to the city at its four corners, while a fifth angel descends and stores away the sacred vessels of the Temple until the end of days. Chapters 9–12: After seven days Baruch is commanded to beg Jeremiah to accompany the exiles to Babylonia, but he himself is to remain with the ruined Temple. Baruch laments that Zion is destroyed whereas Babylonia is preserved. Chapters 13–20: Seven days later a mysterious voice informs Baruch that he will survive until the end of days. Chapters 21–30: After Baruch has fasted for seven days, the voice answers his question: "When will the messianic age come?" He is told that it will come in due time, but not before all the souls destined to be born will have been created. Chapters 31–34: Baruch prophesies to the people that the Temple will be rebuilt, destroyed again, and once more rebuilt for all eternity. Chapters 35–41: While Baruch sits on the ruins of the Temple, a vision is revealed to him. He sees a forest planted in a valley and surrounded by mountains. Opposite the forest is a vine, below which flows a spring. Rising to a mighty stream, the spring overturns the forest, leaving only a cedar standing, but it, too, is soon swept away by the waters of the spring. The interpretation of the vision is: The mountains and the forest are four future kingdoms, the forest being the fourth one; the spring represents the messianic age; the vine is the Messiah; and the cedar is the last ruler of the wicked kingdom (Rome). Chapters 42–52: Baruch goes to Hebron and after he fasts there for seven days, he is informed by the voice that the righteous will be resurrected at the end of days and exalted above the angels. Chapters 53–74: In a final vision, which the angel Ramiel explains to him, Baruch sees a cloud rising from the sea and shedding 12 times alternately dark and bright waters. Lightning, flashing above the black cloud, restores the places destroyed by the dark waters. Twelve rivers arise, but submit to the lightning. The interpretation of the vision is as follows: The six dark waters refer to the sins of man (those of Adam, the Egyptians, the Canaanites, Jeroboam, Manasseh,

and the Babylonians), while the six bright waters represent the elect of the nation (Abraham and his progeny; Moses, Aaron, Joshua, and Caleb; David and Solomon; Hezekiah; Josiah; the restoration of Jerusalem in the Second Temple era). The last dark waters refer to the interval between the Second Temple and the advent of the Messiah, a period of causeless hatred and social revolutions, the final flash of lightning being the messianic kingdom. Chapters 75–87: Baruch thanks God for the revelations he has received and writes two letters, one to the ten tribes and the other to the two and a half tribes. Only the contents of the former are given. In this letter, carried by an eagle to the captives in Babylonia, Baruch promises a speedy redemption, if they make full repentance.

The Apocalypse of Baruch and Talmudic Literature

There are many parallels between the Apocalypse of Baruch and *aggadot* in the Talmud and Midrash. According to the *aggadah* (PR 26:131) God likewise commands Jeremiah to leave Jerusalem on the eve of its destruction (II Bar. 2:1); angels set fire to the city (*ibid.*, chs. 6–8); the priests hand over the keys of the Temple to Heaven (Ta'an. 29a; Lev. R. 19:6; PR *ibid.*; ARN¹ 4, 12; II Bar. 10:18); Baruch enters Paradise alive (II Bar. 13:3–4; cf. Sif. Num. 99). There are several other features common to the Apocalypse of Baruch and the *aggadah*, such as that Manasseh made an idol with five faces (II Bar. 64:3; Sanh. 103b; Deut. R. 2:13 (20)); that he was burnt to death by the Assyrians (II Bar. 64:7; PdRK 162); that some sacred articles of the Temple (missing subsequently in the Second Temple) were swallowed up by the earth (II Bar. 6:7–8; Yoma 21b; Num. R. 15:10); that the patriarchs knew the Torah (Yoma 28b); and that Abraham, when eating secular meals, observed the rules of levitical cleanness required for sacred food (BM 87a).

There are further parallels between the Apocalypse of Baruch and the *aggadah*: The Heavenly Jerusalem (the counterpart of the earthly Temple), revealed to Adam (II Bar. 4:3; Sif. Deut. 37) and to Abraham in “the covenant between the pieces” (Gen. R. 44:21; 56:10; II Bar. 4:4); the souls in the “treasury” (II Bar. 30:2; Yev. 62a; Sif. Num. 139; ARN ch. 12; Shab. 152b); and the abundance and fertility that would be in time to come (Ket. 100a–b). The language of many ancient prayers is very similar to that of Baruch (cf. 11:4 “those that sleep in the dust”; 54:13 – which resembles the language in the **Nishmat* prayer).

In form and purpose the Apocalypse of Baruch is close to IV *Ezra, but it is impossible to determine which was composed first. In any event the Apocalypse of Baruch was written shortly after the destruction of the Second Temple (see II Bar. 20:2–4) and before the Bar Kokhba revolt. The Syriac version, which is derived from the Greek translation, was published in 1861 in Latin by A.M. Ceriani (*Monumenta sacra et profana*, t. 1², I–IV, 73–98), as well as in facsimile (1876–83). The work was undoubtedly written originally in Hebrew (see II Bar. 21:14; see Greek Apocalypse of *Baruch; Rest of the Words of *Baruch).

[Yehoshua M. Grintz]

BARUCH, BOOK OF (abbr. I Bar.), an apocryphal book which together with the Epistle of *Jeremiah is associated in the Septuagint with the writings attributed to the prophet Jeremiah and is regarded as canonical in both the Eastern and Latin churches. It purports to be a letter sent by *Baruch, Jeremiah's amanuensis, from Babylonia to Palestine after the destruction of the First Temple (1:1–4). It contains five chapters which fall into two or three sections. The first (1:1–3:8) opens with Baruch's reading of the book to the people assembled in Babylonia on the banks of the river Soud (LXX Σοῦδ, Syriac *šwr*; cf. 4Qp Jer *šwr*) and the assembled multitude's repentance and mourning (1:1–14). This is followed by a penitential prayer which comprises the remainder of the prose section. The first part of this prayer strongly resembles the prayer in Daniel 9:4–19 and a comparison leads to the conclusion that the prayer in Baruch is based on that in Daniel. The continuation of the prayer (2:20–3:8) is composed of a mosaic of biblical verses and some original sections. Prayers of repentance associated with public fasts and lamentation are mentioned in the literature of the period (cf. I Macc. 3:46–54; Judith 4:8ff.; and Ta'an 2:1). In form, the prayers in Baruch and Daniel show a strong resemblance to the liturgical texts from Qumran called *Divrei ha-Me'orot* (Baillet, in RB, 58 (1961), 195–250). The second section (3:9–4:4) is sapiential in character. It is addressed to Israel (3:9) and in part reproaches Israel for abandoning wisdom and in part praises wisdom. This poem contrasts the true wisdom known to Israel with that of the peoples of the East, famed for their wisdom. The passage, in common with Ben Sira and later wisdom writing, identifies true wisdom with that revealed to Israel, i.e., with the Torah. The final section of the book is composed of two poems of lamentation and comfort. The first (4:9–29) is a message of solace addressed to Israel by a personified Jerusalem, seen as a mother bewailing her children (4:10, 12, etc.). In 4:30 the speaker changes and Jerusalem is herself comforted with the message of the eventual redemption of Israel. The book is extant in Greek, Syriac, Syro-Hexaplar, three Old Latin versions, as well as Armenian, Arabic, Ethiopic, and Coptic. It has been suggested that the translation of the first section into Greek was the work of the translator of the second part of Septuagint Jeremiah (Thackeray, in: JTS, 4 (1903), 261–6). The question of the original language is intimately related to that of the literary unity of the work. A number of scholars have proposed that the book is a compilation of two or three original documents: the prayers of confession, the wisdom poem, and the laments. In general,

all agree that the first section (1:1–3:8) was written in Hebrew, and most scholars who accept the documentary theory consider the third section (4:9–5:9) to be originally Greek and dependent on Wisdom of Solomon II (Charles, *Apocrypha*, 1 (1913), 572–3). This stance, modified by a vigorous defense of the coherence of the present form of the book as the work of a single “author-redactor” has been supported by Wambacq (*Biblica*, 47 (1966), 574–6), while A. Kahana in his Hebrew edition maintained the theory of literary unity and original Hebrew (*Ha-Sefarim ha-Ḥizonim*, 1 (1936), 350ff.). The book has been dated variously between the late Hasmonean period (*ante quem non* – dependence on Daniel) and the destruction of the Second Temple (the historical framework of the book). The existence of further Baruch-Jeremiah apocrypha at Qumran weakens this latter argument considerably.

[Michael E. Stone]

BARUCH, GREEK APOCALYPSE OF (abbr. III Bar.), an apocalypse describing the journey of *Baruch through the heavens. Baruch, Jeremiah's scribe, weeps over the destruction of Jerusalem and questions God's righteousness. He is granted this heavenly journey in order to subdue his anger and console him in his grief. In the introduction, the angel of the Lord offers to show the mourning Baruch the secrets of God. He takes him to the First Heaven where they see men in monstrous form who are identified as the people who built the Tower of Babel. The angel also explains certain measurements of the First Heaven. In the Second Heaven they meet doglike human monsters who initiated the building of the tower. In the Third Heaven, the angel shows Baruch the dragon in Hades; he also tells him how it came about that God permitted Noah to plant the cursed vine which had been the cause of Adam and Eve's sin (the vine being identified with the forbidden fruit of the Garden of Eden – cf. Ber. 40a; Gen. R. 19:5). God promises him to change the curse into a blessing; the angel, however, warns against overindulgence in wine, for the most awful sins result from it. In this heaven Baruch also observes the coming and going of the sun and the moon. The sun's chariot is driven by four angels; other angels are busy purifying the sun's crown, defiled by men's daily sins. The phoenix absorbs with his wings most of the fiery rays of the sun, so as to prevent life on earth from burning up. Baruch is frightened by this spectacle and by the accompanying thunder. Next, the angel and Baruch pass the dwelling place of the righteous souls. In the Fifth Heaven, Baruch sees the archangel Michael weighing the good deeds of people, brought by the angel appointed over each individual, and sending them their reward. The angels who could not bring any good deeds from their protégés are ordered to attend upon the sinners until they repent, and if they do not, to inflict upon them all

the prophesied evils. Baruch then returns to the earth and is instructed to reveal to the sons of men those of God's secrets which he has seen and heard.

In the present form the Greek Apocalypse of Baruch is the work of a Christian writer: the Christological interpretation of the vine in chapter 4; the citation from the New Testament in chapter 15; and the technical terms deriving from a Christian background, namely ἐκκλησία (“church”) and πνευματικοὶ πατέρες (“spiritual fathers”) in chapter 13 are organic parts of the present story and cannot possibly be explained as mere interpolations. It is obvious however that this is not the original form of the book. The ultimate aim of the traveler through the heavens is to see the Glory of God, an aim usually attained in the Seventh Heaven (cf. Slavonic Enoch, ch. 9ff.; Test. Patr. Levi 3:8; Hag. 12b. etc.). Indeed, twice in the book (III Bar. 7:2; 11:2) the guiding angel assures Baruch, “Wait and you shall see the Glory of God,” a promise which is never fulfilled, for Baruch reaches no further than the Fifth Heaven. This reinforces the probability that the present work is a later version of an apocalypse of Baruch which in an earlier version, mentioned by *Origen (*De principiis* 2:3, 6), included the Seven Heavens.

The main issues dealt with in the Greek Apocalypse of Baruch are the heavenly mechanisms of, and causes behind, cosmological matters, and man's just reward for his deeds. The latter brings it into the realm of the testament- and Adam-literature; it is in the light of this genre and not in that of direct New Testament influence (as M.R. James avers) that the lists of sins (III Bar. 4:7; 8:5; 13:4) should be understood. The uranological traditions of the Greek Apocalypse of Baruch are closely related to the Enoch books (cf. Ethiopic Enoch chs. 72, 73; Slavonic Enoch chs. 3–9, esp. 6); some stories have parallels in aggadic literature (see Ginzberg, and Artom's notes in Kahana); the theme that the souls of the righteous dwell as birds around a lake (ch. 10) might well be of Egyptian origin (in the hieroglyphics the bird designates the heavenly soul).

The Apocalypse is written in a very simple Koine-Greek of late antiquity; there is no evidence that it was translated from a Semitic language. Two Slavonic versions (see Picard, pp. 70–71 and Turdeanu) mainly follow the Greek text.

[Jacques Yakov Guggenheim]

BARUCH, JACOB BEN MOSES ḤAYYIM (late 18th century), editor and author. Baruch lived in Leghorn. In 1875 he edited (Leghorn, Castello & Saadun) *Shivḥei Yerushalayim* (“The Praises of Jerusalem”); or *Shabbēhi Yerushalayim*, from

Psalms 147:12, "Praise, O Jerusalem"), an anthology of texts on the Land of Israel containing extracts from the following works: (1) *Tzahve-Adom* by Raphael Treves (Constantinople, 1740), on the holy places in the Land of Israel; (2) *Imrei Kadosh* from the *Sha'ar ha-Gilgulim* of Samuel ben Hayyim Vital, on the graves of sainted rabbis; (3) an Eretz Israel travelogue, whose author remained unknown until the scholarly edition of the manuscript by Izhak Ben-Zvi (1938), who identified him (after A. De Rossi's indication in *Meor Einayim*, ch. 46, ed. Cassel 449–50) with the rabbi Moses *Basola. Ben-Zvi criticized Baruch's publication, which omitted the beginning and the end of the manuscript, and was sometimes inaccurate; 4) *Masa'ot* of Benjamin of Tudela; (4) prayers of kabbalistic inspiration concerning the pilgrimage to the graves of the sainted rabbis, opposite the Temple Mount (also from Basola's travelogue), etc.; (5) *Kitzur Shenei Luhot ha-Berit* of Yehiel Epstein; (6) a list of currencies and weights. *Shivhei Yerushalayim* had considerable success and was published at least six times until the late 19th century.

In 1790 Baruch edited (and financed publication of) *Sha'ar ha-Heshek* ("The Portal of Delight," Livorno, Falorni), a large part of *Shir ha-Ma'ilot*, the introduction to Johanan *Alemanno's *Heshek Shelomo* on Song of Songs, an elaboration on King Solomon's wisdom. Baruch added an introduction in which he praised the religious value of science (quoting Y. Del Medigo's *Sefer Elim*) and many notes to the text (under the name *Ashiv*, "Amar Shafel Ya'akov Barukh," "said the humble Jacob Baruch"), in which he emphasizes the Jewish origin of all the sciences (esp. p. 12a). These notes refer mainly to kabbalistic literature (from **Sefer Yetzirah* to Hayyim Joseph David *Azulai) but also take into account the Italian, rationalist tradition (A. De Rossi, p. 55a; A. *Portaleone, p. 23b). *Sha'ar ha-Heshek* was published a second time in Halberstadt in 1862.

[Alessandro Guetta (2nd ed.)]

BARUCH, JOSEPH MARCOU (1872–1899), early Zionist propagandist in Western Europe and Mediterranean countries. Baruch, born in Constantinople, conducted an anti-assimilation campaign among Jewish students in Berne and was wounded in a duel with a non-Jewish student over an antisemitic remark. In 1893 Baruch went to Vienna and joined the student circle of the Zionist Kadimah association. In 1894, in Algeria, he edited the newspaper *Le Juge*, in which, despite the opposition of local Jewish leaders, he tried to awaken the national consciousness of Algerian Jewry. Registered with the police as an anarchist, Baruch was compelled to leave the country. In 1895, after returning to Vienna, he went to Bulgaria and established a Zionist group in Sofia. In Philippopolis (Plovdiv) he published a French-language newspaper with a Ladino supplement, called *Carmel*, and helped establish Zionist associations in various Bulgarian towns, until he was imprisoned. He

was released under the protection of Prince Konstantinov, and in 1896 left Bulgaria for Egypt where he continued his Zionist activity in Port Said, Alexandria, and Cairo. Some of his ideas later reached Herzl, particularly his criticism of "infiltration" (i.e., small-scale settlement in Palestine without prior political guarantees), and his advocacy of the foundation of an internationally recognized Jewish state. Toward this end he proposed war with Turkey, even joining the group called Garibaldi's army, which eventually fought for the liberation of Crete from Turkish rule. When Herzl appeared on the Zionist scene, Baruch was among his supporters. He attended the Second and Third Zionist Congresses (1898, 1899), and went on Zionist propaganda tours. Herzl's feelings for Baruch alternated between sympathy and dislike, as a result of the latter's eccentric personality, and Herzl was even afraid he might make an attempt on his life. Baruch's last days were spent in Italy, where he published his book *Le Juif à l'Île du Diable*, a defense of Alfred Dreyfus. He committed suicide in Florence.

[Getzel Kressel]

BARUCH, REST OF THE WORDS OF, apocryphal book, also called *Paralipomena Jeremiae* (Chronicles of Jeremiah) in its present form, a Christian reworking of a patently Jewish source. It is connected with the wider Baruch and Jeremiah literature represented also by the Syriac and Greek Apocalypses of *Baruch, the Greek Book of *Baruch, the Epistle of *Jeremiah, as well as fragments from Qumran Cave 4.

Its story opens with the destruction of the Temple, which is announced by God to Jeremiah. At God's orders, Jeremiah buries the Temple vessels beneath the Temple, where they are to remain until the coming of the Messiah. He also enquires what is to be done with the slave Abimelech (Ebedmelech of Jer. 38, and one Armenian recension) and is instructed to send him to Agrippa's vineyard where he would be hidden until the return from exile. Jeremiah was to go with the exiles of Babylon (cf. Jer. 43, but see SOR 26), while Baruch was to remain in Jerusalem.

The role played by Abimelech is unique to this book. He arrives in Agrippa's vineyard to pick some figs and, it being midday, lies down to rest and awakens only after 66 years. He examines his figs and finds them fresh. Going to Jerusalem, he does not recognize the city and, in his confusion, accosts an old man who tells him of what has happened while he slept. He is led to Baruch by an angel and they rejoice over the miracle of the figs in which they see a sign of redemption. Baruch prays for guidance in sending a letter to Jeremiah and the following morning a miraculous eagle appears and carries Baruch's letter and some of the figs to Jeremiah. To prove its genuineness, the eagle alights on the body of a dead man and he is restored to life. Jeremiah then reads the letter to the people in Babylon; they repent and weep, and the exiles set forth for

Jerusalem. Before they depart, however, Jeremiah examines them to ensure that there are no uncircumcised among them and none married to foreign women. Those who are thus disqualified desire to return to Babylon, but are not permitted to do so by the Babylonians, and so they build themselves the city of Samaria. The story concludes with the offering of sacrifices in Jerusalem and Jeremiah's death in the Temple. The sequel is Christian and, as generally agreed, not part of the original work. This story is extant in Greek, various Slavonic, Ethiopic, Coptic (P. Morgan Ms. 601), and three different Armenian recensions. The problem of textual history and the relationship between the various text forms have not been adequately studied. Klausner (EIV, s.v.) defends the primacy of the Ethiopic but, like most previous students of the work, he was not familiar with the Armenian recensions. The Jewish nature of the original is apparent from many distinctive features. Thus the approval of sacrifice, the rejection of foreign women, and the attitude to circumcision, to mention the most prominent, clearly disprove the theory of a Christian original.

It is probable that the book was composed after the destruction of the Second Temple, and some would even suggest that the hatred displayed toward the Samaritans indicates a date in the reign of the emperor Hadrian. It depends at many points on the Syriac Apocalypse of *Baruch. Recent studies have emphasized the prominence of Jewish religious ideas and terminology in this work.

[Michael E. Stone]

BARUCH BEN DAVID YAVAN (18th cent.), *Court Jew of the Polish king August III, financier of his minister Count Bruehl. He was a leader in the *Council of Four Lands and as **shtadlan* for the Council used his influence at court for furthering Jewish causes. Baruch received a talmudic education under R. Jacob Joshua *Falk and knew several languages. He was prominent in combating the remnants of *Shabbateanism and the *Frankists. In the controversy over Jonathan *Eybeschuetz' adherence to Shabbateanism he upheld Jacob *Emden (who was related to him by their children's marriage) in his condemnation of Eybeschuetz. Baruch did not hesitate to effect the removal of Ḥayyim b. Abraham, an adherent of Eybeschuetz, from his post of rabbi of Lublin and his imprisonment in 1751. Baruch took a leading role in Jewish diplomatic efforts to counter the Frankists. When the disputation between the talmudists and Frankists became in 1757 the occasion for an ecclesiastical order to burn the Talmud, Baruch, aided by the *shtadlan* Mordecai Merkil, sought the help of Count Bruehl. He obtained access to the papal nuncio

and succeeded in saving many talmudic works. Baruch also persuaded Count Bruehl to use his influence at the papal curia to thwart the *blood libel instigated by Frank. In 1764 he frustrated Frank's intrigues with Russia, using his connections with the Russian nobility to convince the synodal authorities of the Russian Orthodox Church that Frank's application for acceptance into their faith was insincere.

[Nathan Michael Gelber]

BARUCH BEN ISAAC OF ALEPPO (c. 1050–c. 1125), scholar. Baruch appears to have been born in Spain, where he studied together with his younger kinsman *Baruch b. Samuel of Aleppo. From there he went to Aleppo where he was the head of a large yeshivah. From 1085 his signature appears on various documents, among them a letter of recommendation on behalf of Obadiah the Proselyte of Normandy. He wrote a commentary on the order *Kodashim*, of the Babylonian Talmud, which was highly recommended by *Joseph Rosh ha-Seder, who considered it equal to the commentaries of *Hananel b. Ḥushi'el on the orders *Mo'ed*, *Nashim*, and *Nezikin* and of *Isaac b. Melchizedek on *Zera'im* and *Tohorot*. He also wrote commentaries on other tractates, including *Shabbat* (quoted by Isaiah di Trani in his commentary on this tractate) and *Bava Mezia* (see *Ginzei Kedem*, 5 (1934), 131–4). S. Assaf was of the opinion that the commentary on tractate *Zevaḥim* (Jerusalem, 1942), attributed to Hananel, was by Baruch, but this identification does not appear to be correct.

[Israel Moses Ta-Shma]

BARUCH BEN ISAAC OF REGENSBURG (second half of 12th century), talmudic scholar. He was a member of the *bet din* of Regensburg, together with *Isaac b. Jacob Ha-Lavan of Prague, Abraham ben Moses of Regensburg, and *Judah he-Ḥasid b. Samuel (*Sefer Ḥasidim*, ed. by J. Wistinetzki (1924²), 390). Baruch was one of the teachers of *Abraham b. Azriel, the author of *Arugat ha-Bosem*. There is record of a question addressed to Baruch and his two fellow judges by R. *Joel ben Isaac ha-Levi (*Sefer Ravyah*, no. 1031). Baruch engaged in disputations with his older contemporary *Eliezer b. Nathan of Mainz, who esteemed him highly, and with *Isaac b. Samuel ha-Zaken of Dampierre. Some scholars have incorrectly identified him with *Baruch b. Isaac of Worms, author of the *Sefer ha-Terumah*.

BIBLIOGRAPHY: H. Gross, in: MGWJ, 34 (1885), 558–60; idem, in: ZHB, 11 (1907), 179; J. Wellesz, in: MGWJ, 48 (1904), 442; V. Ap-towitzter *Mavo le-Sefer Ravyah* (1938), 174, 326–9; Urbach, *Tosafot*, 286ff., 299, 334; idem, *Arugat ha-Bosem* (1963), index; idem, in: *Tarbiz*, 10 (1938/39), 86ff.

[Moshe Nahum Zobel]

BARUCH BEN ISAAC OF WORMS (late 12th–early 13th century), German tosafist. Although Baruch lived in Worms, he probably came from France and is sometimes referred to as Ha-Zarefati (“the Frenchman”). Baruch was a pupil of *Isaac b. Samuel the Elder of Dampierre, and after his teacher’s death, spent a considerable amount of time in France with Judah of Paris. Baruch immigrated to Erez Israel (1237?). It seems certain that he is not to be identified with *Baruch b. Isaac of Regensburg.

He is renowned as the author of *Sefer ha-Terumah* (written shortly before 1202; first published Venice, 1523), which comprises a summary of the established *halakhot* on several subjects, including the laws pertaining to Erez Israel, combined and arranged according to the chapters of the relevant tractates of the Talmud. The whole work reflects the teachings of Isaac b. Samuel. In it Baruch mentions *Samuel b. Meir (Rashbam) and *Isaac b. Meir, as well as statements of Rabbi Jacob *Tam and his pupils; however, very few German scholars are referred to. By virtue of its wealth of material and its terse, easy style, well adapted to its purpose of leading, through discussion, to the practical *halakhah*, the book spread through France, Germany, Italy, and Spain, and was widely quoted by many later authorities among them, *Eliezer of Worms, *Isaac b. Moses Or Zarua, *Moses b. Jacob of Coucy, Zedekiah *Anav, *Aaron b. Jacob of Lunel, and *Naḥmanides. Entire halakhic passages from the work were inserted by copyists into the *Maḥzor Vitry. Numerous manuscripts of *Sefer ha-Terumah* and some manuscripts of an anonymous abridgment are extant. Baruch also wrote *tosafot* to several tractates of the Talmud, but only those on *Zevahim* have been preserved and they are printed in the standard editions of the Talmud. A. Epstein held that the anonymous commentary on *Tamid* attributed to Abraham b. David (Prague, 1725) should be ascribed to Baruch, but – despite a measure of similarity between the commentary and a number of quotations in Baruch’s name which are known – this is unlikely. E.E. Urbach has maintained that the commentary on the *Sifra* ascribed to Abraham b. David was written by Baruch, but this too is uncertain.

[Israel Moses Ta-Shma]

BARUCH BEN JEHIEL OF MEDZIBEZH (1757–1810), ḥasidic *zaddik*; grandson of *Israel b. Eliezer the Baal Shem Tov, the founder of modern *Ḥasidism. Baruch, who studied under Phinehas Shapira of Korets, officiated from 1780 as rabbi in Tulchin, but encountered opposition and returned to Medzibezh in 1788. He attributed great importance to his descent and regarded himself as the heir to the Ba'al Shem Tov’s leadership. He held that the *zaddik* could save and lead the whole world; the duty of the common man was only “to destroy the evil impulses and abandon his desires.” Regarding himself as the leader of Ḥasidism by hereditary right, he held “court” in Medzibezh in a highly autocratic and luxuri-

ous fashion, though preaching asceticism to others. He kept a “court jester,” Hershele Ostropoler. His behavior aroused opposition from other ḥasidic leaders. In 1808 he met Shneur Zalman of Lyady in an effort to settle their differences. Baruch attached mystical importance to the custom practiced by Ḥasidim of giving presents to the rabbis (*pidyonot*). He encouraged Ḥasidim to immigrate to Erez Israel. He took part in the assembly of ḥasidic rabbis at Berdichev (1802–03) that discussed the government’s prohibition of Jewish settlement in the villages among other matters. His writings include *Amarot Tehorot* (1865; first published in his brother’s (*Moses Ḥayyim Ephraim) *Degel Maḥaneh Ephraim*, Zhitomir, 1850) and *Buzina di-Nehora* (1880).

[Nachum Arieli]

BARUCH BEN SAMUEL (d. 1834), adventurer and physician. Baruch was born in Pinsk and emigrated to Safed in 1819. The reports of a messenger who traveled from Safed to Yemen and back in 1825 gave rise to wondrous tales about a Jew from the tribe of Dan whom he allegedly met in Yemen and of stories about the “Sons of Moses” and the Ten Tribes. The community of Safed decided to send a messenger to these remote Jews to come to the aid of their brethren in Palestine. They chose Baruch who, in their opinion, possessed the qualities necessary for such a bold undertaking. They gave him a letter addressed to the Ten Tribes and made him swear to devote himself wholly to this task.

Baruch started his journey in 1831. His travels took him to Damascus, Aleppo, Kurdistan, Mesopotamia, Baghdad, Basra, Bushire, Muscat, and Aden. Toward the end of 1833 Baruch reached Yemen. The rabbis of San’a received him cordially and one of the members of the community (*dayyan* Māri Yihye al-Abyat) accompanied him to Ḥaydān at the northern extremity of Yemen, where, according to the rumor, the tribe of Dan lived. Baruch and his companion made their way into the desert where they met a shepherd, who appeared to them like a Danite. They gave him the letter and he promised to deliver the answer to them in Ḥaydān. Then Baruch and his companion hurried back to San’a for the autumn Holidays. The Jews of Ḥaydān promised to forward the anticipated answer to San’a, but it never came.

When Baruch returned to San’a, he offered to cure the sickly imam of Yemen, al-Mahdi. He hoped thereby to enlist the imam’s aid in the completion of his mission. After his recovery, the imam appointed Baruch his court physician. Baruch began to behave haughtily toward the Muslims, and thus aroused their enmity and jealousy. In 1834 Ibrahim Pasha of Egypt attacked Yemen and captured Mocha. Baruch assured the imam that if he would give him an army, he would drive out the conqueror on condition that afterward he himself be appointed the ruler of that city. This proposal served Baruch’s

enemies as a pretext for charging him with spying for Egypt. The imam believed this false accusation and in February 1834, during his daily walk in the garden with Baruch, the imam shot his physician. The dying Baruch predicted that the Imam and his family would lose their kingdom. His prediction came true in less than a year.

[Yehuda Ratzaby]

BARUCH BEN SAMUEL OF ALEPPO (also called **Baruch of Greece**, or **the Sephardi**; 1070/80–1130/40), talmudic commentator. It is surmised that he was either from southern Italy or Spain. He immigrated to Erez Israel and then to Aleppo, from where he sent questions to Samuel b. Ali, head of the Baghdad yeshivah. His commentaries are frequently quoted by the scholars of Germany, Italy, Provence, and Spain, among them *Isaac b. Moses of Vienna, author of *Or Zaru'a* and *Isaiah b. Mali di Trani. He is mostly quoted by Zechariah *Aghmati in his commentary on *Bava Kamma*, *Bava Mezia* and *Bava Batra*. Baruch relied mainly on *Hananel's commentary and *Perushei Magenza* (Mainz) attributed to *Gershom b. Judah. He followed the method of giving a precis of the talmudic text and interweaving his own commentary. Like *Nissim b. Jacob and Hananel b. Hushiel he referred to the talmudic sources, *Sifra*, *Sifrei*, and *Tosefta*, and was meticulous with regard to variant readings. He also wrote *Hibbur Tohorot*, which is mentioned by Isaiah di Trani, and a book of halakhic decisions. Only his commentary to *Horayot* has survived and is printed in the Romm editions of the Talmud, although erroneously ascribed to Hananel.

BIBLIOGRAPHY: S. Assaf, in: *Tarbiz*, 1 no. 1 (1930), 126; Epstein, *ibid.*, 1 no. 4 (1930), 27–62; 16 (1944/45), 49–53.

[Josef Horowitz]

BARUCH BEN SAMUEL OF MAINZ (c. 1150–1221), scholar and *paytan*. Baruch was a pupil of Moses b. Solomon ha-Kohen, whom he succeeded as a member of the *bet din* of Mainz. There is no basis for Aptowitz's statement that a dispute for the position between him and his kinsman, *Eliezer b. Samuel of Metz, took place. Baruch also studied under *Judah b. Kalonymus b. Meir of Speyer, and possibly *Ephraim b. Isaac of Regensburg. He was in halakhic correspondence with many contemporary scholars, including *Judah he-Ḥasid.

Baruch is best known for his *Sefer ha-Hokhmah*, a comprehensive work (now lost) covering the subject matter of *Nashim* and *Nezikin*, as well as the laws of *Issur ve-Hetter*; it also included his responsa. The work was still extant in the 16th century when Solomon *Luria and Bezalel *Ashkenazi used it. It is extensively quoted by the *rishonim*, particularly by *Mordecai b. Hillel and by *Meir b. Baruch of Rothenburg, sometimes being referred to as "The Book of Baruch of Mainz." Baruch is not mentioned at all by name in *tosafot*, although some ascribe to him the authorship of the printed *tosafot* to

Sotah. Of Baruch's *piyyutim*, 33 of which have been preserved (published by Habermann – see bibl.), some deal with the persecutions in *Blois (1171), *Speyer and *Boppard (1196), and Wuerzburg (before 1221), and are a valuable historical source. One *piyyut* is devoted to the talmudic discussion "ilan de-Ulla" ("the tree of Ulla," BB 26b–27a), a rare phenomenon in *piyyut*. These *piyyutim*, some of which are rhymed, excel in their variety and their style – biblical language being interspersed with the language of rabbinical and early mystical literature. Baruch revised a number of his *piyyutim* in order to bring them up to date, as in the *seliḥot*, *Be-Terem Noledu Harim* and *Be-Terem Harve-Givah*. Highly popular among congregants, his *seliḥot* were affectionately termed "berukhah," "mevorekhet," and "mevorakh" ("blessed," a play on words from his name). His son, R. SAMUEL OF BAMBERG, the teacher of R. *Meir b. Baruch of Rothenburg, was also noted as an halakhic scholar and as a *paytan*.

[Israel Moses Ta-Shma]

BARUCH (BEN ABRAHAM) OF KOSOV (c. 1725/30–1795), kabbalist. He was a disciple of *Menahem Mendel of Vitebsk and also studied with *Menahem Mendel of Przemyslany for a short while. Baruch became *Maggid* in Kosov. In his sermons he tried to make the kabbalist doctrine, as taught mainly by Isaac *Luria and Ḥayyim *Vital, easily comprehensible by the use of explanatory metaphors. According to Baruch, Luria was the highest authority on Kabbalah. Therefore, he advised all who wished to study the *Zohar, first to read Luria and Vital. Baruch interpreted (as did Joseph *Ergas) Luria's doctrine of "zimzum" (i.e., God's self-willed withdrawal), as a metaphor and not as an actual fact. On this point he argued against the realistic interpretation of Immanuel Ḥai *Ricchi. Baruch taught that the true life of every material entity was conditioned by its spiritual aspect. He therefore contended that full surrender and complete attachment to God was possible because this was an intellectual discipline originating in a love which knows no limits. He maintained that it was possible to attain a concept of things, first through the senses, then on a higher level, through the imagination, and finally, at the highest stage, through wisdom. It was only through wisdom that one could perceive the spiritual quality inherent in every material being. Only wisdom had the capacity to feel the pain which the soul inevitably felt when man committed a sin. Baruch conceded that the questions of predestination and free will were so difficult as to be unanswerable. Nevertheless he believed in both, and counseled unconditional belief in them (*Ammud ha-Avodah*, 54–55, 107; *Yesod ha-Emmunah*, 76–99). Baruch was totally and aggressively against the followers of *Shabbetai Zevi and Jacob *Frank. In 1760 his antagonism to the latter apparently motivated him to begin writing the above

books with the aim of refuting the anthropomorphism applied by Frankists to the basic concepts of Kabbalah. From 1761 he had started to collect from learned authorities their written commentaries on the manuscripts of his books. However, it was only in 1854 that they were actually printed in Czernowitz: (1) *Yesod ha-Emunah*, on the Pentateuch and miscellanies; (2) *Ammud ha-Avodah*, on the basic questions of Kabbalah, including “a lengthy introduction to explain the essence of the spiritual entities.”

[Samuel Abba Horodezky]

BARUH, BORA (1901–1941), Yugoslav painter. After studying law, he devoted himself to painting, moving to Paris in 1938. On returning to Belgrade in 1941, he joined the partisan movement in Serbia but was captured and executed. He painted landscapes, portraits, and Spanish Civil War scenes, mainly in oils.

BARUK, HENRI (1897–1999), French psychiatrist. In 1931 he was appointed chief physician at the Charenton mental institution, and in 1946 became professor at the Sorbonne. His early scientific studies concentrated on psychiatric disorders caused by tumors on the brain. He succeeded in creating, by artificial means, aggression psychoses in animals. This led him to study the connections between psychiatric illness and defective moral awareness in human beings, and he subsequently displayed a tendency to extend psychiatry into the area of general anthropology. In 1957 he became chairman of the French Neurological Society. Baruk compared biblical medicine with that of Greece and wrote studies on religious belief and medical ethics. He opposed scientific experiments on the human body and all methods of psychiatric treatment which suppress or diminish the personality. Deeply linked to Jewish tradition and texts, Baruk was active in Jewish affairs in France, as chairman of the Society for the History of Hebrew Medicine in Paris and of the French Friends of the Hebrew University of Jerusalem. His works include *Hebraic Civilization and the Science of Man*, 1961 (originally a lecture in Edinburgh in 1960); *Le Test Tzedek, le jugement moral et la délinquance* (1950); *Psychiatrie morale, expérimentale, individuelle et sociale*; *Psychoses et neuroses* (1965); *La Psychanalyse devant la médecine et l'idolâtrie* (1978); *La Psychiatrie et la crise morale du monde d'aujourd'hui* (1983); and *La Bible hébraïque devant la crise morale du monde d'aujourd'hui* (1987). He also published his memoirs: *Des hommes comme nous, mémoires d'un neuropsychiatre* (1975); *Patients are People Like Us: The Experiences of Half a Century in Neuropsychiatry*, 1977).

[Joshua O. Leibowitz / Dror Franck Sullaper (2nd ed.)]

BARUKH (Heb. בָּרוּךְ), initial word of the **berakhah* pattern of prayer. *Barukh* is conventionally translated “blessed,” but the etymology is disputed. The root (בָּרַךְ) seems to have meant originally “bend (or fall) upon the knees (*berekh* = knee)” in

prayerful obeisance (Ps. 95:6; Isa. 45:23). Cassuto maintains, however, that it meant originally “bestow a gift” (Gen. 24:1, 35; 33:11, et al.). *Barukh* is a homonym expressing a reciprocal relationship: man can address God as *barukh* by expressing feelings of thanksgiving, reverence, love, and praise, while he is *barukh* by God who bestows His material and spiritual gifts. The person upon whom the divine blessing rests is called *berukh Adonai*, “blessed of the Lord” (Gen. 24:31, 26:29). *Barukh Adonai*, in the sense of man blessing God, occurs 24 times in the Bible.

The pattern *barukh Attah Adonai* (“blessed art Thou, Lord”) occurs only twice in biblical literature (Ps. 119:12; 1 Chron. 29:10). This second person form attained currency no earlier than about the fourth century B.C.E. There is, however, no substantive difference between the second and third person forms. As applied to God “blessed” is identical with “praised” and the formula of blessing viz. benediction is, in fact, one of praise.

The prototype of the classical *berakhah* is to be found in the biblical formula, *barukh Adonai... asher...* (e.g., Gen. 24:27; Ex. 18:10), in which he who has experienced the marvelous or miraculous expresses adoration and awe. This pattern persisted for centuries and was eventually adapted for liturgical use as the Jew’s response to “the miracles of every day.” But the insertion of the pronoun *Attah* (“Thou”) was slow in gaining exclusive acceptance. Some of the variant forms of the *berakhah* persisted until the third century C.E. when the standard pattern was fully established (Ber. 40b). In third-century Babylonia, Rav and Samuel were still debating whether *Attah* was required in the formula (TJ, Ber. 9:1, 12d). Rav’s pattern, *barukh Attah Adonai*, became the standard opening phrase; but the old biblical formula in which *barukh (Attah) Adonai* was followed by the characteristic phrase, *asher* (“who,” i.e., “performed some beneficent act”) remained in use. This juxtaposition of direct address to God and a sequel in the third person created a syntactical paradox which has exercised commentators and theologians down to the present. Many commentators explain the juxtaposition of second and third person homiletically as indicating both God’s nearness and transcendence. The second person address is referred to in traditional sources as *nigleh* (“revealed”) and the third person as *nistar* (“hidden”).

[Herman Kieval]

BARUKH SHE-AMAR (Heb. בָּרוּךְ שֶׁאָמַר; “Blessed be He who spoke”), benediction opening the section of **Shaḥarit* called “passages of song,” i.e., the morning psalms (*Pesukei de-Zimra* or *Zemiroṭ*). In the Ashkenazi rite the benediction is placed at the beginning of the whole section, while in the Sephardi and other rites some verses and psalms are recited before *Barukh*

she-Amar. In the original Sephardi prayer books (Leghorn, Amsterdam, and Vienna) there is a longer version, with additions for Sabbath. In the Eastern Sephardi rites – according to the Kabbalah – there is a shorter version of 87 words, which is similar to the Ashkenazi rite with slight variations. In its present form it is a combination of two separate prayers of which only the second part can be considered a benediction. The first part is a hymn praising God, the Creator and Redeemer. In spite of numerous variations and later accretions, the prayer may be of talmudic origin. It is first mentioned by Moses Gaon (c. 820) and is found in the prayer book of Amram Gaon (also ninth century), where the prayer is introduced as follows: “When Jews enter the synagogue to pray, the *hazzan* of the congregation rises and begins...” Nathan ha-Bavli reports a century later that at the ceremony of the installation of the exilarch *Barukh she-Amar* was sung antiphonally, and hence some scholars have suggested that the response *Barukh Hu* (“blessed be He”), was repeated as a refrain after every clause, and not only for the first one as in the present text. According to Saadiah’s *Siddur* it was recited only on Sabbaths. The style of the hymn is midrashic and most of the phrases used are found in various passages of Talmud and Midrash (see S. Baer, *Siddur* (1868), 58). Eleazar b. Judah of Worms of the 12th–13th centuries, quoting from the *Heikhalot* texts of the early mystics, refers to the esoteric significance of the 87 words contained in *Barukh she-Amar* (at least in the Ashkenazi rite (Rokeah 320)); the extant texts of the *Heikhalot* do not, however, have this passage. D. *Hoffmann has interpreted the first part of the prayer as an exposition of the various meanings of the Tetragrammaton. In Prague a *Barukh she-Amar* Society was active from the 16th century until World War II. The members rose early in order to be in the synagogue before the reciting of *Barukh she-Amar*.

BARUKH SHEM KEVOD MALKHUTO LE-OLAM VA-ED (Heb. בָּרוּךְ שֵׁם כְּבוֹד מַלְכוּתוֹ לְעוֹלָם וָעֶד; “Blessed be His name, whose glorious kingdom is forever and ever” (Singer, Prayer, and *Union Prayer Book*) or “Blessed be His glorious kingdom for ever and ever” (*Rabbinical Assembly Prayer-book*)), a doxology of ancient origin, based upon Nehemiah 9:5, “Stand up and bless the Lord your God from everlasting to everlasting; and let them say: Blessed be Thy glorious Name, that is exalted above all blessing and praise.” Talmudic sources state that in the Temple it was not customary to respond “Amen” after blessings pronounced by the priests (Tosef., Ber. 7:22), but rather the aforesaid *Barukh Shem Kevod Malkhuto le-Olam va-Ed*. This was also the custom after the high priest pronounced the Holy Name (the Tetragrammaton) in his public confessions on the Day of Atonement (Yoma 35b, 39a, 66a; Ta’an. 16b; Tosef., Ta’an. 1:12; Sif. Deut. 306; see **Avodah*). This formula is pronounced in the daily prayers after the first verse of the *Shema* before continuing with the verses of Deu-

teronomy 6:4–9. In the Orthodox ritual, however, this formula is pronounced in a whisper, either because it is not biblical as is the rest of the *Shema* (Pes. 56a; Gen. R. 98:3) or because it is recited by the angels in heaven, corresponding to the people of Israel’s reciting of the *Shema* (Deut. R. 2:36). It has also been suggested that precisely because the phrase was recited aloud in the Temple (Ta’an. 16b), it should be whispered after its destruction. For the second reason, this doxology is pronounced aloud in Orthodox synagogues only on the Day of Atonement, since on this day “Israel is as pure as the angels” (Deut. R. 2:36). Another explanation for uttering this formula in a whisper is that martyrs used to pronounce the *Shema* as they met their death while their relatives, out of fear of the oppressors, responded quietly. But on the Day of Atonement, when all are ready for martyrdom, it is pronounced aloud (see M.A. Mirkin’s commentary to Deut. R. 98:3). In the Ashkenazi rite, at the close of the *Ne’ilah* service on the Day of Atonement, this formula is pronounced aloud three times as a solemn affirmation of the Jewish faith and in anticipation of the day when this belief will be realized by all mankind.

BIBLIOGRAPHY: J. Heinemann, *Ha-Tefillah bi-Tekufat ha-Tanna’im ve-ha-Amora’im* (1966²), 79, 84; E. Munk, *World of Prayer* (1961), 114; Werner, in: HUCA, 19 (1945–46), 282–9.

BARUKH SHE-PETARANI (Heb. בָּרוּךְ שֵׁפֶטְרָנִי; “Blessed be He who has relieved me,” i.e., from the responsibility for my son’s conduct), benediction pronounced by the father at his son’s **bar mitzvah* (see: Isserles, to Sh. Ar., OH 225:1; Maim. Yad, Teshuvah, 6:1). This benediction is based upon the Midrash: R. Eleazar said, “A man is bound to occupy himself with his son until the age of 13, thereafter he should say: Blessed be He who has released me from the responsibility (literally ‘punishment’) for my son’s conduct” (Gen. R. 63:10), because from now on the boy assumed responsibility for his actions as a member of the community. At *bar mitzvah* ceremonies in Reform congregations, the *She-Heḥeyanu* blessing has been substituted for *Barukh she-Petarani* since they objected to the idea that parents are accountable for the religious transgressions of their offspring. In Yiddish *barukh she-petarani* became a familiar expression after getting rid of any annoying thing or person.

BAR-YEHUDAH (Idelson), ISRAEL (1895–1965), Israeli labor leader, born in Konotop, Ukraine. He studied mining engineering and joined the *Ze’irei Zion* movement. After he became secretary of its left wing (*Ziyyonim Sozialistim*) in 1921, he was arrested by the Soviet authorities and exiled to the Arctic region. Released in 1923, Bar-Yehudah left for Berlin. There he served, with Berl *Locker, as secretary of the World Union of *Po’alei Zion. In 1926, upon settling in Palestine, he became secretary of the Petah Tikvah Workers’ Council and was imprisoned for leading a picket group that demanded the introduction of Jewish labor in the local citrus groves. After joining kibbutz *Yagur in 1930, he became a leading member of Ha-Kibbutz ha-Me’uḥad, mainly as coordinator of its

defense committee. As a member of the *Mapai faction, Bar-Yehudah was active in the central institutions of the *Histadrut, the *yishuv*, and the Zionist organizations. When Mapai split, in 1944, he joined *Aḥdut ha-Avodah and became one of its leaders and later a member of its Knesset faction. During his term as minister of interior (1955–59) the question of “Who is a Jew” according to Israel law became a public issue in connection with identity-card registration. From 1962 until his death Bar-Yehudah served as minister of transport. During 1960–62 he was his party’s secretary-general.

[Abraham Aharoni]

BARYLKO, JAIME (1936–2003), Argentine educator and writer. Barylko was born in Buenos Aires and graduated from the Teachers Seminary in Moisesville. He taught in Jewish schools in the provinces of Argentina as well as in Buenos Aires. He directed the Rambam secondary school and, later, the Vaad Hachinuch Hamercazi (Central Council of Jewish Education). After obtaining a Ph.D. in philosophy from La Plata University, Barylko was appointed professor in various Argentine universities and dean of humanities in the private Maimonides University in Buenos Aires. He wrote a large number of books on Judaism, philosophy, psychology, and pedagogy, among them: *El aprendizaje de la libertad* (1982), *De Adán al mesías* (1989), *Usos y costumbres del pueblo judío* (1991), *El miedo a los hijos* (1992), *Los hijos y los límites* (1993), *Cábala de la luz* (1994), *Sabiduría de la vida* (1995), *Educación en valores* (1997), *Ética para argentinos* (1998), *El significado del sufrimiento* (2000), *El hombre que está solo y no espera* (2002), *Cómo ser persona en tiempos de crisis* (2002), *Jacob, drama y esencia* (2002), *La revolución educativa* (2002), *La Filosofía, una invitación a pensar* (2003), *Reflexiones filosóficas: Los múltiples caminos hacia la verdad* (2003). He also lectured for Jewish and non-Jewish organizations and frequently appeared on radio and television.

[Efraim Zadoff (2nd ed.)]

BAR-YOSEF, OFER (1937–), Israeli prehistorian of the southern Levant. Born in Jerusalem, Bar-Yosef undertook at the age of 18 his compulsory service with the Israel Defense Forces, and afterwards in 1960 began his studies at the Institute of Archaeology in the Hebrew University, concentrating primarily on prehistoric archaeology, which eventually led to his writing a Ph.D. (1966–70) on the Epi-Palaeolithic cultures of Palestine under the supervision of Moshe *Stekelis. During the 1970s Bar-Yosef taught at the Hebrew University, serving as associate professor between 1973 and 1979 and then as professor from 1979, influencing a generation of students of prehistoric archaeology in Israel.

Having first excavated with Stekelis at the Natufian and Neolithic site of Naḥal Oren in 1959–60, Bar-Yosef went on to participate in two other major projects associated with Stekelis at the important sites of Ubeidiya (1960–66) and Ein

Gev I (1963–64). From the 1960s onwards Bar-Yosef directed numerous projects of field research, notably at Hayonim Cave in western Galilee, at Ubeidiya, in various parts of Sinai (including Gebel Maghara, Ain Hudeirah, and Kadash Barnea), at the Qafzeh Cave at El-Wad Terrace and the Kebara Cave on Mount Carmel, and at the Neolithic site of Netiv Hagdud in the Lower Jordan Valley. Side by side with his continued excavations at Hayonim Cave in the 1990s and early 2000s, Bar-Yosef actively participated in excavations and researched materials from sites situated in different parts of the world: Turkey (Karain and Öküzini Caves, Mezra’a Tleilat), China (sampling of the Zhoukoudian site, Yuchanyan Cave), Republic of Georgia (Dzudzuana Cave, Kotia’s Klde), and the Czech Republic (Stranska Skala).

Bar-Yosef has numerous publications to his credit: 15 books and monographs and close to 300 research papers. He was a co-editor of *Geoarchaeology* and *Eurasian Prehistory* and served on the advisory board of numerous prestigious international scientific journals.

From 2005 Bar-Yosef was professor of prehistoric archaeology in the Department of Anthropology, Peabody Museum, Harvard University.

[Shimon Gibson (2nd ed.)]

BAR-YOSEF (Zenwirth), YEHOShUA (1912–1992), Israeli novelist and playwright. Bar-Yosef was born in Safed and studied in yeshivot in Transylvania and Jerusalem. Bar-Yosef realistically describes the world of the old *yishuv*, the pre-Zionist Jewish settlers in Erez Israel. His trilogy *Ir Kesumah* (“Enchanted City,” 1949) is set in Safed. Bar-Yosef views life as a constant battle between the spiritual and the temporal, the Will to Evil and the Will to Good, the sacred and the profane. Bar-Yosef’s plays *Be-Simta’ot Yerushalayim* (“In the Alleys of Jerusalem”) and *Shomerei ha-Homot* (“Guardians of the City Walls”) were produced at the Ohel Theater. While his early work is graphically realistic, he later showed a tendency to symbolism. Recipient of the Bialik Prize (1984), his late works include the novels *Ha-Dag ve-ha-Yonah* (“The Fish and the Dove,” 1989), *Utopi’ah be-Kaḥol Lavan* (“Utopia in Blue and White,” 1990), and *Gevilim u-Besarim* (“Parchment and Flesh,” 1993). Bar-Yosef’s memoirs, *Bein Zefat li-Yerushalayim*, were published in 1972.

His son YOSEF (1933–) received an Orthodox education and later studied Jewish philosophy, Kabbalah, and English literature. He began publishing in 1962 and after the success of his play *Tura* (1963), which dealt with problems of an Oriental family’s integration into Israeli society, he continued to focus on playwriting. Among his plays, many of which were staged in Russia, Poland, Brazil, and Great Britain, are *Ha-Pardes* (“The Orchard,” 1986), *Anashim Kashim* (“Difficult People,” 1973) and *Ḥagigat Horef* (“Winter Feast,” 1992). An English translation of “Difficult People” is included in the volume *Modern Israeli Drama in Translation* (edited by M. Taub).

BARZILAI, Italian family. GIUSEPPE (1824–1902), Orientalist. Born in Gradisca (Goerz), Giuseppe studied at Padua and was at one time secretary of the Trieste Jewish community. His work on the relations between the Semitic and Indo-Germanic languages (1885) won a prize from the *Académie Française*. He also translated the Song of Songs and Lamentations into Italian verse (1865 and 1867).

SALVATORE (1860–1939), son of Giuseppe, Italian politician, played no part in Jewish life. An ardent supporter of the Italian claim to Trieste, at the age of 18 he was found guilty of treason against Austria, but was acquitted on appeal after a year of imprisonment. Salvatore studied law at Bologna and began to practice in 1882, specializing in criminal law. Later he became recognized as an eminent legal authority. He was foreign editor of *La Tribuna* of Rome from 1883 to 1891, and entered the Chamber of Deputies in 1890 as an extreme left-wing republican advocating Italy's withdrawal from the Triple Alliance. His irredentism was so great that he became known as "the Deputy from Trieste." He strongly supported Italy's declaration of war against Germany and Austria in 1915, and was later appointed minister for the liberated territories. Salvatore was an Italian delegate at the peace conference in 1919 and became a senator in 1920. Among his writings are *La criminalità in Italia* (1885); *La recidiva* (1883); and *Il nuovo Codice Penale* (1889).

ADD. BIBLIOGRAPHY: E. Falco, *Salvatore Barzilai: un repubblicano moderno tra massoneria e irredentismo* (1996).

BARZILAI (Eisenstadt), YEHOSHUA (1855–1918), leader of the *Hibbat Zion* movement and writer. Barzilai was born in Kletsk, Minsk region, Belorussia, to a rabbinical family, and from an early age became active in the *Hibbat Zion* movement. He first visited Erez Israel in 1887, but a year later returned to Russia, where he became one of the founders of the clandestine *Benei Moshe, which was led by *Aḥad Ha-Am and became a center of modern spiritual and national thought. He was elected deputy member of the Odessa *Hovevei Zion* Committee, which was then the central body for activities on behalf of the new settlements in Erez Israel.

Barzilai returned to Erez Israel in 1890 and was appointed secretary of the Executive Committee of *Hovevei Zion* in Jaffa. He was instrumental in the founding of several educational and community institutions, wrote numerous articles and reports on life in the Yishuv in various Hebrew papers in Russia, and from 1893 to 1895 edited, jointly with Yehudah Grasoovski (*Goor) *Mikhtavim me-Erez Yisrael* (Letters from Erez Israel), a bulletin on the life and problems of the Jewish community in

Erez Israel. He was also active on behalf of the settlers in their disputes with the administration of Baron Rothschild.

Barzilai joined the Zionist movement and participated in the Minsk Conference of Russian Zionists (1902). He was among the opponents of the Uganda Plan. From 1904, he was an official of the Anglo-Palestine Bank in Jerusalem and was one of the founders of the Hebrew Gymnasium in Jerusalem, the first modern high school in Erez Israel, and the Beit Ha-Am community center of Jerusalem. At the beginning of World War I he returned to Europe, and after a long illness died in Lausanne, Switzerland. His remains were reinterred in 1933 on the Mount of Olives. A collection of his writings was published in 1912.

[Benjamin Jaffe]

BARZILLAI (Heb. בַּרְזִילַי), name of two biblical persons.

(1) Barzillai the Gileadite (Heb. בַּרְזִילַי הַגִּילְעָדִי), a wealthy man of Rogelim. When David and his men fled to Mahanaim in Gilead because of *Absalom's rebellion, he, like two other prominent Transjordanians, Machir son of Ammiel of Lo-Debar and Shobi son of Nahash, the Ammonite, welcomed them with food. Barzillai also sustained David throughout his stay in Mahanaim. On David's return to Jerusalem, Barzillai accompanied him as far as the west bank of the Jordan; however, owing to his advanced age, Barzillai did not accept David's invitation to come to Jerusalem and reside at the royal court (11 Sam. 17:27; 19:32–41). Instead, he sent his son Chimham (or Chimhan) with David and from this time Chimham and his family lived at the king's court (1 Kings 2:7). It seems that a quarter near Bethlehem was set aside for Chimham and his relatives and was therefore called "Chimhan's (*keri*; *ketiv*: "Chemoham") Residence" (Geruth Chimham, Jer. 41:17). In post-Exilic Judah two priestly families, Habaiah and Hakkoz – which claimed descent from Barzillai, were disqualified from the priesthood. The sons of Hakkoz were readmitted in the same generation (Ezra 2:61; Neh. 7:63).

(2) Barzillai of Abel-Meholah (a city in Transjordan), the father of *Adriel, the husband of *Merab, the daughter of King Saul (11 Sam. 21:8, where it reads Michal instead of Merab, cf. 1 Sam. 18:19). It has also been suggested that Barzillai from Meholah was Barzillai the Gileadite.

[Israel Moses Ta-Shma]

BASCH, VICTOR GUILLAUME (1863–1944), French philosopher and a defender of human rights. Basch was born in Budapest and studied German at the Sorbonne. He served as a professor at the universities of Nancy, Rennes, and Paris. In 1918 he held the newly established chair of aesthetics at the Sorbonne. Basch became well-known when he championed Alfred Dreyfus. He was a founder of the League for the Rights

of Man and its president in 1926. Basch was a socialist supporter of the left-wing coalition known as the Popular Front and a leader of the Alliance Israélite Universelle. During World War II, Basch was a member of the central committee of the French underground. He and his wife were executed by the Vichy government.

His writings include *Essai critique sur l'esthétique de Kant* (1896); *La guerre de 1914 et le droit* (1915); *Les doctrines politiques des philosophes classiques de l'Allemagne* (1927), and *Essais d'esthétique de philosophie et de littérature* (1934), as well as other works on literature, philosophy, and political issues.

ADD. BIBLIOGRAPHY: F. Basch, *Victor Basch ou la passion de la justice: de l'affaire Dreyfus au crime de la milice* (1994); F. Basch, L. Crips, and P. Gruson (eds.), *Victor Basch: un intellectuel cosmopolite* (2000).

BASCHKO, ZĚVI HIRSCH BEN BENJAMIN (1740–1807), rabbi and halakhist. Baschko was the last to occupy the position of rabbi (which he held from 1802) of the joint communities of Altona, Hamburg, and Wandsbek (the “Three Communities”) before the union was dissolved. Born in Zamosc, Poland, of a distinguished family, he was rabbi first of Tischwitz (Tyszowce), then from 1771 of Brody, and from 1788 of Glogau, where he established an important yeshivah. He was one of the greatest rabbis of his day; among those who addressed halakhic questions to him were Isaiah Berlin, Solomon Zalman Fuerth, Phinehas Horowitz of Frankfurt, and Meir Posner, while Ezekiel Landau and Akiva Eger referred to him in unusually high terms of esteem. He wrote *Tiferet Zevi*, responsa on the Shulḥan Arukh in two parts, the first on *Orah Hayyim* and *Yoreh De'ah* (Warsaw, 1816 (?)) and the second on *Even ha-Ezer* (Jozsefov, 1867). His responsa also appear in the works of contemporary rabbis. Some of his commentaries and homilies are still in manuscript. He died in Ottensen, near Altona, and was buried at Altona, his tombstone bearing the inscription, “There arose none, nor will there ever be another, like him.” His sons were also rabbis: Moses at Tomaszow, and Judah Loeb at Komarno.

[Itzhak Alfassi]

BASEVI, Italian family of German origin, especially associated with Verona. In Hebrew, they called themselves Bath-Sheba and in abbreviation, Bash (בשׁ). The name Naphtali was common in the family, and therefore some of its members took a deer's head as their crest and became known as “Basevi Cervetto” (Italian: “little deer”), in accordance with the Blessing of Jacob (Gen. 49:21). Others took a boat as their crest, in accordance with the Blessing of Moses (Deut. 33:23), and became known as “Basevi della Gondola.” It is not clear what precise relationship existed between this family and the Bassevi family of Prague (see *Bassevi, Jacob von Treuenberg). The brothers ABRAHAM and JOSEPH, sons of Sabbatai Mattathias

Bath-Sheba, were printers in Salonika (1594–1605). Abraham subsequently became a printer in Damascus (1605–06), while his brother had been a proofreader in the Verona press, a Mi-drash *Tanhuma* appearing with his name (1595).

GIOACCHINO (1780–1867), originally from Mantua, moved to Milan at the beginning of 19th century and was one of the earliest Italian Jews to attain distinction as a lawyer. He defended the Tyrolese hero Andreas Hofer in his trial for armed rebellion against Napoleon. In Milan, he wrote and published his principal works, *Il commento al Codice Civile Austriaco* (seven editions from 1845 to 1857) and *Il Trattato delle leggi attinenti al Processo Civile* (1850). EMANUELE (1799–1869) was a physician and medical writer from Pisa, where he took the university degree in 1817. In 1823 he published his first work, *Discorso*, and in 1824 *L'esposizione della Medicina Fisiologica di Broussais*. Among his other works were *Cenni sulla Medicina Fisiologica confrontata colla Dottrina Medica Italiana* (1825) and *Sugli uffici del medico* (1826). In 1825 the Grand Duke of Tuscany appointed him secretary of the Jewish community of Leghorn. ABRAMO (1818–1885), although a qualified physician, devoted himself to music, composed some operas, launched the publication of musical texts, and organized popular orchestral concerts. He founded in Florence the *Beethoven Matinée*s (1859) and afterwards the well-known *Società del Quartetto*, which exerted a great influence on Italian music life. His writings (e.g., *Della Certezza*, 1842) anticipated the theories of the American programists. Giuseppe Basevi (?–1884) from Verona was a rabbi in Sabbioneta, Spalato and Verona.

In the 18th century some of the Basevi family emigrated to England. NATHAN or NAPHTALI (1738–1808), of Verona, settled in London in 1762 and was an early president of the *Board of Deputies of British Jews. His daughter, Maria, was the mother of Benjamin *Disraeli. The conversion of the Disraeli children in 1817 was followed by that of the family of JOSHUA, Maria's brother. A Lloyds underwriter, he moved to Brighton, where he was chairman of the magistrates from 1838 to 1843 and also a deputy lieutenant of the County of Sussex.

Joshua's son, NATHANIEL (1792–1869), was the first Jewish-born barrister to practice in England. Another son, GEORGE (1794–1845), an architect and a nephew of Maria d'Israeli, and himself a convert to Christianity, was articulated to Sir John Soane, the most original British architect of his time. In 1816–19 Basevi traveled in Italy and Greece and his first buildings reveal the influences of classical architecture. These include St. Mary's Church, Greenwich, England, designed in 1823, when Basevi was 29 years old. His best-known building, the Fitzwilliam Museum, Cambridge, England, begun in 1836, already reveals a trend to more dramatic, baroque treatment which is fully evident in the famous building of the Conservative Club (now the Bath Club) of 1843, in St. James's Street, London, designed with Sydney Smirke. Earlier in his career Basevi designed several country houses and the main part of Belgrave Square, the largest and most elegant of early 19th century London thoroughfares. Basevi died as a result of

a fall from the spire of Ely Cathedral, of which he was resident architect. Casts of a plaster bust of Basevi, attributed to T.I. Mazzotti, are in the Fitzwilliam Museum, Cambridge, the Soane Museum, London, and the Royal Institute of British Architects, London. Other members of the family include JAMES PALLADIO (1832–1871), Anglo-Indian surveyor and explorer; JACOB BASEVI CERVETTO (1682–1783), generally known as James Cervetto, musician, who introduced the playing of the cello into England, and his illegitimate son, JAMES CERVETTO (1746–1837), also a musician and one of the best cellists of his time. Both father and son composed various musical works, especially for the cello. Most of the members of this family were not professing Jews.

JOSEF BASEVI (b. 1840) founded the Giuseppe Basevi sugar firm in Trieste, which attained considerable importance in opening Oriental markets to Austrian export.

[Vivian David Lipman / Federica Francesconi (2nd ed.)]

BASHAN (Heb. בַּשָּׁן, הַבָּשָׁן), a region north of the Yarmuk River and east of the Jordan and lakes Huleh and Kinneret. In biblical times, the city of *Salchah (Salcah) was at the eastern extremity of Bashan (Deut. 3:10; Josh. 13:11) and the city of Dan at its western (Deut. 33:22). Most of its area, some 4,334 sq. mi. (11,200 sq. km.) is covered with basalt as a result of lava eruptions occurring during the Pleistocene period or later. In some parts of Bashan, the volcanic material has eroded into fertile soil, but others are still covered with rocks.

The meaning of the name is not clear; by analogy with the Arabic word *batan* it may mean a rockless plain. Targum Onkelos and the Palestine Targum translate Bashan as *Matnan* (a possible variant of Batnan) and the Syriac Peshitta as *Matnin*. The Palestine Targum has *Butnaya* as a variant (Deut. 33:22) as does the Jerusalem Talmud, probably through Greek influence (cf. Ma'as 4:6, 51b, et al.).

With its sufficient rainfall in normal years and lava soil, Bashan is a very fertile region. Once possessing forests and pastures, it is praised in the Bible for its lofty trees (Isa. 2:13; Ezek. 27:6; Zech. 11:2), its cattle and sheep (Deut. 32:14; Amos 4:1; Ps. 22:13), and, with the Carmel, it is mentioned as an area of outstanding fertility (Isa. 33:9; Jer. 50:19; Nah. 1:4). Although its forests disappeared many generations ago, good pasture is still found in Upper *Golan and on Jebel Druze. The Plain of Bashan is noted for its hardy, superior wheat, but years of drought occur there more often than on the western side of the

Map of the Bashan area in ancient times.

Jordan, with the exception of the Negev. The ancient "King's Highway" from Elath to Damascus passed through Bashan (Num. 20:17), merging with a branch of the Via Maris that crossed the Jordan near the Sea of Galilee; a second branch led to Damascus by way of Dan and Baniat. Today Bashan is crossed by a highway that follows the same route and, in the east, also by the Hejaz railroad.

The ancient inhabitants of Bashan were the *Rephaim, one of whom was *Og, king of Bashan (Deut. 2:11; 3:11), whose 60 fortified cities were proverbial (Deut. 3:4; 1 Kings 4:13, etc.). Some of Bashan's important cities are mentioned in Egyptian documents from the Middle and New Kingdoms: Ashtaroth, Bozrah, Zer, Kenath, Tob, etc. Ashtaroth and *Edrei were the main cities of Og (Josh. 12:4–5), whom Moses defeated at Edrei (Num. 21:33). He allotted his land to the half-tribe of Manasseh (Num. 32:33–42), but most of the original inhabitants remained there (Num. 32:17). Foreign enclaves, such as those of the Geshurites east of the Sea of Galilee, and the Maacathites in Upper Golan south of Mt. Hermon survived into the early days of the monarchy (Josh. 13:13; 11 Sam. 10:6–8; 13:37). In the period of the First Temple, Damascus attacked Bashan and *Gilead and, from time to time, imposed its rule on them (1 Kings 22:3). *Joash and his son *Jeroboam II were the last Israelite kings to hold Bashan (11 Kings 13:25; 14:25). In 732 B.C.E. it was conquered by Tiglath-Pileser III who exiled many of its inhabitants (11 Kings 15:29; cf. Isa. 8:23) and established two Assyrian provinces there – Karnini (Karnaim) and Hawrina (Hauran) – that evidently existed through Babylonian and Persian rule.

Under the Ptolemies, Bashan was divided into three provinces: Gaulanitis, Batanea, and Trachonitis. The Seleucids consolidated the whole of Transjordan north of the Arnon into a single unit called Galaditis (Gilead). In 164 B.C.E. *Judah Maccabee went to the aid of the persecuted Jews of Bashan, defeated their enemies led by a certain Timotheus, and evacuated the Jews from Transjordan (1 Macc. 5:9ff.;

Jos., Ant., 12:330ff.). Alexander *Yannai in 85 B.C.E. wrested Golan from the Nabateans, who, by the latter part of the second century, had spread out from their settlements in Edom and reached as far as Damascus. Some 20 years later, however, Pompey conquered Golan from the Jews and gave it to the Itureans, who controlled most of Bashan. He granted autonomy to the Greek cities Hippos (Susita) in Lower Golan and Raphana and Kanatha in the Plain of Bashan and included them in the *Decapolis. From 30 to 20 B.C.E. Herod gradually received all of Bashan from Emperor Augustus, and it remained the domain of his heirs Herod Philip and Agrippa I and II until about 100 C.E. In the days of Herod, Jews from Western Palestine and Babylonia were settled there. His army commander *Zamaris (Zimra), a Babylonian Jew, cleared Trachonitis (al-Lijā) of marauders and the area was later named for him – Terakhona de-Zimra, or Terakona. For halakhic purposes this region was considered part of Erez Israel (Tosef., Shev. 4:11). In 106 C.E. Bashan was annexed to the Provincia Arabia, the capital of which was Bozrah.

In Byzantine times the al-Jafna dynasty of the Ghasān tribe ruled Bashan; its capital was Jabiyya, northwest of Nawe. Chosroes II, king of Persia, penetrated into Bashan in 614 and defeated the Byzantines near Edrei (Dar'a). The Muslims invaded in 634 and after the battle of the Yarmuk (Aug. 20, 636) Golan was included in Jund al-Urdun (Jordan Province), the capital of which was Tiberias. The rest of Bashan apparently became part of the district of Damascus – capital of the caliphate from 660 to 750. Because of its proximity to the centers of power and of Muslim culture, Bashan flourished under the Umayyad dynasty; thereafter it declined rapidly until, in Turkish times, it was inhabited by Bedouins, who plundered its few remaining villages. In 1711 Druze from Mt. Lebanon began to settle on Mt. Bashan, which was later renamed for them (Jebel Druze). Their number increased considerably there in 1860, when many Druze fled from Mt. Lebanon. Far from submitting to the Bedouin, the Druze established their authority over many tribes. The attempts of the Egyptians (from 1832 to 1840) and of the Turks (from 1840 to 1918) to extend their sovereignty over Jebel Druze were only partly successful. In 1925 the Druze rebelled against the French, who subdued the revolt, and subsequently granted the Bashan Druze area broad autonomy. Until the end of the British Mandate, Bashan was the most tranquil part of Syria; after 1944, it became part of the Republic of Syria. Attempts by the Damascus government to treat it like other provinces met with constant opposition and periodic rebellions.

On the Bashan Plain and in Golan, Turkish rule succeeded in enforcing its sovereignty over the inhabitants in the late 19th century. To strengthen its authority in these districts, the Turkish government settled Circassian refugees there in 1880–84. At the end of the 19th century, a French company laid a railroad line in Bashan from Damascus to al-Muzayyib, north of the Yarmuk, to expedite the export of its wheat. In 1907 the Hejaz railway was built parallel to the French line as far as Edrei (Dar'a), and then branching off to cross the Yarmuk, thus connecting Bashan with Haifa. The French tracks

were removed by the Turks during World War I. Good roads were constructed during the French Mandate, linking up with the road networks of Syria, Transjordan, and Palestine. During the 1890s, Baron Edmond de Rothschild purchased thousands of acres on both sides of Nahr al-'Allān and founded a Jewish settlement, but the pasha of Damascus expelled the settlers in 1899. A small private settlement called Benei Yehudah was founded in 1886 by Jews from Tiberias and Safed in the Golan, east of Lake Kinneret, but it was abandoned in 1920 as a result of the Arab riots and attacks after contact was broken between the two banks of the Jordan. In 1967 the area was captured from the Syrians and Israeli settlement there began. In 1981 the Golan Law declared the area part of Israel. In the early 2000s the Golan Heights included 33 settlements, mainly rural, with a population of 15,500 Jewish settlers and another 18,000 Druze concentrated in four large villages.

[Abraham J. Brawer / Shaked Gilboa (2nd ed.)]

BASHIRI, YAḤYA (Yahya b. Abraham b. Sa'adiāh al-Bashiri; Heb. name **Abner bar Ner ha-Sharoni;** 17th century), Yemenite kabbalist and scribe. His extant work is characterized by accuracy and beauty. Later Yemenite scholars, particularly Yaḥya *Ṣaliḥ, refer to Bashiri in their writings, while popular legends extol his piety and the miracles he performed by virtue of his knowledge of practical Kabbalah. His two extant works, still in manuscript form, are *Ḥavazzelet ha-Sharon*, a kabbalistic work on the letters of the Hebrew alphabet, and *Bashiri*, a pentateuchal commentary based on *gematria*. He is known to have written other works, which have not survived: two commentaries on the *Ein Yaakov* of Jacob ibn Ḥabib and *Amirat ha-Emunot*, the contents of which are unknown. The numerous quotations from Bashiri in the *Ḥelek ha-Dikduk* of Ṣaliḥ reveal the *variae lectiones* collected by Bashiri in the course of copying the books of the Pentateuch, on which he may even have compiled a distinct work. His love of books is evidenced by his written vow (appearing in a colophon to the *Midrash ha-Gadol*, on Deuteronomy) never to sell a book "in his lifetime or thereafter," i.e., even if this be necessary to provide funds for his burial shroud.

[Yehuda Ratzaby]

BASHYAZI (Heb. בַּשְׂיָזִי; traditional Rabbanite transcription for the Turkish name Bashyatchi), family of Karaite scholars in Adrianople and Constantinople. Although the family moved to Constantinople in 1455, they retained the cognomen "Adri-

anopolitans” even in later generations. The Karaite school of Adrianople tended toward liberalism. The Bashyazi family, its leading exponents, advocated the kindling of Sabbath lights contrary to the prevalent Karaite custom of spending Sabbath in darkness. MENAHEM B. JOSEPH BASHYAZI first permitted this practice around 1440. His grandson Elijah found support for this ruling in liberal Karaite halakhic sources and through his influence it was accepted in the Karaite communities of Turkey, Crimea, Poland, and Lithuania, although in Egypt, Syria, and Erez Israel the Karaites continued to refrain from kindling lights on the Sabbath at least until the 19th century. Menahem also abolished the Karaite custom of starting the weekly Torah readings from the beginning of the Pentateuch in the month of Nisan and directed that the cycle should start in Tishri, conforming to Rabbanite practice. The more conservative Karaites opposed the change.

His grandson ELIJAH B. MOSES (c. 1420–1490) was the ideologist of the Karaite rapprochement with Rabbanism and a codifier of Karaite law. Elijah, in addition to upholding the rulings of his grandfather Menahem and father Moses, provided them with a theoretical basis and expanded them (e.g., concerning intercalation). He remains the supreme Karaite authority. Elijah is reported to have begun the compilation of his great code *Adderet Eliyahu* in about 1480, but the section on the calendar refers to the year 1457. After his death his pupil and son-in-law Caleb *Afendopolo attempted to complete the work. The *Adderet* was distributed chapter by chapter and its contents were recognized as binding even during the author’s lifetime. It was also one of the first Karaite works to appear in print (Constantinople, 1530–31; Eupatoria, 1835; Odessa, 1870 [the latter repr. Ramle 1966]). Its Sabbath laws became the subject of much Karaite polemical literature. Other sections, especially those dealing with the sanctification of the new moon (Elijah was the first to draw up an official calendar for this, which was virtually a permanent one), the ten principles of faith (new and final formulation of the Karaite credo), and the laws of *shehitah* and incest were submitted to a series of adaptations, abridgments, and interpretations by Karaite religious leaders in different countries. Bashyazi’s leniency on Karaite *halakha* stands in juxtaposition to the strict positions of *Aaron ben Elijah. In addition to reflecting the various schools of late medieval Karaite thought, the *Adderet* attests to Bashyazi’s knowledge of both general and Jewish subjects. In the statements and sections concerning beliefs Bashyazi often tends towards Aristotelian positions.

Particularly noteworthy is Elijah’s use of Rabbanite techniques and sources, even where they were antagonistic to Karaism. Elijah interpreted their hostility as a device to achieve publicity so as to cover their actual sympathy toward Karaism. However, he also polemicized against several Rabbanite scholars, including Mordecai *Comtino. While one of his three polemical works, *Iggeret ha-Yerushah* (published in the Eupatoria edition of *Adderet*), is directed against the Rabbanites, his *Iggeret ha-Zom* and *Iggeret Gid ha-Nasheh* are written to refute his Karaite opponents. Elijah’s correspondence

with Karaite leaders in Lithuania shows that his reputation had spread to the northern Karaite communities. He introduced the Lithuanian Karaites to his relaxation of Karaite *halakha* and customs, recommending the establishment of a *bet din* of three in *Troki on the model of that in Constantinople, and the institution of kindling the Sabbath lights. His pupils included the Rabbanite *Moses of Kiev (with whom he also had sharp disputes), well-known among Lithuanian Karaites. The Karaite prayerbook contains several prayers and hymns composed by Elijah, including *Melizat ha-Mitzvot*, recited on Shavuot.

MOSES (first half of 16th century), great-grandson of Elijah, died relatively young. He renewed the connections with the Arabic-speaking Karaite communities. He also traveled to the East, returning with ancient Karaite manuscripts in Arabic and isolated pages of *Sefer ha-Mitzvot* by *Anan b. David in Aramaic on which he based his *Zevaḥ Pesah* and *Sefer Re’uven* (in manuscript). His explanation of the laws of incest, *Sefer Yehudah*, was published by I. Markon, and an important part of his *Matteh Elohim*, on the history of the Karaite schism, was incorporated into *Mordecai b. Nisan’s *Sefer David Mordekhai*.

°BASIL I, Byzantine emperor 867–886. Basil first attempted to achieve the conversion of the Jews by persuasion and invited rabbis to a *disputation to defend their faith, vainly offering them material benefits if they would confess defeat. When this attempt failed he issued in 874 an edict ordering all his Jewish subjects to become converted to Christianity. The decree was also connected with his policy to propagate orthodox Christianity among the Bulgars, Russians, and other peoples, and forcible conversion of nonorthodox sects, notably the Paulicians, whom he probably associated with iconoclasm. His attempt to convert by force the Jewish communities in southern Italy then under Byzantine rule is recorded in the 11th-century Hebrew chronicle of *Ahimaaz b. Paltiel, which portrays Basil as a cruel and persistent enemy of the Jews and Judaism. Despite his decree, the legal status of the Jews remained unchanged and there was no curtailment of their existing rights. The decree, whether formally rescinded or not, eventually fell into disuse under Basil’s son and successor Leo VI.

BASILEA, SOLOMON AVIAD SAR-SHALOM (c. 1680–1749), rabbi and kabbalist in Mantua, Italy. Solomon received instruction from the most learned scholars in the city, including his father, Menahem Samson Basilea, Judah b. Eliezer *Briel (Bariel), Moses *Zacuto, and *Benjamin b. Eliezer Ha-Kohen Vitale of Reggio. He also studied geometry and astronomy. Solomon became rabbi of Mantua in 1729. At the age of 44 he began a methodical study of Kabbalah according to the system of Isaac *Luria. In 1733 he was accused by the Inquisition of having mocked Catholicism and of retaining unexpurgated Hebrew works, and was imprisoned for a year. He was subsequently confined to his house and finally to the ghetto. He courageously supported Moses Ḥayyim *Luzzatto against his accusers in the controversy over the latter's kabbalistic practices. Solomon Basilea's main work *Emunat Ḥakhamim* (Mantua, 1730) was intended to emphasize the continuity in Jewish tradition of the mystic significance of the Torah and the error of scholars opposing that interpretation. To support his thesis, Solomon reviewed not only the whole of Hebrew literature but also Greek, Arabic, and Renaissance philosophy. Basilea did not believe that the Zohar was written by Simeon b. Yoḥai, but that it nevertheless contained his esoteric doctrines as handed down to his disciples. Basilea also rejected the views which ascribed the authorship of the Zohar to *Moses b. Shem Tov de Leon. The book was very well received by the kabbalists, but opponents of the Kabbalah were critical of it. Jacob *Emden wrote a refutation of the *Emunat Ḥakhamim* in *Mitpaḥat Sefarim*, 2 (1768). Some rabbinical decisions of Solomon Basilea are included in the collections of his fellow student Isaac *Lampronti and others. He also wrote on the calendar and a commentary on Euclid's *Elements* as well as notes on the 1715 edition of *Tofteh Arukh* by Moses Zacuto. In his collections, he includes the responsa of his father MENAHEM SAMSON BEN SOLOMON (d. 1693), rabbi in Alessandria and from 1630 in Mantua. Menahem's responsa also appear in collections of his contemporaries, Moses Zacuto and Nethanel b. Aaron *Segrè.

[Attilio Milano]

BASILICA (Greek βασιλική, talmudic בְּסֵלִיכָה), elongated rectangular building divided by colonnades. During the Roman period this term was broadened from the narrow meaning of a meeting place for merchants to any assembly hall. In particular the term referred to a hall used in the philosophers' schools and in wealthy homes for reading and lectures. In these basilicas, the apse was the area set aside for the lecturer or teacher. The entire hall was oriented toward the podium set in the apse, which had a concave roof serving as an acoustical ceil-

ing. This type of basilica was the prototype for the early synagogues and churches. Talmudic sources refer to three types of basilicas, which served as palaces, bathhouses, and treasuries (Av. Zar. 16b). They note that the basilica also served as a hall of justice (Gen. R. 68:12) and as a place for the sale of grain (as in Ashkelon, Tosef. to Oho. 18 end).

An early example of the basilica construction is found in the "Royal Stoa" which Josephus (Ant., 15:411–416) describes as having been erected along the southern wall of the Temple Mount by Herod when he had the Temple rebuilt. This basilica had four rows of pillars each 23 ft. (7 m.) high. According to Josephus, its length was one *stadion* (606 ft. (185 m.)), but it appears to have been longer – about 920 ft. (280 m.). The central hall was 30 cubits wide and 60 cubits high. The width of the side aisles was 20 cubits, and the height, 30 cubits, giving the structure a true basilical form. Two partially carved stone pillars have been found in Jerusalem which by their size indicate that they were destined for this basilica. However, they were cracked and therefore not used. It is possible that Herod modeled his stoa after the Great Synagogue in Alexandria which has been described as "a kind of basilica with a stoa within a stoa" (Tosef. to Suk. 4:6). Conceivably this expression refers to the central area which was constructed between two colonnades. Another interpretation is that this refers to an additional stoa which extended the width of the hall. Such construction was typical of the early synagogues, remains of which have been found at Masada and in Galilee.

The Christians adopted the western form of basilica, and most of the early churches (fourth–sixth centuries) were built on that model, although the term "basilica" was no longer in common usage. In the early Christian basilicas, the apse served as the seat of the priests. The altar was set before it, and this part of the building was separated from the remainder by a grille which crossed the width of the church. Two or more rows of columns extended the length of the building, separating the main hall in the center from the narrower aisles at either side.

The first churches in Palestine and elsewhere, e.g., the Church of the Nativity in Bethlehem and the Church of the Holy Sepulcher in Jerusalem, were built according to this design. In the fifth century a vestibule (*narthex*) was added to the front facade of the basilica churches.

Basilicas were also used for secular purposes in the Jewish community in Palestine. One structure of this nature (135 × 49 ft. (40 × 15 m.)) was found in Bet She'arim. It consists of an enclosed paved court, a vestibule, and a basilica with two rows of five columns each. At the far end of the building, opposite the entry, is a low platform. It would appear that this was a hall of justice in the time of R. Judah ha-Nasi.

[Michael Avi-Yonah]

BAŞİR, JOSEPH BEN ABRAHAM HA-KOHEN HARO'EH AL- (Yūsuf al-Basir; first half of 11th century), Karaite halakhist and philosopher, who originated from Iraq or Persia. Because he was blind he was euphemistically called al-Başir Abū Yūsuf Ya'qūb "ha-Ro'eh" ("the Seeing"). Many Karaite authors confused him with Abū Yūsuf Ya'qūb al-Kirkisani who lived 100 years prior to him. *Firkovich and later P. Frankl and *Harkavy have shown that he lived in the 11th century (he mentions in some of his works Samuel b. Hophni [d. 1013]). It is now known that he met Samuel b. Hophni in Baghdad. Though blind, he traveled extensively, probably as a Karaite propagandist. One of the most important Karaite scholars, he studied Talmud and rabbinic literature. He knew many languages and was well versed in Islamic philosophy. While in Baghdad he met also with Muslim theologians, with whom he had oral and written disputes. At the beginning of the 11th century he settled in Jerusalem, where he died around 1040.

In his philosophic views he followed the Başiran branch of the Mu'tazilites, notably 'Abd al-Jabbār (see *Kalām). His teachings, with the additions and refinements of Yeshu'a b. Judah, became the recognized theology of Karaism for centuries to come. He strongly upholds the belief in the essentially rational character of ethics and gives priority to reason over revelation. He embraces the atomistic views of Islamic Kalām as the basis for the proof of the createdness of the world. Only reason can prove God's wisdom and omnipotence, which imply His existence. Other predicates of God are will, oneness and simplicity, incorporeality, and eternity. Of primary importance in al-Başir's philosophy are the questions of God's justice, of the nature of good and evil, and of free will. God does good always because of His wisdom, not by necessity, and even if He inflicts pain it is for the good. Considering God's foreknowledge, al-Başir has no doubt that man is free to determine his actions, though God knows beforehand how he will act. The commandments are God's means of guiding man in the right path and the obedient are eternally rewarded in the next world. If a sinner repents of his evil deeds, it is the duty of God to accept his repentance and remit his punishment. Al-Başir authored two theological compendia, several theological and halakhic monographs and numerous epistles and response, some of which survived in manuscript fragments of various lengths in several libraries. His main works are the following:

(1) A concise work entitled *al-Tamyiz* ("The Distinction"), also *al-Manšūrī*, consisting of 31 chapters. This work was translated with some additions by Tobiah b. Moses under the title *Maḥkimat Peti* (non-critical print Ashdod 2004). In a final chapter the author criticizes the esoteric book *Shi'ur*

Komah and rejects the doctrine of Benjamin al-Nahāwendi that the world was created by an angel.

(2) *al-Muḥṭawī* ("The Comprehensive"). Divided into 40 chapters, the work tries to bring the main principles of the Mu'tazilite Kalām into agreement with the Karaite dogmas. The author polemicalizes frequently against Christians, dualists, Magians, Epicureans, and other sects. A critical edition by Vajda was published with extensively annotated French translation (see bibl.). The book was translated from Arabic into Hebrew under the title *Sefer ha-Ne'imot* or *Zikhron ha-Datot*, probably by Tobiah b. Moses (non-critical print Ashdod 2004; individual chapters of the medieval Hebrew translation were published in critical editions, see Vajda).

(3) *al-Istibṣār* ("Careful Examination"), dealing with the precepts, includes also lengthy discussions of theological topics. It seems that the sections of the work had initially been composed as separate treatises and later compiled into one compendium. Several sections of the work are extant in the Russian National Library and the British Library. The section concerning the holidays, which contains a polemic in eight chapters against Saadia, was translated by Tobiah b. Moses.

Several theological and halakhic works have been apocryphally ascribed to al-Başir. The Karaites considered al-Başir as one of their most important authorities. Judah *Hadassi, Aaron b. Joseph ha-Rofe, Bashyazi, and other Karaite authors often cite his halakhic views and his scriptural interpretations. His philosophic views were also esteemed by later Karaite scholars down to *Aaron b. Elijah in the 14th century, who often cites him in his *Ez Ḥayyim*. Of special significance is the reform, encouraged by him, of the Karaite law of consanguinity. This reform was developed further and made effective by his pupil *Jeshua b. Judah, who was likewise an important Karaite authority.

[Isaak Dov Ber Markon / Leon Nemoy]

BASKIN, JUDITH R. (1950–), U.S. scholar of women in late antiquity and the Middle Ages. Baskin was born in Hamilton, Ontario, Canada, the eldest child of Rabbi Bernard and Marjorie Shatz Baskin. Educated at Antioch College (B.A., 1971) and Yale University (Ph.D., 1976), she served as professor of

religious studies and director of the Harold Schnitzer Family Program in Judaic Studies at the University of Oregon from 2000, where she was named Knight Professor of Humanities in 2002. Prior to that, she led the Department of Judaic Studies at the State University of New York at Albany and taught at the University of Massachusetts, Amherst. She is the author of *Pharaoh's Counsellors: Job, Jethro and Balaam in Rabbinic and Patristic Tradition*, (1983) and *Midrashic Women: Formations of the Feminine in Rabbinic Literature* (2002). The editor of several volumes, including the widely used collection of essays *Jewish Women in Historical Perspective*. (1991, 1998), she has written dozens of articles on various aspects of Jewish life and culture in late antiquity and the Middle Ages. In 2004 Baskin assumed the presidency of the *Association for Jewish Studies. She also served as editor of the Women and Gender division for the second edition of the *Encyclopaedia Judaica*.

[Jay Harris (2nd ed.)]

BASKIN, LEONARD (1922–2000), U.S. sculptor, printmaker, watercolorist, and illustrator.

Born in New Brunswick, New Jersey, Baskin was the son of a leading Orthodox rabbi. His earliest education was at a yeshivah in Brooklyn, where his family had moved when he was seven. After developing an interest in sculpture at age 14, he would attend day classes at the yeshivah and take evening art classes at the Educational Alliance (1937–39). Baskin also attended New York University (1939–41) and Yale University (1941–43). While at Yale, Baskin discovered William Blake. Impressed by Blake's role as a poet-artist-bookmaker, Baskin founded the Gehenna Press in 1942 and learned printmaking. The Press has published over 100 books, including Homer's *Iliad* (1962) and Dante's *Divine Comedy* (1969).

Three years in the Navy during World War II temporarily curtailed Baskin's artistic activity. After the war he completed his B.A. at the New School for Social Research (1949). In the early 1950s he also studied in Paris and in Florence. From 1953 to 1974, Baskin taught printmaking and sculpture at Smith College in Northampton, Massachusetts. He spent 10 years in England, in part to be close to Ted Hughes, with whom he collaborated on several books. Upon returning to the U.S., he taught at Hampshire College (1984–94).

Baskin's frequent subject is the human condition, often fragile and anxiety-ridden, rendered in a manner that shows the artist's debt to expressionist artists. Although he first gained acclaim for his printmaking, sculpture was his favored medium. He preferred printmaking over painting, and especially the medium of wood, because of the more democratic nature of prints, which can be reproduced widely. He often worked on a monumental scale; his 1952 woodcut *Man of Peace* measures five feet tall and *The Altar* (1977), a wood sculpture depicting the binding of Isaac, is nearly six feet long.

Many of Baskin's drawings and prints concern Jewish subjects. In 1974 he illustrated *A Passover Haggadah*, for which

he provided watercolors, as well as hand lettering of much of the Hebrew text. Baskin received many important commissions, including a bas relief for the Franklin D. Roosevelt Memorial in Washington, D.C., and a seven-foot-tall bronze figure for a Holocaust Memorial in Ann Arbor, Michigan.

[Samantha Baskind (2nd ed.)]

BASLE (Basel, Bâle), Swiss city. The earliest information on a Jewish community dates from the beginning of the 13th century when Basle was still a German free city. The medieval Jewish cemetery was discovered in recent years and the remains were transferred in 1938 to the present Jewish cemetery. In the Middle Ages the Basle Jews were free to acquire and sell real estate. They engaged in commerce and money-lending, sometimes providing loans to the bishops of Basle. Juridically they were under imperial protection: according to a roster of 1242 the Jews of Basle had to pay the crown an annual tax of 40 marks. During the *Black Death they were accused of poisoning the wells; the members of the city council attempted to defend them, but finally yielded to the guilds who demonstrated before the town hall. Six hundred Jews, with the rabbi at their head, were burned at the stake; 140 children were forcibly baptized. This ended the first Jewish community in Basle (Jan. 16, 1349). In 1362 a Jew from Colmar in Alsace was permitted to settle in Basle; he was soon followed by others. In 1365 the emperor transferred his prerogatives over the Jews of Basle to the town. The second half of the 14th century was a period of prosperous growth despite restrictions imposed by the Church. However, in 1397, the slander of well poisoning was renewed. The Jews fled in panic and the community again came to an end. In 1434 a church council held in Basle introduced compulsory attendance of Jews at conversionist sermons. For four centuries there was no Jewish community in Basle. From the mid-16th century Basle authorities alternately issued residence permits to individuals and expulsion edicts. At the end of that century Basle became a center for Hebrew printing. The printing houses were owned by Christians, but they had to have recourse to Jewish proofreaders for whom they obtained residence permits. Johannes *Froben published the Psalms in 1516. His son Jerome in 1536 published a Bible in Hebrew. In 1578–80 Ambrosius Froben was permitted to print a duly censored edition of the Talmud, which had been banned under Pope Julius III in 1553 and placed on the Index in 1559. Also printed there were the works of Johannes *Buxtorf (father and son) who taught Hebrew at Basle University (1591–1664). From the 1560s Jews lived in rural communities in nearby Alsace.

In 1789, when anti-Jewish propaganda was rife in Alsace, many Alsatian Jews fled to Basle and were permitted to stay there temporarily. On the request of the French gov-

ernment the city authorities in 1797 exempted French Jews entering Basle from payment of the “body-tax” usually imposed on Jews, and in 1798 the tax was abolished completely in the whole of Switzerland. Under Napoleon several Jews, mainly French citizens from Alsace, settled in Basle. They numbered 128 in 1805 and were organized in a community. In 1835, however, Jews were expelled from the new separatist canton of Basle Land and the French government broke off relations. Some of the Jews returned after a brief interval, but in 1851–54 were again forced to leave both cantons of Basle. After the granting of free settlement to the Jews of Switzerland in 1866 Jews were able to return and live in Basle. A synagogue was consecrated in 1868. The first Zionist Congress was held in Basle in 1897 where the “*Basle Program” was adopted; other Zionist Congresses were subsequently held there: the second (1898), the third (1899), the fifth (1901), the sixth (1903), the seventh (1905), the 17th (1931), and the 22nd (1946). Prominent members of the Basle community were J. Dreyfus-Brodsky, representative of Swiss Jewry in the Jewish Agency (1859–1942), Rabbi Arthur Cohn, a leader of Agudat Israel, and his son, the lawyer Marcus Mordecai Cohn (1890–1953), an active Zionist and rabbinical scholar, who later became adviser on Jewish law to the Ministry of Justice in Israel. Other prominent Basle Jews were the chemist Markus Guggenheim (1885–1970) and Tadeus *Reichstein (1897–1996), who was awarded the Nobel Prize for Medicine in 1950. During World War II Basle served as a temporary refuge for many Jewish refugees. Most of them left after the war. In 2000 there were 1,421 Jews in Basle City and 318 in Basle Land. The community maintained a community house from 1958 and an old-age home (Holbeinhof) from 2001, relocated in the city. A Jewish school was opened in 1961 and named after Rabbi Leo Adler. The Orthodox community (founded in 1927), with a membership of approximately 90 families, had its own network of services (e.g., a separate primary school and a small Jewish high school preparing students for yeshivah attendance). The Union of Jewish Women in Switzerland is centered in Basle and there are also WIZO and other Zionist organizations. Two youth movements are active in Basle, the unaffiliated Emuna and Bnei Akiva. From 1960 a small but excellent Jewish museum was open and from 1940 the weekly *Juedische Rundschau Maccabi* was published, later merging with the new Swiss Jewish weekly *Tachles*. In 1973 the community was formally recognized by the canton of Basle City, the first such case in Switzerland. Consequently, women received voting rights in 1975. An international congress honored the 100th anniversary of the first Zionist Congress in Basle (1997).

[Zvi Avneri / Uri Kaufmann (2nd ed.)]

BASLE PROGRAM, original official program of the Zionist Organization, named after the city where the First Zionist Congress (see *Zionism) was held (August 23–31, 1897), and where the program was formulated and adopted. Its first sentence, stating the objective of the Zionist movement, was followed by a four-point program: “Zionism seeks to establish a home for the Jewish people in Palestine secured under public law. The Congress contemplates the following means to the attainment of this end: (1) The promotion by appropriate means of the settlement in Palestine of Jewish farmers, artisans, and manufacturers; (2) The organization and uniting of the whole of Jewry by means of appropriate institutions, both local and international, in accordance with the laws of each country; (3) The strengthening and fostering of Jewish national sentiment and national consciousness; (4) Preparatory steps toward obtaining the consent of governments, where necessary, in order to reach the goal of Zionism.” While the term “Basle Program” includes both the statement of aim and the enumeration of means, the phrase is frequently used to refer solely to the first fundamental sentence.

The text of the Basle Program was prepared by a special commission set up by the Preliminary Conference that met in Basle two days before the opening of the Congress. It consisted of Nathan *Birnbaum, Max *Bodenheimer, Siegmund Mintz, Siegmund Rosenberg, Saul Rafael *Landau, Hermann *Schapira and Max *Nordau – all except the last two being lawyers. The draft constituted a compromise between opposing viewpoints, and a synthesis of various elements. One of these was Herzl’s London Program, proposed during his visit to London in July 1897, according to which the aim of Zionism was “the acquisition of a territory, in accordance with the Law of Nations, for those Jews who are not able or willing to assimilate themselves.” Also of importance in the genesis of the Basle Program were Schapira’s ideas on the colonization of Palestine and, in particular, the theses of the Cologne Nationaljuedische Vereinigung, headed by Bodenheimer, which postulated a Jewish commonwealth guaranteed by international law, the furtherance of the colonization of Palestine, dissemination of Jewish knowledge, and improvement in the social and cultural position of the Jews.

Not only Herzl in his *Judenstaat* (1896) but others, such as Bodenheimer, had expressly advocated a Jewish state, but the commission regarded it as prudent to refrain from using the word “state” in the official Zionist program. They felt that it was liable to antagonize Turkey, from which Herzl hoped to obtain the charter, and might also frighten certain Jewish circles. They therefore employed the term “*Heimstaette*” (home, or more exactly, homestead), suggested by Nordau, who submitted the draft proposal of the program to the Congress. This draft spoke of a “home secured by law” (*rechtlich gesicherte Heimstaette*).

Representatives of the younger generation, such as Fabius Schach and Leo *Motzkin – who spoke on this subject in the plenary session of the Congress – took exception to the term and proposed replacing it by “secured by International Law” (“*voelkerrechtlich gesicherte Heimstaette*”), wishing to emphasize the political character of the World Zionist Organization and to distinguish it clearly from the Hibbat Zion, whose cautious approach and exclusively philanthropic methods they strongly resented. It was Herzl himself who provided a compromise formula, which he had already used in his speeches – “*oeffentlichrechtlich gesicherte Heimstaette*” (“home secured by public law”) and this formula met with universal approval. With this amendment the commission’s draft proposal was unanimously passed by the Congress and became the official program of the World Zionist Organization for more than half a century. Parts of the first sentence of the Basle Program were incorporated into the *Balfour Declaration (1917) and the League of Nations Mandate over Palestine (1922).

After the declaration of Israel’s independence (1948), it was felt that the Zionist program should be adapted to the new situation created by the establishment of the State of Israel, which had fulfilled the main postulate of Zionism. The most important among the proposals for a new Zionist program were those drafted by a committee established by the Zionist Organization of America and headed by the jurist Simon Rifkind, and another put forward by the American Section of the Jewish Agency Executive (both in 1949). These proposals assumed that the establishment of the state was a step toward, rather than a full realization of, the Zionist goal.

The question of the Zionist program figured high on the agenda of the 23rd Zionist Congress (Jerusalem, 1951), the first to meet after the proclamation of the state. The Congress committee charged with reformulating the Zionist program was headed by Ezra Shapiro (U.S.). Rather than abolishing the Basle Program and replacing it by a new one, the committee proposed completing it by a declaration that was officially styled “the task of Zionism.” Generally known as the Jerusalem Program, this document reads as follows: “The task of Zionism is the consolidation of the State of Israel, the ingathering of the exiles in Erez Israel and the fostering of the unity of the Jewish people.” The Basle Program was retained and its first sentence – as well as the whole Jerusalem Program – was incorporated into the new constitution of the World Zionist Organization of 1960. There were several reasons for the affir-

mation of the Basle Program. First, a majority could not be found at the Congress for an entirely new reformulation of the goal and aim of Zionism. There were differences of opinion between the delegates from the United States and other English-speaking countries on the one hand and Israel and some Diaspora countries on the other, concerning the “Redemption of Israel through the Ingathering of Exiles” and other propositions. Further, it was felt that, at a time when little more than 10% of the Jewish people were living in the State of Israel, the “home” mentioned in the Basle Program could not be regarded as fully established. The desire to observe a time-honored tradition and to emphasize the continuity of the Zionist movement also played a part in the decision to retain the original platform of the Zionist Organization.

After the Six-Day War in 1967, when the Jewish people all over the world had shown its solidarity with embattled Israel, at least two points of the Jerusalem Program – those regarding the consolidation of the state and the unity of the Jewish people – had become common ground for the overwhelming majority of all Jews. It was felt, therefore, by many Zionists that the Jerusalem Program had lost much of its distinctive Zionist character, precisely because it was so widely accepted. The demand was increasingly voiced to keep the Basle Program unchanged but to revise the Jerusalem Program by making it more outspokenly Zionist. This revision, prepared by the Zionist Executive, was accomplished at the 27th Zionist Congress (Jerusalem, 1968). The Revised Jerusalem Program read as follows: “The aims of Zionism are: the unity of the Jewish people and the centrality of Israel in Jewish life; the ingathering of the Jewish people in its historic homeland Erez Israel through *aliyah* from all countries; the strengthening of the State of Israel which is based on the prophetic vision of justice and peace; the preservation of the identity of the Jewish people through the fostering of Jewish and Hebrew education and of Jewish spiritual and cultural values; the protection of Jewish rights everywhere.” This Revised Jerusalem Program was not merely an amplification and elaboration of the 1951 version; it introduced new points, some of which had been included in minority proposals at the 23rd Congress but had not been passed by the Plenary Session. These are the postulates of immigration from all lands; of Jewish and Hebrew education, as well as emphasis on the centrality of Israel in the life of the Jewish people and, consequently, of every Zionist.

[Aharon Zwergbaum]

BASMAN BEN-HAYIM, RIVKE (1925–), Yiddish poet. One of the leading Yiddish poets of the post-Holocaust period, she was born in Vilkomir (Lithuania) and survived the Vilna Ghetto and the forced labor camps of World War II. In 1947 she immigrated to Palestine and participated in the War of Independence. After training as a teacher, she studied literature at Columbia University in New York and was a co-founder of

the literary movement *Yung Yisroel*. Her poetry, which problematizes the tensions between an annihilated world and a new homeland, attempts to come to terms lyrically with the Holocaust while affirming life in all its manifestations. A sober poetic style and a boldly visual lexical metonymy express great sensitivity, quiet joy, and restrained sorrow. The poems on the death of her husband (Mulah ben Hayim) are elegiac and pantheistic. Her book publications include: *Toybn baym brunem* ("Doves at the Well," 1959), *Bleter fun vegn* ("Leaves on Paths," 1967), *Likhtike shteyner* ("Glittering Stones," 1972), *Tseshotene kreln* ("Scattered Pearls," 1982), *Onrirn di tsayt* ("Touching Time," 1988), *Di shtilkeyt brent* ("Burning Silence," 1992), *Di erd gedenkt* ("The Earth Remembers," 1998), and *Oyf a strune fun regn* ("On a String of Rain," 2002).

[Astrid Starck (2nd ed.)]

BASNAGE, JACQUES CHRISTIAN (also called **Basnage de Beauval**; 1653–1725), Protestant divine and historian. Basnage was born in Rouen, France. In 1676 he became pastor there but after the revocation of the Edict of Nantes he accepted a call first to Rotterdam (1686) and later to the Hague (1691). He wrote several books, the most famous being *L'histoire et la religion des Juifs depuis Jésus Christ jusqu'à présent* (5 vols., 1706–11; Eng. *The History and Religion of the Jews from the time of Jesus Christ to the Present*, 1708), which was praised by Voltaire. The book was intended to supplement and continue the history of Josephus, but is marred by the author's inadequate knowledge of Hebrew, which obliged him to rely on Latin translations of Jewish sources and authors. He made use of the works of Buxtorf and Arias Montano and other Christian scholars. Despite Basnage's dry style and occasional inability to control the vast material, his book enjoyed great popularity and was the basis for later, more informed Jewish histories. In 1713 Basnage published another book on Jewish history *Antiquités judaïques ou Remarques critiques sur la république des hébreux*. His books are important as the first comprehensive and truly erudite history of the Jews in the Christian era, filling a gap between early Jewish historical writings and modern Jewish historical research.

[Benzion Dinur (Dinaburg)]

BASOLA, MOSES BEN MORDECAI (I) (1480–1560), Italian rabbi. Basola was apparently of French extraction, since he signed himself "Zarefati" ("The Frenchman"); it has been conjectured that his surname is identical with Basilea, i.e., Basle. From the age of nine he resided in Soncino. Basola served as teacher and tutor in the household of the banker Moses Nis-

sim of Poligno in Pesaro. After he was ordained as a rabbi by R. Azriel *Diena of Sabionetta in 1535 he became a rabbi in Ancona and was the head of a Jewish academy (yeshivah) there and also a district rabbi of Marches. He was also involved in financial ventures with his son Azriel, and from 1554 owned a bank in the city of Rocca in the Marches. In the years 1557–58 he was a rabbi in Pesaro. Shortly afterward he immigrated to Erez Israel and settled in Safed, where he died.

Although Basola's halakhic decisions have never been collected, some have been preserved as independent documents while others have been appended as approbations to rabbinic decisions issued in his day. Both types can be found in the collected responsa (published and manuscript versions) of his contemporaries. He had a central role in some of the halakhic debates and affairs that electrified Jewish society in Italy and elsewhere. For example, he took a strong stand against the planned international boycott of Ancona promoted by the Ottoman sultan's courtiers, Don Joseph *Nasi and Dona Gracia *Nasi. The courtiers' plan to shift the center of commerce between Italy and the East from Ancona to Pesaro was sparked by Pope Paul IV's execution of 25 *Conversos who had settled in Ancona. Basola joined other rabbinic figures and the Anconan and Levantine merchants whose livelihood was threatened (and who feared the wrath of the local authorities) in opposing the short-lived boycott that began in July 1556. He was deeply involved in the dispute over the printing of kabbalistic (Jewish mystical) works, which was significantly in Italy in the years 1557–58. Leone *Modena (1571–1648) testified that Basola was "a great sage in Kabbalah," but no kabbalistic works by Basola are extant. He even made a specific prediction that the "end of days," namely redemption, would occur between 1575 and 1578. Basola's contacts in the world of Kabbalah extended to Christian kabbalists. He was particularly close to the French-Christian kabbalist and Hebraist Guillaume *Postel. In 1521 Basola went as pilgrim from Venice to Erez Israel, remaining there for a year and a half. His travelogue appeared as an anonymous text in Livorno (1785) in a collection of treatises called *Shivhei Yerushalayim* ("Praises of Jerusalem") which was edited by Jacob b. Hayyim. With the publication of the Itzhak Ben-Zvi edition of this travel book in Jerusalem in 1938 the identity of its author was definitively established. The work is remarkable for its clarity, critical faculty, and clear delineation of economic and social conditions. At the end are appended an account of the organization of Jewish communal life in Jerusalem, reports on the (mythical) river *Sambatyon, and advice to Jewish sea travelers. Basola's book is not only a travel diary that records the impressions of the pilgrim as he prays at a venerated gravesite or enjoys Jerusalem's unique urban atmosphere. Rather, Basola envisioned his treatise primarily as a useful guide whose purpose was to provide European Jewish pilgrims and potential settlers in Erez Israel with helpful information for planning their voyage.

MOSES BASOLA (II) (16th century), kabbalist originally from Safed and possibly the grandson of Moses Basola I, settled in Italy, where he edited, together with Gedaliah b.

Moses Cordovero, *Or Ne'erav* (a compendium of *Pardes Rimmonim*, Venice, 1587) and *Tomer Devorah* (Venice, 1589), both by Moses Cordovero.

MOSES BASOLA (III) (16th century), properly Della Rocca, was grandson through his mother of Moses Basola I. He was the teacher of Leone *Modena at Ferrara (1582–84). Subsequently he went to Cyprus where he died. Modena wrote a poem in his memory, which can be read either as Hebrew or Italian.

[Cecil Roth / Avraham David (2nd ed.)]

BASRA, port in southern Iraq, on the Shaṭṭ al-Arab, the outlet into the Persian Gulf of the rivers Tigris and Euphrates. Jews settled there under the *Umayyad regime and one of the nine canals near the town is called Nahr al-Yahūd (“River of the Jews”). Jews also settled in Ubulla, then the port of the town of Basra and now the site of Basra. Toward the end of the Umayyad caliphate, Māsarjawayh, a Jewish physician from Basra, gained fame for his Arabic translations of Greek medical books. In the first generation of *Abbasid rule, the court astrologer was the Jew Misha b. Abra, called Māshāallah. Besides many artisans and merchants, the Basra Jewish community comprised many religious scholars, including Simeon Kayyara of Ṣabkha (suburb of Basra), who wrote *Halakhot Gedolot* about 825 C.E. The sages of Basra were in close contact with the academy of *Sura, to which the community sent an annual contribution of 300 dinars. In the tenth century, when the academy closed, the last *Gaon*, Joseph b. Jacob, settled in Basra. But until about 1150 the Jews of Basra continued to direct their questions on religious matters to the heads of the yeshivah in Baghdad, and especially to *Sherira Gaon and his son *Hai Gaon. From these questions, it appears that the Jews of Basra had close commercial ties with the Jews of Baghdad. Both a Rabbanite and a *Karaites community existed in Basra. A Karaites, Israel b. Simḥah b. Saadia b. Ephraim, dedicated a *Ben-Asher version of the Bible to the Karaites community of Jerusalem. In the 11th century, Basra was gradually abandoned as a result of civil wars in Mesopotamia; and many of its Jews emigrated. Solomon b. Judah (d. 1051), head of the Jerusalem yeshivah, mentions religious scholars and physicians from Basra in Palestine and Egypt.

However, throughout the Middle Ages there remained an important community in Basra. *Benjamin of Tudela (c. 1170) reports that approximately 10,000 Jews, including many wealthy men and religious scholars, lived in the town. He also mentions the grave north of the town, believed to be that of *Ezra and also venerated by the Muslims. According to an early 13th century letter by Daniel b. Eleazar b. Nethanel Hibat Allah, head of the Baghdad yeshivah, there was also a

synagogue in the town named for Ezra. When the *Mongols conquered Iraq in the mid-13th century, Basra surrendered and was not severely damaged. However, when Tamerlane conquered Mesopotamia in 1393, many Jews were killed and all the synagogues in the town were destroyed. Nevertheless, a small community continued to exist.

The community regained its importance during the 18th century. Its wealth increased; rich landowners in the community liberally distributed alms and even sent contributions to Erez Israel. The liturgical poem *Megillat Paras* (“Persian Scroll”) by the emissary from Hebron, Jacob Elyashar, describes the siege of Basra by the Persians and the town’s deliverance in 1775, when the Jewish minister of finance, Jacob b. Aaron, who had been captured, was released. Afterward, Nisan 2nd – the day on which the siege was lifted – was celebrated in Basra as the “Day of the Miracle.” Jews played such a vital role in the commercial life of Basra that in 1793 the representative of the East India Company was forced to live in Kuwait for nearly two years, because he had quarreled with the Jewish merchants. In 1824 David d’Beth Hillel reported 300 Jewish households belonging to merchants and artisans in Basra and a Jewish finance minister. During the persecutions of Jews which took place under the rule of Da’ūd Pasha in the early 19th century, several wealthy members of the Basra community emigrated to India. The traveler, Benjamin II, mentions that in 1848, he found about 300 Jewish families in Basra. But in 1860 Jehiel Fischel, an emissary of the rabbis of Safed, reports 40 Jewish families in the town out of a population of 12,000. After the British occupation in 1914, the number of Jews increased from 1,500 to 9,921 in 1947, when Jews constituted 9.8% of the total population. Most of the Jews were traders and many worked in the administration service of the railroads, the airport, and the seaport. The legal status of the community was regulated by a 1931 law, according to which a president and a chief rabbi were assigned to head it. A boys’ school was founded by the Alliance Israélite Universelle in 1903, and later became a high school. In 1950 it had 450 pupils. In 1913 an Alliance Israélite Universelle girls’ school was founded, and attended in 1930 by 303 pupils. All schools were under the supervision of the community committee. In the 1930s, a theological group was formed and headed by the Jew Kadduri Elijah ‘Aani (who went to Palestine in 1945 and died in Jerusalem). The community excommunicated this group, and its Jewish members were forced to establish their own synagogue, cemetery, and slaughter-house. A Zionist association, formed in Basra in 1921, was not allowed freedom of action.

[Eliyahu Ashtor]

Modern Period

In May 1941, under the pro-Nazi regime of Rashīd ‘Āli al-Kailānī, Jewish shops were looted by an incited mob. In 1942 the newly founded Zionist movement of Basra trained Jewish youngsters to use arms in anticipation of further attacks and organized groups for **aliyah*. After a few years of relative calm, the Jews were again in danger. In 1948, with the decla-

ration of the State of Israel, a military regime was declared in Iraq and many Jews were arrested and accused of cooperating with Israel. In September 1948, Shafiq Adas, a Jewish millionaire, was accused of selling arms to Israel via Italy. In fact he dealt with scrap metal left behind by the British forces. He was sentenced to death and fined £5 million; he was then hanged in front of his home in Basra. As the wave of arrests continued, thousands of Jews tried to leave Iraq and reach Israel using clandestine routes. Most of them arrived in Basra, and in 1949–50, the city served as a center for the flight of Jews to Iran, on their way to Israel, with the Jewish population rising to 13,000. Thousands were helped by smugglers to cross the Shatt al-‘Arab to the Iranian shore. Under ‘Abd al-Karīm Qāsim’s military regime (1958–63), the Jews were given some freedom and civil rights, but after the Ba‘athist counterrevolution, they were again persecuted. In 1969, many of Basra’s Jews were arrested and transferred to *Baghdad. Nine of them were hanged. In 1968 fewer than 300 Jews were living in Basra. After American and British forces entered Iraq in 2003 and put an end to Saddam Hussein’s dictatorship, the few remaining Jews in Basra and Baghdad emigrated to Israel, with the help of Jewish organizations.

BAŞRI, MEER (1911–), Iraqi author and economist. Active in Baghdad commercial life, Başri published a volume of essays on economics (1948) and two collections of short stories, notably *Rijāl wa-Zilāl* (“Men and Shadows,” 1955). Unlike most of Iraq’s Jewish writers, Başri did not immigrate to Israel and made no mention of Jews or Judaism in his works of fiction.

[Shmuel Moreh]

BASS (Bezprozvany), HYMAN B. (1904–1983), Yiddish educator and essayist. Born in Vilnius (now Lithuania), Bass immigrated to New York in 1922 and taught in Yiddish schools. From 1953 he served as executive secretary of the *Congress for Jewish Culture and in 1966 as president of the Jewish Book Council of America. He edited textbooks for Yiddish schools and wrote extensively on Jewish education. His book of essays *Undzer Dor Muz Antsheydñ* (“Our Generation Must Decide,” 1963), embodied his ideas on Jewish education and cultural survival. S. *Dubnow, Y.L. *Peretz, and Chaim *Zhitlowsky

were his mentors and he adapted their ideas to a mid-20th century American Jewish context.

[Sol Liptzin]

BASS (or Bassista; Heb. בַּסָּיִטָא), **SHABBETAI BEN JOSEPH** (1641–1718), the first Jewish bibliographer. Bass’s parents were killed in a pogrom in Kalisz (Poland) by the Cossacks in 1655, but he and his elder brother were saved and fled to Prague. Possessing a pleasant voice, Bass was engaged as an assistant singer (hence his nickname Bass) to the cantor Loeb at the Altneu synagogue (Altneuschul) in Prague. In Prague he acquired a thorough knowledge of the Talmud, and also a general education which included Latin. His love of books and a critical spirit drew him to publication and printing. In 1669 in Prague he printed a revised edition of the Yiddish commentary on the Pentateuch and the Five Scrolls by Moses Saertels, *Be‘er Moshe*, with an appendix on “grammatical rules.” As there was no complete list in Hebrew of Jewish literature, he undertook to compile one. Between 1674 and 1679 Bass visited libraries in Poland, Germany, and Holland. In Amsterdam he studied the art of printing and proofreading, and published *Massekhet Derekh Erez*, a guide book for travelers (1680); the Pentateuch with a super-commentary on Rashi, *Siftei Hakhmamim* (1680), a popular commentary often reprinted; and *Siftei Yeshenim* (1680), a list in Hebrew of some 2,200 Hebraica and Judaica. This was the first Jewish bibliography in Hebrew giving, apart from the names of the books, the name of the author, content, format, place and year of printing, and sometimes also where it could be found. He also listed manuscripts. In some copies a prayerbook was appended to the list. In 1688 Bass obtained a permit to set up a Hebrew printing press at Auras, and this was shortly afterward transferred to *Dyhernfurth. The first book printed by Bass was Samuel b. Uri Shraga’s commentary *Beit Shemu‘el* (1689), on Shulḥan Arukh *Even ha-Ezer*. He also successfully engaged in bookselling. When the Jesuits accused Bass of spreading hatred against the Christians and the government, he at first succeeded in refuting the accusations; but in 1712 the Jesuits repeated the accusations and he was arrested. In the trial he succeeded in proving the ignorance of his accusers and was released. His sons and grandsons continued to print books at Dyhernfurth up to the second half of the 18th century.

[Abraham Meir Habermann]

BASSAN, ABRAHAM HEZEKIAH BEN JACOB (18th century), proofreader and poet. Abraham’s father, JACOB, was the rabbi of the Spanish and Portuguese community of Hamburg. From 1735 to 1756 Jacob lived in Amsterdam and in 1755 published an order of service for the fast day proclaimed on the occasion of the great earthquake in Lisbon.

Abraham Hezekiah was proofreader for the Hebrew press in Amsterdam. He is mentioned as the proofreader of Benjamin Raphael Dias Brandon's *Orot ha-Mitzvot* (1753) to which his father wrote an approbation, and to which Abraham contributed an introduction and poem consisting of 13 stanzas. Other poems by Abraham were published in works by various authors: in the *Gemul Atalyah* (1770) of David *Franco-Mendes, in the *Se'ah Solet* (1757) of Raphael b. Gabriel Norzi, and in the *Maskiyyot Kesef* (1760) of Mordecai b. Isaac Tamah. In about 1773 he moved to Hamburg where he succeeded his father as rabbi of the local Spanish and Portuguese community. He was the author of a book of eulogies, *Sermões Funebres* (Amsterdam, 1753), written in Spanish. It is doubtful that he is the author of the *Yashresh Yaakov* (Nuremberg, 1768), a work on grammar and the text of the prayer book, as has been conjectured (see BenJacob, *Ozar*, 234 no. 503).

[Yehoshua Horowitz]

BASSANI, GIORGIO (1916–2000), Italian writer. Bassani, who was born in Bologna, lived for many years in Ferrara and was active in the anti-Fascist Resistance. After World War II he moved to Rome, but Ferrara, and especially its Jewish community, remained at the heart of Bassani's literary world. His first published work was a volume of stories and poems entitled *Una città di pianura* (1940), published under a pseudonym because of the Fascist antisemitic laws. In 1945 he made his reputation with a book of poems, *Storie di poveri amanti*. His collection of short stories *Cinque storie ferraresi* (1956) deals with provincial life in Ferrara. One of them, "Una lapide in via Mazzini" is the story of a Jewish survivor of a concentration camp: his presence is an embarrassing reminder to the people of his native town, who wish to forget the tragedy. *Gli occhiali d'oro* (1958; *The Gold-Rimmed Spectacles*, 1960) is the story of two men rejected by society, one because he is a homosexual, the other because he is a Jew. The Jewish theme is omnipresent in Bassani's fiction: Jewish identity is a paradigm of the malaise of modern man, who has lost his stable system of values. This theme is intertwined with the theme of memory, particularly in *Il giardino dei Finzi-Contini* (1962; *The Garden of Finzi Contini*, 1965), which has been translated into a number of languages, including Hebrew. Reality and fiction are mixed in this novel, which deals with the fate of an old and wealthy Jewish family during the Fascist years and the war, and stops just before its deportation. In *Lairone* (1968; *The Heron*, 1969) a Jewish bourgeois who leaves his property to his Christian wife and the Communist peasants represents the European bourgeois unable to establish a healthy relationship with the surrounding world. The association of a problematic Jewish identity with the crisis of the contemporary bourgeoisie is also a key theme of *Dietro la porta* (1964; *Behind the Door*, 1972), the most autobiographical of his novels. Jewish characters are also present in *Lodore del fieno* (1972; *The*

Smell of Hay, 1997). In 1980 Bassani revised his short stories and novels and published them in one volume under the title *Il romanzo di Ferrara*. His poems were collected in 1982 in *In rima e senza*; among them some texts dealing with the Jewish condition, such as "Le leggi razziali" (1974). *Di là dal cuore* (1984) is a collection all of Bassani's critical essays. From 1948 to 1961 he edited the literary review *Botteghe Oscure* and from 1948 to 1961 he was a vice president of Italian radio and television; for many years he was also president of Italia nostra, an association for the preservation of the country's artistic and natural heritage. In addition he taught the history of theater at the National Academy of Dramatic Art in Rome.

[Alessandro Guetta (2nd ed.)]

BASSANI, MORDECAI (**Marco** in Italian; the name **Hezekiah** was added on the occasion of his last illness, c. 1632–1703), Italian rabbi and polemicist. In 1666 he became preacher to the Ashkenazi community of Verona, and in 1680 he became its rabbi; in 1695 he was appointed rabbi of the entire Verona community. He was the author of *Sefer Bikkurim* (Venice, 1710) containing deathbed prayers and usages (adapted from *Ma'avar Yabbok* of *Aaron Berechiah ben Moses of Modena, and *Shenei Luhot Ha-Berit* of Isaiah *Horowitz) written for the Bikkur Holim fraternity of Verona, but later widely adopted. His treatise on divorce, entitled *Mikhtav le-Hizkiyyah*, and one on *halizah*, entitled *Ma'amar Mordekhai*, were included by his great-grandson Menahem Navarra in his *Penei Yizhak* (Verona, 1743). In his will he mentions a collection of "moral sermons" which he had compiled (*Avnei Binyan*, 1 (1938), 65). He was friendly with the Roman Catholic polemicist Fra Luigi Maria Benetelli. His criticisms of Benetelli's polemical work, *Le saette di Gionata...* (Venice, 1703) together with those of Samson *Morpurgo and Abraham Joel *Conegliano prompted Benetelli's rejoinder, *I dardi rabbini infranti...* (Venice, 1705). In this work Benetelli speaks in the highest terms of the gentle manner, great charity, and admirable character of Bassani. Bassani is also the author of a lengthy responsum on the relationship between the Ashkenazi community of Verona and the smaller Sephardi community there.

BASSANO, small town in Veneto (Northern Italy). The first mention of Jews in Bassano is from a document of October 7, 1264; a certain Aicardo was said to own a vineyard. Only from the beginning of the 15th century, when Bassano passed over to

Venetian rule, is there more information. A certain Calimano had a bank in the town in 1404. Venetian authorities allowed Jews to settle in the town. However, moneylenders could only stay for a short time. Via Bricito was known as Via dei Zudei, because of the presence of many Jewish banking establishments. A notarial deed of 1435 reveals, however, that by then Jews resided in all parts of the city. Freedom of worship was granted by the Venetian Republic, but Jews were not allowed to have a synagogue and had to observe their festivals "in the houses in which they dwelled." Relations between the local population and the Jews were quite good. Once in 1486 some Bassano city dwellers attended a Jewish wedding. They were excommunicated by church authorities, but the town council had the excommunication repealed. It is not known if Bassano Jews had to wear the yellow badge, obligatory according to the Venetian decree of 1429. The preaching of Bernardino da Feltre and the creation of **monti di pietà* (savings and loan agencies) in 1423 brought a decline to the Jewish community. In 1468, a decree of perpetual banishment was issued against them. Nevertheless they returned. In 1475, following the ritual murder charge concerning Simon of **Trent*, the municipality of Bassano requested permission from Venice to expel the Jews. They were banished again by the city council in 1481. However, they were soon readmitted. During the War of the League of Cambrai (1508), the Jews in Bassano paid a heavy tribute, but this did not prevent their expulsion from Bassano at the end of the war in 1509. The banks, however, closed completely only around 1510.

BASSANO (Bassan, Bassani), name of Italian family deriving from the town **Bassano*. In the 17th and 18th centuries, it produced several rabbis and scholars, outstanding among whom are: MORDECAI **BASSANI* (c. 1632–1703), rabbi of Verona and ISAIAH BEN ISRAEL HEZEKIAH (d. 1739), rabbi in Cento, Padua, Ferrara, and Reggio Emilia. Many of his responsa are included in the second volume of *Todat Shelamim* by his son Israel (see below) and in the *Paḥad Yizḥak* of Isaac **Lampronti* and *Shemesh Zedakah* of Samson **Morpurgo*. His other responsa, glosses on the Talmud, a number of poems, notes on the gospels, sermons, and a book, *Kur le-Zahav*, comprising critical notes on Solomon **Algazi's Halikhot Eli*, remain in manuscript. His pupils included Moses Ḥayyim **Luzzatto*. His son, ISRAEL BENJAMIN (1701–1790), one of the outstanding Italian Jewish poets of his day, published two collections of Hebrew poetry accompanied by Italian versions. He dedicated both to Francesco III of Este, duke of Modena (1750–53), calling the second *Corona Estense*. His *Todat Shelamim* (Venice, 1741, 1791) includes his own halakhic writings and responsa by

his father. According to the Christian scholar G.B. **De' Rossi*, he was highly esteemed in Jewish circles.

BASSEVI OF TREUENBERG (Treuenburg), JACOB (1570–1634), Court Jew descended from a noted Prague family. He was probably the first European Jew outside Italy to be ennobled. Bassevi and his brother Samuel engaged in large-scale trading and in 1599 obtained a safe-conduct from the emperor exempting them from the restrictions imposed on most Jews. In 1611 Matthias II confirmed Bassevi's privileges and added the right of settling in Vienna. In 1622 because of the emperor's increased need of money during the Thirty Years War, Bassevi formed a consortium with Prince Liechtenstein and the imperial general Wallenstein, which leased the mint for an enormous sum and issued debased coinage. Bassevi, whose profit per silver mark was the lowest within the consortium, provided the financial expertise, and bought most of the necessary silver abroad. When currency dropped to one-seventh of its former value, the depreciated thaler was nicknamed the "Schmilesthaler," the Thaler of Shmil. In 1622 Ferdinand II granted Bassevi a coat of arms. This, however, evidently still did not endow Bassevi with unqualified noble rank, for shortly afterward he requested other privileges connected with his new status, which were nearly all granted.

Like other Court Jews, Bassevi took an active part in Jewish communal life. After the imperial troops left Prague in 1620, Bassevi organized a guard to defend the Jewish quarter from pillage. He obtained for the Jews in Prague in 1623 some 40 houses bordering on the Jewish quarter which had been confiscated from the rebels. He also paid 12,000 Reichsthaler toward the enormous indemnity demanded from Yom Tov Lipmann **Heller* in 1629. As head of Prague Jewry for several years, Bassevi was largely responsible for apportioning the communal taxes, as a result of which the opposing faction complained about him to the authorities. After Prince Liechtenstein's death in 1627 the authorities took steps against the former members of the consortium, the complaints providing a welcome excuse for confiscating Bassevi's property and arresting him (1631). However, because of Bassevi's privileged status, Wallenstein succeeded in securing his release (1632). Bassevi then lived at Wallenstein's residence in Jicin, as fiscal administrator of his duchies. Bassevi survived the murder of Wallenstein in 1634 by only a few weeks and was buried at Mlada Boleslav. After his death all his privileges were declared illegal and abrogated.

Bassevi, who maintained his Jewishness while holding his high position, was considered a "princely Jew" ("Juden-

fuerst”) by his fellow Jews – a fact which seems to have been of some comfort to them in those dark days.

BASSIN, MOSES (Moyshe; 1889–1963), Yiddish poet. Bassin, who was born in Nivki, Belorussia, deserted the Russian army in 1907 and immigrated to New York. From 1909 he contributed lyrics, essays, folk ballads, and children’s songs to American Yiddish journals. His reputation rests on two works: a two-volume, 600-page anthology, *Finf Hundert Yohr Yidische Poezye* (1917, 1922²), with notes on the earlier selections by Ber *Borochof, which became a standard work; and an anthology of American Yiddish poetry *Amerikaner Yidische Poezye* (1940), encompassing 31 poets. Bassin’s own lyrics appeared in his anthologies but were never collected in book form.

[Moshe Rosetti]

°**BASSUS, LUCILIUS** (d. 72 C.E.), Roman governor of Judea after the fall of Jerusalem in 70 C.E. Bassus was instructed to subdue the fortresses of *Herodium, *Machaerus, and *Masada, which still remained in Jewish hands. He first attacked Herodium, which fell without a battle. Then he marched on Machaerus, which was so strongly fortified as to “inspire its occupants with high hopes of security.” The defenders fought bravely until one of their leaders, Eleazar, was captured and the Romans threatened to crucify him opposite the walls. The defenders then agreed to surrender the fortress if Eleazar’s life were spared. Bassus kept his promise and allowed the occupants to escape, but followed some *Sicarii who had escaped to a forest called Jardes, where they were all killed. Bassus died as he was preparing to begin operations against Masada. It was during his administration of Judea that Jewish-held lands were confiscated to become imperial domain, and that the poll-tax of the *Fiscus Judaicus was put into operation.

[Edna Elazary]

BAS TOVIM, SARAH (18th century), author of highly popular *tkhines*, women’s supplicatory prayers. Bas Tovim was born in Satanov in Podolia (present-day Ukraine), the great granddaughter of Rabbi Mordecai of Brisk. Her works con-

tain a strong autobiographical voice: She refers to herself as “I, the renowned woman Sarah bas Tovim, of distinguished ancestry,” and tells the story of her fall from a wealthy youth to an old age of poverty and wandering. Sarah composed two works published in the 18th century, *Tkhine shaar ha-yikhed al oylemes* (The *Tkhine* of the Gate of Unification concerning the Aeons) and *Tkhine shloyshe sheorim* (The *Tkhine* of Three Gates). Like other *tkhine* authors, Sarah often includes portions of earlier works; these excerpts from other sources date her *tkhines* to the middle of the 18th century. Because 18th-century *tkhines* published in Eastern Europe only rarely contain a notice of place or date of publication, it is very difficult to establish the bibliographic history of her works.

Tkhine shaar ha-yikhed al oylemes (a title with kabbalistic overtones) contains one long *tkhine* to be recited *Mondays and Thursdays (considered minor penitential days) and on fast days. The work concludes with a *tkhine* to be said before making memorial candles for Yom Kippur, a theme which recurs in *Tkhine shloyshe sheorim*, her better-known work. This composition contains *tkhines* for the three women’s *mitzvot* (the first “gate”), the Days of Awe (the second “gate”), and the New Moon (the third “gate”). The most distinctive material is found in the second and third “gates.” Sarah’s powerful *tkhine* calls on the forefathers and foremothers of the Jewish people to aid their descendents with a healthy and prosperous New Year, and also to bring the Messiah, the end of death, and the resurrection of the dead. The *tkhine* for the Sabbath before the New Moon contains a great variety of material to be recited at the Blessing of the New Moon, much of it drawn from kabbalistic sources.

The figure of Sarah bas Tovim lived on in popular legend and in the literary imagination of Yiddish authors. Because her works were so popular, 19th-century *maskilim* who wrote *tkhines* to sell often attached her name to their own creations. In addition, Sholem Yankev *Abramovitch (Mendele Moykher Sforim) mentions Sarah’s *tkhines* in his fictional autobiography, *Shloyme, Reb Khayims (Ba-Yamim ha-Hem, “In Those Days”)*, which includes a description of women making memorial candles before Yom Kippur, reciting a version of Sarah’s *tkhine* for *kneytlakh legn*. Sarah also became the subject of a short story, “Der ziveg; oder, Sore bas Tovim,” (“The Match; or, Sarah bas Tovim”) by I.L. *Peretz, in which she appears as a sort of fairy godmother, helping those who faithfully recite her *tkhines*.

[Chava Weissler (2nd ed.)]

BAT (Heb. חַיָּטוּב; *atallef*). About 20 species of insect-eating bats are found in Israel and one, the *Rousettus aegyptiacus*, which feeds on fruit. The bat is actually a mammal, but because of its wings which enable it to fly, the ancients were in

doubt whether it was to be classified with birds or mammals. In the Bible it is last in the list of the unclean birds (Lev. 11:19) but the Talmud declares that “although it lays eggs, it suckles” (Bek. 7b). Apparently the rabbis attributed to the bat the eggs laid by other birds in their caves. The bat is long-lived (up to 30 years) and many legends were woven about its development (BK 16a). The bat causes extensive damage to fruit trees, particularly the date palm, as is indicated in the Jerusalem Talmud (TJ, Pe’ah 8:1, 20d).

[Jehuda Feliks]

°BAṬĀLYAWSĪ, ABU MUHAMMAD ABDALLAH IBN MUHAMMAD IBN AL-SĪD AL- (1052–1127), Arab grammarian, philosopher, and author. He was born in Badajoz (Arabic: Baṭalyaws), Spain, is known to have lived in Saragossa for some time, and died in Valencia. His main philosophical work is the *Kitāb al-Ḥadā’iq* (“The Book of Circles”) which was translated independently into Hebrew, in whole or in part, three times. The book was quoted widely by Jewish religious philosophers down to the beginning of the 17th century. It is composed of seven chapters in each of which an explanation is given of a statement of the neoplatonic philosophers. The separate chapters center on the following themes:

(1) The procession of existing things from the First Cause imitates an imaginary circle. The explanation of this statement is that from God, the cause of all causes, all existing things emanate in hierarchically descending order, that is, the ten intellects, the soul, form, and matter. Then minerals, plants, animals, and man come into being in hierarchically ascending order. The souls of men are also arranged in ascending order from the vegetative, vital, rational, philosophic to the prophetic which contacts the divine and closes the circle. According to this doctrine, the soul of the prophet is intrinsically superior to that of the philosopher. (2) Man’s knowledge imitates an imaginary circle. This may be understood in two ways. First of all, man begins his quest for knowledge with mathematics, and then rises to physics and metaphysics. He then descends to politics and reaches himself once again. Secondly, he descends from himself to the knowledge of animals, plants, minerals, the four elements, matter and then rises to contemplate form, the soul, and the Active *Intellect in which man’s rationality has its source. (3) The individual soul may conceive the forms which are in the universal intellect. (4) Number is composed of imaginary circles in each of its stages. (5) The attributes of God should be expressed negatively. (6) The Creator knows Himself alone. (7) The soul is immortal. I. Brill’s assertion that the work was wrongly ascribed to al-Baṭalyawsī is without foundation. The substitution of quotations from the Koran and Islamic traditional literature by citations from the Bible and Talmud is standard practice in the medieval Hebrew translations from Arabic which Moses

ibn *Tibbon followed in his translation. Some quotations from the Koran are translated and introduced by the formula: “One of the founders of the religions says . . .”

[Lawrence V. Berman]

°BATE, JULIUS (1711–1771), English Christian Hebraist. As a member of the Hutchinsonians (a Christian sect) he was involved in a controversy with Bishop William Warburton (1698–1779) on the latter’s *Divine Legation of Moses* (1737), and with Benjamin Kennicott (1718–1783) on the published emendations of the masoretic text (1751). Bate’s mastery of the Hebrew Bible is demonstrated in his most famous work *Critica Hebraica* (1767), a Hebrew-English dictionary in which the biblical words are reduced to their original roots and their specific forms illustrated and exemplified by passages cited at length from the Scriptures. A strong Christian piety pervades this work and his translation of the Bible which goes to the end of 11 Kings (1773). He wrote various pamphlets in defense of biblical mysticism.

[Zev Garber]

BATH, spa in Somerset, England. A fashionable resort from the 18th century, Bath early attracted Jewish residents, among them the physician Isaac *Schomberg, as well as visitors. Shortly after 1800, Moses Samuel, formerly warden of the Great Synagogue in London who had retired to Bath, organized a congregation there, and on his death in 1839 left money for building a synagogue. The community subsequently dwindled, and regular services had ceased by 1874. The synagogue closed in 1910. Short-lived congregations have since been set up more than once. By the 1960s there was no Jewish community in Bath, but in 2004 services were being revived under Progressive Jewish auspices.

[Cecil Roth]

BATH, BATHING. Bathing is referred to in the Bible not only for physical cleanliness but also for ritual purposes. Jacob charged his family to wash themselves before they built the altar at Beth-El (Gen. 35:3). Before the revelation at Sinai, the entire Jewish nation was bidden to sanctify themselves by washing their bodies and their garments (Ex. 19:10). Ritual immersion was associated with levitical purity and was stressed in the Book of Leviticus (see *Mikveh). When Jeremiah described the sinfulness of Israel, he exclaimed, “For though thou wash thee with niter, and take thee much soap” (Jer. 2:22), it still would not remove the sins of the nation.

Talmudic Period

The Talmud declared it forbidden for a scholar to reside in a city which did not contain a public bath (Sanh. 17b). Rome was said to contain 3,000 public baths (Meg. 68) and despite the animosity to the Romans they were praised by the rabbis for constructing baths in Palestine (Shab. 33b). It is related that Rabban Gamaliel utilized the Bath of Aphrodite in Acre although the image of the idol adorned the bath (Av. Zar. 3:4). Originally the baths were communal institutions (Ned. 5:5). Afterward, smaller baths were also built by private individuals (BB 1:6; 10:7) and competition between them to attract customers was permitted (BB 21b). The bath attendants received checks or tokens from intending patrons so they would know in advance how many to expect and what preparations to make (BM 47b and Rashi ad loc.). The larger baths contained separate areas for bathing in lukewarm water, hot water, and steam baths (Shab. 40a). On entering the bathhouse, the rabbis ordained the following prayer: "May it be Thy will, O Lord, my God, to deliver me from the flames of the fire and the heat of the water, and to protect me from a cave-in." Upon leaving, the individual recited, "I thank Thee, O Lord, my God, for having delivered me from the fire" (TJ, Ber. 9:6, 14b; cf. Ber. 60a). Hillel the Elder told his disciples that he considered bathing in the communal bathhouse a religious duty for just as the custodians scour and wash the statues of the kings, likewise must man, created in God's image and likeness, do to his body (Lev. R. 34:3).

Middle Ages and Modern Times

The public bath and adjoining *mikveh* were maintained by Jewish communities throughout the Middle Ages as part of the institutions of Jewish social life and welfare. Hygienic habits and the ritual requirements of the Jewish religion made the Jews regard bathing as part of their living routine during a period when bathing was generally considered a form of rare luxury in Europe. By the end of the 11th century, some Jewish communities erected imposing buildings to house their baths and regularly attended to their servicing and upkeep. The refusal of Christians to allow Jews to share the municipal baths and the fear that Jewish women might be molested there increased the need for separate institutions. The fact also, that, with the exception of Poland, Jews were prohibited from bathing in the same river as Christians finally led them to build their own bathhouses, which often became landmarks, such as the *Badehaus* of the Jews of Augsburg, or "Bakewell Hall" in London, which was probably originally "Bathwell Hall." In Moslem Spain, Ramon Berenger IV allowed his court physician, Abraham, to build the only public bathhouse in Barcelona, which his family ran from 1160 to 1199. In the Middle East, and in modern times, particularly in Eastern Europe, Jews became addicted to the "Turkish bath" which has found its way into Jewish folklore. Several ancient baths have been discovered in Erez Israel such as the swimming pool and hot baths that Herod built at *Herodium, which had waiting rooms, dressing rooms, hot rooms, and cool rooms with all

the comforts of the baths at Rome. Among the best-preserved and beautifully finished baths that have been uncovered in Erez Israel are those on Masada, where no less than four baths and one swimming pool were built by Herod. In the northern palace there is a small, private bathhouse finished in Roman style, and south of the palace there is a large swimming pool with cubicles for keeping clothes; Herod built a small bathhouse in the west palace as well, which was unusually heated by an oven in an adjoining room and fitted with a niche for an oil lamp. More important, however, are the remains of the large bathhouse near the north palace where more than 200 stands, the remnants of the piping system for the hot air, were discovered, as well as elaborate facilities for steam baths, cold baths, etc., adorned with frescoes and mosaics. At a later period the Zealots built a large bathhouse in the southern corner of Masada, consisting of a small *mikveh* and two connecting larger ones, which conform to *halakhah*. Near Tiberias are the remains of the hot, mineral baths of *Hamath of the Roman period.

BAT HEFER (Heb. בַּת הֶפֶר; "Daughter of Hefer"), urban community located in the *Hefer Plain in central Israel. The settlement is located near the border of Samaria, near *Tül Karm, and is part of the regional council of Emek Hefer. Its area is 0.4 sq. mi (1 sq. km.). The settlement was part of the "seven star" plan of Ariel *Sharon to establish settlements near the border of Samaria. Building began in 1994 and the first settlers arrived in 1996. At the end of 2002 the population of Bat Hefer was 4,610.

[Shaked Gilboa (2nd ed.)]

BATH-SHEBA (Heb. בַּת־שֵׁבַע, in 1 Chron. 3:5 בַּת־שֵׁבַע), wife of *David and mother of *Solomon. Bath-Sheba was originally the wife of *Uriah the Hittite, one of David's warriors. During the war against Rabbath-Ammon (11 Sam. 11), David saw Bath-Sheba and ordered her brought to his palace. When David knew that she was pregnant by him, he attempted to return Uriah to his house (see 11 Sam. 11:6–13). Failing to do so, he sought and found a pretext to have Uriah killed in battle (11:14–27); he then married Bath-Sheba. The prophet *Nathan rebuked David for this act (12:1–12), but subsequently took Bath-Sheba's side and supported the enthronement of her son Solomon (1 Kings 1:8ff.). She later agreed to present to Solomon *Adonijah's request for David's concubine *Abishag. In addition to Solomon, Bath-Sheba gave birth to at least three other sons, Shimea, Shobab, and Nathan (1 Chron. 3:5). It seems that her first son, who died soon after his birth because of the sin of his father, is included in this list (11 Sam. 12:13ff.).

According to 11 Samuel 11:3, Bath-Sheba was the daughter of Eliam, and according to 1 Chronicles 3:5, she was the daughter of Ammiel, who the rabbis of the Talmud (Sanh. 69b) identify with Eliam son of *Ahithophel the Gilonite (11 Sam. 23:34); hence the opinion of early commentators (Kimhi and Levi b. Gershom) and several recent scholars that the opposition of Ahithophel to David during the revolt of Absalom stemmed from his wish to avenge Uriah's death. Others believe that these opinions are unacceptable, because, if indeed Eliam was the son of the famous Ahithophel, the Bible would not have failed to mention the fact. It is also difficult to believe that Ahithophel, if he was the grandfather of Bath-Sheba, would have taken part in such an action which would undoubtedly have endangered the position of his granddaughter and her son in the royal court. On the other hand, there is reason to suppose that Bath-Sheba was of a family that existed in Jerusalem before its conquest by David.

[Yehoshua M. Grintz]

In the Aggadah

If she was Ahithophel's granddaughter, the prophecies which he believed foretold his own royal destiny, in fact applied to her (Sanh. 101b). Bath-Sheba was predestined for David; his sin was that he took her before the appointed time (Sanh. 107a). She was not guilty of adultery since it was the custom that soldiers going to war gave their wives bills of divorce which were to become valid should they fail to return and Uriah did fall in battle (Ket. 9b). She was a prophet in that she foresaw that her son would be the wisest of men. She is numbered among the 22 women of valor (Mid. Hag. to Gen. 23:1).

BATHYRA, place in the toparchy of Batanea (i.e., *Bashan, east of Golan) founded by Jewish military settlers from Babylonia. Desirous of defending his borders from attacks by the neighboring Trachonites, *Herod decided to settle a large number of Jews in the area of Bathyra with the further intention that it would serve also as a base for his own military offensives. Upon learning that *Zamaris, a Jew from Babylon, had crossed the Euphrates with five hundred horsemen and was staying near Antioch under the patronage of Saturninus, the governor of Syria, Herod offered them the territory for the proposed buffer-zone, promising to rescind all taxes and tributes. The Babylonians took possession of the land, building fortresses and a village named Bathyra. The settlers defended not only the local population from Trachonite brigandage, but also Jewish pilgrims from Babylonia on their way to Jerusalem.

The family of Zamaris became a major ally of Herod, supporting his policies as well as those of the two Agrippas.

Although Bathyra remained their base, members of the family also resided throughout the neighboring territories. Relatives of Philip, grandson of Zamaris, were among the prominent residents of Gamala at the beginning of the Roman War (66 C.E.). Philip played a vital if somewhat ambiguous part during that uprising, as well as in the events in Jerusalem on the eve of the outbreak of the war in 66. It was his task to secure Batanea from insurrection against Agrippa II and the Romans. Numerous scholars have made the connection between Bathyra and the rabbis referred to in the Talmud as "the sons of *Bathyra," who held high offices in Jerusalem until they were superseded by Hillel. However, it is improbable that there was any connection between the warriors of Bathyra and the rabbinical "sons of Bathyra."

[Isaiah Gafni]

BATHYRA, SONS OF (according to TB; in TJ known as "Elders of Bathyra"), members of a famous Jewish family who were prominent from the first century B.C.E. to the second century C.E. Some scholars conjecture that the family was named after the city of *Bathyra in northern Transjordan. It is inferred from talmudic sources that members of this family were the religious authorities of their time, but that when Hillel demonstrated his superior knowledge of Torah (on the question of whether the paschal offering overrides the Sabbath) "they set him at their head and appointed him *nasi* over them" (TJ, Kil. 9:4, 32b; Pes. 66a; BM 85a). As a result of this abdication they were regarded exemplars of humility; Judah ha-Nasi said of them "whatever I am bidden I am prepared to do except what the Elders of Bathyra did for my ancestor (Hillel), namely abdicating from their high office in order to elevate him" (TJ, Ket. 12:3, 35a). The talmudic sources do not specify their names. According to the Jerusalem Talmud they were *nesi'im*. In other talmudic sources, while they were not specifically designated as such, it is implied that they held the patriarchate before Hillel was appointed. According to Halevy, the Sons of Bathyra carried out the functions of the patriarchate when the Sanhedrin was not functioning (possibly at the beginning of Herod's rule). Apparently members of this family exercised influence even after the destruction of the Temple, when the Sanhedrin was in Jabneh. Johanan b. Zakkai was said to have consulted the Sons of Bathyra in regard to certain legal rulings. A number of *tannaim* known by this patronymic, e.g., Judah b. Bathyra, Joshua b. Bathyra, and Simeon b. Bathyra, presumably belonged to this family.

[Zvi Kaplan]

BAT KOL (Heb. בַּת קוֹל; lit. “daughter of a voice,” i.e., an echo of a heavenly voice, or a divine voice “once removed”), a heavenly or divine voice which revealed God’s will, choice, or judgment to man. According to rabbinic tradition, the *bat kol* was already heard during the biblical period. It proclaimed Tamar’s innocence; declared that the prophet Samuel had not materially benefited from his public position; and validated Solomon’s judgment in awarding the child to the true mother (Mak. 23b). Before the death of Moses, a heavenly voice proclaimed that God Himself would attend to his burial (Deut. R. 11:10), and after his death a *bat kol* heard over an area 12 miles square announced his demise (Sot. 13b). A *bat kol* informed David that Rehoboam and Jeroboam would divide his kingdom (Shab. 56b); and when Solomon sought to emulate Moses a heavenly voice rebuked him (RH 21b). According to the Talmud a *bat kol* was often heard at the death of martyrs. After the death of the mother and her seven sons (see *Hannah and Her Seven Sons), a voice proclaimed: “A joyful mother of children” (Ps. 113:9; Git. 57b). When Ḥanina b. Teradyon was cruelly executed, a *bat kol* called out: “R. Ḥanina b. Teradyon and the Roman who hastened his death have been assigned to the world to come” (Av. Zar. 18a). After R. Akiva’s execution, a “heavenly voice” resounded: “Happy art thou, R. Akiva, that thou art destined for the life of the world to come” (Ber. 61b). When a Roman officer sacrificed his life so that R. Gamaliel II would be spared, a *bat kol* declared: “This high officer is destined to enter into the world to come” (Ta’an. 29a).

With the cessation of prophecy, the *bat kol* remained the sole means of communication between God and man (Yoma 9b). In most instances, where reference is made to a *bat kol*, it refers to an external voice which is heard by the recipient of the message. However, at times the *bat kol* was only perceived in dreams (cf. Ḥag. 14b). The “heavenly voices” mentioned in stories concerning R. Bana’ah (BB 58a) and Rabbah b. Bar Ḥana (BB 73b–74a) also were heard in dreams (see Chajes in bibl.).

The authority granted to a *bat kol* in determining *halakhah* is discussed in two different talmudic passages. In one instance, after three years of controversy between Bet Shammai and Bet Hillel, the sages accepted a *bat kol*’s pronouncement that “the words of both are the words of the living God, but the *halakhah* is in agreement with the rulings of Bet Hillel” (Er. 13b). However, R. Joshua refused to abide by a *bat kol* which ruled in favor of R. Eliezer in his dispute with the sages regarding the ritual purity of the oven of “*Akhnai*” (BM 59b). R. Joshua explained that the Torah “is not in heaven” (Deut. 30:12), and therefore no attention is given to a “heavenly voice,” and it is rather the majority of the sages who determined the *halakhah*. Later commentaries accepted R. Joshua’s viewpoint, and explained that the *bat kol* was only effective in determining the ruling in the Bet Shammai and Bet Hillel controversies, since the sages were themselves in doubt whether to rule in accordance with the larger school of Bet Hillel or the more profound thinkers of Bet Shammai (Tos. to Er. 6b s.v. אֲחֵנַי).

[Aaron Rothkoff]

BATLANIM (Heb. בְּטָלָנִים; “men of leisure”), originally an honorable title conferred on those who either wholly or partly abstained from work to free themselves for community service. In ancient as well as medieval times there existed the institution of the *asarah batlanim* (“ten men of leisure”). The Mishnah (Meg. 1:3) states that a town was regarded as large if it had “ten *batlanim*” who “frequent the synagogue” (TB Meg. 5a; TJ, Meg., 1:6, 70b) and “abstain from work” (TJ, *ibid.*). Among the population of 120 who make a town “eligible for a Sanhedrin” (Sanh. 1:6) are included “the ten *batlanim* of the synagogue” (Meg. 17b). The ten verses of the Torah read publicly on Mondays and Thursdays “correspond to the ten *batlanim*” (BK 82a). R. Judah, characterized the “ten *batlanim*” as “those who, like ourselves, have no need of our studies” (TJ, Meg. loc. cit.), meaning, probably that they needed no occupation in addition to their studies. The ten *batlanim*, at that time, were scholars. Rashi explains that they refrain from work and are supported by the community in order to attend prayers in the synagogue (Meg. 5a; cf. Rashi to Sanh. 17b). R. Nissim notes that they need not “abstain from work and be supported by the community” for their town to be reckoned a large one in connection with the variant practices concerning the reading of the scroll of Esther. It is sufficient if they attend prayers in the synagogue both mornings and evenings (commenting on Alfasi; beginning of *Megillah*). Elsewhere (BK 82a) Rashi states that an additional function of the ten *batlanim* is to occupy themselves with the needs of the community, and Maimonides sees them as “assigned to the synagogue for communal needs” (Yad, Megillah 1:8). Benjamin of Tudela records that in 12th-century Baghdad, the ten heads of the yeshivah “are called *batlanim*, their sole occupation being to engage in communal affairs.... They render decisions on legal and religious questions for all the Jewish inhabitants of the country.” In later Yiddish usage the term became pejorative and meant a man who was lazy, loafed, and could not make his way in the world.

BAT-MIRIAM (Zhelezniak), YOKHEVED (1901–1980), Hebrew poet. Born in Keplits, Belorussia, Yokheved Bat-Miriam attended the universities of Odessa and Moscow. Although her poems began appearing in 1923, her first volume of poetry *Me-Raḥok* (“From Afar”) was published in 1932, four years after she settled in Erez Israel; it was followed by six other volumes of poetry. The bulk of her poetry was written between the two world wars against the background of the Jewish tragedy of this period, and her personal experiences as a child in Russia

and a settler in Israel. Influenced by Russian symbolist poetry, her verse is written against a dreamlike landscape, charged with symbols from nature drawn from the world of childhood. One image fades into another, with past and present merging. This coalescing of imagery is reinforced by a similar shifting of her idiom by means of assonance, alliteration, and other sonal devices. Her works include *Erez Yisrael* (1937); *Re'ayon* (1949); *Demuyyot me-Ofek* (1942); *Mi-Shirei Rusyah* (1942); 1943 – *Shirim la-Getto* (1946); and *Shirim* (1963). A list of her works translated into English appears in Goell, Bibl. She was awarded the Israel Prize in 1972.

BATO, LUDWIG YOMTOV (1886–1974), Zionist and writer. Bato was born in Dolní-Kubín in Slovakia (then Hungary) and in 1904 edited the first Zionist publication in Hungarian. While a student in Turin (1906–07), he founded the Piedmontese Zionist Federation. Returning to Hungary in 1908, he joined the editorial board of the Zionist newspaper *Zsidó szemle*. In 1910 he went to Vienna, where he lived until 1933. There he was one of the leaders of the Austrian Zionist Federation and from 1914 to 1918 edited its organ *Juedische Zeitung*. With O. *Abeles he published the literary almanac *Juedischer Nationalkalender* (6 vols., 1916–22). Between 1933 and 1940 Bato was director of the Jewish National Fund in Romania and in 1940 he settled in Tel Aviv. Bato wrote *Die Juden im alten Wien* (1928) and *Don Yosef Nasi* (Heb., 1942).

BAT SHELOMO (Heb. בַּת שְׁלֹמֹה; “Daughter of Solomon”), Israel moshav in the Manasseh Hills northeast of Zikhron Ya'akov. It was founded in June 1889 by the administration of Baron Edmond de *Rothschild, to provide farmsteads for children of Zikhron Ya'akov settlers. The small village, with wine grapes as its principal branch of farming, made little progress. After the establishment of the State of Israel, immigrants from Hungary and Yemen settled in Bat Shelomo. In the mid-1990s the population was approximately 275, rising to 365 in 2002. The village was named for Baron James (Jacob) Rothschild's wife, whose father was Solomon Mayer Rothschild of Vienna.

[Efraim Orni]

BATSHEVA AND BAT-DOR DANCE COMPANIES. In 1964, Baroness Betsabee de *Rothschild founded the Batsheva Dance Company, which has become the flagship of Israeli dance. Establishment of the troupe marked the beginning of the influence of American modern dance in Israel and

contributed to the professional level of dance there. From the middle 1960s until the early 1970s, the troupe drew heavily on the techniques of Martha Graham, who was also its artistic adviser. The company's repertoire included seven important works by Graham: *Errand into the Maze*; *Diversion of Angels*; *Embattled Garden*; *Dark Meadow*; *Herodiade*; *Cave of the Heart*; and the *Learning Process*. In 1974, Graham created *Jacob's Dream* especially for Batsheva.

Graham and Betsabee encouraged the dancers to create their own works, which was accomplished by Oshra Elkayam and Moshe Efrati, dancers and the troupe's outstanding choreographers.

The repertoire also included works by well-known choreographers, among them: Robert Cohan, Glen Tetley, Norman Morrice, Jerome *Robbins, and Jose Limon. Distinguished soloists were Rina Schenfeld, Rena Gluck, Nurit Stern, Ehud Ben-David, Moshe Efrati, and Rachamin Ron.

In spite of its many successful performances abroad and its great following in Israel, in the 1970s and 1980s the troupe went through a difficult period with a relentless turnover of artistic directors (Jane Dudley, Norman Walker, William Louthier, Brian McDonald, Robert Cohan, Paul Sanasardo). Most of them came for short periods, their works were performed, and then they left. The guest list of choreographers who worked with the Batsheva Dance Company in that period, and whose creations the company staged, were: John *Cranko (*Song of My People*), Gene Hill Sagan, Anna *Sokolow, Daniel Ezralow, and Christopher Bruce. After Rothschild distanced herself from the troupe, its attitude of not accepting the works of Israeli choreographers who were not members of the company changed. In the second half of the 1970s, Caj Lottman was named its artistic director, the first Israeli one, soon followed by Moshe Romano, Sheli Shir, and David Dvir. In 1983 and 1986, they launched workshops for the purpose of encouraging original local creations. Discovered in those workshops was the young generation of choreographers: Yossi Tmim, Siki Kol, Alice Dor-Cohen, Tamar Ben-Ami, Nir and Liat Ben-Gal. Despite the fact that the company continued to be very much admired in Israel, it lost its intrinsic essence and novelty, lacking a clear and specific artistic direction.

In 1990, Ohad *Nahari was appointed artistic director of the Batsheva Dance Company and created a rich tapestry of productions for the troupe. His style greatly influenced Israeli dance. The troupe was rejuvenated and a young audience flocked to its performances. Among the prominent choreographers whose works were represented in its repertoire were: Wim Vandekeybus, Anjelin Prelojocal, Arvo Pärt, William Forsythe, and Jiri Kylian.

In 1991, the Batsheva Ensemble was founded. It is smaller, and most of its dance pieces are local choreographies which were auspicious beginnings for many Israeli artists, among them Itzik Galili, Inbal Pinto, and Anat Daniel.

The Baroness continued to support Batsheva financially until 1977, when the Israel Ministry of Education and Culture granted the troupe a subsidy.

Bat-Dor

In 1967, Rothschild established the Bat-Dor Dance Company for Jeannette Ordman, a classical ballet dancer from South Africa who captured the heart of the Baroness. Ordman was the artistic director, principal dancer, and headmaster of its dance school. From the beginning, Bat-Dor's style was a combination of modern dance with a strong emphasis on the technique of classical ballet. The Baroness gave her generous financial support to Bat-Dor, making it possible for the ensemble to purchase works of important artists all over the world.

Among the Israeli choreographers who worked with the ensemble were Domi Reiter-Sofer, Mirale Sharon, Gene Hill-Sagan, Yehuda Maor, Igal Perry, and, in the past decade, Tamir Gintz. The importance of Bat-Dor lies, essentially, in its school of dance in Tel Aviv and the branch in Beersheba, which have produced generations of young dancers who have permeated the dance companies in Israel. Rothschild's death (1999) brought an end to the stream of cash flowing into the company, and its ongoing work was soon in crisis. Requests for government subsidies were made subject to reorganization of the ensemble's management practices and, today, it only operates the school, which receives government support.

BATTAT, REUBEN (1882–1962), Iraqi jurist. Battat studied law in Baghdad and in Constantinople and served as judge in various courts of Iraq. In 1923 as judge in Basra, he handed down a decision in favor of transferring the property of the Jewish philanthropist Gourji Shemtov to the Keren Hayesod. That decision was used against him in 1949, when he was tried by a military tribunal on charges of being a Zionist and sentenced to three years imprisonment. He was, however, released after four months. From 1924 Battat represented the Jews of Iraq for several terms in parliament; he was also one of the supporters of the Zionist organization in Baghdad. Before 1936 he published an important work about the constitution of the kingdom of Iraq (in Arabic). He died in Switzerland.

[Haim J. Cohen]

BATTLE OF CABLE STREET, name popularly given to a major altercation in the East End of London, England, when Sir Oswald Mosley, leader of the British Union of Fascists, attempted to march with his supporters through this heavily Jewish area of London. On October 4, 1936, Mosley attempted to lead a march of 3,000 black-shirted British Fascists from the City of London through Whitechapel, where about 100,000 Jews lived. At Cable Street, at the edge of the East End, Mosley's men were forcibly prevented from advancing further by a large throng of left-wing protesters, comprised of local Jewish and Irish inhabitants as well as "cockney" dockers and other workers, organized in part by the British Communist Party, and they were forced to turn back. The term "Battle" is something of a misnomer, since the only violence occurred between

anti-Mosley protesters and the police, on whom the anti-Fascists turned, and not between the Fascists and anti-Fascists. Nevertheless, the "Battle of Cable Street" has become legendary as one of the few times during the 1930s when the left and far right apparently clashed, and the far right was defeated. Since most of the anti-Mosley protesters were probably gentiles, "Cable Street" was also seen by many as a prime example of what a "popular front" could achieve to stop the seemingly irresistible spread of Fascism in Europe. It also probably enhanced the prestige of the British Communist Party, which attracted a significant level of support in the Jewish East End during the latter 1930s (but probably not earlier). Presumably in retaliation, the following week many windows of Jewish shops in Whitechapel were smashed by vandals.

BATUMI (until 1936 **Batum**), port on the eastern shore of the Black Sea; capital of the Autonomous Adzhar Republic, within *Georgia. A Jewish community was established there in 1878 after the town was incorporated into Russia. In 1889 many of the Jews living there without official authorization (see *Pale of Settlement) were expelled. According to official statistics there remained 31 Jewish families, and according to unofficial sources about 100 Jewish families. The number, however, again increased rapidly. By 1897 there were 1,179 Jews living in Batum. One of the oil refineries was owned jointly by the Rothschild family and Jewish investors in Russia. The Jewish population numbered 3,700 in 1923 (6.1% of the total population) and 1,778 in 1939 (2.54% of the total population). Subsequent data are unascertainable.

[Abraham J. Brawer / Abba Ahimeir]

BAT YAM (Heb. בַּת יָם; "Daughter of the Sea"), city in central Israel, on the seashore south of Tel Aviv-Jaffa, founded in 1926 by 24 religious families who called themselves and the quarter they established "Bayit va-Gan" ("House and Garden"). In the 1929 Arab riots, this isolated group found refuge in Tel Aviv, returning to their homes in 1931. From 1933 the population increased as immigrants from Germany built their homes there. In 1937 the quarter received the status of a local council and changed its name to Bat Yam. In the War of Independence (1948), the town, then numbering approximately 1,000 inhabitants, had to defend itself against strong Arab attacks. With the mass immigration following the founding of Israel, the population grew rapidly. Receiving city status in 1958, it formed part of the Tel Aviv conurbation, bordering on the city of Tel Aviv-Jaffa in the north, Holon in the east, and Rishon le-Zion in the south. Manufacturing and recreation facilities were the mainstays of its economy. The food industry (light beverages, beer, ice cream) was a leading employer and the

city was a popular resort with a seashore of 2 mi. (3.2 km.), three-quarters of it open for bathing. It also had a municipal museum, art galleries, and the Sholem *Asch House. Asch resided in Bat Yam in his last years.

The population of Bat Yam was 10,000 at the end of 1953, 62,000 in 1967, and 133,900 in 2002, making it the 11th largest city in Israel. It had a large concentration of recent immigrants from the former Soviet Union, Syria, and Ethiopia. The municipal area was 3.1 sq. mi. (8 sq. km.).

°**BAUDISSION, WOLF WILHELM, GRAF VON** (1847–1926), German Bible critic and historian of religion. Baudission was born in Holstein and taught at the universities of Leipzig, 1874–1876; Strasbourg, 1876–1881; Marburg, 1881–1900; and Berlin, 1900–1921. He belonged to the Wellhausen school of thought in regard to the understanding of the Pentateuch as a whole, but he departed from its philosophy in his *Die Geschichte des alttestamentlichen Priesterthums* (1889) where he argued for the priority of P, the pre-Exilic Priestly Source, over the D, Deuteronomic, Source. In *Kyrios als Gottesname im Judentum und seine Stelle in der Religionsgeschichte* (4 vols., 1929), published posthumously, Baudission championed the theory that the substitution of Adonai for YHWH first originated among Greek-speaking Jews. His main contributions in the area of comparative religion are *Studien zur semitischen Religionsgeschichte* (2 vols., 1876–78); *Jahve et Moloch* (1874); and *Adonis und Esmun* (1911). These studies deal with the influence of the Canaanite cult on the history of Israel.

[Zev Garber]

°**BAUER, BRUNO** (1809–1882), German Protestant theologian, philosopher, and historian. He became influenced by the philosophy of Hegel while a student in Berlin, and because of radical criticism of the New Testament expressed in numerous works, was dismissed from his post as lecturer at Bonn in 1842. Bauer then returned to Berlin where he devoted himself to writing historical works and critical studies of the rise of Christianity. He also wrote on contemporary political issues, defending Prussian conservatism, and strongly opposed granting emancipation to the Jews in Germany. In his essay *Die Judenfrage* (“The Jewish Question,” 1843), he stresses, like Hegel, the Oriental character of the “Jewish national spirit” (*Volksgeist*) which failed to comprehend the ideals of freedom and reason and saw its highest duty in fulfilling unreasonable ceremonies. In particular, Bauer attacked the representatives of Reform Judaism, who called for a return to a pure or purified “Mosaism.” In his view, “pure Mosaism” was only possible in the land of Canaan, and only in a sovereign Jewish state. It was therefore impossible in contemporary circumstances. Bauer argued that the observance of Jewish laws made faith illusory and that Judaism was exclusive and unrealistic. As

long as Jews were not ready to forsake their specific character, their emancipation was out of the question. The work gave rise to sharp controversy in which Abraham *Geiger, Gabriel *Riesser, Samuel *Hirsch, and Karl *Marx, among others, took part.

[Reuven Michael]

BAUER, HANS (1878–1937), scholar of Semitic languages. Bauer, who was born in Bavaria, studied theology and Semitic languages and in 1922 was appointed professor of Semitic languages at the University of Halle. After working on medieval Arabic philosophy (especially Al-Ghazālī), and other Arabic studies, he turned to Hebrew grammar in the context of the other Semitic languages, employing the methods developed by Indo-Germanic linguists. In his book *Die Tempora im Semitischen* (1910), he dealt with the Semitic tenses. He worked on the assumption (which others had made before him) that the imperfect was in the early stages of the language the only defined verbal form (i.e., the all-tempora: Aorist), while the perfect was originally a nominal form (i.e., a type of participle: nominal), and thus close in meaning to the present tense. The nominal participle has two temporal qualities, according to the meaning of each verb: an act done now or continuously; or an act, completed in the past, whose results are felt in the present. The second quality (*perfectum praesens*) is likely to develop into the *praeteritum*. In each of the Semitic languages, one of these qualities became the primary: in Akkadian, the former (Bauer equates the form *ikaššad* with the perfect of the other languages); in Aramaic, Arabic, Ethiopic, and even Phoenician, the latter. As a result, the semantic field of the all-tempora form became limited in its meaning. In Akkadian it is used as the perfect, but in the other languages as the present-future. Biblical Hebrew, which Bauer considered a mixed language, in this respect stands midway: the conversive tenses reflect the Akkadian usage, while the regular tenses are comparable to the use in other Semitic languages. His view of the mixed nature of Hebrew (“early Canaanite base,” close to Akkadian, with a “late layer” which is closer to the other Semitic languages) derives from certain cases of phonetic inconsistency, such as the vowels after the *kof* in כַּף (*kam*) as opposed to מַקוֹם (*makom*) which both are in Arabic *ā* (*qām*, *maqām*). This problem is discussed in his book *Zur Frage der Sprachmischung im Hebraeischen* (1924). With Pontus Leander, he wrote the *Historische Grammatik der hebraeischen Sprache des Alten Testaments* (1922; repr. 1965). They also collaborated in writing the *Grammatik des Biblisch-Aramäischen* (1927). In 1930 he succeeded in deciphering most of the Ugaritic alphabet embodying the results of his study in *Die alphabetischen Keilschrifttexte von Ras Shamra* (1936); others followed him in completing this work. Bauer also wrote a book on the origins of the alphabet, *Der Ursprung des Alphabets* (1937).

[Hans Jacob Polotsky]

BAUER, JACOB (Jehiel ben Gershom; 1852–1926), *hazzan* of the Turkish-Israelite Temple in Vienna and adaptor of its liturgical music. Bauer was born in Szenice, Hungary, and went as a youth to Vienna. During his school days in that city, he was a soprano singer with the *hazzan* Pesah Feinsinger. After regular training of his adult voice, Bauer was employed as *hazzan* at Ottakring, a suburb of Vienna, Szigetvar (Hungary, 1875), and Graz (1878). In 1880, the governors of the Vienna Sephardi congregation decided to adapt the musical part of their service “to the needs of modern times.” They commissioned Bauer and the choir-director Isidor Loewit to arrange their melodies and to organize a temple choir. At first this modernized service was, more or less, in the common Ashkenazi style. In the course of time, Bauer and Loewit worked on arrangements of the original Turco-Sephardi melodies which were published as *Schir-Hakawod* in 1889.

Bauer founded and edited the *Oesterreichisch-Ungarische Kantoren-Zeitung* from 1881 to 1898 and was co-founder and temporarily chairman of the Oesterreichisch-Ungarischer Kantoren-Verband from 1883.

[Hanoeh Avenary]

BAUER, MARION EUGÉNIE (1882–1955), U.S. composer, teacher, and music critic. Bauer was the daughter of French Jewish immigrants to the U.S. Part of the “forgotten vanguard” of modernism, her work bridged the lush harmonies of French impressionism and the dissonant modernism of the late 1920s. She studied composition with Henry Holden Huss and Eugene Heffley and was Nadia Boulanger’s first American pupil. Bauer taught composition and theory at New York University (1926–51) and the Juilliard School of Music (1940–55). Through teaching and mentoring, she maintained numerous ties to a younger generation of modernists including Milton *Babbitt and Ruth Crawford.

Bauer wrote reviews and criticism for the *Musical Leader* and *Musical Quarterly* and published four books on music, including the popular appreciation text *Twentieth Century Music* (1933). A fervent advocate of modern music, she helped found the American Music Guild, served as secretary for the Society for the Publications of American Music, and was on the executive boards of the League of Composers, the American Composers Alliance (ACA), and the Society of American Women Composers.

Aside from brief experiments in 12-tone writing in the 1940s and 1950s, Bauer’s music never completely broke with tradition. Her impressive and frequently performed compositions include *Symphonic Suite* (1940), *American Youth* for piano and orchestra (1943), and *First Symphony* (1950). Her

most successful work, *Sun Splendor* (1947), was premiered by the New York Philharmonic under Leopold Stowkowski.

[Melissa de Graaf (2nd ed.)]

BAUER, OTTO (1881–1938), Austrian socialist leader; first foreign minister of the Austrian Republic (1918–19). Bauer, the son of a Jewish industrialist, became one of the most important Austro-Marxist theoreticians soon after joining the socialist movement along with many other young Jewish intellectuals of his time. In 1907, together with Karl Renner and Adolf *Braun, he founded the monthly *Der Kampf*, which became a forum for socialist discussion. In his famous study *Die Nationalitaetenfrage und die Sozialdemokratie* (1907), he contended that no socialist could disregard the problem of nationalities, and provided an original definition of the nation: “the totality of men united through a community of fate into a community of character.” Bauer favored the granting of cultural autonomy to every national group in the Austro-Hungarian Empire. He praised the Jewish role in history, but argued that the Jews could not be regarded as a nationality, especially in Western Europe. He advocated assimilation and was sharply criticized by Zionists as a consequence. In November 1918, with the collapse of the Austro-Hungarian Empire at the end of World War I, Bauer became foreign minister of the new Austrian Republic. He resigned in 1919 when his main objectives, a merger with Germany and retention by Austria of the German-speaking parts of the Tyrol, failed to materialize. When the Dollfuss regime came to power in 1934, Bauer took a leading part in the uprising of the workers in Vienna and subsequently took refuge in Czechoslovakia after its suppression. In May 1938, he fled to Paris and died there a few weeks later – on the day the *London News Chronicle* published his appeal to world conscience to save the 300,000 Jews of Austria. Bauer was an outstanding figure within the Socialist International, where, although an opponent of Communism, he represented the Marxist left wing. He was a prolific writer on socialist problems, including the books *Bolschewismus oder Sozialdemokratie?* (1920), in which he contrasted the economic conditions of Soviet Russia and Western Europe, and *Kapitalismus und Sozialismus nach dem Weltkrieg* (1931), which was intended to be his magnum opus. After his death, his *Die illegale Partei* was published in Paris by Friedrich *Adler (1939).

[Robert Weltsch / Lisa Silverman (2nd ed.)]

BAUER, SIMON HARVEY (1911–), U.S. physical chemist. Bauer was born in Kaunas, Lithuania, and immigrated to the U.S. in 1921. Awarded his Ph.D. degree from the University of Chicago (1935), he was a postdoctoral fellow at the California Institute of Technology (1935–37), and an instructor at Pennsylvania State University (1937–39) before being invited to join the Chemistry Department at Cornell University, where he became professor in 1950. Subsequently he was appointed adjunct professor at the Institute of Molecular Science in Okazaki and served as consultant to Los Alamos National Laboratory, Calspan, Arco-Harvey Tech Center, and Lockheed Cal. His research studies include structure determinations by electron and X-ray diffraction techniques; molecular spectroscopy in the IR measurements of rapid chemical conversions induced in shock tubes or via laser irradiation; measurements of physical, kinetic, and thermochemical properties of boron hydrides; and formulation of kinetics of condensation from supersaturated vapors.

[Bracha Rager (2nd ed.)]

BAUER, YEHUDA (1926–), historian of the Holocaust. Bauer was born in Prague, Czechoslovakia (now Czech Republic). He immigrated with his family to Palestine on March 15, 1939; the day German troops marched into Prague and Germany took control of Bohemia and Moravia. He later joined the Palmah and fought in Israel's War of Independence. He completed his B.A. and M.A. at the University of Cardiff in Wales (1946–48; 1949–50) and then became a founding member of Kibbutz Shoval in the Negev, in Israel, in 1952. He completed his Ph.D. at the Hebrew University of Jerusalem in 1960 with a dissertation that focused on the Mandate period in Palestine. In 1961, Bauer joined the faculty of the Institute of Contemporary Jewry, where he began teaching about the Holocaust several years later and until his retirement in 1995. Bauer held many additional important positions in academia and research, among them: academic chairman of the Institute of Contemporary Jewry (1978–95); founding chair of the Vidal Sassoon International Center for the Study of Antisemitism at the Hebrew University (1982–95); chairman of the Study Circle at the Home of the President of Israel on the Jewish People in the Diaspora and the State of Israel (1980–95); founding editor of the *Journal of Holocaust and Genocide Studies* (1985–95); head of the International Institute for Holocaust Research at Yad Vashem (1995–2000); academic advisor at Yad Vashem (from 2000). In 1998 he was awarded the Israel Prize for his

life's work in teaching and heightening awareness about the Holocaust, and in 2000 he was elected a member of the Israel Academy of Sciences.

Bauer's vast knowledge, sharp analytical capabilities, keen ability to synthesize many sources and much research into coherent observations, along with his written and spoken articulation and his dynamic teaching ability helped him reach broad audiences in Israel and around the world. He is considered to be one of the major scholars of the Holocaust, as well as one of the most important and influential voices to raise consciousness of the event and of its ongoing major impact on the world.

Bauer's approach to understanding the Holocaust is multifaceted. He believes that the Holocaust was an unprecedented event when it happened, but as an event that was part of human history, it is both accessible to human understanding and is an event that can be repeated once the precedent has been set.

Bauer has advocated and promoted meticulous empirical research in all relevant languages, both of official German and other documents, and of Jewish documents from the period and later, including oral history. Bauer argues that official government documents, and certainly Nazi documents, cannot automatically be taken as objective reflections of reality, or as being entirely true. He has cited numerous examples of German Nazi era documents that were sanitized or carefully edited (e.g., the Protocol of the Wannsee Conference, January 20, 1942) in order to create a particular impression at the time. Although oral testimony needs to be read critically and cross-referenced, in the same way as other documentation, such source material remains for Bauer an integral and necessary part of Holocaust research. Fundamentally, without a thorough examination of the story of the Jews in the Holocaust, our understanding of the event can be only partial.

Bauer has been influential in introducing a number of fundamental concepts to our understanding of the Holocaust, such as the distinction between information and knowledge of the event around the world as it unfolded. He has also advocated against mystification or glorification of the Holocaust or of those who played a role in it. He has kept his observations on the event grounded in human history, examining the participants in the event as human beings. In looking at the Jews, he has promoted the examination of their daily lives and struggles to get through to another day. He has always sought to keep the individual in perspective when discussing the mass of details and data. He frequently resorts to individual stories in his writing and speaking as a way to personalize the Holocaust and retain the humanity of its victims.

Bauer has also stood out in his willingness to engage in comparative analyses of the Holocaust with other genocides (e.g., of the Armenians by the Turks and of the Sinti and Roma by the Nazis), highlighting both their commonalities and their differences. Although he sees a number of basic common characteristics in all these events, the Holocaust remains for him a singular event, particularly in its totality and universal-

ity – attempting to murder all Jews everywhere – and in the central role played by race theory. It is fundamental in Bauer's understanding of the Holocaust that the Nazis saw in the Jews both a threat of cosmic proportions to human existence and the embodiment of the enlightened Western values that the Nazis despised. The Nazi attack on the Jews was an attack on the very foundations of Western civilization.

Bauer has published numerous books and articles. His research topics have included American Jewish responses to the Holocaust; the responses of the victims; the decision-making process in Nazi Germany; the events in Hungary, Romania, and Slovakia; Jewish attempts to rescue Jews via negotiations with the Nazis; events and Jewish life in the small and medium-sized towns of Eastern Europe, and more. A number of his articles have become basic introductory reading for students regarding a number of central subjects in the Holocaust (e.g., Jewish responses, rescue, Jewish leadership). Among his major books are *Flight and Rescue: Brichah* (1970), on the clandestine movement by survivors to Palestine; *My Brother's Keeper* (1974), on the Joint Distribution Committee through the 1930s; *The Holocaust in Historical Perspective* (1978), lectures delivered at the University of Washington; *American Jewry and the Holocaust* (1981); *A History of the Holocaust* (1982), a textbook (2001²); *Jewish Reactions to the Holocaust* (1989); *Jews for Sale?: Nazi-Jewish Negotiations, 1933–1945* (1994); and *Rethinking the Holocaust* (2001), which is a collection and reworking of some of his major essays on the Holocaust and Holocaust historiography over the past decades.

[David Silberklang (2nd ed.)]

BAUM, HERBERT (1912–1942), German Communist and anti-Nazi fighter. Baum was a member of the German communist youth movement from 1932 and led a clandestine Jewish communist cell in Berlin from 1936. In 1937 he and his wife Marianne organized a political circle with communist leanings frequented by young Jews (both party members and others), including some Zionists. According to communist sources, this group continued its activities even after the outbreak of World War II by mimeographing leaflets and illegal newspapers and establishing contacts with French and Belgian forced laborers in Germany, mainly in the Siemens plant in Berlin where Baum worked. On May 18, 1942, Baum and a number of his comrades set fire to the Nazi propaganda exhibit *Das Sowjetparadies* (“The Soviet Paradise”). Shortly afterward Baum and members of his group were arrested. He died in jail, probably by his own hand, while his comrades were tried and sentenced to death or deported to death camps. At the request of the group's sole survivor, Charlotte Holzer, Baum and his comrades were buried in the Jewish cemetery at Weissensee, East Berlin.

[Lucien Steinberg]

BAUM, MENAHEM MENDEL BEN AARON OF KAMENETZ (1800?–1873), prominent member of the Ashkenazi community of Safed and Jerusalem, author of a travel book in Hebrew and Yiddish, and one of the first modern hoteliers in Erez Israel. Baum was born in Kamenetz-Litovsk (Lithuania), but immigrated to Erez Israel in 1833, settling in Safed, where he witnessed the anti-Jewish riots by the peasants who rebelled against Ibrahim Pasha (1834). He remained in Erez Israel for a short period, visiting Tiberias, Jerusalem, and Hebron. He then traveled abroad both for personal economic considerations and also on a mission to collect funds for the community of *Perushim* (disciples of Elijah of Vilna) in Safed and Jerusalem. In 1842–43 he returned to Jerusalem and was active on behalf of the Grodno community (*kolel*). During this period he established a guesthouse, which evolved into the group of Kaminitz hotels of Jerusalem, Jaffa, and Hebron in the second half of the 19th century, and which reached their heyday in the lifetime of his son Eliezer Lipa Kaminitz. Run by members of the family, they supplied hostelry services on a European standard.

His travel book *Korot ha-Ittim li-Yshurun be-Erez Yisrael* (Hebrew, 1839; Yiddish translation, 1841) was intended to serve both as a guide for East European immigrants and as a chronicle of the peasant revolt of 1834, so as to arouse concern about the fate of the Ashkenazi community of Safed and to encourage financial contributions. The historical section is essentially a description of the events of 1834, and is an authentic historical document, as the author himself witnessed many of the events described. The other two sections of the book briefly depict the process of immigration, as experienced by the author, and give a detailed guide to the professional, economic, and cultural conditions of the country. These sections are of great value for the study of the lifestyle of the period. The style of the Hebrew edition is simple and straightforward. The language of the Yiddish version is more popular and the trend of prayer and lamentation in it is more prominent. *Korot ha-Ittim* was reprinted in Hebrew by Meir Anshin (1931) and with an introduction and notes by G. Kressel, Jerusalem (1946). A new edition of the first printings in both languages with an introduction and indexes was issued in Jerusalem, 1975.

[Israel Bar Tal (2nd ed.)]

BAUM, MORTON (1905–1968), U.S. lawyer, politician, and patron of the arts. Baum was born in New York City. He became a Republican district leader on Manhattan's West Side. In 1934 he was elected to the city council. As Mayor La Guardia's tax counsel, Baum devised New York City's first sales tax. He served as a tax consultant to subsequent New York mayors and to several governors. A lover of the performing arts, Baum was elected to the board of the Metropolitan Opera Company in 1941. In 1943 he helped found the New York City Center of Music and Drama, and was instrumental in developing its renowned ballet troupe and opera company. He was the first president of New York's Metropolitan Synagogue (1959).

BAUM, OSCAR (1883–1941), Czechoslovak author who wrote in German. Baum was a member of the Prague circle of Max *Brod and Franz *Kafka. Losing his sight as a boy, Baum was trained at the Vienna Institute for the Blind as an organist and pianist and subsequently became a music critic. Brod took down in shorthand his first short stories and persuaded Baum to publish them. *Uferdasein* (1908), *Das Leben im Dunkeln* (1909), and *Nacht ist umher* (1929), hailed by Stefan *Zweig as the "most moving document in German from the lightless world" were all taken from the life of the blind. They reflect his opposition to the compassion displayed by society and his call for equality of opportunity, which influenced modern education of the handicapped. Baum's *Die boese Unschuld* (1913) has acquired significance as a document of Jewish life in Bohemia against the background of the Czech-German nationality struggle. Baum also wrote a drama, *Das Wunder* (1920). His last novel, *Das Volk des harten Schlafes* (1937), ostensibly a story about the Jewish kingdom of the *Khazars, actually deals with problems of Jewry in the first years of Nazi rule. It was dedicated to Baum's "son and friend" Leo, who was later killed in the King David Hotel explosion in Jerusalem (1946).

BIBLIOGRAPHY: M. Brod, *Der Prager Kreis* (1966), 118–32; A. Schmidt, *Dichtung und Dichter Oesterreichs im 19. und 20. Jahrhundert*, 1 (1964), index.

BAUM, SHEPARD (c. 1900–1977), U.S. *kashrut* supervisor and Jewish community activist. Known to have been an amateur boxer in his youth, Baum was best known for his work as chief supervisor for Kosher Law Enforcement for the Department of Agriculture in the State of New York. Despite the separation of Church and State in the laws of the United States, the State of New York could have an official *kashrut* supervisor to ensure that consumers were not misled and fraud was not being practiced and that the food they were purchasing was indeed kosher.

An avid Zionist, he was national vice president of B'nai Zion, the American Zionist fraternal organization, and wrote many articles for B'nai Zion publications. Baum was also a founder of American Magen David Adom; president and chairman of The Bridge; president of the New York Jewish Conference; chaplain of the Bronx-Lebanon Hospital; member of the Commission on Synagogue Relations for the Federa-

tion of Jewish Philanthropies; chaplain for the Grand Lodge of Freemasons for the State of New York; and a U.S. Army chaplain during World War II.

BIBLIOGRAPHY: *The New York Times*, (July 23, 1977), 17.

BAUM, VICKI (1888–1960), novelist. Born in Vienna, Vicki Baum began her career as a professional harpist but her success as a short story writer led her to leave music. In 1921 she became an editor in the Berlin publishing house of Ullstein. Of her 25 novels, the best known is *Menschen im Hotel* (1929; *Grand Hotel*, 1930), which became a worldwide best seller and a popular film. In 1931 she settled in the United States. Vicki Baum often repeated the pattern of *Grand Hotel* – a montage of stories of interrelated characters – in her novels, for which she chose a wide range of historical, sociological, and psychological themes. Her autobiography, *Es war alles ganz anders* (1962), was published posthumously.

[Samuel L. Sumberg]

BAUMAN, ZYGMUNT (1925–), sociologist. Born in Poznan, Poland, to assimilated Jewish parents. At the start of World War II Bauman escaped to the Soviet-occupied zone, where he fought in a Polish division of the Red Army. After the war, he entered the University of Warsaw and rose to the rank of professor of sociology. In 1948, Bauman married a survivor of the Warsaw ghetto. Following a wave of antisemitism in 1968, they left Poland for Israel and in 1971 Bauman became professor of sociology at the University of Leeds, U.K. A leading, prolific, and iconoclastic scholar in contemporary social thought, Bauman is best known for his theories of postmodernity, which he applied to the study of the Holocaust in his work *Modernity and the Holocaust* (1989). The book provoked considerable controversy as Bauman argues that the Holocaust was a result of modernity, that is, technology and bureaucracy, rather than specific German nationalism. While critics believe that his thesis absolves National Socialism of its responsibility, Bauman counters that blaming Germany exclusively – though clearly National Socialism is to blame – absolves all others who were complicit in adopting and promoting ideas such as eugenics, which were popular with well-respected thinkers at that time in both Europe and the U.S.

Professor emeritus at the University of Leeds from 1990, Bauman continued to write about the human condition in the postmodern age.

[Beth Cohen (2nd ed.)]

BAUME, PETER (Erne; 1935–), Australian politician. Born in Sydney, and a consulting physician, Baume served as a Liberal Party senator for New South Wales from 1974 to 1991. He held a number of cabinet posts under Malcolm Fraser (1975–82), including minister for aboriginal affairs (1980–82), minister for health (1982), and minister for education (1982–83). He was vice president of the Australia-Israel

Inter-Parliamentary Group from 1985 to 1991. After his political career, Baume went back to the medical academic world, becoming professor of community medicine at the University of New South Wales and, subsequently, chancellor of the Australian National University.

[William D. Rubinstein (2nd ed.)]

BAUMGARDT, DAVID (1890–1963), philosopher. In 1924 he was appointed lecturer in philosophy at the University of Berlin where he later was professor (1932–35). In 1935 he was visiting professor at the University of Madrid where he lectured on Maimonides at the congress organized by the Spanish government to commemorate the eighth centenary of Maimonides' birth. From 1935 Baumgardt taught at Birmingham (England) and from 1939 at Pendle Hill, Wallingford, Pennsylvania. From 1941 to 1954 he was consultant on philosophy to the Library of Congress in Washington, D.C. Baumgardt, a Zionist from his early youth, conceived the idea of founding a Hebrew philosophical journal. In his earlier works (particularly in his *Das Moeglichkeitsproblem der Kritik der reinen Vernunft, der modernen Phaenomenologie und der Gegenstandstheorie*, 1920) he treated the modalities (possibility, reality, and necessity) in the philosophy of Kant, Husserl, and Meinong (the late 14th-century German philosopher). He then turned his attention to historical studies, particularly to the history of philosophical romanticism in Germany at the beginning of the 19th century. This culminated in the publication of his book on Franz von Baader and philosophical romanticism (1929). Another work of Baumgardt is devoted to an investigation of the relations between Mendelssohn and Spinoza (1932). In *Der Kampf um den Lebenssinn unter den Vorlaeufern der modernen Ethik* (1933) he related the systematic study of ethics to the study of history. In this book he undertook a penetrating critique of Kant's system of ethics, showing that Kant's ethical system was derived from the basic idea of a Higher Unity pervading all human striving but that this derivation is merely a formal one, devoid of content. Baumgardt examined Hermann Cohen's attempt to rescue Kant's ethics but even here he arrived at negative conclusions. He likewise examined the attempts, undertaken by thinkers at the end of the 18th century (Herder, Hemsterhuis, Jacobi), to create a system of ethics possessed of content. In opposition to Kant, Herder extolled Hebrew ethics because they preserve man's unity. In connection with this investigation, Baumgardt assembled the literary material relevant to the relations between Herder and Spinoza. His search for ethical fundamentals possessing content led him to become particularly interested in Bentham's ethical system, to which he devoted a large volume on *Bentham and the Ethics of Today* (1952). In 1961 Baumgardt published *Great Western Mystics; Their Lasting Significance*. He sought a reconciliation of the ethics of force and the ethics of love.

[Samuel Hugo Bergman]

BAUMGARTEL, ELISE J. (1892–1975), Egyptologist. Elise Baumgartel, who was born in Berlin, became a leading figure in the field of Egyptian prehistory. She left Germany for England during the Hitler era, and from 1948 to 1950 was keeper of the department of Egyptian antiquities at Manchester University. In 1951 she went to Oxford, where she engaged in research at the Griffith Institute until 1955. She then went to live in the United States, and became a member of the Oriental Institute at the University of Chicago. Elise Baumgartel's major publications are *Culture of Prehistoric Egypt* (2 vols., 1948–50) and the chapter on "Predynastic Egypt" in the *Cambridge Ancient History* (1963).

[Penuel P. Kahane]

BAUMGARTEN, EMANUEL MENDEL (1828–1908), Austrian economist, journalist and communal leader, Hebrew writer and poet. Baumgarten was born in Kroměříž, Moravia, into a traditional Jewish family of Talmud scholars. He first studied at Moravian yeshivot but also acquired secular knowledge. He heard lectures in economics at Pressburg and, from 1848, at Vienna University. While successfully devoting himself to commercial life, he also became active in the journalistic and literary fields, contributing to several political and Jewish papers in Vienna. With Mayer, he edited an economic paper, *Der Fortschritt*, and with I.H. Weiss the scientific Hebrew monthly *Beit ha-Midrash* (1865–66). In 1861, Baumgarten was elected to the municipal council of Vienna as one of the first Jews and later granted an order of merit by the emperor for his care for the wounded during the 1866 war. In 1870, he became warden of the Jewish Temple in Vienna. In 1872, he was elected to the council of the Jewish community (which he also represented in the state's boards of education), and in 1873 to the council of the newly founded Israelitische Allianz, assisting Jewish refugees from Russia and Romania. Though critical of Zionism, he also supported Jehiel *Brill's colonization plans in Palestine. In 1893, he was among the founders of the Israelitisch-theologische Lehranstalt in Vienna and was elected to its council. In honour of Baumgarten's 70th birthday (1898), his sons published a *Festschrift* (1899).

Among Baumgarten's published works are the first German translation of R. Bahya ibn Paquda's *Ḥovot ha-Levavot* ("Duties of the Heart"), on the basis of R. Judah ibn Tibbon's Hebrew translation, with an appendix by S.G. Stern, *Arugat Peraḥim*, containing biographies of Ibn Paquda, Ibn Tibbon, and Joseph Kimḥi (1854); several Hebrew poems, e.g., *Ruth*, with an introduction by M. Letteris (1864); *Einige Worte ueber den Weinhandel und die Weinkultur in Oesterreich* (1866); and *Die Juden in der Steiermark* (1903). In response to the new antisemitic movement, Baumgarten edited two apologetic works: *Die Blutbeschuldigung gegen die Juden. Von christlicher Seite beurtheilt* (1883) and *Gutmeinung ueber den Talmud der Hebraeer* by the Christian Hebraist C. Fischer (1883, originally completed in 1802). In addition, Baumgarten edited several sources for the history of Moravian Jewry: *Megillat Se-*

darim (1895), the memoirs of Abraham Broda Leipniker on the expulsion of the Jews from Usov (Maehrisch-Aussee) in 1722; *Yeshu'at Yisrael* (1898), the memoirs of Benjamin Israel Fraenkel from the 18th century; and *Maria Theresia's Ernennungsdekret für den Maehrischen Landesrabbiner Gerson Chajes* (1899).

BAUMGARTEN, SÁNDOR (1864–1928), Hungarian architect. Baumgarten, together with Ö. Lechner, designed the building of the Postal Bank in Budapest (1900). Using Hungarian folkloristic motifs he built the Institute for the Blind and the Erzébet high school for girls.

[Eva Kondor]

BAUMGARTNER, WALTER (1887–1970), Swiss Bible scholar and Orientalist. Baumgartner studied classical and Oriental philology and theology, and taught at the University of Marburg from 1916 (professor, 1928). From 1947, he was professor of Semitic languages at Basle. Baumgartner's position among biblical scholars and Orientalists is assured by the results of his work in the field of Bible and Semitic philology. His important studies on the Aramaic sections of the Bible include *Das Buch Daniel* (1926) and the Aramaic sections of L. Koehler and W. Baumgartner's *Lexicon in Veteris Testamenti Libros* (1953, 1958, 1967 ff.). In his doctoral dissertation, *Die Klagedichte des Jeremia...* (1916), he employed critical methodology to prove that the monologues of Jeremiah were not later additions but may be attributed to the prophet himself. In his monographs *Alttestamentliche Religion* (1928) and *Israelitische und altorientalische Weisheit* (1933) he helped pioneer the study of ancient Near Eastern religion and wisdom literature. His book *Zum Alten Testament und seiner Umwelt*, a collection of previously published essays on the Bible and Oriental studies, was published in 1959 in honor of Baumgartner's 70th birthday (includes complete bibliography, pp. 1–26) and the jubilee volume *Hebraeische Wortforschung* was presented to him on his 80th birthday.

BAUMHORN, LIPÓT (1860–1932), Hungarian architect who built 25 synagogues in Austria-Hungary. Born in Kisbér, Baumhorn was educated at the Technische Hochschule

in Vienna and started practicing in Ödön Lechner's office in Budapest, where he adopted the characteristic combination of plain plastered surfaces and red or yellow brick wavy decoration (string-courses, lysens, gables). Nevertheless, Baumhorn's style was slightly more conventional, using Moorish, Renaissance, or Gothic elements instead of the Hungarian national style.

His first building was the Neo-Moorish synagogue in Esztergom (1888), followed by synagogues at Rijeka (1895), Szolnok (1898), and Szeged (1903). The last is the most grandiose, expressing the aspirations of assimilated Hungarian Jewry with elaborated details and very rich ornamentation. It shows Baumhorn's typical nearly central floor plan with eastern *bimah*, emphasized central dome, and four subordinated corner-turrets containing the staircases for *ezrat nashim*.

Artistically the most noted synagogues are in Novi Sad (1906) and Budapest-Aréna-Út (1909) where affluent decoration disappears and the clarity of Proto-Modern architecture took over.

BAUMOL, JOSHUA (1880–1948), rabbi. Son of Nahum, the communal rabbi of Krachinka, who was his primary teacher, Baumol received rabbinical ordination from Rabbi Samuel Engel of Radomysl and Rabbi Benjamin Weiss of Chernovtsy, author of the *Even Yikarah*. Baumol taught Talmud in Vishnitz in the Bet Israel yeshivah from 1908 to 1911. He fled to Bohemia during World War I and became a pulpit rabbi in Brno at Congregation Maḥzekei ha-Dor.

Baumol arrived in the United States in 1920 and became the pulpit rabbi at Kehillath Adath Jeshurun in Williamsburg, Brooklyn, N.Y. As a member of the Agudat ha-Rabbonim, he became vice president of its Kashruth Committee. He was best known for handling issues confronting American Orthodox Jewry with tact and diplomacy. He was one of the founders and the first president of the *Agudat Israel of America, an umbrella group for Orthodox organizations and an advocacy organization. He was deeply involved in policymaking and administration of the Agudah and remained involved with the group until his death.

Baumol's peers respected him as a halakhic authority and often asked him for his opinions on contemporary matters. Among many things, he was asked about post-mortems, lie detector tests, and questions concerning survivors of the Holocaust. His two-volume set of responsa, *Emek Halakhah*, was published in 1934. In 1976, a revised edition, with addenda, was issued.

[Jeanette Friedman (2nd ed.)]

BAUR, HARRY (1883–1943), French actor. Born of poor Alsatian parents, Baur was compelled at the age of 12 to work on the Marseilles docks but managed to study at the Marseilles Conservatory of Music. He appeared briefly on the Paris stage but after the outbreak of World War I joined the army. Wounded, he returned to civilian life, continuing to act on the stage until movies became his chief interest. The French called Baur the “king of the character actors,” and indeed, his heavy features and bushy brows lent themselves to a great range of parts including Beethoven in the *Life and Loves of Beethoven*. He also played in *Rasputin* and in *The Golem*. Baur was arrested in Berlin in 1942 on charges of forging a certificate of (Aryan) ancestry. Ironically, the Germans had to destroy a costly film because Baur had the main role. He was subsequently tortured for 4 months and died shortly after his release from prison.

[Louisa Cuomo]

BAUSKA (Yid. **Boysk**), town in S. Latvia, near the Lithuanian border. Originally in the duchy of *Courland, it was incorporated in Russia in 1795 and became a district town in the government (province) of Courland. Jews were permitted to settle there by a special law of 1799. At first their right of residence was restricted to a suburb on a bank of the river Aa (Lielupe), but the restriction was lifted in the 1820s. The community, most of whose members came from Lithuania, retained its “Lithuanian” character, with its stress on Torah learning and Orthodoxy. It numbered 2,669 in 1835 but by 1850 had decreased to 2,226 as a result of the settlement of 82 families (692 persons) from Bauska in the agricultural colonies in the province of Kherson in 1840 and of an outbreak of cholera in the area in 1848. The Jewish population numbered 2,745 in 1897 (42% of the total population). During World War I many Jews were forced by the Russian military authorities to evacuate Bauska, which was in the area of hostilities, for the Russian interior. Many did not return after the war and by 1920 there remained only 604 Jewish inhabitants. Their number rose to 919 in 1925. Most of the trade was in Jewish hands, supported by a Jewish cooperative bank. Well-known rabbis who officiated in the community in the second half of the 19th century were Mordecai *Eliasberg and Avraham Yitzhak *Kook. During Soviet rule in 1940–1941 all Jewish life and trade was eliminated. Bauska was occupied by the Germans on June 26, 1941. On August 3, 50 Jews were murdered by Latvian police, and on September 30, 1941, all the remaining Bauska Jews, about 800, were executed.

[Simha Katz / Shmuel Spector (2nd ed.)]

BAVA BATRA (Aram. בְּבֵרָה בְּתֵרָה, “last gate”), tractate of the Mishnah with *Gemara* in the Jerusalem and Babylonian Talmuds. The tractates *Bava Kamma, *Bava *Mezia, and *Bava Batra* were originally one large tractate, *Nezikin*. The division into three apparently took place in Babylonia: in the Babylonian Talmud there are indications that the *Gemara* of each of the three sections was edited by a different hand, while in the Jerusalem Talmud they are uniform.

Chapters 1–3 of *Bava Batra* deal essentially with laws relating to ownership of real estate. Chapter 1 discusses the division of a courtyard held by joint owners whose homes open onto it. They may build a stone partition, each owner contributing an equal amount of land for its construction. Consequently, if the partition falls, “the place and the stones belong to them both.” This law is similar to *Bava Mezia* 10:1, for the last chapter of *Bava Mezia* opens the discussion on ownership continued here. A courtyard containing several houses is a small community, and the Mishnah discusses the obligations of the individual to this community. Next, the mutual obligations of “neighbors” are presented for the dwellers of one city. The Tosefta adds to these communal obligations: “The citizens of a town can compel each other to build a synagogue, and to purchase a scroll of the Torah and the Prophets. The citizens are permitted to fix price ceilings and control weights and measures ...” (Tosef., BM 11:23). In chapter 2, the Mishnah imposes limitations upon the actions of the property owner within the bounds of his own property, when such acts are a source of damage or nuisance to neighbors. Personal privacy is protected by a law prohibiting construction of windows which command a close-range view into a neighbor’s windows. The section on ownership concludes with chapter 3, which discusses the rules of **ḥazakah*, according to which evidence of three years’ undisturbed use of property can serve as proof of ownership. The Babylonian Talmud records many actual cases involving *ḥazakah* and disputed ownership, indicating the wide application of these laws in the area of Jewish real estate in Babylonia.

Concerning the acquisition of real estate, chapter 4 gives precise definitions of terms, so as to prevent a dispute between buyer and seller over what was included in the purchase. The list of legal definitions is continued in chapter 5 and extended to cover sale of movables. The variety of objects thus treated presents a wealth of precise Hebrew terminology and a rich description of the *realia* of Palestine during the mishnaic period. The remainder of this chapter expands on the requirement of justice in weights and measures (Lev. 19:35–36; Deut. 25:13–16), a topic related to purchase. Chapter 6 returns to definitions of objects of sale, not with regard to extent of inclusion but with regard to quality, i.e., to what degree the seller is required to replace inferior goods. The remainder of the chapter defines the minimum legal dimensions of various structures and tombs. Definitions of specific quantities of land mentioned in the sale of real estate are presented in chapter 7. This concludes the unit of “definitions,” which began with chapter 6. The chapters discussed above deal with acquisition

of property through purchase; chapters 8 and 9 consider acquisition of property by inheritance.

Chapter 10 contains rules for the proper preparation of legal documents by scribes, as well as the correct interpretation by the court of certain legal documents, especially bonds of indebtedness. This is a fitting conclusion to the tractate, since legal documents figure in acquisition, ownership, and other matters discussed in earlier chapters. The last Mishnah was intended, perhaps, as an apt conclusion for the entire tractate of *Nezikin* (the three *Bavot*, *Bava Kamma*, *Bava Mezia*, and *Bava Batra*): “He that would become wise, let him occupy himself in cases concerning property, for there is no branch of law greater than they, for they are like a welling fountain” (10:8).

The Tosefta of *Bava Batra* contains 11 chapters. Generally the Tosefta follows the Mishnah, supplementing and paralleling it, but there are chapters where the material in the Tosefta is richer than the Mishnah and has an original and interesting order of its own.

The first chapter, dealing with the prevention of torts, parallels chapter 2 of the Mishnah (ch. 1 of which is paralleled by the second half of the Tosef., BM 11). Chapter 2:1–14, paralleling the Mishnah 2:1–6, deals with *ḥazakah*; while 2:14–17, paralleling Mishnah 2:2–8, is a supplement to chapter 1 of the Tosefta. It is probable that the connection between this supplement and the preceding section is *Samuel b. Meir’s definition of a Tyrean window (14a) and the prohibition against opening a window facing that of a neighbor (14b). Chapters 3–4, paralleling Mishnah 4:1–5:5, deal with the regulations of selling; 5:1–6:21, paralleling Mishnah 5:6–6:3, deal with commercial honesty; the last part of this section differs from the Mishnah, in that the transition to the following two sections is clearly recognizable. Thus the subject of 6:22–23, paralleling the Mishnah at the end of chapter 6, deviates only slightly from the main discussion on commercial honesty, as it deals with the language used by a seller, a subject covered previously, and the subject of Tosefta 6:24–28 parallels the Mishnah of chapter 7. Chapters 7–10, discussing the *halakhot* of inheritance, contain a wealth of sources on details not mentioned at all in the parallel Mishnah (ch. 8 and 9). Chapter 11, dealing with deeds, parallels Mishnah chapter 10.

The rabbinic tradition regarding the order and authorship of the books of Scripture is recorded in *Bava Batra* 14b. The report of the travels of Rabbah bar Bar Ḥana (BB 73–74) contains fantastic descriptions of marvelous creatures and visions of the corpses of the Israelites who left Egypt and died in the wilderness of Sinai.

In the standard printed editions of the Babylonian Talmud more pages are found in this tractate than in any other (BB’s last page is numbered 176). However, there are other tractates whose talmudic text is longer (see *Talmud). The size of the *Bava Batra* volume is due to the fact that the commentary of *Rashi is printed through page 29a only (in the Pesaro edition the termination of the commentary is marked: “Here died Rashi”), and the remainder of the tractate contains

the more lengthy commentary of Samuel b. Meir. An English translation of the Talmud was made by I. Epstein (Soncino edition, 1935).

[Shamma Friedman]

BAVA BEN BUTA (first century B.C.E.), sage and judge during the reign of *Herod. Bava, although a disciple of Shammai, agreed with Hillel, that the “Laying of Hands” (cf. Lev. 3:2) on sacrifices during festivals is permissible and was instrumental in establishing this law (Bezah 20a–b). As a judge, Bava was noted for his thorough investigations and for his just decisions (Git. 57a). He offered daily guilt-offerings prescribed in cases of doubtful trespass, for fear that he had committed a sin (Ker. 6:3). This sacrifice came to be called “the guilt-offering of the pious.” Bava overlooked an insult to himself to make peace between husband and wife (Ned. 66b). According to another legend Bava was the only Jewish sage who was not put to death by Herod; instead, Herod blinded him so that he could seek his counsel incognito. When Herod finally disclosed who he was and asked how he could make amends, Bava advised him to rebuild the Temple (BB 3b–4a). Josephus refers to “The Sons of Bava,” who were among the noblemen of Jerusalem, and were beloved by the people. They were strong opponents of Herod, and for a long time “The Sons of Bava” remained in hiding for fear of him. Ultimately they were executed by him (Ant., 15:260–6).

[Zvi Kaplan]

BAVA KAMMA (Aram. ܒܘܒܐ ܕܢܝܩܝܢ), tractate of the Talmud, the first of the order *Nezikin*.

Name

Bava Kamma was originally not a separate tractate, but the first part of a larger tractate, whose name was identical with the name of the order. The title *Bava Kamma* is the abbreviated form for *Bava Kamma de-Massekhet Nezikin* (“the first gate (section) of the tractate *Nezikin*”). Tractate *Nezikin* (“torts”) comprised 30 chapters, covering the entire range of pecuniary law (*dinei mammonot*). However, according to the Midrash, the size of *Nezikin* discouraged the student: “What does the fool say? ‘Who can study the Torah? *Nezikin* has 30 chapters; *Kelim* has 30 chapters!’” (Lev. R. 19:2). For this reason *Nezikin* was divided into three sections, each consisting of ten chapters. The second and third parts are now called *Bava Mezia* (“the middle gate”) and *Bava Batra* (“the last gate”). The division seems to have taken place in Babylonia (*bava* as “gate” is unique to Babylonian Aramaic; see: Ned. 66b), where the size of *Nezikin* must have interfered with the regular practice

of the academies to study one tractate each term. Palestinian sources indicate no division. (*Genizah* fragments of the Jerusalem Talmud treat it as one tractate.)

A similar division took place in the Tosefta, where the original tractate *Nezikin*, which contained 33 chapters, was divided into three sections of 11 chapters each. The mechanical nature of this division is evident from the fact that chapter 11 of Tosefta *Bava Mezia* contains some material that parallels the last chapter of Mishnah *Bava Mezia* and some that parallels the first chapter of Mishnah *Bava Batra*.

Contents

The first three *mishnayot* of *Bava Kamma* belong to one of the most ancient strata of mishnaic material, and contain, in succinct phrases, the underlying laws of *Torts (see *Avot Nezikin): “There are four *avot* (lit. ‘fathers’ or ‘main categories’) of torts – the *shor* (‘ox’), the *bor* (‘pit’), the *maveh* (‘man’ or ‘tooth’) and the *hever* (‘fire’).... If I am responsible for the care of a thing, it is I who make possible the injury it may do.... Assessment of the monetary equivalent [of an injury] must be made before a court of law, based upon the testimony of witnesses.... The laws of torts apply equally to women....” The antiquity of this section is indicated by the use of numerical listing (four *avot*), first person constructions, biblical phrases, archaic forms, and terse rules. One of the earliest of the Babylonian *amoraim*, Rav, alluded to the character of this section when he stated: “The *tanna* of this Mishnah was a Jerusalemite, who taught in a terse style” (BK 6b).

The list of four *avot* in the Mishnah is a convenient summary of the various sources of damage mentioned in Exodus 21:28–22:5. In the *beraitot*, other lists of *avot nezikin* are found, one containing 13, and others 24, according to varying schemes of inclusion (see BK 4b; Tosef. to BK 9:1).

CHAPTERS 1:4–3:7. Chapter 1:4 is another ancient Mishnah, again in the form of a numbered list, dealing, now in greater detail, with the *avot* of “horn,” “tooth,” and “foot,” and, finally, “man.” In chapter 2 each entry on the list in 1:4 is defined and expanded. For example, if an animal, while walking, kicks some pebbles, which hit another object and cause damage, this is “foot,” only half of the damage is to be paid. Thus, chapter 2 of the Mishnah is a sort of “*Gemara*” on 1:4.

The first laws in chapter 3 come under the category of “pit”: “If a man left a pitcher in the ‘public domain,’ and another stumbled over it... the owner is liable for the injury.” The middle part of chapter 3 deals with “man”: “If two pot-vendors [carrying their wares] were walking, one behind the other, and the first one stumbled....” The end of chapter 3 again deals with “horn” and appears to be a new discussion of the same subject covered in chapter 2. It has therefore been suggested by A. Weiss that 1:4–3:7 was originally an independent Mishnah section, dealing with the *avot* of “ox” (“horn,” “tooth,” “foot”), “pit,” and “man.” It would thus appear to be an expansion of the list of *avot* at the beginning of chapter 1, until *maveh*, in consonance with the interpretation that *maveh* is “man.”

CHAPTER 3:8–6 END. This is another section, treating in detail the categories “horn,” “pit,” “tooth and foot,” and “fire.” It, too, is an expansion of 1:1, taking “ox” as “horn,” and *maveh* as “tooth and foot.” Thus the dispute between Rav and Samuel as to the meaning of *maveh* (BK 3b) did not originate with them; it had its origin in the underlying organizational scheme of early *mishnayot* which are independent expansions of the ancient Mishnah: “There are four *avot* ...”

CHAPTER 7. Chapter 7 is a comprehensive treatment of the laws of theft. It concentrates on the fines of “double,” and “four or five” fold found in Exodus 22:3 and 21:37. Virtually each aspect of the theft and subsequent trial of the thief is scrutinized; each term of the pertinent scriptural verses is carefully defined and analyzed. In respect to the fine of “four or five” fold imposed by Scripture for the sale or slaughter of a stolen animal, the Mishnah determines that if the thief sold part of the animal but retained partial ownership, however minute, he is not liable to the fine of “four or five fold,” but only to that of “double.” Thus “sells it” in the scriptural verse is defined as the sale of the entire animal. Similarly, “if he slaughtered it and it became unfit under his hand [through a ritually improper slaughtering]” (7:5), he is exempt from the fine of “four or five” fold, such an act not being properly deemed “slaughter.”

CHAPTER 8. This chapter is a comprehensive unit devoted to the laws of assault and battery.

CHAPTERS 9–10. Chapters 9 and 10 deal with laws of robbery. It would appear that a more natural position for these chapters would be after chapter 7, which deals with the related subject of theft. Their position is perhaps determined by their concentration upon the regulations governing transference of ownership of the stolen object through physical alteration or the original owner’s despair of recovery, which makes them more closely related to the laws of acquisition and ownership in the succeeding chapters (see *Bava Mezia) than to the laws of torts in the preceding ones.

It has been suggested that the function of “monetary law” in rabbinic sources is to prevent offenses of law, and to instruct the common man in moral behavior, rather than merely to provide for redress after a wrong has been committed (i.e., that such law is duty-oriented, rather than right-oriented, as explained by Silberg). Along these lines, types of damages are described in *Bava Kamma* for which one is “not liable according to human law, but guilty according to the laws of heaven” (55b–56a). Since there are acts which, even though not rendering one liable to suit, are morally wrong, it becomes an act of piety to take extreme care in preventing harm to the person or property of others. R. Judah held that the study of the laws of damages in *Bava Kamma* is a prerequisite for achieving true piety (30a).

Jerusalem Talmud

S. Lieberman has shown that the tractate *Nezikin* in the Jerusalem Talmud is of a different nature from the rest of that Talmud. The differences are attributed to its having been ed-

ited in Caesarea, no later than 350 C.E., while the rest of the Jerusalem Talmud was edited in Tiberias, some 50 years later. Among its distinguishing features are the short, pithy nature of the discussions, indicating a minimum of editing; a more primitive talmudic terminology; archaic Hebrew words; a relatively wider use of Greek and Latin (Caesarea was the seat of the Roman government in Palestine); and a distinctive orthography (e.g., -ל for לָ). Anonymous statements in *Nezikin* are quoted elsewhere in the Jerusalem Talmud in the name of “the sages of Caesarea,” or in the name of specific *amoraim* who lived in Caesarea. When points of law relating to *Nezikin* are discussed elsewhere in the Jerusalem Talmud, the treatment differs from the parallels in *Nezikin*. Conversely, sections of *Nezikin* which discuss matters relating to other tractates do not correspond to the material found in the relevant section of those tractates, although it is reasonable to assume that they were present in the corresponding tractates of the Talmud collection used by the editor of *Nezikin*. All this leads to the conclusion that *Nezikin* differs from the other tractates of the Jerusalem Talmud and constitutes the only existing remnant of the “Talmud of Caesarea.” This issue has recently been reexamined by Y. Sussman, who arrived at different conclusions.

Aside from the regular editions, commentaries and translations, *Bava Kamma* has received special scholarly attention with the publication of a new critical edition of the Jerusalem Talmud of *Massekhet Nezikin*, edited by E.S. Rosenthal with commentary by S. Lieberman, and a comparative study of the Mishnah and Tosefta by Abraham Goldberg.

[Shamma Friedman]

BAVA MEZIA (Aram. מְזִיָּא קְמָרָא, “middle gate”), tractate of the Mishnah, with *Gemara* in the Jerusalem and Babylonian *Talmuds. Originally *Bava Mezia* was not a separate tractate but the second part of the tractate *Nezikin* (see **Bava Kamma*). Chapters 1 and 2 deal with the laws of *acquisition (*kinyan*) of lost or abandoned articles and describe the cases in which the article may not be acquired by the finder but must be held until claimed. These regulations are thus related to the laws of the last two chapters of *Bava Kamma*, which determine how and under what circumstances stolen articles may be legitimately acquired and under what circumstances they must be returned. Great religious importance is attached to the commandment of returning lost property: if a man returns a lost animal and it escapes again, he must continue to return it, even “100 times” (31a). Nonetheless, exemption is granted from this

commandment if its performance would require violation of a ritual prohibition, entail behavior which is an affront to the personal dignity of the finder, or require the finder to neglect his own work and thereby sustain a financial loss greater than the object's value (30a). Chapter 2:9 reads like a new beginning and probably represents the incorporation of a new source, originally a Midrash on Deuteronomy 22:1. It closes with a section which is religious and moral in tone, thus marking the end of a unit.

An unpaid guardian, with whom goods were deposited for safekeeping, is discussed in chapter 3. He resembles one who guards found property (ch. 2), and also must, on some occasions, sell perishables deposited with him and hold the proceeds for the owner. If the guardian misuses the object, he is considered a robber and must assume all responsibility for subsequent damage. Chapter 4 opens with the general rules for acquiring movable property in a business transaction. Transfer of title to the buyer occurs, not at the time of payment, but only when the buyer takes the item (or symbolically “draws” it to himself). This means that the sale can be legally canceled even after payment, as long as the goods have not been “drawn”; but the sages said, “He that exacted punishment from the generation of the Flood ... will exact punishment from him that does not abide by his spoken word” (4:2). However, R. Johanan held that originally payment of some amount of money effected the transfer of title, but that since this law led to abuse – the seller would not deliver but say, “Your wheat was destroyed by fire in the storeroom” – the rule was changed to its present form (46b). The remainder of the chapter contains a detailed section on *ona'ah*, unfair and illegal business practices (based on Lev. 25:17). Much attention is given to overcharging; the law guarantees redress to the party defrauded of one-sixth or more of the value of the purchase.

Chapter 5 is a self-contained unit dealing with the laws of interest (see Lev. 25:36); it appears here probably by virtue of its association with the regulations on commerce found in chapter 4, and closes with a section emphasizing the ethical seriousness of the prohibition (see Tosef. 6:17). Chapter 6 opens with cases of deception between employer and craftsmen, which can be considered a continuation of the theme of *ona'ah* found in chapter 4. The first Mishnah is followed by a series of *mishnayot* each beginning with the words, “If a man hired...” They deal with breach of contract in cases of hiring craftsmen or work animals. The final section concerns itself with craftsmen who work with others' material but on their own premises; they have the status of “paid guardian” and are responsible for loss or theft. Chapter 7 gives rules of labor relations and the right of the employee, especially the agricultural worker, to eat from the produce of the field. This law reflects the interpretation that Deuteronomy 23:25–26 refers specifically to the agricultural worker and not to any passerby, for granting to the latter the rights of eating the field's produce would not yield a viable situation for the owner (92a). The duty of the farmer to allow his animal to eat of the produce (Deut. 25:4) is also treated. The discussion of the right of those who

guard produce (but do not work with it) to partake of the food is the occasion to introduce an ancient Mishnah delineating the laws of the four kinds of guardian: an unpaid guardian, a borrower, a paid guardian, and a hirer (Ex. 22:6–14). The beginning of chapter 8 continues the subject of guardians, specifically elaborating on Exodus 22:14 – that the borrower of an animal may not be liable for payment on unavoidable accidents when he had also borrowed or hired the personal services of the lender. The chapter closes with laws of renting houses (related to “hiring” above).

Chapter 9 opens with a related issue: leasing of a field where the lessee gives the owner a percentage of the produce, or a fixed amount of produce, instead of rental money. The last two parts of the chapter complement laws found earlier in the tractate; they deal with the duty to pay employees promptly and limitations of the creditor’s right to exact a pledge from the borrower. The religio-moral tone of this section is typical of the close of a unit. Chapter 10 does indeed open a new topic, the ownership of real estate (continued through *Bava Batra), and deals basically with the property rights of neighbors whose properties are situated one above the other.

Among several aggadic passages in *Bava Mezia*, the section beginning at the bottom of 59a is of special interest. R. Eliezer’s arguments regarding the purity of a certain oven did not convince his colleagues. He then called for a series of miraculous acts to vindicate him. Although heavenly interventions were forthcoming, the miracles were deemed valueless in settling legal disputes. R. Eliezer then declared, “If the law is according to my opinion, may it be proved from heaven.” A heavenly voice (*bat kol) issued forth saying, “Why do you challenge R. Eliezer, for the law is according to his opinion in all matters?” Whereupon R. Joshua rose and declared, “It is not in the heavens” (Deut. 30:12) “... since the giving of the Torah at Mt. Sinai, no attention is paid to a heavenly voice, but the opinion of a majority of the scholars determines authentic law.” An English translation of the Talmud was made by S. Daiches and H. Freedman (Soncino edition, 1935). A student’s edition, vocalized, with translation, commentary and notes in English, appeared as part of the *Talmud El-Am*.

[Shamma Friedman]

The Tosefta of *Bava Mezia* contains 11 chapters. The *beitot* in the Tosefta, in addition to giving supplementary and sometimes parallel passages to the Mishnah, also contain much more material than the Mishnah, dealing with entire subjects not mentioned in it.

Chapter 1 of the Tosefta parallels chapter 1 of the Mishnah, but it ends with a series of laws dealing with deeds and surety. They begin with the words (1:15), “if two have hold of a bill, the one saying it is mine but I lost it” etc., which are directly connected with the main subject of the chapter; since the editor did not want to fragment the source, he gives it in full on account of the first *halakhah*. Chapter 2 parallels Mishnah chapter 2, but from its last *halakhah* (33) it can be inferred

to whom lost property need not be returned – “heretics, apostates, and informers” (cf. Av. Zar. 26b; and see Ch. Albeck, *Mehkarim be-Varaita ve-Tosefta*, 1944, 138 n.4). Chapter 3:1–12, parallels chapter 3 of the Mishnah, and 3:13–29 parallels chapter 4 of the Mishnah. Chapter 5 of the Mishnah dealing with interest is paralleled by chapters 4–6 of the Tosefta. Tosefta 7:1–14 parallels 6:1–5 of the Mishnah, dealing with *ona'ah* in the hiring of laborers and cattle and the requirement not to deviate from traditional custom in the conditions of hire; while Tosefta 7:14–19 parallels Mishnah 6:6–8, dealing with the *halakhot* of craftsmen in respect of guarding articles in their care. It is probable that this chapter preserves richer and more original sources than those contained in the Mishnah.

Chapter 8:1–12, paralleling Mishnah 7:1–7, deals with the duties and rights of laborers, as well as the rights of cattle employed in work (in respect of eating the produce). Tosefta 8:13–26 deals with the four bailees and parallels Mishnah 7:8–8:5, but here too the Tosefta appears to preserve a more original order. It is not clear whether Tosefta 8:25–26 was brought in because of the previous cases of conflicting statements by the two litigants or whether it is merely the supplement of the body of *halakhot* in 7:1–14. Tosefta 8:27–33 parallels Mishnah 8:6–9 and discusses the laws of the hiring and borrowing of houses, inns, and shops. Tosefta chapter 9 deals with hiring and the renting and tenant-hiring of fields. (The Mishnah has nothing on hiring, whereas from the Tosefta the connection [in the Mishnah] between the renting of houses and the leasing of fields becomes clear.) Chapter 10:1 (“He who lends to his fellow”) may be a supplement to the previous chapter (9:14, 20–21: “one may not deviate from local custom”) or it may have been brought in because of the laws which follow dealing with remuneration for hire. Tosefta 10:2–7, dealing with the laws of hired men and their hire, parallels accordingly Mishnah 9:11–12, and subsequently 8–11 parallels Mishnah 9:13 in dealing with the taking of a pledge. Tosefta chapter 11, dealing with the laws of partners and neighbors, parallels chapter 10 of Mishnah *Bava Mezia* together with chapter 1 of *Bava Batra*.

[Moshe David Herr]

Aside from the regular editions, commentaries and translations, *Bava Mezia* has received special scholarly attention with the publication of a new critical edition of the Jerusalem Talmud of *Massekhet Nezikin*, edited by E.S. Rosenthal with commentary by S. Lieberman, and the monumental work *Talmud Arukh*, *Talmud Bavli Bava Mezia VI*, by Shamma Friedman.

BAVARIA, *Land* in S. Germany, including Franconia. Jews are first mentioned there in the *Passau toll regulations of 906. Their settlement was apparently connected with the trade routes to Hungary, southern Russia and northeastern Germany. A Jewish resident of *Regensburg is mentioned at the end of the tenth century. The communities which had been established in *Bamberg and Regensburg were attacked during the First Crusade in 1096, and those in *Aschaffenburg, *Wuerzburg, and *Nuremberg during the Second Crusade in 1146–47. Other communities existed in the 13th century at Landshut, Passau, *Munich, and *Fuerth. The Jews in Bavaria mainly engaged in trade and moneylending. In 1276 they were expelled from Upper Bavaria and 180 Jews were burned at the stake in Munich following a *blood libel in 1285. The communities in Franconia were attacked during the *Rindfleisch persecutions in 1298. The *Armleder massacres, charges of desecrating the *Host at *Deggendorf, Straubing, and Landshut, and the persecutions following the *Black Death (1348–49), brought catastrophe to the whole of Bavarian Jewry. Many communities were entirely destroyed, among them *Ansbach, Aschaffenburg, *Augsburg, Bamberg, *Ulm, Munich, Nuremberg, Passau, Regensburg, *Rothenburg, and Wuer-

zburg. Those who had fled were permitted to return after a time under King Wenceslaus.

In 1442 the Jews were again expelled from Upper Bavaria. Shortly afterward, in 1450, the Jews in Lower Bavaria were flung into prison until they paid the duke a ransom of 32,000 crowns and were then driven from the duchy. As a result of agitation by the Franciscan John of *Capistrano, they were expelled from Franconia. In 1478 they were expelled from Passau, in 1499 from Nuremberg, and in 1519 from Regensburg. The few remaining thereafter in the duchy of Bavaria were expelled in 1551. Subsequently, Jewish settlement in Bavaria ceased until toward the end of the 17th century, when a small community was founded in *Sulzbach by refugees from *Vienna. During the War of the Spanish Succession (1701–14) several Jews from Austria serving as purveyors to the army or as moneylenders settled in Bavaria. In this period a flourishing community grew up in Fuerth, whose economic activities helped to bring prosperity to the city. After the war the Jews of Austrian origin were expelled from Bavaria, but some were able to acquire the right to reside in Munich as monopoly holders, *Court Jews, mintmasters, and physicians. Several Court Jews belonging to the Frankel and *Model families

Map of Bavaria showing Jewish population centers from the tenth century to 1932-33.

became prominent in Ansbach and Fuerth for a while in the 18th century, particularly because of their services in managing the state's economy.

In the Napoleonic era Jewish children were permitted to attend the general schools (1804), the men were accepted into the militia (1805), the poll tax was abolished (1808), and Jews were granted the status of citizens (1813). However, at the same time their number and rights of residence were still restricted, and only the eldest son in a family was allowed to marry (see *Familiants Laws). In 1819 anti-Jewish disorders broke out in Franconia (the “*Hep! Hep!” riots). Owing to the continued adverse conditions and the restrictions on families a large number of young Bavarian Jews immigrated to the U.S. A second wave of emigrants left for the U.S. after the 1848 Revolution, which had been accompanied by anti-Jewish riots notably in rural Franconia. In 1861 the discriminatory restrictions concerning Jews were abolished, and Jews were permitted to engage in all occupations. However, complete equality was not granted until 1872 by the provisions of the constitution of the German Reich of 1871. Certain special “Jewish taxes” were abolished only in 1880. The chief occupation of Jews in 19th century rural Bavaria was the livestock trade, largely in Jewish hands (see *Agriculture). By the beginning of the 20th century Jews had considerable holdings in department stores and in a few branches of industry.

A number of Jews were active after World War I in the revolutionary government of Bavaria which was headed by a Jew, Kurt *Eisner, who was prime minister before his assassination in 1919. Another Jew, Gustav *Landauer, who became minister of popular instruction, was also assassinated that year. In the reaction which followed World War I there was a new wave of antisemitism, and in 1923 most of the East European Jews resident in Bavaria were expelled. This was the time when the National Socialist Movement made its appearance in the region, and antisemitic agitation increased. Jewish ritual slaughter was prohibited in Bavaria in 1931.

The size of the Jewish population in Bavaria varied relatively little from the Napoleonic era to 1933, numbering 53,208 in 1818 and 41,939 in 1933. A Bavarian Jewish organization, the Verband bayerischer israelitischer Gemeinden, was set up in 1921 and included 273 communities and 21 rabbinical institutions. In 1933 the largest and most important communities in Bavaria were in Munich (which had a Jewish population of 9,000), Nuremberg (7,500), Wuerzburg (2,150), Augsburg (1,100), Fuerth (2,000), and Regensburg (450). At this time the majority of Bavarian Jews were engaged in trade and transport (54.5%) and in industry (19%), but some also in agriculture (2.7% in 1925 compared with 9.7% in 1882). Over 1,000 Jews studied at the University of Bavaria after World War I, a proportion ten times higher than that of the Jews to the general population.

Regensburg was a center of Jewish scholarship from the 12th century. Regensburg was the cradle of the medieval Ash-

kenazi *Hasidism and in the 12th and 13th centuries the main center of this school. The traveler *Pethahiah b. Jacob set out from there in about 1170. Prominent scholars of Bavaria include *Meir b. Baruch of Rothenburg (the leading authority of Ashkenazi Jewry, 13th century); Jacob *Weil (taught at Nuremberg and Augsburg, beginning of the 15th century); Israel *Bruna (settled in Regensburg, mid-15th century); Moses *Mintz (rabbi of Bamberg, 1469–1474); and the Renaissance grammarian Elijah *Levita (a native of Neustadt). In the 19th/20th centuries there lived in Munich the folklorist and philologist Max M. *Gruenbaum; Raphael Nathan Nata *Rabinowicz, author of *Dikdukei Soferim*; and Joseph *Perles, rabbi of Augsburg, 1875–1910.

The Jews in Bavaria were among the first victims of the Nazi movement, which spread from Munich and Nuremberg. Virulent and widespread antisemitic agitation caused the depopulation of scores of the village communities so characteristic of Bavaria, especially after the **Kristallnacht* in 1938. The first concentration camp was established at *Dachau in Bavaria and many Jews from Germany and other countries in Europe perished there.

After World War II thousands of Jews were assembled in displaced persons' camps in Bavaria; the last one to be closed down was in Foehrenwald. Almost all of the 1,000 Bavarian Jews who survived the Holocaust were saved because they were married to Germans or were born of mixed marriages. A year after the end of hostilities a Nazi underground movement remained active in Bavaria, and the neo-Nazi anti-Jewish demonstrations of June 1965 started in Bamberg. Antisemitic sentiment was also aroused when the minister of Jewish affairs, Philip Auerbach, was prosecuted for misappropriation of funds in 1951.

In 1969 there were in Bavaria about 4,700 Jews, forming 13 communities, the majority from the camps of Eastern Europe. The largest communities were in Munich (3,486), Nuremberg (275), Wuerzburg (141), Fuerth (200), Augsburg (230), and Regensburg (150). There were smaller numbers of Jews in *Amberg, Bamberg, *Bayreuth, Straubing, and Weiden. In 1989 there were 5,484 community members. Due mainly to the emigration of Jews from the former Soviet Union, the number rose to 18,387 in 2003, the largest communities being those in Munich (8,917), Straubing (1,713), Augsburg (1,619), Nuremberg (1,286), and Wuerzburg (1,027).

[Zvi Avneri]

BAVLI (Rashgolski), HILLEL (1893–1961), Hebrew poet and educator. Bavli, who was born in Pilvishki, Lithuania, attended yeshivot in Kovno and Vilna. In 1912 he immigrated to the United States and studied at Canisius College and Columbia University. From 1918 he taught modern Hebrew literature at the Jewish Theological Seminary of America, after 1937 with the rank of professor. Bavli's first poems appeared in a children's periodical, *Ha-Perahim*, in 1908. His first book of poetry, *Neginot Arez* ("Melodies of the Land"), was published in 1929. Subsequent collections of his poetry, *Shirim* ("Poems," 1938), *Shirim le-Rahel* ("Poems for Rahel," 1950), and *Ad-deret ha-Shanim* ("The Mantle of Years," 1955), also appeared in Israel. Conservative in style and structure, Bavli covers a broad range of themes in his work: personal love; love of his people; love of Erez Israel. He was one of the first Hebrew poets to deal with the American milieu. "Mrs. Woods" is an idyll about an American woman of simple tastes and honest demeanor. Bavli's critical essays *Ruhot Nifgashot* ("Winds Meet," 1958) deal mainly with Hebrew and American writers. Bavli translated Dickens' *Oliver Twist* (1924) and Shakespeare's *Antony and Cleopatra* into Hebrew (1952). He also translated works by the black writers James D. Corrothers, W. Burghardt du Bois, and Claude McKay into Hebrew. He edited a miscellany, *Nimim* (1923); a yearbook, *Massad* (2 vols, 1933–36); the Zevi Scharfstein Jubilee Volume (1955); and several modern Hebrew classics for school use. He published a number of articles in English on modern Hebrew literature, including "The Growth of Modern Hebrew Literature" (1939) and "Some Aspects of Modern Hebrew Literature" (1958).

[Eliezer Schweid]

BAVLI, MENAHEM BEN MOSES (fl. 16th century), rabbi and kabbalist of the Safed school. There is little information about his descent. The title "*Bavli*" (Babylonian) probably stands for "Roman," and it is possible that he came from Italy. In 1522 and in 1525 he signed himself as *dayyan* in Trikkala, Greece. Later he immigrated to Erez Israel and in 1531 he was in Safed together with his father and brother Reuben (responsa R. Moses b. Joseph di Trani, 1 (1641), no. 43). They made their living in the wool-dyeing trade. Menahem was considered one of the great scholars of the town. One of his responsa was published in the responsa collection *Maran le-Even ha-Ezer* (no. 14) and in it he quotes a ruling of R. Jacob *Berab, whom he calls "our teacher the Great Rabbi," which suggests that Bavli may have been a student at Berab's yeshivah in Safed. After 1553 he traveled to Egypt. From Safed Bavli went to Hebron probably in connection with the expansion of the Jewish settlement there, in which the scholars of Safed took part. In the introduction to his *Peri Hevron (Taamei ha-Mitzvot)* (Lublin, 1571), he wrote that he dedicated the income of this book to "Hebron, as a contribution for its reconstruction."

BAYAZID II (c. 1447–1512), sultan of the Ottoman Empire (1481–1512), son and successor of Sultan Mehmet II, conqueror of Constantinople. Following the expulsion from Spain, great numbers of Jews streamed into the Ottoman Empire and settled in various towns of the Balkans and Anatolia. According to R. Elijah *Capsali, Sultan Bayazid issued an order to the governors of the provinces not to refuse those Jews entry or cause them difficulties but to receive them cordially and provide them with the help they needed to settle themselves. Nevertheless, according to the same source, Bayazid was a devout Muslim and was responsible for certain cases of forced conversion of Jews to Islam. He was also the only sultan to enforce the prohibition against building new synagogues. Immanuel *Aboab attributes to Bayazid the famous remark that the Catholic monarchs (Ferdinand and Isabella) were considered wise, but wrongly so, since they impoverished Spain (by the expulsion of the Jews) and enriched the Ottoman Empire. During the reign of Bayazid the position of rabbi in the capital was held by R. Moses *Capsali, who was succeeded by R. Elijah *Mizrahi. Joseph *Hamon was the sultan's physician and influential at court. European sources accuse Hamon of complicity in the sudden death of Bayazid after his forced abdication in favor of his son Selim I.

BAYEFSKY, ABA (1923–2001), Canadian artist and teacher. Bayefsky was born in Toronto, where he was first encouraged to paint by Canadian Group of Seven artist Arthur Lismer. In 1942 Bayefsky joined the Royal Canadian Air Force and became an official war artist in 1944. In May 1945 he was among the first to enter the newly liberated *Bergen-Belsen concentration camp. "For the first time," wrote Bayefsky, "I had become aware of man's monstrous capacity for evil. It was the determining factor in everything I have done since." His camp images are part of the art collection of the Canadian War Museum. After the war Bayefsky returned to Europe to study at the Académie Julian in Paris and continued to paint and draw images based on the lives of Jewish displaced persons.

Back in Toronto, Bayefsky's drawings, paintings, watercolors, murals, and publications celebrated people and their everyday lives. Well traveled, he created works reflecting the diversity of human experience from the marketplaces of India to the traditional tattoo artists of Japan. Yet it was his Jewish heritage, his anger at what he witnessed during the Holocaust and at the resurgence of antisemitism during his later years that engendered Bayefsky's most vibrant work. "Tales from

the Talmud” illustrated 18 talmudic folk tales and parables; large murals depicted scenes from Jewish history’s joys and sorrows; “Epilogue,” his last works, encompass 50 years of reflection on the Holocaust. “Epilogue” was donated to Yad Vashem in 1999.

Bayefsky exhibited in more than 45 one-man exhibitions and taught Fine Art at the Ontario College of Art from 1957 to 1988. He was also president of the Canadian Group of Painters and the Canadian Society of Graphic Art, a member of the Royal Canadian Academy, and appointed to the Order of Canada, the highest honor Canada bestows upon a citizen.

[Paula Draper (2nd ed.)]

BAYER, BATYA (Bathja; 1928–1995), Israeli musicologist, music archeologist, and librarian. Born in Bingen, Germany, Bayer immigrated to Eretz Israel in 1936 with her family. She earned her Ph.D. at the University of Zurich in 1959. Subsequently she received a librarian’s degree from the Hebrew University of Jerusalem. From 1964 to 1974, she was the director of the Music Department at the National and University Library and played a vital role in shaping the research of the major music research library in Israel. She was also a senior lecturer at the Department of Musicology of the Hebrew University. Bayer was a pioneer in the interdisciplinary study of music and archeology in relation to the ancient civilizations of the Near East, and one of the creators of a new field of study: music archeology. She made a significant effort to gather archeological and iconographical data from the biblical period in Palestine with a view to elucidating the musical passages and musical instruments mentioned in the biblical text and post-biblical writings. Her thorough investigation is exemplified by her monograph *The Material Relics of Music in Ancient Palestine and Its Environs* (1963), by the entry “*Neginah ve-Zimrah*” in the *Encyclopedia Biblica* 5 (1980), and, in particular, by her two extensive studies “The Biblical Nevel” (*Yuval* 1, 1968) and “The Titles of the Psalms” (*Yuval* 4, 1982).

Bayer was broadly cultured and an individual of enormous erudition and perfectionism. An eloquent example is her coverage of the extensive musical material related to biblical figures and stories for the first edition of the *Encyclopaedia Judaica* as well as her other entries on a wide variety of subjects.

[Amnon Shiloah (2nd ed.)]

BAYHAN (Bayhān), county and its central city, Bayhān al-Kaşab, in South Arabia. This was a desert area with shifting sands on the ancient Perfume Road. In the Roman period the area flourished because of the perfume trade, but it deteriorated when Christianity became widespread. In *Nūr al-Zalām* by Rabbi *Nethanel ben Isaiah, Bayhan was referred to as Diklah (Gen. 10:27). At the end of the 15th century a Jewish false messiah orated in the area, but after he had been seized

and killed by the authorities the area was evacuated of all Jews. In the 19th century the Jews suffered from the struggle between the Turkish and the British. Jews lived in Bayhan and in four villages in the area: Aylan, Shirka, Aliya, and Rawna, which were controlled by the Sheikh Husayn ibn Aḥmad. There were approximately 30 houses belonging to Jews in the town and about 20 families in the nearby villages. Most Jews were blacksmiths and weavers but some were merchants. A number of families had land in the neighboring city of Ḥarib. Jews and Muslims lived side by side and had good relations. There was one synagogue in Bayhan, established by R. Sa’id Kasha of Ṣan’a. Another rabbi from Ṣan’a was Salim Joseph Ṣan’ani. The cemetery was located in the western part of the city. One synagogue was situated in Aylan and was used by all Jews in the village area. The rabbinical court was staffed by the Mori and Menasheh families, which, according to their testimony, had lived in Bayhan for many generations, coming there from Bayda, Ḥabban, Rada’, Suwadi, Ṣan’a, and other places. Jewish professions in the last generation included: blacksmithing, weaving, retail commerce, and some farming. The 88 Jews of Ḥabban were brought to Aden by a British air force flight in 1949 and from there immigrated to the State of Israel on December 4, 1949. They settled in the abandoned village of Ajur.

[Yosef Tobi (2nd ed.)]

BAYONNE, town in southwestern France. The first Jewish settlement in Bayonne, in the suburb of Saint-Esprit, consisted of *Marranos originally from Spain and Portugal, who settled there early in the 16th century. In 1550 they were granted rights of residence as “New Christians” by the central authorities, but the Bayonne merchants prohibited them from retail trading. In 1636 several Marrano families were expelled from Bayonne, and some of them found refuge at Nantes. From the middle of the 17th century, the Bayonne community organized a congregation, *Nefuzot Yehudah* (“The Dispersed of Judah”). Their cemetery was established in 1660. The right of the community to observe Judaism openly was not officially recognized until 1723. Rabbis of Bayonne in this period included Ḥayyim de Mercado in the second half of the 17th century, succeeded by Raphael *Meldola (1730–1792) of Leghorn, and Abraham David Leon, author of *Instruccioness sagradas y morales* (1765). At the beginning of the 18th century the community numbered 700, and 3,500 in 1753.

The Bayonne community claimed jurisdiction over the small communities in Bidache, Peyrehorade, and other places in the vicinity. Marranos from Spain and Portugal continued

to settle in Bayonne until late in the 18th century. The regulations of the community were drawn up in 1752, and confirmed by the “intendant du roi.” Bayonne Jewry helped to introduce the chocolate industry into France; in the mid-18th century the import of salt and glue into Bayonne was in Jewish hands. Bayonne Jews were among the first to establish trade connections with the French West Indies. About one-third of the municipal tax revenue was derived from the Jewish residents. Despite opposition from their Christian neighbors, the Jews participated in the elections to the States-General in 1789. They were recognized as French citizens in 1790, with the rest of the “Portuguese, Spanish, and Avignonese” Jews in France. During the Reign of Terror, most of the members of the *Comité de surveillance* of Saint Esprit (known then as “Jean Jacques Rousseau”) were Jews; it is noteworthy that no guillotining took place. In the Napoleonic period the community benefited from the city’s increasing prosperity. A new synagogue was built in 1837, using the Torah Ark erected during the reign of Louis XVI. The Jewish population nevertheless fell to 1,293 in 1844, and by 1926 had decreased to 45 families.

[Zvi Avneri]

Holocaust Period

After the Franco-German armistice (June 1940) Bayonne became a stopover for dozens of Jewish refugees, particularly from *Belgium and *Luxembourg. A great many could not get to Spain, and the official police census of March 15, 1942 registered 308 Jewish families there at that time. In April 1943 the majority of them were expelled, while 193 pieces of Jewish property were confiscated. Fortunately, the Ark, built in the style of Louis XVI, and the Torah scrolls, some of which were of Spanish origin, were hidden in the Basque Museum, and restored to the synagogue after the Liberation. Few of Bayonne’s Jews survived the war. The rabbi of Bayonne, Ernest *Ginsburger (1876–1943) directed religious activities on behalf of the Jews interned in French concentration and labor camps. He was subsequently deported and murdered by the Germans. In April 1943, almost all the Jews in Bayonne and the surrounding district were forcibly evacuated.

After the war the community slowly rebuilt itself, with about 120 families recorded living in the city in 1960. With the arrival of immigrants from North Africa, the Jewish community more than doubled, so that in 1969 close to 700 Jews lived in Bayonne. The community maintained an old-age home. A rabbi was engaged to preside over regular community services, led according to the ancient Sephardic (“Portuguese”) rites of the old synagogue, which was restored. The old Jewish cemetery, dating back to 1660, continued to be in use. The Basque Museum maintains two rooms with a large display of Jewish religious objects and historic documents relating to the Bayonne Jewish community. René *Cassin, the Nobel Prize winner and president of *Alliance Israélite Universelle, was born in Bayonne in 1887.

BAYRAMIÇ, town near *Çanakkale in Turkey in an area where many important ancient cities like Skamandros, Skepsis, called *Israiliü* in the Ottoman Era, and Kebrene developed. Ottoman rule in this region started in the mid-14th century. Due to Jewish overpopulation in Çanakkale, some Jewish families emigrated to Bayramiç where they established a small quarter composed of 30 households in 1884 and 60 Jews in 1894. By 1910 the number of Jewish households had increased to 50. There were 800 Muslims, 190 Greeks, and 200 Armenians in the district in the 1890s. From time to time there were conflicts, as in the case of a Christian blood libel against the Jews in 1884. During the Gallipoli Campaign, the Jewish population in Bayramiç temporarily increased due to mass flight from the battlefields in Çanakkale. The Jews in Bayramiç had their own cemetery after the Gallipoli Campaign, whereas they had previously buried their dead in Çanakkale. The Jewish community was well organized in the sense that it had a synagogue, *talmud torah*, rabbis, and charitable institutions to provide relief for the needy. Economic activities like exporting cereal and bonito, small-scale manufacturing, and ironmongery were common among the Bayramiç Jews. According to the census of 1927, 93 Jews remained in the district. The Jewish presence in Bayramiç ended in the 1960s.

[M. Mustafa Kulu (2nd ed.)]

BAYREUTH, city in Bavaria, Germany, and former principality. Jews lived in the principality of Bayreuth at the beginning of the 13th century and are mentioned in *Meir b. Baruch of Rothenburg’s responsa. In 1248 several Jews were admitted into the city of Bayreuth. In the course of the riots accompanying the *Black Death (1348–49) many Jews in the principality were killed. After this, the emperor Charles IV entrusted authority over the Jews of Bayreuth to the margrave. In 1372 the latter appointed a chief rabbi for all his territory, including at that time the communities of Kulmbach and Hof. Until the end of the 15th century the Jews were permitted freedom of movement and the right to bring claims against Christians before a mixed tribunal. In 1409 a charter was granted to the Jews of Neustadt an der Aisch (where 71 Jews had perished in the massacre of 1218) and in 1421 Jewish trade in the principality was regulated. In 1422 the Jews were compelled to renounce all claims against Christians and subsequently left

the principality. However, six Jewish families resettled in the “Jewish lane” of the city of Bayreuth in 1441, and the position of the Jewish residents improved. A number of refugees from *Bamberg were admitted into the towns of Pegnitz, Steinach, *Baiersdorf, Erlangen, Neustadt an der Aisch, and Kulm (later called Chlumec in Czechoslovakia), and several *Court Jews were in the margrave’s service at Bayreuth. In 1488 the Jews were again made to cancel all the debts owing to them as a condition for setting aside an expulsion order. Nevertheless, they were expelled several times from various parts of the principality during the 16th and 17th centuries, though most of the expulsion orders were short-lived.

Their position began to improve as a result of the influence of the Court Jew, Samson of Baiersdorf. In 1695 the margrave granted concessions and protection to Jewish tradesmen. The seat of the provincial rabbinate was Baiersdorf since Jews had been excluded from the city of Bayreuth from 1515. Further improvements followed after 1735, in the main a reflection of the liberal attitude of Margrave Frederick, who had a Jewish chess player and a Jewish painter at his court. The Jewish population of the principality rose from 135 families in 1709 to 346 families (1,727 persons) in 1771. Ten Jewish families were admitted into the city of Bayreuth in 1759, and there were 65 families (401 persons) resident in the city in 1771. In 1805 there were 2,276 Jews living in the principality, which was incorporated into Bavaria two years later. During the 19th and the beginning of the 20th centuries the number of the Jews declined. In spite of their shrill antisemitism, Richard *Wagner and his circle in Bayreuth did not affect the position of the Jews there. In 1933 the Jewish population of Bayreuth numbered 261 (0.7% of the total).

On Nov. 10, 1938, the synagogue (built in 1760) was ransacked and homes and shops were pillaged by the SA. The populace committed further acts of vandalism the next day, and the cemetery was desecrated beyond recognition. After flight and emigration, just 120 Jews remained in the city at the time. On Nov. 27, 1941, 60 persons were deported to *Riga; on Jan. 12, 1942, the last 11 were transported to Bamberg en route to *Theresienstadt. After World War II a new community was established which numbered 550 in 1949 and had decreased, through emigration, to 40 in 1967. As a result of the immigration of Jews from the former Soviet Union, the number of community members rose to 473 in 2003.

[Zëv Wilhem Falk]

BAY TREE. The *oren*, mentioned only once in the Bible (Isa. 44:14), is identified in the Talmud (RH 23a) with *ara*, the bay tree. It is mentioned in the Mishnah (Par. 3:8) as being among the trees that were used in preparing the fire for the burning of the red heifer. From it (according to one reading) long poles

were made for the beacons that were kindled to announce the New Moon (RH 2:3). In Israel it is an important forest-tree that grows extensively on moist mountain slopes. An evergreen, its aromatic leaves are used for seasoning food, and were, according to the Talmud, an ingredient in a cure for intestinal worms (Git. 69b). In modern Hebrew *oren* denotes the pine tree, an identification that is based on the Septuagint, but the pine is the biblical *ez shemen*. The translation of *oren* as “ash” (AV) or as “cedar” (RV) is untenable, the latter being the biblical *erez*. In modern Hebrew the bay tree is called *dafnah* or *ez azil*.

[Jehuda Feliks]

BAYUDAYA, group of adherents of Judaism in Mbale, Uganda. Numbering some 600 people who live in villages a few miles north of Mbale, this group owes its origins to a remarkable Ugandan soldier and traditional leader, Semei Kakungulu. At the beginning of the 20th century Kakungulu emerged as a powerful military leader on the British side against Muslim forces. Rewarded by the colonial authorities with a post as a semi-autonomous administrator in a large area around Mbale in the eastern part of the country, he decided to follow biblical teaching and become circumcised. In 1920 he declared of himself and his followers: “We shall be known as the Jews,” and in 1922 published a book which was essentially a guide to Judaism. His followers in Mbale have maintained their Jewish practices (despite persecution at the time of Idi Amin). Orthodox conversions carried out in 2001 and 2002 have transformed the community into a substantially Orthodox community with links with western Jewry and Israel.

BAZA (Arabic *Basta*), town N.E. of Granada in S.E. Spain. Baza was annexed to Granada after Almeria’s defeat by the army under *Samuel b. Joseph ha-Nagid’s command (c. 1039). In the 11th century there was a Jewish community in Baza whose residents were employed mostly in the silk industry. The Jewish quarter was located opposite the present-day cathedral of Santiago. A *mikveh* with three bath chambers has been uncovered and is a good example of 11th-century Arabic bathhouse architecture.

BIBLIOGRAPHY: EI, 1 (1960²), S.V. *Basta*; M. Gómez-Moreno, in: *Al Andalus*, 12 (1947), 151–5; Ashtor, Korot, 2 (1966), 92–93.

BAZELON, DAVID L. (1909–1993), U.S. judge. Bazelon was born in Superior, Wisconsin, and was educated in Chicago. Admitted to the Illinois bar in 1932, he practiced law until 1949. In 1946 Bazelon was appointed an assistant attorney general of the U.S., and in 1949 President Truman appointed him judge

of the U.S. Court of Appeals for the District of Columbia Circuit, often described as the country's most influential court next to the Supreme Court. At 40, he was the youngest judge ever appointed to that court. From 1962 to 1978 he served as chief judge, retiring in 1986 as a senior judge. From 1960 he was a member of the board of trustees of the Jewish Publication Society of America. In 1987 Bazelon's book *Questioning Authority* was published.

An authority on the relationship between law and psychiatry, Bazelon held several university lectureships, and in 1962 was elected honorary fellow of the American Psychiatric Association. As a member of the National Institutes of Health Advisory Commission, he was one of the key architects of early guidelines for genetic engineering. He expressed his particular interest in psychiatry related to the law as a lecturer in law and psychiatry at Johns Hopkins University, the University of Pennsylvania, and the Menninger Clinic. He was an active member of the American Orthopsychiatric Association, serving as its president from 1967 to 1970, and was the only non-psychiatrist included in the first U.S. Mission on Mental Health to the U.S.S.R. in 1967.

Rather than follow precedent set in a simpler time, Bazelon questioned the status quo and sought to apply new findings in the social sciences and psychiatry to issues the court faced. One of his landmark opinions from the appellate bench established the right of a mental patient to appropriate treatment in the least restrictive alternative setting.

At the forefront of the new legal advocacy was the Mental Health Law Project, formed by some of the lawyers and mental health professionals who worked on early cases. In 1993 MHLPP celebrated its 20th anniversary by rededicating its mission to Bazelon and renaming itself in his honor. The Judge David L. Bazelon Center for Mental Health Law is a legal advocate for people with mental disabilities. Its precedent-setting litigation has outlawed institutional abuse and won protections against arbitrary confinement. For its clientele, the center's advocacy has opened up public schools, workplaces, housing, and other opportunities for community life.

[Ruth Beloff (2nd ed.)]

BDELLIUM (Heb. בְּדֵלְיָם) twice mentioned in the Scriptures, once in the description of the land of Havilah, which contained "gold, bdellium, and onyx stone" (Gen. 2:12), and again in the description of the manna, "its appearance was as the appearance of bdellium" (Num. 11:7). In both passages the Septuagint understands it as the name of some precious stone, as do Rashi, who interprets it as "a precious stone, crystal" and Saadia Gaon, as "pearls." The Midrash gives two opinions. According to one, it is a precious stone, and according to the other the reference is to "the *bedolah* of perfumers." In Genesis the Midrash decides in favor of the first interpretation because there it is associated with gold and onyx (Gen. R., 16:2). Josephus (Ant. 3:28) explains that "the manna resembled the spice bdellium." The reference is presumably to the sweet-smelling sap called in Greek βδέλλιον and in Latin

bdellium, a semi-transparent resin extracted from trees of the genus *Commiphora*. According to Pliny (*Historia Naturalis*, 12:36) the best variety is Bactrian bdellium from Baluchistan, which is similar to that obtained from Nubia. In effect the sap of both the Bactrian, *Commiphora roxburgii*, and the Nubian, *Commiphora africana*, were used as incense. The former variety is known among Arabs as *mokul*, a name they also give to the resin issuing from the tree *Hyphaene thebaica*, a species of palm with a branching trunk that grows in the Arabia (at the approach to Elath), and in Sinai. The Arabs call it "Jewish bdellium." It is apparently this species that is referred to by Dioscorides as "the bdellium imported from Petra" (*De Materia Medica*, 1:80).

[Jehuda Feliks]

BEA, AUGUSTIN (1881–1968), Catholic prelate. Born in Baden, Germany, Bea joined the Jesuit Order and had a distinguished ecclesiastical and scholarly career. From 1930 to 1949 he was rector of the Pontifical Biblical Institute in Rome, and editor of the periodical *Biblica* from 1930 to 1951. During World War II, he served as confessor to Pope Pius XII. He was created cardinal by Pope John XXIII in 1959. Pope John had already begun preparing for an ecumenical council to meet at the Vatican, and he appointed Bea head of the Secretariat for the Promotion of Christian Unity. Among his tasks was the preparation of a statement on the relation of the Catholic Church to non-Christian religions, including Judaism. The declaration, submitted to the Council's second session, met with considerable opposition on political and religiously conservative grounds. Bea accepted some changes, but continued to work for a forceful draft, which he submitted at the Council's third session in 1964. It was again deferred, over the protest of the large liberal element among the churchmen present. At the fourth session in November 1965, the statement, though weaker than Bea and other liberals had hoped for, was adopted by an overwhelming vote. Placed now in the context of friendly declarations on the church's attitude toward Islam and other religions, that on the Jews made two important points: that Jews of today should not be burdened with the guilt of the crucifixion of Jesus, and that the church "decried" antisemitism and hostility in any form. It further expressed the hope that friendly dialogue between Christians and Jews would in time eradicate all hostility. After the council's adjournment, Cardinal Bea wrote *The Church and the Jewish People* (1966), explaining the declaration and emphasizing its favorable aspects.

[Solomon Grayzel]

BEAME, ABRAHAM DAVID (1906–2001), first Jewish mayor of New York (but see *Lewis, Samuel). Beame was born in London, but was brought to New York by his parents before he was a year old. He grew up on the Lower East Side and graduated from the City College of New York in 1928. He

practiced accounting during 1928–46, becoming a Certified Public Accountant in 1930, and from 1929 taught accounting and commercial law at Rutgers University. In 1946 he was appointed assistant budget director of the City of New York, and director in 1952, serving as a member of many city and state committees and commissions dealing with management, social services, the courts, city employees, the state constitution, and intergovernmental fiscal relationships.

In 1962, and again in 1969, Beame was elected comptroller and in 1965 won the mayoral nomination of the Democratic Party in a primary election. In 1967 he was a delegate to the New York State Constitutional Convention. In November 1973, at age 67, Beame defeated State Senator John Marchi and won the election for mayor of New York by a landslide victory, which included 63% of the Jewish vote and 68% of the black vote. He assumed office on January 1, 1974, as the 104th mayor of New York.

During his term of office, the city endured such crises as terrorist bombings, a citywide power failure that resulted in violence and looting, and the Son of Sam serial killings. At the same time, Beame faced the worst fiscal crisis in the city's history and spent most of his term trying to ward off bankruptcy. He slashed the city workforce, froze wages, and restructured the budget, which proved insufficient until reinforced by actions from newly created state-sponsored entities and the granting of federal funds. After a tumultuous four years as mayor, he ran for a second term in 1977 but was succeeded in 1978 by Edward *Koch, also a Jew. Despite criticism about his methods, Beame left office with a \$200 million surplus for the city, having entered the mayoralty facing a \$1.5 billion deficit.

Beame retired from politics but remained active as head of the Advisory Board of the UMB Bank and Trust, and later senior advisor of Sterling National Bank. He also served on the board of directors of a number of civic and corporate foundations.

[Ruth Beloff (2nd ed.)]

BEANS. Ancient Jewish sources refer to several species of beans under the Hebrew name of *pol* qualified by various epithets. *Pol* itself is the broad bean (*Vicia faba*) which was included in the food brought to David's forces by his loyal supporters from Ammon and Gilead (11 Sam. 17:28). Its flour was added to the bread that Ezekiel was commanded to eat to symbolize the approaching destruction of Jerusalem (Ezek. 4:9). In mishnaic and talmudic times the broad bean was widely grown, being a cheap food popular especially among the poor (Tosef., BM 3:9; Sof. 21:4) and eaten with or without the husk. Another important plant was the *pol ha-mizri* which, identified with the cowpea (*Vigna sinensis*), is a creeper which grows in summer. In mishnaic times it was highly regarded as a food for human consumption (Ned. 7:1; Shev. 2:8–9) but is now grown as fodder. To the botanical genus *Vigna* belongs

another plant called *pol he-ḥaruv* which is the legume known as the yard-long bean (*Vigna sesquipedalis*), its Hebrew name being derived, according to the Jerusalem Talmud (Kil. 1:2, 27a), from the shape of its pods, which resembles that of the carob (*ḥaruv*). Another variety of the cowpea is called *she'u'it* (Kil. 1:1); this is the legume *Vigna nilotica*, which grows wild in Israel climbing river banks, or is sown as fodder. The Mishnah (*ibid.*) states that it is not a *mixed species (*kilayim*) with *pol ha-lavan*, the hyacinth bean (*Dolichos lablab*), the seed of which is used as food.

[Jehuda Feliks]

BEAR (Heb. בַּרְדַּלְיָה; *dov*). In ancient times the Syrian brown bear, *Ursus arctos syriacus*, had its habitat within the borders of Erez Israel; it was found in the forests of Lebanon until World War I and is still occasionally reported in Lebanon and northern Syria. The bear is omnivorous, and when driven by hunger, it preys on large animals, including the ox or cow (cf. Isa. 11:7). In the Bible the bear is portrayed as an animal dangerous to man, like the lion. Especially emphasized is the danger of a (female) bear bereaved of its cubs (11 Sam. 17:8; Hos. 13:8). This was a frequent occurrence as the cubs were taken from the dam to be trained. The bear was common in the period of the Mishnah, which forbids their sale to Gentiles (Av. Zar. 16a). One of the miracles ascribed to R. *Ḥanina b. Dosa was that after being attacked by bears, each of his goats came home with a bear on its horns (Ta'an. 25a). Because the second world kingdom of Daniel 7 was identified as the Persian one, the fact that it is represented by a bear (Dan. 7:5) is explained by the observation that the Persians "eat and drink like the bear, are fat like the bear, are hairy like the bear, and are restless like the bear" (Kid. 72a).

BEARD AND SHAVING. The characteristic manner in which the beard and hair were shaved, cut, curled, or groomed identified specific peoples in the ancient world. Egyptian, Assyrian, and Babylonian monuments depict the unique way various peoples treated facial hair, thereby illustrating their ethnic identity. The Semites appear with thick beards or with thin and groomed beards; the Lybians are shown with pointed beards, while the Hittites, Ethiopians, and Sea Peoples are portrayed as clean-shaven. The Babylonians and Persians are represented with curly and groomed beards, and the majority of the images of Egyptian males reveal clean-shaven faces, with the exception of a number of pharaohs who appear with plaited beards extending from the chin only. Shaving was performed either by the individual himself or by a barber (Heb.

galav) who also attended to bodily ailments in a quasi-medical fashion. Razors were made entirely from metal or from flint blades fixed in a stone handle. Shaving was also connected with cosmetic treatment of the face (see *Cosmetics). According to Leviticus 19:27 and 21:5 in an apparent reference to the hair between the head and the cheeks (sidelocks) it is forbidden to destroy the “corners” of the beard. It is difficult to determine the reason for the ban, but it is possible that it was promulgated in order to differentiate Israelites from other peoples. Another possible explanation is that shaving specific areas of the face was associated with pagan cults or symbolized those who ministered to their gods and just as the Bible opposes imitation of pagan practices so it opposes this form of ritual shaving. In the Bible shaving of the head and beard is considered a sign of *mourning (e.g., Job 1:20) and degradation. Shaving was identified with the spontaneous plucking of the beard, an expression of great sorrow (Ezek. 5:1ff.). To humiliate a man, it was the practice to forcibly shave half of the beard as in II Samuel 10:4, where the elders, because of this humiliation, were commanded to hide in Jericho until their beards grew again. Shaving is also part of rituals of purification (Lev. 14:8; Num. 6:9; 8:7). Priests were forbidden to shave the “edges” of their beards (Lev. 21:5), and “the priests, the Levites, the sons of Zadok” (Ezek. 44:15) were allowed neither to shave their heads nor let their locks grow long, but only to trim their hair (*ibid.* 44:20).

[Z'ev Yeivin]

In Talmudic Times

The Talmud regards the beard as “the adornment of a man’s face” (BM 84a); a man without a beard was compared to a eunuch (Yev. 80b; Shab. 152a). Young priests whose beards had not yet grown were not permitted to bless the people (TJ, Suk. 3:14, 54a). *Sennacherib was punished by God by having his beard shaved off (Sanh. 95b–96a). Rabbinic authorities permitted only those who had frequent dealings with the Roman authorities to clip their beard with forceps (*kom*; BK 83a). Objection to the removal of the beard was on the ground that God gave it to man to distinguish him from woman; to shave it, was therefore an offense against nature (see Abrabanel to Lev. 19:27).

In the Middle Ages

Jews living in Islamic countries cultivated long beards whereas those in Christian Europe clipped them with scissors. This was permitted by *halakhah* (Sh. Ar., YD 181:10). Rabbinical courts punished adulterers by cutting off their beards (C.M. Horowitz, *Toratan shel Rishonim*, 1 (1881), 29; 2 (1881), 18). The post of *hazzan* was only bestowed upon a man with a beard (*Baḥ*, OH 53). Kabbalists ascribed mystical powers to the beard (and hair). Isaac *Luria refrained from touching his, lest he should cause any hairs to fall out (*Ba'er Hetev*, YD 181:5). With the spread of kabbalism to Eastern Europe, trimming the beard was gradually prohibited by leading rabbinic authorities (*Noda bi-Yhudah*, *Mahadura Tinyana*, YD 80) and with the rise of Hasidism, the removal of the beard became tantamount to

a formal break with Jewish tradition. Nevertheless, from a strictly traditional point of view, shaving was permitted as long as it was done in a certain fashion. *Halakhah* forbids only the shaving proper of the beard; this is defined as the act of removing the hair with an instrument with one cutting edge. Chemical means (depilatory powder), scissors, or an electric shaver with two cutting edges, are permitted. Although it is customary not to use a single-edge razor to shave any part of the beard, the strict letter of the law forbids its use only for five parts of the face. Considerable difference of opinion among the rabbis as to the exact location of these five places had led to the practice of not using a single edge at all. In Western Europe and especially among Sephardi Jews, rabbinic authorities (S.D. *Luzzatto among others), consented both to the trimming of the beard and even of its entire removal by chemical agents. This became the accepted custom (from the second half of the 17th century). The question of cutting and shaving the beard on *ḥol ha-mo'ed*, prohibited by the Talmud (MK 3:1), was a matter of much controversy at the turn of the 19th century. R. Isaac Samuel *Reggio tried to prove that this talmudic injunction no longer applied because of changed circumstances (*Ma'amar ha-Tiglahat*, 1835) but the traditional opinion of the Shulḥan Arukh (OH 531) prevails among strictly observant Jews, who also refrain from cutting their beard (and from shaving) during the *Omer period (*Sefirah*) and the *Three Weeks (see also *Mourning Customs). To trim the beard (and have a haircut) in honor of the Sabbath and the festivals is regarded as a pious duty. Several rulers (e.g., Nicholas I of Russia) tried to force the Jewish population to cut off their beards and earlocks; others (e.g., Maria Theresa of Austria) ordered Jews to have beards so as to be easily singled out as a foreign element by their Christian neighbors.

BEARSTED, MARCUS SAMUEL, FIRST VISCOUNT (1853–1927), founder of the Shell Oil Company. Marcus Samuel was educated at Jewish schools in London and Brussels before joining the firm established by his father Marcus Samuel, who had prospered in the Far Eastern trade, principally from selling fancy shells and ornamental shell boxes. In 1878, the younger Marcus Samuel formed his own business partnership with his brother Sam (1855–1934), who later sat as a member of parliament for 20 years. Marcus Samuel successfully traded in the Orient, particularly Japan. Subsequently he became London banker to the Japanese government. Samuel entered the oil trade in 1892, built a fleet of tankers, and founded the Shell

Transport and Trading Company in 1897. His neglect of his business during his year as lord mayor (1902–03) resulted in Shell's amalgamation with the Royal Dutch Petroleum Company on what seemed disadvantageous terms, but he proved indispensable to the new organization. This move served Britain well in World War I. Another momentous war service was the supply of toluol, an essential ingredient in explosives. Marcus Samuel made generous donations to both Jewish and non-Jewish charities. The Bearsted Memorial Hospital, a maternity hospital in London, bears his name and was financed by him. Samuel was lord mayor of London in 1902–03, the fifth Jew to hold this office. In 1921, he was made baron, and in 1925, Viscount Bearsted. Although holding no important Jewish communal offices, Samuel used his influence to help persecuted Jews. While lord mayor of London he refused, in the face of opposition, to invite the Romanian ambassador to the lord mayor's banquet as a protest against Romania's treatment of its Jewish citizens. His brother Samuel Samuel was the founder of M. Samuel, a prominent City of London merchant bank.

His son WALTER HORACE SAMUEL, SECOND VISCOUNT BEARSTED (1882–1948) succeeded his father as chairman of Shell in 1920. A notable art collector, he was chairman of the trustees of the National Gallery in London. He also held various Jewish communal offices. The third viscount MARCUS RICHARD SAMUEL (1909–86) was chairman of the Bearsted Memorial Hospital and president of the Jewish Home and Hospital.

[Vivian David Lipman]

BEATITUDE (Heb. הַצְּלָחָה, *hazlahah*; *osher*), the blissful state of the soul in the World-to-Come (*Olam ha-Ba) that constitutes the ultimate end of human life. Medieval Jewish philosophy fused rabbinic religious ethics and eschatology with the teleological and rationalist conception of happiness (*eudaimonia*) as analyzed by Aristotle in the *Nicomachean Ethics*, thus investing them with new shades of meaning that were conceptual rather than pictorial. Within a rationalist teleological framework, Jewish philosophers maintained that the attainment of religious perfection requires the acquisition of moral and intellectual virtues through the study of philosophy, culminating in the knowledge of God or even in a mystical union of the rational soul, or intellect, with God. Within this broad framework, the interpretation of beatitude varied over time, reflecting changing anthropological schemas within Jewish philosophy, the interplay of Jewish philosophy with Islamic and Christian cultures, the rivalry between Judaism and the monotheistic religions concerning individual salvation, and the internal Jewish debate between rationalists and traditionalists about the ideal life for Jews. Jewish reflections on beatitude were part of the larger discourse on happiness in premodern Judaism.

*Saadia Gaon, an exponent of the Jewish *Kalam school, was the first Jewish philosopher to reflect systematically about the ultimate end of human life and to articulate a philosophical anthropology as the basis for Jewish ethics. According to Saadia human beings are a temporary combination of two substances – body and soul. Both are created by God and both are united by Him. The substance of the soul is refined, “comparable in purity to that of the heavenly sphere [and] like the latter, it attains luminosity as a result of the light which it receives from God” (*Beliefs and Opinions*, 242). After analyzing what people commonly consider the good life for humans, Saadia shows that no social good can be pursued for its own sake and that the ultimate end of human life is intellectual – knowledge and devotion to God. Although the two substances, body and soul, separate at death and the soul of the righteous person continues to live on as an immortal substance, at the end of time, as a result of divine intervention, the individual soul will be recombined with its corresponding body. Saadia interprets the rabbinic statement, “In the world to come... the righteous will sit with their crowns on their heads and enjoy the splendor of the *Shekhinah*” (Ber. 17a) to mean that life in the hereafter consists in the enjoyment of a specially created luminous substance which sustains the righteous and burns the sinners (*Beliefs and Opinions*, 9:4–5).

In Jewish neoplatonic philosophy, however, a different philosophical anthropology prevailed. Here the bliss of the World-to-Come is understood as the climax of the soul's ascent from its entanglement in matter to union with the supernal world. Isaac *Israeli was the first to link traditional Jewish eschatology with neoplatonic mysticism. Holding that the soul in its ascent passes through three stages, purification, illumination, and union with the supernal light, Israeli identifies the bliss experienced in the afterlife with the last of these stages. However, this union can already be achieved in this world, provided that man withdraws from the influence of the flesh and of the lower souls. The union achieved by the soul at its highest stage is not union with God (though Israeli speaks of the soul's being attached to God), but with “wisdom” which, together with “first matter,” occupies a place just below God in Israeli's metaphysical scheme. Israeli identifies the soul's final stage with the religious notion of “Paradise” (*Book of Definitions*, in A. Altman and S.M. Stern (eds.), *Isaac Israeli* (1958), 25–26). By contrast with his spiritual concept of human blessedness, he provides a more physical account of punishment in the hereafter. The soul of the sinner will be sad, in pain, tortured by fire (*ibid.*, 26–27). Some prominent features of Israeli's eschatology occur also in Joseph Ibn *Zaddik's *Olam Katan*.

In the 11th century, both Solomon ibn *Gabirol and *Bahya ibn Paquda followed essentially the same pattern of neoplatonic thought, although they represent different social programs. Ibn Gabirol was a product of the Jewish courtier class and its commitment to the *adab* culture, whereas Bahya ibn Paquda was a jurist and a critic of a superficial adaptation of the *adab* culture by Jews who only cared about social advancement and worldly success. Ibn Gabirol saw the goal of

the existence of man in the “attachment” of his soul to the supernal world that is the “return of like to like.” This goal is to be reached by “knowledge,” i.e., the contemplative life of the intellect, and by “work,” i.e., the practice of the ethical virtues. The former is the exercise of intellectual virtues, whereas the latter pertains to the acquisition of moral virtues, which are linked to parts of the body. Ibn Gabirol explained the precise connection between specific moral traits and human physiology in his *Islah al-Akhlaq* translated into Hebrew as *Tikkun Middot ha-Nefesh* (“The Improvement of Moral Qualities”). This was a manual for the cultivation of proper character traits composed for the sake of the Jewish *adib* and reflecting the commitment of Jews to the social ideals of *adab* culture. Together moral and intellectual perfections free the soul from the captivity of nature, and purify it from its turbidity and darkness (*Mekor Hayyim*, 1:2). Ibn Gabirol holds that “knowledge” leads to “works,” which, in turn, enable the soul to rise to the contemplation of the spiritual world. The highest level of contemplation consists in the ecstatic vision of the “first universal matter” in which all supernal forms are contained (3:56–58). There is, however, a still higher goal to be attained. Beyond universal matter (and universal form) there exists, in Ibn Gabirol’s ontological scheme, the “will” of God and, in the final passage of his *Mekor Hayyim*, he speaks of a progress of knowledge leading to a knowledge of the “will.” Holding that a still higher stage may be achieved, Ibn Gabirol calls for an ascent to the “will’s” beginning and source, i.e., God. The fruit of this effort is freedom from death and man’s “attachment” to the “fountain of life” (*mekor hayyim*), i.e., communion with God. Beatitude in the hereafter is, in Ibn Gabirol’s view, not a mere continuation of the bliss of the contemplative life, but a gift of God (5:43, end).

With Ibn Gabirol, Bahya shares the new intellectualist piety characteristic of Jewish philosophy in Muslim Spain. He too sees the upward way as the “road to felicity” (*Hovot ha-Levavot*, 1:7), passing through the stages of purification, illumination, and the vision of the “supernal and exalted forms” (8:4). He identifies the love of God with the soul’s longing for union with the supernal light, i.e., supernal wisdom (10:1), holding that it arises from the purifying effects of the ascetic life (10:11) and from the scrutiny of the soul (10:8). According to Bahya, man is an “exile” in this world (8:3), and the “bliss of the next world” should be his most cherished goal (4:4, end). The reward promised for the hereafter is said to consist in the “utmost distinction [conferred on man] by God” and in the “approximation to the supernal light” (4:4). This definition combines the notion of reward as a gift from God with the neoplatonic concept of illumination and union as a result of the soul’s ascent. *Judah Halevi, another member of the courtier class in Muslim Spain who was critical of some of its tendencies, even though he absorbed the neoplatonic schema, teaches that the bliss of the World-to-Come is essentially identical with the supreme stage attainable in this world. This stage is conceived in neoplatonic terms as an “attachment” to the “supernal world” and to the “divine light” (*Kuzari*, 1:103; 3:20),

and is more sharply defined as a suprarational prophetic stage. In Halevi’s view the life of piety is essentially of the same order as the prophetic stage of illumination and communion with God. Accordingly, the pious man can achieve the bliss of attachment to God already in this world.

Discussions of beatitude became more sophisticated in Jewish Aristotelianism, but also more problematic from Jewish traditional perspective. While Jewish Aristotelians interpreted beatitude solely as a cognitive state in which the human intellect conjoins with the incorporeal intelligence, they disagreed on whether immortality is individual or collective, reflecting thereby a difference of opinion which also existed among Islamic philosophers. Among the Muslims, *al-Farabi (in his earlier works) and *Avicenna affirmed that the individual human intellect becomes immortal once it has achieved the stage of the “acquired intellect” (see *Intellect), while *Avempace and *Averroes held that in the afterlife there exists one intellect for all men, denying thereby that anything individual remains after death. Closely related to the question of immortality was that of man’s “ultimate felicity,” a state which Aristotelians generally identified with the “conjunction” of man’s “acquired intellect” with the “agent intellect,” or sometimes even with God. Reflecting the differences of opinion concerning immortality, those affirming that immortality was individual allowed for “ultimate felicity” in this world and the next, while the proponents of collective immortality held that “ultimate felicity” was possible only in this world.

The position of *Maimonides concerning immortality cannot be easily determined. In his *Guide of the Perplexed* (1:74, the seventh method), the discussion implies that he inclines to Avempace’s doctrine of the unity of souls in the hereafter, which amounts to the denial of individual immortality. By contrast, he speaks of the “acquired intellect” as “separate from the organic body” (1:72), and sharply distinguishes the potential intellect with which man is born, and which is a “mere disposition,” from the actual intellect, which remains after death, thus implying that immortality is individual (1:70; see also 1:41). Moreover, the whole tenor of his description of the state of man’s attachment to God (3:51) points in the direction of an individual afterlife. Concerning beatitude, Maimonides holds that “ultimate felicity” is possible in this world, as well as in the next. While still in his bodily state a human being may achieve the state of continually being with God (whereby Maimonides seems to refer to “conjunction” with the agent intellect), by means of the intellectual worship of Him. Among humans, Moses achieved this state in the most excellent manner, but approximating this intellectual perfection is, in principle, also possible for others. This stage of ultimate felicity is continued in the afterlife. Maimonides’ endeavor to impress his readers with the spiritual character of the bliss of the afterlife is particularly pronounced in his discussion in his commentary on the Mishnah (introd. to Sanh., *perek Helek*), and reappears in his *Mishneh Torah* (*hilkhot Teshuvah*, ch. 8). Maimonides interprets the meaning of the previously cited rabbinic dictum: “In the world to come there is no eating, no

drinking, no bathing, no anointing, no sexual intercourse; but the righteous sit with crowns upon their heads and enjoy the splendor of the *Shekhinah*” in the following manner: “crowns upon their heads’ means the survival of the soul by virtue of the survival of knowledge, the two being one and the same thing; ‘enjoying the splendor of the *Shekhinah*’ means taking delight in the intellection of the Creator, even as the holy *hayyot* and the other angelic orders delight in their comprehension of His existence.” Maimonides, it should be noted, distinguished between the World-to-Come, which is an incorporeal state, and Paradise, which is a place here on earth. The treatise known as *Perakim be-Hazlahah* (“Chapters on Beatitude”) has been wrongly ascribed to Maimonides, but it expresses views similar to his. Affirming that felicity is possible in this world and the next, the treatise distinguishes between the ecstatic experience of prophecy and the ultimate felicity of the soul’s union with God in the next world. Prophecy is described as the stage of human perfection at which the rational soul, like a polished mirror, reflects the light of the supernal world. At this stage one is happy, though one’s joy is tempered with the fear of God. Prophecy can be reached only after a search for wisdom and after subjecting the senses to a rigorous discipline. Imagination functions at this level under the complete control of the intellect (cf. Maimonides’ letter in *Kovez Teshuvot ha-Rambam*, 2:39b, where the same motif is quoted in the name of Abraham Ibn Ezra’s commentary on Ex. 23:20). The ultimate felicity, on the other hand, is the reward which all righteous may expect in the next world according to the measure of their worthiness. The author adds that this view of the afterlife is in agreement with the views of the philosophers, whereby he seems to refer to al-Farabi (in his earlier works) and Avicenna. The author assures his reader that every man can rise to a rank close to Moses’ (for which there is a parallel in *Guide*, 3:51), and, echoing neoplatonic traditions, he states that ultimate felicity consists in the union with God following the purification of the soul and its illumination by the supernal light.

The meaning of beatitude and its implication for Jewish culture became a hotly debated issue, constituting the so-called Maimonidean Controversy of the 13th century. Its first phase (1202–4) concerned the fate of the human soul after death and the resurrection of the body; the second phase (1232–35) was about the composition of Jewish education; the third phase (c. 1290) pertained to the allegorical interpretation of the Torah; and the fourth (1303–5) to the validity of astrology, the discipline that most captured scientific naturalism, in traditional Jewish society. All of these debates were aspects of a larger question: what is the necessary and sufficient knowledge for the attainment of the ultimate end of human life defined as beatitude? The debates were exceptionally acrimonious because what was at stake was the salvation of the individual soul, a topic hotly debated not only among Jews but also between Judaism and Christianity. As Jewish rationalism spread in Spain, Provence, and Italy during the 13th century, Jewish philosophers differentiated between two orders of felicity: one

in this world and one of a still higher degree in the hereafter. This distinction is found in Shem Tov ibn *Falaquera’s *Sefer ha-Ma’alot* (ed. L. Venetianer (1894), 15–19), where the “true happiness of the soul at its ultimate perfection” is said to lead to the eternal life. Invoking the notion of a twofold felicity, *Hillel b. Samuel in his *Tagmulei ha-Nefesh* (Lyck, 1874) states that humans, through the perfection of the moral and intellectual virtues, may achieve a rank even higher than that of the angels, but the beatific vision becomes possible only after death. The perfected human is then illumined by the “eternal light,” rises from rank to rank, and at the end is granted the vision of God. This state, in Hillel’s view, is the meaning of Paradise (*ibid.*, 23a–24a). Hillel’s analysis of ultimate felicity manifests a familiarity with and influence of Christian scholastic discourse, especially of Thomas *Aquinas.

Jewish philosophers who accepted *Averroes’ epistemology either openly or implicitly denied the validity of the belief in individual immortality. Thus, for example, Samuel ibn Tibbon appears to subscribe to Averroes’ doctrine of the unity of souls, when in his *Ma’amar Yikkavu ha-Mayim* (ed. M. Bisliches, Pressburg, 1837) he says of the soul which has become perfect and separate from matter at death that it conjoins with the agent intellect, and that “they become one single thing, for now the soul becomes divine, of a superior and immortal order, like the agent intellect with which it is united” (p. 91). It may be assumed, especially in the light of his commentary on Ecclesiastes, that Ibn Tibbon speaks here of a “total fusion” which leaves no room for individual survival (see G. Vajda, *Recherches sur la philosophie et la Kabbale* (1962), 27 n. 3). *Levi b. Gershom, on the other hand, upheld the notion of individual immortality and of individual degrees of bliss in the hereafter. In his *Milhamot Adonai* (1:13) he says that the “degrees of the happy ones” vary greatly according to the degree of unity achieved by the acquired intellect in its conception of the intelligibles. The degree of bliss in the hereafter – identified by him with Paradise – depends on the degree and type of knowledge achieved while on earth.

Traditionalist Reaction

The pronounced intellectualism of the philosophers’ concept of beatitude provoked a great deal of indignant protest from the traditionalists who regarded the life of piety rather than intellectual pursuits as the gateway to eternal felicity. The kabbalist Jacob b. Sheshet *Gerondi (in his *Meshiv Devarim Nekho’im*; see Vajda, *op. cit.*, 110–1) attacked Samuel ibn Tibbon’s interpretation of the ladder in Jacob’s dream as an allegory of man’s intellectual progress. The Zohar was profoundly concerned with ultimate felicity and could be viewed as a dramatization of an ethical theory about the intrinsically good life as well as an implicit polemic against the systematic discourses of the rational philosophers. For the Zohar the Torah itself is considered as the source of the well-lived life in this world and the blissful life of the World-to-Come. Unlike the philosophers, for whom cognizing intelligibles culled from the observation of nature leads to enlightenment, for the Zohar,

enlightenment comes only from fathoming those mysteries of the Torah that pertain to the inner life of the Godhead. The kabbalists, who possess this esoteric knowledge, are able to fathom the inner meaning of each and every mitzvah and perform it correctly, thereby producing holiness in the performer and in the world and even increasing the holiness of the Godhead, by bringing about the re-union of the masculine and feminine aspect of God. The ultimate end of the pursuit of religious perfection is thus the perfection of God. According to Zoharic anthropology the very fact of the afterlife is not a theoretical problem because the soul is an individuated entity even before its association with the particular body. When the body dies, the individual soul survives the event; its very existence as a separate substance does not depend on the body itself. The career of the soul after the death of the body depends on the balance between the merits and sins that one has accrued throughout life. If one lived a holy life, the soul returns to her divine source.

During the 14th century the path toward beatitude became the focal point of the Jewish-Christian polemics, when learned rabbinic Jews such as *Abner of Burgos, converted to Christianity and debated with their former coreligionists. Abner challenged his conversation partner, Isaac *Polleqar, to differentiate between faith and rational knowledge and argued that the highest expression of faith is the love of God but that love is not commensurate with the degree of intellectual perfection. Abner's position influenced Ḥasdai *Crescas, who was the main critic of the philosophic conception of beatitude. In his *Or Adonai* (3:3), he rejected the theory that the soul achieves its immortality only through the process of knowledge. The degrees of bliss in the hereafter correspond to the degrees of love of God and attachment to him. Crescas replaced the Maimonidean view of ultimate felicity with a non-intellectualist interpretation of human love that focused on the willingness of the individual to be committed to God. For Crescas ultimate felicity consists of a kind of life that is commensurate with the nature of the soul as in incorporeal substance; the happiness of the soul is predicated not on cognitive activity but on the ability of the will to freely choose the good. Human love for God is reflected not in the contemplation of intelligibles but in the actual performance of the commandments. The anti-intellectualist attitude gained ground in the last phase of Jewish life in Spain.

During the 15th and 16th centuries, philosophic reflections on beatitude changed in response to traumatic events in Jewish history: the persecutions and mass conversion of Jews in Spain in 1391 and the expulsions from Spain (1492) and Portugal (1497), growing Jewish familiarity with Christian scholasticism and Renaissance humanism, and increasing blending of rationalist philosophy and Kabbalah. In Italy the typical example of this intellectual syncretism was Johanan Alemanno, for whom the final end of human life was a mystical union with God's attributes, the *Sefirot*, or more particularly with the central sefirah, *Tiferet* ("Beauty"). Alemanno understood the mystical union with God in accord with his spiritual mentor,

Abraham *Abulafia, who envisioned this state as prophecy. Using the Platonic characterization of "divine madness," Alemanno depicted this ecstatic state as the culmination of the erotic pursuit of wisdom. In that state the human soul loses any taint of corporeality and is able to become one with the form of the Good. The highest example of erotic spirituality, according to Alemanno, is the Song of Songs, which Alemanno read as a guide to the attainment of a mystical union with God in this life.

For Sephardi exiles in the Ottoman Empire reflections on ultimate felicity, or beatitude, became an obsession, looming large in their biblical commentaries, sermons, and systematic theology. Moses *Almosnino harmonized Jewish Aristotelianism and the Zohar in order to provide answers to Jewish perplexity after the expulsion from Iberia. His analysis of the pursuit of perfection agrees with Crescas that love of God is the ultimate end of human love. Through the love of God one attains the perfection of all virtues in this world for which one is rewarded with eternal life. The love of God is everlasting and inexhaustible because it is an unconditional love. This love is not a communication between two perfect intellects but the love of the infinite details of the beloved. Only a perfect will that can discern the infinite variations of particulars can love God, the most perfect Will, unconditionally. Therefore, those who unconditionally love the Torah, the manifestation of God's infinite love, love God and enjoy everlasting salvation. Love of God yields the blissful union of the separated soul with God, enjoying an incomparable spiritual delight. The bliss of personal immortality is reserved for perfect Jews, a community that includes men and women. Women could enter the World-To-Come, because for Almosnino, in contrast to the rationalist tradition, ultimate felicity does not depend on philosophical wisdom but on faith, the perfection of the will, and the actual performance of mitzvot. Almosnino did not ignore the traditional hope for the coming of the messiah but depoliticized it by spiritualizing its meaning. In the Messianic Age, a total transformation of human existence from corporeality to spirituality will take place so that all Jews will envision the "face of the *Shekhinah*" during their lifetimes because their bodies will no longer be material entities. The bliss of immortality could thus be enjoyed despite the continuation of political exile.

BEUCAIRE (Heb. בִּלְקִירִי), town in France. Documents attest the existence of a Jewish community in Beaucaire in the 12th century; its Jews served the counts of Toulouse as fiscal administrators. After the death of Count Raymond in 1194 there were anti-Jewish outbreaks. With the annexation of lower Languedoc to France in 1229 the privileges formerly enjoyed by the Jews in Beaucaire were revoked. In 1294 Philip the Fair relegated the Jews to a special quarter, between the fortress and the present Rue Haute, today the Roquécourbe quarter. A year later he ordered the imprisonment of several Jews in order to extort money from them. The Jews had to leave Beaucaire when they were expelled from France in 1306. They were allowed to return in 1315, when their resettlement was supervised by Christian and Jewish agents sent by the king. In 1317 the Jews in Beaucaire were required to wear the Jewish *Badge. They were again expelled in 1322. The further rehabilitation of the community after 1359 came to an end with the general expulsion of the Jews from France in 1394; most of the exiles settled in Provence, then outside French administration, and in the Papal State of the *Comtat-Venaissin, where many Jews retained Beaucaire as a family name. The former Jewish quarter of Beaucaire was demolished during a siege in 1578.

The poet Judah Al-Ḥarizi, on his visit to Beaucaire in about 1210, found poets and philosophers living there. In about 1321, Samuel b. Judah of Marseilles (Marseilili) finished his Hebrew translation of *Averroes’ “middle” commentary on Aristotle’s *Ethics* while imprisoned in the fortress of Beaucaire. Moses b. Solomon of Beaucaire translated Averroes’ long commentary on the *Metaphysics* (1342); Beaucaire was also the birthplace of the translator Tanḥum b. Moses.

BEBAI.

(1) Third-century Palestinian *amora*. Bebai studied under R. Johanan (בִּק 61a), Resh Lakish (תַּי, Nid. 3:3, 50d), R. Eleazar b. Pedat (Zev. 70b), and R. Joshua b. Levi (Ber. 62b). He was a close associate of Ammi and Assi (Shab. 74a; תַּי, Ter.

8:5, 45c). He interpreted Deuteronomy 28:66 in terms of his own poverty: “‘The life you face shall be precarious’ – this refers to him who purchases provisions from one year for the next; ‘You shall be in terror night and day’ – refers to him who purchases provisions from one Sabbath eve to the next, ‘with no assurance of survival’ – refers to him who is dependent upon the bakery.” Although Bebai engaged chiefly in *halakhah*, his opinions being frequently cited in both Talmuds, he was also a competent aggadist. Particularly well-known is his application of the commandment, “You shall not swear falsely by the name of the Lord God” (Ex. 20:7), to hypocrites: “Do not don *tefillin*, wrap yourself in a *tallit*, and then commit a sin” (PR, 22:111b).

(2) Fourth-century Babylonian *amora*. Bebai studied under R. *Naḥman and the Talmud quotes halakhic problems that he discussed with his teacher (BM 23b; BB 36b). He taught *beraitot* in the school of Naḥman (Ḥag. 22b; Yev. 12b) and sat before Hamnuna (Nid. 27a). He transmitted teachings in the names of Rav and Samuel and was endorsed by R. Joseph: “Adopt the version of Bebai” (Meg. 18b). He was friendly with R. Joseph (Kid. 81a), who placed him in charge of religious affairs in his city (Kid. 76b). The exilarch Isaac was his sister’s son (Yev. 115b).

[Yitzhak Dov Gilat / Zvi Kaplan]

BEBAI BAR ABBAYE (fourth century), Babylonian *amora*. Bebai was a son of *Abbaye, head of the Pumbedita academy, and studied under him and R. *Joseph. He served as *dayyan* in Pumbedita and appears to have succeeded his father (Yev. 75b). According to the Talmud (Ket. 85a) his colleagues R. *Papi and R. *Huna b. Joshua, who sat with him as judges, at times opposed his rulings with the words, “Because you are a descendant of short-lived people your words are incomplete, lacking a beginning and making no sense” (referring to his descent from Eli the priest whose descendants were condemned to die young, cf. 1 Sam. 2:32; see *Arukh*, s.v. *mal*). However, R. Papi greatly respected him, referring to him as “master” even in his absence (Ḥul. 43b). Bebai was a prosperous farmer, leasing land in addition to his own (BM 109a; BB 137b). Many legends are related of him. According to one, the angel of death visited him frequently and disclosed to him the secrets of the other world (Ḥag. 4b–5a). Another relates that he perceived demons at work, and was stricken down, whereupon the scholars prayed for him and effected his recovery (Ber. 6a).

BEBE, PAULINE (1965?–), French reform rabbi. After studying the English and Hebrew languages in Paris, Pauline Bebe attended the rabbinical seminary at the London-based liberal Leo Baeck College, one of the few rabbinical institutions in Europe welcoming women. She completed her He-

brew cursus in Jerusalem (Hebrew Union College) and earned a degree from the Institut des Langues Orientales in Paris. Her first rabbinical appointments, while a student rabbi, were in Southport and Cardiff. Her academic interests were the attitude of Judaism towards proselytism and conversion and the ethics of language, both themes providing her with the background of a strongly liberal and passionate exploration of the dynamics of Jewish tradition.

Back in France, she became the country's first female rabbi in 1990, serving the MJLF (Mouvement Juif Liberal de France, the most liberal of the two branches of the Reform movement in France at the time), which she left in 1995 to start her own movement, the Communauté Juive Liberale, now embraced by more than 200 families. Her first book, *Le judaïsme libéral* ("Liberal Judaism"), was published in Paris in 1993, followed in 2001 by an ambitious dictionary of women and Judaism (*Isha: un dictionnaire des femmes et du judaïsme*).

[Dror Franck Sullaper (2nd ed.)]

BECCARI, ARRIGO (1909–), priest and teacher at the Catholic seminary in Nonantola, near Bologna, Italy; Righteous Among the Nations. In July 1942, a group of 50 Jewish children arrived at the seminary, having fled from the war zone in Dalmatia, Yugoslavia, between Italian troops and local partisans. With the help of Delasem, the officially recognized Jewish emigration and welfare agency, the children were housed in the Villa Emma home. There, Josef Itai, the group's leader, became friendly with Father Arrigo Beccari. Nonantola seemed a safe place to sit out the war, but when Italy surrendered to the Allies on September 8, 1943, and the Germans overran the parts of the country not yet in Allied hands, a reign of terror began for the Jews. In order to keep the children at the Villa Emma from falling into German hands, Beccari, without necessarily consulting his superiors, took as many children as possible into the seminary for hiding and arranged for others to be housed with friendly villagers. Food for all of them was provided by the seminary's kitchen. As the Nazis and their local collaborators stepped up the search for Jews, it became urgent for the children and their adult leaders, a total of 120 persons, to be moved somewhere else. It was decided to take the whole group north and across the Swiss border. With the help of Dr. Giuseppe Moreali, Nonantola's physician, all 120 persons were provided with forged documents identifying them as Italians. Then they boarded a train for the Swiss frontier, a ride fraught with terrible but unavoidable risks, for most of them could hardly speak Italian and the forged papers may not have saved them during a police check. Luckily, no mishaps occurred during the long train ride, and on Yom Kippur eve of 1943 the group passed safely into Switzerland. The Gestapo, discovering the loss of the children, seized Beccari and imprisoned him in Bologna. Despite the tortures inflicted on him over the next few months, he refused to disclose the names of the persons who had helped him or to reveal the whereabouts of others Jews in hiding. His reli-

gious superiors interceded on his behalf and he was released. Years later he wrote: "It would be difficult for me to erase the memory of the terror and suffering of those days or of my joy at doing the small good which was my duty and which had to be done." In 1964, Don Beccari was awarded the title of Righteous Among the Nations by Yad Vashem.

BECHER, SIEGFRIED (1806–1873), Austrian economist. Becher was born in Plany (Bohemia) and educated in Prague and Vienna. After his conversion to Catholicism, he became professor of geography and history at the Vienna Polytechnic and was frequently consulted by the Austrian authorities on statistical and tariff questions, and represented his country in several international negotiations. In 1848 he was made a counselor at the Ministry of Commerce, and later was granted the title of "Hofrat" (court counselor). After a denunciation because of democratic inclinations he was dismissed in 1852 and died eventually in poverty. In addition to statistical investigations Becher's interests centered on labor and population economics. His publications include *Handelsgeographie* (2 vols., 1836–37); *Oesterreichisches Muenzwesen 1524–1838* (2 vols., 1838); *Die Bevoelkerungsverhaeltnisse der oesterreichischen Monarchie* (1846); *Organisation des Gewerbewesens* (1849); and *Die Volkswirtschaft* (1853).

BECHHOLD, JACOB HEINRICH (1866–1937), German colloid chemist, born in Frankfurt. Bechhold was the director of the Institute of Colloid Research, Frankfurt, and took out several patents on filtration and on adhesives. He was the author of: *Die Kolloide in Biologie und Medizin* (1912; 1919⁵); *Handlexikon der Naturwissenschaften und Medizin* (1920); *Ultrafiltration* (1923); and *Einfuehrung in die Lehre von den Kolloiden* (1934).

BECHYNE (Get. **Bechin**), town in Bohemia, Czech Republic. Legends are connected with R. Ḥayyim, living in Bechyne in the 16th century, who apparently forbade the building of a burial hall at the cemetery. Five Jewish taxpayers are mentioned in 1570. In 1685 the representatives of Bohemian Jewry complained that the community of Bechyne had failed to comply with its ordinances. In 1695 the Jews there were prohibited from residing in the same building as Christians. The community numbered 81 persons (14 families living in six houses) in 1715, and 56 persons in 1725. In 1898 the community's German-language school was closed down. The community numbered 145 persons in 1902 and 32 in 1930. It was liquidated by the Nazis in 1942. Several of the Jewish houses in the Jewish street, and the cemetery with remarkable tomb-

stones from the last quarter of the 17th century, were preserved. There were also Jewish communities in the vicinity in Bernartice and Stadlec.

BECK, KARL ISIDOR (1817–1879), Hungarian-born poet, writing in German, who gave voice to the Hungarian people's struggle for liberation against the Austrian Empire. His work was filled with despair and disillusion with the state of Jewry and the world. His first poems, *Naechte*, *Gepanzerte Lieder* (1838), and *Stille Lieder* (1840), contained such glowing rhetoric, passionate imagery, and consuming love of freedom that he was hailed as a new Byron. When his *Lieder vom armen Mann* appeared in 1846, Friedrich Engels saw in him a future Goethe. The *Lieder vom armen Mann* are lyrics of great depth of feeling and clarity of vision, ranging from savage invective against social injustice to pathetic pictures of starvation in working-class homes. Beck prefaced the volume with the allegation that Rothschild had enslaved the masses with his gold and had failed to liberate his own unredeemed people. Beck was the first German lyric poet to write about slum conditions; in his lyrics there broods a vague hope of better days to come and a fear of impending social strife. Beck's Jewish despair found utterance in a cycle of poems entitled *Das junge Palaestina*, that bewail his unreciprocated love for Germany. His biblical drama *Saul* (1840) has as its climax David's vision of the Jewish people: he sees them as eternal fugitives who have become mere caricatures of a people that was once pure, simple, and glorious. His verse epic, *Jankó, der ungarische Rosshirt* (1841), contains some excellent descriptions of Hungarian life. The refrain of one of his poems, "an der schoenen blauen Donau" inspired Johann Strauss' famous "Blue Danube" waltz. Although he was baptized in 1843, Beck continued to be haunted by the fate of Jewry. He sank into a state of pessimistic resignation, which was intensified by the failure of the Hungarian rising of 1848. Filled with bitterness, he made his peace with the Austrian government, renounced his radical activities, and virtually ceased writing poetry for the rest of his life.

°BECK(IUS), MATTHIAS FRIEDRICH (1649–1701), German Lutheran Orientalist. Born in Kaufbeuren (Swabia), Beck studied at Augsburg and Jena (1668–70), under the renowned philologist Johann Frischmuth. His competence in Oriental languages was very broad, Jewish interests being reflected in his translation into Latin of the Targum to Chronicles (1680–83) and publication of Jewish antiquities discovered in Augsburg (*Monumenta antiqua judaica Augustae Vindellicorum reperta*, 1686). His voluminous unpublished works, now

mostly dispersed, included translations of Benjamin of Tudela's and Petaḥiah of Regensburg's travelogues.

[Raphael Loewe / Giulio Busi (2nd ed.)]

°BECK, MICHAEL (1653–1712), German Lutheran theologian and Hebraist. Beck studied in Jena, like his namesake M.F. *Beck, under the apostate Frischmuth. He left a tract on the Masoretic accents as a hermeneutic device (Jena, 1678; repr. in G. Menthen, *Thesaurus theologico-philologicus*, 1, 1701), as well as *Hannaḥatan ve-Haliḥatan shel Tefillin* or *Usus Phylacteriorum* (Jena, 1675), which is a public dissertation on phylacteries by Beck with the reply of Matthew Kreher.

[Raphael Loewe]

BECK, MORITZ (Meir; 1845–1923), rabbi, educator, and leader of Romanian Jewry. Born at Pápa in Hungary, Beck studied at the University of Breslau and the Breslau rabbinical seminary. He went to Romania in 1873, and was appointed preacher (in 1900, rabbi) at the "Choir Temple" and principal of the Loebel Jewish School for Boys in Bucharest. Beck was considered rabbi of the progressive elements in the Bucharest community. He promoted the expansion of Jewish education in Romania, encouraging the formation of new schools with adequate financial support. He also helped establish social welfare institutions, and worked toward the renewal of the Bucharest community organization, which had disintegrated in the second half of the 19th century (see *Romania). Beck took a prominent part in the fight against antisemitism and discrimination in Romania and for the emancipation of Romanian Jews. He contributed to the general and Jewish press, and published the journal *Revista Israelită* from 1886 to 1892 and from 1908 to 1910. Aside from his sermons and numerous articles on various subjects, Beck compiled a Hebrew-Romanian dictionary of the Torah (1881). Toward the end of his life he was attracted by Zionism.

BIBLIOGRAPHY: M. Beck, *Cuvânt de omagiu: Viața și opera* (1925); A. Stern, *Insemnări din viața mea*, 2 (1921), passim.

[Eliyahu Feldman]

BECK, WILLY (1844–1886), Hungarian painter and cartoonist. He exhibited portraits and scenes from daily-life at the Budapest salon. He later earned his living by publishing the *Zeitgeist*, a humorous periodical in German, contributing all the prose and cartoons. In 1849 he settled in Vienna and edited the *Charivari*, a political and satirical journal, until the police suspended publication. He then returned to Hungary.

BECKELMAN, MOSES W. (1906–1955), U.S. social worker. Beckelman was born in New York City. He was a lecturer in social work at the City College of New York (1927–30), and managing editor of the *Jewish Social Service Quarterly* (1936–39). At the outbreak of World War II Beckelman was sent by the *American Jewish Joint Distribution Committee to Lithuania, where he helped large numbers of refugees to emigrate, until he was forced to leave in 1941. In 1942 Beckelman joined the U.S. Office of Strategic Services, and in 1943 directed a refugee camp in Morocco for UNRRA. After serving as an assistant director of the Intergovernmental Committee on Refugees, from February 1945, he rejoined the “Joint” in 1946 and became its director general in Europe in 1951. Until his death Beckelman supervised the liquidation of the displaced persons camps, the establishment of *Malben in Israel for the social care of immigrants, and extensive social work programs for Jews, especially in Morocco and Iran.

[Yehuda Bauer]

BECKER, U.S. family of bankers and philanthropists. **ABRAHAM G. BECKER** (1857–1925), U.S. banker and philanthropist, was born in Warsaw, Ohio, and eventually settled in Chicago. He organized his own commercial paper house, A.G. Becker and Company, which pioneered in the syndication of large loans. Active in communal affairs, Becker helped found the Associated Jewish Charities of Chicago and served as its president for eight years. He was a trustee of Hebrew Union College and the Chicago Orchestral Association and bequeathed large sums to the Chicago Art Institute and the Chicago Jewish charities. His son, **JAMES HERMAN** (1894–1970), was also a banker and communal leader. In 1914, while an undergraduate at Cornell University, he helped convoke the original Jewish War Relief Conference in Chicago. Becker served with the U.S. Army in Europe from 1918 to 1921, assisting war victims through the American Relief Association and later as director general of the American Jewish Joint Distribution Committee in Europe. Upon his return to America in 1921, Becker joined his father’s firm, becoming director (1926), president (1947), and chairman (1961). He also directed several other companies and served with many Jewish organizations. In 1936 he was chosen president of the Chicago Jewish Welfare Fund, a post that he held for nearly 30 years.

[Edward L. Greenstein]

BECKER, AHARON (1906–1995), Israeli labor leader. Born in Kobrin, Belorussia, Becker grew up in Brest-Litovsk, where he joined the Zionist labor youth movement and *He-Ḥalutz. In 1925 he settled in Palestine. He was a construction worker in Petaḥ Tikvah and Tel Aviv and cofounder of Ha-Baḥarut ha-Sozialistit ha-Ivrit, the union of young members of *Aḥdut ha-Avodah. He started his career as a *Histadrut worker in 1929 as the secretary of the workers’ council in Ramat Gan; he later worked in Tel Aviv in various trade unions and was on its workers’ council. He was an initiator of the cost-of-living

scale for wages and salaries. In 1947 Becker was appointed by Ben-Gurion to organize the supply department of the Haganah and later of Israel’s army, but in 1949 returned to Histadrut work, becoming the chairman of its executive’s trade union department, a post he held for 12 years. From 1961 until 1969 he served as the Histadrut’s secretary-general. He maintained many international contacts, and regularly attended the conferences of the International Labor Organization in Geneva, serving on its governing body from 1957 until 1971. Becker was elected to the Knesset (from the Third to the Seventh Knesset) on the Mapai and Labor Party ticket. He published a book entitled *Bi-Ymei Shilton ha-Labor* (“In the Period of Labor Government,” 1955), after visiting Britain in the early 1950s, and *Ha-Oved be-Yisrael* (“The Worker in Israel,” 1970).

[Shmuel Soler]

BECKER, EDWARD ROY (1933–), U.S. jurist. Becker was born in Philadelphia, Penn. He received his B.A. from the University of Pennsylvania in 1954 and his LL.B. from Yale Law School in 1957. He practiced law in Philadelphia with Becker, Fryman and Ervais from 1957 until 1970. In 1970, President Richard M. *Nixon nominated Becker, then only 37 years old, to the U.S. District Court, Eastern District of Pennsylvania. In 1981, President Ronald *Reagan nominated him to the U.S. Court of Appeals for the Third Circuit. He was Chief Judge from 1998 to 2003 and achieved a remarkable collegiality in the Court.

Federal appellate courts often decide cases with a single word: “Affirmed.” Becker felt that this was a mistake, “that we owed the bar more.” Providing a rationale for a judicial decision, Becker said, “was the right thing to do.” When he began his term as Chief Judge, the Third Circuit resolved 53% of its cases without comment. By the end of 2002, the number was 3%. His passion for writing comprehensive opinions, leaving no hard issue behind and clarifying the law no matter how complex, led colleagues to chide him for his predilection for extensive footnotes. In fact, his article “In Praise of Footnotes” has become a judicial classic.

He was deeply involved in efforts to improve the administration of justice, serving on the executive committee of the Judicial Conference and the board of the Federal Judicial Center. He helped simplify the management of complex litigation, improve the Federal Rules, and coordinate state and federal judicial efforts. He wrote and lectured extensively on cutting-edge legal issues and produced more than 1,000 opinions, a significant number of which were precedent-setting. His expertise – particularly in anti-trust, securities, class actions, scientific evidence, and tort law – is widely recognized, and his opinions are often cited by other judges, including justices of the Supreme Court.

In 2002, the American Judicature Society conferred its prestigious Devitt Distinguished Service Award upon him. This award honors a federal judge whose “career has been exemplary and who has made significant contributions to

the administration of justice, the advancement of the rule of law, and the improvement of society as a whole.” His nomination was co-signed by every judge on the Third Circuit.

Judge Becker served in leadership roles in his synagogue, but judicial rules precluded active participation in many Jewish organizations committed to fundraising, or to social issues that may come before the Court. Jewish leaders – cultural, philanthropic, civic, and entrepreneurial – have consulted with him often to benefit from his wisdom and insight.

[Jerome J. Shestack (2nd ed.)]

BECKER, GARY STANLEY (1930–), American economist, Nobel Prize winner. Born in Pottsville, Pennsylvania, Becker was educated at Princeton and the University of Chicago. He was the Arthur Lehman Professor of Economics at the University of Chicago and, from 1985, a columnist for *Business Week* magazine. A free-market philosopher, Becker applied the methods of economics to aspects of human behavior previously considered the domain of sociology, anthropology, and demography. Early in his career, for example, he decided that racial and ethnic bias could be maintained only if markets were not completely competitive. The idea that discrimination takes a financial toll on the discriminator is an accepted concept among economists today, thanks to Becker. And in his 1964 book *Human Capital*, he raised the idea of considering education as an economic decision.

In the late 1960s he postulated that the way to reduce crime was to raise the probability of punishment or make the punishment more severe. His insights into crime helped develop a new branch of economics. He also examined the family unit, considering the household as a small business the behavior of which could be analyzed by applying economic principles.

In 1967 Becker won the John Bates Clark Award of the American Economic Association and served as president of the association in 1987. In 1992 he was awarded the Nobel Memorial Prize in Economic Science “for having extended the domain of economic theory to aspects of human behavior which had previously been dealt with – if at all – by other social science disciplines such as sociology, demography, and criminology.” Other books by Becker include: *The Economics of Discrimination* (1957), *The Allocation of Time and Goods Over the Life Cycle* (1975), *A Treatise on the Family* (1981), *The Economic Approach to Human Behavior* (1992), *The Essence of Becker* (1995), and *The Economics of Life: From Baseball to Affirmative Action to How Real World Issues Affect Our Everyday Life* (1996) – a collection of Becker’s popular *Business Week* columns.

[Ruth Beloff (2nd ed.)]

BECKER, JULIUS (1881–1945), German Zionist journalist and politician. Becker was born in Gottesberg, Silesia, into an acculturated German-Jewish trading family. He studied at Berne University (Ph.D. in graphology). While in Switzerland, he joined the Zionist Democratic Fraction of Ch. *Weizmann, who had been appointed assistant lecturer at Geneva University in 1901. Shortly after, Becker moved to Berlin and joined the staff of the renewed Zionist weekly *Juedische Rundschau* (1895–1938), which, in Oct. 1902, had been taken over by H. *Loewe. Originally established as *Berliner Vereinsbote* (1895–1901) and first renamed *Israelitische Rundschau* (1901–02), it served as the official organ of the *Zionistische Vereinigung fuer Deutschland* (est. 1897). When Loewe resigned in Dec. 1908, Becker became editor-in-chief, followed by Felix Abraham in Oct. 1911. From 1906 to 1913, he also frequently contributed to the central Zionist organ *Die Welt* (1897–1914), signing himself “JB.” In 1908, immediately after the Young Turk Revolution, he assisted R. *Lichtheim and V. *Jabotinsky in Constantinople to win the new regime’s support for Zionism. Soon, Becker became a prominent figure in German Zionist organizations and was elected to both the Executive and Central Committee of the *ZVFD*. In addition, Becker contributed to political publications, especially those of the Ullstein company, such as *Berliner Morgenpost* (est. 1898) and *Vossische Zeitung* (taken over in 1913 and edited by G. *Bernhard). After 1919, Becker became correspondent of the *Vossische Zeitung* at the League of Nations in Geneva, for a time also chairing the assembly of press correspondents assigned to the League. From 1925, he extended considerable help to V. *Jacobson, the delegate of the Jewish Agency at the League, taking over this post on the latter’s death in Aug. 1934. In 1935, Becker went to Shanghai to organize the Chinese Information Service for the Kuomintang government, returning to Switzerland in 1937. As a stateless person, he had to emigrate to the United States in 1941, where he continued his journalistic activities. In his *History of German Zionism* (1954), Lichtheim described Becker as “a very gifted journalist and a charming companion who, due to his numerous contacts, served Zionism a great deal.”

[Johannes Valentin Schwarz (2nd ed.)]

BECKER, JUREK (1937–1997), German writer of Polish-Jewish background. Born in Lodz, Becker grew up in the Lodz ghetto and the concentration camps of Ravensbrueck and Sachsenhausen. In 1945 he moved with his parents, who had survived the war together, to East Berlin. He joined the Freie Deutsche Jugend Communist youth organization and the Communist Party (SED) while studying philosophy. In 1960

he was ousted from the university for political reasons. After he studied at the Film School of Babelsberg he worked as a playwright and writer in East Berlin. Becoming more critical of the East German regime and defending dissidents publicly, he was thrown out of the Communist Party in 1976. A year later he left East Germany and, after a brief stay in the United States, settled in West Berlin.

Becker's best-known book is his first novel *Jakob der Lugner* (1968; *Jacob the Liar*, 1996), which tells the story of Jacob, who owns a radio in the Warsaw ghetto and invents hopeful stories about an imminent liberation. It became the basis of one of the most successful East German movies. *Der Boxer* (1976) describes the new existence of a concentration camp survivor, while *Bronsteins Kinder* (1986; *Bronstein's Children*, 1991) deals with the revenge of survivors against their Nazi torturers. In the 1980s and 1990s he became well known as a scriptwriter for many German TV comedies. Becker never denied his Jewish background, which is apparent in most of his major works, but stressed that in his life, Judaism played no active role.

[Michael Brenner (2nd ed.)]

BECKER, LAVY M. (1905–2001), Canadian rabbi, communal official, businessman. Lavy Becker was born in Montreal to Russian immigrant parents. His father was a *shohet* and cantor there. Becker attended high school in Montreal and New York, where he studied Talmud at Yeshiva College (*Yeshiva University). He earned a B.A. at McGill University in 1926. In 1930 he was ordained by the *Jewish Theological Seminary.

While at JTS, Becker came under the influence of Mordecai *Kaplan, founder of Reconstructionist Judaism (see *Reconstructionism). Like his classmates and friends Ira Eisenstein and Milton Steinberg, Becker's career reflected a profound commitment to Kaplan's ideal of Judaism as a civilization, a Judaism more expansive than what was usually defined as the religious domain. After graduation, he became rabbi at the Sunnyside Jewish Center and over the next ten years he assumed executive positions at the Jewish Community Centers of Detroit and New Haven as well as taking on the position of executive director of the YM-YWHA in Montreal. Ever ready to assume significant communal challenges, in 1945–46 Becker became the country director for displaced persons in the American Zone of Occupation, under the auspices of the Joint Distribution Committee and UNRWA, responsible for the welfare of the thousands of Holocaust survivors.

After Becker's return to Montreal, he never again assumed a paid position within the Jewish community. He worked first in the family business and then went on to work for others and then himself, when he set up Lavy Becker Consultants. However, he remained deeply involved in Jewish communal life. In 1951, he was the founding rabbi at a new

Conservative synagogue (Congregation Beth-El) in the new Jewish community of Mount Royal. Nine years later he realized his ideal of setting up a Reconstructionist synagogue in Montreal, Dorshei Emet, which he served as unpaid rabbi until 1977. During those same decades, Becker served on the executive of the Canadian Jewish Congress and the World Jewish Congress, where he had special responsibilities for smaller Jewish communities. He traveled extensively through the Caribbean and Latin America, including Cuba, as well as to Iceland. In Canada, he was appointed the chairman of the Centennial Interfaith Council, helping organize Canada's 1967 centennial celebrations.

Many regarded Lavy Becker's life as an embodiment of Mordecai Kaplan's Reconstructionist ideals. Within the Reconstructionist movement he was highly regarded, becoming president of the Federation of Reconstructionist Synagogues (1969–72) and chairman of the Board of Overseers of the Reconstructionist Rabbinical College (1969–74). In Montreal, the Jewish Community Federation established in his honor the Lavy M. Becker chair at the Reconstructionist College in Philadelphia.

[Richard Menkis (2nd ed.)]

BEDA (Fritz Loehner; Fritz Loewy; 1883–1942), Viennese journalist, satirist, and operetta librettist. Born in Wildenschwert, now Usti nad Orlici in the Czech Republic, the Loewy family changed its name to Loehner soon after moving to Vienna. There Beda, whose name is short for Bedrich, Czech for Friedrich, studied law, though already during his school days he had begun to write satirical verse, including some which ridiculed Jews who were attempting to assimilate into Austrian society. In the 1920s Beda became one of the most popular librettists in Vienna. Several of his works provoked scandals, and quotations from them became household words. The satires were published in contemporary Zionist periodicals, and subsequently collected in *Getaufte und Baldgetaufte* ("Baptized and Newly Baptized," 1908); and in *Israeliten und andere Anti-semiten* ("Israelites and Other Anti-Semites," 1909). A collection of personal lyrics is *Ecce ego* (1920). His best-known libretti (with co-authors) were for Franz Lehar's *Land of Smiles* (1929) and Paul Abraham's *Ball in Savoy* (1932); he also collaborated with Fritz Gruenbaum. He was active in the Zionist student organization *Kadimah, and president of the *Hakoah sports club, for whose benefit he organized the "Beda-Abende," one of the highlights of the Vienna season. In 1925 he married Helene Jellinek, with whom he had two daughters. In 1938 Beda was arrested and sent to Dachau, and subsequently deported to the *Buchenwald concentration camp. There he organized cultural activities and in a competition initiated by the camp commandant for a "camp song," Beda's entry (submitted in a "kapo's" name), the "Buchenwaldlied," was chosen as the winner and later became widely known as a reaffirmation that "whatever our fate we still say 'yes' to life." Beda's wife, her mother, and both their daughters

were deported to Minsk in 1942. Beda himself died in *Auschwitz that same year.

BEDACHT, MAX (1883–1972), U.S. Communist leader. Bedacht was born in Munich, Germany. After an impoverished childhood and a career as a journeyman barber and trade union leader in Germany and Switzerland, he immigrated to New York City in 1908, where he supported himself as a barber and German-language newspaper editor. He moved to Detroit and then to San Francisco (1919), where he worked as an editor for the German press. In the same year he was made a member of the national executive committee of the newly formed Communist Labor Party, renamed the American Communist Party in 1921. In this capacity Bedacht was sent as a delegate to the Comintern Congress in Moscow (1921), from which he returned an apostle of the militant new line. While primarily a labor agitator, Bedacht rose to serve on the central executive committee's secretariat (1927–29), and in 1933 was named general secretary of the International Workers Order. He built its Jewish fraternal section into the party's largest auxiliary, while editing its publication *The New Order*. In 1946, following the post-World War II changes in Communist leadership, Bedacht was expelled from the party for factionalism, and retired to become a poultry farmer in New Jersey.

In 1949 he appeared before a hearing of the House Un-American Activities Committee to deny charges made against him by the former Russian espionage agent Whittaker Chambers that for many years he had served as a permanent link between Soviet military intelligence and the central committee of the American Communist Party. In his 1952 autobiography *Witness*, Chambers wrote: "About both brief, tidy men [Heinrich Himmler and Max Bedacht] there was a disturbing quality of secret power mantling insignificance – what might be called the ominousness of nonentity, which is peculiar to the terrible little figures of our time."

BEDARIDA, GUIDO (1900–1962), Italian author and historian. Born in Ancona of a family of south French origin, Bedarida ultimately settled in Leghorn. The Jewish environment had a deep influence on him, inspiring his poetical and literary work and his eagerness to proclaim his Jewish and Zionist identity. Most of Bedarida's poems deal with Jewish subjects. His first collection of verse, *Io Ebreo* (1927), appeared under

the pen name of Eliezer ben David, which he thereafter used frequently. Bedarida wrote plays such as *La casa vuota* (1928) and *Io t'ho chiamato* (1930), and three in the Jewish dialect of Leghorn: *Lucilla fa da sé* (1924), *Vigilia di sabato* (1934), and *Il siclo d'argento* (1935). In the verse dialogues *Alla "banca di Memo"* and *Il lascito del sor Barocas* (1950) and in a collection of sonnets, *Ebrei di Livorno* (1956), he gave a lively picture of the life of the Jews of Leghorn and the local Jewish dialect. His *Ebrei d'Italia* (1950) described the Jewish contribution to Italian culture.

BÉDARRIDE, ISRAËL (1798–1869), French jurist and historian. In 1823 Bédarride won a prize from the Institut de France for his essay on the Jews in the Middle Ages, which he later enlarged and published as *Les juifs en France, en Italie et en Espagne* (1859). The following year Bédarride became a lawyer in Montpellier and was reputed to be one of the best jurists of southern France. He wrote many articles on legal subjects, but Jewish history remained his main interest. In 1867 he published his *Etude sur le "Guide des égarés" de Maimonide*, and in 1869 his *Etude sur le Talmud*. Bédarride was also interested in contemporary Jewish life and wrote against proselytism and in favor of religious liberty, *Du proselytisme et de la liberté religieuse, ou le judaïsme au milieu des cultes chrétiens dans l'état actuel de la civilisation* (published posthumously). He was the author of *Harcanot et Barcanot*, a comedy on life in Carpentras, written in the local Jewish dialect (1896, 2nd edition 1925).

BÉDARRIDES, village in the department of Vaucluse, near Avignon, S. France. The small Jewish community established in Bédarrides in the Middle Ages was expelled by the vice legate of Avignon in 1694. One of the prominent Jewish families of southern France originated in Bédarrides. Its members include: GAD BEN JUDAH OF BÉDARRIDES, who composed a hymn for a local Purim established at *Cavaillon to commemorate escape from rioters in 1713; JASSUDA BÉDARRIDE (1804–1882), jurist, who became mayor of Aix-en-Provence after the 1848 revolution; ISRAËL (ISAIAH) *BÉDARRIDE; and GUSTAVE EMANUEL BÉDARRIDES (1817–1899), magistrate, the first French Jew to be appointed public prosecutor (*procureur général*) at Bastia, in Corsica (1862), and vice president of the Central Consistory from 1872. A branch of the family which established itself in Italy assumed the name-form *Bedarida.

BEDDINGTON, English family of businessmen, philanthropists, and soldiers, originally named Moses. **HENRY MOSES** (c. 1791–1875) became a wealthy wholesale clothing merchant in London, with links to the New Zealand wool trade, and left £500,000 at his death. In 1868, his children changed their surname to Beddington, a suburb in south London, giving rise to much humorous commentary. Henry Moses' son **MAURICE BEDDINGTON** (1821–1898), a London wool broker, left over £1 million. The family also branched out into the tobacco business and founded the Abdullah cigarette company. **ALFRED HENRY BEDDINGTON** (1835–1900) was active in the life of the London Jewish community. In World War I, 37 members of the family served in the British forces. They included Lieutenant-Colonel **CLAUDE** (1868–1940) who fought in the South African War and was in command of the Mounted Troops of the 20th Division in France in World War I. He became an enthusiastic yachtsman. **SIR EDWARD HENRY LIONEL** (1884–1966) was a career officer in the British cavalry and, after having taken part in World War I, retired from active service in 1920. At the outbreak of World War II he rejoined the army, became deputy director of Military Intelligence, and rose to the rank of brigadier. **WILLIAM RICHARD** (1893–1975) entered the British army shortly before World War I, served in France and the Mediterranean area, and was wounded in action. In 1939 he became officer commanding the 2nd Royal Dragoon Guards (The Queen's Bays). He held various staff appointments in the Middle East, Italy, and North Africa, and finally joined Supreme Headquarters, Allied Expeditionary Forces (**SHAEP**). In 1946 he rose to the rank of major general and retired in 1947. Henry Moses' grandson **JOHN LOUIS** ("JACK") **BEDDINGTON** (1893–1959) became one of the most famous advertising poster designers of the 20th century.

BEDERSI, ABRAHAM BEN ISAAC (c. 1230–c. 1300), Hebrew poet in southern France. The designation "Bedersi" indicates that he originated from Béziers (Heb., בדרסי). He may be identical with the Abraham Mosse de Montepessulano (Montpellier; otherwise Abram de Sala) mentioned in secular documents. Abraham settled as a youth in Perpignan where he was a pupil of Joseph Ezobi. He stayed for some time in Arles and once took refuge in Narbonne, but apparently lived most of his life in Perpignan, then under Aragonese sovereignty. The Jewish community there had been granted a charter of privileges by James I to protect them from molestation. Abraham is the conjectured author of a letter from the community to the Jews of Barcelona, appealing to them to persuade the king through the medium of the bishop of Huesca to uphold the rights granted under the charter and reduce the communal tax obligations. Letters of recommendation written by Abraham in the name of the Perpignan community on behalf of petitioners and fund-raising emissaries have also been preserved.

In 1275 Todros b. Joseph ha-Levi *Abulafia, who had accompanied the Castilian monarchs to France, spent some time in Perpignan and the two exchanged verses. A well-known poem of Bedersi on the pen and the sword, inspired by Arabic verses, was written in his honor and sent to him on the occasion of this visit. Abraham also composed for Todros a poem in the style of the Passover *Haggadah*, the first attempt to parody it. He gave some financial assistance to the poet Isaac Gorni, although deriding his literary talents. Abraham wrote numerous poems and satires, apparently collected by his son *Jedaiah ha-Penini (mostly still in manuscript; the most complete manuscript is in the British Museum (Add. Ms. 27, 168); others are in Vienna, Amsterdam, and Leningrad). Despite his bombastic style, Abraham's works contain interesting historical details and provide an insight into the contemporary cultural scene. Between 1290 and 1295 he wrote *Ha-Herev ha-Mithappekhet* ("The Revolving Sword"), a lengthy poem of 210 verses (according to the numerical value of the Hebrew letters in *herev*). In it, Abraham mentions his birthplace and his father, and comments on the Hebrew poets who preceded him in Provence and Spain. He considered himself their inferior. He did, however, contend that he was the best poet of his generation and challenged his contemporaries to a competition for which he proposed judges. Abraham also composed *Hotam Tokhnit*, the first dictionary of Hebrew synonyms in the Bible. Both works were published in 1865, the latter with a commentary by Samuel David Luzzatto. There is some doubt whether Abraham or his son Jedaiah composed the prayer *Elef Alfin* (so called because its thousand (Heb. *elef*) words all begin with the letter *alef*; published in *Kerem Hemed*, 4 (1839), 57–65) and *Shir ha-Lamedin* (Frankfurt on the Oder, 1812), a *bakkashah* for the Day of Atonement, in which each word contains the letter *lamed*, and all subsequent letters of the alphabet are excluded.

[Jefim (Hayyim) Schirmann / Zvi Avneri]

BEDFORD, English county town. In the Middle Ages a small community existed in Bedford, which housed one of the *archae* for registration of Jewish debts. Local Jews suffered from violence during the Barons' Wars in 1263 and again in 1274. Three Jews were hanged for coin clipping in 1278. By the time of the expulsion of the Jews from England in 1290, the community seems to have been almost extinct. Jews resettled in Bedford at the end of the 18th century, and a tiny community existed from 1803 to 1827 and from 1837 to c. 1879. Organized Jewish life was revived briefly in 1903 and again during the

evacuation from London in 1939–45. In 1968 there were 55 Jews in Bedford and in 2004 the population was estimated at 45.

[Cecil Roth]

BEDIKAT ḤAMEZ (Heb. בְּדִיקַת הָמֵץ; “searching for leaven”), ceremony of searching for leaven, instituted in order to ensure that not even the smallest particle of **ḥamez* remains in the house during Passover. The biblical injunction, “Even the first day shall ye put away leaven out of your house” (Ex. 12:15), was interpreted by the rabbis as referring to the eve of Passover, i.e., the 14th of Nisan. The ceremony of *bedikat ḥamez* takes place on the 13th of Nisan (or the 12th if the 13th should be on a Friday). It follows the *Ma’ariv* prayer immediately after nightfall and before any other kind of activity is undertaken. The ceremony is preceded by the blessing: “Blessed art Thou O Lord our God, King of the Universe, Who hast sanctified us by Thy commandments and commanded us concerning the removal of the leaven.”

By the light of a wax candle, with a wooden spoon and a whisk made of several chicken or goose feathers tied together, the master of the house searches every corner in the house for stray crumbs. Every room into which *ḥamez* may have been brought during the past year has to be searched. Since a blessing must never be recited without good reason, a few crumbs of bread are deliberately left on window sills and in other obvious places. The ceremony of *bedikat ḥamez* takes precedence even over the study of Torah on that evening. If the husband is not available, the ceremony has to be performed by the wife or another member of the family. The kabbalistic school of R. Isaac Luria hid ten pieces of bread for *bedikat ḥamez*. Leaven to the mystics symbolized the ferment of base desires and evil impulses which had to be purged. Upon completion of *bedikat ḥamez*, the leaven collected is put away in a safe place and the master of the house recites these words: “May all leaven that is in my possession, which I have not observed, searched out or had cognizance of, be regarded as null and be common property, even as the dust of the earth.” On the morning of the 14th of Nisan, no later than 10 A.M., the leaven is burned and a similar Aramaic formula is recited. This observance is called *Bi’ur ḥamez* – the removal or the burning of *ḥamez*. The laws concerning *bedikat ḥamez* are codified in Shulḥan Arukh (OH 431 to 445).

[Harry Rabinowicz]

BEDZIN (Yid. **Bendin**), town in the Zagłębie Dąbrowskie area, Kielce district, Poland. A Jewish settlement existed in Bedzin from the beginning of the 13th century with a privilege from Casimir the Great and his successors to work as merchants. The development of Bedzin was interrupted by the Swedish invasion of the mid-17th cent. In 1765 the Jewish population numbered 446; in 1856, 2,440 (58.6% of the total); in 1897, 10,839 (45.6%); in 1909, 22,674 (48.7%); in 1921, 17,298

(62.1%); and in 1931, 21,625 (45.4%). A large number of Jewish workers were employed in Bedzin’s developing industries at the beginning of the 20th century, and the town became the center of Jewish and Polish socialist activity and Jewish workers parties like the Bund and Po’alei Zion during the 1905 Russian revolution. Zionist activities were begun in Bedzin by Ḥovevei Zion in the 1880s and expanded in interbellum Poland to comprise various Zionist youth organizations. After World War I Jews took a considerable part in iron-ore mining, metallurgy, zinc and tin processing, and the production of cables, screws, nails, and iron and copper wire. Jewish-owned undertakings included chemical works and factories for paints, candles, and bakelite products, in particular buttons for the garment industry, which expanded in the area during 1924–31. Most Jews earned their livelihoods as merchants and craftsmen.

Jewish schools and a gymnasium (secondary school) were supported by the community with the help of donations from local Jewish industrialists. The Jewish community was very active organizing social and cultural institutions. The first pioneers of the Third Aliyah came from Bedzin. Dr. S. Weinzier was elected as member of Parliament (Sejm). The chain of credit cooperatives and free loan societies established in Bedzin through the American Jewish Joint Distribution Committee had a membership of nearly 1,000.

[Nathan Michael Gelber / Shlomo Netzer (2nd ed.)]

Holocaust Period

The German army entered the town on Sept. 5, 1939, and five days later they burned the Great Synagogue in the Old City. About 50 houses surrounding the synagogue, which were inhabited exclusively by Jews, went up in flames and 60 Jews were burned to death. During 1940–41 the situation in Bedzin was considered somewhat better than in most other places in occupied Poland (Bedzin and its neighbor *Sosnowiec were for a long time the only large cities in Poland where no ghetto was established). For this reason thousands of Jews from central Poland sought refuge there. Several thousand Jews from the district were expelled and forced to reside in Bedzin, among them all the Jews from Oswiecim (German name – Auschwitz), who arrived in April–May 1941, prior to the construction of the Auschwitz camp. About 6,500 Jews in the town were sent to forced labor camps and others were put to work locally making clothing and boots for the German army. In May and June 1942 the first deportations took place in which 2,400 “nonproductive” Jews were sent to their death in Auschwitz. On Aug. 15, 1942, about 8,000–10,000 Jews were sent to Auschwitz, while others were shot on the spot for disobeying German orders. In spring 1943 a ghetto was established in the suburb of Kamionka. On June 22, 1943, 4,000 Jews were deported and on August 1, 1943, the final liquidation of the ghetto began. In all, about 30,000 Jews were sent to Auschwitz from Bedzin. Only a limited number of Jews survived the concentration camps by hiding. The Jewish underground resistance in Bedzin became active at the beginning of 1940. They

circulated illegal papers and made contact with the Warsaw Ghetto underground. After the establishment of the ghetto, the underground concentrated mainly on preparations for armed resistance. A unified fighting organization came into being with strong ties with the Jewish Fighting Organization of the Warsaw Ghetto. On Aug. 3, 1943, during the last deportation, some armed resistance broke out. Among the fighters who fell in battle was the leading Jewish partisan Frumka Plotnicka. Deportees from Bedzin played a major role in the underground and uprising in the Auschwitz death camp (among them – Jeshajahu Ehrlich, Moshe Wygnanski, Ala Gertner, and Rosa Sapirstein). Although some Jewish survivors settled in Bedzin after the war (in 1946 the Jewish population numbered 150 people), all of them left after some time.

BEE (Heb. דְּבִיָּה). Beekeeping was practiced early in the Mediterranean region. However, there is no reference to it in the Bible where the bee is mentioned only four times and only once in connection with honey (Judg. 14:9). References to bees stinging those who approach them (Deut. 1:44; Ps. 118:12) may refer to the gathering of wild honeycombs, and the finding of honey is mentioned (1 Sam. 14:25; Prov. 16:4). Bees swarm when the land is desolate and untilled, so that a child will then eat “butter and honey” (Isa. 7:22). On the other hand, the honey of “a land flowing with milk and honey” (Deut. 8:8) is date honey according to the rabbis. There are frequent references to beekeeping in the talmudic era. The rabbis give detailed accounts of the beehives which were made of wicker and attached to the ground with clay (Oho. 8:1; Uk. 3:10) and discuss the number of honeycombs which it was permitted to take from the hives in the case of a man who acquires them for one year only (BB 5:3). Bee honey is permitted as food and the rule “that which derives from the unclean is itself unclean” does not apply to it. The reason adduced is that the bee does not produce the honey but sucks it from the flowers and discharges it through the mouth (Bek. 7b). The bee referred to is the *Apis mellifica* whose sting is especially acute. For this reason in recent times the Italian species *Apis ligustica*, which is easier to handle, has been introduced into Israel.

°**BEEK, MARTINUS ADRIANUS** (1909–1987), Dutch Bible scholar and Orientalist. He was minister of the Dutch Reformed Church and professor of the exegesis of the Hebrew Bible (in the Faculty of Theology) and of Hebrew language and literature (in the Faculty of Humanities) at the Univer-

sity of Amsterdam (1946–74). He was the successor to Judah L. Palache, who was dismissed from his position in November 1940 and murdered in Auschwitz (1944).

Beek's books include works on Jewish apocalyptic literature, the literature and history of the Mesopotamian area, the history of Ancient Israel, a general introduction to the Bible, the modern State of Israel, and Martin Buber. Most of his books have been translated into English and/or German. From his many articles mention should be made of his “Saturation Points and Unfinished Lines in the Study of Old Testament Literature” (in Dutch, 1968; transl. in: *Voices from Amsterdam*, 1994) which became a stimulus for his students to explore new methods of interpretation. He was an initiator of the Societas Hebraica Amstelodamensis, which became known for the *Amsterdamse Cahiers* series and the translation of Ruth, Jonah, and other biblical books into Dutch (“to be read aloud”), published by the Dutch Bible Societies.

Of his many administrative activities outside the university mention should be made of his longstanding work for the Liberal Protestant radio corporation in the Netherlands (VPRO), the Netherlands-Israel Friendship League, the Bible Museum in Amsterdam, and the Praemium Erasmianum.

He was succeeded by Karel A. Deurloo (Faculty of Theology) and by Maas Boertien (Faculty of Humanities), who edited Tractate *Nazir* in the Giessener Mischna (1971).

[E.J. Hoogewoud (2nd ed.)]

BEER (Heb. בְּאֵר; “a well”), the name of several biblical localities. (1) One of the stations where the Israelites stopped during the Exodus, north of the Brook of Zered in Transjordan (Num. 21:16–18). It is possibly identical with Beer-Elim (Isa. 15:8) in southern Moab. (2) The place where *Jotham, son of *Gideon, sought refuge when he fled from his brother Abimelech (Judg. 9:21). As this place is associated with the history of *Gideon's family, it is generally located north of the Jezreel Valley. The Septuagint mentions Beeroth, in the inheritance of Issachar, between Shion and Anaharath, i.e., in the vicinity of Mount Tabor (Josh. 19:19), where the Arab village of al-Bira is located. Nearby is Khirbat al-Bira, where remains of the early Israelite period have been discovered. The village was abandoned by its inhabitants during the War of Independence.

[Michael Avi-Yonah]

BEER, AARON (1739–1821), German cantor, composer, and collector. Beer was born near Bamberg and was known as “*der Bamberger ḥazzan*.” He had a tenor voice of unusually wide

range. While still a youth he became cantor of the Paderborn congregation and at the age of 26 was appointed chief cantor of the Heidereutergasse Synagogue in Berlin, a position he held until his death. Beer was known for his extensive repertory of liturgical melodies, including many of his own composition. Tradition credits him with 1,210 items. He made a habit of varying his tunes for regular prayers in order to discourage the congregation from joining in his singing, a practice he profoundly disapproved. Beer's collection of 447 festival prayer melodies was passed down to his successor, Asher Leon (1776–1863), and thereafter to Cantor Moritz Deutsch of Breslau (1818–92), H. Schlesinger, and Cantor E. Birnbaum (1855–1920). It is now in the library of the *Hebrew Union College in Cincinnati.

[Joshua Leib Ne'eman]

BEER, BERNHARD (1801–1861), German scholar, community leader, and bibliophile. For nearly 30 years Beer served as head of the Dresden Jewish community and its schools. He founded various charitable organizations, and in 1829 joined in establishing a Mendelssohn Society for the furtherance of scholarship, art, and trades among Jewish youth. Through his writings and personal active efforts, Beer was able to wage an eventually successful struggle for the civic equality of the Jews in Saxony. Although he observed traditional practice and was emotionally attached to Jewish customs, Beer rejected Orthodoxy intellectually and aesthetically in favor of moderate reforms, especially in liturgy. He was the first Jew to give a German sermon in a Dresden synagogue. Beer's religious views were similar to those of his close friend, Zacharias *Frankel. Nevertheless the reformers *Geiger and *Holdheim also accorded him respect and admiration, and Beer was regarded as a mediating influence between the proponents of tradition and those of reform. Beer wrote numerous scholarly articles and reviews which appeared in Frankel's *Zeitschrift* and *Monatsschrift* as well as in *Orient*, *Kerem Hemed*, and other journals. His books include *Das Buch der Jubilaeen und sein Verhaeltniss zu den Midraschim* (1856), *Juedische Literaturbriefe* (1857), and *Leben Abrahams nach Auffassung der juedischen Sage* (1859). He also translated into German, with additions, Solomon Munk's *La Philosophie chez les Juifs* (Leipzig, 1852). The extensive and valuable library which Beer acquired during his lifetime was divided after his death between the Breslau Seminary and the University of Leipzig, where Beer received his doctorate in 1834.

[Michael A. Meyer]

BEER, GEORGE LOUIS (1872–1920), U.S. historian and publicist. Born in Staten Island, N.Y., during his twenties he was successful in the tobacco business, from which he retired in 1903 to devote himself to research on the theme which commanded all his work as an historian: the economic features of 17th- and 18th-century British colonial policy. His writings include: *Commercial Policy of England toward the American Colonies* (1893); *British Colonial Policy, 1754–65* (1907); *The Origins of the British Colonial System, 1578–1660* (1908); and *The Old Colonial System, 1660–1754* (2 vols., 1912). Beer's basic theses were that English colonization had aimed at setting up a self-sufficient commercial empire of interdependent and complementary areas; that British commercial policy toward the American colonies had promoted their growth; and that the removal of the French from Canada encouraged the American colonies to assert themselves and seek independence. During World War I, Beer supported the British cause. He expressed the hope, particularly in *The English Speaking Peoples* (1917), that Great Britain and the U.S. would ultimately rejoin in a political union, to ensure the progress of the postwar world. He served as chief of the colonial division of the American delegation at the Paris Peace Conference, and helped draft the treaty provisions dealing with the former German colonies. He urged the establishment of "mandates" to promote the welfare of the natives. His *African Questions at the Paris Peace Conference* was published in 1923. A participant in many communal and charitable activities, Beer was a director of the Jewish Protectors and Aid Society.

[Abraham S. Eisenstadt]

BE'ER, HAIM (1945–), Israeli writer. Born in Jerusalem, Be'er grew up in an Orthodox family, among deeply religious Jews whose conversations were studded with quotations from the Bible, the Talmud, and the later rabbinic literature. Following his army service in the military chaplaincy, he joined the Am Oved Publishing House in Tel Aviv, where he advanced from proofreader to member of the editorial board. Be'er's prose depicts the Orthodox milieu, a wide and colorful range of types, some eccentric or comic, others pitiable. His first novel, *Nozot* (*Feathers*; Eng. trans. 2004) describes the experiences and observations of a boy growing up in Jerusalem and joining a military burial squad during the Yom Kippur War (1973). A sense of the grotesque, which underlines the portraits of a bizarre visionary leader, Esperantists, and vegetarians, also marks Be'er's second novel, *Et ha-Zamir* ("The Time of Trimming," 1987). It is the story of Naḥum Gevitz, serving in a rabbinical unit between 1965 and 1967, a period of messianic dreams and hopes of "liberating the Holy City from captivity." This merciless account, marked by parody and biting criticism, was described by critics as "the Israeli Catch 22." Be'er's personal experiences play an even more significant role in his third novel, *Havalim* (1998; *The Pure Element of Time*,

2003), an autobiographical novel which has been praised as a pastiche of different styles. While the first part centers on the figure of the author's grandmother, a remarkable woman and a born storyteller, the second part depicts the marriage of his parents, his beloved mother and her much older, melancholy husband. The third part of this gripping epic triptych describes the protagonist's first steps as a writer. Other books by Beer are a collection of poems *Sha'ashuei Yom Yom* (1970) and a study of the literary and personal relations between three outstanding Hebrew writers: Brenner, Bialik, and Agnon (*Gam Ahavtam, Gam Sinatam*, 1993).

[Anat Feinberg (2nd ed.)]

BEER, ISRAEL (1912–1966), military commentator and Soviet agent in Israel. Beer went to Palestine from Vienna in November 1938. He joined the *Haganah and was appointed to the Central Training Bureau. During the War of Independence he served on the General Staff with the rank of lieutenant colonel. After retiring from the army in 1949, he became noted as a military commentator in Israel and abroad. Later, when he held the chair of military history at Tel Aviv University, *Ben-Gurion commissioned him to prepare the official history of the War of Independence. In 1961 Beer was arrested and accused of having contact with a Soviet intelligence agent. He was found guilty of treason and sentenced to 15 years' imprisonment. He died in prison. The true facts of Beer's biography until his arrival in Palestine are difficult to establish, since he himself gave varying versions. Apparently, he was born in Vienna and studied literature and philosophy at the University of Vienna. He claimed to have simultaneously joined the Schutzbund (the military organization of the Austrian Social-Democratic Party) and the government militia, and to have graduated from a course at Wiener Neustadt Military Academy with the rank of lieutenant in 1935. He also alleged that, at the outbreak of the Spanish Civil War in 1936, he had been ordered by the Social-Democratic Party to join the International Brigade, being finally promoted to the rank of lieutenant colonel. He wrote *Der Nahe Osten, Schicksalsland zwischen Ost und West* (1960), and *Bithon Yisrael – Etmol, ha-Yom, Ma'har* (1966; "Israel's Security – Yesterday, Today, Tomorrow").

[Jehuda Wallach]

BEER, MAX (Moses; 1864–1943), German socialist historian and journalist. Beer was born in Tarnobrzeg, Galicia. Coming from socialist circles there, he emigrated to Germany via Vienna in 1889. He was first employed as a type-setter and printer, then became assistant editor of the social democratic daily *Die Volksstimme* ("Voice of the People") in Magdeburg. In 1893, as a result of a newspaper article, he was imprisoned for 14 months on the basis of the Sozialistengesetz (1878) and expelled from Prussia on his release. He stayed in London until 1915. In 1895–96, he enrolled at the newly founded London School of Economics, earning his living as a language teacher, lecturer, and correspondent for the social democratic paper *Post* in Munich and the Jewish *Arbeiter-Zeitung* in New York. From 1899 to 1901, he temporarily joined the latter's staff in New York and contributed to the *Jewish Encyclopaedia* (1901–06). Back in London, Beer became correspondent for the social democratic weekly *Neue Zeit* (est. 1898) and the Berlin daily *Vorwaerts*, the central organ of the German Social Democratic Party. In 1912, however, he resigned from his post due to political differences and intensified his historical research on British and international socialism. In 1913, his *Geschichte des Sozialismus in England* appeared which became a standard work (cf. *A History of British Socialism*, 2 vols., 1919–20). Considered an "enemy alien" during World War I, Beer was repatriated to Germany in 1915 where he continued his research and was naturalized as a German citizen in 1920 (revoked in 1934). In 1919–21, he edited *Die Glocke*, contributed book reviews to the *Times Literary Supplement*, and finally was invited by D. Ryazanov to serve as English librarian of the Marx Engels Institute in Moscow from 1927 to 1929. On his return, Beer was employed at the Frankfurt Institute for Social Research until, in 1933/34, almost 70 years old, he was forcibly divorced from his non-Jewish wife and expelled from Germany. Broken and impoverished, Beer again settled in London, continuing his research with the aid of the British Central Fund for German Jewry. In 1935, he published his autobiographical work *Fifty Years of International Socialism*. In 1943, almost forgotten, he died at the age of 78.

Due to his personal experience, Beer was considered one of the greatest experts on British and international socialism of his time. In 1918, on Karl Marx's centenary, Beer was commissioned to write *Karl Marx. Eine Monographie* (cf. *The Life and Teachings of Karl Marx*, 1921), followed by *Allgemeine Geschichte des Sozialismus und der sozialen Kämpfe*, 5 vols. (1919–23), which was published in several languages (cf. *General History of Socialism and Social Struggles*, 1922–26). Among Beer's other works are *Das Regenbogenbuch* (1915); *Jean Jaurès* (1915); *Sozialistische Dokumente des Weltkrieges*, nos. 1–5 (1915–16); *L'Entente annexionniste* (1917); *Der britische Sozialismus der Gegenwart 1910–1920* (1920); *Krieg und Internationale* (1924); *Die Reise nach Genf* (1932); *The League on Trial*, 1933); *Die auswärtige Politik des Dritten Reiches* (1934); and *Early British Economics from the Thirteenth to the Middle of the Eighteenth Century* (1938).

[Johannes Valentin Schwarz (2nd ed.)]

BEER, MICHAEL (1800–1833), German poet and playwright; brother of the composer Giacomo *Meyerbeer and of the astronomer Wilhelm *Beer. In one of his earliest works, the classical tragedy *Klytemnestra* (1823), he attempted to gain sympathy for a heroine who murders her husband. Beer's play was successfully performed in 1819 at the Berlin Hoftheater and later in Vienna. In 1825, he achieved a triumph with the poetic drama *Der Paria*, a disguised plea for Jewish emancipation, which won high praise from Goethe. Beer moved to Paris in 1824, and in 1827 settled in Munich, where he enjoyed the goodwill of King Ludwig of Bavaria and the friendship of Eduard von Schenk, the minister of interior. *Struensee*, generally regarded as his best play, was produced by the Bavarian Royal Theater in 1828, when it was favorably reviewed by Heine. The incidental music for *Struensee* was composed by his brother Meyerbeer. Beer's narrative poems include only one with a Jewish theme, a legend entitled *Der fromme Rabbi*. His collected plays and poems appeared in 1835, with an introductory biographical sketch by Eduard von Schenk and verse tributes by Schenk and M.G. *Saphir. Two years later, Schenk published Beer's collected letters.

[Sol Liptzin / Marcus Pyka (2nd ed.)]

BEER, PETER (Perez; pen name: **Theophil Nikodem;** 1758 (or 1764)–1838), Austrian educator and author, representative of radical *Haskalah in the Habsburg Empire. Beer, who had a traditional Jewish education, also learned Latin and German. He attended the Prague and Pressburg (Bratislava) yeshivot, and from 1780 studied pedagogy at Vienna University, being one of the first Jews to train as a teacher within the educational reform program introduced by Emperor *Joseph II. From 1784 he taught at *Mattersdorf, then at his native Nový *Bydžov, and from 1811 until his death at the new Prague “Normalschule.” Beer was also appointed “teacher of morals” to the Jewish pupils at Prague high schools in 1813, being probably the first Jew appointed to hold a government appointment and entitled to wear a government employee's uniform. In 1796 Beer published his *Toledot Yisrael*, a history of the Jews, omitting chapters likely to be unpalatable to enlightened circles, such as the slaying of the prophets of Baal by Elijah, as well as the entire talmudic period. It became the blueprint of biblical his-

tory textbooks used by teachers of the Enlightenment school in Europe for many years, both in the original and in translation (the last Russian translation was published in 1905). In 1809 Beer published *Dat Yisrael* and in 1810 *Emet ve-Emunah*, religious manuals in German. His two-volume *Geschichte, Lehren und Meinungen aller religioesen Sekten der Juden und der Geheimlehre oder Kabbala* (1822–23) is even now interesting for the material on the *Frankists and *Ḥasidism. In them, he developed an ideology of “Mosaism,” which, parallel to “Christianity” that embraces Catholicism, Protestantism, etc., covers all different Jewish sects. Beer wrote several appeals, some anonymously, to the authorities on matters of public interest, including the question of military service and the establishment of a rabbinical seminary in Prague. He contributed to the periodicals **Sulamith*, *Ha-Me'assef* (see *Me'assefim), and **Bikkurei ha-Ittim*, and published a prayer book for “educated women” (1815). He was instrumental in opening the Reform synagogue in Prague and in inviting Leopold *Zunz to serve as preacher. He published a commentary on Genesis intended for readers of all creeds, drawing heavily on contemporary Protestant commentators. Only one installment of his translation of Maimonides' *Guide* was published (1834). It was sharply criticized by Joseph *Derenbourg. Beer was highly esteemed by the Austrian authorities and was awarded a decoration. However, his educational activities were viewed with suspicion by the majority of Jews. His autobiography, edited by Moritz Hermann, was published in 1839.

BEER, RACHEL (Richa; 1858–1927), owner and editor of the *Sunday Times*, London, 1893–1904. Rachel Beer was born in Bombay, the daughter of Sasson David *Sassoon and Flora (Farḥa) Reuben of Baghdad. She was an infant when the family settled in England. In an age which afforded women little scope, she displayed both character and talent. For two years she worked as an unpaid hospital nurse, and in 1887 married Frederick Arthur Beer, owner of the *Observer*. She became

a contributor to the paper, and later its editor. In 1893 she bought its rival the *Sunday Times* which she edited while retaining her position on the *Observer*. Under her control the *Sunday Times* changed its outlook from independent liberal to non-partisan. She was also a composer and published a piano sonata and a piano trio. The first woman ever to edit a Fleet Street newspaper, in the 1890s she obtained one of the great "scoops" of the age for the *Observer* when she obtained proof that the documents used to convict Alfred *Dreyfus in France had been forged. Siegfried *Sassoon (1886–1967), the famous poet, was her nephew.

Griffiths (ed.), *Encyclopedia of the British Press, 1422–1992* (1992), 98; S. Jackson, *The Sassoons: Portrait of a Dynasty* (1998); C. Bermant, *The Cousinhood* (1961), index; ODNB online.

BE'ER, RAMI (1957–), dancer, choreographer, and artistic director of the Kibbutz Contemporary Dance Company. He was born into a family of musicians in kibbutz Ga'aton in Israel. At a very early age, he began studying cello and later studied dance with Yehudit Arnon. Be'er joined the company as a dancer and choreographer in 1980.

His choreographic style is influenced by Central European expressionism and American modern dance. Generally, his works take up a full evening's program and are constructed as a collage around a central theme. His themes are connected to the reality in which we live and his choreographies reflect the tension between abstraction and expression. *Reservist Diary* (1989) reveals the ethical uncertainties of an Israeli soldier in the reserves during the *Intifada*. In *Real Time* (1991), Be'er deals with the kibbutz movement as the parting of ways. In *Angelos Negros* (1992), he addresses the Spanish Inquisition. In *Naked City* (1993), the dominant motif is the loneliness of the individual. The theme of *Aide Memoire* (1994) is strongly influenced by Be'er's being a member of a family of Holocaust survivors. The set and lighting designs are usually Be'er's own creations. In *On the Edge* (1999), the stage is designed as a huge fortress, and in *Screensaver* (2002), rays emitted by a television set are part of the production. He was awarded the Contributor to Cultural and Educational Creativity Prize in 2000.

[Ruth Eshel (2nd ed.)]

BEER, SAMUEL FRIEDRICH (1846–1912), Czech sculptor. Beer studied in Vienna and quickly gained some recognition as a portraitist. His friendship with Theodor Herzl inspired his Jewish subjects, such as the monumental group *Shema Israel*. He designed the medal issued on the occasion of the Second Zionist Congress at Basle. He later worked in Paris, Rome, and Florence.

BIBLIOGRAPHY: Roth, Art, 868; T. Zlocisti, in: *Ost und West*, 5 (1905), 78, 82, 83ff., includes reproductions.

BEER, WILHELM (1797–1850), German astronomer and brother of Giacomo *Meyerbeer, the composer, and Michael *Beer, the poet. Wilhelm Beer joined and later succeeded his father in the family banking house. His leisure hours were spent in studying astronomy in an observatory he had constructed in his garden. Together with J.H. Maedler, he studied the planet Mars during the 1828, 1832, 1835, and 1837 oppositions and their findings were published. Later they made a map of the moon; over many years they recorded every aspect of the moon surface and published their findings in *Der Mond nach seinen kosmischen und individuellen Verhaeltnissen, oder allgemeine vergleichende Selenographie* (2 vols., 1837). This was the standard work for many years. When Maedler left and joined a university, Beer went into politics and in 1846 was elected to the Prussian Chamber of Deputies. A mountain on the moon is named for him.

BEER-BING, ISAIAH (1759–1805), one of the leaders in the struggle for the "regeneration" of the Jews of France. He wrote a number of pamphlets including a refutation of an anti-Jewish pamphlet by Aubert Dufayet (*Lettre du Sr I.B.B.... à l'auteur anonyme d'un écrit intitulé: Le cri du citoyen contre les juifs*, 1787, 18052). Beer-Bing was appointed to the commission headed by Malesherbes to improve the status of the Jews in 1788. In 1799 he drew up a memorandum on the community of his birthplace Metz. He was a member of the municipal council of Metz from 1790 and became the administrator of the saltworks in eastern France. He was on the editorial committee of the *Décade philosophique*. Beer-Bing translated the *Phaedon* of Moses *Mendelssohn from German into French and Hebrew (*Sefer Hasharat ha-Nefesh*, 1786–87, republished many times), a *Song of Zion* by Judah Halevi from Hebrew into French, and a fragment from the *Behinat Olam* by *Jedaiah ha-Penini (in *Essai sur la régénération... des juifs* by his friend the abbé *Grégoire, 1789).

[Moshe Catane]

BEER-HOFMANN, RICHARD (1866–1945), Austrian poet and playwright. The son of a Moravian lawyer, Beer-Hofmann was adopted by his uncle, the Viennese industrialist Alois Hofmann. After graduating in law at the University of Vienna, he was drawn into the "Young Vienna" literary group, which included many of his close friends, Arthur *Schnitzler, Peter *Altenberg, Hermann Bahr, Theodor *Herzl, Hugo von *Hofmannsthal, and Felix *Salten. He influenced the style of Viennese *Décadence* in his *Novellen* (1893) and in his earliest lyric poem, *Schlaflied fuer Miriam* (1898). His only novel, *Der Tod Georgs* (1900), depicts a main protagonist whose fascination with paganism and aestheticism is replaced in the end by a return to Jewish tradition. Self-sacrifice for the glory of God remains an enduring motif in Beer-Hofmann's oeuvre. His first drama, *Der Graf von Charolais* (1904), features a character – the "Rote Itzig" – who contrasts the Elizabethan

tragedy of the narration with the ongoing suffering of Jewry. Beer-Hoffmann's work reveals the special message Judaism seems to offer the world when Nietzschean philosophy considers it lost to man.

If Beer-Hofmann's early works can be interpreted as seeing the rebirth of modernity out of the spirit of Judaism, his subsequent work may be viewed as seeing the rebirth of Judaism out of the spirit of modernity. Impressed and inspired by the Neo-Wagnerian theater concept of Max *Reinhardt, who had already staged *Der Graf von Charolais*, Beer-Hofmann tried to open to Jewry a space from which religious imperatives had banned it: the theater. In pursuit of a "Jewish national drama," he continued work on his biblical cycle, *Die Historie von Koenig David*, for decades. The prologue *Jaákobs Traum*, premiering in 1918, focuses on Israel's election by blending Jacob's dream of the ladder and his wrestling with the angel. In contrast to the pagan rituals of sacrifice in which contemporary dramatic theory identified the roots of tragedy, the play makes the sacrifice of Isaac the primal scene of Jewish theater. The transition play *Ruth und Boas* remained a fragment. The third part of a planned pentalogy, *Der junge David*, was completed in 1933 but never staged. The drama shows David in conflict between his destiny as king and his wish to leave royal dignity to God. Again, the action is linked to the sacrifice of Isaac. Jewish theater, in Beer-Hoffmann's conception, is legitimate only if it eschews idols and has no symbols or icons at its disposal, just as Abraham stood at Mount Moriah with nothing to sacrifice but his own offspring. Further theoretical reflection is provided by the prelude to a nonexistent fourth part, the *Vorspiel auf dem Theater zu Koenig David* (1936), where the stage is likened to an altar on which theater itself must be sacrificed to avoid idolatry. The only one of Beer-Hofmann's dramatical works to achieve sustained international attention was *Jaákobs Traum*, which was staged in Palestine as early as the early 1920s.

Beer-Hofmann emigrated from Austria to New York in 1939. *Verse* (1941) includes all the poems that he wished preserved. A posthumous fragment in tribute to his wife, *Paula* (1949), captures the autumnal mood of Austria as it influenced his own life and shaped his personality.

BE'ERI (Heb. בֵּעֵרִי), kibbutz in S. Israel, in the N.W. Negev, affiliated with Ha-Kibbutz ha-Me'uḥad. It was one of 11 settlements in the Negev and the south founded during the night of

October 6, 1946. The founding settlers, members of Ha-No'ar ha-Oved (Israel Working Youth Movement), were joined by other settlers, mainly from Iraq. In the mid-1990s the population was approximately 850, dropping to 753 in 2002. The economy was based mainly on its printing press. The kibbutz cultivated around 3,000 acres of farmland, which included field crops and orchards, and raised dairy cattle and ostriches. The name commemorates the labor leader Berl (Be'eri) *Katznelson.

WEBSITE: www.beeri.org.il.

BEERI, TUVIA (1929–), Israeli painter and printmaker. Beeri was born in Czechoslovakia and immigrated to Israel in 1948. In 1957 he entered the "Oranim" art school, where he studied with Marcel *Janco and Jacob Wechsler, continuing his studies in Paris. From 1961 to 1963 he studied the technique of etching under Johnny *Friedlaender and attended the studio of lithography at the Ecole des Beaux-Arts, Paris. Returning to Israel, he taught at the Bezalel School of Arts and Crafts. From 1957 he taught printmaking at the Avni Institute of Art, Tel Aviv.

Beeri was one of Israel's leading graphic artists. He used etching-needle and drypoint, but was particularly in favor of aquatint print technique, which, by the creation of color and the variation of planes, makes it possible to introduce painting quality into graphic work.

Beeri's world is a dream world of color and form. His paintings remind one of mysterious landscapes of the Pyramids and of ancient times. Luminosity is achieved by printing bright colors one above the other, thus achieving transparency, depth, and plasticity of forms.

Beeri held many one-man shows and participated in group exhibitions in the United States, Canada, South America, Australia, Europe, and Israel. He also took part in some important Biennales of the graphic arts – in Paris, Florence, and Tokyo. His work is represented in the Museum of Modern Art, New York, the Bibliothèque Nationale, Paris, and in many museums both in Israel and abroad.

BEERMAN, LEONARD (1921–), U.S. Reform rabbi. Beerman was born in Altoona, Pennsylvania, served in the U.S. Marine Corps during World War II, and entered Hebrew Union College in 1943. He interrupted his seminary education to volunteer for the *Haganah in 1947–48, returning to receive his rabbinic ordination in 1949. Beerman became the founding rabbi of Leo Baeck Temple in Los Angeles that year and remained there until his retirement in 1986. His career was marked by social activism on behalf of civil and human rights, as well as world peace. He was on the faculty of Claremont Men's College and Immaculate Heart College and served as

president of the Pacific Association of Reform Rabbis and vice president of the Southern California Board of Rabbis.

[Bezalel Gordon (2nd ed.)]

BE'ER ORAH (Heb. בְּאֵר אֹרֵחַ), training camp of *Gadna (the Israel pre-military youth corps) founded in 1950 in the southern Negev, 14 mi. (20 km.) north of Eilat. Youth were brought here in groups for periods of a fortnight or longer to combine the study of nature and farming with excursions, sports, and small-arms training. In May 2001 a ceremony was held establishing a civilian settlement near the training camp, with the same name. However, in 2006 it was still not inhabited. Be'er Orah, meaning "Well of Light," is a reversal of the former Arabic Bīr (Be'r) Hindīs, "Pitchblack Well," so called by the Bedouin because the strong magnesia content of the local well's water was likely to cause illness.

[Efraim Orni]

BEEROTH (Heb. בְּאֵרוֹת; "wells"), one of the Gibeonite cities mentioned as part of a confederacy together with Gibeon, Chephirah, and Kiriath-Jearim (Josh. 9:17). Beeroth is listed with the cities of Benjamin (Josh. 18:25); part of its population had previously fled to Gittaim (11 Sam. 4:3). One of David's heroes came from Beeroth (11 Sam. 23:37; 1 Chron. 11:39), as did the assassins of Ish-Bosheth (11 Sam. 4:2). The town was resettled after the return from Babylon (Ezra 2:25; Neh. 7:29). Birea, where Bacchides encamped in 161 B.C.E. before the battle with Judah Maccabee (1 Macc. 9:4), has been identified with the biblical locality. Beeroth is commonly identified with the Arab town al-Bīra near Ramallah, 9 mi. (14 km.) north of Jerusalem; Bronze Age remains have been found nearby, at Ra's al-Taḥūn. Several attempts to identify Beeroth with Tell al-Naṣb (Mizpeh?) or al-Jib (Gibeon) have been disproved by recent excavations. It has been proposed to locate Beeroth at Nebi Samwil, 1 mi. (1½ km.) south of el-Jib. Although this identification has not yet been confirmed by archaeological findings, it is strengthened by the statement of Eusebius (Onom. 48:9) that a village with this name was situated 7 mi. from Jerusalem on the road to Nikopolis (Emmaus; but according to Jerome, on the road to Neapoli, i.e., Shechem), and its possible appearance on the *Madaba Map.

[Michael Avi-Yonah]

BE'EROT YIZHAK (Heb. בְּאֵרוֹת יִצְחָק), kibbutz in central Israel on the Coastal Plain, east of Lydda. Affiliated with Ha-Kibbutz ha-Dati, it was originally founded on Aug. 9, 1943, southeast of Gaza by a group of religious pioneers from Germany and was the first settlement in the Negev. During the War of Independence in May 1948, it was all but razed by

shelling from the Egyptian army. The settlers put up strong resistance and drove the attackers back from buildings they had already occupied. Although never abandoned during the fighting, it was so utterly destroyed that it was decided not to rebuild the place and in August 1948 the settlers reestablished their kibbutz on its present site, the former German Templar village of Wilhelma (whose inhabitants were interned there during World War II and later deported from the country). The economy of the kibbutz was based on highly intensive farming and a factory for coated steel pipes and fittings (Avrot Industries). In subsequent years it also operated a successful Subway-style sandwich service, supplying El Al, army bases, and schools. In the mid-1990s the population was approximately 480, while at the end of 2002 it was 417.

The name, meaning "Isaac's Wells," both refers to the wells sunk by the Patriarch (Gen. 26:18ff.) in the part of the Negev where the group first settled, and also commemorates Yizḥak *Nissenbaum.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

BEERSHEBA (biblical: Beer-Sheba; Heb. בְּאֵר שֶׁבַע), city in the *Negev on the southern border of Judah; its name has been preserved in the Arabic form Bīr (Be'r) al-Sa'b. Beer-sheba was first settled in the Chalcolithic period. Excavations conducted in its surroundings by J. Perrot uncovered remains of cave dwellings dug in the earth from this age. The inhabitants of the caves engaged in raising cattle and the manufacture of metal tools. Their pottery and stone vessels and figurines carved out of ivory and bone display a highly developed craftsmanship. Evidence of the beginnings of a religious cult was also found.

According to the Bible, Abraham and Isaac dug wells at Beer-Sheba and also formed alliances there with *Abimelech "king of the Philistines." The allies bound themselves under oath to observe the treaties, and in one source Abraham set aside seven ewes as a sign of the oath, which the Pentateuch explains was the origin of the name of the city (*Be'er*, "well"; *Sheva*, "oath" or "seven"; see Gen. 21:31; 26:33). The sanctuary of "the Lord, the Everlasting God," which was apparently located there in very early times, was invested with great importance in the tales set in the patriarchal period (Gen. 21:33; 26:23–24, 32–33; 46:1). After the rise of Israel, Beer-Sheba became a city of the tribe of Simeon and was later incorporated into the tribe of Judah (Josh. 15:28; 19:2). It appears to have been a center of the Israelite settlement in the Negev in the time of Samuel since his sons were sent there as judges (1 Sam. 8:1–3). The sanctuary at Beer-Sheba was regarded as the extreme southern point of the country in contradistinction to the sanctuary at Dan which was held to be the northern point (Amos 5:5; 8:14). Thus the phrase "from Dan to Beer-Sheba" (Judg. 20:1, etc.) was the customary designation, at least until the days of David and Solomon, for the entire area of the country. After the division of the monarchy, Beer-Sheba con-

tinued to be the southern frontier of the kingdom of Judah; the expression “from Dan to Beer-Sheba” was then replaced by “from Beer-Sheba to the hill-country of Ephraim” (II Chron. 19:4) or “from Geba to Beer-Sheba” (II Kings 23:8). Zibiah, the mother of Jehoash, king of Judah, originated from Beer-Sheba (II Kings 12:2). Elijah set out on his journey to Horeb from Beer-Sheba, the gateway to the desert (I Kings 19:3, 8). The city was settled by Jews after the return from Babylon (Neh. 11:27, 30). The biblical town of Beer-Sheba is to be sought at Tell al-Saʿb (Tell Beer-Sheba, a UNESCO World Heritage site (2005)), 2½ mi. (4 km.) NE of the new town, where remains of a fortress and potsherds from the Iron Age to the Roman period were found in excavations begun in 1969 by Y. Aharoni.

After 70 C.E. Beersheba was included in the Roman frontier-line defenses against the Nabateans and continued to be a Roman garrison town after the Roman annexation of the Nabatean kingdom. A large village existed then at its present site, where many remains have been found including mosaic pavements and Greek inscriptions (including a sixth-century C.E. ordinance regarding tax payments, which was issued to the south of the country, and a synagogue inscription). In the fourth and fifth centuries C.E., Beersheba first belonged to the district of Gerar and was later annexed to “Palaestina Tertia.” The town was abandoned in the Arab period.

[Michael Avi-Yonah]

Modern Beersheba

The modern settlement dates from 1900, when the Turkish government set up an administrative district in southern Palestine separate from that of Gaza and built an urban center in this purely nomadic region. The Turks were motivated by the need to strengthen governmental authority over the Bedouin at a time when Turkey was struggling with Britain over the delineation of the Egyptian border in Sinai. German and Swiss engineers aided in laying out a city plan. Both a city and a district council were set up, and Bedouin sheikhs held seats on them. Until 1914, however, progress was slow, and Beersheba had about 800 Muslim inhabitants and some Jewish families, one of whom ran a flour mill. In World War I, the town became the principal base for the Turko-German Army fighting on the Suez and Sinai front. Fortifications were laid out around the town and more settlers, including Jews, came and provided services to the army. A branch of the Jerusalem-Jaffa railway line was constructed and led beyond Beersheba to the southwest. On Oct. 31, 1917, the town was taken by Allied forces under General Allenby's command, with Australian and New Zealand units prominent in the battle. Allied losses were considerable; the British War Cemetery at Beersheba has about 1,300 graves. When Beersheba's strategic role ended, its economy dwindled and the railway was dismantled. In 1920, a few Jewish laborers planted a tree nursery and eucalyptus grove there and experimented with cultivating vegetables and other crops. In 1922, the population reached 2,356, among whom were 98 Jews. By 1931, the number of Jews had

decreased to 11. The last Jews left during the 1936–39 riots, but efforts were intensified to purchase land for Jewish settlement in the Negev. During the *War of Independence the invading Egyptian army made Beersheba its headquarters for the Negev. When the town was taken by Israel forces on Oct. 21, 1948, it was totally abandoned by its inhabitants. Early in 1949, Jewish settlers, mostly new immigrants, established themselves there. The population, which totaled 1,800 at the end of 1949, reached 25,500 in 1956, 51,600 in 1962, and over 70,000 in 1968.

The vast majority of its inhabitants were originally new immigrants, mainly from North Africa, Iraq, India, Romania, Poland, Hungary, and South America. The first arrivals took over the abandoned houses, but from 1951 large new suburbs were built extending mainly to the north and northwest, while to the east a large industrial area sprang up. Arab Beersheba of Turkish times now became a small “old city” in a large modern town. The municipal area of about 10 sq. mi. (26 sq. km.) was doubled in 1967. Beersheba became the capital of Israel's Southern District, and a hub of communications linking up with the main roads and the railway lines Lydda-Kiryat Gat and Dimonah-Oron. A pumping station of the Eilat-Haifa oil pipeline was located there. Its largest industries (ceramics, sanitary ware, fire-resistant bricks, pesticides and other chemicals, and bromide compounds) exploited Negev minerals. There was also a large textile factory, flour mill, machine garage, and smaller plants for building materials, diamonds, metals, and other industries. The city had several academic, scientific, and cultural institutions, of which the Soroka Medical Center and the Municipal Museum were the first. In 1957, the Negev Institute for Arid Zone Research was established, which experiments with water desalination by electro dialysis, exploitation of solar energy, cloud seeding, adaptation of plants to aridity, hydroponics, and human behavior under desert conditions. The Institute for Higher Education, opened in 1965, was formally recognized as the University of the Negev in 1970 and had 1,600 students. Subsequently renamed Ben-Gurion University after Israel's first prime minister. It had 15,000 students in 2002. In 1973 the Beersheba Theater and the Symphony Orchestra were established. Beersheba also had a Biological Institute, mainly for the study of plant life in the desert. The city also served as a market center for the Negev's tens of thousands of Bedouin and had several large hotels. The traditional Thursday Bedouin market day was a noted tourist attraction.

In the 1970s the population of Beersheba passed the 110,000 mark, making it the fourth largest urban concentration in Israel after Jerusalem, Tel Aviv and Haifa. The original plan to make Beersheba an industrial center was not too successful, though there were several large industrial plants, such as Machtshim, which produced agricultural fertilizers and employed over 1,000 workers, and an Israel Aircraft Industries metal plant. The main sources of employment, however, were the Soroka Medical Center, employing over 2,000, and the university. The city thus continued to serve as a regional

center and many workers in the Dead Sea chemical works and in the Nuclear Research Center near Dimona resided there. By the mid-1990s the population had risen to approximately 141,400, and in 2002 it was 181,500, making Beersheba the sixth largest city in Israel.

[George Schwab and Efraim Orni / Shaked Gilboa (2nd ed.)]

Another Beersheba was situated on the border of Upper and Lower Galilee (Jos., Wars, 3:39). It was fortified by Josephus, together with other places in Galilee in 66–67 C.E., for defense against the Romans during the Jewish War (*ibid.*, 2:573). It is located at Ḥorvat Beer-Sheba (Khirbat Abu al-Shab'a) between Parod and Kafr 'Inān near the Acre-Safed highway, where remains from the Second Temple period have been found.

BE'ER TOVIYYAH (Heb. בְּאֵר טוֹבִיָּיָה), moshav in the southern Coastal Plain of Israel, affiliated with Tenu'at ha-Moshavim. It was founded in 1887 by Jews from Bessarabia with the aid of Baron Edmond de *Rothschild and for years it was the southernmost Jewish settlement in the country. The village did not prosper, due to the scarcity of water, lack of capital and experience, distance from other Jewish centers, enmity of neighboring Arab villagers, and, particularly, the strained relations between the settlers and the Baron's administrators. It was nearly abandoned, but in 1896 the Ḥovevei Zion Association of Odessa (see *Ḥibbat Zion) purchased the land and new settlers came. They too endured hardships and in World War I were forced to leave temporarily by the Turkish authorities. The village was abandoned after it suffered losses in an Arab attack in the 1929 riots. The land was then taken over by the Jewish National Fund and the village was founded anew in 1930 by veteran agricultural laborers. Ground water was discovered and mixed farming introduced. Be'er Toviyyah soon became one of the most populous and prosperous moshavim in the country. In 1939 a second moshav, Kefar Warburg, was established on part of its land. After the Arabs abandoned the entire region during the Israeli *War of Independence (1948), Be'er Toviyyah became the center of a densely settled farming area, to which such urban agglomerations as Kiryat Malakhi and Ashdod were later added. Many of the settlers of Be'er Toviyyah came from Eastern Europe and Germany, others were Israeli-born. In 1968 the population was 645. The economy was mainly based on citrus and intensive farming. In 2002 the population was 763. The village was initially called Qastina, after a neighboring Arab village. It became Be'er Toviyyah in 1896, the name being adapted from the Arabic name for the site, "Bīr (Bīr) Ta'abya."

[Efraim Orni]

BE'ER YA'AKOV (Heb. בְּאֵר יַעֲקֹב), town in the Coastal Plain of Israel, W. of Ramleh, founded in 1907 by a group of 56 Jews from Russia (most of them "Mountain Jews" from Dagestan). Some of the settlers were peasants in their country of origin and preserved their picturesque dress and customs throughout the decades. Initially, almond orchards constituted Be'er Ya'akov's principal farming branch. In 1925, 20 families from Turkey settled in the village, but until 1948, its population did not exceed 400 inhabitants due to a scarcity of land. After the Israeli *War of Independence (1948), however, new immigrants were absorbed in local housing projects and in two moshavim, Be'er Ya'akov Pittu'ah and Talmei Menasheh, which were subsequently integrated into the municipal area. In 1949, it received municipal council status. Citrus orchards, poultry, and dairy cattle were originally prominent branches and constituted an important part of Be'er Ya'akov's economy. It was the site of three large hospitals (Asaf ha-Rofe, Shemu'el ha-Rofe, and a mental hospital) and industrial enterprises, among them a crate factory employing hundreds of laborers and a division of Israel Aircraft Industries. Be'er Ya'akov's educational institutions also attracted pupils from other localities, e.g., the Johanna Jabotinsky agricultural high school, a religious girls' teachers seminary, and yeshivot. The population rose to 3,950 in 1968, 6,960 in the mid-1990s, and 8,320 in 2002. The name, "Well of Ya'akov," commemorates the spiritual leader of the founders, Rabbi Ya'akov Yizḥaki of Dagestan.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

BEET. The plant referred to in rabbinic literature as *tered*, or *selek* (Er. 29a) is the spinach beet (*Beta vulgaris*, var. *Cicla*). The present varieties, red beet, sugar beet, and fodder beet, were unknown to the ancients. Although the long white root of the beet was sometimes eaten, it was the leaves which were mainly used as food. The rabbis, in common with the Greek and Roman naturalists, praised it highly for its nutritive and medicinal value. Thus the Talmud states: "A dish of beets is good for the heart and good for the bowels and especially for the small bowels" (Bet. 44b). It was also held to account for the absence of skin diseases and of leprosy in Babylonia (Ket. 77b). It is a winter plant, but due to its nutritive value, attempts were made to grow it also in summer, and Solomon's servants were said to have been able to supply summer beets for his table (Deut. R. 1:5).

[Jehuda Feliks]

BEGGING AND BEGGARS. Although the Bible is concerned with the poor and the needy, there is hardly a reference to begging or to beggars, and there is, in fact, no biblical Hebrew word for it. The needs of the poor were provided by the laws of **leket*, *shikhḥah*, and *pe'ah* which were the perquisites of the *ani*, the "poor man," or the *evyon*, the "needy." The only possible references are not to actual begging and beg-

gars but are contained in the complementary assurances that whereas the children of the righteous will not have to “seek bread” (Ps. 37:25), the children of the wicked will, after his untimely death, be vagabonds “and seek their bread out of desolate places” (Ps. 109:10).

During the talmudic period, however, the itinerant beggar who goes from house to house figures with some prominence. So characteristic does it seem to have been of social life in those times that the first Mishnah of tractate *Shabbat* employs the example of the beggar receiving his pittance from the householder, and the various ways in which it might be handed to him, to illustrate the important laws concerning the carrying of articles from a private to a public domain on the Sabbath. The Mishnah also deals with the rights of the beggar who “goes from place to place” and who had sometimes to be provided with lodging for the night (Pe’ah 8:7). It was regarded as immodest for women to beg, with the result that the Mishnah stipulates that if a man left insufficient means for his children, the daughters should remain at home and the sons go from door to door (Ket. 13:3). The New Testament describes the blind beggar Bartimeus sitting by the roadside and begging (Mark 10:46) and a lame beggar soliciting alms at the entrance to the Temple (Acts 3:2). The rabbis are censorious of those beggars who used to feign such afflictions as “blindness, swollen belly, and shrunken leg” in order to arouse the compassion of the charitable (Pe’ah 8:9; Tosef., Pe’ah 4:14). Nevertheless one rabbi takes a charitable view of those impostors, saying that they perform the useful function of exercising the charitable instincts of the people (Ket. 68a). Nor was the cheerful impudent beggar unknown, as the following story in the Talmud indicates: “A beggar once came to Rava who asked him ‘What do your meals usually consist of?’ ‘Plump chicken and matured wine’ answered the beggar. ‘Do you not consider this a burden on the community?’ asked Rava. The beggar retorted: ‘I do not take from them – I take what God provides.’ At that moment Rava’s sister, who had not seen him for 13 years, appeared bringing him a fat chicken and matured wine. ‘Just what I told you!’ said the beggar” (Ket. 67b).

Nevertheless two factors tended to keep begging within bounds. One was the delicate custom of sending food to the poor in order to spare their feelings (see the examples, Ket. 67b), and the other was the highly organized system of collection for and distribution to the poor through the official *kuppah* (“charity fund”) and *tamhui* (“soup kitchen”). As a result, it was proclaimed that relief was actually to be withheld from those who went begging as they had forfeited their rights to organized charity, although a compromise was arrived at not to send such a mendicant away completely empty-handed (BB 9a).

In the early Middle Ages this was established as the actual *halakhah* (Yad, Mattenat Aniyyim 7:7; Sh. Ar., YD 250:3). *Rashi (to BB 9a) explains that it is “because he has accustomed himself to make the rounds, he must suffice with that.” On the other hand, Solomon b. Adret, in answer to an enquiry from a community overburdened with beggars, ruled that al-

though “the poor are everywhere supported from the communal chest, if they wish in addition to beg from door to door they may do so, and each should give according to his understanding and desire” (Responsa, pt. 3 no. 380). In Cracow, however, in 1595 and in the Spanish and Portuguese congregation in London in the second half of the 17th century, begging by mendicants was completely outlawed (Balaban, in JJLG, 10 (1913), 342; Barnett, *El Libro de los Acuerdos* (1931), 9).

This admirable system of organized relief for the poor (cf. Yad, loc. cit., 9:3: “We have never heard of a community which has no charity fund for the relief of the poor, though some have no *tamhui*”) seems almost to have eliminated beggars until the 17th century. Launcelot Addison (*The Present State of the Jews*, p. 212) goes out of his way to dispel the belief prevalent in his time that “the Jews have no beggars,” which he attributed to the “regular and commendable efforts” by which the Jewish community supplied the needs of the poor. A notable literary description of the English Jewish beggar is Zangwill’s *King of the Schnorrers*.

It would seem that an increase in Jewish mendicancy took place as an aftermath of the *Chmielnicki pogroms when hundreds of Polish communities were destroyed and thousands of penniless and destitute Jews roamed throughout Europe. From this time dates the word “*shnorrer*,” the accepted Yiddish term for a beggar which became a characteristic feature of Jewish life. Sometimes the *shnorrers* openly collected for themselves, at other times for the dowry of a poor bride (see **Hakhnasat Kallah*) or to restore a house which had been burnt down in one of the many conflagrations of wooden houses. If the 18th century has been styled “a century of beggary” as a whole, it certainly applies to the impoverished Jewish communities of Central and Eastern Europe up to the dawn of the modern period.

Beggary, which was rife in Erez Israel before the establishment of the State of Israel, has been largely eliminated in the streets, as a result of the increased activities of the Ministry of Social Welfare. It is still, however, a feature of the synagogues during the morning services. Beggars consist of two groups, genuine beggars and students of the old-fashioned yeshivot who are to some extent encouraged by the authorities of the yeshivah, not only as a source of subsistence but to afford the worshipers an opportunity of combining prayer with charity. A similar sentiment is held toward beggars in cemeteries. Despite objections that they disturb worshippers, opinion among the Orthodox is opposed to their removal.

See *Charity.

[Louis Isaac Rabinowitz]

Social Aspects

Beggary as a social phenomenon is associated with migrations. It became prevalent in Jewish history during the period of the Mishnah and the Talmud and especially after the destruction of the Second Temple. This came about as a result of persecutions under Roman rule, as well as the physical and economic insecurity which impoverished the rural class and reduced the urban population to ruin. Yet, despite the in-

crease in the numbers of poor and those reduced to begging, nothing is heard about Jewish mendicants forming a society and developing their own subculture, as did occur within the non-Jewish world at that time.

Jewish beggars wandering from place to place are more frequently found throughout the Middle Ages. In the Cairo *Genizah* a large number of letters from beggars complaining of their misfortunes and seeking support have been found. The documents indicate that these itinerant poor wandered from community to community, and from land to land. The *Or Zaru'a* (*hilkhot Zedakah* 11) of R. *Isaac of Vienna mentions that these destitute people customarily equipped themselves with "documents," i.e., letters of recommendation which they would present in their travels as proof of their trustworthiness.

In medieval times there was another class of wanderers who went from place to place, relying upon the hospitality of others, namely, the yeshivah students who moved from one center of Torah study to another. A parallel phenomenon (goliards, vagrant scholars) is found within the student community of Christian society of that time.

At the end of the 17th century, a relatively large class of Jewish beggars, called in non-Jewish sources "*Betteljuden*," and *orhei porhei* ("flotsam and jetsam") in Jewish literature, developed throughout Europe, especially in Germany. The size of this class is not known exactly, but it has been estimated at as much as 20% of the total Jewish population. Although the reasons for the formation of this class are still not completely clear, it is assumed to have resulted from (i) the natural growth of the Jewish population; (ii) the limited number of Jews permitted to reside in any individual place by the local authorities; and (iii) the unstable economic conditions which brought about drastic changes from extreme wealth to great poverty. The *Betteljuden* constituted a section within the large class of non-Jewish itinerant poor. These Jewish vagabonds, like their Christian counterparts, eventually united into societies, religiously intermixed at times, developing their own subculture. This class became a source of manpower and information to the bands of thieves which were rampant at that time. The authorities treated these groups of Jewish mendicants very harshly. They condemned them for thievery and for causing diseases and plagues in various places. As a result of these accusations, local authorities sought to banish the beggars. The Jewish communities were very ambivalent vis-à-vis these mendicants. On the one hand, they strove to obey the local powers-that-be, for they also saw in the beggars a social danger, not only because of their associations with thieves, but also because of their licentiousness. Yet, on the other hand, they not infrequently had feelings of compassion and brotherliness toward these unfortunates. The manner in which the communities handled these *orhei porhei*, therefore, corresponded to their ambivalence toward them. In general, the community accommodated them in the homes of its residents for one night (for two nights over the Sabbath), and afterward sent them along with a sum of money for travel

expenditures. Special lodgings for mendicants, particularly for the sick among them, were also set up in the *hekdesh* ("poor house"). After the Emancipation, with residence restrictions for Jews lifted, and areas in which Jews were permitted to work widened, this impoverished class was largely integrated with other social classes. However, the phenomenon itself did not disappear from Jewish communal life, and it continued to exist especially in Eastern Europe, if not to the same extent.

Glanz, *Geschichte des niederen juedischen Volks in Deutschland* (1968); Scheiber, in: M. Zohary and A. Tartakower (eds.), *Hagut Ivrit be-Eiropah* (1969), 268–75.

BEGHI, family of Karaite scholars in Constantinople (15th–17th centuries). Its members include: ELIJAH AFIDAH (AFDAH) BEGHI (d. before 1641). Elijah wrote *Hilkhot Shehitah*, on the rules of slaughtering; *Be'ur Asarah Ikkarim*, on the ten principles of Karaite faith; *Mikhtav Eliyahu*, poems, verse compositions and tales; several responsa (all these works survived in manuscripts kept in various libraries). JOSEPH BEN MOSES (15th–16th centuries). Joseph was the pupil of the Karaite scholar Abraham *Bali, who in 1505 wrote for Beghi and his fellow student, Joseph b. Caleb, his *Issur Hadlakat Ner be-Shabbat*, on the Karaite prohibition of kindling lights on the Sabbath. The cordial relationship between the Karaites and *Rabbanites at that period is attested by Joseph's correspondence with Rabbanite scholars. Two letters by Moses b. Jacob (evidently *Moses of Kiev "*ha-Goleh*") to Beghi are preserved. Joseph wrote *Iggeret Sukkah*, on Sukkot; *Keter Kehunnah*, six homilies; *Iggeret Kiryah Ne'emanah* especially directed against the identification of the Karaites with the Sadducees, a work of literary and historical value since it mentions a number of earlier Karaite scholars; *Iggeret Kelulah*, an explanation of a problem in marriage law. Simḥah Isaac b. Moses Lutzki mentions two important works of Joseph which are no longer traceable: *Shulḥan Haverim*, a book of precepts, and *Safah Berurah*, a philosophical work. MOSES BEN BENJAMIN (second half of the 16th century), wrote *Mitzvot Moshe*, a book of precepts including two essays "*Ohel Moshe*" on the calendar, and "*Masat Moshe*" on the Sabbath laws, published in *Pinnat Yikrat* by the Karaite *Isaac b. Solomon (1834; non-critical print, 2 vols., Ashdod 2005). Benjamin also composed liturgical poems, several of which have been included in the Karaite prayer book.

[Isaak Dov Ber Markon]

BÉGIN, EMILE-AUGUSTE (1802–1888), French physician, historian, and librarian. Bégin, who was born in Metz, studied medicine at the Military College in Strasbourg. He soon gave up his position as a regimental physician in favor of a literary career. His early writing dealt mainly with the history of northeastern France. He became well known for his four-volume *Biographie de la Moselle* (1829–32) and his literary and political periodical *L'Indicateur de l'Est* (1830). His historical research embraced Jewish communities, and some of his findings appeared under the title “*Recherches pour servir l'histoire des Juifs dans le Nord-Est de la France*” in *Revue Orientale*, 1–2 (1841–42). Bégin settled in Paris in 1846 and became a contributor to publications of the Academy of Medicine. In 1850 he cooperated in the official edition of the papers of Napoleon I and in 1853–54 produced a laudatory five-volume biography, *L'Histoire de Napoléon Ier*, based on hitherto unpublished personal papers. Napoleon III rewarded him with an appointment as librarian at the Louvre, where he remained until 1871. In 1874 Bégin became librarian at the Bibliothèque Nationale, Paris.

[Herbert A. Strauss]

BEGIN, MENAHEM (1913–1992), Israeli statesman and former commander of the Irgun Zeva'i Le'ummi (IZL); prime minister of Israel. He served in the First to Tenth Knessets. Begin was born and educated in Brest-Litovsk. He graduated with a law degree from Warsaw University. After a short association with Ha-Shomer ha-Za'ir he joined Betar, becoming a member of its leadership in Poland in 1931 and head of the movement there in 1938. During the disturbances in Palestine in the years 1936–38, Begin organized a mass demonstration near the British Embassy in Warsaw, and was imprisoned by the Polish police. When the Germans occupied Warsaw, Begin escaped to Vilna, where he was arrested by the Soviet authorities and sentenced to eight years of hard labor in the Arctic region. Because he was a Polish citizen, he was released at the end of 1941 and arrived in Palestine in 1942 with the Polish army formed in the Soviet Union. Toward the end of 1943, after having been discharged from the Polish ranks, Begin became commander of IZL. He declared “armed warfare” against the British Mandatory Government at the beginning of 1944, and led a determined underground struggle against the British, who offered a reward for the disclosure of his whereabouts. On July 22, 1946, the IZL under Begin's command, carried out an attack on British Headquarters in Jerusalem, in the King David Hotel, which resulted in numerous deaths. The original plan had been to cooperate in this operation with the *Haganah, but this attempt failed, and despite Begin's attempts to avoid violent clashes within the *Yishuv*, there was great animosity between the two camps. After the Proclamation of Independence, in the course of the first ceasefire in the War of Independence in June 1948, Begin was

on board the IZL ship *Altalena* when it approached Tel Aviv with a consignment of arms. The ship was shelled by order of the Israeli government (see *Irgun Zeva'i Le'ummi). In 1948 Begin founded the *Herut movement and became its leader. He was to serve in the Knesset as leader of Herut, and later *Gaḥal and the *Likud until 1983. David *Ben-Gurion refused to consider Begin as a partner in any of his coalitions, and it was only after Levi *Eshkol became prime minister in 1963 that the attitude of the ruling *Mapai towards him changed.

In 1952 he led the protest campaign against the Restitution Agreement with the Federal Republic of Germany, and after clashing with the police outside the Knesset building, was banned from participation in Knesset meetings for several weeks. In the course of his many years as leader of the main opposition party, Begin gained a reputation for his fiery speeches and acting as a watchdog for democracy. He unsuccessfully fought to have the Emergency Regulations, which Israel had inherited from the British, abolished, and objected to the special Military Administration to which the minority citizens of Israel were subjected until 1966, which was based on these regulations. Towards the elections to the Sixth Knesset in 1965 he was instrumental in establishing the Gaḥal parliamentary group with the Liberal Party. In May 1967, on the eve of the Six-Day War, Gaḥal was invited to join the government by Levi Eshkol, and Begin was named minister without portfolio in the Government of National Unity. As the head of Gaḥal, he joined the government formed by Golda *Meir after the 1969 elections, but left the government the following year in protest against its acceptance of the American Rogers Plan for a settlement with Egypt, involving a withdrawal by Israel of territories occupied in the course of the Six-Day War (see *Israel, Historical Survey).

In 1977, after 29 years in the opposition, Begin, at the head of the Likud, won his first general election and was called upon to form a government. He established a coalition made up of the Likud (including Ariel *Sharon's Shlomzion), the National Religious Party, Agudat Israel, and the Democratic Movement for Change. Five months after he became prime minister, President Anwar Sadat of Egypt came to Jerusalem for a historic visit, addressing the Knesset on November 20, 1977. In his response to the Egyptian President's speech Begin made his famous declaration: “No more war, no more bloodshed.” After signing the Camp David Accords with Sadat on September 17, 1978, and with the help of Foreign Minister Moshe *Dayan and Minister of Defense Ezer *Weizman, Begin signed Israel's first peace treaty with an Arab state with Egypt on March 26, 1979, on the White House lawn in Washington. On December 10, 1978, Begin and Sadat jointly received the Nobel Prize for Peace in Oslo.

Despite many crises in his first government, and the resignation of numerous ministers, the Likud emerged victorious in the elections to the Tenth Knesset, and Begin formed his second government, made up of the Likud, the National Religious Party, Agudat Israel, and Tami, and despite misgivings he appointed Sharon as his defense minister. In June 1981

Sharon, with Begin's approval, embarked on Operation Peace for Galilee, which was meant at first to involve the occupation by the IDF of a 15-mi. (40-km.) strip in Southern Lebanon, and the ousting of the PLO from that land. Begin's slogan for the operation was: "No more Katyushas on Kiryat Shmonah." However, as the situation in Lebanon became more complex, and following the death of his beloved wife and his own failing health, Begin decided to resign from the premiership in October 1983. After his resignation Begin seldom left his home until his death in 1992.

His writings include *Ha-Mered* (1950; *The Revolt*, 1964), which describes the struggle of IZL; *Be-Leilot Levanim* (1953; *White Nights*, 1957), reminiscences of his imprisonment in Russia; and *Ba-Maḥteret: Ketavim u-Te'udot* (4 vol., 1959–61), a collection of writings from his days in the underground.

Begin's son, Ze'ev Binyamin *Begin (1943–), was also active in politics.

[Yohanan Bader / Susan Hattis Rolef (2nd ed.)]

BEGIN, ZE'EV BINYAMIN (1943–), Israeli geologist and politician. Member of the Twelfth to Fourteenth Knessets. Ze'ev Binyamin Begin was born in Jerusalem, the son of Menaḥem *Begin. He studied geology at the Hebrew University of Jerusalem and received his doctorate from the University of Colorado in the United States in 1978, later working in the Geological Survey of Israel as head of the environmental unit and the unit for the mapping of maritime geology. He entered politics in 1988 at the behest of his father. As a Knesset member, he was always noted for his modesty, and the fact that he usually arrived at the Knesset by public transportation. When Yitzḥak *Shamir invited Reḥav'am *Ze'evi to join his government in February 1991, he was one of several members of the Likud who objected, because of Ze'evi's advocacy of the transfer of land to the Palestinians.

Begin contested the leadership of the Likud in March 1993, following the party's defeat in the elections to the Thirteenth Knesset, but was defeated by Binyamin *Netanyahu. In the government formed by Netanyahu after the elections, he was appointed minister of science. Despite being part of the government, Begin strongly criticized Netanyahu's contacts with the chairman of the Palestinian Authority, Yasser *Arafat,

and Netanyahu's willingness to fulfill Israel's undertakings under the Tab'a Agreement for a partial withdrawal from Hebron. He made constant efforts to prove that the Palestinians were systematically violating their commitments under the Declaration of Principles of September 1993, especially abrogation of the articles in the Palestine National Covenant that spoke of the destruction of Israel. After voting in the government twice within one week against resolutions proposed by the prime minister, Begin resigned from the government. Together with two additional members he left the Likud-Gesher-Tsomet parliamentary group and set up a new parliamentary group by the name of Herut. Begin did not run for election in the Fifteenth Knesset and returned to his previous work as a geologist, on rare occasions coming out publicly on an issue, such as opposition to Prime Minister Ariel *Sharon's plan in 2004 to dismantle all the Jewish settlements in the Gaza Strip and several in Northern Samaria.

[Susan Hattis Rolef (2nd ed.)]

BEHAK, JUDAH (1820–1900), Hebrew writer. Behak, who was born in Vilna, was a member of the Vilna group (M.A. *Guenzburg, A.D. *Lebensohn, S.J. *Fuenn, and I.E. *Benjamin) which had a decisive influence on the Haskalah movement in Lithuania. He wrote for *Pirḥei Zafon*, the first Lithuanian Haskalah journal, and for *Ha-Karmel*. In 1848 he joined the staff of the newly established Vilna Rabbinical Seminary, and in 1856 moved to Kherson (most of his writings were signed *Ish Vilna be-Kherson*, "A Vilnaite in Kherson"). Behak devoted himself to the study of the Hebrew language. His main work was *Ez Yehudah*, linguistic studies of the Bible and the Talmud (5 vols., 1884–1901, Vilna, Odessa, Berdichev). His book *Yod ha-Rabbim*, a study of Aramaic, was published posthumously (1901). Behak also edited J.L. Ben-Ze'ev's *Talmud Lashon Ivri* (with Z.H. Katznellenbogen, 1848) and S. Levisohn's *Mehkerei Lashon* (with A.D. Lebensohn, 1849), and wrote commentaries for I.E. Benjacob's and A.D. Lebensohn's Bible, *Mikra'ei Kodesh* (1848–53).

[Getzel Kressel]

BEHAR, LEON (1898–1957), Mexican Jewish community leader. Behar was born in Salonika, Greece, immigrated to Mexico in 1920, and a few years later started his communal activity, first among the Sephardim and later in the community at large. He took part in the establishment of the Asociación Israelita Sefaradí La Fraternidad (Sephardic Community) in 1924 and was its president for two years. In the 1930s he participated in the foundation of many important institutions, including the Sephardic Zionist Organization (serving as its president for several terms) and the Comité Central Sionista (as its vice president). Behar also presided over the joint aid committee for Jewish refugees in Europe and was active in other Jewish institutions. One of his most important activities

was promoting the foundation of the Comité Central Israelita (the representative body of Mexican Jewry) in 1938, which he presided over for two years.

[Efraim Zadoff (2nd ed.)]

BEHAR, NISSIM (1848–1931), founder of modern Hebrew education in Erez Israel and public figure in Jewish life in the U.S. Behar was born in Jerusalem. He graduated from the *Alliance Israélite Universelle teachers institute in Paris in 1869 and taught in Syria, Bulgaria, and Turkey. He headed the Alliance school in Constantinople from 1873 to 1882. There he introduced the direct method of teaching Hebrew, “*Ivrit be-Ivrit*.” In 1882 Behar initiated the founding of the new Alliance school in Jerusalem, Torah u-Melakhah (“Torah and Work”), and became its headmaster. One of the teachers there was Eliezer *Ben-Yehuda, and its first students included David *Yellin and Yosef *Meyuhas. Its modern methods were eventually applied in Hebrew schools throughout the country. Behar was an outstanding leader of the *yishuv*, especially as a liaison with the Turkish authorities. He attempted, with the help of Baron Edmond de *Rothschild, to regain the Western Wall for the Jewish community, but failed because of rabbinical opposition. The rabbis’ hostility to Behar resulted from his educational innovations, and he was eventually relieved of his duties as headmaster (1897) and sent to represent the Alliance in the U.S. (1901). In his attempts to organize the work of the Alliance in the U.S., Behar encountered difficulties from Jewish institutions which looked askance at the activities of a large, foreign Jewish organization. American Jewish leaders did not approve of his intense propaganda, public meetings, and protests. Nevertheless, Behar soon became a public figure in American Jewry. He expounded the idea that political organizations should speak for American Jewry, and in 1906 founded the National Liberal Immigration League, directing it until 1924. In 1908 Behar traveled to Europe and back in order to learn how immigrants to the U.S. were treated on the boats. He was one of the founders of the Federation of Jewish Organizations. Behar was active in the *Histadrut Ivrit in the U.S. from its beginning. He died in New York and his remains were reburied in Jerusalem a year later.

BEHEMOTH (intensive plural of Heb. *behemah*, “beast”), creature described in the Book of Job (40:15–24). It is depicted as an animal that eats grass like an ox, is all muscles and strength, lives in the marsh in the shade of the *ze’elim* (“*jube”), eats huge quantities of food, and can swallow the waters of the Jordan. In the light of the description of other animals in these chapters, it would seem that the reference is to an existing animal, to which legendary details have been added. In later Jewish literature, however, it appears as

a purely mythical creature. One of the mammoths fashioned on the fifth day of creation (Targ. Yer., Gen. 1:21; 11 Bar. 29:4), he is the male counterpart on land of the female *Leviathan in the sea (1V Ezra 6:49–52). He is said to dwell in the wilderness of Dendain (or Dudain), east of Eden (1 Enoch 60:7–8), or else, by a fanciful interpretation of Psalm 50: 10, to span “a thousand hills” (1V Ezra 6: 49–52; Lev. R. 21). At the end of the world’s existence he will be slain and served, along with his mate, at a banquet tendered to the righteous (*ibid.*; Targ. Yer., Num. 9:6; *PRÉ* 11; cf. *TB*, *BB* 75a). It has been suggested that this reflects the Iranian belief that at the Resurrection the righteous will obtain immortality by drinking a nectar made out of the fat of the mythical ox Hadhayosh mixed with *haoma* (a plant; Bundahishn 19:13, 20:25; Dadistan-i-Denik 37:119); but it is undoubtedly inspired also by the statement in Psalms 74:14 that God once fed the flesh of Leviathan “to the people.” The hippopotamus (*Hippopotamus amphibus*) has been identified with Behemoth. It is the largest land animal in the Middle East, weighing up to three tons. It has powerful sinews, an enormous head, and a wide mouth with huge molars. Once it inhabited Erez Israel; skeletal remains of it have been found in the vicinity of the Yarkon River. In ancient Egypt it was a favorite quarry of hunters and its capture with spears is often depicted.

[Jehuda Feliks / Theodor H. Gaster]

BE-HOZAI, a district extending E. of *Mesene, S.E. of Babylon, and N. of the Persian Gulf. Geographically, Be-Ḥozai did not belong to Babylonia, but to Persia. Despite the great distance between them (Ta’an, 21b; *BK* 104b), very close ties (including commercial) existed between the Jews of Babylonia and those of Be-Ḥozai. The district had a plentiful supply of water, and rice, extensively grown there, was used for bread by its inhabitants (*Pes.* 50b). It was an important station for goods in transit between Babylonia and Persia (*Shab.* 51b; *BK* 104b; *Ket.* 85a). Many problems were addressed to the Babylonian scholars by its sages, the names of some of whom are known, e.g., Avimi (*Nid.* 5b), Aḥa (*BM* 39b), Beroka (Ta’an. 22a), Avram Ḥozā’ah (*Git.* 50a), Ḥanina (*Shab.* 130b). The Babylonians had a generally poor opinion of the common people of Be-Ḥozai (*Ned.* 22a). The Babylonian Talmud mentions, among other localities in the region, Be Lapet (Syriac for Be Shafat), where many Jews lived (Ta’an, 22a), and Shushan (*Meg.* 2b), or “Sus,” its widely used Syriac abbreviation (*Sanh.* 94a).

BEHR (Baer), ISSACHAR FALKENSOHN (1746–1817), Polish poet who wrote in German. Born in Zamosc, Behr was raised in a traditional, Yiddish-speaking home. He was a failure as a petty tradesman and, leaving his wife and family

in order to seek an education, wandered to Königsberg and reached Berlin in 1764. There he learned German, Latin, and French, and studied mathematics, philosophy, and medicine. Daniel *Itzig became his patron and introduced him to the Berlin intellectuals. He soon wrote excellent German verse and in 1772 published his *Gedichte von einem polnischen Juden*, a pioneer achievement for an East European Jew. Goethe reviewed this strange collection of lyrics in the *Frankfurter Gelehrten-Anzeiger*. In 1773, Behr completed his medical studies at the University of Halle and devoted himself to medical practice in Courland; thereafter, he wrote no more poetry.

BEHREND, JACOB FRIEDRICH (1833–1907), German jurist. Behrend became a law clerk in 1859, in 1864 he was appointed lecturer at the University of Berlin, and in 1870, associate professor of jurisprudence. From 1873 to 1887 he was professor of law at the University of Greifswald, and in 1887 became a member of the Supreme Court, one of the few Jews to achieve this distinction. He was an acknowledged expert on German and Roman law and specialized in the early sources of law. Behrend published many important works on jurisprudence which were highly regarded by scholars. His first published work was the *Magdeburger Fragen* (“Magdeburg Problems,” 1863) which dealt with the jury system. Later Behrend edited numerous works on jurisprudence, including *Zeitschrift fuer die deutsche Gesetzgebung und fuer einheitliches deutsches Recht* (“Journal for German Legislation and for a Unitary German Law,” 1880). His major work, *Lehrbuch des Handelsrechts* (“Textbook of Commercial Law”), was regarded as the first comprehensive work on this subject. Although he managed to complete only the first volume (in two parts, 1886–96), this was for many years an invaluable source of research.

[B. Mordechai Ansbacher]

BEHREND (Behrens), LEFFMANN (1634–1714), Hanover Court Jew. Behrends, who began as a small merchant supplying luxuries to the court, gradually established himself as moneylender, diplomatic mediator, and coin minter. His position was strengthened under Duke Ernest Augustus (1679–98), for whom he procured the title of elector, and under George, elector of Hanover (1698–1727), the future George I of England. He established business and marital connections with the *Oppenheimers and *Wertheimers of Vienna and stationed his agents, usually his relatives, in the main German cities. An ardent talmudist, and father-in-law of David b. Abraham *Oppenheim, he supported talmudic studies. For many years he was head (*Vorsteher*) of the community of Hanover-Neustadt, the majority of whose members were connected with his household. In 1673 he acquired the right to open a cem-

etry, and in 1703 built a synagogue and presented it to the community. In 1687 at his request the duke agreed to permit the Jews of Hanover to appoint a *Landesrabbiner*. In 1700 he obtained the support of the elector in suppressing the writings of Johann *Eisenmenger. Behrends attempted to murder a relative of his who became an apostate, but he was able to use his influence to evade being brought to trial. His sons and grandsons, also Court Jews, carried on the family firm; their bankruptcy in 1721 shook the European financial world and took more than a century to settle legally. The trial revealed that Behrends had left his estate in a sorry condition. His descendants settled in Copenhagen.

BEHRMAN, MARTIN (1864–1926), U.S. public official. Behrman was born in New York City and taken to New Orleans in 1865 by his parents, who died when he was 12. At 19 he became a traveling salesman for a large grocery concern. Turning to politics, Behrman was elected president of the State Board of Assessors, a member of the New Orleans Board of Education (1892–1906), state auditor (1904–05), and mayor of New Orleans in 1904, serving four terms until his defeat in 1920. Behrman was director of the American Bank and Trust Company. He was a leading state Democrat and was chairman of the Louisiana delegation to the national Democratic convention in 1908. Behrman was active in civic and Jewish affairs. He was a member of the Louisiana Constitutional Conventions of 1898 and 1921, and president of the League of American Municipalities (1917–18).

[Edward L. Greenstein]

BEHRMAN, SAMUEL NATHANIEL (1893–1973), U.S. playwright. Behrman was born in Worcester, Mass. His parents had emigrated from Lithuania, and his father often devoted himself to Hebrew Scripture. Behrman graduated from Harvard, where he joined G.P. Baker’s Drama Workshop, and from Columbia University. It took him 11 years to sell his first play, *The Second Man* (1927). It was a great success and marked the beginning of a prolific and brilliant career. Intellect, technique, wit, and charm apparent in this early work marked his later writings. His plays, including *End of Summer* (1936), *No Time for Comedy* (1939), and *Jacobowsky and the Colonel* (in collaboration with Franz *Werfel; 1943), are distinguished by warmth and respect for human values. Behrman was far ahead of his fellow playwrights in showing awareness of totalitarian evils, as in *Rain from Heaven* (1935) and *Wine of Choice* (1938). Behrman turned to biography with *Duveen* (1952), the career of the famous British art dealer. This was followed by the autobiographical *Worcester Account* (1954), a charming description of an American Jewish boyhood with an immigrant background. In *Portrait of Max* (1960), he recorded his conversations with Sir Max Beerbohm. Behrman returned to the theater in 1958 with a dramatization of his

autobiography under the title *The Cold Wind and the Warm*. He also adapted the Duveen biography as a play, *Lord Pengo* (1963). In 1964 he was one of three American authors whose new works were chosen for the opening season of the Lincoln Center Repertory Theatre in New York. Behrman's play was *But For Whom Charlie* (1964), a comedy about a conflict of temperaments. His novel *The Burning Glass* (1968) was set in pre-World War II Salzburg. Among other his works is *People in a Diary; A Memoir* (1972).

[Bernard Grebanier]

BEI AVIDAN, meeting place in talmudic times where scholars of various nations and faiths met for religious discussions and disputations. Enjoying the protection of the authorities, the institution was visited by some of the Jewish sages, while others, such as *Joshua b. Hananiah (Shab. 152a) and Eleazar b. Perata (Av. Zar. 17b), refrained from doing so, for which they were compelled to apologize to the authorities. Similarly, the *amora* Rav did not enter a *Bei Avidan*, whereas his colleague Samuel did (Shab. 116a). The *Bei Avidan* is mentioned in this context in association with a *Bei Nizrefei* (or *Bei Nazrufei*), to which neither Rav nor Samuel would enter, and which was apparently an idolatrous house of worship (cf. Er. 80a). R. Abbahu was asked whether it was permitted to save the books of a *Bei Avidan* from a fire on the Sabbath (Shab. loc. cit.). It apparently contained books of the Bible (see R. Hananel, ad loc.), but since it was not known whether a Jew or a sectarian had copied them, the doubt arose whether or not they could be saved on the Sabbath. Various theories have been advanced to explain the origin of the word. According to S.J.L. Rapoport (*Erekh Millin* (1852), 3), it derives from the Persian *abdan* (“a forum”), the meeting place there being called *Bei Avidan* (i.e., “house of”). L. Ginzberg (*Festschrift ... Schwarz*, 1917, 329) suggests that the word derives from the name of a person, possibly the astrologer Abidas-Abidan, who was active in Persia at the beginning of the third century. L. Loew (*He-Halutz*, 2 (1853), 100ff.) contends that the correct reading is “*Bei-Evyoni*,” i.e., the meeting place of the Ebionites in the Land of Israel. However, the fact that the word “*Bei Avidan*” is not found in Palestinian sources and that, furthermore, the statement about Joshua b. Hananiah and Eleazar b. Perata is in Aramaic indicate that the *Bei Avidan* originated in Babylonia and that the term was adopted by the rabbis to apply to the institution in Erez Israel. More recently, S. Shaked has suggested that the term is derived from a Persian word meaning “temple”; see Sokoloff, DPJA, p. 209b.

[Yitzhak Dov Gilat]

BEIDER, CHAIM (1920–2003), Yiddish poet, journalist, and literary historian. Beider was born in the *shtetl* of Kupel, near the town of Proskurov (now Khmelnytski, Ukraine). After finishing the local Yiddish school, he studied in the Yiddish Department of the Odessa Teachers' Training Institute and, from 1933, published poems in periodicals. He graduated in 1940 and worked as a teacher. During the war he lived in Tadzshikistan. From 1946 he lived in Khmelnytski and Kamenets-Podolski, working on local Ukrainian dailies. In 1971 he moved to Birobidzhan and worked there as a staff journalist for the Yiddish newspaper *Birobidzhaner Shtern*. In 1973 he moved to Moscow and joined the editorial staff of *Sovetish Heymland*, first as an editor and later as associate editor. In 1998 he immigrated to New York.

His first poetic collection, *Khanukas Khabais* (“Housewarming”), appeared in Moscow in 1979. He also wrote numerous articles devoted to the history of Yiddish literature and culture, many of which were included in his collection *Di Vegn, Vos Mir Antdekn* (“The Ways That We Find,” 1991). He was especially interested in such topics as the life and work of Sholem Jacob *Abramovitch (Mendele Mokher Seforim), the cultural history of Birobidzhan, and biographies of Soviet Yiddish cultural and political activists. In New York, he briefly edited the Yiddish journal *Tsukunft* and regularly contributed to the Yiddish weekly *Forverts*.

BEIDERMAN, BERNARDO (1919–), Argentine criminologist. Beiderman was professor of criminal law at Buenos Aires University from 1957 to 1966, when he resigned because of government interference in the universities. He then became a lecturer on the same subject at the university Museo Social Argentino in Buenos Aires, and later dean of its faculty of communication sciences. As a member of the Argentinian Commission, he helped draft a model penal code for Latin America. Beiderman wrote on criminal theory, female criminality, obscenity and pornography, and penal reform.

BEILENSEN, ANTHONY CHARLES (Tony) (1932–), U.S. congressman. Beilenson was born in New Rochelle, New York. His parents, Peter and Edna Beilenson, were both first cousins of the Hebrew journalist-writer-translator Moshe *Beilenson (1889–1936). Like their cousin, Peter and Edna Beilenson were involved in publishing; their firm, the Peter Pauper Press, was one of the most successful small presses operating in the United States from the 1930s to the 1950s.

At 16, Beilenson matriculated into Phillips Academy in Andover, Massachusetts – the alma mater of many U.S. lawmakers. Following his graduation in 1950, he entered Harvard, going on to graduate from both Harvard College (1954) and its school of law (1957) before striking out for California. Moving to the Los Angeles area, Beilenson spent two years working for

a Beverly Hills law firm. A liberal Democrat, Beilenson was elected to the California State Assembly in 1963 and the State Senate in 1965. In his more than decade-long tenure in the California State Senate, he authored more than 200 pieces of legislation. Highly esteemed by both his fellow legislators and members of the press, Beilenson was named best all-around senator by the state capitol press corps and most effective senator in a poll of his Senate colleagues.

In 1976, Beilenson was elected to the U.S. House of Representatives, a post he would hold for the next 20 years. During his tenure in Congress, Beilenson served on the all-important House Rules Committee, where he became the point man on all Jewish and Israel-related issues. Within the House, Beilenson gained a reputation for being a "straight arrow, a man whose integrity is beyond reproach." Beilenson also served as chair of the House Permanent Select Committee on Intelligence. Beilenson's legislative interests ranged from budget reform and "covert-action language" for federal intelligence-gathering agencies to restrictions on U.S. imports of elephant ivory. Through Beilenson's efforts, the Convention on International Trade in Endangered Species eventually ordained a worldwide ban on trade in elephant ivory in 1989. On his many trips abroad, he always made it a point to have the U.S. State Department set up meetings with local Jewish groups and then have prominent Jews invited to American embassy dinners.

Beilenson voted against American involvement in the 1991 Gulf War. Reflecting on that vote, he said, "I don't like Americans systematically inflicting great violence and punishment on another people without absolutely compelling reasons for doing so. I don't like the fact that we are killing thousands of human beings who have not harmed any of us, and who have no capability of doing so. I regret that we didn't have the sense, the imagination, the wit, to deal with the problem in a way that could have produced the desired results without going to war." After serving ten two-year terms, Beilenson retired from Congress in January 1997.

BEILIN, ASHER (1881–1948), Hebrew and Yiddish journalist, author, and editor. Beilin was born in Kiev. He worked intermittently as *Shalom Aleichem's secretary (1901–05). In 1906 he moved to London, where he engaged in journalism, and in 1933 settled in Jerusalem. Beilin contributed extensively to the Hebrew and Yiddish press, edited Yiddish papers, and in his later years wrote for the Tel Aviv Hebrew daily newspaper, *Davar*. His writings include reminiscences of J.H. *Brenner (1943), with whom he collaborated for many years, and Shalom Aleichem (1945), a novel *Al Belimah* ("On Nothing," 1928), and a play *Banim li-Gevulam* ("Sons to their Border," 1945). His selected works were published in 1956.

[Getzel Kressel]

BEILIN, YOSSI (1948–), Israeli politician and political scientist. Member of the Twelfth to Fifteenth Knessets. Beilin was born in Petaḥ Tikvah. He received his Ph.D. in political science at Tel Aviv University and taught there in 1972–85. In 1977–84 he served as the spokesman of the *Israel Labor Party and was part of the entourage of the Party Chairman, Shimon *Peres. When Peres served as prime minister in the National Unity Government in 1984–86, Beilin served as government secretary. In the following two years, after Peres became minister for foreign affairs, Beilin served as political director general at the ministry, making efforts to cool Israel's relations with South Africa, which still followed a policy of apartheid, and to establish relations with the African National Congress.

Within the Labor Party he formed the dovish Mashov Circle. He was elected to the Twelfth Knesset and, until the Labor Party left the National Unity Government, served under Peres as deputy minister of finance. In this capacity he expressed his opinion that only the needy, and not the whole population, should receive child support and other allowances from the state, provoking severe criticism within the party. He was also criticized for statements about the expected level of unemployment, which proved to be conservative.

When Yitzhak *Rabin formed his government in 1992, Beilin once again followed Peres to the Ministry for Foreign Affairs as his deputy. At this time he was one of the initiators of what came to be known as the Oslo Process with two colleagues – Dr. Ya'ir Hirschfeld and Dr. Ron Pundak. When he was convinced of the seriousness of the negotiations with the Palestinians, he approached both Peres and Rabin, who agreed to upgrade the talks, though until the end of August 1993 the talks were kept secret from the public.

In June 1995 Beilin was appointed minister of economics and planning. After Rabin's assassination, when Peres became prime minister, Beilin brought about the dismantlement of the Ministry of Economics and Planning, which he thought was superfluous, and was appointed minister in the Prime Minister's Office.

Three days before Rabin's assassination Beilin concluded with the Palestinian politician Maḥmud Abbas (known as Abu-Ma'azen), who was later to become prime minister, a document that outlined the parameters of a permanent settlement between Israel and the Palestinians. The document, which was published by *Haaretz*, spoke of the establishment of a demilitarized Palestinian state in 90% of the West Bank and the Gaza Strip, with its capital in the Arab neighborhood of Abu-Dis, east of Jerusalem. Peres rejected the document, because he believed it would be harmful to the Labor Party in the forthcoming elections.

In June 1997 Beilin contested the leadership of the Labor Party, but lost to Ehud *Barak, receiving 28.5% of the party vote. In the government formed by Barak after the elections to the Fifteenth Knesset, he was appointed minister of justice. He resigned from the Knesset in November 1999, to enable the next member on the Labor list to enter the Knesset. After Shas left the government, he also assumed the portfolio for religious

affairs. After failing to receive a realistic place in the Labor list for the Sixteenth Knesset, Beilin, together with Yael *Dayan, joined the Meretz list, but when Meretz received only six seats, he failed to enter the Knesset. With Palestinian leader Yasser Abed Rabbo, Beilin started to work on a new peace document that came to be known as the Geneva Initiative, signed in Geneva under the auspices of Switzerland on December 1, 2003. On March 16, 2004, Beilin won the election for leadership of Meretz (which changed its name to “Yaḥad and the Democratic Choice”) against MK Ran Cohen.

The following of his books have appeared in English: *Israel: A Concise Political History* (1993); *Touching Peace* (1999); *Dispatches from Palestine: The Rise and Fall of the Oslo Agreement* (1999); *His Brother's Keeper: Israel and Diaspora Jewry in the Twenty-First Century* (2000); *Manual for a Wounded Dove* (2003); *The Path to Geneva: The Quest for a Permanent Agreement, 1996–2004* (2004).

BEILINSON (Belinson), MOSES ELIEZER (1835–1908), Hebrew and Yiddish writer and publisher. He was born in Dubrovna (Russia). In 1860 he published a brochure *Zevi la-Zaddik* containing an apologia for Judaism and an attack upon Christianity and Karaism. He translated Ludwig Philippson's novel *Die Vertreibung der Juden aus Spanien und Portugal* into Hebrew as *Galut Sefarad* in 1860. In the 1860s he established a Hebrew printing press in Odessa, and published *Alei Hadas*, a literary and scholarly periodical (1865), in which he printed his correspondence with Philippson on the situation of the Jews in Russia. Only four issues appeared. Perez *Smolenskin published his first pamphlets at Beilinson's press (1862–67); Beilinson wanted to “correct” Smolenskin's style, but most of his corrections were rejected. *Kol Mevasser* (1871), the first Yiddish weekly published in Russia, was also printed at Beilinson's press and Beilinson succeeded Moshe Leib *Lilienblum as its editor, using the pseudonym “M.E.B.N.” He composed three genealogical histories (including one on his own family): *Megillat Yuḥasin* (1891), *Yalkut Mishpahot* (1892), and *Millu'im le-Kovez Yalkut Mishpahot* (1893). He published *Toledot ha-Rav Yosef Shelomo Rofe Delmedigo mi-Kandia* (1864), a biography based on Abraham Geiger's *Melo Hofnayim* (German section), and *Shelomei Emunei Yisrael*, three brochures dealing with literary and scientific topics (1898–1901). He also edited *Kovez Yagdil Torah* (1879–85) and *Kovez Mekhilta de-Rabbanan* (1885), dealing with halakhic matters. Beilinson adapted Longfellow's *Judas Maccabaeus* into a Yiddish Hanukkah play (1882), and also adapted Philippson's above-mentioned novel (1888). He additionally published *Nutslikher Fremdvorterbukh* (Part 1, 1887), a dictionary of foreign phrases used in Yiddish.

[Gedalyah Elkoshi]

BEILINSON, MOSHE (1889–1936), Hebrew writer, journalist, and one of the chief spokesmen of the labor movement in Erez Israel. Beilinson, who was born in Veprika, Russia, qualified as a doctor in 1913. A supporter of the Russian socialist movement, he was won over to Zionist socialism by Z. Shazar and B. Katznelson. After World War I he settled in Italy, where he became active in the Zionist movement. He also published a series of translations into Italian of books of Jewish interest, including: Buber's *Reden ueber das Judentum* (1923); R. Travers Herford's *Pharisees* (1925); and (with Dante *Lattes) Joseph Klausner's *Kizzur Toledot ha-Sifrut ha-Ivrit ha-Ḥadashah* (1926). In 1924 he settled in Petaḥ Tikvah and soon afterward joined the editorial board of the newly founded *Davar. Here Beilinson published articles and notes, discussing problems of the Palestinian labor movement. He first wrote in Russian but changed to Hebrew in 1926. His style was simple and fluent. Beilinson wrote: *Bi-Ymei Massah*, on the Jewish-Arab question (1930); *Bi-Ymei Tehiyat Italyah* (1930); *Be-Mashber ha-Olam* (published in 1940, with an essay on Beilinson by B. Katznelson) and *Ba-Derekh le-Azma'ut* (1949). One of the main hospitals in the Tel Aviv area was named after him.

BIBLIOGRAPHY: *Ziyyun le-Moshe Beilinson* (supplement to *Davar*, fasc. no. 3792, Nov. 9, 1937, includes a bibliography of his writings).

[Getzel Kressel]

BEILIS, MENAHEM MENDEL (1874–1934), victim of a *blood libel charge in Russia in 1911. On March 20, 1911, the mutilated body of Andrei Yushchinsky, a 12-year-old boy, was discovered in a cave on the outskirts of Kiev. The monarchist rightist press immediately launched a vicious anti-Jewish campaign, accusing the Jews of using human blood for ritual purposes. At the funeral of Yushchinsky, leaflets circulating the blood libel were distributed by members of the reactionary “Black Hundred” (“*Union of Russian People”) organization. Meanwhile the police investigation traced the murder to a gang of thieves associated with a woman, Vera Cheberiak, notorious for criminal dealings. However, the reactionary antisemitic organizations led by the “Black Hundred” pressured the antisemitic minister of justice, I.G. Shcheglovitov, to conduct the investigation of the crime as a ritual murder. Accordingly, the chief district attorney of Kiev disregarded the police information and instead looked for a Jew on whom to blame the crime, through whom the entire Jewish people could be publicly indicted.

In July 1911, a lamplighter testified that on March 12, the day Yushchinsky disappeared, he had seen him playing with two other boys on the premises of the brick kiln owned by a Jew, Zaitsev. He also alleged that a Jew had suddenly appeared and kidnapped Yushchinsky, pulling him toward the brick kiln. On the strength of this testimony, Mendel Beilis, the superintendent of the brick kiln, was arrested on July 21, 1911, and sent to prison, where he remained for over two years. A report was submitted to Czar Nicholas II that Beilis was regarded by the judiciary as the murderer of Yushchinsky.

The case attracted universal attention. Protests and addresses by scientists, public and political leaders, artists, men of letters, clergymen, and other liberal-minded men were published in all the civilized countries of Europe and the United States affirming that the blood libel was baseless. The trial of Beilis took place in Kiev from September 25 through October 28, 1913. The chief prosecutor A.I. Vipper made anti-Jewish statements in his closing address and defended the Cheberiak gang against the charge of Yushchinsky's murder. Beilis was represented by the most able counsels of the Moscow, St. Petersburg, and Kiev bars: Vassily Maklakov, Oscar O. Grusenberg, N.P. Karabchevsky, A.S. Zarundy, and D.N. Grigorovitch-Barsky. The lamplighter and his wife, on whose testimony the indictment of Beilis rested, when questioned by the presiding judge, answered, "We know nothing at all." They confessed that both had been confused by the secret police and made to answer questions they did not comprehend. "Scientific" foundation for the blood libel was supplied at the trial by a Catholic priest with a criminal record, Justin Pranaitis, who stated that the murder of Yushchinsky had all the characteristics of ritual murder enjoined by the Jewish religion. His arguments were refuted by the rabbi of Moscow, Jacob *Mazeh, who proved that Pranaitis was ignorant of the talmudic texts cited. Two Russian professors of high standing, Troitsky and Kokovtsoff, also spoke on behalf of the defense in praise of Jewish values and exposed the falsity of the ritual murder hypothesis. The jury, composed of simple Russian peasants, after several hours of deliberation unanimously declared Beilis "not guilty."

Beilis, who still remained in danger of revenge by the "Black Hundred," left Russia with his family for Erez Israel. In 1920, he settled in the United States. Bernard *Malamud's novel *The Fixer* is based on the Beilis case.

[Chasia Turtel]

BEIM, SOLOMON BEN ABRAHAM (1817?–1867), Karaite scholar and important public figure, a disciple of the Karaite scholar Mordecai *Sultansky. He also acquired a secular education and knew Russian, French, and German. In 1839 he accompanied Abraham *Firkovich in his voyages around the Crimea and Caucasus to help him search for antiquities. In the mid-1840s he conducted archaeological excavations in the Crimea and became a member of the Imperial Geographical Society. Beim first officiated as *hazzan* in Chufut-Kale, where he founded a Karaite school with tendencies of enlightenment. In addition to Bible and Hebrew, he also taught Russian and secular subjects. Beim was on friendly terms and corresponded with intellectuals of the Jewish Haskalah and Reform Movement. He attempted to ease the severe Kara-

ite laws, but he met with strong opposition. In 1855, after the death of Simḥah *Babovich he was appointed as *hazzan* of the Crimea and Odessa. After the death of his father, the *hazzan* of the Odessa Karaite community, he moved to Odessa and continued his father's good relations with the Rabbanites. He died in the course of his visit to St.-Petersburg, where he came to deliver to Czar Alexander II samples of typical Karaite garments, on the Czar's request. He wrote *Pamiat' o Chufut-Qaleh* and several other treatises in Russian on the Karaites which, however, have limited value, being based solely on the findings of Firkovich.

[Golda Akhiezer (2nd ed.)]

BEIMEL, JACOB (c. 1875–1944), *hazzan*. Beimel was born in Parichi, Belorussia, where his father was also a cantor; as a child, he sang in Bobruisk and Berdichev. He studied music in Odessa and Berlin, became cantor in Berlin, where he conducted the Mendelssohn Choir, and later served in Copenhagen. In 1915, he went to the U.S. and conducted choral concerts. He held posts in New York and later in Philadelphia. His works and adaptations of synagogue music, his folk songs and ḥasidic melodies, were published in the quarterly *Jewish Music Journal* (Eng. and Yid., 1934–35), which he edited in the U.S.

BEIN, ALEXANDER (1903–1988), archivist and historian of Zionism. Bein was born at Steinach and studied at Erlangen and Berlin. From 1927 to 1933 he served on the staff of the German State Archives. In 1933 he settled in Palestine where he became assistant director of the General Zionist Archives in 1936. In 1955 he was appointed director, and in addition from 1956 was state archivist of Israel. Apart from studies in general history, *Die Staatsidee Alexander Hamiltons in ihrer Entstehung und Entwicklung* (1927), Bein devoted his efforts to the history of Zionism and modern antisemitism. Among his works are *Toledot ha-Hityashevut ha-Ziyyonit* (1945²); *The Return to the Soil* (1952); his biography of Theodor Herzl (1934) which was translated into several languages; *Die Judenfrage* (1980; Eng., *The Jewish Question*, 1990). Bein also edited a new Hebrew edition of Herzl's writings in Hebrew which appeared in ten volumes in 1960–61. He contributed articles to scholarly journals on the history of modern antisemitism and Zionism. In 1987 he was awarded the Israel Prize for his contributions to Zionist historiography.

BEINART, HAIM (1917–), Jewish historian specializing in Spanish Jewry in the Middle Ages. Born in Pskow, Russia, Beinart received a traditional Jewish and general education at the Hebrew High School in Riga. He arrived in Palestine

in 1937 as a student and commenced his academic studies at the Hebrew University of Jerusalem.

Concentrating on the history of the Jews in Spain, Beinart spent a research year in the Archivo Historico Nacional in Madrid and in the Archiva General de la Corona de Aragon in Barcelona. He received his Ph.D. in 1955 for his thesis on “The Trials of the Inquisition against the Judaizers in Toledo in the period of the Expulsion of the Jews from Spain.”

Beinart taught in the department of Jewish history at the Hebrew University from 1952, becoming a full professor in 1972.

From 1965 to 1969 he served as academic adviser for the Faculty of Humanities and Social Sciences at what was to become the Ben-Gurion University of the Negev, and was dean of the faculty from 1969 to 1973. Beinart served also as the head of the Institute of Jewish Studies at the Hebrew University of Jerusalem. Beinart was awarded the Israel Prize in 1991 for Jewish history and in 2004 he received the Rothschild Prize.

Beinart’s research work dealt extensively with the history of Spanish Jewry in the Middle Ages, based on original sources he uncovered through his meticulous searches in various libraries throughout the world. His research concentrated on the century before the expulsion of the Jews from Spain in 1492, although he investigated numerous other areas including studies on the Jews expelled from Spain and their search for refuge in other countries. This includes archival material about Marranos who formed the nucleus for the revival of Jewish communities outside of Spain.

Beinart published hundreds of scholarly articles in various journals in Spanish, Hebrew and English. His four-volume *Records of the Trials of the Spanish Inquisition in Ciudad Real*, which includes the reports of the trials against the Marranos during the Spanish Inquisition, his *Conversos on Trial*, and his *Expulsion of the Jews from Spain* made a major contribution to the study of the era.

Beinart founded and edited the *Hispania Judaica Series* (1978–) which publishes historical monographs on the Jewish community in Spain. He was a member of the editorial board of the quarterly *Zion* and of *The Shorter Jewish Encyclopaedia in Russian* and was editor of the history of the Jews in Christian Spain for the first edition of the *Encyclopaedia Judaica*.

[Elaine Hoter]

BEINISCH (Werba), DORIT (1942–), Israeli jurist. Born in Tel Aviv, Beinisch studied law at the Hebrew University of Jerusalem and from 1976 to 1982 served as director of the Department of Constitutional and Administrative Law at the State Attorney’s Office. In 1982 she was appointed deputy state attorney and in 1989 she became state attorney. She served in this position for seven years, heading government litigation in the Magistrate, District, and Supreme Court. She also served as the official legal advisor to government departments and agencies. Beinisch gave special attention to ensuring that government institutions remain subject to legal restraints, with

particular emphasis on the IDF, Police, and General Security Service. In 1995 she was appointed to the Supreme Court of Israel. Among her notable court opinions are her decision holding that parents cannot use corporal punishment against their children and decisions stressing the importance of protecting rights of women and children.

[Leon Fine (2nd ed.)]

BEI-RAV (Aram. בֵּי רַבִּי), term in talmudic literature designating a place of elementary or advanced education (e.g., Sanh. 33b, 17b; Yev. 83b). A related term in Hebrew is *bet rabban* (e.g., Shab. 119b). The students at the *bei rav* also lived there (Ber. 25a). *De-Vei-Rav* is also used by some *amoraim* as a term for certain collections of tannaitic literature. *She’ar Sifrei de-Vei-Rav* (“Other Books of Bei-Rav”) mentioned by some *amoraim* (Yoma 74a; BB 124b), are explained by Rashi as the tannaitic commentaries on Numbers and Deuteronomy, although Solomon b. Abraham *Adret and *Gershom b. Judah include the Midrash on Exodus as well. For them, the Midrash on Leviticus (*Sifra de-Vei Rav*) was the book of Bei-Rav as everyone was so well versed with it, whereas the other works were somewhat less well-known. Zunz identifies **Sifra* and *Sidra de-Vei-Rav* (also known as *Torat Kohanim*) with the commentary on Leviticus, and *Sifrei* and *Sifrei de-Vei-Rav* with the commentary on Numbers and Deuteronomy. Known under the single name of **Sifrei*, these midrashic commentaries were taught for the first time by Rav in Babylonia (Zunz, *Vortraege*, 49 f.). Maimonides and Menahem Meiri after him considered Rav the author of these works. M. Friedmann, in his introduction to the **Mekhilta* (1870; xviff.), identifies *Sifra* with *Torat Kohanim* (i.e., the commentary on Lev.) and *Sifra de-Vei-Rav* with miscellaneous **baraitot* of Rav, or of the academy of Rav. D. Hoffman (*Zur Einleitung in die halachischen Midraschim* (1887), 13–20, and *Mar Samuel* (1873), 68 f.), subscribes to the view that the term “*tanna de-Vei-Rav*” embraces the *Sifra* and *Sifra de-Vei-Rav*, a collection of the teachings of the sages at the academy of Rabbi Huna (cf. Sanh. 17b). For more on the halakhic midrashim, see **Midrashei Halakhah*.

BEIRUT, capital city and chief port of Lebanon. From the second century B.C.E. Jews lived in its vicinity, and probably in the city itself. The Chronicle of Joshua the Stylite mentions the existence of a synagogue in Beirut at the beginning of the sixth century. *Abiathar b. Elijah (late 11th century) includes Beirut and Gebal (Byblos) among the cities subject to the gaonate of Palestine. At the time of the Crusader conquest (1100) Beirut contained 35 Jewish families and *Benjamin of Tudela (c. 1170) found 50 households there. According to Isaac of Acre, many Jews were killed during the Muslim capture of the city in 1291.

Jews frequently visited Beirut on their way to Erez Israel, but a pupil of *Nahmanides who stopped there at the beginning of the 14th century did not note the presence of Jews in the city. An anonymous pupil of Obadiah *Bertinoro wrote in a letter (1495) "At Baroto (Beirut) there are no Jews, and I do not know the reason, because the Ishmaelites at Baroto are better than all the other people of the Kingdom and are very well-disposed toward the Jews." However Jews settled again in Beirut after their expulsion from Spain in 1492. Moses *Basola, who visited the city in 1521, found 12 Jewish families from Sicily. Abraham Castro was in charge of customs. During Basola's stay in the city, the activity of David *Reuveni, whom a Jewish merchant encountered at Gaza, excited the Jews. *David d'Beth Hillel, who visited Syria in 1824, relates "There are [in Beirut] some 15 families [of] Jewish merchants, natives of the country [i.e., the place] who speak Arabic and have a small synagogue, their customs resembling those of the Jews of Palestine."

In 1856 Ludwig August *Frankl stated that he found in Beirut 500 Sephardi Jews, mostly merchants and porters. In the course of time other Jews moved to Beirut from Damascus, Smyrna, Aleppo, Constantinople, and ultimately also from Russia. In 1878 the *Alliance Israélite opened a girls' school and the following year, one for boys. In 1901, 271 pupils were studying at the latter, and 218 at the former. In 1897 the Alliance opened a crafts school for girls.

In 1862 and in 1890 blood libels resulted in Christian attacks on the Jewish quarter. In 1890 order was restored by the Turkish authorities and the rioters were arrested. At that time Beirut contained a synagogue and 12 *batei midrash*. After World War I the Jewish population grew in Beirut, the newly established capital of *Lebanon.

The community was regarded as the most highly organized in Lebanon and Syria. The principal synagogue Magen Avraham was the center of the communal institutions, which included the schools of the Alliance and of the congregation, the B'nai B'rith Lodge, and the Maccabi Club.

The Jews of the city belonged mostly to the middle class, and the overwhelming majority of them engaged in commerce. They were not concentrated in special quarters, but the poorer Jews resided in streets formerly part of the Jewish quarter in Wadi Abu Jamil. When the State of Israel was established, the Lebanese security forces were ordered to protect the Jewish quarter, and when an anti-Jewish demonstration was held and infuriated mobs advanced on the Jewish quarter, members of the Maronite Christian Phalanges dispersed the demonstrators. The Jewish paper *al-'Alam al-Isra'ili* ("The Israelite World") changed its name to *al-Salam* ("Peace"). The Jewish community was compelled to contribute a sum of money to the fund of the Arab League but in general the Jews were not mistreated.

In 1880 there were about 1,000 Jews in Beirut; in 1889, 1,500; between 1892 and 1906 there were 3,000; between 1907 and 1910 their number reached 5,000.

[Simon Marcus]

From 1948

The number of Jews rose from 5,000 in 1948 to 9,000 in 1958, as a result of the immigration of Syrian Jews to Lebanon. However, the numbers were subsequently depleted, especially from 1967; and in 1969 only about 2,500 were left. By 1970 the community had decreased to about 1,000–1,800.

Until the 1975–90 conflict (see *Lebanon), the Jewish community in Beirut, like the rest of the Jews living in the country, was considered to be an integral part of Lebanon's multiethnic society. During periods of crisis, such as the 1948 War, the first Lebanese civil war in 1958, and the 1967 War, the Lebanese authorities ordered the security forces to protect the Jewish quarter in Wadi Abu Jamil. The wealthy Jews living in new suburbs among members of other faiths were also unharmed. In contrast to other Arab countries, Jewish life in Lebanon continued almost normally: Jews were not discriminated against or arrested by the government in an arbitrary manner, and their property was not confiscated. In 1950 extremist Arab nationalists place a bomb beneath the *Alliance Israélite Universelle school building, causing it to collapse. The Alliance administered three other institutions, in which 950 pupils studied in 1965. In addition, 250 pupils attended the *talmud torah* and 80 studied at the Oẓar ha-Torah religious school. The Jewish scouts and Maccabi sports organization were closed by the government in 1953. The community council, which had nine members, was elected biennially. The Bikkur Ḥolim committee of the council was responsible for medical treatment of the poor, and their hospitalization if they were not Lebanese citizens. Its income derived from the *Arikha* (assessment) tax, paid by all males, as well as from endowments and from synagogues. Most Beirut Jews were merchants or employees of trading and financial enterprises.

[Hayyim J. Cohen]

During the early stages of Lebanon's second civil war (1975–90), the Jews in Beirut, like members of other minorities who resided in the Lebanese capital (e.g., Armenians and Kurds), found themselves caught in the crossfire between local and foreign forces that battled for control of the city and its neighborhoods. The proximity of the Jewish quarter to the "Green Line" separating Beirut's Christian and Muslim sectors exacerbated its inhabitants' insecurity. In the course of the fighting, many Jewish homes and businesses were damaged, as were their communal institutions, most notably the Magen Avraham synagogue (the building itself, which was reportedly hit by an Israeli shell in 1982, was, however, not destroyed). Jewish communal life was further disrupted when the local rabbi left the country in 1978. Meanwhile, impoverished Shi'i Muslims, who had been driven from their homes by the war, began to settle in the Jewish quarter. The continued violence and chaos in Beirut encouraged most of the Lebanese Jews, whose number on the eve of the war was estimated at about 1,800 (of these, more than a thousand resided in Beirut) to leave the country, whereas others moved to safer areas in and around the capital. From 1975 on most

Lebanese Jews immigrated to France, Italy, the U.S., Canada, South America, and Israel.

In 1982 there were an estimated 150 Jews in the western part of Beirut and 100 in its eastern sector. But Israel's invasion into Lebanon and the siege imposed by its army on the Lebanese capital, combined with the chaos that prevailed in the city following the Israeli withdrawal and the failed attempt to reconstruct the Lebanese state in 1982–84, impinged on the situation of the country's remaining Jews, which were now estimated at 100–200. Radical Shi'i factions began to target the Jewish community in Beirut in order to exert pressure on the Israeli government and avenge attacks by the Israeli army in South Lebanon. Thus, in the period 1984–87, the Organization of the Oppressed on Earth, a radical Shi'i faction reportedly close to Hizbullah, abducted 11 prominent members of the local Jewish community, including its head, Isaac Sasson. The kidnappers claimed that their actions were part of their "resistance" to the Israeli occupation in Lebanon and demanded the release of Shi'i prisoners held by Israel and by its proxy, the South Lebanon Army. But Israel refused to comply. The bodies of four Jews were later recovered and the fate of the other seven remained unknown. These factors caused the Jewish community in Beirut to drop to about fewer than 100 members in the late 1980s and early 1990s.

In the 1990–2001 period, the number of Jews in Lebanon, who by then resided almost exclusively in Beirut and its vicinity, dropped even further. Wadi Abu Jamil was almost emptied of its Jewish residents, and the majority of the remaining Lebanese Jews resided in the eastern part of the Lebanese capital or in Mount Lebanon. During the 2004 municipal elections, only one of the registered Jewish voters in Beirut showed up at the polling booth. It was reported that most of the remaining Jews in Lebanon were elderly women.

BEIT, SIR ALFRED (1853–1906), South African financier and co-founder, with Cecil Rhodes, of Rhodesia. Born in Hamburg, Beit learned the diamond trade in Amsterdam and went to South Africa in 1875. He became prominent in the development of the Kimberley diamond fields and later of the Witwatersrand gold reefs. In 1889 he formed the partnership of Wernher, Beit, and Company, forerunner of one of the big Rand mining groups. Beit met Rhodes, and their careers became inseparable. His financial talents complemented those of Rhodes, and he became identified with Rhodes' imperial ambitions. Beit stood with Rhodes in the rivalry with *Barnato for the control of the diamond fields. He obtained the assistance of the London Rothschilds, and became a life gov-

ernor in De Beers Consolidated Mines when it was formed in 1888. With Rhodes he established the British South Africa Company for the administration of the territory that became known as Rhodesia and had a part in the development of the country second only to that of Rhodes himself. He was implicated in Rhodes' plot against the Kruger regime that ended in the Jameson Raid of 1895. He made generous donations to South African war relief funds, founded the Beit professorship of colonial history at Oxford, and through the Wernher-Beit bequest stimulated university education in South Africa. Other bequests included £1,200,000 for education and communications in Rhodesia and thirty fellowships in medical research. Beit left a fortune of over £8 million, probably the largest personal fortune ever left in Britain until then. He left his entire estate to his brother, OTTO JOHN BEIT (1865–1930), who was associated with him in his financial and philanthropic activities.

[Dora Leah Sowden]

BEIT-HALLAHMI, BENJAMIN (1943–), Israeli psychologist and leading authority on the social psychology of religion. Born in Tel Aviv, Beit-Hallahmi served in the IDF in 1963–66. He was educated at the Hebrew University of Jerusalem (B.A. 1966) and at Michigan State University (M.A. 1968, Ph.D., clinical psychology, 1970). He taught at a number of American and Israeli universities, including the University of Michigan, the University of Pennsylvania, and the Hebrew University, and maintained membership in several American professional associations. From 1973 he was senior lecturer and professor of psychology at the University of Haifa.

The primary focus of Beit-Hallahmi's academic work (for which he acknowledged his debt to the work of William James) was the study of the social psychology of religion, with particular attention to religion and social identity; the appeal of New Religious Movements (or NRM, popularly known as "cults"), on which he was an acknowledged international authority; and the relationship between Jewish ideas of religious salvation and the Zionist project, and its social consequences. Among his influential publications in this area were his books *The Social Psychology of Religion* (1975, with Michael Argyle), *Prolegomena to the Psychological Study of Religion* (1989), *Despair and Deliverance: Private Salvation in Contemporary Israel* (1992), *The Psychology of Religious Behavior, Belief, and Experience* (1997, with Michael Argyle), several edited volumes and numerous journal articles.

Beit-Hallahmi, as a secular student of culture and "progressive" (his own word) citizen of Israel, brought his fundamental concerns to bear on public controversies regarding Israeli policy and Zionism, and published two important books examining their origins and history: *The Israeli Connection: Who Israel Arms and Why* (1987) and the classic *Orig-*

nal Sins: Reflections on the History of Zionism and Israel (1992; revised American edition 1993), a frank and hardheaded discussion of the permanent Israel/Palestine crisis: "Out of the original sins of the world against the Jews grew the original sins of Zionism against the Palestinians.... The problem is a moral one. Raising the moral question is not a mark of idealism but of realism."

[Drew Silver (2nd ed.)]

BEIT JANN, Druze village in Upper Galilee, Israel. Lying at 3,082 ft. (940 m.) above sea level on the western slope of Mt. Meron, it is one of Israel's highest inhabited places. Although the identification of the village with the town Beth-Dagon of the tribe of Asher is no longer regarded as correct, Beit Jann seems to be the Galilean village Bet Dagan, reported in talmudic times as producing a certain late-ripening vegetable (Tosef., Shev. 7:13). In 1839 Scottish missionaries found here a few Jewish families, who apparently had moved from Safed 6.2 mi. (10 km.) to the east after the 1837 earthquake. In 1964 Beit Jann received municipal council status. With 4,110 inhabitants in 1968, on an area of 1.8 sq. mi. (4.65 sq. km.), Beit Jann was one of the major Druze centers in Israel. Its economy was based on fruit, beef cattle, and tobacco. By the end of 2002 its population has risen to 9,430.

[Efraim Orni]

BEIT JIMĀL, monastery and agricultural school in the Judean Foothills, 3 mi. (5 km.) S. of Bet-Shemesh, founded in 1881 by Salesian Fathers from Italy on the supposition that R. *Gamaliel I had lived there and that the place was named after him. The site is supposed by some scholars to be identical to *Kefar Gamala, where the tomb of St. Stephen was located in the fifth century. Remnants of a church with a mosaic floor were discovered there in 1916. In 1988 a new monastery was built nearby for the Bethlehem Sisterhood, which houses about 30 nuns who choose to live their lives in solitude and silence.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

BEJA, town in S. Portugal, capital of the region of Alemtejo; one of the seats of the subordinate rabbinates set up under the general control of the *Arraby Moor in the 15th century. When the kingdom of Portugal was established in the 12th century, Jews are said to have been living already in Beja. In the charter (*foro*) granted to the town in the 13th century, nine clauses deal with the Jews, both resident and transient; most of them speak of established local usage. A tombstone found in the castle of Beja has a fragment of a Hebrew inscription referring to the death of R. Judah. Another tombstone from Beha was found in the 18th century and was brought to Evora in 1868. It is probably from 1378. After the expulsion of the Jews from Portugal in 1496–97, Beja became a center of crypto-Judaism and many natives of the city appeared at autos-da-fé or escaped abroad. In the early years of the 18th century, a physi-

cian named Francisco de Sá e Mesquita spitefully denounced persons from Beja – on one occasion 66, on another 92 – who, he said, had come together to observe Jewish rites. The name Beja was common among the Sephardim of the Orient: e.g., Ḥayyim Beja (c. 1810–1870) of Salonika, who subsequently became rabbi of Tyria in Asia Minor; and the scholar-preacher Isaac b. Moses *Beja.

[Cecil Roth / Yom Tov Assis (2nd ed.)]

BEJA, ISAAC BEN MOSES (c. 1570–1628), preacher in Salonika and Nikopolis (Bulgaria). Beja studied in Salonika. He was compelled to wander from one community to another until he was invited to teach at the yeshivah of Nikopolis. He arrived there after the city had been damaged in the war between the Turks and the Walachians (1595–99). Beja's homilies and eulogies, blended with Kabbalah, were published under the title *Bayit Ne'eman* (Venice, 1621); he also wrote poetry, and four of his poems appear in this work. His work displays originality both in thought and in his homiletical approach. His homily on the building of the synagogue of Nikopolis was reprinted under the title "Keter Torah" in *Le-Ohavei Leshon Ever* (Paris, 1628). There were two contemporaneous Salonikan scholars both named Isaac Beja; one died in 1635, the other in 1647.

BIBLIOGRAPHY: Rosanes, *Togarmah*, 3 (1938²), 115ff.; M. Molho, *Be-Veit ha-Almin shel Yehudei Saloniki*, 4 (1933), 13; I.S. Emmanuel, *Mazzevot Saloniki*, 1 (1963), 25of., 270.

BEJERANO, family of Israeli industrialists. The brothers **MOSHE** (1902–1951) and **SHIMON** (1910–1971) **BEJERANO** were born in Plovdiv, Bulgaria, and educated in Switzerland. In 1921 they moved with their family to Milan, where they became active Zionists. Shimon settled in Palestine, in 1936, followed by Moshe three years later. Together they founded a cigarette factory, and acquired the Assis factory in Ramat Gan, which they developed into one of the largest syrup and canning enterprises in Israel. They became leaders of the Manufacturers' Association of Israel. Moshe served as Israel's first commercial attaché in Moscow and devoted himself to the development of commercial relations between Israel and the Far East. Shimon was active in the General Zionist Party, which he represented in the Second and Third Knessets.

[Abraham Aharoni]

BEJERANO, BEKHOR ḤAYYIM BEN MOSES (1850–1931), Bulgarian rabbi and scholar. Bejerano was born in Eski-Zagra, Bulgaria, and studied under Zechariah ha-Levi of Salonika. He learned, in addition to his regular Torah studies, languages and other secular subjects. In 1880, he moved to Rushchuk,

where he served as head of the community and where Solomon *Rosanes was one of his pupils. During the Russo-Turkish War (1878), Bejerano found a haven in Choumla. He afterward moved to Bucharest, where he was both a *daiyyan* and principal of the school of the Sephardi community. His years in Bucharest were his most fruitful, both in terms of literary productivity and of personal gratification. He maintained close ties with Queen Elizabeth of Romania and served as the official interpreter for Semitic languages of both the Romanian royal house and of the official government institutions. His publication of several books in Romanian earned him a government decoration. In 1908, Bejerano was chosen chief rabbi of Adrianople and in 1922, chief rabbi of Constantinople, a position he held until his death. Bejerano was famous for his generosity and was greatly honored in his lifetime. He was a corresponding member of the Spanish and French academies. His Hebrew articles appeared in *Ha-Maggid*, *Ḥavazzelet*, *Ha-Méassef* and *Ha-Mizpeh*, etc. He left many works in manuscript.

[Itzhak Alfassi]

BEJERANO, MAYA (1949–), Israeli poet. Bejerano was born in Kibbutz Elon and spent her childhood in Jaffa. She studied literature and philosophy at Bar-Ilan University as well as violin and flute and was also an amateur photographer. Holding an M.A. in Library Science from the Hebrew University, she worked as a consultant at the Tel Aviv Municipal Library. She published 11 collections of poems, including *Bat Ya'anah* ("Ostrich," 1978), *Ibud Netunim* 52 ("Data Processing 52," 1983), *Livyatan* ("Whale," 1990), *Anaseh Lag'at be-Tabur Bitni* ("Trying to Touch My Belly Button," 1998). "Selected Poems 1972–1986" appeared in 1987 and 2005 saw a volume of collected works under the title *Tedarim*. While in "Trying to Touch My Belly Button" she movingly depicted her childhood experiences and her relationship with her parents, other poems address female concerns, the joys and anguish of love, and politics, and describe the sights and moods of Tel Aviv, especially the so-called "Shenkin myth." Descriptions of nature, states of consciousness, actions and moods blend in an attempt to transform poetry into "data processing" – the title of one of her collections. For Bejerano poetry writing is a kind of linguistic and emotional laboratory: "The Hebrew language is my friend," she writes. Bejerano was awarded the Bialik Prize (2002) and the Bernstein Prize (1988). Bejerano also wrote books for children, a collection of stories, and a play. Individual poems have been translated into various languages. Information is available at the ITHL website at www.ithl.org.il.

[Anat Feinberg (2nd ed.)]

BEKACHE, SHALOM (1848–1927), printer and publisher. He was born in Bombay of Baghdadi origin. After studying in Safed, he became a rabbi in Acre and then migrated to Algeria, where he was rabbi of the Ben-Thoa Synagogue, the oldest in Algiers, for 40 years. He contributed to the Hebrew periodicals *Ha-Maggid*, *Ha-Meliz*, and *Ha-Zefirah*. In 1885 he published in Leghorn in Judeo-Arabic *Mevasser Tov*, a historical, geographical, and literary miscellany, which was followed by a monthly bulletin, *Or ha-Levanah*, dedicated essentially to the history and geography of Erez Israel; five issues were published. In about 1888 he established a small printing press in Algiers, which produced some 20 books in Judeo-Arabic, edited and translated by himself. These works, which deal with the history of the Jews of Babylonia and the kingdom of the Khazars in fictional form, were adapted to the intellectual standard of the Algerian Jews of that time and were useful in widening their historical knowledge. In 1891–93 Bekache published a weekly newspaper in Judeo-Arabic, *Beit Yisrael. Nizzahon ha-Or al ha-Hoshekh* ("Triumph of the Light over the Darkness," 1896) is a philosophical thesis in Hebrew presented in the form of a controversy between the Pharisees and the Sadducees.

[Robert Attal]

BEKEMOHARAR, family of 18th–19th-century rabbis of Adrianople. MENAHEM BEN ISAAC ASHKENAZI (1666–1733) was born in Temesvár; he was two years old when his parents moved to Adrianople. He used to sign his name בכמורר"ר (BKMOHRR = Ben Kevod Morenu ha-Rav Rabbi), to which abbreviation each of his descendants appended the initial letter of his own father's name. When Abraham Gheron was appointed rabbi of Adrianople in succession to his father-in-law Abraham Zarefati, six of the 13 congregations, disapproving the appointment, appointed Menahem b. Isaac as head of the *bet din*. He headed a large yeshivah and wielded great influence, the surrounding communities subjecting themselves to his authority. His works on Maimonides' *Mishneh Torah*, on Jacob b. Asher's *Arba'ah Turim*, and on Isaac b. Abba Mari's *Ha-Ittur*, as well as a homiletic work, were destroyed in a fire that broke out in Adrianople after his death. Another homiletic work, responsa, and novellae on the Talmud were saved. A small portion of the responsa that were saved was published in *Mikhtav Shelomo* by his grandson Solomon Bekemoharar. Menahem was also a kabbalist and a poet; his poem recited at circumcisions is well known throughout Turkey and the Balkan states.

His son, MORDECAI B. MENAHEM (d. 1748), rabbi and halakhist, succeeded his father. Most of his *Ma'amar Mordekhai*, a commentary on Mordecai b. Hillel's commentary to tractates Yevamot and part of Ketubbot, was destroyed by fire. The first three chapters of Yevamot which were rescued were published (Salonika, 1874) with the text; appended are novellae on Maimonides' *Mishneh Torah* with assorted addenda. Still in manuscript form are homilies and a talmudic

commentary. Several of his responsa were published in his son's *Mikhtav Shelomo*.

MENAHÉM (II) B. MORDECAI (d. 1781) succeeded his father. He was a halakhist and kabbalist and his halakhic decisions survive in manuscript form. His son was Mordecai (II). NISSIM (a name added later) SOLOMON BEN MORDECAI (1732?–1770?) began to write halakhic responsa at an early age. His works include: *Heshek Shelomo* (Constantinople, 1768) on the first 68 chapters of *Hoshen Mishpat*, *Mikhtav Shelomo*, responsa (vol. 1, Salonika, 1855; vol. 2, appended to his father's *Ma'amar Mordekhai*), and *Beit Shelomo*, only a small part published in his grandson Menahem (IV)'s *Devar Emet*. His *Mirkevet ha-Mishneh*, on Maimonides' *Yad*, was almost identical to Aaron *Alfandari's work of the same name, and as soon as Alfandari's work was published in Smyrna in 1755, Bekemoharar stopped working on his. His son, MORDECAI SIMEON BEN NISSIM SOLOMON (d. 1814?), rabbi and halakhist, traveled extensively between the communities in Turkey and the Balkans. He wrote *Matteh Shimon*, one of the most important works on the *Hoshen Mishpat* (until §258; in 3 vols.; Salonika, 1797–1819; vol. 3 consists of responsa).

MORDECAI (II) BEN MENAHÉM (II) (d. 1821) succeeded his father. Some of his halakhic decisions were published in *Mera Dakhya* (appended to vol. 3 of Mordecai Simeon b. Solomon's *Matteh Shimon*). The Jewish concessionaires in Constantinople appealed against his monopoly of the laudanum concession. In 1802, after a controversy in which the rabbis of Constantinople and Adrianople took part, his rights to the concession were reaffirmed. His son, MENAHÉM (III) (d. 1810), was a member of the rabbinate during his father's lifetime, from about 1800. In 1801 a new congregation was formed in Rushchuk, comprising settlers from Adrianople, Vidin (Bulgaria), Belgrade, and Niš (Yugoslavia), which chose Menahem as rabbi. He left several works in manuscript.

JOSEPH RAPHAEL B. MORDECAI (II) (d. 1849) also served in the rabbinate during his father's lifetime. In 1839 the sultan Abdul Mejid appointed him head of all the congregations in Adrianople and its environs. His eldest son, MOSES RAḤAMIM (d. 1878), succeeded him in his lifetime (1846). Moses wrote responsa to questions addressed to his father and published *Nitpal la-Kodesh*, a compendium of his own responsa, together with the *Ma'amar Mordekhai* of Mordecai (I) b. Menahem. During the Russo-Turkish War (1878), he escaped to Constantinople, where he died. He was succeeded by his son, RAPHAEL (d. 1899), who was a member of the Bulgarian parliament. When independent Bulgaria was founded, the communities that came under Bulgarian rule severed their ties with the Adrianople rabbinate.

His son, MENAHÉM (IV) R. MORDECAI SIMEON (1810?–1887), preacher and halakhist, was productive as a writer and as a publisher of the works of his family. His works include *Devar Emet* (Salonika, 1843), on the laws of Torah scrolls; *Devar Menahem* (2 vols., 1866–69), on *Orah Hayyim*; *Devar ha-Mishpat* (Smyrna, 1874); *Menahem Avelim* (1880), on the laws

of mourning. He was employed in a bank. During the Russo-Turkish War (1878), he escaped to Constantinople; in 1880 he immigrated to Erez Israel, where he died. His grandson, YOM TOV, a scholar and a *maskil*, contributed in his youth to *Ha-Maggid*, participated in communal endeavors, and was a Bulgarian Zionist leader.

BÉKÉSCSABA, capital of Békés county, southeast Hungary. Jews first settled there at the end of the 18th century. The first Jewish community was organized at the beginning of the 1830s. The town, an agricultural and commercial center and later a railroad hub, attracted Jewish settlers, who helped develop the town's commercial life. Their number ranged from 110 (0.5% of the total) in 1840 to 2,458 (5.0%) in 1920. The first synagogue was built in 1850. Following the denominational rift of 1869, the community identified itself at first as Orthodox, but three years later as Status Quo. In 1883, the Orthodox seceded and formed their own congregation, building its own synagogue in 1894. The Status Quo community inaugurated its own synagogue in 1896. The community's Jewish elementary school opened in 1865. In the early 1940s the congregations operated separate high schools. The last two rabbis of the Orthodox community, Judah Wolf and Isaac Tiegermann, and Rabbi Jacob Silberfeld of the Status Quo community died in the Holocaust. Illés Szabó, who was elected rabbi in 1941, survived and eventually emigrated to Israel.

According to the census of 1941, the last before the Holocaust, the city had a Jewish population of 2,433, representing 4.6% of the total of 52,404. After the German occupation of Hungary on March 19, 1944, the Jews were first deprived of their rights and property. They were rounded up between May 7 and 14 and placed into a ghetto that was established in the local tobacco factory and its environs. At its peak the ghetto included 3,113 Jews, of whom about 2,500 were from the city proper. The others were brought in from the neighboring villages and towns, including Bánhegyes, Békés, Ebdörd, Gyula, Orosháza, Szarvas, and Tótkomlós. In addition, the Jews from three districts in the neighboring Csanád, Arad, and Torontál county – Mezökovácsháza, Battonya, and Elek – were brought to Békéscsaba. The approximately 350 Jews from Mezökovácsháza were first placed in the local ghetto situated in the Mentelep area. The 414 Jews from villages in the Mezökovácsháza, Battonya, and Elek districts were first taken to a temporary ghetto established on the so-called Mandel farm, near Magyarbánhegyes. The ghetto of Békéscsaba was liquidated on June 25 and 26, 1944, with the deportation of the Jews in two transports: one, including the Jews of Orosháza, Kunágota, Battonya, Magyarbánhegyes, and Tótkomlós, was directed to Strasshof, Austria, where most of the Jews survived; the other, including the Jews of Békés, Békéscsaba, Csorvás, Gyula, and

Mezőberény, was directed to Auschwitz, where most of them perished.

The few hundred survivors – deportees and labor servicemen – reestablished their community after the war. But the anti-Jewish riot of November 30, 1946, coupled with the policies of the Communist regime that came to power in 1948, induced most of them to leave the city. In 1949, close to 500 Jews – 204 Neolog and 230 Orthodox – were still living in the city, but by 1968 their number had shrunk to 151. The Orthodox synagogue still exists; the Neolog was sold in 1961.

[Randolph Braham (2nd ed.)]

BEKHOROT (Heb. בְּכוֹרוֹת; “Firstborn”), fourth tractate in the Mishnah, in the order of *Kodashim*. Bekhorot is a striking instance of the weaving together of disparate strands to form a mishnaic tractate. The main unifying principle is biblical: “I consecrated every first-born in Israel, man and beast, to Myself, to be Mine, the Lord’s” (Num. 3:13). The primary theme relating directly to the order *Kodashim* concerns the firstborn of “pure” animal species: ideally, it must be slaughtered at the Temple and consumed as a sacrifice. The firstborn of the impure ass, however, must be “redeemed” or killed; a ritual of redemption is ordained for human firstborns as well (Exod. 13:13, 34:20). A separate issue is the law of inheritance, in which the firstborn is entitled to a double share.

The opening clauses of the first two chapters introduce the tractate’s two secondary subjects: the priests (*kohanim*) and the tithe of cattle. The paired clauses 1:1 and 2:1 relate the various laws concerning the firstborn to the special status of the priests, whose consecration replaced that of the firstborn Israelites (Num. 3:45). The priests are not the subject of a mishnaic tractate, (cf. *Kodashim*), but figure significantly in *Bekhorot*, above and beyond the entire chapter (Ch 7, see below) detailing the physical wholesomeness required for their service in the Temple. The ninth, concluding chapter is devoted to the cattle tithe, whose manner of consecration – by objective circumstance – is similar to that of the firstborn animal (as emphasized in 2:2). Although the chapter’s opening formula continues the series of *Hullin* 5–12, the tithing of cattle is grounded (like the following tractates, *Arakhin* and *Temurah*) in Lev. Ch. 27, which is also the source for the automatic consecration of the firstborn (Lev. 27:26, 32–3).

The fact that – unlike other sanctified things – the *bekhor* (firstborn) does not require an act of consecration is key to the tractate’s main legal issues. First, since the determinative conditions of birth may be in doubt – especially if the dam gives birth to multiple young – ownership may be contested between the original owner and the priest (who has a claim to the *bekhor*). Hence *m* 2:6–8 presents a series of tannaitic disputes regarding the disposition of this contested object, including R. Akiva’s classical dictum: “Whoever seeks to extract property from his fellow, has the burden of proof.” Second, after the destruction of the Temple, when people desisted from

consecrating animals, the firstborn – holy at birth – becomes a terrible burden. Although it can no longer be actually offered and consumed at the Temple, it still must be treated with the full care and awe due to sanctified objects and animals. The only escape allowing the priest to consume it is in case the animal happens to contract a blemish that renders it unfit as a sacrifice. Thus the Mishnah carefully determines the manner and requisite authority for examining such blemishes, as well as the specifics of the blemishes themselves.

Chapters 4 and 5 are dedicated to the procedures for examining the firstborn and to safeguards against fraudulent permissions. This becomes the classical context for broader rules about mistaken rulings and about trustworthiness in general (*M* 4:4–10). The caption of chapter 6 is: “The following blemishes are grounds for slaughtering the firstborn” – that is, for non-sacral consumption. The chapter goes on to enumerate these blemishes in anatomical detail; this is, in effect, the catalog of blemishes that invalidate an animal for any kind of sacrifice. Chapter 7 applies the same rules to humans – that is, to priests, who may not serve if there is a blemish in their body – but goes on to define several differences, including the issue of what may be called moral blemishes (*M* 7:7).

As noted above, priests figure centrally in *Bekhorot*. As God’s representatives, they are entitled to the firstborn animal, and it is from them that the firstborn Israelite son is redeemed. Chapter 8 is devoted to the human *bekhor*, “firstborn for the priest” (i.e., requiring redemption) and “firstborn for inheritance.” It opens by distinguishing the definition of the maternal firstborn for this redemption (“first issue of the womb,” Exod. 13:2, 12) from that of the paternal firstborn, entitled to a double inheritance (“the first fruit of his vigor,” Deut. 21:17).

Tosefta *Bekhorot* follows the arrangement of the Mishnah especially closely, but adds several significant expansions. *M*. 1:2 discusses scenarios in which an animal of one species gives birth to a creature resembling another species – not only with regard to the sanctity of the firstborn, but also with regard to the animal’s status as “pure” or “impure” for eating – and offers the rule: “Anything that emerges from the impure is impure; from the pure – pure.” The Tosefta’s extensive treatment of this rule (1:5–13) includes an explanation of why it is nevertheless permitted to eat honey, and a grounding of the rule in a firm biological principle that cross-species breeding is impossible. When discussing untrustworthiness, the Mishnah (4:10) emphasizes that it is context-specific. *T*. endorses this in its own extended discussion of the same topic (3:8–12), but posits an exception: “One who is suspect with respect to idolatry is [on that account] suspect with respect to the entire Torah [i.e., in all matters]” (3:12).

The Mishnah’s discussion of the “firstborn for the priest” includes several cases in which two women give birth and doubts then arise as to whether their children were exchanged (8:4–6). It is only in the Tosefta’s extended treatment of this theme (6:2–9) that the setting for these doubts becomes clear. The events are repeatedly described as having taken place “in

a hideout,” evidently reflecting the grim realities of the Hadrianic persecutions.

[Noam Zohar (2nd ed.)]

The role played by the mother in defining the firstborn for most matters leads the Babylonian Talmud to discuss the determination of a child’s birth affiliation (to tribe or nation) by its father or mother (47a). A related discussion effectively recognizes a status of Levitess – the “daughter of a Levite” – whose son (even from a father who is an Israelite) is exempted, like the son of a Levite, from the toll of the firstborn (4a).

The Book of Numbers (Chs. 3 & 8) describes the Levites’ dedicational ceremony, to serve in the firstborns’ stead; B. explains the absence of the priests from this description by affirming that they are included in the collective group of the Levites (4a). B. concludes that prior to this replacement, the firstborn were appointed in charge of sacrificial worship (4b).

In the context of halakhic discussions of animal births, B. reports a battle of wits between R. Yehoshua b. Hanania and the “Elders of Athens,” stemming from a disagreement regarding the duration of the pregnancy of the snake (8b–9a). The battle ends with the physical downfall of the Elders of Athens.

In the conclusion of its discussion of blemishes, the Mishnah (6:12) reports a debate as to whether or not androgynous and epicene (*tumtum*) animals are considered blemished. This leads B. into a lengthy discussion regarding the various possibilities to view the status of androgynous and epicene humans (41b–42b).

In the ninth chapter, the Mishnah defines the grouping of animals into a herd that should be counted and tithed together, both in terms of birthing cycles and in terms of physical spacing; R. Meir adds (9:2) that the Jordan River constitutes a boundary in this regard. B. discusses the status of the Jordan River as a border – whether it is considered part of the land of Israel, or a separate territory. B. then enters an extended discussion of rivers, focusing on the four rivers of Eden mentioned in the Creation account in Genesis (1:10–14): Pishon, Gihon and Tigris are said to be elevated above all other bodies of water; the Euphrates is the highest of all, and the source of all the world’s water (55a–55b).

BEKHOR SHOR, JOSEPH BEN ISAAC (12th century), northern French exegete, tosafist, and poet. Referred to as Joseph Bekhor Shor, he has been identified with Joseph b. Isaac of Orleans, an identification which has been proved despite the doubts of various scholars. The designation Bekhor Shor (“Firstling Bullock”) derives from the expression applied to Joseph (Deut. 33:17). He was the pupil of R. *Tam, who esteemed

him greatly and referred to him in terms of high praise. Abraham b. Joseph of Orleans, mentioned several times in *tosafot*, was apparently his son. Joseph’s commentary on the Pentateuch, parts of which previously appeared in various publications, was issued in its entirety by Joseph Gad (1956–60), while excerpts from his commentary on Psalms have been published in *Revue des Études Juives* (vol. 58 (1909), 309–11). In his exegesis, he adopted his French predecessors’ method of literal interpretation – that of Rashi, Joseph *Kara, and particularly Samuel b. Meir upon whom he largely based himself. Nevertheless, in many respects he pursued a new and original course, although in his efforts to produce novel interpretations his comments are sometimes rather strange and pilpulistic, particularly in the manner in which he relates passages to one another. He dwells at length on the biblical figures and investigates the motives for their actions but at times interprets these somewhat in terms of contemporary social conditions (Gen. 27:40). In many respects his exegesis is similar to that of the Spanish commentators, this being apparent in his efforts to explain away anthropomorphic expressions (Gen. 1:2; Num. 23:19); in defending the actions of the Patriarchs and rejecting any calumnies against them (Gen. 30:33); in interpreting miracles as almost natural phenomena (Gen. 19:26; Ex. 9:8); and in giving, to a greater extent than his French predecessors, a rational basis for the Commandments (Ex. 30:1; Lev. 19:27).

He pays little regard to grammar, nor is he as extreme as Samuel b. Meir in his homiletical comments, adding these occasionally alongside the literal interpretation (Gen. 3:24; Ex. 25:29). He makes use of *gematria* (Ex. 22:16), and at times incorporates in his comment a lengthy halakhic discussion of a passage, in these two respects being close to the exegetical method of the tosafists. He sharply opposes the allegorization of the Commandments, any neglect of which he vehemently assails (Lev. 17:13), adopting a similar attitude as regards the precepts of the *tefillin* and *mezuzah* (Deut. 6:9). This did not however prevent him from giving a literal interpretation of some passages contrary to the accepted *halakhah* (Ex. 23:19), which he naturally neither repudiates nor controverts. Joseph knew Latin, and both in speech and in writing refuted the christological interpretation of biblical passages, attacking in his comments both apostates and Christians, against whom he argued a great deal rejecting all attempts to find in the Bible allusions to Christian dogmas. He similarly repudiated their allegorical explanations that deny the validity of the Commandments. “Although they have translated the Bible from the holy tongue into the vernacular, the Lord has given them neither a heart to understand, nor eyes to see, nor ears to hear” (Num. 12:18). In his commentary on Genesis and Exodus he adds at the end of each weekly portion a brief poem in which he expresses his hopes and those of the Jewish people. He also wrote *piyyutim* in the style of the German and northern French *paytanim*, describing in them the sorrows that afflicted his generation. Several of these were published by Habermann in *Tarbiz* (vol. 9, 1937–38); others have not yet appeared in print.

Joseph of Orleans, i.e., Bekhor Shor, is mentioned in the *tosafot*; four of his halakhic questions addressed to R. Tam are preserved in *Sefer ha-Yashar*, while excerpts of many others are quoted by earlier authorities.

[Avraham Grossman]

BEKKER (Baruch), PAUL (1882–1937), German music critic and writer. Bekker started his career as a violinist and conductor in his native Berlin, and from 1906 wrote music criticism for Berlin papers and was chief music critic of the *Frankfurter Zeitung* from 1911 to 1925. He did much to promote acceptance of the works of Gustav *Mahler, Franz Schreker, and Paul Hindemith. As supervisor of the State Theater in Cassel (1925–29), and at Wiesbaden (1929–32), he continued to foster contemporary music, especially operatic. In his books on music history and aesthetics he pioneered the application of sociological criteria to the understanding of musical creation and performance. His critical biography of Beethoven (1911, first English translation 1926) is considered a major contribution to the analysis of the creative process in music. In 1934 Bekker immigrated to the United States and became music critic of the *New Yorker Staatszeitung und Herold*. His other books include biographies of Oscar Fried (1907) and *Offenbach (1909); studies of the symphonies of Beethoven (1911, Eng. trans. 1925) and Mahler (1921), and the life of Wagner (1924, Eng. trans. 1931); *Neue Musik* (1923); *Musikgeschichte als Geschichte der musikalischen Formwandlungen* (1926); *Materiale Grundlagen der Musik* (1926); *Wandlungen der Oper* (1934); *The Changing Opera*, 1935); and *The Story of the Orchestra* (1936).

BELAIS(H), ABRAHAM BEN SHALOM (1773–1853), Tunisian rabbi. At one time treasurer to the bey of Tunis, he had to leave the country following business reverses and settled in Jerusalem. For a time he was rabbi in Algiers, then, moving to Europe, he managed to secure the patronage of persons high in public life. He was appointed by the king of Sardinia rabbi of Nice, against the wishes of the community, with whom he promptly quarreled. In 1840, he went to London where before long he again got into financial difficulties and quarreled with the authorities. He was ultimately given a minor communal office and sat occasionally on the *bet din*. He published a large number of books, apart from his sycophantic odes in honor of European crowned heads and other influential persons. The following deserve mention: *Yad Avishalom* (1829), on *Orah Hayyim*; *Peraḥ Shushan Beit Levi* (1844), sermons with English translation; *Petaḥ ha-Bayit* (1846), commentary and alphabetical index to part of the Shulḥan Arukh; responsa *Afrot*

Tevel (1850); and an English translation of Ecclesiastes with his commentary. His undoubted scholarship was marred by his serious defects of character. Another Abraham (b. Jacob) Belaiḥ (d. Jerusalem, c. 1828) was rabbi in Jerusalem and wrote a number of religious works.

[David Corcos]

BEL AND THE DRAGON, two stories appearing in different versions in the Apocrypha, the Septuagint, and Theodotion; they appear as a continuation of the Book of Daniel. In “Bel,” Daniel challenged the divinity of the idol Bel, which was reputed to eat and drink. By scattering ashes on the temple floor, he revealed the footprints of the priests who secretly removed the sacrifices placed before the idol. As a result the Persian king, Cyrus, destroyed the idol and killed the priests. In “The Dragon,” Daniel caused the death of a dragon worshiped by the Babylonians, by feeding it a mixture of pitch, fat, and hair. Thrown into the lion’s den at the crowd’s demand, Daniel was miraculously unharmed and survived for a week without food, after which he was fed by the prophet Habakkuk who was miraculously transported to Babylon (see Prophecy of *Habakkuk). The king thereupon praised God and had Daniel’s accusers thrown to the lions who devoured them. The object of these stories is to portray the futility of idolatry. The suggestions that they are either a “Jewish version” of the Babylonian Marduk and Tiamat legend, or propaganda against Hellenistic idolatry, seem improbable. They appear to be popular works composed in Babylon when Bel was no longer worshiped, i.e., between the destruction of the temple of Babylon by Artaxerxes (485–465 B.C.E.) and its rebuilding by Alexander the Great (332 B.C.E.). Snakes (= dragons) were used in the Babylonian cult, and the stories were perhaps a midrashic elaboration of Jeremiah 51:34, 44. The two Greek versions seem to be translations from an Aramaic original. A version from the *Midrash Bereshit Rabbati* of R. Moses ha-Darshan (published by A. Neubauer, Book of Tobit (1878), Hebrew portion p. 39–40) as well as by Ch. Albeck (1940, p. 175) is found in the *Pugio Fidei* of Raymond *Martini (p. 957). These two versions are almost identical with the Syriac *Peshitta*. An Aramaic version of Bel and the Dragon in the *Chronicle of Jerahmeel* is based on Theodotion. A Hebrew fragment is preserved in Genesis R. 68:20 and a Hebrew version is found in *Josippon (3).

[Yehoshua M. Grintz]

BELARUS, C.I.S. republic. For the region’s earlier history, see *Belorussia.

Developments from the 1970s

In 1979 Belorussia’s Jewish population amounted to 135,400 and in 1989 to 112,000 (with 39,100 in Minsk, 31,800 in Gomel province, and 18,400 in Mogilev province). Nearly 70,000 em-

igrated in the 1989–93 period, mainly to Israel and the United States, and the Jewish population was further reduced through emigration to 27,798 in 1999 and 24,300 in 2002. The main umbrella organization coordinating all Jewish activities in the country was the Belarus Union of Jewish Organizations and Communities, operating in 20 cities, most of them with synagogues and Jewish schools. Minsk had a Jewish People's University operating as an evening school and affiliated with the Belarus State University. In 1994 a Center for Jewish National Culture was opened in Minsk, as was a Center for the History of the Jews of Belarus in Vitebsk. In all, over 100 Jewish organizations were in operation throughout the country.

One Jew was elected to the republic's Supreme Soviet in 1990. Antisemitism within the Belorussian national movement militated against its receiving support from Jewish organizations. Antisemitic propaganda was rife in such publications as *Politicheskii sobesednik*, *Slavianskie vedomosti*, *Semidnei*, *My I vremia*, and *Prognoz*. The year 1991 saw the desecration of the Jewish cemetery in Borisov and in 1994 cemeteries were desecrated in Gomel, Mogilev, and Haradok, Vitebsk region. Antisemitic incidents continued to occur sporadically throughout the decade. Right-wing organized antisemitic activities in Belarus came mainly from pan-Slavic organizations which advocated a close union with Russia and were supported by their counterparts there. Such organizations included "Slaviane" (The Slavs), "Bratsva Slavian" (Brotherhood of Slavs), "Slavianskii Sobor – Belaia Rus" (Slavic Council – White Russia). On Independence Day in 1994 about 1,000 extremist nationalists marched through Minsk bearing slogans such as 'Belarus only for the Belorussians.'

The monthly Jewish newspaper *Aviv* began to appear in 1992 and by 1993 there were five Jewish periodicals appearing in Belarus. In 1992 Rabbi Yitzhak Volpin came from New York to occupy the long vacant pulpit in the Minsk synagogue. In the spring of the same year Belarus established diplomatic relations with Israel.

[Daniel Romanowski and Michael Beizer]

BELASCO, DAVID (1859–1931), U.S. theatrical producer and playwright. Born in San Francisco, Belasco came from a Portuguese-Jewish family named Valasco. He was educated in a monastery, which may have accounted for the way he dressed later in life, a free-flowing style that earned him the epithet "the Bishop of Broadway." As a boy in Victoria, British Columbia – where his father, a one-time clown, owned a store – he joined a circus. At the age of 11 he appeared at the Victoria Theater in Charles Kean's production of *Richard III*. Working as a stage manager on the Pacific Coast, he devised

melodramas with fires and battles and a passion play with real sheep. In 1879 he went to New York, where his name became associated with sensational scenic effects. He was a pioneer in the use of electricity for stage lighting. Belasco's first melodrama, *La Belle Russe*, was produced at Wallack's Theater in 1882. He established the Lyceum School of Acting and produced successes such as *Du Barry* and *Zaza*. In 1902 he opened the first of two theaters, both called the Belasco, where he introduced innovations such as footlights sunk below stage level. His 374 productions displayed a passion for flamboyant realism. His greatest successes as a playwright were *Madame Butterfly* (1900, based on a story by J.L. Long) and *The Girl of the Golden West* (1905), both turned into operas by Puccini. Belasco's work was primarily in melodrama, and though the literary worth of his plays was slight, he was able to satisfy the contemporary demand for spectacular staging. His production of *The Merchant of Venice* (1922), with David *Warfield as Shylock, was regarded as the finest artistic achievement of his career.

BELAYA TSERKOV (Heb. שָׂדֵה לָבָן; "White Field"), ancient town in Kiev district, Ukraine, center of a fertile agricultural region. A community was formed there toward the end of the 16th century; 100 houses in Jewish ownership out of a total of 800 are recorded in 1646. The community was destroyed during the *Chmielnicki rising in 1648, and again suffered at the beginning of the *Haidamack rising in 1703. Subsequently, Jews again began to settle there, in 1765 numbering 1,876 poll-tax-payers in the town and its vicinity. After Belaya Tserkov had been attacked by the hordes under Cossack general Gonta (1768), only 223 Jewish inhabitants remained. The community increased to 1,077 in 1787; 6,665 in 1847; and 18,720 in 1897 (54% of the total population). The grain trade and sugar industry contributed to the growth of the town during the 19th century. In 1904, Jews owned 250 workshops and 25 factories engaged in light industry employing 300 Jewish workers. The Jews there suffered from pogroms in 1905. During the civil war of 1919–20, about 850 Jews were massacred in Belaya Tserkov by Ukrainian troops, bands of peasants, and soldiers of the White Army. The religious and cultural life of the community, which numbered 15,624 (36.4%) in 1926, came to an end with the establishment of the Soviet government. Under the Soviets in 1929, 240 artisans were organized in cooperatives and 3,628 were unemployed. Of these, 2,655 were sent to the local sugar refinery and 847 went to work in the nearby kolkhozes. Two Yiddish schools operated in Belaya Tserkov, one of them a vocational school. In 1939, Jews numbered 9,284 (20% of the total population). The town was occupied by the Germans on July 16, 1941. They confiscated all Jewish belongings in October, and later they assembled 6,000 Jews from Belaya Tserkov and its environs in prisoner-of-war camp No. 334, and murdered

all of them. There were 5,600 Jews listed as residents in Belaya Tserkov in the 1959 census. Its sole synagogue was closed in 1962 and thereafter Jews conducted private prayer services. During the 1965 High Holidays, militia broke into such *minyanim*, arrested participants and confiscated religious articles. In 1970, the Jewish population was estimated at 15,000. Most left in the 1990s. In Jewish folklore Belaya Tserkov is also referred to as the “Black Abomination” (Yid. *Shvartse Tume*), a play on its name in Russian (“White Church”).

BELCHATOW (Pol. **Belchatów**), small town 28 mi. S. of Lodz, central Poland, in the district of Piotrkow. Seven Jews are recorded as living in Belchatow in 1764. Jewish settlement increased after the formation of Congress *Poland. By 1897 there were 2,897 Jewish residents out of a total population of 3,859, mainly engaged in the flourishing textile industry which developed in the 19th century. In 1921 the Jewish population numbered 3,688 (59% of the total), and in 1939, 6,000, constituting one-third of the total population.

Holocaust Period

The German army took the town during the first week of the war, during the High Holidays. Many Jews dressed in *tallit* and *kittel* were humiliated in the streets and photographed by German soldiers. The Torah Scrolls and other liturgical objects were taken from the local synagogues and burned while the congregation was forced to dance around the pyre. Jewish property was looted, goods in Jewish warehouses were confiscated, and the Jews were evicted from their homes and sent on forced labor. There was no formal ghetto, but a few streets were earmarked as the Jewish district. Numerous refugees from the smaller towns and villages were crowded into this small area. Frequent German raids took place in which able-bodied men were kidnapped and deported.

The final liquidation of the Jewish community took place in August 1942 when close to 1,000 able-bodied Jews were sent to the *Lodz ghetto and 5,000 Jews were deported to the death camp in *Chelmno. No Jewish community was established in Belchatow after the war.

BELED, village in Győr county (in 1944, iKapunár district of Sopron county), western Hungary. The first Jewish settlers came to Beled in the mid-18th century, mainly from the neighboring village of Vásárosfalú. Their number ranged from 61 in 1784 to 336 in 1930. According to the census of 1941, the last

before the Holocaust, their number was 320, representing 11% of the total of 2,909. The community was organized in 1785; its synagogue and cemetery were established around 1790. A Jewish school was established in 1861 and a *hevra kaddisha* under the leadership of Lipót Kohn in 1884. The congregation identified itself as Orthodox in 1876. Among the rabbis who served the community were Joel Fellner (1902–22) and Áron Silberstein (1925–44). Organizationally, the Beled congregation also served the spiritual and communal needs of the Jews in the neighboring smaller villages, including Babot, Bogyoszló, Cirák, Csapod, Csáfordjánosfa, Dénesfa, Egyed, Garta, Iván, Kapuvár, Kisfalud, Mihályi, Szil, and several others.

In May 1944, the Jews were first placed in a local ghetto set up in and around the synagogue. The ghetto also included the Jews from the neighboring communities of Csapod, Mihályi, Páli, and Vitnyéd. At its peak the ghetto held 360 Jews. It was liquidated on June 17, when about half of the ghetto population was transferred to Szombathely and the other half to Sopron, from where they were deported to Auschwitz on July 5, 1944.

Forty-two survivors returned in 1945. Most emigrated or relocated soon thereafter; in 1968 there was still one Jewish resident in the village. The synagogue was destroyed during the German occupation.

BELEV, ALEXANDER (1900–1944), first commissar for Jewish affairs in *Bulgaria (1942–43). He was one of the founders of the antisemitic organization Ratnik and became an official of the ministry of the interior. Belev was sent in 1941 to Germany to study methods of enforcing anti-Jewish legislation and, in September 1942, he became head of the Commissariat for Jewish Affairs. He collaborated closely with Dannecker, *Eichmann's representative in Bulgaria, with whom he signed an agreement on February 22, 1943, to deport 20,000 Jews. Belev implemented the antisemitic “Law for the Protection of the Nation” (which had been passed on December 24, 1940) with cruelty and sometimes exceeded his authority in order to gain his end – the deportation of all Bulgarian Jewry, but he succeeded only in deporting “to the East” the Jews from the Yugoslav and Greek territories under Bulgarian military occupation. His wide powers earned him the nickname “King of the Jews.” When Bulgaria was conquered by the Soviet Army in September 1944, Belev attempted to flee with the Germans, but he was caught by the militia and disappeared without a trace. He was sentenced to death in absentia by a People's Court in Sofia in 1945.

BELFAST, capital of Northern Ireland. The earliest reference to Jews in Belfast dates from 1652. Mention of a “Jew Butcher” in 1771 suggests the existence of the nucleus of a community. Jews are again recorded in the 1840s. D.J. Jaffe, who settled in Belfast in 1851, established a congregation in 1869 and built its first synagogue in 1871–72. Joseph *Chotzner was the first minister (1869–80; and again 1893–97). After 1881 the community increased with the arrival of Jewish refugees from Russia. These at first formed their own congregation but in 1903 joined the main congregation. A municipal Jewish elementary school was established in 1898. Sir Otto *Jaffe, twice lord mayor and once high sheriff, served for many years as the congregation’s president and built its second synagogue in 1904. Isaac *Herzog served as rabbi of Belfast from 1915 to 1919, followed in 1926 by Jacob Shachter, and in 1954 by Alexander Carlebach (who served until 1965). In 1967 the Jewish population numbered about 1,350. In that year, a new synagogue building was consecrated. In the mid-1990s the Jewish population dropped to approximately 550, and in 2004 to about 500. An Orthodox synagogue and a Jewish community center continue to exist.

BELFORT, capital of the territory of Belfort, eastern France. A grant of privilege conferred on the city in 1307 authorized Jewish residence. Persecutions of Jews living in Belfort are recorded in 1336. They were subsequently expelled and readmitted in 1689. During the French Revolution anti-Jewish excesses took place in the region, but the Jews in Belfort remained unharmed. The Jewish population increased considerably after the Franco-Prussian war (1870–71) with the arrival of Jews from Alsace-Lorraine (then annexed to the German Empire) who wished to remain French.

Holocaust and Postwar Periods

The Belfort Jewish community was destroyed under Nazi occupation. Out of a total of 700 Jews, about 245 were killed. A monument bearing the names of those who perished was erected in the Jewish cemetery after the war. The community was rebuilt after World War II, and together with the Montbeliard Jewish community it numbered 1,200 in 1987. It had a synagogue with an acting minister, a communal center, a network of institutions, and a quarterly bulletin.

BELFORTE, SOLOMON (1806–1869), printer of Leghorn. Belforte belonged to an Italian Jewish family that settled in Leghorn (Livorno) at the end of the 17th century. He started to edit Hebrew prayer books in 1821 and established his own

printing house in 1834. In 1843, the local government authorized the printing of Italian translations of Hebrew liturgical texts. The activity of Salomone Belforte & Co. was continued by the family – with the forced hiatus of the period of Fascist antisemitic laws and the war – until 1961, when all the equipment of the printing house was sold to an Israeli company. For almost 100 years, Salomone Belforte & Co. was one of the most prestigious publishers of Hebrew books, meeting the intellectual and religious needs of Italian, Sephardi, and also Ashkenazi communities. Beside this, the Belforte printing house published Italian literary works and school books.

BELGIUM, West European kingdom.

The Medieval Community

Jews first appeared in the southern Netherlands during the early 13th century, although the exact date of their settlement there cannot be ascertained. They arrived from the east, most probably from the large Rhenish communities, and did not migrate further south than *Brussels and Mechlin (*Malines). Most of the immigrants settled along, or within proximity of, the Cologne-Bruges axis. Jews are mentioned in Jodoigne (in Brabant province) in about 1200; in Louvain, where a small community lived precariously, in about 1220; in Tirlémont in about 1230; and in Brussels shortly before 1260. In his will (1261) Duke Henry III ordered that “all Jews and usurers be expelled from the province of Brabant. They are to be totally extirpated until not even one remains, unless they undertake to engage in commerce after the fashion of other merchants and agree to cease their practice of moneylending and usury.” Apparently their expulsion was not implemented. When consulted, Thomas *Aquinas recommended that the Jews should be taxed moderately, so as not to deprive them of the necessary means to lead a decent existence. He added that it was preferable to compel them to earn their livelihood by manual labor rather than become wealthy by the practice of usury. The fact remains that they were not disturbed in any of their occupations. The organization of a crusade in 1309 brought this comparative tranquillity to an end. After the massacre of Jews in Louvain who had refused baptism, Duke John II took the survivors under his protection. Jews later returned to Louvain, and in 1311 had their own rabbi. The number of Jews throughout Brabant during this period was not large.

As a result of the expulsion from France in 1306, a number of exiles found refuge in the province of Hainaut. They were scattered in about ten localities, the community in Mons being the most important. In 1326, a converted Jew was put to death in Cambron, on a charge of stabbing an image of the Virgin. In 1337, the count of Hainaut renewed his protection of the Jews. A census on this occasion showed 18 Jewish families, comprising 35 adults. They subsequently scattered in other cit-

The Jewish communities of Belgium.

ies in Hainaut, but their numbers remained small. The *Black Death (1348–49) calamitously disrupted the existence of these communities. Accused of having introduced the plague by poisoning the wells, the Jews were either massacred by the populace or executed by the authorities. Almost all the Jews in Brabant were put to death. In Brussels the community ceased to exist. The massacre may have spread to *Antwerp, and few communities in Hainaut remained unscathed.

Thus the Jews disappeared almost completely from Hainaut. In Brabant, however, tiny communities were reestablished. There were seven families living in Brussels in 1368 and two in Louvain. In 1370 the Jews in Brussels and Louvain were accused of desecrating the Host, and after confessions extracted by torture a number were burned at the stake. The Jews thus disappeared also from Brabant. The role and number of the Jews in medieval Belgium were unimportant. Mainly petty moneylenders, their restricted numbers prevented them from wielding any influence in the economic life of the country. They were generally regarded as foreigners and as such exposed to violent hostility.

The Resettlement Period

It is only in the early 16th century that Jews again appeared in the southern Netherlands. At that time, Portuguese merchants made their way to the north, attracted by the economic development of the Netherlands, first to Bruges and then to Antwerp. Possibly the majority of them were *Marranos whose presence was sanctioned by a safe-conduct accorded to the New Christians in 1526. The newcomers consolidated their presence in Antwerp, notwithstanding a number of inconsistent measures concerning them. For a number of them, such as the future Duke of Naxos, Joseph *Nasi, or the physician *Amatus Lusitanus, Antwerp was only a place of transit en route to the hospitable Turkish haven. The Marrano population of Antwerp gradually increased with the intensification of their persecution in Portugal. However, with the establishment of an open Jewish community in *Amsterdam, the main

tide of Marrano settlement was diverted to that place and to Holland generally. On the other hand, the Dutch Jews now not infrequently visited Brussels or Antwerp, sometimes for prolonged periods, without suffering serious inconvenience. When Antwerp came under Austrian rule in 1713, the community was at last able to profess Judaism more openly. With the occupation of the Netherlands by the French revolutionary armies in 1794, Jews were able to settle freely in Brussels and Antwerp. From the early 18th century, there was also a slight immigration of Ashkenazi Jews to Belgium. The authorities took care to limit their numbers by the imposition of special taxes which aroused vehement protests by the Dutch Jews, who rejected this attempt at discrimination.

Under French domination, Belgian Jewry, which then numbered some 800 persons, was incorporated into the *Consistory of Krefeld; the administrative framework disappeared with the downfall of Napoleon's empire. The principal communities in Belgium at the time were in Antwerp, Brussels, Herentals, Liège, and Mons. From 1831, once Belgian independence was achieved, the Jewish religion received official recognition, religious freedom being an integral part of the constitution guaranteed by the Concert of Europe. However, the synagogue councils were not officially recognized until 1870. The organization of Belgian Jewry remained strongly influenced by the Napoleonic prototype. Centralized in Brussels, it was administered by the Consistoire Central Israélite de Belgique.

Throughout the 19th century, Belgian Judaism developed on the French pattern. At the end of the century, however, as a result of the influx of immigration from Central and Eastern Europe, Belgian Jewry underwent a process of bipolarization which has lasted to the present day. Brussels was the center of French influences while in the Antwerp community Yiddish influences, and accessorially Flemish, were equally strong; occasionally conflicts arose between the two. In 1900, Antwerp numbered some 8,000 Jews, the greater part intending emigrants en route to the United States. The sudden impetus given to the diamond industry by the discovery of mines in South Africa opened numerous possibilities of employment in Antwerp. After an interruption during World War I, when part of the Jewish population migrated to Holland, the Jewish community again began to grow. Massive immigration to Antwerp, as well as the local particularism, rapidly resulted in a marked difference in character between Antwerp Jewry and the main body in Belgium, not only from the economic aspect, but also from the aspect of Antwerp Jewry's anxiety to retain the traditional forms of Jewish life. The Antwerp community resisted assimilation with more success than neighboring Brussels. This was also due to the care taken to ensure that almost every child should attend a Jewish school. The Jewish community of Antwerp remained faithful to its East European origins and was rightly considered as a bulwark of European Judaism. The Brussels community, as well as the smaller communities, had also benefited from a strong nu-

merical contribution from Eastern Europe, but this had little effect on its structure or character. The Belgian government's restrictive naturalization policies encouraged the continued cohesion of the Antwerp community, whose members represented some 75% of the local manpower employed in the diamond industry and commerce.

[Simon R. Schwarzfuchs]

Holocaust Period

The study of the Holocaust in Belgium has been complicated by lack of unified research and by contradictory accounts. Furthermore, as the Belgian Constitution does not allow any mention of religion in documents of civil status, exact official data are lacking.

When the German army invaded on May 10, 1940, between 90,000 and 110,000 Jews lived in Belgium, among whom there were probably about 20,000 German refugees. Only 5–10% of the Jews in Belgium were of Belgian nationality, while the majority of Jews who immigrated to Belgium from other countries had to remain foreign nationals. Antwerp had at that time at least 55,000 Jews, forming Belgium's largest, and economically, socially, and culturally most closely knit Jewish community, and thus suffered more heavily than the loosely knit community in Brussels (at least 35,000) and the other smaller communities: Charleroi, with at least 2,000 Jews; Liège, 2,000; Ghent, 300; and Namur, 50. At the time of the invasion, the adult males among the German-Jewish refugees were treated as suspect aliens although many had volunteered for the Belgian Army. They were rounded up by the Belgian police and interned in the Gurs camp in France. Their families remained behind, many reliant on the social welfare committees of the Jewish communities.

The majority of Jews in Belgium fled the country, mainly southward toward France. Some managed to escape German occupation and emigrated overseas; others were overtaken by the German armies and ordered to turn back. Many who reached unoccupied France were lured back to Belgium a few months later in accordance with Nazi policy at the time to assuage the fears of the Jews and prevent the rise of antagonism among the non-Jewish population. Belgium capitulated on May 28, 1940, and was held under military rule until the liberation in September 1944. The German military occupation set up a Belgian administration in charge of civilian affairs, which was instructed by the Wehrmacht to carry out anti-Jewish measures. This situation was more favorable than that for the Jews in the *Netherlands, where the *Gestapo was in charge of carrying out anti-Jewish measures. The anti-Jewish policy was executed in two stages. The preparatory phase circumscribed the Jewish population, ordered their geographic fixation, and brought about gradual economic and social paralysis. The exterminatory phase, which began on July 22, 1942, consisted of labor call-ups, followed by roundups and razzias for internment in the Dossin assembly camp near Mechlin (Malines). From there, the inmates were deported to extermination camps in the east.

The succession of edicts followed that in other Nazi-occupied countries, though what the Germans termed the "lack of understanding of the local population," and the courageous and well-supported Jewish resistance did slow up the persecution somewhat. The tragic and still not forgotten experience in Belgium of German occupation during World War I brought about more immediate and efficient resistance than in the Netherlands. The first edicts were issued in October 1940. Ritual slaughter was forbidden (Oct. 23, 1940). The first sign of racial discrimination was the ordinance of Oct. 28, 1940, which defined who was a Jew and prohibited the further return of Jews to Belgium. It required all Jews above the age of 15 to register at the communal administration and have the letter J stamped on their identity cards. The registration affected about 42,000 Jews; apparently 10,000–13,000 Jews did not register at all. Jewish property had to be registered, and was not transferable. Notices of Jewish ownership in three languages (Flemish, French, and German) had to be posted. Jews in the fields of law, education, and communication were prohibited from practicing their professions. The first protest was raised by the Belgian associates of Jewish professional men and the Belgian administration in the case of discriminatory legislation bearing on Jews in the professions. They objected to the anti-constitutional character of the anti-Jewish legislation and claimed they were unable to carry it out. The Belgian government in exile, residing in London, laid down a decision on Jan. 10, 1941, that all laws imposed by the German occupation which contradict the Belgian Constitution would be annulled at the time of liberation.

In 1941, further edicts were issued to restrict and paralyze Jewish life: edicts for confiscation of radios (May 31); enforced declaration of bank holdings (June 10); prohibition against residing outside the four large cities of Antwerp, Brussels, Liège, and Charleroi (August 29); and a curfew between 8 P.M. and 7 A.M. (August 29). On Nov. 25, 1941, the German military commander for Belgium and northern France ordered the formation of a Judenrat, called Association des Juifs en Belgique (AJB), under the pretext of organizing Jewish social welfare for the community and furthering Jewish emigration. A national committee of seven representatives was to encompass all Jews and take over existing Jewish bodies and their property. Rabbi T.S. Ullman, the only rabbi of Belgian nationality, accepted the presidency only after consultation with high Belgian authorities. Local committees were formed in Brussels, Antwerp, Charleroi, and Liège. Although no documents attest to the modes of constitution of these committees, there are indications that the Germans held sway over the choice of their members. In the course of time, the members of the AJB committees were utilized by the Germans as a front for carrying out their own aims. On Dec. 1, 1941, the Judenrat was ordered to set up an educational system for Jewish children who were expelled at that time from the public schools by the Germans.

The AJB was ordered to hold another census of the Jews and, by March, forced to take charge of the distribution of call-

ups to be accompanied by covering letters pressing for conformance to the orders. In September 1942, the AJB leaders were interned in the concentration camp of Breendonck and charged with insufficient diligence in carrying out German orders. The AJB president was released after a week and resigned. Razzias now replaced call-ups, and the AJB's job was largely limited to mitigating the suffering of the deportees. Officially, however, they were permitted to continue their activities. They set up children's homes and old-age homes, and their employees and administrators were "protected," i.e., not liable for deportation. The underground took advantage of this status by introducing some of its people into positions within the AJB and utilized its resources, despite all the risks involved.

On May 27, 1942, the Nazis issued an order for every Jew to wear the yellow badge. The Belgian administration refused to promulgate the order and the Germans were forced to do it themselves, but a few days later they imposed the task on the AJB. The Belgian population showed its hostility to this discriminatory measure, expressing its sympathy in various ways. By June 1, 1942, Jewish doctors, dentists, and nurses were forbidden to practice on gentile patients. Previously (March 2 and May 8), forced labor for the Nazi organization Todt had been imposed theoretically on all the unemployed, but was in fact aimed at the Jews, who had been evicted from all economic pursuit. The underground issued pleas not to submit to these labor call-ups. By July 1942, summonses were issued to unemployed Jews to report to Malines for "work in the east." At first the summonses were meekly obeyed, but the resistance movements' warnings started taking effect and people went into hiding. As the call-ups provided insufficient numbers of "volunteers," the Germans commenced their razzias. The first convoy of 1,000 Jews left on Sept. 2, 1942. Within five weeks, 10,000 had been deported. Later, the deportations slowed down. By July 31, 1944, 25,631 victims had been deported in 31 convoys. Only 1,244 of the deportees returned after the war. Belgian leaders, among them the queen mother Elisabeth and Cardinal van Roey, intervened on behalf of the small number of Jews of Belgian nationality, and the Germans agreed to omit them from expulsion as long as they would not transgress German laws. This show of tolerance was short-lived. On Sept. 3, 1943, Jews holding Belgian citizenship were all rounded up and deported.

Resistance

The Jewish population required time to organize resistance. Some Jews individually joined the ranks of the Belgian underground. But after the dissolution of Jewish organizations, the former social and political groups started regrouping, mainly for the purpose of mutual social help. Anti-fascist elements grasped the significance of the persecutions sooner and formed a group of about 70 Jewish armed partisans, many of whom fell in the line of duty. An estimated 140 fell, including those who fought as individuals in the general armed resistance. The Committee for Jewish Defence (CDJ), recognized officially after the war as a civilian resistance group affiliated

to the Front de l'Indépendance) comprised a complete range of Jewish groups and individuals. It soon realized the need to hide Jews, and called upon all the Jews to resist and disobey any German edicts as well as instructions from the AJB. The Committee developed a vast, well-organized network of activity for hiding children (an estimated 3,000 children were thus saved) and adults (an estimated 10,000). In fact, in Belgium a high proportion of Jews was saved compared to other occupied countries. Places of hiding, identity papers, food ration tickets, and money were obtained, and escape routes established toward Switzerland and Spain. The cultural aspect of the Jewish resistance groups was remarkable. They distributed information and propaganda material, established a lending library, and maintained a Jewish illegal press. The Yiddish paper *Unzer Vort* appeared 28 times, and *Flambeau* in French and the *Vrije Gedachte* in Flemish appeared with the help of the Belgian illegal press.

Contacts were made with numerous non-Jewish organizations that helped, including Oeuvre Nationale de l'Enfance, Jeunesse Ouvrière Catholique, the Red Cross, a number of Catholic institutions, and underground resistance movements. As time went on, more and more money was needed to keep alive those in hiding. Millions of francs were contributed by local Jews and non-Jewish organizations and credit was allotted. Later, large sums were secretly obtained through Switzerland, and some came from the Belgian government-in-exile. A number of people managed to escape from deportation trains in a feat unique to occupied Belgium. The 20th convoy departing on April 19, 1943, was attacked in a well-organized action initiated by the CDJ together with Georges Livchitz and partisans of Group "G" (an armed resistance group). It enabled several hundred to escape, although many of them were caught or killed by the Germans. Another Jewish underground group, the Ninth Brigade, was organized under the aegis of the Mouvement National Belge, a more rightist group. A little-known and rather circumscribed resistance activity was carried out by the federation of the Zionist parties, which succeeded in obtaining through Switzerland a few immigration certificates to Palestine which protected the holders from deportation. At one point (1941–42) a *hakhsharah* (agricultural training program) for members of Zionist youth movements was provided. According to partial studies and reports by former participants, there were innumerable cases (not generally known) of underground activity, including armed attacks on collaborators, sabotage, and withdrawing those children in hiding who were exposed and in danger of arrest by the Gestapo.

The Catholic Church on many occasions intervened on behalf of the Belgian Jews through the work of Cardinal van Roey, who acted mainly through his secretary Canon Leclef. On Aug. 4, 1942, he alerted the Vatican to the inhumanity of the racial laws, pointing out that even Catholics of Jewish origin were affected. The Church was largely efficacious through its request to Catholic institutions to hide Jewish children and to refrain from baptizing them, unless specific permission was given. When the German-Jewish refugees in Antwerp were

deported at the end of 1940 to the province of Limburg, the priests instructed the local population to help them. When the Jews were compelled to wear the yellow badge, priests denounced this discriminatory act and elicited the sympathy of large parts of the population. The Belgians made attempts to allay Jewish suffering, though prior to the invasion, the Germans had encouraged Flemish nationalism and separatism and fanned antisemitism. For this reason the persecutions met with greater success in the mostly Flemish Antwerp region.

[Rivka Irene Banitt]

Early postwar years

In 1945 the Jewish population was composed of those who had remained in the country, had returned from exile, or were liberated from prisons and camps. Until about 1955, thousands of Jewish refugees from Eastern and Central Europe resided in Belgium for a limited time, awaiting immigration permits to other countries of permanent settlement. In the 1960s both emigration and immigration considerably decreased. The number of Jews in Belgium in 1970 was about 40,000. This population, essentially urban, was distributed approximately as follows: Brussels, 18,000; Antwerp, 12,000; Liège, 1,000; Charleroi, 500; Ghent, Ostend, and Arlon, 1,000; the remainder was dispersed among other cities. As the Jewish population became stable, social and economic integration within Belgian society improved in many respects. It was not especially difficult to obtain citizenship, and a great number of immigrants and their descendants were therefore Belgian citizens. Although many arrived in the country without independent resources, within a short period they displayed great social mobility. The majority came to belong to the middle class and were active in the fur and textile industry, wholesale and retail trade, crafts, and the manufacture of clothing and leather goods. Antwerp Jewry has been professionally concentrated for a long time in the diamond industry and trade. Since the end of World War II, more young people have undertaken university studies, resulting in the growth of the professional and white-collar classes. Though the country's economic progress benefited the Jewish population, there was still a small number of underprivileged persons and social cases, most of whom were cared for by the community. The favorable attitude of the government and communal authorities, as well as the population as a whole, facilitated the integration of Jews in Belgium, though from time to time in the first two decades after World War II certain manifestations of antisemitism were provoked by small factions of the extreme right.

The Jewish religion is legally recognized along with the Catholic and the Protestant religions. Belgian laws also guarantee public Jewish worship. In 1970 there were 12 recognized Jewish communities in the country: four in Brussels, three in Antwerp, and one each in Liège, Charleroi, Ghent, Ostend, and Arlon. Two of these communities were Sephardi, the others Ashkenazi. The rabbis, cantors, and synagogue boards were elected by the members of the community. Each community has proportional representation at the Consistoire Central

Israélite de Belgique, which represents the communities in their relations with the state. Though this institution, of Napoleonic origin, supervises the administration of synagogue properties and examines their budgets and accounts, it generally does not intervene in their internal affairs but is called to ratify the nomination of rabbis and *hazzanim*.

Until 1980 the chief rabbi was appointed by the Consistoire to act as the supreme authority on Jewish religious affairs. Since that time the post has been formally vacant, though Albert Guigui, rabbi of Brussels from 1983, acted as rabbinic adviser to the Consistoire and in effect fulfilled the function of chief rabbi. In addition, at the outset of the 21st century, four government-recognized regional rabbis, including Guigui, were in office. Cultural differences between communities represented in the Consistoire were evident. Some older communities reflected many formal aspects of the Reform movement, which spread through Belgium during the 19th century, but whose influence was reduced by East European Jews. The result of the contact between the two elements was the widespread practice of Conservative Judaism. Other communities remained faithful to an Orthodoxy imbued with Yiddish Ashkenazi traditions. In spite of the differences, most blatant in the contrasting character of the Brussels and Antwerp communities, the Consistoire preserved a sense of unity. The state paid the salaries of the regional rabbis, cantors, and state-recognized teachers who provide religious instruction in public primary, secondary, and technical schools throughout the country. The state also subsidized Jewish day schools in which courses of Jewish content were taught in addition to the compulsory general curriculum. The state's contribution to various religious and educational institutions illustrates concretely the recognized position of the Jewish religion, which gives observant and nonobservant Jews a feeling of security and confidence.

About 100 Jewish organizations, either revolving around the recognized communities or developing on the fringe, are active in every facet of Jewish life. The main types of organizations are welfare and philanthropic, Zionist and pro-Israel, communal bodies, youth movements, and independent religious, political, cultural, and sports-oriented groups. Welfare and philanthropic organizations are united for fund-raising purposes in Brussels and are absorbed into a central body in Antwerp. These two centralizing institutions collaborate at the national level in La Conférence Permanente des Oeuvres Sociales Juives de Belgique. Youth movements are grouped in La Fédération de la Jeunesse Juive de Belgique. Very influential before the war, the Zionist Federation of Belgium continues to concern itself with the renewal of its structure and with the aim of expanding its membership; but since the creation of the State of Israel, the distinction between Zionists and non-Zionists within the community has lost much of its acuteness. Indeed, most Belgian Jews express their support of Israel, and for many of them it has developed into a component of their identity. Manifestations of this support are shown in various ways: financial contributions, collective trips to Israel, the

study of modern Hebrew, and hosting Israel experts on communal and educational matters. The favorable attitude toward Israel is widely shared by non-Jews as well. During the Six-Day War (1967), non-Jews walked side by side with Jews in public demonstrations to proclaim solidarity with Israel, and the Belgian press as a whole supported Israel's point of view.

[Max Gottschalk / Willy Bok]

Later Developments

The Jewish population of Belgium in 2002 was estimated at 31,400, equally divided between French and Flemish speakers, with around 15,000 Jews each in Brussels and Antwerp and the rest in such shrinking communities as Liege, Charleroi, Arlon, Mons, Ghent, and Ostend.

COMMUNITY LIFE. An important merger of community organizations began in 1971 to unify divergent organizations under a central umbrella organization, which would serve as spokesman for Belgian Jewry. As a result, in 1977, 21 Belgian Jewish organizations banded together, as well as the communities of Liege, Charleroi and Ghent. In September 1977 the Coordinating Committee and the Belgian Section of the World Jewish Congress merged into the Coordinating Committee of Belgian Jewish Organizations, affiliated with the WJC with the president of the Belgian Section as its head. By 2002 it had 41 members and, together with the Consistoire, was recognized as an official representative of the Jewish community for political matters. A parallel organization, Forum oder Joodse Organisaties, founded in 1994 and based in Antwerp, represented Flemish-speaking Jews before the authorities.

The Consistoire remained the central authority for Belgian Jews in religious matters, with 16 member congregations in 2002. In all, around 50 synagogues and places of worship were in operation (around 30 in Antwerp). A Jewish chapel opened (1986) at the Brussels international airport, following the request of Orthodox travelers. Religious life continued to be much more intense in Antwerp with its largely Orthodox population than in Brussels. However, starting in the late 1980s Brussels witnessed a strengthening of its more traditionalist religious life – the creation of two new Orthodox communities, the suppression of the organ and the mixed choir at the principal synagogue, the opening of a kosher restaurant and a yeshivah. The Israelite Community of Waterloo and of Southern Brabant, which belonged also to this current, was recognized (1992) by the Cult Administration only four years after its creation. The new congregation is the result of changes in the urbanization of the Brussels area; its membership consists largely of English-speaking expatriates. The Liberal congregation has grown steadily and in 1984 founded its own burial society with its own cemetery.

A reorganization of the Belgian Zionist Federation took place in 1976. Following an intensive nationwide membership campaign in 1975–76, some 5,000 Jews enrolled as members of the Zionist Federation, which has branches in five com-

munities, all of which were directly represented on the directorate.

The World Conference of Jewish Communities on Soviet Jewry convened in Brussels in 1971 and 1976. The congress was hosted by the Coordinating Committee of Belgian Jewish organizations, the Jewish Secular Community Center of Brussels, and the National Belgian Committee for Jews in the Soviet Union. The congress, sponsored by the World Zionist Federation, World Jewish Congress, B'nai B'rith, the Public Councils for Soviet Jewry, the Conference of Presidents of Major Jewish Organizations in the United States, and various national committees for Soviet Jewry, was attended by 1,200 representatives from 35 countries throughout the world, and hundreds of leading Jewish and non-Jewish personalities.

Jewish education in Belgium continued to benefit from the national educational system, providing for diverse religious studies in all State schools where a significant number of parents request them. Such classes are attended by 60 percent of Jewish public school children in Brussels and 30 percent in Antwerp. Though paid for by the State, teachers are hired by the Consistoire and supervised by its religious inspectors. In addition, the State subsidizes the general curriculum of Jewish day schools, attended by around 7,000 children in the early 2000s. There were three such schools in Brussels (Maimonides Athenaeum, Ganenou Athenaeum, Beth Aviv) with around 2,000 children, and three in Antwerp (Tachkemoni, Yesode Hatora, Yavne) which together with a number of ḥasidic *ḥadarim* and some other institutions accommodated around 5,000 children. Extracurricular studies were conducted through the community *talmud torah* in Brussels and youth groups at the community centers, and through the Zionist youth movements. Adult Jewish education continued to improve, with Hebrew courses taught in conjunction with the Jewish Agency. The Ministry of Education also largely supported a free faculty of Jewish studies called "Institut Universitaire d'Etudes du Judaïsme" founded in 1972 and operating under the auspices of the Brussels Free University, which since the academic year 1986–1987 has recognized Institut degrees in Jewish history, thought, and civilization. The Flemish section (created in 1983 at the Vrije Universiteit te Brussel) was later moved to the Instituut voor Joodse Studies in Antwerp.

POLITICAL DEVELOPMENTS. In December 1974, the Volksunie Party submitted a bill to Parliament granting amnesty to former Nazi collaborators. The bill was strongly opposed by the Belgian Jewish community, led by the national Jewish organizations of ex-servicemen, former resistance fighters, and deportees, as well as by their Christian counterparts, and on March 25, 1976 the bill was defeated by a vote of 98 to 81 with 3 abstentions.

Belgium has been the site of a number of Arab terrorist attacks on Jewish or Israel-connected objectives. In 1979 there was an attempted attack on El Al passengers at Brussels airport. In July 1980 a hand grenade was thrown into a group of children about to leave Antwerp for summer camp; one

boy was killed and others were injured. In October 1981 a car bomb exploded in Antwerp near a small Sephardi synagogue shortly before services were to begin; over 100 passers-by were injured, two of them fatally. There was vociferous public protest over these incidents.

After the municipal (October 1988) and European elections (June 1989), the general elections (October 1991) confirmed the success of the right-wing parties by electing politicians openly against immigration as well as against Jews (in Antwerp 20 percent of the population voted for them). This was not a specifically Belgian phenomenon but an international one, as was stressed at the conference of the World Jewish Congress held in Brussels in July 1992, called "My Brother's Keeper."

Also giving rise for concern were the killing in 1989 of Professor Joseph Wybran, president of the political body of Belgian Jewry; the release (July 1990) of a Palestinian terrorist in exchange for the freedom of four Belgian hostages held by the Abu Nidal group; and antisemitic slogans painted on walls. All these events brought protests from Jewish bodies to the government, which reacted positively.

Antisemitic outbursts became particularly widespread with the onset of the second Intifada in Israel in 2000, which, coupled with pro-Palestinian terror throughout Europe and the local anti-Israel press, made life for Belgium's Jews distinctly uncomfortable. Among the incidents recorded in the early 2000s were the firebombing of synagogues, including rifle fire in one case, and Nazi and antisemitic graffiti. In 2001 Rabbi Guigui was attacked in the street by young Muslims of Moroccan origin.

INTERFAITH RELATIONS. Jewish-Christian relations remained essentially cordial. The Consistoire worked together with the National Catholic Commission in Belgium, a sub-committee of the National Commission for Ecumenism, and the Belgian Protestant Council for Relationship between Judaism and Christianity, sponsored by the Federation of Protestant Churches in Belgium. A regular interfaith scholastic dialogue, "Institutum Judaicum," was conducted as well as more general lectures and study groups on Judaism, and an Interfaith Bulletin published.

Following the end of the Carmelite Convent affair in Auschwitz (August 1993), a Judeo-Christian Consultation Group was organized. It had to deal with two exhibitions illustrating anti-Jewish prejudice like the Bible des Communautés Chrétiennes which was uncovered by a researcher of the Leuven Catholic University.

As to the Israel-Vatican Agreement, it was in Brussels that the World Jewish Congress held a seminar with the main negotiators (Monsieur Celli from the Vatican and Israel's Deputy Foreign Minister Yossi Beilin) to assess the situation one year later (December 1994).

From December 1985 to May 1993 the "Yarden affair" provided a bad image in the media of the ḥasidic community and of the Jews. Thanks to the work of the FBI, the three chil-

dren born of a mixed marriage and kidnapped by the father (a member of the Satmar ḥasidic group) before he was put in a Brussels jail were given back to their mother.

On the official level the Consistoire also maintained cordial relations with Muslim representative bodies in Belgium.

REMEMBERING THE HOLOCAUST. Holocaust consciousness was heightened among Belgian Jewry. The case of the Carmelite convent in Auschwitz (see *Auschwitz Convent) was first taken up in Belgium. Actions around this affair froze official interfaith relations, although in 1993 a "Committee of Consultations between Jews and Christians in Belgium" was set up. After the publication of Professor M. Steinberg's thesis on "The History of Jews in Belgium between 1940 and 1944," an international colloquium on "The Holocaust Period in Belgium" was organized in Bar-Ilan University in Israel (1989). Belgium television (French and Dutch channels) produced and broadcast several documentaries on this subject followed by discussions.

As approximately 20,000 Jews were hidden by Christians during the last period of the Holocaust, several memorials were opened in remote places by different associations, one of which, the Belgian Hidden Children Association, helped organize the first congress in New York on this subject.

The 50th anniversaries of several historical events were commemorated by impressive ceremonies attended by thousands of Jews and non-Jews. For the 45th celebration of VE-day, King Baudouin attended a gathering in the Jewish National Memorial; it was the first time in the history of Belgium that the ruling king ever came to a Jewish monument.

Paradoxically the right-wing political successes occurred during the period of the 50th anniversary of the events linked to the end of the World War II. From King Albert II, who attended the opening of the museum in Mechelen (May 7, 1995) to his son Philippe, who was at the commemoration of the Warsaw Ghetto and the attack of the xxth convoy (April 1993), from the prime minister, who visited Auschwitz with a former Jewish Belgian deportee (January 1995) before the official pilgrimage (March 1995), to the Ministry of Education, which launched a nationwide campaign entitled "Democracy or Barbarism ... 50 Years After," everyone tried to do something to remember what had happened 50 years before. Numerous exhibitions attended by millions of people, TV series, books, new plays, movies, operas, and classical music programs were presented on the subject. Most of the time the fate of the Jews was underlined.

A memorial to Belgian Jews who perished in the Holocaust was dedicated in Antwerp (November 13, 1994).

The first European meeting of hidden children was organized at the University of Brussels (April 30–May 1, 1995) and three ceremonies were held for Righteous Gentiles during 1995.

Belgium also created a commission in 1997 to investigate the fate of Jewish assets seized during the war. Subsequently, in

2001, a National Commission for Restitution was established to examine claims and facilitate compensation.

[Daniel Dratwa]

Relations with Israel

Important circles in Belgium displayed sympathy for Zionism and supported the struggle of the Zionist movement almost from its beginning. Noteworthy were the active support of Queen Elisabeth and various Socialist leaders, including Emile Vandervelde, Camille Huysmans, de Brouquère, and Paul Henri Spaak. On Nov. 29, 1947, Belgium voted in the UN in favor of the establishment of a Jewish state and it was among the first countries to establish diplomatic relations with Israel (de facto Jan. 31, 1949, and de jure in January 1950). These relations were subsequently elevated to the ambassadorial level. The Israel ambassador in Brussels is also accredited in Luxembourg, which is tied to Belgium through a customs' pact, and is attached to the European Economic Community, whose seat is in that city. Trade relations between Belgium and Israel developed satisfactorily and tourism also increased, reaching 8,000 people in 1968. Belgium filled a specific role in Israel's foreign relations because of its special position in the process of European integration and the fact that Brussels had become a sort of "capital of Europe." Many of Israel's diplomatic efforts directed toward the European Community passed through Belgium, which was either a host or an active participant in the creation of the new European identity. The official ties between the two countries included the visit of Queen Elisabeth and a short visit of King Baudouin, which was mainly a pilgrimage to the Holy Land, and the visits of President Izhak Ben-Zvi and prime ministers David Ben-Gurion and Levi Eshkol to Belgium.

[Yohanan Meroz]

During the 1970s trade between Israel and Belgium continued to grow. Exports from Belgium (including Luxembourg) to Israel rose from \$115 million in 1972 to \$404 million in 1980, while imports from Israel rose from \$49 million to \$236 million. By 2004 the figures were \$955 and \$695 million, respectively, excluding diamonds. The movement of diamonds between the two countries reached \$5.5 billion.

In March 1992, elections were held in Belgium to the Zionist Congress: 3,140 voted (25 percent more than in 1987). The results showed a shift to the right, possibly because the leader of the left was involved in organizing a meeting with Palestinians. The anti-Israel feelings prevailing in the media since the Lebanon War were still felt among the population and the flow of tourists going to Israel dropped. One consequence was the closing of the Israel Tourist Office in Brussels. The Oslo Accords brought a resurgence of goodwill but the onset of the second Palestinian Intifada produced a dampening of official relations, fueled by a hostile press and the presence of half a million Muslims in the country, as the Belgian government, professing evenhandedness, regularly voted for anti-Israel resolutions in international bodies, including the UN. In 2002 Belgium suspended arms sales to Israel and in

2001 and 2002 the Brussels and Flemish Regions of Belgium suspended their cooperative agreements with Israel. Tensions came to a head when war crimes charges were brought against Israeli Prime Minister Ariel *Sharon in Belgium for his part in the Lebanon war under Belgium's "universal jurisdiction" legislation. Israel withdrew its ambassador. Subsequently the Belgian Supreme Court ruled that Sharon could not be tried while serving as prime minister of Israel.

Since 1992, Israel has had two ambassadors in Brussels, one for the EEC, the other for Belgium.

BELGOROD-DNESTROVSKI (formerly **Akkerman**; Rum. **Cetatea-Albă**), city in Ukraine, in the region of *Bessarabia, on the river Dniester; in Romania 1918–40 and 1941–44. It is referred to in Jewish sources as Weissenburg and *Ir Lavan* (both meaning "White City"). Karaite scholars, including apparently Caleb *Afendopolo, lived there in the early 16th century, attesting to the existence of a cultured Karaite settlement during this period. A Rabbanite community is first recorded in Belgorod-Dnestrovski in 1591. In 1808, 18 heads of Jewish families were registered there. According to tradition, a *bet midrash* was built there in 1815 and a synagogue in 1828. The community grew considerably in the 19th century with the arrival of Jews in Bessarabia from other regions of the *Pale of Settlement. The Jewish population numbered 2,422 in 1864 and 5,613 in 1897 (19.9% of the total). The Jews in Belgorod-Dnestrovski were influenced in social and cultural spheres by the important Jewish center in *Odessa. Most of the Jews earned their living in the grain trade, which was mainly concentrated in Jewish hands, but many engaged in crafts. In 1905, there was a pogrom in which eight Jews were killed. After Bessarabia passed to Romania in 1918, the Jews in Belgorod-Dnestrovski developed a flourishing communal and cultural life, and established cultural and welfare institutions. Jewish institutions before World War II included a hospital (founded

in 1882), an old-age home, a kindergarten, and a Hebrew elementary *Tarbut school. In 1930, 4,239 Jews resided in Belgorod-Dnestrovski (12.3% of the total population).

[Eliyahu Feldman]

Holocaust Period and After

In July 1940, during the Soviet occupation, all Jewish life was disbanded, and a few months later, the great Remasline synagogue became a government archive. Prominent and wealthy Jews were arrested and tried or disappeared altogether. On the night of June 13, 1941, dozens of families were exiled to Siberia, most of whom did not survive. When the fighting drew near, in 1941, about 4,000 Jews fled the city, mostly for nearby Odessa. Most of them were caught in the German siege of the city and shared the fate of local Jews, being later executed or deported by the Romanians. Those who remained were the sick and the old and pious Jews. The entry of German and Romanian troops was preceded by the murder of Jews and the plunder of Jewish property on the part of the local peasants. As soon as the town was occupied, all the remaining Jews were gathered in the Remasline synagogue where they were kept for three days without food and water. They were then taken to the Liman River where they were all shot to death; about 800 Jews were killed in the slaughter. Approximately 500 of the prewar population of Belgorod-Dnestrovski survived the war, and about half of these eventually returned. In 1970, the Jewish population was estimated at 300 families. Most emigrated in the 1990s but Jewish life revived in the 21st century with Rabbi Fishel Chichelnitzky heading a kindergarten, Sunday school, and the new Chabad synagogue.

[Jean Ancel]

BIBLIOGRAPHY: I. Feldman, *Toledot ha-Yehudim be-Besarabiyah ad Sof ha-Me'ah ha-Tesha-Esreh* (1970), index; idem, in: *Tarbiz*, 38 (1968/69), 61–74; Y. Schildkraut, *Al Hurvot Besarabiyah* (1954), 17–191.

BELGRADE (Serb. **Beograd**), capital of Serbia. Several Jews from Italy and Hungary settled in Belgrade in the 13th and 14th centuries. They were joined by Sephardi Jews after the Turkish conquest in 1521. They lived mostly in the Jewish *mahala* (“quarter”) near the citadel, and were physicians, weapon-smiths, tanners, and merchants. The Jews lived in comfortable circumstances and were allowed to own land. The community enjoyed a degree of judicial autonomy. It numbered 800 in 1663. Between 1642 and 1688, the Belgrade yeshivah became widely known under the rabbis Judah *Lerma, Simḥah b. Gershon Kohen, and Joseph *Almosnino.

With the start of the decline of the Turkish Empire in the late 17th century, a long series of catastrophes befell the Jews of Belgrade. In 1688, at the approach of the Austrians, Turkish janissaries plundered and burned the Jewish quarter. After the capture of the city, Austrian soldiers burned, looted, and killed the Turkish and Jewish population. The community was totally destroyed; some Jews managed to flee to Bulgaria, but the majority were taken prisoner and deported to

Austria to be sold as slaves or offered to Jewish communities for ransom.

Shortly after, a number of Jews returned to the city and rebuilt the synagogue. However, since Belgrade became the key fortress against the Turks, under Austrian rule (1717–39) Jewish residence was restricted. The town was captured again by Turks in 1739 and by 1777 the number of Jews had increased to 800. In 1795 irregular troops of Pazvan Oglu, pasha of *Vidin, attacked Belgrade, burning the synagogue and many Jewish houses in the *mahala*. Nevertheless, the Jews remained prosperous: in 1798 all the Belgrade guilds together paid 1,600 grush in taxes, while the Jewish community alone paid 10,000 grush.

A series of rebellions and wars by the Serbs against the local Turkish despots, who had made themselves semi-independent of Constantinople, began in 1803, continuing intermittently for nearly 30 years. Belgrade changed hands many times, the Jews suffering each time. In 1807 the Serbs expelled the Jews from Belgrade. The anti-Jewish measures were revoked at Russian intervention. Some Jews had been allowed to stay, and more returned between 1811 and 1813, but were forced to leave once more when an abortive rebellion broke out in 1813. When in 1815 Milosh Obrenovich was recognized ruler of Serbia the situation of the Jews improved. There were some 1,300 Jews (200 Ashkenazim) in 1831. Prince Milosh's Serbian State Press, founded in 1837, had Hebrew type too. The works, mostly liturgical or ritual, were printed in Ladino, or in Hebrew with a Ladino translation. The Ladino periodical *El Amigo del Pueblo* was established in 1888 and appeared in Belgrade throughout the 1890s. Milosh's successor, Alexander Karageorgevich (1842–58), introduced a series of restrictions on Jewish residence, professions, and acquisition of property.

After obtaining full rights following the Congress of Berlin in 1878, the wealthier Jews gradually became absorbed into Serbian society. They spoke Serbian, their children went to state schools and universities, and became physicians, civil servants, etc. In 1907 they built the new Sephardi synagogue, Bet Yisrael, in the upper town. There was a Hebrew school from the 1850s. Most Jews lived in the *mahala* until World War I when it was partly destroyed. After World War I, when Belgrade became the capital of independent Yugoslavia, the younger generation gradually left the *mahala* to enter the professions, banking, the stock exchange, and the garment industry.

Holocaust Period

When the Germans entered Belgrade in April 1941, 12,000 Jews were living there. The 20,000 Volksdeutsche (ethnic Germans) of Belgrade led the Germans to Jewish shops and homes, looting all that the Germans left. Jews were evicted and their property confiscated. The Ashkenazi synagogue was turned into a brothel; the Bet Yisrael synagogue became a storehouse for looted Jewish property and was blown up before the German retreat. All communal activities were forbidden, but the *Vertretung* (“Representation”), nominated by

the Germans, contrived to organize public kitchens, medical services, etc. for the local Jews and for the 2,500 Jews from the Banat region who were expelled to Belgrade. All men between the ages of 14 and 60 and all women between the ages of 14 and 40 were forced to work in the town, not only without payment but also providing their own food.

With the beginning of armed resistance in Serbia, the Germans began executing hostages, mostly Jews. The first mass execution took place on July 29, when 122 “Communists and Jews” were shot. The “final solution” began with the mass arrest of some 5,000 Jewish men in July and August. After being imprisoned in two camps in Belgrade, the men were then taken in groups of 150 to 400 “to work in Austria” and shot in nearby forests by regular German army units. The remaining 6,000 Jewish women and children were arrested in December 1941 and transported to the Saymishte camp, a former commercial fairground on the left bank of the Sava. Food was scarce, and many froze to death in the winter of 1941–42. Between February and May 1942, the remainder were killed in gas vans and buried in the village of Jaintsi. Patients of the Jewish hospital in the *mahala* were also liquidated in 1942.

Resistance

Immediately after the German occupation Jewish youth, mainly from Ha-Shomer ha-Za’ir, joined the resistance movement, sabotaging enemy installations, disseminating propaganda, and collecting funds and medical supplies. In August 1941 they joined partisan units in the forests, but not before considerable numbers of them had been arrested and shot. A monument to fallen Jewish fighters and victims of Fascism was set up after the war in the central cemetery of Belgrade.

Contemporary Period

Immediately after the liberation of Belgrade in October 1944 the Jewish community resumed its activities by opening a soup kitchen, a center for returnees, and medical services. The Ashkenazi synagogue was reconsecrated in December 1944, with the Ashkenazi and the Sephardi communities merging. In 1947 the community had 2,271 members, half of whom emigrated to Israel shortly after. In 1969 there were 1,602 Jews in Belgrade and in 2000 around 1,500. The community center ran an internationally known choir, a youth club, and a kindergarten. It also housed the Federation of Jewish Communities of Yugoslavia. The Yugoslav Jewish Historical Museum founded in 1948 and officially opened in 1952, contains material on all Jewish communities in Yugoslavia, and their artistic creativity. The J. community remained stable demographically with natural increase and returning émigrés offsetting those leaving for Israel and other countries. Jewish holidays were celebrated and J. events noted in a regularly appearing monthly publication. In 1995 an impressive sculpture cast in brass, the work of Nandor Glied, entitled “Menorah in Flames,” was erected near the Danube at the site of the ancient Jewish quarter.

BELGRADO, DAVID FERNANDO (1918–), rabbi and *hazzan*. Born in Florence, Italy, Belgrado was appointed third *hazzan* to the Great Synagogue of Florence at the age of 18. He went on to become the second *hazzan* and ultimately the chief *hazzan* of the Florentine community. He was ordained as rabbi in Rome and was appointed chief rabbi of Florence in 1961. Belgrado studied music and singing at the municipal theater of Florence and has sung in operas and concerts of Jewish and general music. He has made recordings of his renditions of cantorial chants in the Florentine style.

[Akiva Zimmerman]

BELIAL (Heb. בְּלִיַּאל; lit. “worthlessness”). In the Bible a common noun characterizing persons who behave in a dissolute manner, give false testimony, or hatch infamous plots. It is used in apposition to such words as “son” (Deut. 13:14; 1 Sam. 2:12), “daughter” (1 Sam. 1:16), “man” (1 Sam. 30:22; Prov. 16:27), “witness” (Prov. 19:28), and “counselor” (Nah. 1:11). A “matter of *beliyyā’al*” is a base thought (Deut. 15:9), and “rivers of *Belial*” (Ps. 18:5) are hellish currents of adversity. In post-biblical literature – especially in the pseudepigrapha – Belial (usually written Beliar) is the name of the Prince of Evil, i.e., *Satan – a view which no doubt underlies the practice of the Vulgate (and of Theodotion, Judg. 9:22) to reproduce the word by transliteration in certain passages of Scripture. Belial is the spirit of darkness (Test. Patr., Levi 19:1; 1QM 13:12). Evil men are dominated by him or his attendant spirits (Test. Patr.: Ash. 1:8; Levi 3:3; Joseph 7:4; Dan. 1:7; Ben. 6:1), and the world is currently under his sway (1QS 1:18, 24; 2:5, 19; 1QM 14:9; Mart. Isa. 2:4). His will opposes God’s (Test. Patr., Naph. 3:1), and he wields a sword which causes bloodshed, havoc, tribulation, exile, death (or plague?), panic, and destruction (*ibid.*, Ben. 7:1–2), or catches men in the snares of lewdness, lucre, and profanity (Zadokite Document 4:13ff.). Belial will ultimately be chained by God’s holy spirit (Test. Patr., Levi 18:12) or cast into the all-engulfing fire (*ibid.*, Judah 25:3), and his attendant spirits will be routed (*ibid.*, Iss. 7:7; *ibid.*, Dan 5:1), and discomfited by the Messiah (*ibid.*, Dan 5:10; *ibid.*, Ben. 3:8). There will be a final war in which he and his partisans will be defeated by God and God’s partisans, aided by heavenly cohorts (1QM 1:5; 15:3; 18:1, 3). The latter now abide in the second of the seven heavens (Test. Patr., Levi 3:3). The concept of Belial as the opponent of God probably owes much to Iranian dualism, where the eternal antagonists Asha (Right) and Druj (Perversity) are portrayed as destined to engage in a final “Armageddon,” aided respectively by heavenly and

earthly partisans, *ashovans* and *dregvants*. (In 1QS (2:20–21; cf. 4:23; 9:21), these terms are reproduced exactly as *benei zedek*, “sons of righteousness,” and *benei ’awel*, “sons of perversity.”) The Iranian picture was validated, however, by the authority of the biblical text Zechariah 14:5, “The Lord my God will come and all the holy ones [will be] with you” (LXX: “and all His holy ones with Him”). In the third book of the *Sibylline Oracles* (65–74), Belial is identified with a deceiver and miracle-monger whose line hails from Sebaste, i.e., Samaria. This is thought to refer to Simon Magus.

BELIEF

The Bible

In the Bible there are no articles of faith or dogmas in the Christian or Islamic sense of the terms. Although trust in God is regarded as a paramount religious virtue (Gen. 15:6; Isa. 7:9; cf. Job 2:9), there is nowhere in Scripture an injunction to believe. Even a verse like 11 Chronicles 20:20 “believe (*haʿaminu*) in the Lord your God, and you will be established; believe His prophets, and you will succeed” expresses only King Jehoshaphat’s advice to the people; it is not a religious commandment. Furthermore, the verb *heʿemin* (הֵאֱמִין “to believe”), the noun *ʿemunah* (“belief”), and other forms derived from the stem *ʿmn* (אָמַן) mean to trust, have confidence; and faithfulness; and in this sense are used both of God and of man (Gen. 15:6; Deut. 32:4; Prov. 20:6; Job 4:18). This usage is in striking contrast to the concept of “belief” in the New Testament (e.g., John 3:18). It is only in the Middle Ages, when Jewish theologians began to formulate articles of faith, that derivations of the root *ʿmn* came to be used in a dogmatic sense.

The reason for the absence of a catechism in both the Bible and the rabbinic tradition is probably twofold: in Judaism the primary emphasis is not on profession of faith but on conduct (Avot 1:7); and speculative and systematic thinking is not characteristic of the biblical or the rabbinic genius. Dogmatics entered Judaism as a result of external pressure; contact with alien religious systems, which had formulated theological doctrines, compelled Jewish thinkers to state the basic creeds of their own faith. In a sense, Jewish dogmatics forms part of the larger category of Jewish apologetics.

No religion, however, is conceivable without fundamental doctrines or axiomatic principles, and Judaism, in its scriptural as well as rabbinic aspects, is no exception. Indeed, the Bible contains certain summary statements that might be considered incipient dogmas. The **Shema* (Deut. 6:4), underscoring the unity of God; the Ten Commandments (Ex. 20:1 ff.; Deut. 5:6 ff.), providing an epitome of Jewish precepts; the formulation of the divine attributes in Exodus 34:6–7; Micah’s sublime summary of human duty (6:18); and the majestic simplicity of the Lord’s assurance to Habakkuk “but

the righteous shall live by his faith” (2:4) are a few examples culled from many. But valuable as these formulations are, they do not embrace the complete range of fundamental biblical teachings. Only an analysis of scriptural doctrines against the background of the entire complex of biblical thought can yield the essential religious beliefs, moral ideals, and spiritual truths that underlie the faith expounded by the Scriptures.

That “God is” is axiomatic. He is One (Deut. 6:4) and incomparable (Isa. 40:18); there are no other gods (Deut. 4:39). He is omnipotent (Job 42:2), omnipresent (Ps. 139:7–12), omniscient (Job 28:23 ff.), and eternal (Isa. 40:6–8; 44:6). Even more important is the doctrine that He is the God of justice and love (Ex. 34:6–7); it is His moral nature that makes Him holy (Isa. 5:16). In His might He willed the creation of the universe (Gen. 1), and in His love He continues to sustain it (Ps. 104; 145:14 ff.). He made the laws of nature; the miracles are exceptions to these cosmic rules, but both the normal and the abnormal conform to the Divine Will. Mythology, except for idiomatic phrases, is excluded from biblical teaching. Magical practices are forbidden (Deut. 18:10); unlike miracles, they do not issue from the will of God, but seek to overrule divinely established laws of nature.

The apex of creation is man, created in the divine image. This “image” is reflected in the moral and spiritual qualities of human nature. In man creation achieves a new dimension – a moral personality endowed with freedom of will. The relationship between God and man has a voluntaristic ethical character. It is an encounter between the Divine Person and His human counterpart, between Father and child. Ideally it is an “I–Thou” relation. But man may disobey; sin is spiritual treason, which transforms the “nearness” of God into “estrangement.” The divine “Thou” then becomes “It.”

Human freedom of choice (Deut. 30:15, 19) is the source of man’s responsibility, upon which are predicated rewards and penalties, both collective and individual. Divine retribution is a corollary of God’s righteousness; but its purpose is primarily not punitive but educative and reformative; it aims to restore the “I–Thou” nexus. Thus God does not desire the destruction of the wicked, but their return to the path of goodness (Ezek. 18:23, 32), and heaven’s grace far exceeds the measure of divine punishment (Ex. 20:5–6; Deut. 5:9–10). Hence all the predictions of the prophets are conditional (cf. Jonah). The Heavenly Father hopes for His punitive decrees to be nullified. Conceptually there appears to be a contradiction between God’s omniscience and omnipotence on the one hand, and man’s freedom of action on the other. But the Bible harmonizes them in a supreme historic event. Human rebellions will ultimately end in a great reconciliation. In the messianic era Zion’s teaching will become a universal heritage (Isa. 2:2 ff.; Mic. 4:1 ff.). “In the end of days” the divine design of history will be realized as perfectly as His cosmic plan.

Human waywardness was manifest from the beginning of history. Man has constantly been tempted to do wrong: “every imagination of the thoughts of his heart was only evil

continually" (Gen. 6:5). To aid humanity to persevere along the path of righteousness, divine revelation was necessary. Its purpose was to direct and supplement the basic sense of right and wrong innate in every human being (cf. Gen. 39:9). Certain spiritual geniuses – the patriarchs, the prophets – learned to know the will of God in given situations. But the complete revelation was vouchsafed to the Children of Israel at Sinai. It comprised many elements – legal and ritual, moral and spiritual, national and universal – each component being necessary to its educative and purifying intent. The precepts were neither to be augmented nor diminished (Deut. 4:2); the law was immutable. Intrinsicly the prophets did not add to the Torah. The glory of Hebrew prophecy consists not in preaching new ideas, but in elucidating the historic covenant and applying its teachings to the circumstances of their time. In particular they stressed the moral and spiritual values of religion, and the universal conception of the consummation of history in the kingdom of God.

By accepting the Torah, Israel became the "treasured people" of the Lord, a holy nation in the service of the Holy God (Ex. 19:5; Lev. 19:2). They entered into a covenant with Him (Ex. 24:7; Deut. 29:11, 12), calling for unswerving obedience on their part and protective providence on the part of God. The election of Israel was not an act of favoritism. On the contrary, it represented a mission involving special responsibility and corresponding retribution. "You only have I known of all the families of the earth; therefore I will visit upon you all your iniquities" (Amos 3:2). Nor was God's providential care limited to Israel; there was a Philistine and Aramean exodus comparable to that of Israel (*ibid.* 9:7). The covenant with Israel was an integral part of God's universal historic plan of salvation (Isa. 49:6). Hence the Israelites were as indestructible as the cosmos (Jer. 33:25–26). Their sins would be punished, but redemption would succeed every disaster. The national hope of restoration and return to the Land of Israel is thus indivisibly linked with the redemption of all mankind. Jewish nationalism and universalism are not opposed but complementary biblical ideals.

Since ethics occupies a central position in scriptural theology, theodicy greatly exercised the minds of the prophets and sages of Israel. The thought "shall not the Judge of all the earth do justly?" (Gen. 18:25) is echoed in various forms throughout the Scriptures. It is an essential aspect of the dialogue between man and God. To criticize and challenge God in sincerity is not viewed by Scripture as a sin (witness Abraham, Moses, Jeremiah, Habakkuk, and Job); only hypocrisy and smugness are iniquitous (Job 42:7). The biblical answers to the problem of suffering are varied: it is accounted for by sin, by the concept of "the suffering servant," by the limitations of human knowledge. Man's view is too short; however long the process, righteousness triumphs in the end (Ps. 92:8). In the final analysis God's purpose is beyond man's understanding (Isa. 55:8; Job 42:3). Until the ultimate reconciliation at "the end of days," the Incomprehensible God can be apprehended only in faith (Hab. 2:4).

Hellenistic Literature

The encounter with Greek culture in the Hellenistic period brought the challenge of new concepts and philosophic methodology to Judaism. But the impact was transitory, and *Philo, "the first theologian," was the only one among the Greco-Jewish writers to formulate Jewish dogmas. He enumerates five tenets: (1) God exists and rules the universe; (2) He is one; (3) the world was created; (4) creation is one; (5) Divine Providence cares for the world (Op. 61). Josephus asserts that the antagonism between the Sadducees and Pharisees was based on doctrinal differences, such as the question of providence, the immortality of the soul, and the belief in resurrection with the concomitant idea of the final judgment (Wars, 2:162–5). Modern scholarship, however, is inclined to give a political and national interpretation to these disputes.

Rabbinic Literature

Rabbinic theology is marked by an overwhelming diversity of opinion. Since the sages' method of study was essentially based on argumentation and controversy, it is by no means easy to determine at all times its fundamental ideas. Furthermore, while the rabbis sought to give clear definition to the *halakhah*, the *aggadah* remained vague, unsystematized, and contradictory. Nevertheless in Talmud and Midrash, as in Scripture, it is possible to discern ground patterns of thought and basic concepts that constitute the foundations of the tannaitic and amoraic ideology. It is axiomatic that rabbinic teaching rests firmly on biblical doctrine and precept. Here, as in the Bible, God is the transcendent Creator; the Torah is the unalterable embodiment of His will; providence is motivated by moral principles; there is an "I–Thou" relationship between man and God; the election of Israel, linked to the immutable covenant of the Torah, is a paramount idea; and the prophetic promise of Israel's ultimate redemption and the establishment of the kingdom of God upon earth is the national-universal denouement of the drama of history. But rabbinic theology is a superstructure founded on scriptural faith, not a copy of it; there are evolutionary differences in talmudic Judaism that distinguish it from biblical norms and give it its distinctive qualities.

Rabbinic Judaism produced no catechism; but external cultural pressures and internal heresies gave rise to certain formulations of a dogmatic character. Sanhedrin 10:1, for example, in defining those who have no share in the world to come, gives to the belief in resurrection and in the divine origin of the Torah credal status. Similarly Hillel's dictum "That which is hateful to thee do not do unto others" (Shab. 31a) constitutes in its context the principal Jewish dogma. In discussing the precepts of the Torah the rabbis spoke of various figures who reduced the number of precepts (from the traditional 613), ending with Habakkuk who subsumed them all under one fundamental principle, "but the righteous shall live by his faith" (Hab. 2:4; cf. Mak. 24a). But in rabbinic, as in scriptural, literature, the root-ideas can be reached only by

a careful examination of the complete compass of the tradition and a comparative study of its beliefs.

A new mysticism, emanating from the doctrines of *ma'aseh bereshit* ("work of creation") and *ma'aseh merkavah* ("work of the chariot"), now attaches to the concept of God. Gnostic influence, despite the general opposition of the sages to Gnostic ideas, is discernible. But these esoteric notions were reserved for the few only (Ḥag. 2:1). On the other hand, the broad-based popular approach, found in numerous *aggadot*, inclines toward an anthropopathic presentation of the Deity. The Holy One of Israel suffers all Israel's tribulations; He too is exiled (Sif. Num. 84; Ber. 9b). Man is conceived as a dualism: his soul, which is immortal, gives him a place among the angels; his body makes him akin to the beasts (Sif. Deut. 309). But the body is not condemned as a source of evil, nor may the material things of this world be left unenjoyed (TJ, Kid. 4:12, 66d). They are the work of God and inherently good. Indeed, God is to be served with both lower and higher impulses (Sif. Deut. 32; Ber. 54a). Man's freedom of choice, however, is fully recognized: "All is in the power of heaven except the reverence of heaven" (Ber. 33b), though the omniscient God foresees all (Avot 3:15). But this freedom is the basis of responsibility and the justification of retribution. To err is human, but penitence is the great shield that protects man (*ibid.* 4:13). Hence it was created even before the world (Pes. 54a).

The Torah, as the will of God, is immutable, and the sages regarded it as their supreme task to expound and determine its provisions, giving precedence, where needed, to moral principles over strict legalism (e.g., TJ, BM 2:5, 8c). To be holy and to walk in the Lord's ways implied in particular the practice of lovingkindness (Sifra 19:1; Sif. Deut. 49), which was equal to all the precepts put together (TJ, Pe'ah 1:1, 15b). The purpose of the commandments is to purify man (Gen. R. 44:1), and the true spirit of observance seeks no reward beyond the service of God (Avot 1:3). But there are two Torahs: the Oral Law, which was also revealed at Sinai, supplements and elucidates the Written Law. On the basis of Deuteronomy 17:11 (Ber. 19b), the sages claimed the right to enact laws of their own (*mi-de-rabbanan*), chiefly with a view to their serving as a "fence" (protection) to the biblical ordinances (*mi-de-orayta*). The most daring principle of all originated by the rabbis was their right to interpret the Torah in conformity with their understanding and to decide (by majority vote) accordingly. It was they, not the heavenly court (*familia*), that fixed the calendar (TJ, RH 1:3, 57b). Even if a halakhic ruling ran counter, so to speak, to the view of heaven, the rabbis still maintained that theirs was the right to decide, for the Torah, having been vouchsafed to man, was now subject to human judgment. Nor did this principle displease the Holy One, Blessed Be He, for He smiled indulgently when His children outvoted Him (BM 59b). The sages went so far as to declare "the suppression of the Torah may be the foundation thereof" (Men. 99). Thus the rabbis evolved theological machinery for adapting the *halakhah* to historical changes and needs without discarding

an iota of the scriptural tradition. Theologically they justified this procedure by the theory that all that the rabbis taught was already inherent in the Sinaitic revelation (Lev. R. 22:1; TJ, Pe'ah 2:6, 17a), that the sages did not innovate but discovered already existing truths.

The rabbinic exaltation of Torah study was a natural corollary of their attitude to the Scriptures. The Mishnah lists the things whose fruits a man enjoys in this world, while the capital is laid up for him in the world to come, and declares "the study of the Law is equal to them all" (Pe'ah 1:1). The rabbis (BB 12a) elevate the sage (with his restrained, reflective approach) above the prophet (with his incandescent, intuitive consciousness). Nevertheless the truth that Judaism is life and that learning must lead to deeds was not lost sight of: "Great is the study of the Torah, because it leads to [right] action" (Kid. 40b).

Israel's election is a leading theme in rabbinic thought. It brought comfort and renewed courage to a suffering people. God's ultimate salvation was never doubted. The messianic era, despite the preceding tribulation, would bring redemption to Israel and the land. This belief suffuses the entire aggadic literature and inspires every facet of the liturgy. Great emphasis is placed on the importance of Erez Israel in Talmud and Midrash and the prayer book. The rabbis exhaust the language of praise and indulge in unrestrained fantasy in depicting the future glories of the land. One dictum even avers that "he who dwells outside the Land of Israel is as one who serves idols" (Ket. 110b). This hyperbole was intended not only to encourage Jewish settlement in Erez Israel, but also to strengthen the hope of national restoration. Jewish nationalism did not, however, exclude universalist ideals. "The pious of all nations have a share in the world to come" (Tosef., Sanh. 13:10). "Whoever repudiates idolatry is called a Jew" (Meg. 13a); and the greatest Torah principle is enshrined in the verse "This is the book of the generations of Adam" – the brotherhood of man (TJ, Ned. 9:4, 41c).

In the Talmud, as in the Bible, the problem of theodicy is a major theme. The sages range the entire gamut of possible explanations for human suffering. In the ultimate analysis they propound the profoundest conception of all: suffering deriving from divine love (Ber 5a). Human suffering is an essential element in human spiritual advancement. It is an aspect of God's grace. Another cardinal rabbinic belief offered a collective historical solution to the question of divine justice. The concept of resurrection (Sanh. 10:1) was closely linked with the advent of the Messiah and the last judgment (Shab. 152b; Ḥag. 12b; Sanh. 91a–b). Bygone generations would, if worthy, share in the sublime joy of the kingdom of God upon earth. Maimonides, however, interprets the resurrection in a purely spiritual sense (*Ma'amar Teḥiyat ha-Metim*). Going beyond biblical theology, the rabbis envisaged yet another world, where the imbalance of earthly justice is rectified. The immortal soul is judged after the death of the body in the hereafter ("world to come") and is requited according to the individual's deeds upon earth (Sif. Deut. 307; Ber. 28b; Shab. 153a; Ber. 17a). In

this solution time is transcended. God's ultimate justification is a function of eternity.

These norms of rabbinic faith provided the basis of medieval Jewish theology and philosophy. Their lack of definition gave later Jewish thinking flexibility and their emphasis a firm framework.

[Israel Abrahams]

Medieval Jewish Philosophy

In medieval philosophy belief is a general philosophical category belonging to the theory of knowledge, of which religious belief is one specific kind. The medieval philosophers distinguished between two activities of the mind: the formulation of propositions, and the affirmation that propositions in the mind correspond to a reality outside the mind, and identified belief with the latter activity. In line with this account *Maimonides defines belief as "... the notion that is represented in the soul when it has been averred of it that it is in fact just as it has been represented" (*Guide of the Perplexed*, 1:50). In somewhat less technical language *Saadiah defines belief as "... a notion that arises in the soul in regard to the actual character of anything that is apprehended. When the cream of investigation emerges, and is embraced and enfolded by the minds and, through them acquired and digested by the souls, then the person becomes convinced of the truth of the notion he has acquired" (*Book of Beliefs and Opinions*, introd.). Belief defined in this manner may still be true or false, and hence it is necessary to add criteria by means of which true beliefs may be distinguished from false ones. Saadiah, discussing this issue, lists four criteria which enable one to establish that a belief is true: sense perception, self-evident propositions, inference, and reliable tradition (*ibid.*, introd.; cf. Maimonides, "Letter On Astrology," in: R. Lerner and M. Mahdi (eds.), *Medieval Political Philosophy: A Sourcebook* (1963), 228). This conception of belief as the affirmation or conviction that propositions within the mind correspond to reality outside the mind can be traced to Greek philosophy, particularly to the Stoics.

Belief for medieval Christian, Muslim, and Jewish thinkers meant, in the first instance, religious belief, that is, the conviction that the teachings of Scriptures are true and that their truth is guaranteed by the authority of their respective traditions. At the same time they noted that philosophers also investigated some of the same issues that interested them, e.g., the existence of God, the creation of the world, principles of human morality, and they further noted that there was a similarity between the teachings of religion and human reason. Hence the question arose how the teachings of religion, that is, religious beliefs, are related to the teachings of philosophy, that is, philosophical beliefs. There were essentially three views concerning this interrelation. There were those who, denying that the term belief applies to philosophic teachings, affirmed that this term in its strict sense refers only to propositions accepted on the basis of religious authority; there were those who permitted the application of the term only to propositions known by way of demonstration; and there were still

others, who were prepared to use the term belief for describing both. In line with these distinctions H.A. *Wolfson classifies the attitudes toward religious belief in a threefold fashion: the double faith theory, according to which the acceptance of propositions based both on religious authority and rational demonstration constitutes belief; the single faith theory of the authoritarian type, according to which the acceptance of propositions based on authority alone constitutes belief; and the single faith theory of the rationalist type, according to which the acceptance of propositions based on demonstration alone constitutes belief (*JQR*, 33 (1942), 213–64).

Saadiah, a proponent of the double faith theory, accepts the notion of belief as applying to things known both by way of authority and by way of demonstration. He maintains that the doctrines of Scripture coincide with those of philosophy, and that an affirmation of these doctrines, whether based on revelation or on rational demonstration, constitutes belief. While Saadiah advocates speculation about the truths of religion, he, nevertheless, maintains that it is forbidden to ignore Scripture entirely and to rely solely on one's reason, for the reason is not infallible, and may lead to erroneous conclusions.

*Judah Halevi, a representative of the single faith theory of the authoritarian type, maintains that belief applies only to things known by means of authority. According to him, belief is an acceptance of the doctrines of Scripture based on authority, i.e., on the fact that these doctrines of Scripture were divinely revealed. For example, in connection with sacrifices Halevi states categorically that "... he who accepts [sacrifices], without examination or reasoning is better off than he who resorts to research and analysis" (*Kuzari*, 2:26; see also 1:64–65, and 3:7).

Maimonides, on the other hand, is a representative of the single faith theory of the rationalist type. He maintains that belief applies only to things known by way of demonstration. While he does not state categorically that an acceptance of the doctrines of Scripture based on authority is not belief, he definitely considers an acceptance based on demonstration to be a more perfect form of belief. Belief is more than verbal acceptance; it requires understanding and a rational basis. Providing an example, Maimonides writes that someone who utters with his lips that he believes in the unity and incorporeality of God, while at the same time maintaining that God has positive attributes, cannot be said to believe truly in God's unity. That he can maintain that God has attributes indicates that he does not understand the principle of God's unity, and there is no belief without understanding (*Guide*, 1:50). According to Maimonides the precept "You shall love the Lord, your God," cannot properly be fulfilled without an understanding of metaphysics. Love of God, according to Maimonides, is "proportionate to apprehension" (*Guide*, 3:51; cf. *Yad*, *Yesodei ha-Torah*, 4:12).

*Levi b. Gershom shares the view of the Maimonidean school that there is no opposition between reason and belief. He holds that priority should be given to reason where its demands are unambiguous, for the meaning of Scripture

is not always clear and is subject to interpretation (*Milḥamot Adonai*, introd.).

See also *Allegory, *Revelation, *Philosophy.

[Jacob Haberman]

Maimonides' aforementioned definition of belief (Arab.: *i'tiqād*; Hebrew: *emunah*) may be called the "cognitive" sense of *emunah*, i.e., opinion or position held. The positive evaluation of *emunah* in its cognitive sense dominates Jewish philosophy until the late 14th century, when the influence of scholastic philosophy is felt, especially in Spain. There one can distinguish three new approaches: *emunah* as non-volitional and of little religious significance; as non-volitional yet superior to rational knowledge; as volitional and hence of supreme religious significance. The view of *emunah* as non-volitional is adopted by Hasdai *Crescas, who still adheres to the cognitive sense. Because *emunah* is non-volitional, its religious significance is of little value according to Crescas; God does not reward and punish humans solely on the basis of their belief-states. Crescas responds here to the Jewish Aristotelians who considered the possession of rationally justified *emunot* to be a necessary (and perhaps sufficient) condition for the immortality of the soul. Crescas' student Joseph *Albo defines *emunah* as "a firm conception of the thing in the mind, so that the latter cannot in any way imagine its opposite, *even though it may not be able to prove it*" (*Ikkarim* 1.19, trans. Husik). According to Simeon *Duran, *emunot* are proved by miracles or by a reliable tradition concerning them, whereas according to Isaac *Abrabanel, *emunot* are distinct from both knowledge and opinion. Isaac *Arama views *emunot* not only as superior but as often contrary to reason. True wisdom is attained only when one assents to the Torah's commands that are *opposed* to speculation. The language of *emunah* that dominates these discussions is most probably influenced by Christian treatments of *fides*, "faith."

The most telling example of this influence is found in Abraham *Bibago's *Derekh Emunah*, which should be translated, *The Way of Faith*. Bibago distinguishes between attaining knowledge via rational inquiry and via faith. In the case of Judaism the latter method is superior to the former because it is guaranteed by a reliable tradition that stretches back to Moses, whereas many philosophical doctrines are debatable. The point is as old as Halevi, but the language is that of *emunah*. Since rational knowledge is not as certain as knowledge acquired through faith, the mind of the faithful is superior to that of the philosopher. Moreover, Bibago implies that *emunah* is fundamentally different from rational knowledge, for *emunah* is the "assent to unseen things" (a similar definition is found in *Aquinas) whereas rational knowledge is of revealed things. Divine science, i.e., theology and metaphysics, can be attained only through *emunah* (*Derekh Emunah* 2:7).

[Charles Manekin (2nd ed.)]

Modern Jewish Philosophy

While in medieval philosophy the description of faith formed an integral part of the theory of knowledge, the rise of modern

science and the concomitant decline of the belief in the divine revelation of Scriptures have made faith a matter of trusting in God rather than of the affirmation of certain propositions. Characteristic of this attitude in recent Jewish thought are the views of Franz *Rosenzweig, according to whom religious belief arises from the experience of personal revelation, for which man must always strive and be prepared. This view was anticipated by Hermann *Cohen in his theory of correlation. Similarly, Martin *Buber and Abraham *Heschel see faith as a relationship of trust between man and God, which arises from, and manifests itself in, personal encounters between man and God, and man and man, which Buber calls I-Thou relationships.

Another tendency among modern thinkers, which reflects the influence of psychology, is to view belief as a psychological state which is valuable insofar as it motivates man to act in an ethical manner. Mordecai *Kaplan, a representative of this naturalistic view, implies that faith is a kind of "self-fulfilling prophecy" insofar as it leads to the redemption of human society. According to the others embracing a naturalistic view, faith is good in that it infuses meaning and purpose into an otherwise meaningless and cruel existence. This point is taken up strongly by Richard *Rubenstein, who has been concerned with the challenge to Jewish faith posed by the Holocaust.

BELINFANTE, Sephardi family. Its paterfamilias, JOSEPH COHEN BELINFANTE, fled Portugal in 1526 because of the persecution of the Jews. The family settled in the Balkans, in the city of Belgrade. After the Austrian conquest of Belgrade, the Jews were denied access to that city, and for this reason a part of the family came over to the Netherlands.

One example is ELIJAH HEZEKIAH, born in 1699. He played an important part within the Portuguese community in Amsterdam. Isaac *Belinfante (d. 1780), son of Elijah Hezekiah, was a Hebrew poet and writer. Elijah Hezekiah's brother, MEIR ḤAYYIM (d. 1721), settled permanently in Amsterdam. His son, SADDIK (1675–1750), became the chief rabbi of the Portuguese community and was the author of several Bible commentaries and some halakhic writings: *Simḥat Zaddik*, *Neḥamot Zaddik*, and *Peri Zdadik*.

The son of Saddik, MOSES COHEN BELINFANTE (The Hague, 1761–1827), was actively involved in the struggle for Jewish emancipation in the Netherlands. In 1806, Moses moved to Amsterdam, where he became the editor of the official newspaper published in the Netherlands. Moses' brother, JACOB COHEN (1780–1845), was editor between 1807 and 1837. He also published several Jewish almanacs as well as the *Jaarboeken voor de Israëlieten in Nederland* between 1835 and 1840. Their sister SARA BELINFANTE was the headmistress of an Amsterdam school for Jewish girls.

In the 19th century, the Belinfantes were primarily active in the field of journalism. ARON BELINFANTE (1811–1881) became a member of the editorial staff of the *Dagblad van Zuid-Holland en 's Gravenhage*, which was merged with the *Nieuwe Dagblad*. ISAAC BELINFANTE (1814–1892) worked for the *Nederlandsche Staatscourant* and the *Algemeen Handelsblad* and was also a co-founder of the *Weekblad van het Regt*. His brother JOSEPHUS JUSTUS (1812–1882) was co-director of the *Nederlandsch Correspondentie Bureau* and compiled the *Rijks- en Residentie Almanak*. MAURITS ERNST BELINFANTE (1849–1903), son of Josephus Justus, succeeded his father at the Bureau and worked as a journalist for several newspapers, among which were the *Revue des Deux Mondes* and the *Chronique Politique*. GEORGE BELINFANTE (1837–1888), son of Isaac, became known for his polemical writings in the *Haagsche Courant* and his political letters in the *Zaanlandse Courant*. In the field of politics, he became known after 1870 as the writer of the chamber reviews for the *Nieuwe Rotterdamse Courant*.

ARY BELINFANTE (1870–1925) became famous in Dutch music circles as a pianist and a teacher at the Amsterdam school for orchestra, and as the founder of the first private school of music. He published several studies on the history of music and on the science of music education.

In the 20th century, also the female members of the family stepped more into the limelight. EMILIE JOSEPHINE (or Emmy), BELINFANTE (1875–1944) was educated as a primary schoolteacher, but she became famous as a journalist. In 1901 she became the chief editor of *Het Familieblad – 's Gravenhaagsch Nieuws – en Advertentieblad*. She was in charge of her own section, using “May” as a pen name. In 1905, she started working for a daily paper called *Land en Volk*, in which she ran her own women's section. In 1908 she was appointed to work as a regular member of staff of the *Nieuwe Courant*, in which she reported extensively on the emerging women's movement and on women's issues. Her work as a reporter focused mainly on the women's movement until World War II. In February 1944 she was arrested and a few months later she was murdered in the concentration camp at Auschwitz-Birkenau.

JUDITH BELINFANTE (1943–) was prominent in the cultural and political life of the Netherlands. In 1976, she was appointed director of the Jewish Historical Museum in Amsterdam. From 2003 she was chief curator of Special Collections of the Amsterdam University Library. She was a mem-

ber of parliament for the PvdA (Dutch Labour Party) from 1998 to 2000.

BELINFANTE, ISAAC BEN ELIAH COHEN (d. 1780), man of Hebrew letters. A younger contemporary of David *Franco Mendes, Belinfante was probably born in the early 1720s. From the 1750s he participated in the burgeoning Hebrew literary life of the Amsterdam Portuguese-Jewish community. Besides his work as a *darshan*, he took an active part in preserving and disseminating contemporary Hebrew culture, by compiling manuscript anthologies (e.g., of the literary society Shomrim la-Boker) and by bringing to press compositions of his fellow literati. His own work, some of which was written under the pseudonym Pi ha-Medabber, includes sermons, occasional and ethical-didactic poetry, and historical-documentary material (e.g., the bibliographical *S'ah Yitzhak*, i.e., *Sifte Yeshenim Hadash*), which testifies to a new cultural self-awareness among the Amsterdam Sephardim. The majority of these writings remained in manuscript.

BELINKOV, ARKADII VIKTOROVICH (1921–1970), Russian literary critic and writer. Belinkov was born and educated in Moscow. In 1944 he was arrested and condemned to death on charges of writing an “anti-Soviet novel,” *Rough Copy of Feelings*, and for founding an anti-Soviet literary group, but the sentence was commuted and he spent only 13 years in prison. In 1960 his book on Y.N. Tynyanov (second edition, 1965) was published; the work had a considerable influence on Soviet literature. In 1968 Belinkov immigrated to the U.S., where he lectured at Yale and Indiana Universities and published his works in the emigré editions of the *Novyi Zhurnal* and *Novoe Russkoe Slovo*, as well as the *Russian Review*. In the middle of the 1960s, his literary career moved from pure literary criticism to the journalistic genre, which he maintained was a continuation of the tradition of fierce opposition of the prerevolutionary underground press. He opposed the political trends of both the West and the censored Soviet press. Belinkov's central theme is the place of the intelligentsia in history and its atti-

tude toward the revolution, society, and the state. He asserts the everlasting opposition of intellectuals (as the only social group that needs spiritual freedom) to the state, which suppresses this freedom, and society collaborating with the state. Belinkov was deeply aware of his Jewish identity and stressed his sympathy for Israel. He died in the U.S.

[Lazar Fleishman]

BELISHA, Moroccan family of merchants and financiers. In 1817 MOSES BELISHA (1788–1851) settled in Marseilles where he acquired a large fortune. He became “Merchant of the sultan of Morocco” and a benefactor of the Jewish community. His activities extended to Gibraltar and to Manchester. Moses was assisted by his son BARROW who traded with India, Egypt, and Mogador, where the philanthropists JESHUA and SOLOMON had remained. Moses’ nephew, ISAAC, merchant and industrialist, became president of the Manchester Sephardi community in 1872. Isaac’s grandson was Leslie *Hore-Belisha.

[David Corcos]

BELKIN, ARNOLD (1930–), Mexican painter. Born in Canada, Belkin settled in Mexico in 1948. Belkin saw the possibilities of the mural as expanding into multiple viewpoint conceptions which changed and shifted as the spectator moved. The most important of Belkin’s murals were at the Federal Penitentiary (1960), at the Children’s Welfare Institute (1963), and at the Jewish Cultural Center (1966). From 1954 to 1960 he was assistant professor of mural techniques at the Universidad Motolinia, Mexico City. During this time, his etchings and aquatints included a series of biblical themes, a number of large black and white paintings grouped under the theme “Earth Creatures” and drawings on “Love and War.”

BELKIN, SAMUEL (1911–1976), U.S. rabbi, educator, and scholar. Born in Swislocz, Poland, Belkin studied at the yeshivot of Slonim and Mir, and was ordained in Radun (1928). He immigrated to the U.S. in 1929 and received his Ph.D. at Brown University in 1935. He joined the Yeshiva College faculty as instructor in Greek and Talmud (1935–37), becoming secretary of its graduate school (1937) and member of the College Executive Committee (1939). Appointed professor and dean of Yeshiva’s Rabbi Isaac Elchanan Theological Seminary in 1940, Belkin became president of the RIETS and Yeshiva College in 1943. He launched a far-reaching program of academic and physical expansion which enlarged Yeshiva University from 850 students and a faculty of 94 to 8,000 students and a faculty of some 2,200 with teaching centers throughout New York City. Fourteen constituent schools were founded, and in 1945 the college became *Yeshiva University.

Belkin, an authority on Jewish law and Hellenistic literature, especially Philo and early Midrashic sources, published many scholarly studies. In his major work, *Philo and the Oral*

Law (1940), he stressed that “the oral law which originated in Palestine was also known and practiced among the Jews who lived outside of Palestine, and that Philo’s *halakhah* is based upon the Palestinian oral law as it was known in Alexandria.” He further showed that “there prevailed a great interdependence of thought between the Alexandrian and Palestinian Jewish communities and that we cannot regard them as two entirely separate forms of Judaism.” His later works also demonstrate Philo’s dependence upon ancient rabbinic traditions. Belkin wrote *Essays in Traditional Jewish Thought* (1956) and *In His Image* (1960), in which he formulated a religious philosophy of Judaism as reflected in the *halakhah*. Numerous articles of his were published in learned periodicals, both in Hebrew and in English.

As an educator, Belkin stressed that “Torah is the source from which all human obligations spring.” He especially enunciated the religious philosophy of Judaism as reflected in the *halakhah*. To him its basic principles are the sovereignty of God and the sacredness of the individual. Hence, many legal and spiritual institutions in Judaism can be understood only by these fundamental teachings based on belief in divine kingship and the finite worth of the human personality. Though recognized as a modernist Orthodox spokesman, Belkin generally maintained rapport with all groups in Judaism, promoting the unity of peoplehood.

[Sidney B. Hoenig]

BELKIN, SIMON (1889–1969), Canadian political activist, community leader, and historian. Belkin was born in Smoljanka, a small village near Kiev in the Ukraine. A committed reformer who deeply identified as a Jew, he participated in the 1905 struggle for radical social change in the czarist empire before he joined the Zionist *Po’alei Zion movement. He immigrated to Montreal in 1911 but retained a strong emotional attachment to his region of origin. When, during the civil war following the Russian Revolution, the White forces organized large-scale pogroms against the Jewish communities of the Ukraine in 1920, Belkin traveled to Moscow to help organize relief efforts and arrange for the emigration of Jewish orphans from Russia to Canada.

But it was Belkin’s involvement in the creation of the Canadian Jewish Congress in 1919 that established his reputation as a forceful community leader and committed socialist. In the years preceding the founding of the Canadian Jewish umbrella organization, Belkin campaigned tirelessly in favor of Canadian Jewish unity and a left-wing nationalist approach to solving community problems. A spokesperson for the Yiddish-speaking Zionist population in Montreal, he campaigned for Jews to retain their culture in their new country and to express solidarity with the Zionist movement.

In 1921 Belkin became director of the *Jewish Colonization Association. The JCA was founded in 1906 as the Canadian wing of Baron Maurice de *Hirsch's effort to resettle displaced East European Jews on agricultural lands in the New World. Although several such Canadian rural colonies predate the JCA, most were organized by the JCA. All these efforts eventually failed. By the end of World War II, most Jewish farm settlements were being abandoned as farmers moved to cities. Belkin left the employment of the organization in 1954.

Belkin turned to chronicling the Canadian Jewish experience. In 1956 he published his benchmark study of the Labor-Zionist movement in Canada entitled *Di Poale-Zion Bavegung in Kanade (1904–1920)*, which served to establish his reputation as a leading researcher in the field of Jewish Canadiana. To this day this work has not been surpassed in scope or in the thoroughness of its documentation. Belkin also wrote an important study on Canadian Jewish immigration history entitled *Through Narrow Gates* (1966). Belkin retired to California.

[Pierre Anctil (2nd ed.)]

BELKIND, Erez Israel family of the First *Aliyah.

MEIR BELKIND (1827–1898), one of the first teachers of the modern Hebrew school system in Erez Israel, was born in Logoisk, Belorussia, and followed his sons, Israel and Shimshon, to Erez Israel at the beginning of the 1880s. He settled first in Jaffa and later in *Gederah, where he served as rabbi for the new settlers. Although a traditional Jew himself, he defended the *Bilu'im against the attacks of the religious zealots. When his son Israel established the first Hebrew school in Jaffa in 1889, Belkind became its teacher for religious subjects, thus molding the method of religious instruction in the modern schools of Erez Israel.

ISRAEL (1861–1929), one of the founders of Bilu, was born in Logoisk. In 1882, while studying at Kharkov University, he was among the students who founded the Bilu movement and went to Erez Israel at the head of its first group. He led the opposition against Baron Edmond de *Rothschild's officials and, on being expelled by them from Rishon le-Zion, settled in Gederah. In 1889 Belkind opened a private Hebrew school in Jaffa. He was accepted as a teacher at the *Alliance Israélite Universelle in Jerusalem in 1892, and there published several textbooks. In 1903 he founded an agricultural training school at Shefeyah (near Zikhron Ya'akov) for orphans of the Kishinev pogroms whom he brought to Erez Israel. However, the school was forced to close down in 1906 because of lack of funds. During World War I Belkind resided in the U.S., where he published his memoirs in Yiddish, *Di Ershte Shrit fun Yishuv Erets Yisroel* ("The First Steps of the Jewish Settlement of Palestine," 1918).

Apart from numerous articles and popular pamphlets, Belkind published a geography of Palestine, *Erez Yisrael ba-Zeman ha-Zeh* ("The Land of Israel Today," 1928). He died in Berlin, where he had gone for medical treatment. His remains were interred in Rishon le-Zion.

SHIMSHON (1864–1937), a Bilu pioneer, was born in Logoisk. He joined the Bilu movement in Russia and settled in Erez Israel in 1883. He worked at various crafts in Jerusalem, Mikveh Israel, and Rishon le-Zion, and in 1888 moved to Gederah, where he was a farmer. His sons Na'aman and Eytan were members of *Nili.

NA'AMAN (1889–1917) was a member of Nili and was executed by the Turks. He was employed in the Rishon le-Zion wine cellars, where he came into contact with visiting Turkish officers. He joined Nili together with his cousin Avshalom *Feinberg. In September 1917, while attempting to reach Egypt to investigate the circumstances of Feinberg's death, he was caught by Bedouin who handed him over to the Turkish authorities. He was taken to Damascus, tried, convicted for spying, and hanged in the winter of 1917, together with Yosef *Lishansky. He was later buried in Rishon le-Zion.

[Yehuda Slutsky]

BELKOWSKY, ZEVI HIRSCH (Grigori; 1865–1948), Zionist leader and jurist. Belkowsky was born in Odessa, where his father died of wounds received during the 1881 pogroms. He was admitted to a Russian high school and graduated cum laude from the University of Odessa law school. He was offered a post at the university on the condition that he convert to Christianity. He refused and became a lecturer and later

professor at the University of Sofia in Bulgaria (1893–97). As a university student, he had joined the *Hibbat Zion movement, and from 1891 was in contact with the pre-Herzl Zionist circle surrounding Nathan *Birnbbaum in Vienna. When Herzl's *Judenstaat* was published in 1896, Belkowsky joined Herzl's group and helped organize the First Zionist Congress (1897). At the Third Congress he was elected to the General Council and appointed representative to the St. Petersburg district of the movement. He was among the leaders of the opposition to the *Uganda Scheme. Belkowsky published a series of pamphlets on Zionist subjects. He also initiated the publication of a bibliographical work in Russian entitled *Ukazatel literatury o sionizme* ("A Guide to Zionist Literature," 1903). Belkowsky continued his Zionist activity during the Russian Revolution. He was adviser to the British consul in Moscow on matters regarding Palestine immigration certificates, and chairman of the Zionist Central Committee of Russia (1920–22). In 1924 he was arrested for his Zionist activities and sentenced to deportation to Siberia, but the sentence was commuted to banishment from the Soviet Union. He settled in Palestine in 1924 and was active in the Federation of General Zionists. He later wrote his memoirs, *Mi-Zikhronotai* (1940).

[Yehuda Slutsky]

BELL, DANIEL (1919–), U.S. sociologist. Like many New York intellectuals, Bell, who was born to Polish immigrants, was deeply affected by the Great Depression. He grew up in the slums of the Lower East Side and his first language was Yiddish. He always viewed Zionism with a skeptical eye and Socialism, not Judaism, was his real religion as a boy.

Bell read widely, attending the Socialist Sunday School, and was tempted to join the Communist Party. His anarchist relatives in Mohegan Colony, N.Y. were horrified. Bell was handed pamphlets on the Russian sailors' rebellion at Kronstadt that Leon Trotsky had brutally suppressed. They dispelled any illusions he might have harbored about the true nature of Bolshevism. When Bell continued his studies, he was the only member of his circle who resisted the lure of Trotskyism.

In 1940, he became managing editor of the socialist weekly *The New Leader*, which featured the writings of a number of future liberal cold warriors including Melvin J. Lasky and Sidney *Hook. Bell excoriated industry for war profiteering and revered the magazine's editor, Sol M. Levitas, a Menshevik who had fled the Bolsheviks and who exposed the delusions of many New York intellectuals about the true nature of Stalin's Russia. Bell went on to write for many years for Henry M. Luce's *Fortune* magazine, but always felt the academic tug. In the late 1940s, he taught at the University of Chicago before moving to New York, where he taught at Columbia University and was close friends with scholars such as Lionel *Trilling and Richard *Hofstadter. Bell also wrote for the journal *En-*

counter and worked for the Congress for Cultural Freedom in Paris from 1956 to 1967.

Bell's legacy rests with his books, which traverse immense terrain and are studded with footnotes that themselves often constitute minor essays. In 1960 Bell's book *The End of Ideology* created a sensation by declaring that the old categories of left and right were becoming defunct. Next Bell turned his attention to the unresolved tension between capitalism and morality. In the *Coming of Post-Industrial Society*, Bell prophesied the shift away from a manufacturing to a knowledge society that has taken place in the U.S. and Europe. But Bell did not believe that the quest for control over information would fundamentally alter the nature of human beings. He noted that "what does not vanish is the duplex nature of man himself – the murderous aggression, from primal impulse, to tear apart and destroy; and the search for order, in art and life, as the bending of will to harmonious shape."

If ideology was at an end, the *Public Interest*, which Bell co-founded with Irving Kristol in 1965, was supposed to supply sound social science solutions to the problems that faced the U.S. But politics intruded. Like other New York intellectuals, Bell was horrified by the aggression and primal impulses displayed by student radicals who rioted at Columbia in 1968. He and others saw the New Left as totalitarian, hedonistic, and jejune. It was indulging in revolutionary rhetoric that almost irreparably damaged the university – the institution that had offered a passport to the wider intellectual world for Bell and others. Nothing filled Bell with more contempt than the daydreamers about revolution and utopia who ended up creating bloodshed and tyranny.

But unlike Kristol, Bell never moved to the right or accepted the term "neoconservative." Instead, he remained focused on his academic work and moved to Cambridge, Mass., to become a professor of sociology at Harvard in 1969. In 1976, he amplified his observations about capitalism and hedonism in his classic *The Cultural Contradictions of Capitalism*. In a sweeping historical tour de force, Bell sought to show how capitalism had over the centuries inexorably weakened the authority of the very bourgeois societies it had brought into being. Where self-denial had allowed the Fuggers in Europe to amass great wealth, the bounty created by post-war American capitalism had created an unmoored individual indulging mainly in self-gratification. The individual, he concluded, "can only be a cultural wanderer, without a home to return to." The result is to threaten the vitality of capitalism itself.

Though he retired from teaching, Bell continued to write on politics and cultural matters in journals such as *Dissent*. Bell described himself as a socialist in economics, a liberal in politics, and a conservative in culture. His profound insights have ensured that his own works are beyond ideology and have become classics.

[Jacob Heilbrunn (2nd ed.)]

BELL, SIR FRANCIS HENRY DILLON (1851–1936). New Zealand politician and prime minister. Francis (“Harry”) Bell was the son of a Protestant father and a Jewish mother, Margaret Hort. His Jewish background was well known in his lifetime. Born in Nelson, New Zealand, Bell was educated at Cambridge University and became a barrister in London until 1875, when he returned to Wellington, New Zealand, to practice law. After an extremely successful legal career, he entered politics and served as mayor of Wellington three times. In 1893 he was elected to the New Zealand parliament, serving until 1896, when he resumed his legal career. In 1912 Bell was appointed to the Legislative Council, New Zealand’s upper house, serving until his death. A forceful and well-respected politician, he held numerous government posts and served as acting prime minister several times before becoming New Zealand’s prime minister for two weeks in May 1925 following the death of Prime Minister William Massey. Bell was New Zealand’s first native-born prime minister and the second Jew, after Julius *Vogel, to hold the office. Bell received a knighthood in 1915. Originally a radical, he later described himself as a “Tory socialist.”

[William D. Rubinstein (2nd ed.)]

BELL, JOSHUA (1967–), U.S. violinist. Born in Bloomington, Indiana, Bell studied with Mimi Zweig, and with Josef Gingold (1980–89). Winning the grand prize of the *Seventeen Magazine / General Motors* competition (1981) led to a highly acclaimed orchestral debut with Riccardo Muti and the Philadelphia Orchestra. In 1985 he made his Carnegie Hall debut. In 1987 he received an Avery Fisher Career Grant and made his first recordings, creating a sensation throughout the music world. His playing combined a virtuoso technique with sweetness of tone and phrasing. He performed with leading conductors and orchestras, made recordings of the concerto repertory and also composed his own cadenzas for the major violin concertos. In 1993 Bell gave the premiere of Maw’s Concerto, of which he is the dedicatee. A chamber music enthusiast, Bell initiated a chamber music series in London and Paris. A multifaceted musician, he also teamed up with artists such as Chick Corea and Bobby McFerrin. He continued to explore all sides of the musical spectrum in concerts and recordings (such as *Gershwin Fantasy* and *West Side Story Suite*, a deconstruction of *Bernstein’s original score). He is known widely for his brilliant performance on the soundtrack to the film *The Red Violin*. The Indiana Historical Society named Bell an Indiana Living Legend (2000). He also received the Indiana Arts Council Governor’s Award (2003), and recordings awards. Bell holds an Artist Diploma from Indiana University. In 1998, he began teaching master classes at London’s Royal Academy of Music. He plays an Antonius Stradivarius.

BELLELI, LAZARUS MENAHEM (1862–1940?), Greek polyglot writer and philologist. Born in Corfu, by the early age of 15 he was already a serious author. In 1877 he edited *At-teret Bahurim* (“The Crown of the Young”), a Hebrew-Greek vocabulary for the Book of Genesis supplemented by a sketch of Hebrew grammar. Afterward he contributed to the *Vessillo Israelitico*, the *Famiglia Israelitica*, *Mose*, and *Corriere Israelitico*. Belleli graduated from the University of Athens, but was forced to leave in 1883 due to antisemitic discrimination. Then, he went to study at the Istituto di Studi Superiori at Florence, where he obtained his doctorate in philology in 1890. During part of this period he served as principal of the Jewish school in Leghorn.

In 1890 Belleli returned to Corfu where he was the secretary of the local Alliance Israélite Universelle chapter.

Belleli had already sensed for several years the dangers that the Jewish population was to face in the future. He tried to combat the antisemitic instigation of the local press. He was unsuccessful in his talks with local politicians to get political equality for the Jews, for the latter only reiterated that the Jews enjoyed protection. At best this “protection” was feeble and soon to be shattered.

Belleli witnessed the violent outbreak against the Jews in Corfu in 1891 that followed the murder of the seven-year-old Jewish girl Rubina Sarda and a vicious blood libel against the Jews. He represented the Alliance as an observer and reported back to them extensively at the ensuing trial in Patrás.

In response to the spread of anti-Jewish literature Lazarus Belleli translated into Greek Theodore Reinach’s *Histoire des Juifs* (1895).

In 1895 Belleli left for England. In 1908 while still living in London he received the Corgialeigno Prize from the University of Athens for his study “President Capodistrias as a Propagator of Education in Greece.” This was the first time that a Jew had been awarded such a high honor in Greece. In 1909 he published *Examination of the Assuan and Elephantine Aramaic Papyri*.

He eventually returned to Greece. From 1929 to 1930 he taught Jewish studies at Aristotle University, Salonika.

[Yitzchak Kerem (2nd ed.)]

BELLISON, SIMEON (1881–1953), clarinetist. Bellison studied first with his father and then, from 1894 to 1901, in the Moscow Conservatory with J. Friedrich. He performed from the age of nine and organized his own ensembles. Bellison played first clarinet in the Moscow Opera Orchestra (1904–14) and the Petrograd Opera Orchestra (1915). He served in the Russian army during the Russo-Japanese War and WWI. Bellison organized the Zimro woodwind ensemble (1918), which went on tour in Asia and the U.S. In 1920 he joined the New

York Philharmonic Orchestra as first clarinetist (until 1948). He transcribed many Jewish compositions for his ensemble. The Bellison archives and a collection of his instruments are housed at the Rubin Academy of Music, Jerusalem.

BELLOW, SAUL (1915–2005), U.S. novelist. Author of 11 novels and numerous novellas and stories, Pulitzer Prize winner for *Humboldt's Gift* (1975), Nobel Prize winner for literature in 1976, and the only novelist to win three National Book Awards, for *The Adventures of Augie March* (1953), *Herzog* (1964), and *Mr. Sammler's Planet* (1970), Bellow brilliantly captured the Jewish-American experience and voice of the mid-20th century.

Born Solomon Bellow, the youngest of four children of Abraham (Abram) and Liza (Lescha) Belo, Russian Jewish immigrants to Canada, Bellow changed his name as the Bellows assimilated, from Shloimke to Solomon to Sol to Saul. He was born in Lachine, Quebec, two years after his family immigrated to Canada, and was raised in Montreal and Chicago, Illinois. He spoke fluent Yiddish, French, and English as a child, and studied Hebrew. Bellow's trilingual childhood is evident in Bellow's vivid stylistic mix of high and low registers, of classical English and the uniquely Jewish dialect of his Chicago childhood.

The Bellows, owing to poverty and Abram's troubles with the law as a result of his bootlegging, moved to Chicago when Saul was nine. Bellow later in life had a nostalgic love for the Chicago of his youth, and he explored Chicago's history, diverse ethnic cultures, unique American dialect, and Jewish immigrant society in much of his literature. In his later works he contrasted his nostalgia for the Chicago of his youth with his mounting anxiety concerning what he saw as the city's rapid urban decay. This concern may help account for his growing conservatism, which was a dominant theme of such later books as *Mr. Sammler's Planet* (1970), in which Bellow brought together, through the Holocaust survivor Sammler, the Shoah and his dark satirical rejection of 1960s radicalism. His conservatism can also be seen in *The Dean's Decem-ber* (1982), Bellow's depiction of contemporary Chicago as a violent, barbaric dystopia.

Bellow's religious childhood had a profound impact on his works, for Jewish American issues and culture permeate his novels. His religiously observant mother had hopes that he would become a rabbi or talmudic scholar; at four he could recite whole passages from the Torah in Hebrew or Yiddish. Bellow used both vernacular Yiddish and Yiddish cadences and syntax throughout his works. In early works such as *The Adventures of Augie March* and later works such as "Cousins" from his short story collection *Him with His Foot in His Mouth* (1984), Bellow also depicted Jewish immigrant family life with vividness and affection. In his use of Jewish irony and humor and in his introspective, morally focused protagonists, Bellow is recognizably a Jewish writer. He referred to his Jewish up-

bringing as a literary "gift, a piece of good fortune with which one doesn't quarrel." Nevertheless, he rejected the label "Jewish American author," preferring to say that he was "an American, a Jew, a writer by trade," perhaps due to a fear that being identified as too Jewish would relegate him to a literary ghetto. Bellow was not religiously observant as an adult. Nonetheless, he never denied his Jewishness, and he spoke out in support of oppressed Jews in the Soviet Union and against antisemitism everywhere, spoke often to Jewish groups, and visited Israel often, including going to Israel in 1967 to report on the imminent war. Bellow went to Israel again in 1970 and in 1976, eventually writing about his experiences there and about the global political problems facing Israel in his well-reviewed nonfiction book *To Jerusalem and Back* (1976).

Jewish themes are central to many of Bellow's major works, as are autobiographical elements. For example, Bellow's Kafkaesque *The Victim* (1947) is an original treatment of the theme of antisemitism and the first of his attempts to confront the meaning of the Holocaust, with the secular Jewish protagonist Asa Leventhal confronted by the antisemitic Kirby Allbee; his award-winning *The Adventures of Augie March* (1953) is a picaresque novel about the adventures of a Jewish boy from Chicago during the Depression of the 1930s. In his powerful novella *The Bellarosa Connection* (1990), Bellow told the story of a Holocaust survivor while at the same time delved into Jewish issues of memory and the ethical and psychological problems faced by American Jews living safe lives while their European brothers suffered and died. Bellow's final novel *Ravelstein* (2000), a moving fictionalized treatment of his friendship with the conservative Jewish intellectual, Allan *Bloom, author of the controversial *The Closing of the American Mind*, is also arguably Bellow's most overtly Jewish novel, with discussions concerning the Holocaust, Jewish history and identity, Israel, and the fate of the Jewish people.

While his father and brothers were business-minded, Bellow was always more interested in books and culture, and this conflict between pragmatism and idealism, the real world and the inner or ideal world, is central to much of his fiction. Bellow was introspective and death-obsessed from an early age, partly due to childhood illnesses including six months spent in the tuberculosis ward at Royal Victoria Hospital when he was eight, where he saw many die and came near death himself. He later described his mother's early death when he was 18 as the greatest loss in his life; fears of death and loss thus dominate much of Bellow's canon. His early loss of his mother may also help to explain his problematic relationship to women, including his five marriages and four unpleasant divorces, themes that reoccur throughout his novels.

Bellow entered the University of Chicago in 1934, but transferred the following year to Northwestern, where he studied anthropology with Melville Herskovits. Upon graduation in 1937, Bellow entered the University of Wisconsin to pursue a graduate degree in sociology and anthropology, but soon left to marry his first wife, Anita Goshkin, and then left for New York to become a writer. The Bellows quickly re-

turned to Chicago. In 1940 he and his wife traveled to Mexico with the hopes of meeting his boyhood hero, Leon Trotsky, only to discover that Trotsky had been killed the day before they arrived. Bellow's early attempts at writing novels proved frustrating. He abandoned an early novel set in Mexico and threw away the manuscript for *The Very Dark Trees*, a novel about a Southern white man turning black, after the publisher for the book canceled its publication for the duration of the war.

Bellow wrote his first published novel, the semi-autobiographical *Dangling Man* (1944), while waiting to enter the army. During this period Bellow's first marriage began to collapse while he waited to be conscripted (he finally joined the merchant marines toward the end of the war) and worked at various jobs, including three years (1943–46) on the editorial staff of the *Encyclopaedia Britannica*. In *Dangling Man*, the Kafka-inspired protagonist, Joseph, a young Jewish would-be writer, waits to be drafted as he experiences Romantic isolation, studies classic writers, has an affair, and suffers from death anxieties and emotional turmoil. In this way Bellow set the pattern for many of his major works, works focused on semi-autobiographical, introspective, intellectual, Jewish protagonists searching for meaning in a savage, irrational universe.

Bellow followed *Dangling Man* with *The Victim* (1947) and with *The Adventures of Augie March* (1953), which Salman Rushdie referred to as the best candidate there was for the Great American Novel. Bellow then published *Seize the Day* (1956), a study of loneliness, failure, and the onset of middle age, and *Henderson the Rain King* (1959), an excursion into the fantastic about a wealthy American's search for ultimate reality among primitive African tribesmen. Bellow's most widely acclaimed work was *Herzog* (1964), an international best seller that gained Bellow fame and numerous awards. Its protagonist, Moses Herzog, is a ruminating, near-mad Jewish professor who writes letters to everyone, including dead relatives, Jung, Nietzsche, and God. Herzog struggles comically but futilely to relate with humanistic values to a dehumanized modern world; like all Bellow's protagonists, he is doomed to live out the contradiction between an inner world of romantic aspiration and an outer one of less than romantic fact.

Bellow was a prolific writer throughout his life, publishing his first play, *The Last Analysis*, in 1964; a volume of short stories, *Mosby's Memoirs and Other Stories* (1968); *Mr. Sammler's Planet* (1970); *Humboldt's Gift* (1975), after which he was awarded the Nobel Prize for literature for 1976; *To Jerusalem and Back* (1976); *The Dean's December* (1982); a short story collection, *Him with His Foot in His Mouth* (1984); *More Die of Heartbreak* (1987); a collection of three novellas, *Something to Remember Me By* (1991); an essay collection, *It All Adds Up* (1994); *The Actual* (1997); and *Ravelstein* (2000). He also edited *Great Jewish Short Stories* (1963). Bellow led a largely itinerant life, moving from university to university as he moved from marriage to marriage; however, he did remain married to his final wife Janis for the last 16 years of his life, and was a profes-

sor for the Committee on Social Thought at the University of Chicago from 1962 to 1993. He also maintained close friendships with a large number of Jewish friends from Tuley High School in Chicago and with such eminent writers as Ralph Ellison, John Berryman, Allan Bloom, John Cheever, Philip Roth, and the Jewish poet Delmore Schwartz, the model for Von Humboldt Fleisher of *Humboldt's Gift*. Widely considered one of mid-century America's leading novelists, Bellow died leaving behind a powerful canon of literature.

[Craig Svonkin (2nd ed.)]

BELMONT, AUGUST (1816–1890), U.S. banker, diplomat, and politician. Belmont was born in Alzey (Hesse), but claimed descent from the distinguished Belmonte family of Portugal. His enemies later circulated the story that his original name was Schoenberg. He began his career as an apprentice in the Frankfurt banking house of Rothschild and was soon transferred to the Naples office, where he conducted the Rothschilds' financial negotiations, including those with the Vatican. After an assignment to Havana, Cuba, in 1837, Belmont served the Rothschild interests in New York. Later he opened his own banking house, August Belmont & Co., which continued to represent the Rothschilds in the United States until the beginning of the 20th century. In 1844 he was appointed honorary Austrian consul general in New York, but resigned in 1850 in protest against the Vienna regime's brutal treatment of the Hungarian rebels, particularly their leader, Louis Kossuth. Belmont represented the United States at The Hague as chargé d'affaires (1853–55), and as minister (1855–58). At the conclusion of his foreign service, Belmont returned to New York and became active in political life. He supported the Union during the Civil War and raised and equipped the first German-born regiment in New York. He enlisted the support of European bankers and merchants for the Union cause during visits to Europe in 1861 and 1863. As Democratic National Committee chairman from 1860 until his retirement from politics in 1872, he exercised great influence in his party and American society. He became the founder of the U.S. Racing Club. One of America's best-known racetracks bears his name. Belmont severed his Jewish ties and married the daughter of Commodore Matthew C. Perry. One son, PERRY (1850–1947), became a lawyer, diplomat, congressman, and an author on United States history and politics. The other, AUGUST (1853–1924), succeeded his father as head of the bank, and played an important role in financing public transportation in the United States.

BELMONTE, town in northern Portugal near the Spanish frontier. Its medieval community is seldom mentioned in the contemporary records, but there is preserved a Hebrew synagogal inscription of 1296–97, probably originally intended to be placed above the synagogue Ark. After the forced conversion of the Jews in Portugal at the end of the 15th century, Belmonte became a major center of New Christian life. A number of well-known families of the Crypto-Jewish Diaspora bearing this name originally derive from this place. It was here that S. Schwarz first established contact with the surviving Crypto-Jews in 1917. The Crypto-Jewish traditions have been more faithfully preserved here than in any other place in Portugal. Reforms that were introduced by Pomal may have caused paradoxically a decline in Crypto-Jewish practices, although prejudice against the descendants of the New Christians persisted in Portugal. In Belmonte, Crypto-Jewish identity remained very strong. During the 19th century there is evidence that some Jews were aware of the existence of New Christians who considered themselves Jewish or felt a certain affinity towards Jews and Judaism. Some scholars at that time, such as M. Kayserling and J. Latouche, drew attention to this fact. The newly established Jewish community in Lisbon showed little interest in New Christians who visited their synagogue. Arthur Carlos de Barros Basto, a New Christian who was a high-ranking officer in the army, found no warmth there. In 1912, after his visit in Portugal, Nahum Slousch reported that many in Portugal led Jewish lives in secret. It was Schwarz, however, who discovered the Crypto-Jews of Portugal, and especially those of Belmonte. He wrote a full and emotional account of his encounter with the Belmonte Crypto-Jews in his book, published in 1925. Schwarz made efforts to have the Crypto-Jews of Belmonte and others return officially to Judaism. Several Jewish organizations, such as the Alliance Israélite Universelle, and individual Jews like Cecil Roth and Lucien Wolf, joined these efforts with enthusiasm. Barros Basto, who returned to Judaism, and Schwarz at first cooperated but finally ended up as bitter rivals. In 1989 the Jewish Community of Belmonte was officially established. In 1996 the Bet Eliahu synagogue was inaugurated. The return of some Crypto-Jews to normative Judaism was no simple matter, since the rabbis who came to instruct and guide them brought normative Judaism as a definitive alternative to the entire body of practices, prayers, and beliefs that had been considered as authentic Judaism practiced in secret.

[Cecil Roth / Yom Tov Assis (2nd ed.)]

BELMONTE, Dutch Sephardi family of poets and diplomats of Marrano extraction. The first member of the family to figure in Jewish life was JACOB ISRAEL (1570–1629). Born in Madeira as a Marrano under the name of Diego Nuñez Belmonte, he was one of the founding members of the Amsterdam Jewish community. According to Daniel Levi (Miguel) de *Barrios, he wrote a satire in Spanish directed against the Inquisition and a poem on Job, both now lost. His son MOSES (17th century) drew and engraved a portrait of his mother Simḥah (Gimar) Vaz. It is impossible to establish their family relationship with ISAAC NUÑEZ (alias MANUEL) BELMONTE (d. 1705), a wealthy merchant who served from 1664 as Spanish agent general in the Netherlands and from 1674 as resident minister or consul. In 1684/5 his community dues amounted to 50 fl, making him sixth in the taxpayers list. In 1693 he was created count palatine by Emperor Leopold III, while at the same time the king of Spain conferred on him the title of baron. In 1676 Isaac Nuñez Belmonte founded a poetic society in Amsterdam, the *Academia de los Sitibundos* and in 1685 the *Academia de los Floridos*. Meetings of the *Academia* were held in his mansion. In 1684 he was appointed one of the two deputies to represent the Sephardi community in cases before the Dutch authorities. From 1700 he lived in the splendid house now at 586 Herengracht. He wrote two poems in memory of the Crypto-Jew Abraham Bernal, who was burned in the auto de fé in Córdoba in 1655. He was *parnas* of the community on and off between 1697 and 1704 and also served as a member of the committee for the redemption of the captives. Unmarried, he was succeeded after his death, both in his title and his diplomatic post, by his nephew Baron FRANCISCO (ISAAC) XIMENES (d. 1713) who, in turn, was followed by his son, MANUEL XIMENES (d. 1730) who died childless, and the title became extinct. JACOB ABRAHAM BELMONTE (alias Franz van Schoonenberg; b. 1757), Dutch diplomat, also was connected with this family, but it is impossible to establish the exact relationship. ISAAC NUÑEZ BELMONTE (18th–19th centuries), a scholar of Smyrna, presumably belonged to a branch of this family which had emigrated to Turkey. He was author of *Sha’ar ha-Melekh* (Salonika, 1771; Bruenn, 1801; Lemberg, 1859), a commentary on the first and second parts of Maimonides’ *Mishneh Torah*.

[Kenneth R. Scholberg]

BELOFF, MAX, BARON (1913–1999), English historian and political scientist. Beloff, who was born in London, graduated in modern history from Oxford in 1935. From 1939 he taught

history at Manchester University and returned to Oxford in 1946 as reader in the comparative study of institutions. During World War II he served in the Royal Signal Corps. In 1957 he became professor of government and public administration at Oxford and a fellow of All Souls' College. The author of numerous works on European history, American government, and Soviet foreign policy, Beloff also wrote extensively about developments in contemporary international relations, particularly concerning Western Europe after World War II. In *The United States and the Unity of Europe* (1963) he considered the prospects of European unity and the interdependence of Western Europe and the U.S. Two works on Soviet foreign policy, *The Foreign Policy of Soviet Russia 1929–41* (1947–49) and *Soviet Policy in the Far East 1944–51* (1953) were among the pioneering attempts to present a documentary and historical assessment of the Soviet Union's role and aims in international politics and are considered standard works in this field. Beloff's studies of American government, including *The American Federal Government* (1959), concentrated on the historical roots of American federalism and how its evolution shaped the structure and functioning of contemporary American politics and institutions. Among his other works are: *The Age of Absolutism, 1680–1815* (1954); *Europe and the Europeans...* (1957), a report prepared at the request of the Council of Europe; *The Great Powers: Essays in 20th Century Politics* (1959); and *The Balance of Power* (1967). In 1992 Beloff produced an autobiography, *An Historian in the Twentieth Century*. In the early 1970s Beloff was instrumental in founding University College, Buckingham, Britain's only purely private university, and served as its principal from 1974 to 1979. An outspoken Conservative, Beloff was knighted in 1980 and given a life peerage by Margaret Thatcher in 1981.

His sister NORA BELOFF (1919–1997), political correspondent of *The Observer* in 1964–76, was the first woman political correspondent of a Fleet Street newspaper. A brother, JOHN BELOFF (b. 1920), became probably the best-known serious investigator of parapsychological phenomenon in Britain, and is the author of *The Existence of Mind* (1962) and *Parapsychology: A Concise History* (1993). Another sister married the Nobel Prize-winning scientist Sir Ernest *Chain.

[Brian Knei-Paz (Knapheis) / William D. Rubinstein (2nd ed.)]

BELORUSSIA, territory located between the rivers Neman (west) and Dnieper (east) and the rivers Pripet (south) and Dvina (north). Between the 14th and 18th centuries part of *Poland-Lithuania, from the partitions of Poland (1772–95) until the 1917 revolution it was part of the "northwestern region" of Russia, and much of it was included in the three "guberniyas" (provinces) of Minsk, Mogilev, and Vitebsk. Under Soviet rule Belorussia became a political entity as the Belorussian Soviet Socialist Republic. After the dissolution of the Soviet Union, the area was called Belarus and was a C.I.S. republic.

Up to Soviet Rule

In Jewish history Belorussia is part of "Lita" (Lithuania), its Jews being considered "Litvaks." Jewish merchants apparently first visited Belorussia in transit between Poland and Russia as early as the 15th century. Jews were acting as toll collectors in Nowogrodek (1445), *Minsk (1489), and *Smolensk (1489). In 1495 the Jews in Belorussia were included in the expulsion of Lithuanian Jewry, returning with it in 1503. As large-scale farmers of customs dues and wealthy merchants, Jews from *Brest-Litovsk played an important role in the development of Belorussia. Their agents were often the pioneers of the communities of Belorussia. A community was established in *Pinsk in 1506. By 1539 Jews had settled in *Kletsk and Nowogrodek, and subsequently in Minsk, *Polotsk, *Vitebsk, *Mogilev, and *Orsha. The Christian citizenry consistently opposed the permanent settlement of Jews within the areas of the cities and towns under municipal jurisdiction. In Vitebsk, for instance, Jews were not granted permission to build a synagogue until 1630. Within the framework of the Council of Lithuania (see *Councils of the Lands), Pinsk was one of the three original principal communities; most of the communities in Belorussia came under the jurisdiction of the Brest-Litovsk community, while several were subject to that of the Pinsk community. In 1692 the *Slutsk community achieved the status of a principal community. Smaller communities also grew up under the protection of landowners who rented their towns, villages, taverns, or inns to Jewish contractors (see *Arenda). These made constant attempts to break away from the jurisdiction of older communities and manage their communal affairs independently.

Until the partitions of Poland the communities in Belorussia were constantly exposed to the danger of Russian incursions, which were accompanied by wholesale massacres and forced conversions. Such events occurred in 1563 in Polotsk, and in many other communities between 1648 and 1655.

The relative strength of the Belorussian communities in the middle of the 18th century is shown by the amounts levied on them as listed in the tax register of the Council of Lithuania for 1761: for the communities in the eastern part of Belorussia, 16,500 zlotys; Polotsk and environs, 3,000 zlotys; the area around Minsk (including 40 small communities), 4,260 zlotys; Slutsk and its environs, 2,420 zlotys; Druya and its environs, 750 zlotys; Nowogrodek, 300 zlotys. According to the government census of 1766, there were 62,800 taxpaying Jews living in Belorussia, forming 40% of Lithuanian Jewry. The largest communities were in Minsk (1,396 Jewish inhabitants) and Pinsk (1,350).

After Belorussia passed to Russia in the late 18th century, *Shklov became an important commercial center on the route between Russia and Western Europe. Although a small group of Jews acquired wealth as building contractors, army suppliers, and large-scale merchants, the vast majority of Jews in the region of Belorussia were relatively destitute. Nevertheless, their numbers grew. There were 225,725 Jews living in the three "guberniyas" of Belorussia in 1847, and 724,548 in 1897

(13.6% of the total population), forming the majority in the principal cities of the region. There were 47,561 Jews in Minsk (52.3% of the total population); 34,420 in Vitebsk (52.4%); 32,369 in *Daugavpils (46.6%); 21,539 in Mogilev (50%); 21,065 in Pinsk (74.2%); 20,759 in *Bobruisk (60.5%); and 20,385 in *Gomel (54.8%). The Jews in the cities and townships of Belorussia had associations with the village and rural economy in a variety of ways. Both the wealthy and poorer Jews engaged in the development and trade of forest industries, and established small- or medium-sized timber enterprises. They also developed leather and allied industries on a similar scale. Another Belorussian Jewish occupation was peddling combined with the buying up of village produce, such as flax, hemp, and bristles, which the Jewish peddler sold to Jewish merchants who exported these commodities to the West. Because of the prevailing conditions of poverty, large numbers of Jews emigrated from Belorussia to the Ukraine or southern Russia, and, from the 1880s, to the United States.

In the cultural sphere, the Jews of Belorussia were influenced by the centers in Vilna, Volhynia, and Podolia. In general the **Mitnaggedim* trend predominated in the north and west of the region. Most of the celebrated Lithuanian yeshivot were in Belorussia, those of *Volozhin and *Mir, among others. Ḥasidism penetrated Belorussia from the south. Two of the fathers of Ḥasidism, *Menahem Mendel of Vitebsk and *Shneur Zalman of Lyady, were active there. Belorussia was the cradle of *Ḥabad Ḥasidism. In southern Belorussia the influence of the ḥasidic rabbis of the *Karlin and *Stolin dynasties was strong. By the mid-19th century Haskalah penetrated the larger towns from Vilna. The pogroms in Russia from 1881 to 1883 did not spread to Belorussia. The Ḥovevei Zion found adherents mainly in the larger and average-size communities. Toward the end of the 19th century Zionism and the Bund movement began to spread among Belorussian Jewry. Zionism found its main adherents among middle-class professionals and white-collar workers or working men from the ranks of traditional Judaism. It was in Belorussia that Labor Zionism originated, its centers being Minsk, Bobruisk, Gomel, and Vitebsk. The second convention of Russian Zionists was held in Minsk in 1902. The Bund won converts mainly among Jewish artisans and workers, but also among radicals of the intelligentsia. During the revolution of 1905 the Bund headed the revolutionary movement in Belorussia. Self-defense organizations to protect the Jews during the wave of pogroms in this period were established by the Bund and Labor Zionists in every town in the region. The first move toward organized Jewish self-defense was made to combat a gang of rioters in Gomel in the fall of 1903. As a result, only a few communities in Belorussia experienced harm.

The revolution precipitated far-reaching changes in the internal life of the Jews of Belorussia which contributed to the breakup of traditional Jewish social and spiritual patterns and loyalties. Zionism resulted in the development of modernized *ḥadarim* and Hebrew schools. After the outbreak of World War I a stream of refugees and émigrés from Poland and Lith-

uania passed through Belorussia, and were warmly received by the Jews there. The 1917 February Revolution aroused great expectations among the Jewish public, and Jewish political parties emerged from underground. A number of Jewish journals were issued in Minsk, including the Zionist *Der Yid* and the Bundist *Der Veker*. In the Minsk district the Zionists received 65,400 votes in the elections to the All-Russian Constituent Assembly, with 16,270 votes cast for the Bund and the Mensheviks. After the October Revolution and the Peace of Brest-Litovsk, Belorussia became a battlefield between the Red Army and the Polish army. The Jewish communities suffered severely both from general wartime conditions and from attacks by the Polish Army when Jews were killed indiscriminately on the charge of spying and helping the Red forces. The victims of these atrocities included 35 Jews in Pinsk in April 1919. Russian volunteers under the command of General Bulak-Balakhovich terrorized the Jews in the small towns and villages. After the Treaty of Riga in March 1921, Belorussia was divided between the Soviet Union and Poland.

Under Soviet Rule (until 1941)

During the first years of Soviet rule, the Jews of Belorussia found themselves in an exceptional situation. Among the Belorussian people, mainly poor and uneducated peasants, nationalist feelings were just beginning to crystallize. The anti-Jewish tradition, which poisoned relations between the Jews and non-Jews in Poland and the Ukraine, was little felt among the peasant masses of Belorussia. On the other hand, there were no cultural ties between the Belorussians and the Jews. The Jewish poet Samuel Plavnik (1886–1941), writing under the pseudonym Zmitrok *Byadulya, who was one of the creators of Belorussian literature even before the October Revolution was a rare phenomenon. The Jewish population in Belorussia existed in conditions conducive to a flourishing cultural and social life of its own. Relatively, the largest concentration of Jews in the Soviet Union was that of the Belorussian Republic, with a solidly based social structure and culture, Yiddish being its main language. According to the census of 1926, the 407,000 Jews in Belorussia formed 8.2% of the republic's total population. A considerable proportion of the urban population was Jewish. There were 53,686 Jews (40.8%) in Minsk; 37,745 (43.7%) in Gomel; 37,013 (37.5%) in Vitebsk; and 21,558 (42%) in Bobruisk. The Belorussian government, in its policy of reducing the predominance of the Russian language in towns, which was to no small extent a language used by the Jews, encouraged the use of Yiddish among the Jewish population. For some time the slogan "Workers of the World Unite!" was also inscribed in Yiddish, in addition to Belorussian, Russian, and Polish, on the emblem of the Belorussian Republic.

With the consolidation of the Soviet regime in Belorussia, the old economic structure of the Jewish population was overturned. The abolition of private trade and restrictions on small artisans created a large class of citizens "deprived of rights" (*Lishentsi*). Attempts to integrate these elements

into the agricultural and industrial sectors failed to solve the problem. A partial solution was however achieved by the continuous Jewish emigration from Belorussia to the interior of Russia, especially to Moscow and Leningrad. According to the census of 1939, there were only 375,000 Jews living in Belorussia, and their proportion in the general population had decreased to 6.7%.

The *Yevseksiya (Jewish section of the Communist Party) was particularly active in Belorussia in its violent campaign of propaganda and persecution against the Jewish religion and way of life and Jewish national solidarity. *Hadarim* and yeshivot were closed down, and synagogues turned to secular use. Yet, even in the late 1920s religious Jews still fought courageously for the right to publish *siddurim*, calendars, etc., and to maintain synagogues. *Hadarim* and yeshivot were maintained secretly. A relentless war was also waged on Zionism, which was deeply entrenched in Belorussia. Underground Zionist youth movements (*Kadimah, *Ha-Shomer ha-Za'ir, *He-Haluz) continued their activities in Belorussia until the late 1920s. It was only after repressive measures and systematic arrests that the movements were suppressed.

On the other hand, Jewish Communists attempted to create a framework for promoting a Soviet-inspired secular national-Jewish culture in Belorussia. A network of Jewish schools giving instruction in Yiddish was established, which, in 1932–33, was attended by 36,650 children, 55% of the Jewish children being of school age. A number of Yiddish newspapers were also established, the most important of which were the daily *Oktyaber* and the literary journal *Shtern*. In 1924 a Jewish department was established at the Institute of Belorussian Culture of Minsk, with philology, literature, and history sections. There was also an institute for Jewish teachers at the Belorussian University. In 1931 proceedings were conducted in Yiddish in ten Soviet law tribunals. A center for Yiddish literature was created in Minsk, of which the most outstanding members were the writers Izzie *Kharik, Moshe *Kulbak, and Selig *Axelrod. During the 1930s there was a sharp decline in this cultural activity with the abolition of the Yevseksiya. The Jewish cultural and educational institutions gradually degenerated, and toward the end of this decade most were liquidated. The systematic “purge” of Jewish intellectuals in Belorussia also began in the late 1930s (Izzie Kharik and Moshe Kulbak in 1937, and Selig Axelrod in 1941).

Western Belorussia under Polish and Soviet Rule

In the western part of Belorussia, which was under Polish rule from 1920 to 1939, Jewish life developed along entirely different lines. The old economic order was maintained, and the Jews continued to engage in commerce and crafts, most living in great poverty. Jewish culture, however, was able to develop freely. *Hadarim* and yeshivot, including yeshivot whose members had fled from the Soviet sector, such as the yeshivah of Slutsk that transferred to Kletsk, continued to expand. A Hebrew school network (Tarbut, Yavneh) was established. The Zionist movement was well organized and many of the local

youth joined Zionist bodies, from Ha-Shomer ha-Za'ir to Betar. Many were also members of the illegal Communist movement which was rigorously repressed in this border region. Yiddish remained the spoken language of the Jewish masses and knowledge of Hebrew was widespread. In the cultural sphere the Jews of Western Belorussia looked to the important centers of Vilna, Brest-Litovsk, Bialystok, and Warsaw.

In September 1939, when western Belorussia was annexed by the Soviet Union, hundreds of thousands of Jews in whom religious and nationalist feelings were strong augmented the numbers of Belorussian Jewry already under Soviet rule. They also included groups of refugees from the Nazi-occupied zone. Even though the Soviet authorities immediately began to liquidate the practice of religion and the Zionist movement, signs of awakening were evident among the “older,” “Soviet” Jews. In Bialystok a nucleus of Jewish writers and intellectuals was formed. The Hebrew schools were converted to Yiddish institutions. The higher authorities, however, were quick to liquidate this “reactionary evolution.” Arrests of “bourgeois elements” and expulsions to the interior of Russia soon followed, and every effort was made to press forward with the liquidation and assimilation carried out over 20 years in eastern Belorussia. The German invasion of Belorussia in June 1941 interrupted this activity, then at its height. The Jews in Belorussia, most of whom had not succeeded in escaping eastward, were now caught in the trap of the Nazi occupation.

For their subsequent history, see *Russia, Holocaust Period, Contemporary Period; *Belarus.

[Yehuda Slutsky]

BELOV, A. (pen name of **Abraham Joshua Elison**; 1911–2000), Soviet Russian writer, translator, and journalist. Belov was born in the town of Mogilev on the Dnieper. He received a traditional Jewish education before entering a Soviet public school. In 1927–28 he was a member of the underground Zionist youth organization and escaped arrest by moving to Leningrad. In 1933–36 he studied at the Leningrad Conservatory. From 1932 he contributed to Soviet periodicals and in 1934–49 he was on the staff of *Leningradskaya pravda*. He was fired from the newspaper during the campaign against the “cosmopolitans.” After World War II Belov coauthored several volumes of popular history that were translated into a number of languages. Together with the semitologist L. Vilsker (1919–88) he translated works from the Syrian (Aramaic) and Hebrew languages. His translations of Israeli writers are collected in *Rasskazy izrail'skikh pisateley* (“Stories of Israeli Writers,” 1965) and *Iskatel' zhemchuga* (“The Pearl Diver,”

1966). He was the only translator of *Shalom Aleichem from Hebrew into Russian (*Za granitsej i doma* (“At Home and Abroad”) and *Shimele*, both in 1959). These were the first legal translations from Hebrew in the Soviet Union since 1923. In 1964 Belov published an essay on A. *Shlonsky’s translation of Pushkin’s *Eugeni Onegin* in an anthology called *Masterstvo perevoda* (“The Mastery of Translation”). He also translated from Yiddish. Publication of Belov’s book on the trial of Adolf *Eichmann and his book on the Dead Sea were banned by the Party censor. The latter book was later published in Jerusalem as *Dno mira* (“The Bottom of the World,” 1978).

Belov was one of the first teachers of Hebrew in Lenin-grad. From 1974 he lived in Israel. He continued to work as a translator, translating works by S.Y. *Agnon, Y. *Burla, A. *Meged, and others into Russian. He also worked as a journalist and published 153 letters written to him by Shlonsky and B. *Gaponov. In 1990 his memoirs were published in a Hebrew translation as *Eikh hayiti kushi* (“How I Was a Blackamoor”). In 1998 he published his book on Hebrew writers, poets, journalists, scholars, and teachers in the Soviet Union under the title *Rytsari ivrita v byvshem Sovetskom Soyuze* (“The Knights of Hebrew in the Former Soviet Union”).

[Naftali Prat (2nd ed.)]

BELSHAZZAR (Heb. בִּלְשַׁזְזָר, בְּלִישַׁזְזָר; the Akkadian name *Bel-šar-ušur*, “O Bel, guard the king”; LXX, Βαλτασάρ), son of *Nebuchadnezzar and the last king of Babylon, according to the Book of Daniel. The biblical account (Dan. 5) relates that Belshazzar gave a banquet for his high officials at which the wine was drunk from the sacred vessels captured by Nebuchadnezzar from the Temple in Jerusalem amid songs to the idols of gold, silver, etc. While they were thus engaged, a mysterious hand appeared and wrote on the wall words which none of the Chaldeans was able to read or interpret but which Daniel, on being summoned by the king, read as **Mene Mene, Tekel Upharsin*, and interpreted as a warning to Belshazzar of the impending downfall of his kingdom. That night Belshazzar was killed and was succeeded as world ruler by *Darius the Mede (5:30; 6:1). Two of Daniel’s visions are dated as occurring in the first and third years of Belshazzar’s reign (7:1; 8:1). While the details given in Daniel appear historically inaccurate, Babylonian texts mention a Bēl-šar-ušur as the son, crown prince, and regent of *Nabonidus, the last king of Babylon (556–539 B.C.E.). In Nabonidus’ absence, Babylon was captured by the armies of *Cyrus, king of Persia. Neither Nabonidus nor Belshazzar was directly descended from Nebuchadnezzar. Presumably because he was a regent, Belshazzar’s name is coupled with that of Nabonidus in Babylonian prayer formulae (in the prayer for the king’s health in I Bar. 1:11, it is coupled – unhistorically – not with Nabonidus but with Nebuchadnezzar) and in two legal documents (12th and 13th years of Nabonidus), where an oath is sworn by their lives. While the Greek historians Herodotus (1:191) and Xenophon (*Cyropædia*, 3:5, 15) do not mention Belshazzar, they share with Dan. 6 the – hardly historical – tradition that the Babylonians were

engaged in revelry at the time when the Persians entered the city (corresponding to the time when Belshazzar was killed in the biblical account).

In the *Aggadah*

Belshazzar is often linked in the *aggadah* with two of the other Babylonian rulers mentioned in the Bible, Nebuchadnezzar and *Evil-Merodach. Thus the “three-year-old heifer” that Abraham was commanded to offer up (Gen. 15:9) is said to be a reference to these three kings (Gen. R. 44). The occasion of Belshazzar’s feast was his miscalculation that the “seventy years” (Jer. 25:11–13) of exile before the redemption had passed without any sign of God’s help to His people, a calculation that he made from the date of Nebuchadnezzar’s accession to the throne, instead of from the destruction of the Temple (Dan. 9:2; Meg. 11b). Darius and Cyrus were the doorkeepers of Belshazzar’s chamber. On the night after he had seen the handwriting on the wall, the king commanded them to kill anyone who tried to enter, even if he should claim to be king. Belshazzar himself, however, had cause to leave the room during the night by a private entrance, and when he attempted to reenter through the usual entrance, Darius and Cyrus, in accordance with his own instructions, slew him (Song. R. 3:42).

In the Arts

Christian writers and artists of the Middle Ages saw in Belshazzar a prefiguration of the antichrist. Belshazzar’s feast is described in the *Ordo Prophetarum*, a medieval mystery cycle, in the section dealing with the prophet Daniel. From Renaissance times onward, however, the theological aspect of the story faded, and its dramatic and spectacular character was invariably emphasized. The great Spanish playwright Pedro Calderón de la Barca (1600–1681) devoted one of his innumerable *autos sacramentales* to the theme, his *La Cena de Baltasar* (written c. 1634), combining fine poetry with excellent stagecraft. In England Hannah More included a *Belshazzar* in her *Sacred Dramas* (1782); Lord *Byron wrote the poem “Vision of Belshazzar” (in his *Hebrew Melodies*, 1815); and the poet and historian Henry Hart Milman, who became dean of St. Paul’s Cathedral, produced *Belshazzar; a Dramatic Poem* (1822), a melodramatic verse-play not intended for the stage. Another English work inspired by the biblical story was *The Impious Feast* (1828), a poem by Robert Eyres Landor. Lord Byron’s interpretation is said to have inspired the poem *Bel-sazar*, one of the earliest works of Heinrich *Heine, which appeared in his *Buch der Lieder* (1827). Another writer who dealt with the theme was the Spanish playwright and novelist Gertrudis Gómez de Avellaneda, author of the romantic tragedy *Baltasar* (1858).

In the visual arts treatment of the Belshazzar episode followed the same pattern as in literature. The antichrist interpretation occurs in medieval manuscript illumination, notably the 11th-century *Saint-Sever Apocalypse*, and in sculpture at Vézelay, France (12th century), and Amiens and Magdeburg (13th century). By contrast, the spectacular aspect is dominant

in later painting, notably the dramatic portrayal by *Rembrandt (1634).

The biblical story has also inspired orchestral and vocal music. Handel's powerful oratorio *Belshazzar* (1745; text by Charles Jennens) did not deter later composers from attempting versions of their own. The most successful of these was William Walton's oratorio *Belshazzar's Feast* (1931; text arranged by Osbert Sitwell). Other treatments of the theme were Sibelius' *Belsazars gästabud* (1906), written as incidental music to a drama by the Finnish-Swedish poet Hjalmar Procopé and reworked as an orchestral suite in 1907; and a setting of Heine's *Belsazar* by Bernard van Dieren (1884–1936). The incidental music to a play on the theme which Joseph *Achron composed in 1928 was later reworked as two tableaux for large orchestra.

BELTESHAZZAR (Heb. and Aram. בִּלְטֵשְׁאָזָר; בִּלְטֵשְׁאָזָר; LXX, Βαλτασάρ; Vulg., Baltassar), name given to *Daniel in Babylonia (Dan. 1:7). Foreigners introduced into court life were often given native names; e.g., in Egypt *Joseph became known as Zaphenath-Paneah (Gen. 41:45). Popular etymology related the name Belteshazzar to Bel (Dan. 4:5) but it probably derived from *Balaṭ-šarri-ušur* ("Protect the life of the king").

[Bezalel Porten]

BELTSY (Rum. *Bălți*), city in Bessarabia, Moldova; in Romania 1918–40 and 1941–44. Jews were invited there in 1779 when an urban nucleus was formed in the village. Their rights and obligations were established by an agreement in 1782. By 1817 there were 244 Jewish families living in Beltsy. The community subsequently increased through immigration; after the *May Laws were issued in 1882, many Jews expelled from neighboring villages settled in Beltsy. The community numbered 3,124 in 1864 and had grown to 10,348 in 1897 (56% of the total population) even though Jewish domicile was limited by legislation and Jews were often expelled from the city as illegal residents. As an outcome of these expulsions, coupled with economic difficulties, many Jews from Beltsy emigrated toward the end of the 19th century, including a group who journeyed to Erez Israel.

In 1847 a Jewish state school was opened in Beltsy. A *talmud torah*, founded in 1889, provided instruction in both Jewish and general subjects. By the 1930s Jewish educational institutions included a kindergarten, three elementary schools, and two secondary schools, for boys and girls. Welfare institutions included a hospital and old-age home. The Jews in Beltsy

were mainly employed in commerce and crafts; some living in the vicinity engaged in agriculture. The 1,539 members of the local Jewish cooperative loan-bank in 1925 included 656 engaged in business, 441 in crafts, and 156 in agriculture. The Jewish population numbered 14,259 (46% of the total) in 1930. When Bessarabia became part of Soviet Russia in June 1940, the communal organization was disbanded.

[Eliyahu Feldman]

Holocaust Period and After

In June 1941 about two-thirds of the town's buildings were destroyed in German and Romanian air raids. The Jews fled to nearby villages, mainly to Vlad. On July 7 a gang of Vlad peasants seized homes sheltering the refugees, murdered the occupants, and set fire to the houses. The next day a group of Romanian soldiers encountered 50 Jews on the road to Beltsy, drove them into the swamps, and shot them to death. Beltsy was captured by the Germans on July 9 and those Jews who had returned were deported to a concentration camp. The same day 10 Jews who had been taken as hostages were executed. The Gestapo also asked the ghetto committee to furnish it with a list of 20 "Jewish communists" who were to be put to death. When they refused to do so, all the committee members, together with another group of 44 Jews, were forced to dig their own graves and shot. Twenty more Jews were shot by the Germans on July 16. On July 11, 1941, all surviving Jews were assembled in the courtyard of the Moldova Bank. Romanian troops transferred them to an internment camp in the Răuțel forest, some 7½ mi. (12 km.) from the town. Many of the inmates died from starvation and disease. By August 30, 1941, only 8,941 Jews were left in the entire district (compared to the 31,916 who resided there according to the 1930 census). They were concentrated in three camps, and later on all were deported to *Transnistria. Even the Jewish tombstones were removed from the cemetery in Beltsy to erase all traces of the Jewish inhabitants of the town. Jews returned to Beltsy after the war. The only synagogue was closed by the authorities in 1959 and the Jewish cemetery was badly neglected. In 1962 militia broke into a house where Jews had assembled for prayer; those attending were taken to the public square where communist youth had been gathered to jeer at them. Their children were expelled from school. The city has retained a certain Jewish character and Yiddish is often heard on its streets. Its estimated Jewish population in 1970 was 15,000 and 1,000 in the early 2000s.

BELY, VICTOR ARKADYEVICH (Aronovich; 1904–1983), composer and musicologist. Born in Berdichev, Bely studied at the Kharkov Conservatory (violin and composition, 1919–21) and at the Moscow Conservatory with G. Konyus and N. My-

askovsky (composition, 1922–29). From 1935 to 1948 he taught composition there. After working at the Minsk Conservatory in 1949–52 he returned to Moscow and became editor in chief of the Moscow journal *Muzykalnaya Zhizn*. He replaced his early expressionistic style through participation in *Prokoll* (the production collective) with poster-like music for revolutionary masses and then songs for the masses. A vocal piece, *Orlyonok* (“Young Eagle,” 1936), was followed by successful war songs, including a popular “Ballad of Captain Gastello.” His collection of songs won the Stalin Prize in 1952. Bely was awarded the titles of Honored Art Worker of the RSFSR and Honored Artist of the Belorussian SSR.

BELZ, small town in the Lvov district, Ukraine (between the world wars, in Poland). The Jewish settlement in Belz dates from the beginning of the 15th century. About 200 Jews inhabiting 32 houses are recorded in 1550. Two hundred Jews died during the *Chmielnicki uprising in 1648–49 and 60 children subsequently during the Swedish invasion (1660). The community later revived and became famous as a center of Ḥasidism. The *rebbe*s of the Rokeaḥ dynasty (see next entry) officiated as rabbis of the community. Other noted rabbis of Belz include Joshua *Falk, Joel *Sirkes, Zechariah *Mendel, and Jonah Teomim. In 1921 the Jews numbered 2,104 (50.7% of the total population). In May 1942, during the Nazi occupation, there were 1,540 Jews in Belz. About 1,000 were deported to the Sobibor death camp via *Hrubieszow. The remaining Jews were put to work on farms and after the harvest were deported to Sobibor, also via Hrubieszow. In 1970, Jews were living in the town and there was one synagogue there, but there was no community by the early 21st century.

[Nathan Michael Gelber / Shmuel Spector (2nd ed.)]

BELZ, one of the most important ḥasidic dynasties of Galicia, so called after the township where it took up residence (see previous entry). The founder of the dynasty, SHALOM ROKE'AH (1779–1855), came from a distinguished family descended from R. Eleazer *Roke'ah of Amsterdam. Orphaned as a child, Shalom studied under his uncle, Issachar Baer of Sokal whose daughter he married. At Sokal he was introduced to ḥasidic teachings by Solomon of *Lutsk, a devoted follower of *Dov Baer, the *Maggid* of Mezhibezh. Later Shalom became a disciple of *Jacob Isaac Horowitz, ha-Ḥozeh (“the Seer”) of Lublin, Uri of *Strelisk, the *maggid* Israel of *Kozienice, and *Abraham Joshua Heschel of Apta. On the recommendation of Horowitz, Shalom was appointed rabbi in Belz. After Horowitz' death in 1815, Shalom was recognized as a *zaddik* as his following increased. He built a splendid *bet midrash* in Belz. Thousands of Ḥasidim flocked to him, including rabbis and

well-known *zaddikim*, and Belz became the center of Galician Ḥasidism. Many legends tell of the miracles he performed. Shalom was also considered an authoritative talmudist; he stressed the importance of talmudic study and strengthened the principle of learning in Ḥasidism. Active in public affairs, he served as a spokesman for Galician Jewry, taking part in the struggle to improve the severe economic conditions, and opposing Haskalah. Excerpts from his teachings have been frequently quoted. They are collected, with legends and tales of his activities, in *Dover Shalom* (1910). Many of Shalom's descendants served as *zaddikim*, including his son-in-law HENIKH OF OLESKO and his son JOSHUA (1825–1894) who succeeded him. The latter provided Belz Ḥasidism with the organizational framework which maintained it as the focus of Ḥasidism in Galicia, and ruled his community strictly. One of the leaders of Orthodox Jewry in Galicia, he was prominent in the opposition to Haskalah. He initiated the establishment of the Maḥazikei ha-Dat organization and the Orthodox newspaper *Kol Maḥazikei ha-Dat*. As a result of the cultural and social tensions in Galician Jewry, the Belz *zaddikim* adopted an extreme stand and resisted every new idea emanating from non-Orthodox circles. Some of Joshua's teachings are published in *Ohel Yehoshua* (printed with *Dover Shalom*, 1910). Joshua's successor ISSACHAR DOV (1854–1927) was greatly influenced by Aaron of Chernobyl although Aaron taught a form of Ḥasidism that differed radically from that of the Belz school. Issachar Dov was an exacting leader of Galician Orthodoxy and also headed the Maḥazikei ha-Dat. In particular he opposed the Agudat Israel and denounced any innovations. He strongly opposed Zionism in any form. In 1914, when the war front reached Belz, he fled to Hungary and lived in Újfehértó where he succeeded in winning many Hungarian Jews to Belz Ḥasidism. In 1918 he moved to Munkács (*Mukacevo) and became embroiled in a bitter quarrel with the *zaddik* of Munkács which gave rise to a voluminous exchange of polemics. In 1921 Issachar Dov returned to Galicia and settled first in Holschitz, near Jaroslaw, moving back to Belz in 1925.

His son and successor AARON (1880–1957) deviated little from the pattern set by his father. He lived an ascetic life, and instituted a lengthy order of prayers. The influence of Belz Ḥasidism had considerable impact on Jewish life in Galicia because its adherents entered all spheres of communal affairs and were not afraid of the effects of strife within the community. Many rabbis accepted the authority of the Belz *zaddikim*. In the parliamentary elections the Belz Ḥasidim did not join the Jewish lists, but voted for the Polish government party. On the outbreak of World War II, Aaron escaped to Sokol and then to Przemyśl where 33 members of his family were murdered. After confinement in the ghettos of Vizhnitsa, Cracow, and Bochnia, he was sent to Kaschau (now *Kosice), then in Hungary, at the end of 1942 and subsequently to Budapest. In 1944 he managed to reach Erez Israel. There he revised his political views and directed his followers to support the Agudat Israel. He established yeshivot and *battei midrash* throughout the country. His home in Tel Aviv became the new center for the

followers of Belz Ḥasidism throughout the world. His grave is a place of pilgrimage where many gather on the anniversary of his death. He was succeeded by his nephew, ISSACHAR DOV (1948–), who established a *bet midrash* in Jerusalem and an independent *kashrut* system. Large numbers of Belz ḥasidim also inhabit the Boro Park section of Brooklyn, New York.

BELZBERG, SAMUEL (1928–), Canadian financier and philanthropist. Belzberg was born in Calgary to Abraham and Hilda, who immigrated to Canada from Poland in 1919. His father was clearly imbued with an entrepreneurial spirit. He moved from working on the floor of an abattoir to owning a secondhand furniture store and then successfully shifted into real estate. Samuel was clearly his father's son. Together with his brothers Hyman and William, he embarked on a remarkable and sometimes controversial career in business and finance. Basing himself in Edmonton, Belzberg first made money on oil leasing, and investing the proceeds in real estate, set up what would grow into First City Financial Corporation to finance the acquisitions. In 1968 he moved to Vancouver, where he expanded his finance and real estate holdings. In the rough-and-tumble world of corporate takeovers in the United States of the 1980s, Samuel and his brothers (elder brother Hyman remained in Calgary, while his brother William moved to the United States) scored a number of successes. First City Financial Corporation was, at its height in the 1980s, a powerhouse in the Canadian financial world valued at more than \$5 billion. First City and Samuel Belzberg suffered reversals in the early 1990s. In a bitter and much publicized dispute with his two brothers, Samuel was forced out of the financially slumping business. Under the weight of enormous debt, the firm crashed as dramatically as it had soared. Samuel's subsequent business activities were relatively modest.

Paralleling his business rise, Belzberg was heavily involved in philanthropic and community activities in both Edmonton and Vancouver, with much emphasis on support for Jewish causes. In Vancouver, he made substantial donations of time and expertise to both Simon Fraser University (where he was honored with an honorary doctorate) and the University of British Columbia. He and his wife, Frances, established the Dystonia Medical Research Foundation in 1976, after their daughter Cheri was diagnosed with the genetic disease that disproportionately affects Ashkenazi Jews. The Belzbergs became friendly with Rabbi Marvin Hier when he served in Vancouver as rabbi in the Orthodox synagogue Schara Tzedeck. In 1977 Belzberg supported Hier in his establishment of the Simon Wiesenthal Center in Los Angeles and

the Center's Museum of Tolerance, which opened in 1993. In 1988 Belzberg was appointed a member of the Order of Canada and in 2001 was promoted to officer in the Order. He married Frances Cooper, who was also a member of the Order of Canada for her efforts on behalf of dystonia research and an HIV Care Unit in Vancouver and for her active support of the Simon Wiesenthal Center.

[Richard Menkis (2nd ed.)]

BELZEC (Pol. **Bełżec**), one of the six Nazi death *camps in German-occupied Poland, situated in the southwest corner of the country on the Lublin–Lvov railway line. Between February and December 1942, close to half a million Jews were killed in its gas chambers by the German SS and their collaborators.

During the ten months of its operation, Belzec was the most lethal of all Nazi camps established in occupied Poland. The overwhelming number of those murdered there came from *Lublin and surrounding areas as well as from the provinces of *Cracow, *Lvov, *Stanislaw (Stanislawow), and *Tarnopol – the heart of Galician Jewry. Victims also included Jews from Austria, Germany, and Czechoslovakia. Once the Nazis concluded that all the Jewish communities of *Galicia had been destroyed, they dismantled the death camp and tried to remove all traces of their crime.

Virtually no one brought to Belzec survived, and only two of its victims bore witness to the horrors that took place there. Rudolph Reder of Lublin was the lone survivor to give extended testimony; a second survivor, Chaim Hirszman, was murdered after his first day of testimony.

Unlike some other death camps, the Nazis situated Belzec in a relatively populated area, close to the heavily traveled railway line. Poles and Ukrainians in the area witnessed the systematic murder of Jews; they saw ghetto liquidations and trains arriving at the killing center. Poles lived in terror that the fate of the Jews could soon be theirs. With the scarcity of Jewish eyewitnesses local Poles became a valuable source for learning what occurred.

Belzec, together with *Treblinka and *Sobibor, were the three death camps that operated under the German codename *Aktion Reinhard*, devoted to murdering the Jews in General Gouvernement territory.

Belzec was first established as a forced labor camp for the Jewish and gypsy prisoners who worked on antitank ditches along the German-Soviet border in 1940. This was more than a year before Belzec assumed any role in the killing process. Later, when the killing center at Belzec became operational, these antitank ditches were used as mass graves.

During a conference held in Lublin on October 17, 1941, *ss-Brigadefuehrer* (Brigadier-General) Obidio Globocnik, who was assigned by Heinrich *Himmler to organize *Aktion Reinhard*, informed gathered Nazi officials about the decision to murder the Jews of the General Gouvernement. Within two weeks the first three *ss* men of the future camp crew arrived to Belzec and requested 20 workers from the local mayor. By

November 1, 1941, construction had begun on the Belzec killing center. The timing of the creation of Belzec coincided with the creation of *Chelmno, one of the six Nazi killing centers where murder by gassing became operational on December 8, 1941. Gassing was by mobile gas canisters of the same type that were built by SS men stationed at Belzec, which were used to kill mental patients in *Zamosc county in December–January 1941–42.

By the end of February 1942 about 120 Jews from Lubycza Krolewska had become the first victims of gassing at Belzec. Between March 17, 1942, and April 14, 1942, “the great action” of killing Jews began as some 70,000–75,000 Jews, most of them from Lublin and Lvov, were murdered. The first gassing installations consisted of three gas chambers located inside a small 26 × 13 foot barrack. The floor of the gas chamber and the walls were covered with tin and the door was made of hard wood to prevent it from being broken open from the inside. The pace of killing overwhelmed the camp’s facilities, so on April 17 the gassing ceased, resuming only in the middle of May 1942 when transports from the Cracow district start arriving again to a functioning camp. Once again the speed of deportation outpaced the camp’s facilities. So deportations were halted again and murder by gassing ceased in mid-June to permit the old gas chambers to be torn down and replaced with much larger and more efficient ones. They were made of brick and concrete with one door for entering the gas chambers and another for clearing out the bodies. The size of each gas chamber was 13 × 16 feet. At the entrance to the building was a sign: “Shower and Disinfection Room.” Their capacity was 1,000–1,200 bodies at a time, or those incarcerated in ten freight cars of arriving prisoners.

By the second week of July deportations and the gassing that followed resumed, continuing uninterrupted until December when the gassing operations were halted. Work detachments of Jewish forced laborers excavated mass graves and burned the bodies to remove all evidence of the crime. When the work was completed, the Germans murdered virtually all surviving forced laborers at *Sobibor. Chaim Hirszman jumped from the train to Sobibor and survived until liberation. He was killed in Lublin, in 1945. A third escapee, Sylko Herc returned to Belzec, where he remained for 2–3 days before going to Cracow. His fate is not known.

In spring 1943–summer 1944, German officials and *Trawniki-trained auxiliaries plowed under the site of the Belzec camp, planted trees, and built a manor house nearby in order to conceal any traces of the killing center. At the end of July 1944, the Soviet Army overran Belzec

The staff of Belzec consisted of between 14 and 30 SS officials, many of whom were veterans of the T-4 operations: the murder of mentally retarded, physically infirm, and emotionally disturbed Germans, where the Nazis pioneered murder by gassing. Some 90–120 Trawniki-trained guards joined them. Trawniki was the camp where 2,500 captured Soviet soldiers and 2,200 civilians became police auxiliaries for the *Aktion Reinhard* killing centers. These troops worked throughout

the camps and supported deportations throughout German-occupied Poland.

Christian Wirth, the commandant of Belzec, first developed the killing center. In 1942 Globocnik appointed him inspector of the SS Special Detachments with overall responsibility for the *Aktion Reinhard* camps. Nicknamed the “Wild Christian” by his fellow SS men, his “ideas” for Belzec were also used in Sobibor and Treblinka. He was succeeded as Belzec’s commandant by Gottlieb Hering in August 1942.

The design of the gas chambers is credited to ss-*Hauptscharfuhrer* (Master Sergeant) Lorenz Hackenholt, who first served as a mechanic in the T-4 program operating the mobile gas vans. After his experience at Belzec he constructed the gas chambers at Sobibor and Treblinka. The gas chambers were euphemistically called *Stiftung Hackenholt* (Hackenholt Foundation).

Only one Belzec official faced charges after the war, Wirth’s deputy, Josef Oberbauer, a veteran of T-4, who supervised the construction of Belzec. In 1965 he was sentenced to four years and six months in prison.

Number of Victims

Until recently, historians cited 600,000 as the number of Jews killed at Belzec. First established in 1946, the figure was based on the prewar population of Jewish communities presumably deported to Belzec. Because this estimate does not account for Jews murdered in the ghetto deportation operations, or shot in other locations, it is too high.

To date, only one known document, a report dated January 11, 1943, from the coordinator of *Aktion Reinhard*, Hermann Hoefle, to ss-*Obersturmbannfuhrer* Adolf *Eichmann in Berlin, gives a specific figure for Jews killed in Belzec: 434,508. The report, intercepted by the British during World War II, and recently discovered as a declassified document, purports to be a statistical summary of the actual number of Jews arriving at Belzec up to December 31, 1942. It had been radioed on January 11, 1943, by Hoefle for the attention of ss-*Obersturmbannfuhrer* (Lieutenant Colonel) Franz Heim, commander of Security Police in Cracow, and to Eichmann, in Berlin.

As Rudolph Reder reported, there was no detailed count of Belzec’s victims and some transports may even not have been included in Hoefle’s figures. The Belzec Memorial estimates that the actual death toll for Jews at Belzec may have been as high as 500,000. Groups of non-Jewish Poles and Roma and Sinti were murdered at the Belzec death camp as well. Their number, according to testimonies, could range from dozens to several hundred, but a specific number could not be determined. Poles have argued that several of the Poles were killed for the “crime of saving Jews,” but to date no evidence has been found to substantiate this claim.

Rudolph Reder, the only known survivor of Belzec who lived to tell his story, escaped his captors in November 1942 when he was taken outside the camp by them.

Reder described the killing process as follows:

Receiving of the train began. Dozens of ss men would open the wagons yelling “Los!” (“Get out!”). With whips and their rifle butts, they pushed people out. The doors of the wagon were a meter or more above the ground. Driven out by whips the people had to jump down: everybody, old and young; many broke their arms and legs falling down. They had to jump down to the ground. The children were mangled in the bedlam. Everybody pouring out – dirty, exhausted, terrified....

With each transport it was the same as with the one that I arrived on. People were told to undress, leave their things in the courtyard.... People always showed a spark of hope in their eyes that they are going to work. But seconds later, babies were torn away from their mothers, the old and the sick were thrown on stretchers, and the men, little boys and girls were pushed with rifle butts further and further down the path.

While the women were rounded up naked and shaved, whipped like cattle into a slaughterhouse, the men were already dying in the gas chambers. It took two hours to shave the women and two hours to murder them. Many ss men using whips and sharp bayonets pushed the women toward the building with the chambers.

Then the askars [Trawniki-trained guards] counted out 750 persons per chamber....

I heard the noise of sliding doors, moaning and screaming, desperate calls in Polish, Yiddish – blood-curdling screams. All that lasted 15 minutes.

After the doors were closed, the Jews in the gas chambers realized what was about to happen with them and started to cry and scream. But after a few minutes everything went quiet. After 20 minutes the outer doors of the gas chambers were opened again and the corpses of the Jews were disposed of in the mass graves.

The *Sonderkommando* were Jewish prisoners who were selected to live in order to facilitate the camp’s function as a killing center. They escorted the victims from the trains to the gas chambers and disposed of the bodies after the victims were murdered. The crucial tasks of the camp were restricted to the Germans. They alone decided “who shall live and who shall die.” They started the diesel engines.

How did the *Sonderkommando* personnel, whom the Germans periodically murdered and replaced with new deportees, cope? Reder reported:

We moved like automated figures, just one large mass of them. We just mechanically worked through our horrible existence ... Every day we died a little bit together with the transports of people.

When I heard children calling [in the gas chamber]: “Mommy, haven’t I been good? It’s dark,” my heart would break. Later we stopped having feelings.

Another valuable source of historical information was Kurt Gerstein, who was both a perpetrator and informant. An anti-Nazi by conviction, he nevertheless served as an *ss-Untersturmfuehrer* in the Technical Disinfections Department in the Hygienic Institute of the Waffen SS, working directly with Zyklon B. Yet he was so appalled by what he saw in the *Aktion Reinhard* camps of Belzec and Treblinka in August 1942 that he passed on information to a neutral Swedish diplomat, to the

Vatican, and to a bishop in the anti-Nazi German Confessing Church. His depiction of the dead is as follows:

Inside [the gas chamber] the people were still standing erect, like pillars of basalt, since there had not been an inch of space for them to fall in. ... Families could still be seen holding hands, even in death. It was a tough job to separate them as the chambers were emptied to make way for the next batch. A couple of dozen workers checked the mouths of the dead, which they tore open with iron hooks.... Other workers inspected anuses and genital organs in search of money, diamonds, gold, etc. Dentists moved around hammering out gold teeth, bridges, and crowns. In the midst of them stood Captain Wirth, in his element.

There were a few outside sources who made information available to the Polish underground. Among them was Janusz Peter, M.D., a Tomaszow physician who obtained information from local members of the underground as well as ss and Trawniki-trained camp guards who were his patients. This information made its way to London and Washington. Peter alone reports on an instance of resistance on June 13, 1942, that resulted in the killing of several ss guards. No other source for resistance has been found.

For many years Jan Karski, the Polish underground courier, maintained that he had visited Belzec. His description of the camp he visited comports with the contours and function of Izbicia, which was a way station to Belzec. Szlamek Bajler, an escapee from Chelmno shortly after it opened, obtained information regarding the camp that was transmitted to the Oneg Shabbat group in Warsaw. A document sent to the West, based on local eyewitness testimony, notes that killing was by electrocution for local Poles.

Postwar History of the Camp

In 1945–1946, the District Commission on the Investigation of Nazi Crimes in Poland in Lublin investigated the crimes committed in Belzec and concluded that the Nazis murdered about 600,000 Jews at Belzec between March and December of 1942. In 1946, the eyewitness account of Rudolph Reder was published by the District Jewish Historical Commission of Cracow. This is the lone account by a victim of Belzec.

In 1963, a monument was unveiled at the Belzec site, the first commemoration of Belzec’s victims.

In 1965, the trial of the former SS man of the Belzec crew Josef Oberhauser took place. He was the only SS guard convicted for the crimes committed in Belzec. His sentence was 4½ years in prison. The other seven SS men tried together with Oberhauser were acquitted by the Munich court. The Main Commission for the Investigation of Nazi Crimes in Poland conducted the second investigation of Belzec crimes but did not find any new information about the camp.

In 1967–1968, at the request of the KGB, the Polish secret police investigated Trawniki-trained Ukrainian guards in Belzec. The documentation was only recently declassified after 30 years.

In 1995, the *United States Holocaust Memorial Museum entered into an agreement with the Council for the Protection

of Monuments of Combat and Martyrdom in Poland to erect a new monument at the Belzec site. In May 1997 an international jury chose a design by Andrzej Solyga and his team. Over the next two years archeological surveys were conducted at the Belzec site marking down 33 graves as well as remnants of the building structures and in 2002 construction began on a new monument constructed as a joint effort by the Polish government and the American Jewish Committee.

On January 1, 2004, the Belzec memorial became a division of the State Museum of Majdanek in Lublin in anticipation of the opening on June 2 of a new monument consisting of an evocative environment sculpture together with an adjacent museum explaining how the camp functioned.

[Michael Berenbaum (2nd ed.)]

BELZYCE (Yid. and Heb. **Belzitzc, Belshic, Ba'al Shitz**), small town in Lublin province, Poland. A charter of privileges granted to Belzyce in 1432 designated it a compulsory halting stage for merchants traveling to the Lublin fair. Jews settled there at the beginning of the 16th century, probably connected with this traffic. The physician Jacob *Naḥman lived in Belzyce at the end of the 16th century. The Council of Four Lands convened in Belzyce in 1643. The community suffered heavy losses during the *Chmielnicki massacres of 1648–49. The ḥasidic rabbi Gedaliah Samuel Jacobson lived in Belzyce in the second half of the 19th century. In 1764 the Jewish population numbered 949; in 1897, 1,705 (out of 3,182); in 1921, 1,882 (over half the total population); and in 1939, 2,100.

[Nathan Michael Gelber]

Holocaust Period

The German army entered the town in mid-September 1939, and the Jewish population became subject to the persecution and terror carried out throughout Lublin Province. In February 1940 about 300 Jews from Stettin (then Germany) were deported to Belzyce. In February and March 1941 about 500 Jews from Cracow and another 500 from Lublin were forced to settle there. On May 12, 1942, several thousand Jews from central Germany (Sachsen and Thuringen) arrived. The town's Jewish population grew to about 4,500 by the time the mass deportations to the death camps began. In spring 1942, the Germans conducted an *Aktion* to liquidate the remaining Jews in Belzyce. They rounded up over 3,000 Jews for extermination at Sobibor. Subsequently the Germans established a concentration camp in Belzyce in a few houses around the destroyed synagogue. In May 1943 the Belzyce camp was liquidated. Several hundred Jews, mostly women and children, were shot, while another 250 women and 350 men were sent to Benzin, where only a handful survived. After the war the Jewish community in Belzyce was not reconstituted.

BE-MOZA'EI MENUHAH (Heb. בְּמוֹצָאֵי מְנוּחָה; “at the close of the rest (day),” i.e., the Sabbath), name of a *piyyut* in acrostic style of unknown authorship. It forms part of the *Selihot service on the first day of the *Selihot* cycle preceding Rosh ha-Shanah. It consists of eight verses which close with the refrain “Hear our supplication and our prayer.” The initial words of the first stanza as well as other expressions indicate that it was composed for the first day of *Selihot*, which always falls on a Saturday night-early Sunday morning. A song of a similar name, *Be-Moza'ei Yom Menuhah*, forms part of the traditional hymns for the closing of the Sabbath. Its author is the liturgist Jacob de *Lunel (“Ya'akov min Yeriho”).

Rosenfeld, *Authorized Selichot* (1957), 13; Text and melody in A. Nadel, *Zemiroth Shabbat, Die haeuslichen Sabbatgesaenge* (1937), 44 (Hebrew part 16).

[Meir Ydit]

BEMPORAD, AZEGLIO (1875–1945), Italian astronomer. Bemporad, who was born in Siena, was appointed director of the Capodimonte Observatory near Catania in Sicily in 1912. Some of his first publications were of a purely mathematical nature, and until c. 1924 his main interest was the complex study of the extinction of starlight within the earth's atmosphere. He was also concerned with observational and theoretical studies of solar radiation, of variable stars, solar and lunar eclipses, and occultations. From 1925, he published discussions on the progress of the compilation of the *Catalogo astrofotografico... di Catania* as part of the international enterprise of mapping the sky. Bemporad wrote about the history of astronomy. In 1946, a commemorative volume of his life work was published.

[Arthur Beer]

BEMPORAD, ENRICO (1868–1944), Italian publisher. At an early age he joined the Florentine publishing company of the brothers Alessandro and Felice Paggi. After the death of his father, Roberto, in 1891, he became the head of the firm which had, in the meantime, changed its name into R. Bemporad and son. Under his direction the publishing house became one of the most important in Italy. Bemporad established branch offices in many towns and extended the company's activities from educational and scholastic publications to wider literary fields. His company published the works of Giovanni Verga and Luigi Pirandello as well as the initial edition of Dante's works for the Italian Dante Society. Bemporad was at various times president or managing director of other Italian publishing companies, including Lattes of Turin, Sansoni of Florence, and Zanichelli of Bologna. During the Nazi occu-

pation Bemporad was compelled to abandon his publishing work. He went into hiding and died a few days after Florence was liberated.

[Giorgio Romano]

BEN (Benista), ZEHAVA (1968–), Israeli popular singer. Ben was brought up in a poor neighborhood in the city of Beersheva; her father had been an *‘ud* (lute) player in Morocco. As a teenager, Ben admired and studied the songs of Yemenite singer Zohar *Argov and was inspired by his Middle Eastern vocal style. When Argov died in 1987 she sang his hit “*Perah be-Ganni*” in his memory at an anti-drug concert.

Ben’s first major success came in 1990 when she took part in a film called *Tippat Mazzal* (“A Drop of Luck”). The song she sang derived from a Turkish folk tune and became a hit all over Israel. She also made her commercial cassette debut that year, selling 80,000 copies.

Her mainstream vocal breakthrough continued with “*Ke-tourna Masala*,” an east-west duet with the popular Ethnics rock band. The song climbed to first place in the 1992 Israeli hit parade. A turning point in Ben’s career came in 1994, when she decided to sing the songs of the most famous singer in the 20th-century Arab world, the legendary Umm Kulthum. Ben’s interpretation of the latter’s sophisticated and classic songs “*al-Atlal*” and “*Inta ‘umri*” won over her most fanatical fans. She performed this repertoire accompanied by the Haifa Arab Music Orchestra, conducted by Suheil Radwan, at a Palestinian gathering in Nablus, in Jericho during Ramadan, at public concerts in Israel, and at memorial ceremonies for Yitzhak *Rabin. She was also invited with the orchestra to a number of festivals in Europe, including Stockholm, Montpellier, and Paris (Theatre de la ville). In 1995, Ben issued a CD of Umm Kulthum songs called *Zehava Ben Sarah Aravit*.

[Amnon Shiloah (2nd ed.)]

BENA’AH (Benaiah; third century C.E.), Palestinian scholar in Tiberias at the end of the tannaitic and the beginning of the amoraic era. Most of his dicta are transmitted in the Talmud by his disciple *Johanan Nappaḥa, but some are also cited in collections of tannaitic literature. His extant sayings are chiefly of an aggadic character: e.g., “Whoever occupies himself with the Torah for its own sake makes learning an elixir of life” (Ta’an. 7a); “The Pentateuch was given scroll by scroll” (Git. 60a). Bena’ah acquired a great reputation for wisdom, juridical ability, and the unraveling of complex legal cases, as a result of which the Roman authorities appointed him a judge. He was the author of an enactment according to which any judge found guilty even in a civil case was deemed unworthy of continuing in his judicial office (BB 58a–b). According to the biographer of the emperor Alexander Severus, the introduction of a similar statute in Roman law was the result of the Jewish precedent (*Scriptores Historiae Augustae*, Alexander Severus, 45:7). Bena’ah used to mark burial caves to keep the unsuspecting from defilement. In this connection, the talmudic aggadah relates some wondrous tales such as that of his

visit to the grave of Adam (BB 58a). Bena’ah was the head of an academy in Tiberias, which apparently continued to function after his death. His disciple, Johanan, taught there (TJ, Shab. 12:13c). Some scholars maintain that it was because of this college that Tiberias was selected as the site of the central academy in Palestine.

[Zvi Kaplan]

BEN-ABRAHAM, ZVI (1941–), geologist. Born in Jerusalem, he received his B.Sc. in geology in 1968 from the Hebrew University and his Ph.D. from the Massachusetts Institute of Technology and at the Woods Hole Oceanographic Institution in 1973. Upon his return to Israel in 1973, after six months as a postdoctoral fellow at Woods Hole Oceanographic Institution, he began working at the Israel Oceanographic and Limnological Research Institute in Haifa and later at the Weizmann Institute of Science in the Department of Applied Mathematics. In 1982, after a two-year sabbatical at Stanford University, Ben-Avraham joined the Department of Geophysics and Planetary Sciences at Tel Aviv University, holding the Nebenzahl and Grossberg Chair in Geodynamics, and heading the Minerva Dead Sea Research Center. That same year, he was appointed professor of geophysics at Stanford University. In 1989 Ben-Avraham accepted an offer to hold the Max Sonnenberg Marine Geosciences Chair at the University of Cape Town. He conducted detailed measurements on the sea floor, magnetic field, gravity field, sub-bottom, and heat flow of the Sea of Galilee, Dead Sea, and the Gulf of Eilat using different geophysical methods. He made numerous geophysical studies of the Levant continental margin and the Levant basin, eastern Mediterranean. He also researched the evolution of the Pacific oceanic margins and ways in which continents grow and compared the San Andreas and Dead Sea faults, which are tectonically similar. As a result, a number of advances were made in understanding the Dead Sea fault valley. Ben-Avraham gained extensive academic experience at various universities in the U.S. and Europe and conducted scientific studies of numerous seas. He is a fellow or member of numerous scientific societies and recipient of the Israel Prize (2003) and the L. Meitner-A.V. Humboldt Research Award (2004).

[Bracha Rager (2nd ed.)]

BENACERRAF, BARUJ (1920–), physician and Nobel Prize laureate in medicine. Benacerraf was born in Caracas, Venezuela. He moved to the United States in 1939 and graduated in science from Columbia University, New York, in 1942 and in medicine from the Medical School of Virginia in 1945. His life-long research interest was immunology. He worked at Columbia University in 1948–49, the Broussais Hospital in Paris in 1949–56, and the New York University School of Medicine in 1956–68, where he became professor. He was director of the immunology laboratory at the National Institute

of Allergy and Infectious Diseases, Bethesda, in 1968–70 and Fabyan Professor of Comparative Pathology, Harvard Medical School, from 1970. In 1980 he was awarded the Nobel Prize in medicine (jointly with George Snell and Jean Dausset) for establishing that immune responses are genetically controlled. This and his other discoveries have profound implications for understanding immunity in infections, allergy, and cancer. Among his many awards is the Rabbi Shai Shacknai Prize in immunology and cancer research of the Hebrew University in 1974. He was a member of the board of governors of the Weizmann Institute of Science. He had a special interest in the training of young scientists. He abandoned a successful business career to concentrate on research and his pride in his Sephardi origins was expressed in his Nobel Prize acceptance speech.

[Michael Denman (2nd ed.)]

BEN-ADIR (pen name of **Abraham Rosin**; 1878–1942), writer and Jewish socialist leader, born in Krucha, Belorussia. He received a traditional Jewish education from his grandfather Jacob Aaronson and his uncle Solomon Aaronson. At the age of 16 he went to Odessa to sit for the university examinations as an external student, and then moved to Minsk. In 1896–97 he became influenced by A. *Liessin who advocated a Jewish national brand of socialism. After the First Zionist Congress in 1897, Ben-Adir published an article advocating political Zionism in opposition to the ideology of *Aḥad Ha-Am. In 1901 he moved to Paris where he studied at the Free Russian University, and later returned to Russia. After the *Kishinev pogrom of 1903 Ben-Adir published a call for the formation of a Jewish party which would combine the aims of revolutionary socialism with national Jewish aspirations. Ben-Adir was one of the founders and ideologists of the *Vozrozhdeniye group, and of its successor of the Sejmists (*Jewish Socialist Workers' Party) whose program included Jewish national-political autonomy while envisaging *Territorialism as a remoter aim. He edited its organs *Serp* (Russian) and *Folkshtime* (Yiddish). After the February 1917 Revolution, Ben-Adir became a leader of the *United Jewish Socialist Workers' Party. Also in 1917 he published *Kehile Fragen*, a pamphlet envisaging the *kehillah* as an instrument of national Jewish *autonomy. Ben-Adir withdrew from the united party in 1919 when the communist trend predominated, and in 1921 left Russia for Berlin. His *In Khaos fun Lebn un Denken* ("Whirlwind of Life and Thought"), a collection of essays on socialist problems, in particular an argument against communism, was published in 1925. Ben-Adir stayed in Erez Israel between 1925 and 1927 but returned to Berlin, leaving for Paris in 1933. After the French defeat by the Nazis in 1940 he went to the United States. In Paris and New York he coedited the *Algemeine Entsiklopedye* ("General Encyclopedia" in Yiddish) to which he also contributed.

BENADOR, URY, originally **Simon Schmidt** (1895–1971), Romanian novelist. One of his best known novels, *Ghetto veac xx* ("20th-Century Ghetto," 1934), presents a picture of Romanian-Jewish life. A short story, *Appassionato* (1935), describes expressionistically the ecstatic and mystic fascination that Beethoven's music exercises on a young ḥasid from an East European shtetl. During the Communist period, the writer became a conformist supporter of the regime, publishing anti-Zionist and anti-religious pamphlets. A novel, *Gablonz "Magazin Universal"* (1961), is a violent attack on the Jewish bourgeoisie. He also wrote a biography of Beethoven (1964).

[Leon Volovici (2nd ed.)]

BEN-AHARON (Nussenbaum), YITZHAK (1906–) Israeli labor leader and politician. Member of the First to Fifth, Seventh and Eighth Knessets, on behalf of Mapam, Aḥdut ha-Avodah-Po'alei Zion, and the Alignment lists. Ben-Aharon was born in Zoinitza, then Austrian Bukovina. He studied political science and economics in Berlin and was also a leader in the *Ha-Shomer ha-Za'ir movement. Ben-Aharon immigrated to Palestine in 1928, and in 1933 was one of the founders of Kibbutz Givat Ḥayyim, where he remained a member. In 1932–38 he was secretary of the Tel Aviv Labor Council, and in 1939 secretary of *Mapai. In 1940 Ben-Aharon joined the British Army and was taken prisoner by the Germans in Greece in 1941, remaining in a German prison camp until the end of the war. After the war he took part in the struggle of the Yishuv against the British and was among the Jewish leaders arrested on "Black Saturday" on June 29, 1946.

When *Aḥdut ha-Avodah seceded from *Mapai, and established Aḥdut ha-Avodah-Po'alei Zion, he became one of its leaders, representing it in the *Histadrut. In 1948, Aḥdut ha-Avodah-Po'alei Zion united with Mapam and the two parties ran in a single list in the Knesset elections. Ben-Aharon was elected on behalf of Mapam to the First and Second Knessets, and after that on behalf of Aḥdut ha-Avodah-Po'alei Zion. In 1959–62 he served as minister of transportation, resigning due to differences of opinion within his own party on the need for unification with Mapai, and with other members of the government over social and economic issues. In 1965 he was one of the driving forces for the establishment of the first Alignment with Mapai, and in 1968 for the establishment of the Israel Labor Party. From 1969 to 1973 Ben-Aharon served as secretary general of the Histadrut. In this position he encouraged wage claims, particularly on behalf of the lower-paid workers, frequently in contravention of the economic policy of Minister of Finance Pinḥas *Sapir, and spoke out strongly against the high earnings and luxurious living of the wealthy in Israel. He also advocated having the governing bodies of the Histadrut elected by the districts rather than on a national basis and called for an increase in the proportion of representatives elected by the workers directly instead of by the party and trade union functionaries. In this period he strongly criti-

cized the political positions of Prime Minister Golda *Meir, and within *Ha-Kibbutz ha-Me'uḥad clashed with Yitzḥak *Tabenkin, who supported the Greater Israel idea. Ben-Aharon did not run for the Ninth Knesset but continued to act behind the scenes within Ha-Kibbutz ha-Me'uḥad and the Labor Party, while expressing dovish views with regard to the peace process with the Palestinians.

Throughout his career Ben-Aharon was considered not only a political leader but an ideologue as well. His articles and speeches appeared in various collections.

BENAIHAH (Heb. בְּנֵי־הַיְהוָה, בְּנֵי־הַיְהוָה; “YHWH has built”), son of Jehoiada, one of David’s warriors and Solomon’s commander in chief. Benaiah came from Kabzeel in Judah. Famous for his individual acts of valor, the killing of two warriors, the slaying of a lion in a pit in the snow, and the defeating of an Egyptian giant, he was one of David’s most honored warriors (II Sam. 23:20–23; I Chron. 11:22–25). It is reasonable to attribute some of these deeds to the period of David’s outlawry or to the first part of his reign. David appointed Benaiah as the head of his bodyguard (II Sam. 23:23; I Chron. 11:25), identified by some scholars with the Cherethites and Pelethites (II Sam. 20:23, according to the *keri*; I Chron. 18:17; cf. II Sam. 8:18; I Kings 1:38), whose commander was also Benaiah. After the death of *Ahithophel, he served as counselor to David, together with the priest *Abiathar (I Chron. 27:33–34, where the order of the names should be reversed according to some versions: “Benaiah son of Jehoiada” instead of “Jehoiada son of Benaiah”). Benaiah opposed *Adonijah’s attempt to seize the crown at the end of David’s reign and, together with the priest *Zadok and the prophet *Nathan, he proclaimed Solomon king (I Kings 1:8–44). He later carried out the liquidation of *Shimei, of Solomon’s rival *Adonijah, and of the latter’s supporter *Joab (2:25–46), in whose stead Solomon appointed Benaiah commander in chief.

[Yehoshua M. Grintz]

BENAIM (Heb. בְּנֵי־נְאִיִּים), name of North African families of rabbis and merchants. JACOB ḤAYYIM BENAIM (d. 1803), rabbi in Fez, Morocco, author, and halakhic authority, left Fez about 1760 for Algeria on his way to Erez Israel, but remained in the city of Mascara, where he was appointed rabbi and *dayyan*. In 1764 he moved to Algiers to become *av bet din*, a position he held for 18 years; eventually, however, his harsh exercise of this office provoked opposition from noted scholars in the community and he left. He settled in Leghorn in 1782 and there had his works printed, including *Zera Ya'akov*, responsa (1784); *Yeshu'ot Ya'akov*, sermons (1795); and an edition

of the Zohar (1795). His novellae to the Talmud were published posthumously in *Ḥesed ve-Emet* (Salonika, 1813). He also composed *piyyutim* for a local Purim of Algiers to commemorate the victory over the Spanish.

MOSES (19th century), merchant, emigrated from Algiers to Marseilles, France. In 1819 he established the Dramont commercial house for Franco-Moroccan trade; his good relations in the two countries proved beneficial to the business affairs of his Jewish compatriots. His son Makhluḥ founded another commercial company with the later Rif rebellion leader Abd el-Kader. RAPHAEL ḤAYYIM MOSES (c. 1850–1920), was born in Tetuan but emigrated to Palestine in his youth. He was a member of the *bet din* of Tiberias. In the 1870s he traveled to Turkey and North Africa as an emissary to collect charitable funds for Palestine. In Gibraltar he was chosen chief rabbi (1881), and held this position until his death. His publications include *Raḥamim* [initials of Raphael Ḥayyim Moses (son of) Isaya (and) Masudah] *Peshutim*, responsa (Tunis, 1910; but according to the preface not published before 1914), and other rabbinical works.

JOSEPH (1882–1961), rabbi and clerk to the *bet din* of Fez, Morocco, was a lifelong bibliophile, who collected the largest library of books and manuscripts in Morocco. His own works include a bio-bibliographical dictionary of rabbis of Morocco, *Malkhei Rabbanan, Kevod Melakhim* (Jerusalem, 1931); a collection of sermons, *Millei Me'alyata* (in manuscript); and many other writings left in manuscript. After his death his library was sold to the Jewish Theological Seminary of New York. DAVID (1888–1968), son of Raphael Ḥayyim Moses, was the leader of the Jewish community in Gibraltar after his father’s death. He became a member of the Government Council of the Colony, and in 1954 he was appointed honorary consul of Israel for Gibraltar.

[David Obadia]

BEN 'ALĀN, JOSHUA (ninth century?), author of a Hebrew treatise on the Jewish calendar. Excerpts from the treatise are found in a polemical essay by the Karaite scholar Hasan b. Mashi'aḥ (Ms. Leningrad), in which the latter refers to Ben 'Alān as “the rabbinical scholar who is the best versed in the science of the calendar.” This is the only source for Joshua’s name; a grammarian by name of Judah b. 'Alān, who lived in Tiberias at the beginning of the tenth century, may have been Joshua’s brother, as Harkavy assumes.

[Moshe Nahum Zobel]

BEN-AMI (Shieren), JACOB (1890–1977), actor and director. Ben-Ami's long stage career began in his native Minsk, Belorussia, before he was a teenager. After traveling with many Yiddish acting companies through Eastern Europe, Ben-Ami went to the United States in 1912 to appear with Rudolf Schildkraut and Sarah Adler in Yiddish plays. In 1918, together with Maurice *Schwartz, he founded the Yiddish Art Theater in New York. Ben-Ami's reputation as an actor and director grew, and in 1920 he made his English-language acting debut in *Samson and Delilah*, a drama written by a Dane, Sven Lange, that Ben-Ami had played and directed in Yiddish in New York and in Russia. The following year he made his Broadway debut in Peretz Hirshbein's *The Idle Inn*, and many leading roles followed. Ben-Ami played more parts on the English-speaking stage than on the Yiddish, but he did not appear in a commercial success until almost 40 years later, when he played a grandfather in Paddy Chayefsky's *The Tenth Man* (1959). In the interim, Ben-Ami toured extensively in South America, in South Africa, and in the United States where he did Yiddish plays and Yiddish translations of Russian, European, and American plays.

[Stewart Kampel]

BEN-AMI (Dankner), OVED (1905–1988), founder and long-time mayor of Netanyah. Ben-Ami, who was born in Petaḥ Tikvah, served as secretary of Benei Binyamin (1924–28), an organization of the sons of early Jewish settlers, which was instrumental in establishing several new settlements. Ben-Ami founded the town of Netanyah in 1928–29, and the settlement of Even Yehudah in 1932. He was mayor of Netanyah continuously from 1930 with minor interruptions. During that time Netanyah became a major resort and the center of Israel's diamond industry. In 1947 Ben-Ami and other Jewish mayors and *yishuv* leaders were arrested by the British Mandatory authorities in reprisal for Jewish underground activities. Ben-Ami was a member of the Liberal Party and a part owner of *Maariv*, the daily evening paper. From 1958 to 1961 he was active in the establishment of the new town of Ashdod, heading the Ashdod Development Company. He wrote the books, *Netanyah, Birat ha-Sharon* (1940), and *Unbreakable Spirit of Our Jewish Heritage* (1964).

[Benjamin Jaffe]

BEN-AMITAI, LEVI (1901–1980), Hebrew writer. He received a general education in his native Belorussia and in 1917 joined the He-Ḥalutz movement. In 1920 he emigrated to Palestine, where he worked as a manual laborer. He became a member of kibbutz Deganyah Bet in 1925, and worked there first as an agricultural laborer, then as a teacher. His stories and sketches in Hebrew periodicals began to appear in 1925. His books of poetry include *Ha-Shibbolim Penimah* (1934); *Leilot ba-Mazor* (1939); *Ba-Kevuzah* (1938); *Sadot she-ba-Emek* (1950); *Oholivah* (1959); *Mi-Midbar Mattanah* (1962), po-

ems about the Essenes; and *Osfei Kayiz* (1966). He edited the anthologies *Deganiyyot* (1955) and *Ha-Sofer ba-Kevuzah* (1956), and was coeditor of a collection of short stories by writers in cooperative agricultural settlements, entitled *Al Admatam* (1959). Ben-Ami's poetry is distinguished by its short verses, and restrained, almost prosaic style. The agricultural-folk setting takes on symbolic dimensions by virtue of the connotative language he chooses. Much of his writing is charged with strong religious accents that evoke a prayerful mood.

[Getzel Kressel]

BEN-AMMI (Rabinowicz), MORDECAI (1854–1932), author and journalist writing in Russian. A traditional Jewish education and the harsh circumstances of his life after he lost his father at a young age are reflected in his stories. At Odessa he attended a yeshivah where the curriculum included languages and sciences. Influenced by Perez *Smolenskin, he became a *maskil*, and entered a Russian secondary school and thereafter the University of Odessa. When pogroms broke out in southern Russia in 1882, Ben-Ammi took part in organizing Jewish self-defense in Odessa. He campaigned against the czarist regime for organizing the pogroms and the Russian press for condoning them, also castigating the Jewish intelligentsia for failing to defend its people. In 1882 he went to Paris to obtain assistance from the Alliance Israélite Universelle for the victims of the pogroms. From there he sent his "Letters from Paris" to the Russian-Jewish monthly *Voskhod* (signed "Resh Galuta"), which reflect his deep appreciation of Jewish values. The same year Ben-Ammi moved to Geneva, where he began to write stories depicting the joyous spirit of Jewish festivals and the legends associated with them. In 1883 he completed the stories "*Priezd Tsadika*," and "*Ben Yukhid*," the latter reflecting the atmosphere of the days of the Cantonists, and in 1884 a long story "*Baal Tefila*." The stories became popular among Jews who read Russian. In 1887 Ben-Ammi returned to Odessa, where he remained until 1905, and published the autobiographical story *Detstvo* ("Childhood"), in which he describes the Jewish background of his youth. In articles published in *Voskhod*, he attacked the czarist authorities for their anti-Jewish discrimination. He also criticized the Jewish intelligentsia for having renounced Jewish values and for leaving their persecuted brethren to suffer an unfortunate fate. He also published a collection of stories for Jewish juvenile readers with illustrations, as well as a series of stories in Yiddish. Ben-Ammi became a member of the committee of Ḥovevei Zion in Odessa upon its formation in 1890, and was a delegate to the First Zionist Congress and other congresses convened by Theodor Herzl. His esteem for Herzl was so great that on his death Ben-Ammi mourned him as though he were a close relative. While living in Odessa, he taught in the Jewish school directed by Mendele Mokher Seforim, whose faithful friend he remained throughout his life. On the outbreak of the

Russian revolution of 1905, Ben-Ammi returned to Geneva. In 1923 he settled in Erez Israel. Ben-Ammi's stories portray the traditional Jewish way of life from the inside. Despite a certain sentimentality and romanticization, their pervasive sincerity and spirit of piety give them a unique appeal, especially among the young. Several were translated into Hebrew by H.N. Bialik.

[Israel Klausner]

BEN-AMOTZ, DAHN (Moshe Tehilimzeiger; 1923–1989), Israeli author and humorist. Born in Poland, he was taken to Palestine with a group of children in 1938, escaping the fate of his parents, who were murdered in the Holocaust. He joined the British Navy during World War II. After the war he volunteered for the Palyam, the marine branch of the Palmah, where he first established himself as a humorous writer. Though his earliest publication is a volume of “serious” stories *Arba'ah ve-Arba'ah* (1950), he won fame with a collection of Palmah lore – half fact, half tall story – entitled *Yalkut ha-Kezavim* (“Bag of Lies,” 1956), which he wrote jointly with the poet Hayim *Hefer. His other humorous writings, initially published in the Hebrew press, are collected in *Mah Nishma* (“What’s New,” 1959) and *Eikh La'asot Mah* (“How to do What,” 1962). In 1968 he published his first full-scale novel, *Lizkor ve-Lishko'ah* (“To Remember and To Forget”) which, though laced with humor, is basically a return to serious writing. A semi-autobiographical story, it constitutes the author's attempt to confront a past he had tried to ignore, his non-*sabra* origin, the murder of his parents, and his own responsibility as their son. The questions of the German people's guilt, the existence of the “other Germany,” and the moral justification for accepting German reparations are all widely explored in this book. An English translation of *To Remember and To Forget* was published in 1973.

Besides writing, Ben-Amotz made a reputation for himself as a witty radio personality, starting with the popular *Three in One Boat* program, as a sharp-tongued interviewer, as manager of the Hamam satirical cabaret, organizer of happenings, lexicographer of Hebrew slang, sometime actor (a small part in *A Streetcar Named Desire* – during his Hollywood phase – and the part of Uzi in *Exodus*), and as the quintessential Israeli, an exemplar of the “New Jew,” the *sabra*, combining charm and brashness with a highly visible bohemian lifestyle and left-wing politics. Dying of cancer, he arranged a now legendary farewell party for himself, receiving the accolades of Israel's cultural and political elite with customary good cheer.

[Miriam Arad / Fred Skolnik (2nd ed.)]

BENAMOZEGH, ELIJAH BEN ABRAHAM (1822–1900), Italian rabbi and kabbalist. Benamozegh was born in Livorno (Leghorn) of Moroccan parents. His father died when he was three years old and his Jewish education was seen to by his mother's brother, the kabbalist Judah Coriat. Destined for a commercial career, Benamozegh soon revealed extraordinary intellectual ability and from 1846 could devote himself entirely to study. He served as a preacher at the synagogue of Livorno, as a professor of theology in the rabbinical school of the city, and as a member of the local rabbinical court. He also founded a printing house for Jewish religious books. Benamozegh's intellectual energy was directed mainly to the defense of the Kabbalah, and he may be considered the last important kabbalist in Italy. He considered the Kabbalah as a genuine part of Jewish dogma, paralleling the tradition of the Oral Law. Hostile to Ḥasidism (which he saw as a superstitious degradation of pure Jewish theology), Benamozegh tried to show the affinities between Kabbalah and philosophy (as had a century before another kabbalist from Livorno, Joseph *Ergas), arguing that the former took precedence. Embracing Eastern and Western elements, the will to both unity and to multiplicity, the Kabbalah could moreover represent a solution to the religious crisis of modern Europe. Benamozegh wrote numerous books and articles in Hebrew, Italian, and French. Among his works are (1) Exegesis: *Ner le-David* (1858), a commentary on Psalms; *Em la-Mikra* (1862–65), a commentary on the Pentateuch in five volumes incorporating the findings of comparative philology, archaeology, and ancient history, in which the influence of the Italian philosopher G. Vico is particularly prominent. This commentary was condemned by the rabbis of Aleppo and Jerusalem, who attacked it for being too open to “external sciences” and to mythology; (2) Theology: *Spinoza et la kabbale* (1864), on the possible kabbalistic origins of Spinoza's thought; *Teologia dogmatica e apologetica* (1877), in which Benamozegh starts to build a comprehensive Jewish theology based on the Kabbalah. Benamozegh saw in Hegel's philosophy the most dangerous enemy of a religious philosophy and considered the thought of the Catholic V. Gioberti a powerful weapon in the fight against “modern pantheism,” i.e. German idealism; *Israël et l'Humanité* (revised and published posthumously in 1914 by his Christian disciple Aimé Pallière; *Israel ve-ha-Enoshut* (1967; *Israel and Humanity*, 1994), on the universal potential of Judaism. (3) Apologetics: *Ta'am le-Shad* (1863), a refutation of Samuel David *Luzzatto's *Vikku'ah al Hokhmat ha-Kabbalah*, in which Luzzatto denied the antiquity of the *Zohar* and the theological interest of Kabbalah; *Morale juive et morale chrétienne* (1867; *Jewish and Christian Ethics*, 1873; *Bi-Shevilei Musar*, 1966), on the superiority of Jewish ethics, which concerns itself with the political sphere while Christian ethics sees ascetism as its supreme value. In the second part of this work, *L'origine des dogmes chrétiens*, Benamozegh tries to show that Christianity derives from an incorrect interpretation of Kabbalah. (4) History: *Storia degli Esseni* (1865), a collection of lectures on the *Essenes, seen as the forerunners of the kabbalists.

BENARDETE, MAIR JOSÉ (1895–1983), philologist. Benardete was born in Turkey and emigrated to the United States in 1910. He was a long-time professor of Spanish and Sephardic Studies at Brooklyn College in New York City. Benardete and Federico de Onis, who founded Columbia University's Hispanic Institute in 1920, are well known for effecting a reconciliation between Hispanics and Sephardim in America. Benardete was director of the institute's Sephardic Studies Section in the late 1920s. Under his direction, the section sponsored lectures on Sephardi civilization, generated articles for the institute's *Revista Hispanica Moderna*, published a Ladino/Spanish commemorative volume on medieval Spanish-Jewish poet *Judah Halevi, and staged plays in Judeo-Spanish.

Benardete wrote a number of volumes in the field of Spanish literature and civilization. Several Loyalist ballads are presented in English translation in *And Spain Sings* (1937), which he prepared in collaboration with the poet Rolfe Humphries. His *Hispanic Culture and Character of the Sephardic Jews* (1952; Spanish, 1963) is an analysis of the Sephardi Jews.

Benardete retired from City University of New York / Brooklyn College in 1965. As a tribute to the renowned scholar, his colleagues Louis Levy and David Barocas formed the Committee for the Advancement of Sephardic Studies and Culture to publish the testimonial book *Studies in Honor of M.J. Benardete*. They then joined forces with other Sephardi leaders to continue publishing books on Sephardi history and Sephardi life in the U.S.

In the late 1970s Benardete, along with Rabbi Marc *Angel, Levy, and Barocas, initiated the idea of a cultural center that would fill the void in information and programming regarding Sephardi history and culture. To that end, Sephardic House was established in 1978 at Congregation Shearith Israel in New York City.

[Victor A. Mirelman / Ruth Beloff (2nd ed.)]

BENARES, capital of Benares district, India. This sacred city of the Hindus became the residence of Anglo-Jewish merchants toward the end of the 18th century because of its proximity to the diamond mines. Among these early Jewish merchants was Jacob Barnet, an English diamond merchant who moved from Madras to Benares in 1780. His clients in London included the

merchant-house of Israel Levin Solomons. In 1786 Lyon Prager was sent by this firm to Bengal and established his headquarters in Benares. Prager also became inspector and purchaser of drugs, indigo, and other commodities for the English East India Company. After his death in 1793 his activities were continued by his brother George Prager, who moved from Benares to Calcutta. The Jewish association with Benares was maintained by the affluent Anglo-Portuguese Jewish diamond merchant Benjamin d'Aguilar (d. 1813), and Pellegrine Treves (d. 1825), who obtained permission to settle in Bengal in 1774.

BEN-ARIEH, YEHOSHUA (1928–), Israeli geographer specializing in historical and cultural geography and the Middle East. Considered one of the most important researchers of Erez Israel and Jerusalem in the modern era, Ben-Arieh was born in Tel Aviv, and received his Ph.D. from the Hebrew University of Jerusalem in 1963. He began to lecture at the Hebrew University in 1965 and became a professor in 1979. From 1982 until 1985 he served as dean of the Faculty of Humanities. In 1997 he became rector of the Hebrew University. He was a research fellow at the University College of London and was visiting professor at the University of Maryland, Carleton University, and University College of London. In 1971 he received the Ben-Zvi Prize and in 1977 the Bialik Prize. In 1999 he was awarded the Israel Prize for geography. Among his books in English are *Rediscovery of the Holy Land in the Nineteenth Century* (1980), *Jerusalem in the Nineteenth Century: The Old City* (1985), and *Jerusalem in the Nineteenth Century: Emergence of the New City* (1987). Volumes edited include *Jerusalem in the Mind of the Western World, 1800–1948* (1997) and *Painting the Holy Land in the Nineteenth Century* (1997).

[Shaked Gilboa (2nd ed.)]

BEN-AROYA, AVRAHAM (1887–1979), Greek socialist and one of the founders of the labor movements in Salonika and Macedonia. Born in Vidin, Bulgaria, Ben-Aroya was a teacher and in 1908 went to Salonika, then under Turkish rule, where he taught Bulgarian and worked as a printer. Already an enthusiastic socialist, Ben-Aroya found in Salonika's large Jewish working class a ready audience for his doctrines. While his views were close to those of the small revolutionary Bulgarian group, he was drawn to the exploited and unorganized Jewish workers in the city, especially the tobacco workers with whom he shared common interests. In 1909 he formed the Salonika workers' organization later known as the *Federación Socialista Laboradera* ("Socialist Workers' Federation"). Under Ben-Aroya's direction the Federation founded the first workers' newspaper in Turkey, *El Journal del Laborador*, and later a weekly Ladino newspaper, *Solidarità Oberadera*. After the Balkan war, Ben-Aroya joined with Greek socialists in Athens. He formed *La Bursa del Laboro* ("Jewish Syndicate Center") and was elected chairman of its executive. He was also a

leader of the Greek Socialist Party, but when the Party split in 1924 Ben-Aroya helped to found the Social Democratic Party and its newspaper *The New Period* (in Greek). Subsequently, Ben-Aroya published numerous political pamphlets including tracts on *Social Democracy and the Jewish Question* (Bulgarian) and *The Workers' Movement in Turkey* (Hebrew tr. 1910). In 1953 Aroya emigrated to Israel. Although bitterly opposed to Zionism for many years, the rise of Nazism and World War II changed his views, while his decision to emigrate to Israel reflected his disillusionment with socialism, which he had previously believed would resolve the Jewish question.

[Baruch Uziel]

BENAROYA, AVRAM (1888–1955), journalist and first teacher of stenography in Turkey. Born in Edirne, Benaroya studied in the Ecole Normale Israélite in Paris. His first teaching position was in Hasköy, Istanbul, and then in Damascus. From 1911 he taught French and stenography at the Turkish Lycée Galatasaray and the High School of Commerce. His stenography method was adopted by the Ministry of Education. In 1925 the Ministry of Commerce decided to introduce stenography in the commercial schools and Benaroya was responsible for the curriculum. In 1928 Benaroya started working as a stenography teacher in the Turkish Parliament. His journalistic career began in *Le Jeune Turc*. Later he wrote in *Ikdam*, *Stamboul*, *La République*, and *Le Journal d'Orient*. In 1948 he started publishing *L'Etoile du Levant*, a weekly newspaper in French which appeared until shortly after his death. His books include: *Basit ve Vatani Kıraat: Lectures Patriotiques Faciles* (1916), *Türkçe Lisanına Mahsûs Stenografya Usûlü*, Istanbul (1918), *Türkçe'ye Mahsûs Stenografya Usûlü* (1929), *Istenografi Esas Kuralları ve Kısaltmalar Ders 1–2* (1943), *İstenografi: Esas Kurallar ve Kısaltmalar (12 ders)* (1944), *Istenografi Dersleri* (1947).

[Rifat Bali (2nd ed.)]

BENARUS, ADOLFO (1863–1958), Portuguese writer. His grandfather David Bensabat, born in Morocco, was the first Jew to settle (1815) in the Azores Islands. Benarus was born there, at Angra do Heroísmo. He was a painter and philologist and taught English in the faculty of letters of the University of Lisbon and in other educational institutions. He was active in communal life and was honorary president of the Jewish community of Lisbon. He wrote *Israel* (1924); *Os Judeus, Historia Estranha deste Povo* ("The Jews, the Strange Story of This People," 1927); *A Tragédia da Historia* ("The Tragedy of History," 1937); *Anti-semitismo* (1948) as well as pamphlets on Jewish festivals.

[Moses Bensabat Amzalak]

BENAS, BARON LOUIS (1844–1914), English banker and communal worker. Born in London, he settled in Liverpool

early in life where he carried on the family banking business. He established in 1867 the Liverpool branch of the *Alliance Israélite Universelle, which later became the local branch of the *Anglo-Jewish Association, serving as its president until his death. He was chairman of a commission set up in 1882 by the London Russo-Jewish Committee to supervise the emigration via Liverpool to the United States of refugees from Russia. He was elected president of the Liverpool Literary and Philosophical Society in 1890 and wrote several papers for that and other learned societies, including *Records of the Jews in Liverpool* (1899) as well as an article on the history of Liverpool Jewry for *The Jewish Encyclopedia* of 1909. His son, BERTRAM BENJAMIN BARON (1880–1968), practiced as a chancery barrister from 1906. A well-known figure in legal circles, he was appointed bencher of the Middle Temple in 1953 and was also chairman of the Liverpool Bar Association. He served as president of the Merseyside Jewish Representative Council (1944–46) and of the Jewish Historical Society of England (1951–53). He was the author of a number of books and papers, including supplements to his father's pioneering monograph on Liverpool Jewish history.

[Sefton D. Temkin]

BEN-ASHER, AARON BEN MOSES (called *Abu Sa'id* in Arabic; first half of tenth century), last and most important of a family of masorettes active in Tiberias for five generations, from the second half of the eighth century. That Ben-Asher lived in the first half of the tenth century may be deduced from a list in the *Keter*, a biblical manuscript formerly in Aleppo, now in Israel. This states that Ben-Asher vocalized and *masar* (i.e., wrote the *Masorah of) the *Keter*, which was written by Solomon b. Bouya'a, a well-known scribe, who wrote another Bible dated 930. It is also known that Ben-Asher was no longer alive in 989, since the scribe of the manuscript of the Former Prophets from that date says of him: "may he rest in the Garden of Eden" (Leningrad, Firkovich II, Ms. 39). Ben-Asher was apparently an elder contemporary of *Saadia Gaon, who wrote the anti-Karaite critique "*Essa Meshali*," against Ben-Asher.

The controversial question, as to whether or not Ben-Asher was a Karaite, was seemingly settled when this reply of Saadia (mentioned in Dunash's objections on Saadia, p. 21, no. 72) was discovered. In this reply it is clear that the Ben-Asher who was Saadia's opponent worked on masorah, and it seems, therefore, that he was identical with Aaron Ben-Asher, the well-known masorete. The assumption that he was a Karaite serves to explain his attitude to the Bible and its authoritativeness in matters of *halakhah* (for example, *Dikdukei ha-Te'amim*, ed. A. Dotan (1967), ch. 2: "The prophets... complete the Torah, are as the Torah, and we decide

Law from them as we do from the Torah”) and to vocalization, opinions rooted in Karaite thought. It appears from the parallel ideas and style used in the *Mahberet Ben-Asher* (see below), from the “Wine Song” written by his father, and from the list which his father appended to the codex of the Prophets (kept in the Karaite synagogue, Cairo), which he wrote “827 years after the destruction of the Second Temple” (i.e., in 895), that his father, Moses Ben-Asher, was also a Karaite, and it is probable that Karaism was a family tradition. (Note, however, that Dotan (*Simai*, 41 (1957), 280ff.) and M. Zucker (*Tarbiz*, 27 (1957/58), 61ff.) hold that Aaron Ben-Asher and his family were not Karaites.) It is noteworthy that the founder of the family, “Asher the Great Sage,” apparently lived in the first half of the eighth century and was a contemporary of Anan, a precursor of Karaism.

Ben-Asher rapidly gained fame as the most authoritative of the Tiberias masorettes, and in 989, the scribe of the above-mentioned manuscript of the Former Prophets vouched for the care with which his copy was written by the fact that he had vocalized and added the masorah “from the books that were [vocalized] by Aaron ben Moses Ben-Asher.” Maimonides, by accepting the views of Ben-Asher (though only in regard to open and closed sections), helped establish and spread his authority. Referring to a Bible manuscript then in Egypt, he writes: “All relied on it, since it was corrected by Ben-Asher and was worked on (*ve-dikdek bo*) by him for many years, and was proofread many times in accordance with the masorah, and I based myself on this manuscript in the *Sefer Torah* that I wrote” (Yad, Maim. *Sefer Torah*, 8:4). It is generally agreed that the codex used by Maimonides is that formerly in Aleppo.

Proof for this is adduced from Saadiah b. David Al-Adni, who wrote in his commentary on the Yad (*ibid.*): “The Codex that the Gaon [i.e., Maimonides] used is in Zoba, called Aleppo, and is called the *Keter*... and at the end is written, ‘I Aaron Ben-Asher proofread it... I saw and read it’” (Oxford, Bodleian Library Ms. Hunt. 372, fol. 138b; cf. P. Kahle, *The Cairo Genizah* (1947), 58). However, Cassuto, who studied the *Keter* in Aleppo, was doubtful. An attempt was made to refute these doubts by M. Goshen-Gottstein (*Textus*, 1 (1960), 1ff.), but A. Dotan further supported Cassuto’s position (*Tarbiz*, 34 (1964/65), 136ff.) It now appears likely that it was Ben-Asher who vocalized and added the masorah to the *Keter* of Aleppo, despite the fact that the note in the manuscript was written after his death. The masorah has been vocalized and added by “the lord of scribes, the father of wise men and the first of teachers... the unique Rabbi Aaron ben Rabbi Asher, may his soul be bound up in the bond of eternal life” (the latter being an epithet applied to a person who has died)

The tradition of Ben-Asher is the one accepted in the Jewish Bible, but this does not mean that the version of the Bible found in the common editions is exactly the same as that which Ben-Asher produced. The differences between the printed editions and the various manuscripts assumed to be

written in the Ben-Asher tradition are mainly in the placing of the accents, especially the use of the *meteg*, different uses of the *sheva* and *hataf* in certain grammatical forms, all differences that are unimportant for the average reader. These differences developed over the years, usually as a result of grammatical assumptions that were not always correct. Furthermore, certain divergences in vocalization and masorah are found even in manuscripts that are accepted as Ben-Asher codices. This fact, combined with the evidence of Mishael b. Uzziel in his *Kitab al-Khulaf*, indicates that Ben-Asher used different systems of vocalization at different times in specific words. It may be said, therefore, that different Ben-Asher manuscripts reveal a continual development in his method of vocalization.

Ben-Asher was one of the first to lay the foundations of Hebrew grammar. His *Sefer Dikdukei ha-Te’amim* (or the *Mahberet Ben-Asher*, as David *Kimḥi called it in his commentary on Judg. 6:19) is a collection of grammatical rules and masoretic information. Grammatical principles were not at that time considered worthy of independent study. The value of this work is that the grammatical rules presented by Ben-Asher reveal the linguistic background of vocalization. The book was first published in *Biblia Rabbinica* edited by Pratensis, the format later called *Mikra’ot Gedolot* (1516–18), and again in 1879 by S.I. Baer and Strack, who edited the material according to topics, in a manner different from that in the first edition. Until recently all studies relating to Ben-Asher’s system of grammar and masorah were based on this edition. A. Dotan’s edition (1967), which includes a commentary and studies on the content of the book, changed the previous conception of *Dikdukei ha-Te’amim* as it had been understood for 90 years. Many of the phonological and morphological topics which had been commonly attributed to *Dikdukei ha-Te’amim* are not included. The main theme discussed in the book is the relationship of the biblical accents to the rules of vocalization and pronunciation. The *sheva* and its pronunciation play a major part in this work.

Except for certain parts, including masoretic lists, the book is written in a rhymed poetic style, using paytanic language. It can be assumed that the parts not written in this style were not by Ben-Asher. The language of the book shows a certain Arabic influence, particularly with regard to grammatical terms. Even in its more limited form *Dikdukei ha-Te’amim* is important not only for showing how the different vocalizers determined the correct vocalization, but also for a clearer understanding of the grammatical world of the later masorettes, who laid the foundations for Hebrew grammar in later generations.

[Zeev Ben-Hayyim]

BEN-ASHER, MOSES (second half of ninth century), scribe and masorete. Moses was the fourth in the line of well-known masorettes descended from Asher the Elder, and the father of the last, Aaron. A manuscript by him of the Former and Latter Prophets has survived, written, pointed, and furnished with accents and masoretic notes. Found today in the Karaite synagogue in Cairo, it has been photographed a number of times (one photocopy is in Jerusalem). A colophon by Ben-Asher at the end of the manuscript testifies that he wrote it in Tiberias in the year 827 after the destruction of the Second Temple (i.e., 896 C.E.). The manuscript is a beautiful one, embellished with drawings and illuminations, the work of an expert artist, in a style which, according to the latest investigations, constitutes an ancient specimen of Islamic decorative art, older than any extant surviving Koran and thus perhaps the most ancient of this type.

The vowel-points, the accents, and the masoretic notes are marked with the stamp of antiquity, but deviate greatly from the method of pointing of his son Aaron, whose method is nowadays called “the school of Ben-Asher” (see *Ben-Asher, Aaron). A comparison of the readings in the manuscript with the list of variants in the *Kitāb al-Khulaf* of Mishael b. Uzziel shows that in almost two-thirds of the cases the manuscript follows the reading of *Ben-Naphtali, and only in one-third, that of Aaron Ben-Asher (see *Masorah). At times it also maintains its own independent reading. In about a quarter of the cases in which the two authorities agree, according to Mishael, he differs from both their readings. He points לִיִּשְׁרָאֵל (Jer. 29:23) and לִיִּיִּאֵה (Jer. 32:39). Accordingly the Ms. displays a great measure of affinity with what was later termed “the school of Ben-Naphtali.” On the other hand it contains a great number of *ge'ayot* (i.e., *metegs*; “secondary stress”), more than was usual in other manuscripts of his time, particularly *ge'ayot* in open syllables (known as *ga'ayah gedolah* “major *ga'ayah*”). There are also other anomalies in the pointing, such as some *degheshim* in the letter א (תִּלְוָאִים/ב, Jer. 38:12; תִּלְוָאִים, Hos. 11:7). It follows that the actual tradition of pointing was not uniform throughout the generations of the Ben-Asher family; it was only the occupation with the masorah that they had in common. Another possibility, suggested by A. Dotan, is that the pointing and accents of the manuscript are by a different scribe and that Moses Ben-Asher only wrote the consonantal text. In any event the fragment entitled “The order of Scripture,” which he copied at the end of the manuscript (p. 583), was certainly not written by him.

No other works by Moses have survived, but his name is mentioned in an Arabic *genizah* fragment (Cambridge, Ms. T.-S. Arabic 9/5): “and Moses Ben-Asher, may God have mercy upon him, has already written a large book...” Because that fragment also mentions, though without any connection with M. Ben-Asher, the expressions מְצוּתָהּ (“vowel”), אלְדוֹ מְצוּתָאָת, (“the seven vowels”), Allony conjectured that the large book attributed here to M. Ben-Asher is the anonymous *Kitāb al-Muṣawwītāt* mentioned in several places in the writings of Jonah *Ibn Janah. Mention of it has also been discovered in Nissim Gaon's *Megillat Setarim* (see *Nissim b. Jacob b. Nissim), where it is ascribed to Ben-Asher (with no first name). At present there is not sufficient evidence to accept this conjecture. It would appear that he also wrote *piyyutim* and composed the “Song of the Vine,” in which the people of Israel is compared to a vine whose roots are the patriarchs, and from which come forth the prophets and sages. Mention is also made there of the masorah, the accents, and the work of the masorettes. Most of the poem is extant, in three manuscripts (one of which is Ms. Leningrad B 19a); only its end is missing. The initial letters of the remnant verses form the acrostic ... מִשֶׁה בֶּן אֵשׁ (“Moses Ben-Ash...”). This poem contains one of the decisive proofs that M. Ben-Asher was not a Karaite.

In some places the name has been corrupted as a result of a faulty completion of the abbreviation “Ben-Asher,” as in the commentary *Migdal Oz* on Maimonides' *Yad*, *Sefer Torah* 8:4, where “Moses Ben-Asher” occurs instead of Aaron, and as in the British Museum manuscript (Or. 4227, p. 274b) where “Moses b. Aaron Ben-Asher, the great scribe,” occurs instead of Aaron b. Moses.

[Aron Dotan]

BENATZKY, RALPH (1884–1957), composer. Benatzky was born in Moravske-Budejovice and studied in Prague and Munich. A composer of light music, he wrote about five thousand songs and 92 operettas. The best known was *Im Weissen Roessl* (1930), which became famous throughout the world as *White Horse Inn*. Benatzky went to live in the United States in 1938, but later returned to Europe and settled in Zurich. He wrote the scores for about 250 films.

[Dora Leah Sowden]

BEN-AVI, ITHAMAR (1882–1943), Hebrew journalist and Zionist. He was the son of Eliezer *Ben-Yehuda, from the initials of whose name Ben-Avi formed his Hebrew name. Ben-Avi was one of the first modern Jews whose mother tongue was Hebrew. In his early youth he began publishing in Hebrew periodicals edited by his father. He studied at the Teachers' Seminary of the Alliance Israélite Universelle in Paris and at the Institute for Oriental Studies at the University of Berlin. On his return to Erez Israel in 1908, he joined the editorial board of Ben-Yehuda's *Ha-Zevi* and *Ha-Or*, bringing to them something of the flamboyant spirit of popular European and American journalism. During World War I he lived with his family in the U.S.A. Returning after the war he founded the daily **Dòar ha-Yom* in Jerusalem in 1919 and continued to edit it until 1929. He also served as the Jerusalem correspondent for the London *Times* and *Daily Mail* and several French newspapers. An accomplished speaker in several languages, Ben-Avi visited various countries on behalf of the Jewish National Fund and the settlement projects of the native generation of moshavot farmers, of whose organization, *Benei Binyamin, he was a co-founder. In 1939 he went to the U.S.A., where he later died. His remains were interred in Jerusalem in 1947. Impetuous by nature, Ben-Avi advocated bold innovations, such as the writing of Hebrew in Latin characters, in which he published the weekly *Dror* (1933–4) and a biography of his father (*Avi*, 1927). In the 1930s he campaigned for the partitioning of Palestine into Jewish and Arab cantons. His political and cultural aim was the transformation of the Jewish people into an independent “western” nation.

BIBLIOGRAPHY: H. Ben-Yehuda, *Nosei ha-Degel* (1944), includes bibliography.

[Gedalyah Elkoshi]

BENAYAH, family of scribes living in San'a, Yemen, in the 15th–16th century. Between 1450 and 1483 the patriarch of the family, BENAYAH BEN SAADIAH BEN ZECHARIAH BEN BENAYAH BEN ODED, known as Ben Merjaz, copied dozens of books, most of which were copies of the Bible (*tijān*, sin. *tāj*). In the margins of the pages of these copies there was the *mesorah and at the beginning the *Maḥberet ha-tijān*, which included the rules of reading. These copies, however, did not include the Aramaic *targum* of *Onkelos or the Arabic *tafsir* of *Saadiyah, as was customary in ancient Yemenite copying. Benayah's inscriptions are considered to be accurate and concise, which make him the most important of Yemen's scribes. His children were also scribes: DAVID (1484–1510), JOSEPH (1486–1508), SAADIA (b. 1489), the daughter MIRIAM (!), and the grandchildren ME'ODED and AVIGAD, the sons of David. Y. Sappir, who visited Yemen in 1859, tells of the beautiful and accurate copying done by Miriam. At the end of the manuscript she wrote: “Do not bring punishment upon me if you discover mistakes since I am a nursing mother, Miriam the daughter of Benayah the scribe” (*Massa' Teiman*, 1945, 174; the manuscript was never found). The sons of Benayah also copied the *haftarot*, prayer books which preserves the ancient

Yemenite tradition, and other books such as the *Kitāb Mi'yār al-'Ilm* of Abū Ḥāmid al-*Ghazālī by Sa'adia. The connection between the tradition of the scholars of Tiberian tradition and the writings of the Benayah family was a subject of debate among scholars in 1961. According to an ancient tradition, Benayah copied over 400 texts. Today 33 manuscripts of the Benayah family are documented. Most texts are owned by public libraries and a few by private collectors (Rigler, 1991, 163–65). The texts were usually ordered by wealthy men, and after a while were donated to synagogues. In the colophon of a copy of the Early Prophets from 1475 Benayah dedicated a poem honoring the man who had ordered the book, a certain Avraham (Ratzaby, 1975). The Benayah family controlled the copying profession in San'a, which was the most important Jewish center in Yemen between 1460 and 1540.

[Yosef Tobi (2nd ed.)]

BENAYAHU, MEIR (1926–), Israeli scholar. The son of the Israel chief rabbi Isaac *Nissim, Benayahu was a member of the team of senior workers at the *Ben-Zvi Institute for Research on Oriental Jewish Communities, which was founded in 1947, and from 1964 he was its director. A prolific researcher, he published numerous studies and documents. His works include: *Marbiz Torah* (“Propagator of the Torah”), on the authority, functions, and status of the bearer of the title *Marbiz Torah* in Oriental countries (1951); *Rabbi Ḥayyim Yosef David Azulai* (1959), a comprehensive monograph; *Rabbi Ya'akov Elyashar ve-Ḥibburo Megillat Paras* (“R. Jacob Elyashar and His Work ‘The Scroll of Persia,’” 1960); *Sefer Toledot ha-Ari* (“Biography of R. Isaac *Luria”, 1967). He also published a new edition of *Zimrat ha-Arez* of Jacob *Berab (the Third) on the beginnings of the Jewish settlement in Tiberias during the mid-18th century. Benayahu was an editor of the yearbook *Yerushalayim* (Jerusalem), comprising studies on Erez Israel (vols. 3–5; 1951–55). The first seven volumes of the scientific periodical of the *Ben-Zvi Institute, *Sefunot* (begun in 1957), were jointly edited by Izhak *Ben-Zvi and Benayahu, while from the eighth volume onward he was the sole editor. From 1985 he was director of the Nissim Research Institute and in 2004 he was awarded the EMET Prize for work that integrated traditional Torah learning with modern scholarship.

BEN AZZAI, SIMEON (early second century C.E.), *tanna*, generally referred to in talmudic literature simply as “Ben Azzai.” In three places in the Mishnah (*Zev.* 1:3, *Yad.* 3:5, 4:2) he is referred to by his full name: Rabbi Shimon ben Azzai (according to Parma de Rossi 128 and others). Presumably a disciple of *Joshua b. Hananiah, he transmitted rulings in his name (*Yoma* 2:3), brought a proof in support of R. Joshua's position (*Yev* 4:13), and interpreted an obscure tradition be-

fore R. Joshua (Par. 1:1). He is found disagreeing with R. Akiva (Shek. 3:1, 4:5) and he transmitted a tradition in the name of R. Joshua in the presence of R. Akiva, who changed his ruling in line with this tradition (Taan 4:4). In the Bavli he is called a “disciple-colleague” of R. Akiva (BB 158b). It was said of him: “With the passing of Ben Azzai, diligent scholars passed from the earth” (Sot. 9:15). According to tradition Ben Azzai was one of the four “who entered the Garden” (*pardes*). According to Tosefta Hag. 2:3, “he caught a glimpse and died,” while his companion Beb Zoma went mad as a result of this mystical experience. In the Jerusalem Talmud (Hag. 2:1 77b) their roles are reversed. Although he declared that whoever abstains from procreation is regarded as though he had shed blood (Tos. Yev 8:7), he himself never married so as not to be distracted from his studies. When accused of not practicing what he preached, he answered: “What shall I do if my soul yearns for Torah? The world can be perpetuated by others” (*ibid.*). The Bavli, nevertheless, reports in one place that he married, but separated from his wife (Sot. 4b), and according to another tradition he was betrothed to Akiva’s daughter who, as her mother had done, made it a condition of marriage that her husband devote himself to the study of the Torah (Ket. 63a, but cf. S. Friedman, *JSIJ*, 3 (2004) 1–39, and Tosefot to Ket. 63a). His aphorisms included: “Be quick in carrying out a minor commandment as in the case of a major one, and flee from transgression; for one good deed leads to another good deed and one transgression leads to another transgression; for the reward for a good deed is another good deed and the reward for a transgression is another transgression” (Avot 4:2). While R. Akiva said that the verse “Thou shalt love thy neighbor as thyself” (Lev. 19:18) is a great principle of the Torah, Ben Azzai declared that the verse “This is the book of the generations of man” (Gen. 5:1) embodied an even greater principle, i.e., of the common origin of mankind (Sifra 7:4 and parallel passages). Ben Azzai was not referred to as “rabbi” and was not described as one of the “sages,” but rather as one of the “disciples” who argued in the presence of the sages (Sanh. 17b). Because of his reputation, later generations of scholars used to underscore their own scholarship by claiming: “I am like Ben Azzai in the marketplace of Tiberias” (Kid. 20a). Ben Azzai was renowned for his saintliness; it was said: “He who sees Ben Azzai in his dreams may look forward to achieving saintliness” (Ber. 57b). He is numbered by some among the *Ten Martyrs (Lam. R. 2:2, no. 4).

BEN BAG BAG, *tanna*, apparently of the first century C.E. His most famous dictum: “Turn it and turn it [the Torah], for everything is in it, and contemplate it, and grow grey and old over it, and stir not from it, for you can have no better rule than this” (Avot 5:25) is elsewhere attributed to Hillel (ARN 12, 11). A number of halakhic statements are reported in Ben Bag Bag’s name in various *baraitot* (e.g., Er., 27b; Tosef., BK 10:38). On the question whether a person is permitted to take the law into his

own hands he states: “do not enter your neighbor’s courtyard in stealth to take what belongs to you without his permission, lest you appear to him a thief; rather break his teeth [i.e., enter openly] and say to him, ‘It is my own property that I take’” (BK 27b). Some scholars identify Ben Bag Bag with Johanan b. Bag Bag, who sent a question to Judah b. Bathyra in Nisibis, and whom the latter eulogized as “an expert in the chambers of the Torah” (Tosef., Ket. 5:1). Some incline to the view that the name is symbolic like that of *Ben He He (Avot 5:26) with whom he has been identified, and that he was a proselyte (Hag., 9b and Tos., s.v. *Bar He He*). Some identify him with the proselyte who came to Hillel and asked to be taught the Torah “while standing on one leg,” which occasioned the famous reply of Hillel: “What is hateful to thee do not do to thy fellow.”

BEN CHANANJA, the first Hungarian Jewish learned periodical, published in German between 1844 and 1867. *Ben Chananja* was founded and edited by Leopold *Loew. It first appeared in Leipzig as a quarterly in 1844; resumed publication in Szeged, Hungary, in 1858; and became a weekly in reduced format in 1861. *Ben Chananja* advanced the scientific development of Jewish studies and stimulated interest in Jewish questions. Its contributors were scholars of prestige in Hungary and abroad. The periodical presented biblical exegesis, commentary on the Talmud, historical studies, educational information, and literary news. It also considered religious and social problems, advocating the establishment of a rabbinical seminary and legislation for Jewish emancipation. Among the contributors were Simon Bacher, Abraham Hochmuth, Solomon Buber, S.D. Luzzatto, and Leopold Dukes. The academic material was supplemented with topical articles, editorials, Jewish communal news, and occasional poems. *Ben Chananja* had correspondents in Jerusalem, Berlin, New York, and in most cities with large Jewish communities in Europe and America.

BENCHETRIT, AARON (1886–1967), physician and communal leader. Born in Tetuan, Spanish Morocco, Benchetrit spent his childhood in Caracas, Venezuela, and studied in Paris and Caracas. He was the medical director and administrator of the Leprosierías de Venezuela (1921–26). In 1927 he moved to Bogotá, Colombia, where he was in charge of all leprosy cases in the country from 1927 to 1935 and directed many scientific researches on leprosy. He published several medical works including *Disertaciones de un estudiante de medicina* (1917), *La epidemia febril de Caracas* (1919), *Nuevas disertaciones* (1921), and *Disertaciones acerca de la lepra* (1922). He also wrote on Zionism in *Disertaciones acerca del sionismo*. Benchetrit was president of the Centro Israelita of Bogotá and was president of the Zionist Federation of Colombia, 1943–44.

BENCHIMOL, Moroccan family. The descendants of **ABRAHAM BENCHIMOL**, one of the leaders of the community in *Fez (1700), established a business of international repute in Tangiers at the end of the 18th century. For four generations the family played a leading role in Morocco's political and economic life. As diplomats, they were entrusted with many missions by the French or the sultans. **ḤAYYIM** (1834–1915), who lived in Tangiers, was the founder of freemasonry in Morocco. There he organized and supported the *Alliance Israélite Universelle. He also established the first newspapers in Tangiers for the defense of human rights and of the Jews in particular. His influence provoked attacks by the anti-Semite Edouard *Drumont. A philanthropist and founder of charitable institutions, Ḥayyim headed the Jewry of northern Morocco.

BEN-CHORIN, SCHALOM (1913–1999; until 1931 **Fritz Rosenthal**), German philosopher, journalist, and writer. Ben-Chorin grew up in an assimilated family in Munich. Causing severe conflicts with his family, he discovered Judaism in 1928, showing an interest in the Jewish religion, Zionism, and modern Jewish literature at the same time. He also took on the name “peace, son of freedom” (Schalom Ben-Chorin). Following Martin *Buber he sought an alternative to Orthodoxy and secular Zionism, which he finally found in Reform Judaism (cf. *Jenseits von Orthodoxie und Liberalismus*, 1937). Having left his apprenticeship as a bookseller at the Jewish Ewer bookstore and studying German literature, theater, and religion, he was arrested and mistreated in the streets of Munich in 1933, a turning point in his life (cf. his autobiography *Jugend an der Isar*, 1974). In 1935 he immigrated to Palestine and started working as journalist for German newspapers (articles collected in *Begegnungen*, 1991) as part of a group of German-Jewish intellectuals and writers in Palestine. Together with the writer Gerson Stern he edited an early anthology of German-Jewish literature in Palestine and himself wrote novels and poetry (*Menora. Eine Auswahl literarischen Schaffens in Erez-Israel*, 1941). Ben-Chorin was much better known, however, as a thinker in Reform Judaism – he also laid the foundation of the Reform community in Jerusalem in 1958 (the Har-El-Synagogue) – and as philosopher of religion mediating between Judaism and Christianity. On the one hand, he wrote several fundamental and introductory works on Jewish theology, anthropology, and ethics, such as for example *Juedischer Glaube* (1975), which is based on a series of lectures at Tuebingen and aims at portraying the theology of Judaism according to Maimonides' classic model of the 13 *Articles of Faith, though more for a non-Jewish audience (cf. also *Die Tafeln des Bundes*, 1979; *Juedische Theologie im 20. Jahrhundert*, 1988). On the other hand, he reflected upon the relation

between Judaism and Christianity, seeking not only the differences but much more the links. While still in Munich and under the name Rosenthal he wrote the poem *Der Rabbi von Nazareth* (in *Das Mal der Sendung*, 1935). In this spirit, from 1940 he wrote several books promoting the Jewish-Christian dialogue (*Die Christusfrage an den Juden*, 1941; *Das christliche Verstaendnis des Alten Testaments und der juedische Einwand*, 1941), an endeavor which he stepped up after the war, traveling to Germany from 1956 and still writing in German (*Theologia Judaica*, 1/2, 1982, 1992; *Weil wir Brueder sind*, 1988). In this context, he made clear the Jewish origins of Christianity, interpreting some of the central figures of Christianity like Jesus, Paul, and Miriam (cf. the trilogy *Die Heimkehr*, consisting of *Bruder Jesus*, 1967; *Apostel Paulus*, 1970, *Mutter Mirjam*, 1971). As a catch-phrase symbolizing his approach, the often-quoted sentence from his book on Jesus might be cited: “Der Glaube Jesu einigt uns, aber der Glaube an Jesus trennt uns” (“The faith of Jesus unifies us but the belief in Jesus separates us”). At the same time he tried to answer a central theological question which came up after the Holocaust: the meaning of suffering and the absence of God (e.g., *Als Gott schwieg*, 1986). He was highly esteemed for his efforts at bringing about a new Jewish-Christian and Jewish-German dialogue after 1945. Ben-Chorin died in Jerusalem.

BENDA, JULIEN (1867–1956), French writer and philosopher. Benda studied history and philosophy at the Sorbonne. His first book, *Dialogues à Byzance* (1900), offered a bold analysis of the manifestations of corruption in French society, which formed the background of the Dreyfus Trial. Benda wrote several novels, especially in the first years of his literary activity, including *L'Ordination* (1911), which reveal his rationalistic outlook and rigorous morals. But Benda was first and foremost a philosopher who preferred to express his ideas in essays defending reason, science, and responsible thinking against the cult of intuition. In *Le Bergsonisme, ou une philosophie de la mobilité* (1912) and in other works, Benda attacked Bergson's irrationalism; in *Belphegor* (1919; Eng. tr. 1929), Benda rejected most contemporary writers, such as Romain Rolland, Paul Claudel, Maurice Barrès, George Sorel, and Charles Péguy, his former friend. Benda's militancy increased in his most famous book *La trahison des clercs* (1927; *The Great Betrayal*, 1928), in which he castigated contemporary thinkers and writers, including the intellectuals and the professionals. He accused them of having sold reason or of having left it to the state, to society, to the parties, to the family, etc. He charged them with having forsaken service to reason and to the perennial truth, all for the sake of temporary success. The rigorous conclusions which oppose any compromise are the

basis of his views in theology, history, and aesthetics, in his last books such as *Essai d'un discours cohérent sur les rapports de Dieu et du monde* (1931) and *La France byzantine; ou Le triomphe de la littérature pure...* (1945). This last work was sharply criticized. Although Benda did not convert to Christianity, he was completely isolated from Jewish life, and considered his Jewish origin a burden. He had to seek refuge during World War II in southern France. However, he regarded the Jewish problem as only a minor aspect of the war.

BEN-DAVID, JOSEPH (1920–1986), Israeli sociologist. Ben-David was born in Győr, Hungary, and immigrated to Israel in 1941. He studied at the London School of Economics from 1947–1949. He received his M.A. in history and sociology in 1950 and Ph.D. in sociology in 1955, both from the Hebrew University.

In 1951 he was appointed George Wise Professor of Sociology at the Hebrew University, in 1968 research associate and visiting professor of sociology at the University of Chicago, and in 1979 the Stella M. Rowley Professor of Education and professor of sociology at the University of Chicago.

Ben-David's sociological research and publications reflected his interest in the interaction between macrolevel historical events and microlevel sociological processes in the areas of the development of science, higher education, and the professions and social stratification.

His publications included *Fundamental Research and the Universities: Some Comments on International Differences* (1968), *The Scientist's Role in Society: A Comparative Study* (1971), *American Higher Education: Directions Old and New* (1972), and *Centers of Learning: Britain, France, Germany and the United States* (1971).

BENDAVID, LAZARUS (Eleazar; 1762–1832), German mathematician, philosopher, and educator. He attended the universities of Göttingen and Halle, and spent from 1792 to 1797 in Vienna where he delivered public lectures on Kantian philosophy. In 1802 he became political editor of the newspaper *Haude- und Spenersche Zeitung*. In 1806 he was appointed honorary director of the Juedische Freischule in Berlin, which he headed until 1825. The school attained a high reputation and a large proportion of its students were Christian until 1819, when the government forbade the enrollment of non-Jews. The school offered a revolutionary model of modern Jewish education combined with a high level of German and secular classic culture that represented the educational and philosophic notions of the Jewish Haskalah. Bendavid began his scientific work in 1785 with an investigation of the theory of colors. In 1786 he published *Ueber die Parallellinien*, and

in 1789 *Versuch einer logischen Auseinandersetzung des mathematischen Unendlichen*.

In 1795 his *Vorlesungen ueber die "Kritik der reinen Vernunft"* appeared. Bendavid held that philosophy had attained the pinnacle of its development in the Kantian system. From 1796 to 1798 he wrote a series of works explaining Kant's philosophy. In 1799 he published *Versuch einer Geschmackslehre*, containing his theory of aesthetics based on Kant. In 1801 the Royal Academy of Sciences in Berlin awarded him a prize for his study, *Ueber den Ursprung unserer Erkenntnis*, and published it in 1802.
